Using Now Assist for Legal Service Delivery (LSD)

If you have a sn_lg_gen_ai.request_fulfiller role, you can summarize the details of the legal requests and matters with the Now Assist for Legal Service Delivery (LSD) application. You can also use Now Assist Q&A Genius capability to get actionable search results from knowledge articles.

Summarize a legal request or matter by using Now Assist for Legal Service Delivery (LSD)

Generate a summary from the fields that you selected on the legal request or matter record and quickly understand the request context by using the Legal Request or Legal Matter summarization skill in the Now Assist for Legal Service Delivery (LSD) application.

Before you begin
Role required: sn_lg_gen_ai.request_fulfiller

About this task
The Legal Request or Legal Matter summarization skill provides you with a concise summary of a legal request or legal matter, including the actions taken and resolution details. By viewing a summary, you can understand the context, refresh the summary, and post the summary to the work notes.

You can configure the variables of practice areas that you want to be considered as inputs for legal request or matter summarization by using the Now Assist application. To add variables, see Configure variables for Now Assist summarization.

The summarization skills are available in Legal Counsel Center and in Core UI.

- In Legal Counsel Center, you use the Legal Request summary by Now Assist component to generate a summary. This component appears above the activity stream.

  Note:
  You can also generate a summary on demand from the Now Assist panel. For more information, see Request the Now Assist for Legal Service Delivery (LSD) capabilities from the Now Assist panel.

- In Core UI, you select the **Summarize** button on the legal request or matter record to generate a summary.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Workspaces** > **Legal Counsel Center** and open a legal request or matter.
2. In the Legal Request summary by Now Assist component, select **Summarize**.
   The summary by Now Assist component appears above the activity stream.

   Note:
   Generating and displaying the summary may take several seconds.

3. **Optional:** When you finish summarizing a record, you can add it to the work notes, expand or collapse it, provide feedback, copy it, or view information about it.

Request the Now Assist for Legal Service Delivery (LSD) capabilities from the Now Assist panel

Request the contextual generative AI capabilities, such as a request summary by using the conversational interface in the Now Assist panel.

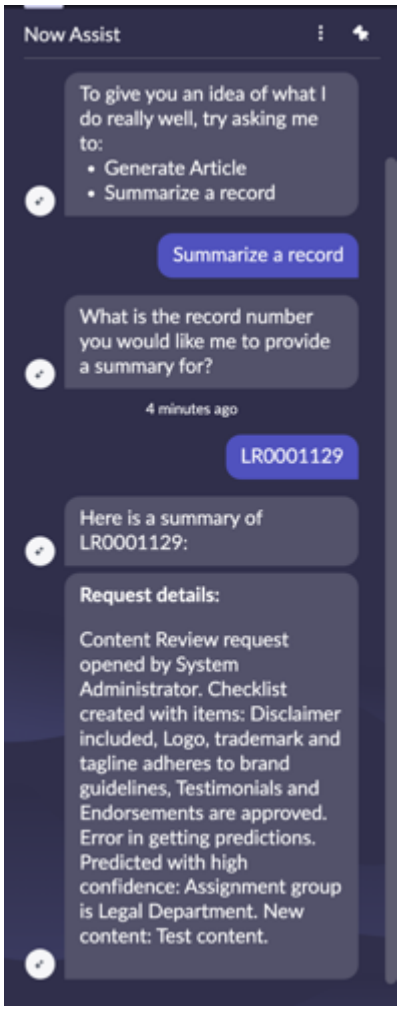
Before you begin

Make sure that Next Experience is enabled in the instance. For more information, see Next Experience UI.

Role required: sn_lg_gen_ai.request_fulfiller

About this task

You can use the Now Assist panel to request a summary.



For more information about the Now Assist panel, see Now Assist panel. For information about activating the Now Assist panel, see Turn on the Now Assist panel.

Procedure

1. Log in to an instance where the Now Assist for LSD application is installed.
2. Navigate to **Workspaces** > **Legal Counsel Center**.
3. Request the generative AI capabilities in LSD for summarization by selecting the Now Assist icon.
4. After you request the generative AI capabilities, select **Summarize a record**.
5. Enter the record number that you want to summarize.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The summary is displayed.

Generate search results by using Q&A Genius Results in Now Assist for Legal Service Delivery (LSD)

Generate actionable search results from knowledge article results in Legal Counsel Center, Employee Center, and global search by using Q&A Genius Results in Now Assist for Legal Service Delivery (LSD).

Before you begin

For Legal Counsel Center, Q&A Genius Results is activated by default when you install and activate AI Search and Now Assist for Legal Service Delivery (LSD).

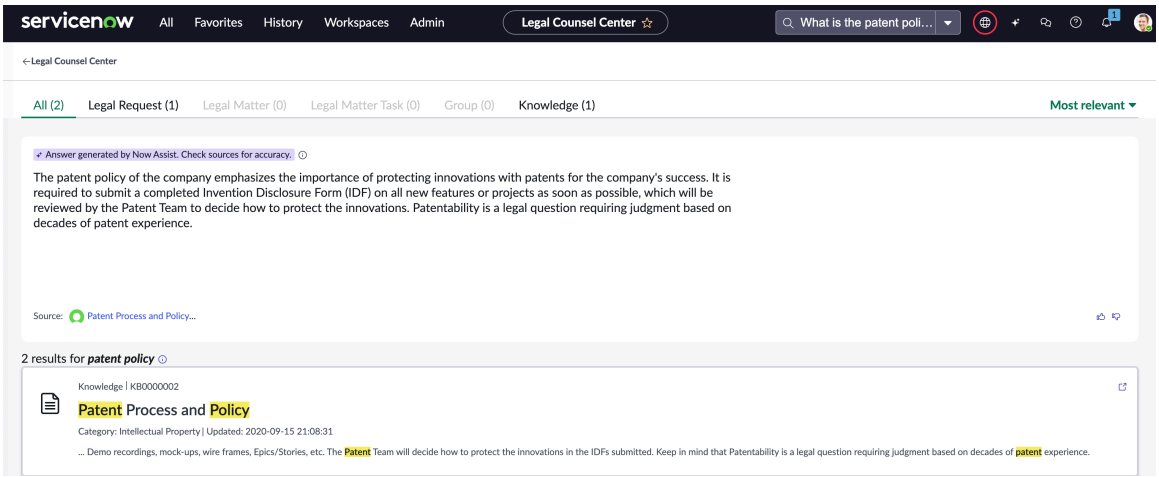
For global search and Employee Center, you must enable Q&A Genius Results manually. For more information, see Enabling Now Assist Q&A Genius Results and Enable Now Assist genius results.

For more information on the other supported search engines, see Search in Legal Service Delivery.

Role required:

- sn_lg_ops.legal_fulfiller for Legal Counsel Center
- sn_lg_ops.legal_user for Employee Center
- No specific role is required to access global search.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Navigate to the workspace through either the Legal Counsel Center, Employee Center, or Global Search.

2. In the **Search** field, enter your query.

Result

With your search results, you also see an answer card with a topic snippet and an answer snippet extracted from a single knowledge article. You can view the full article directly from the answer card.

Using agentic workflows in Now Assist for Legal Service Delivery (LSD)

Use agentic workflows for Legal Service Delivery to analyze general legal requests, predict the appropriate legal category, and initiate a transfer after confirmation from the legal fulfiller or group manager.

Available agentic workflows for Legal Service Delivery AI Agent Collection

Agentic workflow name	Description	Available AI agents
Triage legal requests	Uses AI agents to analyze general legal requests, predict the appropriate legal category, and initiate a transfer upon a confirmation from the legal fulfiller. The agentic workflow enhances response times, reduces manual tasks, and improves overall productivity. **Note:** The agentic workflow is triggered in the Now Assist panel. It is not supported in the Virtual Agent panel.	• Record management AI agent • Record field value prediction AI agent • Transfer legal request AI agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
By default, all agentic workflows and AI agent records are read only.

For more information about the AI agents, see Now Assist AI agents.

To run the AI agents autonomously, you must first duplicate the use case, and then proceed with the following steps:

- Activate the agentic workflow. For more information, see Activate an agentic workflow template.
- Activate all agents within the workflow.
- Activate the trigger to invoke the agentic workflow automatically. If you prefer to invoke it manually, activating the trigger isn't necessary.

Note:

- When you modify an agentic workflow, AI agents, or tools, make sure that you update all instructions accordingly.
- If you have a customized triage legal request agentic use case, update the script include of the business rule with the sys_id of the customized use case. For more information, see Activate the business rule for the Triage legal requests agentic workflow.

Looking for an AI agent?

- There might be AI agents installed with the Now Assist application that are not used in agentic workflows. To learn how to see all agents that are available on your instance, see Find AI agents.
- To find agents that might not be installed on your instance, visit the AI Agent Marketplace on the ServiceNow Store.

Triage legal requests agentic workflow

Use the Triage legal requests agentic workflow to predict the appropriate legal category and to initiate a transfer after a confirmation from the legal fulfiller or group manager.

Triage legal requests agentic workflow overview

Important:

- To run the Triage legal requests agentic workflow, ensure that you have completed all the configurations. For more information, see Configuring the Triage legal requests agentic workflow.
- If your generative AI service provider is not Now LLM Service, ensure that the API connections and credentials are configured. For more information, see Configuring API credentials for generative AI capabilities.
-

The agentic workflow is triggered under the following conditions:

- A general legal request is submitted and an assignment rule is configured for it.
- The **Assigned to** field is updated for a general legal request.

The agentic workflow conversation can be seen in the Now Assist panel by the legal fulfiller or group manager with the now_assist_panel_user role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The agentic workflow is not supported in the Virtual Agent panel.

Accessing the Triage legal requests agentic workflow from the AI Agent studio

You can access the agentic workflow from AI Agent Studio when you have the sn_aia.admin role.

1. Navigate to **All** > **AI Agent Studio** > **Create and manage**.
2. Select **Triage Legal Requests**.

AI agents used in the Triage legal requests agentic workflow

AI agents names and descriptions

Name	Description
Record management AI agent	Obtains the request details from the provided description.
Record field value prediction AI agent	Checks for similar records and predicts the legal category.
Transfer legal request AI agent	Is the supervised agent. The AI agent predicts the appropriate legal category, and initiates a transfer after a confirmation from the legal fulfiller.

Using Triage legal requests agentic workflow

The agentic workflow conversation can be seen in the Now Assist panel by the legal fulfiller or group manager with the now_assist_panel_user role.

1. Open the Now Assist panel by selecting the Now Assist icon
2. In the Now Assist chat panel, select the legal request under the active chat.
3. See the agentic workflow conversation and the predicted legal category:
   - If you choose to transfer the general legal request, enter `Yes` and select the send icon ( ) in the panel. When it's transferred, the original request is canceled and a new request is created with the predicted legal category. The agentic conversation is closed after the transfer of the legal request.
   - If you choose not to transfer the general legal request, enter `No` and select the send icon ( ) in the panel. The general legal request isn't transferred and the agentic conversation is closed.

Integration of Legal Service Delivery with ServiceNow applications

Extend Legal Service Delivery capabilities by integrating with other ServiceNow applications.

Contract Management Pro for Legal Service Delivery

With the Legal Contract Management Pro for Legal Service Delivery, you can configure and automate the legal contract lifecycle by creating contract document templates, clauses, and clause variations. The legal contract lifecycle enables you to submit, review, finalize, and manage legal contract requests. The integration also supports e-signatures and external storage systems.

Contract Management Pro for Legal Service Delivery benefits

Features and benefits of Contract Management Pro for Legal Service Delivery

Benefit	Feature	Users
Submit, review, finalize, and manage legal contract requests. The legal department can manage and process these submitted legal requests for contracts from a centralized location.	Contract Management Pro for Legal Service Delivery	• Legal user and contract user • Contract Management Pro for Legal Service Delivery fulfiller
Contracts Core installed with Contract Management Pro for Legal Service Delivery enables you to effectively manage a library of clauses and clause variations.	Contracts Core	Contract configurator
Use Now Assist in Contract Management to analyze contracts for non-standard and missing clauses, and extract information from signed contracts to add in the contract repository.	Now Assist in Contract Management	Now Assist contract fulfiller

Non-disclosure agreement contract request workflow

A sample workflow for a non-disclosure agreement (NDA) contract request might progress as follows:

1. Legal configurator sets up the foundation data for submitting an NDA request. For more information, see Configure Contract Management Pro for Legal Service Delivery.
2. Legal requester fills out the NDA intake request form.
3. A contract request is initiated.
4. Contract document is generated from a contract template and content is added dynamically per predefined conditions.
5. Contract user edits the requests for any changes and creates a new version of the contract document using the **Regenerate** or **Sync document** option.
6. The Contract requester views the contract document.
   a. If no changes are required, the document is sent for signature.
   b. If any changes are required, the contract requester submits a change request, which is sent to the contract fulfiller.
7. Based on the change request, the contract fulfiller can take the following actions.
   a. The contract fulfiller initiates an internal review process.
      i. The contract fulfiller submits a review task for internal review.

> **Note:**
> You can create parallel review tasks for the same contract document for different reviewer groups. However, you cannot create a review task for the same document with the same reviewer group if another active task already exists.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ii. A contract reviewer group manager can assign the review task, or a contract reviewer can self-assign it.

iii. The assigned contract reviewer starts working on the contract document.

iv. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.

v. If a request for more information was submitted, the contract fulfiller shares the information.

vi. The contract reviewer reviews the document, accept or reject redlines, proposes edits, and adds comments.

vii. The contract reviewer completes the review and shares the updated contract document if available.

viii. The contract fulfiller receives updated document and makes the necessary changes based on the feedback.

- For internal storage - If any changes are required, a new document version is created after finalizing the document.
- For external storage - Reviewers collaborate on the contract document revision online in real time. Once the review is complete, the fulfiller can finalize the contract document that is available online or create a new offline version with the changes.

b. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created.

c. Once the document is finalized, fulfiller sends document to requester.

8. The contract requester previews the generated contract and, if no changes are required, sends it to the signatories.
9. All signatories submit the required signatures.
10. The signed contract is attached to the legal request record.
11. If an external storage is configured, the signed contract is stored in it and referenced in the contract repository.

Third-party contract review request workflow

As a legal fulfiller on the legal team, you work on assigned third-party review requests by completing the following activities:

1. The legal user creates a third-party contract review request.
2. The legal user uploads a single or multiple contracts and their supporting documents and classifies them.
3. The contract fulfiller reviews the contract document attached to the legal request.
4. If necessary, the contract fulfiller reclassifies the contract and supporting documents.
5. If an expert review or feedback is required from internal teams, the contract fulfiller initiates internal review process.

a. The contract fulfiller submits a review task for internal review.

Note:
You can create parallel review tasks for the same contract document for different reviewer groups. However, you cannot create a review task for the same document with the same reviewer group if another active task already exists.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. The contract reviewer is assigned the review task

c. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.

d. If a request for more information was submitted, the contract fulfiller shares the information.

e. The contract reviewer reviews the document, accept, reject, or proposes edits, and adds comments.

f. The contract reviewer reviews the contract and provides feedback. If a revised document is available, it is also shared with the contract fulfiller.

g. The contract fulfiller receives updated document and makes the necessary changes based on the feedback.

- For internal storage - If any changes are required, a new document version is created after finalizing the document.
- For external storage - Reviewers collaborate on the contract document revision online in real time. Once the review is complete, the fulfiller can finalize the contract document that is available online or create a new offline version with the changes.

6. The contract fulfiller uploads the revised contract to the contract request.
7. The contract fulfiller emails the revised contract document to third-party contacts.
8. View responses from third-party contacts in the activity stream of the contract request.

   Multiple iterations of revisions between your company and the third party might be necessary before the contract document is finalized by all parties. The review process may be conducted again with different reviewer groups.

9. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created. The contract document can be sent for signature only when it has been approved.
10. The contract fulfiller prepares for signatures by specifying the order in case of multiple contract documents, adding fields required in case of e-signature and sends the contract document for signature.
11. Signatories review the contract document.
    - If no change is required, the contract document is signed by all the signatories.
    - If any changes are required, signature is declined, the user who is working on the contract request generates a new document and resends it for signature.
12. The signed contract is stored on the ServiceNow instance or an external storage system and referenced in the contract repository. The requester and department members can access the signed contract document from the contracts repository.

Contract Management Pro for Legal Service Delivery

Contract Management Pro for Legal Service Delivery enables you to submit, review, finalize, and manage legal contract requests. The legal department can manage and process these submitted legal requests for contracts from a centralized location.

Features

- Workflow for tracking, approval, and execution of requests.
- Support word contract templates for own paper.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Support for adding multiple contract and supporting documents in a third-party contract review request.
- Integration with external storage providers to store final signed contract documents.
- Support for electronic and wet signatures.
- Centralized repository for all signed contract documents.

Benefits

- Legal support for reviewing and finalizing non-disclosure agreements and third-party legal requests.
- Ability to track, prioritize, and work on multiple requests concurrently with the Legal Counsel Center.
- Contract templates for uniformity across legal contracts and reduced rework.
- Automatic notifications to monitor contracts and take timely action.
- Multiple document support for third-party contract review enables reviewing and finalizing multiple contract documents from single request.

Configure Contract Management Pro for Legal Service Delivery

Install Contract Management Pro for Legal Service Delivery and Microsoft Word add-in for ServiceNow Contracts. Set up the requirements for managing legal contract requests.

Install Contract Management Pro for Legal Service Delivery

Install the Contract Management Pro for Legal Service Delivery (sn_lg_cnt) application. The application installs related ServiceNow® Store applications and plugins if they aren't already installed.

Before you begin

Review the Contract Management Pro for Legal Service Delivery (sn_lg_cnt) application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Contract Management Pro for Legal Service Delivery:

- Store applications
- Roles
- Scheduled jobs
- Tables

For more information, see Components installed with Contract Management Pro for Legal Service Delivery

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Contract Management Pro for Legal Service Delivery (sn_lg_cnt) application using the filter criteria and search bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

The available versions are displayed.

3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. Select **Install**.

Configure the Microsoft Word add-in for ServiceNow Contracts

As an admin, configure the Microsoft Word add-in for ServiceNow Contracts.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **ServiceNow Add-Ins for Office** > **Office Add-In Manifests**.
2. From the Office Manifests list, select **ServiceNow Contracts**.
3. Select **Download Manifest** to download the file.
4. Configure the add-in.

Result

The **ServiceNow Contracts** add-in is available in the Home ribbon.

Create a legal contract intake workflow

Create a legal contract intake workflow by creating a record producer and configuring base system settings so users can request the legal department's guidance on legal contracts.

Before you begin

Role required: sn_lg_cnt.contract_config, admin

About this task

The legal support for a contract request works based on a workflow, so you must provide specific information while setting up the intake process.

Two record producers, Non-disclosure Agreement and Third-party Contract Review are available with the base system.

Procedure

1. Create a record producer for a new contract type.
   For more information, see Create or modify a record producer for legal services through Classic environment. On the record producer form, you must provide the following specifications for a new contract type:

   a. In the **Table name** field, select the Legal Contract Request table [sn_lg_ops_contract_request].
      The contract workflow is associated with the Legal Contract Request table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. **Optional:** Create variables to add fields on the legal intake form.

i. In the Variables related list, select **New**.

For more information on creating variables, see Create a service catalog variable.

ii. Map the variable to the corresponding column in the Legal Contract Request [sn_lg_ops_contract_request] table.

c. If the intake form requires user input for the type of contract, in the Variables related list, select **New**, and then add a variable of type Reference.
Map the variable to the Contract type table [sn_cm_core_contract_type] in the **Type Specifications** tab.

d. If the contract requires the signature of outside parties, in the Variable Sets related list, select **Edit**, and then add the **External signatory details** variable set.

e. If you want to validate the state of contract type and restrict creation of a legal request for the inactive contract type on submission of the legal request, add the **Verify if Contract type is active** script from the base system non-disclosure agreement record producer to the new record producer.
For more information on adding a catalog client script, see Create a Service Catalog client script.

Note:
If you don't add this script in the new record producer, the legal request with the corresponding record producer will be created in the Cancelled state and the contract request won't be created.

2. Add an intake form in the Contracts practice area.
For more information, see Add an intake form to a practice area. Provide the following details in the respective fields.

a. From the **Type** drop-down list, select **Request**.

b. In the **Options** field, select **Assigned To field not mandatory**.

c. For the third-party contract intake form, the **Generate Document from Template** option must not be enabled.

d. From the **Request record producer** field, select the record producer created in Step 1 to associate with the intake form.

3. Modify business rule to enable data synchronization for custom intake forms.
For more information, see Configure a practice area table.

4. For Non-disclosure agreement intake form that use own-papers, create a contract template.

For more information, see Create a contract template.

In the **Conditions**, you must select the new category added for the new contract.

5. For Non-disclosure agreement intake form that use own-papers, configure contract template rules when a legal contract request is being created by a legal user.
For more information, see Configure contract template rules.

6. Configure the settings in the Standard Ticket Page for legal requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The following settings must be updated in the Contract Management Pro for Legal Service Delivery application scope.

a. Navigate to **Standard Ticket** > **Standard Ticket Configuration**.

b. Select the **sn_lg_ops_request** ticket configuration.

c. On the Ticket Configuration form, select **Documents** in the Tab Configuration related list.

d. On the Tab Configuration form, add the condition **[Category][is][<CategoryName>]** in the **Visible** field, where <CategoryName> is the category created for the new contract.

e. Select **Update**.

f. Repeat steps 6c-6e for the **Preview** tab configuration.

For more information, see Configure the standard ticket page.

Enable transfer of a legal request

As a admin, configure business rule to enable transfer of general legal request to contract practice area.

Before you begin

Role required: admin

About this task

The business rule should be configured only if you have custom record producer that will be used to generate a contract request. For information on how to create a custom record producer, see Create or modify a record producer for legal services through Classic environment and Create or modify a record producer for legal services through Catalog Builder.

Procedure

1. Navigate to **All** > **System Definition** > **Business Rules**.
2. Open the *Initializing Legal Contract* business rule.
3. In the **When to run** tab, add a new OR condition for the custom record producer.
   a. Set the following filter condition: **[Category][is][<record-producer>]**.
   b. Select **AND**.
   c. Set the following filter condition: **[Questions][<record-producer>][<mandatory-question>][is not empty]**.
4. Select **Update** to save the business rule.

Set up Contracts Core

As a contract configurator, create and manage a library of clauses, clause variations and contract templates that will be used to generate contract document when a legal request is submitted.

On installing Contract Management Pro for Legal Service Delivery, Contracts Core plugin is also installed. Contracts Core enables you to effectively manage a library of clause variations, requests for electronic signature, receive notifications, and integrate with an external storage system.. Perform the following tasks to create and manage the clauses, clause variations, and contract templates that will be used for generating a contract document.

Create a contract type

Create a contract type for defining different types of legal contract requests and associate it to a contract model.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create document template categories

Create document template categories to easily identify similar documents and find the correct document template more easily.

Enable users to view email details in activity stream

Enable users to view the details of email sent in the activity stream.

Activate a system property to generate a certificate of completion

Activate a system property to generate a certificate of completion for electronically signed non-disclosure agreements (NDA) and third-party contracts.

Configure reminders for expiring contracts

Configure reminders for expiring contracts that each business unit can use without the need to create their own.

Configure contract templates for a contract request

Create a contract template of type .docx that can be used when submitting a legal contract request to generate a standard legal contract with predefined content.

Configure dynamic clauses for contract templates

Enable dynamic customized content in contract templates through clauses that contain clause variations for preset conditions.

Setup for standard documents and letters

Configure document templates for standard letters or documents

Configuring external applications for legal contracts

Set up external applications that provide services such as electronically signing contract documents and saving signed contracts or the documents related to legal requests in an external storage system.

The Legal Service Delivery applications use spokes from Integration Hub to integrate with external applications. The legal configurator can complete configuring these external apps after the administrator has installed and configured these spokes.

Integration with external storage systems

Configure external storage provider spokes

The administrator can use the Integration Hub to install and configure the following external storage provider spokes for saving documents attached to legal contract requests and signed contract documents:

- Google Drive spoke
- Microsoft OneDrive spoke

Configure an external storage provider

The legal configurator can set up the external storage app integrations for legal apps from **Legal Integrations**. For more information, see Configure an external storage system for legal requests and legal matters.

Integration with e-signature providers

Configure electronic signature provider spokes

The administrator can use the Integration Hub to install and configure the following electronic signature provider spokes for contract documents:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Adobe Acrobat Sign spoke
- Docusign spoke

Set up the electronic signature provider app

The legal configurator can set up the electronic signature app integrations for legal apps from **Legal Integrations**. For more information, see Configure an e-signature provider for legal contracts.

Configure an external storage system for legal contracts

Configure an external storage system to store signed contract documents.

Before you begin

Ensure that the administrator has installed and set up spokes for the external storage system you want to configure.

Google Drive spoke v1.3.0 or later version

For more information on the setup and creating the Google Drive account, see Set up Google Drive spoke.

Microsoft OneDrive spoke v2.1.0 or later version

For more information on the setup and creating the Google Drive account, see Set up Microsoft OneDrive spoke.

Role required: sn_lg_cnt.contract_admin

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Integrations** > **Integrations**.
2. Create or modify an external app configuration.
   - To create an external app configuration, click **New**.
   - To modify an existing external app configuration, open the external app configuration from the list.
3. On the Integration Type page, click the **External Storage** link.
4. On the form, fill in the fields.

External Storage form

Field	Description
Name	Name of the external app configuration.
Description	Description of the external app configuration.
Active	Option for marking the configuration for external storage as active.
Table	Table in which the signed legal contracts information is stored. Select the **Legal Contract Request [sn_lg_ops_contract_request]** table. **Note:** If you select a different table, you must associate a corresponding flow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Condition	Filter conditions to determine which integration app to use. For example, say you've already set up the Google Drive external storage integration and want only NDA contracts to be stored there, you can define the condition as follows: **[Category] [is] [NDA]** and then select the Google Drive.
Execution order	Order in which an external storage system is used for storing contract documents. The system with the lower-order value is chosen first.
App	External storage system such as Google Drive or Microsoft OneDrive.
Folder structure	Filepath to store the signed contract documents in the external storage system. Define a folder structure using a combination of static text and dynamically generated text from the selected fields. For example, the folder structure `Legal/${company}/Contracts/${number}`, where, ○ `Legal` and `Contracts` are the static texts ○ `${company}` and `${number}` are the fields chosen from the **Select variables** list. These field variables are dynamically replaced by the values in each field while saving a document.

5. Save the external app configuration.
   - Save a new external app configuration by clicking **Submit**.
   - Save the changes to an existing external app configuration by clicking **Update**.

   The external storage configuration is saved.
6. Click **Publish**.

Result
The configuration for the external storage system is published and is ready to be used for storing contract documents.

Configure an e-signature provider for legal contracts

Configure an electronic signature provider to enable users to sign contract documents electronically.

Before you begin
Ensure that the administrator has installed and set up spokes in Integration Hub for the electronic signature providers that you want to configure.

Adobe Sign spoke **spoke v2.5.1 or later version**

For more information on the setup and synchronizing the Adobe Acrobat Sign group, see Synchronize Adobe Acrobat Sign group with ServiceNow.

DocuSign spoke **spoke v3.3.0 or later version**

For more information on the setup and creating the Docusign account, see Set up Docusign eSignature spoke using authorization code grant.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_lg_cnt.contract_admin

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Integrations** > **Integrations**.
2. Create or modify an external app configuration.
   - To create an external app configuration, click **New**.
   - To modify an existing external app configuration, open the external app configuration from the list.
3. On the Integration Type page, click the **Electronic Signature** link.
4. On the form, fill in the fields.

Electronic Signature form

Field	Description
Name	Name of the external app configuration.
Description	Description of the external app configuration.
Active	Option for marking the external app configuration as active.
Table	Table in which the contracts data is stored. Select the **Legal Contract Request [sn_lg_ops_contract_request]** table.
Condition	Filter conditions to determine which integration account to use. For example, say you've already set up the Docusign electronic signature account and want only NDA contracts to use that account for signatures, you can define the condition as follows: **[Category] [is] [NDA]** and then select the Docusign in the **Integration provider** and its associated account in **Account**.
Execution order	Order in which an integration account is used for electronic signature of contract documents. Integration account with the lower-order value is chosen first.
App	Electronic signature provider such as Adobe Acrobat Sign or Docusign.
Account	Account number associated with the electronic signature provider. This field appears only when **Docusign** is selected from **Integration provider**.
Group	Group associated with the electronic signature provider. This field appears only when **Adobe Acrobat Sign** is selected from **Integration provider**.
Attributes	Additional configuration items based on your electronic signature provider. Provide the following details:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Host Url: Add the URL of the selected electronic signature provider that enables you to finalize or update the contract document before sending them to signatories. For example, use Web UI URL for **Adobe Acrobat Sign** or use **Docusign** UI for DocuSign.

5. Save the external app configuration.
   - Save a new external app configuration by clicking **Submit**.
   - Save the changes to an existing external app configuration by clicking **Update**.

   The external app configuration is saved.
6. Click **Publish**.

Result

The configuration of the e-signature app is published and is ready to be used for the electronic signing of contract documents.

Use Contract Management Pro for Legal Service Delivery

Use Contract Management Pro for Legal Service Delivery to submit legal requests for non-disclosure agreement (NDA) and third-party contracts.

Non-disclosure agreement legal requests

Employees can submit legal requests for creating non-disclosure agreement (NDA) contracts with third parties such as vendors, customers, and partners. The legal department can manage and process these requested changes from a centralized location.

Features

- Contract templates with metadata and business rules for selecting the most relevant template for a request.
- Microsoft Word format contract templates to enable easier editing for the contract fulfiller.
- Self-service capability for creating and executing standardized NDA contracts.
- Electronic signature integrations with Adobe Acrobat Sign and Docusign.
- Wet signature support for manual signing.
- External storage integrations with Google Drive and Microsoft OneDrive for storing signed contract documents.
- Centralized legal contracts repository containing the metadata of signed contract documents.

Non-disclosure agreement contract request workflow

When a requester submits a legal request, an NDA contract document is created using a standard contract template based on the information from the request. The information from the request is inserted at the appropriate places in the template.

Because contract documents are in Microsoft Word format, reviewing, editing, and finalizing the contract documents is easier than documents in PDF or HTML format.

If the generated NDA document doesn't require any changes, the requester can send it to the signatories for an electronic or wet signature. After all signatories have signed the contract document, it's stored on the ServiceNow instance or an external storage system based on the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

configuration. The requester and legal department members can access the signed contract document from the Contracts repository.

A sample workflow for a non-disclosure agreement (NDA) contract request might progress as follows:

1. Legal configurator sets up the foundation data for submitting an NDA request. For more information, see Configure Contract Management Pro for Legal Service Delivery.
2. Legal requester fills out the NDA intake request form.
3. A contract request is initiated.
4. Contract document is generated from a contract template and content is added dynamically per predefined conditions.
5. Contract user edits the requests for any changes and creates a new version of the contract document using the **Regenerate** or **Sync document** option.
6. The Contract requester views the contract document.
   a. If no changes are required, the document is sent for signature.
   b. If any changes are required, the contract requester submits a change request, which is sent to the contract fulfiller.
7. Based on the change request, the contract fulfiller can take the following actions.
   a. The contract fulfiller initiates an internal review process.
      i. The contract fulfiller submits a review task for internal review.

      Note:
      You can create parallel review tasks for the same contract document for different reviewer groups. However, you cannot create a review task for the same document with the same reviewer group if another active task already exists.

      ii. A contract reviewer group manager can assign the review task, or a contract reviewer can self-assign it.
      iii. The assigned contract reviewer starts working on the contract document.
      iv. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.
      v. If a request for more information was submitted, the contract fulfiller shares the information.
      vi. The contract reviewer reviews the document, accept or reject redlines, proposes edits, and adds comments.
      vii. The contract reviewer completes the review and shares the updated contract document if available.
      viii. The contract fulfiller receives updated document and makes the necessary changes based on the feedback.
         - For internal storage - If any changes are required, a new document version is created after finalizing the document.
         - For external storage - Reviewers collaborate on the contract document revision online in real time. Once the review is complete, the fulfiller can finalize the contract document that is available online or create a new offline version with the changes.
   b. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created.
   c. Once the document is finalized, fulfiller sends document to requester.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. The contract requester previews the generated contract and, if no changes are required, sends it to the signatories.
9. All signatories submit the required signatures.
10. The signed contract is attached to the legal request record.
11. If an external storage is configured, the signed contract is stored in it and referenced in the contract repository.

Submit a legal request for a non-disclosure agreement

Submit a legal request for a non-disclosure agreement (NDA) with third parties such as vendors, customers, or partners.

Before you begin

- The contract type must be active.
- Role required:
  - sn_lg_ops.legal_user and sn_cm_core.contract_user

Procedure

1. Access the non-disclosure agreement intake form.

2. On the form, fill in the fields.

Non-disclosure agreement intake form

Field	Description
Requested For	User for whom you want to submit a legal request. This field is visible only when you are a legal fulfiller with the sn_lg_cnt.contract_fulfiller role.
Contract party type	Category of the third party entity with whom the contract has to be signed.
Purpose of the contract	Purpose of the agreement. Example: Non-disclosure agreement for new business investments.
Company	Legal name of the third party with whom you are making an agreement. If the company name isn't listed, select the **[Company not listed]** option and enter the name in the **New company legal name** field.
Address	Mailing address of the third party.
Country	Country of the third party.
Contract start date	Start date of the contract period.
Contract end date	End date of the contract period.
External signatory details	List of people from the selected third party who should sign the agreement.
Signature type	Type of signature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Electronic signature: The signatory electronically signs the contract. ○ Wet signature: The signatory manually signs the physical version of the contract. The default signature type is Electronic Signature.

3. **Optional:** Modify the list of signatories.
   - (Optional) To add a signatory, select **Add** and provide the signatory's details.
   - (Optional) To modify a signatory's information, select the Edit row icon (✎) on the signatory's row and update the details.
   - (Optional) To remove a signatory, select the Remove row icon (✖) on the signatory's row.
4. Select **Submit**.
5. **Optional:** Modify the request details or manage signatories by selecting **Actions** and then selecting **Edit Request**.
   This option is available only if the request state is Draft or Work in progress. For more information, see Modify a non-disclosure agreement legal request.

Result

- A legal request is submitted and a contract request is created for generating contract documents.
  - If there are no validation errors, a contract request is created in the Work in progress state.
  - If there is a validation error due to incorrect signatory information, a contract request is created in Draft state.
- If a contract template rule or contract configuration is not available, a contract request will not be created. The contract configurator should correct the configuration to trigger contract request creation. The legal request remains in Draft state.
- Version 1.0 of a contract document is generated and listed in the **Contract Document** tab of the contract request.
- . The contract document process involves:
  - Using the correct contract template based on contract template rules.
  - Replacing the metadata with data from the request.
  - Replacing the signatory information.
  - Placing the content of the clauses in the contract document according to the clause variation rules.
- Internal signatories based on the template are also populated in the generated document. For more information, see Define an internal signatory rule.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- If more signatories have been added in the request than are needed for the contract as defined in the contract template, only the default number of signatories are necessary for signing the contract. Other signatories are marked as Not Considered.
- If fewer signatories are included in the request than are required for the contract, you can add more signatories.

A record for each external signatory is created in the Signer [sn_cm_core_signer] table.

For more information on how to view and track a legal request, see View and track non-disclosure agreement requests as a legal user.

Modify a non-disclosure agreement legal request

As a requester, modify the legal request for a non-disclosure agreement (NDA).

Before you begin

Role required:

- sn_lg_ops.legal_user and sn_cm_core.contract_user

About this task

Note the following:

- You can modify a request until it is in the Draft or Work in progress state.
- You can't modify the **Signature type** field.

Procedure

1. Open an NDA legal request.
2. Select the request that you want to edit.
3. On the request page, from the Actions menu, select **Edit Request**.
4. Edit the fields that you want to modify.
5. Select **Save** to update the record.

Result

- Based on the change in values in the request form, the contract document is updated as follows:
  - The correct contract template is used based on contract template rules. For example, The contract template rules can be defined for specific countries. If a change is made in the Country value, the contract document is updated per the contract template defined for the updated value of the country.
  - Metadata and signatory information is replaced with data from the modified request.
  - Content is inserted in the clauses in the contract document per the clause variation rules.
- A new document revision is created and the file name is appended with the version number.
- The Contract status is marked as Ready revision.

View and track non-disclosure agreement requests as a legal user

View the details of a non-disclosure agreement request after it has been submitted and track the activities in the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user

Procedure

1. Open a legal request.

2. View the details of the contract request.

Information type	Tab
Contract document	Contract Documents ○ If the request uses internal storage for attachments, access the document by selecting it. ○ If the request uses external storage, access the document by selecting the link.
Signatories	Signatories
Request details	Request Details **Note:** If legal fields have been modified in a workspace, the updated values and previous values are displayed in the corresponding variables in the **Request Details** tab in Employee Center.
Signed contract document	Legal Contract
Attachment documents in internal storage	Preview

3. **Optional:** Track the activities in the request and post messages for the fulfiller working on it by accessing the **Activity** tab.

Work on NDA legal requests

As a member of the legal contracts support team, work on the legal request. Upload the revised document to the request and send the document to the requester from within the request.

Before you begin
The practice area lead or group manager should have assigned you the request. If not, you can open the request to assign it to yourself or someone in the group.

Role required: sn_lg_cnt.contract_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Procedure

1. Assign a legal request to yourself or to someone in your assignment group.
   For more information, see Assign a legal request

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Start working on a legal request.
   a. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
   b. Select the list icon ( ).
   c. Select **Legal requests** option.
   d. Select **Assign to me**.
   e. Open the legal request from the list.
   f. Select **Start work**
   The state of the legal request updates to Work in progress.
3. In the **Lists** tab, navigate to **Legal Requests** or **Contract Requests**.
4. **Optional:** If you need help from other fulfillers to work on the legal request, add them in the **Collaborators** field.

   Note:
   Users with the sn_lg_contracts.contracts_fulfiller role are listed in the **Collaborators** field.

   The collaborators are notified via email that they have been added as collaborators to a legal request.
5. **Optional:** In the legal request, update the **Watch list**, **Collaborators**, and **Requested for**.
   Any changes done to the **Watch list**, **Collaborators**, and **Requested for** are synced to the contract request.
6. **Optional:** Update a company name by selecting its name in the **Company** field.
   If the company name is not listed in the **Company** field, select the **Add new company name** check box and then enter the company name in the **New company legal name** field.
7. **Optional:** If you have opened a contract request from the **Legal requests** listing, select the **Contract Requests** tab.
8. **Optional:** Initiate an ad hoc approval for the contract document revision when an approval is required from other stakeholders.
   For more information, see Initiate an ad hoc approval for a contract document revision.
9. **Optional:** Add internal or external signatories to the contract request by accessing the **Signatories** tab and selecting **Add**.

   Note:
   You can add signatories in NDA legal requests only when the contract is generated from a template configured with signature blocks
10. **Optional:** Remove the signatories from the contract request by accessing the **Signatories** tab, selecting the signatory, and selecting **Remove**.

    Note:
    You can remove signatories in NDA legal requests only when the contract is generated from a template configured with signature blocks
11. **Optional:** In the **Signatories** tab, select **Sync signatories** to update the contract document with the latest signatory details.
    For more information, see Updating and synchronizing signatories

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
This option is not available on Contract Management Pro starting with version 1.2.1.

12. In the Activity section, review the changes requested by the requester and make the necessary changes in the contract document.
13. Upload the revised contract document.

    a. In the **Contract documents** tab, select **Create Revision**.

    b. In the Create revision dialog box, select the source of the updated contract and upload a new document revision.

Contract source	Action
Computer	In the **Attachment** field, select **Attach File** and upload the updated contract.
Activity stream	In the **Document** field, select the document in the activity stream. The activity stream includes documents attached while requesting changes for a contract or documents received through email.
External storage	If external storage is configured, in the **Document** field, select the document.

    c. **Optional:** Add work notes to provide any information on the attached document.

    d. Select **Create**.

    The attached document is added to the request. The revision number of the latest document is one higher than the previous document revision number. The document is listed in the **Contract document** tab.
14. When a legal request changes, create a new version of the contract document with updated metadata and signatories and retain the changes in the previous version by selecting **Sync document**.
    For more information, see Synchronize a non-disclosure agreement document after modifying a self-served contract request (Contract Management Pro 1.2.1).

Note:
This option is available on Contract Management Pro starting version 1.2.1

15. **Optional:** For any changes in legal request, select **Regenerate** option to create a new version of the contract document with updated metadata and signatories, and discard the changes in the previous version.
    For more information, see Regenerate contract document after modifying request.
16. Set up an email to stakeholders to request to have the completed contract document reviewed and the changes confirmed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select **Compose Email**.

b. In the **New Email Draft** tab, add recipients' email addresses in the **To**, **CC**, and **BCC** fields as appropriate.
The **CC** field is automatically populated with the requester's email address.

c. Enter the subject of the email in the **Subject** field.
The short description of the request is populated by default.

d. In the **Attachments** field, select **+Add File**.

e. Select whether the file source is your computer or an attachment to a record and select the file to be attached.
If you've marked a contract document revision as Ready, it's attached to the email by default.

f. Either enter your own message in the email body or copy and paste the content from an email response template into the email body.

Using response templates, you can insert predefined content into the email body. Select the response template icon ( ) and find an appropriate response template based on the subject of your email. Copy and paste the template's content into the email body.

Note:
Only response templates configured for the email channel are available to use. For more information, see Response templates configured for email channel.

For more information, see Communicating via email .

g. Either send the email immediately or indicate that it should be sent later.

- To send the email immediately, select **Send email**.
- To indicate that the email should be sent later, select **Save as draft**.

  If you choose to save the email as a draft, you can modify it later. If a newer document revision has been posted, you have to substitute that revision for the document you attached.

Synchronize a non-disclosure agreement document after modifying a self-served contract request (Contract Management Pro 1.2.1)

Synchronize the contract document for non-disclosure agreements contract requests to create a new revision of the document with updated metadata and signatories while retaining the changes made in the previous version of the contact document.

About this task

Note:
The **Sync document** option is available only starting with Contract Management Pro version 1.2.1

You can synchronize a contract document only when the contract request is in the Work in progress state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Tables are not updated when you use the **Sync document** option. You must regenerate the document to update the tables. For more information, see Regenerate contract document after modifying request.

Before you begin
Role required:

- sn_lg_ops.legal_user and sn_cm_core.contract_user
- sn_cm_core.contract_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Navigate to **Legal Requests**.
4. Open a legal request.
5. Navigate to the **Contract Requests** tab and open the request.
6. In the **Contracts documents** tab, select **Sync document**.

Result
A new contract document revision is created with the update metadata and signatories. The changes made in the previous revision are retained.

Regenerate contract document after modifying request

As a legal user or legal fulfiller, regenerate the contract document for non-disclosure agreement contract requests when the legal request has been modified.

About this task
When the parent request is modified, you can use the **Regenerate** option to generate a new contract document from the contract template with the latest metadata, signatories, and tables. You can regenerate a contract document only when the State is Draft or Work in progress.

Any changes made to the signatory information in the contract request will be overwritten by the signatory information from the contract template. If the signatory information is incomplete or inconsistent after regeneration, you can manually update the signatories. For more information, see Updating and synchronizing signatories.

You can regenerate a contract document only when the State is Draft or Work in progress.

Before you begin
Role required:

- sn_lg_ops.legal_user and sn_cm_core.contract_user
- sn_cm_core.contract_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Navigate to **Legal Requests**.
4. Open a legal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Navigate to **Contract request** and open the request.
6. Select the More Actions icon ( ) and select **Regenerate**.

Result

The results of the regeneration depends on the initial state of the document:

- Draft: Replaces the existing contract document revision.
- Work in progress: Creates a new contract document revision and any changes made in the previous revision is discarded.

Note that although contract fulfillers can see all contract document revisions, a contract user can see only the latest revision.

Updating and synchronizing signatories

As a legal user or fulfiller, update and sync signatory details when the contract submission has failed, or contract document cannot be sent due to incomplete signatory information.

> **Note:**
> If you are using Contract Management Pro version 1.2.1 and the document is stored on your ServiceNow instance, signatories are automatically updated when you send the document for signature or resubmit the contract request.

Resolve the failure to send contract documents for signature (Contract Management Pro 1.2.1)

Update signatory details in an external contract document when there is a failure in sending the document for signature due to a mismatch between the signatory information in the contract request and the contract document.

Before you begin

Role required:

- sn_lg_ops.legal_user and sn_cm_core.contract_user
- sn_cm_core.contract_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Navigate to **Legal Requests**.
4. Open a legal request.
5. Navigate to the **Contract Requests** tab and open the request.
6. Navigate to the **Activity** stream to learn the validation error.
7. Select the **Signatories** tab.
8. Select the signatory and update the information.
9. Select **Save** to save the signatory details.
10. Select the **Contracts documents** tab.
11. Select **Sync document**.
    A new contract document revision is created with the updated signatory information.
12. Select **Save** to save the contract request.
13. Select **Send for signature.**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A message appears displaying details of the contract document that is sent for signature.

14. Select **Send for signature** on the confirmation message.

Resolve the failure to submit a self-serve contract

As a legal user, resubmit a contract request that was not submitted due to incomplete signatory information by updating and syncing signatory information.

Before you begin

Role required:

- sn_lg_ops.legal_user and sn_cm_core.contract_user
- sn_cm_core.contract_fulfiller

About this task

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Navigate to **Legal Requests**.
4. Open a legal request.
5. Select the **Contract Requests** tab and open the request.
6. Select the **Activity** stream to know the validation error.
7. Select the **Signatories** tab.
8. Select the signatory and update the information.
9. Select **Save** to save the signatory details.
10. Select the **Signatories** tab.
11. Select **Sync signatories**.
    The contract document is updated with the new signatory details.
12. Select **Save**.
13. Select **Resubmit**.

Result

The contract request is resubmitted and the state changes from Draft to Work in progress.

Resolve an error during send for signature

As a legal user or fulfiller, update and synchronize signatory details when send for signature fails due to a mismatch between signatory information in the contract request and contract document.

Before you begin

Role required:

- sn_lg_ops.legal_user and sn_cm_core.contract_user
- sn_cm_core.contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Navigate to **Legal Requests**.
4. Open the legal request.
5. Navigate to the **Contract Requests** tab and open the request.
6. Navigate to the **Activity** stream to find the validation error.
7. Select the **Signatories** tab.
8. Select the signatory and update the information.
9. Select **Save** to save the signatory details.
10. Select the **Signatories** tab.
11. Select **Sync signatories**.
    The contract document is updated with the new signatory details.
12. Select **Save**.
13. Select **Send for signature.**
    A message appears displaying details of the contract document that is sent for signature.
14. Select **Send for signature** on the confirmation message.

Result

A new contract document revision is created with the latest signatory details and sent for signature. The Activity stream displays details of the contract document that is sent for signature.

Reviewing and finalizing a self-serve contract document

Review and finalize the contract document generated after the self-serve contract request is submitted, then send it for signature.

After submitting a self-serve contract request, a contract document is generated based on the contract template and contract template rules. A workflow for reviewing and finalizing a self-serve contract document might progress as follows:

1. The contract user reviews the contract document.
   - If no changes are required, the contract user submits the document for signature.
   - If changes are necessary, the contract user submits a change request to the contract fulfiller and the process continues.
2. An email notification with the details of the change request is sent to the contract fulfiller.
3. The contract fulfiller updates the document and creates a document revision.
4. Contract fulfiller gets ad-hoc approval from the stakeholders.
5. Contract fulfiller sends the contract document back to the contract user.
6. An email notification is sent to the contract user that the document has been updated.
7. The contract document can shared with stakeholders and on finalizing can be sent for signature.
8. If additional changes are required, the contract user submits the change request again and this process continues until the document is acceptable and can be sent for signature.

Review a contract document in Employee Center

As a contract user, review a contract document and submit a change request to the contract fulfiller if changes are required in the contract document.

Before you begin

Role required: sn_cm_core.contract_user and sn_lg_ops.legal_user

About this task

- Change requests can be submitted only by the user who has initiated the contract request or for whom it was initiated.
- The Contract state is Work in progress.
- The **Request changes** option isn't available if a previously submitted change request isn't completed.

Procedure

1. Open a legal request.
2. Select the **Contract documents** tab.
3. Access the contract document.
4. Review the contract document.

Work on a contract change request

As a contract fulfiller, review the change request, update the contract document and send it back to the contract user.

Before you begin

Role required: sn_cm_core.contract _fulfiller and sn_lg_cnt.contract_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Select **Legal Requests**.
4. Go to the contract request listing.
   - For assigned contract request - Select **Assigned to me**.
   - For unassigned contract request - Select **Unassigned**.
5. Select the legal request for which the change request has been submitted.
   - When you have opened a request from the unassigned list, assign it to yourself or the group manager has to assign it to a user.
   - When the legal request is assigned, select **Start work**.
   - You can get the details of the change request from the Activity stream or the notification email received.
6. Select Contracts request tab and open the request.
   You can get the details of the change request from the Activity stream or the notification email received.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select the Contract documents tab.
8. Access and edit the contract document.
9. If you have downloaded the document from the storage, upload the updated contract document by creating a revision.
   a. Select **Create revision**.
   b. In the Create revision from drop-down list, select a storage type and upload the new document.
      - **In the workspace**: Select **Attach File** and upload the document.
      - **Activity stream**: In the **Document** field, select the document that is displayed based on attachments in the activity stream.

        The documents attached while requesting changes for a contract and the documents received through inbound emails are available in the Activity stream.
      - **External Storage**- In the Document field, select the document. This option is displayed only if external storage is configured.
10. **Optional:** Get approval of the updated document from stakeholders.
    For more information, see Initiate an ad hoc approval for a contract document revision.
11. Return the contract document to the change requester.
    a. Select **Send document**.
    b. Select **Send document** on the confirmation screen.

Result
The document is sent back to the user and the Contract status updates to Document ready to indicate that the contract document has been updated according to the change request.

Initiate an ad hoc approval for a contract document revision

Initiate an ad hoc approval for a contract document revision from a user or a user group.

Before you begin
Role required: sn_lg_cnt.contract_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

You can assign these approvals to any user or user group in your organization who have the sn_lg_cnt.contract_fulfiller role. When you initiate an approval, the approvers receive an email notification and can review and act on the approval.

Note:
If a contract document revision already has a pending approval record, you cannot initiate another approval for the same item.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, navigate to **Legal Requests** or **Contract Requests**.
4. **Optional:** If you have opened contract request from the **Legal requests** listing, select **Contract request** tab.
5. In the **Approvers** tab, click **Initiate Approval**.

   You can also initiate an approval by clicking the more actions button ( ) and selecting **Initiate Approval**.
6. On the Initiate Approval dialog box, fill in the fields.

Initiate Approval dialog box

Field	Description
Contract type	Contract type for which you need to initiate approval.
Document revision	This field is automatically populated with the latest document revision.
Approval by	Approval required at user level or user group level. ○ **User**: Get approval from an individual user. ○ **User group**: Get approval from a set of users. The **Select user** field is replaced by the **Select user group** field.
Select user	User or user group who must approve the item. **Note:** Users or user groups with the sn_lg_cnt.contract_fulfiller role are listed. ○ If you selected **User** in the **Approval by** field, select a user from whom the approval is required. ○ If you selected **User group** in the **Approval by** field, select a user group from whom the approval is required.
Approval note	Note for the selected user or user group.

7. Click **Initiate**.

Result

Assigned approvers are added in the **Approvers** tab based on the following conditions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If you selected **User** in the **Approval by** field, an approval record is created for the selected user.
- If you selected **User group** in the **Approval by** field, an approval record for each user in the selected user group is created. Anyone from the group can approve.

The assigned approvers get an email notification with a link to open the record for review and action.

The approval details appear under the **Approvals** tab on the Standard Ticket page.

Send a non-disclosure agreement document for signature

After a non-disclosure agreement contract document has been reviewed and finalized, send the document for signature.

Before you begin

The contract document must have been reviewed and finalized, and the contract status must be set to Document ready. For more information, see and Review a contract document in Employee Center and Work on a contract change request.

Role required: sn_cm_core.contract_user and sn_lg_ops.legal_user

Procedure

1. Open a legal request.
2. Select the **Contract documents** tab.
3. Select **Send for signature**.

   Note:
   If a message states that the signatories are not in sync, update and sync them before sending the document for signature.
   - If you are using Contract Management Pro 1.2.1, see Resolve the failure to send contract documents for signature (Contract Management Pro 1.2.1).
   - If you are using an earlier version of Contract Management Pro, see Resolve an error during send for signature.

   A message appears displaying details of the contract document that is sent for signature.
4. Select **Send for signature** on the confirmation message.

Result

The document is sent for signature to the specified signatories. The activity stream displays details of the contract document that is sent for signature.
The contract state and contract status updates to Awaiting Signature. For more information, see Signature workflow for a legal request.

Third-party contract review requests

Employees can submit legal requests for review of third-party contracts by the legal team.

Features

Third-party review requests include the following features:

- Ability to submit a third-party document for review.
- Ability to upload multiple contract and supporting documents for review.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Get review and feedback from the internal subject matter experts on contract documents
- Electronic signature integrations with Adobe Acrobat Sign and Docusign.
- Support for storing contract documents in your ServiceNow instance or external storage systems such as Microsoft OneDrive and Google Drive.
- Legal contracts repository containing the metadata of signed contract documents.
- Support for a configurable system property to generate a certification of completion.

Third-party contract review request workflow

As a legal fulfiller on the legal team, you work on assigned third-party review requests by completing the following activities:

1. The legal user creates a third-party contract review request.
2. The legal user uploads a single or multiple contracts and their supporting documents and classifies them.
3. The contract fulfiller reviews the contract document attached to the legal request.
4. If necessary, the contract fulfiller reclassifies the contract and supporting documents.
5. If an expert review or feedback is required from internal teams, the contract fulfiller initiates internal review process.
   a. The contract fulfiller submits a review task for internal review.

      Note:
      You can create parallel review tasks for the same contract document for different reviewer groups. However, you cannot create a review task for the same document with the same reviewer group if another active task already exists.

   b. The contract reviewer is assigned the review task
   c. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.
   d. If a request for more information was submitted, the contract fulfiller shares the information.
   e. The contract reviewer reviews the document, accept, reject, or proposes edits, and adds comments.
   f. The contract reviewer reviews the contract and provides feedback. If a revised document is available, it is also shared with the contract fulfiller.
   g. The contract fulfiller receives updated document and makes the necessary changes based on the feedback.
      - For internal storage - If any changes are required, a new document version is created after finalizing the document.
      - For external storage - Reviewers collaborate on the contract document revision online in real time. Once the review is complete, the fulfiller can finalize the contract document that is available online or create a new offline version with the changes.
6. The contract fulfiller uploads the revised contract to the contract request.
7. The contract fulfiller emails the revised contract document to third-party contacts.
8. View responses from third-party contacts in the activity stream of the contract request.

   Multiple iterations of revisions between your company and the third party might be necessary before the contract document is finalized by all parties. The review process may be conducted again with different reviewer groups.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created. The contract document can be sent for signature only when it has been approved.
10. The contract fulfiller prepares for signatures by specifying the order in case of multiple contract documents, adding fields required in case of e-signature and sends the contract document for signature.
11. Signatories review the contract document.
    - If no change is required, the contract document is signed by all the signatories.
    - If any changes are required, signature is declined, the user who is working on the contract request generates a new document and resends it for signature.
12. The signed contract is stored on the ServiceNow instance or an external storage system and referenced in the contract repository. The requester and department members can access the signed contract document from the contracts repository.

For e-signatures, after all signatories have signed the contract document, it's stored on the ServiceNow instance or an external storage system. If an external storage is configured, the signed contract is stored in it and referenced in the contract repository.

For wet signatures, after all signatories have signed and returned the contract document, the legal fulfiller uploads the signed contract to the contract request. The document is then stored in the contract repository.

The requester and legal department members can access the signed contract document from the Legal Contracts repository.

Create a legal request for a third-party contract review

Create a legal request for the legal team to review a third-party contract or the terms and conditions provided by the third party.

Before you begin

Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user

About this task

Procedure

1. Access the third-party review intake form either from the Legal Service Portal or from Employee Center.

2. On the form, fill in the fields.

   For a description of the field values, see Third-party Contract Review form

3. Add single or multiple contract and supporting documents to be reviewed by the legal department.

   a. In the Documents section, attach documents.

4. Classify the attached documents.

5. **Optional:** Save the information in the request to submit later in Employee Center by selecting **Save as Draft**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If the contract type is deactivated when the request is saved as draft, the inactive contract type is not included in the list displayed in the **Document type** field. You must select an active contract type before submitting the request.

6. Select **Submit**.

Result

- A legal request for reviewing the attached third-party contracts and any supporting documents is created in the New state.
- The contract documents and supporting documents are available in the respective tabs, and the contract status is New.
- For a custom record producer, if no documents are attached, the legal request is created in the Draft state. You must upload the documents and resubmit the contract request. For more information, see Resubmit third-party contract request.

For more information on how to view and track the legal request, see View and track third-party contract review request as a legal user.

What to do next

As a member of the legal department contract support team, work on the request to review the contract and get it signed. For more information, see Work on a third-party contract review request

.

Resubmit third-party contract request

As a legal user, resubmit contract request in draft state.

Before you begin

Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user

About this task

For a custom record producer, if no documents are attached, the legal request will be in Draft state. You need to upload document and resubmit the contract request.

Procedure

1. Open the third-party contract review request.

2. In the Documents section, attach documents.
   The attached files are listed with File name, Document type, and Actions in the Documents section The list of documents attached can be seen in the activity stream of the request.
3. Classify the attached documents.

4. Select **Resubmit**.

View and track third-party contract review request as a legal user

View the details of a third-party contract review request after it has been submitted and track the activities in the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user

Procedure

1. Open a legal request.

2. View details of the request.
   - View the contract document by accessing **Contract documents** tab.
   - View the supporting documents by accessing the **Supporting documents** tab.
   - Track the request's activities and post messages for the fulfiller working on it by accessing the **Activity** tab.
   - View the list of signatories and their details by accessing the **Signatories** tab.
   - View the details of the third-party contract review by accessing the **Request Details** tab.

     When legal fields are modified in a workspace, the updated value and previous values are displayed in the corresponding variables in the **Request Details** tab.

   - View the final contract documents by accessing the **Legal Contract** tab. When multiple contract documents are attached, a separate record is created for each contract type.

Modify a third-party review request

As a requester, modify a legal request to update the request details or replace the attached contract document with an updated version.

Before you begin
You can modify a request until it is in the Draft state.

Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user

Procedure

1. Open the third-party contract review request.

2. Modify the request.

3. Select **Save** to update the record.

Work on a third-party contract review request

As a member of the legal contracts support team, review and revise a third-party contract document. You can email the revised document to stakeholders to verify the revisions and then send the ready document for signature from within the legal request.

Before you begin
Role required: sn_lg_cnt.contract_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Assign a legal request to yourself or to someone in your assignment group.
   For more information, see Assign a legal request
2. Start working on a legal request.
   a. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
   b. Click the list icon ( ).
   c. Select **Legal requests** option.
   d. Select **Assign to me**.
   e. Open the legal request from the list.
   f. Select **Start work**
   The state of the legal request updates to Work in progress.
3. In the **Lists** tab, navigate to **Legal Requests** or **Contract Requests**.
4. **Optional:** If you need help from other fulfillers to work on the legal request, add them in the **Collaborators** field.

   Note:
   Users with the sn_lg_contracts.contracts_fulfiller role are listed in the **Collaborators** field.

   The collaborators are notified via email that they have been added as collaborators to a legal request.
5. **Optional:** Reclassify the contract or supporting documents submitted for review.
   For more information, see Reclassify contract documents in third-party contract review request as a legal fulfiller and Modify supporting documents in third-party contract review request as a legal fulfiller.
6. **Optional:** If you have opened contract request from the **Legal requests** listing, select **Contract request** tab.
7. Open an existing revision of a contract document.
   - For internal storage:In the **Contract documents** tab, select the name of the document to open the document revision record.
   - For external storage: In the **Contract documents** tab, click the link in the **URL** tab to view the document online.
8. Review the contract documents.
9. Revise the contract document if any changes are required and upload it by creating revision.
   a. Select **Create revision**.
   b. In the **Select contract type** field, select the contract type.
   c. In the **Create Revision from** field, select the storage type to attach the revision.
      - To select a file from your local system, select **Computer** and upload a file.
      - To select an attachment from an email, select **Inbound Email**.

        Files attached to inbound emails are listed in the **Document** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To select a file stored in the configured external storage system, select **External storage**.

  This option is displayed only if an external storage has been configured.

  (Optional) Add more information about the document in the **Notes** field.

  This information is added to the activity stream along with the attachment.

d. Select **Create**.

The document is added to the request. The revision number of the latest document is one higher than the previous document revision number. The document revision is listed in the **Contract Documents** tab.

10. If an approval is required from other stakeholders, send the document for ad hoc approval. For more information, see Initiate an ad hoc approval for a legal request or its attachment.

11. Set up an email to stakeholders to have the completed contract document reviewed and the changes confirmed.

a. Select **Compose Email**.

b. In the Compose Email pop-up, select documents to be attached to the email.

c. Select **Add** to attach the document to the email.
An email editor is displayed.

d. In the **New Email Draft** tab, add recipient email addresses in the **To**, **CC**, and **BCC** fields as appropriate.

In the **To** field enter the email address of the recipient, The **CC** field will be set to requester's email address.

e. Enter the subject of the email in the **Subject** field.
The short description of the request is populated by default.

f. In the **Attachments** field, select the **+Add File** link to add the documents and then select the source of the file.

g. Either enter your own message in the email body or copy and paste the content from an email response template into the email body.

Using response templates, you can insert predefined content into the email body. Select the response template icon ( ) and find an appropriate response template based on the subject of your email. Copy and paste the template's content into the email body.

Note:
Only response templates configured for the email channel are available to use. For more information, see Response templates configured for email channel.

For more information, see Communicating via email.

h. Either send the email immediately or indicate that it should be sent later.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To send the email immediately, select **Send email**.
- To indicate that the email should be sent later, select **Save as draft**.

12. In the **Signatories** tab, add signatories to whom the contract will be sent for signature by selecting **Add**.

13. When all stakeholders have agreed on a contract document revision, select **Prepare for Signature** to prepare and send the document to the signatories for signature.

    a. In the Reorder the document pop-up, drag and place the documents to define the order. The reorder option is displayed only when more than one documents are attached in the contract request.

    b. Select **Prepare for Signature**.

    Note:
    When you select **Prepare for Signature**, the document opens in the configured e-signature system.

    - For DocuSign, the document opens automatically in the e-signature portal without requiring a login.
    - For Adobe Sign, you must log in to the e-signature portal to open the document.

    The Contract status and State updates to Preparing for Signature.

14. Complete the document in the configured e-signature system and send it for signature.

    a. Preview the document to ensure that the content is correct.
    The contract documents submitted in the third-party contract review request will be combined into a single document.

    b. Add the required fields including the Signature and Signature date field for all the signatories.

    c. Select **Send**.

    An e-signature envelope is created and sent to all signatories. If the system receives a success notification from the electronic signature provider, the Contract status updates from Preparing for Signature to Awaiting Signature.

15. **Optional:** If you need to cancel the signature request before all signers have completed signing the document, select **Cancel Signatures**.
    The Contract status updates to Signature cancelled.

What to do next

- Signatories can review and sign or decline to sign the contract.

  For more information, see Signature workflow for a legal request.

- Check the Contract status in the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If all signatories sign the contract document, the Contract status updates to Contract Signed. In the **Signatories** tab, the status of all signatories updates to Signed. You can access the legal contract repository record from the **Legal Contracts Repository** tab.
- If any signatory declines to sign the contract document, the Contract status updates to Signing declined. In the **Signatories** tab, the status of all signatories updates to Declined. If more changes are required in the contract document, update it and resend it to the signatories for their signature.
- After all the signatories have signed the document, an email is sent to the legal signatories with the finalized contract document attached.
- If the certificate of completion is enabled, a certificate will be issued with the time stamp details about each signatory's action during an electronic signature.

- If the contract is signed by all signatories, you can close the request by selecting **Close Complete**. For more information, see Close a legal request

Reclassify contract documents in third-party contract review request as a legal fulfiller

As a legal fulfiller, reclassify the documents submitted in a third-party contract review request. For example, you need to change the contract document type from Non-disclosure Agreement to Partnership Agreement.

Before you begin

Role required: sn_lg_cnt.contract_fulfiller

About this task

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Open the legal request for which you want to reclassify the documents.
4. Select the contract request from the **Contract Requests** tab.
5. In the **Contract Documents** tab, select **Reclassify**.
6. In the **Contract type** drop-down list, select the contract type that you want to reclassify.
7. In the **Reclassify to** drop-down list, select the contract type into which you want to reclassify. Only active contract types are displayed in the list.
8. **Optional:** Add more information about the document in the **Work notes** field.
9. Select **Reclassify** to update the classification.
10. Select **Save** to save the record.

Modify supporting documents in third-party contract review request as a legal fulfiller

As a legal fulfiller, add, remove, or reclassify supporting documents submitted in a third-party contract review request.

Before you begin

Role required: sn_lg_cnt.contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Open the request for which you want to reclassify the documents.
4. Select the contract request from the **Contract Requests** tab.
5. Navigate to **Supporting Documents** tab.
6. Modify the supporting documents.

7. Select **Save** to save the record.

Internal review overview

Get your content reviewed by internal teams who have the expertise you need.

A workflow for getting content reviewed by internal teams might progress as follows:

1. For non-disclosure agreements, legal user submits a change request to the fulfiller for the content that needs internal review.

   Note:
   For third-party contract review requests, the contract user cannot create a change request. Instead, the contract fulfiller creates a task for internal review.

2. The contract fulfiller submits a review task when contract request is in Work in progress or Awaiting review State.
3. The contract reviewer or the manager assigns the review task.
4. The assigned contract reviewer starts working on the contract document.
5. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.
6. If a request for more information was submitted, the contract fulfiller shares the information.
7. The contract reviewer reviews the document, accept, reject, or proposes edits, and adds comments.
8. The contract reviewer completes the review and shares the updated contract document if available.
9. The contract fulfiller receives updated document and makes the necessary changes based on the feedback.
   - For internal storage - If any changes are required, a new document version is created after finalizing the document.
   - For external storage - Reviewers collaborate on the contract document revision online in real time. Once the review is complete, the fulfiller can finalize the contract document that is available online or create a new offline version with the changes.

The contract request remains in the Awaiting review State until a review task is active.

Request an internal review

Initiate a review task for review of the contract document by subject matter experts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- For non-disclosure agreements, you may want review and feedback from the internal subject matter experts. If needed, the contract requester can submit a change request to the contract fulfiller. The contract fulfiller then submits a review task with the change request details. For more information, see Review a contract document in Employee Center.
- For third-party contract review requests, the contract user cannot create a change request. Instead, the contract fulfiller creates a task for internal review.

Role required: sn_cm_core.contract_fulfiller

About this task

- You can raise a review task when the contract request State is Work in progress or Awaiting review.
- You can create parallel review tasks for the same contract document for different reviewer groups. You can't create a review task for the same document with the same reviewer group if another active task already exists.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Navigate to **Legal Requests** > **All**.
4. Open a legal request.
5. Navigate to **Contract Requests** tab and open the request.
6. Select the Reviews tab.
7. Select **New task**.
8. On the Create New Review Task form, fill in the details.

Create task for requesting internal review

Field	Value
Contract type	Contract for which you want to submit an internal review request. **Note:** The field is auto-populated when there is only one contract type. The latest revision of contract document is sent for review
Due date	Date to complete the task.
Priority	Level of priority to address the review request.
Assignment group	User group with contract reviewer role to which the task is assigned.
Assigned to	User to whom the task is assigned. If an assignment group is selected, the list shows members of the selected group.
Instructions	Description to specify the content to be reviewed.

9. Select **Create**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
A review task is created, listed in the Reviews tab and the change request details are added to the Activity stream. The Contract status updates to Awaiting review. If the new task doesn't appear in the list, click the refresh list button () to view it.

Work on internal review task

As a contract reviewer, review and provide feedback on contract documents

Before you begin
Role required: sn_cm_core.contract_reviewer

Procedure

1. Open the review task.
2. If the review task is not already assigned, select **Assign to me**.
3. Select **Start work**.
4. Open the contract document.
   - Internal storage: Download the document.
   - External storage: Select the document link to open it.
5. If you need additional context to review the document, request more information.

   a. Select the More Actions icon ().

   b. Select **Request information**.

   c. In the Comments field, enter the details about the information needed.

   d. Select **Submit**.
   The contract request Status and the review task State changes to Awaiting information and you can proceed with review after receiving information.

6. Share the review feedback
   The reviewer can make edits to the document, suggest changes through comments, and approve or reject any redlines.
   The review task will be closed, work notes are added to the Activity stream, and the State changes to Closed Complete.

Share requested information for internal review

As a contract fulfiller, share information requested by the reviewer to proceed with the contract document review.

Before you begin
Role required: sn_cm_core.contract_fulfiller

About this task
The work notes added when requesting information are available in the Activity stream. Review the information needed and gather the information to be sent to the reviewer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the review task.

2. Select **Send information**.
3. If you have document to be shared, select **Attach file**.
4. Select the file to be shared.
5. In the Comments field, enter work notes.
6. Select **Send**.

Result

The information is shared with reviewer and the review task State changes to Work in progress.

Cancel a review task

As a contract fulfiller, cancel a review task irrespective of its state.

Before you begin

Role required: sn_cm_core.contract_fulfiller

Procedure

1. Open the review task.

2. Select **Cancel review**.
   If you have selected **Cancel review** from the Reviews tab, select the review task to be canceled in the pop-up window.
3. In the Comments field, enter information for canceling the request
4. Select **Yes, cancel**.

Result

- The review task is canceled and the cancellation comments appear in the Additional Comments section of the contract request.
- When all the review tasks are cancelled or closed, the contract request State updates to Work in progress.

Signature workflow for a legal request

Contract Management Pro for Legal Service Delivery supports electronic signature or wet (manual) signature for a contract request.

- Electronic Signature: Enables signatories to sign the contract document electronically. For more information, see Configure an e-signature provider for legal contracts.

  If you want to generate a certificate of completion, you must select the **Electronic Signature** as signature type in the contract request. For more information, see Activate a system property to generate a certificate of completion.

- Wet Signature: Enables signatories to sign the contract document manually. You can then upload the signed document to a contract request. For more information, see Upload a manually signed contract document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Electronic signature workflow

- Send the finalized document to the signatories for signing.
  - The state and contract status updates to Awaiting Signature and the electronic signature flow is triggered as configured in Configure an e-signature provider.
  - An email notification that the contract document is available for signature is sent to the first signatory. The email contains a link to the contract document that the signatory can open and sign the document through the Docusign or Adobe Acrobat Sign electronic signature provider as configured in the electronic signature integration.

    The first signatory is the one whose Order value in the list of signatories is set the lowest in the contract template rule. For more information, see Configure contract template rules.
- Signatories can sign or decline the contract document.

Signatory action on the contract document

Signatories action	Workflow
All the signatories choose to do an electronic signature	○ First signatory signs the contract document If there is more than one signatory,the contract document is sent to the next signatory in the order. The status of the current signatory in the request updates from Pending Signature to Signed. The status of the next signatory updates from Not Started to Pending Signature. ○ After the last signatory has signed the document, the contract repository record is created and the signed document is attached to it. For contract requests containing multiple contract documents, the signed contract document is split into individual documents and attached to the contract repository record for the respective contract type. The state of the requests updates to Contract Signed.
One or more signatories decide to do a wet signature	○ One or more signatories decided to do a wet signature instead of electronic signature. ○ The wet signed contract document in PDF format is shared with the contract fulfiller. ○ The contract fulfiller uploads the signed document, selects the signatories who have shared the wet signed contract document and proceeds with the signature

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signatories action	Workflow
	process by sending the document to the next signatories. The status of the signatory in the request updates from Pending Signature to Signed. The status of the next signatory updates from Not Started to Pending Signature. The signature type is updated to Mixed signature after all the signatories have signed the document. ○ After the last signatory has signed the document, the contract repository record is automatically created and the signed document is attached to it. For contract requests containing multiple contract documents, the signed contract document is split into individual documents and attached to the contract repository record for the respective contract type. The state of the requests updates to Contract Signed.
The document is declined by the signatory.	An email notification that the signer has declined to sign the document is sent to the requester. The Signatory status in the request updates to Declined. The State changes to Work in progress and the Contract status changes to Signing Declined.
The contract document is resent for signature.	For contract request fulfilled by the contract user: A contract user can submit a change request. The contract fulfiller works on the change request and sends the updated document back to the contract requester. The updated contract document is sent for signature by the contract user. For contract request fulfilled by contract fulfiller: The contract fulfiller creates a document revision manually or by using regenerate option and resends the document for signature.

If the system property *sn_cm_core.enable_executed_contract_audit_certificate* is set to true, the certificate of completion is generated and attached to the contract repository record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Wet signature workflow

- Send the finalized document to the signatories for signing.
  - The state and contract status are updated to Awaiting signature.
  - An email notification is sent to the signatories and the contract documents are attached as PDFs in the email.

    The signatory with the lowest Order value in the list of signatories is the first signatory and is placed in the **To** field of the email. The other signatories are placed in the **CC** field.
- Signatories accept or decline the document.

Signatory action on the contract document

Signatories action	Workflow
The signatory accepts the document.	○ The signatory prints the contract document,signs it, and then returns it to the signature requester. ○ If there are multiple signatories for the contract, they can collaborate and send the signed document with everyone's signature or individually sign and send it back to the signature requester.
The document is declined by the signatory.	The signatory sends the document back to the requester for necessary correction. The signatories and the contract fulfiller can collaborate and finalize the contract document.
The contract fulfiller uploads the signed contract document.	○ On receiving the signed contract document, Contract fulfiller uploads the signed contract document in PDF format. ○ The contract document is added to the repository after it is uploaded. For self-served contracts, the state of the request updates to Closed complete and the contract status updates to Contract signed. For non-self-served contracts, the state of the request and the contract status updates to Contract signed. To close the contract request, select Close complete. For more information, see Upload a manually signed contract document.

Access to a contract document is based on the following user roles and conditions:

- A contract fulfiller can view and update contract documents
- Only a contract administrator can delete contract documents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Requesters can view only the contract documents for which they submitted the contract request.
- Users added to the watch list can view only contract documents for contract requests they have added.

While generating the contract repository record, mapped fields and their values are validated for data type and correctness. If validation errors are found, an email notification is sent to the contract fulfiller. The email also displays the list of fields that haven't been copied into the final contract document and the link to the contract repository record. The fulfiller then opens the record using the link and corrects the values to resolve the validation errors.

Upload a manually signed contract document

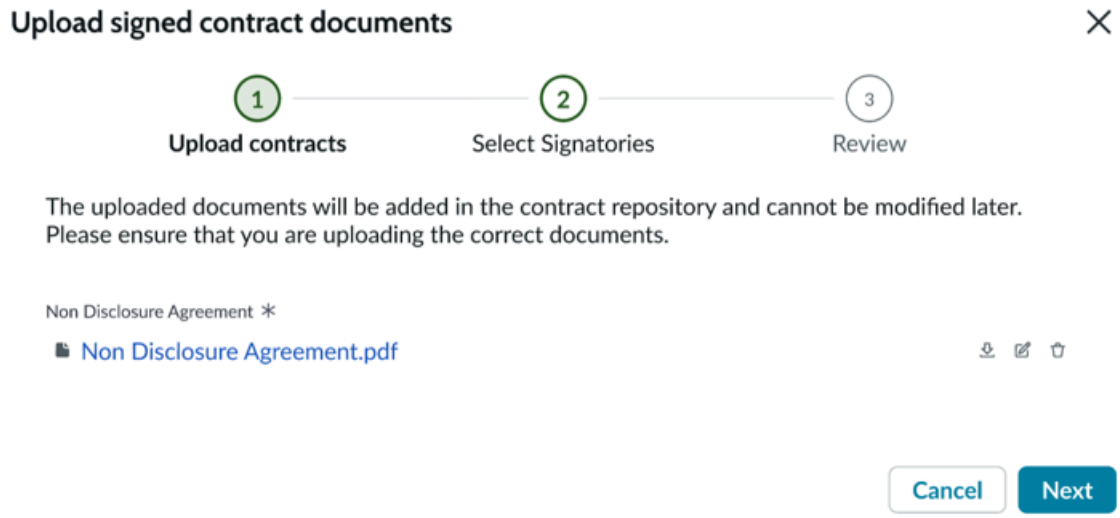
Upload the wet signed contract document that you have received from the signatories. You need to upload a contract document for a wet signature workflow or if one of the signatories in the electronic workflow decides to do a wet signature.

About this task

The state of the non-disclosure agreement should be Awaiting signature.

Before you begin

You can only upload a contract document in PDF format.



Role required: sn_lg_cnt.contract_fulfiller and sn_cm_core.contract_fulfiller

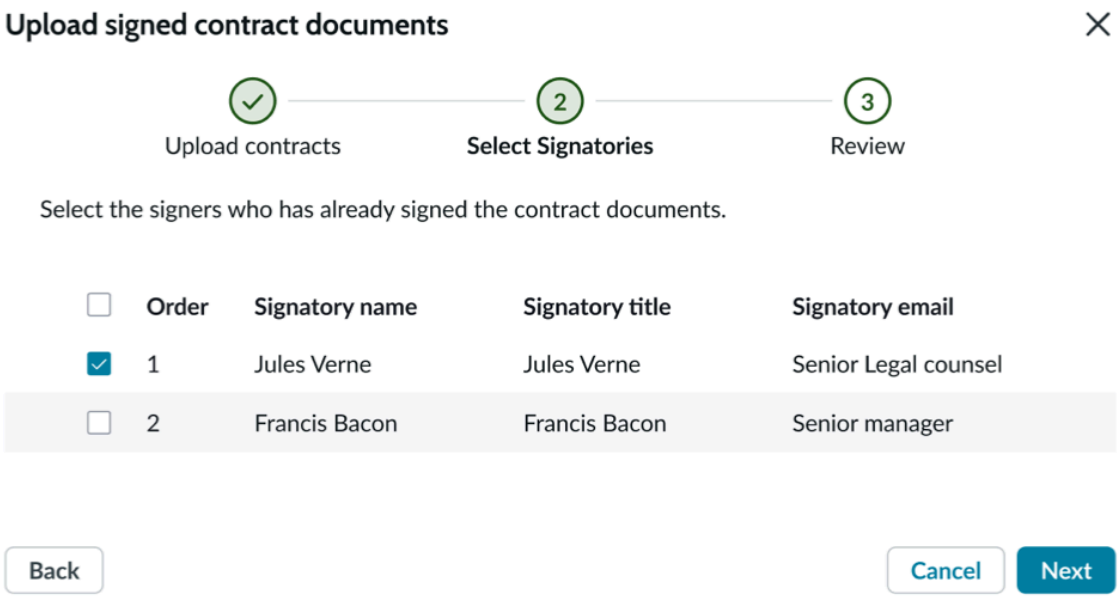
Procedure

1. Navigate to **All** > **Legal request** > **Legal Counsel Center**.
2. Select the list icon ( ).
3. In the **Lists** tab, navigate to **Legal Requests** or **Contract Requests**.
4. **Optional:** If you have opened contract request from the **Legal requests** listing, select the **Contract request** tab.
5. Select **Upload signed contract documents**.
6. Attach the wet signed contract document received from the signatories.
   a. In the Upload contracts step, select **Attach File**.
   b. Select the contract document and select **Open**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Attach wet signed contract document for upload

The contract document is attached.

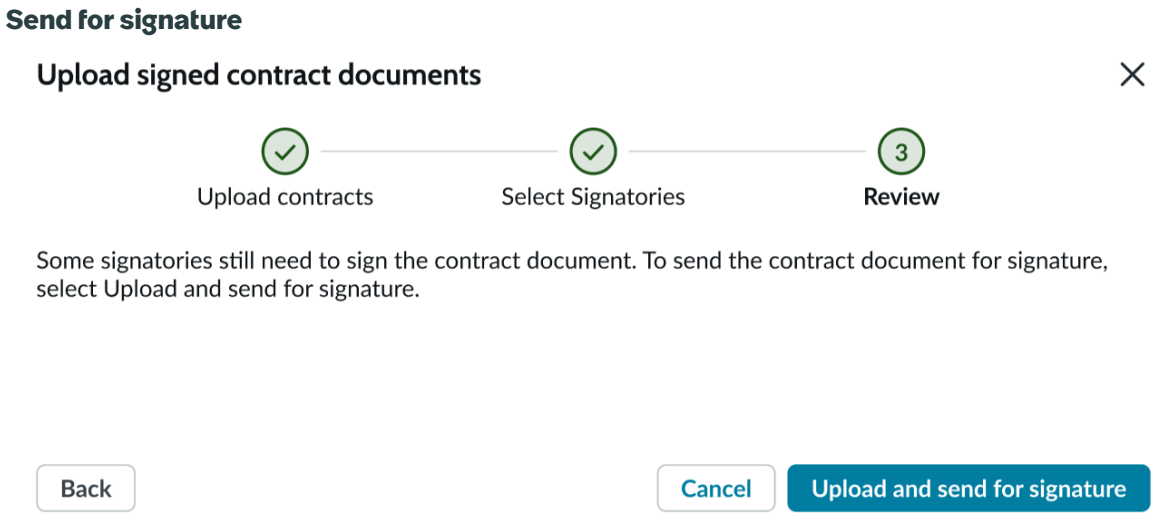


c. Select **Next**.

7. Select the signatories who have signed and share the contract document.

a. Select the check box for the signatories who have signed the contract document.

b. Select **Next**.



Select signatories

8. Review and upload the contract document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Upload the signed contract document - If all signatories have signed the contract document, select **Upload** to upload the document.
- Send the uploaded document to the next signatories - If some of the signatures are pending, select **Upload and send for signature** to upload and send the document to the pending signatories.

Result

When all the signatories have the contract document, it is uploaded to the contract request. A contract repository record is created and the signed contract document is attached to it.

An email with the attached final contract document is sent to the signatories.

For Non-disclosure agreement legal requests, the state of the request updates to **Closed complete** and the contract status updates to **Contract signed**.

For Third-party contract review requests, the state of the request and the contract status updates to **Contract signed**. To close the contract request, select **Close complete**.

Cancel the wet signature process from the Employee Center

Cancel a wet signature process for a Non-disclosure agreement legal requests from the Employee Center.

Before you begin

Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user

About this task

You can cancel the signature process from the Employee Center under following conditions:

- The legal request is of type Non-disclosure agreement.
- The signature type of the Non-disclosure agreement legal request is Wet signature.
- The state of the contract request should be Awaiting signature.

Procedure

1. Navigate to **All** > **Employee Center**
2. Select **My Requests** from the header.
3. Open the legal request for which you want to cancel the signature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. On the request page, from the Actions menu, select **Cancel signature**.
5. On the confirmation window, select **Cancel signature** to confirm the cancellation.

Result
The contract status updates to Signature cancelled, and a notification email is sent to all signatories.

Cancel the signature process from the Legal Counsel Center

Cancel a signature process for a legal request from the Legal Counsel Center.

Before you begin
Role required: sn_lg_cnt.contract_fulfiller and sn_cm_core.contract_fulfiller

About this task
You can cancel the signature process from the Legal Counsel Center when the legal request is in Awaiting signature state.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Open the legal request for which you want to cancel the signature.
4. Select the contract request from the **Contract Requests** tab.
5. On the Standard Ticket page, from the **Actions** menu, select **Cancel signature**.
6. On the confirmation window, select **Cancel signature** to confirm the cancellation.

Result
The contract status updates to Signature cancelled, and a notification email is sent to all signatories.

Cancel a legal request

Cancel a legal contract request if it is no longer necessary.

Before you begin
Important:
Cancelling a legal contract request after it has been sent for signature stops the process in its current state.

Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user, sn_lg_cnt.contract_fulfiller

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Open your submitted legal request from the **My Requests** option on the header menu.
3. On the Standard Ticket page, from the Actions menu, select **Cancel Request**.
4. In the dialog box, enter comments to explain why the request was canceled.
5. Select **Confirm Cancellation**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- The request is canceled and the associated active flows are terminated. The cancellation comments appear in the **Activity** tab of the request.
- The Contract status changes to Contract cancelled.
- The document signature sent to signatories is canceled to block further signing. The signatories get an email notification that the legal request has been canceled.

View and download a signed contract document

View and download a signed contract document.

When all signatories have signed a contract document, it's considered as the final contract document and is stored in the Legal Contract [sn_lg_cnt_repository] table.

Access to a contract document is based on the following user roles and conditions:

- Group manager, Assigned to user and collaborator have edit access to the contract repository.
- Contract fulfiller belonging to the same assignment group has view access to the contract repository.
- Contract fulfiller not in assignment group do not have access to the to the contract repository.
- A Contracts Fulfiller can view and update contract repository record
- Only a Contracts Administrator can delete contract repository record.
- Requesters can view only the contract documents for which they submitted the legal request.
- Users can view only contract documents for which they have been added to the watch list of the corresponding legal requests.

When multiple contract documents are attached, a separate contract repository record is created for each contract type.

View and download a signed contract document as a legal fulfiller

View and download a signed contract document as a legal fulfiller.

Before you begin

Role required: sn_lg_contracts.contracts_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the list icon ( ).
3. In the Lists tab, navigate to **Legal Contracts** > **All contracts**.
4. From the list, open a contract repository record.
5. Select the **Contract Documents** tab.
6. Download the contract document.
   - If an external storage integration is active and published, select the link in the **URL** tab to open the external storage location to download the contract document.
   - If no external storage integration is available, select the document in the **Contract Documents** tab to view the contract revision details. Select the Actions icon ( ) and select **Download** to download the document. You can click on the name of the document view option to it.

View and download a signed contract document as a legal user

View and download a signed contract document as a legal user.

Before you begin
Role required: sn_lg_ops.legal_user and sn_cm_core.contract_user

Procedure

Open the legal request either from the platform view or using Service Portal.

View contract requests

When a legal request is submitted a contract request associated with it is initiated.

Before you begin
Role required: sn_lg_contracts.contracts_fulfiller

About this task
You can access contract request through the legal request or directly from the Legal Counsel Center.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the list icon ( ).
3. In the Lists tab, navigate to **Contract Requests**.
   - Select **Assigned to me** to see the contract requests assigned to you.
   - Select **Collaborations** to see the contract requests where you are a collaborator.
   - Select **All** to see all the contract requests.

Manage Contract Management Pro for Legal Service Delivery

As administrator work on managing the word document templates and legal contracts.

Refer to the following topics on how to manage word document templates and legal contracts.

Manage clauses, tables, and contract templates

Create a contract type for defining different types of legal contract requests and associate it to a contract model.

Manage contract records

Define a user as an internal signer so that the signer can be added to a contract template to automatically add to the contract document for a request.

View a contract record

Create document template categories to easily identify similar documents and find the correct document template more easily.

Modify a contract record

Enable users to view the details of email sent in the activity stream.

View a contract record

View the history of a legal contract to track changes, review the audit trail, and update fields. Easily see the date a contract was modified and who modified it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_cnt.contract_fulfiller

Procedure

1. Navigate to **All** > **Legal Counsel Center**.
2. Select the List icon ().
3. View all contracts by navigating to **Legal Contracts** > **All Contracts**.
4. **Optional:** View expired contracts or contracts that will expire soon.
   - To view contracts that will expire within 30 days, select **Expiring contracts**.
   - To view expired contracts, select **Expired contracts**.
5. **Optional:** View a previous version of the contract.
   a. Select the contract from the list.
   b. In the **Contract History** related list, select a date in the **Contract Starts** column to view the earlier version.

Modify a contract record

After a contract record is created, you can change the end date, parent contract, and contract model.

Before you begin
Role required: sn_lg_cnt.contract_fulfiller

About this task
If changes are made to a contract end date or its terms and conditions, a copy of the contract is automatically saved and placed in contract history.

Procedure

1. Navigate to **All** > **Legal Counsel Center**.
2. Select the List icon ().
3. View all contracts by navigating to **Legal Contracts** > **All Contracts**.
4. Select a contract.
5. **Optional:** Modify the contract end date.
   a. In the **End date** field, select the Show End date calendar icon ().
   b. In the calendar pop-up, select a date.
   c. Select **OK**.
6. **Optional:** Modify the parent contract.
   a. In the **Parent contract** field, select the Search for Record icon ().
   b. In the Parent contract pop-up list, select a contract record to assign as the parent contract.
7. **Optional:** Change the contract model.
   a. In the **Contract model** field, select the Search for Record icon ().
   b. In the Contract model pop-up list, select the model.
8. Select **Save**.

Explore Predictive Intelligence for Legal Service Delivery

With Predictive Intelligence, you can train a model to predict a target value based on one or more input values. The Predictive Intelligence for Legal Service Delivery includes machine learning algorithms that predict the subcategory and assignment group for General Legal Requests and Ethics Complaints. You can create your own machine learning solution to meet your needs.

Predictive Intelligence for Legal Service Delivery overview

The Predictive Intelligence for Legal Service Delivery solution helps you reduce time spent on identifying and assigning General Legal Requests and Ethics Complaints by predicting the Subcategory and Assignment group based on short description, description and subcategory. Predictions with high confidence are automatically populated in the fields, while predictions with low and medium confidence are displayed as suggestions. The legal fulfiller can review the suggestions and fill in the fields as needed. You can customize the threshold for low, medium and high confidence scores.

Predictive Intelligence for Legal Service Delivery users

Users

User	Description
Legal fulfiller	Reviews the predictions and updates the fields.

Predictive Intelligence for Legal Service Delivery workflow

1. The predictive intelligence administrator for Legal Service Delivery for Legal Service Delivery defines a solution definition that will be used to train a classification solution.
2. The predictive intelligence administrator for Legal Service Delivery for Legal Service Delivery defines a use case.
3. The predictive intelligence administrator for Legal Service Delivery for Legal Service Delivery defines a business rule which defines under what conditions the predictions will triggered.
4. The legal user submits a legal request.

Solution definitions and business rules for Predictive Intelligence for Legal Service Delivery

Solution definitions and business rules are defined to train, test, and monitor the predictive intelligence solution.

Solution definitions

The solution definition for Predictive Intelligence for Legal Service Delivery is available when you activate Predictive Intelligence plugin (com.glide.platform_ml) and Predictive Intelligence for Legal Service Delivery (sn_lg_pi) plugin. You can customize the solution definition to meet your business requirements.

You can also create and train machine-learning solutions as per your requirement. For more information, see Predictive Intelligence.

The following solution definitions are available in the base system. You can access the solution definition by navigating to **All** > **Predictive Intelligence** > **Classification** > **Solution Definitions**.

Note:
The solutions definitions in the base system are not trained. You need to train them on your instance before using them.

Predictive Intelligence for Legal Service Delivery solution definitions

Solution Type	Solution Definition	Description
Classification	Legal Request Sub-categorization	Predicts the subcategory for general legal request based on short description and description.
Classification	Ethics Complaints Sub-categorization	Predicts the subcategory for ethic complaints based on description.
Classification	Legal Request Assignment	Predicts the assignment group for general legal request based on short description, description, and subcategory.
Classification	Ethics Complaints Assignment	Predicts the assignment group for ethic complaints based on description and subcategory.

Use cases

The following use cases are available in the base system. You can access use cases by navigating to **All** > **Legal Administration** > **Legal AI Configurations**.

Legal Service Delivery use cases

Use case	Description
Legal Request Assignment	Predicts the assignment group for general legal request based on short description, description, and subcategory.
Legal Request Sub-categorization	Predicts the subcategory for general legal request based on short description and description.
Ethics Complaints Assignment	Predicts the assignment group for ethic complaints based on description and subcategory.
Ethics Complaints Sub-categorization	Predicts the subcategory for ethic complaints based on description.

Business rules

The business rule triggers the predictive intelligence to predict the assignment group and sub categorization. The following business rules are available in the base system. To complete the solution definition and use cases available in the base system, create a business rule for Ethics Complaints.

You can create your own solution for any fields based on your requirement. For any solution definition defined, create a corresponding business rule.

Predictive Intelligence for Legal Service Delivery business rules

Solution Definition	Description
Predict legal request assignment group	Predicts the assignment group for general legal request based on short description, description, and subcategory.

Configure Predictive Intelligence for Legal Service Delivery

Install and configure the Predictive Intelligence for Legal Service Delivery.

Configuration overview

Activate Predictive Intelligence for Legal Service Delivery

You can activate the Predictive Intelligence for Legal Service Delivery plugin (sn_lg_pi) for Legal Service Delivery if you have the admin role.

Before you begin

Predictive Intelligence for Legal Service Delivery requires a separate subscription from the rest of the ServiceNow AI Platform.

To purchase a subscription, contact your ServiceNow account manager. When you purchase a subscription, certain plugins are activated automatically. If a paid plugin isn't activated automatically, you can manually activate it from the All Applications list in your instance.

Note:

Before purchasing a subscription, you can evaluate the feature on a non-production instance without charge by requesting it from the Now Support Service Catalog.

Role required: admin

About this task

Roles are installed with Predictive Intelligence for Legal Service Delivery:

For more information, see Components installed for Advanced Work Assignment for Legal Service Delivery reference.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Predictive Intelligence for Legal Service Delivery plugin (sn_lg_pi) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Train the classification solution to predict the subcategory for General Legal Request

Train the classification solution definitions to identify and predict an subcategory using short description and description for General Legal Request.

Before you begin

Role required: sn_lg_pi.admin
Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for Legal Service Delivery (sn_lg_pi) plugins.

Note:
A minimum of ten thousand records are needed to train the classifications.

Procedure

1. Navigate to **Predictive Intelligence** > **Classification** > **Solution Definitions**.
2. In the Classification Definitions list, search for and select the Legal Request Sub-categorization (ml_x_snc_sn_lg_pi_global_legal_request_sub_categorization) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Classification Definition form fields, see Create and train classification solution.

Train the classification solution to predict the assignment group for General Legal Request

Train the legal request classification solution definition to identify and predict an assignment group using the short description, description and subcategory for General Legal Request.

Before you begin

Role required: sn_lg_pi.admin
Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for Legal Service Delivery (sn_lg_pi) plugins.

Note:
A minimum of ten thousand records are needed to train the classifications.

Procedure

1. Navigate to **Predictive Intelligence** > **Classification** > **Solution Definitions**.
2. In the Classification Definitions list, search for and select the Legal Request Assignment (ml_x_snc_sn_lg_pi_global_legal_request_assignment) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Classification Definition form fields, see Create and train classification solution.

Train the classification solution to predict the subcategory for Ethics Complaint

Train the legal request classification solution definition to identify and predict an subcategory using the description for an Ethics Complaint.

Before you begin

Role required: sn_lg_pi.admin
Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for Legal Service Delivery (sn_lg_pi) plugins.

Note:
A minimum of ten thousand records are needed to train the classifications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Predictive Intelligence** > **Classification** > **Solution Definitions**.
2. In the Classification Definitions list, search for and select the Ethics Complaints Sub-categorization (ml_x_snc_sn_lg_pi_global_ethics_complaints_sub_categorization) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Classification Definition form fields, see Create and train classification solution.

Train the classification solution to predict the assignment group for Ethics Complaint

Train the legal request classification solution definition to identify and predict an group assignment using the description and subcategory for an Ethics Complaint.

Before you begin

Role required: sn_lg_pi.admin
Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for Legal Service Delivery (sn_lg_pi) plugins.

Note:
A minimum of ten thousand records are needed to train the classifications.

Procedure

1. Navigate to **Predictive Intelligence** > **Classification** > **Solution Definitions**.
2. In the Classification Definitions list, search for and select the Ethics Complaints Assignment (ml_x_snc_sn_lg_pi_global_ethics_complaints_assignment) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Classification Definition form fields, see Create and train classification solution.

Configure fields to be displayed in Activity stream

Configure fields to be displayed in the Activity stream.

Before you begin

Role required: sn_lg_ops.legal_config

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Requests** > **All**.
2. Select a legal request to customize Activity stream for.
3. Select the activity stream icon.
4. Select the filter activity icon.
5. Select **Configure available fields**.
6. Select the fields from Available list and add to Selected list.
7. Set the desired order.
8. Select **Save**.
9. Select **Update** to save the changes to the legal request form.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use Predictive Intelligence for Legal Service Delivery

Use the Predictive Intelligence solution to predict and auto populate or view the suggestions for sub-category and assignment group.

Legal requests can be automatically assigned using assignment rules, Advanced Work Assignment or Predictive Intelligence. For more information, see Assigning legal request.

Use Predictive Intelligence for Legal Service Delivery

Use the Predictive Intelligence solution to predict and auto populate or view the suggestions for sub-category and assignment group.

Before you begin

Role required: sn_lg_ops.legal_fulfiller

About this task

- Ensure you have installed and configured the Predictive Intelligence for Legal Service Delivery plugin (sn_lg_pi). For more information, see Configure Predictive Intelligence for Legal Service Delivery
- Ensure the solution definitions are trained on your ServiceNow instance.
- When a legal request is submitted, the Predictive Intelligence feature predicts values for the subcategory and assignment group based on solution definitions.
- Under the following conditions, the values are predicted again.
  - When the short description or description is modified, the subcategory is predicted again.
  - When short description, description or subcategory is modified, the assignment group is predicted again.

  The conditions under which the values are predicted again are defined in the business rules. For more information, see Solution definitions and business rules for Predictive Intelligence for Legal Service Delivery

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, open a General Legal Request or Ethics Complaints by selecting an option under **Legal Requests**.
   - Predictions for Subcategory and Assignment group are available.
   - Fields with high confidence predictions are automatically updated with the predicted value.
   - Fields with medium and low confidence predictions are not automatically updated but the values are shown as suggestions.
   - The Activity stream is also updated with the predicted values. You can customize the activity stream to display additional fields. For more information, see Configure fields to be displayed in Activity stream.

Set up Advanced Work Assignment for Legal Service Delivery

Configure various components, such as service channels, work item queues, and assignment rules that determine how a legal request should be routed to an agent.

Before you begin

Role required: admin

The base system includes the Advanced Work Assignment solution for General Legal Requests and Ethics Complaints. You can also configure it for other types of legal requests.

Procedure

1. Navigate to **All** > **Advanced Work Assignment**.
2. Create a service channel to automatically route incoming legal requests to agents.

   For more information, see Create or configure a service channel.

   The following service channels are available in the base system Advanced Work Assignment for Legal Service Delivery.

   - Legal Request
   - Chat

   After you have created a service channel, do the following:

   a. Configure the agent capacity to determine the number of work items that can be automatically assigned to agents supporting a service channel. For more information, see Override agent capacity for selected agents.

   b. Create or change an inbox layout to determine the information shown on work item cards displayed in an agent's inbox. For more information, see Create or change an inbox layout.

   c. Create a work item size override if you want to calculate an agent's workload using a work item size other than the default. For more information, see Create or change a work item size override.
3. Make your service channel available in Agent Workspace by adding it to the Presence States.

   a. Navigate to **All** > **Advanced Work Assignment** > **Presence States**.

   b. Select **Available**.

   c. On the form, move the following to selected list.

   - Legal Request
   - Chat

   d. Select Active (if not already selected).

   e. Select **Update**.
4. Define or change a queue so that you can determine which work items are routed automatically to agents through a given service channel.
   For more information, see Create a work item queue.

   The following queues are available in the base system for Advanced Work Assignment for Legal Service Delivery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- General Legal Request
- Ethics Complaint

5. Set the Advanced Work Assignment criteria for assigning work items to agents.
   For more information, see Configure agent assignment rules.

   An assignment rule Capacity and skill based assignment for Legal Requests is available in the base system for Advanced Work Assignment for Legal Service Delivery.

6. **Optional:** Use Skill Determination Rules as an alternative way to map skills to an legal request case.
   If you are going to use skill determination rules to map a skill to an legal request, activate Skills Management. For more information, see Skills Management.

   Skill determination rule for Legal is available in the base system for Advanced Work Assignment for Legal Service Delivery.

7. **Optional:** Configure the following parameters to improve your Advanced Work Assignment functionality:

   a. Create or modify the availability states that agents use to indicate whether they can receive work or are offline or away. Agents set these states in their Workspace Inbox. For more information, see Configure agent presence states. Add the service channel to

   b. Define the reasons that agents can use to decline work assignments that they receive in their Agent Workspace inbox. For more information, see Configure reasons for rejecting work items.

   c. Prevent an agent from being assigned too many work items by configuring the agent's maximum universal capacity. For more information, see Configure an agent's maximum universal capacity.

   d. Create or manage groups that have associated Advanced Work Assignment queues. For more information, see Create or change groups for Advanced Work Assignment queues.

      The following queues are available in the base system for Advanced Work Assignment for Legal Service Delivery.

      - Legal - Ethics
      - Legal Department

   For detailed instructions on how to configure Advanced Work Assignment, see Configuring Advanced Work Assignment.

Use Advanced Work Assignment for Legal Service Delivery

Use the ServiceNow Advanced Work Assignment for Legal Service Delivery feature to automatically assign legal to agents based on availability, capacity, and skills.

Legal requests can be automatically assigned using assignment rules, Advanced Work Assignment or Predictive Intelligence. For more information, see Assigning legal request.

Accept incoming legal request

As a legal fulfiller, accept or reject to an incoming legal request assignment from the Legal Counsel Center Inbox.

Before you begin

Role required: sn_lg_ops.legal_fulfiller

Legal services on the Employee Center portal

Employees can submit and track requests to get legal support or get information on legal services through the Employee Center portal.

Legal Service Portal enables employees to submit legal requests to get services and support from the legal department only. Whereas ServiceNow® Employee Center provides a single and unified portal experience for employees to find information and request services across various departments, including Legal. Using the Content Taxonomy framework, you can modify the default Legal taxonomy to include your service-specific content types and child topics.

To enable legal services on the Employee Center portal, ensure you've the following ServiceNow applications and plugins installed:

- Legal Service Delivery applications
- Employee Center plugin (sn_ex_sp)
- Employee Experience Taxonomy plugin (sn_ect)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Legal taxonomy on Employee Center

The base system taxonomy — Employee — is installed when you install the Employee Experience Taxonomy plugin. To provide legal services, the following Legal taxonomy structure is available by default under the Employee taxonomy:

1. **Contracts** – Contains Sales Contract Review, Third Party Contract Review, and NDA intake forms.
2. **Privacy and Data** – Contains the Privacy Impact Assessment intake form.
3. **Ethics and Compliance** – Contains the Conflict of Interest, Stock Preclearance, and Ethics Complaints intake forms, and a knowledge base article on Insider Trading Policy. When enabled, an ethics complaint can also be submitted through the Anonymous Report Center portal.
4. **Browse all legal** – Contains General Legal Request, Marketing Content Review, Digital Forensics, and Subpoena intake forms.

Enabling legal services on the Employee Center portal

Complete the following tasks to enable legal services on the Employee Center portal:

1. To customize the base system taxonomy, duplicate the taxonomy and then make the required changes in the cloned taxonomy.

   For more information, see Clone taxonomy for employee content.

2. Create intake forms and knowledge base articles for legal services and support.

   For more information on creating a legal request intake form, see intake forms for legal requests; and for more information on creating a knowledge base article, see knowledge base articles.

3. Associate the content with a topic in the taxonomy.

   For more information, see Associate connected content to a topic.

Approvals for legal items through Employee Center

Employee Center uses configurable approvals using Task Configuration for the approvers to view and approve various items. The approvers review the detailed information about the item that needs approval from the **My Tasks** tab in Employee Center. The Task Configuration can be set up for both task tables (legal requests, legal matters, and practice area tables) and non-task tables (artifacts, matter templates, custodians and non-custodians, and external storage documents.)

The following base system Task Configurations in the To-dos Configuration are available with Legal Service Delivery apps:

- Legal Request Management
  - Legal Requests
  - Legal Request Attachments
  - Legal Request External Documents
- Legal Matter Management
  - Legal Matters
  - Legal Matter Attachments

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - Legal Matter External Documents
  - Legal Matter Tasks
  - Legal Matter Artifacts
  - Legal Matter Templates
- Legal Digital Forensics
  - Custodial data
  - Non-Custodial data

Note:
These new Task Configurations, which are mapped to tables of Legal Service Delivery apps, replace the existing To-dos Widget Mapping settings for the approvals via Employee Center. To use the existing mappings for approvals, you must disable the Task Configurations.

For more information about configurable approvals in the Employee Center and how to configure them, see Configurable approvals experience.

Universal Request for Legal Service Delivery

Integrating Universal Request and Legal Service Delivery enables you to create a unified user experience for your employees to request services from the Legal department. Legal services can be provided to employees seamlessly without them having to deal with the difficulties of interdepartmental collaboration for resolution.

Journey of a universal request for a legal service

The ServiceNow® Universal Request application enables cross-departmental reporting from the time of an initial employee request through the final issue resolution. For more information, see Universal Request.

The Legal Request Management application provides a unified mechanism for employees to get all the information, services, and help that they need from the legal department.

You can fulfill requests across the organization to improve the employee experience by integrating legal requests with universal requests.

- An employee submits a universal request using the **Request help** option in the Employee Center portal. The employee can also submit a direct legal request attached to a universal request.
- A routing agent identifies this request related to the Legal department and creates a legal request from the universal request. The legal request becomes the primary ticket of the universal request.
- Based on the services requested, a legal fulfiller can do the following while working on the legal request:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Provides a resolution and closes the legal request. The universal request also gets closed.
- Transfers the request to another department or back to the universal request routing group with or without resolution.
- Creates associated tickets for the tasks to be done by users in the Legal or any other department required to fulfill the request.
- Marks the legal request as Restricted if it contains any sensitive or confidential information. Routing agents from the current assignment group with the sn_uni_req.sensitiveinfo_agent role, and the primary ticket agent can view the complete details of the ticket. Other routing agents cannot see fields in the universal request that may contain sensitive information, such as **Short description** and **Description**.

The universal request gives requesters complete visibility into the status of their requests. They can view all the relevant details from the Activities stream of the universal request, including users who are working on the issue, transfers between departments, and other updates.

When the universal request is closed, the requester can reopen it if not satisfied with the resolution.

For more information about submitting and tracking a universal request, see Using Universal Request.

For more information on submitting and managing ethics complaints, see Better together solution: Legal Investigations and HR Service Delivery Employee Relations.

Required ServiceNow plugins and apps

For integrating universal requests for legal services, you must have the following ServiceNow plugins and application installed:

- Universal Request plugin (com.snc.universal_request)
- Legal Request Management app 6.1 or later version
- Employee Center app

Also, you've to configure various settings in Universal Request. For more information, see Configure Universal Request for legal services.

Configure Universal Request for legal services

Review the base system configurations for integration of legal requests with universal requests and configure as per your business needs.

Before you begin

Ensure that you've the following plugins activated and apps installed:

- Universal Request plugin (com.snc.universal_request)
- Legal Request Management version 6.1

You can also install Employee Center to provide employees to submit requests.

Role required: admin

About this task

Legal Request Management version 6.1 installs the service set, service set assignment group, transfer configuration, and state mappings required for the legal requests to work with the universal requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Universal Request** > **Administration**.
2. Review and configure the following settings as per your business needs.

3. Add users to the **Legal Routing Group** service set assignment group.
   Legal Routing Group is the base system assignment group with the required roles added. Users in the assignment group will act as the routing agent, triaging the universal request and creating of legal requests to get support from the Legal department.
4. Select the **Enable Legal Request creation From Universal Request** option from the **Options** field of an intake form in a practice area.
   For more information, see Add an intake form to a practice area.

Create a legal request from a universal request

Create a legal request from a universal request to get the Legal department's assistance in resolving the request.

Before you begin

Ensure you have the Universal Request application installed and related configuration for legal services completed by the administrator.

An employee has submitted a universal request and the universal ticket is assigned to you.

> **Important:**
> The routing agent with the required roles must also be a member of the Legal Routing Group assignment group.

Role required: sn_lg_ops.legal_user and sn_uni_req.universal_request_write

About this task

A routing agent can also create a legal request from a universal request through the Agent mobile app. For creating legal ticket for a complaint, see Create an ethics legal matter from a universal request.

Procedure

1. Navigate to **All** > **Universal Request** > **Assigned to me**.
2. Open the universal request from which you want to create a legal request.
3. Click **Create Legal Ticket**.
4. In the Create Legal Ticket dialog box, fill in the fields.
   a. From the **Request type** list, select a legal request type.
   b. In **Additional comments**, enter details about the service and support required from the Legal department.
5. Click **Create**.

Result

- A legal request is created and becomes the primary ticket for the universal request. The legal request number is populated in the **Primary Ticket** field.
- The state of the universal request changes to In Progress.
- The **State reason** field displays with the pre-populated value Primary Ticket - In Progress.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

In the Legal department, the legal request is assigned a legal fulfiller. The assigned legal fulfiller works on the legal request and provides the resolution, or transfers the legal request to another department or back to the Universal Request.

To transfer the general legal request back to the Universal Request with external storage enabled, activate the **Name UR Transfer Post Processor** script action to sync the attachments. The script action is available in **All** > **Event** > **Script Actions**.

Transfer a legal ticket to another department

Transfer a legal ticket (legal request or legal matter) associated with a universal request to another department or back to the universal request for processing and resolution.

Before you begin

Role required: sn_lg_ops.legal_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the List icon ( ).
3. Open the list of legal requests or legal matters.
   - To open the legal request list, in the **Lists** tab, select **Assigned to Me** under **Legal Requests**.
   - To open the legal matter list, in the **Lists** tab, select **Assigned to Me** under **Matters**.
4. Open a legal request or legal matter that you want to transfer.
5. Select **Transfer**.
6. In the Transfer Ticket dialog box, fill in the fields.

Transfer Ticket dialog box

Field	Description
Action	Transfer options to other department or back to universal request.
Department	Department to which you want to transfer the request. If the user is not sure which department to transfer the legal ticket to, the **I'm not sure** option transfers the ticket back to the universal request.
Service	The service or request type within the selected department. **Note:** **Employee Relations** must be selected to transfer an ethics complaint legal matter to the Human Resources department. For any other service selected, an error message is displayed.
Transfer reason	Option to specify whether the legal ticket is being transferred with a resolution.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Transfer with resolution**: The legal ticket is resolved and needs further processing by another department. The state of the legal ticket will update to Close Complete. ○ **Transfer without resolution**: The legal ticket is not resolved or does not belong to the Legal department. The state of legal ticket will update to Close Incomplete.
Transfer notes	Details that might be useful for the department to know for further processing.
Copy additional comments and attachments	Options for including additional comments and attachments from the legal ticket to the request of another department with the transfer. By default, this option is selected. If the additional comments and attachments shouldn't be transferred, clear the check box.

7. Select **Transfer**.

Result

- The legal ticket is transferred to the selected department.
- The legal ticket no longer remains a primary ticket for the universal request.

Integration of Legal Service Delivery with third-party applications

Extend Legal Service Delivery capabilities by integrating with third-party applications.

Configure Microsoft Outlook Add-In for Legal Service Delivery

Install and add the Microsoft Outlook Add-In for Legal Service Delivery to your Microsoft Outlook and enable intake forms for submitting legal requests or matters.

Activate Microsoft Outlook Add-In for Legal Service Delivery

You can activate the Microsoft Outlook Add-In for Legal Service Delivery plugin (sn_lg_outlook) for Legal Service Delivery if you have the admin role.

Before you begin

Microsoft Outlook Add-In for Legal Service Delivery requires a separate subscription from the rest of the ServiceNow AI Platform.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To purchase a subscription, contact your ServiceNow account manager. When you purchase a subscription, certain plugins are activated automatically. If a paid plugin isn't activated automatically, you can manually activate it from the All Applications list in your instance.

Note:

Before purchasing a subscription, you can evaluate the feature on a non-production instance without charge by requesting it from the Now Support Service Catalog.

Role required: sn_lg_outlook.admin

About this task

Roles are installed with Microsoft Outlook Add-In for Legal Service Delivery:

For more information, see Microsoft Outlook Add-In for Legal Service Delivery reference.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Microsoft Outlook Add-In for Legal Service Delivery plugin (sn_lg_outlook) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Download Microsoft Outlook Add-In for Legal Service Delivery manifest file

As an admin, download Microsoft Outlook Add-In for Legal Service Delivery manifest file.

Before you begin

Role required: sn_lg_outlook.admin

Procedure

1. Navigate to **All** > **ServiceNow Add-Ins for Office** > **Office Add-In Manifests**.
2. From the Office Manifests list, select **ServiceNow for Legal**.
3. Select **Download Manifest** to download the file.
4. If your ServiceNow instance is configured with single sign-on (SSO) login, update the manifest file.

   a. Open the manifest file.

   b. Locate the `AppDomains` element.

   c. Add a `AppDomain` element and enter the SSO URL inside it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

```
<AppDomains>
<AppDomain><Instance URl></AppDomain>
<AppDomain><SSO URl></AppDomain>
</AppDomains>
```

d. Save the manifest file.

What to do next

Deploy Microsoft Outlook Add-In for Legal Service Delivery.

Deploy Microsoft Outlook Add-In for Legal Service Delivery

Deploy Microsoft Outlook Add-In for Legal Service Delivery for it to be available in Microsoft Outlook to submit legal requests.

Before you begin

Role required: sn_lg_ops.request_fulfiller

Procedure

1. Open Microsoft Outlook.
2. On the Outlook ribbon, click **Get Add-ins**.
3. Select **My add-ins**.
4. In the Custom add-ins section, select **Add a custom add-in** > **Add from file**.
5. Select the manifest file that you have downloaded.
6. Select **Install**.

Result

The ServiceNow for Legal Add-in is available in the Outlook ribbon.

If you do not want to open the ServiceNow for Legal add-in each time you select a new email, keep it pinned by making changes to the manifest file. For more information on the changes to be made to the manifest file, see Implement a pinnable task pane in Outlook topic in the Microsoft Outlook documentation.

Enable intake forms for Microsoft Outlook Add-In for Legal Service Delivery

Enable intake forms to be available as categories while submitting legal requests or matters from Microsoft Outlook using Microsoft Outlook Add-In for Legal Service Delivery.

Before you begin

Role required: sn_lg_ops.legal_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Select a practice area.
3. From the Intake Forms related list, select an intake form.
4. If you are prompted in a message at the top of the form to switch applications to be able to edit the record, select the word **here**.
5. Select the Unlock Options icon in the **Options** field in the Record Producer section.
6. Enter `Enable` in the **Select target record** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select **Enable for Microsoft Outlook Add-in** from the list.
8. Select **Update**.

Result
The request category will be available while submitting a legal request from Microsoft Outlook Add-in.

Auto populate information from email to legal request or matter

Map the sender's email address, email content, and subject field from an email to legal request fields to automatically fill in information from the email to the submitted legal request.

Before you begin
Role required: sn_lg_ops.legal_config

About this task
The script include **OutlookMappingConfig** available in the base system supports the mapping of the following variables of the email.

- *`subject`* - Subject of the email.
- *`fromEmail`* - Sender's email address.
- *`body`* - Email content

Procedure
1. Navigate to **All** > **System Definition** > **Script Includes**.
2. Select the **OutlookMappingConfig**.
3. In the **Script** field, specify the mappings.

Use Microsoft Outlook Add-In for Legal Service Delivery

Use the Microsoft Outlook Add-In for Legal Service Delivery to submit legal requests with attachments. You can submit requests, manage attachments, and view legal requests pr matters without leaving your Microsoft Outlook client.

Sign in to Microsoft Outlook Add-In for Legal Service Delivery

As a legal request fulfiller, sign in to Microsoft Outlook Add-In for Legal Service Delivery.

Before you begin
Ensure you have installed and configured Microsoft Outlook Add-In for Legal Service Delivery. For more information, see Configure Microsoft Outlook Add-In for Legal Service Delivery

Role required: sn_lg_ops.request_fulfiller or sn_lg_matter.matter_fulfiller

Procedure
1. Sign in to Microsoft Outlook Add-In for Legal Service Delivery using any of the two methods.
2. Enter credentials as legal request fulfiller.
3. Select **Log in**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
You are logged in and the Microsoft Outlook Add-In for Legal Service Delivery add-in lists the legal requests or matters you have access to.

Submit legal request or matter

As a legal request or matter fulfiller, submit a legal request or matter from within the Microsoft Outlook.

Before you begin
Ensure you have installed and deployed Microsoft Outlook Add-In for Legal Service Delivery. For more information, see Configure Microsoft Outlook Add-In for Legal Service Delivery

Role required: sn_lg_ops.request_fulfiller or sn_lg_matter.matter_fulfiller

Procedure

1. Sign in to Microsoft Outlook Add-In for Legal Service Delivery.
   For more information, see Sign in to Microsoft Outlook Add-In for Legal Service Delivery.
2. Submit a legal request.
3. Select an email for which you want to submit a legal request.
4. Select **New**.
5. In the pop-up, select the legal request category.
   To see the legal request categories, enable the respective intake forms for the Outlook add-in. For more information, see Enable intake forms for Microsoft Outlook Add-In for Legal Service Delivery
6. Select **Create**.
   Legal request intake form will be displayed.
7. Enter the details in the intake form.
8. To attach documents, select Add attachments icon ( )
   For legal matter, select the artifact from the Artifact section and then select Add attachments icon ( )
9. Select **Submit**.
   A legal request is created in the New state.
10. Select **View details** to view the submitted legal request.
    To view the legal request or matters in the ServiceNow instance, select Open the request in workspace icon ( ).

View legal request from the Outlook add-in

As a legal request fulfiller, view legal requests and matters in the Microsoft Outlook Add-In for Legal Service Delivery.

Before you begin
Ensure you have installed and configured Microsoft Outlook Add-In for Legal Service Delivery. For more information, see Configure Microsoft Outlook Add-In for Legal Service Delivery

Role required: sn_lg_ops.request_fulfiller or sn_lg_matter.matter_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Sign in to Microsoft Outlook Add-In for Legal Service Delivery.
   For more information, see Sign in to Microsoft Outlook Add-In for Legal Service Delivery.
2. On the Microsoft Outlook ribbon, select ServiceNow for Legal.
3. View the legal request.
   Legal request details are displayed and you can attach or delete documents.
4. To view the legal request or matters in the ServiceNow instance, select Open the request in workspace icon ( ).
   You can view the legal request or matters in the instance and perform actions that are available according to the current state.

Manage attachments from Microsoft Outlook Add-In for Legal Service Delivery

As a legal request fulfiller, add or delete documents in the legal request and matters from Microsoft Outlook Add-In for Legal Service Delivery.

Before you begin

Ensure you have installed and configured Microsoft Outlook Add-In for Legal Service Delivery.
For more information, see Configure Microsoft Outlook Add-In for Legal Service Delivery

Role required: sn_lg_ops.request_fulfiller or sn_lg_matter.matter_fulfiller

Procedure

1. Sign in to Microsoft Outlook Add-In for Legal Service Delivery.
   For more information, see Sign in to Microsoft Outlook Add-In for Legal Service Delivery.
2. Add attachment to the legal request
   a. In the search box enter at least two characters to search by Number, Short description, and Requested for
   b. Select the legal request or matter.
      Legal request or matter details are displayed.
   c. Select Add attachments icon ( )
      For legal matter, select the artifact from the Artifact section and then select Add attachments icon ( )
3. Delete attachment from the legal request
   a. In the search box enter at least two characters to search by Number, Short description, and Requested for
   b. Select the legal request or matter.
      Legal request or matter details are displayed.
   c. Select Delete icon.
      For legal matter, select the artifact from the Artifact section and then select Delete icon ( ).

Legal Virtual Agent Conversations

The ServiceNow® Legal Virtual Agent Conversations application provides predefined conversation topics to enable automated chats with employees seeking legal services. You can build new topics or customize the predefined topics to handle common legal requests from employees or guide them through self-service tasks.

Features

- Automates handling of repetitive requests
- Reduces the response time for your employee queries
- Integrates with legal services to create requests on behalf of employees
- Provides live agent chat support

Predefined conversation topics for Legal Service Delivery

The Legal Virtual Agent Conversations application installs the following virtual agent conversation topics (chatbot conversations) to help employees with common self-service tasks in Legal Service Delivery. These conversation topics are grouped under the Legal Service Delivery category.

Check Legal Request and Matter status

Displays the status of legal requests and matters submitted by employees for themselves or on behalf of another employee.

General Legal Request

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Helps employees create a general legal request. Based on the entered short description, it also provides links to relevant Legal knowledge base articles to resolve issues.

Privacy Assessment

Helps employees create a legal request to review whether projects comply with an organization's applicable privacy regulations and accepted privacy policy. The Legal department reviews such requests for potential risks and might recommend a mitigation plan if necessary.

Stock Trading

Helps employees to know about the stock trading window of your organization and with stock pre-clearance requests.

This virtual agent conversation topic is available only if you've installed the Legal Stock Preclearance application.

Legal Knowledge Base

Finds and displays Legal knowledge base articles based on the entered search string.

Note:
If Universal Request for legal services is enabled, the system creates a universal request and an associated legal request when an employee submits a legal request through virtual agent. General Legal Request, Privacy Assessment, and Stock Trading request types are supported.

Install Legal Virtual Agent Conversations

You can install the Legal Virtual Agent Conversations application (sn_lg_va) if you have the admin role. The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Virtual Agent Conversations application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

Note:
To use the Live Agent support, install the Agent Chat (com.glide.interaction.awa) plugin.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Virtual Agent Conversations application (sn_lg_va) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Legal Virtual Agent Conversations.

4. Select **Install**.

Configure Virtual Agent conversation topics for legal services

Create or modify Virtual Agent conversation topics for legal services.

Before you begin

Role required: admin or virtual_agent_admin

About this task

The Legal Virtual Agent Conversations application installs various virtual agent conversation topics for seeking legal services.

These virtual agent conversation topics are built using ServiceNow Virtual Agent Designer, so make sure you're familiar with the Virtual Agent Designer basics.

Procedure

1. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **> Designer**.
2. Configure a new conversation topic or customize a predefined conversation topic for a legal service.

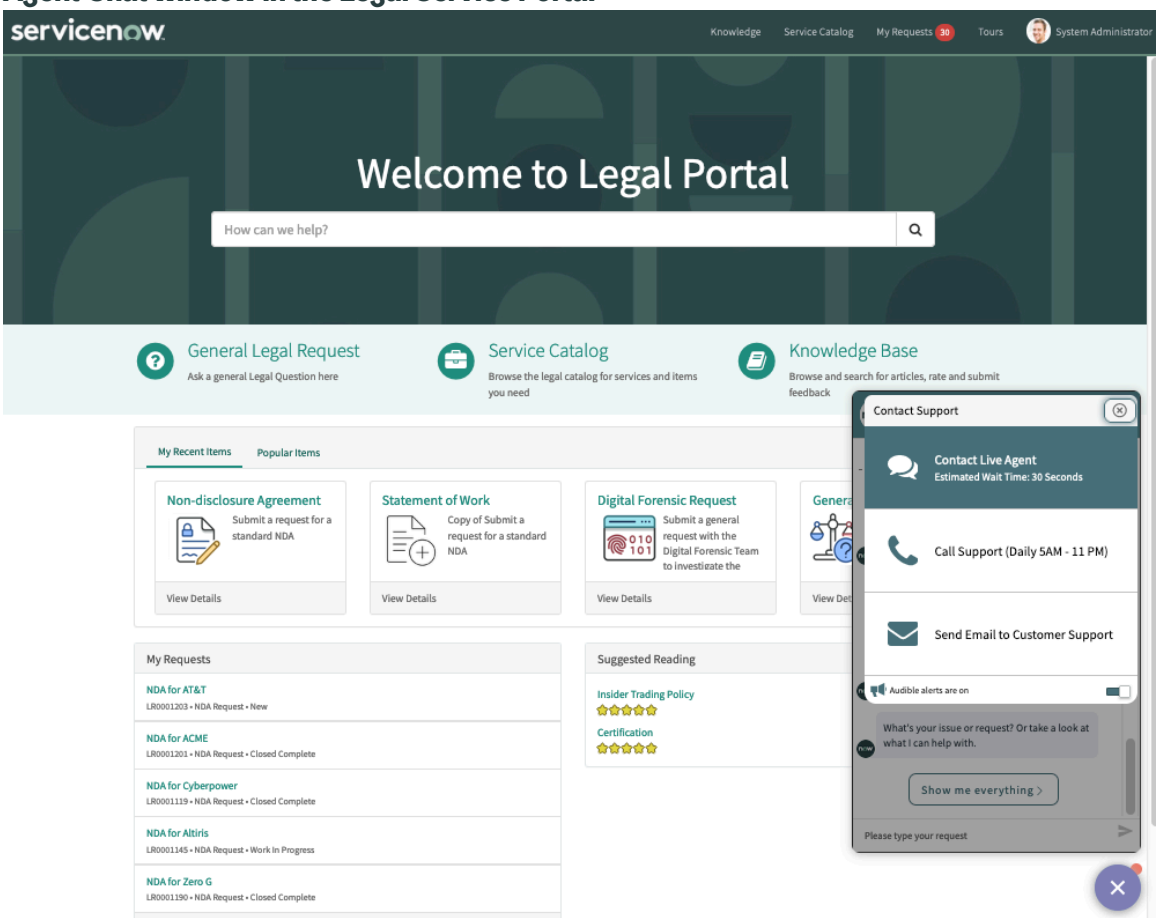
   Note:
   All conversation topics for legal services are grouped under the Legal Service Delivery category.

3. Click **Publish** to make the conversation topic available to employees on the Virtual Agent client.
   For more information, see Publish a Virtual Agent topic.

Live agent support for legal services

Employees can contact a live agent from the Legal department (a paralegal staff or lawyer) via the Virtual Agent chat window to seek legal help.

Note:
To use the Live agent support, you must install the Agent Chat (com.glide.interaction.awa) plugin.



Requester experience

Employees can connect to a live agent at any time during their ongoing virtual chats in the Legal Service Portal by clicking the support options icon ( ) in the Virtual Agent chat window and selecting **Contact Live Agent**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Contact Live Agent** option is not available in Virtual Agent chat window on the Employee Service Center to connect with live agents in the Legal department.

Agent Chat window in the Legal Service Portal

If no agent accepts the chat request, the conversation automatically times out for the requesters.

Fulfiller experience

In the Legal Counsel Center, users in the Legal department with the legal_fulfiller role can make themselves available when they are ready to take any incoming chat requests.

Interaction records

When a live agent accepts an employee's chat request, an Interaction record is automatically created.

Other actions for live agents

While on a chat, live agents can do the following actions:

- Transfer the chat to another agent.
- Transfer the chat to another queue.
- Send attachments to the chat.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure live agent support settings for legal services

Configure settings to enable live agent support for legal services.

Before you begin

- Ensure that you have the following applications installed:
  - Legal Request Management
  - Legal Virtual Agent Conversations
  - Legal Counsel Center
- Ensure you select **Load demo data** while installing Agent Chat.
- Ensure the user has legal fulfiller (sn_lg_ops.legal_fulfiller) role to use the Agent Chat.

Role required: admin

Procedure

1. Install Agent Chat along with the demo data.
   For more information, see Agent Chat and Advanced Work Assignment.
2. Configure the assignment rule to provide the criteria for routing the chat conversations to live agents in the Legal department.
   a. Navigate to **Advanced Work Assignment** > **Settings** > **Assignment Rules**.
   b. Open the base system assignment rule **Legal Chat Assignment Rule**.
   c. Update fields as required.
   For more information on the fields, see Configure agent assignment rules.
   d. Click **Update**.
3. Configure the work item queue and the associated assignment eligibility.
   a. Navigate to **Advanced Work Assignment** > **Settings** > **Queues**.
   b. Open the base system Queue **Legal Chat**.
   c. Update fields as required.
   For more information on the fields, see Create a work item queue.
   d. Click **Update**.
   e. In the Assignment Eligibility related list, open the base system record **Legal Department**.
   f. Update fields as required.
   For more information on the fields, see Define Assignment Eligibility.

Start a chat session through Legal Counsel Center Inbox

Accept an incoming chat request through Legal Counsel Center Inbox to start a chat session with the requester.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
The live agent support enables a chat interaction between an employees and legal department users. For more information, see Live agent support for legal services.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the inbox icon ().
3. Select **Available** from **Status** to make yourself ready to take incoming chat request.
   Employees on a Virtual Agent chat can use the **Contact Live Agent** option to connect.
4. When a chat comes through the chat queue, select **Accept**.
   A new interaction record is created and appears on the Legal Counsel Center.
5. From the Active Chat panel, interact with the employee who initiated the chat through the **Public Chat** tab or with another Legal department user for any information related to the current chat queries through the **Private Chat** tab.
   - To chat, enter a message and click the send icon ( ) or press the Enter key.

     Using response templates, you can insert predefined content in your chat conversations.

     Select the response template icon ( ) and find an appropriate response template. Copy and paste the template's content into the chat.

     Note:
     Only response templates configured for a chat channel are available to use. For more information see Response templates configured for chat channel.

   - To send an attachment, click the send attachment to chat icon ( ), select the file to attach, and click **Open**.
   - To transfer the chat to another queue, click the transfer to queue icon ( ) and select the queue.
   - To transfer the chat to another available agent, click the transfer to agent icon ( ) and select the agent name.

Legal Mobile

The ServiceNow® Legal Mobile application enables your employees to submit and track legal requests and lawyers to work on these requests on their mobile devices.

Employees can use the Now® Mobile app to do the following tasks:

- Submit and track legal requests
- Track the status of submitted requests

Lawyers can use the ServiceNow Agent app to do the following tasks:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Triage unassigned requests and matters
- Approve or reject requests
- Create and manage matters
- Create and assign tasks
- Create and manage artifacts
- View legal events and milestones

These apps run on the ServiceNow® mobile platform. You can download these mobile apps for the iOS platform from the Apple App Store or for the Android platform from the Google Play Store.

Default style for the Legal Mobile app

Legal Mobile app interfaces now match the ServiceNow AI Platform application. For more information on Next Experience in Mobile, see Next Experience in Mobile.

Install Legal Mobile

You can install the Legal Mobile application (sn_lg_mobile) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed. This app makes Legal Service Delivery applications available on Now Mobile and Mobile Agent mobile apps.

Before you begin

- Ensure that the Legal Mobile application and all of its associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Mobile application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Install the Legal Request Management (sn_lg_ops) application before you install Legal Mobile application (sn_lg_mobile).

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Mobile application (sn_lg_mobile) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Legal Mobile.
4. Select **Install**.

Download and log in to mobile apps to access legal services

Download the Now Mobile app to submit and track legal requests and the Mobile Agent mobile app to work on the submitted legal requests.

Before you begin

Role required: none

About this task

After you install the Legal Mobile app in your instance, employees and lawyers can start using the legal services on their mobile device.

Procedure

1. Download the following mobile apps for the iOS platform from the Apple App Store or for the Android platform from the Google Play Store.
   - As a requester, download the Now Mobile app for submitting and tracking legal requests.

     For more information on using this mobile app, see Now Mobile app.
   - As a member of the legal department, download the Mobile Agent mobile app for working on legal requests.

     For more information on using this mobile app, see Agent mobile app.
2. Add your ServiceNow instance to the mobile app.
3. Log in to access the Legal Mobile apps functionality through the mobile device.
4. Open the Now Mobile or Mobile Agent mobile app and tap the plus icon (**+**).
5. Add your ServiceNow instance by entering the instance address.

   You do not need to include `service-now.com` at the end of the instance name.
6. **Optional:** In the **Enter nickname** field, enter an alias to quickly identify the instance.
7. Tap **Save and login**.
8. Log in to your instance.

Submit a legal request through Now Mobile

Submit a request to seek legal services from your organization's legal department.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Open the Now Mobile app on your mobile device.
2. In the navigation bar, tap **Support**.
3. On the Support page, scroll down and tap **Legal** to view all available request categories.
4. Tap a request category.
5. Tap a legal service item for which you want to submit a request.
   If you are not sure which category to choose, tap the **General Legal Request** service item.
6. Fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Every legal service request has different set of fields based on the selected legal service item.

7. Tap **Submit**.
   A confirmation that your request has been submitted is displayed.
8. Tap **Close** to return to the list of service items.

Assign a legal request through Mobile Agent

As a legal group manager or a practice area lead, assign a legal request to a legal department's member to work on.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
When an employee submits a legal request, it is automatically assigned to a group or user in the legal department based on the assignment rules configured for the intake form of the associated practice area. If the request is assigned to a legal group, any member from the group can triage the request themselves or assign it to another member of the group.

Procedure
1. In the Mobile Agent, navigate to the **Practice Area Work** list.
2. Tap **Unassigned Requests** to open the list of unassigned requests.
3. Tap a request item to assign it to a legal department's member.
4. In the **Details** tab, tap **Assign**.
5. In the **Assigned to** list, select the user to whom you want to assign the request.
6. Tap the submit icon ( ).

Result
The legal request is assigned to the selected user. The state of the legal request changes to Assigned.

Work on a legal request through Mobile Agent

As a member of the legal department, work on legal requests submitted by employees to resolve their issues or to answer their queries.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

Procedure
1. Open the Mobile Agent app on your mobile.
2. In the navigation bar, tap **Legal**.
3. Open an assigned request you want to work on in any of the following ways:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- In the global search bar, search for a request and tap on a request to open.
- In the **Critical Requests Assigned to Me** list, tap on a request applet.
- In the **My Work** list, tap on the **Assigned Requests** and then tap on a request.

4. Tap **Start Work** to start working on the legal request.

Result
The state of the legal request changes from Assigned to Work in Progress.

What to do next
- Create and manage checklist to track what should be done to resolve the legal request.
- Add documents, videos, images.
- Promote the legal request to a legal matter. This option is available only if you have installed the Legal Matter Management application.
- Close the legal request when the request is resolved.

Manage a checklist for a legal request through Mobile Agent

Create and manage a checklist in an assigned legal request to ensure that you complete all the items necessary to fulfill the request.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

Procedure
1. In the Mobile Agent, navigate to the **Assigned Requests** list.
2. Open a request for which you want to create the checklist.
3. In the **Checklist** tab, tap **Add Item** to add a new checklist item.
4. In the **Add Item** field, enter the checklist item description.
5. Tap the submit icon ( ).
6. Continue to add checklist items for the necessary actions to handle the request.
7. Check off completed items by tapping the corresponding item.

Promote a legal request to a legal matter through Mobile Agent

Promote a legal request to a legal matter when the request needs additional investigation and evaluation and substantial time to work on.

Before you begin
Ensure you have the Legal Matter Management app installed and the record producer type in the associated intake form is set to **Request and Matter**. For more information, see Add an intake form to a practice area.

Role required: sn_lg_ops.legal_fulfiller

Procedure
1. In the Mobile Agent, navigate to the **Assigned Requests** list.
2. Tap the assigned request you want to work on.
3. In the **Details** tab, tap **Create Matter**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the Create Matter from Template screen, indicate whether to use a template to create a legal matter.
   - To create a legal matter record with predefined data, such as phases and tasks, select a template name from the **Matter template**.
   - To create a legal matter record without any predefined data, leave the **Matter template** field empty.
5. Tap the submit icon ( ).

Result

- A legal matter is created with details copied from the legal request.
- If you selected a matter template, the matter has predefined phases, tasks, and attributes from the template.

Add collaborators to a legal matter through Mobile Agent

Add other users as collaborators so that they can view the details and progress of a legal matter.

Before you begin

Role required: sn_lg_matter.matter_fulfiller

Procedure

1. In the Mobile Agent, navigate to the **Assigned Matters** list.
2. Tap the assigned matter to which you want to add a collaborator.
3. Tap the actions icon ( ) and select the **Add Collaborators** option.
4. Tap the **Add Collaborators** field and select the users to add as collaborators.
5. Tap the ok icon ( ).
6. Tap the submit icon ( ).

Add a phase in a legal matter through Mobile Agent

Add a phase to a legal matter to follow a structured approach to perform specific tasks to complete the matter.

Before you begin

Role required: sn_lg_matter.matter_fulfiller

About this task

If you created a legal matter using a matter template, the predefined phases are available in the matter from the template. You can add more phases as required.

Procedure

1. In the Mobile Agent, navigate to the **Assigned Matters** list.
2. Tap an assigned matter in which you want to add a phase.
3. Tap the actions icon ( ) and select the **Create Phase** option.
4. In the **Enter Phase Name** field, enter a unique name for the phase.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the **Enter Phase Order** field, enter the order in which the phase should be worked on.
6. Tap the submit icon ( ).

Result
A phase is added to the matter.

What to do next
Add tasks in the phase to manage activities in the legal matter. If the task has to be done by a different user, you can assign these tasks to that person.

Add a task in a legal matter through Mobile Agent

Add a task in a legal matter or a phase of the matter that you or another user should perform to resolve the matter.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

Procedure
1. In the Mobile Agent, navigate to the **Assigned Matters** list.
2. Tap an assigned matter.
3. In the **Others** tab, tap **Phase and Tasks**.
4. Open a phase in which you want to add a task.
5. Tap the actions icon ( ) and select the **Create Task** option.
6. On the form, fill in the fields.

Legal matter task form

Field	Description
Task Name	Unique name for the task.
Order	Order in which the task should be worked on.
Type	Type of the task: ○ Data collection ○ Risk and Mitigation
Due date	Date by which the task should be completed.
Short description	Short description to specify the expected activities and output involved in completing the task.

7. Tap the submit icon ( ).
8. Create a checklist to complete all the items necessary to fulfill the task.
   a. In the **Checklist** tab, tap **Add Item** to add a new checklist item.
   b. In the **Add Item** field, enter the checklist item description.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Tap the submit icon ().

d. Continue to add checklist items for the necessary actions to handle the task.

9. Assign the task to a user who can work on the task by tapping the **Assign** button.

Result
A legal matter task is created and is listed in the matter's Tasks tab. If the task was added in a phase record, then the task is also listed in the phase's Legal Matter Tasks tab.

Complete a legal matter task through Mobile Agent

When you finish working on an assigned matter task, you can mark the task as complete.

Before you begin
Role required: sn_lg_ops.legal_user

Procedure

1. In the Mobile Agent, navigate to the **Assigned Tasks** list.
2. Tap an assigned task.
3. In the **Details** tab, tap **Mark as Complete**.

Result
The matter task is completed and its state updates to Review. It sent to the matter owner for approval.

Approve or reject a legal matter task through Mobile Agent

As a legal matter owner, you can review and approve or reject matter tasks that are marked as complete by the task owners.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

Procedure

1. In the Mobile Agent, navigate to the **Pending Approvals** list.
2. Tap an assigned task.
3. **Optional:** Review the task details and activities done by the task owner.

   a. Tap the task number on the **Approval for** field.

   b. Tap the back icon () to return to the task Pending Legal Matter Task Approval screen.
4. Approve or reject the task by tapping **Approve** or **Reject**.

Result

- If you approve the matter task, the task is closed. The state of the task updates to Closed Complete.
- If you reject the matter task, the task is opened again. The state of the task updates to Work in Progress. The task owner can work on the task again to fulfill the requirements of the task and mark it complete for approval.

Add an artifact to a legal matter through Mobile Agent

Add an artifact to a legal matter to upload and store documents, emails, and files related to the matter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

About this task

Note:
If the requester attached any files when submitting a request, a default artifact containing those files is created in the matter promoted from the request.

Procedure

1. In the Mobile Agent, navigate to the **Assigned Matters** list.
2. Tap an assigned matter to which you want to add an artifact.
3. Tap the actions icon ( ) and select the **Create Artifact** option.
4. In the **Enter short description** field, enter a description for the artifact.
5. Tap the submit icon ( ).

Result
An artifact folder is created for the matter.

What to do next
Attach the matter-related files to the folder.

Attach files to a legal matter through Mobile Agent

Upload supporting documentation, such as documents, copies of email messages, images, or any other files into the artifact while you are working on a legal matter or matter task. You can also use these artifacts as a reference material to solve similar requests in future.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

Procedure

1. In the Mobile Agent, navigate to the **Assigned Matters** list.
2. Tap an assigned matter.
3. In the **Others** tab, tap **Artifacts**.
4. Open an artifact to which you want to attach a file.
5. Tap **Add Attachment** and select one of the options:
   - Take Photo
   - Record Video
   - Open Gallery
   - Attach File

   The file is attached and listed.
6. **Optional:** You can rename the file by tapping the edit icon ( ) and entering a new name.

Note:
If a file is no longer required for the legal matter, you can remove the file by tapping the delete icon ( ).

Close a legal matter through Mobile Agent

Close a legal matter assigned to you when you complete all activities for resolving it, or if you find that it doesn't need any further action.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

Procedure

1. In the Mobile Agent, navigate to the **Assigned Matters** list.
2. Tap an assigned matter.
3. Tap **Close Complete**.
4. In the Close Matter screen, enter comments in the **Comments** field describing the resolution of the matter or why it is being closed if not resolved.
5. To close related legal requests along with the parent request, tap **Close related requests** and select **Yes**.
   Only related legal requests that are in the Assigned or Work in Progress states are closed.
6. Tap **Submit**.

Result

- The legal matter is closed and its state updates to Closed Complete.
- If the parent legal request of the matter is not associated with any other open matters, the request is also closed.
- If you chose to close all related requests also, then they are also closed if they meet the following conditions:
  - The state of those requests is either Assigned or Work in Progress.
  - Those requests are not associated with any other open matters.
- Comments entered in the Close Matter screen are posted in all the open related requests.

Close a legal request through Mobile Agent

Close a legal request assigned to you when you've resolved it.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

Procedure

1. In the Mobile Agent, navigate to the **Assigned Requests** list.
2. Tap the request item that you want to close.
3. Tap **Close Complete**.

Result
The legal request is closed and the state changes to Close Complete.

Legal Counsel Center Classic

Legal Counsel Center Classic enables legal department members to categorize, prioritize, and efficiently address legal issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:

- The legacy Legal Counsel Center was renamed as Legal Counsel Center Classic.
- Legal Counsel Center Classic is being prepared for deprecation. It will be hidden and no longer available for activation for new customers but will continue to work and be supported for existing customers. For enhanced workspace experience, use Legal Counsel Center. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are upgrading Legal Counsel Center Classic to the latest Xanadu release versions, make sure you have first upgraded it to the Washington DC release version of 6.3.8 or 6.4.1.
- If you are using Legal Counsel Center Classic and want to upgrade to the Xanadu family release, ensure you upgrade to the Washington DC release first.

Legal Counsel Center Classic is available if you've installed the following apps:

- Legal Request Management (sn_lg_ops)
- Legal Counsel Center Classic (sn_lg_workspace)
- Legal Counsel Center Components (sn_lg_ws_comps)

Legal Counsel Center Classic is built using the ServiceNow® Agent Workspace. You can customize Legal Counsel Center Classic as per your departmental needs. For more information, see Configure Legal Counsel Center Classic.

The ServiceNow® Legal Counsel Center Components application enhances the workspace experience for the Legal Counsel Center Classic by decoupling the components in the Legal Counsel Center Classic to offer better performance.

Review the Legal Counsel Center Classic application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Key features

Legal Counsel Center Classic includes the following features:

Department and user level metrics

Get an overview of new, assigned, unassigned, and high-priority requests. Review and act on upcoming milestones and pending approvals.

Multi-tab interface

Track and address multiple requests concurrently by navigating between multiple open records.

Real-time activity feed

View activities related to legal requests and legal matters and notifications in real time.

Intuitive search and filter capabilities

Search for relevant information across multiple sources such as knowledge bases, open and resolved legal requests and legal matters, and catalog items in Counsel Assist.

Compose and send emails

Compose and send emails from within the Legal Counsel Center Classic from a legal request, legal matter, or matter task record forms. You can also compose emails and save them as drafts for sending them later.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Legal Counsel Center Classic users

Users with the sn_lg_matter.matter_fulfiller and sn_lg_ops.request_fulfiller roles can access Legal Counsel Center Classic and is personalized for different roles.

Accessing Legal Counsel Center Classic

To open Legal Counsel Center Classic, navigate to **All** > **Legal Request** > **Legal Counsel Center Classic**.

Legal Counsel Center Classic landing page

On the Legal Counsel Center Classic landing page, get a quick overview of the legal requests, legal matters, matter tasks, and upcoming milestones. The various metrics and widget data help you and your team in monitoring your workload, focusing on high-priority items, and easily navigating across your responsibilities.

Note:
The widgets and data displayed in the widgets are determined by your role.

Configure Legal Counsel Center Classic

Configure the Legal Counsel Center Classic to enable legal department members to quickly resolve legal requests and legal matters.

Before you begin

Important:

- The legacy Legal Counsel Center was renamed as Legal Counsel Center Classic.
- Legal Counsel Center Classic is being prepared for deprecation. It will be hidden and no longer available for activation for new customers but will continue to work and be supported for existing customers. For enhanced workspace experience, use Legal Counsel Center. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are upgrading Legal Counsel Center Classic to the latest Xanadu release versions, make sure you have first upgraded it to the Washington DC release version of 6.3.8 or 6.4.1.
- If you are using Legal Counsel Center Classic and want to upgrade to the Xanadu family release, ensure you upgrade to the Washington DC release first.

Legal Counsel Center Classic is built using the ServiceNow® Agent Workspace, so make sure you're familiar with the Workspace basics.

Role required: admin

Procedure

1. Configure landing page and lists in the Legal Counsel Workspace.

   a. Navigate to **All** > **Workspace Experience** > **Administration** > **All Workspaces**.

   b. Open the **Legal Counsel Workspace** record to configure.

   c. **Optional:** On the Legal Counsel Workspace form, update fields as required.
   For more information about the fields, see Get started setting up your workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can also customize the workspace in the UI Builder by clicking **Open in UI Builder**.

d. **Optional:** In the Workspace Lists related list, click **New** to set up filtered lists.
List filters display a subset of the records in a table. For more information, see Setting up list view in a workspace.

e. In the Landing Pages related list, open the **Legal Workspace Default Landing Page** record to customize and set up the landing page.
For more information about creating a landing page, see Creating custom landing pages for workspaces, and about customizing a landing page, see Set up supplied landing pages in workspace.

f. On the Landing Page form, in the UX Page Element Permissions related list, click **New** to set up landing page permissions.
These landing page permissions enable users to see the page based on their roles or groups they belong to. For more information, see Set up landing page permissions.

2. Create an action that enables legal team to perform functions on the records in the list in the Legal Counsel Center Classic.

a. Navigate to **All** > **Workspace Experience** > **Action & Components** > **List Actions**.

b. Open a base system action to modify or create new custom list actions by clicking **New**.
For more information on the field descriptions, see Create custom list operations in a workspace.

Add action button in Legal Counsel Center Classic to create legal request

Add a declarative action button in the Legal Counsel Center Classic to easily create a legal request from the workspace and resolve a request without navigating to the Legal Service Portal.

Before you begin

Important:

- The legacy Legal Counsel Center was renamed as Legal Counsel Center Classic.
- Legal Counsel Center Classic is being prepared for deprecation. It will be hidden and no longer available for activation for new customers but will continue to work and be supported for existing customers. For enhanced workspace experience, use Legal Counsel Center. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are upgrading Legal Counsel Center Classic to the latest Xanadu release versions, make sure you have first upgraded it to the Washington DC release version of 6.3.8 or 6.4.1.
- If you are using Legal Counsel Center Classic and want to upgrade to the Xanadu family release, ensure you upgrade to the Washington DC release first.

Ensure the Legal Request Management application is installed and the application scope is set to Legal Simple Contracts.

Role required: sn_lg_ops.legal_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

A legal fulfiller adds a declarative button in the Legal Counsel Center Classic to create legal requests. The button allows the fulfiller to create the request from the Legal Counsel Center Classic directly instead of through the Legal Service Portal.

Procedure

1. Navigate to **All** > **Workspace Experience** > **Actions & Components** > **List Actions**.
2. Select **New** on the Action Assignments page.
3. Enter `Sales Contract` in the **Action label** field.
4. Set the **Implemented as** field to **Client Action**.
5. In the **Specify client action** field, select the **Lookup using list** icon ( ).
6. In the Action Payload Definition form, fill in the details to create a record.
   a. Select **New**.
   b. Enter `ITEM_SELECTED` in the **Key** field.
   c. Select the **Lock** icon ( ) to unlock the **Applicable To** field.
   Enter the details in the **Applicable To** field to define the location where the action payload is applicable.
   d. Enter `List` in the **Select target record** field.
   e. Enter `{"table":"sc_cat_item","row":{"intake form sys_id":{"value":"72ba83d1b35313007a6de81816a8dc54"}},"parent_table":"{{parentTabl{"query":"{{query}}"}}` in the Payload field.
   The required data is for a legal request sent to the back-end from the workspace.
   f. On the form, fill in the remaining fields.

Action Payload Definition record

Field	Description
Label	Display label of the action payload definition.
Description	Description of the action payload definition.
Application	Application scope of the action payload definition. This field is pre-populated.

   g. Select **Submit**.
7. To make the action assignment button available on the Legal Counsel Center Classic, follow the steps.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the **Workspace** field, start entering `Legal` and select **Legal Counsel Workspace** from the list.

b. In the **Table** field, search for `Legal Request` in the drop-down list, and select **Legal Request (sn_lg_ops_request)**.

c. Select **Submit**.

8. **Optional:** Move the action assignment button to the **New** button drop-down list in the Legal Counsel Center Classic workspace list view.

a. Select **Advanced View**.

b. In the **Group** field, select the Lookup using list icon ( ) and select the **Group By** check box.

c. Select **Legal Request Types**

d. Select **Update**.

Result
The new declarative action button is now available for access in the Legal Counsel Center Classic workspace.

Legal Counsel Center

The Legal Counsel Center is the next experience Workspace that enables the legal department members to work with actionable widgets to quickly categorize, prioritize, and efficiently resolve legal issues.

It is a redesigned and restructured version of the Legal Counsel Center Classic Workspace experience built on a configurable UI Builder version. For more information on UI Builder, see UI Builder

Important:

- The legacy Legal Counsel Center was renamed as Legal Counsel Center Classic.
- Legal Counsel Center Classic is being prepared for deprecation. It will be hidden and no longer available for activation for new customers but will continue to work and be supported for existing customers. For enhanced workspace experience, use Legal Counsel Center. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Exploring Legal Counsel Center

Legal Counsel Center enables legal department members to categorize, prioritize, and efficiently address legal issues.

Legal Counsel Center requires the installation of the following applications:

- Legal Request Management (sn_lg_ops)
- Legal Counsel Center (sn_lg_cf_workspace)

Install Legal Counsel Center to get the Next Experience. Review the Legal Counsel Center application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Note:
Install Legal Counsel Center to get the Next Experience and then review and uninstall the Legal Counsel Center Classic. For more information, see Uninstall an application.

Legal Counsel Center benefits

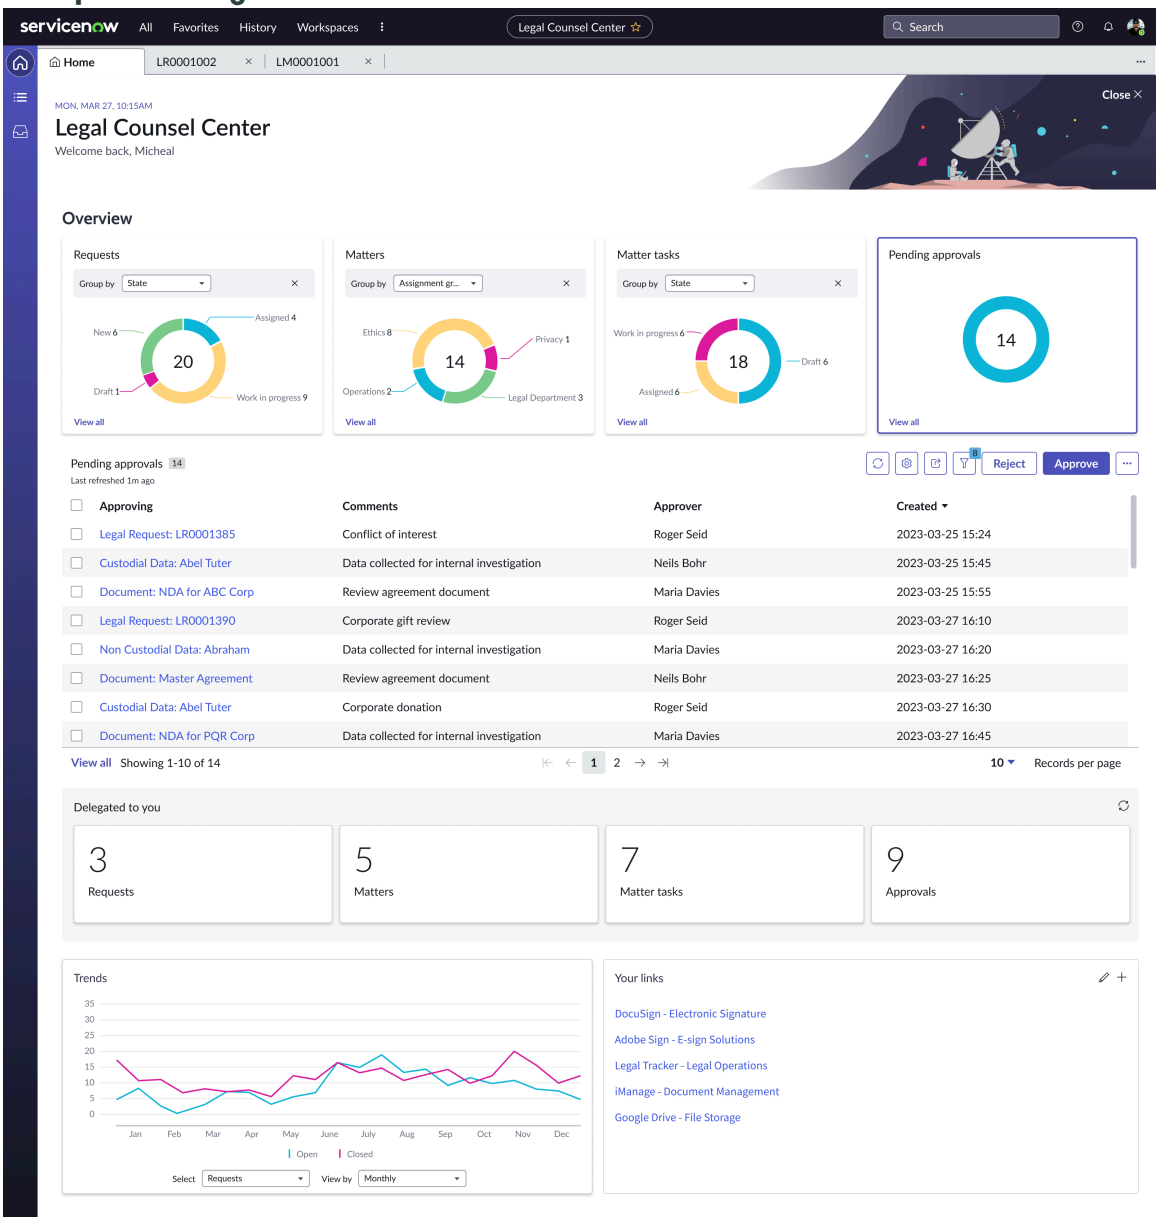
Features and their benefits

Feature	Benefit
User action widgets and metrics	As a fulfiller, access an overview of new, assigned, draft, and work-in-progress requests and matters, and pending approvals. You can also see the trends for open and closed requests, matters, and matter tasks, and a consolidated list of all your selected links.
Multi-tab interface	Track and address multiple requests concurrently by navigating between multiple open records.
Real-time activity feed	View activities related to legal requests and legal matters and notifications in real time.
Intuitive search and filter capabilities	Search for relevant information across multiple sources such as knowledge bases, open and resolved legal requests and legal matters, and catalog items in Counsel Assist.
Compose and send emails	Compose and send emails from a legal request, legal matter, or matter task record forms through Legal Counsel Center. You can also compose emails and save them as drafts to send later.

Legal Counsel Center home page

The Legal Counsel Center home page enables you to work with actionable widgets that helps in quickly categorize, prioritize, and efficiently resolve legal issues.

The Legal Counsel Center is the next experience Workspace for the legal fulfillers. It acts as a starting point and gives a snapshot of what is important to the fulfiller. It enables the members of the legal department to categorize, prioritize, and efficiently address legal issues. On the Legal Counsel Center home page dashboard, get a quick overview of the legal requests, legal matters, matter tasks, and pending approvals that the fulfiller is working on and that are newly created or in draft state for your assignment group, which you can assign to yourself and address. The graphical representation of the various metrics and widget data helps you monitor your workload, focus on high-priority items, and easily navigate across your responsibilities. You can view the delegated items that others have delegated to you. Additionally, you can also view trends in open and closed requests and matters over a period of time. Finally, you can use the Your links widget as a bookmark to easily access important and frequently used internal and external URLs within the Workspace.



Important:

- The Matters and Matter tasks widgets are visible if the Legal Matter Management plugin is installed.
- To use interview templates, you must first install the Interview Templates plugin (com.sn_interview_templates) and enable the Requested RCA of Interview Templates for Legal Counsel Center application and Legal Matter Management scope. For more information, see Interview Management.

The following is an example of the Legal Counsel Center landing page.

Install Legal Counsel Center Workspace

You can install the Legal Counsel Center application (sn_lg_cf_workspace) if you have the admin role. The application installs ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Counsel Center application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed:

- Plugins
  - Legal Request Management plugin
  - Legal Counsel Center plugin
- Store applications
- Roles

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Counsel Center application (sn_lg_cf_workspace) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. Select **Install**.

Enable or disable notifications

Enable or disable Legal Counsel Center notifications to subscribe to items that interest you and unsubscribe from information that does not interest you and is not mandatory.

Before you begin

You must have the following applications installed:

- Legal Request Management
- Legal Counsel Center

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
For information about the available notifications, see Legal Counsel Center notifications.

Procedure
1. Navigate to **All** > **Self-Service** > **My Notification Preferences**.
2. Select **Advanced Preferences** in the **General** tab of the Notifications window.
3. Enter `Legal` in the Search notifications field.
4. Enable or disable any legal matters or legal request notifications.

Result
The notification is enabled or disabled for the user. For more information on the notifications, see Legal Counsel Center notifications.

Configure AI Search for Legal Counsel Center

Configure your AI Search implementation for Legal Counsel Center Workspace.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > **Now Experience Framework** > **UI Builder**.
2. Search and select **Legal Counsel Center** from the Experiences section of the UI Builder homepage.
3. Select **Settings** to open the experience settings.
4. Search and select the **Search source** drop-down in the Global search section.
5. Select **Legal Counsel Center AI Search** from the drop-down.
6. Select **Save**.
7. Go back to the homepage and navigate to **All** > **AI Search** > **AI Search Index** > **Indexed Sources**.
8. The **AI Search Indexed Sources** page is displayed.
   Search for the following indexed sources:
   - Legal Requests
   - Legal Matters
   - Legal Matter Task
9. Select each of them to open.
10. Select **Index All Tables** for each of them.
    This process generates the indexes for all the tables. You need not perform any task on the opened page and you can close the page.

Result
The AI Search for Legal Counsel Center is configured and is available for consumption in the Legal Counsel Center Workspace.

Compliance Assurance: Having a system for external legal queries helps promote that the organization conforms with relevant laws and regulations.	Addressing legal queries submitted by external users.	Legal team

What to explore next

To learn more about configuring and using External Legal Service Center, see:

- Configuring up External Legal Service Center
- Using External Legal Service Center
- External Legal Service Center reference

Configuring up External Legal Service Center

Install External Legal Service Center, set up the requirements for enabling external users to submit request for legal services.

Configuration overview

1. Install External Legal Service Center

   Install and activate External Legal Service Center.

2. Enable record producer for external user

   Enable the record producer to be available in the External Legal Service Center catalog.

3. Enable save as draft option for record producer

   Enable the **Save as Draft** option for a record producer.

4. Configure the password reset process for External Legal Service Center

   The Password Reset application enables an end user to reset or change a password using a self-service process.

Install External Legal Service Center

You can activate the External Legal Service Center plugin (sn_lg_ext_portal) if you have the admin role. The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

External Legal Service Center requires a separate subscription from the rest of the ServiceNow AI Platform.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To purchase a subscription, contact your ServiceNow account manager. When you purchase a subscription, certain plugins are activated automatically. If a paid plugin isn't activated automatically, you can manually activate it from the All Applications list in your instance.

Note:

Before purchasing a subscription, you can evaluate the feature on a non-production instance without charge by requesting it from the Now Support Service Catalog.

Role required: admin

About this task

Required plugins and roles are installed with External Legal Service Center.

For more information, see External Legal Service Center reference.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the External Legal Service Center plugin (sn_lg_ext_portal) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Enable record producer for external user

Enable the record producer to be available in the External Legal Service Center catalog.

Before you begin

Role required: sn_lg_ops.legal_admin

About this task

You can create record producers for external users to submit requests through the External Legal Service Center. For more information, see Managing record producers for legal services.

Procedure

1. Navigate to **All** > **Legal Administration** > **Record Producers**.
2. Select the record producer from the list.
3. Enable the record producer for external users.

   a. Select Available For related list.

   b. Select **Edit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Select **Users with sn_lg_ext_portal.ext_user**.

d. Select Add icon ( ).
Users with sn_lg_ext_portal.ext_user is moved to the Available For List.

e. Select **Save**.

4. Remove external user role from not available list.
   a. Select Not Available For related list.
   b. Select **Edit**.
   c. Select SNC External from the Not Available for list.
   d. Select Remove icon ( ).
5. Select **Update** to save the record producer.
6. For the record producer to be available in the catalog, configure ACLs for tables referenced from the record producers.
   For more information, see Configure an ACL rule.

Result
The record producer is available for the external users in the External Legal Service Center catalog.

What to do next
If you want **Save as Draft** option to be enabled for a record producer, enable the system property *glide.sc.enable.save_as_draft.portal.elp*. For more information, see Enable save as draft option for record producer.

Enable save as draft option for record producer

Enable the **Save as Draft** option for a record producer.

Before you begin
Role required: sn_lg_ext_portal.ext_config

Procedure
1. In the filter navigator, enter `sys_properties.list`.
2. In the **Name** column, search for the `glide.sc.enable.save_as_draft.portal.elp` property.
   For more information on the system property, see Property installed with External Legal Service Center.
3. Select the property.
4. If you aren't able to edit the property in the current application scope, select the word **here** in the message at the top of the page.
5. Update the **Value** field to `true`.
6. Select **Update**.

Configure the password reset process for External Legal Service Center

The Password Reset application enables an end user to reset or change a password using a self-service process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

External users can reset their password on forgetting it. For more information on the password reset process configuration, see Configuring Password Reset.

Using External Legal Service Center

The ServiceNow® External Legal Service Center application enables external users to register themselves, submit, view, and track their requests for legal services.

You can also add attachments while submitting a request.

Note:
You cannot add attachments to a request when you have external storage configured.

Overview of submitting a request for a legal service

To register yourself and submit a request for legal services, perform the following actions.

1. Register with External Legal Service Center

   Register yourself for External Legal Service Center to enable you to submit requests.

2. Create request from External Legal Service Center

   Create a request for a legal service from the External Legal Service Center. You can submit a request or save it in draft to submit later.

3. Edit requests in External Legal Service Center

   Edit requests that saved are as draft in External Legal Service Center.

4. View and track requests submitted in External Legal Service Center

   View and track requests submitted for a legal service from the External Legal Service Center.

Register with External Legal Service Center

To submit a request for legal services, register yourself with the External Legal Service Center.

Before you begin
Role required: sn_lg_ext_portal.ext_user

Procedure

1. Navigate to the External Legal Service Center home page by accessing your instance URL and adding a /elp suffix.
   For example, https://example.com/elp.
2. Select **Register**.
3. On the Account sign up form, fill in the fields.
   First name, Last name, and Email are required fields.
4. Select **Sign Up**.
   A verification email is sent to the email address that you provided.
5. Select **Verify Account** from the verification email.
   - After your details have been verified, the self-registration request is approved.
   - On approval of the self-registration request, you receive an email to set the password.
6. In the set password email, select **Set a new password** to set a new password for your account.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Set a password for your account.
   Your self-registration is complete. You can now log in to the External Legal Service Center.

Create request from External Legal Service Center

Create a request for a legal service from the External Legal Service Center. You can submit a request or save it in draft to submit later.

Before you begin
Role required: sn_lg_ext_portal.ext_user

About this task
Verify you have registered with External Legal Service Center before submitting a request for a legal service. For more information, see Register with External Legal Service Center.

Procedure

1. Navigate to the External Legal Service Center home page by accessing your instance URL and adding a /elp suffix.
   For example, https://example.com/elp.
2. Log in with your user name and password.
3. From the Legal Services catalog, select the request type to be submitted.
4. Add Summary description.
5. **Optional:** Add Description.
6. **Optional:** Add attachments.
   a. Select Add icon ( ).
   b. Add attachments using any of the following methods.
   - Select **Choose a file** and select the file to be attached.
   - Drag files from your local computer into your browser window to attach them to the current record.
   - From your local computer, copy the files that you want to attach. Click inside the Documents box and paste the files.
7. Submit the request or save it as a draft.

Edit requests in External Legal Service Center

Edit requests that are saved as draft in External Legal Service Center.

Before you begin
You can only edit requests that are saved as draft. Once you submit a request, you cannot edit it.
Role required: sn_lg_ext_portal.ext_user

Procedure

1. Navigate to the External Legal Service Center home page by accessing your instance URL and adding a /elp suffix.
   For example, https://example.com/elp.
2. Log in with your user name and password.
3. Navigate to **My Requests** from the header.
4. Navigate to the Drafts tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select a request.
6. Select **Update Draft**.
7. Edit the Summary description or Description.
8. Work on the attachments.

9. Select **Update Draft** to save the file.
10. **Optional:** Select **Submit** if you want to submit the request.

View and track requests submitted in External Legal Service Center

View and track requests submitted for a legal service from the External Legal Service Center.

Before you begin
Role required: sn_lg_ext_portal.ext_user

About this task
After you submit a request, the assigned group starts working on it. You receive an email when a comment is added to the request. The request is marked as complete once it is resolved.

Procedure
1. Navigate to the External Legal Service Center home page by accessing your instance URL and adding a /elp suffix.
   For example, https://example.com/elp.
2. Log in with your user name and password.
3. Navigate to **My Requests** from the header.
4. Navigate to the Submitted request tab to see your requests.
   A list of submitted requests will be displayed with the State.
5. Select a request to view the details.
   - In the Activity tab, view the comments.
   - In the Attachment tab, view the attached files.
   - In the Request Details, view the summary and description.
6. Post a comment in the request.
   a. Navigate to the Activity tab.
   b. Enter a comment in the Type your message here field.
   c. Select **Post**.
7. Cancel the request if it is no longer needed.
   a. Select **Actions** > **Cancel request**.
   b. Enter the reason for cancellation.
   c. Select **Confirm cancellation**.
   The request is canceled and you will receive an email notification for the cancellation.

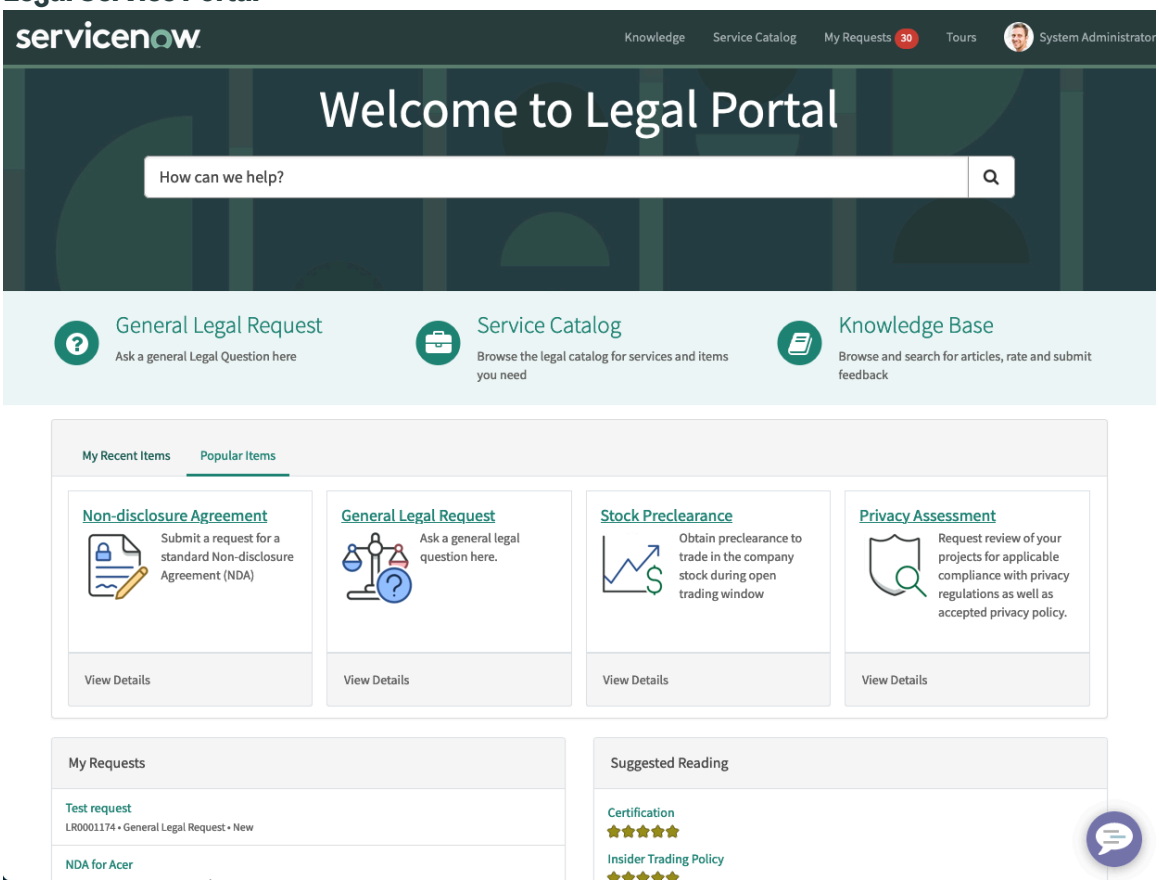
Exploring Legal Service Portal



The Legal Service Portal is a self-service portal for employees to submit legal requests, monitor their progress, read legal knowledge base articles, and get help using virtual agent chat support.

The Legal Service Portal is installed with the installation of the Legal Request Management app.

Navigate to **All** > **Legal Request** > **Legal Service Portal** to access Legal Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Legal Service Portal

Use the Legal Service Portal to do the following tasks:

- Submit legal requests by selecting from a catalog item from the Legal Service Catalog.
- Track the status of your submitted requests.
- Find and read through the top-rated legal knowledge base articles to find information.
- Chat with a virtual agent to submit and track legal requests and read legal knowledge base articles.

With ServiceNow® AI Search enabled, you get better search results through predictions and Natural Language Processing (NLP). For more information, see Enable and configure AI Search in Legal Service Portal.

Security in Legal Service Delivery

Legal Service Delivery provides security through various ServiceNow AI Platform security features such as Restricted Caller Access, Encryption Support, and Edge Encryption.

Restricted caller access for Legal Service Delivery

Restricted caller access (RCA) privilege settings define cross-scope access to an application, application resource (for example, access control role, business rule, UI action, script include), event, or to allow or deny requests for access. Using RCA, the administrators can track cross-scope applications or scripts that request access to a Legal Service Delivery application, application resources, or events and secure sensitive information in scoped tables and script includes.

The **Scoped Application Restricted Caller Access [com.glide.scope.access.restricted_caller]** plugin is activated during the Legal Service Delivery application installation or upgrade.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When you define cross-scope access to an application resource, use the following settings:

Caller tracking

This setting is recommended for the development stage. Access is allowed to the tables and script includes, but tracked in the Restricted Caller Access table. Access information can be viewed from **Application Restricted Caller Access**.

Caller restriction

This setting is recommended for the production phase after development is complete.

For more information, refer to Define cross-scope access to an application resource.

Encryption for Legal Service Delivery

Legal Service Delivery provides encryption to secure sensitive information.

Encryption prevents unauthorized users viewing specific fields. To encrypt fields in Legal Service Delivery, Column Level Encryption is activated by default and provides role-based encryption functions.

For more information on encryption, see Column Level Encryption.

Edge Encryption for Legal Service Delivery

ServiceNow® Edge Encryption ™ encrypts sensitive data on your company premises before sending it over the internet to your ServiceNow instance (encrypted in flight), where it remains encrypted at rest.

For more information, see Understanding Edge Encryption.

Because edge encryption is enabled on a proxy server on your side of the network, there is significant planning, network administration and management, and setup required. For more information, see Planning for Edge Encryption.

To install edge encryption, see Edge Encryption installation.

To configure edge encryption, see Edge Encryption configuration.

You can encrypt columns (fields) or attachments associated with tables. See Encrypt fields using encryption configurations.

Note:
There are limitations when using edge encryption. See Edge Encryption limitations.

Scoped knowledge bases

To protect knowledge bases containing sensitive articles, use a scoped knowledge base. Even system administrators and knowledge administrators can't administer scoped knowledge bases unless explicitly authorized through user criteria.

For example, say you have a knowledge article with sensitive payroll information that should be seen only by the Payroll department and not by a system administrator or knowledge administrator. You could create a knowledge article with the sensitive information in a scoped knowledge base within the Human Resources: Core application.

Only users with the admin role of an application and the knowledge_admin role can administer a scoped knowledge base. You control access to knowledge bases of an application with application administration enabled, such as HR, through the ACLs of the knowledge tables

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

in the application instead of global ACLs. To define access to a scoped knowledge base, specify appropriate user criteria for users, including system administrators and knowledge administrators.

Note:
For Scope Master tables to derive scope and execute scoped ACLS, you must set the *glide.enforce_security_scope.<scope_name>* system property to true.

You can't modify the scope of existing knowledge bases. They remain in the global scope. However, you can create a scoped knowledge base to protect sensitive knowledge articles.

To create a scoped knowledge base for an application, in addition to the knowledge_admin or admin role, you must have access to view and select that application in the application picker (see Application picker). For example, before you create a knowledge base in the Human Resources: Core application, you must select the Human Resources: Core application in the application picker, and then create the knowledge base. Then, when you create a knowledge base, on the Knowledge base form, the application scope of the knowledge base is set in the **Application** field.

- Control access at the knowledge base level through user criteria

Analytics and Reporting Solutions for Legal Service Delivery

Analytics and Reporting Solutions contain prepackaged Performance Analytics content for use with other ServiceNow AI Platform products. This Analytics and Reporting Solution enables data-driven decision making through insights and trends derived from legal services and operations data.

Required roles

The following roles and tasks are associated with this Solution:

- ServiceNow AI Platform administrator (admin): Install and activate this Analytics and Reporting Solution and make any necessary changes to system properties.
- Performance Analytics administrator (pa_admin): Review the indicators, breakdowns, widgets, and dashboards. Set up and start data collection. Share the dashboards with appropriate stakeholders.

The Next Experience user interface (UI) Legal Executive Dashboard is available and can be accessed from **Workspaces** > **Platform Analytics Workspace** > **Dashboards** > **All** > **Legal Executive Dashboard**.

Related topics

- Analytics and Reporting Solutions

Activate the Analytics and Reporting Solution for Legal Service Delivery

Activate the content pack ServiceNow Store application for the Analytics and Reporting Solution.

Before you begin

Activate the full, subscription version of Performance Analytics on the instance where you are activating this Platform Analytics Solution. You can activate Performance Analytics on a non-

© 2026 ServiceNow, Inc. All rights reserved.

production instance without purchasing a subscription. For more information, see Activate your Performance Analytics subscription.

Review the Performance Analytics Content Pack for Legal Service Delivery application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

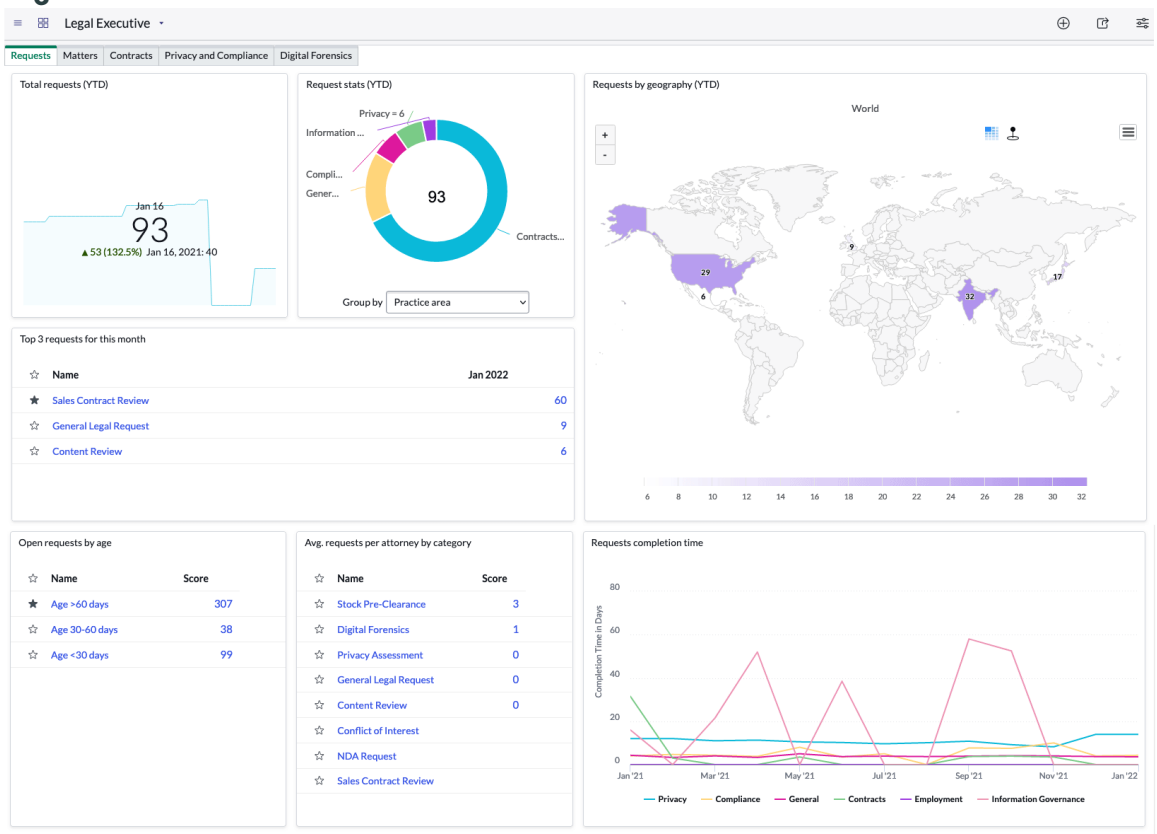
Procedure

1. Navigate to **All** > **System Applications** > **All Applications** > **ServiceNow Store**.
2. Browse for Performance Analytics Content Pack for Legal Service Delivery and verify that you have the necessary valid entitlements.

   You need a HI account and permission to request applications for the instances under consideration. The HI account and the instance need to be part of the same company. For more information, see Install a ServiceNow Product on the ServiceNow Store.
3. Search for `Performance Analytics Content Pack for Legal Service Delivery`.
4. Install the application.

Legal Executive dashboard

With the Legal Executive dashboard, you can get an insight into how your team and business are performing for resolving Legal service requests.



From a single place, you can track the status of legal requests and matters, analyze trends, and drill down into the details. You can view the details for top request categories, requests by user locations, practice area, and requesting department, SLA compliance of legal requests and legal matters, the average number of requests handled per attorney, and average time to close legal requests and legal matters over time.

Note:
The classic version of Legal Executive Dashboard has been deprecated. If you open a saved URL to access the classic Legal Executive Dashboard, the Next Experience dashboard is automatically displayed. If you have customized the classic version, review and migrate your customizations to the Next Experience Legal Executive Dashboard.

For reports and metrics on legal requests and legal matters and the trend analysis, see Legal Operations dashboard.

Legal Executive dashboard

Important:
The tabs specific to practice areas are available on the Legal Executive dashboard depending on whether the corresponding application is installed. For example, the **Contracts** tab is available when you have installed the Legal Simple Contracts application. Also, you can add new tabs in the dashboard to view reports related to practice areas created by you.

Required ServiceNow AI Platform roles

- sn_lg_ops.legal_report_viewer, required to see the dashboard widgets and data.
- sn_lg_ops.legal_report_publisher, required to edit the dashboard.

Access the Legal Executive dashboard

To open the dashboard, navigate to **All** > **Legal Request** > **Legal Dashboards** and click **Legal Executive**.

Use cases

For examples of how different people in your organization would use this dashboard, see these use cases.

Use cases for different personas

User	Dashboard use
General counsel	Make data-driven decisions through insights into legal operations with the following metrics:

Number of open legal matters created in the last 30 days.

Age >60 days (applies to legal requests)

Number of open legal requests created more than 60 days ago.

Age >60 days (applies to legal matters)

Number of open legal matters created more than 60 days ago.

Average activity completion time for digital forensics

Monthly trend of average completion time of various digital forensics activities by phase. The completion time is calculated from the time an activity task is created and until it is closed.

Average matter completion time per practice area

Monthly trend of average completion time of legal matters by practice area. The completion time is calculated from the time a legal matter is created and until it is closed.

Average matters per Attorney

Average number of legal matters handled by each attorney where breakdowns are Practice area and Category.

Average request completion time for contracts

Monthly trend of the average completion time of contract requests by different contract types.

Average request completion time for privacy and compliance

Monthly trend of the average completion time of various privacy and compliance requests.

Average request completion time per practice area

Monthly trend of average completion time of legal requests by practice area.

Average requests per Attorney

Average number of legal requests handled by each attorney where breakdowns are Practice area and Category.

Collect

Number of days that the Collect activity has been open for digital forensics requests created this year to date. The activity's age is calculated from the time the legal matter task associated with the activity was created to the present day.

Conflict of Interest

Age of open Conflict of Interest requests that have been submitted. The age is calculated from the time the legal requests were created to the present day.

Count of members in Legal group

Number of users in a legal user group.

MoM trend of Legal Matters

Monthly trend of number of legal matters created.

MoM trend of Legal Requests

Monthly trend of number of legal requests created.

Open Backlog Contract Requests

Number of open Contract requests, broken down by deal size, that have been created so far this year, as well as their age.

Number of days that the Present activity has been open for digital forensics requests created this year to date. The activity's age is calculated from the time the legal matter task associated with the activity was created to the present day.

Preserve

Number of days that the Preserve activity has been open for digital forensics requests created this year to date. The activity's age is calculated from the time the legal matter task associated with the activity was created to the present day.

Privacy Impact Assessment

Age of open Privacy Assessment requests that have been submitted. The age is calculated from the time the legal requests were created to the present day.

Request Completed within SLA

Number of Privacy and Compliance requests closed on the day within SLA.

Review

Number of days that the Review activity has been open for digital forensics requests created this year to date. The activity's age is calculated from the time the legal matter task associated with the activity was created to the present day.

Stock Preclearance

Age of open Stock Preclearance requests that have been submitted. The age is calculated from the time the legal requests were created to the present day.

Total Completed Legal Requests with SLA

Number of legal requests closed on the day within SLA.

YTD Digital Forensics Request

Number of Digital Forensics requests that have been created so far this year.

YTD Legal contracts

Number of Contract requests that have been created so far this year.

YTD Legal matters

Number of legal matters that have been created so far this year.

YTD Legal Privacy and Compliance Requests

Number of Privacy and Compliance requests that have been created so far this year.

YTD Legal requests

Number of legal requests that have been created so far this year.

% of privacy and compliance requests that met SLA

Percentage of privacy and compliance requests that were responded to within the defined SLA this year to date. The score is calculated according to this formula: [Requests Completed within SLA]/[Total Completed Legal Requests with SLA] * 100

Conflict of Interest

Average number of legal matters in the Conflict of Interest category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = Conflict of Interest]/[Count of members in Legal group > Legal group = Legal - Ethics & Compliance]

Content Review

Average number of legal requests in the Content Review category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category

= Content Review]/[Count of members in Legal group > Legal group = Legal Department]

Digital Forensics (applies to legal requests)

Average number of legal requests in the Digital Forensics category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = Digital Forensics]/[Count of members in Legal group > Legal group = Legal - Digital Forensics]

Digital Forensics (applies to legal matters)

Average number of legal matters in the Digital Forensics category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average matters per Attorney > Category = Digital Forensics]/[Count of members in Legal group > Legal group = Legal - Digital Forensics]

General Legal Request (applies to legal requests)

Average number of legal requests in the General Legal Request category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = General Legal Request]/[Count of members in Legal group > Legal group = Legal Department]

General Legal Request (applies to legal matters)

Average number of legal matters in the General Legal Request category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average matters per Attorney > Category = General Legal Request]/[Count of members in Legal group > Legal group = Legal Department]

NDA Request

Average number of legal requests in the Non-disclosure Agreement category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = NDA Request]/[Count of members in Legal group > Legal group = Legal Contracts Support]

Privacy Assessment

Average number of legal requests in the Privacy Assessment category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = Privacy Assessment]/[Count of members in Legal group > Legal group = Legal Privacy]

Privacy Assessment

Average number of legal matters in the Privacy Assessment category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average matters per Attorney > Category = Privacy Assessment]/[Count of members in Legal group > Legal group = Legal Privacy]

Sales Contract Review

Average number of legal requests in the Sales Contract Review category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = Sales Contract Review]/[Count of members in Legal group > Legal group = Legal Sales Contract]

Stock Pre-clearance

Average number of legal requests in the Stock Preclearance category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = Stock Pre-Clearance]/[Count of members in Legal group > Legal group = Legal Stock Approvers]

Subpoena

Average number of legal matters in the Subpoena category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average matters per Attorney > Category = Subpoena]/[Count of members in Legal group > Legal group = Legal Employment]

Third Party Contract Review

Average number of legal requests in the Third Party Contract Review category handled by each attorney in the respective assignment group this year to date. The score is calculated according to this formula: [Average requests per Attorney > Category = Third Party Contract]/[Count of members in Legal group > Legal group = Legal Contracts Support]

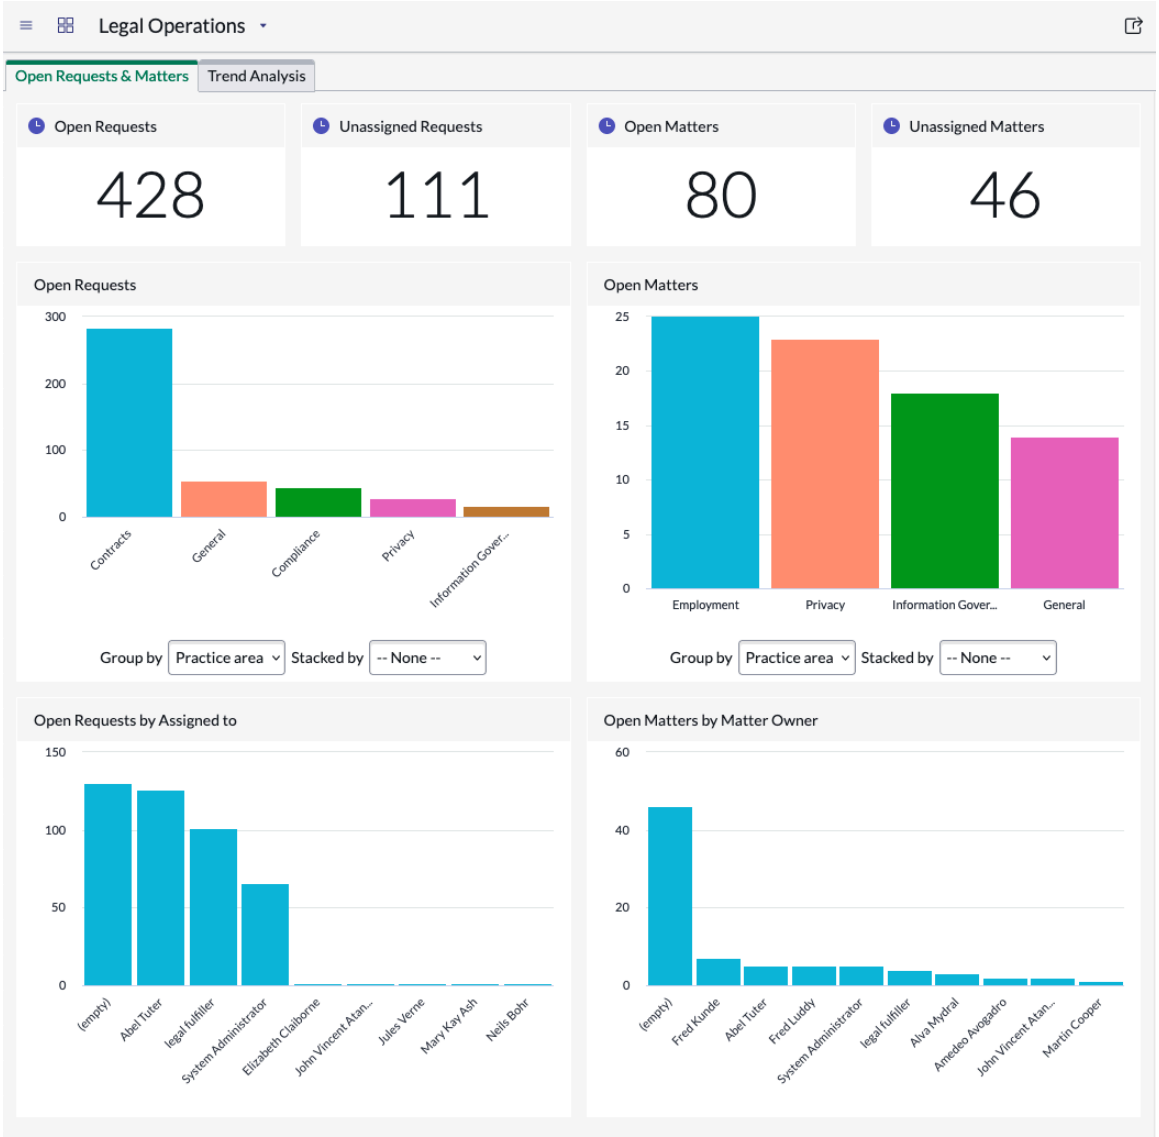
Legal Operations dashboard

The Legal Operations dashboard provides comprehensive reports to the legal department. The dashboard uses Performance Analytics to provide reports and metrics on legal requests and legal matters.

General Counsel and the practice area leads can use the Performance Analytics Legal Executive dashboard to gain insights into legal operations, performance, and trends with real-time reporting.



Note:
The classic version of the Legal Operations dashboard has been deprecated. If you open a saved URL to access the classic Legal Executive Dashboard, the Next Experience dashboard is automatically displayed. If you have customized the classic version, review and migrate your customizations to the Next Experience Legal Operations dashboard.

Access the Legal Operations dashboard

To open the dashboard, navigate to **All** > **Legal Request** > **Legal Dashboards** and click **Legal Operations**.

Workflows in Legal Service Delivery

The Legal Request Management application installs automated workflows for electronic signature and external storage. These workflows enable support for multiple integrations and accounts at the same time.

These workflows available in Legal Service Delivery are built using Flow Designer.

Note:
All workflows for Legal Service Delivery applications are read-only by default.

Electronic signature workflows

The following predefined workflows for electronic signing of documents are available:

Core electronic signature workflows

The following core electronic signature workflows are installed with Legal Request Management

- Electronic Signature Core - DocuSign
- Electronic Signature Core – AdobeSign

NDA Signature workflows

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following electronic signature workflows are installed with Legal Simple Contracts and are used for sending the Non-disclosure Agreement (NDA) documents for electronic signature.

- NDA Electronic Signature (Dynamic Flow)
- NDA Electronic Signature - DocuSign
- NDA Electronic Signature - AdobeSign

External storage workflows

The Legal External Storage Core flow for storing documents in external storage systems is installed with Legal Request Management. The following subflows are installed within the core workflow for each external storage system integration.

- Legal External Storage Core - Microsoft OneDrive
- Legal External Storage Core – Google Drive
- Legal External Storage Core – Box
- Legal External Storage Core – Microsoft SharePoint
- Legal External Storage Core – iManage

Note:
These external storage subflows can be used with another workflow to store documents in external storage.

The Legal Contracts External Storage Flow is the core external storage workflow installed with Legal Simple Contracts.

Domain separation and Legal Service Delivery

Domain separation is supported for applications in Legal Service Delivery. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

Legal Service Delivery overview

Legal Service Delivery includes the following applications:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Legal Request Management
- Legal Matter Management
- Gifts and Entertainment Compliance
- Legal Conflict of Interest
- Legal Digital Forensics
- Legal Invention Disclosure
- Legal Investigations
- Legal Simple Contracts
- Legal Simple Privacy
- Legal Stock Preclearance

All tables installed with the following applications can be domain-separated:

- Legal Request Management
- Legal Matter Management
- Gifts and Entertainment Compliance
- Legal Conflict of Interest
- Legal Digital Forensics
- Legal Invention Disclosure
- Legal Investigations
- Legal Simple Contracts
- Legal Simple Privacy
- Legal Stock Preclearance

How domain separation works in Legal Service Delivery

- If an employee submits a legal service request, the request can be assigned to legal department users who are in the same domain as the employee.
- Lawyers or paralegal staff can work only on those legal requests that have been created within the domain that they belong to.

Domain separation for service providers

Universal Request

ServiceNow Universal Request empowers customers in their journey toward Enterprise Service Management (ESM) or Global Business Services (GBS) by enabling agents to resolve cases seamlessly across the enterprise to provide a better employee experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee experience

Enhance the experience by eliminating the employee confusion when figuring out which department to reach out to for help. Hide the complexities of the service delivery process by handling request transfers across the enterprise behind the scenes.

Enterprise security

Restrict access to the request at the time of creation or after assessing the request for an agent to view the ticket that has sensitive information. This enhanced security ensures that security is maintained while transferring the request between scoped applications.

Cross-department ticket transfers

Transfer tickets between scoped applications by configuring the transfer type without compromising on the security protocols. Also, route tickets using artificial intelligence.

Tasking capabilities

Task employees to get additional information needed to fulfill the employee's request. Integrate the Universal Task framework to create a general and standard task experience for both the agent/fulfiller and the employee.

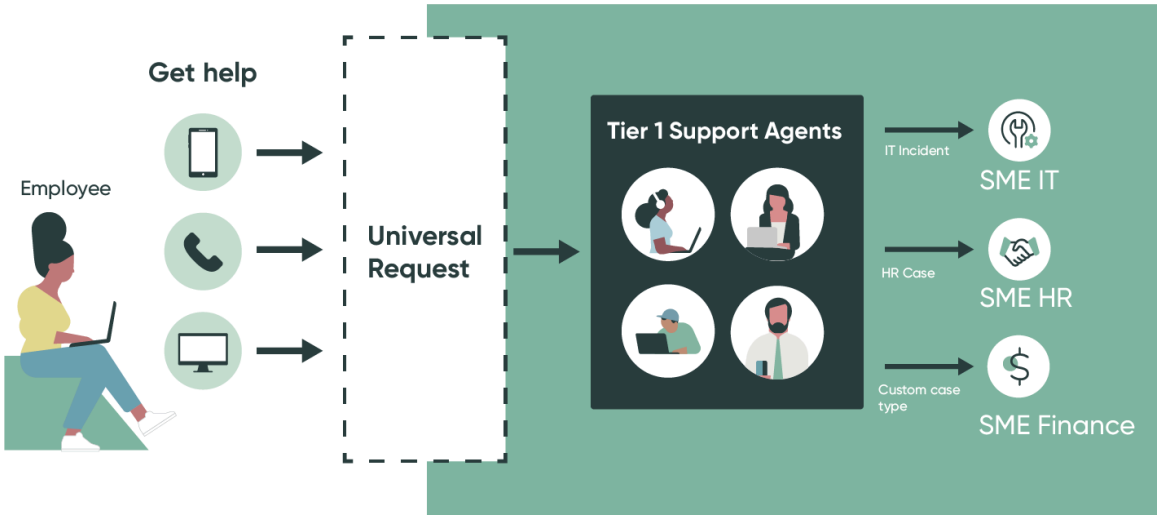
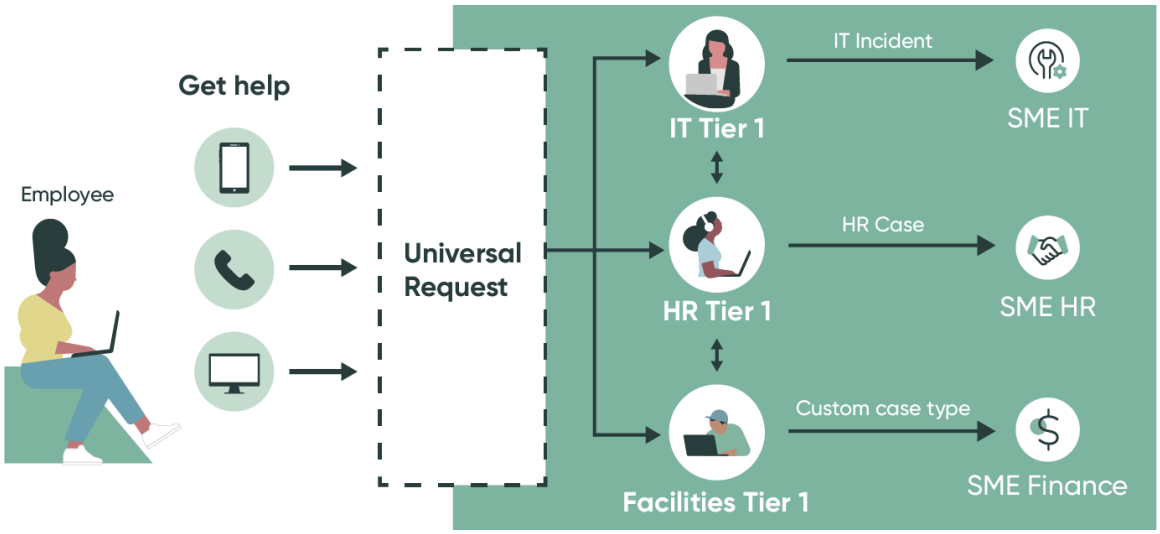
Exploring Universal Request



The ServiceNow Universal Request application enables cross-departmental reporting from the time of an initial employee request through the final issue resolution. You can map various departmental ticket states and activity streams into a unified and simplified experience for your employees and agents.

Universal Request application supports the following two most common ESM or GBS service delivery models.

Cross-departmental Tier 1 support desk



If your organization has a cross-trained group of Tier 1 agents to resolve routine requests, then you can use this support desk model. In this model, universal requests are assigned to the cross-departmental tier 1 support desk agents to triage, resolve, or forward unresolved requests to a higher support level within a specific department.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Embedded Tier 1 Support Desks

If your organization has tier 1 agents in each department, such as IT, HR, and Finance, then you can use this support desk model. In this model, universal requests are routed to the appropriate departmental tier 1 agents who resolve, escalate, or transfer the requests to the correct department.

The Universal Request application provides the following key benefits to employees and agents of your organization:

- Facilitates employees to create a request by just clicking **Request Help** in the Service Portal if they cannot find the relevant search results or are unsure of which department to contact for help.
- Provides a consistent and unified ticket page experience to employees across service departments.
- Enables agents to effectively resolve a case or request through cross-departmental interactions rather than working in silos.
- Provide an end-to-end user experience with complete visibility to the case details.
- Enables ticket transfers across departments or between a Tier-1 support desk and higher-level departmental support teams, with enhanced security.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Enables agents to task employees using the Universal Task application to complete a catalog item or upload a document to facilitate quick resolution of a request.
- Monitor and improve the end-to-end experience with cross-departmental SLAs and metrics.

Universal Request versus Interaction Records (New Call record)

Universal request and interaction records are created and used by agents of various departments. However, they differ in the way they are handled. The following information provides an overview of both the records and how they differ from each other.

Interaction Record

An Interaction Record or a New Call record is used by an agent to take notes and determine the next steps during a live chat or a phone call. From an Interaction Record, an agent can perform one of the following actions:

- Attach the interaction to an existing request, such as an IT incident, an HR case, or a Universal Request.
- Create a new department ticket, such as an IT incident or an HR case.
- Create a Universal Request and assign it to a Tier 1 agent or assignment group in a specific department.

Let's say an agent gets a live chat from a customer who is experiencing a technical problem. The agent documents the conversation in an interaction record and determines that the issue needs expertise of IT department. To ensure a seamless hand off, the agent creates an IT incident.

Universal Request

A Universal Request is created from an Interaction Record or New Call record when an agent determines that a new task record must be transferred to a different department by assigning it to a Tier 1 assignment group.

Let's say an employee wants to find specific information about medical benefits on the company's self-service portal. The employee searches for information about medical benefits and finds no relevant catalog items. In this case, the employee can select **Request help** on the portal to create a universal request.

The following table lists the high-level differences between an Interaction Record and a Universal Request.

Differences between Universal Request and Interaction Record

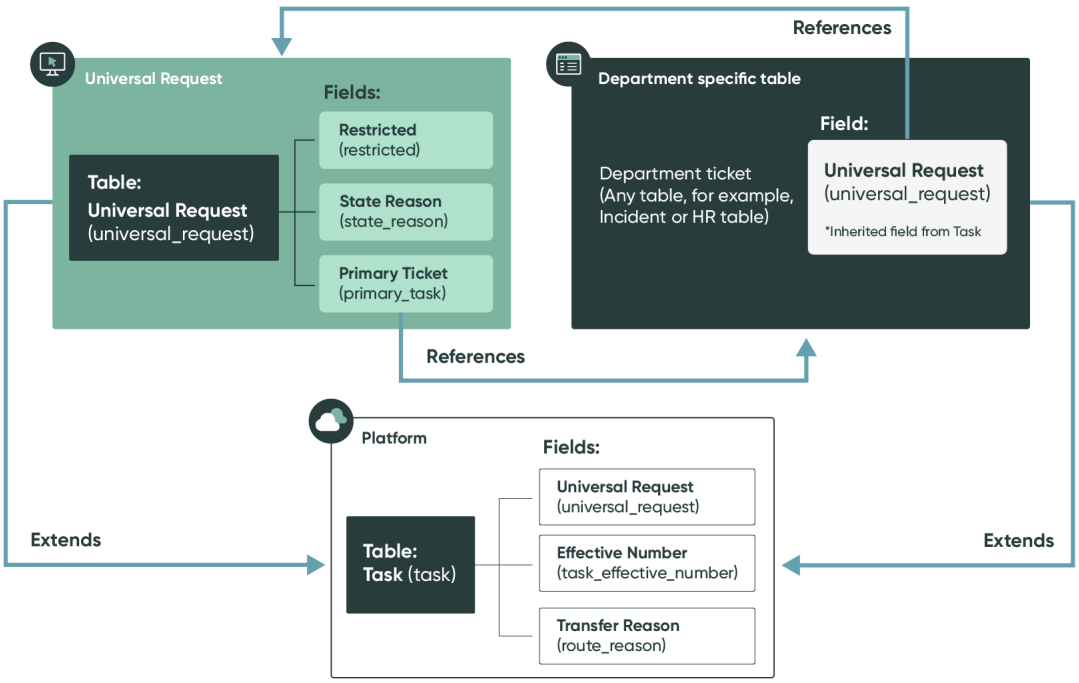
Universal Request	Interaction Record
Universal Requests are task records used by Tier 1 agents to either resolve or escalate an employee issue through any channel.	Interaction records are temporary records used by agents to capture initial interactions with an employee from a chat or phone call. The agent determines whether to create a new task record or add it to an existing record.
Universal Requests are requester-facing records. The universal requests are listed on the requester's ticket list page. They can view the individual tickets in the standard ticket page.	Interaction records are not requester-facing records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Differences between Universal Request and Interaction Record (continued)

Universal Request	Interaction Record
Universal Request is a task type that agents work on. Universal Request supports cross-departmental ticket transfers and a unified ticket page experience for the requester.	Interaction record is not a task type.
Universal Request is a task type that serves as a parent record for other records that are created as child records, such as INC, HRC, and custom task types. It is also used for all cross-departmental reporting.	Interaction records cannot be used for cross-departmental SLA reporting.

Universal Request data model



Universal Request is a task type that supports cross-departmental collaboration and unified employee experience. Universal Request becomes the parent record for departmental primary tickets, such as IT incidents and HR cases, and enables your organization to measure cross-departmental SLAs and OLAs.

The Universal Request (UR) is a task that can be created from any of the following sources.

- Requester-created: An employee uses any of following options to submit a request.
  - Clicks **Request Help** on the Service Portal or Employee Center.
  - Taps **Needs Help** on a mobile device.
  - Uses the virtual agent chat on the portals.
- Agent created: An IT service desk agent receives a phone call or live chat from an employee, starts a new call record or an Interaction Record, and in some cases, can create a Universal Request instead of a department ticket. The agent can then assign that UR to an appropriate Tier 1 assignment group.
- System generated: Based on configuration, a universal request is created when an employee submits a Record Producer. The Record Producer is configured to automatically create a Universal Request to enable cross-departmental request transfer and a consistent ticket view for the requester.

The following diagram shows a high-level overview of the Universal Request data model.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Universal Request data model uses a combination of tables to store data:

- ServiceNow AI Platform tables
- Tables included with Universal Request

For information, see the list of Universal Request plugins.

The Task [task] table is modified to include the following fields:

- A Universal Request (UR) field points to the parent UR record. This model allows any table extending the Task table to be a child of the UR.
- Effective Number field (identifying number) stores the UR number, if the request has a UR associated with it. If it is not associated with a UR, then the Effective Number stores the current department-specific request number.
- Transfer Reason field stores the reason for the transfer of the request. The possible options are:

  With resolution

  Indicates that the request is completed and is transferred back to Universal Request, the specific department or service.

  Without resolution

  Indicates that the request is not completed and is transferred back to Universal Request, the specific department or service.

The Universal Request table includes:

- State reasons for the customer-facing states
- Primary ticket details of the department-specific requests
- Restricted field to indicate if the request created is sensitive or not

Universal Request also includes user roles and ACLs that customers can use to provide access to different tables. This includes both internal and external user roles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Universal Request is a new task type that is extended from the base Task [task] table and is uniquely identified by a number prefixed with **UR**.

Universal Request table

Field	Description
Primary ticket	References the request that is currently active under the Universal Request. For example, INC1022201.
Opened for	The requester for whom the Universal Request is created.
State	Current state of the Universal Request. A UR can be in any of the following states: • New • In Progress • Awaiting Response from user • Closed For more information on the UR states, see Universal Request states and reasons.
State reason	The agent-facing reason for some requester-facing states. The state reason values are as follows: **Triaging:** A possible state reason when a Universal Request state is **In Progress**, and indicates that the Universal Request is being triaged. **Primary ticket WIP:** A possible state reason when a Universal Request state is **In Progress**, and indicates that the work for an active primary ticket is in progress. **Confirm response:** A possible state reason when a Universal Request state is **In Progress**, but the state reason changes to **Confirm Response** notifying the tier 1 agents to either accept or reject the response before closing the ticket for the requester. This happens when the **Needs Review** flag of the Universal Request is set to true. **Accept Resolution:**

Universal Request table (continued)

Field	Description
	A possible state reason when a Universal Request is in **Awaiting Response** state indicating that there is a pending requester's action to accept the resolution provided. **Action required:** A possible state reason when a Universal Request is in **Awaiting Response** state that there is an additional action to be performed by the requester.
Restricted	Option for restricting access to a ticket that has sensitive data. If a ticket is marked as Restricted, then only the agents with the sensitive request access can view and resolve the ticket.

Primary Ticket field of the Universal Request table

The Primary Ticket field in the Universal Request determines the UR state and the requester's ticket view experience. Use the Standard Ticket page configuration of the primary ticket to determine the content that must be displayed in various sections of a standard ticket page. The primary ticket for an UR is a departmental ticket such as an IT incident or an HR case.

Note:
A Universal Request can have only one primary ticket at a time.

For a Universal Request that is created for the first time, no primary tickets exist. If a child department ticket, such as an IT incident or an HR case is created from the UR, then the child ticket becomes the primary ticket. If the primary ticket is transferred back to UR or to another department, then the primary ticket field becomes empty. This sequence continues as new primary tickets are added and transferred back to UR or to another department.

When a record producer is configured to automatically create a Universal Request, then the UR becomes the parent record. And, when a department ticket is created, then that record becomes the primary ticket and remains until it is transferred back to the UR, to another department, or service.

Universal Request roles and groups

Users with certain roles and access can use Universal Request.

Universal Request roles

Role	Description
sn_uni_req.universal_request_read	Users with this role have read access to the Universal Request application and the related functions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Universal Request roles (continued)

Role	Description
sn_uni_req.ur_admin	UR administrators can setup and configure Universal Request.
sn_uni_req.routing_agent	Users with this role can open, update, and close Universal requests. By default, the users with the sn_uni_req.routing_agent role alone can have Universal requests assigned to them.
sn_uni_req.universal_request_write	Users with this role have both read and write access to the Universal Request application and the related functions.
sn_uni_req.ur_service_owner	Users with this role act as the Universal Request service owner that defines the process to service the universal request.
sn_uni_req.sensitiveinfo_agent	Users with this role can view and work on the tickets that are marked as restricted. Restricted tickets contain sensitive information and are secured from general viewing.

Universal Request application provides the following default assignment groups as part of the demo data. You can customize the default groups or create your organization-specific assignment groups.

Default assignment groups

Group	Description
IT Routing group	Assignment group that consists of tier-1 agents who manage both Universal Requests and IT incidents. The agents of this assignment group have both Universal Request role and the ITIL role. Agents assigned to the IT Routing group can: • Manage Universal Request. • Create child IT incidents from the UR parent.
HR Routing group	Assignment group that consists of tier-1 agents who manage both Universal Requests and HR cases. The agents of this assignment group have both Universal Request role and the HR role. Agents assigned to the HR Routing group can: • Manage Universal Request • Create child HR cases from the UR parent.
Universal Request Routing group	Assignment group that consists of tier 1 agents who focus primarily on managing Universal Requests. The agents of this assignment

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Default assignment groups (continued)

Group	Description
	group have Universal Request role. Agents assigned to the Universal Request Routing group can: • Resolve the Universal Request at the parent level. • Assign the Universal Request to another assignment group, such as HR routing group or IT routing group.

Universal Request states and reasons

The Universal Request (UR) state is determined by the state of the primary ticket. The primary ticket for a UR is a child department ticket, such as an IT incident or a HR case. A Universal Request can have only one primary ticket at a time.

Given are some examples of the impact of the primary ticket on UR:

- If there is no primary ticket, then the Standard Ticket configuration for UR determines requester page view of the UR ticket.
- If a child IT incident is the primary ticket of a UR, then the Incident Standard Ticket configuration determines the requester page view of the UR ticket.
- If a child HR case is the primary ticket of a UR, then the Case Standard Ticket configuration determines the requester page view of the UR ticket.

UR states and state reasons

The Universal Request (UR) state describes where in the life cycle the UR request is.

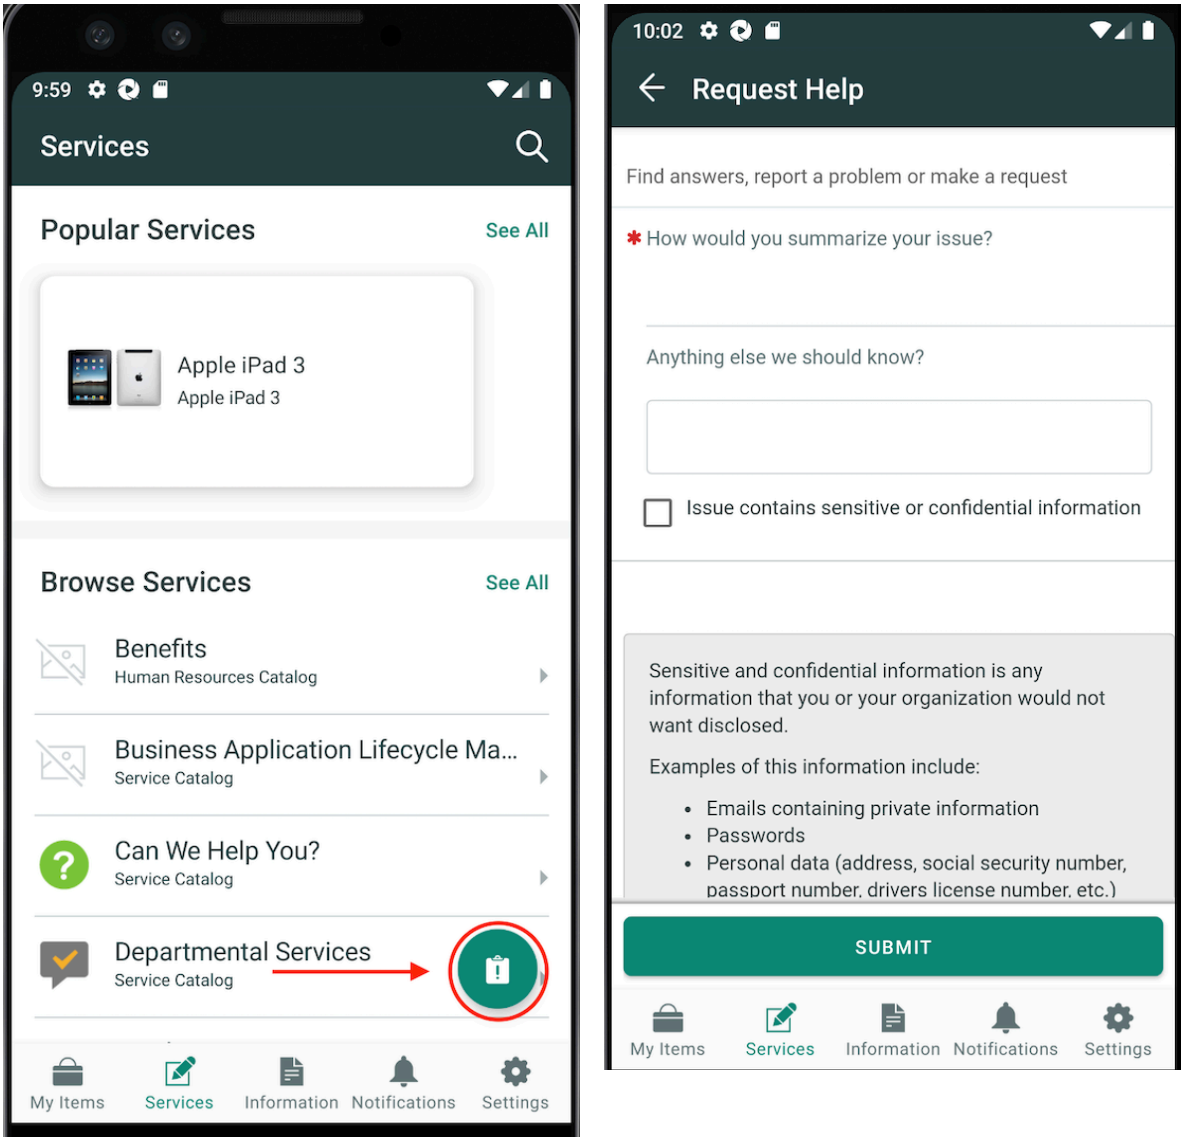
UR states and reasons

States	Description
New	The UR request is created and is ready to be triaged. This is the first state in the life cycle.
In Progress	The state when the UR is being triaged and worked on. For example, the state can be In progress because of the following state reasons: • **Triaging**: Is being triaged by the routing agent. • **Primary Ticket - In Progress**: Primary task is currently work in progress. • **Confirm Response**: Waiting on the routing agent's confirmation on the resolution provided by the department agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

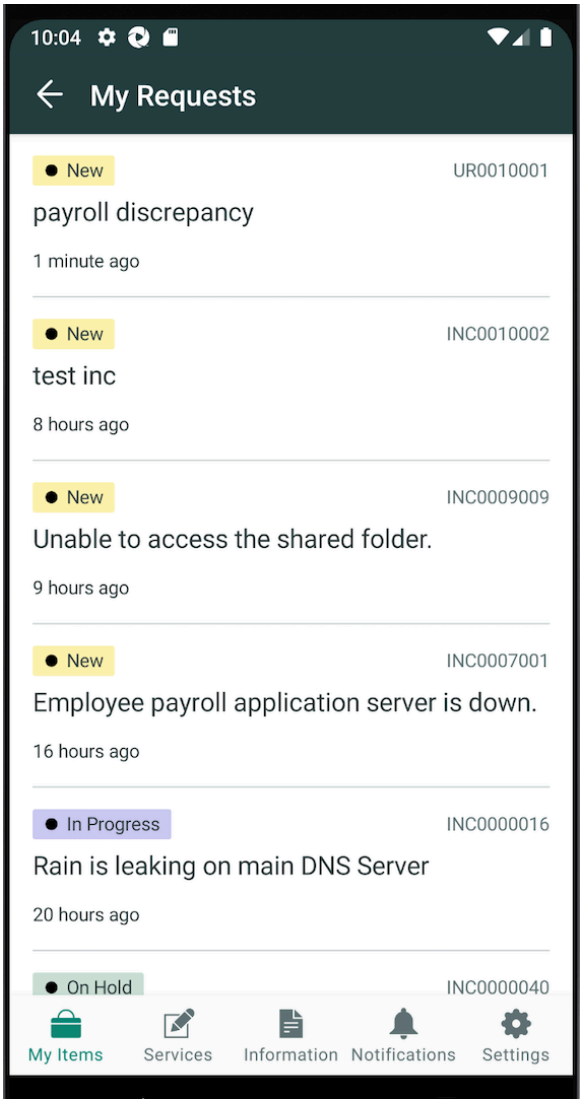
UR states and reasons (continued)

States	Description
Awaiting Response	The state when there is a user action is pending. For example, the possible state reasons are one of the following: • **Action Required**: When the agent has requested the user for some action or information. • **Accept Resolution**: When the agent has requested the requester for accepting the resolution.
Closed	The UR is closed.
Canceled	The UR is canceled. **Note:** Requesters can cancel a UR only if there are no active or closed primary tickets attached to it. Also, the state of UR must be either **New** or **In Progress**.

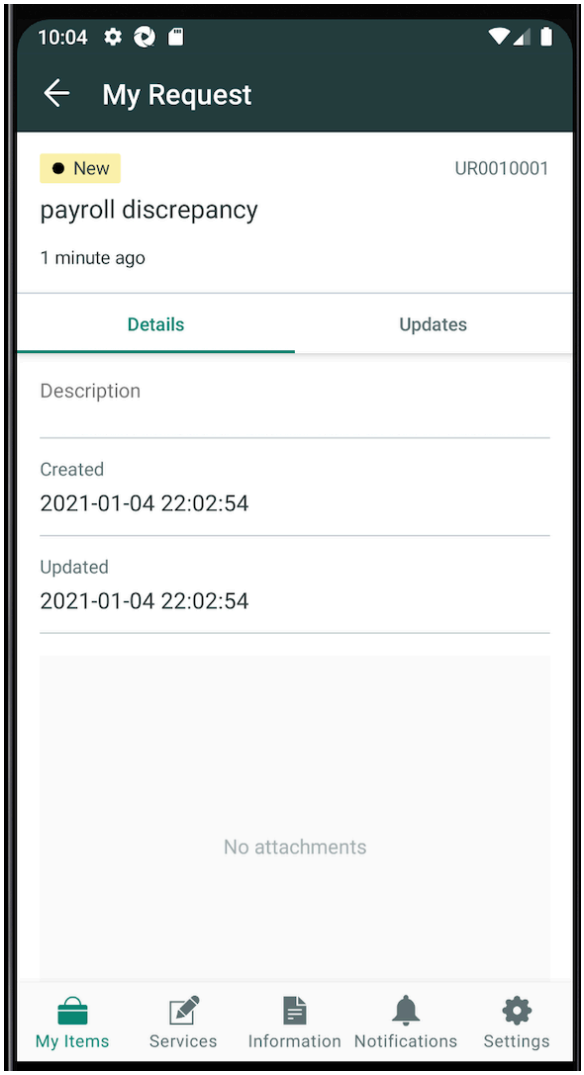


Mobile experience for Universal Request

Create universal requests from a mobile device using the Now Mobile application. Stay connected and access information in real time.



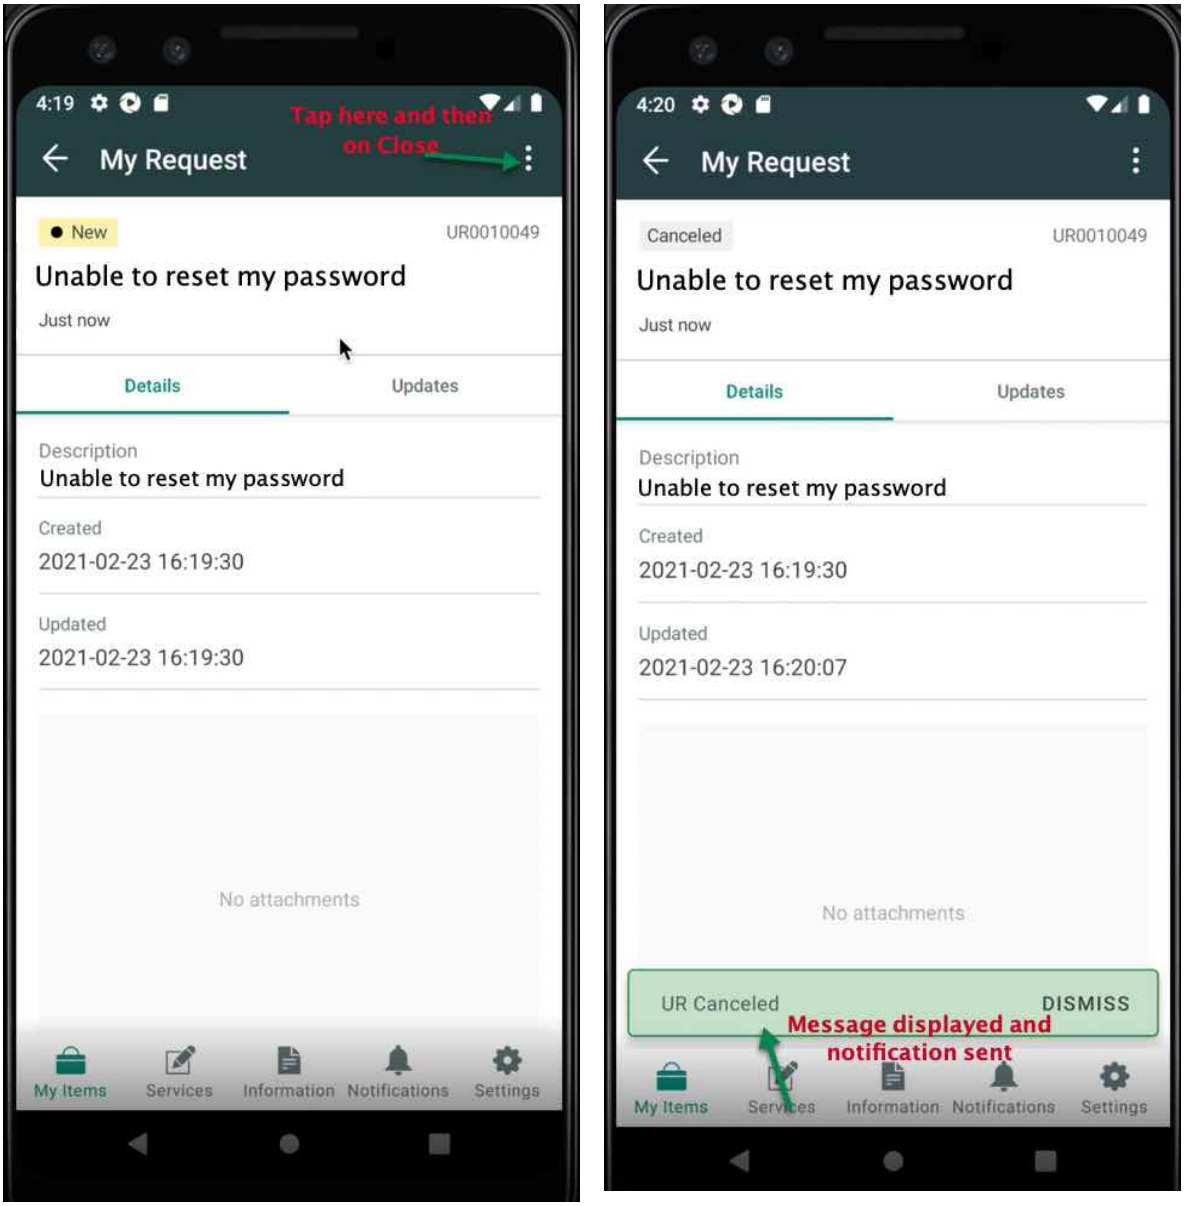
A requester can use the mobile device to create universal requests by tapping on the **Get help** link within the context menu of the **Services** tab.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The mobile experience for Universal Request provides a snapshot of the Universal Requests created in the list view along with their statuses. Tapping on the Universal Request takes you to the detailed view of the request with the updates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Requesters can cancel a UR from the mobile device and enter the reason for canceling the request if they no longer need it or they have already resolved it. When an UR is canceled, email notifications are sent to the requester as well as to the agent working on the request.

Note:
Requesters can cancel a UR only if there are no active or closed primary tickets attached to it. Also, the state of UR must be either **New** or **In Progress**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Setting up and configuring Universal Request

Set up and configure Universal Request to enable agents to create universal requests and work on them to resolve employee issues.

Understand the given information before you set up and configure to use Universal Request.

Universal Request application uses HTML mark-up to render comments that are copied between UR and the child tickets. This feature uses [CODE] tags, which are controlled by the *glide.ui.security.allow_codetag* property value that is set to true by default. If you change this property value to false, comments may not render properly, and HTML tags might appear in your comments.

Guided setup for Universal Request

Before you start using the ServiceNow® Universal Request application in your organization, you must set up Universal Request. Work with your stakeholders to define requirements for setting up the application effectively to meet the needs of your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Requirement

Role required: admin.

Before you begin

Meet with stakeholders and determine the following requirements:

- Universal Request workflow for your organization
- Users, groups, and roles
- Services and departments to leverage Universal Request

What to do next

The Universal Request application provides two guided setups to configure the application on the ServiceNow instance.

- **Guided setup for UR** to configure the Universal Request application.
- **Guided setup for Services** to configure your custom departmental applications in UR.

Using guided setup

Use the Universal Request guided setup and complete tasks in sequence to configure UR and your custom departmental application in UR.

Navigate to **Universal Request** > **Administration**, open the following guided setups, and complete the tasks.

- **Guided setup for UR**
- **Guided setup for Services**

Universal Request plugins

Request and activate the following plugins to use Universal Request in your application.

Activate Universal Request

You can activate the Universal Request plugin (com.snc.universal_request) if you have the admin role. This plugin is not active by default, and you must install it to use the Universal Request application. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin
Role required: admin

About this task
The Universal Request plugin activates these related plugins if they are not already active.

Plugins for Universal Request

Plugin	Description
Universal Request: Reporting [com.snc.universal_request.reporting]	To create and view various Universal Request reports.
Agent Workspace	To create, view, and resolve universal requests from the Agent Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugins for Universal Request (continued)

Plugin	Description
[com.agent_workspace]	
Agent Assist Recommendation [com.snc.agent_recommend]	To use Agent Assist recommendation in Agent Workspace.
Universal Request Core [com.snc.universal_request_core]	Contains the data model changes on the Task table to support the Universal Request application.
Service Catalog - Workspace [com.glideapp.servicecatalog.workspace]	To use Service Catalog in Agent Workspace.
Service Portal - Standard Ticket [com.glideapp.servicecatalog.workspace]	To enable the Standard Ticket page for your Service Portal.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Tables installed

Tables in Universal Request

Table	Description
Universal Request [universal_request]	Stores the Universal Request records and the state reasons.
Transfer Configuration [universal_request_route_conf]	Holds the routing configuration that is used when the task is routed.
Service Assignment Group [universal_request_service_assignment_group]	Stores the assignment group details of different services configured in UR.
State Mapping [universal_request_state_mapping]	Holds the state mapping configuration that maps the department ticket states to the Universal Request states.
Service Configuration [universal_request_service_conf]	Stores the details of the services that are configured in the Universal Request application.
Service set [universal_request_service_set]	Stores the service set (department) details of the organization.
Service Set Assignment Group [universal_request_service_set_assignment_group]	Stores the assignment group details of the service set (department).
SLA Breakdown by Primary ticket and Assignment group [sla_breakdown_by_primary_ticket_and_group]	
Mapping Configuration [universal_request_transfer_mapping]	
Transfer Fields Mapping [universal_request_transfer_fields_mapping]	
Universal Request Priority Data Lookup [dl_universal_request_priority]	
Universal Request Activity Log [universal_request_activity_log]	

Activate Universal Request Advanced Work Assignment

You can activate the Universal Request: Advanced Work Assignment plugin (com.snc.universal_request.awa) if you have the admin role. Activating this plugin enables you

Activate Predictive Intelligence for Universal Request

You can activate the Predictive Intelligence for Universal Request plugin (com.snc.universal_request.ml) to use machine-learning solutions in the Universal Request application, if you have the admin role.

Before you begin
Role required: admin

Note:
The Predictive Intelligence for Universal Request plugin (com.snc.universal_request.ml) plugin requires a separate subscription and must be activated by a ServiceNow personnel.

The application includes demo data and installs related applications and plugins if they are not already installed.

- Predictive Intelligence for Universal Request requires the following plugins. Ensure that these plugins are activated before you install this plugin.

  Required ServiceNow plugins

  Predictive Intelligence

  Install this plugin to enable the creation of machine learning solutions using data in your instance. The plugin provides various capabilities and solution types for training the system to predict, recommend, and drive data outcomes. A trained solution can be invoked by any application through the use of a prediction API..

  Universal Request

  Install this plugin to use the Universal Request application.

Role required: admin.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Predictive Intelligence for Universal Request plugin (com.snc.universal_request.ml) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Activate Performance Analytics and Reporting for Universal Request

You can activate the Performance Analytics and Reporting for Universal Request plugin (com.snc.universal_request.pa) for Universal Request if you have the admin role.

Before you begin
Role required: admin.

About this task

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Performance Analytics and Reporting for Universal Request plugin (com.snc.universal_request.pa) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

Note:
When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Configuring Universal Request

Set up the Universal Request features, components, and integrations that you need to set up your organization to provide service and support to your employees and agents.

Configure users and groups

A user is an individual who can access your instance and a group is a set of users who share a common purpose. The users associated with a group are listed as group members.

Before you begin
Role required: admin

About this task
Group information is used across most processes in the ServiceNow AI Platform for assigning work to teams and requesting approvals. Any rule that is applied to a UR group is automatically assigned to all the group members, for example, roles and assignment rules.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

- You can import existing users and groups using guided setup.
  For more information, see Guided setup for Universal Request.
- You can create new users and groups using the *ServiceNow AI Platform* user administration feature.
  - Create a user
  - Create a user group
  - Add a user to a group

Assign roles to UR users

Roles control access to features, capabilities, and data in the Universal Request application.

Before you begin

Role required: admin

Before you can assign roles to your users, make sure that users and groups have already been configured. For more information, see Configure users and groups.

About this task

You can assign roles to individual users or groups. Apply roles to groups and the members of those groups inherit those roles. Universal Request application provides a list of default roles and groups that can be used by your organization. For more information, see Universal Request roles and groups.

Procedure

- You can assign roles to users and groups using guided setup.
  For more information, see Guided setup for Universal Request.
- You can also assign roles to users and groups using the *ServiceNow AI Platform* user administration feature.
  - Assign a role to a user
  - Assign a role to a group

Service Level Agreement configuration for Universal Request

View, modify, or create Service Level Agreement (SLA) definitions that is provided for the Universal Request application to make sure that the requests are closed within a defined time frame.

Before you begin

Role required: admin

About this task

The SLA definitions created for the Universal Request are for the UR and does not depend on the SLAs defined for the individual child tasks of the specific departments.

Procedure

1. Navigate to **All** > **Service Level Management** > **SLA** > **SLA definitions**.
   List of all the SLA definitions available is displayed.
2. Click **New** to create an SLA definition for your tasks.
3. On the form, fill the fields.
   For field descriptions and detailed instructions, see Create an SLA definition.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The SLA definition is created for the specified task table.

Transfer configuration

You can enable agents to transfer department-specific tickets, such as an incident ticket or an HR case back to the Universal Request (UR), to another department, or service. This transfer configuration allows you to determine what happens to the departmental ticket when the request is transferred to another department or back to UR.

Before you begin
Role required: admin

About this task
The transfer configuration has the following configurations.

Transfer Information

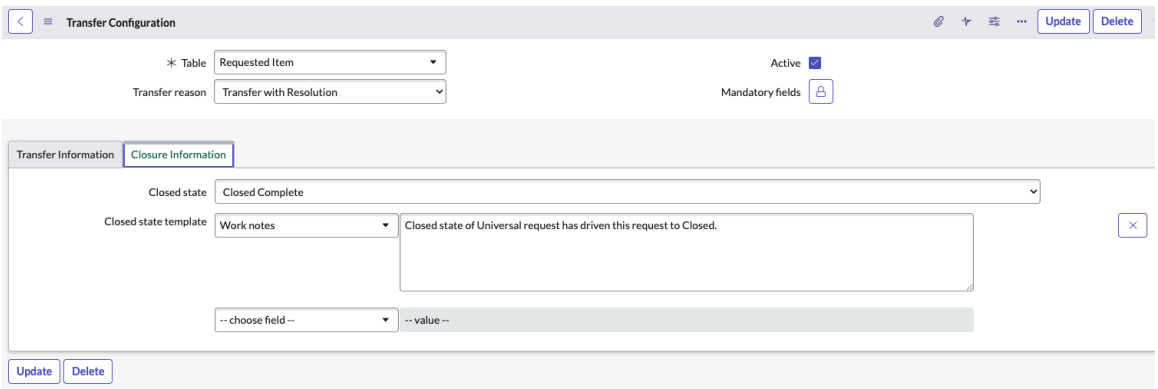
Determines the state and template to apply on the department ticket when a department ticket is transferred.

Closure Information

Determines the final closure state and template to apply on the department ticket associated with a UR that is closed.

When you transfer a department ticket, you can transfer it with one of the following reasons:

Transfer with resolution



When the request is resolved and transferred back to UR, to the specific department, or service.

Transfer without resolution

When the request is not resolved or does not belong to the specific department and is transferred back to UR, to the specific department, or service.

For example, if an incident ticket is transferred without resolution, in the **Transfer Information** tab, you can configure the **Transfer state** as `Canceled`. In the **Closure Information** tab, you can configure the closed state of the incident ticket when the UR is closed.

To perform this transfer action, you must configure the transfer configuration details in the Universal Request application.

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **Transfer Configuration**.
2. Open and edit an existing configuration or click **New** for a new configuration record.

3. On the form, fill in the fields.
   For more information on the field descriptions, see Transfer configuration form.

Configure Dynamic translation for Universal Request

Activate and configure the Dynamic Translation plugin to translate the text on a Universal Request record.

Before you begin
Role required: admin

About this task
After activating the Dynamic Translation plugin, you can configure one of the translator service spokes available by default. You can also configure a custom translator service provider.
For more information on translation service providers, see Integration with other translation services.

Procedure

1. Activate the Dynamic Translation plugin.
   For more information, see Activate Dynamic Translation.
2. Configure and activate the translator configuration for the spoke you are using.
   Available spokes include the following.
   - Configure Microsoft Azure Translator Service spoke
   - Configure Google Cloud Translator Service spoke
3. Activate the I18N plugin for the specific language you want to translate to.
   For a list of available languages, see Activate a Language.

Configure Chat queues

Configure chat queues to enable users to communicate with the agents for assistance on their request.

You can configure chat queues using one of the given options.

- Advanced Work Assignment for agent workspace
- Connect Chat support

By default, a sample Universal Request Chat Queue is available for both the options. You can create your own queue or customize the default queue.

Configure Advanced Work Assignment chat queue

Create or modify the default chat queue for UR in Advanced Work Assignment automatically assign work items to your agents, based on their availability.

Before you begin
Role required: admin
Ensure that you have activated the Agent Chat (com.glide.interaction.awa) plugin.

Procedure

1. Navigate to **All** > **Advanced Work Assignment** > **Queues**.
2. Perform any of the following task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Open the **Universal Request Chat Queue** chat queue and modify it
- Create the **Assignment Eligibility** record for the chat queue modifying the application provided Universal Request assignment rule.
- Click **New** to create a new record.

For more information, see Advanced Work Assignment.

3. Click **Submit**.

Configure Connect chat support queue

Connect Support is a real-time messaging tool that enables support agents to easily track their support cases, find solutions, and resolve problems quickly.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Connect** > **Support Administration** > **Queues**.
2. Click **New** or open the default **Universal Request Chat queue**.
3. On the form, update or fill in the details.
   For more information, see Administer Connect Support queues topic on the product documentation site.
4. Click **Submit**.

Predictive Intelligence for Universal Request

The Predictive Intelligence for Universal Request uses machine-learning algorithms for the auto-assignment of universal requests and to find similar knowledge articles and closed universal requests.

Predictive Intelligence for Universal Request has the following benefits:

- Use of machine learning algorithms to predict the assignment group across various departments based on the data provided by the requester in the short description and description fields of the request.
- Use of machine learning similarity solution to provide recommendations for similar Knowledge Base articles and similar closed Universal Request. These recommendations are based on the data provided in the short description and description fields of the request, and help agents to resolve universal requests quickly.

Solution definitions for Predictive Intelligence for Universal Request

The solution definition for Predictive Intelligence for Universal Request is available when you activate Predictive Intelligence plugin (com.glide.platform_ml) and Predictive Intelligence for Universal Request (com.snc.universal_request.ml) plugins. You can customize the solution definition to meet your business requirements.

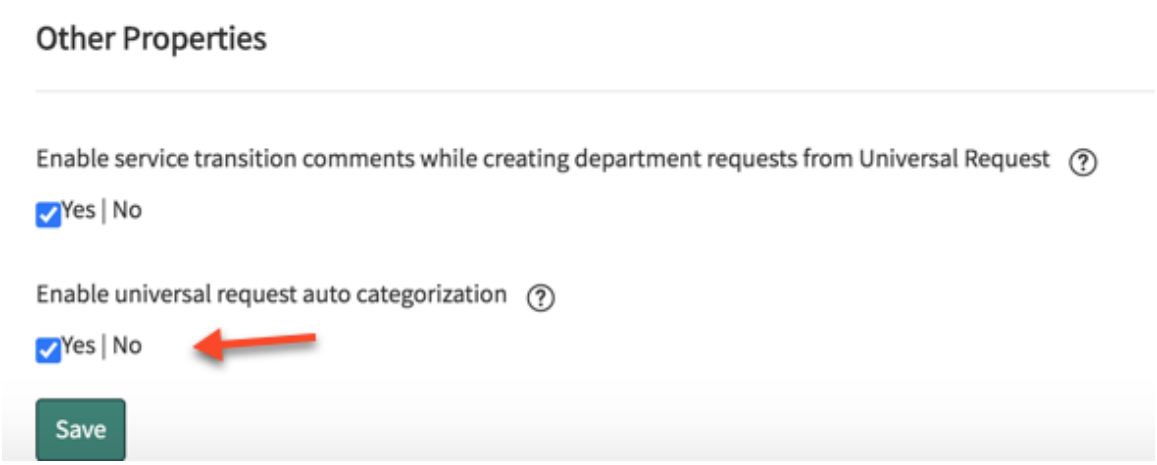
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Solution definition for Universal Request

Solution definition	Solution type	Description
Universal Request Categorization	Classification	• Predicts the assignment group from the short description and description of a Universal Request. • Runs a business rule to create service level tickets using the prediction. The service level tickets that are created will be associated with the universal request.
Similar Knowledge Articles for UR	Similarity	Predicts similar knowledge base articles based on the short description and description of a Universal Request.
Similar closed Universal Request	Similarity	Predicts closed Universal Request that have similar short description, description, and assignment group.
Identify sensitive information in UR	Classification	Identifies and predicts that the UR is sensitive based on the short description and description of the request. It also marks the request as restricted.

Train the classification solution to predict the assignment group

Train the Universal Request classification solution definition to identify and predict an assignment group using the short description and create service level tickets that are associated with the universal request.



Before you begin

Role required: admin

Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for Universal Request (com.snc.universal_request.ml) plugins.

Set the *`Enable universal request auto categorization`* property to true by navigating to **Universal Request** > **Administration** > **Properties**. Enabling this property enables the application to use the **Universal Request Classification solution** for UR.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
A minimum of ten thousand records are needed to train the classifications.

Procedure

1. Navigate to **Predictive Intelligence** > **Classification** > **Solution Definitions**.
2. In the Classification Definitions list, search for and select the Universal Request Categorization (ml_universal_request_categorization) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Classification Definition form fields, see Create and train classification solution.

Train the similarity solution for similar knowledge articles

Train the Similar Knowledge articles for UR solution definition to identify and predict knowledge articles using the short description. When an agent opens a universal request, similar knowledge articles are displayed in the Related Search section of the Universal Request record.

Before you begin

Role required: admin
Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for (com.snc.universal_request.ml) plugins are activated.

Note:
A minimum of ten thousand records are needed to train the classifications.

Procedure

1. Navigate to **All** > **Predictive Intelligence** > **Similarity** > **Solution Definitions**.
2. In the Similarity Definitions list, search for and select the Similar Knowledge articles for UR (ml_sn_sn_uni_req_global_similar_knowledge-articles-for-ur) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Similarity Definition form fields, see Create and train a similarity solution.

Train the similarity solution for similar closed Universal Requests

Train the Similar Closed Universal Request solution definition to identify and predict similar Universal Requests that are closed based on the short description, description, and the assignment group of the Universal Request created. When an agent opens a universal request,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

similar closed universal requests can be searched in the Related Search section of the Universal Request record.

Before you begin

Role required: admin or sn_un_req.ur_admin
Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for (com.snc.universal_request.ml) plugins are activated.

This solution is available only if you enable the **Enable to view similar closed Universal Request recommendations** (sn_uni_req.similar_closed_universal_request) property. For more information on this property, see Universal Request properties.

Note:
A minimum of ten thousand records are needed to train the classifications.

Procedure

1. Navigate to **All** > **Predictive Intelligence** > **Similarity** > **Solution Definitions**.
2. In the Similarity Definitions list, search for and select the Similar Closed Universal Request (ml_x_snc_sn_uni_req_global_similar_closed_universal_request) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Similarity Definition form fields, see Create and train a similarity solution.

Train the classification solution to identify UR with sensitive information

Train the Universal Request classification solution definition to identify and predict universal request with sensitive information using the short description and description. The solution identifies and marks the UR as restricted, allowing only agents with access or from the assignment group to work on the request.

Before you begin

Role required: admin
Ensure that you have installed Predictive Intelligence (com.glide.platform_ml) and Predictive Intelligence for (com.snc.universal_request.ml) plugins are activated.

Set the *Enable to auto-restrict requests with sensitive information* property to true by navigating to **Universal Request** > **Administration** > **Properties**. Enabling this property enables the application to use the **Universal Request Classification solution** for UR.

Note:
A minimum of ten thousand records are needed to train the classifications.

Procedure

1. Navigate to **Predictive Intelligence** > **Classification** > **Solution Definitions**.
2. In the Similarity Definitions list, search for and select the UR Sensitive Classification (ml_sn_sn_uni_req_ml_global_ur_sensitive_classification) solution.
3. On the form, verify the default field values and customize the solution as required.
   For more information about the Classification Definition form fields, see Create and train classification solution.

Set up Virtual Agent for Universal Request

Use Virtual Agent (VA) capabilities to provide a better user experience for your chat channel using the ServiceNow® Natural Language Understanding (NLU) model. Publish and use the default Virtual Agent topics for Universal Request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

To use VA capabilities, you must activate the following plugins:

- Activate the Universal Request: Virtual Agent Conversations plugin (com.snc.universal_request.va) to set up and use Virtual Agent in Universal Request. This plugin installs the Virtual Agent topics that must be made active. By default, the topics are set to inactive.
- Activate the Universal Request: NLU Model for Virtual Agent Conversations plugin (com.snc.universal_request.nlu) to set up and use the NLU model for Virtual Agent conversations.

Role required: admin

About this task

Activate the Virtual Agent topics for Universal Request.

You can also copy and modify the default topics or create your own topics to use during the chatbot conversations. For more information on creating a topic, see Create a Virtual Agent topic.

Procedure

1. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.
2. Enter `Universal Request` in the **Category** field.
   The following topics and topic blocks are displayed:
   - Employee Help Request (Template)
   - Track Universal Request Status (Template)
   - Update UR (Template)
3. Select the **Employee Help Request (Template)** topic to open it.
4. On the header section, select **Publish**.
   The topic is made available and active in the chat window.
5. Repeat this procedure to open and publish the Track Universal Request Status (Template) and Update UR (Template) topics.

Enable Natural Language Understanding model for Universal Request topic

Apply the Natural Language Understanding vocabulary in the Universal Request application to help the system to understand human-expressed language.

Before you begin

Role required: admin

To use the Universal Request topic for your chatbot conversations, select and enable the Natural Language Understanding (NLU) model. For more information, see Configure Natural Language Understanding in Virtual Agent.

Procedure

1. Navigate to **All** > **Collaboration** > **Virtual Agent** > **General Settings**.
2. On the **NLU Settings** tab, select **Enable NLU in Virtual Agent** to make it active.
3. Select `ServiceNow NLU` in the **NLU service provider** drop-down list.
4. Select **Save**.

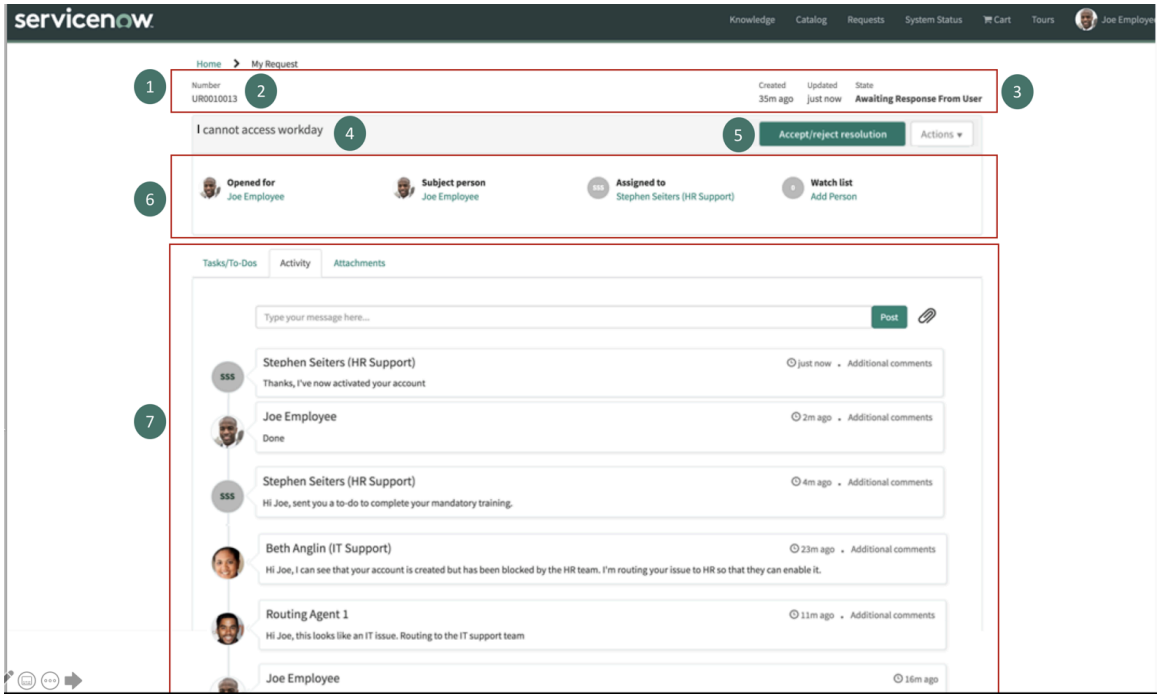
Standard Ticket page for Universal Request

The Universal Request standard ticket page enables requesters to view the details of their universal requests from the Service Portal.

A requester can view the aggregated and simplified view of the UR activity and all activities from one or more child department tickets (primary tickets). Using the UR standard ticket page has the following advantages:



- A ticket reference number (UR number) that is always consistent for the requester, even when the request is transferred between various departments.
- The UR state details that is derived from the mapping between the UR states and the states of the primary ticket associated with UR. With this state mapping enabled, the requester sees only the UR state.
- An activity stream that shows a logical and sequential record of comments to and from any fulfiller who worked on the UR or its primary tickets.
- An info region that displays department-specific fields of the current primary ticket. For example, configure the page to show **Opened For** and **Subject Person** fields from a child HR case, or to show **Caller** and **Urgency** fields from a child IT incident.

The Standard ticket page configuration for UR tickets enables you to determine what you want to display as a view. By default, a Universal Request Standard Ticket configuration is available that you can use and customize. Information displayed in different sections of a standard ticket page depends on the individual request type.

Note:
If you are upgrading from a previous release and want to use the Standard Ticket page for your department, ensure that you enable the *Page Route map* in Service Portal. For more information, see Enable the page route map for standard ticket page.

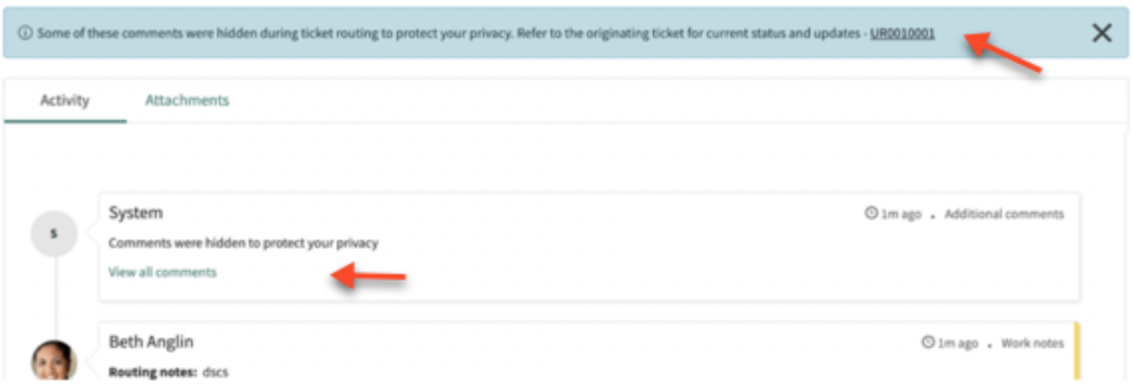
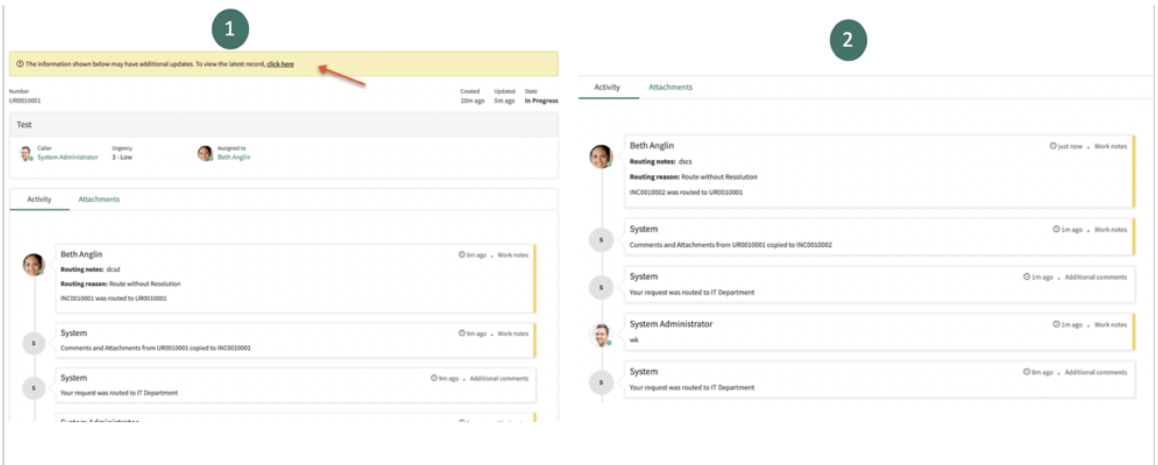
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UI components of Universal Request standard ticket page



Sl #	UI Component	Information displayed
1	Header section	Displays the information submitted for the Universal Request record, such as the UR request number, created and updated details of the request, and the current status. This section is not a configurable section. **Updated** field displays the details of the last activity time of the primary ticket if it exists. If there is no primary ticket attached, the **Updated** field displays the last activity time of the Universal Request.
2	Number	Displays the unique UR number that identifies the request.
3	State	Shows the state of the Universal Request.
4	Short Description	Always displays the short description of the Universal Request submitted.
5	Actions region	Actions that are configured as part of the primary ticket page. If the primary ticket does not exist, then the default actions of the Universal Request are displayed. The default UR actions are: • **Accept/Reject resolution**: To review the resolution provided and choose to either accept or reject the resolution. • **Close**: To cancel the UR if the UR is no longer required. **Note:** An UR can be canceled only if there are no active or closed primary tickets attached to it. Also, the state of UR must be either **New** or **In Progress**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



UI components of Universal Request standard ticket page (continued)

SI #	UI Component	Information displayed
6	Info region	Configurable fields that are part of the primary ticket. If the primary ticket does not exist, then the default fields configured for Universal Request are displayed.
7	Tabs section	Tabs that are configured as part of the primary ticket page. If the primary ticket does not exist, then the default tabs, such as the **Activity** and **Attachments** are displayed.
9	Activity stream	Displays the activity and attachments from UR, and all the previously associated primary tickets in a sequential order.

When a routing agent chooses not to share additional comments or attachments while routing, a system-generated message displays in the header and activity stream. However, the requester can view all comments in the activity stream.

When a user clicks to view the Standard Ticket page from a department ticket that was previously a primary ticket of the UR, then the Standard Ticket configuration validates and displays a message asking the user to open the latest page that displays only the activity streams and attachments. The following image displays the message containing a link to open the latest activity stream.

Related topics

Configure Standard Ticket page for Universal Request

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure Standard Ticket page for Universal Request

Use the Standard ticket page configuration for Universal Request to provide a consistent layout across all tickets raised and associated.

Before you begin

Role required: admin

By default, a standard ticket configuration is provided for UR. You can customize the layout or create a new ticket layout as per your organizational requirements.

Procedure

1. Navigate to **All** > **Standard Ticket** > **Standard Ticket Configuration**.
   A list of default ticket configurations is displayed.
2. Click and open **universal request** configuration.
3. Click the link **here** that appears in the message displayed to edit the record.
4. Modify the form field as per your requirements.
5. Click **Update**.
6. **Optional:** Click **New** to create your custom configuration.
   For more information, see Standard ticket page.

Configure service to use Universal Request

Configure the Universal Request application with any service to manage requests across multiple services under one unified request. Using Universal Request integrated with your service helps deliver a seamless employee experience in your organization.

Configure mappings

Configure the target table and field mappings to create a department level ticket and to set the fields according to the field mappings.

Before you begin

Role required: ur_admin

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **Mapping Configuration**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information, see Mapping configuration form.
4. Click **Submit**.

What to do next

Post this configuration, map the service fields with that of the UR fields to enable a seamless transfer of tickets. For more information, see Map UR fields with target table fields.

Map UR fields with target table fields

Define the fields that you want to map between the universal request and the target table fields that you already configured. This configuration enables you to copy the values of mapped fields from the universal request to the new ticket, and vice versa.

Before you begin

Role required: ur_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To map automatically the fields, select **Map fields automatically** related link. This action maps all fields that are common between UR and the service ticket and vice versa.

Note:
Field mappings will take precedence over transfer template configuration, if you've already defined them.

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **Mapping Configuration**.
2. Open the configuration for which you want to map the fields.

   Note:
   The **Type** field indicates the type field mapping selected, such as Transfer, Associated Ticket, or Create UR.

3. Select **Update**.

Create a service set

Create your service set (department) name in the Universal Request (UR) application to use the UR capabilities for a specific service set in your organization. Service sets are the various departments in your organization.

Before you begin

Role required: admin
Your organisation must have one service set without any services that is marked as a Universal Set. The Universal Set acts as the default department that receives new Universal Requests that are not routed to a specific department. This service set makes sure that when a UR is created it is assigned to the assignment group of the service set under one of the following conditions.

- A UR is created from Request Help with no department selected. For example, when an employee creates a UR from Request Help with no department selected and when the automatic assignment is not suggested by the ML routing algorithm, then the UR is assigned to the Service Set that is marked as Universal Set.
- When a UR is transferred with the **I'm not sure** option. For example, when a UR is transferred by a department agent, and the agent is unsure of the department to transfer the request to, the agent can select **I'm not sure** in the department field. In this case, the UR is routed to the Service Set that is marked as the Universal Set.

Note:
You can have only one service set marked as a Universal Set for your organization.

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **Service Sets**.
2. Click **New**.
3. Enter your service specific department name.
4. Select the **Universal Set** check box.
   If this check box is selected, the new service set is considered as a Universal Set.
5. Select the **Mapping Configuration** that you want to define for your service set.
6. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create your service-specific assignment groups

Set up your service-specific groups and assign the necessary roles and users. The users in the group inherit the roles of the group, so you do not have to assign roles to each user separately.

Before you begin
Role required: admin

About this task
Here are a few good practices for creating groups:

- Create one group for administrators and assign the admin role to this group only.
- Create as many groups as needed in your organization. For example, you can create a HR department specific assignment group or IT specific group. Assign the necessary users to those groups, and then assign the staff role to those groups.

Procedure

1. Navigate to **All** > **User Administration** > **Groups**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information, see Create a user group.
4. Click the lock icon beside the **Type** field.
   If the field is not visible, configure the form to add it.
   The **Type** field expands.
5. Click the reference lookup icon and select the **[application]** type.
6. Right-click the form header and select **Save**.
7. Add the roles to the **Roles** related list.
8. Add users to the **Group Member's** related list.
9. Click **Update**.

Assign assignment group to service sets

After creating your service-specific assignment groups, assign them to the service sets. Assigning assignment groups to the various departmental service sets facilitates in automatically routing universal requests to the right agents (assignment group) within a specific department (service set).

Before you begin
Role required: admin

About this task
Also, after triaging, agents can also transfer universal requests and department tickets to the appropriate agents (assignment group) within a specific department (service set).

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **Service Set Assignment Groups**.
2. Select the **Service Set** from the look-up list.
3. Select the **Assignment Group** for the service set.
4. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create your service for Universal Request

Register your service name for your service specific table and associate it with a service set (department) to use the Universal Request capabilities for a specific service in your organization.

Before you begin
Role required: admin

About this task
Service categorizes the application according to the area of the work within the service set (department) in the organization.

Note:
By default, HR cases and IT incidents are configured as services in the Universal Request application. This step can be ignored.

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **Service Configuration**.
2. Click **New** to register your service.
3. On the form, enter the **Service Name**.
4. Select the **Service Table** from the list of available tables.
5. Select the **Service Set** from the list of available service sets registered for your organization.
6. Click **Submit**.

Assign assignment group to your service

After creating the services for your service set (department), assign the assignment groups to the services in the service sets to enable agents to transfer tickets to the appropriate routing group.

Before you begin
Role required: admin

About this task
Assigning assignment groups to the various departmental service sets facilitates automatic routing of universal requests to the right agents (assignment group) within a specific department (service set). Also, after triaging, agents can transfer universal requests and department tickets to the appropriate agents (assignment group) within a specific department (service set).

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **Service Assignment Groups**.
2. Select the **Assignment Group** for the service set.
3. Select the **Service** from the look-up list.
4. Click **Submit**.

Create service specific UI actions

Create a UI action or modify an existing one to enable your service to create department tickets under a universal request.

Before you begin
Role required: admin
Administrators and users with the ui_action_admin role can define UI actions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

For example, consider a scenario when a Tier 1 agent of a service department receives a universal request, and is not able to resolve it. The agent escalates the request to another department or to an agent within the same department. In this case, the Tier 1 agent uses the **Create case** or similarly labeled action to create a new case within the service (department). This case can then be routed to the appropriate assignment group for resolution.

To perform this action, you must create a UI action for your service.

Procedure

1. Navigate to **All** > **System Definition** > **UI Actions**.
   A list of all UI actions specific to Universal Request table appears.
2. Click **New** or open an existing record.

   Note:
   For a new UI action, ensure that you always select the Universal Request table.

3. On the form, fill in the fields to define the UI action.
   For more information, see Create a UI action.

Register application administration enabled scoped application

If your application is an application admin enabled scoped application, register the application with Universal Request (UR) to make your application's service and service set data available for the Universal Request application to work.

Before you begin

Role required: admin

About this task

After you configure your service, you must perform these steps and create the following ACL-inheritance entries. This enables Universal Request to use your application's service and service set data.

Only UR administrator [sn_uni_req.ur_admin] can assign scoped UR roles.

To configure your system, you must log in as a System Administrator [admin]. The UR Administrator [sn_uni_req.ur_admin] role is contained in the System Administrator [admin] role. The combination of these two roles allows a user to perform all tasks associated with configuring your system.

After system configuration, ensure that only the UR Administrator [sn_uni_req.ur_admin] role has access to sensitive information. Remove the UR Administrator role from System Administrator [admin] role to prevent the System Administrator from viewing sensitive UR information. For more information, see Remove UR administrator role from system administrator.

After granting access, define the *sn_uni_req.min_admin_count* property in the system properties for UR to ensure that a minimum number of scoped administrators exist and the application is not locked out in one administrators absence.

Procedure

1. In the navigation panel, enter `sys_scoped_admin_acl_inheritance.list`.
2. In the **Application Administration ACL Inheritance** page, click **New**.
3. Select `Service Set` from the **Table** drop-down list.
4. Check that the **Application** is your scoped application

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Click **Submit**.
   Creates an ACL inheritance record for the service set table in your scoped application.
6. In the **Application Administration ACL Inheritance** page, click **New** again.
7. Select `Service Configuration` from the **Table** drop-down list.
8. Check that the **Application** is your scoped application
9. Click **Submit**.
   Creates an ACL inheritance record for the service configuration table in your scoped application.

Remove UR administrator role from system administrator

To secure your information from undue access, after system configuration, ensure that only the Universal Request (UR) administrator [sn_uni_req.ur_admin] role has access to sensitive information.

Before you begin

Role required: admin with sn_uni_req.ur_admin

About this task

By default, a System Administrator also has a UR admin role and can access the UR information. Add UR Admin role to specific users who would work on the UR configuration for their respective services. The user with this role can make another user a UR admin based on the roles and responsibilities. After this step is complete, to secure your application, remove the UR administrator role [sn_uni_req.ur_admin] from the System Administrator [admin] role.
By doing so, you prevent the user with a default System Administrator [admin] role from viewing all the Universal Request information.

Note:
Ensure that you have at least two users with the UR administrator role. If you assign only one person with the role and that person is deactivated, you no longer will have a user that can perform the UR admin duties.

Also, ensure that the same users have the System Administrator [admin] role to access the UR modules.

Procedure

1. Log in as admin.
2. From **User Administration**, go to **Roles** (left navigation menu).
3. Click **admin**.
4. On the **Contains Roles** tab, click **Edit**.

   Note:
   If you do not see the **Edit** button, change the **Application** scope to `Global`.

5. From the **Contains Roles List** column, highlight and move **sn_uni_req.ur_admin** to the **Collection** column.
6. Click **Save**.
7. Log out.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a business rule for your service

Create a business rule on the service table to attach the newly created department ticket with a universal request.

Before you begin
Role required: admin

About this task
You can create a business rule for your service for any of the following reasons.

- Provide a unified and simplified ticketing experience for your requester by configuring UR creation from all channels.
- Enable agents to transfer the primary ticket to other departments if the original request was initially sent to the wrong department by the requester.
- Facilitate cross-departmental reporting on the overall SLA if the ticket is transferred between departments.

Procedure

1. Navigate to **All** > **System Definition** > **Business Rules**.
2. Click **New**.
3. In the **Name** field, enter your business rule name.
4. Select your service table from the **Table** list.
5. Select **Advanced**.
6. On the **When to run** tab, in the **When** condition select `after` and select the **insert** check box.
   This action specifies that the business rules should run after the insert or update.
7. On the **Advanced** tab, add your condition.
   For example, add the below condition in the **Condition** field.

   ```
   !current.universal_request.nil() &&
   current.universal_request.primary_task.nil()
   ```

8. Enter the script in the **Script** field that you want to run when the defined condition is true.
   For example, add the below script to attach the service ticket as a primary ticket for UR.

   ```
   (function executeRule(current, previous /*null when async*/)
   { var urUtilsApi = new sn_uni_req.UniversalRequestUtils();
   urUtilsApi.attachPrimaryTicket(current.universal_request,
   current.getUniqueValue(),null,true); })(current, previous);
   ```

9. Click **Update**.
   For more information on other fields of this form, see Create a business rule.

Create a business rule to automatically create universal request

Create a before insert business rule on the service table to automatically create a universal request when a ticket is raised from any of the available channels.

Before you begin
Role required: admin

About this task
When a new request is submitted from the employee portal, this business rule validates if UR already exists. If there is no UR attached to the request, then the business rule automatically creates the UR and the department specific request is attached as the primary ticket.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UR is auto-created from any of the following channels:

- ServiceNow AI Platform
- Workspace
- Virtual Agent
- Email
- Interaction
- Self-service

You can automatically create a universal request in the following scenarios.

- To provide a consistent user experience while viewing the UR ticket.
- Transfer the department ticket seamlessly, as UR is already associated with the ticket.
- Use cross-departmental SLA or OLA reporting for UR, department ticket, and any other tasks associated with the parent UR.

Note:
By default, this business rule is shipped with HR Service Delivery and IT Service Management. Activate it to use it. For other departments, to use this capability, create or customize the given business rule for your specific department table.

Procedure

1. Navigate to **All** > **System Definition** > **Business Rules**.
2. Click **New**.
3. In the **Name** field, enter your business rule name.
4. Select your service table from the **Table** list.
5. Select **Advanced**.
6. On the **When to run** tab, in the **When** condition select `before` and select the **insert** check box.
   This action specifies that the business rules should run before the insert.
7. Enter the highest **Order** for the table.
   The order value is department specific.
8. Add your condition.
   For example, add the below condition in the **Condition** field.

   ```
   current.universal_request.nil()
   ```

9. Enter the script in the **Script** field that you want to run when the defined condition is true.
   For example, add the below script to attach the service ticket as a primary ticket for UR.

   ```
   (function executeRule(current, previous /*null when
   async*/) { /* call UR API to create or attach Universal
   Request with inserted department record */ new
   sn_uni_req.UniversalRequestFieldsMappingUtils().attachUniversalRequest(curr
   (current, previous);
   ```

10. Click **Submit**.
    For more information on other fields of this form, see Create a business rule.

Create extension points for departments

Create a scripted extension point to create your department specific primary ticket during cross-department ticket transfers. Using extension point enables you to create a primary ticket type as per the extension point definition.

Before you begin
Role required: admin

About this task
When configuring your department for Universal Request, to use transfer to other department capability, create scripted extension points and add them to the script includes of the application code. A sample *CreateDepartmentTicket* extension point is provided for you to modify and use.

Note:
For a better user experience, you can choose to use the Mapping configuration to define and configure fields that must be copied to the end-points for ticket transfers and creation. For more information, see Configure mappings.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_uni_req.CreateDepartmentTicket`.
3. On the form banner, click the link **here** to edit the record.
4. Click **Create Implementation** in the related list to create your department specific extension point script.
   For more information, see Using extension points to extend application functionality.

Create an extension point for post-processing of transfers

Create a scripted extension point to perform additional actions after the cross-department transfer of a primary ticket in the Universal Request application. You can change the sample extension point to copy any additional information from the previous primary ticket's child entities.

Before you begin
Role required: admin

About this task
When a primary ticket of a Universal Request is transferred, the current mapping configuration only copies the information from the primary ticket to the destination ticket. However, if you want additional actions to be performed after the cross-department transfer of the primary ticket, you can create a scripted extension point implementation for the *DepartmentTransferPostProcessor* extension point. A sample *DepartmentTransferPostProcessor* extension point, which is based on your business requirements, is provided for you to modify and use.

Procedure

1. Navigate to **All >System Extension Points >Scripted Extension Points**.
2. In the search bar, search for *sn_uni_req.DepartmentTransferPostProcessor*.
3. Create your department-specific extension point by selecting **Create implementation**.
   For more information about using extension points, see Using extension points to extend application functionality.

Unified ticket experience setting

Set up your service to provide your employees with a unified and consistent ticket experience. This setup automatically creates a universal request when requests are raised from an interaction record, email, or record producer.

You can customise and configure to automatically create universal request for a task from various channels using APIs provided with the Universal Request application. For more information, see UniversalRequestUtilsSNC API.

Universal Request application supports the creation of universal request from an interaction record in the Agent Workspace. For more information, see Create a Universal Request from an Interaction Record.

Modifying email notification preferences helps in controlling the outbound email actions. For more information, see Email notification preferences for your service.

Set up email preferences to create universal request when an email is received in the configured mail box. For more information, see Automatically create universal request from an inbound email.

Configure your service record producer to create universal request from a request raised from the record producer. For more information, see Configure a catalog item or record producer to create a universal request.

Create universal request automatically for department tickets via other channels

Universal request is not automatically created when a fulfiller or employee creates a department ticket from channels other than the Service Portal or Virtual Agent topics. Create universal request automatically by adding the business rule to the specific service table, such as an Incident or a HR service.

Before you begin

Role required: admin

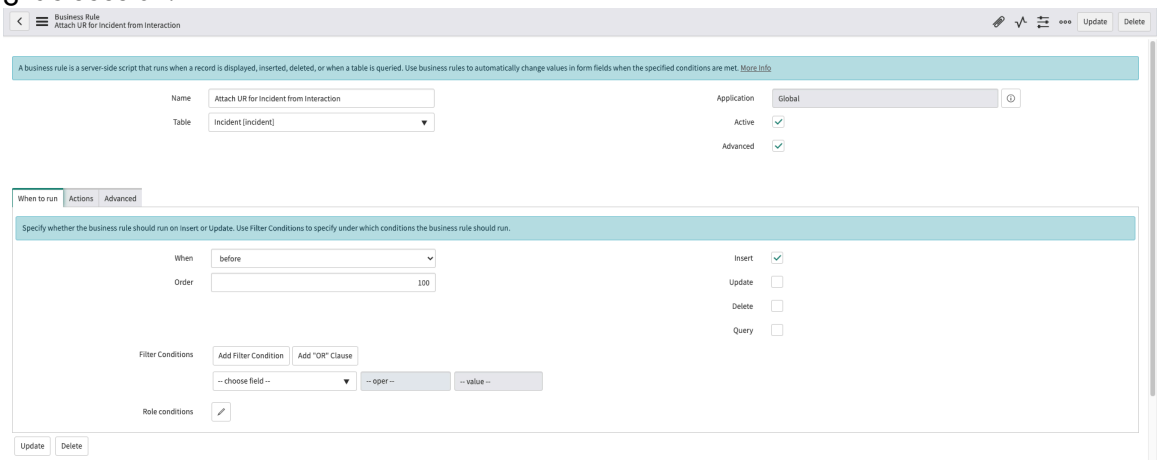
About this task

Create universal request automatically by adding the business rule to the specific service table, such as an Incident or a HR service. The universal request created is then automatically associated to the department ticket, such as an Incident or a HR case created in that table. You may want to automatically create universal request in the following scenarios.

- To provide a consistent user experience when viewing the UR ticket.
- Transfer the department ticket at any time, as UR is already associated with the ticket.
- Use cross-departmental SLA/OLA reporting for the UR, the department ticket, and any other tasks associated with the parent UR.

You can achieve this by using a business rule and the Universal Request API. For more information, see UniversalRequestUtilsSNC API.

Follow the given steps to enable create universal request automatically from an interaction record.



Procedure

1. Modify the UI action of the department ticket to pass the URL parameter that is retrieved from the client script.
2. Create an AJAX script include to set the data in the glide session.
3. Create an onSubmit() client script to fetch the URL parameter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Client scripts.

4. Set the URL parameter and the sys_id to the glide session using the AJAX script include.
5. Create a before insert business rule on the department ticket and retrieve the data from the glide session.

6. Create universal request record using the *`UniversalRequestUtils`* API and attach the universal request to the task.

Email notification preferences for your service

Customize email notifications to control which email notifications are sent to requesters when a universal request is created. This setting prevents employees from receiving duplicate or inconsistent email notifications.

Before you begin

Role required: admin

About this task

Set up your notification preferences, so that the communications to the requester come from the Universal Request instead of the department ticket, and the links in the communications link back to the Universal Request instead of the department ticket.

Email notifications are usually sent when one of the following activities is performed:

- A universal request is created for a requester.
- Comments are added to the request.
- Resolution is provided for the request.
- Request is closed.

Procedure

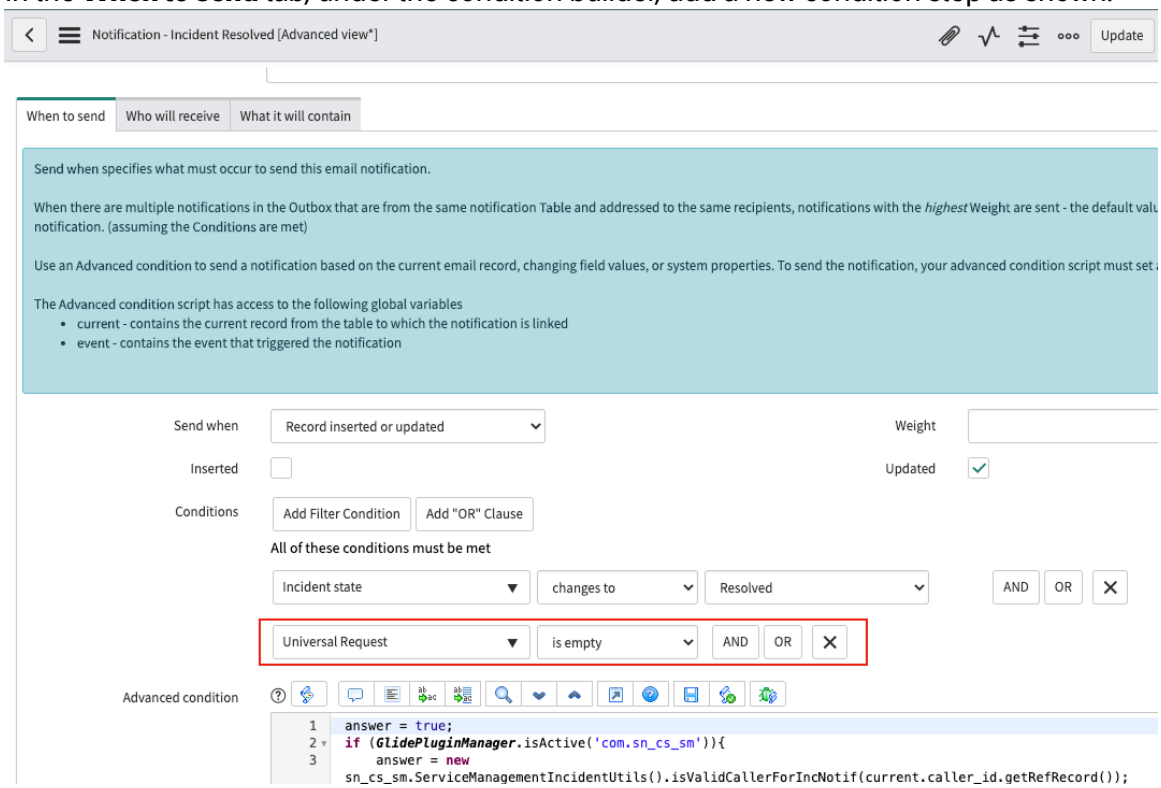
1. Suppress outbound notification for services leveraging Universal Request.
2. Use effective number in email subject.

Suppress outbound notification for services leveraging Universal Request

You can configure outbound email notifications to define the emails a requester must receive when a universal request is created. For example, if your service (department) ticket is associated with a universal request, you can customize the notifications to send only the emails that are relevant to the requester.

Before you begin

Role required: admin



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

Service emails, such as, service ticket creation, notes or state changes, can be suppressed from being distributed.

Procedure

1. Navigate to **All** > **System Notification** > **Notifications**.
2. Open your service specific notification that you want to customize.
3. In the **When to send** tab, under the condition builder, add a new condition step as shown.

4. Click **Update**.

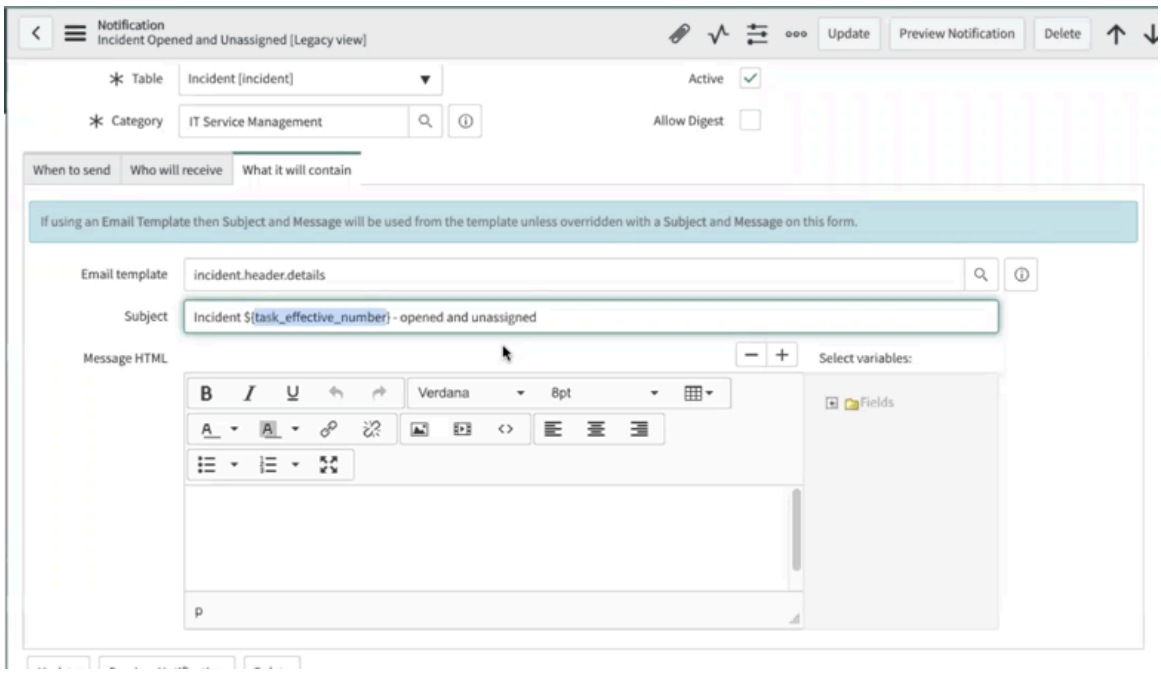
Use effective number in email subject

Modify the email subject to display the relevant ticket number by using the task effective number. For example, if your service ticket is associated with a universal request, then you must mask the service ticket number and show the UR number.

Before you begin

Role required: admin

About this task



The *task_effective_number* is a dynamic field value that displays the UR number when the service ticket is associated with UR and displays the actual service ticket number when there is no UR associated.

Procedure

1. Navigate to **All** > **System Notification** > **Notifications**.
2. Open your service specific notification that you want to customize.
3. In the **When it will contain** tab, in the **Subject** field use the *task_effective_number*.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, in the Incident Opened and Unassigned notification, in the **Subject** field, enter *Incident ${task_effective_number} - open and unassigned*.

4. Click **Update**.

Automatically create universal request from an inbound email

Universal requests can be automatically created from the information received by emails. The auto-creation of universal requests enables faster response time and quicker resolution for employees compared to the agents manually creating requests from emails.

Configure the email IDs in the *General email address for Universal Requests* (sn_uni_req.ur_email) property. For more information, see Universal Request properties. By default, an email sent to these configured mail IDs will automatically create a universal request. Incoming emails marked with high importance will create universal requests with high priority (Priority 1).

By default, the solution definition is configured and the predictive model is auto-trained when the following conditions are met.

- The Universal Request (com.snc.universal_request) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- The Predictive Intelligence for Universal Request plugin (com.snc.universal_request.ml) plugin is installed. This plugin requires a separate subscription and must be activated by a ServiceNow personnel.

On instances where Predictive Intelligence for Universal Request is active, the following solution definition and business rule are available:

Solution definition table

Definition	Description
Universal Request Categorization	Predicts the assignment group from the short description and description of a Universal Request and also creates service level tickets

© 2026 ServiceNow, Inc. All rights reserved.

Business rule table

Business rule	Table	Description
Predict assignment group of UR	Universal Request [universal_request]	Predicts the assignment group from the short description and description of a Universal Request.

Configure a catalog item or record producer to create a universal request

Create a universal request along with a requested item or task-based record to provide unified ticketing experience.

Before you begin

Role required: admin

About this task

Only when the Universal Request plugin (com.snc.universal_request) is activated, the **Universal Request Config** section is added to a catalog item or record producer form.

A universal request is not created for the following scenarios:

- Cart with multiple catalog items is checked out
- Order guide is submitted

For information on creating a catalog item, see Create or edit a catalog item.

For information on creating a record producer, see Create a record producer.

Procedure

1. Navigate to **All** > **Service Catalog** > **Catalog Definitions** > **Maintain Items**.
2. Select the required catalog item or record producer.
3. In the Catalog Item or Record Producer form, configure these fields in the **Universal Request Config** section.

Universal Request Config section fields

Field	Description
UR certified/ enabled item	Option to specify that a universal request should also be created along with a requested item or task-based record. In the universal request, a reference is created to the associated requested item or task-based record, which becomes the primary task of the universal request.
Requires Additional Review	Option to automatically select the **Needs resolution review** check box on the corresponding universal request. For information about the universal request fields, see Universal Request form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The **Requires Additional Review** field appears only when the **UR certified/ enabled item** check box is selected.

4. Click **Update**.

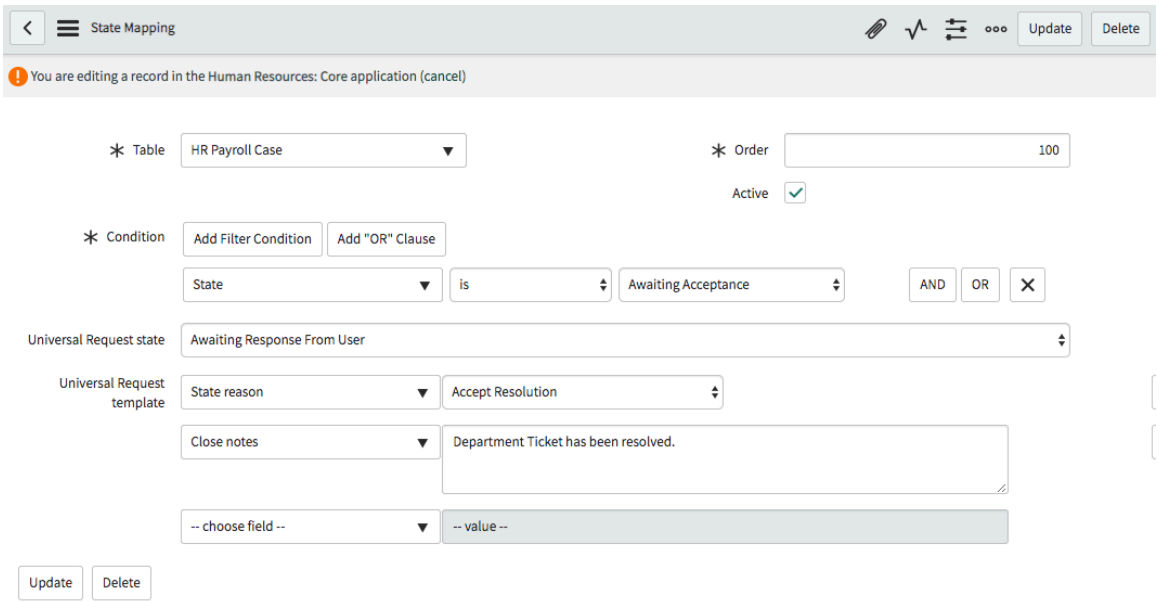
Service Catalog configuration for Universal Request

Universal Request state mapping



All workflows consist of states, transitions, and reasons. Map your service-specific states to the Universal Request states to provide a better user experience during request state transition.

Before you begin

Role required: admin

About this task

For example, consider a universal request that has an HR payroll case attached to it as a primary task. When the HR case state changes from **In-progress** to **Awaiting Acceptance**, then the universal request state is updated to **Awaiting Response From User**.

By mapping the states of the service to the UR state, it is ensured that the correct state of UR is displayed. The state transition of the primary ticket is hidden from the requester and they only see the simplified UR state transitions that are driven by the state mappings. The following table describes the universal request states and the suggested mappings.

UR states and suggested mappings

Primary ticket status	UR state
When UR is created and there is no primary ticket	New
All states when ticket is being worked upon, like WIP, awaiting approval	In progress

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

UR states and suggested mappings (continued)

Primary ticket status	UR state
All states that require response from a requester	In progress

Procedure

1. Navigate to **All** > **Universal Request** > **Administration** > **State Mapping**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information on the field description, see State mapping form.

Domain separation and Universal Request

Domain separation is supported for ServiceNow Universal Request. Universal Request helps Help Desk agents to resolve cases across the enterprise for a better employee experience. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

How domain separation works in Universal Request

All configurations are strictly domain separated.

The Universal Request table is data-separated.

Tables

Configuration tables (strict domain separation)

- universal_request_service_set
- universal_request_service_conf
- universal_request_state_mapping
- universal_request_route_conf
- universal_request_transfer_mapping
- universal_request_transfer_fields_mapping

Domain separation for service providers

Using Universal Request

Agents and managers can use the Universal Request application to create requests, manage information and security, and connect with other departments and services to assist with request resolution.

Create Universal Request

Create a universal request record on behalf of the requester from the Universal Request application.

Before you begin
Role required: sn_uni_req.routing_agent or admin.

Procedure

1. Navigate to **All** > **Universal Request** > **Create New**.
2. On the form, fill in the fields.
   For more information on the field description, see Universal Request form.
3. Click **Submit**.

Cancel a universal request

Cancel the universal request if the issue is resolved or the request no longer needs any action.

Before you begin
Role required: admin, routing agents

About this task
You can cancel a universal request only if

- There are no active or closed primary tickets attached to it.
- The state of UR is either **New** or **In Progress**.

Procedure

1. Navigate to **All** > **Universal Request** > **Open**.
2. From the list of open universal requests, select the request you want to cancel.
3. Select **Canceled** from the **State** field.

   Note:
   If the user in **Opened for** tries to cancel the request, then they must enter the reason for canceling.

4. Click **Update**.

Result
When the UR is canceled, email notifications are sent to the stakeholders associated with the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the guided tour in Universal Request

Use the guided tour to navigate a sequence of interactive steps that provides an overview of Universal Request cases.

Before you begin

Role required: sn_uni_req.universal_request_write, sn_uni_req.routing_agent, sn_uni_req.sensitiveinfo_agent

When you select a Universal Request case for the first time, the guided tour starts automatically.

Use this procedure the start the guided tour manually.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Go to **Lists** > **Universal Request**.
3. Select a universal request in any given categories.
4. Select the **Show help** icon ().
5. Select **Take a tour**.
6. Select **Begin tour** in the Guided Tour pop-up window.
7. Read the call outs to understand the interface of a Universal Request case.
8. Select **Next** to progress through the tour.

   To end the tour at any point, select the **End Tour** option in the **Show help** menu option or select the **Close** icon in the pop-up window and confirm to end the tour.
9. Select **Done** to complete the tour.

View universal requests with primary ticket

A universal request can have multiple child requests, such as an IT ticket or an HR case. An active child request is called the primary ticket. At a given time, a universal request can have only one primary ticket.

Before you begin

Role required: admin, itil, or routing agents

To view the universal request with an active primary ticket, do the following.

Procedure

1. Navigate to **All** > **Universal Request** > **With Primary Ticket**.
   A list of all universal requests that have a primary ticket is displayed
2. Open and view the universal request you want to work on.

Create associated ticket for primary ticket of UR

Agent, working on the primary ticket, requests other departments for assistance in resolving a universal request (UR) by creating associated tickets for the UR. Multiple departments can work simultaneously on these associated tickets. These associated tickets are independent of the UR state flow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Configure the *sn_uni_req.associated_ticket* property in the **Universal Request properties** page to determine how to handle the creation of the associated tickets. For more information, see Universal Request properties.

Role required: agent part of the assignment group of the primary ticket or assigned to agent

About this task

A routing agent of the primary ticket can request other departments for assistance in resolving a UR by creating associated tickets on the primary ticket. Multiple departments can work simultaneously on the associated tickets to resolve the UR.

The following are some key highlights.

- Pass on the context of the request directly to the other department using the pop-up when creating an associated ticket.
- Configure the information to be copied from UR to the Associated ticket in Mappings configuration.
- Agents work on the associated ticket even after the closure of primary ticket / UR as associated tickets are independent of the UR state flow.
- Configure the Associated ticket tab configuration to view and track the activity of associated tickets from the standard ticket page.

Procedure

1. Navigate to the primary ticket record.
   For example, to open an incident primary ticket, navigate to **All** > **Universal Request** > **With Primary Ticket**.
2. Open the UR and then click the associated primary ticket.
   For example, the Incident ticket associated is displayed as a link in the message.
   The primary ticket record appears on the page.
3. Click **Create Associated Ticket**.
4. In the **Create Associated Ticket** dialog box, enter the following details.

   Note:
   Based on the sn_uni_req.associated_ticket property, different fields display on the form. For more information, see Universal Request properties.

   - **Department**: Select the department from the list.
   - **Service**: Select the specific service of the chosen department.
   - **Short description**: Enter the short description for the new associated ticket.
   - **Description**: Enter the detailed description for the new associated ticket.
   - **Work notes**: Enter work notes details.
5. Click **Create**.
   An associated ticket is created with the descriptions provided and is associated to the existing UR of the primary ticket.

Universal Request sensitive information security

Universal Request security capability provides flexibility to protect information by controlling the view and edit authorization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Key advantages

- Requester can mark the request as sensitive at the time of creating the request.
- Routing agents can mark the request as restricted while creating a request.
- If the request is not sensitive, a sensitive info routing agent from the current assignment group, or the primary ticket agent can mark the ticket as unrestricted while triaging.
- When a restricted ticket is created or transferred, only a sensitive info routing agent from the current assignment group, or the primary ticket agent can view the complete details of the ticket.
- The security controls are also transferred during cross-department transfers, as the assignment group is changed to that of the new department.
- Use Predictive Intelligence solution to automatically identify and mark the universal request as sensitive.

Sensitive Info Agent role

The *sn_uni_req.sensitiveinfo_agent* role controls who views and acts on the universal requests that have sensitive information. Only the UR routing agents from the current assignment group with the *sn_uni_req.sensitiveinfo_agent* role, and the primary ticket agent can view the complete details of the ticket.

For example, if an HR case (primary ticket) is created for a universal request, then only the HR routing agent with the *sn_uni_req.sensitiveinfo_agent* role, or the HR case agent can view the complete details of the request, such as the short description, description, attachments, and comments.

An agent without the sensitive agent role can access only the primary information of the request. The secured fields (short description, description), attachments, and comments in the activity stream are hidden.

Application Administration enabled scoped application

Universal Request is an Application administration enabled application. If you are configuring your service that is also an application administration enabled application or has it's own security modal, then you must register your application. For more information, see Register application administration enabled scoped application. This ensures that the security is maintained within the universal request.

Raising a sensitive universal request from the portal

When requesters create a request using the **Request Help** option on the Service Portal, Employee Center, or Mobile app, then they can secure the information provided as sensitive.

To help requesters identify sensitive information, a knowledge article is provided on the **Request Help** page. After determining if the request is sensitive, they can select the **Issue contains sensitive or confidential information** check box. If the check box is selected, the requester can select the department to which the issue might belong, or choose the **I'm not sure (general submission)**.

If the Predictive Intelligence for Universal Request [com.snc.universal_request.ml] plugin is installed, then the department is auto-selected, and the requester is notified about the selection. For more information, see Activate Predictive Intelligence for Universal Request. The requester can then choose to override the suggestion. On submission, this action creates a universal request marked as **Restricted**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

At times, agents can also create a request from an interaction, a call, or from the Self-Service module. In such cases, the agent can mark the request as **Restricted**.

Agent experience of UR security

Any agent can view the list of universal requests that are marked as restricted. However, only the service-specific assignment group agent or the agent who have access to sensitive requests can view the detailed information. While triaging, any agent who views the request and identifies that it has sensitive information can mark it as restricted.

If the Predictive Intelligence for Universal Request [com.snc.universal_request.ml] plugin is installed, then UR with sensitive information is automatically identified and marked as restricted and only agents with *sn_uni_req.sensitiveinfo_agent* role can access and work on the request.

However, only the service-specific assignment group agent or the agent with the role to access a sensitive request can mark it as unrestricted. For more information, see Restrict universal request access or Mark universal request as unrestricted. You can mark a request as restricted or unrestricted directly on the universal request or from the primary ticket.

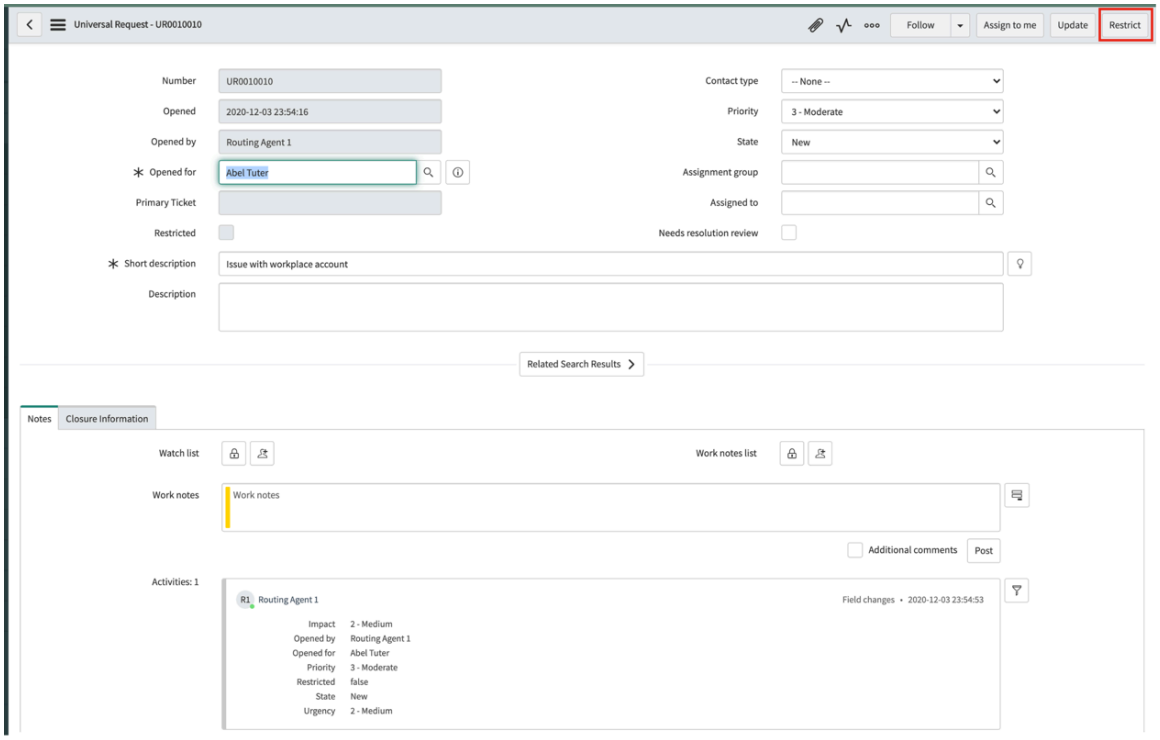
Transferring a restricted request

A restricted request means the parent universal request is marked as restricted. When a primary ticket of the sensitive universal request is transferred to another department, the security controls are also transferred, as the assignment group of the UR changes.

COE Security

COE security policies are a way to easily restrict access to different COEs via configuration. The underlying COE security policy implementations are ServiceNow ACLs.

Restrict universal request access



Mark a universal request as restricted when you identify the request contains sensitive information.

Before you begin
Role required: employees, routing agents, sn_uni_req.sensitiveinfo_agent or service specific assignment group members

Procedure

1. Navigate to the universal request that you want to mark as restricted.
2. On the form, click the **Restrict** button.

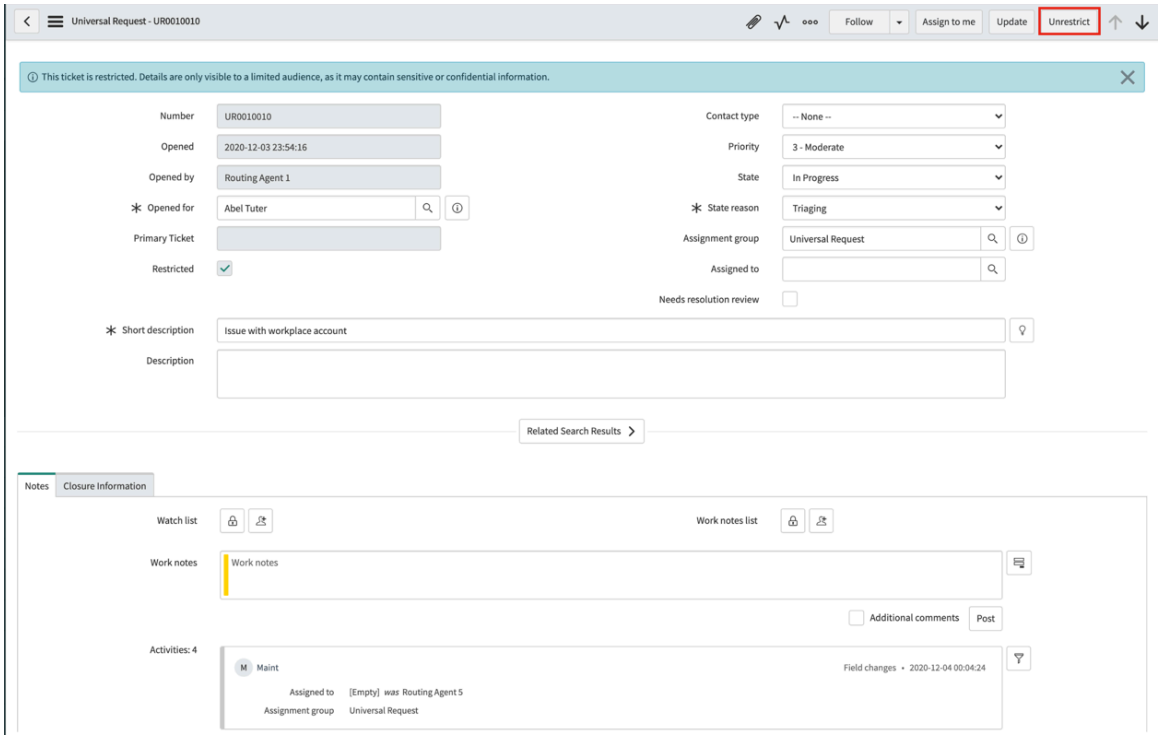
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The restricted fields are hidden, and the form is only for view purpose.

Note:
To mark the request as unrestricted only agents with the access role can modify.

Mark universal request as unrestricted

You can unrestrict a restricted universal request if you identify that the request does not have any sensitive information.



Before you begin

Role required: sn_uni_req.sensitiveinfo_agent, Primary ticket agent, or members of assignment group of that UR

Procedure

1. Navigate to the universal request that you want to mark as unrestricted or to the primary ticket that you are resolving.
2. On the form, click the **Unrestrict** button.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

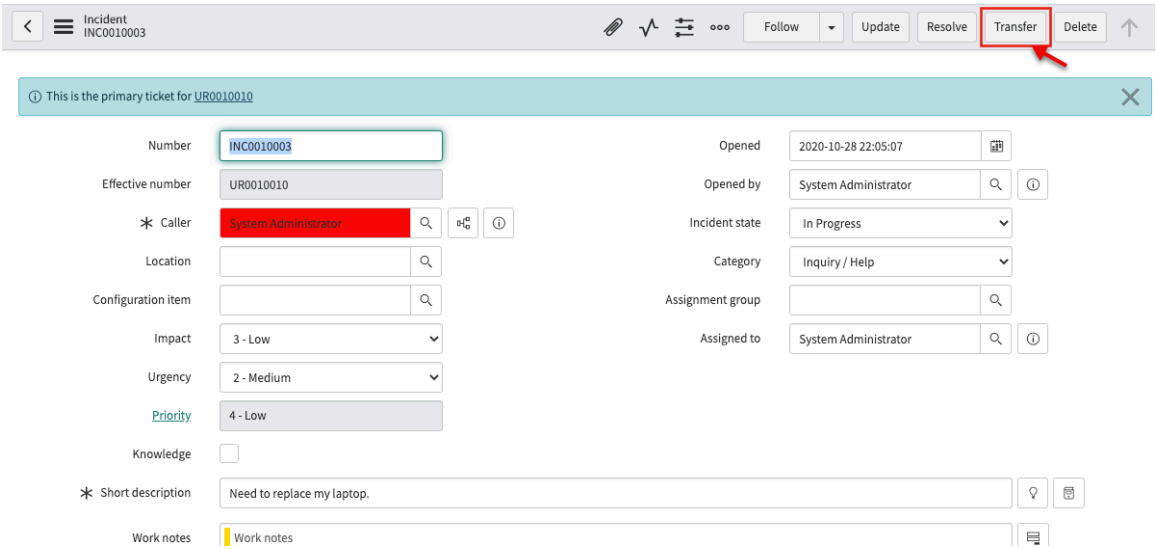
The hidden restricted fields are now visible, and any agent can view the content.

Note:
To mark the request as unrestricted only agents agent who is part of the primary ticket assignment group or with the access role can modify.

Transfer a primary ticket

You can transfer a primary ticket back to Universal Request, service set (department), or service either with or without resolution.

Before you begin



Role required: agent part of the assignment group of the primary ticket or assigned to the agent

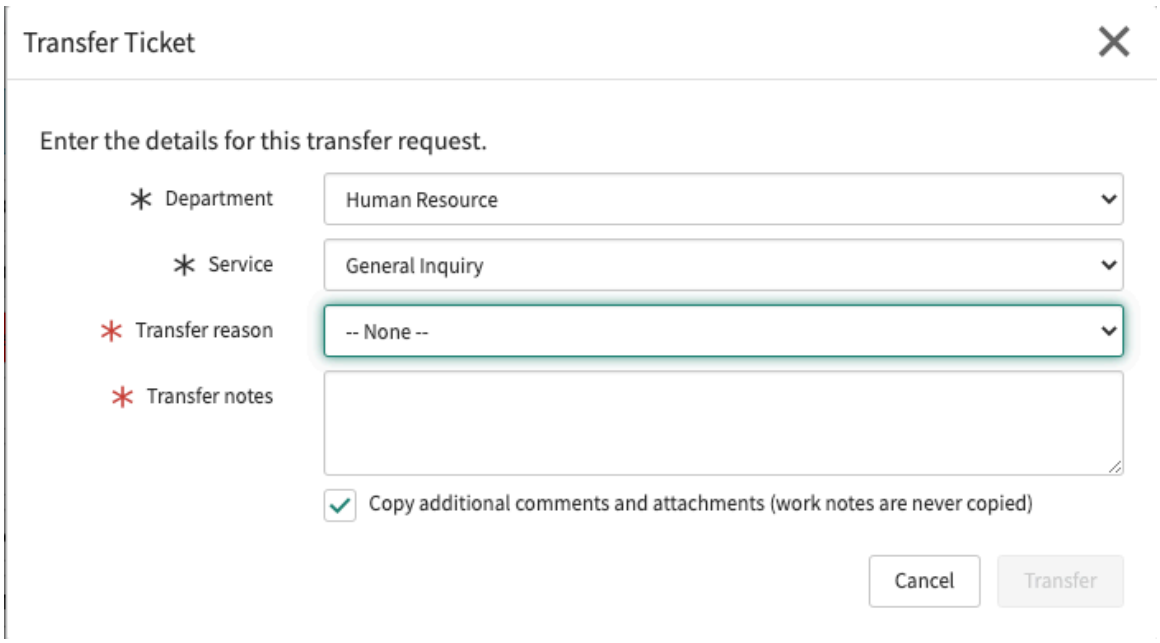
About this task

Configure the *sn_uni_req.transfer_type* property in the **Universal Request properties** page to determine how to handle the primary ticket transfers. For more information, see Universal Request properties.

A routing agent can either resolve and close a primary ticket or transfer it to back to Universal Request or another department for review and closure. When a primary ticket is transferred back to UR, the ticket is no longer a primary ticket, and the primary ticket field of the Universal Request becomes empty.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When transferring the ticket, the routing agent can choose the department and a specific service within the department or can select `I'm not sure` when they're unsure of the correct department or service.



The agent can transfer a ticket with one of the following reasons:

Transfer with resolution

The request is resolved and transferred back to UR, a specific department, or a service. Agents can select this option when another departments help is required to fulfill the request.

Transfer without resolution

The request isn't resolved or doesn't belong to the specific department and transferred back to UR, a specific department, or a service.

Procedure

1. Navigate to the primary ticket record that you want to transfer.
   For example, to open an incident primary ticket, navigate to **All** > **Universal Request** > **With Primary Ticket**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Open the universal request and then click the associated primary ticket.
   For example, the Incident ticket associated is displayed as a link in the message.
   The primary ticket record appears on the page.
3. Verify and click **Transfer**.
4. In the **Transfer Ticket** dialog, provide the following details and then click **Transfer**.

   Note:
   Based on the transfer type configuration, different fields display on the form. For more information, see Universal Request properties.

   - **Action**: Select if you want to transfer the ticket to another department or back to the Universal Request.
   - **Department**: Select the department from the list.
   - **Service**: Select the specific service of the chosen department.
   - **Transfer reason**: Select the reason from the list.
   - **Transfer notes**: A brief description for routing the primary ticket to the UR Routing agent.
   - **Copy additional comments and attachments**: Clear the check box if you don't want to transfer the ticket with additional comments and attachments. By default, all attachments and comments are transferred.

     Note:
     Work notes aren't copied while transferring.

Result
The ticket is transferred based on the direct transfer mappings in mapping configuration and transfer type configurations. For more information on configuring routing, see Transfer configuration and Map UR fields with target table fields.

Search similar and closed Universal Requests

When creating a Universal Request, search for closed universal requests that are similar using Predictive Intelligence.

Before you begin
Role required: admin

Note:
This search option is available only if you install the Predictive Intelligence plugin (com.glide.platform_ml) plugin and then enable the **Enable related search for similar closed Universal Requests** (sn_uni_req.similar_closed_universal_request) property. For more information on this property, see Universal Request properties.

Procedure

1. Navigate to **All** > **Universal Request**.
2. Create new or open an existing request that is not closed.
3. Select `Similar Closed Universal Request` under the **Related Search Results** section.
   All closed universal requests that are similar are displayed based on the short description, description, and assignment group of the selected universal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Review the solutions to copy the closed information or mark the solution as **This helped**.

Translate a Universal Request field

Use dynamic translation to translate Universal Request fields to another language.

Before you begin
Role required: admin

About this task
As of now, you can only translate the short description, description and work notes fields on a Universal Request form.

Procedure

1. Navigate to **All** > **Settings** > **General** > **Language**.
2. Select the language.

   Note:
   Only the languages that have been configured will be displayed. To activate a language, see Activate a Language
3. Navigate to **Universal Requests** > **All**.
4. Open the request to be worked on.

   A translate icon appears next to the fields. The logged-in user can click on to translate the text to their preferred language as configured.

Reporting solutions for Universal Request

Universal Request (UR) reporting solutions contain preconfigured dashboards with actionable data visualizations to improve your employee service delivery processes.

Use the widgets on the dashboard to visualize data over time, analyze your business processes, and identify areas of improvement. To view the Universal Request reports and dashboard, install the Universal Request Reporting plugin (com.snc.universal_request.reporting) .

Note:
The Universal Request Reporting plugin (com.snc.universal_request.reporting) is part of the Universal Request Professional subscription. For more information, see Activate Universal Request Reporting.

Depending on your role, you can use any of the following dashboards for your day-to-day operations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Overview dashboard**: As routing agents, view the details of the assigned universal requests and trends.
- **Process Overview dashboard**: As Process owners, analyze the behaviors of the tickets in your organization.

Universal Request Overview dashboard

View and analyze the general statistics of the universal requests for routing agents, such as the number of open requests, breached, unassigned, and requests at risk. You can also view the weekly opening and closing universal requests along with the number of department tasks that are part of each UR.

To view the Universal Request Overview dashboard, navigate to **Universal Request** > **Overview**. You can view the dashboard in the Next Experience UI Framework.

Use cases

For examples of how different people in your organization would use this dashboard, see these use cases.

Users and use cases for Universal Request Process Overview dashboard

User	Dashboard use
admin, sn_uni_req.ur_admin	View and edit the dashboard. Manage users, groups, and roles of the dashboard.
sn_uni_req.ur_service_owner	View and analyze the UR behaviors and track transfers to make informed decisions about your service.

Indicators

All the following indicators are measured on a monthly basis.

Universal Request Response SLA Breaches

The number of breaches in Universal Request Response SLA.

Universal Request Response SLA Average

The average value for Business elapsed time (in minutes) of response SLAs for Universal Request.

Universal Request Resolution SLA Average

The average value for Business elapsed time (in minutes) of resolution SLAs for Universal Request.

Universal Request Resolution OLA Breaches

The number of breaches in Universal Request Resolution OLA.

Universal Request with Primary Ticket Resolution SLA Average

The average value for Business elapsed time (in minutes) of resolution SLAs for Universal Requests with a primary ticket.

Universal Request Primary Ticket Transfer Without Resolution

The number of Universal Request primary tickets that are transferred without resolution.

Universal Request Primary Ticket SLA Breaches

The number of SLA breaches in primary tickets which have an associated universal request.

% of breached Resolution SLAs of Universal Request with primary ticket

The result of the formula `([[Universal Request with primary ticket Resolution SLA Breaches]] / [[Universal Request with primary ticket Resolution SLA]]) * 100`.

The following indicators are used only to calculate formulas and are not shown directly on the dashboard:

- Universal Request with primary ticket Resolution SLA Breaches
- Universal Request with primary ticket Resolution SLA

Breakdowns

The breakdowns in the Universal Request Process Overview dashboard are as follows:

- UR Service Configurations
- UR Assignment groups
- Universal Request (Inactive)

Data visualizations

The visualizations in the **SLA trends** tab are based on closed universal requests per month.

Universal Request Process Overview dashboard reports

Title	Type	Source table	Description
Assignment Group Changes by Group	Bar	universal_request_instrumentation	The number of times the UR is moved between the UR assignment group.
Resolution Time Consumed by Group	Bar	sla_breakdown_by_primary_ticket_and_group	The total resolution time consumed by universal requests spread across different assignment groups, such as IT, UR, or HR routing group. Resolution time is the total time consumed by the UR from the creation to closure.
Sources	Donut	universal_request_instrumentation	The percentage of universal requests created from various sources, such as interaction, UR record producers, virtual agent, or email interactions.
Resolution Time Consumed by Service	Bar	sn_uni_req_sla_breakdown_by_primary_task_service	The total resolution time consumed by each department on the primary ticket. Resolution time is the total time consumed by the primary ticket from its creation to closure.
Triage Time Consumed by Group	Bar	sla_breakdown_by_primary_ticket_and_group	The total triage time consumed by different assignment groups on the UR. Triage time is the time consumed by the ticket in the UR assignment group queue before the department ticket is created. The triage time pauses when the department ticket is created.
Transfer Disposition	Donut	universal_request_instrumentation	The disposition selected by the routing agents while transferring the tickets back to the UR. The statuses captured are the percentages of tickets that are either of the following:

Date	Choice	The time period for the data that will be filtered.

Virtual Agent for Universal Request

The Virtual Agent capabilities of Universal Request provide automated chat options to employees. It reduces the workload of agents by assisting the requester with certain basic tasks. It can display suggestions for self-help topics and knowledge articles based on keywords. It can also help employees to update their universal requests.

The Virtual Agent capabilities of Universal Request can help your employees do the following:

- Create a universal request.
- Mark a universal request as sensitive while creating it.
- Track universal requests opened for them.
- Add comments to universal requests opened for them.
- Update the watchlist for universal requests opened for them.
- Close universal requests opened for them.

Virtual Agent uses predefined topic conversations to interact with employees. The information exchanged during the conversation flow, such as user inputs and virtual agent responses, enables the virtual agent to fulfill a request or help complete a task. The conversation topics available by default with Universal Request are as follows:

- The Employee Help Request topic enables employees to create universal requests using the Virtual Agent. When a request contain sensitive information, the Virtual Agent marks the request as sensitive after confirming with the employee. If your organization uses the ServiceNow® Predictive Intelligence solution, you can train the solution to detect sensitive information on its own. Predictive Intelligence can also predict the correct department for the primary ticket of the universal request. Using Predictive Intelligence, the employee can now create a ticket and assign it to the correct department.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Track Universal Request Status topic enables users to track and update the universal requests opened for them. Employees can add comments or update the watchlist of their request. They can also close a ticket after providing a reason. The topic has an integrated NLU model, enabling requesters to enter their queries in natural language utterances. Some of the utterances include the following queries:
  - Track my request
  - Track my ticket
  - What is the status of my request
  - Need an update on my ticket

These topic conversations are available in all supported Universal Request Virtual Agent messaging integrations.

Create a universal request using Virtual Agent

Create a universal request with the help of Virtual Agent. You can access the Virtual Agent using the chat option in the search page of Service Portal.

Before you begin

Role required: none

Procedure

1. On the portal home page, search for your query in the search bar.
2. In the Contact us for help section, select **Chat**.
3. Describe your request.
4. Select whether your request contains sensitive information.
   If your request contains sensitive information, the Virtual Agent can detect that. It can mark your request as sensitive. For a sample Virtual Agent conversation, see Universal Request Virtual Agent conversation flows.
5. If prompted, select the department.

Result

A universal request is created for your issue.

Update or cancel a universal request using Virtual Agent

Update or cancel a universal request with the help of the Virtual Agent in the chat option.

Before you begin

Role required: none

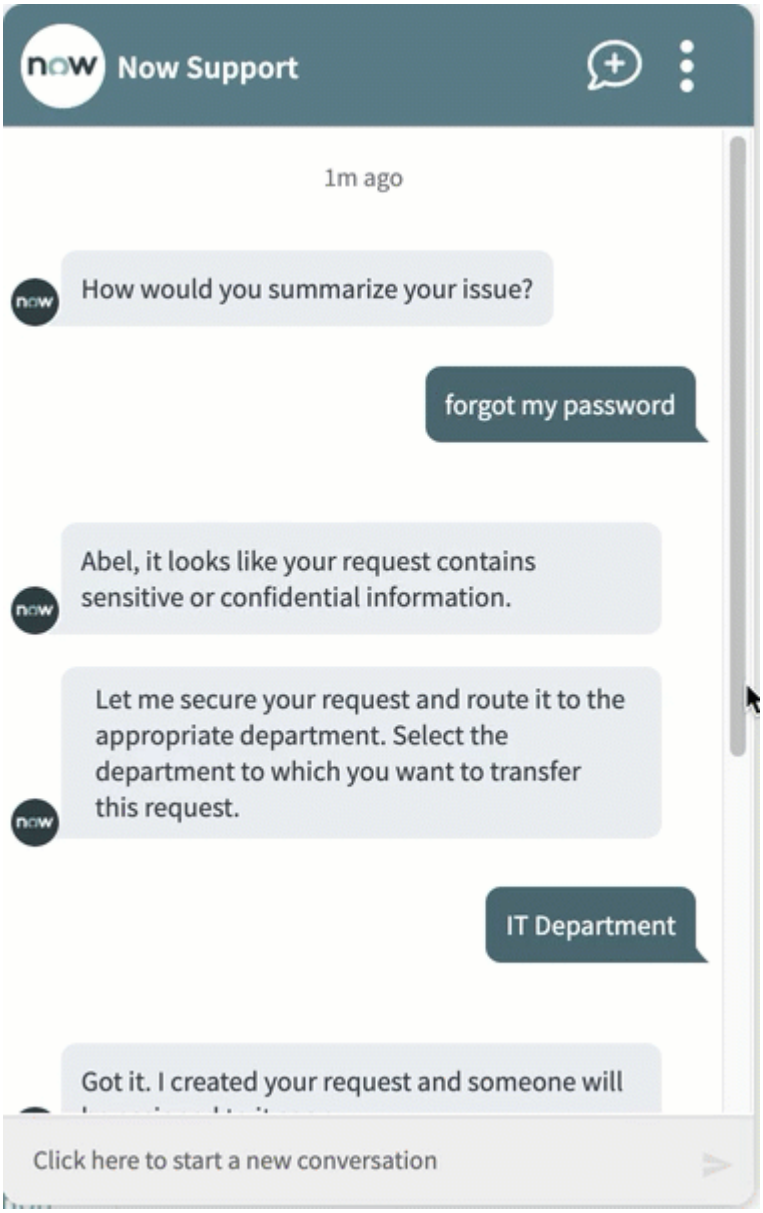
Procedure

1. On the portal home page, open the chat window ( ).
   The Virtual Agent prompts you to enter your request.
2. Enter your request to track, update, or cancel your request.
   If you are not sure about the option to select, enter `Track my request`.
3. Select **Track universal Request Status (Template)**
4. Select the request that you want to update.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select the appropriate responses to complete your request.
   For a sample Virtual Agent conversation, see Universal Request Virtual Agent conversation flows.

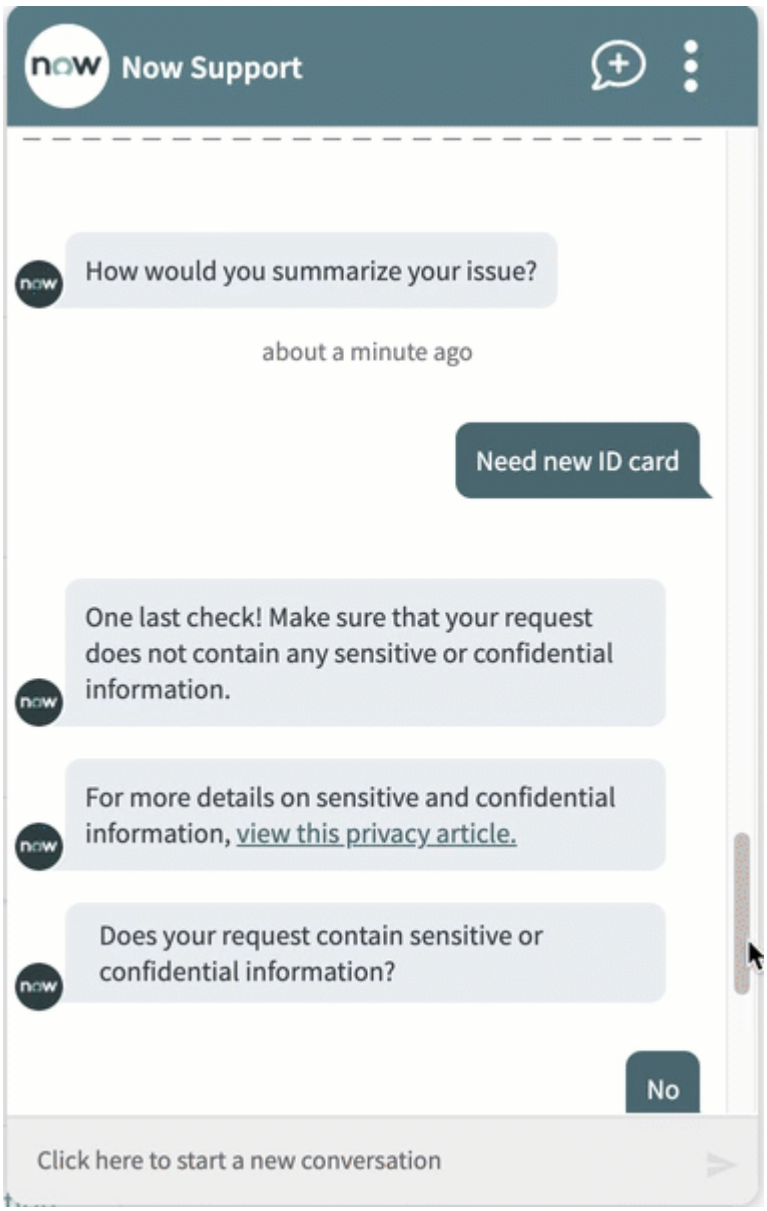
Universal Request Virtual Agent conversation flows



Universal Request Virtual Agent includes several predefined topic conversations that you can use to resolve common tasks on your universal requests.

The Universal Request Virtual Agent contains the following predefined conversation flows:

Create a universal request



If employees cannot find the required assistance in the form of self-help topics, they can create a universal request using the Virtual Agent in the chat option on the search page. They can also assign the request to the correct department. If the request contains sensitive information, they can mark the request as sensitive while creating it.

Universal Request properties (continued)

Property	Property name	Description
		that mentions the details of the department transition.
Define the fields to automatically map for UR mapping configuration	sn_uni_req.com.snc.universal_request.transfer.auto.map	The list of fields must be automatically mapped with UR fields for direct transfer between departments.
Define parent tables that should not create a UR for record producers	sn_uni_req.com.snc.ur.record_producer.exclude.parent	Excludes the specified parent tables when a UR is created from a record producer.
General email address for Universal Requests	sn_uni_req.ur_email	Creates a universal request when an email is received in the general email address mailbox. **Note:** You can add multiple email addresses with comma-separated .
Enable Request (RITM) integration with Universal Request	sn_uni_req.com.snc.ur.request_integration	Creates a universal request when a request is submitted from a catalog item or record producer.

State mapping form

Use the State Mapping form to map your service specific state to the Universal request states.

State mapping form fields

Field	Definition
Table	Select the service or department table that you want to map to.
Order	Enter the order value to consider if multiple state mapping entries conditions are matched. **Note:** If there are multiple mappings and order value, the least order value is considered.
Condition	Enter the condition to evaluate and match when a service request state changes. For example, when the service request state is Close Complete, then the UR state is mapped to Close.
Universal Request state	Select the UR state to map.
Universal Request template	Select the fields that you want to populate other than the state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Transfer configuration form

Use the **Transfer configuration** form to configure your transfer details in the Universal Request application.

Transfer configuration form fields

Field	Definition
Table	The service or department table that you want to map for.
Transfer reason	The reason given when the task is transferred. The options to choose are: **With resolution** The primary task is addressed and is transferred with the resolution. **Without resolution** The primary task is not completed and is transferred without resolution.
Active	Indicates if the configuration for the department is active or not.
Mandatory fields	The mandatory fields that must be filled before a ticket is transferred.
Transfer Information	
Transfer state	The state of the department-specific ticket. The states are listed based on the department specific table that you select.
Transfer template	Select the fields that you want to populate other than the state.
Closure Information	
Closed state	State that you want to populate for the already transferred department ticket when UR is getting closed. The states are listed based on the department specific table that you select.
Closed template	Select the fields that you want to populate other than the state.

Mapping configuration form

Use the **Mapping Configuration** form to configure your fields and field mapping for cross-departmental transfers.

Mapping configuration fields

Field	Description
Name	Enter the name of your mapping configuration
Active	Indicates if the configuration for the mapping is active or not
Application	The application scope that the service belongs to
Table	Select the service or department table you want to map
Transfer Information	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Mapping configuration fields (continued)

Field	Description
Transfer template	Select the template that you want to populate for the ticket transfer.
Associated Ticket Information	
Associated ticket template	Select the template that you want to populate for the associated ticket creation.
Create UR Information	
Create UR template	Select the template that you want to apply to the universal request while a department ticket is created.

Service Configuration form

Use the **Service Configuration** form to register your service to use the Universal Request application.

Service configuration form fields

Field	Definition
Service Name	Enter the name for your service.
Service Table	Select the application table that you want to use from the list.
Mapping Configuration	Select the mapping configuration that is defined for your service.
Application	The application scope that the service belongs to.
Service Set	Select the service set that your service belongs to.
Restrict requests	Select to mark all the requests created for the service as restricted.

Universal Request form

Use the **Universal Request** form to create a universal request task record.

Universal Request form fields

Field	Description
Number	Unique number generated for the universal request.
Opened	Date and time when the universal request was created.
Opened by	Agent who created the universal request.
Opened for	User who requested for this universal request.
Primary task	Task number, for example, an incident or HR case number that is associated with the universal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Universal Request form fields (continued)

Field	Description
Restricted	Indicates that the request consists of sensitive data, and its use is limited on a need-to-know basis.
Contact type	Medium from which the universal request was created.
Priority	Points how quickly the service desk should address the request.
State	State of the universal request. By default, the state is **New**.
Impact	Impact value indicates a measure of the effect of an incident, problem, or change on business processes.
Assignment group	Group assigned to the universal request.
Assigned to	User assigned to the universal request.
Needs resolution review	When checked, and when the department agent closes the primary ticket, the Universal Request does not get closed. Universal Request state remains in **In Progress**, and the state reason changes to **Confirm Response**. This notifies the tier 1 agent (Routing agent) to either Accept or Reject the resolution provided in the primary ticket before closing the Universal Request for the requester.
Short description	Brief description of the request.
Description	Detailed description of the request.
Related Search Results section	
Displays a list of knowledge articles, catalog items, pinned articles, or similar Universal Requests based on the **Short description** entered.	
Notes section	
Watch list	Users to receive notifications when work notes are added.
Work notes list	Users to receive notifications when work notes are added. **Note:** The administrator must create an email notification for the work notes list.
Additional comments (Customer visible)	More information about the change.
Work notes	Information about how to resolve the universal request or steps taken to resolve it, if applicable. This note is for internal use. The work notes information is not visible to your customer.

Universal Request form fields (continued)

Field	Description
Closure Information section	
Closed	Date and time when the universal request was closed.
Closed by	Agent that closed the request.
Close notes	How or why the universal request was closed.

Integrating Universal Request with other applications

Extend the capabilities of Universal Request and connect with other departments to assist with ticket resolution. By integrating with other applications, you provide a consistent ticketing experience and facilitate inter-department request transfers and multi-department use cases.

Integrate with IT Service Management

Universal Request provides an integration with the Incident Management application after you install Universal Request integration- Incident Management. With this integration, employees and agents can create incident records from universal request. IT routing agents can view these records from the Universal Request application. To modify the integration with the Incident Management application, use the Universal Request guided setup. The guided setup takes you through the setup and configuration process.

Integrate with HR Service Delivery

Universal Request provides an integration with the HR Service Delivery application after you install HR Service Delivery integration with Universal Request. This integration gives flexibility to the employees to create HR cases in the universal request record using the Now® Mobile app and Employee Center. HR routing agents can view these records from the Universal Request application. To modify the integration with the HR Service Delivery application, use the Universal Request guided setup.

Integrate with Request Management

Integrate Request Management with the Universal Request application to create a universal request when a request is submitted from a catalog item or record producer. To use this capability, enable the *sn_uni_req.com.snc.ur.request_integration* property under Universal Request properties. For more information on the integration and capabilities, see Request Management integration with Universal Request.

Integrate with Innovation Management

Integrate Innovation Management with the Universal Request application to enable your employee and agents to create an idea from a universal request (UR). This integration also provides the capability to transfer the idea to another department with or without resolution. For more information, see Innovation Management Integration with Universal Request.

Integrate with Workplace Service Delivery

Integrate Workplace Service Delivery services with Universal Request so that you can provide a convenient workplace experience to your employees. This integration provides a common help desk so that your employees can submit requests that are related to their workplace without

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

having to search the Workplace services catalog. For more information, see Workplace Service Delivery integration with Universal Request.

Integrate with Universal Task

Universal Request provides an integration with the Universal Task application. This integration enables agents to task employees, track task progress, and provide quick resolution. For more information, see Configure your service for Universal Task .

Integrate with Microsoft Teams

The Universal Request integration with Microsoft Teams application enables Universal Request to integrate with Microsoft Teams. This integration enables agents and employees to collaborate using Microsoft Teams and resolve universal requests more effectively. For more information, see Universal Request integration with Microsoft Teams .

Quick start tests for Universal Request

Validate that Universal Request still works after you make any configuration change such as apply an upgrade or develop an application. Copy and customize these quick start tests to pass when using your instance-specific data.

Universal Request quick start tests require activating the Universal Request (com.snc.universal_request), Universal Request: Integration for Incident management (com.snc.incident.universal_request), and Human Resources Scoped App: Core (com.sn_hr_core) plugins.

Universal Request quick start tests

Test	Description	Release version
UR: Transferring an HR case to an Incident	Validate if an HR case is transferred to an incident and an incident is created.	Quebec
UR: Restrict or Unrestrict universal request	Validates the following: • The fields are restricted and hidden when a routing agent restricts a UR. • Only agents with *sensitiveinfo_agent* role are allowed to unrestrict the request. • And, after the request is unrestricted all fields are visible. • sys-audit log access is available for agents.	Xanadu
UR: Universal Request creation with RITM	Verifies a catalog request for any item from self-service can be created when Universal Request Certified is enabled.	San Diego

Universal Request in Agent Workspaces

Use Universal Request in Agent Workspaces to create, view, and work on the universal request.

Using Universal Request in the Agent Workspaces allows agents to:

- Create universal request
- Manage and triage universal request
- Assign and route the universal requests to the appropriate department

Agents can view all universal requests in a list view based on the states, such as new, in progress, or closed along with the primary task association.

For information on additional actions that agents can perform in Agent Workspace, see the following

- Create a Universal Request from an Interaction Record
- Transfer primary ticket in Agent Workspaces

Get started

Explore	Configure	Use
Learn about how employees, agents, and managers use Universal Request in the Agent Workspace.	Plan and configure your implementation.	Work on universal requests, and manage security and transfers in Agent Workspace.

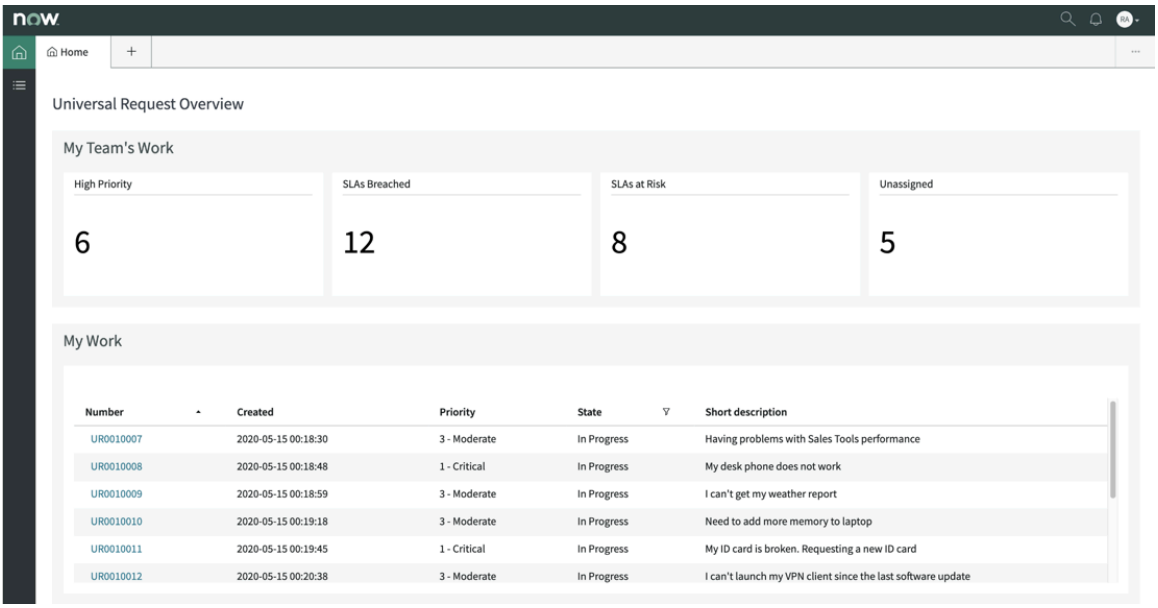
Exploring Universal Request in Agent Workspaces

Learn to create universal requests and understand how user requests are resolved in the Universal Request in the Agent Workspaces.

As a user, when you initiate a chat using the service portal, the routing agent can interact with you using the workspace.

The routing agents can then perform the following actions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- Create a Universal Request manually or from an Interaction Record.
- Self assign a Universal Request by clicking the **Assign to me** button or assign to an assignment group.
- Use Agent Assist capability to find similar UR, related knowledge articles, or catalog items that can help.
- If the agents have a routing agent role of a particular department, then they can create a department specific ticket. For example, and IT routing agent role can create an Incident from the Universal Request.
- Resolve, accept, or reject the resolution based on the state mapping configuration of your department.
- Route primary tasks back to UR with resolution or without resolution.

Universal Request Overview dashboard

The Universal Request Overview dashboard is the default landing page of the Universal Request Agent Workspace. This dashboard contains the basic score card and reports. The information available on this page are:

- List of all Universal Request tasks that are assigned to you in the My Work section.
- Report on your team's work.

You can view more details of the universal requests by clicking the universal request number.

Setting up Universal Request in Agent Workspaces

Activate Universal Request in agent workspace and set up roles for performing the tasks.

Activating Universal Request in Agent Workspaces

Universal Request is activated in Agent Workspaces when you enable the Universal Request plugin (com.snc.universal_request) or Universal Request: Advanced Work Assignment plugin (com.snc.universal_request.awa).

Roles used for Universal Request in Agent Workspaces

Roles in Universal Request

Role	Description
UR administrator [sn_uni_req.ur_admin]	Set up and configure Universal Request roles for the agent workspace.
Routing agent [sn_uni_req.routing_agent, agent_workspace_user, workspace_user, sn_uni_req.universal_request_write, sn_uni_req.universal_request_read	Create, edit, view and resolve Universal requests.
Routing agent [sn_uni_req.routing_agent, agent_workspace_user, workspace_user, sn_uni_req.universal_request_write,sn_uni_req.universal_request_read, interaction_agent]	Handle interactions and create universal request from interaction.

Using Universal Request in Agent Workspaces

As a Routing Agent, use the Universal Request in Agent Workspaces to view, create, edit and resolve universal requests.

You can start working on Universal Request in the Agent Workspaces from one of these areas:

- Landing page
- List queue
- Global search

For additional information on working within Agent Workspace, see Using workspace.

Create a universal request in Agent Workspace

The Universal Request is a task that a requester creates from any of the following sources, such as mobile application, service portal, agent workspace, or using a virtual agent chat. As a routing agent, you can create universal requests from the Universal Request application on behalf of the requester to track and resolve issues.

Before you begin

Role required: sn_uni_req.routing_agent or admin

Procedure

1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, click **Universal Request** > **Open**.
3. Click **New**.
4. On the form, fill in the fields.

Universal Request form

Field	Description
Number	The unique number generated for the universal request.

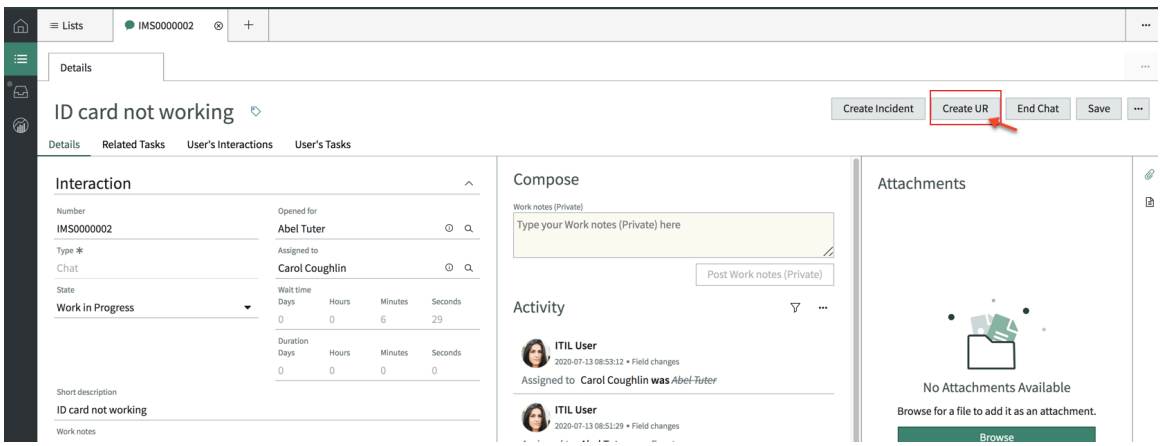
Create a Universal Request from an Interaction Record

Convert an Interaction Record to a Universal Request from the Universal Request Agent Workspace.

Before you begin

Role required: sn_uni_req.routing_agent or admin



About this task

Consider the following scenario. An IT service desk agent with a routing agent role receives a phone call on a request and creates a new call record or an Interaction Record with the notes. After reviewing the record, the agent realizes that the request belongs to HR and not IT. In this case, the IT Agent can create a Universal Record from the interaction record and assign it to the HR assignment group.

Note:
Universal Request is not automatically created when a fulfiller creates a department ticket from an Interaction Record. You have to perform few manual steps to get this. For more information, see Create universal request automatically for department tickets via other channels.

Procedure

1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, click **Interactions** > **My Interactions**.
3. Open the interaction record for which you want to create a Universal Request.
4. Click the **Create UR** button

5. Click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

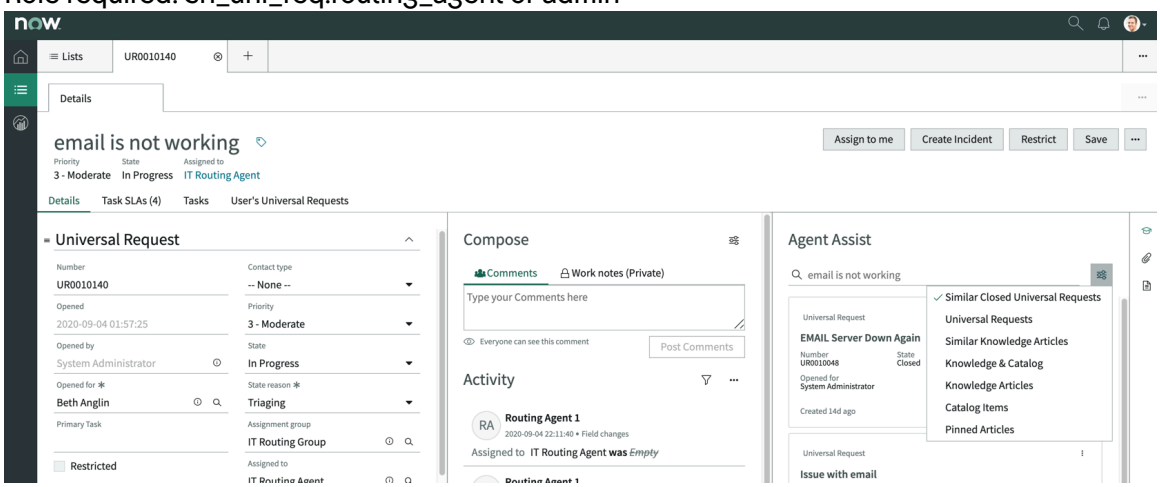
Cancel a universal request in Agent Workspaces

Change the state of the universal request to **Canceled** to cancel the request if the issue is resolved already or you no longer require the request.

Before you begin
Role required: admin

About this task
You can cancel a universal request only if there are no active or closed primary tickets attached to it. Also, the state of UR must be either **New** or **In Progress**. When the UR is canceled, email notifications are sent to the stakeholders associated with the request.

Procedure
1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, click **Universal Request** > **Open**.
3. From the list of open universal requests, select the request you want to cancel.
4. Select **Canceled** from the **State** field.



> **Note:**
> If the person in **Opened for** tries to cancel the request, then they must enter the reason for canceling.

5. Click **Update**.

Use Agent Assist in Agent Workspace

Find similar Universal Requests that are open and closed, Knowledge articles, Catalog items, and Pinned articles using the Agent Assist capability in the Agent Workspace.

Before you begin
Role required: sn_uni_req.routing_agent or admin

Procedure
1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, click **Universal Request** > **Open**.
3. Click the universal request from the list or create a request.
4. In **Agent Assist**, click the settings icon ( ) and select your resource from the list.

- Similar Closed Universal Request: To display all similar Universal Requests that are closed.
- Universal Request: To display all similar Universal Requests that are available.
- Knowledge and Catalog: To display all related knowledge articles and catalog items.
- Knowledge Articles: To display all related knowledge articles.
- Catalog Items: To display all related catalog items.
- Pinned articles: To display all related pinned articles.

Transfer primary ticket in Agent Workspaces

You can transfer a primary ticket back to Universal Request, service set (department), or service either with resolution or without resolution.

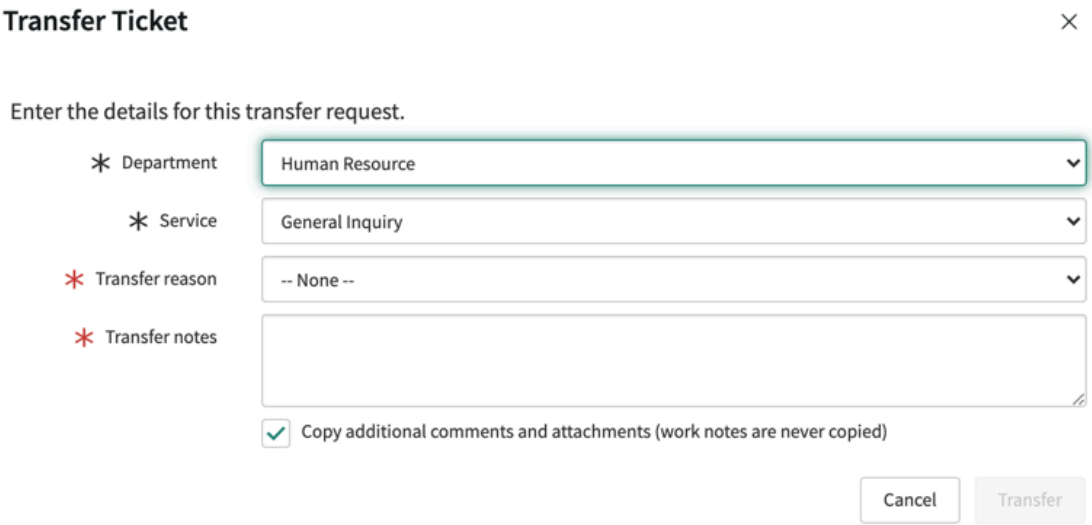
Before you begin

Role required: No specific role is required. Agents part of the assignment group or assigned-to agents on the primary ticket can perform this task.

A routing agent can either resolve and close a primary ticket or transfer it to back to UR or another department for review and closure. When a primary task is transferred back to UR, the ticket is no longer a primary ticket and the primary ticket field of the universal request becomes empty.

When transferring the ticket, the routing agent can choose the department and a specific service within the department or can just choose `I'm not sure` when they are not sure of the department or service to transfer to.

When you transfer a ticket back to universal request, you can transfer it with one of the following reasons:



Transfer with resolution

The request is resolved and transferred back to UR, a specific department, or service. Agents can choose this option when another department's help is required to fulfill the request.

Transfer without resolution

The request is not resolved or does not belong to the specific department, and is transferred back to UR.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the *sn_uni_req.transfer_type* property in the **Universal Request properties** page to determine how to handle the primary ticket transfers. For more information, see Universal Request properties.

Procedure

1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. Open the primary task that you want to route to UR.
3. Click **Transfer**.
4. In the **Transfer Ticket** dialog, provide the following details.

   Note:
   Based on your transfer type configuration, the given fields are displayed. For more information, see Universal Request properties.

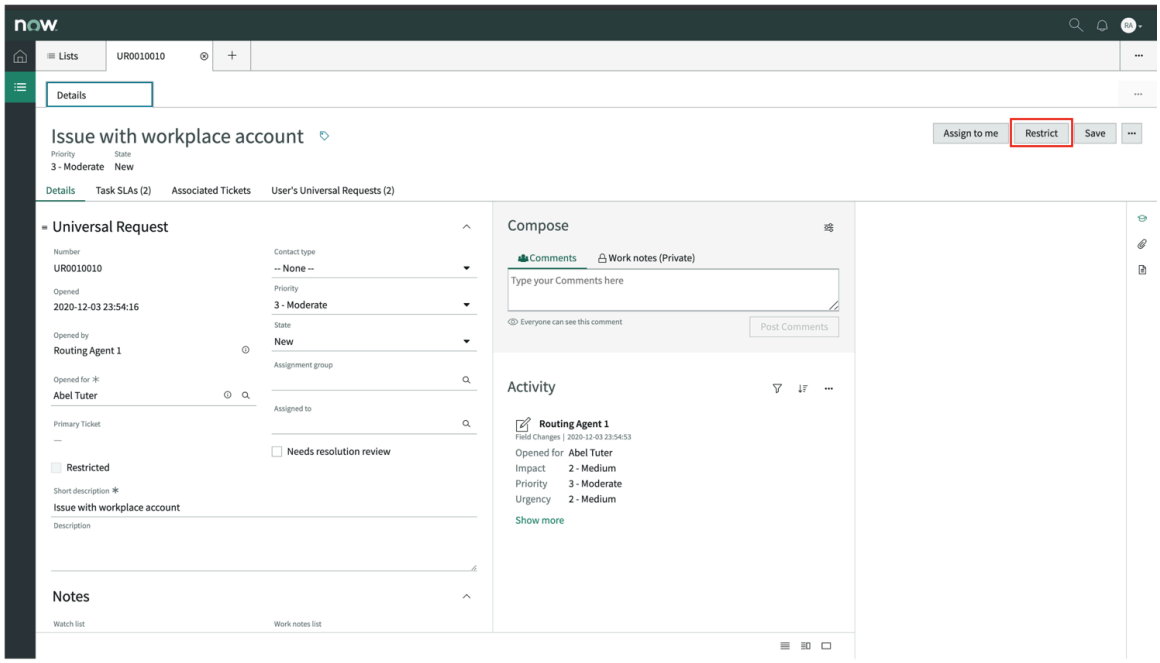
   - **Department**: Select the department from the list.
   - **Service**: Select the specific service of the chosen department.
   - **Transfer reason**: Select the reason from the list.
   - **Transfer notes**: A brief description for routing the primary ticket that you want to pass to the UR Routing agent.
   - **Copy additional comments and attachments**: Deselect if you do not want to transfer the ticket with additional comments and attachments. By default, all attachments and comments are transferred.

     Note:
     Work notes are not copied while transferring.

5. Click **Transfer**.
   The ticket is transferred based on the transfer and transfer type configuration. For more information, see Transfer configuration.

Restrict universal request access in Agent Workspace

Mark a universal request as restricted when you identify the request contains sensitive information.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: routing agents, sn_uni_req.sensitiveinfo_agent or service specific assignment group members

Procedure

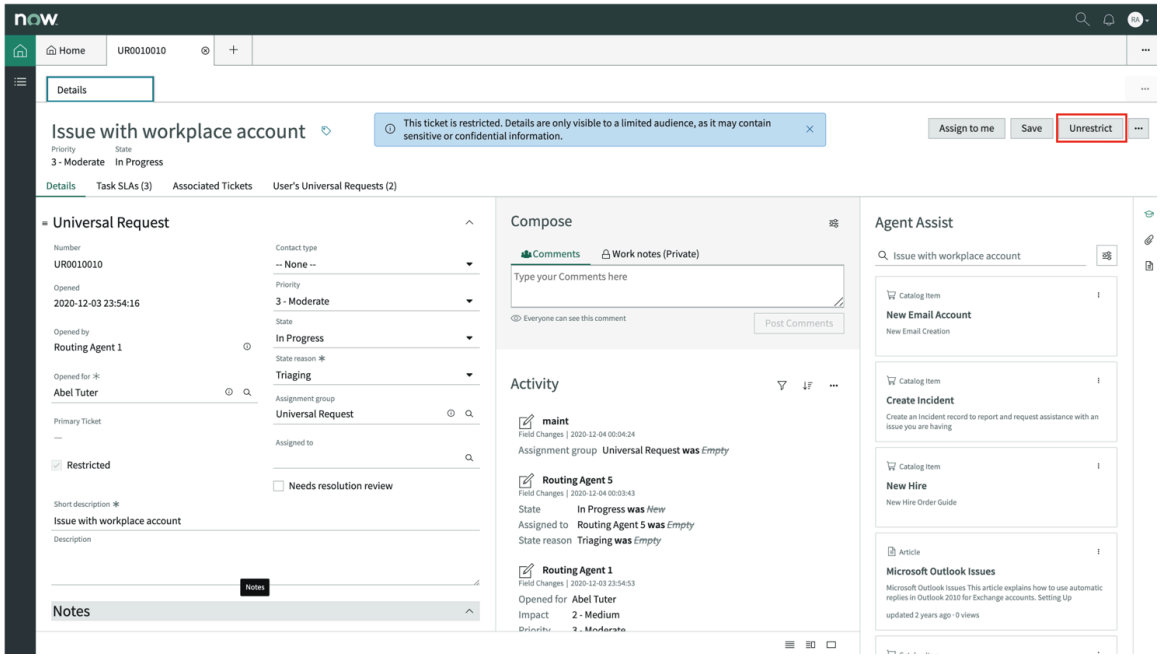
1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, click **Universal Request** > **Open**.
3. Navigate to the universal request that you want to mark as restricted.
4. On the form, click the **Restrict** button.

The restricted fields are hidden, and the form is only for view purpose.

Note:
To mark the request as unrestricted only agents with the access role can modify.

Mark universal request as unrestricted in Agent Workspace

You can unrestrict a restricted universal request if you identify that the request does not have any sensitive information.



Before you begin

Role required: sn_uni_req.sensitiveinfo_agent or service specific assignment group members

Procedure

1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, click **Universal Request** > **Open**.
3. Navigate to the universal request that you want to mark as unrestricted.
4. On the form, click the **Unrestrict** button.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The hidden restricted fields are now visible, and any agent can view the content.

Note:
To mark the request as unrestricted only agents with the access role can modify.

Universal Task

The ServiceNow Universal Task application is a tasking framework that enables your agents to request extra information from employees who submit tickets or to task employees to accomplish an activity in order to resolve a ticket.

Let's consider an example. Aditi, an employee, has lost a laptop and has requested a replacement laptop. Dan, who is the agent working on this incident, needs the lost report from Aditi to proceed with the incident resolution. Dan could choose to use an activity stream to request the lost report but that adds a lot of extra work for Dan. By using an activity stream to get the report, Dan must close the incident and open a new request for the laptop. This process creates a disjointed experience for both Dan and Aditi.

With Universal Task, Dan can task Aditi to upload a lost report from within the incident. On receiving the report, Dan can task Aditi to order a new laptop by using a submit catalog item task under the same incident.

Enhance employee experience

Activity streams can be confusing for agents and employees. Universal Task ensures a guided tasking experience where both agents and employees are aware of all the action items and the status of each item throughout the ticket resolution process.

Standardize employee experience across services

You can configure Universal tasks for any ticket type that extends the task table to ensure a consistent experience for your employees regardless of the ticket type or service type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Increase fulfillment efficiency

Predefined task types enable agents to quickly task employees to get the information required for fulfilling the ticket in the most efficient way possible. Universal Task due dates ensure that your agents can share the fulfillment responsibility with your employees.

Explore  Learn about how employees, agents, and managers use Universal Task.	Configure  Plan and configure your implementation.
Use  Work on universal tasks.	Reference  Get details about components like fields, tables, and properties.

Exploring Universal Task

With the ServiceNow Universal Task application, agents can create tasks for your employees. The agent can ask for additional information or request an action to resolve the parent ticket or request.

Universal Task offers pre-defined tasks for the agent to use. With Universal Task, you can:

- Create employee tasks from any ticket type that extends the task table.
- Enable departments to configure the tasks that solve their domain-specific use cases.
- Enable departments to create templates for commonly used task forms.
- Notify employees about the tasks that need their attention.
- Enable employees to complete tasks by using standard Universal Task portal widgets and the Now Mobile app.

Requester experience

Universal Task enables employees to view the tasks that are assigned to them within the same request that must be completed. Employees can also communicate with the agents within the task that was created. For example, an employee creates a universal request for a laptop. The agent that is assigned for this request can task the employee to submit a catalog request to order the laptop. Employees can view the task in the **To-Do** tab of the Employee Service Center. Employees can also view the task under the **Tasks** tab, under individual Requests in

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

the **Requests** page of the Employee Service Center and Service Portal, if the respective service configures the tab as shown in Add a Task tab on the Standard Ticket page.

Agent Experience

Agents get an insight on the employees' actions and can task the employees as needed. Agents can create multiple tasks for a single request and view all universal tasks that were created for a ticket in the Related Lists section.

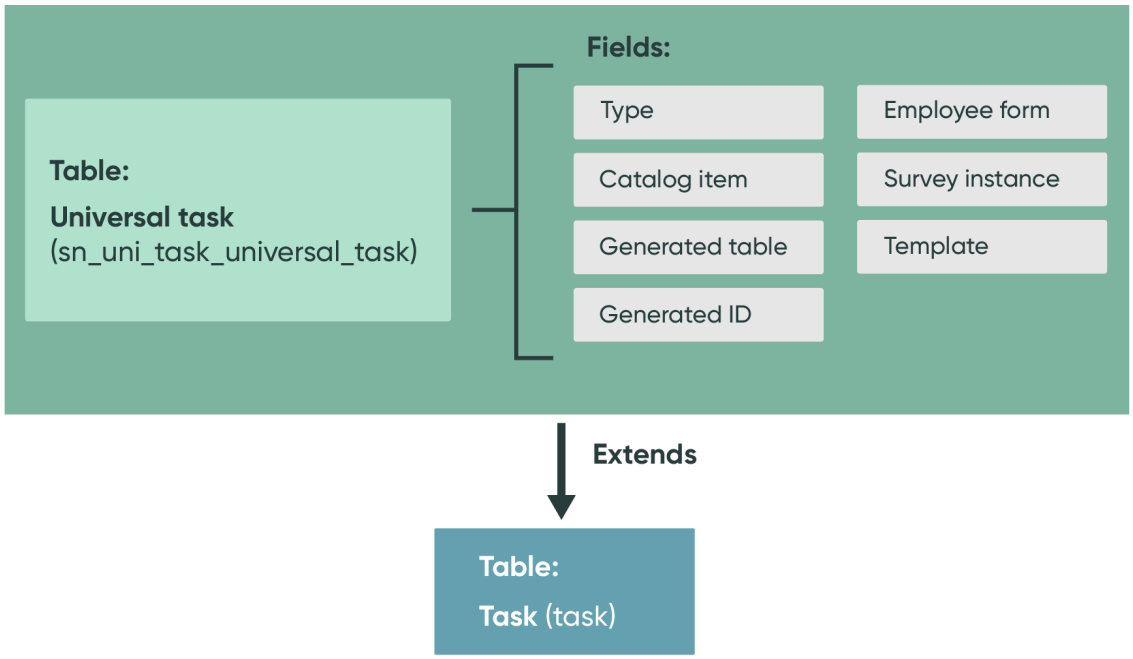
For more information on the types of task available, see Universal Task types.

Universal Task types

The task types in the Universal Task application enable your agent to assign pre-defined tasks to an employee. With these pre-defined tasks, your agent can task employees quicker and more efficiently. You decide which task types that you want to make available to the agents in your organization.

You can choose to make the following task types available in your own organization:

- Submit Catalog Item: Enables agents to task employees to submit catalog items.
- Upload Documents: Enable agents to task employees to upload documents that might be required for fulfilling a request.
- Checklist: Enables agents to create a checklist of tasks that the employee must complete.
- Collect Employee Input: Enables agents to collect information from the employee without creating additional case records or adding new fields to existing tables.
- Mark When Complete: Enables agents to assign a task that contains fulfillment instructions as rich text descriptions. An employee can show that a task is complete by clicking the **Mark complete** button.



Universal Task data model

The Universal Task is a tasking framework that you can append to the ticketing system of any department in your organization. The Universal Task data model explains the tasking framework and its customizations.

You can create Universal Task for any department or service, such as a universal request, an incident, an HR case, or a legal matter. You can also assign multiple universal tasks for a single request.

The following diagram is a high-level overview of the Universal Task data model.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Universal Task data model uses a combination of tables to store data:

- ServiceNow AI Platform tables.
- Tables that are included with the Universal Task application.

For information on the tables and components that are installed with the Universal Task application, see Components installed with Universal Task.

The Universal Task [sn_uni_task_universal_task] table extends the Task [task] table to include:

- The type of task for the current record, for example, Upload document.
- The catalog item if the task is of type Submit Catalog Item.
- The generated table that stores the table name that contains the requested catalog items.
- The generated ID that is the sys_id of the requested catalog item.

> **Note:**
> The catalog item, generated table, and generated ID are only applicable for the Submit Catalog item task type.

- The employee form that is used to request information for the Collect Employee Input task type.
- The survey instance that stores the instance ID of the employee form for the Collect Employee Input task type.
- Task template to be used, if any, to auto-fill the Universal Task [universal-task] form.

The values for the State and Priority fields in the Task [task] table have been modified for Universal Task. The valid states for Universal Task are:

- 1: New (Draft state). Tasks at this state are only visible to the agent.
- 2: Work in Progress. Tasks at this state are assigned to and visible to the employee.
- 3: Complete. Tasks transition to the complete state when the employee completes the task.
- 4: Canceled. Tasks at this state can be canceled by agents before the task is completed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The valid priority values for Universal Task are:

- 1: Critical. Highest priority for urgent or time-sensitive tasks.
- 2: High. Tasks that are important but not urgent.
- 3: Moderate. Tasks that should be completed.
- 4: Low. Optional tasks.

The Universal Task [sn_uni_task_universal_task] table follows data separation.

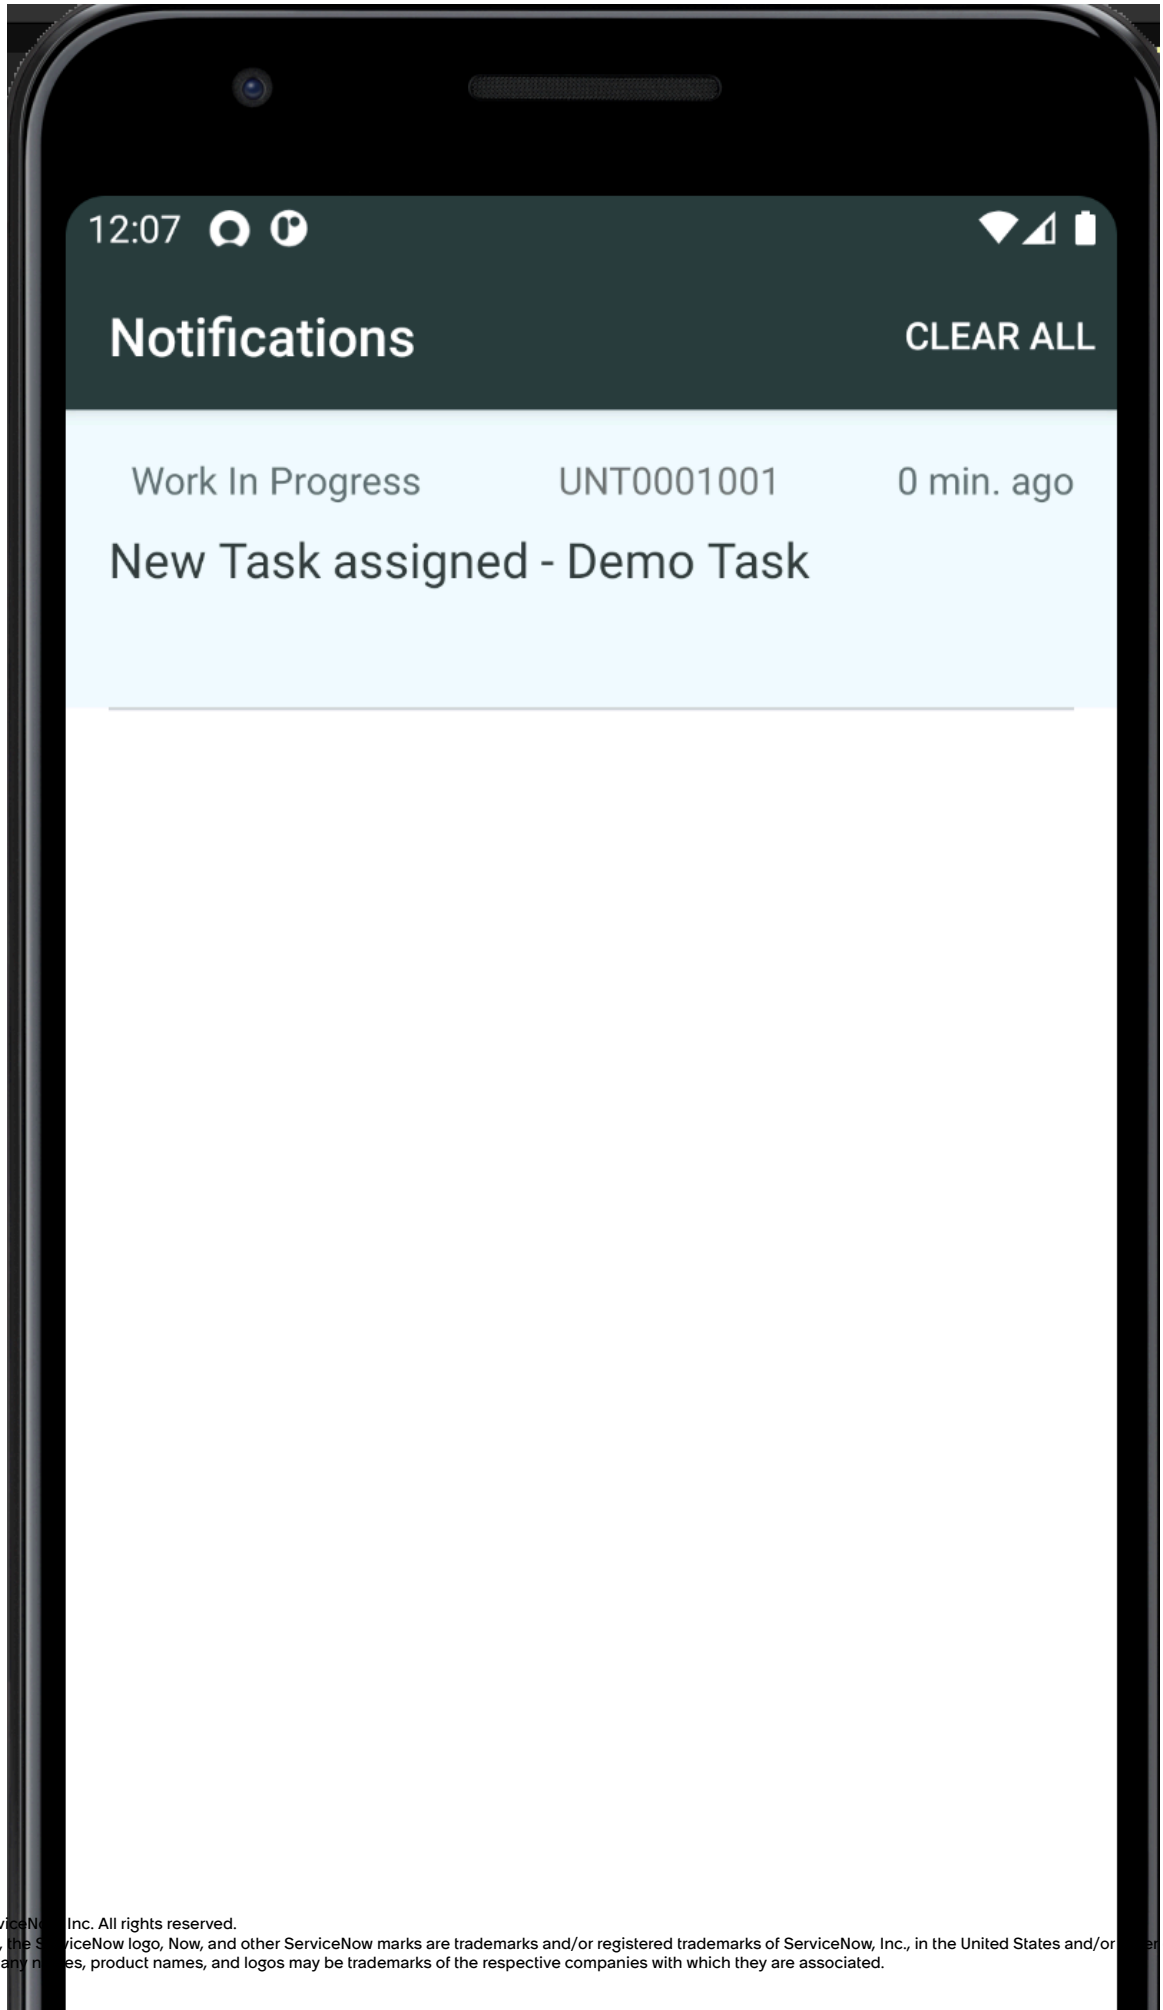
Universal Task configuration table

The Universal Task configuration table is configured to identify the following details:

- The Parent table, or the department-specific table that uses Universal Task. For example, if Universal Task is being used with HR cases, then the HR case table is the parent table. Universal Task can only be created on a table that is an extension of the task table.
- The task types that are available to the agents to task the requester with. For more details, see Universal Task types.
- The **Default Assigned to** field that points to the **requester** field in the parent table. To auto-fill the **Assigned to** field with the assignee while creating a task, configure the **Default Assigned to** field.

For more details, see Configure Universal Task for your service.

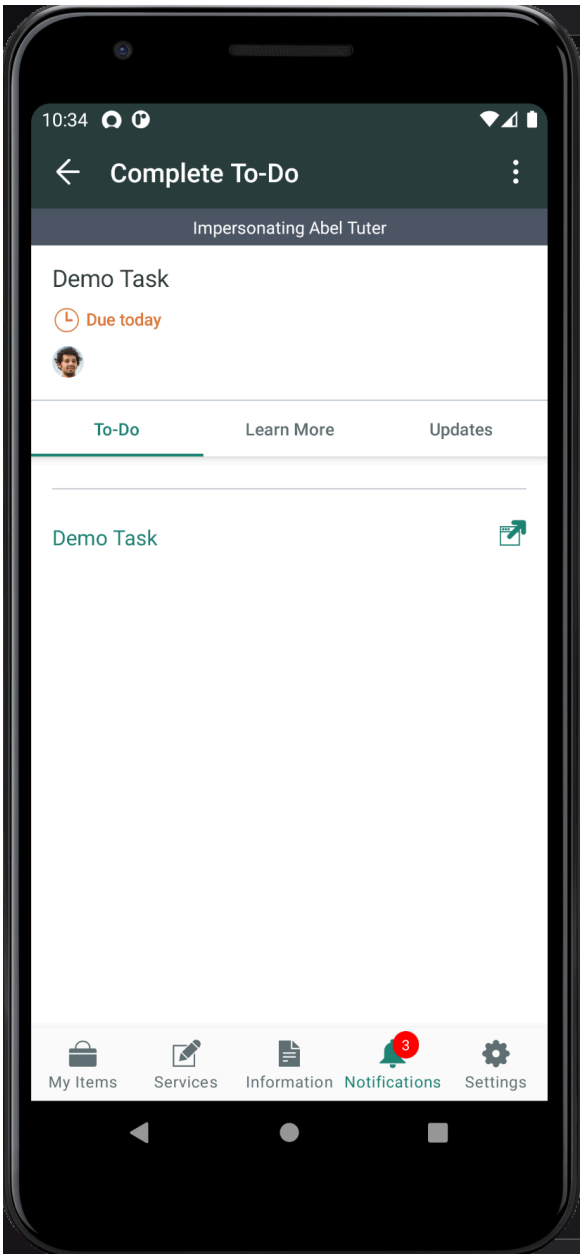
Specific task types might have additional configuration tables. For example, for the Submit catalog item task type, the Catalog task configuration [sn_uni_task_catalog_task_config] table determines which filters to apply to the catalog items that are available to an agent. For more information, see Configure the catalog items for your service.



The Universal task configuration [sn_uni_task_config] table and the Catalog task configuration [sn_uni_task_catalog_task_config] table follow process separation.

Universal Task in Now Mobile

You can complete universal tasks that are assigned to you in real time from your own mobile device by using the Now Mobile application.



From your mobile device, you can get notifications about updates in your universal tasks, you can learn when a new task is assigned to you, or you can see new comments that are added to one of your tasks.

Setting up and configuring Universal Task

You must set up and configure the Universal Task application before you can enable agents to assign tasks to employees in order to fulfill a request.

Install Universal Task

You can install the Universal Task application (sn_uni_task) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

About this task

The required Roles and Tables are installed with Universal Task. Ensure that the glide.enforce_security_scope.sn_uni_task property is set to true in Global scope.

For more information, see Components installed with Universal Task.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Universal Task application (sn_uni_task) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Universal Task.
4. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
5. Select **Install**.

Components installed with Universal Task

Several types of components are installed with activation of the Universal Task application, including tables, user roles, and scheduled jobs.

Demo data is available for this feature.

Roles installed

Roles in Universal Task

Role title [name]	Description	Contains roles
Admin [sn_uni_task.admin]	View and configure the Universal Task application	None
Report view [sn_uni_task.report_view]	Access and view Universal Task reports	None
Employee form admin [sn_uni_task.emp_form_admin]	Create and manage Employee forms	survey_admin
Employee form creator [sn_uni_task.emp_form_creator]	Create and modify employee forms	survey_creator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles in Universal Task (continued)

Role title [name]	Description	Contains roles
sn_uni_task.template_admin	Create and manage Universal Task templates	None

Tables installed

Tables in Universal Task

Table	Description
Universal Task [sn_uni_task_universal_task]	Store the Universal Task record details for a department-specific table.
Universal Task Configuration [sn_uni_task_config]	Store the list of task types for each department-specific table.
Catalog Task Configuration [sn_uni_task_catalog_task_config]	Stores the catalog items details of the department-specific table.
Base Task Configuration [sn_uni_task_base_task_config]	Serves as the base table for the configuration tables for all task types.
Employee Form [sn_uni_task_employee_form]	Stores the employee form records that were created for the Collect employee input task type.
Employee Input Task Configuration [sn_uni_task_emp_input_task_config]	Stores the roles that can view the responses of completed employee forms for each department-specific table.
Universal Task Template [sn_uni_task_template]	Stores the universal task templates with predefined field values that can be applied on Universal Task forms.
Universal Task Dynamic Template Mapping [sn_uni_task_dynamic_template_mapping]	Stores the dynamic template mappings between Universal Task fields and parent table fields.

Configuring your service for Universal Task

You can configure the UI actions and related lists for the Universal Task application so that you can view and create universal tasks for your service. Services are the various departments in your organization, such as IT, HR, and Legal.

Assign Universal Task admin role

Assign the sn_uni_task.admin role to the application administrators so that they can integrate and configure Universal Task. Roles control access to features, capabilities, and data.

Before you begin
Role required: sn_uni_task.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

You can assign roles to individual users or groups. When you apply roles to groups, the members of those groups inherit those roles.

Before you can assign the sn_uni_task.admin role to specific users, the logged-in user must also have the sn_uni_task.admin role. By default, the admin role contains the sn_uni_task.admin role. Administrators can assign the sn_uni_task.admin role to other agents who will work on the Universal Task configuration for their respective services.

Procedure

1. Navigate to **All** > **User Administration** > **Groups**.
2. Open the group that you want to assign the sn_uni_task.admin role to.
3. In the Roles related list, click **Edit**.
4. In the Collection list, select **sn_uni_task.admin**.
5. Click **Add**.
6. Click **Save**.

The *sn_uni_task.min_admin_count* property in the System Properties [sys_properties] table ensures that a minimum number of scoped administrators are active at any given time for managing the application. For Universal Task, the minimum count of scoped admins is set to two by default. You can modify this property to increase the minimum count.

Note:
Ensure that you have at least two agents with the sn_uni_task.admin role. If you assign only one agent with the role and that person is deactivated, you no longer will have an agent who can perform the Universal Task admin duties.

Create UI actions for your service with Universal Task

Create UI actions for your service so that agents can create universal tasks.

Before you begin

Role required: admin

Administrators and users with the ui_action_admin role can define UI actions. The UI actions must be configured for both the ServiceNow AI Platform form and the Agent Workspace form.

Procedure

1. Navigate to **All** > **System Definition** > **UI Actions**.
2. In the UI actions list, click **New**.
3. Enter the name of the UI action.
   For example, enter the name as `Assign Task`.
4. Select the service-specific table that Universal Task is being configured for.
   For example, select the Universal Request [universal_request] table for placing the Assign Task UI action on the Universal Task form view or workspace.

   Note:
   For any new UI action, ensure that you always select the appropriate service table.

5. **Optional:** Clear the **Show insert** check box.
   If the **Show insert** check box remains checked, the UI action to create a task is displayed even when the main ticket is being created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

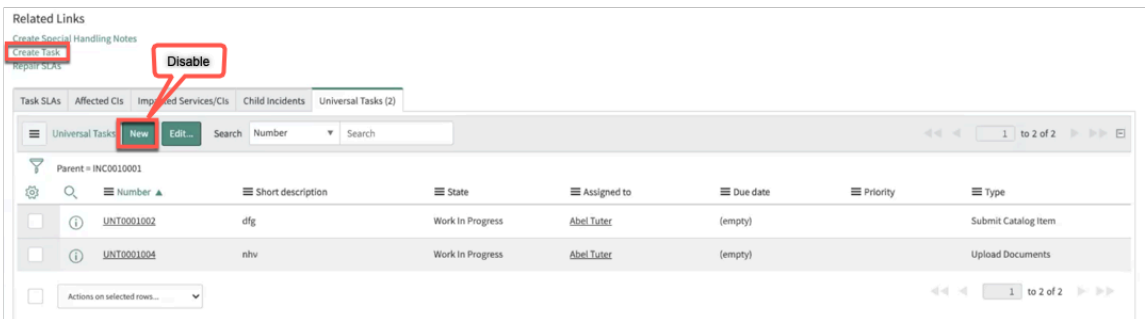
6. Select the **Form Button** check box.
7. In the **Script** field, enter the following script.

```
var gr = new GlideRecord("sn_uni_task_universal_task");
gr.initialize();
gr.setValue("parent",current.sys_id);
action.openGlideRecord(gr);
action.setReturnURL(current);
```

8. On the **Workspace** tab, select the **Workspace Form Button** check box.
9. On the form, fill in the fields.
   For more information on fields and descriptions, see Create a UI action.
10. Click **Submit**.

Add a Universal Task related list

Add a Universal Task related list to a service-specific form in both the ServiceNow AI Platform and Agent Workspace to let agents view a universal task for the request.



Before you begin

Role required: admin

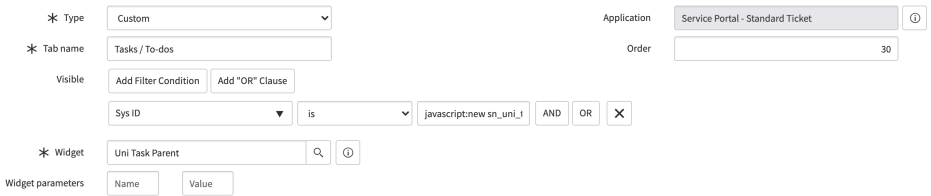
Procedure

1. Navigate to the table that the related list must be added to.
2. Open a service-specific form.
3. Right-click the additional actions context menu .
4. Navigate to **Configure** > **Related Lists**.
5. On the form, select the **Universal Task->Parent**.
6. Select a view name:
   - Default view: To add the Universal Task related list in the ServiceNow AI Platform form.
   - Workspace: To add the Universal Task related list in the Agent Workspace form.
7. Click **Save**.

Note:
Due to access control list (ACL) restrictions, the **New** button might not work while you are creating a task. You can hide the **New** button on the related list and use the UI action to create a universal task.

For more information on adding related lists, see Related lists.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Add a Task tab on the Standard Ticket page

Add a Task tab on the Standard Ticket page to let employees view the tasks that are assigned to them by the agents.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Standard Ticket** > **Standard Ticket Configuration**.
2. Click your service-specific table to open it.
3. In the Tabs Configurations related list, click **New**.
4. On the Tab configuration form, in the **Type** field, select **Custom**.
5. Enter the **Tab name**.
   For example, `Tasks/To-dos`.
6. Add the appropriate filter conditions to control the visibility of the tab.
   For example, set **Sys ID** to `javascript:new sn_uni_task.UniversalTaskUtils().hasTasksToShow(current)` to make the task tab visible only if there tasks are assigned to the employee.

7. In the **Widget** field, add a widget.

> **Note:**
> The Uni Task Parent is the default widget that you can use to add the **Universal Task** tab in the Standard Ticket.

8. Click **Submit**.

Define the agent criteria for Universal Task

Define the criteria for an agent so that the agent can access the parent table for Universal Task. The default criteria is that agents must have write access to the parent table.

Before you begin
Role required: admin

About this task
By using an extension point, you can add more conditions for agents to qualify as Universal Task agents. If this extension point is not implemented, agents with write access to the parent table are treated as UT agents for the parent table by default.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. In the API name column, search for *`sn_uni_task.UniversalTaskParentAccess`*.
3. To create an extension point script that defines the agent criteria for your service, click **Create Implementations** in the related link.
   To know more about extension points, see .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Specify the criteria for an agent to have access to the parent table.
   For example, you might want to ensure that the agent belongs to a specific assignment group in addition to having write access for the parent table.

Configure Universal Task for your service

Configure the Universal Task application for your service so that you can create and assign tasks to employees.

Before you begin
Role required: sn_uni_task.admin

Procedure

1. Navigate to **All** > **Universal Task** > **Administration** > **Universal Task Configuration**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information on form fields and descriptions, see Universal Task Configuration form.
4. Click **Submit**.

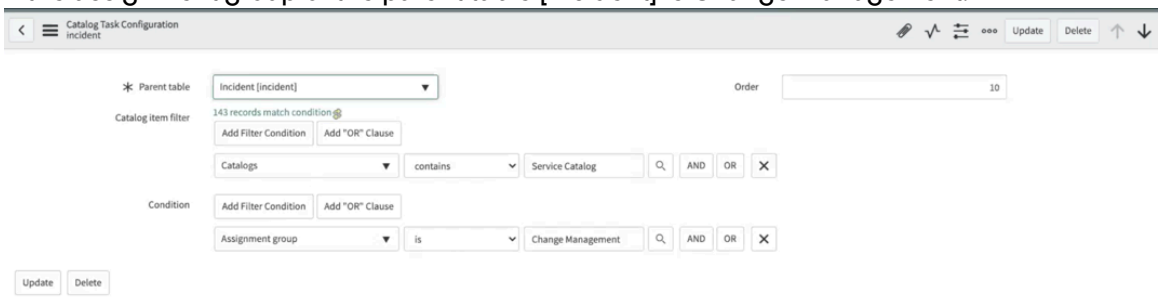
Configure the catalog items for your service

Filter the catalog items that you want to show in the Submit Catalog Item task for your service.

Before you begin
Role required: sn_uni_task.admin

About this task
You can add filters to manage the catalog items that are available to a user. For instance, some catalog items might be restricted based on the location or service type of the request.

Procedure



1. Navigate to **All** > **Universal Task** > **Administration** > **Catalog Task Configuration**.
2. Click **New**.
3. Select your service-specific table as the parent table.

   Note:
   You can select only the service-specific tables that have been configured for Universal Task with the Submit Catalog Item task type.

4. To filter the items that you show in the Submit Catalog Item task, add the **Catalog item filter** field.
5. Enter the **Order** value.
6. Add a parent table **Condition** for the catalog item, if any.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, in the following configuration, the catalog item filter is applicable only if the assignment group of the parent table [incident] is Change Management.

You can create multiple conditions to configure your catalog items. The conditions with lower order values get precedence over higher order values.

7. Click **Submit**.

Configure the roles to view employee forms

Configure the roles to enable your agents to view the employee responses in the completed Universal Task employee forms.

Before you begin

Role required: sn_uni_task.admin

Procedure

1. Navigate to **All** > **Universal Tasks** > **Administration** > **Employee Input Task Configuration**.
2. Click **New**
3. On the form, fill in the fields.
   For more information on form fields and descriptions, see Employee Input Task Configuration form.
4. In the **Parent table** field, select the parent table.

   Note:
   You can only select the tables that have been configured for Universal Task.

5. In the **Response view roles** field, select the roles for your agents.
6. In the **Condition script** field, add a condition script, if any.
7. Click **Submit**.

Configure the extension points for Universal Task

Provide the implementation for childTaskCancelled, childTaskCompleted, childTasksClosed of the scripted extension point to execute the custom logic of the service, when a universal task is canceled, completed, or closed.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_uni_task.UniversalTaskCloseEvents`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. To create your service-specific extension point script, click **Create Implementations** in the related list.
   For more information, see Using extension points to extend application functionality.
4. Click **Update**.

Display the universal tasks for a request in Now Mobile

Display all the universal tasks that are assigned for a particular request by simply configuring the **Tasks** tab in Now Mobile.

Before you begin
Role required: admin

Procedure
1. In the navigation panel, enter `sys_sg_form_segment.list`.
2. In the Form Screen Segments page, click **New**.
3. Select the service-specific **My Request** form screen.
   To find your service-specific **My Request** form screen, select a **My request** form screen and then preview the record.
4. In the embedded screen field, select **Tasks**.
5. In the **Order** field, enter a number to indicate the order that you want the tab to appear in.
6. Click **Update**.

Hide the template bar on the Universal Task form

Hide the template bar for the Universal Task form because it does not include Universal Task templates.

Before you begin
Role required: admin

Procedure
1. In the navigation panel, enter `sys_properties_list.do`.
2. On the System Properties page, click **New**.

   Note:
   Ensure that the application is in Global scope.

3. On the form, fill in the fields.

   System Property form

Field	Value
Name	glide.ui.show_template_bar.sn_uni_task_universal_task
Type	true | false
Value	false

4. Click **Submit**.
5. To clear the cache of your instance, in your browser, enter `<server_url/cache.do>`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Remove the Universal Task admin role from the admin role

Remove the sn_uni_task.admin role from the admin role so that you can prevent a user with the default admin role from viewing all Universal Task tables.

Before you begin
Role required: admin

About this task
By default, a system administrator also contains the sn_uni_task.admin role and can access the Universal Task information. To secure your application, remove the sn_uni_task.admin from the admin role. By doing so, you prevent the user with a default admin role from viewing all the Universal Task information.

> **Note:**
> Ensure that you have completed setting up Universal Task before removing the sn_uni_task.admin role from the admin role.

Procedure

1. Log in as admin.
2. Navigate to **User Administration** > **Roles**.
3. Select **admin**.
4. On the **Contains Roles** tab, click **Edit**.

   > **Note:**
   > If you do not see the **Edit** button, change the Application scope to `Global`.

5. From the Contains Roles List column, highlight and move **sn_uni_task.admin** to the Collection column.
6. Click **Save**.

Email notification layout for Universal Task notifications

Use the email notification layout and template shipped with the Universal Task application (sn_uni_task) to deliver email notifications. Apply the layout to email notifications to elevate their look and feel and to deliver branded notifications.

The following table lists the email notifications shipped with Universal Task. You can choose to modify the email body or keep the default versions.

Email notifications for Universal Task

Notification name	Used for	Fields where recipients are identified
Universal Child Tasks Closed	Sends an email notification when all child Universal Tasks of the parent are closed.	Assigned to field of the parent
Universal Task Assignment For Assigned To	Sends an email notification when the task is assigned and either the assignee changes or the state changes to Work In Progress.	Assigned to, Watch list

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Email notifications for Universal Task (continued)

Notification name	Used for	Fields where recipients are identified
Universal Task Assignment For Group	Sends an email notification when the task is assigned to a group and either the group changes, or the state changes to Work In Progress.	Assignment group, Watch list
Universal Task Cancelled	Sends an email notification when the task is cancelled.	Opened by, Assigned to field of the parent
Universal Task Cancelled For Assigned To		Assigned to, Watch list
Universal Task Cancelled For Group		Assignment group, Watch list
Universal Task Changed For Assigned To	Sends an email notification when the task type, short description, or description is updated.	Assigned to, Watch list
Universal Task Changed For Group		Assignment group, Watch list
Universal Task Commented For Assigned To	Sends an email notification when there is a new additional comment on the task.	Assigned to, Watch list, Opened by, Assigned to field of the parent
Universal Task Commented For Group		Assignment group, Watch list, Opened by, Assigned to field of the parent
Universal Task Completed	Sends an email notification when the task is complete.	Opened by, Assigned to field of the parent
Universal Task Completed For Assigned To		Assigned to, Watch list
Universal Task Completed For Group		Assignment group, Watch list

Important:
These email notifications are automatically set up for a new user of Universal Task.

If you are an existing user of Universal Task on a release prior to San Diego, upgrade to Employee Center or Employee Center Pro or install the Employee Experience Foundation plugin from ServiceNow Store to start using these email notifications.

Domain separation and Universal Task

Domain separation is supported for ServiceNow Universal Task. Universal Task enables agents to request extra information from the employee or to task the employee to accomplish an activity, in order to resolve a ticket. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

Universal Task domain separation overview

In the Universal Task framework, all the configurations are process domain-separated, and the data tables, namely, Universal Task table, Employee form table, and Task template table are data domain separation offerings.

How domain separation works in Universal Task

The configuration tables in Universal Task are process domain-separated. So, the configurations created by the parent domains are also implemented in the child domains. However, a child domain can override the configuration, if needed. For example, In an organization, the services are the child domains, while the organization is the parent domain. The task types available for Universal Task in a particular organization, will also be available for the various services of the organization. However, a particular service can override the task types as needed.

The data tables in Universal Task are data domain-separated. So the data stored in any of the child domains is accessible to the parent domain. For instance, if a service is using task templates, the data captured in the Task templates table for the service domain is accessible to the organization domain, but not to the domains of other services, unless configured.

Tables

The following Configuration tables are process separated.

- sn_uni_task_config
- sn_uni_task_base_task_config
- sn_uni_task_catalog_task_config
- sn_uni_task_emp_input_task_config

The following Data tables are data separated.

- sn_uni_task_universal_task
- sn_uni_task_template
- sn_uni_task_employee_form

Domain separation for service providers

Using Universal Task

Agents can use the Universal Task application to create tasks for employees and to manage the request resolution. Employees can view and complete tasks assigned to them using the Employee Service Center or the Now® Mobile app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a universal task

Create a universal task for a request and assign it to the employee or create multiple tasks for a request by using Universal Task.

Before you begin

Role required: Configurable by your service

About this task

Universal Task agents, as configured in Define the agent criteria for Universal Task can create a new universal task using the UI action available on the ticket page.

Note:
To control the access for creating a task, configure the visibility of the UI action for creating Universal Task. For more information, see Create UI actions for your service with Universal Task.

When a universal task is created, it is auto-assigned to the employee as configured in Configure Universal Task for your service. The employee receives a notification and can view or update the task from the ServiceNow Employee Service Center. If the employee accesses the task from the ServiceNow AI Platform, they can only add a comment and add people to the watch list.

Procedure

1. Open the ticket that you want to create a universal task for.
2. Click the UI action for creating a universal task.

   Note:
   The name of the UI action is configurable and can vary. For more information, see Create UI actions for your service with Universal Task

3. On the form, fill in the fields.
   See Universal Task form for more information.
4. Select one of the following.

Result

Employee experience: A new task is created for your request. You can view and complete the task in the **To-Do** tab of the Employee Service Center. You can also view and complete the task in the task tab of the associated request, if configured in standard ticket configuration. You receive notifications if the task is canceled, closed, completed, or if a comment is added to the task. Notifications are sent to the stakeholders when changes are made to the task.

Agent experience: You can now view or edit the task. You can also add more tasks to the same request.

View and update Universal Task using Now® Mobile

View and update the universal tasks that are assigned to you by using the Now Mobile app.

Before you begin

Role required: Requester

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. On your mobile device, tap the Now Mobile app icon ().
2. To view all tasks that are assigned to you, tap **My Tasks**.
   To view Universal tasks for a particular request, tap **My Requests**, open the request and go to the **Tasks** tab.
3. Tap a universal task to open it.
4. Go to each tab to do the following.

Create an employee form

Create or modify an employee form to collect employee input. Employee forms are questionnaires that are built using the survey designer to collect or update information from employees.

Before you begin

To use this task, first create an employee form record. Then, use the survey designer to design a questionnaire for the employee.

Role required: sn_uni_task.emp_form_admin or sn_uni_task.emp_form_creator

Note:
You will need sn_hr_le.activity_reader role or any role that starts with sn_hr_core to have read access to the employee form page being utilized, and view data that is passed between case and child task.

Procedure

1. Navigate to **All** > **Universal tasks** > **Employee forms**.
2. Click **Create New**.
3. On the form, fill in the fields.
   For more information on form fields and descriptions, see Employee form.
4. Right-click the form header and click **Save**.
   The **Form designer** button appears.
5. To open the survey designer in a new window, click **Form designer**.
6. To build the questions for your employee form, use the survey designer.
   For more information on the question types, see Survey designer elements.
7. Click **Save and Publish**.

Result

You can now assign the form to an employee by using the Collect Employee input task. To view the employee responses, click **View Responses** after the task is marked complete.

Note:
You must have specific roles to view the employee responses. For more information, see Configure the roles to view employee forms

Universal Task templates

Task templates help agents to create Universal Task records by auto-populating fields in a template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The task template [sn_uni_task_template] table follows data separation. For more information, see Domain separation and Universal Task.

Using task templates, you can create templates for common use-cases. You can also set a schedule to periodically create records based on a template.

A task template can have static and dynamic mappings. In static mappings, the values of fields are individually specified and fixed. In dynamic mappings, the field values are updated and mapped from another table. You can create dynamic template mappings between the fields of the Universal Task table and any other parent table that uses Universal Task. Using the dynamic template mappings, you can do the following:

- Map Universal Task fields to parent table fields.
- Create text templates for fields in the parent table.
- Offset date fields by specific durations.

Create a template using the Universal Task template form

Create a template for any service table to automatically populate fields on a form. Creating templates for common use cases enables agents to create universal tasks faster and ensures uniformity of field values.

Before you begin
Role required: sn_uni_task.template_admin

About this task
A task template can have static and dynamic mappings. In static mappings, the values of fields are individually specified and fixed. The following procedure is for creating a static template mapping. For information on dynamic templates, see Create dynamic template mapping.

Procedure

1. Navigate to **All** > **Universal task** > **Task templates** > **Create new**.
2. On the form, fill in the fields.
   For more information on form fields and descriptions, see Universal Task template form
3. **Optional:** Select **Schedule** to create a scheduled job to create records based on this template.
   For detailed instructions, see Create records based on a template.
4. Click **Submit**.

Create a task template by saving a form

Save a populated Universal Task form as a template. This is an alternative method for creating a task template.

Before you begin
Make sure you have a Universal Task form that you want to use. If you need to create a form, see Create a universal task.

Role required: sn_uni_task.template_admin

Procedure

1. Navigate to a Universal Task form.
2. Complete the form as it should appear when a user applies the template.
3. Right-click the form header and click **Save**.
4. Click **Create Universal Task Template**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The task template with the filled forms appears.

5. In the **Name**, enter a descriptive name for the template.
6. Set the **Parent table** field to a service-specific table.
   If you choose not to select any table, then the configuration will apply to all tables.
7. Make additional changes as required.
8. Click **Submit**.

Create dynamic template mapping

Create dynamic templates to map fields on a Universal task form to corresponding fields on the parent table form. Dynamic templates help agents to map parent table fields to Universal task fields.

Before you begin

Ensure that you have write access to the parent table that is used for the template mappings.

Role required: sn_uni_task.template_admin

About this task

Dynamic template mappings can be created for templates that have an assigned parent table. In a dynamic mapping, the value of a field is updated with the value of the mapped field in the parent table. Dynamic template mappings get precedence over static template mappings. In static template mappings, fields are set to specific values. For more information on how to create a static template, see Create a template using the Universal Task template form.

Procedure

1. Navigate to **Universal Task** > **Task Templates** > **All**.
2. Open the template that you want to create mappings for.
3. In the Universal Task Dynamic Template Mappings related list, click **New**.
4. In the **Universal task field** field, select the field that must be mapped.
5. In the **Parent table field** field, select the field that must be mapped to the previously selected field from the **Universal task field** field.
   Depending on what type of field is selected in the **Universal task field** field, the **Advanced** option appears. If you select the **Advanced** option, the following options are available based on the input type of the Universal task field.
6. Click **Submit**.

Result

A mapping was created for a specific Universal task field. You can repeat this procedure to map more fields.

Use Task templates

Use a task template to auto-populate a Universal Task form. Using a task template enables agents to create tasks faster.

Before you begin

Role required: write access to the parent table, if the parent table is defined in the template configuration. If no parent table is defined, then any agent can access and use the task templates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the ticket that you want to create a universal task for.
2. Click the UI action for creating a universal task.
3. In the **Template** field of the Universal Task form, select the template to be used.
4. Fill in the fields that are left empty by the template.
   Depending on what template you used, some of the fields will already be populated by the template. You can fill in the rest of the fields yourself. For more details on what each field means, see Universal Task form
5. To create your task, click any of the following buttons.

Add the Universal Task list category in Service Operations Workspace Core

Add the Universal Task list category to the new Service Operations Workspace Core so that agents can access and navigate through various modules directly from the new workspace.

Before you begin
Role required: admin

About this task
Due to the deprecation of the old service operations workspace, the Universal Task category listing isn't displayed in the new workspace. To display the relevant modules, you can manually add records to the table sys_ux_list_category.

Procedure

1. Navigate to **All** > **System Definition** > **Tables** > **UX List Categories** > **Show List**.
   To access the list directly, you can use the navigation search bar and perform a search by using the table name sys_ux_list_category.list.
2. Insert records in the sys_ux_list_category table by selecting **New**.
3. On the form, fill in the fields.
   For more information, see . .
4. Select **Submit**.

Result
The Universal Task list category is added to the Service Operations Workspace Core.

Add lists under the Universal Task list categories

Add lists under the newly created Universal Task list category in Service Operations Workspace so that agents can access these modules from the new workspace.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Tables** > **UX Lists** > **Show List**.
   To access the list directly, you can use the navigation search bar and perform a search using the table name sys_ux_list.list.
2. Add records in the sys_ux_list table by selecting **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see UX List form.

4. Select **Submit**.

Result
The lists under the Universal Task list category are added.

UX List Form SOW

Learn about the fields of the UX List form. Use this form to create additional lists in the Lists menu of Service Operations Workspace.

UX list form

UX list fields

Field	Description
Title	Displays the name of the list category in the workspace.
Application	Application scope should be set to Universal Task.
Order	Order in which you want to display the list category in the workspace.
Category	Category under which the list would be displayed in the workspace.
Active	Option to enable the display of this category in the workspace.
Table	Source table of the list.
Configuration	By default, this field is set to **Default-SOW**.
Conditions	Conditions to filter the records of the source table.
Columns	Columns of the table that must be displayed in the list in the workspace.
Group by column	Attribute that would be used to group the list of records by.
View	View to determine which columns are displayed in the list in the workspace. **Note:** If you select a view, the **Columns** field is inactive.

Universal Task for external users

Enable external users to have access to the tasks assigned through Universal Task.

Users that aren't yet part of your organization are external users (snc_external). For example, new-hires who didn't yet start working for the company.

The following points must be considered to enable Universal Task for the external users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Explicit Role (com.glide.explicit_roles) plugin must be installed to assign external and internal roles to the users. For more information, see .
- When creating a Universal Task, all pre-defined task types like Upload Documents, Mark When Complete, Checklist, and Collect Employee Input are available for external users except for Submit Catalog Item. If you try to create a Submit Catalog Item, you will get an error.
- All the Universal Task widgets, tables, and ACLs are enabled for both internal and external roles.
- The portal and pages where the Universal Task is embedded must also be supported for the external users. For example,
  - Employee Service Center where the widgets are added.
  - The **To-Do** tab of the Employee Service Center.
  - The hrm_todos_page where the Universal Task is displayed.

Universal Task reference

You can refer to the reference topics to learn more about the universal tasks, including lists and forms.

Universal Task form

Universal Task form to create a task record.

Universal Task form fields

Field	Description	
Number	Unique number that is generated for the Universal Task. The Universal Task number starts with UNT.	
Parent	Number of the parent case or request.	
Parent Assignment Group	Group assigned to the parent case or request.	
Parent Assigned to	Agent primarily responsible for working on the parent case or request.	
Type	Type of task being assigned. The available options are: • Submit Catalog Item • Upload Documents • Upload Documents • Mark When Complete • Checklist • Collect Employee Input	
	Submit Catalog Item	In the **Catalog item** field, select a catalog item.
	Upload Documents	Use the **Description** field to provide instructions or details of documents to be uploaded.
	Mark When Complete	Use the **Description** field to provide details about this task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Universal Task form fields (continued)

Field	Description	
		Note: The state of the task will change to **Complete** after the employee completes the task.
	Checklist	In the **Checklist** section, add the checklist items. For detailed information, see Create a checklist
	Collect Employee Input	In the **Employee form** field, select the employee form that the user will fill out. **Note:** Employee forms can be built using the survey designer. See Create an employee form for more information.
	To know more about the function of each type, see Universal Task types	
Employee form	Mandatory employee form. **Note:** This field appears only if the Collect Employee Input task is selected in the **Type** field.	
Survey instance	Link to the completed employee form. **Note:** This field appears only if the Collect Employee Input task is selected in **Type** field, and the value of the **State** field is complete.	
Template	Task template to auto-fill the task form.	
State	State of the Universal Task. The available state settings are: • New • Work In Progress • Complete • Cancelled	
	New	Default state when the task is a draft. Tasks at this state are only visible to the agent
	Work in Progress	Task is assigned to and visible to the employee.
	Complete	Task has been completed by the employee.
	Cancelled	Task has been cancelled before completion.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Universal Task form fields (continued)

Field	Description	
Priority	Value that identifies how quickly the service desk should address the request. The available options are: • Critical • High • Moderate • Low	
	Critical	Highest priority for urgent or time-sensitive tasks.
	High	Tasks that are important but not urgent.
	Moderate	Tasks that should be completed at some point.
	Low	Optional tasks.
Assignment group	Group assigned to the Universal Task. This field is available for the **Mark When Complete** and **Checklist** task types. Other tasks types require a mandatory update of the **Assigned to** field with the **Assignment group**. **Note:** Email notifications are sent only for the two task types.	
Assigned to	Employee assigned to the Universal Task.	
Due date	Expected date for the employee to complete the task.	
Watch list	Users to receive notifications when there is any change in the task status.	
Short description	Brief description of the request	
Description	Detailed description of the request	
Additional comments (Customer visible)	More information about the change. The information in this field is visible to the customer.	
Work notes	Information about how to resolve the Universal Task or steps taken to resolve it, if applicable. This note is for internal use. The work notes information is not visible to customers.	

Universal Task Configuration form

Use the Universal Task Configuration form to associate Universal Task to your service.

Universal Task Configuration form

Field	Description
Parent table	Department-specific table that the universal task should be associated to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Universal Task Configuration form (continued)

Field	Description
Task Types	Task types that are available to the agents for use.
Default Assigned to	User field on the parent table that the universal task must be assigned to on creation. **Note:** Agents can still change the value of **assigned to** at the time of creating a universal task.

Employee form

Use the employee form to create a new employee form record for Universal Task

Employee Form

Field	Description
Name	Name of the employee form.
Description	Description of the employee form.
Parent table	Parent table available for the employee form. Parent table is a department-specific table associated to a universal task. For more information configuring a parent table, see Configure Universal Task for your service. **Note:** • Only the tables that are configured for Universal Task with **Collect Employee Input** task type can be selected. • You can select a parent table only if you have write access to it.
Active	Option to activate the employee form for use.
State	State of the form. This field gets auto-populated.

Employee Input Task Configuration form

Use the Employee Input Task configuration form to configure the roles that can view completed Universal Task employee form.

Employee Input Task Configuration

Parent table	Department-specific table that the universal task should be associated to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

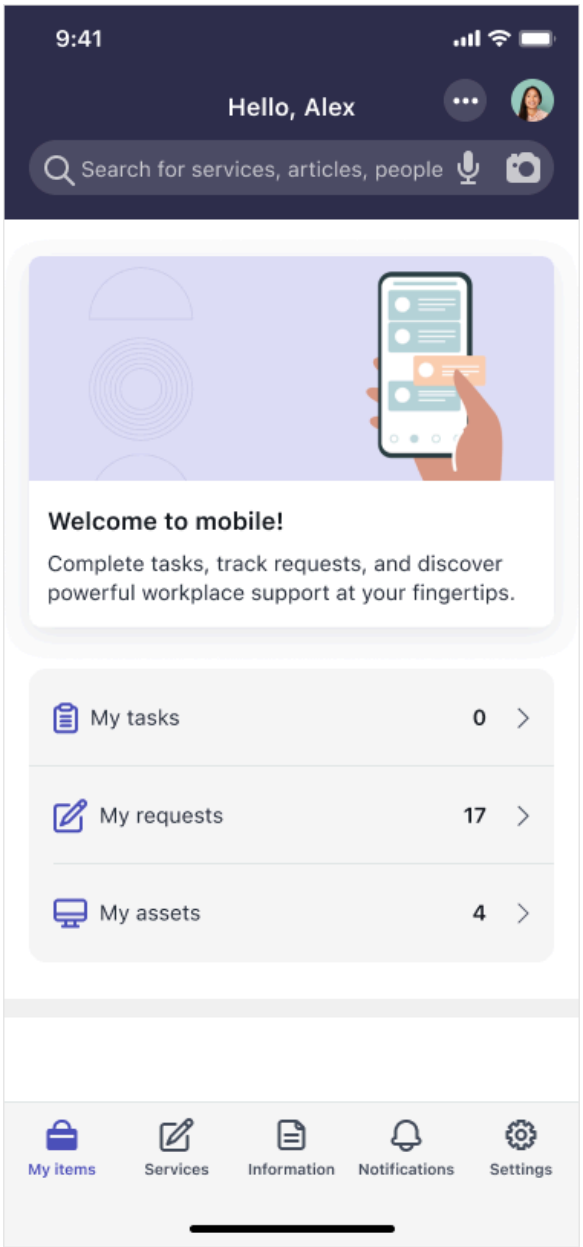
Employee Input Task Configuration (continued)

	Note: You can only select the tables that have been configured for Universal Task.
Response view roles	Roles that will contain the Response view role
Condition script	Script to add conditions to the role, if any
Application	Name of the application scope. This field is auto-selected.

Universal Task template form

Use the Universal Task template form to create a Universal Task template.

Universal Task template form



Field	Description
Name	Name of this template.
Parent table	Table that this template applies to. By default, the template is applicable to all tables.
Short description	Description of the template. **Note:** Adding content to this field does not add that content to the **Short description** field of the forms that use this template.
Template	Content that automatically populates records that are based on this template. Select a field from the specified table in the left column. Then enter the data to automatically populate in the right column.
Application	Field that is automatically set based on the scope of your organization.
Active	Option for making the template available for use. A template must be active to be used.

Now Mobile app

Enable your users to submit incidents and requests, manage tasks, and access company resources from anywhere using the Now Mobile app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Mobile applet launcher features

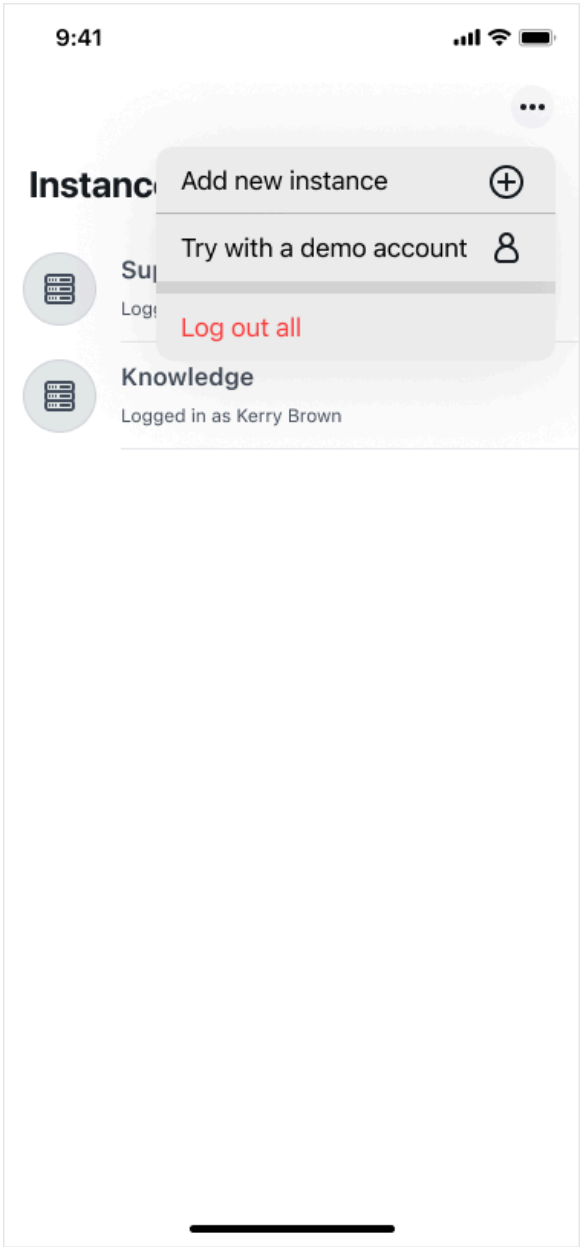
Feature	Description
	**Features of the Now Mobile app** The Now Mobile app is a downloadable app designed to help your employees with the following tasks: • Get help by submitting requests and issues. • Find answers using global search and knowledge base. • View and report issues around your assets • View and complete tasks • Upload images and attachments to ServiceNow records • Request help from Agent Chat and Virtual Agent • Use pre-configured Siri shortcuts unique to the Now Mobile app to complete common actions. **Note:** For more information, see Base system functionality for ServiceNow mobile. **Download the app** Download the Now Mobile app for Apple iOS or Google Android from the Apple App Store or the Google Play store. **Access the demo** Take a look at the Now Mobile app demo. The demo is a curated experience designed to show how your employees can accomplish their work from anywhere. For more information on the app, see Now Mobile app demo.

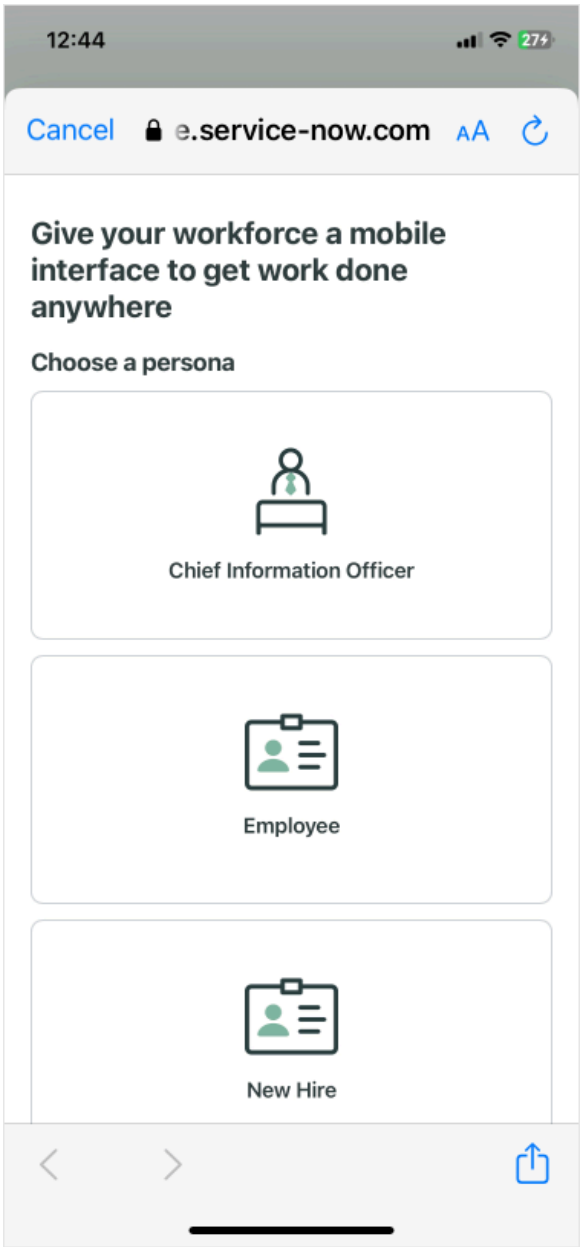
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Mobile app demo

Access the demo in your Now Mobile app to learn how the app can help you work from anywhere using your mobile device.

The Now Mobile demo includes curated demonstrations to show how employees, new hires, and Chief Information Officers (CIO) can get work done on their mobile device.





Access the demo

In the Now Mobile app, tap **Try with a demo account**. Then select the role that matches the demo you'd like to see:

- Employee - quickly submit incidents and requests, manage tasks, and access company resources
- Chief Information Officer - quickly measure the performance of IT as a business unit, be informed of key updates, and monitor progress of major initiatives
- New Hire - get access to resources and information necessary to start a new job successfully

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Demo screens with different personas

Demo screen	Persona selection screen
	

Demo highlights

The Now Mobile demo displays a launcher screen divided into UI sections. Tap an item in any section to open the item. For details on how launcher screens, other types of screens, and actions work together in the mobile environment, see Mobile hierarchy.

Employee

Campaigns

The carousel display shows how you can easily present targeted information to employees based on location, job role, and other key criteria. Rich media, including in-app video playback, can cover a variety of important company communications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Frequently Used Items

The display includes an example of shortcuts to items employee users are likely to access frequently, such as scheduling a visit to the tech lounge. These can be configured by the organization to keep them readily available for employees. For more information about the tech lounge example, see Walk-up Experience. For more information on office entry codes, see Verify your health status and compliance.

My Items

The My items section provides links to active tasks, requests, assets, and team members.

- **Tasks**

  Items assigned to a user for completion, such as approvals or policy acknowledgement, will appear in the tasks for the employee. Inline action can be taken to respond to approval requests.

- **Requests**

  Once the employee has submitted a request for an item or service the open ticket or case will be available here to track. Universal requests, indicated with a UR at the beginning of the case number, can be easily transferred between departments as needed. For more information on services and requests, see Request experience in Now Mobile.

- **Assets**

  Items assigned to a user are itemized for easy reference, making it simple to report an issue or review all checked out assets. For more information, see Hardware Asset Management.

- **Team**

  Reaching colleagues is just a tap away. In addition to contact information, profiles show examples of how deeplinks can directly launch other apps, such as a Microsoft Teams chat or a LinkedIn profile. For information on configuring native mobile functions like those used to make calls and send emails, see Mobile functions.

Services

Employees can request items or help from departments across the enterprise. Popular services make the most commonly requested needs easy to find. Other items are easy to browse by topic or can be reached via the search.

Saved

Use saved views to gain quick access to frequently used screens and views. Saved views enable you to save any screen or web page within your mobile app. Learn more about Mobile saved views.

Health

Employees have everything they need for workplace health and safety. Users can verify health, make reservations, or report vaccinations. For more information, see Safe Workplace for mobile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Virtual Agent Chat

Use the chat button to connect to a virtual agent. Virtual agent is an automated conversational interface you can use to address common issues, such as password resets, or email account setup. The Now Mobile uses a quick action to access chat. For more information on Virtual Agent, see Virtual Agent. The chat button on the demo launch page is a quick action. For details on how to add a virtual agent to your mobile apps, see Enable Live Agent in the Now Mobile app.

Chief Information Officer (CIO)

Value

CIOs need to always have a pulse on the value being delivered by IT to the business. Implementing this core value is delivered within the following sections:

- **Targets**

  Quickly glance at how IT is performing against its set targets. This ultimately ties to the CIOs objectives and key results (OKRs). Possible targets could be:

  - IT spend to plan YTD
  - Employee satisfaction
  - Number of projects delivered YTD

- **Investments**

  What strategies and business units are investing in IT.

- **Business Enablement**

  Review and identify any current Capability gaps and take action to address them.

- **Business Consumption**

  See the details of subscription or license costs, the vendor, type of agreement, and most importantly when a contract is ending.

Risk and Resiliency

- **Service Degradation**

  Service availability and performance issues that the CIO needs to be aware of.

- **Security and Compliance**

  Security vulnerabilities that are possible risks to the business and compliance issues that need to be addressed to avoid audits.

Execution

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Goals**

  Standards compliance goals as well as applications retired or cloud migration business goals.

- **Projects in Red**

  Understand what the project is slated for along with access to current and past status reports. These reports can include executive summaries on the status to decide whether or not to engage with the project.

- **Upcoming Releases**

  Single view to track all new products, features, and enhancements being delivered across the organization.

- **Digital Transformation**

  Measure and track execution of the digital transformation efforts within IT, in support of all business units.

- **Saved Items**

  Any of the cards or graphs or metrics have drill-down capability, allowing the CIO to navigate down to specific records in ServiceNow. In addition, any section of the CIO mobile has a Save item feature that can serve as bookmarks, so the CIO has a place to go directly to what is top of mind rather than having to navigate to a particular area of the mobile.

  Saved items are all available with a single tap and swipe under **Saved**at the bottom of the CIO mobile app.

New Hire

Note:

The Mobile Onboarding app is being deprecated!

With the ServiceNow AI Platform Rome release in September 2021, we started phasing out support for the Mobile Onboarding app. Customers may no longer activate it, and we are not offering enhancements or non-critical bug fixes. Mobile onboarding features are available in the Now Mobile app for HR Service Delivery.

Welcome Section

Easily present targeted information to employees based on location, job role, and other key criteria. Rich media, including in-app video playback, can cover a variety of important company communications.

Get Ready

A list of common tasks from across the organization that new employees may complete as part of their onboarding experience. These tasks are lifecycle activities, which are part of the Enterprise Onboarding and Transitions application. For more information on lifecycle activities, see Configure a lifecycle event activity.

New Hire Contacts

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the contacts in this section to view and connect with colleagues using your mobile device's built in capabilities.

For information on configuring functions like those used to make calls and send emails, see Mobile functions.

Get Informed

Use targeted mobile campaigns to push relevant information to employees at the right moment. Tapping into this section opens a screen with helpful info about New Hire orientation.

Learn more about the Now Mobile app

Use the following links to learn more about on how to use and configure the Now Mobile app.

- Now Mobile app
- Configuring the Mobile Platform

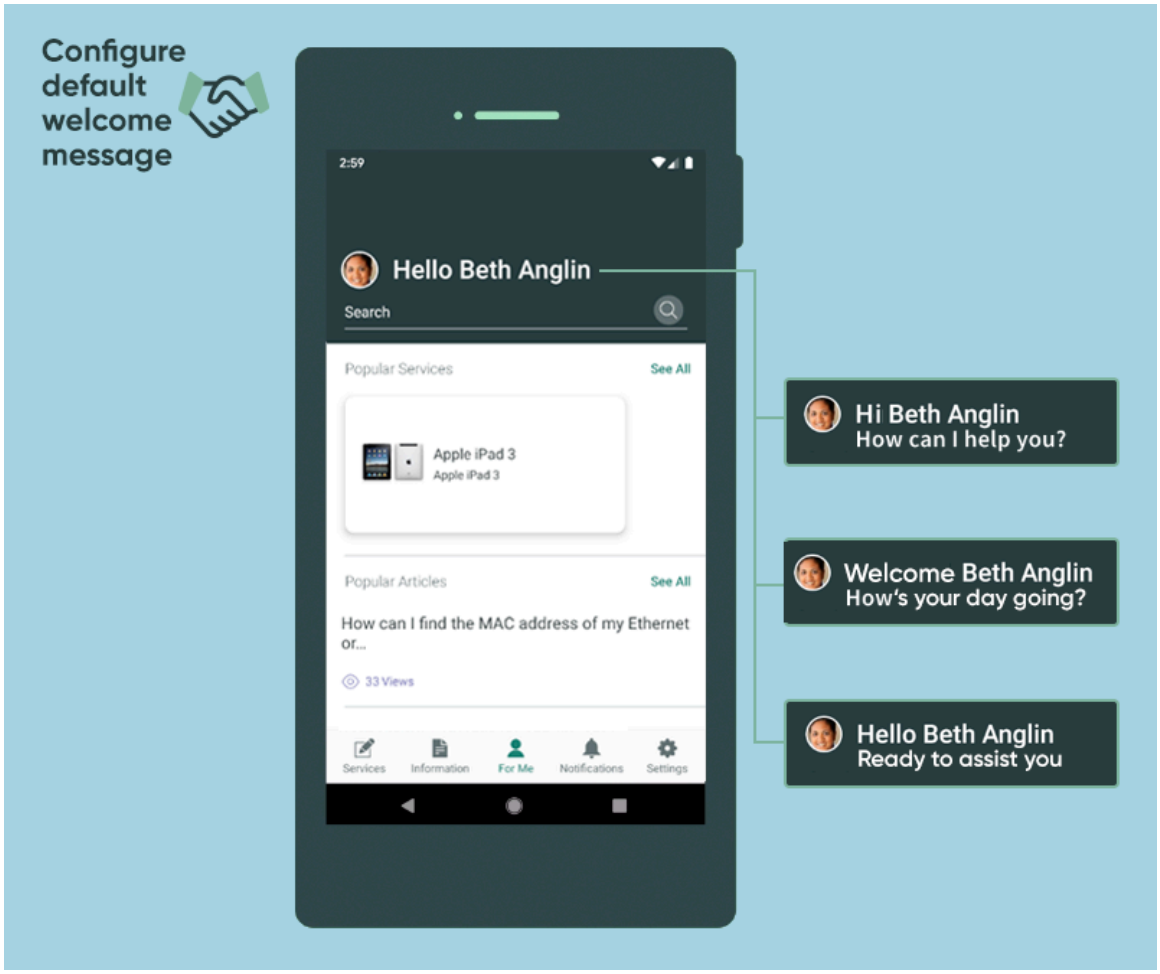
Configuring Now Mobile

Configure options for the Now Mobile app. For example, you can link the app with a service catalog and knowledge base, personalize the greeting for the home page, and specify which records appear under **My Requests** in the **For Me** tab.

Note:
Offline mode is not supported in the Now Mobile app.

For Me

This page includes these configuration options:

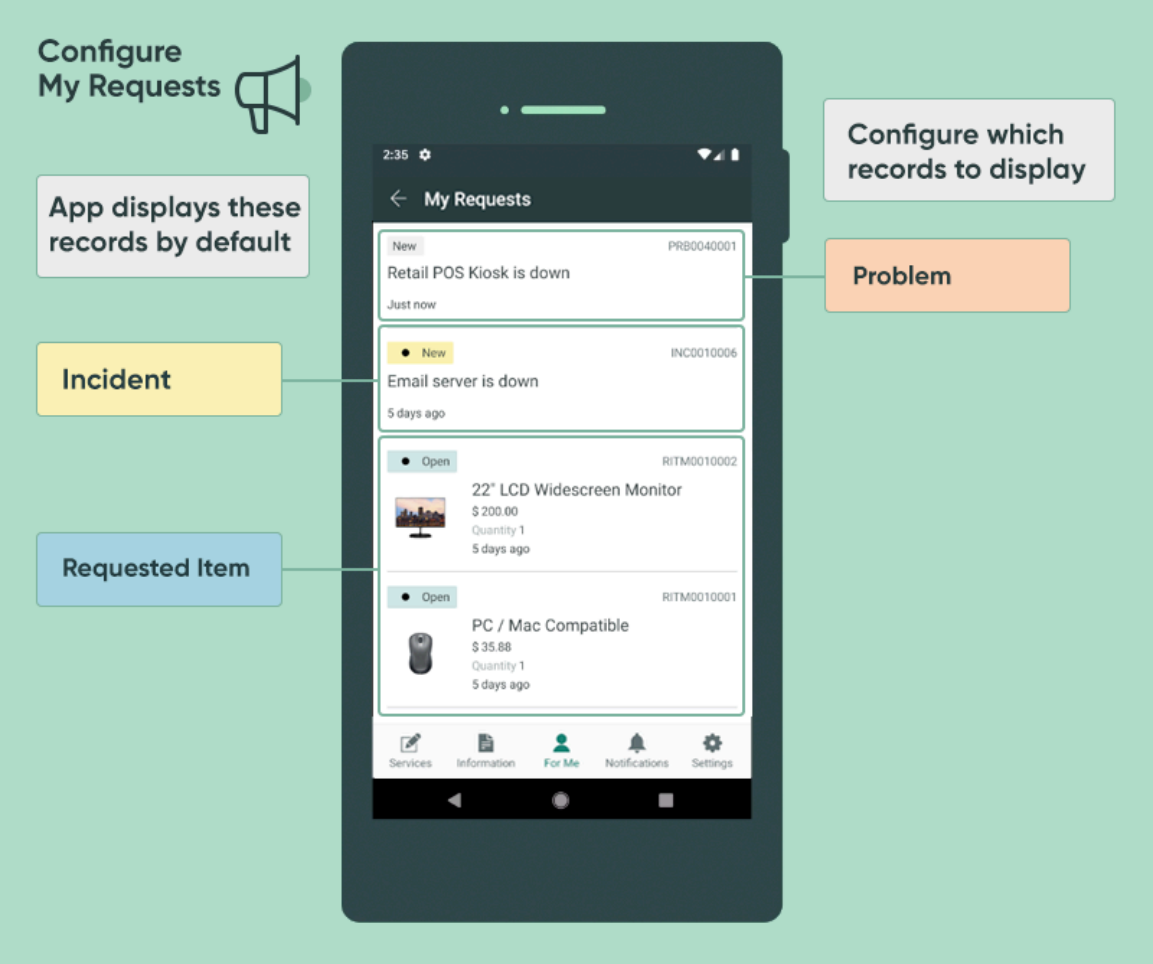


Greeting

Configure the greeting that your users see when they log in to the Now Mobile app. For example, you can add a hello message that includes the user's first and last name.

My To-Dos

Users can view items that are assigned to them and complete their tasks. By default, My To-Dos show the user things that they need to approve from the Requests [sc_request] and Requested Items [sc_req_item] tables. Other applications, such as HR Service Delivery, might include other types of tasks. For more information about HR Service Delivery, see Now Mobile for HR Service Delivery.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

My Requests

Specify which records that you want your users to see under **My Requests** so that they can track their work assignments. For example, you can add a filter to display records that are opened by the user from the Problem table. By default, the app displays records that are opened by the user from the Incident and Requested Item tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Search

Search includes these configuration options:

People search

Configure whether users can search for other users in the system. By default, people search is enabled. For people search to display results, your users must have read-only access to the User [sys_user] table. You can test people search by logging in as a user without any roles and searching for another user. If search results do not include meaningful data, for example, locations and phone numbers, update the access control lists (ACLs) on the User table to allow read access. For more information, see Access control list rules.

Analytics and suggestions

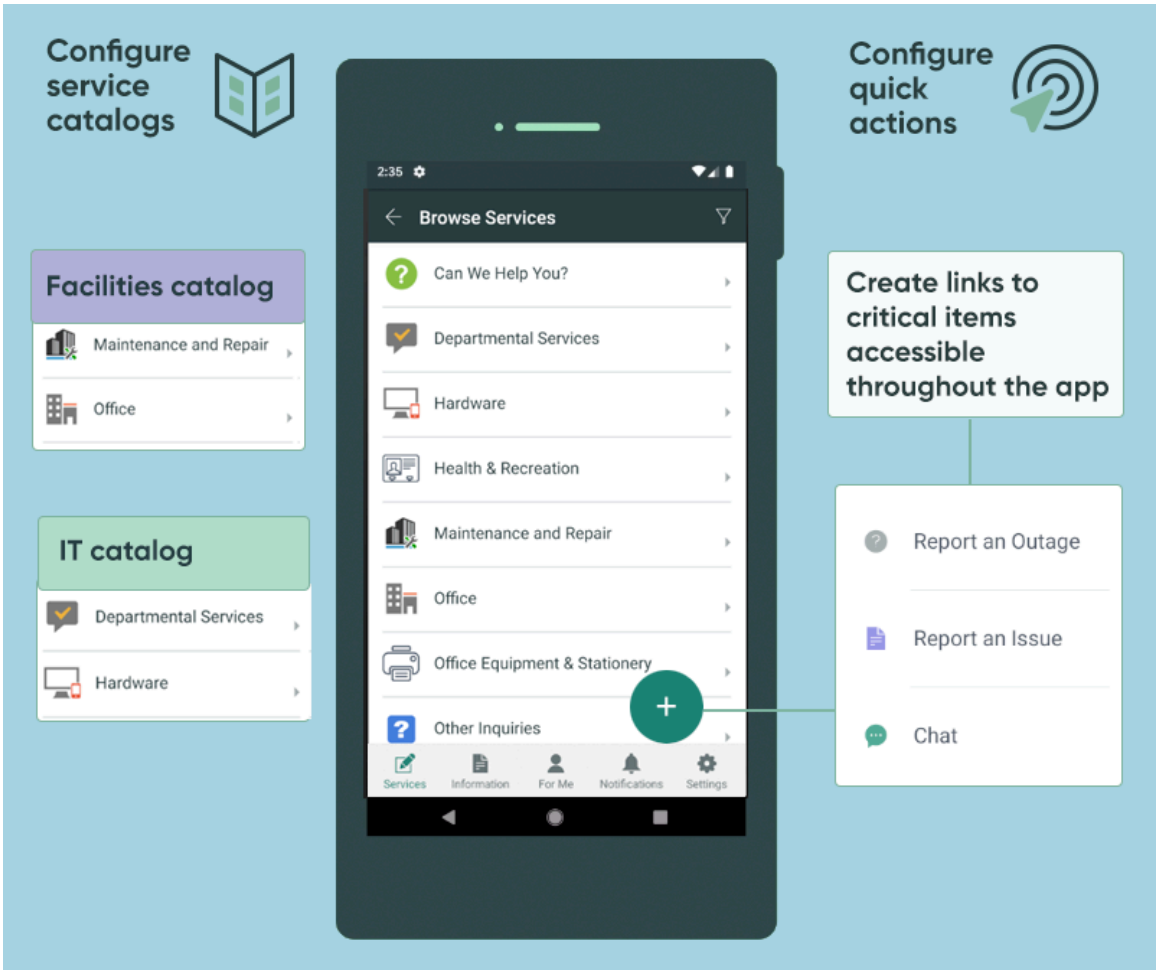
The Now Mobile app collects search data and analytics that generate search suggestions. If you are upgrading from a previous release, the search analytics do not contain any data yet. To immediately provide suggestions to your users, you can populate the search suggestions using knowledge, catalog, and user search records from the Text Searches [text_search] table.

Search Suggestions is a ServiceNow AI Platform feature. For more information, see Search Suggestions.

Items and services

Service Catalog items and services include these configuration options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



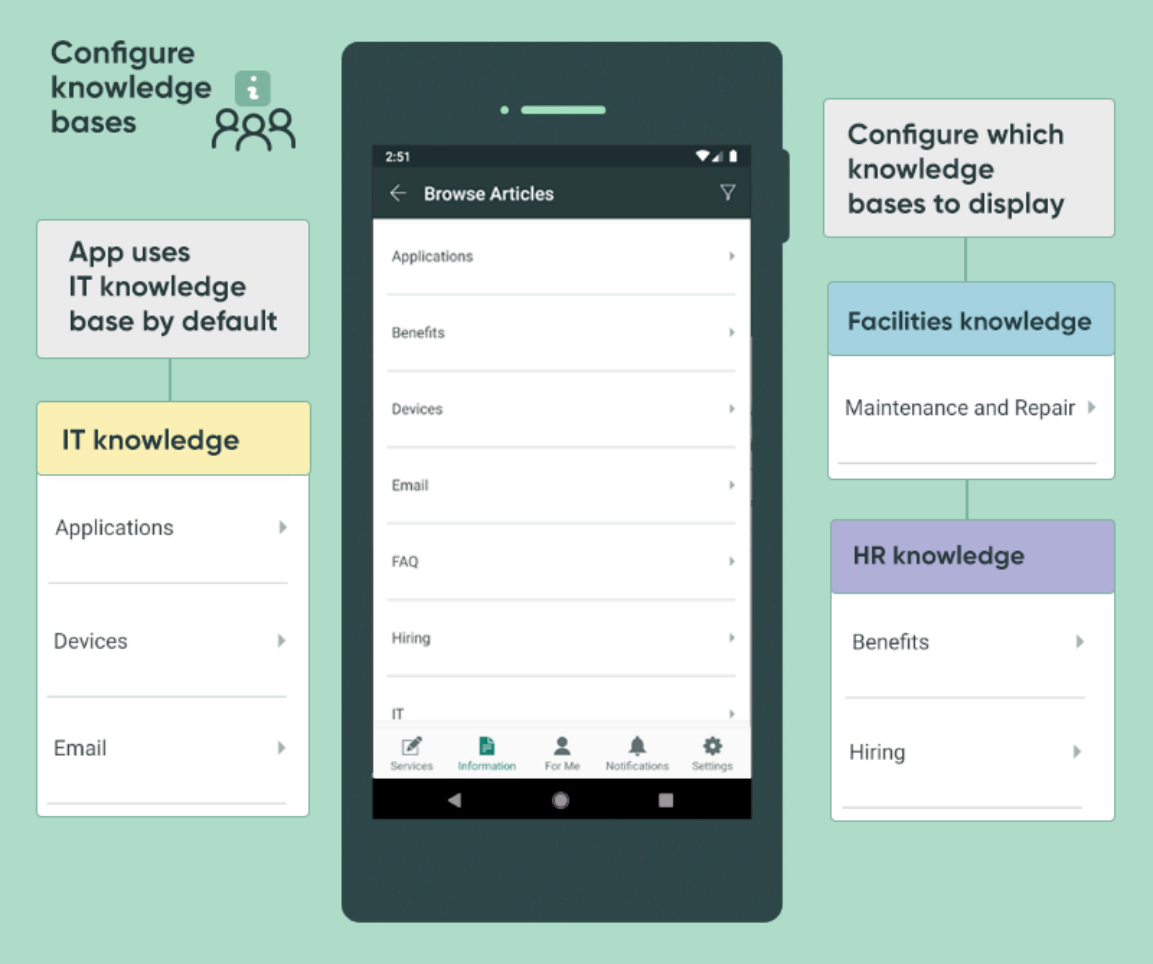
Catalog

Enable your users to view and request their associated items in the Now Mobile app. If no catalogs are selected, users can view and request items from all catalogs in the system. By default, the app uses Service Catalog.

For more information, see Now Mobile for Service Catalog.

Quick actions

Select catalog items to display as additional user menu actions. For example, add the **Report an Incident** catalog item to enable users to quickly navigate to the form. Users can only see items if they have the required user criteria permissions.



Knowledge

Enable users to view knowledge articles from the mobile app. If no knowledge bases are selected, users can view articles from all knowledge bases in the system. By default, the app uses the IT knowledge base.

For more information, see Now Mobile for Knowledge Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Siri shortcuts

In the base system, iOS users can use Siri shortcuts to open these pages in the app:

- Open a chat window.
- Browse items and services.
- Open my tasks.
- Open my requests.

Configure a personalized greeting

Configure the greeting that your users see when they log in to the Now Mobile app. For example, you can add a hello message that includes the user's first and last name.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Now Mobile App** > **Applet Launchers**.
2. In the Applet Launchers [sys_sg_applet_launcher] table, open the Homepage record.
3. Add the **Header Titles** field to the form.
4. In the **Header Titles** field, open the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Update the **Text** field as required.
   This text displays in the Now Mobile app heading.

   This field uses the `{{sys_id}}` syntax to reference a variable for the first and last name of the currently logged-in user. Changing the variable is not supported.

6. Click **Submit**.

Result
When a user logs in to the Now Mobile app, they see your personalized greeting.

Configure My Requests to track open records

Specify which records that you want your users to see under **My Requests** so that they can track their work assignments. For example, you can add a filter to display records that are opened by the user from the Problem table. By default, the app displays records that are opened by the user from the Incident and Requested Item tables.

Before you begin
Role required: admin

About this task
Demonstrates configuring service catalogs, knowledge bases, and My Requests in the Now Mobile App.

Procedure
1. Navigate to **All** > **Now Mobile App** > **My Request Filters**.
2. In the My Request Filters [request_filter] table, create a filter to display records from a specific table:

   a. Click **New**.

   b. On the form, fill in the fields.

   Request filter form

Field	Description
Title	Name for the filter.
Table	Table that extends the Task table. The app displays records from this table under **My Requests**.
Filter	Filter for the table. For example, you can set the filter to **[Opened by] [is (dynamic)] [Me]** to enable users to view their own requests.
Active	Option that you can select to make the filter active.
Applies to	Option that you can select to apply to **Mobile** apps.

   c. Click **Submit**.

   Records from the defined filter are displayed in the app under **My Requests** in the **For Me** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

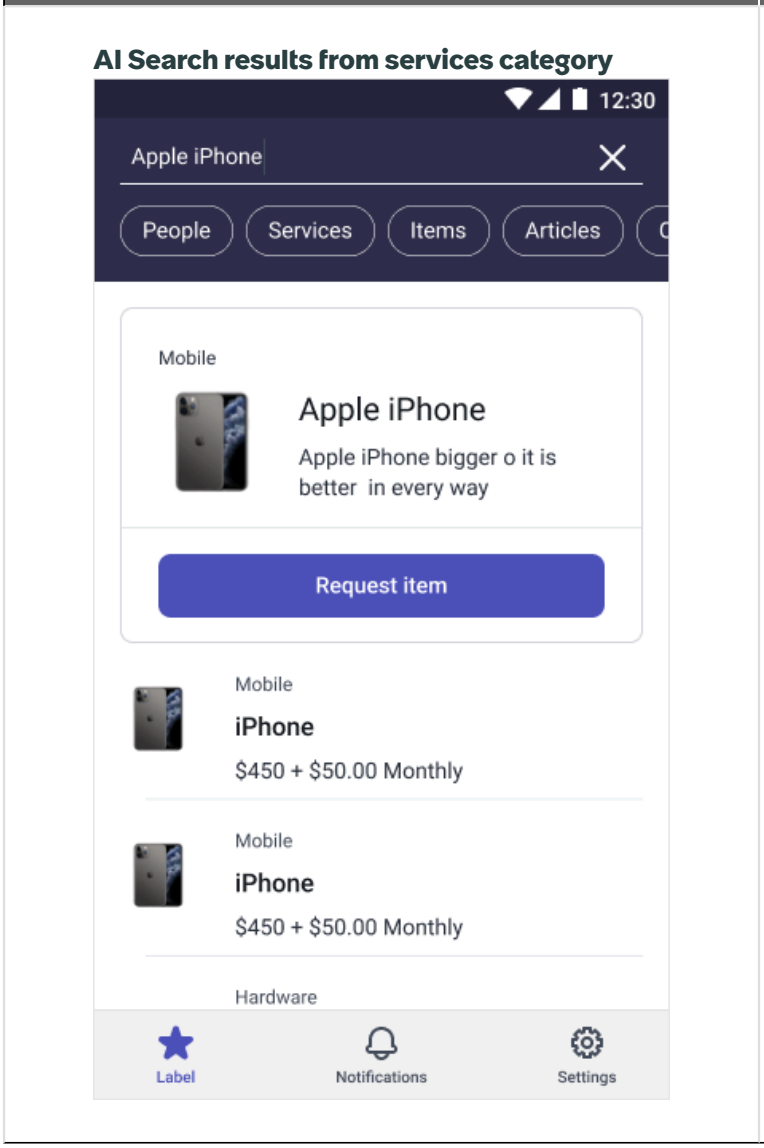
AI Search in mobile

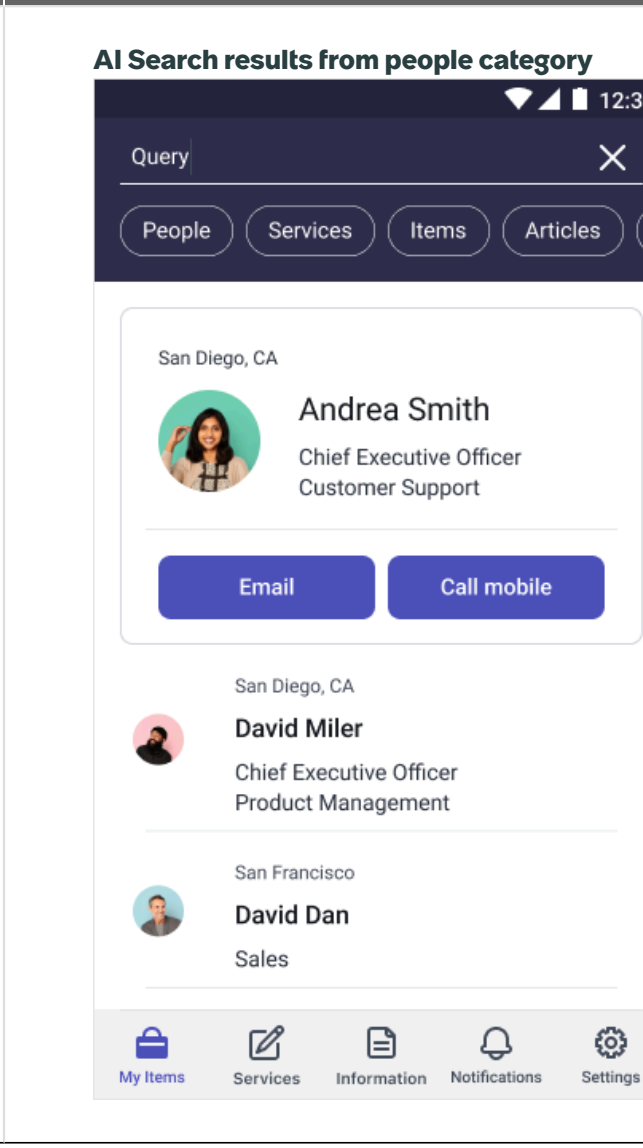
The AI Search search engine in the Now Mobile platform enables users to find answers to issues and then proceed quickly with their tasks.

The mobile platform supports two search engines within applet launchers: AI Search and Zing.

AI Search uses user data sources (people), catalog items (services), and knowledge articles. The Zing search engine uses additional data sources not associated with AI Search, for example, user tasks and requests.

- For more information on AI Search configuration, see AI Search.
- For more information about Zing configuration, see Global search for mobile.





Note:
You cannot simultaneously use both AI Search and Zing search engines within the same search field. However, you can configure individual applet launchers to host a different search engine per applet. For more information, see Add AI Search to a launcher screen.

AI Search offers the following features:

- Navigation tab filters - Filters help users narrow down results on a site.
- Auto-complete - As the user enters text, AI Search predicts the query and helps formulate the user's question.
- Recent and popular searches - When the user starts to search, two categories of search answers display: the user's personal search history and the most common queries by all users on the instance.
- Auto-correct typos - Typos are auto-corrected based on indexed content.
- Synonym handling - The search engine also looks for words similar to the search term.
- Genius cards and action items - Genius result cards display the most relevant answers and offer users the option to perform actions within the card, for example, adding buttons to make a call, send an email, or add to a shopping basket.

AI search results

Service category AI search	People category AI search
	

Configure AI Search for mobile devices

Configure the Now Mobile search bar to use the AI Search search engine.

Before you begin

To enable the AI Search capability to search for people and customers, ensure that you have the Employee Center Pro plugin [com.snc.employee_center_pro] installed. For more information, see Install Employee Center Pro. You must purchase a subscription before activating the plugin. For more details, see ServiceNow plugins.

Make sure you are working in a scoped application where you can add new item configurations.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Change the search engine from Zing to AI Search and select the relevant profile.
   a. In the web-based UI, enter `sys_sg_global_search.list` in the filter navigator, to open a list of global search configurations.
   b. Select the record **Homepage Search - Catalog, Knowledge, People**.
   c. Select **click here** at the top of the page to edit the record.
   d. Select the reference lookup icon ( ) in the **Search Application Configuration** field, and select **Open Record** to open the Search Context Configuration form.
   e. Select AI Search in the **Search Engine** field.
   f. Select the information icon ( ) in the **Search Profile** field and select the NowMobile Default Search profile.
   g. Select **Yes** in the confirmation message.
   h. Select the form header ( ) and select **Save**.
2. Remove the item configuration, Catalog Item Main item.
   a. In the web-based UI, enter `sys_sg_global_search.list` in the filter navigator to reopen the list of global search configurations.
   b. Select the record **Homepage Search - Catalog, Knowledge, People**.
   c. In the **Catalog Item Main Item** row, right-click the information icon ( ) and select **Open Link in New Tab**.
   d. Select **Delete** in the top-right of the page and select **Delete** in the subsequent confirmation message.
3. In the Global Search M2M Item Configurations related list, add the new catalog item to be the main item.
   a. Select **New**.
   b. Select the reference lookup icon ( ) in the **Item Configuration** field.
   c. In the Item Configuration form search bar, search for `Catalog Item Search Result Main Item` and then select the entry
   d. Select **Submit**.
4. In the Global Search M2M Item Configurations related list, remove the two existing knowledge item configuration records.
   a. Select the **Knowledge article search main item** row and the **Knowledge article search main item (viewcount1)** row.
   b. Select **Actions on selected rows**, and then select **Delete**.
   c. Select **Delete** in the subsequent confirmation message.
5. In the Global Search M2M Item Configurations related list, add the new knowledge item as the main item.
   a. Select **New**.
   b. Select the reference lookup icon ( ) in the **Item Configuration** field.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

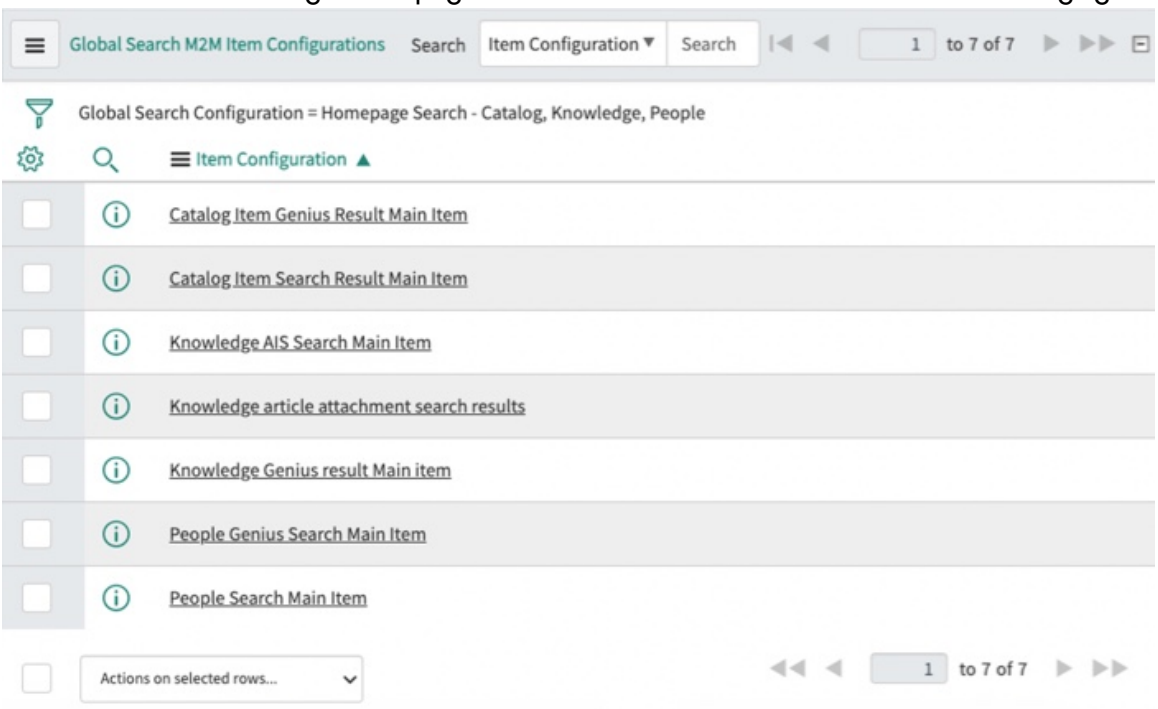
c. In the Item Configuration form search bar, search for `Knowledge AIS Search Main Item` and then select the entry.

d. Select **Submit**.

6. Activate the view configuration for the people-based records.

a. In the web-based UI, enter `sys_sg_master_item.list` in the filter navigator, to open a list of item configurations.

b. In the Name search bar, search for `People Search Main Item`.



c. Select the information icon ( ) next to People Search Main Item and select Open Record.

d. In the Item Configuration form, select **Use card**.

e. Select the menu icon ( ) and select **Save**.

Result

The Global Search Configuration page should contain the items shown in the following figure.

Customize AI Search results

Customize AI Search results to provide users with a tailored search experience.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Mobile** > **Search** > **Search Configurations.**.
2. Select the AI Search configuration to customize.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Search Context Configuration form

Field	Value
Name	This field is automatically set to the name of the search context configuration.
Search Engine	This field is automatically set to the selected search engine. For this configuration, the value is AI Search.
Search Profile	The search experience offered to users. This field is automatically set to **NowMobile Default Search Profile**.
Search Results Limit	The number of standard results displayed per page not including Genius results. The default value is 10.
Genius Results Limit	Number of Genius results listed at the top of the results. The default value is 1 and the maximum value is 3.
Enable Typo Handling	Option for replacing misspelled search query terms with auto-correction terms derived from indexed content.

4. **Optional:** Modify the display name and the navigation tab filters for the People, Services, and Articles categories.
   These filters display under the search bar.

   a. Select the **Navigation Tabs** tab.

   b. Select the information icon next to either **People**, **Articles**, or **Services** and select **Open Record** to open the record for that navigation tab.

   c. On the form, fill in the fields.

Navigation Tab form

Name	Name of the navigation tab category.
Active	Option for determining whether the navigation tab filter displays.
Order	The position in which the navigation tab displays. The lower the order value, the further left it displays.
Label	Label to display for the navigation tab filter in the search application.
Search Context Config	This field is automatically set to the name of the search context configuration.

   d. Repeat this process for each category you want to display.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** Customize the Autocomplete Suggestions tab, which relates to the display of relevant auto-complete suggestions as the user enters text.

> **Note:**
> The only options available for mobile applications are the section headers, **Recent searches** and **Popular searches**.

a. Select the Autocomplete Suggestions tab.

b. Select the information icon ( ) next to either **Recent searches** or **Popular searches** and select **Open Record** to open the record for that navigation tab.

c. On the form, fill in the fields.

Suggestion Reader Group form

Suggestion Type	(Optional) Application-specific name for the auto-complete suggestion type. This field is automatically set.
Section Header	(Optional) Label that displays auto-complete suggestions. Available options are: ▪ **Popular Searches** - Displays search queries commonly submitted by all users searching on this instance. ▪ **Recent Searches** - Displays search queries drawn from the user's recent personal search history for the search application.
Order	Position in which the section headers appear. The higher the order value, the lower the section is in the list of suggestions.
Suggestion Limit	The maximum number of suggestions to show at any one time in this section. Default is 5.
Click-in Mode	Option for controlling the section header display. ▪ If selected, auto-complete suggestions display when the user first taps in the empty application search field. ▪ If cleared, auto-complete suggestions display as the user types search query terms into the application search field.

d. Repeat this process for each section header you want to display.

What to do next

After you have customized the display of your search results, select the AI Search results to be displayed in an applet launcher. See, Add AI Search to a launcher screen.

Consider configuring a customized empty state display to inform users that their search has not produced any results. If you do not customize an empty state, a preconfigured default empty state is displayed. To customize an empty state, see Configure an empty state for search results.

Add AI Search to a launcher screen

Configure your launcher screen to use the AI Search search engine.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Mobile** > **Mobile App Builder**.
   The Mobile App Builder opens in a new browser tab and displays the application scope selection screen.
2. Search for the application scope you are working in and then select the name of the application scope.
   The Mobile App Builder categories home screen displays.
3. Select the **Screens** category, and then select the launcher you want to update.
4. In the **Search configuration** section, select the search configuration record you wish to associate with your search option.
5. Select **Save**.

Define people search as inactive

Configure whether users can search for other users in the system. By default, people search is enabled.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Now Mobile App** > **Applet Launchers**.
2. Open the page where you want to disable people search.
3. In the **Search Configuration** field, select **Homepage Search - Catalog and Knowledge**.
4. Click **Update**.

Result

Your users can no longer see search results for other users in the system.

Configure catalogs

Enable your users to view and request their associated items in the Now Mobile app. If no catalogs are selected, users can view and request items from all catalogs in the system. By default, the app uses Service Catalog.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

About this task
Demonstrates configuring service catalogs, knowledge bases, and My Requests in the Now Mobile App.

Procedure
1. Navigate to **All** > **Now Mobile App** > **Catalogs**.
2. **Optional:** In the portal catalogs [m2m_sp_portal_catalog] table, add a catalog in addition to the base system catalog, or change the catalog that is associated with the base system record:
   a. Click **New** or open the base system record.
   b. On the form, fill in the fields.

Portal catalogs form

Field	Description
Portal	Portal that you select. Select **Employee Center**.
Catalog	Catalog that you would like to associate with the app.
Order	Number that indicates the order that the configurations should run. If there are multiple configurations on a portal, the system runs the configurations from the lowest to the highest order that you selected.

Result
Your users can view and request items from all added catalogs.

Configure knowledge bases

Enable users to view knowledge articles from the mobile app. If no knowledge bases are selected, users can view articles from all knowledge bases in the system. By default, the app uses the IT knowledge base.

Before you begin
Role required: admin

About this task
Demonstrates configuring service catalogs, knowledge bases, and My Requests in the Now Mobile App.

Procedure
1. Navigate to **All** > **Now Mobile App** > **Knowledge Bases**.
2. **Optional:** In the portal knowledge bases [m2m_sp_portal_knowledge_base] table, add a knowledge base in addition to the IT knowledge base.
   a. Click **New**.
   b. On the form, fill in the fields.

Portal knowledge bases form

Field	Description
Active	Option that you can select to make the configuration active.
Portal	Portal that you select. Select **Mobile Employee Service Portal**.
Knowledge Base	Knowledge base that you would like to associate with the app.
Order	Number that indicates the order that the configurations should run. If there are multiple configurations on a portal, the system runs the configurations from the lowest to the highest order that you selected.

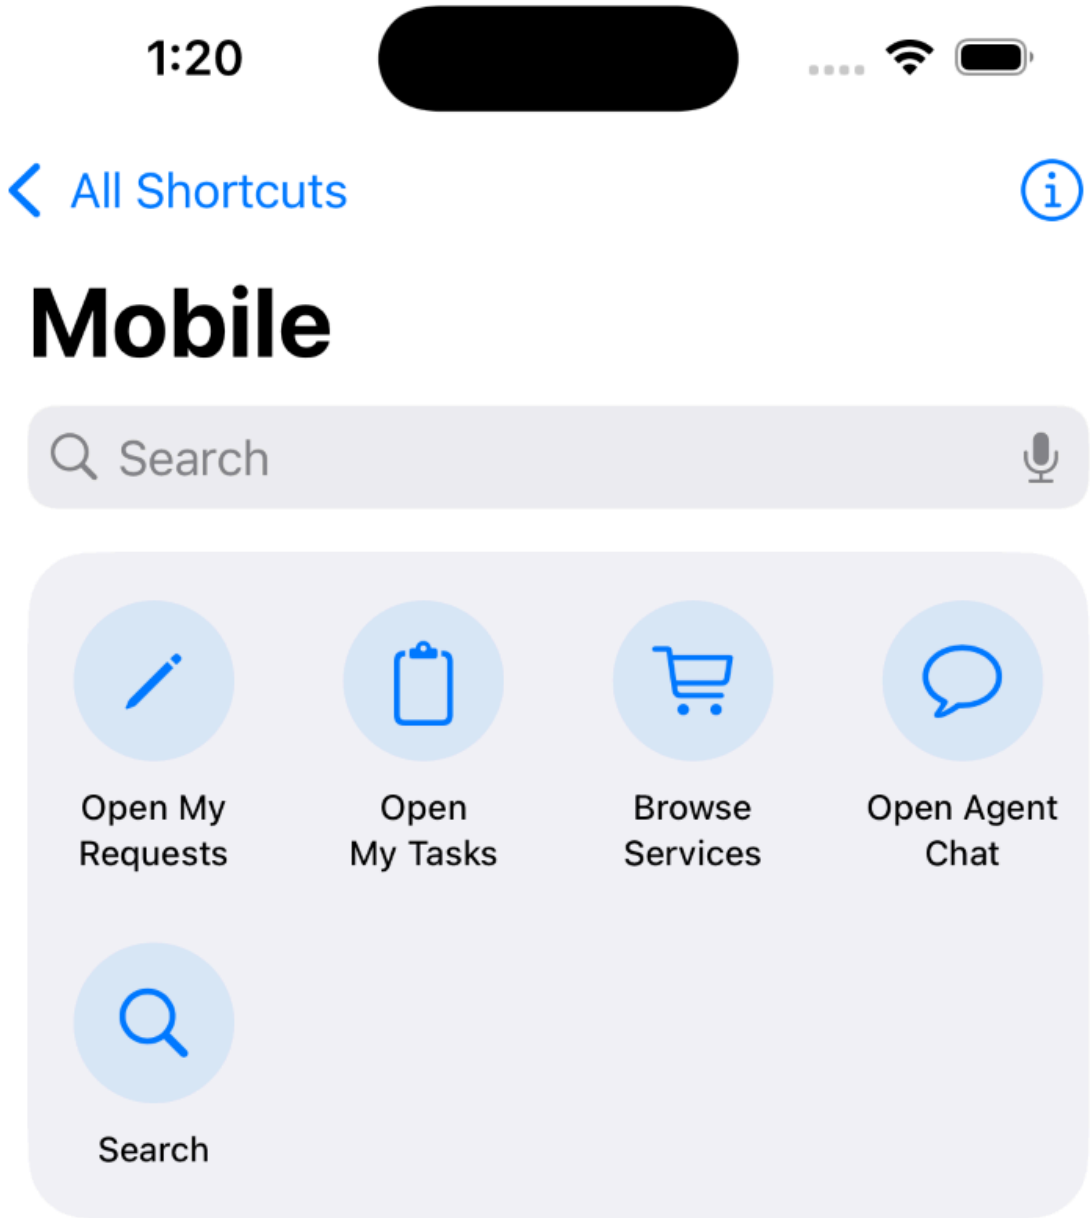
3. **Optional:** Change the default knowledge base that is associated with the Now Mobile app.
   a. In the **Portal** field, open the record with **Mobile Employee Service Portal**.
   b. In the **Knowledge Base** field, select the knowledge base that you would like to associate with the app.
   c. Click **Update**.

Result

Users can select the + icon on the applet launcher page to open the quick action.

Configure Siri shortcuts for Now Mobile

Configure Siri shortcuts for quick access to common features on your iOS mobile device.



Before you begin

Role required: admin

Procedure

Set up the Siri shortcuts in the Apple **Shortcuts** application.

Add a quick action in your mobile applications

Provide your users with a shortcut, which is also known as a quick action, to an item or action in your mobile apps. Quick actions appear on the applet launcher page.

Before you begin

Role required: admin

About this task

Demonstrates adding shortcuts, called quick actions, to applet launcher pages in the Now Mobile App.

Procedure

1. Navigate to **All** > **Now Mobile App** > **Applet Launchers**.
2. In the applet launchers [sys_sg_applet_launcher] table, open the applet launcher record that you would like to add the catalog item to.

   For example, open the Homepage record to add the catalog item under the + icon on the home page.
3. Select the **Body** tab.
4. Add a record under the Quick Actions Menu Maps related list.
   If you're not able to insert a row, make sure that you're in the **ServiceNow Now Mobile App Screens and Applet Launcher** application scope.
5. Add one of the quick actions from the following options.

Options for quick actions

Quick action	Description
Report an Issue	Opens the **Create Incident** catalog item.
Chat	Opens Agent Chat.

Result

Your users can open the quick action by selecting the + icon on the applet launcher page.

Create a quick action in your mobile applications

Provide easy access to an important item by creating a quick action. For example, you can create a quick action that opens a Service Catalog item.

Before you begin

Role required: admin

Procedure

1. Create a function for the quick action.

   a. Navigate to **System Mobile** > **Functions**.
   The Function [sys_sg_button] table opens.

   b. Click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. On the form, fill in the fields.

Button fields form

Field	Description
Name	Name of the function record.
Description	Description to enable other users to easily understand the purpose of the function.
Type	Type of quick action that you want to create. To create a quick action that opens a Service Catalog item, select **URL**. For more information about function types, see Configure a smart button.
Context	Whether the function applies at the record or table level. ▪ Record: Action only applies at the record level. For example, updating a field. ▪ Global: Action that only applies at the table level. For example, creating or deleting a record. For this example, select **Global**.
Link Label	Label for the link. This value does not display in the user interface.
Link URL	Relative URL for the item that you want to open when the user clicks the function. For example, to open a Service Catalog item in the Now Mobile portal, enter `/mesp?id=sc_cat_item&sys_id=060f3afa3731300054b6a3549dbe5d3e`. This field only displays if the **Type** field is **URL**.
Relative URL	Option that is selected to determine whether the URL is relative. For this example, choose **Selected**. This field only displays if the **Type** field is **URL**.
Condition	
Table	Table on which the condition runs.
Condition	Condition that should be met for the action to be successful. For a catalog item, enter `var item = new sn_sc.CatItem('3f1dd0320a0a0b99000a53f7604a2ef9'); answer = item.canView() && item.isVisibleServicePortal();` to display the quick action only when the end user has permissions to view the item.
Roles	Roles that you want to user to have to view the quick action.

2. Add an instance of the function that you created to the page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the native UI, navigate to **Now Mobile App** > **Applet Launchers**.

b. Open the applet launcher record that you would like to add the quick action to.

c. Select the **Body** tab.

d. Insert a new row in the Quick Actions Menu Maps related list.
If you're not able to insert a row, make sure that you're in the **ServiceNow Now Mobile App Screens and Applet Launcher** application scope.

e. Click the magnifying glass to look up an item
The Function Instances [sys_sg_button_instance] table opens.

f. Click **New**.

g. On the form, fill in the fields.

Function instance form

Field	Description
Name	Name of the function instance.
Description	Description to enable other users to easily understand the purpose of the function instance.
Parent	Page on which you are adding the quick action. For example, select **Applet Launcher: Homepage** to add the quick action to the home page. Select a value in the **Parent table** field first.
Application	Application scope.
Parent table	Table that contains the record type where the button appears. For this example, select **applet Launcher [sys_sg_applet_launcher]** to add the quick action to an applet launcher page.
Function	Function record that you created earlier.
Label	Label to help the user understand what the quick action opens. For example, `Report an outage`.
Location	Location where the button appears in the UI. For this example, select **Quick Action**.
Icon	Icon to display next to the label. For more details on mobile icons, see Mobile icons. **Note:** Not all listed icons work with quick actions. To see a list of compatible icons, filter your list where the **Icons** field contains `now-mobile-icons-buttons`. **Note:** The **Icons** field is not on the icon list by default. To add the **Icon** field to your list, right-click the list header and select **Configure** > **List Layout**. Then, add the *Icon* field to the selected list. You should see the icon field on your reference field list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Order	Number that indicates the order that the functions are listed. If there are multiple instances in the same location, the app displays them from the lowest to the highest.

h. Click **Submit**.

i. Save the applet launcher record.

Result

Your users can open the quick action by selecting the + icon on the applet launcher page.

Enable Live Agent in the Now Mobile app

Activate the Chat quick action to allow your users to ask for help from a virtual or live agent from the Now Mobile home page.

Before you begin

Role required: admin
Ensure that the Agent Chat plugin is active. For more information, see Agent Chat.

About this task

Chat is enabled from the Requests and Knowledge Articles pages by default.

Note:
Connect Chat is not supported in the Now Mobile app.

Procedure

1. Navigate to **All** > **Now Mobile App** > **Applet Launchers**.
2. In the Applet Launchers [sys_sg_applet_launcher] table, open the Homepage record and select the **Body** tab.
3. Under the Quick Actions Menu Maps related list, open the Chat record.
4. Select **Active** to activate the record.
5. Click **Update**.

Result

Users can select Chat in the Homepage quick actions menu to ask for help from a live or virtual agent.

Populate search suggestions in the mobile apps

If you are upgrading from a previous release, run a script to populate search suggestions with data from a platform search table to provide search suggestions to your users. Alternatively, you can wait until users search for keywords instead of running this script.

Before you begin

Role required: admin
In new instances, the search suggestions are enabled by default. In upgraded instances, you must enable the search suggestions. For more information, see Enable search suggestions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The ServiceNow AI Platform collects search data and analytics that generate search suggestions. If you are upgrading from a previous release, the search analytics do not contain any data yet. To immediately provide suggestions to your users, you can populate the search suggestions using knowledge, catalog, and user search records from the Text Searches [text_search] table.

Search suggestions improve over time as more people use the app. Search Suggestions is a ServiceNow AI Platform feature. For more information, see Search Suggestions.

Warning:
Populating search suggestions can be a resource-intensive task that may take a while to complete. Do not run this script during peak hours. Populating search suggestions is not supported on domain-separated instances.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. Open the **Populate Suggestions to avoid Cold Start - NowMobile App** scheduled job.
3. Activate the record and select **Execute Now**.
   Running this scheduled job populates the Search Events [sys_search_event], Search Source Events [sys_search_source_event], and Search Suggestions [sys_search_suggestion] tables with records from the Text Searches [text_search] table.

Result

Users see suggestions when they start typing in a search field in the Now Mobile app.

ServiceNow for Microsoft Outlook

The ServiceNow integrations with Microsoft Outlook help you create a better, more connected experience for users. Employees get seamless self-service without having to leave the Outlook client, and agents can resolve cases faster.

ServiceNow for Microsoft Outlook overview

ServiceNow for Microsoft Outlook leverages the Outlook Actionable Messages plugin to provide the following features:

- Employees and agents receive notifications about request submissions, updates, and completion, making it easier to track, plan, and collaborate on issues.
- Managers and approvers receive summaries and detailed reports for approval requests with actionable messages to approve or reject requests.
- Employees can provide feedback about their experience using the feedback card embedded in the emails.
- Employees can take surveys about their experience using the survey card embedded in the emails.

Configuring ServiceNow for Microsoft Outlook

Configure ServiceNow for Microsoft Outlook to provide employees with seamless self-service without leaving the Outlook client.

Configuration overview

The following table lists the tasks required to configure ServiceNow for Microsoft Outlook.

Configuration tasks

Task	Description
Configure system properties to update the survey question limit	Update the question limit for a survey displayed in Microsoft Outlook.

Configure system properties to update the survey question limit

Configure system properties to update the question limit for a survey to be displayed in Microsoft Outlook.

Before you begin

Role required: admin (OR) oam_admin

About this task

The *sn_ms_oam.feedback_survey_question_count* system property controls the behavior of the survey card that is rendered in email messages on Microsoft Outlook. If the number of questions exceeds the value of this property, the survey opens on the portal specified in the *sn_ms_oam.portal.suffix* property.

Procedure

1. Navigate to the **All** menu and enter `sys_properties.list` in the navigation filter.
   The System Properties [sys_properties] table appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. In the **Name** column, search for `sn_ms_oam.feedback_survey_question_count`.
3. Select the *sn_ms_oam.feedback_survey_question_count* property.
4. Update the **Value** field with the number that you want to set as the survey question limit. The default value of the property is **2**.
5. Select **Update**.

Using ServiceNow for Microsoft Outlook

Use the ServiceNow integration with Microsoft Outlook to view reports, approve requests, and provide feedback from within email messages.

Concur expense reports

View Concur expense reports from approval notifications in email messages. Approve or reject expense reports without leaving the Microsoft Outlook application.

Feedback and surveys

Submit feedback or take a survey about your experience by using actionable cards embedded in email notifications.

Manage approvals from a Microsoft Outlook email

Approve or reject Concur expense reports from a Microsoft Outlook email message.

Before you begin

The Approvals hub integration with SAP Concur (sn_ex_cnc) plugin must be installed.

Role required: approver_user

Procedure

1. Launch the Microsoft Outlook application.
2. Open the Concur Pending Approval Report email message.
3. **Optional:** View expenses and receipt items by selecting **Expenses and receipts**. A maximum of 12 expense items are displayed in the report. To view all items, select **View full report**.
4. Approve or reject the report.

> **Note:**
> You cannot accept or reject a report if the assigned approver has been modified or the report has been updated or closed.

Submit feedback from a Microsoft Outlook email message

Submit feedback about a service request or your experience using the feedback card in a Microsoft Outlook email message.

Before you begin

To enable the feedback card, the `include_feedback_actionable` script must be added to the email notification and a feedback definition must be created for the required workflow.

For information about experience feedback, see Integrated experience and service feedback.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The feedback card only appears at the top of the email message.

Role required: None

Procedure

1. Launch the Microsoft Outlook application.
2. Open an email message and select **Give Feedback**.
3. On the feedback card, select a rating based on your experience.
4. **Optional:** Enter additional feedback in the text box.
5. **Optional:** Make the feedback anonymous by selecting **Do not share my personal info**.
6. Select **Submit**.

Submit a survey from an email message

Submit a survey about your experience using the feedback card in a Microsoft Outlook email message.

Before you begin

To enable a survey in the email channel, the email notification and the survey must be selected in the feedback definition for the required workflow.

For information about experience feedback, see Integrated experience and service feedback.

Note:
The survey card only appears at the top of the email message.

Role required: None

Procedure

1. Launch the Microsoft Outlook application.
2. Open an email message and select **Get Started**.

   Note:
   Surveys that are longer than the limit set by the admin are opened on the portal specified by the admin.

3. On the actionable card, enter text or select appropriate options based on the survey questions.
4. Select **Submit**.

ServiceNow for Microsoft Outlook reference

Reference topics provide additional information about the lists and forms that you use to configure ServiceNow for Microsoft Outlook.

Properties installed with ServiceNow for Microsoft Outlook

The following properties are installed with the Outlook Actionable Messages plugin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The following properties are located in the System Properties [sys_properties] table. To access the table, enter `sys_properties.list` in the navigation filter.

Properties for ServiceNow for Microsoft Outlook

Property	Description
sn_ms_oam.feedback_survey_question_count	Use this property to set a limit for the number of questions to be displayed on a survey card. If the number of questions exceeds this value, the survey opens in the portal specified by the *sn_ms_oam.portal.suffix* property. • Type: integer • Default value: 2
sn_ms_oam.portal.suffix	Use this property to set the portal in which the survey opens if the questions exceed the value of the *sn_ms_oam.feedback_survey_question_count* property. You must enter the URL suffix of the portal that you want to use. • Type: string • Default value: esc

Outlook Actionable Messages compatibility for surveys

Survey definitions must be compatible with Outlook Actionable Messages (OAM) to display surveys in the Microsoft Outlook application.

Conditions for OAM compatibility

The survey definition must meet the following conditions to be compatible with OAM.

- Outlook Actionable Messages must be selected in the survey definition. For more information, see Modify a survey definition.
- The survey must be active and published.
- The survey must not contain image scale questions with other question types. For more information, see Survey question data types.
- The survey can only contain one image scale question.

Note:
If the survey contains more questions than the value of the *sn_ms_oam.feedback_survey_question_count* system property, the survey opens on the portal specified in the *sn_ms_oam.portal.suffix* property. For more information, see Configure system properties to update the survey question limit.

ServiceNow Add-in for Microsoft 365

Create an add-in with customized office controls and quick links for employees. Increase efficiency by allowing employees to submit requests directly from their Microsoft 365 applications.

What to explore next

To learn more about configuring and using ServiceNow Add-in for Microsoft 365, see:

- Configuring ServiceNow Add-in for Microsoft 365
- Using ServiceNow Add-in for Microsoft 365
- ServiceNow Add-in for Microsoft 365 reference

Configuring ServiceNow Add-in for Microsoft 365

Configure the ServiceNow Add-in for Microsoft 365 and map the email fields to catalog items or forms.

Configuration overview

Note:

- The add-in can be used in Microsoft 365 applications, but field mapping is only available for emails and can only be used in Microsoft Outlook.
- ServiceNow Add-in for Microsoft 365 is only supported for Microsoft Outlook 2019 or later versions.
- Actions that require the *admin* role, can also be performed with the *sn_outlook_addin.outlook_addin_setup* role.

Install the ServiceNow Add-in for Microsoft 365

You can install the ServiceNow Add-in for Microsoft 365 application (sn_outlook_addin) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the ServiceNow Add-in for Microsoft 365 application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with ServiceNow Add-in for Microsoft 365:

- Plugins
- Store applications
- Roles
- Scheduled jobs
- Tables

For more information, see Components installed with ServiceNow Add-in for Microsoft 365.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the ServiceNow Add-in for Microsoft 365 application (sn_outlook_addin) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Create a manifest file

Create and download a manifest file with the configurations that you want to enable for the ServiceNow Add-in for Microsoft 365.

Before you begin

Role required: sn_outlook_addin.outlook_addin_setup, sn_hr_sp.admin, sn_hr_sp.esc_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **ServiceNow Add-Ins for Office** > **Office Add-In Manifests**.
2. On the Office Manifests list, select **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Office Manifest form.

   You can also configure single sign-on (SSO) for your add-in. For more information, see Configure single sign-on for ServiceNow Add-in for Microsoft 365.
4. Save the record.
5. On the Office Control related list, select **New**.
6. On the form, fill in the fields.
   For a description of the field values, see Office Control form.

   Note:
   For Office Controls of the type Menu, you can create menu items by using the related list in the Office Control record.

7. **Optional:** On the Office Controls related list, set the Order and Domain for the records.
8. On the Office Manifest record, select **Activate**.
   This step is applicable if you did not select the **Active** field while creating the record.

Result

The manifest is configured and activated for the ServiceNow Add-in for Microsoft 365. You can download the manifest file by selecting **Download Manifest** on the Office Manifest record.

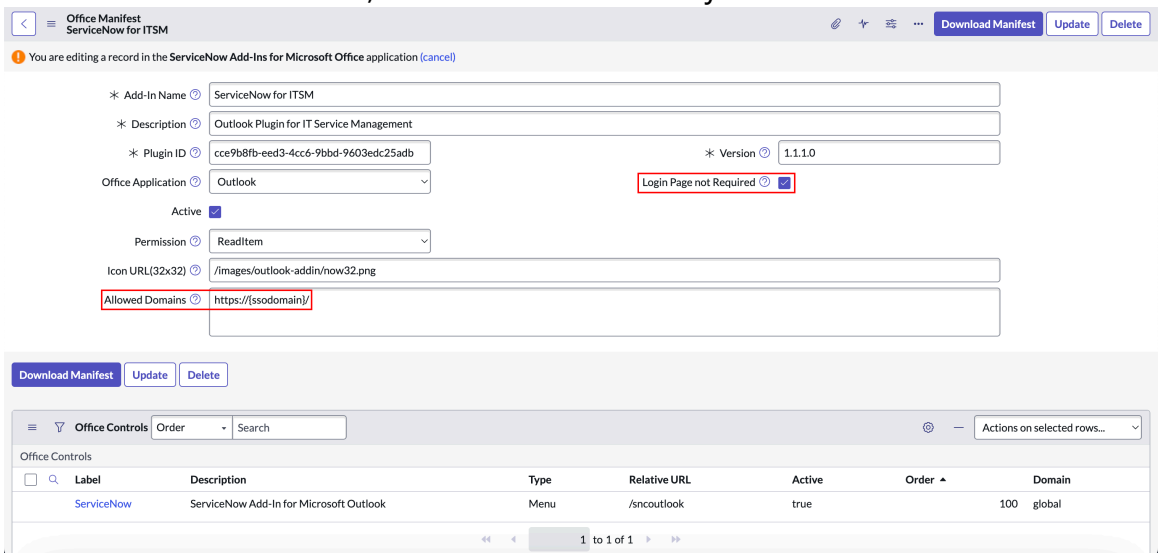
What to do next

- Configure single sign-on for ServiceNow Add-in for Microsoft 365
- Upload a manifest to the Microsoft admin center

Configure single sign-on for ServiceNow Add-in for Microsoft 365

Configure single sign-on (SSO) for your add-in so users don't have to sign-in to Employee Center.

Before you begin



Role required: sn_outlook_addin.outlook_addin_setup, sn_hr_sp.admin, sn_hr_sp.esc_admin

Procedure

1. Navigate to **All** > **ServiceNow Add-Ins for Office** > **Office Add-In Manifests**.
2. From the Office Manifests list, select the manifest that you want to configure.
3. On the Office Manifest form, select **Login Page not Required**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the **Allowed Domains** field, enter the SSO domain for your add-in.

Upload a manifest to the Microsoft admin center

Upload the manifest file to the Microsoft admin center to enable the add-in for all employees.

Before you begin

Ensure that you have downloaded a manifest file for the add-in. For more information, see Create a manifest file.

Role required: Microsoft Admin

Procedure

1. Log in to the Microsoft admin center.
2. Navigate to **Settings** > **Integrated apps**.
3. On the Integrated apps page, select the **Add-ins** link.
4. On the Add-ins page, select **Deploy Add-In**.
5. Select **Next**, then select **Upload custom apps**.
6. Select **I have the manifest file (.xml) on this device**, then select **Choose file**.
7. Select the manifest file that you created for the add-in.
8. On the Deploy a new add-in page, select **Upload**.
9. Deploy the add-in from the admin center.
   For more information about deploying add-ins, see Deploy an Office Add-in using the admin center in the Microsoft documentation.

Map email fields to a catalog item

Map email fields to catalog item fields to pre-fill information and reduce the time taken to raise a request.

Before you begin

Role required: sn_outlook_addin.outlook_addin_setup, sn_hr_sp.admin, sn_hr_sp.esc_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **ServiceNow Add-Ins for Office** > **Catalog Mapping Configurations**.
2. On the Catalog Mapping Configurations list, select **New**.
3. On the Catalog Mapping Configurations form, fill in the fields.

   For a description of the field values, see Catalog Mapping Configurations form.

   Note:
   The fields from Microsoft Outlook are based on the Extension Point Type selected in the manifest file. Ensure that the catalog item matches the catalog item in the office controls of the add-in manifest. For more information about the manifest, see Create a manifest file.

4. Save the form.
   A Catalog Mapping Configuration record is created. You can add Office Mailbox to Catalog Field Mapping records to map individual fields.
5. In the Office Mailbox to Catalog Field Mappings related list, select **New**.
6. On the Office Mailbox to Catalog Field Mappings form, fill in the fields.
   For a description of the field values, see Office Mailbox to Catalog Field Mappings form.
7. Save the form.
   An Office Mailbox to Catalog Field Mappings record is created. You can create more records to map fields based on your requirement.

Map email fields to a form

Map email fields to form fields to pre-fill information and reduce the time taken to submit an incident or a case.

Before you begin

Role required: sn_outlook_addin.outlook_addin_setup, sn_hr_sp.admin, sn_hr_sp.esc_admin

Procedure

1. Navigate to **All** > **ServiceNow Add-Ins for Office** > **Form Mapping Configurations**.
2. On the Form Mapping Configurations list, select **New**.
3. On the Form Mappings Configurations form, fill in the fields.

   For a description of the field values, see Form Mapping Configurations form.

   Note:
   The fields from Microsoft Outlook are based on the Extension Point Type selected in the manifest file. Ensure that the table matches the table in the office controls of the add-in manifest. For more information about the manifest, see Create a manifest file.

4. Save the form.
   A Form Mapping Configuration record is created. You can add Office Mailbox to Catalog Field Mapping records to map individual fields.
5. In the Office Mailbox to Form Field Mappings related list, select **New**.
6. On the Office Mailbox to Form Field Mappings form, fill in the fields.
   For a description of the field values, see Office Mailbox to Form Field Mappings form.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Save the form.
   An Office Mailbox to Form Field Mappings record is created. You can create more records to map fields based on your requirement.

Using ServiceNow Add-in for Microsoft 365

Use the ServiceNow Add-in for Microsoft 365 to request catalog items or create incidents and cases directly from your emails.

Get a custom add-in for Microsoft Outlook

Get the custom add-in for your Microsoft Outlook client to use the features configured by your admin.

Before you begin

The add-in is available only if the admin has deployed the add-in in the Microsoft admin center.

> **Important:**
> ServiceNow Add-in for Microsoft 365 is only supported for Microsoft Outlook 2019 or later versions.

Role required: None

Procedure

1. Log in to the Microsoft Outlook client.
2. From the Tools menu, select **Get Add-ins**.
3. In the Office Add-ins window, select **Admin-managed**.
4. Search for the add-in deployed by your admin, then select **Add**.

   Example
   For example, search for ServiceNow Add-in for Microsoft 365, then select **Add**.

Result

The custom add-in is added to your Microsoft Outlook client. You can use it to request catalog items or open incidents and cases based on your emails.

Raise a request using the ServiceNow Add-in for Microsoft 365

Open a relevant catalog item or form to raise a request with pre-filled information from your email.

Before you begin

The following procedure is for raising a request from Microsoft Outlook. You can use the add-in to raise a request from any Microsoft 365 app that is selected by the admin.

Role required: None

Procedure

1. Launch the Microsoft Outlook application.
2. Select the email that you want to use to raise a request.
3. Select the add-in, then select the button or menu item for your request.

   Example
   For example, select the ServiceNow Add-in for Microsoft 365, then select **Create incident**.
   You might have to login to the Employee Center with your ServiceNow credentials.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Office Control form

The Office Control form helps you create a button, menu, or menu item for the ServiceNow Add-in for Microsoft 365.

Office Control form

Field	Description
Label	Label of the office control that is displayed on the add-in.
Description	Description of the office control displayed on the add-in.
Type	Type of office control that you want to create.
Action	Action taken when the office control is selected. This field is available only when **Button** or **MenuItem** is selected in the **Type** field.
Relative URL	Relative URL that opens when the user selects the office control. This field is available only when **Open URL** is selected in the **Action** field.
Catalog	Catalog that opens when the user selects the office control. This field is available only when **Open Catalog** is selected in the **Action** field.
Table	Table for the new record that is created when the user submits a form. This field is available only when **Open Form** is selected in the **Action** field.
Parent Control	Parent menu that you want to add the item to. This field is available only when **MenuItem** is selected in the **Type** field.
Manifest	Manifest record that the office control is linked to.
Active	Option to activate the record.
Extension Point Type	Extension point for the office control. This field is available only when **Button** or **Menu** is selected in the **Type** field. **Note:** Menu items will have the same extension point as the parent menu record. This field has the following options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Office Control form (continued)

Field	Description
	• MessageReadCommandSurface: Adds a button in the mail read view • MessageComposeCommandSurface: Adds a button in the mail compose form • AppointmentOrganizerCommandSurface: Adds a button on the ribbon for the meeting organizer • AppointmentAttendeeCommandSurface: Adds a button on the ribbon for the meeting attendee • PrimaryCommandSurface: Adds a tab to the ribbon in the Office app. This option is available only when the manifest is created for Microsoft Word or Microsoft PowerPoint For more information about extension points, see ExtensionPoint element in the Microsoft documentation.
Icons	Section that requires HTTPS or relative URLs for the office control icons.

Catalog Mapping Configurations form

The Catalog Mapping Configurations form helps you customize mapping of emails and catalog items.

Catalog Mapping Configurations form

Field	Description
Catalog item	Catalog item that you want to map the email fields to.
Application	Application scope of the mapping configuration. This field is automatically set to the application scope of your instance.
Domain	Domain that you want to create the mapping configuration in.
UI script parser	UI script that contains custom logic for the mapping configuration.
Active	Option to activate the mapping configuration record.

Form Mapping Configurations form

The Form Mapping Configurations form helps you customize mapping of emails and forms.

For upgrading existing Microsoft Teams capabilities to Microsoft 365 applications, see Integrating ServiceNow with Microsoft 365 applications for Employee Experience.

ServiceNow for Microsoft Teams integrations

ServiceNow for Microsoft Teams integration features are as follows:

- Allows agents and employees to collaborate to resolve a ticket.
- Enables agents to initiate a Microsoft Teams chat with an employee from a task record.
- Enables agents to import the Microsoft Teams chat transcript back to the task record as a comment.
- Enables employees with specific permissions to view Microsoft Teams chat from a task record.

Explore Microsoft Teams and Microsoft 365 integration for Employee Experience

Offers help for employees to resolve their IT, HR, and UR related issues through Microsoft Teams or Microsoft 365. Employees can interact with the agents from within Microsoft Teams or Microsoft 365 to resolve their issues.

Important:

- From IT Service Management for Microsoft 365 (version 2.6.7), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.
- From HR Service Delivery for Microsoft 365 (version 3.3.6), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.

For upgrading existing Microsoft Teams capabilities to Microsoft 365 applications, see Integrating ServiceNow with Microsoft 365 applications for Employee Experience.

IT Service Management integration with Microsoft Teams and Microsoft 365

IT Service Management integration with Microsoft Teams extends the Now Virtual Agent integration with Microsoft Teams to enable employees to more effectively request and receive service from within Microsoft Teams.

Functionalities of the IT Service Management integration with Microsoft Teams

The IT Service Management integration with Microsoft Teams application includes the following additional capabilities:

- Actionable notifications: For approval and comments on tickets. Users can reply on the notifications from within Microsoft Teams.
  - Approval – for Request (single Requested Item), Change Request
  - Ticket comments: Employees are able to respond to notifications on the tickets from within Microsoft Teams: Incident, Requested Item, and Change Request.
- Agents can initiate a Microsoft Teams chat with an employee from an incident, change request, or request item. Agents can then copy the chat transcript back to the ticket as a comment.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Additional informational notifications for:
  - Incident: Resolved, Updated
  - Requested Item: Completed, Approved, Rejected, Updated
  - Approval (for all approvals other than Request (with a single requested item), and Change Request)

Note:
Approvals with e-Signature are not yet supported for IT Service Management integration with Microsoft Teams.

Feature mapping

Feature	License Requirements
Actionable Notifications	ITSM Pro
Chat - Agent to Employee/Agent to Agent	ITSM Standard or above
Employee Center	ITSM Standard or above

Using the IT Service Management integration with Microsoft Teams

You must perform the following activities to integrate IT Service Management with Microsoft Teams in your ServiceNow instance:

1. Install IT Service Management integration with Microsoft Teams application
2. Setting up the ServiceNow instance for Microsoft Teams integration

To configure the IT Service Management integration with Microsoft Teams in your ServiceNow instance, see Configure IT Service Management integration with Microsoft Teams.

To manage the IT Service Management integration with Microsoft Teams in your ServiceNow instance, see Customize IT Service Management integration with ServiceNow.

To use the IT Service Management integration with Microsoft Teams in your ServiceNow instance, see Use ITSM and HRSD integrations with Microsoft Teams.

HR Service Delivery integration with Microsoft Teams and Microsoft 365

HR Service Delivery integration with Microsoft Teams extends the Now Virtual Agent integration with Microsoft Teams to enable employees to more effectively request and receive service from within Microsoft Teams.

The HR Service Delivery integration with Microsoft Teams application extends the Now Virtual Agent integration and includes the following additional capabilities:

- Actionable notifications – for approval and comments on tickets. Users can take action on the notifications from within Microsoft Teams.

  Ticket comments: Employees are able to respond to notifications on the tickets from within Microsoft Teams.

  This `respond_to_comment_notification_inclusion_list_for_hr` property specifies the HR tables for which the **Respond to Comments** notification triggers. <HR services>

- sn_hr_core_case_total_rewards
- sn_hr_core_case_global_mobility
- sn_hr_core_case_operations
- sn_hr_core_case_performance
- sn_hr_core_case_benefits
- sn_hr_core_case_workforce_admin
- sn_hr_core_case_talent_management
- sn_hr_core_case_corporate_communication
- sn_hr_core_case_payroll,
- sn_hr_core_case_compensation.

- Provides agents the ability to initiate a Microsoft Teams chat with an employee from an HR case and then to copy the chat transcript back to the ticket as a comment.
  - sn_now_teams_hr.chat_sn_hr_core_case_fields

    This system property contains the list of HR Case table fields that will be shown as recommended participants for "Start Chat" feature. By default, the recommended participants contain the participants comprising of "opened_for", "subject_person", "collaborators" fields.

  - sn_now_teams_hr.chat_sn_hr_core_task_fields

    This system property contains the list of HR Task table fields that will be shown as recommended participants for "Start Chat" feature. By default, the recommended participants contain the participant defined in "assigned_to" field.

  - sn_now_teams_hr.hr_case_allow_list_for_teams_chat_actions

    This system property contains the list of HR Case tables for which "Start Chat" and "Import Messages" UI Action. By default, this list does not include highly sensitive HR Cases such as "Employee Relations", "Investigation", and "Ethics" cases.

  - sn_now_teams_hr.respond_to_comment_notification_inclusion_list_for_hr

    This system property contains the list of HR Case tables for which "Respond to Comment" actionable notifications will be sent. By default, this list does not include highly sensitive HR Cases such as "Employee Relations", "Investigation", and "Ethics" cases.

Note:
Approvals for HR cases and Approvals with e-Signature are not yet supported for HR Service Delivery with Microsoft Teams.

Feature mapping

Feature	License Requirements
Actionable Notifications	HR Pro or above
Chat - Agent to Employee/Agent to Agent	HR Pro or above
Employee Center	HR Standard or above

You must perform the following activities to integrate HR Service Delivery with Microsoft Teams in ServiceNow instance:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Install HR Service Delivery integration with Microsoft Teams application
2. Setting up the ServiceNow instance for Microsoft Teams integration

To configure HR Service Delivery integration with Microsoft Teams in ServiceNow instance, see Configure HR Service Delivery integration with Microsoft Teams.

To manage HR Service Delivery integration with Microsoft Teams in ServiceNow instance, see Customize HR Service Delivery integration with Microsoft Teams.

To use HR Service Delivery integration with Microsoft Teams in ServiceNow instance, see Use ITSM and HRSD integrations with Microsoft Teams.

Universal Request integration with Microsoft Teams

The ServiceNow® Universal Request integration with Microsoft Teams application extends the ServiceNow integration with Microsoft Teams. You can enable employees to more effectively request and receive service from within Microsoft Teams by using this application.

The Universal Request integration with Microsoft Teams includes the following capabilities:

- Agents and Employees can collaborate and discuss a universal request through Microsoft Teams.
- Agents can save the conversations in the activity stream of the related universal request as Additional comments or Worknotes.
- Employees can create universal requests through Microsoft Teams.
- Employees can track, update, or cancel their universal requests through Microsoft Teams.

The Universal Request integration with Microsoft Teams is available with the Universal Request Pro application.

For Universal Request integration with Microsoft Teams in ServiceNow instance, see Integrating ServiceNow with Microsoft Teams and Microsoft 365.

To configure Universal Request integration with Microsoft Teams in ServiceNow instance, see Configure Universal Request integration with Microsoft Teams.

To manage Universal Request integration with Microsoft Teams in ServiceNow instance, see Customize UI actions for Universal Request integration with Microsoft Teams.

To use Universal Request integration with Microsoft Teams in ServiceNow instance, see Use Microsoft Teams for Universal Request.

Explore Microsoft Teams integration for Agent Experience

Allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Microsoft Teams.

Notify connector for Microsoft Teams

Notify connector for Microsoft Teams enables you to manage and initiate a Microsoft Teams meeting directly from any record such as an incident, or a task.

Key Features

- Start and end Microsoft Teams meetings directly from any record such as an incident or a task or from the major incident workbench.
- Manage a Microsoft Teams meeting by adding or removing participants.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

System Requirements

Install the ServiceNow IntegrationHub Installer (com.glide.hub.integrations) plugin to design the integration flows in the Flow Designer application. For more information, see Request IntegrationHub.

Next procedures

You must perform the following activities to integrate Notify connector for Microsoft Teams with ServiceNow:

1. Install Notify connector for Microsoft Teams
2. Setting up the ServiceNow instance for Microsoft Teams integration
   - Integrate Notify connector pre-published app with Microsoft Teams
   - Integrating Notify connector self-configured app with Microsoft Teams

To allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Microsoft Teams, see Configure Notify connector for Microsoft Teams.

To use Notify connector for Microsoft Teams in ServiceNow instance, see Use Notify connector for Microsoft Teams.

Meeting Extensions for Microsoft Teams

The Meeting extensions for Microsoft Teams enables the major incident manager, and the participants to view the communication tasks from within Microsoft Teams during an active conference call.

The meeting extensions feature displays the incident details and the communication tasks from the major incident workbench.

The data on the **Incident details** tab and **Communication tasks** tab is updated automatically whenever the major incident is updated in ServiceNow®.

Next procedures

You must perform the following activities to integrate Meeting Extensions app in ServiceNow instance:

1. Ensure you have completed Notify connector for Microsoft Teams related procedures. For more information, see Notify connector for Microsoft Teams.
2. Install Meeting Extensions for Microsoft Teams
3. Setting up the ServiceNow instance for Microsoft Teams integration
   - Integrate Meeting Extensions pre-published app with Microsoft Teams
   - Integrate Meeting Extensions self-configured app with Microsoft Teams

To use Meeting Extensions for Microsoft Teams with ServiceNow, see Use Microsoft Teams Meeting Extensions.

Configure integrations for Microsoft Teams and Microsoft 365

Integrate Servicenow with MS teams and Microsoft 365, with MS teams for GCC-H or DoD and with Microsoft 365 for employee experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Actions that require the *admin* role, can also be performed with the *sn_now_teams.admin* role.

Integrating ServiceNow with Microsoft Teams and Microsoft 365

Set up your ServiceNow instance to integrate Microsoft Teams or Microsoft 365 applications.

Important:

- From IT Service Management for Microsoft 365 (version 2.6.7), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.
- From HR Service Delivery for Microsoft 365 (version 3.3.6), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.

For upgrading existing Microsoft Teams capabilities to Microsoft 365 applications, see Integrating ServiceNow with Microsoft 365 applications for Employee Experience.

To connect your ServiceNow instance to your Microsoft Office 365 tenant and to authorize applications, you must have both the external_app_install_admin role and the application administrator role in Microsoft Office 365. For more information on Microsoft roles, see the Microsoft documentation on Azure AD built-in roles.

Azure Active Directory (Azure AD) organizes objects like users and apps into groups called tenants.

Self-configured apps (previously referred to as single-tenant) are available only in the tenant they were registered in, also known as their home tenant. Here, a single Microsoft Teams tenant is connected to multiple ServiceNow instances.

Pre-published apps (previously referred to as multi-tenant) are available to users in both their home tenants and other tenants. Here, a single Microsoft Teams tenant is connected to a single ServiceNow instance.

Choose between a self-configured app and a pre-published app configuration

Pre-published app	Self-configured app
• The relevant *Microsoft Azure* app is provided by *ServiceNow* so you don't need to create your own. No need to create an app in the *Microsoft Azure* portal. Moderate *Microsoft Azure* expertise is required. • Once the administrator consents, *ServiceNow* automatically updates the *Microsoft Azure* app.	• You must create your own app in the *Microsoft Azure* portal. Requires proficiency in *Microsoft Azure* portal. • Own and control the *Microsoft Azure* app.

When you consent to the app to use the required permissions, a Service Principal (SP) is created representing the *Microsoft Azure* app. For more information about the admin consent, see Understand user and admin consent.

In a self-configured app configuration, you must create an app in *Microsoft Azure* portal and use the app ID and the client ID values to connect to your *ServiceNow* instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When to use Pre-published app or Self-configured app configuration

Use the self-configured app or pre-published app configuration based on the following conditions:

- In case of a single Microsoft tenant to multiple ServiceNow® instances integration, use the self-configured configuration setup.
- In case of a single Microsoft tenant to single ServiceNow® instance integration, it is recommend to use the pre-published configuration setup. However, you can still use the self-configured configuration setup.
- In case of a single ServiceNow® instance to multiple Microsoft tenant integration, use the Self-configured configuration setup.

Plan your installation

Identify the need and plan your installation for ServiceNow® for Microsoft Teams.

Install IT Service Management integration with Microsoft Teams application

Install the IT Service Management integration with Microsoft Teams application for the collaboration between the agents and employees.

Before you begin

Role required: admin

Note:
If you install IT Service Management integration with Microsoft Teams app, you don't need to download Conversational Integration with Microsoft Teams separately.

Procedure

1. Navigate to **System Application** > **All Available Applications** > **All**.
2. In the search field, enter `IT Service Management for Microsoft 365`.
   You can search for the application by its name or ID. If you cannot find an application, visit the ServiceNow app store to view IT Service Management for Microsoft 365. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install** button.

   Note:
   All the dependent plug-ins are automatically installed in this process.

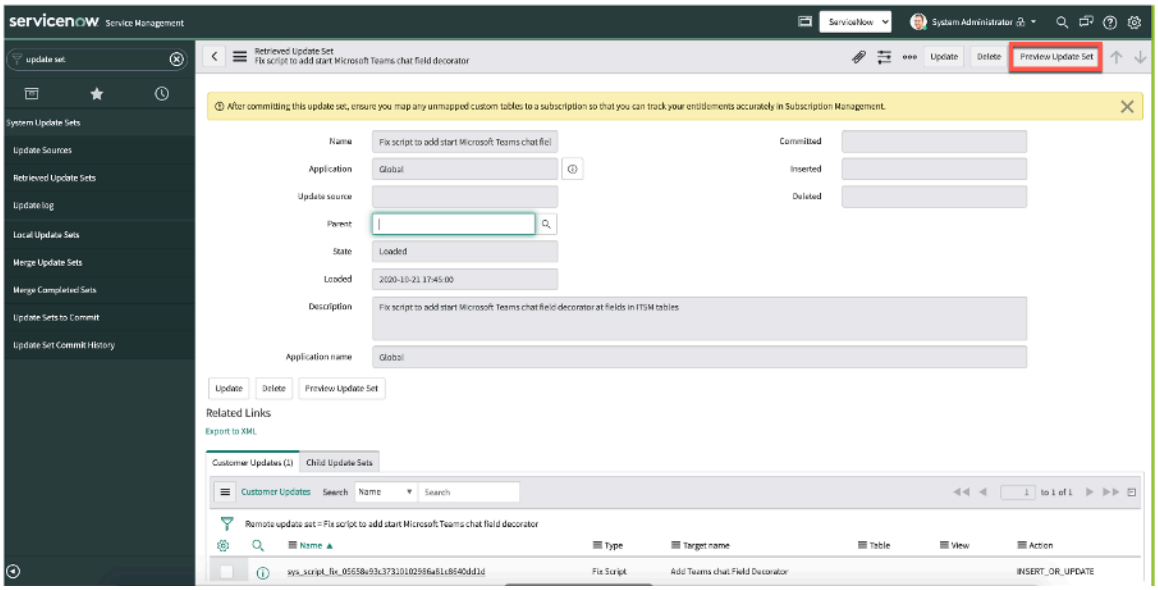
   You must also install the *fix_script_start_chat_field_decorator_IT* update set to have a field decorator in a ticket to initiate a chat with the requester.

4. Download the *fix_script_start_chat_field_decorator_IT* update set from the app store.

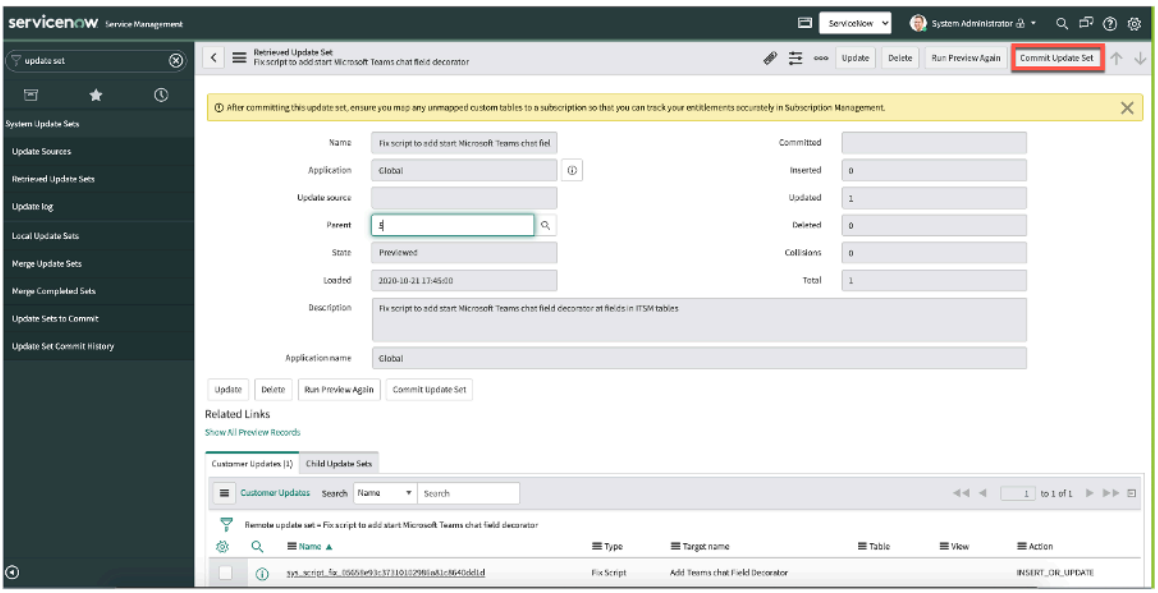
   If you can't find the fix script, click **Show more** to view the list of supporting links and docs.

   Click *fix_script_start_chat_field_decorator_IT* to download the XML file.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

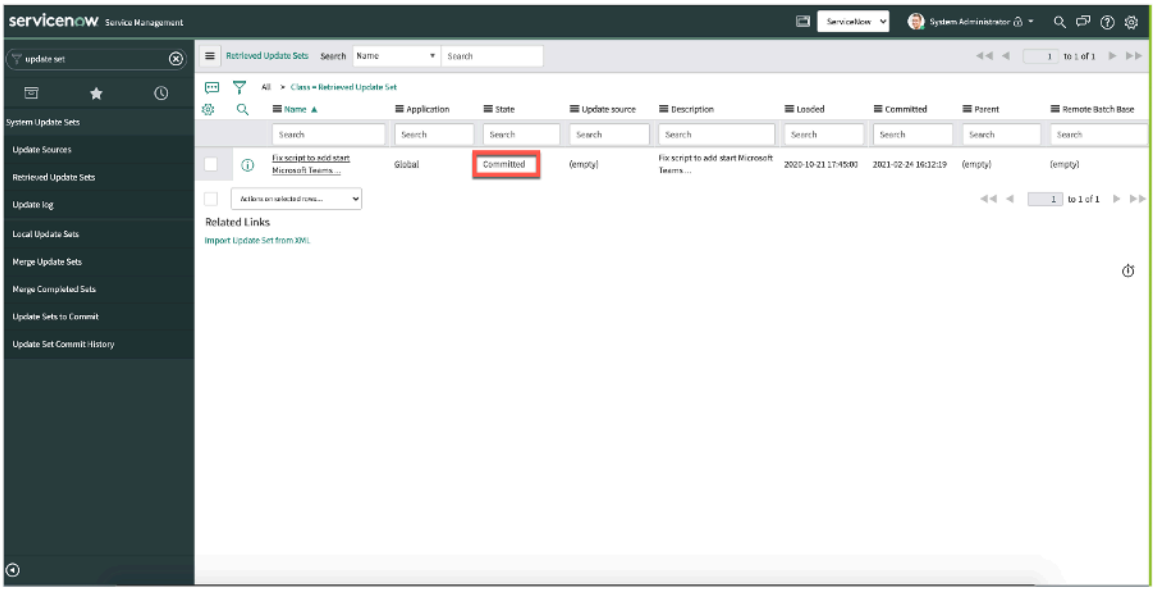


5. Navigate to **All** > **System Update Sets** > **Retrieved Update Sets** > **Related Links** > **Import Update Set from XML**.



6. In the XML file field, click **Choose file** button and select *fix_script_start_chat_field_decorator_IT* XML file and upload the XML file.
7. Click **Fix script to add start Microsoft Teams chat field decorator**.
8. Click **Preview Update Set**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



9. Click **Commit Update Set**.

The Fix script to add start Microsoft Teams chat field decorator will be in Committed state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. Navigate to **System Definition** > **Fix Scripts**.
11. In the **Name** search field, enter `Add Teams chat Field Decorator`.
12. Click **Add Teams chat Field Decorator** fix script.
13. Click **Run Fix Script** button.

The  icon is displayed as a field decorator in a record.

Install HR Service Delivery integration with Microsoft Teams application

Install the HR Service Delivery integration with Microsoft Teams application to integrate with ServiceNow instance for the collaboration between the agents and employees.

Before you begin

Role required: admin

Note:
If you install HR Service Delivery integration with Microsoft Teams app, you don't need to download Conversational Integration with Microsoft Teams separately.

Procedure

1. Navigate to **System Application** > **All Available Applications** > **All**.
2. In the search field, enter HR `Service Delivery for Microsoft 365`.
   You can search for the application by its name or ID. If you cannot find an application, visit the ServiceNow app store to view HR Service Delivery for Microsoft 365. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.

Note:
All the dependent plug-ins are automatically installed in this process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

You must also install the following update sets from the app store for HR Service Delivery for Microsoft 365:

- human_resources_integrations_rca_records
- human_resources_service_portal_rca_records
- human_resources_lifecycle_events_rca_records
- human_resources_core_rca_records
- content_automation_rca_records
- document_templates_rca_records.xml
- fix_script_start_chat_field_decorator_HR

All the Restricted Caller Access(RCA) privileges are displayed in **Application Restricted Caller Access Privileges** list.

Download and execute the *fix_script_start_chat_field_decorator_HR* to display the field decorator in the ticket to initiate a chat with the requester.

Verify Application Restricted Caller Access (RCA) Privileges

Verify that there are no duplicate entries in the Restricted Caller Access (RCA) records before uploading an RCA data set to fix the configuration issues.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **Application Restricted Caller Access Privileges**.
2. In the **Source Scope** search, enter: `ServiceNow for Microsoft Teams`.
3. Right-click on **Source Scope** column header, and select **Group By Source Scope**.
4. Expand **ServiceNow for Microsoft Teams**, and **Collaboration Services** source scopes.
5. Delete all the entries under **ServiceNow for Microsoft Teams**, and **Collaboration Services** source scopes.

Import Update set from XML and install fix script

Import update set from XML to provide cross-scope access to HR Service Delivery applications and run fix script to display field decorator in the ticket.

Before you begin

Role required: admin

About this task

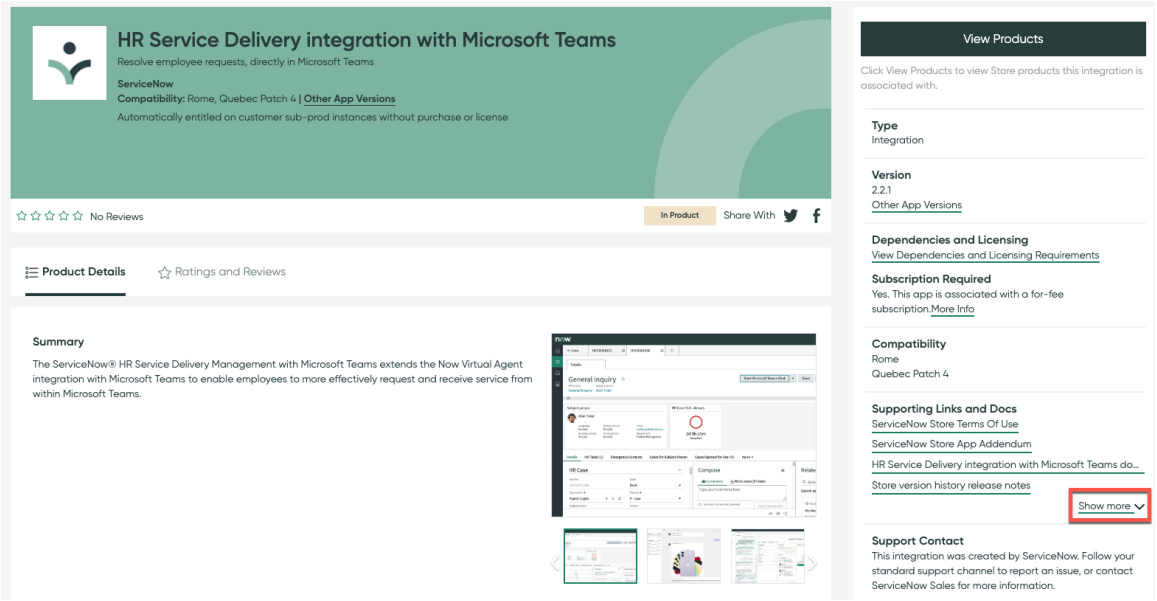
Following table depicts the RCA record mapping to its feature.

RCA record mapping

RCA Record	Plugin	Plugin Name
content_automation_rca_records.xml	{Content Automation}	[com.sn_content_automation]
document_templates_rca_records.xml	{Document Templates}	[com.snc.document_templates]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

RCA record mapping (continued)



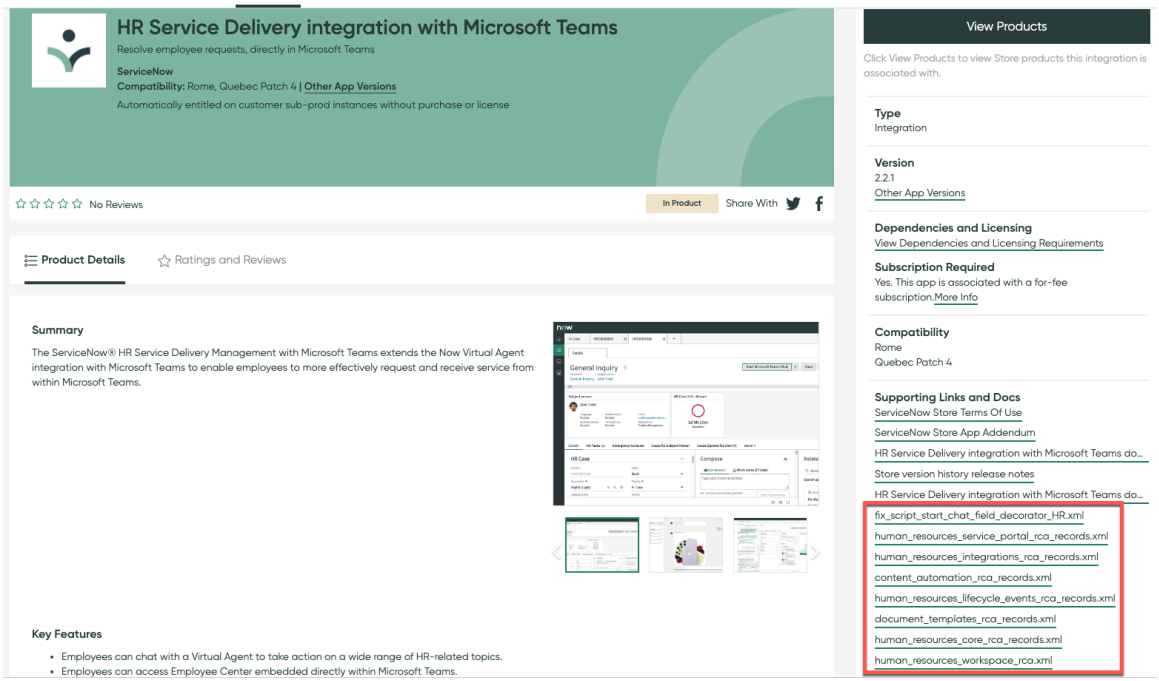
RCA Record	Plugin	Plugin Name
human_resources_core_rca_records.xml	{Human Resources Scoped App: Core}	[com.sn_hr_core]
human_resources_integrations_rca_records.xml	{Human Resources Scoped App: Integrations}	[com.sn_hr_integrations]
human_resources_lifecycle_events_rca_records.xml	{Human Resources Scoped App: Lifecycle Events}	[com.sn_hr_lifecycle_events]
human_resources_service_portal_rca_records.xml	{Employee Center}	[com.sn_hr_service_portal]
human_resources_workspace_rca.xml	{Human Resources Scoped App: Workspace}	[com.sn_hr_agent_workspace]

For more information about the Update sets, see Update set transfers.

Procedure

1. Download the update sets from the app store for HR Service Delivery integration with Microsoft Teams.

   If you can't find the XML files, click **Show more** to view the list of supporting links and docs.



2. Click each of the XML files to download on to your computer.

   - human_resources_integrations_rca_records
   - human_resources_service_portal_rca_records
   - human_resources_lifecycle_events_rca_records
   - human_resources_core_rca_records
   - content_automation_rca_records
   - document_templates_rca_records.xml

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- fix_script_start_chat_field_decorator_HR
- human_resources_workspace_rca.xml

3. Navigate to upload XML files.
   - Navigate to **All** > **System Update Sets** > **Local Update Sets** for the RCA script XML uploads.
   - Navigate to **All** > **System Update Sets** > **Retrieved Update Sets** for the fix script XML upload.
4. Right-click on the **Name** column header and select **Import XML** menu.
5. Select **Browse** on the Import XML form and select the update set XML file.
6. Select **Upload**.
7. Select the XML file by its name on the Retrieved Update Sets form for RCA script type and Local Update Sets form for fix script type.
8. Select **Preview Update Set**.
9. Select **Commit Update Set**.

   The XML scripts will be in Committed state.

Result
The RCA and fix script XMLs are uploaded.

Install Fix Script for HR Service Delivery integration with Microsoft Teams

Run the *fix_script_start_chat_field_decorator_HR* in the ServiceNow instance to display **Start Microsoft Teams chat** field decorator in the ticket to initiate a chat with the requester.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **System Definition** > **Fix Scripts**.
2. Enter `Add Teams chat Field Decorator` in the **Name** column search.
3. Select **Add Teams chat Field Decorator** fix script.
4. Select **Active** check box.
5. Select **Run Fix Script**.

The  icon is displayed as a field decorator in a record.

Install Universal Request integration with Microsoft Teams application

Install the Universal Request integration with Microsoft Teams application (sn_uni_req_msteams). You can initiate Microsoft Teams conversations within your ServiceNow instance by using this application. The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Universal Request integration with Microsoft Teams requires the following plugin. Ensure that the plugin is activated before you install Universal Request integration with Microsoft Teams.

  Required ServiceNow plugins

  Universal Request: Virtual Agent Conversations (com.snc.universal_request.va)

  The Universal Request Virtual agent conversations plugin is required for the Virtual Agent functionalities to be activated.

- Universal Request integration with Microsoft Teams requires the following ServiceNow Store application. Ensure that the application is installed before you install Universal Request integration with Microsoft Teams.

  Required ServiceNow Store applications

  ServiceNow for Microsoft Teams (sn_now_teams)

  The ServiceNow for Microsoft Teams store application must be activated for the Universal Request integration with Microsoft Teams application to function.

Role required: admin

About this task

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Universal Request integration with Microsoft Teams application (sn_uni_req_msteams) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Universal Request integration with Microsoft Teams.

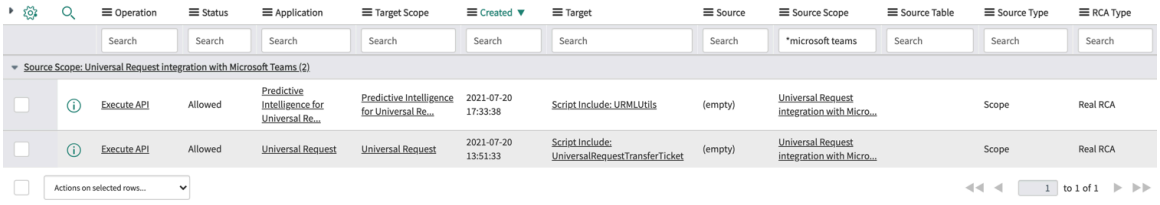
4. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
5. Select **Install**.

Approve application restricted caller access privileges

Approve restricted caller access (RCA) privileges in the target scope so that you can provide scope access privileges. Approving the RCA privileges enables the script includes in Universal Request scope to be accessed from the Universal Request integration with Microsoft Teams scope.

Before you begin
Role required: admin

About this task
RCA privileges define cross-scope access to an application, an event, or an application resource. Application resources include access control roles, business rules, UI actions, and script includes. RCA privileges can also be used to allow or deny requests for access. Restricted caller access [sys_restricted_caller_access] records track cross-scope applications or scripts that request access to an application, application resource, or event. For more information, see Requested restricted caller access (RCA).



Procedure

1. Navigate to **All** > **System Applications** > **Application Restricted Caller Access** > **Restricted Caller Access Privileges**.
2. In the **Source Scope** search, enter `Universal Request integration with Microsoft Teams`.
3. Right-click on **Source Scope** column header, and select **Group By Source Scope**.
4. Expand the **Universal Request integration with Microsoft Teams** source scope.
5. Open the record.
6. Change the **Status** to **Allowed**.
7. Click **Update**.

Result
The RCA is approved. The records get updated as shown in the following figure. The **Application** column and the **Target Scope**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

column now have the same values, and the **Status** column changes to

Allowed.

Install Notify connector for Microsoft Teams

Install and activate the Notify connector for Microsoft Teams plugin to be able to initiate a Microsoft Teams meeting directly from a Task record or via the Major Incident Workbench.

Before you begin

Ensure you have installed the following plugins on your ServiceNow instance.

- Notify plugin `com.snc.notify`.
- Microsoft Teams Communications spoke plugin `sn_msteams_com_spk`.
- Azure Active Directory User Mapping plugin `sn_now_azure`.

For more information about Microsoft Teams Communications spoke, see Microsoft Teams Communications spoke.

For more information about Notify, see Notify.

Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Plugins**.
2. Enter `Notify Connector for Microsoft Teams` or `sn_notify_msteams` in the search field.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests on the store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.
3. Select **Install**.

What to do next

Integrate Notify connector for Microsoft Teams in ServiceNow instance.

- To set up pre-published app (Single Microsoft Teams tenant to single ServiceNow instance), see Integrate Notify connector pre-published app with Microsoft Teams.
- To set up self-configured app (Single Microsoft Teams tenant to multiple ServiceNow instance), see Integrating Notify connector self-configured app with Microsoft Teams.

Install Meeting Extensions for Microsoft Teams

Install and activate the Meeting Extensions for Microsoft Teams plugin to be able to initiate a Microsoft Teams meeting directly from an Incident record.

Before you begin

Ensure you have installed Notify connector for Microsoft Teams. For more information, see Install Notify connector for Microsoft Teams.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Definition** > **Plugins**.
2. Enter `Meeting Extensions for Microsoft Teams` or `sn_now_teams_ext` in the search field.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests on the store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.
3. Select **Install**.

What to do next

Integrate Meeting Extensions for Microsoft Teams with ServiceNow.

- To set up pre-published app (Single Microsoft Teams tenant to single ServiceNow instance), see Integrate Meeting Extensions pre-published app with Microsoft Teams.
- To set up self-configured app (Single Microsoft Teams tenant to multiple ServiceNow instance), see Integrate Meeting Extensions self-configured app with Microsoft Teams.

Setting up the ServiceNow instance for Microsoft Teams integration

Set up your ServiceNow® instance for the Microsoft Teams integrations.

When to use Pre-published app or Self-configured app configuration

Use the self-configured app or pre-published app configuration based on the following conditions:

- In case of a single Microsoft tenant to multiple ServiceNow® instances integration, use the self-configured configuration setup.
- In case of a single Microsoft tenant to single ServiceNow® instance integration, it is recommend to use the pre-published configuration setup. However, you can still use the self-configured configuration setup.
- In case of a single ServiceNow® instance to multiple Microsoft tenant integration, use the Self-configured configuration setup.

For best practices and guidelines, refer to the Knowledge base article: https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB1586849.

Setup for integrating pre-published apps with Microsoft Teams

Prepare your environment to set up and configure your ServiceNow instance for Microsoft Teams integrations using the pre-published app configuration.

Setup for integrating pre-published apps with Microsoft Teams for Employee Experience

Set up pre-published apps to integrate with IT, HR, and Universal Request through Microsoft Teams. Employees can interact with the agents from within Microsoft Teams to resolve their issues.

Connect your ServiceNow instance to your Microsoft Teams tenant

Connect your ServiceNow instance to your Microsoft Teams tenant to enable users to create their requests from within Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Note:
The following steps are for pre-published apps. Your Azure apps must already be registered and published to follow this configuration.

Role required: External admin (external_app_install_admin)

Procedure

1. Navigate to **All** > **ServicenowNow for Microsoft 365** > **Install Azure apps**.
2. Select **Install**.

   This step connects your tenant to the ServiceNow instance.
3. Select the#**Consent on behalf of your organization** option to provide the consent/permissions for all your users, then select#**Accept** to provide the admin consent.
   These permissions enable the app to do the following:
   - Maintain access to data that you have given access to
   - Sign in and read user profiles
   - Sent a teamwork activity to any user

   When the apps are successfully installed, the page displays the details of the tenant and available Azure Apps to authorize.

Grant permissions to required Microsoft Azure apps

Authorize the required pre-published apps to enable your ServiceNow instance to make API calls to Microsoft Azure to enable ServiceNow for Teams application workflows.

Before you begin

Install Virtual Agent Lite or Virtual Agent. For more information see Virtual Agent integration with messaging apps.

To connect your ServiceNow instance to your Microsoft 365 tenant and to authorize apps, you must have both the external_app_install_admin role and the Global Administrator role in Microsoft 365. For information about the related Microsoft roles, see Azure AD built-in roles.

Role required: External admin (external_app_install_admin). This role is installed on the base system as part of the installation of the Channel Proxy plugin.

About this task

The ServiceNow for Teams pre-published apps are:

- Notify Connector: Install Notify Connector for Microsoft Teams to enable the chat to call feature. For more information, see Notify connector for Microsoft Teams.
- Request-based Chats
- SSO and Activity Notifications

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.
2. Authorize the relevant app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Click **Authorize** in the row of the app entry.

b. Provide the admin consent by selecting **Accept**.

For information on API permissions used in ServiceNow for Microsoft Teams integration, refer ServiceNow for Microsoft Teams integration API permissions for Request-based chat and SSO.

Upon successful authorization, a green check mark appears next to the app name and the **Authorize** button changes to **Installed**.

What to do next

If the upn is different from email ID in your environment, go to Enable connecting to meetings from Microsoft Teams. If the upn is same as the email ID, go to Create and download the manifest file for pre-published apps.

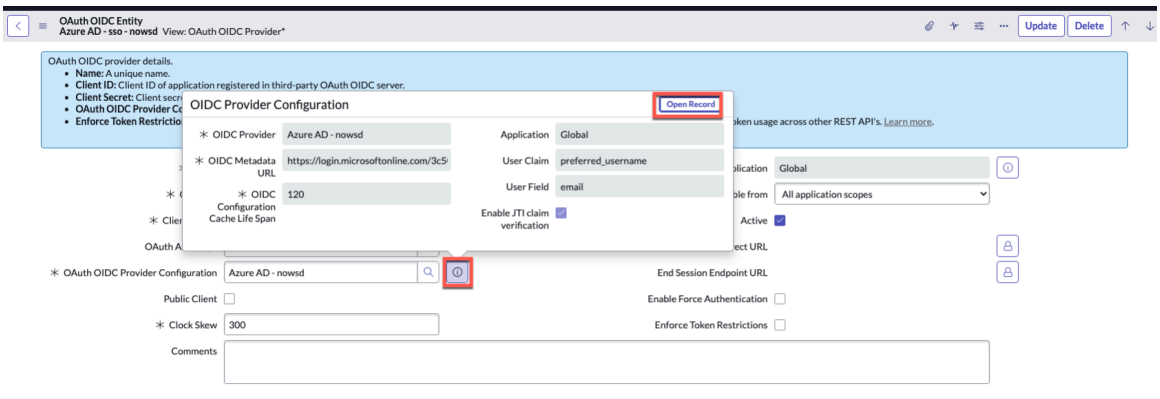
Enable connecting to meetings from Microsoft Teams

Create the OIDC provider configuration record that enables users to connect to meetings in the Microsoft Teams application.

Before you begin

Role required: admin

Ensure that you install the Azure apps in your environment.



About this task

This step is only required if the upn is different from the email ID.

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select the OIDC record in the format **Azure AD – sso -**<tenantname> where <tenantname> is the name of your tenant.
3. Review the **OAuth OIDC Provider Configuration** entry.

Note:
This field is applicable for records of the type **External OIDC Provider**.

4. Select **Open Record**.
5. In the **User Claim** field, enter `email`.
6. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Change tenant to configure pre-published apps

Change the tenant to use pre-published apps in your environment.

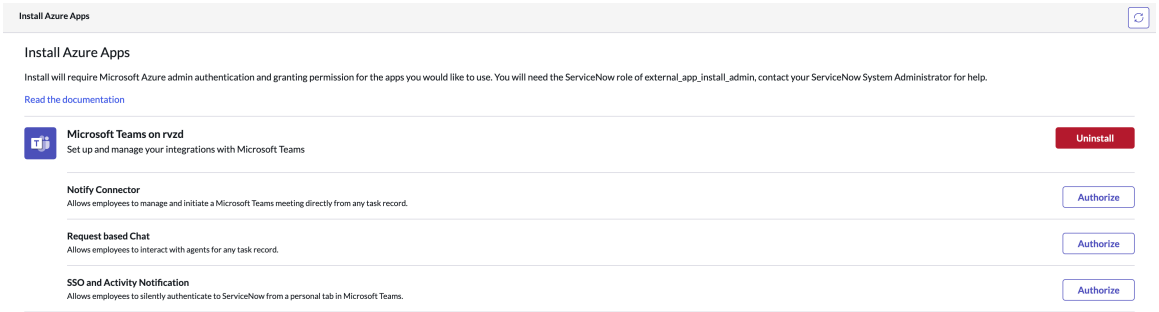
Before you begin

Role required: External admin (external_app_install_admin)

About this task

If you have already set up a connection on a different Microsoft Teams tenant, changing to a new tenant stops the integration from working on the originally configured tenant. All users using the integration on the original tenant will no longer be able to use it. If you are only changing from self-configured Azure apps to pre-published Azure apps, but keeping the integration on the same Microsoft Teams tenant, there will not be an impact to users.

Uninstall the connected Microsoft Teams tenant from the original/registered ServiceNow instance. Then install the same Microsoft Teams tenant on the new/required ServiceNow instance.



Procedure

1. Uninstall the connected Microsoft Teams tenant from the original ServiceNow instance.

   a. Open your current/original/registered ServiceNow instance.

   b. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.

   c. Select **Uninstall**.

   d. Select **Uninstall** on the Uninstall Microsoft Teams Tenant dialog box to uninstall the connected Microsoft Teams in your instance.

   Your Microsoft Teams tenant is disconnected from the original/registered ServiceNow instance.

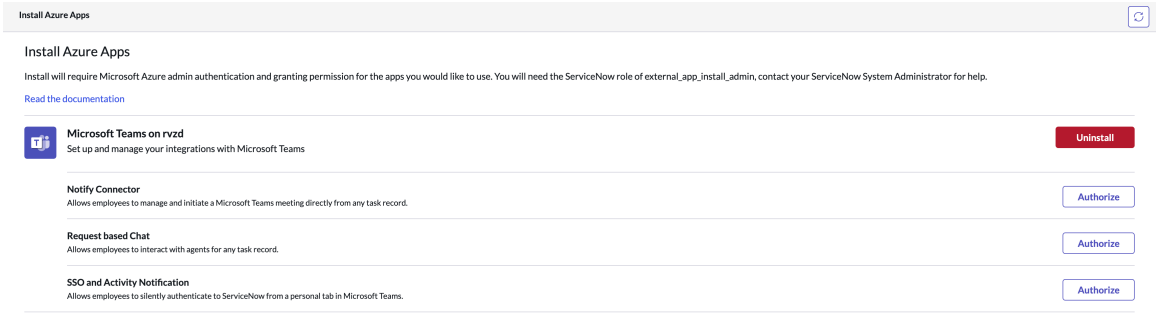
2. Install the same Microsoft Teams tenant on the new/required ServiceNow instance.

   a. Open your new/target ServiceNow instance.

   b. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Click **Install** to install the same Microsoft Teams in your new/target instance.



d. Select the **Consent on behalf of your organization** option to provide the consent for all your users, and click **Accept** button to provide the admin consent.

e. Once the tenant is mapped with the ServiceNow instance, you must authorize the apps by providing the admin consent.

The Notify Connector and Import Chat apps appear only if you install Notify plugin in your instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **SSO and Activity Notification**: Authorize this app to display **Employee Center** tab in Microsoft Teams app.
- **Notify Connector**: Authorize this app to enable agents to initiate a Microsoft Teams meeting from a task record.
- **Request-based Chats**: Authorize this app to enable the agents to initiate chat in Microsoft Teams and import chat messages to the respective record.

f. Authorize the apps as required.

What to do next

You must upload the manifest file in Microsoft Teams. For more information, refer Create and download the manifest file for pre-published apps.

Override Microsoft Teams tenant connection

Override an existing tenant connection, only if, for any reason, you are unable to uninstall the connected Microsoft Teams tenant from the original ServiceNow instance.

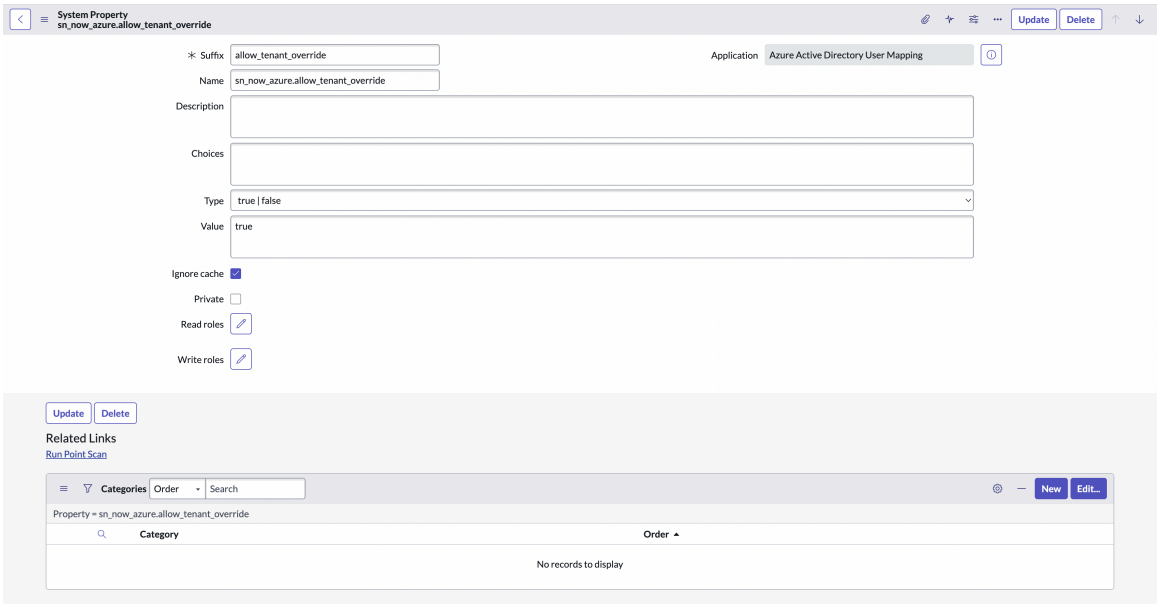
Before you begin

Role required: External admin (external_app_install_admin)

About this task

Create the sn_now_azure.allow_tenant_override system property and set it to True. Then override the existing Microsoft Teams tenant connection on the Install Azure Apps page.

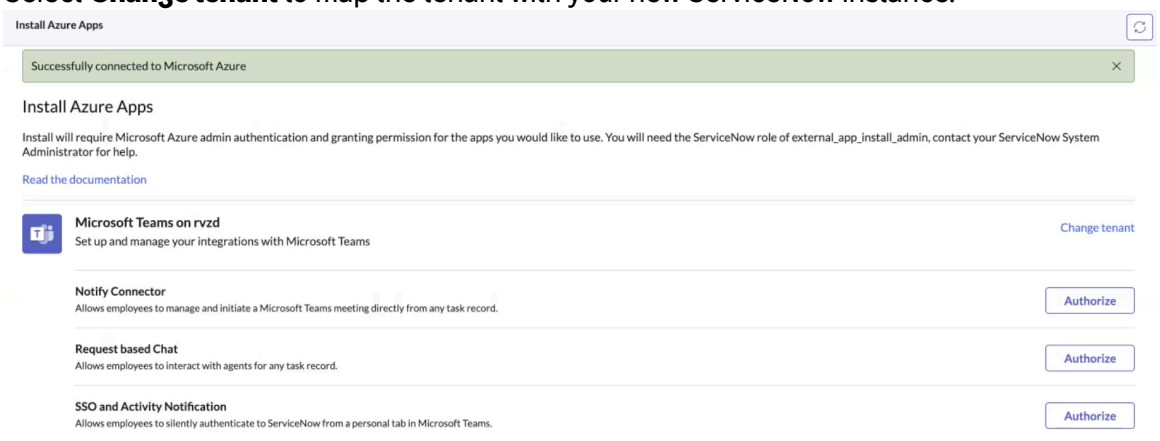
> **Note:**
> ServiceNow doesn't recommend the override method.



Procedure

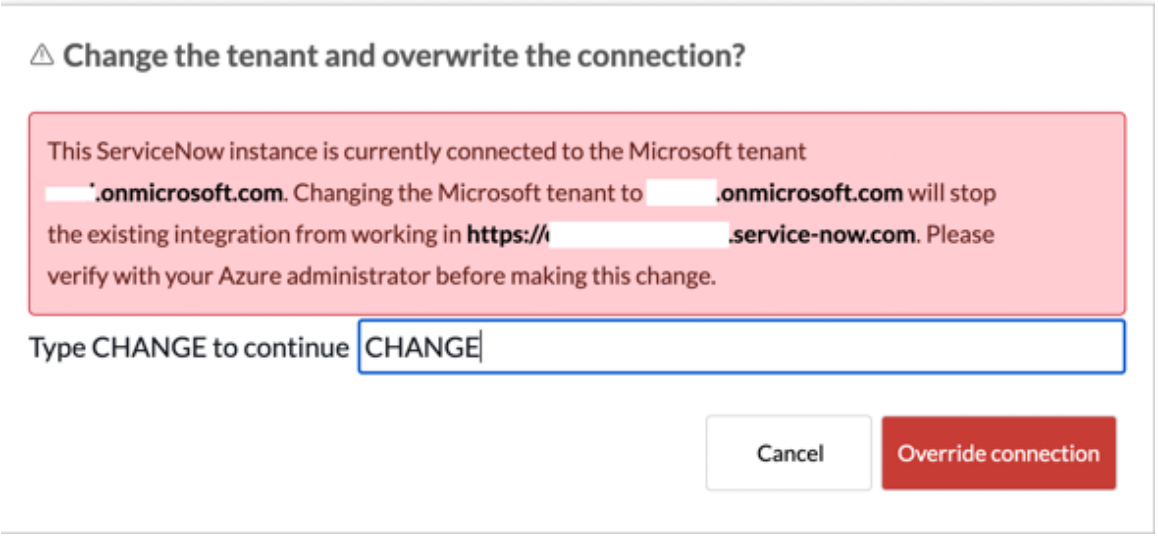
1. Open your new/target ServiceNow instance.
2. In the navigation filter, enter `sys_properties.list`.
3. Select **New** on the System Properties page.
4. On the System Property form, fill in the fields.
   - Search and select **Azure Active Directory User Mapping** as **Application**.
   - Enter **allow_tenant_override** in **Suffix**.
   - Name value **sn_now_azure.allow_tenant_override** is auto populated in **Name**.
   - Select **true | false** as **Type**.
   - Enter **true** in **Value**.
5. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:

If the **Value** field entry is **false**, then the method of uninstalling the connected Microsoft Teams tenant from the original ServiceNow instance should be followed.



This activates the method of overriding the Microsoft Teams tenant connection on the Install Azure Apps page by enabling the **Change tenant** option.

6. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.
7. Select **Change tenant** to map the tenant with your new ServiceNow instance.

8. Enter **CHANGE** and select **Override connection**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Authorize the apps by providing the admin consent after the tenant is mapped to the new ServiceNow instance.

Create and download the manifest file for pre-published apps

Create and download the ServiceNow for Microsoft Teams manifest file from your instance to enable Microsoft Teams to use the ServiceNow for Teams app.

Before you begin

Role required: external_app_install_admin

About this task

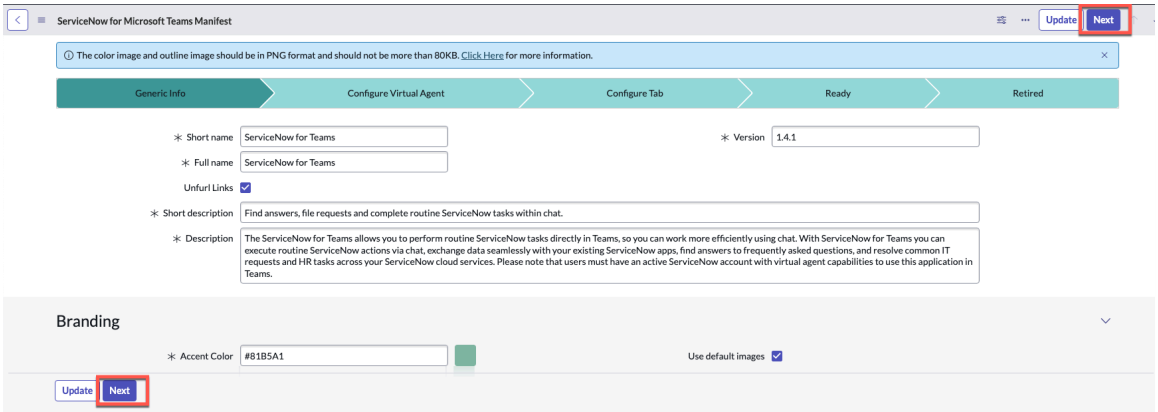
You can connect multiple ServiceNow instances to one Microsoft Teams tenant. For more information, see Integrating multiple ServiceNow instances with a single Microsoft Teams tenant.

Only one pre-published app setup can be connected to the Microsoft Teams tenant.

Note:
You can connect multiple self-configured app environments to the Microsoft Teams tenant as you can create separate Azure apps for each self-configured app environment. For information about creating a manifest file for self-configured apps, see Create and download the manifest file for self-configured apps.

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Application Manifest** > **ServiceNow for Teams**.
2. Select **New**.
   The **Generic Info** section opens.
3. On the **Generic Info** section, fill in the fields.



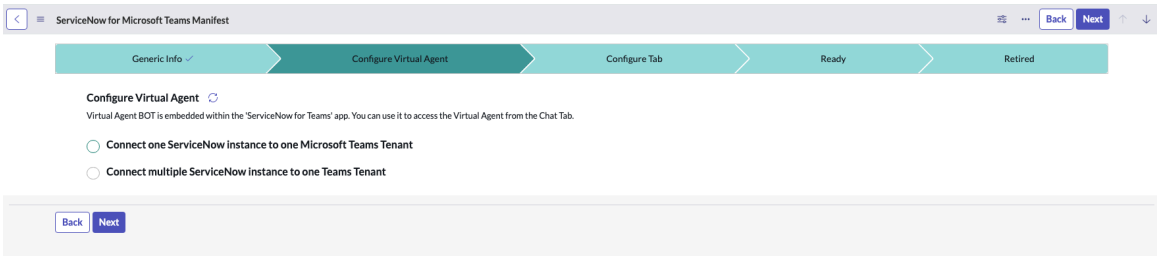
Generic Info Form

Field	Description
Short name	Short name for the manifest file.
Full name	Complete name for the manifest file.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Version	Version of the manifest file. For example, `1.0.0`.
Unfurl Links	Option to unfurl the links in Microsoft Teams. Link unfurling generates a content-rich preview(adaptive card) when a supported link is shared in a conversation with a user in Microsoft Teams. For more details about link unfurling, refer Unfurl the web links in Microsoft Teams chat.
Short description	Short description about the manifest file.
Description	Detailed description about the manifest file.
Accent Color	Custom color for the conversations in Microsoft Teams according to the company branding. The accent color must be in the HTML color code format.
Use default images	Option to use the default images for branding. **Note:** If you want to customize the company branding, clear the **Use default images** option and then upload the icons. For more information on the size of icons, see App icons and manifest schema icons.

4. Select **Submit**.
5. Select **Next**.



The **Configure Virtual Agent** section opens

6. In the **Configure Virtual Agent** section, select either of the following options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select **Connect a single ServiceNow instance to your Microsoft Teams Tenant** to connect one ServiceNow instance to a Microsoft Teams tenant. The Virtual Agent Bot ID is auto-populated when you select this option.
- Select **Connect multiple ServiceNow instances to your Microsoft Teams tenant** to connect multiple ServiceNow instances to one Microsoft Teams tenant. This is applicable for self-configured apps. For more information, see Create and download the manifest file for self-configured apps.

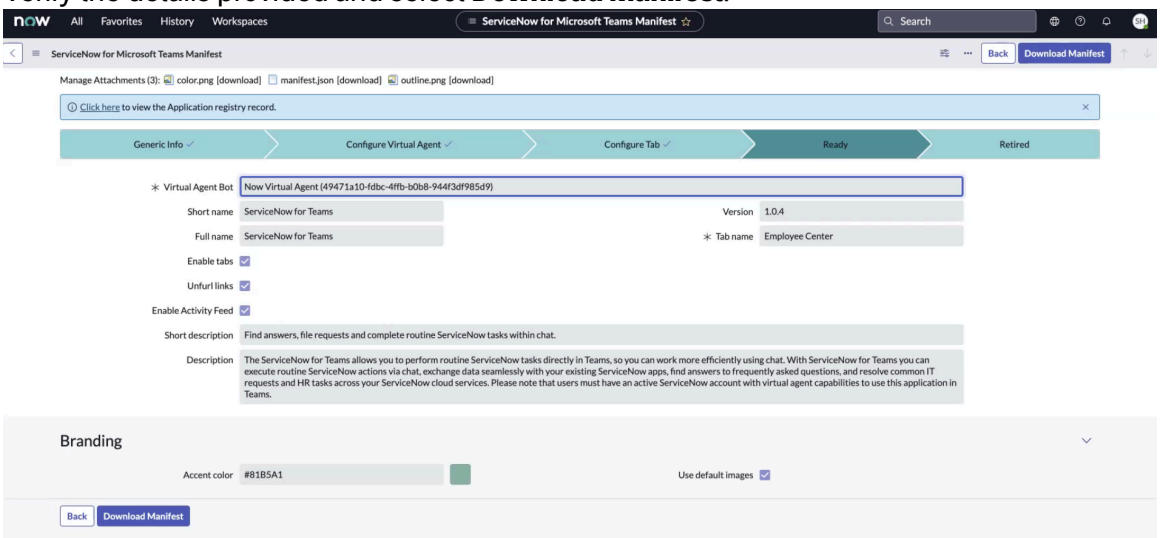
7. Configure the Virtual Agent in your instance.
   For more information, see Conversational Integration with Microsoft Teams.
8. In the **Configure Tab** section, fill in the fields.

Configure Tab form

Field	Description
Enable tabs	Option to add tabs in the Microsoft Teams application. This option is selected by default.
Tab name	Name of the service portal tab that appears in the Microsoft Teams application.
Enable Activity Feed	Option to enable the activity feed to receive campaign notifications in Microsoft Teams. This option is selected by default.

For a self-configured app, you must provide the Application (client) ID and Directory (tenant) ID in the **Configure Tab** section.

9. Select **Next**.
   The **Ready** section opens.
10. In the **Ready** section, select the **Enable Activity Feed** option to receive notifications for campaigns.
11. Navigate to the Application registry record and view the OIDC Provider Configuration record.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select the link in the information message at the top of the page.
- Navigate to **System OAuth** > **Application Registry** and select **Azure AD - sso - <Tenant-ID>**.

The User Claim is part of the *id_token* that is fetched from Microsoft Azure AD (Entra ID). The **User Field** must be configured so that the value fetched from the User [sys_user] table matches the User Claim value.

> **Note:**
> If none of the configured fields match the User Claim value, you can create a custom field and enter the required value.

12. Verify the details provided and select **Download Manifest**.

The manifest file is downloaded in the zip format.

What to do next

You must upload the manifest file in Microsoft Teams. For more information, see Upload manifest file in Microsoft Teams.

Upload manifest file in Microsoft Teams

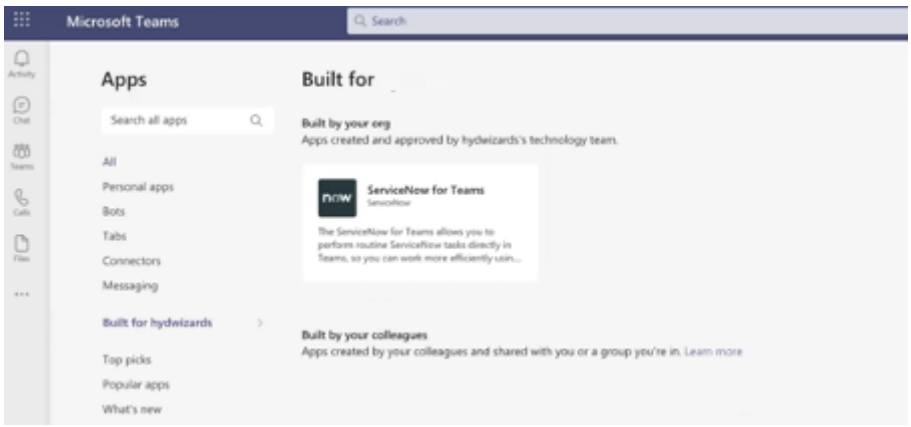
Upload the manifest file in Microsoft Teams to integrate Microsoft Teams with your ServiceNow instance.

Before you begin

Make sure that you have the manifest file for pre-published apps. For more information, see Create and download the manifest file for pre-published apps.

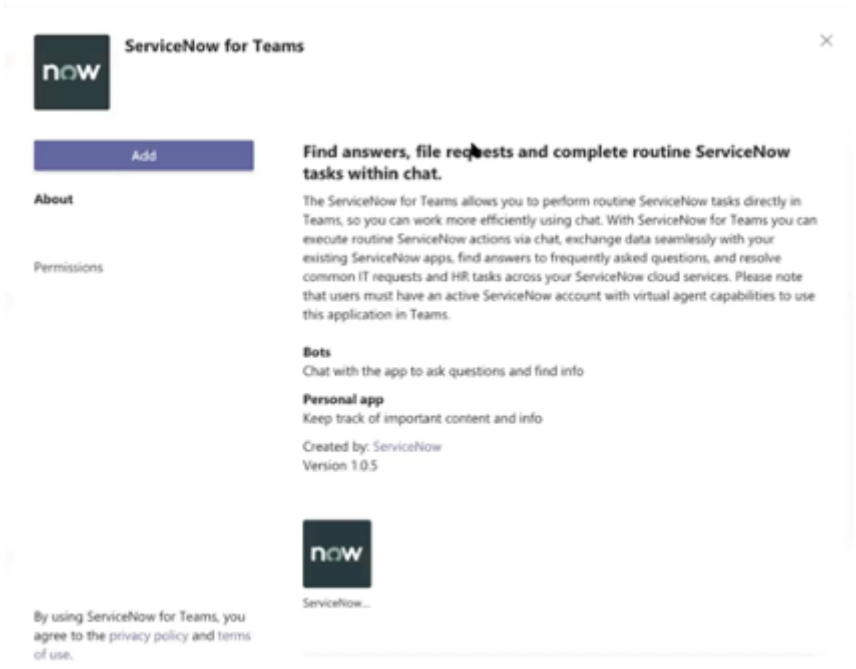
Role required: admin

Procedure



1. Launch Microsoft Teams application.
2. Navigate to **Apps** > **Manage your apps**, then select **Upload a customised app**.

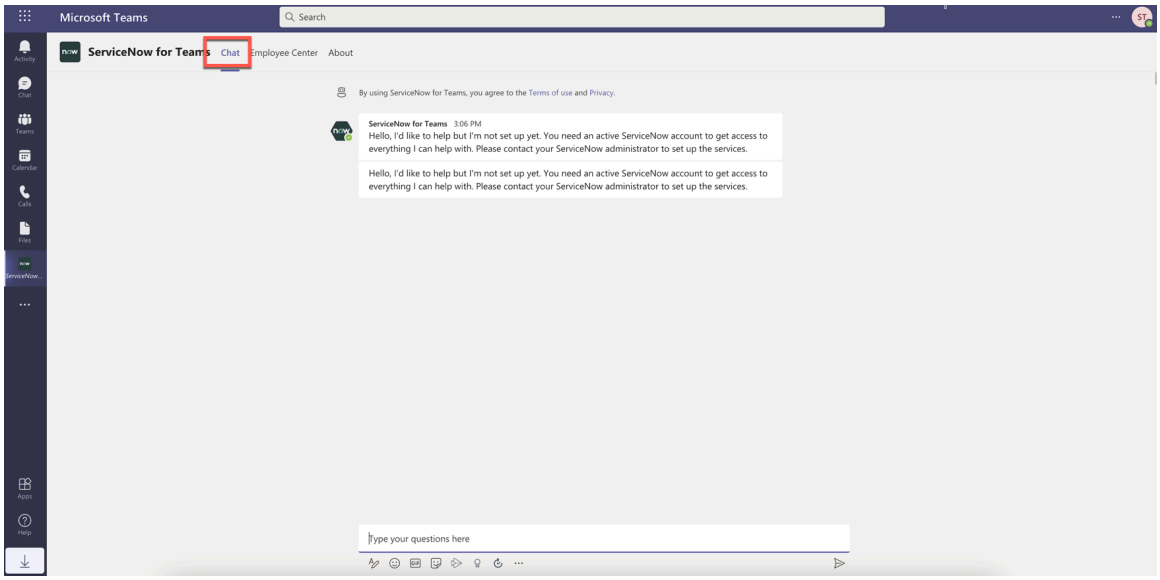
> **Note:**
>
> Ensure that ServiceNow for Microsoft Teams is allowed as a third-party app in Microsoft Teams. For information about allowing apps in Microsoft Teams, see the Microsoft Teams documentation.



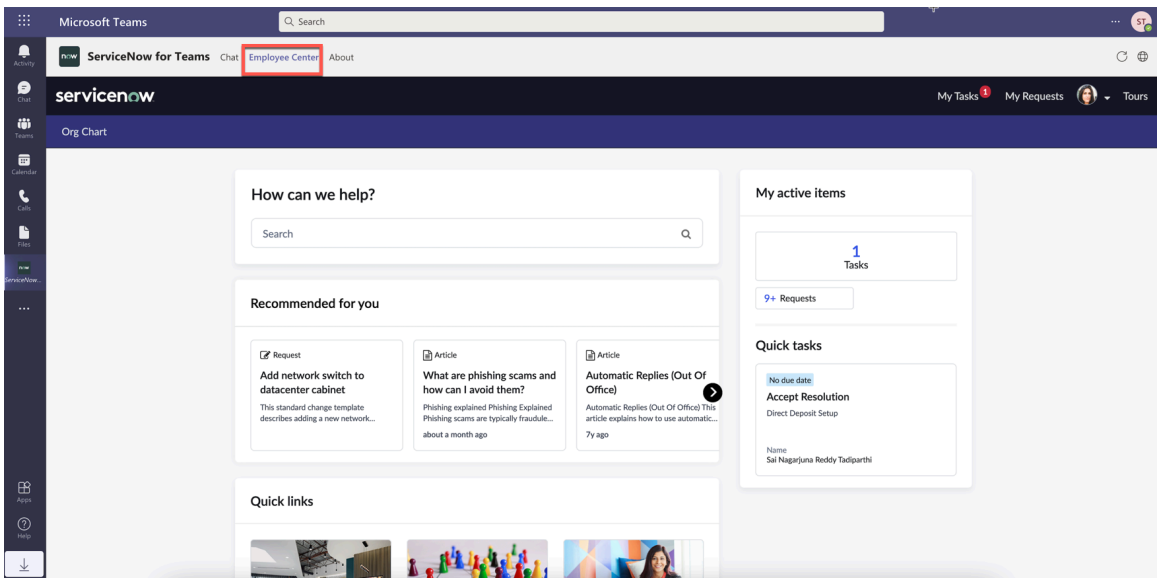
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Navigate to the location where the manifest file is downloaded and select the zip file.
4. Click **Open**.

   The **ServiceNow for Teams** appears in **Apps** screen.



5. Click **ServiceNow for Teams** app.
6. Click **Add**.



The ServiceNow for Teams app appears in Microsoft Teams.

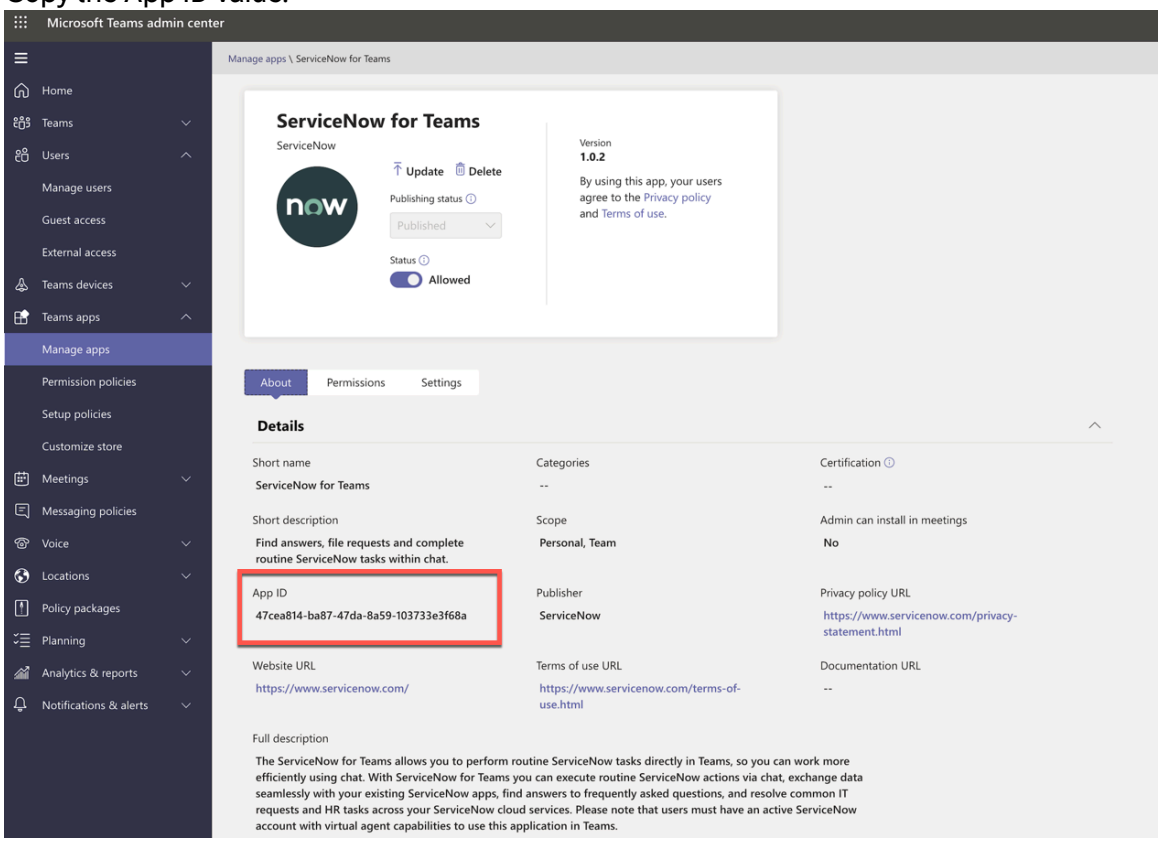
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Chat**: Begin your conversation with the Virtual Agent to get help.

- **Employee Center**: Click **Employee Center** tab to view the organization updates and the status on your tasks and requests.

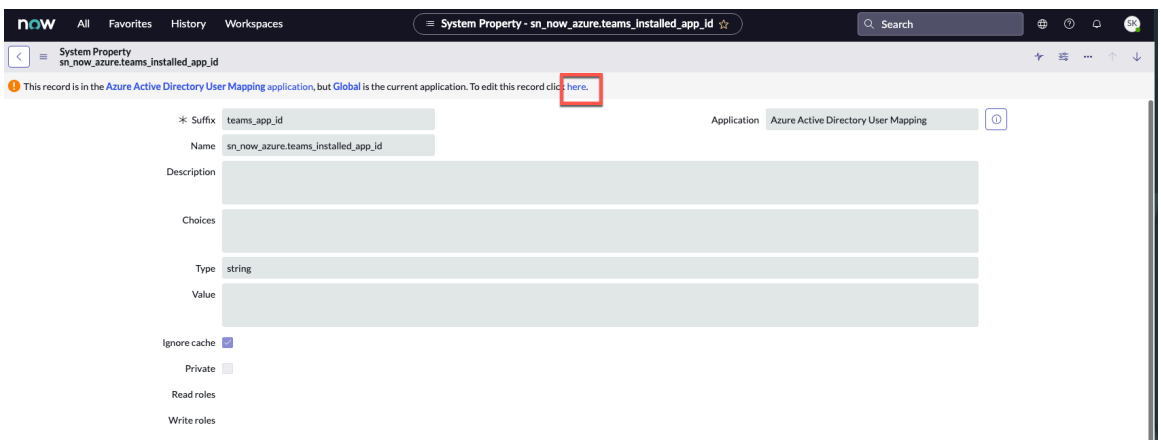
Note:
If you don't want to create a manifest file, you can edit an existing manifest file as required. Upon updating the existing manifest file, you can download and upload the manifest file in Microsoft Teams to make the changes effective.

Update the app ID in the ServiceNow instance



Update the ServiceNow for Teams app ID from the Microsoft Teams admin center in your ServiceNow instance.

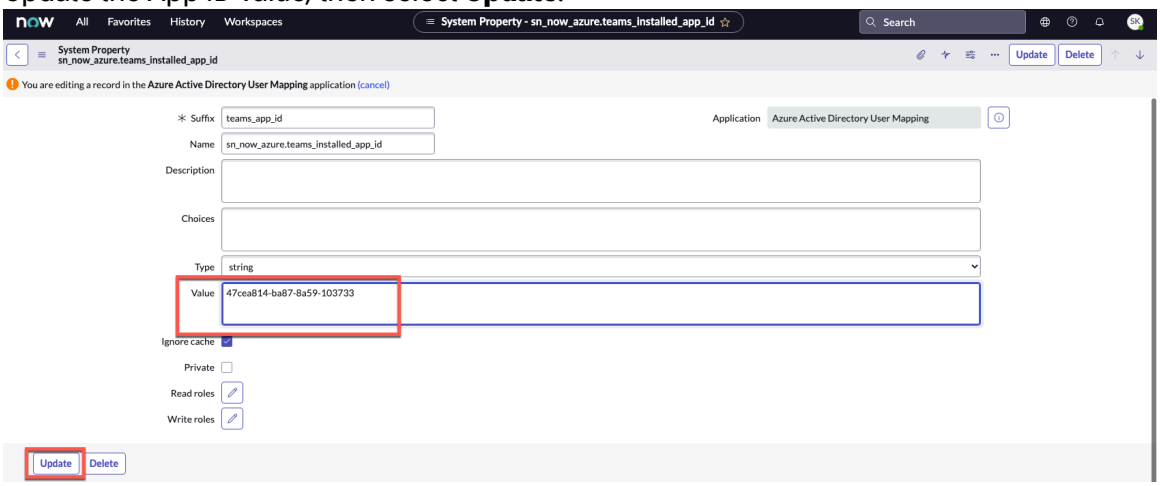
Before you begin
Role required: admin



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Microsoft Teams admin center.
2. Navigate to **Teams apps** > **Manage apps**.
3. Select the **ServiceNow for Teams** app.
4. Copy the App ID value.



5. In your ServiceNow instance, search for `sys_properties.list`.
6. Select the `sn_now_azure.teams_installed_app_id` property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Update the App ID value, then select **Update**.

Disable the Now Virtual Agent

Disable the Now Virtual Agent app to avoid duplicate notifications from Microsoft Teams when you install and integrate ServiceNow for Microsoft Teams with your ServiceNow instance.

Before you begin

Note:
Your employees will not see or use the Now Virtual Agent app.

Role required: Microsoft Teams admin

About this task

ServiceNow has two apps available for Microsoft Teams:

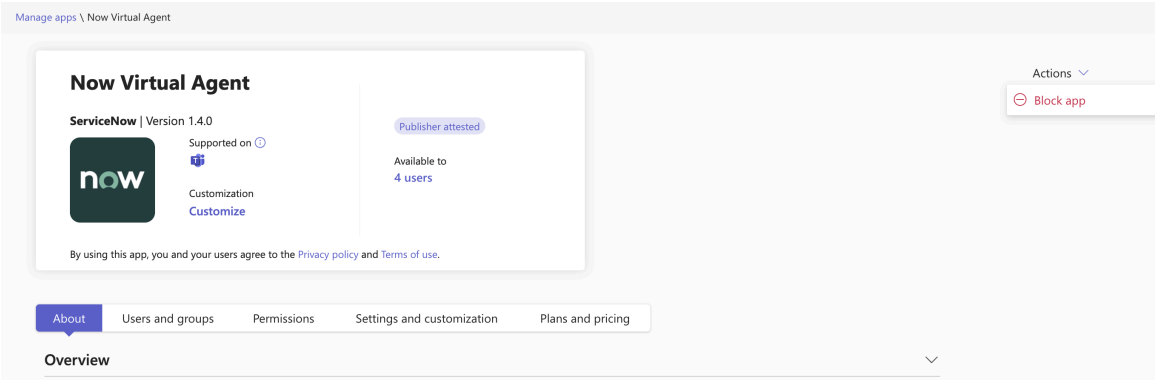
- Now Virtual Agent

  This app displays the Virtual Agent within Microsoft Teams, has been available within Microsoft Teams app since 2019.

- ServiceNow for Microsoft Teams

  ServiceNow for Microsoft Teams is a new app that provides a broader employee experience, including and expanding beyond Virtual Agent, with an embedded portal experience called **Employee Center**, and the ability for agents to reach out to employees in Microsoft Teams to quickly resolve open tickets.

Since the same Bot (Virtual Agent) is shared in both apps, blocking the Now Virtual Agent app also results in the same bot ID being blocked for the ServiceNow for Microsoft Teams app, making the Virtual Agent unusable in the ServiceNow for Microsoft Teams app. To work around this issue, it is necessary to make sure that the Now Virtual Agent app is in the list of allowed apps.



You must first block the Now Virtual Agent app, so it stops showing up for employees and then add the app to the allowed list. After this configuration, your employees will not see or use the Now Virtual Agent app, but will be able to use Virtual Agent within the ServiceNow for Microsoft Teams app.

Note:
It may take up to 24 hours for the changes to be propagated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Microsoft Teams admin portal.
2. Navigate to **Teams apps** > **Manage apps**.
3. In the search field, enter `Now Virtual Agent`.
4. Select the **Now Virtual Agent** app.
5. Select **Actions**, then select **Block app**.

Translate the Microsoft Teams manifest file

ServiceNow for Microsoft Teams supports localization to multiple languages, using UTF-8 for international characters.

You must activate the localized plugins in your instance. To install the language plugin, see Activate a language.

After installing the language plugin, you must create and download the manifest file and upload the file to Microsoft Teams. To download the manifest file, refer Create and download the manifest file for pre-published apps.

Request-based chat access for a guest user

Request-based pre-published app chat access enables a guest user to start and import chats in a single ServiceNow® for Microsoft Teams instance.

Guest sharing is enabled by default in Microsoft Azure AD and in ServiceNow for Microsoft Teams. As a result, users can invite guests to teams and sites, and share files with guests without having to request assistance from the IT department.

Guests can take the following actions:

- Initiate a chat with people from outside their organization.
- Import their chat conversations with people from outside their organization.

For information about configuring access for guest users, see Guest access in Microsoft Teams.

Guest access configuration is applicable to the following tables in both IT Service Management integration with Microsoft Teams and HR Service Delivery integration with Microsoft Teams applications:

- HR Core task (sn_hr_core_task)
- HR Life events Case (sn_hr_le_case)
- HR Core case (sn_hr_core_case)
- Request Item (sc_req_item)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Task (sc_task)
- Incident (incident)
- Request (sc_request)
- Change request (change_request)

The ServiceNow system admin can extend guest access to other tables.

Enable chat access for a guest user

Enable chat access for a guest user while configuring ServiceNow® for Microsoft Teams settings for a pre-published app.

Before you begin

In an upgrade scenario for a pre-published app, after the upgrade process, you must reauthorize the Request-based chat and SSO and Activity Notifications applications. Reauthorization permits your ServiceNow instance to make API calls to Microsoft Azure. As a result, ServiceNow for the Microsoft Teams application workflow is enabled and your consent for the new API permissions is ensured. For more information, see Grant permissions to required Microsoft Azure apps.

Role required: admin

About this task

Connecting the ServiceNow instance to your Microsoft Teams pre-published app automatically populates the fields tenant id, tenant full name, and source on the Teams Guest User Chat Configuration form. If you want to grant guest user access, enable the guest access in the Teams Guest User Chat Configuration form.

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Teams Guest User Chat Configuration**.
2. On the form, fill in the fields.

Teams Guest User Chat Configuration form

Field	Description
Tenant ID	Auto-populated during the pre-published app installation. Directory (tenant) ID from the application overview page in the Microsoft Azure portal updates details in the ServiceNow instance.
Tenant full name	Auto-populated during the pre-published app installation. Full domain name of the tenant or host. For example, account1.onmicrosoft.com.
Enable Guest access	Option to enable the Client Credentials token to fetch user type details.

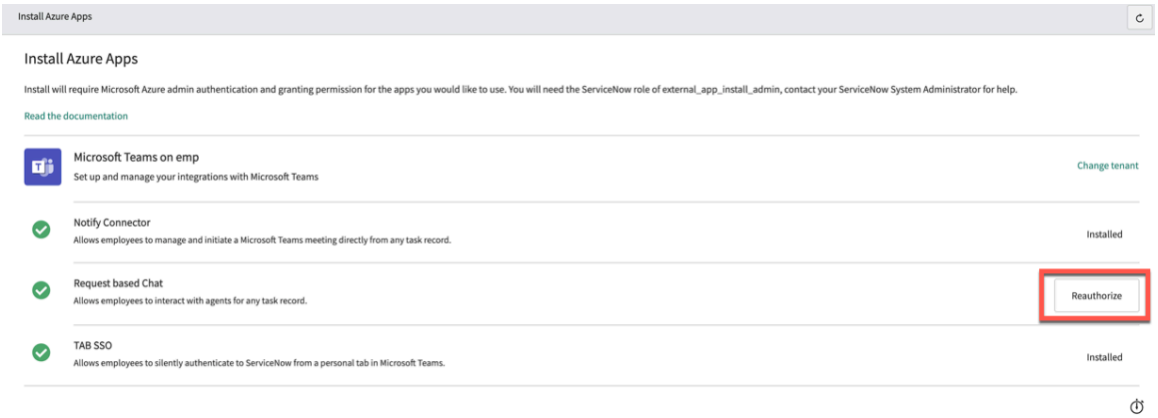
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	If you do not select this check box, then an error occurs when the guest tries to start or import a Microsoft Teams chat. **Note:** When the guest access is enabled, the sn_tcm_collab_hook.MS_Teams_Chat_App_Credentials value in the sys_alias table configured in Connection & Credential Aliases fetches the Azure user details. When the guest access is inactive, the sn_tcm_collab_hook.MS_Teams_Chat_Credentials value in the sys_alias table configured in Connection & Credential Aliases fetches the Azure user details.
Allowed Guest domains	The guest user domains where invited guests can start or import a chat. Only the tenants in these domains can start or import a chat. List multiple guest domain names as comma-separated values.
Source	Auto-populated during the pre-published app installation. This field is associated with the Tenant Connections module.

3. Select **Submit**.

Result

Guests belonging to the selected guest domains can now start or import chats.



User Presence Indicator

User presence indicator helps the agents to know the status of the users in *`Microsoft Teams`* before the agent can initiate a chat using *`Microsoft Teams`*.

By default, the agents can view the status of the users when they launch the Start chat modal in the ServiceNow instance.

When you are upgrading the application, you must reauthorize the **Request Based Chat** from **Install Azure Apps** page. For more information on installing the Azure apps, refer Grant permissions to required Microsoft Azure apps.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The system takes 60 minutes to display the user presence status in the start chat modal for the first use when you upgrade to *IT Service Management* integration with *Microsoft Teams* v2.5.0 or Collaboration Services v3.5 applications.

The status of the user from *Microsoft Teams* is mapped into the ServiceNow instance as depicted in the table.

User status mapping

User status in Microsoft Teams	Status shown in Start Chat modal
'Available', 'AvailableIdle'	available
'Busy', 'BusyIdle', 'DoNotDisturb'	busy
'Offline', 'PresenceUnknown'	offline
'Away', 'BeRightBack'	away

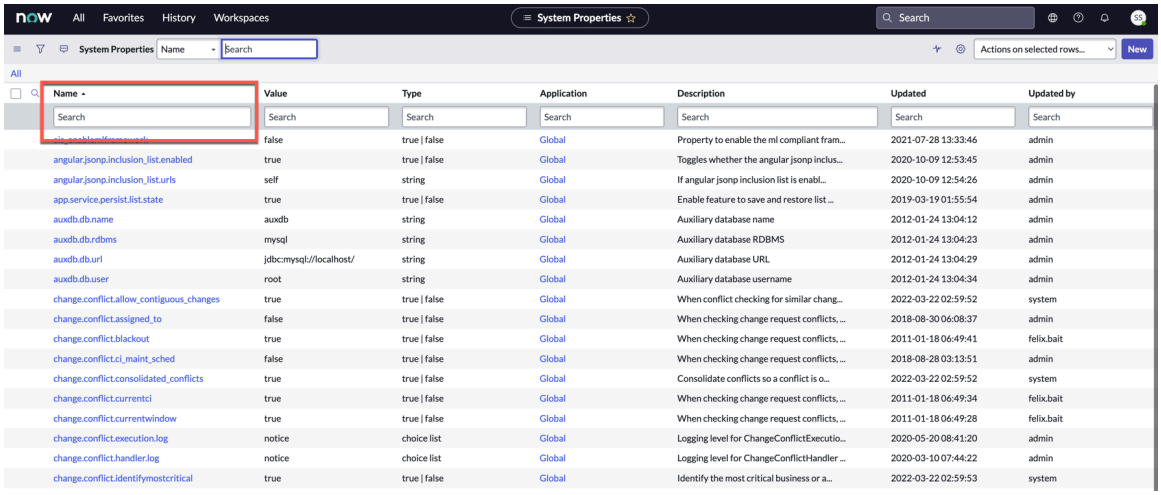
The user presence status is cached for 180 seconds, this implies if a user is “online” in *Microsoft Teams*, the Start Chat modal displays the user status as “online” until 180 seconds. If the user status is modified, the system fetches the user status after the interval of 180 seconds and updates the status in the Start Chat modal.

The time interval to cache the user status is configurable by a system property `sn_tcm_collab_hook.teams.presence_status_cache_invalidate_duration`. You can modify the time interval to retain the user presence status. For more information, refer Configure cache duration for the user presence status.

Configure cache duration for the user presence status

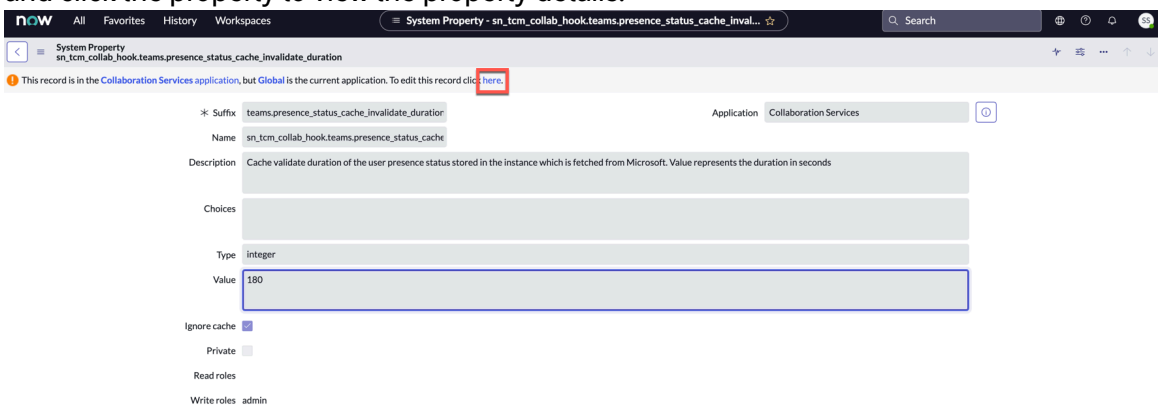
You can modify the system property to configure the cache duration to retain the user presence status of the *Microsoft Teams* user.

Before you begin



Role required: admin

Procedure

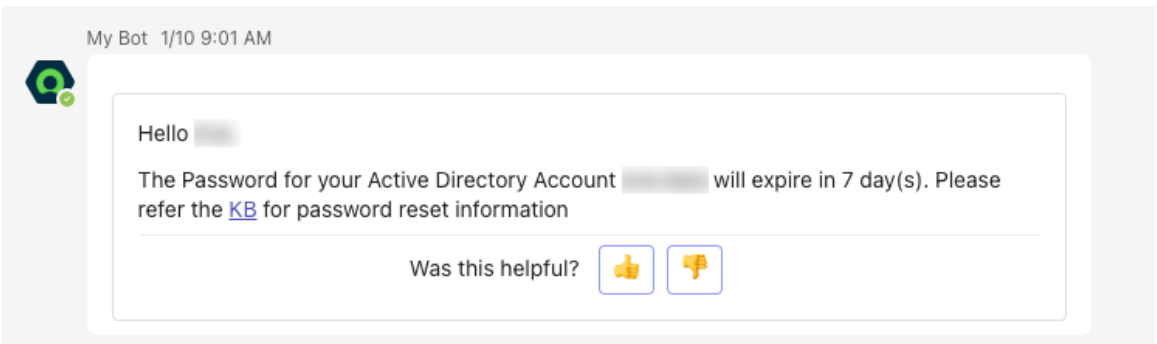


1. In the navigation filter, enter `sys_properties.list` and press **Enter**.

   The entire list of properties in the System Properties [sys_properties] table appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. In the Name column, search for the system property `sn_tcm_collab_hook.teams.presence_status_cache_invalidate_duration` and click the property to view the property details.



3. Click here to edit the property details.
4. Define the cache duration in seconds to retain the user presence status in the **Value** field.
5. Click **Update**.

Sending notifications to employees using Microsoft Teams

Integrate Microsoft Teams with the Employee Center to enable content managers to send notifications to employees through Microsoft Teams.

Send messages on Microsoft Teams to drive employee action, such as to read an article, watch a video, or perform a task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Employee Center contains two features, which content managers can use to send communications to employees:

Creating employee communications with Content Publishing

Content Publishing provides a workflow to create and publish employee communications.

Content Experiences

Content Experiences provides a robust publishing configuration which controls the content availability, duration, and audience.

Integrating Microsoft Teams with Employee Center

You must have the following plugins installed in your environment:

- Employee Center Pro [com.snc.employee_center_pro]
- IT Service Management for Microsoft 365 [sn_now_teams_it]
- Glide Virtual Agent [com.glide.cs.chatbot]
- HR Service Delivery for Microsoft 365 [sn_now_teams_hr]
- Conversational Integration with Microsoft Teams [sn_va_teams]
- Content Publishing [sn_cd]
- Content Experiences [sn_ca]

Configuring a Microsoft Teams notification

1. Create notification content for Microsoft Teams
2. (Optional) Translate the notification content
3. Publish the content:
   - Use **Content Publishing** > **Schedule Content** to make the content available to employees: Schedule delivery of Microsoft Teams notification content
   - To include the content in a multi-stage, multi-channel campaign, use **Content Experiences** > **Content Experience Builder**: Create Microsoft Teams notification content with Content Experience Builder

Send automatic campaign notifications in Microsoft Teams

Automatically send campaign notifications in Microsoft Teams for better collaboration and efficient communication.

Before you begin

After the upgrade process for a pre-published app configuration, you must reauthorize the SSO and Activity notifications application to enable your ServiceNow instance to make API calls to Microsoft Azure. ServiceNow for Microsoft Teams application work flow is then enabled and your consent for the new API permissions is ensured. For more information, see Grant permissions to required Microsoft Azure apps.

A manifest file to enable the campaign notification display in *Microsoft Teams* must exist.

If the configured Employee Center version is v.24 or above, then the Employee Center tab is present by default in your *Microsoft Teams* application. If the Employee Center version is lower than v.24, you must update the value of the portal in the `sn_now_teams.portal.suffix` property to `esc`. This value enables Employee Center in your instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Ensure that you enter the app ID of ServiceNow for Microsoft 365 in the *sn_now_azure.teams_installed_app_id* system property. You can get the app ID from the Microsoft Teams admin center.

Role required: admin

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Application Manifest** > **ServiceNow for Teams**.
2. Select **New**.
3. Fill in the details in the **Generic Info** section.
   Select **Submit** and then select **Next**.
4. Fill in the details in the **Configure Virtual Agent** section and select **Next**.
5. In the **Configure Tab** section, verify that **Enable activity feed** is selected and select **Next**.

   Note:
   If you are modifying a base system manifest file, select **Enable activity feed** to receive notifications for campaigns.

6. Verify the details in the **Ready** section and select **Download Manifest**.
   The manifest file downloads in zip format.
7. Upload the manifest file in Microsoft Teams.
   For more information about creating a manifest file, see Create and download the manifest file for pre-published apps. For more information about uploading a manifest file, see Upload manifest file in Microsoft Teams.

Create a Microsoft Teams campaign with content publishing

Create and distribute the Microsoft Teams campaigns using direct content publishing if you have the admin role.

Create notification content for Microsoft Teams

Create notifications to send messages directly to your employees through campaigns in Microsoft Teams.

Before you begin

- Install the necessary plugins:
  - Employee Center Pro [com.snc.employee_center_pro]

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Publishing** > **Content Library**.
2. Either use an existing content record or create a notification.
3. On the form, fill in the fields.

Notification Content form

Field	Description
Title	Title of the notification. The title is not the subject of the notification, although they can be identical. The default value is the app name provided in the manifest file. The value is appended with the phrase "posted a new campaign".
Subject	Subject of the notification, similar to the subject line in an email.
Description	Brief description of the notification.
Employee Center URL	The Employee Center URL that the notification directs the user to.
Content type	Option to select the type of notification that you want to send. This field is automatically set to Microsoft Teams.
Active	Option to indicate that the notification is active and available.

4. Save the settings and return to the Content list.
   - To save new content and settings, select **Submit**.
   - To save existing content settings, select **Update**.

What to do next

Make the content available to users: Schedule delivery of Microsoft Teams notification content.

Alternatively, you can build out a more robust publishing configuration using Creating campaigns with Content Experiences

Schedule delivery of Microsoft Teams notification content

Schedule posting of notifications in Microsoft Teams channels.

Before you begin

Role required: sn_cd.content_manager, admin

Procedure

1. Navigate to **All** > **Content Publishing** > **Schedule Content**.
2. Select the content to schedule.
3. From the Schedule Content related list, select **New**.
4. On the Schedule content form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For a description of the field values, see Schedule content form for Microsoft Teams notifications.

5. Select **Submit**.

Schedule content form for Microsoft Teams notifications

Complete the Schedule content form to schedule the posting of notifications in Microsoft Teams channels.

Schedule content form

Field	Description
Content	Content or information you want to make available to employees.
Title	Name for the schedule content record. This field is automatically set to the name of your content selected in the **Content** field.
Active	Option to indicate that the schedule for content is active and available to employees.
Add Users	Option to indicate that you want to add specific users to view your content. Selecting this option clears the values in the **Audience** field.
Audience	Names of the users from the list who you want to see the content.
Approvers	Names of the users to approve the content before it is publicly available. **Note:** This field can contain only users with the Content Approver [sn_ca.content_approver] role.
When to process	Date and time on which you want the content to be sent, created, or posted.
Content status	The status of your to-do content. • Pending: The Content Publishing scheduled jobs have not processed the content. • Scheduled: The content is scheduled and is queued to be processed. • Max Exceeded: The scheduled content exceeded the allowable time.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule content form (continued)

Field	Description
	The maximum value is configured in the *sn_cd.todo.max_run_time* property. • Error: An error in scheduling or posting the content occurred.
Completed on	The date and time the Content Publishing: Create To-dos scheduled job completed.

Translation support for Microsoft Teams notification campaigns

ServiceNow for Microsoft Teams supports localization to ServiceNow supported languages in campaigns.

ServiceNow translates campaign content into the user-specific language set in your ServiceNow instance. If you have not set a user-specific language, the Microsoft Teams application delivers campaign content in the default global language set on your system.

You must activate the localized plugins in your instance to use this feature. For more information about plugins and installing the language plugin for ServiceNow supported languages, see Activate a language.

For more information about language settings for an instance, see Set default language for an instance and User specific language.

For more information about creating campaigns, see Create a Microsoft Teams campaign with content publishing and Create Microsoft Teams campaigns with the Content Experience Builder.

For more information about scheduling and executing a job, see Scheduled jobs.

Note:
The **Title**, **Subject**, and **Description** field labels in the Notification content form are translated. For more information, see Create notification content for Microsoft Teams.

Create Microsoft Teams campaigns with the Content Experience Builder

If you have the admin role, you can create campaigns using the Content Experience Builder to distribute content to employees.

For information about campaigns and campaign bundles and stages, see Creating campaigns with Content Experiences.

Create Microsoft Teams notification content with Content Experience Builder

Create or place notification content into a bundle or stage for a Microsoft Teams campaign using Content Experience Builder.

Before you begin

Role required: sn_ca.campaign_manager or sn_cd.content_admin

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the Campaign form, fill in the fields.
   For a description of the field values, see Campaign form in the Content Experience Builder.
4. Click **Save** to remain on the campaign page.
   Clicking **Submit** returns you to the campaigns list.

What to do next

Click **Next** or the **Schedule of Content** tab to add stages and content to the campaign: Create Microsoft Teams campaign stages using the Campaign Builder Experience

Campaign form in the Content Experience Builder

Campaign form to create Microsoft Teams notification content using the Content Experience Builder.

Campaign form

Field	Description
Title	Unique name for the campaign.
State	State of the campaign. • Draft: The campaign is in the creation process. When content and bundles are attached to the campaign, the **Publish** button appears in the form header. • Published: Activates all content for an audience. • Editing: The campaign is being edited.
Audience	Names of the users from the list who you want to see the content.
Approvers	User responsible for approving the campaign.
Start time	Date and time the campaign should launch.
End time	Date and time the campaign should end.
Re-evaluate campaign	Option for reviewing audience for a campaign. If the box is cleared, the *Content Experiences: Update Campaign Audience* scheduled job runs one time, after which the targeted audience is never re-evaluated or changed. Option to display the **Re-evaluate frequency** field so you can define how often you want the *Content Experiences: Update Campaign Audience* scheduled job to run. When your campaign is re-evaluated, the users dependent on the current audience criteria are removed or added.
Re-evaluate frequency	Frequency, in days, that you want to re-evaluate the audience. Audiences are re-evaluated after the *Content*

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Campaign form (continued)

Field	Description
	Experiences: Update Campaign Audience scheduled job runs based on the value you enter here. This field appears only if the **Re-evaluate campaign** check box is selected. This field value overrides the default (7 days) value set in the **Campaign Re-evaluation** field in the Content Experiences system property. For more information, see Properties installed with Content Experiences.
Description	Descriptive information about the campaign.

Create Microsoft Teams campaign stages using the Campaign Builder Experience

Use the Campaign Experience Builder to create stages for your campaign. Campaign builder provides a simple, single-page view for managing content and assembling your campaign.

Before you begin

Role required: sn_ca.campaign_manager or sn_cd.content_admin

About this task

For information about campaigns and campaign bundles and stages, see Creating campaigns with Content Experiences.

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select the campaign.
3. From the Campaign Bundles related list, select **New**.
4. On the form, fill in the fields.

Campaign bundle form

Field	Description
Title	Name of the campaign bundle.
Campaign	Option to choose a campaign that is associated with the campaign bundle.
Trigger type	Option to choose a trigger type that determines how the campaign bundle starts or ends. To learn more about triggers, see Campaign bundle triggers
Offset trigger start	Enables you to move the end date forward or backward from the value in the **Trigger type** field.
Specify end	Indicates whether you want the campaign bundle to have a specific end.
Description	Brief description for the campaign bundle.

5. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. From the Campaign Content related list, select **New**.
7. On the form, fill in the fields.

Campaign content form

Field	Description
Content	Description of the content record.
Campaign Bundle	The campaign bundle to associate with the content.
Title	Title for the campaign content. This value is automatically updated as per the value in the Content field.
Active	Option to indicate that the schedule for content is active and available to employees.
Description	Brief description about the campaign bundle.

8. Select **Submit**.
9. On the Campaign form, select **Publish**.

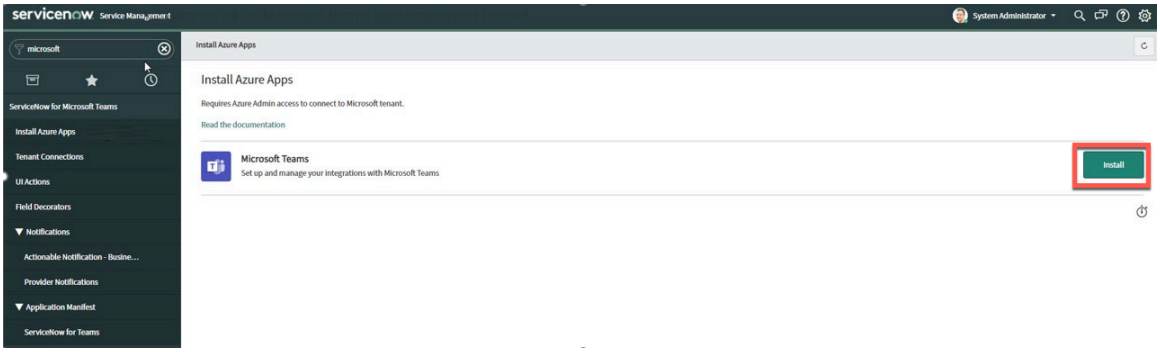
Result
The campaign is delivered to the employees according to the scheduled job timeline.

Setup for integrating pre-published apps with Microsoft Teams for Agent Experience

Allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Microsoft Teams pre-published app environment.

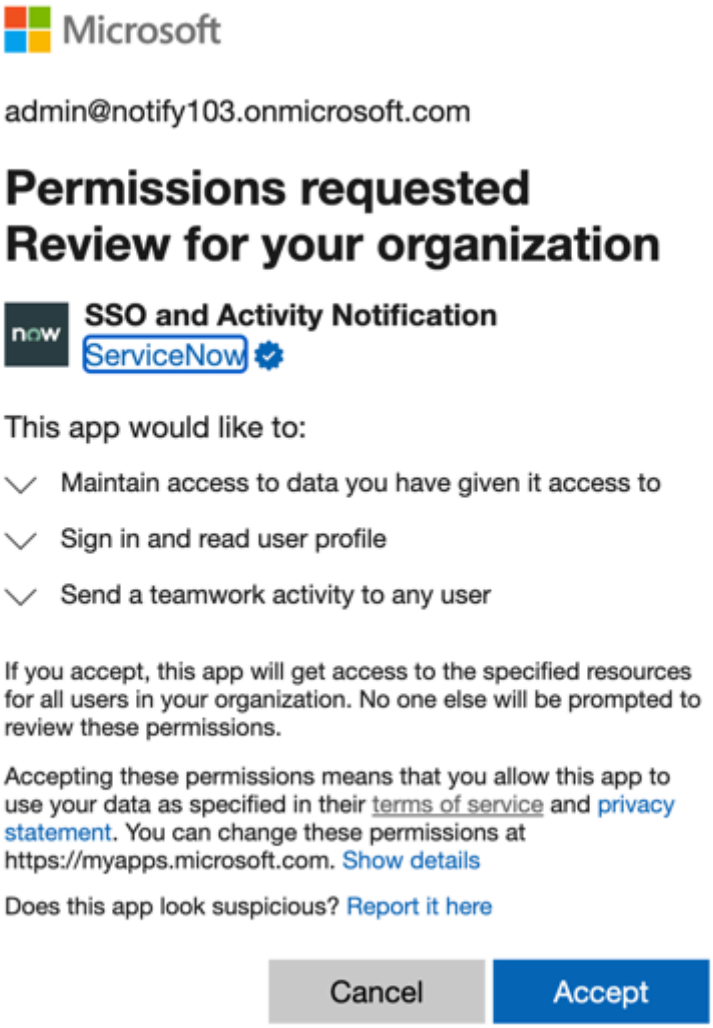
Integrate Notify connector pre-published app with Microsoft Teams

Set up the Notify connector for Microsoft Teams using the pre-published app. You can use the Microsoft Azure apps instead of creating a separate Microsoft Azure app for the integration.



Connect the ServiceNow instance to your Microsoft Teams tenant

Connect your ServiceNow instance to your Microsoft Teams tenant to enable the users to create their requests from within Microsoft Teams.



Before you begin
Role required: External admin (external_app_install_admin)

Procedure
1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.
2. Click **Connect** to install Microsoft Teams in your instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the **Consent on behalf of your organization** option to provide the consent for all your users, and click **Accept** button to provide the admin consent.

SSO and Activity Notification is one of the apps to verify the users and connect the Microsoft tenant to the ServiceNow instance. Provide the desired Microsoft tenant details to connect to the ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

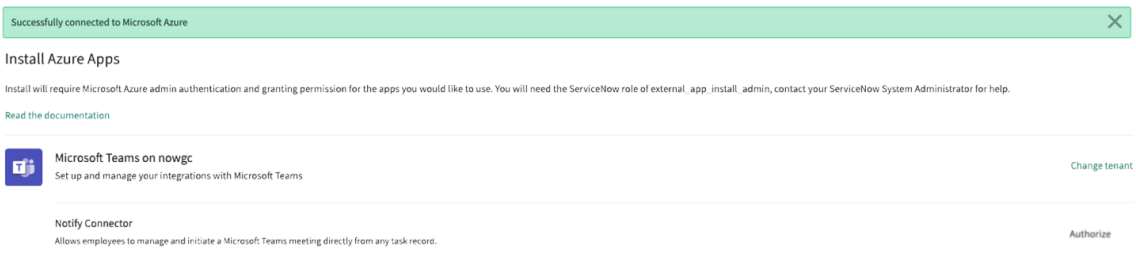
Select the **Consent on behalf of your organization** option to provide the consent for all your users.

> **Note:**
> All the users must also accept the permissions, not accepting the permissions result in not being able to use the ServiceNow integrations with Microsoft Teams.

Authorize pre-published Azure apps to grant required permissions

Authorize the pre-published apps to enable ServiceNow to make API calls to Microsoft to enable each of the ServiceNow for Teams application workflows.

Before you begin

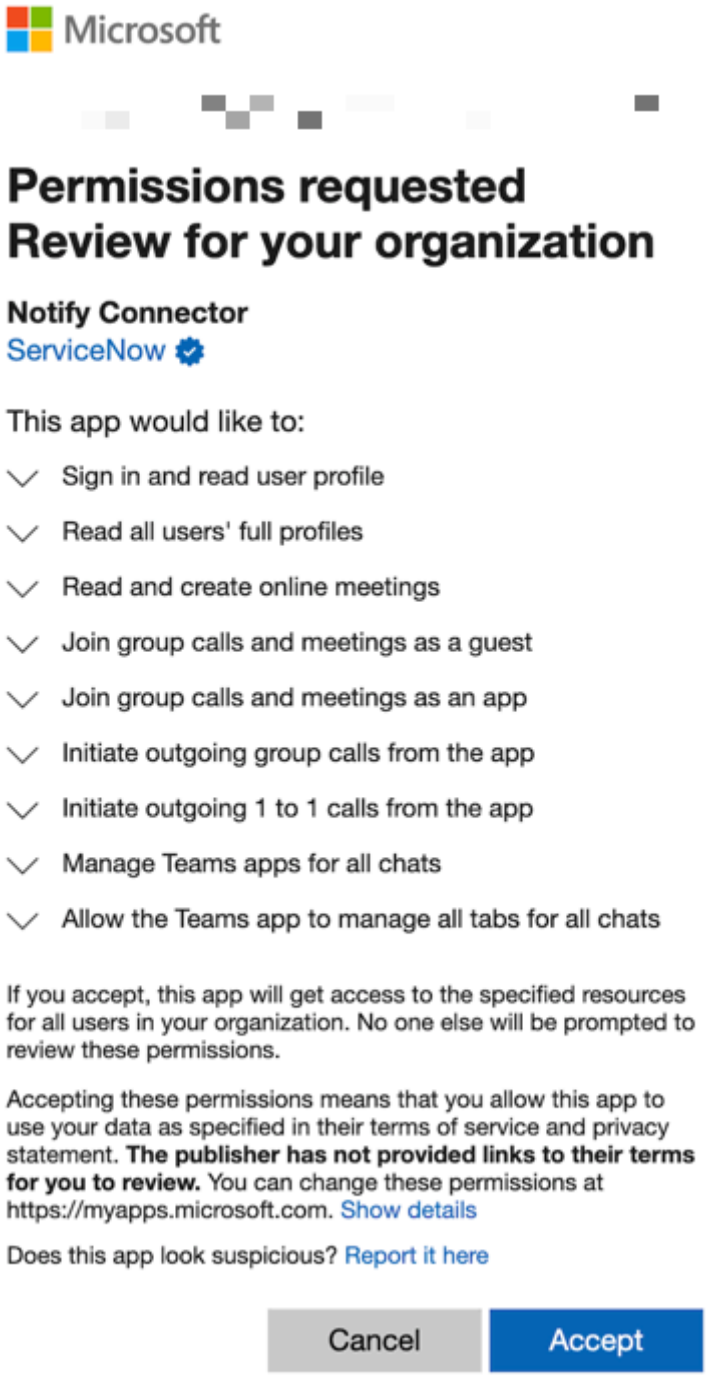


Role required: External admin (external_app_install_admin)

About this task

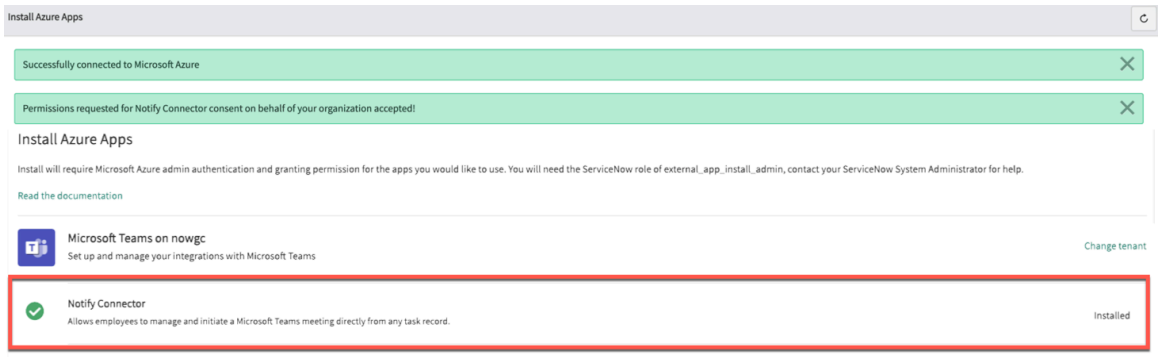
To connect your ServiceNow instance to your M365 tenant and to Authorize apps, the user must have both the external_app_install_admin role as well as the application administrator role in M365. Application administrator is a Microsoft driven role, for more information on roles, refer Azure AD built-in roles.

Procedure



1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.

2. Click **Authorize** for Notify Connector.
3. Provide the admin consent by selecting **Accept**.



> **Note:**
> Additional permissions such as 'Manage Teams apps for all chats' and 'Allow the Teams app to manage all tabs for all chats' are required to create an app for meeting extensibility, and to create a new tab for a major incident meeting from the major incident workbench in Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Upon successful authorization, the app is shown as **Installed**.

Create a Service user to make calls from Microsoft Teams

Configure Notify connector for Microsoft Teams in your environment by creating a Service user to have a seamless conference call experience in Microsoft Teams.

Before you begin

Role required: admin

Note:
You must create a service user role, which will be able to start online meetings on behalf of users.

Procedure

1. Log in to Microsoft Azure portal.
2. Create a Service user.
   a. Navigate to **Azure services** > **User**.
   b. Select **New user**.
   c. On the form, fill the fields.

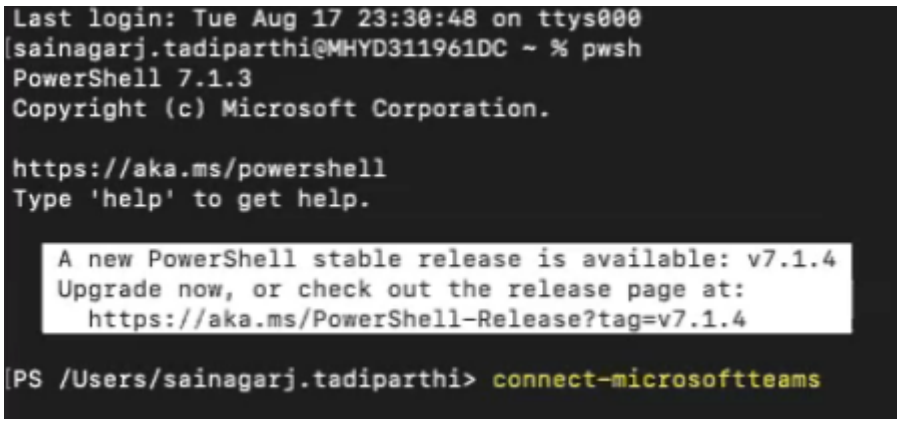
New user

Field	Description
User name	Option to provide the user name for the user.
Name	Option to provide the name of the user.

   d. Select **Create**.
   e. Select the created user to view the details.

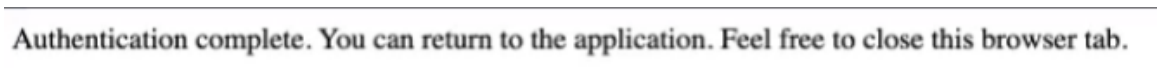
Note:
Ensure that the Service User has the required license/subscription and a valid usage location set to make conference calls from Microsoft Teams.

3. Run the PowerShell command from Terminal on macOS or from the Command prompt on Windows OS.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Type the command `pwsh` and press **Enter**.



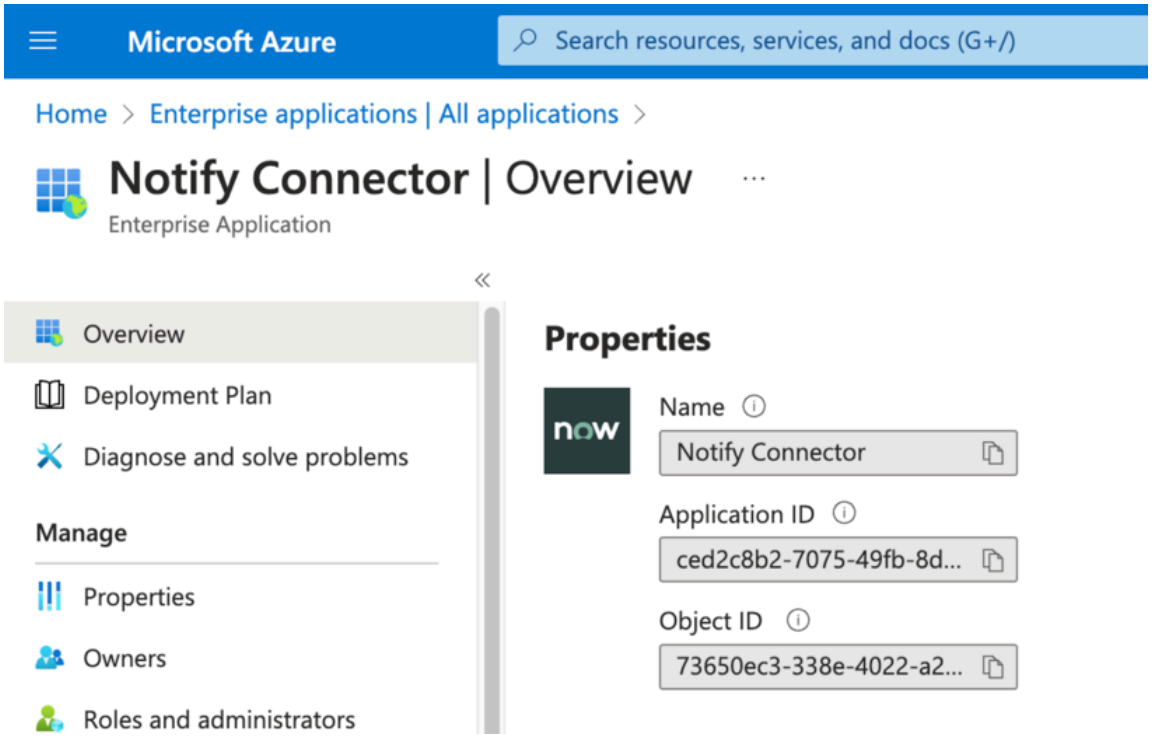
b. Connect your Microsoft tenant with PowerShell.

c. Run the following command in PowerShell.

```
connect-microsoftteams
```

Upon successful connection, a confirmation message is displayed in the browser.

PowerShell will also display the tenant details.



4. Run the Application Access Policy in PowerShell.
For more information on the application access policy, see Configure application access to online meetings.

Run the following command in PowerShell.

Use the App ID `ced2c8b2-7075-49fb-8dc9-7ebb41f89769` to grant permission to the Notify connector app. You can find the App ID in Microsoft Azure portal in the path: **Home** > **Enterprise applications** > **All applications**. Select the app created for Notify connector for Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
Syntax:

New-CsApplicationAccessPolicy -Identity "<PolicyName (can
 be anything)>" -AppIds "<AppIds>" -Description "<Policy
 Description>"

Example:
If you have a Pre-published (multi tenant) setup, use the
 application ID from Azure portal.

For Example: New-CsApplicationAccessPolicy
 -Identity "OnlineMeetingsAccessPolicy" -AppIds
 "ced2c8b2-7075-49fb-8dc9-7ebb41f89769" -Description "Grant
 OnlineMeeting Application Permission"
```

Upon successfully granting the permissions, the details are displayed in PowerShell.

5. Run the user permission policy in PowerShell.

   a. Go to the Microsoft Azure portal.

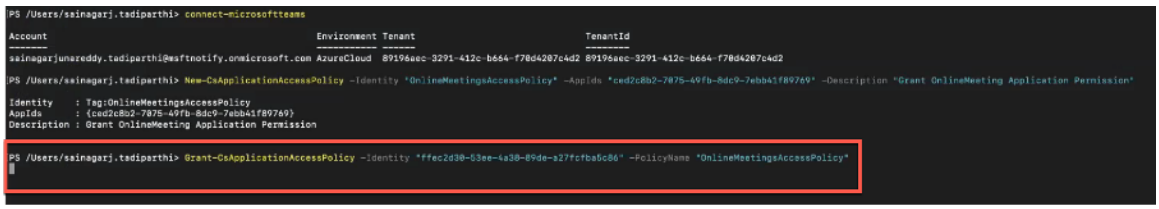
   b. Navigate to **Home** > **Users**.

   c. Select the user created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Copy the **Object ID** of the user to notepad.

e. Run the user policy command in PowerShell with PolicyName same as created in the previous step.

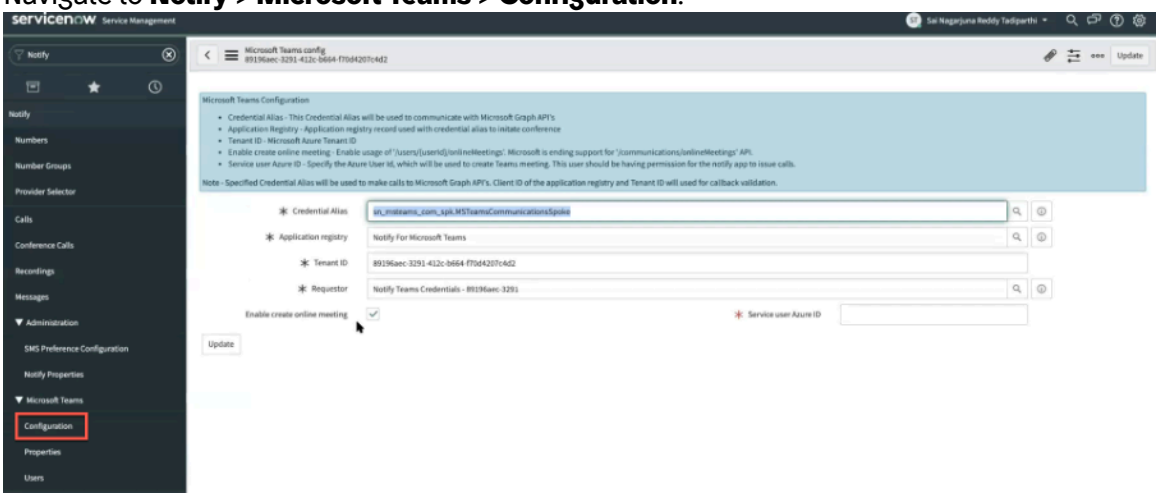


```
Syntax:

Grant-CsApplicationAccessPolicy -Identity "<UserAzureID>"
 -PolicyName "<PolicyName>"
```

You must provide your user ID in **UserAzureID** field and run the command in PowerShell.

```
Example:



Grant-CsApplicationAccessPolicy -Identity
 "fdcd9c17-ceae-468f-906f-2er76b4dd0f4" -PolicyName "
 OnlineMeetingsAccessPolicy"
```

6. Configure Microsoft Teams.

a. Open your ServiceNow instance.

b. Navigate to **Notify** > **Microsoft Teams** > **Configuration**.

c. Paste the **Object ID** of the user in **Service user Azure ID** field.

If you have performed an upgrade to Notify connector for Microsoft Teams, you must manually enable the **Enable create online meeting option**. You can then update the value in the Service user Azure ID field.

d. Select **Update**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integrate Meeting Extensions pre-published app with Microsoft Teams

Configure the Meeting Extensions for Microsoft Teams using the pre-published app.

Notify connector for Microsoft Teams is the prerequisite for the functioning of Meeting Extensions app. So, ensure you have completed integration setup related to Notify connector for Microsoft Teams. For more information, see Integrate Notify connector pre-published app with Microsoft Teams.

Authorize pre-published SSO and Activity Notification Azure apps to grant required permissions

Authorize the pre-published SSO and Activity Notification apps to enable ServiceNow® to make API calls from a personal tab in Microsoft Teams.

Before you begin

Role required: External admin (external_app_install_admin)

About this task

To connect your ServiceNow instance to your Microsoft 365 tenant and to Authorize apps, the user must have both the external_app_install_admin role and the application administrator role in Microsoft 365. Application administrator is a Microsoft driven role, for more information on roles, refer Azure AD built-in roles.

Procedure

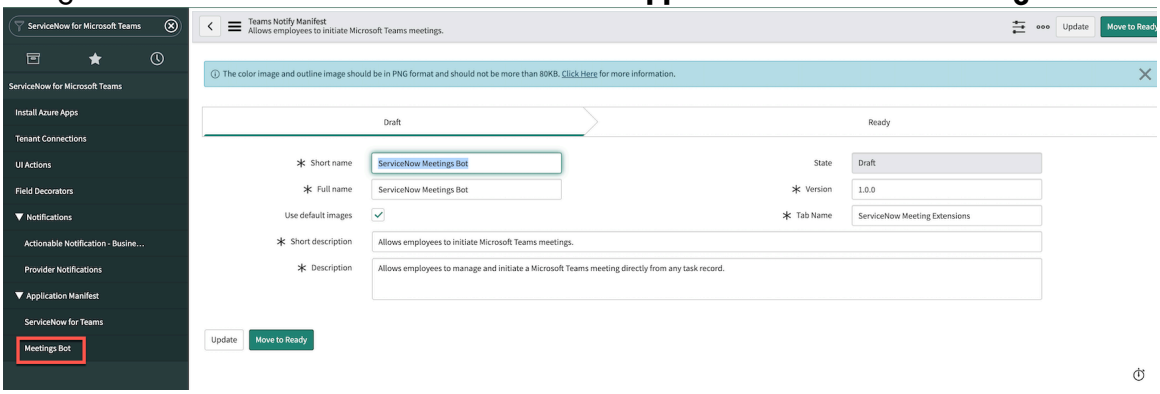
1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Install Azure apps**.
2. Select **Authorize** for SSO and Activity Notification.
3. Provide the admin consent by selecting **Accept**.

> **Note:**
> Additional permissions such as 'Manage Teams apps for all chats' and 'Allow the Teams app to manage all tabs for all chats' are required to create an app for meeting extensibility, and to create a new tab for a major incident meeting from the major incident workbench in Microsoft Teams.

Upon successful authorization, the app status is displayed as Installed.

Download manifest file

Download the Notify connector for Microsoft Teams manifest file from your instance.



Before you begin

Role required: external_app_install_admin, admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Application Manifest** > **Meetings Bot**.

After you install the ServiceNow for Teams pre-published app, the client ID and the app ID entries will not be displayed in the manifest screen.

2. On the form, fill in the fields.

Manifest for Notify connector for Microsoft Teams

Field	Description
Short name	Short name of the meetings bot.
State	State of the manifest file.
Full name	Complete name of the meetings bot.
Version	Version of the meetings bot.
Use default images	Option to use default images for the meetings bot. **Note:** If you want to customize the company branding, clear the **Use default images** option and then upload the icons. For more information on the size of icons, refer App icons and manifest schema icons. You can upload an image for **Color image** and **Outline image** options.
Short description	Short description for the manifest file.
Description	Detailed description for the manifest file.

3. Select **Move to Ready**.
4. Select **Download Manifest**.

Manifest file is downloaded on your system.

Configuring Notify connector for Microsoft Teams app in Microsoft Teams

Configure the manifest file in Microsoft Teams client or admin center to use Notify connector for Microsoft Teams app.

You can upload the manifest file in Microsoft Teams using one of the following procedures.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Configure Notify connector for Microsoft Teams app in Microsoft Teams
- Configure Notify connector for Microsoft Teams app in Microsoft Teams

Configure Notify connector for Microsoft Teams app in Microsoft Teams

Configure the manifest file in Microsoft Teams client to use Notify connector for Microsoft Teams app.

Before you begin

Role required: external_app_install_admin, admin

Procedure

1. Launch Microsoft Teams application.
2. Navigate to **Apps** > **Manage your apps** > **Upload an app**.
3. Upload manifest file on Microsoft Teams client using one of the following procedures.
   - Select **Upload an app to your org's app catalog** if you are an admin.
   - Select **Submit an app to your org** if you are not an admin and for a Microsoft Teams admin to approve.
     a. Search, select, and open the downloaded app manifest file. An acknowledgement of request submission to your admin is displayed.
     b. Log in to the Microsoft Teams admin portal as Microsoft Teams admin.
     c. Navigate to **Teams apps** > **Manage apps**.
     d. Search the app by name and select to open. The app default status is Blocked.
     e. Select **Publish** and select **Publish** on the Publish your custom app? pop-up page. The app status is changed to Allowed.

   It may take some time for the uploaded app to appear on the Microsoft Teams admin center.

Result

The **ServiceNow Meetings Bot** card appears in Microsoft Teams.

Configure Notify connector for Microsoft Teams app in Microsoft Teams

Configure the manifest file in Microsoft Teams admin center to use Notify connector for Microsoft Teams app.

Before you begin

Role required: external_app_install_admin, admin

Procedure

1. Log in to Microsoft Teams admin portal.
2. Navigate to **Teams apps** > **Manage apps** > **Upload new app** > **Upload**.
3. Search, select, and open (in the Upload a custom app dialog-box) the manifest file you downloaded.

Result

The **ServiceNow Meetings Bot** card appears in Microsoft Teams.

Map ServiceNow Meeting Extensions app ID in ServiceNow

Map the ServiceNow Meeting Extensions app ID in your ServiceNow instance to automatically add the meeting extensions tab in Microsoft Teams for a conference call.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: Microsoft Teams admin

Procedure

1. Copy the Meeting Extensions App ID.

   a. Log in to Microsoft Teams admin portal.

   b. Navigate to **Teams apps** > **Manage apps**.

   c. Search and select **ServiceNow Meeting Bot**.

   d. Select **ServiceNow Meeting Bot**.

   e. Copy the App ID in a notepad.

   Note:
   Ensure that you are copying the value of the **App ID** and not the **External app ID**.

   This **App ID** must be updated in System Properties in ServiceNow instance.

2. Paste the Meeting Extensions App ID.

   a. Log in to the ServiceNow instance.

   b. Navigate to **Notify** > **Microsoft Teams** > **Properties**.

   c. Update the **Application ID of Meeting Extensibility teams app** field with the above App ID.

   d. Click **Save**.

   Note:
   Log in to the Microsoft Teams portal, under **Apps**, search and open **ServiceNow Meetings Bot** app at least once for the Meeting Extensions app to work.

   Meeting Extensions app is set up.

What to do next

After completing Meeting Extensions integration with Microsoft Teams, see the section Meeting Extensions for Microsoft Teams.

Setup for integrating self-configured apps with Microsoft Teams

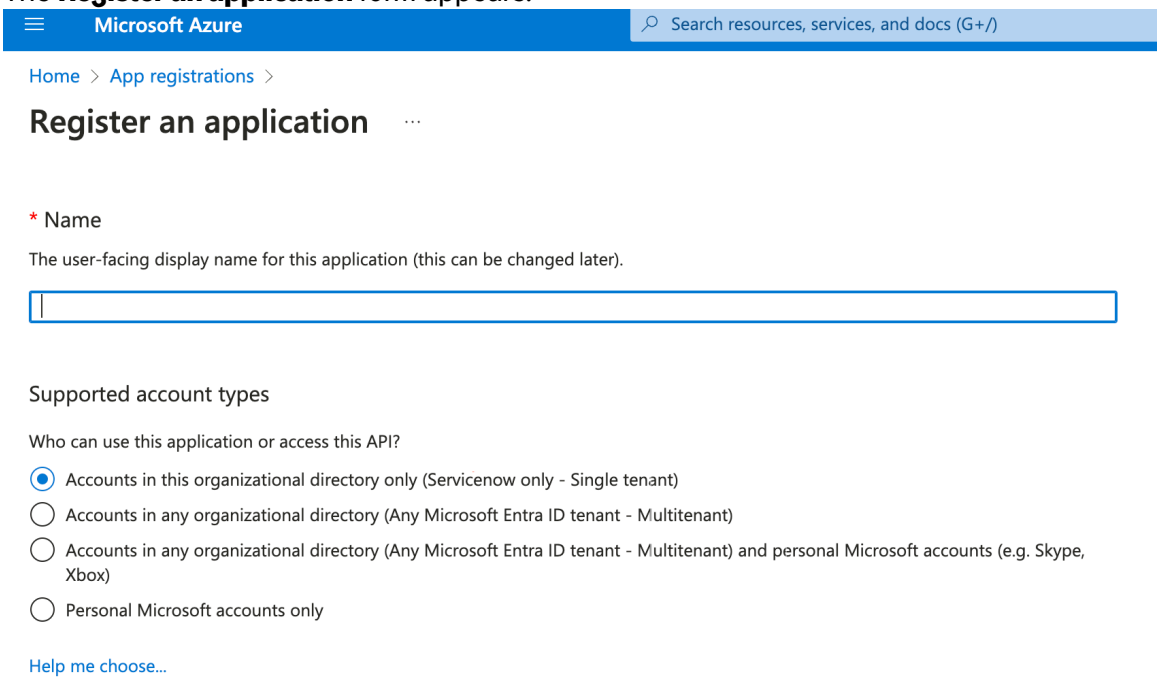
Prepare your environment to set up and configure ServiceNow for Microsoft Teams integrations using the self-configured app.

Setup for integrating self-configured apps with Microsoft Teams for Employee Experience

Set up self-configured apps to integrate with IT, HR, and Universal Request through Microsoft Teams. Employees can interact with the agents from within Microsoft Teams to resolve their issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create Microsoft Azure application and authenticate users to access Employee Center in Microsoft Teams



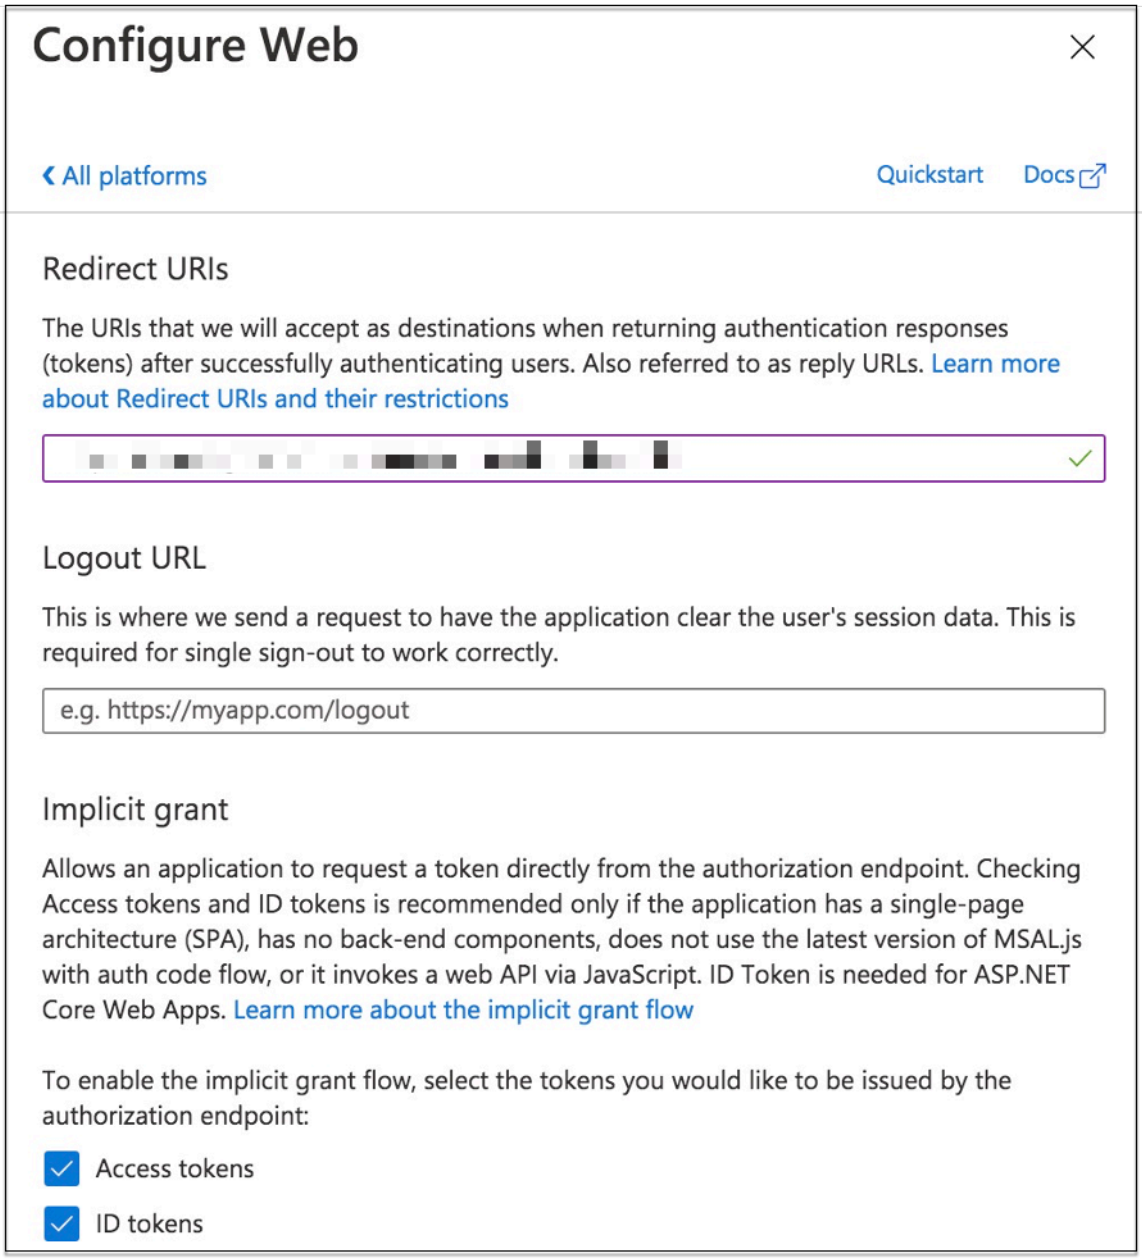
Create a Microsoft Azure application in the Microsoft Azure portal to enable agents to start and import the chat conversations, and assign permissions to users to view the Employee Center dashboard in the Microsoft Teams application.

Before you begin

Role required: Microsoft Azure admin

Procedure

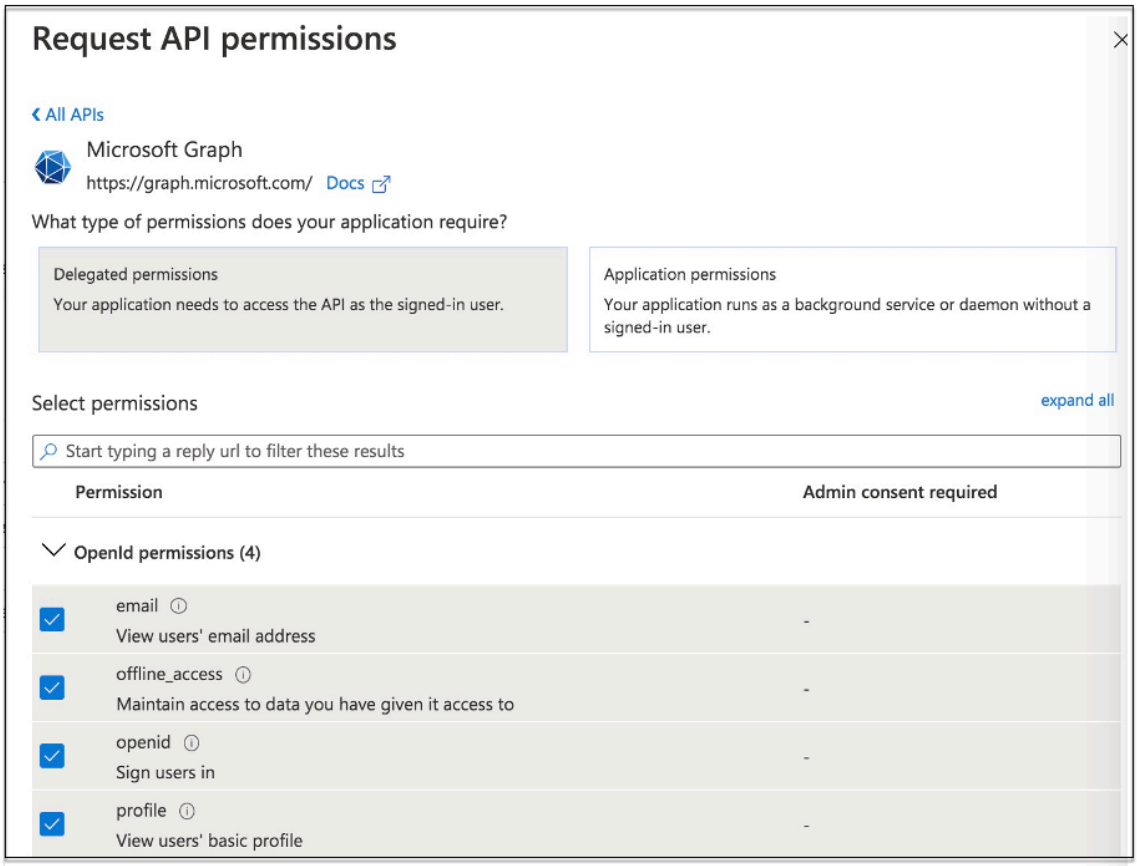
1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Microsoft Entra ID** > **Manage** > **App registrations**.
3. Select **New registration**.
   The **Register an application** form appears.



4. Enter the name for your application, for example: `ServiceNow Auth app`, on the Register an application page.
5. Select **Accounts in this organizational directory only (Servicenow only - Single tenant)**.
   For more information on why this option is selected, see Identity and account types for single- and multi-tenant apps.
6. Select **Register**.
   A new Microsoft Azure app is registered.
7. Navigate to **Manage** > **Authentication**.
8. Select **Add a platform** > **Web**.
9. On the **Configure Web** form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure Web form



Field	Description
Redirect URIs	Provide the redirect URI. The redirect URI should be in the following format: `https://<instance-url>/sn_now_teams_ms_login.do` where <instance-url> is the ServiceNow instance URL.
Implicit grant	Select **Access tokens** and **ID tokens**.

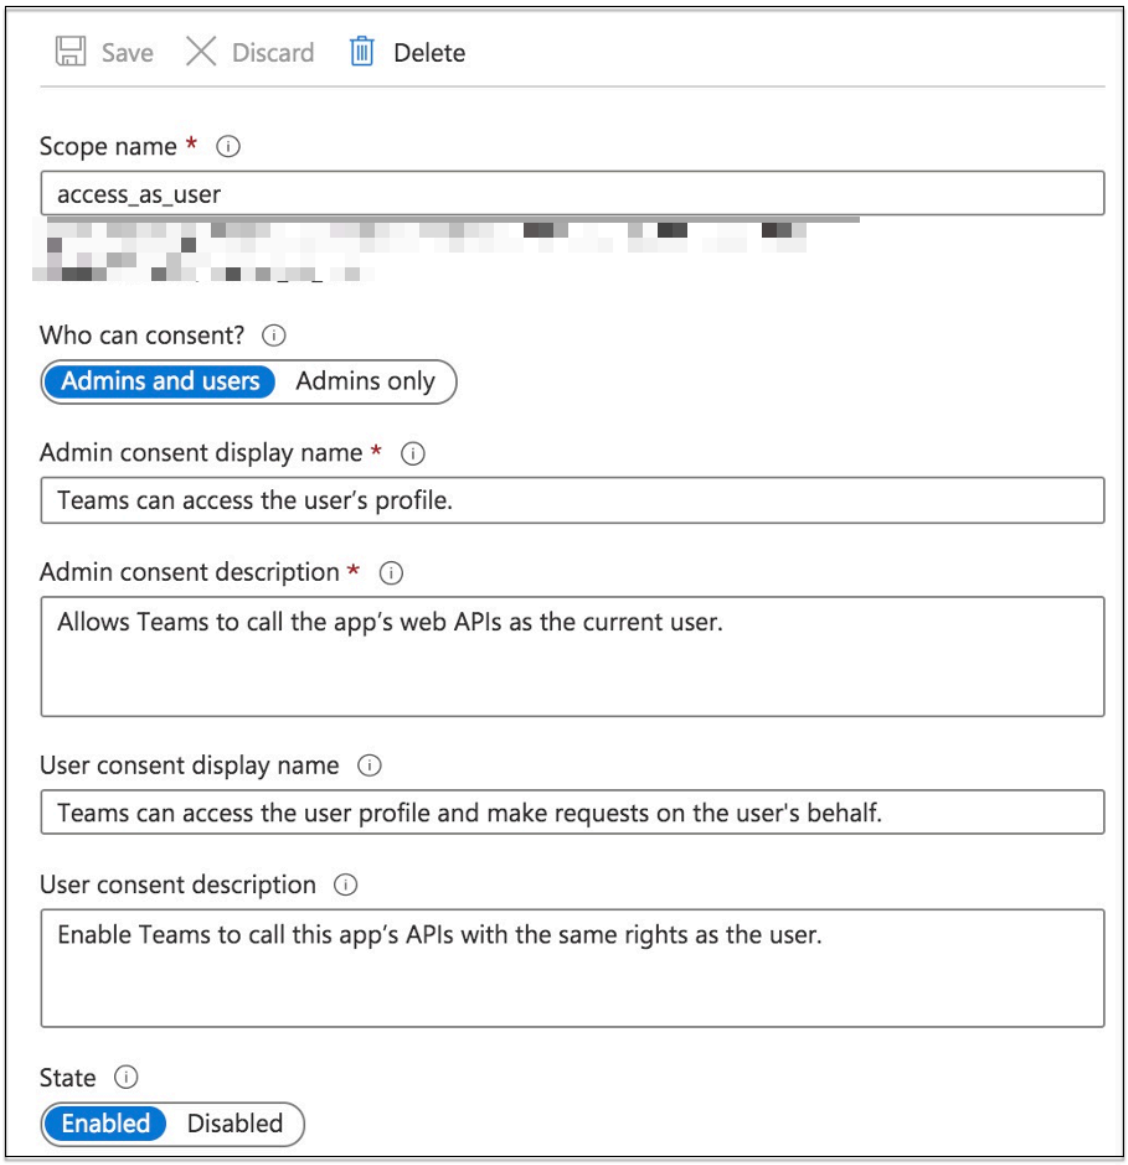
10. Select **Configure**.
11. Navigate to **Manage** > **API Permissions** > **Add a permission** > **Microsoft Graph**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

12. Select **Delegated permissions**.
13. Select **Openid permissions** accordion, and select **email**, **offline_access**, **openid**, and **profile** check boxes.

14. Select **Add permissions**.
15. In the **API permissions** screen, select the **Grant admin consent for {tenant}** link.
16. Select **Yes** on the pop-up dialog box.
17. Navigate to **Manage** > **Expose an API**.
18. Select **Set against Application ID URI**, and enter the application URI in the format: `api://<instance>.<domain_name>.com/<client_id>`.

> **Note:**
> The client ID is the application ID from your Microsoft Azure portal.



19. Select **Save**.
20. Select **Add a scope**.
    In the **Add a scope** form, fill the following fields.

Add a scope form

Field	Description
Scope name	access_as_user
Who can consent	Admins and users
Admin consent display name	Teams can access the user's profile.
Admin consent description	Allows Teams to call the app's web APIs as the current user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

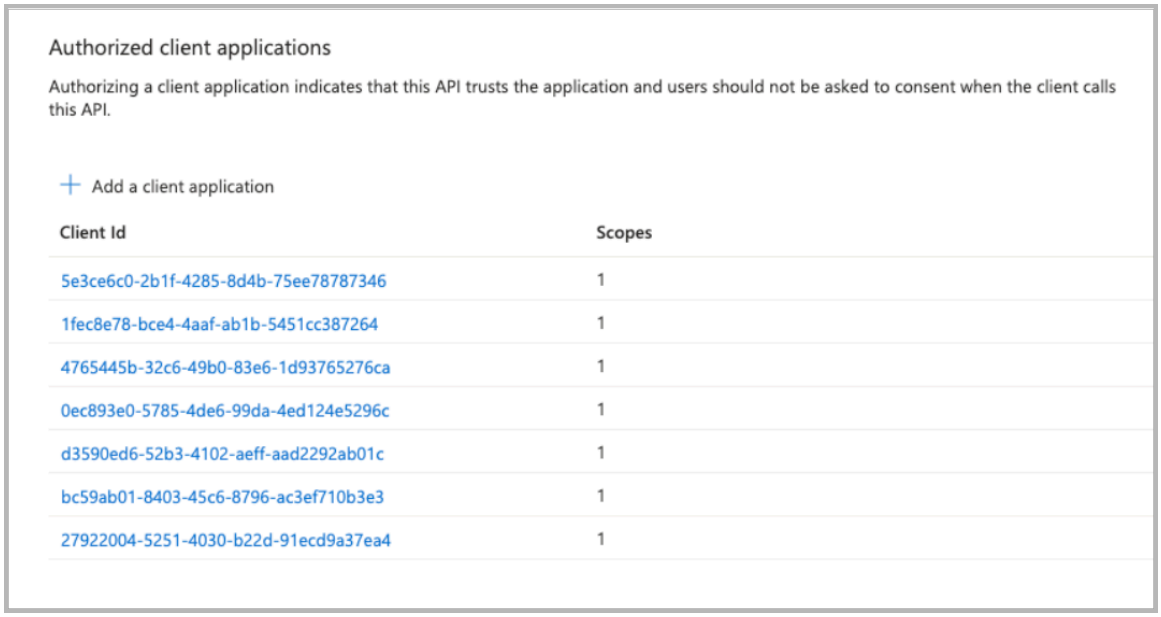
Field	Description
User consent display name	Teams can access the user profile and make requests on the user's behalf.
User consent description	Enable Teams to call this app's APIs with the same rights as the user.
State	Enabled

21. Select the **Add scope** button.
22. Navigate to **Authorized client applications** > **Add a client application**.
23. In the **Add a client application** form, fill the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

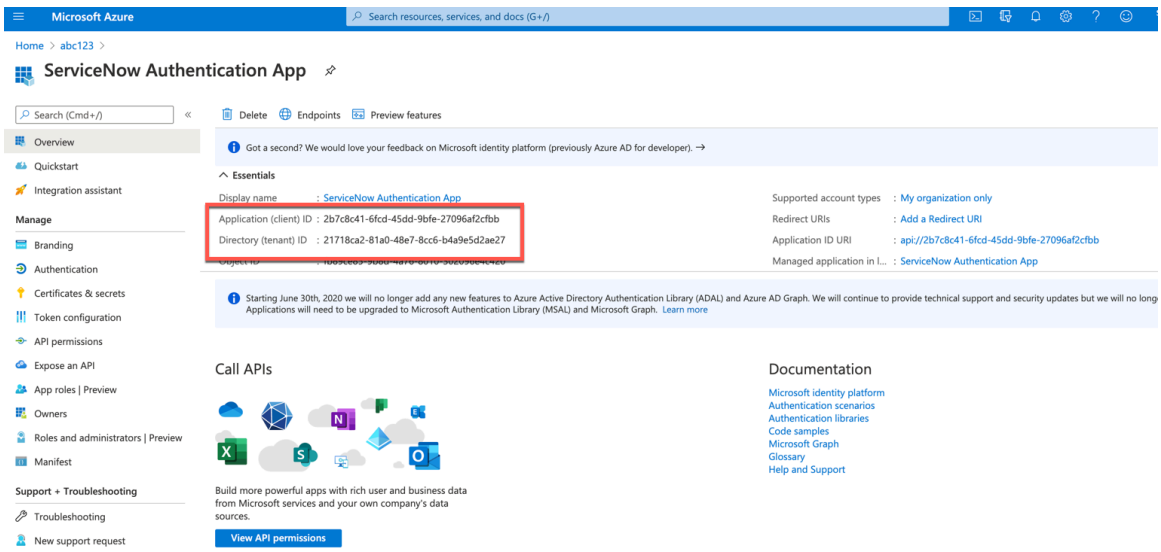
Add client application form

Field	Description
Client ID	○ Microsoft Teams mobile/desktop application: **1fec8e78-bce4-4aaf-ab1b-5451cc387264** ○ Value for Microsoft Teams web application: **5e3ce6c0-2b1f-4285-8d4b-75ee78787346**
Authorized scopes	Check the authorized scope



Note:
For using Employee Center in Microsoft 365 applications, add the following client IDs:

Microsoft 365 applications client IDs



Client ID	Description
4765445b-32c6-49b0-83e6-1d93765276ca	Microsoft 365 web application
0ec893e0-5785-4de6-99da-4ed124e5296c	Microsoft 365 desktop application
d3590ed6-52b3-4102-aeff-aad2292ab01c	Client ID for Outlook desktop application web application
bc59ab01-8403-45c6-8796-ac3ef710b3e3	Client ID for Outlook web application
27922004-5251-4030-b22d-91ecd9a37ea4	Client ID for Outlook mobile application

For more information on the client IDs, see Configure your tab app in Microsoft Entra ID in the Microsoft Teams documentation.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

24. Select the **Add application** button.
Copy the Application (client) ID, and Directory (tenant) ID from the application overview page in the Microsoft Azure portal to update the details in the ServiceNow instance.

Create and download the manifest file for self-configured apps

Create and download the ServiceNow for Microsoft Teams manifest file from your instance to enable Microsoft Teams to use the ServiceNow for Teams app.

Before you begin

Role required: external_app_install_admin

About this task

You can connect multiple ServiceNow instances to one Microsoft Teams tenant. For more information, see Integrating multiple ServiceNow instances with a single Microsoft Teams tenant.

Multiple self-configured app environments can be connected to the Microsoft Teams tenant as you can create separate Azure apps for each self-configured app environment.

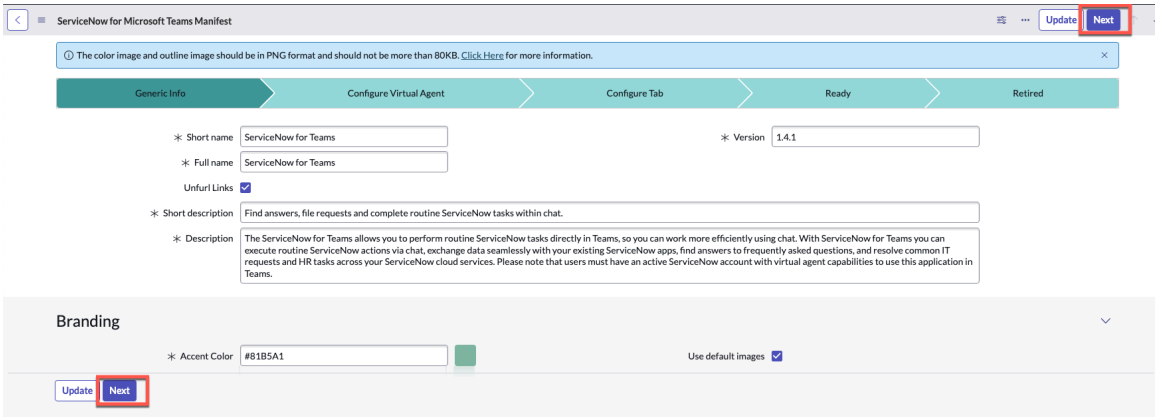
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This process is for configuring a Microsoft Teams manifest file, which dictates how an application would behave in Microsoft Teams. For information about the manifest generation provided by ITSM/HR, see Auto-generate the manifest file for uploading on Microsoft Teams, which includes more available configurations.

Note:
You can only connect one pre-published app setup to the Microsoft Teams tenant. For information about creating a manifest file for pre-published apps, see Create and download the manifest file for pre-published apps.

Procedure

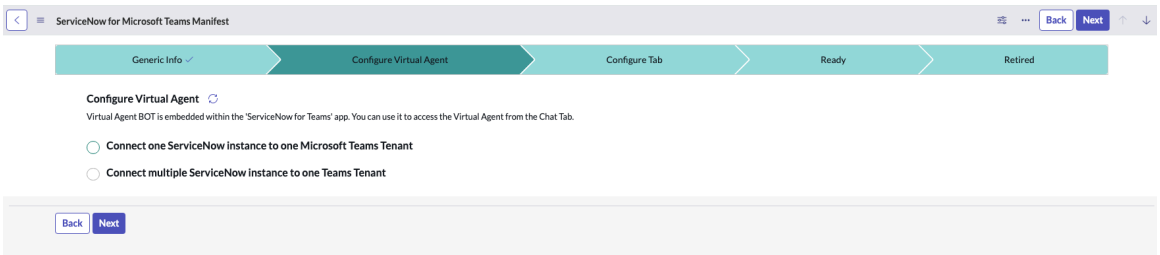
1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Application Manifest** > **ServiceNow for Teams**.
2. Select **New**.
   The **Generic Info** section opens.
3. In the **Generic Info** section, fill in the fields.



Generic Info Form

Field	Description
Short name	Short name for the manifest file.
Full name	Complete name for the manifest file.
Version	Version of the manifest file. For example, `1.0.0`.
Unfurl Links	Option to unfurl the links in Microsoft Teams. Link unfurling generates a content-rich preview(adaptive card) when a supported link is shared in a conversation with a user in Microsoft Teams. For more details about link unfurling, refer Unfurl the web links in Microsoft Teams chat.
Short description	Short description about the manifest file.
Description	Detailed description about the manifest file.
Accent Color	Custom color for the conversations in Microsoft Teams according to the company branding. The accent color must be in the HTML color code format.
Use default images	Option to use the default images for branding. **Note:** If you want to customize the company branding, clear the **Use default images** option and then upload the icons. For more information on the size of icons, see App icons and manifest schema icons.

4. Select **Submit**.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Next**.

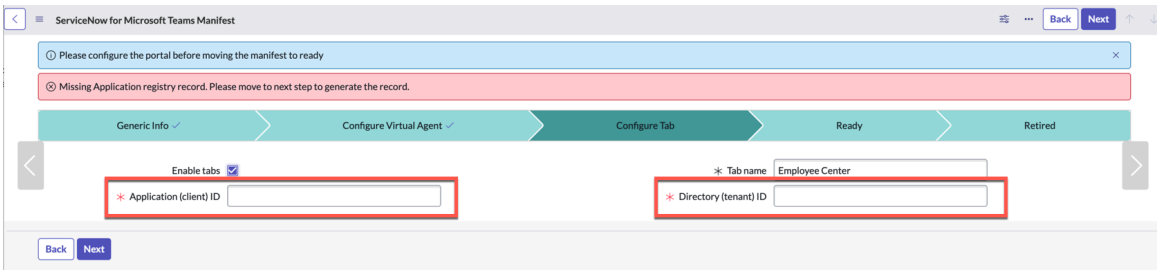
The **Configure Virtual Agent** section opens

6. In the **Configure Virtual Agent** section, select either of the following options.
   - Select **Connect a single ServiceNow instance to your Microsoft Teams Tenant** to connect one ServiceNow instance to a Microsoft Teams tenant. The Virtual Agent Bot ID is auto-populated when you select this option. This is applicable for pre-published apps. For more information, see Create and download the manifest file for pre-published apps.
   - Select **Connect multiple ServiceNow instances to your Microsoft Teams tenant** to connect multiple ServiceNow instances to one Microsoft Teams tenant.

To configure the Virtual Agent in your instance, select **Configure Virtual Agent**. For more information, see Conversational Integration with Microsoft Teams.

To integrate Virtual Agent with Microsoft Teams by configuring your own bots, see Integrating Virtual Agent with Microsoft Teams using the self-configured bot.

7. In the **Configure Tab** section, fill in the fields.



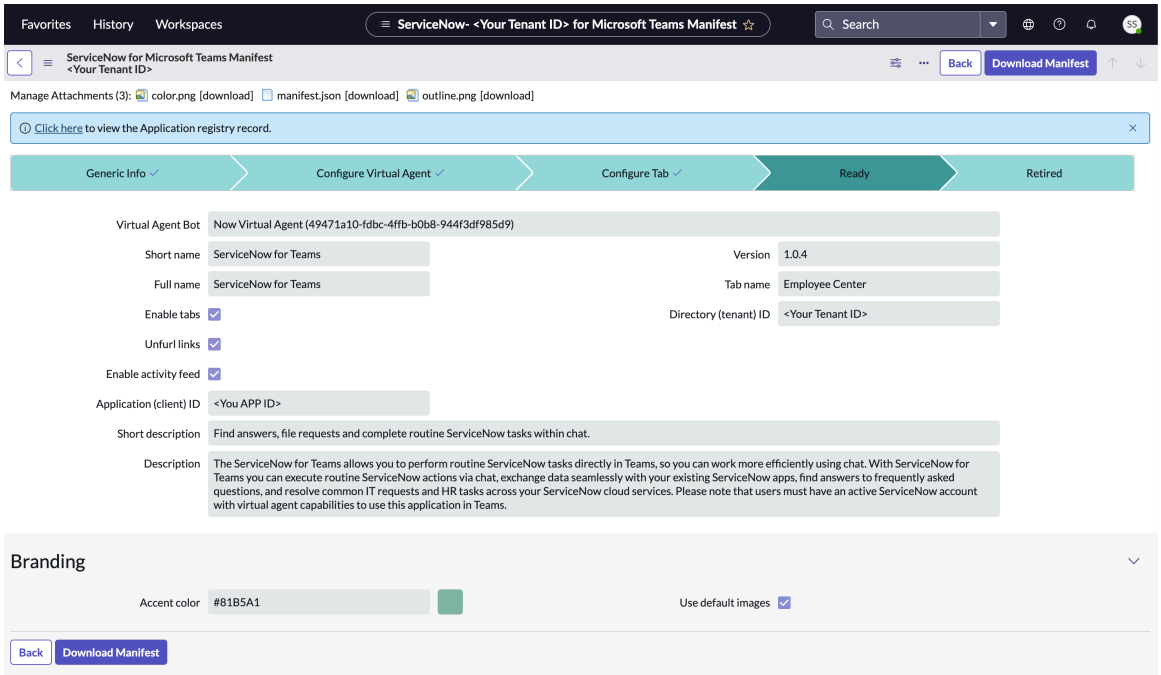
Configure Tab form

Field	Description
Enable tabs	Option to add tabs in the Microsoft Teams application. This option is selected by default.
Tab name	Name of the service portal tab that appears in the Microsoft Teams application.
Enable Activity Feed	Option to enable the activity feed to receive campaign notifications in Microsoft Teams. This option is selected by default.
Application (client) ID	The client ID of the Azure app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Directory (tenant) ID	The tenant ID of the Azure app.

For a self-configured app, you must provide the Application (client) ID and Directory (tenant) ID in the **Configure Tab** section. The Tenant ID and Client ID (App ID) can be fetched from the Azure portal.



8. Select **Next**.
   The **Ready** section opens.
9. In the **Ready** section, select the **Enable Activity Feed** option to receive notifications for campaigns.
10. Navigate to the Application registry record and view the OIDC Provider Configuration record.
    - Select the link in the information message at the top of the page.
    - Navigate to **System OAuth** > **Application Registry** and select **Azure AD - <Tenant-ID>**.

    The User Claim is part of the *id_token* that is fetched from Microsoft Azure AD (Entra ID). The **User Field** must be configured so that the value fetched from the User [sys_user] table matches the User Claim value.

    Note:
    If none of the configured fields match the User Claim value, you can create a custom field and enter the required value.

11. Verify the details provided and select **Download Manifest**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The manifest file is downloaded in the zip format and an application registry is created.

What to do next

You must upload the manifest file in Microsoft Teams. For more information, refer Upload manifest file in Microsoft Teams.

Upload manifest file in Microsoft Teams

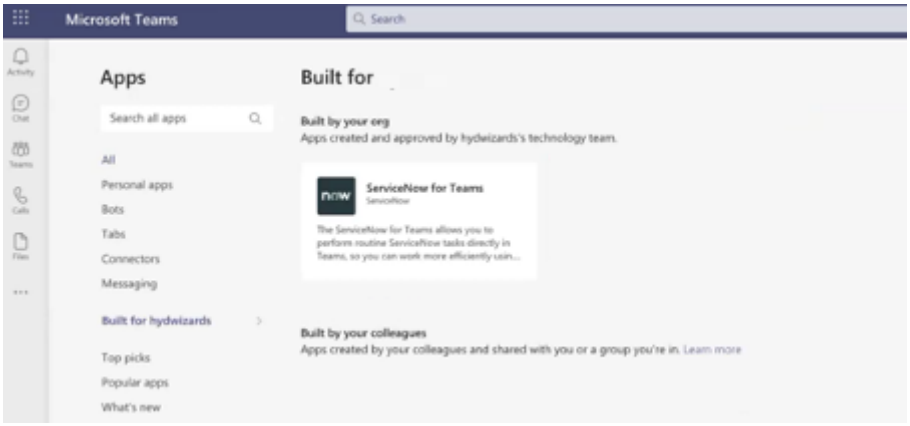
Upload the manifest file in Microsoft Teams to integrate Microsoft Teams with your ServiceNow instance.

Before you begin

Make sure that you have the manifest file for self-configured apps. For more information, see Create and download the manifest file for self-configured apps.

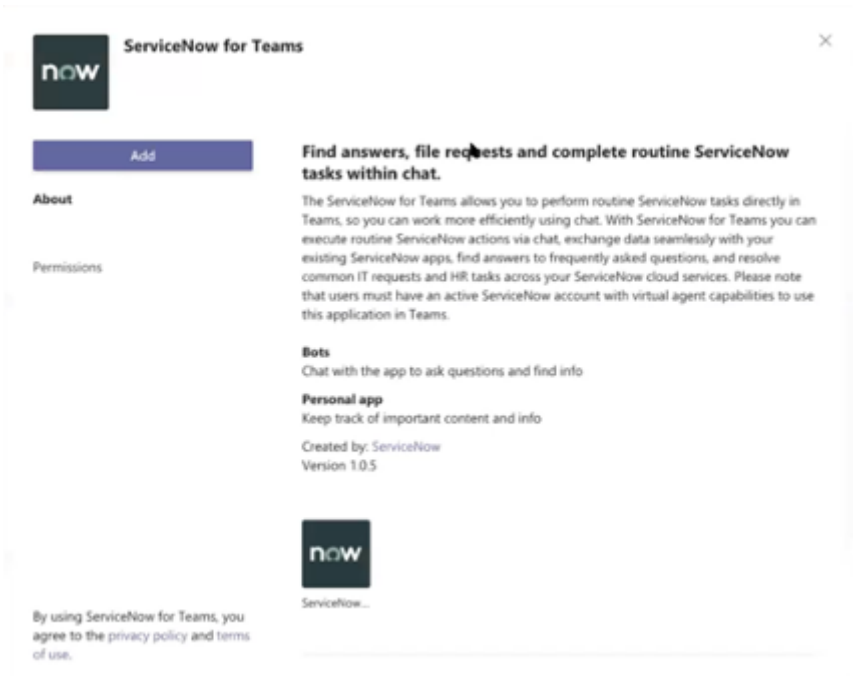
Role required: admin

Procedure



1. Launch the Microsoft Teams application.
2. Navigate to **Apps** > **Upload a customised app**.

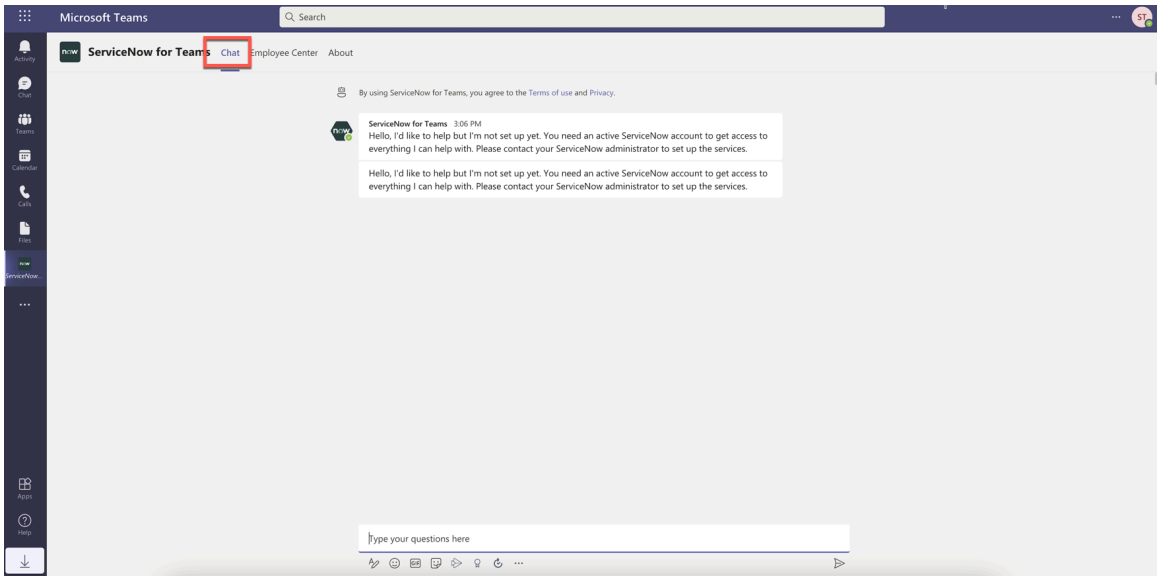
> **Note:**
>
> Ensure that ServiceNow for Microsoft Teams is allowed as a third-party app in Microsoft Teams. For information about allowing apps in Microsoft Teams, see the Microsoft Teams documentation.



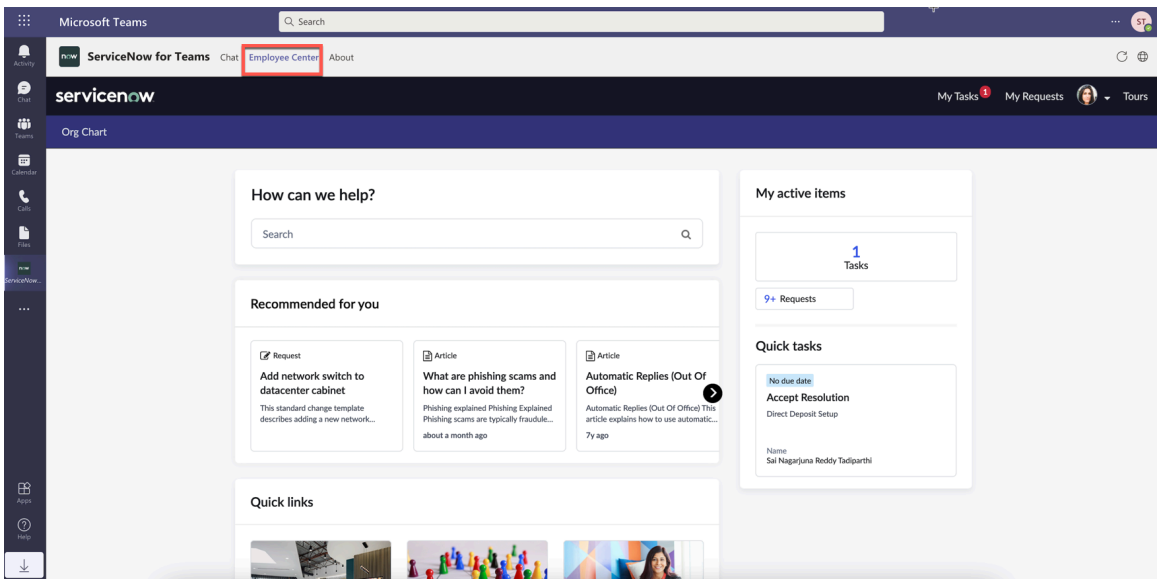
3. Navigate to the location where the manifest file is downloaded and select the zip file.
4. Select **Open**.

The **ServiceNow for Teams** appears in the **Apps** screen.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



5. Select the **ServiceNow for Teams** app.
6. Select **Add**.



The ServiceNow for Teams app appears in Microsoft Teams.

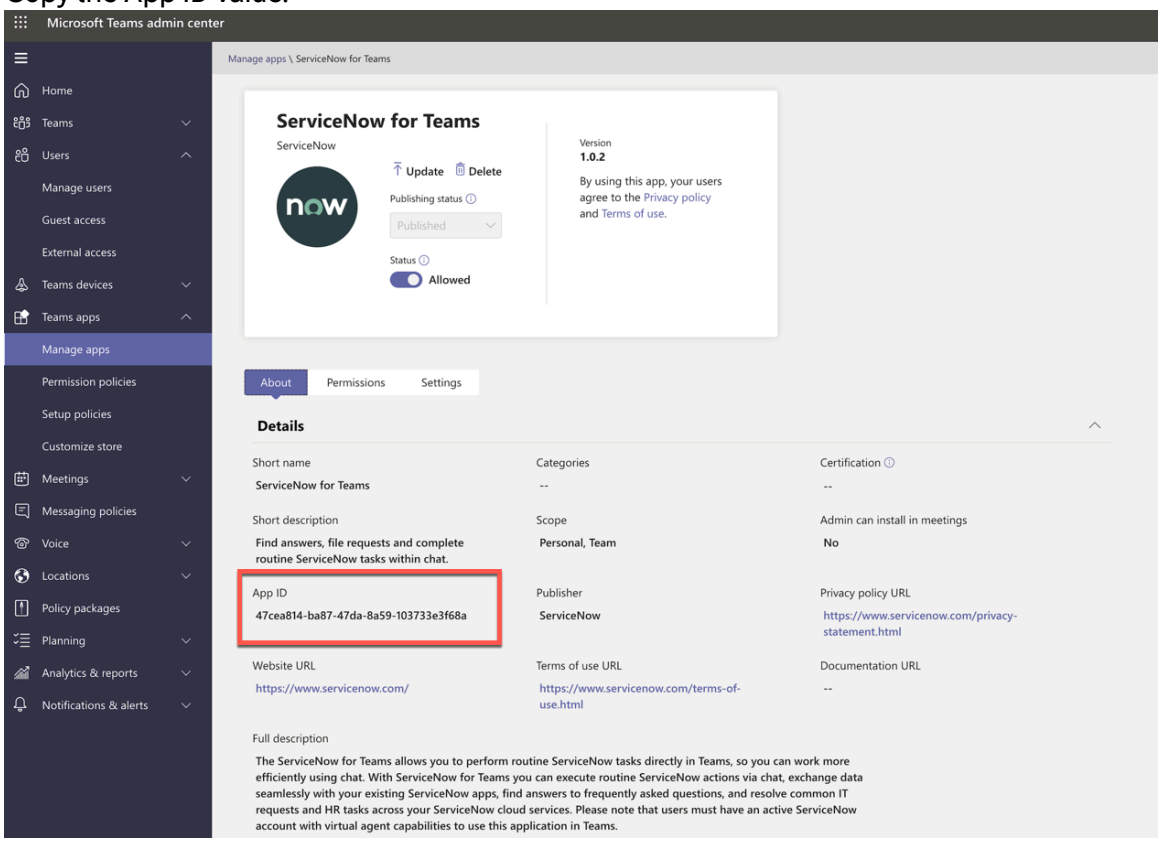
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Chat**: Begin your conversation with the Virtual Agent to get help.

- **Employee Center**: Select the **Employee Center** tab to view the organization updates and the status on your tasks and requests.

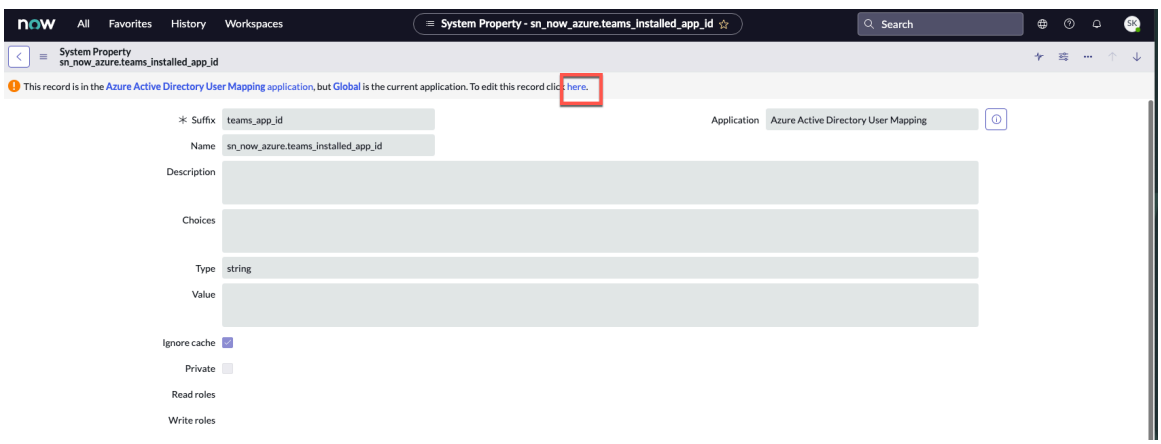
Note:
If you don't want to create a manifest file, you can edit an existing manifest file as required. After updating the existing manifest file, you can download and upload the manifest file in Microsoft Teams to make the changes effective.

Update the app ID in the ServiceNow instance



Update the ServiceNow for Teams app ID from the Microsoft Teams admin center in your ServiceNow instance.

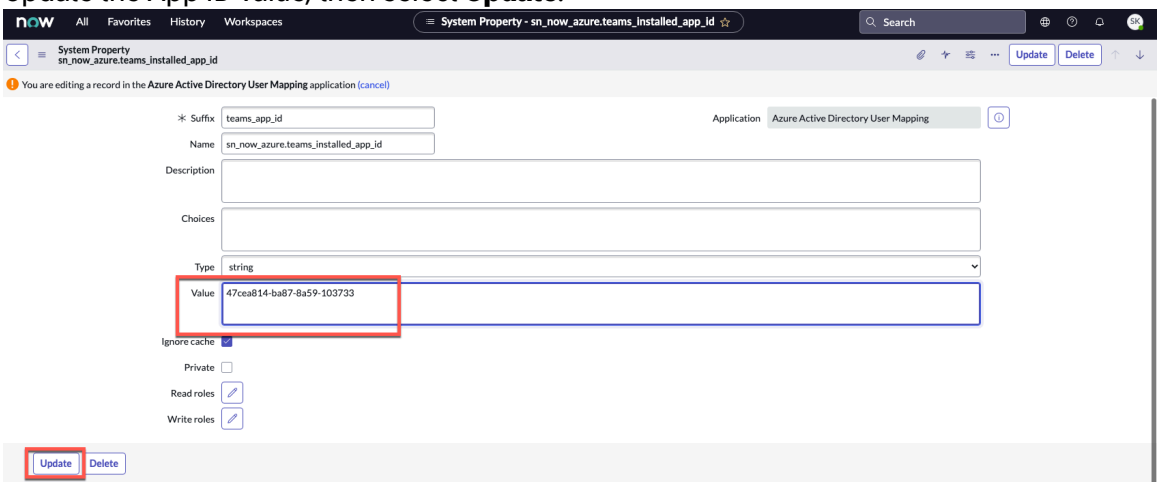
Before you begin
Role required: admin



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Microsoft Teams admin center.
2. Navigate to **Teams apps** > **Manage apps**.
3. Select the **ServiceNow for Teams** app.
4. Copy the App ID value.



5. In your ServiceNow instance, search for `sys_properties.list`.
6. Select the `sn_now_azure.teams_installed_app_id` property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Update the App ID value, then select **Update**.

Disable the Now Virtual Agent

Disable the Now Virtual Agent app to avoid duplicate notifications from Microsoft Teams when you install and integrate ServiceNow for Microsoft Teams with your ServiceNow instance.

Before you begin

Note:
Your employees will not see or use the Now Virtual Agent app.

Role required: Microsoft Teams admin

About this task

ServiceNow has two apps available for Microsoft Teams:

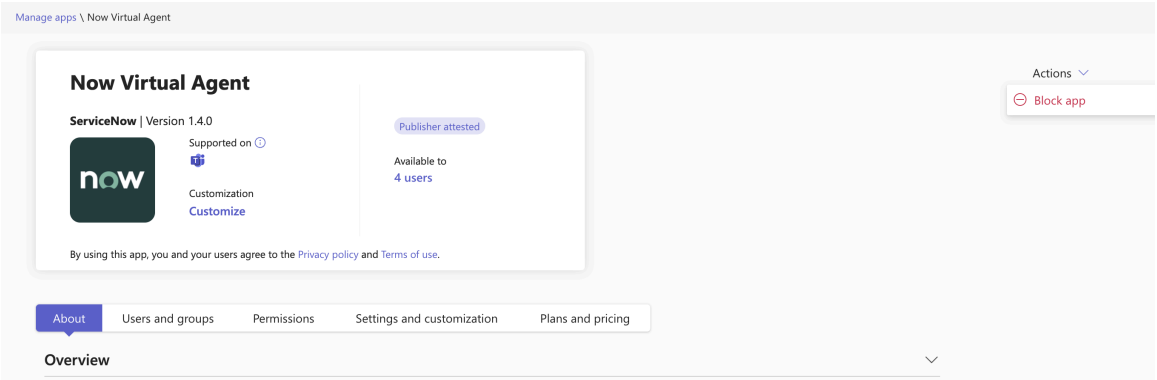
- Now Virtual Agent

  This app displays the Virtual Agent within Microsoft Teams, has been available within Microsoft Teams app since 2019.

- ServiceNow for Microsoft Teams

  ServiceNow for Microsoft Teams is a new app that provides a broader employee experience, including and expanding beyond Virtual Agent, with an embedded portal experience called **Employee Center**, and the ability for agents to reach out to employees in Microsoft Teams to quickly resolve open tickets.

Since the same Bot (Virtual Agent) is shared in both apps, blocking the Now Virtual Agent app also results in the same bot ID being blocked for the ServiceNow for Microsoft Teams app, making the Virtual Agent unusable in the ServiceNow for Microsoft Teams app. To work around this issue, it is necessary to make sure that the Now Virtual Agent app is in the list of allowed apps.



You must first block the Now Virtual Agent app, so it stops showing up for employees and then add the app to the allowed list. After this configuration, your employees will not see or use the Now Virtual Agent app, but will be able to use Virtual Agent within the ServiceNow for Microsoft Teams app.

Note:
It may take up to 24 hours for the changes to be propagated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Microsoft Teams admin portal.
2. Navigate to **Teams apps** > **Manage apps**.
3. In the search field, enter `Now Virtual Agent`.
4. Select the **Now Virtual Agent** app.
5. Select **Actions**, then select **Block app**.

Translate the Microsoft Teams manifest file

ServiceNow for Microsoft Teams supports localization to multiple languages, using UTF-8 for international characters.

You must activate the localized plugins in your instance. To install the language plugin, see Activate a language.

After installing the language plugin, you must create and download the manifest file and upload the file to Microsoft Teams. To download the manifest file, refer Create and download the manifest file for pre-published apps.

Working on campaigns in Microsoft Teams

Campaigns in Microsoft Teams enable you to set up and package your content into a campaign to deliver the right message to the required audience at the right time.

You can create a campaign for Microsoft Teams from the Content Experience Builder or by publishing content directly. The Campaign Experience Builder provides a simple, single-page view for managing content and assembling your campaign.

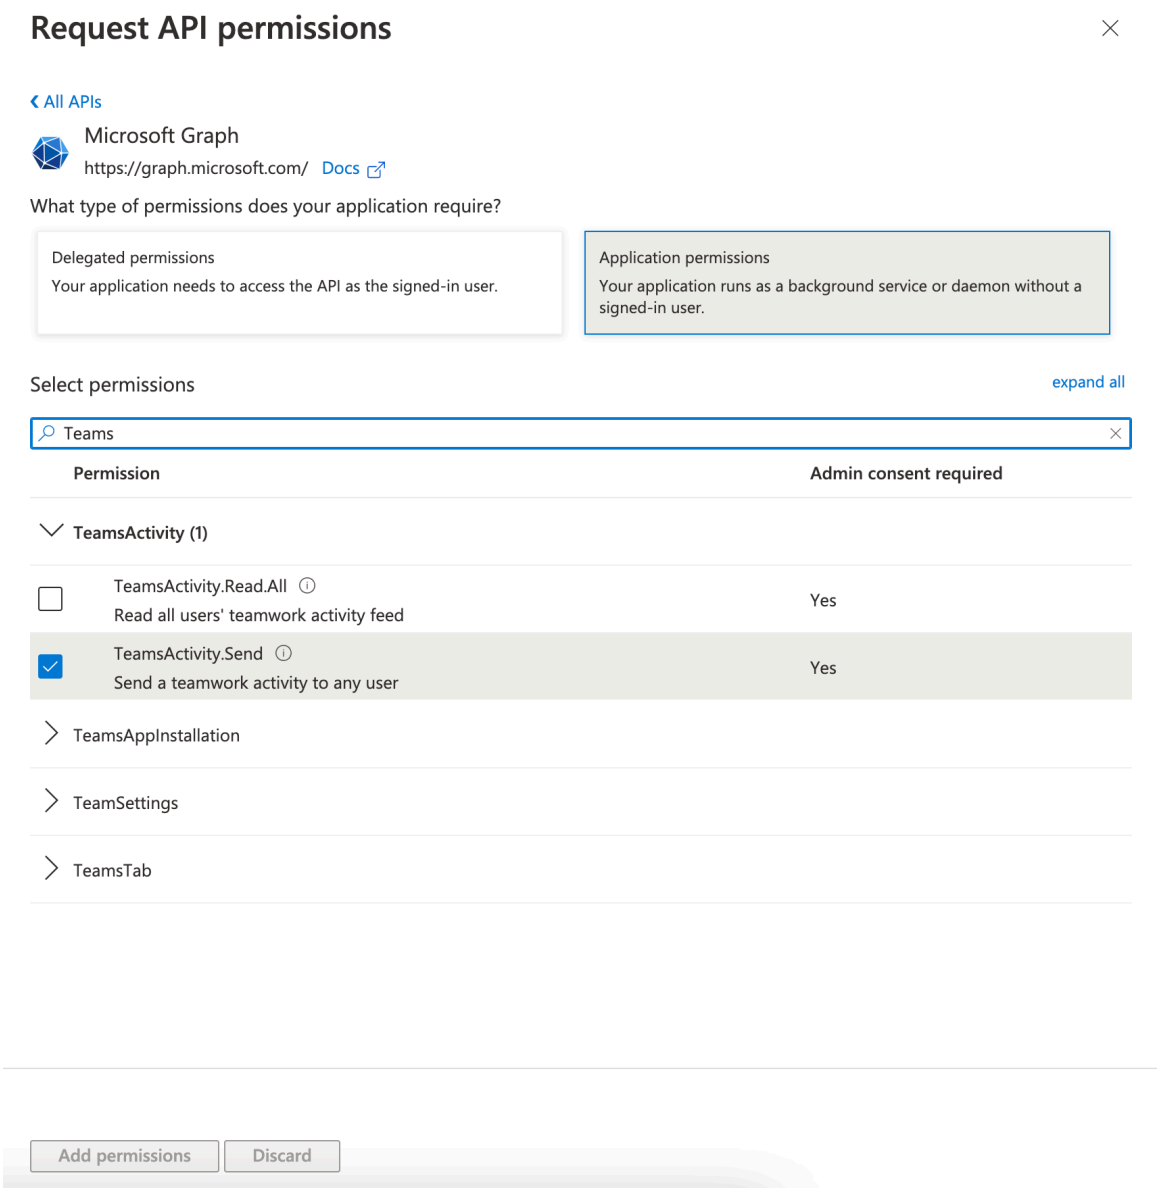
You must have the following plugins installed in your environment:

- Employee Center Pro (com.snc.employee_center_pro) plugin, which enables the Campaign for Content Experiences feature.
- Content Experiences [sn_ca] plugin

For more information about campaigns, see Campaigns for Content Experiences.

Authenticate users with additional permissions to send campaign notifications in Microsoft Teams

Assign additional Microsoft Azure permissions to users to enable Microsoft Teams create and send new campaign notifications on the user's behalf in the teamwork activity feed.



Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **App Registrations**.
3. Open the Microsoft Azure application for self-configured app if it is already created, else create it.
4. Navigate to **API Permissions** > **Add a permission** > **Microsoft Graph**, and click **Application permissions**.
5. Select **TeamsActivity** accordion, and select **TeamsActivity.Send** check box.

6. Select **Add permissions**.
7. On the API permissions screen, select **Grant admin consent for {tenant}** link, and then select **Yes** on the pop-up dialog box.
8. Regenerate and upload the manifest file in Microsoft Teams.
   For more information, see Send campaign notifications automatically in Microsoft Teams.
9. Register the Request-based chat app in your instance to use Microsoft Teams chat on a self-configured app environment.
   For more information, see Configure Application Registry on the ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Send campaign notifications automatically in Microsoft Teams

Automatically send campaign notifications in Microsoft Teams for better collaboration and efficient communication.

Before you begin

A manifest file to enable the campaign notification display in *Microsoft Teams* must exist.

If the configured Employee Center version is v.24 or above, then the Employee Center tab is present by default in your *Microsoft Teams* application. If the Employee Center version is lower than v.24, you must update the value of the portal in the `sn_now_teams.portal.suffix` property to `esc`. This value enables Employee Center in your instance.

Ensure that you enter the app ID of ServiceNow for Microsoft 365 in the *sn_now_azure.teams_installed_app_id* system property. You can get the app ID from the Microsoft Teams admin center.

Role required: admin

About this task

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Application Manifest** > **ServiceNow for Teams**.
2. Select **New**.
3. Fill in the details in the **Generic Info** section.
   Select **Submit** and then select **Next**.
4. Fill in the details in the **Configure Virtual Agent** section and select **Next**.
5. In the **Configure Tab** section, verify that **Enable activity feed** is selected and select **Next**.

   Note:
   If you are modifying the base system manifest file, select **Enable activity feed** to receive notifications for campaigns.

6. Verify the details in the **Ready** section and select **Download Manifest**.

   Manifest file downloads in the zip format.

7. Upload the manifest file in Microsoft Teams.

   For more information about creating a manifest file, see Create and download the manifest file for self-configured apps. For more information about uploading a manifest file, see Upload manifest file in Microsoft Teams.

Create a Microsoft Teams campaign using direct content publishing

Create and distribute the Microsoft Teams campaigns using direct content publishing if you have the admin role.

Create notification content for Microsoft Teams

Create notifications to send messages directly to your employees through Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Install the necessary plugins
- Role required: sn_cd.campaign_manager
- A Microsoft Teams notification includes a link Create a video, URL, or to-do link

Procedure

1. Navigate to **All** > **Content Publishing** > **Content Library**.
2. Either use an existing content record or create a notification.
3. On the form, fill in the fields.

Notification Content form

Field	Description
Title	Title of the notification. The title is not the subject of the notification, although they can be identical. The default value is the app name provided in the manifest file. The value is appended with the phrase "posted a new campaign".
Subject	Subject of the notification, similar to the subject line in an email.
Description	Brief description of the notification.
Employee Center URL	The link to the video, web page, or to-do item that the notification directs the user to.
Content type	Option to select the type of notification that you want to send. This field is automatically set to Microsoft Teams.
Active	Option to indicate that the notification is active and available.

4. Save the settings and return to the Content list.
   - To save new content and settings, select **Submit**.
   - To save existing content settings, select **Update**.

What to do next

Make the content available to users: Schedule delivery of Microsoft Teams notification content.

Alternatively, you can build out a more robust publishing configuration using Creating campaigns with Content Experiences

Schedule delivery of Microsoft Teams notification content

Schedule posting of notifications in the Microsoft Teams channels.

Before you begin

Role required: sn_cd.content_manager, admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Publishing** > **Schedule Content**.
2. Select the content to schedule.
3. From the Schedule Content related list, select **New**.
4. On the form, fill in the fields.
   For more information, see Schedule content form for Microsoft Teams notifications.
5. Select **Submit**.

Schedule content form for Microsoft Teams notifications

Complete the Schedule content form to schedule the posting of notifications in Microsoft Teams channels.

Schedule content form

Field	Description
Content	Content or information you want to make available to employees.
Title	Name for the schedule content record. This field is automatically set to the name of your content selected in the **Content** field.
Active	Option to indicate that the schedule for content is active and available to employees.
Add Users	Option to indicate that you want to add specific users to view your content. Selecting this option clears the values in the **Audience** field.
Audience	Names of the users from the list who you want to see the content.
Approvers	Names of the users to approve the content before it is publicly available. **Note:** This field can contain only the users with the Content Approver [sn_ca.content_approver] role.
When to process	Date and time on which you want the content to be sent, created, or posted.
Content status	The status of your to-do content. • Pending: The Content Publishing scheduled jobs have not processed the content. • Scheduled: The content is scheduled and is queued to be processed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule content form (continued)

Field	Description
	• Max Exceeded: The scheduled content exceeded the allowable time. The maximum value is configured in the *sn_cd.todo.max_run_time* property. • Error: An error in scheduling or posting the content occurred.
Completed on	The date and time the Content Publishing: Create To-dos scheduled job completed.

Create Microsoft Teams campaigns using the Content Experience Builder

Create campaigns using the Content Experience Builder if you have the admin role to distribute content to employees.

Create Microsoft Teams notification content from Content Experience Builder

Create or place notification content into a bundle or stage for a Microsoft Teams campaign using Content Experience Builder.

Before you begin

Role required: sn_ca.campaign_manager or sn_cd.content_admin or admin

Procedure

1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Click **New**.
3. On the form, fill in the fields.
   For more information, see Campaign form in Content Experience Builder.
4. Select **Submit**.

Result

The list of all campaigns is displayed.

Campaign form in Content Experience Builder

Fill in the Campaign form to create the Microsoft Teams notification content using the Content Experience Builder.

Campaign form

Field	Description
Title	Unique name for the campaign.
State	State of the campaign.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Campaign form (continued)

Field	Description
	• Draft: The campaign is in the creation process. When content and bundles are attached to the campaign, the **Publish** button appears in the form header. • Published: Activates all content for an audience. • Editing: The campaign is being edited.
Audience	Names of the users from the list who you want to see the content.
Approvers	User responsible for approving the campaign.
Start time	Date and time the campaign should launch.
End time	Date and time the campaign should end.
Re-evaluate campaign	Option for reviewing the audience for a campaign. If the box is cleared, the *Content Experiences: Update Campaign Audience* scheduled job runs one time, after which the targeted audience is never re-evaluated or changed. Option to display the **Re-evaluate frequency** field so you can define how often you want the *Content Experiences: Update Campaign Audience* scheduled job to run. When your campaign is re-evaluated, the users dependent on the current audience criteria are removed or added.
Re-evaluate frequency	Frequency, in days, that you want to re-evaluate the audience. Audiences are re-evaluated after the *Content Experiences: Update Campaign Audience* scheduled job runs based on the value you enter here. This field appears only if the **Re-evaluate campaign** check box is selected. This field value overrides the default (7 days) value set in the **Campaign Re-evaluation** field in the Content Experiences system property. For more information, see Properties installed with Content Experiences.
Description	Descriptive information about the campaign.

Create Microsoft Teams campaign stages using the Campaign Builder Experience

Use the Campaign Experience Builder to create stages for your campaign. Campaign builder provides a simple, single-page view for managing content and assembling your campaign.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_ca.campaign_manager or sn_cd.content_admin or admin

About this task
For information about campaigns and campaign bundles/stages, see Creating campaigns with Content Experiences.

Procedure
1. Navigate to **All** > **Content Experiences** > **Content Experience Builder**.
2. Select the campaign.
3. From the Campaign Bundles related list, select **New**.
4. On the form, fill in the fields.

Campaign bundle form

Field	Description
Title	Name of the campaign bundle.
Campaign	Option to choose a campaign that is associated with the campaign bundle.
Trigger type	Option to choose a trigger type that determines how the campaign bundle starts or ends.
Offset trigger start	Enables you to move the end date forward or backward from the value in the **Trigger type** field.
Specify end	Indicates whether you want the campaign bundle to have a specific end.
Description	Brief description for the campaign bundle.

5. Select **Submit**.
6. From the Campaign Content related list, select **New**.
7. On the form, fill in the fields.

Campaign content

Field	Description
Content	Description of the content record.
Campaign Bundle	The campaign bundle to associate with the content.
Title	Title for the campaign content. This value is automatically updated as per the value in the Content field.
Active	Option to indicate that the schedule for content is active and available to employees.
Description	Brief description about the campaign bundle.

8. Select **Submit**.
9. On the Campaign form, select **Publish**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The campaign is delivered to the employees on the scheduled job timeline.

Translation support for Microsoft Teams notification campaigns

ServiceNow for Microsoft Teams supports localization to ServiceNow supported languages in campaigns.

ServiceNow translates campaign content into the user-specific language set in your ServiceNow instance. If you have not set a user-specific language, the Microsoft Teams application delivers campaign content in the default global language set on your system.

You must activate the localized plugins in your instance to use this feature. For more information about plugins and installing the language plugin for ServiceNow supported languages, see Activate a language.

For more information about language settings for an instance, see Set default language for an instance and User specific language.

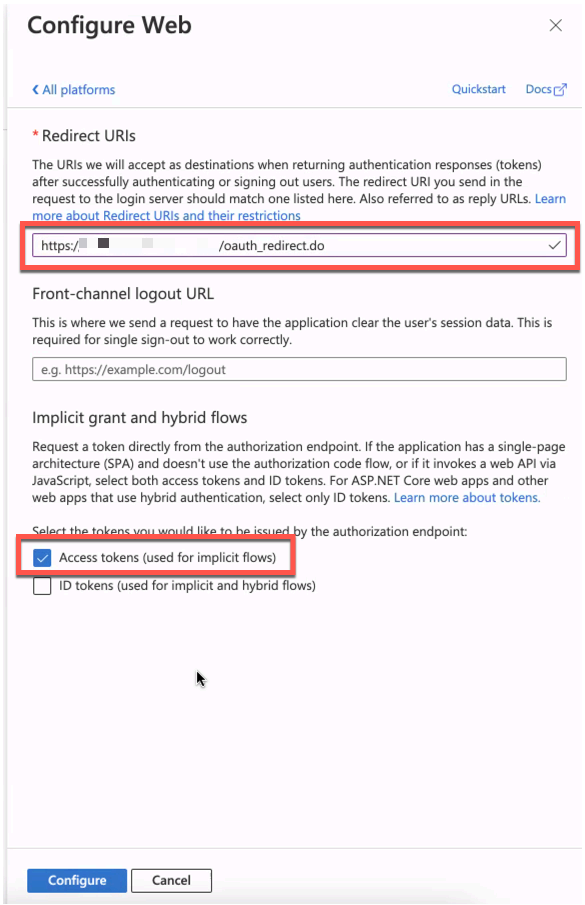
For more information about creating campaigns, see Create a Microsoft Teams campaign using direct content publishing and Create Microsoft Teams campaigns using the Content Experience Builder.

For more information about scheduling and executing a job, see Scheduled jobs.

Note:
The **Title**, **Subject**, and **Description** field labels in the Notification content form are translated. For more information, see Create notification content for Microsoft Teams.

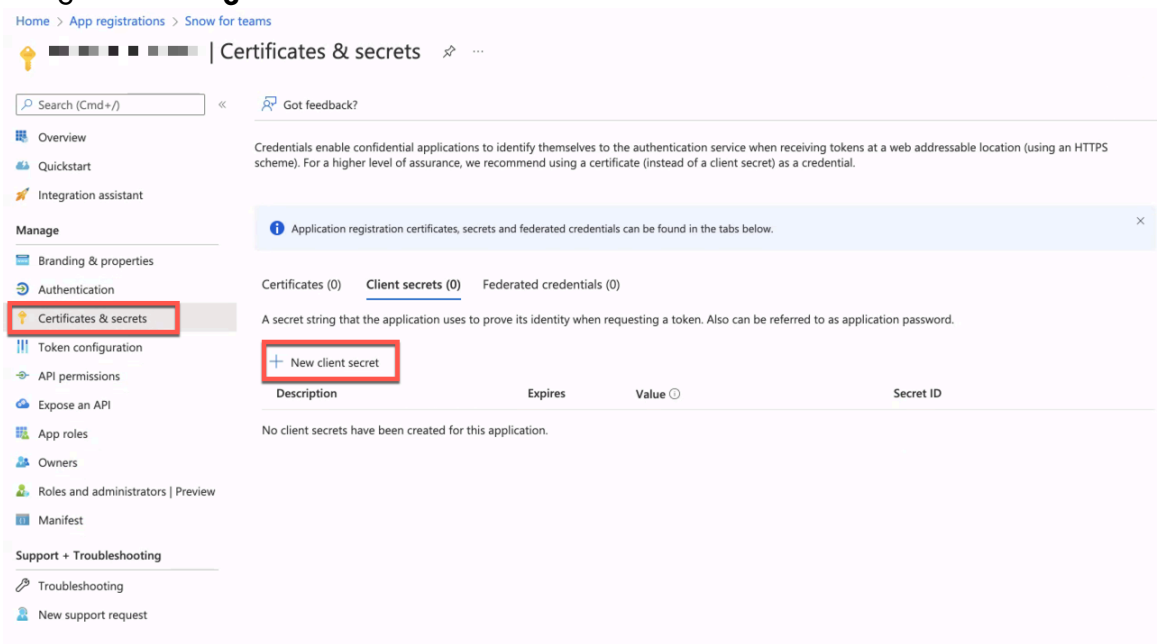
Register and configure the Request-based chat application on the Microsoft Azure portal

Create a Microsoft Azure application in Microsoft Azure portal to enable agents to import the conversations from Microsoft Teams to ServiceNow.



Before you begin
Role required: admin

Note:
You can use one Microsoft Azure application if you use both **IT Service Management integration with Microsoft Teams**, and **HR Service Delivery integration with Microsoft Teams** applications.



Procedure

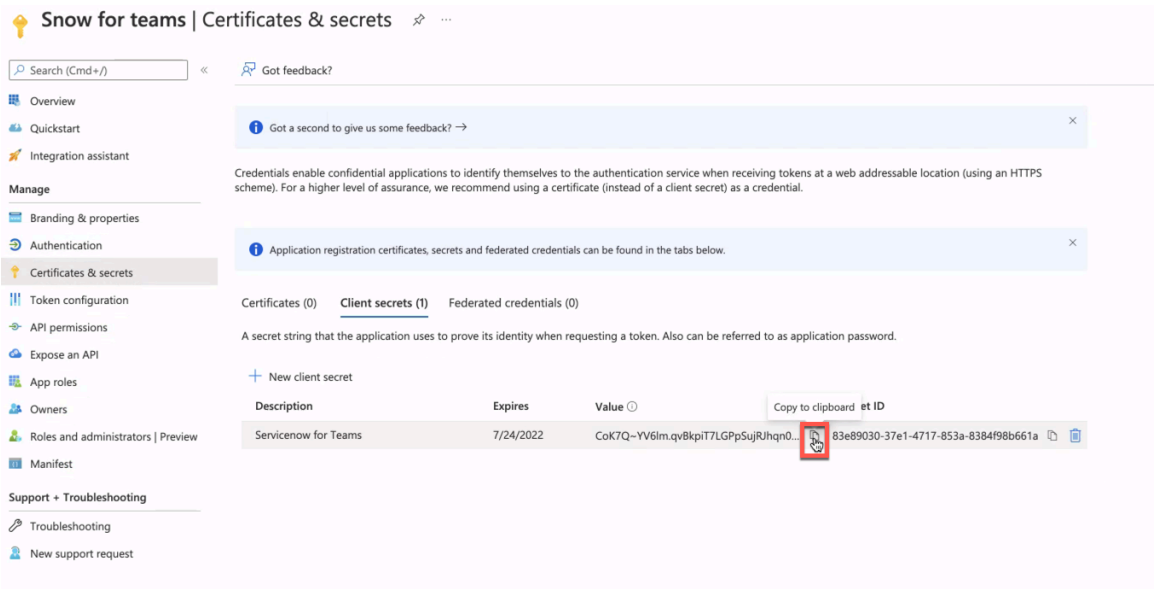
1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. Select **New registration**.
   The **New registration** page displays.
4. On the **New registration** form, perform the following actions:
   a. Name: Enter the name of your application. `Example: Request based chat app.`
   b. Redirect URI: Enter `https://<instance-name>/oauth_redirect.do`, where `<instance-name>` is the name of your ServiceNow instance.
   c. If you're prompted to select a supported account type, select **Accounts in any organizational directory**
5. Select **Register**.
6. Select **Redirect URIs**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select the **Access tokens** check box.
8. Select **Configure**.
9. Navigate to **Manage** > **Certificates & secrets**.

10. Select **New client secret**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



11. On the Add a client secret form, fill the fields.

a. Description: Provide the description for the client secret.

b. Expires: Select the expiry date for the client secret using the drop-down menu.

c. Select **Add**.

d. Copy and save the client secret in a notepad.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add permissions to the Microsoft Azure application

Assign permissions to users to enable them to start chat and import chat conversations with employees from Microsoft Teams to ServiceNow® instance.

Before you begin

Role required: admin

Procedure

1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. Select the app that is created to enable agents to import the conversations from Microsoft Teams to the ServiceNow instance.
   Example: `Request based chat app`.
4. Navigate to **Manage** > **API Permissions** > **Add a permission** > **Microsoft Graph**.
5. Select **Delegated permissions**.
6. In the **Select permissions** field, enter the following permissions.
   - Offline_access (delegated): ServiceNow stores an access token for each user, which enables them to reauthenticate with ServiceNow, within Microsoft Teams, without having to go through a login prompt. Offline access enables you to refresh the access token automatically.
   - Chat.ReadWrite (delegated): The Read part of the Chat.ReadWrite permission enables you to import request-based chats from Microsoft Teams. The Write part of the Chat.ReadWrite permission is used in the “Start Chat” screen, where an opening message is provided on behalf of the agent.
   - User.Read (delegated): This permission is added when an app is created to read the basic information of a user like the name and email-id.
   - User.ReadBasic.All (delegated): This permission is required to obtain the names and Azure IDs of users. ServiceNow stores the Azure ID to create chats and import chats on behalf of users.
   - Files.Read.All (delegated): This permission is used when request-based chats are imported from Microsoft Teams. It enables attachments to be imported as part of the Teams chat.
   - ChatMember.ReadWrite (delegated): When a request with a Teams chat is set to inactive, participants are automatically removed from the corresponding chat. This permission is required to remove the chat participants.
   - Chat.Create (delegated): This permission is used to create request-based chats.
   - Chat.ReadBasic (delegated): This permission is used when request-based chats are imported. It enables you to display which participant sent each message in the chat.
   - Presence.Read.All(delegated): This permission is used to fetch a user's presence status from Microsoft Teams.
7. Select **Add permissions**.
8. In the **API permissions** screen, select the **Grant admin consent for {tenant}** link.
9. Select **Yes** on the pop-up dialog box.
10. **Optional:** After upgrading an Azure application, remove the user tokens and reauthorize the users to fetch a token with the added permissions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Log in to your ServiceNow instance.

b. Navigate to **All** > **System OAuth** > **Manage Tokens**

c. Remove the user tokens for the single tenant chat app.

Note:
Users must log in to their Microsoft Azure active directory account to fetch a token with the added permissions.

Configure Application Registry on the ServiceNow instance

Register the Request-based chat app in your instance to use Microsoft Teams chat for self-configured app environment.

You can register the Request-based chat app in your instance to use Microsoft Teams chat for self-configured app environment using one of the following methods.

- Edit existing Microsoft Teams Chat self-configured app application registry (Recommended)
- Create an application registry for Microsoft Teams chat self-configured app

Edit existing Microsoft Teams Chat self-configured app application registry

Register the Request-based chat app in your instance to use Microsoft Teams chat for self-configured app environment by editing existing Microsoft Teams Chat self-configured app application registry.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Search and select **Microsoft Teams Chat Single Tenant** application registry.
3. Fill in the details **Client ID** and **Client Secret** on the form.
4. Select **Save**.
5. **All** > **ServiceNow for Microsoft 365** > **Properties**
6. Enable the option **Set this property to true to use integration hub action for Start Chat / Import chat flows** on the ServiceNow for Microsoft Teams properties form
   The OAuth profile property **Sys ID of OAuth profile for single tenant setup** is set to default (OOB) when shipped with application registry.
7. Select **Save**.

Create an application registry for Microsoft Teams chat self-configured app

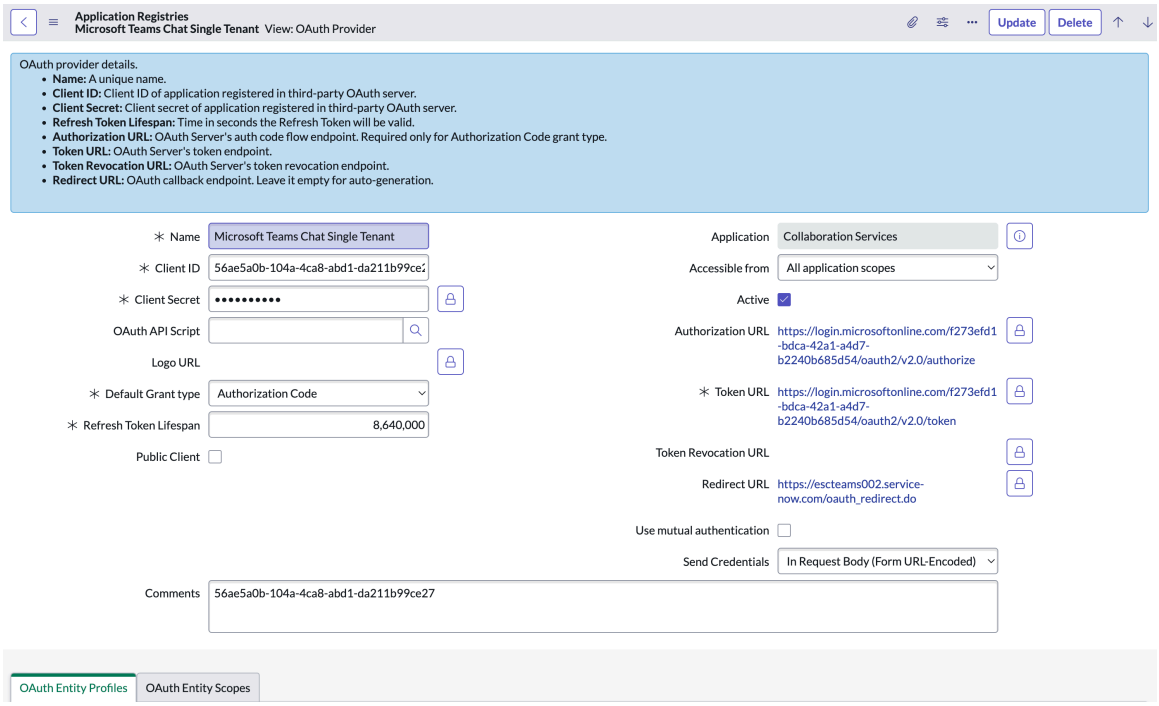
Register the Request-based chat app in your instance to use Microsoft Teams chat for self-configured app environment by creating a Microsoft Teams Chat self-configured app application registry.

Before you begin

Note:
Use this procedure only if it is absolutely required.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **New**.
3. Select#**Connect to a third party OAuth Provider**.
4. On the form, fill in the fields.

Application Registries - Microsoft Teams Chat for Single Tenant

Field	Description
Name	Name to uniquely identify the record. For example, enter: Microsoft Teams chat self-configured app
Client ID	Client ID created in Azure portal. Provide the value of the Azure application ID in this field.
Client Secret	The password you generated when creating the app in Microsoft Teams. For more information, see Register and configure the Request-based chat application on the Microsoft Azure portal.
Authorization URL	Authorization URL that includes the tenant ID of your app with the format https://login.microsoftonline.com/{tenantid}/oauth2/v2.0/authorize where is the tenant ID created during the app creation in Microsoft Teams.
Token URL	Token URL that includes the tenant ID of your app with the format https://login.microsoftonline.com/{tenantid}/oauth2/v2.0/token where is the tenant ID created during the app creation in Microsoft Teams.
Redirect URL	Redirect URL that includes the instance URL with the format https://<instanceURL>/oauth_redirect.do Update the <instanceURL> value with your instance URL.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **OAuth Entity Scopes** related list.
6. Add the following scopes.
   - Enter `Default` in **Name** and enter `.default` in **OAuthscope**.
   - Enter `Offline Access` in **Name** and enter `offline_access` in **OAuthscope**.
7. Select **Save**.
   System generates an OAuth Entity profile.
8. See OAuth Entity Profile details in the related list **OAuth Entity Profiles**.
9. Open the OAuth Entity Profile record and copy the Sys ID.
10. Navigate to **All** > **ServiceNow for Microsoft 365** > **Properties**.
11. Enable the option **Set this property to true to use integration hub action for Start Chat / Import chat flows** on the ServiceNow for Microsoft Teams properties form.
12. Enter the copied OAuth Entity Profile value in the field **Sys ID of OAuth profile for single tenant setup. This needs to be setup if you are setting "sn_tcm_collab_hook.teams_use_ih_actions_for_single_tenant" to true**.
13. Select **Save**.

Request-based chat access for a guest user

Request-based self-configured app chat access enables a guest user to start and import chats in a single ServiceNow® for Microsoft Teams instance.

Guest sharing is enabled by default in Microsoft Azure AD and in ServiceNow for Microsoft Teams. As a result, users can invite guests to teams and sites, and share files with guests without having to request assistance from the IT department.

Guests can take the following actions:

- Initiate a chat with people from outside their organization.
- Import their chat conversations with people from outside their organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information about configuring access for guest users, see Guest access in Microsoft Teams.

Guest access configuration is applicable to the following tables in both IT Service Management integration with Microsoft Teams and HR Service Delivery integration with Microsoft Teams applications:

- HR Core task (sn_hr_core_task)
- HR Life events Case (sn_hr_le_case)
- HR Core case (sn_hr_core_case)
- Request Item (sc_req_item)
- Task (sc_task)
- Incident (incident)
- Request (sc_request)
- Change request (change_request)

The ServiceNow system admin can extend guest access to other tables.

Authenticate guest users to initiate and import chat from Microsoft Teams

Assign permissions to guest users to initiate and import chat conversations with employees from Microsoft Teams to a ServiceNow® instance for a self-configured app.

Before you begin

Ensure you have completed the Request-based chat app configuration for a self-configured app. For more information, see:

1. Register and configure the Request-based chat application on the Microsoft Azure portal
2. Configure Application Registry on the ServiceNow instance
3. Add permissions to the Microsoft Azure application

Role required: admin

Procedure

1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. Select the Request-based chat app to enable agents to initiate and import the conversations from Microsoft Teams to the ServiceNow instance.
4. Navigate to **Manage** > **API Permissions** > **Add a permission** > **Microsoft Graph**.
5. Select **Application permissions**.
6. In the Select permissions search field, enter `User.Read.All` and select that permission.

   This permission obtains the Microsoft Azure user type value. This value is stored on the ServiceNow instance to enable the creation and importing of chats on the user's behalf.
7. Select **Add permissions**.
8. In the **API permissions** screen, select the **Grant admin consent for {tenant}** link.
9. Select **Yes** in the pop-up dialog box to save the settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable authentication of guest users

Verify and update application registry values to authenticate guest users in the Microsoft Teams application to start and import chats for a self-configured app.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select the Microsoft Teams Chat Single Tenant application registry.
3. On the form, verify and update the fields.

Application Registries form

Field	Description
Name	Name to identify the record. For example, Microsoft Teams Chat self-configured app, Microsoft Teams Chat App Permission ST, and so on.
Client ID	Application ID created in the Microsoft Azure portal.
Client Secret	Password generated during the app creation process in ServiceNow for Microsoft Teams.
Authorization URL	Authorization URL that includes the tenant ID that was generated during the creation of your app in ServiceNow for Microsoft Teams in the following format: `https://login.microsoftonline.com/<tenantid>/oauth2/v2.0/authorize`
Token URL	Token URL that includes the tenant ID of your app that was generated during creation in ServiceNow for Microsoft Teams in the following format: `https://login.microsoftonline.com/<tenantid>/oauth2/v2.0/token`
Redirect URL	Redirect the URL that includes your ServiceNow for Microsoft Teams instance URL in the following format: https://<instanceURL>/oauth_redirect.do

4. Select **Save**.
5. Navigate to **ServiceNow for Microsoft Teams** > **Properties**.
6. Select the option **Set this property to true to use integration hub action for Start Chat / Import chat flows**.
7. Select **Save**.
8. Repeat this procedure for the Microsoft Teams Chat App Permission ST application registry.

Enable chat access for guest users

Enable chat access for a guest user while configuring ServiceNow® for Microsoft Teams settings for a self-configured app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Teams Guest User Chat Configuration**.
2. On the form, fill in the fields.

Teams Guest User Chat Configuration form

Field	Description
Tenant ID	Directory (tenant) ID from the application overview page in the Microsoft Azure portal. Use the ID value to update details in the ServiceNow instance.
Tenant full name	Full domain name of the tenant or host. For example, account1.onmicrosoft.com.
Enable Guest access	Option to enable the Client Credentials token to fetch user type details that were set during the process of Enable authentication of guest users. If you do not select this option, an error occurs when the guest tries to start or import a Microsoft Teams chat. **Note:** When the guest access is enabled, the sn_tcm_collab_hook.MS_Teams_Chat_App_Credentials value in the sys_alias table configured in Connection & Credential Aliases fetches the Azure user details. When the guest access is inactive, the sn_tcm_collab_hook.MS_Teams_Chat_Credentials value in the sys_alias table configured in Connection & Credential Aliases fetches the Azure user details.
Allowed Guest domains	The guest user domains where invited guests can start or import a chat. Only the tenants in these domains can start or import a chat. List multiple guest domain names as comma-separated values.

3. Select **Submit**.

Result
Guests belonging to the selected guest domains can start or import chats.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Presence Indicator

User presence indicator helps the agents to know the status of the users in *Microsoft Teams* before the agent can initiate a chat using *Microsoft Teams*.

By default, the agents can view the status of the users when they launch the Start chat modal in the ServiceNow instance.

Ensure that the API permission is added to the already created Request Based Chat application from the Azure Portal, when you are upgrading the application. For more information on required permissions for Request Based Chat, see Add permissions to the Microsoft Azure application.

The system takes 60 minutes to display the user presence status in the start chat modal for the first use when you upgrade to *IT Service Management* integration with *Microsoft Teams* v2.5.0 or Collaboration Services v3.5 applications.

The status of the user from *Microsoft Teams* is mapped into the ServiceNow instance as depicted in the table.

User status mapping

User status in Microsoft Teams	Status shown in Start Chat modal
'Available', 'AvailableIdle'	available
'Busy', 'BusyIdle', 'DoNotDisturb'	busy
'Offline', 'PresenceUnknown'	offline
'Away', 'BeRightBack'	away

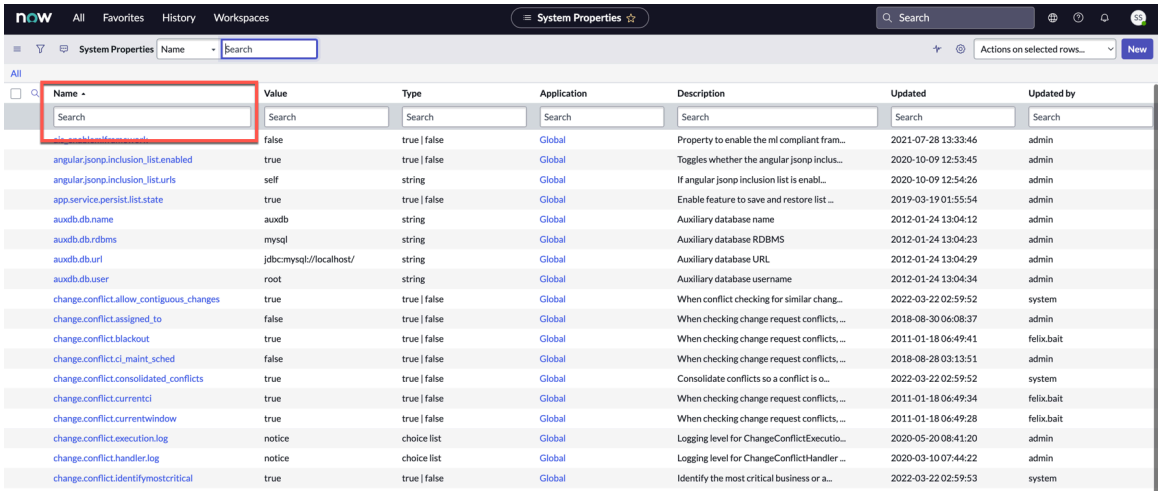
The user presence status is cached for 180 seconds, this implies if a user is “online” in *Microsoft Teams*, the Start Chat modal displays the user status as “online” until 180 seconds. If the user status is modified, the system fetches the user status after the interval of 180 seconds and updates the status in the Start Chat modal.

The time interval to cache the user status is configurable by a system property `sn_tcm_collab_hook.teams.presence_status_cache_invalidate_duration`. You can modify the time interval to retain the user presence status. For more information, refer Configure cache duration for the user presence status.

Configure cache duration for the user presence status

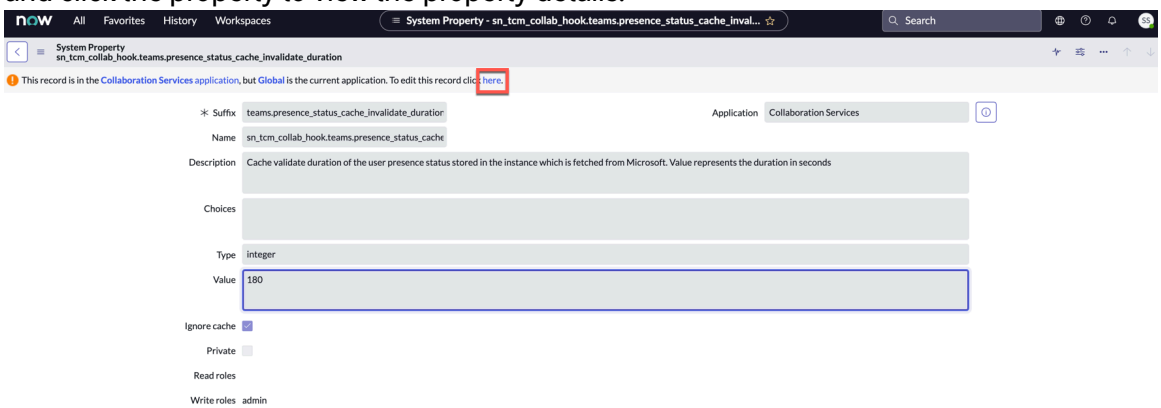
You can modify the system property to configure the cache duration to retain the user presence status of the *Microsoft Teams* user.

Before you begin



Role required: admin

Procedure



1. In the navigation filter, enter `sys_properties.list` and press **Enter**.

   The entire list of properties in the System Properties [sys_properties] table appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. In the Name column, search for the system property `sn_tcm_collab_hook.teams.presence_status_cache_invalidate_duration` and click the property to view the property details.

3. Click here to edit the property details.
4. Define the cache duration in seconds to retain the user presence status in the **Value** field.
5. Click **Update**.

Setup for integrating self-configured apps with Microsoft Teams for Agent Experience

Allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Microsoft Teams self-configured app environment.

Integrating Notify connector self-configured app with Microsoft Teams

Set up the Notify connector for Microsoft Teams using the self-configured app.

You might need to use the self-configured app setup due to your company or regulatory requirements.

Create an app in Microsoft Teams to enable making calls

Create an app to make outbound calls from Microsoft Teams.

Before you begin

Ensure you have installed Notify connector and other required plugins on your ServiceNow® instance. For more information, see Install Notify connector for Microsoft Teams.

Role required: admin, Microsoft Teams admin, Microsoft Azure admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to Microsoft Teams developer portal.

   Note:

   The Developer Portal for the Government Community Cloud (GCC) is accessible only through an application within Microsoft Teams. It is not available as a separate, standalone website. For more information, see Developer Portal for Teams. To create an app for GCC, you must create the app from Microsoft Teams.

2. Create an app.

   a. Navigate to **Apps** > **New app**.

   b. Enter a valid name for the app in the Add app pop-up page and select **Add**.

   c. On the App details page, fill in the fields.

   App details page

Field	Description
Short name	Name of your application. For example, ServiceNow for Notify Microsoft Teams.
Full name	Full name of your application.
App ID	Unique identification number for the app. **Note:** This App ID is different from the Bot ID/App ID that will be generated in further steps.
Short description	Brief description of the app.
Long description	Detailed description of the app.
Version	Version for the app. For example, 1.0.
Developer or company Name	Name of your company.
Website	Link to your company website.
Privacy policy	Link to the privacy statement for your app.
Terms of use	Link to the terms and conditions for your app.

   d. Select **Save**.
   An app is created in Microsoft Teams.

3. Create a bot (Notify connector) for the new app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **Configure** > **App features**.

b. Select **Bot**.

c. Select **Create a new bot**.

d. Select **New Bot**.

e. Enter a valid name for bot in the Add bot pop-up page and select **Add**.

f. Copy to a notepad the Bot ID value of the new Notify connector using one of the following options and this will be your app Client ID.

- Copy the ID from the browser URL.
- Navigate back to **Bots** > **Tools**, and copy the Bot ID.

g. Go to **Channels**, enable **Microsoft Teams**, and select **Save**.

h. Select **Client secrets** and enter a client secret for your bot.
A Client secret is generated.

> **Note:**
> Ensure you copy the generated Client secret to a notepad because it will not appear again.

4. Copy the Client ID/Bot ID of Notify Connector to the Application (client ID).
   a. Go to **Apps** and select the app you created.
   b. Navigate to **Configure** > **Basic information**.
   c. Paste the Client ID/Bot ID that you copied during step 3f in the **Application (client) ID** field and select **Save**.
5. Configure additional app features for new bot.
   a. Go to **Apps** and select the app you created.
   b. Navigate to **Configure** > **App features** > **Bot** > **Select an existing bot** and select the bot you created.
   c. Select **Support audio calls** and **Support video calls** from 'What can your bot do?'.
   d. Select **Personal**, **Team**, and **Group chat** from 'Select the scopes in which people can use this command'.
6. Copy the new app attributes.

a. Log in to Microsoft Azure portal as Microsoft Azure admin.

b. Navigate to **Azure services** > **Azure Active Directory** > **Manage** > **App registrations**.

c. Search and open the new bot created for Notify Connector by name or by Application (client) ID.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Make a note of client ID/Application (client) ID, Object ID, and tenant ID to update these values in your ServiceNow instance in later procedures.

Note:
Bot ID created in the Microsoft Teams Developer portal and Application (client) ID in the Microsoft Azure portal are the same.

What to do next
Assign permissions to users to access the new bot. For more information, see Manage permissions and authenticate the Notify connector app/bot in Microsoft Azure portal.

Manage permissions and authenticate the Notify connector app/bot in Microsoft Azure portal

Assign permissions to users to be able to authenticate successfully and participate in conference calls in Microsoft Teams.

Before you begin
Role required: Microsoft Azure admin

About this task
You can manage the permissions required by the Notify connector app/bot to perform required actions for conference calls.

Procedure
1. Log in to Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. Search and open the Notify connector bot created in step 3 in the section Create an app in Microsoft Teams to enable making calls by name or by Application (client) ID.
4. Navigate to **Manage** > **API Permissions** > **Add a permission** > **Microsoft Graph** and select **Application Permissions**.
5. Search and select the following values using **Select permissions**, and then select **Add permissions** to grant the permission.
   - **User.Read.All** from User list.
   - **OnlineMeetings.ReadWrite.All** from OnlineMeetings list.
   - **Calls.InitiateGroupCall.All**, **Calls.JoinGroupCall.All**, **Calls.JoinGroupCallAsGuest.All** from Calls list.
6. Grant admins access to the Microsoft Azure applications that require admin approval.
   a. Select **Grant admin consent for <tenant>** in the API permissions page.
   b. Select **Yes** in the Grant admin consent confirmation pop-up page.

Create a Service user to make calls from Microsoft Teams

Create a service user role to be able to start online meetings on behalf of users in Microsoft Teams.

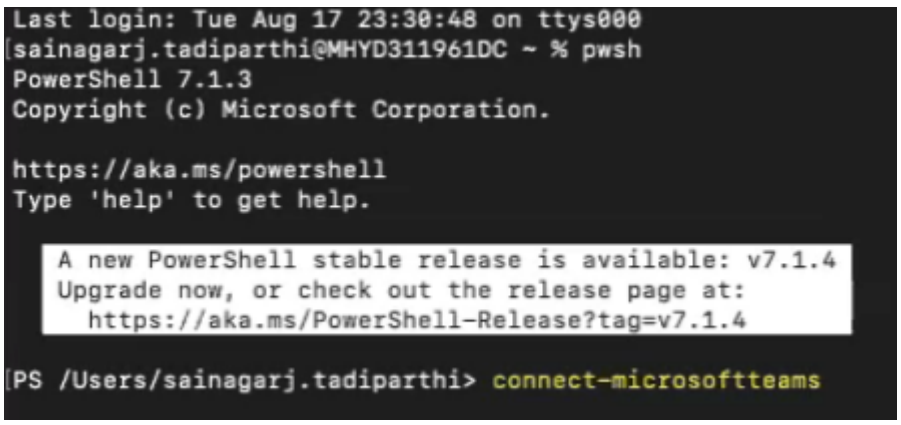
Before you begin
Role required: Microsoft Teams admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to Microsoft Azure portal.
2. Create a Service user.
   a. Navigate to **Azure services** > **User**.
   b. Select **New user**.
   c. On the form, fill the fields.

New user



Field	Description
User name	Option to provide the user name for the user.
Name	Option to provide the name of the user.

   d. Select **Create**.
   e. Select the created user to view the details.

> **Note:**
> Ensure that the Service User has the required license/subscription and a valid usage location set to make conference calls from Microsoft Teams.

3. Run the PowerShell command from Terminal on macOS or from the Command prompt on Windows OS.
   a. Type the command `pwsh` and press **Enter**.
   b. Connect your Microsoft tenant with PowerShell.
   c. Run the following command in PowerShell.

```
connect-microsoftteams
```

Upon successful connection, a confirmation message is displayed in the browser.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

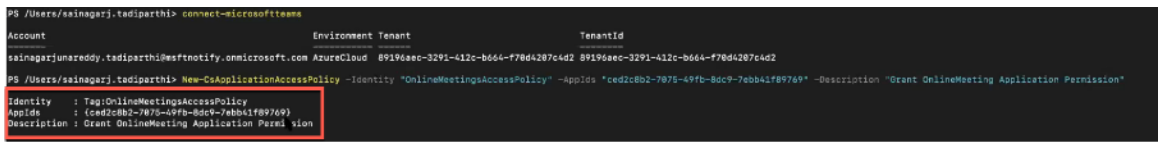
PowerShell will also display the tenant details.

4. Run the command below to create a new Application Access Policy in PowerShell.

   Use the bot ID created in step 3 in the section Create an app in Microsoft Teams to enable making calls as the AppId for the command.

   For more information on the application access policy, see Configure application access to online meetings.

```
Syntax:



New-CsApplicationAccessPolicy -Identity "<PolicyName (can
 be anything)>" -AppIds "<AppIds>" -Description "<Policy
 Description>"

Example:
If you have a Self-configured (single tenant) setup, use the
 application ID from Azure portal.

For Example: New-CsApplicationAccessPolicy
 -Identity "OnlineMeetingsAccessPolicy" -AppIds
 "aaaaaaaa-1234-er4r-8dc9-123456789012" -Description "Grant
 OnlineMeeting Application Permission"
```

Upon successfully creating the policy, the details are displayed in PowerShell.

5. Run the user permission policy in PowerShell.

   a. Go to the Microsoft Azure portal.

   b. Navigate to **Home** > **Users**.

   c. Select the user created.

   d. Copy the **Object ID** of the user to notepad.

   e. Use the policy name created in the previous step as the **PolicyName** of the command and the **Object ID** as the **UserAzureID** respectively in the command to execute in PowerShell.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
Syntax:

Grant-CsApplicationAccessPolicy -Identity "<UserAzureID>"
 -PolicyName "<PolicyName>"

Example:

Grant-CsApplicationAccessPolicy -Identity
 "fdcd9c17-ceae-468f-906f-2er76b4dd0f4" -PolicyName
 "OnlineMeetingsAccessPolicy"
```

Create a Microsoft Teams application registry entry to connect the created app to ServiceNow instance

Register your Microsoft Teams application with your ServiceNow instance for OAuth authorization.

Before you begin

Role required: admin

Procedure

1. Log in to your ServiceNow instance.
2. Navigate to **All** > **System OAuth** > **Application Registry**.
3. Select **New**.
4. Select **Connect to a third-party OAuth Provider**.
5. On the form, fill in the fields.
   - Name: Name to uniquely identify the record, for example, Microsoft Teams for Notify Self-configured app.
   - Client ID: Application (client) ID or Bot ID created and copied during the app creation in Microsoft Teams.

     Copy the Application (client) ID from the Microsoft Azure portal. Bot ID created in the Microsoft Teams Developer portal and Application (client) ID in the Microsoft Azure portal are the same. For the Application (client) ID or Bot ID information, see Create an app in Microsoft Teams to enable making calls.

     Do not copy the App ID of the Microsoft Teams app created on the Microsoft Teams Developer Portal.
   - Client Secret: The password you generated when creating the bot in the Microsoft Teams Developer Portal (step 3h).

     For the Client Secret information on the Microsoft Azure portal, see Create an app in Microsoft Teams to enable making calls.
   - Default Grant Type: `Client Credentials`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Token URL: Token endpoint URL that includes the Directory ID of your app with the structure `https://login.microsoftonline.com/<Directory-ID>/oauth2/v2.0/token`, where `<Directory ID>` is the tenant ID created during the app/bot creation in Microsoft Teams Developer Portal. For the tenant ID information in the Microsoft Azure portal, see Create an app in Microsoft Teams to enable making calls.

  Or follow this procedure.

  a. Log in to the Microsoft Azure portal.
  b. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
  c. Search and open the new bot created for Notify connector by name or by Application (client) ID.
  d. Copy the Directory (tenant) ID value.
  e. Go to **Endpoints** > **Get the OAuth 2.0 token endpoint (v2)**.
  f. Replace `common` with the copied Directory (tenant) ID value.

6. Select **OAuth Entity Scopes** in related list and add a record with the values `Default` in **Name** and `.default` in **OAuthscope**.
7. Set OAuth Entity Profile values.

   Note:
   By default, an OAuth Entity Profile record is created. If it is not available, then you can create one by following these sub-steps.

   - Select **OAuth Entity Profiles** in related list.
   - Open the created `<>default_profile`record.
   - Select **OAuth Entity Profile Scopes** in related list.
   - Add a record with the values `Default` in **OAuth Entity Scope** and `<>default_profile` in **OAuth Entity Profile**.
   - Select **Update** to save the changes.

Result
The Microsoft Teams app is now registered with an OAuth profile authorization.

What to do next
Create a Connection & Credentials alias for Microsoft Teams

Create a Connection & Credentials alias for Microsoft Teams

Create an alias to associate the connection information with the credential data required to complete the application integration in Microsoft Teams.

Before you begin
Role required: admin

About this task
For more information, refer Introduction to credentials, connections, and aliases.

Procedure
1. Navigate to **All** > **Connections & Credentials** > **Credentials Aliases**.
2. Select **MSTeamsCommunicationsSpoke**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **New** in the Credentials related list.
4. Select **OAuth 2.0 Credentials**.
5. Set the values for the credentials.
   a. Enter a name for the credential in the **Name** field, for example, `Notify Microsoft Teams credentials for self-configured app`.
   b. Enter the OAuth Entity profile information in the **OAuth Entity Profile** field, for example, `<application-registry-name>_default_profile`.
   The profile ID is set when you generate the application registry entry.
6. Select **Submit**.

Update the records in the Microsoft Teams Configuration page

Update the created records in Microsoft Teams to make seamless calls.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > **Notify** > **Microsoft Teams** > **Configuration**.
2. On the Microsoft Teams Configuration form, fill in the fields.
   - Credential Alias: Provide `sn_msteams_com_spk.MSTeamsCommunicationsSpoke` in the field.
   - Application registry: Select the Application Registry record created in the section Create a Microsoft Teams application registry entry to connect the created app to ServiceNow instance.
   - Tenant ID: Enter the tenant ID created during the app creation in Microsoft Teams. For the tenant ID information on the Microsoft Azure portal, see Create an app in Microsoft Teams to enable making calls.
   - Requester: Select the Credential alias record created in the section Create a Connection & Credentials alias for Microsoft Teams.
   - Service user Azure ID: Enter the objectId of the service user created in Create a Service user to make calls from Microsoft Teams.
   - Enable create online meeting: Ensure this option is selected.
3. Right-click the form header and select **Save**.

Result
OIDC Application Registry is created.

Verify OIDC Application Registry creation for a self-configured app setup

Verify whether the OIDC Application Registry was created when Microsoft Teams Application Registry was created and mapped to the configuration during a self-configured app setup process.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.

About this task

Mapping a Microsoft Teams Application Registry after creation automatic creates an OIDC Application Registry as a part of the self-configured app setup. If this automatic creation fails, issues occur in processing call backs that might cause meeting information not to be updated in real time.

For more information, see Create a Microsoft Teams application registry entry to connect the created app to ServiceNow instance and Update the records in the Microsoft Teams Configuration page.

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Filter the list by the Client ID created during the app creation in Microsoft Teams.

   Ensure that there is also an External OIDC Provider type Application Registry for the same Client ID along with the OAuth Provider type created. For the External OIDC Provider type Application Registry information, see Update the records in the Microsoft Teams Configuration page. For the Client ID information on the Microsoft Azure portal, see Create an app in Microsoft Teams to enable making calls.
3. If the Application Registry with External OIDC Provider type for the Client ID is missing, create it manually.

   a. Select **New** on the Application Registries page.

   b. Select **Configure an OIDC provider to verify ID tokens**.

   c. In the **Name** field, enter your OAuth provider name and append `OIDC`.

      For example, if your OAuth Provider name is `MS Teams SC Config`, you would name your OIDC `MS Teams SC Config OIDC`.

   d. Select **Client ID** same as the OAuth Provider value.

   e. For the **Client Secret** value, select **invalid_value**. (This value is not relevant).

   f. For the **OAuth OIDC Provider Configuration** value, select **Notify Teams OIDC Config**.

   g. For the **Redirect URL** valuesas **invalid_value** (This value is not relevant).

   h. Right-click the form header and select **Save**.

   By default, an OAuth Entity profile is created. Ensure the **Grant Type** is **Client Credentials**.
4. Create an OAuth Entity scope.

   a. Select **OAuth Entity Scopes** tab on the Application Registries page.

   b. Double-click **Insert a new row** and enter `Notify MS Teams SC OIDC` appended with `Default Profile`.
   For example, if your OIDC Config name is `MS Teams SC Config OIDC`, then you can enter the name as `MS Teams SC Config OIDC Default Profile`.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Enter `https://api.botframework.com/.default` as the OAuth scope.

d. Right-click the form header and select **Save**.

What to do next

Configure Notify connector for Microsoft Teams.

Integrate Meeting Extensions self-configured app with Microsoft Teams

Configure Meeting Extensions for Microsoft Teams using the self-configured app environment.

Ensure you have completed Notify connector for Microsoft Teams integration. For more information, see Integrating Notify connector self-configured app with Microsoft Teams.

Create and configure an app for Meeting Extensions in the Microsoft Teams Developer Portal

Create and configure an app for Meeting Extensions in Microsoft Teams Developer Portal to fetch incident details during the conference call in Microsoft Teams.

Before you begin

Ensure you have installed Notify connector and other required plugins on your ServiceNow® instance. For more information, see Install Meeting Extensions for Microsoft Teams.

Role required: Microsoft Teams admin

Procedure

1. Log in to the Microsoft Teams portal at https://dev.teams.microsoft.com.
2. Create an app.

a. Navigate to **Apps** > **New app**.

b. Enter a valid name for the app in the Add app dialog box and select **Add**.

c. On the App details page, fill in the fields.

App details page

Field	Description
Short name	Name of your application. For example, ServiceNow Meeting Extensions for Microsoft Teams.
Full name	Full name of your application.
Application (client) ID	Unique identification number for the app. **Note:** This App ID is different from the generated Bot ID/App ID.
Short description	Brief description of the app.
Long description	Detailed description of the app.
Version	Version for the app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For example, 1.0.
Developer or company Name	Name of your company.
Website	Link to your company website.
Privacy policy	Link to the privacy statement for your app.
Terms of use	Link to the terms and conditions for your app.

d. Select **Save**.

3. Configure the Group and Channel app.

a. Navigate to **Configure** > **App features** > **Group and Channel app**.

b. On the Group and channel app details page, fill in the fields.

Group and channel app details page

Field	Description
Configuration URL	The configuration URL in the following format: `https://<instance_name>.service-now.com/sn_now_teams_ext_meeting_configuration.do`
Scope	The meeting types **Team** or **GroupChat**,depending on where users can use your app.
Context	Select all context items from the list.
Users can reconfigure the app	Option to allow users to reconfigure the Meeting Extensions app.

c. Select **Save**.

4. Go to **Single sign-on** and enter the Application ID URI in the format `api://<instance_name>.service-now.com/<client ID in Microsoft Azure>`. For information about the Client ID, see Create an app in Microsoft Teams to enable making calls.
5. Add a domain.
   a. Navigate to **Domains** > **Create your first domain**.
   b. Enter `*.service-now.com` in the Add domain dialog box to allow authorizations for ServiceNow URLs.
6. Select **Publish**.
7. Select **Download the app package**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Upload the app manifest in Microsoft Teams.

Upload the app manifest in Microsoft Teams

Enable users to interact with agents from Microsoft Teams application by copying the Notify connector App ID value.

Before you begin
Role required: Microsoft Teams admin

Procedure

1. Log in to Microsoft Teams admin portal.
2. Navigate to **Teams apps** > **Manage apps** > **Upload new app** > **Upload**.
3. Search, select, and open (in the Upload a custom app dialog-box) the app package you downloaded in the section Create and configure an app for Meeting Extensions in the Microsoft Teams Developer Portal.
4. Go to **Manage Apps**, search for the uploaded app, open and copy the **App ID** value in a notepad from the app details page.
   This App ID is used for Meeting Extensions and so, this App ID must be updated in System Properties in ServiceNow® instance.

Add the Meeting Extensions tab in Microsoft Teams

Map the ServiceNow® Meeting Extensions app ID in your ServiceNow instance to automatically add the meeting extensions tab in Microsoft Teams for a conference call.

Before you begin
Role required: admin

Procedure

1. Log in to the ServiceNow instance.
2. Navigate to **Notify** > **Microsoft Teams** > **Properties**.
3. Paste the copied App ID value in **Application ID of Meeting Extensibility teams app (The App ID can be found from "Manage apps" page in Teams Admin portal)** and select **Save**.

   Note:
   Log in to the Microsoft Teams portal, search for and open **Notify Connector for Microsoft Teams** app at least once for the Meeting Extensions app to work.

   Meeting Extensions app is set up.

Configure the Notify connector app to use Meeting Extensions in the Microsoft Azure portal

Configure the existing Notify connector app/bot to use Meeting Extensions in Microsoft Azure portal to fetch the incident details during the conference call in Microsoft Teams.

Before you begin
Role required: Microsoft Azure admin

About this task
No need to create a separate Meeting Extensions bot as the Meeting Extensions app depends on the Notify connector for Microsoft Teams app. You can configure the existing Notify connector app/bot in the Microsoft Azure portal for Meeting Extensions to have a seamless conference call experience in Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Ensure that API permissions are configured for the Notify connector for Microsoft Teams app in the Microsoft Azure portal. For more information, see Manage permissions and authenticate the Notify connector app/bot in Microsoft Azure portal. You must update the following changes to the existing Notify connector app in the Microsoft Azure portal.

Procedure

1. Log in to Microsoft Azure portal as Microsoft Azure admin.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. Open the app created for Notify connector in Microsoft Teams in the section Create an app in Microsoft Teams to enable making calls.
4. Navigate to **Manage** > **API Permissions** > **Add a permission** > **Microsoft Graph** and select **Application permissions**.
5. Search and select the following values using **Select permissions**, and then select **Add permissions**.
   - **TeamsTab.ReadWriteForChat.All** from TeamsTab list.
   - **TeamsAppInstallation.ReadWriteForChat.All** from TeamsAppInstallation list.
6. Grant admins access to the Microsoft Azure applications that require admin approval.
   a. Select **Grant admin consent for <tenant>** in the API permissions page.
   b. Select **Yes** in the Grant admin consent confirmation pop-up page.
7. Authenticate app to receive the incoming requests from Microsoft Teams into ServiceNow® instance.
   a. Navigate to **Manage** > **Authentication** > **Platform configurations** > **Add a platform** > **Web applications** > **Web**.
   b. On the form, fill in the fields.

Configure Web form

Field	Description
Redirect URIs	Enter the meeting login URL. URL should be in the following format: `https://<instance-name>.service-now.com/sn_now_teams_ext_meeting_login.do`
Implicit grant	Select **Access tokens** and **ID tokens**

   c. Click **Configure**.

Configure the Notify connector bot for Meeting Extensions

Configure the Notify connector bot for Meeting Extensions in the Microsoft Azure portal.

Before you begin

Role required: Microsoft Azure admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Microsoft Azure portal at https://portal.azure.com/ as the Microsoft Azure admin.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. Search for and open the new bot created for Notify Connector by name or by Application (client) ID.
   The app was created in the section Create an app in Microsoft Teams to enable making calls.
4. Expose an API.

   a. Navigate to **Manage** > **Expose an API** > **Application ID URI** > **Set**.

   b. Paste the Application ID URI `api://<instance_name>.service-now.com/<client-id-in-azure>`, which was set for the Single-sign on in the section Create and configure an app for Meeting Extensions in the Microsoft Teams Developer Portal and select **Save**.

   c. Select **Add a scope**.

   d. On the form, fill in the fields.

Add a scope form

Field	Value
Scope name	`access_as_user`
Who can consent?	Select **Admins and users**.
Admin consent display name	Enter a valid name. For example, `Teams can access the user's profile`.
Admin consent description	Enter a valid description. For example, `Allows Teams to call the app's web APIs as the current user.`
User consent display name	Enter a valid name. For example, `Teams can access the user profile and make requests on the user's behalf.`
User consent description	Enter a valid description. For example, `Enable Teams to call this app's APIs with the same rights as the user.`
State	Set to **Enabled**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

e. Select **Add scope**.

f. Select **Add a client application**, enter the value `1fec8e78-bce4-4aaf-ab1b-5451cc387264` for Microsoft Teams desktop and mobile application in the **Client ID**, and then select **Authorized scopes**, and select **Add application**.
For more information, see 'Update Azure AD app registration for SSO' section on the Extend a Teams personal tab across Microsoft 365 app page.

g. Select **Add a client application**, enter the value `5e3ce6c0-2b1f-4285-8d4b-75ee78787346` for Microsoft Teams desktop and mobile application in the **Client ID**, and then select **Authorized scopes**.
For more information, see the "Update Azure AD app registration for SSO" section on the Extend a Teams personal tab across Microsoft 365 app page.

h. Select **Add application**.

Create an application registry entry in your ServiceNow instance

Register the application with the instance to participate in OAuth authorization.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **New**.
3. For the **What kind of OAuth application** field, select **Configure an OIDC provider to verify ID tokens**.
4. On the form, fill in the fields.
   - Name: Enter a name to uniquely identify the record; for example, Microsoft Teams.
   - Client ID: Enter the client ID value in the format `api://<instance-name>.service-now.com/<client-id>` from the section Create an app in Microsoft Teams to enable making calls.
   - Client Secret: Enter any random value as client secret and make a note of it.
   - Add an OAuth OIDC Provider Configuration record.
     a. Select **OAuth OIDC Provider Configuration** lookup to create a new record and select **New**.
     b. On the OIDC Provider Configuration New record form, fill in the fields.

OIDC Provider Configuration New record form

Field	Description
OIDC Provider	Name to uniquely identify the record. For example, Microsoft Teams meeting extensions.
OIDC Metadata URL	Enter value in the following format:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	`https://login.microsoftonline.com/{tenant_id_from_azure}/v2.0/.well-known/openid-configuration` To copy tenant ID, see Create an app in Microsoft Teams to enable making calls.
User claim	Enter any preferred user-name.

   c. Right-click on the OIDC Provider Configuration New record form header and select **Save**.

   d. Select **Submit**.

- Add an OAuth Entity Scope record.

   a. Select **OAuth Entity Scopes** related list.

   b. Add a record with the values `Default` in **Name** and `.default` in **OAuthscope**.

5. Select **Save** on the OAuth OIDC Entity form.
6. Generate a new OAuth token.

   a. Navigate to **Notify** > **Microsoft Teams** > **Configuration**.

   b. Open the record associated with the **Requester** by selecting **Preview this record** icon and then select **Open Record**.

   c. Select the **Get OAuth Token** related link to refresh the token.

   d. Select **Update** on the OAuth 2.0 Credentials form.

   e. Select **Update** on the Microsoft Teams configuration form.

What to do next

After completing Meeting Extensions integration with Microsoft Teams, see the section Meeting Extensions for Microsoft Teams.

Integrating ServiceNow with Microsoft Teams for GCC-H or DoD

Set up your ServiceNow instance to integrate with Microsoft Teams applications.

You can integrate Employee Center, Virtual Agent, and request-based chatbots with Microsoft Teams for Government Community Cloud - High (GCC-H) or US Department of Defense (DoD) customers.

Integrating Virtual Agent with Microsoft Teams for GCC-H or DoD

You can integrate Virtual Agent with Microsoft Teams for GCC-H customers by configuring your own apps.

Integrating Employee Center with Microsoft Teams for GCC-H or DoD

You can integrate Employee Center with Microsoft Teams to enable Government Community Cloud High (GCC-H) and US Department of Defense (DoD) customers to access attached files in Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Prerequisites

Before integrating Employee Center with your Microsoft Teams tenant, ensure that the following prerequisites are met:

- Your ServiceNow instances have been upgraded to the Vancouver release.
- You have not previously attempted to install the Conversational Integration with Microsoft Teams app on your instances.
- You have the admin permissions for the ServiceNow instance and Microsoft Azure instances.

Integration process

The overall process to integrate Employee Center with your Microsoft Teams tenant involves the following tasks:

1. Activate the IT Service Management integration with Microsoft Teams plugin (sn_now_teams_it).

   Note:
   For more information on activating plugins, see Activate a plugin.

2. Create Microsoft Azure application and authenticate users to access Employee Center in Microsoft Teams.
3. Update the OIDC entities table.
4. Update your Microsoft Teams tenant URL for GCC-H or DoD.
5. Download and modify the manifest file for Employee Center for GCC-H or DoD.
6. Upload manifest file in Microsoft Teams.

Update the OIDC entities table

Update the OIDC entities table to replace dummy values created by the registry file with your Microsoft Teams tenant values.

Before you begin

Role required: admin

Procedure

1. In the Navigation filter, enter `oauth_oidc_entity_list.do`.
2. Select the ServiceNow for Microsoft Teams App record.
3. In the **Client ID** field in the OAuth OIDC entities table, enter `api://INSERT_COMPLETE_INSTANCE_URL_without_http(s)/ APPLICATION (CLIENT) ID` .
4. Select the reference icon beside the **OAuth OIDC Provider Configuration** field.
5. Select **Open Record**.
6. In the **OIDC Metadata URL** field in the OIDC Provider Configuration table, enter your directory (tenant) Id.
7. Select **Update**.

Download and modify the manifest file for Employee Center for GCC-H or DoD

Download and modify the package file to provide the information that is required to make Employee Center available in your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

About this task
To download, edit, and upload the manifest file, refer to this Knowledge Base article.

Procedure
1. Download the `Employee_Center_Integration_With_Teams_For GCCH.zip` file from this Knowledge Base article and extract its contents.
   The manifest zip file that you downloaded from the Knowledge Base article includes the following files:
   - Color.png
   - Manifest.json
   - Outline.png
2. Open the manifest.json file and replace **INSERT_CLIENT_ID** with your Application (Client) ID next to `id` under `version`, `id` under `webApplicationInfo`, and `botId` under `composeExtensions`.
3. Replace **INSERT_COMPLETE_INSTANE_URL** with your URL next to `contentUrl` and **INSERT_COMPLETE_INSTANE_URL** next to `websiteUrl` under `staticTabs`.
4. **Optional:** Customize the values of `packageName`, `short` name, `full` name, and **accent color** in the manifest file to re-brand your self-configured bot.
   If you would like to change the bot icon and outline icon, you can replace the color.png and outline.png files with your desired images.

   Note:
   Ensure that you have not changed the names for these files while uploading.

   For more information about image requirements, see Microsoft documentation.
5. **Optional:** Add additional domains in the manifest file to preview content using the task module for content outside of the default ServiceNow domain, you can add additional domains in the manifest file.

   Note:
   By default, the manifest file already contains the ServiceNow domain under validDomains. It also includes a `true` attribute next to `"supportsFiles"`, which adds the file attachment icon in your Virtual Agent conversation. If you do not want to include additional domains for the content preview feature, you can skip this step.
6. Save the updated files and compress the three files (manifest.json, color.png, and outline.png) into a new zip file.
   Select all three files and click **Compress** instead of compressing the folder itself.

Update your Microsoft Teams tenant URL for GCC-H or DoD

Configure your Microsoft Teams tenant URL for Government Community Cloud High (GCC-H) or US Department of Defense (DoD).

Before you begin
Role required: security_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. In the Navigation filter, enter `sys_response_header_list.do`.
2. In the HTTP Response Headers table, append the appropriate URL in the **Value** field of the following records:
   - Global
   - Microsoft Integrations – Core/UI Page: ms_login
   - Employee Center Core/Service Portal: Employee Center

   Use the following URLs:

   - GCC-H: `https://gov.teams.microsoft.us`
   - DoD: `https://dod.teams.microsoft.us`
3. Select **Update**.

Integrating Employee Center and Virtual Agent with Microsoft Teams for GCC-H or DoD

You can integrate Employee Center and the Virtual Agent bot with Microsoft Teams to enable Government Community Cloud High (GCC-H) and US Department of Defense (DoD) customers to interact with agents through Virtual Agent and access the attached files in Employee Center.

Prerequisites

Before integrating Employee Center with your Microsoft Teams tenant, ensure that the following prerequisites are met:

- Your ServiceNow instances have been upgraded to the Vancouver release.
- You have not previously attempted to install the Conversational Integration with Microsoft Teams app on your instances.
- You have the admin permissions on ServiceNow and Microsoft Azure instances.

Integration process

The overall process to integrate Employee Center with your Microsoft Teams tenant involves the following tasks:

1. Activate the IT Service Management integration with Microsoft Teams plugin (sn_now_teams_it) and Glide Virtual Agent plugin (com.glide.cs.chatbot).

   Note:
   For more information on activating plugins, see Activate a plugin.

2. Create Microsoft Azure application and authenticate users to access Employee Center in Microsoft Teams.
3. Create a bot in Microsoft Teams for GCC-H or DoD.
4. Integrate your Self-configured bot with Microsoft Teams for GCC-H or DoD.
5. Update your Microsoft Teams tenant URL for GCC-H or DoD.
6. Modify and download the manifest file for GCC-H or DoD.
7. Upload manifest file in Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Modify and download the manifest file for GCC-H or DoD

Create and download the ServiceNow for Microsoft Teams manifest file from your instance to enable Microsoft Teams to use the ServiceNow for Teams app.

Before you begin

Role required:external_app_install_admin

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Application Manifest** > **ServiceNow for Teams**.
2. Click **New**.
   The **Generic Info** tab appears.
3. In the **Generic Info** section, enter the details.

   a. **Short name**: Option to provide a short name for the manifest file.

   b. **Full name**: Option to provide the complete name for the manifest file.

   c. **Version**: Version of the manifest file.
   Ex: 1.0.0

   d. **Unfurl Links**: Option to unfurl the links in Microsoft Teams.

   Link unfurling generates a content-rich preview(adaptive card) when a supported link is shared in a conversation with a user in Microsoft Teams. For more details about link unfurling, refer Unfurl the web links in Microsoft Teams chat.

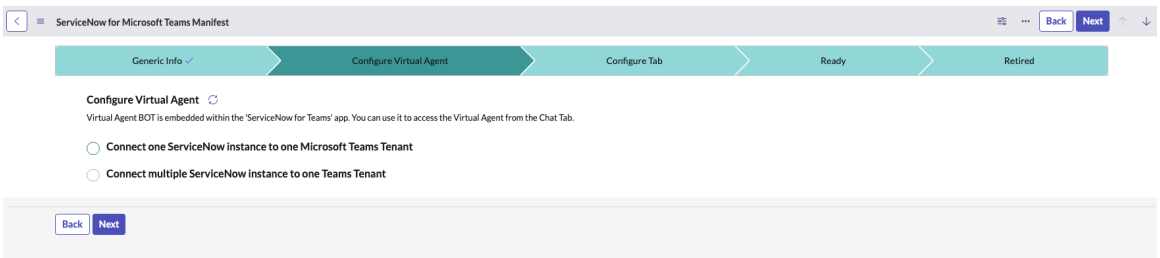
   e. **Short description**: Short description about the manifest file.

   f. **Description**: Detailed description about the manifest file.

   g. **Accent Color**: Option to choose a custom color for the conversations in Microsoft Teams as per the company branding and the accent color should be in HTML color code format.

   Note:
   If you want to customize the company branding, clear the **Use default images** option and then upload the icons. For more information on the size of icons, refer App icons and manifest schema icons.

4. Click **Submit**.



5. In the **Generic Info** section, click **Next** to navigate to **Configure Virtual Agent** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. In the **Configure Virtual Agent** section, you can do one of the following.

   To configure the Virtual Agent in your instance, click **Configure Virtual Agent**. For more information, see Conversational Integration with Microsoft Teams.

   Select **Connect multiple ServiceNow instances to your Microsoft Teams tenant**and select the Virtual agent installed in Step 5.

7. In the **Configure Tab** section, enter the following.

   a. **Enable tabs**: Option to add tabs in Microsoft Teams application and this is selected by default.

   b. **Tab name**: Option to provide a name for the Service portal tab that appears in Microsoft Teams.

   c. **Enable Activity Feed**: Option to enable activity feed to receive campaign notifications in Microsoft Teams and this option is selected by default.

   d. Click **Next**.

      For self-configured app, you must provide the Application (client) ID and Directory (tenant) ID in the **Configure Tab** section.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. In the **Ready** section, select **Enable Activity Feed** option to receive notifications for campaigns.

   Verify the details provided and click **Download Manifest** to download the manifest file.

   The manifest file downloads in the zip format.

What to do next

You must upload the manifest file in Microsoft Teams. For more information, refer Upload manifest file in Microsoft Teams.

Integrating Request-based chat with Microsoft Teams for GCC-H or DoD

You can integrate request-based chat with Microsoft Teams for Government Community Cloud - High (GCC-H) or US Department of Defense (DoD) customers to auto import the chat conversations between the agents and the employees.

Prerequisites

Before integrating Employee Center with your Microsoft Teams tenant, ensure that the following prerequisites are met:

- Your ServiceNow instances have been upgraded to the Vancouver release.
- You have not previously attempted installing the Conversational Integration with Microsoft Teams app on your instances.
- You have the admin permissions on ServiceNow and Microsoft Azure instances.

Integration process

1. Activate the IT Service Management integration with Microsoft Teams plugin (sn_now_teams_it).

   Note:
   For more information on activating plugins, see Activate a plugin.

2. Register and configure the Request-based chat application on the Microsoft Azure portal.
3. Add permissions to the Microsoft Azure application.
4. Configure Application Registry on the ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For GCC-H and DoD, use the `https://login.microsoftonline.us/` domain for token and authorization URLs on the application registry page.

5. Update chat credentials with Azure GCC URL.
6. Create record with Azure GCC details.

Update chat credentials with Azure GCC URL

Update the Azure URL in the chat credentials of GCC customers. Enable GCC customers to start chat and import chat conversations from Microsoft Teams to the ServiceNow instance.

Before you begin
Role required: admin

Procedure

1. In the navigation filter, enter `http_connection_list.do`.
   The HTTP(s) Connection [http_connection_list.do] table appears.
2. Open the Chat Credential record with the connection alias sn_tcm_collab_hook.MS_Teams_Chat_Credentials.
3. In the **Connection_URL** field, enter the URL `https://graph.microsoft.us/`.

   Note:
   For DoD customers, enter the URL `https://dod-graph.microsoft.us`.

4. Select **Update**.

Create record with Azure GCC details

Create and update a new record in the sys_properties.list table with the details of the Azure account of GCC customers.

Before you begin
Role required: admin

Procedure

1. In the navigation filter, enter `sys_properties.list`.
   The System Properties [sys_properties] table appears.
2. Select **New**.
3. In the **Name** field, enter *`sn_now_teams.teams_url`*.
4. In the **Value** field, enter the URL `https://gov.teams.microsoft.us`.

   Note:
   For DoD customers, enter the URL `https://dod.teams.microsoft.us`.

5. Select **Update**.

Integrating ServiceNow with Microsoft 365 applications for Employee Experience

Set up your ServiceNow Employee Center instance to integrate Microsoft 365 applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:

- From IT Service Management for Microsoft 365 (version 2.6.7), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.
- From HR Service Delivery for Microsoft 365 (version 3.3.6), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.

For upgrading existing Microsoft Teams capabilities to Microsoft 365 applications, follow the steps given here.

The ServiceNow Employee Center integration with Microsoft Teams extends its capability to enable integration with other Microsoft 365 applications, bringing the ServiceNow employee experience to Microsoft Outlook, Microsoft Office 365, and Microsoft Teams together.

Prerequisites

Before integrating Employee Center with your Microsoft 365 tenant, ensure that the following prerequisites are met:

- You have the external app install admin (external_app_install_admin) permissions on ServiceNow.
- You have installed and deployed one of the following:
  - IT Service Management for Microsoft 365
  - HR Service Delivery for Microsoft 365

  For more information on how to install IT Service Management with Microsoft 365 or HR Service Delivery with Microsoft 365, see Integrating ServiceNow with Microsoft Teams and Microsoft 365.

Integration process for pre-published apps

1. Upgrade to IT Service Management for Microsoft 365 / HR Service Delivery with Microsoft 365 by installing the latest IT Service Management for Microsoft 365 / HR Service Delivery with Microsoft 365 plugin.

   Note:
   For more information on activating plugins, see Activate a plugin.

2. Regenerate and download a new manifest file for Microsoft 365.

   For more information on how to generate and download the manifest file, see Create and download manifest file for Employee Center and Microsoft 365 integration.

3. Upload manifest file in Microsoft Teams for Microsoft 365.

Integration process for self-configured apps

1. Upgrade to IT Service Management for Microsoft 365 / HR Service Delivery with Microsoft 365 by installing the latest IT Service Management for Microsoft 365 / HR Service Delivery with Microsoft 365 plugin.

   Note:
   For more information on activating plugins, see Activate a plugin.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Authenticate users to access Employee Center in Microsoft 365 applications by updating the client IDs in the *Microsoft Azure* application.

Client IDs

Application	Client ID
Microsoft Teams mobile/ desktop application	**1fec8e78-bce4-4aaf-ab1b-5451cc387264**
Microsoft Teams web application	**5e3ce6c0-2b1f-4285-8d4b-75ee78787346**
Microsoft 365 web application	**4765445b-32c6-49b0-83e6-1d93765276ca**
Microsoft 365 desktop application	**0ec893e0-5785-4de6-99da-4ed124e5296c**
Microsoft Outlook desktop application	**d3590ed6-52b3-4102-aeff-aad2292ab01c**
Microsoft Outlook web application	**bc59ab01-8403-45c6-8796-ac3ef710b3e3**
Microsoft Outlook mobile application	**27922004-5251-4030-b22d-91ecd9a37ea4**

For more information on updating the *Microsoft Azure* application and authenticating users, see Create Microsoft Azure application and authenticate users to access Employee Center in Microsoft Teams.

3. Regenerate and download a new manifest file for Microsoft 365.

For more information on how to generate and download the manifest file, see Create and download manifest file for Employee Center and Microsoft 365 integration.

4. Upload manifest file in Microsoft Teams for Microsoft 365.

Create and download manifest file for Employee Center and Microsoft 365 integration

Create and download the manifest file from your instance to make Employee Center available in Microsoft 365 applications.

Before you begin

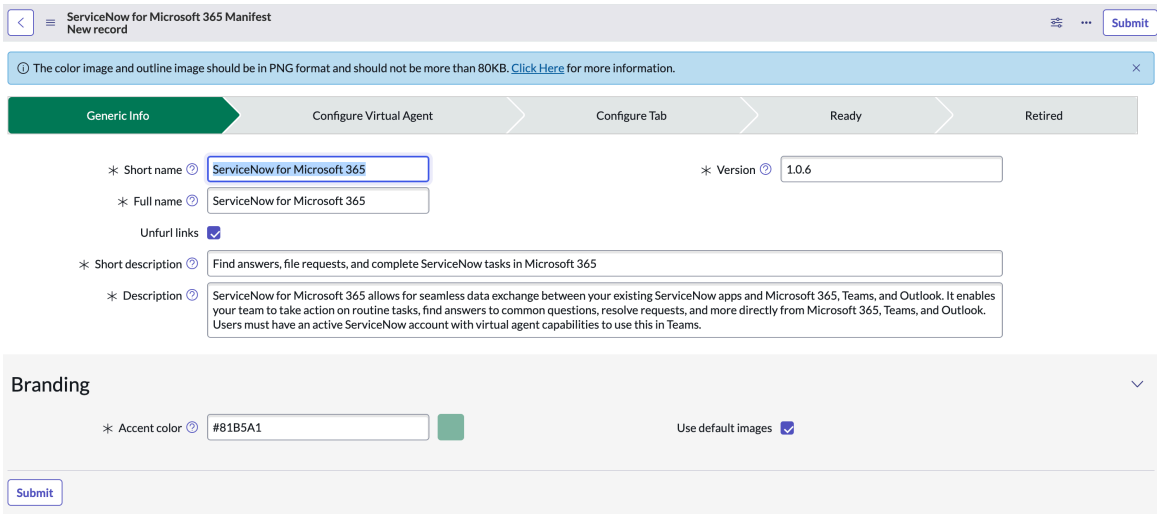
Role required: external app install admin

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Application Manifest** > **ServiceNow for Teams**.
2. Select **New**.

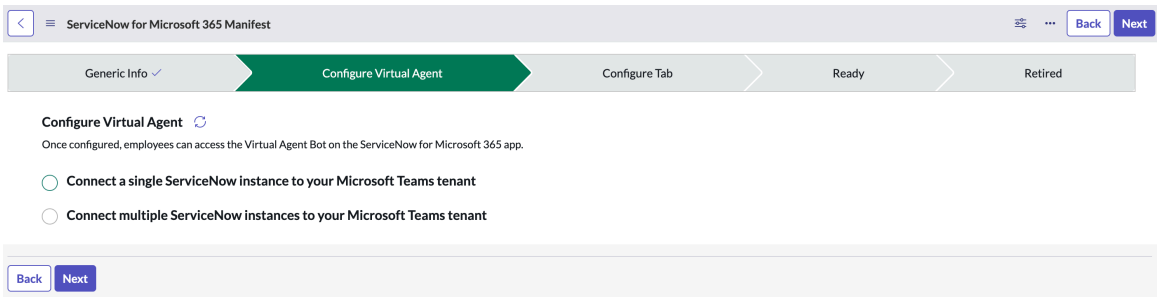
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Generic Info** tab appears.



3. In the Generic Info section, fill in the following fields.

Generic Info section



Field	Description
Short name	Option to provide a short name for the manifest file.
Full name	Option to provide the complete name for the manifest file.
Version	Version of the manifest file. For example, 1.0.0
Unfurl Links	Option to unfurl the links in Microsoft Teams. Link unfurling generates a content-rich preview (adaptive card) when a supported link is shared in a conversation with a user in Microsoft Teams. For more details about link unfurling, refer Unfurl the web links in Microsoft Teams chat.
Short description	Short description about the manifest file.
Description	Detailed description about the manifest file.
Accent Color	Option to choose a custom color for the conversations in Microsoft Teams as per the company branding. The accent color should be in HTML color code format. **Note:** If you want to customize the company branding, clear the **Use default images** option and then upload the icons. For more information on the size of icons, refer App icons and manifest schema icons.

4. Select **Submit**.

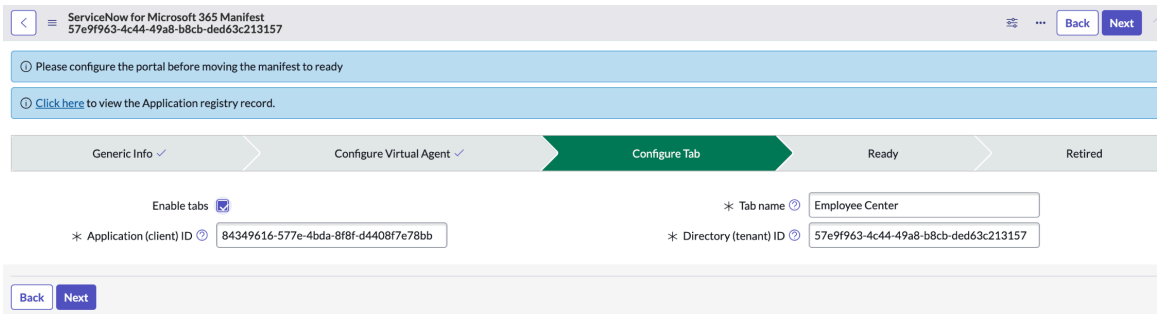
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the Generic Info section, select **Next** to navigate to **Configure Virtual Agent** tab.
6. Configure the Virtual Agent in your instance by selecting **Configure Virtual Agent**.
   For more information, see Conversational Integration with Microsoft Teams.

7. In the Configure Virtual Agent section, to connect to a single or multiple ServiceNow instances.
   - If you want to connect one ServiceNow instance to a Microsoft Teams tenant, select **Connect a single ServiceNow instance to your Microsoft Teams Tenant**.

     The Virtual Agent Bot ID is auto-populated if you select this option.
   - If you want to connect multiple ServiceNow instances to one Microsoft Teams tenant, select **Connect multiple ServiceNow instances to your Microsoft Teams tenant**.

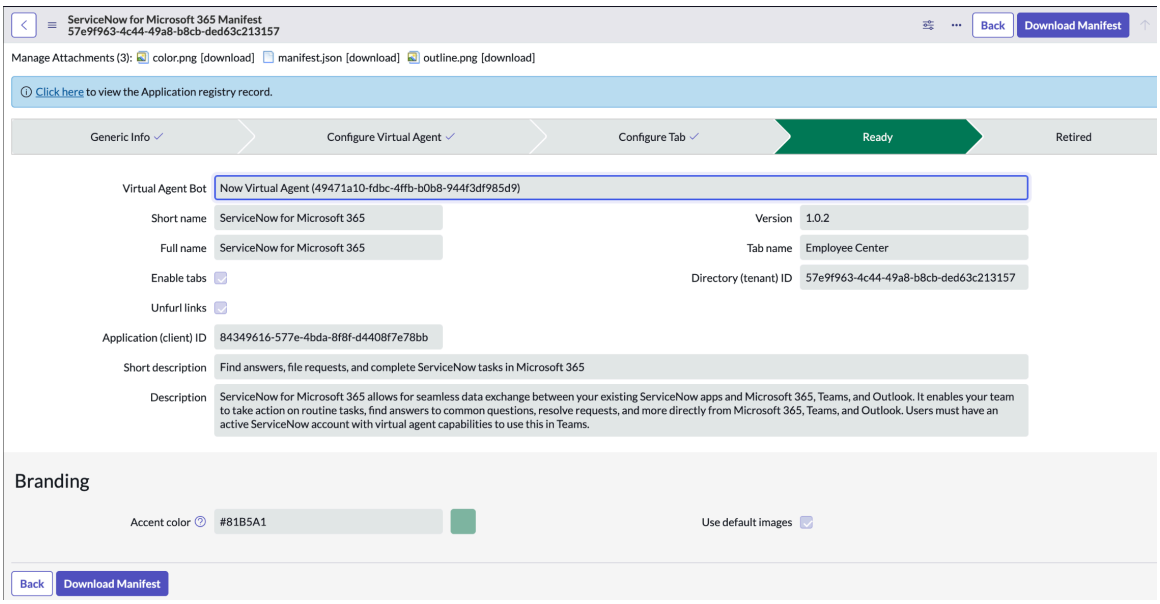
   To integrate Virtual Agent with Microsoft Teams by configuring your own bots, see Integrating Virtual Agent with Microsoft Teams using the self-configured bot.
8. In the Configure Tab section, fill in the following fields and select **Next**.



Configure Tab section

Field	Description
Enable tabs	Option to add tabs in Microsoft Teams application. This field is automatically selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Field	Description
Tab name	Option to provide a name for the Service portal tab that appears in Microsoft Teams.
Enable Activity Feed	Option to enable activity feed to receive campaign notifications in Microsoft Teams. This option is automatically selected.

9. For self-configured apps, provide the Application (client) ID and Directory (tenant) ID in the **Configure Tab** section.

Important:
The above step is not applicable for pre-published apps.

10. Receive notifications for campaigns by selecting **Enable Activity Feed** option in the Ready section.
11. Verify the details provided and select **Download Manifest** to download the manifest file.

The manifest file downloads in the zip format.

Result
An application registry is created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

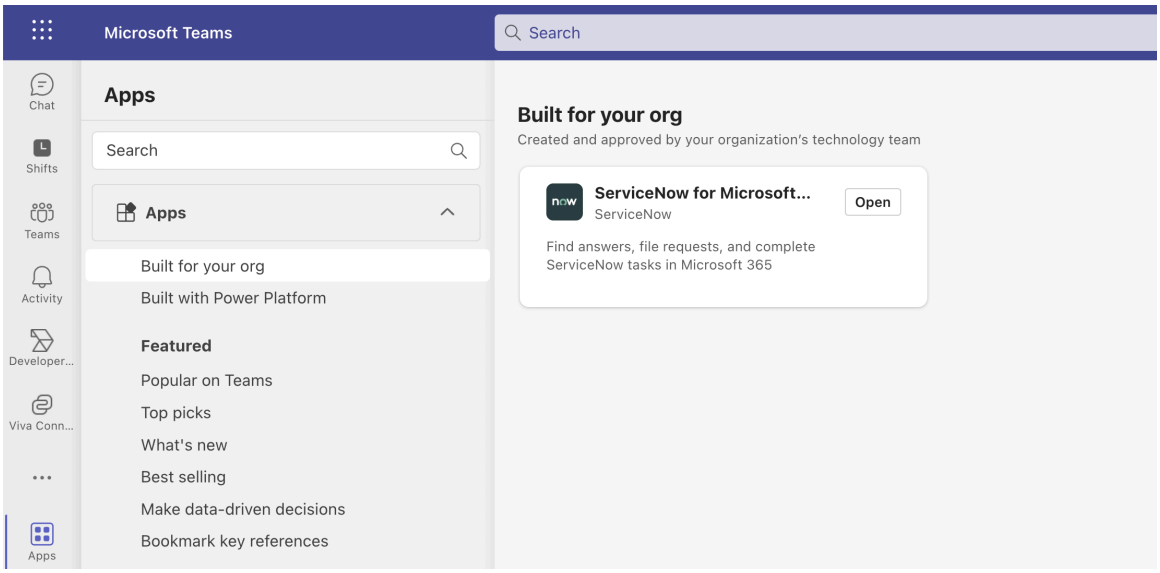
Upload manifest file in Microsoft Teams for Microsoft 365

Upload the manifest file in Microsoft Teams to integrate Microsoft 365 with your ServiceNow instance.

Before you begin

Role required: admin

Procedure



1. Launch Microsoft Teams application.
2. Navigate to **Apps** > **Manage your Apps** > **Upload an app**.
3. Select the **Upload a custom app** option.

Note:

Ensure that ServiceNow for Microsoft 365 is allowed as a third-party app in Microsoft Teams. For information about allowing apps in Microsoft Teams, see the Microsoft Teams documentation.

4. Navigate to the location where the manifest file is downloaded and select the zip file.
5. Select **Open**.

The ServiceNow for Microsoft 365 app appears in the Apps screen.

6. Select the ServiceNow for Microsoft 365 app.
7. Select **Add**.

Configuring ServiceNow for Microsoft Teams and Microsoft 365 integration

ServiceNow® for Microsoft Teams enables agents to initiate chat with employees and import the chat, and enables employees to view and receive chat service from within#he Microsoft Teams application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:

- Actions that require the *admin* role, can also be performed with the *sn_now_teams.admin* role.
- From IT Service Management for Microsoft 365 (version 2.6.7), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.
- From HR Service Delivery for Microsoft 365 (version 3.3.6), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.

For upgrading existing Microsoft Teams capabilities to Microsoft 365 applications, see Integrating ServiceNow with Microsoft 365 applications for Employee Experience.

Configuring Microsoft Teams integration for Employee Experience

Offers help for employees to resolve their IT, HR, and UR related issues through Microsoft Teams. Employees can interact with the agents from within Microsoft Teams to resolve their issues.

Configure IT Service Management integration with Microsoft Teams

Complete the procedures outlined to configure IT Service Management integration with Microsoft Teams.

Review the active notifications for Microsoft Teams

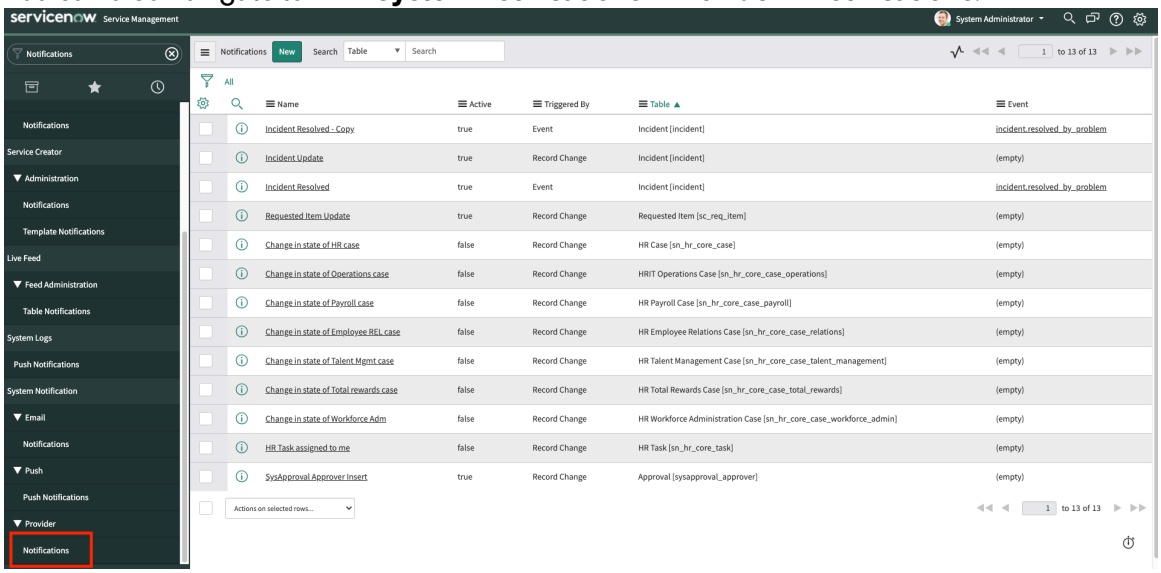
The notifications added by ServiceNow for Microsoft Teams, might duplicate existing notifications in your instance. Review and disable any duplicate notifications to avoid notifying users multiple times for the same event.

Before you begin

Role required: admin

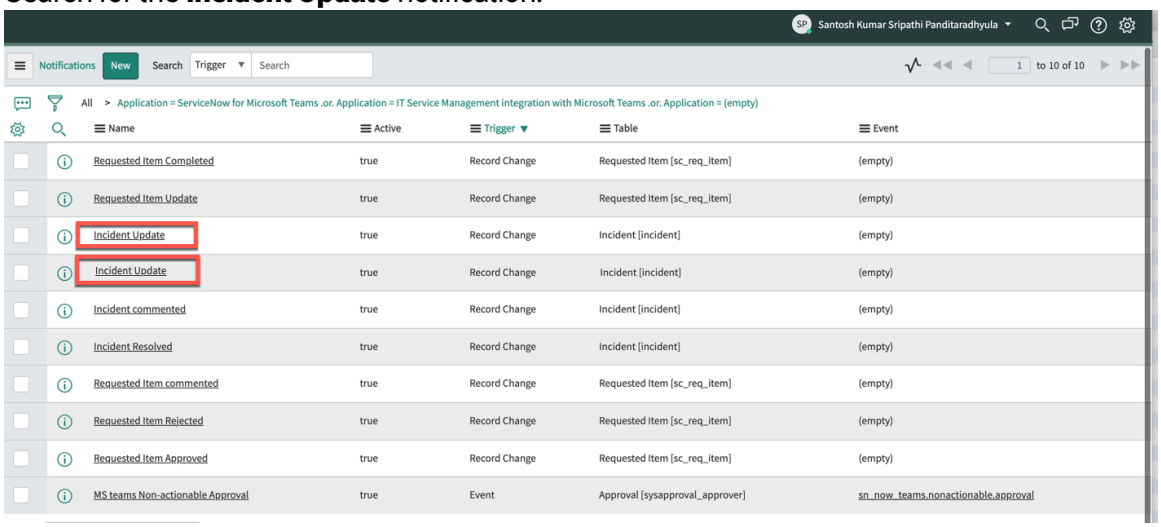
About this task

You will find the following duplicate notifications after installing the IT Service Management integration with Microsoft Teams application.



- Incident Update
- MS teams Non-actionable Approval
- Requested Item Update

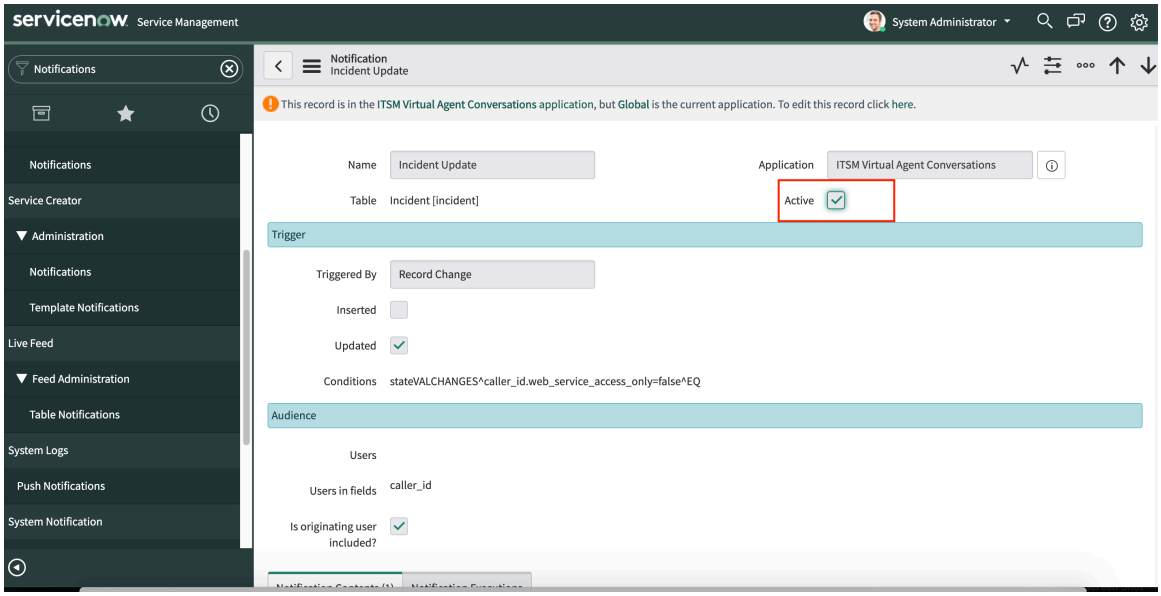
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Notifications** > **Provider Notifications**.

   You can also navigate to **All** > **System Notifications** > **Provider** > **Notifications**.



2. On the Notifications list, select the **Name** column to sort the list in alphabetical order. This collates all the duplicate notifications.
3. Search for the **Incident Update** notification.

4. Select one of the **Incident Update** notifications.
5. Clear the **Active** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Update**.
7. Repeat the process for the following notifications:
   - MS teams Non-actionable Approval
   - Requested Item Update

Result
Leave a comment on an incident record, only one notification appears about the comment in Microsoft Teams.

Enable Virtual Agent notifications for IT Service Management

Configure system properties to enable Virtual Agent notifications in Microsoft Teams.

Before you begin
Role required: admin

About this task

> **Note:**
> If your first installation of IT Service Management for Microsoft 365 is version 2.7.0, Virtual Agent notifications are enabled by default. The following scenario is only applicable if you upgrade from older versions of the plugin.

After upgrading to IT Service Management for Microsoft 365 version 2.7.0, you must configure system properties to enable Virtual Agent notifications.

The following tables are supported for Virtual Agent notifications in the base system.

- Incident
- Change
- Requested Item

Procedure

1. In the **All** menu, enter `sys_properties.list`.
   The System Properties table appears.
2. In the name column, search for `*sn_now_teams`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. For the following properties, set the value to `true`.
   - *sn_now_teams.enable_va_approval_notification*: This property enables Virtual Agent notifications for approvals.
   - *sn_now_teams_it.enable_va_comment_notification*: This property enables Virtual Agent notifications for comments.

   The default value of these properties is **true**. If you've upgraded from an earlier version of IT Service Management for Microsoft 365, the value is **false**.

What to do next

You can customize the fields displayed in approval notifications. For more information, see Customizing approval notification fields.

Customizing approval notification fields

You can customize the approval notification fields by creating the methods in a script include.

Note:
The topic uses the API names of the script includes.

Actionable Notifications are sent for approval and comments on tickets. You can customize the fields displayed in the approval notifications by creating methods in the `sn_now_teams.ApprovalsVAUtil()` script include. These methods override the ones in the `sn_now_teams.ApprovalsVAUtilSNC()` script include.

For information about script includes, see Script includes.

Creating the method

The notification logic calls a method based on the table that the approval record is created for. The method names follow this format: *get<TableName>Fields()*, which you can use to create a method for any table in the base system.

Note:
Custom tables aren't supported for approval notifications.

For example: If the table name is sc_request, the method name is *getScRequestFields()*. If the table name is incident, the method name is *getIncidentFields()*.

Overriding the method fields

The methods that you create in the `sn_now_teams.ApprovalsVAUtil()` script include override the ones in `sn_now_teams.ApprovalsVAUtilSNC()`.

While creating the method, you can enter the field names that are displayed in the approval notification.

- For TASK extended tables, you can dot-walk to the referenced field by using the *sysapproval* field.

  For example:

```
getChangeRequestFields: function() {
 return {
  "fields":
 ["sysapproval.number", "sysapproval.short_description", "sysapproval.risk", "sysapp
roval.start_date", "state"]
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
    }
},
```

- For NON-TASK tables, you must enter the table fields directly.

  For example:

```
getKbKnowledgeFields: function() {
 return {
  "fields":
 ["number", "short_description", "kb_knowledge_base", "author", "workflow_state"]
  }
},
```

- You can create a default method, *`getDefaultFields()`*, which is used if the system doesn't find a method for the table in the approval record. The field references follow the TASK extended tables.

  For example:

```
getDefaultFields: function() {
 return {
  "fields":
 ["sysapproval.number", "sysapproval.requested_for", "sysapproval.price", "sysapproval.due_date", "state"]
  }
},
```

Configure Request-based chats to import messages from Microsoft Teams to ServiceNow

Configure request-based chats for IT Service Management integration with Microsoft Teams and HR Service Delivery integration with Microsoft Teams applications enable the system to auto import the chat conversations between the agents and the employees.

If you are installing the ServiceNow for Microsoft Teams in your environment, the auto-import functionality is applicable by default for the following tables.

- HR Core task (sn_hr_core_task)
- HR Life events Case (sn_hr_le_case)
- HR Core case (sn_hr_core_case)
- Request Item (sc_req_item)
- Task (sc_task)
- Incident (incident)
- Request (sc_request)
- Change request (change_request)

The admin can extend the auto import feature to the other tables as required. For more information see, Create requester mapping.

Note:
You must manually enable the auto import feature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

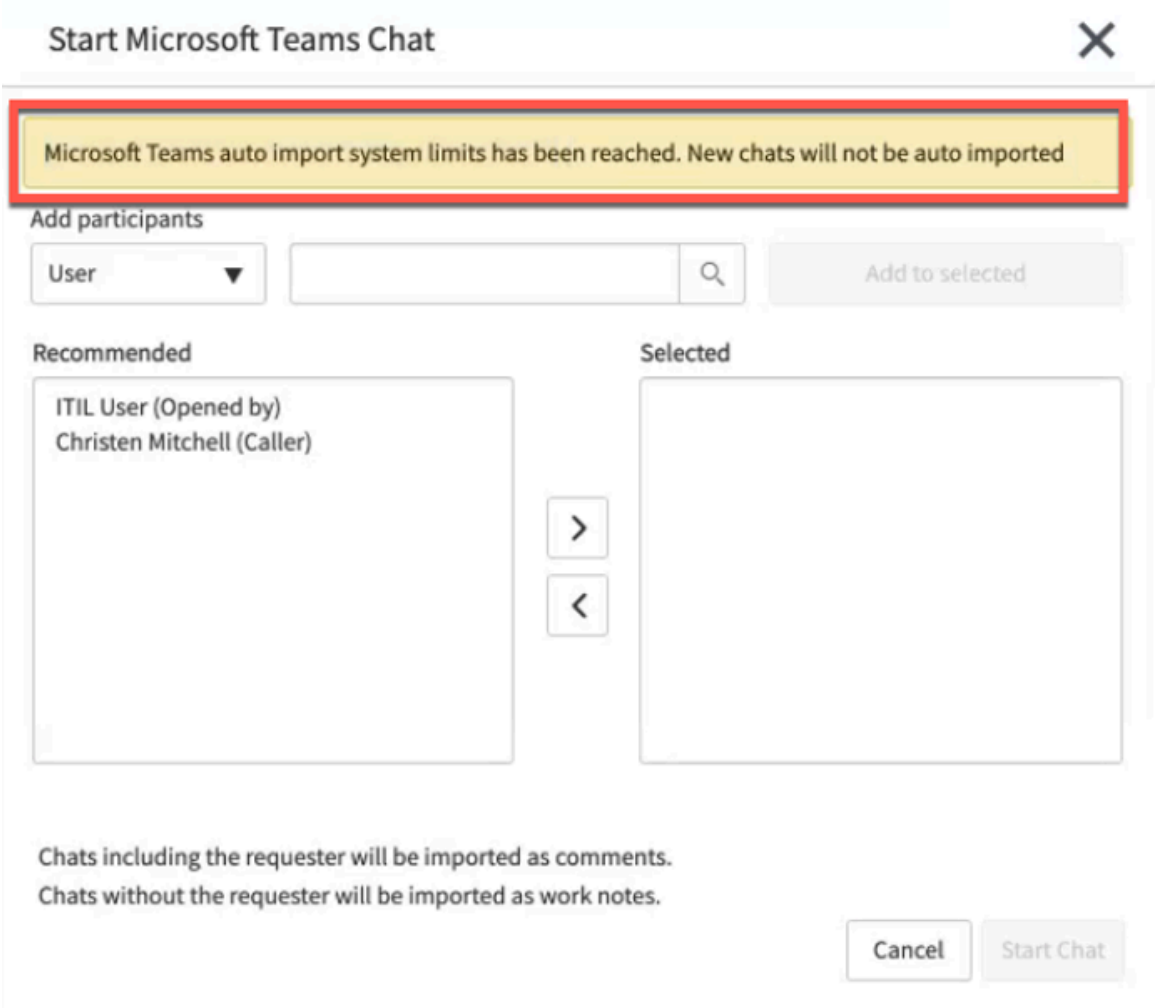
Functionality of auto importing messages

All the chat messages from Microsoft Teams will be auto imported to the ServiceNow instance at an interval of 30 minutes. The system looks for all the new messages across all the chats and import the messages to ServiceNow instance.

To prevent polling from running indefinitely on inactive conversations, if there are no new messages, the polling interval will gradually lengthen until, eventually, polling stops.

The system verifies the record for new messages for every 30 minutes. If there are no new messages, the system checks for the new messages for an interval of one hour, two hour, four hour and eight hours. If there are no new messages in an interval of eight hours for seven days, the Auto Import polling activity is disabled.

If there is any message during any of the intervals, the auto import timer will look for the new messages in the next interval, and import the messages. The timer is then reset to 30-minutes interval.



System Limits

The system imports a maximum of 500 active chats in a 30-minute interval. If there are more than active 500 chats the system will not auto-import the new chat records for the 30-minute interval.

The system executes a maximum of 10,000 sub-flows to import the chats for an interval of 30 minutes, 1 hour, 2 hour, 4-hour, 8-hour intervals. This is a count of all the active subflows that auto-import the messages into ServiceNow.

If the system reaches the limit, a message is displayed to the agent that the system level is reached and the chat can't be auto imported on the **Start Microsoft Teams Chat** modal.

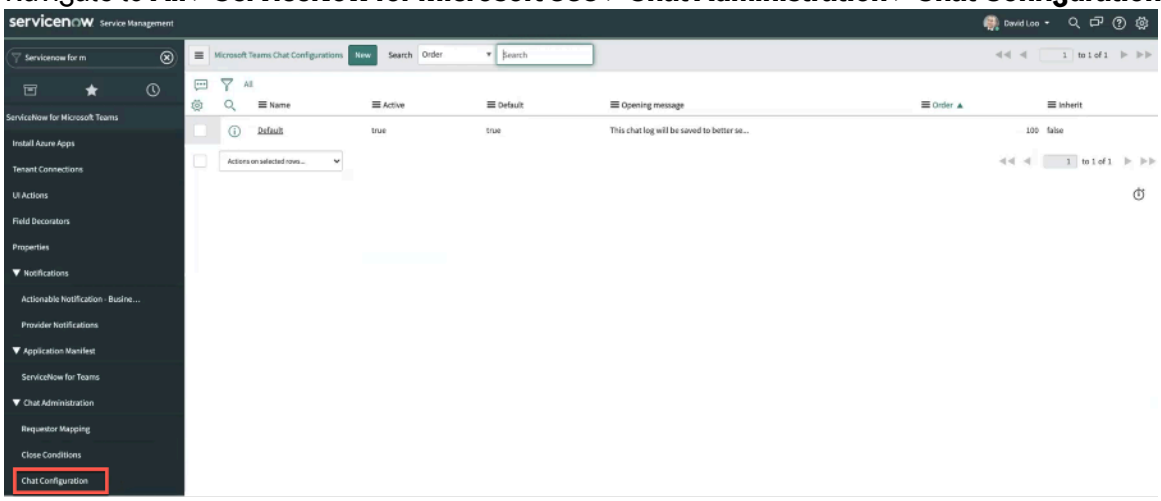
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When the ticket is closed, the system will trigger auto import for one last time posts the new messages in the Work notes (Chat history).

If there is an interaction record associated with the parent record then interaction record is also closed. The chat record will also be closed as part of this flow.

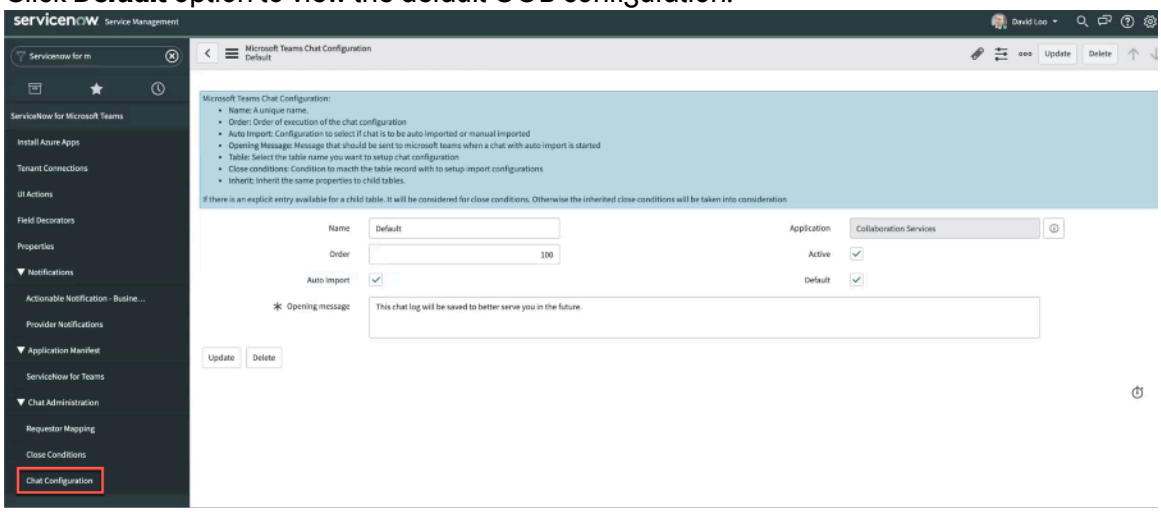
If you want to continue using the default configuration, you can skip the following procedures to extend the auto-import functionality. However, if you want to extend the auto-import functionality to other tables, perform the steps mentioned in the topics below.

Configure the chat to enable auto-import



Create a chat configuration to automatically import the chats between the agents and the requesters for additional tables to extend the auto import functionality.

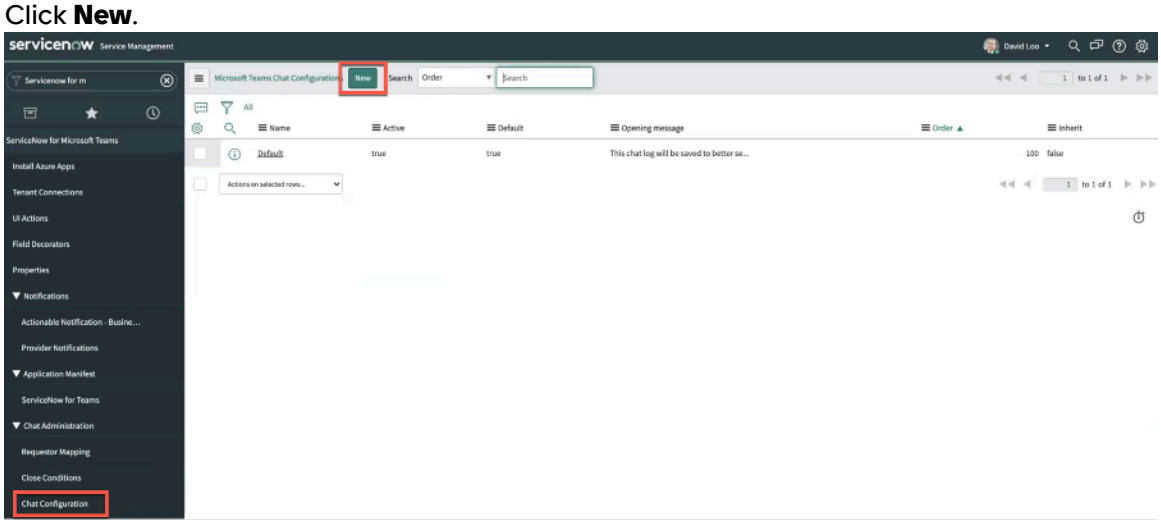
Before you begin
Role required: admin



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

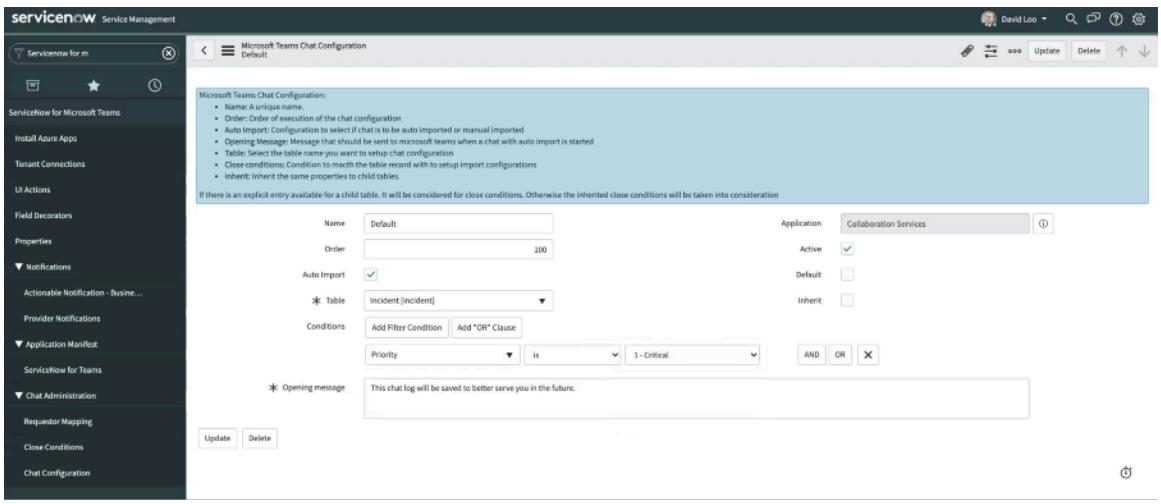
1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Chat Administration** > **Chat Configuration**.



2. Click **Default** option to view the default OOB configuration.

> **Note:**
> If you want to auto-import chats for certain conditions, create a condition.

3. Navigate to **ServiceNow for Microsoft Teams** > **Chat Administration** > **Chat Configuration**.
4. Click **New**.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. On the form, fill the fields.

Chat configuration

Field	Description
Name	Value for the configuration.
Order	Order for the configuration. You can define multiple chat configurations for a single table. The system executes the query based on the descending order.
Active	Option to activate the configuration. Select the check box to activate the configuration.
Auto Import	Option to automatically import the chat. Select the check box to automatically import the chat.
Default	Option to keep the configuration as default. **Note:** You cannot define multiple default values for chat configuration.
Table	Option to select the auto-import for a table.
Inherit	Extend and apply to the child tables.
Conditions	Option to define a condition for a chat to be auto-imported.
Opening message	Option to provide a text message that displays to the agent when the agent initiates a chat. This field is enabled only if the **Auto Import** option is selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

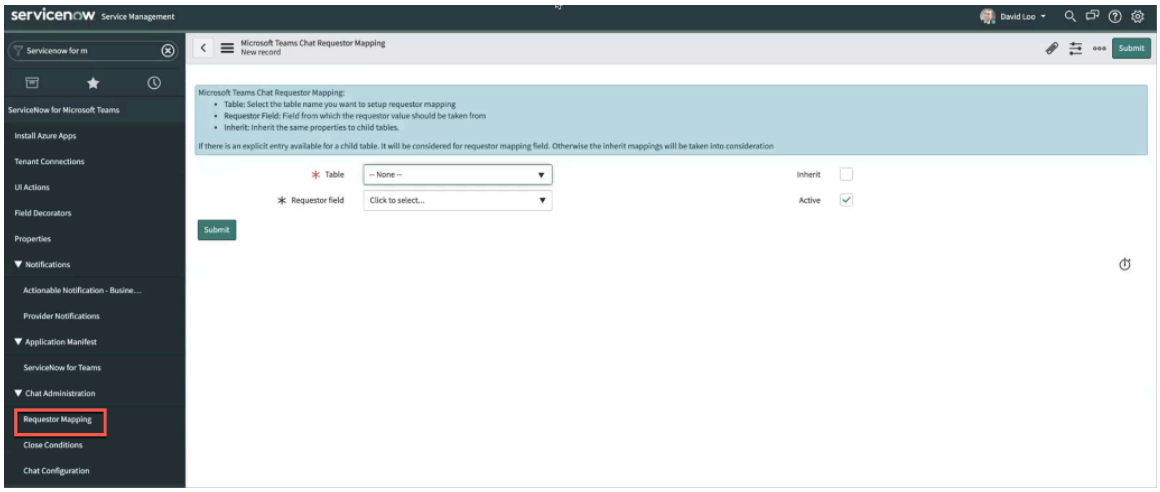
6. Click **Submit**.

   The chat configuration defined will be applicable only for the table selected. You can extend the chat configuration to other tables by creating another chat configuration record.

Create requester mapping

Create a requester mapping to extend the auto-import functionality to other tables.

Before you begin
Role required: admin



Note:

If there is no requestor mapping defined for a table, the interaction records will not be created. An error log is created for the admin to notify that the requestor mapping is not defined for a table.

A requestor-mapping record defines which field, in any given table, is the field representing the requestor of a ticket.

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Chat Administration** > **Requestor Mapping**.
2. Click **New**.

3. On the form, fill in the fields.

Requestor mapping

Field	Description
Table	Table to which the requestor mapping (auto-import feature) should be applicable.
Requestor field	Field to select the requestor for a record.
Inherit	Extend and apply the auto-import feature to the child tables.
Active	Option to activate the requestor-mapping record.

4. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure close condition

Configure the condition to exclude the chat conversation from auto importing.

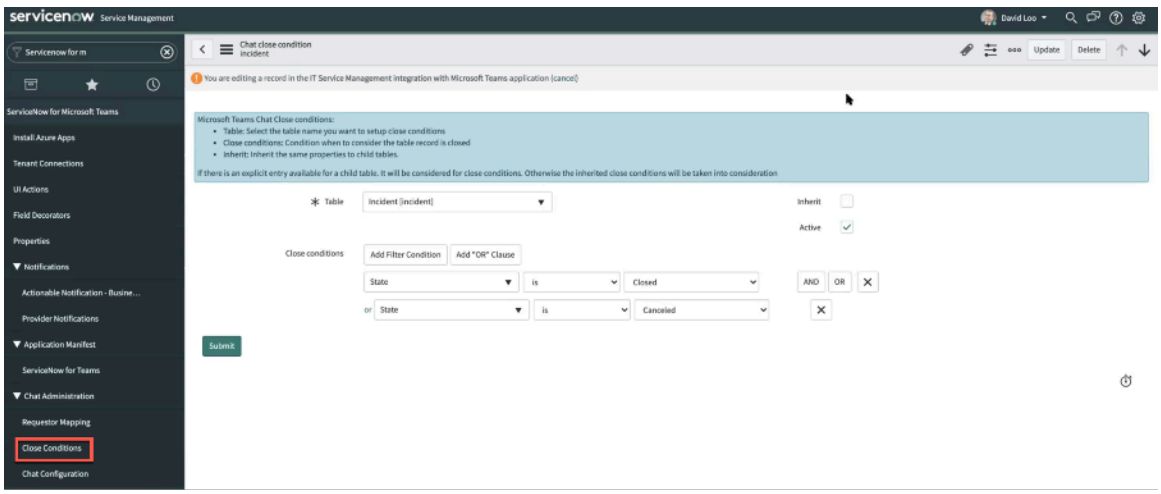
Before you begin

Role required: admin

About this task

When a ticket is set to inactive, the system does one final poll for any messages in the chat, removes the participants such that no further messages about the ticket can be exchanged in the chat, and then stops polling that chat. This is determined by the "active" field on a table being set to "false".

For any table with an active field, this behavior works automatically. If your custom application does not use an "active" field for determining whether the ticket remains active, define an alternate condition that can be used to denote the ticket as being closed or inactive.



Alternately, to adhere to platform standards, consider adding an active field to your custom application and maintaining the state of that field in accordance with the business logic of your application.

Important:

If you are creating a close condition for a new table, ensure to create business rule for close condition. For more information, see Configure business rule for close condition.

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Chat Administration** > **Close Conditions**.
2. Click **New**.

3. On the form, fill in the fields.

Close condition

Field	Description
Table	Option to select a table to which the requester mapping (auto-import feature) should be applicable.
Inherit	Extend and apply the auto-import feature to the child tables.
Active	Option to activate the requester-mapping record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Close conditions	Condition builder to define a condition that the record is closed.

4. Click **Submit**.

Configuring Employee Center

Use the Employee Center within Microsoft Teams or embed a custom portal in Microsoft Teams.

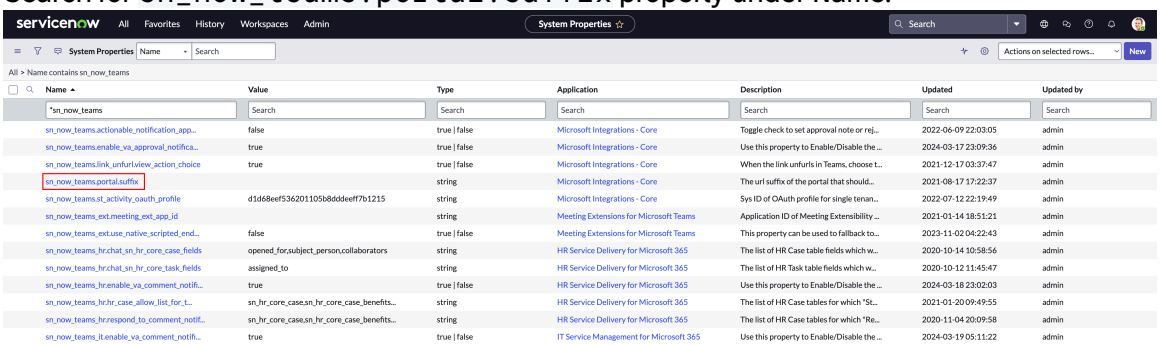
Employee Center appears in Microsoft Teams when you install and configure Employee Center v23.0.5 or a higher version in your environment. For more information on Employee Center, see Employee Center.

If you install Employee Center Pro in your environment, the Employee Center Pro is available in Microsoft Teams.

If you don't install Employee Center in your environment, the Employee Service Portal is displayed in the Microsoft Teams application. Alternatively, you can embed a custom portal in Microsoft Teams.

Embed a custom portal

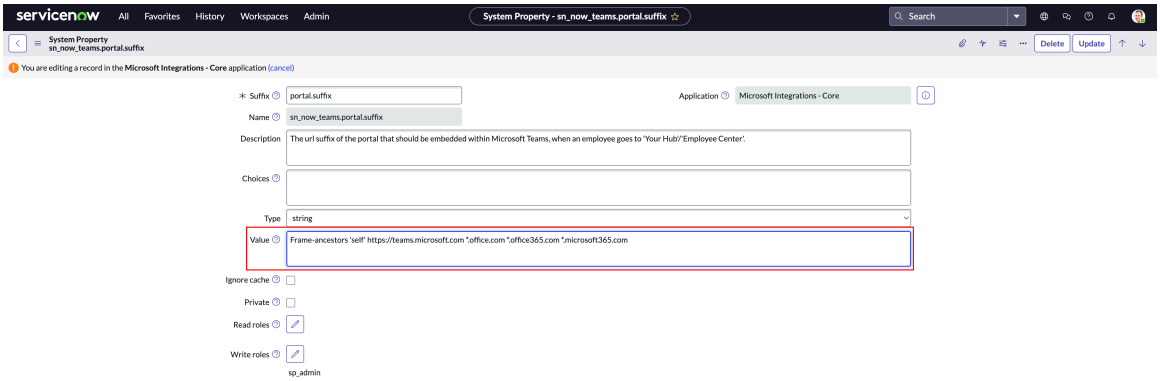
Embed your custom portal to replace the Employee Center tab in Microsoft Teams by configuring the system property. The custom portal shows up in the Employee Center tab in Microsoft Teams.



Before you begin

Role required: admin

If you're using a custom portal rather than the Employee Center, you can replace the embedded Employee Center with your custom portal, so that it's accessible within Microsoft Teams. The following steps take you through the configuration to embed your portal.



Procedure

1. In the navigation pane, enter `sys_properties.list`.
2. Search for `sn_now_teams.portal.suffix` property under Name.

3. Select **sn_now_teams.portal.suffix**.
4. Enter the value of your custom portal in the **Value** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Update**.
6. Create a custom header for the embedded portal after you configure your custom portal.

   For more information on adding header configuration, see Configure HTTP response headers.

   a. In the Navigator pane, type `sys_response_header.list`.

   b. Select **New**.

   c. On the HTTP Response Header form, fill in the following fields based on your requirement.
      - Active
      - Application
      - Record
      - Description

   d. Enter the following field values.

Field values for the HTTP Response Header form

Field	Value
Applies to	Specify Type
Type	Service Portal [sp_portal]
Name	Content-Security-Policy
Value	Frame-ancestors 'self' https://teams.microsoft.com

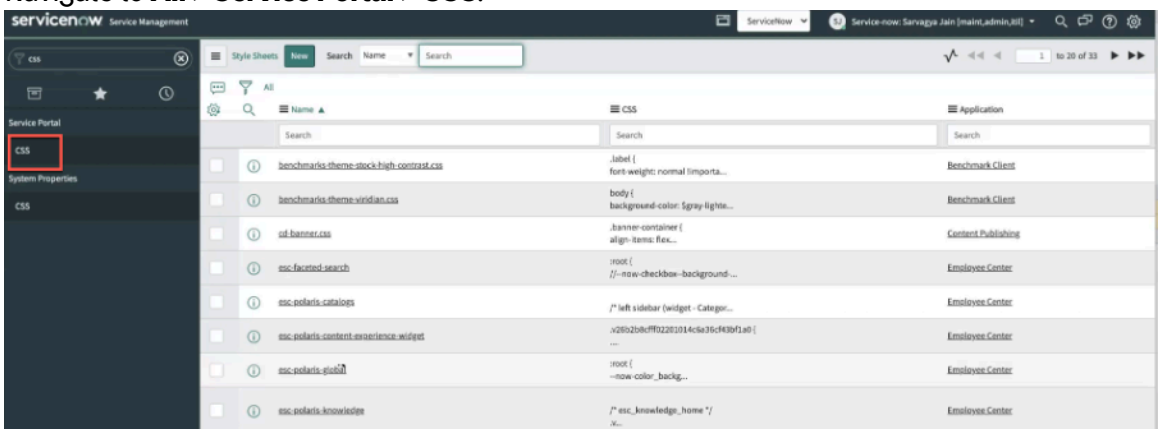
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Value
	Important: To enable the custom portal in all Microsoft 365 apps, add the following domains to the Value field. ▪ *.office.com ▪ *.office365.com ▪ *.microsoft365.com ▪ *.cloud.microsoft For example: `Frame-ancestors 'self' https://teams.microsoft.com *.office.com *.office365.com *.microsoft365.com *.cloud.microsoft`

e. Select **Submit**.

Hide the chat button on the custom portal

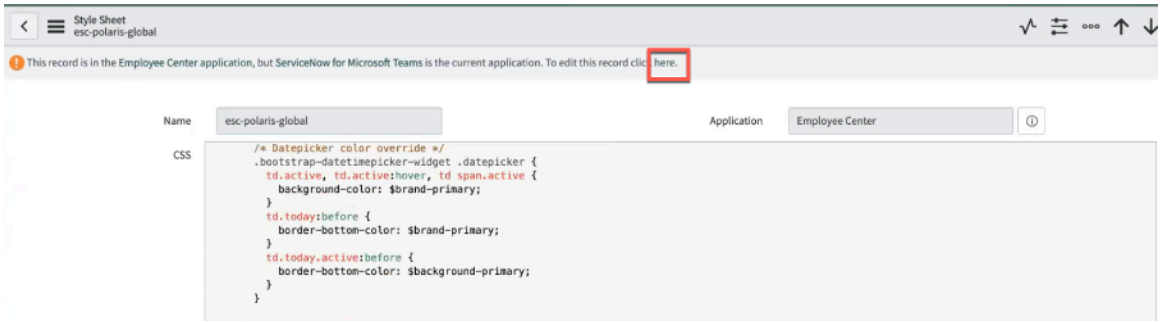
You can hide the chat option for your custom portal that appears in the Employee Center tab within Microsoft Teams.



Before you begin

Ensure that you set the *`com.glide.cs.advanced-chat-popover`* system property to false.

Role required: admin



Procedure

1. Navigate to **All** > **Service Portal** > **CSS**.

2. Select the custom CSS that you want to edit.
3. Select the **click here** link to edit the CSS.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Paste the following code in the **CSS** field.

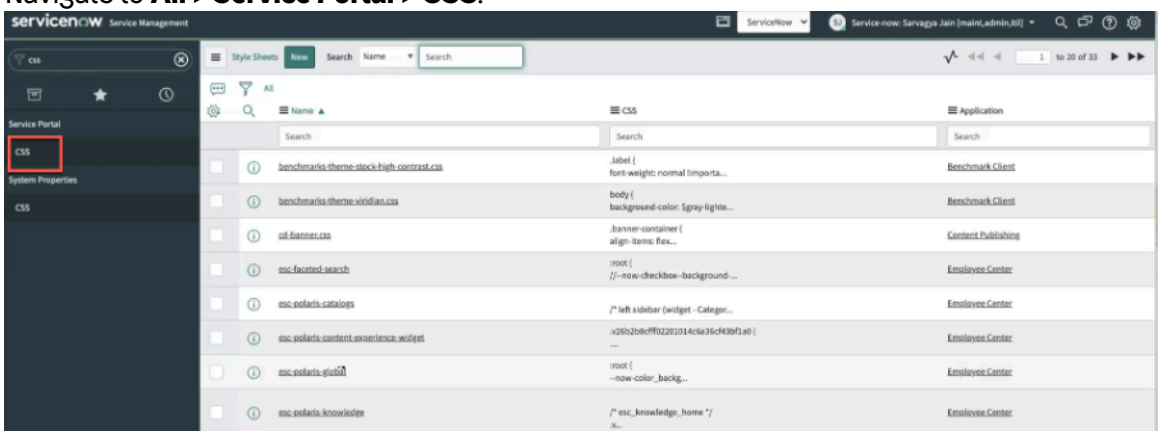
> **Note:**
> In the following code example, the `.embedded-experience .sp-ac-btn` element specifies the chat button and the `display: none;` property hides the button. You can customize the code based on your requirement.

```
/* Embedded portal */

.embedded-experience .sp-ac-btn {
        display: none;
      }
```

5. Select **Update**.
6. Refresh the custom portal tab in Microsoft Teams.

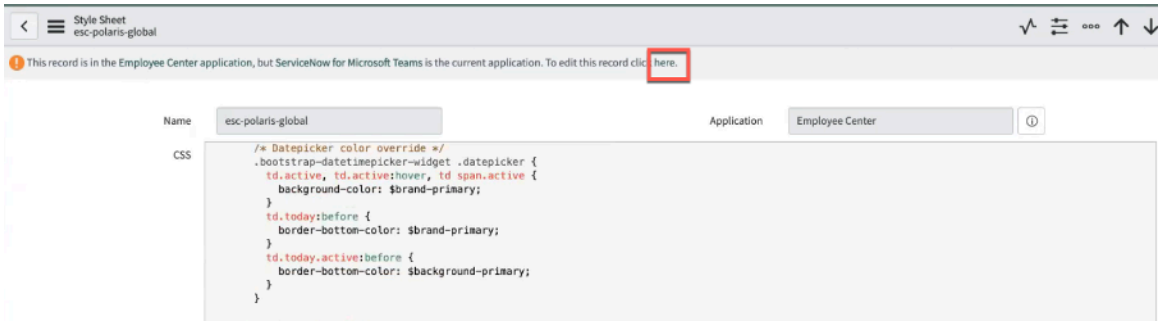
Hide the logout button on the custom portal



You can hide the logout option for your custom portal that appears in the Employee Center tab within Microsoft Teams.

Before you begin

Role required: admin



Procedure

1. Navigate to **All** > **Service Portal** > **CSS**.

2. Click on your custom CSS.
3. Click **here** to edit the CSS.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. To disable the logout button from Microsoft Teams desktop application.

   Customize the following code as required and paste in the CSS.

```
/* Embedded portal */

/*The code shared to disable the logout button is an example.
 You need to customize as required to disable logout button.*/

.embedded-experience .avatar-drop-down .header-menu-item:last-c
hild {
        display: none;
      }
```

5. To disable the logout button from Microsoft Teams mobile application.

   Customize the following code as required and paste in the CSS.

```
/* Embedded portal */

/*The code shared to disable logout button is an example. You
 need to customize as required to disable logout button.*/

.embedded-experience .impersonate-and-logout {
          div > ul > li:last-child {
            display: none !important;
          }
      }
```

6. Click **Update**.
7. Refresh the custom portal tab in Microsoft Teams.

Microsoft Teams Chat widget in Employee Center

The Teams Chat widget enables employees to view or continue chats with agents and view and access the content of attached files in the Employee Center. This widget is available through the IT Service Management integration with the Microsoft Teams application.

Using the Teams Chat widget, employees can access ticket-specific Microsoft Teams chat conversations in Employee Center. If you are installing ServiceNow for Microsoft Teams in your environment, the Teams Chat widget feature is applicable to the following tables:

- Request Item (sc_req_item)
- Incident (incident)
- Change request (change_request)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The admin can extend the Teams Chat widget feature to other tables.

Employees can take the following actions associated with their tickets:

- View the chat conversations with agents.
- View and access the content of attached files shared with agents.
- Continue a chat conversation with the agent handling the ticket using the Microsoft Teams application without having to exit the Employee Center.
- View the list of people involved in their chat conversation.

Add Microsoft Teams Chat widget

Add the Teams Chat widget to enable employees to view or continue chats with agents and view and access the content of attached files in the Employee Center.

Before you begin

Role required: sp_admin

Procedure

1. Navigate to **All** > **Standard Ticket** > **Standard Ticket Configuration**.
2. On the Ticket Configurations page, select **New**.
3. On the Ticket Configuration form, fill in the fields.
   For more information about the field descriptions, see Configure the standard ticket page.
4. Right-click the header menu and select **Save**.
5. From the Tab Configurations related list, select **New**.
6. On the Tab Configuration form, fill in the fields.

   Some fields require values specific to this task.

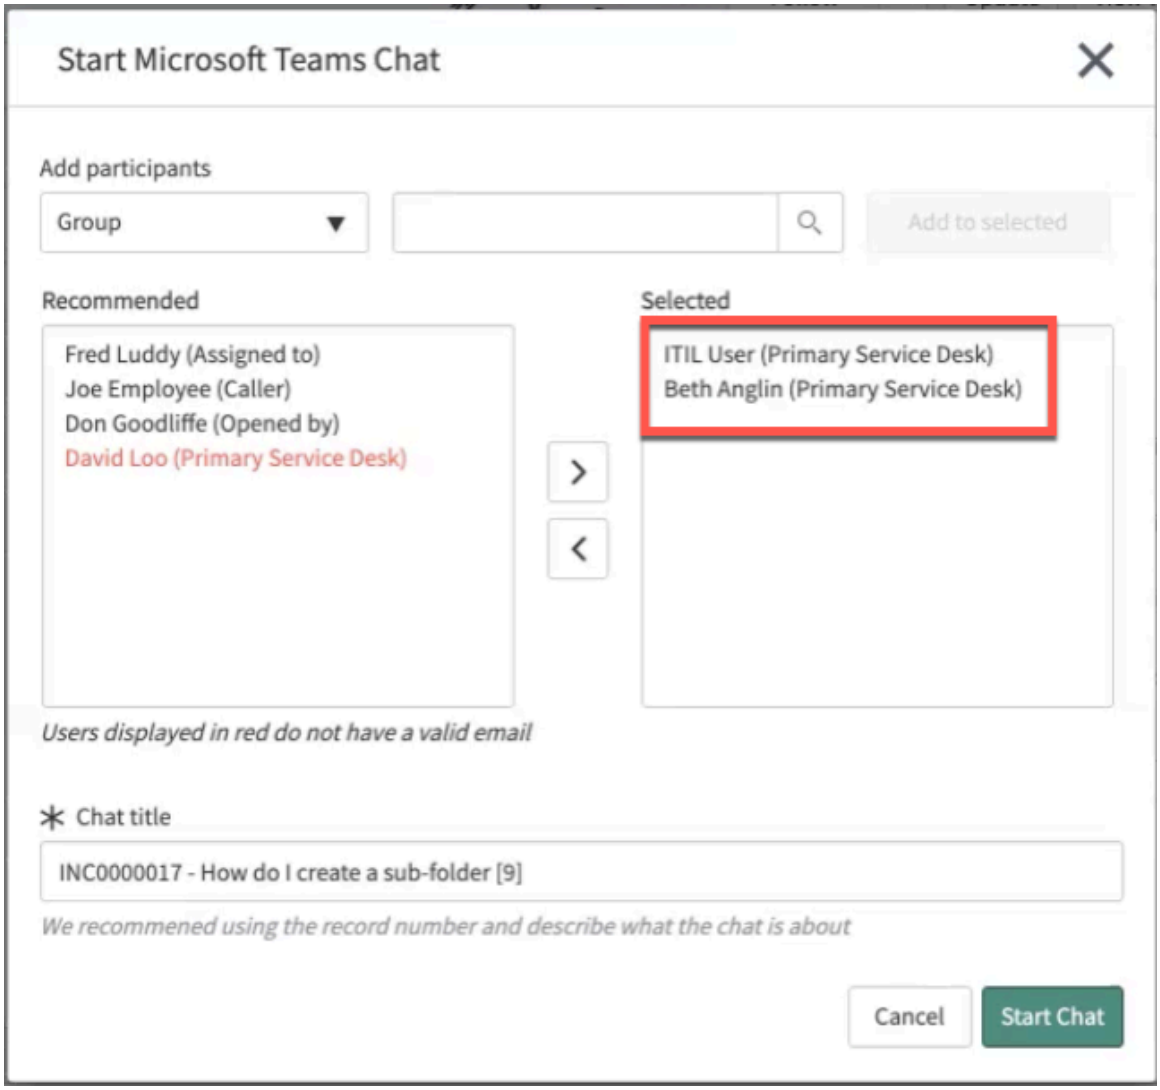
   - For the **Type** field, select **Custom**.
   - For the **Tab name** field, enter `Teams chat`.
   - For the **Widget** field, search for and select **Teams Chat**.

Tab Configuration form

Field	Description
Type	Tab type based on which a widget is displayed. Possible options are: ○ Activity ○ Associated Requests ○ Attachments ○ Custom ○ Variable Editor (Read-Only) ○ Variable Summarizer
Tab name	Name of the tab.
Application	Application associated with the ticket configuration.
Order	Order in which the tab should be displayed in the tabs section. The tab with the least order is the tab selected on the page load.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Advanced	Option to enable adding a script for the tab visibility. By default, this check box is cleared.
Visible(Script)	Script for the tab visibility. ○ If the script returns true, the tab is visible on the standard ticket page. ○ If the script returns false, the tab is not visible on the standard ticket page. **Note:** This field appears only when the **Advanced** check box is selected.
Visible	Conditions for the tab visibility. This is not displayed if the **Advanced** check box is selected.
Widget	Widget that should be displayed in the tabs section. This field appears only when **Custom** is selected from **Type**.
Widget parameters	Comma-separated list of tab widget parameters. This field appears only when **Custom** is selected from **Type**.



7. Select **Submit**.
8. On the Ticket Configuration form, select **Update**.

Result
A Teams Chat tab is added in each record of the Employee Center My Request page for the configured ticket type or table.

Include On-call scheduling users to initiate Microsoft Teams chat

Users who are associated with On-Call Scheduling will be displayed on the Selected column in **Start Microsoft Teams Chat** modal.

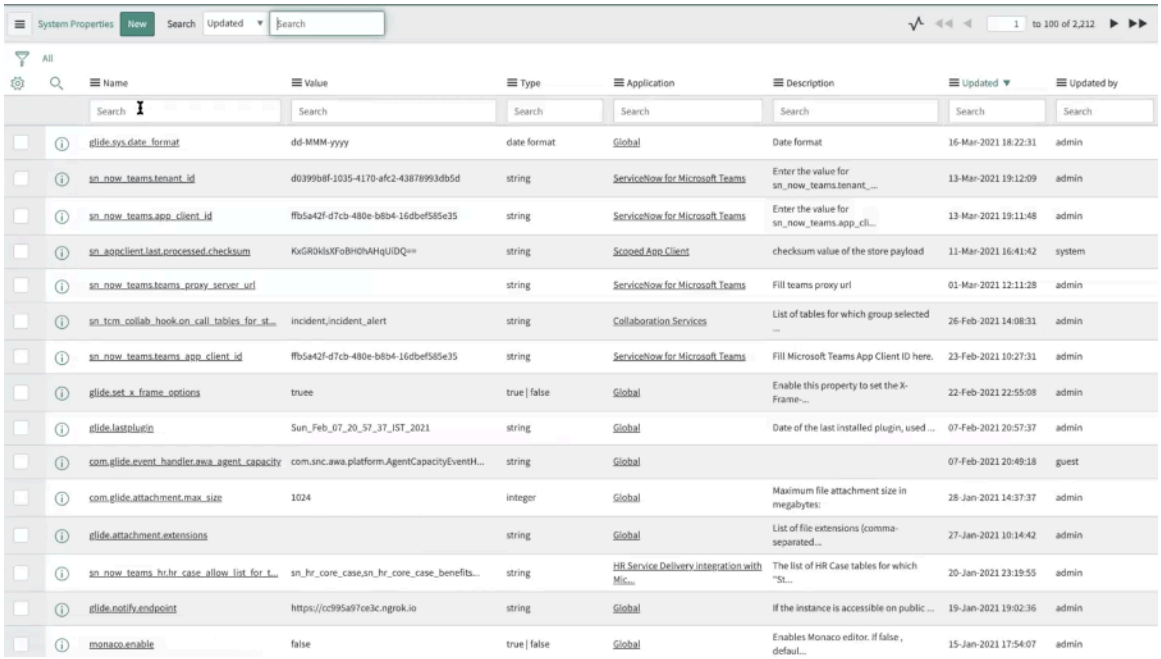
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

sn_tcm_collab_hook.on_call_tables_for_start_chat_action system property is created to support this functionality. You can extend this functionality to change, and request tables.

For more information on On-Call Scheduling, see On-Call Scheduling On-Call Scheduling.

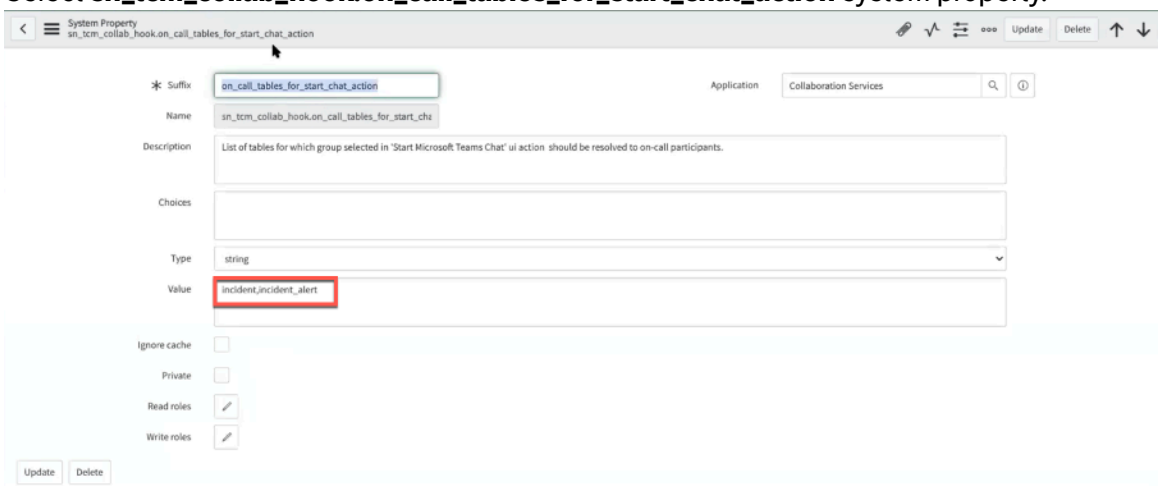
Extend On-Call Scheduling users to initiate Microsoft Teams Chat

View the list of On-Call Scheduling users in Start Microsoft Teams chat for a change, request, or a request item.



Before you begin

Role required: admin



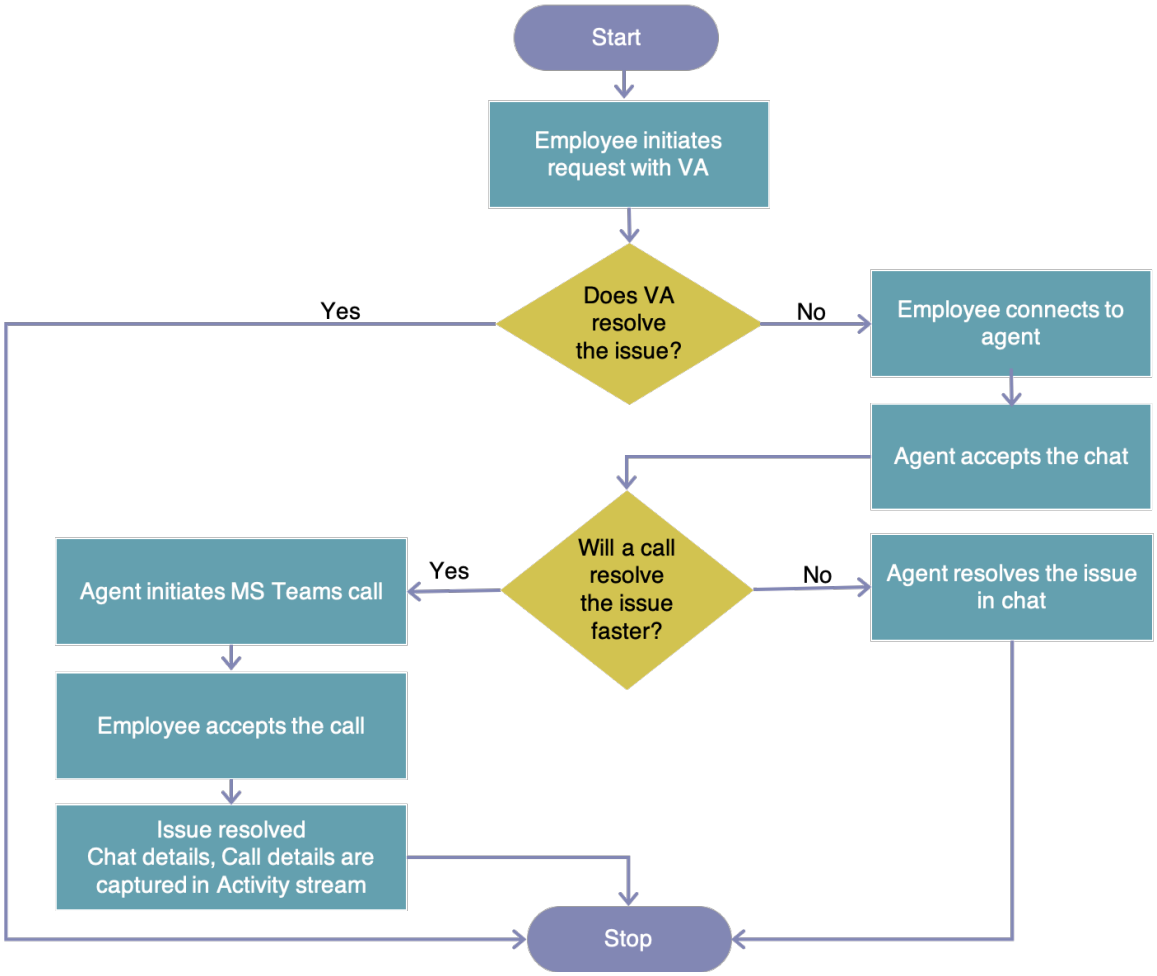
Procedure

1. In the navigation filter, enter `sys_properties.list`.
   The list of properties in the System Properties [sys_properties] table appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. In the Name search field, enter `sn_tcm_collab_hook.on_call_tables_for_start_chat_action`.
3. Select **sn_tcm_collab_hook.on_call_tables_for_start_chat_action** system property.

4. In the Value field, provide the tables to which you must extend the functionality. Example: change, request.
5. Select **Update**.



Set up Chat to call

Set up the chat to call functionality in your instance to enable the agents to collaborate with the requester to resolve the issue.

The Chat to call functionality helps the requester to quickly get the resolution for their issues.

Here is the flow-diagram of the chat to call functionality:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To enable the Chat to Call functionality you must install the Workspace Agent chat, Notify, and the Notify connector for Microsoft Teams plugins in your instance. You must also install ServiceNow for Teams installed with Virtual Agent or Virtual Agent Lite. For more information, refer the following topics:

- Set up Agent Chat
- Activate Notify
- Notify connector for Microsoft Teams

For more information on the workflow for chat to call flow, refer Promote chat to a call from workspace.

Access ServiceNow for Microsoft Teams app

Enables users to interact with the agents from Microsoft Teams application.

Before you begin

Role required: admin

About this task

To receive notifications from Virtual Agent, users must link their accounts to Microsoft Teams. Guest users can't receive notifications.

Procedure

1. Launch Microsoft Teams application.
2. Click **Apps**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. In the apps search field, enter `ServiceNow for Microsoft Teams`.
4. Click **ServiceNow for Microsoft Teams** app.
5. Click **Open**.

Result

The **ServiceNow for Microsoft Teams** app is successfully installed in your Microsoft Teams application.

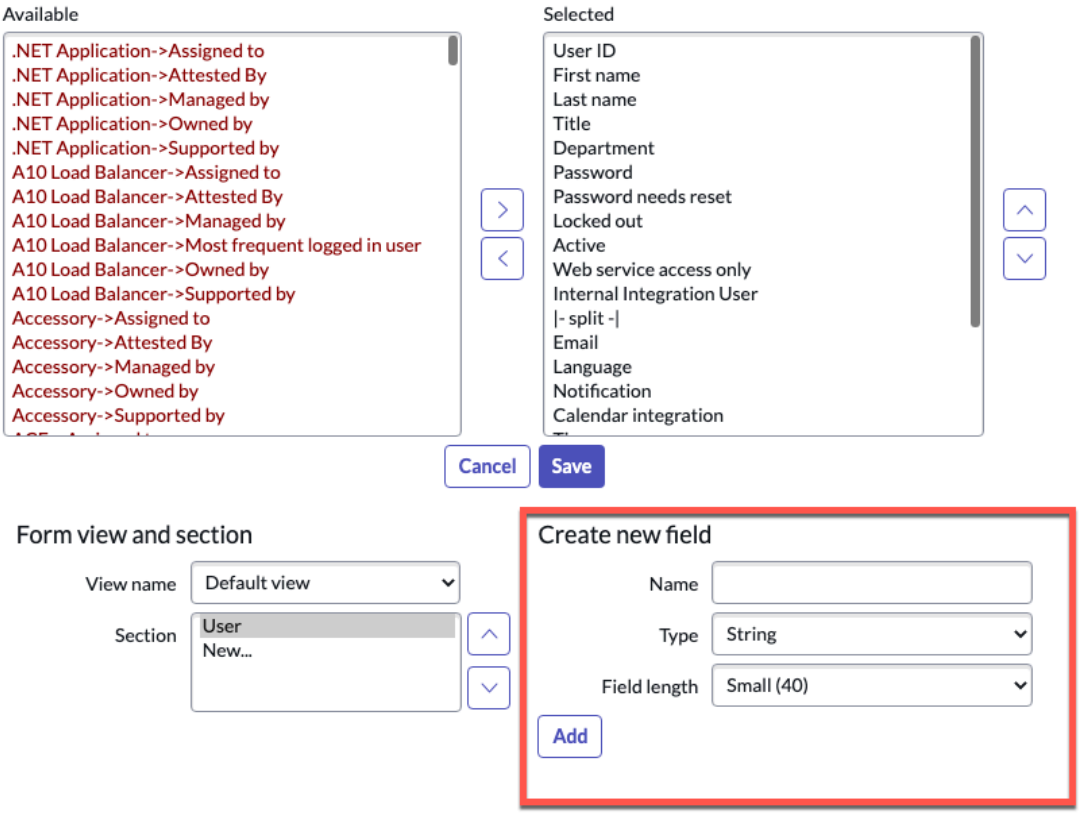
Create custom email field to initiate Microsoft Teams chat

Create a custom email field to use Microsoft Teams app to initiate chat conversation for the agents to resolve the IT and HR related issues of the users.

Before you begin

Role required: admin

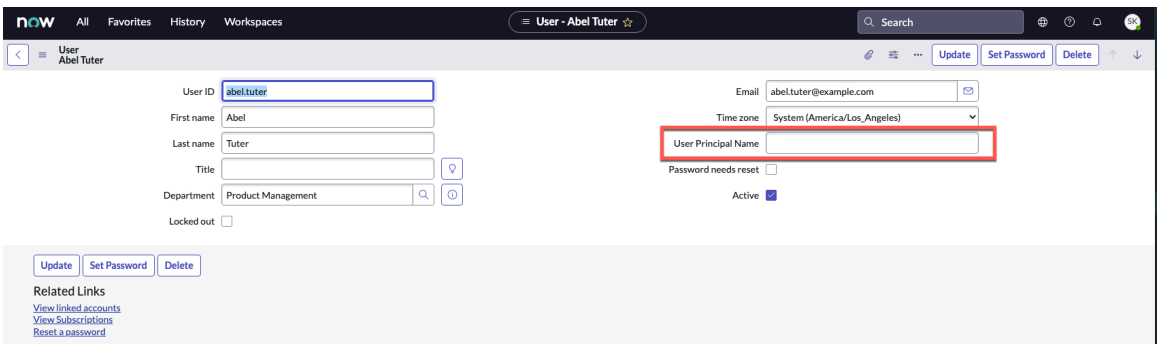
Procedure



1. Navigate to **All** > **System Security** > **Users and Groups** > **Users**.
2. Click a user.
3. Right-click on the form header and select **Configure** > **Form Layout**.
4. In the Create new field section, fill in the fields.

Create new field

Field	Description
Name	Enter the name of the field as you want it to appear on forms and lists. Example: User Principal Name.
Type	Select a field type as **String**.
Field length	Select a field length. This field is visible only for certain field types.



5. Click **Add**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

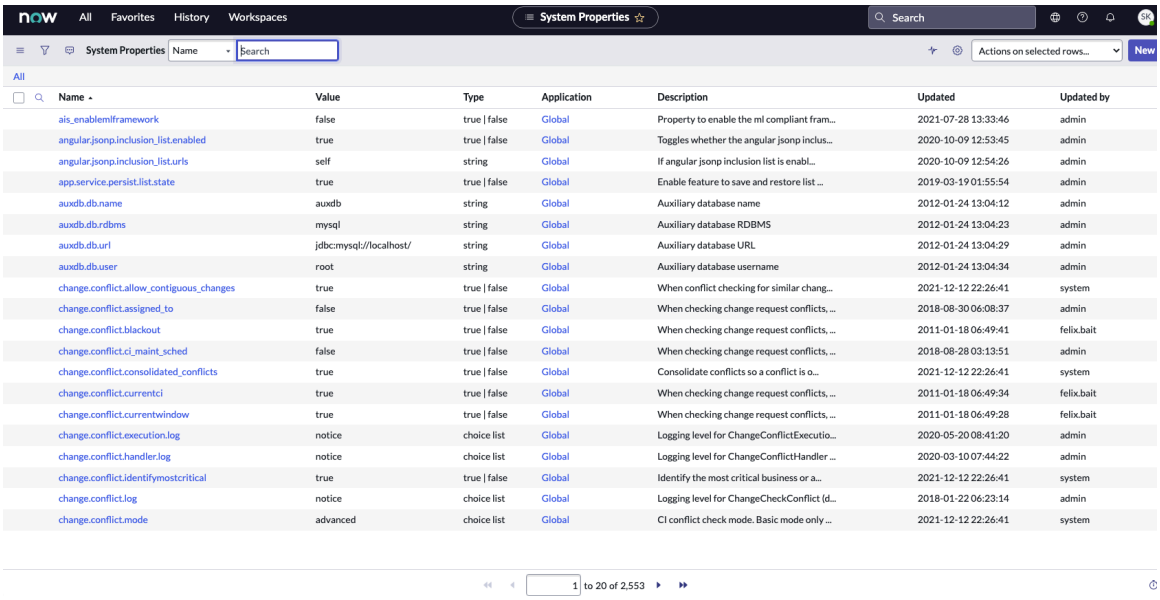
6. In the Selected slush bucket column, move the field in the desired location on the form.
7. Click **Save**.

   The field now appears on the form in the designated location.

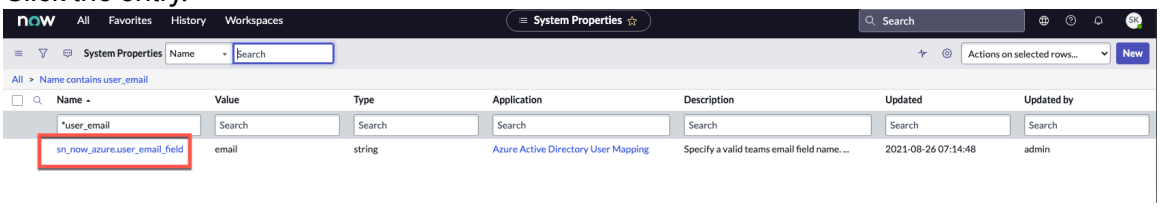
   The admin must enter the email used for Microsoft Teams in this field.

   You need to configure the newly created field value as the default field for initiating chats with the employee in Microsoft Teams.

8. Right-click on the field and click **Show <value of the field name>**.



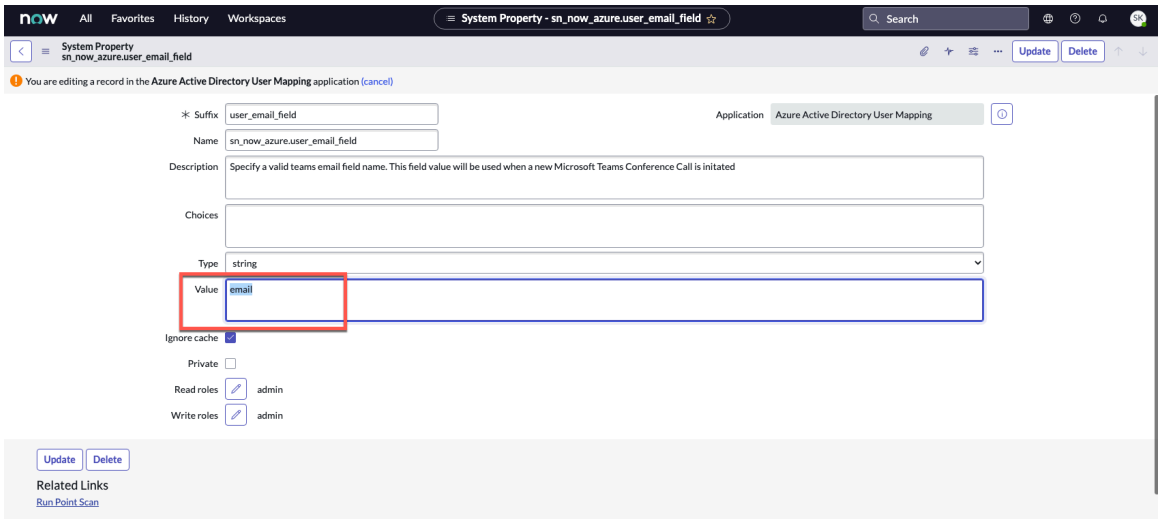
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



The dictionary info of the field name can be viewed.

9. Right click the **Field** and copy the value.
10. In the search field, enter `sys_properties.LIST` to view the system properties.

11. In the Name column, search for `*user_email` property.
12. Click the entry.



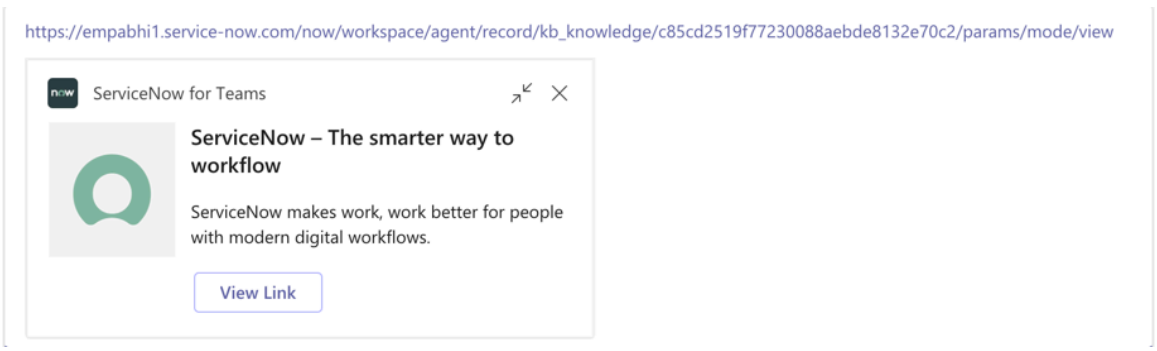
If the record is not editable, click **Edit** on the header to edit the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

13. Update the **Value** field with the new field name that is created.

    The default value is **email**.

14. Click **Update**.



> **Note:**
> Ensure that the email address for all the users for the newly created field is updated with the email associated with Microsoft Teams app.

Unfurl the web links in Microsoft Teams chat

ServiceNow for Microsoft Teams supports link unfurling. Link unfurling generates a content-rich preview when a supported link is shared in a conversation with a user in Microsoft Teams.

To enable link unfurling, you must create and download the manifest file and upload the file to Microsoft Teams. To download the manifest file, refer Create and download the manifest file for pre-published apps.

In a conversation in Microsoft Teams application, the content in the URL appears as a preview to the user in the form of an adaptive card. The preview is generated based on the content shared in the URL.

The content in the adaptive card will be shown only for public knowledge articles, and the catalog items. However, the adaptive card shows generic content for all private links in the chat conversations.

Enable link unfurling

Enable link unfurling in the manifest file to preview the content of the link shared in the chat conversations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Create and download manifest file.

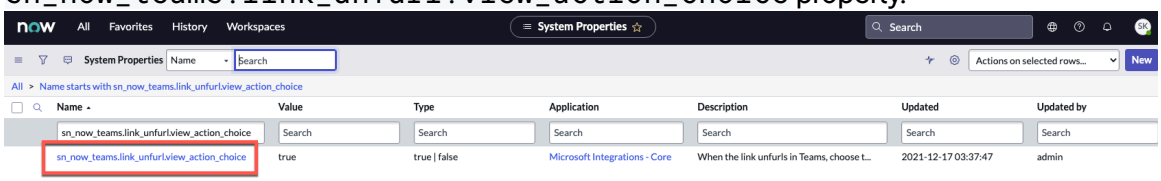
   Enable the link unfurling option in the **Generic info** tab while creating the manifest file.

   For more information, see Create and download the manifest file for pre-published apps.

2. Update the value of the ServiceNow for Teams app ID from Microsoft Teams admin center in your ServiceNow instance.
   For more information, see Update the app ID in the ServiceNow instance.

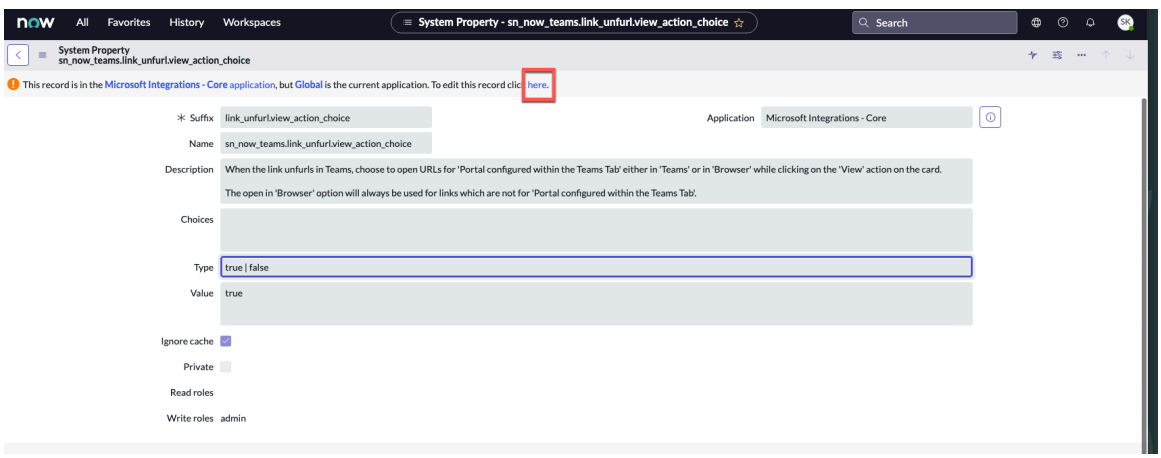
Configure the system property to open the unfurled links

Configure the property to view the content when the user clicks the adaptive card shared in the Microsoft Teams chat conversation.



Before you begin
Role required: admin

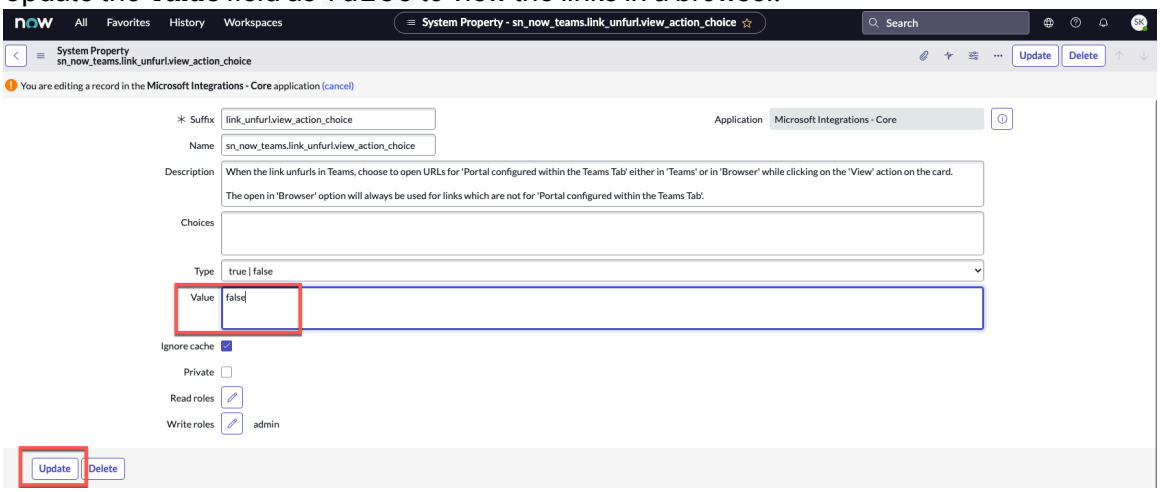
About this task
Setting the property to true opens all the configured portal-related links within the application. All the non-portal links are opened in the browser.



By default, this property is set as true. If you set the property as false, all the links shared in the chat conversations will be opened in the browser.

Procedure

1. In your ServiceNow instance, search for sys_properties.list.
2. In the Name column, search for `sn_now_teams.link_unfurl.view_action_choice` property.



3. Click the property.
   If the record is uneditable, click here to edit the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Update the **Value** field as `false` to view the links in a browser.

5. Click **Update**.

Configure HR Service Delivery integration with Microsoft Teams

Complete the following procedures to configure the HR Service Delivery integration with Microsoft Teams.

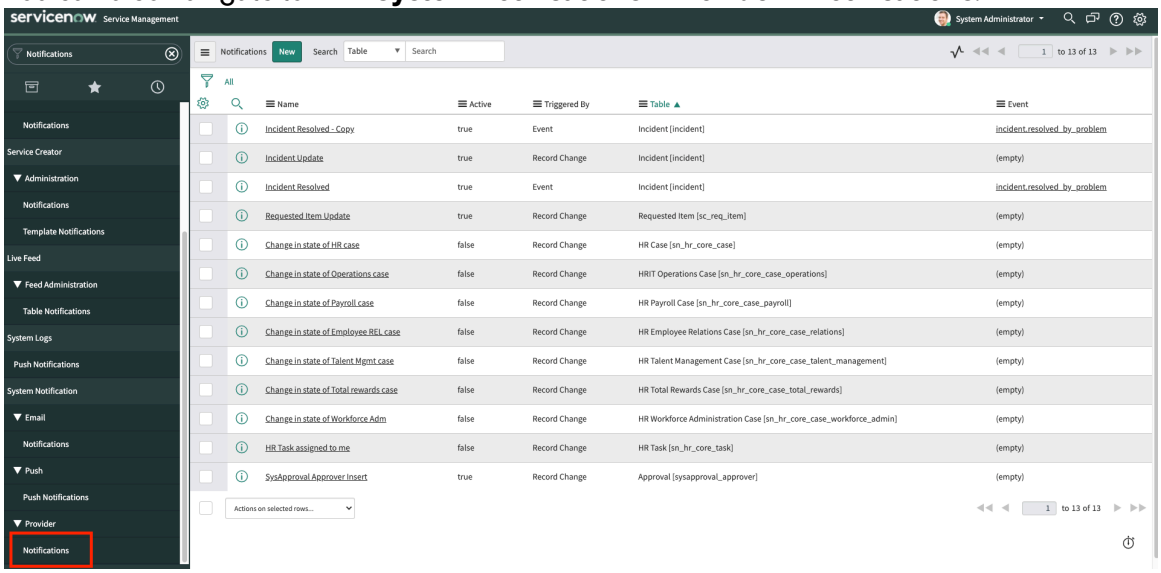
Review the active notifications for Microsoft Teams

The notifications added by ServiceNow for Microsoft Teams, might duplicate existing notifications in your instance. Review and disable any duplicate notifications to avoid notifying users multiple times for the same event.

Before you begin

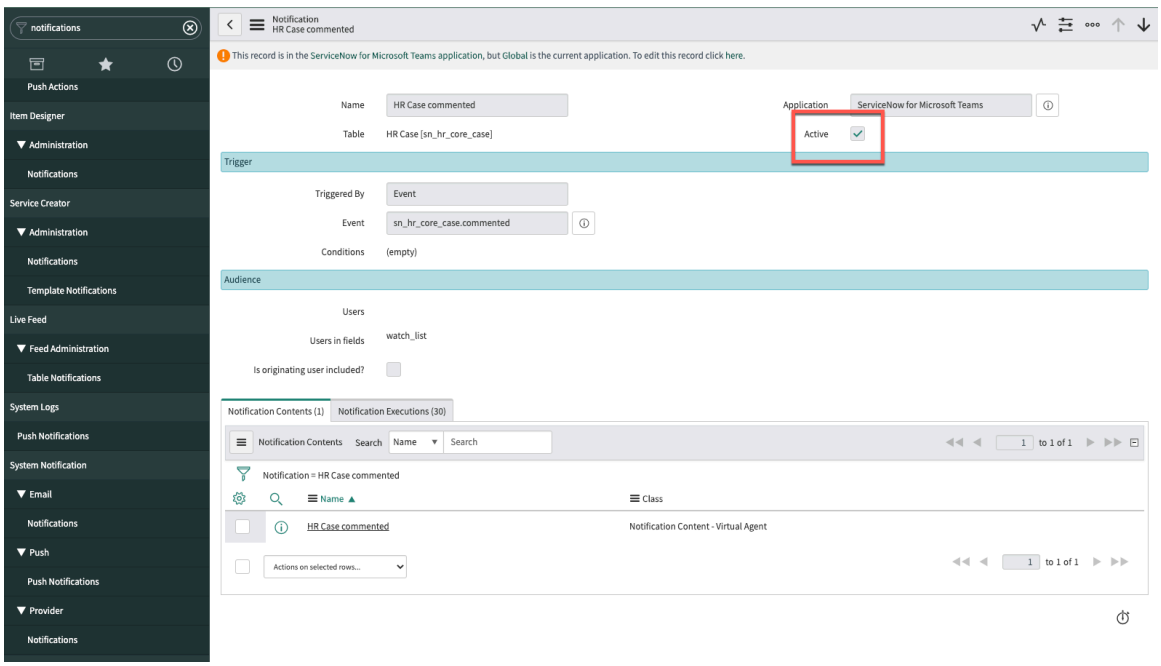
Role required: admin

About this task



You will find HR Case as a duplicate notification after installing the HR Service Delivery integration with Microsoft Teams application. You must disable one of the notifications by setting it to inactive.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Notifications** > **Provider Notifications**.

   You can also navigate to **All** > **System Notifications** > **Provider** > **Notifications**.

2. In the Notifications list, search for the **HR Case** notification.
3. Select one of the **HR Case** notifications.
4. Clear the **Active** field.

5. Select **Update**.

Enable Virtual Agent notifications for HR Service Delivery

Configure system properties to enable Virtual Agent notifications in Microsoft Teams.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Note:
If your first installation of HR Service Delivery for Microsoft 365 is version 3.4.0, Virtual Agent notifications are enabled by default. The following scenario is only applicable if you upgrade from older versions of the plugin.

After upgrading to HR Service Delivery for Microsoft 365 version 3.4.0, you must configure a system property to enable Virtual Agent notifications.

Procedure

1. In the **All** menu, enter `sys_properties.list`.
   The System Properties table appears.
2. In the name column, enter `*sn_now_teams`.
3. For the *sn_now_teams_hr.enable_va_comment_notification* property, set the value to `true`.
   The default value of the property is **true**. If you've upgraded from an earlier version of HR Service Delivery for Microsoft 365, the value is **false**.
   The comment notifications for all HR Core and HR Task tables are enabled.

Configure Request-based chats to import messages from Microsoft Teams to ServiceNow

Configure request-based chats for IT Service Management integration with Microsoft Teams and HR Service Delivery integration with Microsoft Teams applications enable the system to auto import the chat conversations between the agents and the employees.

If you are installing the ServiceNow for Microsoft Teams in your environment, the auto-import functionality is applicable by default for the following tables.

- HR Core task (sn_hr_core_task)
- HR Life events Case (sn_hr_le_case)
- HR Core case (sn_hr_core_case)
- Request Item (sc_req_item)
- Task (sc_task)
- Incident (incident)
- Request (sc_request)
- Change request (change_request)

The admin can extend the auto import feature to the other tables as required. For more information see, Create requester mapping.

If you are upgrading your ServiceNow instance to IT Service Management integration with Microsoft Teams 2.2.0 or HR Service Delivery integration with Microsoft Teams 2.2.0, you must manually enable the auto import feature.

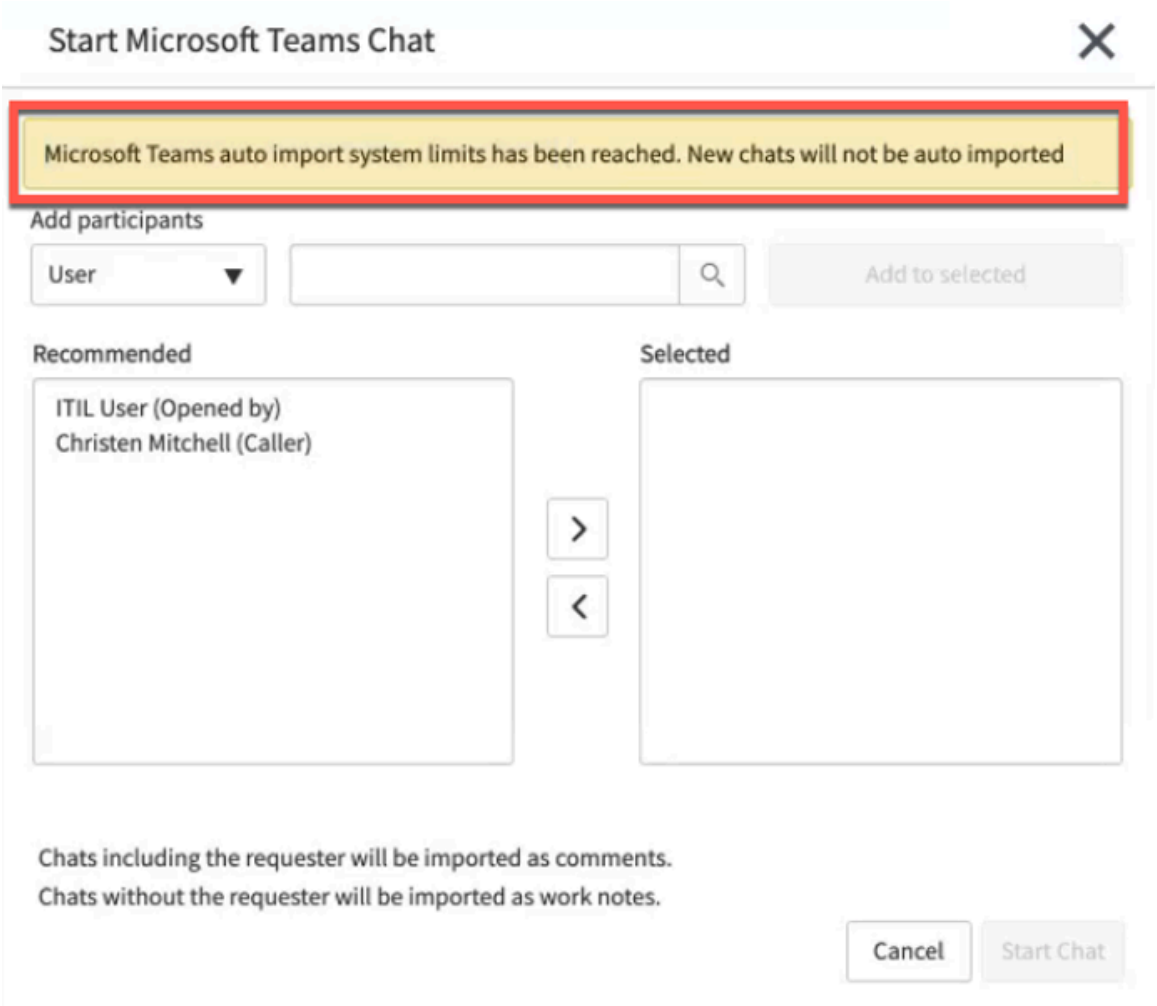
Functionality of auto importing messages

All the chat messages from Microsoft Teams will be auto imported to the ServiceNow instance at an interval of 30 minutes. The system looks for all the new messages across all the chats and import the messages to ServiceNow instance.

To prevent polling from running indefinitely on inactive conversations, if there are no new messages, the polling interval will gradually lengthen until, eventually, polling stops.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The system verifies the record for new messages for every 30 minutes. If there are no new messages, the system checks for the new messages for an interval of one hour, two hour, four hour and eight hours. If there are no new messages in an interval of eight hours for seven days, the Auto Import polling activity is disabled.



If there is any message during any of the intervals, the auto import timer will look for the new messages in the next interval, and import the messages. The timer is then reset to 30-minutes interval.

System Limits

The system imports a maximum of 500 active chats in a 30-minute interval. If there are more than active 500 chats the system will not auto-import the new chat records for the 30-minute interval.

The system executes a maximum of 10,000 sub-flows to import the chats for an interval of 30 minutes, 1 hour, 2 hour, 4-hour, 8-hour intervals. This is a count of all the active subflows that auto-import the messages into ServiceNow.

If the system reaches the limit, a message is displayed to the agent that the system level is reached and the chat can't be auto imported on the **Start Microsoft Teams Chat** modal.

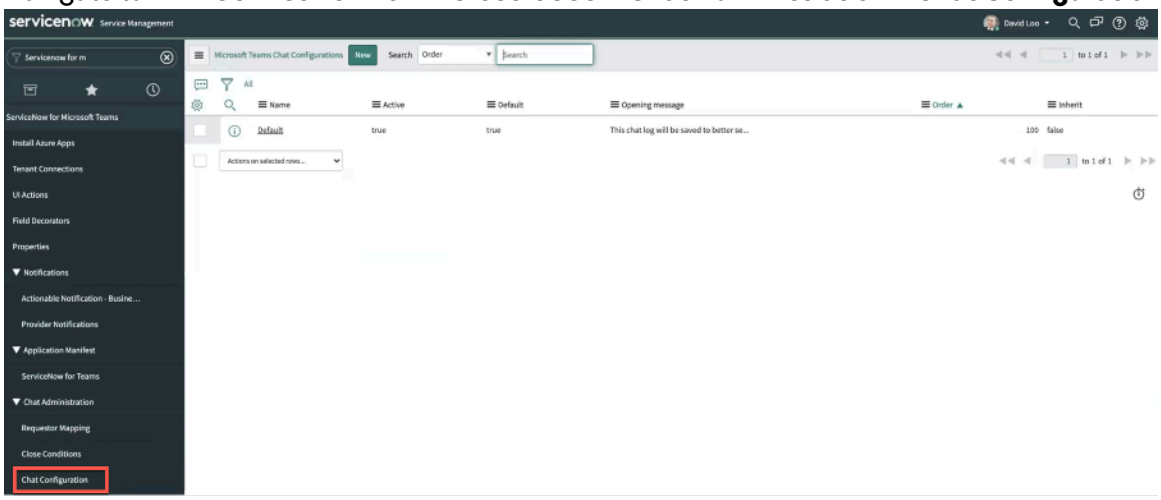
When the ticket is closed, the system will trigger auto import for one last time posts the new messages in the Work notes (Chat history).

If there is an interaction record associated with the parent record then interaction record is also closed. The chat record will also be closed as part of this flow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

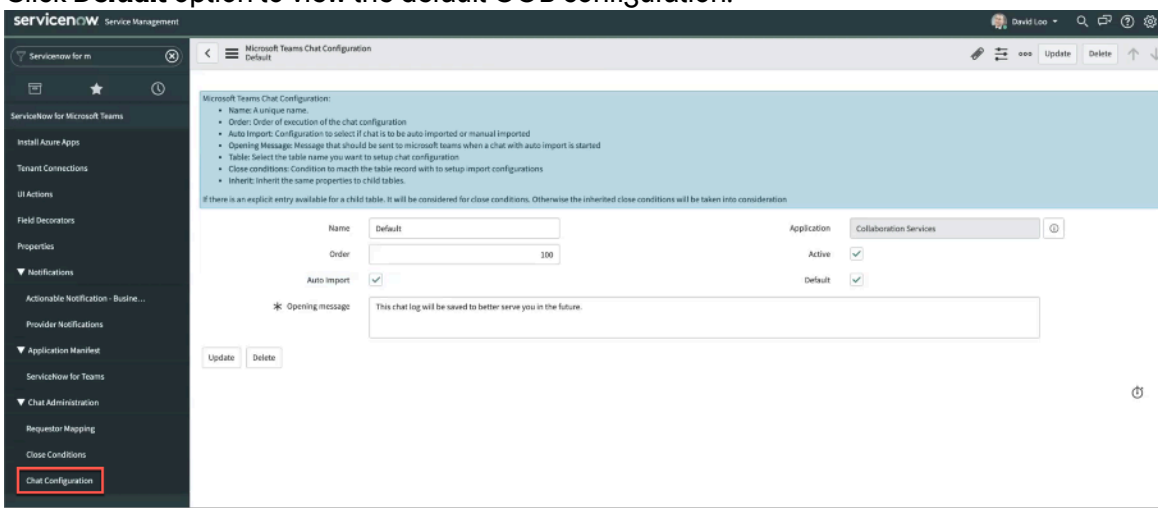
If you want to continue using the default configuration, you can skip the following procedures to extend the auto-import functionality. However, if you want to extend the auto-import functionality to other tables, perform the steps mentioned in the topics below.

Configure the chat to enable auto-import



Create a chat configuration to automatically import the chats between the agents and the requesters for additional tables to extend the auto import functionality.

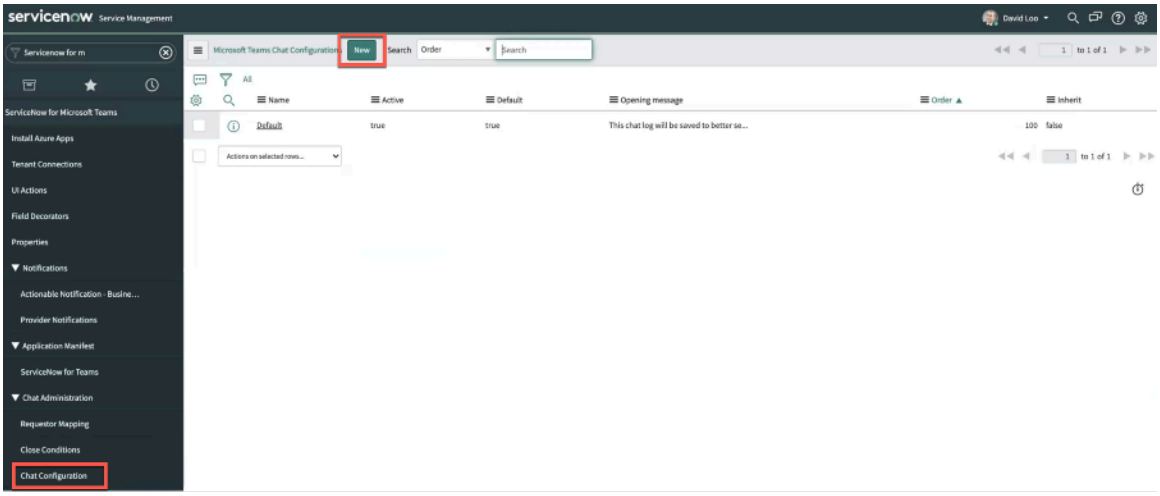
Before you begin



Role required: admin

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Chat Administration** > **Chat Configuration**.

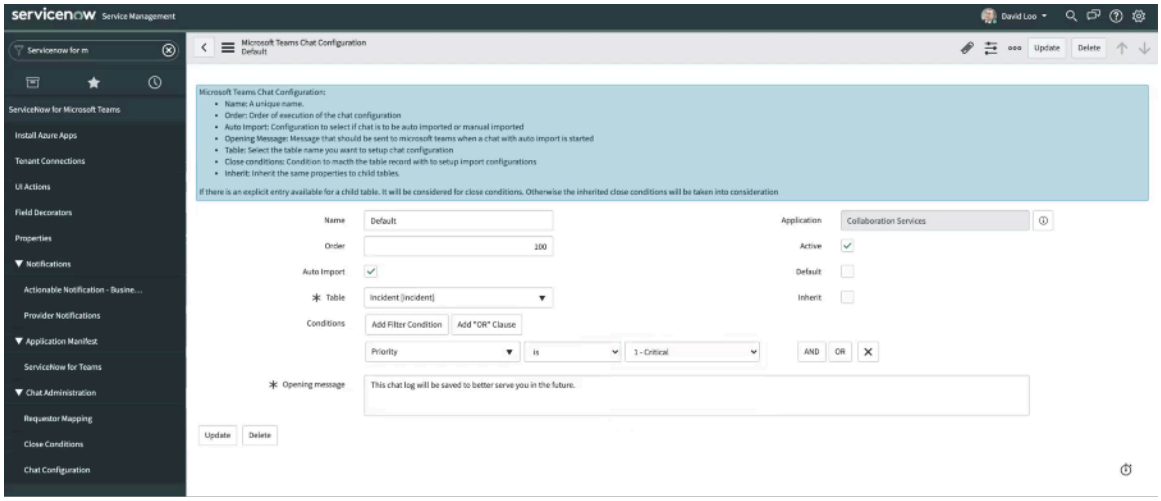


2. Click **Default** option to view the default OOB configuration.

> **Note:**
> If you want to auto-import chats for certain conditions, create a condition.

3. Navigate to **ServiceNow for Microsoft Teams** > **Chat Administration** > **Chat Configuration**.
4. Click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



5. On the form, fill the fields.

Chat configuration

Field	Description
Name	Value for the configuration.
Order	Order for the configuration. You can define multiple chat configurations for a single table. The system executes the query based on the descending order.
Active	Option to activate the configuration. Select the check box to activate the configuration.
Auto Import	Option to automatically import the chat. Select the check box to automatically import the chat.
Default	Option to keep the configuration as default. **Note:** You cannot define multiple default values for chat configuration.
Table	Option to select the auto-import for a table.
Inherit	Extend and apply to the child tables.
Conditions	Option to define a condition for a chat to be auto-imported.
Opening message	Option to provide a text message that displays to the agent when the agent initiates a chat. This field is enabled only if the **Auto Import** option is selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Click **Submit**.

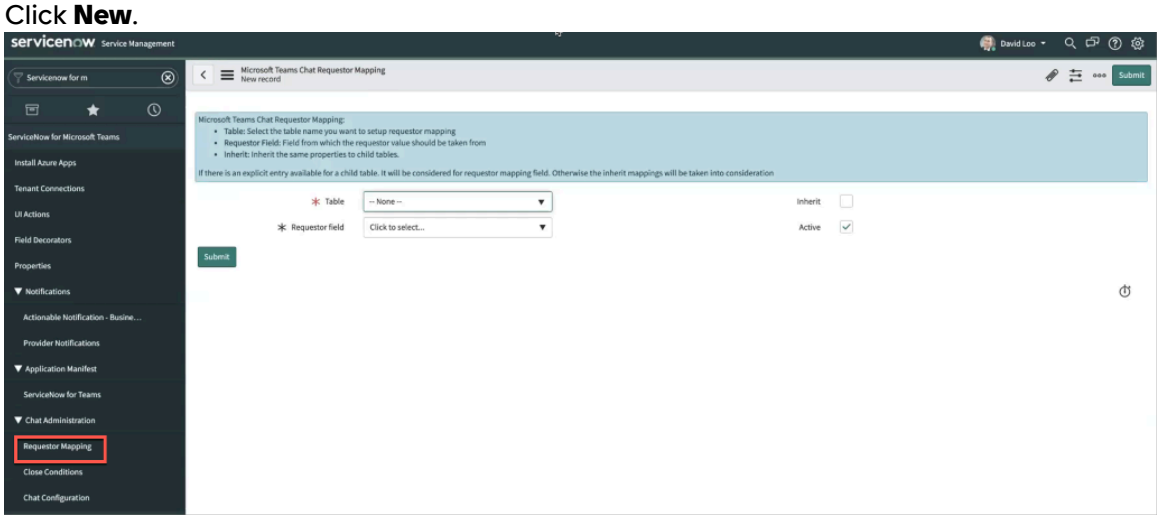
   The chat configuration defined will be applicable only for the table selected. You can extend the chat configuration to other tables by creating another chat configuration record.

Create requester mapping

Create a requester mapping to extend the auto-import functionality to other tables.

Before you begin

Role required: admin



Note:

If there is no requestor mapping defined for a table, the interaction records will not be created. An error log is created for the admin to notify that the requestor mapping is not defined for a table.

A requestor-mapping record defines which field, in any given table, is the field representing the requestor of a ticket.

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Chat Administration** > **Requestor Mapping**.
2. Click **New**.

3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Requestor mapping

Field	Description
Table	Table to which the requestor mapping (auto-import feature) should be applicable.
Requestor field	Field to select the requestor for a record.
Inherit	Extend and apply the auto-import feature to the child tables.
Active	Option to activate the requestor-mapping record.

4. Click **Submit**.

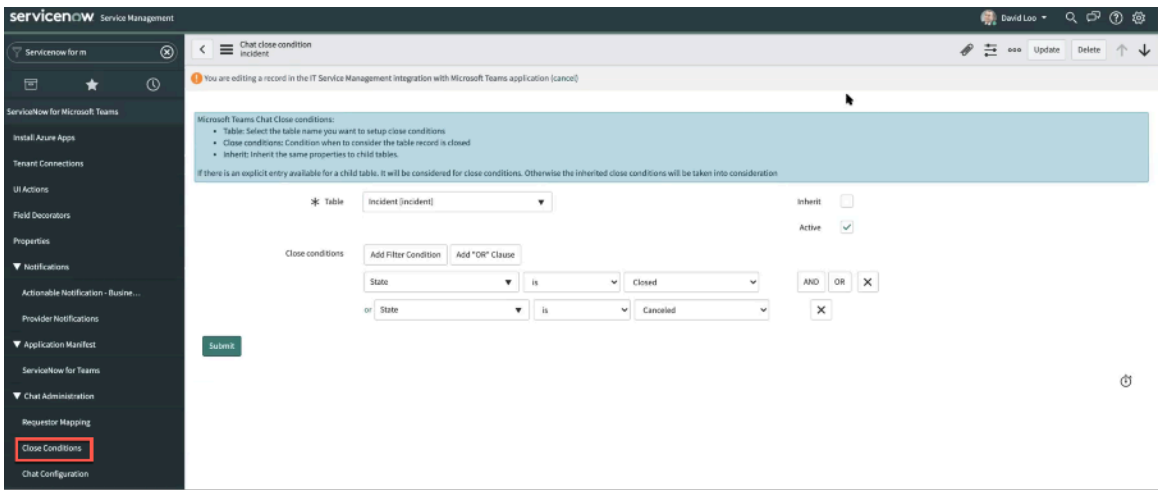
Configure close condition

Configure the condition to exclude the chat conversation from auto importing.

Before you begin

Role required: admin

About this task



When a ticket is set to inactive, the system does one final poll for any messages in the chat, removes the participants such that no further messages about the ticket can be exchanged in the chat, and then stops polling that chat. This is determined by the "active" field on a table being set to "false".

For any table with an active field, this behavior works automatically. If your custom application does not use an "active" field for determining whether the ticket remains active, define an alternate condition that can be used to denote the ticket as being closed or inactive.

Alternately, to adhere to platform standards, consider adding an active field to your custom application and maintaining the state of that field in accordance with the business logic of your application.

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **Chat Administration** > **Close Conditions**.
2. Click **New**.

3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Close condition

Field	Description
Table	Option to select a table to which the requester mapping (auto-import feature) should be applicable.
Inherit	Extend and apply the auto-import feature to the child tables.
Active	Option to activate the requester-mapping record.
Close conditions	Condition builder to define a condition that the record is closed.

4. Click **Submit**.

Note:

If you are creating a close condition for a new table, ensure to create business rule for close condition. For more information, refer Configure business rule for close condition.

Configuring Employee Center

Use the Employee Center within Microsoft Teams or embed a custom portal in Microsoft Teams.

Employee Center appears in Microsoft Teams when you install and configure Employee Center v23.0.5 or a higher version in your environment. For more information on Employee Center, see Employee Center.

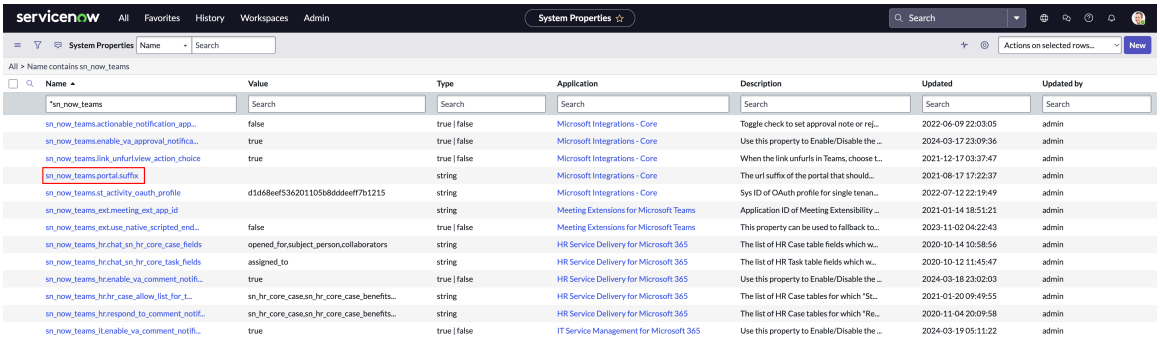
If you install Employee Center Pro in your environment, the Employee Center Pro is available in Microsoft Teams.

If you don't install Employee Center in your environment, the Employee Service Portal is displayed in the Microsoft Teams application. Alternatively, you can embed a custom portal in Microsoft Teams.

Embed a custom portal

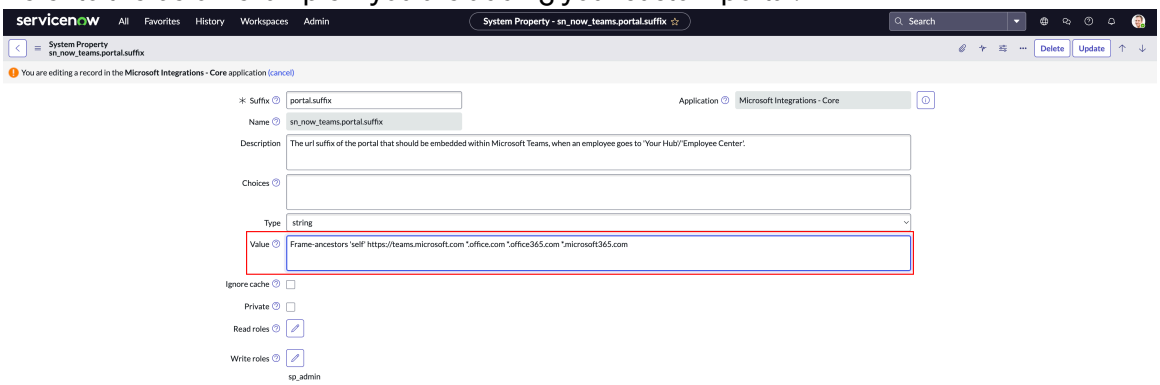
Embed your custom portal to replace the Employee Center tab in Microsoft Teams by configuring the system property. The custom portal shows up in the Employee Center tab in Microsoft Teams.

Before you begin



Role required: admin

If you're using a custom portal rather than the Employee Center, you can replace the embedded Employee Center with your custom portal, so that it's accessible within Microsoft Teams. The following steps take you through the configuration to embed your portal.



Procedure

1. In the navigation pane, enter `sys_properties.list`.
2. Search for `sn_now_teams.portal.suffix` property under Name.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **sn_now_teams.portal.suffix**.
4. Enter the value of your custom portal in the **Value** field.
   Refer to the below example if you are adding your custom portal:

5. Select **Update**.
6. Create a custom header for the embedded portal after you configure your custom portal.

   For more information on adding header configuration, see Configure HTTP response headers.

   a. In the Navigator pane, type `sys_response_header.list`.

   b. Select **New**.

   c. On the HTTP Response Header form, fill in the following fields based on your requirement.
      - Active
      - Application
      - Record
      - Description

   d. Enter the following field values.

Field values for the HTTP Response Header form

Field	Value
Applies to	Specify Type
Type	Service Portal [sp_portal]
Name	Content-Security-Policy
Value	Frame-ancestors 'self' https://teams.microsoft.com

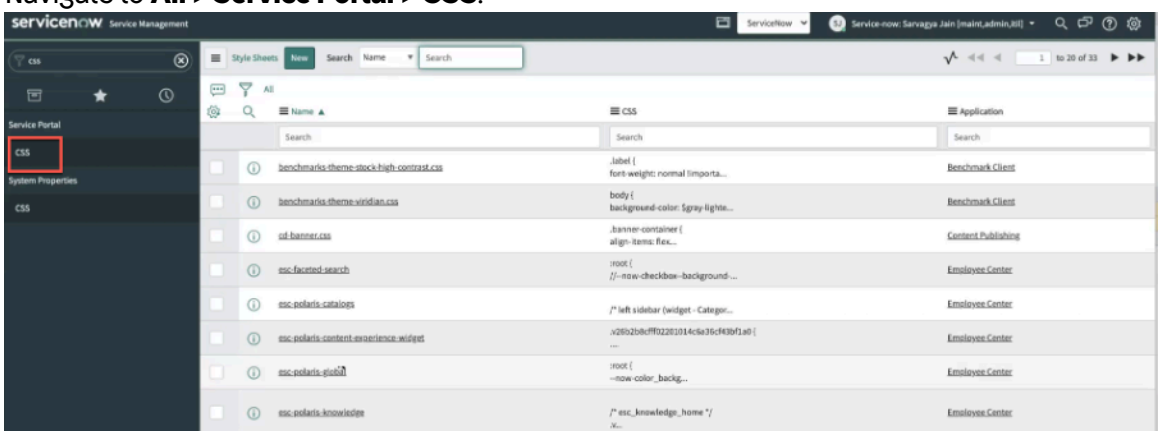
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Value
	Important: To enable the custom portal in all Microsoft 365 apps, add the following domains to the Value field. ▪ *.office.com ▪ *.office365.com ▪ *.microsoft365.com ▪ *.cloud.microsoft For example: `Frame-ancestors 'self' https://teams.microsoft.com *.office.com *.office365.com *.microsoft365.com *.cloud.microsoft`

e. Select **Submit**.

Hide the chat button on the custom portal

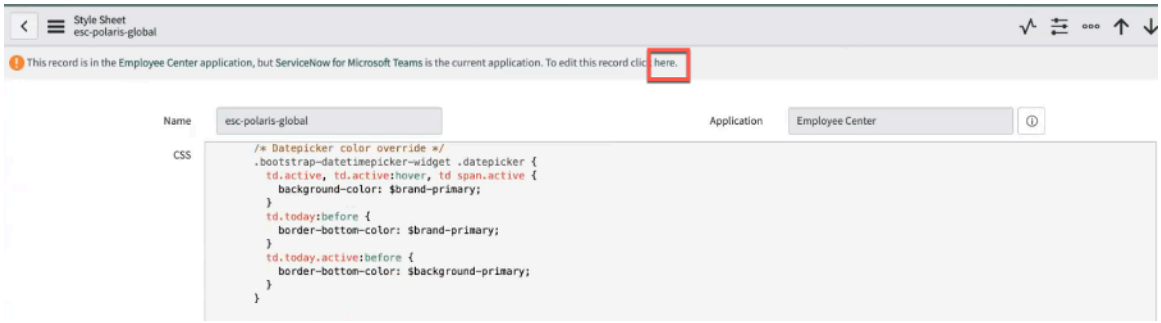
Hide the chat option for your custom portal that appears in the Employee Center tab within Microsoft Teams.



Before you begin

Ensure that you set the *`com.glide.cs.advanced-chat-popover`* system property to false.

Role required: admin



Procedure

1. Navigate to **All** > **Service Portal** > **CSS**.

2. Select the custom CSS that you want to edit.
3. Select the **click here** link to edit the CSS.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Paste the following code in the **CSS** field.

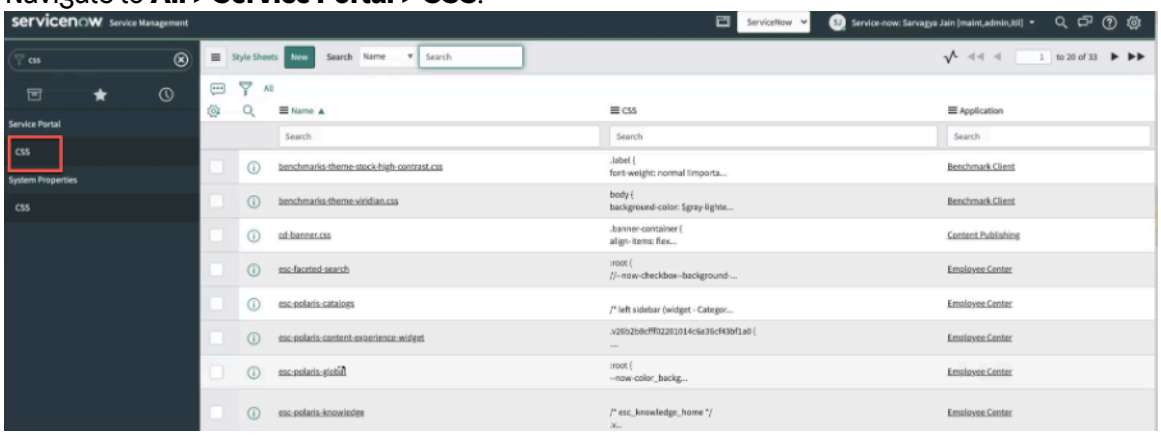
> **Note:**
> In the following code example, the `.embedded-experience .sp-ac-btn` element specifies the chat button and the `display: none;` property hides the button. You can customize the code based on your requirement.

```
/* Embedded portal */

.embedded-experience .sp-ac-btn {
        display: none;
      }
```

5. Select **Update**.
6. Refresh the custom portal tab in Microsoft Teams.

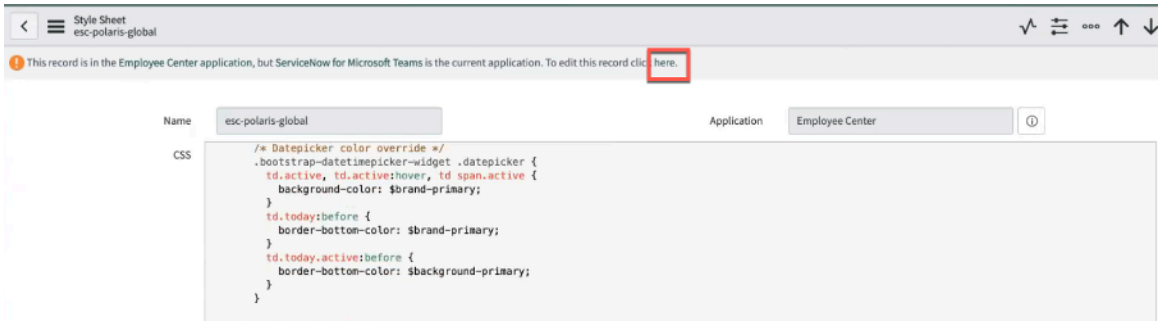
Hide the logout button on the custom portal



You can hide the logout option for your custom portal that appears in the Employee Center tab within Microsoft Teams.

Before you begin

Role required: admin



Procedure

1. Navigate to **All** > **Service Portal** > **CSS**.

2. Click on your custom CSS.
3. Click **here** to edit the CSS.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. To disable the logout button from Microsoft Teams desktop application.

   Customize the following code as required and paste in the CSS.

```
/* Embedded portal */

/*The code shared to disable the logout button is an example.
 You need to customize as required to disable logout button.*/

.embedded-experience .avatar-drop-down .header-menu-item:last-c
hild {
        display: none;
      }
```

5. To disable the logout button from Microsoft Teams mobile application.

   Customize the following code as required and paste in the CSS.

```
/* Embedded portal */

/*The code shared to disable logout button is an example. You
 need to customize as required to disable logout button.*/

.embedded-experience .impersonate-and-logout {
          div > ul > li:last-child {
            display: none !important;
          }
      }
```

6. Click **Update**.
7. Refresh the custom portal tab in Microsoft Teams.

Microsoft Teams Chat widget in Employee Center

The Teams Chat widget enables employees to view or continue chats with agents and view and access the content of attached files in the Employee Center. This widget is available through the HR Service Delivery integration with the Microsoft Teams application.

Using the Teams Chat widget, employees can access ticket-specific Microsoft Teams chat conversations in Employee Center. If you are installing ServiceNow for Microsoft Teams in your environment, the Teams Chat widget feature is applicable to the following tables:

- HR Core task (sn_hr_core_task)
- HR Life events Case (sn_hr_le_case)
- HR Core case (sn_hr_core_case)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The admin can extend the Teams Chat widget feature to other tables.

Employees can take the following actions associated with their tickets:

- View the chat conversations with agents.
- View and access the content of attached files shared with agents.
- Continue a chat conversation with the agent handling the ticket using the Microsoft Teams application without having to exit the Employee Center.
- View the list of people involved in their chat conversation.

Add Teams Chat widget

Add the Teams Chat widget to enable employees to view or continue chats with agents and view and access the content of attached files in the Employee Center.

Before you begin

Role required: sp_admin

Procedure

1. Navigate to **All** > **Standard Ticket** > **Standard Ticket Configuration**.
2. On the Ticket Configurations page, select **New**.
3. On the Ticket Configuration form, fill in the fields.
   For more information about the field descriptions, see Configure the standard ticket page.
4. Right-click in the page header and select **Save**.
5. From the Tab Configurations related list, select **New**.
6. On the Tab Configuration form, fill in the fields.

   Some fields require values specific to this task.

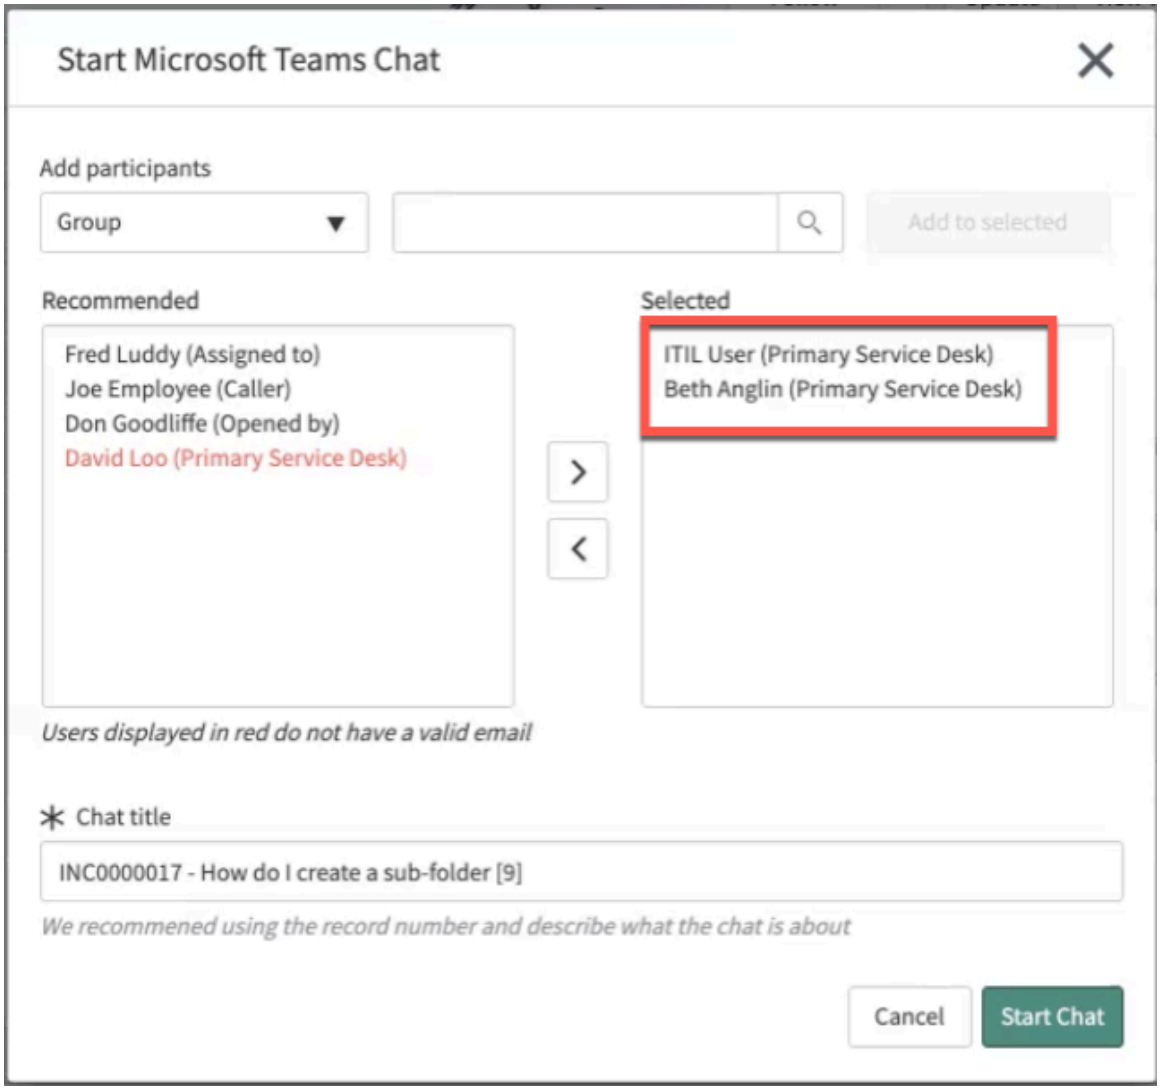
   - For the **Type** field, select **Custom**.
   - For the **Tab name** field, enter `Teams chat`.
   - For the **Widget** field, search for and select **Teams Chat**.

Tab Configuration form

Field	Description
Type	Tab type based on which a widget is displayed. Possible options are: ○ Activity ○ Associated Requests ○ Attachments ○ Custom ○ Variable Editor (Read-Only) ○ Variable Summarizer
Tab name	Name of the tab.
Application	Application associated with the ticket configuration.
Order	Order in which the tab should be displayed in the tabs section. The tab with the least order is the tab selected on the page load.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Advanced	Option to enable adding a script for the tab visibility. By default, this check box is cleared.
Visible(Script)	Script for the tab visibility. ○ If the script returns true, the tab is visible on the standard ticket page. ○ If the script returns false, the tab is not visible on the standard ticket page. **Note:** This field appears only when the **Advanced** check box is selected.
Visible	Conditions for the tab visibility. This is not displayed if the **Advanced** check box is selected.
Widget	Widget that should be displayed in the tabs section. This field appears only when **Custom** is selected from **Type**.
Widget parameters	Comma-separated list of tab widget parameters. This field appears only when **Custom** is selected from **Type**.



7. Select **Submit**.
8. On the Ticket Configuration form, select **Update**.

Result
A Teams Chat tab is added in each record of the Employee Center My Request page for the configured ticket type or table.

Include On-call scheduling users to initiate Microsoft Teams chat

Users who are associated with On-Call Scheduling will be displayed on the Selected column in **Start Microsoft Teams Chat** modal.

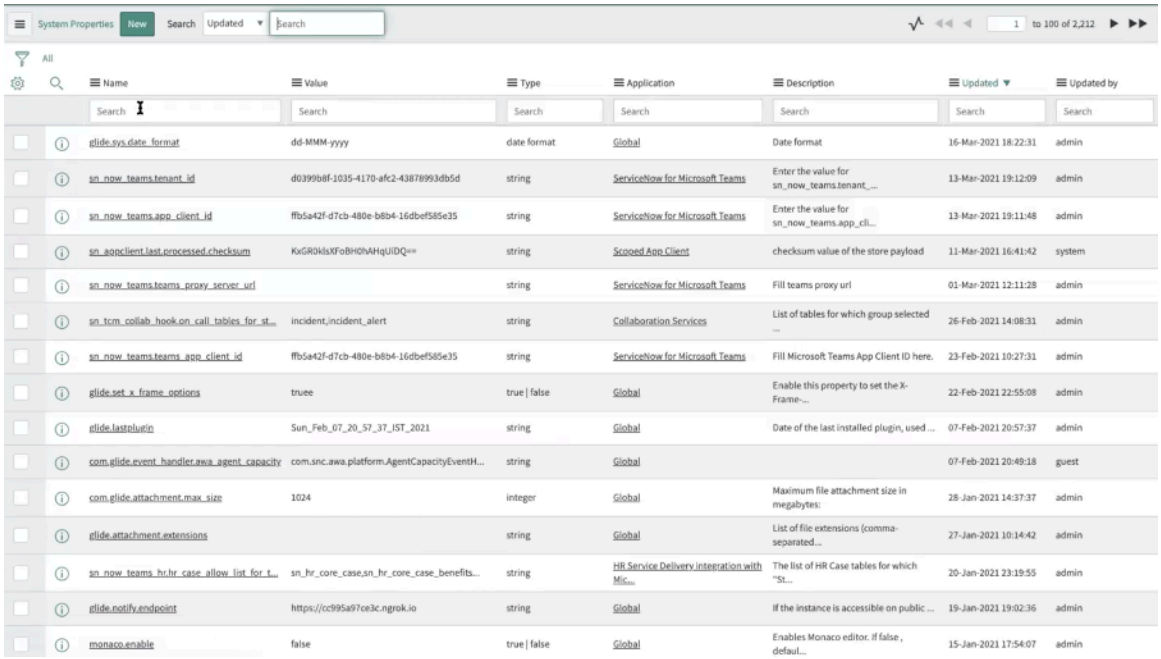
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

sn_tcm_collab_hook.on_call_tables_for_start_chat_action system property is created to support this functionality. You can extend this functionality to change, and request tables.

For more information on On-Call Scheduling, see On-Call Scheduling On-Call Scheduling.

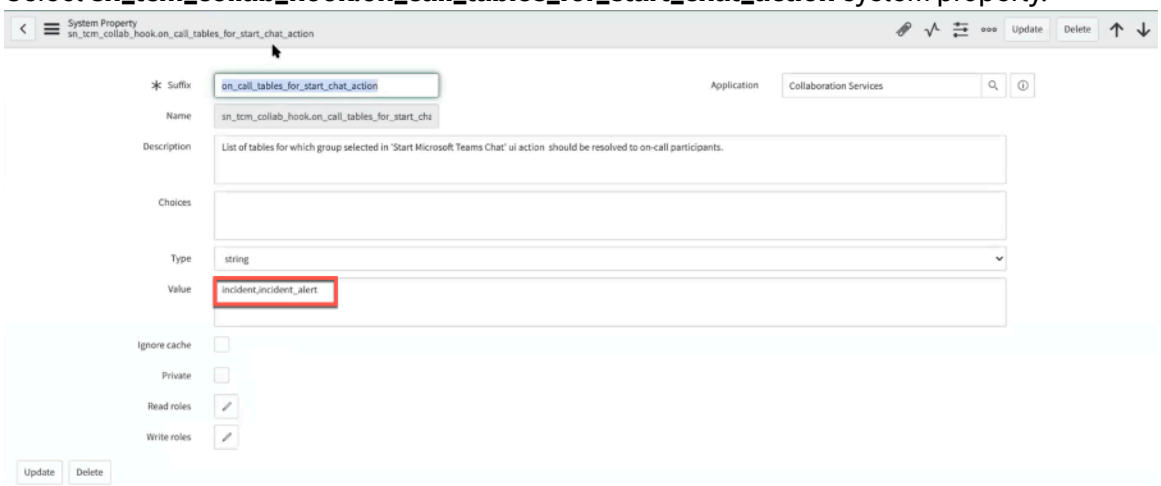
Extend On-Call Scheduling users to initiate Microsoft Teams Chat

View the list of On-Call Scheduling users in Start Microsoft Teams chat for a change, request, or a request item.



Before you begin

Role required: admin



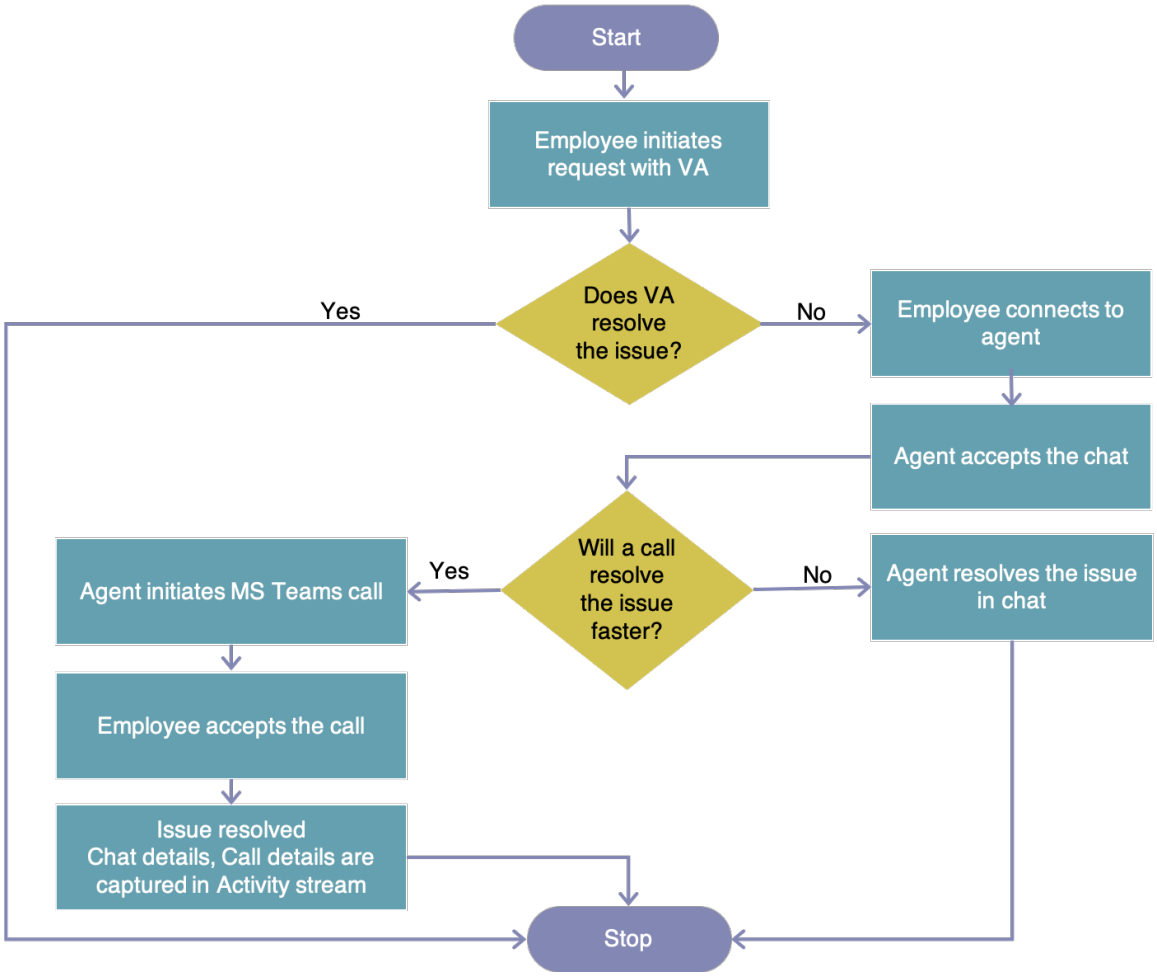
Procedure

1. In the navigation filter, enter `sys_properties.list`.
   The list of properties in the System Properties [sys_properties] table appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. In the Name search field, enter `sn_tcm_collab_hook.on_call_tables_for_start_chat_action`.
3. Select **sn_tcm_collab_hook.on_call_tables_for_start_chat_action** system property.

4. In the Value field, provide the tables to which you must extend the functionality. Example: change, request.
5. Select **Update**.



Set up Chat to call

Set up the chat to call functionality in your instance to enable the agents to collaborate with the requester to resolve the issue.

The Chat to call functionality helps the requester to quickly get the resolution for their issues.

Here is the flow-diagram of the chat to call functionality:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To enable the Chat to Call functionality you must install the Workspace Agent chat, Notify, and the Notify connector for Microsoft Teams plugins in your instance. You must also install ServiceNow for Teams installed with Virtual Agent or Virtual Agent Lite. For more information, refer the following topics:

- Set up Agent Chat
- Activate Notify
- Notify connector for Microsoft Teams

For more information on the workflow for chat to call flow, refer Promote chat to a call from workspace.

Access ServiceNow for Microsoft Teams app

Enables users to interact with the agents from Microsoft Teams application.

Before you begin

Role required: admin

About this task

To receive notifications from Virtual Agent, users must link their accounts to Microsoft Teams. Guest users can't receive notifications.

Procedure

1. Launch Microsoft Teams application.
2. Click **Apps**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. In the apps search field, enter `ServiceNow for Microsoft Teams`.
4. Click **ServiceNow for Microsoft Teams** app.
5. Click **Open**.

Result

The **ServiceNow for Microsoft Teams** app is successfully installed in your Microsoft Teams application.

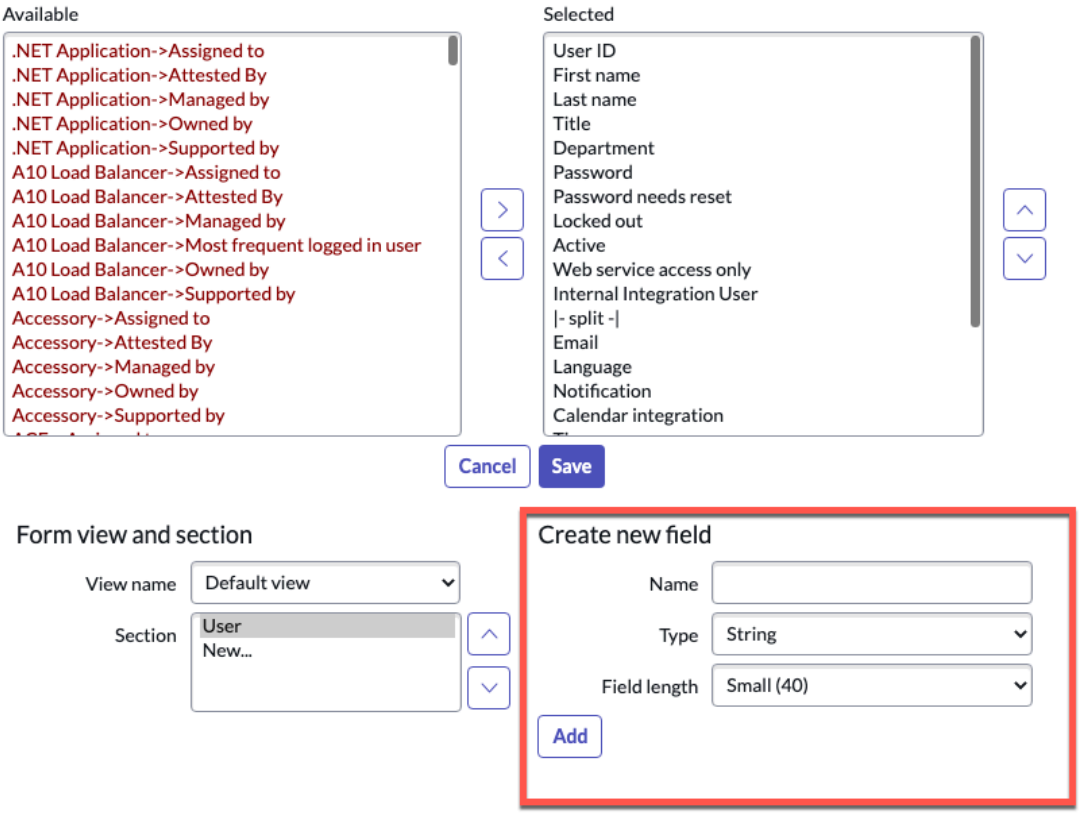
Create custom email field to initiate Microsoft Teams chat

Create a custom email field to use Microsoft Teams app to initiate chat conversation for the agents to resolve the IT and HR related issues of the users.

Before you begin

Role required: admin

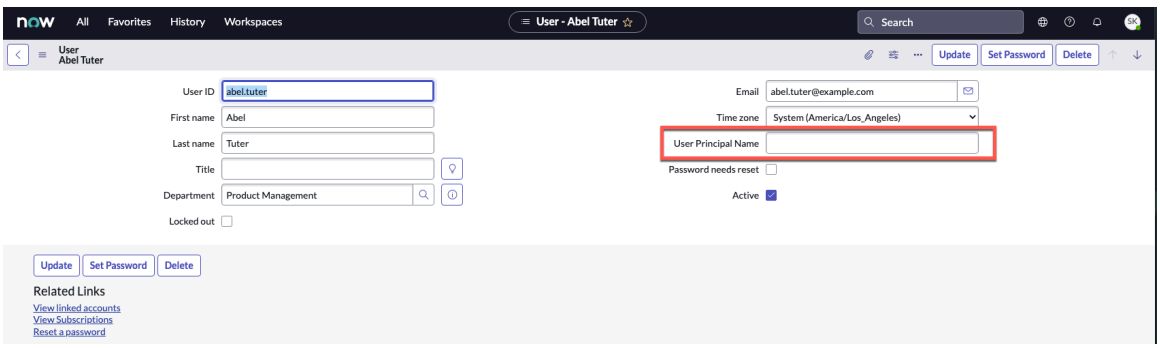
Procedure



1. Navigate to **All** > **System Security** > **Users and Groups** > **Users**.
2. Click a user.
3. Right-click on the form header and select **Configure** > **Form Layout**.
4. In the Create new field section, fill in the fields.

Create new field

Field	Description
Name	Enter the name of the field as you want it to appear on forms and lists. Example: User Principal Name.
Type	Select a field type as **String**.
Field length	Select a field length. This field is visible only for certain field types.



5. Click **Add**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

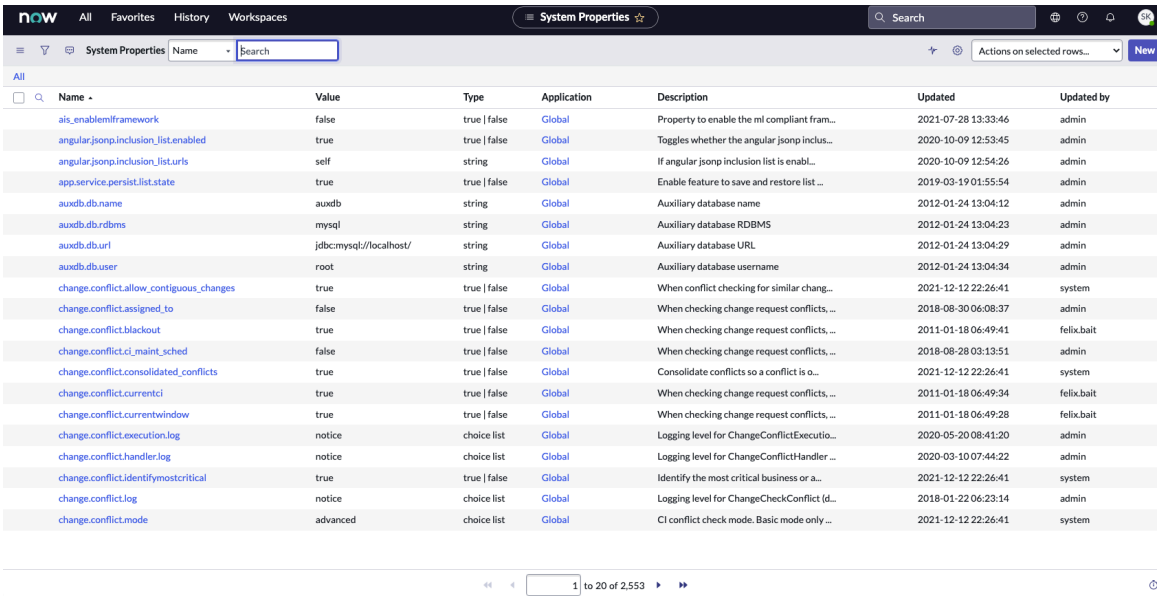
6. In the Selected slush bucket column, move the field in the desired location on the form.
7. Click **Save**.

   The field now appears on the form in the designated location.

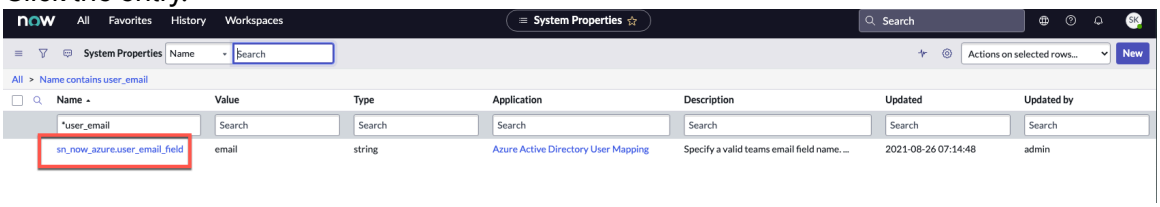
   The admin must enter the email used for Microsoft Teams in this field.

   You need to configure the newly created field value as the default field for initiating chats with the employee in Microsoft Teams.

8. Right-click on the field and click **Show <value of the field name>**.



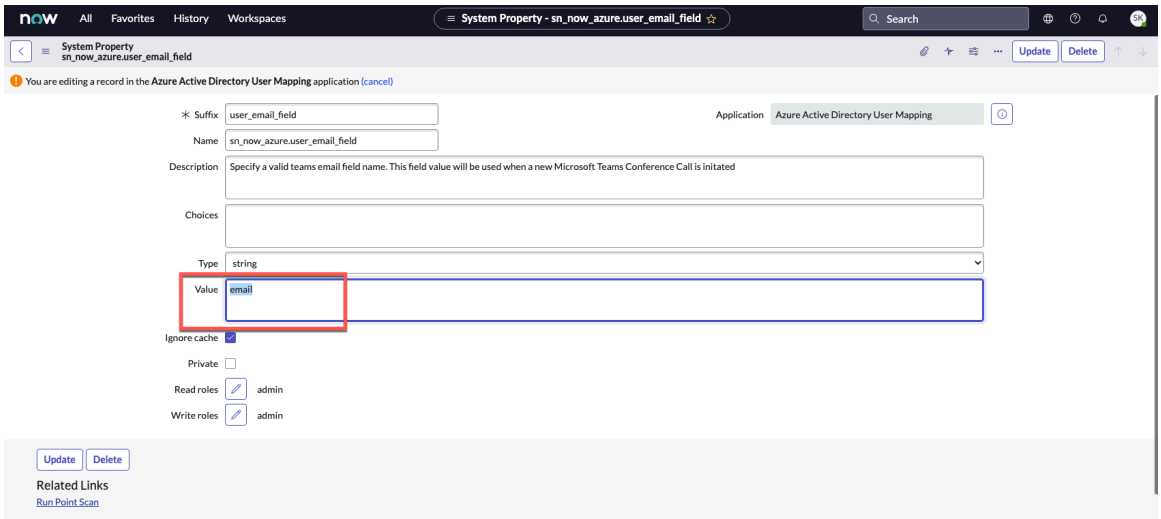
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



The dictionary info of the field name can be viewed.

9. Right click the **Field** and copy the value.
10. In the search field, enter `sys_properties.LIST` to view the system properties.

11. In the Name column, search for `*user_email` property.
12. Click the entry.



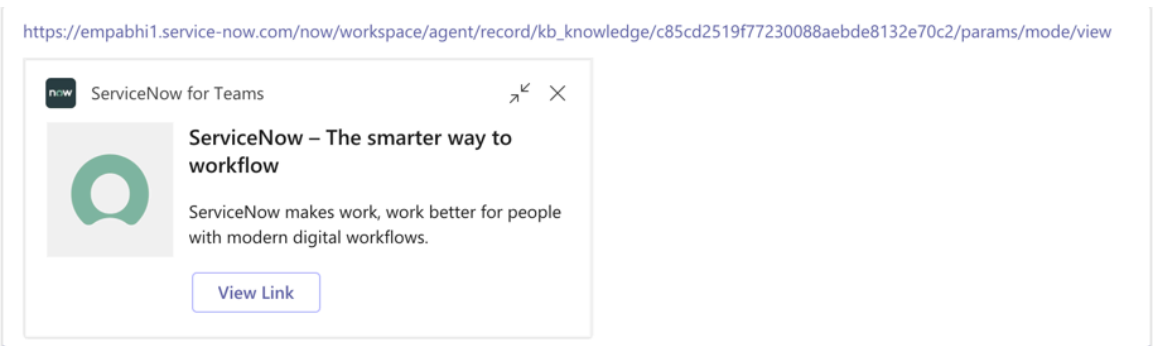
If the record is not editable, click **Edit** on the header to edit the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

13. Update the **Value** field with the new field name that is created.

    The default value is **email**.

14. Click **Update**.



> **Note:**
> Ensure that the email address for all the users for the newly created field is updated with the email associated with Microsoft Teams app.

Unfurl the web links in Microsoft Teams chat

ServiceNow for Microsoft Teams supports link unfurling. Link unfurling generates a content-rich preview when a supported link is shared in a conversation with a user in Microsoft Teams.

To enable link unfurling, you must create and download the manifest file and upload the file to Microsoft Teams. To download the manifest file, refer Create and download the manifest file for pre-published apps.

In a conversation in Microsoft Teams application, the content in the URL appears as a preview to the user in the form of an adaptive card. The preview is generated based on the content shared in the URL.

The content in the adaptive card will be shown only for public knowledge articles, and the catalog items. However, the adaptive card shows generic content for all private links in the chat conversations.

Enable link unfurling

Enable link unfurling in the manifest file to preview the content of the link shared in the chat conversations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Create and download manifest file.

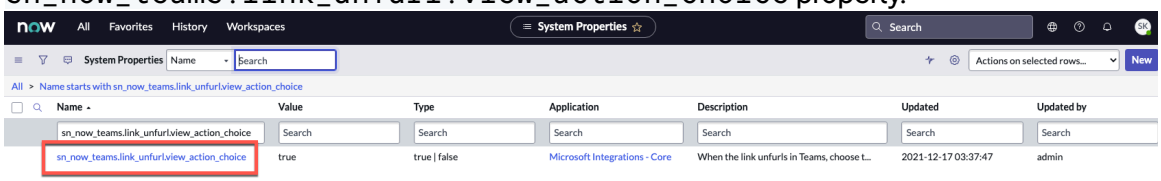
   Enable the link unfurling option in the **Generic info** tab while creating the manifest file.

   For more information, see Create and download the manifest file for pre-published apps.

2. Update the value of the ServiceNow for Teams app ID from Microsoft Teams admin center in your ServiceNow instance.
   For more information, see Update the app ID in the ServiceNow instance.

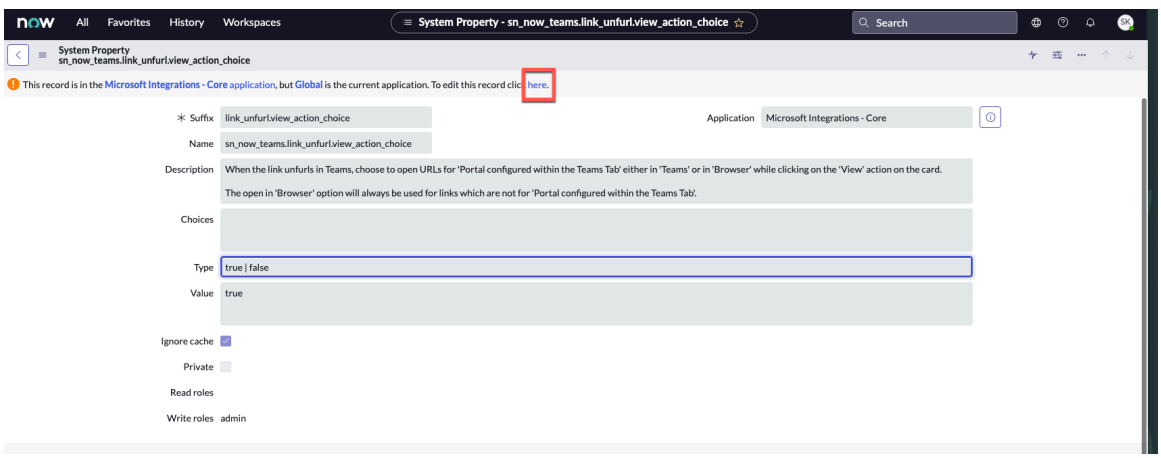
Configure the system property to open the unfurled links

Configure the property to view the content when the user clicks the adaptive card shared in the Microsoft Teams chat conversation.



Before you begin
Role required: admin

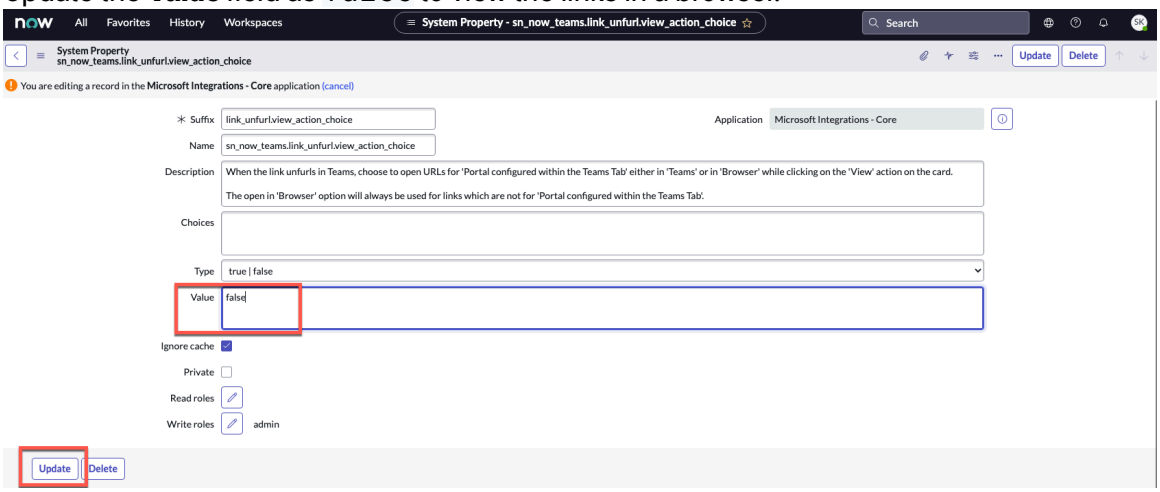
About this task
Setting the property to true opens all the configured portal-related links within the application. All the non-portal links are opened in the browser.



By default, this property is set as true. If you set the property as false, all the links shared in the chat conversations will be opened in the browser.

Procedure

1. In your ServiceNow instance, search for sys_properties.list.
2. In the Name column, search for `sn_now_teams.link_unfurl.view_action_choice` property.



3. Click the property.
   If the record is uneditable, click here to edit the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Update the **Value** field as `false` to view the links in a browser.

5. Click **Update**.

Configure Universal Request integration with Microsoft Teams

Complete the following procedures to configure the Universal Request integration with Microsoft Teams.

Set up Virtual Agent for Universal Request integration with Microsoft Teams

Publish the default Virtual Agent topics (conversation flows) so that they can be used in the Universal Request integration with Microsoft Teams application.

Before you begin

To use Virtual Agent capabilities, you must activate the following plugins:

- Universal Request: Virtual Agent Conversations plugin (com.snc.universal_request.va) to set up and use Virtual Agent in Universal Request. This plugin installs the Virtual Agent topics that must be made active. By default, the topics are set to inactive.
- Universal Request: NLU Model for Virtual Agent Conversations plugin (com.snc.universal_request.nlu) to set up and use the NLU model for Virtual Agent conversations.

Role required: admin

About this task

Activate the Virtual Agent topics for Universal Request.

You can also clone and modify the default topics or create your own topics to use during the chatbot conversations. For more information on creating a topic, see Create a Virtual Agent topic.

Procedure

1. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.
2. In the **Category** field, enter `Universal Request`.
   The following topics and topic blocks are displayed:
   - Employee Help Request (Template)
   - Employee Help Request (Teams Template)
   - Track Universal Request Status (Template)
   - Update UR (Template)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click the **Employee Help Request (Teams Template)** topic to open it.
4. On the header section, select **Publish**.
   The topic is made available and active in the chat window.

   Note:
   This topic has the same functionality as the **Employee Help Request (Template)** topic, but is specially configured for Microsoft Teams.

5. Repeat this procedure to open and publish the **Track Universal Request Status (Template)** topic.

   Note:
   If you have already published the **Track Universal Request Status (Template)** topic for Universal Request, you can skip this step.

Configuring Microsoft Teams integration for Agent Experience

Allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Microsoft Teams.

Configure Notify connector for Microsoft Teams

Configure your ServiceNow instance with Notify connector for Microsoft Teams application to enable making calls using Microsoft Teams.

After configuring, for information about using Notify connector for Microsoft Teams, see Use Notify connector for Microsoft Teams.

Make Microsoft Teams the default communication channel

Make Microsoft Teams the default communication channel to initiate a conference call to resolve a ticket.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Notify** > **Provider Selector**.
2. Select **New**.
3. On the form, fill in the fields.

Provider selector form

Field	Description
Name	Name of the provider you are adding, for example, Microsoft Teams.
Order	Order in which this provider appears when multiple providers are configured.
Source table	The table to which Microsoft Teams must be added.
Condition	Field to add the filter conditions.
Active	Option for indicating whether Microsoft Teams as a provider is active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Catch-all	Option for making Microsoft Teams the default provider if other notify providers like Zoom or Twilio are configured.
Manual Selection	Option for disabling the automatic selection of this provider.

4. Select **Submit**.
   The list of service providers displays.
5. Select the created service provider.
6. Select **New** in the **Provider Selector Choices** section.

   a. Select either **Notify number group** to choose the required notify group or select **Conference provider** to choose Microsoft Teams.

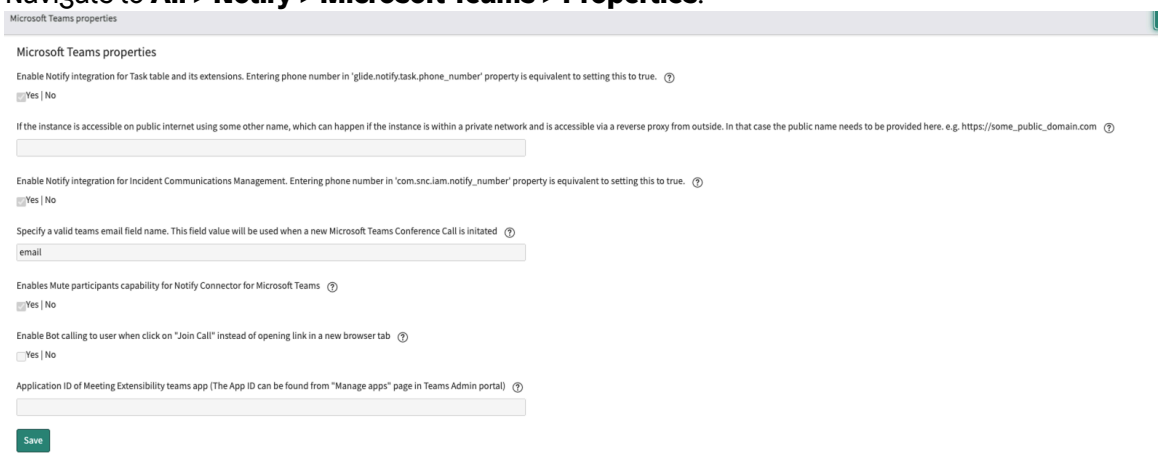
      You can set up configurations for numerous conference providers within the Notify framework.

      For example, you can configure Microsoft Teams as a provider for all the conferences initiated from incidents, and Zoom as the provider for all the conferences related to change or problem.

      Note:
      Selecting both values results in error.

   b. Select **Submit**.

Manage Notify Connector for Microsoft Teams properties



Manage the Notify connector for Microsoft Teams application properties to configure the calling capabilities.

Before you begin

Role required: Notify admin

Procedure

1. Navigate to **All** > **Notify** > **Microsoft Teams** > **Properties**.

2. On the form, fill the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notify connector for Microsoft Teams properties

Field	Description
Enable Notify integration for Task table and extensions	Option to enable Notify integration for Task table and extensions
Enable Notify integration for Incident Communications Management	Option to use Notify connector for Microsoft Teams for incident and major incident-related records.
Specify a valid teams email field name	Option to provide the field name to initiate the call to the user defined in this field. **Note:** The custom field name must be defined in the sys_user table.
Enable Mute participants capability for Notify Connector for Microsoft Teams	Option to mute the participants in a conference call.
Enable Bot calling to user when click **Join Call** instead of opening link in a new browser tab	Option to enable the bot call the user in a conference call.
Application ID of Meeting Extensibility app	Option to provide the app Id of Meeting Extensibility app. Provide the Meeting Extensibility app ID details to use Meeting Extensibility in your environment.

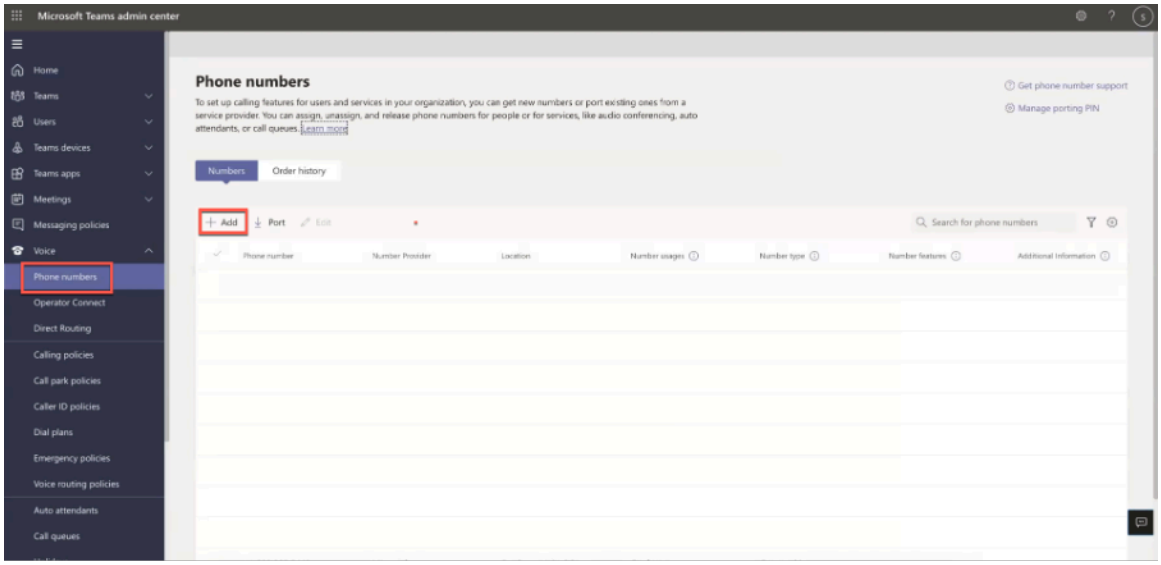
3. Select **Save**.

Configure the conference bridge numbers to join calls via phone

Configure the conference bridge number to allow the participants to collaborate to resolve the incidents via the conference bridge number.

Note:
These are additional configuration, which are optional and can be used as required.

Reserve a conference bridge number



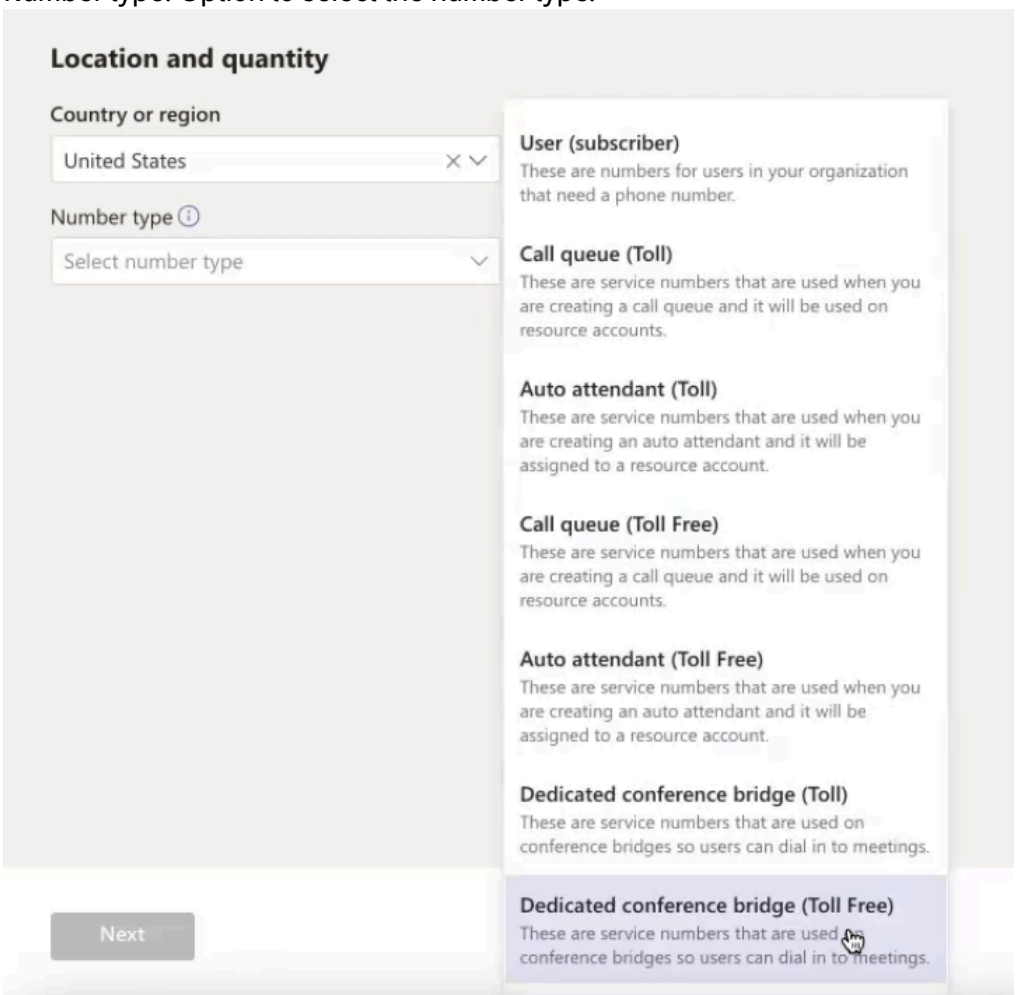
Reserve a conference bridge number to host the conference calls to work towards the resolution of incidents via conference bridge number.

Before you begin
Role required: admin

Procedure

1. Log in to Microsoft Teams admin center.
2. Navigate to **Voice** > **Phone number**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



3. Click **Add**.
4. On the form, fill the fields.

   a. Add a name for your order: Provide a name for the audio service.

   b. Country or region: Option to select a country.

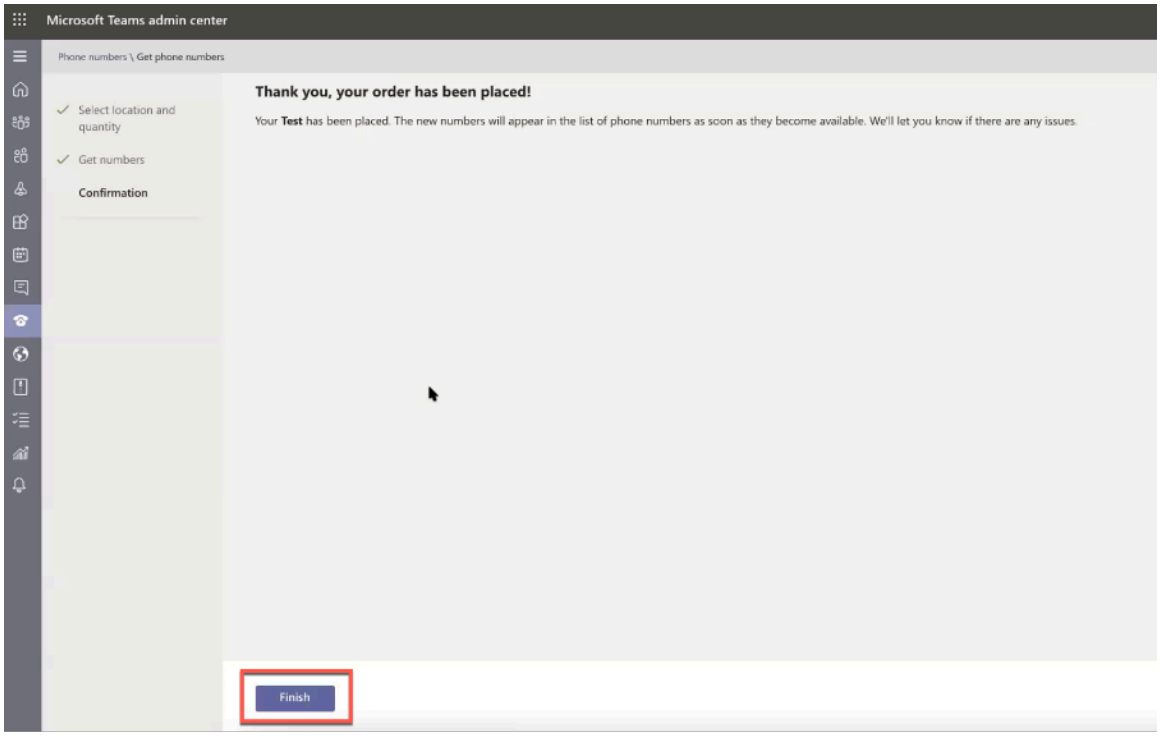
   c. Number type: Option to select the number type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Quantity: Option to choose the number of the conference number.

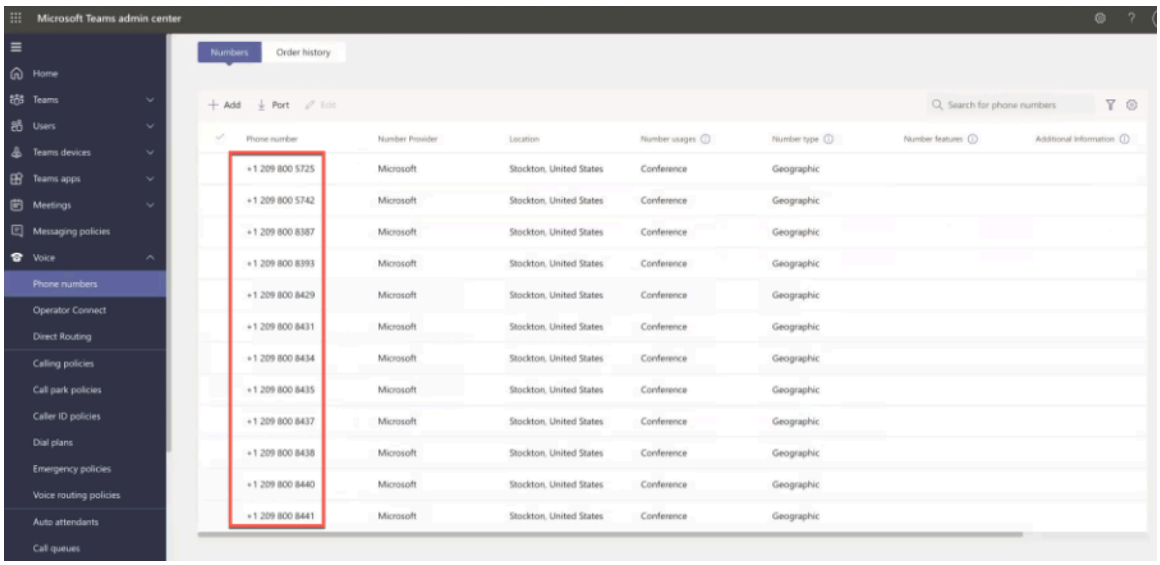
e. Search for new numbers: Option to choose the conference numbers based on city name or by area code.

f. Click **Next**.



The reserved number is displayed.

g. Click **Place order**.



Upon placing the order, the conference numbers appear in the phone numbers for the tenant.

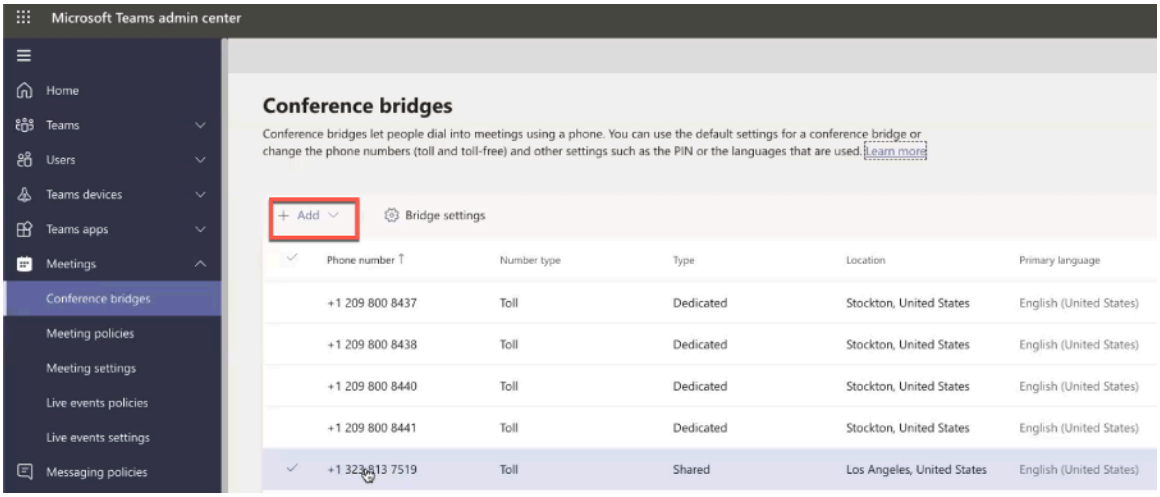
h. Click **Finish**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The reserved numbers appear under Phone numbers section as depicted.

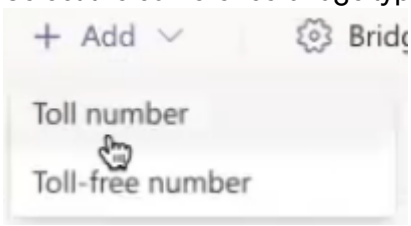
Configure conference bridge number for meetings

Configure the conference bridge number to be used for collaborating with the participants to resolve the major incidents.



Before you begin

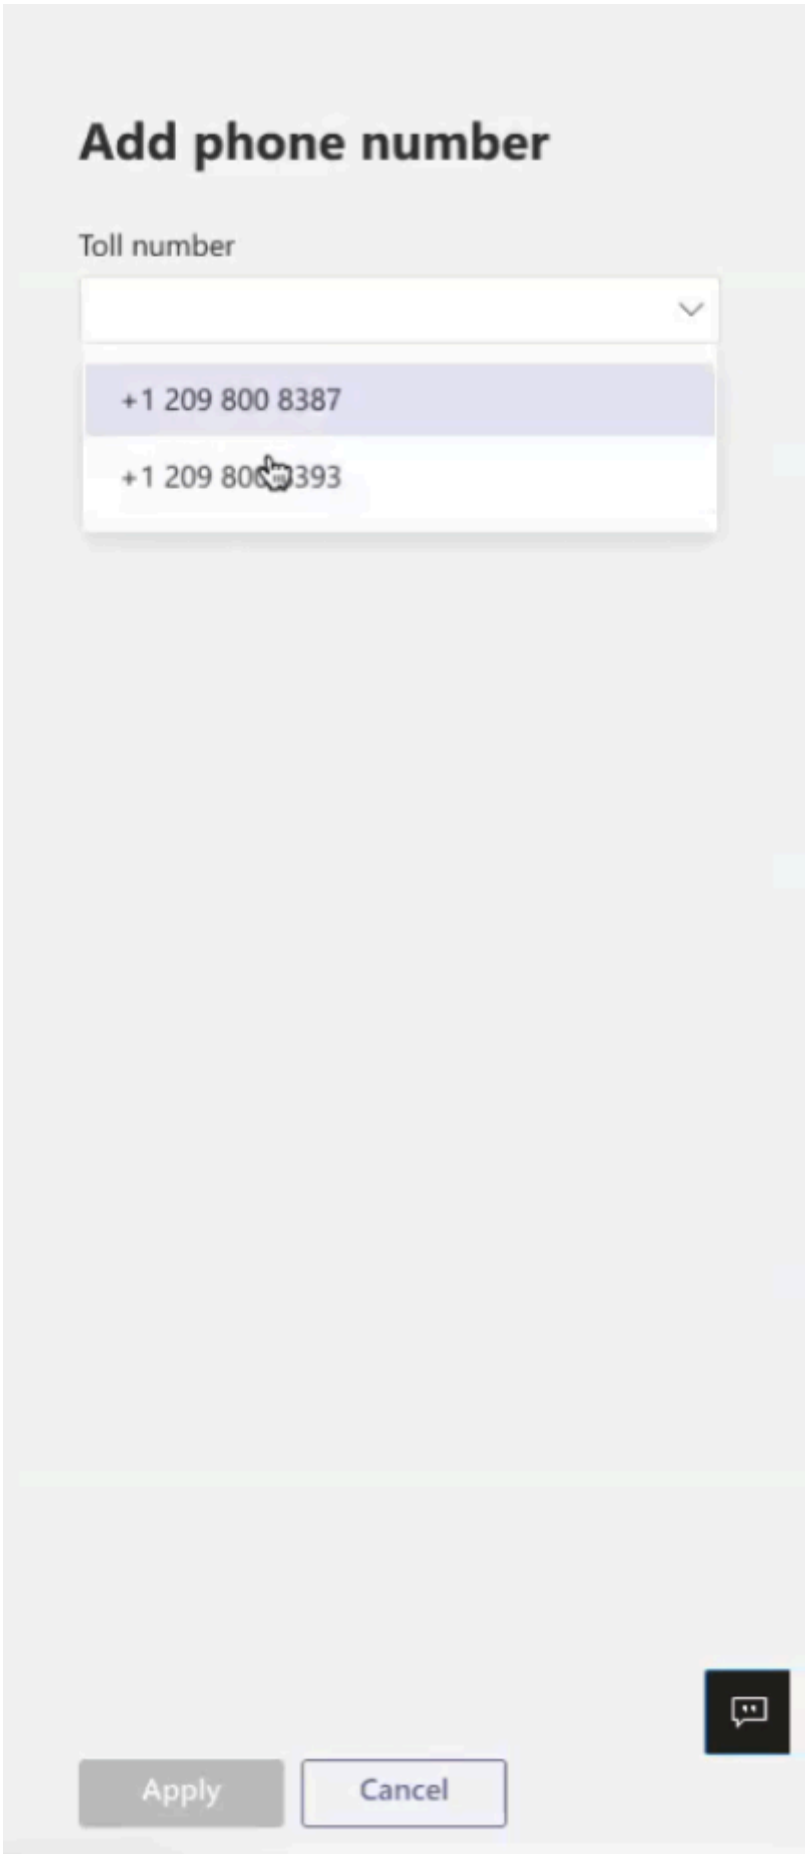
Role required: admin



Procedure

1. Log in to Microsoft Teams admin center.
2. Navigate to **Meetings** > **Conference bridges**.
3. Click **Add**, and then select the conference bridge type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



4. Select the conference bridge type.

5. Select the number from the drop-down option.

   This is the number that is reserved for your tenant for conference calls.

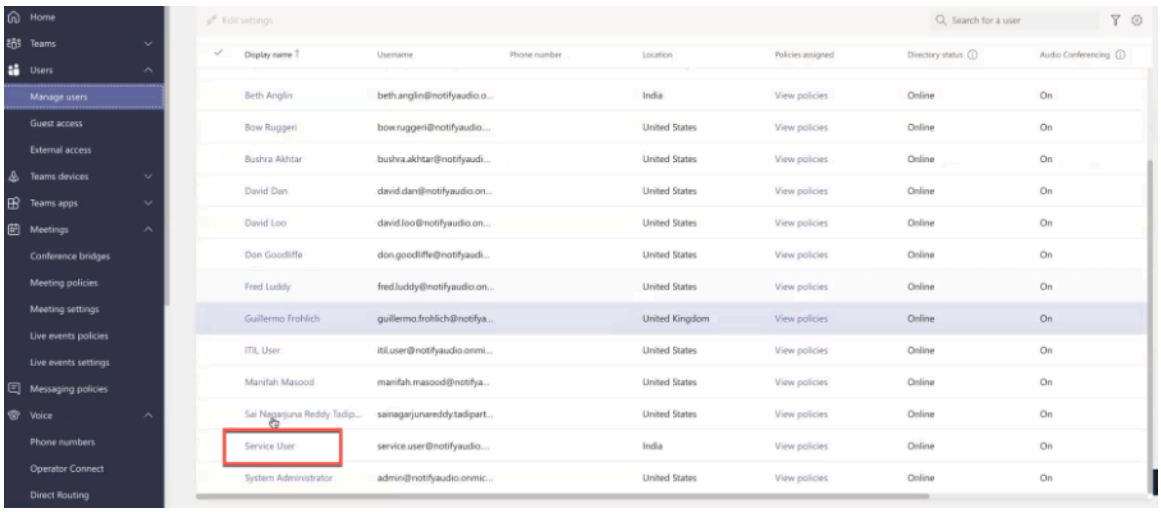
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Click **Apply**.

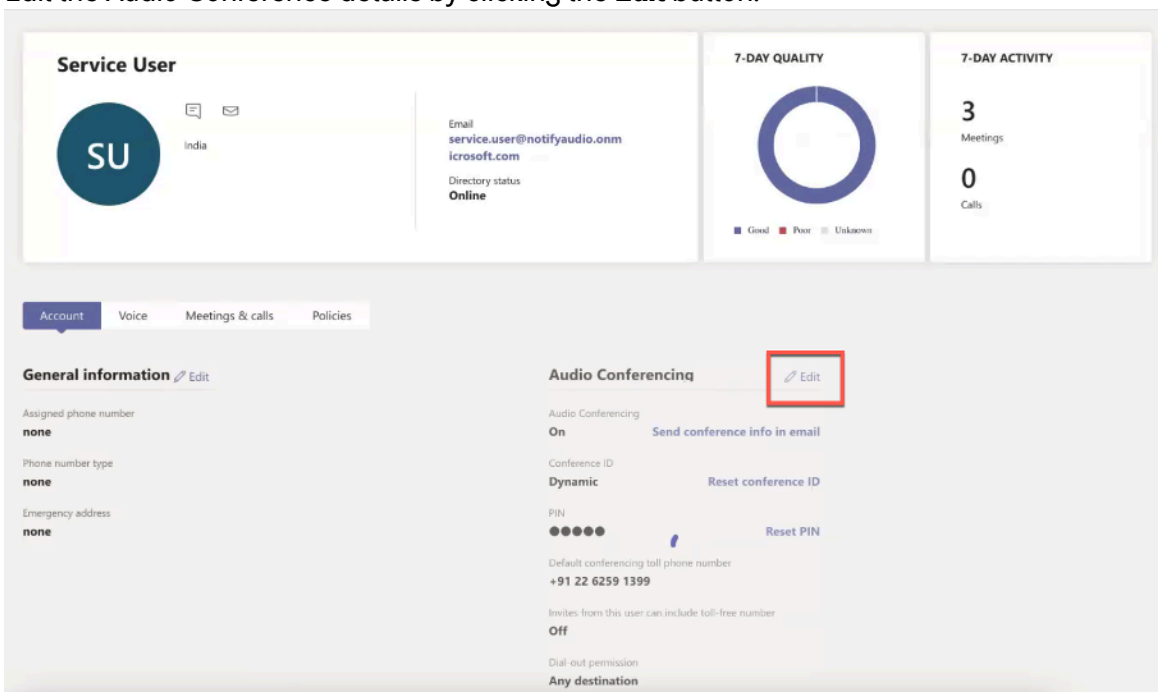
   The selected number is added to the list of conference bridge numbers.

Setup the conference bridge for the users



Make the conference bridge number available for the participants to join a conference call via the bridge number.

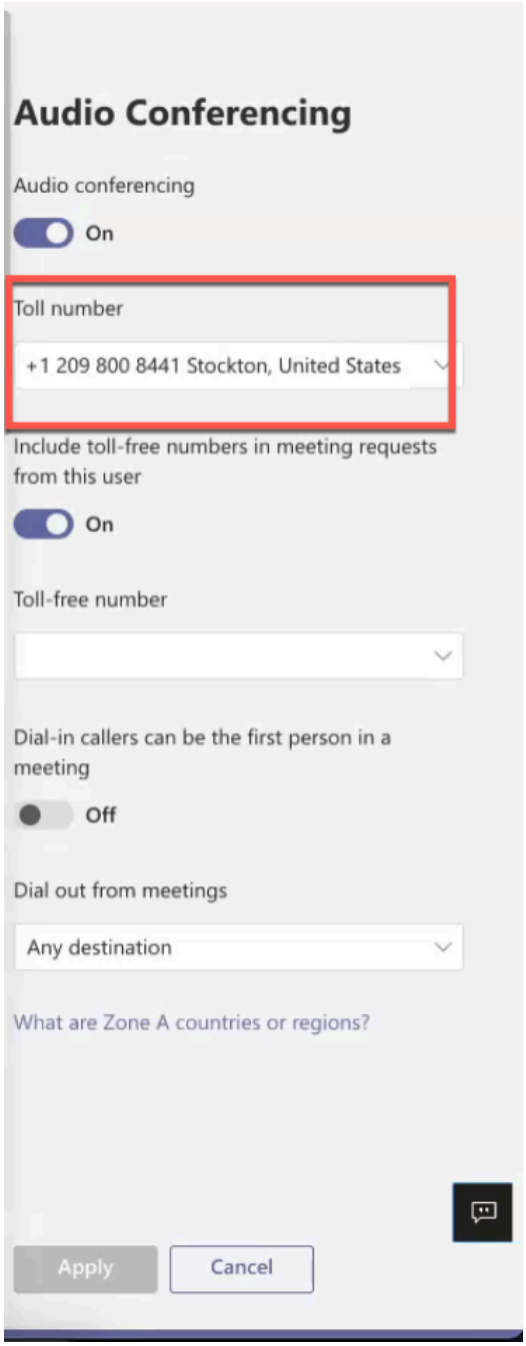
Before you begin



Role required: admin

Procedure

1. Log in to Microsoft Teams admin center.
2. Navigate to **Users** > **Manage users**.
3. Click **Service User**.



4. Edit the Audio Conference details by clicking the **Edit** button.

5. Select the toll number.

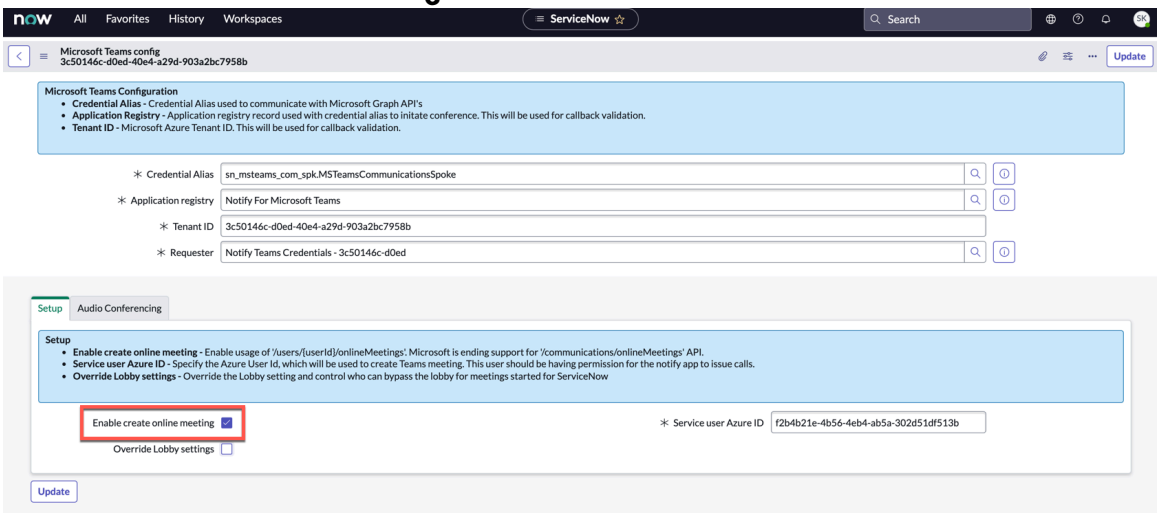
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Click **Apply**.

Enable Audio Conferencing

Enable the audio conferencing to allow the users to participate in the conference call by dialing the conference bridge number.

Before you begin



Note:
This is an additional configuration, which is optional and can be used as required.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

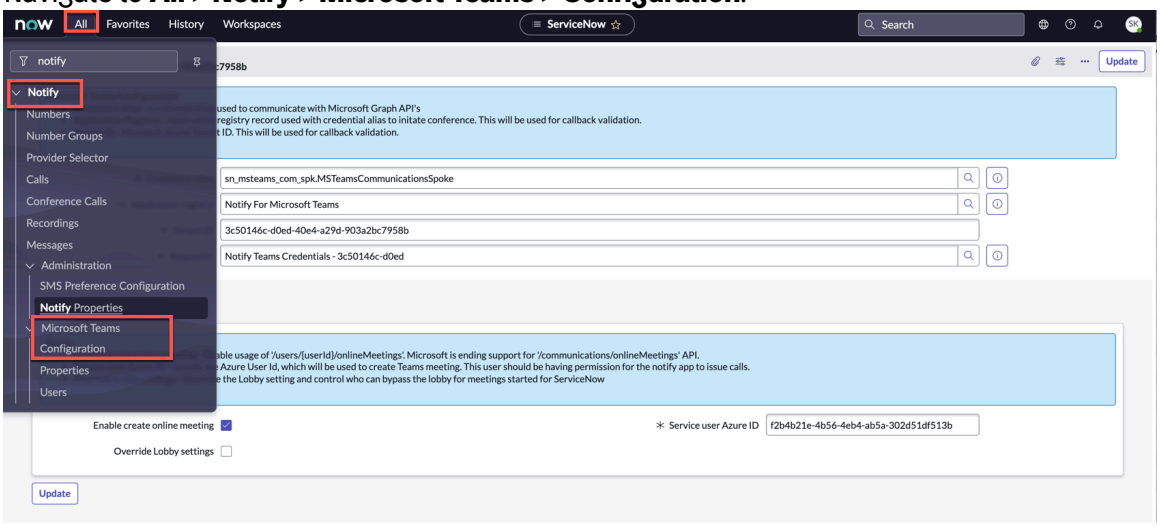
Procedure

1. In your ServiceNow instance, navigate to **All** > **Notify** > **Microsoft Teams** > **Configuration**.
2. Select **Enable Audio Conferencing**.

3. Select **Save**.

Configure Lobby Settings

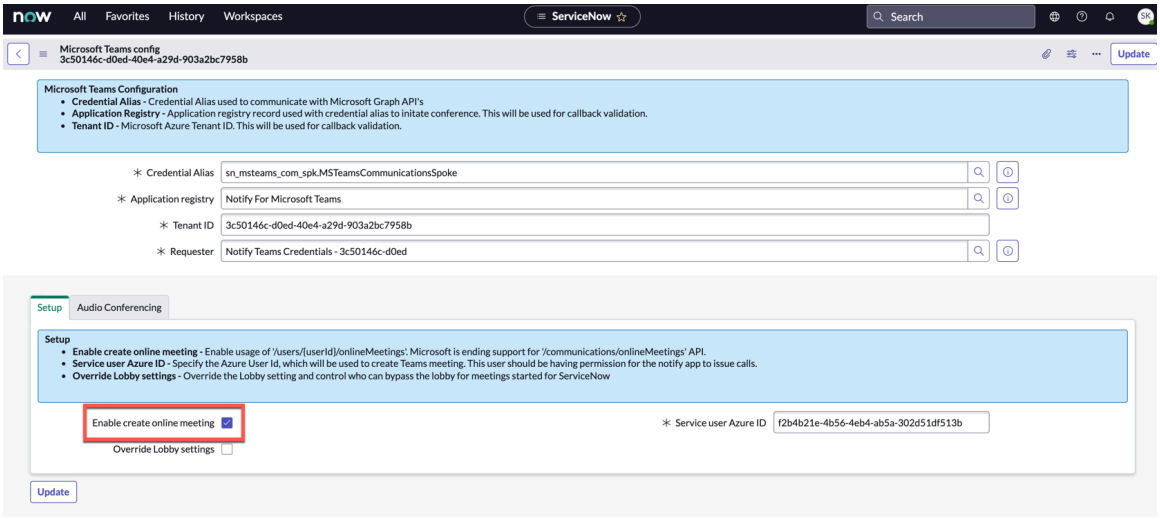
You can override the lobby settings in your instance to allow the participants to join the conference call without waiting in the lobby.



Before you begin

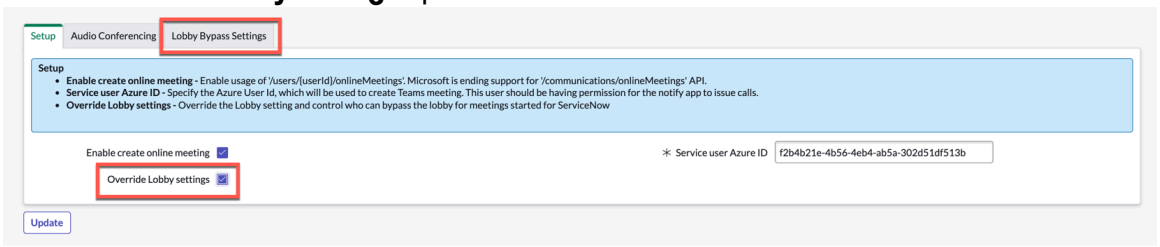
Note:
This is an additional configuration, which is optional and can be used as required.

Role required: admin



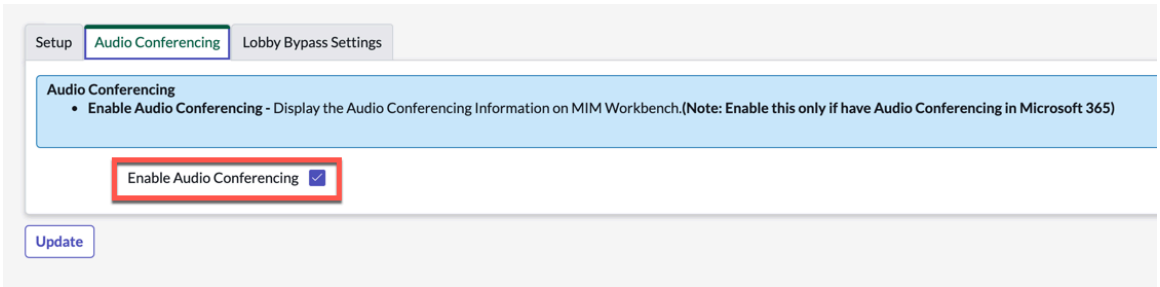
Procedure

1. Navigate to **All** > **Notify** > **Microsoft Teams** > **Configuration**.

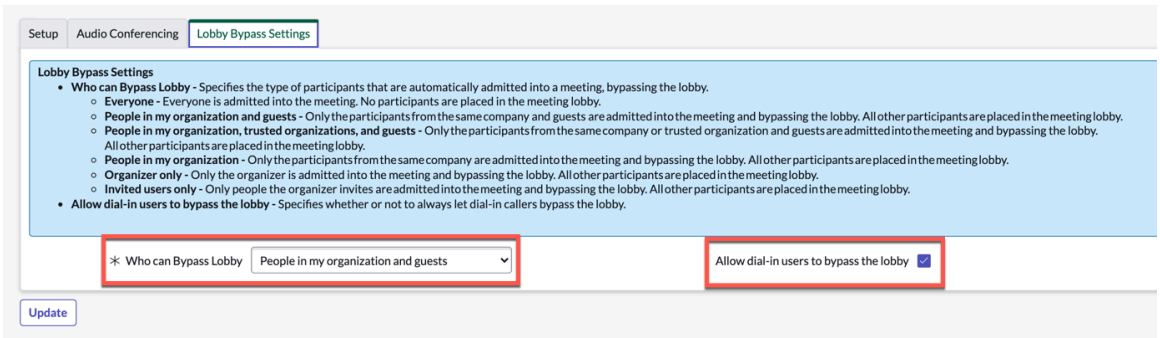


Note:
In the **Setup** tab, ensure that **Enable create online meeting** option is selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



2. Select **Override Lobby settings** option.



The **Lobby Bypass Settings** tab appears once you select the **Override Lobby settings** option.

3. Select **Audio Conferencing** tab, and then select **Enable Audio Conferencing**option.

> **Note:**
> If you have an Microsoft Azure audio conferencing subscription, you must enable this option to enable the users to join the conference call via phone numbers.

4. Select **Lobby Bypass Settings** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. **Who can Bypass Lobby**: Select the participants who can automatically join the conference call.

b. **Allow dial-in users to bypass the lobby**: This option appears only if **Enable Audio Conferencing** option is selected in **Audio Conferencing** tab. Select this option to allow the participants to automatically join the conference call if they have joined using the conference bridge number.

5. Select **Update**.

Map Microsoft Azure email to ServiceNow instance

Create a custom email field to use Microsoft Teams app to initiate call for the agents to resolve the tickets raised by users.

Before you begin

Role required: admin

About this task

If your email field on the sys_user table in your ServiceNow® instance does not match email on the Microsoft Azure tenant for the user, then mapping is required. The default mapping is to the email field and stored in the system property field sn_now_azure.user_email_field. Use this procedure to change the email field value as needed.

Procedure

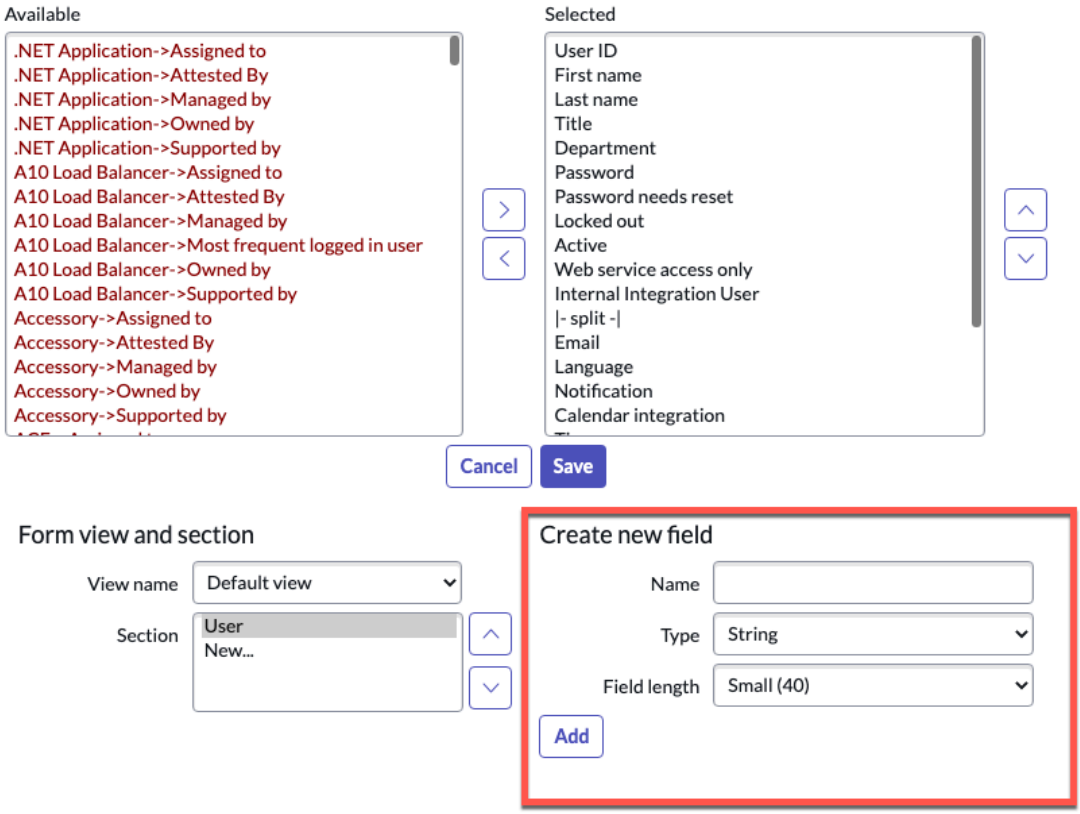
1. Copy the user_email_field value.

a. Open your ServiceNow instance.

b. Navigate to **All** > **System Security** > **Users and Groups** > **Users**.

c. Select a user.

d. Right-click on the form header and select **Configure** > **Form Layout**.

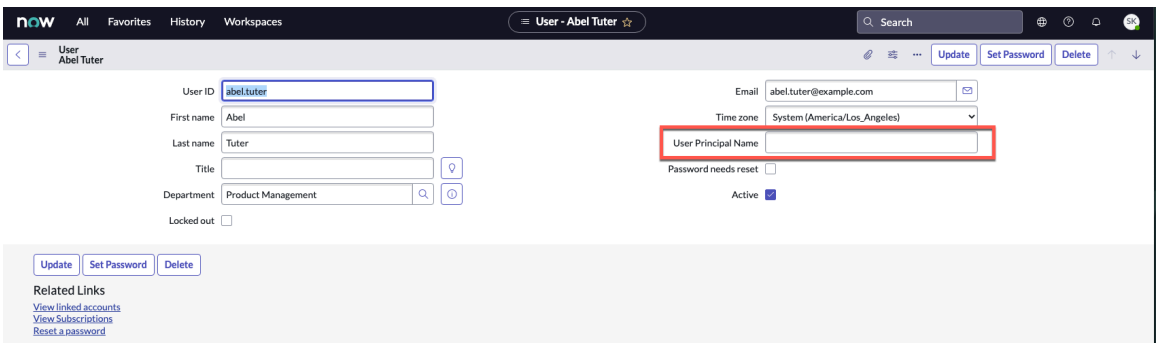


e. In the Create new field section, fill in the fields.

Create new field

Field	Description
Name	Enter the name of the field as you want it to appear on forms and lists. Example: User Principal Name.
Type	Select a field type as **String**.
Field length	Select a field length. This field is visible only for certain field types.

f. Select **Add**.

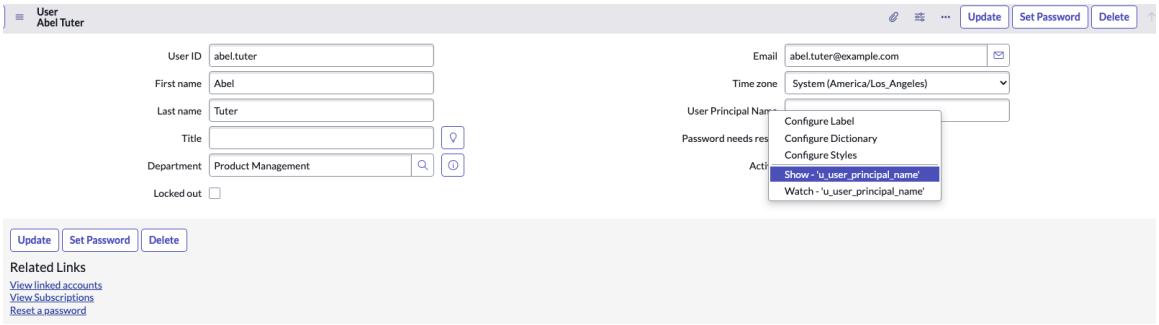


© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

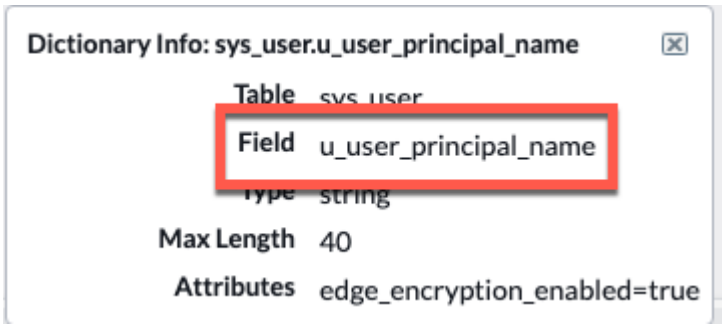
g. In the Selected slush bucket column, move the field in the desired location on the form.

h. Select **Save**.

The field now appears on the form in the designated location.



The admin must enter the email used for Microsoft Teams in this field.



You need to configure the newly created field value as the default field for initiating chats with the employee in Microsoft Teams.

i. Right-click on the field and select **Show <value of the field name>**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The dictionary info of the field name can be viewed.

j. Right-click on the **Field** and copy the value.

2. Change the email field value.

a. Navigate to **Notify** > **Microsoft Teams** > **Properties**.

b. Paste the copied email field value in the field **Specify a valid teams email field value. This field value will be used when a new Microsoft Teams Conference Call is initiated** of the Microsoft Teams Properties form.

The default value is `email`.

c. Select **Save**.

Note:
Ensure that the email address for all the users for the newly created field is updated with the email associated with Microsoft Teams app.

Managing ServiceNow for Microsoft Teams and Microsoft 365

Customize and manage different ServiceNow® for Microsoft Teams or Microsoft 365 integrations both for Employee Experience and Agent Experience, as required.

Important:

- From IT Service Management for Microsoft 365 (version 2.6.7), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.
- From HR Service Delivery for Microsoft 365 (version 3.3.6), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.

For upgrading existing Microsoft Teams capabilities to Microsoft 365 applications, see Integrating ServiceNow with Microsoft 365 applications for Employee Experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manage Microsoft Teams integration for Employee Experience

It offers help for employees to resolve their IT, HR, and UR related issues through Microsoft Teams. Employees can interact with the agents from within Microsoft Teams to resolve their issues.

Customize IT Service Management integration with ServiceNow

Customize the features in your instance to meet your organization needs.

You can customize:

- UI actions
- Business rules

Customize UI actions for IT Service Management with Microsoft Teams

Enables you to extend the UI actions to the tables you require.

You can extend the following UI actions to any other tables:

- Start Microsoft Teams chat
- Import Messages from Microsoft Teams

Customize Start Microsoft Teams chat UI action

Enables you to extend the Start Microsoft Teams chat UI actions to the tables you require.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **UI Actions**.
2. Open the existing **Start Microsoft Teams chat** UI action in a new window.
3. Click **New**.
4. On the **UI action** form, fill the fields:

UI action form

Field	Description
Name	Name of the UI action. Ex: Start Microsoft Teams chat
Table	Table to which the Start Microsoft Teams chat UI action is to be available
Form button	Check this box
Show insert	Clear this box
Client	Check this box
List v3 Compatible	Check this box
Onclick	Type `initChatWithGroup()`
Condition	Copy and paste the condition of the existing Start Microsoft Teams chat. Modify the column name as required.
Script	Copy and paste the script of the existing Start Microsoft Teams chat. Modify the column name as required.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Workspace Form Button	Check this box. Copy and paste the **Workspace Client Script**of the existing Start Microsoft Teams chat. Modify the column name as required.

5. Click **Submit**.

Customize Import Messages from Microsoft Teams UI action

Enables you to extend the **Import Messages from Microsoft Teams** UI action to the tables you require.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **ServiceNow for Microsoft 365** > **UI Actions**.
2. Open the existing **Import Messages from Microsoft Teams** UI action in a new window.
3. On the **UI Actions** screen, Click **New**.
4. On the **UI Action** form, fill the fields.

UI action form

Field	Description
Name	Name of the UI action. Ex: Import Messages from Microsoft Teams
Table	Table to which the Import Messages from Microsoft Teams UI action is to be available
Form button	Check this option
Show insert	Clear this option
Client	Check this option
Condition	Copy and paste the condition of the existing Import Messages from Microsoft Teams. Modify the column name as required.
Script	Copy and paste the script of the existing Import Messages from Microsoft Teams. Modify the column name as required.
Workspace Form Button	Check this box. Copy and paste the **Workspace Client Script**of the existing Import Messages from Microsoft Teams. Modify the column name as required.

5. Click **Submit**.

Customize business rules for actionable notifications

Enables you to customize the business rules for actionable notifications.

Customize UI actions for Universal Request integration with Microsoft Teams

Customize the UI actions and extend them to the tables that you require. The `UniversalRequestMSTeamsUtils` script include controls the visibility of the UI actions.

The following UI actions are available by default. You can customise them to suit your needs.

- Start Microsoft Teams Chat
- Import Messages from Microsoft Teams

To customise the UI actions, you must modify the form fields. For a detailed understanding of the form fields, see UI actions

Using ServiceNow for Microsoft Teams and Microsoft 365

Employees and agents can work together to resolve their issues for IT Service Management, HR Service Delivery, and Universal Request from within Microsoft Teams.

Important:

- Actions that require the *admin* role, can also be performed with the *sn_now_teams.admin* role.
- From IT Service Management for Microsoft 365 (version 2.6.7), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.
- From HR Service Delivery for Microsoft 365 (version 3.3.6), ServiceNow for Microsoft Teams is upgraded to ServiceNow for Microsoft 365.

For upgrading existing Microsoft Teams capabilities to Microsoft 365 applications, see Integrating ServiceNow with Microsoft 365 applications for Employee Experience.

Use Microsoft Teams integration for Employee Experience

It offers help for employees to resolve their IT, HR, and UR related issues through Microsoft Teams. Employees can interact with the agents from within Microsoft Teams to resolve their issues.

Use ITSM and HRSD integrations with Microsoft Teams

Employees and agents can collaborate to receive service and resolve issues effectively from Microsoft Teams.

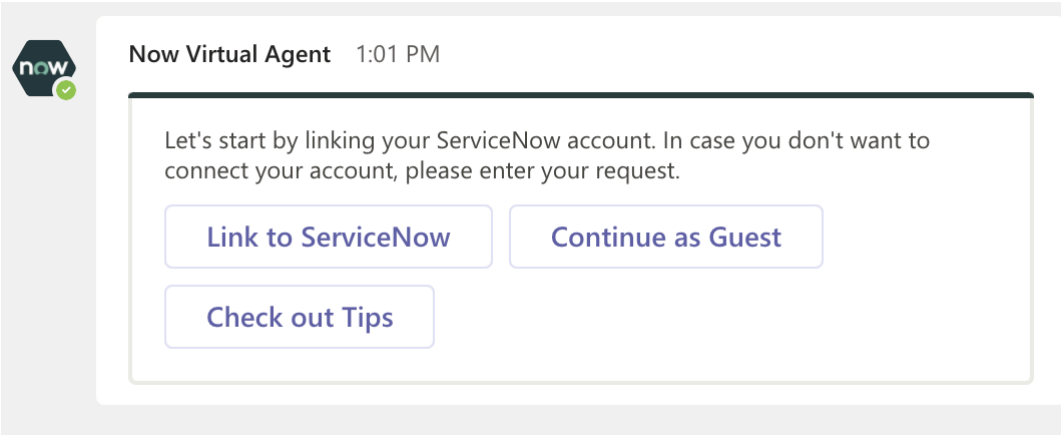
Employee actions

Respond to the approval notifications and the comments against the service-related tickets.

Actionable notifications sent through Virtual Agent in Microsoft Teams. You can:

- Accept or reject approvals in response to an actionable notification
- Respond to a comment from an agent in an actionable notification

Link ServiceNow user account to Microsoft Teams application for Virtual Agent



Link your ServiceNow account to an Microsoft Teams application to access the non-public Virtual Agent topics that use ServiceNow records.

Before you begin
Role required: user
The authentication step occurs in your instance or in a Service Portal set by your admin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the Microsoft Teams application.
2. Find your Virtual Agent bot.
3. Start a conversation with your Virtual Agent bot.
   The bot then presents a prompt that provides options to authenticate **Link to ServiceNow**, continue as a guest user, or see the help menu **Check out Tips**.

4. Select **Link to ServiceNow** to authenticate.
   Authentication directs you to your instance or a Service Portal set by your admin. If you aren't already logged in to your instance or a Service Portal, you're prompted to enter your login credentials.

Note:

The administrator can auto-link the ServiceNow user accounts to Microsoft Teams. For more information, see Account linking in pre-built messaging integrations.

5. On the confirmation dialog, select *Confirm* to link your account.

Unlink your ServiceNow user account from Microsoft Teams for Virtual Agent

Unlinking your account from Microsoft Teams to deactivate the association between your ServiceNow account and the Microsoft Teams application.

Before you begin

Role required: user
After you unlink your account, you can no longer engage in Virtual Agent conversations that query or change records in the ServiceNow database.

Procedure

1. From the application navigator, navigate to **Self-Service** > **My Profile**.
2. Click the **View Linked Accounts** related link.
3. In the linked accounts page, select the check box for the messaging integration to be unlinked.
4. Select **Actions on selected rows** and then click **Unlink account**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The link between your ServiceNow account and the Virtual Agent messaging integration becomes inactive.

> **Note:**
> Even though you unlinked your account, you can still run public Virtual Agent conversations. To link your account again, repeat steps 1 through 3 for the associated messaging integration and in the **Actions on selected rows...** click **Link account**.

View informational notifications

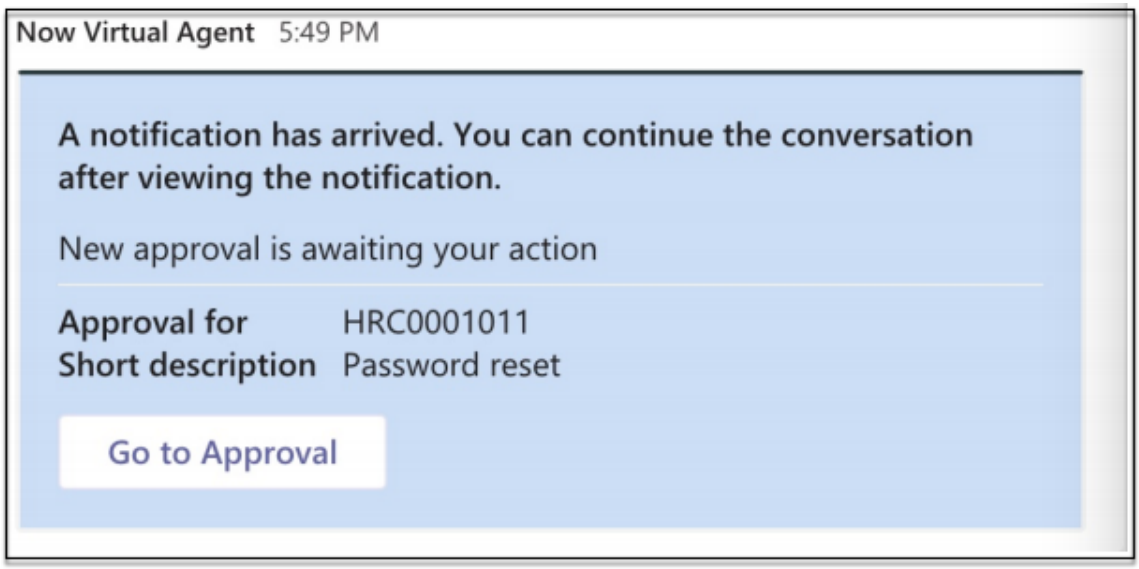
View the notifications that are sent during specific events in a ticket life cycle. These notifications are sent to the requester associated with the ticket.

Before you begin

Role required: user

About this task

The following informational notifications are included with ServiceNow for Microsoft Teams application:



- Incident resolved
- Incident state update
- Requested item complete
- Requested item approved
- Request item rejected
- Request item update

Procedure

1. Launch Microsoft Teams application.
2. Click **Activity**.
3. View the list of notifications feeds for:
   - Incident
   - HR case
   - Change request
   - Requested item

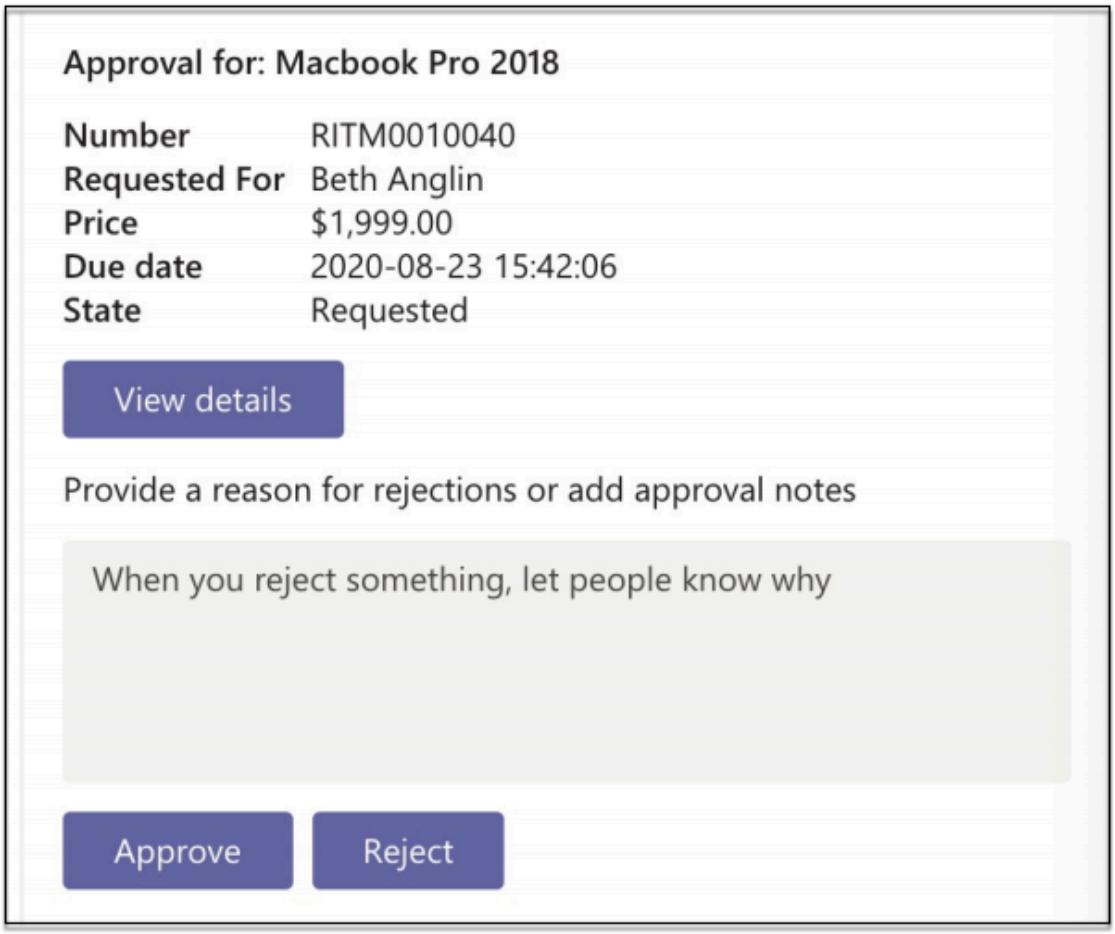
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click the notification to view the details.

Approve or reject requests from Microsoft Teams

Approve or reject requests by using the approval notification in Microsoft Teams.

Before you begin



For information about configuring approval notifications, see Configurable approvals experience.

Role required: user

Procedure

1. Launch the Microsoft Teams application.
2. Select **Activity**.
3. View the list of notifications feeds for the following:
   - Request
   - Change Request
4. Select a notification to view the details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** Select **View details** to view the complete details of the ticket.
6. Enter a comment as required.
7. Select either **Approve** or **Reject** to update the request.

Respond to a comment in a notification

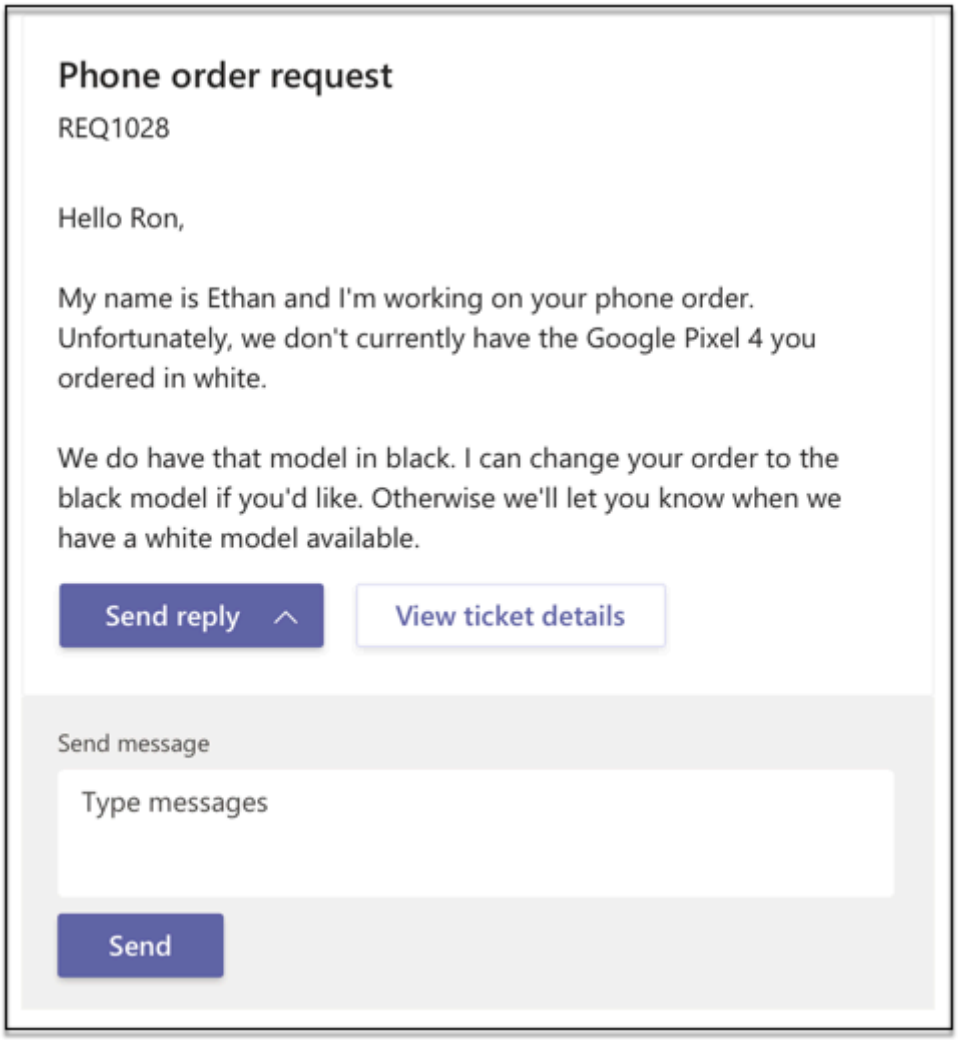
A comment in the activity stream generates a notification to which the user can respond directly, without leaving Microsoft Teams.

Before you begin

Role required: user

About this task

If the user needs to take an additional action, such as attaching a document, they must click **View Ticket Details** to go to the ticket in a Service Portal.



Procedure

1. Launch Microsoft Teams application.
2. Click **Activity**.
3. View the list of notifications feeds for:
   - Incident
   - HR case

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Change request
- Requested item

4. Click the notification to view the details.

5. Click **Send reply**.
6. Enter your comment.
7. Click **Send**.
8. Click **View ticket details** to view the complete details of the ticket.

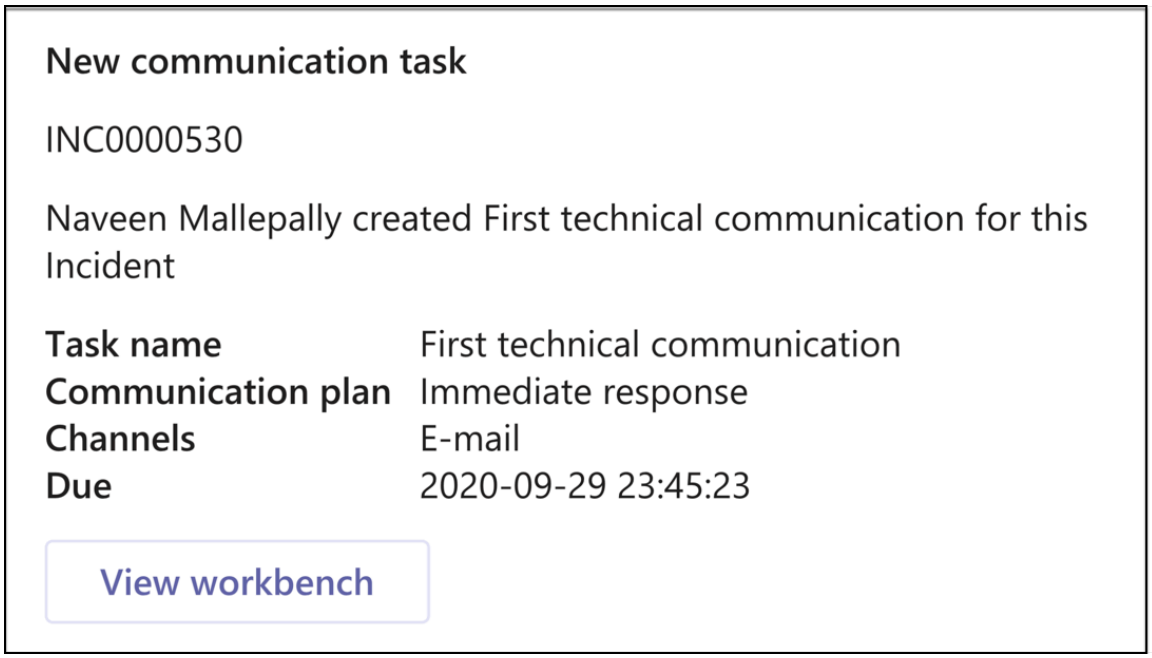
View notifications for a major incident

View the notifications that are sent during specific events in a major incident. These notifications are sent to all the stakeholders associated with the major incident.

Before you begin

Role required: major_incident_manager, agent

About this task



The following informational notifications are triggered for a major incident when:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- A communication task is created for a major incident
- SLA reaches 75%
- SLA is breached

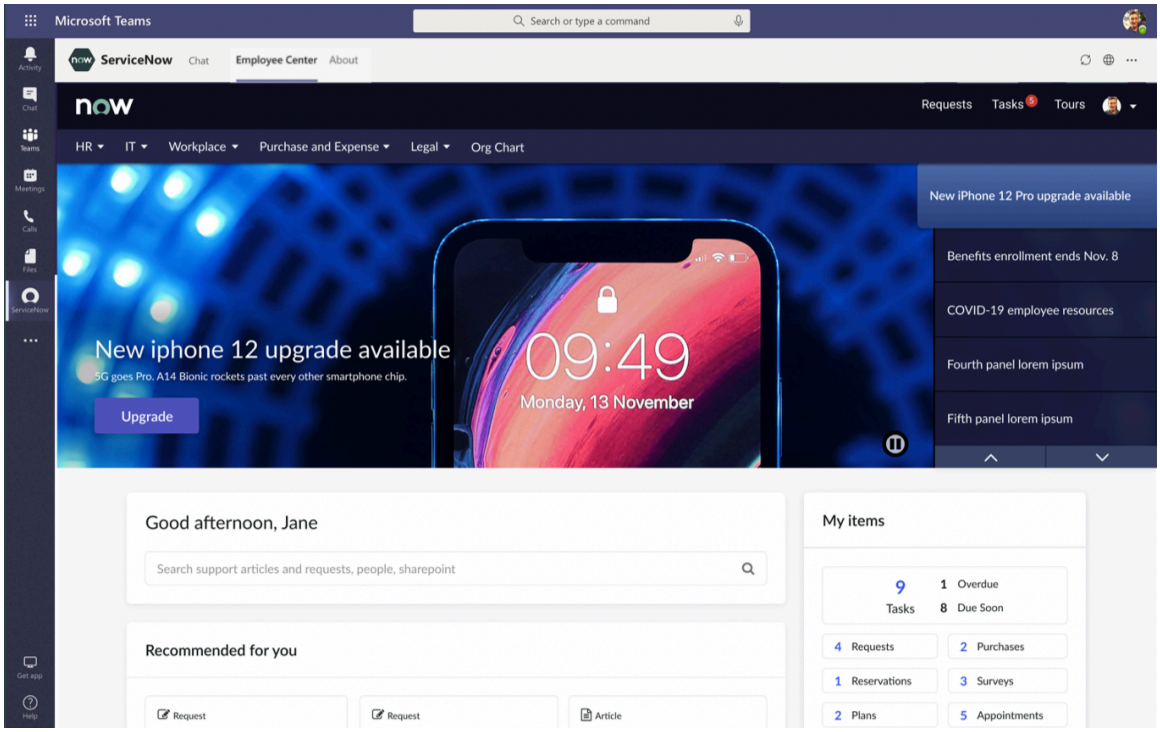
Procedure

1. Launch **Microsoft Teams** application.
2. Click **Activity**.
3. View the list of notifications feeds for the major incident.
4. Click the notification to view the details.

5. Click **View workbench** to view the ticket details in ServiceNow.

Employee Center dashboard

Use the Employee Center dashboard from Microsoft Teams to view the widgets that show pending tasks, requests, and the internal company announcements.



Your Hub dashboard is replaced with **Employee Center** dashboard from Rome.

With embedded Employee Center, you can request help, search for self-service content, and work on your tasks from within Microsoft Teams.

For customers with Employee Center, Content managers and Communications Specialists are able to use Microsoft Teams as an additional channel to reach employees with personalized and timely communications.

Launch Microsoft Teams. Navigate to **ServiceNow for Microsoft Teams** > **Employee Center**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access a Microsoft Teams chat in Employee Center

Access a ticket's Microsoft Teams chat in the Employee Center.

Before you begin

Role required: user

About this task

You can view chats on the Teams Chat widget only if you are added to that chat conversation by the agent and you have access to the associated ticket. If you are on the watch list of an incident and can view the ticket on the ServiceNow portal, you can view the associated chats.

Messages are loaded dynamically. The Teams Chat widget does not display message reactions but it does display emojis contained in messages.

Procedure

1. Launch Microsoft Teams.
2. Navigate to **ServiceNow for Microsoft Teams** > **Employee Center** > **My Requests**.
3. Open the ticket.
4. Select **Teams chat**.
5. Select a chat to view details.
   If more than one chat is available for a ticket, choose the desired chat from the list that appears on the left.
6. Continue the chat in either the desktop version or the mobile version.
   - For the desktop version, select **Open in Microsoft Teams Desktop**.
   - For the mobile version, select **Open in Microsoft Teams Browser**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manage approvals from Microsoft Teams

Manage Concur expense approvals using Virtual Agent actionable notifications in Microsoft Teams to resolve the approval directly in the Virtual Agent conversation without involving a live agent.

Before you begin

- The Virtual Agent integration is supported only for users who have a user record in your ServiceNow instance. Users must link their accounts to Microsoft Teams and enable Virtual Agent notifications.
- Install the Approvals hub integration with the SAP Concur (sn_ex_cnc) plugin.

For more information on receiving notifications, see Conversational Integration with Microsoft Teams and Enable Virtual Agent notifications. For more information on Virtual Agent, see Virtual Agent.

Role required: approver_user

Procedure

1. Launch the Microsoft Teams application.
2. Open the **Now Virtual Agent** chat window.
3. Enter `Show notification` in the chat window.
4. **Optional:** View the report by selecting **View Report**.
   You can also view the report later by selecting **Skip** and entering `Show notification` in the chat window.
5. **Optional:** View expense and receipt items by selecting **Expenses and Receipts**.
   A maximum of 12 expense items are displayed in the report. To view all items, select **View full report**.
6. Approve or reject the report.

> **Note:**
> You cannot accept or reject a report if the assigned approver has been modified or the report has been updated or closed.

Agent actions

Agents can work on the service-related tickets created by the employees.

Request based chat - Start and import chat from classic view

Initiate a conversation with the requester to resolve the ticket.

You must have the "write" role to use the **Start Microsoft Teams chat** and **Import messages from Microsoft Teams** features for an incident, request, change request and a catalog task. This role is available when you activate the ITSM roles plugin, or for all the instances starting the Madrid release.

Record and Role

Record	Role	Plugin
Incident	sn_incident_write	ITSM Roles - Incident Management (com.snc.itsm.roles.incident_management) plugin

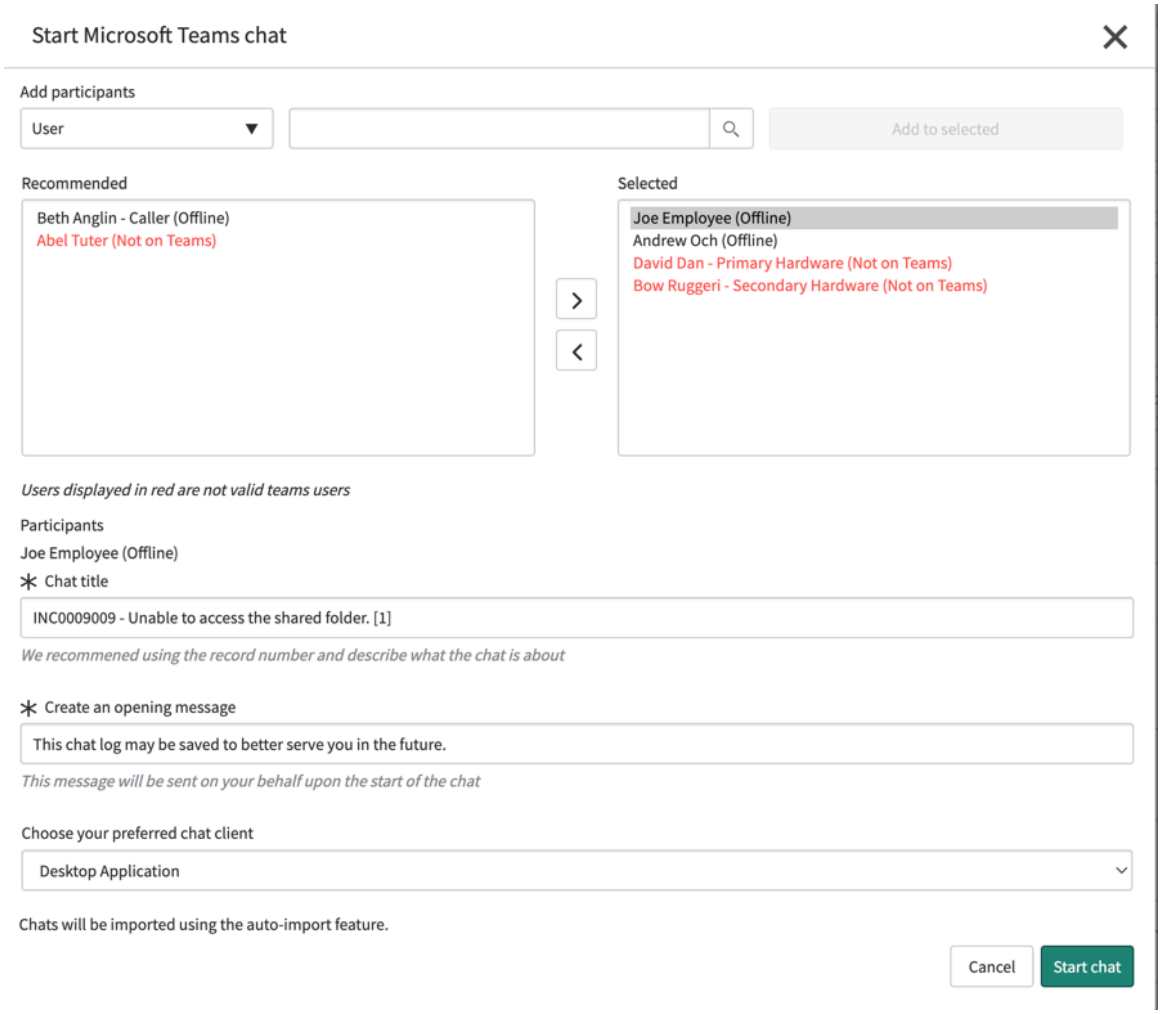
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Record and Role (continued)

Record	Role	Plugin
Change Request	sn_change_write	ITSM Roles — Change Management (com.snc.itsm.roles.change_management) plugin
Request	sn_request_write	ITSM Roles — Request Management (com.snc.itsm.roles.request_management) plugin
HR Case	sn_hr_core.case_writer	Human Resources Scoped App — Employee Relations [com.sn_hr_employee_relations] plugin

Request-based chat - Start and import chat from field decorator

Interact with a requester in Microsoft Teams from the chat icon from the workspace to quickly resolve the ticket.



Before you begin

Role required: user with access to the respective records

Procedure

1. Navigate to an open ticket (an incident, a change request, a request item, an HR case or a catalog task) in your ServiceNow instance.
2. Point to  next to the **Caller** field.
3. Within the dialog box that appears, select the participants for the chat.

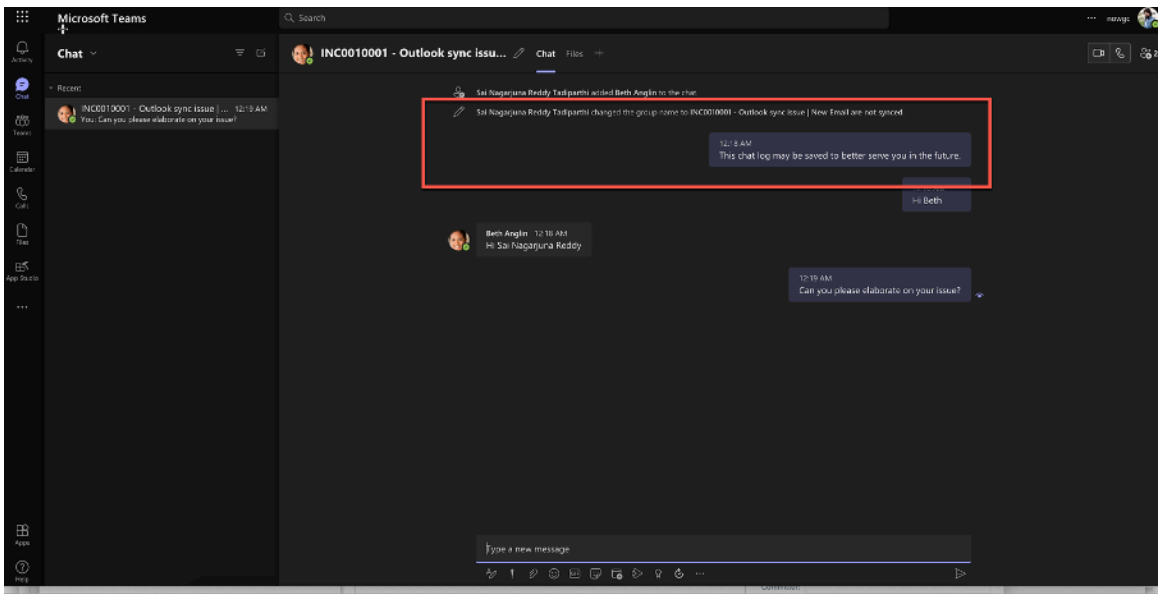
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The dialog box displays the **Recommended** and **Selected** participants along with their current presence status in Microsoft Teams.

All users from the assigned group for the ticket are in the recommended section by default. The user who initiates the chat is added to the selected list of participants.

4. On the form, fill the fields.

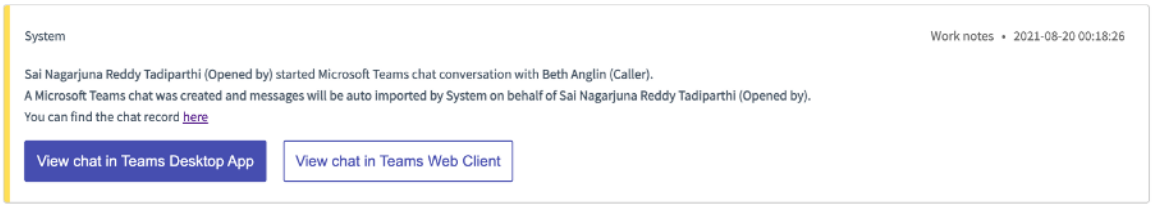
Start chat modal fields



Field	Description
Add Participants	Option to add the users and the stakeholders to work towards the resolution of the ticket. ○ **Users**: Enter the name of the user to include in the chat. ○ **Group**: Enter the group of users to be included in the chat. If the On-Call Scheduling (com.snc.on_call_rotation) plugin is activated, the On-Call Scheduling users will be added when you select a group. On-Call Scheduling

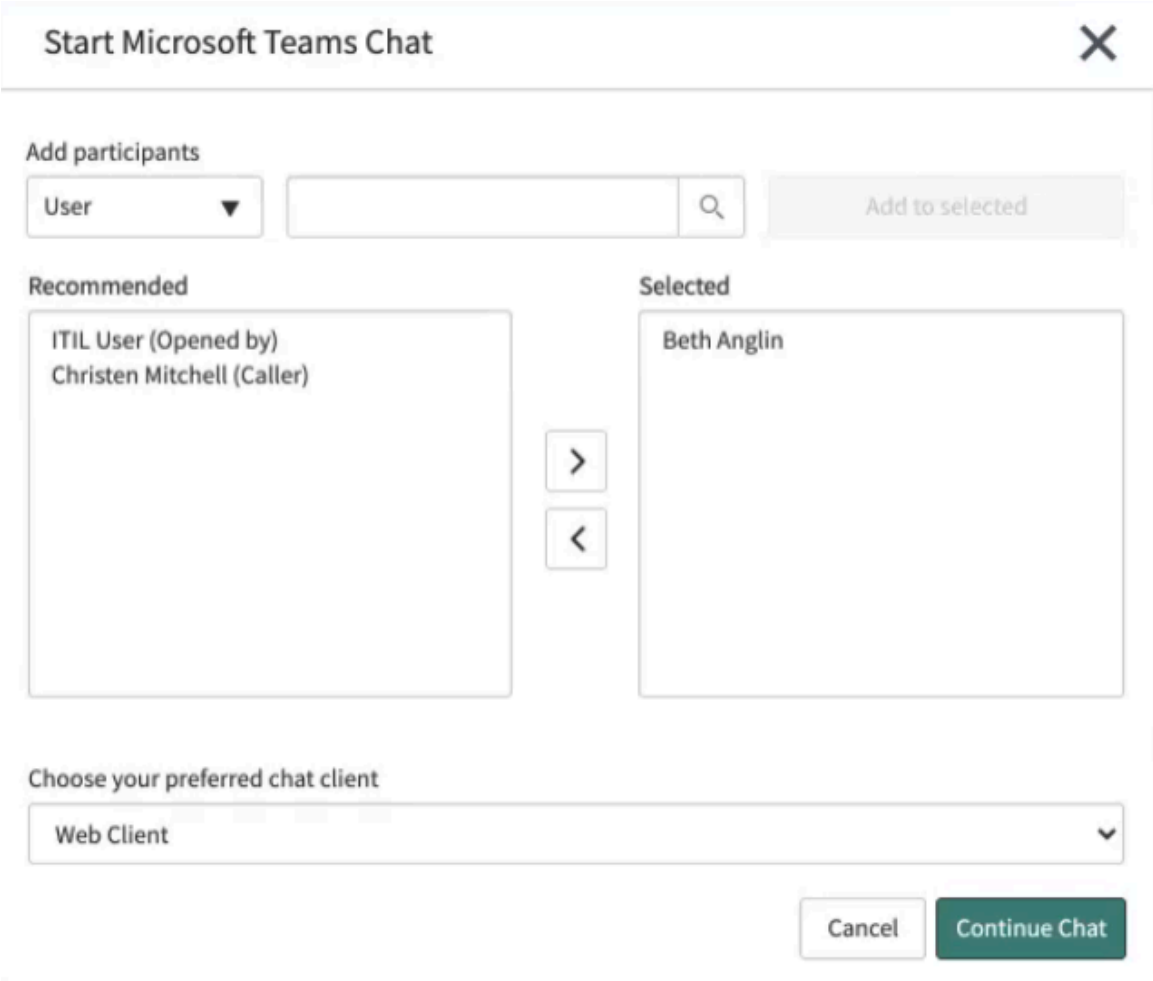
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	(com.snc.on_call_rotation) plugin isn't activated, it adds all users from the selected group. ○ **Email**: Enter a valid email of the participant to be included in the chat. After adding the required stakeholders, click **Add to selected**.
Chat title	The chat title specified shows up as the title of the chat in Microsoft Teams. The default title is the ticket number appended with the short description. You can modify the chat title.
Create an opening message	Option to provide an opening message to the user before beginning the interaction.
Choose your preferred chat client	Option to choose the default chat client. ○ Desktop Application – Open the chat interaction in Microsoft Teams desktop application. ○ Web Client – Opens the chat interaction in Microsoft Teams web client. The system remembers the selected option and will open the chats in the preferred chat client for all the further chat interactions.



5. Click **Start Chat**.

The Microsoft Teams app displays the chat title and the opening message provided by the agent.



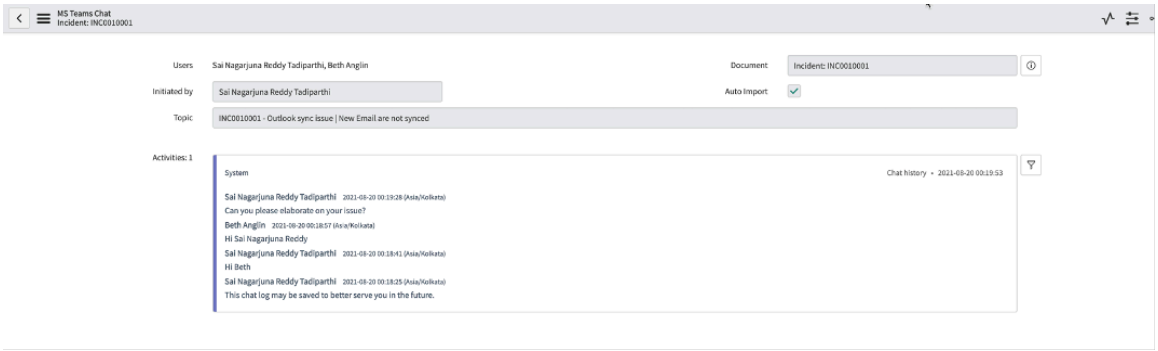
The system captures the work notes about the chat details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the agent initiates the chat from the record with the same user, the **Start Microsoft Teams Chat** appears as shown.

The system displays **Continue Chat** button to resume the conversation. However, if any other user is added, the chat modal displays the **Chat title** and the **Create an opening message** fields.

The interaction is only created when the conversation is with the requester. If the conversation doesn't include the requester, such as a conversation between the agent and a collaborator, an interaction is not created, but the Microsoft Teams chat record is still created.



A Microsoft Teams chat interaction is automatically created and you can access the chat details from the Activities log.

a. In the Activities log of the record, look for the comment that has the link to access the chat interaction.

b. Click the link.

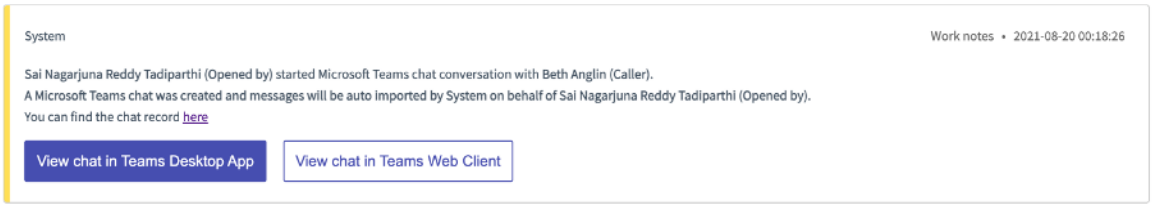
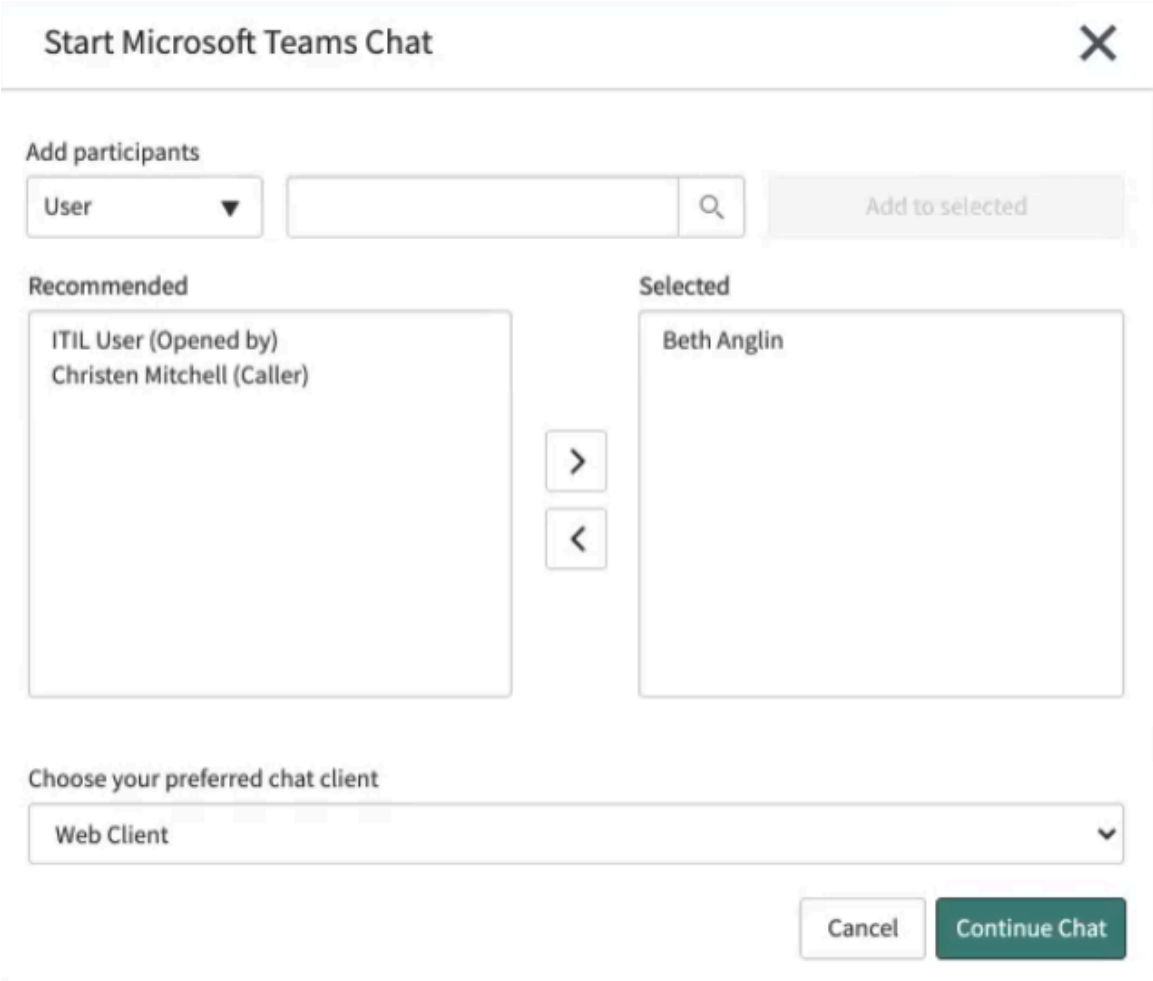
Create an opening message	Option to provide an opening message to the user before beginning the interaction.
Choose your preferred chat client	Option to choose the default chat client. ○ Desktop Application – Open the chat interaction in Microsoft Teams desktop application. ○ Web Client – Opens the chat interaction in Microsoft Teams web client. The system remembers the selected option and will open the chats in the preferred chat client for all the further chat interactions.



5. Click **Start Chat**.

The Microsoft Teams app displays the chat title and the opening message provided by the agent.



The system will capture the work notes about the chat details.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The chat transcript is stored in the **Activities** section.

Chat activities table

Field	Description
Users	Users associated with the chat
Document	Source record number
Initiated by	Agent who has initiated the chat interaction.
Auto Import	Status of the auto-import messages. If the option is not selected, the messages pertaining to the record will not be auto-imported.
Topic	Chat title
Activities	Chat transcript

Import messages from a ticket manually

You can import the conversation with a user from Microsoft Teams and append them in the **Comments** to store all the important messages in the ServiceNow instance.

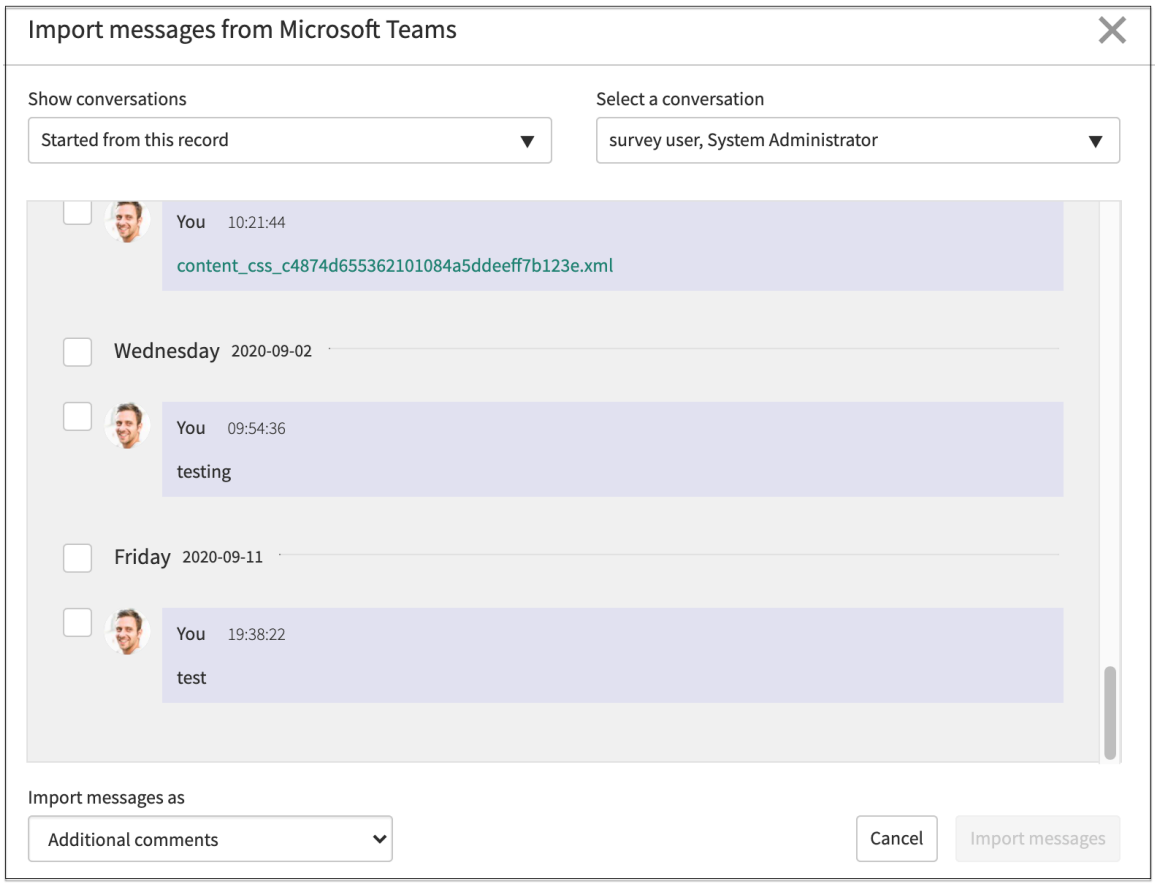
Before you begin

Role required: user

About this task

Importing messages helps agents to view the history of the ticket, allow the requester to see all discussions about their ticket in one place. This helps to capture the information required for post-ticket review and continuous improvement processes.

Procedure

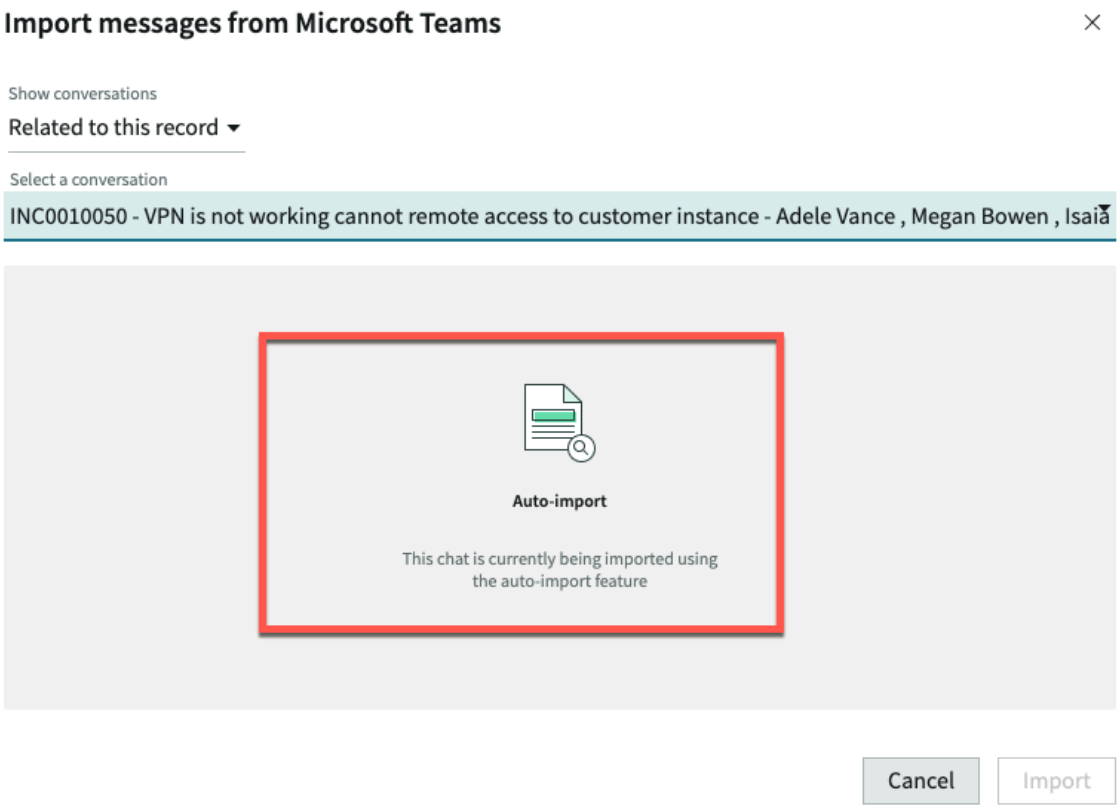


1. Navigate to an open ticket (Incident, change request, request item, HR case or a catalog task) in your ServiceNow instance.
2. Click **Import messages from Microsoft Teams**.
3. On the **Import messages from Microsoft Teams** form, fill in the fields:

Import messages from Microsoft Teams table

Field	Description
Show conversations	Choose from:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Field	Description
	○ Started from this record: Lists all the communication tasks created for the record. ○ List all conversations: Lists all conversations by the logged in agent.
Select a conversation	Choose a conversation to import the messages for the record.
Import messages as	○ **Additional comments**: The messages will be appended under Additional comments. ○ **Work notes**: The messages will be appended under Work notes.

4. Select the messages, files, and the images you would like to import and click **Import messages**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

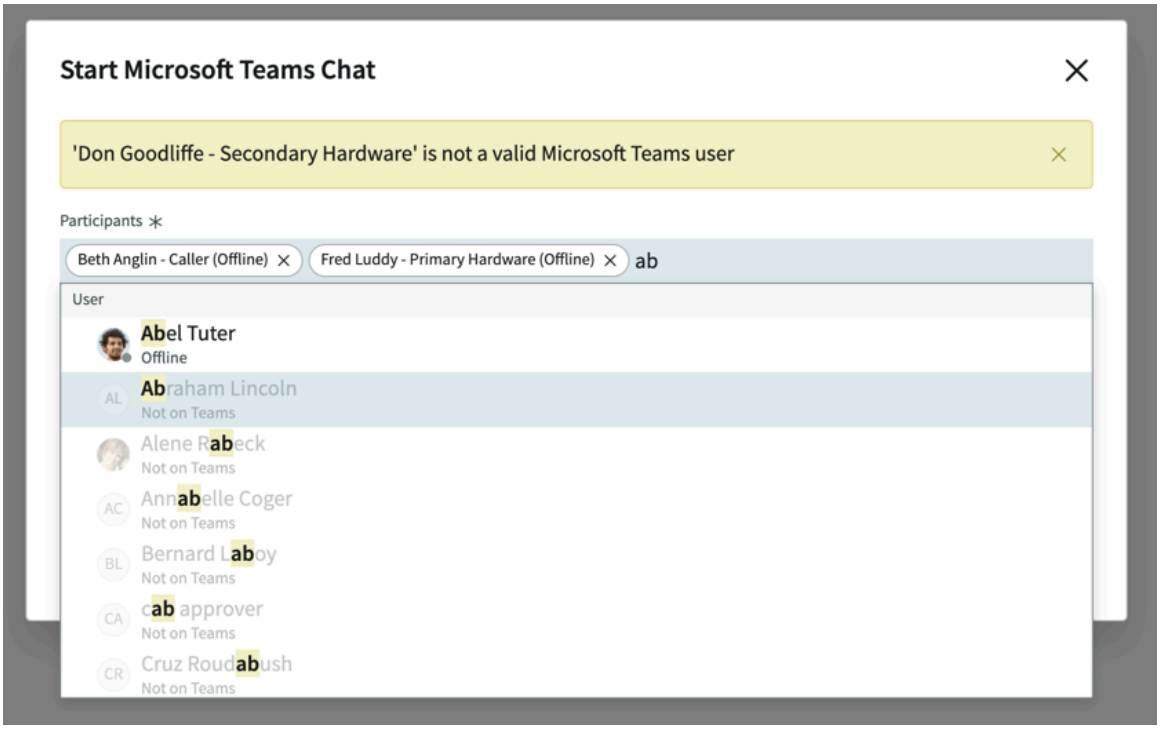
If you try to import the messages manually for a ticket that will automatically import the messages, the system displays a message that the chat is being imported using auto-import.

Request-based chat - Start and import chat from Workspace

Initiate a conversation with the requester to resolve the ticket.

Request-based chat - Start and import chat from field decorator

Interact with a requester in Microsoft Teams for an issue related to an incident, request item, change request, and a catalog task ticket to quickly resolve the ticket.



Before you begin

Role required: user with access to the respective records

Procedure

1. Navigate to an open ticket (an incident, a change request, a request item, an HR case, or a catalog task) in your ServiceNow instance.
2. Point to next to the **Opened for** field.
   The chat is initiated with the user in **Microsoft Teams**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

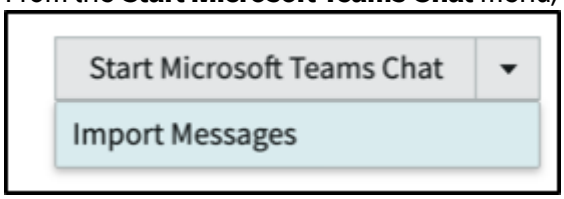
Import messages from Agent Workspace

You can import the conversation with a user from the agent workspace and append them in the **Comments** to store all the important messages in the ServiceNow.

Before you begin

Role required: user



Procedure

1. Navigate to an open ticket in your ServiceNow instance from agent work space.

Navigational path

Record	Description
Incident	Navigate to **Incident** > **Open**. Open the record that you want to work on.
Change Request	Navigate to **Change** > **Open**. Open the record that you want to work on.
Request Item	Navigate to **Requests** > **Open Requests**. Open the record that you want to work on.

2. From the **Start Microsoft Teams Chat** menu, select **Import messages**.

Note:
If you aren't logged in, you receive a prompt to log into Microsoft Teams.

3. Select the messages that you would like to import, then select **Import messages**.

Request-based chat - Start chat with guest user from a record

Start a Microsoft Teams chat with the guest user of an external and allowed domain through a record.

Before you begin

The guest user must be authenticated with chat access. For more information, see Enable chat access for guest users for self-configured app and Enable chat access for a guest user for pre-published app instances.

The guest users list is fetched from the Microsoft Azure AD. For more information, see Guest access in Microsoft Teams.

Role required: agent

About this task

For information about starting a chat with an external user who is not added in the allowed-guest domains list, see Add or invite people outside your Teams org to a chat.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Launch Microsoft Teams.
2. Navigate to **ServiceNow for Microsoft Teams** > **Employee Center** > **My Requests**.
3. Open the ticket that you want to work on in your ServiceNow instance.
4. On the form, fill in the fields.

Ticket form

Field	Description
Assignment group	Search and select **Teams group**.
Short description	Description of the chat purpose.

5. Right-click in the form header and select **Save**.
6. Select **Start Microsoft Teams Chat**.
7. Select the user that you want to chat with.

   You can select the requester and employees, or multiple guests from different domains.

8. Select **Start Chat**.

   On the web client, the domain associated Tenant ID appends to your Microsoft Teams URL.

   The chat opens in the Microsoft Teams application.

Result

All team members see an announcement message in the Microsoft Teams channel thread that the team owner has added a guest and the guest name is listed. A tag in the upper-right corner of the channel thread indicates the number of guests on the team and a **(Guest)** label appears next to each guest name.

Note:

A tag with the label **External** indicates that a user is guest and not present in the allowed-domain.

Request-based chat - Start and import chat as guest user from classic view

You can start a Microsoft Teams chat with an external organization user and import chat after you are invited to their chat.

The following configuration must be complete for a guest user from an allowed-domain to initiate or import chat.

- Enable chat access to a guest user
- Configure external collaboration for a guest user
- Add a guest user to the Microsoft Azure AD

For more information, see Enable chat access for guest users for self-configured app, Enable chat access for a guest user for pre-published app, and Guest access in Microsoft Teams.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

As a guest user, you can import chat only if you are present in the allowed-domain but you can initiate a chat. A tag with the label **External** appears by your name to indicate that you are a guest user and not present in the allowed-domain. For more information, see Add or invite people outside your Teams org to a chat.

Start a Microsoft Teams chat as a guest user

Start a Microsoft Teams chat as a guest user with an external organization user.

Before you begin

You must have received and accepted an invitation as a guest user either in email or through Microsoft Teams.

Role required: agent

About this task

This procedure is accomplished through the classic ServiceNow UI. For information about the same procedure accomplished through the workspace, see Request-based chat - Start and import chat from Start Microsoft Teams chat action.

Procedure

1. Launch Microsoft Teams.
2. Navigate to **ServiceNow for Microsoft Teams** > **Employee Center** > **My Requests**.
3. Open the ticket that you want to work on in your ServiceNow instance.
4. Select **Start Microsoft Teams Chat**.
5. Log in to your Microsoft email account if prompted.
6. Select the user that you want to chat with.

   You can select the requester, employees, or multiple guests from different domains.

7. Select **Start Chat**.

   On a web client, the domain-associated Tenant ID appends to your Microsoft Teams URL.

Result

The chat opens in the Microsoft Teams application.

Import a Microsoft Teams chat as a guest user

Import your Microsoft Teams chat with an external organization user as a guest user.

Before you begin

Role required: agent

About this task

This procedure is accomplished through the classic ServiceNow® user interface. For information about the same procedure accomplished through the workspace, see Import messages from Agent Workspace.

When a guest imports a chat, attachments are not uploaded to the record. Attachments appear as a link to the file on the Microsoft OneDrive application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

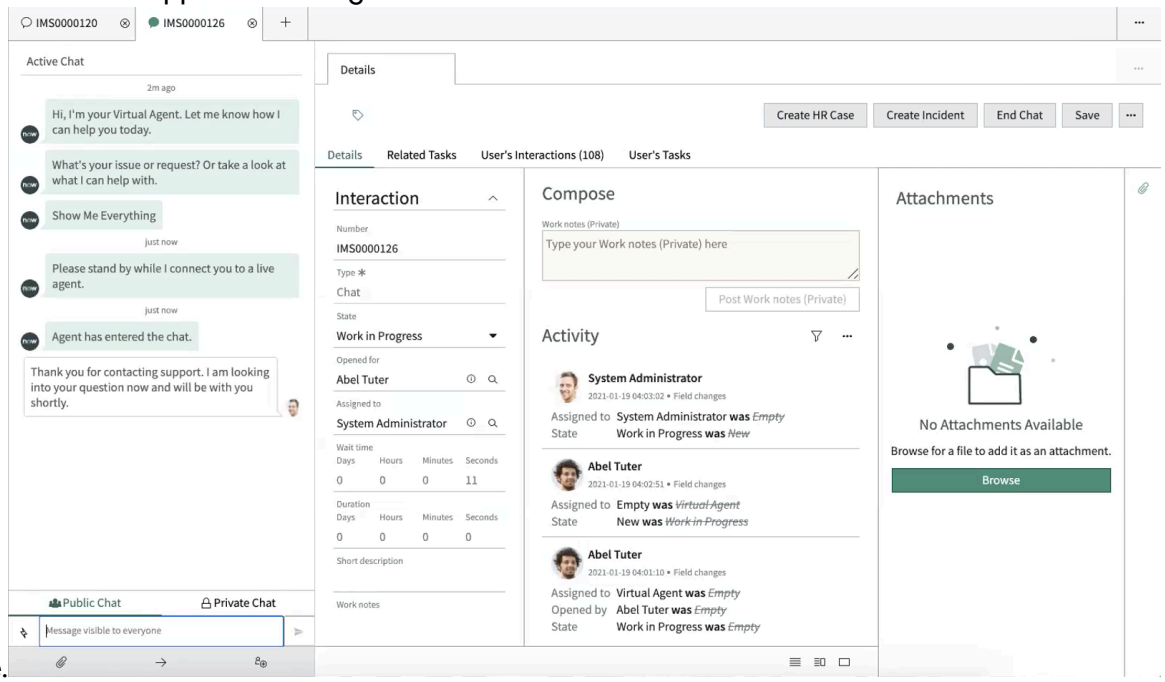
Procedure

1. Launch Microsoft Teams.
2. Navigate to **ServiceNow for Microsoft Teams** > **Employee Center** > **My Requests**.
3. Open the ticket that you want to work on in your ServiceNow instance.
4. Select **Import messages from Microsoft Teams**.
5. On the Import messages from Microsoft Teams form, select the **Show conversations** list and determine the conversations to display.
   - To list all the conversations created for the record, select **Started from this record**.
   - To list all conversations related to the logged-in agent, select **Started from this record**.
6. Select the **Select a conversation** list and choose the messages, files, and the images you want to import.
7. On the Import messages from Microsoft Teams form, select the **Import messages as** list and choose the location to append the imported messages.
   - To append the imported messages in the **Additional comments** field and allow customers to view messages, select **Additional comments**.
   - To append the imported messages in the **Work notes** field and keep the messages internal, select **Work notes**.
8. Select **Import**.

Promote chat to a call from workspace

As an agent, you can initiate a chat with the caller from the workspace to quickly resolve the issue.

Before you begin



Role required: itil, itil_admin

Procedure

1. Navigate to **All** > **Workspace Home** > **Inbox**.
2. From your inbox, click **Accept** to accept a chat.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Click the child interaction record to view the participants, call duration details.

Click meeting chat link to view the conversation occurred in Microsoft Teams.

Add communication plan from MIM workbench

You can create a new communication plan or add a new communication task to an existing communication plan from the workbench.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Ensure you have installed the required plugins to be able to use Major Incident Management (MIM) workbench. For more information, see ServiceNow for Microsoft Teams and Microsoft 365.

Role required: major_incident_manager

Procedure

1. Navigate to **All** > **Incident** > **Major Incidents** > **Open**.
2. Open the relevant major incident.
3. Click **View Workbench**.
4. Click **Communications** tab, and then click **Add** that appears in **Communication Tasks** section.
5. On the form, fill the fields.

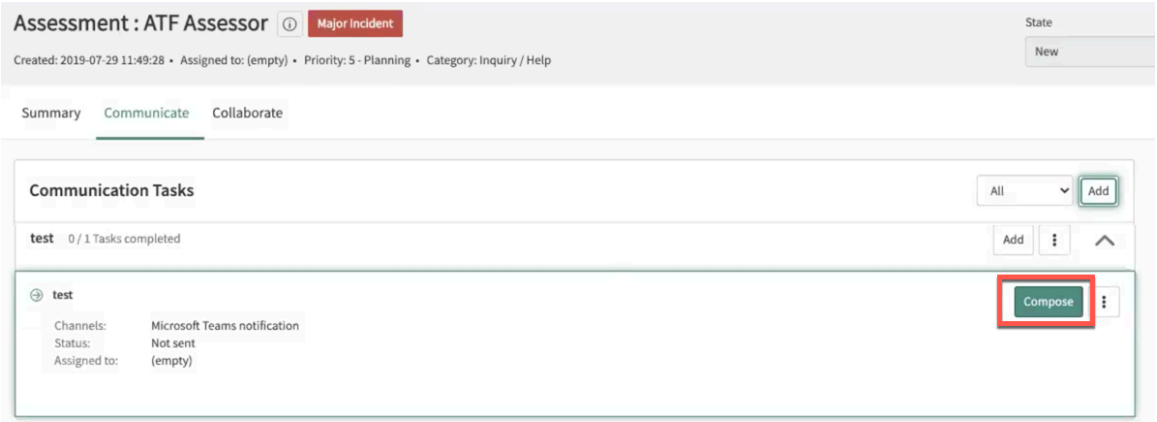
Create New template form

Field	Description
Communication Plan	List to select a new communication plan or to select an existing plan and add communication tasks to the plan.
Plan Short description	Brief description of what the communication plan is all about.
Task Short description	Brief description of what the communication task is all about.
Channels	Check box to select email, SMS, Microsoft Teams notification, or conference as mode of communication for the plan.
Frequency	Frequency at which a specific task must be executed. A task can be executed only once or on specific durations.
Due in (Minutes)	Time span when the task must be executed after the task initiates. For recurring tasks, it also indicates the time span after which the task must repeat.

6. Click **Next**.
7. In the **Manage Recipients** tab, add the users required to be involved in the major incident communication plan.
8. Click **Save**.

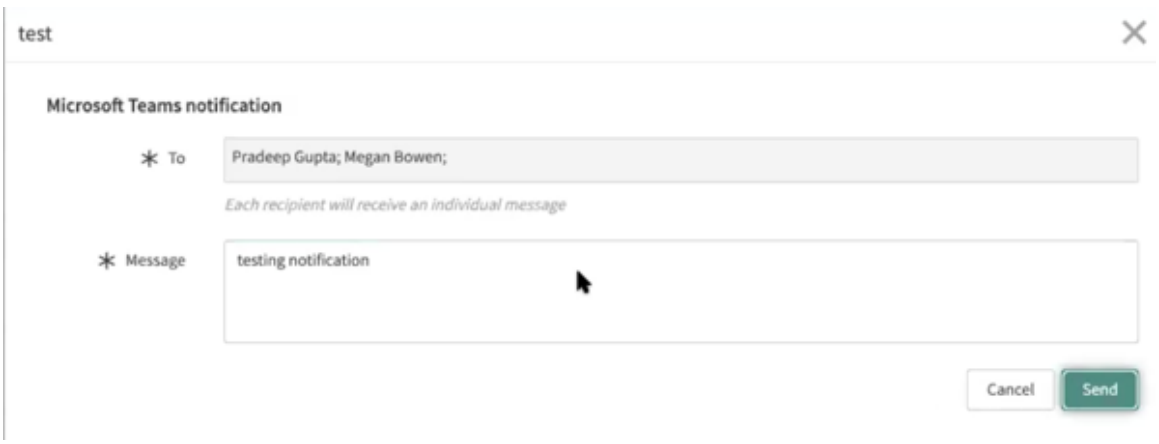
Send a notification from Major incident management workbench

Send a Microsoft Teams notification to the stakeholders associated with a major incident.



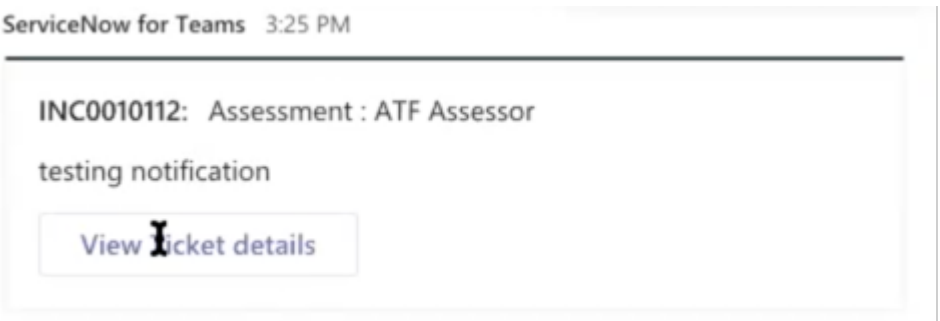
Before you begin

Role required: admin



Procedure

1. Navigate to **All** > **Incident** > **Major Incidents** > **Open**.
2. Open the relevant major incident.
3. Select **View Workbench**.
4. Select the **Communicate** tab.
5. In the Communication Tasks form section, select **Add**.
   The communication task appears.



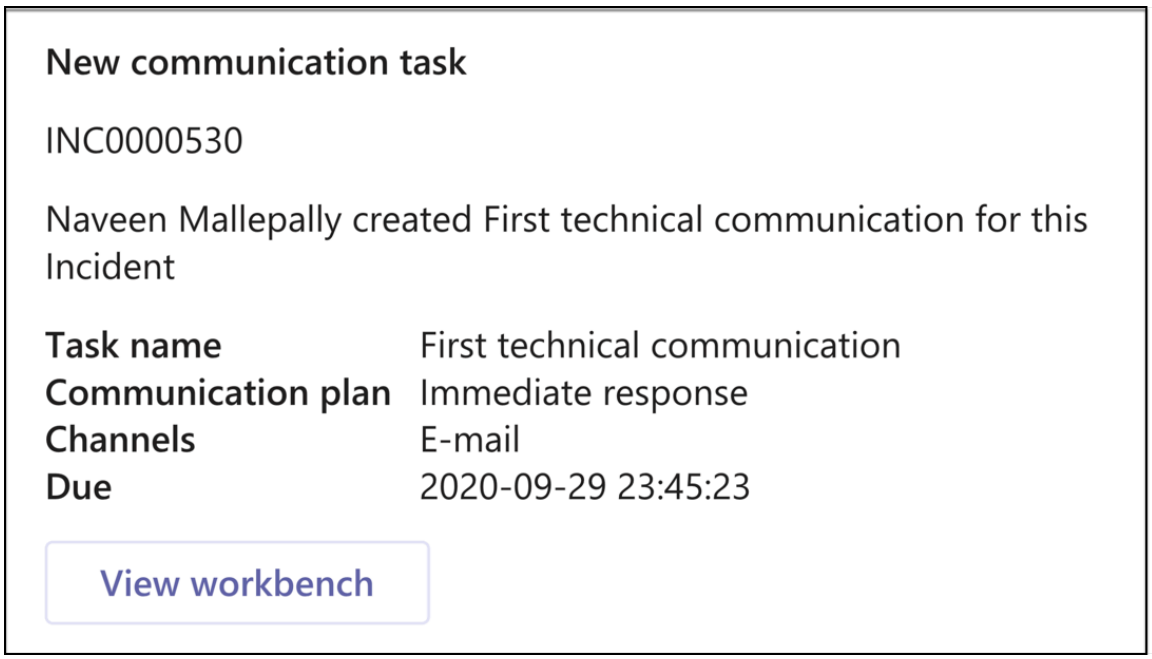
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Compose**.
7. In the Compose modal screen, enter the details for the notification.
   a. In the **To** field, enter the recipients associated with the communication task.
   b. In the **Message** field, enter the message for the notification.
   c. Select **Send**.

Result
The notification is sent to the recipients in Microsoft Teams. Recipients can select **View ticket details** to view the ticket in the ServiceNow instance.

View notifications for a major incident

View the notifications that are sent during specific events in a major incident. These notifications are sent to all the stakeholders associated with the major incident.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: major_incident_manager, agent

About this task
The following informational notifications are triggered for a major incident when:

- A communication task is created for a major incident
- SLA reaches 75%
- SLA is breached

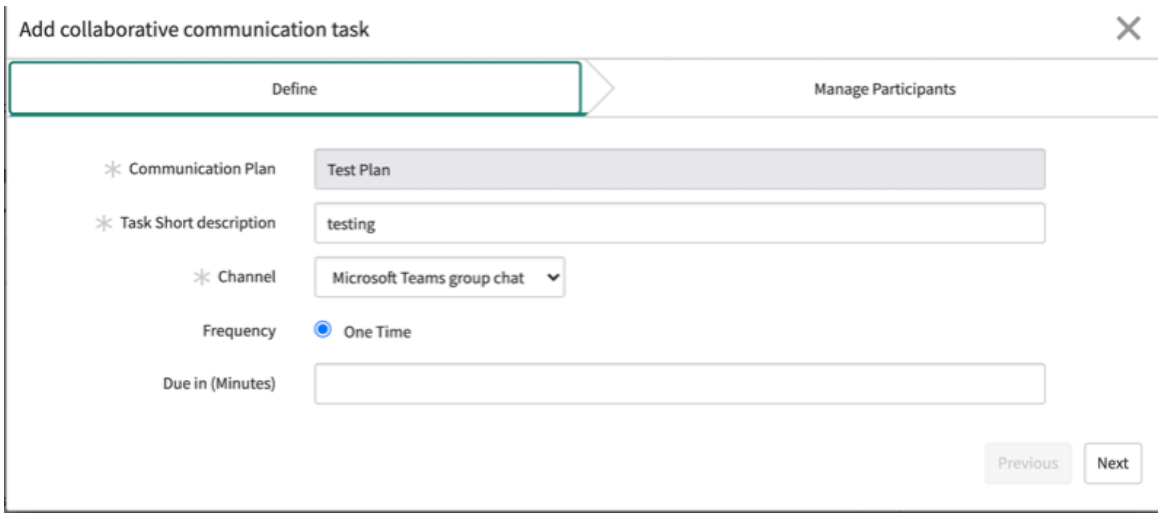
Procedure
1. Launch **Microsoft Teams** application.
2. Click **Activity**.
3. View the list of notifications feeds for the major incident.
4. Click the notification to view the details.

5. Click **View workbench** to view the ticket details in ServiceNow.

Add collaborative communication task from MIM workbench

You can create a communication plan or add a new communication task to an existing communication plan from the workbench.

Before you begin
Role required: major_incident_manager



Procedure
1. Navigate to **All** > **Incident** > **Major Incidents** > **Open**.
2. Open the relevant major incident.
3. Click **View Workbench**.
4. Click **Collaborate** tab.
5. Click **Add** that appears in **Communication Tasks** section.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. On the form, fill the fields.

Communication task form

Field	Description
Communication Plan	List to select a new communication plan or to select an existing plan and add communication tasks to the plan.
Task Short description	Brief description of what the communication task is all about.
Channels	Select Microsoft Teams group chat.
Frequency	Frequency at which a specific task must be executed. A task can be executed only once or on specific durations.
Due in (Minutes)	Time span when the task must be executed after the task initiates. For recurring tasks, it also indicates the time span after which the task must repeat.

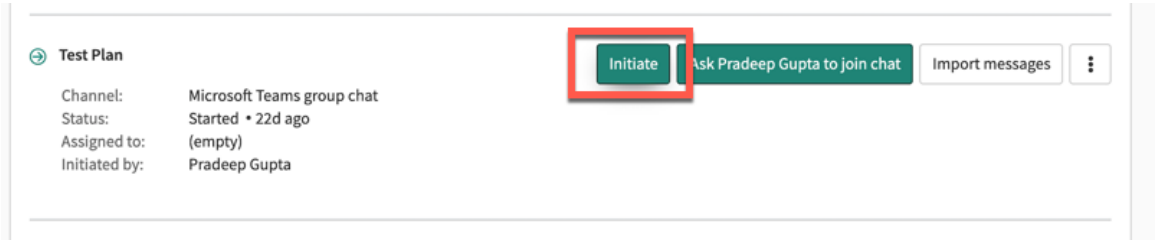
7. Click **Next**.
8. In the **Manage Recipients** tab, add the users required to be involved in the major incident communication plan.
9. Click **Add**.

   The task appears in the **Collaborate** tab.

Initiate Microsoft Teams group chat from MIM workbench

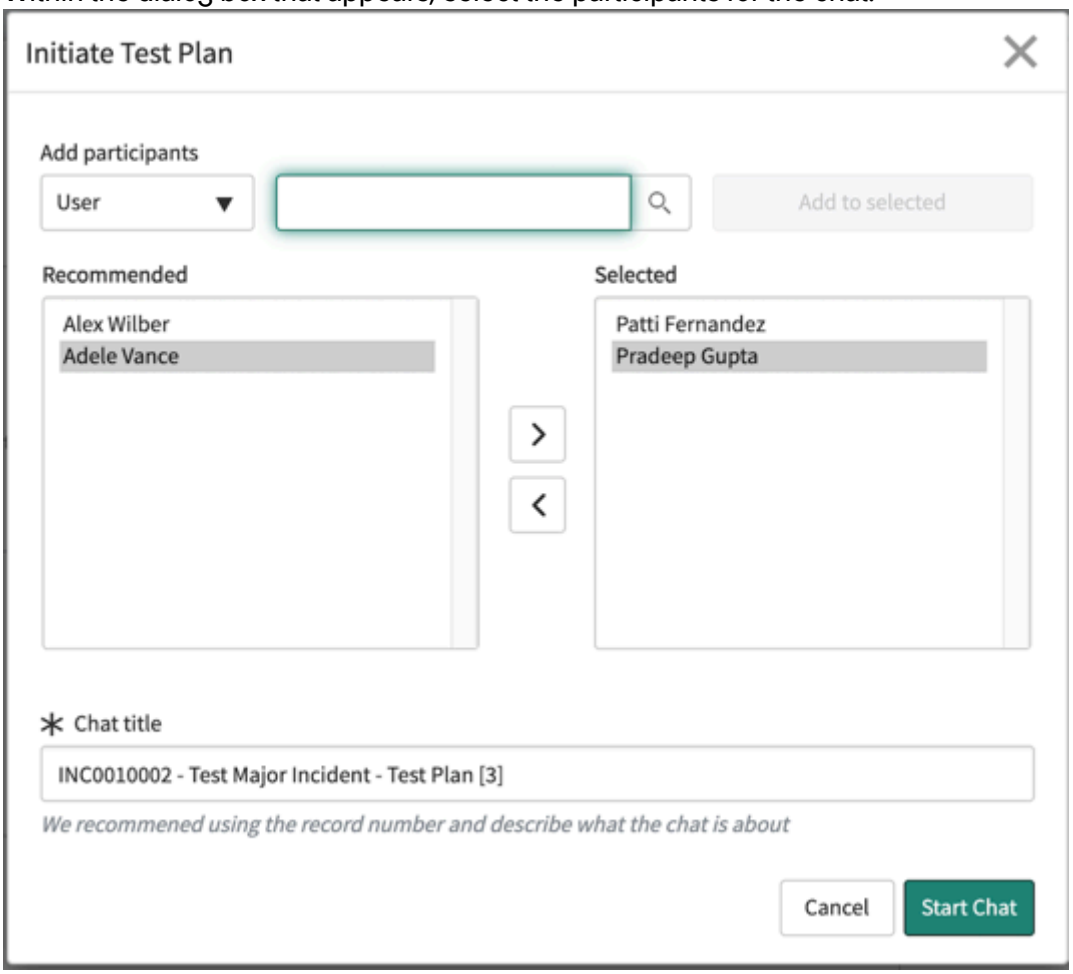
You can initiate a Microsoft Teams group chat from the MIM workbench to work towards the resolution of the task.

Before you begin



Role required: major_incident_manager

Procedure



1. Navigate to **All** > **Incident** > **Major Incidents** > **Open**.
2. Open the relevant major incident.
3. Click **View Workbench**.
4. Click **Collaborate** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Click **Initiate** button.

6. Within the dialog box that appears, select the participants for the chat.

The dialog box displays the **Recommended** and **Selected** participants for the chat.

All users from the assigned group for the ticket are in the recommended section by default. The user who initiates the chat is added to the selected list of participants.

7. Click **Add Participants** list to:
   - **Users**: Enter the name of the user to include in the chat.
   - **Group**: Enter the group of users to be included in the chat.

     If the On-Call Scheduling (com.snc.on_call_rotation) plugin is activated, the On-Call Scheduling users will be added when you select a group. On-Call Scheduling (com.snc.on_call_rotation) plugin isn't activated, it adds all users from the selected group.

   - **Email**: Enter a valid email of the participant to be included in the chat.
8. Click **Add to selected**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Chat Title** appears only if there are more than two participants in the chat.

9. Click **Start Chat**.

Result

The Microsoft Teams application opens the tab where the agent can chat with all the selected participants.

Use Microsoft Teams for Universal Request

Agents and employees can collaborate using the Microsoft Teams application to resolve universal requests effectively. Employees can create and modify universal requests using Microsoft Teams.

Employee actions

Employees can create and update universal requests and track existing universal requests by using Microsoft Teams.

Create a Universal request from Microsoft Teams

Create a universal request with the help of the Virtual Agent. You can access the Virtual Agent from the Microsoft Teams application.

Before you begin

Role required: none

Procedure

1. Launch the Microsoft Teams application.
2. Open the **Now Virtual Agent** chat window.
3. Enter your query in the chat window.
   The Virtual Agent prompts you to select the type of help that you need.
4. Select **Employee help request (Teams template)**.
5. Summarize your issue.
6. Confirm if the request contains any sensitive information.

Result

A universal request is created for the issue.

Update or cancel a universal request using Microsoft Teams

Update or cancel a universal request with the help of the Virtual Agent. You can access the Virtual Agent from the Microsoft Teams application.

Before you begin

Role required: none

Procedure

1. Launch the Microsoft Teams application.
2. Open the **ServiceNow for Teams** chat window.
3. Launch the Microsoft Teams application.
4. Open the **Now Virtual Agent** chat window.
5. Enter your query in the chat window.
   The Virtual Agent prompts you to select the type of help required.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Track Universal Request Status (Template)**.
7. Select the universal request that you want to track.
8. Select the appropriate responses to complete your request.
   For a sample Virtual Agent conversation, see Universal Request Virtual Agent conversation flows.

Agent actions

Work on the universal requests created by the employees. You can chat with employees, and import messages from the records or from the Agent Workspace.

Manage chat messages from a record

As an agent, interact with a requester in Microsoft Teams for issues related to universal requests assigned to you. Import the chat back to your instance.

Initiate chat with an employee from a record

As an agent, initiate chats with the requester or an employee from the watchlist of a universal request using Microsoft Teams.

Before you begin

The **Start Microsoft Teams Chat** button is available only if the following conditions are met:

- At least one of the users marked in the universal request has Universal Request integration with Microsoft Teams enabled.
- The universal request is not associated with a primary ticket.

Role required: agent

Procedure

1. Navigate to **Universal Request** > **All**.
2. Open the universal request you want to work on.
3. Select **Start Microsoft Teams Chat**.
4. Select the employee who you want to chat with.
   You can select the requester, or any other employee added to the watchlist. You can also select multiple employees.
5. Select **Start Chat**.

Result

The Microsoft Teams application opens the tab where you can chat with the selected employee.

Import messages from a universal request

As an agent, import a conversation with a requester from Microsoft Teams. Append the conversation in the activity stream of the record to store all the important messages in the ServiceNow instance.

Before you begin

Role required: agent

About this task

Importing messages helps you to view the history of the ticket. The requester can see all discussions about their ticket in one place. Importing helps to capture the information required for post-ticket review and continuous improvement processes.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Universal Request** > **All**.
2. Open the universal request that you want to work on.
3. In the **Related Links** section, select **Import messages from Microsoft Teams**.
   You receive a prompt to log in to Microsoft Teams if you are not logged in.
4. Click **Accept**.
5. On the form, fill in the fields.

Import messages from Microsoft Teams form

Field	Description
Show conversations	Option to show conversations. Choices are as follows: ○ **Started from this record**: Lists all the communication tasks created for the record. ○ **List all conversations**: Lists all conversations by the logged-in agent.
Select a conversation	Conversation whose messages are imported for the record.
Import messages as	Option to import messages into the record. Choices are as follows: ○ **Additional comments**: The messages will be appended under the Additional comments. ○ **Work notes**: The messages will be appended under the Work notes.

6. Select the messages, files, and images that you would like to import.
7. Click **Import messages**.

Manage chat messages from the Agent Workspace

As an agent, interact with a requester in Microsoft Teams from the Agent Workspace for issues related to an universal request. Import the chat back to ServiceNow.

Initiate chat with an employee from Agent Workspace

Chat with an employee from Agent Workspace through Microsoft Teams so that you can collaborate and resolve universal requests.

Before you begin

The **Start Microsoft Teams Chat** button is available only if the following conditions are met:

- At least one of the users marked in the universal request has Universal Request integration with Microsoft Teams enabled.
- The universal request is not associated with a primary ticket.

Role required: agent

Procedure

1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, select **Universal Request** > **All**.

3. Open the universal request that you want to work on.
4. Select **Start Microsoft Teams Chat**.
5. Select the recommended participants or add the email address of external participants.
   You can select the requester, or any other employee added to the watchlist. You can also select multiple employees.
6. Select **Start Chat**.

Result
The Microsoft Teams application opens the tab where you can chat with the selected employee.

Import messages from Agent Workspace

As an agent, import a conversation with a user from Microsoft Teams. Append the conversation in the activity stream of the record in the Agent Workspace. Store all important messages related to a universal request in the ServiceNow instance.

Before you begin
Role required: agent

Procedure
1. Navigate to **All** > **Workspace Experience** > **Workspaces** > **Agent Workspace Home**.
2. From the navigation list, select **Universal Request** > **All**.
3. Open the universal request you want to work on.
4. Select **Import Messages**.
   You receive a prompt to log in to Microsoft Teams if you are not logged in.
5. Click **Accept**.
6. On the form, fill in the fields.

Import messages from Microsoft Teams form

Field	Description
Show conversations	Option to show conversations. Choices are as follows: ○ **Started from this record**: Lists all the communication tasks created for the record. ○ **List all conversations**: Lists all conversations by the logged-in agent.
Select a conversation	Conversation whose messages are imported for the record.
Import messages as	Option to import messages into the record. Choices are as follows: ○ **Additional comments**: The messages will be appended under Additional comments. ○ **Work notes**: The messages will be appended under Work notes.

7. Select the messages, files, and images that you would like to import.
8. Click **Import messages**.

Use Microsoft Teams integration for Agent Experience

Allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Microsoft Teams.

Use Notify connector for Microsoft Teams

Allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Notify connector for Microsoft Teams.

Use Notify connector for Microsoft Teams with task records

Notify connector for Microsoft Teams enables you to initiate conference calls from task records such as incidents, problems, or change requests.

Start and manage a conference call from a task record

Make a conference call from a task record such as an incident, problem record, or change request in Microsoft Teams.

Before you begin

Role required: itil, itil_admin, or admin

Procedure

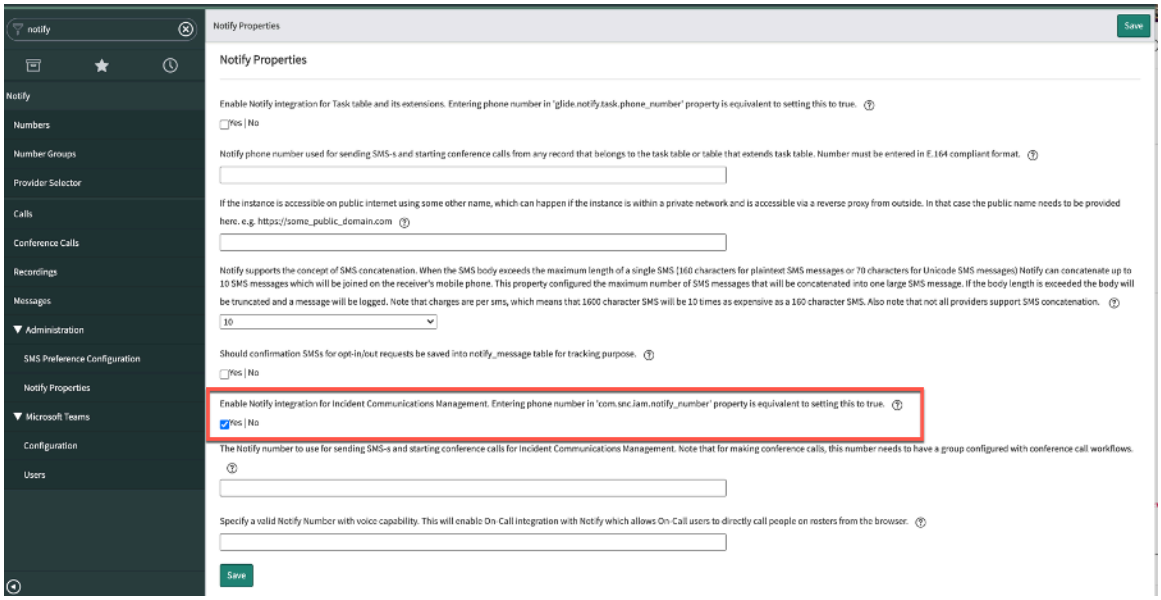
1. Navigate to any task record, such as an incident, problem, or change request.
2. Click the **Start conference call** related link.
3. In the dialog box, select the participants for the conference.

   All users from the User Contacts list in the task record are in the recommended section by default. The user who initiates the conference call is added to the selected list of participants.
4. After you finalize the participant list, click **Start**.

   A notification is sent to all the users in Microsoft Teams that a call has been initiated. Each user can accept the call to join the conference call.

   The host can view the users who have answered the call in Microsoft Teams.
5. Do one of the following activities.

Use Notify connector for Microsoft Teams with Incident Communication Management



Use Notify with an incident communication plan to start conference calls.

The property **com.snc.iam.enable_notify** must be enabled in Notify Properties to make calls from major incident record.

1. Navigate to **Notify** > **Administration** > **Notify Properties**.
2. Check the option **Enable Notify integration for Incident Communications Management. Entering phone number in 'com.snc.iam.notify_number' property is equivalent to setting this to true** (com.snc.iam.enable_notify).

   Right-click on the "Enable Notify integration for Incident Communications Management. Entering phone number in 'com.snc.iam.notify_number' property is equivalent to setting this to true" text and click **Edit Property** to view the property details.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Save**.

Start a conference call from an incident communication plan

Initiate a conference call in Microsoft Teams from an incident communication plan so you can discuss the resolution of an incident.

Before you begin

Role required: incident_communication_manager

Procedure

1. Navigate to **All** > **Incident Communications Management** > **Open**.
2. Open the relevant incident communication plan.
3. Click the **Initiate Conference Call** related link.
4. In the dialog box, select the participants for the conference.
5. After you finalize the participant list, click **Start Call**.

Result

A notification is sent to all the selected users in Microsoft Teams that a call is initiated. Each user can accept the call to join the conference call.

As the host, you can view the users who have answered the call.

Add participants to a conference call from the incident communication plan

Add a participant to a conference call on a task record from the incident communication plan.

Before you begin

Role required: ia_admin, or admin

Procedure

1. Navigate to **Incident Communications Management** > **All**.
2. Open the relevant incident communication plan.
3. Click the **Conference** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click (+) Participants under **Active Participants**.
5. In the dialog box, select the participants you want to add to the conference call.
6. Click **Add Participants**.

Result

A notification is sent to all the selected users in Microsoft Teams that a call is initiated. Each user can accept the call to join the conference call.

As the host, you can view the users who have answered the call.

Mute a participant in a conference call

Mute a participant in a conference call to avoid unnecessary background disruption.

Before you begin

This procedure assumes that there is an active conference call with one or more participants.

Role required: ia_admin, or admin

Procedure

1. Navigate to **Incident Communications Management** > **All**.
2. Open the relevant incident communication plan.
3. Click the **Conference** tab.
4. Click **Mute** next to the participant name you want to mute.

End a conference call made through an incident record

As a host or a user with the incident communication manager role, you can end the conference call.

Before you begin

Role required: ia_admin or admin

Procedure

1. Navigate to **Incident Communications Management** > **All**.
2. Open the relevant incident communication plan.
3. Click the **Conference** tab.
4. Click **End Conference Call**.

Result

When you end a call, only the host (bot) exits the call. The other participants still stay in the call until they manually disconnect. After the host (bot) exits the call, call details are no longer logged.

Use Notify connector for Microsoft Teams with a major incident

Initiate a conference call from the major incident workbench by inviting one or more users to join a call. The conference doesn't start until at least two participants join.

Notify administrators, major incident managers, or communications managers can manage conference calls.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Conference call records are stored in the Notify Conference Calls [notify_conference_call] table. Conference call participant records are stored in the Notify Conference Call Participants [notify_participant] table.

Initiate a conference call

As a participant in a major incident ticket, you can create a conference call from the record.

Before you begin

Role required: notify_admin, major_incident_manager, or communication_manager

Procedure

1. Navigate to **All** > **Incident** > **Major incidents** > **Open**.
2. Open the relevant major incident.
3. Click **View Workbench**.
4. Click the **Collaborate** tab.
5. Select the participants for the conference.
6. After you finalize the participant list, click **Start Call**.

Result

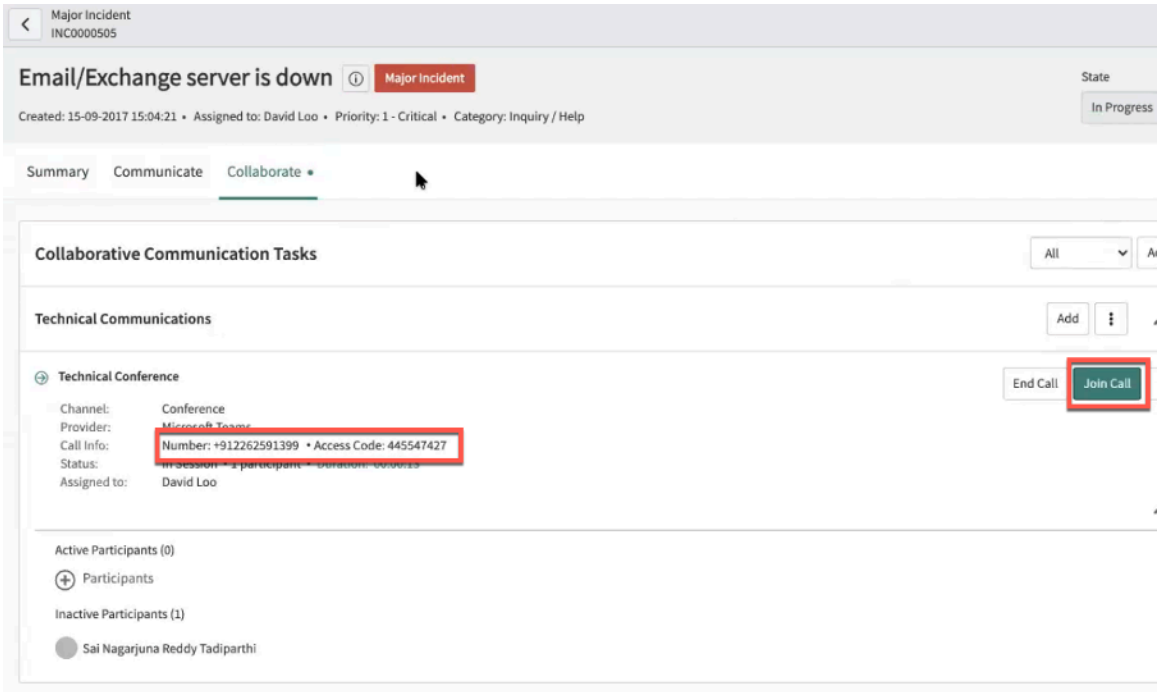
A notification is sent to all the users in Microsoft Teams that a call is initiated. Each user can accept the call to join the conference call.

As the host, you can view the users who have answered the call.

Join a conference call

After a conference call is initiated, as a logged-in user with the major incident manager role, you can join the conference call.

Before you begin



Role required: notify_admin, major_incident_manager, or communication_manager

Procedure

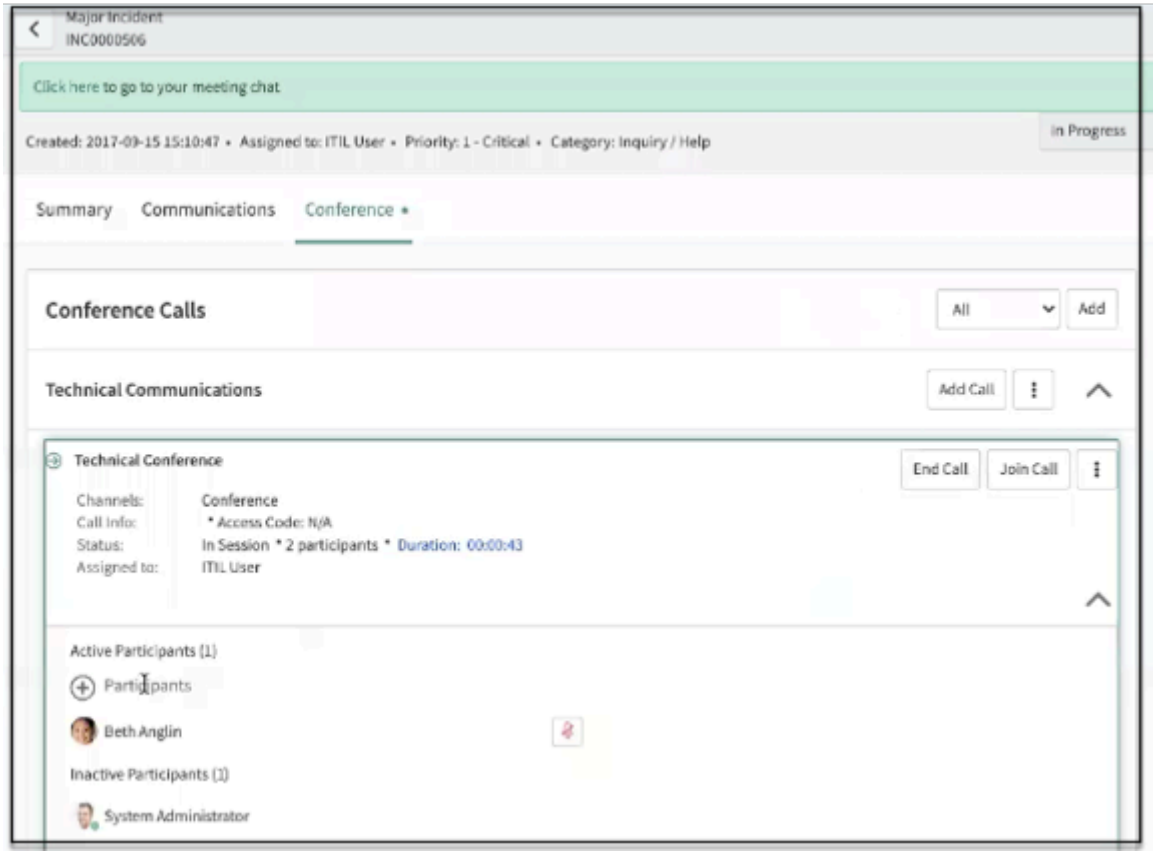
1. Navigate to **All** > **Incident** > **Major incidents** > **Open**.
2. Open the relevant major incident.
3. Click the **Collaborate** tab.
4. Do one of the following.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Join via phone number: Dial in the conference bridge number along with the access code shown in the workbench from your mobile.
- Join Call: Click the **Join Call** to join the ongoing conference call.

Add participants to a conference call

Add a participant to a conference call to participate in the discussion to resolve the major incident.



Before you begin

Role required: notify_admin, major_incident_manager, or communication_manager

Procedure

1. Navigate to **All** > **Incident** > **Major incidents** > **Open**.
2. Open the relevant major incident.
3. Click the **Collaborate** tab.
4. Click (+) Participants under **Active Participants**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the dialog box that appears, select the participants for the conference.
6. Click **Add Participants**.

Result

A notification is sent to all the users in Microsoft Teams that a call is initiated. Each user can accept the call to join the conference call.

As the host, you can view the users who have answered the call.

Mute participants from a major incident conference call

Mute a participant from the conference call to avoid unnecessary background disruption.

Before you begin

Before starting this procedure, ensure that there is an active conference call with one or more participants.

Role required: notify_admin, major_incident_manager, or communications_manager

Procedure

1. Navigate to **All** > **Incident** > **Major incidents** > **Open**.
2. Open the relevant major incident.
3. Click the **Collaborate** tab.
4. Click **Mute** next to the participant name you want to mute.

End a conference call from a major incident

As a host or participant with the major incident manager role, you can end the conference call.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: notify_admin, major_incident_manager

Procedure
1. Navigate to **All** > **Incident** > **Major incidents** > **Open**.
2. Open the relevant major incident.
3. Click the **Collaborate** tab.
4. Click **End Call**.

Result
When you end a call from ServiceNow, only the host (bot) exits the call. The other participants still stay in the call until they manually disconnect. The call details are no longer logged after the host (bot) exits the call.

Manage calls in Microsoft Teams

Manage conference calls in Microsoft Teams by muting or unmuting participants, or ending the call.

Mute participants from Microsoft Teams

As a manager or a conference call host, you can mute conference participants to avoid distraction.

Before you begin
Ensure that there is an active conference call with one or more participants.

Role required: notify_admin, major_incident_manager, communications_manager, itil_admin

Procedure
1. Open the active conference call in Microsoft Teams.
2. Click the participants icon () in the toolbar.
3. Mute an individual participant or mute all participants.

End a call from Microsoft Teams

As the host or a user with the manager role, you can end a conference call after the discussion ends.

Before you begin
Role required: notify_admin, major_incident_manager, communications_manager, or itil_admin

Procedure
1. Open the active conference call in Microsoft Teams.
2. Click more options icon () in the toolbar.
3. Click **End meeting**.
4. Click **Confirm** in the dialog box.

Result
All users are terminated from the conference call.

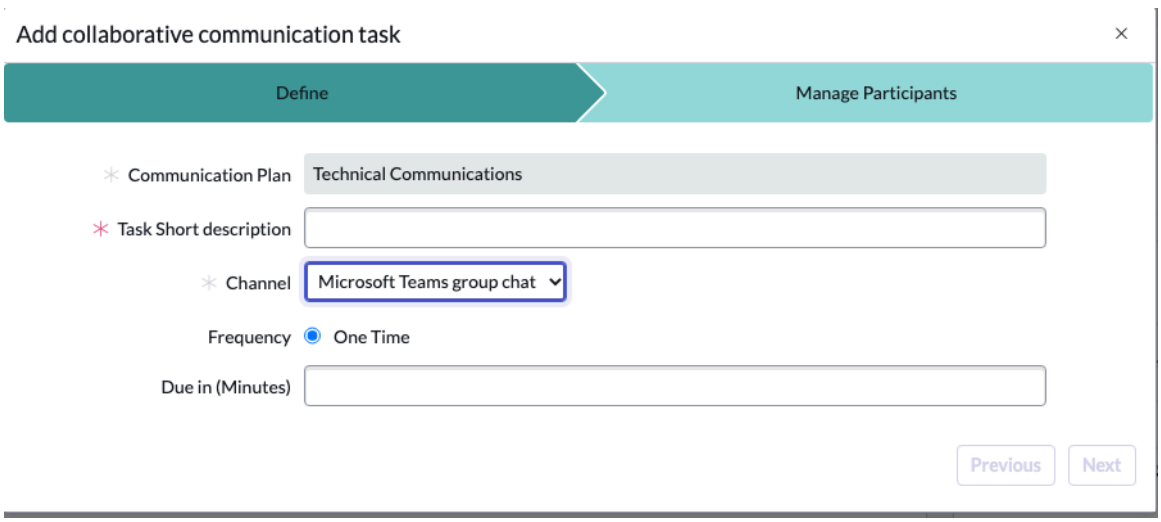
Use Microsoft Teams Meeting Extensions

Allow the agents to work and manage the major incidents from Major Incident Management (MIM) workbench through Microsoft Teams Meeting Extensions.

Manage calls using Meeting Extensions

Use Meeting Extensions to start conference calls to discuss about the resolution for a major incident record.

Before you begin



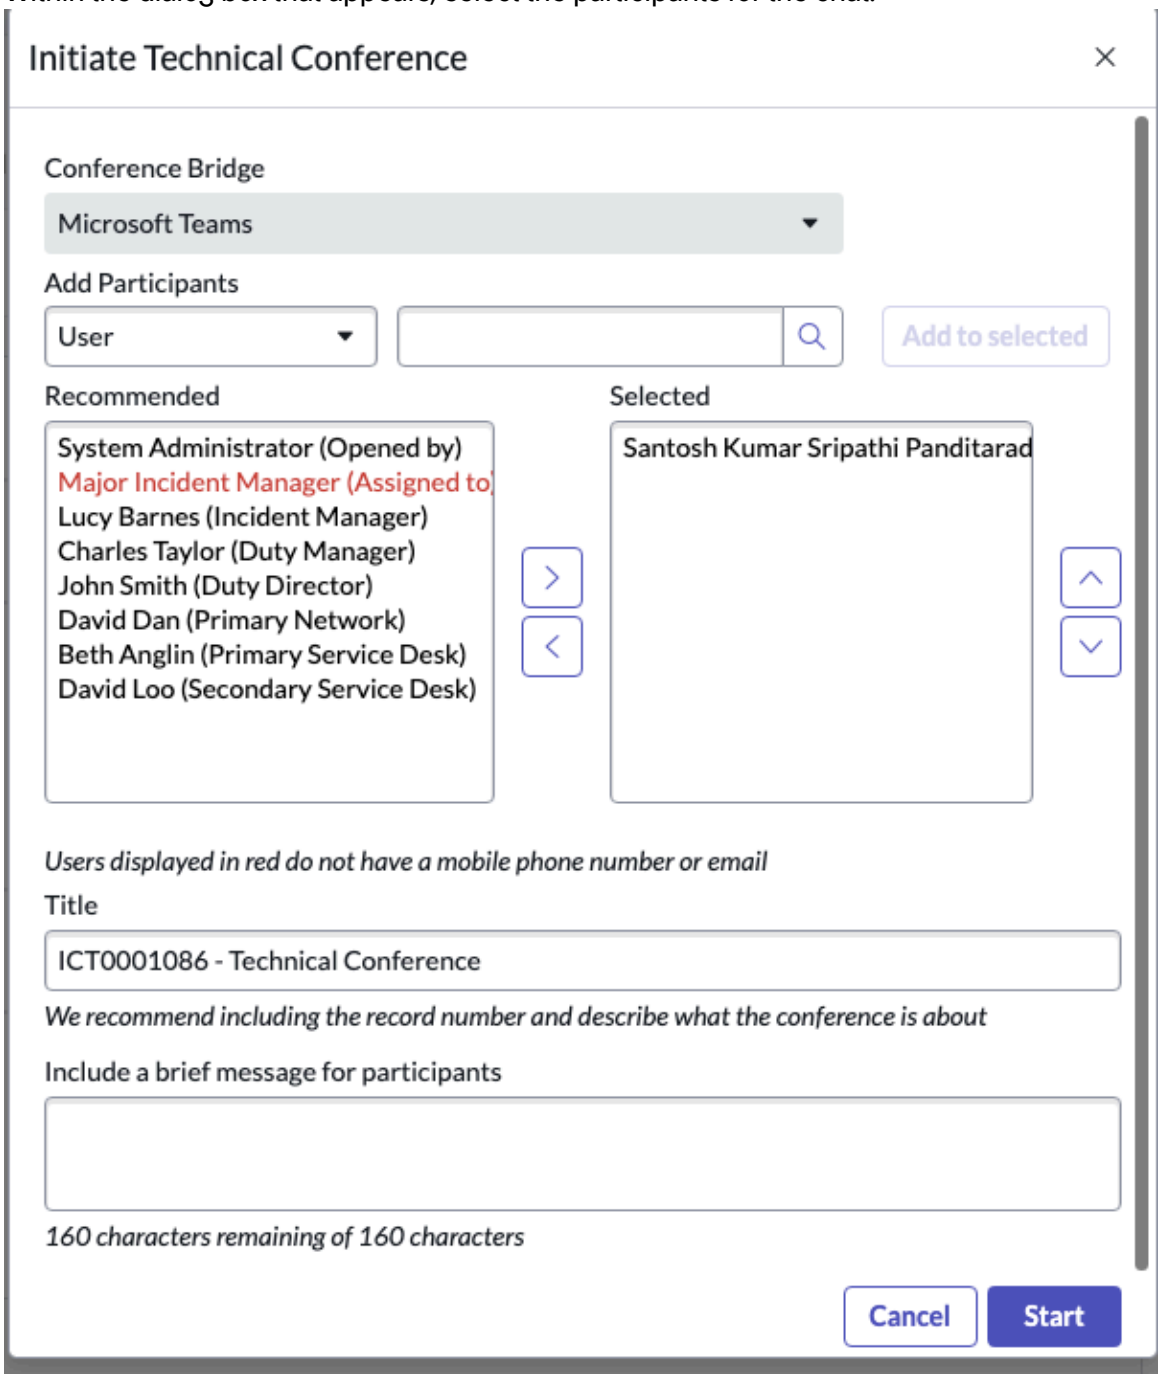
Role required: itil, itil_admin, or admin

Procedure

1. Navigate to **All** > **Incident** > **Major incidents** > **Open**.
2. Open the relevant major incident.
3. Click **View Workbench**.
4. Click **Collaborate** tab.
5. Click **Add** that appears in **Communication Tasks** section.
6. On the form, fill the fields.

Communication task form

Field	Description
Communication Plan	List to select a new communication plan or to select an existing plan and add communication tasks to the plan.
Task Short description	Brief description of what the communication task is all about.
Channels	Select Microsoft Teams group chat.
Frequency	Frequency at which a specific task must be executed. A task can be executed only once or on specific durations.
Due in (Minutes)	Time span when the task must be executed after the task initiates. For recurring tasks, it also indicates the time span after which the task must repeat.



7. Click **Next**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. In the **Manage Recipients** tab, add the users required to be involved in the major incident communication plan.
9. Click **Add**.

   The task appears in the **Collaborate** tab.
10. Click **Initiate** button.
11. Within the dialog box that appears, select the participants for the chat.

   The dialog box displays the **Recommended** and **Selected** participants for the chat.

   All users from the assigned group for the ticket are in the recommended section by default. The user who initiates the chat is added to the selected list of participants.
12. Click **Add Participants** list to:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

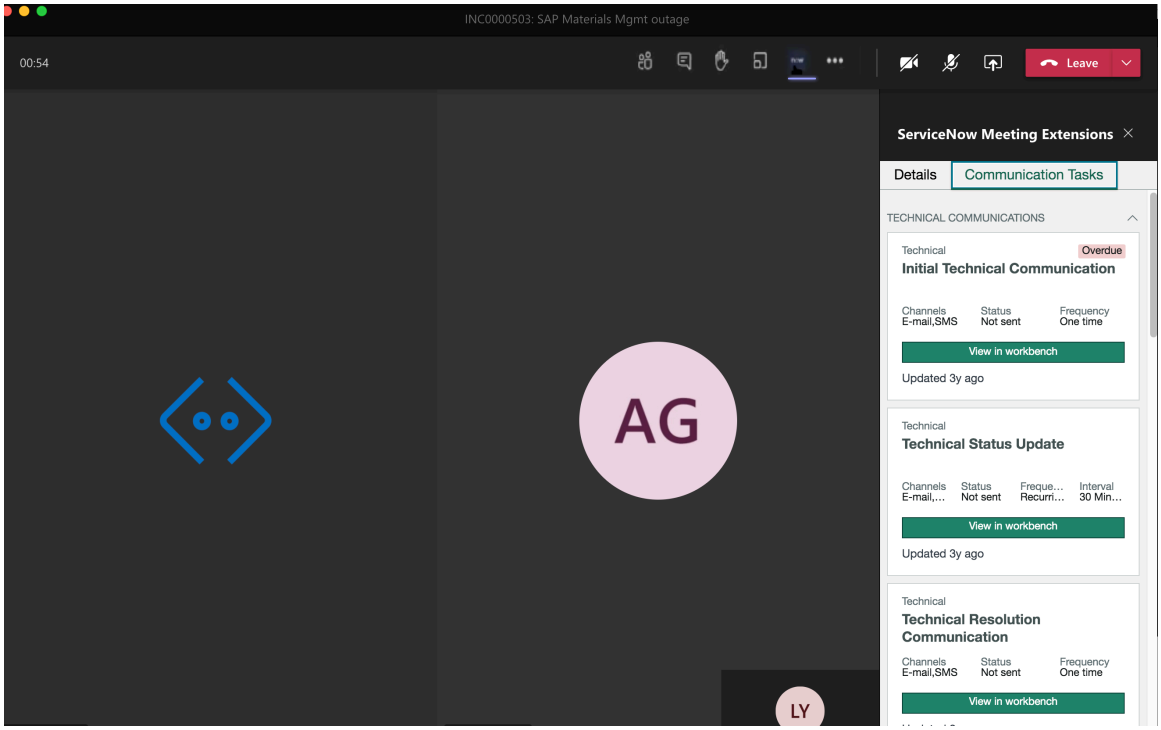
- **Users**: Enter the name of the user to include in the chat.
- **Group**: Enter the group of users to be included in the chat.

  If the On-Call Scheduling (com.snc.on_call_rotation) plugin is activated, the On-Call Scheduling users are added when you select a group. On-Call Scheduling (com.snc.on_call_rotation) plugin isn't activated, it adds all users from the selected group.

- **Email**: Enter a valid email of the participant to be included in the chat.

13. Click **Add to selected**.
    The **Chat Title** appears only if there are more than two participants in the chat.
14. Click **Start**.

    The Microsoft Teams application opens the tab where the agent can chat with all the selected participants.



15. Click  to toggle between show and hide conversation.
16. Click **ServiceNow Meeting Extensions** tab.

- **Details** tab: Displays the details of the major incident. Click **View in workbench** to open the major incident in ServiceNow.
- **Communication Tasks** tab: Displays the communication tasks of this major incident.

17. Click **Communication Tasks** tab.

ServiceNow for Microsoft Teams integration API permissions for Request-based chat and SSO

Following are API permissions requested by the ServiceNow® integration with Microsoft Teams for Request-based chat and SSO.

API Permissions for Request-based chat and SSO

App	API Permission	Description
Request-Based Chat	Offline_access (delegated) (Application)	ServiceNow® stores an access token for each user, which allows them to re-authenticate with ServiceNow, within Microsoft Teams, without having to go through a login prompt. Offline access allows us to automatically refresh the access token.
	Chat.ReadWrite (delegated)	The Read part of the Chat.ReadWrite permission allows us to import request-based chats from Microsoft Teams. The Write part of the Chat.ReadWrite permission is used in the “Start Chat” screen, where an opening message is provided on behalf of the agent.
	User.Read (delegated)	This permission is automatically added whenever an app is created to read the basic information of the user like name, email-id.
	User.ReadBasic.All (delegated)	This permission is required to obtain the names and Microsoft Azure IDs of users. ServiceNow stores the Azure ID in order to create chats on behalf of users and import chats on their behalf.
	Files.Read.All (delegated)	This permission is used when importing request-based chats from Microsoft Teams. It allows attachments to be imported, as part of the Microsoft Teams chat.
	ChatMember.ReadWrite (delegated)	When a request with a Teams chat is set to inactive, participants are automatically removed from the corresponding chat. This permission is required to remove the chat participants.
	Chat.Create (delegated)	Permission used in the creation of reauthenticatequest-based chats.
	Chat.ReadBasic (delegated)	This permission is used when importing request-based chats. It allows us to display which participant sent each message in the chat.
	Presence.Read.All (Delegated)	This permission is used when starting a Microsoft Teams chat to get informed of the presence of each user who will be added to the chat. This allows users to know real time status of chat participants before adding them to the group chat.
	User.Read.All (Application)	This permission is used in Guest access feature, where a guest member can also start a chat. Microsoft does not allow a Guest Token (with delegated permission) to access the '/users' API end point. So, the Application permission is needed to fetch details of Microsoft Azure users and map the UPN with ServiceNow users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

API Permissions for Request-based chat and SSO (continued)

App	API Permission	Description
Tab SSO	User.Read (delegated)	This permission enables the user to authenticate into a ServiceNow Portal embedded in Microsoft Teams.
	Offline_access (delegated)	This permission is required for the use of Tab SSO, to enable user authentication with a Microsoft Teams tab.
	openid (delegated)	This permission is required for accessing the ID tokens.
	email (delegated)	This permission is required to add the user's primary email address to the ID token.
	TeamsActivity.Send (delegated)	This permission is required to send a team work activity to user.
	profile (delegated)	This permission is required for giving the basic user details.

ServiceNow for Microsoft Teams integration API permissions for Notify connector and Meeting Extensions

Following are API permissions requested by the ServiceNow® integration with Microsoft Teams for Notify connector and Meeting Extensions.

API Permissions for Notify connector and Meeting Extensions

App	API Permission	Description
Notify connector for Microsoft Teams	Users.Read.All (Application)	Allows the app to get the details of the users, such as their Azure ID, which is required to start the meeting.
	OnlineMeetings.ReadWrite.All (Application)	Permission required to initiate an online meeting.
	Calls.InitiateGroupCall.All (Application)	Permission required to invite multiple participants to a call on behalf of a Bot.
	Calls.JoinGroupCall.All (Application)	Permission allows the bot to join the meeting as a participant. In order to read call details, the bot must first be a meeting participant.
	Calls.JoinGroupCallAsGuest.All (Application)	Allows the app to anonymously join group calls and scheduled meetings in your organization, without a signed-in user. The app will be joined as a guest to meetings in your tenant.
Meeting Extensions	TeamsAppInstallation.ReadWriteForChat.All (Application)	Permission required to add our app to an online meeting, as part of Meeting Extensibility.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

API Permissions for Notify connector and Meeting Extensions (continued)

App	API Permission	Description
	TeamsTab.ReadWriteForChat.All (Application)	Permission allows the app to open a tab with incident details within a meeting as part of Meeting Extensibility.

ServiceNow for Zoom

The ServiceNow® integrations with Zoom helps you create a better, more connected experience for users. Employees get seamless self-service without having to leave the Zoom client, and agents can resolve cases faster using Zoom chat, video, and telephony tools.

Key features

ServiceNow for Zoom includes the following integrations for various use cases.

ServiceNow for Zoom integrations

Objective	Requirements	Capabilities
Use ServiceNow Virtual Agent with#Zoom Team Chat	• IT Service Management Pro and above • HR Service Delivery Pro and above To implement ServiceNow Virtual Agent with Zoom, see Using the Now Virtual Agent app.	• Enabling ServiceNow Virtual Agent on Zoom provides access to all Virtual Agent capabilities directly via Zoom Team Chat. • Supports Virtual Agent features such as designer controls for creating conversations, sending notifications, and providing AI Search results. • Enables employees to view and act on actionable notifications.
Enhance employee experience by integrating Employee Center with the Zoom application	Available to all customers using the Employee Center. To access Employee Center in the Zoom application, see Employee Center for Zoom.	Embedding Employee Center within Zoom enables employees to access the portal without leaving the Zoom client.
Improve agent productivity by integrating ServiceNow with Zoom Team Chat	Pre-integrated with IT Service Management. Can also be integrated with HR Service Delivery and other Enterprise Service Management applications.	• Enables agents to initiate a Zoom chat with an employee from a ticket and then import the chat transcript back to the ticket as a comment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow for Zoom integrations (continued)

Objective	Requirements	Capabilities
	Collaboration services. For information about Collaboration services, see Collaboration services.	• Enables employees with specific permissions to view Zoom chats from a task record.
Enable agents to collaborate on tickets with Zoom Meetings	Notify plugin To implement Notify connector for Zoom, see Notify Zoom connector.	Expanding Notify with a Notify Zoom Connector enables agents to manage and initiate a Zoom meeting directly from a ticket.
Build custom integrations	For information about building custom integrations, see Zoom spoke.	Create custom integrations using Zoom spoke.

Get started

Explore  Learn about how agents and employees use Collaboration services for Zoom.	Configure  Plan and configure your implementation.	Integrate  Extend Zoom capabilities by integrating with other applications.
Use  Initiate and import Zoom chat messages.	Reference  Get details about components like Zoom APIs.	

Exploring Collaboration services for Zoom

Collaboration services for Zoom provides employees with seamless self-service without leaving the Zoom client and enables agents to resolve their task records faster.

Collaboration services for Zoom is pre-integrated with IT Service Management. It can also be integrated with HR Service Delivery and other Enterprise Service Management applications.

Collaboration services for Zoom Team Chat

Collaboration services for Zoom offers the following capabilities:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Allows agents and employees to collaborate to resolve a ticket.
- Enables agents to initiate a Zoom Team Chat with an employee from a task record.
- Enables agents to import the Zoom Team Chat transcript back to the task record as a comment.
- Enables employees with specific permissions to view Zoom Team Chat from a task record.

Collaboration services for Zoom Team Chat

Collaboration services for Zoom helps employees to interact with agents and resolve their IT-related issues from within the Zoom application.

Collaboration services for Zoom offers the following capabilities:

- Allows agents and employees to collaborate to resolve a ticket.
- Enables agents to initiate a Zoom Team Chat with an employee from a task record.
- Enables agents to import the Zoom Team Chat transcript back to the task record as a comment.
- Enables employees with specific permissions to view Zoom Team Chat from a task record.

Configuring Collaboration services for Zoom

Set up your ServiceNow instance to integrate with the Zoom application.

To connect your ServiceNow instance to your Zoom application and to authorize, you must have the Zoom admin role along with the ServiceNow admin role.

Set up Zoom spoke

Integrate your Zoom account with your ServiceNow® instance. Create a custom OAuth application in Zoom and authenticate requests from ServiceNow.

For complete information about setting up a Zoom spoke, see Zoom spoke.

Enable Zoom chat integration

Enable the Zoom Team Chat feature on your ServiceNow® instance by setting the related system properties.

Before you begin

Ensure you have installed and set up the latest version of the Zoom spoke (Zoom spoke v 4.0.3 or a higher version) application and Collaboration services plugin (sn_tcm_collab_hook) (Collaboration services v 3.7.0 or a higher version).

Role required: admin

Procedure

1. In the navigation filter, enter `sys_properties.list`.
2. In the Name search field of the System Properties [sys_properties] table, enter `sn_tcm_collab_hook.enable_zoom_chat_integration`.
3. Select the system property **sn_tcm_collab_hook.enable_zoom_chat_integration**.
4. In the Value field, enter **true**.

Note:

The Value field entry is false by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Set the Read roles value to **admin**.
6. Select **Update**.

Result
The Zoom Team Chat feature on the ServiceNow instance is enabled.

Install fix-script for Collaboration services for Zoom

Install the *fix_script_start_chat_field_decorator_IT* in the ServiceNow instance to display **Start Zoom Chat** field decorator/icon in the ticket to initiate a chat with the requester.

Before you begin
Role required: admin

Visit the app store Collaboration Services and download the update set *fix_script_start_zoom_chat_field_decorator.xml*.

Procedure
1. Navigate to **System Update Sets** > **Retrieved Update Sets** > **Related Links** > **Import Update Set from XML**.
2. On the Import XML form, do the following.
   a. Select **Browse**.
   b. Select *fix_script_start_zoom_chat_field_decorator.xml* XML file.
   c. Select **Upload** to upload the XML file.
3. Navigate to **System Update Sets** > **Retrieved Update Sets**.
4. Select **Fix script to add start zoom chat field**.
5. Select **Preview Update Set**.
6. Select **Commit Update Set**.

   The Fix script to add start Zoom chat field decorator will be in Committed state.
7. Navigate to **System Definition** > **Fix Scripts**.
8. In the **Name** search field, enter `Fix script to add start zoom chat field`.
9. Click **Fix script to add start zoom chat field** fix script.
10. Select **Run Fix Script**.

    The icon is displayed as a field decorator in a record.

Integrating and using ServiceNow® with Zoom

Collaboration services for Zoom Team Chat enables agents to initiate chat with employees and import the chat, and enables employees to view and receive chat service from within the Zoom application.

Collaboration services for Zoom Team Chat offers the following functionality:

- Agents can initiate a Zoom chat with an employee from a task record.
- Agents can import the Zoom chat transcript back to the task record as a comment.
- Employees can view and receive the task record resolution service from within the Zoom application.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enhance employee experience by integrating ServiceNow® with Zoom

ServiceNow integration with Zoom helps employees to interact with agents and resolve their IT-related issues using Zoom.

Starting and importing a Zoom Team Chat

Initiate a Zoom Team Chat conversation with the requester to resolve the ticket and import the chat as task record comments.

Start a Zoom Team Chat

Start a Zoom Team Chat with an employee through an open ticket to resolve an incident, request item, and change request.

Before you begin

You must have the write role to use the#Start Zoom chat #feature for incident, request, and change request tasks. This role is available when you activate the IT Service Management role plugins or for all instances by default.

Record and related configuration role

Record	Role	Plugin
Incident	sn_incident_write	ITSM Roles - Incident Management (com.snc.itsm.roles.incident_management) plugin
Change Request	sn_change_write	ITSM Roles — Change Management (com.snc.itsm.roles.change_management) plugin
Request	sn_request_write	ITSM Roles — Request Management (com.snc.itsm.roles.request_management) plugin

Ensure you've installed the fix script to enable the display of the Zoom chat icon associated with the Caller field. For more information, see Install fix-script for Collaboration services for Zoom.

Role required: agent

Procedure

1. Navigate to an open task record (incident, change request, or request item) in your ServiceNow instance.
2. Start the chat by selecting **Start Zoom Chat** or the Start Zoom chat icon  associated with the Caller field.
3. In the Start Zoom chat dialog box, select the participants.

   All users from the assigned group for the ticket are in the Recommended section of the dialog box by default. The user who initiates the chat is added to the Selected list of participants.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Start Zoom chat form fields

Field	Description
Add Participants	Option to add the users and stakeholders to work toward the resolution of the ticket. ○ **User**: Enter the name of the user to include in the chat. ○ **Group**: Enter the group of users to be included in the chat. If the On-Call Scheduling (com.snc.on_call_rotation) plugin is activated, the On-Call Scheduling users are added when you select a group. When On-Call Scheduling (com.snc.on_call_rotation) plugin isn't activated, it adds all users from the selected group. ○ **Email**: Enter a valid email of the participant to be included in the chat. After adding the required stakeholders, select#**Add to selected**.
Chat title	The title of the chat that will be displayed in the Zoom application. The default title is the ticket number appended with the short description.
Create an opening message	Option to provide an opening message to the user before beginning an interaction.

5. Select **Start Chat**.

   When the user validation is complete and a Zoom Channel is created for the current instance of the ticket, you are directed to the chat channel in the Zoom application.

   Zoom Team Chat displays the chat title and the opening message provided by the agent.

6. Interact with the ticket requester in Zoom Team Chat.

   You can send files supported by the Zoom application.

   On the ServiceNow instance, the system captures work notes about the chat details.

   A Zoom chat Interaction record is automatically created if the requester is a participant in the chat conversation. The requester can then access chat details in the **Activities** section. For information about a ticket requester mapping, see Create requester mapping.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the Activities section of the record, find the comment that contains a link to access the chat interaction.

b. Select the link.

The chat transcript is stored in the#Activities#section.

Chat activities

Field	Description
Users	Users associated with the chat.
Document	Source record number.
Initiated by	Agent who has initiated the chat interaction.
Topic	Chat title.
Activities	Chat transcript.

7. Resume the chat either with the same user or with the same user plus additional users in the Start Zoom chat form.
   - To continue the chat from the record with the same user, select **Continue Chat**.
   - To start a new chat that includes additional users, add the users and provide a title for the chat in the **Chat title** field and an opening message in the **Create an opening message** field.

Reassign a ticket

Reassign a ticket to another user with a valid Zoom account.

Before you begin

Role required: admin

Procedure

1. Navigate to an open task record (incident, change request, or request item) in your ServiceNow instance.
2. Search and select the new user name in the **Assigned to** field.

   The new user must have a valid Zoom account. Else the ticket is not assigned to the new user and an error message is added in the system logs.

   Any logged in Zoom user who is not a participant of ticket/chat can reassign the ticket to a valid user on behalf of the chat initiator.

3. Right-click the form header and click **Save**.

Import Zoom Team Chat messages

Import the chat conversation manually or automatically with a user from#Zoom application, which appends and stores the messages in the#Comments section of the ticket in the ServiceNow® instance.

Before you begin

You must have the write role to use the#mport messages from Zoom #feature for incident, request, and change request tasks. This role is available when you activate the IT Service Management role plugins or for all instances by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Record and related configuration role

Record	Role	Plugin
Incident	sn_incident_write	ITSM Roles - Incident Management (com.snc.itsm.roles.incident_management) plugin
Change Request	sn_change_write	ITSM Roles — Change Management (com.snc.itsm.roles.change_management) plugin
Request	sn_request_write	ITSM Roles — Request Management (com.snc.itsm.roles.request_management) plugin

Role required: agent

About this task

Importing messages helps agents to view the history of a ticket in one place. So, the information required for post-ticket review is captured and results in continuous improvement processes.

When an agent imports a chat, attachments within the configured file size limit are uploaded to the record. If the uploaded attachments are larger than the configured file size limit, then those attachments appear as a link to the file on the Zoom server.

When an existing chat is continued, auto import occurs again. Auto import is cancelled when chats are archived.

If a parent chat in a thread is deleted, the **Import messages from Zoom** form displays the text that this message was deleted. The child messages in that thread are not deleted.

A tag with the label **External** indicates that a user is listed in the Zoom application users and not present in the ServiceNow instance, or when the user isn't present in the Zoom application.

Note:

An agent can import a chat only if there's an existing chat record for the ticket and they're a participant of the chat.

Procedure

1. Navigate to an open task record (incident, change request, or request item) in your ServiceNow instance.
2. Select **Import messages from Zoom** from the Related Links section.

Note:

If you don't see **Import messages from Zoom**, then on the form menu, select **Reload form** to refresh the ticket form.

3. On the Import messages from Zoom form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Import messages from Zoom#form

Field	Description
Select a conversation	Conversation to import the messages for the record.
Participants	List of users who are participants of the chat.
Import messages as	Method used to import messages. ○ **Additional comments**: The messages are appended in an **Additional comments** field and the users can view them. ○ **Work notes**: The messages are appended in the **Work notes** field but can be viewed only by internal users.

You can also select the nested message threads in a chat.

4. Select **Import**.

   If the auto import of the messages is enabled in the chat configuration and you try to import the messages manually for a record, then the system displays a message that the chat is being imported using auto-import. For configuration information about auto import, see Customize the Zoom chat form.

5. On the form menu, select **Reload form** to refresh the ticket form.

Result

The imported chats and files are displayed in the **Activities** section of the ticket.

Chat-specific configuration for Collaboration services for Zoom

Configure chat-specific options for Collaboration services for Zoom.

ServiceNow Collaboration services for Zoom enables agents to customize the following aspects of Zoom chats:

- Configure Chat group to include On-call Scheduling users for Start Zoom Team Chat
- Configure chat form for different record types
- Create chat configuration to auto-import chats
- Create requester mapping
- Configure chat close condition

If you have the ServiceNow Collaboration services for Zoom in your environment, the customized chat-specific additional configuration is applicable by default for the following tables:

- Request Item (sc_req_item)
- Task (sc_task)
- Incident (incident)
- Request (sc_request)
- Change request (change_request)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The admin can extend the custom configuration to the other tables as required. You can create one chat configuration for only one table at a time. You can extend the chat configuration to other tables by creating another chat configuration record.

Functionality of auto importing messages

All the chat messages from Zoom Team Chat will be auto imported to the ServiceNow instance at an interval of 30 minutes. The system looks for all new messages across all the chats and import the messages to the ServiceNow instance.

To prevent polling from running indefinitely on inactive conversations, if there are no new messages, the polling interval gradually extends until the polling stops.

The system verifies the record for new messages for every 30 minutes. If there are no new messages, the system checks for the new messages for an interval of 1 hour, 2 hours, 4 hours, and 8 hours. If there are no new messages in an interval of eight hours for seven days, the Auto Import polling activity is disabled.

If there is any message during any of the intervals, the auto import timer looks for new messages in the next interval and imports the messages. The timer is then reset to 30-minutes interval.

System Limits

The system imports a maximum of 500 active chats in a 30-minute interval. If there are more than 500 active chats, the system will not auto-import the new chat records for the 30-minute interval.

The system executes a maximum of 10000 sub-flows to import the chats for an interval of 30 minutes, 1 hour, 2 hours, 4 hours, and 8 hours intervals. This is a count of all the active sub-flows that auto-import the messages into ServiceNow.

If the system reaches the limit, a message is displayed to the agent on the **Start Zoom Chat** modal that, "Zoom Team Chat auto import system limits is reached. New chats will not be auto imported.".

When a ticket is closed, the system triggers auto import for one last time and posts the new messages in the **Work notes** (Chat history) section.

If there is an interaction record associated with the parent record then interaction record is also closed. The chat record is also closed as a part of this flow.

Configure Chat group to include On-call Scheduling users for Start Zoom Team Chat

On-call Scheduling users will be shown for Start Zoom Team Chat for an incident record.

The users who are associated with On-call Scheduling will be displayed in the **Selected** column of **Start Zoom chat** dialog box.

sn_tcm_collab_hook.zoom_on_call_tables_for_start_chat_action system property is created to support this functionality. You can extend this functionality to the change and request tables.

Extend On-call users for Start Zoom Team Chat

Shows the list of On-call users in Start Zoom Team Chat for a change, request, or a request item.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. In the navigation filter, enter `sys_properties.list`.
   The entire list of properties in the System Properties [sys_properties] table appears.
2. Enter `sn_tcm_collab_hook.zoom_on_call_tables_for_start_chat_action` in the **Name** search field.
3. Select **sn_tcm_collab_hook.zoom_on_call_tables_for_start_chat_action** system property.
4. Enter the table names in the **Value** field to which you need to extend the functionality.
   For example: change, request.
5. Select **Update**.

Customize the Zoom chat form

Customize the chat form for additional ServiceNow® Collaboration services tables by creating a chat configuration.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Collaboration Services** > **Zoom** > **Chat Configuration**.
2. Click#**Default** to view the default base system configuration.
3. Navigate to **All** > **Collaboration Services** > **Zoom** > **Chat Configuration**.
4. Create a new chat configuration Select **New**.
5. On the form, fill in the fields.

Collaboration Chat Configuration form

Field	Description
Name	Value for the configuration.
Order	Order of the configuration. You can define multiple chat configurations for a single table. The system executes the query based on the descending order.
Active	Option to activate the configuration. Select the check box to activate the configuration.
Messaging Type	Option to select the messaging platform.
Default	Option to keep the configuration as default. **Note:** You cannot define multiple default values for chat configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Auto Import	Option to automatically import the chat. Select the check box to automatically import the chat.
Table	Option to select specific chat feature for a table.
Inherit	Extend and apply to the configuration to the child tables.
Conditions	Option to define a condition for a chat for customizations.
Enable opening message	Option to provide a text message that displays to the user when the agent initiates a chat.
Opening message	Option to enable a text message that displays to the user when the agent initiates a chat. This field is enabled only if the#**Enable opening message** #option is selected.

6. Select **Submit**.

   The defined chat configuration defined is applicable only for the selected table. You can extend the chat configuration to other tables by creating another chat configuration record.

Create requester mapping

Create a requester mapping to extend the Zoom chat functionality to other tables.

Before you begin
Role required: admin

About this task
A requester-mapping record defines which field is representing the requester of a ticket in any given table.

Note:

If there's no requester mapping defined for a table, the interaction records aren't created. An error log is created for the admin to notify that the requester mapping isn't defined for a table.

Procedure

1. Navigate to **All** > **Collaboration Services** > **Requester Mapping**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Requester mapping form

Field	Description
Table	Table to which the requester mapping should be applied.
Requester field	Field to select the requester for a record.
Inherit	Extends and applies the feature to the child tables.
Active	Option to activate the requester-mapping record.
Order	Order of the configuration. You can define multiple chat configuration for a single table. The system executes the query in the descending order.

4. Select **Submit**.

Define how a Zoom chat is closed

Define the way a Zoom chat is closed.

Before you begin
Role required: admin

About this task
When a ticket is set to inactive, the system does one final poll for any messages in the Zoom Team Chat. The participants are removed so no further messages about the ticket can be exchanged in the chat. The system then stops polling that chat.

If your custom application doesn't provide an **Active** option for determining whether the ticket remains active, you must either add that option (preferred) or define an alternate condition denoting the ticket as being closed or inactive.

Alternately, to adhere to platform standards, consider adding an active field to your custom application and maintaining the state of that field according to the business logic of your application.

When a parent ServiceNow record is closed, associated Zoom channel is archived, and only an admin user or that chat creator can post new messages on a closed chat or a channel. The users who are removed from a chat can only see the chat messages history.

Procedure

1. Navigate to **All** > **Collaboration Services** > **Close Conditions**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Close conditions form

Field	Description
Table	The table to which the requester mapping should be applied.
Inherit	Apply the option to the child tables of the selected table.
Active	Option to activate the close condition.
Order	Order of the configuration. You can define multiple chat configurations for a single table. The system executes the query in the descending order.
Close conditions	Defines the condition that determines that the record is closed.

4. Select **Submit**.

Collaboration services for Zoom reference

Scope type	API scope	Description
	imchat:bot	Enable chatbot within Zoom Chat Client.

SharePoint Online Search Connector

The ServiceNow SharePoint Online Search Connector offers a consumer-grade search configuration to manage your information resources.

As search is the key to productivity, SharePoint Online Search Connector (SPOC) helps your employees to search and discover content from the ServiceNow employee experience.

Important:
Starting with the Yokohama release, SharePoint Online Search Connector is being prepared for future deprecation. It is hidden and no longer activated on new instances but continue to be supported. For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

You can index content from multiple sites, enabling employees to find the relevant information through Employee Service Center, Service Portal, Now Mobile app, and Virtual Agent.

Important:
Currently, automatic migration path between SharePoint Online Search Connector and External Content Connectors is not available. For migration guidance, see the Migration Guide: SharePoint Online Search Connector to External Content Connectors [KB1791102] article in the Now Support knowledge base.

For additional instructions on how to get started with **External Content Connectors**, see

- External Content Connectors.
- Exploring External Content Connectors.
- Configuring External Content Connectors.

Visit the ServiceNow Store website to view the application and for information about submitting requests to the store. For cumulative release notes information, see the ServiceNow Store version history release notes.

Before getting started, see the reference information available at SharePoint Online Search Connector reference, SharePoint Online Search Connector KB articles, and known issues.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

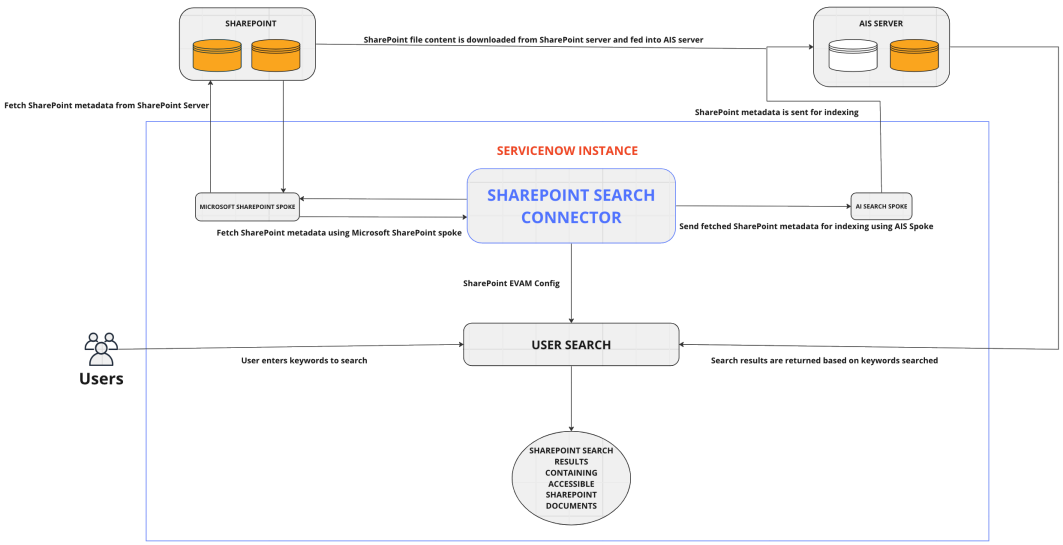
For detailed instructions on how to get started with External Content Connectors, see



- External Content Connectors.
- Exploring External Content Connectors.
- Configuring External Content Connectors.

As search is the key to productivity, SharePoint Online Search Connector (SPOC) helps your employees to search and discover content from the ServiceNow employee experience.

How SharePoint Online Search Connector works

Here's an overview of how SharePoint Online Search Connector works:

SPOC overview

Use the SharePoint Online Search Connector to:

- Create better search and discovery experiences for the Microsoft SharePoint content, confirming that your employees can quickly find the information they need.
- Enable support across multiple channels like Employee Service Management, Service Portal, Now Mobile app, and Virtual Agent.
- Integrate with the ServiceNow® AI Search for improved relevance and personalization.
- Search and find relevant information and drive business outcomes.

Required plugins

Activate the following plugins and apps:

- Employee Center Pro
- Microsoft SharePoint spoke

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- AI Search spoke
- Microsoft Entra ID spoke

Verify that the AI Search engine is enabled. External Content for the AI Search plugin (com.glide.ais.external_content) must have a ServiceNow subscription.

For more information, see Setting up SharePoint Online Search Connector.

Things to remember

- The SharePoint Online Search Connector is only compatible with the AI Search engine, not with the Zing search engine.
- The content types supported by the AI Search engine, such as, DOTX, HTM, XLSX, DOT, PPTM, DOCX, PPTX, TXT, PDF, POT, PPT, POTX, DOC, HTML, and XLS are supported in SharePoint Online Search Connector along with ASPX.
- The AI Search file size up to 25 MB is applicable.
- The languages supported are English, Spanish, French, Japanese, and German.
- SharePoint Online Search Connector supports SharePoint groups The groups are **Members**, **Owners**, and **Visitors**. The groups have different permission levels.
  - **Members**: Can edit a document residing in the site.
  - **Owners**: Can create, edit, and delete documents residing in the site.
  - **Visitors**: Can read a document residing in the site.
- SharePoint Online Search Connector is enabled to read users from the Microsoft 365 groups.

  Note:
  It only reads and pulls data from the Microsoft 365 **Members** group.

- SharePoint Online Search Connector doesn't read users from your Active directory.
- SharePoint Online Search Connector supports **Everyone except external users** site permissions.
- As an admin, you can use the following enhancements for more flexibility and control:
  - **Flexible permissions**: Select the **Sites.FullControl.All**, **Sites.Read.All**, or **Sites.Selected** permissions while configuring the connector.
  - **Selective indexing**: Index sites and subsites selectively by excluding some URLs and subsites, which have confidential information.
  - **Index published versions**: Control and limit the indexing only to the published files, confirming employees access the verified and finalized versions and not the drafts or unfinished documents.

    Note:
    If you have an existing connector without these enhancements, delete the existing connector, create a new connector, specify the URLs for indexing and exclusion, and define the site permissions for more effective content control and governance.

- Two SharePoint instances cannot be connected to one ServiceNow instance simultaneously.
- The Microsoft Entra ID spoke setup is required along with the Graph and REST connection setups to connect your ServiceNow instance to a Microsoft SharePoint tenant.

Related topics

SharePoint Online Search Connector reference

Setting up the SharePoint Online Search Connector

Set up the SharePoint Online Search Connector by configuring and connecting the Microsoft SharePoint tenant with your instance. Validate the connection to avoid any setup failures before indexing the sites for search.

Configure the Microsoft SharePoint tenant

Configure your Microsoft SharePoint tenant to get started with the SharePoint Online Search Connector.

Before you begin

As a Microsoft SharePoint administrator, create a custom application by specifying the root URL (`https://<sitename>.sharepoint.com`), app domain, redirect URL, and other settings.

Important:
Starting with the Yokohama release, SharePoint Online Search Connector is being prepared for future deprecation. It's hidden and no longer activated on new instances but continue to be supported.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Ensure you complete the following prerequisites.

- Follow the procedure to Configure OAuth application in Microsoft Azure.
- Follow the procedure to Set up Microsoft Entra ID spoke. Microsoft Entra ID spoke (formerly known as Microsoft Azure Active Directory spoke) is a dependent plugin that needs to be set up before indexing the users.
- Understand how to Configure Microsoft SharePoint Graph connection.
- Log in with your admin credentials to grant permissions.

Role required: admin

About this task

Complete the following procedure from your Microsoft SharePoint account. For more information on creating and configuring custom applications, see the SharePoint development

Note:
When the permissions assigned in the Azure apps have privilege issues, the following error message appears: `Error message: Method failed: (/_api/web/XXXXXXX) with code: 401 - Invalid username/password combo`. Address this issue with the instructions available in KB1117977.

When you want the search results to display only the published versions of the documents, ensure you select **Application permissions** instead of the **Delegated permissions** while configuring the permissions explained in Microsoft SharePoint Online Spoke.

Note:
Admins can limit indexing to the published versions only, ensuring that drafts or unfinished work aren't displayed in the search results.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Azure** > **Active Directory** > **App registrations** > **All applications**, and select an existing app.
   Use an existing application or create an application.

Configured permissions

2. Navigate to **App registrations** > **API permissions**, and click **Add a permission**.
3. Select one of the following options:
   a. Navigate to **Microsoft Graph** > **Delegated permissions** for Graph.
   b. Navigate to **Microsoft Graph** > **Application permissions** for Graph.
   Add the **Sites.ReadWrite.All** permission from the Sites list. The Sites.ReadWrite.All permission helps with subscription creation.

   Add the **User.Read** permission from the Users list.

   These user permissions are used to crawl the Microsoft SharePoint data later.
4. Navigate to **Sharepoint** > **Application permissions** > **Sites**, and select **Sites.FullControl.All**, **Sites.Read.All**, or **Sites.Selected** for REST.
   Enable the **Sites.Selected** permission by performing the following steps.

   a. In the Microsoft Azure application, enable the **Sites.Selected** and the **User.Read.All** permissions.
   Use any API client to provide read access for the following site collections.
   - Application X that is connected to a ServiceNow instance and has the **Sites.Selected** permission.
   - Application Y that is an admin application and has the **Sites.Full.Control** permission for Graph connection.

   b. Get a bearer token by calling the API method *`https://login.microsoftonline.com/{Tenant Id}/oauth2/v2.0/token`*.
   Payload:

```
client_id={App Y client id}
&scope=https%3A%2F%2Fgraph.microsoft.com%2F.default
&client_secret={App Y client secret}
&grant_type=client_credentials
```

   c. Pass the token received in step b as the authorization token while calling the API method *`https://graph.microsoft.com/v1.0/sites/{site id}/permissions`*.
   Payload:

```
{
"roles": [
"read"
],
"grantedToIdentities": [
{
"application": {
"id": "App X client id",
"displayName": "App X"
}
}
```

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
]
}
```

5. Ensure you configure the required API permissions as shown in the following image:

For more information, see Configure Microsoft SharePoint Graph connection.

6. Click **Grant admin consent**, select **Yes**, and click **Save and Continue**.
7. Navigate to **Authentication** > **Web** > **Redirect URLs** and add the URL in this format `https://<your Servicenow instance URL>/oauth_redirect.do`, for example, https://eesharepoint.example.com/oauth_redirect.do and click **Save**.
8. Navigate to Microsoft SharePoint Online Spoke and register the certificate and secret for your application.
9. Click **Add user** on the Microsoft admin portal, specify the user details, and click **Finish**.

> **Note:**
> The search crawls the sites that you can access. Ensure that you select the user with appropriate permissions for only the required content. For more information, see user permissions. Selecting a high-level user can import more documents than you want to import.

For more information, see Granting access via Azure AD App-Only.

What to do next

Complete the integration from your ServiceNow AI Search account. For more information, see Integrate the Microsoft SharePoint search sources with the AI Search profiles.

Integrate the Microsoft SharePoint search sources with the AI Search profiles

Link search sources to a search profile to specify the content users can search through the linked search profile.

Before you begin

Role required: admin

Procedure

1. Navigate to **Search Applications** > **Search Application Configurations** (sys_search_context_config).
2. Update the following values, for **Virtual Agent Default Search Application**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Search Engine: **AI Search**.
- Search Profile: **ESC Portal Default Search Profile**. This dynamic field value is visible after you change the **Search Engine** value.

For more information, see Create a search application configuration for AI Search.

What to do next

Connect the ServiceNow® instance with the Microsoft SharePoint tenant. Complete the steps from your ServiceNow® account. For more information, see Connect your ServiceNow instance to a Microsoft SharePoint tenant.

Connect your ServiceNow instance to a Microsoft SharePoint tenant

Connect your ServiceNow instance with a Microsoft SharePoint tenant. Create custom ServiceNow OAuth connections for Microsoft SharePoint to authenticate ServiceNow requests.

Before you begin

- Ensure that you have working knowledge of the SharePoint developer program tools and other resources to configure the application.
- Ensure that you're aware of the ServiceNow® integrations.

Role required: sn_sp_con.admin and admin.

Procedure

1. Navigate to **ServiceNow instance** > **System OAuth** > **Application Registry**.
2. Click **New**.
   The system displays the message `What kind of OAuth application?`
3. Select **Connect to a third-party OAuth Provider**.
4. Create the following registries:

   a. On the Graph connection form, fill in the fields.
   For a description of the field value, see Graph connection form.

   b. On the REST connection form, fill in the fields.
   For a description of the field value, see REST connection form.

   c. Right-click the form header and click **Save**.

OAuth Entity Profile

5. Navigate to the OAuth Entity Profiles [oauth_entity_profile] table to find the following entries:
   - `<Graph application registry name>.default_profile`
   - `<REST application registry name>.default_profile`

   Two system-generated OAuth entity profiles (REST and Graph) are created in the OAuth Entity Profiles [oauth_entity_profile] table. For more information, see Specify an OAuth profile

OAuth Entity Scopes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Insert a row with the following values in the OAuth Entity Scopes [oauth_entity_scope] table:

OAuth Entity Scopes

Graph	REST
Name: Any name of your choice	Name: Any name of your choice
OAuth Provider: Graph Application Registry record	OAuth Provider: REST Application Registry record
Application: Global	Application: Global
(For Delegated permissions) OAuthscope: `offline_access https://graph.microsoft.com/Sites.ReadWrite.All` (For Application permissions) OAuthscope: `https://graph.microsoft.com/.default`	OAuth Scope:`https://<instance name>.sharepoint.com/.default`

For more information, see Specify an OAuth scope.

OAuth Entity Profiles Scopes

7. Insert a row with the following values in the OAuth Entity Profiles Scopes [oauth_entity_profile_scope] table:

OAuth Entity Profiles Scopes

Graph	REST
OAuth Entity Profile: Graph entity profile generated in the OAuth Entity Profiles [oauth_entity_profile] table.	OAuth Entity Profile: REST entity profile generated in the OAuth Entity Profiles [oauth_entity_profile] table.
OAuth Entity Scope: Select the graph OAuth Entity Scope [oauth_entity_profile_scope] table.	OAuth Entity Scope: Select the REST OAuth Entity Scope [oauth_entity_profile_scope] table.
Application: Global	Application: Global

Credentials

8. Navigate to **Connections & Credentials** > **Credentials**, and create the OAuth 2.0 credentials:

   a. On the Graph or REST credential forms, fill in the fields.

OAuth 2.0 credential form

Field	Description
Name	Name of your choice.
OAuth entity profile	(For Graph) Graph entity profile identified. (For REST) REST entity profile identified.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Right-click the form header and click **Save**.

Note:
For more information on Entities, Connection & Credential Aliases, see Configure the SharePoint Graph Root Site Subscription connection and credential alias record.

Connection

9. Navigate to **Connections & Credentials** > **Connection**, and click **New** to create HTTP(s) connections for the following **Graph** or **REST**.

a. On the form, fill in the fields.

Connection form

Field	Description
Name: Any name of your choice for Graph	Name: Any name of your choice for REST
Credentials: Select the graph **Credentials**	Credentials: Select the REST **Credentials**
Connection alias: `sn_sp_spoke.MicrosoftSharePointGraph`	Connection alias: `sn_sp_spoke.MicrosoftSharepointOnlin`
Connection URL: `https://graph.microsoft.com/v1.0/`	Connection URL: `https://<Host URL of you SharePoint instance>/`
Domain: Global	Domain: Global

b. Right-click the form header and click **Save**.

For more information, see Connections and Credentials and Create an HTTP(s) connection.

Tenants

10. Navigate to **Microsoft Sharepoint Online** > **Tenants.**

a. Click **New** to create **Graph** or **REST** connections.

b. On the form, fill in the fields.

Tenant connection form

Field	Description
Name	Name of your choice.
Alias	For Graph: `sn_sp_spoke.MicrosoftSharePointGraph` For REST: `sn_sp_spoke.MicrosoftSharepointOnline`
SharePoint root URL	Root URL as `<SiteName>.sharepoint.com`
Tenant ID	Tenant ID required for the Graph or REST connection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Domain	Global

c. Right-click the topic header and click **Save**.

For more information, see Define tenants, Configure the SharePoint Graph Root Site Subscription connection and credential alias record, and Create aliases for multiple tenants

Certificates

11. Navigate to **System definition** > **Certificates** > **Microsoft SharePoint Online Certificate**.

a. Attach the file-generated Java Key Store certificate on the Azure AD portal.
For more information, see Attach a Java Key Store certificate.

b. Update the Key store password with the password of the `Java Key Store (.jks)` file.

c. Update the type to the Java key store.

d. Right-click the topic header and click **Save**.

For more information, see Configure the SharePoint Graph Root Site Subscription connection and credential alias record.

JWT keys

12. Navigate to **System OAuth** > **JWT keys** > **Microsoft SharePoint Online JWT Keys**.
    a. Update signing key with password of `Certificate (.cer)` file.
    b. Right-click the topic header and click **Save**.
13. Navigate to **System OAuth** > **JWT providers** > **Microsoft SharePoint Online JWT Provider**.
    a. Update the **aud** claim with `https://login.microsoftonline.com/<Tenant-id>/oauth2/token`.
    b. Update the **iss** and **sub** claim with the respective client ids on the Azure ad app registrations.
    c. Click **Save**.

Connection

14. Navigate to **Connections & Credentials** > **Connection**.

a. Open the REST connection record and on the **Attributes** tab, specify the Base64 encoded certificate **Thumbprint**.

> **Note:**
> The SharePoint app thumbprint value is hex encoded. Encode the same in the Base64 format in the connection record.

b. Select the following **Credentials** option:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- (For **Graph**): Navigate to the [Credentials] table (oauth_2_0_credentials), open **Graph**, and click **Get OAuth Token**.

  Ensure that you log in to your Microsoft SharePoint instance with the credentials of the user that you created to get the OAuth token for the Graph connection. Store the credentials in the instance.

- (For **REST**): Go to the [Credentials] table (oauth_2_0_credentials), open **REST**, and click **Get OAuth Token**.

  Ensure that you log in to your Microsoft SharePoint instance with the Tenant administrator credentials to get the OAuth token for the REST connection. Store the credentials in the instance. Validate the credential to avoid any configuration failure.

c. Click **Save**.

Trusted Domains

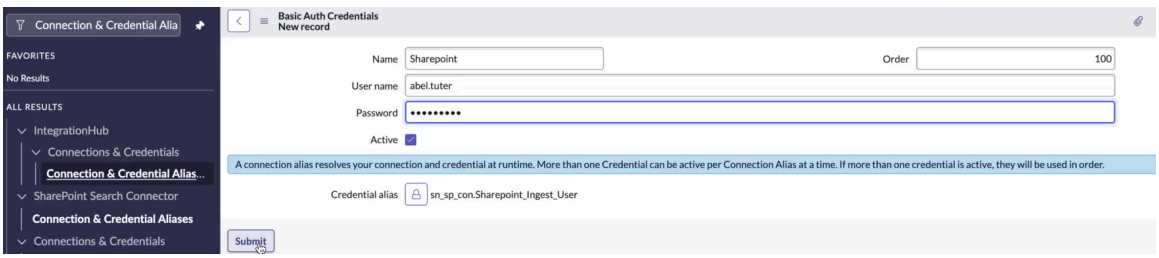
15. Go to **Trusted Domains** table (sn_ais_spoke_trusted_domains) and click **New** to create a domain record.

a. On the form, fill in the fields.

Domain record form

Field	Description
Name	Name of your choice.
Domain	<Host URL of your Microsoft SharePoint tenant>.

b. Click **Save**.
For more information, see Set up the AI Search spoke.



> **Note:**
> Ensure you create a trusted domain record for each tenant, when there are multiple tenants.

Sharepoint Ingest User

16. Navigate to **Connections & Credentials** > **Connection & Credential Aliases** > **Sharepoint Ingest User** (sn_sp_con.Sharepoint_Ingest_User).

a. Click **New** on **Credentials** to create a **Basic Auth Credential** for ingesting external content by AIS.

b. Specify the **User name** and **Password** of the user (sys_user) who has the **ais_external_content** role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
In the example screenshot, the user `abel.tuter` is the sys_user who has the ais_external_content role assigned.

c. Click **Submit**.
For more information, see Create aliases for multiple tenants.

d. Configure the AI Search server connection before you proceed with the next steps.

The Entity View Action Mapper (EVAM) configuration is available by default with Employee Center Pro version 32.0.

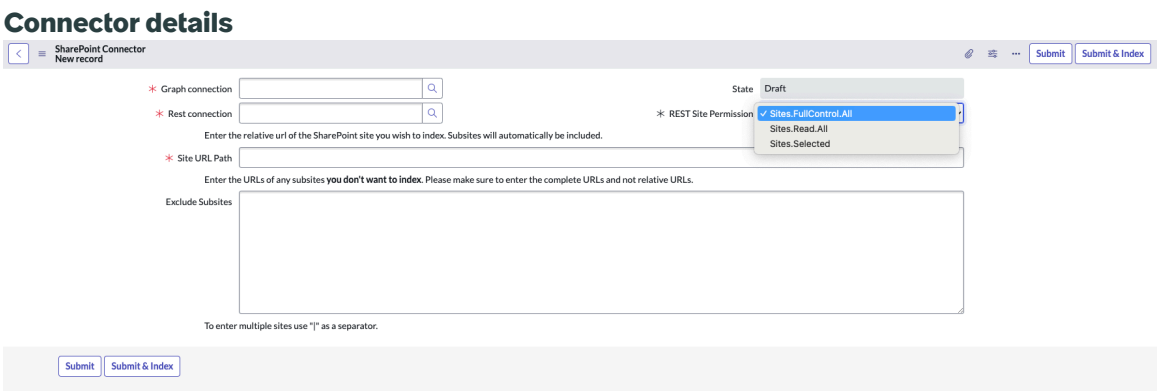
For more information on EVAM definition, see Create an EVAM action definition and Create a multi-data source list display in Entity View Action Mapper.

Result
Your configuration is complete.

What to do next
Index the sites for search. For more information, see Index sites for search.

Index sites for search

Configure the SharePoint Online Search Connector to crawl the content from the eligible sites, subsites, drives, and more.



Before you begin

- Verify that you have a basic knowledge of Microsoft Azure and Microsoft SharePoint functionality.
- Work with a Microsoft SharePoint administrator to understand the set of sites for indexing.
- Activate SharePoint Online Search Connector from the ServiceNow store.

Role required: sn_sp_con.admin or admin

Procedure

1. Navigate to **SharePoint Online Search Connector** > **SharePoint Connectors**.
2. Click **New**.

3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Connection-mapping details form

Field	Description
Graph connection	Connection for graph. Use the graph tenant record.
REST connection	Connection for REST. Use the Rest tenant record.
Site URL Path	Value of the relative URL of the Microsoft SharePoint site for indexing. For example, if your site URL is https://sncplatform.sharepoint.com/Company/Medicalbenefits, the relative URL of the site is `Company/Medicalbenefits`. **Note:** This URL is case-sensitive. Subsites are automatically indexed. See SharePoint Online Search Connector search results.
State	State of the indexing.
REST Site Permission	Use one of the following site permissions to manage access to the SharePoint. ○ **Sites.FullControl.All**: Provides the full control to SharePoint sites for the signed-in user. Sites, subsites, files, and user groups are indexed with this option. ○ **Sites.Read.All**: Provides only the read access to the files for the signed-in user. This option is the default value. Only files and user groups are indexed with this option. ○ **Sites.Selected**: Provides selected site control with selected roles to users. Only files and user groups are indexed with this option.
Site role	Use one of the following options to manage access control. ○ **Full control** ○ **Read** ○ **Write** This field appears only when **Sites.Selected** is selected from **REST Site Permission**.
Exclude Subsites	List of URLs that are excluded from indexing. These URLs are not indexed by the AI Search and are not displayed in the search results. You can add multiple sites with | as a

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	separator. Enter the URLs of any subsites you don't want to index. **Note:** Ensure you specify the complete URLs and not relative URLs.

4. Click **Submit & Index** to validate and start indexing the site.
   When you submit the site, the indexing includes the related subsites.
5. Track the indexing progress from the **Search connector** record state.
6. Proceed to see the **Indexed Sites** related list.
   The indexed site list contains the following information:

Indexed site form

Field	Description
Name	Subsite name.
Display name	Subsite display name.
Web URL	Web URL of the Microsoft SharePoint site.
Description	Description of the subsite.
Subsites fetch state	Status of the subsite crawl, such as, **Pending** and **Complete**.
Drives fetch state	Status of the drives crawl, such as, **In progress** and **Complete**.
State	Overall crawl status.
Marked for deletion	Value is **False** to keep the subsite. Value is **True** to delete the subsite.

To know more about how to exclude sites, see Exclude sites from indexing.

Result

The sites, subsites, folders, and files are indexed and displayed in your search results. Use filters to verify the progress and manage the indexing status by navigating to **SharePoint Online Search Connector** > **SharePoint Sites**.

After site indexing is complete, you can search and discover the site content from multiple channels, like Employee Service Center, Service Portal, Now Mobile app, and Virtual Agent. For more information, see SharePoint Online Search Connector search results.

What to do next

Remove Index: Select the indexed site and click Remove Index to remove the site from indexing. On success, all the sites, drivers, and files are removed from the respective tables and the connector is updated to read only with the Deleted status.

Exclude sites from indexing

Index sites and subsites selectively by excluding some URLs and subsites, which have confidential information.

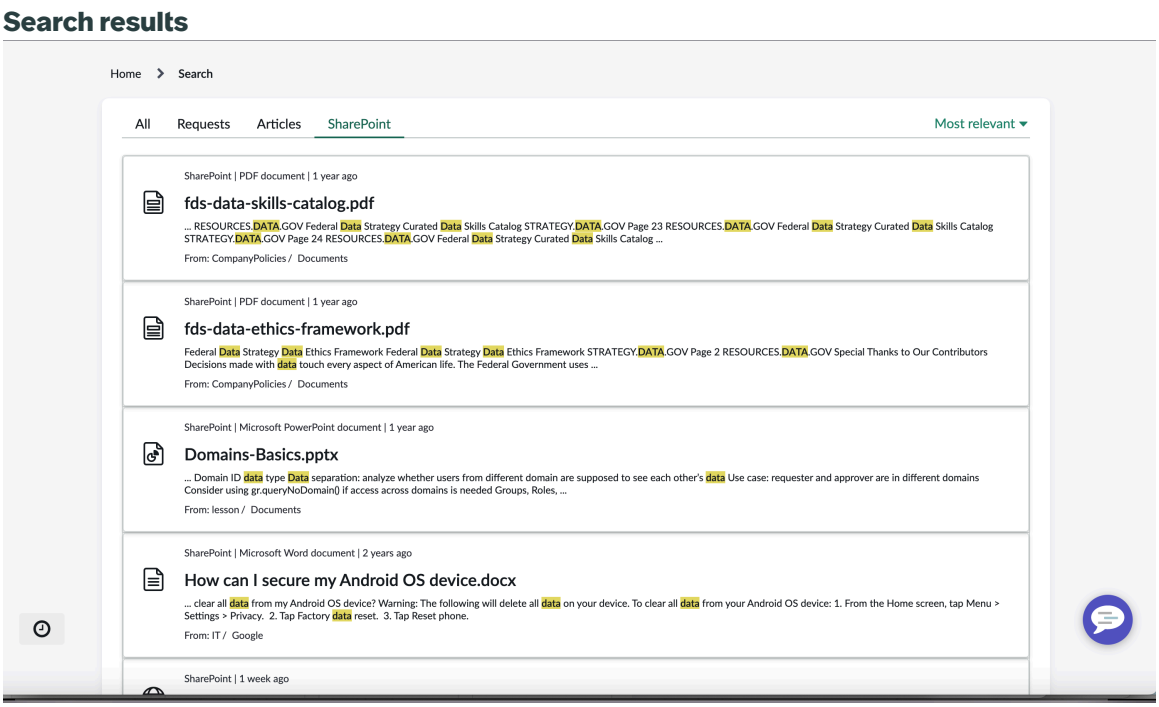
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Specify a list of subsites that you want to exclude from the SharePoint Online Search Connector indexing. Work with a Microsoft SharePoint administrator to understand the set of sites to exclude from indexing.

Role required: AI search administrator

Procedure
1. Navigate to **SharePoint Online Search Connector** > **SharePoint Connectors**.
2. Click **New**.
3. Follow the instructions Index sites for search.
4. Specify the URLs list in the **Exclude Subsites** field.

> **Note:**
> Specify the complete URLs and not relative URLs. You can add multiple sites with | as a separator.



Result
These URLs are not indexed by the AI Search and are not displayed in the search results.

What to do next
Remove Index: Select the indexed site and click Remove Index to remove the site from indexing. On success, all the sites, drivers, and files are removed from the respective tables and the connector is updated to read only with the Deleted status.

SharePoint Online Search Connector search results

Learn about the SharePoint Online Search Connector searches and the results displayed for your search requests.

This example shows the SharePoint Online Search Connector search results page. Based on your settings, the layout and appearance may vary. For more information, see View configurations, view templates, and configuration bundles for EVAM.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see the Using AI Search page.

SharePoint Online Search Connector reference

The reference topics for the application provide additional information about the SharePoint Online Search Connector settings, content types, and features.

Crawl constraints

For more information on crawl types, see Microsoft SharePoint crawl types.

- The time of crawling may vary, based on the content size.
- The documents are available for search after a successful crawl.

Note:
For the latest information on the content types and constraints, see AI Search documentation.

Scheduled job frequency

The default-scheduled job frequency is set to maximize the performance. For more information, see SharePoint Online Search Connector scheduled jobs.

Look up file permissions

When Look up File Permissions action returns a blank or null array, you may face access issues. To resolve the access issue, use the Client Credentials type instead of Authorization Code and provide the API permissions on the application level where the type is application, for more information, see KB1642515.

Content types

- The content types supported by the AI Search are supported in the SharePoint Online Search Connector.
- The AI Search file size maximum of 25 MB applies.
- The languages supported are English, Spanish, French, Japanese, and German.

Reduce batch size value and execution time

The *sn_sp_con.sharepoint_batch_size* property controls the size of the batch in SharePoint and the default value is 200. You can update this value to reduce the batch size and the execution time of the Index flows. Navigate to System Properties *sys_properties_list.do*, search for *sn_sp_con.sharepoint_batch_size*, and reduce the value.

Delegated permissions and Application permissions

When you want the search results to display only the published versions of a document, ensure you select **Application permissions** instead of the **Delegated permissions** while configuring the permissions explained in Configure the Microsoft SharePoint tenant. Admins can limit indexing only the published versions only, ensuring that drafts or unfinished work are not displayed in the search results.

Microsoft SharePoint crawl types

Crawling gathers the content for search. To retrieve information, the crawl operation connects to the content sources by using connectors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To create a modern search experience, the search system must first crawl the content from the multiple content sources. From content sources, specify the content type, the starting URLs, and the depth of content to index.

After retrieving the content, the Crawl component passes the crawled items to the content processing component.

- **Full Crawl**: Crawls, processes, and indexes every item in the content source, regardless of the last crawl status.
- **Incremental Crawl**: Crawls, processes, and indexes only the items that are newly created, changed, or updated since the last crawl. This option takes less time and re-indexes only the changes.

SharePoint Online Search Connector scheduled jobs

Create a scheduled job to fetch each entity such as sites, drives, file metadata, and file content.

You can change the frequency of the scheduled jobs. The list of the scheduled jobs is as follows:

- SharePoint Online Search Connector: Ingest Sites
- SharePoint Online Search Connector: Ingest Drives
- SharePoint Online Search Connector: Ingest Files
- SharePoint Online Search Connector: Index Content
- SharePoint Online Search Connector: Delete Content
- SharePoint Online Search Connector: Renew Subscription
- SharePoint Online Search Connector: Check Connector Status
- SharePoint Online Search Connector: Incremental Pull
- SharePoint Online Search Connector: Process Notification
- SharePoint Online Search Connector: Ingest Permissions
- SharePoint Online Search Connector: Insert New Users

Note:
The default frequency for the scheduled jobs is set to maximize the performance.

Graph connection form

The following are the available fields in the Graph connection form to create a Graph connection for Microsoft SharePoint connectivity configuration.

Graph connection form

Field	Description
Name	Name to identify the graph connection.
Client ID	Client ID of your application.
Client secret	Client secret of your application.
Default grant type	For Delegated permissions, authorization code provided for automatic access to users. For Application permissions, client credentials provided for automatic access to users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Graph connection form (continued)

Field	Description
Application	Global.
Authorization URL (for Delegated permissions only)	`https://login.microsoftonline.com/<Tenant ID>/oauth2/v2.0/authorize`.
Token Revocation URL (for Delegated permissions only)	`https://login.microsoftonline.com/<Tenant ID>/oauth2/v2.0/token`.
Token URL	`https://login.microsoftonline.com/<Tenant ID>/oauth2/v2.0/token`
Redirect URL	`https://<ServiceNow instance URL>/oauth_redirect.do`. For example, https://eesharepoint.example.com/oauth_redirect.do .

REST connection form

The following are the available fields in the REST connection form to create a REST connection for Microsoft SharePoint connectivity configuration.

Rest connection form

Field	Description
Name	Name to identify the rest connection.
Client ID	Client ID of your application.
Client secret	Client secret of your application.
OAuth API script	`OAuthUtilSPJWTOnline` An OAuth API script facilitates authentication and authorization for accessing an API using the OAuth protocol.
Default grant type	Client credentials.
Application	Global.
Token URL	Indicates the token URL, for example, `https://login.microsoftonline.com/<Tenant ID>/oauth2/token`
Redirect URL	Indicates the ServieNow instance redirect URL `http[s]://<servienow-instance>:<port>/oauth_redirect.do`. For example, `http[s]://custinstance.service-now.com/oauth_redirect.do`.

Domain separation and SharePoint Online Search Connector

Domain separation is unsupported for the SharePoint Online Search Connector .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Support level: No support

- The domain field may exist on data tables but there is no business logic to manage the data.
- This level is not considered domain-separated.

For more information on support levels, see Application support for domain separation.

SharePoint Online Search Connector overview

SharePoint Online Search Connector enables your employees to search for and discover content from the ServiceNow® platform. Indexing content from multiple sites enables you to find the right answers through the Employee Service Center, Now Mobile app, and Virtual Agent.

AI limitations

This application uses artificial intelligence (AI) and machine learning, which are rapidly evolving fields of study that generate predictions based on patterns in data. As a result, this application may not always produce accurate, complete, or appropriate information. Further, there is no guarantee that this application has been fully trained or tested for your use case. To mitigate these issues, it is your responsibility to test and evaluate your use of this application for accuracy, harm, and appropriateness for your use case, employ human oversight of output, and refrain from relying solely on AI-generated outputs for decision-making purposes. This is especially important if you choose to deploy this application in areas with consequential impacts such as healthcare, finance, legal, employment, security, or infrastructure. You agree to abide by ServiceNow's AI Acceptable Use Policy, which may be updated by ServiceNow.

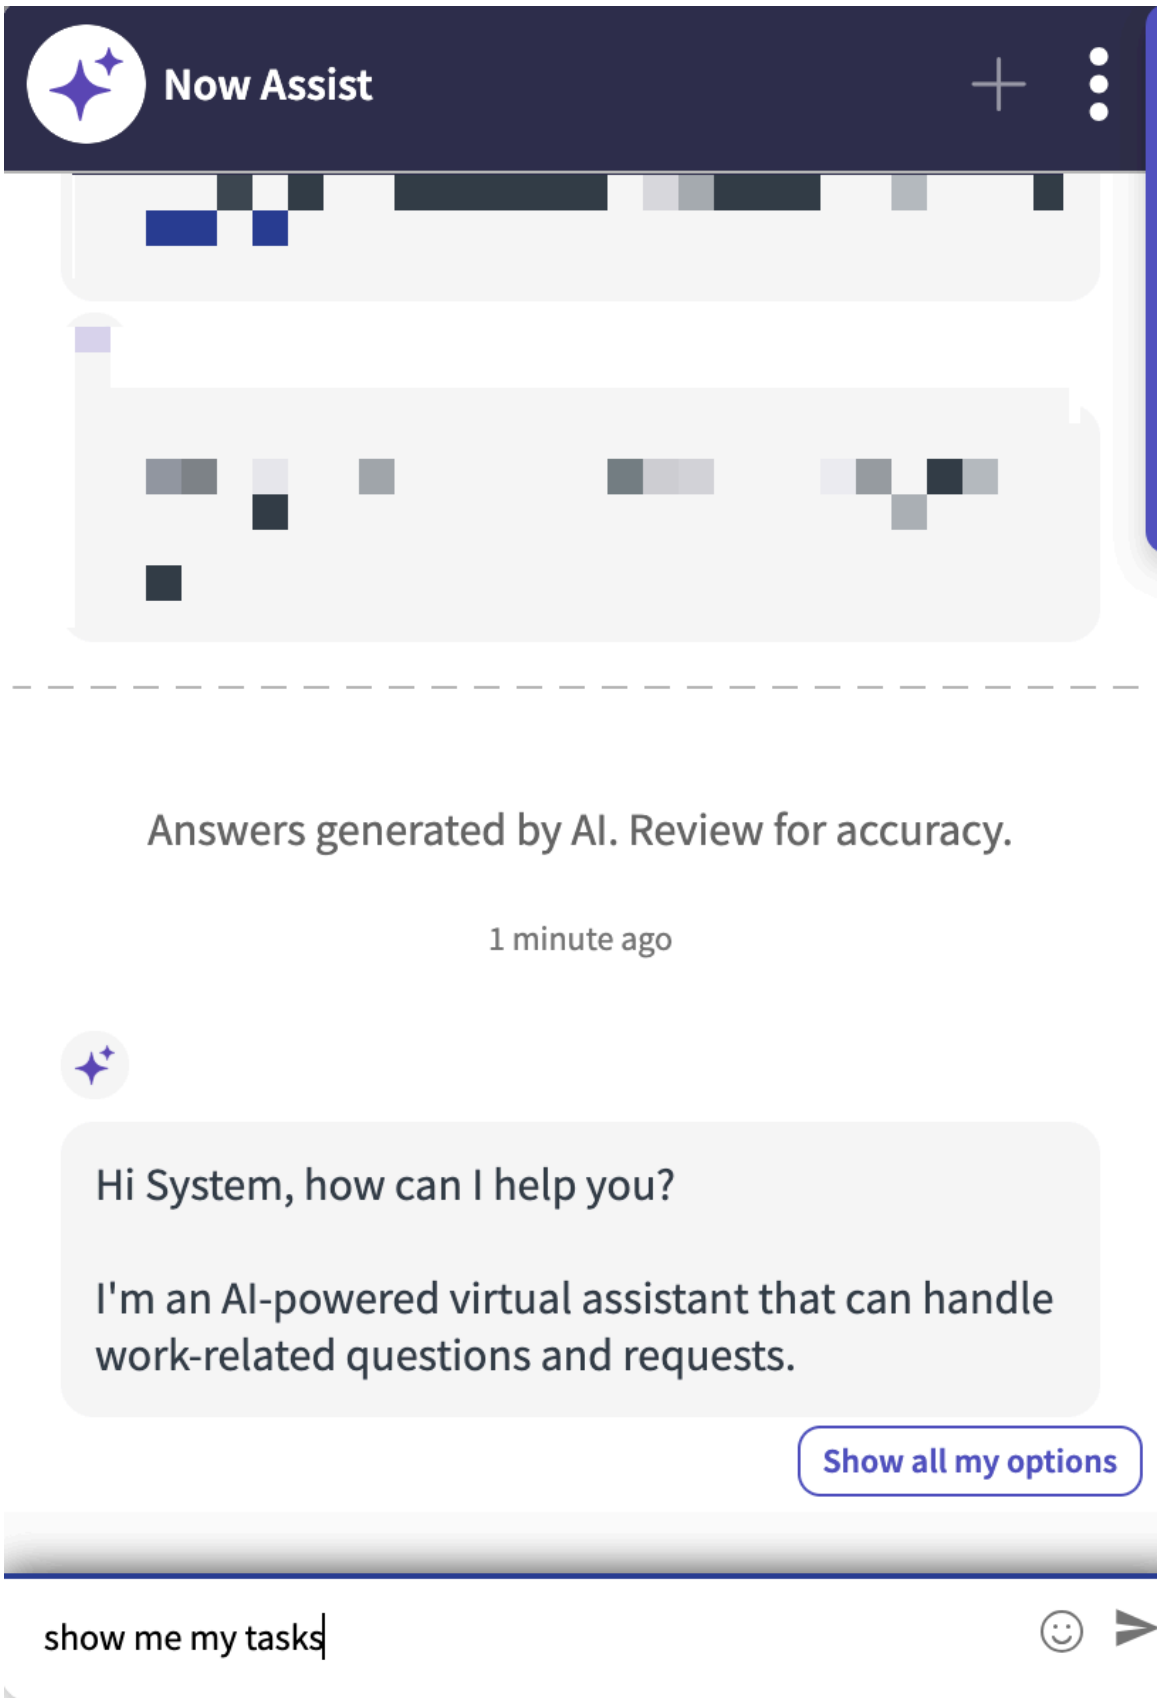
Data processing

This application requires data to be transferred from ServiceNow customers' individual instances to a centralized ServiceNow environment, which may be located in a different data center region from the one where your instance is, and potentially to a third-party cloud provider, such as Microsoft Azure. This data is handled per ServiceNow's internal policies and procedures, including our policies available through our CORE Compliance Portal.

Data collection

ServiceNow collects and uses the inputs, outputs, and edits to outputs of this application to develop and improve ServiceNow technologies including ServiceNow models and AI products. Customers can opt out of future data collection at any time, as described in the Now Assist Opt-Out page.

For more information, see the Now Assist documentation



Exploring Now Assist for Employee Experience

With the Now Assist for Employee Experience application, your employees can use Now Assist in Virtual Agent to quickly check the status of their work through conversations.

The Now Assist for Employee Experience enables your employees to check the following options:

My Tasks

An employee can view the status of their tasks. They can check their assigned, pending, or open tasks. Depending on their query, the Now Assist in Virtual Agent shows the details of the tasks and lets them open a task for more information by using the Task center.

The Now Assist for Employee Experience supports the following tasks by default:

- HR tasks like submitting a catalog request
- Survey tasks

An employee can check their HR service tasks and also submit a request. They can mark a task as complete, view the checklist of a task, or upload a document to support a task. The Now Assist in Virtual Agent also enables an employee to take a survey with the chat survey task.

For example, a manager can chat with Now Assist in Virtual Agent by entering queries like `Show me my tasks`, `Show me my pending tasks`, `Show me my assigned tasks`, `Show me my open tasks`, or `Show me my tasks due today/due this week/due later/due soon`.

My Approvals

An employee can check the approvals that are assigned to them.

The employee's manager can directly approve or reject an approval. Depending on the query, the chat lets a manager approve or reject a task directly.

The Now Assist for Employee Experience supports the following approvals by default:

- Catalog request approvals
- Change request approvals
- KB article approvals

For example, a manager can enter a query like `Show me my approvals`, `Show me my approvals due today` or something similar.

Application information

Activate the Now Assist for Employee Experience store app (sn_ex_gen_ai).

This store app has the following dependencies:

- Now Assist for platform (sn_genai_platform)
- Employee Center (sn_ex_sp)

For more information, see Configure Now Assist for Employee Experience.

Configure Now Assist for Employee Experience

If you have the admin role, you can configure the Now Assist for Employee Experience application so that employees can use Now Assist in Virtual Agent to quickly check the status of their work through conversations.

To-do configuration and skills

Your administrators can choose which portal's To-do configuration to apply Now Assist in Virtual Agent by using the *now.assist.todos_portals* system property.

The Now Assist for Employee Experience application uses Now LLM Service conversation skills. It uses the Now Assist Topic skill in Now Assist in Virtual Agent.

Before you begin

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   You can search for the application by its name or ID. If you can't find an application, request it from the ServiceNow store.

   Use the following details when required:

   - Name of the application: Now Assist for Employee Experience
   - ID of the application: sn_ex_gen_ai

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Select **Install**.
4. In the Version details, review the application dependencies.

   Dependent plugins and applications are listed if they'll be installed, are currently installed, or must be installed.
5. Select **Install**.
