Role required: sn_hr_ws.admin

Each activity attempts to show a record (HR task, HR case, request, and so on) and goes through the card configuration and attempts to match to the lowest ordered record in the table. For example, the 'Verify Work Authorization' is a 'mark when complete' card that the base system provides.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The properties from the card configuration record are filled in from the record (HR task, HR case, request, and so on).

Note:
For Classic HR Service Delivery Agent Workspace and Agent Workspace for HR Case Management, there are two separate default card configurations and activity overrides. The property *sn_hr_agent_ws.use_uib_playbook_card_config* (default value = false) decides which card configuration is to be used for HR Service Delivery Playbook when you have each Agent Workspace installed. By default, the Classic card configuration will be selected in the card configuration.

Procedure

1. Navigate to **All** > **HR Administration** > **Playbook Card Configuration**.
2. Fill in the fields on the form.

HR Playbook Card Configuration form

Field	Description
Name	The name that identifies the HR Playbook Card Configuration.
Table	The record type of the configuration. Determines what card appears for each activity within an activity set (lane). Also determines what properties the card uses.
Condition	The conditions that determine if the type values render to an HR Playbook card. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Activity type	The activity type from a lifecycle event activity. Activity types can be approvals, employee activities, fulfiller activities, notifications, and more. **Note:** For more information, see Configure the supporting components for a lifecycle event.
Active	Indicates if the record is active and available for use.
Order	The order in which the activity attempts to match this record. The lowest values are evaluated first.

The Type Values section determines what appears on each card.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Type Values

Field	Description
Associated table	Not applicable at this time.
Footer	Information you want to appear in the footer of an HR Playbook card. Enter text or click the pill picker icon to display references you can select from to automate the placement of information.
Associated record	Not applicable at this time.
Icon	Displays an icon that appears in the upper, left-side of the card. Click the Lookup using list icon to select the icon you want to appear.
Description	Select the pill picker icon to display a description on the card. **Note:** This is not a free-form field, you must select from the available
Attachments read only	Check to indicate existing attachments can only be read. **Note:** This is a read only field and not for adding attachments to the activity. See the **Attachment source** field.
Title	The title of the card. You can enter free-form text or select from the list after clicking the pill picker icon.
Form fields	Displays a vertical column of fields that render below the row of record fields. **Note:** The fields are editable when at least one button on the card says **Form fields required**. You can enter comma separated text or select fields by clicking the pill picker icon. The fields you select appear as a column on the left-side of the card.
Show SLA	Check to indicate you want the SLA icon to appear at the top, right-side of the card.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The icon shows the state of the SLA.
Tagline	Enter or select information that appears at the top of the card above the title.
Attachment source	Use to allow uploading of attachments. Selecting associated_record allows the user to upload an attachment from the card.
Record fields	Fields you want to appear across the upper section of the card. Enter comma separated list of fields you want to appear on the card or click the xx icon to select references.
Show Checklist	Check to display the checklist from the activity. Users can check off tasks the same way they do on the case form.
Assigned to	Identifies the **Assigned to** agent. You can enter free-form text or select from the references after clicking the pill picker icon . The name appears next to the title.
Form View	Works with the **Form fields** and allows you to define an entire section you want to appear on the card.

3. Click **Submit** or **Update**.

HR Playbook Experience

Use Playbook Experiences to select the playbook your company uses.

The base HR Service Delivery Playbook contains a pre-configured playbook experience.

A Playbook experience is tied to Playbook Configurations and Playbook Activity Overrides.

Playbook Configuration

- Decide if you want the activity state icon on the card.
- Determine what fields to use in the Playbook filter.
- Determine the maximum number of form fields allowed on a card before a model is used.
- Define the conditions to display on the card for the SLA time icon.

Playbook Experiences

Controls the playbook user experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Sets up display and activity filters.
- Provides SLA integration.
- Provides access control.

Activity Overrides

The base system uses activity overrides to show the list card for requests and the default record card for collapsing and expanding tasks. Activity overrides are also for expanding cards assigned to the user, overdue, SLA breached, and so on that agents see by default.

Activity overrides control the logic and conditions for cards that are expanded and cards that are collapsed.

Enables you to override three (3) defaults for each card (from the **What to override** tab):

- The type of card used (default card, list card, create record card, knowledge card, and so on).
- Expand state (should this card open by default when playbook loads).
- Roles Required (should you limit this card to specific roles).

Activity Actions

Defines playbook actions like add using forms, conditions, and scripts, and what buttons appear on a card. You can configure these buttons:

- Location, where the buttons appear.
- Button type and color.
- How the button is implemented (server script, client action, or a UI component modal).

Activity actions also work with displaying buttons and icons that can:

- Render a component (Add Approvers or Close Complete).
- Update the record (change its state).

To make changes to the default configurations, see Update playbook experience configurations.

Configure HR Playbook Experiences

Use Playbook Experiences to modify the default playbook experience configurations.

Before you begin

Role required: sn_hr_ws.admin

Note:
To make changes, clone the HR Playbook Experience record first.

Procedure

1. Navigate to **All** > **Playbook Experience** > **Playbook Experiences**.
2. Select **HR Playbook**.
3. Select the **Playbook Configurations** tab and select **true**.
   For information on the form fields, see Update playbook experience configurations.
4. Select the **Playbook Activity Overrides** tab and an activity override.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information on the form fields, see Set up playbook activity overrides.

5. After editing or creating, click **Update** or **Submit**.

Configure HR Playbook activity overrides

Create optional activity overrides for the default behavior of activities in your HR playbook.

Before you begin

Role required: sn_hr_ws.admin

Note:
Activity overrides are affected by the system property *sn_hr_agent_ws.use_uib_playbook_card_config*.

If this system property is true, Agent Workspace for HR Case Management Playbook Card Configurations are used, and it's activity overrides will apply. If this system property is false, which is the default value, Classic HR Service Delivery Agent Workspace Playbook Card Configurations are used, and it's activity overrides will apply.

You can also access Playbook Activity Overrides from Playbook Experiences. See Configure HR Playbook Experiences.

Procedure

1. Navigate to **All** > **Playbook Experience** > **Activity Overrides**.
2. Select an activity override or **New**.
   For information on the form fields, see Set up playbook activity overrides.
3. After editing or creating, click **Update** or **Submit**.

Configure HR Playbook activity actions

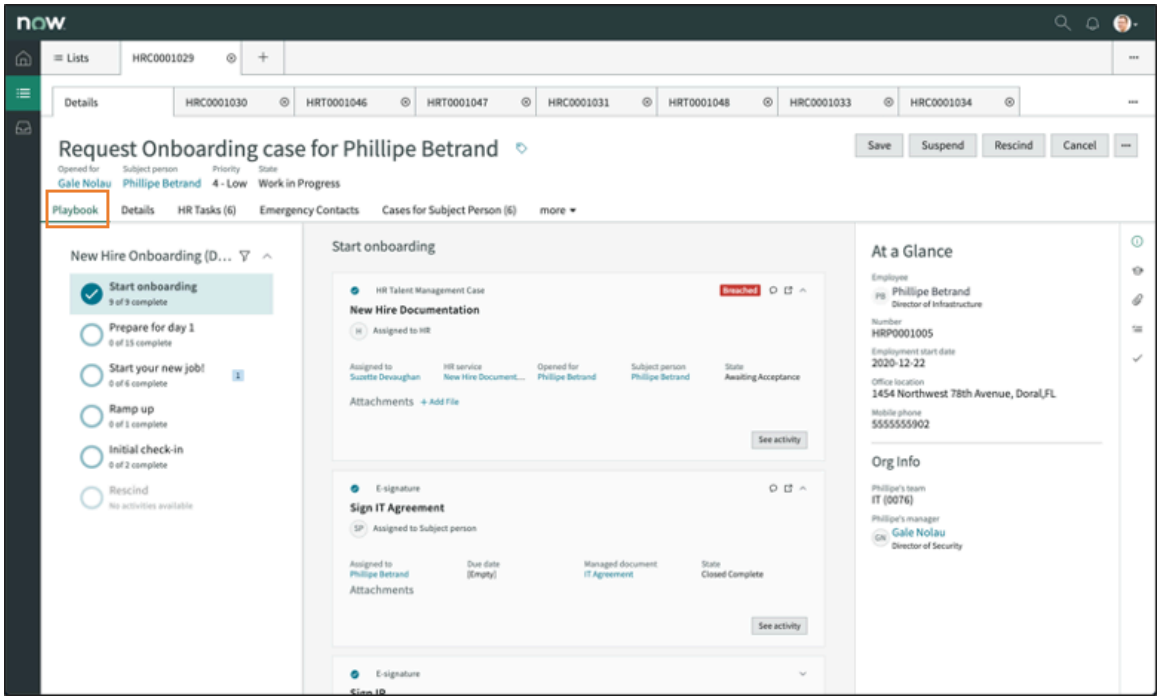
Use playbook actions to enable users to complete (add buttons and lists) and skip activities.

Before you begin

Role required: sn_hr_ws.admin

Procedure

1. Navigate to **All** > **Playbook Experience** > **Activity Actions**.
2. Enter or edit the form fields.
   For information on the form fields, see Customize Playbook actions.
3. After editing or creating, click **Update** or **Submit**.



Using HR Service Delivery Playbook

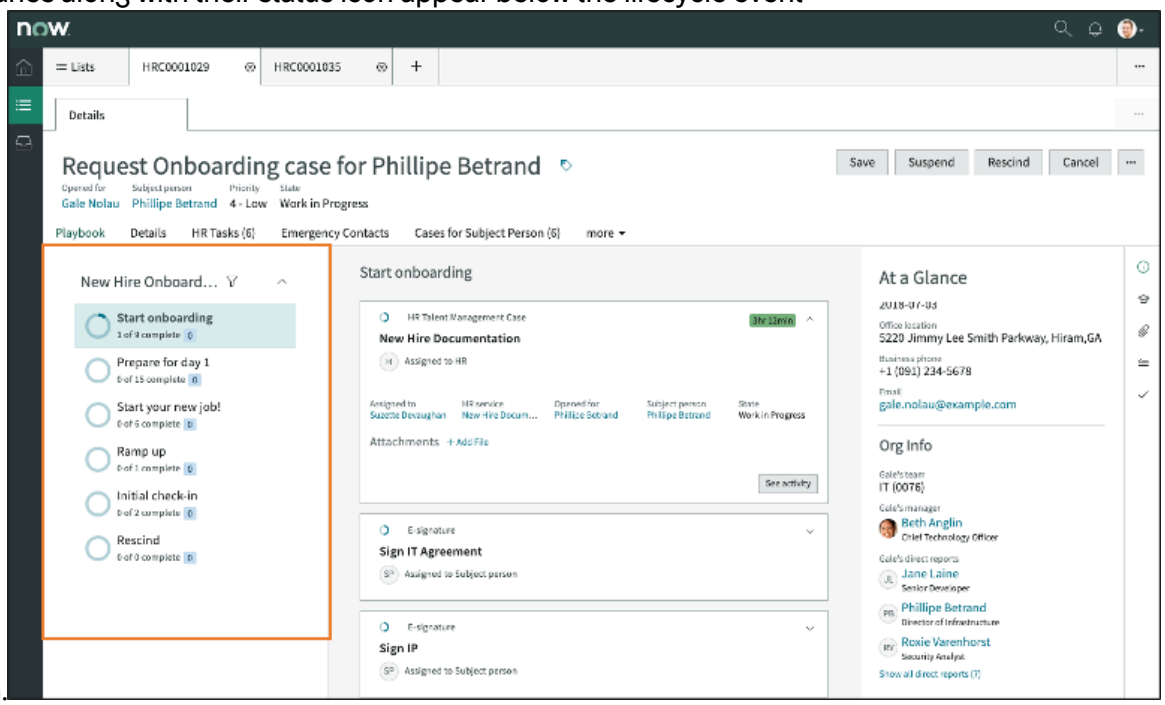
Currently, HR Service Delivery Playbook is only available for use with lifecycle event HR cases.

Playbook shows as a tab on the HR Agent Workspace form after displaying an LE case.

Note:
The Playbook tab only appears after the HR case has moved to **Ready** or **Work in Progress**. This triggers the lifecycle event and data appears for all launched activities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Selecting the Playbook tab allows you to view and work all lifecycle event activities and their child tasks in a single pane.



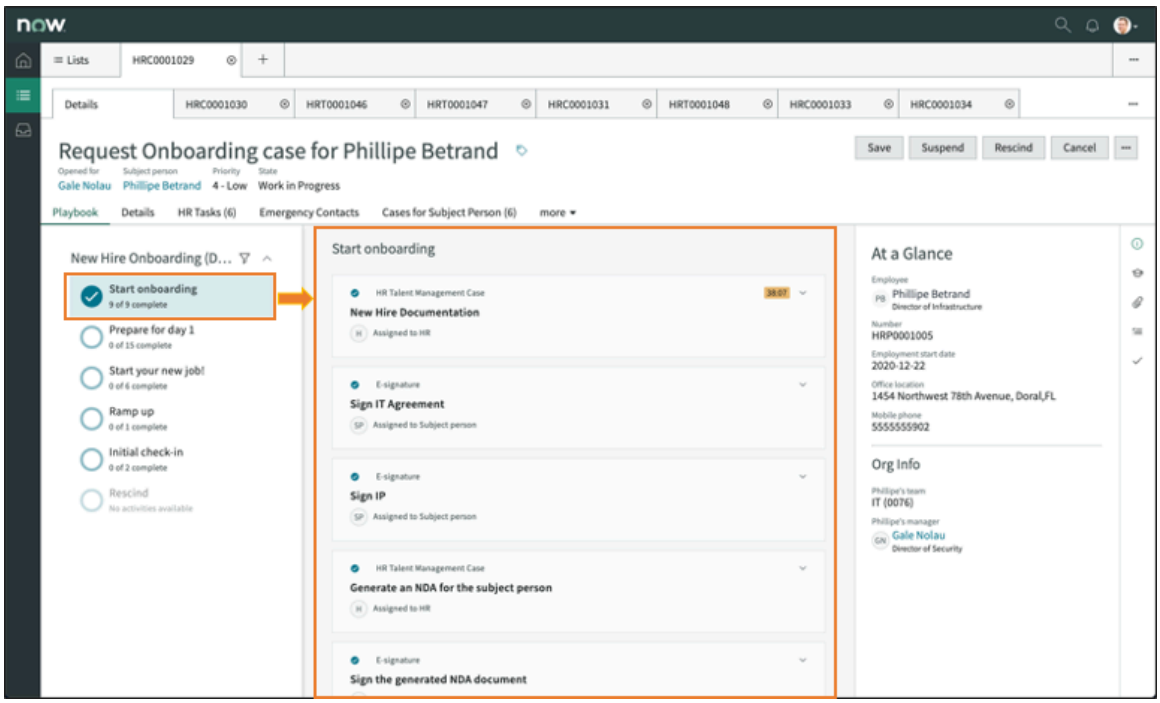
Note:
Tasks that are created ad-hoc and not part of the workflow do not appear in the tab, but may be accessible in regular related lists.

Lifecycle event

The title of the lifecycle event is at the top below the **Playbook** tab in the stage panel.

Activity sets

The list of lanes along with their status icon appear below the lifecycle event description.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Under the New Hire Onboarding (Demo) lifecycle event are five (5) activity sets:

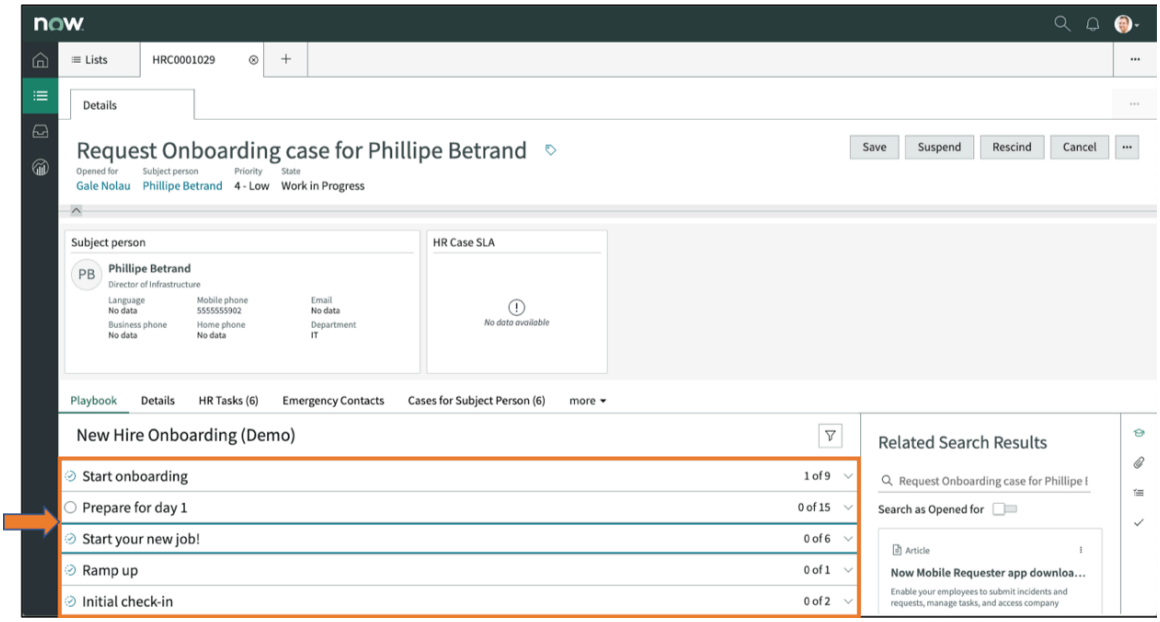
- Start onboarding
- Prepare for day 1
- Start your new job!
- Ramp up
- Initial check-in

Activities

Click on an activity set to view the associated activities.

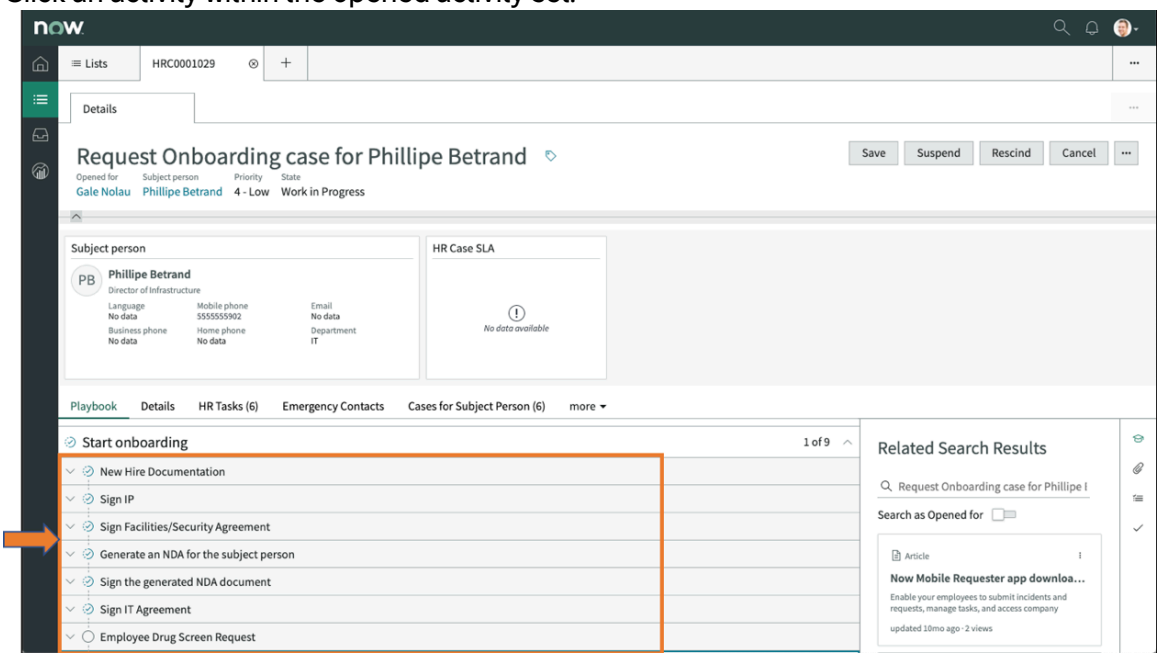
HR Playbook add a note or comment

You can add a work note or comment to an HR lifecycle event case from Playbook.



Before you begin

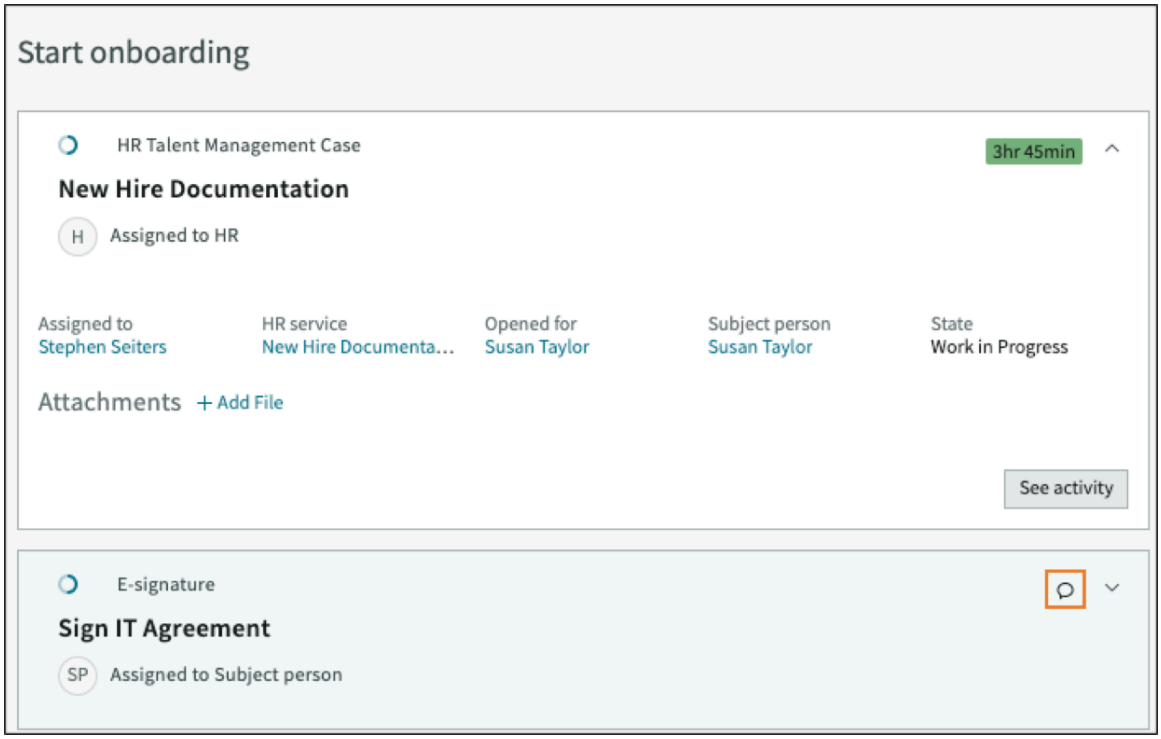
Role required: sn_hr_le.case_writer



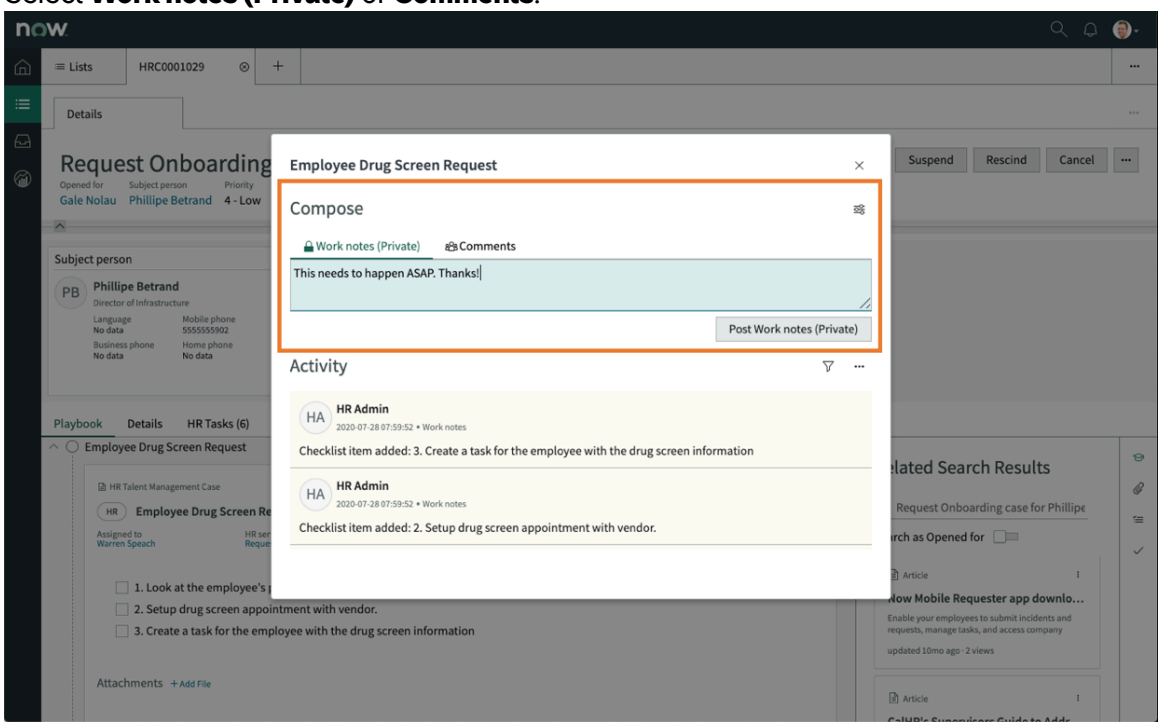
Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

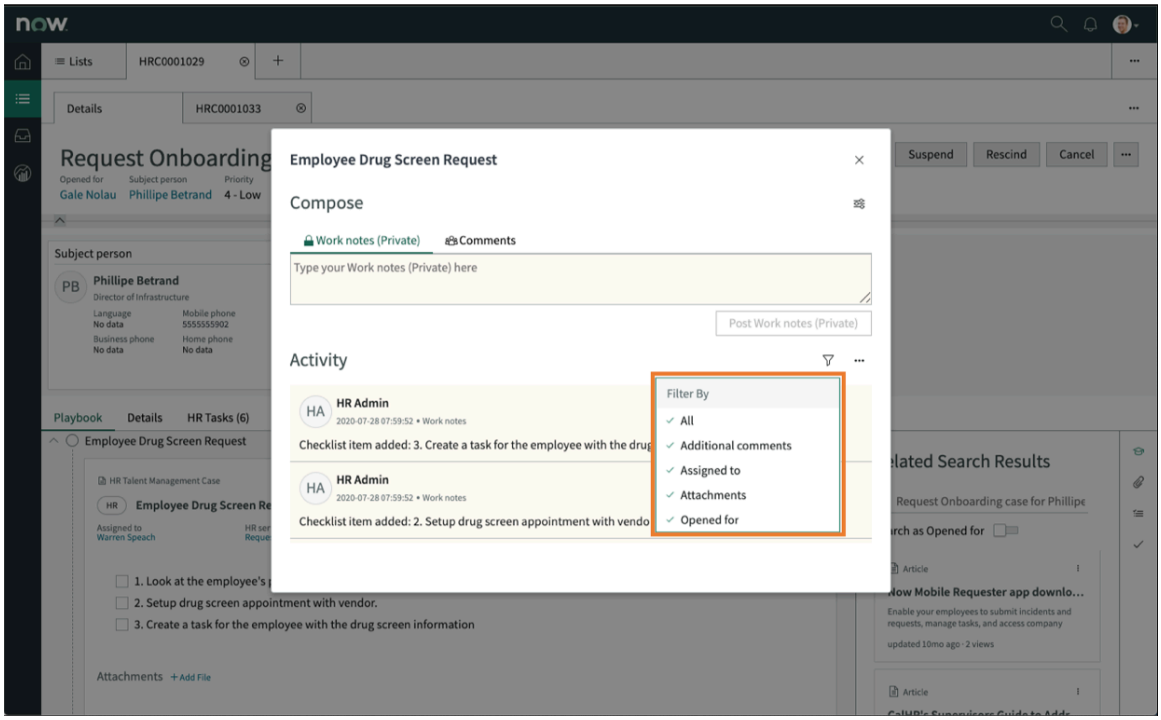


4. Click an activity within the opened activity set.

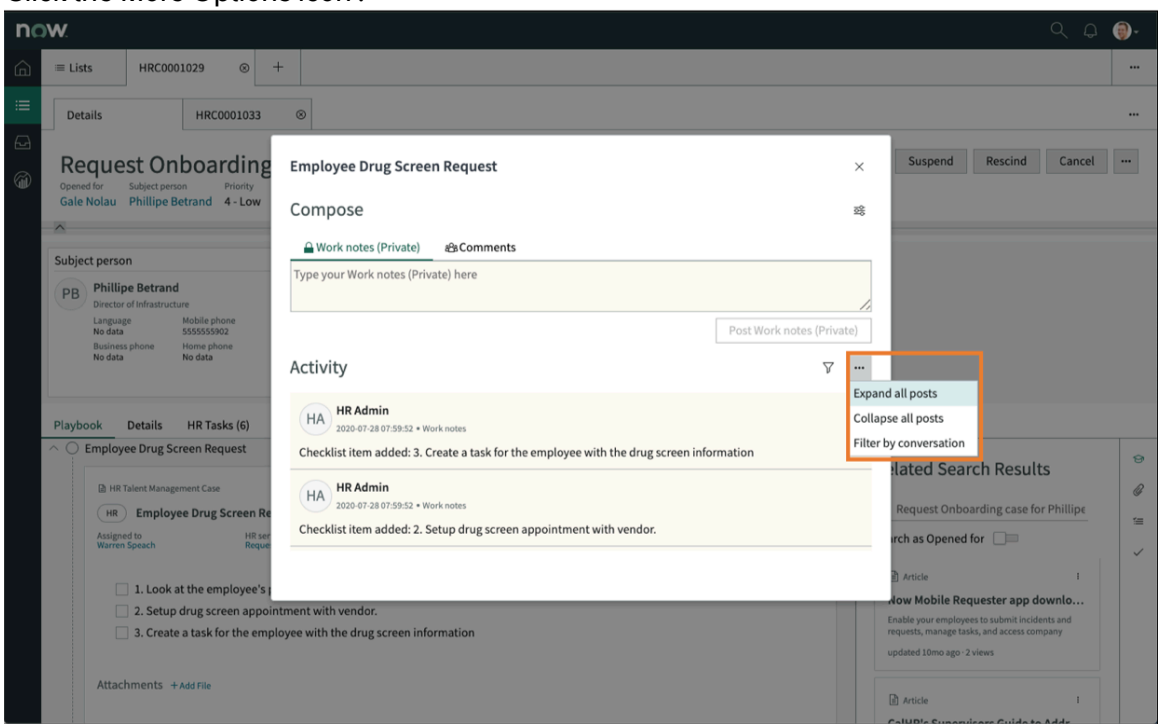


5. Click the **Add note or comment** icon .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



6. Select **Work notes (Private)** or **Comments**.



7. Enter text and click **Post Work notes (Private)** or **Post Comments**.
8. Click the **Filter by** icon to filter by activities.

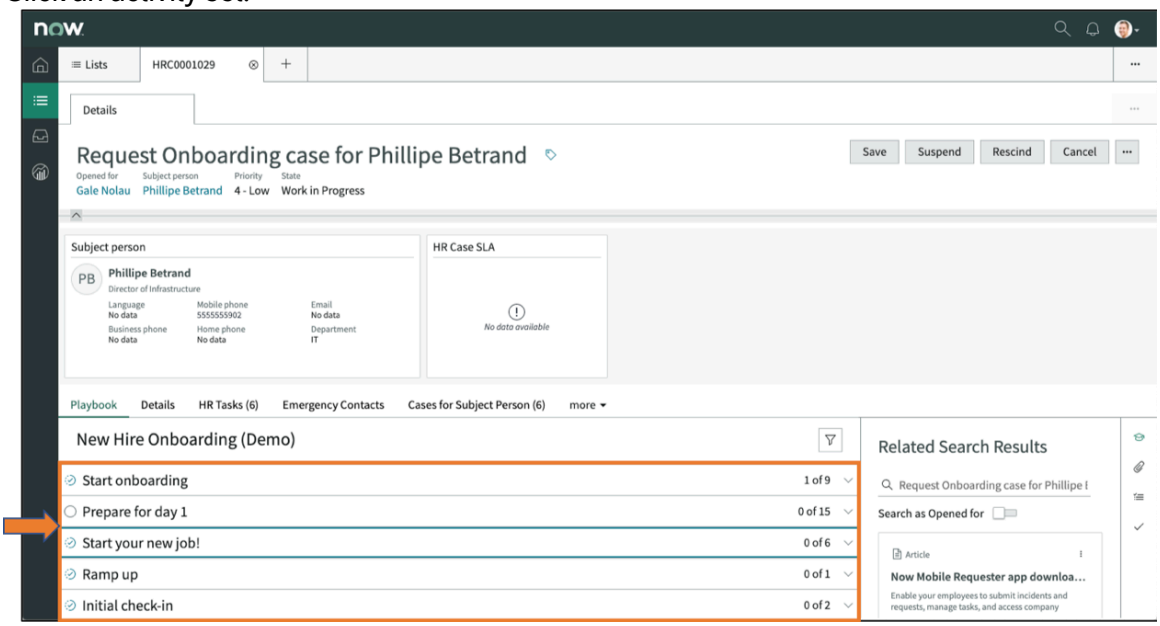
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Check the filters you want to show activities under.
10. Click the More Options icon .

11. Select the filters you want to use to show activities by.

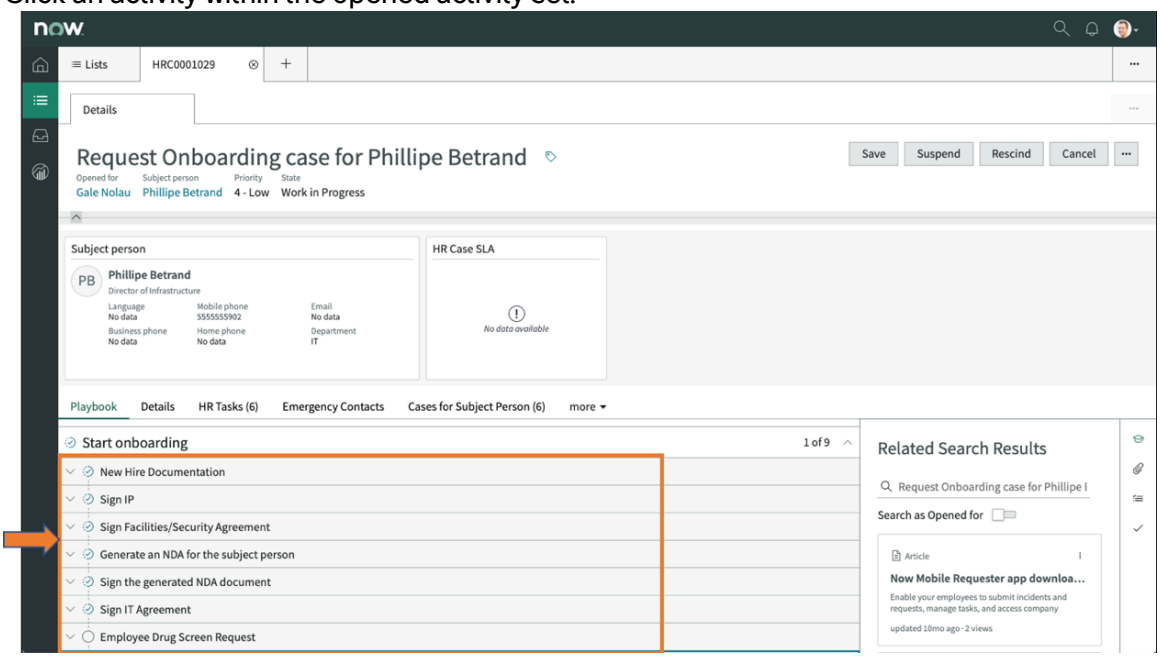
HR Playbook open a case or a task

You can open a sub-case or task on an HR lifecycle event case from Playbook.



Before you begin

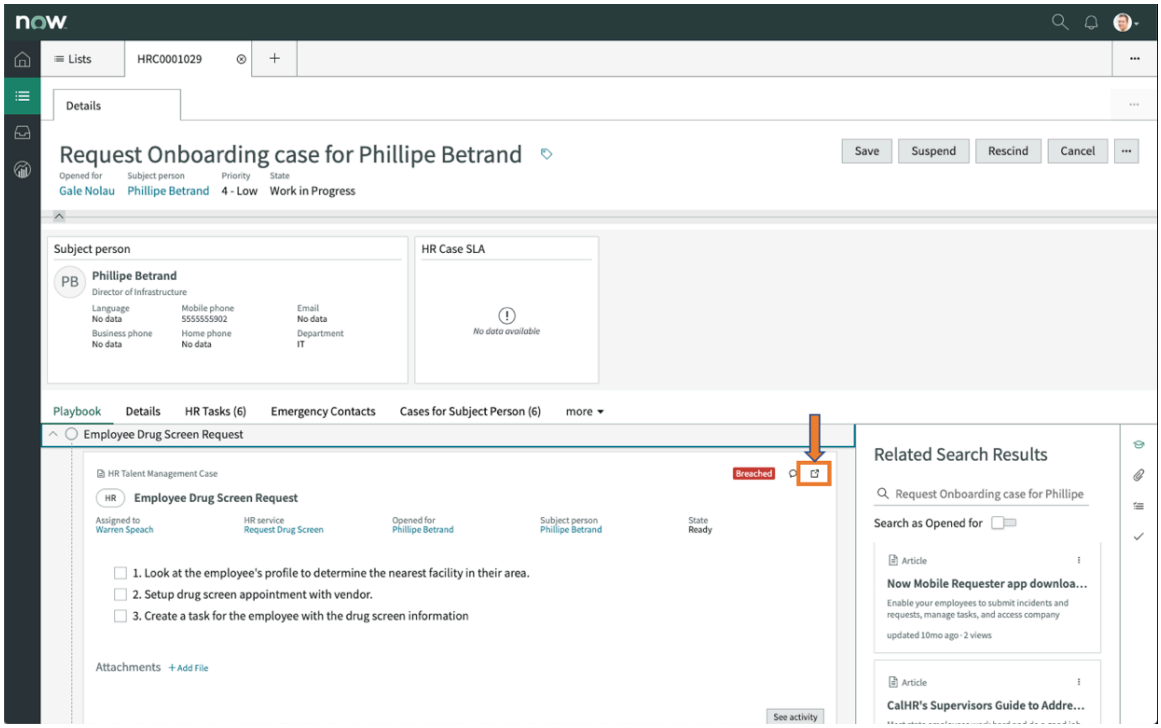
Role required: sn_hr_le.case_writer



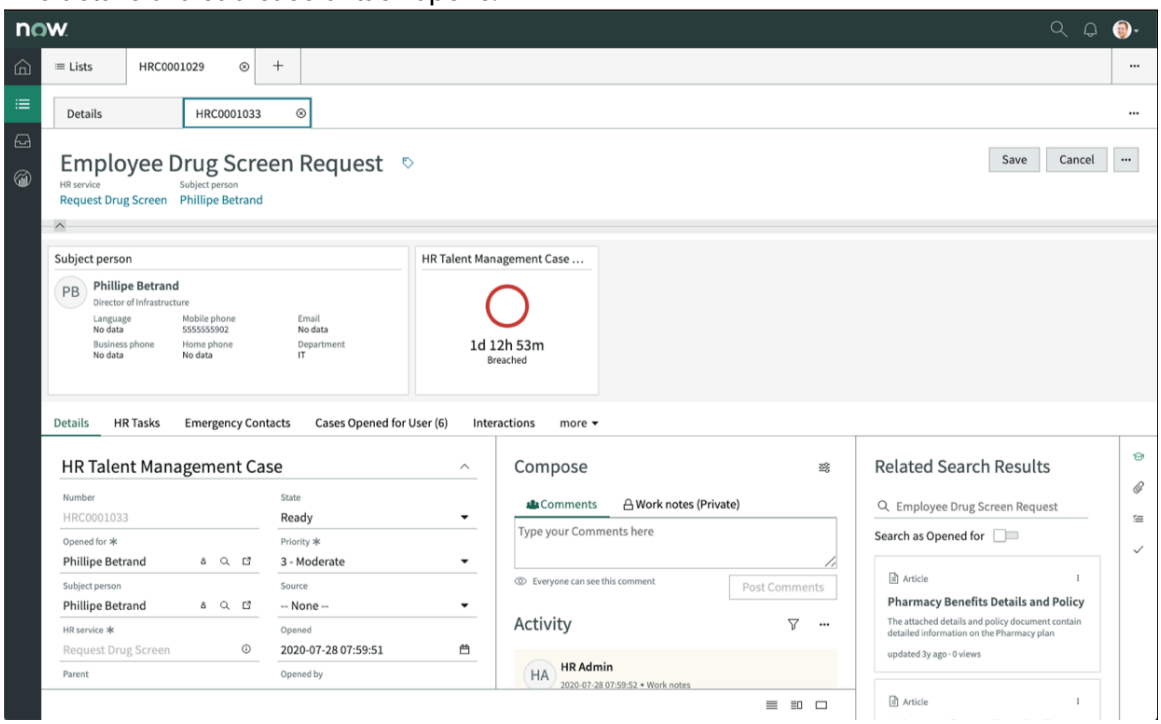
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.



4. Click an activity within the opened activity set.



5. Click the **Open task** icon .

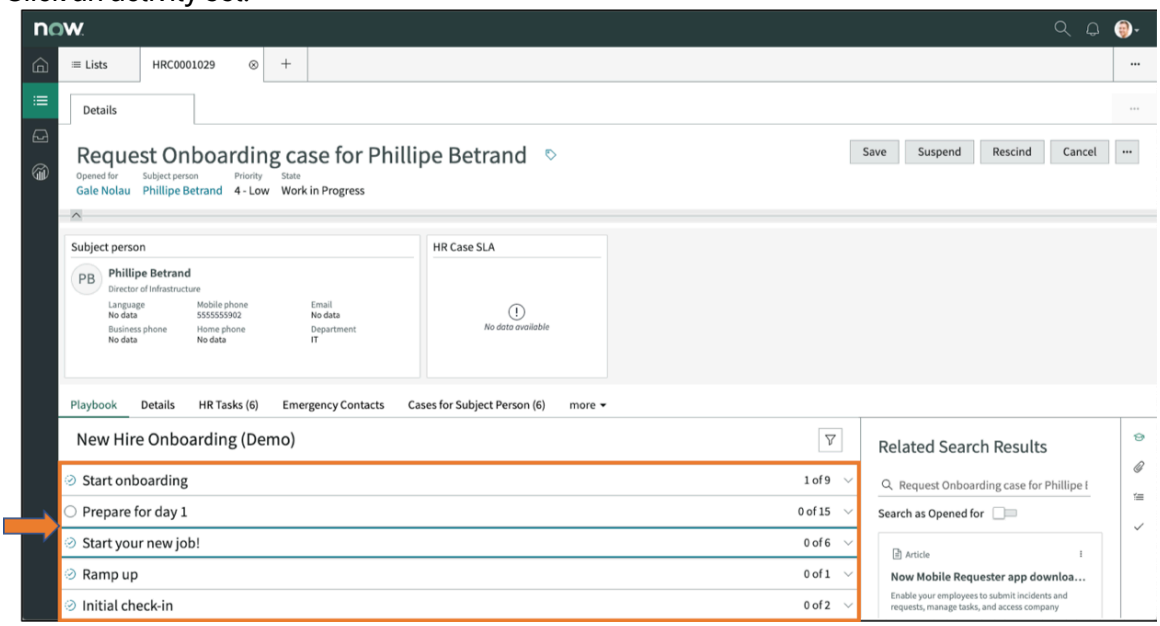
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. The details of a sub-case or task opens.

7. You can make edits and click **Save**.
8. To return to Playbook, click the **Details** tab.

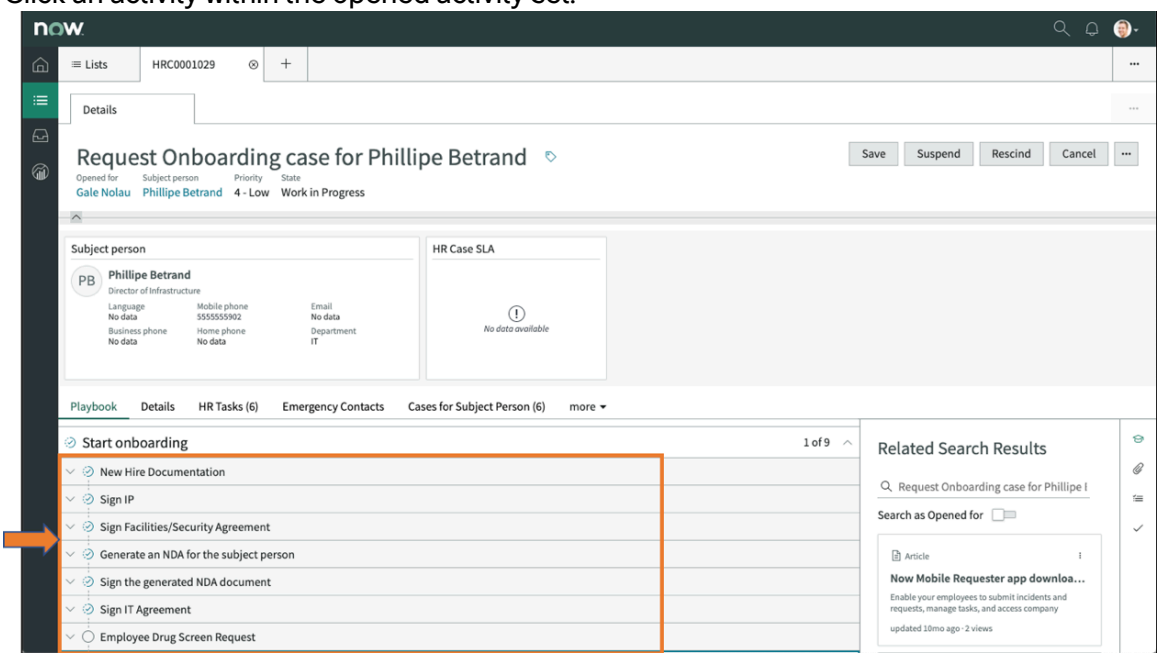
HR Playbook see activity

You can view the activity stream in a modal from HR Playbook.



Before you begin

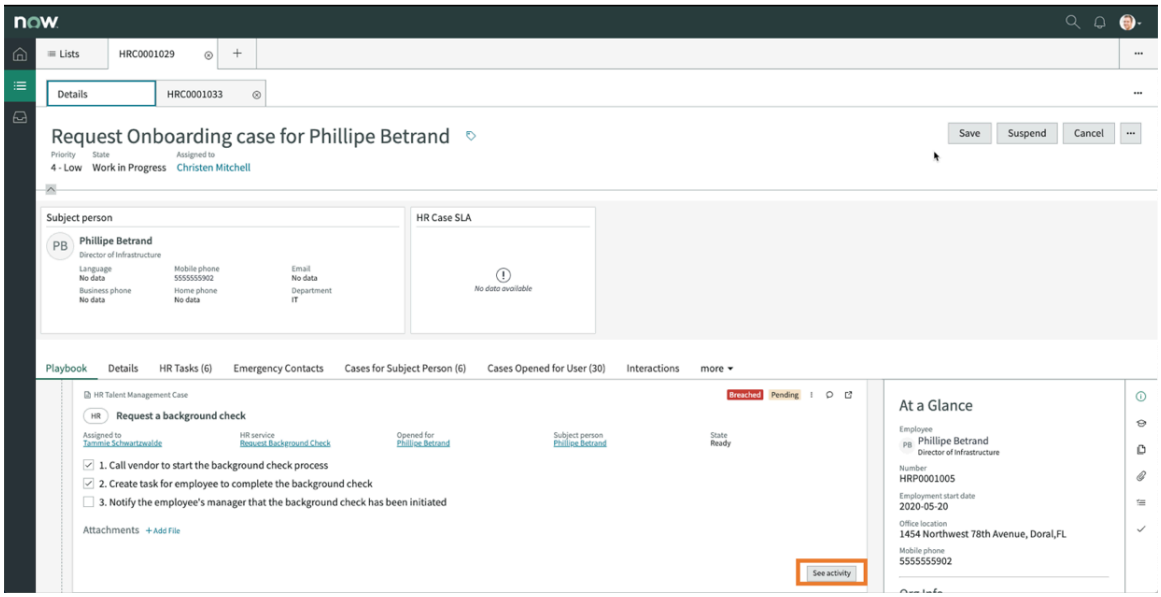
Role required: sn_hr_le.case_writer



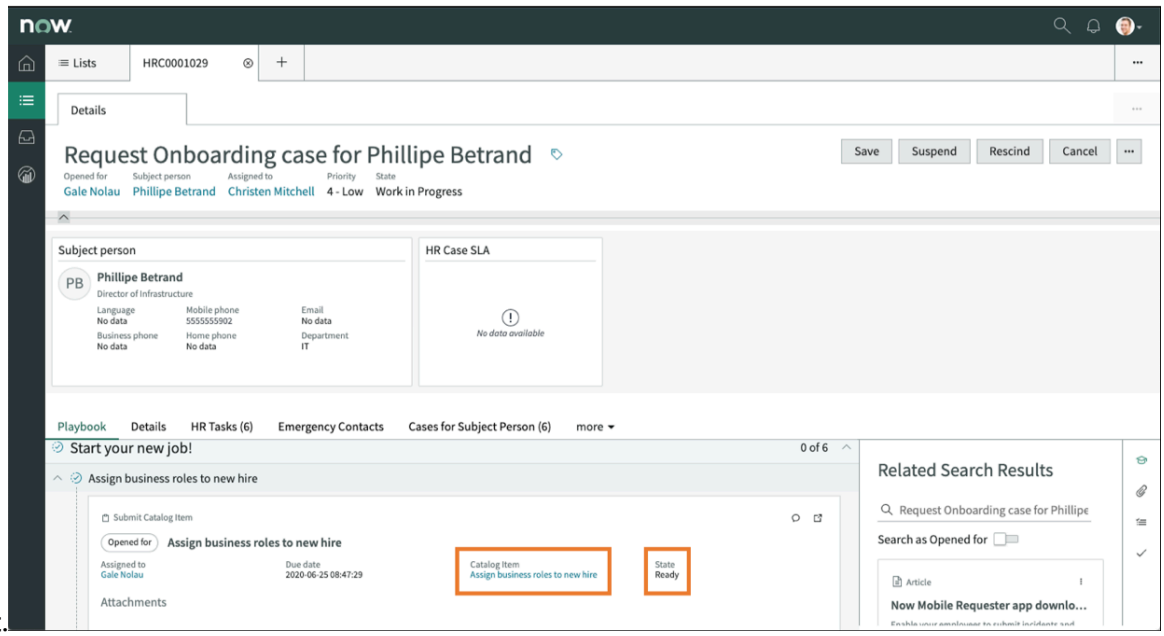
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.



4. Click an activity within the opened activity set.



5. Click the **See activity** button.

> **Note:**
> Only agents with access to the case card and not assigned to the case can see this button. The Assigned to agent does not see this button.

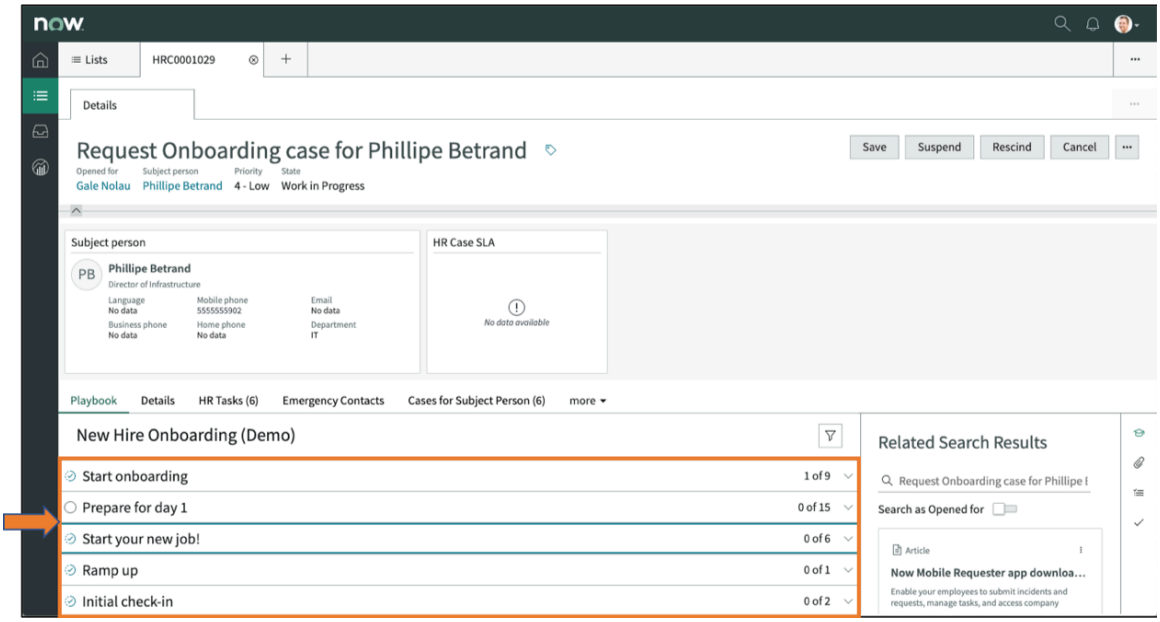
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activities can have links to training, videos, or catalog items. The state of the activity also appears to the right.

Note:
Clicking the Catalog Item link opens the general catalog page.

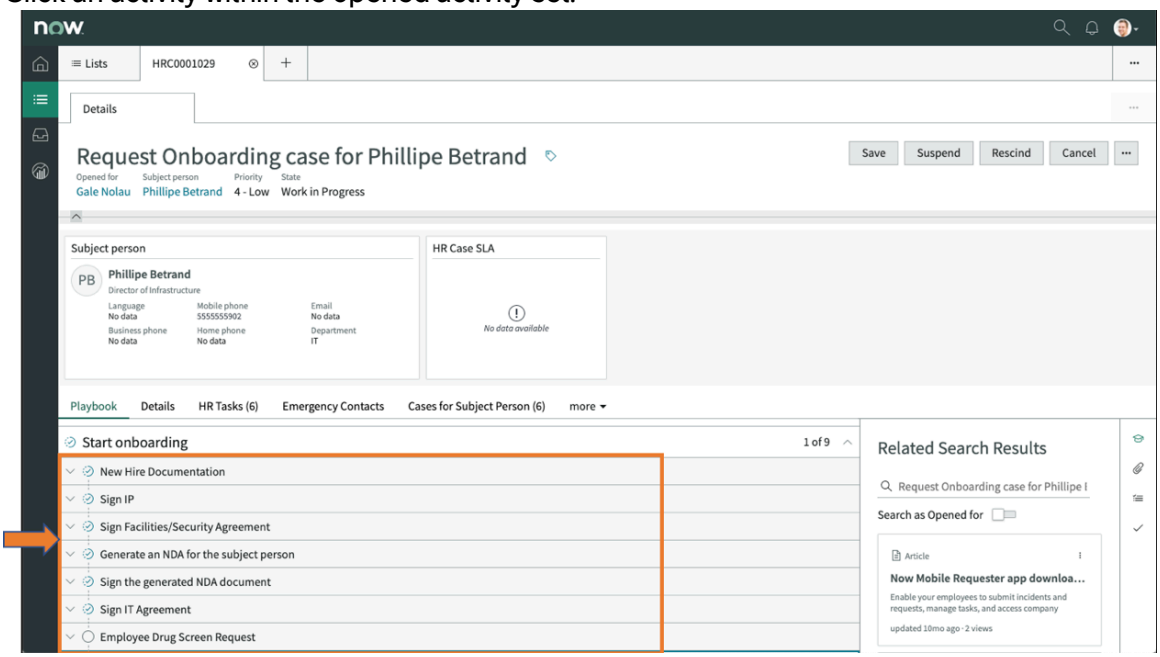
HR Playbook add attachment

Depending on the activity, you can add attachments from Playbook.



Before you begin

Role required: sn_hr_le.case_writer



Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.

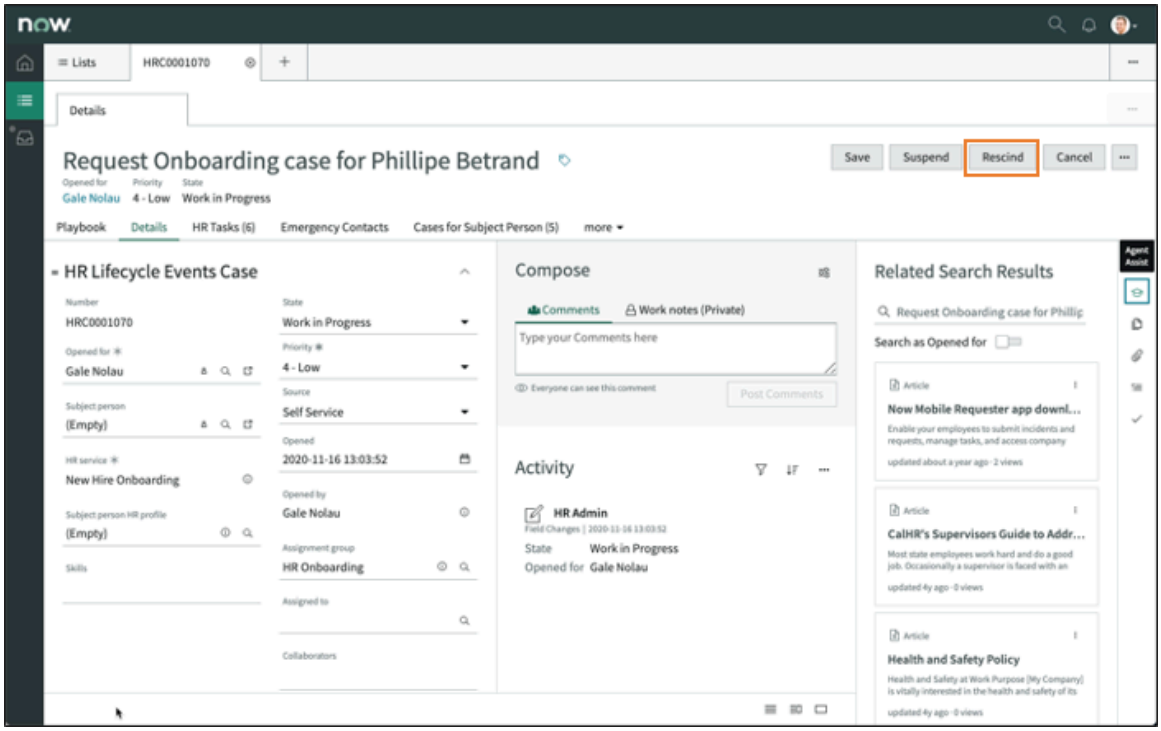
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click an activity within the opened activity set.

5. Click **+Add File**.
6. Select the file you want to up load and click **Open**.

HR Playbook rescind an activity

You can cancel and revert work done in a lifecycle event case using the rescind process.



Before you begin

Role required: sn_hr_le.case_writer
For more information, see Configure the rescind process for a Lifecycle Events activity.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click **Rescind**.

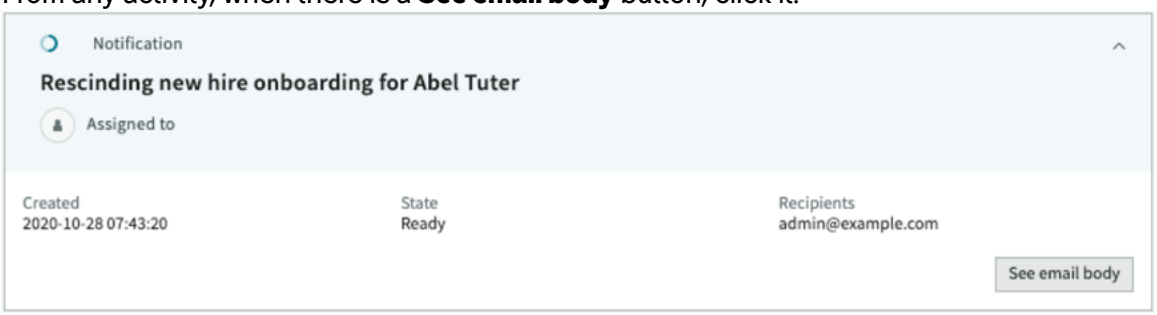
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Enter a reason for rescinding the case.

> **Note:**
> You cannot undo a rescind, so proceed with caution.

5. Click **OK**.
   The rescind activities appear and future activity sets are cancelled.

View email sent to opened for or subject person



As an HR agent, you can view emails to the opened for or subject person on a lifecycle event case.

Before you begin

Role required: sn_hr_le.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Select an activity set.
4. From any activity, when there is a **See email body** button, click it.

5. Click the **X** at the top, right corner of the email to close it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Service Delivery Agent Workspace integration with Universal Request

With the integration of HR Service Delivery Agent Workspace and Universal Request applications, you can provide a consistent user experience for employees while creating service requests.

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

HR Service Delivery Agent Workspace integration with Universal Request overview

A universal request gets created when an employee clicks the **Request help** option in Employee Center. A universal request routing agent analyses the issue (as HR department related) and creates an HR case from that universal request. After the case gets resolved by an HR agent, the state of the HR case changes to **Awaiting Acceptance**. Automatically, the state of the universal request changes to **Awaiting response**. Finally, after the employee accepts the resolution, the universal request gets closed and in turn, the HR case gets closed.

At any point in time, the HR agent can route the HR case back to the universal request queue with or without resolution.

All the important details, such users who are working on the issue, inter-department transfers, and work notes, are recorded in the universal request ticket providing complete visibility to the employee who has raised the request.

Activating the necessary plugins

After you have activated the Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) and Universal Request (com.snc.universal_request) plugins, you will notice that:

- The Universal Request form has the UI action to create an HR case.
- The **Universal Request** field appears on the HR case form only when an HR case is associated with a universal request record.
- The **Transfer** button appears on the HR case form to let an HR agent route an HR case back to the universal request, another department, or service.

Create an HR case from Universal Request in HR Service Delivery Agent Workspace

Create an HR case from a universal request record to restore service to a customer as soon as possible. After creating the HR case record, you can investigate potential solutions.

Before you begin

Role required: routing_agent and sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Navigate to **Universal Requests** > **All**.
3. Open the universal request record from which you want to create an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click **Create HR case**.
5. Fill in the required fields on the HR case form.

> **Note:**
> The **Employee Information** field values are automatically copied from the universal request to the HR case.

Create a new case form

Field	Description
COE	The Center of Excellence
HR service	The HR service type
Opened for	The person the ticket is opened for
Subject person	The subject person
Work notes	Other notes if any

6. Click **Submit**.
   The HR case number appears in the **Primary Ticket** field on the universal request form, and the ticket is listed in the **Associated Tickets** related list. Also the universal request number from which the HR case is created appears in the **Universal Request** field on the HR case form.

Work on an HR case of Universal Request in HR Service Delivery Agent Workspace

Provide resolution to an HR case that is initiated from a Universal Request.

Before you begin
Role required: routing_agent and sn_hr_core.case_writer

About this task
The state changes described in the procedure can be configured to suit your requirements. For more information, see Universal Request state mapping

Procedure
1. Open the HR case that is created from a Universal Request.
2. Click **Start Work**.
   The state of the case changes to **Work in Progress**.
3. Click **Closed Complete** when the resolution is provided.
   The state of the HR case is changed to **Awaiting acceptance** and the state of the universal request is automatically changed to **Awaiting response**. On the Employee Center:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If the user accepts the resolution, the state of the universal request is changed to **Closed**. The state of the HR case is automatically changed to **Closed Complete**.
- If the user rejects the resolution, the state of the universal request is changed to **In progress**. The state of the HR case is automatically changed to **Work in progress.**

> **Important:**
> If for some reason the HR agent clicks **Closed Incomplete** without routing the HR case back to universal request, then the behavior is as follows:
>
> - If the **Needs Additional Review** check box is selected on the universal request, the universal request will be in the **In progress** state, and the HR case will be in the **Close Incomplete** state.
> - If the **Needs Additional Review** check box is deselected on the universal request, the universal request gets closed based on the state mapping.

Transfer an HR case to Universal Request HR Service Delivery Agent Workspace

Transfer an HR case back to the Universal Request queue, or to another department with or without resolution.

Before you begin

Role required: routing_agent and sn_hr_core.case_writer

About this task

Configure the *sn_uni_req.transfer_type* property in the Universal Request properties page to determine how to handle the primary ticket transfers. For more information, see Universal Request properties.

Procedure

1. Open the HR case that you want to transfer.
2. Click **Transfer**.

> **Note:**
> The **Transfer** option is displayed only if you are a part of the assignment group or if the case is assigned to you.

3. In the transfer dialog box, provide the following details.

> **Note:**
> Based on your transfer type configuration, the given fields are displayed. For more information, see Universal Request Properties.

- **Action**: Select if the case should be transferred to another department or back to Universal Request
- **Department**: Select the department from the list.
- **Service**: Select the specific service of the chosen department.
- **Transfer reason**: Select the reason from the list.
- **Transfer notes**: A brief description for routing the primary ticket that you want to pass to the UR Routing agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Copy additional comments and attachments**: Deselect if you do not want to transfer the ticket with additional comments and attachments. By default, all attachments and comments are transferred.

  Note:
  Work notes are not copied while transferring.

4. Click **Transfer**.

Result

- On the HR case form, you can view the transfer reason and transfer notes.
- The state of the HR case is changed to **Closed Incomplete** and the transfer reason and transfer notes are copied to the universal request.
- The state of the universal request remains **In progress**.

Note:
The state changes mentioned can be configured. See Transfer configuration for more information.

Alumni Service Center

The Alumni Service Center is your dedicated hub to stay connected with the organization after your tenure.

Benefits of an Alumni Service Center

The Alumni Service Center portal provides the following benefits to the alumni and organization:

Alumni

- Alumni can conveniently retrieve payroll information, tax documents, and employment verification letters without manual requests or delays. This self-service capability saves time and ensures secure access to sensitive data.
- The portal provides tailored job recommendations based on alumni profiles, previous roles, and preferences. Alumni can also track application status and set up notifications for new opportunities.
- Alumni can update personal contact details, manage preferences, and control visibility settings (public/private) for their profile, ensuring accurate and secure records.
- The portal offers access to company news, announcements, and knowledge resources, helping alumni remain updated on organizational developments and industry insights.

Organization

- Maintain relationships with former employees, making it easier to rehire skilled talent when needed.
- Reduce recruitment costs and shortens onboarding time, as returning employees are already familiar with company processes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Enhance organization's brand and networking by offering a structured alumni experience, and creating a positive impression even after employees leave.
- Access to a broader and pre-qualified talent pool through job listings and personalized recommendations offered in the alumni portal.

Content analytics

The Alumni Service Center provides a separate content analytics tracking profile. For more information, see Create a Content Analytics tracking profile.

Employee to alumni transition

A personal email is required to transition from an employee to an alumnus.

You can perform this transition for individuals or in bulk. To access the Alumni Service Center, users must have one of the following roles:

- [sn_asc.admin]
- [sn_asc.manager]

Note:

- You can add the alumni roles (sn_asc.admin) and (sn_asc.manager) to any user. For more information, see Assign a role to a user.
- To be able to login and access all the alumni features, you must be a user in the Alumni table (sn_asc_user) and not in the User table (sys_user).

Ensure that alumni aren't included in your UU licensing counts

When an employee transitions to an alumnus, and you're using Unrestricted User (UU) licensing, you'll want to avoid inflating user counts when providing services to your alumni. Ensure that the following parameters are updated in the [sys_user] table.

- If you have HRSD Enterprise, with HR or unrestricted users, and you use Alumni Service Center, you need to make users inactive in the [sys_user] table as part of the offboarding process. Once the record is inactivated, it won't be counted in the UU count.

  Note:
  The Alumni Service Center offboarding workflow creates a new alumni record in the Alumni Users [sn_asc_user] table that provides alumni access to the Alumni Service Center services and resources when the User [sys_user] profile is inactive.

- If you have HRSD Professional, with HR or unrestricted users, and are providing alumni services outside of Alumni Service Center, to help prevent former employees from being included in the UU count, you need to create a custom alumni table. The custom alumni table extends the [sys_user] table. When an employee leaves the organization, you can change the user class of the employee in the [sys_user] table from **User** to the sys class name that corresponds to the custom alumni table.

  Note:
  Creating a custom alumni table to service alumni outside of Alumni Service Center is considered a custom implementation. Refer to Create a table for more information.

For additional information, see the DEF1000205 | HR User [KB1125071] article in the Now Support Knowledge Base.

10	Your active items.
11	Quick links and latest videos.

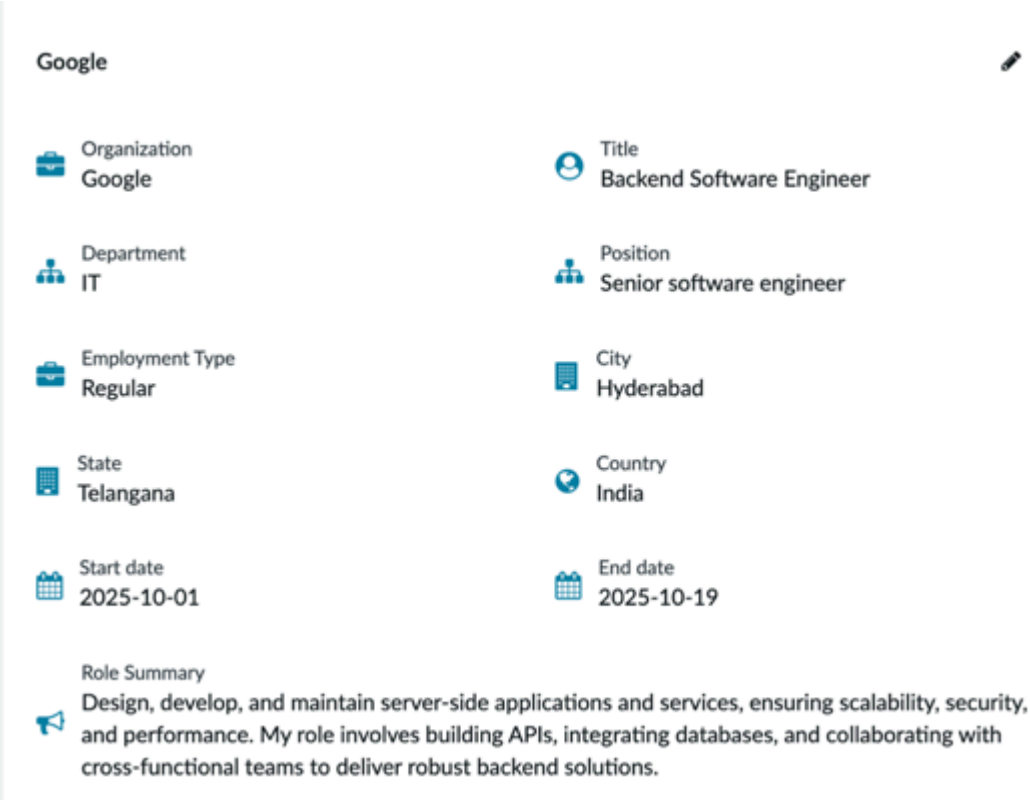
The Alumni home page uses some of the widgets from **Content Delivery**. For more information, see Content Publishing.

For more information about the service portal, see Service Portal.

For more information on the Employee Center, see Employee Center.

Alumni profile

Update your personal details and maintain your employment history in your Alumni profile.



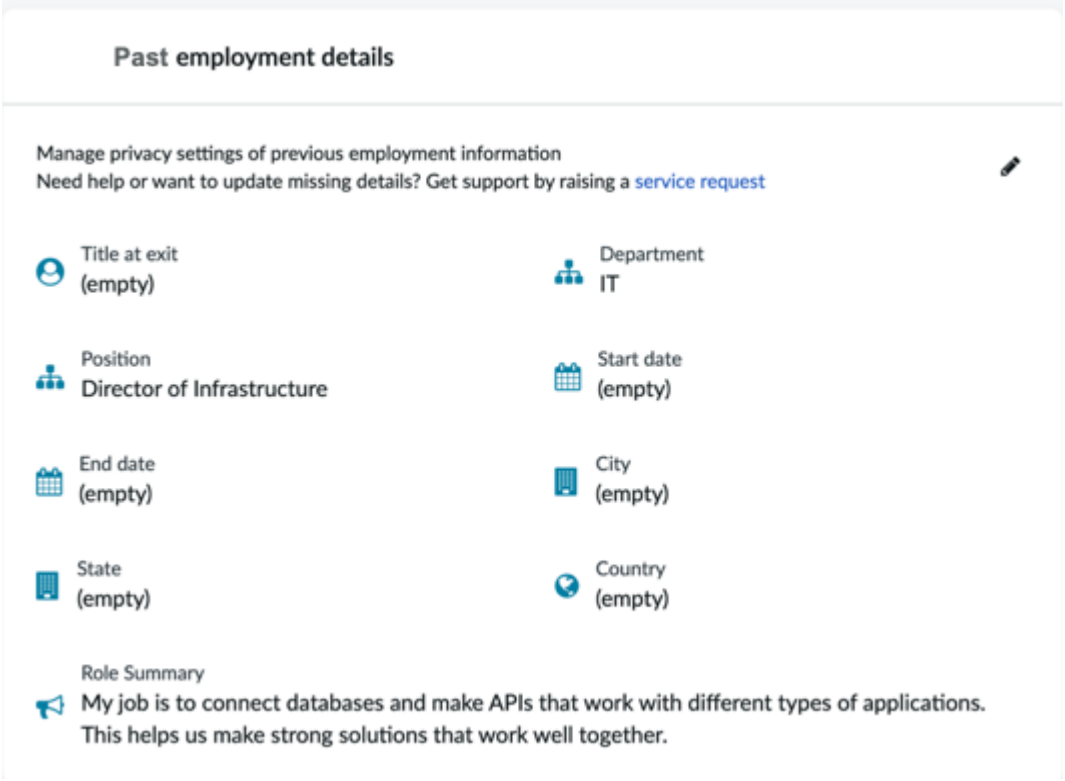
Role required: sn_asc.alumni

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Profile** option under your name contains various widgets to manage your data like, legacy and latest employment details, personal details, documents, and preferences.

Other employment details

Your latest employment details for all the companies you've worked with.

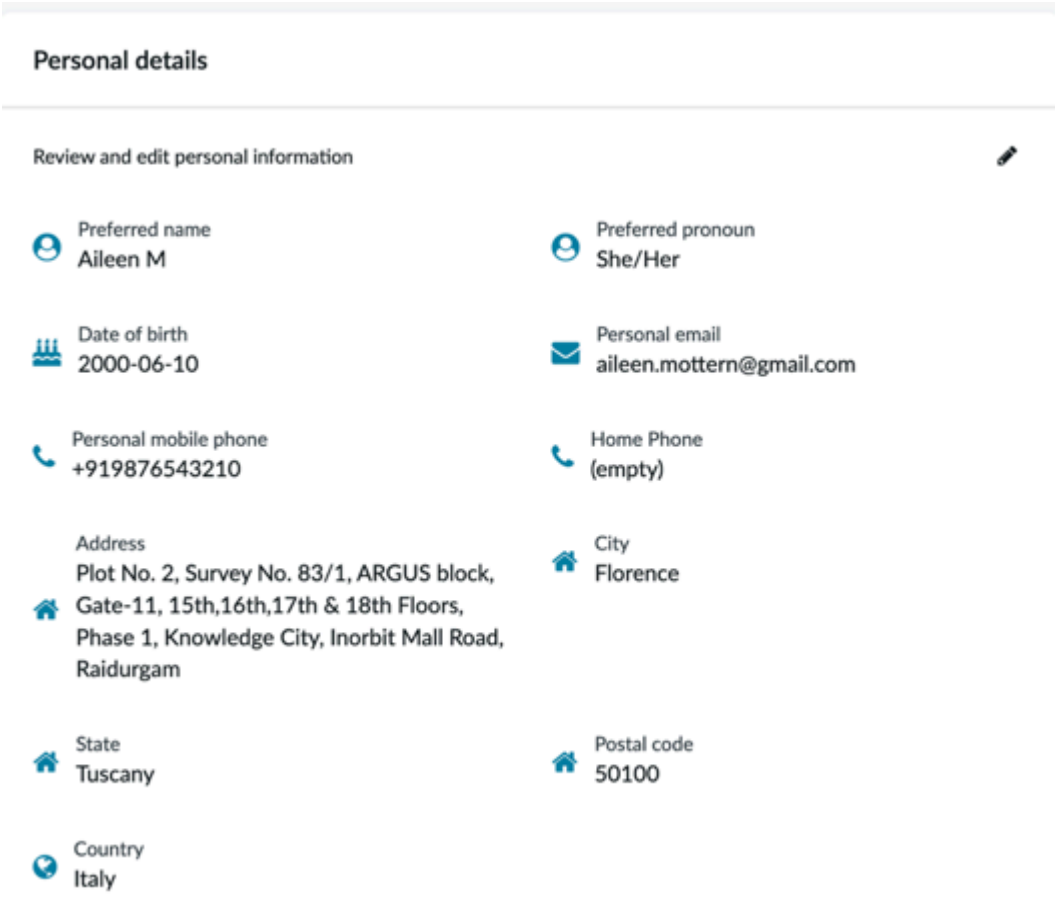


For more information, see Add other employment details.

Past employment details

Your legacy employment details in the organization appear here automatically from your ex-HR profile. If any details are missing, create a service request to update them.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:
If this section doesn't show your details, your HR profile has been purged. Select the **Request profile update** button to create a service request. Provide your employment details, and an agent creates a new HR profile and update it.

Personal details

Your personal details are retrieved and displayed here automatically from your ex-HR profile. You can edit all your personal details, except for your personal email ID.

Note:
In cases your alumni account is created through the automated offboarding process, the relevant details are automatically retrieved from the HR profile.

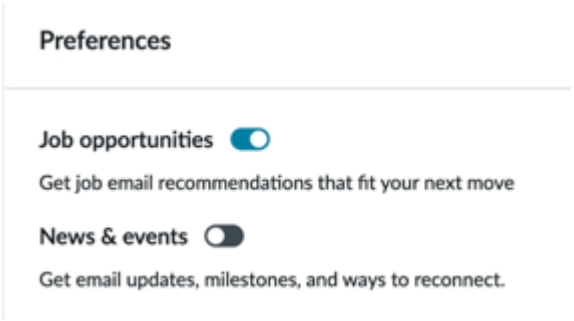
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Edit personal details.

Documents



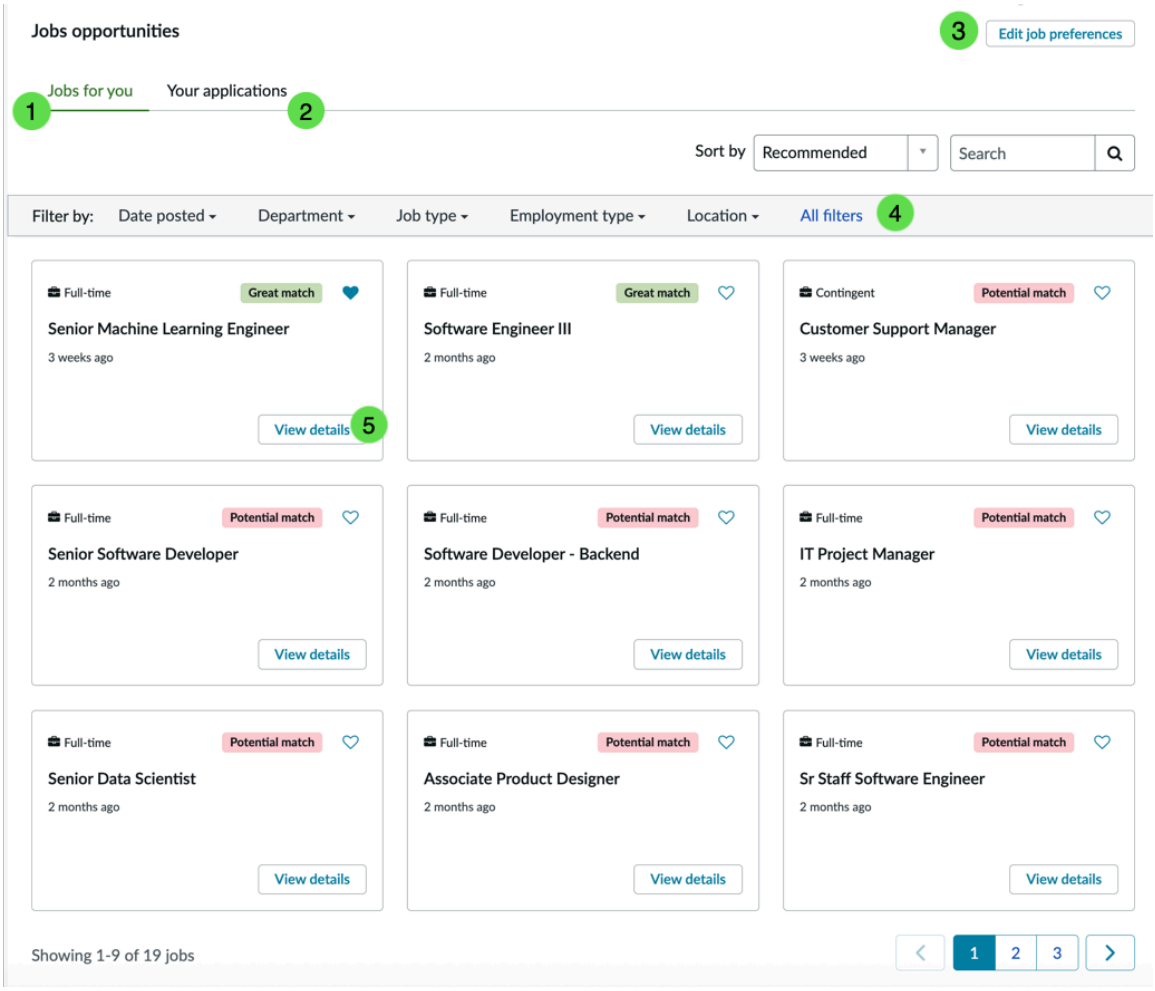
Access your documents shared through the service requests directly from your profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Preferences

Enable or disable email notifications for recommended job opportunities, news, and event updates.

Alumni job opportunities



Discover job opportunities tailored to your skills and interests, and explore roles that align with your experience.

Role required: sn_asc.alumni

Job opportunities are displayed based on your preferences and current role, using scoring from your legacy and current employment details. The Job Opportunities tab shows external roles sourced from the Job Posting table [sn_ta_hiring_core_job_posting] in Hiring Core.

Note:
Organizations can import external job data into the Hiring Core plugin to display these roles as job opportunities for alumni.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Job opportunities page

Number	Element description
1	View the job opportunities. Jobs displayed here are matched using an algorithm that calculates scores based on your job preferences and latest employment details. Depending on the scores, the jobs are assigned tags as follows: • Great match: 80 -100 score • Good match: 60–80 score • Potential match: 40–60 score **Note:** • In case both job preferences and alumni latest employment details are not available, the job recommendation algorithm falls back on the legacy employment details, which may not be relevant now. • To receive suitable job recommendations, it is imperative that you select your job preferences, and also enter your employment details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Job opportunities page (continued)

Number	Element description
2	Track your job application status. **Note:** Your application is processed in the linked Applicant Tracking System (ATS). The information displayed here is fetched from ATS for your convenience.
3	Your job preferences that help in generating job recommendations. For more information, see Alumni job preferences. **Note:** Admin can configure this form according to the organization requirements. For more information, see Configure alumni job preferences.
4	Filters to search for relevant jobs. You can filter on location, job type, employment type, date posted, and department.
5	View job details like description and applicant criteria. Select **Apply**, which will take you to ATS to further process your application.

Setting up your Alumni Service Center

Set up your Alumni Service Center so you can communicate with your former employees or non-employees.

The following plugins must be activated prior to activating the Alumni Service Center (sn_asc) plugin:

- Human Resources Scoped App: Core (com.sn_hr_core)
- Employee Center (sn_ex_sp)

For more information on requesting activation of a plugin, see Request a plugin.

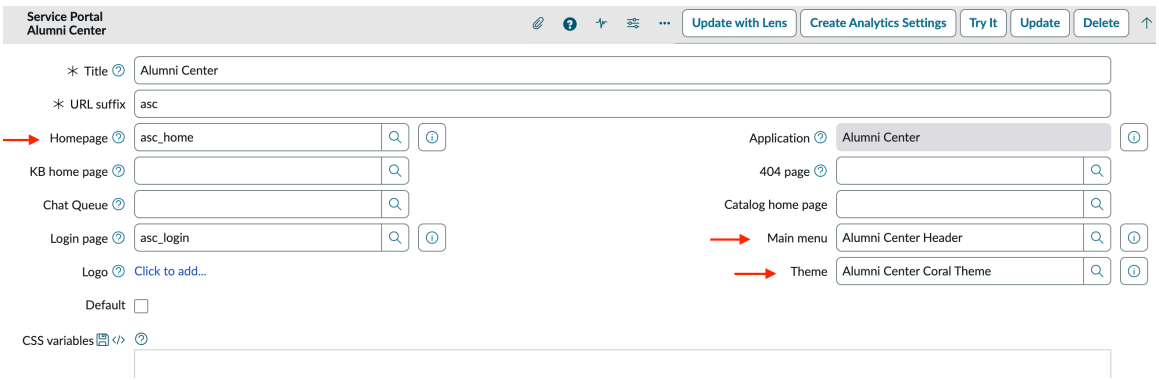
To set up Alumni Service Center, you must request activation for the following: Explicit Roles (com.glide.explicit_roles). The Alumni Service Center uses this plugin to help segregate external users from internal users.

Note:
The Explicit Roles (com.glide.explicit_roles) plugin must be activated before activating the Alumni Service Center (sn_asc). For information on installing a ServiceNow Store application, see Install a ServiceNow Store application.

Roles installed

By activating the Alumni Service Center [sn_asc] plugin, the following roles install and are required to configure your Alumni Service Center:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Roles installed with Alumni Service Center

Alumni Service Center role	Description	Contains roles
Alumni Service Center admin [sn_asc.admin]	Lets you configure all aspects of Alumni Service Center.	• Role delegator [role_delegator] • Skill user [skill_user] • Alumni Service Center manager [sn_asc.manager] • Live feed administrator [live_feed_admin] • Chat administrator [chat_admin} • Service Portal administrator [sp_admin] • Service Catalog administrator [catalog_admin]
Alumni Service Center Alumni [sn_asc.alumni]	Lets you access Alumni Service Center as an alumnus.	External Alumni Service Center user [snc_external]
Alumni Manager [sn_asc.manager]	Lets you manage Alumni Service Center, which includes alumni records and some of the import process.	Content Delivery manager [sn_cd.content_manager]

Alumni Service Center – Service Portal configuration update

After upgrading the latest platform version or the Alumni Service Center Store App version, manually update the following three fields in the Alumni Service Center – Service Portal record to preserve your customizations. These values do not update automatically.

- Home page: asc_home
- Main menu: Alumni Center Header
- Theme: Alumni Center Coral Theme

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Supported task types

The base system supports the following task types:

- Collect Employee Input
- Checklist
- E-signature (HR core only)
- Mark when complete
- Take survey
- Upload documents
- URL
- View video

Adding content

The Alumni Service Center uses the same widgets as the HR Service Delivery Employee Center. For more information, see Employee Center widget instance options.

Use Content Publishing to add and display content to your Alumni Service Center. For more information, see Content Publishing.

To add content as part of a campaign, use **Content Automation**. For more information, see Working on Campaigns.

Load data

To add alumni users in bulk, use **System Import Sets**. For more information, see Import sets key concepts.

At a minimum, the file you upload must have a header and the personal email for each alumnus.

Note:
Use the Imported Alumni [sn_asc_user_imp] table when importing users.

Transform and edit

After loading your file:

- Transform your import set so that it moves to staging.
- Go to **Staged Alumni** to view what was loaded from your file.
- You can edit the loaded users, ensure unique user IDs, or approve if they look valid.
- From the list view of Staged Alumni, click **Import All Approved** to start the Import Approved Staged to Alumni scheduled job.

Configure alumni creation

As an admin, use the various configurable methods to enable seamless employee-to-alumni transition.

Before you begin

Role required: sn_asc.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Review personal details - Enable offboarding employees to review and update their personal details to promote seamless communication.
- Automated onboarding – Configuration to create alumni records automatically for employees who meet the specified criteria during the employee offboarding. For example, employees who are not in the active status and who's employment end date was five days ago.
- Admin import – Configuration to bulk upload alumni records through data imports.
- Alumni Self-registration – Configuration to auto-approve or manually approve the alumni profiles created using self-registration on the alumni portal.

Procedure

1. Navigate to **All** > **Alumni Service Center** > **Administration** > **Configuration**.
2. In the Personal Details Review tab, select the **Add Filter Condition** to configure a trigger condition, which creates a task for employees during their offboarding stage.
   This HR task enables employees leaving the organization to verify and update their personal information, which includes personal email, phone number, and shipping address. These details are essential for post-employment communication. Employees can verify their details in two ways:
   - Verify Personal Details activity – offboarding Journey lifecycle event
   - Verify Personal Details task – In Employee Center To-dos.
3. In the Automatic creation tab, select the **Add Filter Condition** to configure specific conditions on creating the alumni record automatically.

   a. In the Default state field, select Approve or Approval needed.
   The alumni records are automatically created in the staging table. Selecting Approved creates an alumni staging record with Approved status, and selecting Approval needed creates an alumni staging record that require manual approval.

   Note:
   A scheduled job (Import Approved Staged to Alumni) generates alumni records for the staging entries in the Approved status.

4. In the Admin import tab, select the relevant properties to configure the alumni record status when the data is imported via an Excel sheet.

Admin Import Properties form

Property	Description
Default state (sn_asc.import.default.state)	The default status for the staged alumni records when created by an import set and default transform map. The default state is Approved.
Alumni suffix (sn_asc.import.alumni.suffix)	Suffix added to the end of the user names for alumni records. Having a suffix distinguishes between your current work force and alumni.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
	Note: The default suffix provided is .alum. You can also customize the suffix to match your requirements.
Username max tries (sn_asc.import.user_name.max.tries)	The number of times the application attempts to add a digit to an alumni user ID to create a unique ID. For example, when you have multiple people with the same name, the system adds a unique number at the end of each user name. This property determines how many times the system adds a unique number to similar user IDs. **Note:** The default value is 50. If zero (0) is entered, only the suffix is used to distinguish between users with the same name.

5. In the Self-registration tab, select the default approval status to create alumni users without manual intervention when users self-register on the alumni portal.
   - Default state - Use this status when the self-registered user details don't match with the details in the HR profile. Selecting Approved creates an alumni staging record in Approved status.
   - Default state(Alumni verified) - Use this status when the self-registered user details match with the details in the HR profile. Selecting Approved creates an alumni staging record with Approved status.
   - Default fields to match on - Use the configurable JSON script where you can add fields in the 'must' (all the fields must be matched) and 'any' (any one of the fields must be matched) categories to map the alumni user internally.

     For example,

```
{
  "must": [
    {
      "sourceField": "first_name",
      "targetTable": "sys_user",
      "targetField": "first_name"
    },
    {
      "sourceField": "last_name",
      "targetTable": "sys_user",
      "targetField": "last_name"
    }
  ],
  "any": [
    {
      "sourceField": "u_employee_number",
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
      "targetTable": "sys_user",
      "targetField": "employee_number"
    },
    {
      "sourceField": "email",
      "targetTable": "sn_hr_core_profile",
      "targetField": "personal_email"
    }
  ]
}
```

Note:
A scheduled job (Import Approved Staged to Alumni) automatically generates alumni records for these approved entries.

6. Select **Update**.

Properties for Alumni Service Center

Use properties to control the behavior of the Alumni Service Center.

Before you begin
Role required: sn_asc.admin

Procedure

1. Navigate to **All** > **Alumni Service Center** > **Administration** > **Properties**.
2. In the Personal email domains (sn_asc.self_registration.personal.email.domains), select the domain names that are considered when alumni is self-registering.
3. Select **Save**.

Add an import set of alumni for Alumni Service Center

Use **System Import Sets** to upload your file of alumni.

Before you begin
Role required: import_set_loader

Procedure

1. Navigate to **All** > **System Import Sets** > **Load Data**.
2. Select **Existing table** from **Import set table**.
3. Select the **Imported Alumni [sn_asc_user-imp]** table from **Import set table**.
4. Check **File** from the **Source of the import** field.
5. Click **Choose File**.
6. Find the file that contains your list of alumni and select it.
7. Click **Open**.
8. Click **Submit**.
9. Click **Run Transform**.
10. Click **Transform**.
11. To view the import set, click the import (ISET) set number link.
    To view a list of staged alumni, see Edit staged users for Alumni Service Center

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Edit staged users for Alumni Service Center

Use **Staged Alumni** to ensure the import set upload and transform process ran correctly. It also ensures that your uploaded alumni are configured with the correct user ID.

Before you begin

Role required: sn_asc.admin

Procedure

1. Navigate to **All** > **Alumni Service Center** > **Administration** > **Staged Alumni**.
2. Review the list of staged alumni.
3. Look for and correct duplicate names and duplicate user IDs.
4. Click the number associated with a user to edit it.
5. Enter or edit the fields on the form for the user.

Staged alumni form

Field	Description
Number	The automatically assigned staging number of the user.
State	The status of the user. ○ Approval Needed ○ Approved ○ Alumni Created ○ Duplicate ○ Invalid ○ Denied
Personal email	The personal email of the user. How your company contacts the user.
Internal user	The user record found in the User [sys_user] table for the alumnus.
Internal profile	The HR profile of the user.
Alumni	The name of the user found in the Alumni [sn_asc_user] table.
First name	First name of the user.
Last name	Last name of the user.
Date format	Date format to override the system date format.
Time zone	The time zone the user resides in.
Proposed user ID	The user ID created after you fill in the fields and click **Generate Proposed User ID**. The user ID creates based on the personal email address provided with a suffix from the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	properties. For more information on the suffix, see Properties for Alumni Service Center.

6. Select **Save**.
7. Select **Generate Proposed User ID**.
8. Select **Update**.
9. After making edits, ensure that valid users are in the **Approved** state.
10. Return to the **Staged Alumni** list view.
11. Select **Import** or from the **Staged Alumni** list, select **Import All Approved** at the bottom.
12. Select **Import All**.
    For more information about the default state for staged alumni, see Properties for Alumni Service Center.
    The Import Approved Staged to Alumni scheduled job runs.

Configure alumni job preferences

Set the questions that the alumni can choose to receive tailored job recommendations.

Before you begin

Role required: sn_asc.admin

Procedure

1. Navigate to **All** > **Tables** > **Alumni job preference configs**.
2. Select **New**.
3. In the form, fill in the following details.

Job preferences form

Field	Description
Name	Name for the preference.
Active	Make the preference active or in active.
Application	The application where this preference question is displayed. Alumni center in this case.
Domain	The scope of this preference. For example, global.
Display type	The selection type for the preference options. For example, single select or multi select.
Display question	The question that is displayed to the alumni for this preference.
Order	The order in which this question is displayed to the alumni. For example, 1 displays the question as first.
Weight	The weightage for this question. Based on this weightage the jobs are scored and displayed to the alumni. For example,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	entering 100 for this question has more weight compared to 80 for another question. Any number you enter here is normalized internally.
Field	The options for the preference question are extracted from this field. This field refers to the field values in the Job postings (sn_ta_hiring_core_job_posting) table.

4. Select **Save**.

System notifications for Alumni Service Center

The Alumni Service Center (ASC) uses system notifications to alert alumni with an email providing their user ID and a separate email with a password.

When an alumnus logs in for the first time, they are prompted to change the password provided.

The base system provides the following email notifications:

- Invite Alumni Email - Username
- Invite Alumni Email - Temp Password

You can customize the message to suite your company's requirements.

For more information, refer to Email and SMS notifications.

Configure email and password resets for the Alumni Service Center

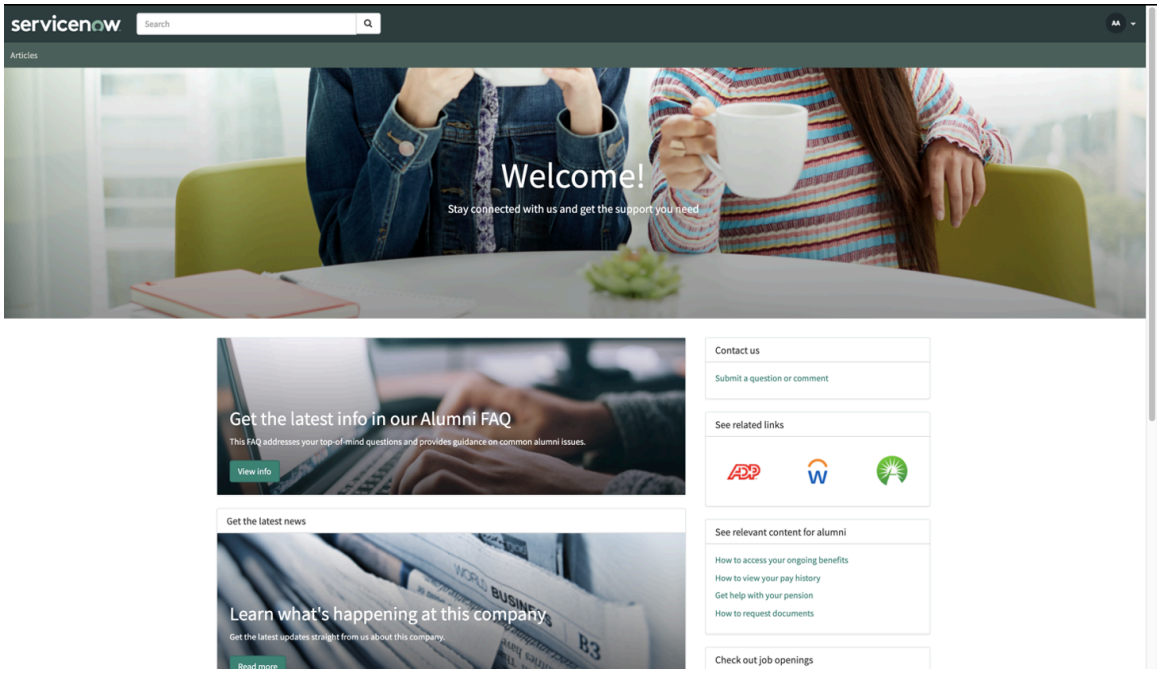
Use **Notifications**, to configure the emails that send the user ID and password reset for your alumni.

Before you begin

Role required: admin

Procedure

1. **System Notification** > **Email** > **Notifications**.
2. Click **Invite Alumni Email - Username** and edit the **Message HTML** to reflect your company's message on providing an alumnus with a user ID.
3. Click **Preview Notification** to preview your message.
4. Click **Update**.
5. Click **Invite Alumni email - Temp Password** and edit the **Message HTML** to reflect your company's message on providing a temporary password to your alumni.
6. Click **Preview Notification** to preview your message.
7. Click **Update**.



Using your Alumni Service Center

Company alumni or former employees use the Alumni Service Center to obtain information or maintain communication with your former company.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Accessing the Alumni Service Center website

Role required: alumni (sn_asc.alumni).

Articles

The **Articles** tab provides an FAQ section and Knowledge Base (KB) articles. For more information, see HR Knowledge Management.

Services

The **Services** tab enables alumni to make service requests. For more information, see HR services and Employee requests page.

To-dos

Use the **To-dos** tab to respond to requests. Employees can review their personal details, available as a task in the To-dos list, to ensure their information is up to date for future communication. For more information, see Employee to-dos page.

Requests

Use the **Requests** tab to view all requests you have made in the past. For more information, see Employee requests page.

Profile

Select Profile from the list and edit your contact information. For more information, see HR Profile.

Register on the Alumni Service Center website

As an external user, sign up using a personal email address and other details to self-register as alumni.

Before you begin
Role required: sn_asc.alumni

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to Alumni Service Center website.
2. Select **Register as alumni** on the login page.
3. Fill in the fields on the alumni self-registration form.

Alumni self-registration form

Fields	Description
First name	Your first name.
Last name	Your last name.
Personal email address	Your personal email address. **Note:** The First name, Last name, and Personal email address fields are required. The email address that you provide here is verified with the existing personal email addresses in your HR profile to create the alumni record.
Employee number	Your employee number in your previous organization.
Employment start year	Beginning year of your employment.
Employment end year	Terminating year of your employment.
Date of birth	Your date of birth.
Country code	The country code for your mobile number.
Mobile number	Your mobile phone number.
Street	Your street name.
City	Your city name.
State / Province	Your state or province.
Zip / Postal code	Your postal or zip code.
Country	Your country.

4. Select the check box to agree to the privacy policies and terms and conditions.
5. Select **Sign Up**.

Result

A mail is sent to your personal email, which contains a verification link. After you select the link, a staging record is created for you so that the admin can verify your details and move the record to Approved or Rejected status.

- If approved, the user ID and password are communicated to you via the personal email address provided.
- If rejected, you receive an email to fill in the required details by selecting to register again, and the verification process is repeated.

Alumni job preferences

Set your preferences for tailored job opportunities. Jobs that best match your profile are recommended based on these preferences.

Before you begin

Role required: sn_asc.alumni

Procedure

1. Navigate to *Alumni Service Center* > **Job opportunities**.
2. Select **Edit job preferences**.
3. In the form, choose your job preferences.

Job preferences form

Question	Options
Which type of job do you prefer?	Your preferred job type. For example, Hybrid, In office, and Remote.
Which job levels are you interested in?	Your preferred job levels. Job levels are specific to your organization. For example, IC1, IC2, IC3, IC4, M1, and M2.
How much travel are you comfortable with?	Slide the bar to your preferred percentage, which is the amount of time that you are willing to travel for this job.
Which work locations do you prefer?	Your preferred work location.
Employee type	Your preferred employment type. For example, Contractor, Full-time employee, Part-time employee, and so on

Note:

- If you don't select any option for a question, that question won't be considered for score calculation.
- Alumni preferences are configured by your organizations administrator. You can see different preferences depending on how your organization configures the preferences. For more information, see Configure alumni job preferences.

4. Select **Save**.

Add other employment details

Update the alumni profile with additional employment details to ensure an accurate career history and provide tailored job opportunities.

Before you begin

Role required: sn_asc.alumni

Procedure

1. Navigate to **All** > *Alumni Service Center* > **Profile**.

Note:
Select your name to see the profile option.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Select Other employment details.
3. Enter your experience details by filling in the fields.

Other employment details form

Fields	Description
Organization	Your company name.
Title	Your title in this company.
Department	Your department in this company.
Position	The position you have held in this company.
Employment type	Your employment type whether full-time, part-time, or a contractor.
City	Your city name.
State	The state you belong.
Country	Your country.
Start date	Your employment start date in this company.
End date	Your employment end date in this company.
Role summary	Write a brief description of your role in this company.

Use the Public or Private option for each field to control whether other alumni can view these details.

4. Select **Save**.
5. **Optional:** Select **Preview profile** to see how your profile looks to other alumni.

What to do next

- Use + icon to add additional employment details.
- Use ✎ to edit the existing employment details.
- Use the **Delete** button to delete an existing employment information.

Edit personal details

Review your personal details and edit them if necessary.

Before you begin

Role required: sn_asc.alumni

Procedure

1. Navigate to **All** > *Alumni Service Center* > **Profile**.
2. Select Personal details.
3. Edit your personal details in these fields.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Personal details form

Fields	Description
Preferred name	Your name.
Preferred pronoun	The pronoun you prefer.
Date of birth	Your date of birth.
Personal mobile phone	Your personal mobile number.
Home phone	Home phone number, if you have any.
Address	Your residential address.
City	The city you reside in.
State	The state you belong.
Postal code	Your postal code.
Country	Your country.

Use the Public or Private option for each field to control whether other alumni can view these details.

4. Select **Save**.

Manager Hub

The ServiceNow® Manager Hub increases managers self-service and proactive engagement with their team by providing insights and recommended actions for what's most urgent and important to drive team success. It enables managers to grow as leaders through curated and personalised resources.

Managers have a complex job that is to focus on achieving business outcomes, and also help their employees develop and grow. Manager Hub helps reduce managers time, energy, and actions and help them focus on things that will keep their team supported and engaged.

Following are a few key features of Manager Hub:

Engage with your team

Approve team requests and act immediately on any tasks that need your attention.

Have a better engagement with your team by staying informed on the upcoming team events, such as employee birthdays, work anniversaries, or reminders on new hire joining dates.

View the time zones of employees across the globe. Be more conscious about the time the meetings are scheduled or when certain requests are sent out to the team.

Focus on your team needs

Effectively manage a globally disbursed team with a mixture of direct reports, as well as managers that have their own direct reports. Have an insight into data of all workers including employees, interns, and contingent workers and the various transitions that they may have.

Create and publish customized plans for key employee transitions, such as career growth, internal mobility, promotions, using the Journey Accelerator templates. Automate the new hire onboarding process using Journey Designer.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Understand where employees stand in the process of their journeys. Identify if any cross-functional team requests are blocking productivity of your employees.

Get your team insights

View historical trends and statistics about your team and organization. Get insight-based suggestions on improving processes with tips and tools, or upcoming deadlines, or supporting employee journeys better.

Find data visualizations about your team, their service requests, journeys, and learnings.

Grow as a people leader

Enhance your skills and grow as a people leader through materials and resources provided in Manager Library.

Use resources on career development, leader enablement, hiring and transitions, employee performance evaluation, upcoming managerial events, knowledge base articles and managerial tools that help you work efficiently.

Customize your user experience

A Manager Hub administrator can configure fields, customize display text and icons suiting the requirements of managers of your organization. For more information, see Configure Manager Hub.

A predefined set of configurations are also available to use after you have activated Manager Hub from ServiceNow Store.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Activating application

Activate ServiceNow Manager Hub from ServiceNow Store.

Note:
Manager Hub is available with the Employee Center Pro application. Some of the features of Manager Hub work only when the HR Service Delivery and Employee Journey Management applications are activated.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

2. Configuring data

Configure roles, team data, team requests, important dates, team column data, team filters, daily stats, and Employee Center and other Service Portals. Display curated and personalized data to managers in Manager Hub.

To learn more about this, see Configure Manager Hub and Reference for Manager Hub.

3. Using Manager Hub in Employee Center

Have a better engagement with your team — Act on items that need immediate attention, keep yourself up-to-date on upcoming team events and employee transitions, and expand your leadership skills.

To learn more about this, see Use Manager Hub.

Configure Manager Hub

Configure Manager Hub by setting up data suitable to the needs of people managers in your organization.

RCA approvals for Manager Hub

After you install Manager Hub, you might encounter Restricted Caller Access (RCA) approval messages requesting for an update in the access request.

Before you begin

- Role required: admin
- The RCAs that are generated after the installation are in the **Requested** state and you must manually mark the RCAs as **Allowed**, which can be time-consuming.

  To automate the RCA approvals for any record, you can run the **MH bulk RCAs approval** script where the source scope is Manager Hub. Download the MH bulk RCAs approval file from the **Supporting Links and Docs** section in ServiceNow Store. This file is a standalone script to reduce the manual effort involved. After you download the script file, perform the following steps:

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. Right-click the header and choose **Import XML**.
3. Click **Choose file** and select the XML file that you downloaded.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Search and find the **MH bulk RCAs approval** script record.
5. Click **Run Script** to allow all the requested RCAs.

> **Note:**
> The fix script can approve the RCAs that exist at the time of execution. After running the RCA script, if you install new plugins, such as Human Resources Scoped App [com.sn_hr_core], Human Resources: Integrations [sb_hr_integration], Journey Accelerator [sn_ja], Journey Designer [sn_jny], and Document Template [sn_doc]), rerun the RCA script to approve the new RCAs.

Activate a scheduled job

Activate and run the Add Manager Hub user role scheduled job to assign the Manager Hub user role to new people managers. When the scheduled job runs, it considers delta changes and assigns the Manager Hub user role to new managers only.

Before you begin

- Role required: admin
- An administrator must review the criteria before assigning the Manager Hub user role to managers. Default criteria: The manager field of sys_user table is considered for assigning the Manager Hub user role.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled jobs**.
2. Open the Add Manager Hub user role scheduled job.
3. Set up the time and schedule at which you want to run the scheduled job.
4. Enable the **Active** check box.
5. Click **Update**.

Configure important dates

Configure important dates, such as employee leaves, employee birthdays, or anniversaries, that you want to display on the **Upcoming team events** widget in Manager Hub in Employee Center.

Before you begin

Role required: sn_mh.admin

Procedure

1. Navigate to **All** > **Manager Hub** > **Administration** > **Important Dates Configuration**.
2. Click **New**.
3. On the form, fill in the fields:

Important Dates Configuration form

Field	Description
Table	Table on which you want to apply filter conditions.
Condition	Conditions that you want to apply on the selected table.
Active	Option to activate or deactivate important dates configuration record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
User field	Field of the table on which the manager filter is applied to fetch the reporting employee details such as name or email.
Display details	
Is annual recurring event	Enable the check box if the event occurs every year, for example, birthdays or anniversaries. **Note:** For an annual recurring event, the offset date range must be less than 365 days.
Date offset unit	Number of days, weeks, or months that defines your offset units. For example, week, day, or month.
Date offset before quantity	Do you want your offset to be before the start date field that you have selected, for example, 1.
Date offset after quantity	Do you want your offset to be after the start date field that you have specified, for example, 1.
Start date field	Indicates the start date from which you want to pull important dates. For example: Assume that the important dates configuration record is being created to display birthdays of team members. Data offset unit is **Week** and Date offset before quantity and Date offset after quantity is **1**. All the birthdays before and after a week of start date are pulled and displayed on the Important dates widget in Manager Hub in Employee Center.
End date field	Indicates the end date until which you want to pull important dates.
Display data source	Display source for grouping based on the field selected. For example, PTOs can be grouped by PTO type.
Order	Order in which the important dates configuration records are to be displayed on Manager Hub in Employee Center. The important dates configuration record with the lowest order number appears first, and the important dates configuration record with the highest order number appears last on the user interface.
Action type	Type of action displayed against the important date record on Manager Hub in Employee Center, such as URL or Email.
URL	URL to be displayed against the important date record on Manager Hub in Employee Center.
Action icon	Display icon to be displayed against the important date record on Manager Hub in Employee Center.
Action tooltip	Text that appears when you point to the action icon against the important date record on Manager Hub in Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Single record display label	Text that must appear only if a single important date configuration record is displayed on Manager Hub in Employee Center. For example: ${employee_name}'s anniversary. **Note:** Use tokens in display labels to show dynamic variables to end users. Available tokens: ${employee_name}, ${display_data}
Multiple record display label	Text that must appear when multiple important date configuration records are displayed in Manager Hub in Employee Center. For example: ${count} employee's have anniversary. **Note:** Use tokens in display labels to show dynamic variables to end users. Available tokens: ${display_data}, ${count}

4. Click **Submit**.

Configure team requests

Configure the type of team requests that you want to display on the **Requests opened by your team** widget in Manager Hub in Employee Center.

Before you begin

Role required: sn_mh.admin

This allows managers to be informed of any support requests their team has, that they may want to be aware of, even if no specific approval or task has been assigned to them.

In addition to the sn_mh.manager_hub_user role, the logged in manager must also have the required ACLs or roles to view certain team requests. For example, if there are any open requests related to HR cases, then the logged in manager must also have the sn_hr_core.case_reader role to view those requests.

Procedure

1. Navigate to **All** > **Manager Hub** > **Administration** > **Team Requests Configurations**.
2. Click **New**.
3. On the form, fill in the fields:

Team Requests Configuration form

Field	Description
Table	Name of the table on which the conditions are applied. For example: Requested item
Request type	Field of the table on which the conditions are applied. For example: cat_item This field can be used to group the requests and display ${request_type} in singular and multiple records labels.
Request status	State of the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
User field	User to whom the request is placed. For example: Requested for
Active	Option to activate or deactivate the team request configuration record.
Display Details	
Action type	Type of action displayed against the team request on Manager Hub in Employee Center, such as URL or Email.
URL	URL to be displayed against the team request on Manager Hub in Employee Center.
Action icon	Display icon to be displayed against the team request on Manager Hub in Employee Center.
Order	Order in which the team request configuration records are to be displayed on Manager Hub in Employee Center. The team request configuration record with the lowest order number appears first, and the team request configuration record with the highest order number appears last on the user interface.
Single record display label	Text that must appear when a single request is displayed on Manager Hub in Employee Center. For example: ${employee_name} requested for ${request_type} **Note:** Use tokens in display labels to show dynamic variables to end users. Available tokens: ${employee_name}, ${request_type}
Multiple record display label	Text that must appear when multiple requests are displayed on Manager Hub in Employee Center. For example: ${count} employee's requested for ${request_type} **Note:** Use tokens in display labels to show dynamic variables to end users. Available tokens: ${request_type}, ${count}

4. Click **Submit**.

Configure team data

Configure team data that you want to display on employee cards and modal in the Team members tab in Your team menu in in Employee Center. Team data configurations are required to support column configurations and filter configurations.

Before you begin

Role required: sn_mh.admin

Procedure

1. Navigate to **All** > **Manager Hub** > **Administration** > **Team Data Configuration**.
2. Click **New**.
3. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Team Data Configuration form

Field	Description
Name	Name of the team data configuration record. For example, team data configuration record is being created for **Leave**.
Table	Table on which you want to apply filter conditions. For example, table can be **Leave of absence**.
User field	Field of the table on which you want to apply conditions. For example, user field can be employee.
Conditions	Conditions applied on the selected table to display the required values. For example, conditions are being applied on **Leave of absence** table to pull the required details. Later, employee sys_IDs are pulled.
Use alternate label	Option to display a text when records match or do not match the team data configuration. For example: ○ **Use alternate label** to display leaves. ○ **Use alternate label** to display the number of incidents raised by any employee.
Alternate label	Value displayed when one or more records match the set conditions. For example: ○ **Alternate label** can be: On leave ○ **Alternate label** can be: ${count} incidents found
No data alternate label	Value displayed when no records match the set conditions. For example, **No data alternate label** can be: No incidents found
Advanced	Option to add a script to retrieve the preferred records. This option allows you to configure display values from multiple data-sources, control the values, and provide a hyperlink for the display values.

4. Click **Submit**.

Configure team column data

Configure column titles that you want to display on the Team members tab in Your team menu in Employee Center. For example, configure a column title to denote the current status of an employee such as new hire, or on leave.

Before you begin

Role required: sn_mh.admin

Procedure

1. Navigate to **All** > **Manager Hub** > **Administration** > **Team Column Configuration**.
2. Click **New**.
3. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Team Column Configuration form

Field	Description
Column title	Name of the team column configuration record. For example, Location.
Order	Order in which the column must appear on the Team members tab in Your team menu in Employee Center.
Active	Option to activate or deactivate the team column configuration.

4. Click **Submit**.

What to do next

Associate the record to a team column data configuration.

1. In the Team Column Data Configuration related list, click **New**.
2. On the form, fill in the fields.

Team Column Data Configuration form

Field	Description
Team column configuration	Name of the Team Column Configuration record. For example, Location.
Team data configuration	Team data configuration with which you want to associate the Team column configuration record. For example, User.
Table	Table that is associated with the team data configuration. This field gets auto-populated by selecting the Team data configuration. For example, sys_user
Column display fields	Fields of the table that you want to display on the Team members tab in Your team menu in Employee Center For example, you want to display time zone, city, state, and country fields (of employees) from the sys_user table on the Location column on the Team members tab in Your team menu in Employee Center
Order	Order in which you want to display the column display fields on the Team members tab in Your team menu in Employee Center. The column display field with the lowest order number appears first, and the column display field with the highest order number appears last on the user interface. **Note:** On the compact cards (list or grid view) there is a limit of what gets displayed, but on the employee modal all the data gets displayed. In addition, if no data is available for an employee for one of the team data records, the next one that is available in order gets displayed.

3. Click **Submit**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure team filters

Configure team filters that you want to display on the Team members tab in Your team menu in Employee Center. For example, a team filter can be Employee Type, which in turn contains other filters such as position and location type.

Before you begin

Role required: sn_mh.admin

Procedure

1. Navigate to **All** > **Manager Hub** > **Administration** > **Team Filter Configuration**.
2. Click **New**.
3. On the form, fill in the fields:

Team Filter Groups form

Field	Description
Filter title	Unique title for the filter group record. For example, Employee type.
Order	Order in which you want the group filter to appear on the Team members tab in Your team menu in Employee Center.
Group all filters	Option to group filter. For example, you can group filters such as position and location type under one filter called Employee type.
Active	Option to activate or deactivate the filter group record. When you deactivate a filter group record, the record does not appear on the user interface.

4. Click **Submit**.

What to do next

Associate the filter to a team data configuration. Filter group is a UI shell, where you can configure display values and order related things. The data that is displayed in the filter group is fetched from a team data configuration.

1. In the **Team Filter Group Data** related list, click **New**.
2. On the form, fill in the fields.

Team Filter Group Data form

Field	Description
Label	Unique name of the filter group.
Team filter group	Name of the team filter group, for example, Employee Type.
Team data configuration	Contains configurations applied on table and fields of the table and so on. For example, for Employee Type the team data configuration is HR profile and Employee profile.
Table	Table associated with the team data configuration. It is selected by default after you have selected the team data configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Column	Column to appear on the Your team tab.
Order	Order in which you want the filter to show up on the Team members tab in Your team menu in Employee Center.
Show select all option	Option to display **Select all in {}** in the filter on the Team members tab in Your team menu in Employee Center. Assume that there are 10 cities in a filter and if you want to provide an option to the user to select all the cities with a single link, then enable **Show select all option**.
Hide if all have same value	Option to hide the same filter values on the Team members tab in Your team menu in Employee Center. Assume that the **Hide if all have same value** option is selected and the **Show empty filter option** option is deselected; all the employees are residing in the same city, for example, London. In this case, the London filter will not appear on the Team members tab in Your team menu in Employee Center.
Show empty filter option	Option to display **No data** as a filter value so that managers can filter their employee list by users who do not have any data available. Assume that the **Hide if all have same value** and **Show empty filter option** options are selected; all the employees are residing in the same city, for example, London. In this case, both London and No data values appear on the Location filter on the Team members tab in Your team menu in Employee Center. **Note:** **Show empty filter option** should not be selected if you only want managers to filter by data values that are available for their employees. For example, if this option is not selected and most employees are residing in London, but some do not have a location set in their user record then the manager will only have the option London to select from.

3. Click **Submit**.

Set up View as Direct Reports

Set up View as Direct reports to help managers guide their team members by viewing articles as seen by their direct reports on the Manager Hub.

Before you begin
Role required: admin

Note:

- Change the *glide.knowman.enable_view_as_user* default value to **True** for the View as feature to work. The default value for this system property is **False**.
- Update the portal system ID for *ec_portal_viewas_association* system property, in case you have a customized portal. Unless the default portal ID is changed to your customized ID, the feature does not work.
- The feature works with Tokyo and later family releases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

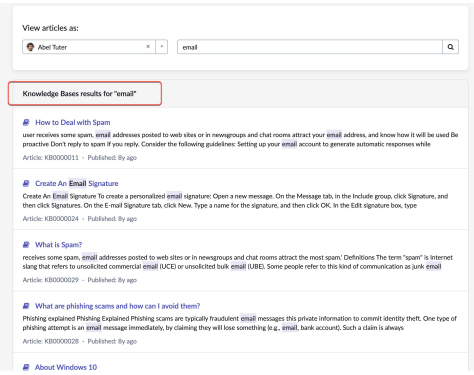
View as Direct report feature is useful for managers who have direct reports. Often, managers do not have access to certain location-specific or designation-specific Knowledge Base articles. Therefore, to help their respective team members, the managers can view the Knowledge Base articles as their respective direct reports.

Use the following procedure to customize the View as experience for your employees with direct reports.

Procedure

1. Navigate to **All** > **Employee Center**.
2. Select Manager Hub at the top-left corner of the screen, then select **Your team** from the list. You can see your entire team in a list view.
3. To change the page view to **Primary** or **Secondary** depending on your preference, right-click on the page and select the **Instance options**.
4. **Optional:** To get a search engine experience, select **Primary** and select **Save**.

Primary view option on View articles as page



5. **Optional:** To get a compact user experience, select **Secondary** and select **Save**.

Secondary View option on View articles as page

6. **Optional:** Manage the number of Knowledge Base articles visible as a search result or add **Pagination** through the Search results **Instance options**.
   The default result is 15 articles.

Search results for View as feature

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
Set up the View as page experience, add pagination, and tweak the number of articles displayed as a search result to provide optimal user experience for a manager searching for Knowledge articles using the feature.

Configure daily stats

Configure daily stats records that you want to display on the Manager Hub and Team members tabs in Your team menu in Employee Center. Daily stats can be information related to employee PTO, employee location, and so on.

Before you begin
Role required: sn_mh.admin

Procedure
1. Navigate to **All** > **Manager Hub** > **Administration** > **Team Daily Stats**.
2. Click **New**.
3. On the form, fill in the fields:

Team Daily Stat form

Field	Description
Name	Name of the daily stat configuration record.
Display label	Display name of the daily stat record in the Manager Hub and Team members tabs in Your team menu in Employee Center.
Active	Option to activate or deactivate the daily stat configuration record.
Order	Order in which you want the daily stat record to appear in the Manager Hub and Team members tabs in Your team menu in Employee Center. The daily stat configuration record with the lowest order number appears first, and the daily stat configuration record with the highest order number appears last on the user interface.

4. Click **Submit**.

What to do next

1. In the **Filter sources** related list, click **New**.
2. On the form, fill in the fields.

Filter Sources form

Field	Description
Filter source	Filter configuration record that you want to associate the daily stat filter with.
Active	Option to activate or deactivate a filter group record.
All	Option to select all the filter values in the source at one time. For example, City is filter source. It contains cities such as Chicago, Hyderabad, Madison, and New York. If you want to select all the cities at time, select **All**. If you want to select only few cities, select **Options**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Options	Option to select only specific filters values in the source.

3. Click **Submit**.

Configure to do mappings

Create additional conditions or mappings to display managerial tasks and requests in Manager Hub in Employee Center.

Before you begin

Role required: sn_mh.admin

Note:

- Prior to this Utah release, you could create additional conditions for to-do mappings using the To-dos Configuration form in Employee Center. Starting with the Utah release, you can create additional conditions for to-do mappings using the To-dos mapping module in Manager Hub.
- If you are upgrading to Utah release, additional conditions that were created for to-do mappings in the To-dos Configuration form in Employee Center must be created again in the To-dos mapping module in Manager Hub.

Procedure

1. Navigate to **All** > **Manager Hub** > **Administration** > **To-dos mappings**.
2. Click **New**.
3. On the form, fill in the fields:

To-dos mapping form

Field	Description
To-do filter condition	To-do filter condition on which additional conditions are applied. For more information on to-do filter condition, see Create or modify a to-dos filter.
Table	Read-only field that is picked from the To-dos configuration table. For example, HR Task [sn_hr_core_task].
Map parent	Option to enable the selection of reportee fields from the To-dos configuration table or its parent table.
Parent mapping reference field	Option to select a reference field from the parent table. **Note:** This option appears only when the **Map parent** field is enabled.
Parent Reportee fields	Option to select reportee fields from the parent table. For example, select reportee fields from the HR Case [sn_hr_core_case] table. **Note:** This option appears only when the **Map parent** field is enabled.
Reportee fields	Option to select reportee fields from the To-dos configuration table. For example, select reportee fields from the HR Task [sn_hr_core_task].

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Active	Option to activate the use of additional filter conditions.
Order	Order in which additional filter conditions are applied.

4. Click **Submit**.

Configure widgets

Configure the widgets in the Manager Hub and Team Insights pages in Your team menu in Employee Center as per your business requirements.

Before you begin

Role required: sn_mh.admin, sp_admin

Procedure

1. Navigate to **All** > **Employee Center**.
   The Employee Center portal opens.
2. Navigate to **Manager Hub** > **Team Insights**.
3. **CTRL+Right-click** on any widget and select **Page in Designer**.
   The Service Portal Designer page opens.
   a. In the Manager Hub prompts widget, click the **Edit** icon:
      - In **Title**, provide a suitable title to the widget.
      - In **Suggestion Categories**, specify the categories on which you want to apply the settings.
      - In **Presentation**, **Suggestion per row**, specify the number of prompts that you want to display in a row in the widget.
      - Click **Save**.
   b. In the About the team or Employee Journeys, click the **Edit** icon:
      - In **Section Title**, provide a suitable title to the widget.
      - In **Reports**, select the reports that you want to display in the widget. Specify the order in which you want the reports to appear in the widget.
      - In **PA widgets**, select the PA reports that you want to display in the widget.

        Note:
        For advanced chart configurations, use sysIDs from the Report and PA widgets tables.

      - In **Suggestion Categories**, specify the categories on which you want to apply the settings.
      - In **Chart Layout**, specify the number of charts in a row. The default value is two charts per row.
      - In **Chart height**, indicate the height of the chart.
      - In **Advanced**, add a script to customize and display content in the widget.
      - Click **Save**.

Use Manager Hub

Support your team and find resources to grow as leaders using the Manager Hub application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Role required: sn_mh.manager_hub_user
- Activate Manager Hub from ServiceNow Store. Manager Hub is available with the Employee Center Pro application. Some of the features of Manager Hub work only when the HR Service Delivery and Employee Journey Management applications are activated.
- Configure Manager Hub.

Procedure

1. Get your team brief.
2. Know your team members.
3. Get team insights.
4. Utilize Manager Library.
5. View and Edit Employees Growth Plans

Get your team brief

Summarizes the most important information and actions for you to focus on. Displays items that need your attention, upcoming team events, and requests opened by your team members.

Before you begin

Role required: sn_mh.manager_hub_user

Procedure

1. Navigate to **All** > **Employee Center**.
   The Employee Center portal opens.
2. Navigate to **Your team** > **Manager Hub**.
3. View the time zones of employees across the globe.
   Be more conscious about the time the meetings are scheduled or requests are sent out to the team.
4. In the **Your Management tasks** widget, view the total number of tasks that require your approval.
   Selecting **All tasks** will navigate you to the To-dos page in Employee Center. Complete the required actions.
5. In the **Upcoming team events** widget, view the upcoming events such as employee birthdays, employee anniversaries, or new hire joining.
   Selecting the **Email** icon opens a mail-to link with work emails of intended reports in To field (default email client) with a blank subject line.
6. In the **Requests opened by your team** widget, view all the requests opened by your team members.
   Pay a closer attention to requests that are time sensitive and requires collaboration across the enterprise.

   Note:
   In addition to the sn_mh.manager_hub_user role, the logged in manager must also have the required ACLs or roles to view certain team requests. For example, if there are any open requests related to HR cases, then the logged in manager must also have the sn_hr_core.case_reader role to view those requests.

7. In the **Suggestion for you and your team** widget, act on items that require your attention.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This widget appears only if prompts are generated for you. For more information, see Proactive Prompts for managers.

8. Review your team daily stats such as number of employees on leave, number of employees in onboarding, and so on.
   For more details, select **All team members**. You will be navigated to the **Team members** tab.

Proactive Prompts for managers

Recommend actions to managers based on collected data and best practices, help managers understand team insights, and guide them with next steps. Enable managers to act on potential issues proactively.

Before you begin

Role required: sn_mh.manager_hub_user

Ensure to activate Proactive Prompts application from ServiceNow Store.

Procedure

1. Navigate to **All** > **Employee Center** > **Your team** > **Manager Hub**.
2. In the Suggestions for you and your team widget, work on your actionable items:

Insight-based suggestions

Suggestion	Description
Support your new Hire	Displays employees who are new hires. Support them better. ○ To mark the suggestion as complete, select ✔. ○ To dismiss the suggestion, select ✖. ○ To send an email to the new hires from your outlook, select **Email Employee**.
Encourage work-life balance	Displays employees who haven't taken a time off. Encourage work-life balance for your employees. ○ To mark the suggestion as complete, select ✔. ○ To dismiss the suggestion, select ✖. ○ To send an email to the employees from your outlook, select **Send Reminder**. ○ To open a KB article that has details on encouraging work-life balance, select **Learn why its important**.
Support your employees with learning	Displays employees who haven't taken up their assigned learnings. Check if they need time to focus on. ○ To mark the suggestion as complete, select ✔. ○ To dismiss the suggestion, select ✖. ○ To send an email to the employees from your outlook, select **Ask if they need help**.
Help your employee grow their career	Displays employees who haven't had a job change in a while.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Suggestion	Description
	○ To mark the suggestion as complete, select ✔. ○ To dismiss the suggestion, select ✖. ○ To learn about career conversations, select **Learn about career conversations**.

3. To set your preferences on the display of prompts:
   a. Select the Menu icon in the **Suggestions for you and your team** widget.
   b. Select **Manage Preferences**.
   c. Turn off the prompts that you do not want to view on the widget.
   Your preferences will be saved and the prompts that have been turned off do not appear in the widget the next time you login to the Manager Hub page. You can change your preferences at any given time.

Know your team members

Effectively manage a globally disbursed team. Understand your team's needs and activities to support them better.

Before you begin

Role required: sn_mh.manager_hub_user

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center portal opens.
2. From the **Your team** drop-down list, select **Team members**.
3. **Optional:** Select the **Direct team** tab to view details of employees reporting to you.
4. **Optional:** Select the **Indirect team** tab to view details of employees that are not part of your direct reporting line.
5. View details of your employees.
   - Focus on what the team is doing across multiple activities such as journeys, and growth and development (if Talent Development is installed).
   - Use the **Sort by** filter to filter data by employee name, type, location, or attention needed. If Talent Development is installed, filters can be applied on the outcome type of growth plans and on the learnings that the team members are currently pursuing.
   - Search for a specific employee by entering at least two characters in the **Search** field.
   - Select the Card view icon ( ) to view employee details in a card view.
   - Select the List view icon ( ) to view employee details in a list view.
6. Provide assistance to your skip level reporting employees when the direct reporting manager is unavailable, for example, on leave.
   To view details of your skip level employees along with your direct reporting employees, select the Settings icon ( ) in the **Direct team** tab, then enable the **Show skip level reports** option.

   You cannot view skip level reports of employees that are not part of your direct reporting line.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select **View org chart** in the **Direct team** tab to view reporting structure of your employees.
8. Select an employee's name on the employee card to view the employee details modal.
   For more information, see View employee details.
9. Select the View menu icon ( ) on an employee card or employee modal, to schedule conversations, assign learning, and so on.
   For more information, see Use the View menu icon in Manager Hub.

Note:
The actions on the employee card are configurable. For more information, refer to Action Framework in Employee Center

Set up View as Direct Reports

Set up View as Direct reports to help managers guide their team members by viewing articles as seen by their direct reports on the Manager Hub.

Before you begin
Role required: admin

Note:

- Change the *glide.knowman.enable_view_as_user* default value to **True** for the View as feature to work. The default value for this system property is **False**.
- Update the portal system ID for *ec_portal_viewas_association* system property, in case you have a customized portal. Unless the default portal ID is changed to your customized ID, the feature does not work.
- The feature works with Tokyo and later family releases.

About this task
View as Direct report feature is useful for managers who have direct reports. Often, managers do not have access to certain location-specific or designation-specific Knowledge Base articles. Therefore, to help their respective team members, the managers can view the Knowledge Base articles as their respective direct reports.

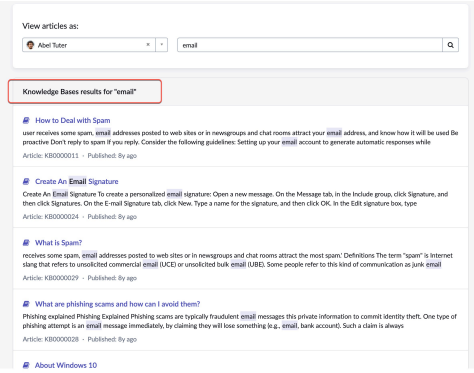
Use the following procedure to customize the View as experience for your employees with direct reports.

Procedure

1. Navigate to **All** > **Employee Center**.
2. Select Manager Hub at the top-left corner of the screen, then select **Your team** from the list.
   You can see your entire team in a list view.
3. To change the page view to **Primary** or **Secondary** depending on your preference, right-click on the page and select the **Instance options**.
4. **Optional:** To get a search engine experience, select **Primary** and select **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Primary view option on View articles as page



5. **Optional:** To get a compact user experience, select **Secondary** and select **Save**.

Secondary View option on View articles as page

6. **Optional:** Manage the number of Knowledge Base articles visible as a search result or add **Pagination** through the Search results **Instance options**.
   The default result is 15 articles.

Search results for View as feature

Result

Set up the View as page experience, add pagination, and tweak the number of articles displayed as a search result to provide optimal user experience for a manager searching for Knowledge articles using the feature.

View employee details

Use the employee modal for a quick overview of your employee's details.

Before you begin

Role required: sn_mh.manager_hub_user

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center portal opens.
2. From the **Your team** drop-down list, select **Team members**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select an employee from the employee list.
4. View the details on the card.

Employee details modal

Field	Description
Location	Local time and location where your employee is assigned to report.
Status	Status of your employee.
Contact	Contact information of your employee.
Reports	Number of direct and indirect reportees reporting to your employee.
In progress	Shared learnings, conversations and growth plans of your employee that are currently in progress.
Upcoming events	List of scheduled events.
Requests	List of requests that have been submitted for review or action. This includes current state of each request such as Approved, in progress or awaiting.
Things that might need your attention	List of learnings, growth plans and journeys that require immediate attention.
Open tasks	List of tasks and requests in the Open state.

Get team insights

Find data visualizations about your team, their service requests, journeys, and learnings.

Before you begin

Role required: sn_mh.manager_hub_user

Procedure

1. Navigate to **All** > **Employee Center**.
   The Employee Center portal opens.
2. Navigate to **Your team** > **Team Insights**.
3. In the **About the team** widget, view the skip level reports and direct reports of: Employees leaves (Used and Unused PTO), employees tenure in the organization, and the time spent by employees in their current roles.
4. In the **Service and support** widget, view reports on type and number of requests raised by your team (IT requests, HR requests except life cycle requests), time taken to resolve the requests, requests open at an organization level, and requests that have been assigned to you and by you.
5. In the **Employee journeys** widget, view skip level reports and direct reports of: Current status of your employee journeys (risk or draft or in progress) and journeys started this year.
   Get a breakdown of journeys by its type: Career growth or Onboarding.

> **Note:**
> This widget appears only when you install the Journey Designer application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. In the **Understanding employee journeys** widget, click **Start a journey**.
   Using a template, you can tailor specific experience for your team members to help them with transitions, growth, personal, and career events.

> **Note:**
> This widget appears only when you install the Journey Designer application.

Know your team's skills

Understand the current skills and the targeted skills of the team so that you're empowered to develop the right skill-set in the team for today's and tomorrow's business requirements. Help your employees utilize different tools of Talent Development such as learning, growth plans, mentoring to build new skills or bridge existing skill gaps.

Before you begin

- Role required: sn_mh.manager_hub_user
- Ensure that the Skills Foundation application is installed.
- Skills or job role implementation is mandatory. This is driven by a system property. If this is set to false, the Skills tab does not appear in Manager Hub.

Procedure

1. Navigate to **All** > **Employee Center**.
   The Employee Center portal opens.
2. Open **Your team** > **Skills**.
3. In the Skills Summary section, view all skills, top strengths, and areas of growth of your team. For more information, see Skills summary of your team.
4. In the Skills distribution section, view skills possessed by your team, across all proficiency levels, by job functions.
   Get a deep-dive understanding of skills from the Skills distribution page. For more information, see View the skill distribution of your team.
5. From the Skills Expectations section, view score percentages of an employee based on an employee's validated skills and proficiencies, compared to their role-based skill requirements. For more information, see View employee cards in Skills Expectations section.
6. In the Skills being learned section, view employees who are pursuing a specific skill.

   For more information about a skill being learned, select  and select **View skill details**. To view all the skill learning cards, select **View all**.

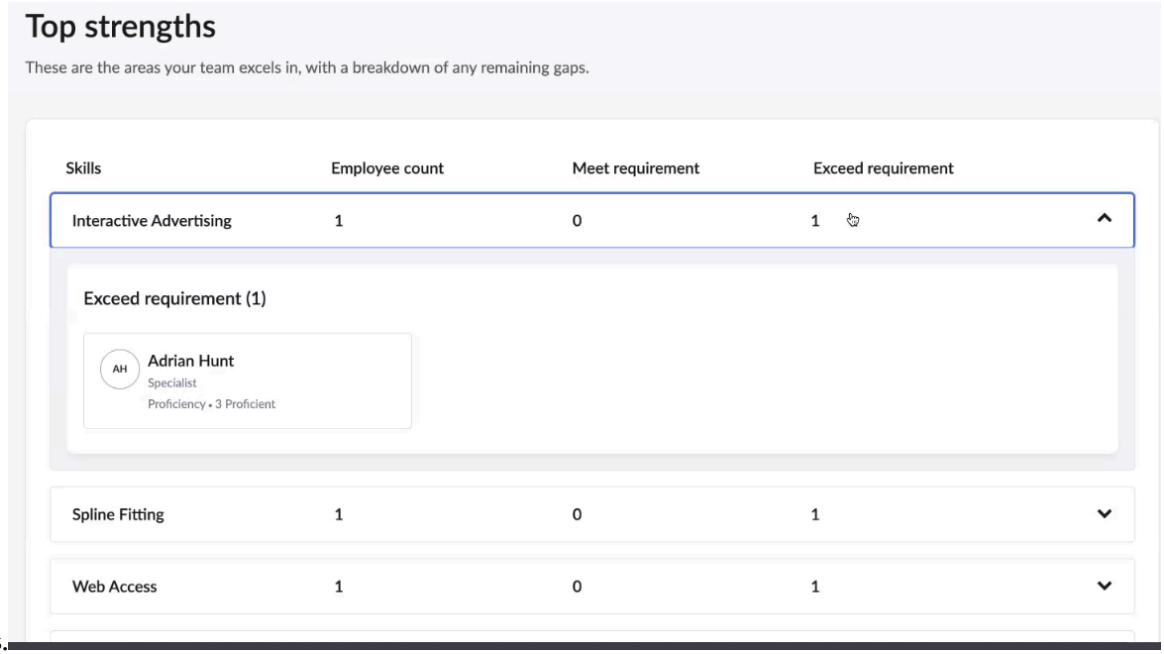
> **Note:**
> For the Skills being learned section to surface data, you must install Learning and Talent Development applications and associate them with skills.

Skills summary of your team

Do a deeper analysis of skills of your team. Understand your team's top strengths and areas of growth.

The following details are displayed in the Skills Summary section on the Skills page:

All skills

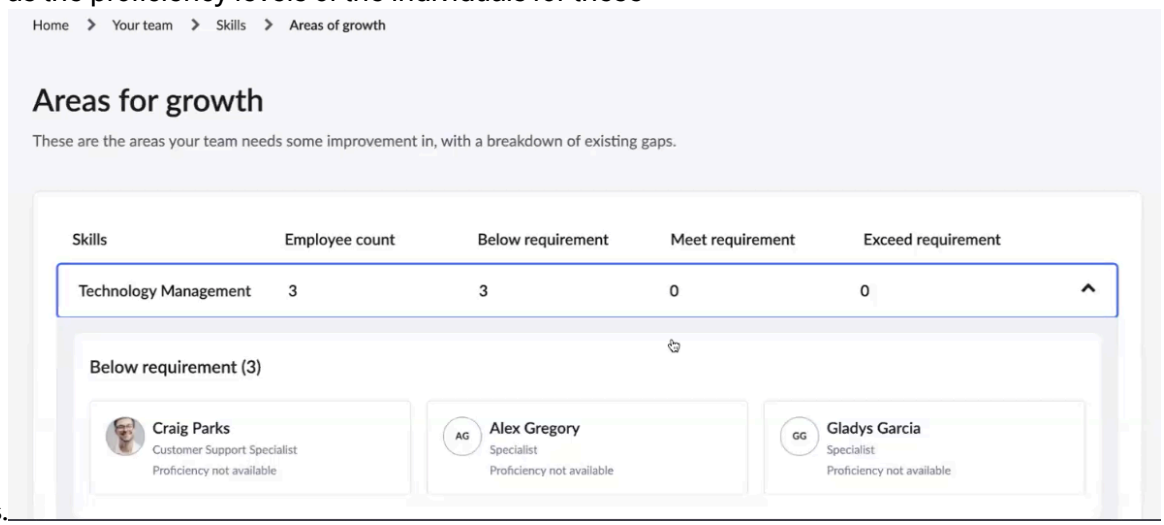


Helps you understand the total number of skills in your team along with the split of total required skills for the team members and the total additional skills of the team members.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Top Strengths

Highlights the strong skills in your team and provides the details of the team members who posses those strong skills.



Selecting the **View all** option provides granular details such as the proficiency levels of the individuals for the strong skills.

Areas for growth

Helps you to understand the skills in the team that need attention along with the details of team members who might need upskilling.

Selecting the **View all** option provides granular details such as the proficiency levels of the individuals for these skills.

Note:
Employees must add proficiency levels to their skills. This data helps to compute top strengths and areas of growth.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View the skill distribution of your team

Get a deep-dive understanding of the skills on your team. Get an overview of different skills that the team members possess along with the count of people across each skill in the team.

Before you begin

Role required: sn_mh.manager_hub_user

Note:
Employees must add proficiency levels to their skills. This data helps you to view details of skill distribution.

Procedure

1. Navigate to **All** > **Employee Center**.
   The Employee Center portal opens.
2. Open **Your team** > **Skills**.
3. In the Skills distribution section, select **View all**.
   The Skills distribution page opens.
4. If you have team members reporting from different job functions, you can filter the skill distribution for each job function from the View list.
5. In the **Skill view** tab, you can perform the following actions:

Skill view tab features

Name of the card	Steps
Skill card	**a.** On a skill card, select ⋮. **b.** Select **View skill details**. A modal opens providing more details about the skill.
Employee card	On an employee card, select ⋮. Select any of the following options: ○ **Validate skills**: Validate employee skills page appears: **a.** Review the current skill proficiencies of the employee, select any skills you want to validate. **b.** Select **Validate selected skills**. ○ **View skills**: Skill details page appears. For more information, see Skill details of an employee. ○ **View profile**: The employee profile page appears with details such as reporting structure, coworkers, designation of employee.

6. In the **Employee view** tab, you can perform the following actions:

Employee view tab features

Name of the card	Steps
Employee card	On an employee card, select ⋮. Select any of the following options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Name of the card	Steps
	○ **View skills**: Skill details page provides granular details of employee skills, proficiency levels, and gaps. For more information, see Skill details of an employee. ○ **View profile**: The employee profile page appears with details such as reporting structure, coworkers, designation of employee.
Skill card	On a skill card, select ⋮. Select any of the following options: ○ **View skill details**: A modal opens providing more details about the skill. ○ **Validate for employees**: Validate skills page appears: **a.** Select the employees that you like to validate this skill for, and review their proficiency rankings. **b.** Select **Validate selected employees**.

View employee cards in Skills Expectations section

View the score percentages of an employee based on an employee's validated skills and proficiencies, compared to their role-based skill requirements.

Before you begin

Role required: sn_mh.manager_hub_user

Procedure

1. Navigate to **All** > **Employee Center**.
   The Employee Center portal opens.
2. Open **Your team** > **Skills**.
3. In the Skills Expectations section, select ⋮ on an employee card and select any of the following options:

View menu options

Option	Steps
Validate skills	**a.** Review the current skill proficiencies of an employee, and then select any skills you want to validate. **b.** Select **Validate selected skills**. **Note:** For Score analysis, you must validate the skills.
View skills	Skill details page provides granular details of employee skills, proficiency levels, and gaps. For more information, see Skill details of an employee.
View profile	The employee profile page appears with details such as reporting structure, coworkers, designation of employee.

4. In the Skills Expectations section, select **Score analysis** on an employee card to view the score percentage of the employee's validated skills.

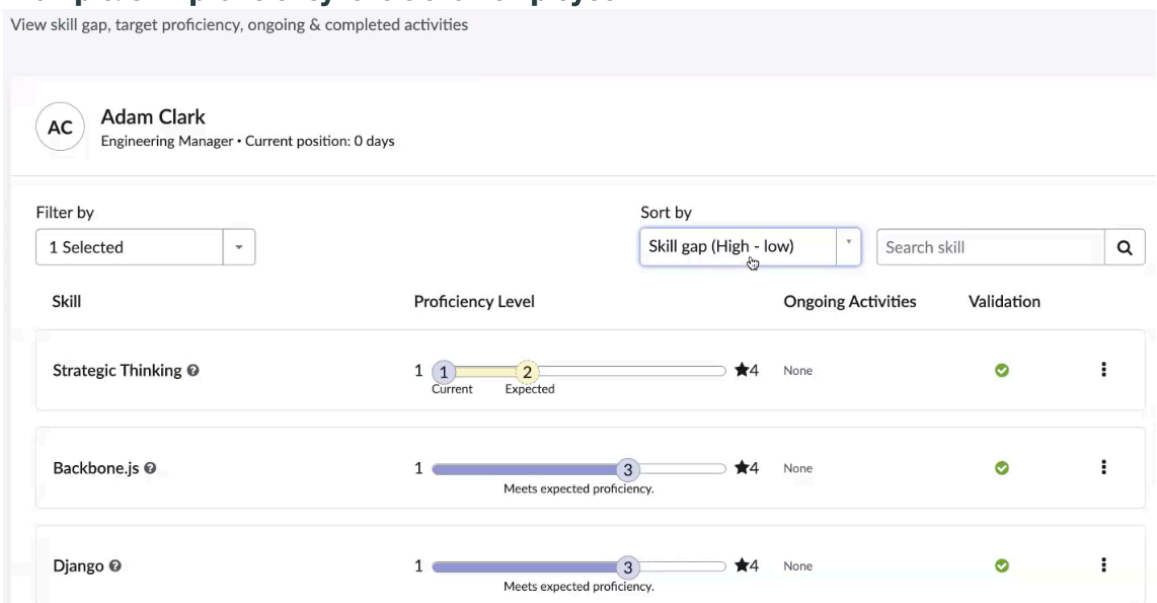
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. **Optional:** Hover over the tool tip in the flyout to see criteria for skill proficiency levels.

b. Select **Assign learning** in the **Validated** skills section to view progress bars of skills that meet and don't meet expected proficient levels.

c. Select the Skill pill icon ( ) on a skill to perform one of the following:
   - **View skill details**: View a detailed description of the skill.
   - **Assign learning**: Assign a learning course to an employee. For more information, see Assign learning form.

5. To view all the employee cards, select **View all**.
6. If you have team members reporting from different job functions, you can filter the skill distribution by job function.



Skill details of an employee

Get a deeper understanding of skill details of an employee, proficiency levels, and gaps.

On an employee card, when you select and select the **View skills** option, the Skill details page appears. In this page, you can:

- View the skills possessed by an employee and proficiency levels of each skill.
- Filter skills by validated versus unvalidated skills.
- Sort skills by name or skill gap (High to Low) or (Low to High).
- Assign a learning course to the employee when the proficiency level of a skill is low. Select and select **Assign learning**. Only the courses related to that skill are displayed for selection.
- Select a skill to view the skill activities fly-out. The skill activities fly-out allows you to review activities such as courses, aspirations and growth plans that contribute to skill proficiency.

Example: Skill proficiency levels of an employee

Utilize Manager Library

Discover curated and personalised leadership resources for multiple departments and systems. Get tools and resources to efficiently manage your team and self.

Before you begin

Role required: sn_mh.manager_hub_user

About this task

Personalised and seasonally-based content from target communications and campaigns, knowledge or catalog items (ServiceNow), share point sites, or other third party applications can also be added to Manager Library. The necessary configurations can be done by a user with the sn_mh.admin role.

Procedure

1. Navigate to **All** > **Employee Center**.
   The Employee Center portal opens.
2. Navigate to **Your team** > **Manager Library**.
3. Find information on corporate initiatives to focus on for the quarter, such as annual goals and feedback.
4. Use resources on career development, leader enablement, hiring and transitions, managerial events, employee performance evaluation, or other managerial tools to help you work efficiently.
5. Click the quick links that navigate you through ServiceNow applications that are integrated with Manager Hub.
   For more information, refer to Integrate Manager Hub.

Use the Employee Summary Virtual Agent topic in Manager Hub

Activate and use the Employee Summary Virtual Agent topic to access employee contribution summaries, view consolidated profiles, and track employee progress.

Before you begin

To access and use the Employee Summary reports topic, the following plugins must me activated:

- Now Assist for HR Service Delivery (HRSD) (sn_hr_gen_ai)

The following plugins are optional:

- Employee Connections (sn_ecn)
- Career Conversations (sn_egd_act)
- Learning (sn_lep)
- Learning Core (sn_lc)
- Manager Hub (sn_mh)
- Employee Goals (sn_egd_goals)

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Turn on the **Persona Assistant** skill.
   a. Navigate to **All** > **Now Assist Admin** > **Skills**.
   b. On the navigation panel, select **Employee**, then select **HRSD**.
   c. On the **Persona Assistant** card, select **Turn on**.
2. Publish the **Employee Summary** Virtual Agent topic.
   For more information, see Publish a Virtual Agent topic.
3. View the Employee Summary reports topic.
   For more information, see View employee summary reports.

Integrate Manager Hub

Extend Manager Hub capabilities by integrating with other applications.

Integration with Journey Accelerator

Use the Journey Accelerator templates to create and publish customized plans for key employee transitions. Create and access the journey plans from Manager Hub in Employee Center.

For this integration to work, you must install Manager Hub, Journey Accelerator, and Employee Center Pro applications.

Integration with Journey Designer

Facilitate daily activities among various cross-functional processes and departments, and automate processes such as new hire onboarding.

For this integration to work, you must install Manager Hub, Journey Designer, and Employee Center Pro applications.

Integration with Enterprise Employee Experience Pack

Administer and coordinate your employees return to the workplace in a manner that promotes your company's safety requirements. Click the Manage return to office link in the Manager Library tab in Employee Center.

For this integration to work, you must install Manager Hub, Enterprise Employee Experience Pack, and Employee Center Pro applications.

Integration with Employee Relations COE

Report any misconduct or sensitive issues through the Employee Relations application, which provides a tighter security to protect employee privacy. Click the Report misconduct employee quick link in the Manager Library tab in Employee Center.

For this integration to work, you must install Manager Hub, Employee Relations, and Employee Center Pro applications.

Integration with Human Resources Scoped App

Contact an HR personnel by clicking the Ask HR quick link in the Manager Library tab in Employee Center.

For this integration to work, you must install Manager Hub, Human Resources Scoped App application, and Employee Center Pro plugins.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration with Content Experiences

Find useful articles and resources that help to expand your skills as a people leader. Use the Manager Library tab in Manager Hub in Employee Center.

Personalised and seasonally-based content from target communications and campaigns, knowledge or catalog items (ServiceNow), share point sites, or other third party applications can also be added in Manager Library.

Manager Library is available with Content Experiences application.

Integration with Employee Center Core

Complete your tasks and approve any team requests from the Overview tab in Manager Hub in Employee Center.

Team tasks and requests appear only when the Employee Center Core application is installed.

Integration with Proactive Prompts

Provide prompts in the Team Insights page in Manager Hub. Encourage managers or employees to take actions quickly.

For this integration to work, you must install Manager Hub, Proactive Prompts and Employee Center Pro applications.

Reference for Manager Hub

Reference topics provide additional information about user roles, tables, and default configurations in Manager Hub.

Components installed with Manager Hub

Several types of components are installed with activation of the Manager Hub [sn_mh] plugin, including tables, user roles, and scheduled jobs.

Demo data is available for this feature.

Roles installed

Roles in Manager Hub

Role title [name]	Description	Contains roles
Manager Hub Admin [sn_mh.admin]	Grants write access to Manager Hub contents. A Manager Hub administrator can: • Activate and run the Add Manager Hub user role scheduled job to assign the Manager Hub user role to new people managers. • Manually assign the Manager Hub user role to new people managers. • Configure team data, team request, important dates	• sn_mh.manager_hub_user • sn_mh.content_manager

Campaign configurations for Manager Hub

Default campaign configurations are available to use after you have activated Manager Hub. Campaigns display predefined content on Manager Hub.

The Manager Library campaign is published by default. It displays a banner with the following content on the Manager Library tab in Your team menu in Employee Center.

Manager Library campaign

Campaign content	Description
Employee voice	View information on Employee Voice Survey (EVS). Review the EVS results of your team and focus on areas that have received lesser score.
Annual goals	Use the guide or a tool that helps to set your annual goals.
Coaching and feedback	Learn best practices on giving feedback and honing your coaching style.

Note:
The Manager Hub example campaign is also available to use. You must publish the campaign to display a banner on the Manager Hub page in Your team menu in Employee Center.

For more details on these campaigns, navigate to **All** > **Content Experiences** > **Configurations** > **Campaign Content**.

Default configurations for important dates

Predefined set of important dates configurations are available to use once you have activated Manager Hub from ServiceNow Store.

Important dates configurations

Name	Description
Employee birthday	Configuration to display employees birthdays in Manager Hub.
Employee anniversary	Configuration to display employees anniversaries in Manager Hub.
Employee time off	Configuration to display employees time offs in Manager Hub.
Employee leave of absence	Configuration to display employees long leaves, such as parental leaves in Manager Hub.
Employee joining date	Configuration to display employees joining dates in Manager Hub.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important dates configurations (continued)

Name	Description
Employee leaving date	Configuration to display employees leaving dates in Manager Hub.

For more details, navigate to **All** > **Manager Hub** > **Administration** > **Important Dates Configuration**.

Default configurations for team requests

Predefined set of team request configurations are available to use after you have activated Manager Hub from ServiceNow Store.

OOB team requests configurations

Request type	Description
cat_item	Configuration to display items (of type hardware and software) that are requested by an employee in Manager Hub
hr_service	Configuration to display cases (except for employee relations cases) opened by an employee in Manager Hub.

For more details, navigate to **All** > **Manager Hub** > **Administration** > **Team Requests Configurations**.

Default configurations for team data

Predefined set of team data configurations are available to use once you have activated Manager Hub from ServiceNow Store.

The following team data configurations support column configurations and filter configurations: Journey, Email, Employee Journeys, Employee Profile, HR Profile, Journeys, Leave, Leaving soon, New hire, PTO, Upcoming leave, User, and Work phone.

For more details, navigate to **All** > **Manager Hub** > **Administration** > **Team Data Configuration**.

Default configurations for team column data

Predefined set of team data configurations are available to use after you have activated Manager Hub from ServiceNow Store.

Team column configurations

Name	Description
Status	Configuration to display the status of an employee on the Team members tab in Your team menu in Employee Center. For example, the status of an employee can be a new hire or leaving the organization.
Location	Configuration to display employee location details based on time zone, city, state, or country.
Active Journey	Configuration to display active employee journeys, such as onboarding, or career growth.
Contact	Configuration to display employee contact details, such as email and work phone.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more details, navigate to **All** > **Manager Hub** > **Administration** > **Team Column Configuration**.

Default configurations for filter groups

Predefined set of filter group configurations are available to use after you have activated Manager Hub from ServiceNow Store.

Team filter groups configurations

Name	Description
Journey	Configuration to group career growth and onboarding employee journeys under Journey filter in the Team members tab in Your team menu in Employee Center.
Employee type	Configuration to group employee type, position, and location type under the Employee type filter group in the Team members tab in Your team menu in Employee Center.
Location	Configuration to group cities under the Location filter group in the Team members tab in Your team menu in Employee Center.
Status	Configuration to display employee PTO, leave, or new hire under the status filter group in Manager Hub.

For more details, navigate to **All** > **Manager Hub** > **Administration** > **Team Filter Configuration**.

Default configurations for daily stats

Predefined set of daily stat configurations are available to use once you have activated Manager Hub from ServiceNow Store.

Team daily stats configurations

Name	Description
On journeys	Configuration to display the total number of active employee journeys in Manager Hub.
Onboarding	Configuration to display the total number of employees who are onboarding in Manager Hub.
On PTO	Configuration to display the total number of employees who are on PTO in Manager Hub.
On leave	Configuration to display the total number of employees who are on long leaves, such as parental leaves in Manager Hub.

For more details, navigate to **All** > **Manager Hub** > **Administration** > **Team Daily Stats**.

Default configurations for To do's

Default set of To do's configurations are available to use after you have activated Employee Center Core. These configurations display managerial tasks and requests in Manager Hub.

To dos filters is a module within Employee Center. For more details on how to configure the filters, see Create or modify a to-dos filter

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To-do's filter

Name	Description
Approvals	Filters to display requests that require approval of a manager in Manager Hub.
My team tasks	Filter to display team tasks to a manager in Manager Hub.

The following filter conditions are also available: HR approvals, HR tasks, HR tasks for UR, Journey accelerator to-dos, Journey accelerator to-dos- Adhoc, Request approvals, Universal task, and UR approvals.

For more information on the filters, navigate to **Employee Center** > **Administration** > **To-dos configuration** > **To-dos filters**.

For more information on the filter conditions, navigate to **Employee Center** > **Administration** > **To-dos configuration** > **To-dos config filter conditions**.

Default proactive prompts for Manager Hub

Default signal configurations, signal categories, and an action URL are available to use on activating Manager Hub and Proactive Prompts.

To learn how to use Proactive Prompts, refer to the Proactive Prompts documentation.

Signal configurations

For detailed information on how to configure signals in Proactive Prompts, see Configuring Proactive Prompts.

Default signal configurations

Field	Description
Assigned learning lack of engagement	Default signal configuration to display the **Support employees with learning** widget in the Manager Hub page. This configuration is available only when the Learning Core application is installed. A schedule job runs every two weeks and identifies users based on the following criteria. These users are displayed to the manager in the **Support employees with learning** widget. • learning course or path has been assigned by the manager • assignment date is one month or more in the past • learning course in not in Work in progress or completed state
Time since job change	Default signal configuration to display the **Help your employee grow their career** widget in the Manager Hub page. This configuration is available only when Human Resources Scoped App: Core plugin is installed. A scheduled job runs every six months and identifies users based on this criterion: 36 months or more since the start date of current job role.
Employee hasn't taken PTO	Default signal configuration to display the **Encourage work-life balance** widget in the Manager Hub page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Default signal configurations (continued)

Field	Description
	This configuration is available only when Human Resources Scoped App: Core plugin is installed. A scheduled job runs every three months and identifies users using one of the following criteria: • time-off balance is 50% or more of the total available and is October 1 or later in the current calendar year • last date when the time off was taken was 6 months or more in the past and time off balance is more than zero
New hire above average requests	Default signal configuration to display the **Support your new hire** widget in the Manager Hub page. This configuration is available only when the Human Resources Scoped App: Core plugin is installed. A scheduled job runs every 14 days to identify users based on the following criteria: • employee start date is 30 days or less in the past • employee has opened six or more requests in the past 14 days • requests are either HR case (except life cycle event case), or catalog item is software or hardware request, or a single request of high priority • requests are not closed complete

Signal categories

Signal categories are the logical groups to divide signals. Signal categories enable you to pull category-specific prompts on the prompt widget.

Career, Employee service, New hire, Team insights, and Well-being are the default signal categories that are available for Manager Hub. For more information on these signal categories, see Configure signal categories in Proactive Prompts.

Signal actions

Signal actions enable end users who receive the prompt to act on them. **Open a URL** is the default signal action that is available for Manager Hub.

For more information on signal actions, see Configure signal actions for Proactive Prompts.

Use the View menu icon in Manager Hub

Use the View menu icon ( ) to view org menu, interact with an employee or assign a learning course.

View menu actions

Action	Description
View org chart	View reporting structure of an employee.
Schedule conversation	Schedule a conversation with an employee. If you have the Microsoft Outlook integration for Manager Hub, the Schedule a conversation form opens. For more information, see Schedule a conversation form. If you don't have the Microsoft Outlook integration for Manager Hub, the Create a conversation form opens. For more information, see Create a conversation form.
View profile	View the profile of an employee.
Send email	Send an email to an employee. This action opens a link with the work email of your employee in the To field (default email client), and an empty subject line.
Call	Call an employee.
Assign learning	Assign a learning course to an employee. For more information, see Assign learning form. **Note:** You can only assign learning for direct reports.
View articles as employee	View articles visible to an employee. **Note:** You can only view articles visible to your direct reports.

Assign learning form

Use the Assign learning form to assign a learning course to an employee.

Assign Learning form

Field	Description
Assign this learning to	Employee to whom you want to assign the learning course.
Assigned material	Learning course that you want to assign to employee.
Assignment description	Additional information about the learning course.
This task is optional	Option to indicate that the learning assignment is optional.
Due by	Date by which you want the employee to complete the course.

Create a conversation form

Use the Create a conversation form to schedule a conversation with an employee when the Microsoft Outlook integration isn't enabled for Manager Hub.

Exploring Leader Hub

The Leader Hub app provides organizational and HR leaders with visibility into their organization's talent so they can comprehensively understand the landscape of their workforce. This application helps leaders gauge their team's strengths and deficiencies to confirm their employees have the appropriate skills and expertise to succeed in the present and future.

Leader Hub overview

Leader Hub gives organizational leaders the tools to grasp their teams' capabilities, recognize skill gaps, and implement changes that support their workforce while advancing key business objectives.

Leader Hub users

Users

User	Description
Organizational or HR leaders	Organizational and HR leaders use Leader Hub to analyze data associated with their organization's talent. Equipped with this data, they can make informed decisions that shape the culture, productivity, and overall success of their organization.
Organizational supporter	Organizational supporters entrusted with tasks and responsibilities use Leader Hub to view their designated leader's organization. With access to Leader Hub, they can provide support in the capacity required for the organization to succeed.

Leader Hub benefits

Leader Hub benefits

Benefit	Feature	Users
Get quick access to a comprehensive overview of your organization's talent. This encapsulated data includes metrics for skill competency across different teams, identifying significant skill gaps, and employee engagement with the growth tools provided in the Talent Development suite of applications.	At a glance	Organizational or HR leaders
Gain visibility into the skills and talent composition of each team that exists within your organization. View talent data at any level of granularity, through an organizational chart that illustrates the reporting relationships across the different teams in your organization.	Org talent	Organizational or HR leaders
Obtain a holistic view of the skill composition associated with your organization. View skills relevant to your organization and metrics that you can use to identify critical skill gaps. This data can be used to hold managers responsible for developing talent within their teams.	Org skills	Organizational or HR leaders

Give organizational supporters to whom the leader has delegated responsibilities access to Leader Hub. Supporters can view their designated leader's organization and provide support accordingly.	Orgs you support	Organizational supporter

What to explore next

To learn more about configuring and using Leader Hub, see:

- Installing and configuring Leader Hub
- Using Leader Hub
- Leader Hub reference

At a glance page

The At a glance page provides your organizational and HR leaders with instant access to a comprehensive overview of their organization's talent. This page offers a glance at data that measures employee engagement and skill proficiency, along with a glimpse of the teams that comprise your organization.

The At a glance page is the home page for Leader Hub and it gives leaders quick and easy access to the following information about the teams in their organization:

- Skill scores
- Significant skill gaps
- Employee engagement with the growth tools available in the Talent Development suite of applications.

To access the At a glance page, navigate to the Employee Center and select **At a glance** from the Leader hub drop-down list.

At a glance widgets

At a glance page widgets

Widget	Description
Insight-based suggestions	Widget contains proactive prompts to enable proactive engagement from leaders by bringing actionable insights as prompts into their flow of work. By default, one signal is configured to prompt leaders to review significant skill gaps.
Org talent	Provides a glance at the data that appears on the Org talent page. Widget contains a short list of cards that provide data about the talent associated with an employee's team. A link to view all teams on the Org talent page is

© 2026 ServiceNow, Inc. All rights reserved.

At a glance page widgets (continued)

Widget	Description
	provided for quick access to the entire talent composition data set.
Skill growth area	Provides a glance at the data that appears on the Org skills page. Widget contains the top five skills with the largest skill gaps. A link to view all skills on the Org skills page is provided for quick access to the entire skill composition data set.
Growth engagement	Widget contains north-star and drill-down metrics that measure employee engagement with the growth tools provided in the Talent Development suite of applications.

Org talent page

The Org talent page provides your organizational leaders with a centralized location to view the talents of each team that exists within their organization.

Leaders can view talent data at any level of granularity through an interactive organizational chart. This organizational chart illustrates the structure of the leader's organization and the reporting relationships across the different teams in their organization.

The organizational chart displays a card for each employee in the leader's organization. To improve the traversing experience, the cards for each employee appear in an organizational hierarchy. The employee cards in the organizational chart appear in the following order from top to bottom:

1. Organizational leader
2. Employees who lead a team within the leader's organization
3. Employees who are individual contributors

Leader's can use the organizational chart or the **Search for employees in your org** field to find and select employees who work for their organization.

To access the Org talent page, navigate to the Employee Center and select **Org talent** from the Leader hub drop-down list.

Org talent widgets

Org talent page widgets

Widget	Description
Search for employees in your org	Widget is a search bar that appears above the organizational chart. Search results appear after you enter three or more characters. Search results include the following information about the employee:

© 2026 ServiceNow, Inc. All rights reserved.

Org talent page widgets (continued)

Widget	Description
	• Name • Job title • Department

Team details page

The Team details page provides your organizational leaders with visibility into the skills and talent composition of a team that exists within the leader's organization.

The Team details page is embedded into the Org talent page. To access the Team details page, perform the following steps after you navigate to the Employee Center and select **Org talent** from the Leader hub drop-down list:

1. Select a card for an employee who leads a team within the leader's organization.
2. Select the **View team details** button on the card for the employee that you selected.

Team details widgets

Team details page widgets

Widget	Description
Growth engagement	Widget contains metrics that measure employee engagement with the growth tools provided in the Talent Development suite of applications.
Team skill score	Widget displays a skill score associated with a team in the leader's organization. This score measures the number of people, in a specific team, who have achieved the proficiency levels necessary for each skill required by the roles in that team. A score of 100 means that the requirements are met. This widget also reflects a list of skills on which the team must improve the most.
Employee work arrangement	Widget reflects a distribution of team members by work arrangements (for example, on-site, remote, hybrid).
Range of years spent at the company	Widget reflects a distribution of team members by tenure at the company. Administrators can configure the following components for the data that appears in this widget: • Up to six segments • The time range for each segment

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Team details page widgets (continued)

Widget	Description
	Tip: For more information about the configuration process, see Configure time range data in tenure widgets. The following time ranges are provided by default: • >6 years • 2–6 years • 1–2 years • <1 year A scheduled job that runs weekly uses the date in the **Employment start date** field in the Employee Profile record to calculate the tenure data that appears in this widget.
Time spent in current positions	Widget reflects a distribution of team members by tenure in their current position. Administrators can configure the following components for the data that appears in this widget: • Up to six segments • The time range for each segment **Tip:** For more information about the configuration process, see Configure time range data in tenure widgets. The following time ranges are provided by default: • >6 years • 2–6 years • 1–2 years • <1 year A scheduled job that runs weekly uses the date in the **Start date** field in the Employee Job Profile record to calculate the tenure data that appears in this widget.
Range of employee experience	Widget reflects a distribution of team members by experience levels. The bar chart displays the number of employees in a specific team, at each experience level, including the team manager.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Team details page widgets (continued)

Widget	Description
	The horizontal axis represents the experience level and the vertical axis represents the number of employees at each experience level. Leader Hub uses the Job level field in the Job profile record from the Employee Job Profiles [sn_employee_position] table to retrieve the data that appears in this widget.

Installing and configuring Leader Hub

Install the Leader Hub application to give organizational leaders and their supporters access to resources that help them guide, influence, and motivate teams within their organization. Administrators can configure components of the application to meet the specifications of your organization.

Installation and configuration overview

Install the Leader Hub application

Install the Leader Hub application to equip your organizational and HR leaders with the necessary tools to cultivate growth, develop talent, and make critical decisions that guide their organization toward long-term prosperity. The Leader Hub app gives leaders access to data about their organization's talent from the Employee Center.

Before you begin

The Leader Hub app has a dependency on UI share library[sn_ui_lib].

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.

6. Select **Install**.

Configure metrics for employee engagement

Use the Leader Hub Metric Configurations table to configure metrics for employee engagement with certain applications in the Talent Development suite. The configurable options are applicable to the metrics that appear in the Growth engagement widget and the employee cards on the Org talent page.

Before you begin

Role required: admin [sn_egd_lh.admin]

Procedure

1. Navigate to **All** > **Leader Hub** > **Leader Hub Metric Configuration**.
2. Select a record in the list to revise an existing configuration or select **New** to create a configuration.
3. Specify the name of the application for which you're creating metrics in the **Name** field.

   Tip:
   Refer to the options in the **Metric** field to determine the application for which you want to create metrics.

4. Make your employee engagement metric available to leaders by selecting the check box associated with the **Active** field.
5. Indicate the sequential order in which your employee engagement metric appears by entering a numeric value in the **Order** field.

   Tip:
   The employee engagement metric you configure for the application you specify in the **Metric** field appears in the Growth engagement widget in the following order: from lowest **Order** field value to highest.

6. Add an image for the employee engagement metric that you create by selecting the **Lookup using list** icon in the **Icon** field.
7. Select an application from the drop-down list associated with the **Metric** field that matches the application you specified in the **Name** field.
8. Select an option from the drop-down list associated with the **Metric Calculation Base** field to specify the base for the metric calculation.
9. Enter a description in the **Description** field to describe the metric you're configuring for the application you specified in the **Metric** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tip:
`<personnel>` represents the role that you specified in the **Metric Calculation Base** field (i.e., employee, manager, or individual contributor). The description you enter appears underneath the percentage that is calculated for the employee engagement metric you create. Using the description provided for the Aspirations app, the Growth engagement widget displays the following message: `<percentage>` of `<personnel>` have active aspirations.

10. Enter alternate text in the **Tooltip** field to provide further details about the employee engagement metric you're configuring.

Tip:
Use the tooltip to display text about the calculation for the metric you're configuring. For example, if you're configuring metrics for the Aspirations app, and metrics are calculated based on the number of employees with a minimum of one aspiration that is in progress, enter `Employees with at least one-in-progress aspiration` in the **Tooltip** field. This text appears when you hover your cursor over the icon appended at the end of the description.

11. Enter `now/leader-hub-analytics/<UIB page>` in the **Analytics URL** field.

Tip:
<UIB page> represents the name of the user interface builder (UIB) page. The name of the application for which you're configuring metrics is the UIB page name by default. For example, if you're configuring metrics for the Aspirations app and you're using the default UIB page, enter `now/leader-hub-analytics/aspirations`.

12. Select the check box associated with the **Enable on Talent Visibility** field to make your employee engagement metric visible on the Org talent page when you view a card that contains information about an employee.
13. Use the **Domain** field to specify the domain in which your metric configuration data is available.

Result
The employee engagement metric that you configured appears in the Growth engagement widget. The Growth engagement widget appears on the At a glance page.

Configure time range data in tenure widgets

Use the Leader Hub Team Composition Configuration table to configure the time range data that appears in the following widgets: Range of years spent at the company and Time spent in current positions. These widgets appear on the Team details page.

Before you begin
Role required: admin [sn_egd_lh.admin]

About this task
Administrators can configure the following components for the data that appears in the previously mentioned widgets:

- Up to six segments for each widget
- The time range for each segment

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the **All** menu, and enter `sn_egd_lh_team_composition_config.list` in the navigation filter.
   The Leader Hub Team Composition Configurations [sn_egd_lh_team_composition_config] table appears.
2. Select a record in the list to revise an existing configuration or select **New** to create a configuration.
3. Select an option from the drop-down list associated with the **Tenure type** field to specify whether the segment is applicable to tenure in the position or the company.

   Tip:
   The option you select in this field determines the widget in which the segment appears. Select **Company** to create a segment that appears in the Range of years spent at the company widget. Conversely, select **Position** to create a segment that appears in the Time spent in current positions widget.

4. Select a time unit from the drop-down list associated with the **Start unit** field to define whether the start of the time range is in months or years.
5. Select a time unit from the drop-down list associated with the **End unit** field to define whether the end of the time range is in months or years.
6. Enter the number of months or years at which the time range starts in the **Range start** field.
7. Enter the number of months or years at which the time range ends in the **Range end** field.
8. Indicate the sequential order in which your segment appears inside the widget by entering a numeric value in the **Display order** field.

   Tip:
   The segment you configure appears in the widget in the following order: from lowest **Display order** field value, to highest.

9. Make your time range segment visible to leaders by selecting the check box associated with the **Active** field.
10. Select **Submit**.

Result

The segment that you configured appears in one of the following widgets after the *`LH get team composition tenure counts`* scheduled job runs:

- Range of years spent at the company
- Time spent in current positions

What to do next

1. Repeat the steps in this task to create additional segments in the previously mentioned widgets.
2. Verify that the *`LH get team composition tenure counts`* scheduled job runs weekly to update the data in the previously mentioned widgets. The calculated values that are generated by this scheduled job are also stored in the Leader Aggregate Values [sn_egd_lh_aggregate_values] table.

Assign a leader or supporter role to a user record

Provide organizational leaders and supporters with access to Leader Hub by assigning the required roles to their user record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

You must create an active employee definition to generate employee profiles. For more information about this process, refer to Create an active employee definition.

You must enable the new employee details and design. For more information, see Opt in to the employee profile.

You must provide employees of your organization with a license to enable access to Leader Hub. For more information about employee licensing, refer to License Talent Development Core users.

Define eligible users to show up in the org chart. For more information, see Organization chart in Employee Center Pro. Select **Employee Profile** in the **Table** field.

Role required: admin [sn_egd_lh.admin]

Procedure

1. Navigate to **All** > **User Administration** > **Users**.
   The Users [sys_user] table appears.
2. Select a record in the list associated with an employee who is an organizational leader or supporter.
   The form for a user record appears.
3. On the **Roles** tab, select **Edit**.
4. Enter `sn_egd` in the **Collection** field.
   A list of roles beginning with "sn_egd" appears.
5. Double-click the role that corresponds to the employee's occupation in your organization.
   The role appears in the Roles List.
6. Select **Save**.

Result

Organizational leaders and supporters have the required role assigned to their user record to access Leader Hub. Use the navigation path that corresponds to the employee's role to view a list of employees with the leader or supporter role assigned to their user record:

Choice table

Role	Path
Organizational leader	**All** > **Leader Hub** > **Leaders**
Organizational supporter	**All** > **Leader Hub** > **Supporters**

Create support relationships

Use the Org Support Relationships table to create a relationship between an organizational leader and an organizational supporter. After the relationship is established, supporters can use Leader Hub to view their designated leader's organization and provide support accordingly.

Before you begin

An organizational leader can receive support from multiple organizational supporters, and an organizational supporter can support multiple organizational leaders. You must create a separate record for each organizational relationship.

Role required: admin [sn_egd_lh.admin]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Leader Hub** > **Org Support Relationships**.
   The Org Support Relationships table appears.
2. Select **New**.
3. Enter the name of an organizational leader in the **Leader** field.
4. Enter the name of an organizational supporter in the **Supporter** field.
5. Select **Submit**.

Result

The organizational supporter that you specified in the **Supporter** field can view the organization associated with the leader you specified in the **Leader** field when they access Leader Hub.

Quick start tests for Leader Hub

Validate that Leader Hub still works after you make any configuration change such as applying an upgrade or developing an application. Copy and customize these quick start tests to pass when using your instance-specific data.

Danger:
By default, the system property that is used to run automated tests is disabled to prevent you from accidentally running these tests on a production system. To avoid data corruption or an outage, run tests only on development, test, and other non-production instances. See Enable or disable executing Automated Test Framework tests.

All test suites and tests should pass on a default implementation. To validate a custom implementation, copy the automated tests and configure them for your customizations.

Quick start tests are disabled and read-only test templates. By default, they only produce a pass result when you run them with the default demo data that is provided with the application or feature plugin.

To make quick start tests produce a pass result when you run them with your instance-specific data, copy and configure them to use your instance data.

Use Performance Profiling to compare tests to detect performance degradation when you upgrade your instance, so you can investigate and fix the issues. See Performance profiling.

The Agile Development 2.0 (com.snc.sdlc.agile.2.0) and the Agile Development 2.0 - ATF Tests (com.snc.sdlc.agile.2.0.atf) plugins must be enabled.

Note:
When running, demo data is required.

Leader Hub

Leader Hub quick start tests require activating the Leader Hub plugin (sn_egd_lh) and loading demo data.

Quick start tests

Run quick start tests for Leader Hub

Run quick start tests to verify the Leader Hub app still works after each upgrade and deployment of new applications or integrations. If you customized Leader Hub, you must configure the quick start tests to ensure they're compatible with your customizations.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Automated Test Framework** > **Tests**.
2. Search and select the quick start tests you want to run.
   For information on available quick start tests, see Quick start tests for Leader Hub.
3. Click **Run Test**.
   The Test Steps tab provides each step of the quick start test.
   After the tests run, the Step Results tab shows the status of each test step. Screen shots also appear at the top of the form as attachments.

What to do next

Use Performance Profiling to compare tests to detect performance degradation when you upgrade your instance, so you can investigate and fix the issues. See Performance profiling.

Integrations for Leader Hub

Extend the Leader Hub application's capabilities by integrating with the Talent Development suite of applications to acquire pertinent data about the talent in your organization.

Leader Hub integrates with certain applications in the Talent Development suite to generate metrics for employee engagement. Organizational leaders use the data that Leader Hub generates to effectively drive performance, foster growth, and harness the potential of their teams. Leaders can view and analyze the data associated with their organization's talent from the Employee Center.

Leader Hub provides an integration with the following applications:

Talent Development Core

Talent Development Core (sn_egd_core) includes the Skills Foundation plugin (sn_skills_int), which must be enabled to use Leader Hub. Talent Development Core also provides the following modules, which are growth tools used in the metrics that Leader Hub generates for measuring employee engagement:

- Aspirations
- Growth plans

Skills Foundation

Leader Hub uses the skill data from Skills Foundation in the metrics that it produces for skill competency scores and critical skill gaps.

Career Conversations

When you optionally install the Career Conversations plugin (sn_egd_act), Leader Hub generates metrics for employee engagement with the Career Conversations app, such as the percentage of managers in your organization who had conversations with their employees in the past 30 days.

Mentoring

When you optionally install the Employee Connections plugin (sn_ecn), Leader Hub generates metrics for employee engagement with the Mentoring app, such as the percentage of employees in your organization currently engaged in mentorship.

Learning

When you optionally install the Learning plugin (sn_lep), Leader Hub generates metrics for employee engagement with the Learning app, such as the percentage of employees in your organization who have completed courses in the past 30 days.

Using Leader Hub

Use the Leader Hub app to access pertinent data about the talent in your organization so you can enhance employee engagement, adapt to changing circumstances, and make data-driven decisions that steer your organization toward success.

View north-star and drill-down metrics

View the north-star and drill-down metrics that appear in the Growth engagement widget. Use this data to gauge the level of employee engagement with the growth tools provided in the Talent Development suite of applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: organizational leader [sn_egd_lh.leader]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the Leader hub drop-down list, select **At a glance**.
3. In the Growth engagement widget, select a north-star metric associated with an application in the Talent Development suite that you want to view and analyze.

   Tip:
   The north-star metrics display a percentage that is calculated for employee engagement with certain applications in the Talent Development suite. The north-star metrics are the first row of metrics that appear in the Growth engagement widget.

   The drill-down metrics for the application you selected appears.
4. View the data in the drill-down metrics to obtain more information about employee engagement with the application you selected.

   Tip:
   The drill-down metrics are graphs that display further details about the corresponding north-star metric. The drill-down metrics appear underneath the north-star metrics.

View team details

Gain visibility into the skills and talent composition of each team in your organization. Use this data to determine the strengths and deficiencies of each team so you can drive changes that steer your employees toward success.

Before you begin
Role required: organizational leader [sn_egd_lh.leader]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the Leader hub drop-down list, select **Org talent**.
   The Org talent page appears.
3. Use the organizational chart or the **Search for employees in your org** field to select an employee who leads a team in your organization.

   Tip:
   The card for each employee reflects whether they have individuals who report to them. You can determine whether an employee leads a team by viewing the number of directs and total reports they have in their employee card.
4. Select **View team details** on the card for the employee that you selected.
   The Team details page appears.
5. View the data on the Team details page to gauge your team's growth and development.

   Tip:
   The Team details page reflects the following information for the team that you selected:

   - Team skill score
   - Skills that require the most improvement
   - Employee engagement with the growth tools provided in the Talent Development

© 2026 ServiceNow, Inc. All rights reserved.

Use the View menu icon in Leader Hub

Use the View menu icon ( ) to view the career profile of an employee, schedule or create a conversation, or send emails.

Before you begin
Role required: organizational leader [sn_egd_lh.leader]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the Leader hub drop-down list, select **Org talent**.
   The Org talent page appears.
3. Use the organizational chart or the **Search for employees in your org** field to select an employee in your organization.

   Tip:
   The card for each employee reflects whether they have individuals who report to them. You can determine whether an employee leads a team by viewing the number of direct and total reports they have in their employee card.

4. Select the View menu icon ( ) to perform one of the following steps.

View skill details

View skills relevant to your organization and metrics that you can use to identify critical skill gaps. This data can be used to hold managers responsible for developing talent within their teams.

Before you begin
Role required: organizational leader [sn_egd_lh.leader]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the Leader Hub drop-down list, select **Org skills**.
   The Org skills page appears.By default, skills are listed from lowest to highest skill score. Use the **Search** bar, and the **View** and **Sort by** filters to sort skills based on the criteria you choose from. Hover over the tool tip for a description of the column.
3. Select a skill that you want to review.
4. View the data on the Skill details page to obtain more information about the skill you selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tip:
The Skill details page reflects the following information about the skill that you selected:

- Skill description
- Skill type
- Trend in the company (rise or decline)
- Roles that require the skill
- Skill score
- Skill compliance ratio
- Skill relevancy to the organization
- Average proficiency level
- Teams with the lowest and highest skill score
- Top experts (individuals with the highest proficiency level)

5. **Optional:** Select **Schedule conversation** to schedule a conversation with the team lead for teams that needs attention or have the highest score.

Note:
This option is only visible if the Microsoft Outlook integration is enabled for Leader hub. For more information, see Schedule a conversation form.

6. **Optional:** Select **Create a conversation** to create a conversation with the team lead for teams that needs attention or have the highest score.

Note:
This option is only visible if the Microsoft Outlook integration is not enabled for Leader hub. For more information, see Create a conversation form.

View organizations you support

View your designated leader's organization so you can provide support in the capacity required for the organization to succeed. Supporters to whom the leader has delegated tasks and responsibilities can access Leader Hub to provide support accordingly.

Before you begin
Role required: organizational supporter [sn_egd_lh.supporter]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the mega menu, select **Orgs you support**.
   The Orgs you support page appears.
3. In the Orgs you support widget, select the leader for whom you are providing support.
4. Select the **Org talent** tab.
5. Use the organizational chart or the **Search for employees in your org** field to select an employee who you must contact on behalf of your leader.
6. Select the **View menu** icon on the card for the employee that you selected.
7. Select **Send email** to send a message to the employee who you have been requested to contact.

Use the Employee Summary Virtual Agent topic in Leader Hub

Activate and use the Employee Summary Virtual Agent topic to access employee contribution summaries, view consolidated profiles, and track employee progress.

Before you begin

To access and use the Employee Summary reports topic, the following plugin must me activated:

- Now Assist for HR Service Delivery (HRSD) (sn_hr_gen_ai)

The following plugins are optional:

- Employee Connections (sn_ecn)
- Career Conversations (sn_egd_act)
- Learning (sn_lep)
- Learning Core (sn_lc)
- Manager Hub (sn_mh)
- Employee Goals (sn_egd_goals)

Role required: admin

Procedure

1. Turn on the **Persona Assistant** skill.
   a. Navigate to **All** > **Now Assist Admin** > **Skills**.
   b. On the navigation panel, select **Employee**, then select **HRSD**.
   c. On the **Persona Assistant** card, select **Turn on**.
2. Publish the **Employee Summary** Virtual Agent topic.
   For more information, see Publish a Virtual Agent topic.
3. View the Employee Summary reports topic.
   For more information, see View employee summary reports.

Leader Hub reference

Reference topics provide additional information about the lists and forms that you use to configure and administer Leader Hub.

Leader Hub Metric Configurations table

The form associated with a record in the Leader Hub Metric Configurations table enables you to configure metrics for employee engagement with certain applications in the Talent Development suite. The configurable options are applicable to the metrics that appear in the Growth engagement widget and the employee cards that appear on the Org talent page.

The form that appears when you create a record in the Leader Hub Metric Configurations table contains the following fields:

Leader Hub Metric Configuration form

Field	Description
Name	The name of the application for which you're creating metrics. This field value should match the value you select in the **Metric** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Leader Hub Metric Configuration form (continued)

Field	Description
Analytics URL	The URL for the user interface builder (UIB) page that contains the graphs for the application you select in the **Metric** field.
Metric Calculation Base	The base for the metric calculation for the application you select in the **Metric** field. Options are as follows: • Select **Employee Count** to have metrics calculated based on the number of employees using the application you specify in the **Metric** field. • Select **Managers Count** to have metrics calculated based on the number of managers using the application you specify in the **Metric** field. • Select **ICs Count** to have metrics calculated based on the number of individual contributors using the application you specify in the **Metric** field.
Tooltip	Alternate text to provide further details about the employee engagement metric you're configuring.
Icon	Image for the employee engagement metric that you create. This image is associated with the application that you select in the **Metric** field.
Application	Field value is set to **Leader Hub** by default.
Domain	The domain in which your metric configuration data is available.
Description	A description to describe the metric you're configuring for the application you selected in the **Metric** field.
Active	Option to indicate whether the employee engagement metric is available to leaders when they access Leader Hub.
Enable on Talent Visibility	Option to indicate whether the employee engagement metric is visible on the Org talent page when you view a card that contains information about an employee. Administrators can select this option for up to three employee engagement metrics that they configure. The system generates the following error message when you exceed the maximum number of metrics permitted to have this option:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Leader Hub Metric Configuration form (continued)

Field	Description
	You can only choose up to three metrics to display on talent visibility card.
Metric	An application in the Talent Development suite for which you want to configure metrics. Options are as follows: • **Aspirations** • **Conversations** • **Growth Plans** • **Learning** • **Mentoring**
Order	The sequential order in which your employee engagement metric appears in the Growth engagement widget.

Org Support Relationships table

The form associated with a record in the Org Support Relationships table enables you to create a relationship between an organizational leader and an organizational supporter. After the relationship is established, supporters can use Leader Hub to view their designated leader's organization and provide support accordingly.

The form that appears when you create a record in the Org Support Relationships table contains the following fields:

Org Support Relationship form

Field	Description
Leader	Select an organizational leader from the list of users in your organization.
Supporter	Select an organizational supporter from the list of users in your organization.

Create a conversation form

Use the Create a conversation form to schedule a conversation with an employee when the Microsoft Outlook integration isn't enabled for Leader Hub.

Create a conversation form

Field	Description
Organizer	Name of the manager scheduling the conversation.
Have this conversation with	Name of the employee with whom you want to converse.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a conversation form (continued)

Field	Description
Conversation title	Name of the conversation. You can update this value.
Date	Date of the conversation. The format is <YYYY-MM-DD>. You can use the Show Calendar for Date icon to select a date.
Reoccurs	The frequency at which the conversation occurs.
Send invite	Select **Send invite** to schedule the conversation. The scheduled conversation appears in a new tab. You can update talking points, action items, or any other notes required for the conversation.
Cancel	Close this conversation.

Schedule a conversation form

Use the Schedule a conversation form to schedule a conversation with an employee when the Microsoft Outlook integration is enabled for Leader Hub.

Schedule a conversation form

Field	Description
Organizer	Name of the manager scheduling the conversation.
Have this conversation with	Name of the employee with whom you want to converse.
Conversation title	Name of the conversation. You can update this value
Date	Date of the conversation. The format is <YYYY-MM-DD>. You can use the Show Calendar for Date icon to select a date.
Reoccurs	The frequency at which the conversation occurs.
Select an available date and time	Visual representation of your and your employee's calendar to schedule meetings based on available time slots.
Additional details	Give recipients more information about the scheduled conversation by including additional details.
Send invite	Select **Send invite** to schedule the conversation. The scheduled conversation appears in a new tab. You can update talking points, action items, or any other notes required for the conversation.
Cancel	Close this conversation.

HR Success Dashboard indicators

HR Success Dashboard indicators provides service and performance insights to the HR leadership team and process owners. You can measure the performance of the HR implementation using the different KPIs.

Success Dashboard is available for HR Service Delivery and IT Service Management via the following applications:

- HR Success Dashboard indicators
- ITSM Success Dashboard indicators

For more information on the ITSM dashboard, see ITSM Success Dashboard indicators.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

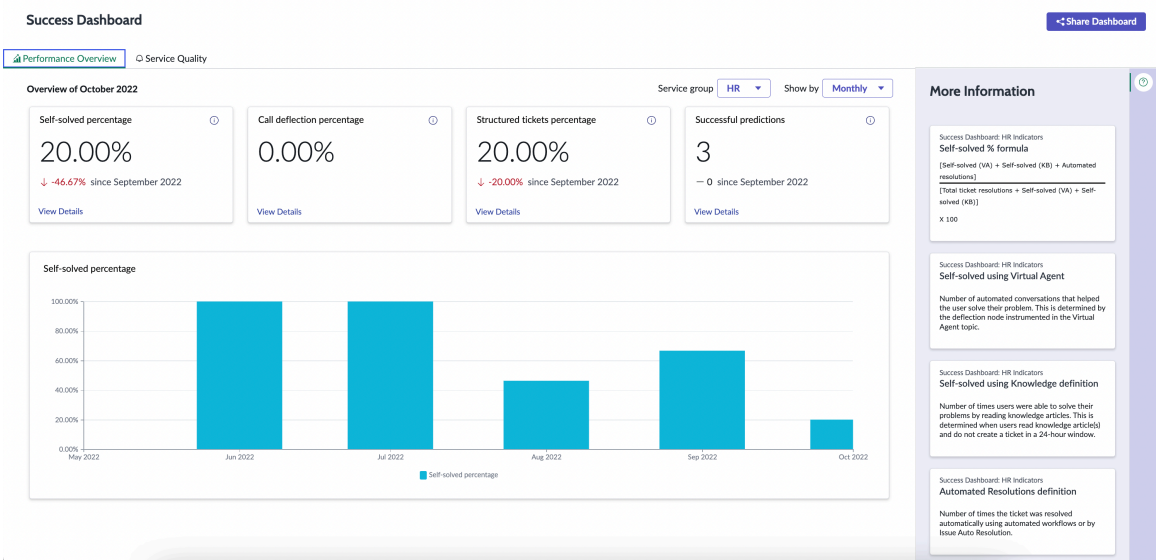
Explore the HR Success Dashboard indicators



Get an overview of the HR Success Dashboard indicators to understand the different components on the dashboard and how can you use the dashboard for your organization.

The HR team can analyze and understand the key metrics such as, call deflections and self-service to measure the success of the HR implementation. The leadership team can view the following insights:

- The number of times users are able to solve their problems on their own.
- The number of times users are able to submit their requests and issues without the help of tier 1 agents.
- The channels (Knowledge Base articles, Virtual Agent conversations, Catalog submissions) that are contributing to self-solve and call deflection.
- The number of times Predictive Intelligence successfully predicted an HR ticket field that has a downstream impact on the resolution time.
- The formulae and definitions of the data.
- The data trend for month-on-month, quarter-on-quarter, or year-on-year.

Also, process owners can view the records that contribute to these insights, do a deep dive analysis, and drive improvement plans.

Configure HR Success Dashboard indicators

Set up the HR Success Dashboard so that IT leadership teams and process owners can start using the dashboard.

Get started with HR Success Dashboard indicators

1. Get the HRSM Pro license for ServiceNow HR Service Delivery applications.
2. Install the HR Success Dashboard indicators application (com.snc.success_dashboard_hrsm).
3. Configure the Knowledge Base for HR Service Delivery.
4. Configure the Virtual Agent topics with VA deflection nodes.
5. Set fulfillment automation level for the HR catalog item.
6. Configure the Key Performance Indicators (KPI)s in the HR Success Dashboard indicators.
7. Run the `UpdateFormulasSD` script to recalculate formulae.
8. Activate Performance Analytics jobs.

Install the HR Success Dashboard indicators

Install the HR Success Dashboard indicators application to get performance and service insights for your organization. The application installs related ServiceNow® Store applications and plugins in case those are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Install the following plugins before installing the HR Success Dashboard indicators application.
  - Performance Analytics - Content Pack for HR
  - Performance Analytics - Premium
  - Self-service Analytics Core
- HR HR Success Dashboard has a dependency on the Success Dashboard Core application. This must be purchased separately.

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the HR Success Dashboard indicators application (sn_sd_hrsm) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

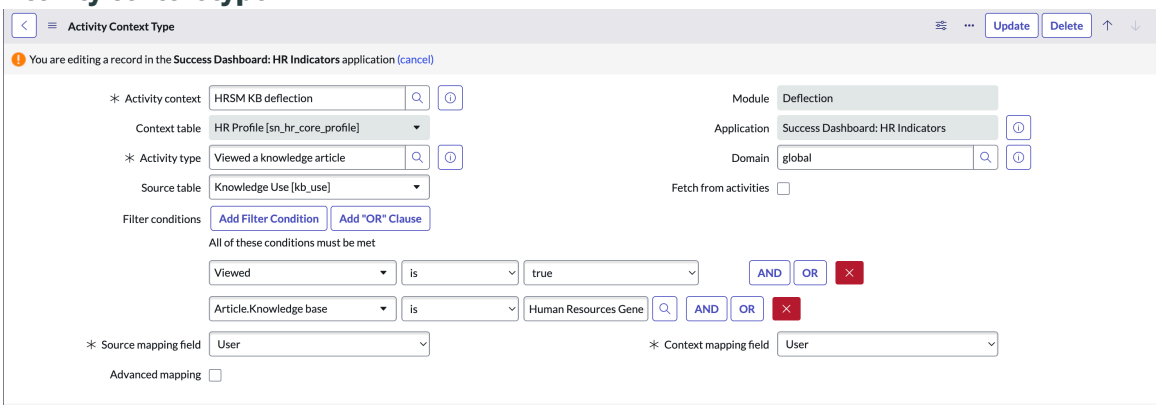
   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. Select **Install**.

Configure the Knowledge Base articles

Include the HR only Knowledge Base articles while determining the **Self-solved using Knowledge** KPI in the HR Success Dashboard indicators.



Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Self-Service Analytics** > **Activity Context**.
2. Select **HRSM KB deflection** from the list.
3. In the **Activity Context Types** tab, select the Preview icon corresponding to Viewed a knowledge article activity type.
4. Select **Open record**.
5. In the Activity Context Type form, change the filter condition to include the relevant knowledge bases.

Activity context type

6. Select **Update**.

Configure the Virtual Agent topics

Configure the Virtual Agent (VA) topics for HR Success Dashboard indicators to display data correctly in case you have topics other than the base system topics.

Before you begin

Role required: admin

About this task

Map the topics with deflection patterns of the **HR VA Default** deflection tracker. Deflection tracker helps analyse the performance of a conversation and how helpful Virtual Agent topics are for users.

Procedure

1. Navigate to **All > Virtual Agent > Designer**.
2. Select the HR topic for which you want to add the deflection tracker.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Enable the flow chart view by disabling the **Table View** toggle switch.
4. Drag and drop the **Deflection** node from the **Utilities** section to the place in the flowchart where you want to add the deflection pattern.
5. Enter the following details in the Deflection Properties pane on the right.

Deflection input parameters

Field	Value
Deflection Configuration	HR VA Default
Deflection Pattern	**HR VA-Self-Resolving:** When the node in the topic indicates that Virtual Agent is able to resolve the user problem completely without creating an IT ticket (incident or request) and consequently contributing to the Self-solved KPIs.
Activity Table	Table where the deflection activity occurs. This table is associated with the primary activity table. For more information, see Create deflection configurations and patterns.
Activity Ids	List of comma-separated activity system IDs.

6. Select **Save**.

What to do next

Set up the fulfillment automation level of the HR catalog items, see Set fulfillment automation level of catalog item.

You may also configure the dashboard indicators KPIs, add contributing indicators, or update the More information card, as required.

1. For more information on configuring the Success Dashboard indicators KPIs, see Configure Success Dashboard indicators KPIs.
2. For more information on adding contributing indicators, see Add contributing indicators.
3. For more information on updating the More information cards, see Update more information cards.

Related topics

Tracking deflections using deflection topic blocks

Create deflection configurations and patterns

Run Update formula script for HR Success Dashboard indicators

Run the update formula script to recalculate all the formulae in the HR Success Dashboard indicators, in case there is outdated data in the dashboard.

Before you begin

Role required: admin

Note:
This action is only required for custom changes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Scheduled Script Executions**.
2. Open the `UpdateFormulasSD` list from the list.
3. Select **Execute Now**.

Activate Performance Analytics jobs

Activate the Performance Analytics (PA) jobs for the HR Success Dashboard indicators to collect daily and historical data.

Before you begin

Role required: admin

Procedure

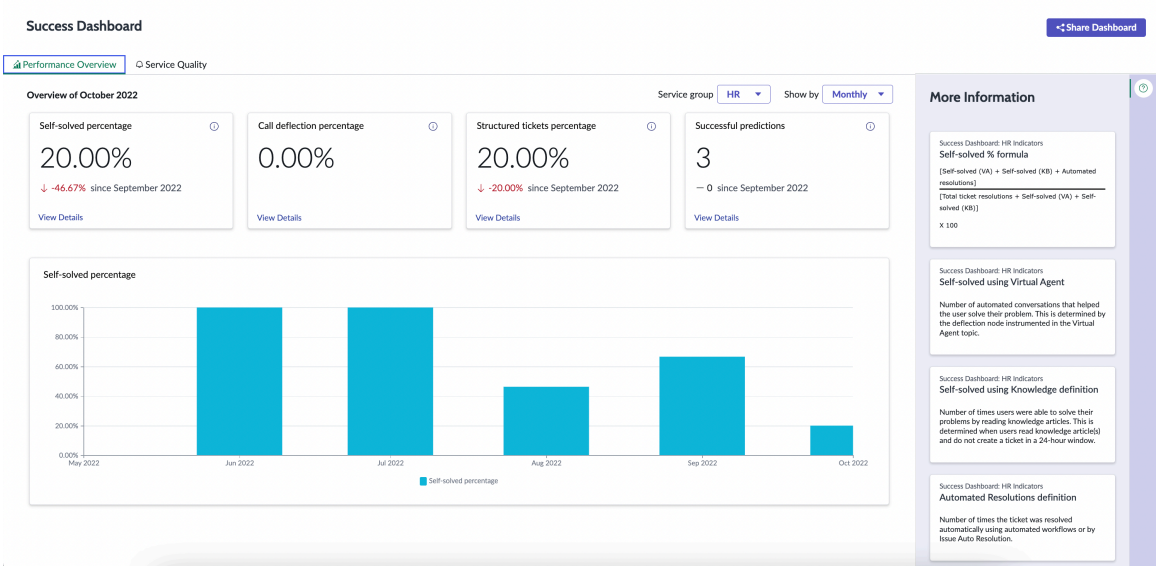
1. Navigate to **All > Performance Analytics > Data Collector > Jobs**.
2. To run the daily jobs:
   a. Filter the list of jobs to select the following:
   [SD HRSM] Daily Data Collection
   b. Activate the scheduled jobs by selecting the **Active** check box corresponding to the job.
3. To run the scheduled jobs for historical data collection:
   a. Filter the list of jobs to select the following:
   [SD HRSM] Historical Data Collection
   b. Select **Execute Now** to see the past 60 days data in the dashboard.

Measure the performance of the HR implementation

Use the HR Success Dashboard indicators to measure the performance of your HR implementation using different KPIs.

For more information on how to share the Dashboard with your leadership, see Share the Success Dashboard indicators.

For more information on how to view the benchmark KPIs of the Success Dashboard indicators, see Success Dashboard indicators benchmark.



Monitor the KPIs of the HR implementation

View and monitor the HR Success Dashboard indicators to measure the performance of your HR implementation using different KPIs.

Access the aggregated KPI data in the HR Success Dashboard indicators. By navigating to **All>** > **Success Dashboard** > **Success Dashboard** if you have the sn_sd.success_dashboard_admin, sn_sd.success_dashboard_read, or sn_sd.success_dashboard_details_read role.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Success Dashboard indicators

You can monitor the data in **Monthly**, **Quarterly**, or **Yearly** time aggregations.

- **Monthly**: Shows the data aggregated monthly. For counts, this data is the monthly sum of the daily values. For percentages, this data is the monthly average of the daily percentages.
- **Quarterly**: Shows the data aggregated quarterly. For counts, this data is the quarterly sum of the daily values. For percentages, this data is the quarterly average of the daily percentages.
- **Yearly**: Shows the data aggregated yearly. For counts, this data is the yearly sum of the daily values. For percentages, this data is the yearly average of the daily percentages.

Once the time aggregation is set, all the score-cards show the data for that period.

For more information on the dashboard components, see HR Success Dashboard indicators components.

For more information on the KPI definitions and formulas, see HR Success Dashboard indicators KPI definitions and formulae.

HR Success Dashboard indicators reference

See additional information about components installed with the HR Success Dashboard indicators.

For more information on the roles and responsibilities required to perform different tasks, see User roles and responsibilities.

Note:

The roles are universal for both ITSM and HR, that is all Service groups of the Success Dashboard indicators.

For more information on how to determine the dashboard configuration to use the KPI and formulae, see HR Success Dashboard indicators KPI definitions and formulae.

HR Success Dashboard indicators KPI definitions and formulae

Enable HR Success Dashboard indicators and configure to determine and use the Key Performance Indicators (KPIs) and formulae.

Performance Overview

HR Success Dashboard indicators uses the following KPIs and definitions:

- **Self-solved:** Calculated from the daily average number of times your users achieved a resolution without intervention from Tier 1 Agents in the report range. Includes numbers from Self-solved using Virtual Agent, Self-solved using Knowledge and Automated resolutions (For example, HR tickets auto-resolution via Virtual Agent). See the formula:

```
[Self-solved using Virtual Agent + Self-solved using Knowledge
 + Automated resolutions] / [Total ticket resolutions +
 Self-solved (VA) + Self-solved (KB)] x 100
```

  - **Self-solved using Virtual Agent:** Number of automated conversations that helped the user solve their problem. In the base system. This is determined by the instrumented deflection node in the VA topic.
    - **HR issues self-solved using Virtual Agent:** Number of times users solved their issues or requests in a Virtual Agent conversation. This is recorded in the deflection metrics table by the **HR VA Self-Resolving** deflection pattern instrumented in the conversation.

    - **Note:**
      To use a different method to determine this KPI, see Configure Success Dashboard indicators KPIs.

  - **Self-solved using Knowledge:** Number of times users are able to solve their problems by reading Knowledge articles. This is determined when users read Knowledge articles and do not create a ticket in a 24-hour window.
    - **HR issues self-solved using Knowledge:** Number of times users solved their issues or requests on their own by reading Knowledge Base articles. This is determined when the user opened provided article(s) and did not create a case in a 24-hour window. This is recorded in the deflection metrics table with the **HR case deflection using Knowledge** deflection pattern.

    - **Note:**
      To use a different method to determine this KPI, see Configure Success Dashboard indicators KPIs.

  - **Automated Resolutions definition:** Number of times the ticket is resolved automatically using automated workflows or by Issue Auto Resolution.
    - The Isuue Auto Resolution value is determined by the deflection node configured in the Issue Auto Resolution Virtual Agent topic.
    - The Request Fulfilled Automatically value is the number of requested items that are fulfilled using automated workflows. When the catalog item uses an automated workflow, the **Fulfillment automation level** field of the catalog item must be set to **Fully-automated** for it to be included in this metric.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **HR cases automatically fulfilled:** HR cases that are fulfilled using automated workflows. When the catalog item uses an automated workflow, the fulfillment automation level field of the record producer level item must be set to Fully automated. Once such an item is submitted, the automation level gets recorded.

- **Note:**
  To use a different method to determine this KPI or add more sources (for example, automated catalog workflows), see Configure Success Dashboard indicators KPIs.

  - **Total ticket resolutions:** The number of HR issues resolved.

- **Call deflection:** Calculated from the number of times per day requesters performed the actions, Ticket submissions using Service Catalog, Ticket submissions using Virtual Agent, Self-solved using Virtual Agent and Self-solved using Knowledge without Tier 1 agent intervention. See the formula:

```
[Catalog ticket submissions + VA ticket submissions +
 Self-solved (VA) + Self-solved (KB)]/ [Total tickets submitted
 + Self-solved (VA) + Self-solved (KB)] x 100
```

  - **Catalog ticket submissions:** HR cases submitted using the Service Catalog in the Service Portal or the Now Mobile app.

    - **HR Cases submitted using Service Catalog:** Number of HR case submissions from the Service Portal or Now Mobile app, as recorded in the HR case table with source as Self Service.

    - **Note:**
      If you use a different method to determine this KPI or add more sources (for example, automated catalog workflows), see Configure Success Dashboard indicators KPIs.

  - **VA ticket submissions:** Number of times the ticket was submitted using the Virtual Agent. This is determined by the deflection node instrumented in the Virtual Agent topic.

    - **HR Cases submitted using VA:** Number of HR case submissions from Service Portal or Now Mobile app, as recorded in the HR case table with the source as Virtual Agent.

    - **Note:**
      If you use a different method to determine this KPI or add more sources (for example, automated catalog workflows), see Configure Success Dashboard indicators KPIs.

  - **Self-solved deflections:** Number of issues or requests users solved on their own using the Virtual Agent and the Knowledge Base articles.

```
[Self-solved using Virtual Agent + Self-solved using
 Knowledge Articles]
```

    - **HR issues self-solved using Virtual Agent:** Number of times users solved their issue or requests in a Virtual Agent conversation. This is recorded in the deflection metrics table by the HR **VA Self-Resolving** deflection pattern instrumented in the conversation.
    - **HR issues self-solved using knowledge:** Number of times users solved their issues or requests on their own by reading Knowledge Base articles. This is determined when the user opened provided articles and did not create a case in a 24-hour window. This is

recorded in the deflection metrics table with the **HR case deflection using Knowledge** deflection pattern.

- **Note:**
  If you use a different method to determine this KPI or add more sources (for example, automated catalog workflows), see Configure Success Dashboard indicators KPIs.

- **Structured tickets completed:** Total number of HR cases completed successfully in the report range.
  - **Structured HR Cases Closed:** Number of HR cases with a state of **Closed complete** where the associated HR Service has any Fulfilment Type other than **Manual**.

  - **Note:**
    If you use a different method to determine this KPI, see Configure Success Dashboard indicators KPIs.

- **Successful predictions:** Successful predictions works by Predictive Intelligence solutions, counted when the prediction made by the solution is the same as the final value. In the base system, this value is determined when the system uses classification to predict and the final value in the case table is the same as the predicted value.
  - **Successful predictions:** Total successful predictions by Predictive Intelligence and the Natural Language Understanding (NLU) solutions.
  - **Successful NLU predictions:** Successful prediction of the number of times the NLU prediction model accurately understood the intent of the user's conversation or auto-selected a topic.
    - **Successful HR case predictions:** Number of times successful predictions have been made by the Predictive Intelligence solutions. It is counted when the prediction made by the solution is the same as the final value of the field in the HR case table.

    - **Note:**
      If you use a different method to determine this KPI, see Configure Success Dashboard indicators KPIs.

Service Quality

- **Customer satisfaction score:** It is the average of the customer satisfaction scores based on the surveys conducted after the issue was resolved.

  HR Average CSAT: HR case normalized satisfaction score or the HR Service Delivery Survey instances.

- **Mean time to resolve:** It is the average of the time between the ticket creation and the ticket closure.

  HR Case MTTR: The sum duration of the closed HR cases or the number of closed HR cases.

- **% Breached SLA:** It is the percentage of the issues that were resolved after the Service Level Agreement (SLA)s was breached.

  HR cases Breached SLA%:

```
(Number of Closed HR cases with Breached SLAs / Number of
 Closed HR cases) * 100
```

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **% Tickets resolved without reassignment:** It is the percentage of tickets that are resolved without reassigning the ticket to a different user.

  % HR cases closed without reassignment: It shows the HR cases that were closed and has reassignment count as zero.

Now Assist for HR Service Delivery (HRSD)

Use the ServiceNow® Now Assist for HR Service Delivery (HRSD) application to summarize the case information, generate resolution notes, and summarize the chat information for an interaction. You can enable your agents to understand the chat and case context so that they can propose quicker resolutions to your requesters.

AI limitations

This application uses artificial intelligence (AI) and machine learning, which are rapidly evolving fields of study that generate predictions based on patterns in data. As a result, this application may not always produce accurate, complete, or appropriate information. Further, there is no guarantee that this application has been fully trained or tested for your use case. To mitigate these issues, it is your responsibility to test and evaluate your use of this application for accuracy, harm, and appropriateness for your use case, employ human oversight of output, and refrain from relying solely on AI-generated outputs for decision-making purposes. This is especially important if you choose to deploy this application in areas with consequential impacts such as healthcare, finance, legal, employment, security, or infrastructure. You agree to abide by ServiceNow's AI Acceptable Use Policy, which may be updated by ServiceNow.

Data processing

This application requires data to be transferred from ServiceNow customers' individual instances to a centralized ServiceNow environment, which may be located in a different data center region from the one where your instance is, and potentially to a third-party cloud provider, such as Microsoft Azure. This data is handled per ServiceNow's internal policies and procedures, including our policies available through our CORE Compliance Portal.

Data collection

ServiceNow collects and uses the inputs, outputs, and edits to outputs of this application to develop and improve ServiceNow technologies including ServiceNow models and AI products. In addition, this application will collect information about HR case data (Case Assist and KB Generation) and chat transcripts (Chat Assist), including related comments and work notes. Customers can opt out of future data collection at any time, as described in the Now Assist Opt-Out page.

For more information, see the Now Assist documentation.

Exploring Now Assist for HR Service Delivery (HRSD)

With the Now Assist for HR Service Delivery (HRSD) application, your agents can summarize the customer chat conversations and case details to get the context of the case, generate the case resolution notes, and wrap up cases faster.

Now Assist for HR Service Delivery (HRSD) Overview

The following generative AI capabilities are available for an agent:

- A case summary provides an agent with a concise summary of a case. It enables an agent to get the context by gathering information about an issue and taking actions more quickly. It also enables an agent to refresh and post the summary to the work notes.
- The case resolution notes can help an agent to wrap up cases faster and provide the context about the case resolution to the other agents who might encounter similar cases.
- An interaction chat history provides the context about the chat conversation between the agents and requesters at different points of the handoff, such as when the Virtual Agent conversation chat history is handed off to a live agent.

The following generative AI capabilities are available for employees or administrators:

- Get direct and actionable responses on customer-specific content by using generative AI in search.
- Enhance self-service by using the new Now LLM Service powered Virtual Agent experience with a simplified set-up experience.

© 2026 ServiceNow, Inc. All rights reserved.

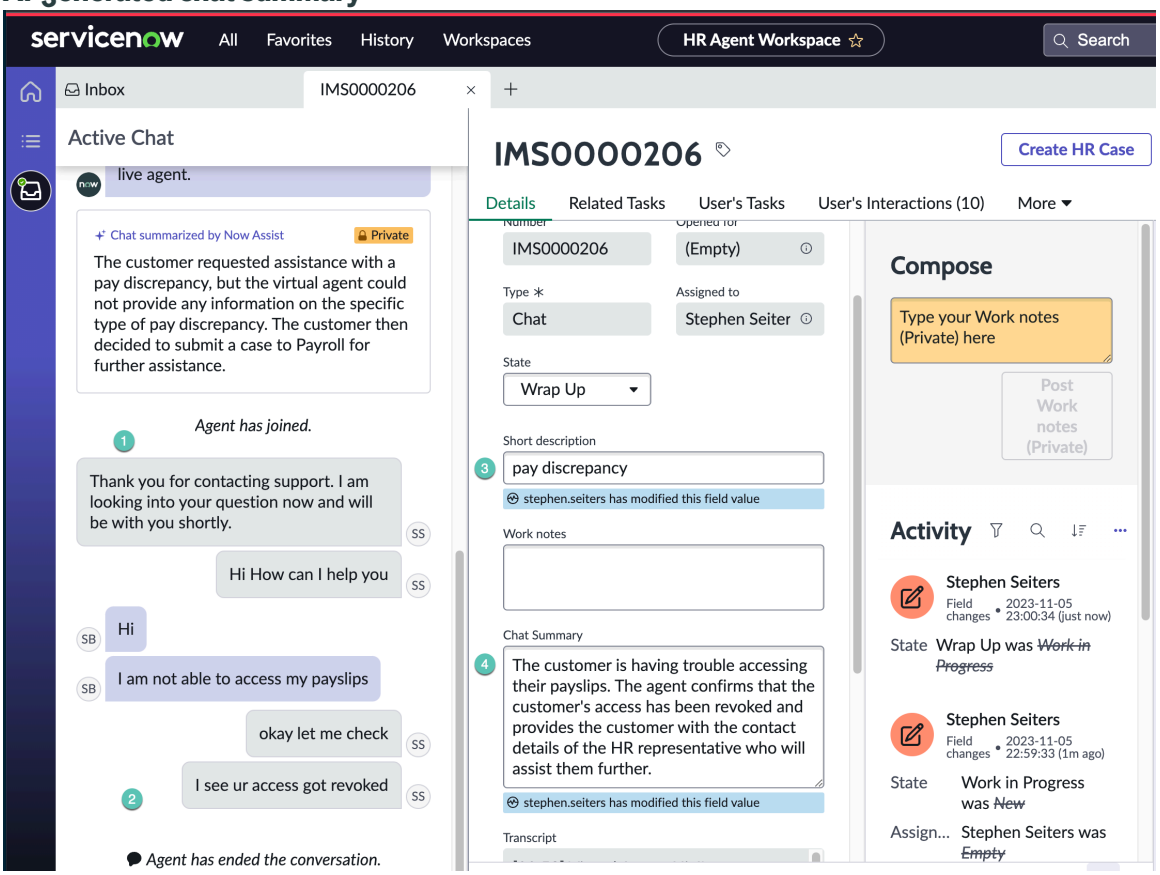
Now Assist for HR Service Delivery (HRSD) Skills

The Now Assist for HRSD application includes the generative AI skills and features that enable your agents to understand the chat and case context so that they can propose resolutions to the requester more quickly.

Chat summarization



Provides an agent with a chat summary of all points of the handoff, including the Virtual Agent conversation and the live agent conversation:

- Quick action summary: Provides a concise summary of the interactions with the quick actions that the agent took.
- Virtual Agent handoff summary: Summarizes the chat when Virtual Agent hands off the chat to a live agent.
- Live Agent to Live Agent handoff summary: Summarizes the conversation when a live agent hands off a chat to another live agent and displays the summary in the Active Chat window. An agent can view a summary of the actions that were taken by a customer before hand off to another live agent.
- Chat wrap up summary: Accelerates the wrap-up time by populating the full chat summary when a conversation ends.
- Chat wrap up short description: Accelerates the wrap-up time by populating the short description that summarizes the requester issues when the conversation ends.

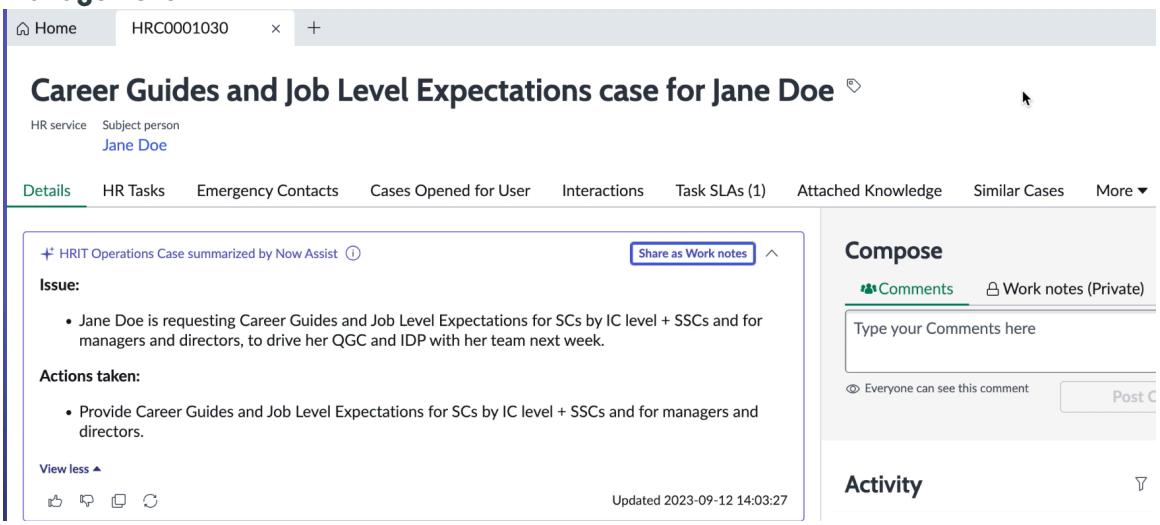
For information on activating the chat summarization skill, see . For information on how to use the skill on Agent Workspace for HR Case Management, see Summarize a chat conversation by using Now Assist for HR Service Delivery (HRSD).

The following example shows an AI-generated chat summary.

AI-generated chat summary

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- 1: The agent accepts the chat with the requester and gets any additional details.
- 2: The agent provides the details and ends the conversation.
- 3: The chat summarization skill automatically updates the short description in the **Short description** field.
- 4: The chat summarization skill automatically updates the chat summary in the **Chat Summary** field.



Case summarization

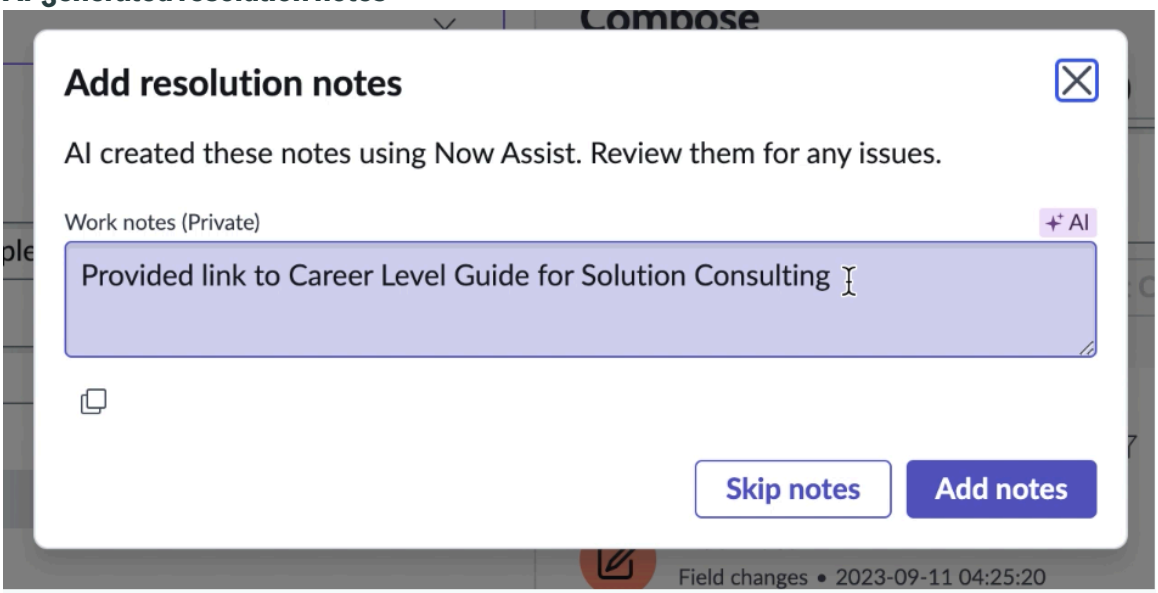
Provides an agent with a concise summary of a case, including the issue, actions that were taken, and resolution information, depending on the state of the case. An agent can view a case summary to understand the case context, refresh the summary, and post the summary to the case work notes.

For information on activating the case summarization skill, see . For information on how to use the skill on Agent Workspace for HR Case Management or Core UI, see Summarize a case by using Now Assist for HR Service Delivery (HRSD).

The following example shows an AI-generated case summary.

AI-generated case summary on Agent Workspace for HR Case Management

Resolution notes generation



Automatically generates the resolution notes for an agent when the state of a case is changed to Closed Complete. An agent can accept the AI-generated notes or edit the notes before saving it to the case.

For information on activating the resolution notes skill, see Configure Now Assist for HR Service Delivery (HRSD). For information on how to use the skill on Agent Workspace for HR Case Management, see Generate the resolution notes for a case by using the Now Assist for HR Service Delivery (HRSD).

The following example shows the AI-generated resolution notes.

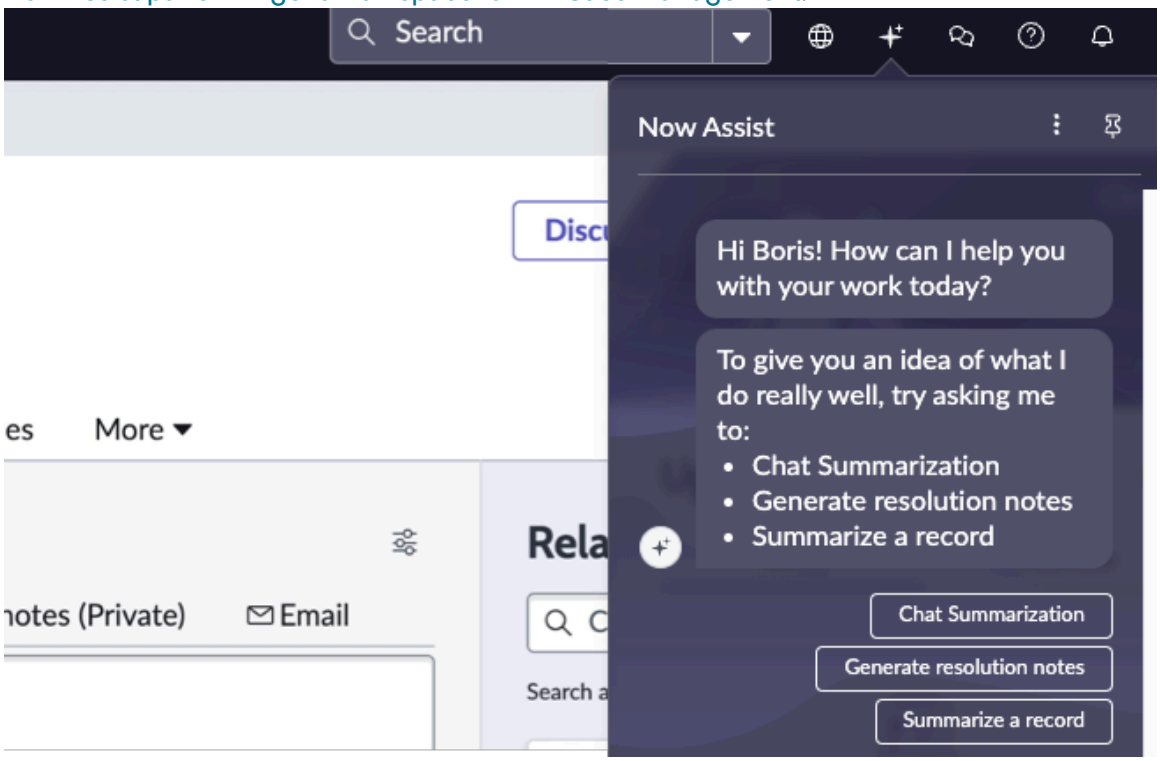
AI-generated resolution notes

Knowledge generation

Enables an agent to generate a knowledge article from a case after proposing a resolution or closing the case.



The knowledge generation skill displays a pop-up window that an agent can use to generate a knowledge article and review it before publishing the knowledge article draft.

Now Assist panel in the Agent Workspace for HR Case Management

The Now Assist panel provides agents with a conversational interface that they can use to request the chat and case summaries on demand.

For more information about the Now Assist panel, see Use the Now Assist panel in Agent Workspace for HR Case Management.

Supporting information for Now Assist for HR Service Delivery (HRSD)

Get a quick overview of the important information that is related to the Now Assist for HR Service Delivery (HRSD) application.

Supported versions

Now Assist for HRSD is supported starting with Vancouver Patch 2.

Supported user interfaces

The Now Assist for HRSD application includes the skills that are listed in the following table.

Now Assist for HRSD supported interfaces

Interface	Skill
Agent Workspace for HR Case Management	• Case summarization • Chat summarization • Resolution notes • Knowledge article generation • Sensitivity detection
Core UI	• Case summarization • Knowledge article generation • Sensitivity detection

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application information

Activate the Now Assist for HRSD store app (sn_hr_gen_ai) to use the chat, case, and resolution skills.

The Now Assist for HRSD application has the following dependencies:

- Human Resources Scoped App: Core (com.sn_hr_core)
- Now Assist Platform (com.sn.now.platform)
- NA-TD and NA-TA are dependent apps for NA-HR and should be installed for every NA-HR installation (talent-core: sn_egd_core and interview-scheduling sn_int_schedule).

Configure Now Assist for HR Service Delivery (HRSD)

If you have the admin role, you can configure the Now Assist for HR Service Delivery (HRSD) application so that your agents can use the generative AI capabilities in Agent Workspace for HR Case Management and Core UI.

Before you begin

Role required: admin

About this task

Use the Now Assist Admin console to configure Now Assist for HR Service Delivery (HRSD). This console contains everything that you need to install the plugins and configure the generative AI skills. For additional information, see Now Assist Admin console.

The following list contains skills that you can access from the Now Assist Admin console.

- Chat reply recommendation
- Chat summarization
- Sidebar discussion summarization
- Case summarization
- Resolution notes generation
- KB generations
- Email recommendation
- Sensitivity detection
- Journey generation for managers
- Journey summarization for managers
- Persona assistant

Now LLM Service is currently the only provider for this Now Assist application's skills.

Procedure

1. Install the Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai).
    - For information about the plugin dependencies and plugin activation order, see Supporting information for Now Assist for HR Service Delivery (HRSD).
    - For information about the installation process, see Install Now Assist plugins.
2. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Activate and configure the skills for the Now Assist for HR Service Delivery (HRSD) features. These features are grouped under the **Employee** workflow group. Each feature has its associated skills.
4. On the skill that you would like to activate, select **Activate Skill**.
5. Select the inputs or triggers for the selected skill.
   For information about the inputs and triggers for each skill, see Skill inputs and triggers for Now Assist for HR Service Delivery (HRSD).
6. After you configure the inputs or triggers for the selected skill, select **Save and continue** to go to the next step.
   You can return to a previous step by using the **Back** button.
7. Define the availability of skill.

   Note:
   This step applies to the case summarization and resolution notes generation skills. It doesn't apply to the chat summarization skill. If you're configuring the chat summarization skill, go to Step 10.

8. After you configure the skill availability, select **Save and continue** to go to the next step.
9. Select where you would like to display the skill.
   - **In-product**: When selected, the Now Assist skills are displayed on forms and workspaces.

     For the skills that appear in **In-product**, select the down arrow to identify the roles that can use the skill. The sn_hr_core.basic role is available by default.
   - **Now Assist panel**: When selected, the Now Assist skills are available in the Now Assist panel. If you don't see this option, you must activate the Now Assist panel. For more information, see Turn on the Now Assist panel.

     For the skills that appear in the Now Assist panel, select the down arrow to identify the roles that can use the skill.
10. After you configure the display for the selected skill, select **Save and continue** to go to the next step.
11. Review your choices and select **Activate** to complete the configuration.
    Your skill is configured.

Skill inputs and triggers for Now Assist for HR Service Delivery (HRSD)

Get a quick overview of the skill inputs and triggers for Now Assist for HR Service Delivery (HRSD). By configuring the inputs or triggers for a skill, you can determine how and when a skill is used.

Skill Inputs Overview

Depending on the selected skill, you can configure the inputs or triggers. These settings determine how and when a skill is used. An input identifies the data that is used for a skill, such

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

as the table and fields that are used to generate a case summary. A trigger initiates an action, such as when the system generates a chat summary.

Chat summarization skill

For the chat summarization skill, select the triggers that determine when a chat summary is generated and how a chat summary is displayed.

The following table lists the triggers that you can configure for the chat summarization skill of the Chat Assist feature.

Triggers for the chat summarization skill

Trigger	Description
Virtual Agent to Live Agent handoff	Chat summary that is generated when the chat handoff is done from Virtual Agent to a live agent.
Quick action	Chat summary that is generated when the live agent performs the `/summarize` quick action.
Short description	**Short description** field that is updated for the interaction when the live agent ends the chat.
Chat wrap-up	Chat summary that is generated when the live agent ends the chat. The **Chat Summary** field is updated for the interaction.
Bulleted list	Chat summary as an unordered list.
Task creation	**Short description** and **Description** fields that are auto-populated when a task is created.

Case summarization skill

The case summarization skill includes the inputs that identify the table and fields that are used when a case summary is generated.

Note:
These fields are read-only.

The following table lists the inputs for the case summarization skill.

Inputs for the case summarization skill

Input	Description
Input table	HR Case [sn_hr_core_case]

RCA approvals for Now Assist for HR Service Delivery (HRSD)

After you install Now Assist for HR Service Delivery (HRSD), you might encounter Restricted Caller Access (RCA) approval messages requesting for an update in the access request.

Before you begin

- Role required: admin
- The RCAs that are generated after the installation are in the **Requested** state and you must manually mark the RCAs as **Allowed**, which can be time-consuming.

  To automate the RCA approvals for any record, you can run the **Now Assist for HRSD Bulk RCA approval** script where the source scope is Now Assist for HR Service Delivery (HRSD). Download the **Now Assist for HRSD Bulk RCA approval** file from the **Supporting Links and Docs** section in Now Assist for HR Service Delivery (HRSD) application in ServiceNow Store. This file is a standalone script to reduce the manual effort involved. After you download the script file, perform the following steps:

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. Right-click the header and choose **Import XML**.
3. Click **Choose file** and select the XML file that you downloaded.
4. Search and find the **Now Assist for HRSD Bulk RCA approval** script record.
5. Click **Run Script** to allow all the requested RCAs.

Restrict Now Assist capabilities for employee relations cases

Restrict the Now Assist capabilities for your employee relations cases and define the availability.

Before you begin

Role required: admin

Procedure

1. Navigate to **Now Assist Admin Console** > **Employee**.
2. Select the generative AI feature that you want to restrict the behavior for.
3. On the **Define Availability** tab, modify the condition and add **Task type is not Employee Relations Case**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure Gen AI Virtual Agent for HRSD

Enable your requesters to have a streamlined, conversational experience that is based on generative AI as they submit a catalog item request in Virtual Agent. By offering this generative AI experience, your organization can increase self-service and reduce operating costs.

Before you begin
Role required: admin

About this task
The generative AI capabilities can provide a human-like, efficient catalog request experience over the Virtual Agent conversational interface. By using the generative AI capabilities with Virtual Agent, your organization can reduce the turnaround time for the request submission.

When the generative AI experience is configured for catalog item request submissions, the following experience is available for a requester:

- Contextual question prompts that enable a more human-like conversation based on answers to previous questions.
- Slot filling that recognizes answers to one or more questions on the requester's input. For example, inquiring about HR benefits or requesting leave of absence.
- Ability to answer catalog item questions.
- Ability to exit the request submission process at any point.
- Although the following catalog item question types are supported in the conversation mode, natural language responses aren't supported:
  - Reference
  - Lookup select box
  - Lookup multiple choice
  - Requested For
  - Attachment
  - Multiple choice question with more than 10 choices

Procedure
1. Turn on the required Virtual Agent Skills: **Multi-Assist Multi-turn Catalog Ordering** and/or **Now-Assist Q&A Genius Results**.
2. Set up Now Assist in Virtual Agent.
   For complete details on how to turn on the skills and set up Gen AI Virtual Agent, see Configuring Now Assist in Virtual Agent.

Note:
- Configure the required conditions for the Virtual Agent Skills.
- HR Service Delivery Virtual Agent will be replaced with the Gen AI Virtual Agent.

Configure the Now Assist for HRSD Virtual Agent topics

Complete the configuration steps to enable your employees place requests to the Human Capital Management (HCM) system using the Now Assist for HRSD Virtual Agent topics in Employee Center.

Before you begin
Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Install the Now Assist for HRSD and Enterprise Service Management Integrations Framework (v3.6) applications from ServiceNow Store.
2. Configure the required ServiceNow spokes or customize spokes to pull data from HCM systems.
3. Create subflows for provider aligning with Template Integration Gateway.
   See Create a subflow using Template Integration Gateway.

   Note:
   - Subflows have been created for Oracle HCM, except for the Request Time off and Add Expense Virtual Agent topics. The Virtual Agent experience has been provided for the Request Time off and Add Expense topics, but without the back-end support through subflows. For more information on the default Virtual Agent topics, see Now Assist for HRSD Virtual Agent topics.
   - The subflows for Oracle HCM can be used as a reference to build subflows for any other HCM systems.

4. Configure Integration Provider Mapping (Decision table) by adding input choices, configuring conditions on input choices and results.
5. Create a Virtual Agent topic block:
   a. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.
   b. From the **LLM Assistant** list, select **Now Assist in Virtual Agent**.
   c. Filter the topics by setting the category to **Now assist for HR service Delivery**.
   d. Select a Virtual Agent topic.
      i. Edit topic properties and make the necessary edits in the topic, such as update the node name, and response message.
      ii. In Integration Gateway, specify the appropriate feature, service name, user, and make the necessary edits.

      Note:
      To publish the Virtual Agent topics in Now Assist for HRSD, publish these topic blocks: **Get Authentication** and **Process Integration Errors**.

What to do next

When an Virtual Agent topic invokes the Integration Gateway subflow, the subflow reviews input values in Integration Provider Mapping (Decision table) to execute results.

Configure HCM AI agents from the HR Service Delivery AI Agent Collection

Enable your employees to place requests to the Human Capital Management (HCM) system using the Now Assist for HR Service Delivery (HRSD) agent collection.

Before you begin

Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

Procedure

1. Install the Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai).
   For more information, see Configure Now Assist for HR Service Delivery (HRSD).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Activate the [Enterprise Service Management Integrations Framework] application from the ServiceNow® Store.
3. Configure the required ServiceNow spokes or customize spokes to pull data from HCM systems.
   For more information, see Integration of HR Service Delivery with third-party systems.
4. Create subflows aligning with Template Integration Gateway, or use default subflows that have been created for your HCM system.
   For more information, see Create a subflow using Template Integration Gateway.

   Note:
   The subflows for Oracle HCM can be used as a reference to build subflows for any other HCM systems.

5. Add input choices and define conditions and results in a decision table for the Integration Gateway subflow.
   For more information, see Configure Integration Provider Mapping (Decision table).
6. Duplicate available HCM AI agents to run them autonomously.
   For more information, see Duplicate an AI agent For list of available agents, see Using agentic workflows in Now Assist for HR Service Delivery (HRSD).

   Note:
   In the Toggle display section, ensure the toggle beside Virtual Agent is enabled.

Configure sensitivity detection in Now Assist for HR Service Delivery (HRSD)

Configure sensitivity detection in the Now Assist for HR Service Delivery (HRSD) application.

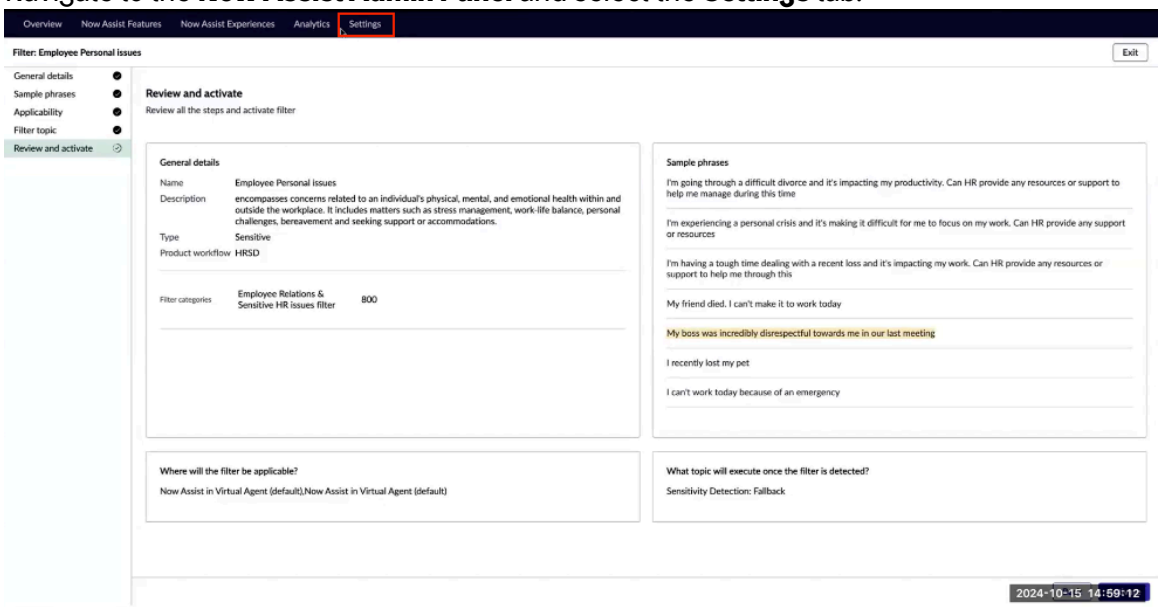
Before you begin

Role required:

- sn_hr_gen_ai.admin

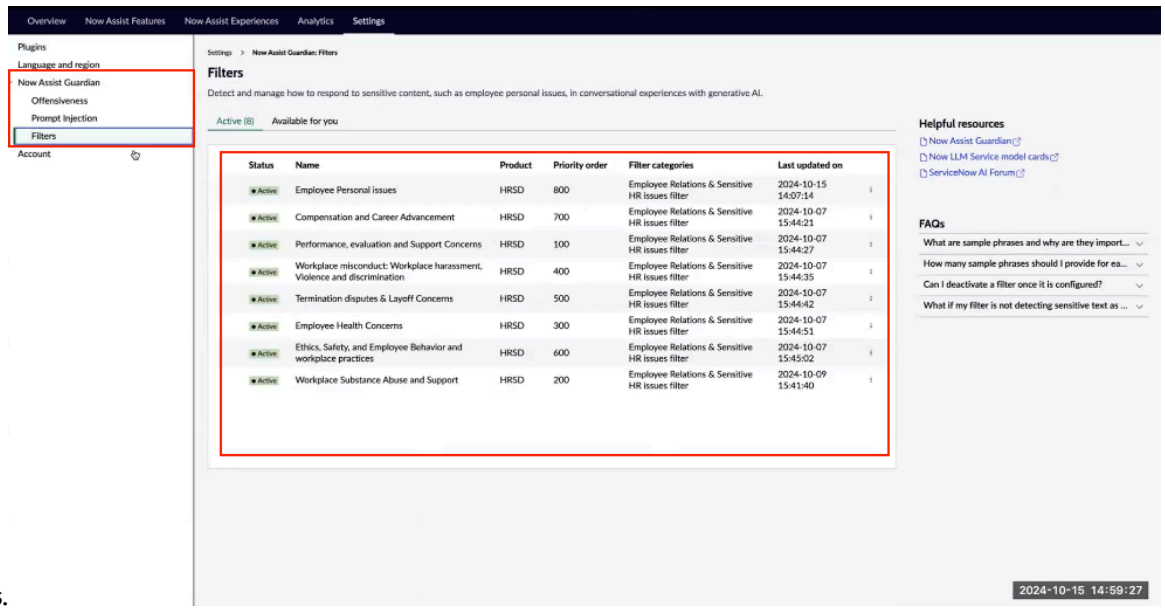
About this task

This capability helps you configure sensitivity detection and filters for the types of sensitive cases such as the harassment complaints, discrimination allegations, workplace violence, safety, employee behavior, and employee personal issues. You can also block Now LLM Service from engaging with these sensitive case types to allow agents to create cases for these sensitive case types.



Note:

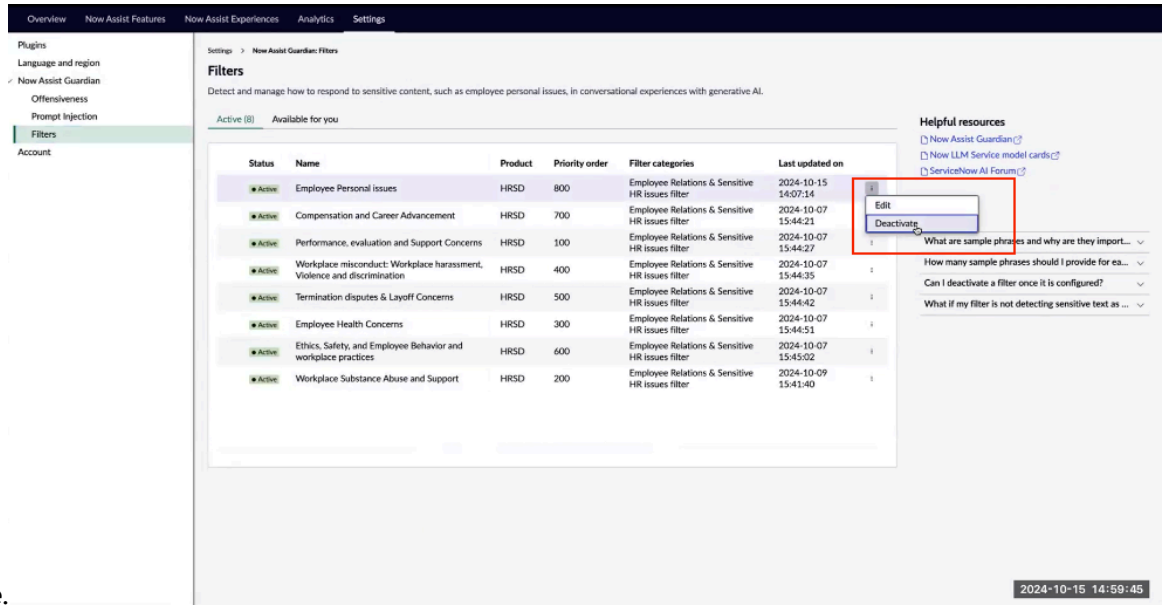
Configurations are available on the Now Assist Admin Panel settings as part of Now Assist guardian. The **sn_hr_gen_ai.admin** role can only **Edit**, **Activate** and **Deactivate** skills on **Guided** setup view only.



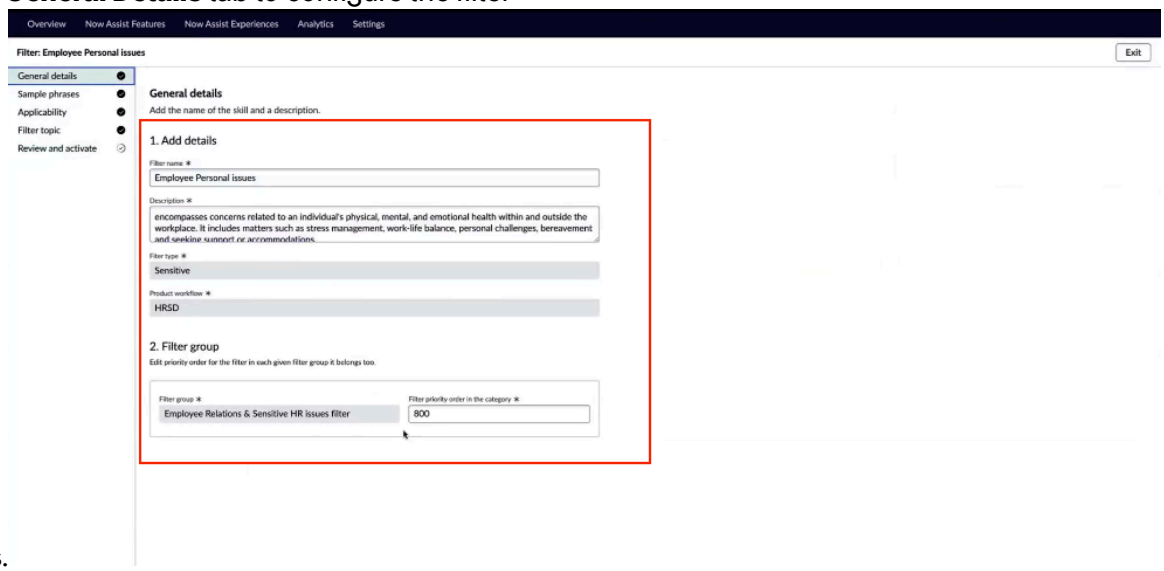
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the **Now Assist Admin Panel** and select the **Settings** tab.



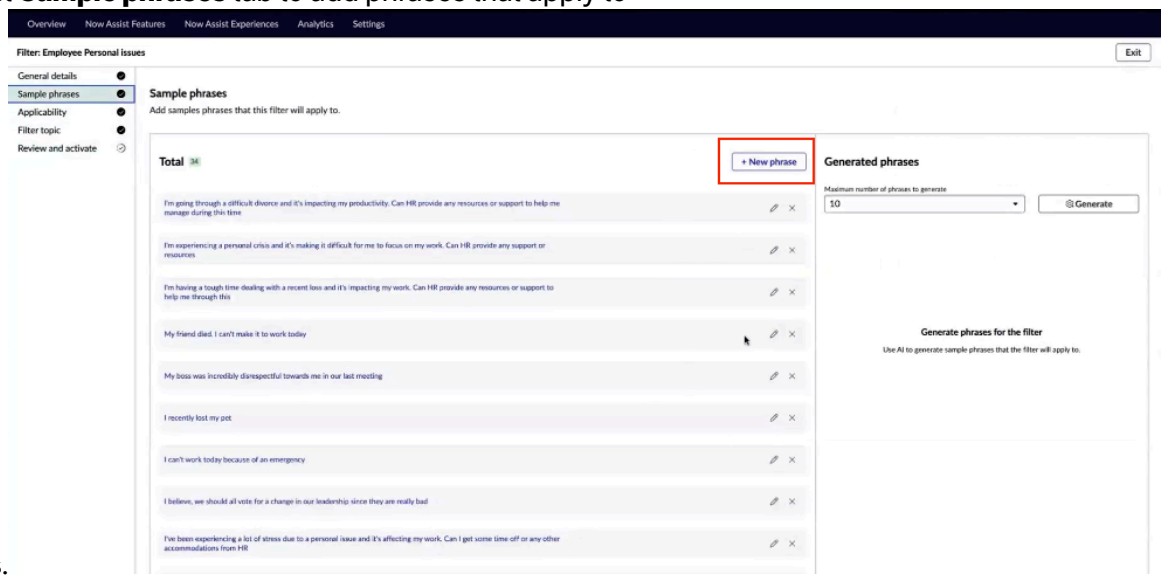
2. Select **Now Assist Guardian** and select **Filters**.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

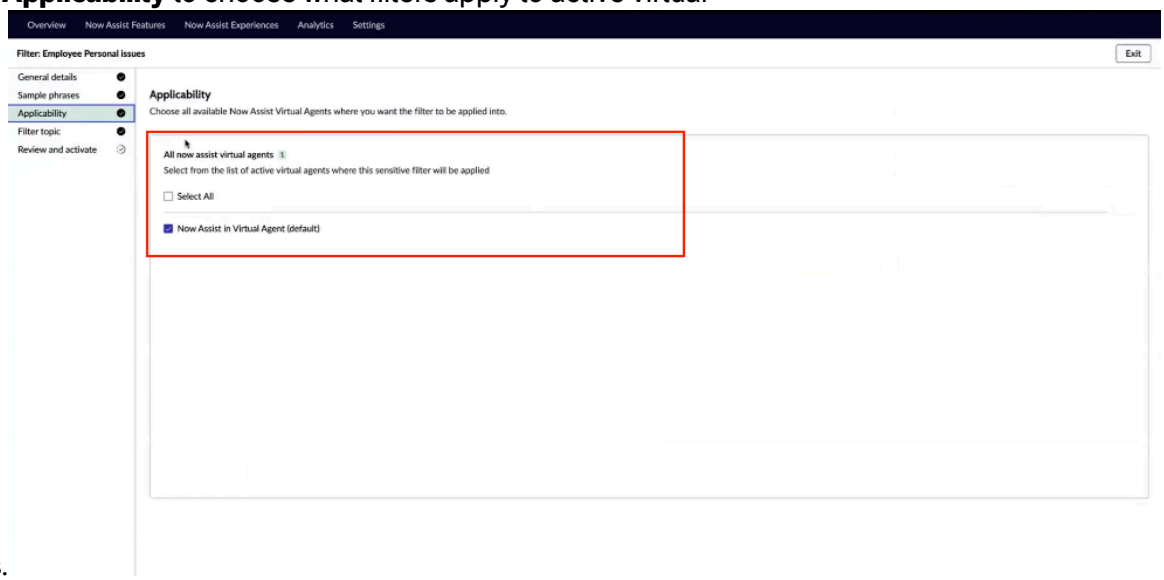
Filter configurations include the ability to **Edit** or **Deactivate** a filter. Only **sn_hr_gen_ai.admin** can **Edit** or

Deactivate.



3. Select **General Details** tab to configure the filter

details.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Sample phrases** tab to add phrases that apply to filters.

> **Note:**
> The ability to edit and update existing filters is available. There is a maximum of 10 phrases that can be generated.

5. Select **Applicability** to choose what filters apply to active virtual agents.

Result

Sensitivity Detection filters and configuration are properly set up to handle sensitive cases.

> **Note:**
> When `Sensitive Phrases` are entered in the now assist panel, it should be detected as sensitive and the LLM should not respond, and should option to redirect to a live agent, or create a case.

Sensitivity detection configuration table filters

Using agentic workflows in Now Assist for HR Service Delivery (HRSD)

Use the Now Assist for HR Service Delivery (HRSD) agent collection to complete tasks autonomously.

Table 1. Available agentic workflows for HR Service Delivery AI Agent Collection

Agentic workflow name	Description	Available AI agents
Resolve policy for tuition reimbursement	AI agents resolve tuition reimbursement requests by connecting to various parties (for example, the manager for approval) and resolving the case, while keeping the human agent in the loop.	• Tuition reimbursement requestor information retrieval AI agent • Tuition reimbursement eligibility check AI agent • Tuition reimbursement checklist creator AI agent • Total rewards case closure AI agent • Total rewards case details management AI agent • Tuition reimbursement pre-approval task creation AI agent • Tuition reimbursement policy retrieval AI agent

Available HCM agents for HR Service Delivery AI Agent Collection

Available AI Agent	Description
Worker profile retriever AI agent	Calls an integration subflow to assist the employee in finding out details about a colleague. The details could include the department, job, email, or phone number that is based on the employee's request by name.
Employee holiday calendar retrieval AI agent	Retrieves the holiday information for the specified year.
Time off requester AI agent	Calls an integration to assist in leave-related requests: • Request time off • Get my time off balance
Employee total rewards	Retrieves the total rewards details of an employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Available HCM agents for HR Service Delivery AI Agent Collection (continued)

Available AI Agent	Description
information AI agent	
Benefits enrollment retriever AI agent	Calls an integration subflow to get the benefits information that an employee has signed up for.
Employee details updater AI agent	Calls an integration to assist in personal details related requests: • Update email address • Update address • Update phone number • Update blood type • Update date of birth
HCM feedback retriever AI agent	Calls an integration subflow to assist the employee in getting the feedback that they have received in HCM from their managers.
Expense Manager AI agent	Fetches expense details to create and submit and expense report.

Important:
All agentic workflow and AI agent records are read-only by default.

To run the AI agents autonomously, you must first duplicate the agentic workflow, and then do the following steps:

- Activate the agentic workflow.
- Activate all agents within the agentic workflow.
- Activate the trigger to invoke the agentic workflow automatically. If you prefer to invoke it manually, activating the trigger isn't necessary.

Looking for an AI agent?

- There might be AI agents installed with the Now Assist application that are not used in agentic workflows. To learn how to see all agents that are available on your instance, see Find AI agents.
- To find agents that might not be installed on your instance, visit the AI Agent Marketplace on the ServiceNow Store.

HR Service Delivery AI Agent Collection Resolve Policy use case

Use the Resolve policy use case for faster mean time to repair (MTTR) cases that require validation based on policies that are built for tuition reimbursement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Resolve policy overview

The Resolve policy use case can help to collect requested information, check all the policy content, and evaluate the information to resolve a case.

Note:
You must have HRSD Pro plus for Now Assist installed for the HR Service Delivery AI Agent Collection. When you modify a use case, AI agent, or tool, make sure that you update all instructions accordingly.

Resolve policy use case

To access the use case:

1. Navigate to **All** > **AI Agent Studio** > **Testing**.
2. Select **AI Agent** > **Tuition Reimbursement Case Resolution**.

AI agents used in the Resolve policy use case

The AI agent decision log displays the AI agents that are working to resolve the case, and you can watch their interactions, decisions, and thought processes as they happen in real time.

Important:
In the Define your test scenario screen for the AI agent, make sure that **AI agent** is selected to activate the AI agent. The task field also displays the use case details for the case that you want to resolve.

Using Now Assist for HR Service Delivery (HRSD)

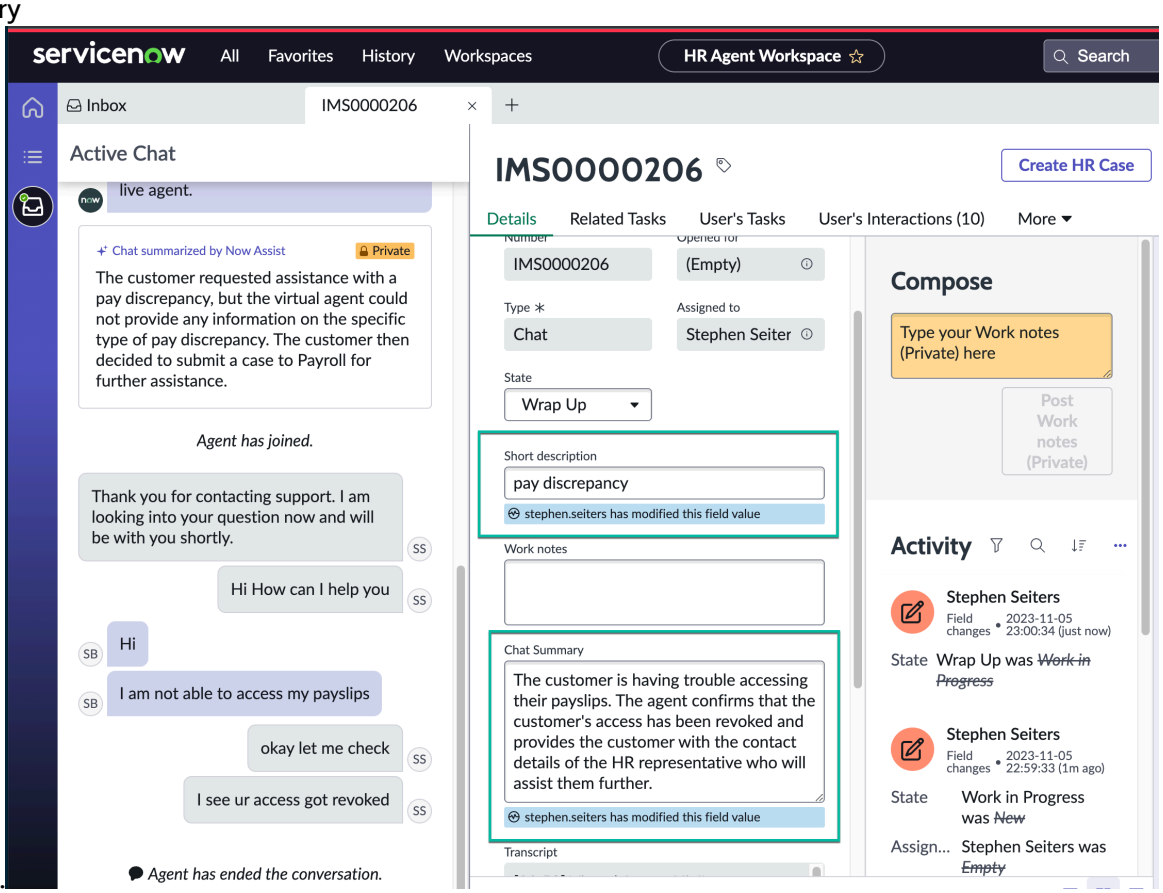
If you have a sn_hr_core.case_writer role, you can summarize a case, generate resolution notes, summarize the chat interactions with a requester, and propose resolutions more quickly with the Now Assist for HR Service Delivery (HRSD) application.

Summarize a chat conversation by using Now Assist for HR Service Delivery (HRSD)

Summarize a Virtual Agent chat history in the Now Assist for HR Service Delivery (HRSD) application. You can also summarize an interaction when the chat ends. The summary includes all points of the handoff, including the Virtual Agent conversation.

Before you begin
Role required: sn_hr_core.case_writer

About this task
In a Virtual Agent conversation, when a requester chooses to connect to a live agent, a chat interaction appears in the inbox of an agent. You can also summarize an interaction when the chat ends. The summary includes all points of the handoff, including the Virtual Agent conversation.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

The chat summarization admin configuration for ITSM and HR are similar. If at least one of them is enabled, you can generate a chat summary from both workspaces.

Procedure

1. Navigate to **Agent Workspace for HRSD**.
2. In Workspace, open the inbox.
3. Accept the chat interaction.
   In the Active Chat window, a summary of the Virtual Agent conversation is generated. The summary includes the actions that were taken before the requester engaged with the live agent.
4. Chat with the requester to get any additional details.
5. In the Active Chat window, use the `/summarize` quick action to summarize the chat during the conversation with the requester.
6. End the chat conversation by selecting **End Chat**.
   The chat summarization updates the **Short description** and **Chat Summary** fields when you end the chat.
7. **Optional:** Review the text in the **Short description** or **Chat Summary** fields and make the necessary changes.

   Because the information in these fields is automatically generated, it's a good idea to review the text and make sure that it's accurate.
8. Select **Save**.
9. **Optional:** If you think that you need further help after the initial troubleshooting before or after ending the chat, create a case from the interaction by selecting **Create HR case**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. **Optional:** When you create a case before or after ending the chat, the **Short Description** and **Description** fields of the case are updated with the interaction summary.

    Note:
    Generative AI doesn't override an existing short description that is in the HR case template.

Summarize a Sidebar discussion by using Now Assist for HR Service Delivery (HRSD)

Generate a summary of the Sidebar discussions between agents, requesters, and subject matter experts by using the chat summarization skill in the Now Assist for HR Service Delivery (HRSD) application.

Before you begin
Role required: sn_hr_core.case_writer

About this task
You can do these actions by using Sidebar discussion summarization:

- Summarize the Sidebar discussion at any point during the discussion using the `/Summarize` quick action.
- Share the Sidebar discussion to the work notes.
- Provide feedback for the summary.

Note:
The Sidebar discussion summarization skill can be found in the **HRSD** tab under the **Employee** group in Now Assist Admin. For more information, see Sidebar discussion summarization.

Procedure

1. Navigate to **Workspaces** > **Agent Workspace for HRSD** and open an HR case that supports Sidebar discussion and summarization.
2. Choose an existing discussion, or start a new discussion.

   Start a new discussion by doing these actions:

   a. Select **Discuss**.

   b. In the Start a Sidebar discussion modal, add participants.

   c. Select **Start Discussion**.
3. Generate a summary of the Sidebar discussion during the conversation either by using the Summarize quick action (enter `/Summarize` in the Active sidebar discussion window), or by selecting the quick action icon .
4. After summarizing the Sidebar discussion, you can add it to the case work notes, and provide feedback about it.

Generate a chat reply recommendation by using Now Assist for HR Service Delivery (HRSD)

Generate a reply based on the context of the chat conversation using Now Assist icon. Chat reply recommendations can help provide agents with quick replies to common questions.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

You can do these actions by using the Now Assist icon:

- Generate a recommended reply that is based on the context of the conversation.
- Refine the recommendation by elaborating or shortening the response.

Note:
The Chat reply recommendation skill can be found in the **HRSD** tab under the **Employee** group in Now Assist Admin. For more info, see Chat reply recommendation.

Procedure

1. Navigate to **Workspaces** > **Agent Workspace for HRSD**.
2. Open the inbox and accept the chat interaction.
   In the Active Chat section of the interaction, a summary of the Virtual Agent conversation is generated. The summary includes the actions that were taken before the requester engaged with the live agent. With this information, you can get an overview of what the requester has already mentioned in the Virtual Agent conversation and troubleshoot the issue.
3. Chat with the requester to get any additional details about their question or issue, if needed. For example, if the requester is having an issue with hardware, you may need the hardware model number and serial number.
4. In the chat message window, either type a response, or leave blank, and then select the Now Assist icon

   The reply response appears in the Now Assist icon modal.
5. Review the generated reply and select **Refine** to modify the response, or select **Insert** to paste the response into the chat message window.
   If the reply response was refined, you can toggle between versions.
6. In the chat message window, select **Send**.
7. End the chat by selecting **End Chat**.

Generate a knowledge article from HR Agent Workspace with Now Assist

Create drafts of knowledge articles that are based on the case descriptions with Now Assist for HR Service Delivery (HRSD). Creating Knowledge content with generative AI enables you to write efficiently as you address user concerns.

Before you begin

- Install the following plugins:
  - Knowledge Management advanced plugin [com.snc.knowledge_advanced.installer].
  - Now Assist in Knowledge Management [sn_km_gen_ai]
  - Human Resources Scoped App: Core [com.sn_hr_core]
  - Latest version of Agent Workspace for HR Case Management [sn_hr_agent_ws]
  - Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events]
  - Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations]
- Activate the Knowledge Assist skill from the Now Assist Admin console.

Role required:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- sn_hr_core.case_reader and sn_hr_core.kb_writer roles to view the **Create Knowledge** option on the HR Case [sn_hr_core_case] and its extended tables.
- sn_hr_le.case_reader and sn_hr_core.kb_writer roles to view the **Create Knowledge** option on HR life cycle Events Cases.
- sn_hr_er.case_reader, sn_hr_core.kb_writer roles to view the **Create Knowledge** option on employee relations cases.
- sn_hr_core.admin role to change specific options or indexed sources.
- You should also have the required role for the knowledge base that you selected in the Now Assist Admin configuration.

About this task

You can use the KB generation skill in either Core UI or Agent Workspace for HR Case Management. The fields that are used as inputs for generating a knowledge article are the Short description, description, close notes, worknotes, and additional comments fields.

Note:
The KB generation skill is supported in the Now Assist panel for the HR Case records [sn_hr_core_case] table, but not on its extended table records.

Procedure

1. Navigate to **Workspaces** > **HR Agent Workspace**.
2. Go to **All** > **AI Search** > **AI Search Index** > **Indexed Sources**.
3. Open the record named **HR Case**
4. Validate that the record is active and select **Index all tables**

Note:
sn_hr_core.admin role is required for indexed source changes. After you validate and index the tables in the initial steps, you can proceed with opening an HR case and drafting a knowledge article.

5. Open an HR case that is assigned to you.
6. Set the HR case to the **Close Complete** state.
7. Select the More actions icon ( ), then select **Create Knowledge**.
8. If displayed, select a knowledge base and an article template.

Note:

- If the Knowledge Management Advanced plugin [com.snc.knowledge_advanced.installer] is installed, one article template might be enabled. Select a knowledge base and article template. Otherwise, the article is created with the standard template.
- Only the KCS article template and standard template are supported. Disable the **Use Now Assist to draft an article** toggle if you don't want the AI to generate a KB article.

9. Select **Draft article**.
   The article appears in a tab with a unique ID number for the knowledge article.
10. View, edit, or publish the article by using the UI actions on the screen.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist in Knowledge Management

Generate a knowledge article from multiple cases

Create drafts of knowledge articles from multiple cases with the Now Assist for HR Service Delivery (HRSD) application. Use generative AI to gather and create the content from multiple cases so that you can reduce the amount of time that you would have spent manually to get the same information.

Before you begin

- Install the following plugins:
  - Knowledge Management Advanced plugin [com.snc.knowledge_advanced.installer]. This plugin isn't mandatory and it can't be uninstalled.
  - Now Assist in Knowledge Management [sn_km_gen_ai]
  - Human Resources Scoped App: Core [com.sn_hr_core]
  - Latest version of Agent Workspace for HR Case Management [sn_hr_agent_ws]
  - Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events]
  - Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations]
- Activate the Knowledge Assist skill from the Now Assist Admin console.

Role required:

- sn_hr_core.case_reader and sn_hr_core.kb_writer roles to view the **Generate article** option on the HR Case [sn_hr_core_case] and its extended tables.
- sn_hr_le.case_reader and sn_hr_core.kb_writer roles to view the **Generate article** option on HR Lifecycle Events Cases.
- sn_hr_er.case_reader, sn_hr_core.kb_writer roles to view the **Generate article** option on the employee relations cases.
- You must have the required role for the knowledge base that you selected in the Now Assist Admin configuration.

Note:
For Core UI users, in the AI search indexed sources, you must set the **Active** state to **true** for the HR Case [source: HR Case sn_hr_core_case] table. The required roles to make this change are the HR admin and agent roles.

About this task

You can use the KB generation skill in either Core UI or Agent Workspace. The fields that are used as inputs for generating knowledge articles are the **Short description**, **description**, **close notes**, **work notes**, and **additional comments fields**. You can also use up to five additional relevant tasks to help you create knowledge articles.

Note:
The KB generation skill is supported in the Now Assist panel for the HR Case records [sn_hr_core_case] table, but not on its extended table records.

Procedure

1. Navigate to **Workspaces** > **HR Agent Workspace**.
2. Open an HR case that is assigned to you.
3. Set the HR case to the **Close Complete** state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Create knowledge**.

   Note:
   You can now select what type of article that you want to create.

5. If displayed, select the knowledge base and article template.

   Note:
   - If your administrator installed the Knowledge Management Advanced plugin [com.snc.knowledge_advanced.installer] and enabled at least one article template, a modal is displayed so that you can select the knowledge base and article template. Otherwise, the article is created with the standard template.
   - Your admin must disable the Use Now Assist to draft an article toggle if you don't want the AI to generate a knowledge article.
   - Additional tasks that are relevant to your case can be used to draft your article. You can select up to five relevant tasks to help you create your article.

6. Select **Create Article**.
7. Select **Draft article** with **Now Assist**.

   Note:
   You see the message "We have found additional relevant tasks-select up to 5 to help in the creation of article." You also see a list of relevant tasks that you can select from.

8. Select up to five tasks to help you create your article.
9. If you don't need any other tasks to help you create your article, select **Continue without more tasks**.

   Note:
   Now Assist starts to generate a draft of a knowledge article and you see the "Drafting article" message box. After Now Assist finishes the draft and loads the article successfully, the article gets a unique ID number.

10. View, edit, or publish the article by using the UI actions on the screen.
    Now Assist has generated your article from multiple cases.

Generate an email reply recommendation by using Now Assist for HR Service Delivery (HRSD)

Generate an email reply that is based on the case and email context by using the Now Assist icon. With email reply recommendations, agents can create quick emails or responses, helping minimize errors and ramp up productivity.

Before you begin
Role required: admin

About this task
An agent can do these actions by using the Now Assist icon:

- Generate a recommended email reply that is based on the case and email context.
- Generate recommended email for new, forwarded, and finishing draft emails.
- Refine the recommendation by elaborating or shortening the response.
- Availability of email template recommendations while composing an email.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The email reply recommendation skill can be found in the **HRSD** tab under the **Employee** group in Now Assist Admin. For more info, see Email reply recommendation.

Procedure

1. Navigate to **Workspaces** > **Agent Workspace for HRSD** and open an HR case that supports the email reply recommendation.
2. Choose how to compose an email.
3. In the email message window, either type a response, or leave blank, and then select the Now Assist.
4. Update the selected text with refined text by selecting **Replace**.
5. Review the generated email reply and select **Refine** to modify the response, or select **Insert** to paste the response into the chat message window.
6. Select **Send Email** or discard the draft if you don't like the recommendation.

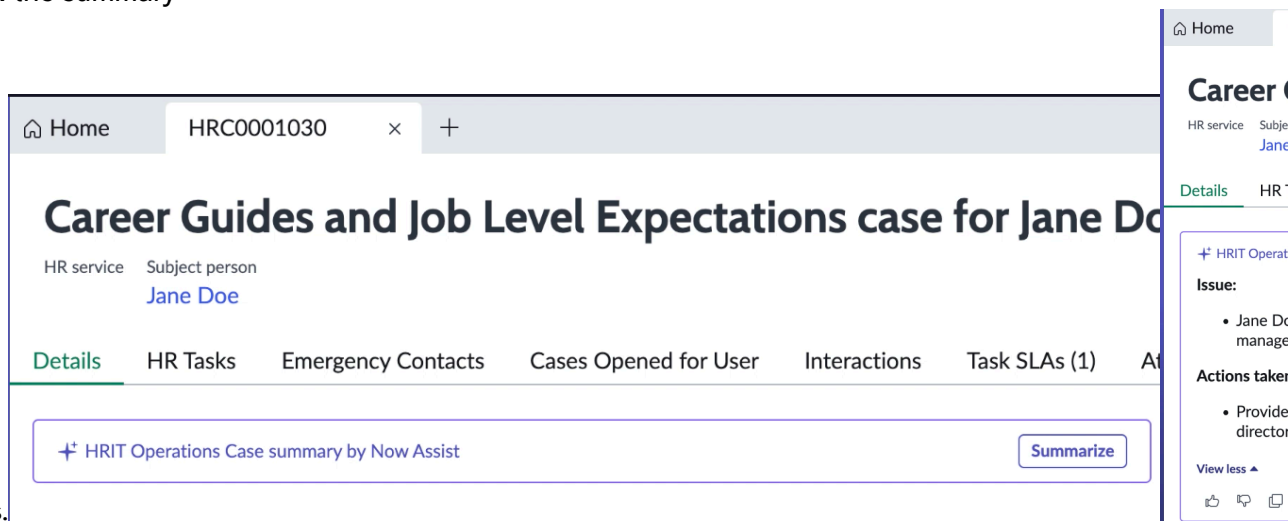
Summarize a case by using Now Assist for HR Service Delivery (HRSD)

Quickly understand the case context and respond to a requester's inquiries by using the Case summarization skill in the Now Assist for HR Service Delivery (HRSD) application.

Before you begin
Role required: sn_hr_core.case_writer

About this task
You can use the Case summarization skill in either Core UI or Agent Workspace for HR Case Management.

- In Core UI, the summary appears in a banner in the case record.
- In Agent Workspace for HR Case Management, the summary is generated in the **Details** tab.



Procedure

1. Navigate to **Agent Workspace for HRSD**.
2. In Workspace, open an HR case that is assigned to you.
3. Select **Summarize**

Note:
Generating and displaying the summary may take several seconds.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Review the summary details.

   A concise summary of a case, including the issue, actions taken, and resolution information appears. The information that is displayed is based on the state of the case:

   - Draft or Ready: Issue
   - Work in progress: Issue and Actions taken
   - Awaiting acceptance, Awaiting approval, Closed complete, or Closed incomplete: Issue, Actions taken, and Resolution
   - Canceled or Suspended: Summary isn't visible

5. **Optional:** When you finish summarizing a case, you can add it to the work notes, expand or collapse it, provide feedback, copy it, or view information about it.

Detect sensitive topics by using sensitivity detection in Now Assist for HR Service Delivery (HRSD)

Detect and fix sensitive topics that relate to your employee relation cases by using the sensitivity detection capability in the Now Assist for HR Service Delivery (HRSD) application.

Before you begin

Role required:

- sn_hr_gen_ai.admin
  - sn_hr_core.case_writer
  - sn_hr_core.case_reader
  - sn_hr_er.case_reader
  - sn_hr_er.case_writer

About this task

This capability helps you detect sensitive cases such as the harassment complaints, discrimination allegations, workplace violence, safety, employee behavior, and employee personal issues. You can also block Now LLM Service from engaging with these sensitive case types.

Note:

The store or app client should automatically take care of all the dependencies when you install Now Assist for HRSD. You must install Now Assist for HRSD version 5.0.7.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the table **sys_gen_ai_filter** and set active to **true** for the filters.

> **Note:**
> sn_hr_gen_ai.admin is required to perform the first step of setting active to **true** for the filters.

2. Verify that the following system properties are set to true.
   - com.glide.genai.semantic_filter.enabled
   - com.glide.cs.semantic_search.enabled
3. Navigate to the **sys_one_extend_capability table** and select the **VA skill search** capability. In the capability attributes, set the **apply filter** field for the utterance to be true.

> **Note:**
> Repeat this step for the *`user_message`* attribute in the Virtual Agent free-form capability and the *`search_text`* attribute in Virtual Agent Semantic Search.

4. Navigate to **Now Assist Admin Console > Features > Platform > Conversation Interfaces**.
5. Set up *`Now LLM Service`*.
6. Navigate to *`Virtual Agent`* on one of the portals and enter **Sensitive Phrases**.

> **Note:**
> You enter `Sensitive Phrases` at the beginning of a conversation. This action should trigger the Sensitivity Detection Fallback topic. When sensitive phrases are entered in the now assist panel, it should be detected as sensitive and the LLM should not respond and should allow you to redirect to a live agent or create a case.

Result

The Sensitive Phrases are automatically detected so that your group can properly handle sensitive cases.

- Sensitivity detection human resource value types

View employee summary reports

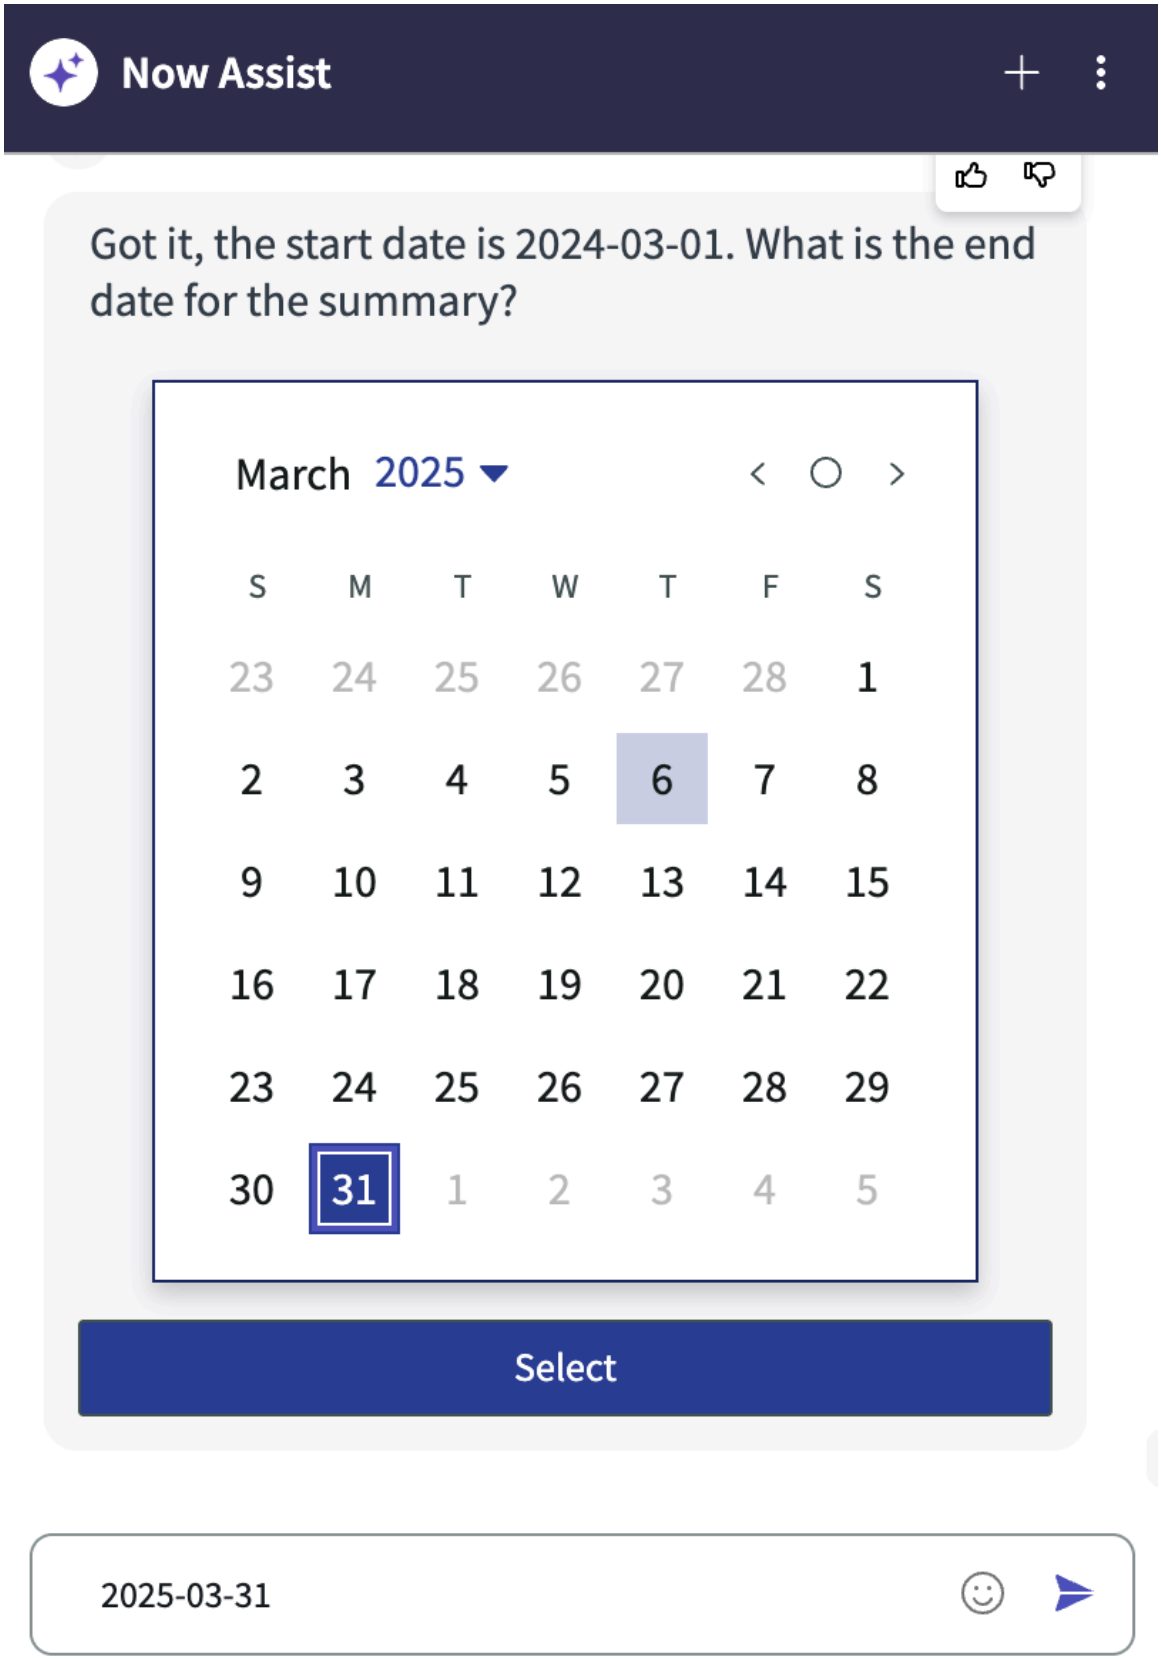
View the Employee Summary Virtual Agent topic in Employee Center to access employee contribution summaries, view consolidated profiles, and track employee progress.

Before you begin

You must have one of the following plugins to view this topic:

- Manager Hub (sn_mh)
- Leader Hub (sn_egd_lh)

Role required: sn_egd_lh.leader or sn_mh.manager_hub_user



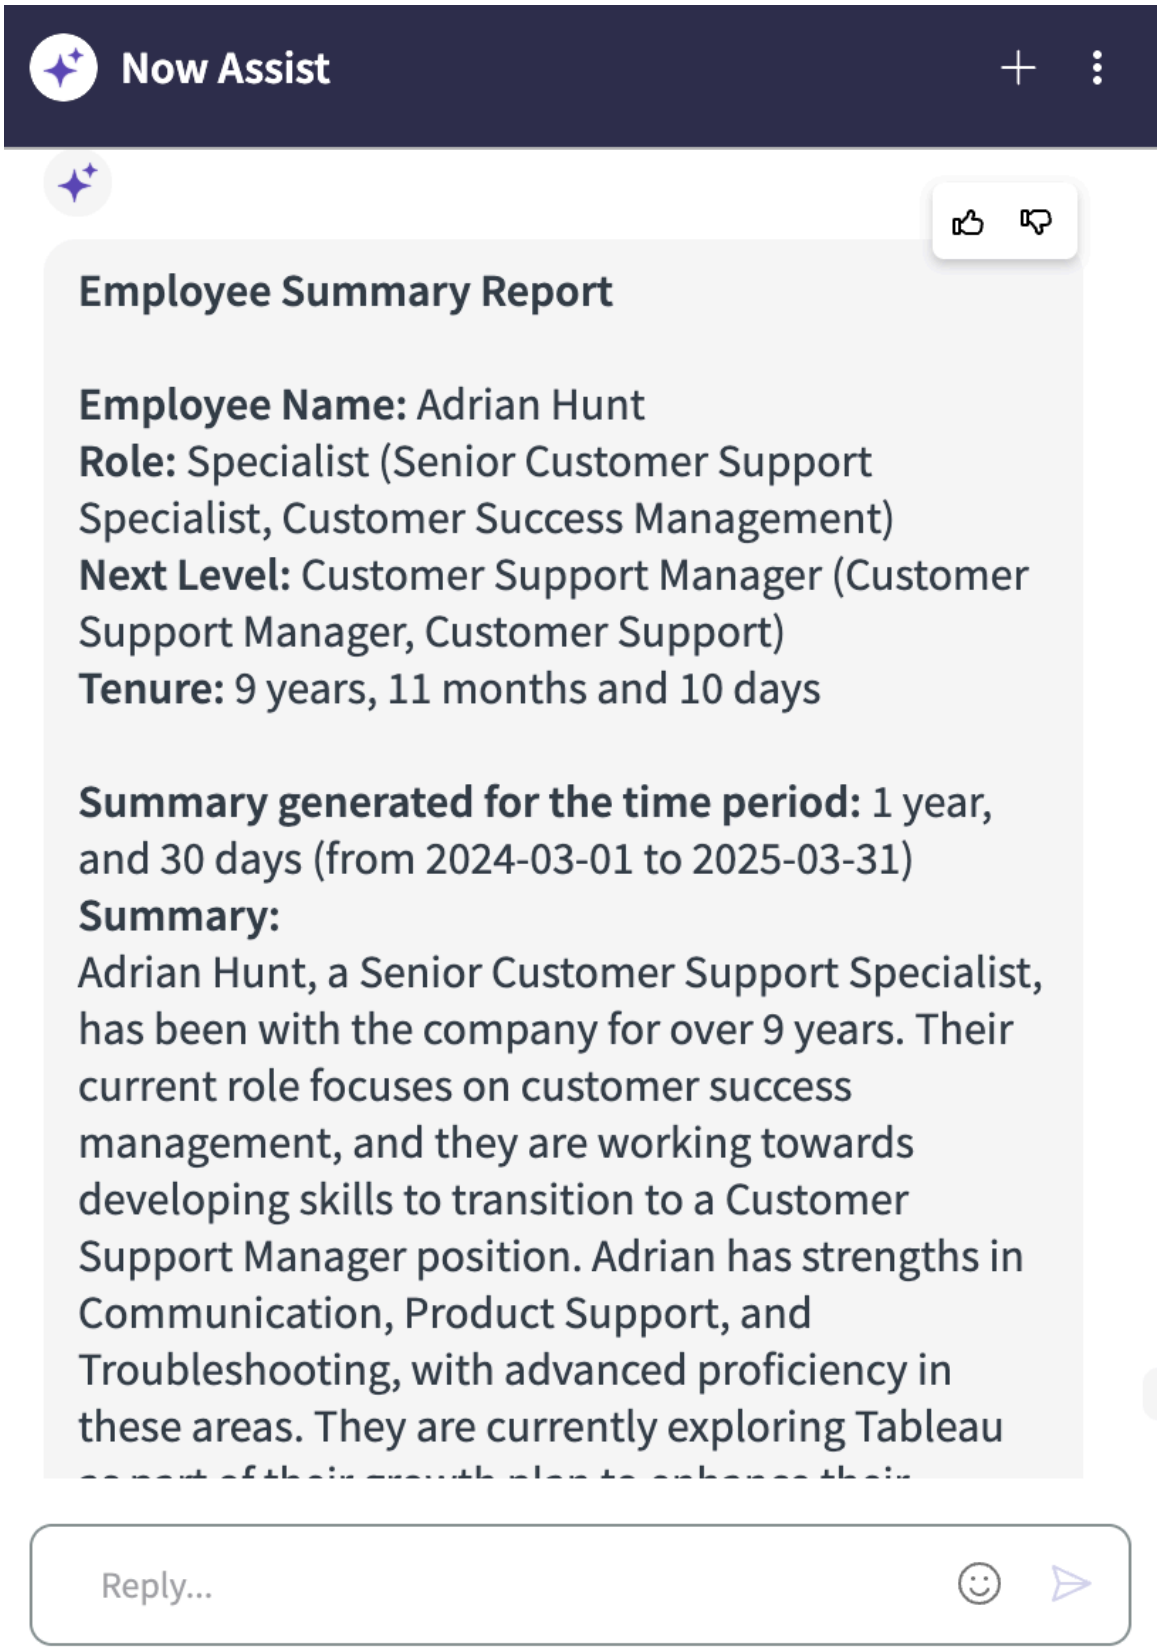
Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Select the Open chat window icon ().
3. Enter `Employee Summary`.
4. Select the employee that you want to view the summary for.

   Note:
   You can view summaries only for your direct and indirect reports.

5. Select a start and end date from the calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:
The duration between the start and end dates must not exceed one year.

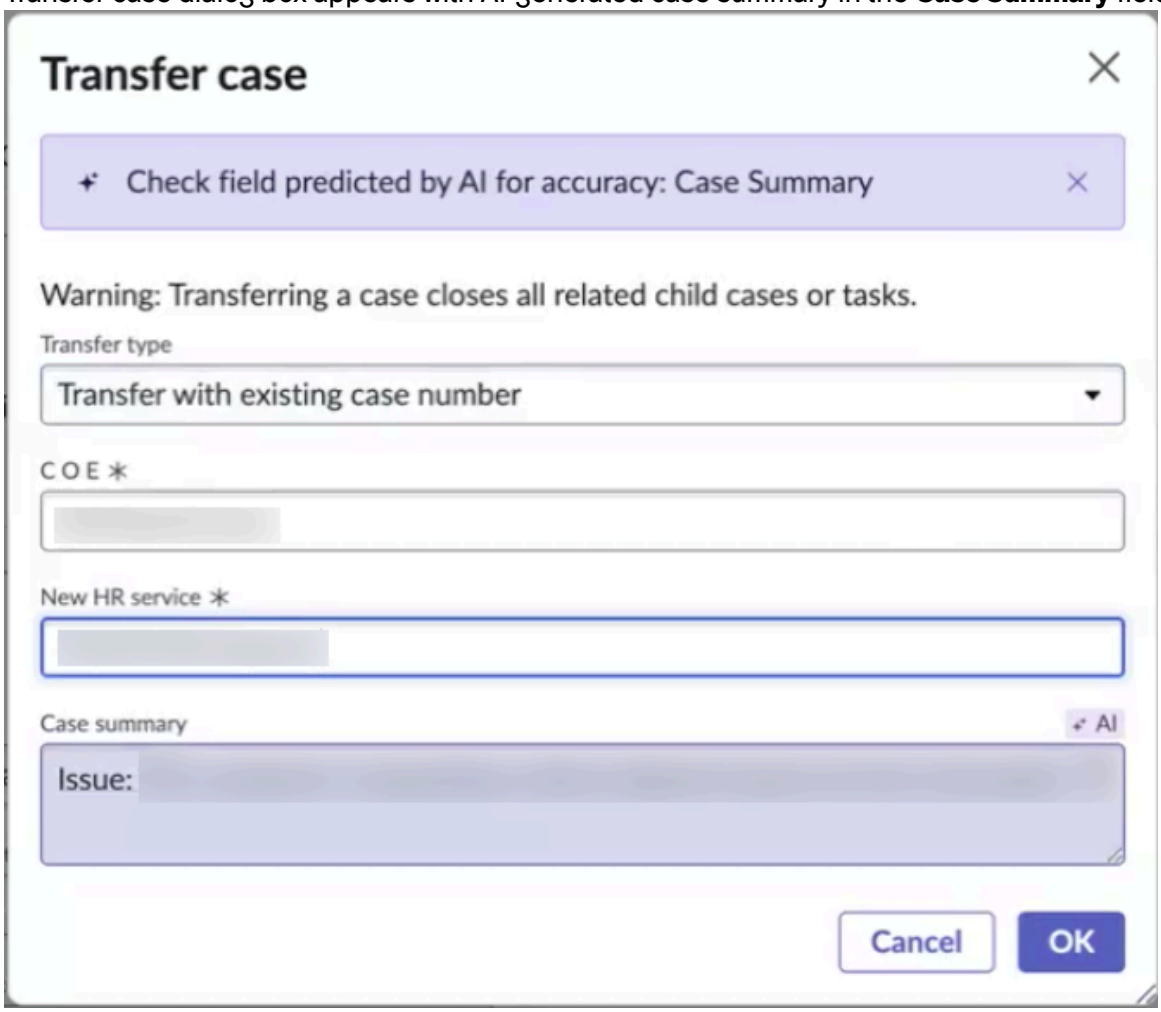
6. Select **Make changes** if you want to make changes, otherwise select **Looks good**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The Employee summary report is available to review. You can enter follow-up questions, or close the chat.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Summarize actions while transferring an HR case



Transfer an HR case to another agent or assignment group by summarizing the actions until hand off. For example, an agent can transfer the case to another agent if the case is incorrectly assigned or needs troubleshooting by another agent or assignment group.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. From HR Agent Workspace, open an HR case that is assigned to you.
2. Click the ··· icon at the top right hand corner of the page.
3. Select **Transfer case**.
   Transfer case dialog box appears with AI-generated case summary in the **Case Summary** field.

   a. In the **Transfer type** field, select whether you want to transfer the case with the same case number or with a new case number.
   b. In the **COE** field, specify the HR Center of Excellence (for example, Payroll) to which you want to transfer the case.
   c. In the **New HR Service** field, specify the HR service (for example, Paycheck discrepancy) to which you want to transfer the case.
   d. Review and make any edits to the AI-generated summary in the **Case Summary** field.

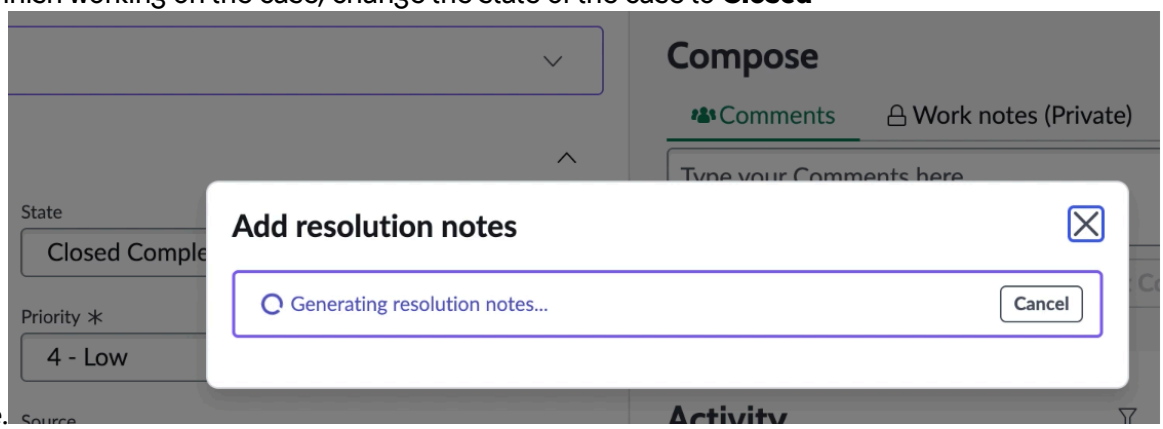
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
GenAI requires a minimum of 200 words on the case to generate summary.

e. Click **OK**.

Generate the resolution notes for a case by using the Now Assist for HR Service Delivery (HRSD)

Automatically update the case resolution notes in the Now Assist for HR Service Delivery (HRSD) application. You can improve the quality of the resolution notes by providing a summary of the steps that were taken to resolve the case.



Before you begin
Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **Agent Workspace for HRSD**.
2. In Workspace, open an HR case that is assigned to you.
3. Write a minimum of 200 words on the case so that generative AI can generate the resolution notes automatically.

   Note:
   To review the inputs fields for the Resolution notes skills in the Now Assist Admin console, see Skill inputs and triggers for Now Assist for HR Service Delivery (HRSD).

4. After you finish working on the case, change the state of the case to **Closed Complete**.

5. Add the AI-generated resolution notes to the case by selecting **Add notes**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- When you select **Skip notes**, the state field remains as **Closed Complete**.

  Note:
  The case isn't saved yet. Also, you can discard your changes by leaving the form.

- Select **Add notes**.

  Note:
  You can copy the resolution notes by selecting **Copy to clipboard**.

Result

The AI-generated resolution notes appear. You can edit, copy, skip, or add them to the case. The Add resolution notes window also appears if you close the case by selecting the **Closed Complete** button.

Use Knowledge Graph in Now Assist for HRSD

Create a personalized knowledge model as a Knowledge Graph schema.

Before you begin

An employee uses Now Assist in Virtual Agent to request an employee visa. The Virtual Agent uses the assigned Knowledge Graph schema to resolve the query and create an Employee Travel Visa Request. Here's an example of how a Knowledge Graph schema assists a Now Assist in Virtual Agent user.Here's an example of how a Knowledge Graph schema assists a Now Assist in Virtual Agent user.

Role required: none

Procedure

1. Navigate to **All** > **Employee Center**.
2. Select **Open chat window**.
3. Query the following: `Need to raise a travel visa request`.
4. Select **Start** below **Employee Self Travel Visa Request**.
5. The query is processed by Knowledge Graph and generates the following fields:
   - Employee name
   - Country of birth

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Country traveling to
- Travel start date
- Trip duration
- Business justification

6. Fill in the required fields.
   Based on the Knowledge Graph schema selected, the Knowledge Graph searches all edges and nodes to provide available outputs such as **Employee name** and **Country of birth.**
7. Edit the provided information before confirmation if needed.
   When confirmed, the request is processed with minimal effort from the user.

Result

Knowledge Graph leverages the existing information available in the internal databases and auto-populates it to reduce efforts while making the entire experience seamless.

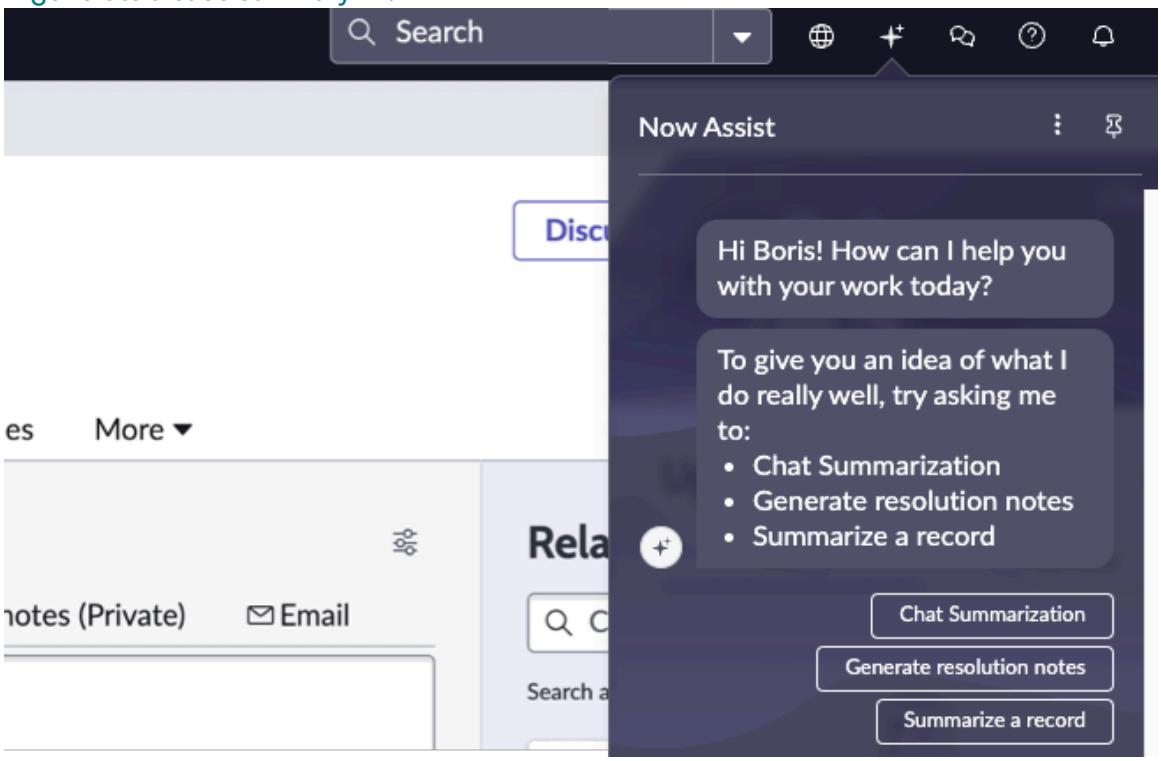
Use the Now Assist panel in Agent Workspace for HR Case Management

Generate chat and case summaries and resolution notes by using the Now Assist panel in Agent Workspace for HR Case Management or Core UI.

Before you begin

Role required:

- sn_hr_core.case_writer: Agent Workspace for HR Case Management
- sn_hr_core.basic: Core UI



About this task

Procedure

1. Open an HR case that is assigned to you.
2. Select the Now Assist icon .
3. Select a skill from the menu:

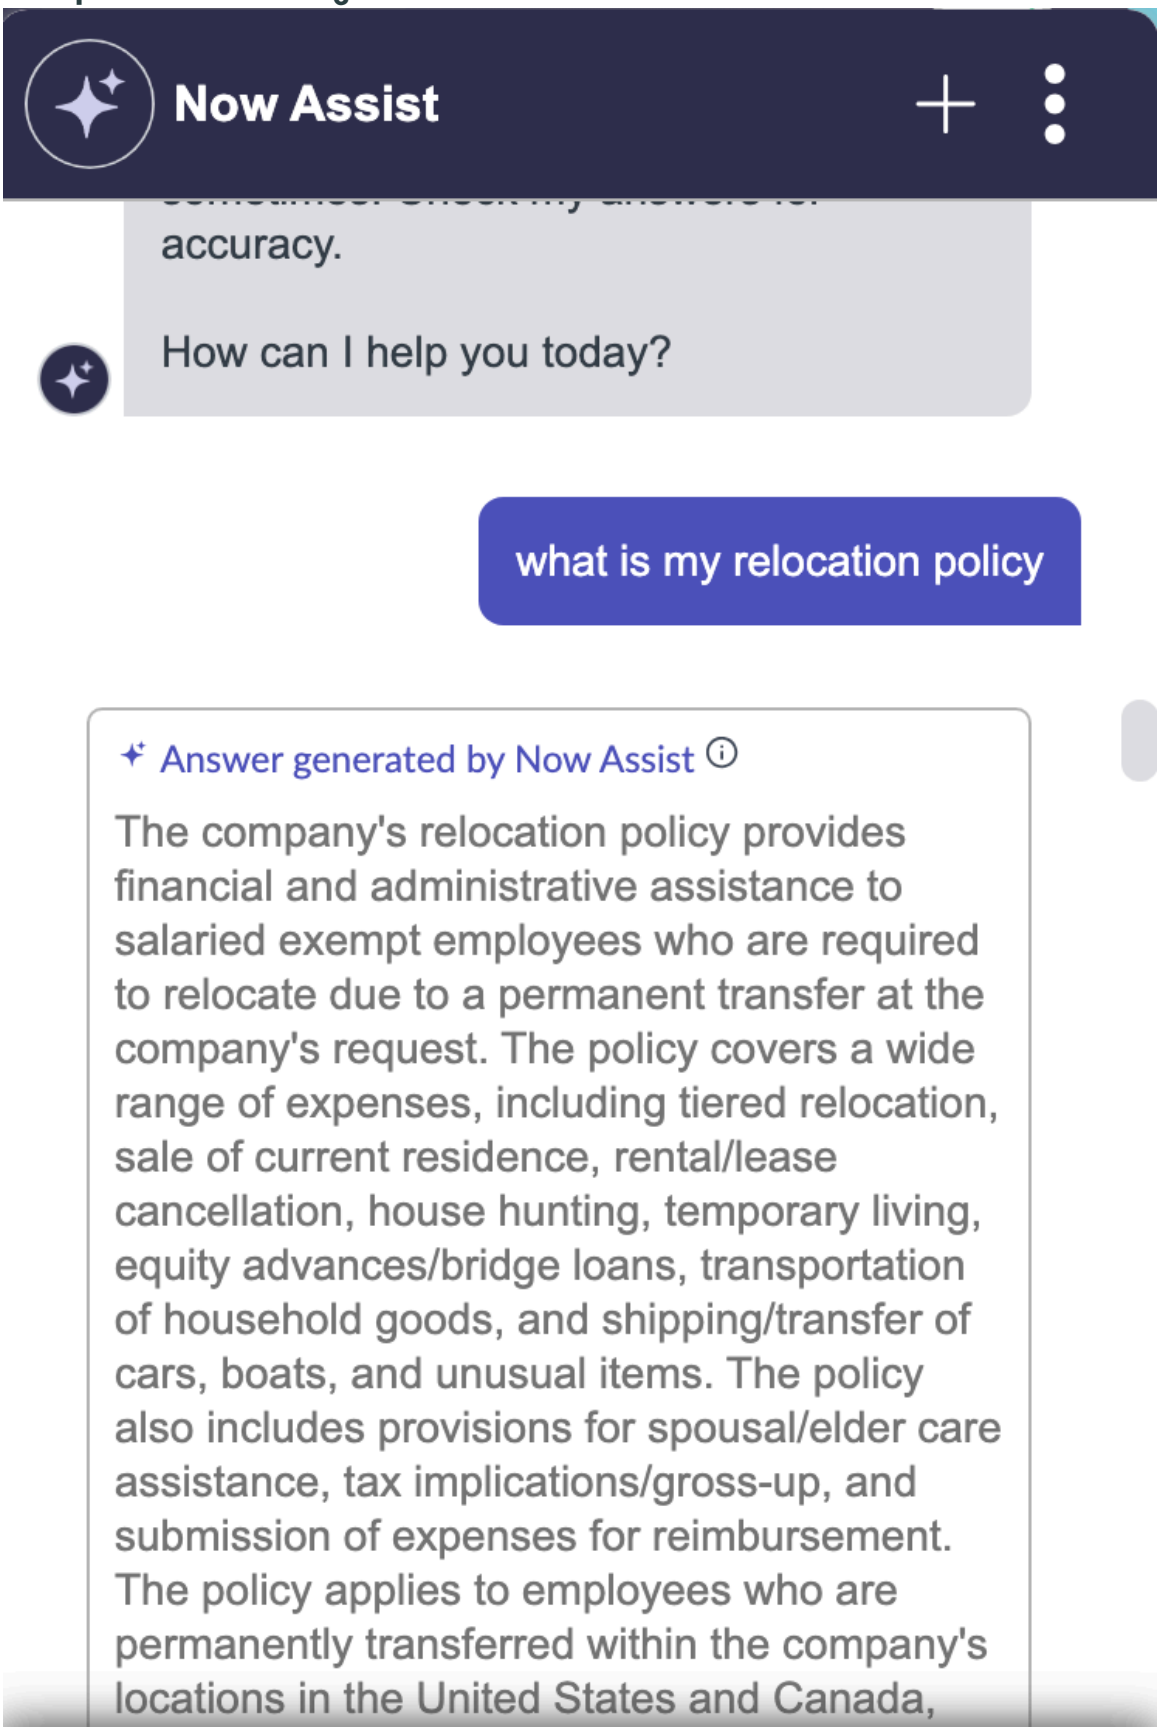
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To generate a chat summary, select **Chat summarization**. For more information, see To generate a chat summary.
- To generate resolution notes, select **Generate resolution notes**. For more information, see To generate resolution notes.
- To generate a case summary, select **Summarize a record**. For more information, see To generate a case summary.

Submit an HR request with Gen AI Virtual Agent

Place an HR request using the conversational and streamlined experience offered by Gen AI Virtual Agent.

Before you begin



Role required: None

Procedure

1. Navigate to **All** > **Employee Center**.
2. Click **Open Chat**.
   Gen AI Virtual Agent appears.
3. Enter your query and select the required catalog item.
   For certain catalog items, KB articles are provided for assistance, for some catalog items you will be directed to a different page to place the request, and for certain catalog items Gen AI Virtual Agent creates an HR case for you.

Now Assist for HR Service Delivery (HRSD) integration with Enterprise Service Management Integrations Framework

Enable employees to complete actions in third-party Human Capital Management (HCM) systems with Now Assist Virtual Agent topics in Employee Center.

Now Assist for HRSD integration with Enterprise Service Management Integrations Framework provides:

- Connection to external HCM systems such as Oracle, or Workday with bi-directional data flow. For example, when an employee applies leave through Now Assist in Virtual Agent, the leave gets reflected in the configured HCM system.
- Provider-agnostic abstraction layer for easy set-up and maintenance of existing iHub integrations, when the provider ecosystem is likely to change.
  - Easier way to switch service providers. For example, a company's payroll has been changed from one system to another. Though the underlying system has been modified, the Virtual Agent topic related to Payroll works as is.
  - Allow different provider application for the same use case based on user country. For example, with the same Virtual Agent topic, an employee of one country sends a leave application to Oracle HCM while an employee of another country sends a leave application to Workday.
- Graphical user interface (Integration Provider Mapping) to plugin integration services, single place to discover integration services, and grouping of related integration services.

Set up

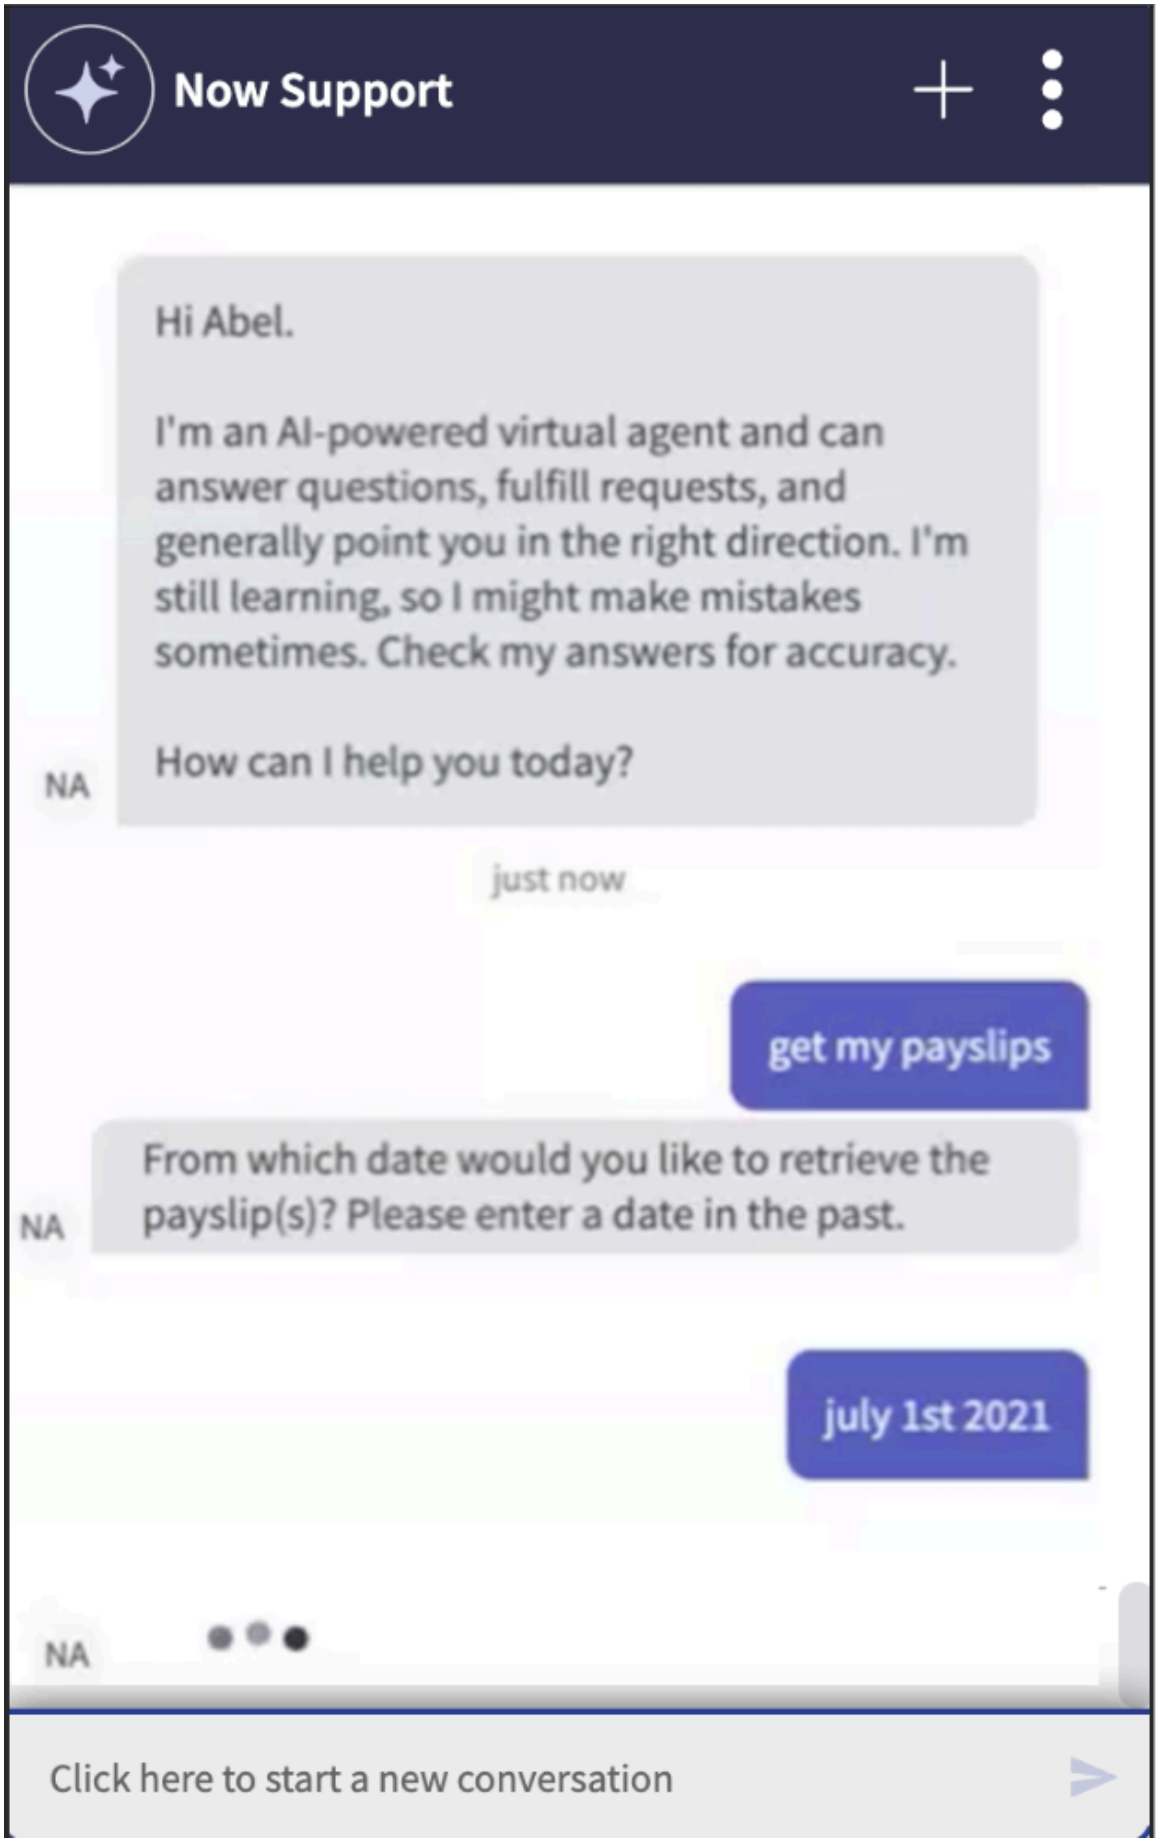
Verify that the configuration steps are complete to use the Now Assist for HRSD Virtual Agent topics in Employee Center. For more details, see Now Assist for HRSD Virtual Agent topics.

Now Assist for HRSD Virtual Agent topics

Use the Now Assist Virtual Agent topics in Employee Center to place requests to the configured HCM system, for example, view details of your time-off balance.

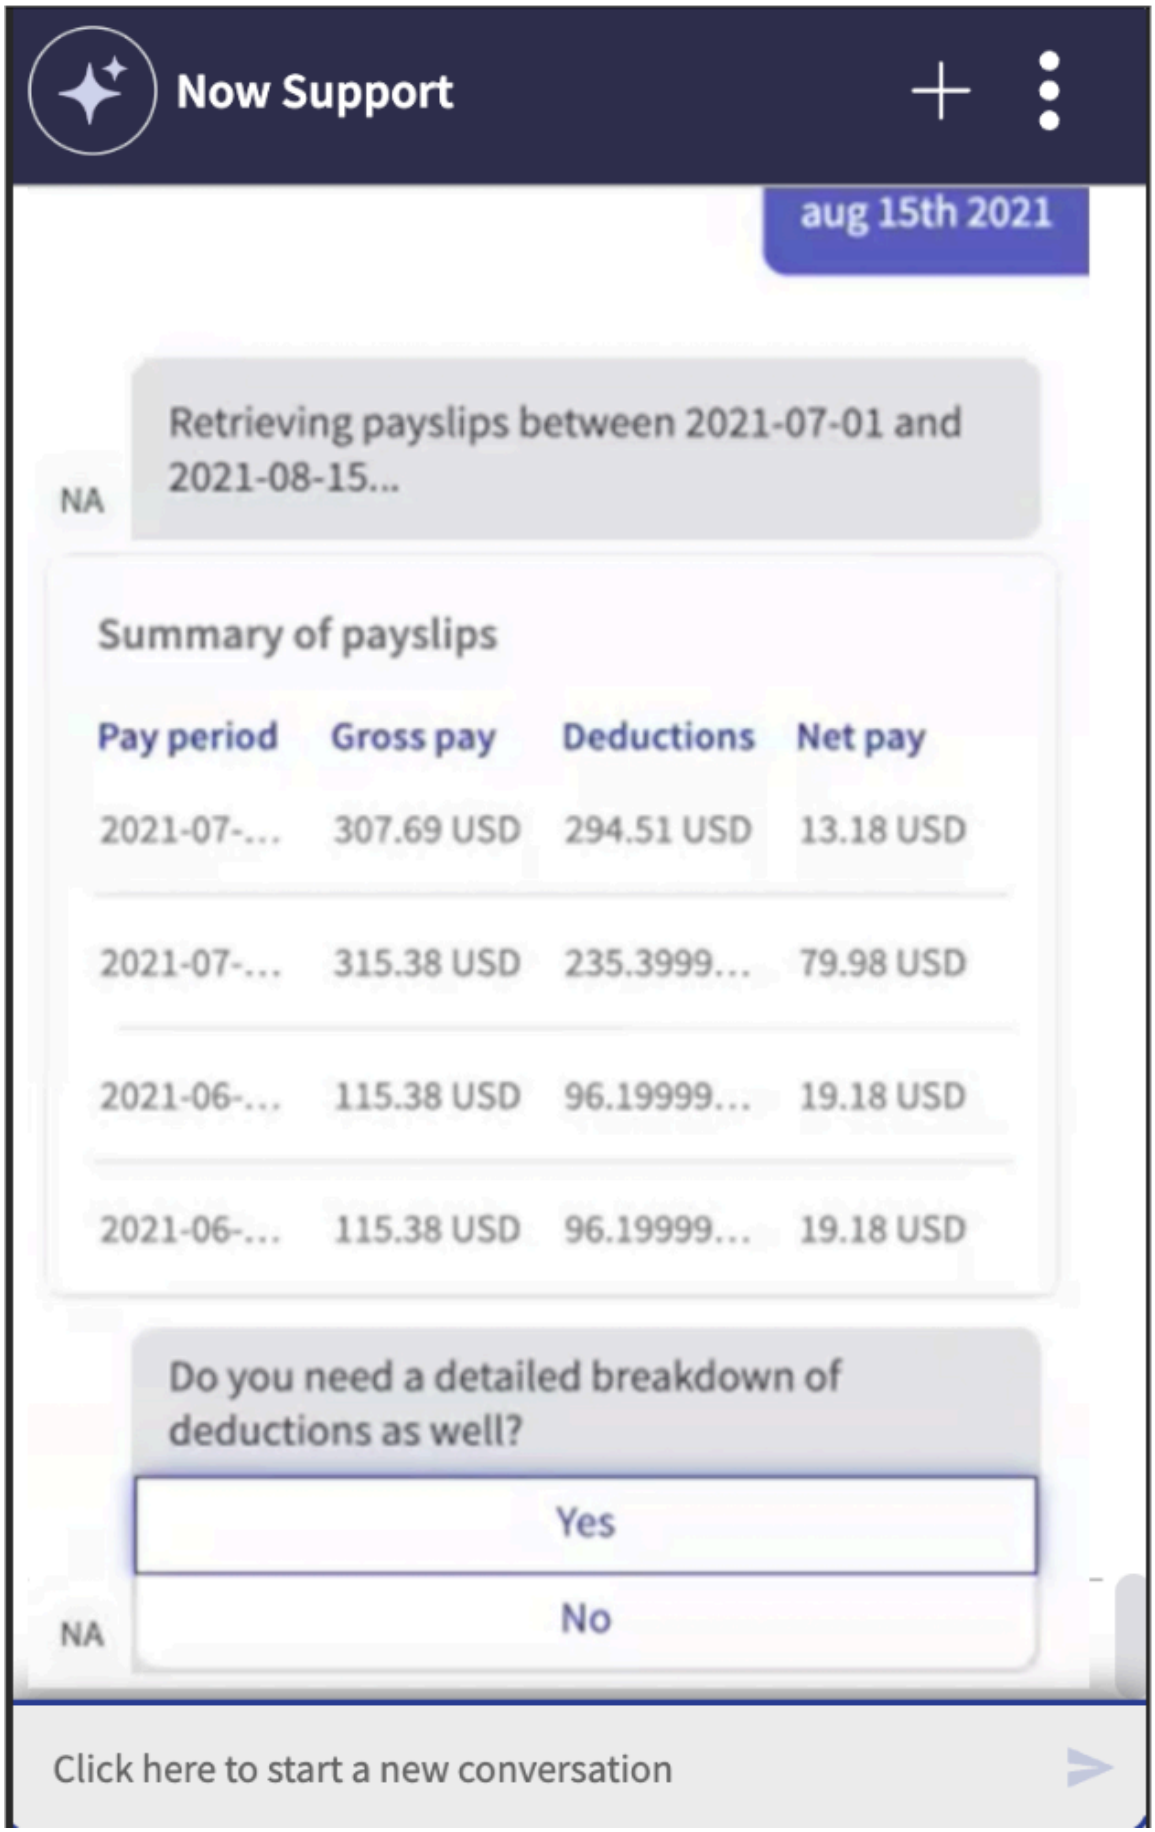
Get time off balance

The Get time off balance Virtual Agent topic enables you to view your leave balance from the configured HCM system in Employee Center.



From Employee Center, open a chat window and type in key words, for example, leave balance. The Now Assist generative AI retrieves details from the HCM system and displays your time off balance.

Get User Paychecks



The Get User Paychecks Virtual Agent topic enables you to view your payslip details in Employee Center.

From Employee Center, open a chat window and type in key words, for example, get payslips. After you provide the required details such as start date and end date, your payslip summary, in the form of pay period, gross pay, deductions, and net pay are displayed. A detailed breakdown of deductions is also displayed.

Activate HR Service Delivery for mobile

Activate the HR Service Delivery for mobile plugin (sn_hr_mobile) if you have the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

HR Service Delivery for mobile activates these related plugins if they are not already active:

- Now Mobile app [sn_me]
- Surveys for mobile [com.sn_msc]

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Components installed with Now Mobile for HR Service Delivery

Several types of components install with the activation of the Now Mobile for HR Service Delivery plugin, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature. Load demo data at the time of the plugin installation, or add the demo data using the repair feature for plugin installations. See Now Mobile app demo.

Note:
The Now Mobile [sn_me] plugin activates the sn_hr_mobile.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only mobile admin user by requiring a minimum number (default is two) of active users with this role.

Roles installed

Roles installed with Now Mobile for HR Service Delivery

  - Analytics and suggestions
- Items and services
  - Catalog
  - Quick actions
- Knowledge
- Siri shortcuts

Please see Configurations for Now Mobile.

Administer Now Mobile

Configure the Now Mobile experience for your employees to enable them to access features from Lifecycle Events, Journey designer, and Agent Chat in their mobile devices.

Configure the different media sections to provide relevant content to new hires at different stages of the onboarding process. And you can enable chat so that new hires can chat with a live or virtual agent from within the app.

The following video provides an overview on how to configure the mobile onboarding.

Watch this video to learn how to configure and test the Mobile Onboarding app.

Select a Lifecycle Event for Now Mobile

Select the Lifecycle Event that you want to use with Now Mobile. When an onboarding case for that event type is created, the new hire completes the to-dos that are associated with that case.

Before you begin

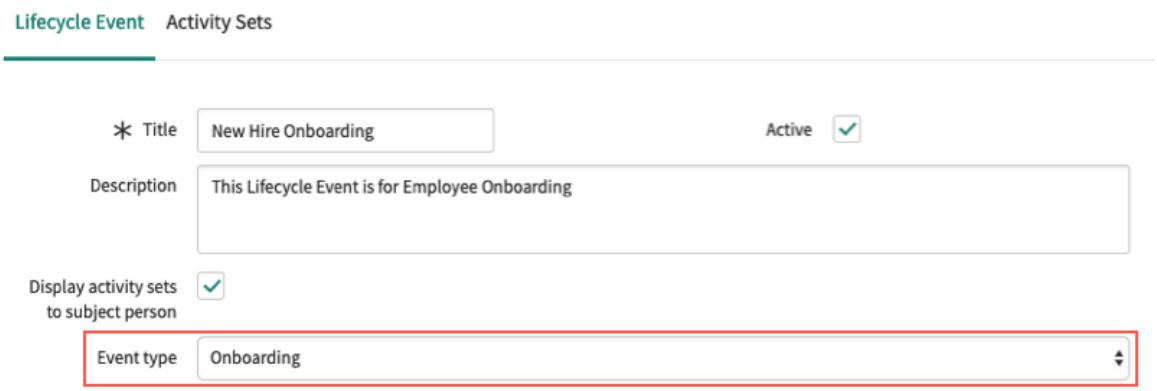
Role required: sn_hr_le.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You must also make sure that the **Display activity sets to subject person** option is selected, as well as the **Show case to subject person** option on the corresponding HR service.

A Lifecycle Event administrator must have set up the Lifecycle Event and the corresponding HR service you want to use with Now Mobile. See Building a lifecycle event for more information.

Procedure



1. Select the Lifecycle Event you want to use with Now Mobile.
   Also make sure that the **Display activity sets to subject person** option is selected.

   a. Navigate to **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.

   b. Open the Lifecycle Event record.

   Note:
   A preconfigured Lifecycle Event named New Hire Onboarding is available to use.

   c. On the Lifecycle Event form, set the **Event type** field to `Onboarding`.

   d. Make sure that the **Display activity sets to subject person** option is selected.

2. On the corresponding HR service form, make sure that the **Show case to subject person** option is selected.

   a. Navigate to **HR Administration** > **HR Services** > **HR Service Configuration**.

   b. Open the corresponding HR service record.

   Note:
   A preconfigured HR service named New Hire Onboarding is available to use.

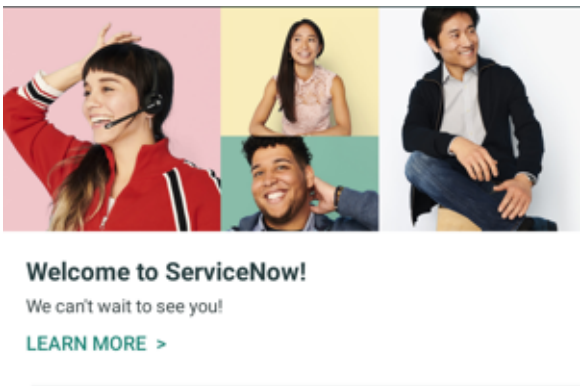
c. Make sure that the **Show case to subject person** option is selected.

Configure a media section for Now Mobile

Configure one or more of the media sections for Now Mobile to provide relevant content to new hires at different stages of the onboarding process.

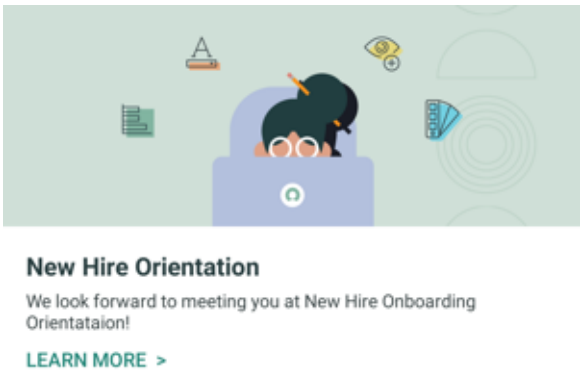
Before you begin



Role required: sn_hr_le.admin

About this task

Media sections are a type of UI section that you can add to an applet launcher. The following media sections appear on the Welcome screen at different stages of the onboarding process, and you can personalize the content with your own headlines, images, video, text, and function instances.

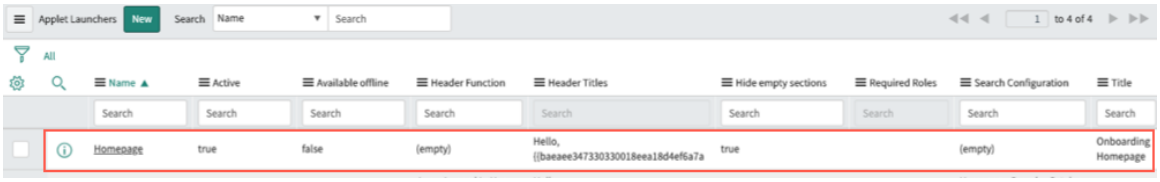


Note:
Beginning in the Paris release, media sections are not enabled by default for new customers.

Media sections in Now Mobile

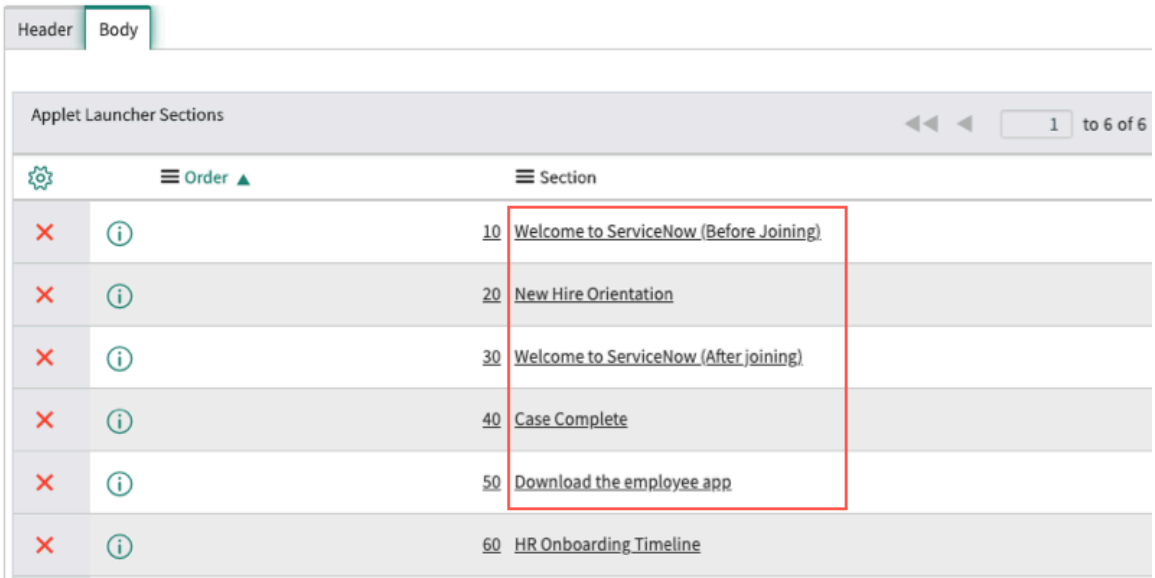
	Welcome to ServiceNow (Before joining) Displays when the onboarding case is created until one day before the new hire's start date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Media sections in Now Mobile (continued)

New Hire Orientation Displays beginning one day before the new hire's start state until their first day.	 **New Hire Orientation** We look forward to meeting you at New Hire Onboarding Orientataion! LEARN MORE >
 **Welcome to ServiceNow!** LEARN MORE >	Welcome to ServiceNow (After joining) Displays beginning on the employee's start date until the onboarding case is complete.
Case Complete Displays on the upper half of the Welcome screen after the onboarding case is complete.	 **Nicely done!** Your new hire onboarding is complete. Enjoy the rest of your journey.
 **Download the employee app** Get help with anything at work, access the Knowledge Base and search the Employee Directory INSTALL	Download the employee app Displays on the lower half of the Welcome screen after the onboarding case is complete.



Procedure

1. Navigate to **All** > **System Mobile** > **Applet Launcher**.
2. Open the **Onboarding Homepage** record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. In the Body related list, open a media section record.

4. Configure the media section.
   You can personalize the headline, text, image/video, or function instance.
   - Headline
   - Text
   - Image or video
   - Function instance

   Note:
   You can personalize the label and configure the associated function. To learn more about how to configure functions, see Functions in ServiceNow mobile.

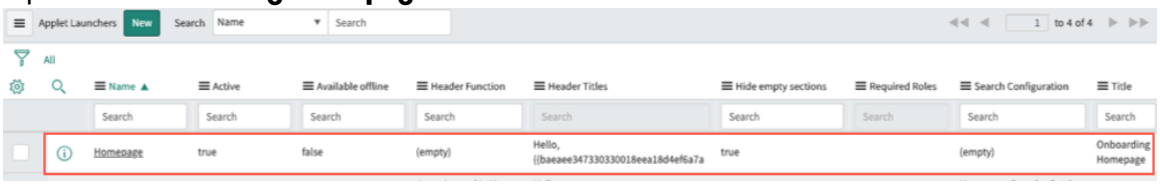
5. Click **Update**.

Enable Agent Chat in Now Mobile

Activate the Chat quick action so that your new hires can chat with a live or virtual agent.

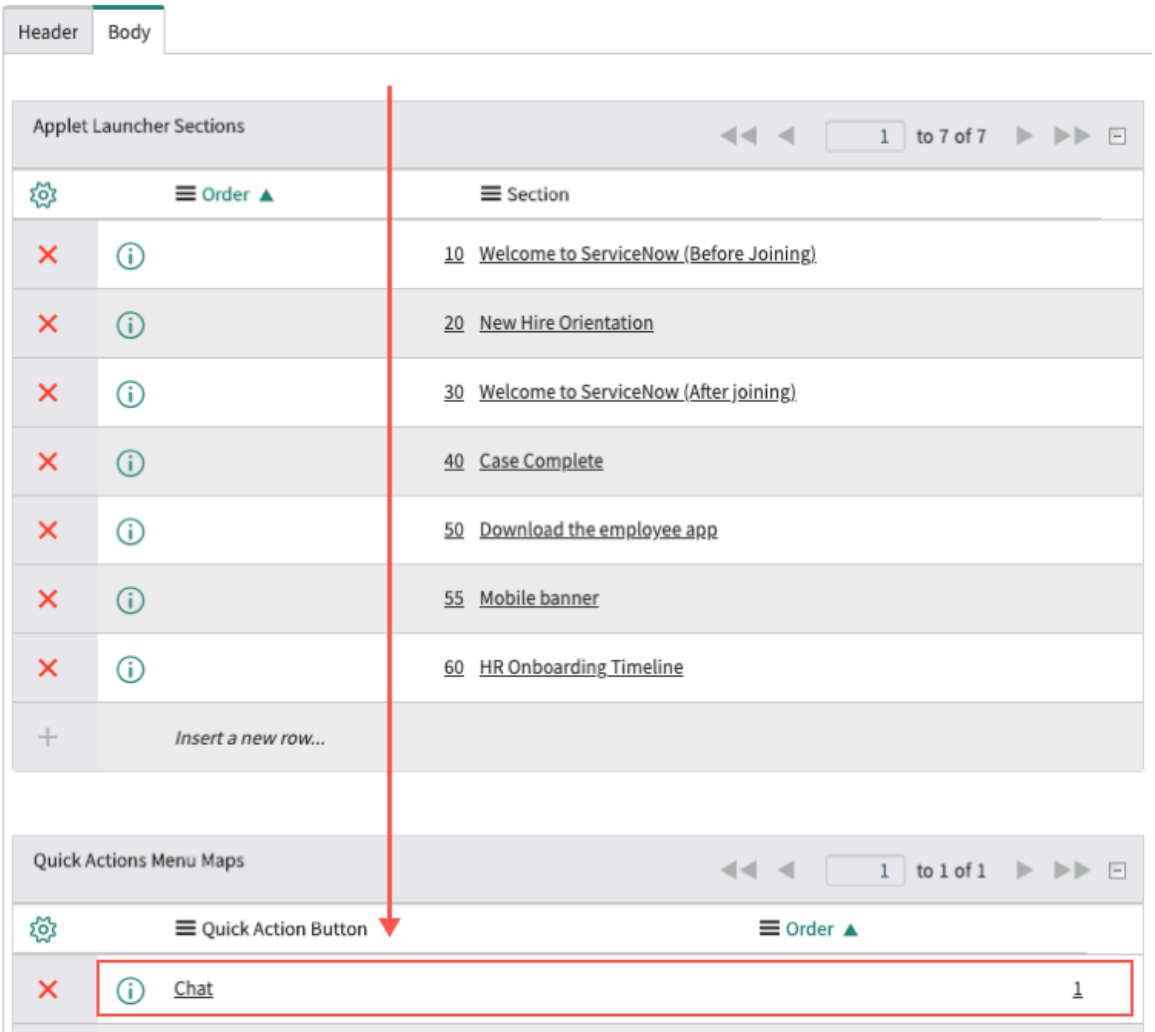
Before you begin
Role required: sn_hr_le.admin

Make sure that live and/or virtual chat are set up for use in the Employee Service Center.



- Employee live chat overview
- Virtual Agent for HR Service Delivery

Role required: sn_hr_le.admin



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Mobile** > **Applet Launchers**.
2. Open the **Onboarding Homepage** record.

3. In the Body related list, under the Quick Actions Menu Maps section, open the **Chat** record.

4. Select the **Active** option to activate the quick action for use.
5. Click **Update**.

Configure Journeys for Now Mobile

Configure Journey designer in Now Mobile to enable managers, mentors, and employees to interact with their journeys from their mobile devices.

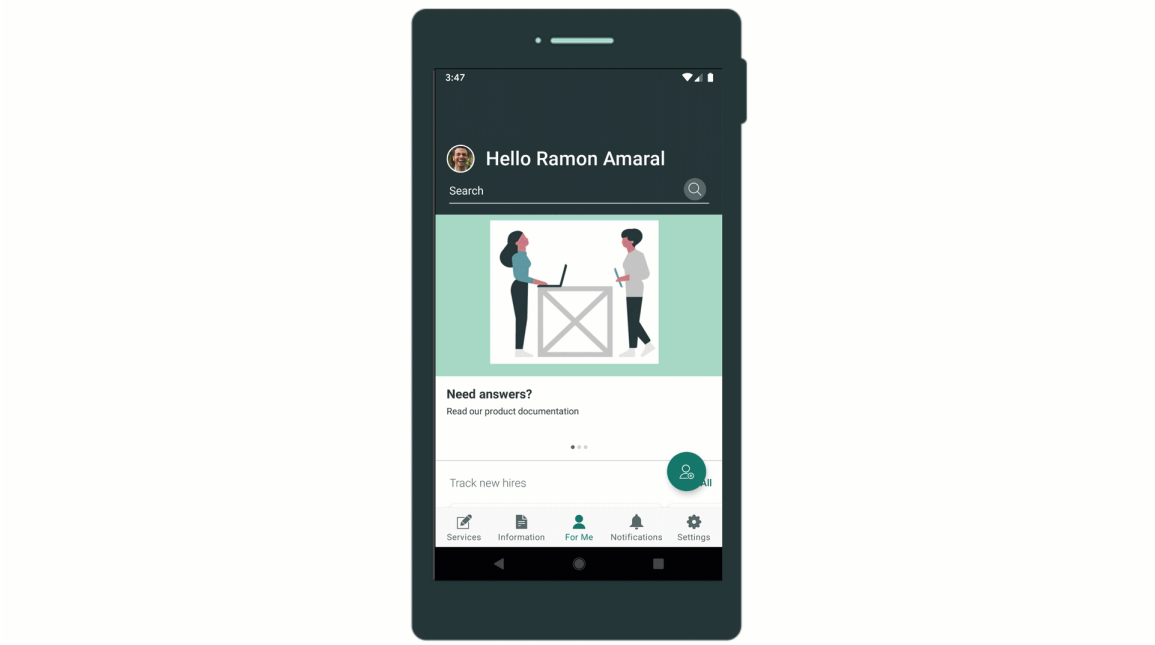
Before you begin

Role required: admin

Plugins: Journey designer (sn_jny), Journey Accelerator (sn_ja), HR Service Delivery for mobile (sn_hr_mobile)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Assign the Journey to the employee and publish the Journey. See Create a journey



For more information on Journeys, see Journey designer.

Procedure

1. Navigate to **All** > **Journey designer** > **Manage Journey Configurations**.
2. Click on the Journey configuration name.
3. Upload an image to appear at the top of the Journey when viewed on Now Mobile.
   For an example of how a Journey looks on Now Mobile, see Journeys on Now Mobile.

Hiring manager experience for new hire onboarding

If you're using the Now Mobile app with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin, hiring managers can track the onboarding progress of their new hires in a single and consolidated section.

The hiring manager experience provides a consolidated view of all of the active onboarding cases of that manager's reports. The manager can drill down into each case form to view and complete their tasks, as well as track tasks that are overdue, view the timeline, and check for any case updates.

Important:
For the hiring manager section to appear, the hiring manager must:

- Be the manager of the subject person of the onboarding case
- Be the opened for person on the onboarding case

Onboarding cases that are shown in the Track new hires section do not appear under the **My Requests** section. If there are no active cases, then the hiring manager section does not appear on the app.

To learn more about new hire onboarding and lifecycle events, see Lifecyle events for enterprise.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Journeys on Now Mobile

Journeys are created in the ServiceNow® Journey designer application to help employees navigate multi-step transitions, such as onboarding, maternity leave, or an interdepartmental transfer. The Now Mobile application enables users to perform journey-related tasks from the convenience of their mobile device.

Using Journeys on Now Mobile

Managers can

- View outstanding tasks and filter them by employee journey or priority.
- View and complete their own Journeys.
- View important information about outstanding journeys and drill down on details.

Note:
Managers can create journeys, add mentors, and publish the journeys in the Employee Center on desktop only.

Mentors can

- View and complete their outstanding tasks.
- Receive notifications when they are assigned to an employee's journey.

Employees can

- View and complete tasks and training.
- Navigate through all of their tasks and milestones.
- Message their mentor or manager
- Search for help articles.
- Complete learning courses added by the organization or their manager.
- Receive notifications when a journey is created for them.

Proactive Prompts

Proactive Prompts enable contextual and proactive engagement for managers and employees by bringing actionable insights as prompts into their flow of work.

Drive engagement

Drive proactive experiences to enable positive habit formation for managers and employees through continuous micro-actions from messaging channels. For example, Proactive Prompts encourages managers to adopt Journeys and other ServiceNow features.

Boost productivity

Define and empower managers to receive timely bite-sized insights and drive positive actions. Enable employees to stay on task by meeting them in their workflow, for example, by posting insights and actions on the Manager Hub portal. Create reminders in Employee Journey Management to enable employees to stay on task by prompting them in their flow of work.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Accessibility

Engage managers and employees through prompts displayed on the most reachable channels like Microsoft Teams. Motivate employees by sending bite-sized prompts in their natural workspaces, thus meeting them in their flow of work.

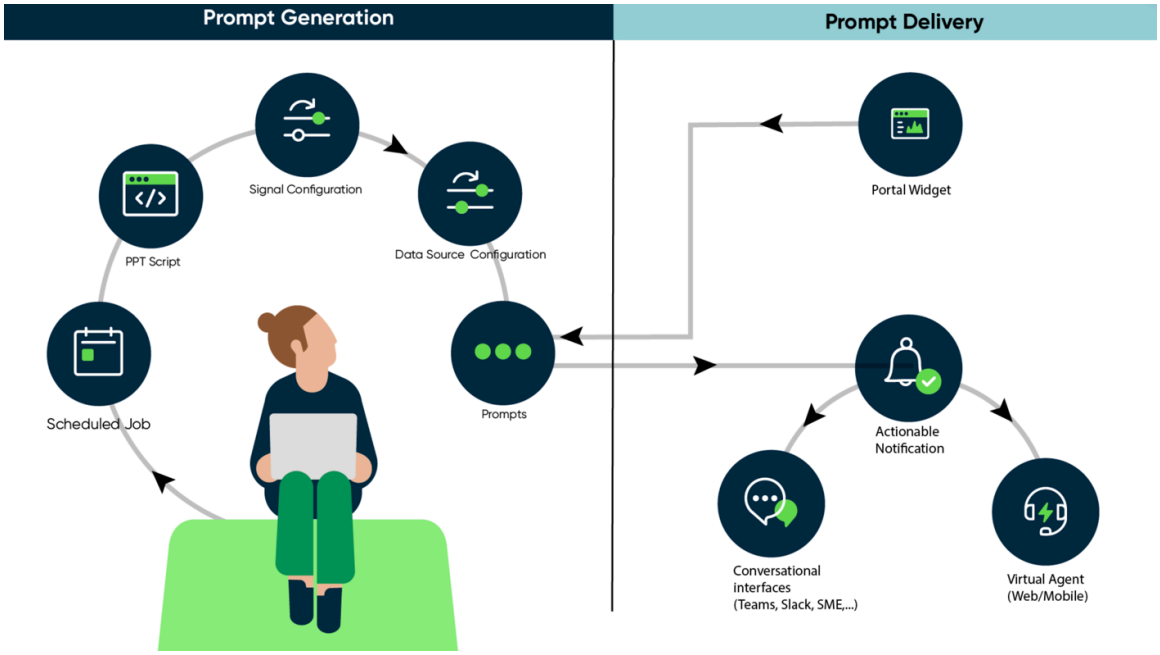
Get started

Explore Detailed information on Proactive Prompts	Configure Configure the application to get started
Use Know how you can use Proactive Prompts	Reference Get details about tokens, data sources, actions and channels in Proactive Prompts

Exploring Proactive Prompts

Learn how to use the Proactive Prompts application in your organization, configuring the signal for prompts, generating the prompts, and displaying them with actions on the selected channels.

Proactive Prompts workflow



A scheduled job triggers the Proactive Prompts script that evaluates the signal configuration. Signal configuration contains two parts:

- Signal details such as to whom to send the prompt, on which channels, what actions are made available, and templates for the prompt message displayed to the user.
- Signal data source that contains data tables and conditions.

Prompts are then generated and sent to configured platforms like Service Portal, Microsoft Teams, Slack, or Virtual Agent.

The following image illustrates this Proactive Prompts workflow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Channels in Proactive Prompts

Channels are the medium through which prompts are displayed to the end user in their flow of work.

The following table describes the channels available in Proactive Prompts.

Channels used in Proactive Prompts

Channels	Description
Portal widget	Prompts are displayed through a widget on the Employee Portal. **Note:** To see the prompts on the portal, the Prompt widget must be added to the portal page. For information on configuring portal pages, see Create and edit a page using the Service Portal Designer. For information on adding widgets to a page, see Service Portal widgets.
Virtual Agent	Prompts can also be delivered to different Conversational Interface (CI) channels through Virtual Agent, for example, Microsoft Teams or Slack.

Note:
For more information, see Configure delivery channels in Proactive Prompts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configuring data

Configure signals, data sources, channels, categories, actions, and schedules to display prompts to managers and employees in their flow of work. For more information, see Configuring Proactive Prompts.

Proactive Prompts in Manager Hub

Generate and display micro insights to managers using Manager Hub through Proactive Prompts. The insights contain reminders about the team's service requests, journeys, and learnings, accompanied by relevant actions to communicate the information to the employees. For more information, see Proactive Prompts for managers.

Install Proactive Prompts

You can install the Proactive Prompts application (com.sn_pp) if you have the admin role.

Before you begin

Role required: sn_pp.admin

Note:
You must install Glide Virtual Agent (com.glide.cs.chatbot) plugin before installing the Proactive Prompts plugin to start using the application.

Dependent plugins and apps for Proactive Prompts:

- Employee Center Pro (com.snc.employee_center_pro) - for portal actions and widgets.
- Microsoft Integrations – Core (com.snc.ms_teams) - to use Start chat action.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Proactive Prompts application (com.sn_pp) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Configuring Proactive Prompts

If you have the admin role, you can install the Proactive Prompts application and configure it to display the relevant prompts to the employees in your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A signal is the configuration for prompts about when to send them, what to send, whom to send them to, where to send them, and the related actions to generate and deliver them. You can define whom to send the signal to, how often, and on what channels. The Proactive Prompts application supports all conversational interface (CI) channels in the portal.

Note:
You must install and activate both the Proactive Prompts and the Now Assist for HRSD application to use the capability and prompts from the base system. The two new signals that are available for use are the Approvals pending prompt and the High leave balance prompt.

Configuring Proactive Prompts is a multi-step process:

- Creating a signal. A signal determines when to send the prompt, what to send, whom to send it to, where to send it, and the related actions to generate and deliver the prompts.
- Creating a data source for the signal. The signal data source brings in the most relevant information for your employees.
- Configuring channels. Choose where to display the prompts that would be the most benefit to your users.
- Configure actions. You determine the actions to generate and deliver the prompts.
- Configuring schedules. You choose the frequency that you want the data source to process the data and to generate the prompts in the selected channels.

Create a signal in Proactive Prompts

Create a signal to determine what prompts to send, whom to send them to, where and when to send them, and to generate them to send to your user.

Before you begin

Note:
You must install and activate both the Proactive Prompts application and Now Assist for HRSD application so that you can use the capability and prompts from the base system. The two signals that are available for use are the Approvals pending prompt and the High leave balance prompt.

Role required: sn_pp.admin

Procedure

1. Navigate to **All** > **Proactive Prompts** > **Signal Configurations**.
2. Select **New**.
3. In the **Name** field, enter a name for the signal configuration.
4. In the **Description** field, enter a brief description about the signal.
5. Activate the signal by selecting the **Active** option.
6. In the **Schedule** field, select a schedule that determines the frequency of sending the prompt to the user.
   For more information on schedules, see Configure signal schedules in Proactive Prompts.
7. In the **Priority** field, select the priority to determine the display order of the prompts on the prompt widget.
   The available values are High, Low, or Medium.
8. In the **Order** field, select the order that is related to the signal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. In the **Category tags** field, select the category for the signal, which is used to pull the prompts on the prompt widget.
   For more information, see Configure signal categories in Proactive Prompts.
10. In the **Channels and actions** field, select the channel where you want the prompts to be displayed and the actions that you want to associate with the channel.
    For more information, see Configure delivery channels in Proactive Prompts.
11. In the **Receiving user** field, select the user that you want to receive the prompt, either the manager or an employee.

    Note:

    - The employee value is taken from the **User** field of the data source that is specified in the **Datasource** field.
    - The manager of an employee is derived from the **Manager** field in the User [sys_user] table.

12. On the **Signal Source** tab, select the data source method to retrieve the data in the **Datasource** field.
    For more information, see Types of data sources in Proactive Prompts.
13. On the **Prompt template** tab, fill in the fields.

    The content in the template is displayed as the content of the prompt to your user.

Prompt template fields

Field	Description
Prompt header	Header for the prompt. For information on adding a new header, see Add a new prompt header to identify the prompt. The header is an icon and a label that is displayed on the prompt to identify the type of prompt on Employee Portal. For example, you could have headers for Skills, Learning, Roles, and so on. **Note:** If no header is selected, then the header that's marked as default is added to the prompt and displayed.
Title	Title of the message when the prompt is displayed to the user.
Single record display	Template for the message to be displayed to the user when the prompt is generated for a single record.
Multiple record display	Template for the message to display to users when the prompt is generated for multiple records. For more information, see Tokens in Proactive Prompts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
URL	URL that the user can access in the **View details** option on the Employee Portal or **Take action** option for Virtual Agent. For more information, see Actions and action groups in Proactive Prompts.

You have created a template that is delivered as a message in the prompt to the user.

14. Select **Submit**.
    You have configured a signal that delivers the prompt message to the user in the frequency that you scheduled.

Add a new prompt header to identify the prompt

Add intuitive headers to the prompts displayed on the Employee Portal to enable users to identify the type of prompt easily.

Before you begin
Role required: sn_pp.admin

About this task
The predefined default header is Suggestion.

Procedure
1. Navigate to **All** > **Proactive Prompts** > **Administration** > **Signal Configurations**.
2. Select **New**.
3. In the **Name** field, enter a name for the signal configuration.
4. In the **Schedule** field, determine the frequency to send the prompt to the user.
5. Select the **Prompt Template** tab.
6. Select the Lookup using list icon ( ) next to the **Prompt header** field.
7. On the Prompt Header Configurations page, select **New**.
8. In the **Label** field, enter a name to describe the header.
9. Select **Active** to activate the new header.
10. **Optional:** Add an icon to accompany the header.
    a. In the **Icon** field, select the **Click to add** link.
    b. Select **Choose file** to select an image from your local drive.
       The supported file types are .jpg, .png, .bmp, .gif, .jpeg, .ico, and .svg.
    c. Select **OK**.
11. **Optional:** Select the **Is default** field to mark the header as the default header.
    This header will be selected if no value is provided in the **Prompt header** field.

    If a default header has already been selected, an error message is displayed. You must clear that selection before being able to set this header as the default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

(Optional) If you don't see the **Is default** field, you can add it to the layout.

12. Select **Submit**.
13. **Optional:** Add more headers by repeating steps 4 through 10.

Result

The newest header added is selected in the **Prompt header** field.

Create a data source for a signal in Proactive Prompts

Specify where and how to get the data you want to use to send insights to users.

Before you begin

Role required: sn_pp.admin

Procedure

1. Navigate to **All** > **Proactive Prompts** > **Signal Data Sources**.
2. Select **New**.
3. On the Signal data source form, fill in the fields.
   For a description of the field values, see Signal data source form.
4. Select **Submit**.

Configure delivery channels in Proactive Prompts

Configure a channel to display the prompts to end users in their workflow.

Before you begin

Role required: sn_pp.admin

Procedure

1. Navigate to **All** > **Proactive Prompts** > **Signal Channel Configurations**.
2. Select **New**.
3. On the form, fill in the fields:

Signal channel configuration form

Fields	Description
Name	Name of the Signal channel configuration.
Application	The scope in which the application is created.
Portal	Option to select Employee Portal as the channel to display the prompts.
Portal action group	The action group applicable to the prompts displayed on the portal. Action groups include some frequently used actions for quick access to the end user. For more information, see Action groups.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fields	Description
Virtual agent	Option to select Virtual Agent as the channel to display the prompts.
Virtual agent actions	The Virtual Agent actions (both NLU and LLM type) from the Signal action [[sn_pp_signal_action] table that can be performed by the end user. For more information, see Configure signal actions for Proactive Prompts. **Note:** A maximum of three NLU based Virtual Agent actions and three LLM based Virtual Agent actions can only be selected for each channel configuration record.

4. Click **Submit**.

Configure signal categories in Proactive Prompts

Create and configure categories to enable efficient search of prompts grouped under the same categories.

Before you begin
Role required: sn_pp.admin

About this task
Signal categories are the logical groups used to label and divide the signals. Categories also enable you to pull category-specific prompts on the prompt widget.

Procedure
1. Navigate to **All** > **Proactive Prompts** > **Signal categories**.
2. Select **New**.
3. On the form, fill in the fields:

Signal categories form

Fields	Description
Name	Name of the signal category.
Description	A brief description of the signal category.
Active	Option to activate the signal category record.

4. Select **Submit**.

Configure signal actions for Proactive Prompts

Set signal actions to enable end users who receive a prompt through Virtual Agent to act on it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Note:
Signal actions are used for Virtual Agent. Employee Portal uses the action group for actions.

Role required: sn_pp.admin

Procedure

1. Navigate to **All** > **Proactive Prompts** > **Signal Actions**.
2. Select **New**.
3. On the form, fill in the fields:

Signal actions form

Fields	Description
Name	Name of the signal action.
Model type	Choose whether you want to use the regular NLU based Virtual Agent topics or LLM based Virtual Agent topics in the VA topic field. Your options are: ○ NLU/Keyword ○ LLM
VA topic	The relevant Virtual Agent topic for the signal action. For more information on creating a Virtual Agent topic, see Create a Virtual Agent topic. For information on publishing the topics, see Publish a Virtual Agent topic.
Active	Option to activate the signal action record.

4. Select **Submit**.

Configure signal schedules in Proactive Prompts

Schedule that determines when to run the signal configuration to generate prompts that notify the user to act on.

Before you begin
The signal schedule is the triggering action in the prompt's workflow that evaluates the configuration and generates prompts that are then delivered to users.

Role required: sn_pp.admin

Procedure

1. Navigate to **All** > **Proactive Prompts** > **Signal Schedules**.
2. Select **New**.
3. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signal schedule form

Field	Description
Name	Name of the signal schedule job.
Active	Option to activate the signal schedule job.
Conditional	Option to run the scheduled job based on certain conditions in the associated script.
Condition	Conditional script that determines whether a scheduled job must run. The last expression of the script should evaluate to a Boolean (true or false) value. **Note:** This field is displayed only when the **Conditional** option is selected.
Run	Type of schedule to execute the job on. The available options are: ○ Daily ○ Weekly ○ Monthly ○ Periodically ○ Once ○ On demand ○ Business Calendar: Entry Start ○ Business Calendar: Entry End
Time zone	Time zone of the signal schedule job. The Use System Time Zone option causes the job to run in the time zone of the instance running the job. If no time zone is selected, the job runs in the time zone of the user who entered the time.
Time	The time when the schedule must be executed in 24-hour clock format. **Note:** This field is available only when the **Run** field value is Daily, Weekly, or Monthly.

4. Select **Submit**.

Add and configure the prompt widget

Add and configure the prompt widget to access Proactive Prompts on a portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > *Service Portal* > **Pages**.
2. Search and select a page to add the prompt widget.
   You can also create a new page and then add the widget. For more information, see Create and edit a page using the Service Portal Designer and Service Portal widgets.
3. Select the **Open in Designer** related link.
   The Service Portal Designer is displayed.
4. In the Widgets tab, search for prompts and drag the prompts widget on to the Edit area.
5. Select the edit icon on the top-right corner of the widget.
6. Edit the form.

Prompt container fields

Field	Description
Prompt categories	Categories to pull and add category-specific prompts on the prompt widget. For information on signal categories, see Configure signal categories in Proactive Prompts.
Persona	Persona to filter and display the prompts on the widget. The options are, Manager, or Employee.
Title	Title to be displayed on the widget.
Show Menu	Displays the Manage Preferences menu on the widget that enables you to turn on or off the display of the prompts individually.
Max prompt count	The maximum number of prompts displayed on the widget.
Prompts per row	The number of prompts displayed at a time on the widget. The next set of prompts can be accessed with a slider on the widget.

7. Select **Save**.

Using Proactive Prompts

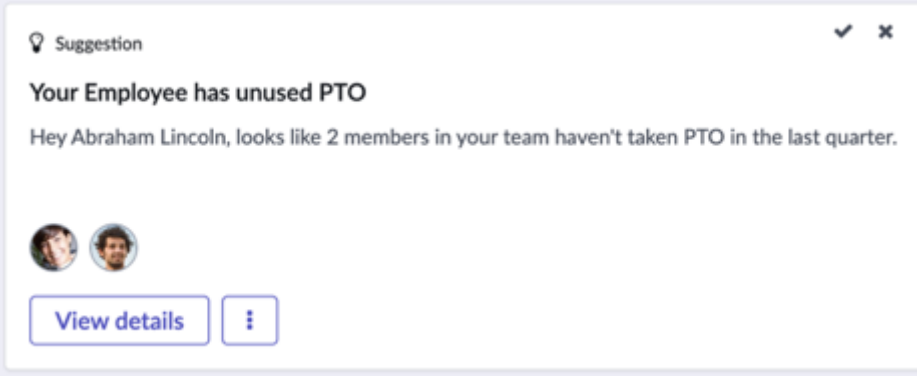
You can use Proactive Prompts application to send informative and actionable insights to managers and employees by keeping them informed and encouraging them to act immediately.

After a successful signal configuration in Proactive Prompts, prompts are generated according to the schedule in the configuration.

To see the list of prompts, navigate to **All** > **Proactive Prompts** > **Prompts**. The following details are displayed for each prompt: Receiver name, Signal name, Status, Prompt template, Tokens, and Created date. For more details, like the related **Action table** and **Action taken** fields, select the View content details icon ( ).

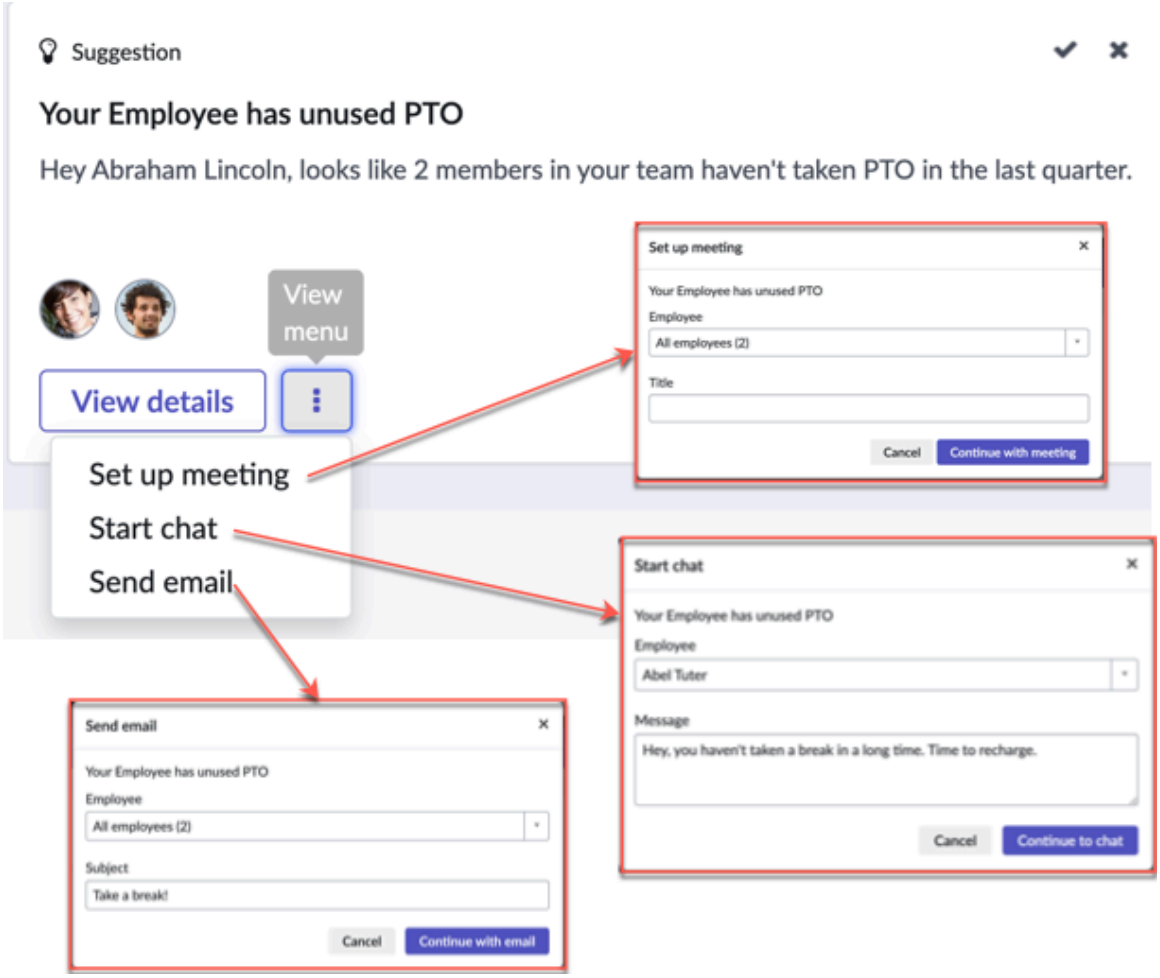
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Prompts are deleted automatically after 180 days of creation using the Auto Flush feature.



Prompts in delivery channels

Prompts are delivered to end users through various channels like Employee Portal, Virtual Agent, or Microsoft Teams.

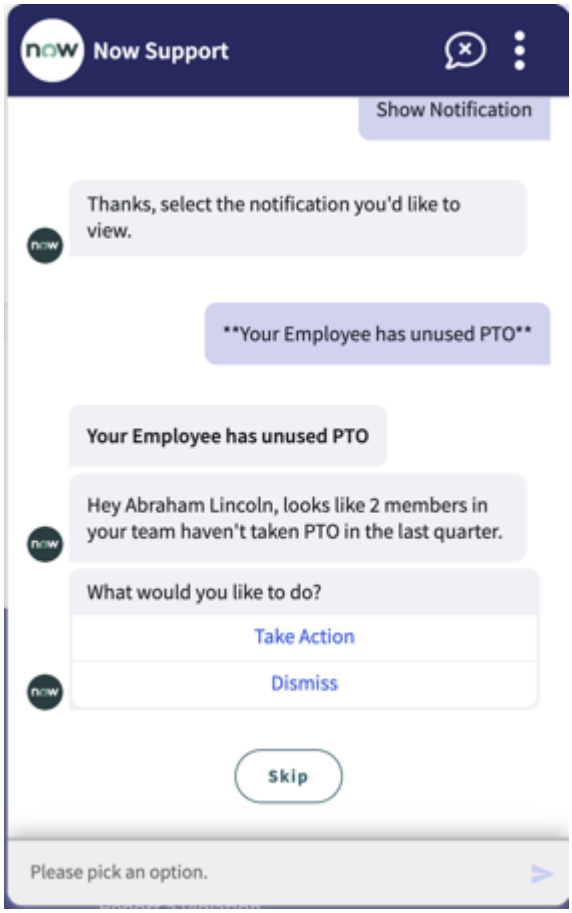


Notifications of prompts and the prompt appearance are different in different channels.

- Prompt widget - On any portal, prompts are displayed through a widget. The Prompt widget is available by default but must be added to the portal. For more information, see Add and configure the prompt widget.

  The following image shows an example of a prompt widget on the Employee Portal. The **View details** button provides more details of the prompt. The details displayed depend on the type of Datasource, the Receiving user and the template (Single or Multiple record display) selected. For more information, see Create a signal in Proactive Prompts. For more information on actions on the widget, see Actions and action groups in Proactive Prompts.

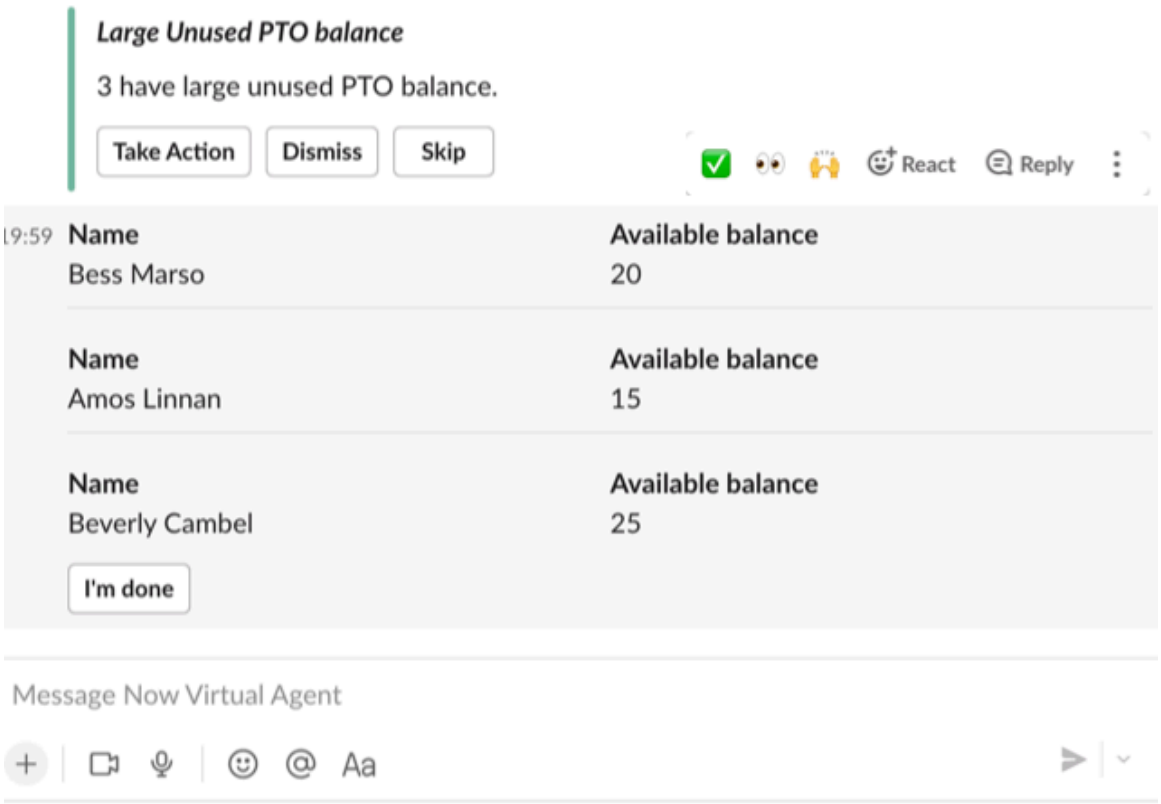
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:
The generated prompts are delivered to the widget only when the user opens the portal.

- Virtual Agent - A notification is displayed on the Virtual Agent chat icon to indicate that there's a prompt message. Selecting the **Open chat window** button starts the chat displaying the prompt message and options to take further actions.

  The following image shows an example of a prompt notification in Virtual Agent.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Microsoft Teams - Similar to the Virtual Agent chat, a notification is displayed in the chat pane. Selecting the Now Virtual Agent contact initiates the chat.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following image shows an example of a prompt notification in Microsoft Teams.

Now Assist with Proactive Prompts

Your employees can see their pending HR tasks and how much time off they have by using the conversational actions in Now Assist with the Proactive Prompts integration.

Proactive Prompts overview

The Proactive Prompts with the Now Assist integration supports large language models like Now LLM Service to create a natural-language conversational experience that can improve the success of your prompts.

Signal configurations

A signal is the configuration for instructions about when to send them, what to send, whom to send them to, and where to send them. It also includes the configuration for the related actions to generate and deliver them.

You can define whom to send the signal to, how often, and on what channels.

The following two signal configurations are available so that your employees and managers can experience the Now LLM Service capabilities in Proactive Prompts:

- Approvals pending: Displays a prompt to the employee on their pending HR tasks for approval. The corresponding action for this signal configuration is **Show Approvals**.
- High PTO balance: Displays a prompt to the employee if more than 80 percent of their paid time off (PTO) balance is remaining. The corresponding action for this signal configuration is **Request PTO**.

The **Show Approvals** and **Request PTO** actions aren't available by default to add to the signal configuration as they're inactive. You can activate these actions:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create and publish the Now LLM Service topics. For information on creating a Virtual Agent topic, see Create a Virtual Agent topic. For information on publishing a Virtual Agent topic, see Publish a Virtual Agent topic
- Create signal actions for Proactive Prompts. For information about configuring signal actions for Proactive Prompts, see Configure signal actions for Proactive Prompts.
- Select the actions in the signal channel configuration. For information on configuring the delivery channels in Proactive Prompts, see Configure delivery channels in Proactive Prompts.

Note:
You can select both Natural Language Understanding (NLU) and Now LLM Service actions in the **Virtual agent actions** field.

A single signal configuration caters to both NLU and Now LLM Service prompts and actions. The prompt is delivered to the portals depending on their Virtual Agent configuration. For example, if the portal has Now Assist configured, Now LLM Service prompts and actions are delivered. If the portal has NLU configured, NLU prompts and actions are delivered from the same signal configuration. For more information on the signal configuration, see Create a signal in Proactive Prompts

Opting out of a prompt in Employee Portal

Choose not to receive a specific prompt by opting out of the signal displayed in Employee Portal.

Before you begin

Role required: none

- Make sure that Manager Hub and Talent Development installed to access these tabs in the Employee Portal.
- To access the prompts on any other portal page in the Employee Portal, the Prompt widget must be added. For information on configuring portal pages, see Create and edit a page using the Service Portal Designer. For information on adding widgets to a page, see Service Portal widgets.

Procedure

1. Navigate to **All** > **Employee Center**.
2. In Employee Center, navigate to the appropriate hub depending on whether you are a manager or employee.
   - If you are a manager, navigate to **Your team** > **Manager Hub**.
   - If you are an employee, navigate to **Your career** > **Career Hub**.
3. On the prompt widget, display a list of all signals by selecting the Manage preferences icon ( ).

   Note:
   All signals for which there is a prompt in the prompts table are listed regardless of their status.

4. Select **Off** for the signal that you want to opt out of.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you decide you want to receive the prompt again, you would select **On**.

5. Select **Update**.

Result
You will not receive prompts from the selected signal. The opted-out prompts are moved to the Dismiss state.

Opting out of a prompt in Virtual Agent

Choose not to receive a specific prompt by opting out of the signal displayed in Virtual Agent.

Before you begin
Role required: none

Procedure

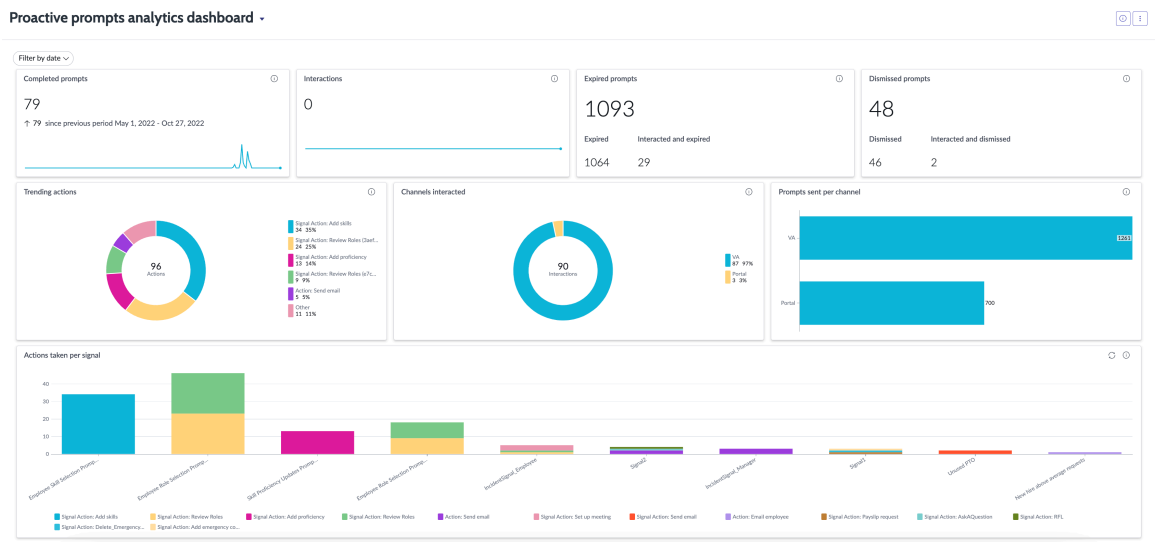
1. Navigate to **All** > **Employee Center**.
2. Select the chat icon () to start the Virtual Agent.
3. Type `Show notifications`.
   All your notifications are displayed.
4. Select the signal that you want to opt out of.
5. Select the **Dismiss** option to withdraw from the signal.
6. In the next set of actions, select **Opt-out** to unsubscribe from the signal.

Note:
The **Not relevant to me** action dismisses the current prompt and not the entire signal.

7. Select **Yes** to confirm your choice.

Result
You will not receive prompts from the selected signal. The opted-out prompts are moved to the Dismiss state.

Proactive Prompts dashboard



Use the Proactive Prompts dashboard to view the usage analytics and key metrics of the prompts that are generated to provide actionable insights in the flow of work.

To access the dashboard, navigate to **All** > **Proactive Prompts** > **Administration** > **Usage Analytics Dashboard**.

End users and roles

Dashboard Viewer (sn_pp.dashboard_viewer) can view the dashboard with various prompt metrics for the selected time period.

Reports and indicators

Widgets in the dashboard

Title	Type	Description
Completed prompts	Single score	Number of prompts marked as Complete by Proactive Prompts users.
Interactions	Single score	Number of interactions (action clicks) performed as a result of prompts.
Expired prompts	Single score	Number of prompts that expired after the time-out period. The number is further divided into Expired prompts, which expired with no interaction from the user, and Interacted and Expired prompts, which involved a user interaction at some point but later expired.
Dismissed prompts	Single score	Number of prompts viewed and dismissed by the users. The number is further divided into Dismissed prompts, which were not interacted with, and Interacted and Dismissed prompts, which involved a user interaction but that later were dismissed.
Trending actions	Donut	Actions preferred by users who interact with prompts.
Channels interacted	Donut	Channels in which users are interacting with prompts.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widgets in the dashboard (continued)

Title	Type	Description
Prompts sent per channel	Horizontal bar	Number of prompts generated for each channel.
Actions taken per signal	Stacked column	Various actions taken by the users based on a signal prompt.

To see a detailed view and in-depth analysis of the widget click it.

Use the **Filter by date** option to select a time period and view the analytics in the given time period.

Reference for Proactive Prompts

Reference topics provide additional information about user roles, tables, and default configurations in Proactive Prompts.

Components installed with Proactive Prompts

Several types of components install with the activation of the Proactive Prompts application, including user roles and tables.

Proactive Prompts roles

Roles in Proactive Prompts

Role name	Operations	Contains roles
sn_pp.admin	Can create and manage all Proactive Prompts configurations and features. CRUD (create, read, update and delete) access to all the tables.	• sn_pp.reader • sn_pp.writer
sn_pp.reader	Read access on the Prompt [sn_pp_prompt], Prompt users [sn_pp_prompt_users], and Prompt details [sn_pp_prompt_details] tables.	
sn_pp.writer	Can view, modify, or create prompts. Write access on the Prompt [sn_pp_prompt], Prompt users [sn_pp_prompt_users], and Prompt details [sn_pp_prompt_details] tables.	sn_pp.reader

You can assign these roles to the appropriate roles, groups, or users in your application.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To assign a role to another role, see Add a role to an existing role.
- To assign a role to a group, see Assign a role to a group.
- To assign a role to a user, see Assign a role to a user.

Tables installed

Tables in Proactive Prompts

Table	Description
Signal configuration [sn_pp_signal_config]	Stores signal configuration data like receiving user, frequency of sending prompts, title, prompt template, category, priority, channels, and actions.
Auto signal [sn_pp_auto_signal]	Stores the schedules for the signal to run.
Signal channel configuration [sn_pp_signal_channel_config]	Stores the channels configuration for a signal, such as the channels on which this signal prompt should be sent to and the actions for each channel.
Signal actions [sn_pp_signal_action]	Stores the Virtual Agent actions that the user can take on receiving the prompt.
Signal data source [sn_pp_signal_data_source]	Stores the source table definition and data extraction logic either from simple conditions or with aggregations or advanced scripting or Performance Analytics Indicator. Also includes threshold to evaluate the data against.
Signal user configuration [sn_pp_signal_user_config]	Stores additional criteria applied to users eligible for prompt.
Signal category [sn_pp_signal_category]	Stores the signal category used to identify the prompt type.
Signal executions [sn_pp_signal_executions]	Stores the executions details for every prompt.
Prompts [sn_pp_prompt]	Stores all the prompts generated by a signal.
Prompt details [sn_pp_prompt_details]	Stores the employee information qualified for the prompt or signal when the receiving user is the manager.
Prompt users [sn_pp_prompt_users]	Stores the record level information qualified for the prompt when the **Collect records** field is selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tokens in Proactive Prompts

Token placeholders indicate the data that will be replaced during runtime.

When creating a signal, the message displayed to the user is written in the Single record display and Multiple record display fields. Use tokens in these messages to indicate data that will be replaced dynamically during runtime. For example, the message "Hey ${receiving_user}, looks like ${user_count} members in your team haven't taken PTO in the last quarter" will be displayed as "Hey Abel Tuter, looks like 2 members in your team haven't taken PTO in the last quarter".

Types of Tokens

- receiving_user: Name of the recipient of the prompt.
- user_name: Name of the employee.

> **Note:**
> If the recipient is the manager and only one employee under that manager qualifies for the signal, use the employee's name directly with this token.

- user_count: Count of employees under the manager that qualify for the signal.
- item_count: Count of records belonging to the employee that qualified the signal.
- item: If only one record belongs to the employee that qualifies the signal, the value in the Display field of the data source is stored in this token.
- score: The score used in the threshold evaluation.

> **Note:**
> * indicates that tokens can only be used when the **Collect records** field is selected.

Tokens for prompt templates

Data source type	Persona	Tokens (Single record)	Tokens (Multiple records)
Simple	Manager	None	receiving_user, user_count
Aggregate as count	Manager	receiving_user,item_count, user_name	receiving_user, user_count
Aggregate as none	Manager	receiving_user,item_count, user_name	receiving_user, user_count
Script	Manager	receiving_user,item_count*, user_name	receiving_user, user_count
Performance Analytics Indicator	Manager	receiving_user,score, item_count*,user_name	receiving_user, user_count
Simple	Employee		
Aggregate as count	Employee	receiving_user,score, item*	receiving_user, item_count
Aggregate as none	Employee	receiving_user, score, item*	receiving_user, item_count
Script	Employee	receiving_user, score, item*	receiving_user, item_count*

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tokens for prompt templates (continued)

Data source type	Persona	Tokens (Single record)	Tokens (Multiple records)
Performance Analytics Indicator	Employee	receiving_user, score, item*	receiving_user, item_count*

Types of data sources in Proactive Prompts

Data sources are the different type of data retrieving methods from data tables in Proactive Prompts.

Data sources used in Proactive Prompts

Data source type	Description
Simple	Retrieves data from a single data table. For example, this type of table can be used to prompt the manager about employee not changing the current role, or prompt the employee about high unused PTO balance. **Note:** Use the Simple type of data source when you're sure that the data source output returns one record per user selected from the **User** field. Otherwise, the framework considers only the first record and skips the remaining records. For multiple records, choose the Aggregated data source.
Aggregate	Allows use of aggregate functions on the data source, for example, Count. For example, this type of table can be used to prompt the managers about large number of requests from new hires, or prompt the employee about the number of overdue tasks. **Note:** • If the Aggregate value is none, the admin should select a score field from the table to be used in the Threshold evaluation. • The aggregation (Count) is grouped by the **User** field.
Script	For complex conditions, use this data source to write code and retrieve data. For example, this type of table can be used to prompt the manager about large number of comments on a case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Data sources used in Proactive Prompts (continued)

Data source type	Description
	The script should return a comma-separated list of objects with the following key-value pairs: • user: sys_id of the sys_user record. • score: Numerical score string if Collect records is checked. • record: sys_id of the corresponding record in the sourceTable. • sourceTable: The table from which the scores are obtained. • displayValue: Name shown in the View details. • displayLabel: Label name that represents the displayValue.
Performance Analytics Indicator	Uses the data collected by the Performance Analytics job for the selected indicator and breakdown. For example, this type of table can be used to prompt the manager about number of open incidents. **Note:** The Performance Analytics job must be run to process the data. For more information, see Activate Performance Analytics jobs.

Actions and action groups in Proactive Prompts

Actions provide the user the ability to act on the prompt.

The types of actions available differ based on the channel. Unless otherwise noted, the actions in the following table are available for Employee Portal and Virtual Agent.

Actions in Proactive Prompts

Action	Description
View details	Enables the user to see more details about the prompt, including any URL provided in the signal configuration. Users can also access links directly to the items/tasks/records based on the URL configured in the Script data source. For more information see, Create a signal in Proactive Prompts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Actions in Proactive Prompts (continued)

Action	Description
	Note: • The display of links to items/tasks/ records only works with the Script data source. • The details displayed are influenced by the selection in the Collect records field. • This action is available only for the Employee Portal. In Virtual Agent, the details are displayed by default.
Send email	The user can send an email directly from the prompt. This action takes the user directly to the compose window depending on the default mail client configured in your organization. Users can choose to send the email to one user or all users at the same time. **Note:** Only active users with their email configured in the User [sys_user] table can be selected to send the email.
Set up meeting	The user can schedule a meeting via the default mail client like Outlook or Gmail based on your organization's configuration. **Note:** • This action has a configurable action parameter *`mailClient`* of type string. By default, the mail client is Outlook. You can change it to Gmail. • Only active users with their email configured in the User [sys_user] table can be selected to set up a meeting. • This parameter is applicable only for Employee Portal actions.
Start chat	The user can talk to the stake holder one-on-one via Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Actions in Proactive Prompts (continued)

Action	Description
	Note: • The Start chat action requires the com.snc.ms_teams plugin to have been installed. • Only active users with their email configured in the User [sys_user] table can be selected to start a chat.

Note:
The configurable action parameter **selectindividual** under Actions in the Employee Center Action framework determines whether you can select all employees or one individual employee for the Send email, Set up meeting, and Start chat actions. The default value is false. This parameter is applicable only for actions in Employee Portal.

Action groups

Action groups are a collection of frequently used actions in a framework for quick access. Action groups are used only in Employee Portal. For Proactive Prompts, the action groups available are:

- Chat action group
- Email action group

For more information, see Action group.

Signal data source form

Form to create a data source for the signal.

Signal data source fields

Fields	Description
Name	Name of the signal data source.
Description	Brief description of the signal data source.
Type	The type of data source that you want to create. The available values are: • Simple • Aggregated • Scripted • Indicator (Performance Analytics Indicator) • Subflow For more information, see Types of data sources in Proactive Prompts.
Script	The script to retrieve the data source. Follow the example script provided in the field for successful execution of the script.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signal data source fields (continued)

Fields	Description
	Note: This field is available only when the Scripted option is selected in the **Type** field.
Subflow	Any published subflow created using Workflow Studio as the data source.
Indicator	The type of performance measurement for the Indicator data source type. **Note:** Only automated indicators that are published on the Analytics hub are supported.
Breakdown	The field to group or filter indicator scores by a qualitative attribute such as Priority, Category, or Assignment Group. **Note:** Only breakdowns whose breakdown source field is available in the User [sys_user] table can be selected.
Table	The table used as the source to obtain the data.
Condition	Criteria that must be met to retrieve the data from the table. For example, the condition **[Available balance][Greater than][10]** would retrieve an unused PTO balance of more than 10 days.
User field	The field from the data table used to group the data source records.
Applies to	The user configuration to filter the data in the **User** field.
Can be evaluated for a single user	Enables the source to be supported for a single user execution. By selecting this option, the prompt is generated for the current logged-in user at run time. **Note:** For Script and Subflow data source types, an additional parameter is added to handle the user.
Can be evaluated for a given date	Enables the source to be executed for the selected date. By selecting this option, the prompt is generated on the selected date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signal data source fields (continued)

Fields	Description
	Note: For Script and Subflow data source types, an additional parameter is added to handle the date.
Collect records	Option to get record details when delivering the prompt message. **Note:** • If Indicator is selected as the data source type, then the **Collect records** option must also be set to true on the selected indicator record. • Selecting this option stores the display field value in the Prompt details [sn_pp_prompt_details] table. • Selecting this option influences the View details action. • If the **Include zero records** field is selected, the **Collect records** option cannot be used.
Display field	A field from the source table that is displayed in the View details action and in the prompt message to represent a record from the table. For example, in the HR Case [sn_hr_core_case] table, an HR case can be represented with a case number, a short description, or any other field in the table. **Note:** • This field is displayed only when the **Collect records** field is selected. • The item token contains the value of this field.
Threshold Condition	
Aggregate	Aggregate type. This field is available only when the selected data source is Aggregate.
Condition	Condition for the threshold value. The available values are: • Less than • Less than or is • Is

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signal data source fields (continued)

Fields	Description
	• Greater than or is • Greater than
Value	A value for the condition provided in the **Condition** field. For example, to find the count of more than five overdue tasks, the **Value** number would be 5, and the full condition would be **[Overdue tasks][Greater than][5]**.
Score field	The field used for score evaluation. **Note:** This field is available only when the selected data source type is Aggregated and the **Aggregate** field value is None. Only the fields that have numerical values can be selected.
Use percentile	Option to use relative comparison instead of static comparison against a fixed number.
Percentile value	Percentile value for the threshold condition. This field appears only when the **Use percentile** field is selected. The available values are: • Lower outliers • 25 percentile • Median • 75 percentile • Higher outliers
Include zero records	Option to include users without any records in the table. For example, select this option to send a prompt to the employees who have no PTO balance. **Note:** You can narrow down the users with zero records by selecting a user configuration in the **Applies to** field. For example, you can send prompts to employees in the HR department with no records in the selected table.

Signal configuration form

Form to create a signal in Proactive Prompts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signal configuration fields

Fields	Description
Name	Name of the signal configuration.
Description	Brief description of the signal configuration.
Active	Option to activate the signal configuration.
Schedule	Determines how frequently to send the prompt to the user. For more information, see Configure signal schedules in Proactive Prompts.
Priority	Determines the display order of prompts on the prompt widget. The available values are High, Low, or Medium.
Order	Stores the order related to the signal.
Category tags	The category for the signal, which is used to pull specific prompts on the prompt widget. For more information, see Configure signal categories in Proactive Prompts.
Channels and actions	The channel where the prompts should be displayed and the actions associated with the channel. For more information, see Configure delivery channels in Proactive Prompts.
Receiving user	The user to receive the prompt, either the manager or an employee. **Note:** • The employee value is taken from the **User** field of the data source specified in the **Datasource** field. • The manager of an employee is derived from the **Manager** field in the User [sys_user] table.
Signal Source	
Datasource	The data source method to retrieve the data. For more information, see Types of data sources in Proactive Prompts.
Prompt Template	
Prompt header	Icon and label displayed on the Employee Portal to identify the type of prompt. For example, you could have headers for Skills, Learning, Roles, and so on.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signal configuration fields (continued)

Fields	Description
	For information on adding headers, see Add a new prompt header to identify the prompt.
Title	Title of the message when the prompt is displayed to the user.
Single record display	A template for the message to be displayed to the user when the prompt is generated for a single record.
Multiple record display	A template for the message to display to users when the prompt is generated for multiple records. For more information on tokens, see Tokens in Proactive Prompts.
URL	A URL that the user can access in the **View details** action on the Employee Portal or **Take action** action for Virtual Agent. For more information, see Actions and action groups in Proactive Prompts.

Integration of HR Service Delivery with third-party systems

Extend HR Service Delivery capabilities by integrating with other third-party systems.

- HR Integrations
- Enterprise Service Management Integrations Framework
- HR Service Delivery Integration with Cornerstone OnDemand
- HR Service Delivery Integration with Magnit
- HR Service Delivery Integration with Workday
- HR Service Delivery Advanced Integration with Workday
- HR Service Delivery integration with Oracle Cloud HCM
- HR Service Delivery Advanced Integration with Oracle HCM
- HR Service Delivery Integration with SuccessFactors
- HR Service Delivery with Ultimate Kronos Group
- Document Template integration with AdobeSign
- Document Template integration with Docusign
- Employee Relations integration with Navex Ethicspoint

HR Integrations

Integrate HR Service Delivery with HR management systems to synchronize employee profiles, to-dos, and other data; background check systems to request background checks; e-signature systems to request electronic signatures; and more.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For select systems, preconfigured integrations are available to use. You can also configure your own custom integration with third-party systems that use SOAP or REST services.

Important:
Workday integration and SuccessFactors integration that were available with the HR Integrations [com.sn_hr_integrations] plugin have been deprecated. For Workday integration, you can use the HR Service Delivery Integration with Workday application, and for SuccessFactors integration, you can use the HR Service Delivery Integration with SuccessFactors application.

Preconfigured integrations

HR Service Delivery provides preconfigured integrations for the following third-party systems.

Preconfigured integration details for third-party systems

Third-party system	Preconfigured integration
Background check system	• Integrating with the First Advantage service • Integrating with the Accurate Background service • Integrating with the Sterling Talent Solutions service
E-signature system	• Integrating with the DocuSign service • Integrating with the Adobe Sign service
Tax form management system	Integrating with the CIC Plus service

Support and troubleshooting information

For information on HR Integrations support and troubleshooting, see the HR Integrations FAQs [KB0678031] article in the HI Knowledge Base.

Note:
There are scenarios that are not supported in the initial integration, specifically when an employee is rehired or when an employee moves from contingent to full time.

Activation information

HR Integrations is automatically activated when you activate Case and Knowledge Management. If it is not activated, you can manually activate HR Integrations. For information on what components are installed with the application, see Components installed with HR Integrations.

Activate HR Integrations

You can activate Human Resources Scoped App: Integrations [com.sn_hr_integrations] if you have the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin
Role required: admin

About this task
Human Resources Scoped App: Integrations allows you to integrate HR Service Delivery with third-party systems.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Components installed with HR Integrations

Several types of components install with the activation of the HR Integrations plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Note:
The Human Resources Scoped App: Integrations [com.sn_hr_integrations] plugin activates the sn_hr_integrations.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only HR Integrations admin user by requiring a minimum number (default is two) of active users with this role.

Roles installed

HR integration role details

Role title [name]	Description	Contains roles
HR integrations administrator [sn_hr_integrations.admin]	Can access and configure the HR Integrations application.	sn_hr_integrations.user
HR integrations user [sn_hr_integrations.user]	Can access and read data in the HR Integrations application.	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scheduled jobs installed

HR integration scheduled job details

Scheduled job	Description
Assign HR Client Roles for Integration Users Sync	Assigns HR roles for integration users daily.
HR Integrations - External Interface Push Retry Job	Retries data push to the third-party system on a periodic basis.
HR Integrations-Accurate Background Check Get Order Updates	Gets background check order updates for the Accurate integration on a periodic basis.

Tables installed

HR integration table details

Table	Description
HR Integrations Additional Inputs [sn_hr_integrations_additional_inputs]	Table for additional inputs.
Background Check Package sn_hr_integrations_background_check_package]	Table for background check packages.
HR Integrations Background Check Staging [sn_hr_integrations_background_check_staging]	Staging table for background checks.
HR Integrations Department Staging [sn_hr_integrations_dept_staging]	Staging table for departments.

HR Integrations Worker Profile [sn_hr_integrations_worker_profile]	Staging table for worker profiles, effective worker profiles, and future worker profiles.

Integrating with the First Advantage service

The preconfigured First Advantage integration uses SOAP services to request background checks through the First Advantage service. You can use the preconfigured integration as-is or customize it to meet your needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Integrating with the First Advantage service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

First Advantage integration overview

The First Advantage integration is configured to request background checks as follows.

- The HR agent creates a case to request a background check through the First Advantage service.
- The First Advantage service evaluates the request to:
  - Update the case with the background check applicant ID and status.
  - Create a task, as well as send an email, for the employee to sign up and complete a background check application through the First Advantage website.
- Once the employee completes the task, the First Advantage service performs the background check.
- When the background check is complete, the First Advantage service updates the case with the background check status and details.

First Advantage integration setup

To set up the First Advantage integration, you must provide the source credentials, verify the integration settings, and add the appropriate background check packages. Once the integration is complete, you can request background checks through the First Advantage service.

Provide source credentials for the First Advantage service

Provide the source and SOAP credentials for the First Advantage service so that it can be accessed for integration.

Before you begin

Important:
Integrating with the First Advantage service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Role required: sn_hr_integrations.admin

So the First Advantage service can be accessed for integration, you must provide:

- SOAP credentials, including the endpoint URL, user name, and password
- Parent account
- Account
- Requestor email address

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Integrations** > **Sources**.
2. Open the **First Advantage** record.
3. In the **SOAP credentials** related list, provide the SOAP credentials to use with your integration.

Field	Description
Endpoint URL	Unique endpoint URL provided by the third-party system. **Note:** ○ The default value is a placeholder URL only. Make sure to replace it with the unique endpoint URL that you get from your third-party provider. ○ Data that is transferred between the customer instance and the third-party system is secured through standard SSL. For a secure connection, provide an encrypted HTTPS link.
Inbound Username	User name for inbound data pull.
Inbound Password	Password for inbound user name. **Note:** You must enter an explicit value for this field. The value you enter is encrypted with the key for the instance, so values imported from other instances using XML files or update sets do not work.
Outbound Username	User name for outbound data push.
Outbound Password	Password for outbound user name. **Note:** You must enter an explicit value for this field. The value you enter is encrypted with the key for the instance, so values imported from other instances using XML files or update sets do not work.

4. Right-click the form header and click **Save**.
5. In the **HR Integrations Additional Inputs** related list, provide the value for each key.
   - parent_account
   - account
   - requestor_email_address
6. In the **HR integrations source properties** related list, you can turn on or off the following source properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR integrations source properties related list

Property	Description
sn_hr_integrations.debug	Enables the debug log to display responses from the third-party system. Turn on to troubleshoot and debug the integration on an as-needed basis. ○ Type: true or false ○ Default value: false ○ Location: Navigate to **HR Integrations** > **Logs** to view the development logs.

Verify integration for the First Advantage service

The integration is configured to push background check data between the HR service in HR Service Delivery and the First Advantage service. You can verify the preconfigured settings and determine whether they meet your needs or if further customization is required.

Before you begin

Important:
Integrating with the First Advantage service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Role required: sn_hr_integrations.admin

Procedure

1. Verify the HR service mapping, which maps the HR service to the HR web service.
   a. Navigate to **HR Integrations** > **HR Service Mapping**.
   b. Right-click the **HR external source** column and select **Group By HR external source**.
   c. For the **First Advantage** group, click the arrow to expand the list.
   For each record, click the information icon to verify that the HR service is correctly mapped to the appropriate HR web service.

HR service mapping

HR service mapping	HR service	HR web service
First Advantage - Request Background Check by First Advantage	Request Background Check by First Advantage	First Advantage Web Service

2. Verify the HR outbound schema mappings.
   a. Navigate to **HR Integrations** > **HR Outbound Schema Mapping**.
   b. Right-click the **Source Table** column and select **Group By Source Table**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. For the HR Talent Management Case [sn_hr_core_case_talent_management] group, click the arrow to expand the list.

d. Click the information icon for each First Advantage record to verify that the data fields from the source tables are correctly mapped to the appropriate fields in First Advantage.

3. Verify the HR schema mappings.

a. Navigate to **HR Integrations** > **HR Schema Mapping**.

b. Right-click the **Source** column and select **Group By Source**.

c. For the **First Advantage** group, click the arrow to expand the list.

d. For each record, click the information icon to verify that the data fields from First Advantage are correctly mapped to the appropriate fields in the staging tables.

4. Verify the HR transform maps.

a. Navigate to **HR Integrations** > **HR Transform Maps**.

b. In the **Table Transform Maps** list, verify that the staging tables are correctly mapped to the appropriate target tables.

Staging table mapping

Staging table	Target table
HR Integrations Background Check Staging [sn_hr_integrations_background_check_staging]	HR Talent Management Case [sn_hr_core_case_talent_management]

Add background check packages for the First Advantage service

Add one or more background check packages to your instance so they can be accessed when a request for a background check by First Advantage is made. For example, you can add a package for a background check only and a package for both a background check and drug screening.

Before you begin

Important:
Integrating with the First Advantage service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

A background check package is a set of activities that are defined by the third-party system to be included in a background check. You can have a package for a background check only, a package for both a background check and drug screening, and so on. For each background check package, you must provide:

- Package ID
- Package name
- Package description

Role required: sn_hr_integrations.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **HR Integrations** > **Background Check Package**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Background Check Package form

Field	Description
Package ID	ID of the background check package.
Package name	Name of the background check package.
Description	Description of the background check package.
Source	Name of the third-party background check system.

4. Click **Submit** or **Update**.

Provide source credentials for the First Advantage service

Integrating with the Accurate Background service

The preconfigured Accurate Background integration uses REST services to request background checks through the Accurate Background service. You can use the preconfigured integration as-is or customize it to meet your needs.

Important:
Integrating with the Accurate Background service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Accurate integration overview

The Accurate integration is configured to request background checks as follows.

- The HR agent creates a case to request a background check through the Accurate service.
- The Accurate service evaluates the request to:
  - Update the case with the background check applicant ID and status.
  - Send an email to the employee with a link to sign up and complete a background check application through the Accurate website.
- Once the employee completes the background check application, the Accurate service performs the background check.
- When the background check is complete, the Accurate service will update the case with the background check status and details.

Accurate integration setup

To set up the Accurate integration, you must provide the source credentials, verify the integration settings, and add the appropriate background check packages. Once the integration is complete, you can request background checks through the Accurate service.

Provide source credentials for the Accurate service

Provide the source and REST credentials for the Accurate service so that it can be accessed for integration.

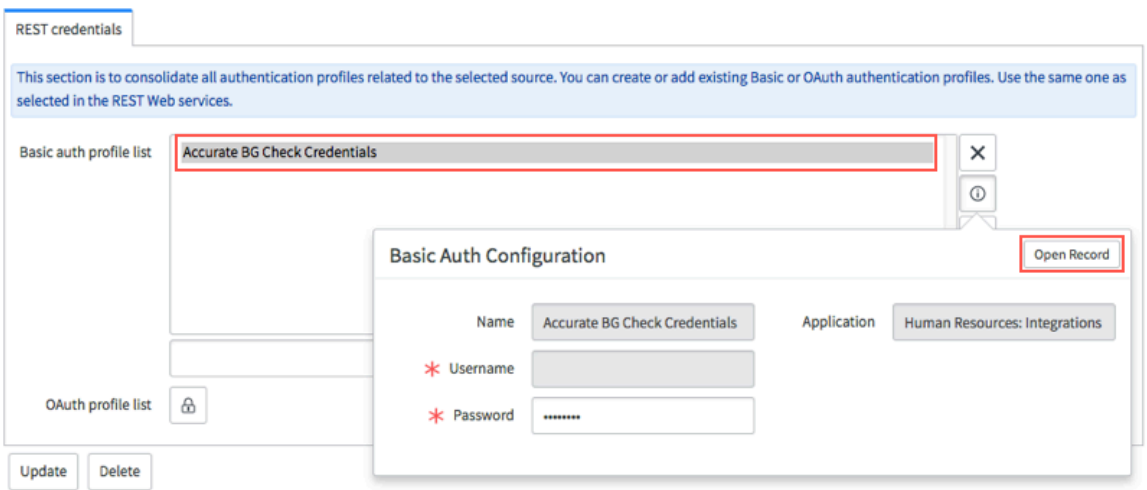
Before you begin

Important:
Integrating with the Accurate Background service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Role required: sn_hr_integrations.admin

So the Accurate service can be accessed for integration, you must provide:

- REST credentials, including the endpoint URL, user name, and password



Procedure

1. Navigate to **All** > **HR Integrations** > **Sources**.
2. Open the **Accurate Background Check** record.
3. In the **REST credentials** related list, provide the Basic authentication profile credentials to use with your integration.

   Important:
   In the corresponding HR REST service, you must provide the unique endpoint URL that you get from your third-party provider.

   a. In the **Basic auth profile list** field, click the **Unlock** icon.

   b. Select the **Accurate BG Check Credentials** profile, and then click **Preview** and open the record.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. In the **Basic Auth Configuration** form, provide the user name and password.

d. Click **Update**.

4. Right-click the form header and click **Save**.
5. In the **HR integrations source properties** related list, you can turn on or off the following source properties.

HR integrations source properties

Property	Description
sn_hr_integrations.debug	Enables the debug log to display responses from the third-party system. Turn on to troubleshoot and debug the integration on an as-needed basis. ○ Type: true or false ○ Default value: false ○ Location: Navigate to **HR Integrations** > **Logs** to view the development logs.

Verify integration for the Accurate service

The integration is configured to push background check data between the HR service in HR Service Delivery and the Accurate service. You can verify the preconfigured settings and determine whether they meet your needs or if further customization is required.

Before you begin

Important:
Integrating with the Accurate Background service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Role required: sn_hr_integrations.admin

Procedure

1. Verify the HR service mappings, which maps the HR service or HR integration outbound services to the HR web services.

a. Navigate to **HR Integrations** > **HR Service Mapping**.

b. Right-click the **HR external source** column and select **Group By HR external source**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **HR Integrations** > **HR Transform Maps**.

b. In the **Table Transform Maps** list, verify that the staging tables are correctly mapped to the appropriate target tables.

Staging table mapping

Staging table	Target table
HR Integrations Background Check Staging [sn_hr_integrations_background_check_staging]	HR Talent Management Case [sn_hr_core_case_talent_management]

Add background check packages for the Accurate service

Add one or more background check packages to your instance so they can be accessed when a request for a background check by Accurate is made. For example, you can add a package for a background check only and a package for both a background check and drug screening.

Before you begin

Important:
Integrating with the Accurate Background service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

A background check package is a set of activities that are defined by the third-party system to be included in a background check. You can have a package for a background check only, a package for both a background check and drug screening, and so on. For each background check package, you must provide:

- Package ID
- Package name
- Package description

Role required: sn_hr_integrations.admin

Procedure

1. Navigate to **HR Integrations** > **Background Check Package**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Background Check Package form

Field	Description
Package ID	ID of the background check package.
Package name	Name of the background check package.
Description	Description of the background check package.

Provide source credentials for the Accurate service

Integrating with the Sterling Talent Solutions service

The preconfigured Sterling Talent Solutions integration uses REST services to request background checks through the Sterling service. You can use the preconfigured integration as-is or customize it to meet your needs.

Important:
Integrating with the Sterling Talent Solutions service is being prepared for deprecation. It will be hidden and unavailable for activation from Zurich, but will continue to be supported till Brazil. If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Sterling integration overview

The Sterling integration is configured to request background checks as follows.

- The HR agent creates a case to request a background check through the Sterling service.
- The Sterling service evaluates the request to:
  - Update the case with the background check order ID.
  - Send an email to the employee with a link to sign up and complete a background check application through the Sterling website.
- Once the employee completes the background check application, the Sterling service performs the background check.
- When the background check is complete, the Sterling service will update the case with the background check status and details.

Sterling integration setup

To set up the Sterling integration, you must provide the source credentials, verify the integration settings, and add the appropriate background check packages. Once the integration is complete, you can request background checks through the Sterling service.

Provide source credentials for the Sterling service

Provide the source and REST credentials for the Sterling service so that it can be accessed for integration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

If you have an active subscription, you can still activate the plugin by submitting a plugin activation request. For more details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Role required: sn_hr_integrations.admin

So the Sterling service can be accessed for integration, you must provide:

- REST credentials, including the endpoint URL
- user_id
- client_reference_id
- integration_id
- password
- account

Procedure

1. Navigate to **All** > **HR Integrations** > **Sources**.
2. Open the **Sterling Background Check** record.
3. In the **REST credentials** related list, do not provide the credentials to use with your integration. Instead, you must provide those credentials in the **HR Integrations Additional Inputs** related list.

   Important:
   In the corresponding HR REST service, you must provide the unique endpoint URL that you get from your third-party provider.

4. Right-click the form header and click **Save**.
5. In the **HR Integrations Additional Inputs** related list, provide the value for each key.
   - user_id
   - client_reference_id
   - integration_id
   - password
   - account
6. In the **HR integrations source properties** related list, you can add the following source property.

HR integration source property descriptions

Property	Description
sn_hr_integrations.debug	Enables the debug log to display responses from the third-party system. Turn on to troubleshoot and debug the integration on an as-needed basis.

Provide source credentials for the Sterling service

Integrating with the DocuSign service

Request electronic signatures through the DocuSign service with the DocuSign integration.

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates and Document Template integration with Docusign that provide the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

This integration depends on the DocuSign spoke in IntegrationHub, and is enabled for the signing of ad hoc documents (HR PDF document templates) and DocuSign templates. A preconfigured HR service, flow, and HR case template for both the ad hoc document flow and DocuSign template flow are available to use.

DocuSign spoke

The DocuSign integration depends on the DocuSign spoke in IntegrationHub. Before you begin, an admin must have set up the DocuSign spoke, including registering as an OAuth provider and creating credential and connection records. You must also synchronize DocuSign with your ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Set up DocuSign spoke. See Docusign eSignature Spoke.
- Sychronize DocuSign with ServiceNow

Note:

- You must synchronize each time you need to get new or updated DocuSign templates. To synchronize, navigate to **DocuSign** > **Accounts** and click the **Get Accounts** related link.
- If your organization has more than one DocuSign account, the ad hoc document flow uses the first available account.

DocuSign integration setup

Once the DocuSign spoke is set up and synchronized, you can configure the integration for HR. Depending on whether the user is signing an ad hoc document (HR PDF document template) or a DocuSign template, the integration has two flows that you can use. For each document that you want to make available for signing through the DocuSign service, configure as follows.

DocuSign integration configuration details

Flow	Configuration requirements
Ad hoc document flow	1. Create a managed document that you want to make available for signing. See Managed Documents for more information. 2. Configure an HR PDF document template for an ad hoc document 3. Configure an HR service for the DocuSign integration
DocuSign template flow	1. Create a DocuSign template that you want to make available for signing. See the DocuSign eSignature User Guide for more information. 2. Configure an HR PDF document template for a DocuSign template 3. Configure an HR service for the DocuSign integration

The ad hoc document flow is for the signing of static documents that originate from a managed document in the ServiceNow system. Each ad hoc document is configured as a standard HR PDF document template. You can add signers to the document with **Mark Signatures**, and then map each signature field to an appropriate user field in a table. (The positioning of the markings are not used, and the DocuSign integration allows the signer to sign anywhere in the document.) You can also parse the PDF to map document fields to corresponding table fields to auto-populate the document when it is generated for signing. The generated document is static, which means that it is read-only and the signatory cannot update any of the fields.

The DocuSign template flow is for the signing of dynamic documents that originate from the DocuSign system. Each DocuSign template is brought into the ServiceNow system, and then configured into an HR PDF document template to enable mappings. You must map each signature field from the DocuSign template to an appropriate user field in a table. You can also map fields from the DocuSign template to corresponding table fields to auto-populate the document for signing. The generated document is dynamic, which means that the signatory can

write in editable fields, such as to update an address or provide W-4 information. However, any updates made are saved to the document only. They are not mapped back to the source table.

Requesting electronic signatures through the DocuSign service

Once the integration setup is complete, HR agents from your organization can request electronic signatures through the DocuSign service.

For more information, see Request an electronic signature through the Docusign service.

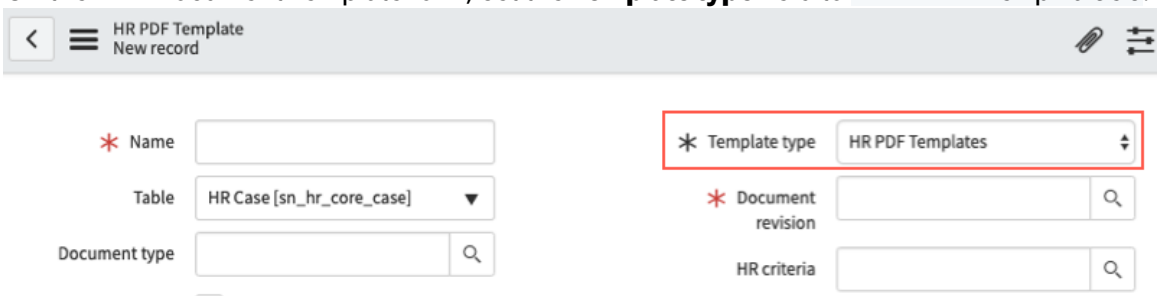
Configure an HR PDF document template for an ad hoc document

If you are using the DocuSign integration, configure an HR PDF document template for each ad hoc document that you want to make available for signing.

Before you begin

Create the managed document that you want to make available for signing through the DocuSign system. See Managed Documents for more information.

Role required: sn_hr_core.admin



You can use an existing or create a new HR PDF document template. You can add signers to the document with **Mark Signatures**, and then map each signature field to an appropriate user field in a table. You can also parse the PDF to map document fields to corresponding table fields to auto-populate the document when it is generated for signing. As part of the DocuSign integration only, you can also enable serial signing for documents that require multiple signers.

Procedure

1. Navigate to **All** > **HR Administration** > **Document Templates**.
2. Click **New** or open a record

   Note:
   If you are creating a new record, make sure to select **PDF Document Template**.

3. On the PDF Document Template form, set the **Template type** field to `HR PDF Templates`.

4. Configure the HR PDF document template, as appropriate.
   You can add signers to the document with **Mark Signatures**, and then map each signature field to an appropriate user field in a table. You can also parse the PDF to map document fields to corresponding table fields to auto-populate the document when it is generated for signing. For further details on configuring an HR PDF document template, see Configure an HR PDF document template.

   Note:
   The positioning of **Mark Signatures** is not used, and the integration allows the signer to sign anywhere in the document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. If you want to enable serial signing for documents that require multiple signers, assign the signing order for each signature field in the PDF Template Mappings section.

Note:

- By default, if a document has two or more signature fields, parallel signing is enabled.
- If the **Signing order** column is not visible, click the gear icon to personalize the list columns. Add the **Signing order** field to the Selected column.

Example

6. Click **Update**.

Configure an HR PDF document template for a DocuSign template

If you are using the DocuSign integration, configure an HR PDF document template for each DocuSign template that you want to make available for signing.

Before you begin

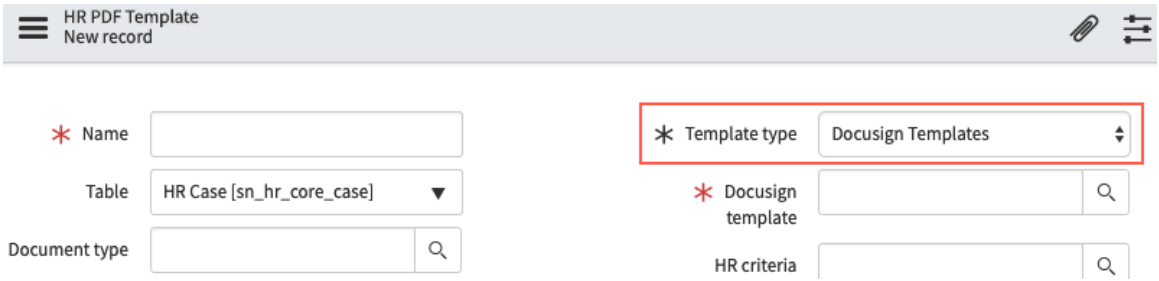
Create the DocuSign template that you want to make available for signing through the DocuSign system. See the DocuSign eSignature User Guide for more information. You must also synchronize your accounts to bring the DocuSign template (and any other new or updated templates) into the ServiceNow system. See Synchronize Docusign with ServiceNow for more information.

Note:
Each DocuSign template must have one associated document. Multiple documents per template are not supported.

Role required: sn_hr_core.admin

About this task

You must map each signature field from the DocuSign template to an appropriate user field in a table. You can also map fields from the DocuSign template to corresponding table fields to auto-populate the document when it is generated for signing.



Procedure

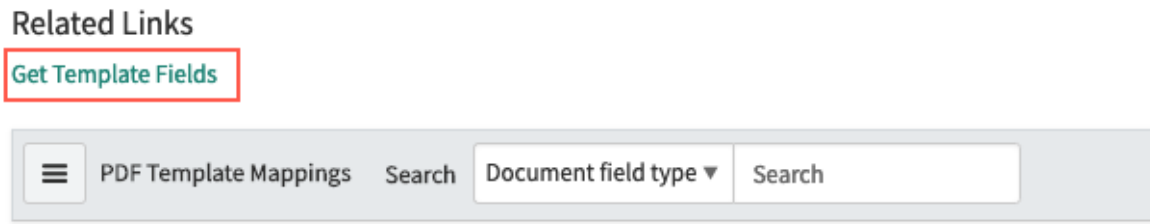
1. Navigate to **All** > **HR Administration** > **Document Templates**.
2. Click **New** or open a record.

Note:
If you are creating a new record, make sure to select **PDF Document Template**.

3. On the PDF Document Template form, set the **Template type** field to `DocuSign Template`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Fill in the fields on the form, as appropriate.



HR PDF Template form

Field	Description
Name	Name of the HR document template.
Table	HR table that the HR document template is associated with.
Document type	Document type that the HR document template is categorized under.
Active	Option to activate the HR document template for use.
Template type	Set the value to `DocuSign Template`.
DocuSign template	Select the DocuSign template to use. **Note:** You must synchronize each time you need to get new or updated DocuSign templates. To synchronize, navigate to **DocuSign** > **Accounts** and click the **Get Accounts** related link. See Synchronize Docusign with ServiceNow for more information.
HR criteria	Defines the conditions that the subject person of an HR case must meet for an HR agent to be able to access the HR document template on their behalf. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

5. Right-click on the form header and click **Save**.
   The **Get template fields status** field, **Get Template Fields** related link, and PDF Template Mappings section displays.
6. Click the **Get Template Fields** related link.

Note: If any changes are made to the signature or document fields on the DocuSign template, you must click the **Get Template Fields** related link to synchronize those changes. Existing mappings are not affected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. When the **Get template fields status** field changes to **Completed**, reload the form.

   Note:
   If you are using a Safari browser, you must reload the form to see the changed state.

   In the **PDF Template Mappings** section, a list of the mappable fields displays.

8. In the **PDF Template Mappings** section, you must map each signature field from the DocuSign template to an appropriate user field in a table.

   Note:
   Configuration of the signature fields, including for parallel and serial signing, must be completed within the DocuSign system. You cannot add or configure the signature fields from within the HR PDF document template.

   Example

9. In the **PDF Template Mappings** section, you can also map fields from the DocuSign template to corresponding table fields to auto-populate the document when it is generated for signing.

   Note:
   - Make sure that the data type of the DocuSign field matches that of the table field.
   - Mapping is not supported for the following DocuSign field types:
     - Initial
     - Date signed
     - Payment item
     - Formula
     - Attachment
     - Note
     - Approve
     - Decline

10. Click **Update**.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure an HR service for the DocuSign integration

Create or modify an HR service to request electronic signatures through the DocuSign service. Preconfigured flows to collect signatures for either an ad hoc document (HR PDF document template) or a DocuSign template are available to use. You must also configure an associated HR case template to set a default ad hoc document or DocuSign template for signing.

Before you begin

Role required: sn_hr_core.admin

About this task

Depending on whether the user is signing an ad hoc document (HR PDF document template) or a DocuSign template, the following preconfigured HR services, flows, and HR case templates are available for your use and example. See HR services to learn more about HR service configuration, generally.

HR services, flows and case templates for DocuSign integration

Flow	Component	Name
Ad hoc document flow	HR service	Request Signature using DocuSign on Adhoc Document
	Flow	DocuSign Integration Flow - Adhoc Document
	HR case template	Signature using DocuSign on Adhoc Document
DocuSign template flow	HR service	Request Signature using DocuSign Template
	Flow	DocuSign Integration - DocuSign Template
	HR case template	Signature using DocuSign Template

Procedure

1. Configure an HR service for the DocuSign integration.

   a. Navigate to **HR Administration** > **HR Service Configuration**.

   b. Click **New** or open a record.

   c. On the HR service form, provide the following values.

HR service form

Flow	Field	Value
Ad hoc document flow	HR service name	<Name of the HR service>
	Fulfillment type	Flow
	Flow	DocuSign Integration Flow - Adhoc Document
DocuSign template flow	HR service name	<Name of the HR service>
	Fulfillment type	Flow
	Flow	DocuSign Integration - DocuSign Template

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Fill in the other fields on the form, as appropriate.
For further details on creating an HR service, see Configure an HR service.

Note:
In the HR Service Additional Information related list, make sure that the **PDF Template** field is included so that it appears on the HR case form when a request for this service is made. See Configure the HR case form for an HR service for more information.

e. Right-click the form header and click **Save**.

2. Configure an accompanying HR case template.

a. In the **Template** field, click the Lookup icon.

b. In the **HR Templates** list, click **New** or open a record.

c. From the **Add fields** list, select **PDF Template.**

d. In the **PDF Template** field, select the HR PDF document template that you want to make available for signing.

Note:

- For the ad hoc document flow, make sure to select an HR PDF document template with the **Template type** field set to `HR PDF Templates`.ake
- For the DocuSign template flow, make sure to select an HR PDF document template with the **Template type** field set to `DocuSign Templates`.

e. Fill in the other fields on the form, as appropriate.
For further details on creating an HR case template, see Configure an HR case template.

f. Click **Submit**.

g. On the HR service form, click **Update**.

Integrating with the Adobe Sign service

Request electronic signatures through the Adobe Sign service with the Adobe Sign integration. This integration depends on the Adobe Sign spoke in IntegrationHub, and is enabled for the signing of adhoc documents (HR PDF document templates) and Adobe Sign templates.

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates and Document Template integration with AdobeSign that provide the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A preconfigured HR service, flow, and HR case template for both the adhoc document and Adobe Sign document are available to use.

Note:
The Adobe Sign Integration flow will be completed (or not in waiting state) only after all the HR tasks created for the HR case are signed or expired or cancelled by the users.

Adobe Sign spoke

The Adobe Sign integration depends on the Adobe Sign spoke in IntegrationHub. Before you begin, your administrator must have:

- activated the Adobe Sign spoke
- set up the Adobe Sign spoke

Adobe Sign integration setup

Once the Adobe Sign spoke is set up, you can configure the integration for HR. The integration has a single flow that branches out into sub flows, one for signing an adhoc document (HR PDF document template) and another for signing an Adobe Sign template. The sub flow triggered for a document depends on the PDF template type that is configured for that document.

For each document that you want to make available for signing through the Adobe Sign service, configure as follows.

Adobe sign integration configuration details

Type of document	Configuration requirements
Adhoc document (HR PDF document template)	1. Create a managed document that you want to make available for signing. See Managed Documents for more information. 2. Configure an HR service for the adhoc document. 3. Configure an HR PDF document template for an adhoc document.
Adobe Sign document	1. Create an Adobe Sign template that you want to make available for signing. 2. Configure an HR service for the Adobe Sign integration. 3. Configure an HR PDF document template for an Adobe Sign template.

Each adhoc document is configured as a standard HR PDF document template. You can add signers to the document with **Mark Signatures**, and then map each signature field to an appropriate user field in a table. The positioning of the markings are not used, and the Adobe Sign integration allows the signer to sign anywhere in the document. You can also parse the PDF to map document fields to corresponding table fields to auto-populate the document when it is generated for signing. The generated document is static, which means that it is read-only and the signatory cannot update any of the fields.

Each Adobe Sign template is brought into the ServiceNow system, and then configured into an HR PDF document template to enable mappings. Map each signature field from the Adobe

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sign template to an appropriate user field in a table. The generated document is dynamic, which means that the signatory can write in editable fields, such as to update an address or provide W-4 information. However, any updates made are saved to the document only.

Requesting electronic signatures through the Adobe Sign service

Once the integration setup is complete, HR agents from your organization can request electronic signatures through the Adobe Sign service.

For more information, see Request an electronic signature through the Adobe Acrobat Sign service.

Activate the Adobe Sign spoke

Activate the Adobe Sign spoke in IntegrationHub from the ServiceNow Store, and enable the signing of adhoc documents (HR PDF document templates) and Adobe Sign templates.

Before you begin

Role required: admin

Procedure

1. Navigate to the ServiceNow Store.
2. In the ServiceNow Store, search for the Adobe Sign spoke.
3. Click the application tile.
   Detailed information about the application you are installing is displayed. Consider reading the Other Requirements and Dependencies sections, as applicable.
4. Click **Get** and enter your HI login credentials.
5. Enter the **Instance Name** and **Reason for request**, and click **Validate Instance**.
   You will receive an email with detailed installation instructions.
6. Log in to the instance and set up the Adobe Sign spoke.

Configure an HR PDF document template for an adhoc document

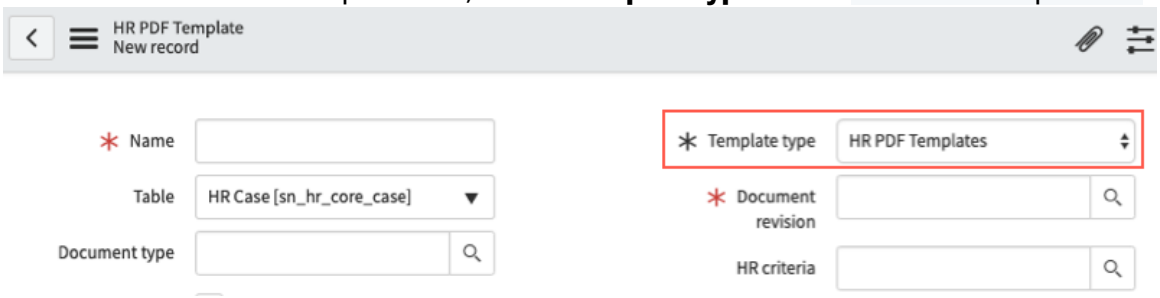
If you are using the Adobe Sign integration, configure an HR PDF document template for each ad hoc document that you want to make available for signing.

Before you begin

Create the managed document that you want to make available for signing through the Adobe Sign system. See Managed Documents for more information.

Role required: sn_hr_core.admin

You can use an existing or create an HR PDF document template. You can add signers to the document with Mark Signatures, and then map each signature field to an appropriate user field in a table. As part of the Adobe Sign integration, you can also enable serial signing for documents that require multiple signers.



Procedure

1. Navigate to **All** > **HR Administration** > **Document Templates**.
2. Click **New** or open a record.

> **Note:**
> If you are creating a record, make sure to select **PDF Document Template**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the PDF Document Template form, set the **Template type** field to `HR PDF Templates`.

4. Fill in the fields on the form, as appropriate.

HR PDF Template form

Field	Description
Name	Name of the HR document template.
Table	HR table that the HR document template is associated with.
Document type	Document type that the HR document template is categorized under.
Active	Option to activate the HR document template for use.
Template type	Set the value to `HR PDF Templates`.
Document revision	Select the adhoc template to use.
HR criteria	Defines the conditions that the subject person of an HR case must meet for an HR agent to be able to access the HR document template on their behalf. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

5. Right-click on the form header and click **Save**.
The PDF Template Mappings section is displayed.
6. Configure an HR PDF document template, as appropriate.
You can add signers to the document with **Mark Signatures**, and then map each signature field to an appropriate user field in a table. You can also parse the PDF to map document fields to corresponding table fields to auto-populate the document when it is generated for signing.

Note:
The positioning of **Mark Signatures** is not used, and the integration allows the signer to sign anywhere in the document.

7. If you want to enable serial signing for documents that require multiple signers, assign the signing order for each signature field in the PDF Template Mappings section.
If the **Signing order** column is not visible, click the gear icon to personalize the list columns. Add the **Signing order** field to the Selected column.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- The **Signing order** field remains empty in case of parallel signing.
- Ensure that the **Field name** of **Document field type** `Signature` is specified as Participant1, Participant2, Participant3, and so on.
- Ensure that the signing order of the first participant is lesser than the signing order of the second participant.

8. Click **Update**.

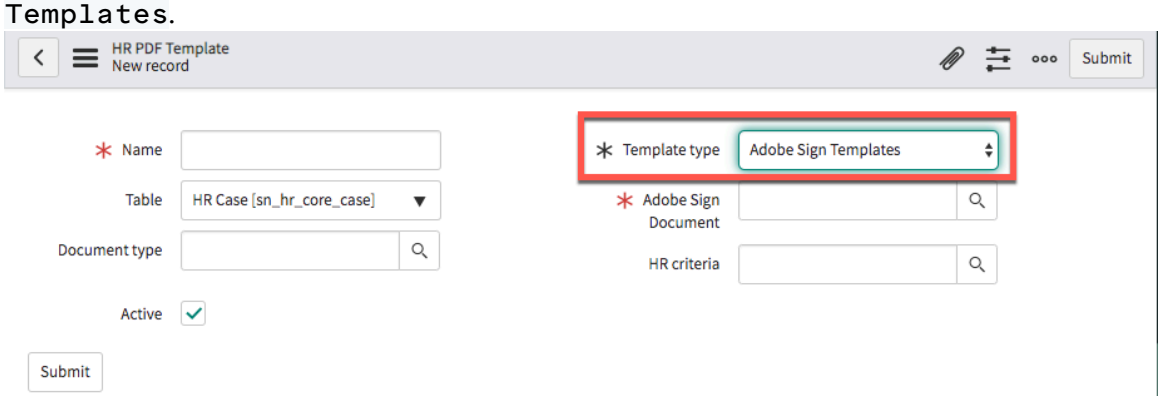
Configure an HR PDF document template for an Adobe Sign template

If you are using the Adobe Sign integration, configure an HR PDF document template for each Adobe Sign template that you want to make available for signing. You must map each signature field from the Adobe Sign template to an appropriate user field in a table.

Before you begin

Create the Adobe Sign template that you want to make available for signing through theAdobe Sign system. See the Adobe Sign user guide for more information. You must also synchronize your accounts to bring the Adobe Sign template (and any other new or updated templates) into the ServiceNow system. See Sync Adobe Sign with ServiceNow for more information.

Note:
Each Adobe Sign in template must have one associated document. Multiple documents per template are not supported.



Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Document Templates**.
2. Click **New** or open a record.

Note:
If you are creating a record, make sure to select **PDF Document Template**.

3. On the PDF Document Template form, set the **Template type** field to `Adobe Sign Templates`.

Note:
Pre filled Adobe sign templates are not supported.

4. Fill in the fields on the form, as appropriate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR PDF Template form

Field	Description
Name	Name of the HR document template.
Table	HR table that the HR document template is associated with.
Document type	Document type that the HR document template is categorized under.
Active	Option to activate the HR document template for use.
Template type	Set the value to `Adobe Sign Templates`.
Adobe Sign Document	Select the Adobe Sign template to use. **Note:** You must synchronize each time you need to get new or updated Adobe Sign templates.
HR criteria	Defines the conditions that the subject person of an HR case must meet for an HR agent to be able to access the HR document template on their behalf. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global API API.

5. Right-click on the form header and click **Save**.
   The PDF Template Mappings section is displayed.
6. In the **PDF Template Mappings** section, you must manually map fields from the Adobe Sign template to corresponding table fields to populate the document when it is generated for signing.

Example

PDF Template Mappings

Field	Description
Field name	Name of the field that is being mapped from the Adobe Sign system to the ServiceNow system.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Ensure that the **Field name** of **Document field type** `Signature` is specified as Participant1, Participant2, Participant3, and so on.
HR PDF Template	Name of the HR PDF template.
Document field	Suitable name of the field that is being mapped.
Document field type	Type of the document field that is being mapped, such as **Signature**, **Text**, or **check box**.
Mapping table	HR table that stores all the field mappings.
Mapping field	Reference field from which the value is rendered in the **Document** field.
Signing order	Order in which the participants are to sign the document. **Note:** ○ If the **Signing order** column is not visible, click the gear icon to personalize the list columns. Add the **Signing order** field to the Selected column. ○ Ensure that the signing order of the first participant is lesser than the signing order of the second participant. ○ The **Signing order** field remains empty in case of parallel signing.
Active	Option for enabling or disabling a field mapping.

Note:
Field mappings are case sensitive.

7. Click **Submit**.

Configure an HR service for the Adobe Sign integration

Create or modify an HR service to request electronic signatures through the Adobe Sign service. A preconfigured flow to collect signatures for either an adhoc document (HR PDF document template) or an Adobe Sign template is available to use.

Before you begin
Role required: sn_hr_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

For signing an adhoc document (HR PDF document template) or an Adobe Sign template, the following preconfigured HR service, flow, and HR case template are available for your use.

- Case template: Signature using Adobe sign in
- HR service: Signature using Adobe sign in
- Flow: Adobe Sign Integration Flow

Procedure

1. Configure an HR service for the Adobe Sign integration.

   a. Navigate to **HR Administration** > **HR Service Configuration**.

   b. Click **New** or open a record.

   c. On the HR service form, provide the following values for an adhoc document and Adobe Sign document:
      - HR service name: Signature using Adobe sign in
      - Fulfillment type: Flow
      - Flow: Adobe Sign Integration Flow

   d. Fill in the other fields on the form, as appropriate.
   For further details on creating an HR service, see Configure an HR service.

   Note:
   In the HR Service Additional Information related list, make sure that the **PDF Template** field is included so that it appears on the HR case form when a request for this service is made. See Configure the HR case form for an HR service for more information.

   e. Right-click the form header and click **Save**.

2. Configure an accompanying HR case template.

   a. In the **Template** field, click the Lookup icon.

   b. In the **HR Templates** list, click **New** or open a record.

   c. From the **Add fields** list, select **PDF Template.**

   d. In the **PDF Template** field, select the HR PDF document template that you want to make available for signing.

   Note:
   - For adhoc document, make sure to select an HR PDF document template with the **Template type** field set to `HR PDF Templates`.
   - For the Adobe Sign template, make sure to select an HR PDF document template with the **Template type** field set to `Adobe Sign Templates`.

   e. Fill in the other fields on the form, as appropriate.
   For further details on creating an HR case template, see Configure an HR case template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

f. Click **Submit**.

g. On the HR service form, click **Update**.

Integrating with the CIC Plus service

Integrate with the CIC Plus service so that you can enable US-based new hires to provide relevant tax information as part of the onboarding process.

This integration assumes you are already integrated with a third-party identity provider (IDP) service, and is configured to work with the lifecycle event for new hire onboarding that is included as demo data with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

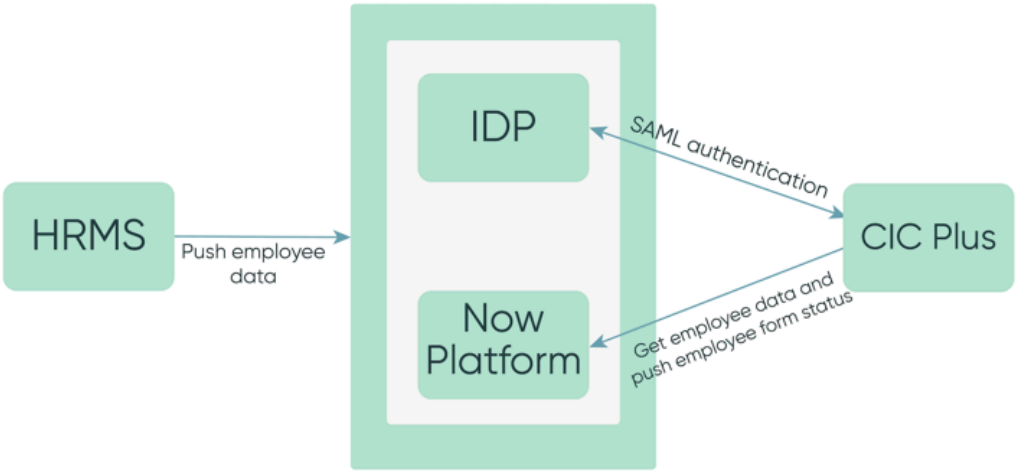
Setting up the CIC Plus integration

To set up the CIC Plus integration, you must configure a SAML connection between your third-party identity provider (IDP) and CIC Plus accounts. Your CIC Plus partner must then set up your account to get employee profiles for US-based employees through the `get_usa_employee_profile` REST endpoint, as well as verify that the callback is properly configured. Finally, you must configure the source credentials to include the login URL of the identity provider service you are using with the CIC Plus integration. For details on how to set up the CIC Plus integration, see Set up the CIC Plus integration.

Using the CIC Plus integration with new hire onboarding

Once the integration is set up, you can use the CIC Plus service with new hire onboarding. The following components are included in the demo data for your use and example.

Note:
The lifecycle event for new hire onboarding is included as demo data with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.



Integration setup components

Component	Name
Lifecycle event activity	Complete Tax Forms (in the Day One activity set)
HR service	Complete Tax Forms through CIC Plus
HR case template	Complete Tax Forms through CIC Plus

How the CIC Plus integration works

The CIC Plus integration works as follows. Your HR management system (HRMS) pushes employee information to your IDP and ServiceNow AI Platform systems. The CIC Plus integration then invokes the `get_usa_employee_profile` REST endpoint to fetch employee information. When a user opens an assigned task and clicks on the link to connect to the CIC Plus service, the CIC Plus integration authenticates the user through a SAML identification via your IDP service. After the user completes the required tax forms, the status is pushed back to the ServiceNow AI Platform system and the employee task is automatically closed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set up the CIC Plus integration

Integrate with the CIC Plus service by configuring a SAML connection between your third-party identity provider (IDP) and CIC Plus accounts.

Before you begin

Role required: sn_hr_core.admin

Your CIC Plus partner must then set up your account to get employee profiles for US-based employees through the `get_usa_employee_profile` REST endpoint, as well as verify that the callback is properly configured. Finally, you must configure the source credentials to include the login URL of the identity provider service you are using with the CIC Plus integration.

To set up your integration with the CIC Plus service, you must first:

- Be integrated with a third-party identity provider (IDP) service. That provider must have user records for the new hire in their system.
- Create a user with the sn_hr_core.usa_employee_only role.
- Gather the following information from your CIC Plus partner:
  - SAML configuration details
  - Company ID
- Provide the following information to your CIC Plus partner:
  - IP address range
  - Platform instance URL
  - Credentials for a user with the sn_hr_core.usa_employee_only role

Role required: sn_hr_integrations.admin

Procedure

1. Configure a SAML connection between your third-party identity provider (IDP) and CIC Plus accounts.

   Important:
   Make sure to configure the SAML connection with the name identifier as the employee number.

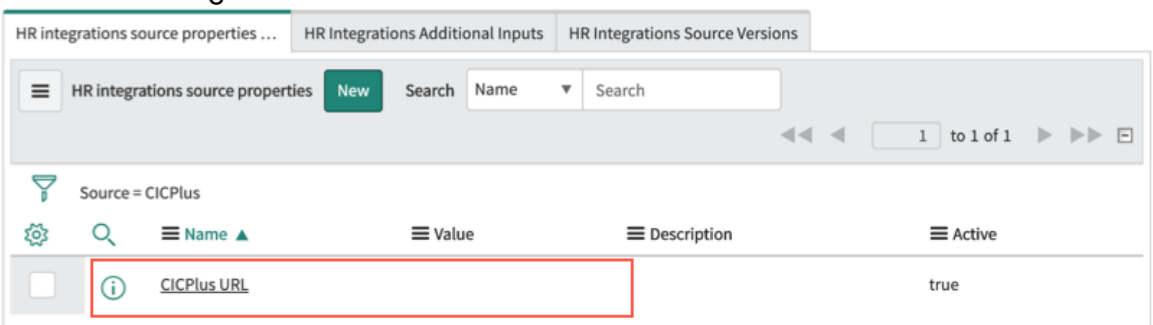
   For information on how to configure the SAML connection, refer to the CIC Plus documentation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Your CIC Plus partner must then:

   a. Configure your account to get employee profiles for US-based employees through the `get_usa_employee_profile` REST endpoint.
   For information and examples on the `get_usa_employee_profile` REST endpoint, see get_usa_employee_profile.

   b. Verify that the callback is properly configured within your CIC Plus account.



3. Configure the source credentials to include the login URL of the identity provider service:

   a. Navigate to **HR Integrations** > **Sources**.

   b. Open the **CIC Plus** record.

   c. In the **HR integrations source properties** related list, open the **CIC Plus URL** source property.

   d. In the **Value** field, provide the login URL of the identity provider service you are using with the CIC Plus integration.

Enterprise Service Management Integrations Framework

The ServiceNow® Enterprise Service Management Integrations Framework application contains common components that can be used for integrating your ServiceNow application with third-party systems. It uses the flow designer capability to communicate with external instances and third-party systems.

The application provides a consistent way of building integrations for common use cases such as pulling employee profiles and tasks from the third-party application to a ServiceNow application, and pushing data from a ServiceNow application into a third-party application.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Setting up Enterprise Service Management Integrations Framework

Understand how to set up Enterprise Service Management Integrations Framework to use for integration with third-party systems.

Before you begin

Role required: sn_hr_integr_fw.admin

To set up Enterprise Service Management Integrations Framework, you must first activate the Enterprise Service Management Integrations Framework application from ServiceNow Store. Next, you must Setting up Enterprise Service Management Integrations Framework.

Procedure

1. Create a source record by specifying the third-party application with which you want to integrate your ServiceNow application.
   For more information, refer to Create a source in Enterprise Service Management Integrations Framework.
2. Create an import set table.
3. Create a flow in Flow Designer.
   For more information, refer to Create a flow.

   Note:
   The flows or subflows that you are parsing into integration services must follow the input and output structure of Template Integration Service.

4. Create an integration service to connect with the third-party system.
   For more information, refer to Create an integration service in Enterprise Service Management Integrations Framework.
5. Create transformation maps.
   For more information, see Create transform maps in Enterprise Service Management Integrations Framework.

   Note:
   - You must create transformation maps only for Schedule Pull services, and not for Ondemand Push services.
   - If you are using Enterprise Service Management Integrations Framework to pull tasks from a third-party system, use the Pull to-do transform map.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a source in Enterprise Service Management Integrations Framework

Create a source record that represents the third-party system which is integrating with your HR Service Delivery application.

Before you begin

Role required: sn_hr_integr_fw.admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **Source**.
2. Click **New**.
3. On the form, fill in the fields:

Integration Sources

Field	Description
Name	Display name of the third-party application.
Properties	Properties configured according to the requirements of the integration.
Domain	Name of the application for which the record is created.

4. Click **Submit**.

Create an integration service in Enterprise Service Management Integrations Framework

Create an integration service to connect with the third-party system.

Before you begin

Role required: sn_hr_integr_fw.admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **Source**.
2. In Integration Services, click **New**.
3. On the form, fill in the fields:

Integration Services

Field	Description
Active	Option to indicate that the integration service is available for use.
Import set tables	List of intermediate tables which store records from the third-party system. **Note:** This field is enabled only when Scheduled pull service is selected in the **Service type** field.
Flow	Flow that interacts with the third-party system to pull the required data.
Name	Display name of integration service.
Source	Name of the third-party system with which you want to integrate your application.
Application	Application which contains the integration service record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Order	Order in which you want to run transformation scripts.
Service type	Option to indicate the type of service **Scheduled pull** or **Ondemand Push**.
Retry policy	Configuration set to push a record if the previous push fails. **Note:** This field appears only when Ondemand Push service is selected in the **Service type** field.

Create transform maps in Enterprise Service Management Integrations Framework

Create a transform map to specify data relationships between the import set table and the target table.

Before you begin

Role required: sn_hr_integr_fw.admin

About this task

For every transformation, you must either create a transform map or select an existing one.

Procedure

1. Navigate to **Integrations Framework** > **Transform Maps**.
2. View the existing transform maps.

Transformation Maps

Name	Description
HR Pull to-do transform map	Moves tasks or Todos from the HR Pulled To-do Integration Staging [sn_hr_integr_fw_todo_inbound_staging] table into the HR Pulled Integration To-do [sn_hr_integr_fw_todo_inbound] table.
HR Profile Transform Map	Maps workers, future workers, and effective workers from the HR Profile Staging [sn_hr_integr_fw_hr_profile_staging] table into the HR Profile [sn_hr_core_profile] table.
Job Transform Map	Maps job profiles from the Job Staging [sn_hr_integr_fw_job_staging] table to the Job [sn_hr_core_job] table.
Department Transform Map	Maps departments from the Department Staging [sn_hr_integr_fw_department_staging] table to the Department [cmn_department] table.
Location Transform Map	Maps locations from the Location Staging [sn_hr_integr_fw_location_staging] table to the Location [cmn_location] table.
Position Transform Map	Maps positions from the Position Staging [sn_hr_integr_fw_position_staging] table to the Position [sn_hr_core_position] table.

3. To create a transform map, click **New**.
   For details of how to create a transform map, refer to the table in Transformation scripts.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a subflow using Template Integration Gateway

Use the Template Integration Gateway as a reference to create the supported subflows for Integration Gateway.

Before you begin

Role required: flow_designer, sn_hr_integr_fw.admin

Procedure

1. Navigate to **All** > **Process Automation** > **Workflow Studio**.
2. In **Subflows**, select Template Integration Gateway.
3. Create a copy of subflow, and provide a suitable name for the flow, click **Copy**.
4. Delete logs.
5. Add the logic and assign flow outputs:

Outputs

Field	Description
Data	Result that is returned.
Provider	Name of the provider.
Status	Type of code number displayed when no results are returned. Code numbers vary based on scenario.
Message	Message associated with status.

What to do next

1. Navigate to **All** > **Process Automation** > **Workflow Studio**.
2. In Subflows, select Integration Gateway.
3. Create an entry for the above created subflow. For more information, see Configure Integration Provider Mapping (Decision table).
4. Click **Test**.
   a. In Test Subflow, select User, Feature Name, Service Name, and Payload.
   b. Click **Run Test**.
   Verify if the outputs or results generated are correct. Validate if the correct subflow has been run.

Configure Integration Provider Mapping (Decision table)

Add input choices and define conditions and results in a decision table for the Integration Gateway subflow to review and generate output results.

Before you begin

View Now Assist for HR Service Delivery (HRSD) Virtual Agent topic mapping for Enterprise Service Management Integrations Framework.

Role required: decision_table_admin, sn_hr_integr_fw.admin

Procedure

1. Navigate to **All** > **Process Automation** > **Workflow Studio**.
2. Navigate to Decision Tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **Integration Provider Mapping**.
4. In Inputs, provide the required values:

Example of input data

Label	Description
Feature name	In Type, create a list of choice options for a feature name. For example, options within Feature name can be Leave Management, or Expense Management.
Service name	Create a list of choice options for a service name. For example, options within Service name can be Time Off Balance, or Get Holiday Calendar.
User	Provide reference to a user from the User [sys_user] table.

5. To add a decision row, select **add new decision row** and provide conditions on input choices, and define the results:

Example of conditions and results in Decision table

Conditions and Results	Description
Feature name	Option you select from the Feature name list. For example, Leave Management.
Service name	Option you select from the Service name list. For example, Time Off Balance.
User country	Option you select for user's country list. You can also add additional conditions on **User country** by adding a condition column. For example, you can also add a check based on user department.
Subflow	Subflow you select to generate results. For example, Get time off balance subflow. The Get Time off Balance topic in Employee Center Center retrieves holiday calendar of user from Oracle HCM system by running the Get time off balance subflow.
Needs Manager Role	When set to true, the user must be a manager to run the subflow.
User Authentication	When set to true, the OAuth entity value is considered to validate the user for running the subflow.
OAuth Entity	OAuth Entity details. For Oauth Entity, the profiles with grant type as authorization code are supported.

6. To validate the conditions specified on inputs choices, click **Test**.
   a. In the Test Decision table, select Feature Name, Service Name, and User.
   b. Select **Test**. For example, the results display the Get time off balance subflow to fetch the time off balance of a user.
7. Select **Publish**.

Using Enterprise Service Management Integrations Framework

Understand how you can use Enterprise Service Management Integrations Framework to connect with a third-party system.

Before you begin

Role required: sn_hr_integr_fw.admin

Procedure

1. Create a source.
   For more information, see Create a source in Enterprise Service Management Integrations Framework.
2. Create an integration service for the source.
   For more information, see Create an integration service in Enterprise Service Management Integrations Framework.
3. Create a scheduled job and trigger the run job flow for the source.
   - Entries are created in the Integration Job Tracker [sn_hr_integr_fw_job_tracker] table. Entries are created for active Scheduled Pull services in the Integration Service Job Tracker [sn_hr_integr_fw_service_job_tracker] table.
   - Import sets are created and attached to the service job tracker, and load start time is populated. Once data is loaded in the import set tables, the state of the service job tracker changes to loaded and the load end time is populated.
   - Once data is loaded for all the services, transformation begins based on the service order defined in the Integration Service [sn_hr_integr_fw_service] table. The states of services change to complete, and then the state of the job tracker record changes to complete. For more information, see View job tracker details.

View tasks of a third-party system

View tasks that are pulled from the third-party system into Enterprise Service Management Integrations Framework.

Before you begin

Role required: sn_hr_integr_fw.admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **Todos**.
2. View details of tasks.

Pulled Integration To-do

Field	Description
Integration todo ID	Unique identifier for the integration Todo.
Todo description	Description of the Todo or task in the third-party system.
Todo state	State of the Todo or task in ServiceNow system, such as Open or Closed.
Active	Option indicating whether the Todo or task is active in the third-party system.
Assigned to	User to whom the Todo or task is assigned.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
External Status	Status of the Todo or task in external system.
Extension System	Option indicating the origin of Todo or task.
Domain	Option indicating that domain separation is enabled for this table.
Approving	Option to approve a document that is pulled from a ServiceNow system or a third-party system. On selecting this option, a window appears that allows you to specify a table and select a document from the table.

Important:

- By default, the Auto Flush data retention policy removes to-dos after seven days. If you do not want the to-dos to be removed from the table:
  a. Navigate to **System Maintenance** > **Table Cleanup** and select **sn_hr_integr_fw_todo_inbound**.
  b. To inactivate the retention policy, deselect the **Active** checkbox.
  c. To specify a different condition in the retention policy, add a script in the **Condition** field.
- If you want use the Pulled Integration To-do table to pull to-dos or tasks from a third-party system, then you must create an implementation of this extension point: sn_hr_integr_fw.TodoTransformHelper.

View job tracker details

View details of the source job and service job, such as when did the job begin and end, when did the records start loading into staging tables, or did the job run completely or fail in between.

Before you begin

Role required: sn_hr_integr_fw.admin

About this task

Once a scheduled flow is triggered or the **Run job** button on source module is clicked, records are created in the Integration Job Tracker and Integration Service Job Tracker tables.

Procedure

1. Navigate to **All** > **Integrations Framework** > **Job Tracker**.
2. View the job details.

Integration Job Tracker

Field	Description
Job name	Name of the job with application name appended.
Job start time	Date and time when the source job has begun.
Job end time	Date and time when the source job has ended.
Error message	Message displayed when the job fails. If the source job fails, you must run the job again.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Source	Name of the source for which the transformation job is run. For example, Cornerstone On Demand, or Pluralsight.
State	Current state of the job such as failed, completed, or running.

HR Integration Service Job Tracker

Field	Description
Integration service	Name of the integration service.
Sets	Lists of import sets.
Load started at	Option indicating the date and time when records started loading into staging table.
Load ended at	Option indicating the date and time when the records finished loading into staging table.
Last run date	Option indicating the last time and date when the service was pulled correctly.
Error message	Message displayed when the service job fails. If the service job fails, you must run the job again.
State	State of the service job such as loaded, running, or completed.
Transform started at	Option indicating the date and time when the transformation has begun, and records are moved from staging table to target table.
Transform ended at	Option indicating the date and time when the transformation has ended.
Flow Execution ID	Unique identifier of the flow that is executed for integration service. **Note:** The reporting feature is turned off for the flows (used for large integrations) that are created for Enterprise Service Management Integrations Framework.
Sync token	Stores token returned by APIs for certain integration services.

Use External Interface to push records into a third-party system

Use External Interface to view details of records that are being pushed from ServiceNow into a third-party system.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **External Interface**.
2. On the form, view the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

External Interfaces form

Field	Description
Service	OnDemand push service that is invoked to interact with a third-party system.
Source table name	Source table in which the record is stored.
Table Sys ID	Sys ID of the table record that has been modified. A combination of **Source table name** and **Table Sys ID** is used to identify and push the modified record into a third-party system.
Status	Current status of the push, such as completed or pending.
Error message	Error message displayed when the push failed.
Error code	Error code displayed when the push failed.

What to do next

The Trigger External Interfaces flow automatically:

- Identifies records whose Status is Pending, Service is Active, and Service type is OnDemand Push from the External Interface [sn_hr_integr_fw_ext_interface] table.
- Pushes the identified records into third-party system.

HR Service Delivery Integration with Cornerstone OnDemand

The ServiceNow® HR Service Delivery Integration with Cornerstone OnDemand application enables you to display relevant learning courses for employees as part of their To-do tasks in the ServiceNow Employee Center.

Cornerstone OnDemand is a learning system that hosts learning videos, training, and certifications for employees. Using HR Service Delivery Integration with Cornerstone OnDemand, you can pull learning tasks from the Cornerstone OnDemand system to ServiceNow so that employees can view all their To-do tasks in a single location, Employee Center.

Setting up the application

To set up the HR Service Delivery Integration with Cornerstone OnDemand application, you must first activate the HR Service Delivery Integration with Cornerstone OnDemand plugin [sn_hr_cornerstone] from ServiceNow Store. This plugin activates Cornerstone spoke in IntegrationHub and Enterprise Service Management Integrations Framework. Next you must set up the Cornerstone spoke in IntegrationHub. For details on how to complete the set up, refer to Setting up HR Service Delivery Integration with Cornerstone OnDemand.

Using Enterprise Service Management Integrations Framework

Enterprise Service Management Integrations Framework provides a consistent way of building integrations for common use cases such as pulling employee profile information, pulling to-dos, or pulling other data from third-party systems and storing it in ServiceNow instance. It contains common components, such as the Source table, HR Integration Services table, scheduled flows, and transform maps, that can be used for building integrations.

By default, when the HR Service Delivery Integration with Cornerstone OnDemand application is set up, source, HR integration services, scheduled flows, and transform maps are automatically set up for the Cornerstone OnDemand system in Enterprise Service Management Integrations Framework. The schedule flows in Enterprise Service Management Integrations Framework interact with the Cornerstone OnDemand system to pull users, learning objects, and transcripts into ServiceNow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Assigning learning tasks to employees

When learning tasks are assigned to employees in the Cornerstone OnDemand system, transcripts are created for those employees in the Cornerstone OnDemand system.

Enterprise Service Management Integrations Framework, using the Sync Transcripts service, pulls the transcripts from the Cornerstone OnDemand system and displays them as tasks in the To-dos page in Employee Center.

On clicking the learning task in Employee Center, the employee is navigated to Cornerstone OnDemand system for completing the task. When the employee completes the task in Cornerstone OnDemand system, the status of task gets updated in Employee Center after the scheduled job is run for the Cornerstone OnDemand system.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Setting up HR Service Delivery Integration with Cornerstone OnDemand

Understand how to set up the HR Service Delivery Integration with Cornerstone OnDemand application for pulling learning courses from the Cornerstone OnDemand system into the ServiceNow system.

Before you begin

- Role required: sn_hr_cornerstone.admin
- Activate the Human Resources Scoped App: Core plugin [com.sn_hr_core].
- Activate the HR Service Delivery Integration with Cornerstone OnDemand plugin [sn_hr_cornerstone] from ServiceNow Store. This plugin activates Cornerstone spoke in IntegrationHub and HR Service Delivery Integrations Framework plugin [sn_hr_integre_fw].

Procedure

1. Set up the Cornerstone spoke in IntegrationHub.
   For more information, refer to the Cornerstone spoke documentation.
2. Configure the URL prefix in the Cornerstone source record in HR Service Delivery Integration with Cornerstone OnDemand.
   For more information, refer to Use deep link for HR Service Delivery Integration with Cornerstone OnDemand.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Once you have activated the necessary plugins and set up the Cornerstone spoke, HR Integration Services (for Cornerstone OnDemand application) are automatically created. For more information, refer to HR Integration Services for HR Service Delivery Integration with Cornerstone OnDemand.

3. Configure the flow for HR Service Delivery Integration with Cornerstone OnDemand.
   For more information, refer to Configure the flow for HR Service Delivery Integration with Cornerstone OnDemand.

Use deep link for HR Service Delivery Integration with Cornerstone OnDemand

Use the deep link prefix to pull learning objects from the Cornerstone OnDemand system during run time.

Before you begin
Role required: sn_hr_cornerstone.admin

Procedure

1. Login to the Cornerstone OnDemand application and generate deep links.
   For more information, refer to the documentation of Cornerstone OnDemand system.

   Note:
   Ensure that you have selected **LO Details** in **Page URL** list in the **Deep link Generator** tab.

2. Copy the URL prefix.
3. Navigate to **HR Cornerstone Integrations** > **Source**.
4. Click **Cornerstone**.
5. In **Properties**, append the copied value in **url_prefix**.

Configure the flow for HR Service Delivery Integration with Cornerstone OnDemand

Specify the frequency and time at which you want to run the scheduled flow that pulls learning objects, users, and transcripts from the Cornerstone OnDemand application into the ServiceNow system.

Before you begin
Role required: sn_hr_cornerstone.admin

Procedure

1. Navigate to **All** > **Flow Designer** > **Designer**.
2. Activate the **Trigger CSOD Sync** scheduled flow.
3. Click **Trigger**.
   a. Select a frequency such as daily or weekly or monthly. The default value is **Daily**.
   b. Specify a time. The default value is **21:00:00**.

Components installed with HR Service Delivery Integration with Cornerstone OnDemand

Several types of components are installed with activation of the HR Service Delivery Integration with Cornerstone OnDemand plugin [sn_hr_cornerstone], including tables and user roles.

Roles installed

Roles and descriptions

Role title [name]	Description	Contains roles
HR Cornerstone Admin [sn_hr_cornerstone.admin]	Can access and set up the HR Service Delivery Integration with Cornerstone OnDemand application.	None

Tables installed

Tables and descriptions

Table	Description
User Mapping [sn_hr_cornerstone_user_mapping]	Details of users mapped from the Cornerstone OnDemand system into the ServiceNow system.
CSOD Learning Object [sn_hr_cornerstone_lo]	Details of learning objects (such as learning type, learning ID, title) that are pulled from the Cornerstone OnDemand system into the ServiceNow system.
CSOD Status [sn_hr_cornerstone_status]	Status of transcripts in the Cornerstone OnDemand system.

Source for HR Service Delivery Integration with Cornerstone OnDemand

Once you set up the HR Service Delivery Integration with Cornerstone OnDemand application, the source record for Cornerstone On Demand application is automatically created in Enterprise Service Management Integrations Framework, Source module. The Cornerstone OnDemand source record in the in Enterprise Service Management Integrations Framework application contains a predefined set of properties and HR Integration Services.

Properties

Field	Description
Full-pull	When set to **True**, all the active users, active trainings, incomplete to-dos from the Cornerstone OnDemand system are pulled into respective tables in ServiceNow instance. When set to **False**, only modified users, modified trainings, modified transcripts (based on last successful schedule run time) are pulled from the Cornerstone OnDemand system are pulled into respective tables in ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Field	Description
	Note: If there is no information on the last successful schedule run time, the first pull will always be a full pull.
page-count	Number of records that are pulled through an API call from the Cornerstone OnDemand system. By default, the value is **500**. **Note:** This property is honored only by the Sync Trainings and Sync Transcripts HR Integration Services, and not by Sync Users HR Integration Service.
url-prefix	Deep link prefix to pull learning objects from the Cornerstone OnDemand system during run time. For more information, see Use deep link for HR Service Delivery Integration with Cornerstone OnDemand.

HR Integration Services for HR Service Delivery Integration with Cornerstone OnDemand

Once you set up the HR Service Delivery Integration with Cornerstone OnDemand application, HR integration services for Cornerstone are automatically created in Enterprise Service Management Integrations Framework. The flows in HR Integration Services communicate with the Cornerstone OnDemand system to pull users, learning objects, and transcripts into ServiceNow.

Important:
You must activate all of these HR integration services so that data is properly synchronized between the Cornerstone OnDemand system and ServiceNow.

HR Integration Services for Cornerstone

Name	Description
Sync Users	This HR integration service maps users in the Cornerstone OnDemand system to users in the ServiceNow system using email Ids. When the Trigger CSOD Sync schedule flow is run, users are pulled from the Cornerstone OnDemand system to the User Mapping Staging [sn_hr_cornerstone_user_mapping_staging] table. After transformation scripts are run, mapped users are displayed in **HR Cornerstone Integrations** > **Users**.
Sync Trainings	This HR integration service pulls learning objects such videos or curriculum from the Cornerstone OnDemand system to the ServiceNow system. When the Trigger CSOD Sync schedule flow is run, learning objects are pulled into the CSOD Learning Object Staging [sn_hr_cornerstone_lo_staging] table. After the transformation scripts are run, learning objects are displayed in **HR Cornerstone Integrations** > **Learning Objects**.
Sync Transcripts	This HR integration service pulls transcripts from the Cornerstone OnDemand system to the ServiceNow system. When the Trigger CSOD Sync schedule flow is run, transcripts are pulled into HR Pulled To-do Integration Staging [sn_hr_integr_fw_todo_inbound_staging] table. After the transformation scripts are run, transcripts are displayed in **HR Integrations Framework** > **Todos**.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Users for HR Service Delivery Integration with Cornerstone OnDemand

Users from the Cornerstone OnDemand system are mapped to the users in ServiceNow system using email Ids. User mapping helps in assigning learning tasks to the correct user in the ServiceNow system.

When the Trigger CSOD Sync schedule flow is run, users are pulled from the Cornerstone OnDemand system to the User Mapping Staging [sn_hr_cornerstone_user_mapping_staging] table. Once the transformation scripts are run, mapped users are displayed in **HR Cornerstone Integrations** > **Users**.

User Mapping

Field	Description
CSOD ID	CSOD ID from Cornerstone OnDemand system.
Active	Option that indicates whether or not the user is active in the Cornerstone OnDemand system.
User	Name of the user in the ServiceNow system.
CSOD User	Name of the user in the Cornerstone OnDemand system.
CSOD User ID	ID of the user in the Cornerstone OnDemand system.
CSOD Email	Email ID of the user in the Cornerstone OnDemand system.

Note:
In case you want to use **CSOD ID**, **CSOD user**, and **CSOD User ID** fields for mapping users, you must override the getUser method in CSODIntegrationsUtil script.

Learning objects for HR Service Delivery Integration with Cornerstone OnDemand

View details of learning objects that are pulled from the Cornerstone OnDemand system to ServiceNow system. Learning objects help in navigating users to the correct learning to-do details.

When the Trigger CSOD Sync schedule flow is run, the flow in the Sync Trainings service pulls learning objects from the Cornerstone OnDemand system into the CSOD Learning Object Staging [sn_hr_cornerstone_lo_staging] table. After the transformation scripts are run, learning objects are displayed in**HR Cornerstone Integrations** > **Learning Objects**.

Learning Objects

Field	Description
Title	Name of the learning object.
Active	Option indicating that the learning object is in use.
Learning ID	Unique identifier of the learning object.
Learning Type	Type of learning object.
Learning Type ID	Unique identifier of the learning type.
Root LO	Parent of the learning object.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- These type of learning objects are not displayed in the Learning Objects page: Session, Cohort, Program, and Library type. These type of learning objects appear in the CSOD Learning Object Staging [sn_hr_cornerstone_lo_staging] table, but do not appear in the Learning Objects page after transformation.

- Only the child topics of a certification are displayed as tasks in the To-dos page in Employee Center, and not the certification itself.

Status mapping in Cornerstone OnDemand System

Once you set up HR Service Delivery Integration with Cornerstone OnDemand, mapping between transcript status ID and status value is displayed in the Status page in HR Service Delivery Integration with Cornerstone OnDemand. This information helps to manage the task external status in the HR Pulled Integration To-do table, for Cornerstone OnDemand system.

For example, a transcript with status ID **25** is pulled into Cornerstone OnDemand system into ServiceNow system. **25** implies that the status value of the task is **Pending approval** in the Cornerstone OnDemand system.

Status

Field	Description
Status	Status of the task in the Cornerstone OnDemand system.
Status ID	Unique identifier of the status in Cornerstone OnDemand system.

Transform maps for HR Service Delivery Integration with Cornerstone OnDemand

By default, when HR Service Delivery Integration with Cornerstone OnDemand is set up, the CSOD user mapping transform and CSOD learning object mappings transformation maps are automatically available for HR Service Delivery Integration with Cornerstone OnDemand. These transform maps specify data relationships between source table and target table.

Transformation maps

Name	Description
CSOD user mapping transform	Maps users from the User Mapping Staging [sn_hr_cornerstone_user_mapping_staging] source table into the User Mapping [sn_hr_cornerstone_user_mapping] target table.
CSOD learning object mappings	Maps learning objects from the CSOD Learning Object Staging [sn_hr_cornerstone_lo_staging] source table into the CSOD Learning Object [sn_hr_cornerstone_lo] target table.
HR Pull to-do transform map	Maps tasks or Todos from the HR Pulled To-do Integration Staging [sn_hr_integr_fw_todo_inbound_staging] table to the HR Pulled Integration To-do [sn_hr_integr_fw_todo_inbound] table. For more information, refer to Create transform maps in Enterprise Service Management Integrations Framework.

HR Service Delivery Integration with Magnit

The ServiceNow® HR Service Delivery Integration with Magnit application provides a seamless experience to track and manage onboarding activities of contingent workers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Key features

- Track and manage onboarding activities of contingent workers. Pull contingent workers from the Magnit application into a ServiceNow AI Platform instance and create onboarding tasks for contingent workers from ServiceNow AI Platform instance.
- Create custom flows for various use cases. For example, trigger a life cycle event for creating HR cases and notifications in ServiceNow AI Platform instance to manage contingent workers onboarding.
- Provide seamless onboarding experience for contingent workers.

Activation information

First, activate the HR Service Delivery Integration with Magnit application from ServiceNow Store. Activating the application automatically activates the Magnit spoke, Enterprise Service Management Integrations Framework and Human Resources Scoped App: Lifecycle Events for Enterprise.

Next, Set up Magnit spoke.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Get started

Explore	Configure	Reference
 Detailed information on the integration	 Configure the application to get started	 Get details about user roles, tables, default configurations

Explore HR Service Delivery Integration with Magnit

Understand the end-to-end work flow of HR Service Delivery Integration with Magnit.

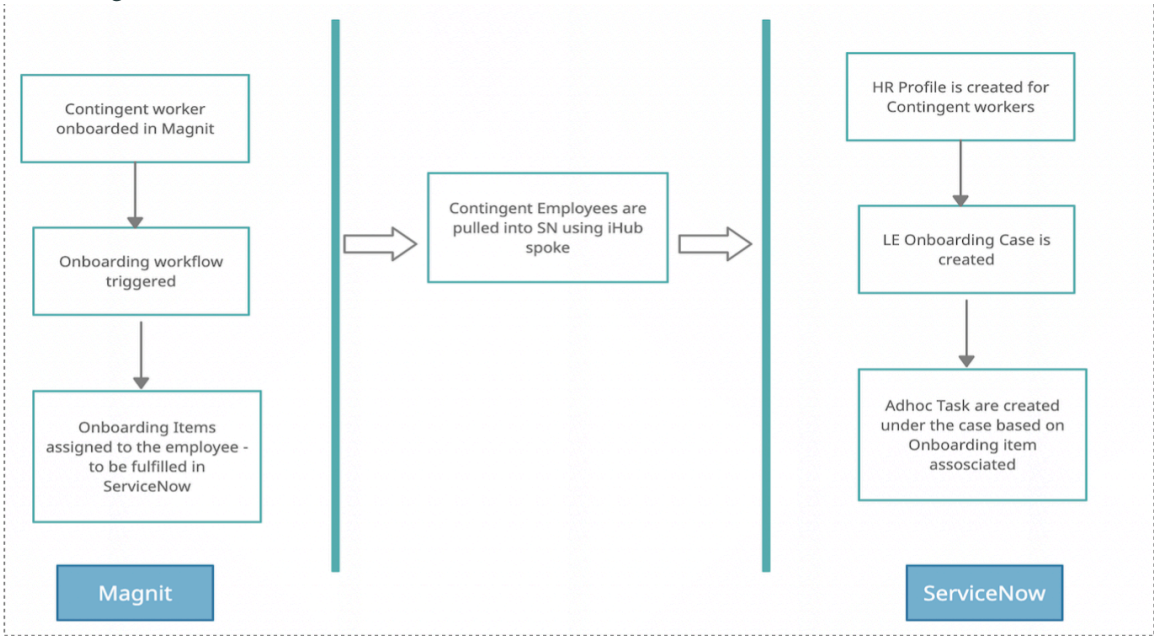
End-to-end flow

1. Ensure that the manager profile is available in the ServiceNow AI Platform instance before pulling contingent worker information.
2. Import Location, Department, Job that must be associated to the contingent worker into ServiceNow AI Platform instance (for example, via bulk import). In case, you do not import the corresponding IDs, these values remain null for the contingent employee.
3. With the sn_hr_magnit.admin role, create relevant HR task templates and associate them to onboarding items pulled from Magnit instance. For more information, see Map Magnit tasks.
4. Create the following properties for the Magnit source. These are one-time configurations:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **full_pull_wait_time**: Wait time between receiving correlation ID and calling the full pull action
- **delta_pull_wait_time**: Wait time between receiving correlation ID and calling the delta pull action

For more information, see Source for HR Service Delivery Integration with Magnit.



5. Pull contingent workers from Magnit application into ServiceNow AI Platform instance via a scheduled job that can be configured. See Activate a schedule flow.

   A life cycle event is triggered and a lifecycle case is created for each contingent worker. An HR task is created for each onboarding item within the lifecycle case.

   Note:
   If an HR task is not created for onboarding item, verify if an active Magnit mapping record exists for that onboarding item. For more information, see Map Magnit tasks.

   Contingent workers complete onboarding tasks from ServiceNow AI Platform instance.

Flow diagram

Status communication to Magnit

Understand how the status of user onboarding tasks are communicated from the ServiceNow® instance to the Magnit application.

Flow

1. Changing the status of an HR task to Work in progress, Ready, or Draft, automatically changes the status of its corresponding user onboarding item to Pending state in the User Onboarding Item [sn_hr_magnit_user_onboarding_item] table. When the HR task is marked as Complete or Closed Incomplete or Cancelled, the status of its corresponding user onboarding item automatically changes to **Ready to Send** in the User Onboarding Item [sn_hr_magnit_user_onboarding_item] table.
2. The Synchronise attachments of onboarding items flow runs at a specific schedule and time, reads the User Onboarding Item [sn_hr_magnit_user_onboarding_item] table to identify records with **Status** value = **Ready to Send**. The Send onboarding status action in Magnit spoke passes these details to the Magnit application, and a correlation ID is received

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

for all the records that are sent to Magnit system. The records in User Onboarding Item [sn_hr_magnit_user_onboarding_item] table are updated with Correlation_ID, status_sent_at and status_sent.

Note:

- Closed and Closed Incomplete states are mapped to Completed in Magnit, and Cancelled is mapped to Rejected in Magnit.
- Attachments greater than 5 MB are discarded and not sent to Magnit application.

3. The Synchronise Attachments of Onboarding Items flow reads the User Onboarding Item [sn_hr_magnit_user_onboarding_item] table and identifies the last correlation ID and the Verify onboarding status action in Magnit spoke identifies the last status sent information. Once the response is identified as completed, the next batch of records (if at all there are any changes in the status of the records) are sent to Magnit application.

Configure HR Service Delivery Integration with Magnit

Configure HR Service Delivery Integration with Magnit to create onboarding tasks for contingent workers.

Before you begin

Role required: sn_hr_magnit.admin

Ensure that the manager profile is available in the ServiceNow AI Platform instance before pulling contingent worker information. Import Location, Department, Job that must be associated to the contingent worker into ServiceNow AI Platform instance (for example, via bulk import). In case, you do not import the corresponding IDs, these values remain null for the contingent employee.

Procedure

1. Map Magnit tasks to create adhoc tasks for contingent workers.
2. Configure properties in Source for HR Service Delivery Integration with Magnit.
3. Activate a schedule flow to pull contingent workers from Magnit application into ServiceNow AI Platform instance.

   A lifecycle event is triggered and a lifecycle case is created for each contingent worker. An HR task is created for each onboarding item within the lifecycle case.

Note:

- If an HR task is not created for onboarding item, verify if an active Magnit mapping record exists for that onboarding item.
- If HR profile, lifecycle case or an HR task is not created for a onboarding item, verify if all Restricted caller access are in **Allowed** state.

Map Magnit tasks

Map an onboarding item name with HR task template to create an adhoc task for the contingent worker.

Before you begin

Role required: sn_hr_magnit.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Magnit Integration** > **Magnit Task Mapping**.
2. On the form, fill in the fields:

Magnit Task Mapping

Field	Description
Onboarding item name	Onboarding item (related to contingent worker) that is pulled from Magnit application.
HR task template	HR task template with which the onboarding item is mapped.
Active	Option to activate the use of this mapping.

3. Click **Submit**.

Source for HR Service Delivery Integration with Magnit

Once you set up the HR Service Delivery Integration with Magnit application, the source record for HR Service Delivery Integration with Magnit application is automatically created in Enterprise Service Management Integrations Framework, Source module. The Magnit source record in the Enterprise Service Management Integrations Framework application contains a predefined set of properties and HR integration service.

Properties

Value	Description
full_pull_wait_time	Wait time between receiving correlation ID and calling the full pull action. **Note:** This property must be configured. It is a one time configuration.
delta_pull_wait_time	Wait time between receiving correlation Id and calling the delta pull action. **Note:** This property must be configured. It is a one time configuration.
full pull	When set to **true**, active employees onboarded in Magnit are pulled to ServiceNow AI Platform instance along with its associated onboarding items. A lifecycle case is created for the each user along with adhoc tasks based on the onboarding items. When set to **false**, new employees onboarded in Magnit (since the last successful pull) are synchronized to ServiceNow AI Platform instance. Any change in the details of contingent worker in Magnit which are already present in ServiceNow AI Platform is synchronized to the ServiceNow AI Platform via a delta pull. If there are new onboarding items that got associated to the employee after the last pull, new HR tasks are created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Value	Description
	Note: If there is an active lifecycle case for a contingent worker, then new onboarding tasks are created within the same lifecycle case. If there is no active lifecycle case associated to the contingent worker, then a new lifecycle case is created for the employee and onboarding tasks are created within it. **Note:** full pull is an optional property.

HR Integration Service for HR Service Delivery Integration with Magnit

Once you set up the HR Service Delivery Integration with Magnit application, HR integration service for Magnit is automatically created in Enterprise Service Management Integrations Framework. The flow in HR Integration Service communicates with the Magnit system to pull contingent workers into ServiceNow AI Platform instance.

HR Integration Services for Magnit

Name	Description
Get Contingent Worker	Pulls contingent workers from Magnit application into ServiceNow AI Platform instance.

Activate a schedule flow

Activate the schedule flow that interacts with Magnit to pull contingent workers from Magnit into the ServiceNow AI Platform instance.

Before you begin

Role required: sn_hr_magnit.admin

Procedure

1. Navigate to **Flow Designer** > **Designer**.
2. Open **Run HRSD Magnit Integration**.
   Alternatively, you can click **Run Job** in Source for HR Service Delivery Integration with Magnit to pull contingent workers from Magnit into the ServiceNow AI Platform instance.
3. Click **Activate**.
4. In the **Trigger** field, specify the time and interval at which you want to automatically run the scheduled flow.

Reference for HR Service Delivery Integration with Magnit

Reference for HR Service Delivery Integration with Magnit.

Components installed with HR Service Delivery Integration with Magnit

Several types of components are installed with activation of the HR Service Delivery Integration with Magnit plugin, including tables, and user roles.

HR Service Delivery Integration with Workday

The ServiceNow® HR Service Delivery Integration with Workday application is built by Bristlecone, Inc.

With this application, you can do the following:

- Synchronize worker profiles from Workday to a ServiceNow application.
- Pull Workday tasks into a ServiceNow application. Enable employees to view all their to-dos or tasks in a single place, Employee Center.

Application setup

First, you must activate the HR Service Delivery Integration with Workday application from ServiceNow Store. This automatically activates the Workday HR Spoke. Next you must set up Workday HR Spoke.

Note:

- HR Service Delivery integration with Workday depends on Workday HR Spoke.
- For the application to work with the ServiceNow Standard Ticket page, you must install these update sets.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Get started

Configure	Use	Reference
Plan and configure your implementation.	Using HR Service Delivery Integration with Workday.	Get details about components like fields, tables, and properties.

Configuring HR Service Delivery Integration with Workday

Pull Workday tasks or to-dos on regular scheduled basis or on manual basis for provided date range into ServiceNow instance. This allows the employees to view all their to-dos in a single place, Employee Center.

Application setup

- Activate the HR Service Delivery Integration with Workday application from ServiceNow Store. This automatically activates the Workday HR Spoke.
- Set up Workday HR Spoke Workday HR Spoke .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Activate the HR Service Delivery Integrations Framework from ServiceNow Store. HR Service Delivery Integration with Workday uses Enterprise Service Management Integrations Framework to pull tasks from Workday into ServiceNow. For more information on HR Service Delivery Integrations Framework, see Enterprise Service Management Integrations Framework.

To-dos settings

Store one-time configuration parameters for pulling tasks from Workday into ServiceNow. For more information, see Configure Workday to-dos.

Note:
The **HRSD Framework Integration** and **HRSD Integration Framework Complete** to-dos configurations help to display Workday tasks in the To-dos page in Employee Center. For more information on these to-dos configurations, navigate to **Employee Center** > **To-dos Configuration**.

Schedule flow activation

Activate and run the schedule flow that pulls tasks into ServiceNow. For more information, see Activating schedule flows.

Synchronize worker profiles

Pull worker profile data from Workday into ServiceNow. View worker profile details from Workday in ServiceNow HR Service Delivery.

The following sections explain how to set up the application, configure worker profile settings, activate and run the schedule flow to synchronise worker profiles.

Application setup

First, you must activate the HR Service Delivery Integration with Workday application from ServiceNow Store. This automatically activates the Workday HR Spoke. Next, you must set up Workday HR Spoke.

Worker profile settings

Store one-time configuration parameters for synchronizing data between Workday and ServiceNow. For more information, see Configure worker profile settings.

Note:
Even if you are not using Worker profile synchronization, ensure that you have configured the **Workday tenant time zone** field in the Workday Worker Profile Sync Configurations form. This field handles the time zones between the two systems, ServiceNow and Workday.

Schedule flow activation

Activate and run the schedule flow that pulls Worker profile information into ServiceNow. For more information, see Activating schedule flows.

Configure worker profile settings

Configure parameters to ensure that worker profiles are synchronized between Workday and ServiceNow.

Before you begin
Role required: sn_hr_workday.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Workday Worker Profile Sync** > **Configurations** > **Worker Profile Sync Configurations**.
2. Update the fields in the record as per your requirements.

Important:
For details on how to get the value for each of the fields in the form, refer to this KB article.

Workday Worker Profile Sync Configurations form

Field	Description
Workday tenant time zone	Time Zone of Workday workers.
Number of days to look ahead for upcoming onboarding and offboarding events	Number of days that is considered to pull the profiles of future workers who are onboarding or off boarding.
Department organization type ID	Unique identifier for the department organization type.
Location usage ID	Unique identifier for the location usage.
Location phone device type ID	Unique identifier for the location phone device type.
Location fax phone device type ID	Unique identifier for the location fax phone device type.
Location communication usage type ID	Unique identifier for the location communication usage type.
Enable dry run	When enabled, data is pulled into staging tables, but is not transformed to target tables.
Enable debugging	When enabled, additional logs are collected.
Worker home email communication usage type ID	Unique identifier for the worker home email communication usage type.
Worker work email communication usage type ID	Unique identifier for the worker work email communication usage type.
Worker work phone communication usage type ID	Unique identifier for the worker work phone communication usage type.
Worker home phone communication usage type ID	Unique identifier for the worker home phone communication usage type.
Worker mobile phone device type ID	Unique identifier for worker mobile phone device type.
Worker phone device Type ID	Unique identifier for worker phone device type.
Worker Home Address Type Reference Communication Usage Type ID	Unique identifier for worker home address.

3. Click **Submit**.

What to do next

Click the Get Reference ID Types related link to run the flow that interacts with Workday to pull the reference ID types that are referenced in the configuration fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure properties for Worker profile synchronization

Set the properties that control Worker profile synchronization.

Before you begin

Role required: sn_hr_workday.admin

Procedure

Navigate to **System Properties** and set the following property values:

Worker profile synchronization properties

Property	Description
sn_hr_workday.worker_service_flow_name	Provide name of the sub flow that is cloned from Get Worker Service. The format must be `scope-name.flow-name`.
sn_hr_workday.worker_page_size	Specify the page size for Get Workers Service. The maximum page size can be 999.
sn_hr_workday.exclude_contingent_workers	Set the value to **True** to exclude the contingent workers from the Workers pull. The default value is **False**.

Mapping worker profile fields

The Run Workday Integration Flow schedule flow maps Worker profile fields from Workday to the HR profile fields in ServiceNow.

Important:

- For details on fields that are mapped, refer to this KB article.
- Create an index on the first_name, last_name columns of HR profile to improve performance.

Integrate Workday professional worker profiles

Bring-in professional worker profile data from Workday into ServiceNow. View professional worker profile details from Workday in ServiceNow HR Service Delivery.

Note:

- Professional worker profiles data is additional to the existing employee profile data. So, make sure you have the employee data available in your ServiceNow instance.
- You need an active Employee definition to generate employee profiles. For more information, see Create an active employee definition.

The following steps show how the professional worker profile data is imported into ServiceNow:

- Activating and running the schedule flow **Run Workday Integration Flow** which contains the professional worker profile flow. For more information, see Activating schedule flows.
- Selecting the **Professional worker profile** check box that activates the **Get Professional Worker Profile** subflow.
- Activating **Get Professional Worker Profile Service**.
- Initiates the **Look up Professional Profiles Stream** action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Pulling data into the staging tables, and transform maps move data into target tables. For more information, see Use transform maps.
- Controlling access to the HR profile table with six Restricted caller access privileges (RCAs).

Configure Workday to-dos

Store one-time configuration parameters to pull tasks from Workday into the ServiceNow application.

Before you begin

Role required: sn_hr_workday.admin

Procedure

1. Navigate to **All** > **Workday Pull To-dos** > **Configuration Pull To-dos**.
   For information on the Pull to-dos report creation, see this KB article.
2. On the form, fill in the fields:

Workday Configuration Pull To-Dos

Field	Description
Workday to dos RAAS report name	Name of the report that is pulled from Workday. **Note:** Make sure you provide the exact name of the report for proper synchronization.
Workday to dos report owner username	Owner of the report. **Note:** Make sure you provide the exact name of the owner for proper synchronization.
Initial load start date time	Date and time from which you want to pull todos from Workday into ServiceNow.
Load Interval	Interval in which you want to pull data, for example, in terms of days or months or hours. Example: For initial load, if you want to pull data from the last six months, then you can set the load interval as 15 days. Data is pulled from the last six months (in a set of 15 days) till the starting time captured in the **Job Started at** field in Job tracker. In case the data is large, an outbound call timeout error is displayed in ServiceNow. You must then decrease the load interval. If a schedule flow is run for every 12 hours, then data is always pulled till current time.

Activating schedule flows

Activate the schedule flow that interacts with Workday to pull worker profile information and tasks into a ServiceNow application.

Before you begin

Role required: sn_hr_workday.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Flow Designer** > **Designer**.
2. Open **Run Workday Integration Flow**.
3. In the Trigger section, specify the time and interval at which you want to automatically run the scheduled flow.
4. In Actions section, expand **Call Run Workday Service Subflow**.
5. Select the data that you want to pull.
   You have the following options:
   - **Department**
   - **Location**
   - **Job Profile**
   - **Worker Profile**
   - **Effective Worker Profile**
   - **Future Worker Profile**
   - **Retrieve All Data**
   - **Pull To-dos**
   - **Professional worker profile**

   Note:
   - For a partial pull, deselect the **Retrieve all data** check box. Only modified data (based on the last successful schedule run time) is pulled from Workday into the ServiceNow instance. Partial pull is not supported for Department and Location. It is only supported for HR profile and Job Profile.
   - For a full pull, select the **Retrieve all data** check box. All the data is pulled from Workday into the ServiceNow instance.
   - The **Retrieve All Data** check box is not supported for **Pull To-Dos**. The first pull will always be a full pull based on the configuration parameter **Initial Load Date time**
   - Before you run the flow, turn off reporting: **com.snc.process_flow.reporting.level**.
6. Select **Done**.
7. Select **Activate**.

Result

The flow is activated after all the trigger conditions are met. The schedule flow pulls data in the following order:

- Locations
- Departments
- Job profile
- Workers
- Future workers
- Effective workers
- Jobs

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Once data is pulled into staging tables, transform maps move data into target tables. For more details, refer to Use transform maps.

Using HR Service Delivery Integration with Workday

Understand how you can use HR Service Delivery Integration with Workday to process employee information at ServiceNow.

Use transform maps

Transform maps specify data relationships between source table and target table.

For details on the transform maps, navigate to **System Import Sets** > **Administration** > **Transform Maps**.

Transformation Maps

Name	Description
Job Profile Transform Map	Maps job profiles from the Job Profile Staging [sn_hr_workday_job_profile_staging] table to the Job Profile [sn_hr_core_job_profile] table.
Location Transform Map	Maps locations from the Location Staging [sn_hr_workday_location_staging] table to the Location [cmn_location] table.
HR Profile Transform Map	Maps workers, future workers, and effective workers from the HR Profile Staging [sn_hr_workday_hr_profile_staging] table to the HR Profile [sn_hr_core_profile] table.
Department Transform Map	Maps departments from the Department Staging [sn_hr_workday_department_staging] table to the Department [cmn_department] table.
HR Job Transform Map	Maps jobs from the HR Job Staging [sn_hr_workday_hr_job_staging] table to the Job [sn_hr_core_job] table.
HRSD Workday Pull Inbox Items	Maps to-dos from the Workday Integration Todos Staging [sn_hr_workday_todo_staging] table into the Workday Todos [sn_hr_workday_todo] table.
HRSD Workday Professional Profile Transform Map	Maps professional worker profiles from the Staging table [sn_hr_workday_professional_profile_staging] to the Professional profile table [sn_professional_profile].
HRSD Workday Certifying Board Code	Maps board code from the Staging table [sn_hr_workday_certifying_board_code_staging] to the Workday Certifying Board Code table [sn_professional_certifying_board_code].
HRSD Workday Education and Training	Maps education and training from the Staging table to the Workday Education and Training table [sn_employee_education_training].
HRSD Workday Other Name	Maps other name from the Staging table [sn_hr_workday_other_name_staging] to the Workday Other Name table [sn_professional_other_name].
HRSD Workday Practice Location	Maps practice location from the Staging table [sn_hr_workday_practice_location_staging] to the Workday Practice Location table [sn_professional_practice_location].

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Transformation Maps (continued)

Name	Description
HRSD Workday Employee Employment History	Maps employment history from the Staging table to the Workday Employee Employment History table [sn_employee_employment_history].
HRSD Workday Professional Reference	Maps professional reference from the Staging table [sn_hr_workday_professional_reference_staging] to the Workday Professional Reference table [sn_professional_reference].
HRSD Workday Professional Specialty Detail	Maps professional specialty detail from the Staging table [sn_hr_workday_professional_specialty_detail_staging] to the Workday Professional Specialty Detail table [sn_professional_specialty_detail].
HRSD Workday Languages Spoken	Maps languages spoken from the Staging table [sn_hr_workday_languages_spoken_staging] to the Workday Languages Spoken table [sn_employee_languages_spoken].

View job tracker details from Workday

Track every pull that has been performed from ServiceNow to Workday either by schedule job or manual reconciliation process. View details of the job, such as when did the job begin and end, when did the records start loading into staging tables, or did the job run completely or fail in between.

Before you begin

Role required: sn_hr_workday.admin

Procedure

1. Navigate to **All** > **Workday Worker Profile Sync** > **Job Tracker** > **Workday Integration Job Tracker**.
2. View job details.

Workday Integration Job Trackers form

Field	Description
Job name	Name of the job that has run.
Job started at	Date and time when the job started.
Job ended at	Date and time when the job ended.
State	Current state of the job, such as **Complete** and **Failed**.
Error message	Message displayed when the job has failed.

3. Select a job record.

   In the **Workday Integration Service Job Trackers** related list, view the service job details.

Workday Integration Service Job Trackers form

Field	Description
Number	Unique identifier for the service job run.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Workday Integration Service	Name of the service job that has run. For example, Worker Profiles integration service.
Job state	Current state of the service job. For example, Completed or Failed.
Job started at	Date and time when the service job run started.
Job ended at	Date and time when the service job run ended.
Error Source	Phase during which the error has occurred: API Error, Transformation Error, or Configuration Error.
Error Message	Message displayed when the job has failed.
Start Date Time-API Parameter	Date after which the modified records are pulled from Workday into ServiceNow.
End Date Time-API Parameter	Date until which the modified records are pulled from Workday into ServiceNow.
Import Set	Name of the import set that is pulled.

View tasks from Workday

View details of the todos or tasks that are pulled from Workday into ServiceNow.

Before you begin

Role required: admin, sn_hr_workday.admin

Procedure

1. Navigate to **All** > **Workday Pull To-Dos** > **Workday To-Dos**
2. On the form, view the fields.

Workday Todos

Field	Description
Integration todo ID	Unique identifier for the Workday task.
Active	Option indicating whether the task is active in Workday.
Assigned to	User to whom the task is assigned.
Todo state	Current state of the task in ServiceNow. For example, **Open**, and **Complete**.
URL	URL that navigates to Workday to complete the task.
Todo description	Description of the Workday task visible in ServiceNow Employee Service Center .
Due date	Date and time by which the task has to be completed.
External status	Current status of the task in Workday. For example, **Awaiting Action**, and **Cancelled**.
Extension system	Option indicating the origin of the task, that is Workday.

Reference - HR Service Delivery Integration with Workday

Reference topics provide additional information about the HR Service Delivery Integration with Workday, including lists and forms.

Components installed with HR Service Delivery Integration with Workday

Several types of components are installed with activation of the HR Service Delivery Integration with Workday (sn_hr_workday) application, including tables and user roles.

Demo data is available for this feature.

Roles installed

Roles installed with HR Service Delivery Integration with Workday

Role title [name]	Description	Contains roles
HR Workday Admin [sn_hr_workday.admin]	• Can access all features and capabilities of the HR Service Delivery Integration with Workday application. • Can configure worker profile settings.	• flow_operator • import_admin • sn_hr_workday.user

Scheduled flows installed

Scheduled flows installed with HR Service Delivery Integration with Workday

Scheduled flow	Description
Run Workday Integration Flow	Pulls data from Workday to ServiceNow. By default the flow is in inactive state. For information on how to activate the flow, see Activating schedule flows.

Tables installed

Tables intalled with HR Service Delivery Integration with Workday

Table	Description
Workday Worker Profile Sync Configuration [sn_hr_workday_configuration_worker_profile_sync]	Stores one-time configuration parameters for the initial setup of the HR Service Delivery Integration with Workday application. These parameters ensure that worker profile information is pulled from Workday into the ServiceNow application.
Workday Integration Job Tracker [sn_hr_workday_job_tracker]	Tracks every job pull that has been performed from the ServiceNow application to Workday either by schedule job or manual reconciliation process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables intalled with HR Service Delivery Integration with Workday (continued)

Table	Description
Workday Integration Service Job Tracker [sn_hr_workday_service_job_tracker]	Tracks every service job pull that has been performed from the ServiceNow application to Workday either by schedule job or manual reconciliation process.
Workday Todos [sn_hr_workday_todo]	Stores todos that are pulled from Workday.
Workday Configuration Pull To-Dos [sn_hr_workday_pull_todo_config]	Stores parameters or inputs which help in setting up the todos configuration.

Worker profile synchronization limitations

Limitations to the data that is synchronized from Workday to ServiceNow.

- Partial pull is not supported for Department and Location. It is only supported for HR profile and Job Profile.
- When an organization, a location, and a job profile is made inactive in Workday, it does not become inactive in ServiceNow. This is because the Department table, Location table, and Job profiles table in ServiceNow do not have the **Active** field to record the status information.
- The following fields are not mapped while synchronizing HR profiles:
  - Under Employee Information: Leave status, Location type, Notice period, Probation end date, Probation period, Social Security number, and Business.
  - Under Jobs: Location type and Work email.

HR Service Delivery Advanced Integration with Workday

The ServiceNow® HR Service Delivery Advanced Integration with Workday application is built by Bristlecone, Inc.

HR Service Delivery Advanced Integration with Workday enables you to complete the following tasks:

As an advanced Workday administrator

- Configure templates to display customized Total Rewards information to employees in the configured Service Portal. See Set up Total Rewards using Workday.
- Configure legal name change settings to enable employees to change their legal name from Employee Center. See Legal name change configuration.
- Import time offs, holiday calendars, and schedule calendars from Workday into the ServiceNow application enabling employees to submit a time-off request from Employee Center. See Time off request to Workday.

As an employee

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Submit your time-off request from Employee Center. See Request a time off.
- Change your legal name through virtual agent conversation in Employee Center. See Change legal name through Virtual Agent.
- Report discrepancy in your Workday payslip from Employee Center. See Report an issue with your payslip.
- View your Total Rewards information (such as benefits, compensation, and allowances) in the configured Service Portal.
- View your holiday calendars in the configured Service Portal.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Get started

Configure	Use	Reference
Plan and configure your integration.	Using the HR Service Delivery Advanced Integration with Workday application.	Get details about components like tables, user roles, and scheduled jobs.

Configuring

Configure HR Service Delivery Advanced Integration with Workday.

Application setup

First, you must activate the HR Service Delivery Advanced Integration with Workday application from ServiceNow Store, which automatically activates the Workday HR Spoke. Next, set up Workday HR Spoke Workday HR Spoke , and install the following applications:

- Glide Virtual Agent plugin [com.glide.cs.chatbot]
- Human Resources Scoped App: NLU Model[com.sn_hr_nlu_model]
- Human Resources Scoped App: Core [com.sn_hr_core]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:

- The HR Service Delivery Advanced Integration with Workday application is built on Workday web service version 33.2. The application may not be compatible with the previous or later versions of Workday web service version 33.2.
- For the application to work with the ServiceNow Standard Ticket page, you must install these update sets : **standard_ticket_rca**
- For the application to work with Human Resource: Core, you must install these update sets : **human_resources_core_rca**
- For the application to work with Human Resources: Service Portal, you must install these update sets : **human_resources_portal_rca**

Set up Total Rewards using Workday

Configure the Total Rewards templates by choosing plans, sections, and target audience. Display a customized Total Rewards widget to employees in the configured Service Portal.

Before you begin

Role required: sn_hr_workday_adv.admin

Configure the required reports for the Total Rewards functionality. See Configure reports HR Service Delivery Advanced Integration with Workday.

Procedure

1. Set up plans to include in sections in Total Rewards Template.
   For more information, see Set up plans for Total Rewards.
2. Set up sections to include in Total Rewards Template.
   For more information, see Set up sections for Total Rewards templates.
3. Set up Total Rewards template by choosing sections, and target audience.
   For more information, see Set up a template for Total Rewards.

What to do next

1. Navigate to **Service Portal** > **Service Portal Configuration** > **Designer**. Display the Total Rewards view to employees by adding the **View Workday Total Rewards** widget to the required Service Portal.
2. Configure the system property, **sn_hr_workday_adv.workday_total_rewards.currency_code**, which stores the currency code to call the Total Rewards RAAS (Report As A Service) based API. The default value of the property is **USD**.

Set up plans for Total Rewards

Complete the one time set up of pulling plans, such as employee benefits plan, compensation plan, insurance plan, from Workday into the ServiceNow application.

Before you begin

Role required: sn_hr_workday_adv.admin

Procedure

1. Navigate to **All** > **Workday Advanced Use Cases** > **Total Rewards** > **Plans Available**.
2. Click **Get Reference IDs** to pull the plans from Workday into ServiceNow tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The plans from Workday are pulled into Workday Reference ID List Staging [sn_hr_workday_adv_reference_id_list_staging] table and from staging table into Workday Reference ID List [sn_hr_workday_adv_reference_id_list] table.

3. On the form, view the fields:

Workday Reference ID Lists form

Field	Description
Descriptor	Description of the plan that is pulled from Workday.
Descriptor ID	Descriptor ID of the plan that is pulled from Workday.
Workday ID	Unique identifier that is generated from Workday.
Reference ID Type	Reference ID of the plan that is pulled from Workday. For example, Compensation Plan ID, Health Care Coverage Plan ID, and Insurance Coverage Plan ID.

Set up sections for Total Rewards templates

Create sections and associate plans to it. Add those sections to Total Rewards Template.

Before you begin

Role required: sn_hr_workday_adv.admin

Procedure

1. Navigate to **All** > **Workday Advanced Use Cases** > **Total Rewards** > **Plans Available**.
2. Click **New**.
3. On the form, fill in the fields:

Total Rewards Section Setup form

Field	Description
Section name	Name of the section. For example: Allowances.
Plans	Plans that you want to include in the section. For example, Allowance - Car, Allowance - Mobile, and Allowance - Housing

4. Click **Submit**.

Set up a template for Total Rewards

Set up a template by adding sections to it. Templates enable you to display a customized Total Rewards view to employees in the configured Service Portal.

Before you begin

Role required: sn_hr_workday_adv.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workday Advanced Use Cases** > **Total Rewards** > **Template Set up**.
2. Click **New**.
3. On the form, fill in the fields:

Total Rewards Template Setup form

Field	Description
Template name	Suitable name of the template.
Sections	Sections that you want to include in the template, for example, Base Pay, Allowances, Incentive Pay, and Commission.
Applies to	Template applies only to the selected user criteria. For example, the template is applicable only to employees whose Employment Type Is Full Time.
Order	If more than one template is applied to an employee, only the template with a lesser order is displayed to the employee in the configured Service Portal.
Domain	Reference to domain.

4. Click **Submit**.

Legal name change configuration

Complete the legal name change configuration to allow employees to change their legal name through virtual agent conversation in Employee Center.

Before you begin

Role required: sn_hr_workday.admin

Procedure

1. Navigate to **All** > **Workday Advanced Use Cases** > **Legal Name Change** > **Document Categories**.
2. To pull the legal name change document categories from Workday into a ServiceNow application, click **Get Reference IDs**.
   A data source with a predefined script imports document categories into the Workday Reference ID List Staging [sn_hr_workday_adv_reference_id_list_staging] table and from staging table into the Workday Reference ID List [sn_hr_workday_adv_reference_id_list] table.

What to do next

1. Navigate to **Workday Advanced Use Cases** > **Legal Name Change** > **Configuration**.
2. On the Legal Name Change Configurations form, click **New**.
3. To allow an employee to upload the name change document in Virtual Agent conversation in Employee Center, click the **Enable document upload** option and select a relevant document category.
4. Click **Submit**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure reports HR Service Delivery Advanced Integration with Workday

Configure the necessary reports to pull data, such as time offs plans, time off reasons, holiday calendar WID, and work schedule calendar WID, from Workday into the ServiceNow tables.

Important:
Only a Workday administrator can create reports in Workday. A ServiceNow administrator must collect the report details from a Workday administrator.

Time off use case

To use the Time off request functionality, create the following reports:

- Absence table reasons
- Absence table tiers
- Absence tables
- Get holiday calendar WID
- Get work schedule calendar WID
- Time off plans
- Time off reasons
- Time off types
- Time offs

Note:
For information about the Time off request functionality, see Time off request to Workday.

Payroll use case

To use the Payslip discrepancy functionality, create the Look up payslip report.

Note:

- For information about the Payslip discrepancy functionality, see Report an issue with your payslip.
- For information about the Look up payslip report creation, see this KB article.

Total rewards use case

To use the Total rewards functionality, create the Total Rewards report.

Note:

- For more information about the Total rewards functionality, see Set up Total Rewards using Workday.
- For information about the Total Rewards report creation, see this KB article.

Holiday calendar use case

To use the Holiday calendar functionality, create the Get holiday calendar WID report.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- If you have already created Get holiday calendar WID report for the Time off request functionality, creating another report of Get holiday calendar WID is not required.
- For more information about the Holiday Calendars functionality, see Holiday calendars.
- For information about the Holiday Calendar report creation, see this KB article .

Configure Virtual Agent topics for HR Service Delivery Advanced Integration with Workday

Complete the configuration steps to enable your employees place requests to the Workday system using the Now Assist for HRSD Virtual Agent topics in Employee Center.

Before you begin

Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

Procedure

1. Install the HR Service Delivery Advanced Integration with Workday, Now Assist for HRSD, and Enterprise Service Management Integrations Framework (v3.6) applications from ServiceNow Store.
2. Configure the Workday HR Spoke to pull data from Workday system.
3. Create subflows aligning with Template Integration Gateway.
   See Create a subflow using Template Integration Gateway.

   Note:
   You can use the default subflows that have been created for Workday for the Request Time off and Get Time Off Balance Virtual Agent topics.

4. Configure Integration Provider Mapping (Decision table) by adding input choices and configuring conditions on input choices and results.
5. Create a Virtual Agent topic block:

   Note:
   The Virtual Agent topics are available by default with the Now Assist for HRSD scope.

   a. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.
   b. From the **LLM Assistant** list, select **Now Assist in Virtual Agent**.
   c. Select a Virtual Agent topic.
      i. Edit topic properties, make the necessary edits in the topic, such as update the node name, and response message.
      ii. In Integration Gateway, specify the appropriate feature, service name, user, and make the necessary edits.

What to do next

When an Virtual Agent topic invokes the Integration Gateway subflow, the subflow reviews input values in Integration Provider Mapping (Decision table) to execute results.

Configure AI agents for HR Service Delivery Advanced Integration with Workday

Enable your employees to place requests to the Workday system using the Now Assist for HR Service Delivery (HRSD) agent collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

View Subflow-agent mapping for HR Service Delivery Advanced Integration with Workday.

Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

Procedure

1. Install the Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai).
   For more information, see Configure Now Assist for HR Service Delivery (HRSD).
2. Activate the [Enterprise Service Management Integrations Framework] application from the ServiceNow® Store.
3. Configure the Workday HR Spoke to pull data from Workday system.
4. Create subflows aligning with Template Integration Gateway.
   For more information, see Create a subflow using Template Integration Gateway.

   Note:
   You can also use the default subflows that have been created for Workday.

5. Add input choices and define conditions and results in a decision table for the Integration Gateway subflow.
   For more information, see Configure Integration Provider Mapping (Decision table).
6. Duplicate AI agents available for Workday to run them autonomously.
   For more information, see Duplicate an AI agent.

   Note:
   In the Toggle display section, ensure the toggle beside Virtual Agent is enabled.

Using

Understand how you can use HR Service Delivery Advanced Integration with Workday to process advanced employee information at ServiceNow.

Time off request to Workday

You can submit a time off request to Workday from Employee Center.

The following sections explain how to configure time off settings, and raise a time off request from Employee Center.

Time off settings

- Configure the reports for time offs, absence tables, holiday calendars, and work schedule calendars. See Configure reports HR Service Delivery Advanced Integration with Workday.
- Import set up data for time offs. See Time offs.
- Get Holiday Calendars from Workday. See Holiday calendars.
- Get Work Schedule Calendars from Workday. See Work schedule calendars.

Time off request

Request a time off to Workday from Employee Center. For more information, see Request a time off.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Limitations

- Custom validations that are supported in Workday are not handled in the ServiceNow application. For example, if an organization has a time off plan configured to enter time off quantity in multiples of 2 or 4, such validations are not supported for such time off plans in the ServiceNow application.
- A maximum of 25 days of leave, including holidays and non-working days, can be applied from the ServiceNow application.

Time offs

Complete the one time set up of pulling time offs from Workday into the ServiceNow application.

Before you begin

Role required: sn_hr_workday.admin

Configure the required reports for the Time Off request functionality. See Configure reports HR Service Delivery Advanced Integration with Workday.

Procedure

1. Navigate to **All** > **Workday Advanced Use Cases** > **Time Off Request** > **Time Off Types**.
2. Click **Import time off setup data**.
3. Click **Submit**.

What to do next

1. Navigate to **Service Catalog** > **Catalog Definitions** > **Content Items**.
2. Configure the URL of time off request page in Workday.
3. Open the Time Off Request – Link to Workday record and modify the URL field.
4. Navigate to Employee Service Center. In the Catalog menu, open **Benefits Category** > **Time Off Request –Link to Workday**. You are directed to the Workday Time Off request page.

Work schedule calendars

Pull work schedule calendars from Workday into the ServiceNow application.

Before you begin

Role required: sn_hr_workday.admin

Procedure

1. Navigate to **All** > **Workday Advanced Use Cases** > **Time Off Request** > **Work Schedule Calendar**.
2. Click **Get Work Schedule Calendars** to run a flow that pulls schedule calendars from Workday into the ServiceNow application.

Work Schedule Calendars form

Field	Description
Work schedule calendar	Name of the work schedule calendar. For example, Standard 40 Hour Week.
Work schedule calendar ID	Unique identifier of the work schedule calendar that is pulled from Workday.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Work week start day	Day in a week when the work schedule calendar begins.
Work week start day ID	ID of the day in a week when the work schedule calendar begins.
Start time	Time when the work schedule begins for the day.
End time	Time when the work schedule ends for the day.
Day of week	Day in a week in a work schedule calendar.
Day of week ID	ID of a day in a week in a work schedule calendar.
Domain	Reference to domain.

3. Click **Submit**.

Holiday calendars

Pull holiday calendars from Workday into the ServiceNow application. Display the Holiday Calendar widget to employees in the configured Service Portal.

Before you begin

Role required: sn_hr_workday.admin

Configure the Get holiday calendar WID report. For more information, see Configure reports HR Service Delivery Advanced Integration with Workday.

Procedure

1. Navigate to **All** > **Workday Advanced Use Cases** > **Time Off Request** > **Holiday Calendars**.
2. Click **Get Holiday Calendars** to run the subflow that interacts with Workday to pull holiday calendars.
3. To create a holiday calendar, click **New**.

Holiday Calendar form

Field	Description
Calendar event name	Name of the holiday event. For example, Holidays for Argentina.
Holiday calendar ID	ID for the holiday calendar that is pulled from Workday.
Holiday calendar WID	Unique identifier of the holiday calendar that is pulled from Workday.
Domain	Reference to domain.
Start date	Start date of the calendar event.
Start time	Start time of the calendar event.
End date	End date of the calendar event.
End time	End time of the calendar event.
Holiday Calendar name	Name of the holiday calendar. For example, Christmas day.

4. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Display holiday calendar widget to employees.

1. Navigate to **Service Portal** > **Service Portal Configuration** > **Designer**.
2. In widget, select the **View Workday Holiday Calendar** and add it to the required Service Portal page.

Request a time off

Request a time off to Workday from Employee Center.

Before you begin

- Role required: none
- You might not be able to submit a time off request if your HR profile does not have a valid employee number and employment type.

Procedure

1. Navigate to **All** > **Employee Center** > **Catalogs** > **Benefits**.
2. Click **Time Off Request**.
3. In the **Time off start date** field, specify the date from which you are applying the time off.
4. In the **Type of time off** field, specify the type of time off you are availing.
   For example, USA sick plan leaves plan, or Mexico leave plan.
5. In the **How many days do you to want to take off** field, specify the number of days for which you are applying time off.
6. In the **Time off per day** field, specify value for the time off in hours or days.

   Note:
   The **Unit of Time** field auto-populates the unit of time (days or hours) for the time off.

7. Click **Submit**.
   An HR case is created. If the time off is submitted successfully, the HR case changes to Closed complete state. If the time off is not submitted successfully, the HR case changes to Closed Incomplete state.

Change legal name through Virtual Agent

Change your legal name change through Virtual Agent chat in Employee Center.

Before you begin
Role required: none

Procedure

1. Navigate to Employee Center.
2. Click Virtual Agent.
3. Enter a text.
   For example, name change. Your current first name and last name are displayed.
4. To continue with the legal name change in Workday, press **Yes**.
5. Enter a first name, a last name, and a middle name.
6. Upload the supporting legal name change document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The option does not appear if it is not configured by your administrator.

7. Enter a description for the uploaded legal name change document.
8. Review your updated legal name changes and supporting document and press **Yes**.
   An HR case is created and the chat conversation is ended.

Publish the VA topic template for legal name change

Publish the Workday Legal Name Change Template which contains an NLU model that recognizes and processes employee utterances, intentions (intents), and objects of, or contexts for, an action (entities).

Before you begin

Role required: sn_hr_workday.admin

Procedure

1. Navigate to **All** > **Collaboration** > **Virtual Agent** > **General Settings**.

   Note:
   The **Enable NLU model** toggle switch must be enabled.

2. Navigate to **Collaboration** > **Virtual Agent** > **Designer**.
3. Select **Workday Legal Name Change Template**.
4. Click **Publish**.

Report an issue with your payslip

Report an issue with your Workday payslip from Employee Center.

Before you begin

- Role required: none
- You might not be able to report payslip discrepancy if your HR profile does not have a valid employee number and employment start date.

Procedure

1. Open Employee Center.
2. Navigate to **Catalog** > **Payroll** > **Payroll Discrepancy - Workday**.
3. In the **Payroll year** field, select the year in which the payslip was generated.
4. In the **Payroll month** field, select the month in which the payslip was generated.
5. In the **Payment date** field, select the date on which the payslip was generated
6. In the **How can we help you with this payslip** field, specify the discrepancy that is found in the payslip.
7. Click **Submit**.
   An HR case is created that is in Ready state.

HR Service Delivery Integration with Workday Learning

The ServiceNow® HR Service Delivery Integration with Workday Learning application is built by Bristlecone, Inc.

With this application, you can do the following:

- Synchronize worker profiles from Workday to a ServiceNow application.
- Pull Workday tasks into a ServiceNow application. Enable employees to view all their to-dos or tasks in a single place, Employee Center.

Application setup

First, you must activate the HR Service Delivery Integration with Workday Learning application from ServiceNow Store. This automatically activates the Workday Learning Spoke. Next you must set up Workday HR Spoke.

Note:

- HR Service Delivery Integration with Workday Learning depends on Workday Learning Spoke.
- For the application to work with the ServiceNow Standard Ticket page, you must install these update sets.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get started

Use	Configure	Reference
Using HR Service Delivery Integration with Workday.	Plan and configure your implementation.	Get details about components like fields, tables, and properties.

Configure HR Service Delivery Integration with Workday Learning

Pull Workday learning tasks or to-dos on regular scheduled basis or on manual basis for provided date range into ServiceNow instance. This allows the employees to view all their to-dos in a single place, Employee Center.

Application setup

- Activate the HR Service Delivery Integration with Workday Learning application from ServiceNow Store. This automatically activates the Workday HR Spoke.
- Set up Workday Learning Spoke.
- Activate the HR Service Delivery Integrations Framework from ServiceNow Store. HR Service Delivery Integration with Workday Learning uses Enterprise Service Management Integrations Framework to pull tasks from Workday Learning into ServiceNow. For more information on HR Service Delivery Integrations Framework, see Enterprise Service Management Integrations Framework.

Schedule flow activation

Activate and run the Trigger Workday Learning Integration that pulls tasks into ServiceNow. For more information, see Activate schedule flows.

Activate schedule flows

Activate the schedule flow that interacts with Workday Learning to pull user profile information and tasks into a ServiceNow application.

Before you begin

Role required: sn_lrn_workday.admin

Procedure

1. Open **Run Trigger Workday Learning Integration**.
2. Navigate to **Flow Designer** > **Designer**.
3. Click **Activate**.
4. In the **Trigger** field, specify the time and interval at which you want to automatically run the scheduled flow.
   This flow in turn triggers the subflows to automate tasks. To customize the sample flow, copy it to the required application scope.

   Available subflows include:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activate scheduled flow details

Subflow	Description
Assign Course to Workday Learning	Assigns learning courses to the ServiceNow users.
Pull Courses from Workday Learning	Retrieves details of the learning courses and maps courses from Workday Learning to ServiceNow.
Pull User Activity from Workday Learning	Retrieves user course activity data from Workday Learning and saves it in the ServiceNow instance.
Track Approval for Workday Learning	Retrieves details of learning todos from Workday Learning and saves it in the ServiceNow instance.
Workday Learning User Mapping	Maps users between Workday Learning and ServiceNow instance.

Note:
These subflows are editable. If you want to make changes to the configurations that are shipped along with HR Service Delivery Integration with Workday Learning

Once data is pulled into staging tables, transform maps move data into target tables. For more details, refer to Use transform maps.

Synchronize workday learning users

Pull user profile data from Workday Learning into ServiceNow. View user profile details from Workday in ServiceNow HR Service Delivery.

Before you begin
Role required: sn_lrn_workday.admin

Procedure

1. Open **Run Trigger Workday Learning Integration**.
2. Navigate to **Flow Designer** > **Designer**.
3. Click **Activate**.
   This flow in turn triggers the subflows to automate tasks. To customize the sample flow, copy it to the required application scope.

Using HR Service Delivery Integration with Workday Learning

Understand how you can use HR Service Delivery Integration with Workday Learning to process employee information at ServiceNow.

View user activity for Workday Learning

All user activity data is shipped along with HR Service Delivery Integration with Workday Learning. However, if you want to view or edit the user activity details, you can edit the respective subflow and then edit the respective record.

Before you begin
Role required: sn_lrn_workday.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workday Learning** > **Data Sources** > **Sync User Activity**.
2. Select **Sync User Activity for Workday Learning**.
3. On the form, edit the fields.

   For a description of the field values, see Edit a record in HR Service Delivery Integration with Workday Learning.

View track approval for Workday Learning

Track every pull that has been performed from ServiceNow to Workday Learning. View or edit details of the job, such as when did the job begin and end, when did the records start loading into staging tables, or did the job run completely or fail in between.

Before you begin

Role required: sn_lrn_workday.admin

Procedure

1. Navigate to **All** > **Workday Learning** > **Data Sources** > **Track Approval**.
2. Select **Track Approval for Workday Learning**.
3. On the form, edit the fields.

   For a description of the field values, see Edit a record in HR Service Delivery Integration with Workday Learning.

Use transform maps

Transform maps specify data relationships between source table and target table.

For details on the transform maps, navigate to **System Import Sets** > **Administration** > **Transform Maps**.

Transformation Maps

Name	Description
Workday Learning User Mapping	Maps users profiles from the user Profile Staging [sn_lrn_workday_user_mapping_staging] table to the User Profile [sn_lc_user_mapping] table.

HR Service Delivery integration with Oracle Cloud HCM

The ServiceNow® HR Service Delivery integration with Oracle Cloud HCM application is built by Bristlecone, Inc. This integration enables you to pull data for departments, locations, positions, workers, and assignments from the Oracle HCM Cloud into the ServiceNow® platform.

Application setup

First, you must activate the HR Service Delivery integration with Oracle Cloud HCM [sn_hr_oracle_hcm] application, from the ServiceNow Store. This automatically activates the Oracle HCM Cloud spoke [sn_oracle_hcm_spoke] and the Enterprise Service Management Integrations Framework [sn_hr_integr_fw].

For next steps, see Configuring HR Service Delivery integration with Oracle Cloud HCM.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Get started

Configure	Use	Reference
Plan and configure your integration.	Work on integrating ServiceNow with Oracle HCM Cloud.	Get details about components like fields, tables, and properties.

Configuring HR Service Delivery integration with Oracle Cloud HCM

Set up Oracle HCM for HR Service Delivery to pull worker data from Oracle HCM into a ServiceNow instance. View worker profiles from Oracle HCM Cloud in ServiceNow HR Service Delivery.

Before you begin

- Role required: None
- Activate HR Service Delivery integration with Oracle Cloud HCM that automatically activates Enterprise Service Management Integrations Framework and Oracle HCM Cloud spoke.

> **Note:**
> If you are upgrading from HR Service Delivery integration with Oracle Cloud HCM V 1.0.1 to a later version, follow the instructions in this KB article.

Procedure

1. Install update sets.
   For more information, see update sets in supporting links in ServiceNow store.
2. Allow RCAs manually in the Utah release.

   This step is not required if you have already upgraded to Enterprise Service Management Integrations Framework 3.3.8 version.

   Allow the Restricted Caller Access records with Status = **Requested** and Source Scope = **Enterprise Service Management Integrations Framework**.
3. For better performance, index the employee number field in HR Profile table and index coalesce fields in transform maps.
   For more information, see create a table index.
4. Set up Oracle HCM spoke.
   For more information, see set up Oracle HCM Cloud spoke.
5. **Optional:** Configure integration source properties for HR Service Delivery integration with Oracle Cloud HCM
   For more information, see Configure properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Activate and run the scheduled flow that synchronizes Worker profile information between Oracle HCM and ServiceNow HR Service Delivery periodically.
   For more information, seeActivate schedule flows.

Configure properties

Once you set up HR Service Delivery integration with Oracle Cloud HCM, the source record for the Oracle HCM Cloud application is automatically created in the Enterprise Service Management Integrations Framework, Source module. The integrations source properties can be used to configure the HR Service Delivery integration with Oracle Cloud HCM.

These properties are available for HR Service Delivery integration with Oracle Cloud HCM.

To set the properties, navigate to **Integrations Framework** > **Source** > **Oracle HCM Cloud**.

Properties for HR Service Delivery integration with Oracle Cloud HCM

Property	Description
workers_records_per_page	Number of worker records that are pulled per page from the Oracle HCM Cloud system. Default value: 100
locations_records_per_page	Number of records that are pulled per page for locations from the Oracle HCM Cloud system. Default value: 100
departments_records_per_page	Number of records that are pulled per page for departments from the Oracle HCM Cloud system. Default value: 100
position_records_per_page	Number of records that are pulled per page for positions from the Oracle HCM Cloud system. Default value: 100
workers_query	List of query fields. For example, PersonId, PersonNumber, DateOfBirth, ApplicantNumber DisplayName, FullName, and ListName The property can be left blank, or a relevant query can be provided in the format specified in Oracle HCM. **Note:** workers_query is an optional property.
full_pull	When set to **True**, all the records are pulled from the Oracle HCM system into respective tables in ServiceNow instance. When set to **False**, only modified records (based on last successful schedule run time) are pulled from the Oracle HCM system into respective tables in ServiceNow instance. Default value: False

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activate schedule flows

Activate a schedule flow that interacts with Oracle HCM to pull worker profile information into a ServiceNow instance. This flow automatically pulls all new changes in the Oracle HCM and keeps the worker profiles updated in the HR Service Delivery.

Before you begin
Role required: admin

Procedure

1. Navigate to **Process Automation** > **Flow Designer**.
2. Select **Trigger Oracle HCM Integration**.
3. In the Trigger section, set the time and interval at which you want to automatically run the scheduled flow.
4. Click **Done**.
5. Click **Activate**.

Using HR Service Delivery integration with Oracle Cloud HCM

Understand how to use the integration feature to get the data from Oracle cloud HCM into ServiceNow.

Mapping entity profile fields

The Trigger Oracle HCM Integration flow maps the entity profile fields from Oracle HCM to the HR profile fields in the ServiceNow® platform.

Important:
For details about the fields that are mapped, refer to this KB article.

Run a scheduled job

Manually run the schedule job to pull data from Oracle HCM to the ServiceNow platform.

Before you begin
Role required: admin

Procedure

1. Navigate to **Integrations framework** > **Sources**.
2. Open the Oracle HCM record.
3. Click **Run job**.

Reference - HR Service Delivery integration with Oracle Cloud HCM

Reference topics provide additional information about the HR Service Delivery integration with Oracle Cloud HCM, including lists and forms.

Components installed with HR Service Delivery integration with Oracle Cloud HCM

Several types of components are installed with the activation of the HR Service Delivery integration with Oracle Cloud HCM (sn_hr_oracle_hcm) application, including tables, user roles, and scheduled jobs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed

Roles installed with HR Service Delivery integration with Oracle Cloud HCM

Role title [name]	Description	Contains roles
HR Oracle HCM Cloud Admin [sn_hr_oracle_hcm.admin]	Can access all the features and capabilities of the Enterprise Service Management Integrations Framework with the HR Service Delivery integration with Oracle Cloud HCM application.	Can access all features and capabilities of the Enterprise Integrations with Oracle HCM integration application. Contains the sn_hr_integr_fw.admin role.

Scheduled job installed

Scheduled jobs installed with HR Service Delivery integration with Oracle Cloud HCM

Scheduled flow	Description
Trigger Oracle HCM Integration flow	Pull data from Oracle HCM Cloud to a ServiceNow® instance. By default, the flow is in inactive state. For information on how to activate the flow, see Activate schedule flows.

Tables installed

The tables required for HR Service Delivery integration with Oracle Cloud HCM are obtained from the Enterprise Service Management Integrations Framework. The tables get auto-installed with the Enterprise Service Management Integrations Framework installation when you activate the HR Service Delivery integration with Oracle Cloud HCM application. For more information, see Components installed with Enterprise Service Management Integrations Framework.

Transform maps for HR Service Delivery integration with Oracle Cloud HCM

Transform maps specify data relationships between a source table and a target table.

HR Profile Transform Map, Job Transform Map, Department Transform Map, Location Transform Map, Position Transform Map are the transform maps used in HR Service Delivery integration with Oracle Cloud HCM. For more information, see Create transform maps in Enterprise Service Management Integrations Framework.

Note:
Ensure that you index coalesce fields for better transformation performance.

HR Service Delivery Advanced Integration with Oracle HCM

The ServiceNow® HR Service Delivery Advanced Integration with Oracle HCM is built by Bristlecone, Inc.

It enables you to complete the following Oracle HCM tasks from a ServiceNow instance without navigating into the Oracle HCM system.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- From a ServiceNow instance, submit a query related to your direct deposit account that is in the Oracle HCM system.
- From a ServiceNow instance, submit a query related to your time off balance in the Oracle HCM system.
- View your holiday calendars from the Oracle HCM system in the configured portal in a ServiceNow instance.
- View your total rewards information from the Oracle HCM system in the configured portal in a ServiceNow instance.

Note:
These use cases don't work if your Employee ID, Person ID, and Location details aren't present in your HR profile.

Application setup

First, you must activate HR Service Delivery Advanced Integration with Oracle HCM application from the ServiceNow Store. The Oracle HCM Cloud spoke [sn_oracle_hcm_spoke], Human Resources Scoped App: Core [com.sn_hr_core] and HR Service Delivery Portal UI Components [com.sn_hr_portal_components] applications are automatically installed.

Next, you must set up Oracle HCM Cloud spoke.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Components installed with HR Service Delivery Advanced Integration with Oracle HCM

Several types of components are installed with activation of the HR Service Delivery Advanced Integration with Oracle HCM [sn_hr_oracle_adv] plugin, including tables and user roles.

Demo data is available for this feature.

Roles installed

Roles and descriptions

Role title [name]	Description	Contains roles
HR Oracle Advanced Admin [sn_hr_oracle_adv.admin]	• Can complete the set up to display total rewards information from an Oracle HCM system into a ServiceNow instance. • Can complete the set up to pull holiday calendars from an Oracle HCM system into a ServiceNow instance.	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed

Tables and descriptions

Table	Description
Holiday Calendar [sn_hr_oracle_adv_holiday_calendar]	Stores holiday calendars that are pulled from a Oracle HCM system into a ServiceNow instance.

HR Service Delivery Portal UI Components

The ServiceNow® HR Service Delivery Portal UI Components application contains common widgets, such as Direct Deposits, Holiday Calendar, Time Off Balances, and Total Rewards widgets that be used with any HR application.

Application set up

You must have the HRSD Enterprise and Professional license to install the HR Service Delivery Portal UI Components application from ServiceNow Store.

Add widgets to an HR application

Add the HR Portal Components, such as Direct Deposits, Holiday Calendar, Time Off Balances, and Total Rewards widgets that can be used with any HR application.

Before you begin

Role required: admin

Procedure

1. Navigate to **Service Portal** > **Widgets**.
2. Embed the HR Portal Components widget in the main widget of your application by passing the source.
   A source refers to the system of data for these widgets, for example, Oracle or Workday. The HR Service Delivery Portal UI Components application uses scripted extension points to provide an implementation to fetch data based on the source that is passed through outer widgets. For more information on how to embed widgets, see Embedded widgets.

Configure total rewards in HR Service Delivery Advanced Integration with Oracle HCM

Complete the set up to display Oracle total rewards to employees in the configured portal in the ServiceNow instance.

Before you begin

Role required: sn_hr_oracle_adv.admin

Procedure

1. Create the total rewards BI report in the Oracle HCM system.
   For more details, refer to this KB article.
2. Add the BI report path in the Oracle HCM system.
   This is required for the Get Total Rewards Action to pull Oracle HCM total rewards information into the ServiceNow instance. For more information, see set up Oracle HCM Cloud spoke.
3. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

An employee can add the View Oracle Total Rewards widget to any ServiceNow page. An employee will not be able to view this widget if the Person ID (Correlation_ID) is missing in the HR profile [sn_hr_core_profile] table.

Configure holiday calendars in HR Service Delivery Advanced Integration with Oracle HCM

Pull holiday calendars from the Oracle HCM system into a ServiceNow application. Display applicable holiday calendars to employees in the configured Service Portal.

Before you begin

Role required: sn_hr_oracle_adv.admin

Procedure

1. Create the Holiday Calendar BI report in the Oracle HCM system.
   For more details, refer to this KB article.
2. To run the View Holiday Calendar widget successfully, configure BI report and Connection & Credential Aliases in Oracle Cloud HCM Spoke.
   For more information, see set up Oracle HCM Cloud spoke.
3. Navigate to **Oracle Advanced Use Cases** > **Holiday Calendar**.
4. Click **Get Holiday Calendars**.
   All the records starting from current year until the next available calendar years are pulled from Oracle HCM system and stored in the Holiday Calendar [sn_hr_oracle_adv_holiday_calendar] table.

What to do next

An employee can add the View Holiday Calendar widget to any ServiceNow page. An employee will not be able to view this widget if the Person ID (Correlation_ID) is missing in the HR profile [sn_hr_core_profile] table.

Configure Virtual Agent topics for HR Service Delivery Advanced Integration with Oracle HCM

Complete the configuration steps to enable your employees place requests to the Oracle system using the Now Assist for HRSD Virtual Agent topics in Employee Center.

Before you begin

Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

Procedure

1. Install the HR Service Delivery Advanced Integration with Oracle HCM, Now Assist for HRSD, and Enterprise Service Management Integrations Framework (v3.6) applications from ServiceNow Store.
2. Configure the Oracle HCM Cloud Spoke to pull data from Oracle system.
3. Create subflows aligning with Template Integration Gateway.
   See Create a subflow using Template Integration Gateway.

   Note:
   You can use the default subflows that have been created for Oracle.

4. Configure Integration Provider Mapping (Decision table) by adding input choices and configuring conditions on input choices and results.
5. Create a Virtual Agent topic block:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Virtual Agent topics are available by default with the Now Assist for HRSD scope.

a. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.

b. From the **LLM Assistant** list, select **Now Assist in Virtual Agent**.

c. Select a Virtual Agent topic.

i. Edit topic properties, make the necessary edits in the topic, such as update the node name, and response message.

ii. In Integration Gateway, specify the appropriate feature, service name, user, and make the necessary edits.

Configure AI agents for HR Service Delivery Advanced Integration with Oracle HCM

Enable your employees to place requests to the Oracle system using the Now Assist for HR Service Delivery (HRSD) agent collection.

Before you begin

View Subflow-agent mapping for HR Service Delivery Advanced Integration with Oracle HCM.

Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

Procedure

1. Install the Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai).
   For more information, see Configure Now Assist for HR Service Delivery (HRSD).
2. Activate the [Enterprise Service Management Integrations Framework] application from the ServiceNow® Store.
3. Configure the Oracle HCM Cloud Spoke to pull data from Oracle system.
4. Create subflows aligning with Template Integration Gateway.
   For more information, see Create a subflow using Template Integration Gateway.

   Note:
   You can use also the default subflows that have been created for Oracle.

5. Add input choices and define conditions and results in a decision table for the Integration Gateway subflow.
   For more information, see Configure Integration Provider Mapping (Decision table).
6. Duplicate AI agents available for Oracle to run them autonomously.
   For more information, see Duplicate an AI agent.

   Note:
   In the Toggle display section, ensure the toggle beside Virtual Agent is enabled.

Submit a time off balance query in HR Service Delivery Advanced Integration with Oracle HCM

Submit a query related to your time off balance in the Oracle HCM system from a ServiceNow instance.

Before you begin

Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The View Time Off Widget works on the basis of Person ID (Correlation_ID) field in the HR profile [sn_hr_core_profile] table. You will not be able to see your time off balances if your Person ID (Correlation_ID) is missing in your HR profile.

Procedure

1. Navigate to **Employee Center** > **Catalog** > **Benefits** > **Time off balances**.
2. View details of all your time off balances.
3. In the **Do you have any question regarding your time off balance?** field, type in your query.
4. Click **Submit**.
   An HR case is created under the HR Service, View Time Off – Oracle Cloud HCM.

Submit a direct deposit query in HR Service Delivery Advanced Integration with Oracle HCM

Submit a query related to your direct deposits in the Oracle HCM system from a ServiceNow instance.

Before you begin

Role required: none

You will not be able to see your direct deposit accounts and its details if your employee number and Person ID (Correlation_ID) are missing in your HR profile.

Procedure

1. Navigate to **Employee Center** > **Catalog** > **Payroll** > **Direct Deposit Inquiry**.
2. View details of all your direct deposit accounts.
3. Select an account for which you want to submit the query.
4. In **How can we help you with your current direct deposits?** field, type in your query.
5. Click **Submit**.
   An HR case is created under the HR service, Direct Deposit Inquiry - Oracle HCM Cloud.

Report a payslip issue in Oracle HCM

Report an issue in your Oracle HCM payslip from Employee Center.

Before you begin

- Role required: none
- You might not be able to report a payslip discrepancy if your HR profile does not have a valid Correlation ID or Person ID, and Employment Start Date.

Procedure

1. Open Employee Center.
2. Navigate to **Catalog** > **Payroll** > **Payroll Discrepancy - Oracle HCM Cloud**.
3. In the **Payroll year** field, select the year in which the payslip was generated.
4. In the **Payroll month** field, select the month in which the payslip was generated.
5. In the **Payment date** field, select the date on which the payslip was generated.
6. In the **Legal Employer** field, select the legal employer from which the payslip was generated.

Note:
This field appears only when you have payslips generated from multiple employers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. In the **How can we help you with this payslip** field, specify the discrepancy that is found in the payslip.
8. Click **Submit**.
   An HR case gets created under the Payroll cases category.

Now Assist Virtual Agent topics for HR Service Delivery Advanced Integration with Oracle HCM

You can use the Now Assist Virtual Agent topics in Employee Center to place requests, for example, apply for a time off or update your details from the Oracle HCM system in Employee Center.

Virtual Agent topics for HR Service Delivery Advanced Integration with Oracle HCM Overview

To access and use the Virtual Agent topics, verify the following:

- Configure the Now Assist for HRSD Virtual Agent topics
- Role required: sn_hr_oracle_adv.admin

Available Spoke Subflows for Virtual Agent topics for HR Service Delivery Advanced Integration with Oracle HCM

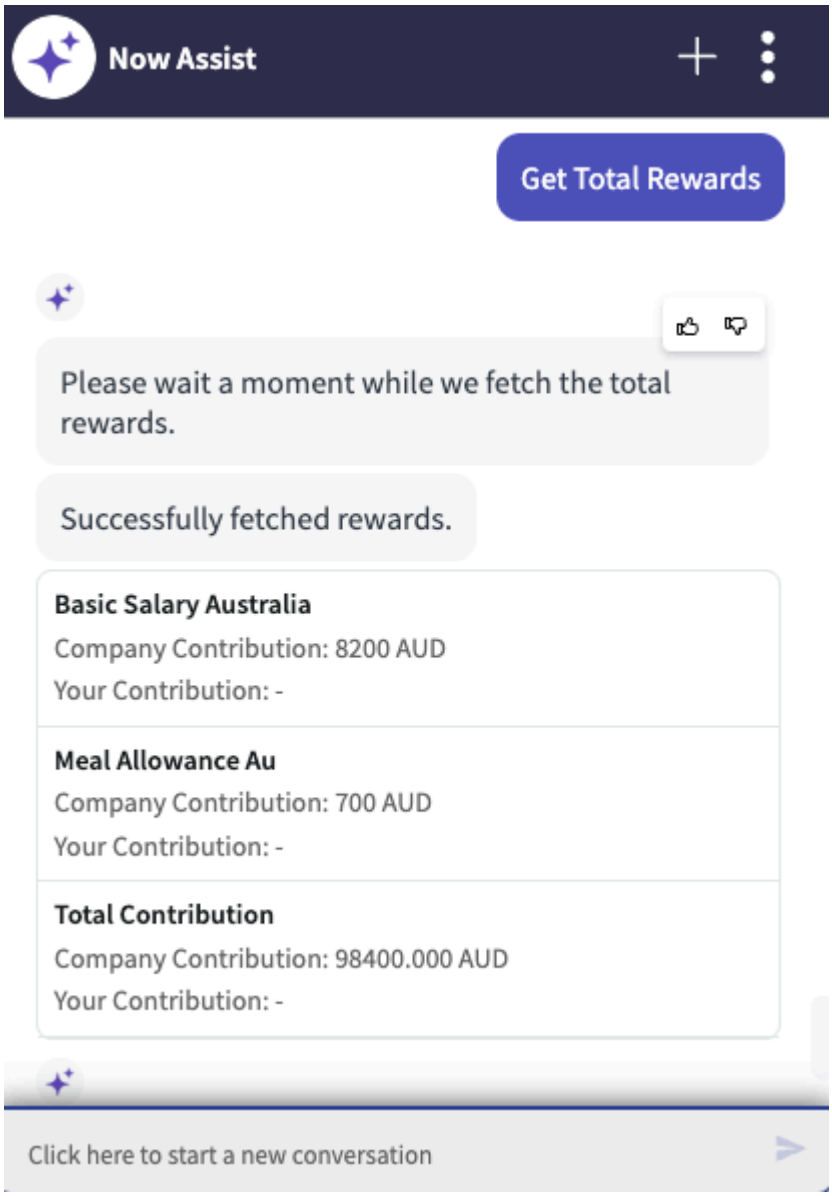
Update Personal Details

You can update personal details in Virtual Agent using one of the following topics in Employee Center from the Oracle HCM system.

- Update Address
- Update Date of Birth
- Update Email Address
- Update Phone Number

Get User Paychecks



The Get User Paychecks Virtual Agent topic enables you to view your payslip details. From Employee Center, open a chat window and type in key words, for example, get payslips. After you provide the required details such as start date and end date, your payslip summary, in the form of pay period, gross pay, deductions, and net pay are displayed. A detailed breakdown of deductions is also displayed.

HR Service Delivery Integration with SuccessFactors

The ServiceNow® HR Service Delivery Integration with SuccessFactors application is built by Bristlecone, Inc.

Using HR Service Delivery Integration with SuccessFactors you can enable employees to fulfill related tasks at a single location in ServiceNow and also synchronize the employee records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get started

Configure	Use	Reference
 Plan and configure your integration.	 Work on integrating ServiceNow HR Service Delivery with SuccessFactors.	 Get details about components like tables, user roles, and properties.

Configuring HR Service Delivery Integration with SuccessFactors

After you install the HR Service Delivery Integration with SuccessFactors, the services for SuccessFactors are automatically created in Enterprise Service Management Integrations Framework.

Before you begin

- Role required: sn_hr_sf.admin
- Activate HR Service Delivery Integration with SuccessFactors that automatically activates Enterprise Service Management Integrations Framework and SuccessFactors spoke.

Procedure

1. Allow RCAs manually.
   Allow the Restricted Caller Access records with Status = **Requested** and Source Scope = **Enterprise Service Management Integrations Framework** or **HR Service Delivery Integration with Successfactors**.
2. For better performance, index the employee number field in the HR Profile table and index coalesce fields in Use transform maps.
   For more information, see create a table index.
3. Set up SuccessFactors spoke.

   Note:
   To use HR Service Delivery Integration with SuccessFactors, ensure to set up the SuccessFactors spoke version 3.1.2

   For more information, see set up SuccessFactors Spoke.
4. **Optional:** Configure integration source properties for Source for HR Service Delivery Integration with SuccessFactors.
5. Activate and run the scheduled flow that synchronizes Worker profile information between SuccessFactors and ServiceNow HR Service Delivery periodically.
   For more information, see Activating schedule flows.

Activating schedule flows

Activate the schedule flow that interacts with SuccessFactors to pull worker profile information and tasks into a ServiceNow application.

Before you begin

Role required: sn_hr_sf.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Flow Designer** > **Designer**.
2. Open **Run Trigger SAP SuccessFactors Integrations**.
3. In the **Trigger** field, specify the time and interval at which you want to automatically run the scheduled flow.
4. Click **Activate**.
5. Expand **Call Run SuccessFactors Service Subflow**.

   Once data is pulled into staging tables, transform maps moves data into target tables. For more details, refer to Use transform maps.

Note:

- For a partial pull, deselect the **Retrieve all data** check box. Partial pull is not supported for Department and Location. It is only supported for HR profile and Job Profile.
- The **Retrieve All Data** check box is not supported for Pull To-Dos. The first pull will always be a full pull based on the configuration parameter **Initial Load Date time**. The subsequent ones are incremental pulls.
- Before you run the flow, turn off reporting: **com.snc.process_flow.reporting.level**.

Configure pull todos

Store one-time configuration parameters to pull tasks from HR Service Delivery Integration with SuccessFactors into the ServiceNow application.

Before you begin

Role required: sn_hr_sf.admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **Source**.
2. Select **SAP SuccessFactors**.
3. On the Integration Services, set **Pull Todos**to true.

Configure push todos

Store one-time configuration parameters to pull tasks from HR Service Delivery Integration with SuccessFactors into the ServiceNow application.

Before you begin

Role required: sn_hr_sf.admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **Source**.
2. Select **SAP SuccessFactors**.
3. On the Integration Services, set **Push Todos** to true.

Enable push todos flow

Enable push todos flow to push existing todos to HR Service Delivery Integration with SuccessFactors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_sf.admin

Procedure

1. Navigate to **All** > **Flow Designer**.
2. Open **Push Todos**.
3. In the **Trigger** field, specify the time and interval at which you want to automatically run the scheduled flow.
4. Click **Activate**.

Configure Virtual Agent topics for HR Service Delivery Integration with SuccessFactors

Complete the configuration steps to enable your employees place requests to the SuccessFactors system using the Now Assist for HRSD Virtual Agent topics in Employee Center.

Before you begin
Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

Procedure

1. Install the HR Service Delivery Integration with SuccessFactors, Now Assist for HRSD, and Enterprise Service Management Integrations Framework (v3.6) applications from ServiceNow Store.
2. Configure the SuccessFactors Spoke to pull data from SuccessFactors system.
3. Create subflows aligning with Template Integration Gateway.
   See Create a subflow using Template Integration Gateway.

   Note:
   You can use the default subflows that have been created for SuccessFactors.

4. Configure Integration Provider Mapping (Decision table) by adding input choices and configuring conditions on input choices and results.
5. Create a Virtual Agent topic block:

   Note:
   The Virtual Agent topics are available by default with the Now Assist for HRSD scope.

   a. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.
   b. From the **LLM Assistant** list, select **Now Assist in Virtual Agent**.
   c. Select a Virtual Agent topic.
      i. Edit topic properties, make the necessary edits in the topic, such as update the node name, and response message.
      ii. In Integration Gateway, specify the appropriate feature, service name, user, and make the necessary edits.

Configure AI agents for HR Service Delivery Integration with SuccessFactors

Enable your employees to place requests to the SuccessFactors system using the Now Assist for HR Service Delivery (HRSD) agent collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

View Subflow-agent mapping for HR Service Delivery Integration with SuccessFactors.

Role required: flow_designer, decision_table_admin, sn_hr_integr_fw.admin, and sn_hr_core.admin

Procedure

1. Install the Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai).
   For more information, see Configure Now Assist for HR Service Delivery (HRSD).
2. Activate the Enterprise Service Management Integrations Framework] application from the ServiceNow® Store.
3. Configure the SuccessFactors Spoke to pull data from SuccessFactors system.
4. Create subflows aligning with Template Integration Gateway.
   For more information, see Create a subflow using Template Integration Gateway.

   Note:
   You can also use the default subflows that have been created for SuccessFactors.

5. Add input choices and define conditions and results in a decision table for the Integration Gateway subflow.
   For more information, see Configure Integration Provider Mapping (Decision table).
6. Duplicate AI agents available for SuccessFactors to run them autonomously.
   For more information, see Duplicate an AI agent.

   Note:
   In the Toggle display section, ensure the toggle beside Virtual Agent is enabled.

Configure HR Service Delivery Integration with SuccessFactors properties

System properties control system behavior. The integrations source properties can be used to configure the HR Service Delivery Integration with SuccessFactors. You can access system properties for HR Service Delivery Integration with SuccessFactors by navigating to All > HRSD SuccessFactors Integration > System Properties. These system properties are only applicable for HR Service Delivery Integration with SuccessFactors and cannot be leveraged with SuccessFactors spoke.

HRSD SuccessFactors System Properties

Field	Description
sn_hr_sf.Retrieve Departments Service (Retrieve Departments Service subflow)	Makes retrieve departments service subflow customer configurable.
sn_hr_sf.Retrieve Effective Workers Service	Makes retrieve effective workers subflow customer configurable.

sn_hr_sf.Retrieve Workers Service	Makes retrieve workers serice subflow customer configurable.

Note:
These system properties are only applicable for HR Service Delivery Integration with SuccessFactors and cannot be leveraged with SuccessFactors spoke. Ensure that the property is set to use the OOB sub-flow exclusively. If you've introduced any new sub-flows, verify that they are compatible with HR use cases before updating the property value.

Using HR Service Delivery Integration with SuccessFactors

Understand how you can use HR Service Delivery Integration with SuccessFactors to manage data and entities on ServiceNow.

View job tracker details

Track every pull that has been performed from ServiceNow to SuccessFactors either by schedule job or manual reconciliation process. View details of the job, such as when did the job begin and end, when did the records start loading into staging tables, or did the job run completely or fail in between.

Before you begin
Role required: sn_hr_sf.admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **Job Tracker**.
2. Open **SAP SuccessFactors**.
3. View job details:

Integration Job Trackers

Field	Description
Job name	Name of the job that has run.
Job start time	Date and time when the job started.
Job end time	Date and time when the job ended.
Source	Origin of the job.
State	Current state of the job such as **Complete** or **Failed**.
Error message	Message displayed when the job fails.

4. Select a job record.
   In the Integration Service Job Trackers related list, view the service job details.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration Service Job Trackers

Field	Description
Name	Unique identifier for the service job run.
Service type	Name of the service job that has run. For example, Worker Profiles integration service.
Flow	Flow of the job.
Import set tables	Available staging tables.
Active	Option that indicates if the state of the job tracker is active.
Application	Application containing the record.
Source	Source of the integration service
Order	Order in which the item is executed as part of sync.

View to dos

View details of the tasks that are pulled from HR Service Delivery Integration with SuccessFactors into ServiceNow application.

Before you begin

Role required: sn_hr_sf.admin

Procedure

1. Navigate to **All** > **Integrations Framework** > **Todos**
2. On the form, view the fields.

Todos

Field	Description
Active	Option indicating whether the task is active in SuccessFactors.
Integration todo ID	Unique identifier for the SuccessFactors task.
URL	Navigation to SuccessFactors to complete the task.
External status	Current status of the task in SuccessFactors. For example, awaiting Action or cancelled.
Domain	
Todo description	Description of the SuccessFactors task visible in ServiceNow Employee Service Center .
Assigned to	User to whom the task is assigned.
Todo state	Option that indicates if the state of the task is one among the following: ○ Open ○ Complete

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Extension system	The origin of the task.
Due date	Date and time by which the task has to be completed.

Use transform maps

Transform maps specify data relationships between source table and target table.

For details on the transform maps, navigate to **Integrations Framework** > **Transform maps**. For more information, see Create transform maps in Enterprise Service Management Integrations Framework

Note:
Ensure that you index coalesce fields for better transformation performance.

Field mappings

The Trigger SAP SuccessFactors Integration Flow maps the entity profile fields from SuccessFactors to the HR profile fields in the ServiceNow® platform.

Important:
For details about the fields that are mapped, refer to this KB article

Now Assist Virtual Agent topics for HR Service Delivery Integration with SuccessFactors

You can use the Now Assist Virtual Agent topics in Employee Center to place requests, for example, apply for a time off or update your details from the SuccessFactors system in Employee Center.

Virtual Agent topics for HR Service Delivery Integration with SuccessFactors Overview

To access and use the Virtual Agent topics, verify the following:

- Configure the Now Assist for HRSD Virtual Agent topics
- Have one of the following roles: sn_hr_sp.admin , sn_hr_sp.esc_admin

Available Spoke Subflows for Virtual Agent topics for HR Service Delivery Integration with SuccessFactors

Source for HR Service Delivery Integration with SuccessFactors

Once you set up the HR Service Delivery Integration with SuccessFactors application, the source record for SuccessFactors application is automatically created in Enterprise Service Management Integrations Framework, Source module. The SuccessFactors source record in the in Enterprise Service Management Integrations Framework application contains a predefined set of properties and HR Integration Services.

Properties

Field	Description
Full-pull	When set to **True**, all the active users, active trainings, incomplete to-dos from the SuccessFactors system are pulled into respective tables in ServiceNow instance. When set to **False**, only modified users, modified trainings, modified transcripts (based on last successful schedule run time) are pulled from the SuccessFactors system are pulled into respective tables in ServiceNow instance. **Note:** If there is no information on the last successful schedule run time, the first pull will always be a full pull.

HR Service Delivery with Ultimate Kronos Group

With the HR Service Delivery with Ultimate Kronos Group application, provide employee assistance through conversations in the Virtual Agent conversational (client) interface. Enable employees to view their accrual leave balances, schedules, and upcoming shifts from the Ultimate Kronos Group application in ServiceNow Employee Center.

Key features include:

- Build conversations that are based on keywords that an employee enters.
- Apply Natural Language Understanding (NLU) models, which enable the Virtual Agent to pick utterances for understanding, processing, and responding to what employees are saying during a conversation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application setup

First, you must activate the HR Service Delivery Integration with the Ultimate Kronos Group [sn_hr_ukg] application from the ServiceNow Store. Next, you must set up HR Service Delivery Integration with Ultimate Kronos Group application.

HR Service Delivery with Ultimate Kronos Group overview

After the activation and setup of HR Service Delivery Integration with Ultimate Kronos Group is complete, the HR Service Delivery with Ultimate Kronos Group responds to what employees or managers are saying during a conversation, and allows employees to view the following details from the Ultimate Kronos Group application in the Employee Center Employee Service Center.

Topics accessible to employees

As an employee, you can view your accrual balances, work hours, list of punches, schedules, time-off requests, and upcoming shifts using the Virtual Agent.

Retrieve My Accrual Balance

You can view the aggregate of accrual leaves balance (by type) by selecting the **Retrieve My Accrual Balance (Template)**. If the NLU model is trained, you can ask a question in the chat (for example, show my sick leaves) and view the balance of a single type of leave.

Retrieve My Hours Worked

You can view the number of hours worked for a given period by selecting the **Retrieve My Hours Worked (Template)** and choosing a symbolic period.

Retrieve My List of Punches

You can view the list of punches by selecting the **Retrieve My List of Punches (Template)** and choosing a symbolic period.

Retrieve My Schedule

You can view the work schedule for a given period by selecting the **Retrieve My Employee Schedule (Template)** and choosing a symbolic period. If the NLU model is trained, you can ask a question in the chat (for example, my work schedules of the previous pay period) and view the work schedules for that symbolic period.

You can also view your schedule location for three days from the current day.

Retrieve My Time Off Requests

You can view the status of the time off requests by selecting the **Retrieve My Time off Requests (Template)** and specifying an end date.

> **Note:**
> Ensure that the selected time-off period ranges for 15 days from the start date (current day).

Retrieve My Upcoming Shift

You can view the next upcoming shift by selecting the **Retrieve My Upcoming Shift (Template)**. If the NLU model is trained, you can ask a question in chat (for example, show my shifts) and directly view the next upcoming shift.

You can also view your location along with the shift date and time.

Topics accessible to managers

As a manager, you can access and view the locations, schedules, and time-off requests of your team using the Virtual Agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The templates are visible only to a user with the manager role.

Reportee's Location Today

You can view the location of a reportee in the team (for today) by selecting the **Reportee's Location Today (Template)**.

Reportee's Schedule Changes

You can view the schedule change requests such as shift cover, shift swap, availability change, open shift, and self-schedule. Follow the onscreen instructions for more information on the schedule changes.

Note:
You can view the change requests in offered, invalidated, or pending state.

Reportee's Time Off Requests

You can view the pending time off requests from your team for a specified time period. You can check the requests from the individual team members or the entire team.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Configuring HR Service Delivery with Ultimate Kronos Group

Set up the HR Service Delivery with Ultimate Kronos Group application to start pulling information, such as accrual balances and shifts from the Ultimate Kronos Group application into a ServiceNow application.

Before you begin

Role required: sn_hr_core.admin

Activate the HR Service Delivery Integration with Ultimate Kronos Group [sn_hr_ukg] application, which automatically activates the following plugins and spoke:

- Glide Virtual Agent [com.glide.cs.chatbot]
- Human Resources Scoped App: Core [com.sn_hr_core]
- Employee Service Center [com.sn_hr_service_portal]
- Virtual Agent Service Portal Widgets [com.glide.va.sp_widgets]
- NLU Workbench [com.snc.nlu_studio]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Predictive Intelligence [com.glide.platform_ml]
- UKG spoke

Procedure

1. Integrate your Ultimate Kronos Group application with your ServiceNow instance.
   Register an OAuth application in the Ultimate Kronos Group application and authenticate requests from ServiceNow. For more information, see Set up the UKG spoke.
2. Complete the one time set up of loading accrual codes from the Ultimate Kronos Group application into ServiceNow.
   For more information, see Set up accrual codes.
3. The **Person number** field in Ultimate Kronos Group application should match the **Employee number** field in the ServiceNow User table.
   If the **Person number** field in Ultimate Kronos Group application matches with some other field in the ServiceNow User table, you must override the getPersonNumberBySysID method in HRKronosUtils script.

Set up symbolic periods

By default, the symbolic periods of Ultimate Kronos Group application are set up when you activate the HR Service Delivery Integration with Ultimate Kronos Group application. Symbolic periods denote the time periods that are identifiable by the Ultimate Kronos Group application.

Before you begin
Role required: sn_hr_ukg.admin

About this task
When an employee posts a question in virtual chat in Employee Center, an NLU model selects an utterance from the question, checks for its mention in vocabulary sources, identifies its symbolic code and ID. A flow uses the ID to pull the requested information from the Ultimate Kronos Group application and display in virtual chat in Employee Center.

Procedure

If you have made any modifications to the symbolic periods in Ultimate Kronos Group:

a. Navigate to **HR UKG Integrations** > **Symbolic periods** and click**Refresh Symbolic Periods.**

b. Navigate to **NLU Workbench** > **Vocabulary sources**, and synchronize **@UKGTimeKeepingSymbolicPeriod**.

c. Navigate to**NLU Workbench** > **Models**, select **UKG Topics Model**, and click **Train**.

Set up accrual codes

Complete the one time set up of loading accrual codes from the Ultimate Kronos Group application into a ServiceNow application. Accrual codes help in pulling accrual leave balances of employees from the Ultimate Kronos Group application into a ServiceNow application.

Before you begin
Role required: sn_hr_ukg.admin

About this task
When an employee posts a question in virtual chat in Employee Center, the NLU model selects an utterance from the question, checks for its mention in vocabulary sources, identifies its accrual code and ID. A flow uses the ID to pull the requested information from the Ultimate Kronos Group application and display in virtual chat in Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, an employee wants to view the accrual balance for annual leave. The NLU model selects annual leave as the utterance. It identifies **Annual Leave** as the accrual code whose ID in Ultimate Kronos Group is **1531**. The flow uses the ID **1531** to pull the requested information from the Ultimate Kronos Group application.

Procedure

If you have made any modifications to accrual periods in Ultimate Kronos Group:

a. Navigate to **HR UKG Integrations** > **Accrual codes** and click **Refresh Accrual codes.**

b. Navigate to **NLU Workbench** > **Vocabulary sources**, and synchronization **@AccrualCode**.

c. Navigate to**NLU Workbench** > **Models**, select the **UKG Topics Model**, and click **Train**.

Train the NLU model

Use the UKG Topics Model (Natural Language Understanding model) to recognize and process employee utterances, intentions (intents), and objects of, or contexts for, an action (entities).

Before you begin
Role required: sn_hr_ukg.admin

About this task
You can train the model dataset iteratively using utterance examples so that the system predicts the optimal intent output for a new utterance.

Procedure

1. Navigate to **All** > **NLU Workbench** > **Models**.
2. Select **UKG Topics Model**.
3. Click **Train**.

Subflows

Use the subflows to pull data from the Ultimate Kronos Group application into a ServiceNow application.

Before you begin
Role required: None

Procedure

1. Navigate to **All** > **Process Automation** > **Flow Designer**.
2. In the Subflow lists, view the following:

Subflow

Subflow	Description
Employee Accrual Balance	Pulls the accrual leave balances (by type) of an employee from the Ultimate Kronos Group application into a ServiceNow application.
Extract Employee Schedule	Pulls the schedule of an employee from the Ultimate Kronos Group application into a ServiceNow application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Subflow	Description
Extract Hours Worked	Pulls the number of hours that the employee has worked from the Ultimate Kronos Group application into a ServiceNow application.
Extract Time Off Requests	Pulls the future time off requests of an employee from the Ultimate Kronos Group application into a ServiceNow application.

Reference - HR Service Delivery with Ultimate Kronos Group

Document Template integration with AdobeSign

The ServiceNow® Document Template integration with AdobeSign application enables you to use the Adobe Sign application for signing documents that are generated from ServiceNow Document Templates.

Key features

- Enable multiple participants to collaboratively work on a single document.
- Choose a signing type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select a signing partner.
- Sign with mobile and portal from anywhere.

Note:
The Document Template integration with AdobeSign application supports the signing of HTML and PDF document templates that are generated from Document Templates.

Activation information

First, activate the Document Template Integration with AdobeSign [sn_dt_adobesign] and Document Templates [sn_doc] applications from ServiceNow Store. Activating the Document Template integration with AdobeSign application automatically activates the Adobe Acrobat Sign spoke. Next, set up the Adobe Sign spoke.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Components installed with Document Template integration with AdobeSign

Several types of components are installed with activation of the Document Template Integration with AdobeSign [sn_dt_adobesign] plugin, including tables and user roles.

Demo data is available for this feature.

Roles installed

Roles installed with Document Template integration with AdobeSign

Tables installed

Tables installed with Document Template integration with AdobeSign

Table	Description
Document Template Adobe Sign Groups [sn_dt_adobesign_group]	Stores Adobe Sign Groups. For more information, see Create adobe sign groups.

Configure document templates for Adobe Sign

Configure document templates to enable signing using the Adobe Sign application.

Before you begin
Role required: sn_dt_adobesign.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All Document Templates**.
2. Select a template.
3. Fill in the required fields on the form.
   a. In the **Signing type** field, select **Adobe Sign**.
   b. Define participants, define tasks for participants, and mark signature blocks.
   c. Associate the document template to the HR template of a service and initiate document tasks from a case.

What to do next

User who receives the document task can use the Adobe Sign application for signing the document.

Create adobe sign groups

Connect your ServiceNow instance to a particular group to send and receive agreements on a business use case.

Before you begin

Role required: sn_dt_adobesign.admin

Procedure

1. Navigate to **Document Templates** > **Adobe Sign Integration** > **Adobe Sign Groups**.
2. On the form, fill in the fields:

Adobe Sign Groups form

Field	Description
Group ID	Unique ID associated with the record.
Connection Alias	Alias record to associate with the connection.
Group Name	Name to uniquely identify the Adobe Sign group.
Role	Roles granted to the Adobe Sign group.

3. Click **Submit**.

Document Template integration with Docusign

The ServiceNow® Document Template integration with Docusign application enables you to use the Docusign application for signing documents that are generated from ServiceNow Document Templates.

Key features

- Enable multiple participants to collaboratively work on a single document.
- Choose a signing type.
- Select a signing partner.
- Sign with mobile and portal from anywhere.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_navex_ep.admin

Procedure

1. Install updates sets from the Supporting Links and Docs section in ServiceNow Store.
2. Allow RCAs manually.
   Allow the Restricted Caller Access records with Status = **Requested** and Source Scope = **Employee Relations integration with Navex EthicsPoint**.
3. For better performance, index Source field: external_id mapped to Target field: correlation_id in Transform maps.
   For more information, see create a table index.
4. Set up Navex EthicsPoint spoke.
   For more information, see Set up Navex EthicsPoint spoke.
5. Configure properties.
6. Map fields.

Configure properties

Configure properties to ensure that data is properly mapped between the Navex EthicsPoint system and the ServiceNow system.

Before you begin
Role required: sn_hr_navex_ep.admin

Procedure

1. Navigate to **ER Navex Integration** > **Administration** > **Properties**.
2. Configure the following properties:

Properties

Name	Description
Tier Id in Navex EthicsPoint	Tier ID that contains the Navex EthicsPoint instance.
Comma-separated Ready to Pull Status Ids in Navex EthicsPoint	Status IDs that are to be pulled from Navex EthicsPoint instance into ServiceNow instance. For example, status IDs of Open, Closed, or Review.
Comma-separated list of closed status ids in Navex EthicsPoint	Status IDs of closed cases that are pulled from Navex EthicsPoint instance into ServiceNow instance.
Comma-separated Primary Issue Type Ids in Navex EthicsPoint	Primary issue type case IDs that are pulled from Navex EthicsPoint instance into ServiceNow instance. For example, primary issue type of a case can be misconduct, discrimination, or accounting.
HR Service used for the case imported from Navex EthicsPoint	HR service to which you want to associate the employee relation case.
Pull attachments. Please configure MID Server if you want to pull the attachments.	Option to pull cases along with the attachments from Navex EthicsPoint instance into ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Name	Description
	To use this feature, you must enable the MID Server. For more information, see Configure MID Server network connectivity
Pull the attachments from the case file. (Make sure that the mid server is on, when this is used)	Option to provide the **Sync attachments** button on cases that are that are already pulled from Navex EthicsPoint instance into ServiceNow instance. The **Sync attachments** button can be used to pull attachments of cases at a later point in time. To use this feature, you must enable the MID Server. For more information, see Configure MID Server network connectivity

3. Click **Save**.

Map fields

Map ServiceNow fields with the fields that are pulled from NAVEX EthicsPoint. Enable an HR Agent to work on employee relation cases from a ServiceNow instance.

Before you begin

Role required: sn_hr_navex_ep.admin

Procedure

1. Navigate to **ER Navex Integration** > **Administration** > **Field Value Map**.
2. Click **Get Navex Field Values**.

   All the fields from Navex EthicsPoint are pulled into ServiceNow instance.

   For complete details of fields that are imported, refer to this KB article.
3. Enter the required values in the **Value** field and **Primary** field for each of the record that is displayed.

Source for Employee Relations integration with Navex Ethicspoint

Once you set up the Employee Relations integration with Navex Ethicspoint application, the source record for NAVEX EthicsPoint application is automatically created in Enterprise Service Management Integrations Framework, Source module. The Navex EthicsPoint source record in the Enterprise Service Management Integrations Framework application contains a predefined set of HR Integration Services.

HR services

After you set up the Employee Relations integration with Navex Ethicspoint application, integration services for Navex EthicsPoint are automatically created in Enterprise Service Management Integrations Framework. The flows in integration Services communicate with the Navex EthicsPoint system to pull and push data related to employee relation cases.

Integration Services for Navex EthicsPoint

Name	Description
Update Employee Relation Cases	Pushes data from ServiceNow Platform into Navex EthicsPoint. For example, when an employee relation case is closed its status is pushed to Navex EthicsPoint.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Using HR Service Delivery for Healthcare

Use the HR Service Delivery for Healthcare application to set up and auto-create necessary tasks to onboard a healthcare professional smoothly into your organization. In addition, securely access, update, and manage the data of a healthcare professional via the Healthcare Professional data model.

Below is an end to end explanation of how to use the HR Service Delivery for Healthcare along with Journey designer and Employee Center:

1. **Configure application**

   As an HR administrator, plan and configure HR Service Delivery for Healthcare by installing the necessary applications.

2. **Customize workflow**

   As a health care administrator, customize the Healthcare Employee Onboarding workflow to tailor to your organization needs.

3. **Place onboarding request**

   As a hiring manager or an HR agent, request an onboarding journey for a healthcare professional from Employee Centre. This triggers onboarding journey for the healthcare professional, creating a set of HR tasks for healthcare professional and HR agents.

   - An HR profile and a Healthcare professional profile is created for the healthcare professional.
   - An onboarding journey is auto-created for the healthcare professional, an email account is auto-created, and the employee is notified about the journey via email.
   - HR Tasks, such as pre-hire tasks, credentialing and verification, background checks, enrollments, required learnings, are auto-triggered and assigned based on the order defined for the tasks in the journey.
   - After the healthcare professional completes the profile intake tasks, the data is sent to the HR agents for validation and credentialing. Once the tasks in the journey are complete, the healthcare employee onboarding request is marked complete.

4. **Use healthcare professional data model**

   Information provided by the healthcare professional is securely managed in the Healthcare Professional data model. The Healthcare Professional Profile data model enables the organization to access and track information of the healthcare professional throughout the period of employment. Healthcare Professional Profile records are stored confidentially and are not publicly viewable.

Customize Healthcare Employee Onboarding workflow

Customize Healthcare Employee Onboarding workflow to tailor to your organization needs.

Before you begin

Role required: Healthcare admin (sn_hr_hc.admin)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Select **Healthcare Employee Onboarding Journey**.
   You can continue to use the default settings or update the values as per your business requirements.
   - In Lifecycle event type, the default value is Healthcare Employee Onboarding. Open the record to add, remove, or update the activity from activity sets as per your business requirements. You can also choose to select another Lifecycle event type based on your business needs.
   - In Journey Configuration, the default value is Healthcare Employee Onboarding. Open the record to add, remove, or update the activity and stages as per your business requirements. You can also choose to select another journey configuration based on your business needs.
3. Click **Update**.

What to do next

When a hiring manager places an onboarding request using the **Healthcare Employee Onboarding** catalog in Employee Center, the Healthcare Employee Onboarding Journey service is triggered and HR tasks are initiated for HR agents and the healthcare professional.

Request onboarding journey

Request an onboarding journey for a healthcare professional. This triggers onboarding journey for the healthcare professional, creating a set of HR tasks for healthcare professional and HR agents.

Before you begin

Role required: None

Procedure

1. Navigate to **All** > **Employee Center**.
2. From onboarding, select the **Healthcare Employee Onboarding** catalog.
3. On the form, fill in the fields:
   See Healthcare Employee Onboarding form.
4. In **Additional needs**, you can select options such as Needs work visa, Needs to transfer work visa, or Needs relocation assistance.
5. To add any files to the request, click **Add attachments**.
6. Click **Submit**.

Healthcare Professional data model

The Healthcare Professional data model stores confidential HR data, such as name, personal contact information, email addresses, professional liability insurance details, medical degree and employment history healthcare professional, previous employment history.

The Healthcare Professional Profile data model enables the organization to access and track information of the healthcare professional throughout the period of employment. Healthcare Professional Profile records are stored confidentially and are not publicly viewable.

Auto-create a Healthcare professional profile

Auto-create a healthcare professional profile when a manager or an hiring agent places an onboarding request for a healthcare professional. Store the details of the health care professional by maintaining strict edit or view permissions.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hc_professional.profile_writer

Procedure

1. Navigate to **All** > **Healthcare professional profile** > **Healthcare professional profiles**. Alternatively, you can also view the Healthcare Professional Profiles by navigating to **All** > **Agent Workspace for HR Case Management**. In Lists, select Healthcare Professional Profiles.
2. On the form, fill in the required fields.
   Most of the data in these fields are auto-filled based on information provided in healthcare employee onboarding form and details provided by healthcare professional on the profile intake forms in Employee Center. See Healthcare professional profile form.
3. Click **Update**.

Record Professional ID details

Store the professional ID details that a healthcare professional provides via the profile intake forms in Employee Center.

Before you begin
Role required: sn_hc_professional.profile_writer

About this task
Professional ID is a unique ID granted to a healthcare professional when the healthcare professional registers in a healthcare network.

Procedure

1. Navigate to **All** > **Healthcare Professional profile** > **Healthcare professional profiles**. Alternatively, you can also view the Healthcare Professional Profiles by navigating to **All** > **Agent Workspace for HR Case Management**. In Lists, select Healthcare Professional Profiles.
2. Open a Healthcare professional profile.
3. In the **Professional ID** related list, open the auto-created record.
4. On the form, fill in the required fields:
   Most of the data in these fields are auto-filled based on information provided by healthcare professional on the profile intake forms in Employee Center. See Professional ID form.
5. Click **Update**.

Record professional liability insurance

Store the professional liability insurance details that a healthcare professional provides via the profile intake forms in Employee Center.

Before you begin
Role required: sn_hc_professional.profile_writer

Procedure

1. Navigate to **All** > **Healthcare Professional profile** > **Healthcare professional profiles**. Alternatively, you can also view the Healthcare Professional Profiles by navigating to **All** > **Agent Workspace for HR Case Management**. In Lists, select Healthcare Professional Profiles.
2. Open a Healthcare professional profile.
3. In the **Professional Liability Insurance** related list, open the auto-created record.
4. On the form, fill in the required fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Most of the data in these fields are auto-filled based on information provided by healthcare professional on the profile intake forms in Employee Center. See Professional liability Insurances form.

5. Click **Update**.

Add a professional reference

Store the professional reference details that a healthcare professional provides via the profile intake forms in Employee Center.

Before you begin
Role required: sn_hc_professional.profile_writer

Procedure

1. Navigate to **All** > **Healthcare Professional profile** > **Healthcare professional profiles**. Alternatively, you can also view the Healthcare Professional Profiles by navigating to **All** > **Agent Workspace for HR Case Management**. In Lists, select Healthcare Professional Profiles.
2. Open a Healthcare professional profile.
3. In the **Professional Reference** related list, open the auto-created record.
4. On the form, fill in the required fields:
   Most of the data in these fields are auto-filled based on information provided by healthcare professional on the profile intake forms in Employee Center. See Professional reference form.
5. Click **Update**.

Record professional specialty details

Store details of the healthcare area in which the healthcare professional specialises and has obtained the required trainings and certifications. These details are provided by healthcare professional via the profile intake forms in Employee Center.

Before you begin
Role required: sn_hc_professional.profile_writer

Procedure

1. Navigate to **All** > **Healthcare Professional profile** > **Healthcare professional profiles**. Alternatively, you can also view the Healthcare Professional Profiles by navigating to **All** > **Agent Workspace for HR Case Management**. In Lists, select Healthcare Professional Profiles.
2. Open a Healthcare professional profile.
3. In the **Professional Specialty Details** related list, open the auto-created record.
4. On the form, fill in the required fields:
   Most of the data in these fields are auto-filled based on information provided by healthcare professional on the profile intake forms in Employee Center. See Professional speciality form.
5. Click **Update**.

Record practice location

Record practice location details of the healthcare professional. The healthcare professional provides these details via the profile intake forms in Employee Center.

Before you begin
Role required: sn_hc_professional.profile_writer

Professional Liability Insurance form

Field	Description
Professional Profile	Professional profile of the healthcare professional.
Carrier name	Name of the company providing the professional liability insurance to the healthcare professional.
Policy name	Policy number issued by the company offering the professional liability insurance.
Effective date	Current effective date as per last enrolment.
Original effective date	Effective date on first purchase or enrolment of policy.
Expiration date	Date on which the professional liability insurance ends.
Coverage type	Type of professional liability insurance taken: Individual or Shared
Amount coverage per occurrence	Amount paid by insurer for claims submitted under one occurrence.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Professional Liability Insurance form (continued)

Field	Description
Aggregate coverage amount	Maximum amount that will be paid by the insurer for claims submitted for a set period of time.
Active	Option to make the professional liability insurance record available to workflows and teams.
Is current	Option to indicate that the professional liability insurance is currently active and enrolled in.
Is self insured	Option to indicate that the healthcare professional has reserved some amount of personal money to be used as liability insurance.
Unlimited coverage	Option to indicate that unlimited coverage is given for the policy taken from the insurer.
Status	Status of the professional liability insurance record: • New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents. • Invalid: When HR agents review the data and reject due to insufficient or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.
Insurer address	Address of the company from which the professional liability insurance is taken by the healthcare professional.
Insurer city	City in which insurer office is located.
Insurer state/ province	State in which insurer office is located.
Insurer zip/postal code	Postal code of area in which insurer office is located.
Insurer country	Country in which insurer office is located.

Professional reference form

Access and validate the Professional reference details of a healthcare professional in the Professional reference form.

Professional Reference form

Field	Description
Professional profile	Professional profile of the healthcare professional.
First name	First name of the user who is added as professional reference.
Last name	Last name of the user who is added as professional reference.
Reference type	Reference type of the user: Credentialing or Professional.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Professional Reference form (continued)

Field	Description
Contact preference	Preferred mode of communication for the user who is added as professional reference.
Email	Email address of the user who is added as professional reference.
Phone number	Phone number of the user who is added as professional reference.
Fax	Fax number of the user who is added as professional reference.
Active	Option to make the professional reference record available to use.
Status	Status of the professional reference record: • New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents. • Invalid: When HR agents review the data and reject due to insufficient or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.
Provider type	Degree awarded to the user.
Other provider type	Other type of degree awarded to the user.
Address	Address of the user.
City	City in which user resides.
State/ Province	State in which user resides.
Zip/Postal Code	Postal code of user address
Country	Country in which user resides.

Professional speciality form

Review and update the Professional speciality details of a healthcare professional in the Professional speciality form.

Professional Speciality Details form

Field	Description
Professional profile	Professional profile associated to the healthcare professional.
Professional specialty	Healthcare domain in which the healthcare professional specialises, or has taken the required training or certification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Professional Speciality Details form (continued)

Field	Description
Initial certification date	Date on which the healthcare professional received the specialization certificate.
Expiration date	Date on which the certification expires.
Recertification date	Date on which recertification needs to be taken by the healthcare professional.
Active	Option to make the professional speciality details record available to use by other workflow or teams.
Type	Type of certification: Primary or Secondary
Are you board certified	Option to indicate that the healthcare professional is certified by a medical board.
Certifying board code	Name of the certifying board code. **Note:** This field appears only when the **Are you board certified** field is selected.
If not board certified	Option to select when the user is not certified by a medical board. **Note:** This field does not appear when the **Are you board certified** is selected.

Malpractice history form

Access, update, and validate the Malpractice history details of a healthcare professional in the Malpractice history form.

Malpractice Claim History form

Field	Description
Professional profile	Professional profile of the healthcare professional.
Date of occurrence	Date when the malpractice occurred.
Date of claim filing	Date when the malpractice claim was submitted.
Profession liability insurance involved	Insurer selected for the claim.
Description	Additional details about the malpractice claim.
Active	Option indicating that the malpractice claim history record is active.
Is in NPDB	Option indicating that the claim history is in the National Practitioner Data Bank (NPDB) database.
Status	Status of the malpractice claim history record:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Malpractice Claim History form (continued)

Field	Description
	• New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents. • Invalid: When HR agents review the data and reject due to insufficient or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.
Claim status	Current status, whether the claim is in progress or resolved.
Resolution method	Type of resolution provided for the claim, for example, settled with prejudice, mediation, or arbitration.
Amount of settlement	Amount at which the claim got settled.
Amount paid	Total amount paid by the insurer for claim submitted.

Education and Training form

Access, update and validate the Education and training details of a healthcare professional in the Education and training form.

Education and Training form

Field	Description
Employee profile	Employee profile of the healthcare professional.
Professional profile	Professional profile of the healthcare professional.
Education type	Type of education received by the healthcare professional: training or degree.
Start date	Date when the education began.
End date	Date when the education ended.
Degree awarded	Type of degree awarded to the healthcare professional. This field appears only when **Degree** is selected in the **Education type** field.
Training type	Type of training received by the healthcare professional, for example, residency or internship.
Training specialty	Healthcare domain in which the healthcare professional has received a training.
Status	Status of the education and training record: • New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Education and Training form (continued)

Field	Description
	• Invalid: When HR agents review the data and reject due to insufficient or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.
Institution code	Code associated to the educational institution.
Institution name	Name of the educational institute from where the healthcare professional has taken the training.
Institution address	Address of the educational institute from where the healthcare professional has taken the training.
Institution city	City in which the educational institute is located.
Institution state/province	State in which the educational institute is located.
Institution country	Country in which the educational institute is located.
Institution zip/ postal code	Postal code of area in which the educational institute is located.

Practice location form

Access, update, and validate the practice location details of a healthcare professional in the Practice location form.

Practice Location form

Field	Description
Professional profile	Professional profile of the healthcare professional.
Practice name (in Directory)	Practice name of the healthcare professional.
Corporation name (in W-9 form)	Name of the corporation in (W-9 format) to verify name, address, and tax ID.
Primary tax ID type	Type of tax ID: Primary or Individual.
Individual tax ID	Individual Tax ID number against which taxes are collected from the healthcare professional.
Group tax ID	Group tax ID (Employer Tax ID) against which taxes are collected.
Credentialing reference	Option to add a professional reference.
Office schedule	Working schedules of the health care professional, for example, 24 X 7.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Practice Location form (continued)

Field	Description
Accept new patients	Option to indicate that the healthcare professional can accept new patients.
Accept new medicaid patients	Option to indicate that the healthcare professional can accept new medicaid patients.
Accept new medicare patients	Option to indicate that the healthcare professional can accept new medicare patients.
Active	Option to indicate that the practice location record is available to use.
Is current location	Option to indicate that this is the current practice location of the health care professional.
Is billing electronic	Option to indicate that electronic billing is generated at the affiliated hospital for the services rendered by healthcare professional.
Send correspondence here	Option to indicate that any correspondence (examples: letters) to the healthcare professional can be sent to the affiliated hospital.
Status	Status of the practice location record: • New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents. • Invalid: When HR agents review the data and reject due to insufficient or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.
Address	Address of practice location.
City	City in which practice location is situated.
State/province	State in which practice location is situated.
Zip/postal code	Postal code of area in which the practice location is situated.
Country	Country in which the practice location is situated.

Employment history form

Access, update, and validate the Employment history details of a healthcare professional in the Employment history form.

Employment History form

Field	Description
Employee profile	Employee profile associated to the healthcare professional.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employment History form (continued)

Field	Description
Professional profile	Professional profile associated to the healthcare professional.
Employment history type	Option indicating whether employed or had a gap in employment.
Employment type	Nature of employment, for example, Consultant, Trainee, or Contractor.
Start date	Date when the employment began at an organization.
End date	Date when the employment ended at an organization.
Status	Status of the employment history record: • New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents. • Invalid: When HR agents review the data and reject due to insufficient or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.
Employer name	Name of the organization at which the healthcare professional has worked.
Employer address	Address of the organization at which the healthcare professional has worked.
Employer city	City in which the employer office is located.
Employer state/province	State in which the employer office is located.
Employer country	Country in which the employer office is located.
Employer zip/ postal code	Postal code of area in which the employer office is located.
Gap reason	Reason stated by the healthcare professional when **Employment gap** is selected in the **Employment type** field.

Languages Spoken form

Access, update, and validate the language details of a healthcare professional in the Languages form.

Languages Spoken form

Field	Description
Employee profile	Employee profile associated with the healthcare professional.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Languages Spoken form (continued)

Field	Description
Professional profile	Professional profile associated with the healthcare professional.
Language code	Option to choose a language name.
Active	Option to indicate that the language spoken record is active.
Primary	Option to indicate that the language specified is primary language of the healthcare professional.
Status	Status of the languages spoken record: • New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents. • Invalid: When HR agents review the profile data and reject due to insufficient date or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.

Hospital Affiliations form

Access, review and validate the Hospital Affiliation details of a healthcare professional in the Hospital Affiliations form.

Hospital Affiliations form

Field	Description
Healthcare professional profile	Profile of the healthcare professional.
Name	Name of the affiliated hospital at which the healthcare professional works.
Privilege start date	Date starting which the healthcare professional has the required permissions to work at a hospital affiliation. **Note:** This field appears only when **Temporary** is selected in the **Privilege type** field.
Privilege end date	Date until which the healthcare professional has the required permissions to work at a hospital affiliation. **Note:** This field appears only when **Temporary** is selected in the **Privilege type** field.
Privilege type	Level of privilege the heathcare professional has at the affiliated hospital: Temporary or Fully unrestricted

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Hospital Affiliations form (continued)

Field	Description
Type of admitting privilege	Nature of admitting privilege, for example, can the healthcare professional only admit a patient at an affiliated hospital, or admit, treat and perform surgeries at an affiliated hospital.
Percentage of admissions	Percentage of admissions that the healthcare professional accepts at an hospital affiliation.
Active	Option to indicate that the Hospital Affiliations record is active and available to use.
Is primary	Option to indicate that it is the primary hospital that the healthcare professional is affiliated to.
Status	Status of the hospital affiliations record: • New: When profile intake form is sent to the healthcare professional for filling. • Pending validation: When data is filled in by healthcare professional and sent for credentialing and validation to HR agents. • Invalid: When HR agents review the profile data and reject due to insufficient date or invalid details. • Valid: When HR agents validate and approve the information provided by the healthcare professional.
Address	Address of the affiliated hospital at which the healthcare professional works.
City	City in which affiliated hospital is located.
State/ Province	State in which affiliated hospital is located.
Zip	Postal code of area in which affiliated hospital is located.
Country	Country in which affiliated hospital is located.

Payers Enrollment form

Access, review and validate the Payers Enrollment details of a healthcare professional in the Payer enrollment form.

Payers Enrollment form

Field	Description
Healthcare professional profile	Profile associated to healthcare professional.
Payer name	Name of payer who makes payments to the healthcare provider.
Payer plan name	Name of payer plan.
Plan number	Unique plan number against which payments are made by healthcare provider.
Active	Option to indicate that the payer enrolment record is active.
Effective From	Date starting which payer enrolment is valid.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Payers Enrollment form (continued)

Field	Description
Effective Till	Date until which payer enrolment is valid.

Healthcare Employee Onboarding form

A hiring agent or a manager places an onboarding request for a healthcare professional via the Healthcare Employee onboarding form in Employee Center.

Healthcare Employee Onboarding form

Field	Description
First name	First name of the healthcare professional.
Middle name	Middle name of the healthcare professional.
Last name	Last name of the healthcare professional.
Personal email	Personal email ID of the healthcare professional.
Mobile number	Mobile number of the healthcare professional.
Fax	Fax number of the healthcare professional.
Employment start date	Joining date of the healthcare professional.
Employment type	Nature of employment such as part time employee, full time employee, or contingent.
Location type	Location type such as hot desk, office based, or remote.
Home city	Home city of the healthcare professional.
Home state	Home state of the healthcare professional.
Title	Designation of the healthcare professional.
Department	Department to which the healthcare professional is associated.
Manager	Reporting manager of the healthcare professional.
Company Location	Location in which the healthcare organization is situated.

Integration of HR Service Delivery with ServiceNow applications

Extend HR Service Delivery capabilities by integrating with other ServiceNow applications.

Universal Request for HR Service Delivery

With the integration of HR Service Delivery and Universal Request applications, you can provide a consistent user experience for employees while creating service requests. You can hide the complexities of inter-department request transfers and multi-department use cases by providing a common help desk for all employees.

About Universal Request for HR Service Delivery

A universal request gets created when an employee clicks the **Request help** option in Employee Center. A universal request routing agent analyses the issue (as HR department related) and creates an HR case from that universal request. After the case gets resolved by an HR agent, the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

state of the HR case changes to **Awaiting Acceptance**. Automatically, the state of the universal request changes to **Awaiting response**. Finally, after the employee accepts the resolution, the universal request gets closed and in turn the HR case gets closed.

At any point in time, the HR agent can transfer the HR case back to the universal request queue with or without resolution.

All the important details, such as, users who are working on the issue, inter-department transfers, and work notes, are recorded in the universal request ticket, providing complete visibility to the employee who has raised the request.

Activating the necessary plugins

After you have activated the Universal Request (com.snc.universal_request), Human Resources Scoped App: Core (com.sn_hr_core), and Employee Center (com.sn_hr_service_portal) plugins, you notice that:

- The Universal Request form contains a UI action to create an HR case.
- The **Universal Request** field appears on the HR case form when an HR case is associated with a universal request record.
- The **Transfer** button appears on the HR case form to let an HR agent transfer an HR case back to Universal Request, another department, or service.
- An HR case created from a record producer automatically creates a universal request. It happens only when the **Create Universal Request** check box is enabled on the record producer.

  Similarly in the Create a test case topic block, if the **Create Universal Request**check box is enabled on the record producer, then a universal request ticket is created and shared with the employee on the Virtual Agent conversation.

- When an HR case associated to a universal request goes through a state change, a notification is sent to the employee (requester) with the universal request number and not the HR case number.
- On ServiceNow AI Platform, HR cases that are associated with Universal Request appear under **HR Case Management** > **All**.
- On Employee Center, HR requests that are associated with Universal Request appear under **Employee Center** > **Requests**.

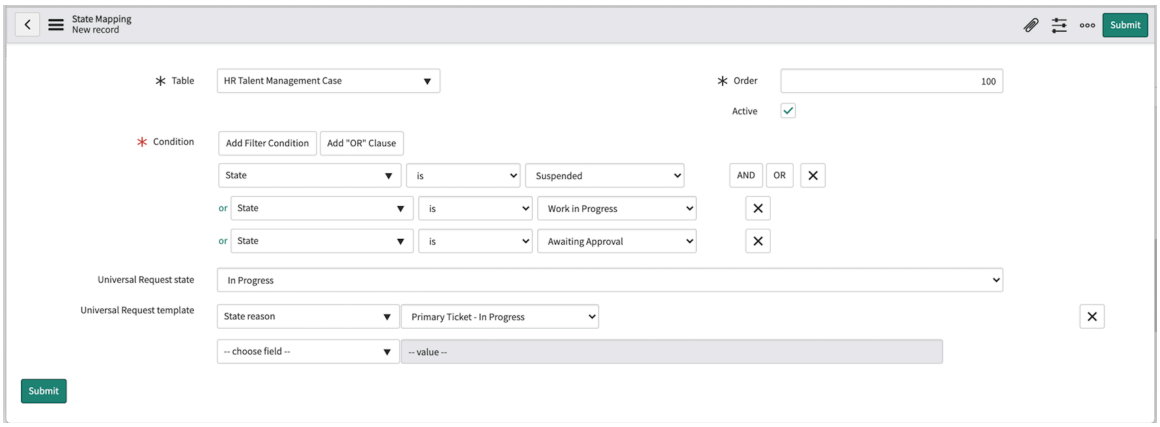
Custom configurations in Universal Request

Transferring and state mappings are preconfigured for all the base system HR states. Do these configurations only when you have a custom state.

Before you begin

Role required: sn_hr_core.admin

About this task



If you have created COEs (Center of Excellence), then create service configurations, state mappings, and transfer configurations as well. In case you have activated the Predictive Intelligence plugin, configure the service assignment groups by referring to Department Setup for UR.

Procedure

1. Navigate to **All** > **Universal Request** > **Administration**.
2. Create your service set and services for Universal Request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Assign the assignment groups for service sets and services.
4. Assign roles to UR users.
5. Map a custom state to that of a universal request.
   The following image is an example of a default state mapping. The **Suspended**, **Work in Progress**, and **Awaiting Approval** states of an HR case are mapped to **In Progress** state of a Universal Request.

6. Set the transfer configuration for any custom state of an HR case.

   This transfer configuration allows you to determine what happens to the departmental ticket when the request is transferred to another department or back to UR.

   If an HR case is being transferred with resolution, the state of the HR case automatically changes to **Awaiting Acceptance**. If an HR case is being transferred without a resolution, the state of the HR case automatically changes to **Closed Incomplete**.

7. Create record producers specific to an HR service.

   A record producer is a specific type of catalog item that allows end users to create task-based records from the service catalog. On the record producer, if you select the **Create Universal Request** check box, an HR case created from that record producer automatically creates a universal request record.

   Following is an example of a record producer for General Inquiry HR service. When a user selects the catalog item as General Inquiry and creates a ticket, automatically a universal request is created and associated to that HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create an HR case from Universal Request

Restore service to a customer as soon as possible. After creating the HR case, you can investigate potential solutions.

Before you begin

- Role required: routing_agent and sn_hr_core.case_writer
- Activate the Universal Request (com.snc.universal_request) and Human Resources Scoped App: Core (com.sn_hr_core) plugins.

Procedure

1. Navigate to **Universal Requests** > **All**.
2. Open the universal request record from which you want to create an HR case.
3. Click **Create HR case**.
4. Fill in the fields on the HR case form.

> **Note:**
> The **Employee Information** field values are automatically copied from the universal request to the HR case.

HR case form

Field	Description
COE	The Center of Excellence
HR service	The HR service type
Opened for	The person the ticket is opened for
Subject person	The subject person
Work notes	Other notes if any

5. Click **Submit**.
   The universal request number from which the HR case is created appears in the**Universal Request** field on the HR case form. The HR case number appears in the **Primary Ticket** field on the universal request form and also under the **Associated Tickets** related list.

Work on an HR case of Universal Request

Provide resolution to an HR case that is initiated from a universal request.

Before you begin

Role required: sn_hr_core.case_writer

About this task

The state changes described in the procedure can be configured to suit your requirements. For more information, see Universal Request state mapping

Procedure

1. Open the HR case that is created from a Universal Request.
2. Click **Start Work**.
   The state of the case changes to **Work in Progress**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- If another department in HR must work on the request, you can transfer the case with the same number or with a new number. When you transfer the case with a new number, the universal request gets associated to that new case number.
- If this issue is not related to the HR department, the HR agent must select the **Transfer** option on the case. For more details on how to transfer the case, see Transfer an HR case in Universal Request.

3. Click **Closed Complete** when the resolution is provided.
   The state of the HR case is changed to **Awaiting acceptance** and the state of the universal request is automatically changed to **Awaiting response from user**. On the Employee Center:
   - If the user accepts the resolution, the state of the universal request is changed to **Closed**. The state of the HR case is automatically changed to **Closed Complete**.
   - If the user rejects the resolution, the state of the universal request is changed to **In progress**. The state of the HR case is automatically changed to **Work in progress.**

Important:
If for any reason the HR agent clicks **Closed Incomplete** without routing the HR case back to universal request, then the behavior is as follows:

- If the **Needs Additional Review** check box is selected on the universal request, the universal request will be in the **In progress** state, and the HR case will be in the **Close Incomplete** state.
- If the **Needs Additional Review** check box is deselected on the universal request, the universal request gets closed based on the state mapping.

Transfer an HR case in Universal Request

Transfer an HR case back to the Universal Request, or to another department or service with or without resolution.

Before you begin
Role required: sn_hr_core.case_writer

About this task
Configure the *sn_uni_req.transfer_type* property in the Universal Request properties page to determine how to handle the primary ticket transfers. For more information, see Universal Request Properties.

Procedure

1. Open the HR case that you want to transfer.
2. Click **Transfer**.

Note:
The **Transfer** option is displayed only if you are a part of the assignment group or if the case is assigned to you.

3. In the **Transfer Ticket** dialog box, provide the following details.

Note:
Based on your transfer type configuration, the given fields are displayed. For more information, see Universal Request properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Action**: Select if the case should be transferred to another department or back to Universal Request
- **Department**: Select the department from the list.
- **Service**: Select the specific service of the chosen department.
- **Transfer reason**: Select the reason from the list.
- **Transfer notes**: A brief description for routing the primary ticket that you want to pass to the UR Routing agent.
- **Copy additional comments and attachments**: Deselect if you do not want to transfer the ticket with additional comments and attachments. By default, all attachments and comments are transferred.

Note:
Work notes are not copied while transferring.

4. Click **Transfer**.

Result

- On the HR case form, you can view the reason for transferring in the **Transfer reason** field.
- The state of the HR case is changed to **Awaiting Acceptance** or **Closed Incomplete based on transfer reason** and the transfer reason and transfer notes are copied to the universal request.
- The state of the universal request remains **In progress**.

Note:
The state changes mentioned can be configured. See Transfer configuration for more information.

Creating a universal request from an HR case

Create a universal request for every HR case that is created, using any channel. Extend the unified ticket experience that Universal Request provides for all the HR cases, irrespective of the channels they are created from.

Activate a business rule

To auto-create a universal request from an HR case, you must activate the **Create Universal Request for HR case** business rule.

Configure field mappings

To auto-create a universal request from an HR case and copy the primary details from an HR case to a universal request, Configure field mappings.

Configure field mappings

Map fields to copy the primary details from an HR case to a universal request (that is auto-created from the HR case).

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Mapping Configuration**.
2. Select an HR service.
3. In the **Create UR mappings** related list, map the fields of an HR case with that of a universal request.

Field mappings

Source Field in HR case	Target Field in universal request
short_description	short_description
opened_for	opened_for
description	description
opened_by	opened_by

Create associated tickets from an HR case

From an HR case that is the primary ticket of a universal request, create tickets for another department and associate them to the same universal request as the HR case. This feature enables agents from various departments to collaborate and work on their tickets in parallel. It also enables organizations to trace back efforts against a single universal request.

Before you begin

Role required: sn_hr_core.case_writer
Logged in user is the member of the **Assignment group** or **Assigned to** fields.

Procedure

1. Open an HR case.
2. Click **Create Associated Ticket**.
3. In the **Create Associated Ticket** dialog box, provide the following details:

Associated ticket form

Field	Description
Department	Department for which you want to create a ticket.
Short description	Purpose of creating the ticket.
Description	More details pertaining to the ticket.
Work notes	Updates that you want to share with the department for which you are creating the ticket.

4. Click **Create**.
   A ticket is created for another department. This ticket is automatically tied to a universal request and appears in the **Associated Tickets** related list in a universal request.

AI Search for HR Service Delivery

The ServiceNow® AI Search application provides a modern consumer-grade search engine for the ServiceNow® Service Portal, Employee Center (EC), ServiceNow® Mobile, and ServiceNow® Virtual Agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New customers automatically have the ServiceNow® AI Search application configured with their base system for the EC only.

If you are an existing customer, you can configure HR Service Delivery to use the ServiceNow® AI Search application.

For more information, see AI Search.

Configuration

For detailed information on configuring the ServiceNow® AI Search application, see Configuring AI Search.

Use the **Search Application Configuration** form to associate the AI Search engine with an HR Service Delivery application.

Note:
For more information, see Create a search application configuration for AI Search.

In the **Search Application Configuration** form, you must also choose a **Search Profile**. The search profile determines the search sources and conditions for people, articles, and services.

The base system provides the following that you can also modify:

- Mobile: NowMobile Default Search Profile
- EC: EC Portal Default Search Profile
- Service Portal: Service Portal Default Search Profile
- VA: Service Portal Default Search Profile

Note:
For mobile, people search is only available to customers that have the EC.

Under the search profile, there are a series of tabs that enhance AI search. The base system provides the following that you can also modify:

- Search Sources
- Synonyms
- Stop Words
- Typo Handling
- Genius Results

See how AI Search displays results, how to use refinement filter options, and Genius Result answers. For more information, see Using AI Search.

ServiceNow® Mobile

Configure AI Search for the ServiceNow® Mobile. For more information, see Advanced text search in mobile.

Service Portal or Employee Center

Configure AI Search for the Service Portal or Employee Center (EC) so your users can take advantage of this powerful search tool. For more information, see AI Search in Service Portal.

Virtual Agent

Virtual Agent uses AI Search to return search results in bot conversations when there are no relevant topics to display. For more information, see Virtual Agent integration with AI Search.

Virtual Agent for HR Service Delivery

HR Service Delivery and Virtual Agent provide an automated chat with an employee requesting HR services. You can program Virtual Agent to understand the intent of an employee to handle repeatable requests.

Virtual Agent enhances the employee experience by addressing queries immediately.

At any time during a virtual chat, the employee can request to interact with a live HR agent.

For more information, see Virtual Agent.

Predefined Virtual Agent topics for HR Service Delivery

The base system provides the predefined Virtual Agent topics (chatbot conversations) designed to help your customers complete common self-service HR tasks. These topics are not published and found under the Virtual Agent Designer. For more information, see Virtual Agent Designer.

For more information on predefined virtual agent topics, see Prebuilt Virtual Agent topics, topic blocks, and ServiceNow NLU models.

The following predefined, HR Service Delivery Virtual Agent topics are available:

- Add Emergency Contact (Template)
- Ask a Question (Template)
- Benefits Overview (Template)
- Create HR General Inquiry Case (Template)
- Delete Emergency Contact (Template)
- FAQ Search Fallback Topic (Template)
- General HR Inquiry (Deprecated)
- New Hire Orientation (Template)
- Pay Discrepancy (Template)
- Request for Leave (Template)
- Update Address (Template)
- Update Email (Template)
- Update Emergency Contact (Template)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Update Phone Number (Template)
- Download Payslip Request (Template)
- Enroll new Beneficiary Request (Template)
- Change in Benefits Inquiry (Template)
- Tuition Reimbursement Request (Template)
- HR Account Access (Template)
- Employment Verification Letter Request (Template)
- 401k Benefits inquiry (Template)
- HSA Inquiry (Template)
- Check Case status (Template)
- Employee Info Update (Template)

Note:
Employee info update topic enables you to update information like Email, Address and Phone number, at one place instead of going to the individual topics separately.

Warning:
General HR Inquiry is no longer available as one of the predefined topics.

A topic defines the dialog between the Virtual Agent (chat support bot) and user to accomplish a specific goal. The information exchanged during the conversation flow (user inputs and bot responses) enables the chatbot to fulfill a user request or assist a user in completing a task.

For more information, see Designing a Virtual Agent topic.

Custom portals and ticket page

If your company has created a custom portal and/or ticket page, and you want the HR case link (in Virtual Agent) to redirect to your portal and/or ticket page, then create a system property that links the HR case in Virtual Agent to your portal and/or ticket page. For example:

- Custom portal name: escServiceNow
- Custom ticket page name: new_ticket_page
- sys_property: com.glide.cs.portal_url_mapping.escServiceNow.sn_hr_core_case
- Value: /escServiceNow?id= new_ticket_page&sys_id={{data.sys_id}}
- Application: Global

Note:
See Add a system property.

Natural Language Understanding (NLU) support

You can set up HR Service Delivery Virtual Agent to use Natural Language Understanding (NLU) to understand word meanings and word contexts to infer user or system actions.

For more information about NLU and the NLU Workbench, see Natural Language Understanding and Activate the NLU Workbench.

Also, see Natural Language Understanding in Virtual Agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
This feature is only available with the HR Professional and HR Enterprise packages.

Reusable HR Service Delivery Virtual Agent topic blocks

Create and reuse topic blocks to perform common functions in HR Service Delivery Virtual Agent conversations, like creating an HR case or performing a search.

Topic blocks help you be more productive by minimizing duplicate subflows, are easier to maintain, and ready to use immediately.

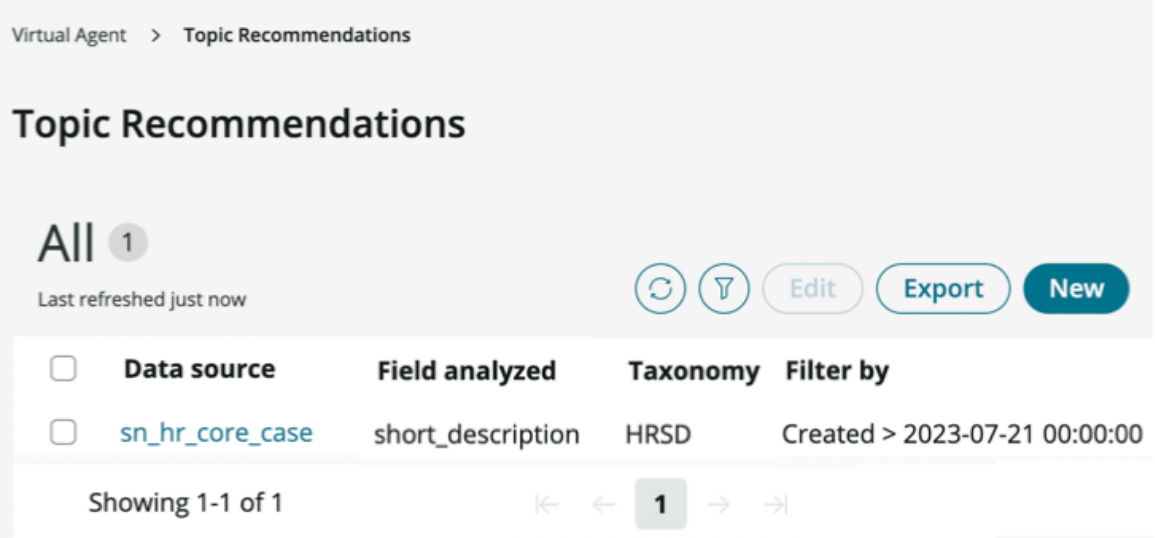
The following predefined, reusable topic blocks are:

- Contextual Search
- Create HR Case
- Survey
- Transfer to Live Agent
- Update HR Case
- Employee Authentication
- Agent Availability
- FAQ Contextual Search
- AI Search
- Request Catalog Item
- Search Catalog Item
- Pause

The Topics page in Virtual Agent Designer features a sort tab called **Topic Blocks** for viewing just the reusable topic functions. For detailed information about HR Service Delivery Virtual Agent, refer to Prebuilt Virtual Agent topics, topic blocks, and ServiceNow NLU models.

Integration with messaging applications

Your employees can hold Virtual Agent conversations using Slack, a third-party messaging application.



For more information, see Virtual Agent integration with messaging apps.

For information on configuring Virtual Agent notifications for certain channels such as Slack, see Setting up Virtual Agent notifications.

Topic Recommendations for HR Service Delivery Virtual Agent

Get pre-built topics or create new topics from the recommended topics for HR Service Delivery Virtual Agent using the default configuration sn_hr_core_case in the Topic Recommendations settings. For more information, see Topic Recommendations settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For HR Cases, this default setting is shipped with Taxonomy preselected to HRSD and the Filtered by setting set to display the cases created after the last 90 days. For more information on Topic Recommendations, see Using Virtual Agent Topic Recommendations.

In the Topic Recommendations page, under Get new recommendations, select **HR Cases** and click on **Get new recommendations**. Once the new recommendations are available, select your preferred recommendations and add them to the Virtual Agent using the **Add to VA** option. For more information, see Topic Recommendations page.

Note:
The system takes around 15 minutes to provide the new topic recommendations.

Note:

- To get the Topic Recommendations, accept the RCAs after installing the HR Service Delivery Virtual Agent plugin.
- To add a recommended topic to the Virtual Agent, you must be present in the HR Service Delivery Virtual Agent scope.
- To get Topic Recommendations, make sure there are a minimum of 10,000 records and a maximum of 300,000 records in the HR Cases table.

Activate Virtual Agent for HR Service Delivery

Activate Virtual Agent for HR Service Delivery to provide user assistance through a conversational messaging interface. You can also activate Virtual Agent for HR Service Delivery with ServiceNow® Natural Language Understanding (NLU).

Before you begin
Role required: admin

About this task
The HR Service Delivery Virtual Agent Conversations plugin (sn_hr_va) activates the *sn_hr_va.min_admin_count* system property in the System Properties [sys_properties.list] table. This property prevents you from deleting your only Virtual Agent admin user by requiring a minimum number of active users with this role. The minimum is two by default.

To activate Virtual Agent, do the following in order:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Activate the Glide Virtual Agent plugin (com.glide.cs.chatbot) that provides the Virtual Agent framework.
2. Activate the Human Resources Scoped App: Core plugin (com.sn_hr_core) that provides case and knowledge management for HR.
3. Activate the HR Service Delivery Virtual Agent Conversations plugin (sn_hr_va) that provides a conversational bot platform for user assistance.

If you want to activate Virtual Agent also with NLU, then activate the following plugins after you have already activated the previous plugins:

1. Activate the Predictive Intelligence plugin (com.glide.platform_ml) that enables the creation of machine learning solutions.
2. Activate the NLU Workbench plugin (com.snc.nlu_studio) that enables the creation of NLU models.
3. Activate the Studio plugin (com.glide.dev-studio) that is used for adding and updating application files.
4. Activate the HR Service Delivery NLU Model for Virtual Agent Conversations plugin (sn_hr_nlu) that provides the NLU model used by HR Virtual Agent. This plugin is available on the ServiceNow Store, and provides NLU models in the English, German, French, Spanish, Japanese, Dutch, Chinese, and Brazilian Portuguese languages.

Note:
The HR Service Delivery NLU Models in the Dutch, Chinese and Brazilian Portuguese languages do not support entity extraction (intent matching and entity recognition).

When an employee opens an HR case using Virtual Agent for HR Service Delivery, the **Source** field on the HR case is **Virtual Agent**. For more information, see Work an HR case.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Set up Virtual Agent for HR

Setting up Virtual Agent or Virtual Agent with NLU for HR Service Delivery requires multiple steps.

Before you begin

Role required: admin, virtual_agent_admin
The base system provides predefined Virtual Agent and Virtual Agent NLU topics (chatbot conversations).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You cannot edit the provided topics. You can duplicate a provided topic and then edit it. You can also create additional topics. See Virtual Agent Designer.

After performing the activation steps, the **Chat** link replaces the **Chat with HR** link on the Employee Center or service portal.

When an employee clicks the **Chat** link, Virtual Agent launches and the employee is chatting with a virtual agent.

Before your employees can use Virtual Agent topics, you must activate and publish them.

Before existing Virtual Agent topics can use NLU, you must republish them.

Note:
By default, the base system provides topics as inactive and unpublished.

If your company uses a custom service portal and ticket page, see Virtual Agent for HR Service Delivery.

To view, duplicate, preview, or publish HR topics in the Virtual Agent Designer:

Procedure

1. Navigate to **All** > **Collaboration** > **Virtual Agent** > **Designer**.
2. Click **Active** so the button turns green to activate a topic.
3. Click **Publish**.
4. Click **Save**.

Configure a custom HR Service Delivery greeting experience

Define a custom HR Service Delivery greeting experience for a specific context in which your users run Virtual Agent. Configure your greeting experience to initiate the virtual agent automatically or immediately transfer to a live agent.

Before you begin

Prechat enables you to determine if you want the Virtual Agent topic conversation experience or a live agent experience. The Prechat is independent of the Glide Virtual Agent (com.glide.cs.chatbot) plugin activation.

For example, if your instance has both IT Service Management Pro and HR Service Delivery Pro subscriptions, you can implement Virtual Agent topic conversations when a chat starts for ITSM and Live Agent transfer when a chat starts for HR Service Delivery.

You can only customize the greeting experience for Virtual Agent setup topics. Customization of the setup topics is based on the condition that you define. The condition is based on context variables. The customizable setup topics include:

Customizable setup topic details

Setup topic type	Setup topic
Anything else	N/A
Live Agent	Live Agent Support
Error	Error Handling Topic
Greeting	Greetings

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Customizable setup topic details (continued)

Setup topic type	Setup topic
Closing	Closing Conversation
Survey	N/A
AI Search fallback	AI Search Fallback
Fallback	Fallback Topic
Explore Help	Virtual Agent Capabilities

Role required: virtual_agent_admin or admin

Procedure

1. Navigate to **All** > **Conversational Interfaces** > **Settings**.
2. Select Virtual Agent.
3. In Custom Greetings and Setup, select **View all**.
4. Select **New**.
5. On the Custom Greetings and Setup form, fill in the fields.
   For field descriptions and more details, see Configure a Virtual Agent chat experience.

   Note:
   Define the custom experience in the **Provide the context** section of the Custom Greetings and Setup record. Configure the **Condition Mode** field to **Advanced** and customize the condition logic in the **Script** field with JavaScript that specifies the context.

6. Select **Create custom experience**.

Result

You have created a custom greeting experience for HR Service Delivery users.

Note:
A custom greeting and chat experience HR ESC Experience is available to the HR Service Delivery Virtual Agent users to cater to HR Service Delivery specific search experience. This experience is inactive by default, you have to activate it for your users.

Capturing solution delivery in HR Service Delivery Virtual Agent chats

HR Service Delivery Virtual Agent provides pre-built patterns that enable you to track whether Virtual Agent conversations helped the end user.

Deflection outcomes indicate whether Virtual Agent chats provided a solution to the user. You can define deflection points in a Virtual Agent topic that can be mapped to a deflection pattern to capture the right deflection.

For HR Service Delivery Virtual Agent users, six deflection patterns are available by default. They are divided into three deflection outcomes:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Confirmed deflection - Provides a resolution to the user that prevents the user from creating an HR case or transferring to a live agent. For example, Virtual Agent might add a user to the distribution list.
- Potential deflection - Provides a partial resolution to the user. For example, information the user is looking for is provided or search results are returned.
- No deflection - Did not provide a solution or the user created a general inquiry case.

HR Service Delivery Virtual Agent Deflection patterns

Deflection patterns	Activity	Deflection outcomes
HR VA Search-Served	Knowledge base article served and helped	Confirmed deflection
HR VA Self-Resolving	Information updated	Confirmed deflection
HR VA Triage&Created	HR service case created	Potential deflection
HR VA Info-Found	Information found	Potential deflection
HR VA Service Case Not Created	HR general inquiry case created	No deflection
HR VA Info-Not-Found	Information not found	No deflection

If the user interacts with a Virtual Agent topic that has deflection defined, the deflection data is captured automatically in the background without changing the user experience. This deflection outcome of matched patterns is then recorded for analysis. You can access this information by navigating to **All** >**Self-Service Analytics** > **Deflection Metric**.

Note:
The default deflection patterns in the HR Service Delivery Virtual Agent are not customizable. To modify a deflection pattern, you have to clone it, make the necessary changes, activate it and then publish the pattern.

Performance Analytics for HR Service Delivery

HR Performance Analytics measures key performance indicators to track HR performance over time.

Activation information

HR Performance Analytics Scoped requires a separate premium subscription to the Performance Analytics application. Activate the:

Performance Analytics Premium for Human Resources Management [com.snc.pa.premium.hr] plugin.

Also, activate one or more of the following content packs:

- Performance Analytics - Content Pack - Human Resources Scoped App [com.sn_hr_pa]
- Performance Analytics - Content Pack - Human Resources Employee Document Management Scoped App [com.sn_hr_employee_files_pa]

To configure the Performance Analytics (PA) dashboard, assign the Performance Analytics Administrator [pa_admin] role to the HR Administrator [sn_hr_core.admin] role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Only the System Administrator [admin] can assign PA roles to employees.

See Performance Analytics roles.

Contact your account manager for more information.

Related topics

Performance Analytics

Viewing HR Performance Analytics Scoped

HR Performance Analytics for the scoped version of HR Service Delivery helps you align resources and systems to strategic objectives.

Before you can view HR Performance Analytics data, your organization must purchase a subscription to Performance Analytics and an administrator activates the plugin.

After activating HR Performance Analytics, the collection job runs daily by default and is configurable. Collected data is kept for 30 days. The data in performance analytics reports is collected based on a daily scheduled job, therefore, the date is one day in the past. Over time, more data is available for historical trending.

Scheduled Data Collection

There are two jobs specific to the Performance Analytics - Content Pack - Human Resources Scoped App [com.sn_hr_pa] plugin:

- [PA HR Case] Daily Data Collection
- [PA HR Case] Historic Data Collection

See Create or schedule a data collection job.

Indicators

Each job has indicators to make data collection efficient and defines what data to collect.

See Configure a job indicator.

View dashboards

After the PA jobs run, you can view the collected data from the **Dashboard**.

See Dashboards overview.

HR Manager

Provides detailed data about open cases that helps managers quickly assign agents and look deeper into opened cases. You can sort this dashboard by assignment group.

- You can only filter this dashboard by Groups.
- The **Overview** tab provides summaries by backlog of all open cases, average time to resolution, and unassigned opened cases.
- The **Operational** tab shows the number of open cases by backlog, critical, breached SL, not updated in the last 10 days, and unassigned open. You can also filter by priority, state, assigned to, topic category, and HR service.
- The **Backlog monitor** tab shows the number of all open cases, average reassignment, cases not updated in last 3 days, unassigned, and the average age

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

of open cases. You can also sort by COE, topic category, HR service, assignment group, agent, state, source, or priority and further by type of HR case. The format of the data is interchangeable.

HR Agent

Provides detailed data for the logged in HR agent. It provides the number of backlog of open cases, breached SLA cases, approval requests, and unassigned cases.

Group and stack the opened backlog cases by priority or state .

You can filter by state, topic category, source, and priority.

The **Performance Analytics** dashboard provides the following reports.

Volume of Open/Closed Cases by Category

The line chart shows the trend of open and closed cases for each of the last four weeks. Click a point on a line to see open or closed cases for the duration. The **Breakdowns** tab shows the number of open or closed cases by category. Select **Stacked bar** from the choice list for the best data format.

Active HR Cases per Week - by AVG

The bar chart shows the average number of active cases by state for each of the last four weeks. It also shows the total number of cases for each week. The **Breakdowns** tab shows the aging buckets and the total number of cases in each bucket.

Active HR Cases by State

The trending chart shows a trend of the cases that moved to each HR case state during the past 30 days. The gray bar to the left of the Trend column represents the proportion of moved cases to the total number of cases. The **Breakdowns** tab shows aging buckets and the number of cases in each bucket for that date.

Active HR Cases Managed by Agent - Weekly AVG

The trending chart shows the number of cases assigned to each agent over the past four weeks.

Active HR Cases SLA Indicator per Week- By AVG

The bar chart shows the average number of cases that were in each aging bucket for each of the last four weeks. The **Breakdown** tab shows the agent and the number of cases on that date in the selected aging bucket. Select **Column** from the choice list for the best data format.

1. Point your cursor to an element, such as a bar or pie segment, to see what the element represents.
2. Click a segment to see more details about the element. Scroll up to view the information. The detail contains the following tabs, depending on the selected element.

- **Chart**: The detail of the element displayed in a chart. You can use the controls on the upper right to add or change comments, targets, and thresholds.
- **Breakdowns**: The breakdown of the buckets used in the report. Select a chart type from the choice list on the upper right to see the data in another format.
- Records: The records that comprise the element you selected. You can view the detail of each record.
- Scores: The number of records for each week in the report.
- Comments: Comments entered for this report. The tab is disabled unless comments exist.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- More info: A description of the logic that generates the report, how often the job runs, and when the data was last collected.
- If a menu icon appears when you point your cursor to a chart, you can click the icon to export the chart to an image file.

For more information about performance analytics and how to develop and modify widgets for your organization, see Performance Analytics concepts .

HR Performance Analytics Dashboards

Platform Analytics Solutions contain preconfigured dashboards. These dashboards contain actionable data visualizations that help you improve your business processes and practices.

Platform Analytics data visualizations use Performance Analytics indicator data to show you data over time, helping you analyze your business processes and identify areas of improvement. With Platform Analytics Solutions, you can get value from Performance Analytics for your application with minimal setup. You can always create your own objects as well.

Important:
Set up and test Platform Analytics Solutions on a non-production instance before enabling them in production.

To enable the solution plugin, an admin can navigate to **System Definitions** > **Plugins** and activate the Performance Analytics - Content Pack - Human Resources Scoped App and the Performance Analytics - Content Pack - Human Resources Lifecycle Events Scoped App plugins.

Add Self-Service Analytics to your Human Resources dashboards

If you have Self-Service Analytics activated on an instance, you can add Self-Service analytics widgets to your Performance Analytics dashboards or a Service Portal. To obtain a ready-made set of indicators and breakdowns, activate the Self-Service Analytics PA (`com.snc.pa.self_service_analytics`) plugin. Find the Self-Service indicators through the Performance Analytics Admin Console, then create widgets and add them to your dashboard or portal. Also activate the [SSA] Self-Service Analytics data collection job.

HR Manager: Needs clear visibility into the operations of the shared service center.	sn_hr_core.manager

Use case

Organizations need to understand and meet or exceed the expectations of the modern workforce and provide a delightful employee experience. This dashboard provides the HR manager with an overview of the number of HR cases and the time and difficulty in resolving them.

Indicators

The HR Manager dashboard presents the following key performance indicators:

Average case survey score

Measures the average score of the customer satisfaction survey that is sent to the employees after a case is closed. The score should maximize over time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **CSAT** widget on the dashboard presents an average over the last seven days of the average case survey score.

HR Cases Growth

Measures the change in volume of your case backlog. This value is calculated from other indicators using the formula `Number of open cases - Number of closed HR cases`.

Number of open cases with breached SLAs

Measures the number of open cases that have SLAs greater than 100.

Average age of open cases

Measures the average time that a case remains open. This value is calculated from other indicators using the formula `Summed duration of open cases / Number of open cases / 24`.

On the dashboard, this indicator is labeled **Open Cases Age**.

Average age of closed cases

Measures the average amount of time that it takes to close a case. This value is calculated from other indicators using the formula `Summed duration of open cases / Number of open cases / 24`.

The **Average time to close - Weekly** widget presents an average over the last seven days of the average age of closed cases.

Number of open cases

Measures the number of cases that were opened on or before today that have not been closed yet.

The number of open cases is plotted against the age of open cases.

Average reassignment of open cases

Measures the average number of times a case is reassigned. This value is calculated from other indicators using the formula `Summed reassignment of open cases / Number of open cases`.

Number of cases with no updates in last 3 days

Number of cases with no updates in last 10 days

The number of open cases that have gone 3 or 10 days, respectively, without any updates.

Summed duration of open cases

Measures how long all open cases have been open for.

Number of reassigned open cases

Measures the number of cases that have a reassignment count greater than 0.

Summed reassignment of open cases

Measures how many times a case is reassigned.

Number of unassigned open cases

Measures number of open cases that are yet to be assigned.

Number of closed HR cases

Measures the number of cases that were closed today.

Summed duration of closed cases

Measures the time taken to close all cases.

HR Onboarding Executive indicators

Number of employees leaving the company

Measures employee attrition. The **Employee Turnover** widget displays this value, broken down by department, employment type, or employment duration.

Average number of onboarding activities per onboarding case

Measures how many activities are closed on average from the total number of closed onboarding cases, using the formula `[Number of Closed Onboarding Activities] / [Number of closed lifecycle events cases > HR Service = Request Onboarding]`

Average new hire satisfaction survey score

Measures the average score of the new hire satisfaction survey which is sent to the employees after they have onboarded

Average time taken for onboarding activities

Measures the time taken on an average to finish onboarding activities per onboarding case, using the formula `[Summed duration of onboarding activities] / [Number of closed lifecycle events cases > HR Service = Request Onboarding] / 24`

Number of HR Cases logged in first 30 days of employment

Measures the number of non-onboarding HR cases that were logged by employees during the first 30 days of their employment

Average number of onboarding activities per onboarding case - Fulfiller

Measures how many activities assigned to the fulfiller are closed on average from the total number of closed onboarding cases, using the formula `[Number of closed onboarding activities - Fulfiller] / [Number of closed lifecycle events cases > HR Service = Request Onboarding]`

Average number of onboarding activities per onboarding case - Employee

Measures how many activities assigned to the employee are closed on average from the total number of closed onboarding cases, using the formula `[Number of closed onboarding activities - Employee] / [Number of closed lifecycle events cases > HR Service = Request Onboarding]`

Average time taken for onboarding activities - Employee

Measures the time employees take on average to finish their onboarding activities as part of onboarding case, using the formula `[Summed duration of onboarding activities - Employee] / [Number of closed lifecycle events cases > HR Service = Request Onboarding] / 24`

Average time taken for onboarding activities - Fulfillers

Measures the time fulfillers take on average to finish their onboarding activities as part of onboarding case, using the formula `[Summed duration of onboarding activities - Fulfiller] / [Number of closed lifecycle events cases > HR Service = Request Onboarding] / 24`

Number of closed lifecycle events cases

Measures number of lifecycle events cases closed today

Number of closed onboarding activities

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Measures the number of all activities closed as part of a lifecyle case, using the formula `[Number of closed onboarding activities - Employee] + [Number of closed onboarding activities - Fulfiller]`

Number of closed onboarding activities - Employee

Measures the number of closed activities assigned to the new hire

Number of closed onboarding activities - Fulfiller

Measures the number of closed activities assigned to the fulfiller

Number of IT Requests logged in first 30 days of employment

Measures the number of IT Requests that were logged by employees during the first 30 days of their employment

Number of new lifecycle events cases

Measures number of lifecycle events cases opened today

Number of open lifecycle events cases - Employees starting in next 7 days

Measures number of open cases for employees starting in the next 7 days

Number of open lifecycle events cases - Post day 1

Measures number of open cases for employees who have already started

Number of open lifecycle events cases - Pre day 1

Measures number of open cases for employees who have yet to start

Breakdowns

- Activity
- Activity Set
- Department
- Employment duration
- Employment Type
- Location
- Owner Group
- Region

Data visualizations

The dashboards include the following visualizations:

Dashboard activity details

Title	Type
Overdue Activities - Employee	Single Score
Overdue Activities - Fulfiller	Single Score

User Experience for HR Service Delivery

User Experience Analytics dashboard provides dashboard views for monitoring the key performance indicators (KPIs) of web applications built on the Employee Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can access the dashboard from Dashboard and Reporting. Monitor key performance indicators of the users experiences to create more intuitive user journeys. Click the respective session for a detailed analysis.

- Enable the analytics to view the number of users and their engagement rates over time.
- Analyze the analytics such as geographic, sessions, operating system, and more.
- Track user actions, see user flows, and understand user behavior.
- Gain visibility into the workflows and create more intuitive user journeys.

Dashboard overview

From dashboard, you can track the following employee sessions, page views, and actions. Navigate to **User Experience Analytics > Dashboard** for more information on the following modules and controls:

- Total active users
- Total sessions
- Page views
- Unique users
- Average session duration
- Retention
- Funnel completion
- Top events

To track the actions, you must enable the analytics first.

Enable Analytics

When you launch the application for the first time, you must enable the consent for tracking the user analytics. Based on your geographic location, your consent settings may change.

Event tracking

Track the following events, status, and progress of the following events. Navigate to **User Experience Analytics > Analytics > Events** for more information.

- To-do opened
- To-do completed
- My requests
- Relevant for you
- Successful login
- Tracking enabled
- Tracking disabled
- View knowledge article
- Successful submissions at survey response
- Unsuccessful attempts at survey response
- Submit record producer request

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Submit catalog request
- Search

Employee To-dos

Track the employee to-dos, tasks, actions, short descriptions, and status from the sessions section. Navigate to **User Experience Analytics > Sessions > Timeline** for more information.

- To-do type
- To-do opened
- To-do completed

Relevant for you

Track the **Relevant for you** information from the sessions section. For example, you can see article title, page id, and more. Navigate to **User Experience Analytics > Dashboard > Sessions > Timeline** for more information.

My Requests

Track the progress of **My Request** information from the sessions section. For example, you can see **Action: Ask A Question**, **Action: Accept Resolution**, HR Case, HR Service, and more. Navigate to **User Experience Analytics > Dashboard > Sessions > Timeline** for more information.

Knowledge

See how employees use the progress of knowledge articles. Navigate to **User Experience Analytics > Analytics** for more information.

Analytics and reports

See the analytics about usage, technical, geographic, events, retention, and more. Navigate to **User Experience Analytics > Analytics** for more information. You can see the reports for various timelines such as daily, weekly, monthly.

View user metrics related to Listening Posts surveys

View user experiences while taking pulse surveys to better understand overall employee interaction with a survey.

Before you begin

- Role required: sn_lp.admin
- Plugins required: Listening Posts [sn_lp], User Experience Analytics [com.glide.appsee], and Service Portal Analytics plugin [com.glide.service-portal.analytics]. For more information, see Integrating Listening Posts with User Experience Analytics.
- Ensure that the application scope is set to Listening Posts. For more information, see Listening Posts.

About this task

The User Experience Analytics dashboard provides information about an employee's interaction with the **Listening Posts My Survey** and **Listening Posts Take Survey** widgets. For more information on widgets, see Widgets for Listening Posts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
On the User Experience Analytics dashboard, the data is updated 30 minutes after the actions are recorded on the Listening Posts survey widget.

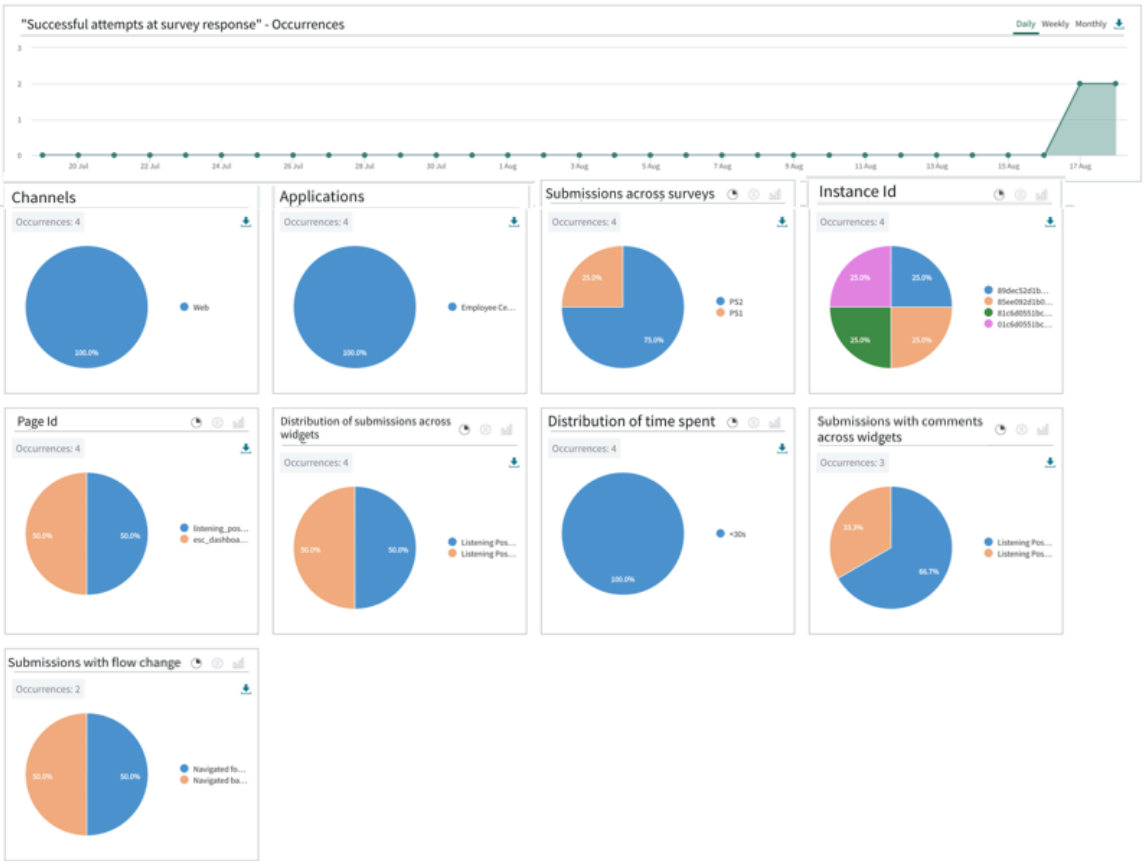
For more information about the information displayed on the User Experience Analytics dashboard, see User Experience for HR Service Delivery.

Procedure

1. Navigate to **User Experience Analytics** > **Dashboard**.
2. On the User Experience Analytics dashboard, select **Events** in the left panel.
3. Click **Expand** to the right of the names of the events relevant to survey widgets: Successful submissions at survey response and Unsuccessful attempts at survey response.
   For more information about the details that are displayed for these events, see Events related to the Listening Posts surveys on User Experience Analytics dashboard.

Events related to the Listening Posts surveys on User Experience Analytics dashboard

The User Experience Analytics dashboard displays events to understand the users behavior when interacting with the Listening Posts survey widgets.



You can evaluate the successful and unsuccessful attempts of an employee related to the Listening Posts My survey and Take survey widgets by viewing two related events on the User Experience Analytics dashboard: Successful submissions at survey response and Unsuccessful attempts at survey response. For example, understanding the average time taken by an employee to respond to a survey, or view the number of resignations in the survey process could help you evaluate how to improve the design of future surveys or indicate whether more encouragement is needed to increase employee participation.

Successful submissions at survey response

On Listening Posts survey widgets, the Successful submissions event indicates that the users have attempted the survey and were able submit it without any difficulty. The following image shows the dashboard charts that display employee interactions on the widgets as actions on the associated properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Experience Analytics dashboard

- Distribution of time spent.

  The percentage of average time spent by an employee either on the My survey widget or the Take survey widget. The time spent data is grouped in time durations of <30 seconds, >30 seconds, or >60 seconds.

- Submissions with flow change.

  Note:
  This metric applies only to the My survey widget.

  A flow change is any alteration to the natural course of a flow, for example, the user navigating backward rather than proceeding forward. This chart displays the percentage of flow change by user's who Navigated forward or Navigated back when taking the survey.

- Submissions with comments across widgets.

  The percentage of submissions with comments across the Listening Posts My survey and Take survey widgets.

- Submissions across surveys.

  The percentage of successful submissions across various surveys. For example, the sample image shows the percentage of submissions distributed across PS1 and PS2 surveys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Distribution of submissions across widgets (My Survey & Take survey).

  The percentage of successful submissions distributed across the Listening Posts My survey and Take survey widgets.

Note:
On the dashboard, the Channels, Applications, Page Id, and Instance Id charts are default properties that are not custom-defined for the Listening Posts widgets.

Unsuccessful attempts at survey response

On Listening Posts survey widgets, the Unsuccessful attempts event indicates that the users have attempted the survey but were not able complete it or submit it. The following image shows the dashboard charts that display employee interactions on the widgets as actions on the associated properties.

User Experience Analytics dashboard

An attempt is defined by the actions performed in any of the following three properties: Distribution of time spent, Attempts to rate, and Attempts to comment.

- Distribution of time spent (on either of the widgets).

  The percentage of average time spent by an employee. The time spent can be either on the My survey or Take survey widget. The time spent data is grouped in time durations of >10 seconds, >60 seconds, or >120 seconds.

- Attempts to rate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The percentage of unsuccessful attempts to rate a survey. True indicates that the employee clicked on a rating but did not submit it and False means the employee clicked on the rating and submitted it.

- Attempts to comment.

  The percentage of unsuccessful attempts to comment by clicking the comments box on the widget. True indicates that the employee typed the comment but did not submit it and False means employee typed the comment and submitted it.

- Attempts across surveys.

  The percentage of unsuccessful attempts across various surveys. For example, the sample image shows the percentage of attempts distributed across PS1 and PS2 surveys.

- Distribution of attempts across widgets (My survey & Take survey).

  The percentage of unsuccessful attempts distributed across the Listening Posts My survey and Take survey widgets.

Machine learning solutions for HR Service Delivery

Machine learning solutions for HR Service Delivery help in auto determining assignment groups and services for HR cases, auto creating cases from emails, and discovering knowledge articles that help in faster resolution of cases and tasks.

Demand Insights for HR Cases dashboard

The Demand Insights for HR cases dashboard enables you as an HR agent to identify which HR cases have no or insufficient knowledge coverage. You can then create feedback tasks for knowledge gaps to deflect such HR cases.

Auto-case creation from an email

Automatically categorize HR cases submitted by email. Auto-case creation allows for a faster response time and better case resolution for employees.

HR cases can be created via email, phone, or a self-service Service Portal such as the Employee Service Center. By default, an email sent to the general address for HR requests is created as a general inquiry case. An HR agent then has to review and manually recategorize it to the appropriate HR service. With Predictive Intelligence, a predictive model is auto-trained to categorize HR cases submitted by email. The email is routed to the appropriate HR service based on the subject line and body.

Note:
This feature is available with the HR Professional and HR Enterprise packages when you activate the HR Service Delivery and Predictive Intelligence applications. If you do not want to use this feature navigate to **HR Administration** > **Application Properties** and disable the *`Enable HR Case auto categorization`* property.

Predictive and HRSD solution definition and business rule

On instances where both Predictive Intelligence and HR Service Delivery are active, the following solution definition and business rule are available to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Solution definition description

Solution Definition	Description
HR Case Categorization	Predicts the **HR service** from the **Short description** and **Description**.

Business rule table and description

Business rule	Table	Description
Predict COE, Service after insert	HR Case [sn_hr_core_case]	Generates prediction results for active HR Service Delivery solutions. Runs when a new HR case record submitted by email is inserted.

By default, the solution definition is configured and the predictive model is auto-trained when the following conditions are met. Auto training happens based on the frequency configuration of solution definition.

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- There are 10000 records of HR case study matching the filters defined in the solution definition.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

When any one of the preceding conditions is not met, you must manually configure the solution definition and train the predictive model from the **HR AI configuration** module. If you use domain separation in your instance, you can define the solution definition to use for each domain by creating additional configuration records. See Configure the HR solution definition and domain for more information.

Once your solution definition is trained, you can test the solution prediction by sending emails to the general email address for HR requests. You can then verify that the corresponding HR cases are automatically categorized to the appropriate HR service. See Test an HR solution prediction for more information.

Configure the HR solution definition and domain

Configure your solution definition from the **HR AI configuration** module, as well as access the solution definition record for training. If you use domain separation in your instance, you can define the solution definition to use for each domain by creating additional configuration records.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **HR AI Configuration**.
2. Click **New** or open a record.
3. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR AI Configuration form

Field	Description
Solution Capability Definition	Name of the solution definition. ○ To create or select a solution definition, click the **Lookup** button. ○ To update or train a solution definition, click the **Preview** button to open the solution definition record. ○ For further information on creating and training a solution definition, see Create and train a solution definition.
Use case	Name of the use case. For example, email categorization or HR service categorization
Active	Check box to activate the HR AI configuration for use.

4. Click **Submit** or **Update**.

Test an HR solution prediction

Test the solution prediction by sending emails to the general email address for HR requests. Verify that the corresponding HR cases are automatically categorized to the appropriate HR service.

Before you begin

Role required: sn_hr_core.admin or sn_hr_core.case_reader

Procedure

1. Send an email to the general email address for HR requests.

   Note:
   To verify the general email address for HR requests, navigate to **HR Administration** > **Properties**, and view the **General email address for HR requests** property.

2. Navigate to **HR Case Management** > **All HR Cases**, and open one of the modules, such as **Assigned to me** or **Open**.
3. Open the applicable record.
4. Verify that the HR case was automatically categorized to the appropriate COE and HR service.

What to do next

If you need to retrain and review your predictive model, see Create and train a solution definition and Review classification solution statistics.

Auto determination of HR service

Auto determine the HR service for a case. Enable an HR agent to transfer the case to the appropriate HR service rather than having to spend significant time manually triaging cases to appropriate HR services.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
This feature is available with the HR Professional and HR Enterprise packages when you activate the HR Service Delivery and Predictive Intelligence applications. If you do not want to use this feature, disable the *sn_hr_core.case_auto_categorization* system property.

Auto-determined HR service displayed in a banner

After you create a case, the HR Case Classification solution definition auto determines the HR service based on the short description of the case. The appropriate HR service for the case is displayed in a banner.

Important:
The banner is not displayed if:

- you have logged the case under the correct HR service
- you have manually transferred or auto-transferred the case
- case is not in the ready or draft state

You can also transfer the case from one HR service to another, without losing the case number or content, using the link on the banner. The auto-determined HR service is selected by default on the Transfer case window. You can ignore the auto-determined HR service for the case, choose to transfer the case to a different HR service, or continue with the HR service that was provided earlier.

Auto training the predictive model

The HR Case Classification solution definition is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- There are 10000 records of HR case study matching the filters defined in the solution definition.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

You can manually train the predictive model if it is not auto trained by default. Later, navigate to the **HR AI configuration** module, open the HR Case Classification record, and map the configured solution definition.

Manually train the HR predictive model

Manually train the HR predictive model if it not auto trained by default.

Before you begin
Role required: admin

Procedure

1. Navigate to **Predictive Intelligence** > **Homepage.**
2. Select the required solution definition.
3. Click **Train**.
4. To configure a solution definition:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Open the solution definition.

b. Right-click the solution definition, and click **Copy Solution Definition**.

> **Important:**
> Ensure that the Application scope is **Human Resources: Core**.

A copy of the solution definition is created. Update the required field values in this solution definition and click **Submit and Train**.

Auto determination of assignment group

Auto determine the assignment group for a case. Enable an HR agent to transfer the case to correct assignment group rather than having to spend significant time manually identifying groups for HR cases.

> **Important:**
> This feature is available with the HR Professional and HR Enterprise packages when you activate the HR Service Delivery and Predictive Intelligence applications. To use this feature, enable the *sn_hr_core.case_auto_assignment* system property.

Auto-determined assigned group displayed in a banner

After you create a case, the Auto Assignment Group for HR Cases solution definition auto determines the assignment group for a case based on the Short description, Description, Opened for Title, Opened for Location Name, and HR service of the case. The appropriate assignment group for the case is displayed in a banner.

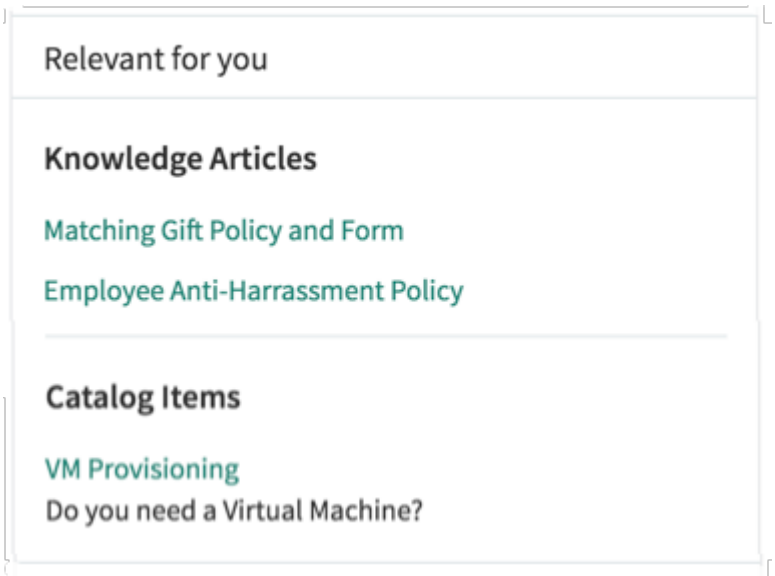
> **Important:**
> The banner is not displayed if:
>
> - You have manually assigned the case to an assignment group.
> - The assignment group is not identified for the case.
> - The case is not in the ready or draft state.

Auto training the predictive model

By default the Auto Assignment Group for HR Cases solution definition is configured and the predictive model is auto trained when all of the following conditions are met.

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- There are 10000 records of HR case study matching the filters defined in the solution definition.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

You can manually train the predictive model if it is not auto trained by default. After you manually train the predictive model, navigate to the **HR AI configuration** module, open the Case Assignment group record, and map the configured solution definition.



Discovering knowledge articles and catalog items for employees

Discover all the users who have a similar profile as the employee who has logged in to Employee Service Center. Identify the top viewed knowledge articles and top submitted catalog items by those users. Display the top three knowledge articles and top three catalog items to the employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Top three knowledge articles and catalog items

When the User Profile Based Recommendation (ml_sn_sn_hr_core_global_user_profile_based_recommendation) solution definition is configured and the predictive model is trained, the top three knowledge articles and catalog items are displayed to an employee in Employee Service Center and HR Ticket page.

Note:
The number of catalog items and knowledge articles displayed in the Relevant for you widget depends on the number in the **Limit** field in Employee Center. By default, the **Limit** field is set to 3. For more information, see Modify the Recommended for you widget display.

Auto training the predictive model

By default, the User Profile Based Recommendation solution definition is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

You can manually train the predictive model if it is not auto trained by default. After you manually train the predictive model, navigate to the **HR AI configuration** module, open the Similar users group record, and map the configured solution definition.

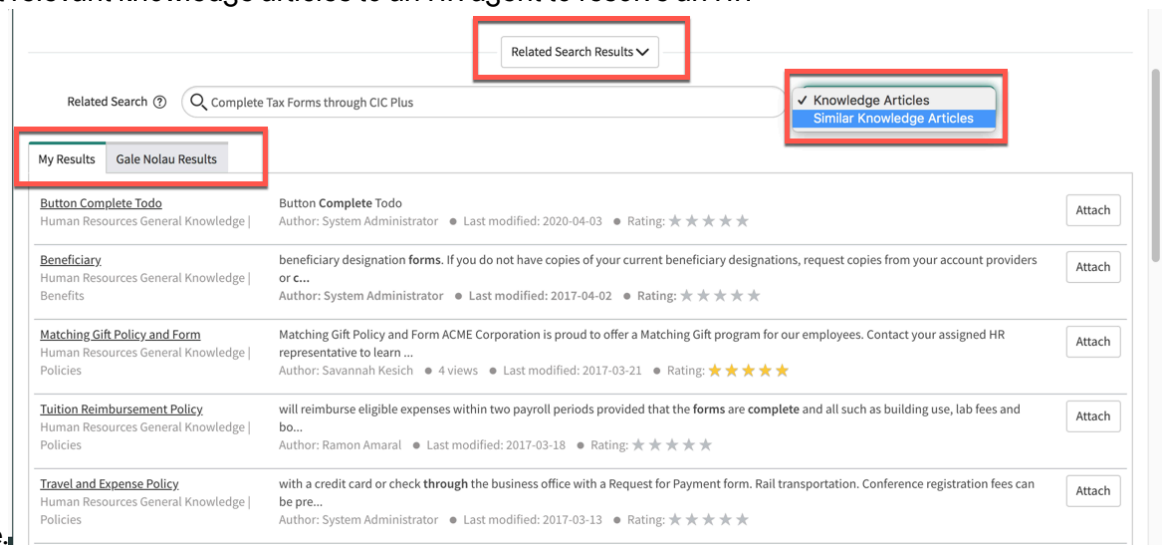
Configuring widget options

You can also configure the following widget options:

- **User prediction count**: Number of similar users discovered by the predictive model. By default, the top 25 similar users are discovered for the user.
- **Recent activity cut off days**: Number of days considered by the predictive model for querying the articles and catalog items. By default, the last 30 days activity is checked from the Knowledge Use table, Requested Items table, and Items Produced Records table.

To configure the widget options, navigate to the **Service Portal Configuration** module, select the widget editor, search for **Relevant for you**, and click **Edit Option Schema**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Discovering similar knowledge articles for HR cases

Discover similar information across knowledge articles based on the short description of the HR case and the text in the related search results. Display such similar knowledge articles to an HR agent to resolve a case.

Similar knowledge articles

The similarity solution takes the short description of the case and compares them to the short description, description, and text fields of the published articles to provide the similar knowledge articles.

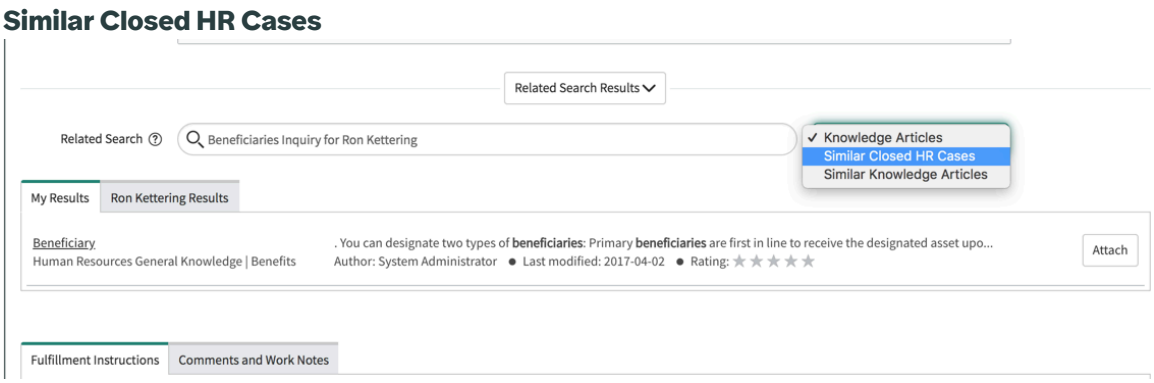
When the Similar Knowledge Articles for HR Case (ml_sn_sn_hr_core_global_case_to_articles) is configured and the predictive model is trained, the **Similar Knowledge Articles** option is displayed on an HR case. This option displays the most relevant knowledge articles to an HR agent to resolve an HR case.

Auto training the predictive model

The Similar Knowledge Articles for HR Case solution definition is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence for Contextual Search (com.snc.contextual_search_ml) plugin is installed.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

You can also manually train the predictive model if it is not auto trained by default.



Discovering similar closed cases for HR cases

Help an HR agent resolve the current case by displaying similar closed cases.

Similar Closed HR Cases

When the Similar Closed HR Cases (ml_sn_sn_hr_core_global_similar_closed_hr_cases) is configured and the predictive model is trained, the **Similar Closed HR cases** option is displayed on an HR case. This option displays the most relevant HR closed cases to an HR agent to help resolve the current HR case.

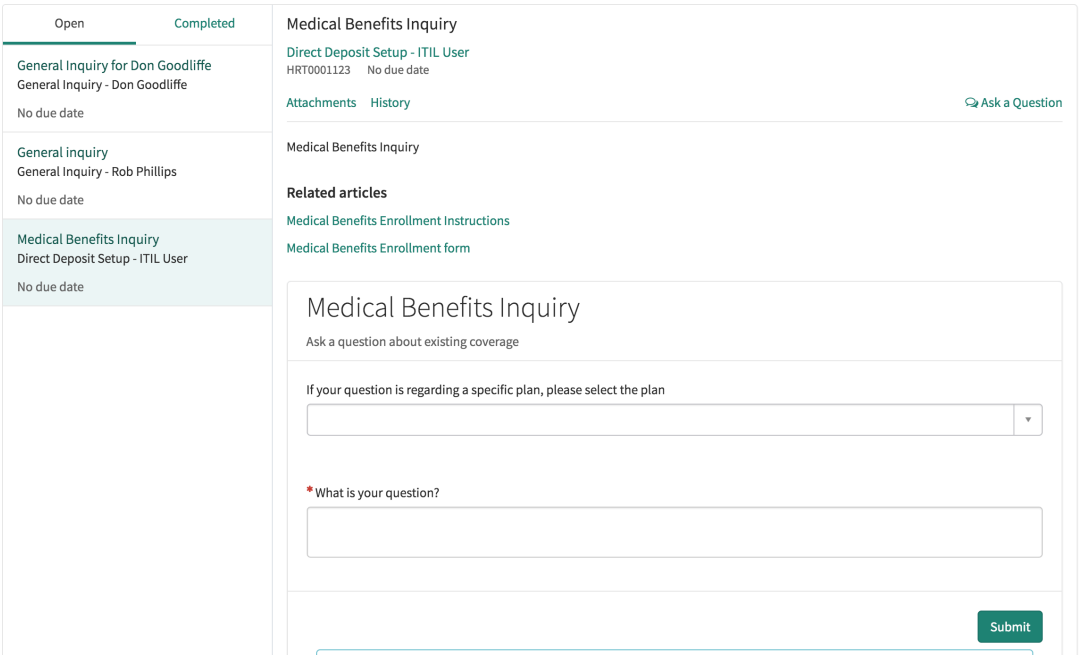
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Auto training the predictive model

The Similar Closed HR Cases (ml_sn_sn_hr_core_global_similar_closed_hr_cases) is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence for Contextual Search (com.snc.contextual_search_ml) plugin is installed.
- The *glide.platform_ml.auto_training.enabled* system property is set either set to true or absent.

Displaying related knowledge articles for completing tasks



Display knowledge articles that help in completing HR and Content tasks in the Employee Service Center To-dos page and the HR Ticket page.

Related knowledge articles

When the following solution definitions are configured and predictive models are trained, the related knowledge articles are displayed to an employee in Employee Service Center and the HR Ticket page.

- The related knowledge articles are displayed for an HR task in Employee Service Center and the HR Ticket page, when you train the Similar Knowledge Articles for HR Task (ml_x_sn_hr_core_global_similar_knowledge_articles_for_hr_task) solution definition.
- The related knowledge articles are displayed for a Content task in Employee Service Center and HR Ticket page, when you train the Similar Knowledge Articles for Content task (ml_sn_sn_cd_global_similar_knowledge_articles_for_content_task) solution definition.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Auto training the predictive models

The Similar Knowledge Articles for HR Task and Similar Knowledge Articles for Content Task solution definitions are configured and predictive models are auto trained when the following conditions are met:

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- The Employee Center (com.sn_hr_service_portal) plugin is required to display related articles for HR tasks.
- The Content Delivery (com.sn_content_delivery) plugin is required to display related articles for Content tasks.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

You can manually train the predictive models if they are not auto trained by default. After you manually train the predictive models, navigate to the **Service Portal Configuration** module and select the Widget editor. Search for **Recommended articles for to dos**, click **Edit Option Schema**, and add the configured solution definitions in the following widget options:

- Solution name for Content Task
- Solution name for HR Task

HR Predictive Intelligence Workbench

The HR Predictive Intelligence Workbench application provides prebuilt use case templates and guides you through your predictive machine-learning implementation to create intelligent HR processes. Business process architects use prebuilt functionality, including pretrained models, to get started with machine learning use cases.

HR Predictive Intelligence Workbench overview

The HR Predictive Intelligence Workbench includes prebuilt use case templates that systematically guides you through the process of creating and training new predictive models, evaluating and testing them, and finally adding them to your business process to add value to your HR organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Once you train your custom use cases, they are usable immediately. No prior knowledge or experience with artificial intelligence or machine learning is required when you use HR Predictive Intelligence Workbench.

The application includes a template with prebuilt guidance to assist you in creating, training, evaluating, testing, and producing, your unique predictive models.

Important:
The HR Predictive Intelligence Workbench application depends on the activation of the Predictive Intelligence Workbench and Human Resources Scope App: Core plugins.

HR Predictive Intelligence Workbench administration

With the sn_piwb_hr_content.admin role, you can activate and configure the application to meet specific requirements.

- Configure Predictive Intelligence Workbench property settings, such as the minimum number of predictions for evaluating use cases that under perform and the minimum percentage of net automation to show an auto-trained model.
- Create a Predictive Intelligence Workbench user group and assign users necessary roles to move through the model implementation process.
- Configure notifications to alert Predictive Intelligence Workbench users via email when a new model is trained and ready for evaluation.
- Create use case templates and make them available to your Predictive Intelligence Workbench users.

Activate HR Predictive Intelligence Workbench

You can activate the Predictive Intelligence Workbench HRSD content plugin [com.sn_piwb_hrsd_content] if you have the admin role.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Components installed with HR Predictive Intelligence Workbench

Several types of components are installed with activation of the HR Predictive Intelligence Workbench HRSD content plugin [com.sn_piwb_hrsd_content] plugin, including user roles.

Roles installed

Roles and descriptions

Role title [name]	Description	Contains roles
sn_piwb_hr_content.admin	With this role, you can: • Configure Predictive Intelligence Workbench property settings, such as the minimum number of predictions for evaluating use cases that under perform and the minimum percentage of net automation to show an auto-trained model. • Create a Predictive Intelligence Workbench user group and assign users necessary roles to move through the model implementation process. • Configure notifications to alert Predictive Intelligence Workbench users via email when a new model is trained and ready for evaluation. • Create use case templates and make them available to your Predictive Intelligence Workbench users.	

HR Predictive Intelligence Workbench notifications

HR Predictive Intelligence Workbench includes several email notifications that alert users throughout the use-case model implementation.

The Predictive Intelligence process architects who are creating and training use-case models receive an email notification when a use-case model is successfully trained and when batch testing has finished successfully. If a use case fails training or if batch testing produces errors, users will receive notifications about these scenarios, as well.

Users can click a link in the email notification to view a newly trained use case or batch test results. They can also download the test results, if desired. Users can receive the following notifications:

Notifications

Name	Description
Use case model training successful Table: PI Solution Model [piwb_model]	Use case model training successful Table: PI Solution Model [piwb_model]
Batch test run complete	Sends an email to a specified user group when batch testing is complete.
Use case Model training failed Table: PI Solution Model [piwb_model]	Sends an email to a specified user group when a use case model training has failed.

For more details about email notifications for Predictive Intelligence Workbench, see Preview email notification.

Create an HR Predictive Intelligence Workbench user group

Create an HR Predictive Intelligence Workbench user group and add users or roles to the group to receive email notifications when the use-case model training and testing phase are complete.

Before you begin

Role required: admin

About this task

Create an HR Predictive Intelligence Workbench user group and add either users or roles to the group so that email notifications are sent to alert users throughout the use case model training and testing phases. Users can receive notifications for the following Predictive Intelligence Workbench events.

- Use case training is successful
- Batch testing is complete
- Use case training has failed

Procedure

To create an HR Predictive Intelligence Workbench user group and add users, see Create a user group Create a user group.

For more information about the email notifications provided with this application, refer to HR Predictive Intelligence Workbench notifications.

HR Predictive Intelligence Workbench implementation

You can use machine learning to optimize your business processes. You can train and implement HR Predictive Intelligence Workbench use cases to augment your existing application workflows.

Explore common use case templates

With the sn_piwb_hr_content.admin role, you can explore the use case templates and create predictive machine learning models. To create a machine learning model, you first select a pre-built use case template. You can use one of the following templates for setting up the use cases.

- **Guided** templates include a comprehensive setup process to help you through implementation. Templates with available auto-trained models accelerate your setup process, by providing a pre-generated model based on your data.
- **Classic** templates include a comprehensive setup information to help you through implementation. Leverage the existing templates to configure, test, and train the models based on your business requirements.

When a template indicates **Auto-trained model available**, this means you can go directly to the evaluation phase of the use case setup. If the auto-trained model is acceptable, you can directly integrate the model with your business processes. Otherwise, you can tune this model or create another model. You may change the name and description of the use case later.

Solution definitions

These solution definitions are available as templates on instances where both Predictive Intelligence and HR are active. Create your own solution definition records to customize the behavior.

Clustering	Demand Insights: HR Case Clusters Need Knowledge	Identifies the case clusters that do not have knowledge and helps with filling the knowledge gaps in your knowledge base.	Classic

Use case creation phases

Creating a predictive machine learning model involves several phases. After you create and train your model, evaluate and tune, test prediction results, and integrate the model with your business process. Use case model creation phases include:

- **Create and train models:** Define parameters to create a model that you train based on your unique data. Create multiple models as you tune and refine your models by defining the right combination of coverage and precision to use.
- **Test your models:** Get prediction results from your models to decide which one is best to integrate with your business process. To see if a model returns a correct result, you can use either the single or batch testing process.
- **Integrate the best model:** Deploy the best model into your business process. After you determine which model returns the best, correct result, integrate it into production.

Prediction accuracy maintenance

You can manage prediction drift by retraining, modifying, or creating new solutions to reflect changes in your business conditions. Test and modify your business rule over time to ensure it works as desired across multiple consumption points and user persona.

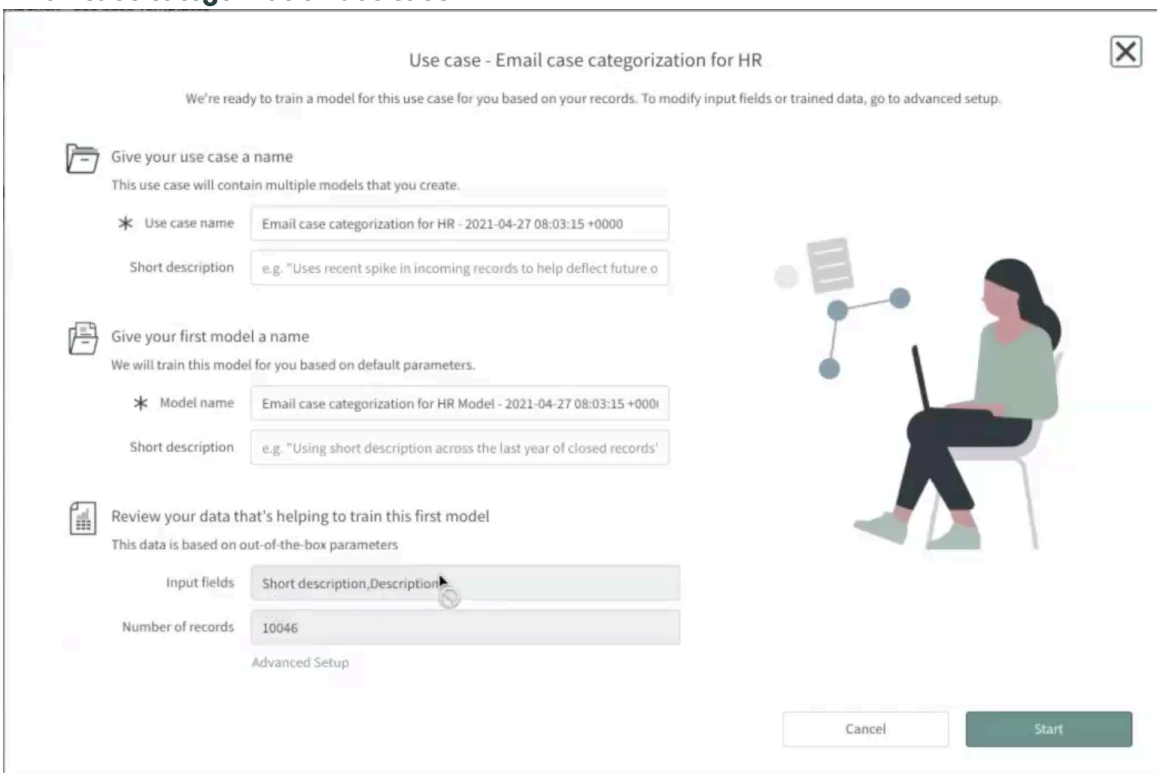
HR PIWB template: Auto-categorize email cases

Use a guided template that walks you through setting up a machine learning model to categorize the email cases automatically for improved productivity and cost savings.

Before you begin

Role required: sn_piwb_hr_content.admin

About this task



This template walks you through customizing a use case model to categorize the email cases. When the use case template shows the label **Guided**, you can use several implementation steps and are automatically taken to evaluate and tune your models when you click **Start**. Otherwise, you begin by creating a machine learning model.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. Select the **Email case categorization for HR** guided template.

Email case categorization use case

3. Provide a unique name for your use case in the **Use case name** field.

> **Note:**
> The use case contains multiple models that you create. You can use the same name as the template, if required.

4. Provide a name for the model in the **Model name** field.

> **Note:**
> Models are trained based on default parameters. The name of the model should reflect its purpose, for example, `Email case categorization for HR`.

5. Click **Start**.

> **Note:**
> To start implementation, you must provide a use case name and short description.

The use case setup page opens displaying the name and description of the use case you created. On this page, you can see all the implementation phases to create and implement your use case model.

6. In the **Create and train models** section of the setup, click **Start** to create a model associated with your use case.
7. Fill in the required fields with a **Model name** and **Short description**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Other data related to the model is pre-filled by default, such as the **Data table**, **Predicted field**, and **Processing Language**.

8. Expand the **Review the filters used to train this model** section to view the default filters.

   Review the base system parameters set to help train the model in the **Input fields** and **Number of records** fields. To modify this data, click **Advanced Setup** and then **Save** any changes you make. You can customize the filters to best represent your business data or add new criteria by clicking **New Criteria**.

   Note:
   By clicking **Advanced Setup** you can change the processing language, review, and modify the filters used to train the model. You can customize the filters to best represent your business data or add new criteria by clicking **New Criteria**. Review and modify the input fields used to generate predictions. Customize the fields to best represent your business data by moving fields between the **Available** and **Selected** lists. Ensure that you have sufficient number of records for the model. Save any changes you make.

9. Click **Save**.
   The use case **ML Model** setup page opens.
10. Click **Continue** in the **Create and train models** section.
    The **Create a model** page opens.
11. Click **Train this model**.
    The process may take a while. The **Train this model** window appears letting you know that the process takes a while.
12. Click **Start** to initiate training.
    The ML Model setup page opens.
13. Click **View Progress** below the header on the ML Model setup page to monitor the training process and click close.
14. **Optional:** Click **View Progress** below the header on the use case setup page to monitor the training process.
15. Click **Start** to initiate training.
    The use case setup page opens with the trained model.
16. On the available trained model, click the **Tune values**.
    The use case model record opens. You can view the **Precision(%)**, **Coverage(%)**, and **Net Automation(%)** scores.

    Note:
    Refine your use case model by defining the right combination of coverage and precision values.

17. When you are ready to test your use case model, click **Test your models** .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The use case **Testing your models** page opens.

18. In the **Select models to test** section, refine the models for testing and comparison.
    Move the options from **Available** to the **Selected**. Remember, selecting more models takes more processing time for a batch test.
19. In the **Define testing parameters** section, decide if you want to test one use case model.

    Select the **Single test** test type. **Single test** is the default.

    > **Note:**
    > Select **Batch test** when you want to test more than one use case model.

    Determine the number of top results you want to display.
20. In the **Input fields** section, provide a short description of your use case model test.
21. Click **Run Test**.
    View the test results data in the View test results section with details such as predicted values and confidence.
22. Click **Mark as complete** to complete testing.
23. When you are ready to integrate your use case model into your business processes, click **Start** in the **Integrate a model** section.
24. In the **Select a model to integrate** section, select the model from the available list.
25. In the **Retraining Schedule** field you can change the definition, if desired.
    The default value is **Run Once**, but you can retrain as often as every 30 days to every 180 days.
26. Click **Integrate**.
    On the confirmation pop-up, click **Integrate** again to complete this action. You have integrated a use case model into your business process.

Result

When the configuration is complete, the solution auto-categorizes the HR service for email cases. For more information, see Auto-case creation from an email

What to do next

You can verify the integration status from **HR Administration** > **HR AI Configurations** > **Solution definition**. The use case is now mapped to the selected solution definition.

HR PIWB template: Predict the HR service for incoming cases

Use a guided template that walks you through setting up a machine learning model to predict the correct HR service for cases.

Before you begin

Role required: sn_piwb_hr_content.admin

Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. Select the **Predict the Service for HR Cases** guided template.
3. Provide a unique name for your use case in the **Use case name** field.
4. Provide unique details about the use case in the **Short description** field.
5. Click **Start**.

   Note:
   To start implementation, you must provide a use case name and short description.

   The use case set up page opens displaying the name and description of the use case you created. On this page, you can see all the implementation phases you will work through to create and implement your use case model.
6. In the **Create and train models** section of the setup, click **Start** to create a model associated with your use case.
7. Fill in the required fields with a **Model name** and **Short description**.

   Note:
   Other data related to the model is pre-filled by default, such as the **Data table**, **Predicted field**, and **Processing Language**.

8. Expand the **Review the filters used to train this model** section to view the default filters. You can customize the filters to best represent your business data or add new criteria by clicking **New Criteria**.
9. Expand the **Review the input fields for this model** section to view the pre-populated fields. You can customize the fields to best represent your business data by moving fields between the **Available** and **Selected** slush buckets.
10. Click **Save**.
    The use case **ML Model** setup page opens.
11. Click **Continue** in the **Create and train models** section.
    The **Create a model** page opens.
12. Click **Train this model**.
    The process can take a while. The **Train this model** window appears letting you know that the process will take a while.
13. Click **Start** to initiate training.
    You are returned to the ML Model setup page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

14. Click **View Progress** below the header on the ML Model setup page to monitor the training process.
15. Click **Start** to initiate training.
    You are returned to the use case setup page.
16. Click **View Progress** below the header on the use case setup page to monitor the training process.
17. On the use case setup page, click **Start** in the **Evaluate and tune your models** section.
    The use case **Evaluate and tune your models** page opens. Here you can refine your use case model, defining the right combination of coverage and precision to use.
18. Click the box next to the use case model that you want to evaluate and tune.
    You can view the evaluation data for the use case model by clicking the chevron icon next to the model name to expand details.
19. In the **Select an Action** list menu, select **Open model record**.
    The use case model record opens. You can view the **Precision(%)**, **Coverage(%)**, and **Net Automation(%)** scores.
20. In the **Retraining Schedule** field you can change the definition, if desired.
    The default value is **Run Once**, but you can retrain as often as every 30 days to every 180 days.
21. If you made evaluation or tuning changes to the use case model, click either **Update** or **Update and retrain**, to run retraining again one time.
    The use case **Evaluate and tune your models** page opens.
22. If you are ready to test your use case model, click the box next to the model that you want to test.
23. In the **Select an Action** list, select **Test this model**.
    The use case **Testing your models** page opens with the use case model you selected to test is in the **Selected** slush bucket.
24. In the **Select models to test** section, decide if there are other use case models available that you want to test.
    If so, move them to the **Selected** slush bucket.
25. In the **Define testing parameters** section, decide if you want to test one use case model.

    If so, select the **Single test** test type. **Single test** is the default.

    Note:
    Select **Batch test** when you want to test more than one use case model.

26. Determine the number of top results you want to display.
27. In the **Input fields** section, provide a short description of your use case model test.
28. Click **Run Test**.
29. View the test results data for the use case model in the **View test results** section.
30. If you are ready to integrate your use case model into your business processes, return to the use case **Evaluate and tune your models** page and select the box next to the model that you want to integrate.**Start** in the **Integrate the best model** section.
31. In the **Select an Action** list menu, select **Integrate this model**.
    The **Select a model to integrate** page opens.
32. Click **Integrate**.
33. Click **Integrate** again when the pop-up asks you if you are sure you want to perform this action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You have integrated a use case model into your business process.

Note:
For details regarding trained use case integration implementation, refer to Predictive Intelligence Workbench integration and customization.

HR PIWB template: Predict the assignment group for incoming cases

Use a guided template that walks you through setting up a machine learning model to predict the correct assignment group for cases.

Before you begin
Role required: sn_piwb_hr_content.admin

Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. Select the **Predict Assignment Group for HR Cases** guided template and click **Start**.
3. Provide a unique name for your use case in the **Use case name** field.
4. Provide a unique name for the model in the **Model name** field.
5. Click **Advanced Setup**.
   The use case set up page opens displaying the name and description of the use case you created. On this page, you can see all the implementation phases you will work through to create and implement your use case model.
6. In the **Create a model** section of the setup, fill in the required fields with a **Model name** and **Short description**

   Note:
   Other data related to the model is pre-filled by default, such as the **Data table**, **Predicted field**, and **Processing Language**.

7. Expand the **Review the filters used to train this model** section to view the default filters.
   You can customize the filters to best represent your business data or add new criteria by clicking **New Criteria**.
8. Expand the **Review the input fields for this model** section to view the pre-populated fields.
   You can customize the fields to best represent your business data by moving fields between the **Available** and **Selected** slush buckets.
9. Click **Save**.
   The use case **ML Model** setup page opens.
10. Click **Continue** in the **Create and train models** section.
    The **Create a model** page opens.
11. Click **Train this model**.
    The **Train this model** window appears letting you know that the process will take a while.
12. Click **Start** to initiate training.
    You are returned to the ML Model setup page.
13. Click **View Progress** below the header on the ML Model setup page to monitor the training process.
14. Click **Start** to initiate training.
    You are returned to the use case setup page.

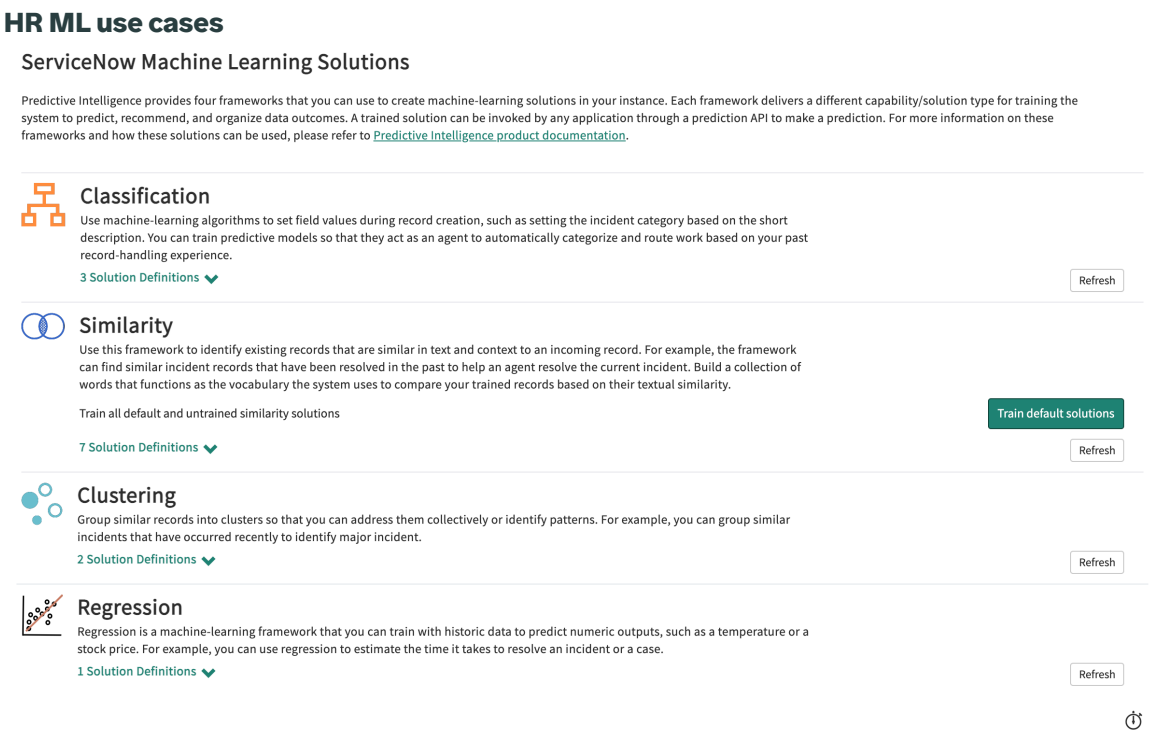
HR PIWB template: Predict knowledge case clusters and demand insights

Use the classic setup template to configure and train your Cluster solution template with machine learning model to predict the case clusters that do not have knowledge, identify knowledge demand, and improve the knowledge articles.

Before you begin

Role required: sn_piwb_hr_content.admin

About this task



This template helps customizing a use case model to configure the Knowledge Demand Insights feature to identify which topics are missing knowledge articles and create actionable knowledge gaps for missing topics. Review the information from Configure Knowledge Demand Insights.

Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. From the templates list, go to **Knowledge demand for HR case clusters** template and click **Start**.
   A pop-up with model name appears. This use case is handled in the classic Predictive Intelligence. You will be taken there to complete setup. You can perform the following steps:
   a. Ensure you click **View product documentation for setting up this use case** to review the instructions on how to configure the solution definition.

      Note:
      Ensure you review and understand the documentation for creating the solution definition.

   b. Click **Take me there** to get started with the solution definition.
   Machine Learning Solutions landing page appears.

3. Review the information from Configure Knowledge Demand Insights.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Go to **Clustering** > **Knowledge demand for HR case clusters** from the available Solution Definitions, click **Configure**.
   The solution definition appears.
5. On the form, verify the default field values and customize the solution as required.

Result

You can use a demand insights for knowledge gap analysis and create actionable knowledge articles for missing topics.
Review the corresponding use case information from Machine learning solutions for HR Service Delivery.

What to do next

You can verify the integration status from **HR Administration** > **HR AI Configurations** > **Solution definition**. The use case is now mapped to the selected solution definition.

Related topics

Create and train a similarity solution

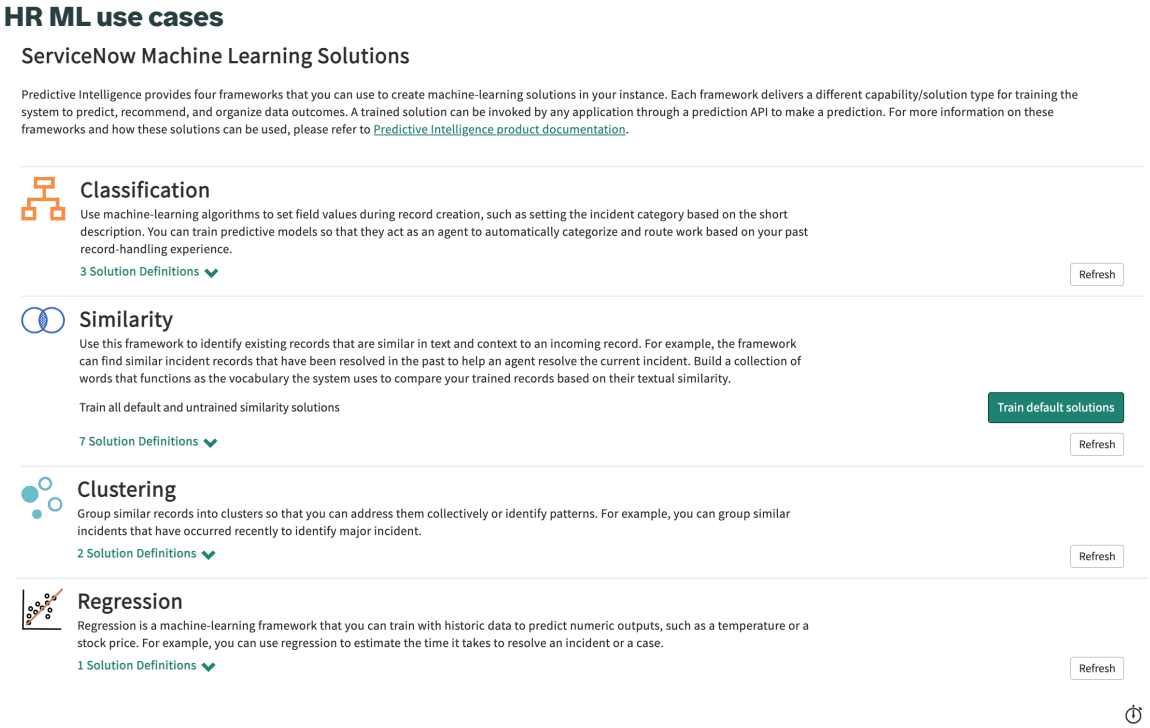
Create and train a clustering solution

HR PIWB template: Predict knowledge gaps and insights

Use the classic template that walks you through setting up a machine learning model to automate the discovery of knowledge gaps and recommend insights into improving knowledge by demand.

Before you begin

Role required: sn_piwb_hr_content.admin



Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. From the templates list, go to **Similar HR cases with knowledge gap** template and click **Start**.
   A pop-up with model name appears. This use case is handled in the classic Predictive Intelligence. You will be taken there to complete setup. You can perform the following steps:
   a. Ensure you click **View product documentation for setting up this use case** to review the instructions on how to configure the solution definition.

      Note:
      Ensure you review and understand the documentation for creating the solution definition.

   b. Click **Take me there** to get started with the solution definition.
   Machine Learning Solutions landing page appears.

© 2026 ServiceNow, Inc. All rights reserved.

3. Go to **Similarity** > **Knowledge for resolving HR Cases for agents** from the available Solution Definitions, click **Configure**.
The solution definition appears.

4. On the form, verify the default field values and customize the solution as required.

Result

When the configuration is complete, agents can discover similar information across knowledge articles based on the short description of the HR case and the text in Related Search Results. Display of such similar knowledge articles can help an HR agent to quickly resolve the cases.

What to do next

You can verify the integration status from **HR Administration** > **HR AI Configurations** > **Solution definition**. The use case is now mapped to the selected solution definition.

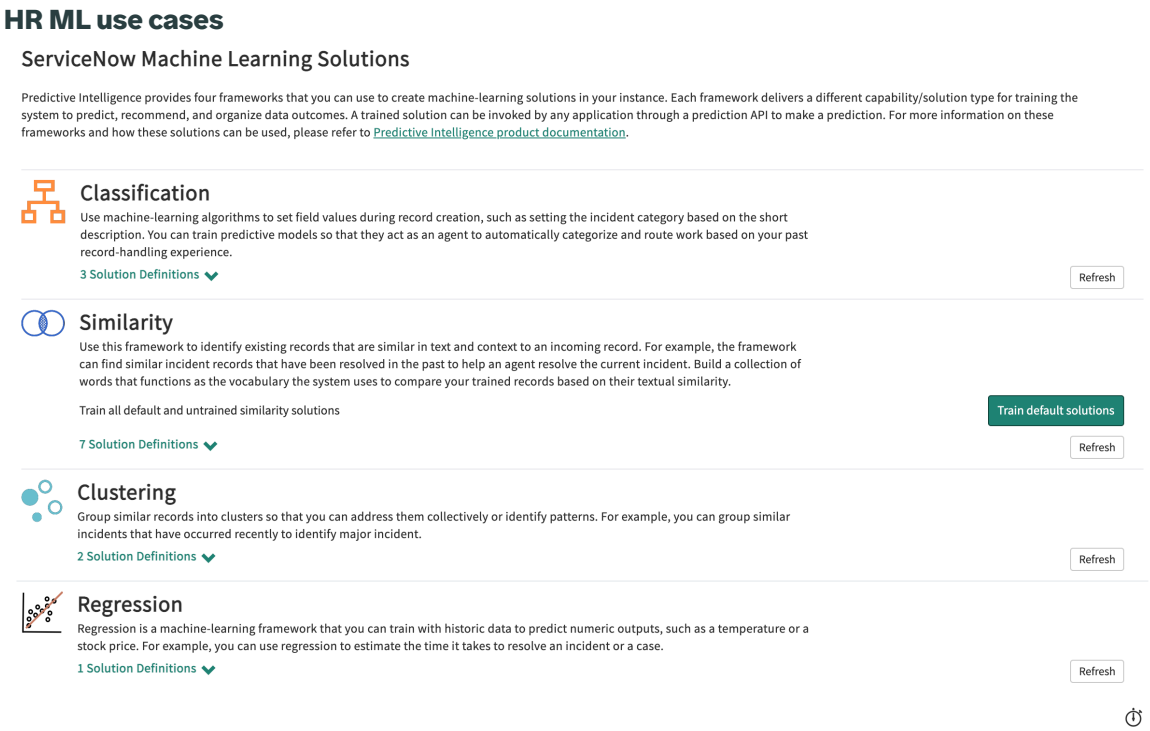
HR PIWB template: Recommend similar cases by employee profile

Use the classic setup template to configure and train your Similarity solution template with machine learning model to recommend top relevant articles and catalog items based on a similar employee profile for content discovery and personalized experience.

Before you begin

Role required: sn_piwb_hr_content.admin

About this task



Discover all the users who have a similar profile as the employee. Identify the top viewed knowledge articles and top submitted catalog items by those users.

Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. From the templates list, go to **Employee profile based recommendation** template and click **Start**.
   A pop-up with model name appears. This use case is handled in the classic Predictive Intelligence. You will be taken there to complete setup. You can perform the following steps:
   a. Ensure you click **View product documentation for setting up this use case** to review the instructions on how to configure the solution definition.

      Note:
      Ensure you review and understand the documentation for creating the solution definition.

   b. Click **Take me there** to get started with the solution definition.
   Machine Learning Solutions landing page appears.

3. Go to **Similarity** and click **Configure**.
   The solution definition section appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. On the form, verify the default field values and customize the solution as required.

   For more information about the Clustering solution definition form fields, see Create and train a clustering solution and Test a classification solution prediction.

   Note:
   For details regarding trained use case integration implementation, see Predictive Intelligence Workbench integration and customization.

Result

When the configuration is complete, the solution displays the top three knowledge articles and top three catalog items to the employee based on a similar employee profile. For more information, see Discovering knowledge articles and catalog items for employees.

What to do next

You can verify the integration status from **HR Administration** > **HR AI Configurations** > **Solution definition**. The use case is now mapped to the selected solution definition.

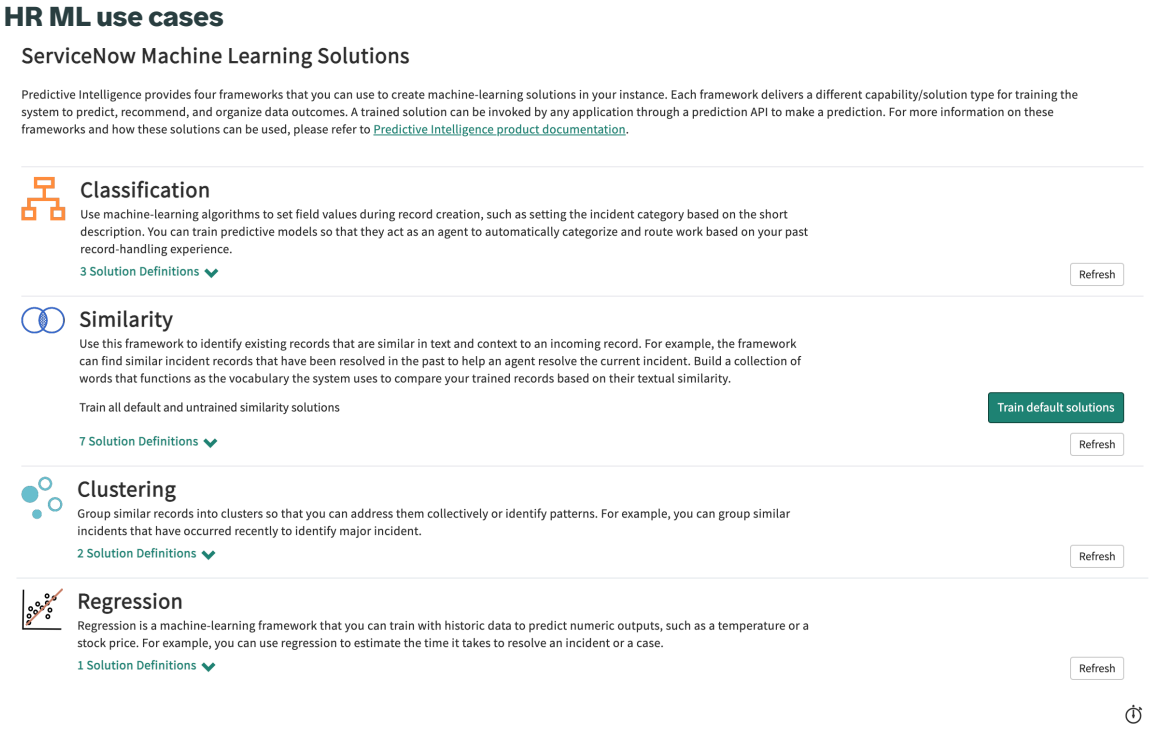
HR PIWB template: Predict knowledge for HR task completion

Use the classic setup template to configure and train your Similarity solution template with machine learning model to recommend knowledge articles for employees to complete the HR tasks.

Before you begin

Role required: sn_piwb_hr_content.admin



Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. From the templates list, go to **Knowledge for completing HR tasks for employees** template.
   A pop-up with model name appears. This use case is handled in the classic Predictive Intelligence. You will be taken there to complete setup. You can perform the following steps:
   a. Ensure you click **View product documentation for setting up this use case** to review the instructions on how to configure the solution definition.

      Note:
      Ensure you review and understand the documentation for creating the solution definition.

   b. Click **Take me there** to get started with the solution definition.
   Machine Learning Solutions landing page appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Go to **Similarity** and click **Configure**.
   The solution definition section appears.
4. On the form, verify the default field values and customize the solution as required.

Result

When the configuration is complete, the employees can complete HR or Content or Campaign to-dos based on the recommendations from the related articles.

What to do next

You can verify the integration status from **HR Administration** > **HR AI Configurations** > **Solution definition**. The use case is now mapped to the selected solution definition.

HR PIWB template: Recommend similar cases

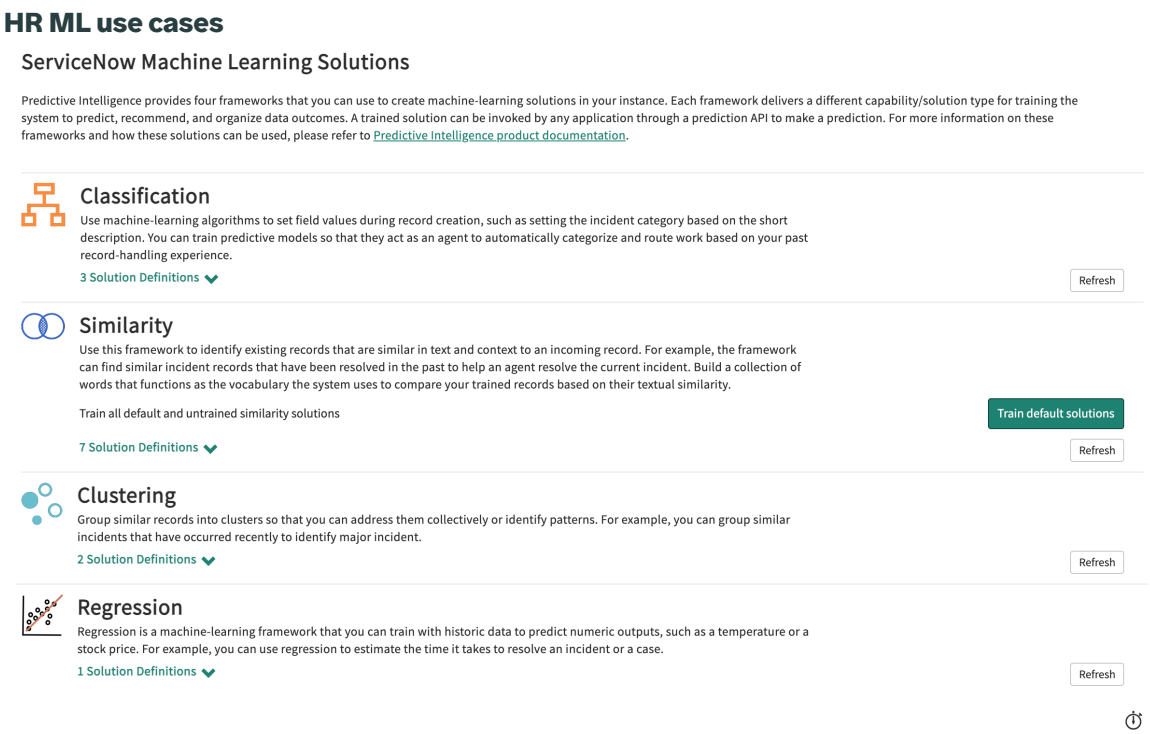
Use the classic setup template to configure and train your Similarity solution template with machine learning model to recommend similar closed HR cases.

Before you begin

Role required: sn_piwb_hr_content.admin

About this task

When the Similar Closed HR Cases is configured and the predictive model is trained, the **Similar Closed HR cases** option is displayed on an HR case. This option displays the most relevant HR closed cases to an HR agent to help resolve the current HR case.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. From the templates list, go to **Similar closed HR Cases** template and click **Start**.
   A pop-up with model name appears. This use case is handled in the classic Predictive Intelligence. You will be taken there to complete setup. You can perform the following steps:
   a. Ensure you click **View product documentation for setting up this use case** to review the instructions on how to configure the solution definition.

      Note:
      Ensure you review and understand the documentation for creating the solution definition.

   b. Click **Take me there** to get started with the solution definition.
   Machine Learning Solutions landing page appears.

3. Go to **Similarity** and click **Configure**.
   The solution definition section appears.
4. On the form, verify the default field values and customize the solution as required.

Result

When the configuration is complete, the solution displays the most relevant HR closed cases to an HR agent to help resolve the current HR case.
Review the corresponding use case information from Machine learning solutions for HR Service Delivery.

HR PIWB template: Recommend estimated time to resolve

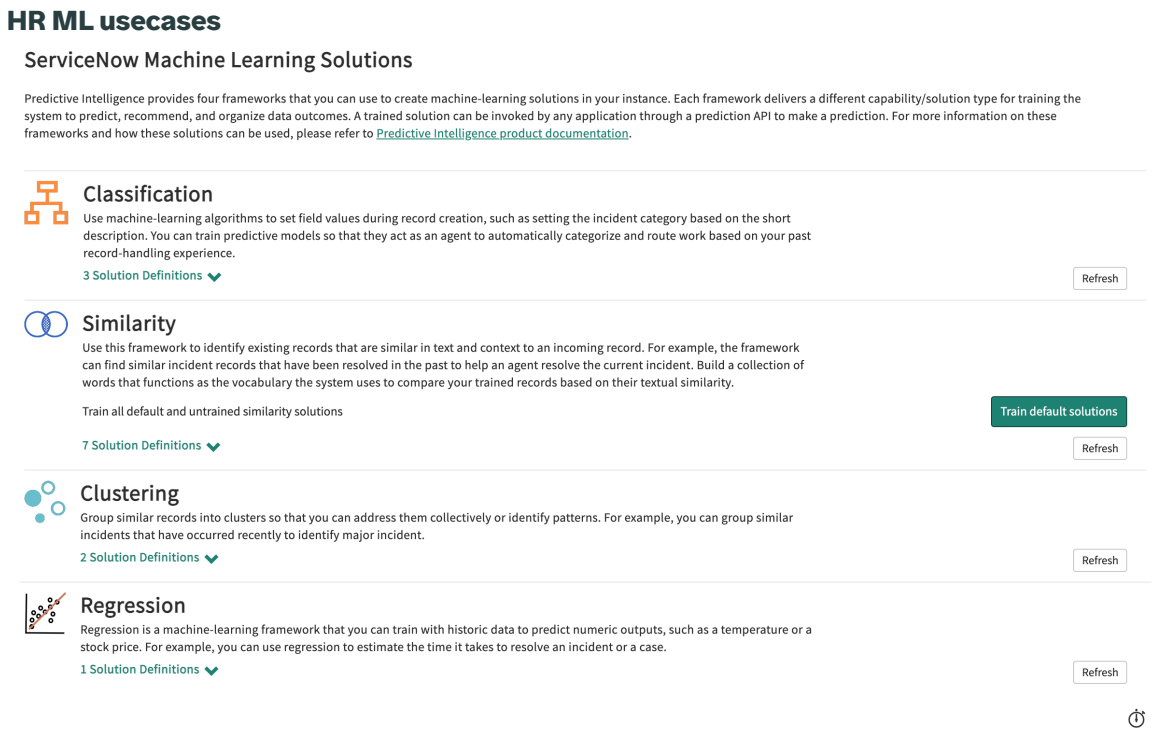
Train your solution by using historical data to predict numeric outputs based on the historic data. Configure the solution definition to predict the estimated time to resolve a HR case.

Before you begin

Role required: sn_piwb_hr_content.admin

About this task

Regression solutions enable you to predict a point estimate and prediction interval. When making predictions, regression also enables you to specify a confidence level for the prediction interval (range). Understand the ETTR configuration information from Estimated time to resolve HR cases.



Procedure

1. Navigate to **All** > **Predictive Intelligence Workbench** > **Use Cases** > **Create New from Templates**.
2. From the templates list, go to **Estimated Time to Resolve an HR case** and click **Start**.
   A pop-up with model name appears. This use case is handled in the classic Predictive Intelligence. You will be taken there to complete setup. You can perform the following steps:
   a. Ensure you click **View product documentation for setting up this use case** to review the instructions on how to configure the solution definition.

      Note:
      Ensure you review and understand the documentation for creating the solution definition.

   b. Click **Take me there** to get started with the solution definition.
   Machine Learning Solutions landing page appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Go to **Regression** > **ml_sn_sn_hr_core_global_hr_case_resolution_time** from the available Solution Definitions, click **Configure**.
   Regression solution definition for HR case resolution time appears.
4. On the solution definition form, configure these fields per the following guidance.

Solution definition form

Field	Value
Label	Enter a unique name for your regression solution. For example, enter `HR Case Resolution Time`.
Name	As you enter your solution Label value, this field automatically populates with a system-assigned name that's similar to your label value `ml_sn_sn_hr_core_global_hr_case_resolution_time`
Word Corpus	Select an existing word corpus that's relevant to your solution. For example, in this use case you select a word corpus that has a title such as **Word Corpus Regression**. If you don't have a relevant word corpus, follow the steps in Create a word corpus. When the word corpus is complete, you can select it from the Word Corpus field in your Regression Definition form. However, the word corpus selection is optional. If your input data has text columns and you don't choose a word corpus, your regression solution trains a new word corpus model by using the text columns in your input data. The resulting word corpus can be reused in any other regression solution or other ML solution type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Value
	Note: The number of records per table for word corpus creation used in regression solutions is limited to 300,000.
Table	Select the database table on which you're applying regression. The table should contain historical records the system can use to predict the length of time for its database restore HR `Case [sn_hr_core_case]`.
Output Field	Select the field whose value you want the predictive model to set. In general, a good output field is a numeric, integer, or floating point field. In this example scenario, you use the **actual_resolution_time** field to measure a length of time. The output field should generate a numeric value.
Fields	Select one or more field types that help the system identify the records you want to train using regression. In this scenario, you use *`short_description, description, hr_service,assignment_group, topic_detail, topic_category, priority,sys_class_name`*. Input field types can be string, nominal, or numeric.
Filter	(Optional) Add filter conditions to the output field records you want to train using regression. Ensure you have sufficient records by adjusting the filters. The minimum number of records for regression training is 10,000 records. The maximum number of records for regression training is limited to 300,000.
Processing Language	Select the dominant language of the dataset you're training on the solution definition. If the dataset language is English, choose **English**. Also, English processing is applied to all datasets by default. For example, if you select Italian, the system processes the data in both English and Italian. **Note:** The term processing indicates some of the language-specific steps used as part of training a solution. For example, tokenizing words, removing stop words, and stemming.
Stopwords	When you select your processing language, the system automatically adds a Stopwords list that uses the same language. For example, if your processing language is Italian, the **Default Italian Stopwords** list appears. The

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Value
	Default English Stopwords list also appears in your selection as well. If you create a custom stopwords list, you can select it from the Stopwords field to add it to your solution. In this scenario, you use the **Default English Stopwords** list.
Training Frequency	Select how often the system regenerates the solution based on records matching the **Filter**. Your options include: ○ Run Once ○ Every 30 days ○ Every 60 days ○ Every 90 days ○ Every 120 days ○ Every 180 days In this scenario, you select Every 30 days By default, the system runs training once. This practice provides you time to review and update the solution definition as needed until it provides acceptable coverage and precision values. The minimum number of records required for regression solution training is at 10,000. The ML scheduler limits the number of trainings an instance can commit to 50 new ML training requests per instance within a 24 hour window. This excludes scheduled re-training requests. In addition, clustering and similarity updates are also excluded from this limit, even if the new training requests exceed 50 within a 24 hour window.

5. Click the appropriate context menu option or button for your solution definition.

6. If you submitted the solution for training, click **OK** on the **Training Activation** window to confirm.
   The system schedules the solution for training with the nearest training service. The system sends you a notification when the training completes, including any errors that may have occurred in the training. Any other users can subscribe to the Predictive Intelligence Notifications category. When training completes, the system uploads the solution as an Attachment record.

   When the configuration is complete, the employees and agents see the estimated time to resolve at the request sections.

What to do next

In this scenario, you created an ML solution from your solution definition. In the Related Links section of your ML solution, see the Solution Statistics, Test Solution, and Solution Definition

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

tabs. On the Solution Statistics tab, review the Point Estimate and Range (prediction interval) statistics your solution has provided.

On the Test Solutions tab of your solution, you can test the prediction output for the records you used as input to the prediction by entering values for the input fields. You can also use the default prediction confidence level of 95, or enter a different level between 0 and 100. Using 95 as the value means that the system is 95% confident that the actual prediction falls within the prediction interval. Click the **Run Test** button to find the prediction output.

After you run the test, the prediction output statistics appear. The Point Estimate on the screen is a single value at one point in time. When the configuration is complete, the employees and agents see the estimated time to resolve at the request sections.

You can verify the integration status from **HR Administration** > **HR AI Configurations** > **Solution definition**. The use case is now mapped to the selected solution definition.

Estimated time to resolve HR cases

Determine the Estimated Time to Resolve a Case (ETTR) for a case by analyzing similar closed cases in the past for better visibility and transparency.

Machine learning predicts the estimated time to resolve a case (ETTR) based on attributes of a case such as its short description, category, priority, assignment group, and so on. For more information about configuring the machine learning regression solution definition for ETTR, see HR PIWB template: Recommend estimated time to resolve

To make predictions, you can use the existing ETTR solution definition or change some of the default settings such as the fields, a filter, and the training frequency.

By analyzing the resolution time for similar closed cases in the past, the ETTR capability offers the following benefits:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Gives employees better transparency and set expectations on resolution time for their cases.
- Helps agents in prioritization of work and measure performance.
- Provides data that can help managers with insights into SLA management and estimated time to resolve for cases.

ETTR for HR Cases

On configuring Estimated HR Case Resolution Time (ml_sn_sn_hr_core_global_hr_case_resolution_time) and training the predictive model, you can see the **HR Case Resolution Time** option. See the **Estimated time to resolve** value from:

- Employee portal view and Now Mobile view
- Agent workspace
- Platform view with a list of cases
- Case configuration view for admins

For more information, see Viewing ETTR predictions

ETTR predictive model

The Estimated HR Case Resolution Time (ml_sn_sn_hr_core_global_hr_case_resolution_time) is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed.
- The Predictive Intelligence for Contextual Search (com.snc.contextual_search_ml) plugin is installed.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

Business rules and system properties

Verify the following system properties and business rules:

- Use or configure the following system properties and corresponding values to display the ETTR values per your requirement:
  - *ml_sn_sn_hr_core.COE_ETTR_display_agent*
  - *ml_sn_sn_hr_core.COE_ETTR_display_employee*
  - *ml_sn_sn_hr_core.estimated_resolution_time_confidence_level*
- Use or configure the **Predict Estimated Resolution Time** business rule per your business needs.

ETTR model

Regression solutions such as ETTR enable you to predict a point estimate and prediction interval. This capability informs the agent, employee, and service owners on the estimated resolution time for a case based on the time taken to resolve similar issues historically.

- **Actual resolution time**: Stores the actual time of resolution of a particular case. This field stores the resolution time from opening to closing of the case.

> **Note:**
> When you upgrade, run this **Populate Actual Resolution Time** schedule job once for populating the actual resolution time for existing HR cases. For all upcoming cases, the business rule **Populate Actual Resolution Time** automatically generates the resolution time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Max ETTR**: Indicates the maximum estimated resolution time in days for case completion. Estimate is based on the time taken for resolving similar HR cases.
- **Min ETTR**: Indicates the minimum estimated resolution time in days for case completion. Estimate is based on the time taken for resolving similar HR cases.
- **ETTR in days**: Stores the point estimated resolution time in days for case completion.

Estimated time to resolve HR cases

ServiceNow Voice for HR Service Delivery

The ServiceNow Voice for HR Agent Workspace provides seamless interactive voice response (IVR) and calling experiences for your employees and agents by integrating a cloud contact center provider with the robust capabilities of the Agent Workspace for HR Case Management.

Use ServiceNow Voice to facilitate inbound and outbound telephone calls for service agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Integrate your ServiceNow instance with a third-party phone system, such as Amazon Connect.
- Display relevant data to assist the HR agent during the call.
- Analyze interactions between HR agents and employees via call recordings, metrics, and transcripts.

For more information, see Integrating ServiceNow Voice for HR.

Employee Center with HR Service Delivery

The Employee Center is available to use when you activate the Human Resources Scoped App: Core [com.sn_hr_core] plugin.

The Employee Center provides a single and unified portal experience for employees to find information, get help, and request services or items they need. For more information, see Employee Center.

Unified taxonomy mappings

HR taxonomy delivers pre-configured mappings of the HR catalog items and knowledge articles to the HR topics provided by the Employee Experience taxonomy.

Your employees can discover content of different types such as catalog and knowledge together within a single topic. The topic mappings for the HR taxonomy also powers the search in the Employee Center.

To use the Employee Center with HR Service Delivery:

- Activate the HR taxonomy (com.sn_hr_emp_taxonomy) plugin. When activated, the HR catalog items and knowledge (KB) articles are mapped to the topics and subtopics under Taxonomy.
- The base system provides the HR topics and subtopics and are included when you activate the HR taxonomy (com.sn_hr_emp_taxonomy) plugin.

Note:
For more information, see:

- Unified taxonomy for Employee Center
- Associate connected content to a topic
- Associate a knowledge article with a taxonomy category

Employee Center widgets

The following are optional widgets that can be configured:

- Start Date widget: This widget only appears to new hires prior to their start date for onboarding cases only. When using the base system layout, place the widget on the Employee Center home page, in the right-hand pane above the My Items widget. For more information on Lifecycle Events and onboarding and configuring the widget, see
  - Lifecyle events for enterprise
  - Service Portal widgets
- Parental Leave Guide: Provides a link to the Parental Leave Guide portal page. For more information, see
  - Now Assist Virtual Agent topics for Journey designer
  - Service Portal widgets

Domain Separation and HR Service Delivery

The ServiceNow® HR Service Delivery application improves the employee service experience by automating HR interactions and providing a single platform for all HR services. Domain separation is supported in HR Service Delivery.

Domain separation separates data, processes, and administrative tasks into logical groupings called domains within a single ServiceNow instance. You can then control several aspects of this separation, including which users can see and access data.

To learn more about domain separation, see:

- KB article
- Understanding domain separation

HR Service Delivery provides the basic level of domain separation support. Basic domain separation (data separation) implies that if the data and all the related configurations reside within a particular domain, HR Service Delivery will function as expected. Hierarchical domain structure, sharing of data/configurations and logic/process separation is not supported by default in HR Service Delivery as per the basic domain separation definition.

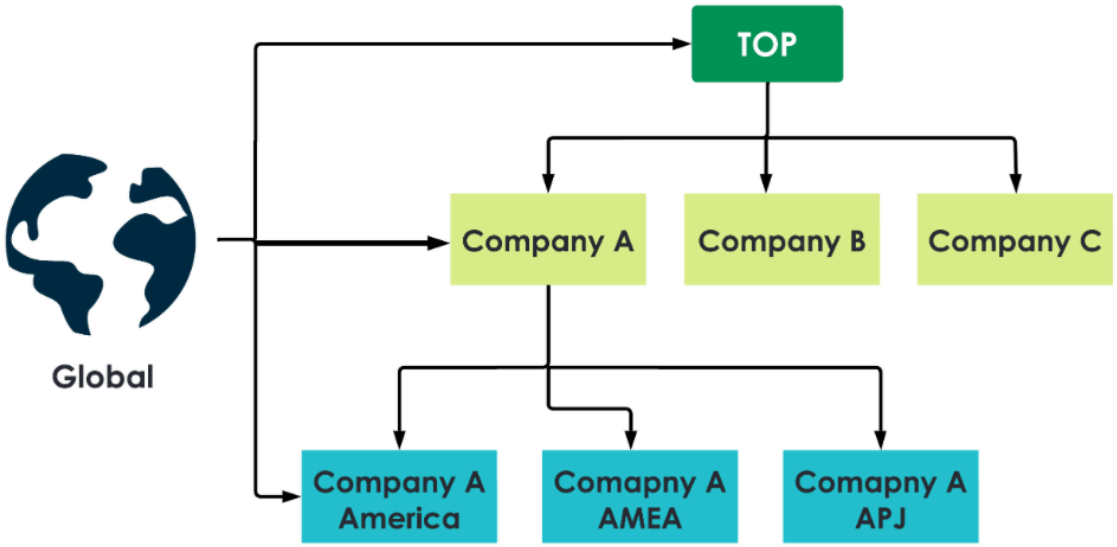
Support level: Basic

Note:
To learn more about support levels, see Domain separation levels of support.

- There is business logic to ensure data goes into the proper domain for the application's service provider use cases.
- In the application, the user interface, cache keys, reporting, rollups, aggregations, and so on, all consider domain at run time.
- The owner of the instance needs to be able to set up the application to function normally across multiple tenants.

Use case: As a Service Provider organization, when I receive a case or a chat from a tenant in the system, I should be able to see and resolve that case without other tenant customers being aware of the case or process.

Overview of HRSD domain separation



Domain separation is best for customers who:

- Enforce absolute data segregation between business entities (data separation).
- Customize business process definitions and user interfaces for each domain (delegated administration).
- Maintain some global processes and global reporting in a single instance.

These users can choose to expand or collapse the domain scope to show or hide data from other domains. For example, data from Company A can be separated from the data of Company B and Company C. Each domain using the HR Service Delivery application can have separate data that cannot be shared with other domains.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Based on the hierarchy, users can see data in their home domain and child domains of that home domain. Users will not have access to data in their parent domains, peer domains, or domains in other branches of the hierarchy. Users always have access to data from domains that have been explicitly granted to them by domain visibility and domain contains.

How domain separation works in HR Service Delivery

- While HR Service Delivery supports separation of data, separation of logic and process is not fully supported.

  Note:

  - For more details on domain separation in HR Service delivery, see Guidance for proper HR Service Delivery domain separation.
  - To learn more about process separation, see the Data Separation versus Process Separation section in this KB article.

- When working in a domain-separated implementation, ensure that records are created at the right domain level so that it is visible to the right set of users.

  For example, domains that look like:

  - Global → TOP
    - Domain A
    - Domain B

    Note:
    Global is not a domain.

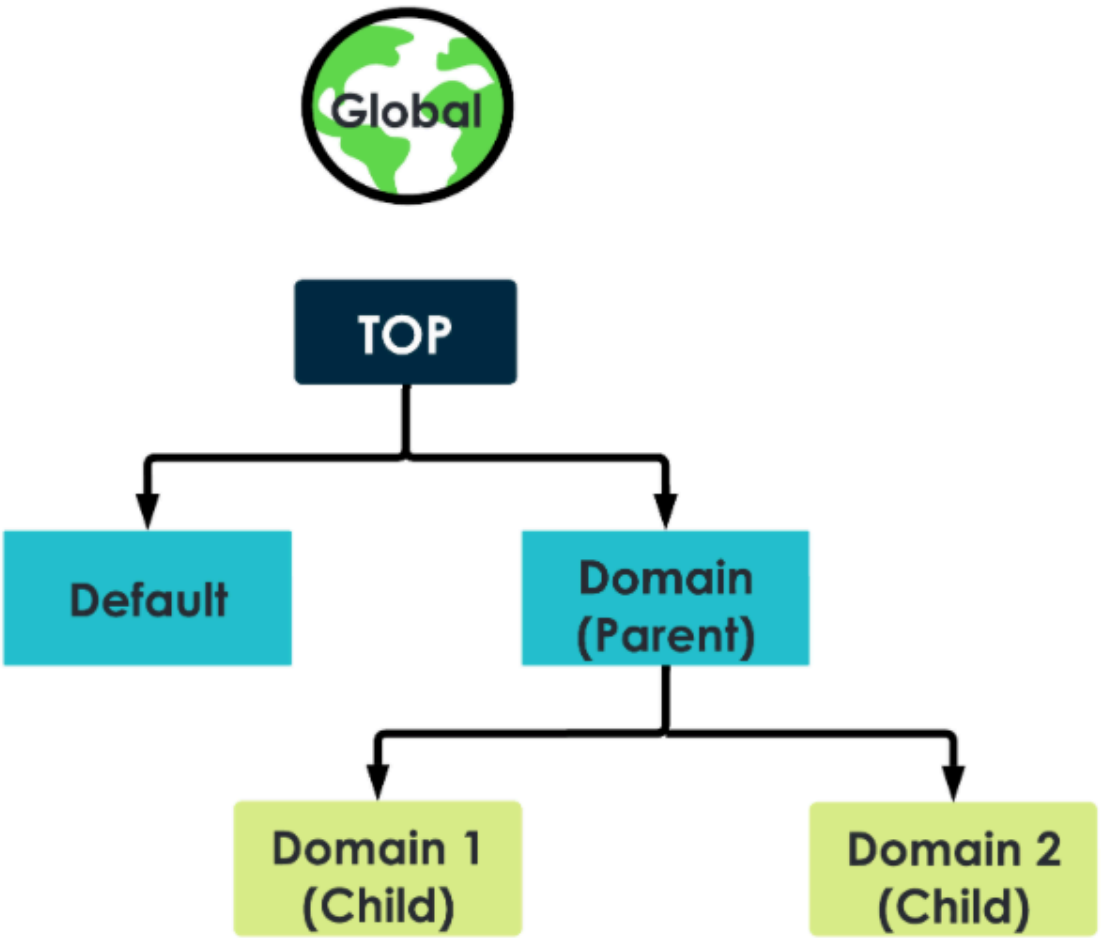
  - For any user in Domain A or Domain B to access an HR case, the HR case must be created at an global level.
  - If an HR case is created in Domain A, a user from Domain B cannot access it. Likewise, if an HR case is created in Domain B, a user from Domain A cannot access it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- For an HR case to be visible to the users in TOP and Domain A, create the HR case in Domain A.
- For an HR case to be visible to the users in TOP and Domain B, create the HR case in Domain B.

Use case: Domain separation in HR Service Delivery

While the behavior offered with domain separation provides multi-tenancy support, multi-tenancy is still contained within a single instance. A few properties, data and processes are always global and shared across all domains. For example, the system's "Remember me" option on the login page is global and cannot be specified per domain.



If a complete and total separation of all system properties is needed and does not require global reporting or global processes, separate instances are the best option.

Guidance for proper HR Service Delivery domain separation

Additional guidance to successfully deploy HR Service Delivery in a domain separated environment.

The following sections explain how to successfully set up domain separation on your instance.

Example of a domain separation hierarchy

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Services

While you set up HR services in a global domain, note the following points:

Limitations

1. Administrator of any domain can edit the global HR services, which impacts all other domains.
2. An HR service that is created in a global domain will be present in all others domains.

Instructions

- This instruction applies to the first limitation: You can create or update write ACL on an HR service table so that the global HR services are only editable by HR admins in a global domain.
- This instruction applies to the second limitation: By using HR criteria, you can restrict global HR services to be used for certain domains only. However, this will not stop access for an global service to view and modify the global HR service by HR administrators.

HR Approvals

While you set up HR approvals for domain separation, note the following points:

Limitations

When the users of parent domain and child domain are added to same approval group:

- The parent domain's HR case is going for approval to a child domain even when the users of the child domain do not have access to the case. For example, the HR case in Domain (Parent) is going for approval to Domain 1 and Domain 2 users even when they do not have access to the case (Refer to the domain hierarchy image).
- The child domain's HR case is not going for approval to the parent domain even when the users of parent domain have access to the case. For example, the HR case in Domain 1 is not going for approval to users in Domain (Parent) even when they have access to the case.

Instructions

Do not use global groups or groups in a parent domain for approvals. While using these groups for approval, verify that you use a flat domain hierarchy, otherwise use domain specific approval groups.

HR Assignment rules

While you set up HR assignment rules for domain separation, note the following points:

Limitations

When the users of parent domain and child domain are added to same approval group:

- The parent domain's HR case might be assigned to a child domain even when the users of the child domain do not have access to the case. For example, the HR case in Domain (Parent) might be assigned to Domain 1 and Domain 2 users even when they do not have access to the case (Refer to the domain hierarchy image).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The child domain's HR case might not be assigned to the parent domain even when the users of parent domain have access to the case. For example, the HR case in Domain 1might not go for approval to Domain (Parent) users even when they have access to the case.

Instructions

- For an assignment rule in a domain, use group from the same domain.
- While using global groups for an assignment, use a flat domain hierarchy, otherwise use the domain specific assignment groups.

HR Assignment group

While you set up HR assignment groups for domain separation, note the following:

Limitation

For an HR case that is created in parent domain, assignment group from child domain can be selected. For example, for an HR case in Domain (Parent), user can select an assignment group from Domain 1.

Instructions

Select the correct assignment group for a parent domain. Do not select an assignment group from a child domain.

HR SLAs

While you set up HR SLAs for domain separation, note the following points:

As an administrator:

- Set up domain specific SLA as per your requirement.
- Set up global SLA definition if all domains require the same SLA definition.

HR Response templates

While you set up HR response templates for domain separation, note the following points:

You can set up response templates with either global or a specific domain. Global templates will be accessible to all other domains, while a specific domain template will be accessible to that domain only.

Advanced Work Assignment (AWA) for HR

While you set up HR live agent chat (AWA) for domain separation, note the following points:

Limitations

When you have AWA set up with a global group, users from a specific domain are getting the **Connect to the live agent** option even when an agent from that domain is not available. For example, if available agents are only from Domain 1 and user from Domain 2 tries to connect to the live agent, user will get option to **Connect to a live agent**, but the actual routing to any agent will not happen.

Instructions

AWA can be set up for both global or domain specific groups. If you are using global group for AWA setup, verify at least one of the global agent is always available.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Escalation rules

While you set up escalation rules for domain separation, note the following point:

Set up escalation rules either at global or a domain specific layer. For an escalation rule in parent domain, do not select a group from child domains.

Enterprise Service Management Integrations Framework

While you set up Enterprise Service Management Integrations Framework for domain separation, note the following points:

- Maintain a separate connection record per domain.
- Copy the default scheduled flow in to respective domain for each integrations.
- Copy default Trigger external interface flow into respective domain.

Issue Auto Resolution for HR

The Issue Auto Resolution for HR application uses artificial intelligence (AI) to provide near real-time responses to your employee's routine inquiries. When your employees use the request and response channels, you can collect their feedback to improve the quality of the recommendations.

By using the Issue Auto Resolution for HR application, your employees can ask for help through the request channels. They can then receive resolutions for their requests through the response channels. The Issue Auto Resolution application also identifies the cases that are critical or sensitive and brings them to an agent's attention for timely assistance.

The key benefits of using the Issue Auto Resolution application are:

- Auto-resolutions to your employee's questions.
- Omni-channel or multichannel experience so that your employees have multiple channels to request and receive help.
- Cost savings through self-service because you don’t require as many agents to answer questions.
- Near real-time responses for your employees.
- Dashboard that your agents and managers can use to monitor the success metrics.

Warning:
Issue Auto Resolution for HR is supported only in the English language and does not support bringing in your own model.

HR case auto-resolution that is powered by AI

For high-volume, non-critical cases, the Issue Auto Resolution application gives near real-time self-service options through the response channels that the employee would like to engage with. The Issue Auto Resolution application can detect which cases are critical and bring them to your agents' attention, which ensures that the employee gets timely assistance.

Omni-channel or multichannel experience

The omni-channel or multichannel experience enables employees to ask for help through the channel that is most convenient to them so that they can receive a near real-time response in their preferred channels. For example, a routine general inquiry that is received through an email can be auto-resolved through a short message/messaging service (SMS) for remote workers or

© 2026 ServiceNow, Inc. All rights reserved.

Microsoft Teams for those employees who go into the office. Your employees decide how they want their responses.

Cost savings for the organization

Nearly 50–80 percent of employee requests are submitted through an unstructured format because employees often prefer the easiest and fastest route to ask for help. Most of these requests are routine or non-critical. By using the Issue Auto Resolution application, you can automate the resolution of high-volume, low-value HR cases. This automation reduces the cost and effort of manually triaging and solving routine cases.

Near real-time response

The Issue Auto Resolution application gives a near real-time response (often 3–5 seconds) for routine employee inquiries. Employees don't have to wait 3–5 days for an agent to get back to them to address their inquiries.

Dashboard for monitoring your success metrics

The Issue Auto Resolution dashboard lets your administrators monitor your dashboard's success metrics. These metrics can provide you with the details of the auto-resolved cases, estimated costs, and time savings through Issue Auto Resolution.

Exploring Issue Auto Resolution for HR

Issue Auto Resolution for HR enables employees to use request channels and response channels for communication and collects feedback from them to improve the quality of the recommendations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Issue Auto Resolution for HR makes asking and receiving help easy for all employees. Office workers, with access to channels can ask help via a desktop or a laptop. Non-office workers, with limited access to computers, can ask help through a mobile phone. Issue Auto Resolution for HR provides a full self-service path toward resolving employee requests across a broad array of channels using AI and automation.

Request and response channels

Employees can request help or create a case using request channels like email or Employee Portal.

Employees receive communication from Issue Auto Resolution through response channels. If an HR case is evaluated as non-critical, and self-service content is available, Issue Auto Resolution sends a suggestion through the employee's preferred response channel. Employees can receive assistance through channels like email, SMS, Employee Portal, Microsoft Teams, or Virtual Agent (web). Providing diverse response channels enables employees to receive communication from Issue Auto Resolution through their preferred communication medium.

How Issue Auto Resolution works

After a general inquiry is created, Issue Auto Resolution uses Artificial Intelligence (AI), and Natural Language Understanding (NLU) to interpret the tone and intent of the case. AI analyzes the description of the HR case and identifies its criticality. Critical cases are flagged to a live agent for timely assistance. For non-critical cases, IAR responds with relevant knowledge articles and catalog items for reference. During the process of case resolution, employees can request agent assistance at any given point.

Understanding feedback

After reviewing the recommended knowledge articles or catalog items, an employee can choose to indicate whether the knowledge articles, and catalog items are helpful in resolving the

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

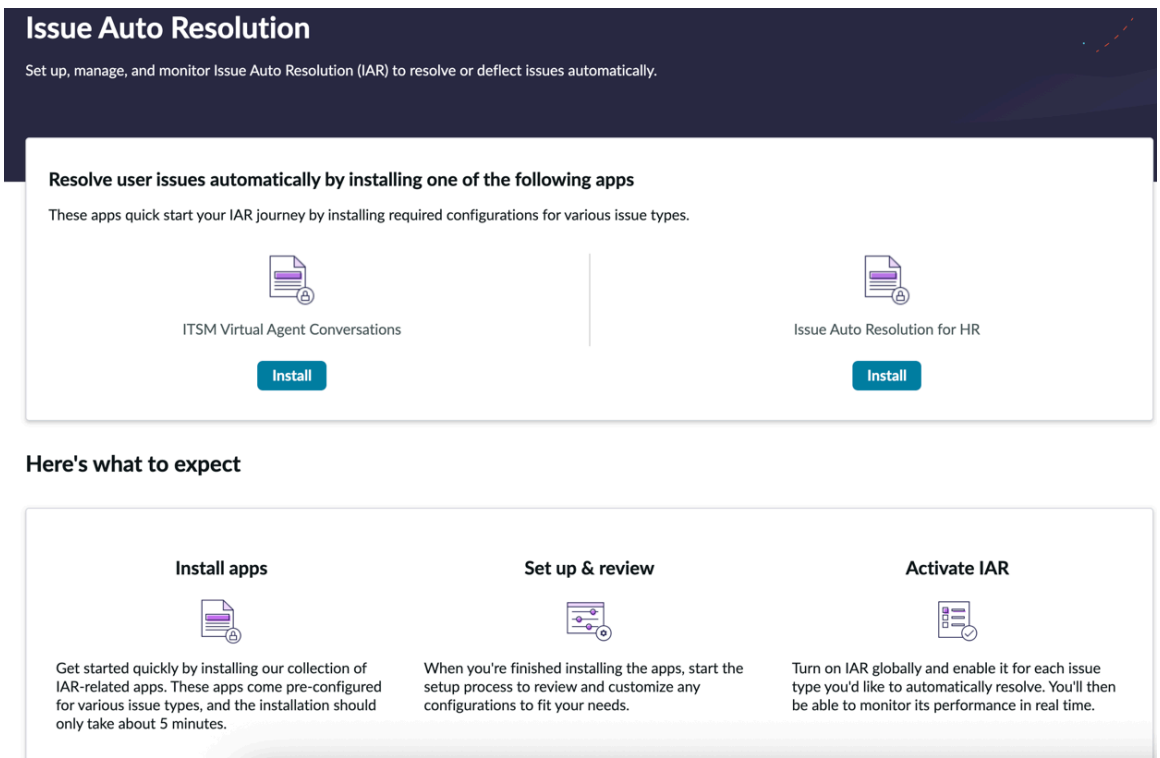
inquiry. If the recommendations are helpful, the case is auto-resolved without any manual agent intervention. Otherwise, the case is moved to an agent's queue for further assistance.

Critical cases are brought to an agent's attention and the assigned agent can give feedback on the prediction. The feedback can be used for training the machine-learning models so that the application gets smarter with time.

Enhanced AI Search assist for general HR inquiries

Refine your search results with the enhanced AI Search assist capability available on Employee Center. Self-solve minor issues with intuitive recommendations before submitting a create incident form.

Use the enhanced search functionality providing relevant recommendations to self-solve your issue while filling in an incident creation form. The contextual search understands long form texts to provide intuitive suggestions. You can attempt to solve your problem with the suggestive resources before you create an incident.



You can find both Service Catalog items and Knowledge Base articles as recommendations for your search.

The feature is available with the Xanadu release and onwards.

For more information on how to configure the enhanced AI Search assist functionality, see Configure AI Search Assist for a record producer.

Configuring Issue Auto Resolution for HR

Setting up Issue Auto Resolution helps your organization to provide near real-time responses to your employee's routine inquiries. To view the settings for Issue Auto Resolution, navigate to **All** > **Issue Auto Resolution** > **Settings**.

You can install the ITSM Virtual Agent Conversations and Issue Auto Resolution applications. After the installation is complete, review and modify the configurations to suit your business needs and activate your IAR.

Note:
You can also install the apps from the ServiceNow Store

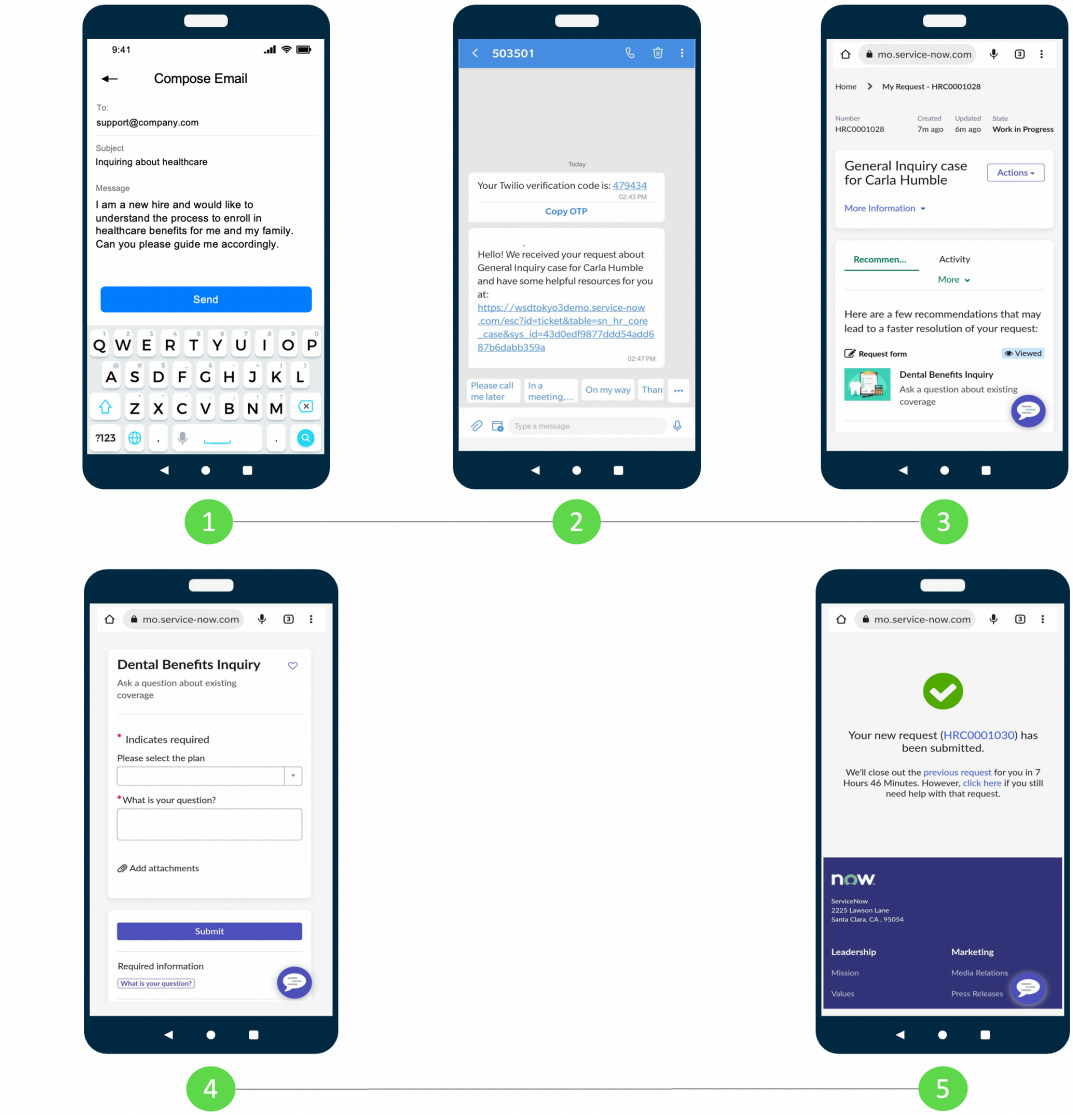
Using Issue Auto Resolution for HR to handle cases

You can use the Issue Auto Resolution for HR application to quickly handle your organization's high-volume, low-value HR cases and reduce the burden on your agents so that they can focus on issues that need more experience or manual assistance.

Overview

By providing your employees with self-service content for their routine inquiries through the Issue Auto Resolution for the HR application, you can help resolve your HR cases faster. Without the Issue Auto Resolution for HR application, your agents would take at least 3–5 days to resolve these cases.

The following two scenarios show how you can use the Issue Auto Resolution application in your organization.



Scenario 1 - Successful catalog submission

Let's say that an employee recently joined your organization. The employee doesn’t have a company laptop. The main method for work-related requests are through the company’s support email address. The employee owns a personal mobile phone, which is the employee's preferred mode of communication.

The following example shows how a new employee can use a personal mobile phone to raise a healthcare-related request.

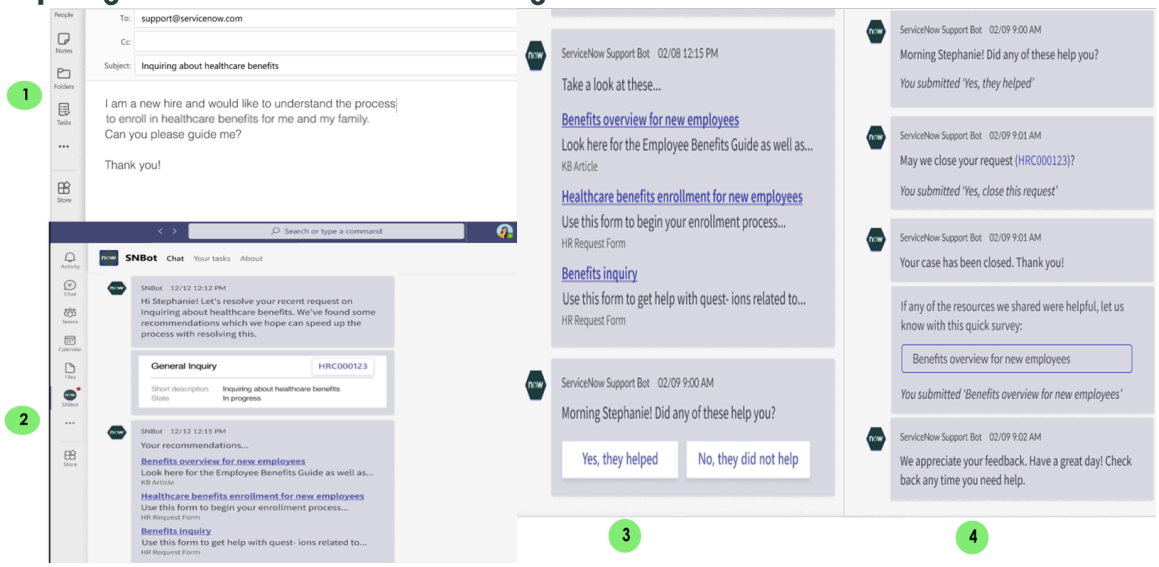
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee inquiring about healthcare benefits

1. The employee submits an HR general inquiry through an email from the employee's own mobile device.
2. The employee receives an SMS notification with recommendations that are related to the inquiry.
3. The employee clicks the link in the SMS message and logs in to the Employee Portal to view the recommendations.
4. The employee goes through all the recommendations, fills out the request form and catalog item, and submits the form.
5. A new structured case is created. The original case is closed automatically.

> **Note:**
> If the employee isn't satisfied with the resolution, the employee can choose to connect with an agent for further assistance.

The employee gets a follow-up SMS regarding the feedback on the original inquiry. Within minutes, the issue is resolved through the channels that the employee is familiar with. No agent was needed for this scenario.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scenario 2 - Helpful knowledge article

Let's say that an employee recently joined your organization as a program manager and is assigned a company laptop. The employee spends most of the time in meetings or communicating with various stakeholders through emails and Microsoft Teams. The employee prefers reaching out through these channels when a question arises.

The following example shows how a new employee can use a company laptop to raise a healthcare-related request.

Inquiring about healthcare benefits through email

1. The employee submits a HR general inquiry through an email via a desktop computer.
2. The employee logs in to Microsoft Teams and is greeted by the Issue Auto Resolution virtual assistance.

   The employee views the knowledge base articles that are recommended by the Issue Auto Resolution for HR application and is satisfied with the information, but later forgets about the open case.
3. The Issue Auto Resolution application tracks that the employee viewed some of the recommendations but hasn't responded to the case. The next day, the employee gets a follow-up message in Microsoft Teams to request feedback.
4. The employee responds with positive feedback and a case closure consent. The case gets automatically closed.

Within a day, the issue is resolved through the employee's preferred channels. No agent was needed for this scenario.

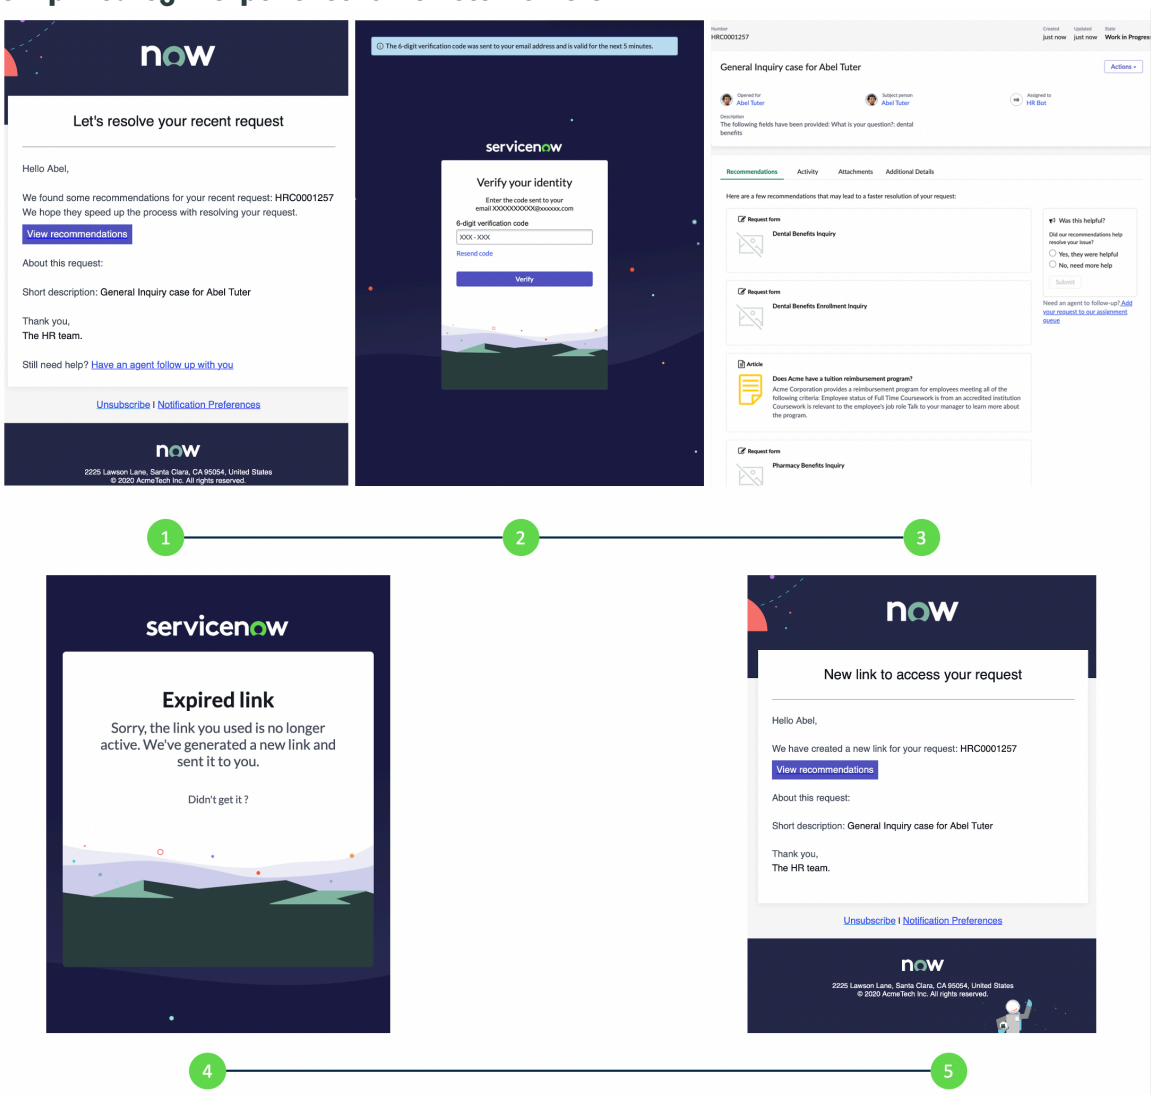
Simplifying the authentication experience for your remote employees

With the Issue Auto Resolution application, you can simplify the authentication experience for your remote employees. Instead of entering a user name and password to access the service portal, your remote employees can get to the portal through a link in a short messaging service (SMS) or email.

By using the Issue Auto Resolution application, your remote employees who don't have the corporate credentials can still access your service portal without entering a user name and password. When you create a case for the employee, that employee gets a link through a text (SMS) or email. That link directs them to the login page where they're prompted to enter a user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

name and password. With this simplified authentication experience feature, these employees, who fulfill the user criteria mentioned in the *sn_iar_hr.digest_link_user_criteria* system property, can access the portal without entering credentials.



You can install the Time Limited Authentication (com.snc.authenticate.time_limited_authentication) plugin to extend the core functionality of the Issue Auto Resolution application.

Successful and simplified login experience

Let's say that a remote employee recently joined your organization. Your employee doesn't have the corporate credentials to access the service portal but that employee has a query about the dental benefits enrollment. With the Issue Auto Resolution application, your employee can access the service portal through an email by using a personal device.

The following example shows how a remote employee can log in to the portal without credentials by using a digest link.

Simplified log in experience for remote workers

The process is as follows:

1. The remote employee gets the digest link through an email.
2. The link directs the employee to verify the identity page, where the employee has to enter a one-time password (OTP) received through an email.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. The employee is then directed to the standard ticket page, where the employee can view the recommendations.

   Note:
   The link's validity depends on the values that are defined in the time-limited authentication configuration record. In this case, the maximum number of times an employee can use the link is set to one.

4. The employee is redirected to the expired link page when the employee tries to use the same link again.
5. The employee gets an email with a new digest link.

Time-limited authentication

You can do the following tasks to set the existing time-limited authentication properties:

- Enable the time-limited authentication glide.authenticate.enable.time_limited_authentication property.
- Disable the account recovery property.
- Enable multi-provider single sign-on (SSO).
- Enable the **Active** field in the time limited authentication properties config record.

To learn how to configure the properties, see Time Limited Authentication Properties form.

To learn more about time-limited authentication, see Time limited authentication.

User criteria for generating the digest link

You can use the sn_iar_hr.digest_link_user_criteria system property to get and validate the user criteria for generating the digest link. This link appears in an SMS or email that is sent to the employee. The value should be the sys_id of the active user criteria. For more information, see User criteria form.

Users with the admin and sn_hr_core.admin roles can assign the sn_iar_hr.digest_link_user role. This role is added to the available user criteria to validate if that user qualifies for digest link generation.

Time Limited Authentication Properties form

Use the Issue Auto Resolution time-limited authentication record to set the fields that are related to the link's validity, expiry, and failed redirect.

Time Limited Authentication Properties form

Field	Description
Name	Name of the record.
One time use	Maximum number of times that a user can log in.
Active	Option to enable the time limited authentication property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Time Limited Authentication Properties form (continued)

Field	Description
	Note: Select this option to activate the property.
Expiry field	Expiry in minutes. The minimum is 30. The maximum is 1440. **Note:** The maximum login attempts are changed to one when expiry is more than 120 min.
Maximum login attempts	Maximum number of times that can be used log in.
Failed redirect	URL to redirect your users after a failed login attempt. An example of this type of URL is a public knowledge article that describes the error and has helpful links. Another example is an internal company URL (e.g. http://portal.companya.com/logout). **Note:** You must change the base link with the instance base link.
External logout redirect	URL to redirect your users after logout, typically back to the portal that enabled the single sign-on (SSO) (e.g. http://portal.companya.com/logout). **Note:** Change the link in the example to match your instance base link.

Using agent feedback to improve your case criticality predictions

By using your agent's feedback to determine how critical a case is, you can improve the machine learning (ML) models of the Issue Auto Resolution (IAR) application to predict cases more correctly over time.

When an agent creates a case, Issue Auto Resolution predicts how critical the issue is. However, in the past, these predictions sometimes needed to be improved. To improve the classification of cases through machine learning (ML) models, a new field, called the **Resolution requires** field, was introduced for HR agents to give feedback. Agents can only see this field on an HR case form when Issue Auto Resolution has predicted the criticality of that case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Using the resolution requires field

The **Resolution requires** field includes the values that are based on the feedback that the HR agents gave on the criticality prediction. The **Resolution requires** field includes the options that are listed in the following table.

Resolution requires field values

Name	Description
Urgent agent action	Immediate agent attention is required to resolve the case.
Self-service content only	User could resolve the case with self-service content.
Nonurgent agent action	Case is noncritical.

Agents can choose the correct feedback from the field options to tell when the Issue Auto Resolution predictions are correct or not.

Resolution priority mapping

Agents see an informational message on the screen when they change the resolution requires, priority, or state of the case. For example, let's say that an agent selects the **Urgent agent action** option. The priority of it being selected is **Low**, so the agent sees the message "Resolution requires field is inconsistent with case priority. Please review." By using resolution priority mapping, agents can correct the issue when the priority is inconsistent with the urgency of the case.

Informational messages can also appear as priority changes. The resolution requires that an agent makes changes or state changes.

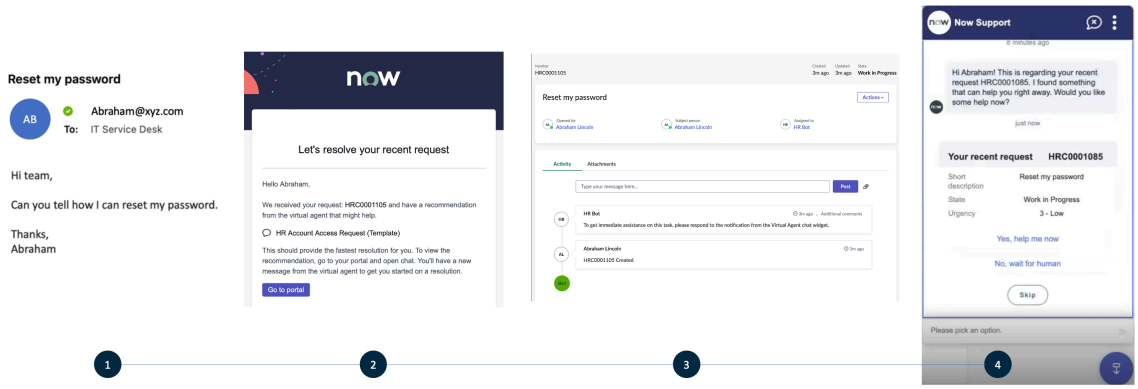
Enhanced search results in IAR with Virtual Agent

The Issue Auto Resolution application for HR has enhanced its search results with the introduction of Virtual Agent to the IAR pipeline flow. The employee can now receive a matching Virtual Agent topic as a recommendation for a noncritical case, when the topic is available in the database, before the application performs a general AI search.

In the previous version of Issue Auto Resolution for HR, all the noncritical HR cases were sent recommendations that were based only on the AI search results. With this enhanced version, the IAR application first checks if a matching Virtual Agent topic is available for that particular HR case. If there's a matching Virtual Agent topic, the IAR application recommends the identified Virtual Agent topic to the employee. If no matching Virtual Agent topic is found, the application performs an AI search, and the recommendations are sent to the employee based on the AI search results.

Note:
To enable the Virtual Agent topic recommendation in the Issue Auto Resolution for HR, the administrator must set the sn_iar_hr.hr_intent_solution_enable property to true. The ServiceNow® support team can update this feature to your Issue Auto Resolution flow.

Virtual Agent topic flow



When an employee submits a human resource (HR) case via an email or portal, the Issue Auto Resolution first checks whether the *sn_iar_hr.hr_intent_solution_enable* property value is set to **True**. If the property value is **True**, the Issue Auto Resolution checks if the corresponding intent for the topic map is active or not in the **Auto-resolution configuration**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

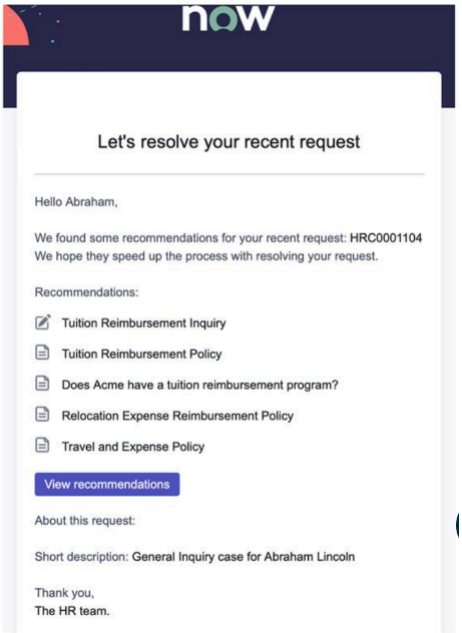
record. When the property value is **False**, then Issue Auto Resolution continues to perform the normal AI search.

The following example shows how an employee receives a Virtual Agent topic recommendation when the employee submits an HR case via email.

VA topic in Issue Auto Resolution flow

The process is as follows:

1. An HR case is submitted by the employee through an email.
2. The employee receives an email with the Virtual Agent topic recommendation in it.
3. The employee selects **Go to portal** to access the details of the case on the portal.
4. The employee accesses the Virtual Agent topic, by selecting the Virtual Agent chat icon on the portal and selecting the case recommendation notification.



Enhanced recommendations preview on email for AI search flow

The new recommendations section displays the titles of the knowledge articles and catalog items in the email. The icon indicates that the recommendation title is a catalog item. The icon indicates that the recommendation title is a knowledge article.

The following example shows how the new recommendations preview section looks in the email you receive when the HR case gets AI search results as recommendations.

Quick start tests for HR Service Delivery

Validate the continued functionality of HR Service Delivery after any configuration change such as an upgrade or after developing an application. Copy and customize these quick start tests to pass when using your instance-specific data.

All test suites and tests should pass on a default implementation. To validate a custom implementation, copy the automated tests and configure them for your customizations.

Quick start tests are disabled and read-only test templates. By default, they only produce a pass result when you run them with the default demo data that is provided with the application or feature plugin.

To make quick start tests produce a pass result when you run them with your instance-specific data, copy and configure them to use your instance data.

The Agile Development 2.0 plugin (com.snc.sdlc.agile.2.0) and the Agile Development 2.0 - ATF Tests (com.snc.sdlc.agile.2.0.atf) plugins must be enabled.

Note:
When running, demo data is required.

Employee Document Management

Employee Document Management quick start tests require activating the Employee Document Management (com.sn_employee_document_management) plugin.

Quick start tests

Run quick start tests for HR

The base HR application provides several quick start tests you can run.

Before you begin
Role required: sn_hr_core.admin, atf_test_admin, atf_test_designer

Procedure

1. Navigate to **All** > **Automated Test Framework** > **Tests**.
2. Search and select the tests for HR Service Delivery.
   For a list of quick start tests and their descriptions, see Quick start tests for HR Service Delivery.
3. Select **Run Test**.
   The Test Steps tab provides each step of the quick start test.
   After the tests run, the Step Results tab shows the status of each test step. Screen shots also appear at the top of the form as attachments.

Employee Center

ServiceNow Employee Center portal is a standard multi-department, dynamic portal for service delivery, and employee engagement.

Employee Center portal enables customers to easily scale their service solutions across departments, such as IT, HR, Workplace, Legal, and Procurement with digital workflows. This unified portal goes beyond the basic service delivery to provide a platform for communications, engagement, and content experiences with Employee Center Pro subscription.

This video shows a visual overview of the Employee Center and its capabilities.

Exploring Employee Center

Employee Center portal is a unified portal that connects systems across an enterprise within one destination site to provide a centralized employee portal. It requires minimal configuration and a wide variety of features to extend portal functionality.

Employee Center overview

Employee Center improves employee productivity by reducing the time and effort employees spend looking for services, updates, and information. With the Employee Center portal, access to information and services across all departments are made simple and can be accessed through any device.

Employee Center easily scales from single to multi-department service delivery use case that includes best-in-class home page and specialized widgets redesigned for multi-department tasking. Employee Center portal also provides curated experiences to drive employee driven content discovery, AI search, and unified browse for an enhanced user experience.

Employee Center is one portal that is packaged as two separate store applications:

- Employee Center: Multi-department service delivery that enables employees to report issues, request items or services, find service-related answers, and complete to-dos. This application and its capabilities are available to all customers by default.
- Employee Center Pro: Application that extends the standard Employee Center capabilities including content creation capabilities, multi-stage and multi-channel content delivery, and portal analytics. This application requires additional licensing.

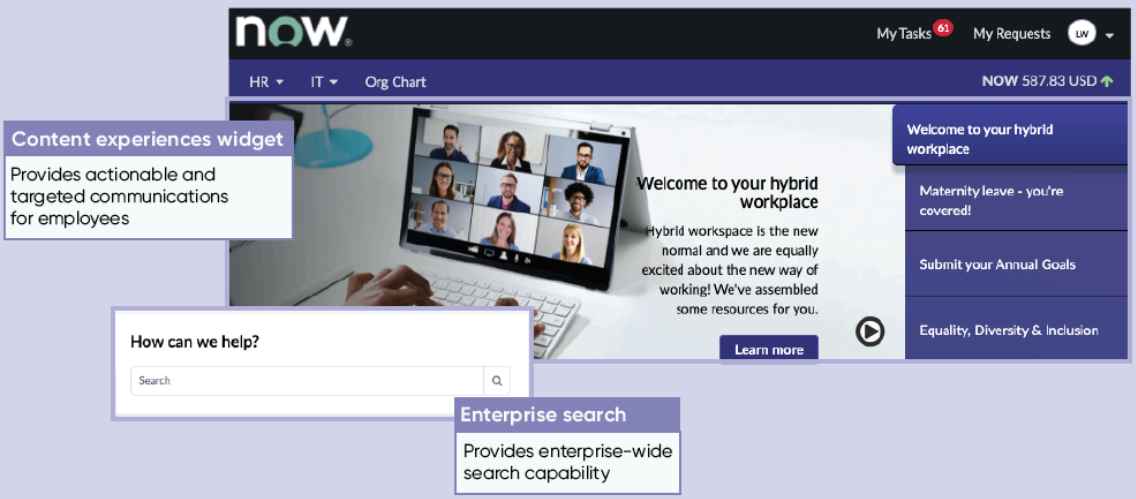
Employee Center feature summary

Employee Center: your one-stop shop for enterprise service delivery

ServiceNow's unified employee portal

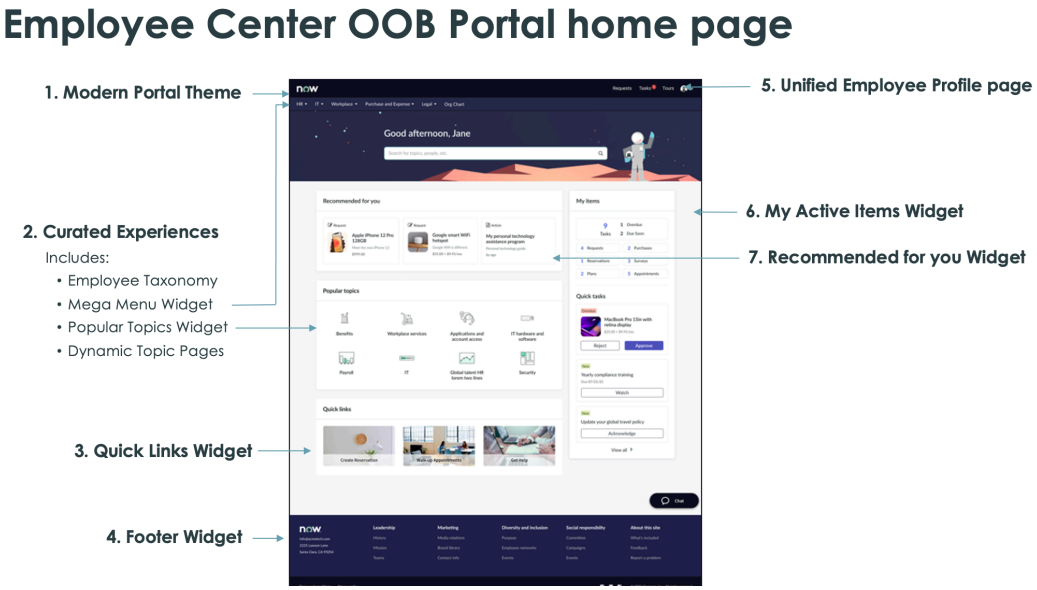


- Available for all customers
- Scales services across departments
- Home page based on best-practices
- AI Search and curated experiences provide an intuitive content discovery experience
- Configurable, curated experiences include:
  - Dynamic topic pages
  - Mega menu widget
  - Popular topics widget

Employee Center Pro

Extends the Employee Center to provide a modern portal for employee engagement and communications:

- Actionable, targeted campaigns
- Dynamic topic pages combine catalog, knowledge, and communications
- Configurable employee tasking experience
- Employee communities



Note:
These images are for illustration purpose only. For more up-to-date theme and UI, see the product interface.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Center home page

Employee Center application is available by default. This portal is loaded with the latest widgets and a modern portal theme that gives an employee-centric content delivery experience.

Home page and widgets

Note:
The latest widgets are made available only after you install Employee Center from the ServiceNow Store.

- **Enhanced home page theme**: Unifies various types of content, such as requests, articles, and quick links. Theme aligns with the latest sets components, a new color scheme, a logo update, and CSS variable adjustments for better browsing experience.
- **Header enhancement**: Helps users navigate to the tasks, requests, favorites, and search effectively.

Browse experience

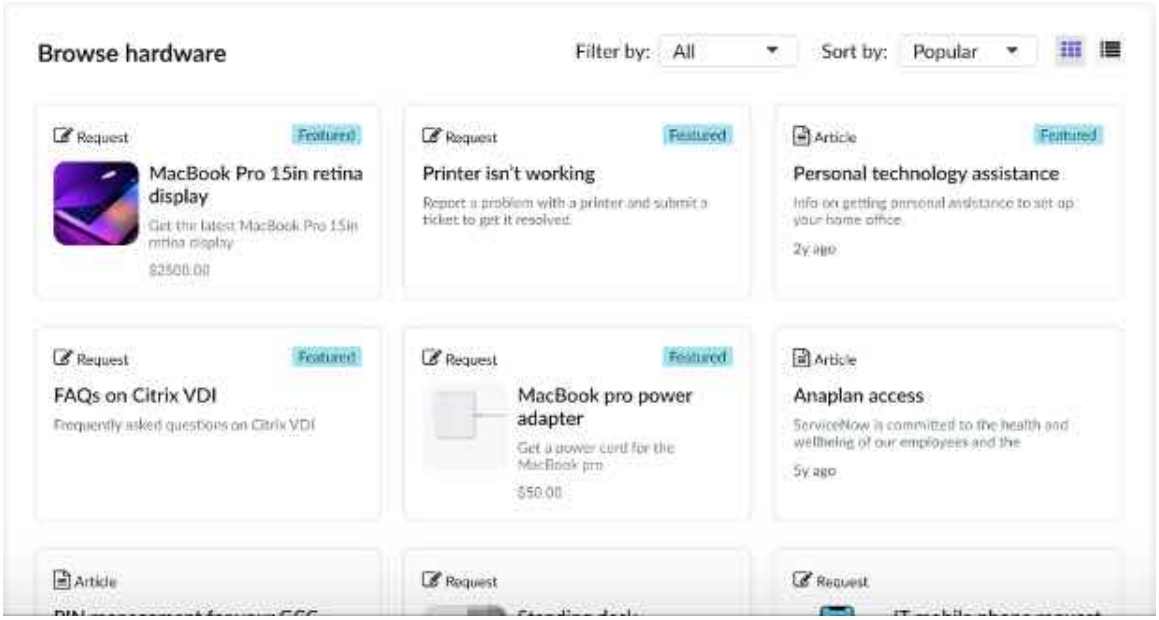
The browse experience within the Unified Taxonomy drives the employee-centric discovery experience across the portal by offering a combination of widgets and portal pages that use a unified content taxonomy to tailor content based on employee needs.

This approach enables the inclusion of multi-department portal pages, such as HR, IT, Legal, and Workplace, within the same portal, providing a unified experience.

https://player.vimeo.com/video/1070134785?h=51930cab17&badge=0&autopause=0&player_id=0&app_id=58479

Key features include:

- Unified Taxonomy for Employee Center: Unifies various types of content, such as requests, articles, and quick links, to create an improved browsing experience.
- Dynamic topic pages: Dynamically delivers content tagged to the taxonomy.
- Configure Mega menu: Easily navigate to topics and their subcategories in one place, providing a seamless navigation experience.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The browse experience ensures that your Employee Center portal is not only unified and comprehensive but also user-friendly, facilitating easier access to relevant information based on employee needs.

Unified browse

Delivers a unified content view for requests and articles that are associated to the topic and its child topics. A portal admin can feature any content under this feature.

Browsing experience

Content recommendations

Get the most relevant content like Knowledge Base articles, Service Catalog items, and Learning content chosen for you by popularity or by ML-based user metrics.

Cross-channel favorites

Employees get quick access to frequently-used content across multiple channels and business units directly from the My favorites widget on the home page or the My Favorites link in the global header navigation bar.

For configuration, see Cross-channel favorites.

Service Portal versus Employee Center application

Both the Service Portal and Employee Center applications are built on the ServiceNow AI Platform and use modern technologies, can be branded and customized, and have more that 200 widgets available. However, the Employee Center is built to scale as multi departmental for all service needs.

The following table lists the key differences between the Service Portal and Employee Center portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

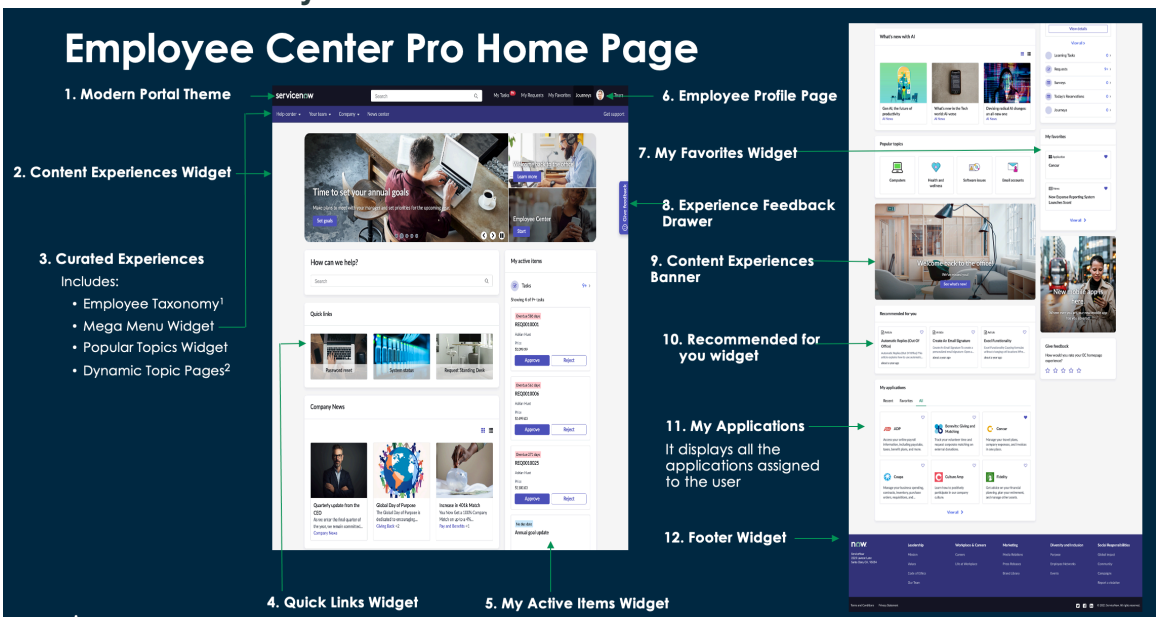
Applications comparison

Employee Center	Service Portal
Best-practice based portal experience with pre-loaded widgets organized coherently across the portal.	Demo home page design where customers start from scratch to design their desired experience.
Dynamically created topic pages based on unified taxonomy for all content types across departments.	Requires designing, creating, and maintaining individual topic pages.
Highly scalable: all portal elements, including widgets, are designed to scale for enterprise service delivery.	Need to redesign the portal with every new use case or department added.
Unified taxonomy enabled AI search that allows browsing different content types, across departments, without switching pages.	Content is siloed across different content type and departments with poor search experience.
Unified taxonomy for all content types that drives employee-centric content discovery.	Ineffective content discovery leading to difficulty in defining an employee centric taxonomy for navigation across the portals.
Integrated with Now Mobile to create an omni-channel user experience.	

Employee Center Pro features and interface

ServiceNow Employee Center portal is packaged as two separate ServiceNow Store applications: Employee Center and Employee Center Pro.

Employee Center Pro home page



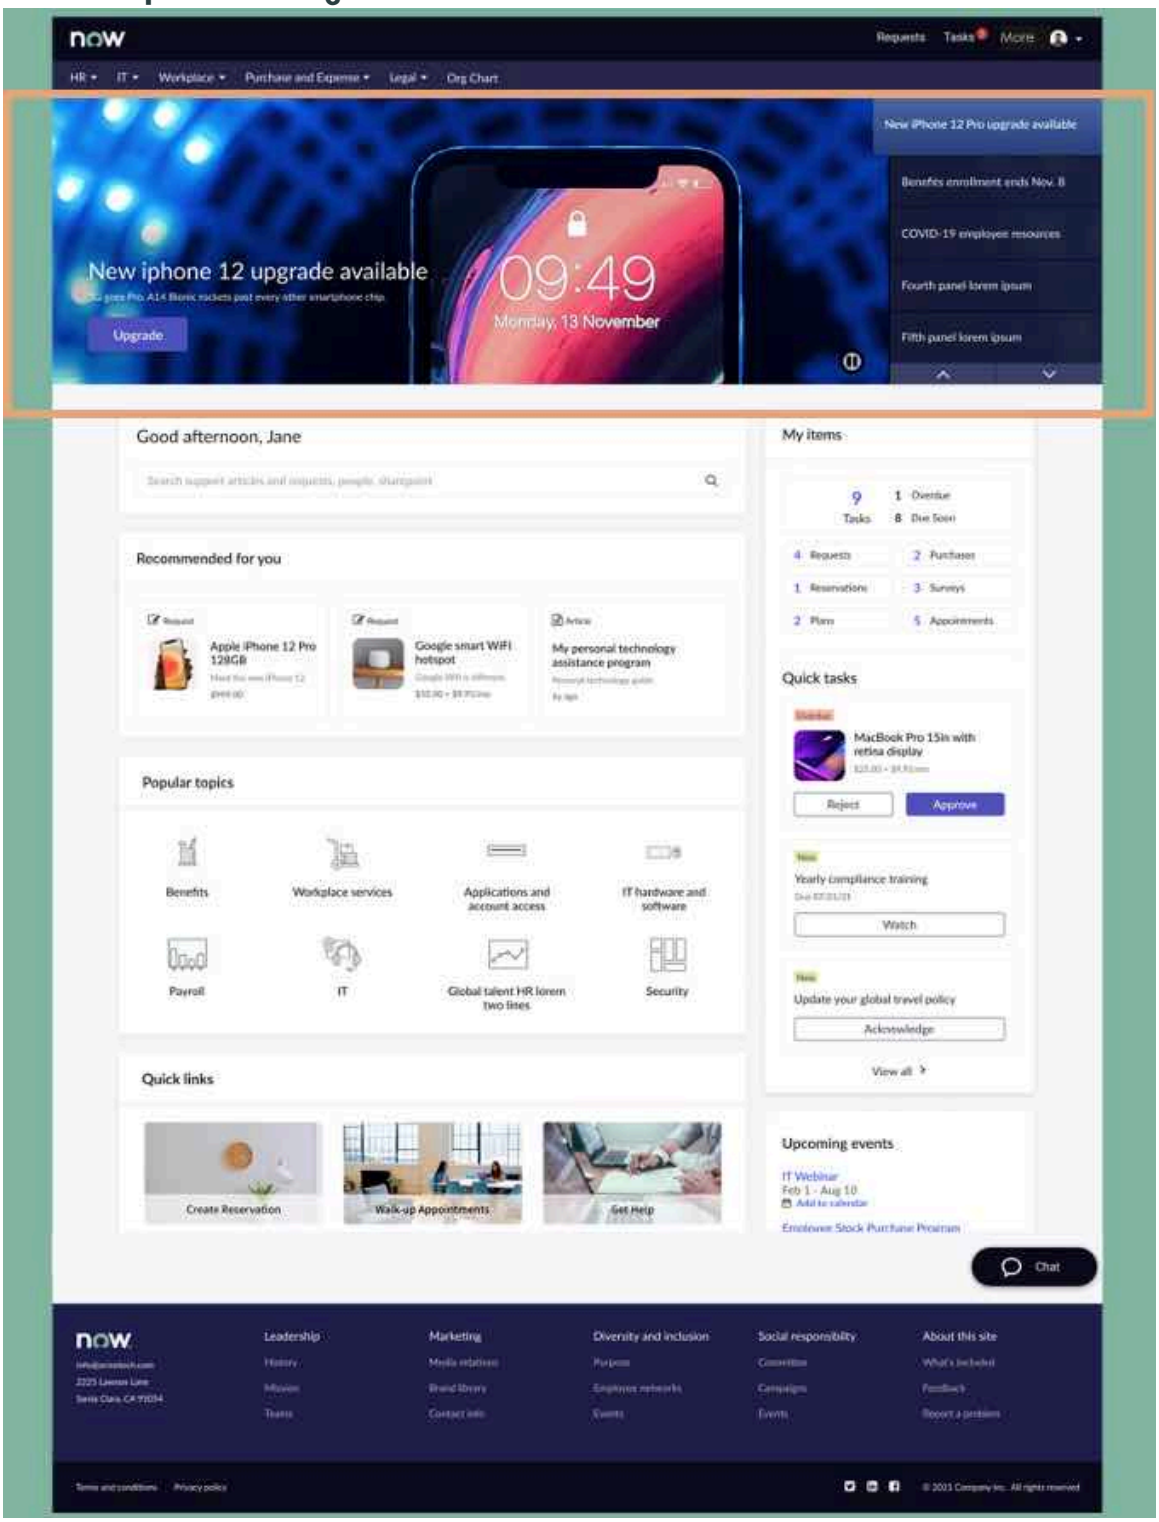
https://player.vimeo.com/video/1104046295?h=6eeadcf516&badge=0&autopause=0&player_id=0&app_id=58479

Employee Center Pro extends the standard Employee Center capabilities and provides additional features, such as:

- Actionable, targeted campaigns
- Enterprise search
- Employee communities

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

EC Pro feature summary



- **Enhanced home page theme**: Unifies various types of content, such as requests, articles, and quick links. Theme aligns with the latest sets components, a new color scheme, a logo update, and CSS variable adjustments for better browsing experience.
- **Header enhancement**: Helps users navigate to the tasks, requests, favorites, and search effectively.
- **Full page search experience**: Offers a conversational search experience in a dynamic dialogue to gather information, provide assistance, or guide through a process using the sparkle icon search.

Content Experiences widget (Employee Center Pro)

Content Experiences widget is designed to support multiple content types, such as banners, announcements, videos, and events. It can be easily configured and adjusted to different layouts. This widget also acts as the unifying interface for multiple content types and announcement configurations for all shapes, sizes, and spaces on a given portal page. For more information, see Creating campaigns with Content Experiences.

Integrated service and experience feedback in Now Mobile®

Integrated service and experience feedback in Now Mobile® provides greater ease of access to the users to provide their feedback on their user experiences and their service experiences.

Experience feedback

A default experience feedback configuration is available with Employee Center Pro version 32.0.

In the **More** menu options in the Now Mobile® app, you see the option to **Provide feedback**.

The default version of the feedback asks for your experience with static questions and a **Submit** button that is enabled when you have selected an option. You can also add comments along with selecting the static feedback option.

Similar to the portal, you have the option not to share your personal information, while submitting the feedback.

A success message displays on the screen when the feedback is submitted.

If the feedback you provided is beneath or equal to the rating threshold set by your organization, a feedback task is triggered.

Service feedback

When you raise a request for a Service Catalog item or go to a topic page and access a Knowledge Base article, you see that a rating-based service feedback is prompted.

Similar to the experience feedback in Now Mobile®, you can choose not to share your personal information while providing the service feedback.

You can configure more feedback configurations and definitions apart from the ones available by default.

- For more information on creating a feedback configuration, see Set up the feedback configuration.
- For more information on creating a feedback definition, see Set up the feedback definition.

Recommended for you in Now Mobile

Recommended for you section is available on Now Mobile app, providing quick access to the section through mobile bringing in more flexibility of usage for customers.

View knowledge articles and catalog items recommended for you on the support tab of the Now Mobile app.

Recommended for you for Now Mobile app lets the user easily access relevant items and knowledge articles on the app itself.

By default, top five recommendations are visible on the widget, at once. The widget gives the user a preview of a knowledge article, showing the title, description, and the time-lapsed since it was added to the recommendations. Similarly, the catalog items show the description and the price of the product, if any.

Also, there is a **Favorite** icon available to add a card to your favorite list.

The article or the catalog item opens in a Mobile Employee Service Portal (MESP) view when a user clicks any recommendation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the customer is not using either the HR profile plug-in or the Employee profile plug-in, the recommendations are provided based on the popularity of the content pulled from the M2M connected content. The recommendations, in that case, are dissimilar to the ones provided if the HR profile or Employee Profile plug-in is installed.

Note:

The Employee Center Core application must be upgraded to the latest version of San Diego or Rome to use the Recommended for you on Now Mobile app.

The default validity of the recommendations is for six months on the Now Mobile app.

For more information on configuring Recommended for you, see Recommended for you.

Search topic content in Now Mobile app

The search functionality for topic content is available on the Now Mobile app.

You can search for Knowledge Base articles, Service Catalog items, and Learning content available on the topic pages with the search functionality.

You can quickly look for any desired result using different filter and sort options that help with easier content discovery.

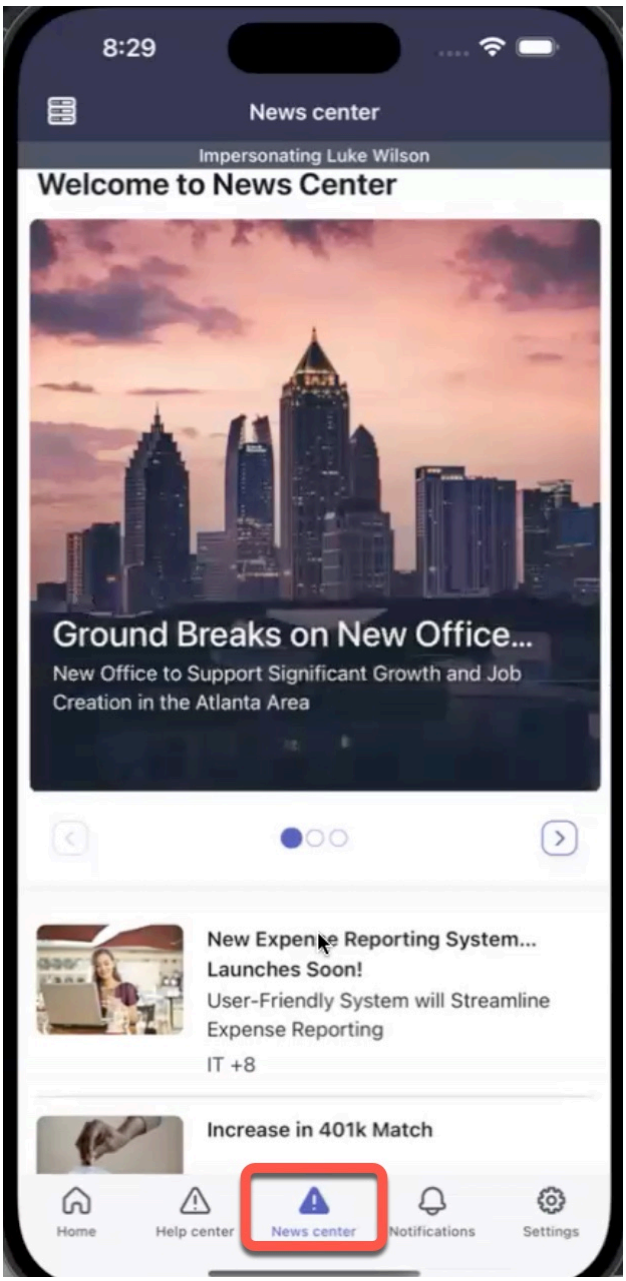
To access the search functionality for topic content in the Now Mobile app:

Note:

- You must upgrade to Utah release and install the Now Mobile version 28.
- You must enable the AI Search functionality.

News in Now Mobile

News articles are available in Now Mobile to provide easy access to consumable content, on-the-go.



Get the news experience on mobile with Employee Center on the Now Mobile app. View news articles on-the-go on your phone.

View news articles from the Featured news section or go to the **News center** tab. Scroll through the Featured news carousel to view all the featured articles on the News center MESP page.

You can select any news article to see the entire article open on the news details page. Scroll down to read the entire article on your phone. The news details page shows when the article was last updated. It also displays the **Favorites** icon ♡ to add it to your list of favorite articles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

News center in Now Mobile

If you want to browse the articles by categories, you can use the Categories section at the bottom of the news details page. All the categories associated to that article are displayed at the bottom of the page. You can also access all the categories at the bottom of the News center page, to search articles by categories. Use **Show more** to load more categories listed on the page.

You can associate a news article to a topic page to see it on the Related news section of that topic page in mobile.

Apart from the news articles, also access videos and calendar from the **News Center** tab.

For more information on news articles on the Employee Center portal, see News articles.

Configuring Employee Center

Set up and configure Employee Center to provide an employee-centric and multi-department service delivery experience.

Base Employee Center plug-ins (continued)

Plugin	Description
Employee Experience Foundation (sn_ex_emp_fd)	Contains components such as best practice email layouts that improve employee experiences.
Employee Profile (sn_employee)	Enhance employee experience with a unified, configurable profile, offering comprehensive work-related information, extensibility across business units, and personalized visibility settings.

Installed with Employee Center Pro

The following dependency plugins are installed with Employee Center Pro.

Plugins for Employee Center Pro

Plugin	Description
Employee Center (sn_ex_sp)	Installs a customizable multi-department portal and framework to help administrators build a self-service portal that provides a great self-service experience for employees.
Employee Center Pro (sn_ex_sp_pro)	Employee Center Pro extends the standard Employee Center capabilities and provides a platform for employees to communicate and be engaged. Install Employee Center Pro
Enterprise Service Management Integrations Framework (sn_hr_integ_fw)	Enables Employee Center Pro to integrate with third-party systems. Enterprise Service Management Integrations Framework
Employee Center Core (sn_hr_sp)	Activates a portal framework that allows administrators to build a mobile-friendly self-service experience for users.
Employee experience taxonomy (sn_ect)	Provides an employee content taxonomy for multi-department service delivery.
Employee Experience Foundation (sn_ex_emp_fd)	Contains components such as best practice email layouts that improve employee experiences.

To learn about the tables, roles, and widgets installed, see Components installed with Employee Center Pro

Plugins to extend Employee Center Pro capabilities

The following plugins are available after you install Employee Center Pro. It is not required to install all the plugins, however some plugins depend on other plugins to function.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Optional plugins for Employee Center Pro

Plugin	Description
Employee Profile (sn_employee)	Enhance employee experience with a unified, configurable profile, offering comprehensive work-related information, extensibility across business units, and personalized visibility settings.
Content Publishing (sn_sd)	Use Content Publishing to create different types of information you want to distribute to your employees. Activate Content Publishing
Communities (com.sn_communities)	The Communities plugin supports Employee Forums, where employees can connect, engage, and collaborate with each other. Requires Content Publishing (sn_sd) and Content Experiences (sn_ca) Activate Communities plugins
Content Experiences (sn_ca)	Package your content into a campaign using multiple channels to deliver the right message to the right audience at the right time. Requires Content Publishing (sn_sd) Activate Content Experiences
Content Analytics (sn_cda)	Content Analytics helps you decide when content is stale, needs refreshing, and how engaged your employees are with your communication. Requires Content Publishing (sn_sd) and Content Experiences (sn_ca) Activate Content Analytics
Content Governance (sn_cg)	Content Governance provides a streamlined way for employees to request content to be created, track the progress, preview the content, and approve it before it is published. Requires Content Publishing (sn_sd) and Content Experiences (sn_ca) Activate Content Governance

For more information, see the List of plugins (Xanadu).

Install Employee Center Pro

Employee Center Pro extends the standard Employee Center capabilities and provides a platform for employees to communicate and be engaged.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Employee Center Pro requires a separate subscription from the rest of the ServiceNow AI Platform. If you are already using Employee Center and want to upgrade to Employee Center Pro, contact your ServiceNow account manager to purchase the subscription.

Note:
Before purchasing a subscription, you can evaluate the feature on a non-production instance without charge by requesting it from the Now Support Service Catalog. For more information, see Request a plugin.

The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

Install the Enterprise Service Management Integrations Framework (sn_hr_integ_fw) plugin to enable Employee Center Pro to integrate with third-party systems. See Enterprise Service Management Integrations Framework.

Role required: admin

About this task

Employee Center Pro installs the following dependent plugins:

Employee Center application (sn_ex_sp)

Installs a customizable multi-department portal and framework to help administrators build a self-service portal that provides a great self-service experience for employees.

Employee Center Core (sn_hr_sp)

Activates a portal framework that allows administrators to build a mobile-friendly self-service experience for users.

Employee experience taxonomy (sn_ect)

Provides an employee content taxonomy for multi-department service delivery.

Employee Experience Foundation (sn_ex_emp_fd)

This plugin contains components such as best practice email layouts that improve employee experiences.

For information on the roles, tables, and widgets installed with Employee Center Pro, see Components installed with Employee Center Pro.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Employee Center Pro application (sn_ex_sp_pro) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Employee Center Pro.

4. Select the **Load demo data** check-box to include the demo data along with your install or repair your install with demo data checked.

   Note:
   Dependent plugin demo data is not automatically installed. To use demo data, repair the plugins with demo data checked. See Repair a ServiceNow application.

5. Select **Install**.

6. Run the fix script#**Set primary topics for Employee taxonomy** to#ndex the#curated experiences#demo data into#search and recommended content##.
   For more information, see Run fix scripts to update Employee Center.

What to do next

- Check and allow all the RCA (Requested Caller Access) privileges requested by Employee Center. For more information on running a fix script for RCA approvals, see Run fix-script for RCA approvals.
- Install plugins to extend Employee Center Pro capabilities:

  Content Experiences (sn_ca)

  Package your content into a campaign using multiple channels to deliver the right message to the right audience at the right time. For more information to activate this plugin, see Activate Content Experiences.

  Content Publishing (sn_sd)

  Use Content Publishing to create different types of information you want to distribute to your employees. For more information to activate this plugin, see Activate Content Publishing.

  Content Analytics (sn_cda)

  Content Analytics helps you decide when content is stale, needs refreshing, and how engaged your employees are with your communication. For more information to activate this plugin, see Activate Content Analytics.

  Content Governance (sn_cg)

  Content Governance provides a streamlined way for employees to request content to be created, track the progress, preview the content, and approve it before it is published. For more information to activate this plugin, see Activate Content Governance

Activate Content Experiences

You can activate the Content Experiences [sn_ca] plugin if you have the admin role to deliver targeted content and campaigns to keep employees informed and engaged. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
Content Experiences plugin activates these related plugins if they are not already active.

Procedure
1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Upgrade to Employee Center Pro from Employee Service Center (HR)

Migrate to the Employee Center Pro portal to provide employees with a unified portal and content experiences.

Before you begin
Role required: admin

About this task
Employee Center is delivered to all customer as a default application, and Employee Center Pro is a licensed application and must be separately installed. For more information, see Install Employee Center Pro.

Note:
If you are an existing customer using Employee Service Center, to experience the enhanced content experience capabilities, you must update to the latest Employee Center Pro application from ServiceNow Store. For more information on the installation steps, see Install Employee Center Pro.

Procedure

1. Install Employee Center Pro to get the latest features.
2. Navigate to **System Definition** > **Fix Scripts**.

   Note:
   Run the **Fix Scripts** only if you want to reset the existing portal home page and the topic pages to the default Employee Center home page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Ensure your application scope is set to **Employee Center Core**.
4. Click open the **Employee Center Easy Install** fix script.
5. On the line `"var runManually = false"`, change the value **false** to **true**.
6. Run the fix script.
7. Clone taxonomy for employee content.
8. AI Search for Curated Experiences
9. Configure **My Active Items** widget.
   For more information, see My active items widget configuration.
10. Configure **Quick Links**.
    For more information, see Quick links.
11. Configure the portal footer.
    For more information, see Footer configuration.

Result
This upgrades the Employee Service Center with the latest Employee Center Pro themes and capabilities.

Migrate to Employee Center from Service Portal

Migrate to the Employee Center portal to provide employees with a unified portal experience.

Before you begin
Role required: admin

About this task

Procedure

1. Install Employee Center from Store.
2. Create a unified taxonomy for catalog items and knowledge articles to implement the unified browsing capability.
   For more information, see Unified Taxonomy for Employee Center.

   Note:
   Copy and modify the default taxonomy that comes with the demo data for your business needs.

3. Add banner and thumbnail images for each topic.
4. Ensure all request types are captured in **My Request Filters** to consolidate request types.
   For more information, see Employee requests page.
5. Configure tasks using **To-dos configuration** to include approvals.
   For more information, see Employee tasks page.
6. **Optional:** Modify the portal theme.
   For more information, see Customize Employee Center portal theme.
7. **Optional:** Use the Email notification layout and template that is shipped with the Employee Experience Foundation (com.snc.sn_ex_emp_fd) plugin to deliver notifications that are consistent.
   For more information, see Use email notification layout.
8. Navigate to **Service Portals** > **Portals** and change the existing portal URL suffix to prevent any breakage of old URL references that an employee has.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. If you have any custom built pages, use the page route maps to redirect to appropriate pages of new portal.
10. If any page in new portal doesn't have equivalent old portal experience, use page route maps to redirect to appropriate pages or portal landing page.
11. Install **Service Portal Analytics** for web analytics.

    a. Navigate to **Service Portal** > **Portals**.

    b. Click **Employee Center**.

    c. Click **Create Analytics Settings**.
    If analytics are already set up, the button updates to View Analytics Settings

Install Employee Center

Install Employee Center to deliver a unified, engaging employee experience across departments and systems.

Before you begin

The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

Role required: admin

About this task

Employee Center (sn_ex_sp) installs the following dependent plugins:

Employee Center Core (sn_hr_sp)

Activates a portal framework that allows administrators to build a mobile-friendly self-service experience for users.

Employee experience taxonomy (sn_ect)

Provides an employee content taxonomy for multi-department service delivery.

Employee Experience Foundation (sn_ex_emp_fd)

This plugin contains components such as best practice email layouts that improve employee experiences.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Employee Center application (sn_ex_sp) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

3. In the Application installation dialog box, review the application dependencies.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Employee Center.

4. Check the **Load demo data** check-box to include the demo data along with your install or repair your install with demo data checked.

   Note:
   Dependent plugin demo data is not automatically installed. To use demo data, repair the plugins with demo data checked. See Repair a ServiceNow application.

5. Select **Install**.
6. Run the fix script **Set primary topics for Employee taxonomy** to index the curated experiences demo data into search and recommended content.
   For more information, see Run fix scripts to update Employee Center.

What to do next

Check and allow all the RCA (Requested Caller Access) privileges requested by Employee Center. For more information on running a fix script for RCA approvals, see Run fix-script for RCA approvals.

Post installation troubleshooting

To index the curated experiences demo data into search and recommended content and allow all RCA privileges, run the fix scripts.

Run fix-script for RCA approvals

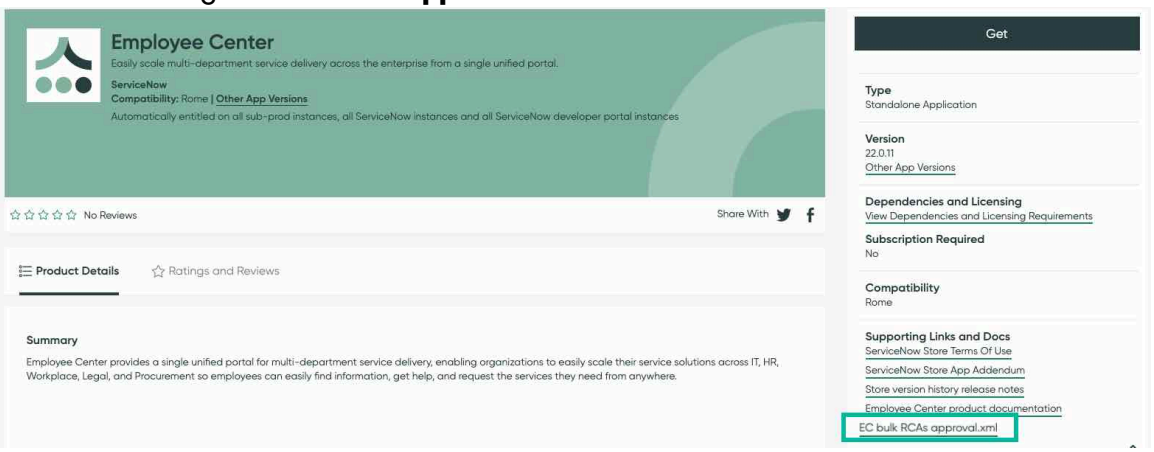
After you install or upgrade to the latest Employee Experience applications from ServiceNow Store, you might encounter Restricted Caller Access (RCA) approval messages requesting for an update in the access request.

Before you begin

Role required: admin

About this task

Install the following Employee Experience applications and subscriptions.



- Employee Center Core
- Employee Center
- Employee Center Pro
- Content Experiences
- Content Publishing

The RCAs that are generated after the installation are in the **Requested** state and you must manually mark the RCAs as **Allowed**, which can be time-consuming.

To automate the RCA approvals for any record, you can run the **EC bulk RCAs approval** script where the source scope is one of the given Employee Experience applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Download the following **EC bulk RCAs approval** file from the ServiceNow Store.

Note:
This file is a standalone script to reduce the manual effort involved.

After you download the script file, perform the following steps.

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. Right-click the header and choose **Import XML**.
3. Click **Choose file** and select the XML file that you downloaded.
4. Search and find the **EC bulk RCAs approval** script record.
5. Click **Run Script** to allow all the requested RCAs.

Run fix scripts to update Employee Center

Manually run fix scripts to upgrade to the latest taxonomy-based Employee Center. Download the latest version from the ServiceNow® Store before running the scripts. The scripts update your existing portal setup to Employee Center without performing multiple set up or configuration steps.

Before you begin
Role required: admin

About this task
Manually run the following are the scripts if

- You are an existing Employee Service Center (HR) customer and have modified the portal records.
- You have not installed the demo data at the time of installation, repair the dependent plugins as described in Install Employee Center and Install Employee Center Pro.

Fix scripts

Fix script	Description
Employee Center Easy Install	Helps to uptake taxonomy for Employee Center. This script runs automatically during install or upgrade. Modifies the following if the employee center portal record is not customized.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fix scripts (continued)

Fix script	Description
	• Updates the catalog search source. • Associates the taxonomy to portal. • Updates the dashboard, theme, and menu in employee center portal record. **Note:** Running this script overrides and resets any modification made to the portal configuration.
Set primary topics for Employee taxonomy	Fixes features like the **Recommended for you** and the **View as Direct Report** searches, if **Employee** taxonomy is associated to the portal. Updates the **taxonomy_topic** column in the knowledge articles and catalog items to the corresponding mapping found in m2m_connected_content table.

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. Search for `Employee Center Easy Install` or `Set primary topics for Employee taxonomy` script, and click to open.
3. In the **Script** field, change the *`runManually`* parameter value to **true**.
4. Click **Run Fix Script**.

Result

Your existing portal is updated to the latest Employee Center portal that uses unified taxonomy.

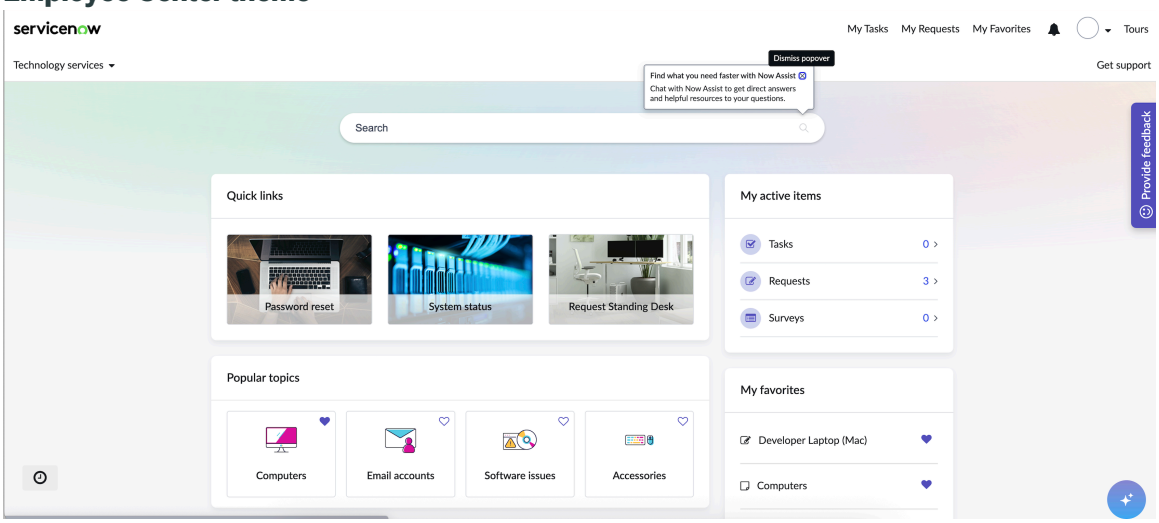
What to do next

Configure AI search to align with curated experience. For more information, see AI Search for Curated Experiences.

Enhanced chat in Employee Center

Learn more about the theme updates and how to get started with Now Assist enhanced chat.

You can see a new theme that is visually-engaging, effective, and user-friendly with the following enhancements:



- **Enhanced home page theme**: Unifies various types of content, such as requests, articles, and quick links, to create an improved browsing experience. The theme aligns with the latest sets components, a new color scheme, a logo update, and CSS variable adjustments for an improved browsing experience.
- **Enhanced header**: Helps you navigate to your tasks, requests, favorites, and search effectively.
- **Enhanced chat**: Offers a conversational search experience in a dynamic dialogue to gather information, provide help, or guide through a process using the search.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enhanced theme in Employee Center

This theme provides a more functional and clean design that is visually appealing to users. This theme aligns with the new sets components, a new color scheme, logo update, and CSS variable adjustments.

Employee Center theme

Enhanced header

Enhanced header helps you navigate to my tasks, requests, favorites, and search quickly.

Enhanced chat

To get started with the Now Assist in Virtual Agent enhanced chat:

- Install the Now Assist in Virtual Agent application from the store.
- Ensure that the enhanced chat is configured for the Employee Center portal by virtual_agent_admin.
- Select Employee Center from the Portals tab and select the enhanced chat.

  For more information, see Display your assistant on a portal or channel.

Important:
Pinning chat windows can create responsiveness issues on the following screen resolutions and pixel range.

- For homepage, my tasks page, my favorites page, and my applications page: Range between 600px and 800px.
- For topic page: Below 1413px.

Ensure you avoid pinning the chat window and resizing on these screen resolutions.

More information about Now Assist in Virtual Agent enhanced chat

Want to learn more? Visit these resources about Now Assist in Virtual Agent enhanced chat.

Important:
By default, pinning a chat window is enabled for Service Portal. For all other portals, an admin needs to create a system property to enable pinning a chat window. For more information, see Now Assist in Virtual Agent system properties.

Setup browse experience features

Make it easy for employees to navigate the portal and discover content using the browse experience features in Employee Center.

https://player.vimeo.com/video/1070134785?h=51930cab17&badge=0&autopause=0&player_id=0&app_id=58479

Browse experience features

Feature	Description
Unified Taxonomy for Employee Center	Unified Taxonomy is a collection of hierarchical topics that brings together different content types, such as requests, articles, quick links, learning content, and employee communications.
Configure Mega menu	The mega menu enables easy navigation to a topic and its child topic. The mega menu is comprised of the topics and child topics in theUnified Taxonomy.
Advanced Portal Navigation	Configure a primary navigation bar of topics and service portal pages.
Guided Self-Service in Employee Center	Empower employees with easier self-serve capabilities through guided experiences to improve productivity and efficiency.
Dynamic topic pages	Dynamic topic pages are portal pages accessible from the mega menu or popular topic widgets that bring together different types of content, such as request, articles, and quick links.
Cross-channel favorites	Cross-channel favorites offer quick access to frequently used content for employees, accessible from various widgets and pages, with sorting and customization options

Configure Mega menu

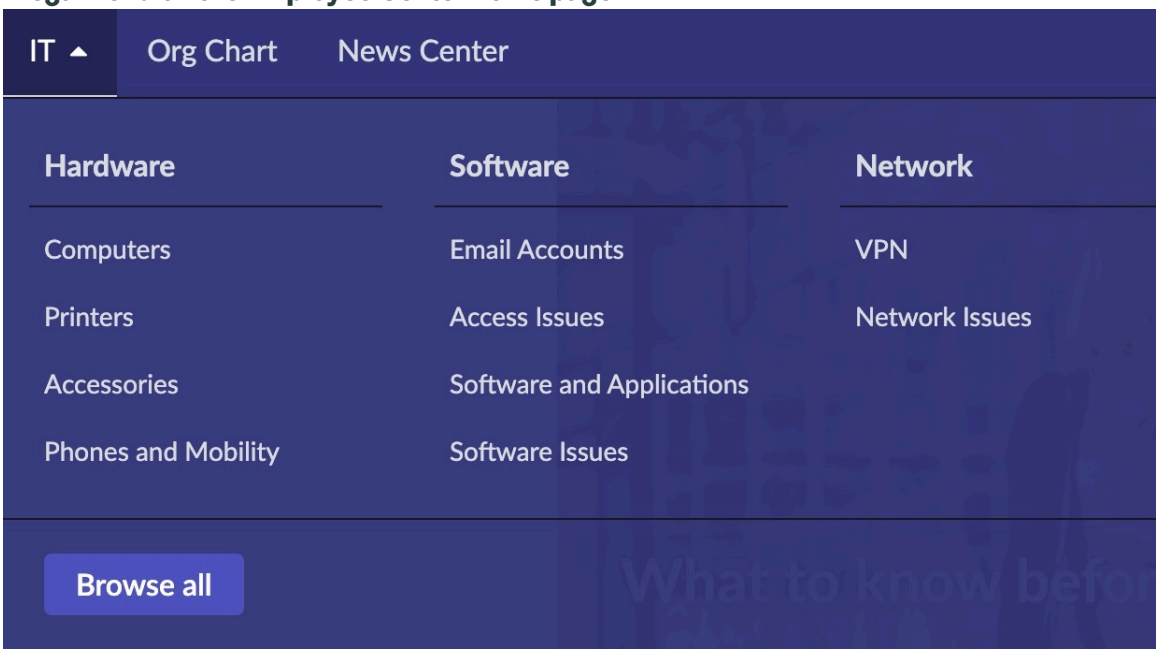
The mega menu enables you to easily navigate to a topic and its child topic. The taxonomy you associate with the employee center portal record determines the mega menu and its menu items. By default, the topics and child topics you create in the taxonomy are displayed as mega menu items.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



Taxonomy topics become available to you after you install and activate the Employee Experience Taxonomy plugin (sn_ect). The base system taxonomy—Employee—is installed when you install the Employee Experience Taxonomy plugin.

To modify the default taxonomy, clone the taxonomy first, and then create new parent topics and their child topics. The root topics are shown in the mega menu. The child topics up to two levels are listed under the mega menu and displayed when you click the mega menu. Click **Browse** <topic_name><topic_name> to open the parent topic. For example, click the **Browse all** to open the IT parent topic. The following figure shows the IT menu items.

Note:
Only the active topics that have connected content are shown in the mega menu.

For more information on the EC information architecture and configuring the portal navigation, see Advanced Portal Navigation.

Mega menu on the Employee Center home page

Note:
You can customise the primary and background color from CSS variables.

In Employee Center, the default Employee taxonomy includes IT, HR, Workplace, Legal, and Procurement mega menus. The mega menu displays three levels of topics (root topic, child topic 1, and child topic 2). For example, **IT > Hardware > Printers**.

- Simple list: If a root topic has only one level of child topic 1, that is, if the child topic 1 does not have child topic 2, the child topic 1 is displayed as a simple list under the root topic menu.
- Single column: If child topic 2 (2nd level topics) has upto 10 under child topic 1, UI is displayed as single column.
- Two columns: If child topic 2 exceeds 10 under child topic 1, UI is displayed as two columns.
- Two columns with topic page: If child topic 2 has more than 20 under child topic 1, UI displays only 20 child topic 2s as two columns. For remaining topics, navigate to Topic Page of child topic 1 and verify in Sub-Topics widget.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
As changes are saved in session cache, the user has to re-login to reflect any topic changes on the mega menu.

Procedure

1. Do one of the following:
   - Clone the taxonomy for employee content. For more information, see Clone taxonomy for employee content.
   - Manually create a taxonomy. For more information, see Create taxonomy.
2. Create a root topic and associate it with the cloned or new taxonomy.
   For more information, see Create and associate topics.
3. Create a child topic and associate it with the parent topic.
   For more information, see Create a child topic. Repeat this step to create as many child topics as needed.
4. Associate connected content to the topics.
   For more information, see Associate connected content to a topic.

   Note:
   You can view topics on the mega menu only if you have access to at least one connected content.

5. Enable user criteria for topics to set up topic-level visibility settings.

What to do next

You can also add non-taxonomy menu items to the primary navigation bar. For more information, see Add menu items to primary navigation.

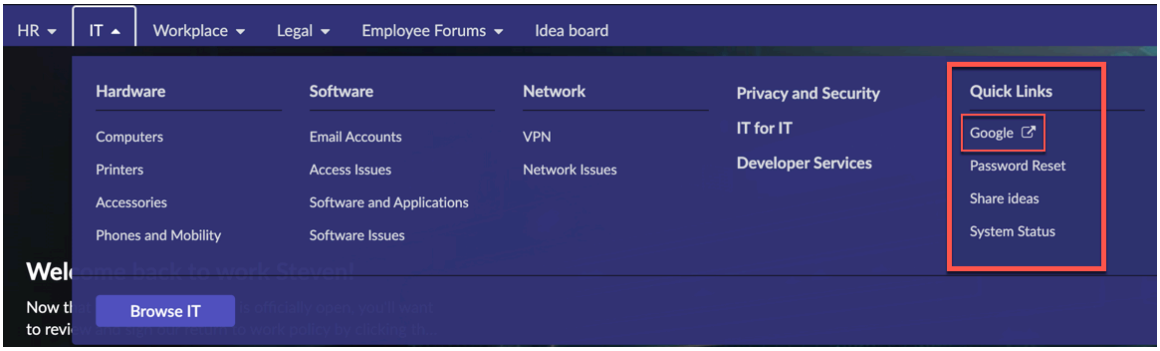
Note:
When the mega menu is empty, check if the demo data for the Employee Experience taxonomy app is installed. Select the Load demo data check-box to include the demo data along with your install or repair.

View quick links on the mega menu

You can view quick links associated with root topics on the mega menu.

Before you begin

Role required: admin



About this task

You can associate quick links with a root topic so that it appears on the mega menu under Quick Links. Only the quick links that you associated with root topics are shown on the mega menu. For more information, see Associate a quick link to a topic.

Procedure

1. On the Employee Center home page, click a root topic.
   If the root topic has quick links associated with it, and if you have access to the quick links, then those quick links are displayed for that root topic on the mega menu.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The external link icon ( ) next to a quick link indicates that it is an external link.

2. Click any quick link that you want to view.
   Depending on the content type associated with the quick link, the relevant content is displayed.

Note:
External link and megamenu are supported for accessibility. Fields include a tooltip icon and Screen readers read the tooltip when the icon is in focus.

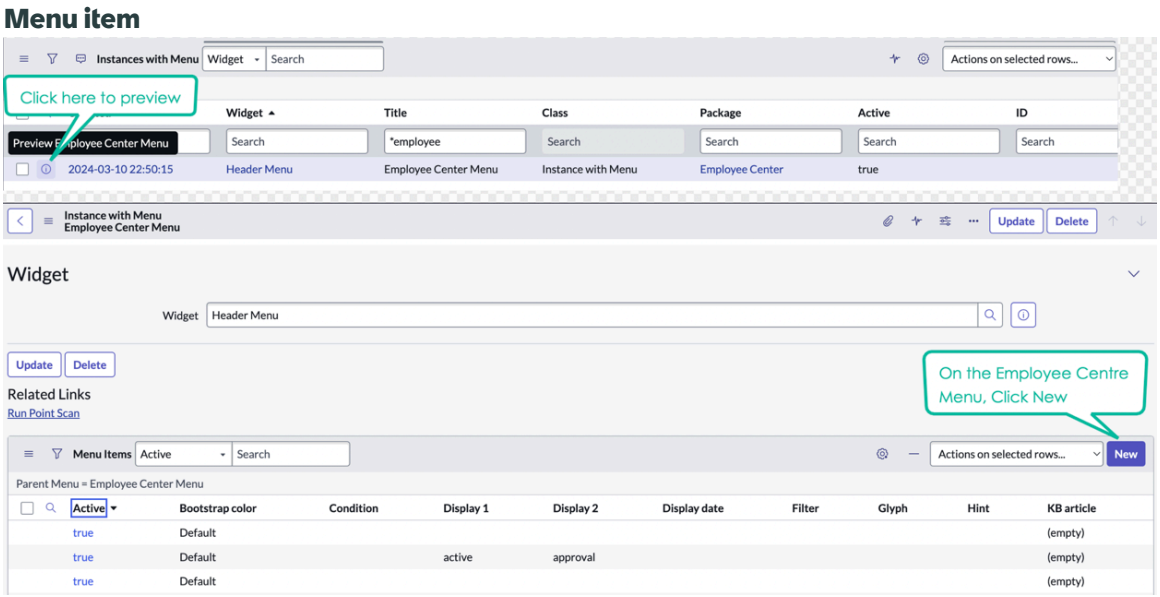
Add menu items to primary navigation

Add non-taxonomy menu items to the primary navigation bar by configuring the Employee Center Menu record. The non-taxonomy menu items are displayed as a simple list.



Before you begin
Role required: admin

About this task
The topics and child topics you create in the taxonomy are displayed as mega menu items in the Employee Center home page. The default non-taxonomy menu items that are displayed depend on the plugins that you installed. For example, the Employee Center displays the Org Chart menu item when you install the Content Delivery (com.sn_content_delivery) plugin. The Employee Center Pro displays the Employee Forums menu item when you install the Communities (com.sn_communities) plugin.

Procedure

1. Navigate to **All** > **Service Portal** > **Menus**.
2. Change the **Application scope** to **Employee Center**.
   You must set the application scope to add a menu item.
3. Next to the **Title** field, click **Preview this record** and open the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the **Menu Items** related list, click **New** or open an existing record.
5. On the form, fill in the fields.
   For a description of the field values, see Menu Item form.
6. Click **Submit**.
   The non-taxonomy menu items are displayed next to the taxonomy menu items in the primary navigation bar.

Advanced Portal Navigation

Advanced Portal Navigation (APN) helps you design and configure an intuitive navigation for better information architecture and topic discovery. You can manage the topics and service portal menu items based on employee needs. Use the enhanced navigation experience that helps you with better content discovery.

Using the advanced portal navigation, you can design the primary navigation menu and configure the navigation setup based on employee needs and content priorities. You can manage topics, SP menu items, and a mix of both.

Note:
When you enable **Advanced portal navigation**, you can manage the root-level topics and menu items from this table itself and not from the taxonomy or the SP menu items.

Here's a quick summary of what you can do:

- Configure and control the design and display of the primary navigation bar.
- Sync across the hierarchy to fetch the menu items, root topics, and child topics.
- Simplify taxonomy updates by enabling single-click sync across all APN hierarchy levels, replacing manual level-by-level sync.
- Use the base system information architecture or customize based on your business needs.

Note:
Only the active portal record and its menu items are shown in the navigation.

Use the guided tour that provides a feature explainer to help understand what APN is and how you can configure it.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Top navigation and side navigation

Create an APN record and select one of the following navigation options.

- Top navigation: Supports up to four levels of hierarchy and surfaces a broad set of topics and quick links directly at the top of the portal, helping employees to navigate to deeper levels. This navigation is the existing mega-menu in the header that supports deeper and more complex hierarchies. For more information, see Configure advanced portal navigation.
- Simplified or side navigation: Use the new layout for simple visual access, iconography, and quick access to key destinations, helping employees browse topics with less effort and reduced visual complexity. Side navigation in Employee Center is a new left-hand, icon-driven, two-level menu meant to simplify browsing. For more information, see .

Both options help define and navigate to root and subtopics, assign icons, and enable faster access.

Advanced portal navigation benefits

You can offer a simplified navigation to the content.

- Use the base system structure for better discovery and consumption.
- Customize the design and structure based on your preferences using the taxonomy or SP portal menu.
- Navigate to the right content with minimal clicks.
- View the topics and menu items on the primary navigation bar.
- Consume the display preferences for the root-level topics or menu items that are custom-served to suit your needs.

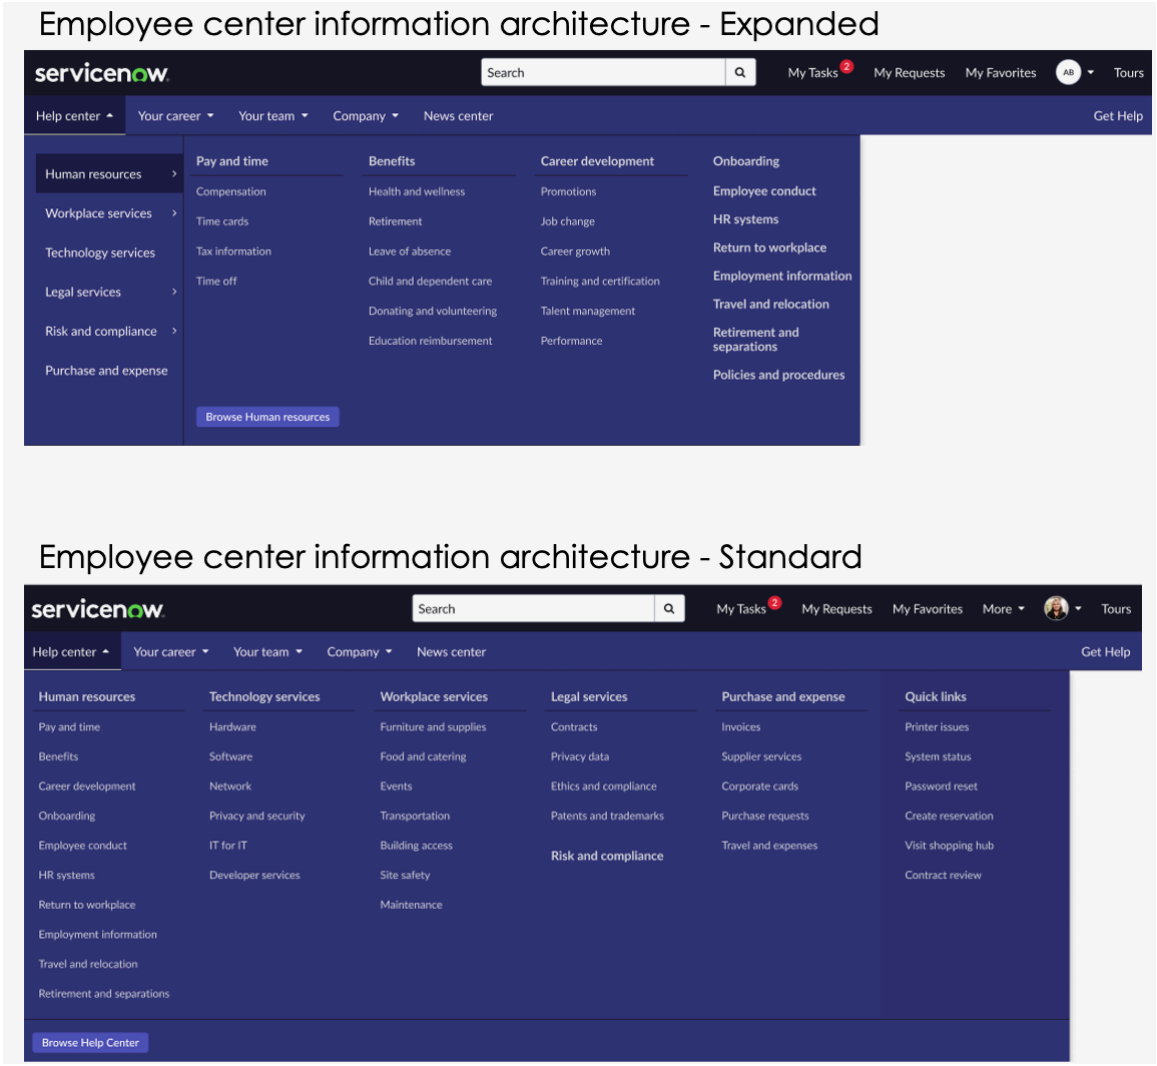
Note:
External link and mega menu are supported for accessibility. Fields include a tooltip icon and screen readers read the tooltip.

Mega menu configuration

Admins can manage the information architecture and navigation. You can configure the mega menu to show a mixed hierarchy of SP menu items, APN menu items, and topics with flexible layout options. Create a mixed hierarchy and enable a consumer-grade browse experience. For more information, see Configure Mega menu.

- Organize the content into standard layout and expanded layouts.
- Configure the root items position to the left or the right.
- Invoke an interactive modal window from the mega menu.
- Sync the hierarchy to fetch the menu items, root topics, and child topics.

Note:
By default, the APN record for EC and EC Pro is inactive for existing customers. When you upgrade to the latest release, ensure you activate the APN record.



EC Information architecture

You can now use the out-of-the-box enhanced information architecture for improving content discovery and visibility.

Using the advanced portal navigation, you can design the primary navigation menu and configure the navigation setup based on employee needs and content priorities. Organize your content into menus or modal windows.

Out-of-the-box mega menu architecture options

This image is for illustration purpose only for the out-of-the-box (OOTB) mega menu.

- OOTB EC Pro mega menu layout is expanded.
- OOTB EC mega menu layout is standard.

> **Note:**
> You can use a layout of your choice and configure more levels in your taxonomy based on business needs.

Useful tips and information

Use some of the following guidance and tips.

- For **Standard view**, you can have a maximum of three levels.
- For **Expanded view**, you can have a maximum of four levels (one menu item in the hierarchy and topics up to three levels). In this example, `Help center > Technology Resources > Hardware > Computers`, you have

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - One navigation menu item `Help center` and
  - Three levels of topics `Technology Resources > Hardware > Computers`
- Add topics up to three levels from the root-level. For example, when you add topics under Human Resources, you can only traverse from `Human Resources > Subtopic 1 > Subtopics 2`.
- Topics from one hierarchy cannot be mixed with topics of another hierarchy. For example,
  - For `Human Resources > Pay and Time > Compensation`, you cannot add Hardware as a child of HR.
  - For `Technology Resources > Hardware > Computers`, you cannot add Pay and Time as a child of Technology Resources or Hardware or Computers.
  - Pay and Time can be a sibling of Technology Resources or Hardware or Computers.
- Level 3 in the expanded view and level 2 in the standard view are dynamically adjusted as per available space.
- For the root item without any child items or any active associated quick link, the Browse button is not displayed.
- The browse button is displayed in the hamburger view for topics and the browse button is not displayed in the hamburger view for SP menu items.

  Note:
  You can configure the browse button however the button text is not displayed in the hamburger view. The Browse button display text in the hamburger view is **Browse all**.

- A quick links related list is available on the root-level for the standard view.
- A quick links related list is not available on the root-level for the expanded view.
- Quick links are fetched when you create portal records.

  Note:
  When you use a sync hierarchy, the quick links are not fetched.

- Only three levels of topics and two levels of SP menu items associated with portal taxonomy are fetched.
- Visibility of a topic in the Mega menu is based on connected content. To avoid display issues, ensure it is active at the source (topic or SP menu item) level and at navigation item level in Advanced portal navigation.
- When you disable the 'Browse' button in the mega menu from <APN config page/record name>, the browse button is disabled only in the desktop version. Mobile version still displays the Browse button as responsive version of the navigation does not currently support the buttons.

Configure advanced portal navigation

Configure advanced portal navigation

Advanced Portal Navigation (APN) helps you design and configure an intuitive navigation for better information architecture and topic discovery.

Before you begin

Before you start, ensure you understand the useful information available in EC Information architecture.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: Admin and SP Admin

About this task

Using the advanced portal navigation, you can enable single-click sync across all APN hierarchy levels, replacing level-by-level sync. You can design the primary navigation menu and configure the navigation setup as per employee needs and content priorities. Here is an overview of the navigation workflow:

Procedure

1. Navigate to **All** > **Employee Center** > **Advanced Portal Navigation**.
2. Click **Take a tour** to understand the APN process.
   Understand more about APN process and configuration from the explainer tour.
3. Click **New** to create a new record or view the list of the available APN record.
4. Select **Active** to replace the current Employee Center with the new navigation menu.

   Note:
   Only one Advanced portal navigation record [sn_ex_sp_portal_extensible_navigation] can be active per portal. When you have one active record, you must first deactivate the other one first.

5. Click **Submit** or **Save**.
   A pop-up appears with the following message.

   ```
   To help you get started, we can bring over your existing
    navigation menu items and you can edit from there.
   You can also skip this and start from scratch. Do you want to
    bring over your current menu now?
   ```

6. On the **Start with current navigation menu**, select one of the following options.
   - **Skip**: When you click skip, the existing associated navigation menu items and topics are not fetched and you can start building your hierarchy afresh.
   - **Yes**: When you click yes, the existing associated navigation menu items, topics, and associated quick links are fetched instantly and you can refine the hierarchy.

   The **Menu items** related list appears.

   Note:
   An empty list appears when you click the skip option.

7. Use one of the options to create new or fetch the existing hierarchy.

   a. Click **New** to create or add from the available list.

   b. Click **Sync hierarchy** to fetch existing items.
   Topics and menu items which are in the **Active** state are synced. Confirm sync popup appears with info on email notification.

   Note:
   Quick links are not fetched. Add quick links manually.

APN Menu items and sync hierarchy

8. On the **Navigation menu item** related list, fill in the form.

> **Note:**
> The following fields are available in the base system starting with Employee Center version 31.

Alignment for Get support

Navigation menu item form

Field	Description
Source	Source of the item is usually a taxonomy topic or a service portal menu item.
Application	Application in scope for this activity.
Topic	Topic name fetched from taxonomy. Depending on the level, you can select the children topics from the available list. **Note:** Ensure that the topic or menu item is already associated in the parent navigation. Only active topics and menu items are available for creating navigation.
Menu path	Path for the menu item. When you open an available APN menu item, the menu path appears. Path indicates the parent-child association, for example **/Help center/Technology services**.
Menu item	Menu item fetched from the service portal menu.
Order	Enter a number to indicate where this item appears on the menu relative to other menu items.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

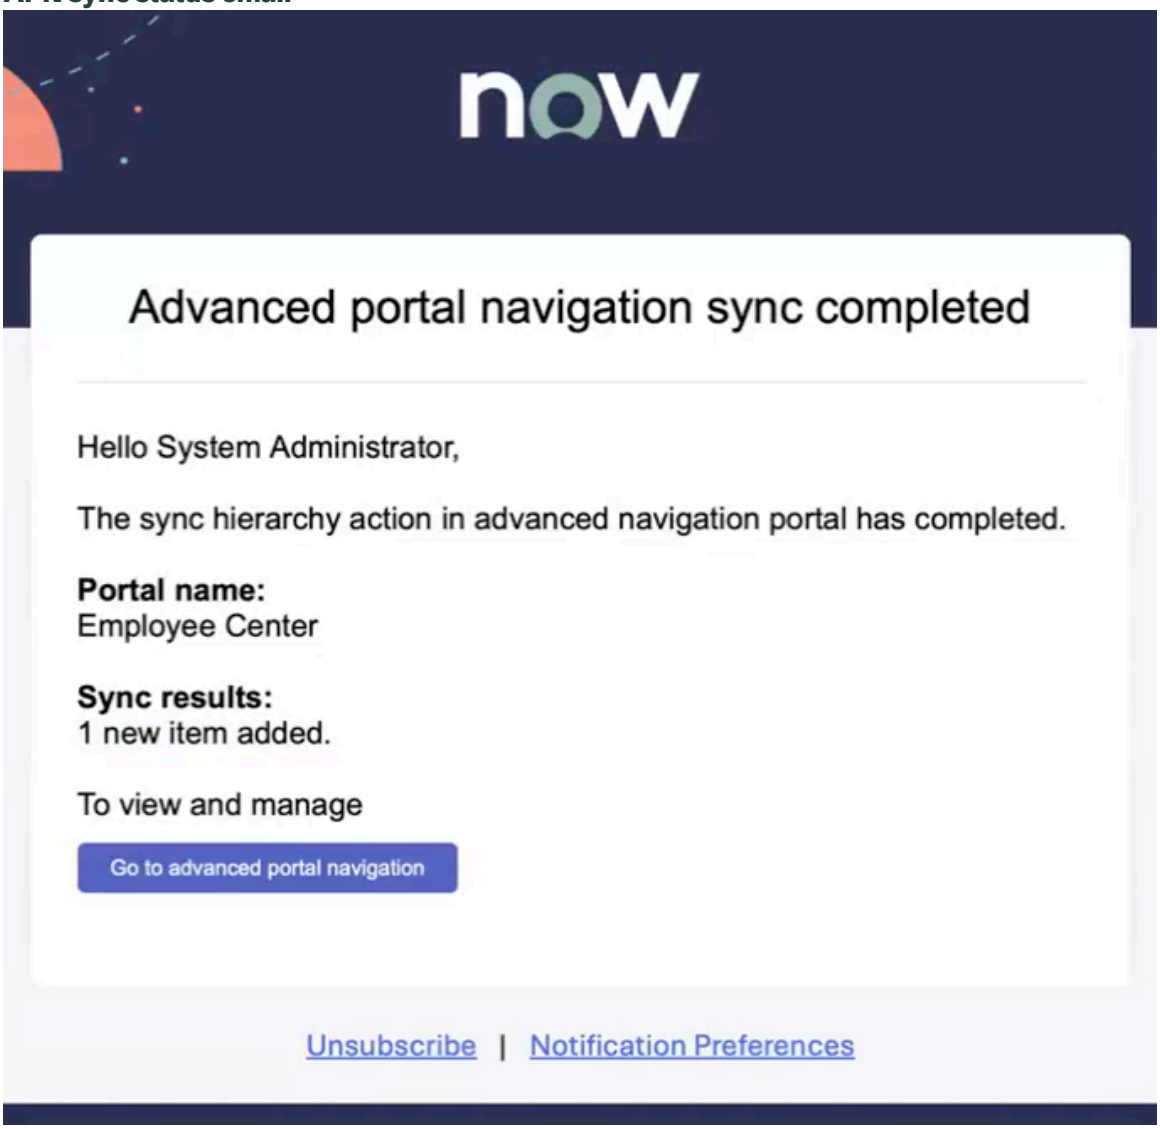
Field	Description
Active	Status of the record. Only Active records are synced.
Render as	Indicates the rendering type that you want. ○ **Menu**: Select this option to display as a menu. ○ **Modal window**: Select this option to display as a modal window. Use widget and widget parameters to customize experience.
Submenu display type	Indicates the rendering type that you want to display in the menu. This field appears only when **Menu** is selected at the root-level hierarchy. ○ **Expanded**: Select this option to display in the expanded view. ○ **Standard**: Select this option to display in the standard view. Out-of-the-box is Standard. For more information, see EC Information architecture.
Widget	Select this option to use the available widgets to customize experience. This field appears only when **Modal window** is selected.
Widget parameters	The modal window renders the widget content based on the name-value pair of widget parameters. This field appears only when **Modal window** is selected.
Browse button	Select this option to show the browse menu option. For the root-level hierarchy, select the Browse button and specify the display text. When you select this option with empty text, the default display is **Browse all**. **Note:** For standard view, the browse option is available on the root-level and for the expanded view root-level and first-level only.
Browse button display text	Select this option to show the browse option on the menu. ○ When you select taxonomy as source, the Browse button display text is automatically generated based on the topic. For example, when you select HR Systems as Topic, the display text shows **Browse HR systems**. ○ When you edit a menu item or sync, manually specify the Browse button display text, for example, `Browse <your text>`. ○ When you do not specify any display text, the button displays **Browse all**.

Note:
Use this table to manage all items in the primary navigation. Hierarchy changes made in the taxonomy or SP menu do not reflect on the primary navigation.

9. Track the sync status from the following fields:
   - **Sync status** indicates the status of the sync such as *`Never synced`*, *`In progress`*, and *`Completed`*.

     Note:
     An email notification is sent with the sync results indicating the addition of new items, if any.

     When Sync is in progress, you can't perform actions such as Update or Delete from the APN or Menu items records.
   - **Last synced** indicates the time of the last sync.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To display the Sync status, ensure you deactivate the **Hide sync status** UI policy from **All** > **System UI** > **UI Policies**. For more information, see UI policies

10. Notify the sync status through email.
On completion, you receive information on the sync status update with the count of changes.

Note:
If you face issues with the sync, contact your administrator.

APN sync status email

11. Click **Update** for changes to reflect.

Result
Advanced portal navigation record is saved and your employees can view the new mega menu design.

What to do next
All active navigation items associated with the portal and taxonomy are fetched and displayed in the related list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- While creating the record or for subsequent syncs, all the fetched navigation menu items are in the **Active** state by default.
- To include any future changes in the service portal menu or root topics in the active taxonomy, you can use **Sync hierarchy** to bring any new topics or menu items.
- Newly synced items are **active** by default with the existing order. When the order is not available for topic, the order is 999999.
- You can make edits, if necessary, after the sync is complete.
- All taxonomy updates across all APN hierarchy levels are in sync with a single-click.

Note:
For successful sync, ensure that the SP Menu Items are associated with the portal for which the Advanced Portal navigation record is configured.

For more information, see EC Information architecture.

Configure advanced portal navigation order

Advanced Portal Navigation (APN) helps you design and configure an intuitive navigation for better information architecture and discovery. You can reorder topics and non-topic menu items based on employee needs.

Before you begin

Role required: Admin

Procedure

1. Navigate to **All** > **Employee Center** > **Advanced Portal Navigation**.
2. Click **New** or view the list of the available portals.
3. On the Advanced Portal Navigation page, specify **Employee Center** and click **Save**.
   The following active navigation items associated with the portal and taxonomy are fetched and displayed as a related list.

Advanced Portal Navigation (APN) configuration

Field	Description
Topic	Topic name fetched from taxonomy.
Menu item	Menu items are fetched from the service portal menu.
Order	Enter a number to indicate where this item appears on the menu relative to other menu items.
Source	Source of the item is usually a taxonomy topic or a service portal menu item.
Taxonomy	Associated active taxonomy of the root topics.
Parent Menu	Parent from where menu items are fetched.

Note:
Use this table to manage the display order of all items in the primary navigation. Order changes made in the taxonomy or SP menu do not reflect on the primary navigation.

4. Specify the order of navigation menu items based on your needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you can use any number from 101 through 199. You can use negative numbers such as -100.

5. Click **Update** for changes to reflect.
   Order and Active status settings persist from this table.
6. Set the Advanced portal navigation record status value to **Active** to manage the display order and navigation preferences.

Result

Advanced portal navigation record is saved. You can save multiple records however only one **Advanced portal navigation** record can be **Active**. When you set the status to **Active**, you can control the display order of Employee Center navigation menu items from the table itself. This replaces the existing menu order.

What to do next

To include any future changes in the service portal menu or root topics in the active taxonomy, you can

1. Click **Sync menu changes**. The following confirmation message appears.

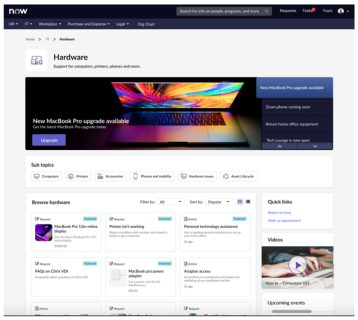
   ```
   Changes show in the navigation menu right away, placed at the
   end. You can make edits or change the order of items after the
   sync is complete. Do you want to sync now?
   ```

2. Click **Yes** to confirm the updates instantly.

When sync happens, the new items appear in the end. Update the order manually to change the display order.

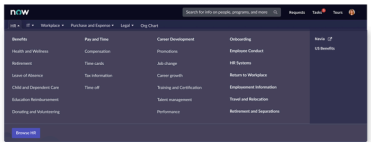
Unified Taxonomy for Employee Center

Unified Taxonomy is a collection of hierarchical topics that brings together different content types, such as requests, articles, quick links, learning content, and employee communications.



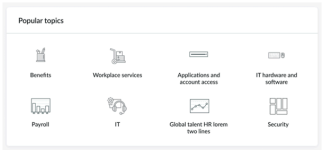
In the Employee Center portal, you can use this capability to span across departments to provide a single employee-centric taxonomy. Unified Taxonomy sits at the core of the Curated Experiences. Set up the Unified Taxonomy to leverage the full potential of the Curated Experiences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



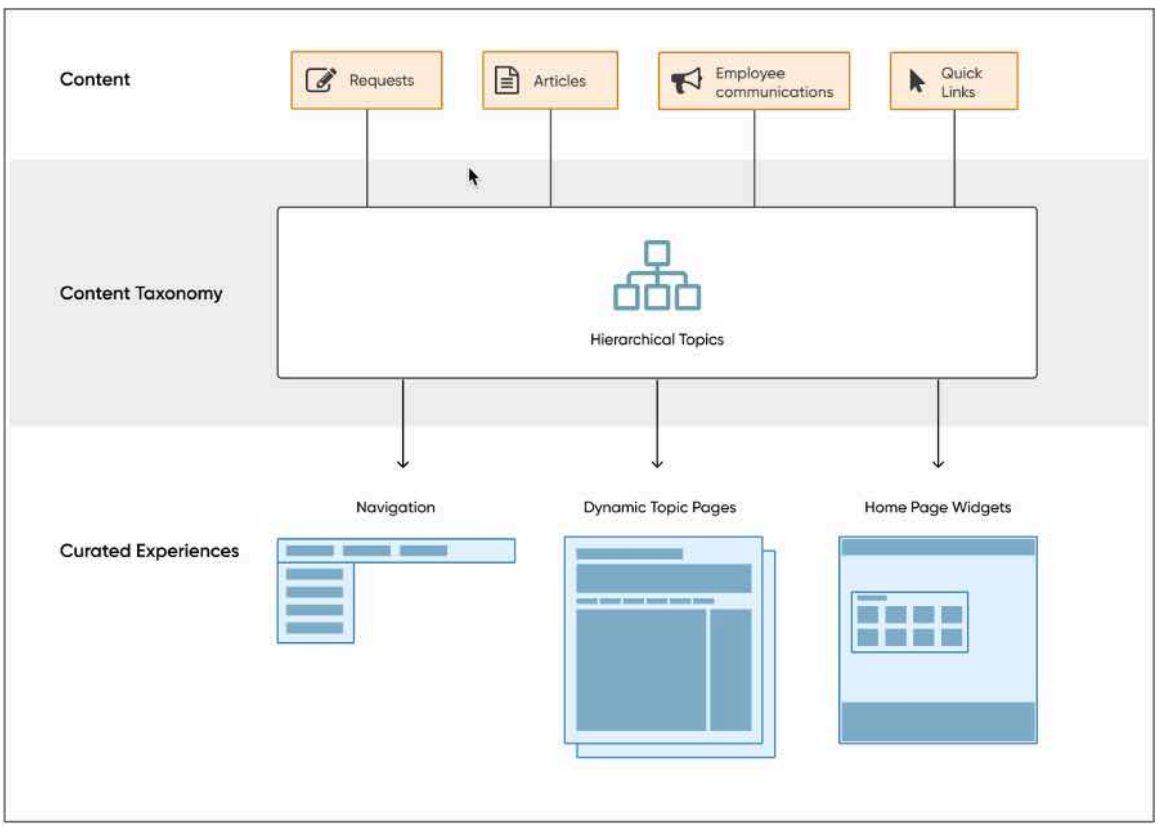
Curated Experiences

It drives employee-centric content discovery experiences across the portal



Dynamic Topic Pages

Mega Menu Navigation



Home Page Widget – Popular Topics

Unified Taxonomy — the foundation of Curated Experiences

The Unified Taxonomy is built on these models.

- Content taxonomy (Data model): Provides the data model or the framework against which the content is mapped. This is the top-three levels of the topic. For example, **IT** > **Hardware** > **Printers**.
- Content Authoring (Taxonomy management): Provides content managers and contributors the ability to tag content against the taxonomy and manage the taxonomy.
- Taxonomy for employee content: Is the actual content mapped to the taxonomy. This provides the mapping to the default content shipped by IT, HRSD, and Legal into the content taxonomy.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Unified Taxonomy capability is delivered by ServiceNow AI Platform as two separate plugin and application.

Content Taxonomy

The application that provides the data model or the topic hierarchy and the taxonomy management (content authoring) capabilities for the Unified Taxonomy.

This application is available by default to all customers.

Employee Experience Taxonomy

The plugin that provides the mapping of all the default content for IT, HR, Workplace, Legal, and Procurement into the default content taxonomy. The content types mapped by default are requests, articles, quick links, learning content, and employee communications. Once the plugin is downloaded, this mapping will be visible as part of the content taxonomy app in the platform.

To get the default taxonomy for employee content, you must download it from ServiceNow Store. On installation, the default content taxonomy displays the available list of topics prescribed for the product or services based on what you are licensed to, such as IT, HR, WSD, PSM, or Legal.

After you complete the installation, perform the following to achieve a Unified Taxonomy experience.

- Clone the employee content taxonomy and make appropriate additions or modifications to the provided topic structure. Taxonomy is updated to reflect the terminology and available services. For more information, see Clone taxonomy for employee content.
- Associate all the existing and new content to the cloned taxonomy topics. For more information, see Create and associate topics.
- Enable user criteria to configure topic-level security and visibility settings for topics. For more information, see Enable user criteria for topics.
- Update the search configurations to filter based on the content associated to the cloned taxonomy.

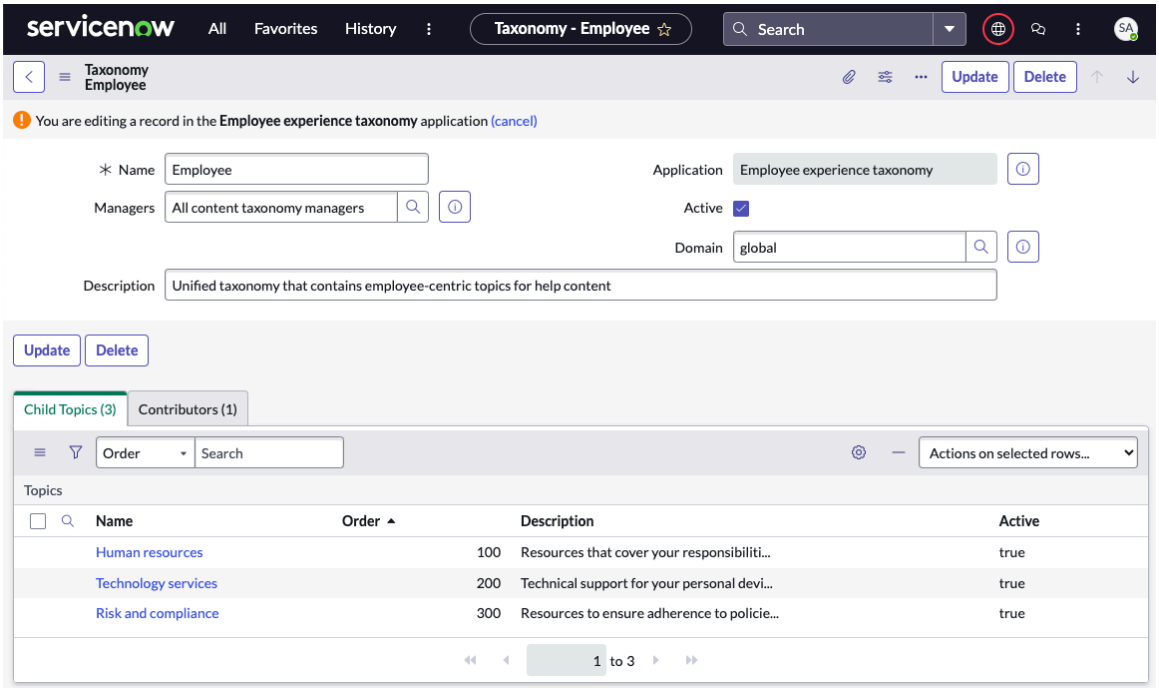
Clone taxonomy for employee content

Clone the taxonomy that is provided out-of-the-box to make your own additions or modifications to the provided topic structure that aligns to your unified portal needs.



Before you begin

Role required: taxonomy_admin

About this task

By default, Employee Center application ships employee-centric taxonomy and taxonomy topics for IT, HR, Workplace, Legal, and Procurement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Taxonomies**.
2. Click the default **Employee** taxonomy.
3. Click **Clone**.
4. Enter the **New Taxonomy Name** in the dialog box that appears and click **OK**.
   This copies the taxonomy and its contents to the new taxonomy. *Optionally*, you can manually create a taxonomy and add your topics. For more information, see, Create taxonomy
5. Modify the taxonomy content and click **Update**.
6. Associate all existing and new content to the cloned taxonomy topics.
7. Associate the taxonomy to the portal that is created.
8. Deactivate the existing taxonomy so that the search configurations pick up the content from the new taxonomy.

Create taxonomy

Create taxonomy for employee content to map the content of your product or services to the taxonomy hierarchy.

Before you begin

Role required: taxonomy_admin

Note:
Content Taxonomy module may be visible to all users but you must have admin privileges to make any changes.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Taxonomies**.
2. Click **New** or edit an existing record.
3. On the form, fill in the fields.

Taxonomy and connected content

Associate connected content to a topic

Enable user criteria for topics

Enable user criteria for topics

Enable user criteria to configure topic-level access and visibility settings for topics in navigation and popular topics widget.

Before you begin

Role required: taxonomy_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User criteria required: Taxonomy Manager, Taxonomy Contributor, Topic Manager, Topic Contributor.

Important:
The Topic-based access control is available from the Yokohama family release.

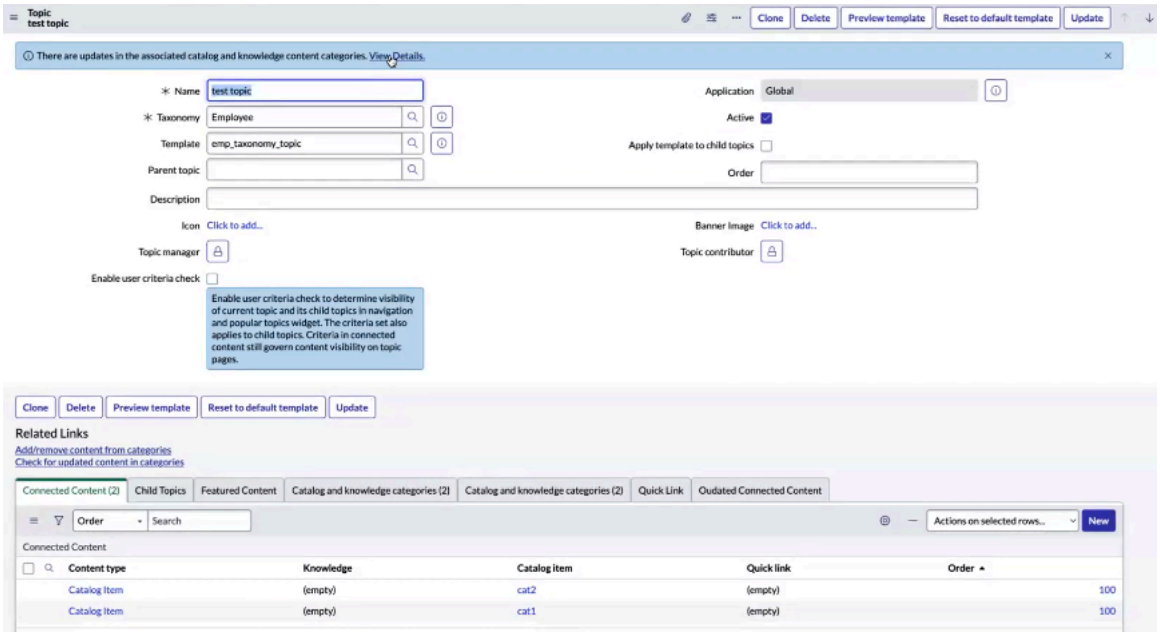
When you have many topics, setting up user criteria for your topics can help with navigational ease and optimal performance.

About this task

Organizations can define who the topic page is **Available for** and **Not Available for** at each topic level, avoiding the need to evaluate content-level access to determine topic visibility. Organizations can make subtopics automatically inherit the same access levels as the parent topic or define their own criteria.

Note:
Remember that the topic visibility on the Mega menu and Popular topics, is driven by the Enable user criteria check option.

Before you configure topic-level visibility, understand the following user criteria basics:



- Add topic-level hierarchy controls on each topic page overriding the default content-based security for megamenu.
- Enable this option on the parent topics and the subtopics inherit the same user criteria automatically.
- Remember that when you disable the topic user criteria toggle, the content security model is applicable.
- Simplify the user criteria and improve the page load time.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Click **New**.
3. Configure the topic form, see Topic form.
4. Select **Enable user criteria check** to set user criteria at topic-level.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User criteria and related tabs

Understand how it works from the note and proceed to add criteria for the following options:

> **Note:**
> Enable user criteria check to determine visibility of the current topic and its child topics in navigation and popular topics widget. The criteria set also applies to child topics. Criteria in connected content still govern content visibility on topic pages.

- **Available for**: Users or user group for whom the topic is visible.
- **Not available for**: Users or user group for whom the topic isn't visible.

After you enable this option, the user criteria fields are available for the entire hierarchy that is root-topic and all its child-topics.

> **Note:**
> When you turn this **Enable user criteria check** option ON the first time, the default values for Available for and Not available for are empty, which means that the topic isn't accessible by any user. Ensure you define the user criteria for the topic to be visible. When you don't specify any values, the topic isn't visible on the mega menu.

5. Specify the user criteria **Available for** and **Not available for** options based on your business needs.
   Understand how the user criterion works in the following use cases:

User criteria use cases

Scenario	How user criteria works
When a new topic is created with no parent	User criteria and visibility remain same as defined at the time of creation.
When a new topic is created with parent	User criteria and visibility of parent is applied to the new topic.
When a topic is moved to a new parent	User criteria and visibility of new parent are applied and old parent criteria are removed. Manual edits remain intact.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scenario	How user criteria works
When a topic is moved out of a hierarchy and made root topic (new hierarchy).	User criteria and visibility remain same as defined at the time of creation.
When a topic is cloned to a new parent with empty user criteria.	User criteria and visibility of the topic are empty.
When a topic is cloned to a new parent with non-empty user criteria.	User criteria and visibility of the new parent override the cloned topic.
When user criteria and visibility of parent change	The revised user criteria and visibility are applied to its children.
When user criteria is enabled for favorites	Employee (for whom the topic isn't available for) isn't able to view the favorited topic. The following message appears `You don't have access to <count> of your favorited items`. For more information, see Configure favorites option.
When a new topic is cloned and made root topic	The cloned topic user criteria and visibility are empty.

Note:
When the user criteria applies on the favorited topic, where the topic isn't visible under **My Favorites**.

6. Click **Submit** or **Save**.

Note:
Topics are visible based on the user criteria associated. For more information, see the *`Favorites card and access`* illustration on Configure favorites option.

Result
User criteria changes are available only after relogging. Proceed to check the topics visibility from the Employee Center portal.

What to do next
Create child topics for the parent topic. For more information, see Create a child topic. Go to the tabs to associate the topic appropriately. Child topics inherit the user criteria of the parent topic however admin can update the child-topic criteria separately as per business needs.

Note:
When you clone or move a topic, the associated guided self-service also is cloned or moved accordingly.

Create a child topic

Create child topics for the parent topic in the taxonomy.

Before you begin
Role required: taxonomy_admin

User criteria required: Taxonomy Manager, Taxonomy Contributor, Topic Manager, Topic Contributor.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Click and open the parent topic to which you want to add a child topic.
3. On the **Child Topics** tab, click **New**.
4. On the form, fill in the fields.
   For more information on the fields and description, see Topic form.
5. Click **Submit**.

Related topics

Associate connected content to a topic

Associate connected content to a topic

Associate all existing and new content to the cloned taxonomy topics. You can add catalog items, knowledge bases, and quick links to the topics.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Connected Content**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information on the fields and description, see Connected Content form.
4. Click **Submit**.

What to do next
For more information, see Taxonomy and connected content.

Associate content categories to topics

Associate content from multiple content categories to a topic in the taxonomy.

Before you begin
Role required: knowledge_admin, taxonomy_admin

User criteria required: Taxonomy Manager.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Select the topic where you want to associate a content category.
3. Select the **Add/remove content from categories** related link.
4. Select one of the following **Content types**
   - Knowledge Categories
   - Catalog item Categories
5. In the corresponding collection list window, do one of the following actions:
   - Select a category and then click the right arrow icon ( ) icon.
   - Double-click a category.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
In the Collection list, you can search for knowledge categories by entering the category name or by using wild cards (*).

6. Click **Save**.
When you associate a category to a topic, all the Knowledge Base articles or Service Catalog items belonging to the selected categories are associated with the topic.

Note:
The time taken to associate all the content with a topic depends on the number of Knowledge Base articles or Service Catalog items that a category contains. This is a one-time activity.

What to do next
For more information, see Taxonomy and connected content.

Related topics
Define a knowledge article category

Associate content from catalog categories to a topic

Associate content from multiple catalog categories to a topic in the taxonomy.

Before you begin
Role required: catalog_admin, taxonomy_admin, or any user that meets the Taxonomy Manager user criteria in the Employee taxonomy

Procedure
1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Click the topic that you want to add content from catalog categories to.
3. Click the **Add content from a catalog category** related link.
4. In the Collection list, do one of the following to move the catalog categories to the Catalog Categories list:
   - Select a catalog category and then click the right arrow icon (>) icon.
   - Double-click a catalog category.

Note:
In the Collection list, you can search for catalog categories by entering the category name or by using wild cards (*).

5. Click **OK**.
All the catalog items that belong to the categories that you moved to the Catalog Categories list are associated with the topic. The time taken to associate all the content with a topic depends on the number of catalog items that a category contains. This is a one-time activity.

What to do next
For more information, see Taxonomy and connected content.

Associate featured content to a topic

You can mark connected content as featured content for a topic. The featured content appears at the top of the topic page, enabling you to easily view content that requires your attention.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Click and open the topic to which you want to associate featured content.
3. On the **Featured Content** tab, click **New**.
4. On the form, fill in the fields.
   For more information on the fields and description, see Featured Content form.

   Note:
   You can't add a quick link as a featured item.

5. Click **Submit**.

Associate a quick link to a topic

Associate quick links to topics to quickly view important content, such as knowledge articles, catalog, items, internal pages, and external links.

Before you begin

Role required: taxonomy_admin

User criteria required: Taxonomy Manager.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Click and open the topic to associate with a quick link.
3. On the **Quick Link** tab, click **New**.
4. On the form, fill in the fields.
   For more information on the fields and description, see Quick Link form.

   Note:
   You can't add a quick link as a featured item.

5. Click **Submit**.

Related topics

Create a quick link

Assign topics to a quick link

Associate learning content to a topic

Add learning content to a topic page to provide employees with quick access to training and career development.

Before you begin

Role required: taxonomy_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Criteria required: Taxonomy Manager, Taxonomy Contributor, Topic Manager, Topic Contributor.

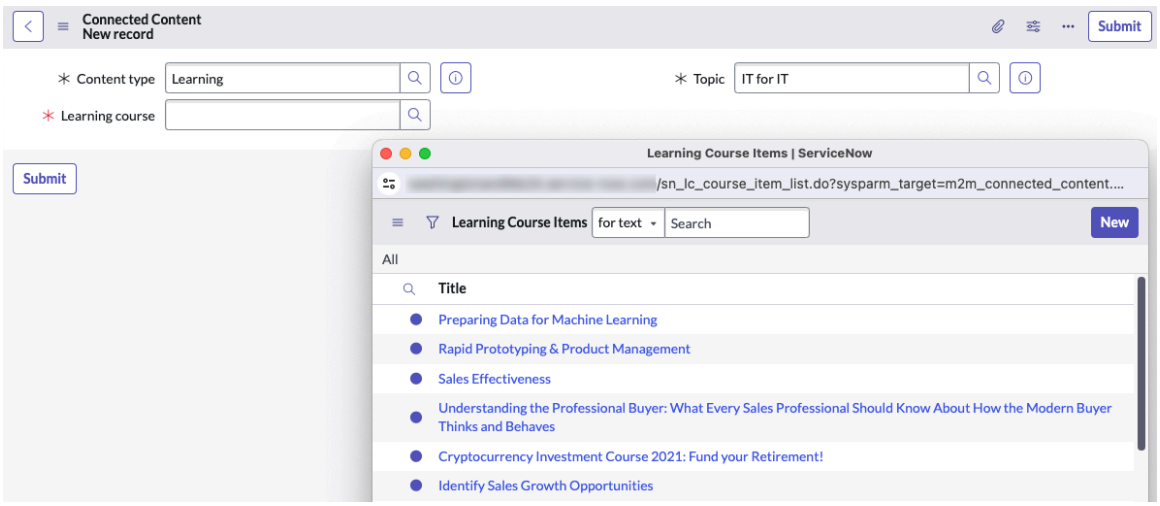
Do the following steps:

1. Install the Learning [sn_lep] application: Install and configure Learning
2. Provide employees with the Talent Development license to enable access to the learning content: License Talent Development Core users
3. Navigate to the **Scheduled jobs** > **Refresh access to all apps** and click **Execute Now**.

   This adds a new record to the Employee Application Access [sn_employee_app_access.list] table.

About this task

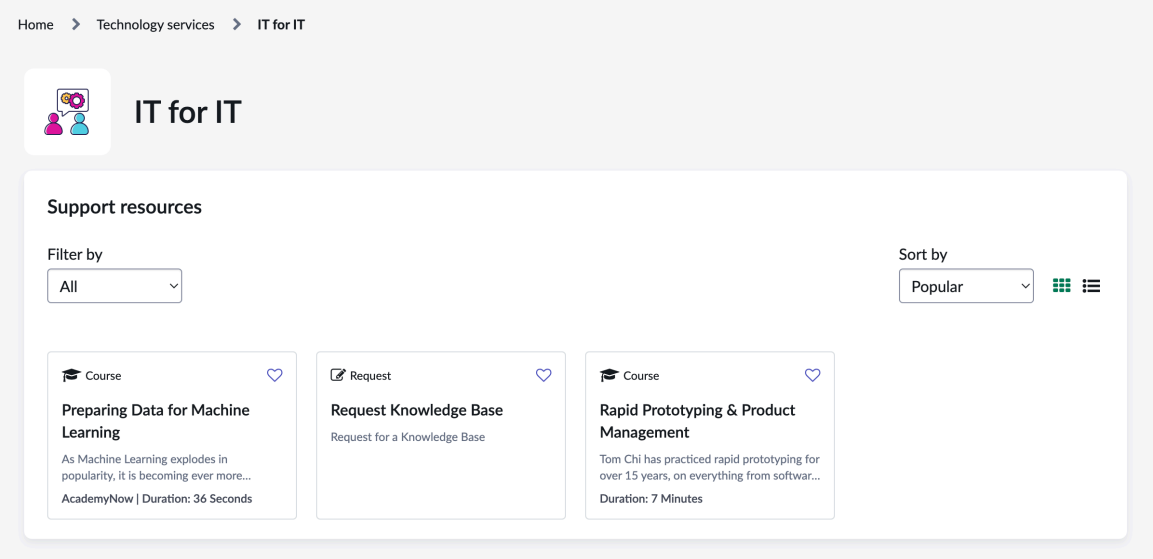
The Topic Content widget displays the connected content associated with that topic, such as Knowledge Base articles, courses, and Service Catalog request items.



Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Select any topic and go the **Connected Content** and click **New**.
3. Select the **Learning** content type.

   The **Learning course** field appears.



4. Select the course.

5. Click **Submit**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
Employees with Talent Development license can now access the learning content on the topic page.

Associate Guided Self-Service Process to a topic

You can make Guided Self-Service available from a topic. The GSS content appears on the topic page enabling your employees to easily self-serve.

Before you begin
Role required: admin, topic manager, taxonomy manager or contributor

Procedure
1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Click and open the topic to which you want to associate featured content.
3. On the **Guided Self-Service Process** tab, click **New**.
4. On the form, fill in the fields.

Guided Self-Service process form

Field	Description
Guided Self-Service process	Guided Self-Service process associated with the topic. Search for and select the Guided self-service process associated with the topic.
Topic	Topic in which you want the Guided Self-Service process to appear.
Order	Order in which you want the Guided Self-Service process to appear.

Note:
When you associate a guided self-service process to a sub-topic, the guided help also appears on its parent topic.

5. Click **Submit**.

Result
The GSS content appears on the topic page enabling your employees to easily self-serve.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

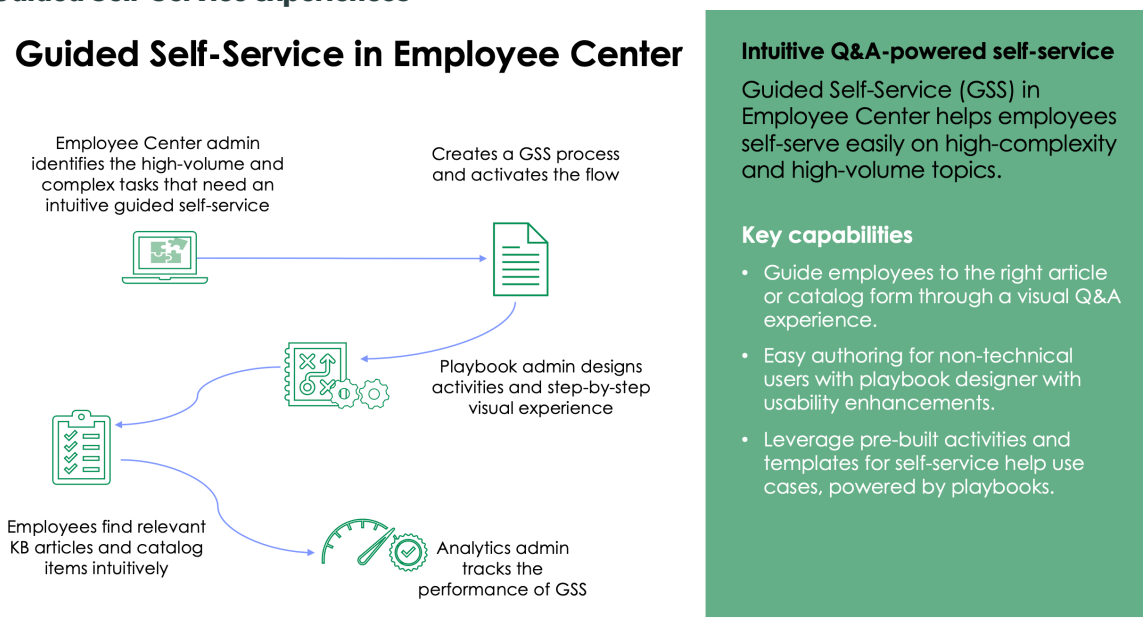
Use Guided Self-Service

Guided Self-Service in Employee Center

Empower employees with easier self-serve capabilities through guided experiences to improve productivity and efficiency.

A new plugin **Guided Self-Service** (sn_ex_sp_gd_help) in Employee Center enables employees with an intuitive Question-and-Answer (QnA) powered self-service.



Guided Self-Service (GSS) overview

With an in-context visual way to navigate the complex work scenarios, admins can design adaptable self-serve workflows that can enhance overall organizational productivity, engagement, and efficiency.

Using the Guided Self-Service, employees can self-serve with step-by-step assistance and navigate their way to the relevant article or catalog item. Guided Self-Service can

- Self-serve with easy access to information, processes, and resolutions for day-to-day work.
- Discover and use the GSS processes through AI-powered search.
- Make information and solutions easily accessible to employees with varying levels of knowledge or experience.
- Guide employees to the relevant article or catalog form through a visual Question-and-Answer (QnA) experience.
- Leverage prebuilt activities and templates for self-service help use cases, powered by playbooks.
- Streamline authoring for non-technical users with playbook designer usability enhancements.
- Optimize the employee self-service capabilities for complex and high-volume topics.
- Streamline authoring for non-technical users with playbook designer usability enhancements

Guided Self-Service experiences

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Provide Guided Self-Service that caters to the frequent needs of employees. You can display Guided Self-Service as a widget on the home page or as a quick link or as a widget on topic pages.

Note:
Discover and use the GSS processes through AI-powered search based on the title and description.

Prerequisites

Guided Self-Service in Employee Center has a dependency on the Employee Center and applications. Ensure you complete the following steps before getting started with GSS.

- Ensure you activate the Employee Center application first before installing the **Guided Self-Service** in Employee Center app from ServiceNow Store.
- Ensure you have Workflow Studio and its components such as Playbooks.
- Ensure that the **sn_hr_sp.esc_admin** user has the **playbook.write** role to edit the playbook design and **playbook_experience.admin** to preview the guided experience.

Know more about Playbooks and Workflow Studio

Playbook provides a visual representation of step-by-step process involved in self-servicing employee needs and requirements such as *`Know your benefits`* and *`Time off request`*.

- Design the visual workflow to guide employees to find relevant article or catalog items.
- Use the playbook capability to help employees with the what-to-do-next option.
- Provide a way to visualize and interact with the workflows in real time via a simple and task-oriented view.

Understand the basics of playbooks and workflow studio. Ensure you have working knowledge of the following processes:

- Exploring playbooks
- Playbooks
- Using Workflow Studio
- Getting started with Playbooks
- Create a flow in Workflow Studio
- Create a playbook
- Building playbooks

Guided Self-Service reference

Use Guided Self-Service

Configure Guided Self-Service

Guided Self-Service (GSS) helps create a playbook for all the useful content for employees.

Before you begin

Ensure you activate the Employee Center application first before installing the **Guided Self-Service** in Employee Center app from ServiceNow Store.

Role required: sn_hr_sp.esc_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **Guided Self-Service**.
2. Click **New** or open an existing record.
3. On the form, fill in the fields.

Guided Self-Service form

Field	Description
Name	Name of the record. **Note:** When you update or rename the name, ensure you (re)activate the GSS.
Active	Check the box to activate. **Note:** Only active items appear on the widget.
Oder	Option to display the order Guided Self-Service process available.
Description	Description that you enter in this field overrides the default short description of the GSS.
Process	Name of the process.
Application	Application scope.
Available for	Option to make GSS available for only the selected users, groups, roles, and more.
Not available for	Option to make the GSS unavailable for.

4. Click **Save** or **Submit**.
   Related tabs Available For, Not Available For, and Assigned Topics appear.

   Note:
   By default, only sn_hr_sp.esc_admin user role can add GSS to the topics and topic persona users (such as Topic Managers and Contributors) can't add GSS to the assigned topics.

5. On the Assign Topics tab, click **Add**, select the topic, and click **OK**.

   Note:
   When you assign the guided process to a subtopic, the help process appears on the topic page and its parent topics. For example, in `Human resources > Benefits`, when a Guided Self-Service is assigned to a subtopic Benefits, the guided self-service appears on its parent topic also.

6. On the **Available For** and **Not Available For** tab, select the users, groups, roles, and more.
   User criterion is defined for Guided Self-Service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
When a user or user group doesn't have permission to a catalog or a KB article, the `You do not have access to this item` message appears. You can contact the admin for permissions.

7. Click **Save** or **Update**.
   Remember, you can't configure multiple questions within a single questionnaire.

Note:
The incomplete selections are cancelled daily by a schedule job.

What to do next

Click the **Edit in Process Automation Designer** button to define and publish the process for the Guided Self-Service after you create the process. Proceed to edit the playbook from **Workflow Studio**.

Note:
Ensure you mark the guided process and playbook active. Only when you activate the GSS process, the **Add** button is displayed on the Assigned Topics.

Guided Self-Service reference

Associate Guided Self-Service Process to a topic

Use Guided Self-Service

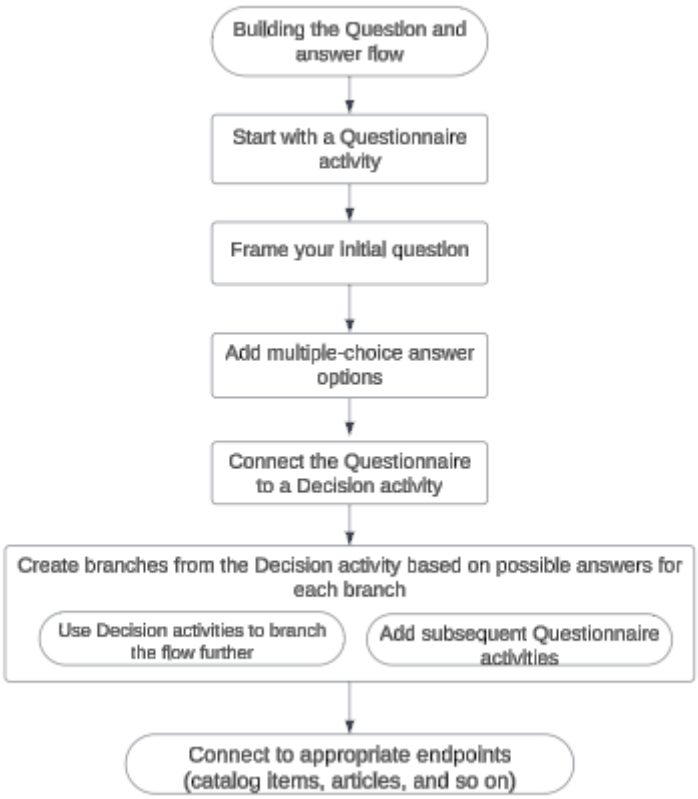
Build a visual flow for Guided Self-Service

Create a visual playbook flow of activities so that employees can find information in a more intuitive and visual way.

Before you begin

Understand the basics of playbooks and workflow studio Building playbooks and Create an activity definition.

Review the information from Guided Self-Service reference.



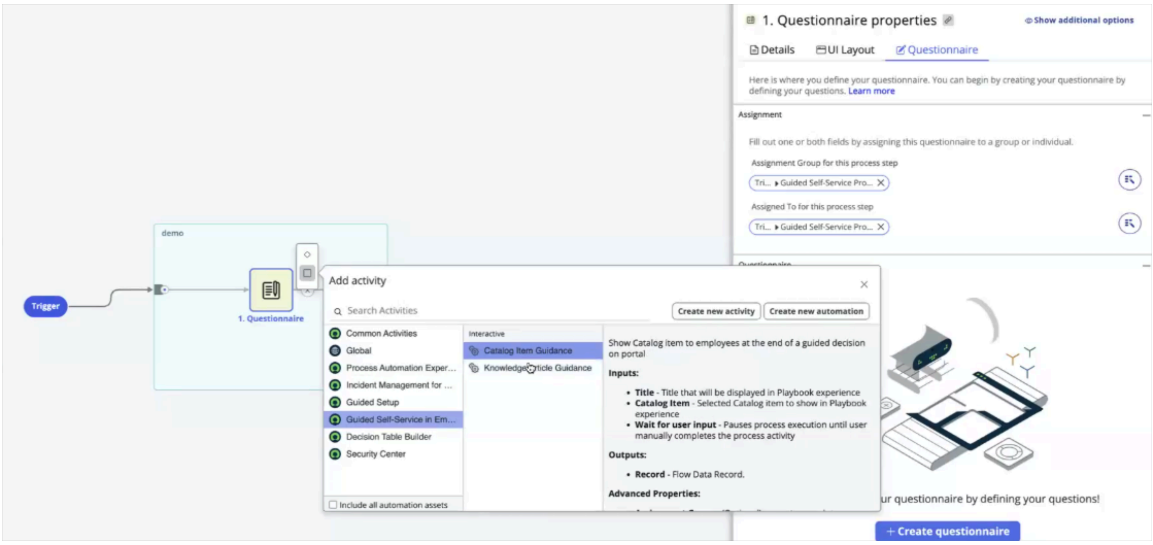
Role required: sn_hr_sp.esc_admin, playbook.write

Procedure

1. On the Workflow Studio, use the existing questionnaire activity available from **Add activity** > **Common Activities** > **Questionnaire** for authoring the question and answer flow.
   Here's a sample illustration of the entire flow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Visual flow



Each activity definition contains some basic configuration details, automation plan, and activity experience.

Note:
Ensure you mark the guided process and playbook active. Only when you activate the GSS process, the **Add** button is displayed on the Assigned Topics.

2. On the Workflow Studio, use the new GSS-specific activities.
   - **Add activity** > **Guided Self-Service in Employee Center** > **Catalog Item Guidance**.
   - **Add activity** > **Guided Self-Service in Employee Center** > **Show Knowledge Article Guidance** > **Instruction activity'**.
   - **Add activity** > **Common Activities** > **Instruction Activity**.

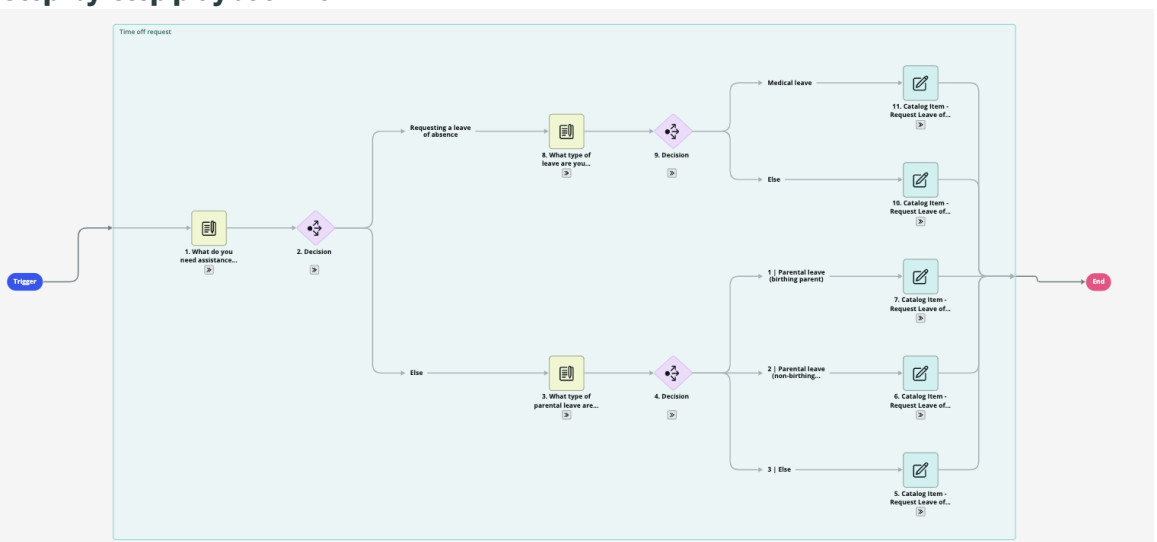
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Add activity

For more information, see the activity information such as Input, Output, and Advanced Properties on the UI.

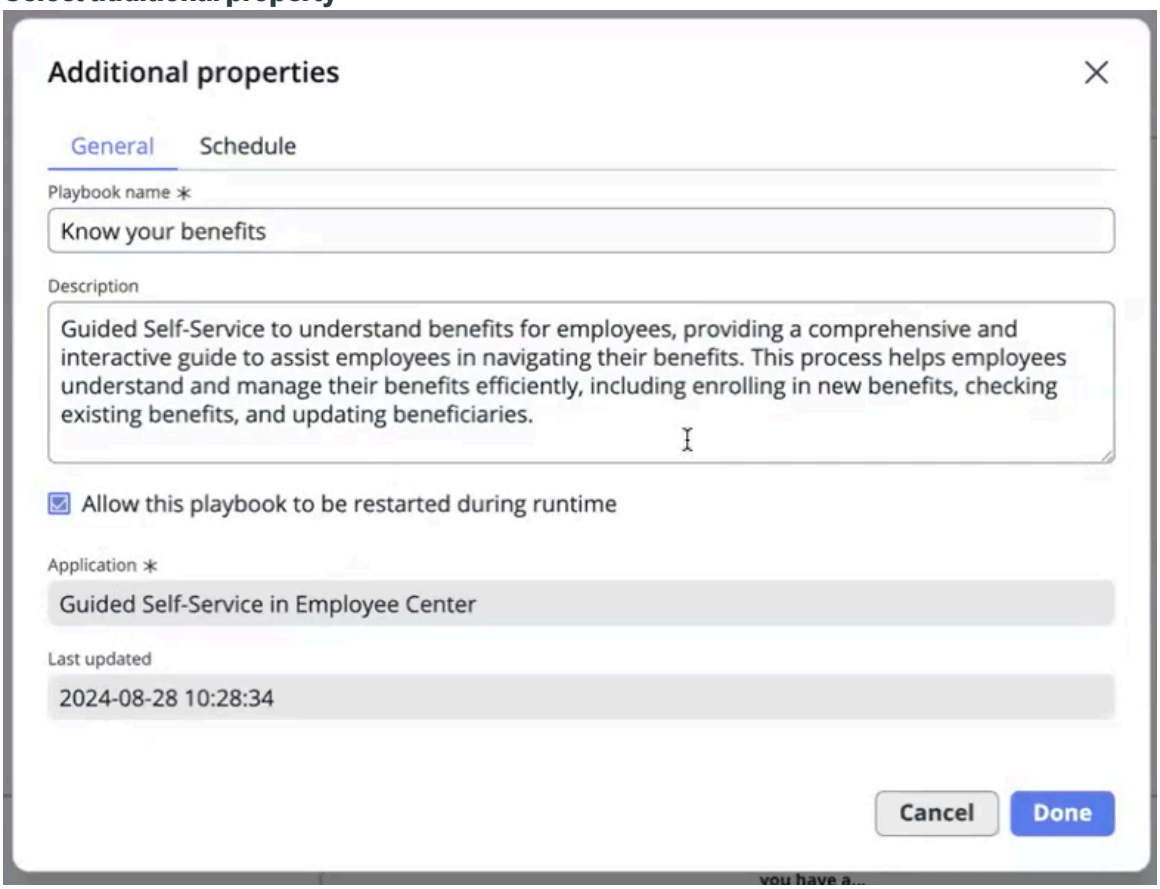
3. On the Workflow Studio, use the pre-configured triggers, flows, decisions, and so on. Here's a sample illustration for time off flow.

Step-by-step playbook flow

Note:
Ensure you configure the Restart rule as always for all or each activity in the flow. Do not use the restart operation with just one activity.

Based on the security access and user permissions, the catalog item and KB appear. For more information, see Create a playbook.

Note:
The Activity Definition [sys_pd_activity_definition] table lists the definitions for the activities that you can add to a playbook in **Workflow Studio**.



4. In the **Playbook activity view**, select one of the following options to determine how the stages and activities are displayed in the playbook.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Focused:** Displays the stages and activities in the playbook life cycle panel and the current activity in the playbook work area.
- **Stacked:** Displays the stages in the playbook life cycle panel and cards for each of the activities in the current stage in the playbook work area.
- **Guided:** Displays an interactive, step-by-step interface that guides users through the playbook stages and activities, providing contextual assistance and decision support at each step.

5. Go to **Playbook** > **...** > **Properties** > **Additional properties**, and select **Allow this playbook to be restarted during runtime** options on the pop-up window to enable restart function.

Select additional property

6. Click **Activate** to reflect all the updates to the GSS or playbook.

> **Note:**
> Only when you activate the GSS process, the **Add** button is displayed on the **Assigned Topics**.

Result

GSS is configured to guide employees.

- By default, a fresh start and context is provided for selection when employees return to a partially completed GSS flow.
- The incomplete selections are canceled daily by a schedule job.
- Admins can add rich media such as images, videos, links, and formatted text to provide detailed answers or guidance as the QnA result.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Based on the user permissions, you can access a catalog or a KB article.

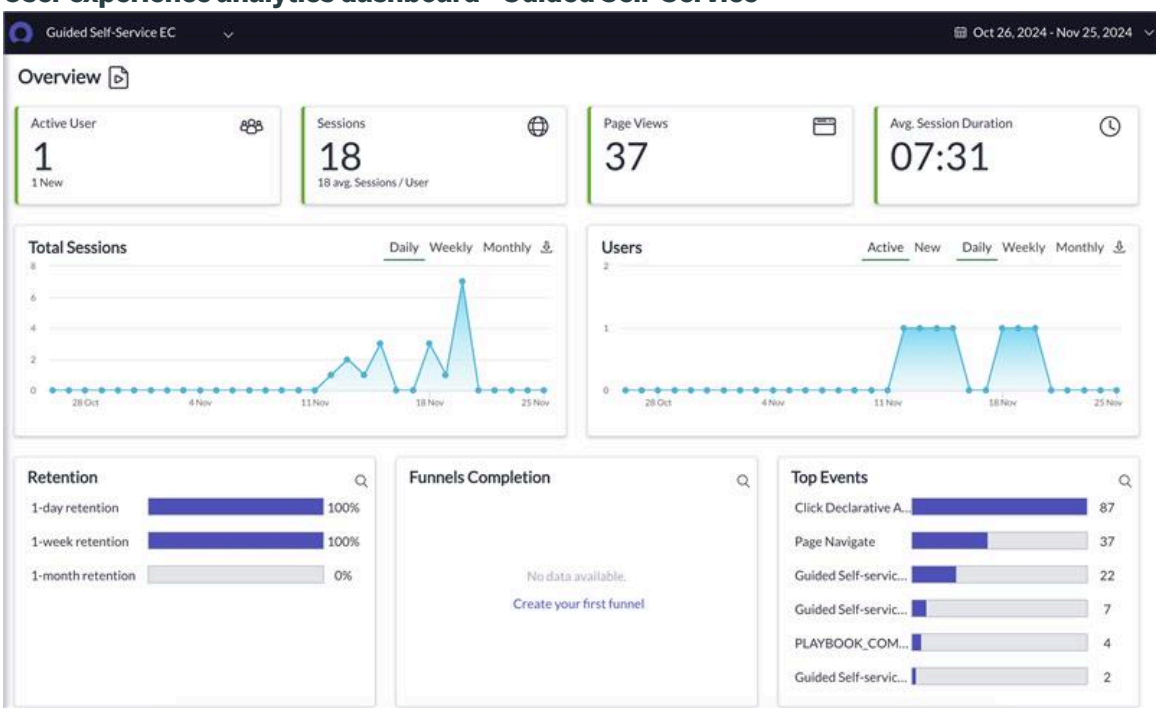
> **Note:**
> When a user or user group doesn't have permission to a catalog or a KB article, the `You do not have access to this item.` message appears. You can contact the admin for permissions.

For more information, see Use Guided Self-Service.

Guided Self-Service user experience analytics

Visually analyze Guided Self-Service usage, user behavior, and other information from the user experience dashboard.

You can use the dashboard to view the information about the Guided Self-Service usage, engagement, and adoption.



Navigate to **User Experience Analytics** > **Dashboard** > **Guided Self-Service** for a detailed view and analysis. Click the respective widget or chart for more information. You can create a funnel to track session adoption and abandonment.

Widgets

The dashboard provides the following metrics:

- **Page Id**: Indicates the occurrences based on the page Id.
- **Title**: Indicates the occurrences based on the title of the Guided Self-Service.
- **Source**: Indicates the occurrences based on the source such as Quick link.
- **User Id**: Indicates the occurrences based on the user.
- **Events**: Indicates the events based on the user.
- **Retention**: Indicates the retention info.
- **Funnel**: Indicates the funnel details based on the user.

User experience analytics dashboard - Guided Self-Service

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User and roles

Roles required for User experience analytics dashboard

Users	Required role
Analytics portal admin	portal_analytics_admin
Analytics viewer	analytics_viewer, mobile_analytics_viewer, web_analytics_viewer, portal_analytics_viewer

User behavior

View and analyze the information available in your dashboard. You can track user behavior and app usage on the app launcher.

- View the Guided Self-Service that employees launch frequently.
- Track monthly and daily user activity.
- View number of user clicks by Guided Self-Service from home page, topic page, and quick links.
- Analyze the trend of user activity periodically.
- Assess the user behavior and insights and drive business decisions.

Events

Events list can help you understand usage patterns, features popularity, and identify areas for improvement.

- Click Declarative Action: A declarative action that the user clicked such as restart, start over, continue, complete, edit responses.
- Page Navigate: A user navigates to Guided Self Service page.
- Guided Self-service Catalog item shown: The self-service catalog item that the user interacted with.
- Guided Self-service Knowledge article shown: the self-service knowledge base articles that the user interacted with.
- PLAYBOOK_COMPLETED: A guided process (playbook) that the user completed.
- Guided Self-service Action clicked: The action button that the user clicked.

For more information, see Events.

Funnel analysis

A funnel analysis shows the percentage of users who completed a desired Guided Self-Service action along a critical path. Funnel reports show conversion rates and trends in aggregate user behavior to uncover the reasons behind success or failure of a specific Guided Self-Service flow.

For more information, see Funnel reports in User Experience Analytics.

Retention

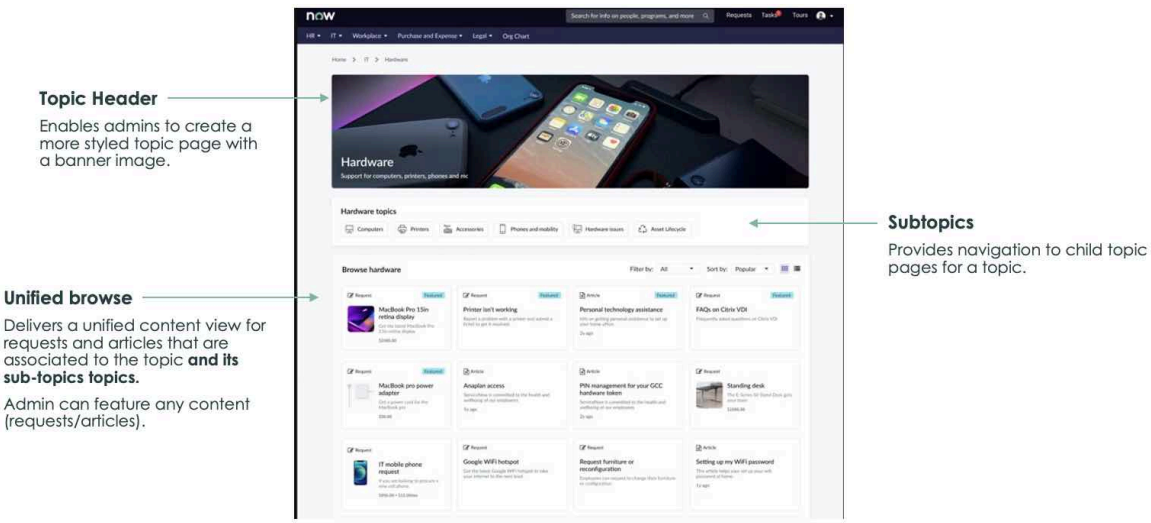
View data such as how many new users you have and how many returned. User retention data also shows you the frequency of user sessions and the average time in between sessions given a certain time period.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see User retention.

Dynamic topic pages

Dynamic topic pages are topic pages that are dynamically configured using content tagged to a unified taxonomy across all departments.

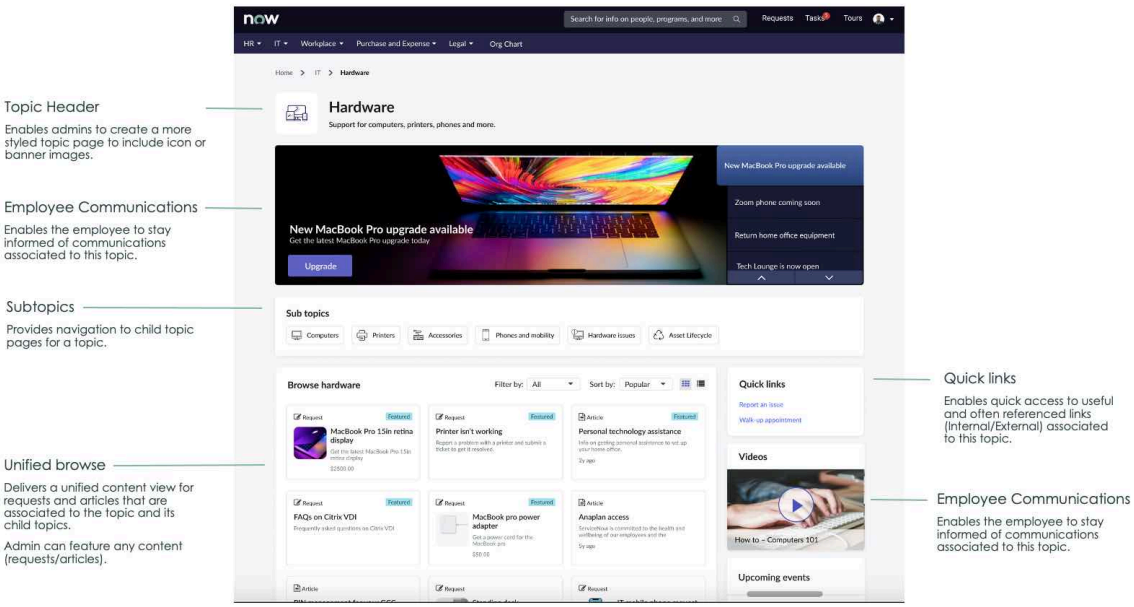


These topic pages are separate portal pages that open when a user clicks a topic either from the mega menu navigation or from popular topics. Dynamic topic pages are not part of the home page. You can navigate to these pages from the mega menu or popular topic widgets. These pages are designed to provide a consistent experience across topics and channels in both web and Now Mobile app.

Topic pages are available on the Browser Extension for Employee Center. For more information, see Browser Extension for Employee Center.

The dynamic topic pages are categorized into:

Topic Pages without Employee Communication content



Dynamically generated topic pages that bring together different types of content, such as request, articles, and quick links to provide a new and improved browse experience. These pages are available to all customers by default.

Topic Pages with Employee Communication content

Dynamically generated topic pages that bring together different types of content, such as request, article, quick links, and employee communication to provide a new and richer browse experience. The employee communication content is made available only after you install the Employee Center Pro application that is licensed separately.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set up the content taxonomy and associate content to topics. If you have installed the Employee Center Pro application, you can use Content Delivery to target employee communication to topics. For more information on content taxonomy, see Unified Taxonomy for Employee Center.

For more information on creating content for your dynamic topic page, see Rich Content Editor. **Rich Content Editor** allows you to create and schedule rich, long form content using a drag-and-drop method and designed for non-technical users that create content. You can also create content from the Content Library and use the base system from Create a content category.

Configure additional permission levels for topic management

Experience decentralized management of topics by configuring two new permission levels, topic manager and topic contributor.

Before you begin

Role required: taxonomy_admin

About this task

Use distributed topic management by establishing two new user criteria, **Topic manager** and **Topic contributor**. These roles are additional levels of control introduced along with the existing Taxonomy admin, Taxonomy manager, and Taxonomy contributors.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Select the desired topic within a taxonomy and define the user criteria, namely **Topic manager**, and **Topic contributor**.

Result

Admins can configure additional permission levels to delegate topic management level tasks to these two user criteria. For more information on these two user criteria, see Topic managers and contributors for topic page management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Note:

- Any number of personae could be added to both the permission levels. Additional permissions provided at a topic level are additive, not overriding.
- Access flows from the root topic to its sub-tree in a top-down manner.

  Topic manager and **Topic contributor** can only make changes from the level they have been provided access to and further down the sub-tree.

Customize topic pages with various templates

Design topic pages with various custom-made templates to suit the tone of the topic for an enhanced user experience.

Before you begin

Role required: taxonomy_admin

About this task

Customize topic templates to improve your user experience. Each topic requires a different way of presentation for optimal customer engagement.

- Decide whether to change the appearance of the parent topic or the entire sub-tree.
- Make different topic sub-trees look different if the topic requires it.
- Easily switch to the default template for the parent topic, the sub-tree topics, or all topics.
- Preview the appearance before you publish.

Note:

Ensure that you have San Diego installed along with Employee Center app version 24.0.5 to use the feature.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Taxonomies**.
   You can choose any taxonomy and the topics within the taxonomy to assign a custom template.
2. Select your preferred template from the list of templates to customize the chosen topic page.
3. **Optional:** Click **Preview template** to view the topic page in the new template before applying.
4. **Optional:** Click **Apply template to child topics** to apply the template for all child topics.

   Note:

   - All scheduled content, such as a campaign or content targeted for the respective topic must be rescheduled after a new template is applied to a topic page.
   - When you clone, move, or create a topic, the default template is automatically used. You must assign the desired custom template to the topic.

5. **Optional:** Click **Reset to default templates** to remove the customization and reset to the default template.
6. Click **Save** to publish.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
Customization of topic pages enables users to have better representation and autonomy in presenting different content.

Simplified topic page template cascade rule

Design topic pages with different templates using simplified cascading rules that provide a better designing experience for curators.

A few modifications have been made to the topic page cascading rules to streamline the process of customizing topic pages.

- When a parent topic cascades its template to its child topics by selecting **Apply template to child topics**, it overrides any changes made to a child topic, on the topic level, and it adapts to the cascaded rules from the parent.
- If you move a child topic from one parent topic to another, the child topic reflects the template cascaded by the new parent topic.

> **Note:**
> If you try to move a child topic from one sub-tree to another, you receive a warning stating that you will lose the current changes present in the topic page.
>
> The feature upgrade clones the applied template when you clone a topic.

Create topic page template

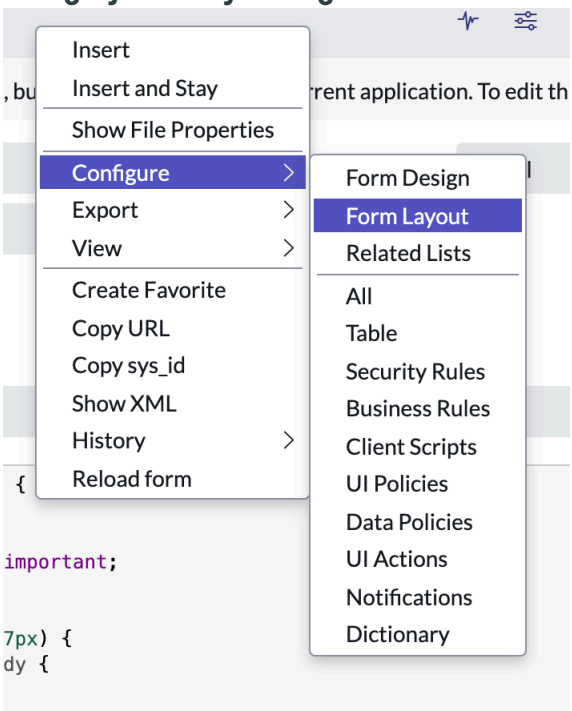
Create customized topic page templates to present different types of topics in distinguished manner to enhance customer engagement.

Before you begin
Role required: sp_admin

Application scope: Employee Center

About this task
Assign various topic templates based on the content after you create or clone a new topic page. For more information, see Create and edit a page using the Service Portal Designer.

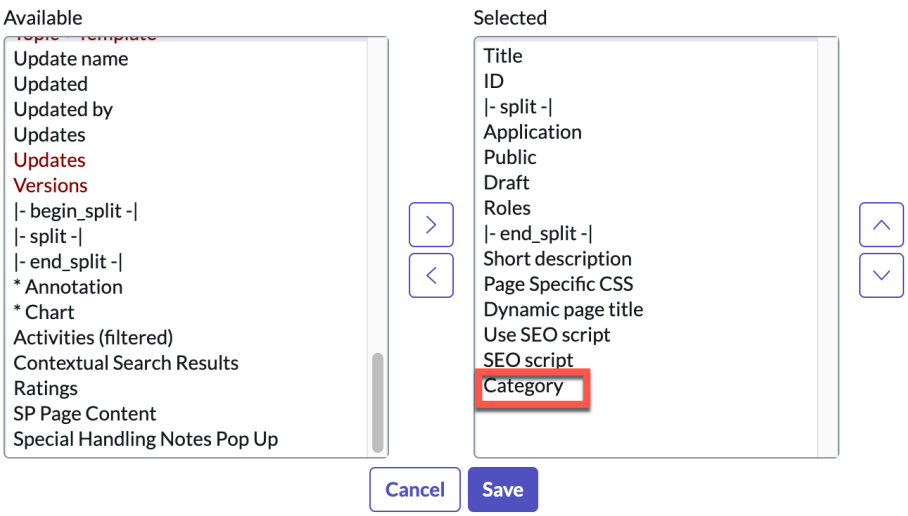
For design recommendations for the topic page templates, see Curated Experiences –#Topic Page Templates UX Guidance [KB1002813].



> **Note:**
> It is advised to clone a topic page and make the required modifications instead of creating one.
>
> This would ensure consistency among the topic pages.

Procedure

1. Navigate to **Service Portal** > **Pages**.
2. Select the topic page template you have created.
3. To make **Category** available on the page, right-click and navigate to **Configure** > **Form Layout** to make **Category** visible, which is by default inaccessible.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Category visibility setting

4. Add **Category** to the **Selected** list and **Save**.

Category field in selected list

Note:
It is essential to set the **Category** to **Taxonomy**. Only the templates set to **Category**, **Taxonomy** are visible in the topic form template list.

Translated Knowledge Base article attachment behaviour

Use the upgraded translated Knowledge Base article attachment feature to find a Knowledge Base article in your own language on topic pages. As an admin, easily link all translated articles. As an employee, quickly find different translated versions, enhancing the navigation experience in different topic pages.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Connected content section in the topic pages has been upgraded to accommodate easier bulk linking and removal of translated Knowledge Base articles for admin users.

With this upgrade, adding any translated version of a particular Knowledge Base article connects all its translated versions to the same topic. Similar logic applies when one of the translated articles is disassociated from the topic. In this case, all the translations for that article are automatically removed.

Any Knowledge Base article translation created after the initial linking to a topic gets automatically connected to the respective topic.

For both association and disassociation of the translated versions, notifications appear on the screen warning you of the automatic changes that were made.

Notification for automatic changes

Scenario	Notification
All translations automatically being associated to a topic, when one of the translated versions is linked.	All translated versions will be automatically added.
All translations automatically being disassociated from a topic, when one of the translated versions is deleted.	All translated versions of the deleted Knowledge Base article was automatically removed.

Translated Knowledge Base article view on Employee Center

As an employee user, view articles in your preferred language by using the respective Employee Center settings. If the preferred language translation is not available for any article, it is visible in the default language. The default language is configured by the *glide.sys.language* system property.

The feature applies to the Recommended for you section in the Employee Center portal and Now Mobile app.

Add all translated Knowledge Base articles after an upgrade

Complete bulk tagging after you upgrade Employee Center by running the utility script. You can determine how many disassociated Knowledge Base article translations and unlinked topics that you have, using this script.

Before you begin
Role required: esc_admin

About this task
Upgrade to the Employee Center app version 25.0.3 to use the script to evaluate if all your Knowledge Base article translations are correctly connected to their respective topics.

You can run the utility script to bulk tag all translated versions of Knowledge Base articles to all the respective topic pages at once.

Procedure

1. Append the UI link `sn_ex_sp_get_unlinked_translated_kb.do` to the end of your instance URL.
   Select one of the following buttons populated by the script:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Topic with unlinked knowledge article count**, which provides the number of topics with one or more unlinked Knowledge Base article translations.
- **Unlinked translated knowledge articles count**, which populates the exact number of unlinked translated article versions.

2. To complete the association, select **Link all translated knowledge articles**.
3. **Optional:** To update the count before linking, select **Refresh list**.

Result

Link all unassociated translations of Knowledge Base articles to their respective topics after upgrading the Employee Center app to the latest version of San Diego or Rome.

Connect content to topic pages with the topic list selector

Get a uniform Service Catalog item-to-topic association experience with the topic list selector on Employee Center.

Before you begin

Role required: catalog_builder_editor, taxonomy_admin

User criteria required: Taxonomy Manager, Taxonomy Contributor, Topic Manager, Topic Contributor.

About this task

You can associate any Service Catalog item to multiple topic pages using the topic selector component. The feature enables easy content-to-topic association for the Catalog Builder.

Note:
The topic list selector feature is available for customers starting with Xanadu release.

Procedure

1. Navigate to **All** > **Service Catalog** > **Catalog Builder** and click **Create a new catalog item**.
2. Click **Continue** on the getting started window.
3. Choose a Service Catalog item template and click **use this item template**.
4. Go to **Location** on the create record producer window.
5. Click **Edit selected topics** on the **Topics** card to add or remove topic pages associated to the Service Catalog item.
   - Select the **Taxonomy** and **Available topics** from the list to associate with your selected Service Catalog item.
   - Drill down until eight levels of sub-tree topics to associate with your Service Catalog item.

Result

- Choose multiple topics altogether in any active taxonomy to associate with a Service Catalog item.
- Add up to eight levels of sub-tree topics to the Service Catalog item.

Cross-channel favorites

A cross-channel favorites provides quick access to the content the employees use frequently and offers extensibility for BUs.

Employees can view and access their favorited content directly from the **My Favorites** widget on the Employee Center home page or from the **My Favorites** link on the global navigation bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

By default, favorites (sp_favorite) are enabled for Employee Center and MESP portals for **Requests**, **Articles**, and **Applications** content types.

Note:
The **Favorites** option for **Applications** is available to only EC pro customers as **App launcher** is an EC Pro feature.

Employees can see the favorites icon on the following types of pages or sections:

- Topic page
- Catalog page detail view
- Knowledge page detail view
- Service catalog page
- My applications page
- My applications widget
- Recommended for you widget

You can set up the favorite card details and use the default favorite icon to bookmark content as your favorites. When your employees mark content as favorites, the favorite icon appearance changes to .

Note:
To change the icon, go to **Service Portal** > **Portals** > **Employee Center** > **Quick start config**, and update the icon.

My Favorites

You can access all your favorite items on the widget from **My Favorites** of the Employee Center home page header. Browse the list of your favorites, sort by date or recency, and see card view and list view.

The **My Favorites** widget appears only when you mark some content as your favorite. However, you can show the empty favorites widget on the home page when you select **Show empty state** from the instance options.

Favorites sorting

You can configure the sort order of the favorited items using instance options. On configuration, your employees can sort the favorites from the favorites section in one of the following ways:

- **Recently Accessed**
- **Date Added (newest)**
- **Date Added (oldest)**

To fix issues with alphabetical sort order of favorites, see KB1348001.

Favorites and topic security

You can configure user permissions such as **Available for** and **Not Available for**. When the favorited topic is not marked available for the user, the topic isn't visible from **My Favorites** and on the favorites widget.

For more information, see Enable user criteria for topics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Favorites troubleshooting

Follow these steps to troubleshoot issues with **Favorites**:

- For upgrades, you can allow the RCAs related to favorites.
- Ensure you install and update the latest plugins.
- On the sp_portal table, set **Enable favorite** value to **True**.
- Remember, any customizations may impact the display and functionality of the favorites.
- Favorite applications cannot be viewed from Now Mobile.

Configure favorites option

Manage favorites

Configure favorite content type

Configure the favorites option to help employees personalize the content and easily access the content they frequently use.

Before you begin

Role required: portal admin and sp_admin

About this task

You can configure the favorites and favorite icon. Once you enable favorites for content types such as requests, articles, and applications (EC Pro only), your employees can mark content as favorites.

Note:
Favorites for **Applications** is available to only Employee Center Pro customers as Applications is an Employee Center Pro feature.

You can configure favorites for content types of your choice.

Procedure

1. Navigate to **All** > **Favorites** > **Favorite Content Type**.
2. Specify the content type.
   For example, **Article**.
3. Select **Badge icon** from the available list.
4. Select the **Active** option.

Result

The content type display is configured.

Configure favorite content type on Mobile

Configure the favorites option on Mobile to help employees personalize the content and easily access the content.

Before you begin

Role required: portal admin and sp_admin

Procedure

1. Navigate to **All** > **System Mobile** > **Mobile UI** > **Mobile**.
2. Edit the mobile UI rules to suit your needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

See Mobile UI Rules and configure the following field values.

Mobile UI Rules

Field	Description
Condition	For the **Condition** field, specify `text_02=sysId`, where sysId indicates the the sys_id of the new **Favorite Content Type** record. This rule applies only to the favorite items that belong to this content type.
Parent	My favorites (without image)
Parent Table	Mobile View
Trigger	OnLoad

Mobile UI Rule Action

Field	Description
Target	text_01
Operation	Set UI Style
Value	Example JSON`{ "TextDecorator": { "Type": "Font", "FontName": "now-mobile-icons", "Value": "f15c", "FontColor": "#333E3F" } }`

When the content configuration associated with this content type can have images to render on the favorite card, create another record with the parent value as **My favorites (with image)**

3. Create a function and function instance to suit your needs.
See Create a function and function instances and configure the following field values.

Mobile Function

Field	Description
Table	Favorite (App Use) [sn_ex_sp_st_favorite].
Conditions	Add appropriate conditions so that this function only applies on desired content types.
Parent	Set the table name to *sys_sg_master_item* and document to My favorites (without image).

Result

The content type display is configured for Mobile.

Before you begin

Role required: sn_hr_sp.esc_admin and sp_admin

About this task

You can set up the favorite card details and use the default favorite icon to bookmark content as your favorites. When your employees mark content as favorites, the favorite icon appearance changes to .

Procedure

1. Navigate to **All** > **Favorites** > **Favorite content configuration**.
2. Click **New** or update an existing configuration.
3. On the form, fill in the fields.

Favorite Content Configuration form

Field	Description
Content Type	The type of content on which the favorites icon can appear. The following content types have the favorite icon by default: ○ **Requests** ○ **Articles** ○ **Applications** ○ **Topic page**
Table	Name of the table from which the data is fetched.
Application	The scope of application.
Order	Order in which you want the favorites content to appear. **Note:** The order in the favorite content configuration table doesn't determine the sequence in which content types appear on the navigation of the Browse favorites section of the ESC portal. See Manage favorites.
Active	Option to activate the favorite functionality on the associated content type.
Condition	Conditions to meet for the Favorite functionality. The conditions available are dependent on the table that you select.
Display Configuration	Display settings for the favorite card. Select appropriate configuration to display on the favorite card. Ensure you select minimum fields for performance improvement. ○ **Availability**: The available options are: ▪ Mobile only ▪ Desktop only ▪ Desktop and mobile ○ **Primary field to display** (Mandatory): Select name or short description. ○ **Secondary fields to display** (Optional): Description of article or catalog item. ○ **Image**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Image URL** **Note:** When content type has both the image and image URL, the image takes precedence to display. **Note:** **For optimal performance**, use the primary field and do not specify other fields.
Navigation Configuration	Navigational settings for the favorite icon. Select the following options: ○ **Navigation type** ○ **Internal** You can specify the portal page and parameters for navigation. ○ **Specify Portal page**: You can select from the available options such as Page ID or Field. Based on your selection, provide any additional parameters: ▪ **Portal page** ▪ **Field** ▪ **Template** ○ **URL parameters**: Specify the parameters as required. ○ **External**The user selects the external navigation type between URL and field. For *URL*, the user specifies the URL and parameters (if any). For *`Field`*, the user selects the field from the table.

Note:
When you experience performance issues, use the primary field and do not specify other fields such as Image and image URL.

4. Click **Submit**.

Result
The favorites appears on the Employee Center and MESP portal.

Here's a sample illustration of how the configuration looks on the **Favorites**.

Favorites card and access

For more information on how Favorites appear, see Manage favorites.

Disable favorites

Enable or disable the favorites options to display the favorites icon and access your favorites list for quick use. Favorites functionality is enabled by default on Employee Center and MESP.

Before you begin
Role required: admin

About this task
Using the **Favorites** option, you can do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Display the favorite icon on the supported content types in portal and app.
- Display the **My Favorites** menu item in the portal header.
- Access the list of all your favorites that are bookmarked for quick reference from the menu item.

The **Favorites** feature is enabled by default.

Note:
For portals other than EC and MESP, you can enable the favorites option by selecting the **Enable favorites** from **Service Portal** > **Portals** > **Employee Center** > **Quick start config**.

Use the following steps to disable the favorites option.

Procedure

1. Navigate to **All** > **Employee Center** > **Administration** > **Portal configuration**.
2. Edit the portal to suit your needs.
   For more information on the portal form fields and description, see Create a portal.
3. On the Employee Center portal, deselect the **Enable favorites** option to disable **My favorites** in the portal.
   On MESP, Favorites is enabled by default.

   Note:
   To disable **Favorites** on MESP, contact support.

Result
The Favorite functionality is turned off.

Remove favorites

Enable the RCAs to manage the favorites options from the Employee Center.

Before you begin
Set the Application Restricted Caller Access on the **Table: Portal Favorite**.

Role required: admin

About this task

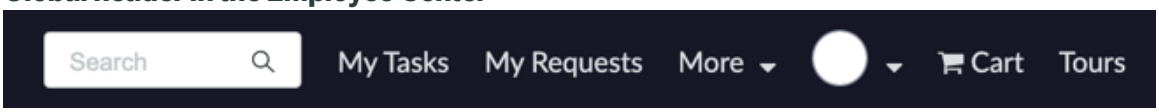
Procedure

1. Navigate to **All** > **System Definition** > **Tables** > **Favorite**.
2. On the sp_favorite, go to the **Application Access** tab.
3. Ensure you select all the following options with the **All application scopes**.
   - Can read
   - Can create
   - Can update

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Can delete

Note:
When you do not select the Delete operation with **sp_favorite**, you are unable to remove the favorite from your favorites. The following message appears.



```
Delete operation against 'sp_favorite' from scope
 'sn_ex_sp' has been refused due to the table's
 cross-scope access policy
Unable to remove this item from your favorites.
```

Result
The **Favorite** functionality is enabled and you can perform the specified CRUD operations.

Employee Center global header

The global header is the first row in the Employee Center portal header. The global header contains menus that enable you to navigate to the My To-dos page, My Requests page, More menu, user profile, and Tours.

Global header in the Employee Center

The global header consists of the following options.

Global header options

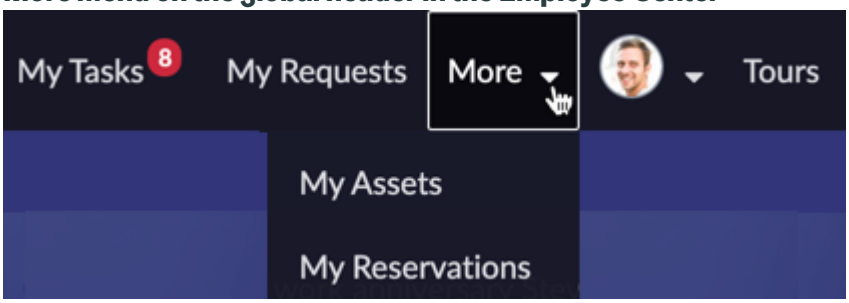
Option	Description
Brand logo	Logo of the company.
Search bar	Enables you to search for the taxonomy content. This option is disabled by default.
My Tasks	Opens the To-dos page.
My Requests	Opens the My Requests page.
More	Shows the additional menu items that you want to add. **Note:** Add any new menu items to the EC Header under the **More** option. Currently, Filtered or Scripted menu items are not supported as Filtered or Scripted List must be top-level Menu Items. .
Cart	Shows the items that you have added to the cart. This option is disabled by default.
Wishlist	Shows items that you intend to buy later. This option is disabled by default.
Tours	Opens guides tours that demonstrate how to use a feature. For example, an administrator can create a task demo with callouts to demonstrate how to perform the task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can enable or disable these options by configuring additional options in JSON format for the Employee Center menu record.

Note:
For performance reasons, the header request count for My Requests is disabled by default.

Add more menu items



Add your own list of items for user-related activities, such as My Assets, My Reservations, My Plans, My Surveys, and My Purchases on the **More** menu.

Before you begin

Role required: admin

Set the scope to Employee Center before configuring the More menu item.

More menu on the global header in the Employee Center

About this task

In the More menu, you can add menu items for user-related activities, such as My Assets, My Reservations, My Plans, My Surveys, and My Purchases. You can enable or disable the More menu on the global header. You can see the **More** menu only when you add more than one menu items. If you add only one menu item in the **More** menu, the **More** menu is not displayed and the name of the menu item is displayed directly on the global header. For more information, see Enable or disable global header options.

You can configure the More menu to display menu items by installing their respective plugins. For Example, My Action Plans is displayed under the More menu when you install the Journey Accelerator plugin.

Procedure

1. Navigate to **All** > **Service Portals** > **Portals**.
   The Service Portal module displays the list of all the available portals.
2. Click **Employee Center**.
3. Next to the **Main menu** field, click **Preview this record** and open the record.
4. In the Menu Items related list, click **More**.
5. In the Menu Items related list, click **New**.

   Note:
   Add any new menu items to the EC Header under the **More** option. Currently, Filtered or Scripted menu items are not supported as Filtered or Scripted List must be top-level Menu Item.

6. On the form, fill in the fields.
   For more information about the form fields and descriptions, see Menu Item form.
7. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable or disable global header options

Enable or disable the global header options by configuring additional options in JSON format for the Employee Center menu record.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Service Portals** > **Portals**.
   The Service Portal module displays the list of all the available portals.
2. Click **Employee Center**.
   If the Employee Center form is read-only, the message `To edit this record click here` appears at the top.
3. Click **here** to edit the form.
4. Beside the **main menu** field, click the **Preview this record** icon to open the Employee Center menu record.
5. Edit the **Additional options, JSON format** field.

   Note:
   For a topic to show up in the **Header Menu**, ensure that you add content to the topic.

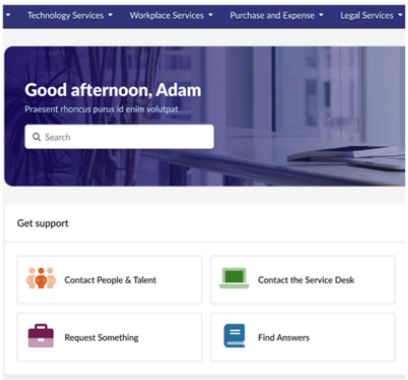
6. Click **Update**.

Get support

Get support helps you with a centralized and easy-to-navigate section for quick help from the employee center.

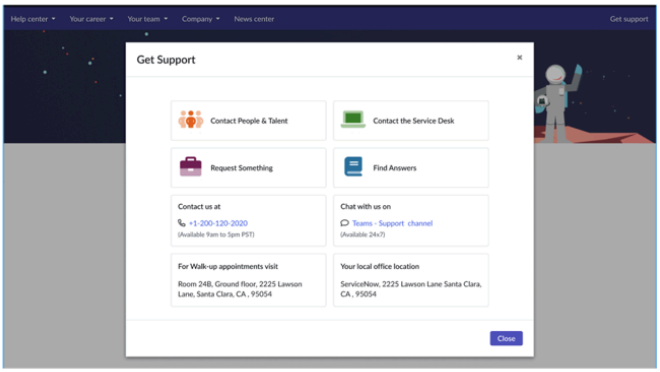
Before you begin
Role required: SP admin or ESC admin

About this task
Admins provide a central place for employees to get help quickly without having to switch context. You can include useful resources available for your employees.



- Enable the widget for an enhanced get support experience.
- Populate the modal with quick link, static content, or a custom widget.

You can render **Get Support** as a widget on the home page or as a modal window. For more information, see Configure advanced portal navigation



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get support

As a home page widget

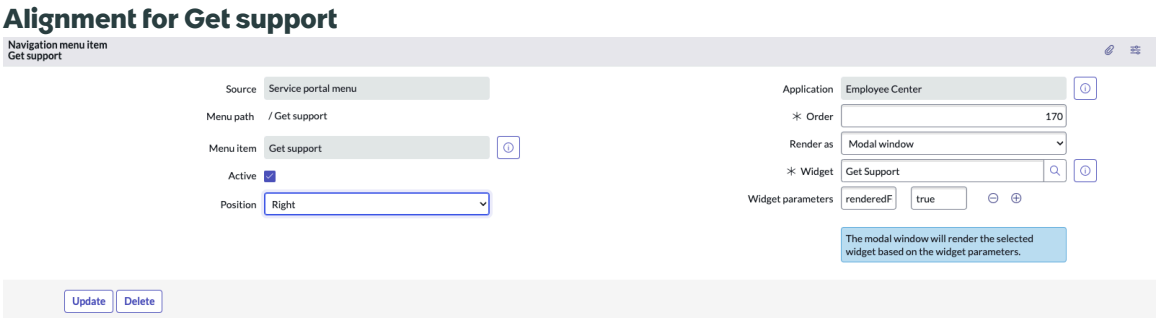
As a modal window

Procedure

1. Navigate to **All** > **Employee Center** > **Get support**.
2. Click **New** or open an existing record.
3. Select **Table** from the available options.
   - Quick Link
   - Static Content
4. Select **Content** from the available options.
   - For **Quick Link**, select the **Table name** (sn_ex_sp_quick_link) and **Document**. For more information on quick links, see Quick links.
   - For **Static Content**, select the **Table name** (sn_ex_sp_static_content) and **Document**. For more information on static content, see Configure static content.

   Note:
   The admin can configure any number of items. The out-of-the-box **Get support** has a maximum of eight items.

5. Specify **Order**.
6. Select **Portal** from the available options.
   For example, to associate a quick link to Employee Center Pro Kiosk, select Employee Center Pro Kiosk.
7. Click **Save**.



Result

Get support is configured by default as part of the navigation.

What to do next

You can proceed to select the Get support section to appear as a modal window by selecting the widget and providing the widget parameters as explained in Configure advanced portal navigation. You can also configure the alignment as shown in the following image.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

.

Configure static content

Static content helps create a central place for adding all the useful content for employees.

Before you begin

Role required: Admin

Procedure

1. Navigate to **All** > **Employee Center** > **Static Content**.
2. Click **New** or open an existing record.
3. On the form, fill in the fields.

Static content form

Field	Description
Title	Name of the record.
Active	Check the box to activate.
Rich text	Descriptive information for the static content.
Available for	Option to make the static content available for only to select users, groups, roles, and more.
Not available for	Option to make the static content unavailable for.

4. Click **Save**.

What to do next

You can add the useful static content in the Get support section.

Setup search experience features

Enhance the search experience.

Search experience features

Feature	Description
AI Search for Curated Experiences	Align the AI search to limit the search to the content associated with the taxonomy.
Personalized Answers on Employee Center	Enable employees to quickly find their leave balance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Search experience features (continued)

Feature	Description
SharePoint Online Search Connector	Connect the Employee Center with SharePoint to enable employees to search for information resources from the portal. **Important:** Starting with the Yokohama release, SharePoint Online Search Connector is being prepared for future deprecation. It is hidden and no longer activated on new instances but continue to be supported. For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

AI Search for Curated Experiences

Align the AI search to limit the search to the content associated with your taxonomy.

Before you begin

Role required: admin

Deactivate the existing taxonomy so that the search configurations pick up the content from your taxonomy.

About this task

For new customers, the AI search is enabled by default.
If you have installed a version of Service Portal prior to Rome, and want to use the Employee taxonomy that is provided by default with the Employee Center portal, you must run a fix script. For more information, see Run fix scripts to update Employee Center.

Procedure

1. Navigate to **All** > **AI Search** > **Search Experience** > **Search Sources**.
2. Click **ESC Portal Catalogs**.
3. In the **Conditions** field, set the **Taxonomy topic . Taxonomy** filter condition to point to your taxonomy to enable the search to focus on the content associated with your taxonomy.
4. You can modify the other default filter conditions or leave them as-is.
5. Click **Update** to return to the AI search source list.
6. Click **ESC Portal Knowledge Bases**.
7. In the **Conditions** field, set the **Taxonomy topic. Taxonomy** filter condition to point to your taxonomy to enable the search to focus on the content associated with your taxonomy.
8. You can modify the other default filter conditions or leave them as-is.
9. Click **Update**.

Improved search functionality

The improved global search provides narrowed down content browsing on the global search for quicker and more specific content browsing experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The improved global search by topic facets provides filtered data based on its association with the a topic and its sub-topics.

- The supported content types for the search facets include content available on the Unified Browse Widget, like, Service Catalog, Knowledge Base articles, and learning content.
- The topic facets filter content by hierarchy. Select a sub-topic to get specific hierarchical data.
- The base system facet levels available are two. You can add up to 10 levels.

  For more information on adding facet levels, see Configure search by the topic facets.
- The two sort options available on the search are **Most relevant** and **Most recent**.
  - Most relevant is the base system sorting option.
  - Most recent filters the data by date.

Note:
You must have the Employee Center 28.0.4 installed along with Utah for the search by the topic facets feature to function.

Configure search by the topic facets

Configure the search by the topic facets, which suits your organizational requirements.

Before you begin
Role required: esc_admin

About this task
The topic facets help filter out content by the hierarchy; topics and sub-topics. You can choose a single or multiple facets to narrow down your search results.

The supported content types for the feature are Service Catalog items, Knowledge Base, and learning content.

The base system facet level support is two. You can add up to 10 levels of facets.

Procedure
1. Navigate to **All** > **AI Search** > **Search Applications** > **ESC Portal Default Search Application**.
2. Go to the **Facets** tab and click **New**.
3. Create a facet with the relevant details according to the topic or sub-topic.

Change the number of returned search results

Specify the maximum number of search results the system should return.

Before you begin
Role required: esc_admin

About this task
- Search content on the topic pages.
- Support for Knowledge Base article, Learning content, and Service Catalog item content types are available with the feature.
- Change the default number of results displayed according to your organizational requirements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **AI Search** > **Search Experience** > **Search Applications**.
2. From the applications list, click **ESC Portal Default Search Application**.
3. Change the **Search Results Limit** to your desired number from the base system value 12.

Configure search source when AI search is disabled

In Employee Center, the AI search is enabled by default. In situations where the AI search is disabled, you can configure a search source from which to fetch search results.

Before you begin
Role required: admin

About this task
The search source configuration limits the search to the content associated with the taxonomy. Employee Center uses the Zing search engine if the AI search is disabled.

Procedure

1. Navigate to **All** > **Service Portal** > **Portals**.
2. Click **Employee Center**.
3. From the **Search Sources** related list, click **New** to add a search source.
4. On the form, fill in the fields.
   For more information, see Define a search source.
5. Click **Submit**.

Configure search navigation tabs

In Employee Center, the AI search navigation tabs are enabled by default. You can configure a search navigation tab on the search results.

Before you begin
Role required: admin

Ensure you understand the AI search and indexed sources. For more information, see Create an indexed source and Configuring navigation tabs in AI Search.

About this task
The search navigation tabs help you to refine their search query results by search source.

Procedure

1. Navigate to **All** > **AI Search** > **AI Search Index** > **Indexed Sources**.
2. Use the available **AI Search Indexed Sources** or click **New**.
   By default, the following sources are available for Employee Center.
   - Guided Self-Service
   - Applications
   - Articles
   - News

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Events

Note:
Ensure you install the required applications.

3. Click **Submit**.

Result
The configured sources appear on AI search results in a tab. For more info on how tabs appear in AI search, see Configure application visibility and access.

Configure click-rank search relevance

Enhance the topic page search rank based on the clicks and usage of a topic by the employees.

Before you begin
Role required: Admin

Important:
The click-rank population of search results is available for the Xanadu family release and beyond. For Washington, the behavior doesn't work due to a limitation.

Ensure you understand the AI search and search suggestions.

About this task
When employees search for topic pages, such interactions influence and improve future search rankings and the content discovery for the organizations. Determine click rank population for search results from the clicks and usage of the topic among employees.

Procedure

1. Understand the basics of search events and suggestions from Analyze search relevancy.
2. Navigate to **All** > **Search Suggestions** > **Search Events**.
3. Review **Click rank** for search query and other details.
   Click rank shows which search result you selected.
   - If you click the first result in the list of search results, the click rank value is 1. If you click the 6th result listed, the click rank value is 6.
   - If you click multiple search results, the click rank is the highest listing value. For example, if you click the first result, return to the search page and click the 6th result, return to the search page and click the 4th result and find an answer, the click rank is 6 (not 4).

   A click rank of 0 means that you don't select any search result, or that you selected a result answer card in AI Search. Lower positive click rank values indicate that the top search results are the most relevant, so the goal is to reduce the average value for this field.

Result
Based on this configuration, your employees can easily find the relevant content based on click rank and portal-specific search results.

Change the number of returned search results

Specify the maximum number of search results the system should return.

Before you begin
Role required: esc_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

- Search content on the topic pages.
- Support for Knowledge Base article, Learning content, and Service Catalog item content types are available with the feature.
- Change the default number of results displayed according to your organizational requirements.

Procedure

1. Navigate to **All** > **AI Search** > **Search Experience** > **Search Applications**.
2. From the applications list, click **ESC Portal Default Search Application**.
3. Change the **Search Results Limit** to your desired number from the base system value 12.

Configure search source when AI search is disabled

In Employee Center, the AI search is enabled by default. In situations where the AI search is disabled, you can configure a search source from which to fetch search results.

Before you begin
Role required: admin

About this task
The search source configuration limits the search to the content associated with the taxonomy. Employee Center uses the Zing search engine if the AI search is disabled.

Procedure

1. Navigate to **All** > **Service Portal** > **Portals**.
2. Click **Employee Center**.
3. From the **Search Sources** related list, click **New** to add a search source.
4. On the form, fill in the fields.
   For more information, see Define a search source.
5. Click **Submit**.

Enable Now Assist genius results

Enable the Now Assist in AI Search setup to use Now Assist genius results.

Before you begin
Role required: esc_admin

Procedure

1. Navigate to **All** > **Self-Service** > **AI Search** > **Now Assist in AI Search Setup**.
2. Enable the Now Assist Genius Results by selecting the check boxes for each application and select **Save changes**.

Genius results in search profiles

Search profile name	Application name	Now Assist Genius Results
Employee Center Pro Kiosk Search Profile	Employee Center Pro Kiosk	Now Assist Q&A; Now Assist Actions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Search profile name	Application name	Now Assist Genius Results
ESC Portal Default Search Profile	Employee Center	Now Assist Q&A; Now Assist Actions
Service Portal Default Search Profile	Service Portal	Now Assist Q&A; Now Assist Actions
NowMobile Default Search Profile	Now Mobile® Admin - Help center Now Mobile® Admin - Home Now Mobile® - Help center Now Mobile® - Home	Now Assist Q&A; Now Assist Actions

Result
You have enabled Now Assist in AI Search to use the Now Assist genius results functionality.

Note:
Now Assist genius results is available Xanadu release onwards.

Personalized Answers on Employee Center

Get personalized Answers about your leave balance within the ServiceNow® system or with an integrated third-party application.

With this feature, the employees can search for personal, relevant data, using AI- Search to get the Personalized Answers. The search works whether the data resides with ServiceNow® or any other integrated third-party application.

There are two third-party integrations supported for the Personalized Answers- time off, Kronos and Workday.

Kronos is supported in India, China, and North America. Workday is supported in Australia.

The Personalized Answers- time-off integration enables employees to find information about their leave balances.

In addition to searching for leave balances specifically, employees can also search for information such as 'how much sick leave do I have left'.

Set up Personalized Answers for PTO

Set up a third-party-integrated instance to provide employees with Personalized Answers for leave balances on Employee Center.

Before you begin
Role required: esc_admin

About this task
Set up the Personalized Answers, an AI-search enabled feature, for information like leave balance or more on the Employee Center search page.

The default third-party integration for the PTO balance search is Kronos and Workday but you can add your desired integration app for any other information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Employee Center does not provide Workday-integration by default.

A live query is answered based on an OAuth authentication on the Kronos-integrated instance.

The following plugins are required for the set-up of this feature with Kronos:

- sn_kronos_spoke
- app_ex_integrated_answers
- com.glide.hub.action_step.payload

For more information on ServiceNow® plugins, see List of plugins

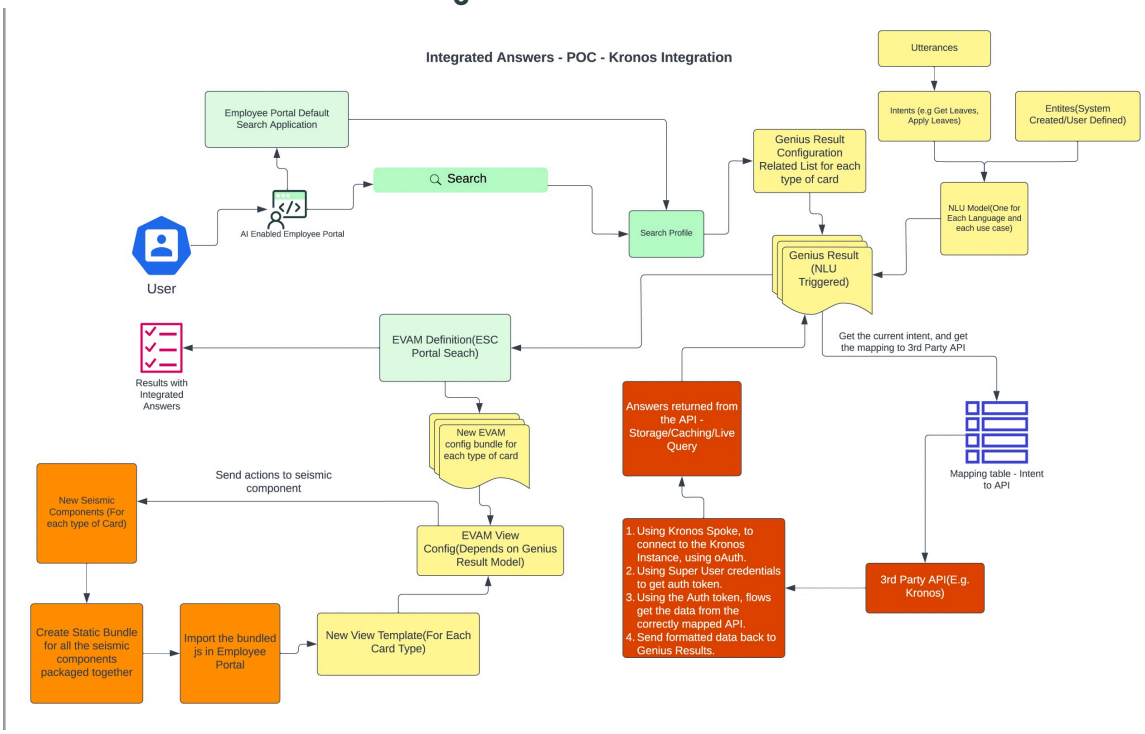
Note:
app_ex_integrated_answers plugin runs with Employee Center version 26.0.1 and Employee Experience Foundation version 25.0.1. When you install the plugin, it prompts that the appropriate versions of the said applications are going to be installed.

After the plugins are installed, Set up the UKG spoke to register Kronos as an OAuth provider and authenticate requests from ServiceNow®.

After the UKG setup, ensure that the following prerequisites are established, before training and publishing the NLU model:

Note:

1. The application registry, connections, and credentials must be within the Kronos application scope.
2. The **sys_user.list** must have the **Employee number** field in its **Personalized List Columns**. The employee number on the Employee Center portal is synced with the Kronos employee numbers.



If both the prerequisites are in order, move on to the following procedure:

Procedure

1. Navigate to **All** > **NLU Workbench** > **Models** > **Personalized Answers Leave Model**.
   The **Personalized Answers Leave Model** link should be in Draft state.
2. Select **English**.
3. Select **Intents** on the **Personalized Answers Leave Model** page.
4. Select **Train model** on the top right-hand corner of the page.
5. To view the **Publish your model** widget, after the training is over, go back to the **Personalized Answers Leave Model** page.
6. Select **view phase**.
7. Select **Publish**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Personalized Answers- Kronos integrated

8. **Optional:** To test the published model, navigate to **All** > **NLU Workbench** > **Models** > **Personalized Answers Leave Model** > **Intents** > **Try model**.

Result

The new genius result card is available on the search result page integrated with the Kronos data.

Use the Personalized Answers on your Kronos-integrated Employee Center portal to seek information on your remaining leave balance.

Note:
Admins can review employee search logs in the **sys_search_event** table.

Configure related actions for Personalized Answers

Configure the leave balance-related actions or any other information like payroll, medical benefits. Configure the related actions depending on the data type.

Before you begin

Role required: esc_admin

About this task

Use the **Personalized Answers** related actions to act on the information found using the Personalized Answers on Employee Center. Set up different third-party integration, different types of information, and configure the action URLs as required.

Procedure

1. Navigate to **All** > **Personalized Answers** > **API Mapping Configuration** > **Get Leave balance**.
2. Make the **View Policy** and **Request for Leaves** functional on the personalized answer page, by configuring **Primary action URL** and **Secondary action URL**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The action names **View Policy** and **Request for Leaves** are default features. You can configure the action URLs, as suitable.

3. Enable multi-location support for the third-party integration by selecting the **Multi-location** check box.

Note:
If you want to get the leave balance data for multiple locations, you must select the check box. Otherwise, the data for any one location is considered as default.

Configure the data fetch type

Configure the data fetch type according to your organizational requirement for Personalized Answers- time off on Employee Center.

Before you begin
Role required: esc_admin

About this task
Use any data fetch type, Live Call, AI Search, and Glide Query as required for the Personalized Answers- time off feature on Employee Center.

Procedure

1. Navigate to **All** > **Personalized Answers** > **Third Party Integration**.
2. Select the third-party integration, Kronos or Workday.
3. Choose **Live Call**, **AI Search**, or **Glide Query** according to your organizational need.

Note:
Workday supports **Live Call** if the Workday-integration is already available to you. Employee Center does not provide Workday-integration by default.

4. **Optional:** Navigate to **All** > **System Definition** > **Tables** > **Employee Time off balance** to view the source of the **AI Search** and **Glide Query** data.

Configure topic search filter

Customize search experiences for different portals by configuring the search application and filters.

Before you begin
Role required: Admin

About this task
You can configure the Topic content widget for a portal-specific search application. Using this, when a Topic page is opened in a portal the same search application and search filter are being applied.

- Configure portal-specific search applications for the Topic search widget.
- Customize search filters and settings for each portal while using cloned topic pages or portals.
- Improve overall search efficiency as search settings are inherited from the portal context.
- Deliver search results that are consistent with the portal-specific search settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Content Taxonomy** > **Topic Search Configuration**.
2. Click **New** or open an existing record.
3. On the form, fill in the fields.

Topic search configuration form

Field	Description
Portal	Name of the portal `Employee Center`.
Application	Name of the application `Global`.
Widget instance	The Employee Center widget instance, for example, `ESC Topic Page`. In the lookup, add filter condition (widget=Topic content) to filter the topic content widget instances.
Search application	Default search application, for example, `ESC Portal Search Application`.
Search filter	List of active search filters based on the search application such as ESC Portal catalogs, ESC Portal Knowledge bases, and Guided Self-Service.
Active	Active indicates the status of the topic search configuration.
Order	Order in which the items are sorted and displayed. Default value:100.

4. Click **Save**.
   Topic search is now configured.

Result

Based on this configuration, your employees can filter content by Search Filter and view results specific to portal and topic search results. For example, when you select ESC portal catalogs as a filter, employees can filter and view the catalogs only.

Setup task management and integration features

Enhance employee productivity and drive portal consolidation.

Task management features

Feature	Description
Recommended features	
My active items widget configuration	The My Active Items widget displays user activities requiring input or review, organizes items by priority, and provides summary and detailed views.
Employee tasks page	Enable employees to view and complete all their tasks on a single page
Employee requests page	Enable employees to view all their requests on a single page in the Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task management features (continued)

Feature	Description
Action framework	Define actions items for quick access.
Employee profile	An Employee Profile is a comprehensive, unified view of an employee's work-related information that enhances business decisions, workflows, and personalization across applications.
App Launcher (Employee Center Pro)	The App Launcher widget provides employees with one-click access to all their web business applications, both SSO-integrated and custom non-SSO applications.
Expand portal capabilities with the following features:	
Approvals hub (Employee Center Pro)	The Approvals hub enables approvers to make informed and prioritized approval decisions by providing in-context information and a consistent layout for different approval types.
Organization chart in Employee Center Pro (Employee Center Pro)	The organization chart enables employees to find information about other employees and understand the team structure.

Action framework

The action framework includes some frequently used action items for quick access. You can use several default actions and create custom actions.

Using the action group framework, you can define these actions that a user can perform in a context.

- Create actions and action groups for ready use as a widget.
- Configure a group of actions that a user can perform.
- Use the default actions and action groups or customize the actions to suit your business needs.
- Manage the display preferences and user criteria.
- Improve employee productivity with access to quick actions.

Here are one-line descriptions about the components in action framework.

- **Action**: A single, defined step or operation within a workflow or process. For example, approve or reject.
- **Action group**: A set of actions for organizing related actions within a flow or subflow. For example, approvals action group has a default **set of actions** Approve and Reject that you can use from the approval page.
- **Action type**: A classification or category that specifies the kind of action to be performed. Type is used for easier identification and use.
- **Action framework**: A structured approach or set of guidelines for organizing and executing actions to achieve specific business goals.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Using actions that are relevant to the user journey, you can complete workflows quickly. For example, you can use the default approve or reject actions to process the requests directly from the approvals page.

Employee Profile action group

Employee Profile action group provides quick access to frequently used action items, such as, viewing the org chart, using email directly or calling. You can edit the default behaviors of the actions to match your requirements.

Approvals experience action group

Approvals experience action group provides quick access to approve or reject the requests directly from the approvals page. You can modify the actions to suit your business requirements.

Manager Hub action group

Manager Hub action group provides quick access to the action items available on the employee cards to view, call, or access email directly on the **Your team** page of the Manager Hub. You can customize the actions to suit your business requirements.

Configure actions

Using the action framework, configure actions and associate a set of actions as action groups for use in the different contexts.

Before you begin

Role required: sp_admin or sn_hr_sp.esc_admin

About this task

Action items provide quick access to actions that you perform in various contexts. You can modify the actions to suit your business needs. For example, you can use the default approve or reject actions to process the requests directly from the approvals page.

Procedure

1. Navigate to **All** > **Employee Center** > **Action framework** > **Actions**.
2. Click **New** or edit an existing record.
3. On the form, fill in the fields.

Actions form

Field	Description
Action label	Name of the action label that appears on the button.
Action type	Select the action type from the available list.
Active	Check the box to activate the action
Action icon	Icon of the action.
Table	Name of the table to which the action is associated. When a record from this table is open, this list action appears. For approvals, select sysapproval_approver.

4. Click **Save** or **Update**.
5. On the **Action parameters** related list, click **New** or edit an existing record.
6. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Action parameters form

Field	Description
Action parameter name	Name of the action parameter.
Parameter type	Select the parameter type from the available list such as JSON, string, or reference.
Is client parameter	Check the box to use the parameters in the client script.
Is display value	Check the box to display the value. By default, the value in sn_ex_sp_action_parameter is set to false and is only visible in form if the parameter type is reference. ○ When true, you get the display value of the field. ○ When false, you get the actual db value of the field.
Action parameter value	This option appears only when you select *string*. Parameter value in a string, for example *approved*
Table	Reference table to which this component is tied to. When a record from this table is open, this list action appears. For approvals, select sysapproval_approver. This option appears only when you select *Reference*.
Field	Field from the table that you can select from the element tree such as *Sys ID*. This option appears only when you select *Reference*.
JSON parameter	JSON string you want to specify. For example, *{"param": "value"}*. This option appears only when you select *JSON*.

In the OOTB actions,

- The *isEsignatureEnabled* value is **true** by default, the esignature approval authentication window appears.
- The *broadcastEventName* value broadcasts an event passed in the parameter to hide the buttons when esignature is successful to enable comments before the esignature scenario.

Note:
For custom actions, you can customize these two parameters.

7. Select **Save** or **Update**.

Result
Action is configured. You can combine a set of related action items as a group.

Configure action group

Configure a set of related action items as an action group.

Before you begin
Role required: sp_admin or sn_hr_sp.esc_admin

About this task
Action group provides quick access to action items such as approve or reject the requests directly from the approvals page. You can modify the actions to suit your business needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **Action framework** > **Action Groups**.
2. Click **New** or edit an existing record such as *Approvals action group*.
3. Edit the **Action group name** or click save or update.
   Proceed to add multiple actions into a group using the Action m2m group table.
4. On the **Action group M2Ms** related list, click new or update an existing record.
   a. Select the **Action** from the available options such as **Approve** or **Reject** or Configure actions.
   b. Edit the **Order** of the action item.
   c. Select **Primary** to set the option as primary.
   d. Select one of the following **Action Visibility** options.
      - Visibility to Self: Visible to owner or self only
      - Visibility to Manager: Visible to the manager of the user
      - Visibility to all
      - Visible to all except Self: Visible to all except self
      - User criteria: Select the criterion of the users for whom the action is visible
      - Advanced: Define a custom visibility with the Advanced option through a script. For example, `answer = context.state.toString() === 'requested';`
5. Click Save or Update.

Result
Action group is configured to provide quick access to the actions. For example, approvals action group has a default set of actions **Approve** and **Reject** that you can use from the approval page.

Configure action types

Configure action types based on the behavior action as an action type.

Before you begin
Role required: sp_admin or sn_hr_sp.esc_admin

About this task
Action group provides quick access to approve or reject the requests directly from the approvals page. You can modify the actions to suit your business needs.

Procedure

1. Navigate to **All** > **Employee Center** > **Action framework** > **Actions**.
2. Click **New** or edit an existing record.
3. On the **Action type**, search and select an existing record or create a new record.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

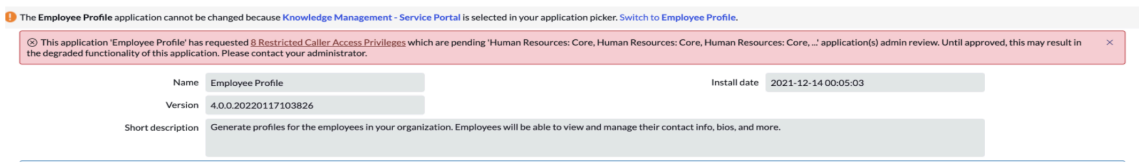
Action types form

Field	Description
Action type name	Name of the action type.
Execute client script before server script	Option to select when the client script needs to be executed before the server script.
Active	Check the box to activate the action type.
Server script	Server scripts run on the server. Scripts are executed in th
Server parameters	Server parameters that are required to execute the function for example `State, sys_id`
Client script	Client scripts run on the client side.
Client parameters	Client parameters that are required to execute the function.

5. Click Save or Update.

Result
Action type is configured. You can associate this **Action type** to Actions.

Employee profile



A unified employee profile provides the employee information and offers extensibility for BUs.

Download the latest version from ServiceNow Store to access the work-related employee profile without navigating to multiple systems. Configuration-driven profile design to introduce fields, actions, and widgets related to work-related information.

- Name: **Employee Profile**
- Scope: sn_employee

Note:
To manually approve the Requested restricted caller access (RCA), go to sys_store_app.list from navigator. Header has an error message with a link to the RCAs.

Requested restricted caller access

You can allow the RCAs.

You can have a comprehensive view of the employee information to drive business decisions, create intelligent workflows, and deliver personalization across end-user facing applications. Using the employee profile, you can:

- Configure the employee profile design and display preferences.
- Create a modern profile UI to match the social and enterprise needs.
- Enable employees to create and manage personal information from one page.
- Enable profile extensibility across multiple business units.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Configure work-related info as tabs and personalize the public profile visibility settings.
- Manage the data visibility and extensibility with a scalable profile for future use cases.
- Improve the overall employee engagement and experience.

Configure employee profile

As an admin, you can create an active employee definition and configure the profile components. Manage updates to the employee profile from a central location. See Configure the Employee Profile overview widget.

Note:
Actions that require the *admin* role, can also be performed with the *sn_employee.admin* role.

Use employee profile

As an employee, you can view, edit, and update the privacy preferences profile. See View employee profile

Create an active employee definition

Create an active employee definition to generate the employee profiles.

Before you begin

After you install the employee profile, create an active employee definition to opt in the new unified employee profile. An active employee definition is a condition that determines who an employee is. You can have only one active employee definition per domain.

Note:
The employee definition table is domain-separated.

Role required: sn_employee.admin

Procedure

1. Navigate to **Employee Profile** > **Employee Definition**.
2. On the employee definition page, click **New**.
3. Select one of the available **Table** options.
   - To create an employee definition from a user table, select **User**.
   - To create an employee definition from HR records, select **HR Profile**.

     Note:
     The HR profile table is available only when you install the Human Resources Scoped App: Core [com.sn_hr_core] plugin.

4. Create a condition from the available filters and clauses.
   For example, make sure that the **First name** starts with **All** to generate the employee profiles that match that condition.

   Note:
   The employee definition condition should be on the indexed columns. Also, keep the condition simple by using only a few filters.

5. To mark the employee definition as active, select **Active**.
6. Click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Generate Employee Profiles** option appears with the following message stating that you can regenerate the employee profiles as per the updated definition and generate employee profiles.

Note:
When you have multiple employee definitions, ensure you deactivate the current active definition before activating the other.

7. Click **Generate Employee Profiles**.
   The confirmation appears stating that employee profiles are being created.

   After you install the employee profile, create an active employee definition to opt in the new unified employee profile. An active employee definition is a condition that determines who an employee is. You can have only one active employee definition per domain.

Result

Once employee profiles are generated, you receive an email with the count and the link to view the employee profiles. Verify the new employee profiles created based on your active employee definition from the **Employee Profiles** table. You can also sync profile generation periodically.

Note:
Employee profiles are added incrementally when the active employee definition matches; for any new users that are added to the user table after generating the employee profiles.

What to do next

Once you have employee definition, you can proceed to opt for the employee profile.

Opt in to the employee profile

Enable the new employee details and design by opting in to employee profile.

Before you begin

Role required: sn_employee.admin

Before opting in, create an active employee definition. For more information, see Create an active employee definition.

Note:
With Employee Profile (com.sn_employee) plugin, employee profile opt-in is available for EC and EC Pro.

Procedure

1. Navigate to **All** > **Employee Profile** > **Setup**.
   The Opt-in to Employee Profile page appears.
2. Select the **Yes, opt in to employee profiles** option, and select **Opt-in**.
   On the opt-in, employees can use the new employee profile and manage their contact info, bios, and more.

Note:
When you opt in to or opt out of the employee profile, the `sn_employee.employee_profile_enabled` value changes.

Opting in helps with using employee profiles in AI and ML profile data models.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- For non-HR customers, AI and ML models are based on the Employee Profile [sn_employee_profile] table.
- The profile page on the portal [user_profile page for non-HR customers and hri_user_profile page for HR Customers] uses the employee_profile page, which is based on the employee profile table.

Note:
Customers with an HR license continue to use the HR profile ML model even if they have not opted in to the latest employee profile.

3. **Optional:** You can opt out of the new employee profile and revert to the previous workflow by selecting **Opt-out** at any time.

Result
When you opt in, your employees can have the following benefits:

- View a customizable **Employee Profile** page that details the contact info, job description, and more.
- Navigate through an enhanced **Org Chart** experience that offers organization chart, team hierarchy, and better search. For more information, see Organization chart in Employee Center Pro
- Use employee profile in AI and ML profile data models.

Configure the Employee Profile header

Configure the Employee Profile header to display useful information about employees, such as their first name, family name, and department. The header enables you to identify the employee quickly.

Before you begin
Role required: sn_employee.admin

About this task
You can configure the Employee Profile header fields to be displayed for all employees. You can configure the following header fields:

- Primary user info including first name and family name and its format.
- Secondary user info such as title, contact number, and preferred pronoun.
- User presence information to show the user status across channels like MS Teams.

Note:
From Employee Profile version 11.0.3, you can create multiple active header configurations.

Procedure

1. Navigate to **All** > **Employee Profile** > **Header UI Configuration**.
2. On the Employee Profile Header Configuration form, fill in the fields.
   For a description of the field values, see Employee Profile Header Configuration form.

   Note:
   For information about the field values of the default profile header record, see Default Employee Profile Header Configuration record.

3. Select **Update**.

Configure the Employee Profile overview widget

Configure your instance options to control the appearance of the Employee Profile overview widget, such as the title, number of items to display, icons, and what category of items you want to view.

Before you begin

Role required: sn_employee.admin

About this task

The Employee Profile overview widget displays useful information about an employee enabling you to view information that is most relevant to you. You can have a comprehensive view of the employee information to drive business decisions, create intelligent workflows, and deliver personalization across end-user facing applications. Using the employee profile, you can do the following:

- Organize the employee profile into sections.
- Add fields to display in a section.
- Select fields from the Employee, User, and HR profiles.

Procedure

1. Navigate to **All** > **Employee Profile** > **Overview UI Configuration**.
2. From the Overview Sections list, select **New**.
3. On the Overview Section form, fill in the fields.
   For a description of the field values, see Employee Profile Overview section form.
4. Select **Save**.
   If you select **Submit**, you're redirected to the previous page containing the list of all sections. The new section is created. You can proceed to the associated fields suitable for the section.
5. In the Overview Section Fields section, select **New**.
   A new record page opens.
6. Select **Field Name**, then select an element from the tree based on your preference.
7. Select the appropriate Field visibility option based on your preferences.

   For example, you can select the visibility of your preferred pronoun or any private information according to your choice.

   - Employee only
   - Manager only
   - Employee and Manager
   - Everyone
   - Manager and Other Managers
   - Employee, Manager and Other Managers
   - User Criteria: Provide the access only to specific users, groups, and roles with the user criteria. The field is visible to the users based on:
     - Available For: User group for whom the field is visible. Define and select the user group based on your business needs.
     - Not Available For: User group for whom the field isn't visible. Define and select the user group based on your business needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Values that are defined in the Not Available For group take precedence over values defined in the Available For group. If both values aren't defined, the field is visible to all users. For more information on field visibility based on user criteria, see User Criteria output.

Note:
Use the user criteria cautiously because the profile page load time can take longer based on your criteria.

8. From the available list, select a suitable icon for the field.
9. Select **Submit**.

What to do next
You can add the following default sections and associated fields for your employee profile:

- About
- Bio
- Personal information
- Contact details
- Employment details
- My team

Configure any additional sections based on your business needs.

You can edit or remove the banner by navigating to **All** > **Employee Profile** > **Background banner**.

Employee profile

Update the Employee Profile banner and profile images

Upload or update the banner and profile images for your Employee Profile page with the upgraded edit features.

Before you begin
Role required: Employee Profile user

About this task
Update the banner and profile images for Employee Profile page with the enhanced editing options. You can also use the default banner image. The default profile image setup takes the initials of the name of the user.

Procedure

1. Navigate to **Self-Service** > **Employee Center**.
2. Go to the user avatar and select **Profile**.
3. Select the camera icon and then select **Browse image** on the welcome screen to select an image to upload, For the first time.
   The Add cover image welcome screen mentions all the file types accepted for the banner image.
4. **Optional:** You can edit the image by using the updated editing options, such as, **Rotate**, **Zoom**, **Flip**, and **Drag to reposition image**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you want to undo or redo the changes made to the picture, click **Reset** to take the image back to its initial-uploaded state.

5. **Optional:** There are two more options visible on the initial upload screen to change the image or upload the current one.
   - **Change image**
   - **Apply**
6. After the initial upload, the Edit cover image screen has an extra **Remove image** option, which takes you back to the default banner image.
   After the initial image upload, the camera icon at the top-right corner changes to a pencil icon to signify, edit option.

   Similar editing options are available for the profile image.

Result
The user can customize the banner and profile images according to their preferences with the upgraded edit features.

Manage profile tabs and visibility in Employee Profile

Enable the display of work-related content in the employee profile to help customize the public profile visibility settings.

Before you begin
You can use the profile tab UI only as follows:

- When the admin opts in to the employee profile
- When the employee meets the employee definition
- When the employee has a corresponding profile record in the employee profile table

Role required: sn_hr_sp.esc_admin

About this task
Provide employees with a professional landing page and help control the information visibility across the organization. You can use the default tabs or create tabs. Using the tabs UI, you can do the following:

- Enable admins to configure the profile information in tabs.
- Configure tabs, widgets, and visibility of profile information.
- Add information from other widgets such as the HR widget and EX widget.
- Provide employees the flexibility to personalize the visibility settings.

For employees, the tab UI appears only when more than one tab is available for display.

Note:
For non-employees, the profile information appears as a flat page with the Employee Profile Overview, Employee Profile My Team, Employee Documents List, Granular Delegation List, and HRI Contacts widgets.

Procedure
1. Navigate to **All** > **Employee Profile** > **Profile Tabs**.
2. Select **New** or open a record.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee profile tabs form

Field	Description
Name	Name of the tab.
Display Name	Tab name to display on the portal. If this field is empty, the value of the **Name** field is displayed on the portal.
Application	Application for the tab.
Active	Option to activate the widget in the tab for use.
Order	Order number that you want the tab to appear in.

When you configure and mark multiple tabs as active, the information is displayed as tabs on the profile.

4. Select **Submit** or **Update**.
   The tab is created or updated.
5. From the Tab widget mappings related list, select **New** or edit an existing record.
6. On the Tab widget mapping form, fill in the fields.
   For a description of the field values, see Tab widget mapping form. The Tab widget mapping **sys_id** is available in the *tabWidgetMappingId* variable of the widget options object.

   Note:
   The *widgetTitle*, *tabWidgetMappingId*, and *isUserSelectionEnabled* variables are available only within the scope of the Employee Profile tab UI.

7. Select **Save** or **Update**.

Result

The **Profile** tab is configured with the widget and visibility settings for employees to view and personalize the visibility. On the UI, the different tabs are visible in a sticky format even when the user scrolls through the page. All widgets under a particular tab are available in the form of navigation menu items.

The admin can use the instance options to configure the visibility of the navigation menu by selecting the **Widget overview panel** option.

Configure Employee Profile for a portal

Configure the Employee Profile for a portal by creating a configuration record and mapping a header and tabs.

Before you begin

Note:
The Employee Profile portal configuration is available from Employee Profile version 11.0.3. If you're upgrading from an earlier version, the profile pages on all portals are updated based on upgrade scenarios. For more information, see Employee Profile upgrade scenarios.

Role required: sn_employee.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee profile** > **Portal Configuration**.
2. In the Employee Profile Portal Configuration page, select **New**.
3. On the Profile Portal Configuration form, fill in the fields.
   For a description of the field values, see Employee Profile portal configuration form.
4. In the tab-mapping section, select **Edit**.
   The tab-mapping page opens.
5. Map tabs to the profile based on your requirement.
   a. Select a tab from the first pane.
   b. Select the add arrow to add the tab to the profile.
   c. Repeat steps a and b to add tabs to the profile.
   d. Select **Save**.

   Note:

   You can create a tab configuration from the tab-mapping section by selecting **New**. For more information, see Manage profile tabs and visibility.

6. Save the record.

Add other manager relationships for an employee

Add other manager relationships to set up dotted-line reporting for an employee.

Before you begin

An employee profile definition must be created and opted in to add other manager relationships. For more information, see Opt in to the employee profile.

Role required: sn_employee.admin

About this task

Use the Other Manager Relationships module to create many-to-many dotted-line relationships between employees and managers. You can define custom relationships for the managers, such as supervisor, project lead, and so on. The other managers and other reports are displayed in the employee profile teams widget and the organization chart.

Procedure

1. Navigate to **All** > **Employee Profile** > **Other Manager Relationships**.
2. On the other manager relationships page, select **New**.
3. On the form, fill in the fields.

Other Manager Relationship form

Field	Description
Employee	Employee profile record of the employee.
Other manager	Employee profile record of the other manager.
Relationship type	Type of relationship of the manager to the employee. You can define custom

Field	Description
	relationships such as supervisor or project lead.

Note:

The specified employee, manager, and relationship type shouldn't match with an existing other manager relationship record.

4. Select **Submit**.

Add an Employee Profile page bio in the upgraded section

Add a short bio comprising interesting details about yourself in the add a bio section of the Employee Profile page.

Before you begin
Role required: Employee Profile page user

Procedure

1. Navigate to **All** > **Employee Center** > **Profile**.
2. In the overview section, click **Add a bio** to get the text area to type in your details.
   The maximum character limit is 256. You can follow the retracting character limit as a reference while typing. If you are over the character limit, you see the overflow text count highlighted in red.

Result
The add bio text area lets employees update key aspects about themselves on their Employee Profile page to gain better understanding of each other's backgrounds and interests.

Manage the employee profile AI and ML model

Use the employee profile Artificial Intelligence (AI) and Machine Learning (ML) model to view recommended articles and catalog items for similar users.

Before you begin
Role required: Employee profile admin

Opt in to employee profile. For more information, see Opt in to the employee profile.

About this task
Discover recommendations from similar users using the employee profile ML model. These recommendations remove the dependency on the HR profile ML model. Identify the Knowledge articles and catalog items that are most viewed by similar users. Display the Recommended for you section based on the instance configuration made by the admin.

You can Modify the Recommended for you widget display to show more results.

Note:
HR customers continue to use the HR profile ML model regardless if they opt in to employee profile.

Procedure

1. Navigate to **All** > **Employee Profile** > **Employee Profile AI Configuration**.
2. To create a record under the default similarity definition, click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Trouble?
The employee profile admin can Manually train the employee profile predictive model if the similar user model is not auto-trained after opting in to employee profile.

What to do next
Employees can browse through the Knowledge articles and catalog items viewable in the Recommended for you section using the employee profile ML model.

Manually train the employee profile predictive model

Manually train the employee profile predictive intelligence to model similar users if auto-train is not enabled by default.

Before you begin
Role required: sn-employee.admin

Procedure

1. Navigate to **Self-Service** > > **Predictive Intelligence** > **Similarity** > **Solution Definitions**.
2. Select **Train** for **Similar users model for employee profile** (*ml_x_snc_sn_employee_global_similar_users_model_for_employee_profile*). A similarity definition record is created after the training is finished.

Note:

- Set the variable system property to **True** with the **Application** scope set to **Global** to use the auto-train model on Employee Profile.
- Provide a minimum of 10 records to use the auto-train model.

Updates for the Employee Profile HR widget

The Employee Profile HR widget has three additions, My Contacts, My Delegates, and Employee Documents.

Three new widgets have been added to the Employee Profile HR widget, namely, My Contacts, My Delegates, and Employee Documents.

Separate plug-ins must be installed for each widget to work. The My Contacts records require the Human Resources: Core plug-in to get the contact details. The My Delegates details are pulled from the granular delegation plug-in. Moreover, the Employee Documents plug-in pulls data from the employee documents management plug-in.

The user can add delegates via the **Add Delegates** button on the My Delegates widget and add contacts via the **Add new contact**.

For more information on managing the documents of an employee, see Managing employee documents.

For more information on adding delegates, see Granular Delegation.

Preferences widget for Employee Profile

User Preferences can be accessed as a separate Preferences widget for customers who have opted in for the Employee Profile.

User Preferences on the user profile page, is available, on the Employee Center and Employee Center Pro portal, as the **Preferences** widget for customers who have opted in to the Employee Profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you have opted in to the Employee Profile, you can see the **Preferences** option available on the list when you select your user avatar.

You can manage **Display** options like, **Date and time format**, **Timezone**, **Language** from **Preferences**. You can also choose your settings for **Accessibility**, **Notifications**, and **Debugging** as required.

The **User preferences** on the user profile page is no longer available for Employee Profile customers.

However, if you have never opted in to the Employee Profile or have opted out of it, you can still see the embedded feature residing on the user profile page.

My active items widget configuration

The My active items widget displays all user activity that requires your input or review.

In the My active items widget, tasks, surveys, and request activities are available by default in the Employee Center. The Tasks activity is set to primary by default. Task activities are displayed using the existing to-do configuration and the Requests activities are displayed using the existing request filters.

Note:
You can add additional configurations to display your activities. For example, to display activities for reservations, you must install and activate the plugin for the ServiceNow® Workplace Reservation Management application.

From **My Active Items** widget, admins can perform the following actions.

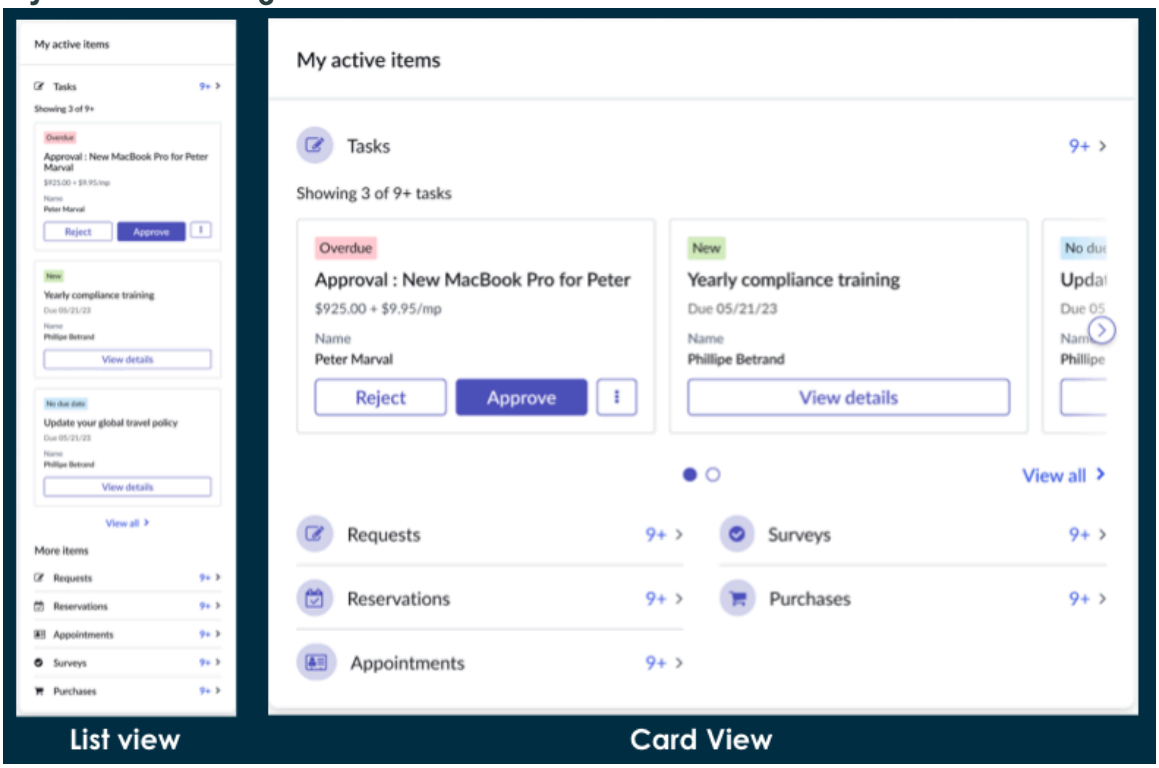
- Organize items based on priority or urgency.
- View the items in vertical or horizontal layouts.
- Perform actions on the assigned tasks from **My Active Items**.

My active items actions

You can now configure action framework to allow employees to perform actions from the My active items.

Configure **Action group** for the primary activity to complete suitable actions. For tasks, the approve and reject actions are available out-of-the-box. For more information, see Enable task configuration for approvals

Note:
When you do not associate an action group with the tasks, the **View details** option appears to navigate to the activity details page.



My Active Items Widget Layout Guidance

The My Active Items widget is designed for optimal display and usability when configured using a column size of 3 or greater. This layout ensures that information presented within the widget remains readable and visually consistent across Employee Center topics.

Note:
The My Active Items widget does not support column sizes less than 3. If you use a column size below 3, the widget is not guaranteed to display correctly for all screen widths. Currently, there are no plans to improve support for smaller column sizes. We suggest you use a column size of 3 or higher moving forward.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

My active items widget items

To change the display options, see Perform an advanced activity configuration.

Summary view

The summary view displays a count of all the activities. The count for the primary activity is shown at the top of the widget. The count for the non-primary activities is shown after that. For example, tasks (9 Tasks) is the primary activity and requests (9+ Requests) is the non-primary activity. If the number of activities is zero, the summary view displays **0** next to the activity name. For example, if there are zero tasks, then the summary view displays 0 Tasks. If the count of tasks exceeds 9 in number, the summary view displays 9+ next to the activity name. For example, If there are 10 tasks, then the summary view displays 9+ Tasks.

Clicking an activity in the widget opens the page that you specified in the **Internal Link** field of the Activity Configuration form.

List view

The list view displays a list of to-dos only for the primary activity. If you set the Tasks activity as primary, the list view displays to-dos only for the Tasks activity. The **View All** option opens the page you have configured for the primary activity.

You can do an advanced configuration or a basic configuration for an activity. Use the out-of-the-box **Approvals action group** to display the actions such as **Approve** and **Reject**.

Note:
When you do not associate an action group with the tasks, the **View details** option appears to navigate to the activity details page.

For more information, see Action framework.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For actions to appear in my items widget, you can add the OOTB **Approvals action group** from **All** > **Employee Center** > **Administration** > **To-dos Configurations**, click an existing to-dos configuration, navigate to the **To-do Configuration Details** record, and use the OOTB action group under **Fields Mapping**.

Perform a basic activity configuration

Perform an advanced activity configuration

Perform a basic activity configuration

Configure activities to determine which records you want to retrieve from a table when certain conditions are met.

Before you begin
Role required: admin, sp_admin, or ESC admin

Procedure

1. Navigate to **All** > **Employee Center** > **Activity Configuration**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information about the form fields and descriptions, see Activity Configuration form.
4. Click **Save** or **Submit**.

What to do next
If you click **Save**, the **Activity Configuration Details** tab appears. Provide details for a basic activity configuration.

Provide details for a advanced activity configuration. For more information, see Perform an advanced activity configuration.

If you click **Save**, the **Activity Configuration Details** and **Activity Access** tabs appear.Restrict access to an activity. For more information, see Restrict access to an activity.

Provide basic activity configuration details

After you create a basic activity configuration, you must specify which records for the activity you want to retrieve from the tables.

Before you begin
Role required: admin, sp_admin, or ESC admin

Procedure

1. Navigate to **All** > **Employee Center** > **Activity Configuration**.
2. The Activity Configurations module displays the list of existing activity configurations.
3. Click the basic activity configuration to provide configuration details.
4. Click the **Activity Configurations Details** tab.
5. Click **New**.
6. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information about the form fields and descriptions, see Activity Configuration Detail form.

7. Click **Submit**.

Perform an advanced activity configuration

Configure activities to display their count and to display items in a list for a primary activity.

Before you begin
Role required: admin, sp_admin, or ESC admin

Procedure

1. Navigate to **All** > **Employee Center** > **Activity Configuration**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information about the form fields and descriptions, see Activity Configuration form.
4. Select the **Advanced** option.
5. In the **Summary view script** field, add a script to display the count of activities, for example, `new sn_ex_sp.ActivityConfigurationUtil().getTasksCount();`
   The API returns an integer value.
6. In the **List View script** field, add a script to display items in a list, for example, `new sn_ex_sp.ActivityConfigurationUtil().getMyTodos(recordsLimit);`

   Note:
   Do this step only if you have marked this activity as primary by selecting the **primary** option.

7. On **List view json**, provide a template with mapping of table fields to component properties. For example, `{ 'badge': '', 'badgeColor': '', 'image': '', 'title': '', 'description': '', 'field1Label': '', 'field1Value': '', 'field2Label': '', 'field2Value': '', 'itemUrl': '', 'target': '' // target is '' if its internal or portal page url. target is '_blank' if url is external }`
8. Click **Save** or **Submit**.

What to do next
If you click **Save**, the **Activity Access** tab appears. For more information, see Restrict access to an activity.

Restrict access to an activity

Apply user criteria to an activity to define which users, groups, and roles can access the activity.

Before you begin
Role required: admin

About this task
In the My active items widget, the activity that a user does not have access to is not displayed for that user.

Procedure

1. Navigate to **All** > **Employee Center** > **Activity Configuration**.
   The Activity Configurations module displays the list of existing activity configurations.

Employee tasks page

Configure the tasks page for employees to view and complete all their tasks on a single page. You can configure the page by applying filters to show user approvals, content tasks, and more.

My tasks overview

The My tasks page shows all open and completed tasks for an employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the tasks page

You control the type of open and completed tasks that appear by configuring the filters. The filters define the table and conditions that a task must meet for it to appear on the tasks page for an employee. You can associate one filter per table. For example, you can configure an Approvals filter by:

- Associating it with the Approval [sysapproval_approver] table with the conditions that the employee is the approver.
- There is an entity that the approval is for.
- The approval is in the requested state.

Note:
The default order is due date. If you have too many filters and find that performance is affected, you can order the tasks by filter. To order by filter, you must enable filter prioritization and assign priority numbers for each filter.

For more information, see Enable task configuration for approvals.

Configure Ask a question

Ask a question is a widget that establishes a communication link between a user with an HR Agent or queue to discuss HR tasks or cases. These configurations determine which HR agent or queue to use for communication. For HR tasks, the **Task support team** field defines the HR agent or queue that picks up any communication about the task when a user selects

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

the Ask a question link. To use this option, activate the Connect Service Portal Widgets (com.glide.connect.sp_widgets) plugin.

Note:
For more information about **Connect**, see Connect.

For HR cases, define configuration under **Conversational Interfaces**.

Note:
For more information about **Conversational Interfaces**, see Conversational Interfaces and Setting up Agent Chat.

If your company is not using Connect Support, you can choose to hide the **Ask a question** link. To hide the Ask a question link, go to **sys_properties.list** and find the **sn_hr_sp.hr_ask_a_question_enabled** property. Default value is **true**. To hide the Ask a Question on HR cases and tasks on the Employee Center, change the setting to **false**. For HR tasks, when Agent Workspace is selected in the **Task support team** drop-down, Virtual Agent is used. If Users and groups is selected, Connect Support is used. For more information, see Adding an HR task to an HR case.

Advanced Work Assignment To configure Advanced Work Assignment (AWA) for Agent Workspace, see Advanced Work Assignment (AWA) for HR Service Delivery Agent Workspace overview.

Preconfigured filters

The following filters are included with the Employee Center application. You can use them or configure your own.

For more information, see Task filters on My tasks

Employee to-dos approval roles

Roles determine who can approve, reject, or comment on employee requests.

Use the following roles to define how employee requests on the Employee to-dos page are handled:

To-do roles

Role title [name]	Description	Contains roles
approver_user	Required role for Approver users. Approver users can modify requests for approval routed to them. They also have all capabilities of Requesters. Note there is a fee associated with this role. Do not assign it to users without confirming your organization has the appropriate entitlement.	None
sn_request_read	Provides read access to the Request Management Application and related functions (It does not check for approving records).	None

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To-do roles (continued)

Role title [name]	Description	Contains roles
	Can read REQs and RITMS.	
sn_request_approver_read	Provides read access to the Request Management Application and related functions (allows access only if user has an approving record for the request record). User with this role can read approvals.	None
sn_request_write	Provides write access to the Request Management Application and related functions. User with this role can comment on requests.	• task_editor • sn_request_read • dependency_views • agent_workspace_user • view_changer • cmdb_read • sn_request_approver_read
sn_hr_core.case_reader	Provides access and ability to read all HR cases.	None

Create or modify to-dos

Create or modify a to-dos in the Employee Center.

Before you begin

Role required: sn_hr_sp.esc_admin

You can use a condition builder to specify the conditions that a task must meet for it to appear on the user to-dos page. You can also define the appearance of the to-dos configuration header. You can associate both task and non-task tables in to-do configuration.

Procedure

1. Navigate to **All** > **Employee Center** > **Administration** > **To-dos Configuration**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

To-dos Configuration form

Field	Description
Name	Name of the to-dos configuration filter.
Table	Name of the table that the to-dos configuration is associated with.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: ○ You can associate one filter per table. ○ The table must be an extension of the Task [task] table.
Tab	The tab where you want the to-dos to appear.
Conditions	Conditions that a task must meet to appear on the to-dos page in the Employee Center.The conditions available to use are dependent on the table you select. **Note:** When defining conditions like case sensitivity or null values, see API GlideFilter - Scoped, Global.
Active	Check box to activate the to-dos configuration for use.
Applies to	Indicates the service portal the to-dos configuration applies to.

4. Select **Save**.
   The **Title row** and **Detail row** tabs appear.
5. In the **Title row** tab, configure the title row of the to-dos configuration header.

Title form

Field	Description
Title type	Indicates what the title type applies to. The choices are: ○ Fields: Uses a field from the table you selected for the title. ○ Custom: Provide custom text to appear as the to-dos configuration title.
Title field	Appears when you select **Fields** from the **Title type** list. Map a field from the table you selected to appear as the to-dos configuration title.
Custom title	Appears when you select **Custom** from the **Title type** list. Enter text you want to appear for the title.

6. In the **Detail row** tab, configure the details row of the to-dos configuration header.

Details form

Field	Description
Detail type	Indicates the type of detail you want to appear in the to-dos.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Custom: Indicates custom text appears as the to-dos configuration details. ○ Parent fields: Select a parent table, and then map one or more fields from that table to appear as the to-dos configuration details. The fields will be separated by a hyphen. **Note:** To display a link to the parent ticket page, make sure that the **Link to parent** check box is selected. ○ Fields: Map one or more fields from the associated table to appear as the to-dos configuration details. The fields will be separated by a hyphen. **Note:** To display a link to the corresponding ticket page, make sure that the **Link to task** check box is selected.
Custom detail	Enter custom text you want to appear in the to-dos list. Only appears when you select **Custom** from the **Detail type** list.
Parent table	The table you want to use to select fields from in the detail row of your to-dos. Only appears when you select **Parent fields** from the **Detail type** list.
Parent fields	The fields you want to appear in the detail row of your to-dos. The fields you choose are based on the table you selected. Only appears when you select **Parent fields** from the **Detail type** list.
Link to parent	Indicates you want a link that opens the parent task to appear on the ticket page. Only appears when you select **Parent fields** from the **Detail type** list.
Detail fields	Indicates the fields you want to appear as the to-dos configuration details. If you select multiple fields, they are separated by a hyphen. Only appears when you select **Fields** from the **Detail type** list.
Link to task	Indicates you want a link to appear that prompts the user to select to open a task on the ticket page. **Note:** Link to task works only when the table extends the task table.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Only appears when you select **Fields** from the **Detail type** list.

7. In the **To-dos Widget Mappings** list, you can map the filter to one or more custom to-dos widgets.

   Note:
   If no widget mapping is provided, a default to-dos widget is used.

   a. Click **New** or open a record.

   b. Fill in the fields on the form.

   To-dos Widget Mapping form

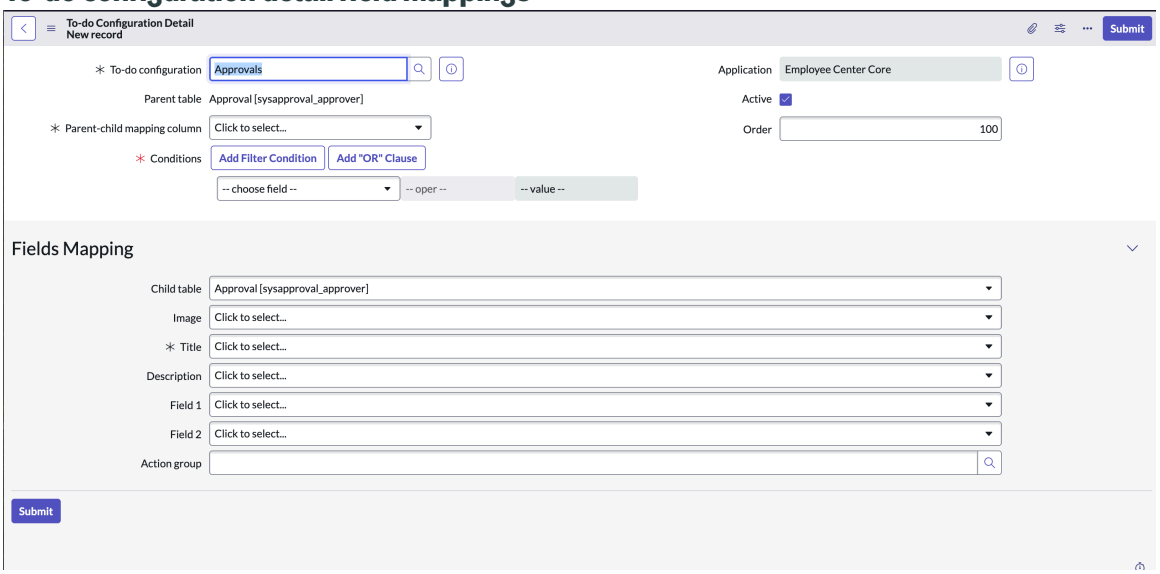
Field	Description
To-dos Configuration	This field is automatically set to the to-dos configuration that the widget mapping is associated with.
Table	This field is automatically set to the table that the to-dos configuration is associated with.
Conditions	Conditions that a to-do must meet for it to display with the widget. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Active	Check box to activate the widget mapping for use.
Widget	Name of the widget that the to-dos configuration is associated with. **Note:** To learn more about widgets and how to configure them, see Service Portal widgets

   c. Click **Submit** or **Update**.

8. In the **To-dos Configuration Detail** list, you can map the source table fields based on the defined conditions.

   a. Click **New** or open an existing record.

   b. On the form, fill or modify the fields.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To-dos Configuration Detail form

Field	Description
To-dos Configuration	Select the to-dos configuration that you want to associate with the widget.
Table	This field is automatically set to the table that the to-dos configuration is associated with.
To-do Target	Select the target table that you want to map the configuration to.
Conditions	Enter the Conditions that a to-do must meet for the configuration mapping. **Note:** When defining conditions like case sensitivity or null values, see API GlideFilter - Scoped, Global.
Active	Check box to activate the widget mapping for use.
Order	Enter the order number in which you want the To-do to appear in the widget.

c. Under **Field Mappings**, map the fields of the selected **To-dos configuration** table with the **To-do target** table.

To-do configuration detail field mappings

d. Click **Submit** or **Update**.

9. Click **Submit** or **Update**.

Related topics

Enable task configuration for approvals

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable prioritization by filter

If you are ordering the to-dos by filter instead of due date, you must enable the **sn_hr_sp.todos_config_display_with_priority** property, add the **Display priority** field to the to-dos configuration form, and assign each to-dos filter a priority number.

Before you begin

Role required: sn_hr_sp.esc_admin

The to-dos will then be sorted by the filter they are associated with. Within each filter, the to-dos will be sorted by due date.

When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

Procedure

1. Enable the **sn_hr_sp.todos_config_display_with_priority** property.
   a. In the navigation filter, enter `sys_properties.list`.
   The System Properties list is displayed.
   b. Open the **sn_hr_sp.todos_config_display_with_priority** property.
   c. In the **Value** field, set the value to `true`.
2. Add the **Display priority** field to the to-dos filter form.
   a. Navigate to **Employee Center** > **Administration** > **To-dos Configuration**.
   b. Or, navigate to **Employee Center Pro** > **Administration** > **To-dos Configuration**
   c. Open a record.
   d. In the to-dos configuration form header, click the menu icon and navigate to **Configure** > **Form Layout**.

      Note:
      Ensure you are in the Employee Center Core application.

   e. Move the **Display priority** field to the **Selected** column.
   f. Click **Save**.
3. Set the priority number for each to-dos filter.
   a. Navigate to **Employee Center** > **Administration** > **To-dos Configuration**.
   b. Open a to-dos filter record.
   c. In the **Display priority** field, set the priority number.
   d. Repeat the process for each filter.

Configurable task filters

Enable the employee to use filters, filter groups, and categories to easily filter, discover, and fulfill the tasks in a few clicks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Filters help employees and managers with better visibility into the time-sensitive and business-critical tasks. Admins empower employees to search, filter, and narrow-down the desired tasks. Enable employees to select these filters and display the records that qualify the selected filter condition.

Enable employees to manage their tasks using the admin-configured filters from the **My Tasks** page. Define the following options to narrow-down the desired tasks.

- **Conditions**: Create conditions and map them to one or multiple filters.
- **Filters**: Create filters and map them to categories or filter groups.
- **Filters groups**: Create filter groups and associate them with multiple filters.
- **Categories**: Create categories and associate them with filters or filter groups.

Admins can create and map conditions to filters. Organize the display preferences with Categories and Filter groups. You can configure the display criteria and order preferences. You can use a condition builder to specify the conditions for a desired task for easier discovery on the **My tasks** page.

You can customize your own filters to suit your business requirements, for example, create a custom filter to display approvals from third-parties such as SAP Concur or Workday.

Employees can use these filters and conditions for Task filters on My tasks

Note:
The filter framework is extensible. You can customize your own filters to suit your business needs.

When redirected from Manager Hub to the **My tasks** page, managers can have better visibility into the team tasks or approvals with additional options to organize. The respective Manager Hub filters are pre-applied.

Configure filter conditions

With these conditions, you enable employees to easily filter, discover, and fulfill the tasks in a few clicks.

Before you begin

Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **All** > *Employee Center* > **Administration** > **To-dos config filter conditions**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Filter condition form

Field	Description
Name	Name of the filter condition.
Application	Application for the filter condition.
Active	Check the box to activate the filter condition for use.
To-dos config	To-dos configuration table. Select the approprite to-do config that suits your task type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Table	Name of the table that the to-dos configuration is associated with. Table is automatically populated per the selected to-dos configuration.
Condition	Conditions that a task must meet. Use these additional conditions that help narrow-down the desired task.
Add additional condition	Check the box to add more conditions using the script.

4. Click **Submit** or **Update**.
   The **Condition** is created.

Create filters or filter groups

With these filters and filter groups, you enable employees to easily filter, organize, discover, and fulfill the tasks in a few clicks.

Before you begin

Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **All** > *Employee Center* > **Administration** > **To-dos filters**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Filter form

Field	Description
Name	Name of the filter or filter group.
Application	Application for the filter or filter group.
Active	Check the box to activate the task filter or filter group.
Is filter group	Option to create a filter group. Filter group can be associated with filters or categories only.
Available for	Option to make the filter available for only to select users, groups, roles, and more. **Note:** This field does not appear when you select **Is filter group**.
Not available for	Option to make the filter unavailable for. **Note:** This field does not appear when you select **Is filter group**.
Description	Descriptive information about the filter.

4. Select **Save**.
   The **Filter** or **Filter group** is created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Proceed to associate the categories, filters, and conditions from the related list. From the related list, select category for the filter. Select a category from the list available from the picker dialog box.

Note:
Associate a filter to only one category or filter group.

If you do not select any specific category or filter group, the filter is not visible on the **My tasks** page.

Complete the following mapping per your requirement.

- For filter group, map **Associated categories** and **Filters**. Also, go to the **Associated filters** related list, click **New**, and fill in the form to add more filters.
- For filters, map **Associated categories** and **Associated conditions**. For sub-filters, map only **Associated conditions** as you cannot map a sub-filter to a category.

Based on your mapping, you make the filters available for employees to use on the **My tasks** page.

Configure filter categories

With these filter categories, you enable employees to easily filter, organize, discover, and fulfill the tasks in a few clicks.

Before you begin

Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **All** > *Employee Center* > **Administration** > **To-dos filter categories**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Filter category form

Field	Description
Name	Name of the filter category.
Application	Application for the filter category.
Active	Check the box to activate the filter category for use.
Order	Order in which the filter category should be displayed.
Display on UI	Check the box to display the category on the UI. When this option is not selected, the filter is not shown on the filter bar. **Note:** When you do not select this option, the category appears only in the **All filters** modal.

4. Select **Save**.
   The **Category** is created and the related list **Associated filters** appears.
5. In the **Associated filters** list, Click **New** to associate filters to the category.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

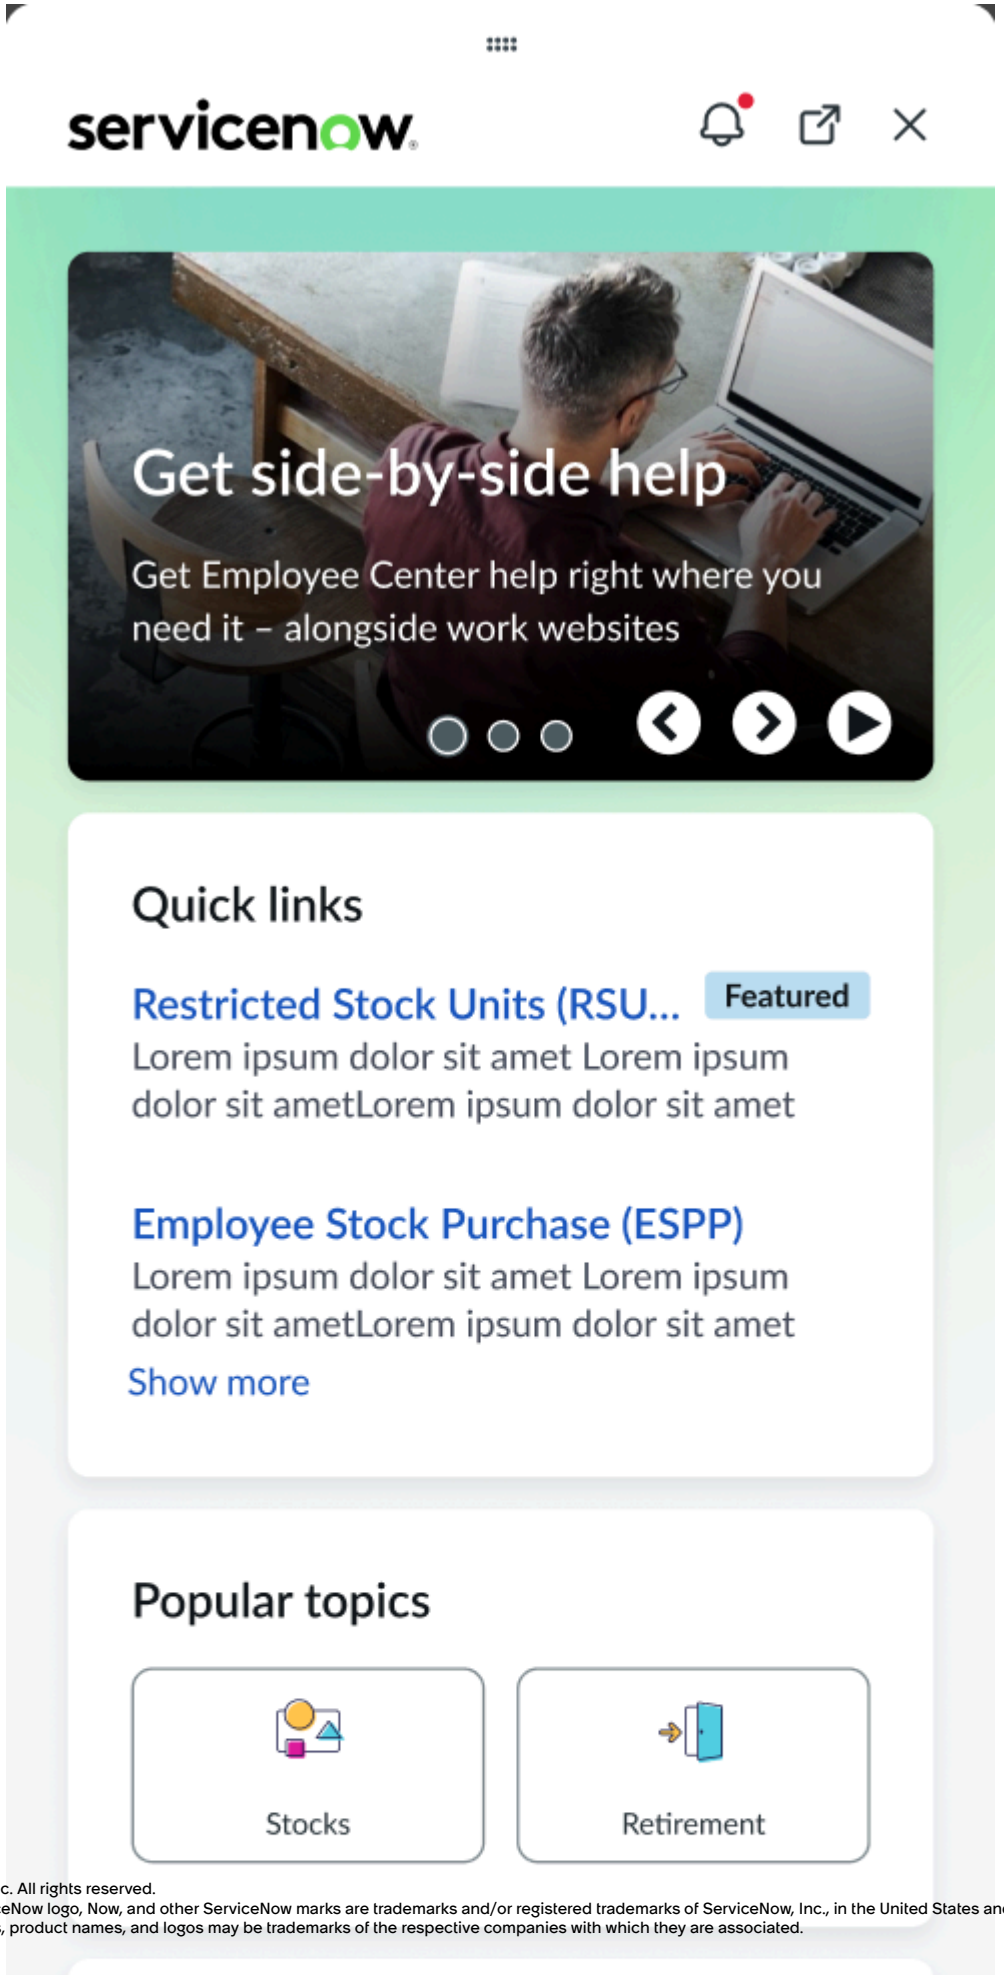
6. Fill in the fields on the form.

Associated filters category mapping

Field	Description
Category	Category to which the filter is mapped. For example, `Task type`, `Priority`.
Application	Application for the filter category.
Filter	Filters or filter groups that are available for mapping with the category.
Order	Order in which the filter or filter group should be displayed in the category.

7. Click **Submit** or **Update**.
   The **Filter category** is created.

What to do next



Based on your mapping, you make the filters available for employees to use on the **My tasks** page.

Browser Extension for Employee Center

Access all your extension-supported, Employee Center content, and other resources within a movable, pop-up browser extension.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Browser Extension

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use Google Chrome or Microsoft Edge to use the Browser Extension for Employee Center.

You can access the Browser Extension for Employee Center with the extension icon from the Employee Center portal. You can also open the extension in a new page with the Floating Action Button (FAB) when you're navigating a browser-supported website.

Read a Knowledge Base article, search through your quick links, or submit a Service Catalog item request, all from the Browser Extension for Employee Center.

The following are the types of content configurable on the Browser Extension for Employee Center.

- Employee Communications - View announcements and banners from your portal.
- Quick links - View featured content and access knowledge base articles; see the most-viewed AI-search results for your portal.

  Note:
  You must have Now Assist Pro+ version along with Employee Center version 38.0 installed to experience the Now Assist full page search within the browser extension.

- News - Read portal news in the quick view of the extension.
- Events - View upcoming events in the extension.
- Related applications - Access your applications in the Related apps section.
- Experience feedback - Provide your portal or extension experience feedback on the Browser Extension for Employee Center.

You can customize the theme and styling of your Browser Extension for Employee Center according to your organizational requirement. You can navigate back to the Employee Center portal easily with a link on the extension.

The following roles can operate at different access levels within the Browser Extension for Employee Center application.

Roles

Field	Description
sn_ex_brw_ext.ecbe_admin	Controls the entire administration of the Browser Extension for Employee Center application.
sn_ex_brw_ext.ecbe_manager	Controls content linking, viewer access to the content, and website records for the Browser Extension for Employee Center application.
sn_ex_brw_ext.ecbe_contributor	Controls content linking and viewer access to the content on the Browser Extension for Employee Center application.

Browser Extension search

Search and view content on the Browser Extension for Employee Center.

Access your configured Employee Center content with the omnibox search functionality. You can enter Employee Center or EC in the Google Chrome search bar and press the Tab key to look for content residing within the Employee Center portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also conduct a context search by selecting a portion of the website content where the extension is enabled. It gives you the search results for the selected section both within the Browser Extension and in the Employee Center portal.

Feedback in Browser Extension

Provide your experience with the Browser Extension for Employee Center with the default feedback configuration and feedback definition available with the Browser Extension for Employee Center plugin (sn_ex_brw_ext) version 1.0. For more information on the experience feedback functionality in the Browser Extension for Employee Center, see Experience feedback for browser extension

Browser Extension interface

You can use the **Instance Options** to modify the display of the extension.

You can configure aspects like the number of options displayed within a widget, the number of search results displayed, and so on.

Leverage the Now Assist search on the Browser Extension for Employee Center. For more information, see Set up Now Assist search in Browser Extension for Employee Center.

Along with the ServiceNow® Store, also get the Browser Extension for Employee Center for Google Chrome and Microsoft Edge in the Chrome web store and the Microsoft Edge Add-ons store. For more information, see the helpful resources section.

Support

Configure browser extension sites

Configure the Browser Extension for Employee Center in your desired websites for easy access to the Employee Center portal.

Before you begin

Role required: sn_ex_brw_ext.ecbe_admin / sn_ex_brw_ext.ecbe_manager

About this task

The Browser Extension for Employee Center lets you access your extension-supported Employee Center portal content via the browser extension.

Note:

- If you try to access the browser extension from any website, without configuring the extension for that website, you see an empty state message.
- If you try to access content when none is configured for the Browser Extension for Employee Center, you see an empty state message.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Employee Center** > **Browser Extension** > **Browser Extension Sites**.
2. Select **New** to create a site that can access the Browser Extension for Employee Center.
3. In the Configured Website form, fill in the fields, and select **Submit**.
   For a description of the field values, see Website configuration form.

Result

You have set up the Browser Extension for Employee Center in your desired website.

Set up browser policies

Set up the browser policies to enable access to the Browser Extension for Employee Center within the supported browsers.

Before you begin

Role required: none

Note:
The enterprise administrator must set up the browser policies.

About this task

The Browser Extension for Employee Center can be accessed through Google Chrome and Microsoft Edge browsers.

Note:
The administrator is responsible for setting up the browser policies depending on the supported browser in use.

The browser settings and policy page might look different for different browsers.

Procedure

1. Configure the Browser Extension for Employee Center in either of the supported web browsers.
   - For more information on setting up the Browser Extension for Employee Center in Google Chrome, see https://support.google.com/chrome/a/answer/14749672?hl=e.
   - For more information on setting the Browser Extension for Employee Center in Microsoft Edge, see https://learn.microsoft.com/en-us/deployedge/configure-microsoft-edge.

   The following is a sample of the JSON file that you must fill to see the policies on the browser.

}
```

2. In the **ServiceNow Employee Center Browser Extension** policy, fill in the fields.
   For a description of the field values, see Browser Extension policy form.

Set up Now Assist search in Browser Extension for Employee Center

Set up the Now Assist Virtual Agent search profile on the Browser Extension for Employee Center.

Before you begin

Role required: sn_ex_brw_ext.ecbe_admin

Now Assist Virtual Agent plugin (sn_nowassist_va) version 9.0 must be installed to avail the Now Assist search functionality and the conversational flow in the Browser Extension for Employee Center. For more information, see Display your assistant on a portal or channel.

Procedure

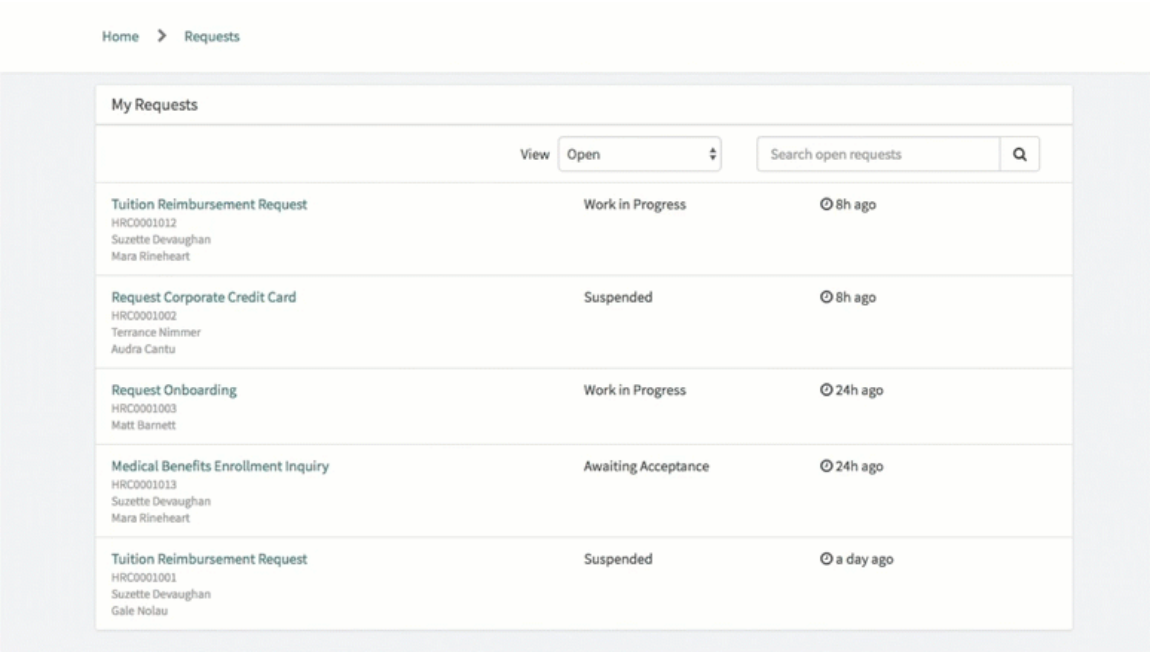
1. Navigate to **Conversational Interfaces** > **Assistants**.
2. In the Assistants page, select **Now Assist in Virtual Agent (default)** to open it.
3. In the Now Assist Virtual Agent (default) page, go to **Display experience** to add a portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select the **Employee Center Browser Extension** portal and select the check box for the **Allow the search bar to open into a full-page chat experience**.

> **Note:**
> The **Allow the search bar to open into a full-page chat experience** check box must be selected to see the Now Assist search bar in the Browser Extension for Employee Center.
>
> If the check box isn't selected, you only view the Now Assist genius card in the search results. You don't see the Now Assist search bar and the conversational flow in the extension. It only displays the AI Search bar.

Result
You have configured the Now Assist search bar in the Browser Extension for Employee Center.



Employee requests page

The requests page is where employees can view all their requests on a single page in the Employee Center. You can configure the requests page by applying filters to show a user's service catalog requests, IT incidents, HR cases, and more.

Overview of the requests page

The requests page displays all of an employee's requests. The following GIF shows an example of an employee viewing and opening requests on the requests page.

> **Note:**
> Leverage the Enhanced Requests Experience to get more flexibility of configuration and requests management on Employee Center. For more information, see Enhanced Requests Experience.

Configuring the requests page

You control the type of requests that appear by configuring the request filters. The filters define the table and conditions that a request must meet for it to appear on the requests page for an employee. For example, you can configure a Service Catalog Request filter by associating it with the Request [sc_request] table with the conditions that the request is active and that the request was opened by or for the employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you are using Employee Center as part of HR Service Delivery, HR cases appear on the requests page for the user that the case was opened for. If an HR case has one or more child cases, the child cases are automatically rolled up with the parent case up to three generations (children, grand-children, and great-grand-children). Furthermore:

- HR child cases that are rolled up with the parent do not appear as separate requests on the requests page.
- Non-HR child cases (such as IT or service catalog requests) appear both as a separate request and as part of the roll-up on the parent case.

To learn more, including how to configure the view for the subject person of an HR case, see HR Case Management.

Preconfigured filters

The following filters are included with the Employee Center application. You can use them or configure your own.

Filters by application

Application	Filters
Employee Center	• Incident Portal • Service Catalog Request • Service Catalog Request Portal • Service Order Portal
With HR Service Delivery	• HR-My Requests • HR Cases Closed • HR Cases Open • HR Service Request Closed • HR Service Request Open

Create or modify a request filter

Create or modify a request filter for the requests page in the Employee Center.

Before you begin

Role required: sn_hr_sp.esc_admin

Each request filter is associated with a table that is an extension of the Task [task] table. You can use a condition builder to specify the conditions that a request must meet for it to appear on the user's requests page. You can also associate the request filter with a ticket page.

Procedure

1. Navigate to **All** > **Service Catalog** > **Catalog Administration** > **My Request Filter**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

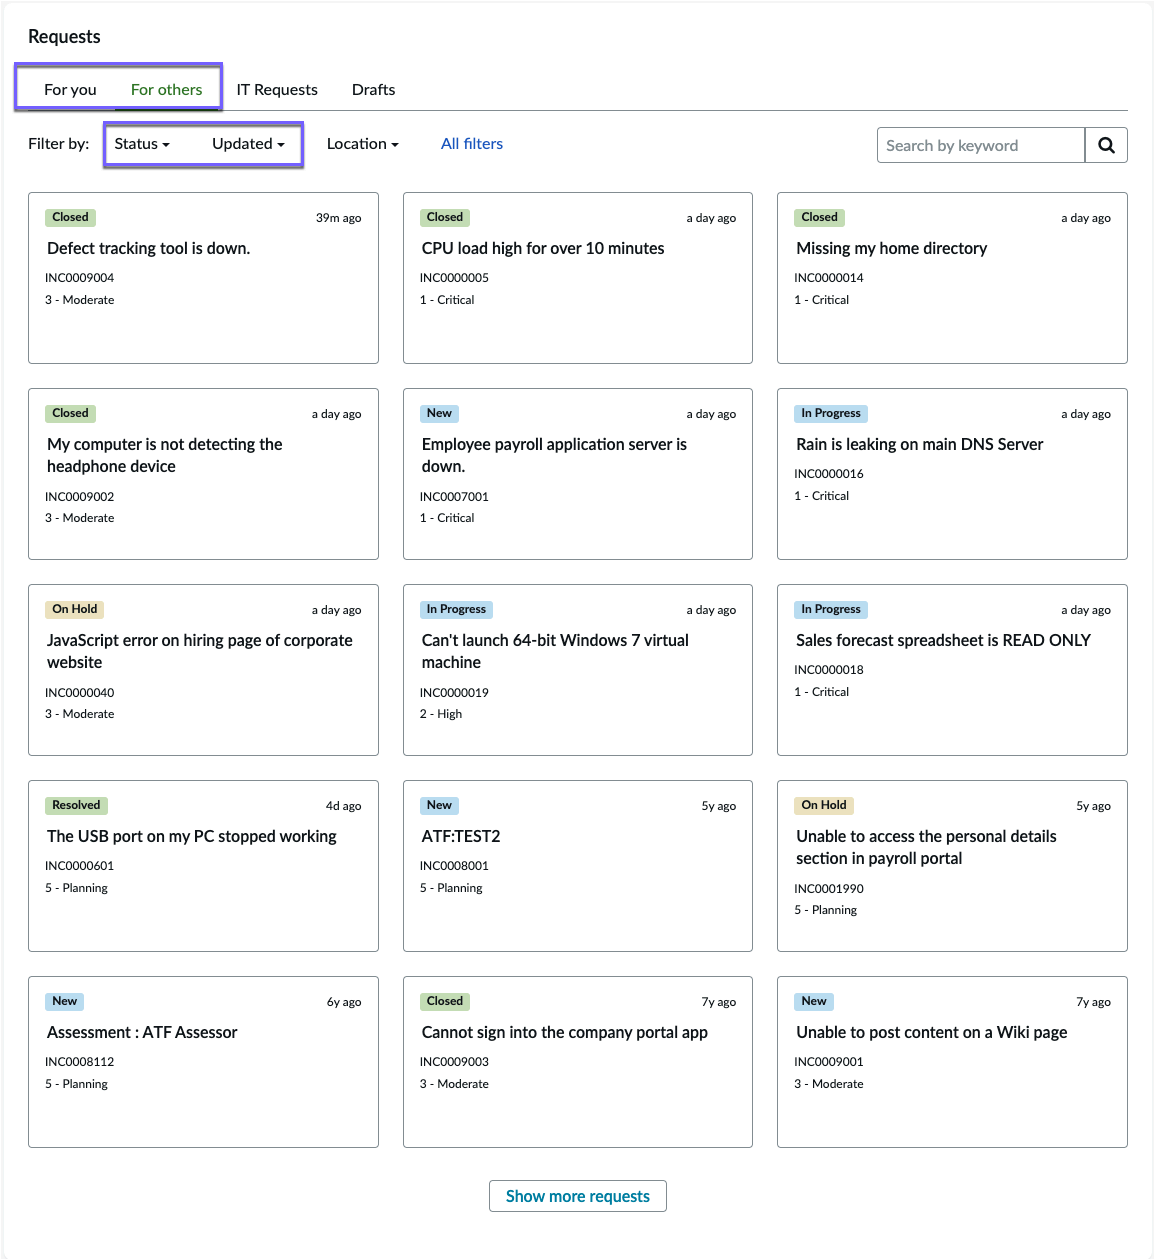
My Request Filter form

Field	Description
Short Description	Description of the request filter.
Table Name	Name of the table that the request filter is associated with. **Note:** The table must be an extension of the Task [task] table.
Active	Check box to activate the request filter for use.
Applies to	Select one of the following: ○ Desktop ○ Service Portal ○ Desktop/Service Portal ○ Mobile
Filter	Conditions that a request must meet to appear on the requests page in the Employee Center. When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global. **Note:** The conditions available to use are dependent on the table you select.
Portal page	Ticket page that the request filter is associated with.

4. Click **Submit** or **Update**.

Enhanced Requests Experience

Improve your request management on Employee Center with the Enhanced Requests Experience that enables you to find and manage requests effectively.



In the Enhanced Requests Experience, requests are segmented by type. You get the **For you** and the **For others** tabs by default with the Enhanced Requests Experience. You can also configure other tabs as the functionality supports multiple tab interface. If the numbers of tabs exceed the screen size a **Show more requests** button displays the rest of the tabs in a list view.

You can edit the default filters **Status** and **Updated** available with the default tabs **For you** and **For others**. You can also configure new filters to the tabs as required. You can associate tabs to filters according to your organizational requirement.

Note:
You must be on the Zurich release or the Employee Center version 38.0 release to use the Enhanced Requests Experience.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enhanced Requests Experience

The default number of requests shown on one page is 15. If it exceeds 15, pagination comes into effect.

The Enhanced Requests Experience let's you create a request and keep it in your **Drafts** instead of submitting it instantly. It will sit in the **Drafts** until you're ready for submission.

Drafts is enabled by default. If you want to hide the **Drafts** tab, mark the system property, Enable Save as draft in esc portal (glide.sc.enable.save_as_draft.portal.esc) **false**.

The requests are displayed in a card view by default. You can the view toggle icons next to the search bar to switch between card view and list view.

Enhance the visibility of requests by using the **Filter by** option. You can only have one filtering view for one portal. Filter options can be like **Request Type**, **State**, **Location**, and so on.

The multiple tab interface and the filter options are configurable. For more information, see:

© 2026 ServiceNow, Inc. All rights reserved.

- Set up request sources
- Set up the Requests filter definition

The **Requests** page is available on responsive view too. The filters are displayed with a **Show more** option when it exceeds the page length.

The Enhanced Requests Experience has improved features for different personas. The experience is scalable, so that admins can create as many tabs as required.

As a manager, you can:

- View requests created by you on behalf of the team.
- View requests created by others for your team.
- View requests created for your own work location, when configured.

As an employee, you can:

- View requests you have created for yourself.
- View requests that are created for you.
- View requests that are created for your work location, when configured.

As an executive assistant, you can view requests that you have created for others.

Set up request sources

Create different request sources for different applications to see all your requests under the Requests section on Employee Center.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **Employee Center** > **Requests** > **Source configurations**.
2. Select **New** to create a new request source.
   For existing customers a fix script is shipped with Employee Center version 38.0 to sync data with the request sources and the request filter conditions when you upgrade.
3. On the Request source form, fill in the fields, and select **Submit**.
   For a description of the field values, see Request source form.

Result
You've created a request source for your preferred application.

Set up the Requests filter definition

Configure a filter definition for different portals or each portal separately with the Requests filter definition.

Before you begin
Role required: sn_hr_sp.esc_admin

About this task
Create a filter definition for the Requests page to have multiple filter support for different tabs. You can also set up each view filter for each of your applications and have a unified request-raising and fulfillment experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Employee Center** > **Requests** > **Filter definitions**.
2. Select **New** to create a filter definition.
   - The **View filter** filter definition along with the **Created for me** and **Created for others** tabs are available with Employee Center version 38.0. The **Other** tab is shipped as inactive. You can use it according to your organizational requirement.
   - You can edit the default filters **Status** and **Updated** available with the default tabs **For you** and **For others**. You can also add new filters to the tabs as required. You can associate tabs to filters according to your organizational requirement. For more information, see the details on the request filter definition form in step 3.
3. On the Request filter definition form, fill in the fields and select **Submit**.
   For a description of the field values, see Request filter definition form.

Result
You have created a filter definition for your Requests view on the portal.

What to do next
1. Set up the Requests filter configuration
2. Set up the Requests filter condition

Set up the Requests filter condition

Set up the filter conditions to provide a second-level filter options for the first-level filters.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure
1. Navigate to **Employee Center** > **Requests** > **Filter definitions**.
2. From the Request filter definitions list, select the required definition to open it.
3. In the filter definition page, go to the Request filter configuration section, and select the required one, like **Created for you**.
4. In the filter configuration page, go to the Request filter conditions section, and select **New** to create a filter condition.
5. On the Request filter conditions form, fill in the fields, and select **Submit**.
   For a description of the field values, see Request filter condition form.

Set up the Requests filter configuration

Set up the request filter configuration to determine the filter options are available under the Requests tabs.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure
1. Navigate to **Employee Center** > **Requests** > **Filter definitions**.
2. From the Request filter definitions list, select any one where you want to add a filter configuration to open it, like **View filter**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. In the filter definition page, go to the Request filter configuration section, and select **New**.

   You can edit the default filters **Status** and **Updated** available with the default tabs **For you** and **For others**. You can also add new filters to the tabs as required. In the Associated tabs sections, you can associate tabs to filters according to your organizational requirement. For more information, see the details on the request filter configuration form in Step 4.

4. On the New filter configuration form, fill in the fields, and select **Submit**.
   For a description of the field values, see Request filter configuration form.

What to do next
Set up the Requests filter condition

Opt in to the enhanced Enhanced Requests Experience

Opt in to the Enhanced Requests Experience, as an existing customer, to get the benefits of the updated features.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **Employee Center** > **Requests** > **Set up**.
2. Check the **Yes, opt in to enhanced request experience** box and select the **Opt-in** button.

Result
You have opted in to the Enhanced Requests Experience.

Configurable approvals experience

Enable the approver with the in-context information for informed and prioritized approval decisions.

Use the approval templates with common info, primary info, tabs, and action groups to make informed decisions. You can configure individual approval types to display the request-specific information, while still having a consistent layout that is similar to other approval types.

Improve productivity with a unified approvals inbox. You can manage requests from internal and external applications from one location. Approvers can approve or send back Concur expenses to the requester right from Employee Center Pro with a configurable omni-channel experience.

Configurable experience
Enhance employee and approver experience by configuring the information and actions for each approval type.

Unified approvals inbox
Manage all your approvals from a unified location across business applications such as SAP Concur and Workday without switching the tools.

Omni-channel approvals
Meet employees where they are for approval management from all channels such as NowMobile, Outlook, and MS Teams.

© 2026 ServiceNow, Inc. All rights reserved.

Approvals user and roles

User roles

User roles	Required role
Approvals admin	sn_hr_sp.esc_admin
ESM framework admin	sn_hr_integr_fw.admin
Workday admin	sn_hr_workday.admin
Flow designer admin	flow_designer

Note:

- The approver_user or the business_stakeholder role is required to be able to approve or reject items on the Employee Center Pro portal.
- The sn_request_read and sn_request_approver_read are read-only roles.

For more information, see Approvals hub integration with SAP Concur and Approvals hub integration with Workday.

How external integration works

Approvals hub integration enables you to share data between the two platforms, automate processes, and improve efficiency. Here are the steps involved in integrating ServiceNow and external applications such as SAP Concur and Workday.

Here is what an administrator can do.

As an administrator

- Use prebuilt integrations and the ability to build custom integrations.
- Pull external data and transform it for display on Employee Center Pro.
- Use the default to-dos configuration and task configuration to customize the approval flows.
- Enable quick actions to process the request.
- Sync data and status between the applications.

Here is what an approver can do.

As an approver

- View and manage open and assigned requests from ServiceNow and external applications from a unified location.
- Make approval decisions based on the contextual information as configured in the to-dos configuration and task configuration.
- Perform quick actions to process the request.

Here is what an employee can do.

As an employee

- Submit your approval requests from any internal and external applications.
- View progress or status of the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

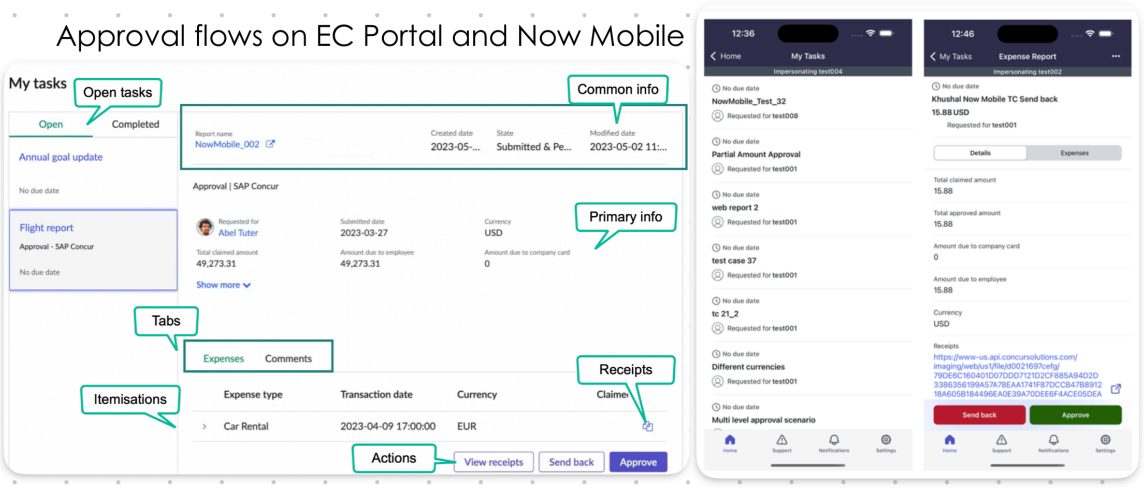
For more information, see Approvals experience reference and Use approval experience.

Enable task configuration for approvals

Provide the approvers with more in-context information about the approval requests for informed and prioritized approval workflows.

Before you begin

Role required: sn_hr_sp.esc_admin



About this task

Each task configuration is associated with a table that is an extension of the To-dos configuration. Define the following task configuration sections:

- Task configuration
- Common information
- Primary information
- Tab configuration
- Actions

Here is a sample illustration of how these configurations appear on the approvals page.

Approval hub workflow in Employee Center

The information displayed on each section of the page depends on the individual approval request type. When a configurable section has no specified value or when a user does not have permission; information isn't displayed.

- Customize the experience by embedding widgets for all sections except task configuration.
- Click the URLs for additional information and context.
- Use the condition builder to specify the conditions that a task must meet to appear on the to-dos page.

Procedure

1. Go to **All** > **Employee Center** > **Administration** > **To-dos Configurations**, click an existing to-dos configuration, and navigate to the **Task Configuration** related list.
2. Click an existing **Task Configuration** record.
3. Fill in the fields on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task Configuration form

Field	Description
Name	Name of the task configuration.
Application	Application for the task configuration.
Active	Check the box to activate the task configuration for use.
Table	Name of the table configured in the to-dos configuration to which the task config is associated.
Additional conditions	Conditions that a task must meet to apply configuration. You can dot-walk to the associated table to define conditions on other table columns. Conditions are implemented on top of conditions from To-dos config. Use the conditions to suit your requirements.
Reference column	To define conditions to the non-associated table, use a reference column from the selected table to help define conditions on reference tables. For example, the approvals reference column is **sysapproval**. **Note:** If the underlying submitted request is stored in a non-task table, select *`Source table`*.
Reference table	Reference table from above table to help define conditions on reference tables. For requests, the reference table is **sc_request**. You can select task or non-task tables in a task configuration such as *`sn_wsd_rsv_reservation`*. Also, use **Scripted Extension Points** to create *`sn_ex_sp.RefNonTaskTables`*.

4. Go to **Common Info** to configure the to-dos configuration header.

Common info form

Field	Description
Common info fields type	Select one of the following options to pick fields from the parent table or reference table as common info. ○ **Fields** ○ **Custom**
Common info fields - **Fields**	Fields you select from the parent table to appear as common info. When you select **Fields** from the parent table such as *`Approval for.Number, Due date, Created, State`*, the fields appear as common info. **Note:** When you select more than four fields, an error message appears.
Common info fields - **Custom**	Fields you specify from the parent and/or reference table to appear as common info. When you specify **Custom**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	fields such as *{reference_table.number}*, *{table.state}*, the number and state fields appear as common info.
Link to task	The link that opens the parent task or external links. You can link to a task or non-task table approvals. When you select the **External** option to open the link in a new tab. Also, adds an icon to denote an external link. Select one of the options as **URL source** to display as URL. ○ When you select **Custom**, specify the URL directly. URL can have values from table and reference table. For example, *{table.<fieldname>} or {reference_table.<fieldname>}*. ○ When you select **Fields**, map a field from the table and specify a page parameter value. ○ When you select **Page**, specify page (for example esc_kb_category) and page parameter values. **Note:** These options appear only for non-task tables and when you select **Link to task**.

5. Go to **Primary Info** to configure the details.

Primary info form

Field	Description
Use widget	Select this option to use widget and widget parameters to customize experience of **Primary Info**.
Widget	Widget to display in the primary info section. Select the widget from the list. This field appears only when the **Use widget** option is selected. You can embed a custom or ootb widget for the entire primary section.
Widget parameters	Comma-separated list of widget parameters. You can specify a combination of static and dynamic text in the widget parameter values. This field appears only when the **Use widget** option is selected.
Title type	Indicates the title type that you want to display in the to-dos. ○ **Custom**: Indicates the custom text that appears as the to-dos configuration details. ○ **Fields**: Maps a field from the table that you selected to appear as the title.
Title	Title of the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Appears when you select **Custom** from the **Title type** list. Specify a combination of static text and dynamic field values as the title. ▪ To define the title from the table, use the Table *{table.field_name}*. ▪ To define the title from the reference table, use the Reference table *{reference_table.field_name2}*. Field name indicates the variable to be replaced with the column names from the respective tables. **Note:** Ensure you append *table.* or *reference_table.* as a prefix to avoid rendering issues. ○ Appears when you select **Field** from the **Title type** list. Map a field from the table that you selected to appear as the title.
Page	Page you want to open when you click the link. This field (kb_article_view) appears only when the Reference column is Source table and the Reference table is Knowledge (kb_knowledge).
Page parameters	Additional parameters are required by some pages to look up a record (sysparam_article).
Fields	The fields you want to appear in the detail row of to-dos. The fields you choose are based on the table you selected. Only appears when you select **Parent fields** from the **Detail type** list.
Fields (Reference table)	Indicates the fields that you want to appear as the to-dos configuration details. If you select multiple fields, they're separated by a hyphen. Only appears when you select **Fields** from the **Detail type** list. **Note:** The price field mapping from the Primary section for OOTB REQ record is removed. However, Admin can add it if required.

6. On the form, fill in the fields.

Tab Configuration form

Field	Description
Type	Tab type based on which a widget is displayed. Possible options are: ○ Activity Stream: To display activity from the source task or request. ○ Line Items: To display parent-child relationship in multi-lines.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Attachments: To add or display the attachments from the source task or request. ○ Custom: To select a widget and parameters. ○ Variable Summarizer: To display only variables user had selected while requesting the item in a summarized format. ○ Variable Editor (Read-only): To display all variables present in the task in the format while creating request. ○ Selectable Line items: To display multiple line items that you can select and perform actions as a batch. **Note:** Using this option allows you to filter the requests by state.
Source	Source for the selected type.
Table	Name of the table that the tab is associated with.
Display name	Display name of the tab.
Application	Application associated with the approval configuration.
Order	Order in which the tab is displayed in the tabs section.
Visible	Conditions for the tab visibility.
Script	Option to enable adding a script for the tab visibility. By default, this check box is cleared.
Visible script	Script for the tab visibility. ○ If the script returns true, the tab is visible on the standard ticket page. ○ If the script returns false, the tab is not visible on the standard ticket page. **Note:** This field appears only when the **Script** check box is selected.
Widget	Widget displayed in the tabs section. This field appears only when **Custom** is selected from **Type**.
Widget parameters	Comma-separated list of tab widget parameters.

7. Click **Actions** to search and select the required action group.
   Select the **Approvals action group** to display the frequently used actions such as **Approve** or **Reject**. For more information, see Action framework.
8. **Optional:** Add **Comments** in a custom widget to show comments.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- Ensure you have the write permissions to the Comment field. Check the ACL and grant permissions to add comments.
- For more information on adding comments while rejecting an approval request, see https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB0760283.

9. Click **Submit** or **Update**.

Result

Based on this configuration, the approvers see the in-context important information about the approval and complete the approval. For more reference info, see Approvals experience reference.

Note:
A user must have the approval_user or business_stakeholder role to approve IT requests (not applicable to other requests such as HR approvals) on Employee Centre. Role validation has not been implemented in Core UI16 because modifying ACLs in UI16 might have broader implications at the NowPlatform level.

Use the out-of-the-box **Approvals action group** to display the actions such as **Approve** and **Reject**. For more information, see Action framework.

Note:
For actions to appear in the my items widget, you can add the OOTB **Approvals action group** from **All** > **Employee Center** > **Administration** > **To-dos Configurations**, click an existing to-dos configuration, navigate to the **To-do Configuration Details** record, and use the OOTB **Approvals action group** under **Fields Mapping**.

Use approval experience

Configure E-signature for approvals

Approval with e-Signature plugin (com.glide.e_signature_approvals) enables users to approve requests by authenticating their login credentials.

Before you begin

Ensure you install Approval with e-Signature plugin (com.glide.e_signature_approvals) from **All** > **System Applications** > **All Available Applications** > **All**.

Role required: Admin

About this task

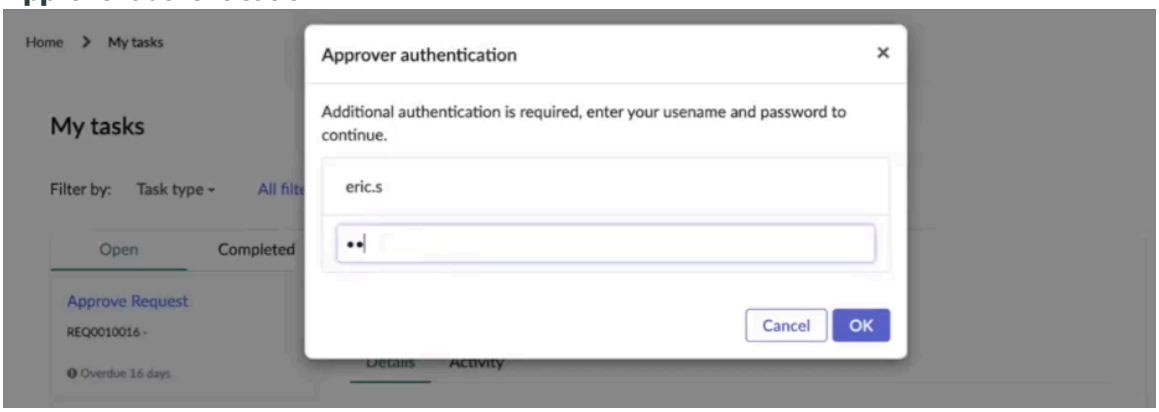
On activation, the **Approval with e-signature** plugin adds a prompt for credentials when an approver attempts to approve a request from the list context menu. Enable E-signature approvals on a table-by-table basis. For detailed information on the plugin, see Approval with e-signature.

For the OOTB approvals:

- Approval users are prompted with e-signature before approving or rejecting the item.
- Approval users can add comments first and without the e-signature.
- When you cancel the e-signature, the task remains in the pending tasks.
- When you approve with an e-signature, the task progresses to the completed section.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

E-signature approvals provide security, compliance, and accountability by introducing the ability for users to enter login credentials before taking an action.



Procedure

1. Navigate to **All** > **System Definition** > **e-Signature Registries**.
2. In **Table name**, select an existing table from the drop-down list.
   - **Table**: A table list to select the table that requires e-signature.
   - **Enabled**: On selection, an e-signature is required. Clear this option to remove the e-signature requirement.
3. Select **Save**.

Result

When you select a table (sc_request) and enable the e-signature, the approvers can perform the approve or reject actions only after a successful user credential authentication. The approver authentication window redirects to the identity provider login screen for an SSO enabled instance.

Approver authentication

Note:
When you do not upgrade to the latest employee center, you do not see the authentication window.

For more information on approvals, see Use approval experience.

App Launcher

App Launcher enables you to provide employees one-click access to all of their web business applications from Employee Center.

Sync all your business applications from Azure AD and non-SSO, register the custom applications manually, and enable employees to access these applications. You can access the applications from the Employee Center home page widget in context from dynamic topic pages and through search.

App Launcher improves your employee productivity by reducing effort in discovering apps and eliminating the need for using the single-use case SSO dashboards. Using application launcher with the Employee Center Pro, you can manage the following types of applications:

- **SSO Integrated Apps**: App Launcher offers pre-built integration with Azure AD. If you use Microsoft Azure AD as an identity and access management tool, you can automatically sync the registered applications in your Azure AD account to the App Launcher. Only applications to which the users have access in SSO, such as Microsoft Azure AD, are displayed on Employee Center. The App Launcher framework enables you to integrate with other SSO vendors and

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

sync registered applications. See Integration Hub for the availability of the required spokes, actions, and the license requirements.

- **Custom web applications (Non-SSO)**: Register the applications manually which are not registered in SSO. Register the apps in the Web Application table and define the user criteria to control the visibility.

SSO and non-SSO app configuration

Configure both SSO integrated Apps and Custom registered apps on the Home page widget or topic page, manage the widget preferences, and associate applications to the topics. As an administrator, you can register applications, sync available applications, and give one-click access to the applications. You can associate topics to the applications to launch useful applications right from within Employee portal.

- Create a unified application launcher that can increase employee productivity.
- Configure the integration such as sync SSO-applications, register custom applications, and assign applications to users or groups.
- Assign custom applications based on the role, location, business unit, team, and other criteria.
- Define the visibility and access to applications based on the user, user group, and other criteria.
- Integrate Azure AD and sync the registered applications from connected Azure AD account.
- Associate application to topics for in-context app discovery.
- Browse applications by **Favorite**, **Featured**, **categories**, and **Recent**.
- Improve employee productivity and experience.
- App launcher is an Employee Center Pro feature.

My applications user experience and personalization

Organize applications on the App launcher for better app discovery and quick access. Enhance the user experience by simplified browsing experience using Featured, Recent, Categories, and Favorites groups. These features are enabled by default however admins can disable the option or adjust the display preferences.

- **Categorization**: Admins can map the applications to a suitable category such as finance, IT, events and more. You can create categories and assign the app to one or many app categories.
- **Featured**: Admins can use this option to promote new or important or seasonal applications for higher visibility. Tag important applications as featured for better visibility. Featured applications have visibility preferences and appear on the top of the page despite any filters or sorting.
- **Favorites**: Employees can mark the applications as favorite for easy access. Bookmark the apps you use frequently for quicker access.
- **Recently opened**: Employees can navigate to the recently opened apps from the recently open section.

Application access and visibility

Enhance application discovery and navigation on the App launcher by configuring the access and visibility settings. Understand how access control can improve the app discovery for employees and find relevant apps that they have access to.

For more information, see Configure application visibility and access.

App Launcher integration with AI search

Understand how AI Search is integrated with App launcher for better application discovery and access, see Configure search navigation tabs.

Ensure you understand how to configure and enable AI search capabilities, see the following AI Search topics:

- Configuring AI Search
- Configuring navigation tabs in AI Search

Related topics

Register custom web applications

Assign topics to web applications

Sync your applications from Microsoft Azure AD

Modify applications widget display

Access applications from App Launcher

Configure application visibility and access

Sync your applications from Microsoft Azure AD

As an administrator, you can sync your single-sign-on applications and give one-click access to the applications. You can associate topics to the applications to launch useful applications right from the portal.

Before you begin

Role required: sp_admin, taxonomy admin, or taxonomy manager

- The App Launcher synchronization of applications from Azure is compatible only with the latest Microsoft Azure AD spoke version. Ensure that you upgrade the existing Azure AD spoke to sync the apps with your web applications.
- Azure AD integration enables your employees to access and manage pre-integrated apps.
- Integrate Azure AD spoke with ServiceNow, create credential records, and create connection records as explained in Azure AD spoke setup
- Understand the basics of Azure spoke and service principals.
- Enable easier access to all active apps with valid entitlement in SSO without asking for login credentials.

About this task

By using the App Launcher with Employee Center Pro, you can do the following actions:

- Sync the registered applications from the connected Azure AD account to your applications widget.
- Enable access to the applications based on user permissions for Azure identity management.
- Manage all active applications of Azure AD in your instance.
- Configure the application integration such as add, create, and assign applications to users or groups.
- Change the app icon, label, and link or mark the app as inactive.

Azure AD integration enables your employees to access and manage pre-integrated apps.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **Web Applications**.
2. To fetch applications from the Azure account, click **Update applications**.
   All the Azure applications appear. See the following information:

List of applications

Field	Description
Name	Name of the web application
Description	Description for the web application. **Note:** For Azure apps, the description is empty due to an Azure API limitation. However, you can manually add the description.
Active	Status of the web application. Only active applications for the user are displayed.
Categories	Category to which the application is assigned. You can create categories and assign the app to one or many app categories.
App source	Source of the application: Azure: Applications that are synchronized by administrators who use external integrations such as Azure.
Application URL	URL of the application
Application icon	Icon of the application When a brand icon isn't configured, a default icon appears. **Note:** Ensure you configure a brand icon for the application for better user experience.
Application icon URL	URL of the application icon
Available for	User group for whom the app is available. Define and select the user group based on your business needs. This field is applicable only for custom applications. Application visibility and access are based on your configuration of the **Available for** option.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Field	Description
	Note: When you mark an application as **Available for** a user, the app is visible and accessible in the search results.
Not available for	User group for whom the app is unavailable. Values that are defined at the **Not available for** take precedence over **Available for**. This field is applicable only for custom applications. Application visibility and access are based on your configuration the **Not available for** option. **Note:** When you mark an application as **Not available for** a user, the app is not visible and accessible in the search results.
Is record updated	Record update setting to indicate if the Azure app record is manually updated. The value changes to true on manual changes. For custom apps, the default is false. **Note:** This field is applicable only for apps that are synchronized with the Azure integration.
Featured	Option to mark the application as featured. Use the **Featured** option to promote new or important or seasonal applications for higher visibility. **Note:** Featured applications have display preferences and appear on the top of the page despite any filters or sorting.

Note:
API throttling limits vary based on multi-tenant or single-tenant configuration.

3. Click **Save**.
   Applications are fetched. You can proceed to associate topics that are suitable for the application.
4. To assign the topics to the applications, see Assign topics to web applications.

Result
When you sync applications, you can see the list of Azure apps and track the flow execution status from the related link on the page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

To sync the latest apps, you can do the following actions:

- Click **Update applications** from **All** > **Employee Center** > **Web Applications** to sync the updates instantly with the sn_hr_sp.esc_admin role. When you update apps, you can track the flow execution status from the related link on the page.
- Run the **Fetch applications** schedule job from **System definition** > **Scheduled jobs** to sync the updates automatically on an as needed-basis or once a day.

For upgrades: When you have an existing Azure AD spoke and connection and upgrade to the employee center pro with the App Launcher, the apps get synced through a job automatically and are updated nightly. To disable the fetch applications job, you must mark the job as inactive from **System Definition** > **Scheduled job**.

```
Scheduled Job: Fetch applications
table: sysauto_script
sys_id: 48b46a8a4744c1109dcae052846d43cf
```

Based on the user permissions, service principals, and the applications that are mapped with the Azure service principals, the applications are displayed on the App Launcher. Verify the service principals from the Azure app service principals.

- When user access permissions change at the Azure side, the updates are synced real-time on the applications widget. To see the changes, re-login to your Azure account.
- Changes to the app metadata reflect only after the next sync.

Note:
When an application is hidden, users still have permissions to the application until the next synchronization.

App launcher integration with Okta

Using OOTB integration with Okta, you can automatically sync the registered applications from Okta and give your employees one–click access to a personalized list of assigned applications. Your employees can easily access all the active apps with valid entitlement in Okta without specifying the login credentials.

Before you begin

- The app launcher sync of applications from Okta is only compatible with the latest Okta Spoke version. Ensure you upgrade the existing Okta spoke to sync the apps on to your web applications.
- Integrate Okta spoke with ServiceNow, Inc., create credential records, and create connection records as explained in Okta spoke setup.

Role required: sp_admin, taxonomy admin, or taxonomy manager

About this task

After the spoke setup, Okta applications are synced on daily basis to a web application table from the Okta account. To sync the latest applications, you can do the following:

- As sn_hr_sp.esc_admin, navigate to **All** > **Employee Center** > **Web Applications** > **Update applications** to sync the updates instantly.

  When you update applications, you can track the flow execution status from the related link on the page.

- As an admin, sync the updates automatically on need-basis or once everyday by running the **Fetch applications** schedule job from **System definition** > **Scheduled jobs**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **Web Applications**.
2. Fetch applications from the external integrations Okta, by clicking **Update applications**.
   All the Okta applications appear with the following information:

Applications

Field	Description
Name	Name of the web application
Description	Description for the web application.
Active	Active indicates the status of the application. Only active applications for the user are displayed.
Categories	Category to which the application is assigned. You can create categories and assign the app to one or many app categories.
App source	Source of the application. Okta applications synced by admins using integrations.
Application URL	URL of the application
Application icon	Icon of the application
Application icon URL	URL of the application icon
Is record updated	Record update setting to indicate if the Okta app record is manually updated. The value changes to true on manual changes to **Name** and **application URL**. For custom apps, the default is false. **Note:** Applicable only for apps synced with the Okta integration.
Featured	Option to mark the application as featured. Use the **Featured** option to promote new or important or seasonal applications for higher visibility. **Note:** Featured applications have display preferences and appear on the top of the page despite any filters or sorting.

   Applications are fetched. You can proceed to associate topics suitable for the application.
3. Assign the topics to applications by following the steps from Assign topics to web applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
When you sync applications, you can see the list of Okta apps. Track the flow execution status from the *Okta flow execution status* related link on the page.

What to do next
For upgrades: When you have an existing Okta spoke and connection and if upgrade to the employee center pro with the App launcher feature, the apps get synced through a job automatically and are updated nightly. To disable the fetch applications job, you must mark the job to the inactive state from **System Definition** > **Scheduled job**.

```
Scheduled Job: Fetch applications
table: sysauto_script
sys_id: 48b46a8a4744c1109dcae052846d43cf
```

Based on the user permissions and the applications mapped with the Okta, the applications are displayed on the App launcher.

- When user access permissions change on the Okta side, the updates are synced real-time on the applications widget. To see the changes, re-login to your Employee Center account.
- Changes to the app metadata such as Deletion, status change, or selecting *Do not display application icon to users* reflect only after the next sync. After sync, the apps are marked inactive and hidden from users.

Note:
When an application is hidden, users still have permissions to the application until the next sync.

Register custom web applications

As an administrator, you can register applications manually and give one-click access to the applications. You can associate topics to the applications to discover and launch useful applications right from topic page.

Before you begin
Role required: sp_admin, taxonomy admin, or taxonomy manager

Procedure
1. Navigate to **All** > **Employee Center** > **Web Applications**.
2. Click **New**.
3. On the form, fill in the following fields.

Applications form

Field	Description
Name	Name of the web application
Description	Description for the web application
Active	Active indicates the status of the web application. Only active applications for the user are displayed.
Categories	Category to which the application is assigned. You can create categories and assign the app to one or many app categories.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
App source	Source of the application: ○ **Custom**: Applications registered by admins using the EC Web Application option ○ **Azure**: Applications synced by admins using external integrations such as Azure.
Application URL	URL of the application
Application icon	Icon of the application When a brand icon isn't configured, a default icon appears. **Note:** Ensure you configure a brand icon for the application for better user experience.
Application icon URL	URL of the application icon
Available for	User group for whom the app is available. Define and select the user group based on your business needs. Applicable only for custom applications. Application visibility and access are based on your configuration of the **Available for** option. **Note:** When you mark an application as **Available for** a user, the app is visible and accessible in the search results.
Not available for	User group for whom the app is unavailable. Values defined at the **Not available for** take precedence over **Available for**. Applicable only for custom applications. Application visibility and access are based on how you configure the **Not available for** option. **Note:** When you mark an application as **Not available for** a user, the app is not visible and accessible in the search results.
Is record updated	Record update setting to indicate if the Azure app record is manually updated. Value changes to true on manual changes to the app record. For custom apps, the default is false. This flag is internally used to exclude specific modified application from the regular data sync job.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Applicable only for apps synced with the Azure integration.
Featured	Option to mark the application as featured. Use the **Featured** option to promote new or important or seasonal applications for higher visibility. **Note:** Featured applications have display preferences and appear on the top of the page despite any filters or sorting.

For more information, see Configure application visibility and access.

4. Click **Submit**.
   Application is now registered. You can proceed to associate topics suitable for the application.
5. Follow the steps from Assign topics to web applications to assign the topics to applications.
6. Click **Update** to assign the topics to an application.
7. Define the **Order** score to determine the display of the applications on the topic page.
   - By default, the applications appear in alphabetical order. On use, the display order changes by **Recent use** on the home page widget.
   - For display preferences, configure the order sequence per your organizational needs.

   You can register multiple applications based on your requirements.

Result
When you create applications, you can see the list of custom apps.

What to do next
Your employees can access all applications and associated topics. See Access applications from App Launcher.

Assign topics to web applications

Associate topics to the applications which can help discover and launch useful applications right from topic page.

Before you begin
Role required: Taxonomy admin, taxonomy manager, and taxonomy contributor

Procedure
1. Go to **Web applications** > **Application topics** > **New**.
2. In the **Select a Topic** dialog box, perform the following steps:

   a. From the Taxonomy list, select suitable taxonomy.
   For example, **Employee**.
   The list of all the topics associated with the selected taxonomy is displayed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Select the topic or subtopic that you want to assign to the application.

c. Click **OK**.

3. Click **Update** to assign the topics to an application.

What to do next

Your employees can access all applications and associated topics. See Access applications from App Launcher

Configure application visibility and access

Enhance application discovery and navigation on the App launcher by configuring the access and visibility settings.

Before you begin

Role required: Admin, ESC admin, and taxonomy manager.

Ensure you configure and enable AI search capabilities, see the following AI Search topics:

- Configuring AI Search
- Configuring navigation tabs in AI Search and tag **ESC Portal Default Search Application**

About this task

Administrators can control user access by specifying who can and cannot use the application. You can specify the users for whom the application is **Available for** and **Not Available for**.

- Improve the app discovery for employees to find relevant apps more quickly and easily.
- Enhance the application discovery from a unified search experience with the **Applications** tab in search results.
- Define the user access controls to ensure users see and access only the authorized applications.
- Increase adoption and productivity for registered and custom applications:
  - For Azure and Okta integrated apps, user access must be cached at the first load of the App launcher.
  - For custom apps, permissions must be evaluated in real-time for each search.

Note:
You can use this feature base system with the default ESC search profile. For existing users with custom search config, ensure you manually map the changes to the custom search profile.

Procedure

1. Navigate to **All** > **Employee Center** > **Web Applications**.
2. Click **New**.
3. Configure the **Application** form as explained in Register custom web applications.
4. Configure the user access control options for application visibility and access.
   - **Available for**: Users or user group for whom the application is accessible and visible.
   - **Not available for**: Users or user group for whom the application isn't accessible and visible.
5. Click **Submit** or **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

Based on the configuration, the applications are made visible to the employees both from the app launcher and from AI search results.
When an application is **Available for** a user, the search results show the application cards with name, icon, description, and link to the relevant applications that the user has access to.

Note:
When the app doesn't have a configured brand icon, a default icon appears.

App Launcher and AI search results

Note:
When you mark an application as **Not Available for** a user, the application tab on the search results indicates the count. However, the user can't see or navigate to the application due to user permissions.

Modify applications widget display

Access all the useful applications from a unified application from the **Applications** widget from your employee portal. You can see list of related applications when you browse topics and launch the application.

Before you begin

Role required: sp_admin

About this task

Using the application launcher with the Employee Center Pro, You can provide one-click access to the applications and configure the instance options to control the appearance of the widget, such as the icon and description. For more information, see App Launcher.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center home page is displayed.
2. To configure the appearance, press and hold the control key, right-click the **Applications** widget, and select **Instance Options**.
3. On the form, select the options:

Instance options for Applications

Field	Description
Title of widget	Title of the widget, for example **My applications**
Application count	Number of the applications you want to display on the widget
Card display view	Display view preference of the card. Either the app icon or the title is required with other options. Select the app icon or the title from the following options. ○ Icon, Title, Description ○ Icon, Title ○ Icon, Description ○ Title, Description

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

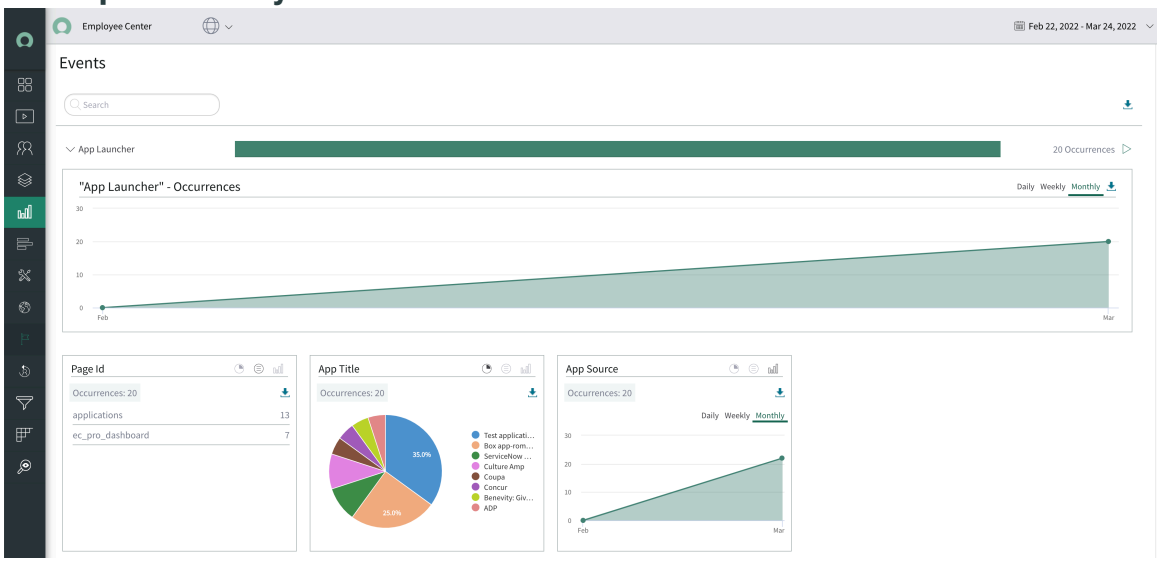
Field	Description
	○ Icon only ○ Title only
Load configuration	Order in which the page and widgets data loads. Select one of the following options: ○ Asynchronous: First the page loads, then the widgets data loads. Users see content appear in the widgets as soon as each individual widget loads. ○ Synchronous: Page and widget data loads at the same time. The page remains blank until all the data loads.
Show empty state	Option to show the widget with empty state message.
Widget behavior during high load	Option to show the view from the available options: ○ None ○ Lite view: Select this option to display a message that the portal is experiencing heavy usage. ○ Regular view: Select this option for regular view.

4. Click **Save**.
5. Click **View all** to see all the applications.

What to do next

After instance option configuration, your employees can access both custom and azure applications, manage the appearance of the widget, and access applications from topics.

App launcher user experience analytics



Visually analyze app usage, user behavior, and other information from the user experience dashboard.

You can use the dashboard to view the information about application usage, application engagement, and app launcher adoption. You can track the App launcher usage, analyze app adoption rate, and user activity to drive future business decisions.

Navigate to **User Experience Analytics** > **Dashboard** for a detailed view and analysis. Click the respective widget or chart for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User experience analytics dashboard

User and roles

Roles required for User experience analytics dashboard

Users	Required role
Analytics portal admin	portal_analytics_admin
Analytics viewer	analytics_viewer, mobile_analytics_viewer, web_analytics_viewer, portal_analytics_viewer

Widgets

The dashboard provides the following metrics:

- **Page Id**: Indicates the occurrences based on the page name from home page, topic page, and apps page.
- **App title**: Indicates the occurrences based on the title of the application.
- **App source**: Indicates the occurrences based on the application source such as custom, Okta, or Azure AD.

User behavior

View and analyze the information available in your dashboard by each app source, title, or page ID. You can track user behavior and app usage on the app launcher.

- View the applications that employees launch frequently.
- Track monthly and daily user activity.
- View number of user clicks by app from home page, topic page, and apps page.
- Analyze the trend of user activity periodically.
- Assess the user behavior and insights and drive business decisions.

Organization chart in Employee Center Pro

Using org chart, learn more about other employees and understand team structures at the organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can offer a better org chart experience with the new org chart functionality available in the Employee Center Pro application. The newer org chart provides an updated UI experience and more configuration capabilities than the older org chart available in the Content Publishing application.

Note:
Ensure that you install Employee Profile plugin 5.0.1 and opt in to the Employee Profile.

As an admin, you can perform the following configuration steps:

- Enable the org chart viewer packaged with Employee Center Pro.
- Configure the eligible users and employee card display settings.
- Populate the direct report count and other report count through scheduled jobs.

Note:
If the other report count is zero, new reports aren't displayed until the count is updated by the scheduled job. For more information on running the job, see Update the report count based on eligible users.

- Display the total report count in the selected user card and skip level reports.
- Define quick actions based on the org chart action group.
- Add an employee role and manage the reporting hierarchy.

Note:
Employee Center Pro customers get the new org chart on opting into the Employee Profile. Mark the Page Route Map record as active. All previous org chart links redirect to the new org chart. See Opt in to the employee profile for more information.

Related topics

Configure eligible users

Configure card settings for org chart

Modify the org chart widget display

Configure eligible users

Define the eligible users to show up in the org chart. Admin can create a new eligible user configuration from one of the Users, HR Profile, and Employee Profile tables.

Before you begin

An active eligible user configuration is a condition that determines who can appear on the org chart. You can have only one active eligible user configuration per domain. Ensure you have only one active configuration.

Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **Employee Center** > **Organization Chart** > **Eligible users**.
2. Click **New** or open an existing record.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Eligible User Configuration

Field	Description
Name	Name of the eligible user configuration record.
Order	Enter the order number to determine where the item appears in relation to other items
Application	Application that you want to configure the activity for.
Active	Option to activate the eligible user configuration record for use. Ensure you have only one active configuration for eligible users.
Table	Table that the eligible user configuration record is associated with. You can select from one of the following tables: ○ Default: Employee Profile ○ HR Profile: The HR profile table appears only when you install the Human Resources [com.sn_hr_core] plugin. ○ Users **Note:** To display all users in your organization, you can model your eligible users on Users or HR Profile.
Conditions	Conditions that a user must meet to be an eligible user. For example, you can select users who are **Active** or employees joining the organization after a certain start date.

4. Click **Save**.

Result
Based on this configuration, only the eligible users appear in the Org Chart widget.

Note:
When you have multiple eligible user configurations, ensure you deactivate the current active definition before activating the other.

What to do next
A scheduled job populates the direct and other report count periodically. You can run the **Populate Manager Reportee Count Using Eligible Users (Domain separated)** scheduled job on-demand to update the report count at any time. The counts change based on the eligible users or employee status. For more information on running the job, see Update the report count based on eligible users.

When an employee with direct reports becomes ineligible, the direct reports are tagged to the manager of such ineligible employee.

Configure card settings for org chart

Define the lines and information to show on the Employee Center Pro org chart card.

Before you begin
Role required: sn_hr_sp.esc_admin
Use **Org Chart Card Configuration** to define information to display on the chart. Define one user card configuration on the same table as the one used in the eligible user configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
New hires appear in an org chart during the onboarding and when a sys_user record is created. You may configure the conditions to suit your business requirements.

You can configure two primary and six secondary slots of information on the card of an employee. Information is configured by selection or dot-walking the fields from the Employee Profile [sn_employee_profile], HR Profile [sn_hr_core_profile], or User [sys_user] tables.

Procedure

1. Navigate to **Employee Center** > **Organization Chart** > **User display** > **Org Chart Configurations Card**.
2. On the form, fill in the fields.

User Display Configuration

Field	Description
Name	Name of the user display configuration record.
Application	Application that you want to configure the activity for.
Table	Table that the user display configuration record is associated with.
Show preferred pronoun	Option to show the preferred pronoun from the employee profile of the user on the org chart. Pronouns field appears only when you select the employee profile table.
Primary display fields	Primary fields to display on the org chart card. For Employee profile, defaults are user.name and user.title. Primary display fields appear on all user cards that includes the manager hierarchy, selected user card and direct reports, if any. User search results also display the information as per the primary display fields. **Note:** Configure two primary display fields.
Action group	Group of quick actions defined for org chart. For **Org Chart Group**, you can use actions such as view profile, email, or call. For more information, see
Order	Enter the order number to determine where the item appears in relation to other items

3. Click **Save**.
4. On the secondary field form, specify the required org chart fields configuration such as *`icon`* and *`display field`* to display as secondary fields on the selected employee card.

   Note:
   Configure upto six secondary display fields.

5. Click **Submit** or **Update**.

What to do next
For more information on widget instance options, see Modify the org chart widget display.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update the report count based on eligible users

Update the direct and other report count by running a script execution job.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. On the scheduled jobs page, select the **Populate Manager Reportee Count Using Eligible Users** job.

> **Important:**
> If the Domain Separation plugin is activated on your instance, select the **Populate Manager Reportee Count Using Eligible Users [Domain Separated]** job.

3. On the scheduled script execution page, select **Execute Now**.

Result
The report count is updated based on the eligible users and is populated in the organization chart.

Setup continuous improvement features

Enhance efficiency and performance through feedback and analytics.

Continuous improvement features

Feature	Description
Content Analytics	Monitor and measure the impact of your content using Content Analytics.
Integrated experience and service feedback	Experience and service feedback enables you to gather quick feedback from your users on their user experiences and their service experiences.

Integrated experience and service feedback

Experience and service feedback enables you to gather quick feedback from your users on their user experiences and their service experiences.

Configure the experience and service feedback across the Employee Center portal to gain insights into your user sentiments, as an admin.

View all the responses captured neatly in the Feedback Analytics dashboard.

The two feedback types are:

- Experience feedback: Provide your feedback on the user experience in the portal, the mobile, Kiosk, or through the Virtual Agent.
- Service feedback: Provide your feedback on the service experience like raising a Service Catalog item request.

Both the feedback types can be either static questions or survey questionnaires.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- Configure the experience feedback drawer widget in your portal, if it has the Employee Center header.
- Configure the experience feedback drawer widget to provide feedback in various formats like, experience, numeric value feedback, or star rating feedback. For more information on configuring feedback definition, see Set up the feedback definition.
- Avail the star rating and the numeric value rating in Experience feedback predefined with Employee Center version 35.0.
- For a description of the field values in the feedback definition form, see Feedback definition form.

Provide feedback through the drawer widget, In page in the portal or via email.

The following widgets are customizable. For more information on how to customize the widgets, see Integrated service and experience feedback management.

Feedback widgets

Name	Type	Description
experience-flow-feedback	Widget	Supports in-page feedback on the portal.
experience-workflow-feedback	Widget	Supports workflow-based feedback on the portal.

Post-feedback loop

Post-feedback loop allows tasks to be created when the feedback rating is beneath or equal to the rating threshold. The feedback tasks are visible in **My tasks**.

Note:
The sn_hr_sp.esc_admin has read and write access to the feedback task table Employee Center Pro version 37 onwards. Additionally, the following fields in the feedback task form are read-only, version 37 onwards:

- **Feedback definition**
- **Assessment response**
- **Feedback provided by**

View the **Details** tab to get the feedback task assessment. For Survey feedback tasks, view the responses and assessment details.

Feedback tasks can be anonymous if the feedback provider doesn't share their personal information while submitting the feedback. Notify the feedback provider via email when the task is resolved if they have shared their personal details. For more information, see

- Resolve a feedback task
- Feedback task notification

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Experience feedback for browser extension

Get an experience feedback configuration and a feedback definition when you install Browser Extension for Employee Center plugin (sn_ex_brw_ext) version 1.0 along with Employee Center Pro plugin (sn_ex_sp_pro) version 36.0.

Note:
Experience Feedback for Browser Extension definition has certain differentiators from the generic experience feedback options. For more information, see Set up the feedback definition.

You can view the feedback analytics from the browser extension by selecting the **Employee Center Browser Extension** in the **Portals Filter**.

Set up the feedback configuration

Set up the feedback configuration for the experience and service feedback in the Employee Center portal. Configure a seamless channel of feedback communication that remains constant for your portal.

Before you begin
Role required: sn_hr_sp.esc_admin

About this task
Set up the integrated service and experience feedback that is available with Employee Center Pro. Get responses anywhere in your portal, via email or Virtual Agent, or through the Kiosk.

The feedback configuration is generic for all feedback types and definitions.

Procedure

1. Navigate to **All** > **Employee Center** > **Experience and Service Feedback** > **Feedback Configuration**.
2. Select **New** to create a feedback configuration.
3. On the feedback configuration form, fill in the fields.
   For a description of the field values, see Feedback configuration form.
4. Select **Submit**.

Note:
The following default feedback configurations are available with Employee Center Pro version 32.0.

- **Employee center feedback configuration**
- **Feedback configuration for kiosk portal**
- **MESP Feedback Configuration**

Result
You've configured the properties for the integrated service and experience feedback.

What to do next
Set up the feedback definition. For more information, see Set up the feedback definition.

Set up the feedback definition

Configure the feedback definition to curate the finer details of each feedback type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_sp.esc_admin

About this task
Feedback definition provides you with the liberty to select how and at what point and mode do you want to gather your feedback data from your users. You can:

- Select the questions to ask.
- Select the kind of question, whether static or survey.
- Select the mode of the feedback request, whether it's a drawer widget or In page, and so on.

Procedure

1. Navigate to **All** > **Employee Center** > **Experience and Service Feedback** > **Feedback Definitions**.
2. Select **New** to create a feedback definition for a portal page.
3. On the feedback definition form, fill in the fields.
   For a description of the field values, see Feedback definition form.
4. Save your modifications.
   - To save your changes and stay on the form, select **Save**.
   - To save your changes and return to the Feedback Definitions [sn_ex_sp_pro_feedback_definition] table, select **Submit**.
   - **Note:**
     The following feedback definitions are active on installation of Employee Center Pro version 32.0.
     - **Experience feedback**
     - **Experience feedback for Kiosk**
     - **Experience feedback for Virtual Agent**
     - **Experience feedback for mobile**
   - You only see **Experience feedback for Kiosk** when you have the Employee Center Pro Kiosk plugin (sn_ex_sp_pro_kiosk) installed.
   - The following feedback definitions are active on installation of Employee Center Pro plugin (sn_ex_sp_pro) version 35.0.
     - **Star rating for experience**
     - **Experience feedback for Kiosk**
     - **Experience feedback for Virtual Agent**
     - **Experience feedback for mobile**
   - If you're originally deploying the experience feedback functionality or the Employee Center Pro plugin (sn_ex_sp_pro) itself with version 35.0, the **Star rating for experience** definition is active by default. The **Experience feedback** definition is inactive.
   - If you're an existing user of the **Experience feedback** definition, the **Star rating for experience** definition is inactive by default. You can enable the former in Employee Center Pro plugin (sn_ex_sp_pro) version 35.0.
   - If you have the Browser Extension for Employee Center plugin (sn_ex_brw_ext) version 1.0 along with the Employee Center Pro plugin (sn_ex_sp_pro) version 36.0, you have

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Experience Feedback for Browser Extension definition by default. The following are some key differentiators from the generic experience feedback definitions.

- The **Star - 5 point scale** is active with the feedback definition by default. You can change it to any other form of experience feedback according to your organizational requirement.
- The **Page selection** only has **ecbe_pro_home** option for the **Included pages** field.
- The **Widget mode** field has **Inline** option for the experience feedback for the browser extension. For more information on the field values, see Feedback definition form.

5. Trigger Conditions [asmt_condition] table is visible only for the feedback type Service - workflow once the definition is saved.
6. Select **New**.
7. On the trigger condition form, fill in the fields.
   For the description of the field values, see Trigger Condition form for surveys.

Note:

- Access the experience feedback widget in the topic pages, the Service Catalog items, and in the My Requests page available by default.
- Add the widget manually in any other page.
- Create only one feedback definition for a portal at a time.
- Create unique survey feedback for each feedback definition.
- Change the default reset timer of the feedback definition trigger condition from 30 days to your required period.

What to do next

- Use the feedback widgets across the Employee Center portal. For more information, see Use the integrated service and experience feedback.
- Check the responses received on the experience feedback dashboard. For more information, see Feedback Analytics dashboard.
- Customize the appearances of the experience flow and the workflow feedback widgets. For more information, see Integrated service and experience feedback management.

Configuring feedback for Virtual Agent

You can promote the experience feedback or set up service feedback for the Virtual Agent.

Promote experience feedback in Virtual Agent

Promote the experience feedback topic to appear in the default Virtual Agent suggestions.

Before you begin

You must have a feedback definition for the Virtual Agent channel with the **Feedback type** set to Experience.

Role required: admin

Procedure

1. Navigate to **All** > **Employee Center** > **Experience and Service Feedback** > **Feedback Definitions**
2. Select the feedback definition that you created for the Virtual Agent channel.
3. Select the **Promote Experience feedback in VA** related link.
   The experience feedback is promoted in the Virtual Agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** View the promoted topic record by selecting the link in the displayed message. For more information about promoted topics, see Promote or demote LLM topics in Virtual Agent Designer.

Set up service feedback for Virtual Agent

Set up the service feedback to appear after a topic conversation in the Virtual Agent.

Before you begin

You must have a feedback definition for the Virtual Agent channel with the **Feedback type** set to Service - workflow.

Role required: admin

Procedure

1. Navigate to **All** > **Employee Center** > **Experience and Service Feedback** > **Feedback Definitions**
2. Select the feedback definition that you created for the Virtual Agent channel.
3. Select the **Setup Service feedback in VA** related link.
4. View the setup topic record by selecting the link in the displayed message. For more information about setup topics, see Working with setup topics.

> **Note:**
> You can set the value of the `com.glide.cs.survey.probability` system property to change the probability (percentage) that the survey setup topic occurs in your conversations. For example, set the Value to 0.50 to display the survey setup topic randomly in 50% of conversations.

Result

The service feedback is set up for the Virtual Agent.

Content Analytics

Monitor and measure the impact of the content you provide through the Employee Center and in campaigns using Content Analytics.

Content Analytics collects data and generates visualizations on employee engagement with content in the Employee Center. Content Analytics is powered by the Platform Analytics framework and uses Performance Analytics to enhance the dashboards capabilities.

> **Note:**
> Google Analytics is no longer supported as Google has stopped offering the integration.

Content Analytics dashboards

Dashboards display data visualizations in widgets. Each widget displays data for specific parameters, such as user interactions with content. Content Analytics includes four dashboards:

Content Analytics dashboards

Dashboard	Description of data visualizations
Content Analytics	Portal engagement metrics, including unique users, average time per page, and bounce rate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Analytics dashboards (continued)

Dashboard	Description of data visualizations
Content Analytics - Basics	Portal page visits and views, including visits per day and most-frequently viewed pages.
Campaign Analytics	Campaign engagement metrics, to-dos, and impact, filtered by campaign or campaign success goal.
Campaign Overview	Campaign performance metrics by campaign, including tasks closed and user actions.
Content Library Overview dashboard	Performance metrics for content published to the portal or Now mobile app.
Content engagement	Metrics on user engagement, such as content views, reaction icon clicks, comments, and replies to comments.

Setting up Content Analytics

1. Activate Content Analytics
2. Establish the tracking profile, by performing one of the following steps:
   - Activate one of the out-of-the-box tracking profiles and set it as the default tracking profile: Activate a tracking profile
   - Create a custom tracking profile: Create a Content Analytics tracking profile

   For more information on tracking profiles, see the section below.
3. To track analytics for a custom widget or page, you must add the tracking profile to the header: Set up Content Analytics tracking

Tracking profiles

Tracking profiles define a bucket where you want to capture analytics. It can correspond to a portal, campaign, application, or any context you like.

Two tracking profiles are included out-of-the-box: Content Experiences and Content Publishing. You can use either one to collect data on content that is displayed with an out-of-the-box widget. If your portal is publishing content to custom widgets, you must update an out-of-the-box tracking profile to collect data for those widgets or create a new tracking profile.

Data collection and storage

Content Analytics stores collected data in tables, which are organized by data type.

Note:
If a dashboard does not display visualizations, check that the data is being collected by opening a table. Enter the table name in the navigation bar, appended by `.list`.

For a list of Content Analytics tables, see Components installed with Content Analytics.

This is an overview of the process by which Content Analytics collects and moves data:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. The users performs an action, such as opening a page or clicking a link.
2. Content Analytics collects that data point and stores in the browser memory.
3. After a user navigates to other content or after five minutes, the data moves to the server in memory.
4. The data moves to the content analytics tables.
   - Tracked Event [sn_cda_tracked_evt_agg]
   - Tracked Page [sn_cda_tracked_page_agg]
   - Tracked Visit [sn_cda_tracked_visit_agg]
5. The tracking profiles trigger runs to transfer data to the shared analytics tables.
   - Event Statistic [sn_cda_event_stat]
   - Page Statistic [sn_cda_page_stat]
   - Analytics Visit Statistic [sn_cda_analytics_visit_stat]

Activate Content Analytics

Activate Content Analytics if you have an admin role to use the default analytics solution that provides web portal traffic analytics, as well as Content Experiences (aka Campaigns) related engagement statistics.

Before you begin

Role required: admin

About this task

Content Analytics requires the following plugins to collect data and generate dashboards:

Content Analytics plugins

Plugin	Description
Content Analytics [sn_cda]	Collects data and provides basic metrics on page views and user sessions
Content Publishing [sn_cd]	Provides data from content published through Content Publishing
Content Experiences [sn_ca]	Provides data from content published through Content Experiences
Performance Analytics - Portal Analytics [sn_cdap]	Enhances dashboards with content profiling and time window filters
Performance Analytics - Content engagement Analytics [sn_ca_pa]	Enhances dashboards with campaign filters enabling users to view campaign-specific analytics and engagement over time for to-do content

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

3. Select a version from the list and select **Install**.

   In the Install dialog that is displayed, any dependencies that are installed along with your application are listed.

4. If you are prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Select **Install**.

What to do next

Content Analytics

Related topics

Components installed with Content Analytics

Activate a tracking profile

Activate one of the out-of-the-box tracking profiles to start collecting portal and campaign metrics.

Before you begin

Role required: sn_cda.analytics_admin

About this task

Content Analytics contains two out-of-the-box profiles (Content Experiences and Content Publishing) that track metrics for the demo portal associated with the product.

You can use either tracking profile to track metrics for the Employee Center by setting it as the default profile.

Procedure

1. Navigate to **All** > **Content Analytics** > **Setup**.
2. Activate one of the profiles: Double-click in the **Active** column, select **True**, then click the **Save** icon.
3. Set a default profile: Double-click in the **Default** column, select **True**, then click the **Save** icon.

   Note:
   The two profiles act as repositories for data collection. The different repository of data provides options to display data sets separately in the analytics dashboard.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

The out-of-the-box tracking profiles each have a scheduled job to collect data. You can modify or manually execute the script associated with the scheduled job by doing these steps:

1. Click the link in the Trigger column.

   Note:
   If the Trigger column doesn't appear in the Tracking profiles list, click the **Update Personalized List** icon and add the Trigger column to the selected list.

   The Profile trigger form opens, where you can modify the import run time (how often the script runs) or set a condition.

2. To manually execute the script, click **Execute Now**.

Create a Content Analytics tracking profile

Use Tracking Profiles to configure your ServiceNow content analytics dashboards.

Before you begin

Role required: sn_cda.analytics_admin

Tracking profiles define:

- What website you want to collect data from.
- From what time zone a day starts and ends for data tracking.
- From what time zone the time data collection should start.
- What countries you want to exclude in your analytics data collection and where you want to capture data from.

Procedure

1. Navigate to **All** > **Content Analytics** > **Setup**.
2. Click **New**.
3. Click **ServiceNow**.
4. Fill in the form.

Tracking Profile

Fields	Description
Name	A description of the tracking profile.
Active	Indicates that the profile is active and available to use. **Note:** If you attempt to deactivate a tracking profile that is in use, a warning message appears to confirm your actions.
Default	Indicates that the profile is the default profile. Portals use the default tracking profile when configured for tracking without setting a specific tracker.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fields	Description
	Note: The base system Employee Center (EC) uses the default tracking profile.
Owner	The user that is responsible for the profile.
Collection time zone	Defines when a day starts for data collection based on the time zone you select. A day starts at 12:00 AM and ends at 11:59:59 PM by default. For example, if you select System (America/Los_Angeles), that means a day starts at 12:00 AM PST.
Import run time	For the ServiceNow profiles, the time and the time zone data moves from the content analytics tables to the shared analytics tables. See Collected data.
Import run time zone	The time zone for the Import run time. For example, if you set the Import run time as 00: 00: 00 and System (America/Los_Angeles) as the Import run time zone, your data moves from the content analytics tables to the shared analytics tables at midnight, PST.
Restricted Countries	The countries of the users you do not want to track. **Note:** Restricted countries are based on the user profile (sys_user) and not the country the user is in at the time. Click **Insert a new row...** and select a country. If a country you want restricted does not appear, add it to the list by navigating to **Organization** > **Locations**.

5. Click **Submit**.

Result

The new tracking profile appears in the Tracking profiles list and the system creates a scheduled job to collect data. You can modify or manually execute the script associated with the scheduled job by doing these steps:

1. Click the link in the Trigger column.

Note: If the Trigger column doesn't appear in the Tracking profiles list, click the **Update Personalized List** icon and add the Trigger column to the selected list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Profile trigger form opens, where you can modify the import run time (how often the script runs) or set a condition.

2. To manually execute the script, click **Execute Now**.

Set up Content Analytics tracking

To use Content Analytics with custom pages or widgets, add the tracking profile to your Employee Center or service portal theme header and add the cdaAnalytics service to your custom widgets.

Before you begin

Role required: sn_cda.analytics_admin

About this task

More steps for page tracking:

Add the tracking profile to your Employee Center or service portal theme header.

```
<widget
id="cda-site-analytics"
options="{ 'tracking_profile_name': '{PROFILE_NAME}',
 'enable_logging': false}"
></widget>
```

Note:
If you do not specify a tracking profile in the options, content analytics tries to use the default tracking profile. See Create a Content Analytics tracking profile.

Procedure

1. Navigate to **All** > **Service Portal** > **Headers & Footers**.
2. Select your header (Content Publishing Header, Employee Center Header, ESC Header, or HRMadrid Header).
3. If necessary, clone the header.
   For more information, see Service Portal configuration page. Or, you can use Angular Providers, see Reuse components with Angular Providers.
4. If using a clone from the Content Publishing header, search for the cda-site-analytics widget tag in the **Body HTML template** field.
5. Then replace PROFILE_NAME with the profile you want to use for tracking.
   For more information, see Configure a portal header menu.
6. If you are using a different header, add the following to the Body HTML and replace PROFILE_NAME:

   ```
   <widget
   id="cda-site-analytics"
   options="{ 'tracking_profile_name': '{PROFILE_NAME}',
    'enable_logging': false}"
   ></widget>
   ```

   If you do not specify a tracking profile in the widget options, content analytics tries to use the default tracking profile (if it exists).

Track Employee Center events

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To track Employee Center events, add cdaAnalytics service to your custom widgets. See Widget developer guide.

For example:

```
function ($scope, cdaAnalytics) {
$scope.onButtonClick = function() {

// track event using the default tracker (no argument for
 getTracker)
cdaAnalytics.getTracker() .then(function(tracker) {
tracker.trackEvent(
'{Desired Category}',
'{Desired Action}',
'{Desired Name}'
);
});

// track event using specific tracker
cdaAnalytics.getTracker ('Human Resources Portal
 Tracker').then(function (tracker) {
tracker.trackEvent(
'Human Resources',
'Video Viewed',
'Open Enrollment 2018'
);
});
};
}
```

7. Navigate to **Service Portal** > **Widgets**.
8. Select a widget or create one.
9. Add cdaAnalytics to the Related List of Angular Providers.
10. Update the client controller of the widget to use the cdaAnalytics service.

Setup employee communications

Inform and engage your employees.

Employee Center Pro provides a robust suite of features to create, publish, and manage employee communications in a variety of content types and delivery channels. Follow these steps to setup employee communications features:

1. Make Content Publishing features available to content managers and employees: Properties installed with Content Publishing.
2. Set up content translation (optional): Integration with Localization Framework
3. Customize the out-of-the-box widgets (optional):
   - Modify the Content Experiences widget
   - Modify the Featured News widget
   - Modify the News feed widget

   To view all the widgets installed with Content Publishing, see the widgets section of Components installed with Content Publishing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information on translating custom widgets, see Translate a client script message

To publish content to a custom widget, you must define the content type and associate it with your custom widget: Add or modify content type for Content Publishing

4. Review the Employee communications features table below and configure the features relevant to your use case.

Employee communications features

Feature	Description	Used with
Content Ownership	Define who has permission to create content, where they can publish it, and which employees can view it.	All employee communications
Content templates	Create a content template to enable content managers to create and publish higher volumes of news article content	News articles
Content engagement	Enable Content engagement to provide users with a way to comment and react to news articles and for managers to measure the effectiveness of their content using engagement metrics.	News articles
Video hosting integrations framework	Connect Content Publishing with a video hosting service, to make the hosted videos available for content authoring and publishing.	Microsites/Rich content
Reusable components	Configure the following reusable components: • Audiences for targeting content to users who meet specific criteria. • Content destinations for publishing news articles. • Content categories to organize news articles.	Microsites/Rich content, News articles and Portal content

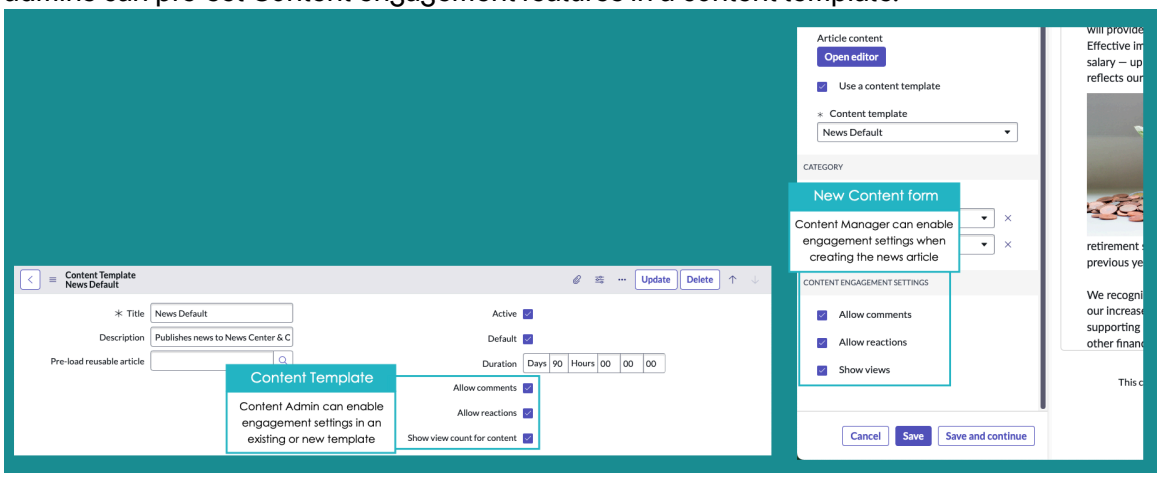
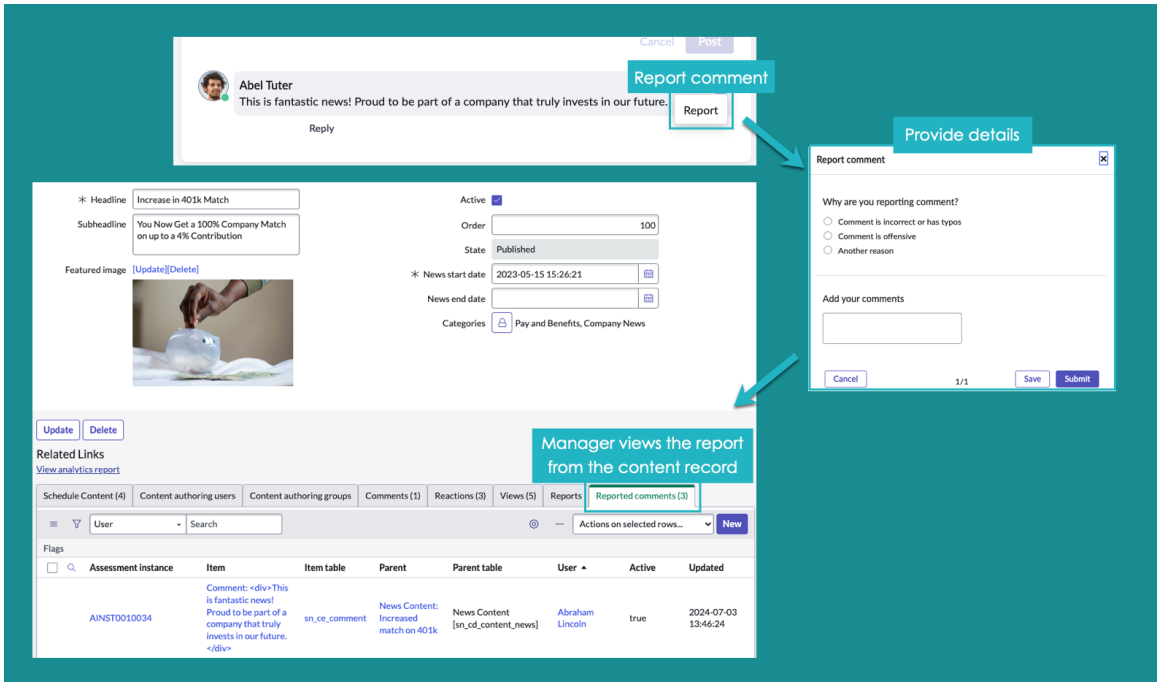
Content engagement



Content engagement enhances news articles by providing users with a way to comment and react to articles and for managers to measure the effectiveness of their content using engagement metrics.

Content engagement overview

Content engagement features are seamlessly embedded in news articles to enable employees to view engagement summaries at the top of the article, select a reaction icon, or post a comment.



Content managers can choose which content engagement features to enable when creating a news article. To enable faster news article publishing, content admins can pre-set Content engagement features in a content template.

Reporting content

Content engagement includes a comment reporting workflow, where employees can report a comment and content managers can view the reports and take appropriate action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Engagement analytics

Content analytics provides visualizations for employee engagement metrics in the Content engagement dashboard.

Additionally, you can review visualizations for a specific news article, including total views count, engagement trends by day, and unique views by day. Navigate to the news article content item and click **View analytics report** in the hamburger menu.

Setting up Content engagement

Content engagement is installed as a plugin. The features are enabled through the Content Publishing properties and delivered to employees via news article widgets. Follow these steps to setup Content engagement:

1. Activate Content engagement
2. Enable Content engagement in Content Publishing properties: Properties installed with Content Publishing
3. Configure a custom reaction (optional)
4. Enable Content engagement in Content templates: Content templates (optional).

Configure a custom reaction

Content engagement utilizes font awesome icons to provide several out-of-the-box reactions for employees to interact with news articles. Engagement admins can customize the out-of-the-box reactions or configure their own.

Before you begin

Role required: Engagement admin [sn_ce.admin]

About this task

The system supports a maximum of six reactions. To create a custom reaction, you can either upload an .SVG or .PNG image file or specify a Font Awesome version 4.7 icon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Engagement** > **Reaction Config**.
2. Click **New**.
3. Fill in the following fields:

Reaction configuration form

Field	Description
Name	System name for the reaction
Display text	Text that appears on the portal when the user hovers over or click a reaction icon
Font awesome icon	Name of the font awesome icon, as it appears on the website
Icon	Field to upload an .SVG or .PNG image file **Note:** If you enter a Font Awesome icon name in the previous field, you can skip this field.
Order	The order in which the icon appears when the user hovers over the **Like** icon on the portal relative to the other icons
Active	Makes the reaction available for users (enabled by default)

4. Click **Submit**.
   The custom reaction appears in the **Reaction Configs** list.

If you create a custom reaction, you must enable Content Publishing to access the reaction by creating an **App Reaction Config** record. You must repeat the following steps for each reaction that you want to make available to employees - including the out-of-the-box reactions.

5. Navigate to **All** > **Content Engagement** > **App Reaction Config**.
6. Click **New**.
7. Fill in the following fields:

Reaction configuration form

Field	Description
Reaction config	Select the reaction.
Application	Connects the reaction with the application. This value is set at the Application scope.
Active	Makes the reaction available for use.
Order	The order in which the icon appears when the user hovers over the **Like** icon on the portal relative to the other icons

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Click **Submit**.
   The reaction is now available for use in the portal.

Video hosting integrations framework

Connect Content Publishing with a video hosting service, to make the hosted videos available for content authoring and publishing.

Content Publishing offers content managers the ability to build content using videos from a video hosting service. The following components must be configured to add the video hosting service as an option in the Content library.

Note:
Depending on your organization, either the content admin or a third-party vendor performs these steps.

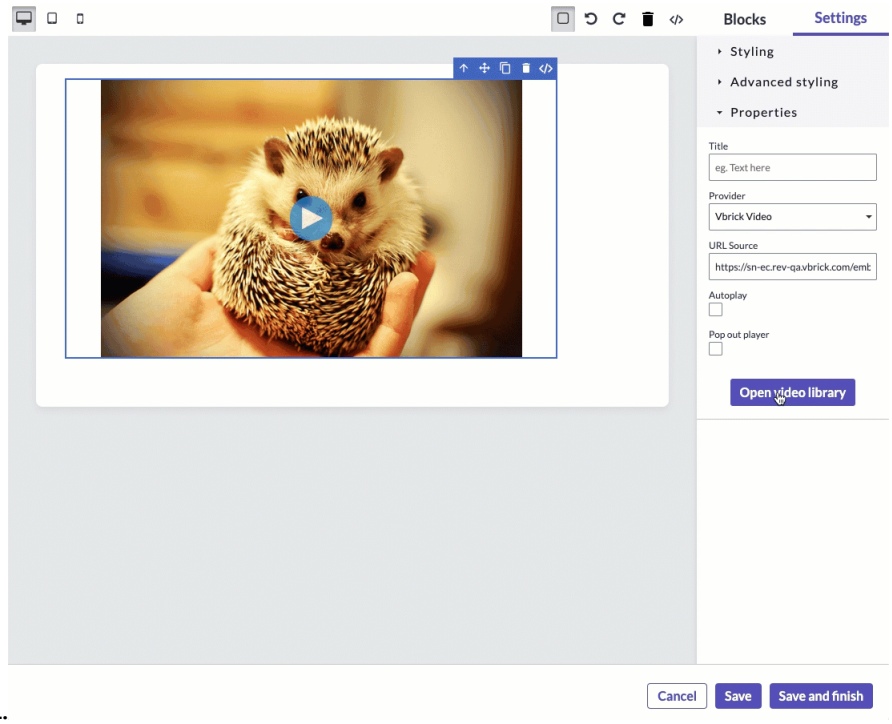
Content provider

A content provider identifies the video hosting service.

Content provider mapping

Content provider mapping makes the hosted videos available to a specific content type. Currently, only the rich content and news articles content types are supported.

Each content provider mapping is associated with a content provider and appears in the related list.



Content processor

Content processors provide an interface to configure API calls to the video hosting service. They are powered by subflows from the Flow Designer. For more information, see Building subflows.

There are two actions available:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Authorize: enables employees to view private videos without providing credentials
- Search: adds a button to the Rich Content Editor interface that enables a content manager to view thumbnails of available videos, instead of copy-pasting the video URL.

Each content processor is associated with a content provider mapping and appears in the related list.

Content Rendering parameter

A content rendering parameter functions similarly to video hosting URL parameters, allowing content managers to customize the viewer's experience through an interface element in the Rich Content Editor. Depending on the hosting provider, this can include defining a checkbox for enabling full screen or autoplay, or a textbox for specifying the start time.

Each content rendering parameter is associated with a content provider mapping and appears in the related list.

Set up content providers

The following process overview guides you through setting up content providers so content managers can use videos from video hosting services when assembling content.

1. The following domains are available out-of-the-box: youtube.com, player.vimeo.com, vimeo.com,players.brightcove.net, and brightcove.net. To configure an additional domain, the system admin must add the host domain to the `glide.html.enable_media_sites` system property.

   For more information, see Available system properties
2. Configure content provider and mapping
3. If the video hosting service contains private videos that require credentials, Configure a video authorization

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. (Optional) To provide content managers with an interface where they can select a video, Configure video content search
5. (Optional) To add interface elements to the Rich Content Editor video picker, Configure content rendering parameter

Configure content provider and mapping

Connect a video hosting service to Content Publishing by configuring a content provider, then mapping the hosting service to specific content types, including rich content, news article, and styled content.

Before you begin

Role required: sn_cd.content_admin

Procedure

Create a new content provider record to identify the hosting service.

1. Navigate to **All** > **Content Publishing** > **Content Provider Configs** > **Content Providers**.
2. Click **New**.
   Fill in the form fields:

New content provider form

Field	Description
Name	Enter a name to identify the content provider when creating content in the Content Library
Type	Select **Video** to connect to a video hosting service
Active	Makes this content provider available for use in the Content Library

3. Click **Submit**.
   The system creates a new record for the content provider. You can view or edit it by navigating to **All** > **Content Publishing** > **Content Provider Configs** > **Content Providers**.

Add one or more content provider mappings to make videos available in specific content types.

4. If you are already on the Content Providers page, click the Content Provider to add mappings. Otherwise, navigate to **All** > **Content Publishing** > **Content Provider Configs** > **Content Provider Mapping**.
5. Click **New**.
   Fill in the form fields:

Content provider mapping form

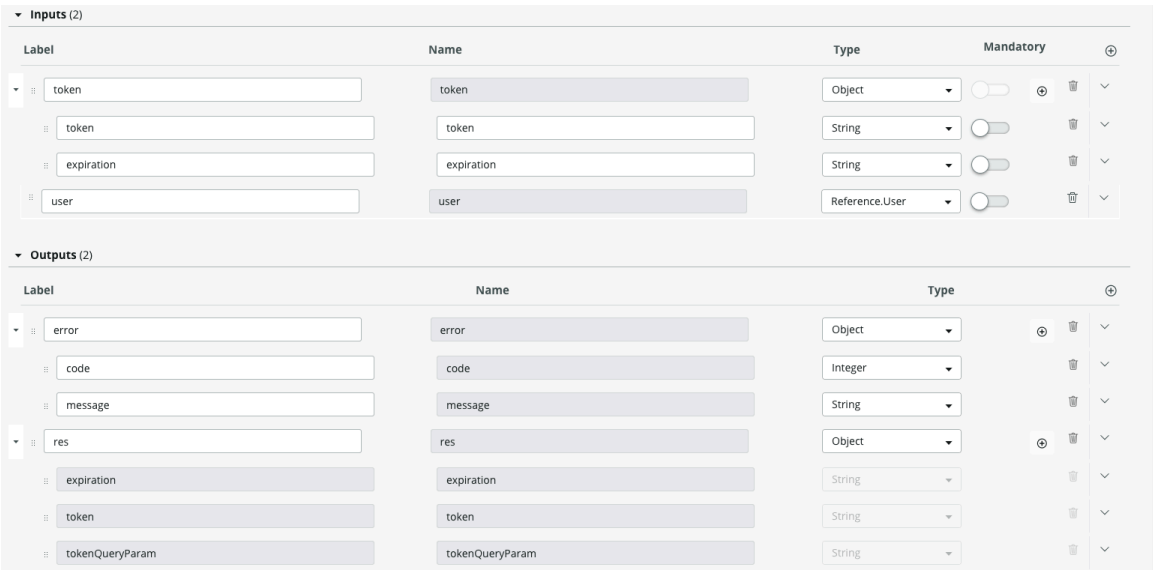
Field	Description
Content provider	Select the name of the Content provider you defined in the previous steps
Content type	Select a content type to use the video content. Choose from:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Rich content ○ News articles ○ Banner
Active	Makes this content provider available for use in the specific content type

6. Click **Submit**.

What to do next



- Enable employees to view private videos without providing credentials: Configure a video authorization
- To provide content managers with an interface where they can select a video, Configure video content search
- To add interface elements to the Content Library video picker, Configure content rendering parameter

Configure a video authorization

Configure a content processor to enable employees to view private videos without providing credentials.

Before you begin

- Role required: sn_cd.content_admin and fd_read_flows
- Create a subflow in Workflow Studio with the following inputs and outputs:

- Configure content provider and mapping

About this task

The authorize action makes authentication API calls to the video hosting service. The authorization method varies based on the provider and is determined by their supported embed iframe.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Publishing appends the authentication token as a query parameter along with its corresponding value to the embedded URL. The configured subflow inputs and outputs manage the query parameters and response body.

Note:
The JSON Web Token (JWT) and access token authentication methods are proven to work. To use a different method, ensure you configure the subflow to return a token. The video hosting service must support auto-authentication via the token in the URL.

Procedure

1. If you have already opened a Content Provider, click the Content Provider Mapping **Preview record** icon then click **Open Record**.
   Navigate to **All** > **Content Publishing** > **Content Provider Configs** > **Content Processors**.
2. Click **New**.
   Fill in the form fields:

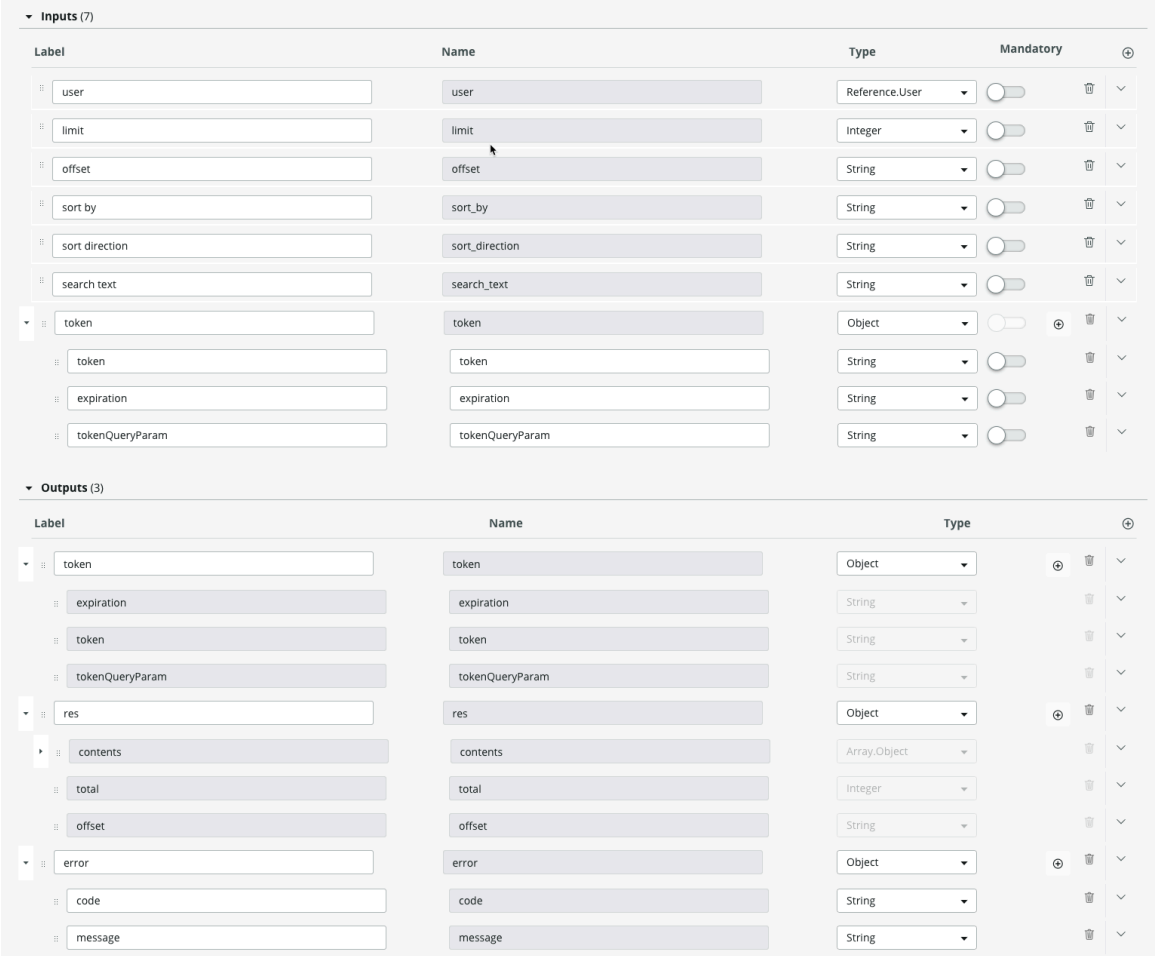
Content Processor form fields

Field	Description
Action	Select **Authorize**
Provider mapping	Select the Content provider that connects Content Publishing to the video hosting service
Processor subflow	Select the flow that performs the authorization API call
Active	Makes this action available to employees

3. Click **Submit**.
   The new Content processor appears in the Content Provider related list.

What to do next

- Enable content managers to view thumbnails of available videos: Configure video content search
- Add interface elements to the Content Library video picker: Configure content rendering parameter



Configure video content search

Configure a content processor to add a button to the Content Library interface that enables a content manager to view thumbnails of available videos from the content provider.

Before you begin

- Role required: sn_cd.content_admin and fd_read_flows
- Create a subflow in Workflow Studio with the following inputs and outputs:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Configure content provider and mapping

Procedure

1. If you have already opened a Content Provider, click the Content Provider Mapping **Preview record** icon then click **Open Record**.
   Navigate to **All** > **Content Publishing** > **Content Provider Configs** > **Content Processors**.
2. Click **New**.
   Fill in the form fields:

New Content Processor form

Action	Select **Search**
Provider mapping	Select the Content provider that connects Content Publishing to the video hosting service
Processor subflow	Select the flow that performs the search API call
Active	Makes this action available to content managers

3. Click **Save**.
   The new Content processor appears in the Content Provider related list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

- Enable employees to view private videos without providing credentials: Configure a video authorization
- Add interface elements to the Content Library video picker: Configure content rendering parameter

Configure content rendering parameter

A content rendering parameter functions similarly to video hosting URL parameters, allowing content managers to customize the viewer's experience through an interface element in the Rich Content Editor. Depending on the hosting provider, this can include defining a checkbox for enabling full screen or autoplay, or a textbox for specifying the start time.

Before you begin

- Role required: sn_cd.content_admin
- Complete the steps to Configure content provider and mapping

Procedure

1. If you have already opened a Content Provider, click the Content Provider Mapping **Preview record** icon, click **Open Record**, then open the **Content Rendering Parameters** related list. Navigate to **All** > **Content Publishing** > **Content Provider Configs** > **Content Rendering Parameters**.
2. Click **New**.
   Fill in the form fields:

Content rendering parameters form

Provider mapping	Select the Content provider that connects Content Publishing to the video hosting service
Label	Appears in the Settings panel to identify the element for Content Managers (for example, autoplay or loop)
Type	Choose from: ○ Checkbox ○ Text
Render checked on UI? (Appears when you select checkbox)	Determines whether this check box is selected by default in the Rich Content Editor.
Append this query parameter to content URL	The query parameter that controls the element (for example autoplay or loopvideo)
Default Value	Sets the default value for the Content Library interface
Active	Makes this element available for use in the Content Library interface
Hide parameter	Hides this parameter from the Rich Content Editor interface, preventing it from being modified

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Order	Where this element appears in relation to other custom elements, with the lowest value appearing higher on the screen

3. Click **Save**.

Organization chart

View your organization chart on both the org chart page and my team widget, search for employees, and more in the Employee Center. Configure what details to display on the org chart card for all employees.

Note:

You can offer a better org chart experience with the new org chart functionality available in the Employee Center Pro application. The newer org chart provides a more modern UI experience and configuration capabilities than the old org chart available in Content Publishing application. Opt in to the Employee Profile for new org chart enhancements. For more information, see Organization chart in Employee Center Pro.

The Organization chart page displays the employees organization chart, the relationships to other employees, and more.

Configure the Organization chart

You control when users appear on both the Organization chart page and my team widget with the user display configuration records. The user display configuration records define when members of a targeted audience display based on a specified date. For example, you can configure a record so that new hires appear on their start date or several days prior.

Note:
User display configuration records control when other users can see the new hire in the org chart page and my team widget. However, the new hire can still access the org chart page and my team widget to see their team if they have access to the portal.

You can configure what details to display on the org chart card for all employees.

Default user display configuration record

A default user display configuration record is included with the Content Publishing application.

Note:
You can have one or more user display configuration records, and they are evaluated in the order assigned. The default user display configuration record is always evaluated last.

Based on the new or upgrading customer, the default record is set to the following values:

User display configuration fields

User type	Date	Table
New customers with Employee Center only	sys_created_on	User [sys_user]
New customers with HR Service Delivery	employment_start_date	HR profile [sn_hr_core_profile]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User display configuration fields (continued)

User type	Date	Table
Upgrading customers	sys_created_on	User [sys_user]

(HR Service Delivery only) User display configuration records control when other users can see the new hire in the org chart page and my team widget. If the record is configured to display based on the HR profile [sn_hr_core_profile] table and an associated date field, the new hire must have an HR profile with an associated date value in order to appear. They do not appear based on the creation of their record in the User [sys_user] table.

Configure the Organization chart card

Use **Org Chart Card Configuration** to define what to show in the org chart cards.

Before you begin

Role required: sn_cd.content_admin, sn_hr_sp.admin
Org chart cards show additional information on employees that are useful for identifying and contacting the employee.

Note:
New hires appear in an org chart when they are onboarded and a sys_user record is created.

You can configure up to four lines of information on the card of an employee.

Note:
The defaults are: user.email, work_phone, work_mobile, and location.

Information is dot-walked from the HR Profile [sn_hr_core_profile] or User [sys_user] tables.

Procedure

1. Navigate to **Content Publishing** > **Organization Chart** > **Org Chart Configurations**.
2. Change the scope to the application you are using.
3. Select **Submit** or **Update**.

Configure a user display configuration record

Create or modify a user display configuration record to define when members of a targeted audience display on the Organization chart page and my team widget in the Employee Center or Employee Center Pro.

Before you begin

Role required: sn_hr_sp.esc_admin or sn_cd.content_admin

Each user display record is associated with an audience record and a date for when members of that audience are set to appear. You can have one or more user display records, and they are evaluated in the order assigned. The default user display record is always evaluated last, and only if none of the previous records were a match.

Procedure

1. Navigate to **Content Publishing** > **Organization Chart** > **User Display**.
2. Click **New** or open a record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Fill in the fields on the form.

User Display Configuration

Field	Description
Name	Name of the user display configuration record.
Audience	Audience record to apply to the user display configuration record. **Note:** Audiences define the conditions or criteria that a user must meet for the user display configuration to apply to them. See Audiences for more information.
Table	Table that the user display configuration record is associated with.
Date	Date field that the user display configuration record is associated with.
Date offset type	Offset type to apply to the date field.
Offset in days	Number of days to apply to the offset type.
Order	Order number for when the user display configuration record is evaluated. Lower numbered user display configuration records are evaluated before higher numbered user display configuration records. **Note:** ○ Make sure that the order number is unique for each user display configuration record. ○ The default user display configuration record is always evaluated last, and only if none of the previous user display configuration records were a match.
Active	Option to activate the user display configuration record for use.

4. Click **Submit** or **Update**.

Content templates

Content templates empower content creators to efficiently publish large volumes of news articles. Each template defines the article layout, publishing schedule, destination, and target audience. By associating a news article with a content template, the system automatically generates publish plans, which reduces the effort required to publish content.

Your instance includes two out of the box templates with a set duration of 90 days and an audience of all active users.

- Featured News: Delivers news to widgets in the portal Home page, News Center, and mobile app.
- News Default: Delivers news to widgets in the portal Home page and News Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you insert a news widget onto a portal page that doesn't already have one configured out-of-the-box, you must create a new content destination to include that page in a content template.

To view a graphic that displays where the News widgets appear, see News articles.

To view the templates, navigate to **All** > **Content Publishing** > **Content Templates** > **View All**.

Note:
Updating a content template does not impact existing publish plans that use that template.

Creating a Content template

A user with the sn_cd.content_template_owner role creates a content template to define the article layout, publishing location, and audience. For more information, see Create a Content template.

Using Content templates

Content authors can use a content template when creating a News article. Depending on the template configurations, the template provides the following pre-defined components:

- Article layout
- Publishing destination (mobile or portal widget)
- Audience
- Content category
- Social engagement activities

When the content author clicks **Save** or **Save and continue**, the system auto-generates publish plans.

A Content template can be modified, even if it is associated with a News article. Changes to a Content template will not impact the existing publish plans for News articles.

Create a Content template

A content template is pre-defined publishing plan for news articles. Create a content template to enable content authors to create and publish higher volumes of news article content.

Before you begin

Role required: sn_cd.content_admin or sn_cd.content_template_owner

- The following content destinations are available out-of-the-box:
  - All News: the news feed widget on the News Center page
  - Featured News: the Featured News widget on the top of the News Center page
  - Featured News Mobile: the news section on the mobile app
  - Latest News Home Page: the news widget on the portal Home page
  - Other News: the news feed widget on the article detail page

  To publish to a different page and widget, create a custom content destination. See Add content destination.
- Define the audience. See Create an audience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Define content categories to tag the news articles, such as company news, pay and benefits, or industry news. See Create a content category.
- Define the article layout with a reusable article template. See Create a news article template.
- Enable and configure Content engagement features. See Content engagement.

About this task

The steps below guide you in creating a content template based on the form that appears when you navigate to **All** > **Content Publishing** > **Content Templates** > **Create New**.

If you instead navigate to **All** > **Content Publishing** > **Content Templates** > **View All** then click **New**, the form has the same fields but with different field names. Also, that form does not provide the ability to add a content destination, audience, or content categories to the template. Instead, you define a Content template record, then open the Content template to add the content destination, audience, or content categories.

Note:
The Content template must have a defined content destination and audience to appear as an option in the Content Library **Publish** tab.

Procedure

1. Navigate to **All** > **Content Publishing** > **Content Templates** > **Create New**.
2. Fill in the fields on the form.

New Content template form

Field	Description
Title	Title of the content template as you want it to appear in the news article creation form.
Description	Description for the content template.
Pre-load reusable article	Select the reusable article to set the content layout.
Default	Makes this content template the default publishing plan for future news content.
Duration	The period of time for which to make the news article available. **Note:** This duration setting only applies to content destinations that do not have a set duration.

If you do not see the form fields for content destinations, audiences, or categories, click **Submit**. You will be redirected to the All Content Templates list, where you can reopen the Content template to edit it. For each tab, click **Edit** to select the options.

3. Use the arrows to add one or more content destinations to the template.
4. Use the arrows to add one or more audiences to the template.
5. Use the arrows to add one or more categories to the template.
6. Select the **Reusable content item** to insert a news article layout.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select which engagement activities to enable.
8. Click **Submit**.

Content Ownership

Define who has permission to create content, where they can publish it, and which employees can view it.

Content Ownership enables system admins and content admins to designate exclusive access to certain Content Publishing features to specific content managers.

Content Ownership gives control over three areas of Content Publishing:

- Who sees the content (Audience)
- Where can a content manager publish content (Topic or Page)
- What content can the content manager create (Content item)

Examples by ownership area

Ownership area	Examples	Relevant links
Who - Audience Assign content managers the ability to publish content for specific employees	• Geographic audiences: target content to audiences based on their geographic location. For example, benefit information may be different for your employees located in the United States as opposed to other locations. • Type of employment: target content for employees that are contractors, new hires, or employees requiring visa transfers.	Assign ownership of an audience Create an audience
Where - Topic or Portal page Assign content managers to specific topics or pages	• Designated topics in the taxonomy • Designated pages in the portal • Pages containing rich content	Assign ownership to a portal page Assign ownership to a topic

What - Content item
 	
Assign content managers to specific content items
	• Sensitive content, such as:
	  ○ Mergers or acquisitions
	  ○ Reduction in Force (RIF)
	  ○ Content specific to geographic region
	  ○ Legal announcements
		Assign ownership of content

Impact on roles

- System admin (admin) has total control and visibility into Content Publishing and Content Experiences during and after restriction set up.
- Content Administrators (sn_cd.content_admin) have full and complete access to add, edit, and publish content within the restricted areas and functions for Employee Center Pro.
- Content Managers (sn_cd.content_manager) have restricted access to authoring and publishing capabilities. Review the tables below to understand how content managers access to audiences, pages, topic, and content items changes when a user or group is assigned to the record.

  The following graphic shows a content manager's access permissions to a record based in whether they are assigned to that record or not.

Note:
These access permission changes apply only when a record is assigned to at least one user or group. If a record does not have an assignment, it is accessible to all content managers.

Activating Content Ownership

The following plug-ins are required:

- Employee Center Pro
- Content Publishing

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Content Governance (only required if using Content Governance features)
- Content Experiences (only required if using Content Experiences features)

Note:
For more information on activating the above plug-ins, see Understanding Employee Center plugins and Install Employee Center Pro.

After activating the required plug-ins, enable the Content Manager Ownership properties. See Properties installed with Content Publishing. When the Content Manager Ownership properties are enabled, Content Ownership related lists appear in records for audiences, content items, topics, and portal pages.

Assign ownership of content

Assign a user or group with the content manager (sn_cd.content_manager) role to a content item so only that user or group can edit and publish the content.

Before you begin
Role required: sn_cd.content_admin

Ensure **Yes** is checked under **Allow Ownership for Content Items** under Content Publishing or Content Experiences properties. For more information, see Properties installed with Content Experiences and Properties installed with Content Publishing.

About this task
Provide a content manager or group of managers with exclusive access to sensitive content, such as a notice of an upcoming merger or reduction of workforce.

Alternatively, use a content item as a template that can be repeatedly cloned and assigned to content owners for customization.

Procedure

1. Navigate to **All** > **Content Publishing** > **Content Library** > **View All**.
2. Select a topic.
3. From the top-left menu (☰), select **View content record**.
   - To assign ownership to a user, select the **Restrict content by user** tab.
   - To assign ownership to a group, select the **Restrict content by group** tab.
4. Click **New**.
5. From the **User** or **Group** field, click the **Lookup using list** (🔍) icon and select a user or group.

   Note:
   Only groups that have the content admin (sn_cd.content_admin) or content manager (sn_cd.content_manager) roles appear. If the members of the group have these roles, but the group does not, the group does not appear.

6. Select **Submit**.
   After a user or group is associated with content, only that user or group can access the content when scheduling content or when adding content to a campaign. Removing the user or group makes the content accessible by all content managers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Assign ownership of an audience

Provide ownership of an audience to a user or group with the content manager (sn_cd.content_manager) role so only they can access and schedule content for the audience.

Before you begin

Role required: sn_cd.content_admin

Ensure **Yes** is checked under **Allow Ownership for Audiences** under Content Publishing or Content Experiences properties. For more information, see Properties installed with Content Experiences and Properties installed with Content Publishing.

About this task

An audience is a defined group of employees that will receive targeted content. For information on creating an audience, see Create an audience.

You can restrict an audience to a specific content manager or group of content managers, which specifies which audience the content managers can publish for, and prevents other content managers from publishing content to that audience. For example, assign a regional Human Resources manager the sole ability to create content for employees based in that country.

Procedure

1. Navigate to **All** > **Content Publishing** > **Re-usable Components** > **Audiences**.
2. Select an audience or create a new audience.
   - To assign ownership to a user, select the **Restrict audience by user** tab.
   - To assign ownership to a group, select the **Restrict audience by group** tab.
3. Click **New**.
4. From the **User** or **Group** field, click the **Lookup using list** () icon and select a user or group.

   Note:
   Only groups that have the content admin (sn_cd.content_admin) or content manager (sn_cd.content_manager) roles appear. If the members of the group have these roles, but the group does not, the group does not appear.

5. Select **Submit**.
   After a user or group is associated with an audience, only that user or group can access the audience. Remove the user or group to make the audience accessible to all content managers.

Assign ownership to a portal page

Assign ownership of a portal page to give a user or group with the content manager (sn_cd.content_manager) role exclusive content publishing ability for the Content Publishing widgets in that page.

Before you begin

Role required: sn_cd.content_admin

Ensure **Yes** is checked under **Allow Ownership for Portal Pages** under Content Publishing or Content Experiences properties. For more information, see Properties installed with Content Experiences and Properties installed with Content Publishing.

Procedure

1. Navigate to **All** > **Service Portal** > **Pages**.
2. Select the **ID** of the page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Scroll down to the related list tabs.
   - To assign ownership to a user, select the **Content Publishing Owner by User** tab.
   - To assign ownership to a group, select the **Content Publishing Owner by Group** tab.
4. Click **New**.
5. From the **User** or **Group** field, click the **Lookup using list** (🔍) icon and select a user or group.

   Note:
   Only groups that have the content admin (sn_cd.content_admin) or content manager (sn_cd.content_manager) roles appear. If the members of the group have these roles, but the group does not, the group does not appear.

6. Select **Submit**.
   After a user or group is assigned to a page, only that user or group can publish content to that page. Remove the user or group to allow all content managers to publish content to that page.

Assign ownership to a topic

Assign ownership of a taxonomy topic to give a user or group with the content manager (sn_cd.content_manager) role exclusive content publishing ability for the Content Publishing widgets in that topic.

Before you begin
Role required: sn_cd.content_admin

Ensure **Yes** is checked under **Allow Ownership for Topics** under Content Publishing or Content Experiences properties. For more information, see Properties installed with Content Experiences and Properties installed with Content Publishing.

About this task
The Unified Taxonomy is a collection of hierarchical topics that brings together different content types, such as requests, articles, quick links, learning content, and employee communications. For more information, see Unified Taxonomy for Employee Center.

Procedure
1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Select a topic.
   - To assign ownership to a user, select the **Content Publishing Owner by user** tab.
   - To assign ownership to a group, select the **Content Publishing Owner by group** tab.
3. Click **New**.
4. From the **User** or **Group** field, click the **Lookup using list** (🔍) icon and select a user or group.

   Note:
   Only groups that have the content admin (sn_cd.content_admin) or content manager (sn_cd.content_manager) roles appear. If the members of the group have these roles, but the group does not, the group does not appear.

5. Select **Submit**.
   After a user or group is assigned to a topic, only that user or group can publish content to that topic. Removing the user or group allows all content managers to publish content to that topic.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Reusable components

Use Re-usable components to create content

Reusable components

Component	Description
Audiences	Define a list of users to see content based on conditions or criteria. Audiences
Block Content	Define reusable content. Add or modify block content
Content Destinations	Defines the page and widget for publishing news articles. Add content destination
Content Categories	Defines categories to organize news articles. Create a content category
Link Content	Defines URL or video links for the Content Library. Add or modify links to other content sources
Reusable Articles	Lists news article reusable templates that were created by following the steps to Create a news article template. **Note:** This feature is only accessible to users with the sn_cd.content_template_owner role.

Add content destination

A content destination defines the page and widget for publishing news articles. It is a component of a content template, which auto-generates publish plans for new articles.

Before you begin

Role required: sn_cd.content_admin

About this task

The Employee Center Pro provides the following content destinations:

- All News: the news feed widget on the News Center page
- Featured News: the featured news widget on the top of the News Center page
- Featured News Mobile: the news section on the mobile app
- Latest News Home Page: the news widget on the portal Home page
- Other News: the news feed widget on the article detail page

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To view a graphic of these content destinations, see the Publishing News articles section of News articles.

Procedure

1. Navigate to **All** > **Content Publishing** > **Re-usable Components** > **Content Destinations**.
2. Click **New**.
3. Fill in the following fields:

New Content Destination form

Fields	Description
Name	Name of the content destination. The name is what you select when you create a publish plan.
Content location	Specify whether to publish the content to the employee service portal or mobile app.
Page	The page in the employee portal where to publish the content.
Widget instance	The widget in the employee portal where to show the news article.
Active	Make the content destination available for use in publish plans.
Refine duration	The period of time for which to make the news article available. **Note:** Although content templates also have a duration field, the duration set in the content destination overrides the setting in the content template. This enables you to fine-tune the content duration based on its publishing location

4. Click **Submit**.

What to do next

After you finish creating a custom content destination, proceed to Create a Content template.

Audiences

Target portal content and lifecycle event activities to specified audiences with audience records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Audiences configuration

For	Use case
Portal content	Defines the conditions or criteria that a user must meet to see content in the portal. See Scheduling the delivery of content for more information.
Org chart page and my team widget	Defines when new hires display on the org chart page and my team widget in the portal.
Lifecycle event activity	(Enterprise Onboarding and Transitions) Defines whether the activity should trigger for the lifecycle event case.

Scoped cache

You can add scoped cache for HR criteria to optionally save the evaluation results in cache. This is an optional feature that is available by passing a Boolean "true" as the "useCache" parameter.

You can also define how long in minutes to retain the cached entries via the sn_hr_core.cache.hrcriteria.ttl system property.

Create an audience

Create or modify an audience record to define the conditions or criteria that users must meet to view content.

Before you begin

Role required: sn_cd.content_admin

Each audience record is configured based on user conditions, user criteria, HR profile conditions, HR criteria, or an uploaded file. You can apply them to portal content or lifecycle event activities. For example, a lifecycle event activity for a work visa transfer is targeted only to employees that need a visa transfer.

Procedure

1. Navigate to **All** > **Content Publishing** > **Re-usable Components** > **Audiences**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Audience form

Field	Description	
Name	Name of the audience record.	
Audience type	The audience the content is directed to. Use one of the following selections to define an audience.	
	Users [sys_user]	Use conditions defined by the User [sys_user] table with custom conditions you choose. Use the **OR** button to define multiple conditions. Any of the conditions you define can be met when using **OR**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Use the **AND** button to evaluate all conditions you define. All conditions must be met when using **AND**. Select the **New Criteria** button to add conditions.
	User Criteria [user_criteria]	Criteria based on role, department, group, location, or company. User criteria is a platform feature. See User criteria for Service Portal.
	HR Profiles [sn_hr_core_profile]	(HR Service Delivery only) Use conditions based the HR profile [sn_hr_core_profile] table with conditions you choose.
	HR Criteria [sn_hr_core_criteria]	(HR Service Delivery only) Use pre-defined HR criteria. HR criteria is based on conditions defined by the HR Profile [sn_hr_core_profile] or User [sys_user] tables. The base system provides examples that can be used. **Note:** For more information, see HR criteria and Configure an HR criteria record.
	Upload File	Browse and choose a file with populated with user names or email addresses. ○ user_name template: Indicates that you are uploading a file with user names. ○ email template: Indicates that you are uploading a file with email addresses. **Note:** The header of the first column must contain user_name or email.

Note:
After audience type and conditions are selected, a blue link appears with the number of users that meet the criteria. Click this link to view all users by audience type.

Select the **View users** link to view the users that meet your conditions.

4. Click **Save**, **Submit**, or **Update**.

What to do next

If you click **Save** and the **Allow Ownership for Audiences** property is set to **Yes**, the **Restrict audience by user** and **Restrict audience by group** related lists appear.

Note:
For more information on restricting an audience by user or group, see Content Ownership and Assign ownership of an audience.

Create a content category

Create a content category to tag news articles.

Before you begin

Role required: sn_cd.content_admin

About this task

Content categories organize news articles and make them easier to find. When you create a content category, the system creates a page in the News Center to display all the news articles tagged with that category. A news article can be tagged with one or more content categories.

Procedure

1. Navigate to **All** > **Content Publishing** > **Re-usable Components** > **Content Categories**.
2. Click **New**.
3. Fill in the following fields:

New content category form

Fields	Description
Name	Name of the content category. The name is what you select when you add the category to a Content template or News article.
Active	Make the content category available for use in Content templates or News articles.
Order	Where in the Category list widget this category appears in relation to other content categories, with the smaller value appearing higher on the list. If there are multiple categories with the same order value, the system lists them in alphabetical order.
Description	Optional description for the content category. This field is only visible to other content admins.

4. Click **Submit**.

What to do next

After you finish creating a custom content category, proceed to Create a Content template or Create a news article.

Add or modify content type for Content Publishing

Use **Content Types** to associate the content type category with a service portal widget to determine where content resides on your service portal.

Before you begin

Roles required: sn_cd.content_admin
The base system provides content types and content that you can use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Publishing** > **Advanced** > **Content Types**.
2. Click **New** or an existing content type to edit.

> **Note:**
> For more information on how to create and use content types, see Content Library.

3. Click **Submit** or **Update**.

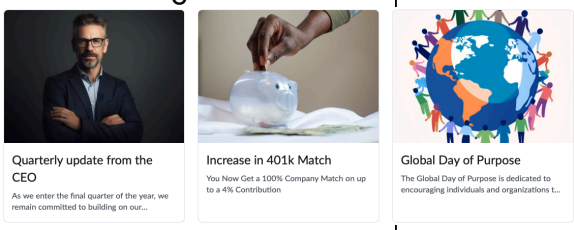
Modify the Featured News widget

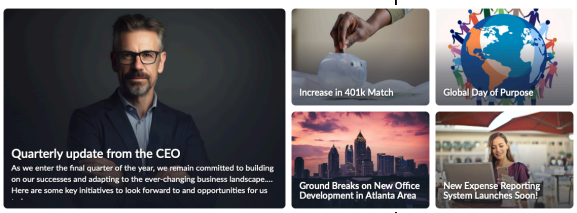
The Featured News widget displays featured articles on company news and announcements.

Before you begin

Role required: sp_admin or admin

Learn more about the news widgets: News articles





Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center home page is displayed.
2. Click **News Center**.
3. Press and hold the control key, right-click the Featured News widget, and then select **Instance Options**.
4. Configure the widget:

Widget configuration options

Widget option	Description
Load Async	Loads widget data in the background. If you select this option, the Employee Center homepage will appear even if the News widget hasn't finished loading.
Header	Text that appears at the top of the News Center page.
Show thumbnail	Option that displays a thumbnail image for each news article
Default thumbnail image	Select an image to display when a news article doesn't have a thumbnail image.
Show empty state	Option that allows the widget to appear if there are no news articles published to the Featured News widget.
Empty state message	The message to display when there are no news articles published to the Featured News widget.
Layout	How you want the news articles to appear in the widget. The choices are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widget option	Description
	○ **Card**: Displays a maximum of three articles where the thumbnail appears above the heading and subheading.  ○ **Tile**: Displays up to five news articles with one large tile and four small tiles where each tile has the news article thumbnail as the background. 
Fixed layout	Option to turn off pagination and display only the first page of news articles.

5. Click **Save**.

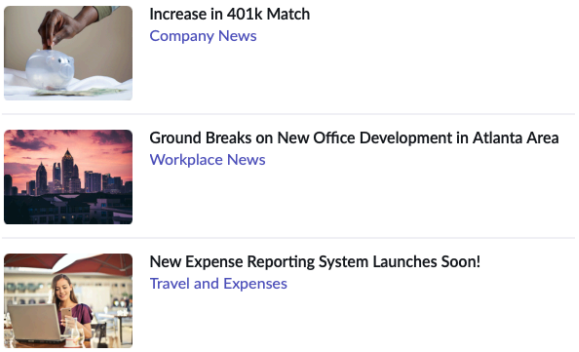
Modify the News feed widget

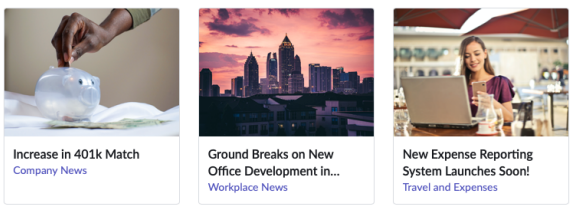
The News feed widget displays articles on company news and announcements. All news, Other news, and Related news are instances of the News feed widget.

Before you begin

Role required: sp_admin or admin

Learn more about the news widgets: News articles





Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center home page is displayed.
2. Press and hold the control key, right-click the News feed widget, and then select **Instance Options**.
3. Configure the widget:

Widget configuration options

Widget option	Description
Load Async	Loads widget data in the background. If you select this option, the Employee Center homepage will appear even if the News widget hasn't finished loading.
Show title	Option to display the news article header title

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widget option	Description
Title	Title of the widget
Show thumbnail	Displays a thumbnail image for each news article
Show subheadline	Option to display the news article subheadline
Inline loading	Enables employees to open other news articles from the Article detail page without refreshing the web page
Enable grid/list controls	Displays an option for the user to switch between a grid and list view of news articles
Default view	Sets the default view for news articles: ○ **List**: Arranges articles in a vertical list.  ○ **Grid**: Arranges articles in a grid with a maximum three articles per row. 
Show categories	Option to show or hide the assigned categories
Pagination type	How users navigate through news articles. The choices are: ○ **Dotted**: Displays navigable dots representing each page of articles. ○ **Numbered**: Displays navigable page numbers. ○ **Call to action**: Displays a button with a call to action link. For example "View all news" which redirects users to the News Center page. ○ **Show more**: Displays a "Show more" button which reveals all the news articles when clicked.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widget option	Description
Number of items per page	Maximum number of articles to display (system maximum is 500 articles)
Call to action: Text	Text for the call to action link. Select the **Call to action** layout to display this element.
Call to action: Page ID	The page where to redirect users who click on the call to action link
Default thumbnail image	Select an image to display when a news article doesn't have a thumbnail image
Allow empty state	Allows the widget to appear if there are no published news articles

4. Click **Save**.

Modify the Content Experiences widget

You can edit the banner of your Content Experiences widget to create a modern and unique layout for your content in the Content Experiences widget.

Before you begin

Role required: sp_admin or admin

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center home page is displayed.

   Note:
   Custom HTML options are not supported OOB on content experience widgets for **Banner content type**.

2. Press and hold the control key, right-click the Content Experience widget, and then select **Instance Options**.
3. Configure the widget:

Widget configuration

Widget option	Description
Display heading text	Displays the Content Experience widget heading To configure the heading, navigate to **Service Portal** > **Pages** > **<Page Name>** > **Instance: Content Experience Header**
Display bounding box	Surrounds the widget with a shadow to give it a three-dimensional appearance
Display widget background color	If the content published to the widget is missing an image, the widget displays the set background color instead of the portal page background color.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widget option	Description
Widget style	How you want the content to appear in the widget when viewed on desktop. The choices are: ○ **Right-hand list menu**: Displays a menu of content headings on the right side of the widget. ○ **Dotted carousel**: Displays navigable dots representing each page of articles. ○ **Tiles**: Displays content in one large left-side tile and two smaller vertically-stacked tiles on the right side.
Allow background image to be partially covered by right-hand list menu	Stretches the image across the width of the widget. This option only applies to the widget style right-hand list menu setting.
Widget height	Sets the widget height
Show 3 small tiles	When the tiles widget style is selected and widget height is 600 pixels or more, this options displays content in three small vertically-stacked tiles on the right side
Load configuration	Sets how the order in which the page and widgets data loads. Choose from: ○ **Asynchronous**: First the page loads, then the widgets data loads. Users see content appear in the widgets as soon as each individual widget loads. ○ **Synchronous**: Page and widget data loads at the same time. The page remains blank until all the data loads.

4. Click **Save**.

Configure your Employee Center portal

Customise and configure the Employee Center portal to help employees self serve and raise requests.

Portal configuration

Configure the default Employee Center portal to incorporate specific widget experiences into your home page.

Before you begin

Role required: admin

About this task

Employee Center application provides best in class portal home pages with all the relevant widgets that provide an employee-centric portal experience. The application has two default home pages.

- Employee Center: ec_home.
- Employee Center Pro: ec_pro_home.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Employee Center Pro portal home page is made available only when you install the Employee Center Pro (com.snc.employee_center_pro) application from the ServiceNow Store and is licensed separately.

To use the latest out-of-the-box homepage:

- For upgrade customers, the default homepage associated with the Employee Center portal record remains the same as before the upgrade. Edit the portal homepage record manually for using the new portal homepage.
- New EC and EC Pro customers see the new homepages associated with the portal by default.

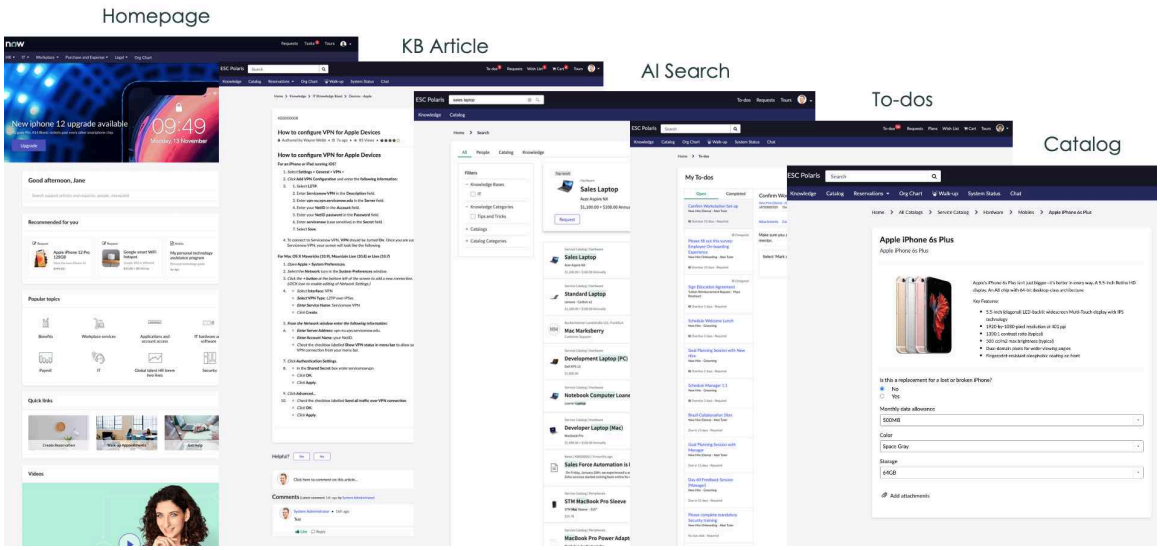
Note:
New home page is not displayed when you have a customized home page.

Modify the default Employee Center or Employee Center Pro portal pages to suit your needs.

For standard sizes of the images and icons, see Standard banner and icon sizes for optimal portal performance.

Procedure

1. Navigate to one of the following portals.
   a. For Employee Center, navigate to **All** > **Employee Center** > **Administration** > **Portal configuration**
   b. For Employee Center Pro Kiosk, navigate to **All** > **Service Portals** > **Portals** > **Employee Center Pro Kiosk**.
2. Edit the portal to suit your needs.
   For more information on the portal form fields and description, see Create a portal.
3. Map the **Taxonomy** that you created or use the default taxonomy.
   For more information on taxonomy, see Unified Taxonomy for Employee Center.



Customize Employee Center portal theme

A theme is a collection of one or more style sheets (CSS files) that define a consistent look for a set of pages. Customize the default portal theme to apply your own theme to suit your branding and improve the visual design of the portal pages.

Before you begin
Role required: admin

About this task
Employee Center application ships a default **EC theme** that has the best visual design experience. The EC theme provides a consistent experience across all portal pages.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Service Portal** > **Themes**.
2. Search for EC Theme to use the default theme.

Note:

- Use the default theme for better visual and usability experience. However, you can select other themes to suit your needs.
- Remove the customized portal theme before an upgrade to see any default theme that might be released with a future version of Employee Center.

3. **Optional:** Customize the theme content to suit your requirement.
   a. Navigate to **Service Portal** > **Themes**.
   b. Select **EC Theme** to open the page.
   c. Edit the **CSS variables** field to customize the text and the background colors of your portal. For a description of the field values to create a portal theme, see Create a portal theme.
4. Navigate to **Service Portal** > **Portals** > **Employee Center**, click **Try it** to preview Employee Center.
5. Select **Update**.

Related topics

Configure portal branding

Enable support for right-to-left languages

When the session language is a right-to-left language, the direction of the portal user interface is mirrored to display from right to left.

Before you begin

Understand how the UI works for a right-to-left language, see CSS for right-to-left languages in portals.

Role required: sp_admin or admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Based on the selected language preferences, the entire hierarchy of existing infrastructure for styling left-to-right languages—the theme, page, widget, and widget instance SCSS—is converted to CSS for right-to-left languages.

- When the session language is a right-to-left language, for example Hebrew, the direction of the portal user interface displays from right to left.
- The arrow next to View Org Chart in employee_profile widget, View All in ec_pro_dashboard, employee taxonomy topic widget, and across Employee Center points to left per the RTL format.

Procedure

1. Navigate to **All** > **Service Portal** > **Portals**.
2. Select the Employee Center portal.
3. Select the **Support right-to-left languages** option.
4. Select **Update**.
   CSS that mirrors the direction of a portal user interface for right-to-left languages is generated.

Result

When the session language is a right-to-left language, the direction of the portal user interface displays from right-to-left. The arrow next to View Org Chart in employee_profile widget, View All in ec_pro_dashboard, employee taxonomy topic widget, and across Employee Center points to left per the RTL format.

Note:
When you support Right-to-Left languages, change the **Card Content Alignment** field value to Right. Alternatively, use the center alignment to avoid issues.

For more information, see Modify the Quick links widget display.

Update the Employee Center home page theme

Enable the gradient background theme along with other UI changes on the Employee Center home page as an existing customer.

Before you begin

Role required: sp_admin

About this task

The gradient background theme is available with Employee Center version 37.0 by default for new customers. It comes with several user experience enhancements like a gradient-themed background and search bar on top.

For existing customers, the following procedure must be followed to enable the theme after upgrading to Employee Center version 37.0.

Procedure

1. Navigate to **Service Portal** > **Portals**.
2. Select the Employee Center (esc) portal, update the **Homepage** field to the updated portal home page available by default, and select **Save**.

Note:
For Employee Center version 37.0, the updated home page provided with the gradient background theme is ec_standard_home.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
Your Employee Center home page has the updated user interface.

Update the Employee Center Pro home page theme

Enable the gradient background theme along with other UI changes on the Employee Center Pro home page as an existing customer.

Before you begin
Role required: sp_admin

About this task
The gradient background theme is available with Employee Center Pro version 35.0 by default for new customers. It comes with several user experience enhancements like a gradient-themed background and search bar on top.

For existing customers, the following procedure must be followed to enable the theme after upgrading to Employee Center Pro version 35.0.

Procedure

1. Navigate to **Service Portal** > **Portals**.
2. Select the Employee Center (esc) portal, update the **Homepage** field to the updated portal home page available by default, and select **Save**.

Note:
For Employee Center Pro version 35.0, the updated home page provided with the gradient background theme is ec_pro_homepage.

Result
Your Employee Center Pro home page has the updated user interface.

Customize the Employee Center with widgets

You can configure the widget instance options to control how data is displayed within the widget.

Widgets are small cards that display dynamic content from ServiceNow® applications and plug-ins on the Employee Center portal. Employees can use widgets to view company announcements, complete to-dos, access SSO-integrated apps, or navigate to popular topics without leaving the portal. Portal admins can customize the widgets, rearranging their size and order and modifying their display.

To view how the widgets appear on the Employee Center portal, see Employee Center Pro features and interface.

The Employee Center features several widgets that are pre-installed and ready to use. Other widgets are installed using plugins such as Content Publishing. For a comprehensive list of all the available widgets, see Employee Center widgets.

Use the following links to learn about the features that are delivered via widgets.

Recommended for you

Recommended for you displays catalog items and knowledge articles, enabling you to view information that is most relevant to you.

Content recommendations
This widget highlights the most relevant catalog items and knowledge articles for the employee:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The **Recommended for you** widget can use an ML algorithm-based on Employee Profile or HR Profile to show popular content accessed by users having similar profile.
- Recommended items are populated either based on ML or popularity of items based on your license entitlements. Underlying table for calculating similar user is determined by Employee Profile or HR profile.

> **Note:**
> When you install Employee Profile, the recommendations are populated based on the Employee Profile table.

- The visual representation of items has a detailed card view with title, description, image, and a simple list view of only titles.
- Employees can view related articles and catalog items on the portal home page and on ServiceNow mobile page.
- By default, the top five recommendations are visible on the widget. The widget provides users with a preview of a knowledge article with the title, description, and other useful information. Similarly, the catalog items show the description and the price of the product, if any.

Prerequisites

Learn about the version, license, and other requirements to use **Recommended for you**.

- The widget is available for Employee Center versions 23.0.7 and later.

> **Note:**
> ML-based recommendations are available only for EC Pro customers or PI entitlement such as HRSD Pro, ITSM Pro, LSD, WSD.

- Enable Employee Profile first to activate recommendations based on the Employee Profile table. Employee Profile is used to formulate recommendations that have similar profile users. For more information, see Manage the employee profile AI and ML model

To make the widget visible on the Employee Center home page:

1. Verify that an active taxonomy is associated to the Employee Center portal record.
2. Verify that you run *`Set primary topics for Employee taxonomy`* manually after installing the application.
3. Verify you have articles or catalog item with non-empty **Taxonomy Topic** field.

For more information, see Configure the Recommended for you

How Recommended for you works

Administrators, developers, and advanced users can configure the widget options. **Recommended for you** highlights the most viewed knowledge article and most requested catalog items across all employees for a time period defined in the Modify the Recommended for you widget display by the portal administrator.

- Knowledge articles recommendations are based on the view count of article.
- Catalog item recommendations are based on the number of times it is requested for.
- The recommendations associated to the portal taxonomy are displayed on the home page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The sys property (enable_topic_content_lang_fallback) disables the language fallback for KB articles, feature content in topics, and the Recommended for you widget. When the value is false, content isn't evaluated from the fallback language and only user preference language content is displayed.

Related topics

View the Recommended for you content

Configure the Recommended for you

The Recommended for you widget displays catalog items and knowledge articles, enabling you to view information that is most relevant to you based on the taxonomy.

Before you begin
Role required: sp_admin or admin

Procedure

1. Navigate to **All** > **Employee Center** > **Administration** > **Portal configuration**.
2. Edit the portal to suit your needs.
   For more information on the portal form fields and description, see Create a portal.
3. Map the **Taxonomy** that you created or use the default **Employee** taxonomy at the portal level.
   For more information on taxonomy, see Unified Taxonomy for Employee Center.
4. Navigate to **System Definition** > **Fix Scripts**.
   a. Search for *`Set primary topics for Employee taxonomy script`*.
   b. Run the script manually to update the *`taxonomy_topic`* field for the articles and catalog items associated to the employee taxonomy.

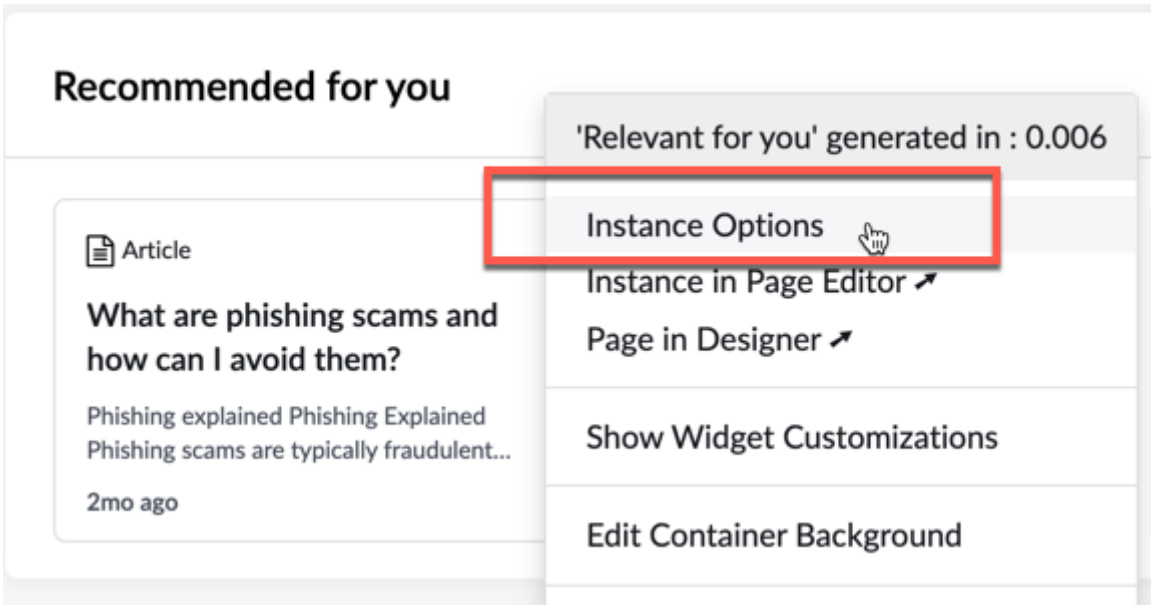
Result
The script fixes the **Recommended for you** and search, if Employee taxonomy is associated to the portal. Updates the taxonomy_topic column in the knowledge articles and catalog items to the corresponding mapping found in m2m_connected_content table.

From the content associated to the taxonomy, most viewed or recommended articles or catalog items are fetched and displayed to the employee.

What to do next
You can proceed to configure the instance options to control the appearance of the widget, see Modify the Recommended for you widget display

Modify the Recommended for you widget display

The Recommended for you widget displays catalog items and knowledge articles, enabling you to view information that is most relevant to you. You can configure the instance options to control the appearance of the widget, such as the title, number of items to display, and what category of items you want to view.



Before you begin
Role required: sp_admin or admin

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center home page is displayed.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Instance option	Description
	Default value: single
Load Configuration	Order in which the page and widgets data loads. Select one of the following options: ○ Asynchronous: First the page loads, then the widgets data loads. Users see content appear in the widgets as soon as each individual widget loads. ○ Synchronous: Page and widget data loads at the same time. The page remains blank until all the data loads.
Show empty state	Option to show the widget with empty state message.

4. Click **Save**.

Quick links

Quick links are a way to quickly access internal and external resources related to specific departments within your organization. You can create quick links, associate quick links to topics, and restrict access to quick links.

Quick links are available on the Browser Extension for Employee Center. For more information, see Browser Extension for Employee Center.

Create a quick link

You can create quick links using the quick links module in the Employee Center for accessing internal and external resources, such as knowledge bases, catalog items, pages, and links.

Before you begin
Role required: sp_admin, taxonomy_manager, or taxonomy_admin

About this task
You can associate quick links to topics in a taxonomy or to the Employee Center and Employee Center Pro home pages. For more information, see EC Information architecture.

Procedure

1. Navigate to **All** > **Employee Center** > **Quick Links**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information about the form fields and descriptions, see Quick Link form.
4. Click **Save** or **Submit**.

> **Note:**
> Remember, you can't add a quick link as a featured item.

What to do next
If you click **Save**, the **Assigned Topics** and **Available For**tabs appear.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Assign topics to the quick links. For more information on assigning topics to a quick link, see Assign topics to a quick link.
- Restrict access to quick links. For more information on restricting access to a quick link, see Restrict access to a quick link.

Users with the sp_admin role can add quick links to a home page using the quick links widget instance options. For more information, see Modify the Quick links widget display.

Note:
The background image for quick link is now visible to external users.

Guided Self-Service in Employee Center

Assign topics to a quick link

After you create a quick link, you can assign topics to the quick link. The quick link content is then displayed in the assigned topic in the Employee Center and Employee Center Pro.

Before you begin
Role required: sp_admin, taxonomy_manager, or taxonomy_admin

Procedure

1. Do one of the following:
   - (If you have the sp_admin role) Navigate to **Employee Center** > **Quick Links**.
   - Navigate to **Content Taxonomy** > **Quick Links**.

   The Quick Link module displays the list of existing quick links.
2. Click the quick link that you want to assign a topic to.
3. Click the **Assigned Topics** tab.
4. Click **Add**.
5. In the Select a Topic dialog box, do the following:

   a. From the Taxonomy list, select a taxonomy.
   The list of all the topics associated with the selected taxonomy is displayed.

   b. Select the topic that you want to assign to the quick link.

   c. Click **OK**.

   Note:
   Add only the root topics to the Quick Links for optimal performance. Access the subtopics through the parent topics.

Restrict access to a quick link

Restrict access to quick links by setting the user criteria, which allows access only to specific users, groups, roles, and more.

Before you begin

Role required: sp_admin, taxonomy_manager or taxonomy_admin and user_criteria_admin

Procedure

1. Do one of the following:
   - (If you have the sp_admin role) Navigate to **Employee Center** > **Quick Links**.
   - Navigate to **Content Taxonomy** > **Quick Links**.

   The Quick Link module displays the list of existing quick links.
2. Click a quick link that you want to restrict access to.
3. Click the **Available For** tab.

Create an external link

Create external links to access external resources and content. When creating a quick link, you can select an external link as the content type to display in a topic.

Before you begin

Role required: sp_admin, taxonomy_admin, or taxonomy_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **External Links**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information about the form fields and descriptions, see External Link form.
4. Click **Save** or **Submit**.

What to do next

If you click **Save**, the **Available For** and **Not Available For** tabs appear. For more information, see Grant or restrict access to an external link.

Related topics

Create a quick link

Grant or restrict access to an external link

Control who can access external links by setting the user criteria, which allows access only to specific users, groups, roles, and more.

Before you begin

Role required: sp_admin, taxonomy_admin, or taxonomy_manager

Procedure

1. Navigate to **All** > **Content Taxonomy** > **External Links**.
   The External Links module displays the list of existing external links.
2. Click the external link that you want to grant or restrict access to.
3. To grant access to the external link, click the **Available For** tab.
4. To restrict access to the external link, click the **Not Available For** tab.

Note:
The Not Available For settings override the Available For settings. A user on the Not Available For list for an external link cannot access that external link, even if that user is also on the Available For list for that external link.

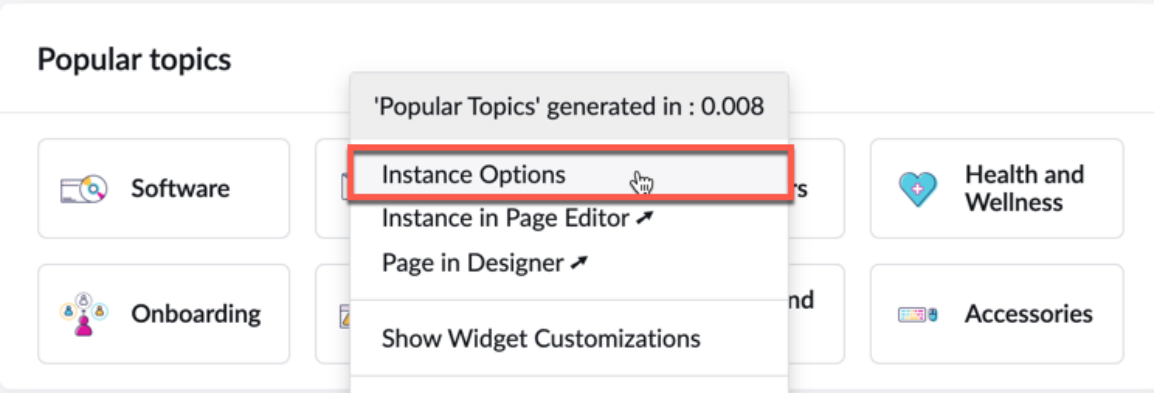
Popular topics widget

Popular topics widget lets you quickly view and access the most popular topics. You can configure the instance options to control the appearance of the widget, such as the title, number of topics, display size, and border color.

Before you begin

Role required: sp_admin or admin

About this task



Employee Center uses an algorithm to determine which topics must appear on the widget.

Note:
Retired articles are not considered for topic popularity calculation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center home page is displayed.
2. Press and hold the control key, right-click the Popular topics widget, and then select **Instance Options**.

3. Configure the instance options.

Popular topics instance options

Instance option	Description
Title	Title of the widget. For example **Popular topics** for EC **Browse help content** for Kiosk
Number of topics	Number of topics you want to appear on the widget. Default value: 8 For Kiosk, the default value is 6.
Display size	Size of the card tiles on the widget. The choices are: ○ **Normal** (Default for EC) ○ **Small** For Kiosk, the default size is small.
Border color	The border color of the widget. The choices are: ○ **Border-primary** ○ **Border-secondary** ○ **Border-tertiary** ○ **Hexcode** Default value: Border-tertiary

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Instance option	Description
Hexcode	Option to specify a hexcode for the border color. Enter a value in this field only if you select **Hexcode** in the **Border color** field.
Show topic icon	Option to show the topic icon. This option is selected by default. You can hide the topic icon by deselecting this option.
Load Configuration	Order in which the page and widgets data loads. Select one of the following options: ○ Asynchronous: First the page loads, then the widgets data loads. Users see content appear in the widgets as soon as each individual widget loads. ○ Synchronous: Page and widget data loads at the same time. The page remains blank until all the data loads.
Show empty state	Option to show the widget with empty state message.
Widget behavior during high load	Option to show the view from the available options: ○ None: ○ Lite view: Select this option to minimize the load and display a message that the portal is experiencing heavy usage. ○ Regular view: Select this option to show the popular topics

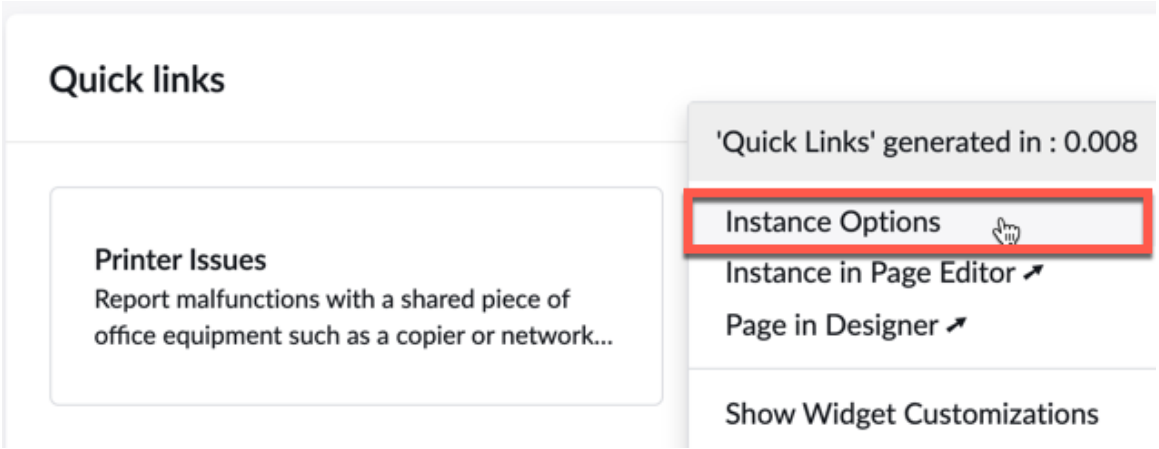
4. Click **Save**.

Modify the Quick links widget display

Design and manage the appearance of the widget, such as the title, display style, tile size, and content alignment.

Before you begin

Role required: sp_admin or admin



> **Note:**
> These configuration options are only available for the Quick links widget, not the Quick links (CD) widget. To verify which widget is present in your portal, open the page in the Service Portal Designer: Create and edit a page using the Service Portal Designer. For more information on how to configure quick links, see Create a quick link

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. On the Employee Center home page, press and hold the control key, right-click the Quick links widget, and then select **Instance Options**.

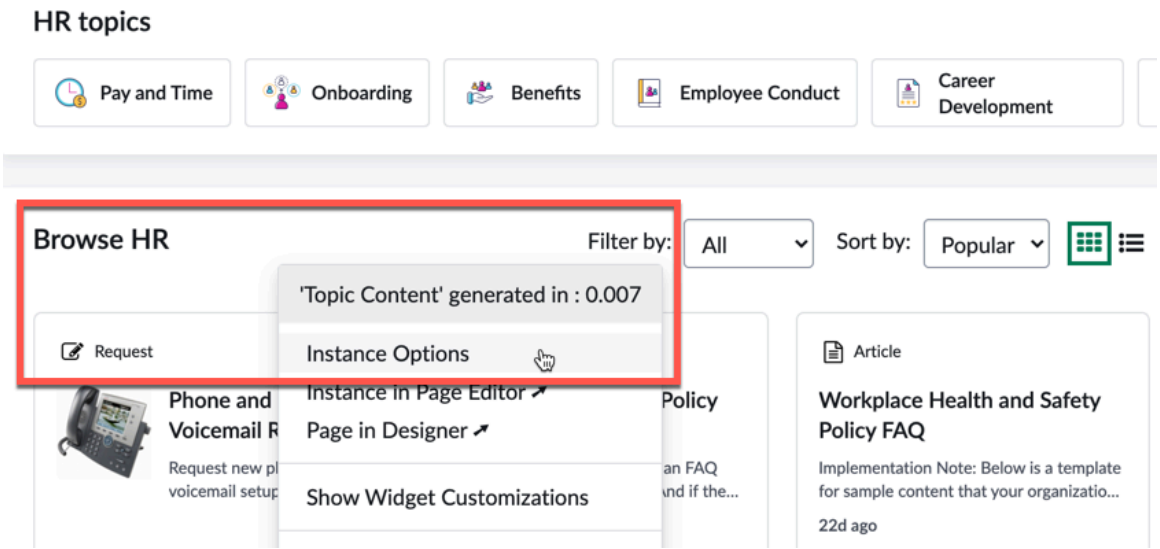
Modify the topic content widget display



The topic content widget displays the knowledge articles and requests associated with the topic in your taxonomy. Click a knowledge article or a request to open it. You can configure the instance options to control the number of items to show per page and their sort order.

Before you begin

Role required: sp_admin or admin

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   The Employee Center home page is displayed.
2. Click a topic on the primary navigation bar.
   The topic page is displayed.
3. Press and hold the control key on the keyboard, right-click the browse topic widget, and then select **Instance Options**.

4. Configure the instance options.

Options

Instance option	Description
Number of items per page	Number of items to show on a single page. The choices are: ○ **12** ○ **24** Default value: 12
Default sort order	Order in which the items are sorted and displayed. The options are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Instance option	Description
	○ **popularity** ○ **alphabetical** Default value: popularity

5. Click **Save**.

Modify banner width options

Modify the width of the Employee Center Pro banner widget, on the home page, to suit your preference.

Before you begin

Role required: admin

About this task

Configure the width of the Employee Center Pro banner widget, in one of the following sizes:

- Fixed width view
- Fluid width view

Note:
The banner width configurable options are only available if you have Employee Center Pro version 25.0.3. The older versions only have the Fluid option available.

Procedure

1. Navigate to **All** > **Service Portal** > **Pages** > **ec_pro_dashbaord**.
2. Scroll down to the **Page Content** and select the **Employee Center Pro Homepage - Container 1**.
3. Make the page editable.
4. **Optional:** To keep the banner compressed, change the **Width** to **Fixed** and select **Update**.

Fixed width view

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** To expand the banner to fit the screen, change the **Width** to **Fluid** and select **Update**.

Fluid width view

Result
Set the banner widget on the Employee Center Pro home page to your preferred width.

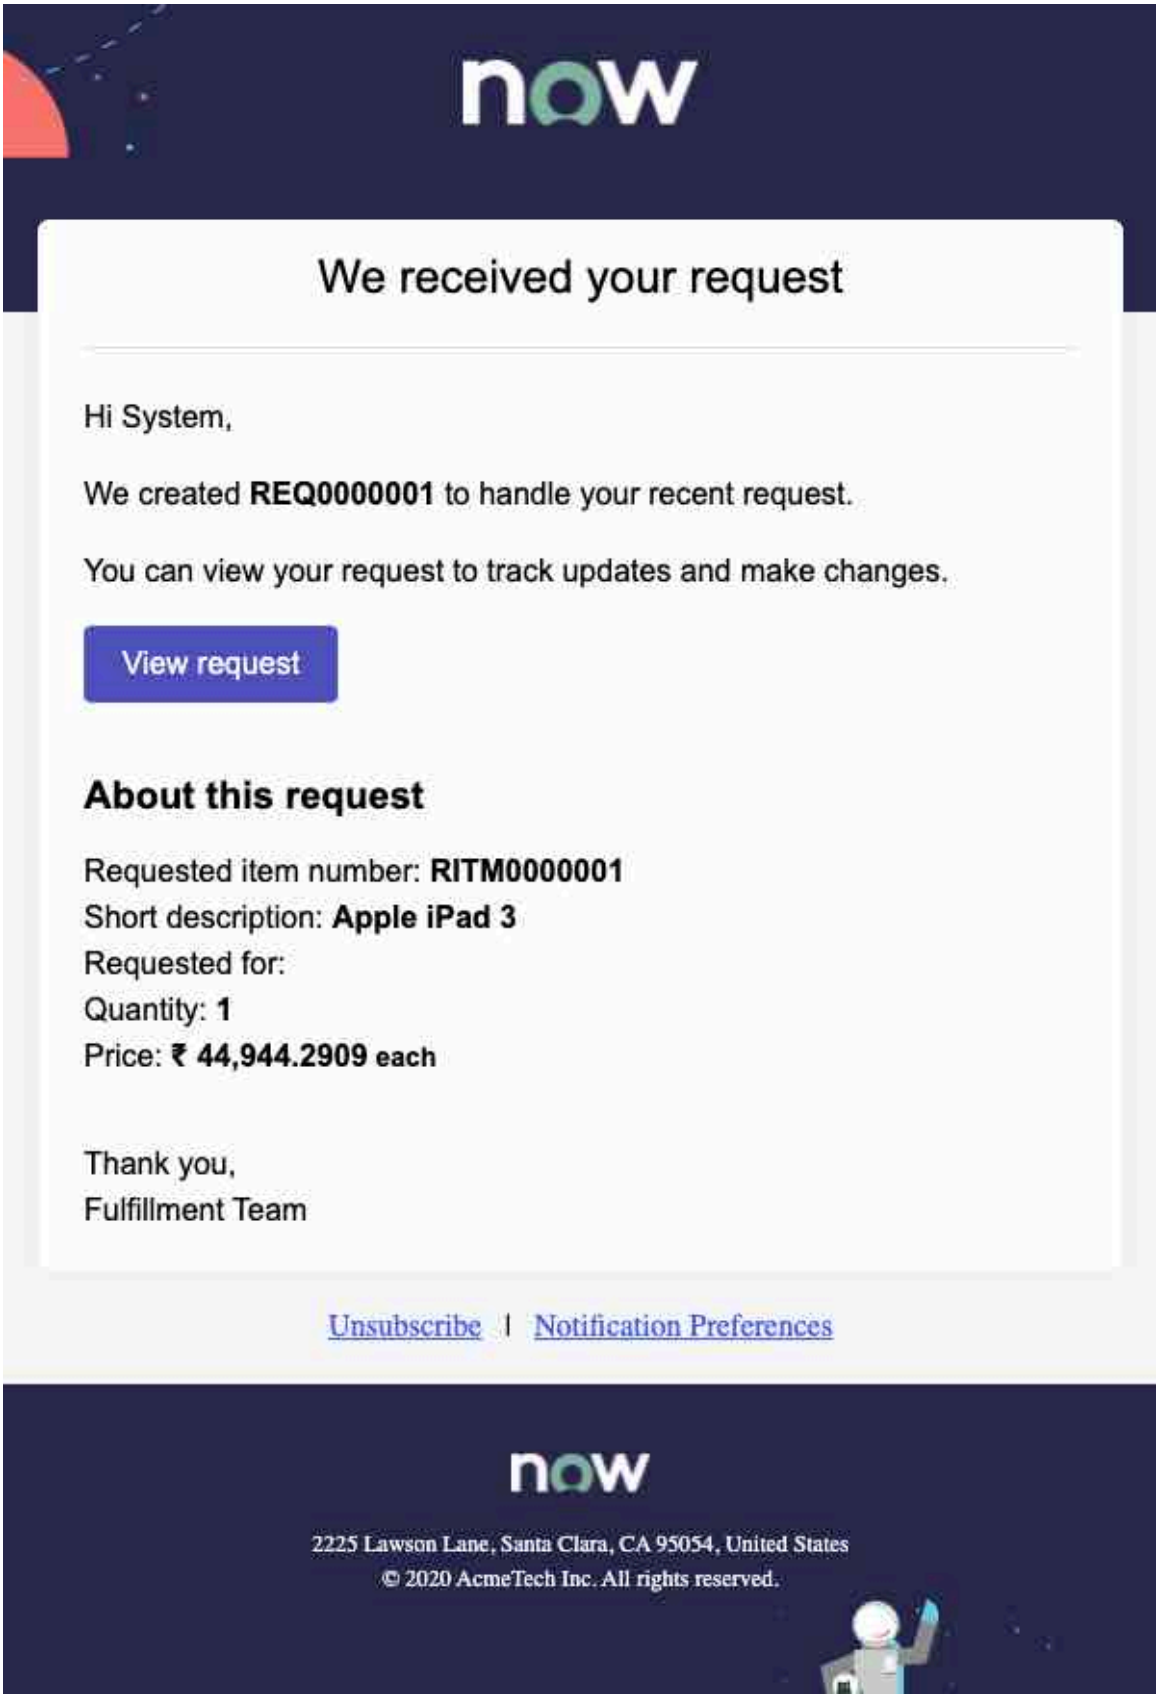
Use email notification layout

Use the email notification layout and template shipped with the Employee Experience Foundation (com.snc.sn_ex_emp_fd) plugin to deliver notifications.

Before you begin
Role required: admin

About this task
Apply the layout to email notifications to elevate the look and feel, and deliver branded notifications.

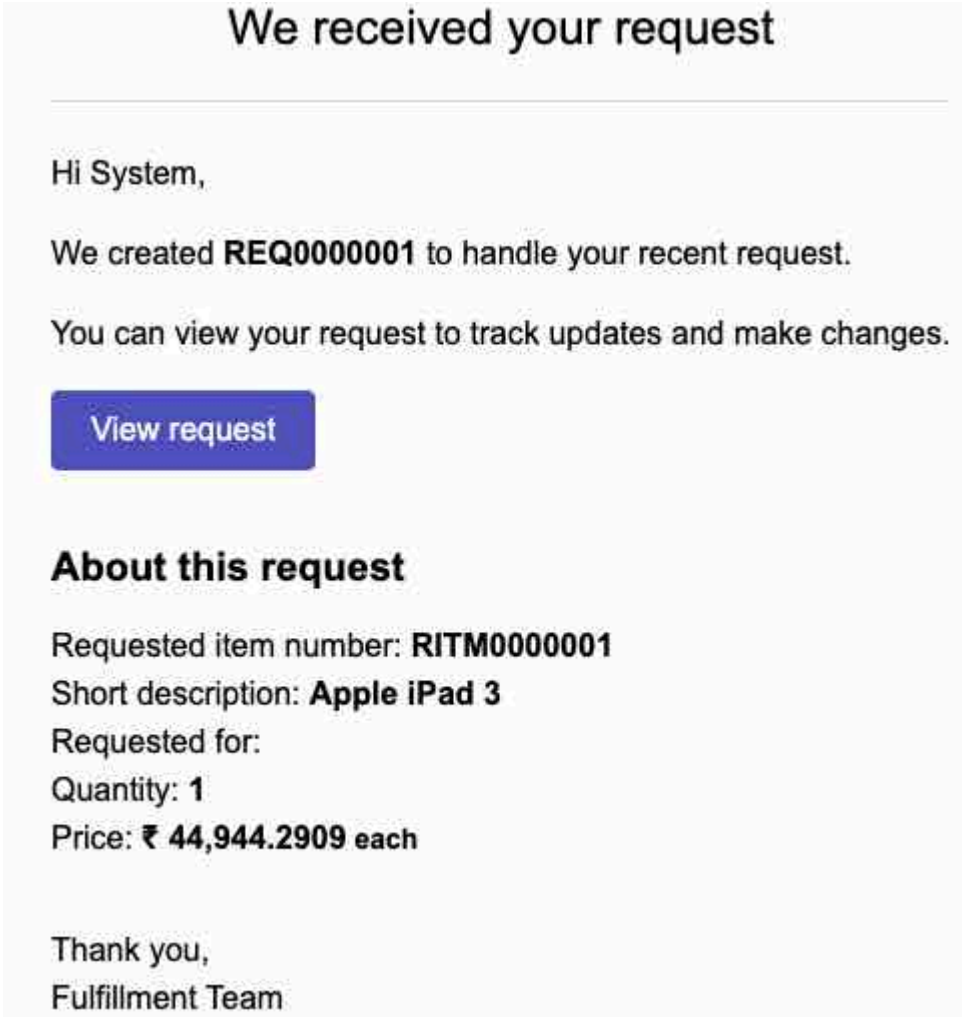
Note:
The Employee Experience Foundation (com.snc.sn_ex_emp_fd) plugin is installed as a dependent plugin with Employee Center or Employee Center Pro. However, you can still independently install the plugin from ServiceNow Store.



The Employee Experience Foundation (com.snc.sn_ex_emp_fd) plugin is shipped with the following.

- Employee notification layout: Provides a Next Experience themed layout to apply to the email templates for all employee facing notifications. This layout includes best practices, standards, and styles. Use the following layout items:
  - Header
  - Footer
  - Unsubscribe and Change preference links
  - Easily modifiable brand logos
  - Web Responsiveness
- Employee notification template: Provides a template for Email notification layout to create reusable content for the subject line and message body. Apply the template to employee facing notifications to deliver consistent information.

View the following examples to understand how the notification looks with and without the Email notification layout.

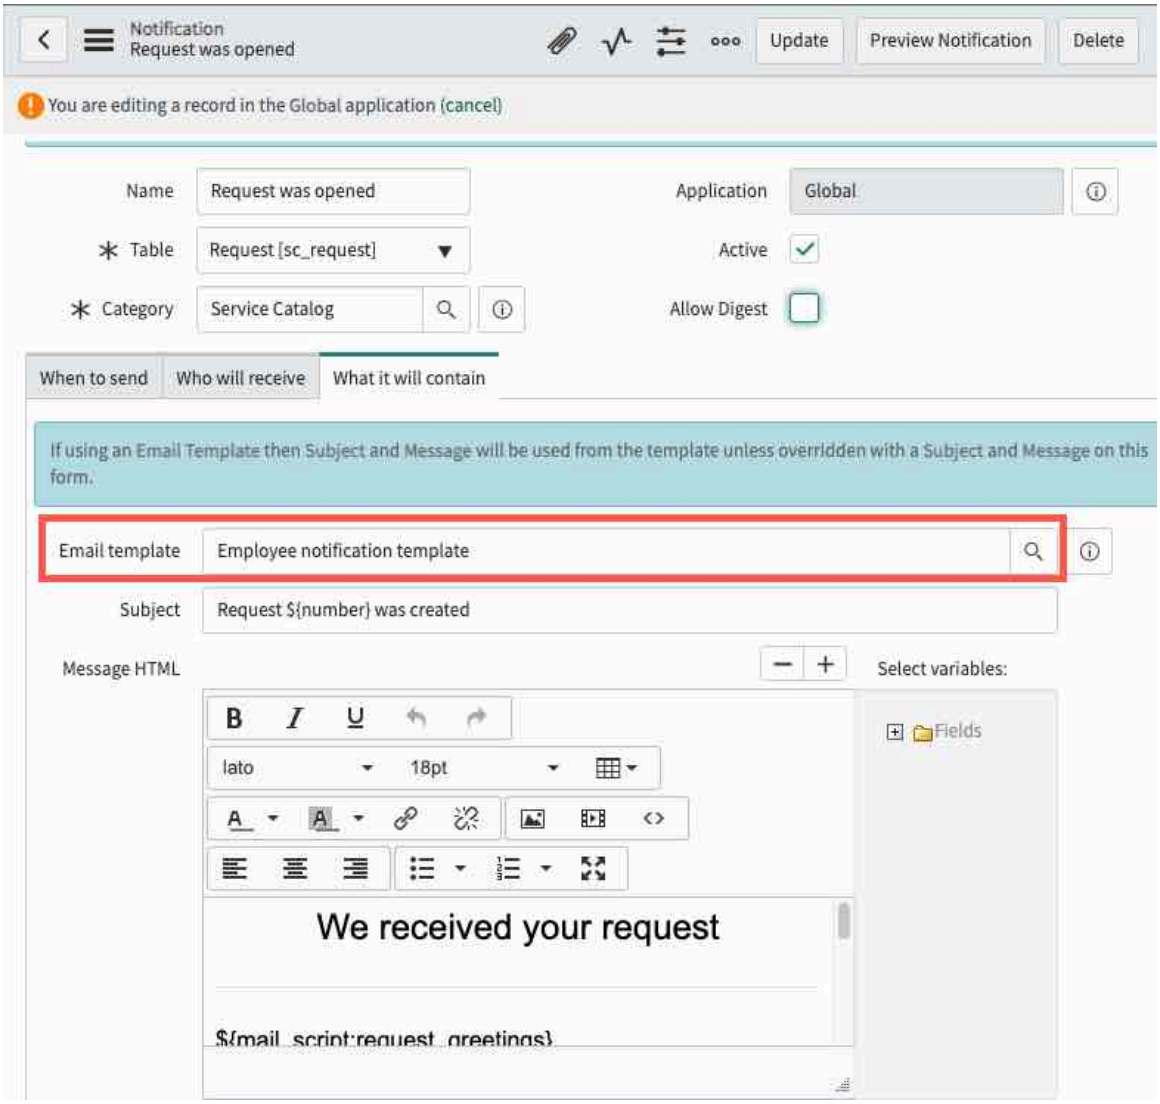


With layout

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Without the layout

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:
If you are an upgrade customer, to use the latest email layout, install the Employee Experience Foundation (com.snc.sn_ex_emp_fd) app from ServiceNow® Store.

Procedure

1. Navigate to **All** > **System Notification** > **Email** > **Notifications**.
2. Search for the notification that you want to apply the template.
3. Click open the notification and check if it is **Active**.
4. On the **What it will contain** tab, select search and apply the `Email notification template` for **Email template**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Modify the email body or use it as given.
6. Preview the notification and click **Update**.

What to do next

Reuse the Employee notification layout for any of your templates to build consistent notifications.

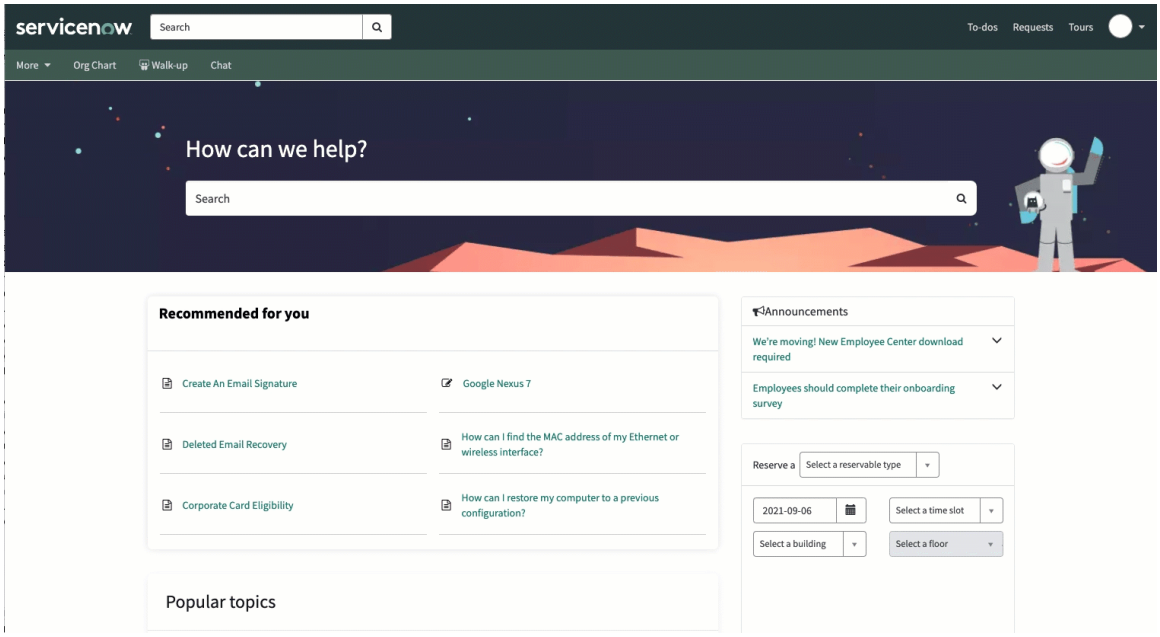
Guided Self-Service in Employee Center

Employee live chat overview

As an employee, you can chat directly and in real time with support agents through the Employee Center. When you initiate a chat and select a conversation topic, you are routed to the appropriate chat queue and connected to a support agent.

Connect Support is a messaging tool that enables support agents to provide real-time assistance for end users, and is automatically enabled with Employee Center. Your administrator can create multiple chat queues for different departments, such as queues for HR, IT, Payroll, or Facilities. To set up the chat queues and learn more about Connect Support, see Connect Support.

Note:



Starting in Utah, Connect Support has been deprecated and is no longer supported or available for new activation. For similar capabilities, please move to Advanced Work Assignment and Agent Chat. For details, see Move from Connect Support to Advanced Work Assignment and Agent Chat.

If no chat queues are defined, then the chat queue defaults to:

- Virtual Agent Support
- (HR Service Delivery only) HR Department Chat Queue

When you initiate a chat in the Employee Center, a pre-chat conversation is displayed with pre-chat categories. The following GIF shows an example of initiating a chat.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
These pre-chat categories are only used with live chat. If you are using Virtual Agent with Employee Center, then these pre-chat categories don't apply.

Configuring the pre-chat categories in live chat

Your administrator can control the pre-chat categories that appear in the pre-chat conversation by adding survey choices in the appropriate configuration. For example, your administrator can configure benefits, employee relations, and travel and expense categories that route to an HR chat queue; finance and payroll categories that route to a finance chat queue.

Note:
If the survey options are not defined, the pre-chat conversation is displayed without data.

Footer configuration

Employee Center and Employee Center Pro include a footer by default, which you can configure.

You can configure the footer to display the following information about your company:

- Corporate office address
- Email address
- Terms and conditions
- Privacy policy
- Social media handles

Configure the footer

Configure the footer in Employee Center or Employee Center Pro to display your company's corporate office address, email address, and so on.

Before you begin
Role required: sp_admin or admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **Employee Center Footer**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information on form fields and descriptions, see Footer form.
4. Click **Save** or **Submit**.

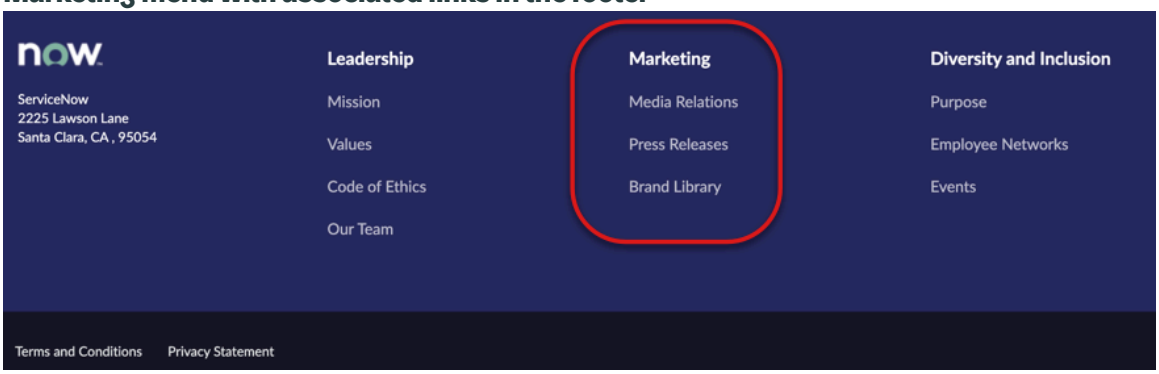
What to do next

If you click **Save**, the Employee Center Footer Menus section appears.

To configure menus for the footer, see Configure the footer menus.

Configure the footer menus

Footer menus enable you to create menus and associate links to internal and external resources under each menu.



Before you begin

Role required: sp_admin or admin

About this task

After you create a footer, configure the menus for the footer. For example, you can create Marketing as a menu category and associate links, such as Media Relations, Press Releases, and Brand Library to this menu.

Marketing menu with associated links in the footer

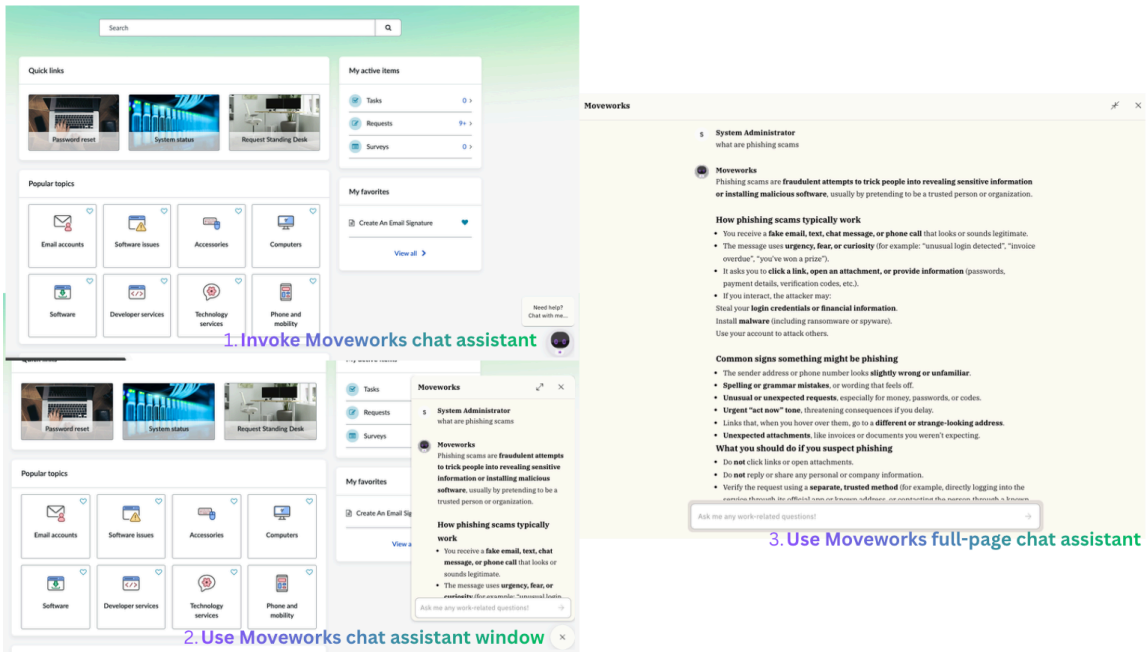
Procedure

1. Navigate to **All** > **Employee Center** > **Employee Center Footers**.
2. Click the footer that you want to configure menus for.
3. In the Employee Center Footer Menus section, click **New**.
4. On the form, fill in the fields.
   For more information on form fields and descriptions, see Footer Menus form.
5. Click **Submit**.

Moveworks for Employee Center

Moveworks for Employee Center enables AI-powered conversational support within the Employee Center portal through natural language interactions.

Using Moveworks embedded AI assistant, your employees can ask questions, get instant answers, and complete tasks end-to-end from Employee Center and Employee Center Pro.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable easier access to relevant knowledge, services, and actions. Employees can access Moveworks embedded AI conversational assistant from ServiceNow Employee Center and Employee Center Pro and get help. Benefit from the AI that knows your people and process, understands your business, and gets work done.

- **Embedded AI Assistant**: Meet employees where they're and how they want to receive information and request services.
- **Conversational self-service experiences**: Let employees ask questions in their own words about IT, HR, and other domains, and get instant resolutions from your ServiceNow knowledge base, service catalogs, and more.
- **Actionable workflows, not just answers**: Go beyond FAQs by helping employees check ticket statuses, update requests, and perform common actions in ServiceNow (and beyond) through a single conversational interface.
- **Enterprise search across systems**: When paired with Moveworks Enterprise Search, surface results from ServiceNow and other connected systems through one unified experience.
- **Proven and scalable deployment model**: Built on the trusted Moveworks Embedded Assistant pattern that makes service portals AI-powered.

After you configure the app, you can access the Moveworks Embedded AI Assistant from Employee Center portals.

Moveworks for Employee Center: Embedded AI assistant

Moveworks unifies the enterprise systems under one intelligent layer to deliver outcomes that matter for every role, team, and business objective.

Getting started with Moveworks for Employee Center

Moveworks integration adds an AI assistant to Employee Center replacing the standard Virtual Agent with Moveworks conversational AI.

A new plugin, Moveworks for Employee Center (sn_ex_mw_chat_int) assistant, lets your entire workforce ask questions, get instant answers, and complete tasks end-to-end.

Using the Moveworks chat assistant, you can access knowledge articles, requests, and tasks. Ensure that you activate the EC applications before installing the Moveworks app from ServiceNow Store.

- Employee Center (sn_ex_sp)
- Employee Center Pro (sn_ex_sp_pro)

You can complete the integration process in three steps:

- Install the plugin from store (`sn_ex_mw_chat_int`).
- Upload the Java KeyStore (JKS) certificate and create JWT provider.
- Configure the bot ID and Embedded AI Assistant.

Understand Moveworks basics

Familiarity with the following Moveworks concepts helps with successful configuration:

- User identity management: How Moveworks identifies and authenticates users.
- Content ingestion: Process for indexing knowledge articles.
- Group actions: Configuring bulk operations for common tasks.
- Hand-off configuration: Setting up live agent escalation.
- Multilingual support: Enabling conversations in multiple languages.

For more information, see Moveworks documentation and Moveworks academy.

Useful tips and information

Before getting started, see the reference information available at Moveworks for Employee Center reference, for settings, observations, and troubleshooting.

Note:
Moveworks for Employee Center is available on both Employee Center and Employee Center Pro.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Ensure you have the appropriate entitlements for the application.
Role required: admin

Procedure
1. Navigate to **All** > **System Applications** > **Applications**.
2. Find the **Moveworks for Employee Center** application using the filters and search bar.
3. **Optional:** Check for dependencies, if any, in the Review Installation Details dialog box.
4. Click **Install** to complete the installation process.

Result
The Moveworks for Employee Center application is now installed.

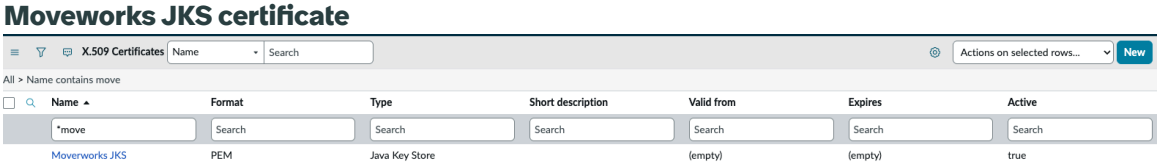
What to do next
Perform the following actions:

- Follow the instructions available at Contact Moveworks and request for JKS certificate file.
- Check your inbox for an encrypted mail from Moveworks and upload JKS certificate.

Upload Java KeyStore certificate

Upload a Java KeyStore certificate and specify the password that's sent in Moveworks encrypted email.

Before you begin
Ensure you have the encrypted email from Moveworks to set up secure connection.

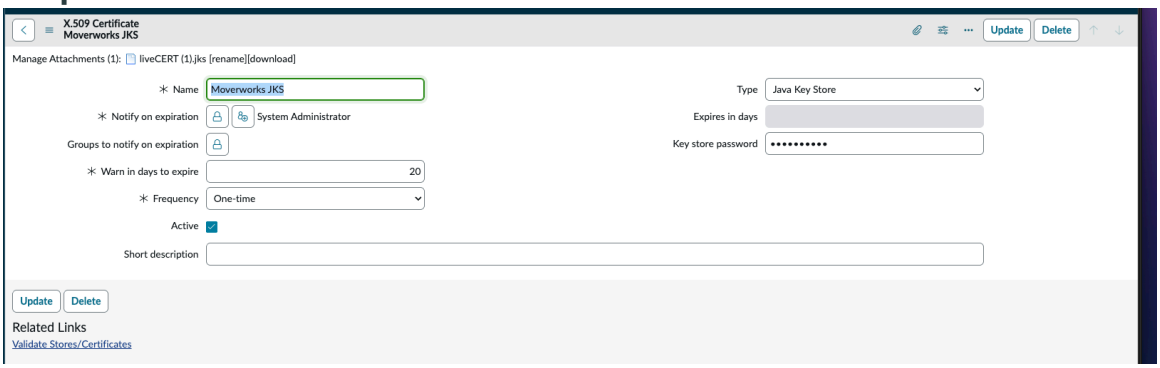


Note:
Follow the instructions available at Contact Moveworks support to receive encrypted email.

Role required: admin or OAuth admin

About this task
Certificate authentication creates encrypted communication between your ServiceNow instance and the Moveworks platform. You must upload the JKS certificate file and configure the keystore password in both the certificate record and JWT key provider.

Procedure
1. Navigate to **All** > **System Definition** > **Certificates**.
2. Search for *moveworks.jks* in the certificate list.



Moveworks JKS certificate

3. Open the certificate record and upload the certificate file.
   a. Select the **Attachment** option.
   b. Upload your *moveworks.jks* file.
4. Enter the password in the **Key Store Password** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

JKS password

Note:
This password you receive from *Moveworks* team.

5. Select **Validate Stores and Certificates**.
   The system validates the certificate with no errors and displays `Valid key_store` message.

Note:
Contact Moveworks support for troubleshooting.

6. Navigate to **System Definition** > **JWT Providers**.
   a. Find the `Moveworks JWT Provider` entry in the list and open it.
   b. Enter the same **Key Store Password** in the **Signing Key** field.
7. Select **Save** or **Update**.

Result
Certificate authentication is configured. JWT tokens can now be generated for secure communication between ServiceNow and Moveworks services.

What to do next
Proceed to add bot ID to complete the Moveworks AI assistant setup.

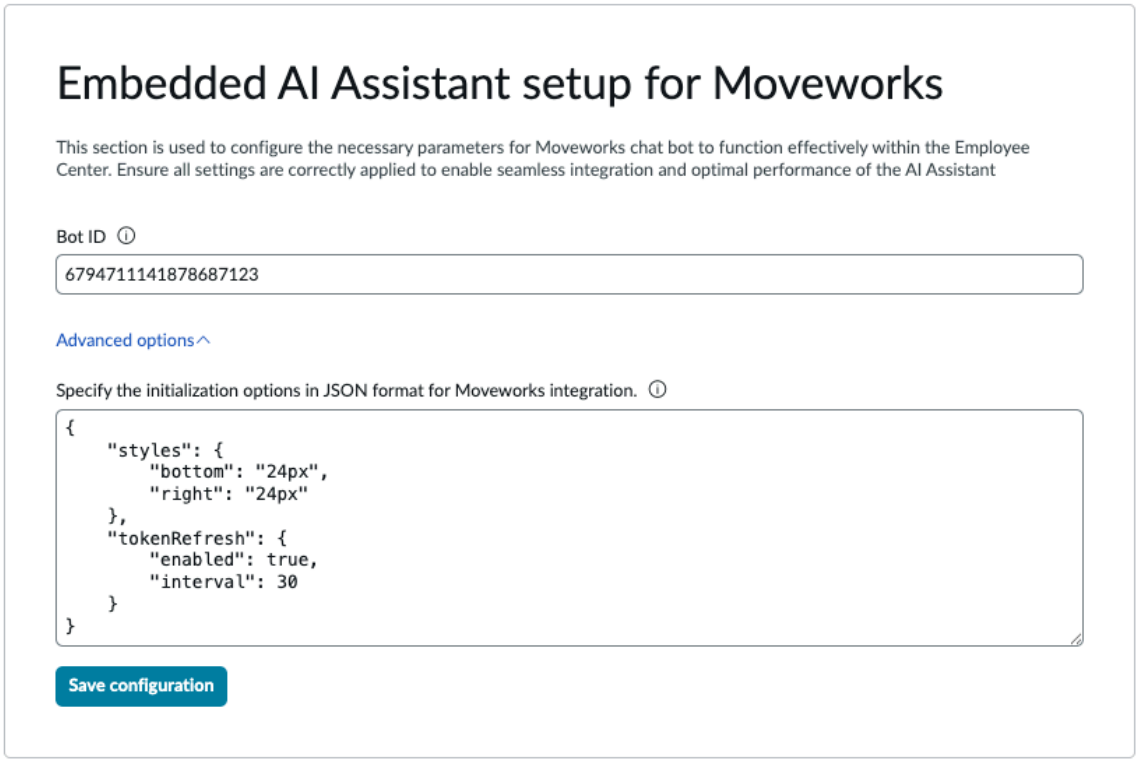
Configure bot ID and AI assistant

Specify the bot ID to configure Moveworks AI assistant on Employee Center portal.

Before you begin
Ensure you have the appropriate entitlements for the application.
Role required: admin

About this task
Ensure you copy the bot ID from **Moveworks** > **Chat Platform** > **Manage Chatbots**. For more information, see Embedded AI Assistant Installation-ServiceNow.



Note:
You don't need to perform other steps or provide any REST API details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **Moveworks Assistant Setup**.
2. Add **Bot ID** which can be found from the **Manage Chatbots** record from Moveworks.
   For detailed Bot ID instructions, see Embedded AI Assistant Installation-ServiceNow.
3. Specify the initialization options in JSON format for Moveworks integration.

Example: Embedded AI Assistant setup for Moveworks

4. Click **Save configuration**.

Result

The Moveworks application is ready for use. You can access the features and functionality per your role permissions.

What to do next

You can perform the following actions:

- Verify the Moveworks chatbot visibility from **All** > **Self-Service** > **Employee Center** portal. For more information, see Use Moveworks on employee portal.
- Test basic functionality by invoking the assistant and asking a sample question.
- Check system properties and verify that all Moveworks-specific properties are configured properly.

Moveworks for Employee Center reference

The reference topics for the application provide additional information about the Moveworks for Employee Center settings, observations, and troubleshooting.

Certificate validation fails

When certificate validation returns errors during the setup process, verify the following configuration:

- The correct keystore password is entered (case-sensitive).
- JKS file isn't corrupted, if necessary, request a fresh file, see Upload Java KeyStore certificate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Password is entered in both certificate record and JWT provider settings.
- Contact support if issues persist after verification.

Moveworks chat isn’t visible

When the Moveworks chat assistant isn't visible on Employee Center or appears non-functional, you can check the following.

- Confirm that the Moveworks plugin is installed and enabled from the ServiceNow Store.
- Navigate to **System Applications** > **Applications** and confirm the status column displays **Active** for the plugin.
- Verify that the JKS is valid and JWT keys are configured with the correct password.
- Check that the Moveworks website setup page is saved with a valid bot ID as explained in Configure bot ID and AI assistant.
- When all the settings look correct, validate their portal-side configuration and ingestion status.

Enable or disable virtual agent on employee center

The Moveworks for Employee Center chat replaces the classic virtual agent. However, you can initiate and maintain an agent chat of your choice in the following way.

1. Navigate to **All** > **Service Portal** > **Agent Chat**
2. Update the **ESC Chat** value to **True** on the Service Portal Agent Chat Configurations `sp_agent_chat_config` table.

Chat responses aren't relevant

Verify the following configuration:

- Ensure content ingestion is complete in Moveworks platform.
- Verify knowledge articles are published.
- Verify knowledge articles aren't restricted by ACLs.
- Check that requested services are available in your service catalog.

Note:
Moveworks for Employee Center is available on both Employee Center and Employee Center Pro.

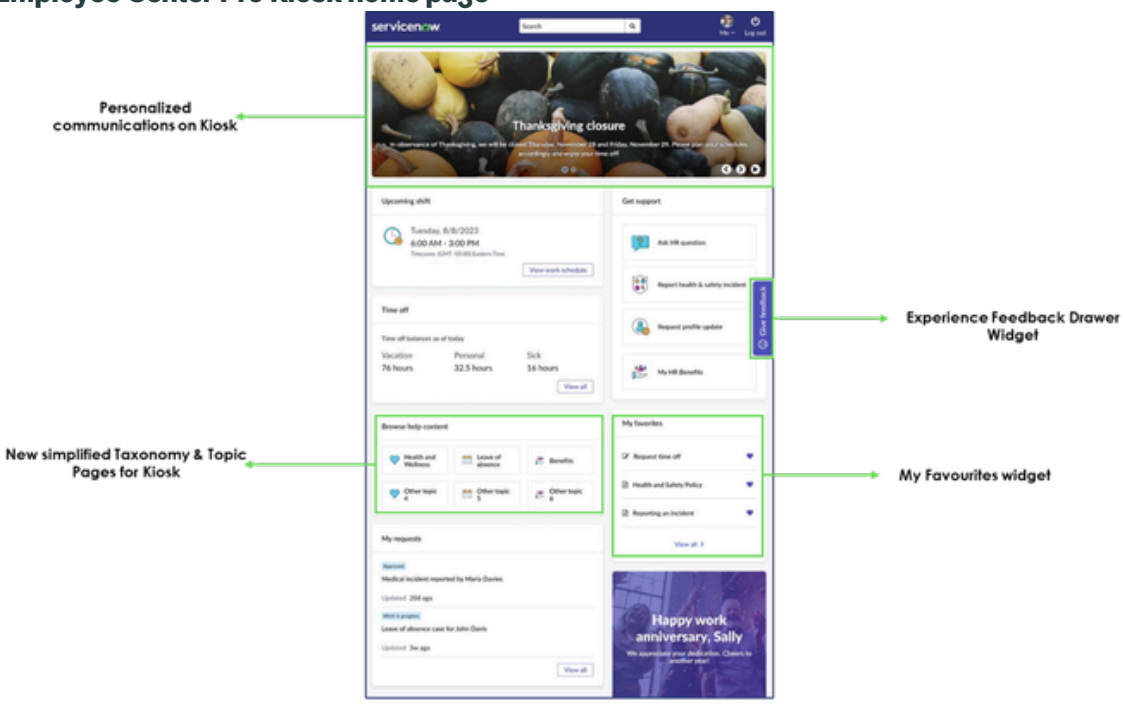
Employee Center Pro Kiosk

Enable the field workers and shift workers with the in-context information for operational efficiency.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



A deskless worker is an employee who typically doesn't sit behind a desk or use a computer to perform the job. Empowering deskless workers with resources is crucial for enhancing productivity, engagement, and overall organizational success.

A new plugin Employee Center Pro Kiosk enables all such deskless workers with simplified access to information and services for self-serve and improved productivity.

Kiosk overview

Using the Kiosk application, deskless employees can manage their time off, schedule, and requests.

Employee Center Pro Kiosk home page

Employee Center Pro Kiosk Homepage

- **One-stop source**: Meet employees where they're and how they want to receive information and request services.
- **Guided experiences**: Empower the deskless employee workforce with relevant services and actions.
- **Personalized self-service experience**: Access relevant information and services that help with day-to-day work.
- **Feedback drawer widget**: Organizations can easily capture feedback on the Kiosk experience using the experience feedback drawer widget on the home page. For more information, see Integrated experience and service feedback.

Note:
Employee Center Pro Kiosk (sn_ex_sp_pro_kiosk) home page is available with Employee Center Pro (com.snc.employee_center_pro) license.

Access all your information and services from a unified location from external applications such as Ultimate Kronos Group. Installation of the HR Service Delivery with the UKG plugin (com.sn_hr_ukg) provides a default setup of the UKG spoke. For more information, see Integrate with the UKG spoke.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Prerequisites

This portal supports displaying timeoff balance, employee schedule, my requests, and get support for deskless workers. Employee Center Pro Kiosk has a dependency on the following applications.

Note:
Ensure you activate these applications first before installing the Employee Center Pro Kiosk app from ServiceNow Store.

- Employee Center Pro (sn_ex_sp_pro)
- Employee Center (sn_ex_sp)
- Employee Experience Foundation (sn_ex_emp_fd)
- Employee Profile (sn_employee)
- HR Service Delivery Integration with Ultimate Kronos Group (sn_hr_ukg)
- UKG Spoke (sn_kronos_spoke)

Note:
Installation of the com.sn_hr_ukg plugin provides a default setup of the UKG spoke.

- (Optional) Health and Safety Incident Management

Note:
To report health and safety, activate the plugin and apply the `sn_ohs_im.reporter` role.

Kiosk users and roles

Roles required for Kiosk

User roles	Required role
Kiosk admin	sn_hr_sp.esc_admin
Kiosk user	sn_ex_sp_pro_kiosk.user
Employee profile admin	sn_employee.admin

Note:
Ensure that the users have the `sn_ex_sp_pro_kiosk.user` role to access the Kiosk portal.

Use Employee Center Pro Kiosk

Integrated experience and service feedback

Employee Center Pro Kiosk benefits

Enable the field workers and shift workers with the in-context information for operational efficiency.

Providing resources for deskless workers is essential for boosting productivity, engagement, and organizational success.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Access information and use services.
- Provide self-service options such as raising and tracking requests.
- Help with shifts, time off, and pay information and other industry-specific needs and use cases.

Benefits

Employee Center Pro Kiosk is a centralized platform that helps employees with essential services and information. The Kiosk offers a user-friendly interface that presents relevant details and options tailored to the deskless employees needs.

- **Shift information**: Displays the shortest and upcoming work shift info with the date and time on the home page. Go to the shift page to see detailed information to plan and manage work routines productively. For more information, see Schedule in Employee Center Pro Kiosk.

  You can use instance options to change the display preferences. For more information, see Modify the Upcoming shift widget display.

- **Time off balance**: Helps employees with the available time off balances such as casual and sick leave. This information helps employees plan and manage their time off effectively. For more information, see Time off balances in Employee Center Pro Kiosk.

  You can use instance options to change the display preferences. For more information, see Modify the Time off widget display.

- **Get support**: Provides employees with quick access to various services and requests such as:
  - Ask HR Question: Allows employees to submit queries or seek assistance from the HR department.
  - Request Profile Update: Allows employees to request updates or changes to the employee profile information.
  - Report Health and Safety Incident: Provides a convenient way for employees to report any health and safety incidents or concerns.

    Note:
    With the Health and Safety Incident Management plugin, you can report health and safety with the `sn_ohs_im.reporter` role.

  For more information, see Get support.

- **Browse help topics**: Allows employees to request updates or changes to the employee profile information.

  You can use instance options to change the display preferences. For more information, see Modify the Browse help content widget display.

- **My Favorites**: Allows employees to mark useful information as favorites.
- **Guided Self-service**: Guides employees to self-serve with step-by-step assistance and to navigate their way to the relevant article or catalog item. For more information, see Guided Self-Service in Employee Center.
- **My requests**: Allows employees to track the progress of their requests. This section shows all the open requests in descending order.
- **AI Search**: Allows employees to search and find relevant information or services such as knowledge articles and catalog items.
- **Header**: Offers easy navigation to My requests, Profile, and other useful information.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Footer**: Contains legal information, links, and copyright details.
- **Feedback widget**: Organizations can easily capture feedback on the Kiosk experience using the experience feedback drawer widget on the home page. For more information, see Integrated experience and service feedback.

  For more information on how to configure, see Configure Employee Center Pro Kiosk.

For more information on how to use the Kiosk application, see Use Employee Center Pro Kiosk.

Integrate with the UKG spoke

Integrate with the UKG spoke to use the Employee Center Pro Kiosk in your organization.

Before you begin

Activate the following plugins in their required versions or later versions to use the Employee Center Pro kiosk.

- Activate Employee Center Pro plugin version 31.0.4 (sn_ex_sp_pro).
- Activate Employee Profile plugin version 11.0.3 (sn_employee).
- Activate the HR Service Delivery with Ultimate Kronos Group plugin (sn_hr_ukg).

Note:
Installation of the HR Service Delivery with Ultimate Kronos Group plugin (com.sn_hr_ukg) provides a default setup of the UKG spoke.

Role required: admin

About this task

If you don't plan to activate the HR Service Delivery with Ultimate Kronos Group plugin (com.sn_hr_ukg), Set up the UKG spoke manually. The HR UKG integration plugin provides you with a default Kronos integration.

Procedure

Set up the UKG spoke.

- For more information on the setup, see Set up the .
- The schedule and time off data on the Employee Center Pro kiosk is enabled with the existing UKG spoke actions.
  - **Look up Employee Schedule**: To get the shift schedule data.
  - **Get Employee Accruals by Person Number**: To get the time off balance data.

    For more information on creating requests, see Create request as manager using the catalog item .

Receive employee data from UKG to the Employee Center Pro Kiosk

Map the employee IDs between the UKG system and the Employee Center Pro Kiosk to see employee details in your organizational kiosks.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
Map the **Person Number** from the UKG system to the **Employee number** in the Employee Center Pro Kiosk. The mapping is required for your employees to be able to view their details in their organizational kiosks.

Procedure
1. Navigate to **All** > **Employee Center** > **System Security** > **Users**.
2. Add the **Person Number** details in the **Employee number** field for each employee.

Result
You have mapped the employee data flow from the UKG system to the Employee Center Pro Kiosk.

Configure Employee Center Pro Kiosk
Configure and use the default Kiosk for better deskless experience.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure
1. Navigate to **All** > **Service Portals** > **Portals** > **Employee Center Pro Kiosk**.
2. Edit the portal to suit your needs.
   For more information on the portal form fields and description, see Create a portal.
3. Navigate to **All** > **Service Portal** > **Themes**.
   a. Search and select `Employee Center Pro Kiosk Coral Theme` to use the default theme.

      Note:
      Use the default theme for better visual and usability experience. However, you can customize the theme to suit your needs.

   b. Click **Update**.
4. Navigate to **All** > **Service Portal** > **Headers & Footers** to check and use the following default header configuration.
   - Header: `eck_header`
   - Header name: `Employee Center Pro Kiosk Header`
5. Navigate to **All** > **Employee Center** > **Employee Center footer** to check and use the following default footer configuration:
   - Footer: `employee-center-footer`
   - Footer name: `Employee Center Footer`
6. On the theme page, Edit **CSS variables** information to customize other settings such as primary and background colors.
   For more information on the theme fields and description, see Create a portal theme.
7. Verify and use the following default configuration:
   - Theme: `Employee Center Pro Kiosk Coral Theme`
   - Main menu: `EC Pro Kiosk Menu`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Homepage: `eck_home`
- Login page: `eck_login_page`
- Topic template: `eck_taxonomy_topic`

8. Mark the **Enable AI Search** option to **Active** to use AI search.

> **Note:**
> For Employee Center Pro Kiosk, the default option is active.

Enable Favorites

9. Navigate to **All** > **Service Portal** > **Portals**, and mark the **Enable favorites** option to **true** to enable My favorites.

> **Note:**
> By default, the favorites are disabled on the header. You can enable the favorites with the following steps:

a. On the portal page, next to the **Main menu** field, click preview this record, and open the **EC Pro Kiosk Menu** record.

b. Edit the **Additional options, JSON format** field.

```
"enable_requests":{ "displayValue":"true", "value":true
"enable_favorites":{ "displayValue":"true", "value":true
```

The **My Favorites** option appears on the header.

10. Select **Support right-to-left languages** for supporting the right-to-left language display on the UI.
11. Click **Update**.
12. **Optional:** Navigate to **All** > **Service Portal** > **Portals** > **Employee Center Pro Kiosk**, click **Try it** to preview the kiosk.

Result

Your employees can now use the configured Kiosk portal. Kiosk app displays the portal, theme, header, footer, and others based on your configuration.

The display title of the **Schedule** tab is customizable. For more information, see Customize the schedule widget.

Customize data display in Kiosks

Create implementations to customize the display of data in the **Schedule** and **Time off** tabs based on your location or any other criterion according to your organizational requirement.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
   The names of the two API methods for the **Schedule** tab and the **Time off** tab are:
   - `sn_ex_sp_pro_kiosk.RetrieveEXKioskEmpSchedule`
   - `sn_ex_sp_pro_kiosk.EXKioskEmployeeTimeOffBalance`
2. From the Extension Points list, select any of the API methods mentioned in step 1.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. In the *sn_ex_sp_pro_kiosk.RetrieveEXKioskEmpSchedule* method page, select **Create implementation** from the Related Links section.
4. In the Script Include page, add the unique location sys_id in the `this.LOCATIONS` array in **Script**.
   - For more information on location tracking, see Enabling and selecting location tracking options.
   - For more information on script include customizations, see Script includes and customization.

   a. The location sys_id enables a `fixed_match`. The `fixed_match` enables you to show location-based data to your users.

   b. If `fixed_match` isn't available, then the data available is for a `global_match`. The data remains the same regardless of location.

   c. If it's a `no_match`, there isn't a **Schedule** or **Time off** tab visible.

Result
You can view data on the **Schedule** and **Time off** tabs based on your location or any other user criterion you've set.

Customize the schedule widget

Customize the schedule widget on the Employee Profile to display it to your preference.

Before you begin
The kiosk data display for the **Schedule** tab is location-based. You can customize it for different users based on their locations. For more information see, Customize data display in Kiosks.

Role required: esc_admin/sn_ex_sp_pro_kiosk.user

Procedure
1. Navigate to **All** > **Employee Profile** > **Profile Tabs**.
2. Select the **Schedule** from the list of tabs.

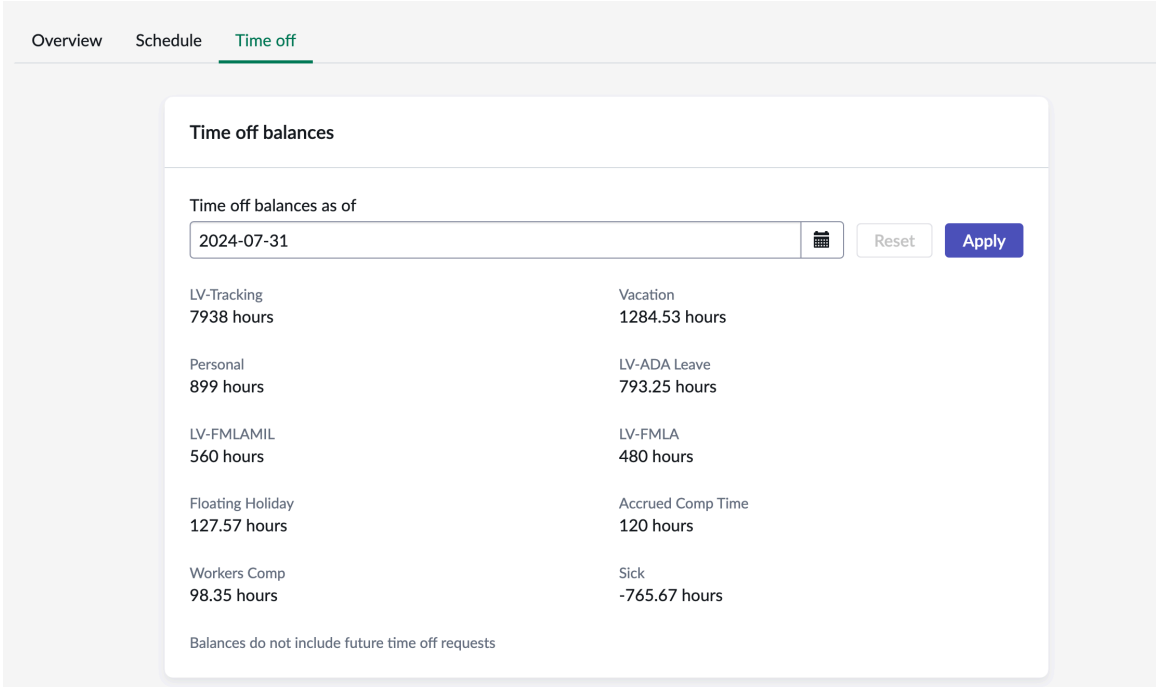
   Note:
   The **Schedule** tab is available in the base system.

3. In the Tab Widget mapping section, select **Schedule** to open the record.
   You can edit the **default_calendar_view** and the **widget_title** within the **Widget Parameters** according to your preference.

Result
The **Schedule** tab is visible on your Employee Profile.

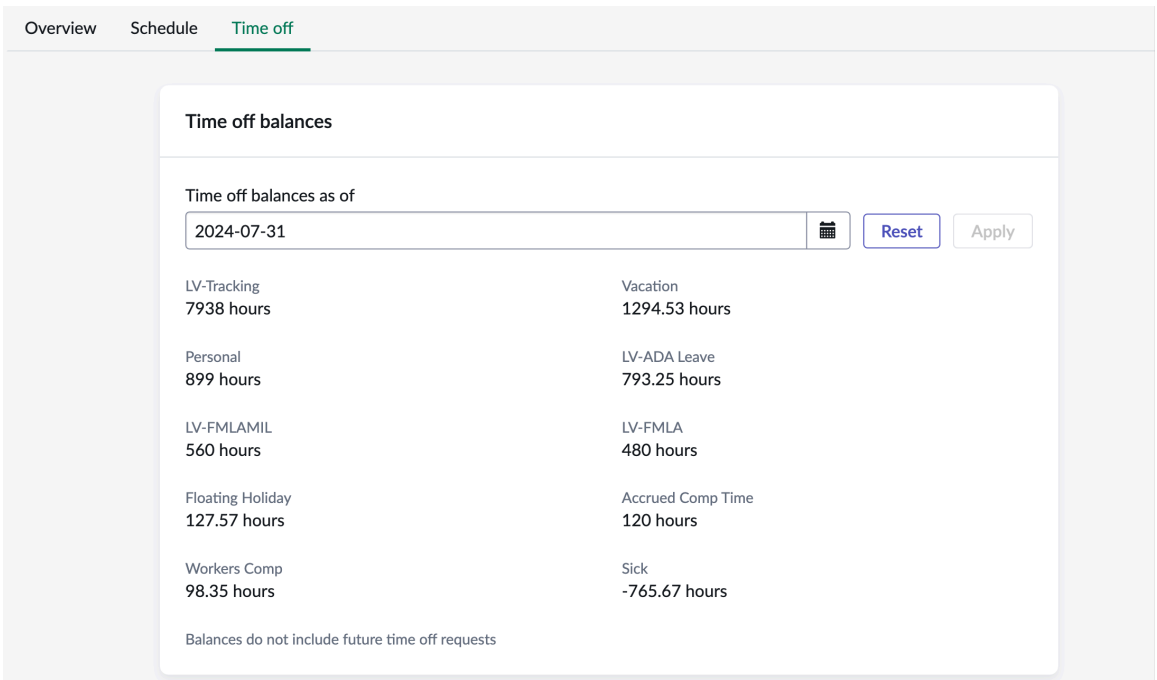
Time off balances in Employee Center Pro Kiosk

The time off balances details in the Employee Center Pro Kiosk is the source of truth for the time off or leave details of the deskless workers.



Track and manage your time off balances with a simplified home page optimized for the kiosks.

The **Time off** tab displays:



- The current leave balance as of the present date.
- The Date picker to view the leave balance on any other date.
- The **Apply** and **Reset** buttons.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Time off balances - date picker

Time off balances - reset

- Select a date from the date picker and select **Apply** to view your time off balances as on the selected date.
- Select **Reset** to reset the date picker to the present date.

Note:
View your time off balances until and up to a year as supported by default.

The display title of the **Time off** tab is customizable. For more information, see Customize the time off widget.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information on customizing the data display in Kiosks, see Customize data display in Kiosks.

Customize the time off widget

Customize the time off widget on the Employee Profile to display it to your preference.

Before you begin

The kiosk data display for the **Time off** tab is location-based. You can customize it for different users based on their locations. For more information see, Customize data display in Kiosks.

Role required: esc_admin/sn_ex_sp_pro_kiosk.user

Procedure

1. Navigate to **All** > **Employee Profile** > **Profile Tabs**.
2. Select the **Time off** from the list of tabs.

   Note:
   The **Time off** tab is available in the base system.

3. In the Tab Widget mapping section, select **Time off** to open the record.
   You can edit the **widget_title** within the **Widget Parameters**.

Result

The **Time off** tab is visible on your Employee Profile.

Configure the mail and SMS send to self

Help employees access information easily by sending required information as an SMS or email.

Before you begin

Ensure you set up the email and SMS notifications first.

- Configure email as explained in Create an email notification.
- Configure SMS notification with Twilio as explained in Configure Notify with Twilio.

Important:
Work with the notify_admin user for Twilio **Account SID** and **Auth Token** to set up Notify with Twilio. Follow the instructions from Configure Notify with Twilio and verify Verified Caller IDs.

Role required: sn_hr_sp.esc_admin

About this task

You can send useful information such as **Schedule** or **Article** to self as an email or SMS.

Procedure

1. Navigate to **All** > **Employee Center** > **Send to self configuration**.
2. Click **New** or open an existing record.
3. On the form, fill in the fields.

Send to self configuration form

Field	Description
Send to self channels	Channel for sending the information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Email ○ SMS ○ Email and SMS (Default) **Note:** Ensure you specify the **Email** address and **Home phone** number on the **sys_user** table.
Active	Check the box to activate. **Note:** You can have only one active configuration for each portal.
Portal	Portal on which you want to display the **Send to self** option. **Note:** By default, this option is available for Kiosk. However, you can configure for other portals too.
Twilio number	Number to send SMS. This field is visible only when you select **SMS** or **Email and SMS**.

Note:
When the email or phone number is not configured, an error message appears. For example,

- When you enable the sn_hr_core plugin, you can raise a profile update request directly: `Unable to send email as there is no email address available. To add an email address to your profile, submit a profile update request here: Request profile update.`
- When you don't enable the sn_hr_core plugin, you can request your manager for a profile update: `Unable to send email as there is no email address available. To add an email address to your profile, contact your manager.`

4. Click **Save**.

Result
On configuration, Employee Center Pro Kiosk portal displays the **Send to self** option.

What to do next
Employee can send the mail and SMS using the default Email and SMS template.

- *`User triggered notification template`* is available from **All** > **System Notifications** > **Email** > **Templates**.
- *`User triggered employee notification layout`* is available from **All** > **System Policy** > **Email** > **Layout**.

Configuring Employee Center for mobile

Configure Employee Center capabilities on Now Mobile to help employees utilize the employee-centric content experience. This configuration enables all services, information, and support tabs.

Next Experience theme for Now Mobile

Next Experience delivers a next generation, intuitive, personalized experience to drive productivity, improve engagement, and surface insights across the ServiceNow AI Platform.

You can configure Next Experience on Now Mobile.

- Provide a better accessible Next Experience on Now Mobile.
- Offer consistent experiences across web and Now Mobile.
- Provide a unified design experience across applications.

Summary of enhancements

The following list provides a quick summary of the improvements as part of Next Experience.

- Use the new layout, screens, and card designs for accessibility and intuitive experience.
- Provide a consistent experience on web and mobile with the updated MESP portal theme that aligns with the next experience theme.
- Set the value of glide.ui.polaris.experience to true to enable the new color variables. A fallback color hex code is used when the new experience is not enabled.
- Use the color variables for UI rules, card templates, and icons.
- Enhance the search and discovery of the content and people.
- Improve accessibility with the new input form screens for functions instead of UI parameters.
- Convert the Content section to the Record section (sys_sg_item_section) to enable the display of each item as a card (mobile view).
- Make the MESP portal record editable. Admin can now configure and apply the custom theme for MESP portal to provide a unified experience across native mobile and MESP.

Enable AI Search upgrade considerations

From Utah, AI Search is the default search engine on Now Mobile.

For existing customers, when you upgrade to Utah, you continue to use your existing search engine for Now Mobile as it was before the upgrade.

- Glide fix runs before the plugin upgrade where the current search engine is stored in a system property sn_me_search.search_engine.
- After plugin upgrade, another glide fix runs to set the value of search engine to sn_me_search.search_engine property value, provided this value is not empty.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

MESP (Webviews) upgrade considerations

From Utah, Next Experience is the new theme on the MESP. For the existing customers, when you upgrade to Utah, the theme adoption works in the following manner:

- When you have not branded the Now Mobile app and enable the Next Experience option, the new theme applies automatically on the MESP portal record.
- When you have not branded the Now Mobile app and do not turn on the Next Experience option, the new theme is not applicable on the MESP portal record.
- When you have branded the Now Mobile app; irrespective of the turning on or off the Next Experience option, the new theme is not applicable on the MESP portal record.

MESP (Webviews) upgrade scenario descriptions

Upgrade scenario	Description
If you are upgrading from Tokyo to Vancouver, when the glide.ui.next_experience.opt_out and the glide.ui.polaris.experience are set to true	Update the MESP record manually to use the Next Experience theme.
If you are upgrading from Tokyo to Vancouver, when the glide.ui.next_experience.opt_out and the glide.ui.polaris.experience are set to false	Update the MESP record manually to use the Next Experience theme.

Now Mobile native upgrade considerations

Here are the Now Mobile upgrade considerations for various Employee Center Applications. When you make changes at the mapping level, the latest changes are not available out-of-the-box.

- Apps compatible with Utah: Now Mobile, Webviews for mobile, Search configurations for mobile, and Tasks for mobile.
- Apps compatible with Utah, San Diego, and Tokyo family releases: Employee Center, Employee Center Core, Employee Profile, and Content Publishing.

Now Mobile native upgrade considerations table

Upgrade scenario	Description
For apps compatible with Utah	When you upgrade to Utah, Next Experience is installed without any additional steps.
For apps compatible with Utah San Diego and Tokyo, with Next Experience changes installed and upgraded to Utah	For pre-Utah, Next Experience changes are not applied. • Use the glide fix to automatically revert Next Experience changes. • After the instance is upgraded to Utah, you can manually run the uptake scripts for each app to uptake Next Experience changes.
For apps compatible with Utah San Diego and Tokyo, without Next Experience changes installed and upgraded to Utah	When you upgrade to Utah, Next Experience is installed without any additional steps.

Run the following fix scripts manually by setting the *runManually=true* to revert Next Experience changes for each application.

Next Experience revert fix script description table

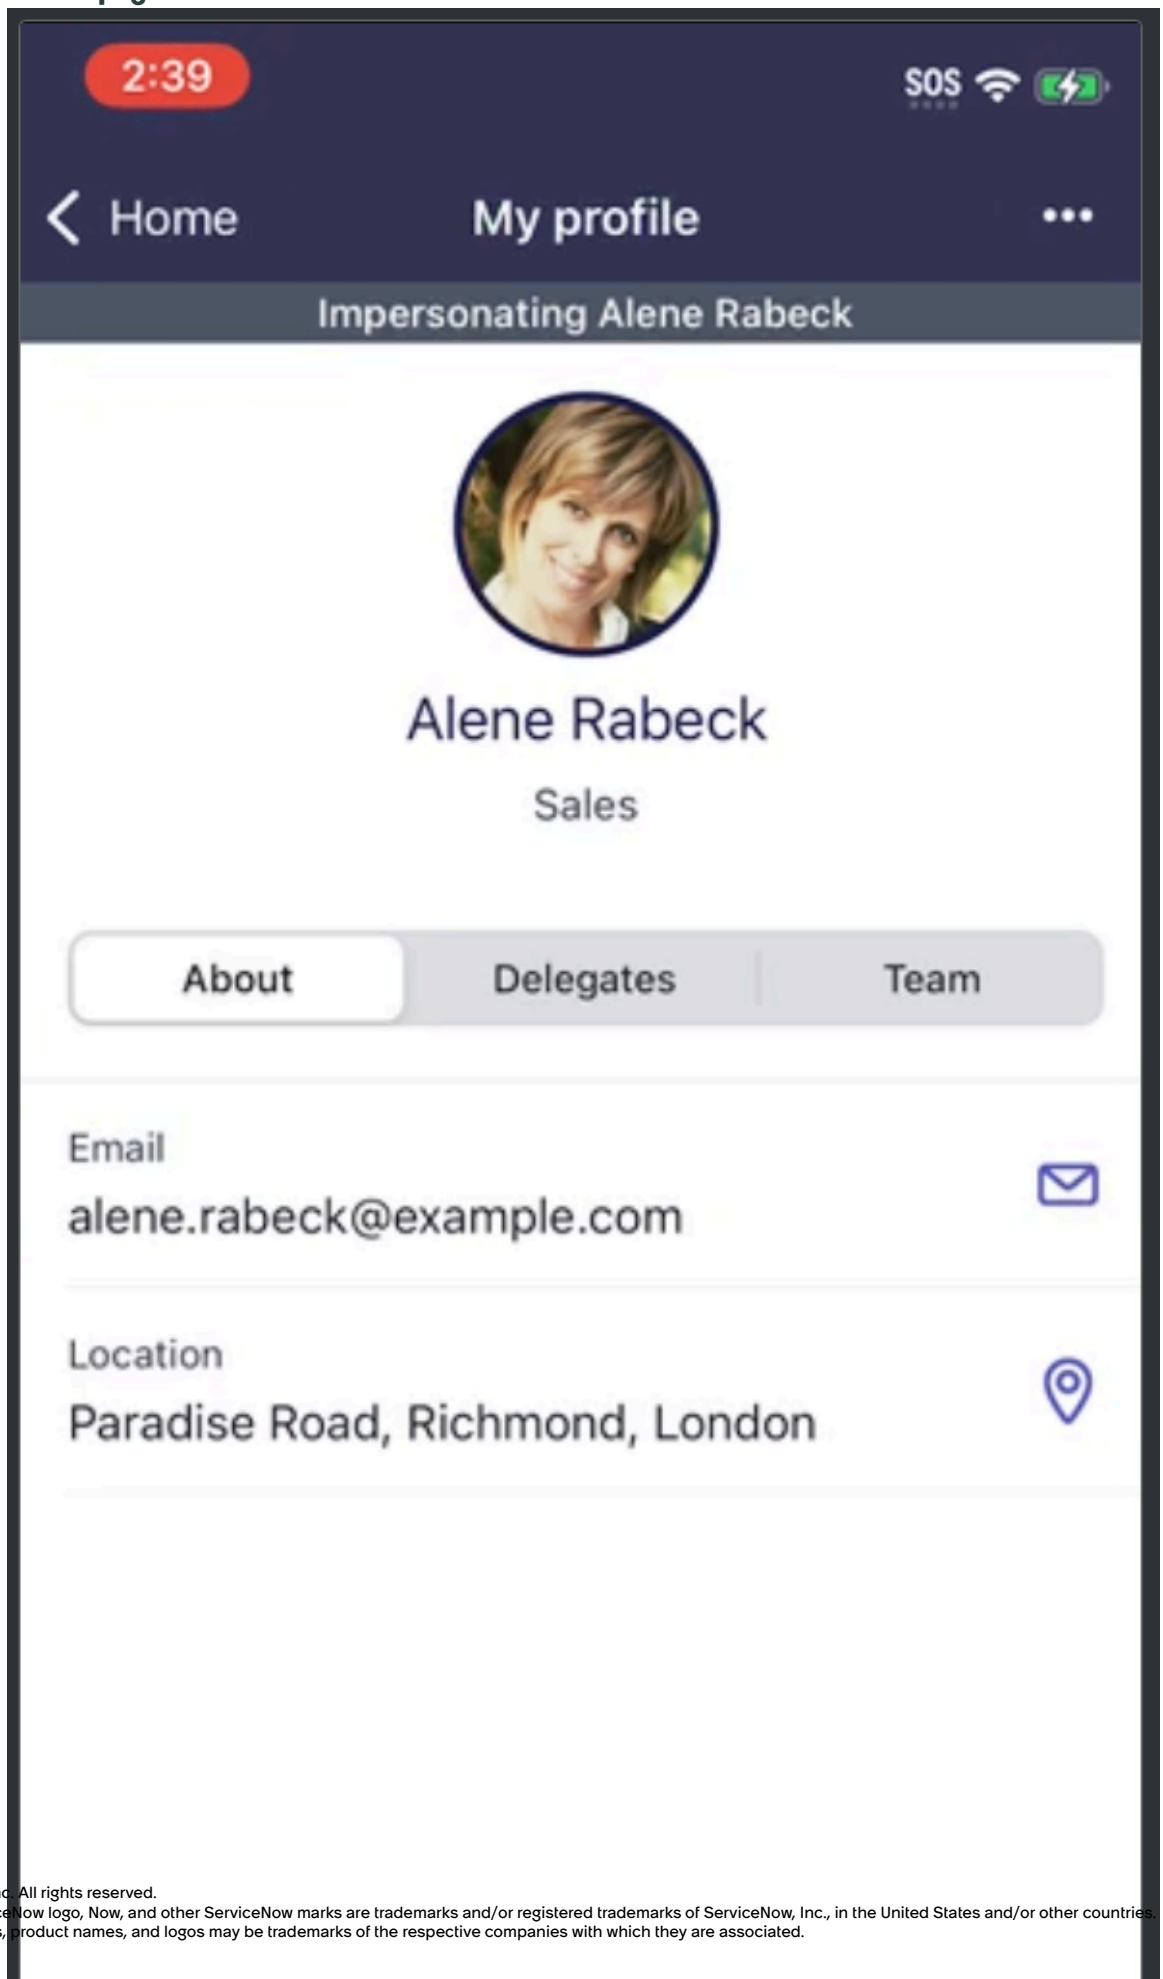
Fix script	Application
Mobile Revert Next Exp - Cont Pub	Content Publishing
Mobile Revert Next Exp - EC	Employee Center
Mobile Revert Next Exp - EC Core	Employee Center Core
Mobile Revert Next Exp - EP	Employee Profile
Mobile Revert Next Exp - Now Mobile	Now Mobile
Mobile Revert Next Exp - NowMobileSearch	Search Configurations for mobile

Run the following fix scripts manually by setting the *runManually=true* to uptake Next Experience changes for each application.

Next Experience uptake fix script descriptions table

Fix script	Application
Mobile Next Exp - Cont Pub	Content Publishing
Mobile Next Exp - EC	Employee Center
Mobile Next Exp - EC Core	Employee Center Core
Mobile Next Exp - EP	Employee Profile

Employee profile for Now Mobile



Employee profile on Now Mobile provides customizable and compact information about employees and their organizational hierarchy.

You must opt in to the employee profile as well as upgrade to the new Now Mobile app to access these new features.

Customers who opt in to the new employee profile have the **View more profile details** button on the **About** tab. The **View more profile details** button is only visible to the logged-in user, Selecting **View more profile details** opens the Profile details page.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Profile details page includes the About, Bio, and Personal information sections by default. An admin can customize these sections across several business units on the platform. The default **Section Visibility** settings for About and Bio are available for the **Desktop**. An admin can change the visibility as required.

Select any user card on the **Team** tab to view the user details.

You can also search for employees by typing their name in the search bar provided on the home screen of Now Mobile.

Section Visibility options

Note:
The admin can configure the **Section Visibility** settings for the Profile details page on the employee profile application by navigating to **All** > **Employee Profile** > **Overview UI Configuration**.

Note:
If a customer upgrades the employee profile but does not have an upgraded Now Mobile app, then the search redirects to the older profile page.

You can avoid this redirection by upgrading to the new Now Mobile profile page.

For more information on configuring Employee profile, see Employee profile.

Upgrade search redirection to the new Now Mobile profile page

Upgrade to the new Now Mobile profile page for an enhanced user-navigational experience.

Before you begin
Role required: admin

About this task
Update the function instance manually to redirect ServiceNow® AI Search to the new Now Mobile profile page.

Procedure

1. Navigate to **System Mobile** > **Now Mobile App** > **Applet Launcher**.
2. In the launcher screen list, select **Homepage**.
3. Navigate to **Header** > **Search config**.
4. Select the **Preview this record** icon to open **Search config**.
5. In the **Search config** page, go to the List Item Configuration list and select **People Genius Search Main Item**.
6. In the People Genius Search Main Item list, go to **People genius result redirection**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Update the **Order** to **200** to prioritize search redirection to the Now Mobile profile page.

> **Note:**
> You can also update the **value** to **200** at `/sys_sg_button_instance.do?sys_id=510879044d0c2010f87749679b4774e8`

Result
The search redirection takes you to the new Now Mobile profile page.

Configure Now Mobile® Home page

Configure the widgets on the Now Mobile® home page Quick links, My items, and My favorites.

Configure My items

Set up My items on the Now Mobile® application to access all your tasks, requests, and other personal resources like assets and purchases from one place.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **System Mobile** > **Now Mobile App** > **Applet Launchers**.
2. In the Launcher screens page, select **Homepage**.
3. In the Homepage screen, go to the **Body** tab and select **My items**.
4. In the Launcher section mapping page, select **Preview this record** on the **UI section**, which should display **My items**.
5. In the Icon section page, go to the **Icon section destinations** tab, select **New**, and create as many items you would like to display to on the My items section.
   Set up the icon sections, colors, destinations from the **Icon section destinations** tab. You can also use the Mobile App Builder to get a more holistic view while configuring. For more information, see Configure an icon UI section.

Result
You have set up My items on your Now Mobile® application.

Configure Quick links for Now Mobile®

Configure Quick links for Now Mobile® to provide your employees with quick access to important forms, links, and other data.

Before you begin
Role required: sn_hr_sp.esc_admin

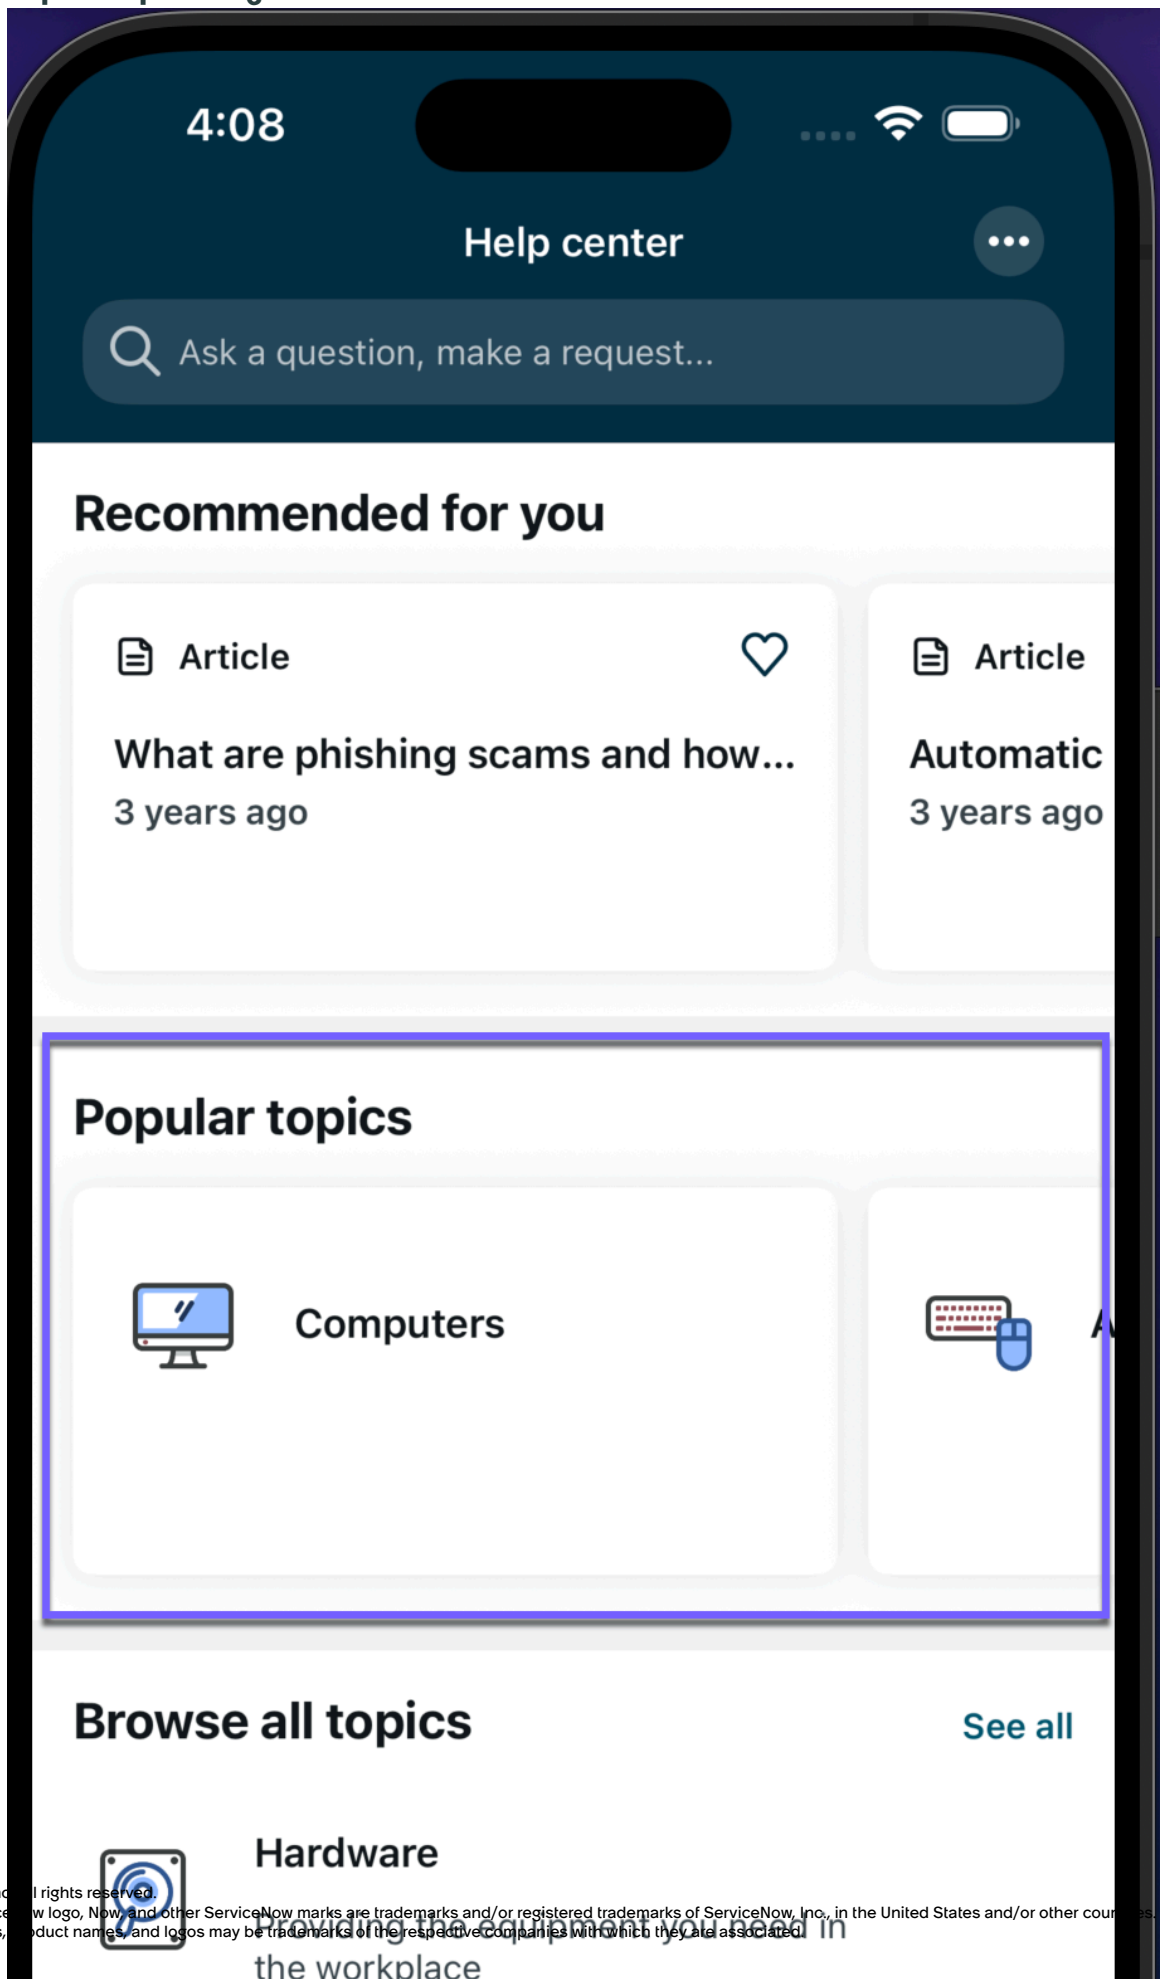
Procedure

1. Navigate to **System Mobile** > **Now Mobile App** > **Applet Launchers**.
2. In the Launcher screens page, select **Homepage**.
3. In the Homepage screen, go to the **Body** tab and select **Quick links**.
4. In the Launcher section mapping page, select **Preview this record** on the **UI section**, which should display **Quick links**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the Icon section page, go to the **Icon section destinations** tab, select **New**, and create as many items you would like to display to on the Quick links section.
   Set up the icon sections, colors, destinations from the **Icon section destinations** tab. You can also use the Mobile App Builder to get a more holistic view while configuring. For more information, see Configure an icon UI section.

Result



You have set up Quick links on your Now Mobile® application.

Popular topics in Now Mobile®

Popular topics displays the most sought out information employees have searched for, in one place, providing quick access to important information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Popular topics widget

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Center uses an algorithm to determine which topics appear on the widget. Popular topics widget contains topics, Service Catalog items and Knowledge Base articles that have been viewed the most number of times, and have higher popularity. Now Mobile® uses the same algorithm used on the portal.

The popularity is calculated based on a scheduled job that runs daily. The algorithm takes into account all the search history for different topics since the configuration of the Employee Center portal.

For more information on the Popular topics configuration, see Popular topics widget.

Approvals in Now Mobile

View all your approval tasks in one place in the Now Mobile app.

Access all your approval tasks under **My Tasks** section in Now Mobile.

- Approve or reject after checking the details of an approval task on the **Details** tab.
- Use the **Updates** tab to provide your comments, view comments from someone, or add or see an attachment relevant to the approval task.
- View the due date information of each task on the list view under **My Tasks** and on the details pages of individual approval tasks.

If you want to reject an approval task, you must provide a reason to submit it. Comments are optional when you approve a task.

The order of priority for the information displayed on the list view in **My Tasks** is as follows:

1. Short description
2. Approval For
3. Approving

Generic approval

The generic approval that is shipped with the Now Mobile version 29.0 displays all the approval tasks available on the Approval [sysapprover_approval] table.

Users with an approver role can access all their approval tasks in the Now Mobile app under **My Tasks**.

Note:
The Generic approval is enabled in the base system as:

- The system property, sn_me_todos.all_approvals_mobile_enabled, is enabled by default.
- The system property, sn_me_todos.all_approvals_mobile_enabled, can be disable to stop using the generic approval card.
- If you want to create a custom approval card within the Approval To-dos list, the value of the **Condition order** field of the custom configuration must be lower than the **Condition order** of the Generic approval card.

For more configuration info, see Enable task configuration for approvals.

Workday approvals in Now Mobile

Access your Workday approvals in the Now Mobile app, with Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Receive all your Workday approval tasks under the **My Tasks** section with Employee Center on Now Mobile. Select an approval task to:

- Approve or reject the approval requests from your mobile.
- View the details of the approval request on **About** and **More details** tabs.
- Check that any attachments added with the request on the **Attachments** tab.
- Navigate to the Workday portal to view the approval tasks on Workday.

The following approval types have default approve or reject buttons on the Now Mobile app. You can finish the approval task on the Now Mobile app for the following approval types.

- Time off
- Time off correction
- Termination
- Leave of absence

For the other approval types, often, more information is required to approve or reject the task. The approve and reject buttons aren't available for such approval tasks. You can select the **Complete In Workday** link to view the following task types in detail on the Workday portal.

- Job requisition
- Time sheet
- Compensation range
- Spend authorization
- Job change

Note:
You can configure the approve and reject button to display in Now Mobile for all the approval types. For more information on the configuration, see Configure Workday approval functions for Now Mobile.

For more information on the configuration of the Workday approvals, see Configure Workday to-dos.

Configure Workday approval functions for Now Mobile

Configure the approve and reject buttons for all the Workday approval task types. Complete all your approval tasks in the Now Mobile app.

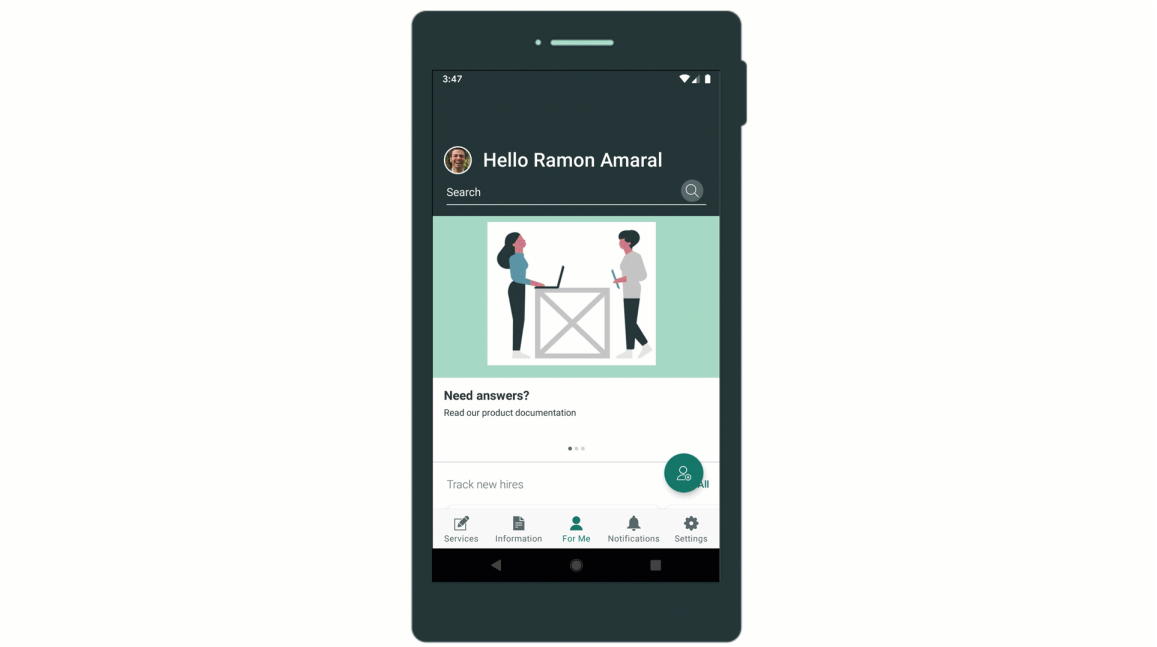
Before you begin
Role required: sn_hr_workday.admin

Procedure

1. Navigate to **All** > **System Mobile** > **Screens**.
2. Select **About** for the correct approval type.
   Check the corresponding **Description** next to **About** to know the approval type.
3. In the **Function instances belonging to screen** tab, turn the options to **True** as required.

Note:
The base system settings for a few approval types are set to false in the Now Mobile app. For more information, see Workday approvals in Now Mobile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Result
Approve and reject buttons are displayed on the configured approval task types in mobile.

Configure mobile content

Configure mobile content such as banners, text cards, and video for content delivery or for use in campaigns. Mobile content is delivered to users that meet the audience criteria on Now Mobile.

Before you begin
Role required: sn_cd.content_manager

About this task

Mobile content displays in a carousel section on the Now Mobile app to users that meet the specified audience criteria. You can configure mobile banners, text cards, and videos for content delivery or for use in campaign.

Procedure

1. Navigate to **All** > **Content Publishing** > **Mobile Content**.
2. Click **New** or open a record.
3. On the Mobile Content form, set the **Content type** field value to one of the following:
   - Mobile Banner
   - Mobile Text Card
   - Mobile Video

   For each content type, follow the applicable task.

For mobile banner

Configure content for a mobile banner.

Before you begin
Role required: sn_cd.content_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. On the Mobile Content form, set the **Content type** field value to `Mobile Banner`.
2. Fill in the fields on the form, as appropriate.

Mobile Content form

Field	Description
Title	Title of the mobile banner.
Content type	Set the value to `Mobile Banner`.
Image	Image to display for the mobile banner.
Link	Link to use with the mobile banner. The link displays when the user taps anywhere on the banner.
Header text	Header text to display for the mobile banner.
Text	Text to display for the mobile banner.
Order	Order in which the mobile content displays. Lower numbered content displays before higher numbered content.
Active	Option to activate the mobile content for use.

3. Right-click the form header and click **Save**.
   The **Schedule Content** related list displays.
4. Schedule the content.
   - To schedule the content for delivery, see Scheduling the delivery of content.

For mobile text card

Configure content for a mobile text card.

Before you begin

Role required: sn_cd.content_manager

Procedure

1. On the Mobile Content form, set the **Content type** field value to `Mobile Text Card`.
2. Fill in the fields on the form, as appropriate.

Mobile Content form

Field	Description
Title	Title of the mobile text card.
Content type	Set the value to `Mobile Text Card`.
Link	Link to use with the mobile text card. The link displays when the user taps anywhere on the text card.
Header text	Header text to display for the mobile text card.
Order	Order in which the mobile content displays. Lower numbered content displays before higher numbered content.
Style	Style of the mobile text card:

Configure content roll-up on topics for Now Mobile

Browse through the associated content on the parent topic and its sub-tree topics. Enable the feature to see a wider range of results for your search on the Now Mobile app.

Before you begin
Role required: admin

About this task
Browse content directly associated to the topic that you're viewing along with the content on the sub-tree topics. With this feature, you can:

- Find associated content on topic pages easily.
- Search content with a broader result display with the results from the sub-tree topics.

Procedure

1. Navigate to **All** > **System Properties** > **All Properties** > **sn_ex_sp.u_allow.rollup.mesp**.
2. Set the system property to **true**, and select **Save**.

> **Note:**
> Verify the value is set to true to enable the feature. The default value is set to false.

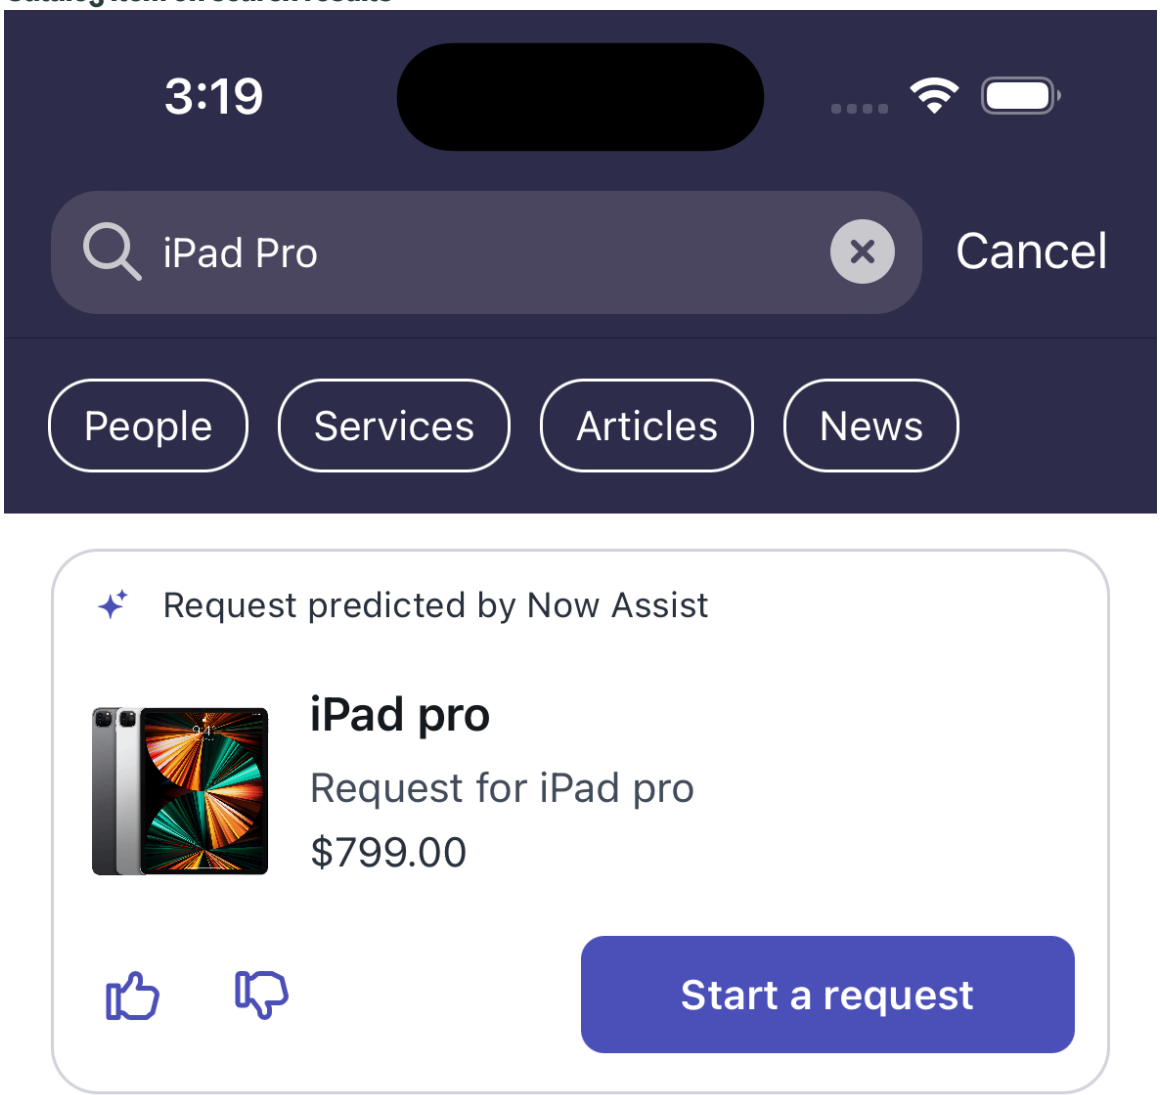
Manage taxonomy for Now Mobile

Clone the default taxonomy or create your own taxonomy and map it to the Mobile Employee Service portal (MESP) to ensure the right taxonomy gets assigned.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Taxonomies**
2. Click the default **Employee** taxonomy.
3. Click **Clone**.
4. Enter the **New Taxonomy Name** in the dialog box that appears and click **OK**.
   This copies the taxonomy and its contents to the new taxonomy. *Optionally*, you can manually create a taxonomy and add your topics. For more information, see, Create taxonomy
5. Modify the taxonomy content and click **Update**.
6. Deactivate the existing taxonomy so that the search configurations pick up the content from the new taxonomy.
7. Navigate to **Service Portal** > **Portals**.
8. Click **Mobile Employee Service Portal**.
9. In the **Taxonomy** tab related list, add the new taxonomy that you created.
10. Click **Update**.



Now Assist genius results in Now Mobile®

Now Assist genius results in Now Mobile® helps provide a personalized way of using the search functionality.

Now Assist genius results are a more personalized way of search as opposed to the traditional AI search experience.

The genius results include:

- Now Assist Actionable genius result: Request for a Service Catalog item by search.
- Now Assist Q&A genius result: View the entire Knowledge Base article with **Show more** functionality from the search results.

Note:
You must enable the **Now Assist in AI Search Setup** in the required applications where you want to use genius results. For more information, see Enable Now Assist genius results.

Update search configurations

Search configurations are not automatically updated when you install the Now Mobile application. Manually run the fix script that is provided to update the search configuration to experience unified browsing on your mobile device.

Before you begin
Role required: admin

Procedure

1. In the Navigation filter, enter `sys_properties.list`.
   The entire list of properties in the System Properties [sys_properties] table appears.
2. Create a property of type **true/false** in the Now Mobile application scope.
   For example, create a property `enable_taxonomy`. For more information on creating system properties, see Add a system property.
3. Set the property value to **true**.
4. Navigate to **System Definition** > **Fix Scripts**.
5. Search for `Enable Taxonomy For Mobile`script and click to open.
6. Click **Run Fix Script** to update the search configuration.

Note:
If the default Employee Taxonomy is attached to the Mobile Service Portal, then run the **Set primary topics for Employee taxonomy** fix script to update the mappings.

Quick start tests for Employee Center

Validate the continued functionality of the Employee Center after any configuration change such as an upgrade or after developing an application. Copy and customize these quick start tests to pass when using your instance-specific data.

All test suites and tests should pass on a default implementation. To validate a custom implementation, copy the automated tests and configure them for your customizations.

Quick start tests are disabled and read-only test templates. By default, they only produce a pass result when you run them with the default demo data that is provided with the application or feature plugin.

To make quick start tests produce a pass result when you run them with your instance-specific data, copy and configure them to use your instance data.

Use Performance Profiling to compare tests to detect performance degradation when you upgrade your instance, so you can investigate and fix the issues. See Performance profiling.

The Agile Development 2.0 (com.snc.sdlc.agile.2.0) and the Agile Development 2.0 - ATF Tests (com.snc.sdlc.agile.2.0.atf) plugins must be enabled.

Run quick start tests for Employee Center

Employee Center provides several quick start tests you can run.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Automated Test Framework** > **Tests**.
2. Search and select the quick start tests you want to run.
   For information on available quick start tests, see Quick start tests for Employee Center.
3. Click **Run Test**.
   The Test Steps tab provides each step of the quick start test.
   After the tests run, the Step Results tab shows the status of each test step. Screen shots also appear at the top of the form as attachments.

What to do next

Use Performance Profiling to compare tests to detect performance degradation when you upgrade your instance, so you can investigate and fix the issues. See Performance profiling.

Integrating with Employee Center

Leverage the benefits of Employee Center-integrated solutions to further enhance your employee experience.

Approval hub integrations

The Approval Hub integration with different external applications enable different access points to fulfill organizational approval tasks.

Approvals hub integration with SAP Concur

Enable easier access to all active approvals of external business applications such as SAP Concur from Employee Center Pro. The SAP Concur spoke is built by Bristlecone, Inc.

Using Approvals hub integration with SAP Concur, you can perform the following actions from Employee Center Pro:

- Pull SAP Concur reports and expenses metadata into a ServiceNow application.
- View the SAP Concur expense reports, expense line items, receipts, itemizations, and comments from your ServiceNow instance.
- Enable approvers to view, send back, and approve the tasks right from Employee Center Pro.

Prerequisites

Remember the following information before getting started with the integration:

- Ensure you install the following plugins:
  - Employee Center Pro
  - SAP Concur spoke 2.0.0 and above *(sn_sap_concur_spok)*
  - Approvals hub integration with SAP Concur plugin *sn_ex_cnc*

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Enterprise Service Management Integrations Framework

  Note:
  This framework is installed with Employee Center Pro.

- Approvals hub integration with SAP Concur is supported with Employee Center Utah patch 3 as the minimum supported release for the functionality to work on Utah.
- Understand how Enterprise Service Management Integrations Framework works, see Using Enterprise Service Management Integrations Framework and View tasks of a third-party system
- Integrate Approvals hub integration with SAP Concur with ServiceNow, create credential records, and create connection records as explained in SAP Concur Spoke.
- Understand the basics of SAP Concur integrations and business processes.

Note:
The RCAs that are generated after the installation are in the **Requested** state and you must manually mark the RCAs as **Allowed**, which can be time-consuming. To automate the RCA approvals for any record, you can run the EC bulk RCAs approval script where the source scope is one of the Employee Experience applications.

SAP Concur approvals workflow

By using the Employee Center Pro approvals experience, you can do the following actions:

- Sync the SAP Concur expense reports to the **My tasks** page on Employee Center Pro.
- View and manage the expense reports, expense line items, receipts, itemizations, and comments.
- Enable approvers to perform quick actions such as approve or send back a request with comments.
- Leverage Concur user flows and approval flows from approvals hub.

Manage approvals from SAP Concur

As an administrator, you can sync, view, track, and fulfill the requests from other business applications such as SAP Concur from a unified Employee Center Pro location.

Before you begin
Role required: sp_admin

About this task
View expense reports, itemizations, and receipts of the SAP Concur account from your ServiceNow instance.

Procedure

1. Navigate to **All** > **Employee Center** > **Concur Configuration** (sn_ex_cnc_concur_configuration).
2. Click **New** or update the existing configuration.
3. On the form, fill in the fields.

Configuration form

Field	Description
Base URL	Base URL of the instance. For example, assuming the base URL of `https://`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	`api.example.com/`, the `/reports` endpoint refers to `https://api.example.com/reports`.
Report relative path	Relative path of the report `/goto/expense-report/{report_id}`.
Active	Status of the web application. Only when a Concur configuration is active, the Concur Expense Reports table gets the report URL populated. The same URL is used by the **My task** page UI to redirect to Concur system.
Domain	Domain of the configuration. This field is automatically filled per the current domain and is used for domain separation. Per domain, only one Concur configuration can be in active state.

4. Click **Save**.
   Configuration is complete.

Result
Base URL and relative path help display the fetched reports and expenses metadata from SAP Concur. The base URL and relative path help the approver navigate to SAP Concur from the respective approval or report for more details.

Populate SAP Concur report and metadata

As an administrator, fetch the reports metadata from other business applications such as SAP Concur. View the Concur expense reports, itemizations, and receipts from your ServiceNow instance.

Before you begin
Role required: sp_admin and sn_hr_integr_fw.admin

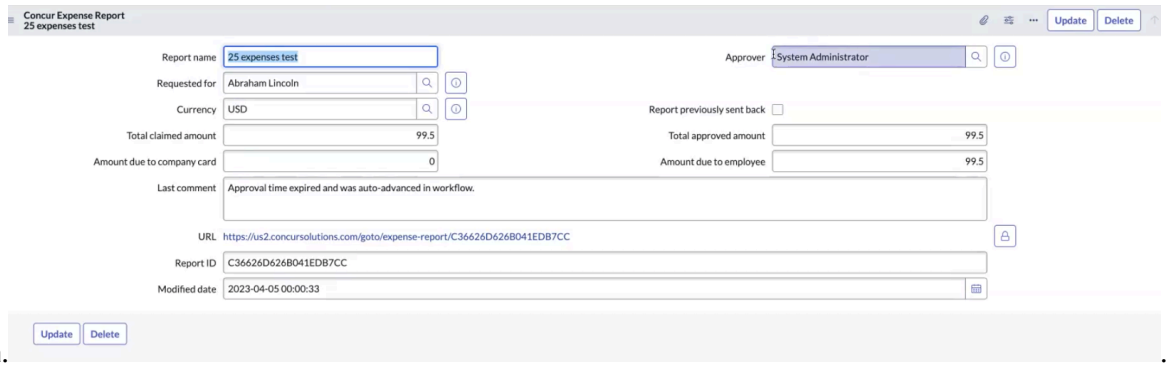
About this task
When you sync requests, you can view, track, and manage the pending requests from SAP Concur right from Employee Center Pro.

Procedure
1. Use one of the following methods to fetch the data.

   a. Navigate to **All** > **Integrations Framework** > **Source**, select **Concur Integration**, and click **Run Job** to fetch Concur expenses report.
   This job uses the **Fetch concur reports** service to fetch the user and report data using the available **Get concur reports** flow.

   b. Navigate to **System definition** > **Scheduled jobs** and run the **Pull concur reports** job to sync the updates automatically on a configured schedule or need-basis.

   By default, Concur reports are synced daily and the last three months data is fetched. Admin can configure the frequency of the schedule job.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To ensure you have the latest data from Concur, the daily scheduled job fetches the new records and any changes to the existing records.

2. **Optional:** Verify the progress of the job from **All** > **Integrations Framework** > **Job Tracker.**
3. **Optional:** Check the populated data from the following tables:
   - Concur Expense Report Staging (sn_ex_cnc_concur_report_staging)
   - Concur Expense Report (sn_ex_cnc_concur_report)
   - Concur User Mappings (sn_sap_concur_spok_sap_concur_user_mappings)
   - Concur Sync Details (sn_ex_cnc_concur_sync_details)
   - Concur Expense Entry (sn_ex_cnc_concur_expense)
   - Concur Comments (sn_ex_cnc_concur_comment)

Note:
Concur Expense Entry and Concur Comments data is populated real-time when the approver clicks the open request on the **My tasks** page.

The tables show the expense reports and related metadata. See the sample Concur expense report and its metadata.

Trouble?
If reports do not appear on the Concur Expense Report (sn_ex_cnc_concur_report), check the credentials (oauth_2_0_credentials) with names *SAP Concur* and *SAP Concur v4 Credentials*. If credentials are fine, check **Get concur reports** flow execution for more information.

Result
The SAP Concur integration syncs the requests automatically and displays the pending open requests on **My tasks**.

What to do next
You can navigate to **All** > **Employee Center** > **SAP Concur Spoke** > **Concur Sync Details** to check the timestamp of the last sync.

- Only the open requests are displayed on the approvers **My tasks** page.
- Changes to the reports and requests reflect when the approver selects the open task.
- (Optional) You can disable the scheduled job by marking the job inactive from **System Definition** > **Scheduled job**.

Proceed to To-dos Configuration and use the default **Approval | SAP Concur** task configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use task configuration for SAP Concur approvals

Using the default To-dos configuration, you can provide the approvers with more in-context information about the approval requests for better approval workflows.

Before you begin

The following **To-dos Configurations** (sn_hr_sp_todos_config) are available by default.

- Concur Expense Report - Approval
- Concur Expense Report - Completed

To-dos configurations are based on **Pulled Integration To-do** table and show Open and Completed concur approvals on My tasks. For more information on task configuration, see Enable task configuration for approvals

Role required: sn_hr_sp.esc_admin

Procedure

1. Go to **All** > **Employee Center** > **Administration** > **To-dos Configuration**, click an existing to-dos configuration, and navigate to the **Task Configuration** related list.
2. Click **New** or edit an existing task configuration record such as **Approval | SAP Concur**.
3. Understand the configuration as explained in Enable task configuration for approvals
4. Use the default configuration or modify per your business requirements.
   - Use the condition builder to specify the conditions that a task must meet to appear on the to-dos page. For example, Todo state is *open*, Source table is *sn_ex_cnc_concur_report*, and Active is *true* and so on.
   - Table name configured in the to-dos configuration to which the task config is associated *Pulled Integration To-do [sn_hr_integr_fw_todo_inbound]*.
   - Reference table is **Concur Expense Report** [sn_ex_cnc_concur_report].
   - Use the {reference_table.name},{reference_table.report_created_date}, {reference_table.approval_status_name} fields to display the table name, created date, and status.
   - Ensure you configure the widget parameters to suit your requirements. For example, set the *showItemizations* and *showAttachments* value to **true** to show attachments and itemizations. When *showReportTotals* is true, the report shows the sum total of all the expenses.
5. Use the default tab configuration **Expenses** and **Comments**or modify to suit your requirements.
   - The **Expenses** tab shows all expenses for Concur report. Widget is **Concur Expenses** and **Concur Expenses Mobile**. You can see Itemizations and receipts.
   - The **Comments** tab shows all comments for Concur report. Widget is **Concur Comments**.
6. Click **Actions** to search and select the required action group.
   Select the **Concur actions** to display the frequently used actions such as **Approve**, **View receipts**, and **Send back**. For more information, see Action framework.
7. Click **Submit** or **Update**.

Result

Based on this configuration, the approvers see the in-context information about the Concur approval and process the approval. For more reference info, see Approvals experience reference.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Approver users can see information and process the approvals. For more information, see Use approval experience

Approvals hub integration with Workday

Enable easier access to all active approvals of external business applications such as Workday from Employee Center Pro. The Workday spoke is built by Bristlecone, Inc.

Using Approvals hub integration with Workday, you can perform the following actions from Employee Center Pro:

- Pull employee information from Workday for time off requests, correct time off request, leave of absence, timesheet, job change, job requisition, termination, spend authorization, and compensation details to a ServiceNow application.
- View the Workday information from your ServiceNow instance.
- Enable approvers to view, reject, and approve the tasks right from Employee Center Pro.

Application setup

Ensure you have the latest versions of the following plugins:

- Employee Center Pro
- HR Service Delivery Integration with Workday 3.0.0

Note:
Upgrade v2.0.6 to v 3.0.0

- Workday HR Spoke
- Human Resources Scoped App: Core (com.sn_hr_core)
- Enterprise Service Management Integrations Framework. This framework is installed with Employee Center Pro.

Prerequisites

Before you start working on the Workday integration, get familiar with the following steps.

- Ensure you have the HRSD pro/Enterprise license that includes EC Pro. Workday integration is not available for Employee Center Pro standalone.
- Understand how Enterprise Service Management Integrations Framework works, see Using Enterprise Service Management Integrations Framework and View tasks of a third-party system
- Integrate Workday with ServiceNow, as explained in Workday HR Spoke and Connections and Credentials.
- Activate and run the schedule flow that pulls record details. For more information, see Activating schedule flows.
- Understand the installed components as explained in Components installed with HR Service Delivery Integration with Workday
- Understand the basics of Workday integration and business processes.

Note:
The RCAs that are generated after the installation are in the **Requested** state and you must manually mark the RCAs as **Allowed**, which can be time-consuming. To automate the RCA approvals for any record, you can run the EC bulk RCAs approval script where the source scope is one of the Employee Experience applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workday approvals workflow

Improve productivity by managing third-party approval flows from Employee Center Pro. Here is a list of the supported Workday todos configurations.

Workday supported tables

Todos configuration	Table name
Job Change Request Todos	sn_hr_workday_job_change_request_todos
Job Requisition Request Todos	sn_hr_workday_job_requisition_request_todos
Leave Of Absence Request Todos	sn_hr_workday_leave_of_absence_request_todos
Spend Authorization Request Todos	sn_hr_workday_spend_authorization_request_todos
Termination Request Todos	sn_hr_workday_termination_request_todos
Time Off Request Todos	sn_hr_workday_time_off_request_todos
Correct Time Off Request Todos	sn_hr_workday_correct_time_off_request_todos
Timesheet Request Todos	sn_hr_workday_todo
Compensation Change Request Todos	sn_hr_workday_compensation_change_request_todos

By default, todos configurations are available for **Open** and **Completed**.

Note:
For more information the field-level info about leaves, timesheets, timeoffs, compensation change, job change, job requisition, or leave of absence, see Workday HR Spoke.

For additional reference information, see Approvals experience reference.

Fetch Workday reports

As an administrator, fetch the reports metadata from other business applications such as Workday. View the Workday reports, leaves, compensation, and other information from your ServiceNow instance.

Before you begin

Role required: sn_hr_workday.admin, sp_admin, and sn_hr_integr_fw.admin

Procedure

1. Navigate to **All** > **Workday Pull To-dos** > **Configuration Workday Approval Todos** and set the **Active** value to **True** to run the reports.
2. Configure the **Load interval** and **Initial load start date time** as explained in Configure Workday to-dos.
3. Activate the schedule flow that pulls data from Workday as explained in Activating schedule flows.
   Based on the configuration and permissions, the data with new records and any changes to the existing records is pulled into the staging records.
4. Verify the progress of the job from **All** > **Workday Pull To-Dos** > **Workday Integration Job Tracker.**
   For more information, see View job tracker details from Workday and View tasks from Workday.
5. Navigate to **All** > **System Definition** > **Tables** to check the staging, todos, and todos items records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Here is an example for Compensation change request. You can see the similar records for other to-do configurations.

- Compensation Change Request Staging [*sn_hr_workday_compensation_change_request_staging*]
- Compensation Change Request ToDos [*sn_hr_workday_compensation_change_request_todos*]
- Compensation Change Request ToDos Items [*sn_hr_workday_compensation_change_request_todos_items*]

6. See the sample Workday report and its metadata.
   After data is pulled into staging tables, use transform maps to move data into target tables.

   Note:
   If event data does not appear on the Workday event table, check the Workday credentials. If credentials are fine, check **Run Workday Integration Flow** flow execution and **Workday Pull-Todos Scheduled Import** subflow execution for more information.

7. Use transform maps and verify data relationships between source table and target table as explained in Use transform maps.
   The fetched data is now transformed for display on **My tasks**.

   Note:
   When the todos do not load on my tasks page, verify the data transformation in the staging, todos, and todos items records. If you see issues, see credentials and flow execution for more information.

Result

The Workday integration syncs the requests automatically and transforms the data to display the pending Workday open requests on **My tasks**.

What to do next

Proceed to **To-dos Configuration** and use the default **Approval | Workday** task configuration.

For data protection, use the default purge policy to delete data more often. By default, data purge happens once in 30 days.

Note:
To protect sensitive data, ensure you remove the HR administrator role from IT administrator. This step ensures that only the HR administrator [sn_hr_core.admin] has access to the sensitive information. Ensure only the HR administrator [sn_hr_core.admin] has access to the sensitive information as explained in Remove HR Administrator role from IT System Administrators

- Only the open requests are displayed on the approvers **My tasks** page.
- Changes to the reports and requests reflect when the approver selects the open task.

Configure Workday to-dos

Store one-time configuration parameters to pull tasks from Workday into the ServiceNow application.

Before you begin

Role required: sn_hr_workday.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workday Pull To-dos** > **Configuration Pull To-dos**.
   For information on the Pull to-dos report creation, see this KB article.
2. On the form, fill in the fields:

Workday Configuration Pull To-Dos

Field	Description
Workday to dos RAAS report name	Name of the report that is pulled from Workday. **Note:** Make sure you provide the exact name of the report for proper synchronization.
Workday to dos report owner username	Owner of the report. **Note:** Make sure you provide the exact name of the owner for proper synchronization.
Initial load start date time	Date and time from which you want to pull todos from Workday into ServiceNow.
Load Interval	Interval in which you want to pull data, for example, in terms of days or months or hours. Example: For initial load, if you want to pull data from the last six months, then you can set the load interval as 15 days. Data is pulled from the last six months (in a set of 15 days) till the starting time captured in the **Job Started at** field in Job tracker. In case the data is large, an outbound call timeout error is displayed in ServiceNow. You must then decrease the load interval. If a schedule flow is run for every 12 hours, then data is always pulled till current time.

Use task configuration for Workday approvals

Using the default To-dos configuration, you can provide the approvers with more in-context information about the approval requests for better approval workflows.

Before you begin

To-dos configurations are based on **Pulled Integration To-do** table and show **Open** and **Completed** approvals on **My tasks**. For more information on task configuration, see Enable task configuration for approvals

Role required: sn_hr_sp.esc_admin

Procedure

1. Go to **All** > **Employee Center** > **Administration** > **To-dos Configuration**, click an existing to-dos configuration, and navigate to the **Task Configuration** related list.
2. Click **New** or edit an existing task configuration record such as **workday**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Understand the configuration as explained in Enable task configuration for approvals for more contextual info about the request.
4. Use the default configuration or modify per your business requirements.
   Table name configured in the to-dos configuration to which the task config is associated *Pulled Integration To-do [sn_hr_integr_fw_todo_inbound]*.
5. Use the default tab configuration or modify to suit your requirements.
   - The **Details** tab shows all the additional information about the request.
   - The **Comments** tab shows all comments about the request.
   - The **Attachments** tab shows all attachments about the request.
6. Click **Actions** to search and select the required action group.
   Select the actions to display the frequently used actions such as **Approve** or **Reject**. For more information, see Action framework.
7. Click **Submit** or **Update**.

Result

Based on this configuration, the approvers see the in-context information about the Workday approval and process the approval. For more reference info, see Approvals experience reference.

What to do next

Based on the configuration, the approver can see information and process the approvals. For more information, see Use approval experience.

Employee Profile integration with Microsoft Teams

Employee Profile provides integration with Microsoft Teams that show the current statuses of employees on their respective Employee Profile pages itself.

The Microsoft Teams integration with the Employee Profile lets users quickly gauge the availability of their peers during work hours and beyond on their Employee Profile pages itself.

When you navigate to another user's profile, the Microsoft Teams status view shows a **Connect** option that leads to a chat window in Microsoft Teams where you can start a conversation. You can also view the Teams status for that particular user on their Employee Profile page.

The statuses available for display are **Available**, **Away**, **Busy**, and **Offline**.

If you are not already logged in to Microsoft Teams from your profile page, the screen shows a prompt **Login to Microsoft Teams to view status** to connect with your Microsoft Teams account using a login form.

You can disable the status view if you do not wish to see it on your profile page.

Note:

To use this integrated feature, the user must install either the HR Service Delivery integration with Microsoft Teams version 3.1.0 app or the IT Service Management integration with Microsoft Teams version 2.4.0 app.

Disable Microsoft Teams status view

You can disable the status view of Microsoft Teams on your Employee Profile page.

Before you begin

Role required: sp_admin/sn_hr_sp.esc_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

You can choose whether you want to show the integrated status view of Microsoft Teams on your Employee Profile page.

For employees, you can enable or disable the user presence info using the employee profile header configuration. For more information, refer to Configure the Employee Profile header.

For non-employees, follow this procedure:

Procedure

1. Navigate to **All** > **Employee Center** > **Profile**.
2. Right-click and choose **Instance Options** from the list.
3. Select or deselect the **Enable non employee user presence info** and click save on the pop-up screen, depending on your preference whether you want the Microsoft Teams status view on your Employee Profile page.

Result

Customize your employee profile page as per your business requirement, by adding or removing the Microsoft Teams status view.

Employee Center for Microsoft Viva Connections

The Employee Center for Microsoft Viva Connections integration extends the ServiceNow for Microsoft Teams integration, bringing the ServiceNow employee experience into the Microsoft Viva Connections dashboard.

Before installing Employee Center for Microsoft Viva Connections, ensure that the following prerequisites are met:

- Your ServiceNow instances have been upgraded to Vancouver release.
- You've installed and deployed the **IT Service Management for Microsoft 365(sn_now_teams_it)** or **HR Service Delivery for Microsoft 365(sn_now_teams_hr)** plugins.
- You've installed and deployed Employee Center. For more information, see Configuring Employee Center.
- You've installed and deployed **Employee Center Core (sn_hr_sp)** August 23 store release version.

There are multiple admin roles required to deploy the Employee Center for Microsoft Viva Connections integrations application. The following table depicts the different admin roles required to perform various setup tasks in your environment.

Roles

Activity	Role on ServiceNow	Role on Microsoft Azure portal
Install Employee Center for Microsoft Viva Connections application	External app install admin	NA
Authorize Employee Center for Microsoft Viva Connections	External app install admin	Any of the following roles: • Application Administrator • Cloud Application Administrator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles (continued)

Activity	Role on ServiceNow	Role on Microsoft Azure portal
		• Global Administrator • Privileged Role Administrator
Update the Microsoft Teams application ID	External app install admin	Microsoft Teams administrator
Download the Microsoft Viva solution package	External app install admin	NA
Deploy the Microsoft Viva integrations package in Microsoft SharePoint	NA	Microsoft SharePoint administrator
Enable the display of the Microsoft Viva card in Microsoft SharePoint	NA	Microsoft SharePoint administrator

Get started

Integrate

Integrate your Viva experience with Microsoft Teams and Employee Center.

Configure

Plan and configure your implementation.

Manage

Manage app access to deploy the Viva connections card.

Reference

Reference content for Viva connections.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integrating Employee Center for Microsoft Viva Connections

Integrate Employee Center with Microsoft Viva Connections to enable an employee experience that allows users to manage tasks and navigate to Employee Center from Microsoft Teams.

Install Employee Center for Microsoft Viva Connections application

Install the Employee Center for Microsoft Viva Connections application to enable users to easily access their task cards from Microsoft Teams.

Before you begin

Role required: external_app_install_admin

Procedure

1. Navigate to **System Application** > **All Available Applications** > **All**.
2. In the search field, enter `Employee Center for Microsoft Viva Connections`.

   You can search for the application by its name or ID.
3. Select **Install**.

Result

A confirmation message appears on successful installation.

Configuring Employee Center for Microsoft Viva Connections

Configure your ServiceNow instance and Microsoft Teams application to enable the ServiceNow card in the Microsoft Viva dashboard.

Authorize Employee Center for Microsoft Viva Connections

Authorize the Employee Center for Microsoft Viva Connections application to enable the display of the ServiceNow card in the Microsoft Viva dashboard.

Before you begin

Role required:

- ServiceNow instance: external_app_install_admin
- Microsoft Azure portal: Administrator role

The administrator role in Microsoft Azure can be as follows:

- Application Administrator
- Cloud Application Administrator
- Global Administrator
- Privileged Role Administrator

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.
2. Select the **Authorize** button in the **Employee Center for Viva Connections** entry.
3. Select **Accept** to provide admin consent.

Result

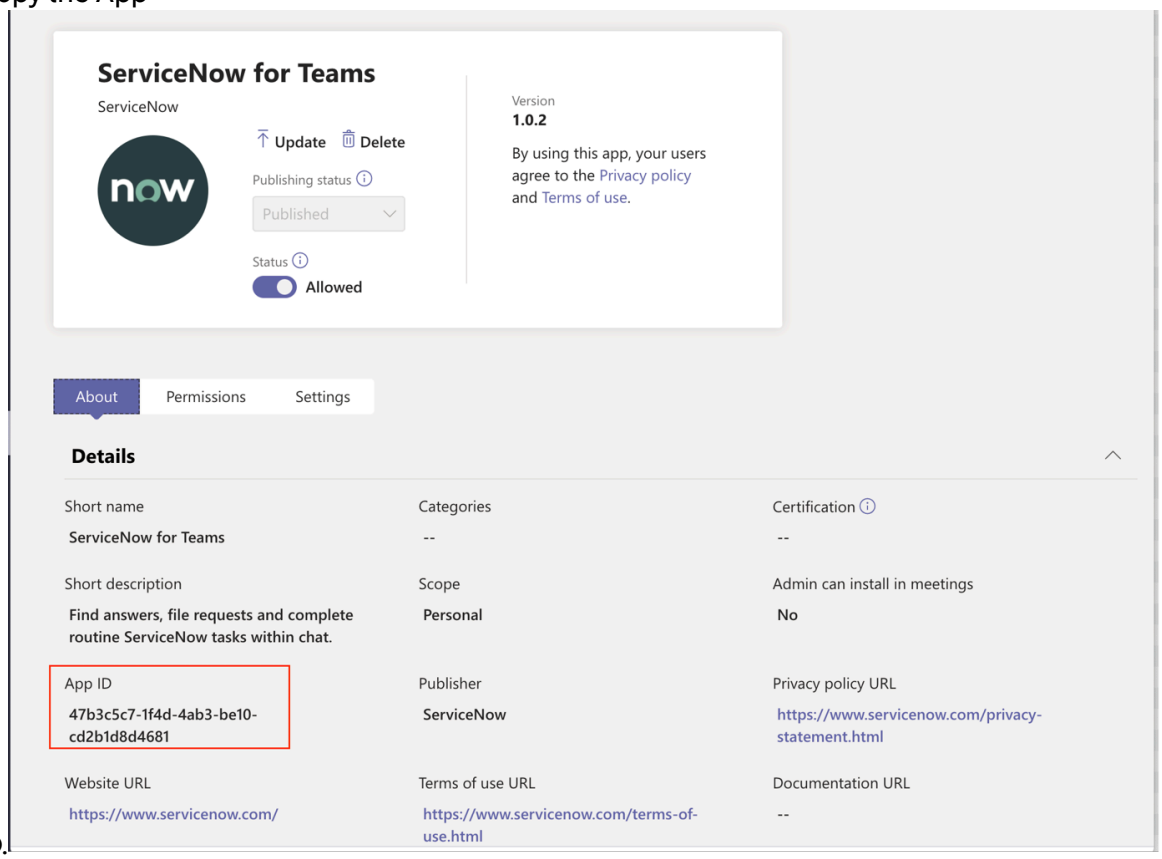
On successful authorization, the app is installed in the instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update the Microsoft Teams application ID

Update the Microsoft Teams application ID in your ServiceNow instance to navigate to your custom ServiceNow for Microsoft Teams app.

Before you begin



Ensure you have created and uploaded the ServiceNow for Microsoft Teams manifest file. For more information, see Create and download manifest file for Employee Center and Microsoft 365 integration.

Role required:

- Microsoft: Microsoft Teams administrator
- ServiceNow instance: external_app_install_admin

Procedure

1. Copy the App ID.
   a. Log in to the Microsoft Teams admin center.
   b. Navigate to **Teams apps** > **Manage apps**.
   c. Select the ServiceNow for Microsoft 365 app.
   d. Copy the App ID.

2. Update the App ID.
   a. Log in to your ServiceNow instance.
   b. In the filter navigator, enter `sys_properties.list`.
   c. In the **Name** field, search for `sn_now_ms_viva.service_now_for_teams_app_id`.
   d. Select the property to view the property details.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

e. Update the **App ID** in the **Value** field.

f. Select **Update**.

Allow cross-domain requests to REST APIs

Allow cross-domain requests to REST APIs from a browser-based application in a different domain by creating a record in CORS rules through the Microsoft Viva Connections Integration application scope.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Web Services** > **REST** > **CORS Rules**.
2. Select **New**.
3. On the form, fill in the fields.

CORS rule form

Field	Description
Name	Name for the CORS rule.
Application	Application containing the associated CORS record. This field is automatically set to Employee Center for Microsoft Viva Connections.
REST API	The REST API this CORS rule applies to.
Domain	The domain that this CORS rule applies to. This CORS rule is evaluated against requests from the specified domain. You can specify a domain pattern or an IP address.
Max age	The number of seconds to cache the client session. After an initial CORS request, further requests from the same client within the specified time do not require a preflight message. If you do not specify a value, the default value of 0 indicates that all requests require a preflight message.
HTTP Methods tab	The HTTP methods allowed. Only the selected methods can be called from the specified domain. The available methods are: ○ **GET** ○ **POST** ○ **PUT** ○ **PATCH** ○ **DELETE**
HTTP Headers tab	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Exposed headers	List of headers that the browser is allowed to access from the request.

4. Select **Submit**.

Managing Employee Center for Microsoft Viva Connections

Download and deploy the Microsoft Viva solution package.

Download the Microsoft Viva solution package

As a ServiceNow admin with the external_app_install_admin role, download the Microsoft Viva solution package to your ServiceNow instance. Your Microsoft SharePoint administrator will then deploy the package to enable the Microsoft Viva card on the Microsoft SharePoint home site.

Before you begin

Role required: external_app_install_admin

Procedure

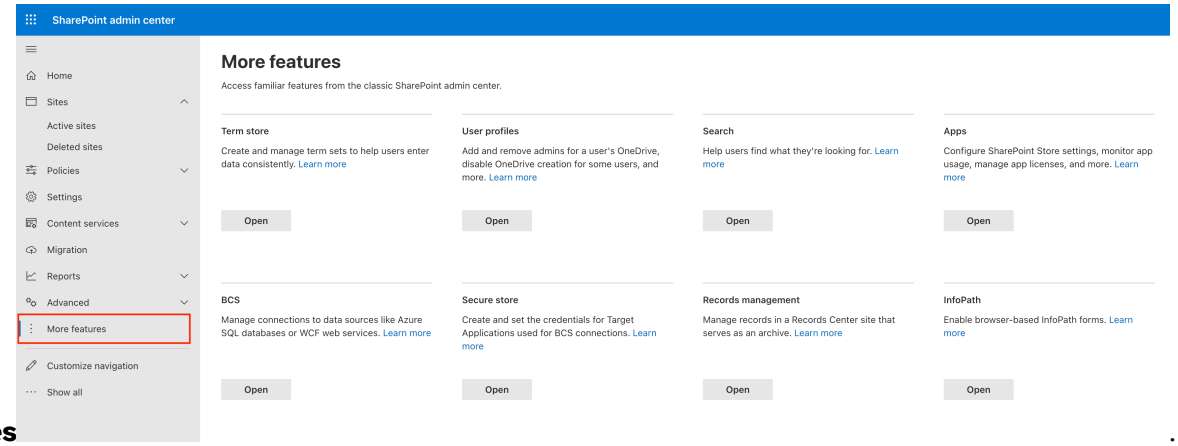
1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Microsoft Viva Connections** > **Viva Package**.
2. Select **Download package**.
3. Unzip the Microsoft Viva package.

What to do next

Ensure that the Microsoft Viva integrations package is deployed in Microsoft SharePoint, either by you if you have Microsoft SharePoint administrator privileges or by your site's Microsoft SharePoint administrator. For more information, see Deploy the Microsoft Viva integrations package in Microsoft SharePoint.

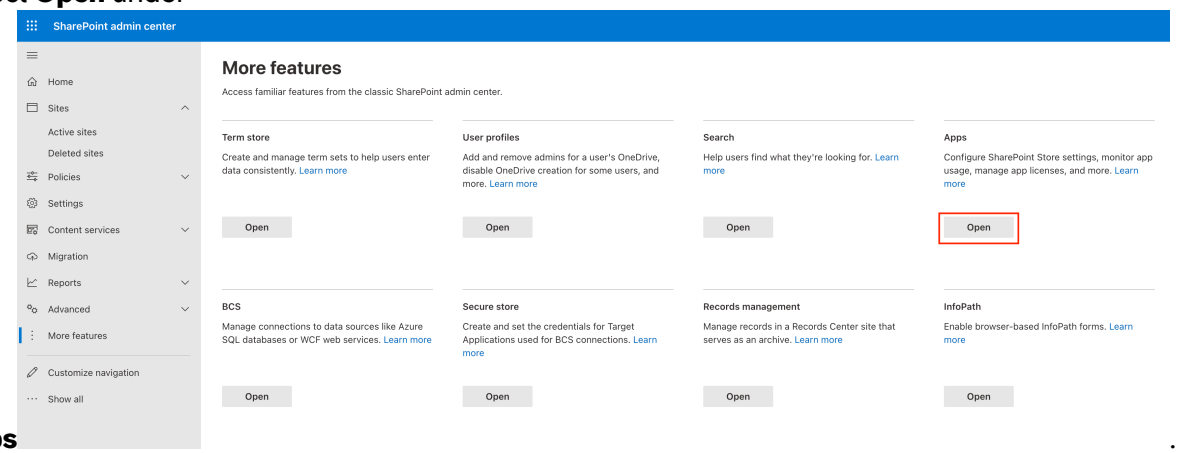
Deploy the Microsoft Viva integrations package in Microsoft SharePoint

Deploy the Microsoft Viva integrations package in the Microsoft SharePoint admin center to enable the display of card details in the Microsoft Viva dashboard.



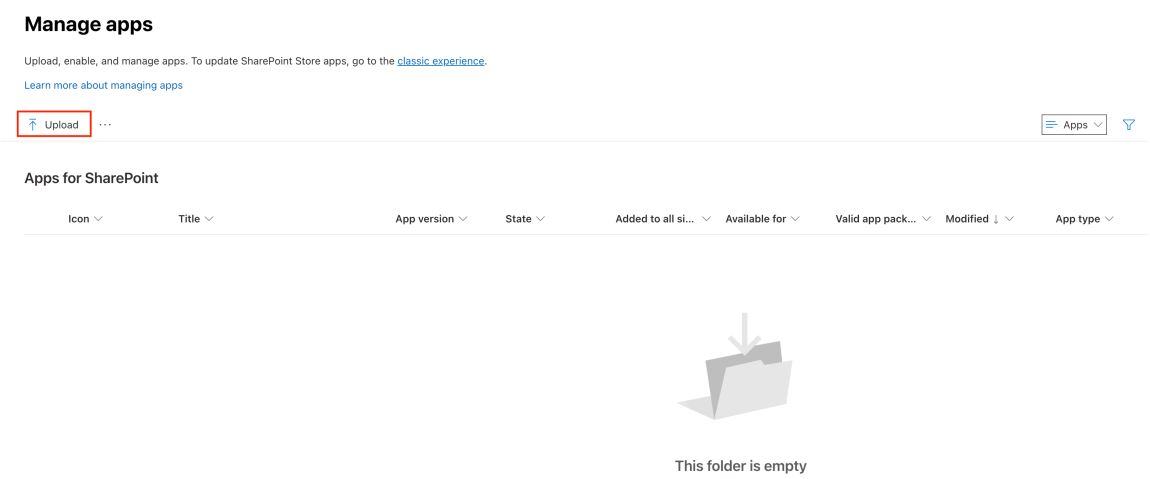
Before you begin

Role required: SharePoint administrator



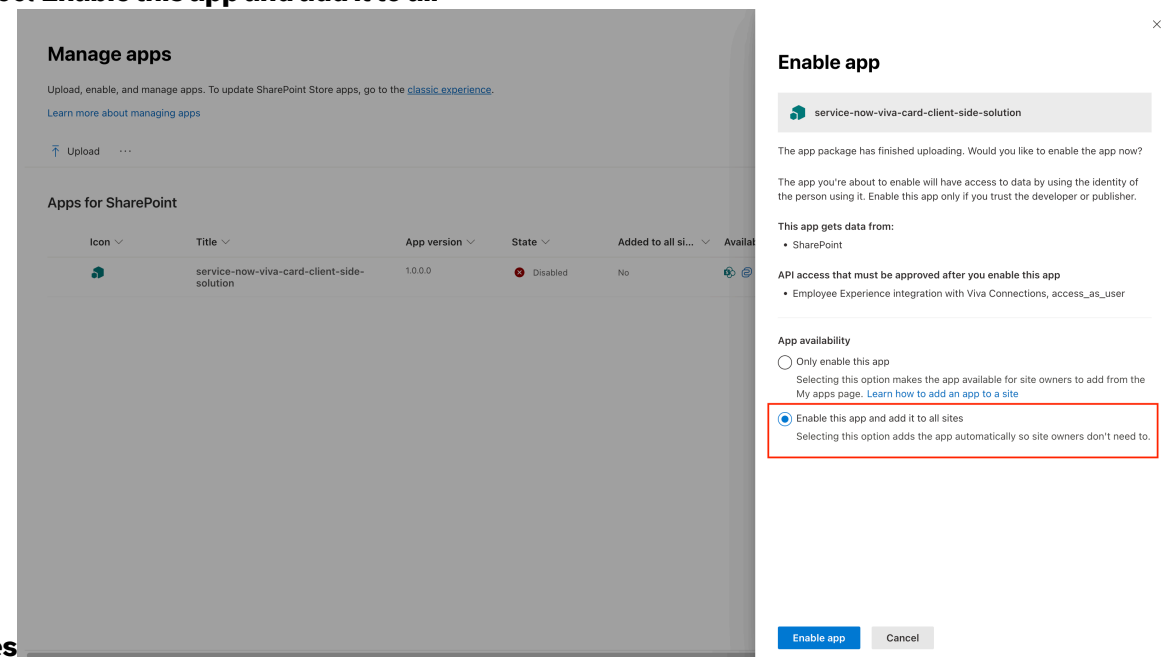
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure



1. Log in to Microsoft SharePoint admin center.
2. Navigate to **More features**.

3. Select **Open** under **features**.



4. Select **Apps**.

5. Select **Upload** and the Microsoft Viva solution package.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Enable this app and add it to all sites**.

7. Select **Enable app**.

Enable the display of the Microsoft Viva card in Microsoft SharePoint

Enable the display of the Microsoft Viva card details to be displayed to users in Microsoft SharePoint.

Before you begin

Role required: SharePoint administrator

About this task

The Microsoft Viva card provides users with a quick view of all tasks assigned to them in both Microsoft SharePoint and Microsoft Teams. It also enables users to quickly navigate to Employee Center to view detailed tasks there.

First grant app access in Microsoft SharePoint and then publish the card.

Procedure

1. Log in to Microsoft SharePoint admin center.
2. Grant app access to the Microsoft Viva integrations app access in Microsoft SharePoint.
   a. Navigate to **Advanced** > **API access**.
   b. Navigate to **Pending requests** > **Organization-wide**.
   c. Select **Employee Experience integration with Viva**.
   d. Select **Approve**.
3. Publish the card.
   a. Select **Edit**.
   b. Select **Add a card**.
   c. Select the **ServiceNow Viva Integrations** card.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Hover over the card and select the Edit icon ( ).

e. On the form, fill in the fields.
For more information, see Microsoft Viva integrations card properties.

f. Select **Republish**.

The card is now available for use.

Employee Center for Microsoft Viva Connections reference

Reference topics provide additional information about components and forms required for Employee Center for Microsoft Viva Connections integrations.

Microsoft Viva integrations card properties

Add properties of the Microsoft Viva integrations card to view tasks from Microsoft Teams.

Viva card properties

Field	Description
Card size	Size of the card.
Card Title	Title of the card.
Card Icon	Icon for the card.
Description Field	Description of the card.
Employee Center Label	Option to customize the Employee Center label.
View Tasks Label	Option to customize the View Tasks label.
Primary Text Label	Option to customize the primary tasks label.
Get Help Label	Option to customize the get help label.
Employee Service Center Error Label	Option to customize the Employee Service Center error label.
Tasks List Label	Option to customize the tasks list label.

Employee Center for Zoom

Integrate Employee Center with a Zoom account for your organization employees so they can use Employee Center capabilities from within the Zoom client application.

Before you begin

Ensure you have installed the Employee Center integration with Zoom plugin [sn_ex_ec_zm].

At least Zoom application version 5.13.11 and it must be installed on the ServiceNow® instance.

Role required: admin, Zoom admin

The Zoom admin role is the Zoom account admin role, and it is not a role in ServiceNow.

About this task

Integrating Zoom with#Employee Center enables access#to Employee Center functionality from within the Zoom client either on Windows OS or iOS. For more information, see Use Employee Center from Zoom.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information about ServiceNow integrations with the Zoom application, see ServiceNow for Zoom.

Procedure

1. Navigate to Zoom App Marketplace and sign in to your account as Zoom admin.
2. Connect your Zoom account to ServiceNow Employee Center on your ServiceNow instance.
   a. Log in to your ServiceNow instance.
   b. Navigate to **All** > **Employee Center** > **Employee Center for Zoom** > **Setup**.

      Note:
      Different domains can have different Zoom accounts mapped.

   c. On the Connect to an account page, select **Connect** associated with Zoom.

      You are redirected to the Zoom App Marketplace.

      Note:
      If you are prompted to log in, log in to your Zoom account as an admin.

   d. Enable **Approve for all users**.
   e. Select **Enable** in the Enable App Approval for All Users dialog box.

      ServiceNow Employee Center access and usage in Zoom application is enabled for all employees in your organization.

   f. Select **Allow**.

      The message `Successfully connected to Zoom account` is displayed in your ServiceNow instance setup.

3. Access ServiceNow Employee Center in the Zoom application by an admin.
   a. Open your Zoom application.

      The notification `ServiceNow Employee Center is added` is displayed.

   b. Navigate to **Apps** > **My Apps**.

      You can now access the ServiceNow Employee Center application.

   c. Select **ServiceNow Employee Center**.
   d. Enter your ServiceNow login credentials and select **Log in**.

      ServiceNow Employee Center homepage is displayed.

Set up a custom portal

Configure the ServiceNow® Employee Center portal appearance of your organization's custom portal in Zoom.

Before you begin

Role required: admin

Procedure

1. Log in to your ServiceNow instance.
2. In the navigation filter, enter `sys_properties.list`.
3. Create the custom portal.
   a. Select the **Show column search row** icon, enter `sn_ex_ec_zm.portal.suffix` in the **Name** search field, and press **Enter**.
   b. Select **sn_ex_ec_zm.portal.suffix**.
   c. On the System Property form, enter your custom portal suffix in the **Value** field.
   d. Select **Update**.

   Note:

   Because the system property is domain separated, different domain admins can create different custom portals.

4. Create a custom header for the embedded portal.
   a. In the Navigator pane, type `sys_response_header.list`.
   b. Select **New**.
   c. On the form, fill in the fields.

HTTP Response Header form

Field	Description
Active	Option to make the HTTP response header configuration active.
Application	Application scope for the custom portal record.
Applies to	Select **Specify Type**.
Type	Type of record the HTTP response header configuration applies to , in this case, Service Portal (Service Portal [sp_portal]) records.
Record	The record for your custom portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Name	Name for the name-value pair for the HTTP response header for example, Content-Security-Policy. `Content-Security-Policy`
Value	Value you want to assign to the name-value pair for the HTTP response header. `frame-ancestors 'self' https://zoom.us`
Description	Description for the HTTP response header.

d. Select **Submit**.

For more information about adding a header, see Configure HTTP response headers.

View connected Zoom accounts

View the list of Zoom accounts connected to your ServiceNow® instance.

Before you begin

Role required: admin

Procedure

1. Log in to your ServiceNow instance.
2. Navigate to **All** > **Employee Center** > **Employee Center for Zoom** > **Connected Zoom accounts**. On the Installed Accounts form, the Zoom accounts connected to the ServiceNow instance are listed.
3. Select any Account ID value to see the associated Zoom account details.

Connect your Zoom account to a different ServiceNow instance

Connect your Zoom account to another ServiceNow® instance by overriding your existing ServiceNow instance.

Before you begin

Role required: admin

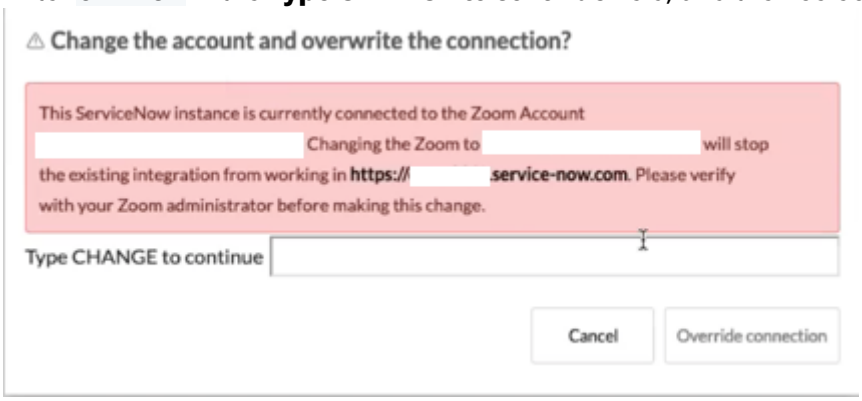
Procedure

1. Open the ServiceNow instance that you want to connect to your existing Zoom account.
2. Navigate to **All** > **Employee Center** > **Employee Center for Zoom** > **Setup**.
3. On the Connect to an account form, select **Connect** associated with Zoom.
4. Enter CHANGE in the **Type CHANGE to continue** field and select **Override connection**.

Result

Your Zoom account is successfully connected to another ServiceNow instance.

Change existing Zoom account connection



Change your existing Zoom account connection in your ServiceNow® instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin, Zoom admin

Procedure

1. Navigate to Zoom App Marketplace and sign into your other Zoom account which you want to connect to your existing ServiceNow instance.
2. Log in to your ServiceNow instance.
3. Navigate to **All** > **Employee Center** > **Employee Center for Zoom** > **Setup**.
4. On the Connect to an account form, select **Change account**.
5. On the Confirm Change Account pop-up page, select **OK**.
6. Enter CHANGE in the **Type CHANGE to continue** field, and then select **Override connection**.

Note:
You can have different domains, which have different Zoom accounts mapped.

Result
Your existing ServiceNow instance is successfully connected to another Zoom account.

Managing Employee Center

Administrators, agents, and managers can use the Employee Center application to facilitate and enable employees to raise requests and search for information on the Employee Center portal.

Action framework

Manage the Employee Center action framework according to your organizational need.

Update approvals action group

Approvals action group provides quick access to approve or reject the requests directly from the approvals page.

Before you begin
Role required: sp_admin or sn_hr_sp.esc_admin

About this task
You can use the default set of actions or customize the actions to suit your business needs.

Procedure

1. Navigate to **All** > **Employee Center** > **Action framework** > **Action Groups**.
2. Click **New** or edit an existing *Approvals action group* record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Edit the **Action group name**
4. Click **Save** or **Update**.
   Use the Action group m2m table to add multiple actions into a group.
5. On the **Action group M2Ms** related list, click New or update an existing record.

   a. Select the **Action** item from the available options such as **Approve** or **Reject** or Configure actions.

   b. Edit the **Order** of the action item.

   c. Select **Primary** to set the option as primary.

   d. Select one of the following **Action Visibility** options.

   - Visibility to Self
   - Visibility to Manager
   - Visibility to all
   - Visible to all except Self
   - User criteria: Select the user criterion from the available options.
   - Advanced: Define a custom visibility with the Advanced option through a script. For example, `answer = context.state.toString() === 'requested';`.

   Note:
   The `context` is the *`GlideRecord`* parameter for the rendered action. You can modify the parameter as needed.

6. Click **Save** or **Update**.

Result
Approvals action group is configured to perform quick actions such as **Approve** and **Reject** from the approval page.

Modify the Employee Profile action group

The Employee Profile actions include some frequently used action items in a framework for quick access.

Before you begin
Role required: sp_admin or sn_hr_sp.esc_admin

About this task
The Employee Profile action framework provides quick access to frequently used action items, like, viewing org chart, using email directly from the Employee Profile page or calls. You can edit the actions beyond the default behaviors to match your requirements.

Procedure
1. Navigate to **All** > **Employee Center** > **Action Groups**.
   The default Action Group items available are:
   - View Org Chart
   - Email
   - Call

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. **Optional:** You can reorder and make any of the items **Primary** as **True** or **False** to access that item as a button or have all the options in a list.
3. **Optional:** You can edit the **Order** as priority suits and remove the primary button altogether.
4. **Optional:** You can use the available default **Action Visibility** namely:
   - Visibility to Self
   - Visibility to Manager
   - Visibility to all
   - Visible to all except Self
5. **Optional:** You can also create a specific **User Criteria** who can modify the action, as required, or create a custom visibility with the **Advanced** option.

Result

Use and customize the action framework according to your priority to provide better employee experience with quick accessibility to work email, calls, and other organizational details through the Employee Profile page.

Action framework

Creating campaigns with Content Experiences

Campaigns offer a powerful content publishing tool that provides organizations with the ability to efficiently deliver targeted information to their employees. As a content manager, you can configure multiple channels to ensure content reaches the intended audience at the optimal time.

Here are a few examples of what you can accomplish through the targeted messaging of campaigns:

- Deflect: Prevent your employees from creating more inquiry cases.
- Drive action: Encourage your employees to sign up for health benefits.
- Provide communication: Ensure that your employees know about a specific subject.

Note:
Campaigns are intended for internal communications only. Please do not use campaigns for customer marketing, as doing so could potentially lead to the NOW mailsystem being flagged as spam by email reputation systems.

Example campaigns

Content Experiences includes demo campaigns to help you better understand campaign structuring, explore examples of bundle trigger configurations, and discover various use cases. To access the demo campaigns, navigate to **All** > **Content Experiences** > **Content Experience Builder**.

Note:
The admin must select **Load demo data** during the installation or upgrade of the Content Experiences plugin. If the demo data does not appear in your instance, ask your admin to install the demo data.

Campaign components

When planning a campaign, consider the following components:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Who: Audiences

Target different content to different audiences. You can have a campaign deliver one set of content to managers and another set to direct reports.

When: Trigger

Content becomes available to employees based on the configured trigger. Content can be made available based on a fixed or dynamic date range, when a condition is met, or a system event occurs.

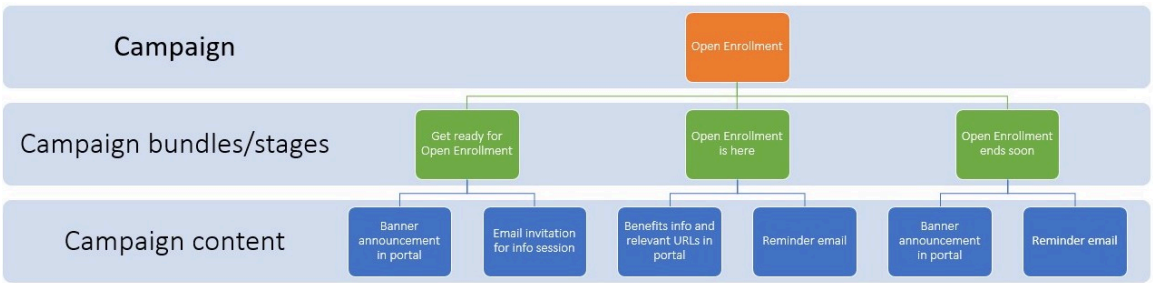
Where: Location

Target content to specific pages, topics, and widgets to ensure the content reaches the intended audience.

What: Information that you want to communicate

Define the information, links, videos, SMS messages, and emails that you want to communicate to your employees.

Campaign structure



A campaign consists of a hierarchy of stages, where each stage contains content.

Note:
Some parts of the interface use the term "bundles" to refer to stages.

Here's an example of how to structure a company benefits open enrollment campaign, consisting of three stages:

1. Get ready for Open Enrollment: This stage delivers content before the open enrollment period to prepare employees.
2. Open enrollment is here: This stage delivers content during the open enrollment period to provide the necessary information on employee benefits.
3. Open enrollment ends soon: In this stage, reminders are sent during the final week of the open enrollment period.

Each campaign stage includes content that will be visible on the employee portal and distributed via email.

Setting up a campaign

Set up a campaign using one of the following methods:

- Content Experience Builder
- Legacy (records and forms)

Content Experience Builder

With the Content Experience Builder, you can complete the entire workflow of configuring a campaign within a single interface.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Create content in the Content library

   You can create a variety of content types that can be delivered via the employee portal, email, SMS, or push notification.

   Note:
   News articles are not yet supported.

2. Create a campaign

   Create a campaign to define the audience, content approvers, and start and end dates.

3. Create campaign stages with Content Experience Builder

   Add stages to your campaign to define what content users will see and when they will see it. You can also use stages to further refine the audience. For example, you can create one stage to hold content for managers and another stage to hold content for direct reports.

4. Add content to a campaign using Content Experience Builder

   You can add content from the Content library and create a variety of content types in the Content Experience Builder.

   Note:
   If you are creating a campaign that contains rich content, you must create the rich content in the Content Library Rich Content Editor, since the Content Experience Builder does not currently support rich content creation. See Rich Content Editor

5. Preview the campaign

   See how your campaign will appear to your audience before publishing.

6. Publish the campaign from the Content Experience Builder.
7. Analyze the effectiveness of the campaign

   Verify that your campaign is targeting the correct audience. Create goals to see if your campaign is driving action from your employees, or reducing activity such as the number of inquiry cases coming in. Continually evaluate your campaign as it progresses.

Legacy (records and forms)

If you prefer to create campaigns using records and forms, or if you are publishing to a custom widget, follow these steps:

1. Create content in the Content library

   You can create a variety of content types that can be delivered via the employee portal, email, SMS, or push notification.

2. Create a campaign

   Create a campaign to define the audience, content approvers, and start and end dates.

3. Create a campaign stage

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add stages to your campaign to define what content users will see and when they will see it. You can also use stages to further refine the audience. For example, you can create one stage to hold content for managers and another stage to hold content for direct reports.

4. Preview the campaign

   See how your campaign will appear to your audience before publishing.

5. Publish the campaign
6. Analyze the effectiveness of the campaign

   Verify that your campaign is targeting the correct audience. Create goals to see if your campaign is driving action from your employees, or reducing activity such as the number of inquiry cases coming in. Continually evaluate your campaign as it progresses.

Create a campaign

Create a campaign to push communications and important information to your employees.

Before you begin

Role required: sn_ca.campaign_manager

If you would like to use Content Analytics to track the success of your campaign, you must set up a tracking profile and activate it. For more information, see Content Analytics.

About this task

Campaigns are organized in a hierarchical structure.

Create a campaign by defining a title, state, audience, start and end times, and other information. For example, you can create a campaign that promotes open enrollment for health benefits, targeting new hires, and runs through the open enrollment period.

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Click **New**.
3. Fill in the following fields:

Campaign new record form

Field	Description
Title	Unique name for the campaign.
State	State of the campaign. This field automatically updates as you move through the campaign configuration process.
Audience	Audience that will view the content of a campaign. Click the Unlock Audience icon to select the audience that you want the campaign to target. For more information, seeCreate an audience.
Approvers	Users responsible for approving content before the campaign is published.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	When you click the Lookup using list icon, only users with the Campaign Approver sn_ca.campaign_approver role appear. The approvers receive an email notification that you require their approval. For more information, see Notifications and Email templates.
Description	Descriptive information about the campaign.
Start time (yyy-MM-dd HH:mm:ss)	The date and time that a campaign will launch. **Note:** To publish a campaign, you must define the start date and time.
End time (yyy-MM-dd HH:mm:ss)	The date and time that a campaign will end.
Re-evaluate campaign	Option for reviewing the audience for a campaign. Check the box to display the **Re-evaluate frequency** field to define how often you want the **Content Experiences: Update Campaign Audience** scheduled job to run. When your campaign is re-evaluated, it removes or adds users depending on the current audience criteria. If the **Re-evaluate campaign** box is unchecked, the **Content Experiences: Update Campaign Audience** scheduled job runs one time after which the targeted audience is never re-evaluated or changed.
Re-evaluate frequency	The frequency, in days, that you want to re-evaluate the audience. Audiences are re-evaluated after the *Content Experiences: Update Campaign Audience* scheduled job runs based on the value you enter here. This field appears only after you select the **Re-evaluate campaign** check box. The value you set in this field overrides the default (7 days) value that is set in the **Campaign Re-evaluation** field in the Content Experiences system property. For more information, see Properties installed with Content Experiences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Tracking on	Enables Content Analytics to track metrics for this campaign.
Tracking profile	Tracking profile to use for Content Experiences analytics. Profiles determine what data to capture for campaign analytics. This field appears when the **Tracking on** option is selected. Click the Lookup using list icon and select the tracking profile that you want to use.

4. Click **Save** to remain on the campaign page.
   Clicking **Submit** returns you to the campaigns list.

What to do next

Click **Next** or the **Schedule of Content** tab to add stages and content to the campaign: Create campaign stages with Content Experience Builder

Campaign bundle triggers

Define a trigger to make the content in the campaign stage available to employees.

A campaign bundle organizes and manages the delivery of campaign content. When configuring a bundle, you set the bundle trigger, which determines when content becomes available and for how long.

Note:
The interface use the terms "bundle" and "stage" interchangeably.

Campaign bundle triggers

Trigger	Description
Immediate	The content is visible to the audience immediately after campaign publication, for the duration of the campaign. Create a campaign stage with immediate trigger
Fixed date	The content becomes available according to a specific start and end date and time and within the start and end date and time of the campaign.
Recurring	Use to create a campaign stage (bundle) that has date-based repeatable content. For example, use this trigger for content specific to employee birthdays or work anniversaries. Create a campaign stage with recurring trigger
To-do completion	The content in this campaign stage becomes available when a user completes a specific to-do item from another stage in the campaign.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Campaign bundle triggers (continued)

Trigger	Description
	Create a campaign stage with to-do trigger
Dynamic	The campaign stage triggers when a field in a table (sn_hr_core_profile or sys_user) fulfills a specific condition. An example use case for this trigger type is a new hire campaign, where each stage contains onboarding content for each week and delivers the content based on the employment start date. **Note:** The dynamic stage trigger will show content only one time. To configure a stage that is triggered on a repetitive basis, such as on an annual basis, use the recurring trigger. Create a campaign stage with dynamic trigger
Condition	This trigger type is specifically for Employee Journeys: Parental Leave of Absence. You can use it for your process, but it is an advanced feature that requires building a triggering mechanism, such as a business rule or scripting. Create a campaign stage with condition trigger

Create campaign stages with Content Experience Builder

Use the Content Experience Builder to create stages for your campaign on Employee Center Pro. Campaign stages control when content is available to your employees and for how long. The Content Experience Builder provides a simple, single-page view for managing content and assembling your campaign.

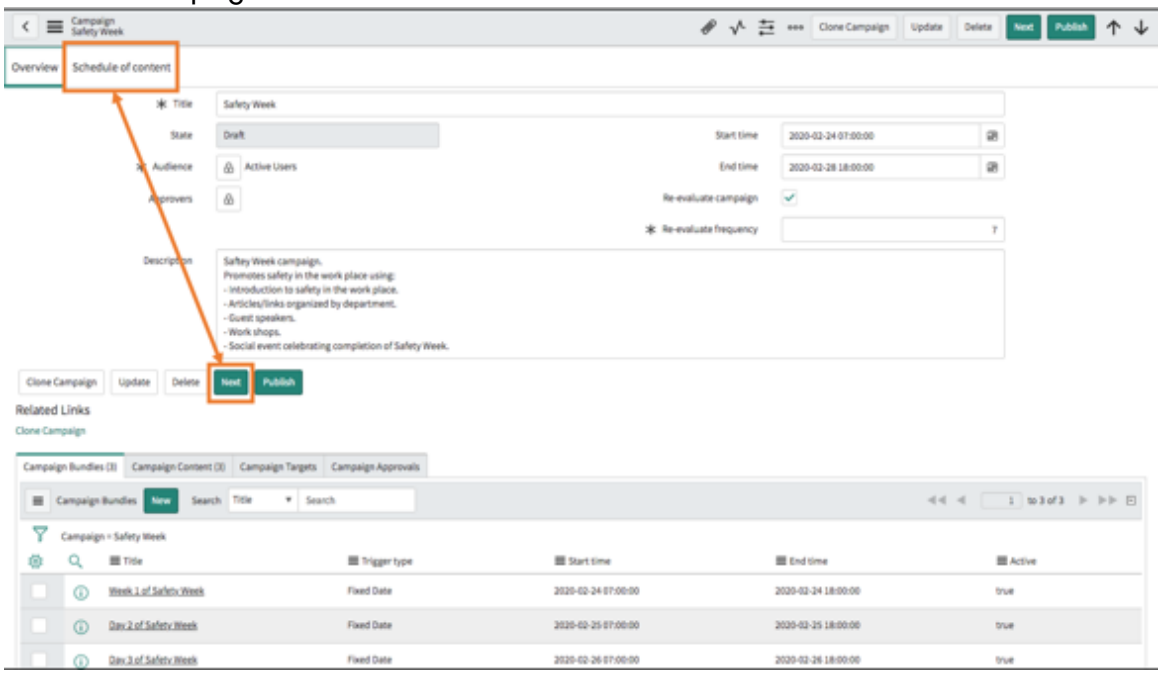
Before you begin

Role required: sn_ca.campaign_manager

Complete the steps to Create a campaign

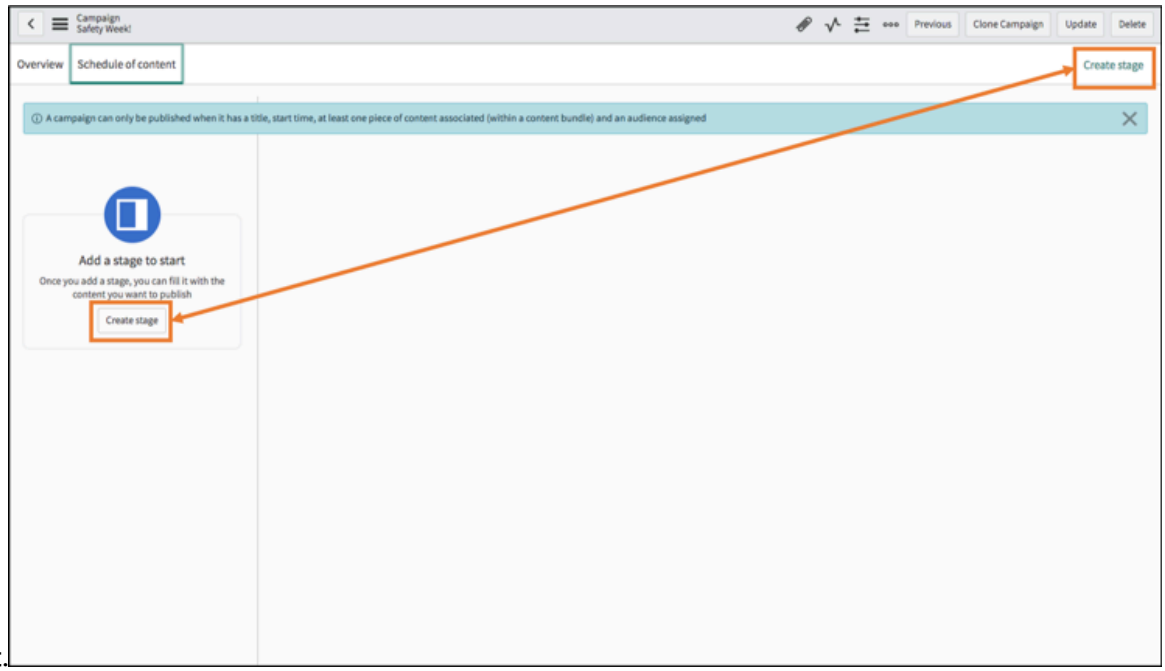
About this task

Stages organize and manage the delivery of campaign content. When configuring a stage, you set the stage trigger, which determines when content becomes available and for how long. To learn more about triggers, see Campaign bundle triggers.



Note:
Some parts of the interface use the term "bundles" to refer to stages.

Procedure

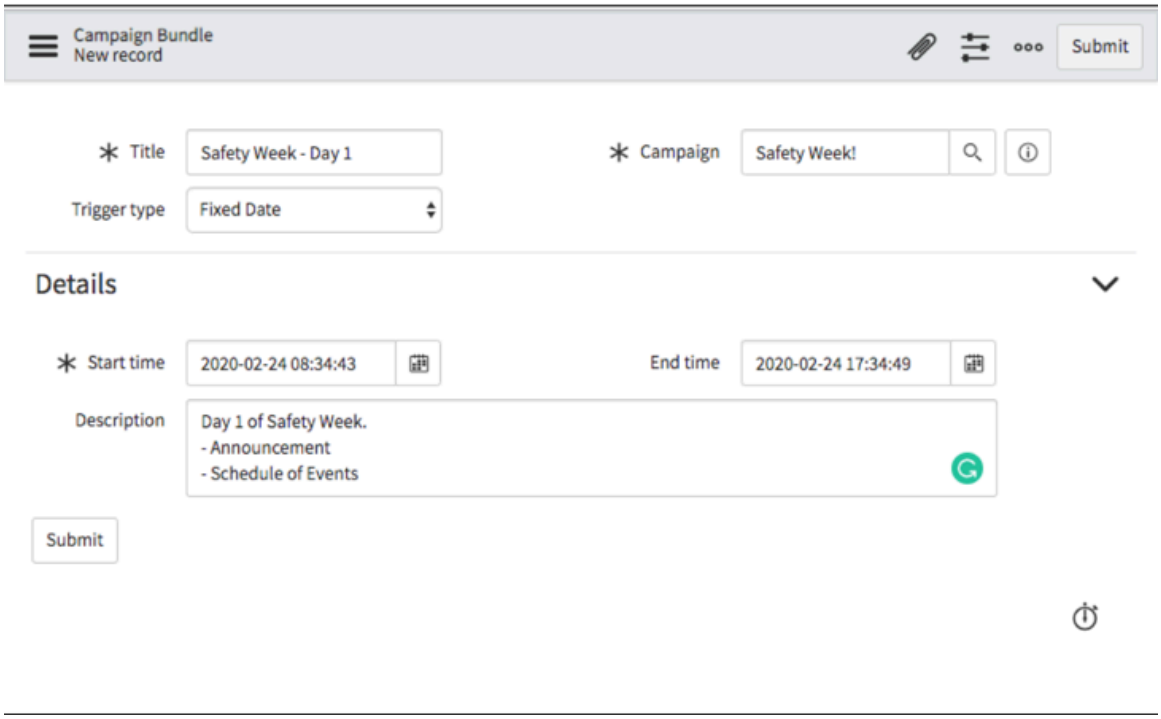


To open a campaign in the Content Experience Builder do steps 1 and 2. If you have already opened the campaign in the Content Experience Builder, proceed to step 3.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select the campaign and click the **Schedule of content** tab or click **Next**.

3. Click **Create stage**.
   A stage is a visible area to add content.



4. On the form, fill in the fields.

Campaign Bundle form

Field	Description
Title	The name of the campaign bundle.
Campaign	The campaign associated with the campaign bundle.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Trigger type	How the campaign bundle starts or ends. To learn more about triggers, see Campaign bundle triggers
Description	Descriptive information about the campaign bundle.

5. Click **Submit**.

What to do next

- Click **Add stage** to configure additional stages
- Add content to the stage, specify an audience, and set the location where the content will be delivered. For more information on creating content in the Content Experience Builder, see Add content to a campaign using Content Experience Builder

Create a campaign stage with to-do trigger

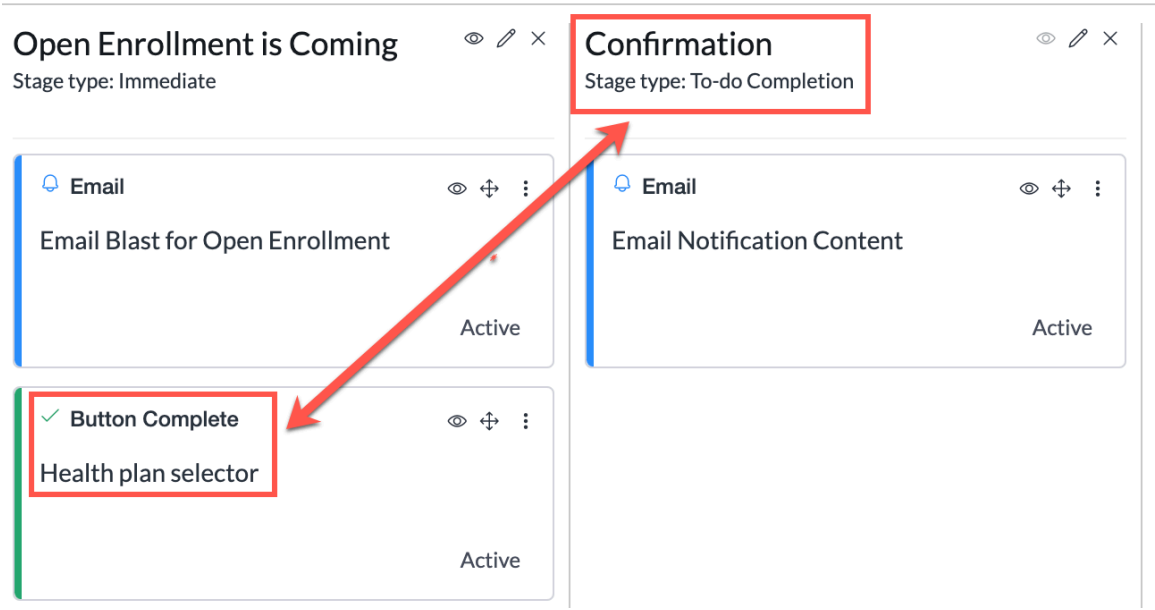
The content in a stage with a to-do trigger becomes available when a user completes a specific to-do item from another stage in the campaign. For example, create a stage that sends a confirmation email when an employee completes the "Select health plan" to-do item.

Before you begin

Role required: sn_ca.campaign_manager

Complete the steps to Create a campaign

Create a stage with a to-do content item. For more information on this content type, see To-do content.



About this task

Stages organize and manage the delivery of campaign content. When configuring a stage, you set the stage trigger, which determines when content becomes available and for how long.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. On the form, fill in the fields.

Campaign Bundle form

Field		Description
Title		The name of the campaign bundle.
Campaign		The campaign associated with the campaign bundle.
Trigger type		Select **To-do Completion**.
Description		Descriptive information about the campaign bundle.
Trigger item		The to-do item that activates the content in this bundle.
Offset start date		Select this check box to trigger your campaign stage before or after the actual trigger start date.
Date offset quantity		The number of days, weeks, or months to offset the trigger type.
Date offset units		Units of time to offset the trigger type.
When		Whether to offset the units before or after the set date.
End > **Duration type**		Defines how long the content in this stage is available. Choose from:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field		Description
		○ **Campaign end date** makes content available until the campaign ends. ○ **Time Length** ends content after a specific number of days or hours. ○ **Dynamic field** uses a trigger table and field to determine when content is no longer available. An example is to end content based on an employee's HR profile and employment end date.
If you selected **Time Length**	Item duration	The number of days, hours, minutes, and seconds you want your campaign stage to remain active.
If you selected **Dynamic field**	End date table	Specify the table from which to select the condition that ends the campaign stage.
	End date field	The fields from the table you selected that you want to create a condition that triggers your campaign bundle.
	Offset end date	Select to indicate content availability ends after a specific amount of time.
	Date offset quantity	The number of days, weeks, or months to offset the trigger type. This field works with the next fields to determine when content is available.
	Date offset units	Units of time to offset from the content end date.
	When	Whether to offset the units before or after the set date.
Close other content		Select to make content from previous stages unavailable.

5. Click **Submit**.

What to do next

- Click **Add stage** to configure additional stages
- Add content to the stage, specify an audience, and set the location where the content will be delivered. For more information on creating content in the Content Experience Builder, see Add content to a campaign using Content Experience Builder

Field	Description
	content to end days, weeks, or months before or after the trigger field end value.

5. Click **Submit**.

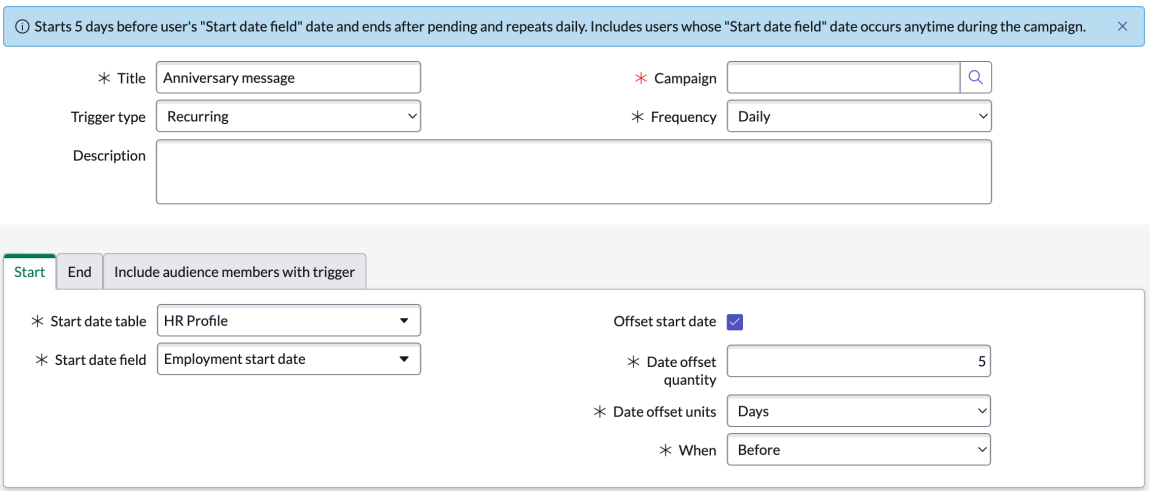
What to do next

- Click **Add stage** to configure additional stages
- Add content to the stage, specify an audience, and set the location where the content will be delivered. For more information on creating content in the Content Experience Builder, see Add content to a campaign using Content Experience Builder

Create a campaign stage with recurring trigger

Use this trigger to publish date-based repeatable content. For example, recognition announcements like birthdays or work anniversaries.

Before you begin

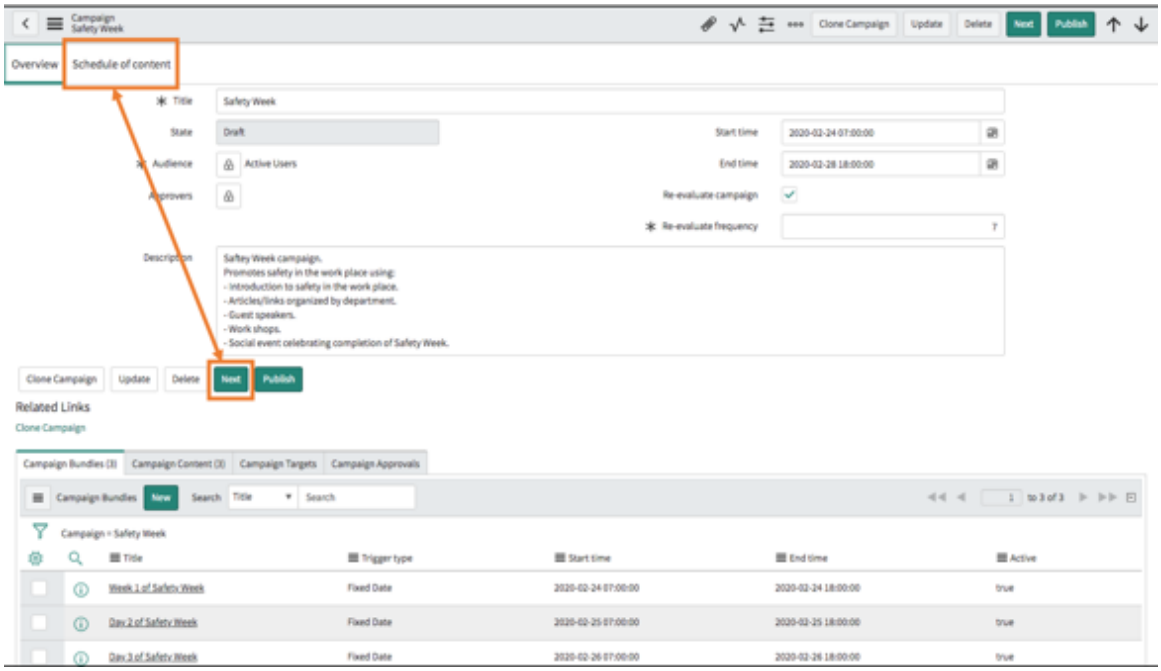


Role required: sn_ca.campaign_manager or sn_cd.content_admin

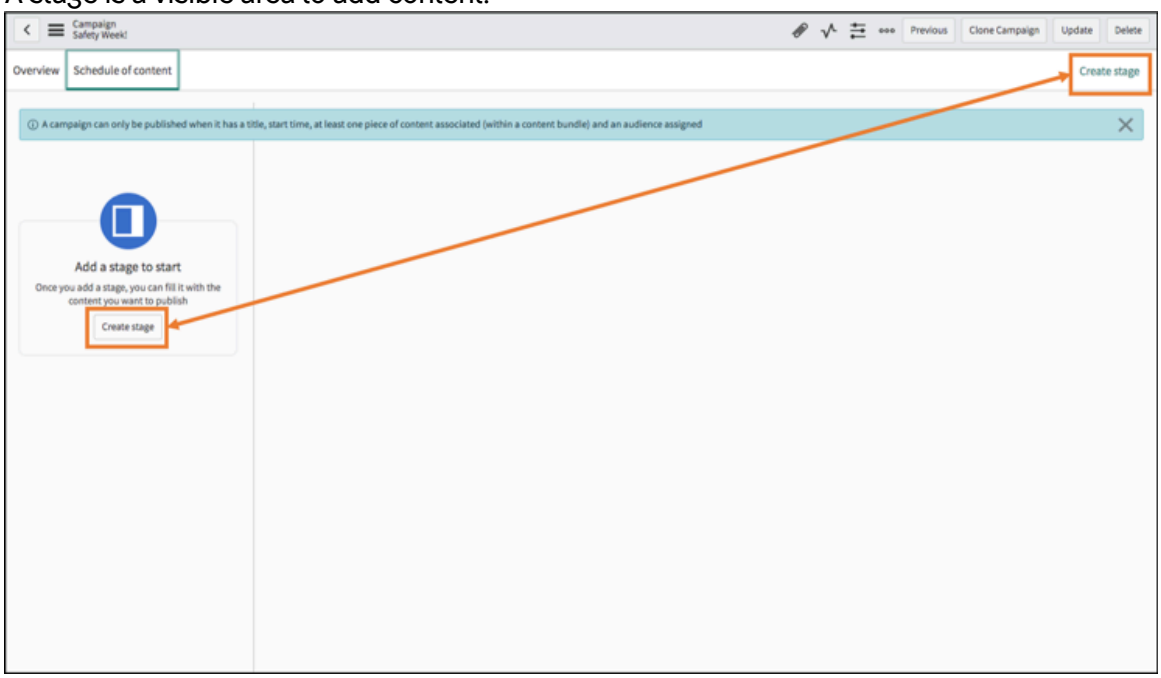
Complete the steps to Create a campaign

About this task

Stages organize and manage the delivery of campaign content. When configuring a stage, you set the stage trigger, which determines when content becomes available and for how long.



Note:
Some parts of the interface use the term "bundles" to refer to stages.



Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select the campaign and click the **Schedule of content** tab or click **Next**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Create stage**.
   A stage is a visible area to add content.

4. On the form, fill in the fields.

Recurring trigger configuration fields

Field	Description
Frequency	Defines how often you want your announcement to repeat. Choose from: ○ Daily ○ Weekly ○ Monthly ○ Yearly

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Start date table	The table you want to base your recurring campaign stage to trigger. Choose from: ○ HR profile (sn_hr_core_profile) ○ User (sys_user)
Start date field	The fields from the table you select to base your recurring campaign stage to trigger. For example, if you are creating a recurring campaign stage for employee birthdays, select the HR profile table and **Date of birth** from this drop-down.
Offset start date	Select this check box to trigger your campaign stage before or after the actual trigger start date. For example, if you are creating a recurring campaign stage for employee birthdays, you can trigger the campaign stage 2 days before the employee birthdays and keep the campaign stage active after the employee birthdays. **Note:** Content is not triggered unless the initial trigger is in the past. For example, if you set a yearly recurring trigger on a date in 2024, the content does not trigger until 2024, so the trigger must be set in the past. You can use the Offset trigger start field to pull the initial trigger start date before the current date.
Date offset quantity	The number of days, weeks, or months to offset the trigger type. This field works with the next fields to determine when content is available. For example, if you want your campaign stage to trigger 2 days before the actual date, enter 2 and select **Days** in the **Date** offset units drop-down.
Date offset units	Units of time to offset the trigger type.
When	Determines whether to trigger the stage content before or after the dates set in the campaign bundle.
End > **Item duration**	The number of days, hours, minutes, and seconds you want your campaign stage to remain active.
Include audience members with trigger > **That occurs**	Specifies whether the content in the stage becomes available to new audience members. Choose from:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Anytime**: Includes all users in the campaign. ○ **During campaign**: Content is only available to users for whom the triggering event occurs after the campaign start date. ○ **After specified**: Content is available only to users for whom the triggering event occurs after a specific date.

5. Click **Submit**.

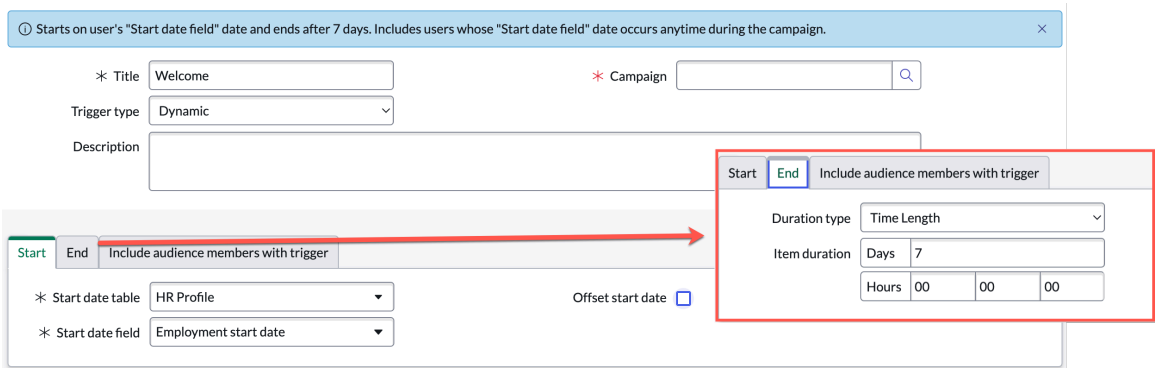
What to do next

- Click **Add stage** to configure additional stages
- Add content to the stage, specify an audience, and set the location where the content will be delivered. For more information on creating content in the Content Experience Builder, see Add content to a campaign using Content Experience Builder

Create a campaign stage with dynamic trigger

The campaign bundle triggers based on a trigger table (sn_hr_core_profile or sys_user), trigger field, and date offsets.

Before you begin

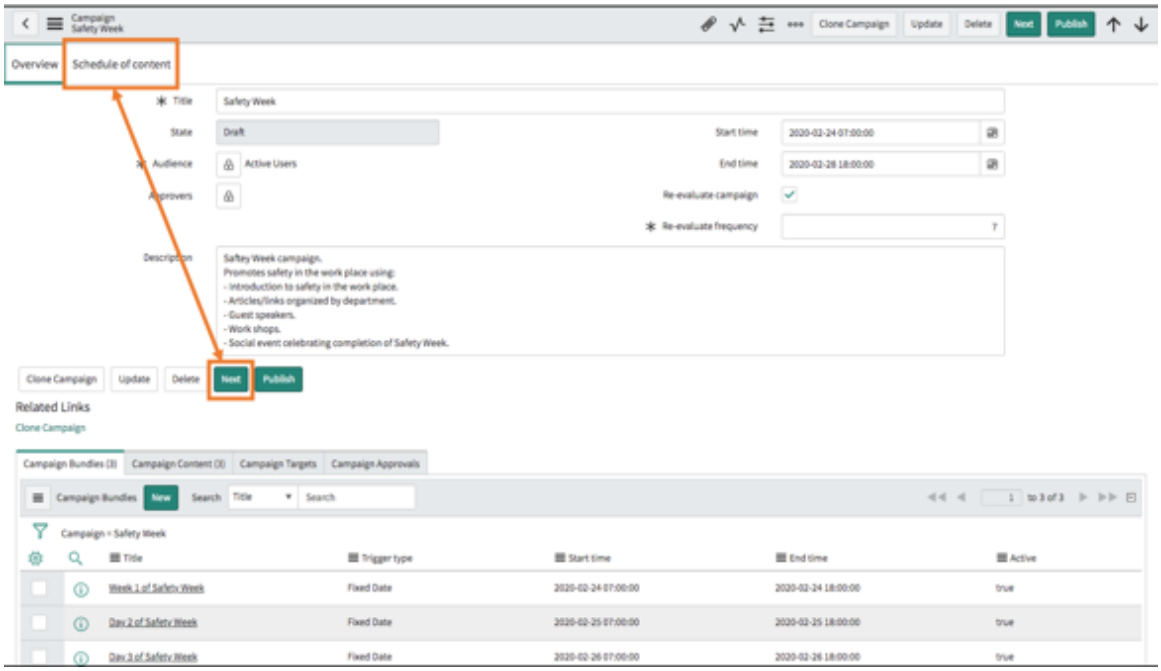


Role required: sn_ca.campaign_manager

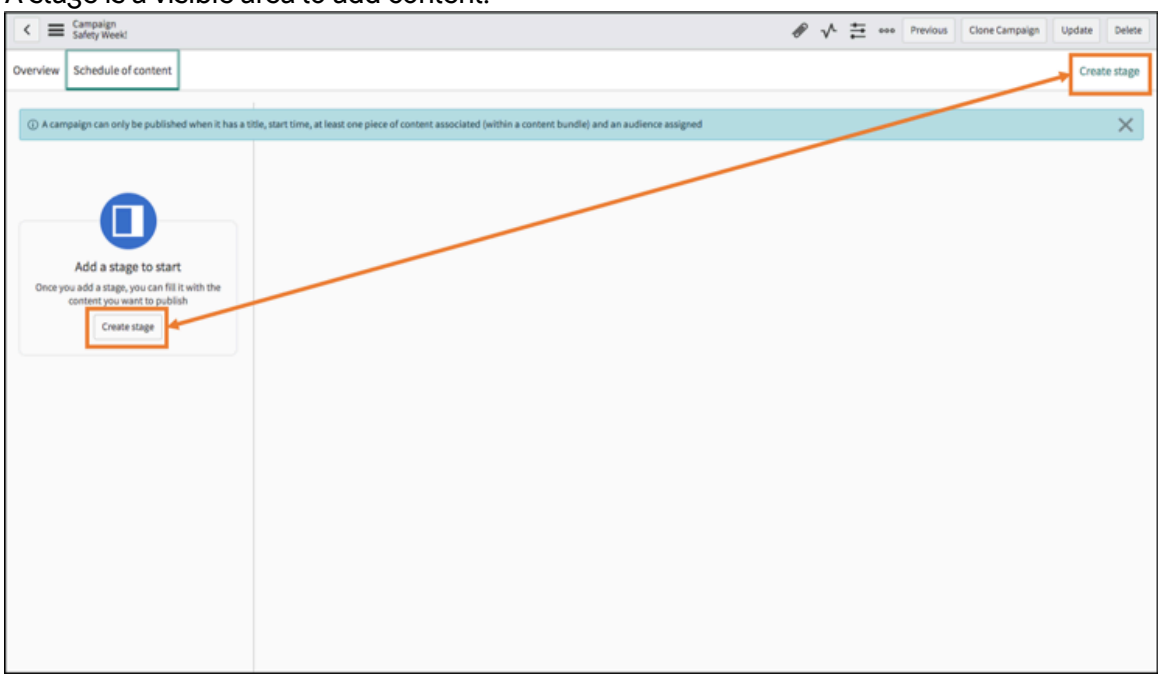
Complete the steps to Create a campaign

About this task

Stages organize and manage the delivery of campaign content. When configuring a stage, you set the stage trigger, which determines when content becomes available and for how long.



Note:
Some parts of the interface use the term "bundles" to refer to stages.



Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select the campaign and click the **Schedule of content** tab or click **Next**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Create stage**.
   A stage is a visible area to add content.

4. On the form, fill in the fields.

Dynamic trigger configuration fields

Field		Description
Start date table		The table you want to base your recurring campaign stage to trigger. Choose from: ○ HR profile (sn_hr_core_profile) ○ User (sys_user)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field		Description
Start date field		The fields from the table you select to base your recurring campaign stage to trigger. For example, if you are creating a recurring campaign stage for employee birthdays, select the HR profile table and **Date of birth** from this drop-down.
Offset trigger start		Select this check box to trigger your campaign stage before or after the actual trigger start date. For example, if you are creating a recurring campaign stage for employee birthdays, you can trigger the campaign stage 2 days before the employee birthdays and keep the campaign stage active after the employee birthdays. **Note:** Content is not triggered unless the initial trigger is in the past. For example, if you set a yearly recurring trigger on a date in 2024, the content does not trigger until 2024, so the trigger must be set in the past. You can use the Offset trigger start field to pull the initial trigger start date before the current date.
	Date offset quantity	The number of days, weeks, or months to offset the trigger type. This field works with the next fields to determine when content is available. For example, if you want your campaign stage to trigger 2 days before the actual date, enter 2 and select **Days** in the **Date** offset units drop-down.
	Date offset units	Units of time to offset the trigger type.
	When	Whether to offset the units before or after the set date.

4. On the form, fill in the fields.

Condition trigger configuration fields

Field	Description
Condition table	The table you want to use to create condition triggers for your campaign bundle.
User field	The fields from the table you selected that you want to create a condition that triggers your campaign bundle.
Start condition	Filter conditions based on the table and field you select for when you want the campaign bundle to trigger.
Offset trigger start	Indicates that you want the trigger to start after or before a defined number of days, weeks, or months from the trigger field you selected.
Date offset quantity	The number of date offset units (days, weeks, or months) the trigger date should occur.
Date offset units	The unit of time (days, weeks, or months) the date offset type should trigger.
When	Indicates if the trigger date should be before or after what you select in the trigger field.
End > **Duration type**	Defines how long the content in this stage is available. Choose from: ○ **Campaign end date** makes content available until the campaign ends. ○ **Time Length** ends content after a specific number of days or hours. ○ **Dynamic field** uses a trigger table and field to determine when content is no longer available. An example is to end content based on an employee's HR profile and start date.
End > **Stop condition**	Filter conditions based on the table and field you select for when you want the campaign bundle to stop.

5. Click **Submit**.

What to do next

- Click **Add stage** to configure additional stages
- Add content to the stage, specify an audience, and set the location where the content will be delivered. For more information on creating content in the Content Experience Builder, see Add content to a campaign using Content Experience Builder

Add content to a campaign using Content Experience Builder

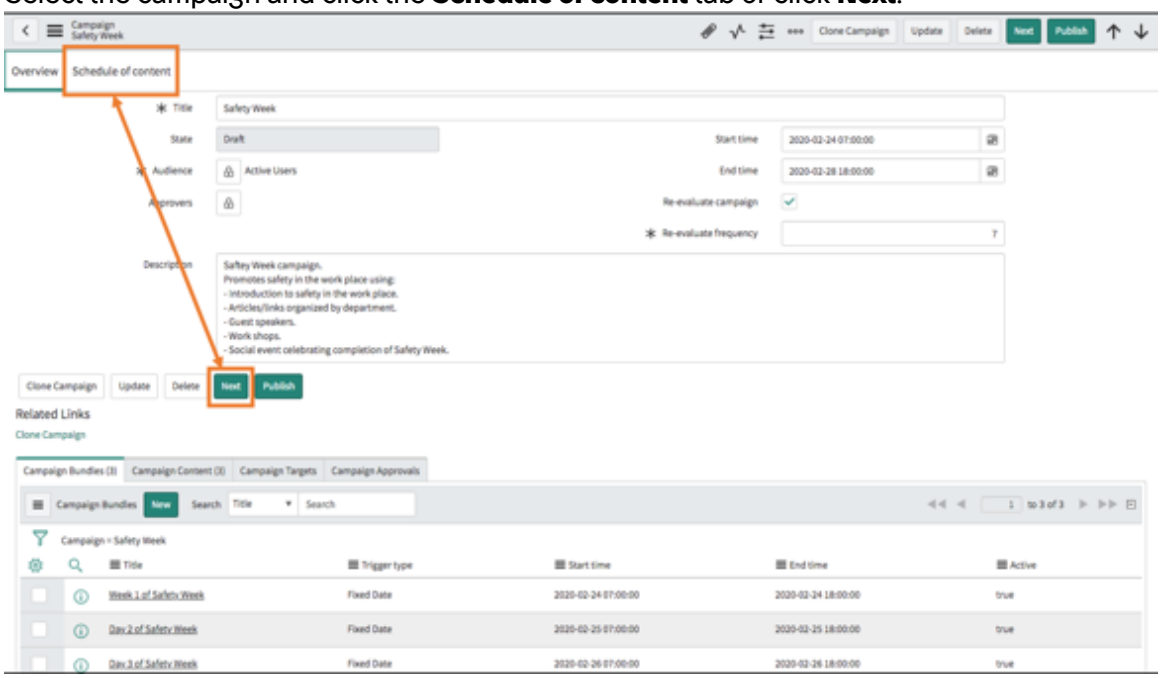
Create or place content into a bundle or stage for a campaign using Content Experience Builder. The Content library holds existing content and is organized by content type.

Before you begin

Role required: sn_ca.campaign_manager

Complete the steps to Create a campaign and Create campaign stages with Content Experience Builder

About this task

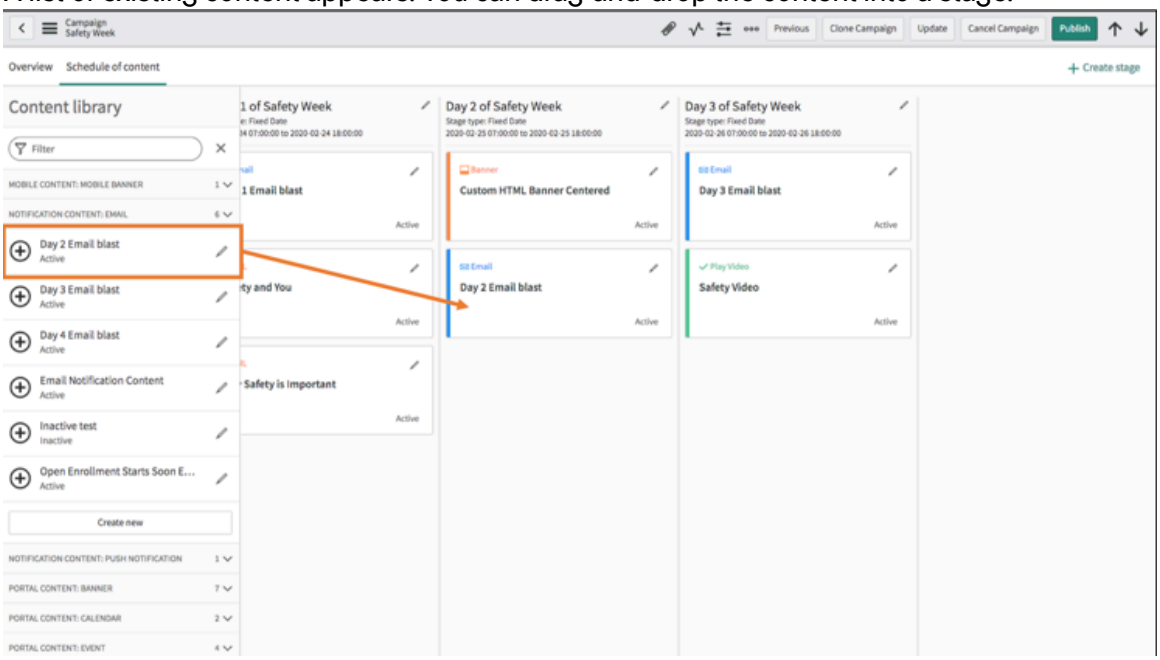


You can add content to the campaign from the Content Library or create new content using the Content Experience Builder.

Note:
You must create rich content in the Content Library Rich Content Editor, since the Content Experience Builder does not currently support rich content creation. See Rich Content Editor

Procedure

To open a campaign in the Content Experience Builder do steps 1 and 2. If you have already opened the campaign in the Content Experience Builder, proceed to step 3.



1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select the campaign and click the **Schedule of content** tab or click **Next**.

3. To create new content or select content from the Content library, click the accordion icon ( ) next to a content type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A list of existing content appears. You can drag-and-drop the content into a stage.

You can use the Filter field to search for content by title (for example "Travel policy update") or content type (such as Mobile or Portal content).

Click **Create new** to create new content. For more information on the New Content form fields, refer to the links in the table below:

Content type

Content type	Description
Mobile Content	Announcement banners that you can send to your employee's mobile devices. The banner can be an image that links to your ServiceNow® Employee Center or ServiceNow® Service Portal content. For information on creating mobile content, see Configure mobile content.
Notification Content	Information blast that you send directly to your employees via email or push to their mobile devices. **Note:** Emails sent through campaigns are individually addressed to one user within the campaign, while the remaining users are blind copied (BCC). For information on creating notification content, see Create email, SMS, or push notification content.
Portal Content	Content that appears on your Employee Center or Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content type	Description
	For information on creating portal content, see Content Library.
To-do Content	Content that assigns tasks to your employees and can be sent via email, SMS, or posted to your Employee Center or Service Portal. For information on creating to-do content, see Create to-do content.

4. Click **Update**.

What to do next

- Continue adding stages and content to the campaign
- Use Campaign preview to see how the campaign will appear to the audience. See Campaign preview
- If you are creating more than one campaign with similar features, use the **Clone campaign** button to clone the campaign, stages, and content.
- When you are ready to publish the campaign, click **Publish**.

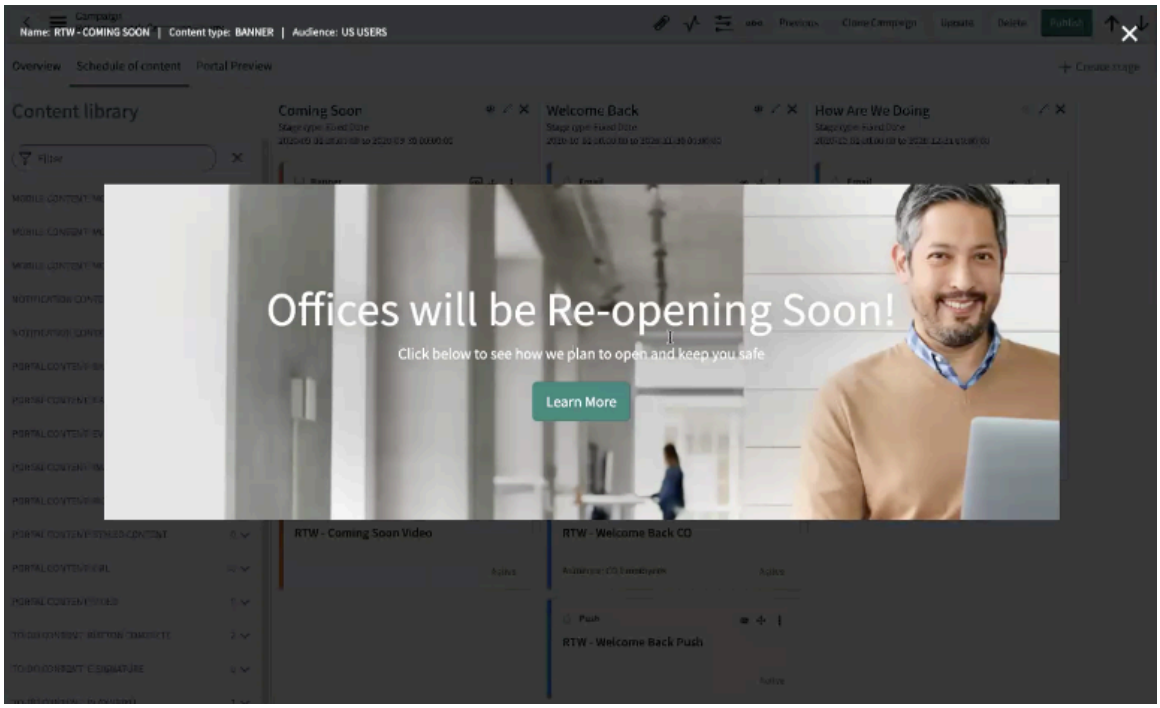
Campaign preview

When creating a campaign, you can preview the content prior to publishing it.

Being able to see how your content looks to your audience is crucial to ensuring you have correct messaging and visuals. Campaign preview provides:

- A way to verify that your campaign is error-free from a user, scheduling, and content perspective.
- A method to gain insight and an accurate view into your content and overall campaign.
- A means to preview a single piece of content, a stage, or a full portal view.

Single content preview



Single content preview provides a view of the following content types:

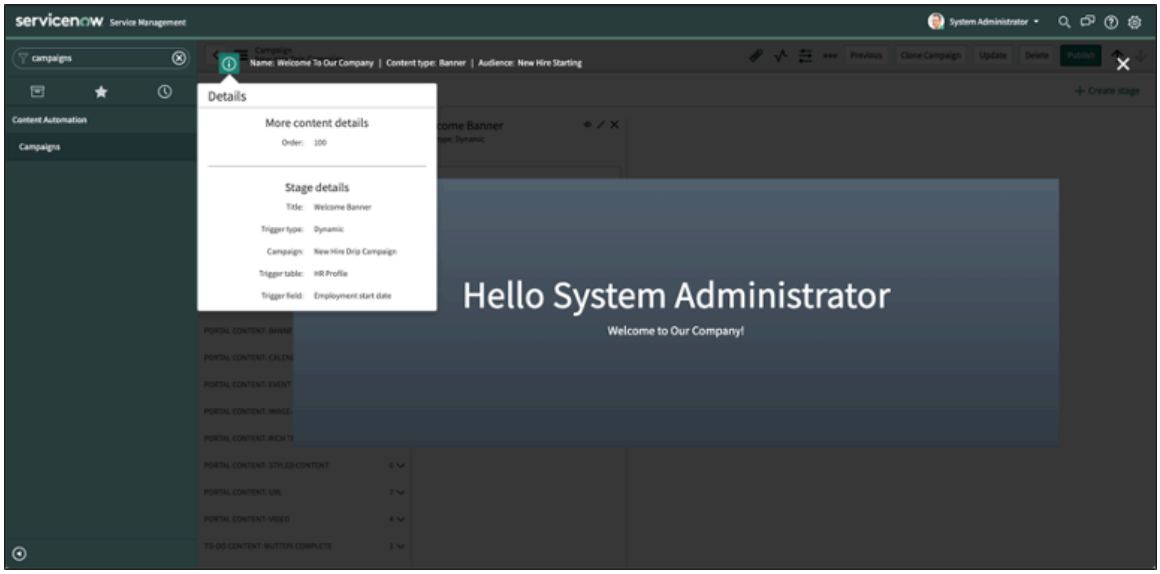
- Banner
- Calendar
- Event
- Rich text (styled content)
- URL
- Video
- Notification
  - Email
  - SMS
  - Push
- To-do (content shown as to-do in the service portal or ESC)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Audience the content is targeted to
- Content type
- Stage details the content belongs to

Note:
Mobile (with exception to Push and SMS) and community content are not available for preview.

Stage preview



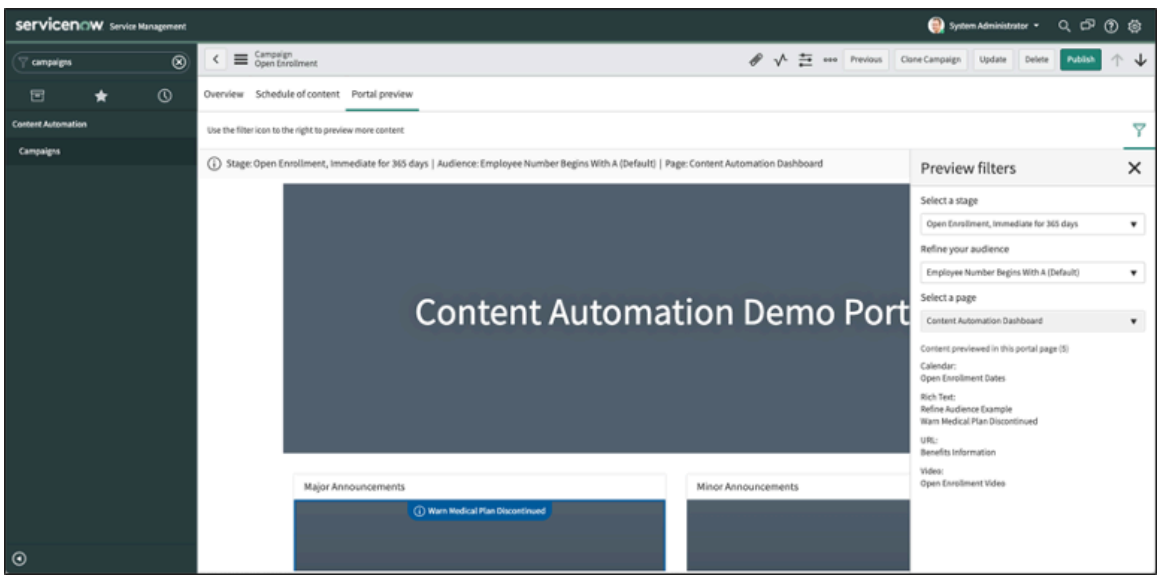
Stage preview provides a view into all content in a stage or bundle of a campaign.

You can also view a specific page (not just your home page if you are presenting content on multiple pages).

For more information, see Preview single content.

Note:
Also available in full portal preview.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

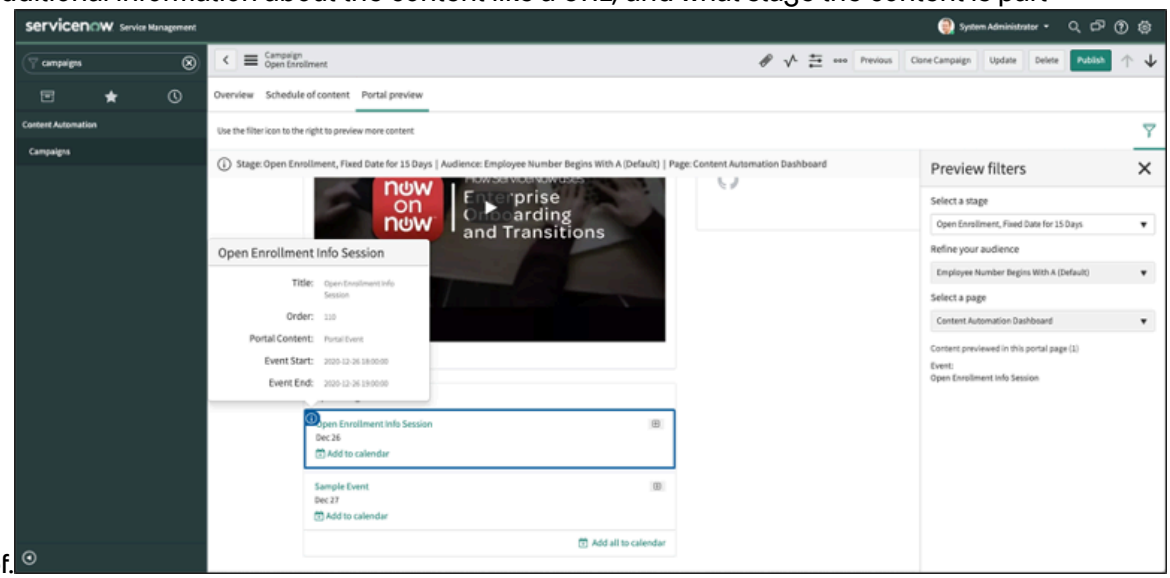


Full portal preview

Full portal preview provides a view into all content that appears on your portal. There are filters you can use to view:

- A specific stage within your campaign
- Content targeting a specific audience
- A specific page (not just your home page if you are presenting content on multiple pages)

Note:
Also available in stage preview.



Only pages with content are available for preview.

Information tags

When previewing your campaign content, a blue outline and information tags shows you what content on your portal is part of your campaign. It also shows

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

additional information about the content like a URL, and what stage the content is part of.

Note:
Previews can't be edited.

Content highlight

Content highlighted in blue is active and content highlighted in grey is inactive.

Campaign Preview property

If you have multiple service portals, use the sn_ca.campaign.preview.portal_url_suffix property to select the portal you want to render campaign previews. Navigate to **Content Experiences** > **Configurations** > **Properties** to view this property.

Preview your portal

Use campaign preview to view the campaign content that appears on your portal. Use the Preview filters to fine-tune what you want to preview.

Before you begin

Role required: sn_cd.content_manager, sn_ca.campaign_manager

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select a campaign.
3. Select the **Portal preview** tab.

Note:
You can also show a portal preview by selecting the show preview icon ( ) from the top of a stage.

4. Use **Preview filters** to determine what you preview.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Preview filters

Filter	Description
Select a stage	The stage or campaign stage/bundle you want to view. Select a specific campaign stage you want to preview the content for.
Refine your audience	The targeted audience for the content in the selected stage. Selecting an audience provides a preview of what content that audience sees.
Select a page	The page on your Service Portal you want to preview. A page is a pre-existing record that contains code and structure that define how to display content you want to schedule and make available to your employees. **Note:** Templates are contained in a topic and references a page. Templates have a direct relationship with a page, but multiple topics can be associated with a template/page. For example, the base system provides the emp_employee-taxonomy page and most of the topics are associated with that page. For more information, see Create topic page template. When a page has topics associated with it, the **Taxonomy** field appears and you can filter by it and you can select topics associated with the taxonomy.
Select a taxonomy	Allows you to filter your preview by taxonomy. Taxonomy is a collection of hierarchical topics that brings together different content types, like requests, articles, quick links, and employee communications. A taxonomy is the top-level of the hierarchy and can have multiple topics under it. For example, you can have taxonomies for HR and IT so you can group specific topics under each. When you use **Select a page** or **Select a topic** to filter your preview, the value in this field can change because the topic might

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Filter	Description
	not be under the taxonomy or on the page you selected. When this field is greyed out, it indicates for the page and topic selected, there is only one taxonomy.
Select a topic	Allows you to preview content associated with a topic. Topics are organized under a taxonomy. When the Allow Ownership for Topics (sn_cd.activate_topic_ownership) system property is set to **Yes** and the topic is assigned to you or a group you belong to, you only see topics assigned to you or topics that do not have restrictions. For more information, see Properties installed with Content Experiences and Assign ownership of content.
Show inactive content	Provides messages in the banner identifying content that is inactive. Toggle switch to green to turn this feature on.

Note:
Preview filters that are greyed out indicates the displayed value is the only available selection for preview.

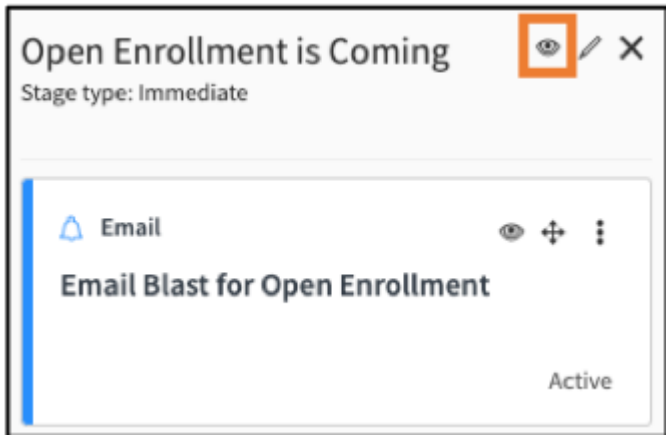
Content highlighted in blue is active and content highlighted in grey is inactive.

5. Exit **Preview filters** to view the portal.

Note:
Select the **View content details** () icon to see additional details about the content.

Preview single content

Use the **Schedule of content** tab to view specific content or a stage in your campaign.



Before you begin
Role required: sn_ca.campaign_manager

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select a campaign you want to preview.
3. Select the **Schedule of content** tab.
4. Select the show preview icon () in the content you want to view.

5. Select the show preview icon () in a stage to preview all content for that stage.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Close the preview to return to the schedule of content view of the campaign.

Note:
When the show preview icon ( ) is gray, a preview is not supported at this time.

Analyzing your campaign for effectiveness

Analyze your campaign to ensure that your messaging is effective and that you are targeting the correct audience when you use campaign success goals. You can also check your campaign's progress and evaluate how successful your campaign is.

Campaigns uses Content Analytics to collect data on user interactions and generate visualizations that help you determine the effectiveness of your campaign. View the data visualizations for published campaigns in the Campaign overview and Campaign analytics dashboards.

Note:
Content Analytics is a separate plugin that must be installed and configured. For installation information, see Activate Content Analytics.

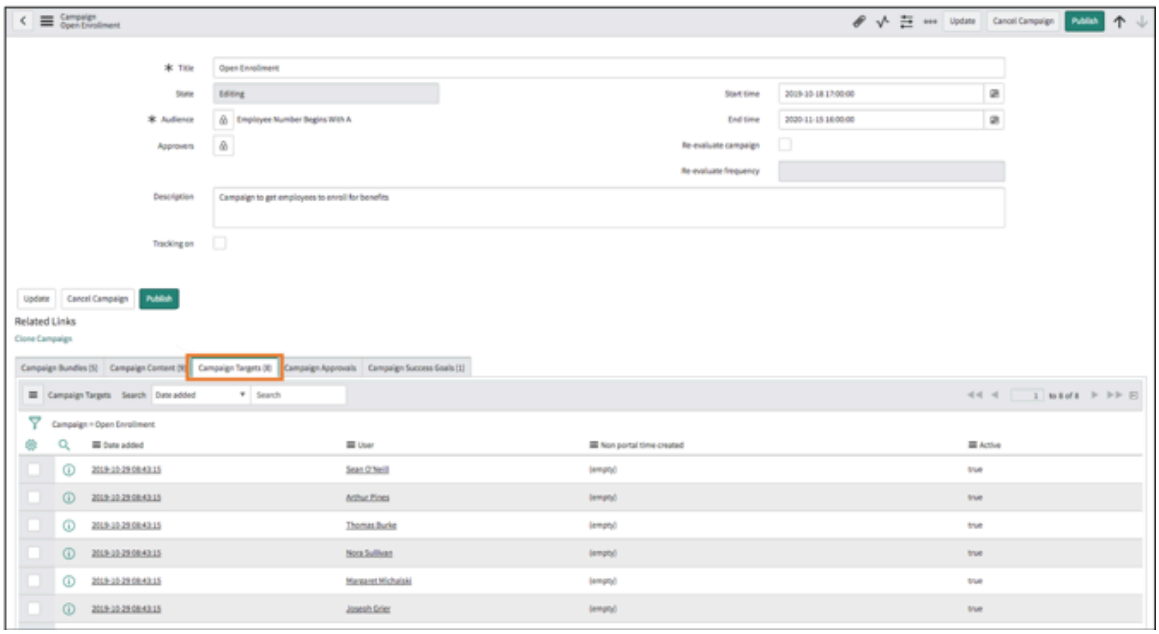
Evaluating a campaign

Since many factors can impact how effective a campaign is, define the factors that matter to your campaign. For example, you can configure the Content Experiences: Update Campaign Audience scheduled job to continually reevaluate the audience for your campaign and remove employees that no longer satisfy the criteria that you define. With this process, you can develop campaign targets to help you verify if your intended audience is accurate.

You can define the following factors to make your campaign more effective:

Audience

An audience is a group of users who meet a set of conditions. You define an audience at the campaign level and refine that audience at the content level to control who sees content.



After the campaign starts, the Content Experiences: Update Campaign Audience scheduled job adds or removes users when they meet or no longer meet the conditions. For example, a campaign targets employees of the Engineering department. The scheduled job periodically re-evaluates the audience, adding new hires to the audience and removing users who transfer to another department or leave the company. The campaign content is displayed only to the current employees in the Engineering department.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Alternatively, you can manually modify the audience after your campaign starts. For more information, see Editing a published campaign.

Campaign targets appear after a campaign is published and the Content Experiences: Update Campaign Audience scheduled job runs. You can view a list of the users in the target audience by opening a campaign and navigating to the **Campaign Targets** tab. The campaign target list contains the date the user was added, the user, the campaign the user is assigned, and if the campaign is active.

Click the **Campaign Targets** tab to view the users that you are targeting for your campaign.

Trigger configuration

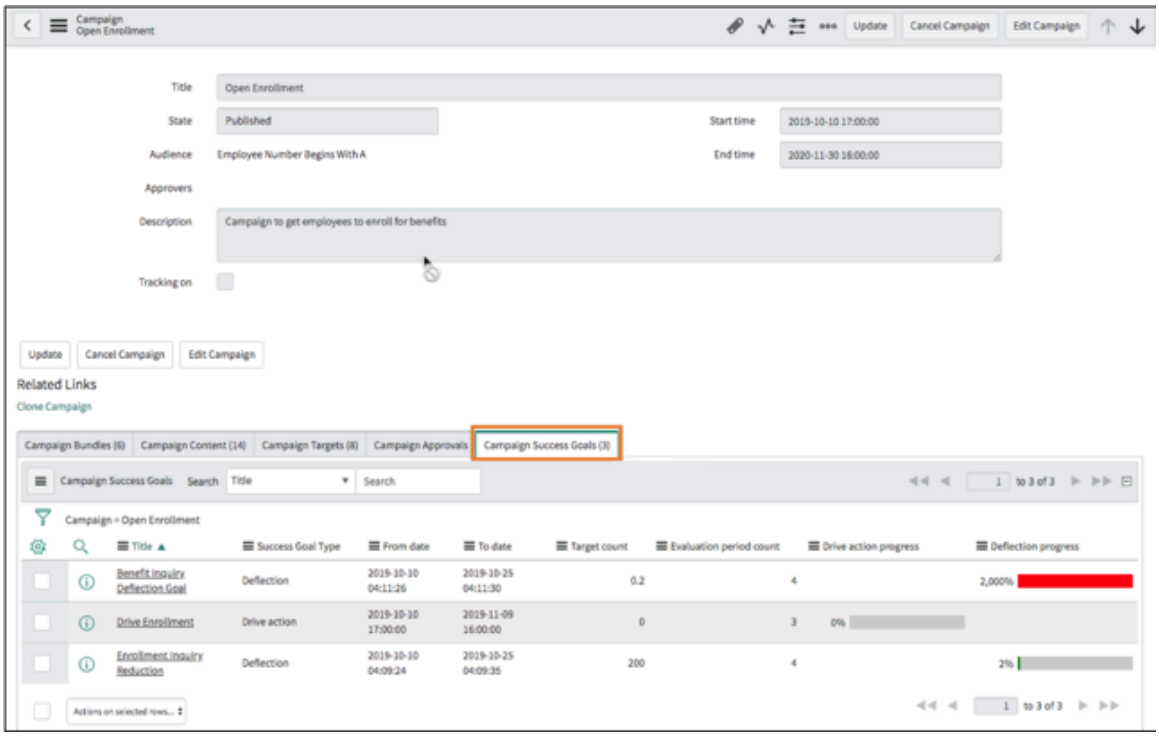
The trigger configurations determine when the content in a stage becomes available to your employees. The configurations include the trigger type and date offset.

When a campaign starts and employees are added, you can reevaluate the trigger type and dates of a campaign stage. By continually reevaluating the trigger types and dates, you can ensure that the correct audience receives the correct campaign content.

Campaign success goals

Use campaign success goals to set a desired outcome for the campaign, for example driving employees to enroll in benefits or reducing the number of employee-created inquiry cases. If you aren't seeing the results that you expected, you can modify the campaign.

> **Note:**
> You can create campaign success goals only when the state of a campaign is in Draft or Editing.



Here are some ways that you can utilize campaign success goals:

- Determine if your campaign is successfully driving a specific type of action, like employees signing up for benefits. For example, your company has 2,000 employees and 1,500 have already signed up for payroll direct deposit. You create a campaign that is directed at the 500 employees who have not signed

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

up for payroll direct deposit yet. If your campaign is in the last stage and few employees have signed up, you can add another stage to the campaign with additional content encouraging employees to sign up.

- Compare metrics from your campaign against a previous campaign. For example, the open enrollment campaign last year included a webinar with a question-and-answer session, whereas this year the campaign has an informational video instead. You can review the difference in enrollment rates to determine if the content change had an impact.
- See if your campaign is successfully reducing a type of action. For example, you create a campaign that provides videos, knowledge articles, and links to inform employees about a program. In the weeks after the campaign ends, you compare the number of inquiry cases created before the campaign started to the number of cases created after.

Click the **Campaign Success Goals** tab to view the progress of a campaign. Depending on the type of success goal that you create, you can see a progress chart under Drive action progress or Deflection progress.

You can also select the campaign success goal to view the record.

Create campaign success goals

Create your own success goals to see how your campaign is progressing and learn how to use baselines to compare against your target goals.

Before you begin

Role required: sn_ca.campaign_manager

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder** and select a campaign.
2. Click the **Campaign Success Goals** tab and select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Campaign Success Goals form

Field	Description
Title	Name of the success goal.
Description	Description of the success goal. **Note:** The title and description help to identify how you are measuring the success of your campaign.
Success Goal Type	How you want to create and calculate your campaign success goal. • Deflection: You want your campaign to inform employees so the number of inquiry cases decreases. • Drive action: You want your campaign to drive employees to create cases, like enrolling in health benefits.
Table	Provides field that the **Success Goal Type** uses to calculate from. You can use to create filter conditions to create specific success goals. **Note:** This field is not editable.
Case date field	Shows the field from the HR Case [sn_hr_core_case] table that the **Success Goal Type** uses to calculate on. After the Content Experiences: Evaluate Campaign Success Goals scheduled job runs, and the first active case that is related to the HR service is created, tracking starts for your success criteria. Use the filters to identify specific conditions you want to track. **Note:** This field is not editable.
Active	Option to activate this campaign success goal.
Filters	Filters that you use to determine your evaluation and target goals. For example, for a Drive Action type, you can set your filters to this condition:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	• HR service • is • General Benefits Inquiry After selecting your evaluation criteria and target, you can see the number of general benefits inquiry cases that were created and compare it to your target count.

4. Select the **Evaluation Criteria** tab.

Campaign Success Criteria section fields

Field	Description
Evaluation type	How you want to define your campaign data collection. You can select three types: • Target count only: Use this type when you have no historical data to compare your campaign to. This type uses date ranges and a specific **Target value** (see Target tab) to determine campaign success. • Date range: Use this type when you want to compare your campaign data to a past campaign. • Relative to campaign: Use this type when you only want to compare success within the campaign and not compare it to historical data. For example, you can define the type to start 10 days before and after the campaign and view the activity. You can also specify a date that is related to a campaign like Created, Publish time, Updated, and others. **Note:** The fields change based on the evaluation type that you select.
From date	Date that you want the evaluation period to start. The start date can be: • Before the campaign starts. • The start date of the campaign. • Any date after the campaign starts.
To date	Date that you want the evaluation period to end. The end date can be:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	• After the campaign ends. • The date that the campaign ends. • Any date before the campaign ends.

5. From the **Evaluation type** field, select the **Date range**.
6. On the **Campaign Success Goal** form, fill in the fields.

Evaluation Criteria tab

Field	Definition
Evaluation date range: From date	Date that you want the evaluation period to start. The start date can be: • Before the campaign starts. • The date that the campaign starts. • Any date after the campaign starts.
To date	Date that you want the evaluation period to end. The end date can be: • After the campaign ends. • The date the campaign ends. • Any date before the campaign ends.
Baseline date range From date	Date that you want the baseline period to start. Baseline dates are for past campaigns or any period you want to establish as your baseline to compare against your campaign data. The start date for your baseline can be: • Before the campaign starts. • The date the campaign starts. • Any date after the campaign starts.
To date	Date that you want the baseline period to end. The end date can be: • After the campaign ends. • The date that the campaign ends. • Any date before the campaign ends.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Definition
	Note: Select the **Calculate baseline** related link to quickly see what your historical data is for the date ranges that you selected. If the calculation doesn't show data, you can expand your date range.

7. From the **Evaluation type** field on the Campaign Success Goal form, select **Relative to campaign**.
8. On the **Campaign Success Goal** form, fill in the fields.

Evaluation Criteria tab

Field	Description
Date offset quantity	Number of days, weeks, or months that you want to collect campaign data before and after the value you select in the **Campaign date** field.
Date offset units	Unit of time measurement that you want to define as your period to evaluate campaign data. The values you can select are: • Days • Weeks • Months
Date offset type	Value that indicates the date offset quantity and units collect data before and after these values.
Campaign date field	Dates or times that are affiliated with a campaign that the evaluation period uses to collect data.

9. Select the **Target** tab.
10. On the **Campaign Success Goal** form, fill in the fields.

Target tab

Field	Description
Target value	Only appears when you select Target count only from the Evaluation type field. The number of cases deflected or created you target for your campaign.
Direction	Identifies the data based on the success goal type that you select. The values are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	• Maximize: Drive action • Minimize: Deflection Only appears when you select Date range and Relative to campaign evaluation types.
Percentage	Percentage of cases deflected or created that you target for your campaign.

11. Click **Submit** or **Update**.
    After the Content Experiences: Evaluate Campaign Success Goals scheduled job runs (daily by default), the base count and evaluation period count populates.

View campaign targets

Use campaign targets to view a list of employees that your campaign has targeted, their status, and the date they were added.

Before you begin
Role required: sn_ca.campaign_manager, sn_cd.content_admin

Procedure

1. Navigate to **All** > **Content Experiences** > **Campaign Targets**.
2. Select a published campaign.
   The campaign target list appears with the date the user was added, the user, the campaign the user is assigned, and if the campaign is active.

Create a campaign

Create a campaign to push communications and important information to your employees.

Before you begin
Role required: sn_ca.campaign_manager or sn_cd.content_admin

About this task
Campaigns are organized in a hierarchical structure.

First, you create a campaign defining a title, state, audience, start and end times, and other information. For example, you can create a campaign that promotes open enrollment for health benefits, targeting new hires, and runs through the open enrollment period.

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Click **New**.
3. Fill in the following fields:

Campaign new record form

Field	Description
Title	Unique name for the campaign.
State	State of the campaign. This field is automatically set to draft. After you associate

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	content and stages with the campaign, the **Publish** button will appear.
Audience	Audience that will view the content of a campaign. Click the Unlock Audience icon to select the audience that you want the campaign to target. For more information, see Create an audience. **Note:** After a campaign is in the Published state, you cannot add users. To add new users to a published campaign, click the **Edit Campaign** button. Or, go to the specific content of a campaign and use the **Refine audience** field. For more information, see Create content for a campaign.
Approvers	Users responsible for approving content before the campaign is published. When you click the Lookup using list icon, only users with the Campaign Approver sn_ca.campaign_approver role appear. To send notifications to approvers, select **Publish with Approval**. The approvers receive an email notification that you require their approval. For more information, see Notifications and Email templates. **Note:** If you select **Yes** in the *sn_ca.all_must_approve* property, all approvers must approve before the campaign publishes. If you select **No**, only one approver is required.
Start time (yyy-MM-dd HH:mm:ss)	The date and time that a campaign should launch. **Note:** To publish a campaign, you must define the start date and time.
End time (yyy-MM-dd HH:mm:ss)	The date and time that a campaign should end.
Re-evaluate campaign	Option for reviewing the audience for a campaign.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	If the box is unchecked, the **Content Experiences: Update Campaign Audience** scheduled job runs one time after which the targeted audience is never re-evaluated or changed. Check the box to display the **Re-evaluate frequency** field so you can define how often you want the **Content Experiences: Update Campaign Audience** scheduled job to run. When your campaign is re-evaluated, it removes or adds users depending on the current audience criteria.
Re-evaluate frequency	The frequency, in days, that you want to re-evaluate the audience. Audiences are re-evaluated after the *Content Experiences: Update Campaign Audience* scheduled job runs based on the value you enter here. This field appears only after you select the **Re-evaluate campaign** check box. This field allows you to override the default (7 days) value that is set in the **Campaign Re-evaluation** field in the Content Experiences system property. For more information, see Properties installed with Content Experiences.
Description	Descriptive information about the campaign.
Tracking on	Option for capturing analytics for your campaign. For more information about campaign analytics, see Content Analytics. This field appears only when a tracking profile is selected from the **Tracking profile** field.
Tracking profile	Tracking profile to use for Content Experiences analytics. Profiles determine what data to capture for campaign analytics. Click the Lookup using list icon and select the tracking profile that you want to use.

4. Click **Save** to remain on the campaign page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Select **Clone Campaign** to copy the campaign, bundles or stages, and content. Cloning saves you time when creating a new campaign if information from the original campaign can be used in a new campaign.

Select **Next** or the **Schedule of Content** tab to view the **Schedule of content** and access the **Content library**, stages, and content of the campaign.

Select the **Portal preview** tab to show the content you want to appear in your campaign. You can use filters to determine what you want to preview from the portal or single content. For more information, see Preview your portal and Preview single content.

After completing all parts of a campaign, click the **Publish** button.

Note:
To start your campaign immediately, ensure the Used to manage whether we want to trigger the campaign publishing process immediately after publishing the campaign (sn_ca.publish.campaign.immediately) sys property is set to **Yes**. This works for campaigns that have a start date and time in the past or the time of publish. Changing this sys property is recommended for campaigns that target less than 100,000 users.

The Trigger Campaign Published Workflow business rule executes and the scheduled jobs are bypassed. The Campaign Targets tab populates with the targeted audience and content is delivered. There are several states that appear after you publish your campaign with the Used to manage whether we want to trigger the campaign publishing process immediately after publishing the campaign (sn_ca.publish.campaign.immediately) sys property is set to **Yes**. The states are:

- Targeting Audience: The audience is in the process of being built/defined.
- Add Non-Portal Campaign Content: Email, SMS, Push, and To-do content are being added and ready to be distributed.
- Delivering Content: The audience and content has been defined and in the process of delivering the content.

The other scheduled jobs related to re-evaluate a campaign and frequency are not affected by this sys property. For more information, see Properties installed with Content Experiences.

Publishing a campaign prior to the start date enables the scheduled jobs to add users to the campaign and create and schedule the content for the campaign.

Campaign Targets show a list of users assigned to a campaign after the *`Content Experiences: Update Campaign Audience`* scheduled job runs.

Note:
The **Publish** button only appears when at least one bundle or stage with content is attached to the campaign, a title, and start time. Publishing activates all content for a selected audience and duration.

Create content for a campaign

There are different places you can create content. You can create content from a campaign, bundle/stage, or directly from **Manage Content** under Content Experiences.

Before you begin

Role required: sn_ca.campaign_manager, sn_cd.content_admin

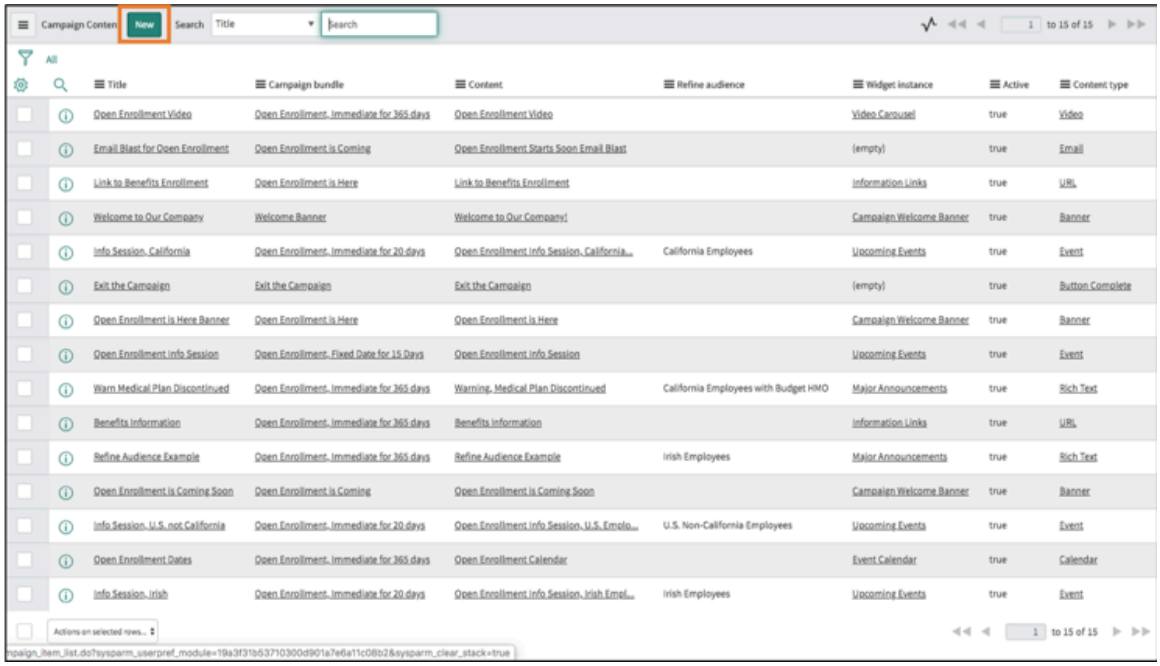
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Experiences** > **Configurations** > **Campaign Content**.
   You can also create content from:
   - The **Campaign Content** related list of a campaign
   - Select **Create new** from the content library column after selecting the . For more information, see Add content to a campaign using Content Experience Builder.

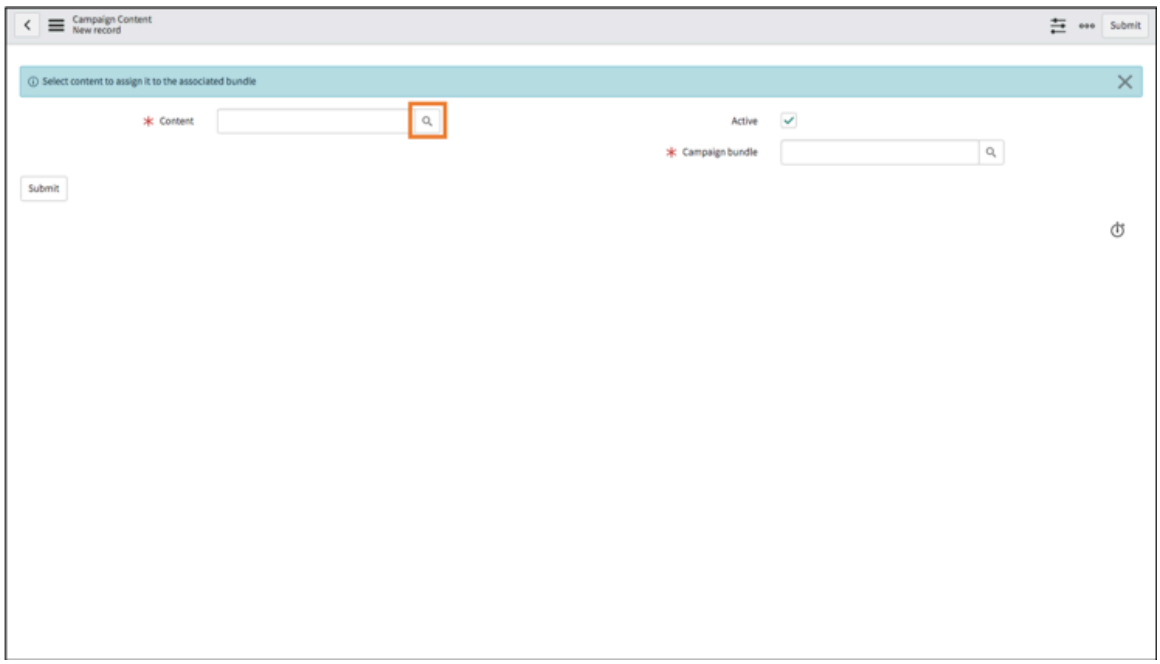
Campaign Content

Field	Description
Title	The title you entered from the **To-do content** form. This field only appears when you select content that has a content type of: ○ Button Complete ○ E-Signature ○ Play Video ○ View Link These are all to-do types of content that request the user to complete a task. **Note:** For more information, see Creating employee communications with Content Publishing.
Content	The content you want to appear in your campaign. Select the **Lookup using list** icon and select the content from the list. The content you want to select must already be created before you can add it to a campaign. **Note:** For more information, see Creating employee communications with Content Publishing.
Due date	Assigns a date when an employee must complete the to-do. Adding a due date allows you to sent a to-do and override the campaign bundle or stage end date. **Note:** Only appears for content that has a to-do content type.
Page	Filters widget instances for the page you select.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select a page and only the widget instances that appear on the page are available in the **Widget instance** choice list. You can open the Page record and select the **Try It** button to view the page. **Note:** Only appears when **Portal Content** or **Styled content** is the content type for content selected.
Widget instance	The Employee Center widget instance. A widget instance is a reference to a widget that contains properties and CSS specific to that instance. A list of filtered widget instances appear when you select a page from the **Page** choice list. **Note:** Only appears when **Portal Content** or **Styled content** is the content type for content selected.
Taxonomy	Filters what topics you can schedule your content to. Taxonomy is a collection of hierarchical topics that brings together different content types, like requests, articles, quick links, and employee communications. For example, you can set up separate taxonomies for HR and IT so you can group specific topics under each. For this field to appear, select a page that has Taxonomy (sn_ex_sp_taxonomy) entered in the Choices tab for the dictionary entry for the Category table of the page. For more information, see Create a table. For more information on taxonomy for the Employee Center, see Unified Taxonomy for Employee Center. For child topics to appear on your Employee Center, you must add it to the Portal form under Service Portal. For more information, see Create a portal.
Topic	The topics you want your content to appear in under a taxonomy.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Only topics that are associated with a specific page/template display. When the Allow Ownership for Topics (sn_cd.activate_topic_ownership) sys property is set to **Yes**, topic ownership is enabled. For more information, see Properties installed with Content Publishing. Ownership of a topic includes: ○ Ability to restrict what groups or users can schedule content for publication. ○ Ability to edit content assigned to the topic. ○ Ability to preview content for the topic. **Note:** Other users that have access to the content can view the restricted content assigned to a topic, but cannot edit or delete the topic. For more information, see Content Ownership and Create and associate topics. To display your topics in the Employee Center, see Portal configuration.
End campaign on completion	Removes employees from the campaign after the to-do is completed.
Active	Indicates the to-do content is active and available to use.
Campaign bundle	The campaign bundle or stage you want the content to belong to.
Refine audience	Narrows your audience selected at the campaign level. Selecting an existing audience creates a subset of the original audience.
Description	Description of the to-do content.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select existing content or **New**.

5. Select the content type.

Content type

Content type	Description
Mobile Content	Announcement banners you can send to your employee's mobile devices. The banner can be an image that links to content of your Employee Center or Service Portal. **Note:** For information on creating mobile content, see Configure mobile content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content type	Description
Notification Content	Information blast you send directly to your employees via email or push to their mobile devices. **Note:** For information on creating notification content, see Create email, SMS, or push notification content.
Portal Content	Content that appears on your Employee Center or Service Portal. **Note:** For information on creating portal content, see Content Library.
To-do Content	Content that assigns tasks to your employees and can be sent via email, SMS, or posted to your Employee Center or Service Portal. **Note:** For information on creating to-do content, see Create to-do content.

6. Click **Submit**.
7. Right-click the form header and select **Save** to remain on the form.
8. Or, click **Submit** or Update and return to the list.

What to do next

Since you attached your content to a bundle or stage, you can launch your campaign by clicking **Publish** from the campaign. Publish only appears when at least one bundle with content is attached to the campaign, and the campaign has a title and a start time. Publishing activates all content for a selected audience and duration.

After the **Content Experiences: Update Campaign Audience** schedule job runs, the **Campaign Targets** tab shows specific employees that are part of the refined audience for the campaign content.

Click **Edit Campaign** to pause the campaign and make edits to the content, audience, or duration.

Click **Cancel Campaign** to de-activate all undelivered content (including notifications) to a scheduled audience. You cannot reverse this step. Canceling a campaign that has already launched de-activates all undelivered content and you cannot restart it.

Click **Deactivate Content** to remove the content from a campaign. The content does not appear for users who have not yet viewed it.

Create campaign bundles/stages

Use campaign stages to group your campaign content within a campaign. This process allows you to determine when the content is available to your employees and for how long.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_ca.campaign_manager, sn_cd.content_admin

About this task
Stages organize and manage the delivery of campaign content. When configuring a stage, you set the stage trigger, which determines when content becomes available and for how long. To learn more about triggers, see Campaign bundle triggers.

Note:
Some parts of the interface use the term "bundles" to refer to stages.

Procedure
1. Navigate to **All** > **Content Experiences** > **Configurations** > **Campaign Stages**.
2. Click **New**.

Campaign Bundle form

Field	Description
Title	The name of the campaign bundle.
Campaign	The campaign associated with the campaign bundle.
Trigger type	How the campaign bundle starts or ends. To learn more about triggers, see Campaign bundle triggers
Description	Descriptive information about the campaign bundle.

3. Right-click the form header and select **Save** to remain on the Campaign Bundle form.
4. Or, click **Submit** or **Update** and return to the Campaign list.

What to do next
When a campaign is in the Edit state, you can edit the campaign bundles. You can also click **Deactivate Bundle** to remove the bundle from the campaign. Deactivating removes the content from the campaign, but remains viewable for existing users.

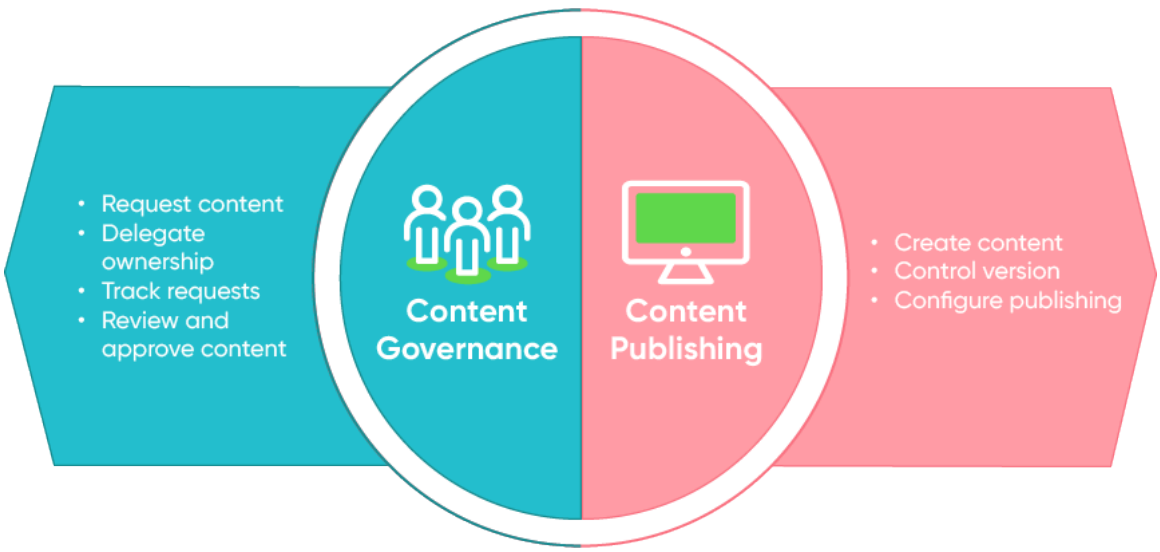
When a campaign is in the **Editing** state, you can also add new campaign bundles and campaign content for matching audiences.

Editing a published campaign

If you need to make changes to a published campaign, review this information to understand your options. Editing a campaign pauses the campaign; any content that is not yet available is suspended until the campaign is published again. The campaign, campaign bundles, and campaign content are editable.

Review the section that applies to your situation:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Published campaign editing options

Type of edit	Information
Edit or add new campaign content	Add new content and modify existing content while the campaign is visible to the audience. Click **Edit Campaign**.
Edit campaign stage/bundle	Edit the stage/bundle name and details such as start time. Click **Edit Campaign**. **Note:** You cannot change the trigger type of published campaign bundle.
Add new campaign stage/bundle	Add a new campaign stage/bundle to a published campaign. Click **Edit Campaign**
Add or remove users from the audience	Modify the campaign audience or refine the audience for specific content. Click **Edit Campaign**.
Pause a campaign	Pause a campaign to suspend undelivered content. After you publish the campaign, the changed content is delivered to users who did not see the originally published content. Click **Edit Campaign**.
Cancel a campaign	Cancelling a campaign deactivates undelivered content. Click **Cancel Campaign** from the Campaign page.

Managing content requests with Content Governance

Content Governance provides a streamlined way for employees to ask for content to be created, track the progress, preview the content, and approve it before it is published.

Content Governance integrates with Content Publishing to provide content managers and admins an efficient way to fulfill and manage content requests. Content managers and admins can view these requests, assign it to a content creator, review the content, approve or make suggestions, and publish the content to make it available to their employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Governance components

Content request

A content request is a system-generated record that tracks the status of an employee's content request and facilitates the Content Governance workflow.

Content request item

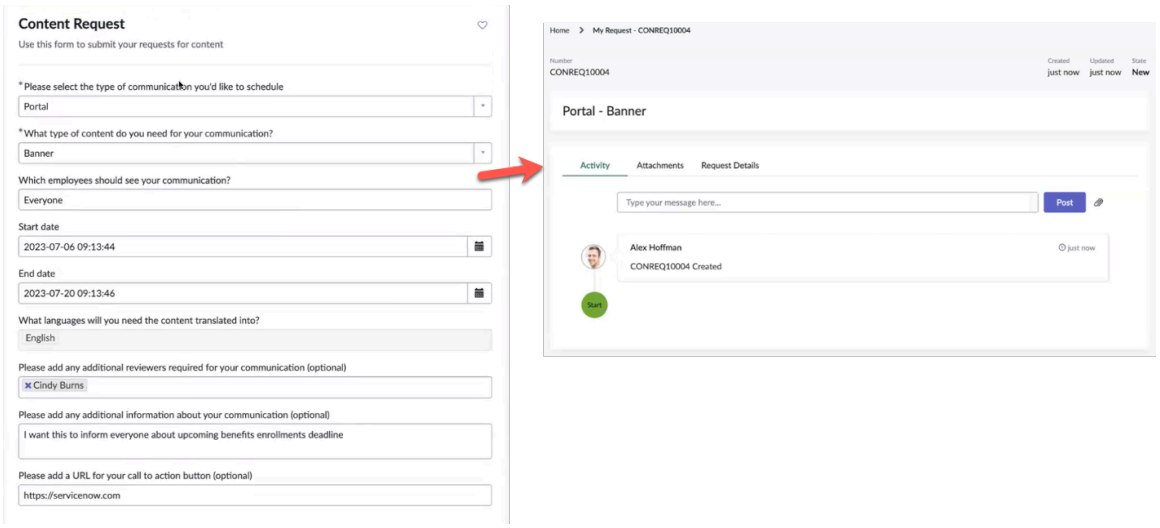
A content request item provides additional details about the content request and the type of content to be created. You can have multiple content request items associated with a content request.

Content request items also provide a status or state of the content being created.

Reviewers

By default, the employee who made the content request is also responsible for approving the content for publishing. The requester or manager can select additional reviewers.

Assignment groups



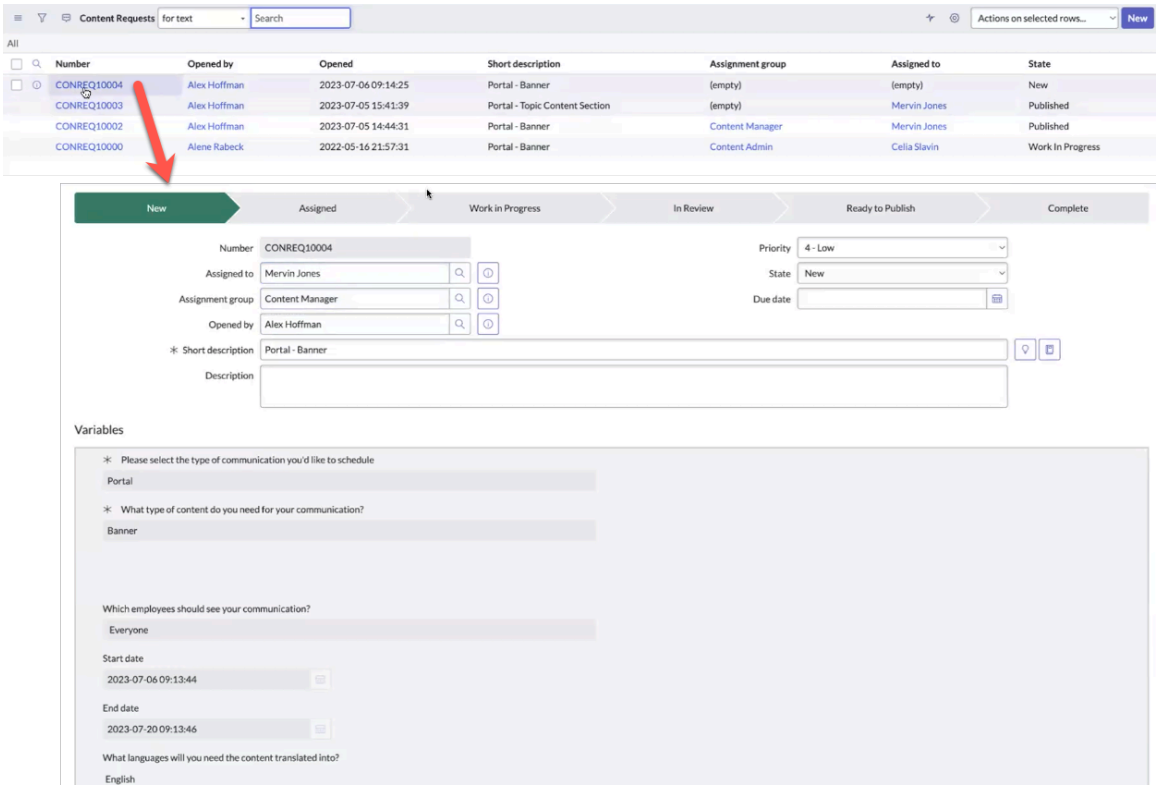
An assignment group is a group of users that receive the content request. Content Governance includes two assignment groups out of the box: Content Admin and Content Manager, which contain the users with those roles. To configure a new assignment group, see Configure assignment group types

Content request process overview

The following process overview provides a high-level understanding of how employees and content-producing teams use Content Governance.

Step 1: Request content

A user fills out the Content Request form, providing details about the needed content. Once the user submits the form, the system creates a content request record, where the user can add comments and attach files.

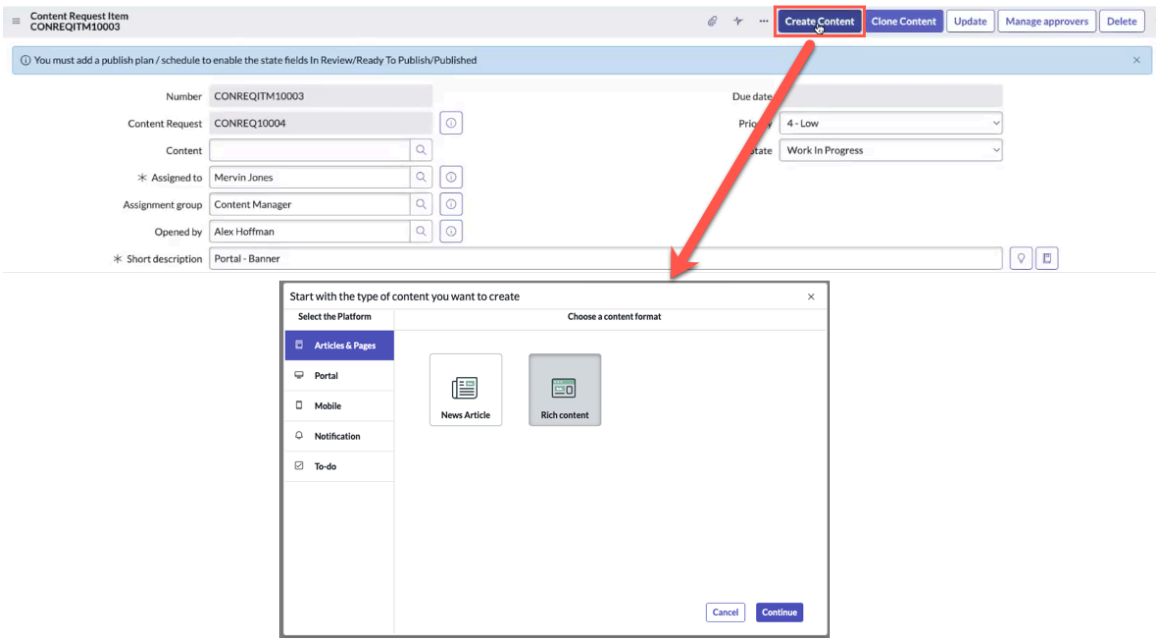


Requesting content

Step 2: Content request is created and assigned

The content manager opens the content request record to review the request details and assign it to an employee responsible for creating content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



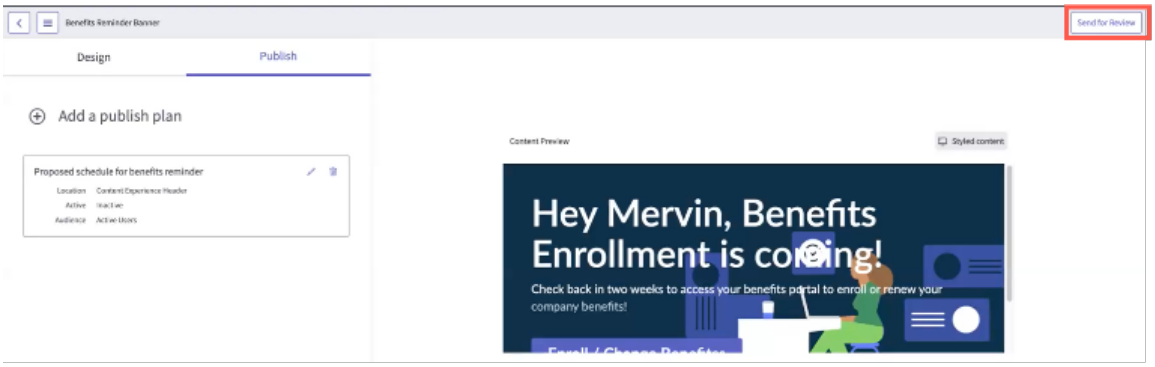
Tracking content requests

Assign content request to content creator

Step 3: Content is created and scheduled

Once the request is assigned to a content manager and the content request is updated to the **Work In Progress** state, the content manager can create content in the content library directly from the request page. This associates the content with the content request for tracking purposes.

Note:
Content can only be associated with one content request.



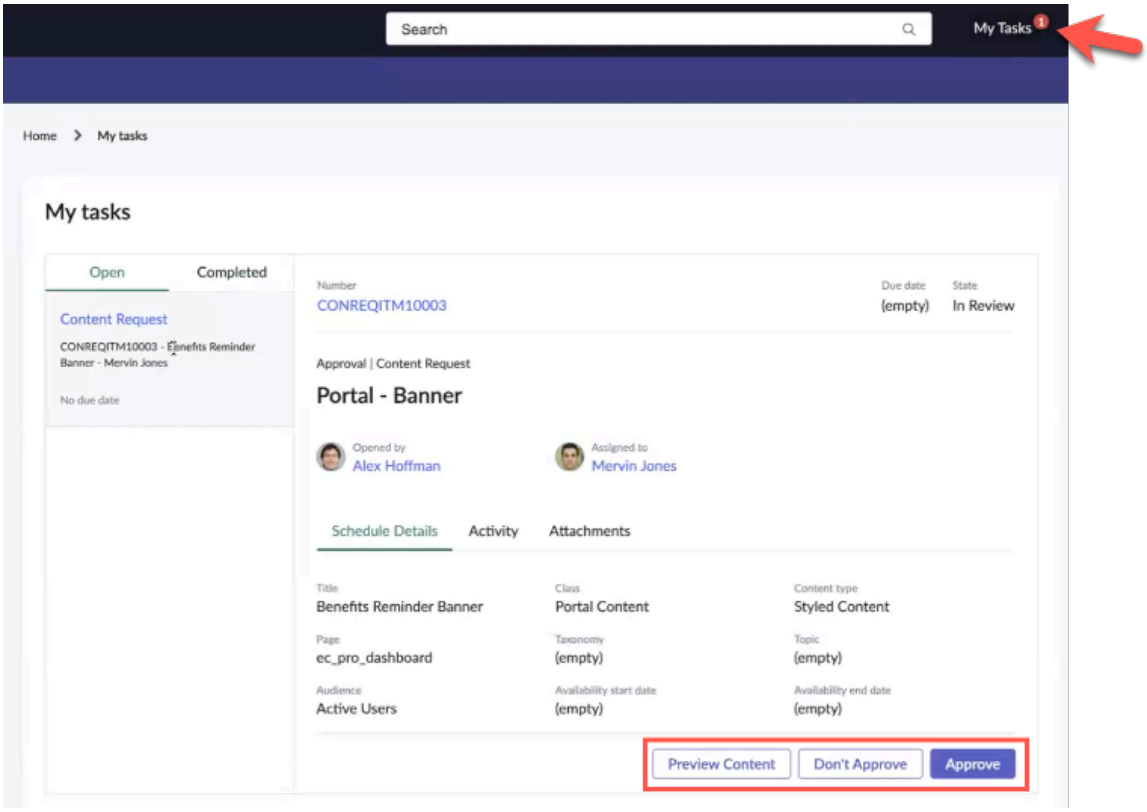
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Step 4: Content is sent to requester for review

When the content creator is done, they send the content to the requester for review. Content must be associated with a publish plan before it can be sent for review.

Note:
Once a Content Request record is in the Review state, the associated content is locked to prevent further editing.

Step 5: Content is reviewed and approved



The requester receives the review request as a new task in their portal and via email notification. The content requester and any additional approvers do the following:

- Review the content

Note:
Only rich content, news, and portal type content can be previewed

- Suggest edits or changes
- Approve the content

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Previewing and approving a content request item

Step 6: Content is published

After the content creator implements any feedback and the content is approved, the content is published based on the configured publish plan.

Requesting content

Content Governance provides multiple ways for employees to request content to be created for employee communications and for your company's content team to clarify the request and assign the request to team members.

Once a content request has been created, Content Governance provides the ability to track the request, review the content created from the request, approve it, and publish it.

There are several ways for your employees to request content to be created:

Employee Center Pro

Employees can use the Content Request catalog item from the Employee Center Pro. Your company decides where on the Employee Center Pro it appears. Any employee that has access to Employee Center Pro can request content.

Service Catalog

Employees can request content from the Service Catalog similar to requesting content from the Employee Center Pro.

Content Request form

Primarily used by the content team to create a content request when the original request was made verbally or through some other method. The **Content Request** form allows the content team to create the request, then track, review, approve, and publish the content that is created from the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Request content from the Employee Center Pro

Employees that have access to the Employee Center Pro can request content to be developed for distribution to other employees.

Before you begin

Role required: none

You can use unified taxonomy to link the request content to a topic so the request can be accessed from the Topic page. For more information, see Unified Taxonomy for Employee Center.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Select **Content Request**.
   Your company decides where on the Employee Center this appears.

   Note:
   You can also enter **Content Request** from the Search bar.

3. Fill in the fields on the **Content Request** form.
4. Select **Submit**.
   A content request number (CONREQ prefix and sequential number) is generated and what you can use to track, review, and approve the content you requested. You can view your request under the **My Requests**.

Request content using the Service Catalog

Employees who have access to Service Catalog can request content from the Service Catalog.

Before you begin

Role required: none

Procedure

1. Navigate to **All** > **Service Catalog** > **Services**.
2. Select **Content Request**.

   Note:
   You can also enter **Content Request** from the Search bar.

3. Fill in the fields on the **Content Request** form.
4. Select **Submit**.
   A content request number (CONREQ prefix and sequential number) is generated on the **Content Request** form. For more information, see Request content using the Content Request form.

Request content using the Content Request form

The content team uses the **Content Request** form to create a content request when the original request was made verbally or through some other method outside of Content Governance. The **Content Request** form enables the content team to create a content request and then assign, track, review, approve, and publish content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: sn_cg.content_request_user

When an employee requests content without using the Service Catalog or Employee Center Pro either verbally or another communication method, the **Content Request** form can be used by your content team to enter the request into Content Governance. This allows the content team to track, review, approve, and create a content request.

The **Content Request** form can also be used by the content team to delegate work to other team members and allow them to track the request and work across the team.

Procedure

1. Navigate to **All** > **Content Governance** > **Create New Request**.
2. Fill in the fields of the Content Request form.
   When a content request is created from Employee Center Pro or the **Service Catalog**, the **Variables** section appears with information entered from those sources.
3. Select **Save** or **Submit**.
   If you select **Save**, your information is saved and the **Content Request** form remains visible and the **Content Request Items** related list appears. For more information, see Edit a content request item. If you select **Submit**, the record is saved and you are returned to the **Content Requests** list.

Discuss

Select to start a sidebar discussion on the proposed content. After selecting this button, the **Start a Sidebar discussion** widow opens. You can add participants to the discussion and enter a brief message that is sent to the discussion participants.

Edit a content request item

Use the **Content Request Item** form to provide details on what type of content should be created from a content request.

Before you begin

Role required: sn_cd.content_manager

When a content request is submitted via the **Content Request** form or through the Employee Center, a content request item is automatically created and associated with the content request.

You can edit a content request item from the **Content Request Items** related list of a content request. To add more content request items, select the **New** button.

You can also access the **Content Request Item** form by selecting a content request from the **Assigned to Me**, **Unassigned**, or **All Requests** lists.

Procedure

1. Navigate to **All** > **Content Governance** > **My Requests**.
2. Select the content request that contains the content request item you want to edit.
   For more information, see Request content using the Content Request form or Request content from the Employee Center Pro.
3. Select the content request item from the **Content Request Items** related list.
   The content request item is identified by the CONREQITM prefix followed by a sequential number.
4. Fill in the fields on the Content Request Item form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Save** or **Update**.
   If you select **Save**, the Content Request Item form continues to display and you can schedule the content to be published. Selecting **Update** takes you back to the **Content Request** form.
6. To schedule content, select **New** from the **Schedule Content** related list.
   For more information on scheduling content, see Publishing content.

Approvers related list

The **Approvers** related list appears at the bottom of the **Content Request Item** form. A list of approvers appears with their associated state and the **Opened by** person automatically appearing.

Use the **Manage approvers** button to add or remove approvers.

The current state of each approver appears.

- Not Yet Requested: Content is not ready for review.

  Note:
  This state prevents an approval from appearing in an approver's to-do list until the state is changed to Requested.

- Requested: Approval has been sent to the user. The request appears in an approver's to-do list.
- Approved: Content has been approved by the approver. After approval, the state of the content request item is moved to **Ready to publish**.

  Note:
  Content managers (sn_cd.content_manager) can override the state manually.

- Rejected: The content is not approved. If comments were added, they appear under the **Comments** column.
- Cancelled: User was removed as an approver.
- No Longer Required: Approval is no longer required.

Discuss

Select to start a sidebar discussion on the proposed content. After selecting this button, the **Start a Sidebar discussion** widow opens. You can add participants to the discussion and enter a brief message that is sent to the discussion participants.

Create Content

You can create content from the **Content Request Item** form.

Select a person in the **Assigned to** field and change the **State** to **Work in Progress**.

The **Create Content** button appears at the top of the **Content Request Item** form.

Selecting the **Create Content** button takes you to the **Content Library** form where you can select the type of content you want to create. For more information, see Content Library.

Edit Content

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also change existing content associated with a content request item by selecting the **Edit Content** button.

The **Edit Content** button appears when there is content associated with the content request item and the **State** is **Work in Progress**.

This takes you to the content form. For more information on editing content, see Content Library.

Clone Content

You can also clone content from the **Content Request Item** form by selecting the **Clone Content** button. When you clone content, you are making a copy of the original content and a sequenced number is added to the content name. For example, if **welcome banner** is the name of the content associated with the content request item and you select the **Clone Content** button, the name of the cloned content is **welcome banner (1)**. The original content name and details remain the same.

In order to clone content, all associated scheduled content must first be removed.

The **Clone Content** button appears when the **State** is **Work in Progress**.

Selecting the **Clone Content** button takes you to the content list where you can select content to clone. For more information on editing content, see Content Library.

View Content

You can view content associated with a content request item if it has an associated schedule and the state is:

- In Review
- Ready to Publish
- Published

Note:
When the content request item is in the above states, associated content cannot be edited or cloned.

For more information, see Publishing content.

Manage approvers

Select to add or delete existing content reviewers.

Note:
This button only appears for people with the content manager (sn_cd.content_manager) role. The **Opened by** user cannot be removed. The **Opened by** person cannot be removed. A content manager (sn_cd.content_manager) can change the **Opened by** person and then remove the user if the user needs to be removed.

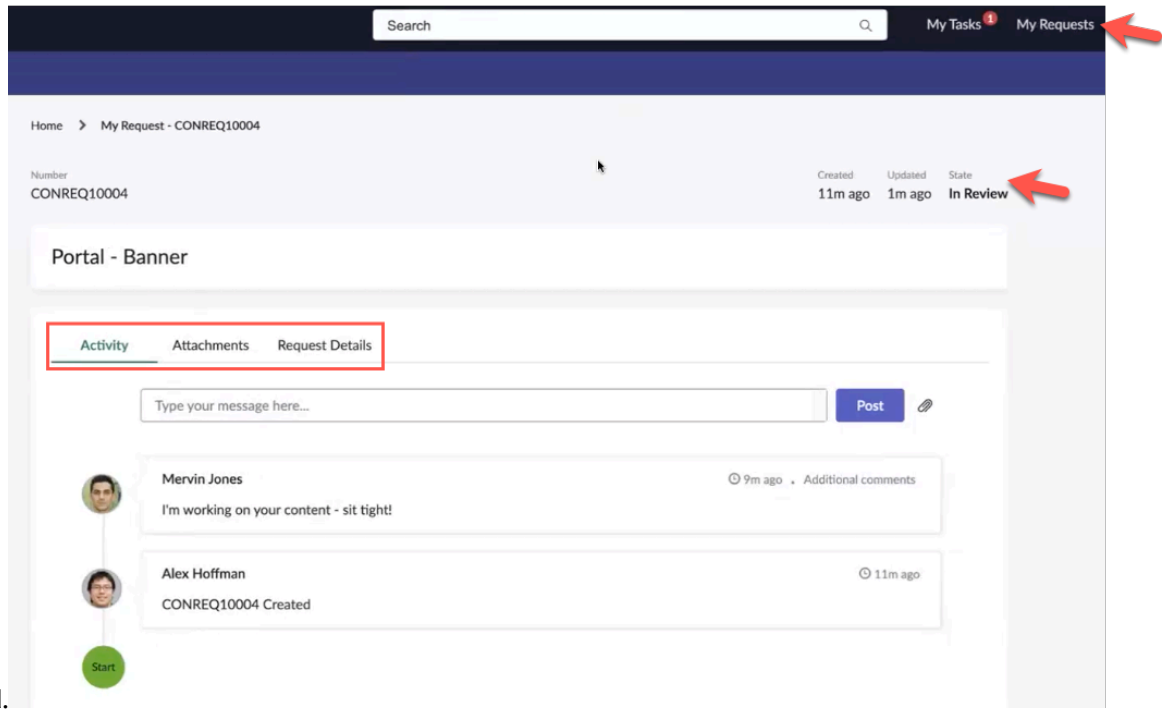
To add an approver, select from the **Users** column and use the right arrow button to move the user to the **Approvers** column. Select **Submit**.

To remove an approver, select from the **Approvers** column and use the left arrow button to move the user to the **Users** column. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Approvers** related list appears at the bottom of the form and shows all users required to approve the content.

Delete



Select the **Delete** button to remove the content request item.

Tracking content requests

After a content request is submitted, Content Governance enables the content requester, content managers, and content admins to track the status of the request and associated content.

Tracking as the content requester

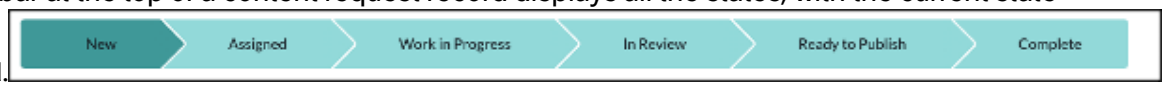
After submitting a content request, the employee can track the status of the request by navigating to **My requests** and opening the content request. They can add a comment for the content manager, attach files, and review the details they submitted.

The state field of a content request provides a quick status update to the requester and content team, as well as triggers system actions. For more information, see Understanding content request states.

Tracking as a content manager or content admin

Content managers and content admins can view content requests by navigating to **Content Governance** > **All Requests**. Each time an employee submits a content request, the system creates a record with the prefix CONREQ. This record can be assigned either to an individual content manager or to a group. The record is used for the following purposes:

- Holds the request details, such as the type of content that needs to be created and the intended audience
- Communicate with the employee who made the request
- Holds the associated content once it's created in the Content Request Items list
- Tracks the request status



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content admins and content managers can view all the content requests and associated content, even if they aren't assigned to that record.

Understanding content request states

The content request state provides a quick update on the current status to the employee who made the content request, approvers, and the content team.

The status bar at the top of a content request record displays all the states, with the current state highlighted.

Content request and content request item states

Content request state	Content request item state	Description
New	Open	Content request was submitted
Assigned	Open	Content admin or manager assigns the request to a content manager or team, and manually updates the state
Work in Progress	Work in Progress	Content manager manually updates the state when they start working on the ticket
In Review	In Review	After the content manager creates the content and publishing plan and clicks **Send for review**, the system updates the state to "In Review" and assigns a task to the content requester and approvers to review the content **Note:** Once a content request item is **In Review**, the content cannot be edited. The content manager must revert the state to "Work in Progress" to edit the content.
Ready to Publish	Ready to Publish	When the requester clicks **Approve**, the system updates the state to **Ready to Publish**
Published	Published	The content manager manually updates the record to **Published** and the content becomes available to employees according to the publish plan configuration
Cancelled	Cancelled	The content admin cancels the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Content request items require content and publishing plan in order to change the state to **In Review**, **Ready to Publish**, and **Published**.

For information on how to customize the approval process, see Employee tasks page.

Assign content request to content creator

Assign a new content request to a content manager so they can create the content and a publish plan, then send it for approval.

Before you begin
Role required: sn_cd.content_admin

About this task
You can assign a content request to a user with the sn_cd.content_manager or an assignment group.

An assignment group is a group of users that receive the content request. Content Governance includes two assignment groups out of the box: Content Admin and Content Manager, which contain the users with those roles. To configure a new assignment group, see Configure assignment group types

Procedure
1. Navigate to **All** > **Content Governance** > **Unassigned**.
2. Click the content request you want to assign.
3. Enter an employee in the **Assigned to** field or select an assignment group.
4. Change the state field to **Assigned**.
5. Click **Update**.

Result
The content request appears in the user's **Content Governance** > **Assigned to me** list.

Add or remove content approvers

A content admin can modify the content approvers list for a request.

Before you begin
Role required: sn_cd.content_admin

Procedure
1. Navigate to **All** > **Content Governance** > **All requests**.
2. Click the content request you want to modify.
3. Scroll down to the content request item related list and select the request item.
4. Click **Manager approvers**.
5. Use the left and right arrows to add or remove users from the approvers list.
6. Click **Submit**.
7. Click **Update**.

Creating content through Content Governance

When a content request item is assigned to you, create and schedule the content, then send it for approval.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

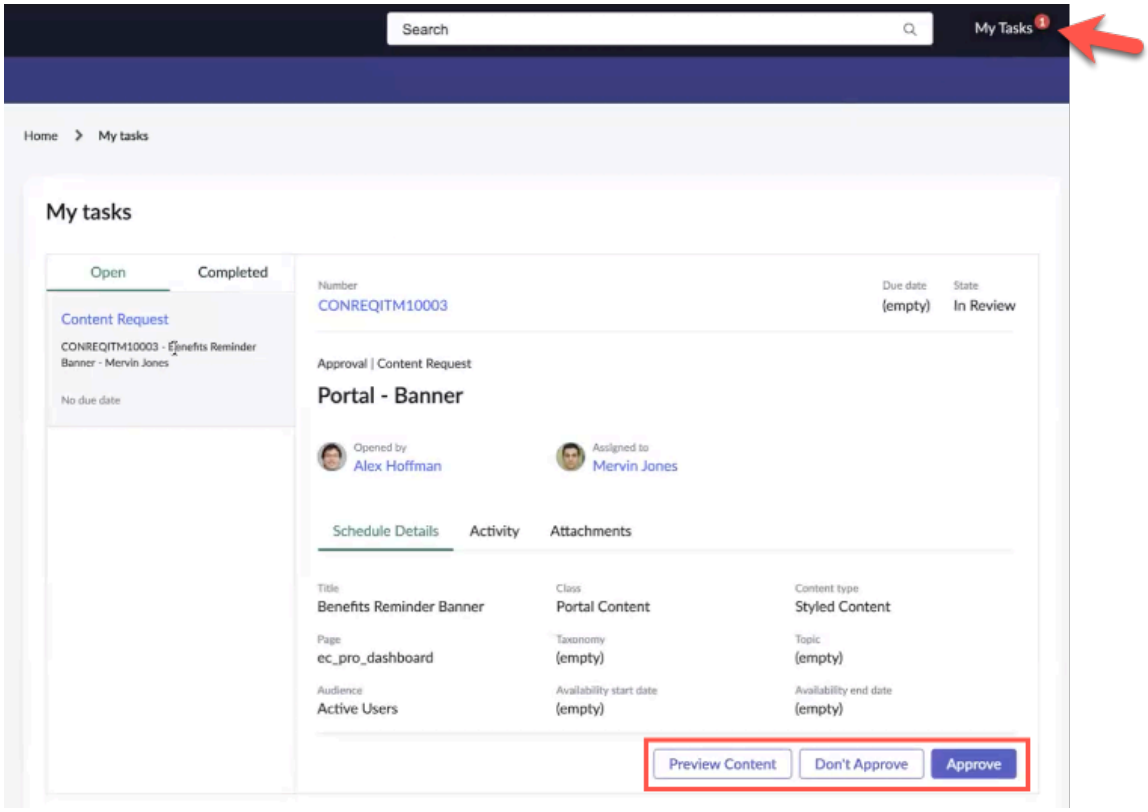
Before you begin

Role required: sn_cd.content_manager

Procedure

1. Navigate to **All** > **Content Governance** > **Assigned to me**.
2. Click the content request you want to fulfill.
3. Change the state field to **Work In Progress**.
4. From the top-left menu, click **Save**.
   If you click **Update**, the system returns you to the Assigned to me list and you must reopen the content request.
5. Scroll down to the content request item related list and select the request item.
6. Click **Create Content**.
   Create and schedule the content in the Content Library.

   Note:
   When you are creating the publish plan, the **Inactive** option is selected by default. When the content is approved, the system activates the publish plan. Alternatively, you can set a publishing duration. However, if you select **Always active**, the content will publish without approval.



7. Click **Send for Review**.
   The system updates the content request status to `In Review`. To edit the content, you must revert the status to `In Progress`.

Previewing and approving a content request item

Content requesters can preview content request items before they approve it to be published.

When a content creator sends the completed content for review, the system assigns a new task to the requester and any additional approvers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The content requester can preview the content item that appears in a preview portal with the content item highlighted.

Note:
Only rich content, news, and portal type content can be previewed.

The portal used for previews is determined by the sn_ca.campaign.preview.portal_url_suffix system property found in **Properties** under Content Experiences Configurations. For more information, see Properties installed with Content Publishing and Properties installed with Content Experiences.

Email notification

An email notification is sent to the content requester and appears as a to-do under **My Tasks** in the Employee Center Pro. A link is provided to the to-do.

For information on setting up email notifications, see Create an email notification.

Understand the Content Operations dashboard

The Content Operations dashboard is a launchpad for content authors, where they can create content, view engagement metrics for published content, content publishing calender, incoming content requests, and review ownership for pages and widgets.

Dashboard overview

Users with the Content Manager role can access the **My Content Operations** dashboard from Content Publishing, Content Experiences, or Content Governance as their starting point for creating or managing content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The admin must install the following plugins (August 2024 store release or later) to enable this dashboard:

- Content Publishing
- Content Governance
- Content Experiences (optional)

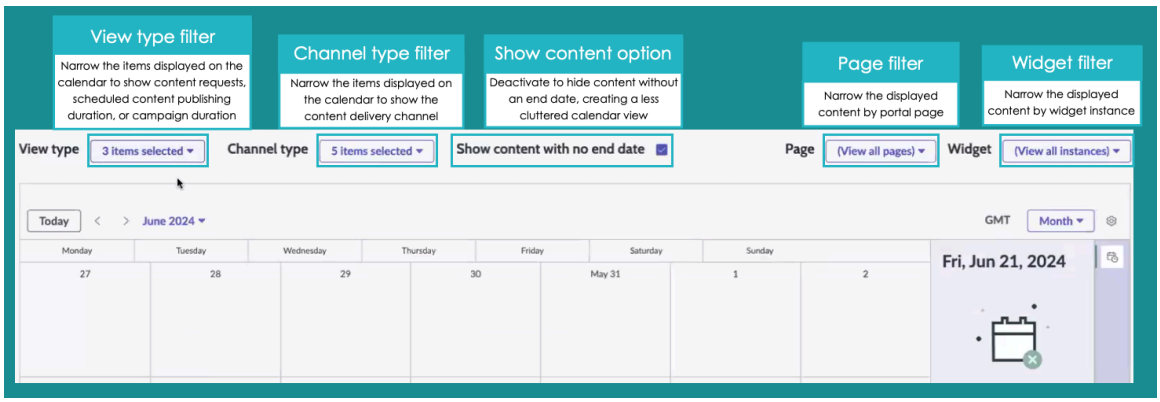
For more information, see Understanding Employee Center plugins.

My Content

The my content tab contains metrics on the content you created. The display may vary depending on the plug-ins in your instance.

My Content cards

Card	Description
My Content	List of all the content you created.
Content Library and Campaigns	Provides a quick view of the status of your scheduled content and campaign content (if the Content Experiences plugin is installed) via the following cards: • **Content to be published**: The number of your content items that are scheduled but not yet published on the portal or Now mobile app. Click this card to open the Schedule content records. • **Content expiring within 7 days**: The number of your content items with a schedule end date within seven days. • **Campaign content to be published**: The number of your content items that are in a campaign bundle. • **Campaign content expiring within 7 days**: The number of your currently-published content items that are in bundles with an end date within seven days. **Note:** The Content Admin can change the number of days for the **Content expiring** and **Campaign content expiring** fields by modifying the Content Governance properties. See Properties installed with Content Governance.
Content requests	Provides a quick view of content requests via the following cards: • **Content requests unassigned**: Incoming content requests that do not have an assigned user. • **Content requests due within 7 days**: Assigned and unassigned content requests with a due date within seven days. • **Content requests in progress**: Content requests that have an associated content item and an **in progress** status.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

My Content cards (continued)

Card	Description
	• **Content requests in review**: Content requests that are awaiting approval from the user who requested the content or from additional reviewers. • **Content requests ready to publish**: Approved content requests that have a content item with a content schedule record. **Note:** The Content Admin can change the number of days for the **Content requests due** field by modifying the Content Governance properties. See Properties installed with Content Governance.

Publishing Calendar

The publishing calender provides a single interface where content managers can view what content will be published and where, upcoming campaigns, and content requests by due date.

Calendar filters

Filter	Description
View type	Narrow the items displayed on the calendar to show: • Content requests The Content request appears on the Content request item due date. For more information, see Managing content requests with Content Governance. • Content Library Content appears based on the content schedule record, with the exception of news articles and to-do content, which are explained in the **Channel type** section below. **Note:** The calendar only displays content with configured start date. Content set to "Always active" will not appear in the calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Calendar filters (continued)

Filter	Description
	• Campaign Content The calendar displays content that is in a published campaign and in a bundle with either an immediate or fixed date trigger. For more information, see Campaign bundle triggers. The content appears in the calendar based on the bundle date, not the campaign start date. **Note:** This option appears only if the Content Experiences plugin is installed. • Campaign Content The calendar displays campaign content based on the bundle trigger configuration. For more information, see Campaign bundle triggers. **Note:** This option appears only if the Content Experiences plugin is installed.
Channel type	The calendar uses different colors to distinguish between channel types, helping you easily differentiate them. Use the filter to narrow the items displayed on the calendar to show specific content delivery channels. • Mobile content • News content displays based on the article publish start date • Notification content • Portal content • To-do content displays based on the **When to process** date
Page	Narrow the displayed content by portal page.
Widget	Narrow the displayed content by widget instance. The drop-down menu displays Content Publishing widgets. For more information, see Employee Center widgets.

Ownership

The ownership tab provides an overview of content, pages, topics, and audience ownership. To learn more about ownership, see Content Ownership.

You can use filters to specify a group or user to view information by:

Group

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The drop-down menu for the group filter contains role-based groups (Content admin and Content manager), which include all users with the selected role. These role-based groups are configured at the platform level by a system admin.

User

The drop-down menu for the user filter contains all the users with either a Content admin or Content manager role.

Ownership cards

Card	Description
Owned content	View all the content that you created or have ownership permissions for
Owned pages	View all the content that you created or have ownership permissions for
Owned topics	View all the topics that you have ownership permissions for
Owned audiences	View all the audiences that you have ownership permissions for

Creating employee communications with Content Publishing

Content Publishing offers robust communications creation tools that enable you to create, manage, and publish a variety of content types including portal content, notifications, mobile content, and tasks.

- Create various employee communications portal content including news articles, rich content microsites, announcements, banners, links to other content, and calendar events.
- Leverage easy-to-use drag-and-drop, visual interfaces for creating, editing and previewing content before it's published.
- Create notifications such as a mass email or short message service (SMS) to your employees.
- Add urgency to your communications by creating and scheduling to-dos in the form of tasks.
- Schedule and target your content to specific audiences with the option of making it available from specific start and end dates.
- Deliver announcements and links to content on your employee's mobile devices.

Content Publishing components

Content Publishing components

Component	Description
Content Library	Your one-stop location for creating and publishing content for your employees in various content formats and publishing platforms.
Content classes	List content items by platform.
Reusable components	You can configure the following types of records to enable you to create and publish content more efficiently:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Publishing components (continued)

Component	Description
	• Audiences: A list of users who can see content based on conditions or criteria. • Block Content: Reusable rich text content. • Link Content: URLs or video links to use when creating content. The following reusable components are pre-configured by the Content Admin: • Content destination: Defines the page and widget for publishing news articles. • Content Categories: Defines categories to organize news articles. • Reusable Articles: Lists news article templates. **Note:** This feature is only accessible to users with the sn_cd.content_template_owner role.
Schedule content	Each piece of content is associated with schedule content record, which contains the information necessary for delivering the content to employees, such as where on your portal it should reside, the audience your information is directed to, who should approve (if applicable), and start and end dates.

Overview of the Content Library workflow

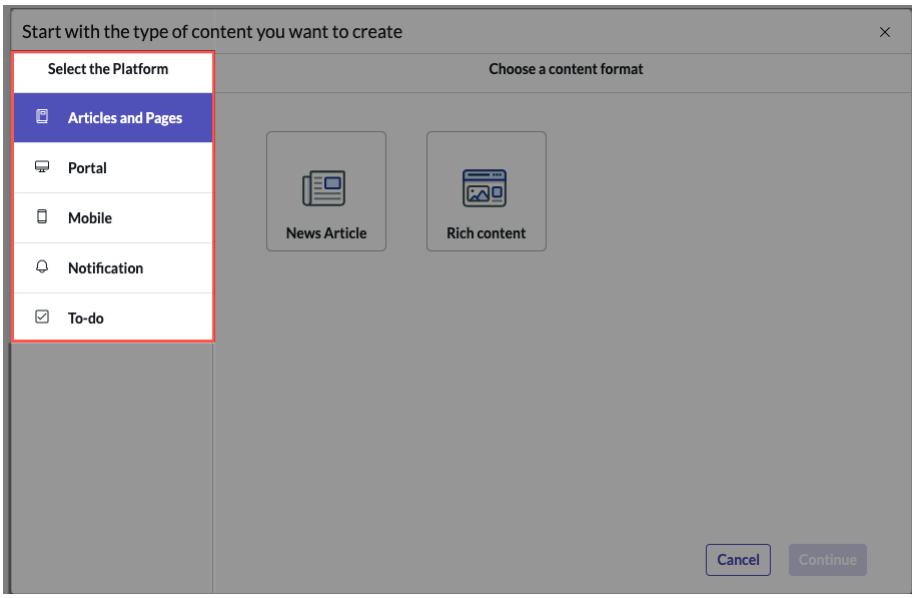
Content Library

Content Library is your one-stop location for creating and publishing content for your employees in various content formats and publishing platforms.

Content Library allows you to manage your content within a single, unified interface and flow.

- Design your content with easy-to-use, no code configurations.
- Preview your content as you are creating it and preview how it looks on your portal.
- Assign your audience and schedule your content for sending/viewing immediately or within a date window.

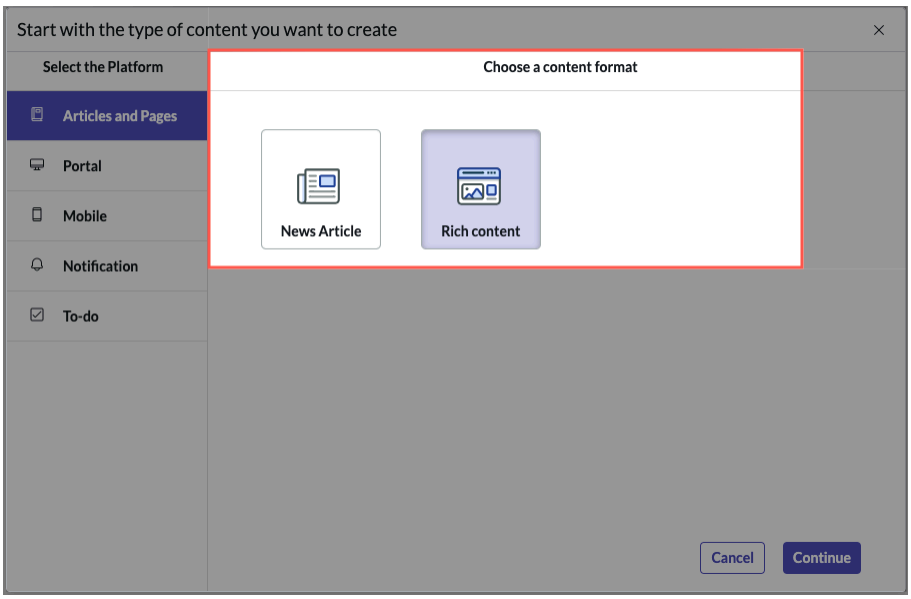
Note:
The end-to-end Content Library workflow supports only news, rich, and portal content. For all other content types, you can create new content in the Content Library, but you will need to use the Schedule form to deliver it to employees. For more information on Publishing content, see Publishing content.



Creating and publishing content

Create and publish content in the Content Library using the following process:

1. **Select the Platform**

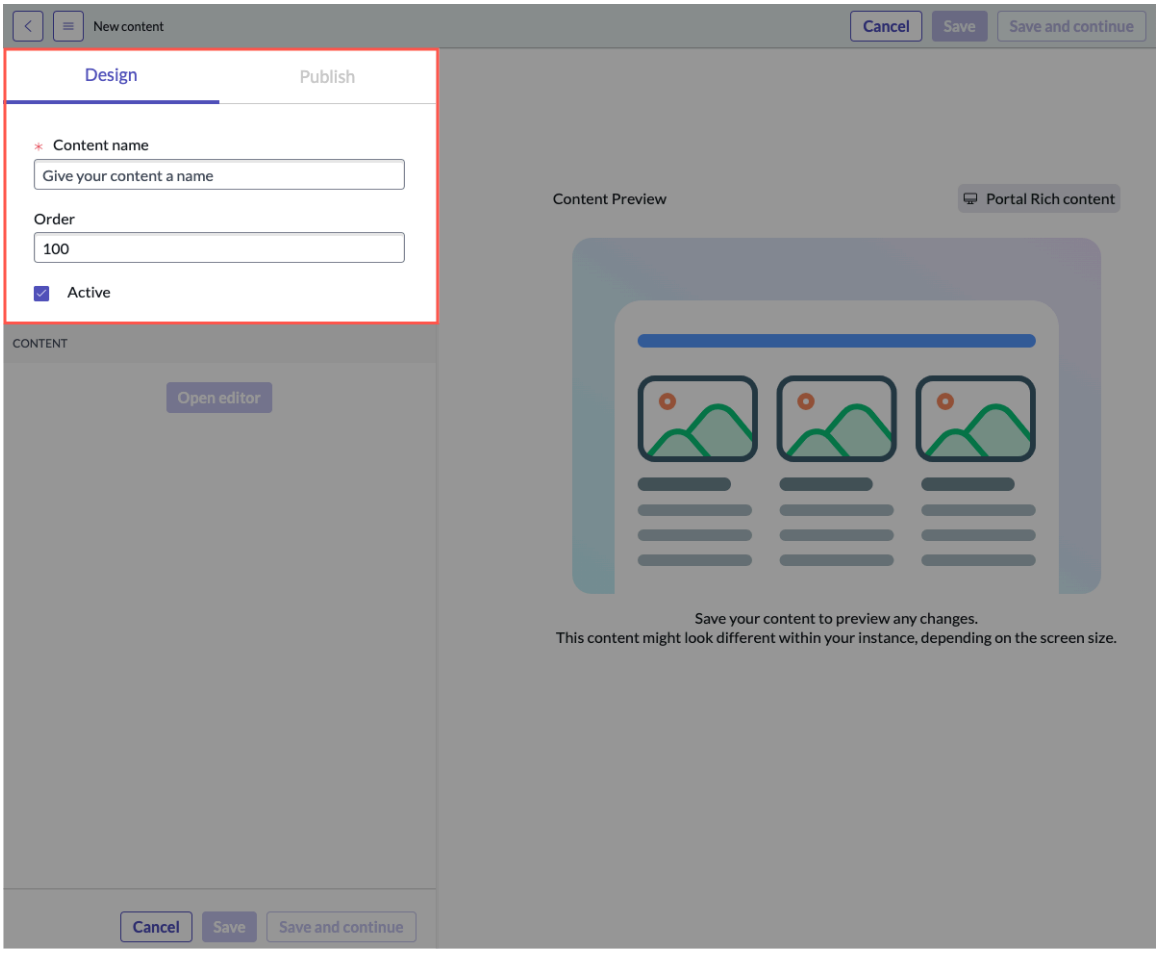


© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When creating a new piece of content, the first step is to select a platform. This determines where your content appears and narrows your selection of content formats.

2. Choose a content format

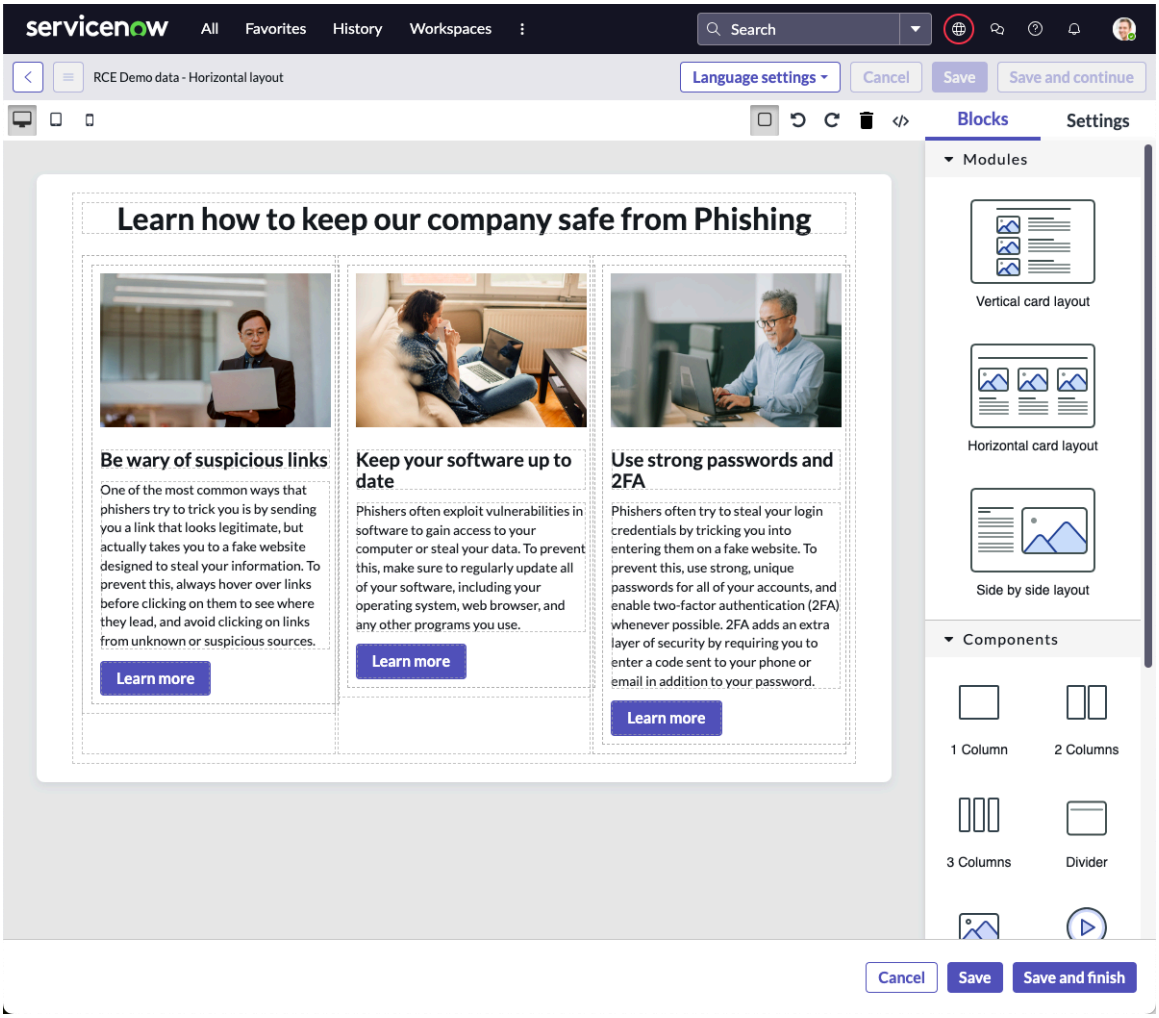
After selecting the platform for your content, select from the available content formats.



3. Create a content record

Fill in the fields in the New content form to provide details such as content name and order.

Note:
Since there is no direct method for migrating content records between ServiceNow® environments, we recommend you create content in your production environment and use the **Active** option and publish plans to control content availability.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

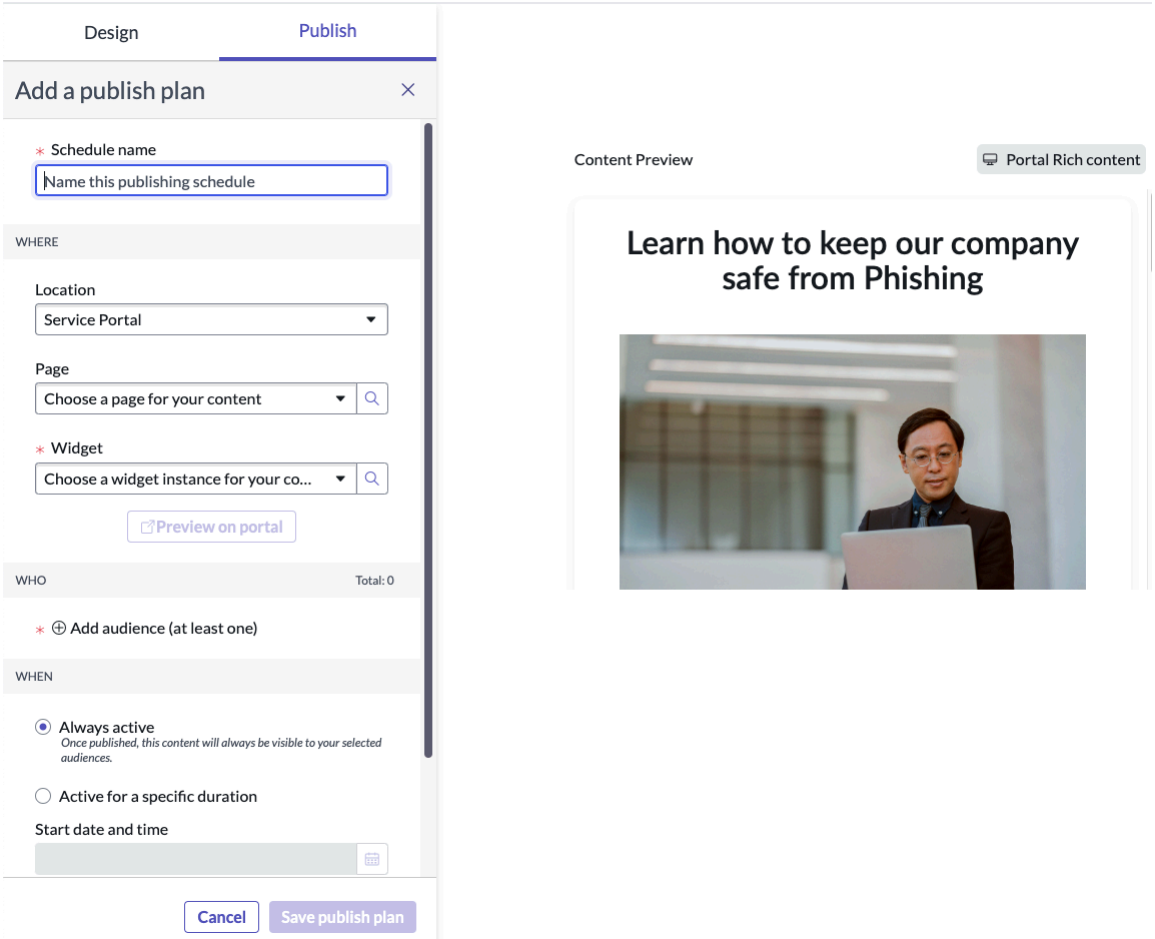
4. Prepare the content

Do the steps applicable to the content format, such as upload the image or video, assemble the banner or news article, or provide the URL.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional) 5. Translate your content

Select a different language to view your session in or request a language translation for the content you are creating. For more information, see Configuring translation for Content Publishing after upgrade.



> **Note:**
> Only translate content you are done creating and formatting the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.
>
> For rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

6. Configure publishing

Add one or more publish plans to determine when the content becomes available, who can see it, and for how long. See Create a publish plan for your content.

Alternatively, you can build out a more robust publishing configuration using Creating campaigns with Content Experiences

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Supported platforms and content formats

Articles and Pages

- Rich content: Provides the ability to create and schedule long form content using a drag-and-drop method without the knowledge of coding. Rich content helps you to easily and visually create high quality curated content that matches the Service Portal look and feel with limited technical knowledge. You can target Rich content to any Portal page.
- News articles: Combines content creation features from the Rich Content Editor with new publishing methods that enable high volume content publishing to keep employees updated on company news and announcements.

Portal

Reach more people in your organization with greater effectiveness and efficiency by creating meaningful content that can be distributed through multiple channels with Content Experiences and Content Publishing. You can create different types of content that includes:

- Styled content: Allows you access to a suite of tools and fields to create custom banners, block, or video content. Styled content is fast and easy to use without having to use HTML/CSS code. For banners you can use features that define your text color, text alignment, add buttons or links, background color, background image, and change the gradient of the image.
- Video: Place videos into your Employee Center or Employee Center Pro.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Use styled content for videos if you want to add heading and body text, reference variables from either the User or HR profile table, and other features that contribute to the over-all style of your video.

- URL: Links that take your employees to content.
- Image-based link: Links to content that are also an image.
- Events: Content for company events that have a specific start and end date and time.
- Banner: Attention grabbing banners that promote a message or content to your employees.
- Rich text: Use rich text to enhance your content or message using common formatting options like bold or italics.
- Calendar: Provides your employees with a quick way of viewing scheduled events

Mobile content

Create different types of content that your employees can view on their mobile devices. The type of mobile content you can create are:

- Mobile Banner: A banner that captures attention for a mobile device.
- Mobile Text Card: Content for a mobile device that includes a heading text and link to content.
- Mobile Video: Video that can be accessed from a mobile device.

Notification content

Send content directly to your employees as a notification. The types of notifications are:

- Email: Notifications sent to your employees via email.
- Push: Notifications sent to your employees via the Now Mobile app.
- SMS Text: When utilizing the ServiceNow Notify product, a content type is available allowing you to send SMS text message notifications to your employees.

  Note:
  Requires configuration of your Notify set up. For more information, see
  - Notify
  - Enable SMS delivery with the email client
  - Configuring Employee Center for mobile

- Microsoft Teams: Notifications sent to your employees via Microsoft Teams. This requires the ServiceNow for Microsoft Teams integration. See Sending notifications to employees using Microsoft Teams.

To-do content

Create content that prompts your employees to complete an assigned task. To-dos are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Button Complete: A button that prompts your employees to push when they complete a to-do.
- E-Signature: Prompts an employee to sign a document to complete the to-do.
- Play Video: Provides a video that after viewing completes the to-do.
- View Link: Provides a link to content that after accessing completes the to-do.

Pulse survey content

To receive feedback from your employees, create and send Pulse surveys that can drive action and measure impact. For more information, see Listening Posts.

Facebook Workplace content

Create content for your company's integration with Facebook Workplace. For more information, see Workplace from Facebook spoke.

Employee Forums

Employee Forums help your employees connect, engage, and collaborate with other employees. Use Employee Forums to share business information, promote employee engagement, encourage ideas and feedback, and to give your employees a voice.

When activating the ServiceNow Communities product to enable Employee Forums, customers can deliver information within Content Publishing including:

- Blog: Create long-form text articles for posting in a forum or topic.
- Video: Add a video to a forum or topic.
- Event: Create event-related information items to post in a forum or topic.

Note:
For more information, see Communities.

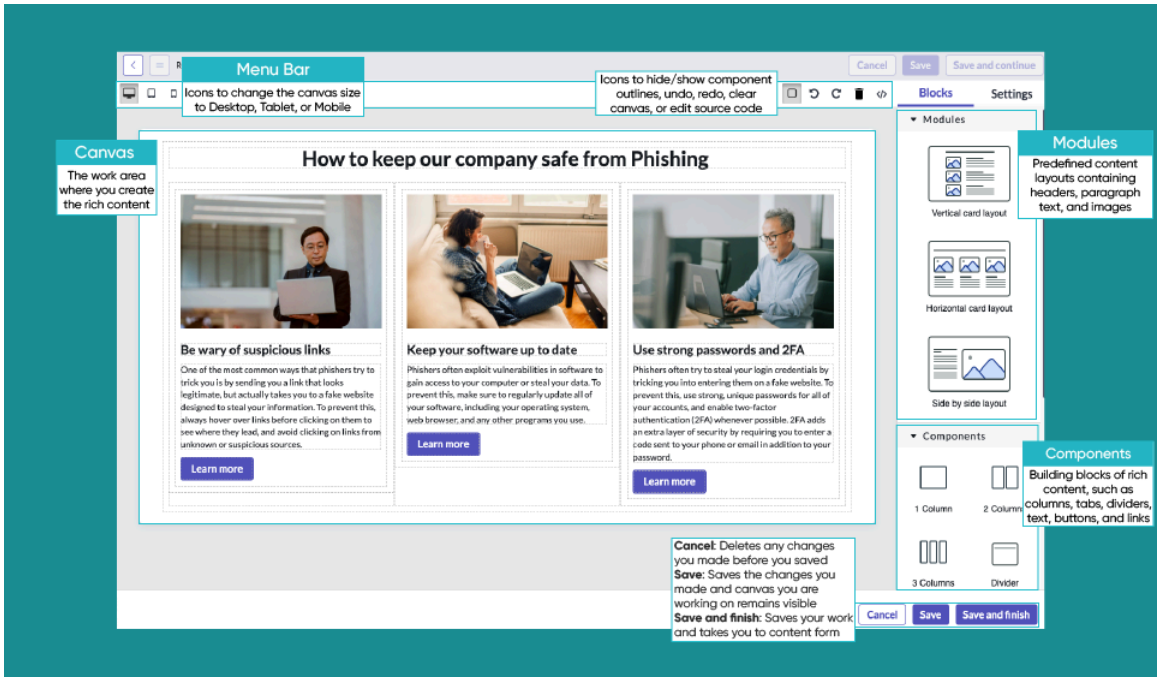
Rich Content Editor

Rich Content Editor enables content managers and admins to create HTML-based content for the Employee Center Pro topic and portal pages using a visual drag-and-drop interface.

You can create a layout, add components (such as containers, images, videos, and links), and adjust the settings of the components with little or no HTML or CSS (cascading style sheets) knowledge. The Rich Content Editor allows non-technical users to build sections of pages without the help of IT or technical users.

The Rich Content Editor provides a library of components and a canvas area, where you use drag-and-drop method to create your content. The components can be edited individually and you can preview what you are creating on a desktop, tablet, or mobile device before you make your content available to your audience.

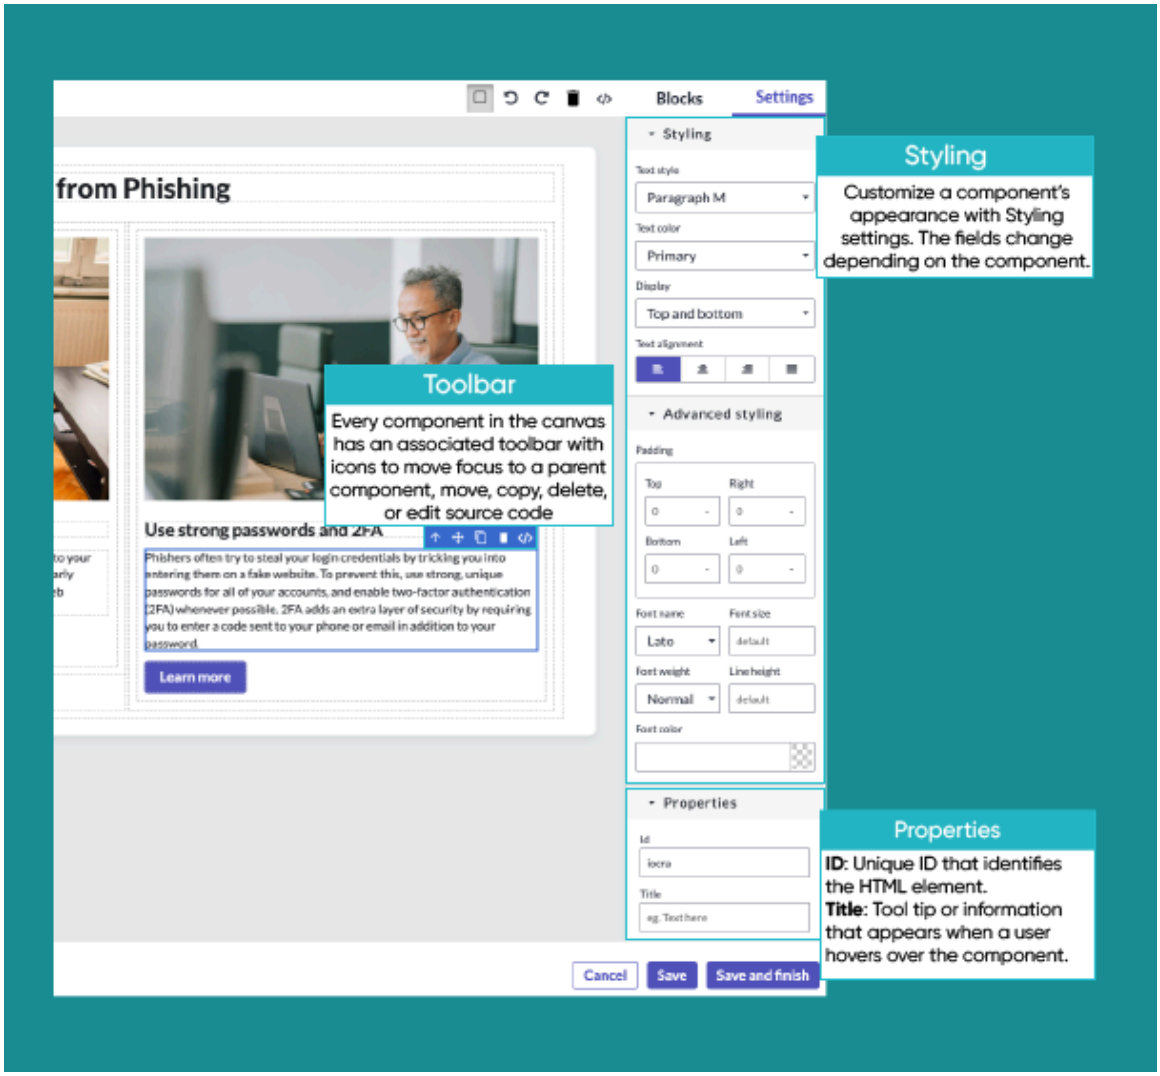
Creating content does not interfere with your portal theme or color. Published content that does not use custom style changes uses the theme of the underlying portal page.



Note:
By default, the **Rich Content Editor** uses the **sn_cd.preview.portal_url_suffix** sys property to determine the portal theme to use for the content you create. Using the preview portal when creating rich content reflects the portal theme to provide an example of how the content will appear. For more information, see Properties installed with Content Publishing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Rich Content Editor interface



The Rich Content Editor interface is comprised of a canvas where you assemble the content, content components that you drag-and-drop into the canvas, and menu bar icons to modify the canvas.

Note:
If the Edit Source code icon does not appear, ask an admin to enable the **Edit code** property. See Properties installed with Content Publishing

When you select a component, a toolbar appears at its top-left corner, allowing you to manipulate the component directly. Each component offers a variety of customization options that are accessed from the **Settings** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Using the Rich Content Editor

The Rich Content Editor makes it possible to build HTML content with little or no HTML or CSS (cascading style sheets) knowledge, using the following process:

1. Create the Rich Content type record: Create rich content
2. Create the page layout.
   - Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
   - Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor
3. Add components such as images, videos, text boxes, and buttons.
4. Change the canvas size to create content for tablet and mobile.

> **Note:**
> For best results when creating content for all three platforms, first create your content for desktop, then tablet and mobile.

5. (Optional) Select a different language to view your session in or request a language translation for the content you are creating. For more information, see Configuring translation for Content Publishing after upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Only translate content after you have completed creating and formatting the content. To create content with format that varies across translations, duplicate the content for each language and format it, then perform the translation.

6. Make the content available to users via a publish plan: Create a publish plan for your content

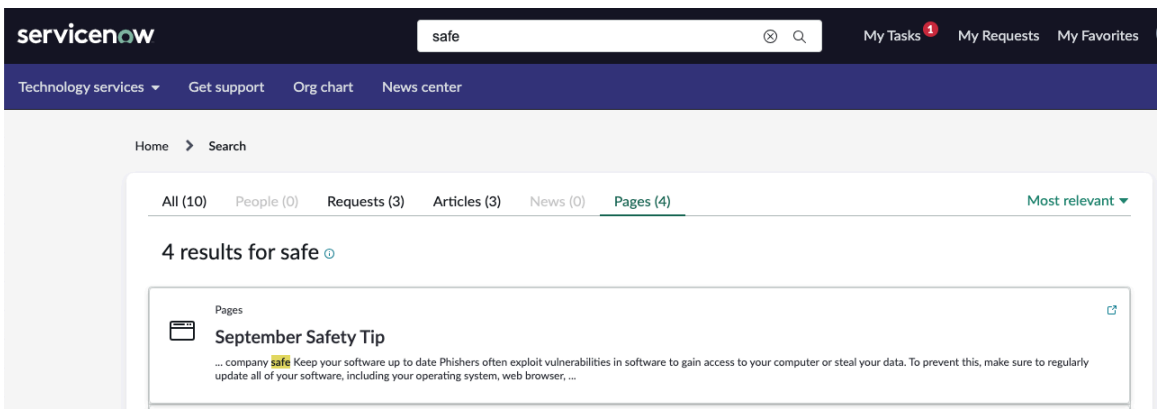
   Alternatively, you can build out a more robust publishing configuration using Creating campaigns with Content Experiences

Keyboard shortcuts

You can assemble rich content and news articles in the Rich Content Editor using a keyboard for improved accessibility.

The Rich Content Editor supports many operating system and text formatting shortcuts, including Save, Bold, and Undo. You can use these additional keyboard shortcuts to support your content creation.

Keyboard shortcuts



Action	Mac keyboard shortcut	Windows keyboard shortcut
Paste and match style of selected text box	Shift+Option+Command+V	Shift+Alt+Windows+V

Tip:

With the Rich Content Editor, you can easily use your keyboard to select individual canvas components. You can add text and columns, create text sections within those columns, and update headings within each section to adjust the styling and fonts to your liking; It helps you customize your content in a simple and convenient way.

Rich content in portal search

When employees enter a keyword in the global search bar, Employee Center uses AI Search to return published pages containing that keyword in the content name or body.

If the user with the system admin or content admin role uses the global search bar, the results include unpublished pages.

Create rich content

Use the Rich Content Editor to build long form content with an easy to use web styled tool.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_cd.content_manager

About this task
Rich content provides the ability to create and schedule long form content using a drag-and-drop method without the knowledge of coding. Rich content helps you to easily and visually create high quality curated content that matches the Service Portal look and feel with limited technical knowledge. You can target Rich content to any Portal page.

Procedure
1. Navigate to **All** > **Content Publishing** > **Content Library** > **Create new**.
2. Select **Rich content** then **Continue**.
3. Fill in the fields in the **New content** form.

New content form

Field	Description
Content name	The name that describes the content you are creating or editing. **Note:** This field appears as the content header in search results.
Order	The number that indicates the order in which the portal and styled content appears in the Content list.
Active	Indicates the content is active and available for use.
Version	Tracks content changes if content versioning is enabled. For more information, see Content versioning.
State	Indicates whether the content is in draft or published.

4. Select **Open editor**.
   Selecting this button saves the information you entered above.

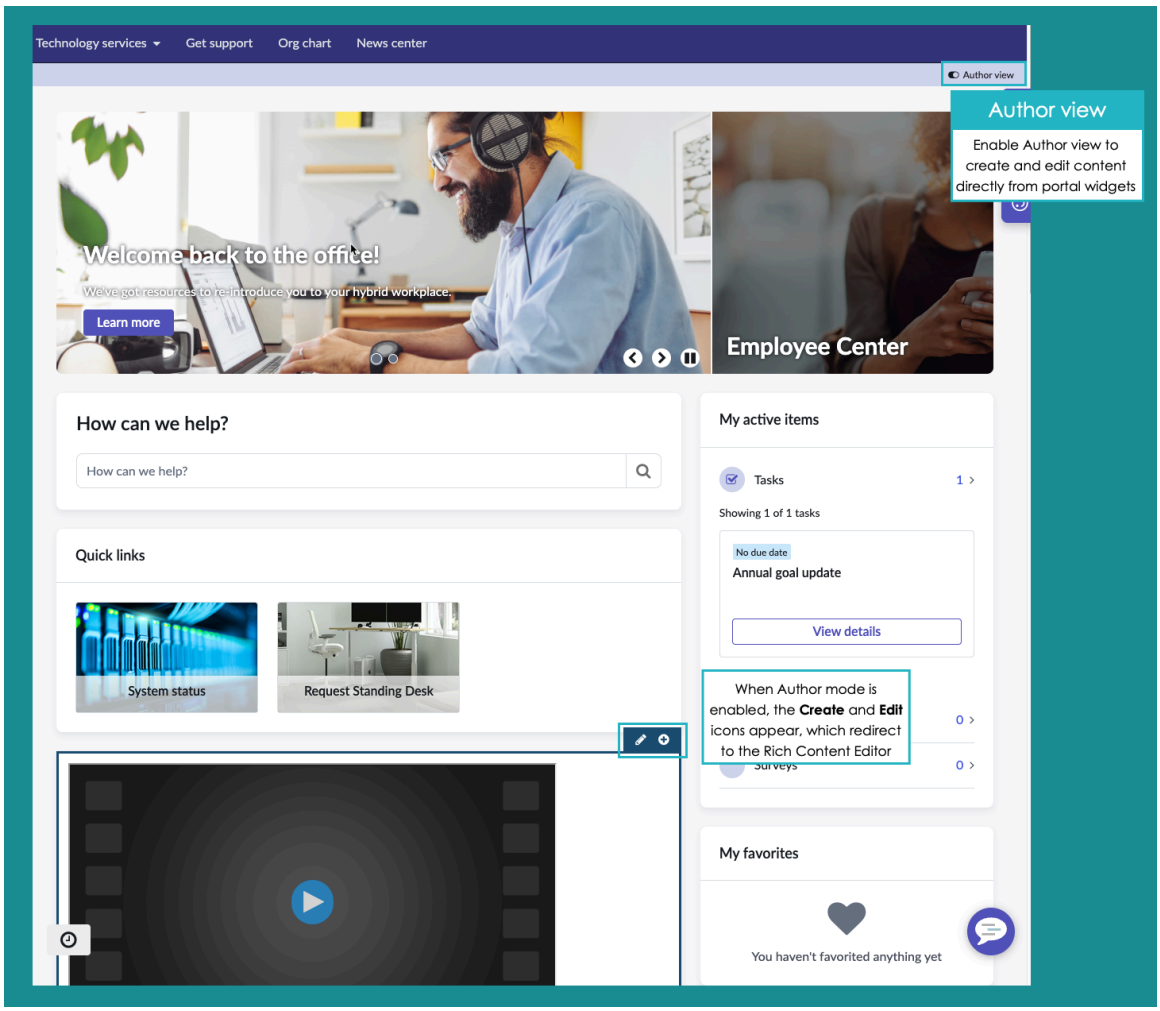
Tip:

With the Rich Content Editor, you can easily use your keyboard to select individual canvas components. You can add text and columns, create text sections within those columns, and update headings within each section to adjust the styling and fonts to your liking; It helps you customize your content in a simple and convenient way.

What to do next
Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Create rich content from portal widgets

Use the Rich Content widget content authoring shortcuts to create and edit rich content directly from the employee portal. When you use the widget shortcuts, the system generates a publish plan to deliver the content to that specific widget.

Before you begin

Role required: sn_cd.content_manager

About this task

Procedure

1. Navigate to **All** > **Self Service** > **Employee Center**.
2. Enable the **Author view** toggle.
   The **Add content** and **Edit content** icons appear above the Rich Content widget.
3. Click the **Add content** or **Edit content** icon.
   - If you click **Add content**, the new content form opens. Follow the Rich content creation flow to create a content record and assemble the rich content. See Create rich content.
   - If you click **Edit content**, the Rich Content Editor opens where you can edit the content as needed.
4. Select **Save and Finish** to return to the content record.
5. Click **Save and continue** or the **Publish** tab.
   The system auto-populates a publish plan that targets the content to the widget.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

If necessary, modify the publish plan. See Create a publish plan for your content.

Add predefined content layouts with the Rich Content Editor

Use modules to easily add new content layouts containing headers, paragraph text, and images. Choose from layouts comprised of three vertical cards, three horizontal cards, or a side-by-side configuration with an image positioned to the right of a text block.

Before you begin

Role required: sn_cd.content_manager

Fill in the New content form fields. See Create rich content

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. Drag-and-drop the module you want to use from the **Blocks** panel.

3. Replace the placeholder headers and paragraph text with your content.
   For more information on styling the text and textboxes, see Add Text or a Text section with the Rich Content Editor.
4. To add an image, do the following steps:

   a. Double-click the image container.

   b. From the file picker pop-up, select an image.
   Or, if you have previously selected images, select the image from the available images on the right side of the **Select Image** pop-up.

   For more information on styling the image, see Add an Image with the Rich Content Editor.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

  Note:
  Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add columns with the Rich Content Editor

Use the **Rich Content Editor** canvas to create columns to help define and organize your layout for your page.

Before you begin

Role required: sn_cd.content_manager

After you have completed the **New content** form (see Create rich content) and navigated to the Rich content canvas, you can create rich content.

You can add 1, 2, or 3 columns. Each column acts as a container for other components. Each column component can also be edited by selecting the component and updating the properties under settings.

Note:
The minimum height for a cell within a column is 75px. If you set the cell height smaller, the cell overflows the row.

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Rich Content Editor** canvas, you can use a drag-and-drop method to add columns. Columns act as containers for the content you are creating.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

After you drop a **1 Column**, **2 Column**, or **3 Column** into the **Rich Content Editor** canvas, there are two separators that appear. The outside separator is labelled **Row**. The inside separator is labelled **Cell**.

Add styling to the row or cells, such as background color, maximum width, or padding. If you do not want to add styling, you can proceed to the links at the bottom of this page.

3. Select a row or cell to edit.
4. Navigate to **Settings** tab.
5. Use any of the following styling settings:

Styling settings

Settings field	Description
Styling	
Background Color	Use the color picker (grey square) to select a color or enter the color code that represents the background color you want to appear. All HTML colors are supported. For more information, see HTML color names.
Advanced styling	
Width	Specify the value by entering a number or dragging the right side of the cell. Select the unit of measure: ○ px: pixel ○ %: percentage
Height	Specify the value by entering a number or dragging the bottom of the row. Select the unit of measure: ○ px: pixel ○ %: percentage
Padding	Padding is the space between content and the border of an element. Specify the value

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	for top, bottom, right, or left padding by entering a number.
Margin (for rows only)	Margin is the space between a row and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.
Border (for cells only)	Define the width, border style, and color.
Border radius (for cells only)	Radius setting rounds the border corner.
Properties	
ID	A unique ID that identifies the HTML element.
Title	A tool tip or information that appears when a user hovers over the component.

6. Select **Save**.

What to do next

Add and style more columns to create a layout for all the content on the page.

Then, add components such as images, videos, text boxes, and buttons:

- Add Tabs with Rich Content Editor
- Add a Divider with the Rich Content Editor
- Add an Image with the Rich Content Editor
- Add a Video with the Rich Content Editor
- Add Text or a Text section with the Rich Content Editor
- Add a Link or Link block with the Rich Content Editor
- Add a Button with the Rich Content Editor

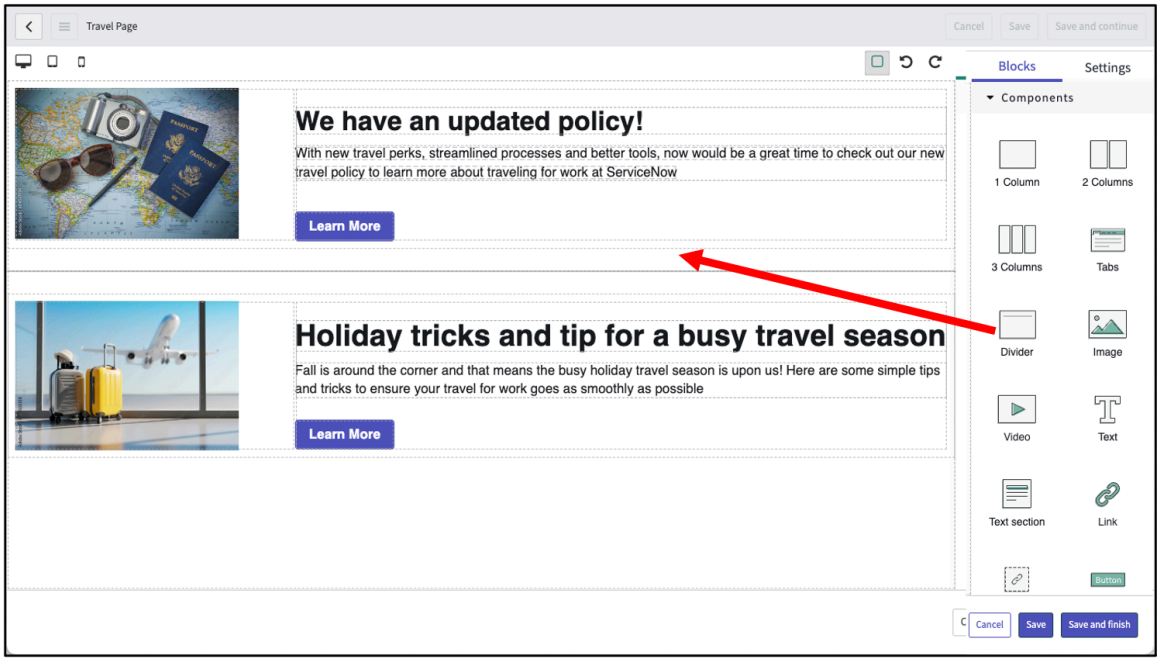
Add a Divider with the Rich Content Editor

Add a horizontal Divider into your canvas to visually separate elements or highlight important sections.

Before you begin

Role required: sn_cd.content_manager

Fill in the New content form fields. See Create rich content



Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Rich Content Editor** canvas, you can use a drag-and-drop method to add dividers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Navigate to **Settings** tab.
4. Use any of the following styling settings:

Styling settings

Settings field	Description
Styling	
Background Color	Use the color picker (grey square) to select a color or enter the color code that represents the background color you want to appear. All HTML colors are supported. For more information, see HTML color names.
Advanced styling	
Width	Specify the value by entering a number. Select the unit of measure: ○ px: pixel ○ %: percentage
Height	Specify the value by entering a number. Select the unit of measure: ○ px: pixel ○ %: percentage
Margin	Margin is the space between the divider and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.
Properties	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
ID	A unique ID that identifies the HTML element.
Title	A tool tip or information that appears when a user hovers over the component.

5. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

  Note:
  Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add an Image with the Rich Content Editor

Use the **Rich Content Editor** canvas to add images in your content.

Before you begin

Role required: sn_cd.content_manager

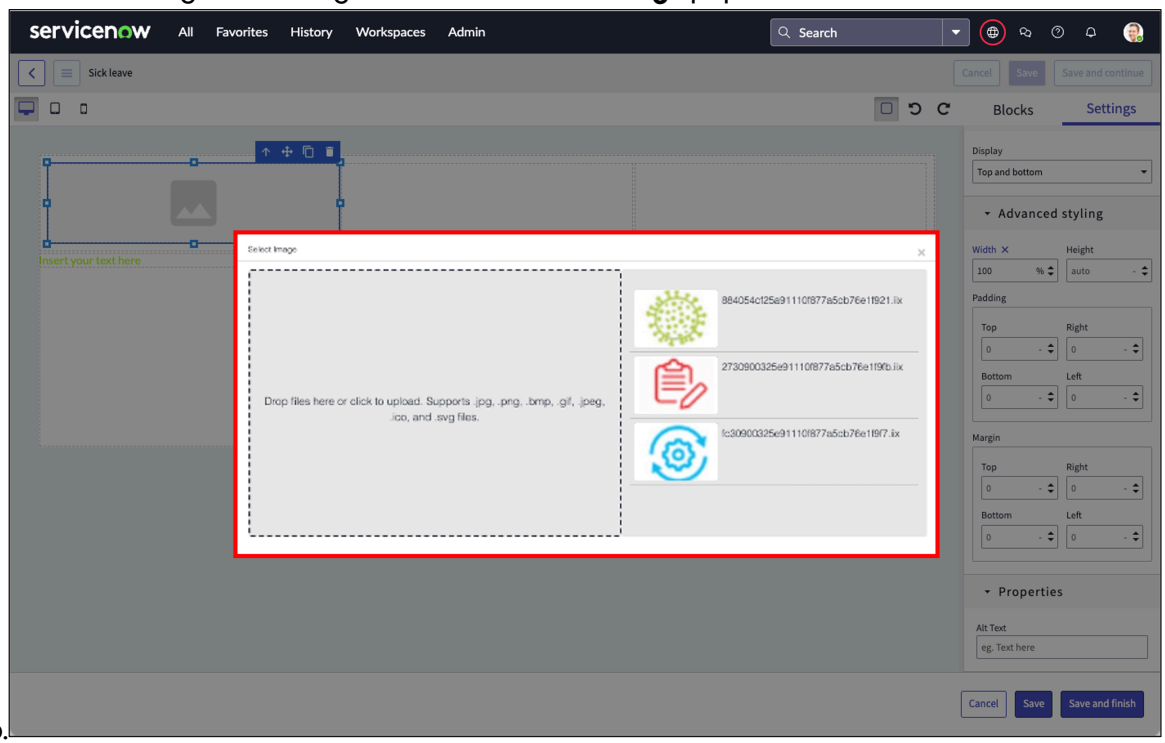
Fill in the New content form fields. See Create rich content

Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

About this task

The Rich Content Editor supports the following types of images:



- .jpg
- .png

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- .bmp
- .gif
- .jpeg
- .ico
- .svg

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Blocks** column, use a drag-and-drop method to move the **Image** component to your canvas.
3. Click in the file picker pop-up to select an image.
   Or, if you have previously selected images, select the image from the available images on the right side of the **Select Image** pop-up.

4. Navigate to **Settings** tab.
5. Configure the following settings:

Settings options

Settings field	Description
Styling	
Display	Configure the appearance of multiple components within the same column, such as an image and a text component. Select from the following options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	○ **Top and bottom** (default): Image appears above the other component. ○ **Side by side**: Image appears with the other component next to it. **Note:** For best results, set the same display for the components. For example, if you have an image and text components in a column and want the image to appear on the left and the text to appear at the right, change the **Display** settings for both components to **Side by side**.
Horizontal align	Configure where the image appears in the container. Choose from the Right, Center, and Left icons.
Advanced styling When you insert an image into a container, by default the image is the full width of the container and the height auto-adjusts based on the image dimensions.	
Width and Height	Specify the value by entering a number or dragging the sides of the image. Select the unit of measure: ○ px: pixel ○ %: percentage
Padding	Padding is the space between content and the border of an element. Specify the value for top, bottom, right, or left padding by entering a number.
Margin	Margin is the space between a row and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.
Properties	
Alt text	Describe the appearance or function of your image for accessibility purposes.

6. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

Note:
Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add a Video with the Rich Content Editor

Use the **Rich Content Editor** canvas to add videos in your content.

Before you begin

Role required: sn_cd.content_manager

Fill in the New content form fields. See Create rich content

Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

About this task

The **Rich Content Editor** supports the following types of video:

- HTML5

Note:
Hover text or tooltips are not supported for HTML5 at this time.

- YouTube
- Vimeo
- Video streaming service

Note:
You must configure a content provider to use videos from a video streaming service. See Video hosting integrations framework.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Blocks** column, use a drag-and-drop method to move the **Video** block to your canvas.
3. Navigate to **Settings** tab.
4. Use any of the following styling settings:

Settings options

Settings field	Description
Styling	
Horizontal align	Configure where the video appears in the container. Choose from the Right, Center, and Left icons.
Advanced styling When you insert a video into a container, by default the video is the full width of the container and the height auto-adjusts based on the video dimensions.	
Width and Height	Specify the value by entering a number or dragging the sides of the video. Select the unit of measure: ○ px: pixel ○ %: percentage
Margin	Margin is the space between a row and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.
Properties	
Title	Text that appears when a user hovers over the video.
Provider	Where the video is hosted. Choose from: ○ HTML5 Source ○ Vimeo ○ Youtube ○ Video streaming content providers
Source/Video ID	The unique identification for the video you want to appear in your canvas. ○ For HTML5, the source is the unique identification for the video you want to appear in your canvas. ○ For YouTube, the video ID is the text that appears after the v= in the URL string. ○ For Vimeo, the video ID are the numbers that appear at the end of the URL string.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
Show controls (Youtube and HTML5 Source)	Check this box to display the video player controls that your users can interact with to start, stop, control volume, show closed captions, show the video full screen, or change the video settings.

5. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

  Note:
  Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add Text or a Text section with the Rich Content Editor

Use the Rich Content Editor canvas to add **Text** or a **Text section** in your content.

Before you begin

Role required: sn_cd.content_manager

Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

- **Text** provides the tools to format and arrange text.
- **Text section** provides the tools to format and arrange text and an area to add a headline.

> **Note:**
> For **Text section**, the headline, text, and container settings are configured separately.

When you copy and paste formatted content into the Rich Content Editor, the content retains its original formatting and appears in a new text box. Alternatively, you can use the browser toolbar option **Edit** > **Paste and Match Style** to paste the content as plain text, matching the formatting of the destination text box.

Pasting behavior:

- Clicking into the text box and pasting: The content appears at the cursor's position.
- Selecting the entire text box and pasting: The content appears in a new text box underneath

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Blocks** column, use a drag-and-drop method to move a **Text** or **Text section** block to your canvas.
3. Enter text or text and a headline depending on what component you dropped into the column.
4. Navigate to **Settings** tab.
5. Use any of the following styling settings:

Settings options

Settings field	Description
Styling	
Text style	Allows you to quickly change the look of your text by selecting a pre-formatted choice. You can select different headlines or paragraph styles. Headline 1-6 corresponds to h1 - h6 HTML tags. Selecting a text style pulls from your portal theme text settings in order to sync with it. For more information, see Portal configuration.
Text color	Use this drop-down to change the color of your text. Selecting a text color pulls from your portal theme text settings in order to sync with it. The values are defined as part of the portal theme. Your company can customize the portal theme to have different colors. For more information, see Portal configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	Your choices are: ○ Primary: The primary color defined by your portal theme. ○ Muted: The color defined by your portal theme. ○ White: Changes the color of your text to white. This is useful when using a background color other than white. Text color assigns predefined CSS classes for text color.
Display	Configure the appearance of multiple components within the same column, such as an image and a text component. Select from the following options: ○ **Top and bottom** (default): Image appears above the other component. ○ **Side by side**: Image appears with the other component next to it. **Note:** For best results, set the same display for the components. For example, if you have an image and text components in a column and want the image to appear on the left and the text to appear at the right, change the **Display** settings for both components to **Side by side**.
Text alignment	Determines the horizontal alignment of your text. Choose from: ○ Left justify ○ Center justify ○ Right justify ○ Justify (text is aligned with both margins)
Advanced styling	
Padding	Sets the spacing between the text and the border of the text container in pixels or as a percentage of the total text container. Specify the padding for the top, right, bottom, and left sides.
Font name	Defines the font face used to render characters. Click the drop-down arrow to select a different font.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
Font size	Sets the size of the font.
Font weight	Determines how bold or light your text appears. Click the drop-down arrow to select a different weight.
Line height	Sets the vertical distance between two lines of text.
Font color	Overrides the font color from your portal theme. To select a color, enter the hex code or click the color picker (grey square to the right of the font color) and select a color from the color palette.
Properties	
ID	A unique ID that identifies the HTML element.
Title	Text that appears when a user hovers over the component.

6. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

  Note:
  Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add a Button with the Rich Content Editor

Add a Button to trigger actions or redirect users to different content.

Before you begin

Role required: sn_cd.content_manager

Fill in the New content form fields. See Create rich content

Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Rich Content Editor** canvas, you can use a drag-and-drop method to add a button.
3. Navigate to **Settings** tab.
4. Use any of the following styling settings:

Styling settings

Settings field	Description
Styling	
Button type	Defines what kind of button you are adding. Your choices are: ○ Primary (default) ○ Secondary ○ Link only Selecting a button type pulls from your portal theme settings in order to sync with it. For more information, see Portal configuration.
Button size	Defines the size of your button. Selecting a button size pulls from your portal theme settings in order to sync with it. For more information, see Portal configuration. Your choices are: ○ X-Small ○ Small ○ Medium (default) ○ Large
Display	Configure the appearance of multiple components within the same column, such as an image and a text component. Select from the following options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	○ **Top and bottom** (default): Image appears above the other component. ○ **Side by side**: Image appears with the other component next to it. **Note:** For best results, set the same display for the components. For example, if you have an image and text components in a column and want the image to appear on the left and the text to appear at the right, change the **Display** settings for both components to **Side by side**.
Horizontal align	Sets the button alignment. Choose from left, center, or right.
Advanced styling	
Button color	Change the color of your button. **a.** Enter the color code that represents the background color you want to appear. **Note:** All HTML colors are supported. For more information, see HTML color names. **b.** Or, you can select the color picker (grey square) to the right of the **Background Color** field. **c.** Click into the color palette that appears. **d.** After selecting a color from the color palette, use the slide bar on the right side to fine tune your color. **e.** Slide the bar up and down. **f.** Use the bottom slide bar to lighten or darken your color.
Width Height	Adjust the width and height of a button by selecting it and using the **Width** and **Height** drop-downs to enter number or use the up and down arrows. You can also choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows. The choices are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	○ auto: Size is based on the content within the tab. If you enter additional text in the tab, the width automatically increases. ○ px: Use pixels as your measurement. ○ %: Use a percentage as your measurement.
Margin	Adjust the margins or the space outside and around the button. Use the drop-downs under the **Margin** section to adjust the margins on the top, bottom, right, and left sides. Just like the width and height, you can choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows.
Border	Edit the border around the outside of the button. **Note:** The border is the outline around the button. Width: Use the up and down arrows to adjust the width of the border. Just like the width and height, you can choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows. Style: The format of the border around the button. Select the drop-down to select the type of border you want around the button. Color: The color of the border around your button. Select the color of your button using the color palette and slide bars similar to how you select your background color.
Border radius	Use the up and down arrows to adjust the radius of the border. Just like the width and height, you can choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows.
Font name	Defines the font face used to render characters. Click the drop-down arrow to select a different font.
Font size	Sets the size of the font.
Font weight	Determines how bold or light your text appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	Click the drop-down arrow to select a different weight.
Line height	Sets the vertical distance between two lines of text.
Font color	Overrides the font color from your portal theme. To select a color, enter the hex code or click the color picker (grey square to the right of the font color) and select a color from the color palette.
Properties	
Button label	Text that appears on the button.
Title	Text that appears when a user hovers over the button.
URL	Location of a web page or content. Enter the complete URL address you are targeting when a user selects the button.
Target	Indicates where the button directs the user. Your choices are: ○ This window: Selecting the button opens the content in the same window you have displayed. ○ New window: Selecting the button opens the content in a new window.

5. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

Note:
Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add a Link or Link block with the Rich Content Editor

Use the **Rich Content Editor** canvas to add a link or a link block to redirect users to different content or a web page. A **Link** provides a textbox and a **Link block** allows you to add an image that acts as a link.

Before you begin

Role required: sn_cd.content_manager

Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Rich Content Editor** canvas, drag-and-drop a **Link** or a **Link block**.
3. Navigate to **Settings** tab.
4. Configure the following settings:

Settings options

Settings field	Description
Styling	
Background color	Sets the background color for the link container. To select a color, enter the hex code or click the color picker (grey square to the right of the font color) and select a color from the color palette.
Display (Link only)	Configure the appearance of multiple components within the same column, such as an image and a text component. Select from the following options: ○ **Top and bottom** (default): Image appears above the other component. ○ **Side by side**: Image appears with the other component next to it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	Note: For best results, set the same display for the components. For example, if you have an image and text components in a column and want the image to appear on the left and the text to appear at the right, change the **Display** settings for both components to **Side by side**.
Advanced styling	
Padding	Padding is the space between content and the border of an element. Specify the value for top, bottom, right, or left padding by entering a number.
Font name (Link only)	Defines the font face used to render characters. Click the drop-down arrow to select a different font.
Font size (Link only)	Sets the size of the font.
Font weight (Link only)	Determines how bold or light your text appears. Click the drop-down arrow to select a different weight.
Line height (Link only)	Sets the vertical distance between two lines of text.
Font color (Link only)	Overrides the font color from your portal theme. To select a color, enter the hex code or click the color picker (grey square to the right of the font color) and select a color from the color palette.
Properties	
Title	Text that appears when a user hovers over the link or link block.
URL	Location of a web page or content. Enter the complete URL address you are targeting when a user selects the button.
Target	Indicates where the button directs the user. Your choices are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	○ This window: Selecting the button opens the content in the same window you have displayed. ○ New window: Selecting the button opens the content in a new window.

5. If you added a Link block, drag-and-drop an Image into the Link block.
   For information on configuring an image, see Add an Image with the Rich Content Editor.
6. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

  Note:
  Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

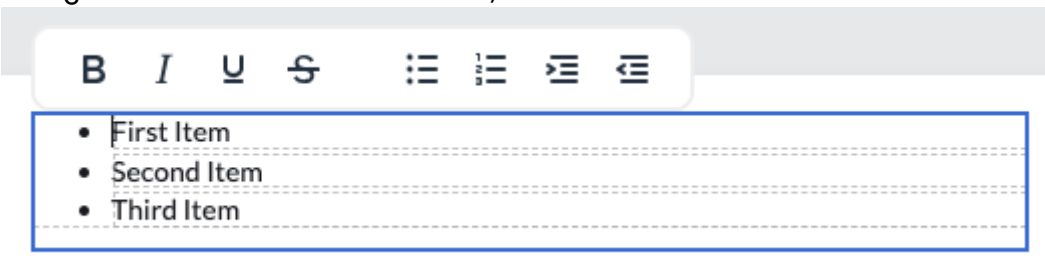
Add a List with the Rich Content Editor

Add a numbered or bullet list to better organize your content.

Before you begin

Role required: sn_cd.content_manager

Fill in the New content form fields. See Create rich content



Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. Drag and drop a list component into the canvas.
3. Double-click within the list to open the text formatting bar, where you can format the text, change the bullet list to a numbered list, or increase indentation.

4. Navigate to the **Settings** panel to configure the following styling settings:

Styling settings

Settings field	Description
Styling	
Background Color	Use the color picker (checkered square) to select a color or enter the color code that represents the background color you want to appear. All HTML colors are supported. For more information, see HTML color names.
Advanced styling	
Padding	Padding is the space between content and the border of an element. Specify the value for top, bottom, right, or left padding by entering a number.
Font name	Defines the font face used to render characters. Click the drop-down arrow to select a different font.
Font size	Sets the size of the font.
Font weight	Determines how bold or light your text appears. Click the drop-down arrow to select a different weight.
Line height	Sets the vertical distance between two lines of text.
Font color	Overrides the font color from your portal theme.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	To select a color, enter the hex code or click the color picker (grey square to the right of the font color) and select a color from the color palette.

5. **Optional:** Select the **Properties** drop-down.

Properties

Field	Description
ID	A unique ID that identifies the HTML element.
Title	Text that appears when a user hovers over the component.

6. Select **Save** or **Save and Finish**.
Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

  Note:
  Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add Tabs with Rich Content Editor

Add tabs to your rich content to help your users navigate efficiently by allowing them to select the various tabs to reveal the associated content within them.

Before you begin

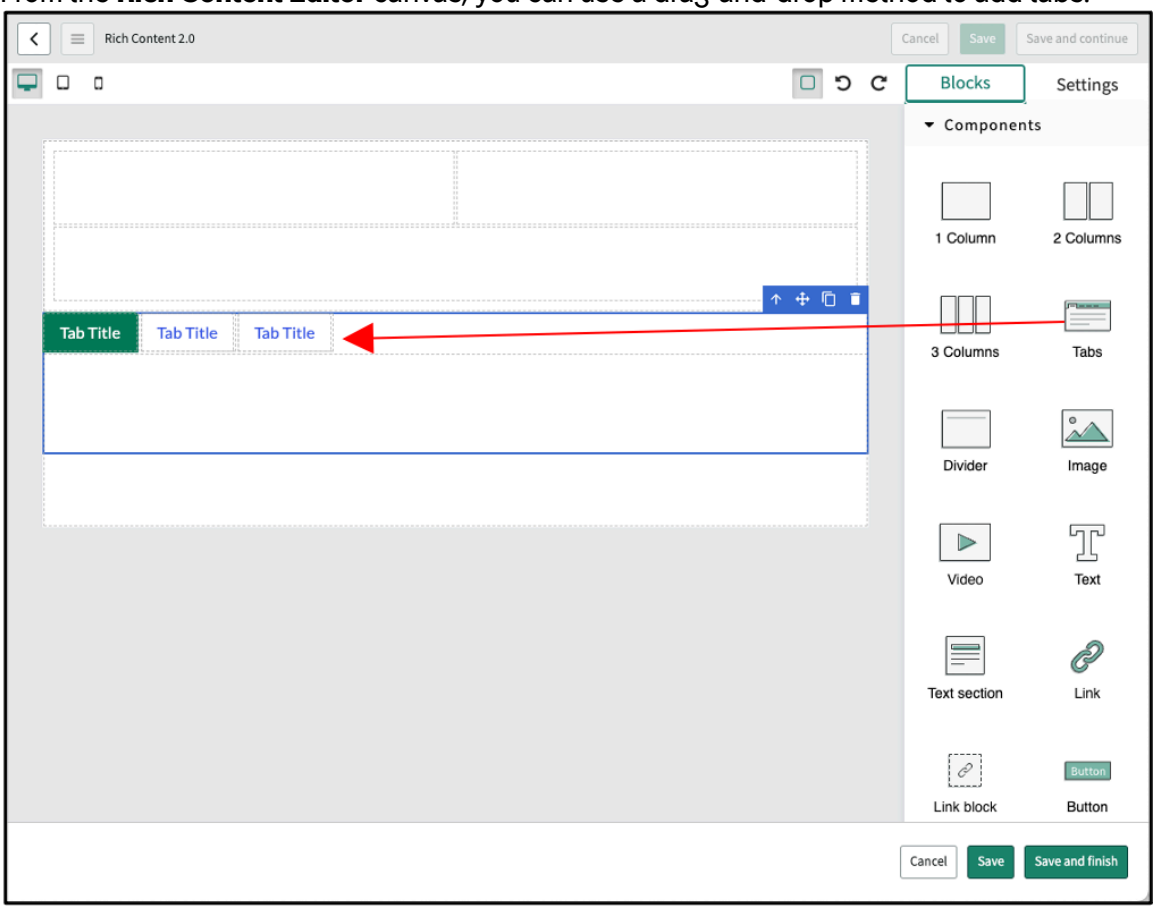
Role required: sn_cd.content_manager

Fill in the New content form fields. See Create rich content

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create the page layout using modules or columns.

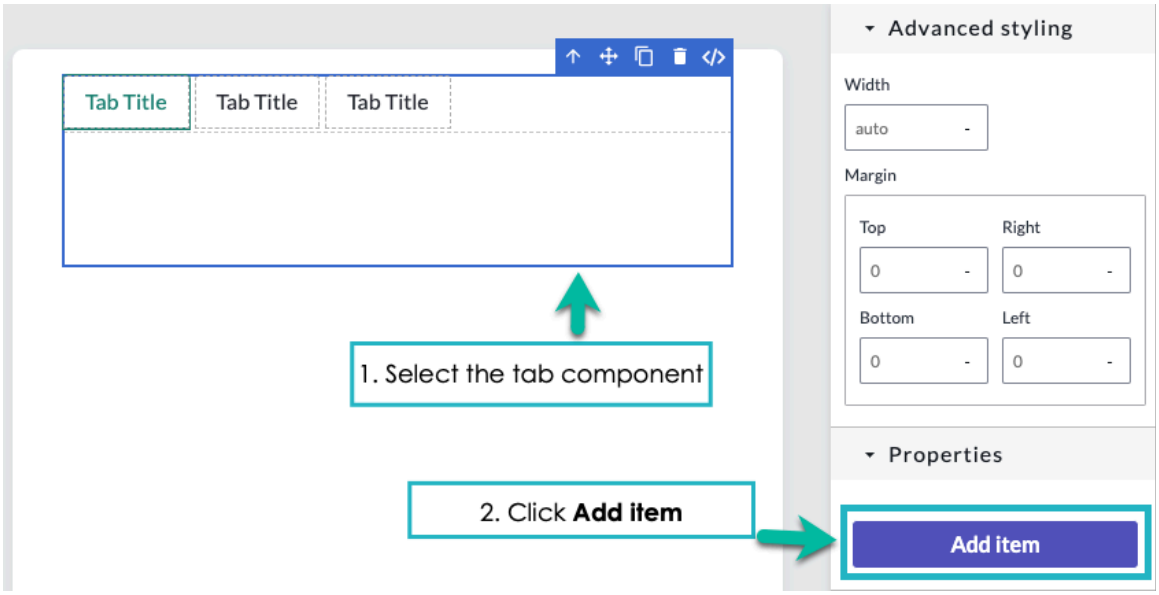
- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor



About this task

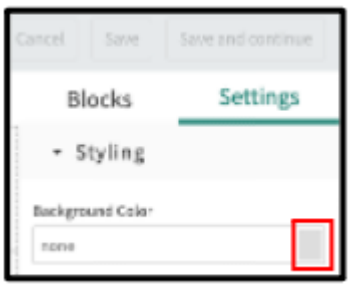
You can add other components under a tab, like an Image, Video, Text, Text section, Link, Link block, or Button. When you drop the **Tabs** component into your canvas, an area below the tabs appears that allows you to drop other components into it.

> **Note:**
> When the **Tabs** functionality is not enabled, try reinstalling the Content Publishing application.

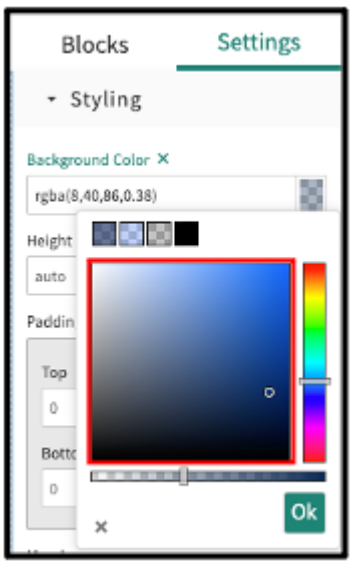


Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. From the **Rich Content Editor** canvas, you can use a drag-and-drop method to add tabs.

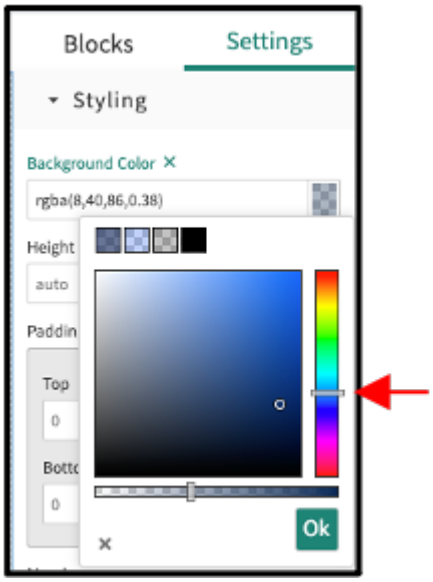


3. To add more tabs, select the entire tab component and click **Add item**, located in **Settings** > **Properties**.

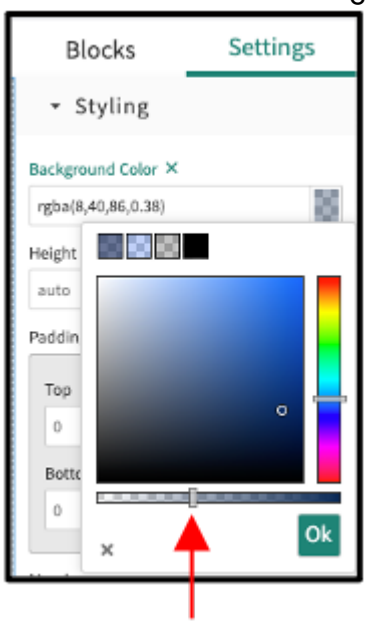


© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select a tab you added to your canvas.
5. To change the color of the tabs, first click into the color palette.
6. From the **Settings** tab, select **Styling**.
7. Enter the color code that represents the color you want to appear.
   All HTML colors are supported. For more information, see HTML color names.
8. Or, you can select the color picker (grey square) to the right of the **Background Color** field.

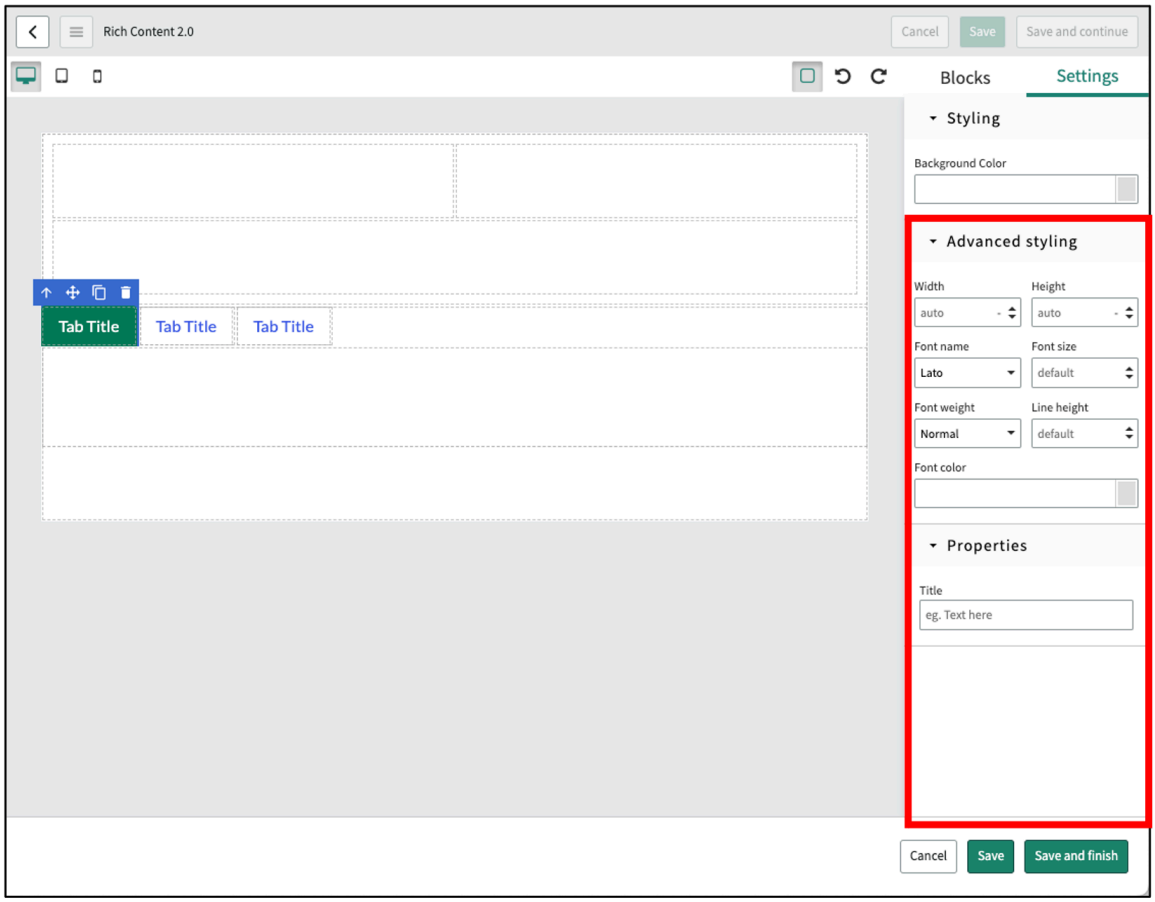


9. Click into the color palette that appears.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. After selecting a color from the color palette, use the slide bar on the right side to fine tune your color.
    Slide the bar up and down.



11. Use the bottom slide bar to lighten or darken your color.

Note:
When previewing your changes and you select the tab, the colors or outline of the tab may show the default colors of the portal theme.

12. You can edit or change the text that appears on the tab by highlighting **Tab Title** and overwriting it.
13. You can edit the size of each tab and the font of the **Tab title** by selecting a tab and then selecting **Advanced styling**.
14. You can drop other components into the area below the Tabs you added to your canvas.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Advanced styling

Field	Description
Width	Edit the width of each tab by selecting it and using the **Width** drop-down. Your choices are: ○ auto: Size is based on the content within the tab. If you enter additional text in the tab, the width automatically increases. ○ px: Use pixels as your measurement. ○ %: Use a percentage as your measurement.
Height	Edit the height of each tab by selecting it and using the **Height** drop-down. Your choices are: ○ auto: Size is based on the content within the tab. If you enter additional text in the tab, the width automatically increases. ○ px: Use pixels as your measurement. ○ %: Use a percentage as your measurement.
Font name	Select the drop-down to choose a specific font.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Font size	Enter a number to change the font size or use the up and down arrows to make the font smaller or larger.
Font weight	Determines how bold or light your text on the button appears. Select the drop-down arrow to choose a different weight.
Line height	Determines the distance between lines of text. Use the up and down arrows to make line height smaller or larger.
Font color	Defines the color of the font. Select the color picker (grey square) to the right of the **Font color** field. Click into the color palette, and choose the color you want. Use the slide-bars on the right and bottom to fine tune your color. **Note:** When previewing your changes and you select the tab, the color of the text may show the default colors of the portal theme.

15. Edit the **Title** field under **Properties**.
    The text you enter appears as hover text for the tab and the screen reader announces it.
16. Select **Save** or **Save and Finish**.
    Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
    Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add an Accordion with Rich Content Editor

Add an accordion component to the canvas to design content that can be expanded or collapsed.

Before you begin

Role required: sn_cd.content_manager

Fill in the New content form fields. See Create rich content

Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. Drag and drop the accordion component into the canvas.

Configure accordion component behavior and toggle/button design, and add more panels.

3. Navigate to the **Settings** > **Properties** section to configure the accordion component:

Accordion properties settings

Settings field	Description
Panel behavior	
Expand first panel on load	Selecting this option loads the accordion with the content in the first panel visible. If you deselect this option, the accordion loads with all the panels closed.
Allow multiple panels to expand	Selecting this option allows employees to expand multiple panels at once. If you deselect this option, when an employee expands a panel, the currently expanded panel automatically closes.
Button design	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
Style	Select the style of the accordion button, or toggle, that employees click to expand and close panels.
Size	Use the up and down arrows to adjust the size of the buttons.
Placement	Specify whether the buttons appear to the left or right of the accordion titles.
Color	Use the color picker (checkered square) to select a color or enter the color code that represents the color you want to appear. All HTML colors are supported. For more information, see HTML color names.

4. To add more panels to the accordion, click **Add item**, located in **Settings** > **Properties**.

Configure the accordion styling, such as background color or border. Click the outer component container (Accordions) to configure all the panels at once. To configure individual panels, click the respective containers.

5. Navigate to the **Settings** panel to configure the following styling settings:

Styling settings

Settings field	Description
Styling	
Background Color	Use the color picker (checkered square) to select a color or enter the color code that represents the background color you want to appear. All HTML colors are supported. For more information, see HTML color names.
Advanced styling	
Width	Specify the value by entering a number or dragging the right side of the cell. Select the unit of measure: ○ px: pixel ○ %: percentage
Padding	Padding is the space between content and the border of an element. Specify the value for top, bottom, right, or left padding by entering a number.
Margin	Margin is the space between a row and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
Border	Edit the border around the outside of the button. **Note:** The border is the outline around the button. Width: Use the up and down arrows to adjust the width of the border. Just like the width and height, you can choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows. Style: The format of the border around the button. Select the drop-down to select the type of border you want around the button. Color: The color of the border around your button. Select the color of your button using the color palette and slide bars similar to how you select your background color.
Border radius	Use the up and down arrows to adjust the radius of the border. Just like the width and height, you can choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows.

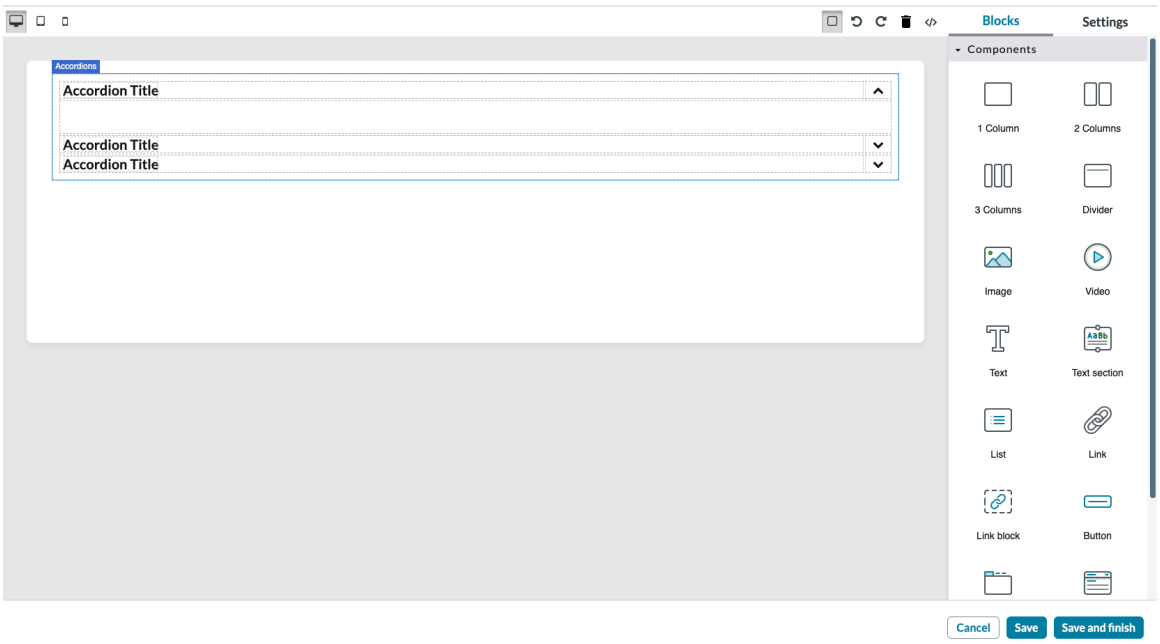
Format accordion title text.

6. To format the accordion title text, click the **Accordion Title** container and navigate to the **Settings** > **Styling** section.

Accordion title styling settings

Settings field	Description
Styling	
Text style	Allows you to quickly change the look of your text by selecting a pre-formatted choice. You can select different headlines or paragraph styles. Headline 1-6 corresponds to h1 - h6 HTML tags.
Text color	Use this drop-down to change the color of your text. Your choices are:

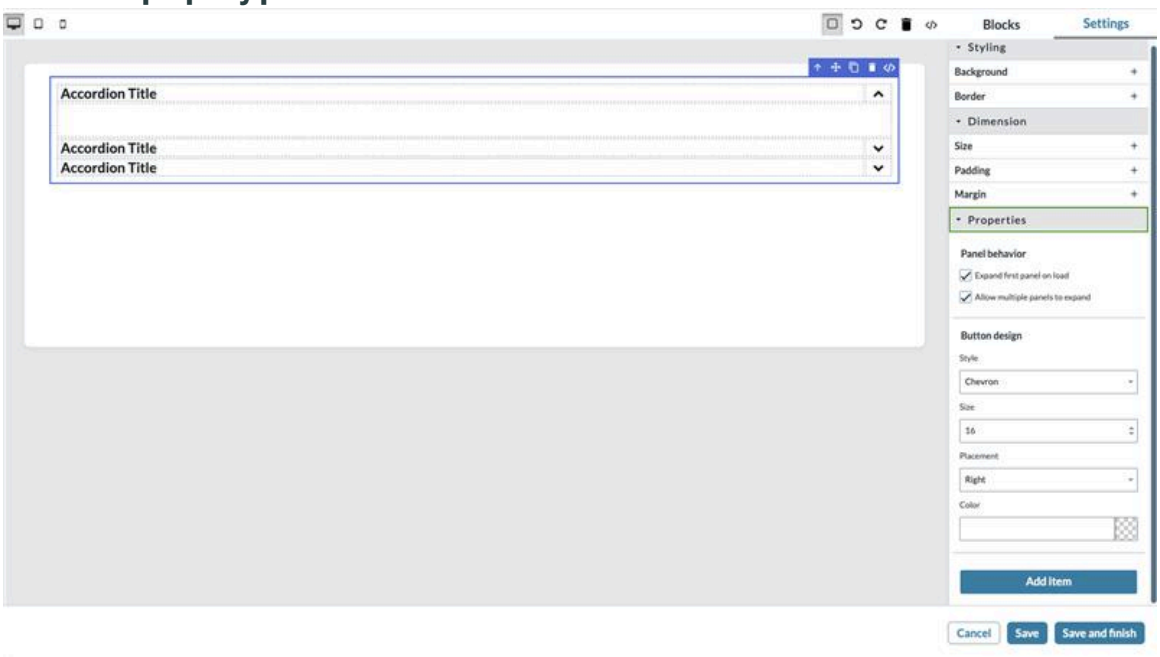
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Settings field	Description
	○ Primary: The primary color defined by your portal theme. ○ Muted: The color defined by your portal theme. ○ White: Changes the color of your text to white. This is useful when using a background color other than white. Text color assigns predefined CSS classes for text color.
Display	Configure the appearance of multiple components within the same column, such as an image and a text component. Select from the following options: ○ **Top and bottom** (default): Image appears above the other component. ○ **Side by side**: Image appears with the other component next to it. **Note:** For best results, set the same display for the components. For example, if you have an image and text components in a column and want the image to appear on the left and the text to appear at the right, change the **Display** settings for both components to **Side by side**.
Align	Determines the horizontal alignment of your text. Choose from: ○ Left justify ○ Center justify ○ Right justify ○ Justify (text is aligned with both margins)
Advanced styling	
Padding	Padding is the space between content and the border of an element. Specify the value for top, bottom, right, or left padding by entering a number.
Margin	Margin is the space between a row and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.
Font name	Defines the font face used to render characters.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	Click the drop-down arrow to select a different font.
Font size	Sets the size of the font.
Font weight	Determines how bold or light your text appears. Click the drop-down arrow to select a different weight.
Line height	Sets the vertical distance between two lines of text.
Font color	Overrides the font color from your portal theme. To select a color, enter the hex code or click the color picker (grey square to the right of the font color) and select a color from the color palette.



7. Build out the accordion content by adding images, videos, text, or links to the panels.
8. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.
9. View the canvas components and property panel for style and setting options.

Accordion view

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Accordion property panel

Use the components, properties, styling and settings to customize Accordion.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

  Note:
  Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Add a Table with Rich Content Editor

Add a table to your content to organize information in rows and columns.

Before you begin

Role required: sn_cd.content_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fill in the New content form fields. See Create rich content

Create the page layout using modules or columns.

- Modules are predefined content layouts comprised of header, paragraph text, and images. See Add predefined content layouts with the Rich Content Editor
- Columns are containers that enable you to define a custom layout. See Add columns with the Rich Content Editor

Procedure

1. Navigate to the canvas by selecting the **Open editor** button from the **Design** tab of the **New content** form.
2. Drag and drop the table component into the canvas.
3. In the **Create new table** window, enter the number of columns and rows.
4. Create a table header row by navigating to **Settings** > **Properties** and selecting **Enable header**.
5. To format the header title text, click the text box in the header row and configure the following settings:

Table header settings

Settings field	Description
Styling	
Text style	Allows you to quickly change the look of your text by selecting a pre-formatted choice. You can select different headlines or paragraph styles. Headline 1-6 corresponds to h1 - h6 HTML tags.
Text color	Use this drop-down to change the color of your text. Your choices are: ○ Primary: The primary color defined by your portal theme. ○ Muted: The color defined by your portal theme. ○ White: Changes the color of your text to white. This is useful when using a background color other than white. Text color assigns predefined CSS classes for text color.
Display	Configures the appearance of multiple components within the same column, such as an image and a text component.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	Note: This setting only applies in the case that you add another component next to the title text box. Select from the following options: ○ **Side by side** (default): Text appears with the other component next to it. ○ **Top and bottom**: Image appears above the other component. **Note:** For best results, set the same display for the components. For example, if you have an image and text components in a column and want the image to appear on the left and the text to appear at the right, change the **Display** settings for both components to **Side by side**.
Align	Determines the horizontal alignment of your text. Choose from: ○ Left justify ○ Center justify ○ Right justify ○ Justify (text is aligned with both margins)
Advanced styling	
Padding	Padding is the space between content and the border of an element. Specify the value for top, bottom, right, or left padding by entering a number.
Margin	Margin is the space between a row and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.
Font name	Defines the font face used to render characters. Click the drop-down arrow to select a different font.
Font size	Sets the size of the font.
Font weight	Determines how bold or light your text appears. Click the drop-down arrow to select a different weight.

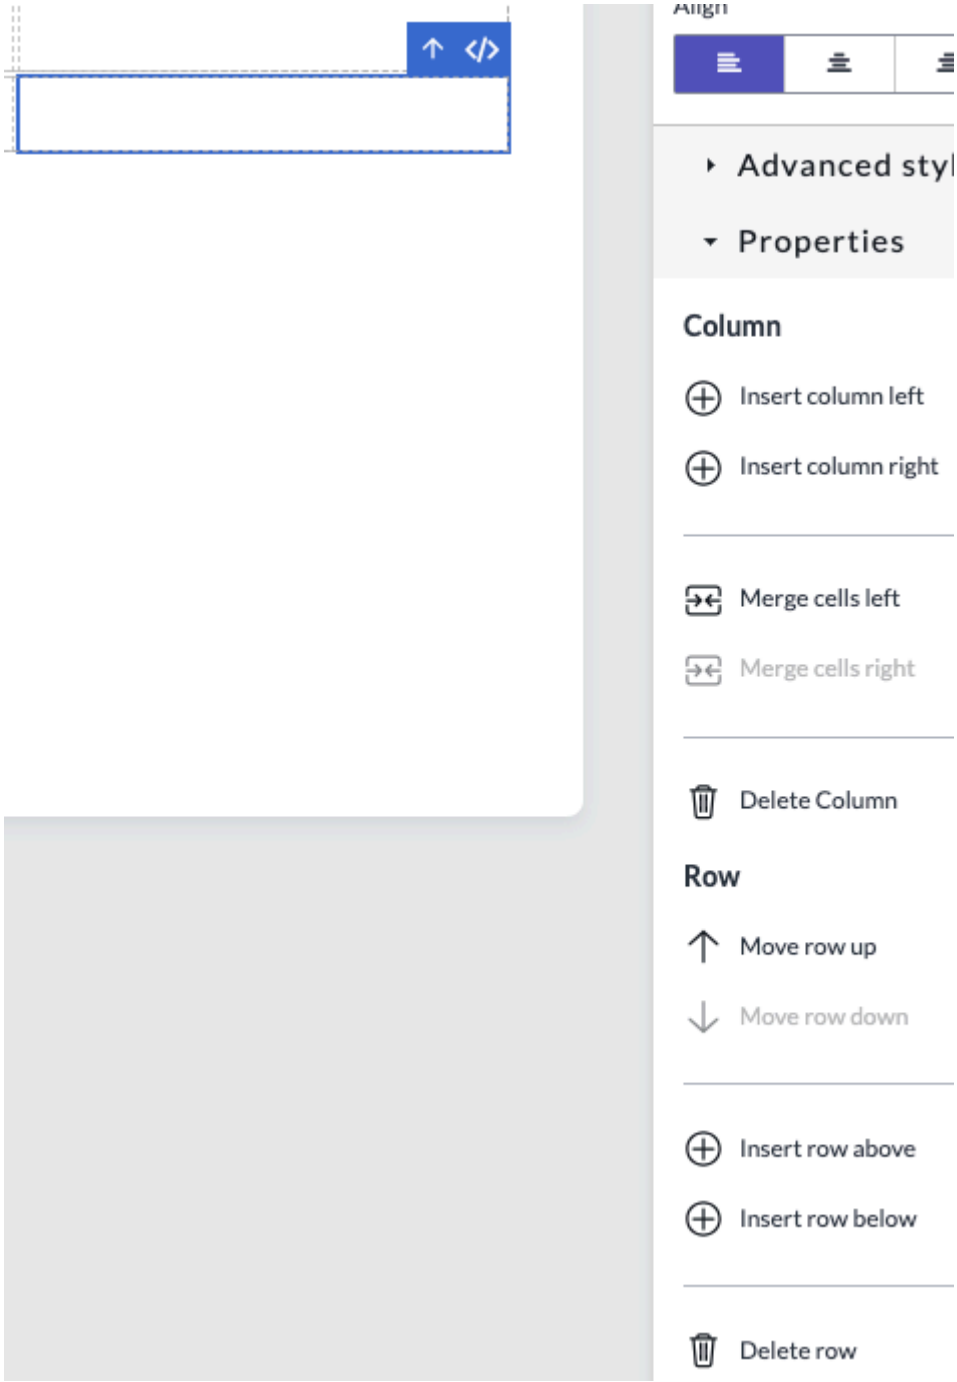
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
Line height	Sets the vertical distance between two lines of text.
Font color	Overrides the font color from your portal theme. To select a color, enter the hex code or click the color picker (grey square to the right of the font color) and select a color from the color palette.

Click on a cell to configure the settings for that cell, such as the background color or border. To configure settings for a row or all the cells in the table, click the up arrow until your desired container is selected.

6. Configure table styling settings:
   Settings options will vary, depending on if you have selected a cell, row, or the entire table.

Styling settings



Settings field	Description
Styling	
Background Color	Use the color picker (checkered square) to select a color or enter the color code that represents the background color you want to appear. All HTML colors are supported. For more information, see HTML color names.
Align	Determines the horizontal alignment of your text. Choose from: ○ Left justify ○ Center justify ○ Right justify ○ Justify (text is aligned with both margins)
Advanced styling	
Width Height	Adjust the width and height of the component using the **Width** and **Height** fields. You can also choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows. The choices are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Settings field	Description
	○ auto: Size is based on the content within the tab. If you enter additional text in the tab, the width automatically increases. ○ px: Use pixels as your measurement. ○ %: Use a percentage as your measurement.
Padding	Padding is the space between content and the border of an element. Specify the value for top, bottom, right, or left padding by entering a number.
Margin	Margin is the space between a row and another element/the canvas boundary. Specify the value for top, bottom, right, or left padding by entering a number.
Border	Edit the border around the outside of the button. **Note:** The border is the outline around the button. Width: Use the up and down arrows to adjust the width of the border. Just like the width and height, you can choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows. Style: The format of the border around the button. Select the drop-down to select the type of border you want around the button. Color: The color of the border around your button. Select the color of your button using the color palette and slide bars similar to how you select your background color.
Border radius	Use the up and down arrows to adjust the radius of the border. Just like the width and height, you can choose the unit of measure you prefer by selecting the single down arrow key to the left of the up and down arrows.

7. With a cell selected, use **Settings** > **Properties** to add or delete columns or rows, merge cells, and move rows up or down.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Select **Save** or **Save and Finish**.
   Selecting **Save** saves your content and you remain on the **Rich Content Editor** canvas.
   Selecting **Save and Finish** saves your record and returns you to the **New content** form.

What to do next

- (Optional) Translate your content.

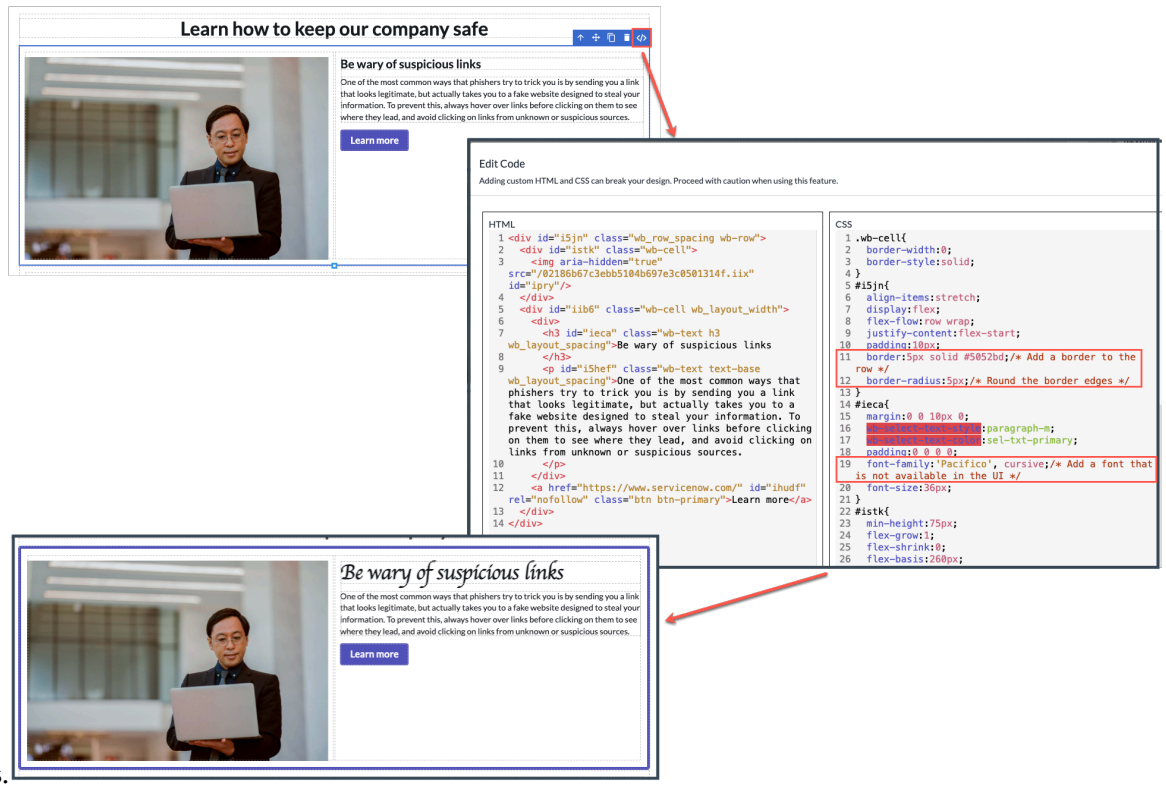
  Request language translation for your content. For more information, see Switch language for Content Publishing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.



Note:
Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Editing source code in the Rich Content Editor

Modify the HTML and CSS source code for all the elements in the canvas or for a specific element.

Build the layout using HTML elements, directly edit the CSS for an element to add styling that isn't otherwise available in the canvas interface, or copy-paste code to migrate content from other sources.

Features and capabilities

Ensure portal security

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When you click **Apply** in the Edit code window, the code editor removes HTML tags that could be used to compromise your instance. For more information, see HTML sanitizer.

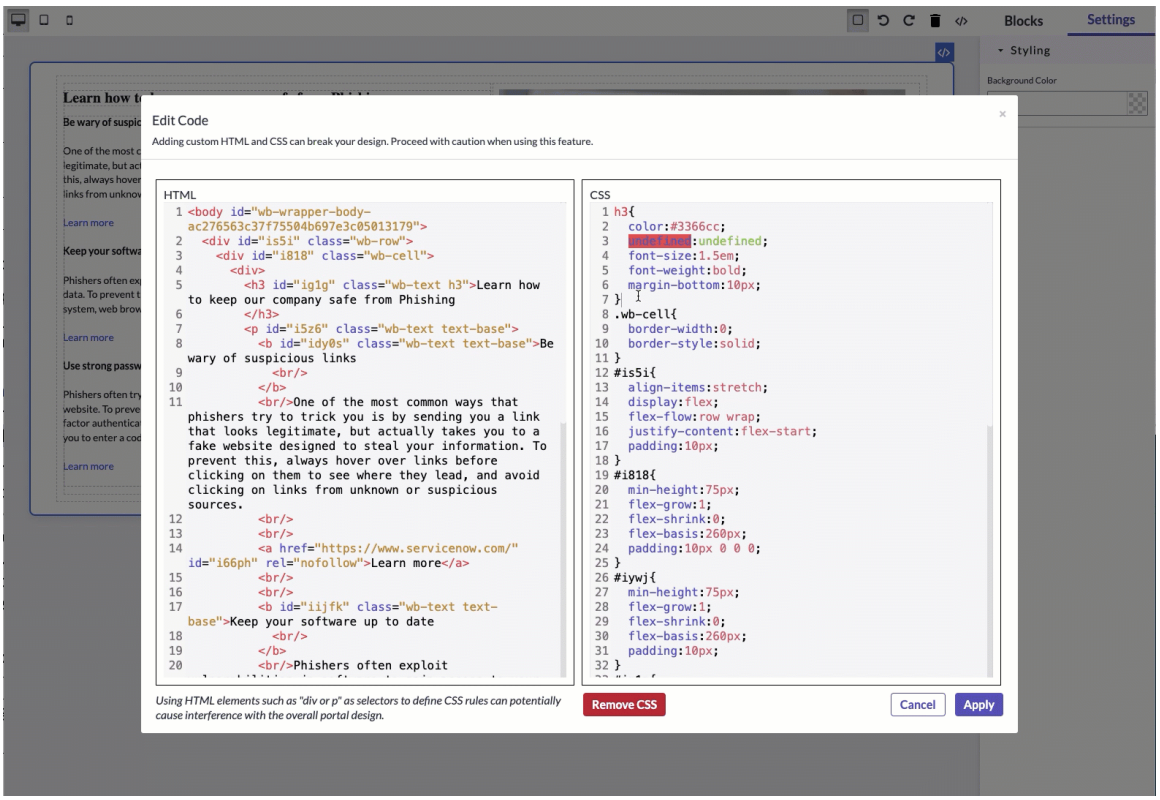
Identify important code

The editing window highlights CSS fragments in red if they should not be deleted. This indicates either a setting that is part of the portal theme or that multiple elements use that code.

Additionally, if you delete a CSS rule that is referenced by one of the following HTML elements, the code editor reinstates the CSS rule:

- Row
- Cell
- Canvas
- Divider
- Button
- Link block
- Tabs

Remove unnecessary code



When you save your changes, the code editor removes any unused CSS rules.

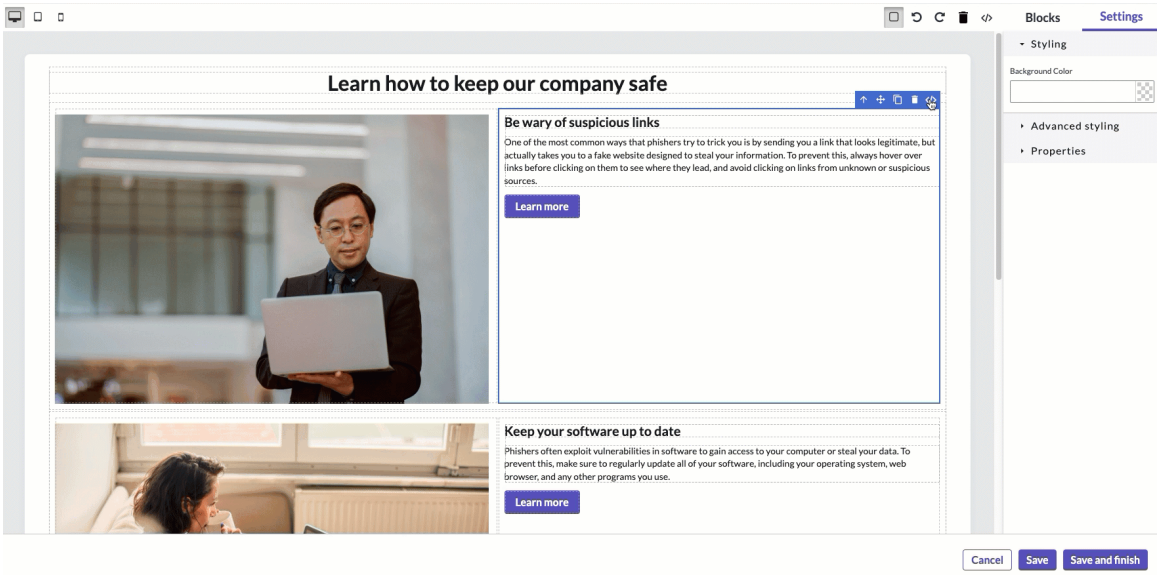
Conversely, if the code editor reinstates a CSS rule that you are trying to remove, highlight that block of CSS code and click the **Remove CSS** button to override the code editor.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

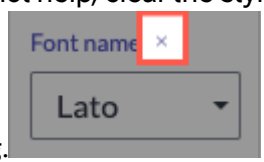
Example of using the Remove CSS button

In the following video, the user tries to delete a CSS rule using the delete key, but the system reinstates the code. Next the user highlights the code and clicks **Remove CSS**, which successfully removes the code.

Note:
This feature is not available by default. An Admin must enable the **Edit code** property. See Properties installed with Content Publishing



Important considerations



- Adding custom HTML and CSS can break your design. Proceed with caution when using this feature. The Rich Content Editor does not track changes in the code editor, so the **Undo** button will not reliably revert the code changes.
- We do not recommend using HTML elements (such as div or p) to define CSS rules, as that can have unintended consequences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example of an unexpected outcome when using HTML element to define CSS rule

In the following example, the user defines a CSS rule for the p element in a cell. However, in the page preview, the style rules apply to the p elements in all the text boxes, as well as in the footer.

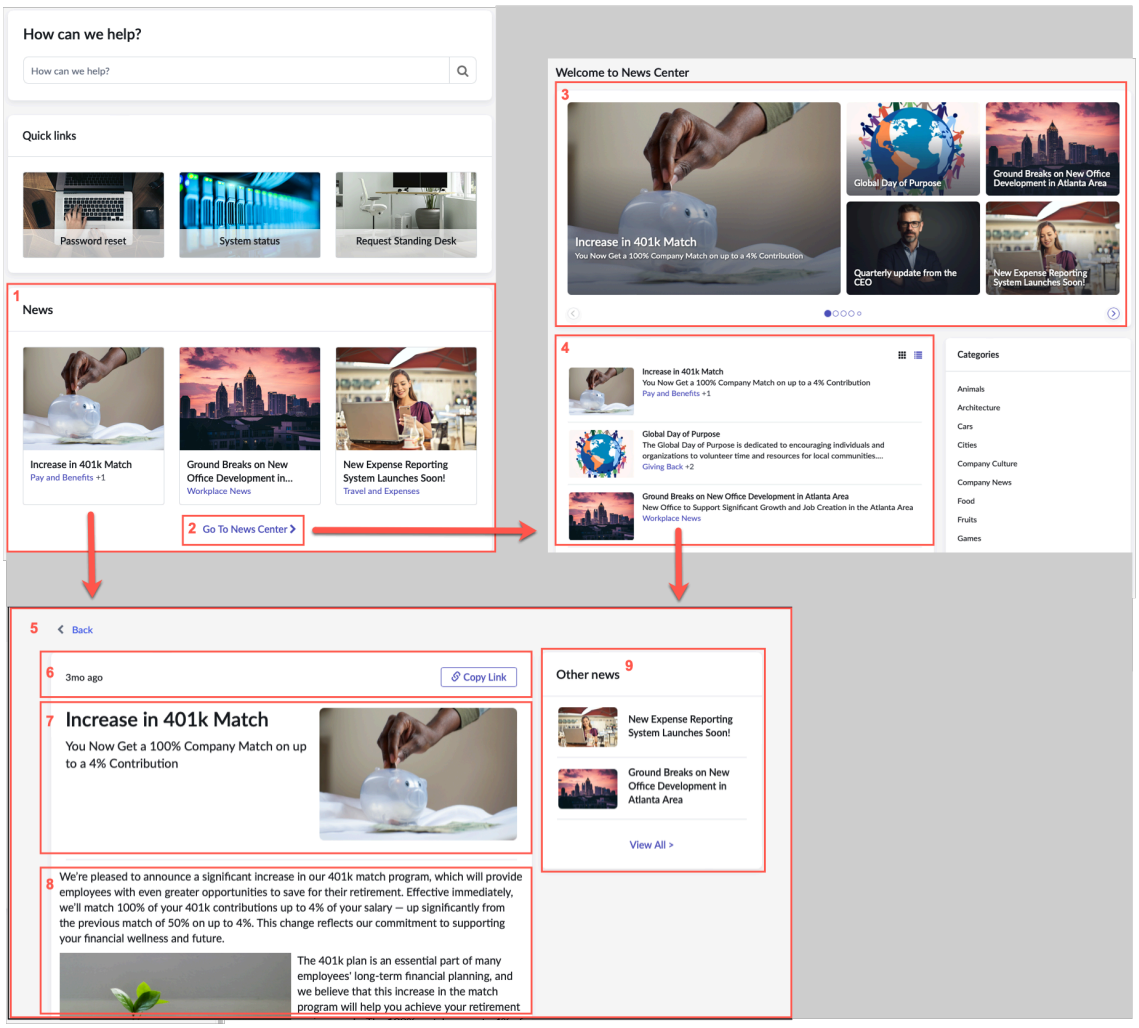
- Different browsers may exhibit varying copy/paste behaviours. If pressing Ctrl+V does not duplicate the content as expected, click the duplicate icon in the component toolbar.
- If copy-pasted content does not retain its styling (such as font), and adjusting the settings does not help, clear the styling by clicking the “x" next to the styling field, then set the styling.

- If pasted content appears differently saving, it likely due to some script tags being removed by the HTML sanitizer.

News articles

The News article content type combines content creation features from the Rich Content Editor with new publishing methods that enable high volume content publishing to the portal and Now Mobile app to keep employees updated on company news and announcements.

News articles in the employee portal



News articles are delivered to users through customizable instances of the News Feed widget. The News Feed widget instances appear on the portal Home page, News Center, Article detail page, and the emp_taxonomy_topic page. The admin can configure the News Feed widget to display news articles in a vertical list or as a three-column grid, add a call to action that links to another page, or to display the news categories. For more information, see Modify the News feed widget.

The Featured News widget appears at the top of the News Center page to display highlighted news articles. For information on configuring the Featured News widget, see Modify the Featured News widget.

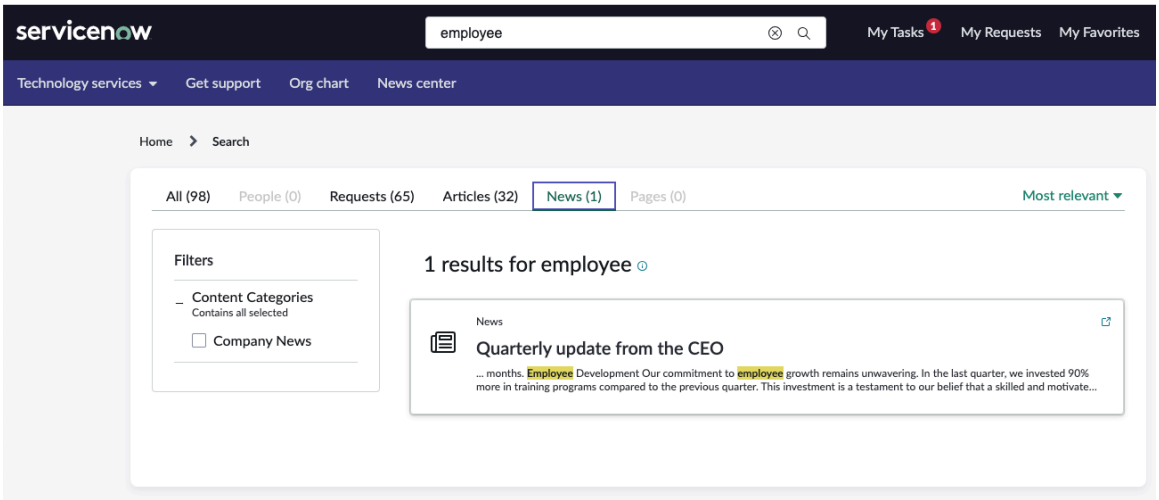
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For ServiceNow instances that are on version Washington or later, the News Center automatically appears as a menu option in the top-level navigation menu (mega menu) to give users quick access to all the published news articles. To remove it from the menu, see Hide News Center from the Mega Menu.

Review the following graphic to understand how employees see and interact with the widgets that display News articles:

1. News Center widget displays highlighted articles on the home page
2. News Center button opens the News Center page
3. Featured News widget displays highlighted articles in the News Center page.
4. All news list uses the News feed widget to show news configured for delivery to this page
5. When an employee clicks a news article, the full article opens in the Article details page

   The three subsequent widgets (News info, News Header, and News Article Detail) work in tandem to display a news article. The three widgets contain the instance option **Use dataloader**. We recommend enabling this option as it allows the news widgets to share data with each other, which reduces calls to the server and web page loading time.

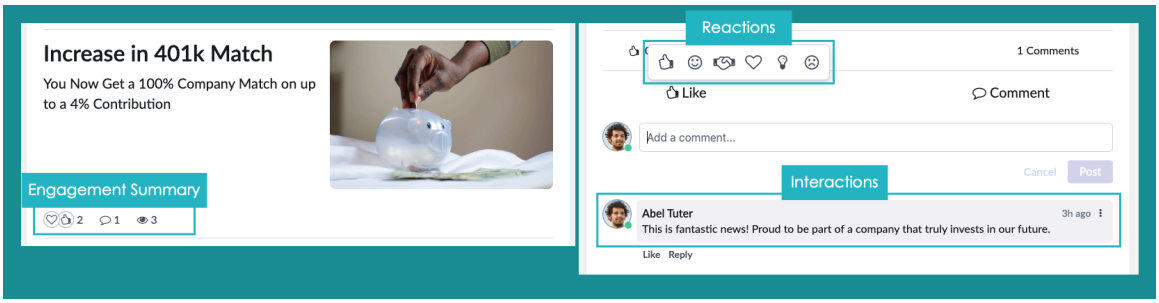


6. News Info widget: Holds the Published date and Copy Link button
7. News Header widget: Holds the headline, subheadline and image thumbnail

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. News Article Detail widget: Holds the article body as created in the Rich Content
9. Other news uses the News feed widget to show news configured for delivery to this page

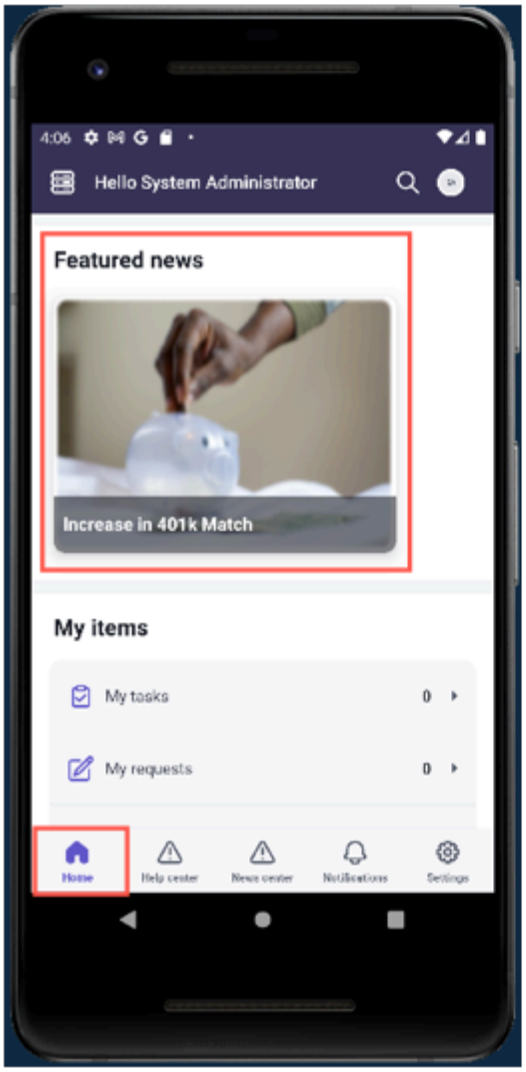
Searching for News articles



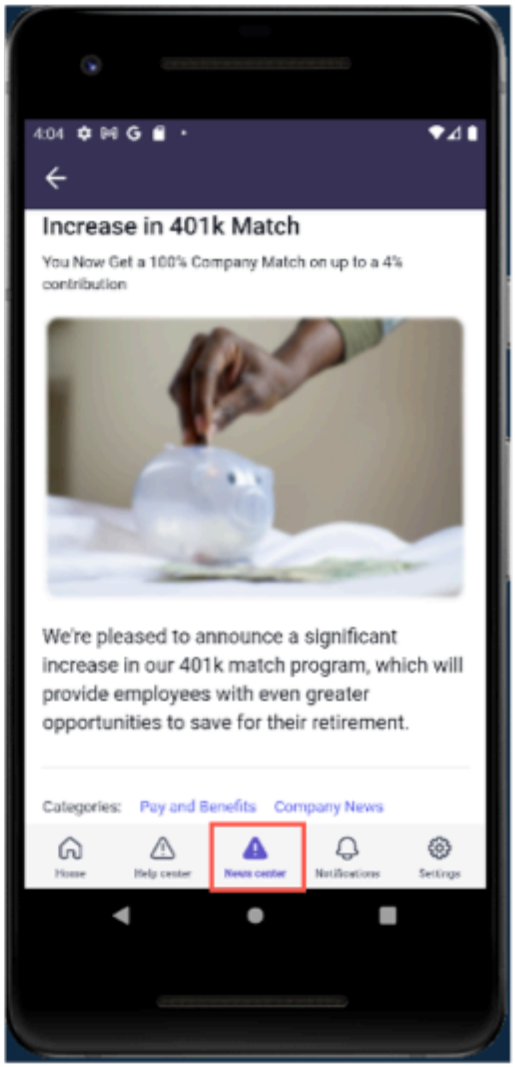
When employees enter a keyword in the global search bar, Employee Center uses AI Search to return published news articles containing that keyword in the heading, subheading, article content, or category.

If the user with the system admin or content admin role uses the global search bar, the results include unpublished news articles.

Employee engagement with news articles



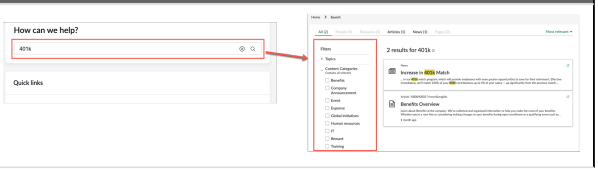
Content engagement enhances news articles by providing users with a way to comment and react to articles and for managers to measure the effectiveness of their content using engagement metrics. For more information, see Content engagement



News articles in the Now Mobile app

The Now Mobile app features the News center screen, which displays the same News articles that are published to the News feed widget in the portal. In addition, content managers can configure News articles to appear on the Now Mobile app Home screen.

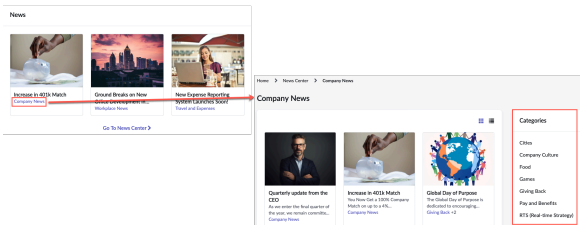
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

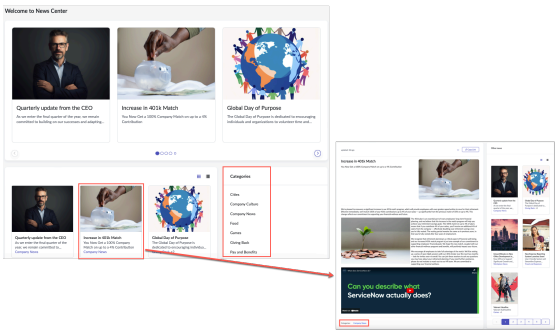


For information on the Now Mobile app user experience, see News in Now Mobile. For information on publishing news articles, see Create a publish plan for your content.

Organizing news articles

Content admins and managers can assign one or more categories to a news article, for example Industry news or Company culture. Once the article is published, employees can see the categories associated with an article when previewing it in the News Feed widget on the Home page or in the News Center. An employee can click the category to open the Category page, which lists all the news articles associated to that category in reverse chronological order.





The following table demonstrates how categories enhance the user experience:

Categories capabilities with example screen shots

Capability	Screen shot
When an employee searches for a news article, they can filter the search results by news category.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Categories capabilities with example screen shots (continued)

Capability	Screen shot
The News Feed widget displays the categories for each article, which link to a page for that category. Each category page lists the associated news articles, organized by publication date, with the most recently published articles displayed first. The page also holds a Category list widget with links to the other category pages. The widget displays the categories based on the configured order. If there are multiple categories with the same order value, the system lists them in alphabetical order.	
The News Center holds a Category list widget with links to the category pages. When an employee opens a news article, the Article detail page displays the news category at the bottom of the article.	

Boosting News article production

Content authors can increase their productivity by leveraging content templates to produce large volumes of News articles. A user with the sn_cd.content_template_owner role first creates a content template to define the article layout, publishing location, and audience. When a content author creates a new article, they can associate the news article to a content template to access a pre-built template and auto-generated publish plans.

For more information, see Content templates.

Customizing the News experience

The News Center and Article Detail pages support other Content Publishing widgets. For example, you can configure the News Center page to display upcoming events. For information on configuring the portal pages, see Creating portal pages.

To set a limit for the number of articles displayed in the News widget or to select different pages for the News Center or Article display, see the News section of Properties installed with Content Publishing.

If you plan to customize the News Center or Article details page, we recommend that you create new pages and update the properties to redirect to the new pages. Some additional considerations include:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Article details page widgets require a `sys_id` query string parameter with the sys_id of the specific News Article.
- We recommend having a News Dataloader widget in the Article details page, and enabling the **Use Dataloader** option in the other widgets in the page. This facilitates data sharing between the widgets on the page, which reduce the page loading time.

Create a news article

Use News articles to keep employees updated on company news and announcements.

Before you begin

- Role required: sn_cd.content_manager
- To publish large quantities of news articles, create a Content template before you create news articles. See Create a Content template
- You can assign one or more content categories to the news article so employees can filter news articles by category. See Create a content category.
- Social engagement settings enable employees to view page count, select a reaction icon, or leave a comment. See Content engagement

About this task

The news article content type is built using the Rich Content Editor and published to the employee portal via news widgets. For an overview of News articles, see News articles.

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New**.
3. Select **News Article** under the **Choose a content format** section.
4. Select **Continue**.
5. Fill in the fields in the **New content** form.

Design

Field	Description
Content name	The name that describes the content you are creating.
Order	The order in which the news article appears in a widget or the news page. A news article with a lesser value appears first. If two articles have the same order value, articles will appear based on the most-recent publish date.
Active	Indicates the content is active and available for use.
Article publish start date and time	The date and time when the article becomes available for viewing on the portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: The article becomes visible to specific users on a set date, based on the publish plan configurations.
Article publish end date and time	The date and time when the article is no longer available for viewing.
Headline	The headline for the news article
Subheadline	The secondary header for the news article
Featured image	The image that will appear in the news article and as a thumbnail in the News feed widget in the Employee Center Pro. We recommend a 4:3 ratio for images.
Article content	Link to assemble the body of the news article in the Rich Content editor. See Rich Content Editor
Use a content template (Optional)	Option to use a preconfigured template which provides a content layout and generates a publish plan. See Content templates
Category	Select one or more categories to associate with the news article.
Social engagement settings	If the Content Admin enabled social engagement, the following settings appear in the form to allow employees to engage with the article: ○ Allow comments ○ Allow reactions ○ Show page view count

6. Click **Save and continue** to proceed to publishing the article.
   If you change the Content template after saving the News article, the system deletes the auto-generated publish plans and generates new plans per the newly-selected Content template. You are redirected to the **Publish** tab.

What to do next

- Review how the News article will appear in the Article detail page by clicking **Preview on portal**.

  Note:
  The content preview does not show how News articles appear in a widget or on mobile.

- Publishing news articles

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a news article template

Create a news article template to enable content authors to reuse the article layout to rapidly assemble news articles.

Before you begin

Role required: sn_cd.content_admin or sn_cd.content_template_owner

You can create a reusable article template from scratch or based on an existing news article: Create a news article

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select the news article.
3. From the hamburger menu, select **Clone as reusable article**.

4. Enter a name for the reusable article.
5. Click **Open editor** to edit the layout.
6. Click **Save**.
   The reusable article appears in **Content Publishing** > **Reusable Components** > **Reusable Articles**.

What to do next

Add the reusable article to a new or existing content template: Create a Content template

Publishing news articles

News articles can be published via a publish plan or using Content templates to auto-generate publish plans. These auto-generated publish plans are inactive by default and must be activated for News articles to appear in the portal.

Before you begin

- Role required: sn_cd.content_manager
- Complete the steps to Create a news article

About this task

If you selected a Content template when you created the News article, the system generates the publish plans defined in the Content template.

Note:
If the Content template is edited after the system auto-generated the publish plans, those changes are not reflected in existing publish plans.

You can manually add publish plans, just like for other content types. For more information, see Create a publish plan for your content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the News article that you want to publish.
2. Review the auto-generated publish plans and edit as necessary, such as to change the audience or publishing dates.
   The changes you make to publish plans do not impact the Content templates.

   Note:
   If you edit an auto-generated publish plan, ensure you select the **Active** option.

3. Click **Activate generated plans**.

What to do next

If you edit a news article after publishing it and want to change the publish start date, you must generate new publish plans.

Hide News Center from the Mega Menu

The News Center menu option appears in the primary navigation menu by default, however, a portal admin can remove it from the menu.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Service Portal** > **Menus**.
2. Locate the menu used in the Employee Center portal and click the link in the **Updated** column.
3. Scroll to the Related Links table and locate the News Center menu item.
4. Click in the **Active** column to change the value to `False`.
   The News Center menu option no longer appears in the primary navigation menu.

Create customized media with styled content

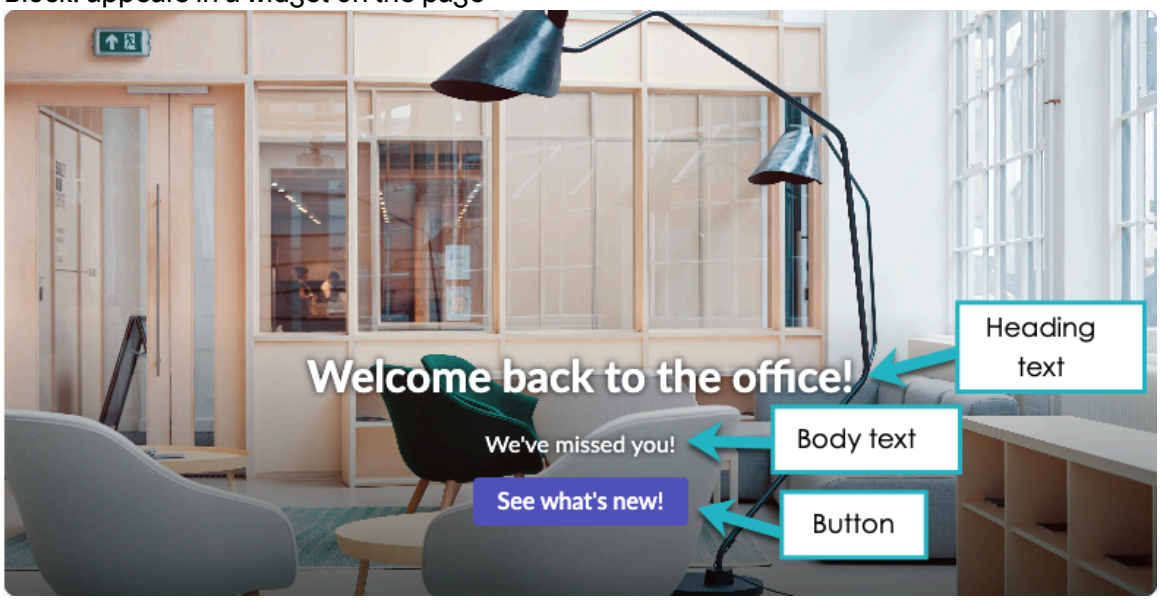
Create banners, block/announcements, or videos using the styled content type to customize settings such as text color, text alignment, links, background colors, and images on Employee Center Pro.

Before you begin

Role required: sn_cd.content_manager

If you are creating video content, you must first upload the video: Add or modify links to other content sources

About this task



This content type offers three options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Banner: appears at the top of the page

- Block: appears in a widget on the page

- Video: can appear anywhere on a page, including at the top in place of a banner

When creating or editing a banner using styled content, you can view and edit the background image rather than editing your image externally and then importing it.

The Form Context menu () at the top, left of the form provides the ability to quickly accomplish tasks when creating content. Select the icon and the following choices appear:

- Clone: duplicate the content record.
- Delete: remove the content record and associated scheduled content records.
- View content record: access and view the content record.

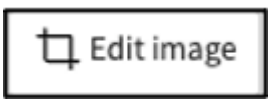
Note:
You must save the underlying content record before the Form Context menu selections are activated.

Procedure

1. Navigate to **Content Publishing** > **Content Library** > **Create New**.
2. Select **Portal** under the **Select the Platform** column.
3. Select **Styled content** under the **Choose a content format** section.
4. Select **Continue**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Fill in the fields in the **New content** form.



Design

Field	Description
Content name	The name that describes the content you are creating or editing.
Order	The number that indicates the order in which the portal and styled content appears in the Content list.
Active	Indicates the content is active and available for use.
Content style	Identifies if your content is: ○ Banner ○ Block ○ Video
CONTENT	
User reference table	Determines the variables you can use to personalize text for the block content. Select **HR Profile** to select variables from the sn_hr_core_profile table. **Note:** When the Human Resources Scoped App: Core (com.sn_hr_core) plugin is activated, only **HR Profile** appears. Select **User** to select variables from the sys_user table.
Headline	A title you want to appear for your content. This field is not required if you want your banner to show only a graphic. **Note:** This field only appears when the Content Experience widget is used.
Heading text	Text that provides additional information or clarity to your headline.
Body text	The detailed message you want to appear over the banner.
User column	Together with the HR profile [sn_hr_core_profile] table, filters users when evaluating a condition. This field only appears when you select **HR Profile** from the **User reference table** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Text color	Indicates if you want the body text to appear dark or light. **Note:** For the Banner content style, both dark and light are supported. For Block content style, only light is supported if the **Text over background** field is active (green).
Text alignment	Indicates how you want your text to appear. You can select left, center, or right justified.
Icon	Determines if you want an icon to appear. Slide right to choose an icon. Only appears when you select **Block** from **Content style**.
Pick an icon	Select the icon you want to appear. This field only appears when you turn the Icon field to green.
Icon size	Indicates the size of your icon. This field only appears when you turn the Icon field to green. The recommended size for icons are: ○ Topic icon: 56 x 56px ○ Sub-topic icon: 28 x28px
Call to action	Select if you want a button or link to appear.
Button title	The text that appears over the button. This field only appears when you select **Button**.
Button link	The link the user goes to when selecting the button. Select the down arrow to view a list of links. This field only appears when you turn the Icon field to green.
Link title	The text that appears for the link. This field only appears when you select **Link**.
Link	The link the user goes to when selecting the link. Select the down arrow to view a list of links.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	This field only appears when you select **Link**.
Video link	The link to the video you want to appear on your portal. This field only appears when you select **Video** from **Content style**. **Note:** Only YouTube and Vimeo videos are supported at this time. Ensure you use the embedded video link.
BACKGROUND	
Background Color	The background color of the banner or block text. To define the color, you can use: ○ Hex color codes **Note:** For a list of hex color codes see Hex color codes. ○ CSS color value and includes keywords, name, RGB decimal, or RGB hex number of the color. **Note:** For more information, see HTML Color Names (W3CSchools).
Background image	Indicates that you want an image to appear as the background. Slide right to display additional image fields.
Image file [Upload an image]	Select the link to add an image. This field only appears when you activate **Background image**. The recommended size for banners are: ○ Home page banner: 1440 x 400px ○ Topic page: 1258 x 300px
	Allows you to edit your background image within the Content Library module. This field only appears after you upload a background image. A crop box appears over the image in the Image Editor Mode form. You can use the crop box by dragging the edges in or out to indicate what part of your image you want to display.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	After opening the image editor, the default mode is crop. When you upload and edit a .svg file, it is saved as a .png file. **Note:** .gif files are not supported. The following icons and buttons appear to help edit your image: Each icon allows you to edit the image you imported: ○ Reset to original  ▪ Activates after you make edits to your image. ▪ Select and the **Reset to original?** pop-up appears. Select the **Reset image** button to back out any edits you made to your image. **Note:** After you select **Save**, you can no longer reset your image. You must upload the image again if you are not satisfied with your edits. ▪ If you do not want to keep your edits, select **Cancel**. ○ Move image mode  ▪ Select your image in any place outside of the crop box and with your mouse, move your image. ▪ Use the points to resize the image. ▪ Press and hold your mouse to move the crop box. ○ Crop image mode  ▪ Select and your cursor is set to crop. ▪ Create a new crop box by holding and dragging your cursor. ▪ Hold and press your mouse to move the crop box. ▪ Resize the crop box using the points. ○ Zoom in

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	▪ Click to make the image larger and closer. ▪ Continue clicking to incrementally zoom in on the image. ○ Zoom out  ▪ Click to make the image smaller and farther away. ▪ Continue clicking to incrementally zoom out on the image. ○ Move left 10 pixels  ▪ Click to move the image to the left by 10 pixels. ▪ Continue clicking to move the image to the left in 10 pixel increments. ○ Move right 10 pixels  ▪ Click to move the image to the right by 10 pixels. ▪ Continue clicking to move the image to the right in 10 pixel increments. ○ Move up 10 pixels  ▪ Click to move the image up by 10 pixels. ▪ Continue clicking to move the image up in 10 pixel increments. ○ Move down 10 pixels  ▪ Click to move the image down. ▪ Continue clicking to move the image down in 10 pixel increments. ○ Rotate left 45 degrees  ▪ Click to rotate the image 45 degrees counter clockwise. ▪ Continue clicking to rotate the image counter clockwise in 45 degree increments. ○ Rotate right 45 degrees  ▪ Click to rotate the image 45 degrees clockwise. ▪ Continue clicking to rotate the image clockwise in 45 degree increments. ○ Crop-short rectangle 

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	▪ Click to change the crop tool to a short rectangle shape. ▪ Use the square points of the rectangle to further crop your image. ○ Crop-tall rectangle  ▪ Click to change the crop tool to a tall rectangle shape. ▪ Use the square points of the rectangle to further crop your image. ○ Crop-square  ▪ Click to change the crop tool to a square shape. ▪ Use the square points of the square to further crop your image. ○ Custom  ▪ Click to display the **Detail Editing** pop-up. ▪ You can define the size of the crop tool and the size of your image by pixels. ▪ You can also specify the angle you want your image rotated. ○ Preview  ▪ Select to display a preview of your edited image. ▪ Enter location information similar to when you publish your content. This allows you to view your image where you want it to appear. For information on the fields, see Create a publish plan for your content. ○ Cancel and Save  ▪ Select **Cancel** to exit editing your image and not save your changes. ▪ Select **Save** to save the edits you made to your image. You can select **Crop and continue** to continue editing. **Note:** After you select the **Save and continue** your edits are saved and you cannot back out your edits.
Image size	How you want the image to appear.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Fill width: Resize the image to cover the entire container, even if the image must be stretched or cut off on the edges. ○ Fit width: Resize the image to ensure it is entirely visible. ○ Original size: Use the original size of the image. This field only appears when you activate **Background image**.
Image position	The location you want your image to appear. Select a box to define the image position. This field only appears when you activate **Background image**.
Text over background	Indicates that you want the text to appear over the background image. If you leave unchecked, the text appears below the image. Slide right to select a gradient for your background.
Add gradient	Indicates that you want the text to include color gradient to make your text easier to read. Only appears when you activate the **Text over background** field.

6. Select **Save** to save the record and remain on the **Design** tab.
7. Or, select **Save and continue** to save the record and move to the **Publish** tab.

What to do next

- (Optional) Translate your content.

  Request language translation for your content. For more information, see Switch language for Content Publishing.

  Note:
  Only translate content after you are done modifying the content. For best results, we do not recommend that you add or remove components or change the formatting after translation.

  To create rich content that is formatted differently in different languages, duplicate the content and modify the formatting as needed. Then, use Audiences to target the content to users by language. See Audiences

- Preview your content from the **Publish** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Content Preview is designed to provide a general idea of how your content looks. Content may look different once published due to variations in device resolution, theme difference, or mobile app style configuration.

- Configure a publish plan to control where the content is delivered, the audience, and the period of time it is available: Create a publish plan for your content.

Create video content

Using the Content Library, you can create video content to appear on the employee portal.

Before you begin

Role required: sn_cd.content_manager

To add features to your video link like heading text, body text, text color, background color, and background image, use Portal Styled content from the **Content Library**. For more information, see Create customized media with styled content.

About this task

The Content Library supports the following types of video:

- HTML5

Note:
Hover text or tooltips are not supported for HTML5 at this time.

- YouTube
- Vimeo

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Portal** under the **Select the Platform** column.
4. Select **Video** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **New content** form.

Design

Field	Description
Content name	The name that describes the content you are creating or editing.
Active	Indicates the content is active and available for use.
Video URL	The link to the video you want to appear as content. Only YouTube and Vimeo videos are supported at this time. Ensure you use the embedded video link.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select the Lookup using list icon () to view a list of link content. This list matches the content you can select when selecting the down arrow key (). You can also select the Preview this record icon () to view the link content record. **Note:** Depending on your configurations or extensions, your link may open in a new window.

7. Select **Save** to save the record and remain on the **Design** tab.
8. Or, select **Save and continue** to save the record and move to the **Publish** tab.

   To switch languages or translate your content, select the **Language settings** drop-down at the top, right side.

   To switch languages and have the fields on the form appear in a different language, select the **Switch language** button, at the top. This button only appears when the sn_cd.enable_language_switching system property is activated. This is similar to changing your language at login. For more information, see Properties installed with Content Publishing.

   To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing.

   For information on publishing your content, see Create a publish plan for your content.

   Content Governance

   When portal content is requested from Content Governance, the **Content Request Items** related list tab appears. Select the content request item to view information about the request. For more information, see Edit a content request item.

   When the **Content Request Item** has a state of **Work in Progress**, the **Send for Review** button appears.

   The content is sent to the **Opened by** or content requester person for review.

   Note:
   To edit the content after a review, the content request item state must be changed to **Work in Progress**.

Create URL content

Using the Content Library, you can create URL content containing a link to information.

Before you begin

Role required: sn_cd.content_manager

Define the link: Add or modify links to other content sources

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Content Publishing** > **Content Library** > **New**.
2. Select **Portal** under the **Select the Platform** column.
3. Select **URL** under the **Choose a content format** section.
4. Select **Continue**.
5. Fill in the fields in the **New content** form.

Design

Field	Description
Content name	The name that describes the content you are creating or editing.
Active	Indicates the content is active and available for use.
Link	The URL link to content you want to appear for your employees. Select the Lookup using list icon ( ) to view a list of link content. This list matches the content you can select when selecting the down arrow key ( ). **Note:** Depending on your configurations or extensions, your link may open in a new window.

6. Select **Save** to save the record and remain on the **Design** tab.
7. Or, select **Save and continue** to save the record and move to the **Publish** tab.
   For information on publishing your content, see Create a publish plan for your content.

   To switch languages or translate your content, select the **Language settings** drop-down at the top, right side.

   To switch languages and have the fields on the form appear in a different language, select the **Switch language** button, at the top. This button only appears when the sn_cd.enable_language_switching system property is activated. This is similar to changing your language at login. For more information, see Properties installed with Content Publishing.

   To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing.

   Content Governance

   When portal content is requested from Content Governance, the **Content Request Items** related list tab appears. Select the content request item to view information about the request. For more information, see Edit a content request item.

   When the **Content Request Item** has a state of **Work in Progress**, the **Send for Review** button appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The content is sent to the **Opened by** or content requester person for review.

> **Note:**
> To edit the content after a review, the content request item state must be changed to **Work in Progress**.

Create image-based link content

Using the Content Library, you can upload a picture or graphic and link it to a url.

Before you begin

Role required: sn_cd.content_manager

Define the link: Add or modify links to other content sources

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Portal** under the **Select the Platform** column.
4. Select **Image-based link** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **New content** form.

Design

Field	Description
Content name	The name that describes the content you are creating or editing.
Order	When you have multiple pieces of content that appear in a carousel, you can define the order they appear. Enter a number defining the order the content appears on the service portal or Employee Center. Content appears closer to the beginning of the carousel when assigned a lower number. **Note:** Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you would simply use any number from 101 through 199.
Active	Indicates the content is active and available for use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Link	The URL link to content you want to appear on the Employee Center or Employee Center Pro. Select the Lookup using list icon () to view a list of link content. **Note:** Depending on your configurations or extensions, your link may open in a new window.
Image Click to add an image	The image the URL is embedded in. Select the **Click to add an image** link to add an image.

7. Select **Save** to save the record and remain on the **Design** tab.
8. Or, select **Save and continue** to save the record and move to the **Publish** tab.
   For information on publishing your content, see Create a publish plan for your content.

   To switch languages or translate your content, select the **Language settings** drop-down at the top, right side.

   To switch languages and have the fields on the form appear in a different language, select the **Switch language** button, at the top. This button only appears when the sn_cd.enable_language_switching system property is activated. This is similar to changing your language at login. For more information, see Properties installed with Content Publishing.

   To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing.

   Content Governance

   When portal content is requested from Content Governance, the **Content Request Items** related list tab appears. Select the content request item to view information about the request. For more information, see Edit a content request item.

   When the **Content Request Item** has a state of **Work in Progress**, the **Send for Review** button appears.

   The content is sent to the **Opened by** or content requester person for review.

   Note:
   To edit the content after a review, the content request item state must be changed to **Work in Progress**.

Create events content

Using Content Library, you can create content that announce events to your employees.

Before you begin

Role required: sn_cd.content_manager, sn_cd.content_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Portal** under the **Select the Platform** column.
4. Select **Events** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **New content** form.

Design

Field	Description
Content name	The name that describes the content you are creating or editing.
Order	When you have multiple pieces of content that appear in a carousel, you can define the order they appear. Enter a number defining the order the content appears on the service portal or Employee Center. Content appears closer to the beginning of the carousel when assigned a lower number. **Note:** Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you would simply use any number from 101 through 199.
Active	Indicates the content is active and available for use.
Content	
Event start	The date and time the event begins.
Event end	The date and time the event ends.
User reference table	Determines the variables you can use to personalize text for the block content. Select **HR Profile** to select variables from the sn_hr_core_profile table. **Note:** When the Human Resources Scoped App: Core (com.sn_hr_core) plugin is activated, only **HR Profile** appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select **User** to select variables from the sys_user table.
Rich text	Message for your event. Use the editing tools to format your text. Based on the table you select from the **User reference table** drop-down, you can customize your messages using variables from the table. For example, when **User** is selected from the **User reference table** drop-down, a list of variables appears in the **Fields** field. You can place a variable like **First name** so the message displays the user's first name and you don't have to add it manually.
Fields	Variables that customize the rich text of the event. The table you select from the **User reference table** drop-down determines what variables are available.

7. Select **Save** to save the record and remain on the **Design** tab.
8. Or, select **Save and continue** to save the record and move to the **Publish** tab.
   For information on publishing your content, see Create a publish plan for your content.

   To switch languages or translate your content, select the **Language settings** drop-down at the top, right side.

   To switch languages and have the fields on the form appear in a different language, select the **Switch language** button, at the top. This button only appears when the sn_cd.enable_language_switching system property is activated. This is similar to changing your language at login. For more information, see Properties installed with Content Publishing.

   To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing.

   Content Governance

   When portal content is requested from Content Governance, the **Content Request Items** related list tab appears. Select the content request item to view information about the request. For more information, see Edit a content request item.

   When the **Content Request Item** has a state of **Work in Progress**, the **Send for Review** button appears.

   The content is sent to the **Opened by** or content requester person for review.

   Note:
   To edit the content after a review, the content request item state must be changed to **Work in Progress**.

Create banner content

Using the Content Library, you can create banner content that appears on the employee portal.

Before you begin

Role required: sn_cd.content_manager

About this task

Banner content appears at the top of the home page to display announcements and redirect users to a portal page or external link. A banner is comprised of a headline, heading, body text, and an optional button.

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Portal** under the **Select the Platform** column.
4. Select **Banner** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **New content** form.

Design

Field	Description
Content name	The name that describes the content you are creating or editing.
Active	Indicates the content is active and available for use.
User reference table	Determines which table provides the variables you can use to personalize text for employees. Selecting **User** allows you to insert variables from the sys_user table to the Headline, Heading text, or Body text. The available variables depend on the user record, which is configured at the platform level. Since the banner design form does not display a list of available variables, you can create a rich text content item, to view all available variables from the sys_user table.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: When the Human Resources Scoped App: Core (com.sn_hr_core) plugin is activated, only **HR Profile** appears. Select **HR Profile** to use variables from the sn_hr_core_profile table.
User column	Together with the HR profile [sn_hr_core_profile] table, filters users when evaluating a condition. Only appears when you select the **HR Profile** from the **User reference table** field.
Headline	A title you want to appear for your content. This field is not required if you want your banner to show only a graphic.
Heading text	The headline you want to appear over the banner. Limit is 80 characters. You can use variables to customize the message for the reader. For example, insert `${name}` to display the employee's full name.
Body text	The detailed message you want to appear over the banner. You can use variables to customize the message for the reader.
Primary button	Use to display a button with a link to different content from your banner. Displays the **Button title** and **Button link** fields.
Button title	Text that labels the button or prompts the user to click. Only appears when the **Primary button** is switched to green.
Button link	A link to content that provides access after selecting the button. Only appears when the **Primary button** is switched to green.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Select the Lookup using list icon () to view a list of link content. This list matches the content you can select when selecting the down arrow key (). You can also select the Preview this record icon () to view the link content record.
Background image Click to add an image	Link to add a background image to your banner. The recommended size for banners are: ○ Home page banner: 1440 x 400px ○ Topic page: 1258 x 300px

7. Select **Save** to save the record and remain on the **Design** tab.
8. Or, select **Save and continue** to save the record and move to the **Publish** tab.
   For information on publishing your content, see Create a publish plan for your content.

   To switch languages or translate your content, select the **Language settings** drop-down at the top, right side.

   To switch languages and have the fields on the form appear in a different language, select the **Switch language** button, at the top. This button only appears when the sn_cd.enable_language_switching system property is activated. This is similar to changing your language at login. For more information, see Properties installed with Content Publishing.

   To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing and Integration with Localization Framework.

   Content Governance

   When portal content is requested from Content Governance, the **Content Request Items** related list tab appears. Select the content request item to view information about the request. For more information, see Edit a content request item.

   When the **Content Request Item** has a state of **Work in Progress**, the **Send for Review** button appears.

   The content is sent to the **Opened by** or content requester person for review.

   Note:
   To edit the content after a review, the content request item state must be changed to **Work in Progress**.

Create rich text content

Using the Content Library, you can create rich text content, which enables you to format your text in a creative and attention-grabbing way.

Before you begin

Role required: sn_cd.content_manager

Rich text can be built using reusable block content. For more information, see Add or modify block content.

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Portal** under the **Select the Platform** column.
4. Select **Rich text** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **New content** form.

Design

Field	Description
Content name	The name that describes the content you are creating or editing.
Order	When you have multiple pieces of content that appear in a carousel, you can define the order they appear. Enter a number defining the order the content appears on the service portal or Employee Center. Content appears closer to the beginning of the carousel when assigned a lower number. **Note:** Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you would simply use any number from 101 through 199.
Active	Indicates the content is active and available for use.
Use block content	You can create rich text or use block content for portal content. Select the toggle switch to show the Block content field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Block content	The block content you want to appear on the Employee Center. Only appears when you select the **Use block content** toggle switch. Select the Lookup using list icon () to view a list of link content.
User reference table	Determines the variables you can use to personalize text for the **Rich text** field. Appears when the **Use block content** is turned off. Select **HR Profile** to select variables from the sn_hr_core_profile table. **Note:** When the Human Resources Scoped App: Core (com.sn_hr_core) plugin is activated, only **HR Profile** appears. Select **User** to select variables from the sys_user table.
User column	Together with the HR profile [sn_hr_core_profile] table, filters users when evaluating a condition. Only appears when you select the **HR Profile** from the **User reference table** field.
Rich text	Message you want to appear as portal content. Use the editing tools to format your text. **Note:** When translating rich text, the HTML sanitizer can remove HTML formatting to protect against security concerns. For more information, see HTML sanitizer.

7. Select **Save** to save the record and remain on the **Design** tab.
8. Or, select **Save and continue** to save the record and move to the **Publish** tab.
   For information on publishing your content, see Create a publish plan for your content.

   To switch languages or translate your content, select the **Language settings** drop-down at the top, right side.

   To switch languages and have the fields on the form appear in a different language, select the **Switch language** button, at the top. This button only appears when the sn_cd.enable_language_switching system property is activated. This is similar to changing your language at login. For more information, see Properties installed with Content Publishing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing.

Content Governance

When portal content is requested from Content Governance, the **Content Request Items** related list tab appears. Select the content request item to view information about the request. For more information, see Edit a content request item.

When the **Content Request Item** has a state of **Work in Progress**, the **Send for Review** button appears.

The content is sent to the **Opened by** or content requester person for review.

Note:
To edit the content after a review, the content request item state must be changed to **Work in Progress**.

Create calendar content

Using the Content Library, you can create calendar content that provide your employees with a quick way of viewing scheduled events.

Before you begin
Role required: sn_cd.content_manager

Procedure

1. Navigate to **Content Publishing** > **Content Library** > **Create New**.
2. Select **Portal** under the **Select the Platform** column.
3. Select **Calendar** under the **Choose a content format** section.
4. Select **Continue**.
5. Fill in the fields in the **New content** form.

Design

Field	Description
Title	The name that describes the content you are creating or editing.
Content type	The content type you are creating or editing. Select **Calendar**.
Order	When you have multiple pieces of content that appear in a carousel, you can define the order they appear. Enter a number defining the order the content appears on the service portal or Employee Center. Content appears closer to the beginning of the carousel when assigned a lower number.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you would simply use any number from 101 through 199.
Active	Indicates the content is active and available for use.
Schedule	The calendar you want to appear on the Employee Center. Select the Lookup using list icon () to view a list of link content.

6. Click **Save**.
   The **Schedule Content** related list displays. For information on publishing your content, see Scheduling the delivery of content.
7. Or select **Submit** to save the record and return to the list of content.

Add or modify links to other content sources

Use link content to create URL or video links. You can use these links on the Employee Center, in a campaign, or in Communities (when Communities is installed).

Before you begin

Role required: sn_cd.content_manager

Procedure

1. Navigate to **All** > **Content Publishing** > **Re-usable Components** > **Link Content**.
2. Click New or an existing Link Content.
   For more information on the fields and description, see Link content form.
3. Click **Submit**, **Update**, or **Save**
   If you select **Save**, the **Portal Content** tab appears. To associate portal content to your link, you must first create portal content and associate it via the **Link** field on the **Portal Content** form. For more information, see Create calendar content.

What to do next

Use the Content Library to create content that includes the link and publish it to the portal or mobile app:

- Create URL content
- Create image-based link content
- Mobile content

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The option to open links in a new tab is only supported in the Service Portal. In the mobile app and Workspace, links will open in the current window, regardless of the **Load link in** configuration.

Add or modify block content

Create block content as reusable information you can insert into campaigns, notifications, rich-text announcements, or community posts (when community is installed).

Before you begin
Role required: sn_cd.content_manager

Procedure

1. Navigate to **All** > **Content Publishing** > **Re-usable Components** > **Block Content**.
2. Click **New** or on an existing block content record.
3. On the form, fill in the fields.
   For more information on fields and description, see Block content form.
4. Select **Save** or **Submit**.
   If you select **Save**, the **Block Content** form remains displayed and the **Translate content** button appears at the top.

   Note:
   Personalized Block Content can't be used for notification, community, or to-do content types.

5. To have your content translated into a different language, select **Translate content** to initiate the translation workflow your company has configured.
6. Select the language you want your content translated to from the modal that appears.
   For more information on language translations, see Integration with Localization Framework.

Notification content

Create email, push, and SMS notifications to send messages directly to your employees. Messages can also be sent as part of a campaign.

Getting started

To send email, push, or SMS notifications, perform the following tasks:

- Activate the Notify [com.snc.notify] plugin: Activate Notify
- Ensure that the following system properties are configured:

Notification content system properties

System property	Description
sn_ca.sms_notification.max_events	Determines the maximum number of campaign events to queue per job run for SMS. The default value is 50.
sn_ca.sms_notification.max_users_per_event	Determines the maximum number of users to add per a campaign event for SMS. The default is 1,000.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

System property	Description
sn_cd.sms_notification.max_recipients	Determines the maximum number of users to add per Content Delivery notification for SMS. The default value is 50,000.
sn_cd.sms_notification.max_users_per_event	Determines the maximum number of users to add for a Content Delivery event for SMS. The default value is 1,000.
glide.notify.sms.max_concatenation	Notify supports the concept of SMS concatenation. The maximum length of a single SMS is 160 characters for plaintext or 70 characters for Unicode SMS messages. Up to 10 SMS messages are linked together when the maximum length is reached. This property configures the maximum number of SMS messages that are linked into one large SMS message. If the body length is exceeded the body truncates and a message logs. **Note:** The charges are per SMS, which means that 1600 character SMS is 10 times as expensive as a 160 character SMS. Also, not all providers support SMS concatenation.

- Configure notifications to work with an SMS service provider or configure a Twilio account. See Configure Notify with Twilio.
- Create notification content. See Create email, SMS, or push notification content.
- Map SMS content to a campaign (Content Experiences). See Create a campaign.
- Schedule content (Content Experiences). See Create a campaign, Create content for a campaign, or Create campaign bundles/stages, or Scheduling the delivery of content.
- Run scheduled jobs:
  - Content Experiences: Send SMS Notifications: Responsible for sending SMS notifications for campaigns. Default value is to run every hour.
  - Content Experiences: Update Campaign Audience: Reevaluates the audience for a campaign and removes employees that no longer satisfy the criteria.

    Adds users that match your defined criteria to the campaign. Users show up in the Campaign Targets related list for a campaign.
  - Content Experiences: Add Non-Portal Campaign Content: Creates sn_ca_campaign_item_user_records for sent emails. It does not send the email.
  - Content Publishing: Send SMS notifications: Responsible for sending SMS notifications for Content Delivery. Default value is to run every hour.

For more information, see: Email and SMS notifications, Notify, and Numbers and number groups.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create email, SMS, or push notification content

Use Notification Content to send an information blast directly to your employees via email, SMS, or push to their mobile devices. Notifications can be used to direct users to the portal for detailed information.

Before you begin

Role required: sn_cd.content_manager

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Notification** under the **Select the Platform** column.
4. Select **Email** or **Push** under **Choose a content format**.
5. Fill out the new notification content form:

Notification Content

Field	Descriptions
Title	A descriptive title of the notification. The title is not the subject of the notification, although they can be identical.
If you select the **Email** content type, provide the following information: **Note:** You will configure recipients as part of a publish plan or in a campaign. The email will be individually addressed to the first listed user, while the remaining users will be blind copied (BCC).	
From	The email address of the person or organization you want the notification to come from. Use the format `admin@example.com`. **Note:** The system does not support string-type inputs, such as `Administrator<admin@example.com>`.
Reply to	The email address that can accept a reply when you want your audience to be able to respond to the notification. Use the format `admin@example.com`. **Note:** The system does not support string-type inputs, such as `Administrator<admin@example.com>`.
Subject	The subject of the notification, similar to the subject line in an email.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Descriptions
Use block content	You can select reusable block content for your notification message. For more information, see Add or modify block content.
Block content	Click the **Lookup using list** icon to select the block content you want for your notification message. Only appears when you select the **Use block content** check box.
Active	Indicates that the notification is active and available. **Note:** Your content must be active in order to publish it.
Body	The body or message of the notification. When you insert an image, use 1440 x 600 pixels (px) and a file size of 100–500 kilobytes (KB). A file size of 100 KB is optimal. This field only appears when Content type is email. **Note:** Optimize your image. It improves performance on the service portal. Also, use SVG files for optimal quality.
If you select the **Push** content type, provide the following information:	
Description	The message you want to send via push. You are limited to 1600 characters.

6. Select **Submit** or **Update** to save and return to the Notification Content list.
   Go to Schedule Content to define the audience, date, and time your content is available. For more information, see Scheduling the delivery of content. Or, go to Manage Content to add your content to a campaign bundle. For more information, see Create campaign bundles/stages.

   To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing.

   Note:
   Integration with Localization Framework is not available for Push or SMS content.

Mobile content

Create different types of content that your employees can view on their mobile devices.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create mobile banner content

Create banner content that your employees can view on their mobile devices.

Before you begin

Role required: sn_cd.content_manager

Define the link: Add or modify links to other content sources

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Mobile** under the **Select the Platform** column.
4. Select **Mobile Banner** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **Mobile Content** form.

Mobile Content

Field	Description
Title	Title of the mobile banner.
Content type	The content type you are creating or editing. Select **Mobile Banner**.
Active	Indicates the content is active and available for use.
Image	Image to display for the mobile banner.
Link	Link to use with the mobile banner. The link displays when the user taps anywhere on the banner.
Header text	Text that appears in the header of the banner (max 80 characters).
Text	Text that displays in the body of the banner.
Order	When you have multiple pieces of content that appear in a carousel, you can define the order they appear. Enter a number defining the order the content appears on the service portal or Employee Center. Content appears closer to the beginning of the carousel when assigned a lower number.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you would simply use any number from 101 through 199.

7. Right-click the form header and select **Save**.
   The **Schedule Content** related list displays.
8. Or select **Submit** to save the record and return to the list of content.

What to do next

Make the content available to users: Scheduling the delivery of content.

Alternatively, you can build out a more robust publishing configuration using Creating campaigns with Content Experiences

Create mobile text card content

Create text card content that your employees can view on their mobile devices.

Before you begin

Role required: sn_cd.content_manager

Define the link: Add or modify links to other content sources

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Mobile** under the **Select the Platform** column.
4. Select **Mobile Text Card** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **Mobile Content** form.

Mobile Content

Field	Description
Title	Title of the mobile text card.
Content type	he content type you are creating or editing. Select **Mobile Text Card**.
Active	Indicates the content is active and available for use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Link	Link to use with the mobile text card. The link displays when the user taps anywhere on the text card.
Header text	Text that appears in the header of the text card (max 80 characters).
Order	When you have multiple pieces of content that appear in a carousel, you can define the order they appear. Enter a number defining the order the content appears on the service portal or Employee Center. Content appears closer to the beginning of the carousel when assigned a lower number. **Note:** Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you would simply use any number from 101 through 199.
Style	Style of the mobile text card: ○ Light ○ Dark

7. Right-click the form header and select **Save**.
   The **Schedule Content** related list displays.
8. Or select **Submit** to save the record and return to the list of content.

What to do next
Make the content available to users: Scheduling the delivery of content.

Alternatively, you can build out a more robust publishing configuration using Creating campaigns with Content Experiences

Create or edit mobile video content

Create video content that your employees can view on their mobile devices.

Before you begin
Role required: sn_cd.content_manager

Define the link: Add or modify links to other content sources

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Mobile** under the **Select the Platform** column.
4. Select **Mobile Video** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **Mobile Content** form.

Mobile Content

Field	Description
Title	Title of the mobile text card.
Content type	he content type you are creating or editing. Select **Mobile Video**.
Active	Indicates the content is active and available for use.
Link	Link to use with the mobile video. The link displays when the user taps on the area below the video.
Video link	Video to display for the mobile video. **Note:** Only YouTube and Vimeo links are currently supported.
Header text	Text that appears in the header of the mobile video (max 80 characters).
Text	Text to display for the mobile video.
Order	When you have multiple pieces of content that appear in a carousel, you can define the order they appear. Enter a number defining the order the content appears on the service portal or Employee Center. Content appears closer to the beginning of the carousel when assigned a lower number. **Note:** Use increments of 100 when determining the order. This method makes it easier to edit. For example, you numbered your links 1, 2, 3, 4, 5 and wanted to place a new content after 2. You would have to renumber 3, 4, and 5. If you use 100, 200, and 300 and wanted to place content from 100 through 200, you would simply use any number from 101 through 199.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Right-click the form header and select **Save**.
   The **Schedule Content** related list displays.
8. Or select **Submit** to save the record and return to the list of content.

What to do next
Make the content available to users: Scheduling the delivery of content.

Alternatively, you can build out a more robust publishing configuration using Creating campaigns with Content Experiences

To-do content

You can assign tasks to your employees that prompts them to take action.

The types of to-do content you can create are:

- Button Complete
- E-Signature
- Play Video
- View Link

For more information on creating to-do content, see To-do content form.

You can also create to-do content that appears in a banner or styled content. For more information, see Creating to-do content.

Create to-do content

You can assign tasks to your employees that prompts your employees to take action. You can also have the to-do as part of a campagin or trigger additional content once a task is completed. To-dos can also be sent via email.

Before you begin
Role required: sn_cd.campaign_manager

About this task
For example, an Open Enrollment for Benefits campaign can have tasks that appear as to-dos. These tasks prompt employees to sign up for health care.

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **To-do** under the **Select the Platform** column.
4. Select **Button Complete**, **E-Signature**, **Play Video**, or **View Link**.
5. Fill in the form.
   For more information on each field, see To-do content form.
6. Select **Submit** or **Save**.
   The Schedule Content related list appears. For more information on scheduling your content, see Scheduling the delivery of content.

   If you want your to-do content to be a link you can add to a banner or styled content, see Add or modify links to other content sources.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To request your content to be translated into a different language, select the **Translate content** button at the top. This button only appears when the sn_cd.enable_localization_framework_integration system property is activated. For more information, see Properties installed with Content Publishing.

Creating to-do content

Use Content Publishing to create links between a banner or styled content items and to-dos content items.

The two ways of delivering to-do links are:

- Scheduled Content (Content Publishing)
- Campaigns (Content Experiences)

Create to-do links for your banner or styled content items to make it easier to access. Placing to-do links in a banner or styled content makes it highly visible for high priority to-do tasks.

Process for Content Publishing

To create to-do links for a banner or styled content, do the following:

- Create to-do content: For more information, see Create to-do content.
- Create link content referencing your to-do content: For details, see Add or modify links to other content sources

  Note:
  Select **To-do** in the **Type** field. And, select the to-do content you created previously from the **To-do content** list.

  .
- Create portal content that references your link content.
- Schedule your content using Content Publishing.
  - Schedule the portal content (banner or styled content).

    Note:
    Your to-do content automatically schedules when you schedule your portal content (banner or styled content).

  - The to-do scheduled content appears in the **To-do scheduled content** field after you select **Save**. Your to-do content also aligns with the schedule of your portal content.
  - The to-do content is automatically scheduled separately when the link content is scheduled.
  - For more information, see Scheduling the delivery of content.
  - The Content Publishing: Create To-dos scheduled job must run before the content becomes available.

Process for Content Experiences (campaigns)

To create to-do links for a banner or styled content within a campaign, you must first have a campaign with stages and content. For more information, see Creating campaigns with Content Experiences. Use the same steps in Content Publishing, but instead of scheduling your content, add it to a campaign stage.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create to-do content.
- Create link content referencing your to-do link content.
- Create portal content that references your link content.
- Add your portal content to a stage/bundle as an activity in your campaign.
  - You can use the legacy lists and forms or the campaign builder UI to add your portal content.
  - For more information, see Create a campaign.
- If you use the campaign builder UI, you will see the banner and link content.

- Use Portal preview to view your content. For details, see Campaign preview.
- After verifying your content, publish it.

Note:
You cannot delete the link content without deleting the banner (parent) content. You also cannot move the link content to another stage (bundle) without moving the banner (parent) content.

Pulse survey content

You can create and send Pulse surveys to your employees as a way to receive feedback.

Create pulse survey content

Create pulse surveys that can be delivered to your employees to obtain feedback, drive action, and measure impact.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lp.creator, sn_cd.content_manager, sn_ca.campaign_manager

Procedure
1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Pulse** under the **Select the Platform** column.
4. Select **Pulse Survey** under the **Choose a content format** column.
5. Select **Continue**.
6. On the form, fill in the fields:

Survey Content form

Field	Description
Title	Suitable name for the pulse content.
Theme	Theme with which you want to associate the pulse content. **Note:** Only the themes of type Group Pulse can be selected in the pulse content.
Active	Option to indicate that the pulse content is active and available for use.

7. Right-click in the form header and select **Save**.
8. In the **Questions** related list:
   - To add a question to content, click **New**. For more information, see Create a pulse question.
   - To add a question from Question Bank, click **From Question Bank**.

   Add Content (of type Pulse Content) to a campaign in Content Experiences or schedule content in Content Publishing. For more information, see Publishing content.

Note:
For more information, see Listening Posts.

Create a pulse question

Create a question in a pulse survey or add a question to pulse question bank.

Before you begin
Role required: sn_lp.creator

Procedure
1. Navigate to **Listening Posts** > **Pulse Question Bank**.
2. In the **Questions** related list, click **New**.

Note:
You can also open a pulse survey and directly add questions to the pulse survey by clicking **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the fields:

Pulse Survey Question form

Field	Description
Name	Name of the question.
Question	Description of the question.
Type	Name of the pulse survey.
Rating option	Format in which the rating is provided for questions asked in a pulse survey. For example, Star or Number.
Description	Description to appear when a user points to a question in the pulse survey.
Order	Order in which you want to place the question in the survey. For example, a question with a lesser order is placed first in the survey.
Allow additional information	Option to provide a text box in the survey for the user to enter more details.
Active	Option to indicate that the question is used for assessments and metric calculations.
Mandatory	Option to indicate that the question is mandatory and must be answered by the survey recipient.

4. Click **Submit**.

Facebook Workplace content

Create content for your company's Facebook page as another avenue to reach your employees.

Note:
Facebook Workplace ServiceNow Store will not be available for download from the store starting September 2023.

Create or edit Facebook content

Create content for your company's Facebook page.

Before you begin

Role required: sn_cd.content_manager, sn_cd.content_admin

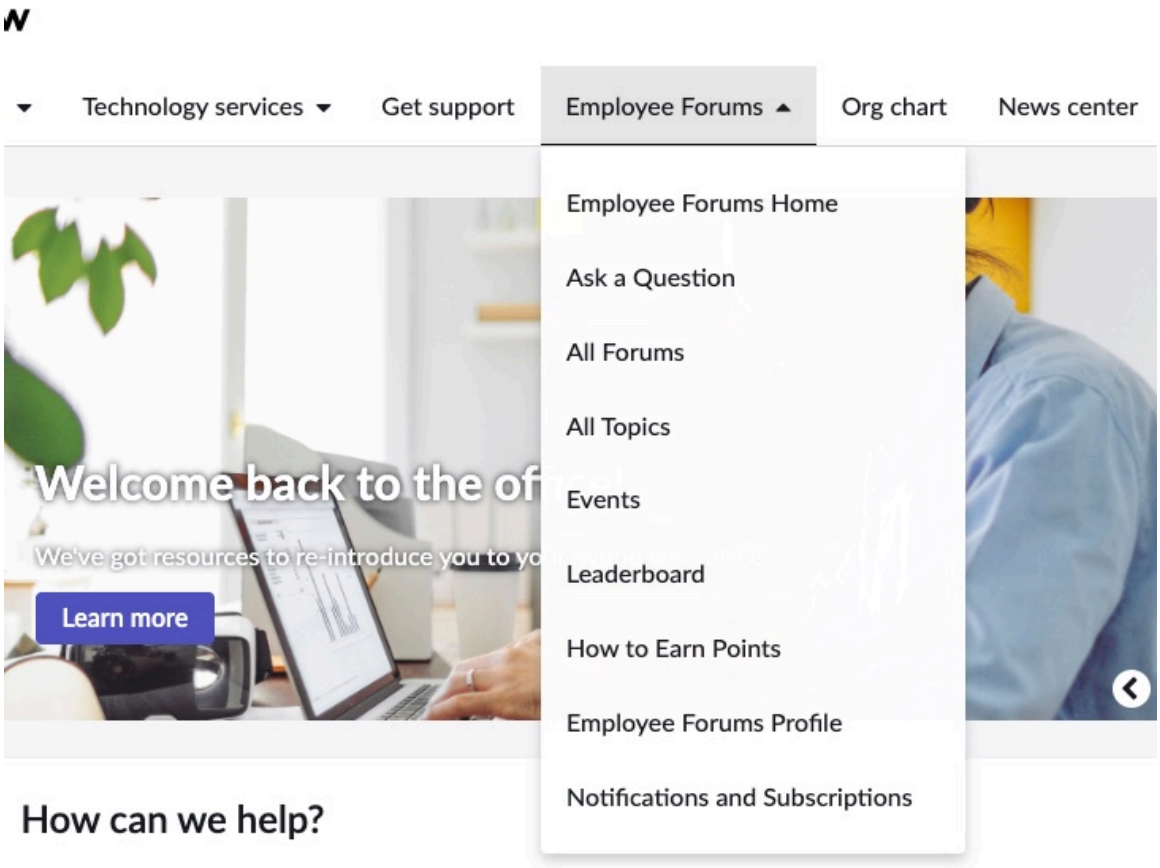
Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select **New** or existing content.
3. Select **Facebook** under the **Select the Platform** column.
4. Select **Facebook Workplace post** under the **Choose a content format** section.
5. Select **Continue**.
6. Fill in the fields in the **Facebook Workplace Content** form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Facebook Content

Field	Description
Title	Title of the Facebook content.
Content type	he content type you are creating or editing. Select **Facebook Workplace post**.
Active	Indicates the content is active and available for use.
Message	Text that displays as the message of your Facebook post.
URL	Link to the content you want to post to your company's Facebook page. **Note:** Select the Lookup using list icon ( ) to view a list of link content.
Image Click to add...	The image the URL is embedded in. Select the **Click to add...** link to add an image.



7. Right-click the form header and select Save.
   The **Schedule Content** related list displays. For information on publishing your content, see Create a publish plan for your content.
8. Or select **Submit** to save the record and return to the list of content.

Employee Forums

Employee Forums delivers Communities features to the Employee Center Pro portal to help employees connect, engage, and collaborate with other employees. Use Employee Forums to share business information, promote employee engagement, encourage ideas and feedback, and to give your employees a voice.

Employee Forums enhances employee self-service by providing access to Communities through an out-of-the-box menu item, which takes users to the community where they can post, view, and subscribe to topics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Forums integrate with campaigns and content publishing so that:

- Content managers can create and schedule content to a forum or topic from Content Publishing.
- Campaign managers can build campaigns that include forum content. Community or forum content can include blog posts, events, videos, or links to posts or other content.

Before content managers can use Employee Forums, an admin must first configure Communities, including forums and topics. These features serve as publishing destinations for managers creating content via Content Publishing. For information on communities, see Communities.

Add or modify forum content

Provide content to your employees through employee forums.

Before you begin

Role required: sn_cd.content_manager

About this task

Creating forum content also requires the following to post to a community or forum:

- A forum to post community content. For information on creating forums, see Configure community forums.
- The `Content Publishing: Post to Forums` scheduled job runs every hour by default to process posts. For more information on scheduled jobs, see Components installed with Content Publishing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Communities (com.sn_communities) plugin must be activated in order to use this feature.

Procedure

1. Navigate to **All** > **Content Publishing** > **Content Library** > **Community**.
2. On the form, fill in the fields.

Community Content form

Field	Description
Title	Title or name that identifies the community post.
Content type	Classification of the community post. Fields used to define the post change based on the content type selection. ○ Community Blog ○ Community Event ○ Community Video ○ Forums Post List (lists posts from a specific forum) **Note:** For more information on community content types, see Community content types.
Active	Indicates that the community post is active and available to post.

Fields change depending on which content type you select.

Community Blog

Community Blog fields

Field	Description
Use block content	Indicates that you are using block content and not rich text. For information on creating block content, see Add or modify block content.
Block content	Appears when you check the **Use block content** box. Click to access existing block content or to create content for your community blog.
Description	Appears when the **Use block content** box is unchecked. Enter rich text for your community blog.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Community Event if you select **Virtual event**, the fields are different.

Community Event fields

Field	Description
Show attendee list	Indicates that attendees can view a list of other attendees.
Attendee limit	Determines the maximum number of attendees that can attend the event.
Virtual event	Indicates that event is online. When checked, the Event URL, Start time, and End time fields appear.
Event URL	The URL link to the virtual meeting.
Start time	The date and time the virtual event begins.
End time	The date and time the virtual event ends.
Location name	The name or description of the event location.
Street	The street address of the event location.
City	The city of the event location.
Zip / postal code	The zip or postal code of the event location.
Time zone	The time zone of the event location. Used to determine the event scheduling and reminder.
Event reminder	Indicates when you want an event reminder sent.
State / province	The state or province of the event location.
Country	The country of the event location.
Description	A description of the event.

Community Video

Community Video fields

Field	Description
Video	Link to the video you want to post to your community, use as part of a campaign, or post to the Employee Center. Videos appear as web URLs that link to popular video sites. Supported video link hosts are: ○ dailymotion.com ○ facebook.com

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ vimeo.com ○ youtube.com For more information on video content, see Add or modify links to other content sources.
Description	Description of the video.

Forums Post List

Forums Post List fields

Field	Description
List type	How you want the posts from a forum to appear on the Employee Center. ○ Manual List: You decide the order and content links to appear. ○ Dynamic List: Automatically generated list.
Forum links	Determines what forum links you want to appear on the Employee Center. Appears when you select **Manual List** from **List type**. Click the **Unlock forum links** icon and select the links you want to appear. **Note:** The first forum link you select appears first on the Employee Center.
Dynamic list type	The method your posts appear in the forum list. ○ Recently Added: The most recently added forum posts appear. ○ Most Popular: Forum posts that Appears when you select **Dynamic** in **List type**.
Number of list items	The number of forum posts you want to appear. Only appears when you select **Most Popular** from **Dynamic list type**.

Community Blog

3. Click **Save** to save and remain on the form, or click **Update** to save and return to the Community Content list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

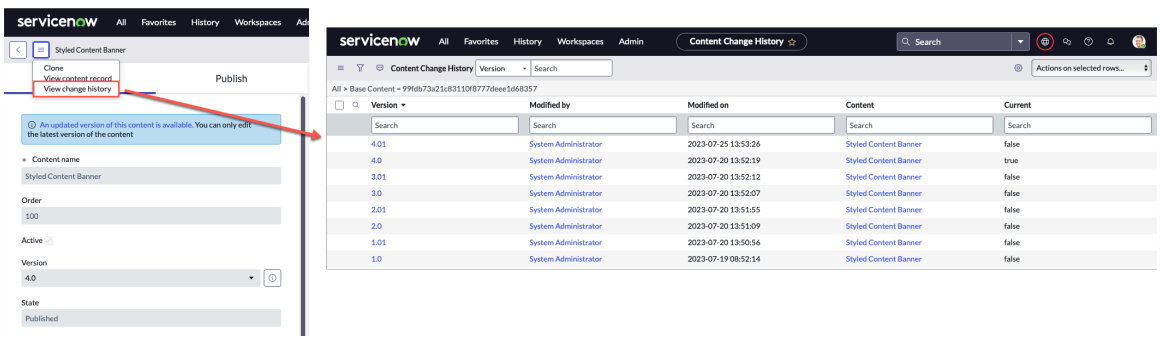
- Go to Schedule Content to define the audience, date, and time your content is available. For more information, see Scheduling the delivery of content.

  Note:
  If you edit published forum content, you must create a new Schedule content record to publish the updates.

- Or, go to Campaign Content to add your content to a campaign bundle. For more information, see Create campaign bundles/stages.

Content versioning

Content versioning tracks changes made to Portal and Rich content types after they are published.



Content versioning tracks changes made to the following content types after they are published:

- Banner
- Calendar
- Events
- Image-based link
- Rich content
- Rich text
- Styled content
- URL
- Video

To edit content once it is published, you must checkout the content, which the system saves as a new version in draft state. Once you publish the new version of the content, the system increments the version number by 1.0.

Note:
Content versioning must be enabled in **Content Publishing** > **Advanced** > **Properties**. For more information, see Properties installed with Content Publishing

The following screen shot displays an example of change history, which allows the content admin to view the content in previous versions, identify when were the changes made, and by whom.

For instructions on how to checkout content for editing, see Checkout published content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Checkout published content

After Portal or Rich content is published, you must checkout the content to modify it.

Before you begin

Role required: sn_cd.content_manager

Note:
Content versioning must be enabled in **Content Publishing** > **Advanced** > **Properties**. For more information, see Properties installed with Content Publishing

About this task

For more information on content versioning, see Content versioning.

Procedure

1. Navigate to **All** > **Content Publishing** > **Content Library** > **View All**.
2. Select the content you will edit.
3. Click **Checkout**.
   A new version of the content is created and the **Version** field value is appended with .01.
4. Make the necessary edits.
5. Click **Save** or **Save and continue**.
   This version is saved to the Content Library without impacting the published version of the content.
6. To preview the updated content as it would appear in the portal, based on the current publish plan:
   a. Click the **Publish** tab.
   b. Click the publish plan to preview.
   c. Click **Preview on portal**.
      The Employee Center opens in a new tab, displaying the updated content as it would appear once published.
7. When you are ready to publish your updates, click **Save and publish**.
   This version replaces the currently-published version. The new version maintains the same publish plans as the previous version.

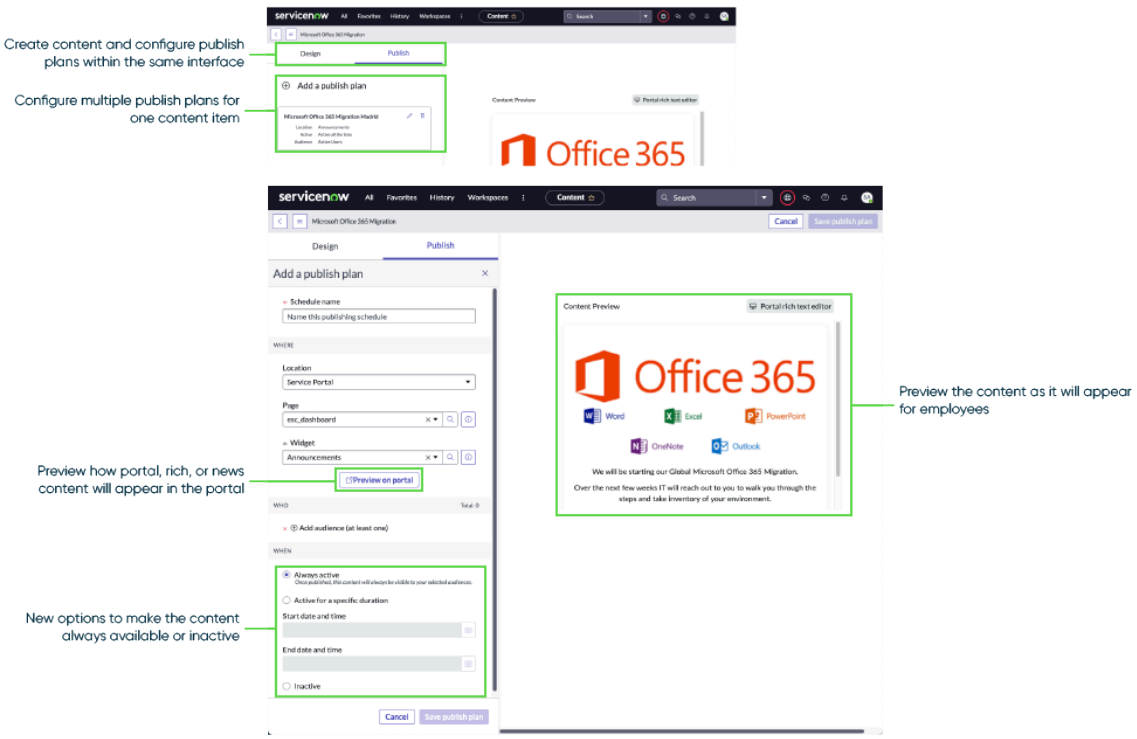
   The **Version** field value increments by 1.0.

What to do next

After publishing the updated content, you can create additional publish plans: Create a publish plan for your content

Publishing content

Use Content Publishing to create, schedule, and deliver your portal content to your employees.



Content publishing offers two options for publishing your content:

Publish plans via Content Library

Publish plans are integrated in the Content Library workflow and offer a robust configuration options, including where the content will appear, who will see it, and publishing duration. You can create a publish plan for news, rich, or portal content. For all other content types, you must use the Schedule content form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To publish content to the Workspace or UIB Workspace, you must use the Schedule content form, as the Content Library does not offer the option to publish to the Workspace or UIB Workspace.

Schedule content form

Configure content delivery for the following types of content using the Schedule content form:

- Mobile content
- Notification content
- To-do content
- Pulse survey content
- Facebook Workplace content
- Employee Forums

Publishing destinations

When you are configuring a content schedule or publish plan, you must define the publishing destination via three fields: Location, Page, and Widget.

Location

For most content types, **Service Portal** is the only option. Some content types, such as news articles, enable you to specify a publish plan for the Now Mobile app. For more information, see Publishing news articles.

Page

The page field lists portal and taxonomy pages. To narrow the selection, you can first select a widget, then return to the page field, which only lists the pages that contain the widget.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you select a taxonomy topic, the form prompts you to specify the taxonomy and one or more topics.

Portal pages are managed in **Service Portal** > **Pages**.

Taxonomy topics are managed in **Taxonomy** > **Topics**. See Unified Taxonomy for Employee Center.

Widget

The widgets field only lists supported widgets for that content type. For more information on the content types, see the table below.

Publishing locations by content type

Content type	Supported widgets
Banner	Content Experiences
Banner	Welcome Banner (CD)
Calender	Event Calender
Event	Upcoming Events (CD)
Image-based link	Quick Links (CD)
News article	News Feed
News article	Featured News
Rich content	Rich Content (CD)
Rich text	Announcements (CD)
Styled content	Content Experiences
Styled content	Styled Content (CD)
URL	Information Links (CD)
Video	Video Carousel (CE)

To customize the content type and publishing widget, see Add or modify content type for Content Publishing

Scheduling the delivery of content

After you create content in Content Publishing, use **Schedule Content** to post to your Employee Center, in a campaign, To-dos, email notifications, and community.

Before you begin

Role required: sn_cd.content_manager
You can also schedule content after creating and saving it from the related list of the content. See the following:

- Configure mobile content
- Content Library
- Create email, SMS, or push notification content
- Create to-do content
- Add or modify forum content

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add or modify links to other content sources
- Add or modify block content

Note:
Ensure you schedule the portal content when you are adding a link content to a banner or styled content. The to-do content is automatically scheduled separately when the link content is scheduled. For more information, see Creating to-do content.

Procedure

1. Navigate to **All** > **Content Publishing** > **Schedule Content**.
2. Select the content you want to schedule.
3. Complete the form.

Schedule content

Field	Description	
Content	The content or information you want to make available to employees. Select content from the list or **New** to create content. When scheduling content you want to appear as a link for to-do content in a banner or styled content, ensure you select the portal content you created. Do not schedule the to-do content, it automatically schedules with the portal content. For more information, see Creating to-do content. **Note:** You cannot schedule Link Content and Block Content as standalone content because it is reusable content.	
Content Request Item	A unique number that identifies the content item associated with the content request. Content requests can be created from the Employee Center by employees or from the Content Request form by content managers or admins.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
	For more information, see Edit a content request item.	
Title	A descriptive name for the schedule content record. By default, the name of your content appears here after you select your content in the **Content** field.	
Active	Indicates that the schedule for content is active and available to employees.	
Add Users	Indicates you want to add specific users to view your content. Selecting this removes the audience you selected. **Note:** To schedule content, the default is to select an audience. When you select this field, you can only select individual users and you cannot select an audience.	
Users	Users you want to view the content you are scheduling. Select the Unlock Users icon to search and add users. **Note:** This field only appears when you select **Add Users**.	
Audience	Who you want to see the content. See Audiences. Does not show for Community Content.	
Approvers	Who you want to approve the content before it is available. Only users with the Content Approver [sn_ca.content_approver] role appear after clicking the Lookup user list icon.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
	After adding approvers, click **Update** or **Save**. You can send email notifications to approvers requesting their approval. See Notifications and Email templates. **Note:** If **Yes** is the value in the **sn_cd.all_must_approve** Content Delivery property, all approvers must approve before campaign publication. If **No** is the value, you only need one approver.	
When to process	The date and time you want your content to be sent, created, or posted. **Note:** This field only appears when you schedule to-do or notification content.	
Due date	The date and time you want your users to complete the to-do or notification content. **Note:** This field only displays when you schedule to-do content.	
Content status	The status of your to-do content. ○ Pending: The Content Publishing scheduled jobs have not processed the content. ○ Scheduled: Content is scheduled and is queued to be processed. ○ Max Exceeded: The scheduled content exceeded the allowable time. The maximum value is configured in the sn_cd.todo.max_run_time	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
	property under Content Publishing/Configurations/Properties. ○ Error: An error scheduling or posting community content occurred.	
Completed on	The date and time the Content Publishing: Create To-dos scheduled job completed.	
Availability start date	You can optionally restrict when content is available by start date. The date the content is first available to the audience. Does not show for Community Content.	
Availability end date	You can optionally restrict when content is available by end date. The date the content is no longer available to the audience. Does not show for Community Content.	
Location	Where the content you are scheduling appears. Your choices are: ○ Service Portal ○ Workspace The fields change depending on what you select in this field because you are selecting where you want your content to appear.	
	The following fields appear when **Service Portal** is selected from the **Content location** field. For more information, see Content Library.	
	Page	The page on your Service Portal you want the content to appear. Select a page and only the widget instances that appear on the page are available in

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		the **Widget instance** choice list. You can open the Page record and select the **Try It** button to view the page. Only appears when **Service Portal** is selected from **Content location**. **Note:** If you schedule Styled or Banner content to the Content Experiences widget on the emp_taxonomy_topic page, the original topic banner image does not display for the topics on the schedule.
	Widget	The Employee Center widget instance. A widget instance is a reference to a widget that contains properties and CSS specific to that instance. A list of filtered widget instances appear when you select a page from the **Page** choice list. Only appears when **Service Portal** is selected from **Content location**. **Note:** If you schedule Styled or Banner content to the Content Experiences widget on the emp_taxonomy_topic page, the original topic banner image does not display for the topics on the schedule.
	Taxonomy	Filters what topics you can schedule your content to. Taxonomy is a collection of hierarchical topics that brings together different content types, like requests, articles,

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		quick links, and employee communications. For example, you can set up separate taxonomies for HR and IT so you can group specific topics under each. For this field to appear, select a page that has Taxonomy (sn_ex_sp_taxonomy) entered in the Choices tab for the dictionary entry for the Category table of the page. For more information, see Create a table. For more information on taxonomy for the Employee Center, see Unified Taxonomy for Employee Center. For child topics to appear on your Employee Center, you must add it to the Portal form under Service Portal. For more information, see Create a portal.
	Topic	The topics you want your content to appear in under a taxonomy. For more information, see Create and associate topics. To display your topics in the Employee Center, see Portal configuration.
	The following fields appear when **Community Content** is the content type for content selected. For more information, see Community content types.	
	Forum	The forum you want to post the community content. For more information on forums, see Create a forum.
	Topics	The area of interest that users can discuss.

© 2026 ServiceNow, Inc. All rights reserved.
