Map printing options

The map printing options provide configurations for the page format, font, icons, collision, legend, and timestamps.

Page Format options

Field	Description
Page Orientation	Orientation that you want to print the page in. The orientation can be landscape or portrait.
Page Size	Paper size that you want to use to print the map.

Page Content options

Field	Description
Add page title	Option to display the title on the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Page Content options (continued)

Field	Description
Add timestamp	Option to display the print timestamp to the map.
Include legends	Option to enable the map legend.
Keep legends in a separate page	Option to move the legend to the second page of the print layout. This field appears only if **Include Legends** is selected.
Include directions	Option to display directions between the points selected in the location directory. This field appears only if your map contains directions between locations.
Include To and From info	Option to display the info card for the points selected in the location directory. This field appears only if **Include directions** is selected.
Replace space titles by numbers	Option to change the location names to numbers. Enabling this option modifies the legend with the numbers and associated location labels.

More options

Field	Description
Space label text size	Size of the location labels on the map.
Space marker size	Size of the location icons on the map.
Legend label text size	Size of the map legend text.
Legend label icon size	Size of the map legend icons.
Remove text anti-collision	Option to enable overlapping of location labels. You can enable this option and adjust the font size to avoid collision.
Remove icon anti-collision	Option to enable overlapping of location icons. You can enable this option and adjust the icon size to avoid collision.

Floor map import group form

You can specify details about the import group and select users who must be notified of the import progress.

Floor plan import group form

Field	Description
Number	Identifier of the import group record. This field is auto-generated and can't be edited.

sn_wsd_indoor_map.es_default_space_type	WSD space type to be used when no place type mapping is found.
sn_wsd_indoor_map.es_automate_deactivate	Enables the deactivation of Indoor Mapping records as part of the sync process. You can enter the following options to enable deactivation of Indoor Mapping records. • campus • building • floor • space You can enter multiple options by separating them with a comma.

Workplace Central

Maintain workplaces more efficiently using a single workspace, Workplace Central. As an admin, workplace manager, space planner, lease administrator, or lease manager, you can use the Workplace Central application to perform workplace-related activities like planning, monitoring, viewing, and optimizing workplaces in less time.

Get started

Explore	Configure	Use
Learn about Workplace Central concepts and features.	Install Workplace Central and related plugins to get started.	Use Workplace Central to efficiently perform workplace-related activities.

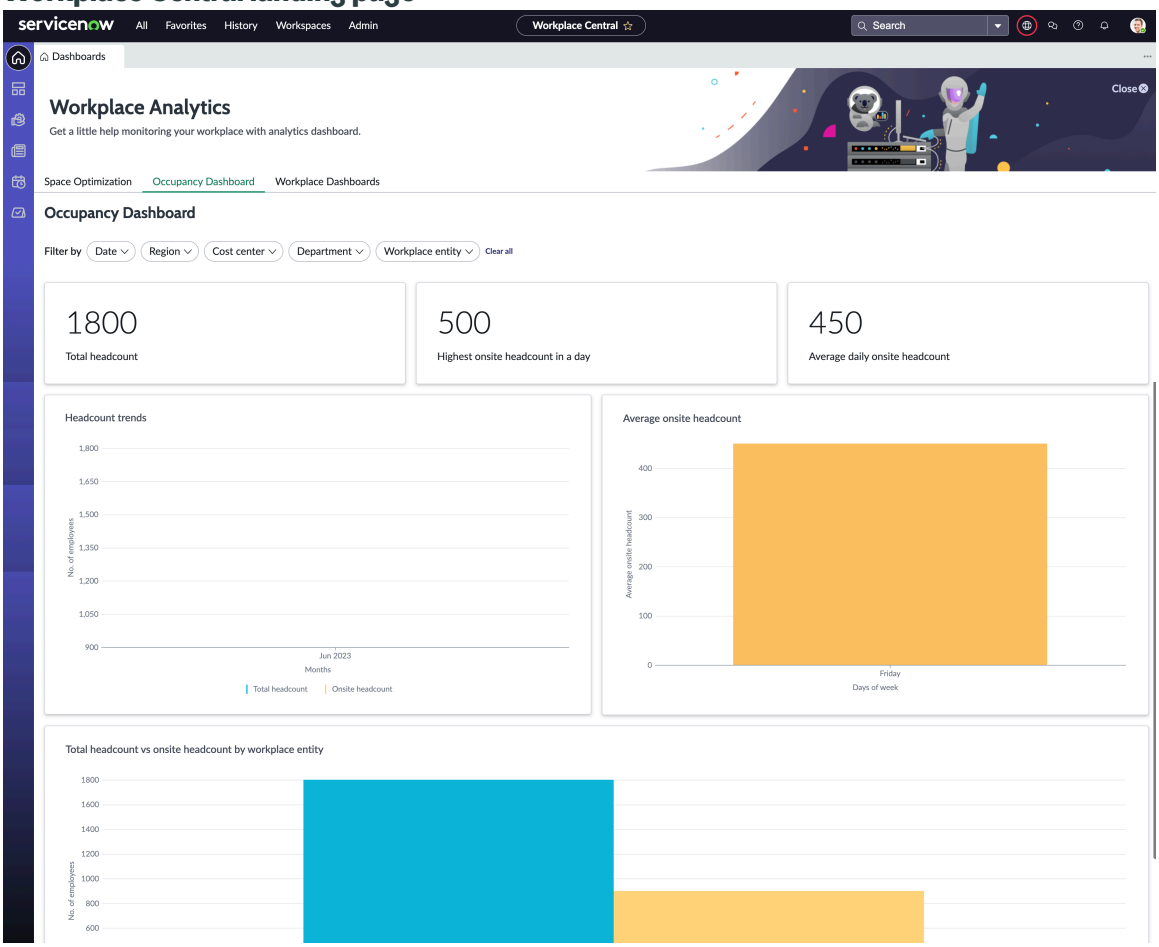
Manage	Components	
Manage workplace-related activities. View metrics and the list of activities that have been created.	Get details about the components installed and key features of Workplace Central.	



Explore Workplace Central

Workplace Central is a one-stop application where you can view key metrics, and access or control all your workplace-related operations.

Install the Workplace Central (sn_wsd_central) plugin from the ServiceNow Store.

As a workplace manager, the Workplace Central makes it easier for you to configure, perform, monitor, and run all your workplace activities efficiently from a single workspace. The application helps you save time without the need to navigate to different places to perform any workplace-related action. For example, you can plan a scenario, track the scenario metrics, analyze workplace activities, monitor workplace maintenance plans, and more.

Workplace Central landing page

Using the Workplace Central application, you can perform the following:

© 2026 ServiceNow, Inc. All rights reserved.

- Plan scenarios using the Scenario planning feature available with the Space optimization module. This module provides the collective information for all the scenarios created, published, deployed, and archived in the system.

  For more information about scenario planning and the Space optimization module, refer to Scenario Planning.

- You can track scenario metrics on the Space Optimization module and also view the scenarios individually.
- Work on space assistance requests.
- View and track space allocation requests.
- Deploy space requests to implement the allocation changes specified in requests.
- You can create, track, and manage the workplace contracts with the Lease Administration application.
- View a key metrics dashboard for Space Optimization, Lease Administration, and Maintenance Management. For more information, see Working with Workplace Analytics.
- Create move projects to track workplace move requests at a time. Collate move requests under a project using filter conditions and monitor their fulfillment. For more information, refer to Move Management.
- Schedule move requests if necessary.
- Track the progress of move requests and work on them based on priority and the dates on which they are expected to be fulfilled.
- Using the Event planner, monitor reservation created in your workplace are any time using the Event planner.
- Check the current day's planned reservation, canceled reservations and reservations that are yet to be approved.
- View reservation details and edit a reservation as a reservation planner.
- Open a reservation's details on the Employee central.

Lists module

The Lists module is a common dashboard that contains lists for the application tables and custom lists.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Lists tab

The Lists tab contains all the tables that are installed with your Workplace Service Delivery applications. You can only view the lists that your role has access to.

For more information about the lists, you can refer to the documentation of the relevant application.

- Workplace Analytics
- Scenario Planning
- Schedule Planning
- Space assistance
- Event Planner
- Move Management
- Case management
- Kiosk Indoor Mapping

My lists tab

The My lists tab contains custom lists that you have created on Workplace Central. You can create a custom list by using an existing Workplace Central list, or by using a system table that you have access to. You can also organize your custom lists by selecting the **Reorder** option.

For more information about creating custom lists, see Creating custom lists on Workplace Central.

Workplace Analytics

The ServiceNow Workplace Analytics dashboard displays key metrics that enable you to optimize the use of workplace resources and maximize your return on investment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Key features

- Data-driven insights, trends, and key performance indicators for the following applications:
  - Space Optimization
  - Lease Administration
  - Maintenance Management
  - Workplace Connectors
- Filters to narrow down the data selection.

Benefits

- Key metrics and trends in a single space
- Data range selection using filters
- Anticipate trends
- Prioritize resources by analyzing trends
- Reduced cost through resource optimization
- Customizable widgets to see relevant metrics

Accessing Workplace Analytics

To access Workplace Analytics, Workplace Central must be installed. For more information, see Install Workplace Central.

You can access Workplace Analytics by using one of the following methods:

- Navigate to **All** > **Workplace Central** > **Workplace Central**.
- Navigate to **Workspaces** > **Workplace Central**.

For more information about how to use Workplace Analytics, see Working with Workplace Analytics.

Space Optimization

As a space planner, you can use the Workplace Central to monitor all your scenarios and workplace-related information from a single page called Space Optimization.

Benefits of Space Optimization

As a space planner, you can do the following using the Space Optimization module:

- View the active number of all the scenarios created in your organization, the ones that were created by you, published scenarios and draft scenarios.
- View and work on space assistance requests raised in the organization.
- Monitor the total number of space assistance requests raised and view their current status at any time.
- Create a scenario for a building or multiple buildings.
- Open a scenario owned by you and make changes using the stack plan.
- View a scenario and see the space allocations in a stack plan or floor map view. You can review a scenario in a read-only mode and share your feedback on space allocations with the scenario owner or other stake holders.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create a single scenario or multiple scenarios. You can work on multiple scenarios at a time, and publish them so that your colleagues or stake holders can review. After finalizing, you can deploy the best one.
- View all buildings stack plans of your organization. You can also create a scenario directly from the building details page.
- Perform map-based administration with Workplace Indoor Mapping maps. View space allocations and assignments on a floor map. Change allocations on the map directly.
- View users assigned to a space, assign a user to a space or remove an assigned user.
- Change a space assignment from flexible to permanent or vice versa.
- Add, change, or remove a single allocation or multiple allocations at a time if you want to change their existing department or cost center.

For more information about the Space Optimization homepage key features, refer to Space Optimization - Key features and actions.

Installing and accessing Space Optimization

You must install the following plugins to use the Space Optimization module:

- Workplace Central
- Workplace Space Management
- Workplace Case Management
- Workplace Indoor Mapping

To open the Space Optimization module, follow any of the following steps on Employee Center:

- Navigate to **Workspaces** > **Workplace Central** > **Space Optimization**.
- Navigate to **All** > **Workplace Central** > **Workplace Central** > **Space Optimization**

You can also view the scenarios created by you from **All**

View Space Optimization metrics

You can view Space Optimization metrics in the Workplace Analytics dashboard. For more information, see View Space Optimization metrics.

View Space Occupancy metrics

Ensure that you have installed the Workplace Connectors application. For more information Occupancy Dashboard metrics, see View Occupancy Dashboard.

Scenario Planning

Manage space allocations in your workplace in the most efficient way using the Space optimization scenario planning feature. Adjust your existing space allocations, floor arrangements, and employee seating plan by creating a scenario and deploying it.

Overview of Scenario Planning

The Workplace Central is like a central homepage where you can monitor all your workplace-related tasks. The Workplace Central provides you the Space optimization module that enables you to create scenarios using a stack plan and view the plan on the floor map. Using the Space optimization module, as a space planner you can perform several actions related to scenarios

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

such as creating a scenario, monitoring the number of scenarios created and more. For more information about the Space optimization module, refer to Space Optimization.

Space Optimization enables you to perform scenario planning using a stack plan and a floor map. Scenario planning enables you to create multiple versions of a building with different space allocations until you finalize the best plan. You can share a scenario between multiple stake holders and deploy the best plan to the production.

Working with Scenario planning

To create a scenario using the space optimization feature, you must install the latest version of the following plugins:

- Workplace Central
- Workplace Space Management
- Workplace Move Management
- Workplace Indoor Mapping

Install the plugins from the from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. .

Using the Space optimization module you can create scenarios for a single building or multiple buildings. You can perform the following actions while working with a scenario:

- A scenario creates a copy of a building with its entire space allocation plan and displays in on a stack plan, according to floors. A stack plan enables you to view all the allocations made on different floors of a building with clear divisions and colors.
- Using the stack plan, visualize spaces and departments as bars and move them to different floors as required. The bars are color-coded and depending on the allocation, the numbers are displayed. You can view unallocated spaces on a floor. You can categorize the spaces based on their department or cost center. You can switch views depending on how you want to view the spaces.
- You can also create a copy of an existing scenario. You can create multiple scenarios of a building and compare the best plan with your stake holders. You can share these scenarios with other colleagues or stake holders by changing the ownership of the scenario and deploying it after finalizing one.
- Create a single scenario or multiple scenarios. You can work on multiple scenarios at a time, publish them so that your stake holders can review.
- Send a scenario for approval after you publish it. The application provides a default approval definition which is used to process approvals.
- You can view your approver and approval-related details in an Approver tab.
- You can deploy an approved scenario directly. In case the scenario is rejected, you can view the details of rejected and implement changes. You can send a scenario for approval multiple times till it is approved.
- Change space assignments on a floor, move a department or cost center from one floor to another, add or remove spaces, view the number of unallocated spaces, and more.
- Change the user assignment of a space, such add or remove a user.
- Vacate a floor easily by moving all the allocations to another floor with simple bar movement on the stack plan.
- Assign a space as permanent or flexible or remove the setting.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- You can also directly move spaces on a floor using the Floor map view. The Workplace Indoor Mapping floor map enables you to make allocations, assignment type, and user assignment-related actions.

> **Note:**
> Ensure that you have installed Indoor Mapping to visualize and reserve spaces using floor maps.

Schedule Planning

Manage space assignments to help employees head back to the office.

Schedule Planning overview

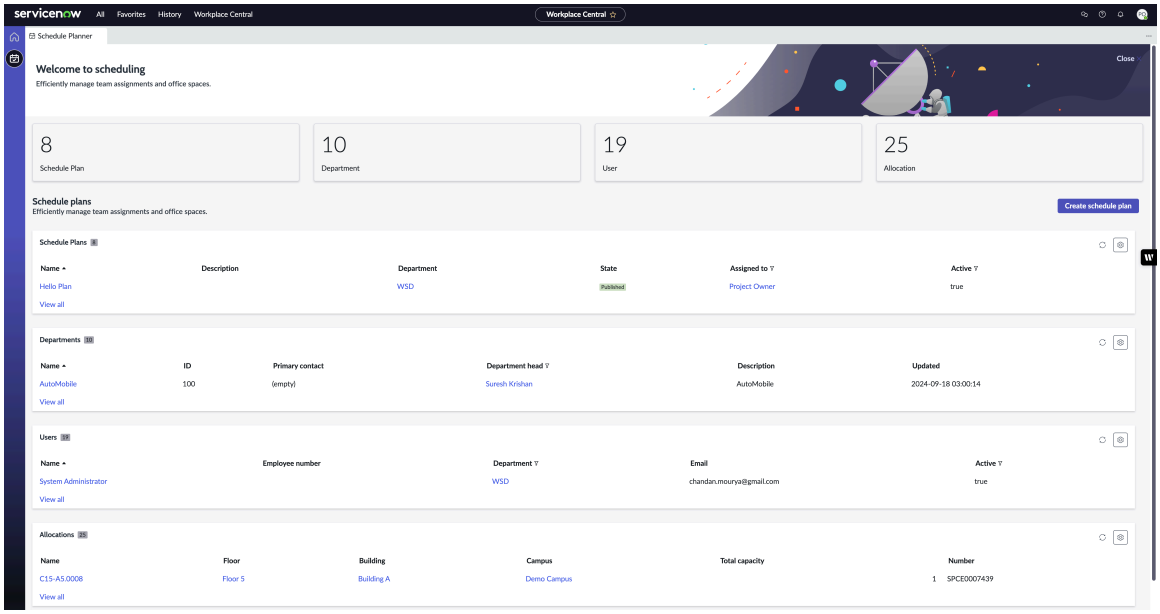
Schedule Planning provides a streamlined experience for project managers to assign and manage employee assignments based on project time frames.

As a project manager, you can do the following:

- View a list of employees assigned to your project
- View a list of spaces allocated for your project
- Create a schedule plan for a specific period to map spaces to the employees
- Execute a schedule plan to assign spaces to the Workplace Profile of the users

Accessing Schedule Planning

You must install the following plugins to use the Schedule Planner module:



- Workplace Central
- Workplace Space Management

You can install the plugins from the ServiceNow Store. You can also visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information of all the released apps, see the ServiceNow Store release notes.

> **Important:**
> You must set a value for the *sn_wsd_core.ALLOCATION_TYPE* property to enable schedule planning.

To access the Schedule Planner, navigate to **All** > **Workplace Central**, then select the **Schedule Planner** module in the workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As a project owner, you can view the created schedule plans, projects assigned to you, and the spaces and users assigned to the projects. You can create a schedule plan or edit existing schedule plans. For more information, see Working with Schedule Planning.

Note:
A project owner can create schedule plans for the projects that are assigned to them. Projects can be assigned to a user from the following fields:

- **Primary contact** field of the department
- **Manager** field of the cost center
- **Managed by group** or **Managed by** field of the workplace entity

Only one of the fields is considered for the project list based on the *sn_wsd_core.ALLOCATION_TYPE* property.

Schedule Plan states

A schedule plan can be in one of the following states:

- Draft: Project owner has created a new schedule plan but has not filled the details or started the workplace assignments.
- In Progress: Project owner has filled the schedule plan details and the workplace locations are being assigned to the users.
- Published: Schedule plan is created and the workplace locations are assigned to all the users.
- Complete: Schedule plan has reached the specified end date and the workplace location assignments are made inactive.
- Cancelled: Project owner has cancelled the schedule plan and the workplace location assignments are made inactive.

Note:
The *Complete the lapsed schedule plan* job runs every day to check which schedule plans have reached the end date and move them to the **Complete** state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space assistance

As a space planner, assist your organization with space planning and their deployment. Work on space requests raised within the organization and implement the changes using the Space Optimization workspace.

The Workplace Central workspace enables you to manage the space requests submitted in the organization and deploy them by following a simple process. A space request is created as a workplace case in the application. You can view the workplace case using the Space Optimization workspace. As a space planner, you can perform the following actions on space request workplace cases:

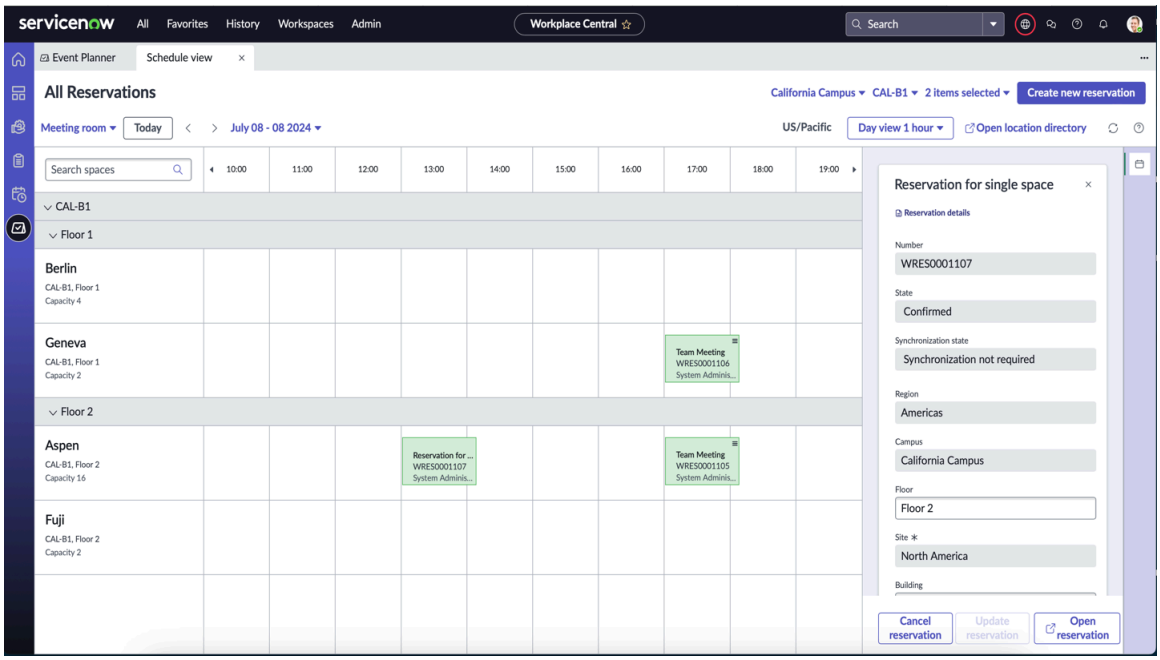
- View the total number of workplace space requests created in the organization using the metrics.
- Work on any space request workplace case that is currently in progress at any time.
- View the space request details.
- Assign the space request to another assignment group or a user.
- Add comments and work notes in the workplace case. The comments and work notes are displayed in the request details to the user.
- View the space plan details of the request. Apply filters on the plan items using the filter pills.
- View the space plan on the floor map. To view the floor map, the floor map must be created using Workplace Indoor Mapping and Indoor Mapping component plugin.
- Check approval details of the request.
- View the respective space and user deployment plan and deploy it.

Event Planner

Manage reservations requested in your organization in a simple event planner. As a Reservation planner, check the current day's planned reservations and view the reservation details. The schedule view also enables you to reschedule a reservation to another date and time by easily dragging and dropping it to another time.

You can also access the Event planner as a Reservation planner and a Reservation viewer. The planner provides you with a detailed view of all the reservations requested by employees and also the reservations requested by you for yourself or on-behalf of others. Open and view the Location Directory portal from the Event Planner home page.

You can check if there are any reservations that require extra services, reservations that are canceled and more. The Event planner also enables you to view the reservations in a scheduled view where you can track reservations made on any campus, its buildings, and any specific floor. The scheduled view displays reservations in colors based on their status. You can also schedule a reservation to a later time by easily dragging it across the time line. At any point, you can view the details of a reservation such as the exact details specified by the requester, the extra services raised by them, the cases and tasks created for those services, the invitees and more.



Important:
Reservations created using a calendar provider can only be managed using the calendar provider.

Ensure that you have installed the Calendar component (sn_calendar) of version 23.2.0 or later.

Using the Event planner schedule view, you can perform various actions on reservation. However, note the following:

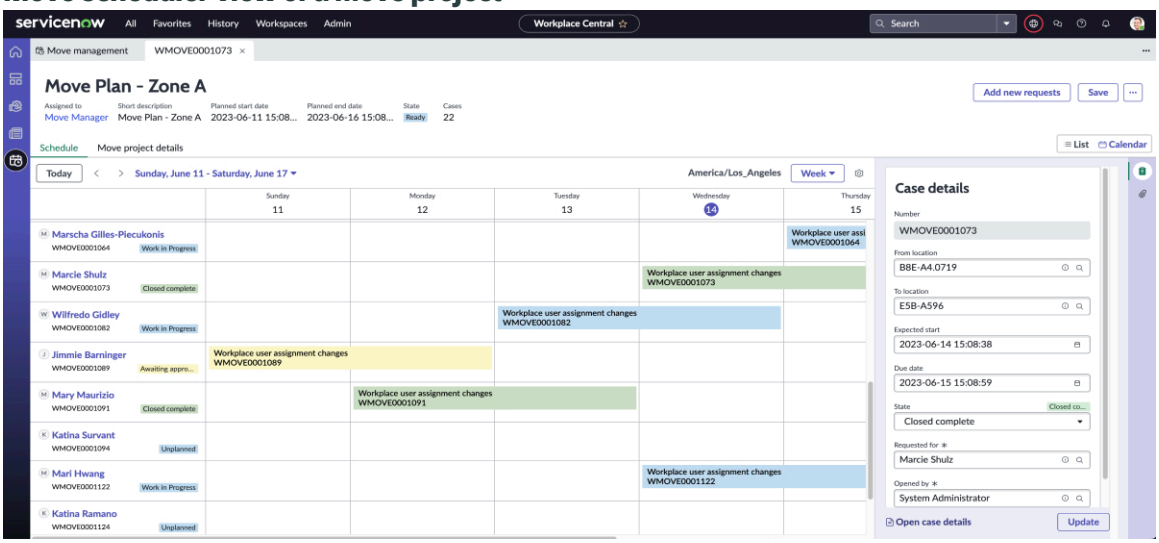
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Open and view the Location directory portal from the Scheduled view. For more information, see Open and view Location directory from Event Planner.
- You can only manage reservations that are created using Workplace Core applications.
- You can manage single and occurrence reservations.
- You can manage a multi-location or a group reservation only by opening the reservation details and not with the schedule view.
- As a reservation planner, you can perform the following actions:
  - Drag a reservation to another date and time to reschedule.
  - Change the reservation timings,
  - Change the location of the reservation.
  - Cancel a reservation
  - **Note:**
    Cancelling a recurring reservation should only delete that particular occurrence and not the complete series. The complete recurring reservation can be cancelled from the portal.
  - Open a reservation and make advanced changes and also add services

The Event planner also provides you with an option to create a reservation. The planner navigates you to the reservation portal from where you can make a reservation. As a Reservation planner, you can edit a reservation's number of attendees, the reservation purpose, and the cost center.

The Event planner workspace provides you with great options in tracking your reservations. For more information about the key features and its capabilities, refer to Workplace Central Event planner.

For more information about the Reservation planner role, refer to Components installed with Workplace Reservation Management



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Move Management

Monitor multiple workplace moves at a time seamlessly using the Move Management workspace in the Workplace Central. Create move projects to track the progress of move requests.

The Move management workspace enables you to schedule moves as per their planned date. You can create a move project and group move requests using different filter conditions, such as, workplace location, campus, space type or more.

Move scheduler view of a move project

A move project enables you to work on requests in a schedule view, which is referred to as the Move scheduler view. The Move schedule view provides a visual representation of move requests in a schedule view similar to the schedule view of the Workplace Reservation Management Reservation portal. The requests are displayed with their current state, the date on which they're scheduled to move and further details. This way you can fulfill move requests as per the requested date in the Workplace Move Management. For more information about the Move scheduler, refer to Move project views, actions, and states.

Important:
The Move management workspace enables you to only view and schedule move requests across different dates. To fulfill a move request, you must use the Workplace Move Management.

A Move project enables you to logically group move requests that match conditions specified by you. You can view all the move requests that matched the conditions under a single move project.

For example, when there are around 100 move requests currently requested by employees, it becomes a hard task to prioritize the fulfilling of move requests. In such cases, you can do the following by using the Move Management workspace in the Workplace Central:

1. Create a move project and specify condition filters to group move requests that match the condition. You can use conditions such as workplace location, space type, campus, requested move date, assignment group or more.
2. In the project, work on the requests that matched the condition.
3. View details of the move requests in the project in a calendar view. The request is displayed as a bar spread across the expected start and the due date.
4. View the number of days available for a request to be fulfilled, the start and end date of the request, the assigned user to the request and more.
5. Schedule the requests to another date by dragging across the calendar if necessary.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you're working on multiple move projects, you can monitor various metrics related to move requests, such as, the number of active projects, move tasks, number of planned and unplanned requests using the Move Management workspace.

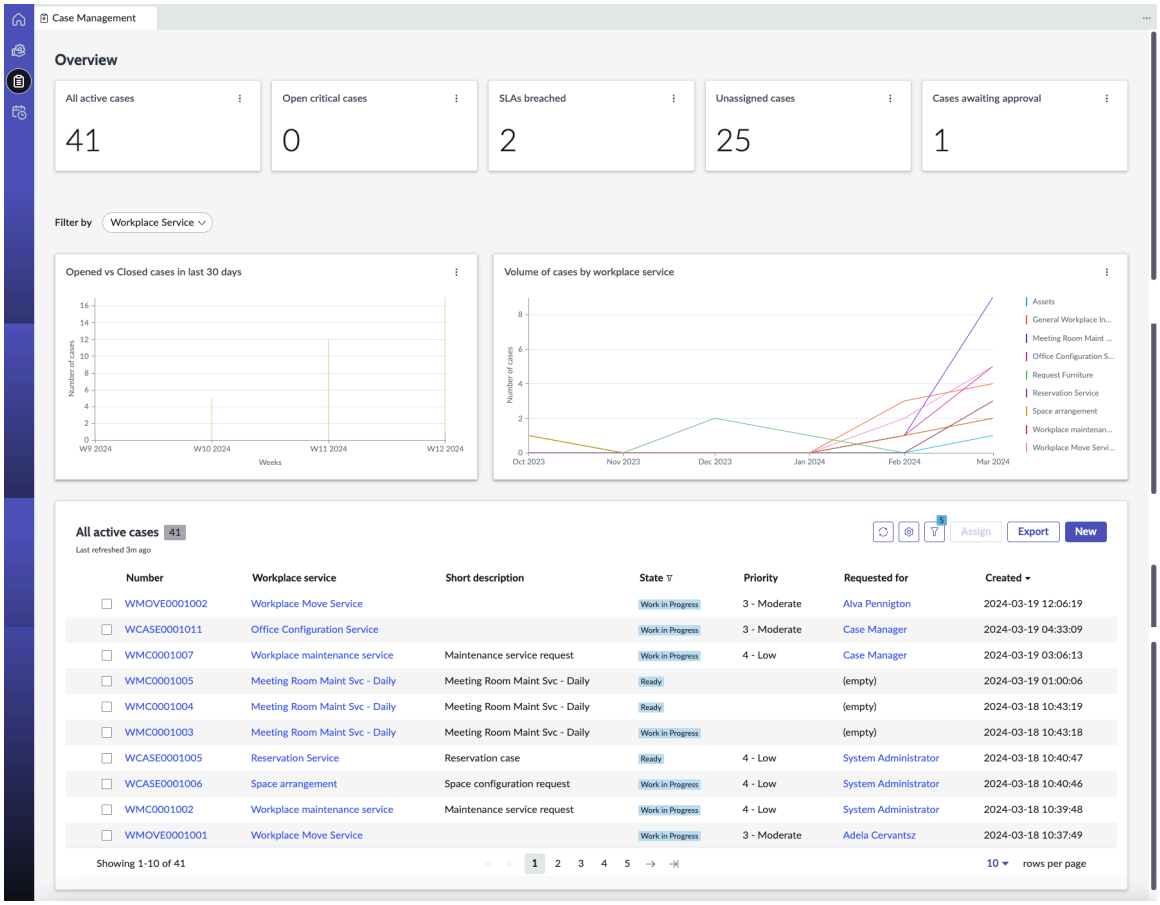
As a move manager, using the Workplace Central Move Management workspace, you can perform the following:

- Create a move project to track multiple move requests at a time. Specify conditions such as building, assignment group, space type and more based on which the move requests must be grouped.
- Track the number of active move projects created that are created by you.
- View the number of move requests associated with the move projects.
- Track the number of workplace move tasks created to implement the move requests.
- View the number of planned and unplanned move requests currently created in the application. You can know which requests you can actively work on
- Visualize the current states of move requests. Track which requests are complete and which ones aren't. Based on the state, you can work on any requests that requires attention.
- You can also visualize each move project that you're working on. Each project is displayed based on the number of move cases assigned to the move project.

For more information about the Move management workspace, refer to Move management key features and actions.

Case management

As a workplace case manager, manage all your workplace cases from a single place using the Case management workspace in the Workplace Central workspace.



The Case management workspace helps you to handle thousands of workplace cases requested in the organization daily. Instead of using the Workplace Case Management application to monitor the cases, the workspace provides you a simple and efficient display of the same cases under various categories to help you handle them easily. Instead of verifying thousands of cases and reading the data specified in detail, the workspace analyzes them and presents the data accordingly. The case details are displayed in a manner where you can find the most the important information easily with a few selects and perform quick actions.

Important:
You need the case manager [sn_wsd_case.manager] role to access the Case management module.

To know the key features of the Case management workspace and more, refer to Case Management - Key features, Actions & Case details.

You can analyze the incoming cases with the help of charts. Check the statuses of the cases and view them in detail. The workspace displays the cases that breached SLAs. The workspace displays cases such as normal workplace cases, maintenance cases, and move cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As a Case manager, the workspace enables you to perform the following actions:

- Monitor the number of active cases, critical cases, cases that have breached SLA, unassigned cases, and cases that are awaiting approval.
- View the graph of opened and closed cases on weekly bases.
- View the monthly volume of cases based on the workplace services.
- View the list of active cases in detail.
- Create a workplace service request directly instead of using the Workplace Service Portal..
- Assign a case to another agent within your assignment group.
- View case details such as the details of the employee who has requested the case, the location of the workplace on the floor map.
- Add notes or comments to the case.
- View attachments with the case, add checklist items, view knowledge base articles associated with the case, view templates and more.

As an admin or a case admin, you can cancel a case if it’s no longer required. Similarly, as a move admin, you can cancel a move case and as a maintenance admin you can cancel a maintenance case.

Kiosk Indoor Mapping

Enhance visitor and employee experiences by providing indoor maps in kiosks across your workplace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Kiosk Indoor Mapping overview

Kiosk Indoor Mapping provides a workspace experience to configure the maps for kiosks.

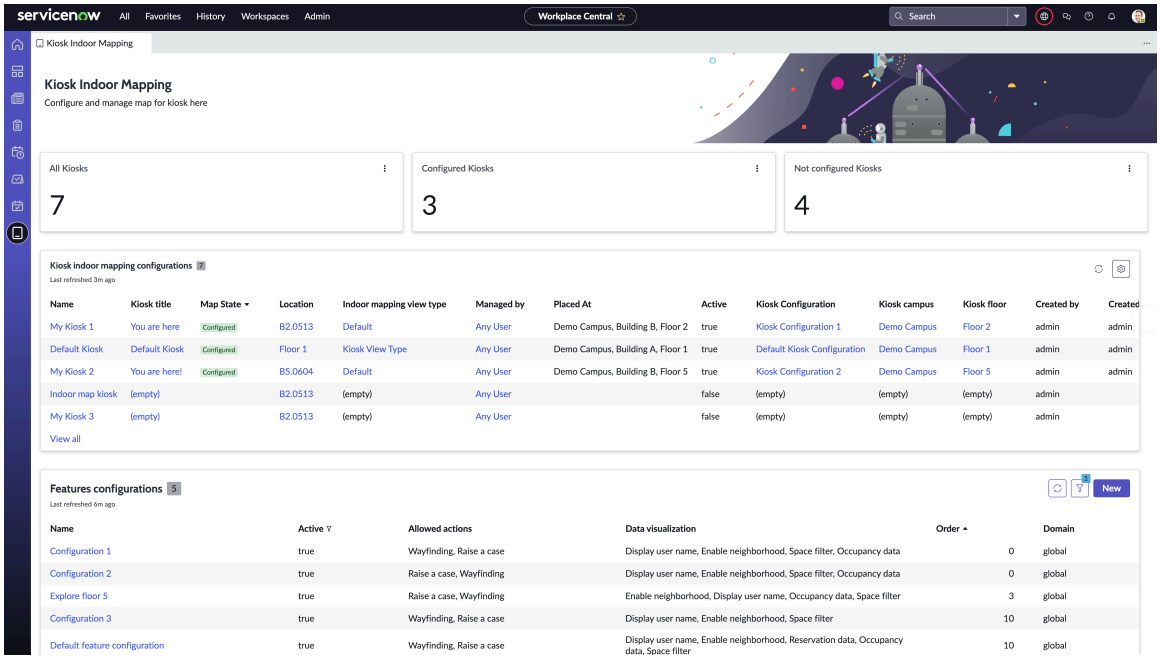
As a kiosk admin, you can do the following:

- Configure a map for a kiosk.
- Link a kiosk with an existing map.
- Customize elements to be used by the kiosk users.
  - Neighborhoods
  - Space bookings
  - Space assignments
  - Space filters
  - Wayfinding
  - Reservation and occupancy data
  - Ability to raise a case

As a kiosk user, you can do the following:

- View the map and your location on the map
- Search for a place on the map
- Filter spaces based on permanent seat assignment, occupancy data, and other criteria enabled by the admin
- Select a space and view the space details
- Get directions from the kiosk to a space
- Book and raise a workplace case

Accessing Kiosk Indoor Mapping



You must install the following plugins to use the Kiosk Indoor Mapping module.

- Workplace Central
- Workplace Services Kiosk
- Workplace Indoor Mapping

You can install the plugins from the ServiceNow Store. You can also visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information of all the released apps, see the ServiceNow Store release notes.

To access the Kiosk Indoor Mapping module, navigate to **All** > **Workplace Central**, then select the **Kiosk Indoor Mapping** module in the workspace.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure Workplace Central

Install Workplace Central and related plugins.

Install Workplace Central. For more information on how to install, refer to Install Workplace Central.

You must also install the following plugins to start using the Workplace Central application:

- Workplace Stack Plan
- Workplace Move Management
- Workplace Space Management
- For Floor map view, the floor maps must be created using Workplace Indoor Mapping Map studio.

Install the plugins from the from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. .

To customize a page in the Workplace Central application, refer to the knowledge base article: https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB1639123.

Configure approvers of a scenario

Configure approvers for scenarios that are sent for approval. Edit the scenario approval definition to add or remove scenarios. By default, the workplace managers are configured to approve a scenario

Before you begin

You can either edit the default scenario approval definition, **Scenario Plan Approval**, that is provided the application or create a new approval definition.

To create a new approval definition, refer to Create an approval definition.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To add an approver to the approval definition, the approver must be configured in the performer criteria. To do so, refer to Create a workplace performer criteria.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Approval definitions**.
2. Select **Scenario Plan Approval** approval definition.
3. On the form, scroll down to the Workplace Approval Configurations related list.
4. Select **Scenario Plan Approver**.
5. On the form, add approvers in the **Approvers** field.
6. Click **Update**.

Result
The approver is configured to review the scenario.

Install Workplace Central

Install the Workplace Central application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin
Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.

2. Verify that the following plugins are activated:
   - Workplace Space Management
   - Workplace Stack Plan
   - Workplace Move Management
   - Workplace Indoor Mapping for Floor map view.
   - Workplace Lease Administration
   - Document Management for Workplace Lease Administration

Use the following details when required:

- Name of the application: Workplace Central
- ID of the application: sn_wsd_central

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   Search for the application by its name (Workplace Central or ID (sn_wsd_central). If you cannot find the application, you may have to request it from the ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Central.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Click **Install**.

Use Workplace Central

Perform workplace-related activities using the Workplace Central application.

To customize a page in the Workplace Central application, refer to the knowledge base article: https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB1639123.

Creating custom lists on Workplace Central

You can create custom lists using the Lists module on Workplace Central. You can create a custom list by using existing lists from Workplace Central, or by using a system table.

Create a custom list based on an existing list

Create a custom list based on an existing list on Workplace Central.

Before you begin

Note:
You might require additional roles based on the lists that you want to access from Workplace Central.

Role required: sn_wsd_central.workspace_user

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
2. Select the **Lists** icon ( ).
3. Select the **My Lists** tab, then select **Add new list**.
   The New List pop-up appears with the **Start from existing** tab selected by default.
4. On the form, fill in the fields.

Start from existing

Field	Description
List	Existing Workplace Central list that you want to use for your custom list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The system only displays lists that your role has access to. After you select a list, additional fields are displayed on the pop-up.
List Name	Display name for the custom list.
Select columns	Columns that are picked from the selected Workplace Central list and displayed on the custom list. This field is displayed after you select a list in the **List** field. Some columns might already be selected based on the selected list.

5. In the Add filters section, use the following options to filter and sort the records in your custom list.

6. Select **Create**.

Create a custom list based on a system table

Create a custom list on Workplace Central based on a system table.

Before you begin

Note:
You might require additional roles based on the system table that you want to access for the custom list.

Role required: sn_wsd_central.workspace_user

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
2. Select the **Lists** icon ( ).
3. Select the **My Lists** tab, then select **Add new list**.
   The New List pop-up appears with the **Start from existing** tab selected by default.
4. Select the **Create your own** tab.
5. On the form, fill in the fields.

Create your own

Field	Description
List Name	Display name for the custom list.
Select Source	System table that you want to use for your custom list. The system only displays tables that your role has access to. After you select a list, additional fields are displayed on the pop-up.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Select columns	Columns that are picked from the selected system table and displayed on the custom list. This field is displayed after you select a system table in the **Select Source** field. Some columns might already be selected based on the selected list.

6. In the Add filters section, use the following options to filter and sort the records in your custom list.

7. Select **Create**.

Working with Space Optimization

Perform space optimization-related actions such as creating scenarios, approving scenarios and more.

Note:
To access the Space Optimization module in Workplace Central, you must have the sn_wsd_spcmgmt.space_planner role or the sn_wsd_spcmgmt.scenario_reader role; sn_wsd_spcmgmt.scenario_reader is a read-only role.

Create a scenario

Create a scenario with a building. Add, update or remove space allocations before publishing and deploying a scenario. Manage and update your scenarios using the Stack plan and Floor map component tabs.

Before you begin

Ensure that the following plugins are installed:

- Indoor Mapping (for map-based administration)
- Workplace Core
- Workplace Central
- Workplace Service Delivery Components
- Workplace Case Management
- Workplace Space Management

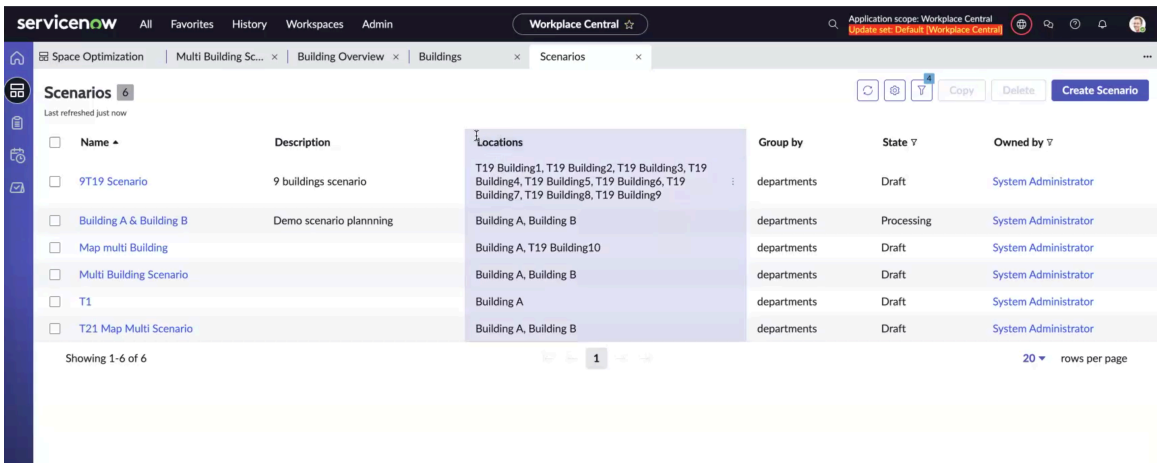
Important:
You can view spaces based on their workplace entities only for a building. You cannot create or view a scenario based on workplace entities.

Role required: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.scenario_reader (read-only; to view a scenario)

Procedure

1. Navigate to one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



You can also open Workplace Central from the Employee Center. Navigate to **Workspaces** > **Workplace Central**.

2. Select the **Space Optimization** icon ( ).
   The Space optimization dashboard opens.
3. Create a scenario by selecting **Create a scenario** from either of the following options.

4. On the Scenario details form, fill in the fields.
   For a description of the field values, see Scenario details form.
5. Select **Save scenario**.
6. **Optional:** Select the Refresh icon ( ) to check if your scenario has moved to the **Draft** state.

Result

The new scenario is created in the **Processing** state and takes some time to move to the **Draft** state. You can't open a scenario that is in the Processing state.

For more information about scenario states, refer to Scenario and Building - Views, states, settings, and key features.

After a scenario moves to the **Draft** state, you can open the scenario and select the view options for the scenario.

- **Edit Scenario**: You can only edit a scenario using this option. This option is available only when you select a scenario from the Space Optimization page. It is not available when you select a building from the Space Optimization page.
- **View Scenario**: View scenario details (unassigned spaces, allocated spaces, and user assignment details) for a selected building, floor, or bar.

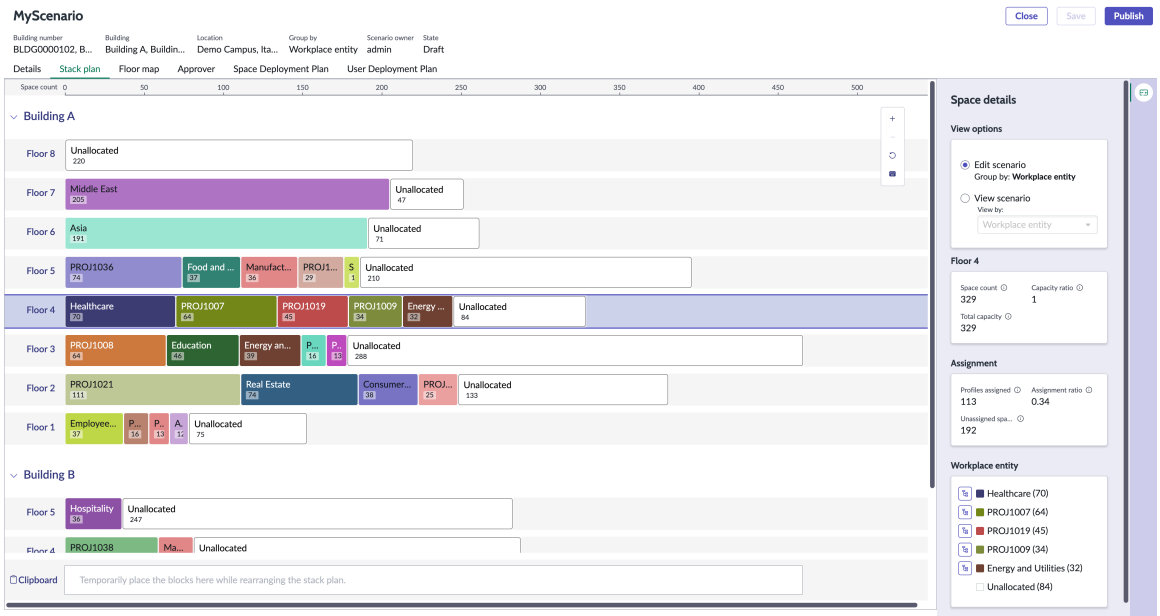
What to do next

To create a copy of an existing scenario, see Create a copy of an existing scenario.

View or edit the scenario by using the stack plan or the floor map. For more information, see Viewing or editing a scenario.

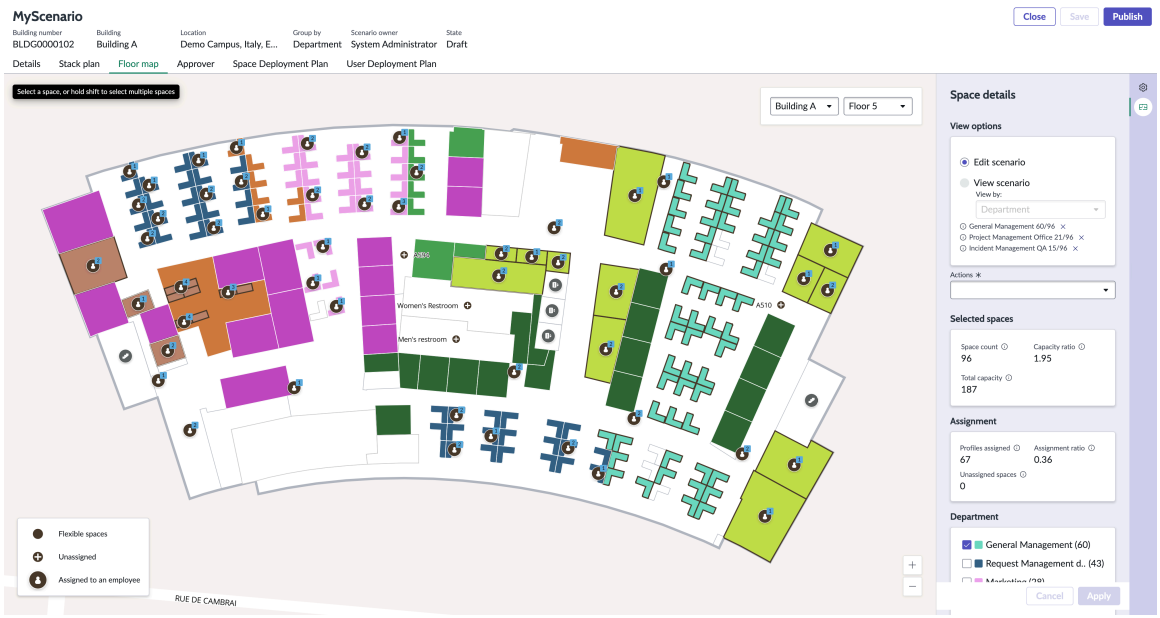
Viewing or editing a scenario

You can view the details like the floor details and space KPIs. You can edit a scenario to allocate spaces to projects and neighborhoods, assign spaces to users, or edit space assignments.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Viewing a scenario



While viewing a scenario, you can select a **View by** option to group spaces on the stack plan or the floor map. If you select Workplace Entity, you can also select the entity level that you want to use to view the scenario. The scenario displays all entity levels by default.

You can view a scenario on the stack plan, or on the floor map. For more information about stack plans and floor maps, see Scenario and Building - Views, states, settings, and key features.

The Space details panel displays information about the spaces and profile assignments for a scenario. When you select a building, floor, or bar on the stack plan, the information is updated based on your selection.

When you select spaces on the floor map, the Space details panel displays information based on your selection.

The information on the Space details panel is displayed in cards. You can also view the cards while editing the scenario.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The first card displays the space count, the total capacity, and the ratio of the capacity to the spaces.

  The name of the card changes based on your selection in the stack plan or floor map.

- The **Assignment** card displays the number of profiles assigned to the selected spaces, the number of unassigned spaces, and the assignment ratio of users to spaces.
- The legend card displays the allocations on the selected area of the stack plan or floor map.

  The name of the card changes based on your selection in the stack plan or floor map.

  If the view by option is Workplace Entity, you can view the hierarchy by selecting the tree icon () on the legend card.

Editing a scenario

While editing a scenario, the **Group by** option is used to allocate spaces based on the Allocation type [*sn_wsd_core.ALLOCATION_TYPE*] system property.

For example, if the **Group by** option is **Neighborhood**, then neighborhoods are available for you to edit in the Stack plan tab of the scenario.

You can edit a scenario by using the stack plan, or by using the floor map. For more information about stack plans and floor maps, see Scenario and Building - Views, states, settings, and key features.

- Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.
- Editing a scenario based on workplace entities is supported from Workplace Space Management version 1.15.0. For earlier versions, you can view spaces based on their workplace entities for a building. For more information, see Edit or view a building's spaces based on workplace entities
- If you select Workplace Entity as the group by option, the bars of the stack plan are displayed based on the lowest node in the hierarchy. For example, if the hierarchy for the spaces is `Corporate\Europe\Information Technology\IT Support`, the bars are displayed for `IT Support`. While editing a scenario, you can select the entity level that you want to use for the stack plan.

For more information about editing a scenario, see either of the following topics.

Edit a scenario using the stack plan

Edit a scenario using the stack plan to allocate spaces to departments, cost centers, workplace entities, or neighborhoods.

Before you begin

Ensure that you have created a scenario, and it is in the Draft state. For more information, see Create a scenario.

Role required: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.scenario_reader (read only; to view a scenario)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**
   You can also open Workplace Central from the Employee Center by navigating to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. Select All scenarios, then select the scenario that you want to edit.
   By default, the scenario opens in the **Stack plan** tab.
3. On the Space details pane, on the View options card, select **Edit scenario**.
   The **Group by** option is automatically filled based on the Allocation type [*sn_wsd_core.ALLOCATION_TYPE*] system property.
4. Select the Accordion panel icon (›) for the building that you want to edit.
   You can expand an accordion to display the floors of a building. If your scenario contains multiple buildings, the accordion of the last building is expanded by default.
   - When you select a building to see the floors, the borders of the selected building are highlighted.
   - When you select a floor on the Stack plan to view the spaces or allocations, the borders of the selected floor are highlighted.
   - When you select a bar or space to view the number of allocated spaces, the borders of the selected bar or space are highlighted.
5. Edit the stack plan based on your requirement.

Edit a scenario using the floor map

Edit a scenario using the floor map to add or remove allocations, or to assign users to spaces in your organization.

Before you begin

Ensure that you have created a scenario, and it is in the Draft state. For more information, see Create a scenario.

Ensure that you have selected Indoor Mapping as your map provider to view maps.

- For more information about selecting a map provider, see Customize the map properties.
- For more information about indoor mapping, see Indoor Mapping.

Role required: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.scenario_reader (read only; to view a scenario)

Procedure

1. Navigate to one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**
   You can also open Workplace Central from the Employee Center. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. From the All scenarios list, select the scenario that you want to edit.
   By default, the scenario opens in the **Stack plan** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the **Floor map** tab.
4. On the Space details pane, on the View options card, select **Edit scenario**.
   The **Group by** option is automatically filled based on the Allocation type [*sn_wsd_core.ALLOCATION_TYPE*] system property.
5. Edit the scenario by using the floor map.

> **Important:**
> Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.

Edit user assignments of a neighborhood

Add a user to a neighborhood or edit the existing user assignments of a neighborhood in a building.

Before you begin

Make sure that you have created a scenario that is based on neighborhoods. For more information about creating neighborhoods and scenarios, see the following topics.

- Managing Neighborhoods
- Create a scenario.

> **Important:**
> You can add a user assignment or edit a user assignment of a neighborhood only in a building view.

Role required: sn_wsd_spcmgmt.space_planner

About this task

You can add or remove user assignments of a neighborhood in a building or a scenario. A workplace user can only have one location in a neighborhood. If a user is assigned multiple locations in the same neighborhood, the latest added location is set as active and others are deleted.

> **Note:**
> On a building, you can only make user assignment-related changes only for a neighborhood that is already created. You can't add a new neighborhood.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. Select the **Space Optimization** icon ().
   The Space optimization dashboard opens.
3. In the All Buildings section, select the building that you want to modify the neighborhood user assignments for.
   Select **View all** to view a list of buildings.
   The stack plan of the building opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** View the neighborhoods on each floor of the building.

   a. Select the Stack plan settings icon ( ) to open the settings.

   b. In the **View by** field, select **Neighborhood**.
   The stack plan displays the neighborhoods in the building.

5. Edit the user assignments of a neighborhood in the stack plan.

   a. Select the neighborhood on the floor that you want to edit the user assignments on.

   b. On the Space details panel, in the Assignment section, select **Edit user assignments**.
   A page opens displaying the list of users assigned to the neighborhood.

   c. **Optional:** Use the filter, sort, or refresh options to modify the list.

   d. Add or remove users from the neighborhood.

   Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.

Review a scenario

Review a scenario created by your colleague on a building in a read-only mode.

Before you begin

Role required: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.scenario_reader (read-only; to view a scenario)

About this task

You can review a scenario created by your colleague from the Space Optimization module and share your feedback with them before they deploy.

Important:

- To review a scenario, the scenario must be published and in the Ready state.
- You cannot edit a scenario, you can only view the scenario in a read-only mode. To edit a scenario, you must be assigned as the owner of that scenario.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. Select the **Space Optimization** icon ( ).
   The Space optimization dashboard opens.
3. In the Scenarios metrics tiles, select the **Published scenarios** tile.
   A list of published scenarios appears in a separate tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** In the Scenarios list section, scroll down the list and click **View all**.
5. Select the scenario that you want to view.
   Use filters on the list to find the scenario that you're looking for.
   After selection, the scenario is opened on a stack plan.
6. On the stack plan, point to or select a bar to view more details.
   If you select a bar, you can view the details related to the bar on the right panel. For more information about the stack plan view features, refer to Scenario and Building - Views, states, settings, and key features.
7. **Optional:** View the scenario plan on a floor directly by selecting the **Floor map view** tab.

> **Note:**
> You can view the scenario plan on a floor map only if the floor map is configured using the Workplace Indoor Mapping Map studio.

Publish a scenario

After creating a scenario and implementing the space allocation and assignment, assignment type change for a department, cost center, or neighborhood publish the scenario. Share the scenario with your colleagues or stake holders.

Before you begin

Create a scenario

Role required: sn_wsd_spcmgmt.space_planner

About this task

Publish a scenario after it is created so that it is available for others to view in a read-only mode. Share the scenario with your colleagues or stakeholders to review in a read-only mode. Access the published scenario from the Space optimization module.

When you publish a scenario, the state of the scenario changes from **Draft** state to **Ready** state. For more information about the states of a scenario, refer to Scenario and Building - Views, states, settings, and key features.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**
2. On the left pane, select **Space Optimization** icon ( ).
   The Space optimization dashboard opens.
3. Open the scenario that you want to publish.
   Follow any one of the following paths.
   The stack plan of the selected scenario opens.
4. **Optional:** Review the scenario in Stack plan or Floor map as required.
   Refer to Review a scenario.
5. Select **Publish**.
   The **Publish** button is available on both the Stack plan and the Floor map for a selected scenario
   The scenario is published.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The scenario is published.

View all the scenario real estate and allocation changes in detail using the **Space Deployment plan** or the **User Deployment plan** tab. The details of all the changes that you performed in the scenario are displayed. View details related to space, floor, building, type of change, current value, scenario value, and workplace cases.

What to do next
Send a scenario for approval

Send a scenario for approval

After publishing the scenario, send your scenario for approval to workplace managers of your organization.

Before you begin
Ensure the following:

1. Create a scenario
2. Publish a scenario

Role required: sn_wsd_spcmgmt.space_planner

About this task
After you publish a scenario, send the scenario for approval. The scenario will be sent for approval to the workplace managers for approval. If there are multiple approvers for a scenario, the approval or rejection received from the workplace manager who performs it at first, is considered. You can view your approval-related details in the **Approver** tab. When a scenario is sent for an approval, the state of the scenario changes from Published to Awaiting approval and you cannot edit the scenario.

Procedure
1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select **Space Optimization** icon ( ).
   The Space optimization dashboard opens.
3. Open the scenario that you want to send for approval.
   Follow any one of the following paths.
   The stack plan of the selected scenario opens.
4. **Optional:** Review the scenario.
   Refer to Review a scenario.
5. **Optional:** If the scenario is not published, then publish the scenario.
   Refer to Publish a scenario.
6. After publishing, click **Send for approval** to send the scenario for approval.
7. **Optional:** Open the **Approver** tab to view your approver-related details.
8. Depending on the state of the scenario after sending for approval, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Rejected: If the scenario is rejected by the approver, then the state of the scenario changes to Rejected.

  To view the rejection details, do the following:

  a. Select the **Approver** tab.

  b. Search for **Rejected** state.

     Use the filter option to view Rejected state.

  c. In the **Comments**, view the comments given by the approver.

  d. Select the **Stack plan** tab to implement the changes suggested by the approver.

  e. After making the changes, click **Save**.

  f. After saving the scenario, to send the scenario for approval again, click **Send for approval.**

     The state of the scenario is again changed to Awaiting approval and you can no longer edit the scenario.

     If the scenario is rejected, you can send a scenario for approval multiple times until it is approved.

- Approved: If the scenario is approved, then the state of the scenario changes to Approved. You can no longer edit the scenario after it is approved.

9. After the scenario is approved, deploy the scenario.
   Refer to Deploy a scenario.

Result
The scenario approval process is completed.

What to do next
Deploy a scenario

Change owner of a scenario

Change the ownership of a scenario that is published and is in the Ready state. Enable other space planners also to make their changes to the scenario that you created. A can switch a scenario between multiple owners one at a time.

Before you begin
Ensure the following:

1. Create a scenario.
2. Publish a scenario

Role required: sn_wsd_spcmgmt.space_planner

About this task
Change the ownership of a published scenario to enable other space planners to implement their changes. A scenario can be worked upon by multiple space planners one at a time.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
The Workplace Analytics dashboard opens.

2. On the left pane, select **Space Optimization** icon ().
   The Space optimization dashboard opens.
3. Open the scenario for which you want to change the ownership.
   Follow any one of the following paths.
   By default, the Stack plan of the selected scenario opens.
4. Select the **Details** tab of the scenario.
   The Scenario details form opens.
5. In the **Owned by** field, select the space planner's name to whom you want to move the ownership.
6. Click **Save**.

Result

The scenario is moved to the selected space planners. You can no longer change the scenario. You can make changes to a scenario only if you are assigned as the owner of the scenario.

Deploy a scenario

After publishing a scenario plan, deploy the scenario on your production.

Before you begin

- Make sure that you have created and published a scenario. For more information, see the following topics.
  - Create a scenario
  - Publish a scenario
- Make sure that the scenario is assigned to you. You can only deploy scenarios that you own.

Role required: sn_wsd_spcmgmt.space_planner

About this task

After you publish a scenario, you must deploy the scenario to implement the changes in the production or main building data.

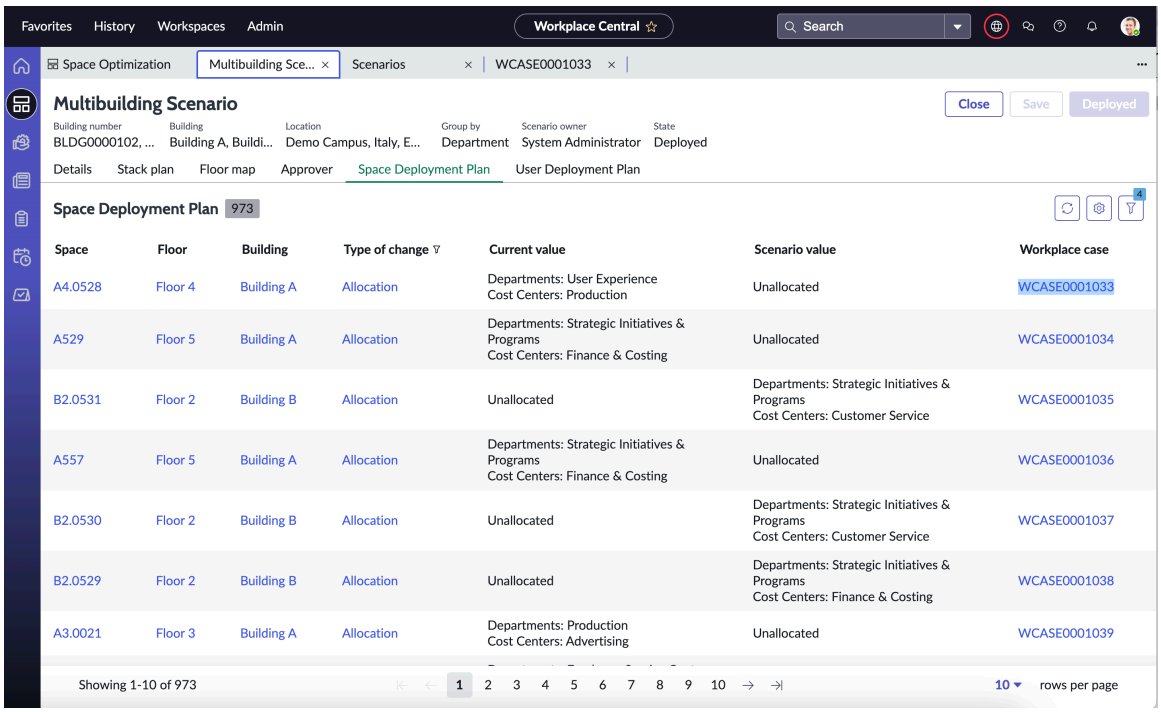
Note:

- From Workplace Space Management version 1.15.0, deploying a scenario replaces existing allocations for a space with the allocations specified based on the **Group by** value.
- For Workplace Space Management 1.14.0 or earlier versions, deploying a scenario replaces all allocations for the space with new allocations, regardless of the **Group by** value.

During deployment, you can collate all move requests raised for the scenario deployment into a single move project. Using a move project, you can track move requests and also schedule based on availability. For more information about move projects, see Move project views, actions, and states.

Note:
The option to create a move project appears only if there is at least one workplace user movement in the published scenario.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**
2. Select the **Space Optimization** icon ( ).
   The Space optimization dashboard opens.
3. Select the scenario that you want to deploy.
   The scenario must be owned by you. To verify the owner of a scenario, you can check the **Owned by** field in the **Details** tab of the scenario.
4. Select **Deploy**.
   The scenario is deployed and workplace cases are created for all the allocation and assignment changes you did on a scenario.

> **Important:**
> Your production data is updated with the scenario plan changes. Review the updated changes before proceeding with deployment.

> **Note:**
> You can't edit it a scenario after it's deployed. You can only view the scenario by using the **View Options**.

5. **Optional:** Navigate to **Space Deployment plan** and the **User Deployment** tab.
   The details of all the changes that you performed in the scenario are displayed. You can view details for building and floor where the change was applied, space, the type of changes, the current and the scenario value.

For more information about the space deployment plan and user deployment plan, see the following topics:

- Space Deployment Plan
- User Deployment Plan

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. **Optional:** In the dialog box that appears, if you want to create a move project for all the moves of the scenario, select the **Create move project** option.
   You can view all the move requests created after deploying the scenario in the move project. You can track and schedule a move request if necessary. For more information, refer to Move Management.

   > ⚠ **Warning:**
   > The option appears only if there is at least one workplace user move in the published scenario.

7. In the dialog box that appears, select **Yes** to deploy.

Result

The scenario is deployed. After the scenario is deployed, the state of the scenario changes to **Deployed**. Each change triggers a workplace case in the Workplace Case Management application.

Depending on the type of change, the following workplace services types are created:

- **Workplace User Assignment and Move Service via Scenario Planning**: Workplace service to update the user assignment and perform move activities related to the user.
- **Workplace Assignment Type Service**: Workplace service to change the assignment type of a space.
- **Workplace Allocation Change Service**: Workplace service to change the allocation of a space.

If you want to work on a move project for all the move requests in a deployed scenario, track the move project in the Move management workspace. To work on the move project, see Work on a move project.

View scenario change details

View details of each change that you implemented in a scenario. You can view details such as the space that is changed, the type of change, and the workplace move case associated with the change.

Before you begin

Ensure that the scenario is created.

Role required: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.scenario_reader (read-only; to view a scenario)

About this task

View details of every change made in the scenario. You can view details such as the floor where the change was applied, the space that was changed, the type of change, and the scenario value. If the scenario is in the Deployed state, you can also view the workplace move cases associated with each change implemented in the scenario.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**
     You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
     The Workplace Analytics dashboard opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Select the **Space Optimization** icon ().
   The Space optimization dashboard opens.
3. Open the scenario that you want to view by using any of the following paths.
   The stack plan of the selected scenario opens.
4. Select the **Space Deployment plan** tab of the scenario.
   If the scenario is grouped by neighbourhood, to view user related changes, select the **User Deployment plan**.

Result

The details of every change that is implemented on the scenario is displayed. If the scenario is in the Deployed state, you can also view the workplace move cases associated with each change implemented in the scenario.

Create a copy of an existing scenario

Create a copy of an existing scenario and make changes. Save time from a creating a scenario from scratch if there are only minor changes to an already created scenario.

Before you begin

Ensure that the scenario that you want to copy is in one of the following state:

- Draft
- Ready

Role required: sn_wsd_spcmgmt.space_planner

About this task

Clone an existing scenario as it is using the copying process. Instead of making changes from scratch, make changes to an already created scenario by copying it. Copy a scenario that is in either the Draft state or the Ready state.

When you copy a scenario, the copy is created with the same name, but appended with '- Copy 2' to identify it easily.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select **Space Optimization** icon ().
   The Space optimization dashboard opens.
3. In the Scenarios list section, at the end of the scenarios list, click **View all**.
   A list of all the scenarios created in the application are displayed.
4. Select the check box next to the scenario that you want to copy.
5. On the top-right corner of the page, select the **Copy** option.

Result

After a few seconds of copying process, the scenario copy is created. To view the copy, refresh the list by selecting the Refresh list icon (). The scenario copy is named with the same name

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

as the copied scenario but appended with a '- Copy 2'. For example, Scenario ABC- Copy 2. When you create a copy of an existing scenario, the scenario opens directly in the stack plan view and in the scenario mode of the copied scenario.

What to do next
To work on the scenario, refer to Create a scenario.

View or edit space allocations of a building

The Space optimization also enables you to view space allocations and make any space-related changes on a building directly. You can view a building stack plan and floor map same as scenarios.

Before you begin
Ensure that the following plugins are installed:

- Workplace Central
- Workplace Stack Plan
- Workplace Service Delivery Components
- Workplace Case Management
- Workplace Space Management
- For Floor map view, the floor maps must be created using Workplace Indoor Mapping Map studio.

Role required: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.scenario_reader (read-only; to view a building)

About this task
You can perform several actions on a building directly instead of working them through scenario planning. The building view enables you to perform the following:

- View space allocations on each floor based on different view options. For more information on the different view by options that are available, refer to Scenario and Building - Views, states, settings, and key features.
- Get space details of each allocation on the stack plan same as in scenarios.
- Perform map-based space administration. Such as, editing or updating user assignments to a neighborhood.
- View space allocations based on the workplace entities. This view option is supported only in the building view. You can specify the entity type based on which you want to see the space allocations.
- You can also perform changes on a building using a floor map directly. Refer to Edit a building's spaces using a map.

Procedure
1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**
     You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
     The Workplace Analytics dashboard opens.
2. On the left pane, select **Space Optimization** icon ().
   The Space optimization dashboard opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. In the All Buildings section, select the building for which you want to view the spaces.
   Select **View all** to view a list of buildings.
   The stack plan of the building opens.
4. To view the spaces on each floor based on their allocation that are they are assigned to, do the following:

   a. On the right panel, select the **Stack plan settings** icon () to open the settings.

   b. In the **View by** field, select an option.
      The following view options are available:
      - **Department**
      - **Cost center**
      - **Neighborhood**
      - **Workplace Entity**

        When you select **Workplace Entity**, an additional field, **Workplace Entity Type** is also displayed in which you can specify the entity type, based on which you want to view the spaces.

      - **Space type**
      - **Assignment type**
      - **Space status**
      - **Space function**
      - **Occupancy status**

5. To view the space details assigned to the allocation that you selected, do the following:

   a. On the right panel, select the Space details icon ().

   b. On the stack plan, select the bar for which you want to view the space details.
      The details such as the space count, capacity, user assignment details and the color legend associated with the allocation is displayed on the right.

6. To allocate a space or to change the allocation, do the following:

   a. Select the **Floor map** and the **Building** tab.

   b. Select the floor and building where the space is located using the drop-down on the top right of the map.

   c. Select a space on the map directly to view the details of that space on the right panel.
      You can select a single or multiple spaces by drawing a circle around them or by using the Shift key on the keyboard. The details on the right panel are displayed based on your selection.

      The spaces that are flexible, assigned, and unassigned spaces are highlighted with different color codes. The legend of these color codes is displayed on the map. If a space is assigned to any user, an avatar icon is displayed with the number of users assigned to that space.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. On the side panel, select **Edit Spaces**.
A page opens displaying the list of selected spaces.

e. Select the spaces for which you want to change the allocation.

f. Select the **Allocations** drop-down.

g. Depending on the allocation change that you want to make, select one of the following:
- **Change allocation**: To change the existing allocation.
- **Add allocation**: To add an allocation.
- **Remove allocation**: To remove the existing allocation.

h. On the window that opens, in the **Allocation type** field, select the allocation type.
You can also select any allocations depending on the requirement.

i. Select **Apply**.

j. On the confirmation window, review the changes that are about to be implemented and select **Confirm**.
The allocation changes are saved automatically.

Edit or view a building's spaces based on workplace entities

View the spaces in a building based on their entity types. On the floor map, directly add an allocation or modify an allocation of space. Assign spaces to a workplace entity from the floor map.

Before you begin
View or edit space allocations of a building

Important:
You can view spaces based on their workplace entities only for a building. You cannot create or view a scenario based on workplace entities.

Role required: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.scenario_reader (read-only; to view a building)

About this task
You can view a building's spaces based on different entity types that you configured in the application. The stack plan enables you to view the number of spaces assigned to each entity. View the hierarchy of each entity that is, view the child and parent workplace entities.

From the floor map view of the building, directly assign a space to a workplace entity or change an existing allocation of a space.

You can also perform changes on a building using a floor map directly. Refer to Edit a building's spaces using a map.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
The Workplace Analytics dashboard opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Select the **Space Optimization** icon ( ).
   The Space optimization dashboard opens.
3. In the All Buildings section, select the building for which you want to view the spaces.
   Select **View all** to view a list of buildings.
   The stack plan of the building opens.
4. To view the spaces on each floor based on the workplace entities that are they are assigned to, do the following:

   a. On the right panel, select the Stack plan settings icon ( ) to open the settings.

   b. In the **View by** field, select **Workplace Entity**.

   c. In the **Workplace Entity Type** field, specify the entity type based on which you want to view the workplace entities.
      If you want to view all the workplace entities irrespective of their entity types, select **All levels**.

5. To view the space details assigned to each workplace entity, do the following:

   a. On the right panel, select the Space details icon ( ).

   b. On the stack plan, select the bar of the workplace entity for which you want to view the space details.
      The details of the workplace entity such as the space count, capacity, user assignment details and the color legend associated with the entity is displayed on the right.

      Spaces that are not assigned to the selected workplace entity directly or indirectly (to any lower hierarchy entity types that can be resolved to the selected workplace entity) are assigned to the higher hierarchy of the workplace entity are displayed as **Others**.

6. To view the hierarchy of the workplace entity, do the following:

   a. Select the workplace entity for which you want to view the hierarchy.
      Select the bar on the floor.

   b. In the Space details panel, go to the Workplace Entity section.

   c. Select the hierarchy icon ( ) next to the color legend of the workplace entity.
      The legend displays the color of the entity and the number of spaces assigned to that entity on the floor.

      A window opens displaying the details of the workplace entity and its hierarchy. The number of spaces assigned to each entity in the hierarchy is clearly detailed.

   d. **Optional:** On the window, select the expand icon ( ) to view the list of below level entities and the number of spaces assigned to it.
      Point to the info icon ( ) to view the number of spaces directly assigned to that entity level out of the total assignments on it and its sublevels in the hierarchy.

7. To allocate a space to a workplace entity or to change the allocation, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select the **Floor map** tab.

b. Select the floor where the space is located using the drop-down on the top right of the map.

c. Select a space on the map directly to view the details of that space on the right panel. You can select a single or multiple spaces by drawing a circle around them or by using the Shift key on the keyboard. The details on the right panel are displayed based on your selection.

   The spaces are highlighted with different colors based on their allocation. The legend of colors is the displayed on the map. If a space is assigned to any user, an avatar icon is displayed with the number of users assigned to that space.

d. On the side panel, select **Edit Spaces**.
   A page opens displaying the list of selected spaces.

e. Select the spaces for which you want to change the allocation to a workplace entity.

f. Select the **Allocations** drop-down.

g. Depending on the allocation change that you want to make, select one of the following:
   - **Change allocation**: To change the existing allocation to a workplace entity.
   - **Add allocation**: To add the workplace entity allocation.
   - **Remove allocation**: To remove the existing allocation.

h. On the window that opens, in the **Allocation type** field, select **Workplace entity**.
   You can also select other allocations depending on the requirement.

i. In the **Entity type** field, select the entity type to which the space belongs.

j. In the **Workplace entity** field, select the workplace entity to which the space belongs.

k. Select **Apply**.

l. On the confirmation window, review the changes that are about to be implemented and select **Confirm**.
   The allocation changes are saved automatically.

Work on a space assist request

As a space planner, fulfill workplace space assistance requests. View the selected space plan of the request and deploy accordingly. You can also assign the request to another assignment group or a user.

Before you begin

Ensure that you have the following:

- Workplace Central
- Workplace Case Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Workplace Space Management
- For Floor map view, the floor maps must be created using Workplace Indoor Mapping Map studio.

Role required: sn_wsd_spcmgmt.space_planner

About this task

When a space request is submitted, a workplace case is created in the application. The Workplace Central Space Optimization dashboard enables you to view all the space request-related workplace cases at one place. As a space planner you can perform the following actions on a request:

- View space requests submitted by users. You can view a request even if the user has not selected any option. Such workplace cases are set with the Work in progress state.
- Track the total number of space requests created in the organization using the Space Optimization metrics board. You can also view the detailed list of the space requests.
- Monitor the state of a space request and work on it accordingly.
- View the selected space plan of a space request and deploy it.
- Assign the space request to another assignment group or a user.
- View the space plan on a floor map and visualize the seating before deployment.
- Add work notes on the request. Work notes are displayed only to the space planner who is working on that request.
- Add comments on the request so that the user can view. You can inform the progress or notify them with any information that they must know.

For a detailed information about the functionality, views, and states, refer to Space request approvals, states, actions, and key features.

Note:
You can deploy only a space request that is in the Approved state.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select **Space Optimization** icon ().
   The Space optimization dashboard opens.
3. To open a space request, do one of the following:
   - In the **Scenarios** metrics section, select **All space requests**.
   - In the **Space requests** section, select **View all**.

   Space Requests tab opens.
4. **Optional:** Apply filters and sort options on the list to filter out the request.
5. Select the workplace case of the space request that you want to work on.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The workplace case opens in a separate tab and displays various details of the request. For detailed information of the various options displayed on the request, refer to Space request approvals, states, actions, and key features.

6. **Optional:** In the **Workplace Case** panel, you can perform any of the following:
   - To assign the space request to another assignment group, edit the **Assignment group** field.
   - To assign the space request to another user directly, specify the user in the **Assigned to** field.
   - Scroll to view the request details and the variables provided by the requester.
7. In the **Activity** panel, you can perform any of the following:
   - Add comments in the **Comments** section and select **Post comments** to notify users with any information.
   - Add work notes in the **Work notes** section and select **Post Work notes (Private)** to notify other space planners who are working on the request. Work notes are not displayed to the requester.
8. Select the **Space plan** tab to view the space plan that is selected by the requester.

   You can also view the space on the map by selecting the **View spaces on map.**

   Warning:
   You can view the space plan only if the requester selects an option. If the requester has not selected any option, the **Space plan** tab doesn't display any information.

9. Select the **Approvals** tab to view the approver details of the space request.
10. Select the **Space Deployment plan** to view the space allocation details such as the type of change, current value, and the scenario value.
11. Select the **Floor map** tab to view the space plan on a floor map.
    The legend of the color related with each department is displayed on the right panel.

    Note:
    You can view the floor map only if the floor on which the space plan is made has a floor map configured. Ensure that you have configured Indoor Mapping as your map provider to view maps and have the Indoor Mapping components plugin. For more information, see Customize the map properties.

12. After making changes, select **Save**.
13. To deploy the space plan, do the following:
    a. Select the **Space Deployment plan** tab.
    b. Review the space plan and allocations if required.
    c. Click **Deploy**.
    The space plan selected in the request is deployed.

Result
The space plan is deployed for the space request. The state of the request is changed to Deployment in progress until all the space allocations are implemented. For every allocation, a workplace case is created for it. When deployment is in progress, the following actions are performed:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If any one workplace case associated with an allocation is unsuccessful, that is, if the state is changed to Closed incomplete. In such cases, the deployment fails and the state of the space request is set to Closed incomplete. You can add comments if you want to notify the user with the failure details.
- If all the workplace cases associated with allocations are successfully implemented, that is, they all have the state set to Closed complete, then the deployment is successful. When the deployment is successful, the space request is set to Closed complete.

Map based space administration

As a space planner, perform space assignments, user assignments and other actions on a building using the building's floor map directly.

The floor map view of a building enables you to visualize the changes in real time. You can implement any actions on the map, such as space allocations, neighborhood allocations, employee assignment, and employee movement.

Install the following plugins:

- Workplace Central
- Workplace Case Management
- Workplace Space Management
- For Floor map view, the floor maps must be created using Workplace Indoor Mapping Map studio.

Edit a building's spaces using a map

Space planners and administrators can update space attributes and allocation changes using interactive floor maps. Select and edit a single space or update bulk spaces via floor maps. Add, change, or remove space allocations as required. The updated space attributes and association changes are reflected in real-time on a floor map.

Before you begin

Role required: sn_wsd_spcmgmt.space_planner

Procedure

1. Navigate to **All** > **Workplace Central** > **Space Optimization** > **All Buildings**.
2. Select **View All** and select a building from the list of buildings.
3. On the Stack plan, select the Stack plan settings icon () from the right pane to display different view options.
4. Select **View by** to select the view based on which the spaces on the floor must be categorized. The following view options are available:
   - Department
   - Cost center
   - Neighborhood
   - Workplace entity
   - Space type
   - Assignment type
   - Space status

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Space function
- Occupancy status

The spaces are displayed based on the selected view.

5. To display the Space details for a selected stack bar, select the Space details icon ( ) on the right pane.
6. To view the space allocations on a map, select the **Floor Map** tab.
   The floor map of the selected floor on the stack plan is displayed. The spaces are highlighted based on the view option that you selected.
7. To change the floors, use the **Floor** option.
8. To view the space details of the spaces or any selected pane, on the right pane, go to the Space details section.
   Various space details such as the space counts, profiles assigned, department details and more are displayed.
9. To change the view, on the right pane, select the Map Settings icon ( ).
   In the Map Settings panel, you can perform the following actions:
   - **Change the floor map view**: Select the **View by** option. The following view options are available:
     - Department
     - Cost center
     - Neighborhood
     - Workplace entity
     - Space type
     - Assignment type
     - Space status
     - Space function
     - Occupancy status
   - View spaces based on assignment: You can enable or disable the following settings:
     - **Assigned to**: View the user to whom a space is assigned.
     - **Assignment type**: View the assignment type of a space.
10. To zoom on the space on the map, use the zoom options displayed on the bottom right of the map.
11. To edit the space attributes or its allocation details, do the following:

    a. Select either a single space or bulk spaces.

    To select multiple spaces, select and hold down the **Shift** key to draw a circle (lasso) or draw any freehand selection border around the spaces that you want to edit.

    b. After the selection, to edit the spaces, on the right pane, select the **Edit Space** option under the **Space details** section.
    A new tab opens with a list view of the selected spaces. You can configure the columns based on which you want to view the spaces and also make edits and perform allocation changes. The updated changes are reflected in real time on a floor map.

    c. Select the spaces that you want to edit using the check box.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Enable the system property **glide.lists.inline_editing_enabled** for making inline edits in the list pages.

d. After selecting the required spaces, select **Edit**.

e. The right panel opens in the **Edit** mode.

f. After making the required space attributes and association changes, select **Update** to save the changes.

g. If there are spaces with similar names for a selected floor, a message is shown to change the space name.

h. Duplicate spaces are also shown so that they can be removed.

i. Take appropriate actions to change floor names and remove duplicate spaces.

j. To update space allocation details, select required spaces from the list view and select the **Allocation** drop-down list to add, change, or remove space allocations.

Allocation options

Field	Description
Add Allocation	Select **Add allocation** from the drop-down list to add new space allocations. ▪ From the **Allocation type** drop-down list, select the allocation type. ▪ Based on the **Allocation type** selection, select the required option. ▪ Select **Apply**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Change Allocation	Select **Change allocation** from the drop-down list to change or update space allocation. ▪ From the **Allocation type** drop-down list, select the allocation type. ▪ Based on the **Allocation type** selection, select the required option. ▪ Select **Apply**.
Remove Allocation	Select **Remove allocation** from the drop-down list to remove the selected space allocation. ▪ Select the allocation from the **Allocation type** drop-down list, ▪ Select the required option, based on the **Allocation type** selection. ▪ Select **Apply**.

k. Additionally, select **Export** to export the bulk space record data to Excel, JSON, HTML, or CSV.

l. Select the **Delivery type** list and select **Download** or **Email** to download or email the selected space record data.

m. Select **New** to add a workplace location and update the required fields.
For more information, see Managing workplace locations.

n. After performing the changes, select **Save**.

12. Select **Back** to navigate back to **Floor Map**.
Any changes that you make to space records are applied in real-time and available on the floor Map of the selected space.

Move employees on a floor or to a different floor using the map

Using the building's Floor map view, move single or multiple employees on a floor or to a different floor. Assign or unassign a space to an employee.

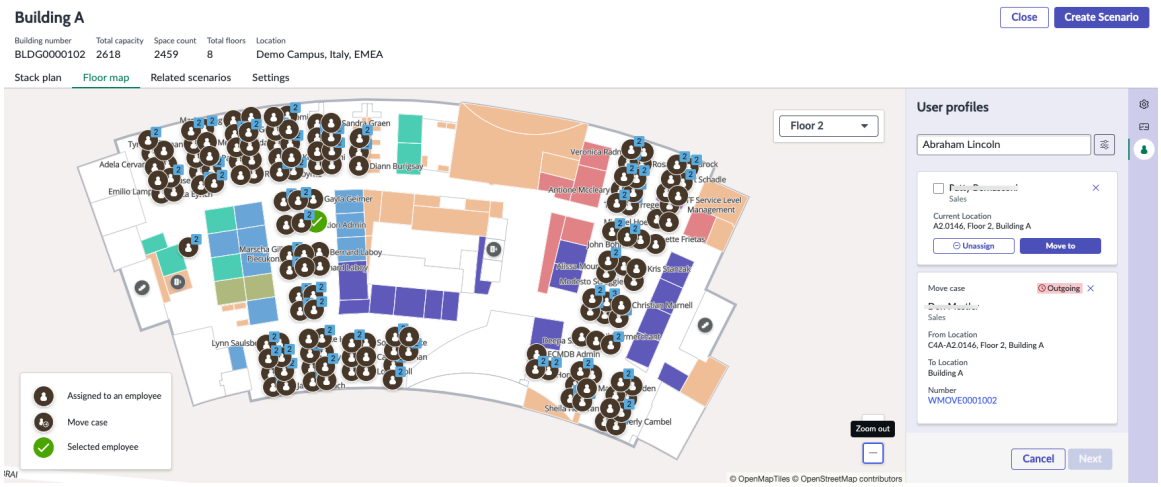
Before you begin
Verify that the building in which you want to move employees has a floor map.

Note:
You must install the Workplace Move Management plugin to move an employee to a different location.

Important:
If the employee already has an ongoing move request, you can't move that employee.

Role required: sn_wsd_spcmgmt.space_planner

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select **Space Optimization** icon ( ).
   The Space optimization dashboard opens.
3. In the All Buildings section, select the building where you want to make employee movements.

   Important:
   If the employee already has an ongoing move request, you can't move that employee.

   Select **View all** to view a list of buildings.

   The stack plan of the building opens.
4. On the Stack plan, select the **Floor map** tab to view the building's floor map.
5. Select the floor where you want to move employees using the **Floor** option on the map.
6. On the side panel, select **Users** icon ( ).
   The floor map displays user icons based on employee assignments.

On the map, the spaces assigned to an employee, the spaces that have an ongoing move case and the space that you have currently selected are displayed as follows:

7. To view the details of one or more employees assigned to a space, select the or the Move icon on the space.

   After selection, the icon is highlighted with

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The details of one or more assigned employees is displayed on the **User profiles** panel. If there's an ongoing move case, then move case details are displayed.

8. To view the details of the move case on a space, select the  icon on the space.

   After selection, the icon is highlighted with  icon.
   The details of the incoming or outgoing move case are displayed on the **User profiles** panel. An incoming move case is tagged as **Incoming** and an outgoing move case is tagged as **Outgoing**. You can select the move case number to view the move case details on a separate tab.

9. To move an employee to a different location, do the following:

   a. Select the space on the map where the employee is assigned.
   The employee details are displayed on the **User profiles** panel.

   b. On the employee details tile, to move the employee, select **Move to**.

   c. On the form, do the following:
   You can change the floor map view by using the **View space view** option. Upon selection, the floor map displays the space details and the number of employees assigned and doesn't display employee names. You can also select the destination space from the map by selecting the **View space view** option.

      i. In the **Actions** field, select the type of move you want to perform. You can select from the following options:

      - Assign or move to space: Select this option to move the employee to a different space.
      - Assign or move to area: Select this option to move the employee to a different area.
      - Assign or move to floor: Select this option to move the employee to a different floor.
      - Assign or move to building: Select this option to move the employee to another building.
      - Unassign: Select this option to unassign the space to the employee.

      Note:
      The **Select building** field is set by default with the current building. You can't change the building.

      ii. In the **Select floor** field, select the floor where you want to move the employee.

      iii. In the **Assign area** field, select the area where you want to move the employee.

      iv. In the **Assign space** field, select the space where you want to move the employee.

      v. Select **Apply**.

   d. On the confirmation window, review and select **Confirm**.
   A move request is created to perform the move. On the map, the space from where the employee is moved and the space where the employee is to be moved are marked with the  icon.

10. To unassign an employee from a space, do the following:

    a. Select the space on the map where the employee is assigned.
    The employee details are displayed on the **User profiles** panel.

    b. On the employee details tile, to unassign the employee from the space, select **Unassign**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. On the form, select **Apply**.

d. On the confirmation window, review and select **Confirm**.
The employee is unassigned from the space.

11. To assign an employee to a space, do the following:

> **Important:**
> If the employee already has an ongoing move request, you can't move that employee.

a. Select the space on the map where you want to assign one or more employees.
The details are displayed on the **User profiles** panel. If there's an existing move case or if there are existing users, the respective details are displayed on the panel.

b. Search and select the employees.
Perform one of the following to search:

- In the **Search users** field, search for the employee whom you want to assign.

  From the list, select the user.

- For an advanced search, select the Search users slider icon ( ).

  i. On the Select users window, search from a list of **System users** or the **Workplace profiles**.

  ii. Select one or more employees and select **Select users**.

One or more selected employees is added to the panel.

- If the selected employee doesn't have any existing location, the **Current location** isn't displayed.
- If the selected employee is already assigned to a location, the location details are displayed in the **Current Location**.

c. To assign an employee who isn't assigned to any location already, do the following:

> **Important:**
> If the employee already has an ongoing move request, you can't move that employee.

i. On the employee details tile of that employee, select **Assign to**.

ii. On the form, specify the type of assignment in the **Actions** field and the location details in the **Select floor**, **Assign area** and **Assign space** fields accordingly.

iii. Select **Apply**.

iv. On the confirmation window, review and select **Confirm**.

The selected space is assigned to the workplace profile of the employee. If a primary space is already assigned to the workplace profile, the selected space is assigned with the **Is primary** field set to false.

d. To assign an employee who is already assigned to a space, do the following:

> **Important:**
> If the employee already has an ongoing move request, you can't move that employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

i. On the employee details tile of that employee, select **Assign to**.

ii. On the form, specify the type of assignment in the **Actions** field and the location details in the **Select floor**, **Assign area** and **Assign space** fields accordingly.

iii. Select **Apply**.

iv. On the confirmation window, review and select **Confirm**.

The selected space is assigned to the workplace profile of the employee and the earlier space is unassigned. If a primary space is already assigned to the workplace profile, the selected space is assigned with the **Is primary** field set to false.

12. To perform multiple employee moves, assignment or unassignment at a time, do the following:

> **Important:**
> If the employee already has an ongoing move request, you can't move that employee.

a. Select and hold down the **Shift** key to draw a circle (lasso) or draw any freehand selection border around the spaces.

The selected spaces are marked with the selected icon  icon. The employee details and the move cases on the selected spaces are displayed on the **User profiles** panel.

b. On the panel, perform the steps 9, 10 and 11 accordingly.

Select the check box on the employee details tile in case of multiple changes and perform the actions.

To assign a space to an employee, use the **Assign to** option.

To move an employee from the existing space to another space, use the **Move to** option.

To unassign an employee from the space, use the **Unassign** option.

Working with Schedule Planning

Create and execute schedule plans to assign workspaces to your employees.

Create a schedule plan

Create a schedule plan to assign employees, spaces, and employee-space mappings for your projects.

Before you begin

> **Important:**
> The admin must set a value for the *sn_wsd_core.ALLOCATION_TYPE* property to enable schedule planning.

You can create schedule plans for projects that are assigned to you. Projects can be assigned to a user from the following fields:

- **Primary contact** field of the department
- **Manager** field of the cost center
- **Managed by group** or **Managed by** field of the workplace entity

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Only one of the fields is considered for the project list based on the *sn_wsd_core.ALLOCATION_TYPE* property. For example, if the allocation type is Department, the project list only displays the departments that you are the primary contact for.

Role required: sn_wsd_spcmgmt.project_owner

Procedure

1. Navigate to **All** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center by navigating to **Workspaces** > **Workplace Central**.
2. Select the **Schedule Planner** icon ().
3. On the Schedule Plans list, select **Create schedule plan**.
4. On the details page, fill in the fields, then select **Next**.
   For a description of the field values, see Schedule Plan details form.
   A schedule plan record is created in the **Draft** state.
5. On the User selection page, select the users that you want to include in the schedule plan, then select **Next**.
   The user selection limit is based on the value of the *WSMConstants.SCHEDULE_PLAN.USER_SELECTION_LIMIT* constant. The default selection limit is 1000.

   Note:
   If the *sn_wsd_core.ALLOCATION_TYPE* property is set to Department or Cost Center, the users are displayed from the Users [sys_user] table. If the property is set to Workplace Entity, the users are displayed from the User Workplace Profile [sn_wsd_core_workplace_profile] table.

6. On the Space selection page, select the workspaces that you want to include in the schedule plan, then select **Next**.
   The space selection limit is based on the value of the *WSMConstants.SCHEDULE_PLAN.SPACE_SELECTION_LIMIT* constant. The default selection limit is 1000.

   Note:
   The spaces are displayed from the Allocation [sn_wsd_spcmgmt_location_cc_dept_map] table.

7. After the system creates a mapping for the users and workspaces, select **Validate**.

   Note:
   The mapping for users and spaces is generated randomly. You can modify the mapping by editing the user and workspace columns.

   Based on the selected workspaces and users, the system may prompt you to resolve warnings and errors. The schedule plan can be created with warnings. However, you must fix the errors to create the schedule plan.

   You can view the error or warning in the **Validation Issues** column.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Validation Issues

Validation issue	Issue type	Description
User Not Found	Error	The user field mapped to the space is empty. Map a user to the space to resolve the error.
Space Not Found	Error	The space field mapped to the user is empty. Map a space to the user to resolve the error.
User Entry Duplicated	Warning	The user is mapped to multiple spaces.
Space Entry Duplicated	Warning	The space is mapped to multiple users.

8. Resolve the errors and warnings, then select **Create plan**.

Result

The schedule plan record is moved to the **In Progress** state. The system takes some time to assign the workspaces to the workplace profile of the users. You can view the progress in the Assignments tab.

If a user has an existing Workplace Profile Location Assignment, the schedule plan creates a non-primary location assignment. If a user does not have a workplace profile, the system creates a workplace profile and a primary location assignment.

After a schedule plan is published, the selected users receive an email with details about their workspace assignment and the start and end date of the schedule.

Edit a schedule plan

Edit a schedule plan to change the details, selected users, or selected spaces.

Before you begin

You can only edit a schedule plan that is in the Draft state and assigned to you. If a schedule plan is not in the Draft state, you can only change the **Name**, **Assigned to**, and **Description** fields.

Role required: sn_wsd_spcmgmt.project_owner

Procedure

1. Navigate to **All** > **Workplace Central**, then select the **Schedule Planning** module.
   You can also open Workplace Central from the Employee Center by navigating to **Workspaces** > **Workplace Central**.
2. Select the **Schedule Planner** icon ( ).
3. From the Schedule Plans list, select the draft schedule plan that you want to edit.
4. Change the Details, User selection, or Space selection based on your requirement.
   You can navigate to the required page by selecting **Back** or **Next**. Adding more users or spaces does not change the existing mappings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Changing the Project, Schedule, Start date, or End date fields resets the User selection, Space selection, and Mapping pages.

5. Navigate to the Mapping page, then select **Create Plan**.
   For more information about user-space mapping and validation, see Create a schedule plan.

Cancel a schedule plan

Cancel a schedule plan to deactivate the location assignment records for your employees.

Before you begin

You can only cancel schedule plans that are in the Draft or Published state.

Role required: sn_wsd_spcmgmt.project_owner

Procedure

1. Navigate to **All** > **Workplace Central**, then select the **Schedule Planning** module.
   You can also open Workplace Central from the Employee Center by navigating to **Workspaces** > **Workplace Central**.
2. Select the **Schedule Planner** icon ( ).
3. From the Schedule Plans list, select the schedule plan that you want to cancel.
4. On the schedule plan details page, select **Cancel**.
   You can also delete the schedule plan by selecting **Delete** from the context menu. Deleting a schedule plan also deletes the respective location assignments.

Result

The schedule plan is moved to the Cancelled state. If the schedule plan was published before being cancelled, the location assignments created in the plan are made inactive.

Working with Workplace Analytics

As a workplace manager or administrator, use the Workplace Analytics dashboard to access key metrics for space optimization, maintenance management, lease administration, and Occupancy Insights to help you make effective decisions.

Ensure that you have the required set of permissions to view the dashboards.

View Space Optimization metrics

Use the Space Optimization dashboard Workplace Analytics to analyze space capacity and utilization trends to achieve optimal use of workspaces.

Prerequisites for accessing the Space Optimization dashboard

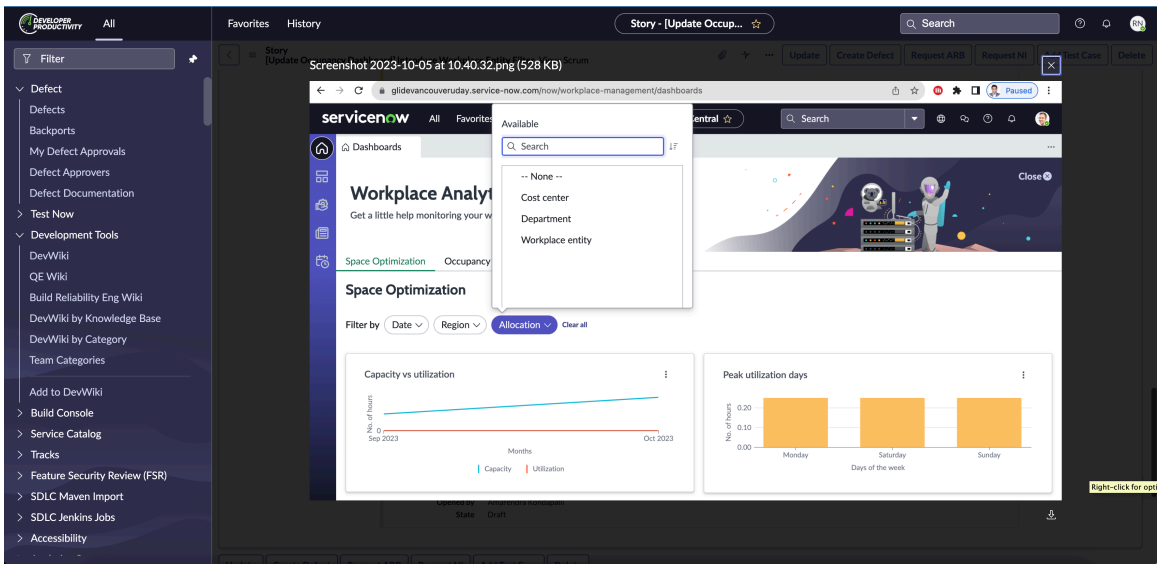
- Ensure that the Workplace Central application is installed. For more information, see Install Workplace Central
- Ensure that the Workplace Space Management (sn_wsd_spcmgmt) application is installed. For more information, see Install Workplace Space Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Ensure that the Workplace Central and Workplace Space Management applications and all of their associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Run the scheduled job *Workplace Analytics Space Management report data generation* before viewing the Space Optimization dashboard for the first time. For more information, see Run the scheduled job for the Space Optimization dashboard.

Accessing the dashboard

To access the Space Optimization dashboard, you must have any of the following roles: sn_wsd_spcmgmt.space_planner, sn_wsd_spcmgmt.manager, sn_wsd_rsv.manager, or sn_wsd_core.workplace_manager.

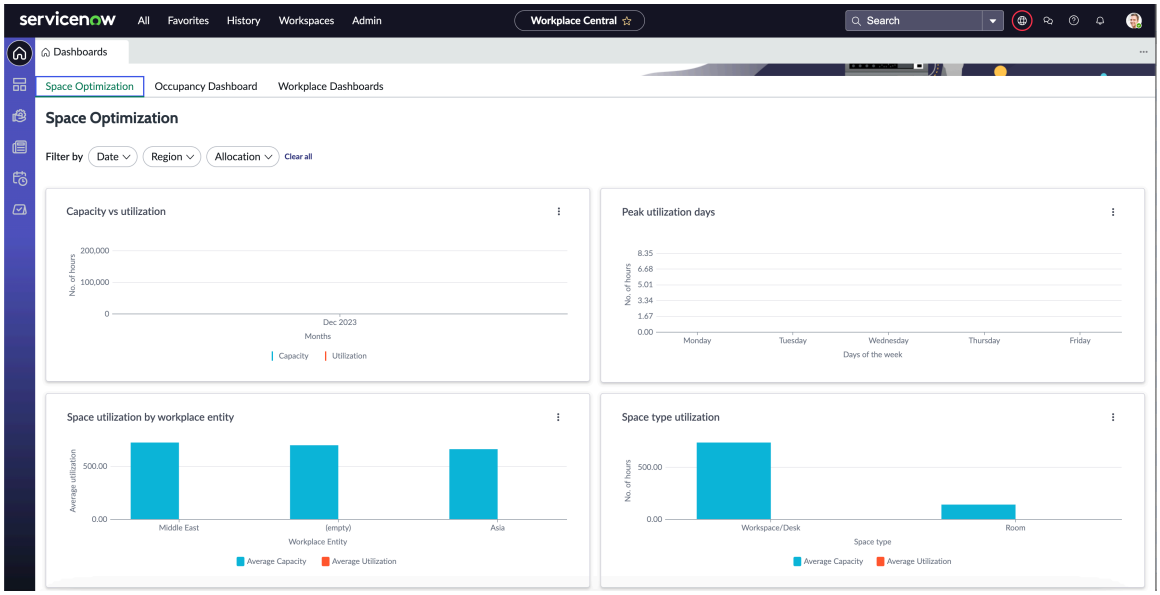


Access the dashboard using one of the following navigation paths:

- **All** > **Workplace Central** > **Workplace Central**.
- **Workspaces** > **Workplace Central**

Reports

The following default reports show data for the past year only. You can adjust the data range by using the available filters for Date, Region, Site, Campus, Allocation, Workplace entity.



Allocation type [sn_wsd_core.ALLOCATION_TYPE] enables you to specify an allocation type based on space utilization. Only allocations that are active in the selected time frame are considered for the reports. For more information, see Allocate a cost center, department, or workplace entity.

For more information, see Allocation - types, setting, and impact.

The Space Optimization dashboard also enables you to visualize data based on the Entity type. Manage space allocations based on the workplace entity to ensure proper space utilization.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Map designated workspaces to user profiles.

Capacity is calculated based on the following criteria:

- Total capacity is the total number of hours an active space is available for reservation.
- Capacity is calculated using the reservation properties **Start time of the working day** and **End time of the working day**.

Utilization is calculated using the following criteria:

- For employees with permanent seat allocation, space utilization is calculated using the reservation properties Start time of the working day [sn_wsd_rsv.day_start] and End time of the working day [sn_wsd_rsv.day_end].
- For employees that don't have a permanent seat allocation, space utilization is calculated from the total reservation time in day's work shift hours. The work shift or office hours is calculated from the Start time of the working day [sn_wsd_rsv.day_start] and End time of the working day [sn_wsd_rsv.day_end].
- For example, if the office work hours are 9 hours and a meeting room is reserved for 11 hours, the total utilization in this case is 9 hours. The Start time of the working day [sn_wsd_rsv.day_start] and End time of the working day [sn_wsd_rsv.day_end] properties are used while calculating office hours. The unallocated hours in a day for a reserved space aren't considered while calculating the total reservation time duration for a day or a multi-day reservation. The reservation property for office hours is set in **(** > **All** > **Workplace Reservation Management** > **Properties**.

Capacity vs utilization

This report facet displays the available space resources versus its occupancy.

Benefits:

- Select the more options icon (⋮) to refresh the report.
- Insight into the space availability versus the occupancy trend.
- Enables you to reconfigure your space assignments and space optimization to achieve optimal resource utilization.
- A desk can be shared by multiple workplace entities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

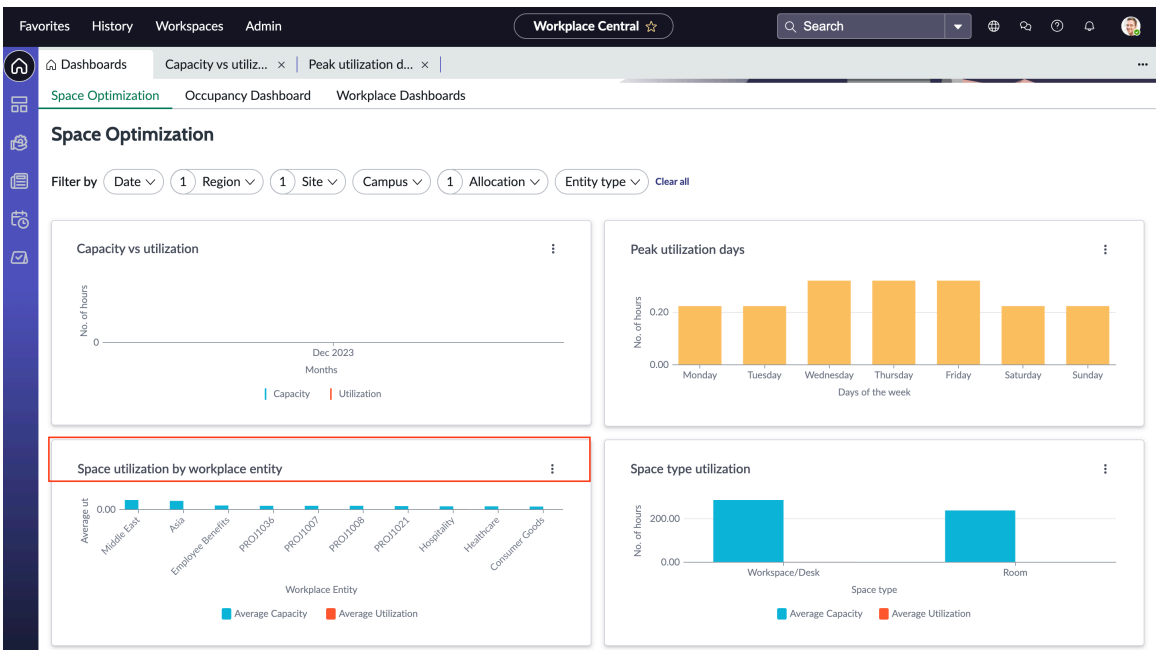
For example, a seat or desk is shared by user A and user B. If user A reserves the seat, the application checks the workplace entity of User A and calculates the space utilization and capacity ratio.

- Select a report facet or card and double-click to see the details.

Peak utilization days

This report displays the average utilization for days of the week.

Benefits:



- Select the more options icon (⋮) to refresh the report.
- Insight into the space utilization for the days of the week.
- Enables you to prioritize resources according to the demand.
- Select a report facet and double-click to see the details.

Calculation:

```
Average utilization = [Total utilization in hours for a weekday/Number of spaces available for the week day]
```

Space utilization by workplace entity

This report facet displays the average capacity and average utilization based on the workplace entity.

Benefits:

- Select the more options icon (⋮) to refresh the report.
- Select the **Allocation** tab in the Filter by options and allocate by different workplace entity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select **Entity type** in the Filter by options and select a workplace entity to view the space utilization metrics for a selected entity.
- Compare the set of data for average capacity and average utilization for a workplace entity.
- Select a report facet and double-click to see the details.

Calculation:

```
Average capacity by workplace entity = [Total capacity in hours for a workplace entity/Number of spaces available for a workplace entity]
```

Space type utilization

This report facet displays the average capacity and average utilization for a space type.

Benefits:

- Select the more options icon (⋮) to refresh the report.
- Compare data for average capacity and average utilization for a space type.
- Add or remove space types to achieve the optimal space optimization.

Calculation:

```
Average capacity by space type = [Total capacity in hours for a space type based on the office hours/Number of spaces available for a workplace entity]
```

Customizing widgets

You can customize the widgets to display relevant metrics by using the UI Builder. For more information, see UI Builder tutorial.

Run the scheduled job for the Space Optimization dashboard

As an admin, run the scheduled job *`Workplace Analytics Space Management report data generation`* to calculate capacity and utilization for all spaces.

Before you begin

Role required: admin

About this task

This job should be run before viewing the dashboard for the first time. The job calculates capacity and utilization for all spaces and populates an internal table from which the dashboards are populated.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Job**.
2. Select **Workplace Analytics Space Management report data generation** from the list.
3. Select **Execute Now** to run the job.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

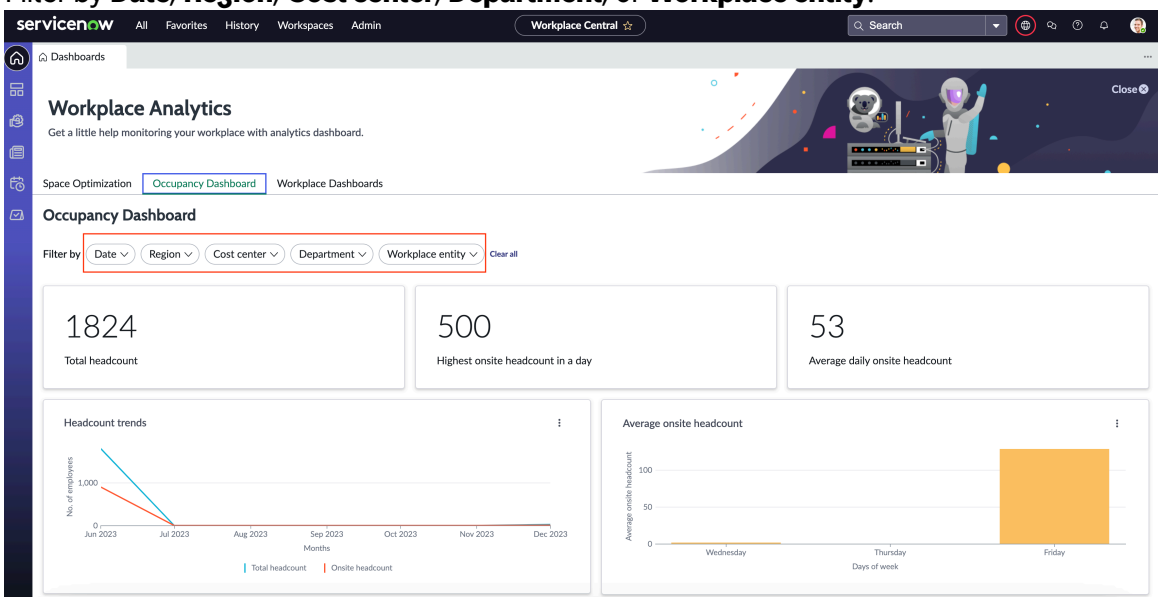
View Occupancy Dashboard

Workplace administrators and managers can view the workspace occupancy metrics to plan and optimize the workplace space utilization.

Before you begin

To view the Occupancy Dashboard report, ensure you have:

- Installed Workplace Central (sn_wsd_central) application plugin.
- Workplace users must have an employee profile created.
- Workplace users must have a workplace location assigned in the employee profile.

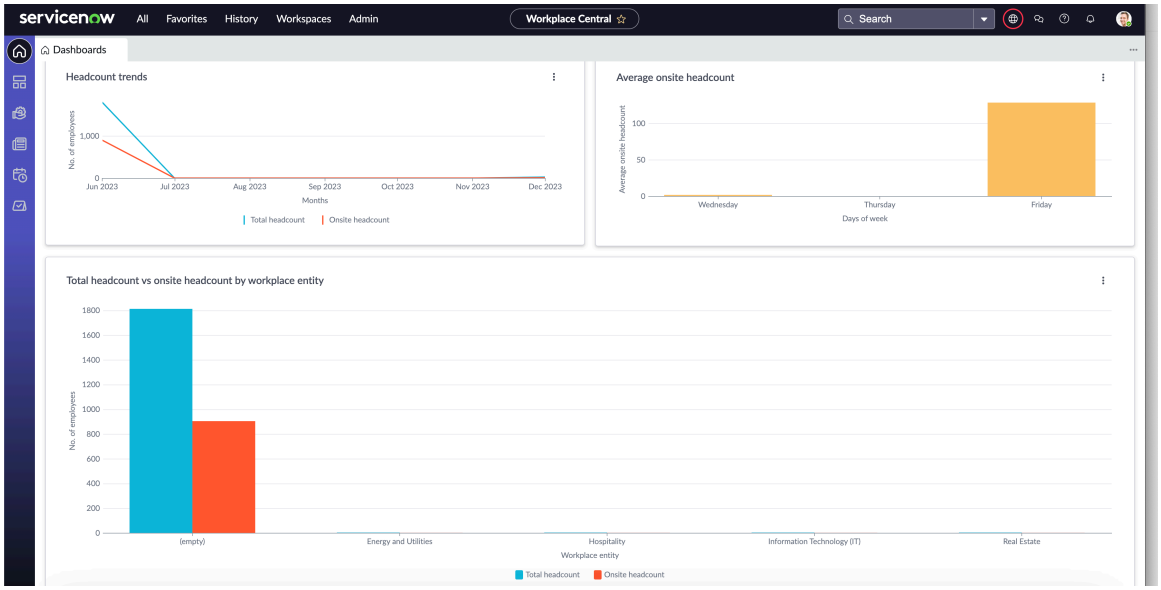


Workplace users with the following roles can access the Occupancy Dashboard report:

- sn_wsd_central.workplace_analytics_user
- sn_wsd_wc.manager
- sn_wsd_wc.user

Role required: sn_wsd_wc.admin

Procedure



1. Navigate to **All** > **Workplace Central**.
   The Workplace Analytics dashboard is displayed.
2. Select **Occupancy Dashboard**.
3. Filter by **Date**, **Region**, **Cost center**, **Department**, or **Workplace entity**.

4. Select **Apply** after you've selected the required filters.
5. View the **Total headcount**, **Highest onsite headcount in a day**, and **Average daily onsite headcount** for a selected region, date, and cost center or department.
6. View occupancy reports based on the following criteria:
   - Headcount Trends
   - Available onsite headcount
   - Total headcount vs online headcount by department
   - Total headcount vs onsite headcount by workplace entity

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Filter by workplace entity to view space allocations of a building based on workplace entities. Workplace entity-based allocation, enables you to control the space consumption of each business in your organization. For more information, see Map designated workspaces to user profiles and Attendance Analytics.

7. The following default scorecards are available on the dashboard:

   Select a scorecard to see detailed reports and metrics:

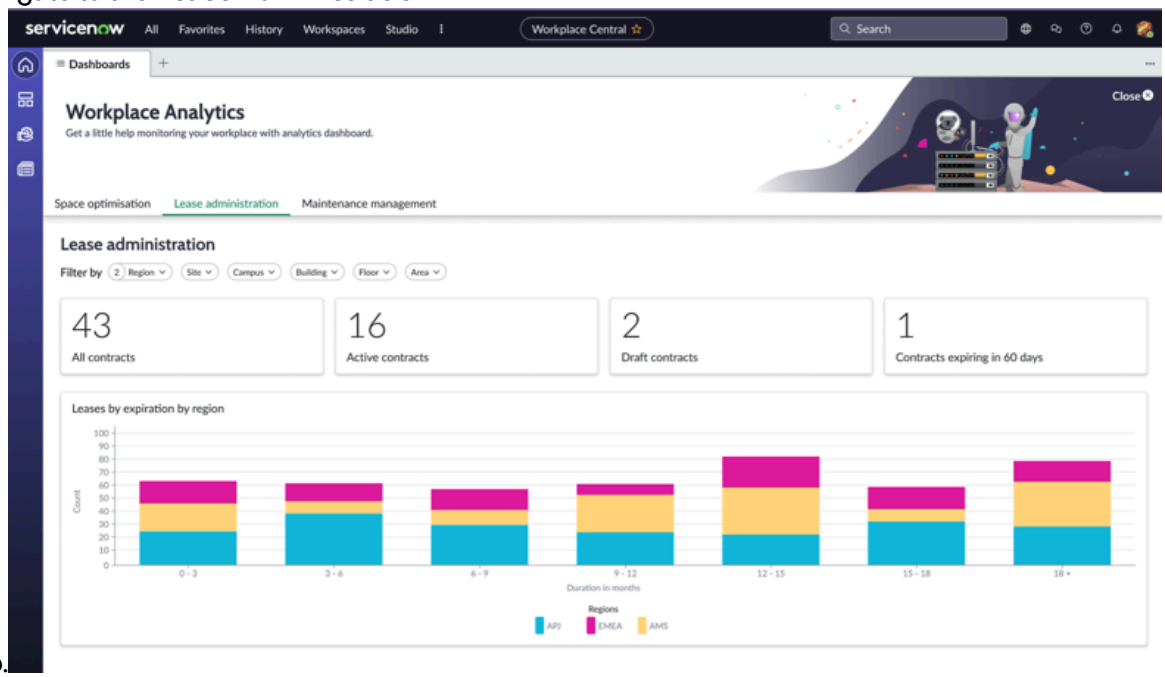
   - Total headcount
   - Highest onsite headcount in a day
   - Average daily onsite headcount

8. Select an object on the chart to open the related component page.
   For example, select **Headcount trends** on the chart to open the Headcount trends page. The headcount for a selected region, site, campus, building, cost center, or department is shown.
9. Select **Export** to export occupancy dashboard data to Excel, JSON, CSV, or a PDF file.
10. After exporting the data, download or email the data.

View Lease Administration metrics

Use the Lease Administration dashboard to get insight into the number of total contracts, active contracts, draft contracts, and expiring contracts.

Prerequisites for accessing the Lease Administration dashboard



- Ensure that the Workplace Central application is installed. For more information, see Install Workplace Central
- Ensure that the Workplace Lease Administration (sn_wsd_la) application is installed. For more information, see Activate Workplace Lease Administration
- Ensure that the Workplace Central and Workplace Lease Administration applications and all of their associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Accessing the dashboard

To access the Lease Administration dashboard, you must have the sn_wsd_la.manager or sn_wsd_la.admin role.

- Access the dashboard using one of the following navigation paths:
  - **All** > **Workplace Central** > **Workplace Central**.
  - **Workspaces** > **Workplace Central**
- Navigate to the **Lease Administration** tab.

Scorecards and report

Note:
Workplace contracts without a location value aren't included in the total count.

The following default scorecards are available on the dashboard. Select the card to see the list of records.

- **All Contracts**- Displays the total number of workplace contracts.
- **Active Contracts** - Displays the number workplace contracts in an active state.
- **Draft Contracts** - Displays the number of workplace contracts in the Draft state.
- **Expiring in 60 days** - Displays the number of workplace contracts that expire within the next 60 days.

For more information, see Workplace Lease Administration.

Reports

Lease expiration by region

Displays the number of workplace contracts expiring in different regions.

Benefits:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Displays a consolidated view of the number of workplace contracts expiring so you can renew them on time. For more information, see Renew workplace contract in Core UI.

View Maintenance Management metrics

Use the Maintenance Management dashboard to get an insight into maintenance cases, their trends, and maintenance plan compliance. These insights enable you to create an efficient maintenance plan to improve workflows and reduce maintenance activities and their related costs.

Prerequisites for accessing the View Maintenance Management dashboard

- Ensure that the Workplace Central application is installed. For more information, see Install Workplace Central
- Ensure that the Workplace Maintenance Management (sn_wsd_maintenance) application is installed. For more information, see Install Workplace Maintenance Management.
- Create and publish a maintenance plan. For more information, see Create and publish maintenance plans and Workplace maintenance cases.

  You can also create a maintenance plan record by using the Preventative Maintenance option on the Workplace central home page. Navigate to **All** > **Workplace Central**. Select the Preventative Maintenance icon ( ) on the context side bar to create a maintenance plan.
- Ensure that the plugin Performance Analytics (com.snc.pa) is installed and that you have the Performance Analytics premium entitlement. For more information, see Install Performance Analytics Content Pack for Agile 2.0
- Ensure that the Workplace Central, Workplace Maintenance Management applications and all of their associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Run the *Workplace Maintenance Case Historical Data Collection* job before viewing the dashboard for the first time. For more information, see Run the scheduled job for the Maintenance Management dashboard.

Accessing the dashboard

To access the Maintenance Management dashboard, you must have the sn_wsd_maintenance.manager or sn_wsd_maint.admin role.

- Access the dashboard using one of the following navigation paths:
  - **All** > **Workplace Central** > **Workplace Central**.
  - **Workspaces** > **Workplace Central**
- Select the **Maintenance Management** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scorecards

The following default scorecards are available on the dashboard. To see the list of records, select the related card.

PMP (Planned Maintenance Percentage)

Shows the percentage of planned days spent for preventive cases vs the total planned days for both preventive and corrective maintenance cases. A high percentage value indicates that more time is being spent in planned maintenance activities rather than unplanned activities.

Calculation:

```
Planned Maintenance Percentage = (Total number of days taken to complete all preventive maintenance cases for a duration / Total number of days taken to complete all maintenance cases for the duration) X 100
```

PMC (Planned Maintenance Compliance)

Shows the percentage of the total number of preventive maintenance cases completed vs the total number of preventive maintenance cases. A high percentage value indicates that maintenance activities are completed as per schedule.

Calculation:

```
Planned Maintenance Compliance = (Number of preventive maintenance cases completed/ Total preventive maintenance cases) X 100
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

MTR (Mean time to repair)

Shows the average time taken to close a maintenance case. A low value indicates that the processes for maintenance and the necessary skills to handle them are effective.

Calculation:

```
Mean time to repair = Average age of all the maintenance cases / Total number of maintenance cases
```

Number of open cases

Shows the total number of open cases. A low number of open cases indicates your maintenance plan and resolution processes are effective.

Calculation:

```
Total number of preventive and corrective maintenance cases that are not in closed complete, closed incomplete, or canceled state.
```

Reports

The following default reports are available on the dashboard. Select the card to see the list of records.

Corrective vs preventive maintenance case trend

Displays the trend of corrective and preventive maintenance cases.

Benefits:

Analyze the trend to understand the efficiency of planning and identify any assets that must be retired or replaced.

Average age of maintenance cases

Displays the average age of corrective and preventive maintenance cases.

Benefits:

Analyze the trend to understand the efficiency of maintenance services and identify the process or assets that cause the increase in the age of maintenance cases. Take steps to reduce the age of cases.

Formula:

- `Average age of corrective maintenance cases = [Sum of ages for all the corrective cases/Total number or maintenance cases]`
- `Average age of preventive maintenance cases = [Sum of ages for all the preventive cases/Total number or maintenance cases]`

Planned maintenance percentage trend

Displays the percentage trend for the total number of days spent on preventive cases versus the total number of planned days for both preventive and corrective maintenance cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Benefits:

Analyze the trend to identify problem areas that cause unplanned activities or corrective cases. Modify the process or replace or retire the assets to avoid unplanned activities.

Formula:

```
Planned maintenance percentage trend = (Total number of planned maintenance days / Total number of maintenance days) X 100
```

Planned Maintenance Compliance trend

Displays the percentage trend of the total number of preventive maintenance cases completed versus the total number of preventive maintenance cases.

Benefits:

Analyze the Planned Maintenance Compliance trend to identify issues that lead to deviation from the plan. Take steps to improve processes that causes inconsistent on-time completion.

Calculation:

```
Planned Maintenance Compliance trend = [Number of completed preventive maintenance cases/ Total preventive maintenance cases] X 100
```

Indicators

The indicator groups and indicators listed in the following table are used for populating the widgets in the dashboard.

Indicators and indicator groups

Indicator group name	Indicators
Workplace.Maintenance.Case.Closed	• Workplace Maintenance Case Closed Age Sum Hours • Workplace Maintenance Case Closed Corrective Age Sum Hours • Workplace Maintenance Case Closed Corrective Count • Workplace Maintenance Case Closed Preventive Age Sum Hours • Workplace Maintenance Case Closed Preventive Count
Workplace.Maintenance.Case.Opened	• Number of corrective cases • Number of open cases

Indicators and indicator groups (continued)

Indicator group name	Indicators
	• Number of preventive cases • Workplace Maintenance Case Opened Preventive Closed Complete Count

You can also add new indicators. For more information on how to work with indicators, see Configure Performance Analytics fundamentals.

Run the scheduled job for the Maintenance Management dashboard

As an admin, run the scheduled job *`Workplace Maintenance Case Historical Data Collection`* to collect data for the past year that is used by the Maintenance Management dashboard.

Before you begin

Role required: admin

About this task

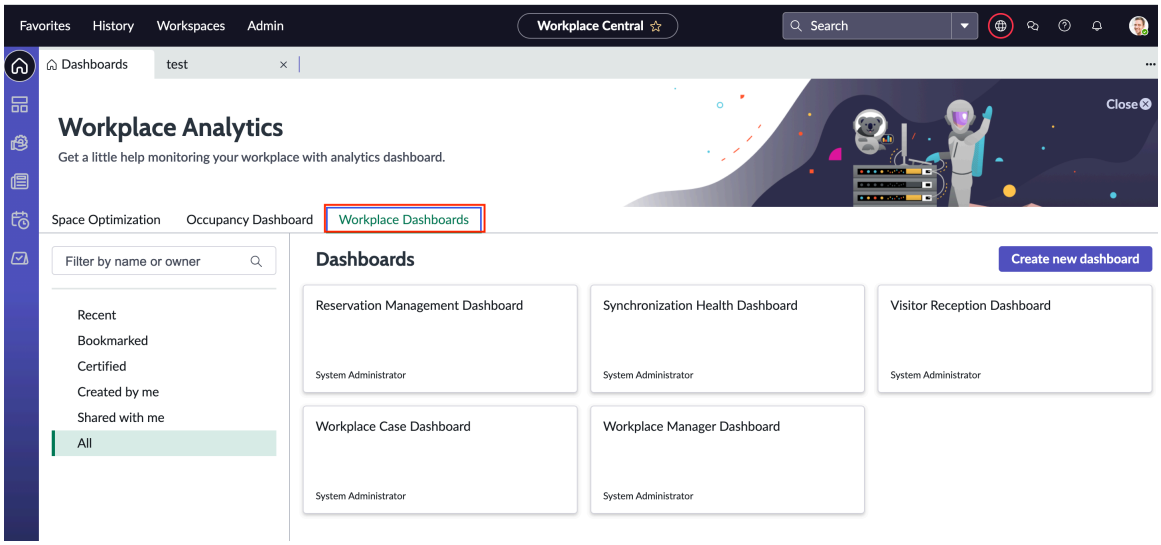
This job should be run before viewing the dashboard for the first time. It collects all the data required for the reports for the past year.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Job**.
2. Select **Workplace Maintenance Case Historical Data Collection** from the list.
3. Select **Execute Now** to run the job.

Manage Workplace Dashboards

Manage Workplace Dashboards in Workplace Central to get insights and metrics of Reservations, Visitors, Workplace Manager activities, Workplace Cases, and Synchronizations.



Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

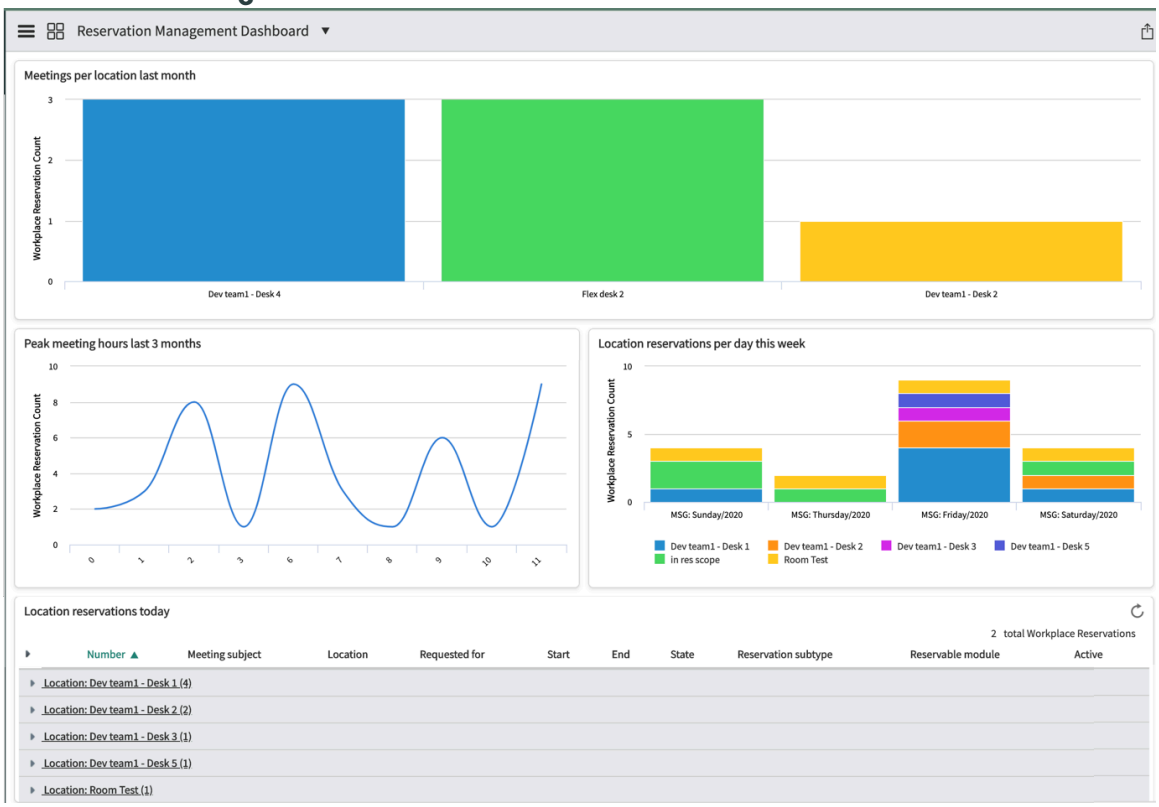
Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Dashboards**.

2. The following Workplace Dashboards are available:
   - Reservation Management dashboard
   - Visitor Reception Dashboard
   - Workplace Case dashboard
   - Workplace Manager Dashboard
   - Synchronization Health Dashboard

Reservation Management dashboard

Use the Reservation Management dashboard to monitor the reservations and meeting frequency in your organization. On any day, you can view details such as number of reservations, peak meeting times, and number of meetings for different locations.



Note:
The Workplace Reservation Management dashboard is migrated to Workplace Central. You can start using the migrated dashboards from Workplace Central. The out-of-the-box dashboards are also migrated to Workplace Central.

Old dashboards are not supported for new Workplace Service Delivery customers. For existing customers, old dashboards are currently available but will be deprecated soon.

For more information about the migrated dashboard, see Reservation Management dashboard.

Working with Move management

Create, monitor, and work on move projects created to schedule move requests. Work on the project using the move scheduling feature and monitor multiple move requests simultaneously.

Create a move project from existing move requests

As a move manager, create a move project to logically group move requests based on different criteria and fulfill them on priority.

Before you begin

Ensure that you have the following plugins installed:

- Workplace Central
- Workplace Move Management

Role required: sn_wsd_move.manager

About this task

Create a move project to group multiple move requests into a single project to oversee and manage them. Specify conditions based on which the move requests must be filtered to group them under the project. You can set conditions to group workplace move requests based on their workplace location, building, space type, assignment group, department, and more. Provide a name and give a short description to the project.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
2. Select the Move management () module.
3. Select **Create project**.
   You can also create a move project from the following locations:
   - Select **My active projects** tile and select **Create** in the list view.
   - In the **All move projects** section, select **View all**. In the list view, select **Create**.
   - You can also create a move project when you deploy a scenario. After you select the **Deploy** action, in the dialog box, select **Create move project**.

     Important:
     The option is displayed only if there are any workplace user or workplace location moves in the scenario.
4. On the Create a move project form, specify a name and short description for the project.
5. Select **Select from existing move requests**.
6. In the **Editor** section, specify your conditions.
   By default, the project is created with Project and Active conditions that you can't remove.
   a. To add a condition, select **+New condition set**.
   b. Set a condition based on which you want to filter move requests to this project.
7. Create the project by selecting **Create**.

Result

The move project is created and all the move requests that have matched the filter conditions that you specified are displayed in the move scheduler. The move requests are displayed to you in the schedule view by default. The planned start and end date of the project are set based on the minimum **Expected start** date and the maximum **Due date** from the move requests that are associated with the project.

A move project contains both the schedule view and a list view. For more information on Move projects, refer to Move project views, actions, and states.

What to do next

Work on a move project.

Create a move project by uploading an Excel file

As a move manager, create a move project by uploading an Excel file that contains move-related information for the employees.

Before you begin

Verify that you have the following plugins installed:

- Workplace Central
- Workplace Move Management

Role required: sn_wsd_move.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center by navigating to **Workspaces** > **Workplace Central**.
2. Select the Move management () module.
3. Select **Create project**.
   You can also create a move project from the following locations:
   - Select **My active projects** tile and select **Create** in the list view.
   - In the **All move projects** section, select **View all**. In the list view, select **Create**.
   - You can also create a move project while deploying a scenario. After you select the **Deploy** action, in the dialog box, select **Create move project**.

     Important:
     The option is displayed only if there are any workplace user or workplace location moves in the scenario.
4. On the Create a move project form, specify a name and short description for the project.
5. Select **Create move cases via excel upload**, then select **Create**.
6. Upload an Excel file that contains move-related information.
   The file must contain move-related information in the appropriate columns. You can download an Excel template by selecting **Download excel template**. For more information about the character limit of the Excel columns, see Excel column lengths for move projects.

   a. On the **Upload file** card, select **Attach file**.

   b. On the **Attachments** pop-up, select **Select file**.

   c. Select a file from your local system, then select **Upload**.
   To attach a different file, you must remove the existing file by using the context menu.

   d. After the file is uploaded, close the pop-up window.

   The system takes some time to process the uploaded file and loads the data in a staging table. After the move information is processed, the system displays information about data issues and business conflicts.
7. On the Move information page, review the information and resolve the conflicts.

   Note:
   Data stored in the Move staging table (to process data conflicts) is archived after seven days. Make sure that you create move cases before the data is archived.

   Conflicts like non-existent employee or same source and destination are stored as data conflicts. Conflicts like allocation mismatch or exceeding capacity are shown as business conflicts. For more information about the conflicts, see Move conflicts for projects created via Excel upload.
8. Create the move cases by selecting **Create move cases**.
   The system takes some time to create move cases based on the move information records. You can view the progress by opening the move project.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Trouble?
If you accidentally close a move project after uploading an Excel file, the system displays a loading screen when the move project is opened. To close the loading screen and edit the project, select **Edit Move Project**.

What to do next

- Review the created cases on the **Move cases** tab:
  - The **List** view displays details like the status and move dates for the cases.
  - The **Calendar** view displays the planned move dates for the move cases. You can schedule the cases by moving them on the calendar.
- Review the move tasks that are created for the move cases. The **Move tasks** tab displays details like the priority and status of the move tasks.
- View the project details, comments, work notes, and activity on the **Move project details** tab.

Note:
The move project isn't marked complete even if all the child cases are closed. You can add more cases to the project from the Schedule View or the List View.

For more information about working on a move project, see Work on a move project.

Work on a move project

After creating a move project, work on the project using the move scheduler. The move scheduler displays all the move requests in a schedule view (calendar view) and a list view. Track all the move requests that are grouped under the move project.

Before you begin
Ensure the following:

- The move project is already created to work on. If you want to create a move project, refer to Create a move project from existing move requests.
- The move project must be active.

Ensure that you are aware of the Move project views, actions, and states.

Role required: sn_wsd_move.manager

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
2. Select the Move management module.
3. Under the Move Management metrics section, select the My active projects tile.
4. From the list view, select the project that you want to work on.
   The project opens in a separate move scheduler tab with a calendar view.
5. View the users who raised the move requests by viewing the Move requests panel on the left. Scroll through the list to view all the users. The move requests are sorted based on their move request number.
6. View the planed start and end dates on the calendar by scrolling horizontally on the calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

> **Important:**
> Move requests that are in the Unplanned state are not displayed with a bar. As a move manager, you must specify the planned start and end date to the move requests.

7. View the previous week or next week by using the **Previous week/ next week** options ( ) placed on the top left of the calendar.
8. Change the calendar view from week to month by using the **Week/Month** option ( ).

> **Important:**
> You cannot move a move request bar in the **Month** view.

9. View the keyboard shortcuts by selecting the Settings icon ( ).
10. View details of a move request by selecting the event/bar on the calendar.
    The move request details are displayed on the right in the Case details panel. To view more case details such as its child tasks, case SLAs, and more, select **Open case details**.
11. Update the move request details.
    a. In the Case details panel, edit the fields that you want to change.
    b. Select **Update**.
    c. **Optional:** To view or update other case details such as the child cases, child tasks, approvers, case SLAs and more, select **Open case details**.
    The move request opens in a separate tab.
        i. Edit the fields that you want change.
        ii. Select **Save**.
12. Schedule a move request to another day.
    a. Select the move request bar on the calendar.
    b. Drag the request to the desired date.

> **Note:**
> - You can drag the request only horizontally, that is, to another day on the calendar.
> - You can't drag the request to another user.
> - You can't drag a request if you are in the **Month** view.

    c. Select **Save**.
13. Change the planned start and planned end dates of the move request.
    a. Select the move request bar on the calendar.
    b. In the **Case details** panel, edit the following fields:
    - **Expected start**: Edit this field to change the expected start of the move request. That is, select the date from when you're planning to start the move.
    - **Due date**: Edit this field to change the due date of the move request. That is, select the date by when you want to close the move request.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

14. Switch to a list view of the move requests by selecting the List option (List).
15. Remove a request or assign a move request to yourself.
    a. Select the List option (List) to open the move requests in a list view.
    b. To remove a request, do the following:
        i. Select the move requests that you want to remove.
        ii. Select **Remove**.
    c. To assign a move request to yourself, do the following:
        i. Select the move requests that you want to assign to yourself.
        ii. Select **Edit**.
        iii. Select **Assign to me**.
16. Add more move requests.
    a. Select **Add new requests**.
    A separate tab opens with a list of move requests that aren't assigned to any move project.
    b. Select the move requests that you want to add.
    c. Select **Add**.
17. To view the move project details, to change the state of the project, to assign the project to another move manager, to know the project's state transition, the actual start and end dates and more, do the following:
    a. Select the **Move project details** tab.
    b. **Optional:** To change the state, edit the **State** field.
    Before changing the states, refer to Move project views, actions, and states.
    c. **Optional:** Assign the project to another move manager by changing the **Assigned to** field.
    d. **Optional:** Add work notes.
        i. Go to the **Compose** panel.
        ii. Enter your work notes.
        iii. Select **Post work notes(private)**.
        iv. Select **Save**.
    e. **Optional:** Add or view attachments of the projects by selecting the Attachments icon (.
    f. Select **Save**.
18. Select **Save**.
19. Delete the move project:

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

> **Warning:**
> Deleting a project won't delete or impact the associated move requests. After deletion, the move request will continue to exist in their current state without any project association.

a. Select More actions icon ( ).

b. Select **Delete**.

c. Select **OK**.

Result
The changes are saved on the move project.

Working with Event planner

Monitor all the reservations created in your organization from a single workspace. Create a reservation, open a reservation, schedule a reservation to another time or move to another location. Open the Location directory portal from the Event planner home and the Scheduled view.

Track reservations using the Event planner

As a reservation planner and a reservation viewer, the Event planner enables you to monitor the reservations that are requested in your workplace.

Before you begin
Ensure that you have installed the Calendar component (sn_calendar) of version 23.2.0 or later.

Role required: sn_wsd_rsv.reservation_planner or sn_wsd_rsv.reservation_viewer

About this task
Check the number of reservations that are planned for the current day and if there are any extra services. The event planner also displays the reservations that are canceled for today and the reservations that are yet to be approved. The reservations are displayed with the following details by default:

- Requester of the reservation
- Location that is reserved
- Building and campus of the location
- Start and end time of the reservation
- Current state of the reservation
- Type of reservation

You can edit the columns to display the information according to your requirement.

You can view all the reservations that are currently active and also the reservations that are created by you or requested for you.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select the **Event planner** icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Event Planner dashboard opens.

3. To view the current days reservation statues, do the following:

   a. Go to the **Reservations** metrics section.

   b. Select one of the following tiles to view as a list:
      - **Planned reservations for today**
      - **Reservations with extra services for today**
      - **Canceled reservations of today**
      - **Pending approval reservations**

4. To view the active reservations, do one of the following:
   - To view all the reservations, go to the **All Reservations** section.
   - To view the reservation created by you or for you, go to the **My reservations** section.

   To view more reservations, select **View all**.

5. To edit the columns of the list view, do the following:

   a. Select the List actions icon ().

   b. Select **Edit columns**.

   c. After you add the columns that you want to view, select **OK**.

6. **Optional:** To refresh the list, select the Refresh icon ().

7. **Optional:** To apply a filter on the list, select the Show filter icon ().

8. To view all the reservations created in the workplace in a schedule view, select **Open schedule view**.

View reservation details in the event planner

Check details of a reservation created in your workplace.

Before you begin

Ensure that you have installed the Calendar component (sn_calendar) of version 23.2.0 or later.

Role required: sn_wsd_rsv.reservation_planner or sn_wsd_rsv.reservation_viewer

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.

2. On the left pane, select the **Event planner** icon ().
   The Event Planner dashboard opens.

3. To view the current days reservation statues, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Go to the **Reservations** metrics section.

b. Select one of the following tiles to view as a list:
   - **Planned reservations for today**
   - **Reservations with extra services for today**
   - **Canceled reservations of today**
   - **Pending approval reservations**

4. To view the active reservations, do one of the following:
   - To view all the reservations, go to the **All Reservations** section.
   - To view the reservation created by you or for you, go to the **My reservations** section.
   To view more reservations, select **View all**.
5. Select the reservation that you want to view.
   The reservation opens in a new tab. The details of the reservation are displayed.
6. Select any of the following tabs based on the details that you want to view:
   - **Blocker Reservations**: To view the blocker reservations created before and after the reservations. This tab appears only if there are any extra services requested.
   - **Cases**: To view the workplace cases created for the extra services requested in the reservation.
   - **Tasks**: To view the workplace tasks created to fulfill the extra services requested in the reservation.
   - **Requested Service**: To view the services requested with the reservation.
   - **Approvers**: Approver of the reservation.
   - **Invitees**: Invitees invited to the reservation.
   - **Reservation Recordings**: Recordings of the reservation if a virtual meeting link was included.
7. To open the reservation on the portal, select **Open reservation**.
   The reservation opens on the Employee Center portal.

What to do next
If you want to edit the reservation, refer to Edit a reservation using the event planner.

Edit a reservation using the event planner

As a reservation planner, edit a reservation directly using the event planner.

Before you begin
You can also manage a reservation using the schedule view. Using the schedule view, you can edit the start and end time, or to move the reservation to another location. For more information, refer to Working with schedule view.

Ensure that you have installed the Calendar component (sn_calendar) of version 23.2.0 or later.

Important:
Using the schedule view, you cannot edit a multi-child or a group-child reservation that is created using a calendar provider. Reservations created using a calendar provider can only be managed using the calendar provider.

Role required: sn_wsd_rsv.reservation_planner

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

As a reservation planner, you can perform the following actions:

- Drag a reservation to another date and time to reschedule.
- Change the reservation timings,
- Change the location of the reservation.
- Cancel a reservation
- Open a reservation and make advanced changes and also add services.

To manage a multi-location or a group reservation, you must open the reservation details and make changes.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select the **Event planner** icon ().
   The Event Planner dashboard opens.
3. To view the current days reservation statues, do the following:

   a. Go to the **Reservations** metrics section.

   b. Select one of the following tiles to view as a list:
      - **Planned reservations for today**
      - **Reservations with extra services for today**
      - **Canceled reservations of today**
      - **Pending approval reservations**

4. To view the active reservations, do one of the following:
   - To view all the reservations, go to the **All Reservations** section.
   - To view the reservation created by you or for you, go to the **My reservations** section.

   To view more reservations, select **View all**.
5. Select the reservation that you want to edit.
   The reservation opens in a new tab. The details of the reservation are displayed in the **Details** tab.
6. In the **Details** tab, edit one of the following fields depending on the changes:
   - **Number of attendees**
   - **Reservation purpose**
   - **Cost center**
7. To edit the workplace case created for the extra services, select the **Cases** tab.
8. After making the changes, select **Save**.

Result

The changes are saved. To change the reservation timings or change the location, refer to Working with schedule view.

© 2026 ServiceNow, Inc. All rights reserved.

Working with schedule view

You can check any reservations created in your workplace and also make changes using the schedule view of the event planner.

Before you begin

Ensure that you have installed the Calendar component (sn_calendar) of version 23.2.0 or later.

> **Important:**
> Reservations created using a calendar provider can only be managed using the calendar provider.

Role required: sn_wsd_rsv.reservation_planner or sn_wsd_rsv.reservation_viewer

About this task

Using the Event planner schedule view, you can perform various actions on reservation. However, note the following:

- You can only manage reservations that are created using Workplace Core applications.
- You can manage single and occurrence reservations.
- You can manage a multi-location or a group reservation only by opening the reservation details and not with the schedule view.

You can view reservations created in any campus, building, or floor of your organization using the schedule view. The schedule view provides a clear calendar-based view of the reservations and the reserved room. The calendar displays all the reservations created on a space for the entire day or week depending on the time-line that you selected.

- You can filter the locations based on their reservable purposes and check the reservations requested on them.
- View reservations requested on any date, including past dates.
- View the status of reservations. The statuses are displayed in different based on their state.
- View the time line based on 30-minutes interval, hourly interval or a weekly view.
- View reservation details.
- View current day's reservations requested on the selected building.
- Search for spaces based by the space's title, reservation host, and subject of the reservation.
- As a planner, you can perform the following actions:
  - Drag a reservation to another date and time to reschedule.
  - Change the reservation timings,
  - Change the location of the reservation.
  - Cancel a reservation
  - Open a reservation and make advanced changes and also add services

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select the **Event planner** icon ().
   The Event Planner dashboard opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **Open schedule view**.
   A schedule view opens displaying all the locations of your organization. If your had already applied a location filter on the schedule view in the past, the filter is retained and the locations are displayed accordingly.
4. To search for a space directly, specify the space name in the **Search spaces** search bar on the top left.
5. To search for reservations requested on a campus, building, or a floor, do the following:

   a. On the top-right corner, select the **Campus** drop-down and select the campus.
      The **Building** and **Floor** fields are automatically populated. By default, all the buildings and floors are displayed.
      The spaces of the campus are displayed based on the building and floor where it's located.

   b. **Optional:** To exclude any building or floor, you can expand the drop-down and deselect.

   The spaces are displayed based on your selection. You can scroll to the right to view the timeline and scroll downwards to view the locations.
6. To filter the spaces based on their reservable purpose, select the **Reservable puposes** option and make a selection.
   If a reservable purpose is not selected, then all the spaces including the ones that do not have any reservable purpose are displayed.
   The spaces that match the selected purpose are displayed.
7. To view reservations requested on a different date, do the following:
   The calendar displays the time based on the time zone of the selected campus.

   a. Select the date drop-down.
      The date field is displayed directly with the current date selection.

   b. On the calendar, select the date that you want to view.
      You can change the month and year if necessary.

   c. Select **OK**.

   The reservations created on the selected date are displayed.
8. To change the time line of the calendar, use the time line option.
   By default, the calendar is set to a 30-minute view, that is, the **Day view 30 minutes** option is selected.
9. To understand the status of the reservation, that is, to know the state of the reservation by its color, select the **Legends** () option.
10. To view the details of the reservation, do the following:

    a. Select the reservation.
       The reservation details such as the start and end time, total duration, type of reservation and current state is displayed.

    b. To view the reservation details on the side panel, select the Open side panel icon ().

    c. To open the reservation on the portal and view more details, select **Open reservation**.

11. To move the reservation to another time, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can perform this action only if you are a Reservation planner.

a. Select the reservation.

b. Drag the reservation to the desired time.

Note:
You cannot move the reservation to another date. You can only change the timings.

Important:
Using the schedule view, you cannot edit a multi-child or a group-child reservation that is created using a calendar provider.

c. On the Confirm reservation changes window, review the changes to be implemented and select either **No, Cancel** or **Yes, Update**.

Note:
If there are any extra service requests with the reservation, you will have to request them again after you move the reservations. When you move a reservation, the extra services are not moved.

12. To move the reservation to another location on the building, do the following:

Note:
You can perform this action only if you are a Reservation planner.

a. Select the reservation.

b. Drag the reservation to the desired location.

c. On the Confirm reservation changes window, read the changes that will be implemented and select either **No, Cancel** or **Yes, Update**.

Important:
If there are any extra service requests with the reservation, you will have to request them again after you move the reservations.

- After you move the reservation, you must request the extra services again. When you move a reservation, the extra services are not moved as the services vary for different locations.
- If you are moving a reservation requested by an employee, a notification is sent to the employee to confirm the action.
- To change the reservation and keep the services, edit the reservation first.

13. To create a reservation on the selected campus, select **Create new reservation**.
For more information on how to make a reservation, refer to Create a reservation.

Allow Event planners to handle reservations with more flexibility

Reservation planners can bypass or overrule certain settings in the Reservable module while moving a reservation to another location in the Event planner Scheduled View.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space planners with the (sn_wsd_rsv.reservation_planner) role can move a reservation when a location or space is part of a Reservable module. Space and reservation planners (sn_wsd_rsv.reservation_planner) with the dedicated role (sn_wsd_rsv.bypass_module_validation) can ignore or bypass certain settings in the Reservable module configuration. They can move and update a reservation from one Reservable module to another without the need to recreate a reservation. Space planners can bypass the Reservable module configuration limitations to optimize reservations quickly and easily.

For example, reservation planners or space planners can bypass the following settings in the Reservable module:

- Max days in the future
- Max number of occurrence
- Min and Max duration
- Available in
- All day

Space planners can do the following while moving a reservation in the Event planner:

- Move to different Reservable modules when a space is available in multiple Reservable modules.

  Note:
  Space planners can't move a reservation from one space to another when there's no Reservable module associated with it.

- Move shift-based reservations. Space planners can move a shift-based reservation to a location having the same-shift-based reservation module.

  Note:
  Space planners can't move a shift-based reservation to a different shift-based module. When a space is part of two different shift-based Reservable modules, only one of the shift-based Reservable module is available for selection while moving a reservation. Space planners can move a shift-based Reservable module to a non-shift based Reservable module. For example, **Desks within a Shift Reservable** module to **Desks** Reservable module.

Move reservations between Reservable modules using the Schedule view

Reservation or space planners can move or update reservation between Reservable modules. Planners with sn_wsd_rsv.bypass_module_validation role can bypass the Reservable module configuration settings.

Before you begin

Make sure that you have installed the following applications:

- Workplace Core
- Workplace Central
- Workplace Reservation Management
- Workplace Case Management

Role required: sn_wsd_rsv.reservation_planner

About this task

As a reservation or space planner, you can perform the following actions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create a reservation from the Event Planner Scheduled view page.
- Drag and move a reservation to another location, date, and time.
- Change or update the reservation location, start and end dates, and time.
- Open a reservation from the Scheduled view page to update a reservation on the Workplace Reservation Management reservation portal page and add services to it.

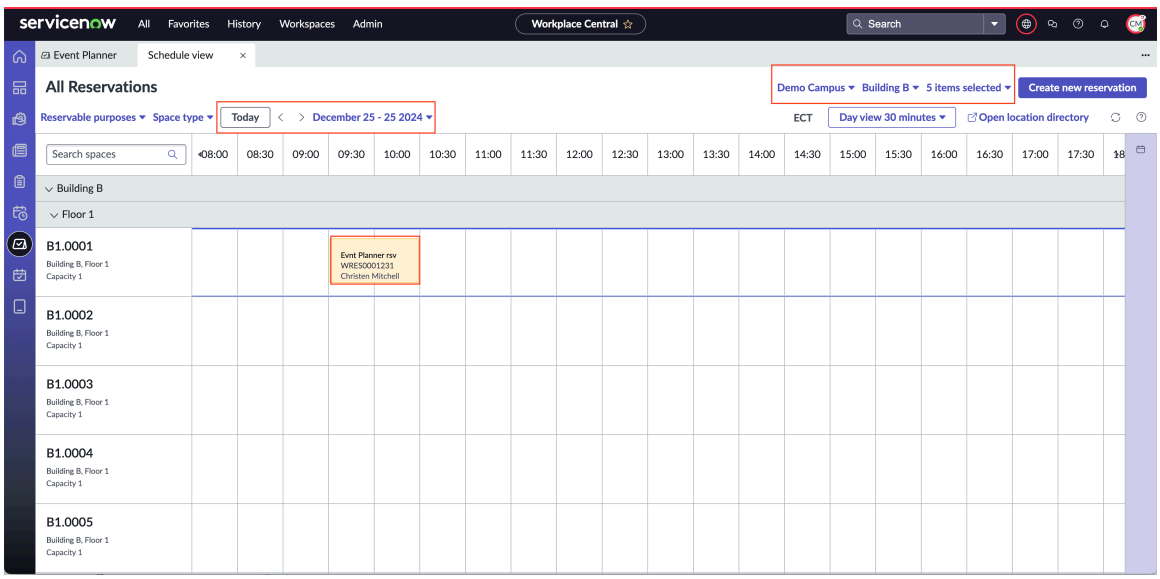
Procedure

1. Navigate to **All** > **Workplace central** > **Workplace Central**.

   You can also open Workplace Central from Employee Center directly. Navigate to **All** > **Self-service** > **Employee Center** > **Workspaces** > **Workplace Central**.

2. Select the Event Planner icon ( ).
3. Select **Open Scheduled view**.

   Schedule view page opens. If you have already applied a location filter on the schedule view in the past, the filter is retained and the locations are displayed accordingly.



4. To search for reservations requested for a campus, building, or a floor, do the following:

   a. Select a **Campus** from the menu.

      The **Building** and **Floor** fields are automatically populated. By default, all the buildings and floors are displayed. The spaces in a campus are displayed based on the building and floor where it's located. Select a building, floor as required. You can clear or uncheck the buildings and floors that are selected by default in the drop-down list.

      Space or reservation planners can change the Reservable module to a different Reservable module while moving or updating a reservation. Planners can search for spaces and select a new location.

   b. To view a reservation for a specific date, do the following:

   a. Select the date from the Date picker for which you want to view a reservation.

      For example, December 24, 2024.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Change the month or year as required.

c. Select **OK**.

The reservations available for a selected date are displayed.

5. Select **Space type** to filter reservable locations based on space types.

   For example, Gym, elevator, Meeting rooms, Desks/Meeting rooms, and so on.

   Scheduled view displays only spaces of the selected type.

6. To create a reservation, select the **Create new Reservation** button from the Scheduled view menu.

   The Make a reservation page opens on the reservation portal.

   Note:
   Adding multiple spaces to a reservation isn't supported in Event Planner. Select only a single space while creating a reservation.

   For more information, see Create a reservation.

   While creating a reservation, space or reservation planners can bypass the start date or end date restrictions configured in the Reservable module:

   - Max days in the future

     For multi-day reservations, planners can select a time span exceeding the Reservable module configuration. For example, If Max days in future vale is 90, space planners can make a reservation exceeding the 90-day limit.

     Note:
     When synchronizing a reservation with the Microsoft Exchange Server, reservation dates too far in the future are rejected.

   - Recurring

     For recurring reservation, planners can select a date past the **Max number of occurrences** value set in the Reservable module configuration.

7. To move the reservation from one Reservable module to another or within the same Reservable module, do the following:

   Note:
   Only one space or location can be selected while moving or updating a reservation from one location to another.

   a. Select the reservation that you want to update.

   b. Drag and move or drop the reservation to the desired location or space.

   For example: Select a reservation in Demo campus, First floor from Room B1-02 and move it to Room B2-02.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can move a reservation from one location to another locations within the same Reservable module or it can be moved to a space or location with a different Reservable module. Workplace services added to a reservation remains intact when the services are available on the new space.

c. The confirm reservation changes dialog box opens.

d. Select the Reservable module to where you want to move your reservation.

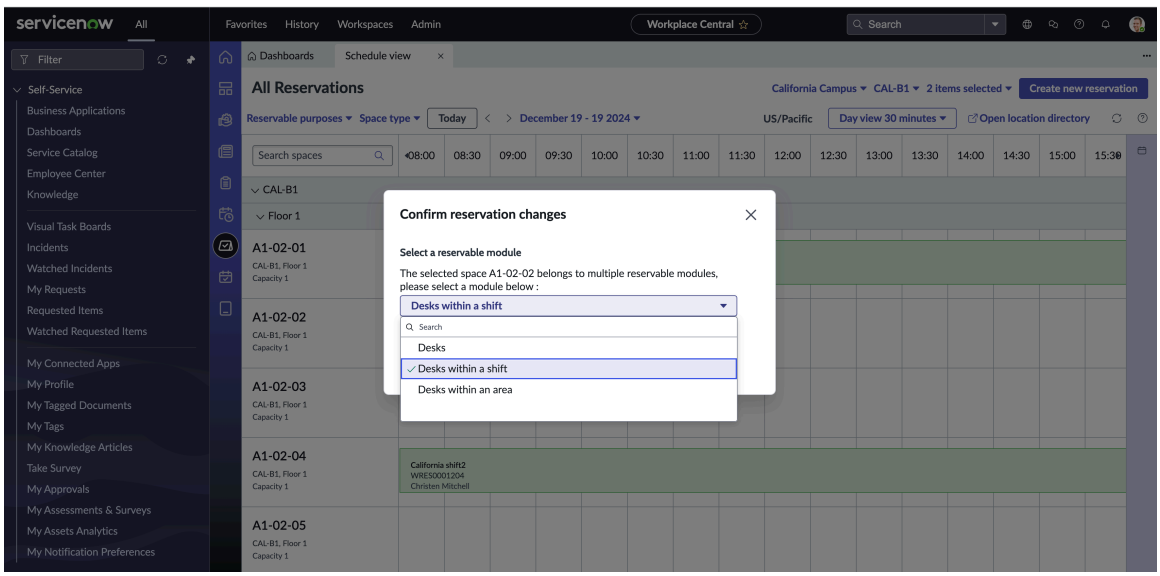
The list displays all the available Reservable modules to which the selected space or location belongs.

While updating the reservation certain roles and limitations are ignored or bypassed for reservation or space planners (sn_wsd_rsv.reservation_planner) having the (sn_wsd_rsv.bypass_module_validation) role.

- If a selected location or space is available in multiple Reservable modules, reservation or space planners can select the Reservable module from while updating a reservation. If a space is part of multiple Reservable modules, available Reservable modules are displayed in the list for selection. The Reservable modules are sorted alphabetically.

  Note:
  If the space is part of multiple Reservable modules, one of the eligible Reservable modules is preselected based on the space details algorithm. For example, if space Dublin is part of Reservable Module Desks and you want to move it to space Eureka which is also part of the same Reservable module (Desks), then Desks is preselected based on the space details logic. If you're moving a space to a location which is part of two different reservable modules then one of the Reservable modules is preselected based on the space details algorithm. For example, if you're moving Eureka to B1.003, and B1.003 is part of two Reservable modules (**Desks** and **Desks within an area**), one of these Reservable module is preselected based on the space details algorithm.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



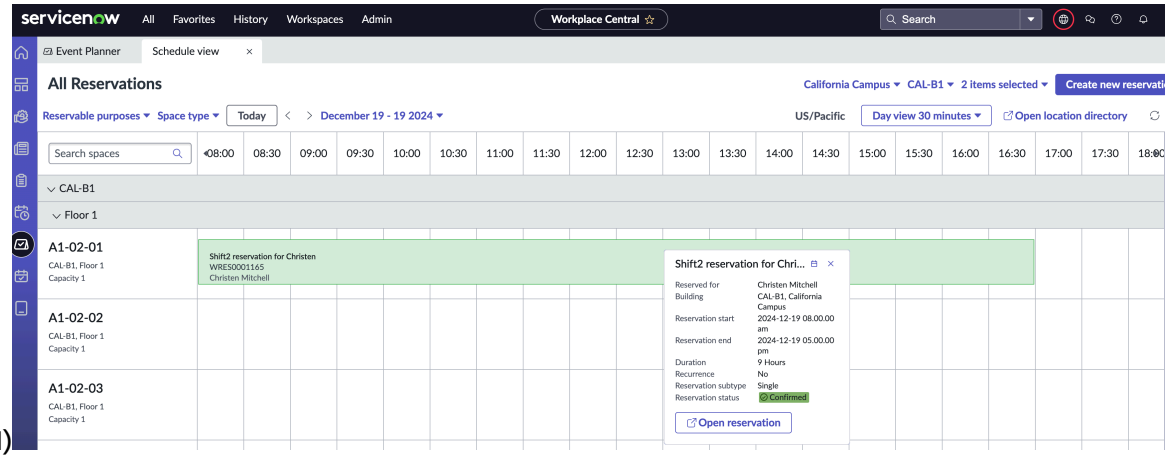
- If the space is part of multiple Reservable modules including the current module from which the event planner is moving a reservation to a different location, the current module is preselected. The reservation or space planner can select a new module from the list of presented modules as required.
- If a space is part of a single Reservable module, only that Reservable module is available for selection while updating a reservation from one location to another. The confirm Reservation changes dialog box doesn't show the drop-down list with multiple reservable modules and only one reservable module is shown for selection.

Note:
If the selected space has no Reservable module, moving or updating a reservation to a new location isn't allowed. A message is displayed, "The target space has no module associated."

e. Select **Yes, update** to confirm your selection.

8. Select an existing shift-based reservation from the Scheduled view.

a. Select a reservation from a location and move or drag it to a desired location.
The confirm reservation changes dialog box opens.



b. Select a Reservable module to which you want to move the selected reservation and space. While moving a shift-based reservation, the shift-based Reservable module of which the space is part of is preselected.

Note:
You can move a location within the same shift-based reservation and not to a different shift-based reservation. Two different shifts aren't available for selection in the confirm reservation changes dialog box when you try to move a reservation. Space planners can move a shift-based reservation to a non-shift Reservable module (Desks, meeting rooms, and so on). For example: **Desks within a Shift** Reservable module can be moved to **Desks** Reservable Module. For more information, see Allow Event planners to handle reservations with more flexibility.

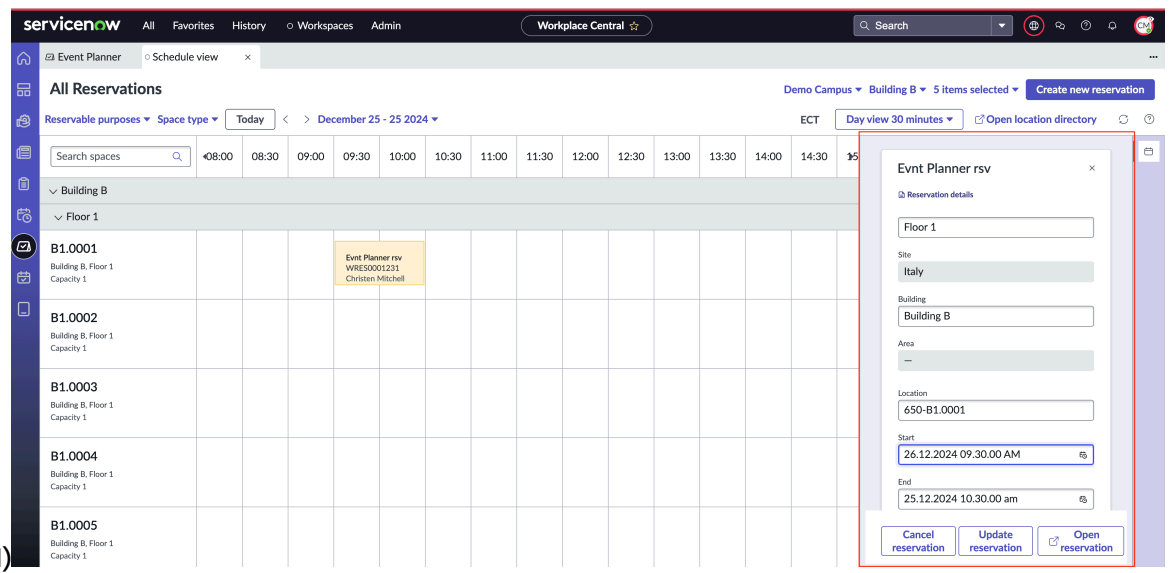
9. **Optional:** Select the Show reservation details icon ( ) to open the Reservation details side-panel context window.

(Optional)



a. Select and select a reservation to open the reservation details information window.

i. Select **Open Reservation**. Your reservation opens in a new browser tab on the Employee Central portal page.

ii. (Optional) Select the **Actions** tab and select **Change Reservation details** to update the reservation.

b. Select an existing reservation on the Scheduled view to open and update the reservation using the contextual side panel.
Update the following field information:

(Optional)

- Floor
- Building
- Location
- Start Date
- End Date
- Requested for

- Additional message

For more information, see Create a reservation.

c. After making the required changes, select **Update reservation**.
The **Update reservation** button is activated when you edit or update changes in the Reservation details contextual-side panel.

Follow Step 7 to Step 8 as required.

Cancel a reservation from the Event planner

As a reservation planner, the Event planner enables you to cancel a reservation at any time.

Before you begin

Ensure that you have installed the Calendar component (sn_calendar) of version 23.2.0 or later.

Role required: sn_wsd_rsv.reservation_planner

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select the **Event planner** icon ( ).
   The Event Planner dashboard opens.
3. To cancel any current day reservation, do the following:

   a. Go to the **Reservations** metrics section.

   b. Select one of the following tiles to view as a list:
   - **Planned reservations for today**
   - **Reservations with extra services for today**

4. To view the active reservations, do one of the following:
   - To view all the reservations, go to the **All Reservations** section.
   - To view the reservation created by you or for you, go to the **My reservations** section.

   To view more reservations, select **View all**.
5. Select the reservation that you want to cancel.
   The reservation opens in a new tab. The details of the reservation are displayed.
6. Select **Cancel reservation** to cancel the reservation.
7. On the confirmation window, select **Confirm cancellation**.

Result

The reservation is canceled. The cancellation notes are automatically generated.

Open and view Location directory from Event Planner

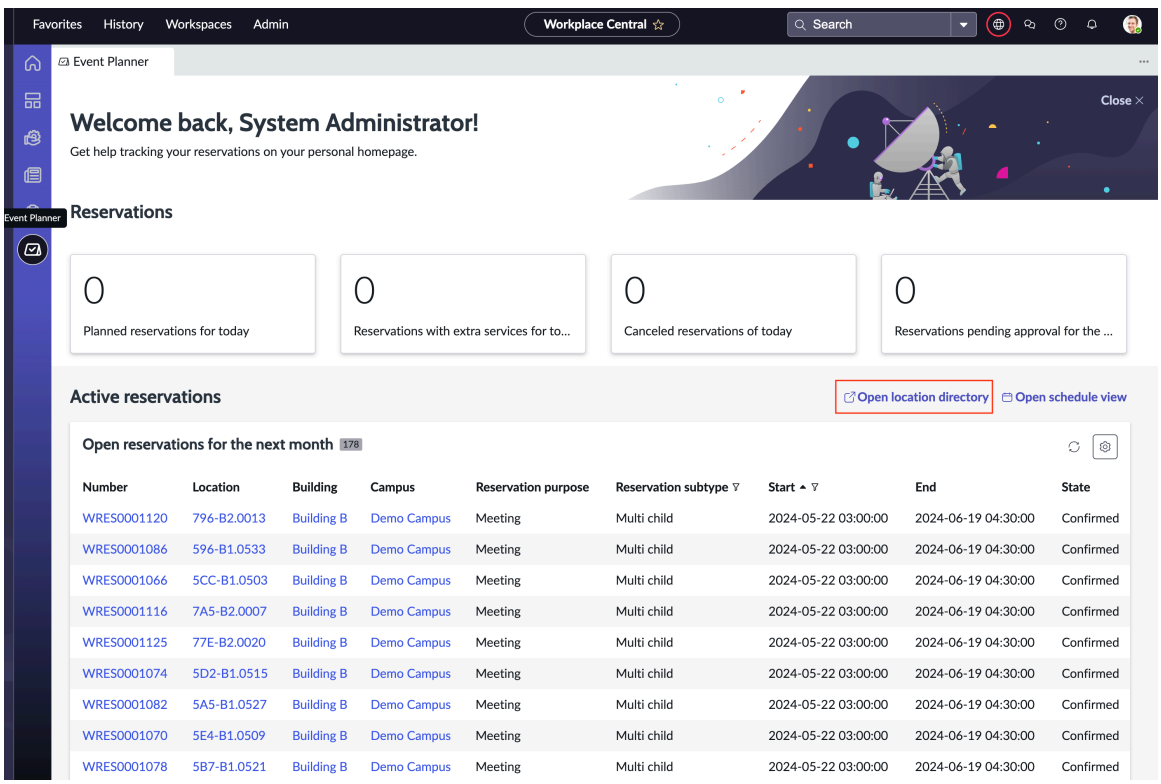
Open and view the location directory portal from the Event planner home page and the Scheduled view.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Verify that the following applications are installed:

- Workplace Core
- Workplace Reservation Management
- Indoor Mapping



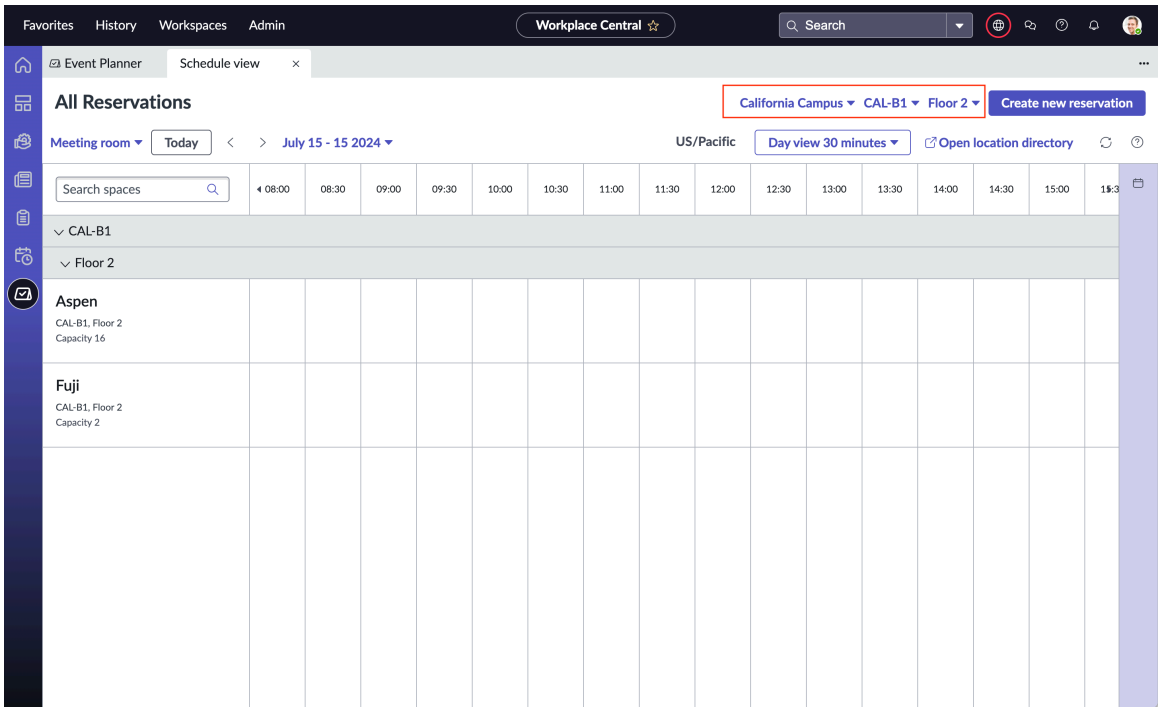
> **Note:**
> If Indoor Mapping is not installed, the option to open and view Location directory is not available on the Event planner home page.

- Indoor Mapping component
- Workplace Indoor Mapping
- Workplace Indoor Mapping component
- Workplace Stack plan
- Workplace Space Mapping

Role required: sn_wsd_rsv.reservation_viewer

Procedure

1. Navigate to **All** > **Workplace Central**.
2. Select the **Event Planner** icon ( ).
   The Event planner home page is displayed.



3. Select the **Open location directory** option.

   The Location directory home page opens in a new browser tab on the Employee Center portal.

   Card view is selected by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select the **Open scheduled view** option on the home page.
5. Select **Open Location Directory** from the Scheduled view page.

a. Based on your selection of a campus, building, or floor on the Scheduled view, the following options are displayed:

- Campus: Select a Campus. The buildings and floors within that campus are selected automatically. At a time, only one campus is available for selection.

  Note:
  If no campus is selected, the location directory portal opens without any context in the Card view.

- Building: Option to select a building.
  - Select a building. The Location directory portal opens with the building view showing the default floor information.
  - If more than one building is selected, the Location directory portal opens the first building that was selected and the floor that was selected in the Floor list options.
- Floor: Option to select a floor.
  - If multiple floors are selected, the location directory portal shows the floor that was selected first in the Card view. For example, Floor 1.
  - If only a floor is selected, the location directory opens that particular floor in the Card view.
  - If none of the floors are selected, the Location directory portal opens the selected building with the default floor.

b. In Scheduled view, if you don't select any campus, the landing page of the location directory opens without any context.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. If you provide an invalid floor, a building, or a campus, a message is displayed.

"Looks like this location doesn't exist." You are redirected to the default Card view.

Working with Case management

Manage your workplace cases using the Case management workspace. Monitor the progress of the cases, update the cases and perform other actions.

> **Important:**
> You need the case manager [sn_wsd_case.manager] role to access the Case management module.

Manage workplace cases using Case management

Monitor the workplace cases requested in your organization at any time using the Workplace Central Case management workspace.

Before you begin

Role required: sn_wsd_case.manager

About this task

Check the number of active cases and the details of those cases using the dashboard. Know the total number of cases that are currently critical, breached SLAs, unassigned and awaiting approval.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select the **Case Management** icon ( ).
   The Case Management dashboard opens.
3. To view the number of cases based on their status, go to the **Overview** section.

   a. Select any of the following tiles to view the list of cases:
   - **All active cases**
   - **Open critical cases**
   - **SLAs breached**
   - **Unassigned cases**
   - **Cases awaiting approval**

   b. In the list view of the cases, perform any of the following actions if necessary:
   - Refresh the list
   - Edit the columns of the list
   - Apply the filter on the list
   - Assign the case to a user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Export the cases to the desired format
- Create a case

c. To add your own list, refer to Create your own list to view case metrics.

4. To view a list of all the active cases, check the **All active cases** section.

a. Optional: From the list view, you can also assign one or more cases to another user using the **Assign** option.
You can edit the columns of the list and also add filters if necessary.

b. To view the case in detail, select the workplace case.

c. To make changes to the workplace cases, refer to Work on a workplace case using Case management.

Create your own list to view case metrics

Configure a custom list to view workplace cases. You can view the workplace cases based on the filter that you apply and monitor the cases.

Before you begin
Role required: sn_wsd_case.manager

About this task
By default, the dashboard displays the metric tiles and the list of all cases under various categories. When you select a metric tile on the dashboard, a list view opens with the associated cases. In the list view, on the left panel, the following lists are displayed by default:

- All cases
- All active cases
- All resolved cases
- Open critical cases
- SLAs breached
- Unassigned cases
- Cases awaiting approval

You can also create your own list on the panel based and view the workplace cases matching the set filter.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
The Workplace Analytics dashboard opens.

2. On the left pane, select the **Case Management** icon ( ).
The Case Management dashboard opens.

3. In the **Overview** section, select any of the following tiles to open the list view.

- **All active cases**
- **Open critical cases**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **SLAs breached**
- **Unassigned cases**
- **Cases awaiting approval**

4. In the list view, on the left panel, select **My Lists**.
5. Select **Add new list**.
6. In the New List dialog box that appears, do the following:

   a. To create another version of the existing list, select the **Start from existing** tab.
      i. In the **List** field, select the list that you want to reuse.
      ii. In the **List name** field, enter a name for the list.
      iii. In the **Select columns** field, select the columns that you want to view additionally.
      iv. In the **Add filter** section, add the filters based on which the workplace cases must be filtered.

   b. To create a new list, select the **Create your own** tab.
      i. In the **List name** field, enter the name of the list.
      ii. In the **Select Source** field, select the source table.
      iii. In the **Select columns** field, select the columns that you want to view.
      iv. In the **Add filter** section, add the filters based on which the workplace cases must be filtered.

   c. Select **Create**.

Result
The custom list is added to the **My Lists** tab on the left panel. At any time, you can view the lists and manage the workplace cases.

Work on a workplace case using Case management

Update, edit, or resolve a workplace case at any time from a single workspace using the Workplace Central Case management workspace.

Before you begin
Role required: sn_wsd_case.manager

About this task
The dashboard enables you work on a case at any time. You can perform any action on a case such as update, edit, and even resolve a case when done. To save time from filtering the cases, the workspace, by default, displays the cases under various categories in the **Overview** section.

- Update the case details.
- Change the state of the case.
- Add comments or work notes.
- View or attach knowledge articles.
- Mark the checklist or add new checklist items.
- View the employee details who requested the case and mail them directly if necessary.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View the workplace location on the floor map. For move cases, view the **From location** and **To location** on the map.
- Create child cases and child tasks if needed. For more information, refer to Create a child case and a child task.

For more information about the features and actions that you can perform in the workspace, refer to Case Management - Key features, Actions & Case details.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select the **Case Management** icon ( ).
   The Case Management dashboard opens.
3. To open a case, do any of the following:
   - Go to the **Overview** section.

     Select the relevant tile to open the list of cases.
   - Go to the **All active cases** section.
4. Select the case that you want to open.
   The list view displays the cases as WCASEXXXX for normal workplace cases, WMCXXXX for maintenance cases and WMOVEXXXX for move cases.
   The case details are displayed in a new tab. For more information about the view, the actions that you can perform and additional features, refer to the **Case details page** section in the Case Management - Key features, Actions & Case details topic.
5. Perform your changes.
6. After making changes, select **Save**.

Result

The workplace case is updated or modified based on your changes. To cancel or delete the case, refer to Cancel or delete a case.

Create a workplace service case

As a case manager, apart from managing the workplace cases, you can also create a raise workplace service request directly using the Workplace Central Case management workspace.

Before you begin

Role required: sn_wsd_case.manager

About this task

Submit a workplace service request on behalf of an employee for any reason. You can directly raise a request using the Case management workspace.

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Workplace Analytics dashboard opens.

2. On the left pane, select the **Case Management** icon ().
   The Case Management dashboard opens.
3. To create a case, use any one of the following navigation:
   - On the Case Management landing page, scroll down to the **All active cases** section and select **New**.
   - On the Case Management landing page, in the **Overview** section, open a tile and select **New** in the list view.
4. In the **Which service would you like to request?** dialog box, select the type of workplace service request that you want to raise.
   You can raise the following workplace service requests:
   - Reconfigure an office space
   - Request a desk change
   - Request furniture
   - Submit a general request
   - Submit a maintenance request
5. Select **Submit**.
   To fill the form, refer to Request a workplace service topics.
6. Select **Submit** to submit the request.

Result

The workplace service request is submitted and a workplace case is created. Refresh the **All active cases** list to view the workplace case.

Create a child case and a child task

As a case manager, to fulfill a case, you can create a child case and also a child task using the workspace.

Before you begin

Role required: sn_wsd_case.manager

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
   The Workplace Analytics dashboard opens.
2. On the left pane, select the **Case Management** icon ().
   The Case Management landing page opens.
3. To open the case to which you want to add a child case/task, do any of the following:
   - Go to the **Overview** section.

     Select the relevant tile to open the list of cases.
   - Go to the **All active cases** section.
4. Select the case to which you want to add a child case/task.
   The case details are displayed in a separate tab. For more information about the view, the actions that you can perform and additional features, refer to the **Case details page** section in the Case Management - Key features, Actions & Case details topic.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. To create a child case, do the following:

   a. On the case details page, select the **Child Cases** tab.

   b. Select **New**.

   c. On the form, fill in the fields.

Create New Workplace Case form

Field	Description
Workplace service	Select the workplace service of the case.
Workplace location	Select the location for which you're creating the child case.
State	Select the state of the case. By default, the state is set as Draft.
Assignment group	Select the assignment group to which you want to assign the case.
Assigned to	Select the location for which you're creating the child case.
Requested for	Select the user for whom you are creating the case.
Enable user acceptance	Select the option if you want to enable user acceptance for the case.
Contact type	Specify the contact mode.
Short description	Enter a short description about the case.
Description	Enter a detailed description about the case.
Additional comments	Add any comments regarding the case. The comments are visible to the requester.
Work notes	Add work notes to the case. The notes are visible only to you.

   d. To attach any file, select the Attachment icon ( ) on the side panel.

   e. To configure a template for the case, select the Template icon ( ).

   f. Select **Save**.
   The child case is created.

6. To create a child task, do the following:

   a. On the case details page, select the **Child Tasks** tab.

   b. Select **New**.

   c. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create New Workplace Task form

Field	Description
State	Select the state of the task. By default, the state is set as Open.
Workplace task type	Select the type of task.
Assignment group	Select the assignment group to which you want to assign the task.
Workplace location	Select the location for which you're creating the child task.
Assigned to	Select the location for which you're creating the child task.
Sign template	Select the signing template.
Vendor	Select the vendor for the task.
Workplace service activity	Select the Workplace service activity to implement the task.
Short description	Enter a short description about the task.

d. To attach any file, select the Attachment icon ( ) on the side panel.

e. To configure a template for the task, select the Template icon ( ).

f. Select **Save**.
The child task is created.

7. After adding the child case/child task, select **Save** to save the changes.

Cancel or delete a case

As a case manager, cancel a workplace case at any time if it's no longer required. As an admin, delete a case record completely from the application if it's no longer required.

Before you begin

As a workplace case manager, you can cancel a case if it's no longer required. Cancelling a case cancels all the child cases and child tasks associated with the case. The state is set to Cancelled.

Important:
Only an admin can delete a case. A case admin can delete only a workplace case, a move admin can delete only a move case and, a maintenance admin can delete only a maintenance case.

Role required: admin (to delete a case) and sn_wsd_case.manager (to cancel a case)

Procedure

1. Navigate to **All** > **Workplace Central** > **Workplace Central**.
You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Workplace Analytics dashboard opens.

2. On the left pane, select the **Case Management** icon ( ).
   The Case Management landing page opens.
3. Open the case that you want to cancel/delete using any of the following navigations:
   - Go to the **Overview** section.

     Select the relevant tile to open the list of cases.
   - Go to the **All active cases** section.
4. Select the case.
5. To cancel the case, do the following:
   a. On the case details page, select **Cancel**.
   b. On the confirmation window, select **Yes**.
   The case and all the child cases, child tasks, flows associated with the cases are cancelled and the state is set to Cancelled.
6. To delete a case, do the following:

> **Important:**
> Only an admin can delete a case. A case admin can delete only a workplace case, a move admin can delete only a move case and, a maintenance admin can delete only a maintenance case.

   a. On the case details page, select More actions ().

> **Note:**
> The option appears only if you are an admin.

   b. Select **Delete**.
   c. On the confirmation window, select **Yes** to delete.
   The workplace case record, the associated SLAs and more are deleted from the application.

Working with Kiosk Indoor Mapping

Create indoor maps and configure map elements for Workplace Services Kiosk.

Configure map features for kiosk

Configure map features such as actions and data visualization for the kiosk.

Before you begin

Role required: sn_wsd_indoor_map.admin and sn_wsd_central.workspace_user

Procedure

1. Navigate to **All** > **Workplace Central**.
   You can also open Workplace Central from the Employee Center by navigating to **Workspaces** > **Workplace Central**.
2. Select the Kiosk Indoor Mapping icon ( ).
3. On the Map Feature Configurations list, select **New**.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Map Feature Configurations form

Field	Description
Name	Name of the feature configuration record.
Order	Order of the feature configuration on the kiosk.
Reservable Module	Browse and select the Kiosk Reservable module. For more information, see Configure Reservable Module for kiosk reservation.
Space Reservation	Select the check box option to allow employees and guests to select a space on the map and make a reservation on the Kiosk Map. If this option is not selected, the option to select a **Reservable Module** for Kiosk is not displayed. After selecting the Reservable Module for a kiosk and enabling Space Reservation option, kiosk operators can bind a physical device to a kiosk. This allows visitors or guests to make a reservation on the Kiosk Map. For more information, see Select a kiosk for a device. After a kiosk is assigned to a physical device, employees and guests can make reservations on a selected kiosk device. For more information, Make workplace reservations on the kiosk.
Allowed actions	Actions that the user can perform on the kiosk. You can select multiple actions from the list. The **Raise a case** action is available if you have installed Workplace Case Management.
Data visualization	Data visualization elements, such as neighborhoods and space filters, for the kiosk user. You can select multiple visualization options from the list. The available elements depend on the applications that you have installed in your instance. For example, **Occupancy data** is available only if you have installed Workplace Connectors.

5. Save the record.

Result
The map configuration is saved as a record in the Indoor map kiosk module.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the kiosk position and map settings

Configure the kiosk position and camera position on the map.

Before you begin

Create a kiosk configuration to use for the kiosk indoor mapping feature. For more information about creating a kiosk configuration, see Create a kiosk configuration.

Role required: sn_wsd_indoor_map.admin and sn_wsd_central.workspace_user

Procedure

1. Navigate to **All** > **Workplace Central**.
2. Select the Kiosk Indoor Mapping icon ().
3. On the Kiosk Map Configurations list, select the record that you want to configure.
   For more information about creating a kiosk configuration, see Create a kiosk configuration.
   The **Map configuration** tab is open by default.
4. On the Kiosk Placement pane, select **Place Kiosk on Map**, then select a position on the map.
5. On the Kiosk Placement pane, select a view type for the map.
6. Enter a kiosk title to be displayed to the kiosk users.
7. Select **Save Placement**.
   The kiosk placement is saved on the map. You can edit the placement or remove the kiosk from the map.
8. Select the Map Settings icon.
9. Select **Edit position**, then move the map to set the default camera position.
   You can also enter values in the fields to set the camera position.

Map Settings value ranges

Field	Value Range
Default Zoom	16 to 23
Default Bearing	-180 to 180
Default Pitch	0 to 60

10. Select **Confirm**, then select **Save Configuration**.

Result

The kiosk position and map settings are saved in the kiosk configuration.

Trouble?

If you get the `Map can't be initialized` error on the Map configuration tab, try any of the following actions:

- Ensure that the kiosk location matches the location of the map that you want to use.
- Provide the view type permissions to the user who must have access to kiosk indoor mapping.
- Navigate to **All** > **Indoor Mapping** > **View types**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

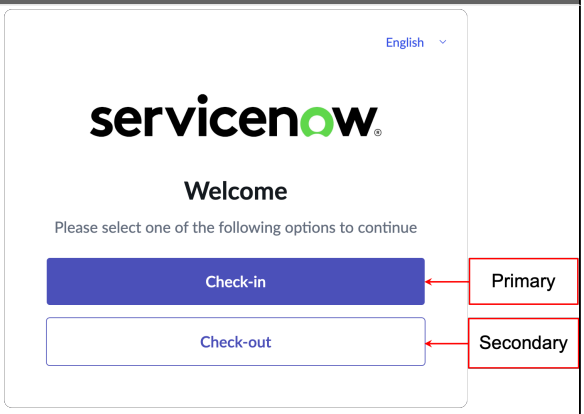
- Ensure that the **Kiosk** view type is active.
- If the **Kiosk** view type is not available, ensure that you have installed Workplace Services Kiosk.

Configure a module for kiosk indoor mapping

Create a module for the kiosk to decide the flow for the kiosk.

Before you begin

Role required: sn_wsd_kiosk.admin and sn_wsd_central.workspace_user



Procedure

1. Navigate to **All** > **Workplace Central**.
2. Select the Kiosk Indoor Mapping icon ( ).
3. On the Kiosk Map Configurations list, select the record that you want to configure.
   For more information about creating a kiosk configuration, see Create a kiosk configuration.
   The **Map configuration** tab is open by default.
4. Select the **Module configuration** tab.
5. On the Kiosk modules list, select **New**.
6. On the form, fill in the fields.

Kiosk module configurations form

Field	Description
Kiosk configuration	Kiosk configuration that the module is linked to.
Module configuration	Configuration record for the kiosk module. For more information about creating a module, see Create a kiosk module. For more information about creating a map configuration, see Configure map features for kiosk.
Active	Status of the kiosk module configuration.
Type	Type of color scheme you want to set for the kiosk module configuration. The type can be set to primary or secondary.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	
Order	Order of preference of the kiosk module.

Note:

- The kiosk device automatically maintains the session before it times out. The session timeout value can be configured in the *glide.ui.session_timeout* property.
- The kiosk header contains the session refresh API; ensure that you do not remove or replace the kiosk theme or the kiosk header.

  For information about customizing the kiosk header, see Customize the kiosk header.

7. Save the record.
   The Kiosk module is created and linked to the configuration.

Manage Workplace Central

Monitor your workplace-related activities. View the metrics and the list of activities that are created at any time.

To customize a page in the Workplace Central application, refer to the knowledge base article: https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB1639123.

Approve a scenario

As a workplace manager, you can approve or reject when a scenario is sent for approval

Before you begin

Ensure the following:

- You have the Scenario reader role [sn_wsd_spcmgmt.scenario_reader].
- You have the permission to approve.

Role required: sn_wsd_core.workplace_manager and sn_wsd_spcmgmt.scenario_reader

About this task

As a workplace manager, you can approve a scenario. The Workplace Core Approval definition, provides the **Scenario Plan Approval** by default to perform scenario approval. The approval definition consists of a **Scenario Plan Approver** performer criteria, in which all the workplace managers are configured to approve scenarios. To configure more approvers, refer to Configure approvers of a scenario.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-Service** > **My Approvals**.
2. Select the approval that is in **Requested** state.
   You can also use filter options to view only those approvals that are in the **Requested** state.
3. To view the scenario before approving, in the **Approving** field, click the Preview this record icon ( ).
4. Click **Open Record**.
5. On the Scenario Plan form, click **Open scenario plan**.
   The scenario stack plan opens in a read-only mode.
6. Review the scenario.
7. After reviewing the scenario, to approve or reject, perform the steps 1 and 2 again.
8. On the form, do any one of the following:
   - To approve the scenario, click **Approve**.

     The scenario is approved.
   - To reject the scenario, do the following:
     a. In the **Comments** field, specify the reason for rejection.

        If you want to suggest any changes in the scenario, briefly details the changes.
     b. Click **Post** after entering you comments.
     c. Click **Reject**.

        The scenario is rejected.

Result
The scenario is approved or rejected based on what action you performed. If the scenario is approved, then the state of the scenario changes to Approved. If it is rejected, then the scenario state is changed to Rejected.

View workplace scenarios

Track the number of scenarios created in your workplace. View the scenarios that are in the published state, in the draft state, and more.

Before you begin
Role required: sn_wsd_spcmgmt.space_planner

About this task
View the scenarios created in your workplace using the Space optimization module. The Space optimization module provides you with metrics for scenarios based on their current state. You get a list of total scenarios and of scenarios that were created based on buildings. At any time, you can monitor the status of a scenario by checking the Space optimization module. For more information about the Space optimization module, refer to Space Optimization - Key features and actions.

Procedure

1. Navigate to any one of the following locations:
   - **All** > **Workplace Central** > **Workplace Central**.
   - **All** > **Scenario Planning** > **My Scenario Plans**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also open Workplace Central from the Employee Center directly. Navigate to **Workspaces** > **Workplace Central**.
The Workplace Analytics dashboard opens.

2. On the left pane, select **Space Optimization** icon ().
   The Space optimization dashboard opens.
3. **Optional:** View the numbers of the scenarios based on their current state by seeing the **Scenarios** section.
   You can also select the numbered tile to view the details of the scenarios.
4. **Optional:** View all the scenarios regardless of their current state.

   a. In the Scenarios section, go to **All scenarios**.
   A list of scenarios is displayed. The list displays five scenarios at a time.

   b. View all the scenarios by scrolling down the list and clicking **View all**.
   The **Scenarios** tab opens.

5. View all the buildings of your workplace.
   You can open a building and view the building on a stack plan. The stack plan displays the current scenario that is deployed on the building. You can also create a scenario directly from a building scenario plan.

   a. In the Scenarios section, go to **All buildings**.
   A list of buildings is displayed. The list displays five buildings at a time.

   b. View all the buildings by scrolling down the list and clicking **View all**.
   The **Buildings** tab opens.

Raise a space assistance request

Submit a workplace service request to get space allocation recommendations using the Workplace Service Portal. The Workplace Service Delivery space assistance provides you with the best space allocation plan options based on the space quantity and the department that you specify. You can select the most suitable allocation or none. Depending on your selection, the Space planner deploys the plan to use.

Before you begin

Ensure the following:

- Workplace Central plugin is installed.
- Workplace Case Management plugin is installed.
- To view the space recommendations on the map, the floor map must be configured using Workplace Indoor Mapping.

Role required: sn_wsd_core.workplace_user

About this task

Specify the department and number of spaces that you want to assign to that department on a floor. Specify the location where you want to see the allocation recommendation. Depending on the specification submitted on the form, the system provides you with options containing the most suitable space allocation plans in that building. If the selected department exists on the floor that you selected, then the spaces are recommended nearby to that department.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can select the best option and submit the selection. If an approval is configured, then the plan is sent for an approval to your manager. The selected space plan is directed to the space planner. The space planner reviews the plan and deploys it accordingly.

Procedure

1. Navigate to **All** > **Workplace Core** > **Workplace service portal**.
   The Workplace Service Portal opens.
2. Open the General category.
   a. Select **Catalog**.
   b. Select **Browse by Categories**.
   c. In the Workplace Services Catalog, select **General**.

   Note:
   If there are multiple catalogs configured on the portal, go to the Catalogs list and select **Workplace Services Catalog** > **General**.
3. Select **Space assist request**.
4. On the form, fill in the fields.

Space assist request form

Field	Description
Request name	Descriptive name for the request.
Allocate space by	The allocation type is set with the default allocation type set by your administrator. **Note:** If there is no allocation type specified, then you cannot proceed with the request.
Requested for	Option to specify the user for whom you are raising the space assistance request.
Select a department	Department based on which you want to allocate spaces. This option appears if **Department** is set in the **Allocate space by** field.
Select a Cost center	Cost center based on which you want to allocate spaces. This option appears only appears if **Cost center** is set in the **Allocate space by** field.
Select a workplace entity type	Workplace entity type based on which you want to allocate spaces. This option appears if **Workplace Entity** is set in the **Allocate space by** field.
Select a workplace entity	Workplace entity based on which you want to allocate spaces. This option appears if

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Workplace Entity is set in the **Allocate space by** field.
Reason for request	Option to select the reason for the request.
Space type	Option to specify what type of spaces you want.
Exact match (Space type)	Option to confirm that you want to see only the spaces that are an exact match to the selected space type.
Assignment type	Option to specify if you want flexible or permanent spaces.
Quantity/Capacity	Number of spaces that you want to allocate.
Region	Region where you want to make space allocation.
Campus	Campus where you want to make space allocation.
Site	Site where you want to make space allocation.
Building	Building where you want to make space allocation.
Exact match (Building)	Option to confirm that you want see only the spaces that are an exact match to the selected building.
Move-in date	Option to specify the date from when you want to implement the space allocation.
Exact match (Move-in date)	Option to confirm that you want see only the spaces that are available on the selected move-in date. This option is not available from Workplace Space Management version 1.12.0.
Move-out date	Option to specify the date until when you want to allocate the spaces.
Exact match (Move-out date)	Option to confirm that you want see only the spaces that are available until the selected move-out date. This option is not available from Workplace Space Management version 1.12.0.
Add attachments	Option to attach any supporting files if necessary.

5. Select **Submit**.
   The request is submitted. After the submission, the request details page is opened.
6. In the My request page, select **Space plans**.
   Refresh the page to view space plan options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The page displays options that have the most suitable space allocations for the select cost center or department on the selected floor, along with the match percentage.

7. Review the options that are displayed.
   The match percentage is displayed under each option.
8. **Optional:** View the space allocations on the map by selecting **View spaces on map**.

   Note:
   You can view the space allocations on the map only if the floor has a floor map configured.

9. Select an option from the provided options.

   a. In the My request page, select **Tasks/To-dos**.

   b. In the **Select a space plan option**, select **View task**.
   A page with all the options that are displayed in the **Space plan** is displayed for selection.

   c. Select **Select** next to the option that you want to proceed with.

   d. **Optional:** If you do not want to select any option for any reason, select **None of the above**.

   Note:
   If you select **None of the above**, the request is closed and the state will be set to **Closed complete**

   e. After selection, select **Submit**.

Result

The option that you selected is submitted. At any time, you can view your selected option in the **Space plans** tab. After you submit the selection, the following actions are performed based on the approval process configured by your organization:

- If an approval process is configured for your user profile, then the space request is sent to your manager for approval. The state of the space request changes to Awaiting approval.
  - If your manager approves, the space request is sent for deployment and the state changes to Approved.
  - If your manager rejects, then the space request is rejected and the state changes to Closed incomplete.
- If your user profile doesn't require an approval, then the space request is transferred to your organization's space planner and the state changes to **Approved.**

Approve a space assist request

As a workplace manager, you can approve or reject a space assist request.

Before you begin

Ensure the following:

- You have the permission to approve.
- You are the manager of the user who raised the space assist request.

Role required: sn_wsd_core.workplace_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

As a workplace manager, you can approve a space assist request raised by a user who is assigned to you. The Workplace Core Approval definition, provides the **Space Recommendation Approval** by default to perform space request approval. The approval definition consists of a **Space Recommendation Approval Config** performer criteria, in which all the workplace managers are configured to approve space assist requests.

Procedure

1. Navigate to **All** > **Self-Service** > **My Approvals**.
2. Select the approval that is in **Requested** state.
   You can also use filter options to view only those approvals that are in the **Requested** state.
3. To view the request details before approving, in the **Approving** field, select the Preview this record icon ( ).
4. Click **Open Record**.
5. Review the request details.
6. After reviewing the details, to approve or reject, perform the steps 1 and 2 again.
7. On the form, do any one of the following:
   - To approve the request, select **Approve**.

     The request is approved.
   - To reject the request, do the following:
     a. In the **Comments** field, specify the reason for rejection.

        If you want to suggest any changes in the request, briefly detail the changes.
     b. Click **Post** after entering your comments.
     c. Click **Reject**.

        The request is rejected.

Space Optimization - Key features and actions

As a space planner, you can perform multiple scenario-related actions using the Space Optimization module. You can create a scenario using the stack plan and view it on a floor map and make changes directly.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space Optimization module

You can create a scenario, track the scenario metrics, view scenario details, and view building details from the module. The Space Optimization displays the following information:

- **Scenarios**: Displays the scenario metrics.
- **Create scenario**: Option to create a scenario for a building. For more details on how to create a scenario, see Create a scenario.
- **Scenarios**: Lists the details of the following:
  - Details of scenarios such as name, location, state, and owner.
  - Details of the building of your organization.
  You can select a scenario or building to view more details.

You can also view scenarios created by you in the Scenario planning application. Navigate to **All** > **Scenario Planning** > **My Scenario Plans**.

Scenario metrics

As a space planner, you can see the total number of scenarios that are currently created in your organization in filtered tiles. You can select each tile to view more details in a list.

In the Scenarios metrics tiles, the numbers are displayed based on the following:

- **All scenarios**: Total number of scenarios that are created in the application.
- **My scenarios**: Total number of scenarios owned by you.
- **Draft scenarios**: Total number of scenarios created by you that are in draft state.
- **Published scenarios**: Total number of your scenarios that are published.

You can also select a tile to view the list.

Scenario details

As a space planner, you can view the list of all the scenarios created in your organization. The details such as name, location, state, owner, and more are displayed. You can configure the list

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

view settings based on what details you want to view about a scenario. The homepage displays five scenarios at a time and to view more, select **View all**.

- When you select **View all**, the list is opened in a separate tab where you can view all the scenarios created in your organization with their details.
- You can also perform the following actions on the list:
  - **Copy**: Create another copy of an existing scenario to make new changes. You can copy only one scenario at a time. The copied scenario is created with the same name appended with '- Copy 2'.
  - **Delete**: Delete one or more scenarios if they're no longer required.
  - **Create scenario**: Create a scenario.
  - Refresh the list.
  - Edit the column.
  - Add or remove filters.

Building details

As a space planner, you can view the list of buildings of your organization on the Space optimization module. You can configure the list view settings based on what details you want to view about a building. The homepage displays five scenarios at a time and to view more, select **View all**. When you select **View all**, the list is opened in a separate tab where you can view all the buildings of your organization and their details. You can refresh the list, edit columns, or apply building-related filters.

When you select a building, the building is opened in a stack plan view where you can see all the space allocations and floor arrangements. A stack plan is a visual representation of all the allocations made on a floor of a building. Every allocation is displayed in a bar based on the department or cost center that is assigned to. For more information about stack plan view and floor map view, refer to Scenario and Building - Views, states, settings, and key features.

- The details of the building such as its total capacity, total number of spaces, and location are displayed on top of the plan.
- You can see the total number of unallocated spaces of the building in total as well as floor-wise.
- You can view the building details in a stack plan view or a floor map view. The floor map view is available only if you have Workplace Indoor Mapping floor maps configured. The floor map view enables you to view the allocation on a floor map and make any changes directly.
- You can view the spaces allocated to a department, cost center, or workplace entity in the stack plan or on the floor map. You can choose how you want to view the allocations. On the right panel, select a view using the **View by** option.
- You can select a bar on the stack plan or a space on the floor map to view more details, such as capacity count, capacity ratio, and total capacity. You can also point to the bar to view the same details in a tooltip. The details window on the right panel displays all the bar details, the details related to assignments and the department.
- You can view other scenarios related to the building in the **Related scenarios** tab.
- In the **Settings** tab, you can apply a filter based on which you want to see the spaces on a floor.
- You can't edit a scenario when you open it in the building view. To edit a scenario of a building, copy that scenario and make changes. The scenario copies the exact building data and enables you to make changes. The changes don't affect the main data as long as it's deployed. To create a scenario of a building, you can also select the **Create scenario** option when the building is open in the stack plan view.

Workplace Central Event planner

The Workplace Central Event planner is a one-stop workspace where you can check all the reservations requested in your organization at a time.

Event planner capabilities

You can view all the reservations of your organization in this single workspace, and monitor how many workplace locations are engaged by employees. Using the planner, you can perform the following actions:

- Access the event planner as a Reservation planner and a Reservation viewer.
- Set the start and end time displaying on the calendar in the schedule view.
- View various reservations such as single, recurring i.e occurrence reservations, multi-child, group, and more.
- Check the available and unavailable spaces at any time.
- Directly view or edit reservations requested in any campus, building, or a floor when required.
- Open and View Location directory using Event planner.
- View the planner in a Scheduled view. Open Location directory from the Scheduled view.
- Change a reservation to an earlier or later date or time.
- View detailed information of each reservation requested either in the past, on the current day or that are upcoming.
- View details such as the requester, the current state of the reservation, the check-in and check-out status, the invitees, the number of people attending and more.
- Create a reservation.
- As a reservation planner, you can perform the following actions:
  - Drag a reservation to another date and time to reschedule.
  - Drag and drop a reservation with service items to another time or another location. The service items can't be modified but the quantity of the service items can be modified.

    Note:
    If the new location or time does not have one or more added services, then a message is displayed informing "This change will result in the loss of one or more services for this reservation".

  - Change the reservation timings.
  - Change the location of the reservation.
  - Cancel a reservation.

    Note:
    Only that particular occurrence is deleted when a recurring reservation is cancelled, and not the complete series. You can cancel the complete recurring reservation from the portal.

  - Open a reservation and make advanced changes and also add services.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Edit the reservation from the contextual side panel of the calendar. This functionality is available only for single and recurring reservations.

  Note:
  When you modify a building value in an existing reservation, because the previous location is not available in the updated building, selecting it throws an error. You can select a different location.

- As a reservation planner, you can manage single or occurrence reservation details. You can also edit reservation details such as the reservable purpose, number of attendees and cost center from the details reservation details pages directly.

  Note:
  You can manage a multi-location or a group reservation only by opening the reservation details and not with the schedule view.

Important:
Reservations created using a calendar provider can only be managed using the calendar provider.

Landing page

The Event planner landing page consists of the following sections:

Reservations

The metrics of the reservations are displayed in the section. The metrics of the current day's planned reservation, requested extra services, canceled reservations, and pending approval reservations.

Active reservations

This section displays the detailed list of all the reservations requested in the organization and the reservations requested by you. You can also view the reservations in a schedule view using the **Open schedule view** option.

Reservation metrics

On the Event planner landing page, you can view the reservation metrics in the **Reservations** section. The following metric cards are displayed. You can select the metric card to view the respective reservations in a list.

Planned reservations for today

Number of reservations scheduled for the current day (today).

Reservations with extra services for today

Number of reservations that have extra service requests for the current day (today).

Canceled reservations of today

Number of reservations that have been canceled for the current day (today).

Pending approval reservations

Number of reservations that are awaiting approval.

Reservations list view

The **Active reservations** section on the landing page displays a list of reservations. You can view all the reservations and reservations requested by you. The **Active reservations** section displays the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

All Reservations

The **All Reservations** section displays the list of reservations created in throughout your organization. The list displays ten reservations at a time. Select the **View all** option to view all the reservations. You can view the following details:

- The reservations requester.
- The location on which the reservation is created.
- The building and campus where the location resides.
- The reservation purpose.
- The reservation types such as single, occurrence, multi-child, group, and others.
- The start and end time of the reservation.
- The current state of the reservation.

You can refresh the list whenever required. You can also edit the columns of the list based on how you want to view the list.

My reservations

The **My reservations** section displays the list of reservations that you have created either for yourself or for others. The list displays 10 reservations at a time. Select the **View all** option to view all the reservations.

You can refresh the list whenever required. You can also edit the columns of the list based on how you want to view the list. You can configure to display up to 10 columns at a time.

Reservations schedule view

The event planner enables you to view all the reservations in a schedule view using the **Open schedule view**.

The schedule view opens a time-line view displaying all the workplace locations of your organization such as campuses, buildings, floors, and spaces on that floor. The schedule view has the following capabilities:

Campus selection

On the top right of the schedule view, you can specify the campus for which you want to view the reservations using the **Campus** option. After you specify the campus, the **Buildings** and **Floors** filters are automatically generated. You can specify the building and the flood that you want to view respectively. As an admin, you can configure the number of campuses that must be displayed in the drop-down selection. You can specify the number in the *`Maximum number of items that can appear in filter drop down of campus, buildings and floors in Event Planner Experience.`* property.

After you specify your campus, the selection is retained and is displayed by default when you open the schedule view next time.

Reservable purpose

You can use the **Reservable purpose** option to filter the spaces of the campus based on the reservable purposes configured in your organization.

Date

You can view the reservations of any date by selecting a date on the calendar. You can select **Today** to view the current day on the calendar.

Timezone

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The schedule view time line is set based on the time zone of the selected location.

Time frame

You can specify the time frame of the schedule view using the drop-down location on the top-right corner of the view. By default, the time frame is set as **Day view 30 minutes**. You can choose to view the time in a one hour window or a week view.

Event Planner Schedule

You can set the start and end time that displays on the calendar in the schedule view from the system properties *`Start time Event Planner Schedule`* ,and *`End time Event Planner Schedule`*.

Snap duration

When you drag and drop a reservation, you pick, and move the reservation by some duration and the duration is called Snap Duration.

The default snap duration for a 30-minute and 60-minute view of the event planner schedule view is 5 and 15 minutes, respectively. The minimum and maximum values to set a snap duration for a 30-minute view is 1 and 30, and for a 60-minute view is 1 and 60. You can modify the default values using the system properties *`Snap duration for 30 min view of Workplace Event Planner Schedule View`*and *`Snap duration for 60 min view of Workplace Event Planner Schedule View`*.

Refresh

You can refresh the view at any time by selecting the refresh icon ( ).

Legend

You can view the color legend based on which the reservations are displayed. The legend displays the colors associated with each state. As an admin, you can modify the colors associated with each state in Workplace Reservation Management properties. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Properties** to modify the properties. You can edit the following properties and specify your colors:

- Color for Draft reservations in Event Planner Experience
- Color for In progress reservations in Event Planner Experience.
- Color for Awaiting confirmation reservations in Event Planner Experience.
- Color for Confirmed reservations in Event Planner Experience.
- Color for Completed reservations in Event Planner Experience.
- Color for Awaiting approval reservations in Event Planner Experience.
- Color for Approved reservations in Event Planner Experience.
- Color for Rejected reservations in Event Planner Experience.
- Color for Conflicted reservations in Event Planner Experience.
- Color for Read only reservations in Event Planner Experience.

Specify the hex code for the color.

Search spaces

You can directly search for a space using the **Search spaces** option.

Reservations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The reservations created on a space are displayed as a bar expanded between start and end time. The reservations are displayed in colors based on their current state. You can view the color legend to know the state.

You can select the reservation to view details such as the reservation start and end time, duration, subtype, status, and services requested if there are any.

- You can also view further details of the reservations on the side panel by selecting the Open side panel icon ( ).
- To open the reservation and view it on the portal, you can select the **Open reservation** option. The reservation is displayed in Employee Center by default. If you want the reservation to open on a custom portal instead of Employee Center, you must perform the following actions:
  1. Navigate to **System Definitions** > **Script includes**.
  2. Search and open **WPCoreUtils**.
  3. In the **Script** field, override `getCommonPortalSuffix` function to get the common portal suffix.
  4. Click **Update**.
- You can also select the Show ( ) icon to get a detailed view of the reservation. The side panel displays the reservation-related details such as the location, start and end time, current state, synchronization state, reservation subject and services requested. As a reservation planner, you can also cancel the reservation using the **Cancel reservation** option.
- You can also move the reservation to another time or to another location by dragging the bar of the reservation.

Last updated sub source

- When a reservation is updated from the Contextual side panel, the last updated sub source is updated as **Workplace Event Planner**.
- When a reservation is updated from the portal, then the last updated sub source is updated as **Workplace Service Delivery**.

Reservation details view

When you select a reservation in the event planner, the reservation opens in a new tab displaying all the reservation-related details. The page displays the requester details, the current state, and the campus where the reservation is requested on the top-level view.

The reservation details are displayed in the following tabs:

Details

The **Details** tab displays the reservation details specified by the requester on the reservation form while making the reservation. As a reservation planner, you can edit the **Number of attendees**, **Reservable purpose** and the **Cost center** field.

Blocker Reservations

The tab displays blocker reservations created along with the reservation. Blocker reservations are created for cleanup and preparation if any extra services are requested with the reservation.

Cases

The tab displays the workplace cases created to fulfill the extra services requested with the reservation. If there are any workplace tasks created, a **Tasks** tab appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Requested Service Items

The tab displays the service items requested with the reservation.

Approvers

The tab displays the details of the approvers of the reservation.

Invitees

The tab displays the details of the invitees invited to the reservation.

Reservation Recordings

The tab displays the recording details if the reservation includes a virtual meeting link.

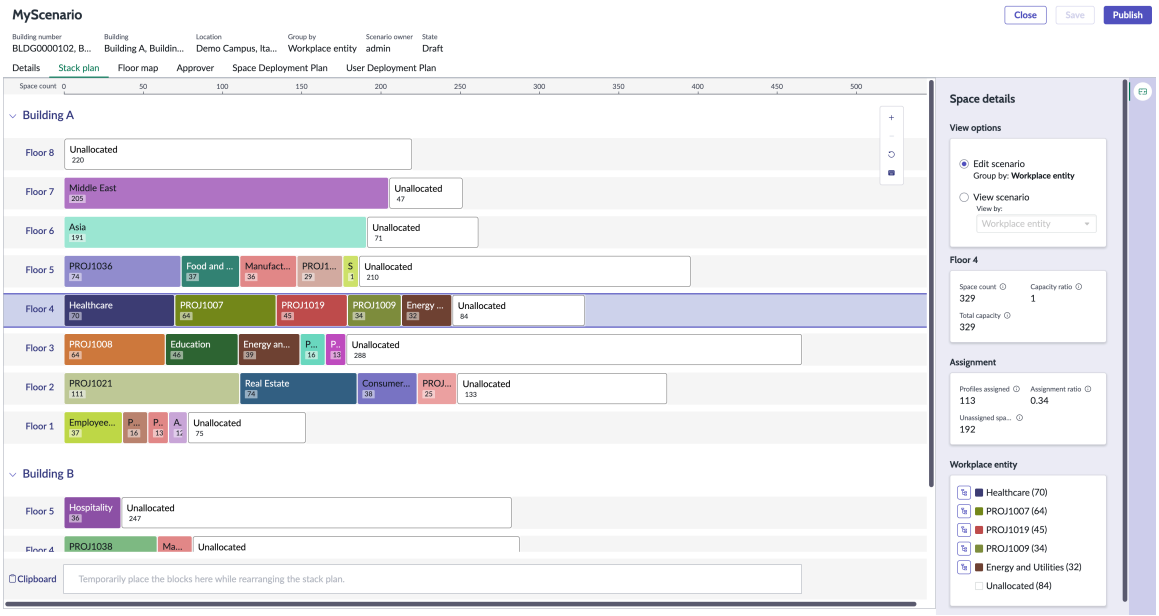
From the reservation details page, you can also open the reservation to view it in the Employee Center portal using the **Open reservation** option. If you want the reservation to open on a custom portal instead of Employee Center, you must perform the following actions:

1. Navigate to **System Definitions** > **Script includes**.
2. Search and open **WPCoreUtils**.
3. In the **Script** field, override `getCommonPortalSuffix` function to get the common portal suffix.
4. Click **Update**.

As a reservation planner, you can cancel a reservation if necessary using the **Cancel reservation** option.

Scenario and Building - Views, states, settings, and key features

Create or view a scenario using a stack plan and a floor map view. Scenario planning enables you to allocate spaces and define user assignments efficiently with different views, simple settings, and several key features.



When you create or open a scenario, the scenario is opened in a stack plan view by default. If the building for which you're creating a scenario or viewing the scenario has floor maps configured, you can view the space allocations on the floor map directly. You can work on a scenario only if it's owned by you or if you're assigned as an owner by your colleague.

Stack plan view

A stack plan is a visual representation of space allocations based on their department, cost center, workplace entity or neighborhood. The stack plan displays the different departments, cost centers, neighborhood or workplace entities of your organization in different color codes.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Stack plan view

A stack plan is similar to a graph. The Y-axis of the plan shows the different floors of a building and the X-axis shows the length of the bar, which is determined from the total capacity of the building. For example, if the sum of the capacities of all the spaces is 1000, then the length of the bar is 1000 plus other spaces that are assigned to the selected bar.

When you create a scenario, you must specify on what basis you want to group your space allocations. For example, the basis can be grouped by department, cost center, or neighborhood in the **Group by** field. The stack plan displays the allocations based on this selection. The stack plan is then opened in the scenario mode directly. The scenario mode is the grouping mode that is selected in the **Group by** field. When you open a scenario that is in the Published state to review the allocations, the scenario is opened in its scenario mode by default.

You can change a scenario only if you're the owner and if the scenario is in the Published state. If you open a scenario that is not owned by you, then you can view the plan only in a read-only mode.

In a scenario, you can view all the details related to the building such as its capacity, space count, unallocated spaces, and more. You can change your space allocations view of a scenario by using the **View by** option.

The stack plan view includes the following features:

View or edit space allocations

View space allocations based on departments, cost centers, workplace entity or neighborhood. The spaces on a floor that belong to the same allocation are grouped as a bar. The bars on a floor are color-coded for simple identification. You can view the legend of the color codes in the right panel.

> **Important:**
> You can view workplace entity-based allocation only in a building stack plan view.

View details

The details panel of a scenario contains the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **View Options**: In this section, you can specify whether you want to edit or view a scenario. From Workplace Space Management version 1.13.0, the view-by types are sorted alphabetically by default. You can change the order or add view types from the View by Configuration [sn_wsd_spcmgmt_view_by_configuration] table. For more information, see Create a view-by configuration. The following options are available by default:
  - **Edit scenario**: Option to edit the scenario. You can edit only if you're a space planner.
  - **View scenario**: Option to view the scenario in read-only mode. By default, the scenario is displayed based on the **Group by** selection that you specified. You can view scenarios based on the following:
    - Assignment type
    - Cost center
    - Department
    - Neighborhood
    - Occupancy status
    - Space functions
    - Space status
    - Space type
    - Workplace Entity

      If you select Workplace Entity, you can specify the entity type to group the spaces.
- **Space/floor/bar details**: The details of a space such as count and capacity.
  - **Space count**: Number of spaces. The value is derived from the values specified in the **Capacity** field of all the space records.
  - **Total capacity**: The total capacity of the space. The values are derived from the capacities specified in the **Capacity ratio** field of all the space records. A capacity ratio can be more than 1 for a space. Which means, a space can have more than a user assigned to it. The length of a stack plan bar is determined based on the total capacity.
  - **Capacity ratio**: The ratio of capacity determined by dividing the **Space count** and **Total capacity** values.
- **Assignment**: Number of users assigned to a space. The values are displayed based on your selection on the plan

  Note:
  In Workplace Space Management version 1.13.0, user profiles that have location assignments associated to schedule plans are excluded from scenario planning.

  - **Profiles assigned**: Number of user profiles assigned to the building/floor/selected bar.
  - **Assignment ratio**: The ratio of the people assigned to the total capacity of that building/floor/selected bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Unassigned spaces**: Number of unassigned spaces to the building/floor/selected bar.
- **Assigned profiles**: The details of the users who are assigned to the select space or spaces.

If a scenario is grouped by neighborhood, you can also make user assignments to a neighborhood from the scenario stack plan using the **Edit user assignments** option. You can add a user, remove a user, or update a user to a neighborhood.

- **Legend**: This section depends on the view selected in the **View by** field. For example, if you select Department as the view option, then the legend of all the departments available in the building is displayed.

Change views

Change the view of the bar based on different types. The following view types are available:

> **Note:**
> From Workplace Space Management version 1.13.0, the view types are sorted alphabetically by default. You can change the order or add view types from the View by Configuration [sn_wsd_spcmgmt_view_by_configuration] table. For more information, see Create a view-by configuration.

- **Assignment type**: View the spaces on a floor based on their assignment type such as permanent or flexible.
- **Cost center**: View the spaces on a floor based on cost centers. The bars are labeled with the different cost centers of your organization.
- **Department**: View the spaces on a floor based on departments. The bars are labeled with different departments of your organization.
- **Neighborhood**: View the spaces on a floor based on the neighborhood. The bars are labeled with different neighborhoods of your organization.
- **Occupancy status**: View the spaces on a floor based on the occupancy status.
- **Space functions**: View the spaces on a floor based on different space functions. The bars are labeled with different space functions of your organization.
- **Space status**: View the spaces on a floor based on their status such as active, future, retired, or temporary. The bars are labeled with the different space statuses.
- **Space type**: View the spaces on a floor based on their space types such as workspace/desk, room, restroom, and more. The bars are labeled with the different space types of your organization.
- **Workplace Entity**: View the spaces on a floor based on the Workplace Entity. After you select the Workplace Entity option, you can also select the type of entity to group the spaces.

Use keyboard shortcuts

Click the Keyboard shortcuts icon( ) to view the shortcuts that you can use during scenario planning. You can use keyboard shortcuts such as:

- Left/right keys: To navigate between stack plan bars in a row (floor).
- Up/down keys: To navigate between to the previous or next row (floor).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Space key: To view the additional details of the highlighted stack plan bar in the tooltip.
- Enter: To select the highlighted stack plan bar.

View the details of an allocation

See the details of an allocation on the plan in the details panel that is displayed on the right side. The details on the right panel of a scenario depend on the selection that you make on the plan and the **View by** option.

- If you select a floor, the right panel displays details such as the floor name, space count on the floor, total capacity ratio of the floor, capacity of the floor, profiles assigned, assignment ratios, unassigned spaces, and department/cost center allocated on that floor. The bar is displayed based on your view selection. The details of the bar is displayed in the bottom of the right panel. For example, if you select **Space type** as the **View by** option, the bar is displayed based on space types and the details of the space types that are assigned on a floor are displayed on the bottom of the right panel.
- If you select a bar, for example Department ABC, the right panel displays details such as the bar name, which is Department ABC, space count of Department ABC, capacity ratio of Department ABC, total capacity of Department ABC, profiles assigned to Department ABC, assignment ratio of Department ABC, unassigned spaces in Department ABC, color code of Department ABC.

  When you select only a bar (Department ABC), you can change the space count, and also assign that bar (Department ABC) to another floor using the **Space count** and **Assign to** fields.

- If you have not made any selection on the stack plan, then the overall details related to the building are displayed with the same fields as above.

View unallocated spaces

Check unallocated spaces on a floor. Unallocated spaces are those spaces that aren't assigned to any cost center, department, workplace entity or neighborhood. Based on the unallocated spaces you can increase or decrease the number of spaces to a department. If you allocate spaces more than the unallocated space count, then the bar doesn't allow you to make the allocation.

> **Important:**
> You can view workplace entity-based allocation only in a building stack plan view.

Allocate a bar to another floor

Move a bar from one floor to another. For example, move Department ABC from Floor 1 to Floor 5.

Move a bar to the clipboard

Move a bar to the clipboard if you're uncertain about its allocation. A clipboard is similar to a working space used to hold bars temporarily.

Merge bars that are split

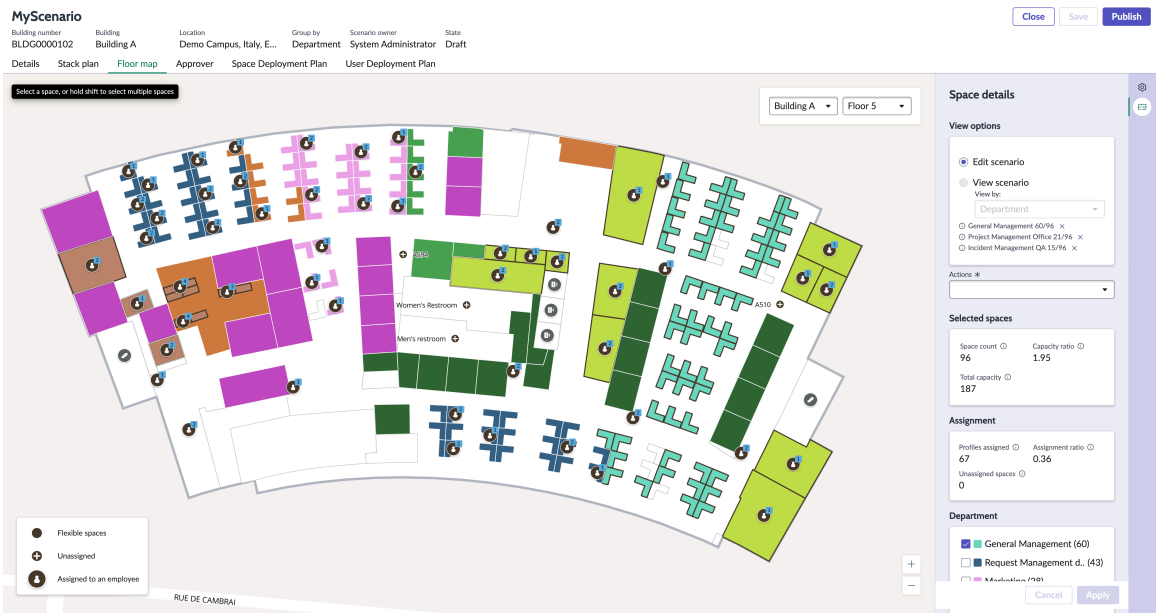
Combine the bars that are split in different floors to one floor, by merging. The spaces are grouped automatically.

View the capacity or capacity ratio

Check the capacity or capacity ratio of a building, floor, or a bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Building view



Not just during scenario planning, but, you can also view a building's spaces and their allocation, and various space details on a stack plan at any time. On the Space optimization dashboard, you can select the building that you want to view. The building is displayed on a stack plan. For more information, refer to View or edit space allocations of a building. The stack plan displays the floors of the building and the allocations like how it is displayed for a scenario. In a building view, you can perform the following actions exclusively:

- You can view the spaces of a building based on the workplace entities that they are associated with. The **View by** option in a building view displays an addition option **Workplace entity** using which you can view the spaces. Additionally, after selection, you can specify the entity type based on which the spaces must be displayed.
- When you select a workplace entity-based allocation on the stack plan, the details of the hierarchy of that selected space allocation and the number of spaces assigned to each parent-child hierarchy are displayed in detail.
- You can edit user assignments of a neighborhood allocation in a building view. You can add, remove, or change the allocation of a user. For more information, refer to Edit or view a building's spaces based on workplace entities.

Scenario - Floor map view

View the space allocations on a floor using the floor map view. The floor map view for a floor is available only if the floor map is configured using Workplace Indoor Mapping. The floor map view makes its easier for you to view the allocations, user assignments, department/cost center/ workplace entity/neighborhood movement on a floor with easy actions. Select the **Floor map** tab on the scenario plan to view the floor map.

Floor map view

The Floor map view provides you with the following features:

View the individual allocation

You can view the allocations of individual spaces on the map directly. The spaces are colored based on the allocation that they're assigned to. The legend is displayed on the right panel.

View any scenario

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can view any scenario at any time. When you open a scenario opened by others, you can view the allocations and details in a read-only mode. A scenario is opened it the scenario mode that is configured on it. You can hover over the spaces on the floor map to view the details in a tooltip.

Zoom

Zoom in or zoom out on the map to view the allocations.

Change floors

You can select different floors of the building using the floor selection option available on the map. If you select a floor on the stack plan and then open the Floor map view, then the floor map of that floor is displayed. If you have not made any selection on the stack plan, then the Floor 1 of the building is opened by default.

Select a space

Select a space on the map directly and view the details of that space on the right panel. You can select a single or multiple spaces by drawing a circle around them or by using the Shift key on the keyboard. The details on the right panel are displayed based on your selection.

The spaces that are flexible, assigned, and unassigned spaces are highlighted with different color codes. The legend of these color codes is displayed on the map.

While editing a scenario, you can select a check box from the space details section to select all the spaces that have the same color code.

If a space is assigned to any user, an avatar icon is displayed with the number of users assigned to that space.

View details

You can view the following details on the right panel:

- **View by**: Option to change the view of the map. The view options are determined from the space types available on a Space record. The spaces are highlighted on the map based on your selected view.
- **Actions**: This field is displayed only if you've selected a single or multiple spaces on the floor. The following options are displayed in the field:
  - **Allocation**: Option to make allocation-related changes such as adding, changing, or removing an allocation.
  - **Assignment type**: Option to change the assignment type such as changing a space from permanent to flex or vice versa. You can also remove the existing user assignment.
- **Space/floor details**: The details of a space such as count and capacity are displayed.
  - **Space count**: Number of spaces. The value is derived from the values specified in the **Capacity** field of all the space records.
  - **Total capacity**: The total capacity of the space. The value is derived from the capacities specified in the **Capacity ratio** field of the space records. A capacity ratio can be more than one for a space. Which means, a space can have more than one user assigned to it. The length of the bar is determined based on the total capacity.
  - **Capacity ratio**: Ratio of capacity determined by dividing the Space count and Total capacity values.
- **Assignment**: Number of users assigned. The values are displayed based on your selection on the plan

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
In Workplace Space Management version 1.13.0, user profiles that have location assignments associated to schedule plans are excluded from scenario planning.

- **Profiles assigned**: Number of user profiles assigned on the building/floor/selected bar.
- **Assignment ratio**: Ratio of the people assigned on the total capacity of that building/floor/selected bar.
- **Unassigned spaces**: Number of unassigned spaces in the building/floor/selected bar.

- **Legend**: This section depends on the view selected in the **View by** field. For example, if you select Department as the view option, then the legend of all the Departments available on the floor is displayed.

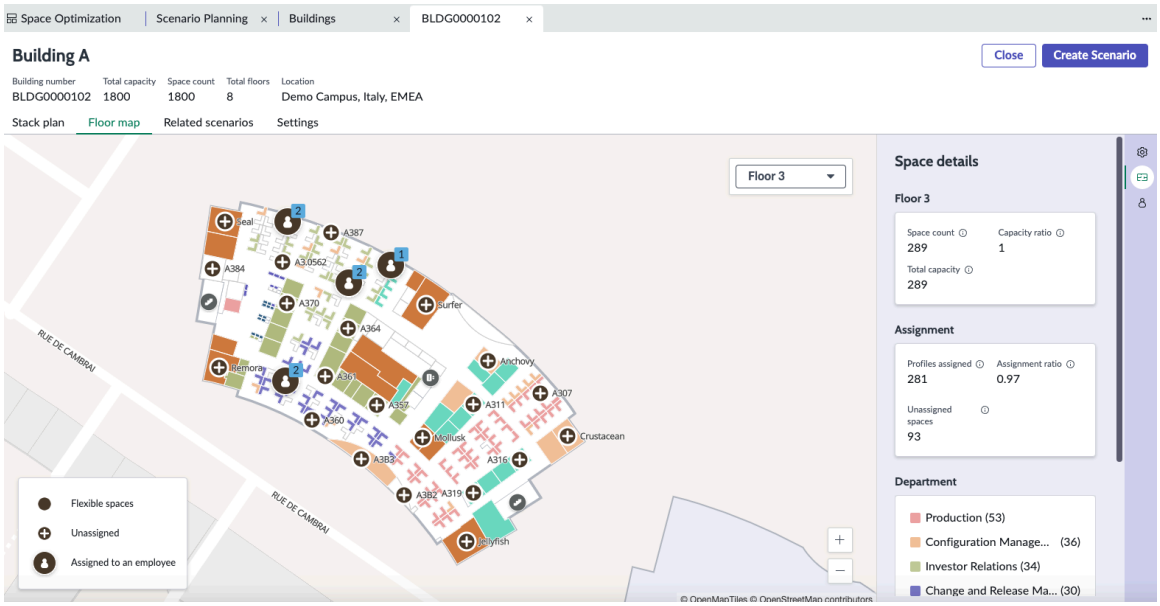
Adjust map settings

Change the map settings. You can switch between Floor plan view details and Map settings details on the right panel. The floor plan details displayed on the panel depend on the map settings. The following settings are available:

- **Assigned to**: Option to view the user or users to whom the space is assigned.
- **Assignment type**: Option to view the assignment type of the space that is flexible or permanent.
- **Opacity %**: Opacity of the colored spaces on the map. You can reduce the opacity if some map elements are hidden due to the colored spaces.

Change space allocations

When you move a department to a floor, the spaces assigned to that department are grouped with the existing spaces of that department on the floor. You can view these space allocations on the floor department wise. You can also select a single space or multiple spaces of that department and allocate it to another department using the **Actions** option.



Building - Floor map view

You can also view a building stack plan or a floor map at anytime and make changes specifically on the building. You can perform actions directly using the floor map of the building if the building has a Workplace Indoor Mapping floor map configured.

Similar to the scenario, the stack plan view of a building also enables you to perform space allocations, view the spaces on the floor based on various options.

The **Floor map** view of a building enables you to perform map based space administration. For more information, refer to Map based space administration.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

On a floor map, you can do the following:

- You can view the spaces of the floor directly. From Workplace Space Management version 1.13.0, the view types are sorted alphabetically by default. You can change the order or add view types from the View by Configuration [sn_wsd_spcmgmt_view_by_configuration] table. For more information, see Create a view-by configuration. The following categories are available by default:
  - **Assignment type**
  - **Cost center**
  - **Department**
  - **Neighborhood**
  - **Occupancy status**
  - **Space function**
  - **Space status**
  - **Space type**
  - **Workplace Entity**

    When you select **Workplace Entity**, an additional field **Workplace Entity Type** is also displayed in which you can specify the entity type, based on which you want to view the spaces.

  Note:
  In Workplace Space Management version 1.13.0, user profiles that have location assignments associated to schedule plans are excluded from the building view.

  For more information, refer to View or edit space allocations of a building.
- You can edit the spaces on a floor. For more information, refer to Edit a building's spaces using a map.
- Assign or unassign an employee from a space. Move employees on a floor or to a different floor using the map.
- You can also change the opacity of the colored spaces in the **Map Settings** pane. Changing the opacity is helpful if some elements on the map are hidden due to the color.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

While viewing or editing spaces, you can select a check box from the space details section to select all the spaces that have the same color code.

Related scenarios

The Related scenarios tab appears when you open a building using the Space Optimization module. All the scenarios related to the selected building are listed.

Details related to scenarios such as the name, state, owner, date when it was created, group for which it's created and more are displayed. You can refresh the list, edit the columns, and apply filters.

Scenario states

A scenario, since its creation to the deployment, undergoes different state changes based on the actions implemented on it. Based on the state of a scenario, you can share it with your colleagues or stake holders to review the plan and implement it on the main production data.

A scenario has the following states:

- **Processing**: A scenario is set to **Processing** when its creation is in process. Also, if you're copying an existing scenario, then during the copying process, the newly created scenario is set to **Processing**.

  Also, at any time, when a scenario is saved, the state of the scenario will be set to **Processing** when the saving process in running.

- **Draft**: A scenario is set to Draft when it's ready to use, that is, when it's being worked on. During this state, only the owner of the scenario can view it.
- **Ready**: A scenario is set to Ready when it's published. When a scenario is published and after the scenario is set to the Ready state, you can share it with your colleagues or stake holders for their feedback. The scenario is available only in read-only mode to others.
- **Awaiting approval**: A scenario is set to Awaiting approval when it is sent for approval after publishing. When a scenario is sent for approval, the scenario can no longer be edited unless the state changes to Rejected.
- **Rejected**: A scenario is set to Rejected if an approver has rejected the scenario. When the scenario is rejected, you can implement the changes suggested by the approver using their comments and send it for approval again.
- **Approved**: A scenario is set to Approved if an approver approves the scenario. When a scenario is approved, you can no longer edit a scenario. You can only deploy a scenario.
- **Deployed**: A scenario is set to Deployed when it's deployed to the main production data. You can't make any changes to a deployed scenario. To make any changes, you must create a copy of that scenario and make changes.
- **Archived**: A deployed scenario is set to Archived if it's older than six months.

Settings

The Settings tab appears when you open a building directly using the Space Optimization module. The Settings tab enables you to apply the space qualifying filter on the spaces displayed on the stack plan. You can apply a filter based on what type of spaces or how you want to see the spaces.

For example, if you want to see all the spaces of type workplace/desk then apply the Space type filter. In the Stack plan tab, these spaces are displayed based on the view that you've selected in the **View by** option.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Approver

The Approver tab displays details of all the approvers who are configured to approve a scenario. The Approver tab displays details such as the approvers who are allowed to approve, the state of the approval, the comments related to the approval and the time of approval. After you send a scenario for approval, if the scenario is rejected by the approver, you can view the details of the rejection in the **Comments** of the Approver tab and implement the changes.

The application provides a default approval definition **Scenario Plan Approval**, in which workplace managers are configured as approvers for scenarios. You can create a new approval definition or edit the default defintion. To create a new approval definition, refer to Create an approval definition.

Note:
To add an approver to the approval definition, the approver must be configured in the performer criteria. To do so, refer to Create a workplace performer criteria.

Space Deployment plan and User Deployment plan

The Space Deployment plan and User Deployment plan tabs appear when you are creating a scenario. The changes that you make on a scenario are logged in the respective deployment plans. After you save the changes made on the stack plan, the plan displays each change with the changed details.

Space Deployment Tab: The plan displays the allocations and space assignment type changes performed on the scenario.

User Deployment Tab: The plan displays the user assignment-related changes such as Add, Update, and Delete performed on the scenario.

After publishing the changes, and after finalizing the space allocations, to execute it to production, you must deploy the changes. The plan enables you to deploy the changes using the **Deploy** option.

After the scenario is deployed, a workplace case is created for every change. After the deployment, additional details such as the workplace cases associated with each change are displayed in the deployment plans. The following workplace move cases are created for each change accordingly:

- Workplace User Assignment and Move Service via Scenario Planning: Workplace move case created to change the user assignment and move the space.
- Workplace Assignment Type Service: Workplace case created to change the assignment type of a space.
- Workplace Allocation Change Service: Workplace case created to change the space allocation.

Space request approvals, states, actions, and key features

As a space planner, execute the space allocation requests raised in the organization using the Workplace Central Space Optimization dashboard. Using the Workplace Central Space Optimization dashboard to avoid multiple tasks about checking the availability, allocating spaces manually, and other process involved while space planning.

Functionality

The Workplace Service Portal enables workplace managers and other workplace users to raise a space recommendation request by specifying their requirements. The application generates various space plan options based on their specifications. When a space request is submitted, a

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

workplace case is created in the application. The Workplace Central Space Optimization makes it easy for you, as a space planner to view only those workplace cases specifically generated from a space request.

As a space planner, you only have a few actions to perform to deploy a space plan. The application applies various algorithms on the location specified by the requester and generates multiple space plan options. The requester is provided with these space plan options to make a selection and submit. This pre-planning of space allocation makes it easier for you, as a space planner to deploy the space plan.

The Space Optimization dashboard provides you the metrics of the total number space requests raised and also view details of each space request. You can also view the details applying various filters and also based on the building for which it is requested for.

On the Space Optimization dashboard, you can view space requests using any one of the following options:

- In the **Scenarios** metrics board, select **All space requests**.
- In the **Space requests** section, select **View all** to view all the space requests.

Approvals

If a space assist request requires approval, you can approve them using the Workplace Core approval configuration. You can approve a space assist request of only those users to whom you are assigned as a manager.

Space request views

When you open a space request workplace case, a separate tab is opened with various details. You can view the details in different views.

Request details

The space request opens in the Request details view by default. In the Request details, the details are split in three different panels as follows:

1. **Workplace case and Variables**: In the first panel, the Workplace case details and the variables provided by the requester is detailed.
   - In the Workplace Case section, you can view the description of the request. You can also assign the space request to another assignment group or a user using the **Assignment group** and **Assigned to** field.
   - In the Variables, section, you can view all the details specified on the form by the requester.
2. **Compose and Activity**: In the second panel, you can add comments and activities performed on the space request since its creation.
   - In the Compose section, you can add comments and work notes in the request. Comments are also displayed to the requester whereas work notes are displayed only to the space planners working on the space request.
   - In the Activity section, you can view all the details related to the actions performed on the space request, such as state changes, approvals, work notes and all.
3. **Attachments and Templates**: In the third panel, you can select two different views, that is, view or add attachments or view workplace case templates. You can select these options using the extreme right panel.

Space plan

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the **Space plan** tab you can view the space plan option that is selected by the requester. You can also see the space plan on the floor map. The floor map is visible only if the floor has a floor map configured using the Workplace Indoor Mapping application and if you have installed the Indoor mapping component.

- The space plan also displays high-level information of the floor, building, and campus involved in the form of pills.
- The space plan provides detailed information of the spaces, floor, building, campus, site, and the region which is used for the allocation.

Important:
If the requester has not made any option selection, the **Space plan** tab does not display any details.

Approvals

In the **Approvals** tab, you can view the approver details of the space request.

Space Deployment plan

The **Space Deployment plan** displays the detailed information related to the allocation, the floor where the space is allocated, the type of change made in the plan, the current value and the scenario value. When you deploy the space plan, a workplace case is created and executed for each allocation. Until all the workplace cases are in progress, the deployment is not considered as done.

User Deployment plan

The **User Deployment plan** displays the detailed information related to the neighbourhood user assignment-related changes if the scenario is grouped by neighbourhood.

Floor map

In the Floor map view, you can view the floor map of the floor where the space plan is planned. The floor map is visible only if the floor has a floor map configured using Workplace Indoor Mapping and if you have installed the Indoor mapping component. You can perform the following actions on a floor map:

- Switch the locations using floor, building, and campus filters.
- Zoom in and out on the map. You can also double-click to zoom in.
- View the legend associated with each department on the right panel.

Space request states

A space request since its creation undergoes several state changes. Based on the state of the request, you can perform actions and deployment.

A space request has the following states:

- **Draft**: When a space request is created using the Workplace Service Portal, it is initially set to the Draft state for a few seconds and then changes to the Ready state.
- **Ready**: After the request is created and the space plan options are still under generation, the status is set to the Ready.
- **Work in progress**: After the options are generated and available to the requesters for selection, the status is set to Work in progress. The status is set as Work in progress until the requester selects an option.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If the requester selects an option, then the request changes to the next state.
- If the requester selects the None option from the list of options provided, then the request is closed and the state is set to Closed complete.

- **Awaiting approval**: If the requester selects an option and submits the request, one of the following actions is performed:
  - If the requester's profile requires a manager approval, then the request is sent for an approval and the state is set to Awaiting approval.
  - If the requester's profile does not require any approval, then the state is automatically changed to Approved.
- **Closed incomplete**: When the request is sent for approval and if the approver rejects the request, that is, if the approver rejects the selected space plan, then the state changes to Closed incomplete.
- **Approved**: If the approver approves the space request, then the state is changed to Approved. You can only deploy space requests that are in the Approved state. Also, the **Space Deployment plan** and the **User Deployment plan** displays the space selected in the space request if the request is Approved.
- **Deployment in progress**: When you deploy the space plan selected in the space request, the state of the request changes to Deployment in progress. The following actions are performed when a request is in the Deployment in progress state:
  - For every allocation, a workplace case is created and implemented.
  - The deployment process is successful only if all the workplace cases are implemented successfully, that is, if all the cases are closed with the Closed complete state.
  - The deployment process is unsuccessful if any one workplace case is not implemented successfully, that is, if any one case is closed with the Closed incomplete state.
- **Closed complete**: If the deployment is successfully implemented, then the space request is closed and the state is set to Closed complete. If the deployment fails, then the space request is closed and the state is set to Closed incomplete.

Move management key features and actions

As a Move manager, fulfill move requests efficiently by logically grouping them in to move projects using the Workplace Central Move management workspace.

Move Management workspace

The Move management workspace is a one stop workspace where you can perform multiple actions on a move request raised by an employee or generated from a scenario deployment. The workspace enables you to manage your workload by creating move projects and monitor these requests by their expected start and due date.

The workspace has several key features such as move requests-related metrics, visual representation, detailed views, and also the option to create a move project. The Move management displays information in the following categories:

- **Move management**: Displays metrics of your active move projects, move requests, and move tasks. It also provides a visual representation of the planned and unplanned move requests, states of requests and active projects.
- **Create project**: Option to create a move project. For more information, refer to Create a move project from existing move requests.
- **Move management**: Lists the details of the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Details of all the move projects with their planned start and end date, their current state, and the assigned user.
- Details of all the move requests with their current state, the requested move date, the expected start, and the due date.

For detailed information about move projects, its features, and various states, refer to Move project views, actions, and states.

Move request metrics

As a move manager, you can view the metrics associated with the active projects that are assigned to you, the number of move requests and move tasks. You can select each tile to view more details in a list view. In the Move management metrics section, the following metrics are displayed:

- **My active projects**: Number of active projects that you're currently working on.
- **Move requests**: Number of active move requests associated with the active move projects.
- **Move tasks**: Number of active move tasks created to fulfill the active move requests.
- **Planned vs unplanned requests**: Visual representation of planned and unplanned move requests in a Pie chart. Unplanned requests are those requests that don't have an **Expected start** or **Due date** specified.
- **Move requests (pie chart)**: Visual representation of move request states in a Pie chart.
- **My active projects**: Visual representation of each move project and the number of cases associated to each project.

Move project details

Under the Move management details section, you can view the details of all the move projects created in the organization. You can view details of the project such as the name of the project, current state, planned start, and end date and the assigned user. You can select a move project and work on it separately in a different tab.

At a time, the workspace displays up to five move projects. To view all the move projects, select **View all** at the end of the list.

- When you select **View all**, the list is opened in a separate tab where you can view all the move projects created in your organization with their details.
- You can also perform the following actions on the list:
  - **Create**: Create a move project.
  - **Delete**: Delete one or more move projects if they're no longer required.

    Warning:
    Deleting a project will only remove the project and not delete the move requests associated to it. It unlinks the move requests from the deleted move project.

  - **Refresh** the list.
  - **Edit** the column.
  - Add or remove filters.
  - You can select a move project to view the details in a separate tab. On selection, the workplace move project is opened where you can view the project details and also edit any information such as the state if necessary.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Move request details

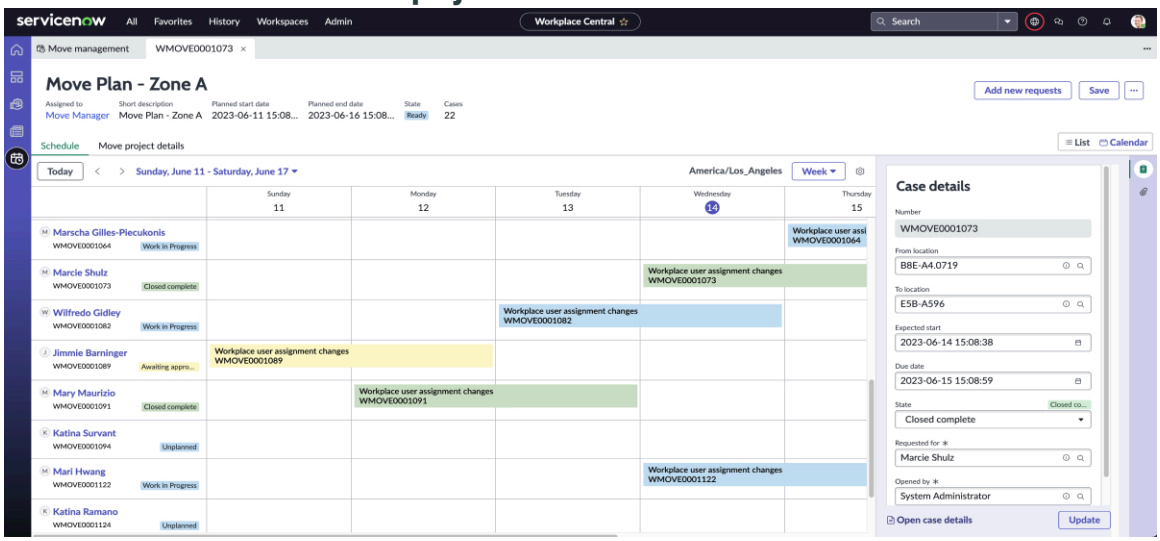
Under the Move management details section, you can view the details of all the move requests created in the organization. You can view the details such as the request number, state, requested for user, request move date, expected start and due date, and the project to which the request is associated. You can select a move request to open it in a different tab.

At a time, the workspace displays up to five move requests. To view all the move requests, select **View all** at the end of the list.

- When you select **View all**, the list is opened in a separate tab where you can view all the move requests created in your organization with their details.
- You can also perform the following actions on the list:
  - **Refresh** the list.
  - **Edit** the column.
  - Add or remove filters.
- You can select a move request to view the details in a separate tab. When selected, the workplace move case record is opened where you can view the request details and also edit any information if necessary.

Move project views, actions, and states

As a move manager, create, track, and work on move projects to fulfill multiple move requests at a time. The move project enables you to work using a schedule view, which is faster than opening individual move requests.



A Move project enables you to logically group move requests based on the specified conditions. You can view all the move requests under a single move project.

Using the Move project's Schedule view, you can:

- Verify the user who raised the move request.
- View the current state of that move request.
- View and edit the expected start and due date by when the request must be fulfilled. The dates are displayed on a calendar.
- Check the number of move requests to be fulfilled every day.
- Schedule a move request to another date by simply dragging the bar of the request.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Move scheduler view of a move project

Move dates

The following process explains how the start and end dates of a move project are determined:

1. An employee or a move manager raises a move request. They specify a date in the **Requested move date** field.
2. When the move requests are collated in the Move Management workspace, they're displayed with the **Requested move date**, **Expected start**, and **Due date**.
3. The planned start and end date of the move project are set based on the minimum **Expected start** date and the maximum **Due date** from the move requests that are associated with the project.

Move project views

When you select a move project to work, it's opened in a separate tab. It's opened in the schedule view by default. You can edit and view the move project details in different views.

Schedule

The default view when you open a move project. The schedule view is an interactive calendar view with displayed according to your local time zone. You can also switch to a list view using the list options tab (List).

The view is categorized based on the following:

- **Move requests**: The first column displays the move request details such as the name of the requester, move request number, and its current state.
- **Calendar**: The main display of the view contains the event details in a calendar view sorted across a set of dates. The minimum planned start date is the first date of the calendar and the maximum planned end date is the end date of the calendar.
  - Each calendar day is displayed with the number of move cases that are expected to be fulfilled.
  - The calendar displays the move request as a bar on the calendar. To schedule the move request on a different day, drag the bar to the required date on the calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The calendar displays the dates based on your current local date. It displays the date and time based on your time zone.
- If a move request doesn't have any **Expected start** or **Due date** specified, then the calendar doesn't display any bar for the request.
- You can switch between a weekly view and a monthly view. By default, the calendar is displayed in a weekly view.
- When you select a move request bar on the calendar, a Case details panel is displayed. You can view case details like the **To location**, **Expected start**, **Due date**, **State**, and **Request for**.

- **List**: You can change your view from a calendar view to list view using the List options tab (

). View all the move requests under the move project as a list.
  - You can view the details of the request like the request number, state, relevant dates, and the move project.
  - You can remove a single or multiple move requests by selecting them from them list.
  - You can also assign one or more move requests to yourself by using the **Edit** option.

Move project details

The Move project details tab contains details such as the name of the project, the move manager who is assigned to the project and the state of the project.

- You can change the state of the project that is assigned to you.
- You can reassign the project to yourself by changing the **Assigned to** field.
- You can track the activities such as state changes and user assignment changes performed on the project in the Activity section.
- You can add work notes in the project using the Compose section. You can enter your names and select **Post Work notes (Private)**.

Attachments

You can view any attachments in the **Attachments** section.

Add move requests

At any time, you can add more move requests to a move project while the project is still in the Work in progress state. Select the **Add new requests** to add move requests. You can add multiple move requests to a project.

Move project states

A move project goes through the following state changes:

Initializing

When the move project is created while deploying a scenario, the state is set to **Initializing**. This state is set when a move project is created and the move requests are still being created under it.

Ready

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When a move project is ready with all the move requests that matched the conditions, the state of the project is set to **Ready**.

Work in progress

When you start working on the project, you can set the state to **Work in progress**.

Closed complete

After you fulfilled all the move requests of the move project, you can change the state to **Closed complete**. You can set it to **Closed complete** only if all the move requests that are assigned to the project are set as **Inactive**.

A project that is in the **Closed complete** state can't be edited. You can only edit the **Assigned to** and the **State** fields.

Closed incomplete

If you want to close a move project for some reasons irrespective of the status if the move requests assigned to it, you can change the state to **Closed incomplete**. Changing the state of the project doesn’t impact the state of the move requests assigned to the project.

A project that is in the **Closed incomplete** state can't be edited. You can only edit the **Assigned to** and the **State** fields.

Cancelled

You can cancel a move project at any time by changing the state to **Cancelled**. Changing the state of the project doesn't impact the state of the move requests assigned to the project.

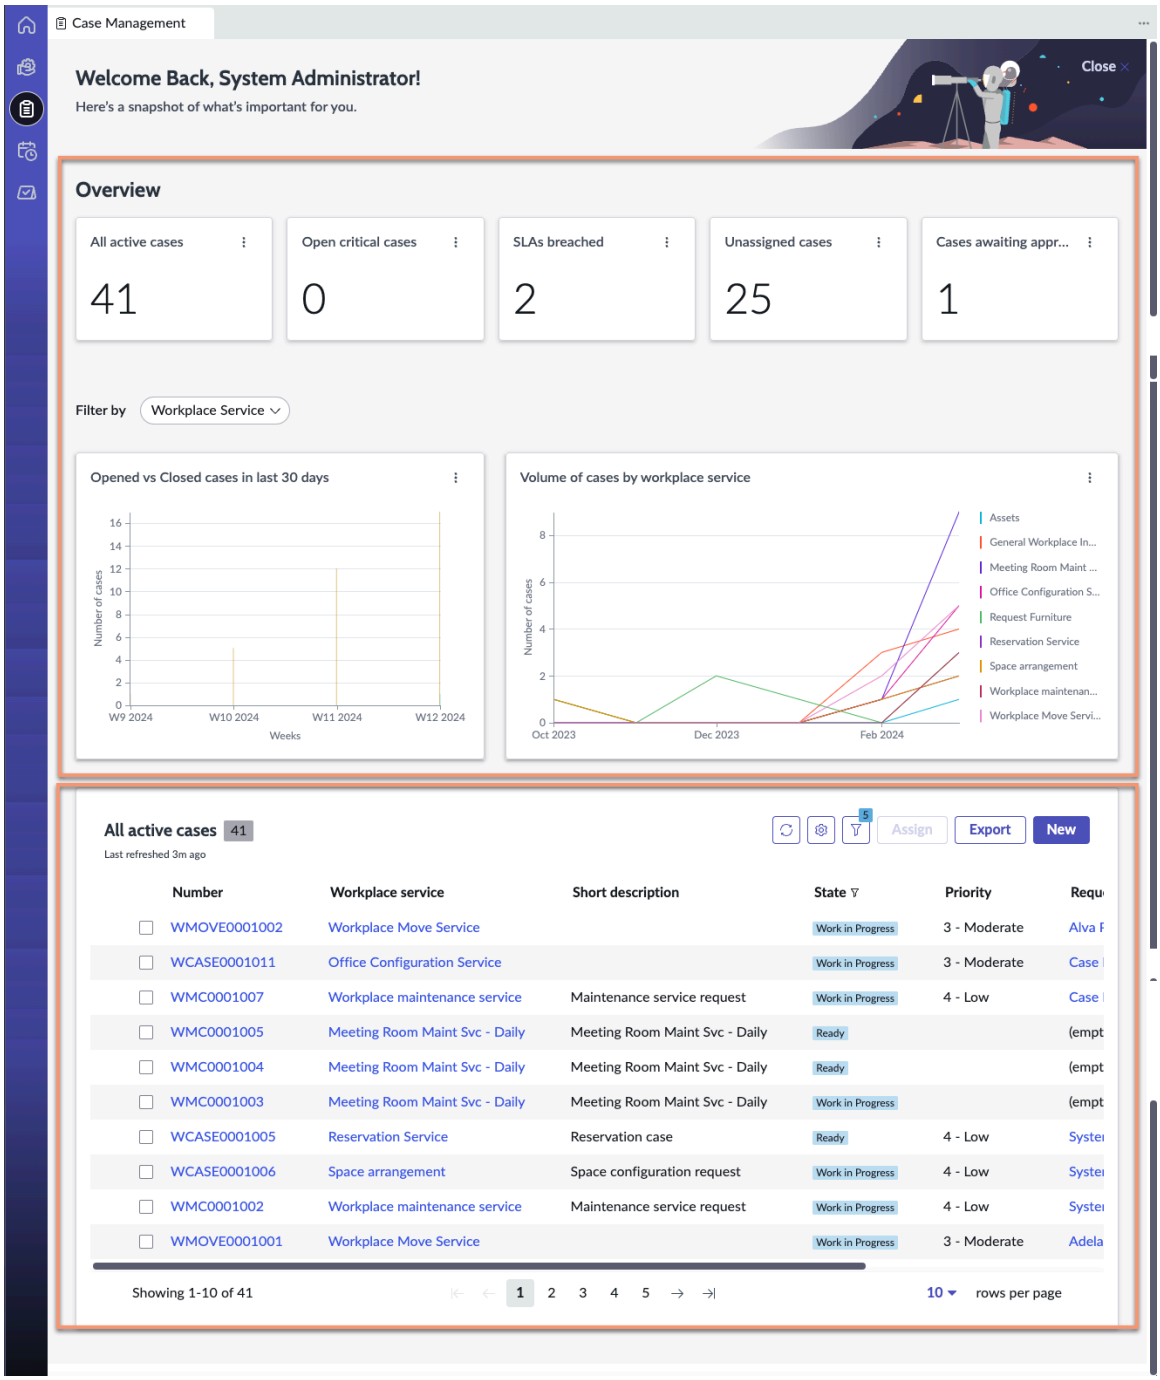
A project that is in the **Cancelled** state can't be edited. You can only edit the **Assigned to** and the **State** fields.

Case Management - Key features, Actions & Case details

The Workplace Central Case management workspace is an all-in-one workspace using which a case manager can manage hundreds of workplace cases created in the organization.

Case management - Key features

As a case manager, monitor the large number of workplace cases incoming daily at any time using the workspace. Check the number of active workplace cases, the cases that have breached SLA and those that are critical. The workspace enables you to focus on priority cases by providing you a categorized display. The workspace enables you to perform the following:



- You can analyze the number of cases opened and closed on a weekly basis. You can know the monthly volume of cases based on the workplace services.
- You can view the case details in an organized display where you can focus on the most important actions and details to help you resolve the case quickly. You can edit a case, update case details, view the details of the employee who has requested the case and also know the location specified in the case on a floor map.
- As an admin or case admin, you can cancel a case if it’s no longer required. Similarly, as a move admin, you can cancel a move case and as a maintenance admin you can cancel a maintenance case.
- In case of a move cases, you can view the 'From location' and 'To location' on the map. You can know the date by when the move must be implemented.
- In case of a maintenance cases, you can view the details related to the asset specified and know the location of the asset specified on the map. You know the details such as the product model and asset-related details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- When there are hundreds of cases like regular workplace cases, move cases and, maintenance cases, you can sort and apply a filter on the cases to work on them based on priority.
- You can export the list of cases if necessary.

The landing page of the workspace is categorized as follows:

- **Overview**: The **Overview** section displays the metrics of the cases. You can view the number of cases under various categories and also view a graph of the volume of cases.
- **All active cases**: The **All active cases** section displays a detailed list view of all the currently active cases including the normal workplace cases, move cases, and maintenance cases.

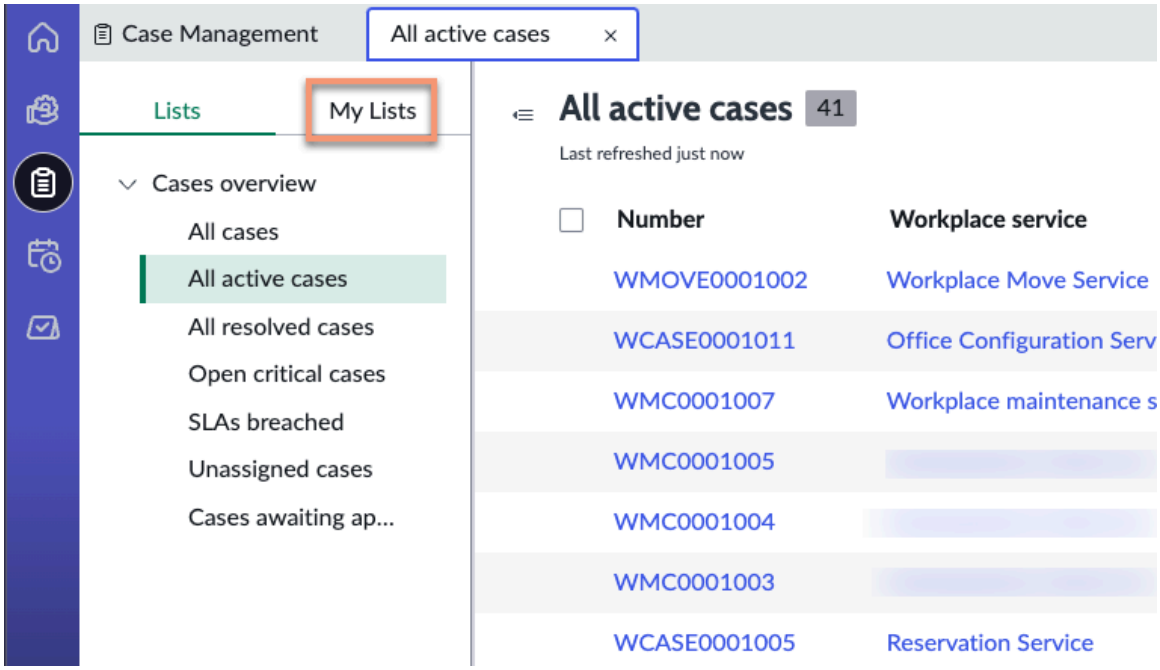
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Case management - Metrics (Overview)

The workspace displays the metrics of all the workplace cases under the **Overview** section. The **Overview** section displays the following information:

Metrics

The metrics section displays the following case numbers in cards:



- **All active cases**: Displays the number of active cases currently requested in the organization. The number includes the cases that are in Draft, and other statuses except Cancelled, Closed incomplete and Closed complete.
- **Open critical cases**: Displays the number of critical cases that are currently open.
- **SLAs breached**: Displays the total number of cases that have breached SLAs that is the cases that have crossed the deadline to be resolved.
- **Unassigned cases**: Displays the total number of unassigned cases.
- **Cases awaiting approval**: Displays the total number of cases that are awaiting to be approved.

You can select the metric card to view a detailed list of the cases. The case numbers are displayed as WCASEXXXX for workplace cases, WMCXXXX for maintenance cases and WMOVEXXXX for move cases same as in the Workplace Case Management application. In the list view, you can perform the following actions:

- Refresh the list and edit the columns of the list.
- Sort the list base don how you want to view them.
- Copy the URL to the clipboard.
- Filter the list based on various conditions and view the filtered conditions in a side panel. You can also get an advanced view of these filters using the **Advanced view** option.
- Export the workplace cases into the desired format using the **Export** option.
- Create a workplace case using the **New** option. For more information, refer to Create a workplace service case. Instead of using the Workplace Service Portal to submit a workplace service request on behalf of an employee for any other reason, you can directly raise a request using the Case management workspace.
- Assign the case to a user using the **Assign** option.

When you open the list view, the left panel displays a list view of the above metric cards. Additionally, the list view also enables you to view **All cases** and **All resolved cases**. You can also switch to the **My Lists** tab in the panel and create a custom list based on what other metrics you want to view using the **Add new list** option. For more information, refer to Create your own list to view case metrics.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Graphs

The workspace also displays a graph with the volume of cases based on workplace services. You can also apply additional filters based on how you want to view them. By default, the graphs are displayed with the filter set as **Workplace Service** only. The page displays the following graphs:

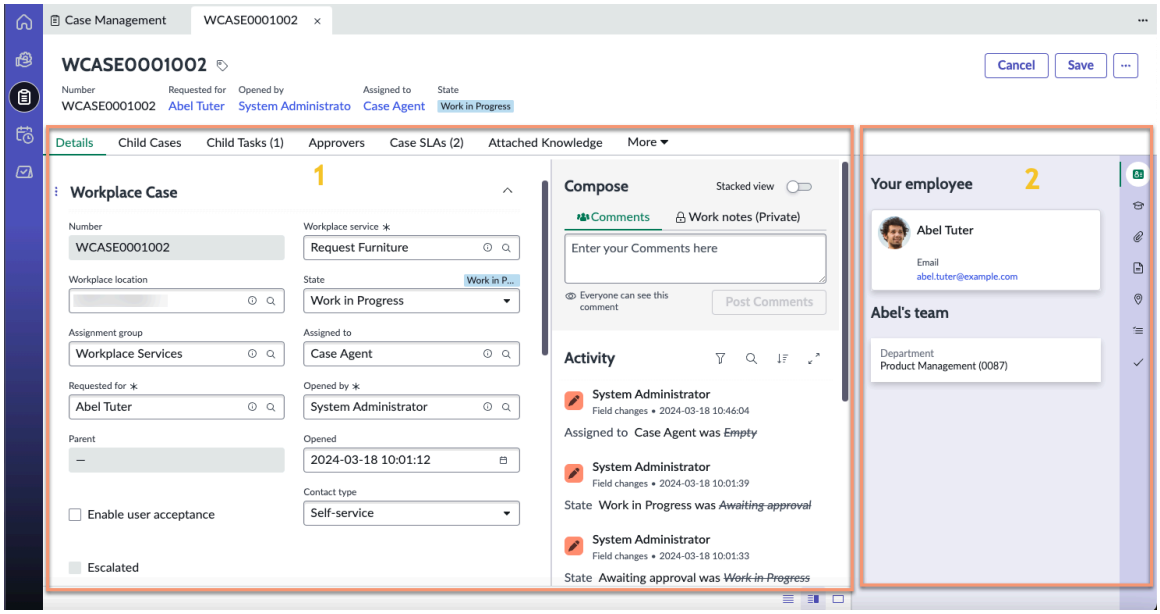
- **Opened Vs Closed cases in last 30 days**: Displays the total number of cases opened and closed in the past 30 days in a week-based view. You can select the graph to view the details of the cases.
- **Volume of cases by workplace service**: Displays the total volume of cases based on workplace services from the past six months (including the current month). You can select the graph to view the cases associated with the selected workplace service.

Case management - List view

You can view a detailed list of all the workplace cases currently active in the application in the **All active cases** section. The list view displays the cases as WCASEXXXX for normal workplace cases, WMCXXXX for maintenance cases and WMOVEXXXX for move cases. You can view the following details in the list view:

- The workplace case number
- The workplace service using which the case was requested
- A short description about the case
- Priority of the case
- Employee for whom the case is requested for
- Date when the case was requested

On the list, you can perform the following actions:



- Refresh the list.
- Edit the columns of the list based on what information that you want to view.
- Apply filter conditions on the list and also change whenever needed.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Assign a single or multiple cases to another user using the **Assign** option.
- Export the cases to the desired format using the **Export** option.
- Create a workplace service case at any time using the **New** option. Instead of using the Workplace Service Portal to submit a workplace service request on behalf of an employee for any other reason, you can directly raise a request using the Case management workspace.

Case details page

When you select a case to view its details, the case details are displayed in a separate tab. The case details page displays the details in an organized format and in various sections.

The case details are categorized in the following views:

(1) Form-based view

When you open a case, the basic details of the case such as the case **Number**, **Requested for**, **Opened by** and current **State** of the case are displayed on the header. The details of the case are displayed in a form-based view same as displayed in the Workplace Case Management application. The form enables you to view the following information related to the case:

Details

By default, the page displays the information under the **Details** tab. The **Details** tab displays the workplace case information entered by the requestor. All the form fields with the details are displayed.

- You can view details such as the **Workplace service** using which the case was requested, the **Workplace location**, **Assignment group**, **Assigned to** user, detailed **Description**, **Items at the location** and more.
- For move cases, you can also view the details such as **From location**, **To location**, **Reason** for move.
- For maintenance cases, you can also view the details such as the **Product model**, **Enterprise asset**.

In the **Details** view, you can add comments in the **Compose** panel and post it on the case. You can also add private work notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The panel also displays all the activities performed on the case in the **Activity** section of the panel.

Child cases

The **Child cases** displays the child cases created with the workplace case. You can view details of the child cases such as the **Number**, **Short description**, **State**, **Assigned to** user, **Workplace task type**, **Workplace location** and more. You can edit the columns, refresh the list and apply filters on the cases.

You can also create a child case if necessary using the **New** option. To create a child case, refer to Create a child case and a child task.

Child tasks

The **Child tasks** displays the child tasks created with the workplace case. You can view details of the child task such as the **Number**, **Short description**, **State**, **Assigned to** user, **Workplace task type**, **Workplace location** and more. You can edit the columns, refresh the list and apply filters on the tasks.

You can also create a child task if necessary using the **New** option. To create a child task, refer to Create a child case and a child task.

Approvers

The **Approvers** displays the approvers of the case.

Case SLAs

The **Case SLA(s)** displays the SLAs associated with the case. You can view the SLA definitions defined for the cases associated with the case. You can also add an SLA using the **New** option.

Attached Knowledge

The **Attached knowledge** displays the attached knowledge articles with the case. You can add a knowledge article using the **New** option.

KB Articles Read by User

Displays the knowledge base articles read by the user associated with the case.

Related cases

The **Related cases** displays the cases that are related with the case. You can also create a case using the **New** option.

Workplace cases

The **Workplace cases** tab appears when you open a maintenance case. You can view the workplace cases associated with the maintenance case. You can create a case using the **New** option.

Requested Service Items

The **Requested Service Items** displays the workplace service items that are requested with the case.

(2) Action panel

The details page displays a side panel on the right side that enables you to perform various actions and also view important details to help you resolve the case. The side panel consists of the following options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **At a glance**: When you open the case, by default, the page displays the **Requested for** employee details if available in the **Employee details** panel. This panel appears when the At a Glance () option is selected. The details include the name of the employee, the email address of the employee using which you can send an email directly to the employee and the contact details. If the employee details are unavailable, then the admin or the case manager details are displayed.
- **Knowledge Articles**: Select the Knowledge Article icon () to view knowledge articles based on the case. You can **Flag** the article, view the article in a separate tab using the **Full view** option and mark the article as useful using the **Helpful** option.
- **Attachment**: Select Attachment icon () to view the attachments in the case. You can also upload attachments if necessary.
- **Template**: Select the Template icon () to view the templates associated with the case. If you selected your own template, you can view them in the **My Template** tab. You can also create a template using the Create template option ().
- **Location**: Select the Location icon () to view the workplace location specified in the case. The **Workplace Location** panel displays the details of the location such as the **Floor**,**Building**, **Campus** and **Region**. The location is also displayed on a floor map. You can drag on the map and also zoom in/out for a better view.
  - For a move case, the **Location** panel displays the details of the **From location** and **To location** under the **Move from** and **Move to** tabs.
  - For a maintenance case, the **Workplace location** panel displays the location of the asset specified in the case. If an asset isn't specified, then the workplace location selected in the case is specified.
- **Fulfilment instructions**: Select the Fulfillment instructions icon () to view the fulfillment instructions related to the case.
- **Checklist**: Select the Checklist icon () to view the checklist of the case. You can mark the checklist if it's done and also add checklist items using the **Edit** option.

You can perform the following actions on a case at any time:

Cancel

Cancel a case at any time if it's no longer required. Cancelling the case will cancel all the child cases and tasks associated with it. The state of the cases and tasks is set as Cancelled.

Save

Save the changes that you made on the case using the **Save** option.

Delete

As an admin, delete a case record completely from the application.

Important:
Only an admin can delete a case. A case admin can delete only a workplace case, a move admin can delete only a move case and a maintenance admin can delete only a maintenance case.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule Plan details form

The details form helps you select the project and schedule for your schedule plan.

Details form

Field	Description
Name	Name of the schedule plan.
Department Cost Center Workplace Entity	Department, Cost Center, or Workplace Entity that the schedule plan is created for. This field name is based on the value of the *sn_wsd_core.ALLOCATION_TYPE* property.
Description	Description for the schedule plan.
Active	Option to activate the schedule plan record. This field can't be edited and is automatically updated based on the schedule plan state. This field is selected by default and is cleared if the schedule plan is cancelled or complete. This field appears only after the schedule plan record is created and is visible while editing the schedule plan.
Assigned to	User that the schedule plan is assigned to. This field is automatically set to the user who creates the schedule plan. This field appears only after the schedule plan record is created and is available while editing the schedule plan.
Domain	Domain that the schedule plan is created for. This field appears only after the schedule plan is created and is available while editing the schedule plan.

Selection template form

Field	Description
Schedule	Schedule that is followed to assign workspaces.
Start date	Start date of the workspace assignments. The start date must be in the future.
End date	End date of the workspace assignments.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can edit a schedule plan only if it is in the Draft state. If the schedule plan is not in the Draft state, you can only change the **Name**, **Assigned to**, and **Description** fields.

Scenario details form

Use the scenario details form to select the scenario owner, location, group by selection, and space selection criteria.

Scenario details form

Field	Description
Scenario name	Name of the scenario
Scenario owner	Scenario owner's name or ID. This is a read-only field and auto-populated. After the scenario is created, the field name changes to **Owned by**. After the scenario is created, you can assign it to another user.
Locations	Locations that are added to the scenario. This field is displayed after a scenario is created. The locations are displayed based on the **Space Selection Criteria** of the scenario.
Group by	Option to select and group a scenario based on the allocation type. After the scenario is created, this field becomes read-only. Allocation types are defined in the *sn_wsd_core.ALLOCATION_TYPE* system property. • Department • Cost center • Neighborhood • Workplace Entity If you select Workplace Entity as the group by option, the bars of the stack plan are displayed based on the lowest node in the hierarchy. For example, if the hierarchy for spaces is `Corporate\Europe\Information Technology\IT Support`, the bars are displayed for `IT Support`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scenario details form (continued)

Field	Description
	Note: • If Neighborhood is selected as the group by option, only assignments that have the Neighborhood assignment type are applicable. For any other group by option, assignments that have the Location assignment type are applicable. • Creating or viewing a scenario based on workplace entities is supported from Workplace Space Management version 1.15.0. Workplace Entity is not supported for scenarios created in earlier versions. For earlier versions, you can view spaces based on their workplace entities for a building. For more information, see Edit or view a building's spaces based on workplace entities.
Space Selection Criteria	Option to apply filter and select locations for a scenario. • Select field: Select campus, building, or floor as required. For example: Building is B1A2. You can select and add multiple buildings using the space selection criteria. • Select operator: Select **And Or** operators as required. • Enter value: Option to provide the value for the selected field. For example, if you select Building, then enter the value as the name of the building (Building A). Location names are displayed based on the filter conditions. Select the refresh icon ( ) to view results matching filter conditions.

Space Deployment Plan

A space deployment plan contains information about how the changes made in the scenario impact the building's spaces.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space Deployment Plan table

Column	Description
Space	Workplace location that is used for the scenario-related change.
Floor	Floor of the workplace location.
Building	Building of the workplace location.
Type of change	Type of change made to the space in the scenario plan. The value in this column can be `Allocation`, `Assignment type`, or `(empty)` based on the changes made to the workplace location. For example, if a space was allocated to IT Support, and the scenario allocates the space to HR and Finance, the Type of change is `Allocation`.
Current value	Current allocation or assignment type value of the workplace location. The value in this column depends on the type of change made to the workplace location. For example, if a space was allocated to IT Support, and the scenario allocates the space to HR and Finance, the current value is `IT Support`.
Scenario value	Allocation or assignment type value of the workplace location in the scenario. The value in this column depends on the type of change made to the workplace location. For example, if a space was allocated to the Workplace Entity IT Support, and the scenario allocates the space to HR and Finance, the scenario value is `Workplace Entities: HR, Finance`.
Updates	Number of updates that are made to the workplace location in the scenario.
Updated	Timestamp of the last change made to the workplace location.
Workplace case	Workplace case record that is created for allocation changes to the workplace location. Workplace cases are created after a scenario is deployed. The value in this column is empty for assignment type changes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Deployment Plan

A user deployment plan contains information about how the changes made in the scenario impact the employees and their workplace locations.

User Deployment Plan table

Column	Description
User	User who is impacted by the scenario-related change.
Operation	Type of operation that is made in the scenario. • Insert: The user is assigned a new space in the scenario • Update: The user's assigned space is changed in the scenario • Delete: The user's assignment is removed in the scenario • Orphan: The user's neighborhood is resized to 0 in the scenario, so the user's assignment to the neighborhood on the corresponding floor has become orphaned.
From workplace location	Current workplace location that is assigned to the user.
Workplace location	Workplace location assigned to the user in the scenario plan.
Parent	Parent of the assigned workplace location. The system displays up to 2 parents based on the location hierarchy.
Workplace case	Workplace case record that is created for assignment changes of the user. Workplace cases are created after a scenario is deployed.

Excel column lengths for move projects

The Excel columns must be within the specified length to create a move project.

Excel column lengths for move projects

Excel Column	Column length
Employee name	151
Employee email	100
Urgency	40
From building	100
From floor	

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Excel column lengths for move projects (continued)

Excel Column	Column length
From space	
To building	
To floor	
To space	
Additional details	4000

Move conflicts for projects created via Excel upload

Review the conflicts and decide whether you want to resolve or ignore them.

If you create a move project from an excel file, the Move information table displays the business and data conflicts. You can review the conflicts to decide whether you want to resolve or ignore them. You can also remove the move record from the table.

Business Conflicts

Conflict	Description
Inactive Destination	The location record of the selected destination is inactive.
Occupied Destination	The selected destination is already occupied by another user.
Allocation Mismatch	The user's allocation doesn't match the allocation of the selected destination. For more information about allocations, see Allocate a cost center, department, or workplace entity.
Flexible Destination	The selected destination is a flexible or shared location, not a fixed assignment. For more information about flexible and permanent spaces, see Configure a workspace or desk as flexible or permanent.
Capacity Exceeded	The selected destination exceeds its capacity when the move is completed. For more information about defining the capacity of a location, see Define the capacity of workplace areas.

Data conflicts

Conflict	Description
Missing required data	The record doesn't contain information for the specified mandatory columns.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Data conflicts (continued)

Conflict	Description
	• Employee name • Employee email • From building • From floor • From space • To building • To floor • To space
Invalid/Non existent Employee	The user name isn't available in the system.
Invalid/Non existent email	The email address isn't available in the system.
Incorrect to building/floor/space	The building, floor, or space that the user is moving to is incorrect or invalid.
Incorrect from building/floor/space	The building, floor, or space that the user is moving from is incorrect or invalid.
Same source and destination	The From and To location of the record is the same.

Workplace Central troubleshooting

Troubleshoot issues that you face in the Workplace Central application.

Condition

After transferring Workplace Central data between ServiceNow ServiceNow instances, some data and links are lost.

Remedy

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. From the Fix Scripts list, select the **Load space details table- current state** script.
3. On the Fix Script details page, select **Run Fix Script**.

Workplace Connectors

Workplace Connectors is a generic framework using which data from the badging or occupancy sensors, air quality, temperature and Wi-Fi sensors can be imported to Workplace Service Delivery applications using spokes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Exploring Workplace Connectors

Workplace Connectors is a framework to integrate different types of badging, occupancy, air quality, temperature and Wi-Fi sensor data. It provides a standardized way of fetching badging, occupancy, air quality, temperature and Wi-Fi data from workplace hardware or sensors in Workplace Service Delivery.

Key features

- Configure multiple hardware or sensor data providers (for example multiple badging vendors, occupancy sensors, air quality and temperature sensors).
- Create extension points to transform data from workplace hardware or sensor to a vendor agnostic format. For more information, see Creating and adding a scripted extension point.
- Provide employee badging data analytics and metrics to optimize workplace space occupancy.
- Space Occupancy metrics dashboard to view analytics based on employee headcount and office space usage.
- Configure reservation automatic check-in based on the Space Occupancy data insights.
- Provide Occupancy sensor data for workplace locations. View and manage your reservations on the location directory based on occupancy and reservation statuses.
- Monitor indoor pollutants including Particulate Matter (PM1 & PM2.5) and air borne chemicals (Volatile Organic Compounds or VOCs), relative humidity levels, temperature, and Carbon dioxide (CO2) levels in a building or workplace.
- Reduced operating costs of workplaces or building maintenance with better air quality and optimum levels of humidity. Reduced particulate matter in the air reduces energy consumption of a building.

Configure Workplace Connectors

Configure Workplace Connectors to complete the installation and setup tasks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Install Workplace Connectors

Install the Workplace Connectors application from the ServiceNow Store.

Before you begin

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Ensure you have the following plugins:

- Workplace Connectors
- Workplace Central
- Workplace Core

Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.

Use the following details when required:

- Name of the application: Workplace Connectors
- Application ID: sn_wsd_wc

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   Search for the application by its name (Workplace Connectors or ID (sn_wsd_wc). If you can't find the application, you may have to request it from the ServiceNow Store.
3. Select **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed. If there are any plugins or applications that must be installed, you must install them before you can install Workplace Space Management.
5. **Optional:** If demo data is available and you want to install it, select **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Select **Install**.

Configure sensor data providers

Configure sensor data providers in Workplace Connectors for retrieving the workplace sensor data from third-party data providers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Note:
If you're using demo data or product data (seed data), the provider name field is pre-filled. In case, if you aren't using the base system product data, you can create a provider data record. The seed data is available as part of the Metrikus Spoke integration.

Role required: admin (sn_wsd_wc.admin)

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Administration** > **Providers**.
2. Select **New**.

   Enter a provider name. For example: Metrikus.
3. Select **Submit**.

Configure data Sources and schedule imports

Set up the data source for the integration framework (for example, badging spoke data) and schedule the import job to retrieve data from the data source periodically.

Before you begin
Role required: sn_wsd_wc.admin

Procedure

1. Navigate to **All** > **System Import Sets** > **Data Sources**.
2. Open the data source form by selecting **Create New**.
3. Import the badging data record of employees to Workplace Connectors by selecting the imported file (for example, the CSV badging file).
4. On the form, fill in the fields.

Data Source form

Field	Description
Name	Name for the data source.
Import set table label	Label for the import set table. For example, Badging Data.
Import set table name	Name of the import set table. For example, badging_data.
Type	Option to select the connection type from the source to the Badging Data table. For example, select File.
File retrieval method	Option to select the appropriate method from the drop-down list to import the file. For example, SFTP, FTP, and so on.
Format	Option to indicate the data format type. For example, CSV.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Save**.
6. Navigate to **All** > **Scheduled Import Sets** > **Scheduled Imports**.
7. Select **Create New**.
8. Configure the scheduled job according to your requirements, including the frequency of execution, and mapping to the data source.
9. On the form, fill in the fields.

Scheduled Data Import form

Field	Description
Name	Name of the installed workplace hardware,sensor data provider, or spoke. For example, occupancy sensor, badging spoke data, and so on.
Data Source	The source data table (Badging Data table) and the target table (Employee Attendance Data table).
Run as	User that executes the scheduled job. For example: **System Administrator**.
Run	Desired import frequency for the scheduled job. For example, **Daily**.
Daily	The time at which the scheduled job should be imported. For example: 10:30:00

10. Select **Execute Now**.

Configure badging data choices

The Badging Data Choices table (sn_wsd_wc_badging_data_choice) contains the badging status details for Swipe-in and Swipe-out event types. You can create multiple badging states and assign the appropriate event type.

Before you begin

Note:
The application comes with pre-filled values for CheckIn_AccessGranted and CheckOut_AccessGranted status and you can't modify or delete these values. However, you can create multiple statuses and set the event type as required.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Badging Choices**.
2. Select **New**.
3. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Badging Data Choices

Field	Description
Status	The badging data status. For example, Access Granted.
Application	Name of the application. Default value: Workplace Connectors.
Value	The minimum or maximum value of the specified badging status. Enter the value within the range 1–99.
Type	Option to select the event types: ○ Swipe-in ○ Swipe-out

Setup Workplace Connectors for badging data

As a Workplace Connectors administrator, configure Workplace Connectors to import data from workplace badging data records. For example, employee attendance data from badging spokes.

The badging vendor Spoke is designed to handle badging data from a specific vendor. It utilizes a badging data table as the source for retrieving the data. It also allows for importing CSV data files through the SFTP method. A scheduled import set is used to transform the file and populate the Badging Data table.

Workplace Connector provides analytics capabilities to analyze employee attendance data. The scheduled job *`Process Provider Data Record`* runs every 5 minutes to fetch data and populate the Employee Attendance table.

Badging data analytics requirement

- Ensure that employees have an employee workplace profile.
- Workplace locations are assigned to employee workplace profile.

Note:
For more information about how to implement the Workplace Connectors framework and badging sensor data, see Workplace Connectors Implementation Guide V1.0 Aug 2023 on the ServiceNow Community.

Create a badging data provider

Configure and add a new provider to fetch the badging data.

Before you begin
Role required: sn_wsd_wc.admin

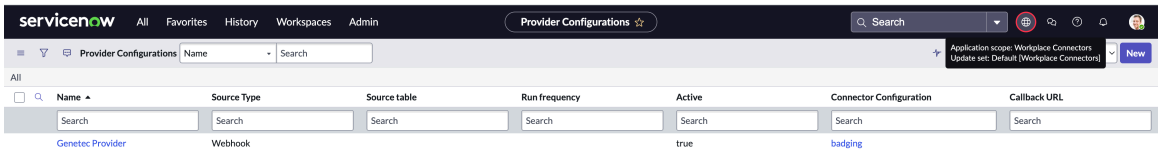
Procedure

1. Navigate to **All** > **Workplace Connectors** > **Administration** > **Providers**.
2. Select **New** and add a new provider to get the badging data from the spoke vendor.

Configure connector configuration for badging data

Configure the connector configuration table [sn_wsd_wc_connector_config] to fetch the badging spoke data records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



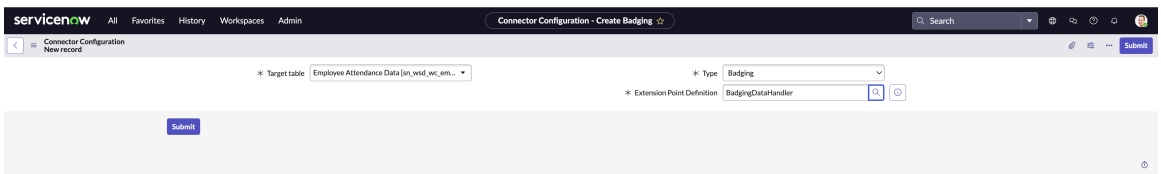
Before you begin

As a Workplace Connectors administrator, add the new connector configuration table to connect with the badging integration framework. This configuration fetches the badging data from the integration framework.

Role required: sn_wsd_wc.admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Connector Configuration**.
2. On the pane, select the Application scope as **Workplace Connectors**.



3. Select **New**.
4. In the **Target table** field, select the target table for the badging spoke data.
   In this case, it's the Employee Attendance Data table.
5. In the **Type** field, select the type of data the connector processes from the drop-down list.

   For example, badging data or occupancy data.

6. In the **Extension Point Definition** field, select the lookup list icon ( ) and select the **BadgingDataHandler** as the extension point for integration.

   Note:
   The extension point is used to process badging data from the provider and convert it to the standard format to be implemented by each provider. It's just an interface. Each provider must have a separate implementation.

   For more information, see Creating and adding a scripted extension point.

7. Select **Submit** to save the connector configuration.

Provider connector configuration

To register details for a new provider, configure a provider to import data from a badging table or use the web hook APIs. The badging data is shared with Workplace Connectors by badging vendors. The badging data is processed and transformed to derive space occupancy metrics in your organization.

Configure badging table data

Register details for a new provider, configure a badging table and import data from the source table to the target table to integrate with the badging system.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

The Badging data table is the source table and the Employee Attendance Data table is the target table. The badging data from the source table is imported from a badging provider (for example, the attendance data from badge readers).

Role required: sn_wsd_wc.admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Provider Connector Configurations**.
2. From the menu, select the application scope icon ( ).
3. Select **Create New**.

   On the form, fill in the fields.

Provider Connector Configuration form

Field	Description
Provider	Name of badging data provider.
Source Type	Source from where the badging data is collected and loaded into the target Employee attendance table. From the drop-down list, select **Table**. **Note:** If you're an existing user and have selected the **Import from table** option in an earlier release to retrieve badging data in your Workplace Connectors instance, the **Source Type** field is defaulted to **Table**. If the **Import from table** option wasn't selected in your Workplace Connectors instance, then the **Source Type** field is defaulted to **External**. The **Import from table** option isn't supported in the November ServiceNow Store release.
Run frequency	Day and time frequency to import data from the workplace system. For example: 5 minutes. The process provider data record picks the records from the badging data table and populates the Employee Attendance table based on the run frequency.
Active	Option to indicate that the provider configuration is active.
Connector Configuration	Select the lookup list icon ( ) and select **Badging**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For more information, see Configure connector configuration for badging data.

4. Select **Submit**.
5. In the Provider Executions table section, filter by **Last query time**.

   The Provider Execution table [sn_wsd_wc_provider_execution] stores all the scheduled job execution timestamps. Every time that the scheduled job **Process Provider data** record runs, this table shows an entry in the Last query time column. The time to import data from the source table (Badging data) to the target table (Employee attendance data) table is updated in the Last query time column.
6. Select **Save**.
7. Navigate to **All** > **System Definition** > **Scheduled jobs**.
8. In the **Scheduled Jobs Name** field, filter data by **Process provider data records** and select it. Process provider data records read data from vendor badging data (source table). After processing the badging data, it loads it into the Employee Attendance Data table (target table).
9. Select and open the Schedule Script Execution for Provider process data records in the edit mode.
10. Review the Process provider data records form.
    If necessary, change or update the **Repeat interval** timings for the scheduled job.
11. Select **Execute Now**.
    The scheduled job takes the source data from the Badging data table to transform the data in the required format, and place it in the target Employee Attendance Data table.

Configure a webhook event

Configure a webhook API event in the Provider configuration table to enable badging vendors to share the badging data collected from badging tables using the webhook event.

Before you begin
Role required: sn_wsd_wc.admin

About this task
The badging data (JSON) is processed using the ServiceNow Rest API explorer. Single or multiple raw badging data records (payload) can be shared and processed using the REST API explorer. The webhook event for badging data is loaded to the Connector Events table in single or multiple JSON records. Multiple records are sent as an array. For more information, see Attendance Analytics.

Procedure
1. Navigate to **All** > **Workplace Connectors** > **Provider Connector Configurations**.
2. Select **Create New**.

   On the form, fill in the fields.

Provider Connector Configuration form

Field	Description
Name	Name for the provider configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Source Type	Source from where the badging data is collected and loaded into the target Employee attendance table. Select **Webhook** to configure the webhook event.
Token Param Name	The **Token Param Name** and **Token value** is a secret key-value pair, which is used to authenticate the API call from the vendor badging system to the Workplace Connectors application. Both systems have the token name value. Using the token name, the application authenticates the API request.
Token value	The token value is the secret key used by the badging vendor while calling the API event to let the server authenticate the API request.
Active	Option to indicate that the provider configuration is Active.
Connector Configuration	Option to search for and select the lookup list icon ( ) to select **Badging**. For more information, see Configure connector configuration for badging data.
Callback URL	Option to select the callback URL icon ( ) to lock or edit the callback URL.

3. Select **Update**.
4. Select the newly created webhook event.

   The Generate Callback URL button is available to generate a callback URL for the REST API request.

5. As a badging vendor, share the badging data in JSON format by navigating to **All** > **System Web Services** > **REST** > **Rest API Explorer**.
6. In the Rest API Explorer page, select the following:
   - Namespace: From the drop-down list, select **sn_wsd_wc**
   - API Name: Workplace Connector Webhook
   - API Version: v1
7. On the Workplace Connector Webhook event page, provide the following values:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- token_name: Token param name used in step 2. The token name value is used by badging vendors to share the badging data (JSON) with Workplace Connectors. The raw data (payload or badging data) is processed and loaded into the Connector Events table.
- ni.nolog.id: Copy the System ID of the webhook created in step 2 and paste it. Select the additional actions menu icon () from the pane.
- token_value: Token value provided in step 2. The token value is the secret key used by the badging vendor while calling the API event to let the server authenticate the API request.

a. In the API Request body, select **Raw** and copy the badging data (payload) in JSON format. This badging data is collected from badging sensors.

b. Select **Send**.
If the Response code is **200 OK** and the response result is **Success**, the badging data is loaded into the Connector Events table.

- The Connector Events table (sn_wsd_wc_connector_events) loads the badging data shared by badging vendors. The State of the badging data is **New** when it's loaded by the REST API Explorer.
- The scheduled Job **Process webhook provider data records** runs every minute to load the badging data from the Connector Events table (data with the State **New**) to the Employee Attendance Data table.

The scheduled job takes the source data from the **Webhook** event to transform the data in the required format and then place it in the target Employee Attendance Data table.

Note:
To access the Workplace Connectors scheduled jobs, navigate to **All** > **System Definition** > **Scheduled jobs**. Search for **Workplace connectors** in the Application column. Two scheduled jobs are available for Workplace Connectors.

- **Process provider data records**: Reads data from vendor badging data (source table). After processing the badging data, the record loads it into the Employee Attendance Data table (target table). For more information, see Configure badging table data.
- **Process webhook provider data records**: Reads data from the Connector Events table. Processes the webhook event data and loads it into the Employee Attendance Data table (target table).
- Data is loaded to the Employee Attendance Data table. The state of the badging data in the Connector Events table changes to **Processed**.
- From the Employee Attendance Data table, the data is loaded into the Attendance Analytics table.

Note:
Badging data records in the Connector Events table with the state of Processed are purged after two days from the date of creation or the current date by the Connector Events table [sn_wsd_wc_connector_events]. Data in the Error state is purged after seven days from the date of creation. Data in the New state isn't purged.

Badging Data

The Badging Data [sn_wsd_wc_badging_data] is the target table that contains the employee badging data and employee access records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

The *Process Provider Data Record* scheduled job runs periodically (every five minutes) and loads the badging data into the Badging Data table.

Note:
The Employee Attendance Data table has been deprecated and a new table Badging Data table has been introduced to support MetricBase integration.

Role required: sn_wsd_wc.admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Badging Readers** > **Badging Data**.
2. On the form, review the field details for badging data.

Badging Data

Field	Description
User	The user workplace profile.
Location	Workplace location that is assigned to the user. The location data shows the complete location hierarchy (Region, site, campus, buildings, floors, and spaces). In the user workplace profile, the **Location** field must be updated with the correct location and the **Workplace entity** column is mapped to the user workplace profile.
Event Data	Time series data. Select this value to visualize the time-series data in different transforms. For more information, see MetricBase transforms.

The Badging Data table data is loaded to the Attendance Analytics table to generate space occupancy metrics in Workplace Central. For more information, see Attendance Analytics.

Attendance Analytics

The Attendance analytics table computes badging data based on the employee head count at the region, site, campus, and building level. It derives occupancy data from the Employee Attendance Data table.

Before you begin

Role required: sn_wsd_wc.admin

Procedure

1. **Optional:** Navigate to **All** > **Employee Attendance Data**.

   (Optional) Verify that the Event Type column is set to **Swipe-in** and the State column is set to **Access Granted**.

2. **Optional:** Navigate to **All** > **Workplace Core** > **Administration** > **Workplace profiles**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Verify that the **Location** field is updated with the correct location. For more information, see Set the primary location of a workplace profile.
- Verify that the **Workplace entity** column is mapped to the user workplace profile. For more information, see Map designated workspaces to user profiles and Configure Workplace entity and entity types.

3. Navigate to **All** and in the application context menu search for **sn_wsd_central_attendance_analytics.list**.

   The Attendance Analytics page is displayed.

   Note:
   Attendance data records with N-2 timestamp are processed by the scheduled job. Here, N is the current date or day before yesterday.

   The Occupancy dashboard metrics can be viewed in Workplace Central. The following roles can access the reports:

   - sn_wsd_central.workplace_analytics_user
   - sn_wsd_wc.manager
   - sn_wsd_wc.user

4. **Optional:** Navigate to **All** > **Workplace Central** > **Occupancy Dashboard**.

   (Optional) In Workplace Central, filter data by **Workplace entity** on the Occupancy dashboard data.

   - The scheduled job **WSDHeadCount Daily Job** in Workplace Central runs daily, and retrieves data from the Employee Attendance table and loads it into the Attendance Analytics table.

   - (Optional) The WSDHeadCount Daily Job scheduled job checks for Workplace entity mapped values. It populates the employee space occupancy data based on the head count at the Region, Site, Campus, and Building level for a workplace entity.

For more information, see View Occupancy Dashboard.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Extension point for badging data

Create a scripted extension point to process badging data from the provider and convert it into a standard format. Confirm that each provider implements this extension.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_wsd_wc.BadgingDataHandler`.
3. On the form banner, select the **here** link to edit the record.
4. Select the **Create Implementation** related link to create your badging data specific extension point script.

Setup Workplace Connectors for occupancy data

Configure workplace connectors to provide workplace occupancy data.

Workplace Occupancy data provides real-time insights on workplace space and resource optimization. It uses the occupancy data from the occupancy connectors or sensors installed at a workplace location. The occupancy data is provided by third-party occupancy sensor data providers. For example, Metrikus Spoke is integrated with Flow Designer Integration Hub. The external Ids from Metrikus Spoke are mapped with Workplace Connectors locations to fetch the occupancy data.

Note:
Customers who aren't using the Metrikus Spoke must build their own integration to get Occupancy data insights for locations provided in Workplace Connectors locations.

Workplace occupancy connector data provides the following benefits;

- Automatically checks in a reservation based on the space occupancy data and reservation status. For example, Occupied, unoccupied, reservation is in progress, reservation is canceled, and so on. For more information, see Configure automatic check-in for reserved spaces.
- Provides near-real time occupancy data on floor maps, Employees can reserve spaces based on Occupancy data and reservation data. For more information, see Manage workplace activities and services with Location directory.

Activate Metrikus Spoke

Activate the Metrikus Spoke plugin from the ServiceNow Store.

Before you begin
Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.
   You can search for the application by its name Metrikus Spoke or ID [sn.wsd.metrikus.spoke]. If you can't find an application, request it from the ServiceNow store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **Install**.
4. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed. If there are any plugins or applications that must be installed, confirm to activate them before you activate the Metrikus Spoke plugin.

5. **Optional:** If demo data is available and you want to activate it, select **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first activate the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Select **Install**.

Integrate Metrikus spoke

Integrate Metrikus Spoke with Flow Designer Integration Hub to retrieve occupancy data for workplace locations.

Metrikus Spoke provides the occupancy sensor data by mapping the workplace locations or spaces provided in Workplace Connectors.

- Activate Metrikus Spoke.
- Integrate Metrikus spoke in Flow Designer Integration Hub.
- Configure sensor data providers in Workplace Connectors

Connector Configurations

Configure the Connector Configurations table for loading the occupancy data in the target Space Occupancy Data table (sn-wsd_wc_space_occupancy). Connector configuration table retrieves the sensor data from different occupancy data providers.

Before you begin

Ensure that you have the sensor data providers to retrieve and fetch data from an occupancy data provider vendor. For more information, see Configure sensor data providers

Note:
If you're using demo data or product data (seed data), some fields are pre-filled. In case, if you aren't using the base system product data, you can configure the connector data. The seed data is available as part of the Metrikus Spoke integration.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Connector Configuration**.
2. Select **New**.
3. Fill in the form fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Connector Configuration

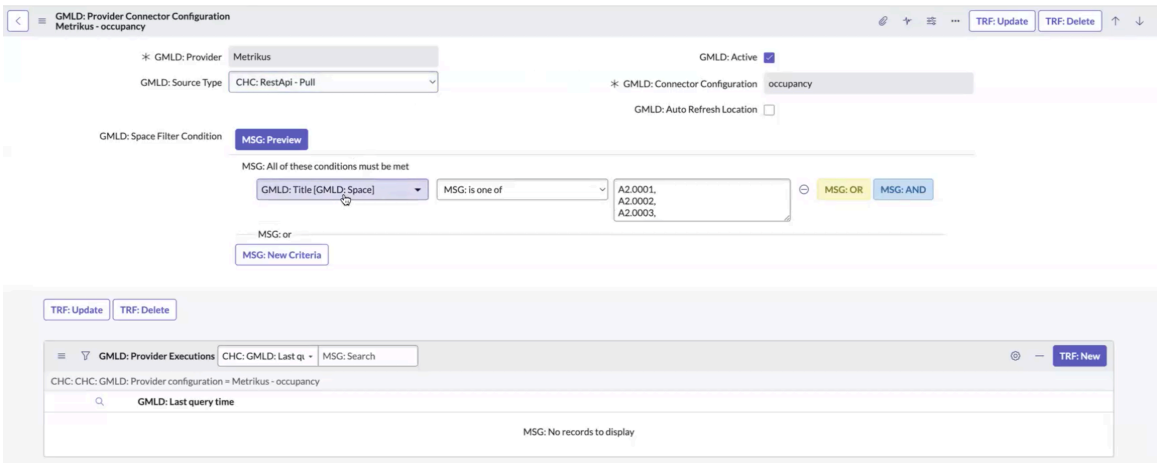
Field	Description
Target Table	Option to indicate the target or destination table to store the occupancy data. Select Space Occupancy Data (sn_wsd_wc_space_occupancy) table. For more information, see Retrieving Space Occupancy Data.
Type	Option to select the type of sensor data. Select **Occupancy**.
Extension Point Definition	Option to search for extension point definition for the Occupancy data. Select the lookup list icon ( ) to search for an extension point definition, select the **OccupancyDataHandler** as the extension point for integration. **Note:** Extension point definition defines how the data is transformed from third-party occupancy sensor data providers. The occupancy data is loaded into the target or final table (Space Occupancy Data table). The external IDs provided by Metrikus or other occupancy data providers are processed and transformed. Each occupancy data provider must have a separate implementation or integration spoke framework.
Stale time (in minutes)	Option to indicate the time (in minutes) beyond which occupancy data is considered stale. Beyond this time, fresh data is fetched from the Occupancy data provider table. When you select a floor on the map and if that space has occupancy data sensor, then, fresh occupancy data is fetched for only those spaces that have stale occupancy data.
Supported Metrics	Option to select target record for supported metrics. For example, Space Occupancy Value.

4. Select **Submit** to save the connector configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Provider Connector Configuration

Register details for the occupancy data provider, the data source type, and connector configuration (sensor) details. Filter spaces using a condition builder, and retrieve occupancy data for a workplace location.



Before you begin

Note:
If you're using demo data or product data (seed data), some fields are pre-filled. In case, if you aren't using the base system product data, you can configure the provider connector data table. The seed data is available as part of the Metrikus Spoke integration.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Administration** > **Provider Connector Configuration**.

2. Select **New**.
On the form, fill in the fields:

Provider Connector Configurations

Field	Description
Provider	Name of the occupancy data provider. This field is auto-filled when the Metrikus Spoke is installed and configured with the Flow Designer Integration Hub.
Connector Configuration	Option to select required sensor items from the Connector Configuration table. For example, Occupancy And Environment.
Source Type	Option to specify the endpoint using which Workplace Connectors retrieves data from Metrikus or other occupancy data spoke providers. Select **RestApi-pull**
Active	Option to select active provider connector configuration data. Only active records from

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	the Provider Connector Configuration table are added or updated in the Provider Space Mapping table. By default, this option is set to **false**. Select the check box to set to **true**.
Auto-refresh locations	Option to auto-refresh locations when spaces are added or when some spaces are removed from a selected location. The scheduled Job **Refresh Provider Space Mapping records** runs daily and reads the **Auto Refresh Location** field in the Provider Connector Configuration table. It reads all records in the Provider Connector Configuration records and updates the Provider Space Mapping table with the latest data. If this option is selected, then spaces that are added to a location are synchronized with the Provider Space Mapping table. If spaces are removed, the occupancy sensor data record is removed from the connector list of the Provider Space Mapping table. For example, if a floor or a space is added to a location, then they're automatically added to a selected location.
Metrics	Option to select the Space Occupancy metric value.

3. Filter spaces using the **Space Filter Condition**.
   Select **Preview** to see the results that your filter condition query returns. Select the link to view the matched space records in Workplace Connectors.

   For example, select **[Space]** from the list. Select the filter condition as **[is]** and manually enter the spaces **[A1.001, A1.002, A1.003]**.

   When a row is created or updated in the space filter conditions, the space records that meet the condition are loaded in the Provider Space Mapping table. A business rule runs in the background to fill the selected space records in the Provider Space Mappings table. For more information, see Configure Provider Space Mapping for occupancy data.

4. Select **Submit**.
   When a records are updated in the Provider Connector Configuration table, the selected spaces or location records are updated in the Provider Space Mapping table. The location records are updated with the location hierarchy (Region, Campus, Building, floor, and space records).

Provider Space Type Mappings

This table maps workplace space types or locations with external ids provided by the space occupancy data providers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

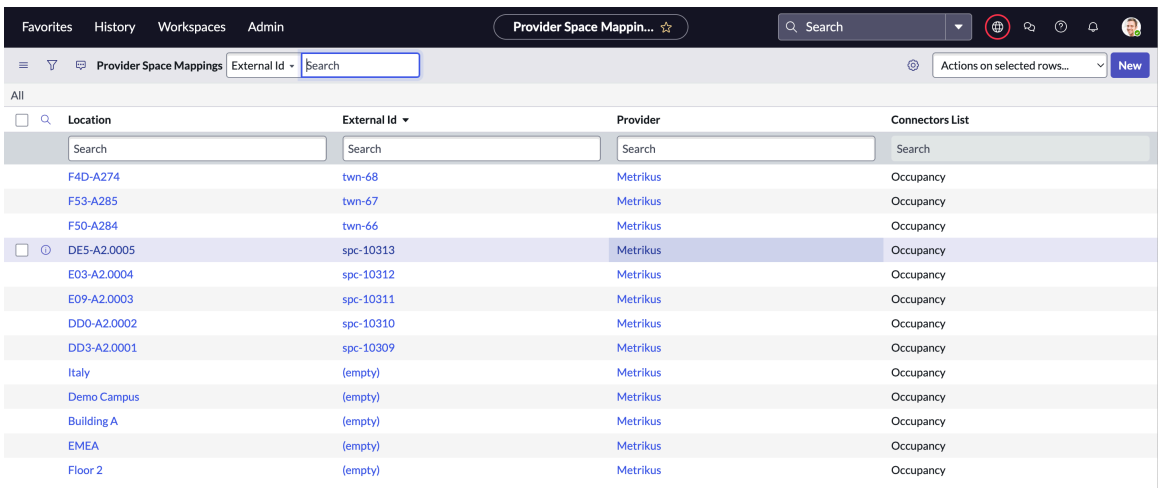
Procedure

1. Navigate to **All** > **Administration** > **Provider Space Type Mappings**.
2. On the form, fill in the fields.

Provider Space Type Mapping

Field	Description
Space Type	Workplace Service Delivery space type. For example, Rooms, Desks, meeting rooms, and so on
Provider Space Type	Space type of the Provider. For example, Desks, Rooms, and so on.
Provider	Provider name. For example: Metrikus.

3. Select **Submit**.



Configure Provider Space Mapping for occupancy data

The Provider Space Mapping data table stores the workplace locations and external Ids provided by the occupancy data provider.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Administration** > **Provider Space Mapping**.
   The location data is mapped with the external Ids of the provider. For example, Metrikus occupancy data using the External Ids. The location hierarchy is shown for the spaces or locations that you selected in the Provider Connector Configuration table.

2. To create a provider space mapping records, select **New**.
   Fill in the form fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Provider Space Mapping

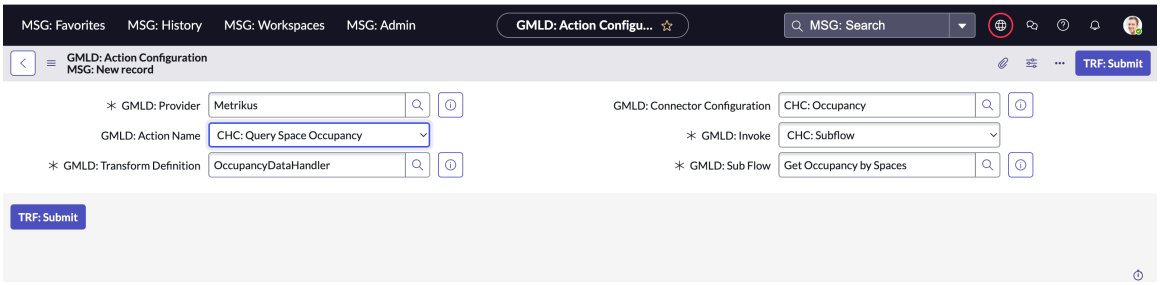
Field	Description
Location	Workplace locations mapped with Occupancy data provider. The location data shows the complete location hierarchy (Region, site, campus, buildings, floors, and spaces)
External id	Option to enter manually the external id provided by the Metrikus spoke or any other occupancy spoke data provider. Select and select a row in the External id column, enter the Metrikus Id or spoke provider Id and select the tick mark icon ( ) to save it. External Ids are corresponding space Ids or location ids on the provider side. External ids from the Provider (for example, Metrikus) are mapped with the space records in Workplace Connectors . The external Id data is transformed to a corresponding Workplace Connectors space Id in the Metrikus Spoke data converter extension point. The data is then mapped to a space id in Workplace Connectors.
Provider	Name of the Provider providing the occupancy data in Workplace Connectors. For example, Metrikus. For more information, see Configure sensor data providers.
Connectors list	Option to show the list of all connectors or sensor data that the provider supports. Select the unlock connector list icon ( ) and select **Occupancy**.

3. Select **Submit**.

Retrieving Action Configurations data

Retrieve Actions from occupancy data provider using Flow Designer Integration Hub. Specify the transform definitions and invoke the Sub flow to retrieve Occupancy data. For example, Metrikus Spoke integration. The occupancy sensor data from the Occupancy data provider is transformed to derive space occupancy data in Workplace Connectors.

Before you begin



Note:
If you're using demo data or product data (seed data), some fields are pre-filled. In case, if you aren't using the base system product data, you can configure the Actions configuration data table. The seed data is available as part of the Metrikus Spoke integration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Administration** > **Action Configurations**.

2. Select **New**.

   Fill in the form fields:

Action Configurations

Field	Description
Provider	Name of the provider. Select **Metrikus**. For more information, see Configure sensor data providers.
Action Name	Actions are reusable operations to automate processes. Actions are defined in the Flow designer Metrikus spoke integration. For more information, seeMetrikus spoke Select **Query Space Occupancy**: The script for action configurations checks the workplace space for occupancy status. For example, **Occupied**, **Unoccupied**, **Invalid**, and so on.
Transform Definition	Transforms the occupancy data output from the providers (For example, Metrikus) in Workplace Connectors Select **Occupancy DataHandler**.
Connector Configuration	Option to select a sensor data from the connector configuration table. For example, Occupancy or Badging. Select **Occupancy**. For more information, see Connector Configurations.
Invoke	Invokes sub flows from the Flow designer for Metrikus spoke integration. For more information, see Metrikus spoke

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select **Subflow**.
Sub flow	Sub flows consist of properties, inputs or outputs, sequence of actions, and data collected or created. Sub flows are repeatable actions. Select **Get All occupancy by Ids**.

3. Select **Submit**.

   The occupancy data from the Actions Configurations table is loaded into the final or target table Retrieving Space Occupancy Data table.

Retrieving Space Occupancy Data

Retrieve the Space Occupancy Data table for loading workplace occupancy data and space occupancy data insights for a selected workplace location.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Occupancy and Environment Sensors** > **Occupancy and Environment Data**.
2. On the form, review the field details for space occupancy data

Space Occupancy Data

Field	Descriptions
Location	Location details of the specific workspace.
Space Occupancy value	Time series data. If the value is 0, it indicates space is unoccupied. If the value is greater than 0, it indicates space is occupied. Select this value to visualize the time-series data in different transforms. For more information, see MetricBase transforms.

The retrieved space occupancy data can be used to verify the following use cases:

- Showing the occupancy data in the Location Directory. For more information, see Manage workplace activities and services with Location directory.
- Automatic reservation check-in. For more information, see Configure automatic check-in for reserved spaces.

Setup Workplace Connectors for environmental data

Configure the workplace environment data sensors to retrieve and fetch air quality and temperature data for a workplace. Define the units to measure air quality and temperature in the Unit of Measure table [sn_wsd_wc_unit_of_measure]. The units are added in the Environmental data table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace Connectors Environmental data table (sn_wsd_wc_space_environment) checks for workplace air quality and temperature. It checks for Carbon dioxide and Ozone levels along with temperature, and relative Humidity value at a workplace location.

Note:
Workplace Connectors customers are expected to build their own environmental data framework for using Environmental sensor data records. For more information about how to implement the Workplace Connectors framework and environmental sensor data, see Workplace Connectors Implementation Guide V1.0 Aug 2024 on the ServiceNow Community.

Set up Connector Configuration for Environmental sensor data

Configure the Connector Configurations table for loading the Environmental data. Connector configuration table retrieves the sensor data from different environmental sensor data providers.

Before you begin

Make sure that vendor or provider is selected for fetching environmental sensor data. For more information, see Configure sensor data providers.

Note:
Seed data or out-of-the box table record is provided with the application and provides pre-filled values. If you want to create a new table record follow these steps.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Connector Configuration**.
2. Select **New**.
3. Fill in the form fields:

Connector Configuration

Field	Description
Target Table	Target or destination table to store the environmental sensor data. Select Environmental data (sn_wsd_wc_space_environment) table. For more information, see Configure environmental sensor data for a workplace location.
Type	Type of sensor data. Select **Environment** from the list.
Extension Point Definition	Search for extension point definition for the environmental data. Search using the lookup list icon ( ) to locate the extension point definition **EnvironmentDataHandler**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Extension point definition defines how the data is transformed from third-party environmental sensor data providers. The data is loaded after transformation into the target environmental data table . The external IDs provided by Metrikus or other data providers are processed and transformed. Environmental data providers or vendors should have a separate implementation framework for these extension points. For example, if you have two different vendors providing environmental data records, you are expected to create two different implementations for the extension point (EnvironmentDataHandler, provided out-of-the-box). Make sure that you are storing the environmental data in the units as per the units configured in the Units of measure table. The units should match. For example, If the environmental data provider or vendor is sharing Temperature sensor data records in Fahrenheit and the temperature unit in the Units of measure table is in Celsius, the Fahrenheit units should be converted to Celsius. The conversion can be done using the Extension point definition. For more information, see Set up the Units of measure data table for environmental sensors.
Stale time (in minutes)	Time (in minutes) beyond which data is considered stale. Beyond this time, fresh data is fetched from the data provider table. For example, 5 minutes. The application will fetch data every 5 minutes.

4. Select **Submit** to save the connector configuration.

Provider Connector Configuration for Environmental sensors

Configure the provider connector configuration for setting up environmental sensors in workplace locations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Make sure that you have configured the sensor data providers for fetching environmental data from enviromental sensor providers or vendors. For more information, see Configure sensor data providers.

Note:
Seed data or out-of-the box table record is provided with the application and provides pre-filled values. If you want to create a new table record follow these steps.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Provider Connector Configuration**.
2. Select **New**.
   On the form, fill in the fields:

Provider Connector Configurations

Field	Description
Provider	Name of the environmental sensor data provider. This field is auto-filled when the provider (for example, Metrikus Spoke).
Source Type	Option to specify the endpoint using which Workplace Connectors retrieves data from Metrikus or other environmental sensor data providers. Following options are available: ○ Table ○ Webhook ○ External ○ RestAPI-Pull For example, select **RestApi-pull**
Active	Option to select active provider connector configuration data. Only active records from the Provider Connector Configuration table are added or updated in the Provider Space Mapping table. By default, this option is set to **false**. Set this value to **true**.
Connector Configuration	Option to select required sensor items from the Connector Configuration table. For example, environmental.
Auto-refresh locations	Option to auto-refresh locations when spaces are added or when some spaces are removed from a selected location. The scheduled Job **Refresh Provider Space Mapping records** runs daily and reads the **Auto Refresh Location** field in the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Provider Connector Configuration table. It reads all records in the Provider Connector Configuration records and updates the Provider Space Mapping table with the latest data. For example, if a new floor or a space is added to a location, then they're automatically added to a selected location.

3. Filter spaces using the **Space Filter Condition**.
   Select **Preview** to see the results that your filter condition query returns. Select the link to view the matched space records in Workplace Connectors.

   For example, select **[Space]** from the list. Select the filter condition as **[is]** and manually enter the spaces **[A1.001, A1.002, A1.003]**.

   When a row is created or updated in the space filter conditions, the space records that meet the condition are loaded in the Provider Space Mapping table. A business rule runs in the background to fill the selected space records in the Provider Space Mappings table. For more information, see Configure Provider Space Mapping for occupancy data.

4. Select **Submit**.
   When a records are updated in the Provider Connector Configuration table, the selected spaces or location records are updated in the Provider Space Mapping table. The location records are updated with the location hierarchy (Region, Campus, Building, floor, and space records).

Set up the Units of measure data table for environmental sensors

Configure the unit of measure for air quality (Carbon dioxide and Ozone metric) and temperature units (degree celsius and micrograms per cubic meter) for a workplace location. The Workplace Connectors environmental sensors checks for the air and temperature quality metrics in a workplace location.

Before you begin

Note:
The units selected in the Units of measure data table should match with the actual data that is shared by your provider or vendor using the Extension Point definition or EnvironmentDataHandler. If the data units don't match, it must be converted and then, stored in the environmental data. For more information, see Provider Connector Configuration for Environmental sensors

Seed data or out-of-the box table record is provided with the application and provides pre-filled values. If you want to create a new table record follow these steps.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Units of Measure**.
2. Select **New**.
3. Fill in the form fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Units of Measure

Field	Description
Table name	The Environmental sensor data table (sn_wsd_wc_space_environment) name.
Value field	Parameters for which you want to have the unit of measure. For example, Carbon dioxide units, Event timestamp, Location, Ozone units, Temperature units, Relative humidity, and so on. If you select Carbon dioxide, then units for carbon dioxide are shown.
Units field	Units for the value selected in the Value field. For example, **Temperature units** in case you have selected Temperature value in the Value field.
Metric	Air quality metrics like Carbon dioxide, Ozone, Particular Matter (PM), and so on. For example, if you select **Temperature** in Value field, metrics related to temperature are displayed.
Units	Units for the metrics selected in the Metrics filed. For example, **Parts per million** in case if you have selected Carbon dioxide in the Metric field.

4. Select **Submit**.

Configure environmental sensor data for a workplace location

Create environmental sensor data for a workplace location in Workplace Connectors. The Environmental Data (sn_wsd_wc_space_environment) table checks for air quality, temperature, and humidity levels at a workplace location.

Before you begin

Note:
Seed data or out-of-the box table record is provided with the application and provides pre-filled values. If you want to create a new table record follow these steps.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Occupancy and Environment Sensors** > **Occupancy and Environment Data**.
2. On the form, review the field information for environmental data.

   For more information about Environmental form fields, see Environmental data form for Workplace Connectors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Extension point for occupancy and environment data

Create a scripted extension point to process occupancy and environment data from the provider and convert it into a standard format. Confirm that each provider implements this extension.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_wsd_wc.OccupancyEnvironmentDataHandler`.
3. On the form banner, select the **here** link to edit the record.
4. Select the **Create Implementation** related link to create your occupancy and environment data specific extension point script.

Set up Workplace Connectors for Wi-Fi data

Configure workplace Wi-Fi data sensors to capture the data from Wi-Fi providers to optimize space usage and efficiently manage workplace operations. You can use Wi-Fi data to determine the occupancy of spaces and attendance of employees in the office.

Wi-Fi data integrate with access points, enabling the tracking of device connectivity and disconnection events. For example, laptops, and mobile devices.

Note:
Workplace Connectors customers are expected to build their own business use cases for using Wi-Fi data records.

Set up Connector Configuration for Wi-Fi data

Configure the Connector Configurations table for loading the Wi-Fi data in the target Wi-Fi Access Data table (sn_wsd_wc_wifi_access_data). The connector configuration table retrieves the data from different Wi-Fi data providers.

Before you begin
Make sure that a table data record exists for the Wi-Fi data.

Note:
The application comes with seed data, or base system table records, that include pre-filled values for Wi-Fi data.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Connector Configuration**.
2. Select **New**.
3. On the form, fill in the fields.

Connector Configurations form

Field	Description
Target Table	Target or destination table to store the Wi-Fi data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select the Wi-Fi Data (sn_wsd_wc_wifi_access_data) table.
Type	Type of sensor data. Select Wi-Fi from the list.
Extension Point Definition	Extension point definition for the Wi-Fi data. Search using the lookup list icon ( ) to locate the extension point definition **WifiAccessLogDataHandler**.
Stale time (in minutes)	Time (in minutes) beyond which data is considered stale. Beyond this time, fresh data is fetched from the data provider table. For example, 5 minutes. The application fetches data every 5 minutes.

4. Select **Submit**.

Provider Connector Configuration for Wi-Fi data

Configure the Provider Connector Configurations table for setting up Wi-Fi data in workplace locations.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Provider Connector Configuration**.
2. Select **New**.
3. On the form, fill in the fields.

Provider Connector Configuration form

Field	Description
Provider	Name of the Wi-Fi data provider (for example, Genetec).
Source Type	Option to specify the endpoint using which Workplace Connectors retrieves data from Genetec or other Wi-Fi data providers. For example, select **RestApi-pull**.
Active	Option to select active provider connector configuration data. Only active records from the Provider Connector Configuration table are added or updated in the Provider Space Mapping table. By default, this value is set to **false**. Set this value to **true**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Connector Configuration	Option to select required sensor items from the Connector Configuration table. For example, Wifi.
Auto-refresh locations	Option to auto-refresh locations when spaces are added or when some spaces are removed from a selected location. The scheduled Job **Refresh Provider Space Mapping records** runs daily and reads the **Auto Refresh Location** field in the Provider Connector Configuration table. It reads all records in the Provider Connector Configuration records and updates the Provider Space Mapping table with the latest data. For example, if a new floor or a space is added to a location, then they're automatically added to a selected location.
Run frequency	Day and time frequency to import data from the workplace system. For example: 5 minutes. The process provider data record picks the records from the wifi data table and populates the Employee Attendance table based on the run frequency.

4. Filter spaces using the **Space Filter Condition**.

   Select **Preview** to see the results that your filter condition query returns. Select the link to view the matched space records in Workplace Connectors.

   For example, select **Space** from the list. Select the filter condition as **[is]** and manually enter the spaces **A1.001, A1.002, A1.003**.

   When a row is created or updated in the space filter conditions, the space records that meet the condition are loaded in the Provider Space Mapping table. A business rule runs in the background to fill the selected space records in the Provider Space Mappings table.

5. Select **Submit**.

   When records are updated in the Provider Connector Configuration table, the selected spaces or location records are updated in the Provider Space Mapping table. The location records are updated with the location hierarchy (Region, Campus, Building, floor, and space records).

Set up a new table to store Wi-Fi data

Retrieve the device name, access point, and connection date and time for a workplace location. The Workplace Connectors Wi-Fi data checks the occupancy of a workplace location.

Before you begin

Role required: admin

Note:
The application comes with seed data, or base system table records, that include pre-filled values for Wi-Fi data retrieved from Wireless Access Point (WAP) devices.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Connectors** > **Wifi Access Point Data** > **Wifi Data**.
2. On the form, review the field details for Wi-fi data.

Wi-fi Data form

Field	Description
Access Point	Wi-Fi access point through which a device connects or disconnects.
Device Name	The name of the device that is connected to Wi-Fi.
Location	Workplace locations that are assigned to the Wi-Fi data provider. The location data shows the complete location hierarchy (Region, site, campus, buildings, floors, and spaces).
Wap Client Name	The name of the client device connecting to a wireless access point.
Event data	Time series data. Select this value to visualize the time-series data in different transforms. For more information, see MetricBase transforms.

Extension point definition for Wi-Fi data

Create a scripted extension point to process Wi-Fi access log data from the provider and convert it into a standard format. Confirm that each provider implements this extension.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_wsd_wc.WifiAccessLogDataHandler`.
3. On the form banner, select the **here** link to edit the record.
4. Select the **Create Implementation** related link to create your Wi-Fi data-specific extension point script.

Execute Temperature Beyond Threshold MetricBase trigger

The Temperature Beyond Threshold MetricBase trigger reads the time-series data that is stored in the Occupancy and Environment Data MetricBase data and trigger Workflow Studio flows. This Metricbase Trigger sends the email notification to the concerned person or group in case temperature for a space goes beyond threshold.

Before you begin

Note:
The application comes with seed data or pre-filled values for Temperature Beyond Threshold trigger. For more information about MetricBase triggers, see Triggering flows using MetricBase data.

Role required: admin

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **MetricBase** > **MetricBase Triggers** > **Trigger Definitions**.
2. Select **Temperature Beyond Threshold**.
3. On the form, review and update the field details:

Badging Data Choices

Field	Description
Aggregator	Option to select the retention policy aggregator. Select from the following options: ○ Max ○ Min ○ Average
Window	The aggregate duration to check temperature for a space. For example, 30 minutes.

4. Select **Update**.

Workplace Connectors references

Learn more about the roles, tables, system properties, and scheduled jobs tables that are installed with Workplace Connectors.

Components installed with Workplace Connectors

Several types of components are installed with the installation of the Workplace Connectors application, including user roles and tables.

Note:
The Application Files table lists the components that are installed with this application.

Roles installed with Workplace Connectors

User roles

Role title [name]	Description	Contains roles
sn_wsd_wc.manager	Provides read access to all data including Occupancy Dashboard and other dashboards.	sn_wsd_wc.user
sn_wsd_wc.admin	Provides admin access to configure and set up the Workplace Connectors application.	sn_wsd_wc.manager
sn_wsd_wc.user	Provides read access to only a few columns and fields. The read access is set up by administrators.	None

Tables installed with Workplace Connectors

Table components

Table	Description
Providers [sn_wsd_wc_provider]	Stores Space Occupancy sensor data provided by occupancy data providers.
Connector Configuration [sn_wsd_wc_connector_config]	Configures a connector to connect with the integration framework. This configuration fetches the data from the integration to workplace applications. This table holds information about the workplace connectors that are defined in the application. For example, Badging data, Occupancy sensors, and so on. This table can also process data for each of the connectors through extension points.
Provider Execution [sn_wsd_wc_provider_execution]	Stores all the scheduled job execution timestamps. Every time the scheduled job **Process Provider data** record runs, this table has an entry for the last query time. The time taken to import data from the source table (Badging data) to the target table (Employee attendance data) table is updated in the **Last query time**. t
Provider connector configuration [sn_wsd_wc_provider_config]	Stores provider data (Occupancy or badging). Imports data from the source table to the target table.
Connector Events [sn_wsd_wc_connector_events]	The Connector Events table (sn_wsd_wc_connector_events) loads the badging data shared by badging vendors. The Scheduled Job **Process webhook provider data records** runs every minute to load the badging data from the Connector Events table (data with State **New**) to the Employee Attendance Data table. For more information, see Configure a webhook event.
Provider Space Type Mapping [sn_wsd_wc_provider_space_type_mapping]	Stores mapping between Workplace Core space or location records and sensor provider data records for occupancy data.
Provider Space Mapping [sn_wsd_wc_provider_space_mapping]	Stores external Ids shared by a sensor provider, for example, Metrikus. The external Ids from sensors providers

Table components (continued)

Table	Description
	are mapped with spaces shared by Workplace Connectors.
Action Configuration [sn_wsd_wc_action_config]	Stores actions, subflows, and transform definitions from Metrikus Spoke.
Badging Data [sn_wsd_wc_badging_data]	Stores employee badging data details.
Badging Data Choices [sn_wsd_wc_badging_data_choice]	Stores the badging status details for Swipe-in and Swipe-out event types.
Occupancy and Environment Data [sn_wsd_wc_occ_env_data]	Stores occupancy and environment data such as carbon dioxide value, ozone, sound, light, temperature, pressure, and humidity levels for a workplace location.
Wi-fi Data [sn_wsd_wc_wifi_data]	Stores Wi-Fi data.
Unit of Measure [sn_wsd_wc_unit_of_measure]	Unit of measure for air, temperature, VOC, and so on. For more information, see Set up the Units of measure data table for environmental sensors.
Space Occupancy Daily Summary Data [sn_wsd_wc_space_occupancy_daily_summary_data]	Stores space occupancy daily summary data.
Wi-Fi Daily Summary Data [sn_wsd_wc_wifi_daily_summary_data]	Stores Wi-Fi daily summary data.
Environmental Daily Summary Data [sn_wsd_wc_environmental_daily_summary_data]	Stores environmental daily summary data.
Environmental Hourly Summary Data [sn_wsd_wc_environmental_hourly_summary_data]	Stores environmental hourly summary data.

Scheduled job

Navigate to **All** > **System Definition** > **Scheduled jobs**. Search for Workplace Connectors in the Application column.

- *`Process webhook provider data records`*: Runs every minute to process webhook event provider data records. For more information, see Configure a webhook event.
- *`Process provider data records`*; Runs every 5 minutes to process provider data records in Workplace Connectors.
- *`Refresh Provider Space Mapping records`*: Runs daily runs daily and executes the space filter condition on the Provider Connector configuration table for the active records where the Auto-refresh field is set to True. For more information, see Provider Connector Configuration.

Environmental data form for Workplace Connectors

Environmental sensor data form has pre-filled environmental data values and units of measure.

Environmental Data

Field	Description	Units
Provider connector configuration	Environmental data provider sensor. For example, **Metrikus-Environment**.	NA.
Carbon dioxide	Carbon dioxide (CO2) concentration level in a workplace location.	Carbon dioxide units.
Ozone	Ozone level unit in a workplace location.	Ozone units.
Temperature	Temperature levels to measure extreme heat or cold in a workplace location.	Temperature units.
Total volatile organic compounds (TVOCs)	Unit for Volatile organic compounds (VOCs) in a location. Helps in analyzing the air quality and identifying the sources of pollution to reduce environmental exposure.	Total volatile organic compounds (TVOCs) units.
Relative humidity	Humidity levels in a workplace location. High humidity promotes growth of mold that can cause respiratory issues.	Relative humidity units.
Particulate matter 2.5	Particulate matter (PM) for fine air particles measuring PM 2.5.microns or less in diameter.	Particulate matter 2.5 units.
Particulate matter 10	Particulate matter (PM) for microscopic matter suspended in air measuring PM 10 mu or micro in diameter.	Particulate matter 10 units.
Event timestamp	Date and time for the event timestamp. Stale time sn_wsd_wc_stale_time checks if the **Event Timestamp** data has the latest timestamp. This property checks for the time beyond which the data is considered stale. Beyond the stale time, latest or current data is fetched from the data provider (for example, Metrikus Spoke).	NA

Environmental Data (continued)

Field	Description	Units
Location	Workplace location where the environmental data sensor is installed.	NA
Query status	**Note:** This is an internal field and is used by the Workplace Connectors framework to optimize the Provider queries. This field should not be manually updated.	NA

Workplace Connectors Data Summarization

Execute the DataSummarization schedule job to retrieve the daily aggregate summary data. When the schedule job runs, it collects the data from target table and MetricBase and stores the daily aggregate data into the respective summary table.

The MetricBase application stores time series data, which is data that is sampled at regular intervals. The administrator specifies a metric to store and how often to collect it by creating a time-series definition in MetricBase. The time-series data is sent from instance to the MetricBase server using the MetricBase API**.** For more information about MetricBase, see Defining and collecting MetricBase data.

Workplace Connectors supports retrieving the time series data from the MetricBase and populates the data into the following summary tables:

Navigate to **All** > **Workplace Connectors** > **Summary** to view the summary tables.

Summary Data

Table Name	Description
Space Occupancy Daily Summary Data	The Space Occupancy Daily Summary Data (sn_wsd_wc_space_occupancy_daily_summary_data) table displays aggregate data retrieved from the Occupancy and Environment Data target table and MetricBase. The *DataSummarization* scheduled job runs daily and loads the daily aggregate summary data into the table. It collects the metric data (Space Occupancy Value) from the target table (Occupancy and Environment data) and MetricBase and populates the data in the summary table (Space Occupancy Daily Summary Data).
Wi-Fi Daily Summary Data	In the Wi-Fi Daily Summary Data table (sn_wsd_wc_wifi_daily_summary_data), you can view aggregate data from Wi-Fi providers to determine employee attendance in the office. The *DataSummarization* scheduled job runs daily and retrieves the summary data based on the Wi-Fi

Summary Data (continued)

Table Name	Description
	time-series data stored in the Wi-Fi Data target table and MetricBase database.
Environmental Daily Summary Data	The Environmental Daily Summary Data table (sn_wsd_wc_environmental_daily_summary_data) displays daily aggregate environment data, including air quality and temperature for a workplace. The *DataSummarization* scheduled job runs daily and loads the daily aggregate summary data into the Environmental Daily Summary Data table. It collects metric data from the target table (Occupancy and Environment data) and MetricBase and populates the summary table data.
Environmental Hourly Summary Data	The Environmental Daily Summary Data table (sn_wsd_wc_environmental_hourly_summary_data) displays hourly aggregate environment data, including air quality and temperature data for a workplace. The *DataSummarization* scheduled job runs daily and loads the hourly aggregate summary data into the Environmental Hourly Summary Data table. It collects metric data from the target table (Occupancy and Environment data) and MetricBase and populates the summary table data.

Archive and purge summary data tables

Use the archive rules and destroy rules to archive and purge the summary data. Archive and purge the Space Occupancy Daily Summary Data (sn_wsd_wc_space_occupancy_daily_summary_data), Environmental Daily Summary Data (sn_wsd_wc_environmental_daily_summary_data), Environmental Hourly Summary Data (sn_wsd_wc_environmental_hourly_summary_data), Wi-Fi Daily Summary Data (sn_wsd_wc_wifi_daily_summary_data) table records.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Archiving** > **Archive Rules**.
2. Select and open the required archive rule.

Archive Rules for Summary Data

Type	Archive Rule	Duration
Space Occupancy Daily Summary Data	Archive Space Occupancy Daily Summary Data Table	Archive space occupancy daily summary data table after 365 days.
Environmental Daily Summary Data	Archive Environmental Daily Summary Data (ar_sn_wsd_wc_environmental_daily_summary_data)	Archive environmental daily summary data table after 365 days.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Type	Archive Rule	Duration
Environmental Hourly Summary Data	Archive Environmental Hourly Summary Data (ar_sn_wsd_wc_environmental_hourly_summary_data)	Archive environmental hourly summary data table after every 15 days.
Wifi Daily Summary Data	Archive Wifi Daily Summary Data Table	Archive Wi-Fi daily summary data table after 365 days.

3. Select the **Active** check box.
4. In the **Conditions** field, change the archive filter conditions as required.
5. From the **Related Links** section, select **Run Archive Now**.
   The data is archived in the Archived table.
6. Navigate to **All** > **System Archiving** > **Archive Destroy Rules**.
7. Select and open the required destroy rule.

Destroy Rules for Summary Data

Type	Destroy Rule	Duration
Space Occupancy Daily Summary Data	Destroy rule for sn_wsd_wc_space_occupancy_daily_summary_data	Purges data from the Archive Space Occupancy Daily Summary Data Table [ar_sn_wsd_wc_space_occupancy_daily_summ after 365 days.
Environmental Daily Summary Data	Destroy rule for sn_wsd_wc_environmental_daily_summary_data	Purges data from the Archive Environmental Daily Summary Data table [ar_sn_wsd_wc_environmental_daily_summary after 365 days.
Environmental Hourly Summary Data	Destroy rule for sn_wsd_wc_environmental_hourly_summary_data	Purges data from the Archive Environmental Hourly Summary Data [ar_sn_wsd_wc_environmental_hourly_summa after every 15 days.
Wifi Daily Summary Data	Destroy rule for sn_wsd_wc_wifi_daily_summary_data	Purges data from the Archive Wi-fi Daily Summary Data table [ar_sn_wsd_wc_wifi_daily_summary_data] after 365 days.

8. In the **Archive Duration** field, set the archive duration before the records are destroyed.
9. Select the **Run Archive Destroy Now** related link to run the job.

Run the DataSummarization on-demand job

Use the ad-hoc OnDemandDataSummarization schedule job to retrieve summary data for the required connector type if the DataSummarization schedule job fails to populate the occupancy, environmental, or Wi-Fi summary reports.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. In the Application Search field, enter Workplace Connectors.
3. From the filtered search results, select and open the OnDemandDataSummarization scheduled job.
4. Select **Execute Now**.

Migrate event data to new summary tables

You can migrate old sensor event data from the existing tables to the new summary data tables using the OnDemandDataMigration scheduled job. This job summarizes daily aggregated data based on specified criteria such as day-wise, location hierarchy-wise, and business entity-wise for occupancy, environment, badging, and Wi-Fi data. The summarized data is stored in the new Space Occupancy Daily Summary Data, Wi-Fi Daily Summary Data, Environmental Daily Summary Data, and Environmental Hourly Summary Data tables.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. In the Application Search field, enter Workplace Connectors.
3. From the filtered search results, select and open the OnDemandDataMigration scheduled job.
4. Select **Execute Now**.

Emergency Response Management

ServiceNow® Emergency Response Management applications help your organization mobilize its business continuity efforts during natural disasters and pandemics like COVID-19. Streamline and automate activities on multiple fronts to keep everyone informed and connected as you anticipate or experience emergencies.

Video describing the Emergency Response Management apps and how they work together

Emergency Response Management applications include:

Emergency Outreach

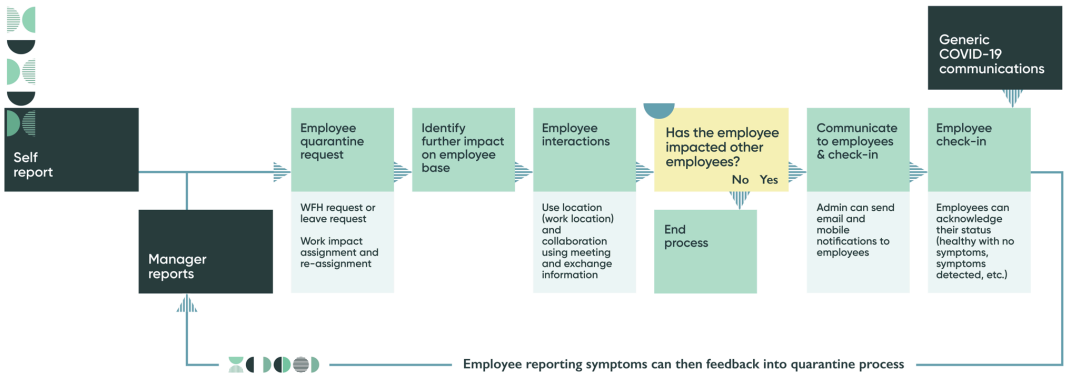
Stay connected with users via email or mobile push notifications. Share important information regarding emergency and safety measures, and ask users to report their status and location. With the installation of Employee Readiness Surveys, you will use Emergency Outreach to send a survey link to help you evaluate whether users are ready to return to the workplace.

Emergency Self Report

Enable your users to report their health status. If users report they are going into quarantine, a workflow helps them safely return to work when ready. Functions such as HR can also be alerted.

Emergency Exposure Management

Identify users who might have been exposed to an infectious disease by analyzing an affected user's meetings, locations, shifts and reservations, and badge scans.



Emergency Response Management for Now Mobile

Enable your users who use the Now Mobile app to respond to Emergency Outreach push messages and also self-report their health status.

Use the Emergency Response Management applications together to automate workflows for sharing information with users, assessing the impact on your team, and responding to the emergency event.

Emergency response app workflow from self-reporting to assessing exposure to requesting user health status check-in

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Emergency Response Management for federal customers

Federal customers using IL4 or FedRAMP environments will see the Emergency Response Management applications ready and available to install on their instances without having to make any special requests. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team.

Agencies remain solely responsible for complying with their legal obligations under applicable laws and regulations, including (but not limited to) data protection and employment laws and regulations, and should modify any language within the templates provided to meet the agency's specific requirements.

Emergency Outreach

Notify users of important information about anticipated or occurring emergency situations. Send an outreach notification via email, mobile push message, or SMS message to request a user response. You can also configure other preferred communication channels.

Emergency Outreach was developed with other ServiceNow® Emergency Response Management apps to monitor and aid in stopping the community spread of infectious diseases, such as COVID-19 among users. With the release of additional ServiceNow® Safe Workplace suite apps, companies are able to manage an emergency situation from the outbreak through the reopening of the workplace.

Some of the Safe Workplace suite apps leverage the Emergency Outreach notification feature to communicate with users.

- Employee Readiness Surveys provides an outreach notification with a link to a survey to assess user readiness to return to the workplace. Customize the notification and the survey to address your company's concerns.
- Employee Health Screening uses outreach notifications to request that users submit their health status verification each day before they can return to the workplace.
- Contact Tracing uses the following outreach notifications:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- An outreach notification to request that users in the workplace provide a list of users that they were in contact with throughout the day. The daily log notification can be scheduled and sent at a certain time every workday or as needed. Keeping daily logs enables contact tracers to follow up with impacted users when a user is affected.
- An outreach notification to request that users review the organization's privacy policy and provide their consent to use their data for contact tracing.
- An outreach notification to potentially exposed contacts in an exposure case to notify them that they might have been potentially exposed to an affected user at the workplace.

Note:
Safe Workplace suite apps require a subscription. Install Emergency Outreach first, then install the Safe Workplace suite app.

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use with other Emergency Response Management applications

The Emergency Response Management applications, built on the ServiceNow AI Platform®, assist organizations in their emergency response efforts. With the Emergency Exposure Management application, you can identify users who might have been exposed to affected users. Through the Emergency Self Report application, users can self-report their health status. Managers can track the health status of their direct reports so that work can be reassigned and response teams can monitor the overall data and trends. Both applications are available in the ServiceNow Store.

Emergency Response Management for federal customers

Federal customers using IL4 or FedRAMP environments will see the Emergency Response Management applications ready and available to install on their instances without having to make any special requests. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Install Emergency Outreach

You can install Emergency Outreach if you have the admin role.

Before you begin

Role required: admin

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team. See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

About this task

After you install Emergency Outreach, no additional administration configuration is required. Optionally, you can configure notifications and response messages.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Emergency Outreach`.
3. Click **install**.

   The Application installation dialog box opens.
4. **Optional:** Load the demo data by selecting the **Load demo data**check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional) For information about how to install or reinstall demo data after the initial installation, see the Work around to install demo data if application is already installed [KB0722909] article in the Now Support Knowledge Base.

5. Click **install**.
6. When the installation is complete, click **Close**.

Result
Emergency Outreach is installed on your instance.

What to do next
Optionally install Employee Readiness Surveys to use with Emergency Outreach. The Employee Readiness Surveys app enables you to evaluate the readiness of your employees to return to the workplace using Emergency Outreach notifications.

Install Employee Readiness Surveys to use with Emergency Outreach

You can install Employee Readiness Surveys if you have the admin role. Installing Employee Readiness Surveys adds notification options to the Emergency Outreach app. A default health readiness survey is provided as an example.

Before you begin
Role required: admin

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

About this task

The Send Outreach form in Emergency Outreach has an option to send a survey instead of a health status request. Users with the sn_imt_checkin.checkin_admin role become owners of the example health readiness survey.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Employee Readiness Surveys`.
3. Select **install**.

   The Application installation dialog box opens.
4. **Optional:** Load the demo data by selecting the **Load demo data**check box.

   (Optional) For information about how to install or reinstall demo data after the initial installation, see the Work around to install demo data if application is already installed [KB0722909] article in the Now Support Knowledge Base.
5. Select **install**.
6. When the installation is complete, select **Close**.

Result

Employee Readiness Surveys is installed on your instance. Use it by navigating to the Emergency Outreach app.

Components installed with Emergency Outreach

Several types of components are installed with Emergency Outreach, including tables and user roles.

> **Note:**
> The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Table	Description
	daily contact logs from the Contact Tracing app.
Survey Instances [sn_imt_m2m_asmt_assessment_instance_checkin]	Associates outreach survey records with survey instances for better reporting.
Response Criteria [sn_imt_checkin_response_criteria]	Set of questions that determine whether the response script runs when an employee completes a survey based on the employee's answers to those questions.
Response Script [sn_imt_checkin_response_script]	List of all response scripts. Response scripts are used to automatically take actions based on employee responses to survey questions.
View Outreach Instance Logs [sn_imt_checkin_employee_check_in_log]	List of outreach surveys with information about their creation and the status of their survey instances.

Configure Emergency Outreach notifications

A user with the admin role can add email notifications to use for any of the apps that communicate using Emergency Outreach. Each app provides a default email notification as an example to help with planning a new notification.

Before you begin

Role required: admin and sn_imt_checkin.checkin_admin

About this task

The Emergency Outreach notification feature supports the following applications and base system outreach notifications.

- Emergency Outreach: Request employee response indicating health status.
- Employee Readiness Surveys: Send a survey link with questions to determine employee readiness to return to the workplace.
- Employee Health Screening: Request that employees acknowledge their health status verification each day before they can return to the workplace.
- Contact Tracing:
  - Schedule an email notification to request that employees in the workplace list other employees they were in contact with.
  - Schedule an email notification to request that employees review the organization's privacy policy and provide their consent to use their data for contact tracing.
  - Send an email notification to potentially exposed contacts in an exposure case to notify them that they might have been potentially exposed to an affected employee at the workplace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Add an email notification to customize the send conditions and notification content for an outreach.
2. Update the email notification used in the outreach notification.
3. Add a Safe Workplace audience for the employees to whom you want to send the notification.
4. Configure response options if an outreach requires them.
5. **Optional:** Create additional notification channels, such as Slack or Microsoft Teams through which you want to send notifications.
6. **Optional:** Add a survey such as the Employee Readiness survey to be sent with the outreach notification.

   (Optional) For information about selecting the survey, see .

   For information about creating a survey, see Survey administration and Survey designer.
7. Configure and send outreach email, mobile, and SMS notifications to your employees.

Note:
SMS notifications are available only for outreach acknowledgments and daily health verifications.

Add email notifications for use with Emergency Outreach

Add an email notification to customize the send conditions and notification for your employees and use it in place of the default notification for an Emergency Outreach notification.

Before you begin

Review the default email notification to familiarize yourself with the way that the notification is laid out and scripted. Use the default notification details to prepare the information to use for the notification that you're adding.

Default email notifications by application

Application	Notification name
Emergency Outreach	Employee Check-ins
Employee Readiness Surveys	Outreach Surveys
Employee Health Screening	Daily Health Verification
Contact Tracing	• Employee Daily Log Alert • User Privacy Consent • Notify Exposed Contact

Role required: admin

Procedure

1. Navigate to **All** > **System Notifications** > **Email** > **Notifications**.
2. Click **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notification form

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Outreach notification	Required fields for configuring the email notification
	[User.Active][is][true] and **[Emergency Outreach.Email notification][is][true]**
Notify Exposed Contact	**Table** field: Exposure Notice [sn_imt_tracing_exposure_notice] **When to send** tab: ○ **Send when**: Select **Record inserted or update** ○ **Conditions**: **[User.Active][is][true]** and **[Notification count][changes]**
Daily Health Verification Outreach	**Table** field: Health Verification Acknowledgements [sn_imt_checkin_health_verification_acknowledgement] **When to send** tab: ○ **Send when**: Select **Record inserted or update** ○ **Conditions**: **[User.Active][is][true]** and **[Acknowledgment Status][is not][Acknowledged]**

4. In the **Advanced condition** field, enter the code to associate the email notification with the corresponding outreach notification.
   - For the Outreach Surveys notification:

```
var checkInSysId = event.getValue('parm1');
var checkInGr = new
 GlideRecord('sn_imt_checkin_employee_check_in');
checkInGr.get(checkInSysId);
var thisNotificationSysId = '<your-sys_id>';
answer = checkInGr.getValue('notification') ===
 thisNotificationSysId && checkInGr.email_notification;
```

   - For other outreach notifications:

```
var thisNotificationSysId = '<your-sys_id>'
answer = current.employee_check_in.notification =
 thisNotificationSysId;
```

   Replace the <your-sys_id> variable with the sys_id of the notification that you're adding. To do so, right-click in the header, select the **Copy sys_id** option, and paste the sys_id into the code line.

5. In the **Who will receive** tab, select the audience to whom the notification will be sent.
   You can also select the target audience while configuring or sending the associated outreach notification. For more information, see Send notifications for an emergency.
6. In the **What it will contain** tab, enter the subject and text of the email message.
   Clear the email template if it does not apply to your outreach notification or you have defined the email content in the corresponding outreach notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Click **Submit**.
8. In the Notifications list, open the notification that you added and click **Preview Notification**.
9. Review the notification and modify as necessary.
10. Click **Update**.

Modify notifications used with Emergency Outreach

The administrator can modify email notifications used with Emergency Outreach.

Before you begin

Review the details about planning for, creating, and modifying system notifications by starting with Create an email notification.

Role required: admin

Procedure

1. Navigate to **All** > **Emergency Outreach** > **Send Outreach**, and then select the Content configuration tab.
2. In the **Response Mode** field, select the mode of the outreach notification to change.
   The default notification for that response mode appears. If it does not appear, search for the notification by name and select it.

Default email notifications by application

Application	Notification name
Emergency Outreach	Employee Check-ins
Employee Readiness Surveys	Outreach Surveys
Employee Health Screening	Daily Health Verification
Contact Tracing	○ Employee Daily Log Alert ○ User Privacy Consent ○ Notify Exposed Contact

3. Click the preview icon ( ) beside the **Notification** field, and then click **Open record**.
4. In the notification record, modify the details of the notification.
   Follow the requirements for the particular notification for the application. To review the requirements for each application, see Add email notifications for use with Emergency Outreach.
5. Click **Preview Notification** and verify your changes.
   Ensure that the information required in the notification is correct and the links are valid.
6. When you're finished, click **Update**.

Result

The modified notification is used for future outreach notifications for the corresponding application.

Add a Safe Workplace audience for Emergency Outreach

Add a collection of users for Emergency Outreach notifications. Target specific users based on criteria such as location, department, or group.

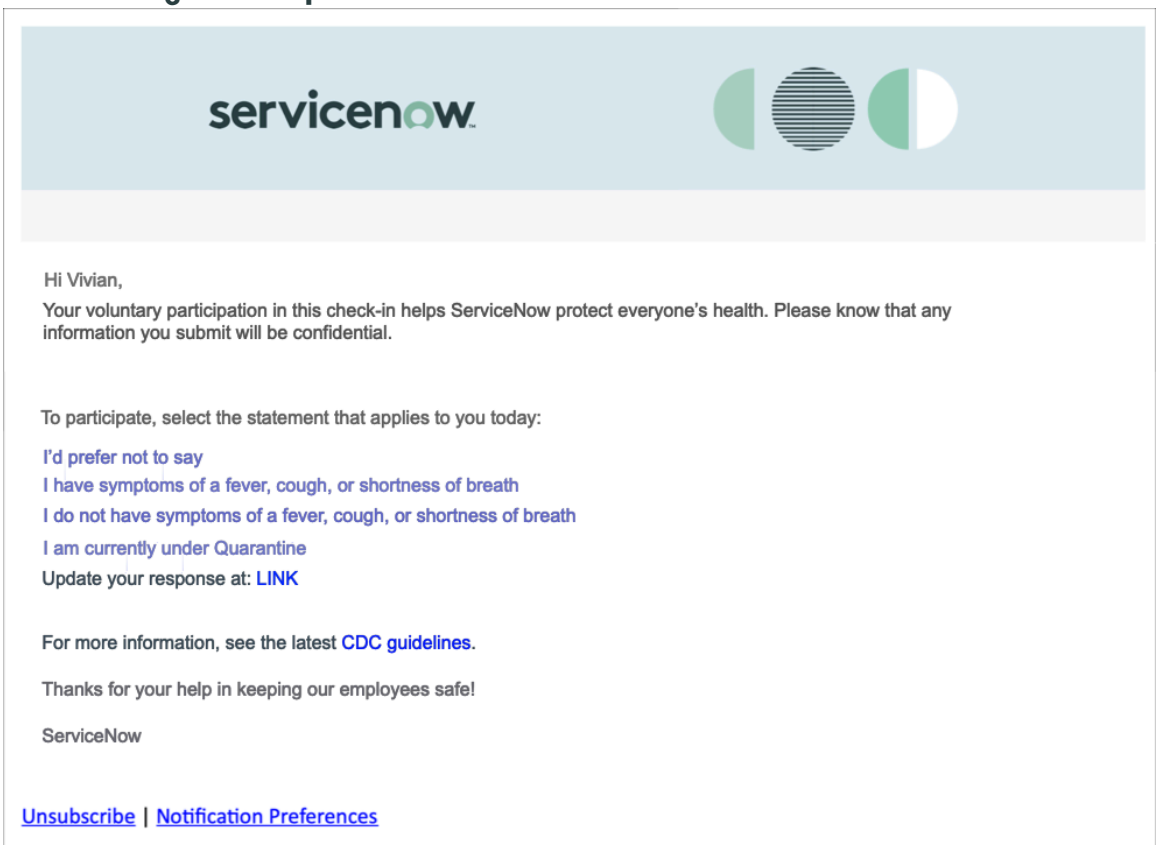
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
The Safe Workplace audience feature is available if you have purchased Employee Readiness Core.

Role required: sn_imt_checkin.checkin_admin or admin

Procedure
1. Navigate to **All** > **Emergency Outreach** > **Safe Workplace Audience** and click **New**.
2. In the **Name** field, enter a descriptive name for the audience.

   Example
   For example, `Building C Network Group` or `Facilities employees reporting to Bob`.
3. Indicate the users who should receive notifications.
4. Select **Submit**.

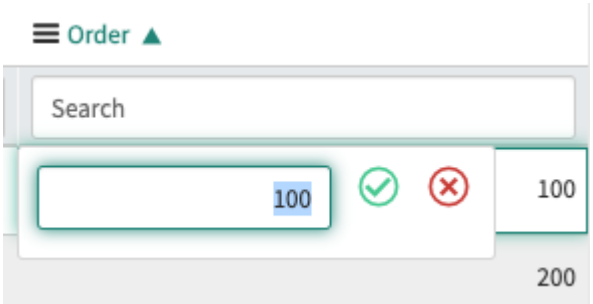


Configure Emergency Outreach response options

Configure the response options that employees choose from to respond to an Emergency Outreach health status request. You can modify the base system responses, add new responses, and deactivate responses you no longer use.

Before you begin
Role required: sn_imt_checkin.checkin_admin or admin

About this task
Response options appear in the Emergency Outreach email notification that employees receive.



Email message with responses

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Emergency Outreach** > **Response Options**.
2. **Optional:** Change the text of a response option.
   a. Open the response option.
   b. Edit the text in the **Response text** field.
   c. Click **Update**.
3. **Optional:** Change the order in which response options appear.
   The easiest way to change the order is to use the list edit feature in the list of response options. You can also open each option to update the order number. Responses appear in numerical order.
   a. In the **Order** list, double-click the order value to update.

   b. Enter the number and click the green check mark icon.
   c. Verify that the responses appear in the appropriate order by clicking the **Order** column header until it is sorted in descending order.
4. **Optional:** Add a response option.
   a. In the Response Options list, click **New.**
   b. Fill in the fields.

Form fields

Field	Description
Response text	The text the user can select as a response.
Order	The number that specifies the position of this response in the list. To put the new response: ▪ First, give it the lowest number. ▪ In the middle, give it a number between the numbers of the responses above and below. ▪ At the end, give it the latest number.
Response value	Read-only, unique value based on the response text.
Active	Option for ensuring that this response option appears in the notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
SMS Option	The number a user selects to reply to an SMS notification with this response. Every SMS option must have a unique number. **Note:** Assign a number if your company will use this response in SMS notifications.
Response mode	The mode of the outreach notification, such as Outreach Acknowledgements.

c. Click **Submit**.

5. **Optional:** Deactivate a response option by clearing the **Active** check box and clicking **Update**.

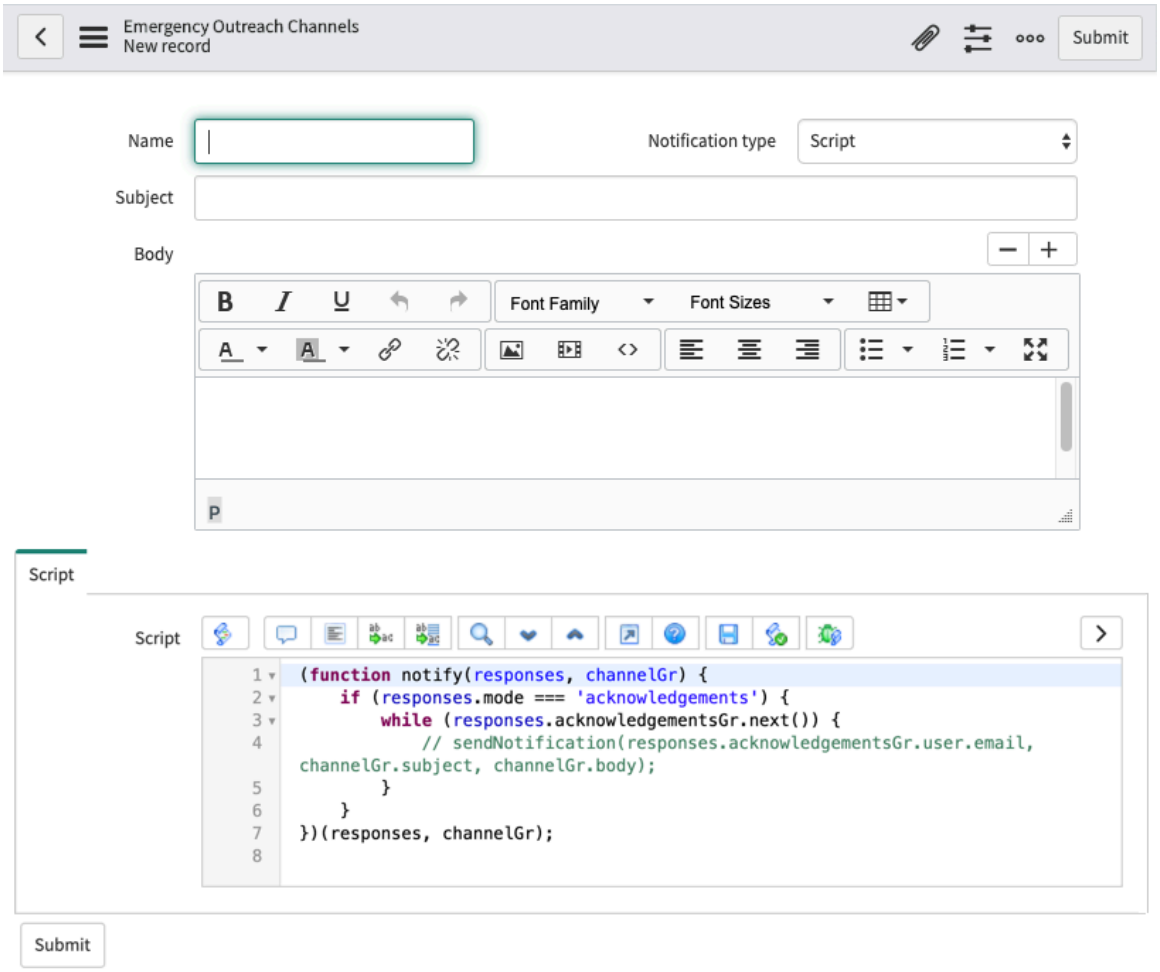
Create an Emergency Outreach notification channel

Create a notification channel to send health status requests using your company's preferred communication method, such as the Slack or Microsoft Teams collaboration platforms. Create the notification channel using a script or a subflow.

Before you begin

Role required: sn_imt_checkin.checkin_admin or admin

About this task



After you create a notification channel, you can select the channel when sending a notification. The channel uses the specified subject and body, and sends notifications to the users that you select when you send the health status request.
For example, your company's IT network group has a Slack channel that they monitor more closely than email. Create a Slack notification channel. To communicate with IT network group members, select the group as the target audience and select the Slack notification channel.

If the **Email notification** and **Now Mobile Push notification** check boxes are selected, all three notifications are sent. To use only the Slack notification channel, clear these two check boxes.

Procedure

1. Navigate to **All** > **Emergency Outreach** > **Channels**.
2. Click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Enter the name of your notification channel.
   Use a short name that indicates the communication method to make it easy for the requester to pick the correct channel.
4. In the **Subject** field, enter the subject of your notification channel.
5. In the **Body** field, enter the body message.
6. Create a script notification channel.

   a. In the **Notification type** field, leave the default notification type of **Script**.

   b. In the **Script** field, replace the code in the comment with the script to connect to your channel.

   Example

```
{
            //
 sendNotification(responses.acknowledgementsGr.user.email,
channelGr.subject, channelGr.body);
        }
```

   For information about JavaScript APIs for GlideRecord, see GlideRecord - Scoped.

   c. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

The following example includes code to count the number of acknowledgements and survey instances generated when the notification is sent. It displays the number of acknowledgements and survey instances that succeeded. Use this information to review and handle errors that appear in the Delivery Log related list in the Outreach record.

```
(function notify(responses, channelGr) {
    var record = responses.mode === 'acknowledgements'
        ? responses.acknowledgementsGr
        : responses.surveyInstancesGr;
    var totalCount = record.getRowCount();
    var numSent = 0;
    while (record.next()) {
        try {
            // sendNotification(record.user.email,
 channelGr.subject, channelGr.body)
            numSent += 1;
        } catch (err) {
            gs.error('Error occurred: ' + err.message);
        }
    }
    return { total_count: totalCount, sent_count: numSent };
})(responses, channelGr);
```

7. Create a subflow notification channel.

   a. Create a subflow to use in the outreach notification.
   For information about creating, publishing, and testing subflows, see Subflows.

   Use the following inputs in the subflow that you create:

   - *mode* (string)
   - *akcnowledgements* (Records of sn_imt_checkin_check_in_acknowledgement)

     If the mode is *acknowledgements*, then acknowledgements are set to a valid GlideRecord and *survey_instances* is `null`.

   - *survey_instances* (Records of asmt_assessment_instance)

     If the mode is *survey_instances*, then survey_instances is set to a valid GlideRecord and *acknowledgements* is `null`.

   - *channel* (Reference of sn_imt_checkin_channels)

   The following outputs are optional:

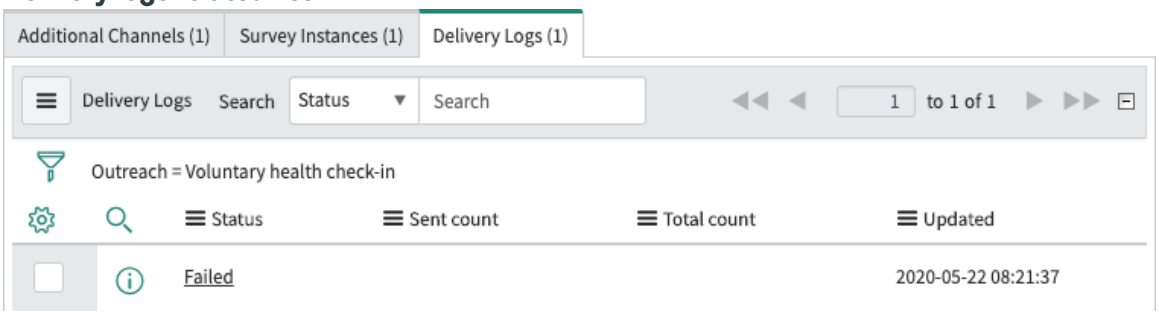
   - *total_count* (integer)
   - *sent_count* (integer)

   To review these outputs, include the number of total acknowledgements or surveys versus the successful acknowledgements or surveys.

   b. Select the **Subflow** notification type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Script section changes to Flow, and the **Subflow** reference field appears.



c. Select the subflow that you created.

8. Click **Submit**.

Trouble?

When an outreach is sent using a custom notification channel, a Delivery Logs related list appears in the Outreach message.

Delivery logs related list

1. Test the notification channel for an outreach message, and open the failed record to review the error message.
2. Fix errors that caused the notification to fail.
3. Continue testing the notification channel until it no longer fails.

Example: Slack channel script

Note:
The following script is for reference only. Refer to it when you develop a notification channel script for your environment.

```
(function notify(responses, channelGr) {
    var createClient = function () {
        var client = new sn_ws.RESTMessageV2();
        client.setRequestHeader('Authorization', 'Bearer
 xoxb-222222222222-1111111111111-00000000000000000000000');
        client.setRequestHeader("Accept", "application/json");
        client.setRequestHeader('Content-type',
 'application/json');
        return client;
    };

    var getEmailToSlackIdMap = function (users) {
        var emailToSlackIdMap = {};
        for (var i = 0; i < users.length; i++) {
            var email = users[i].profile.email;
            if (email) {
                emailToSlackIdMap[email] = users[i].id;
            }
        }
        return emailToSlackIdMap;
    };
```

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
    var runSlackCommand = function (method, params) {
        var client = createClient();
        client.setHttpMethod('post');
        client.setEndpoint('https://slack.com/api/' + method);
        client.setRequestBody(JSON.stringify(params));
        var response = client.execute();
        if (response.getStatusCode() < 200 ||
response.getStatusCode() > 299) {
            throw new Error('Failure running ' + method + ':\n'
+ response.getBody());
        }

        var body = JSON.parse(response.getBody());
        if (!body.ok) {
            throw new Error(body.error);
        }

        return body;
    };

    var sendMessage = function (userId, message) {
        var openConversationResponse =
runSlackCommand('conversations.open', { users: userId });
        var channel = openConversationResponse.channel.id;
        runSlackCommand('chat.postMessage', { channel: channel,
text: message });
    };

    var users = runSlackCommand('users.list').members;
    var emailToSlackIdMap = getEmailToSlackIdMap(users);
    var body = channelGr.getValue('body') || '<p></p>';
    var record = responses.mode === 'acknowledgements' ?
responses.acknowledgementsGr : responses.surveyInstancesGr;
    var numSent = 0;

    while (record.next()) {
        var email = record.user.email + '';

        var link = responses.mode === 'acknowledgements'
            ? gs.getProperty('glide.servlet.uri') +
record.getLink(true)
            : gs.getProperty('glide.servlet.uri') +
'sp?id=take_survey&instance_id=' + record.getUniqueValue();

        var message = body + '\n' + link;

        var slackId = emailToSlackIdMap[email];
        if (slackId) {
            sendMessage(slackId, message);
            numSent += 1;
        }
    }

    return { sent_count: numSent };
})(responses, channelGr);
```

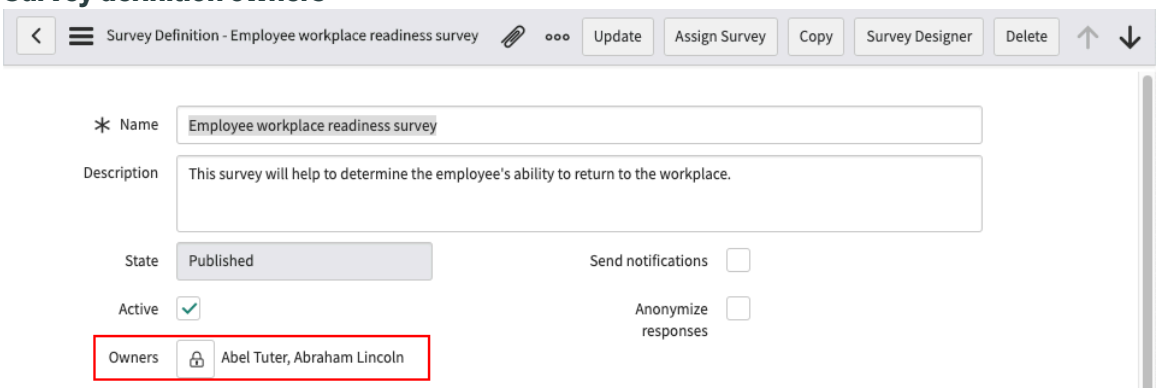
Modify or add Employee Readiness Surveys

Review the Employee workplace readiness survey that is installed with the Employee Readiness Surveys app. Modify the survey, or create one or more surveys to use based on the readiness concerns that you want to address and any legal obligations under applicable law, including data protection laws.

Before you begin

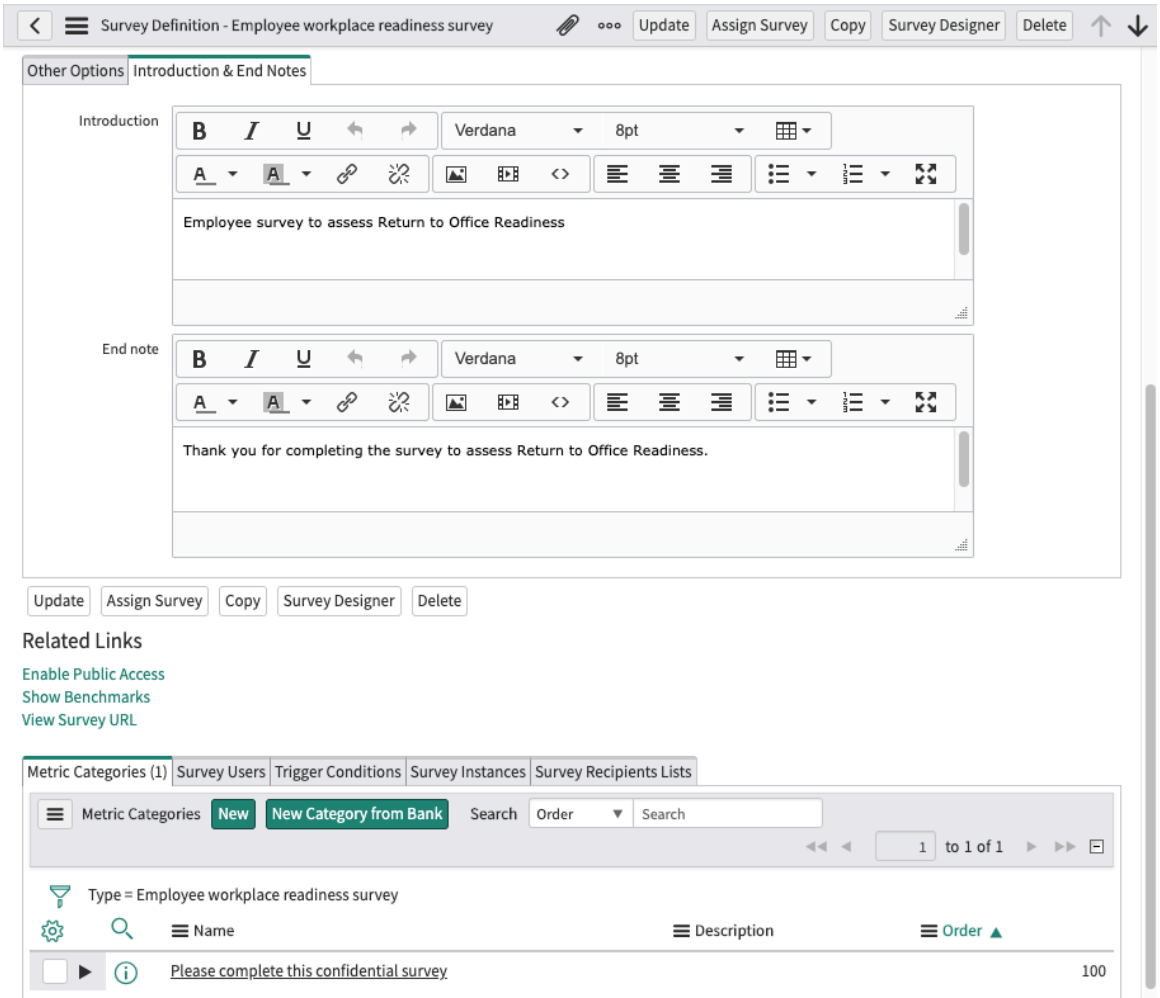


Familiarize yourself with Survey administration. Then meet with other emergency response team stakeholders to plan the changes to the survey. Decide whether to edit the existing survey before you send it to employees, or to create one or more new surveys.

Role required: sn_imt_checkin.checkin_admin, survey_creator, survey_admin, or admin

About this task

Users with the sn_imt_checkin.checkin_admin role have the survey_creator role, and are made owners of the default readiness survey. Users with the survey_creator role can edit or copy the default survey. These users can also add another readiness survey and add other users as owners to collaborate with them.



Survey definition owners

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Surveys** > **View Surveys** and open the **Employee workplace readiness survey**.

2. Using the plan that you made for changing the survey, update any of the following survey elements.

3. Complete any other changes to the survey options, and select **Update**.

Result

The modified survey is used for future outreach surveys.

Add additional Employee Readiness Surveys

Create one or more surveys to use for different workplaces or to evaluate other areas of concern. Start by planning the surveys carefully to gather the best data for your evaluation of readiness to return to the workplace.

Before you begin

Role required: sn_imt_checkin.checkin_admin, survey_creator, survey_admin, or admin

About this task

Consider how you want to begin to reopen your workplace, and what you must understand about the employees before you can begin. Work with a user with the survey_admin role in your

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

company to plan the types of questions and responses for the survey. For information about adding surveys, see Survey administration and Survey designer.

Procedure

- To create a survey, navigate to **Surveys** > **View Surveys**.
- Select **New** or **Survey Designer** and enter the information to complete the survey from the plan that you made.
  Decide on a naming convention to use for surveys, so that a user with the sn_imt_checkin.checkin_admin role knows which one to select when sending outreach surveys. For example, **Readiness survey India** or **Customer service employees return readiness**.

Send a readiness survey in Emergency Outreach

Send notifications for an emergency

Use Emergency Outreach to notify users to report their health status. Use Emergency Outreach also to quickly notify users of important information if there is an emergency.

Before you begin

Users must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Note the following requirements to be able to send and receive SMS notifications:

- Your company must have a Safe Workplace suite subscription and Employee Readiness Core installed.
- Your company must have a Twilio account and phone number.
- The Notify plug-in and the Notify-Twilio Direct driver must be enabled.
- The Label for your number in **Notify** > **Messages** must be set to **Outreach**.

For more information on configuring Notify and the Notify-Twilio Direct driver, see Notify.

Role required: sn_imt_checkin.checkin_admin or admin

About this task

Emergency Outreach is available in the ServiceNow Store without a subscription. The base system provides a notification that requests a response from the recipient regarding their health status. The responses are stored as outreach records and the health status is updated each time the user responds with a change.

Some of the Safe Workplace suite apps leverage the Emergency Outreach notification feature to communicate with users. The Safe Workplace suite apps provide more flexible functions than using Emergency Outreach as a standalone app.

- Employee Readiness Surveys provides notification with a survey link to assess user readiness to return to the workplace.
- Employee Readiness Core provides the ability to use Safe Workplace audiences to simplify the selection of recipients for an outreach.
- Employee Health Screening: Request that users acknowledge their health status verification each day before they can return to the workplace.
- Contact Tracing supports these outreach notification needs:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- A scheduled notification for returning users to fill out a daily contact log.
- A request to review the organization's privacy policy and provide consent to use their contact tracing data.

The following procedure is applicable to the use of Emergency Outreach as a standalone app or with Safe Workplace suite applications.

Procedure

1. Navigate to **All** > **Emergency Outreach** > **Send Outreach**.
2. Enter a name that describes the purpose of the outreach notification.

   Example
   For example, `Global health status check-in` or `London office health status check-in`.
3. **Optional:** In the **Description** field, describe the purpose for sending the outreach.
4. On the **When to run** tab, specify when the outreach should be sent.

   Note:

   In prior releases of Emergency Outreach, notification scheduling was configured by selecting **Schedule** and entering details in a pop-up window. Scheduling is now configured on the **When to run** tab.

   Scheduled outreaches that you sent prior to upgrading provide the previous scheduling function if you need to resend it. This functionality provides the flexibility to set up new scheduled outreaches and to resend prior scheduled outreaches.
5. To identify who will receive the outreach, perform one of the following actions.
6. Click **Save**.
   The outreach details are saved and related lists appear. The Additional Channels related list is used to specify additional custom channels to use when you send the notification. Other related lists are filled in with outreach recipients and their status after you send the notification.
7. Click the **Content configuration** tab and leave the default response mode **Outreach Acknowledgements**.
8. On the **Content configuration** tab, specify how to send the outreach notification.
9. Click **Send Notification**.
   The notification is sent immediately or at the time specified on the **When to run** tab. As responses are received, they appear in the Outreach Acknowledgements related list.

What to do next

Review the Emergency Outreach acknowledgements.

Send a readiness survey and view responses

Send notifications for daily health verification

Review Emergency Outreach acknowledgements

Review the list of acknowledgements from an outreach notification to see each employee's status. Resend the outreach notification to employees who did not respond.

Before you begin

Role required: sn_imt_checkin.checkin_admin or admin

Procedure

1. Navigate to **Emergency Outreach** > **View Outreaches** and open the outreach notification to view.
   Responses are listed in the Outreach Acknowledgements related list. As employees respond to the notification, their records are updated with their status and whether they responded by email, mobile, or SMS.

   If employees haven't responded yet, click **Resend Notification**. The notification is sent again only to employees who have not yet responded.

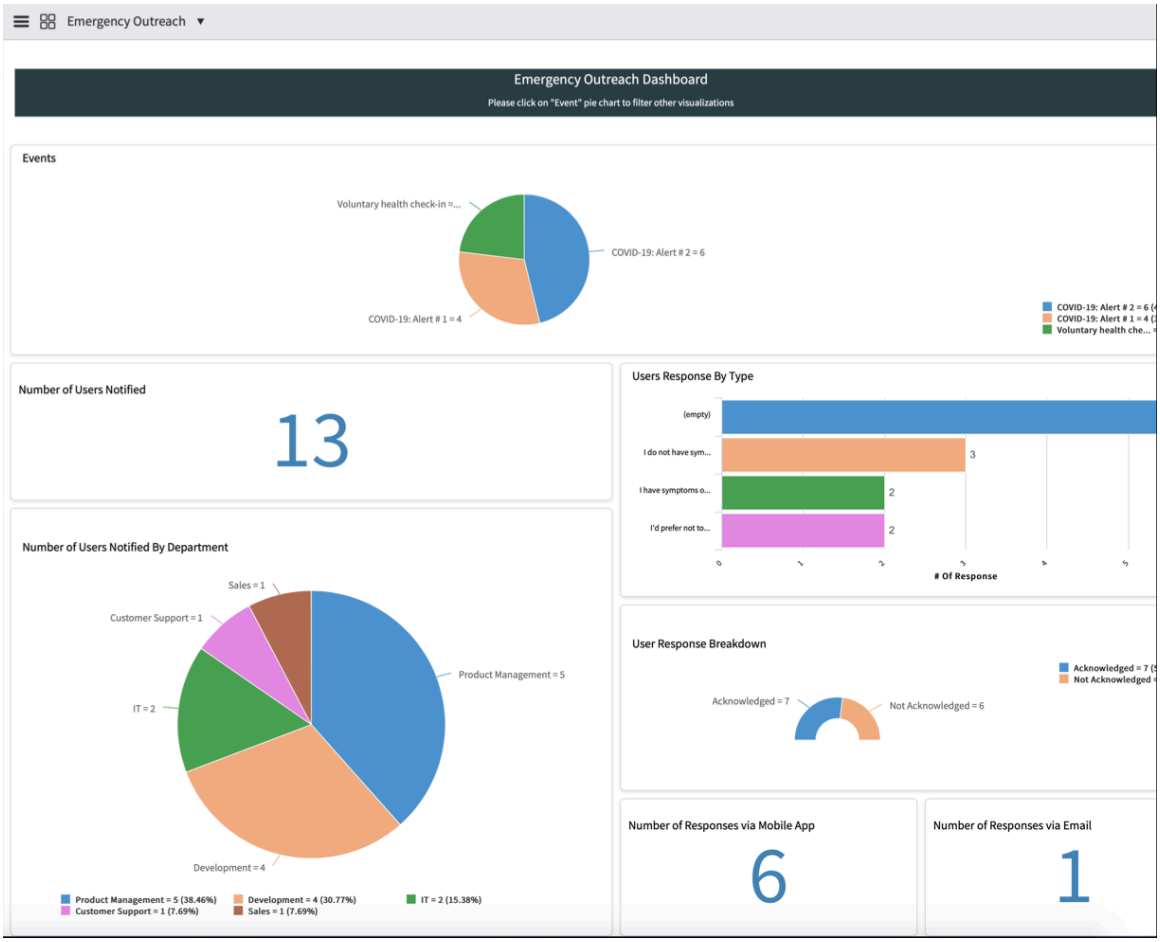
   Note:
   If employees update their status in a subsequent email, the employee's record is updated in the original event and in the dashboard. Employees cannot change their status through mobile push notifications.

   Trouble?

   When an outreach is sent using a custom notification channel, a Delivery Logs related list appears in the outreach record. It lists successful and failed log records for the notification that you sent.

   Depending on how the notification channel was created, success messages can show the number of notifications that were successfully sent, and the total number of notifications that were requested. If the total count is higher than the sent count, the difference is the number of notifications that failed.

   Open the record and investigate the cause of the errors. Correct the cause of the failures, or use another notification method for the users whose notification was not sent.



2. **Optional:** View the Emergency Outreach dashboard, which summarizes data from employee notification events.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **Emergency Outreach** > **View Dashboard**.

b. Review the accumulated notification data and trend.

c. Click an event in the **Events** pie chart to show its data.

Send notifications for daily health verification

Use Emergency Outreach to notify users to report their daily health status.

Before you begin

Users must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Note the following requirements to be able to send and receive SMS notifications:

- Your company must have a Safe Workplace suite subscription and Employee Readiness Core installed.
- Your company must have a Twilio account and phone number.
- The Notify plug-in and the Notify-Twilio Direct driver must be enabled.
- The Label for your number in **Notify** > **Messages** must be set to **Outreach**.

For more information on configuring Notify and the Notify-Twilio Direct driver, see Notify.

Role required: sn_imt_checkin.checkin_admin or admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Emergency Outreach** > **Send Outreach**.
2. Enter a name that describes the purpose of the outreach notification.

   Example
   For example, `Global daily health verification` or `London office daily health verification`.
3. **Optional:** In the **Description** field, describe the purpose for sending the outreach.
4. On the **When to run** tab, specify when the outreach should be sent.

   Note:

   In prior releases of Emergency Outreach, notification scheduling was configured by selecting **Schedule** and entering details in a pop-up window. Scheduling is now configured on the **When to run** tab.

   Scheduled outreaches that you sent prior to upgrading provide the previous scheduling function if you need to resend it. This functionality provides the flexibility to set up new scheduled outreaches and to resend prior scheduled outreaches.
5. Identify who will receive the outreach notification through either the Emergency Outreach or Safe Workplace application.
6. Click **Save**.
   The outreach details are saved and related lists appear. You can use the Additional Channels related list to specify additional custom channels to use when you send the notification. Other related lists are populated with outreach recipients and their statuses after you send the notification.
7. Click the **Content configuration** tab and select the response mode **Daily Health Verification**.
8. On the **Content configuration** tab, specify how to send the outreach notification.
9. Click **Send Notification**.
   The notification is sent immediately or at the time specified on the **When to run** tab. As responses are received, they appear in the Health Verification Acknowledgements related list. New records are created for each day in the Health Verification Acknowledgements related list for each user included in the target audience.

What to do next

Review the daily health verification acknowledgements. Resend the notification to users who have not responded for the day. If a user submits a response via a previous day notification, the status is updated for the notification of the latest date sent to the user.
For example, say you send the daily health notification to Zane from August 1 to August 10. If Zane uses the link in the notification sent on August 4, then the acknowledgement status for Zane is updated in the notification sent on August 10.

Send an Emergency Outreach notification for employee privacy consents in Contact Tracing

Send a readiness survey and view responses

Review daily health verification acknowledgements

Review the list of acknowledgements from the daily health verification notification to see each user's status. Resend the outreach notification to users who did not respond.

Before you begin

Role required: sn_imt_checkin.checkin_admin or admin

Procedure

1. Navigate to **All** > **Emergency Outreach** > **View Outreaches**.
2. Open the Daily Health Verification outreach notification.
   Responses are listed in the Health Verification Acknowledgements related list. As users respond to the notification, their records are updated with their acknowledgements statuses.

   If users haven't responded yet, click **Resend Notification**. The notification is sent again only to users who have not yet responded.

   Note:
   If users submit their status in a subsequent email, the user's record is updated in the original event for the day.

   New records are created in the Health Verification Acknowledgements related list for each user included in the target audience. If a user submits a response through a previous day's notification, the response is updated for the latest date the user was sent the notification.

Send a readiness survey and view responses

Use Emergency Outreach to send a workplace readiness survey. Review the survey responses to assist with your plans to reopen your workplace.

Before you begin

In order to send a survey, you must have the Employee Readiness Surveys application installed.

Employees must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Role required: sn_imt_checkin.checkin_admin or admin

Procedure

1. Navigate to **All** > **Emergency Outreach** > **Send Outreach**.
2. Enter a name that describes the purpose of the survey.

   Example
   For example, "San Diego readiness survey" or "Employee readiness Europe."
3. **Optional:** In the **Description** field, describe the purpose for sending the outreach survey.
4. On the **When to run** tab, specify when the outreach should be sent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

In prior releases of Emergency Outreach, notification scheduling was configured by selecting **Schedule** and entering details in a pop-up window. Scheduling is now configured on the **When to run** tab.

Scheduled outreaches that you sent prior to upgrading provide the previous scheduling function if you need to resend it. This functionality provides the flexibility to set up new scheduled outreaches and to resend prior scheduled outreaches.

5. Identify who will receive the outreach notification through either the Emergency Outreach or Safe Workplace application.

6. Click **Save**.
   The survey outreach details are saved and related lists appear. The Additional Channels related list is used to specify additional custom channels to use when you send the survey notification. The Survey Instances related list is filled in with outreach recipients and their survey status after you send the notification.
7. Click the **Content configuration** tab, and in the **Response Mode** field, select **Survey**.
   Use the **Status** field that appears on the outreach form to confirm the creation status of your survey instances when you send the notification.
8. Select the survey to use or keep the default **Employee workplace readiness survey**.
9. To set a due date for the survey, enter a value in the **Duration** field.

   The **Duration** field sets the amount of time allowed to complete assigned survey instances, starting from the time that the survey instance is generated. The survey instances created for the outreach use the **Duration** field for their due date instead of the **Assessment duration** field on the survey.

10. Specify how to send the outreach notification.

11. Click **Send Notification**.
    The notification and survey link are sent to the target audience. A survey instance is created for each recipient, with the status **Ready to take**.

    When you send the outreach survey notification, any open survey instances for the recipients are canceled. When you resend a notification for an outreach, the open survey instances are not canceled.

    If you have a recurring scheduled outreach, such as a survey that is sent daily or weekly, each time the outreach is sent, the open surveys from the previous day or week are canceled.

    You can't create an outreach survey notification if the survey is being used in a scheduled outreach notification.

    After the notification is sent, the Emergency Outreach Instance Logs related list is displayed. The **Instance creation status** field values match the status on the outreach form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Success: An instance was created for every recipient in the target audience. The number of Assessment instances created should match the number of Target assessment instances or recipients of the survey.

- Partial Success: An instance was created for some recipients in the target audience but not all of them. The number of Target assessment instances and Assessment instances created do not match.

  Send the notifications to users who did not receive a notification or instance by clicking **Send to Remaining**.

- Failed: No instances were created and no surveys were sent.

  Resend the notification to all users by clicking **Send Notification** again.

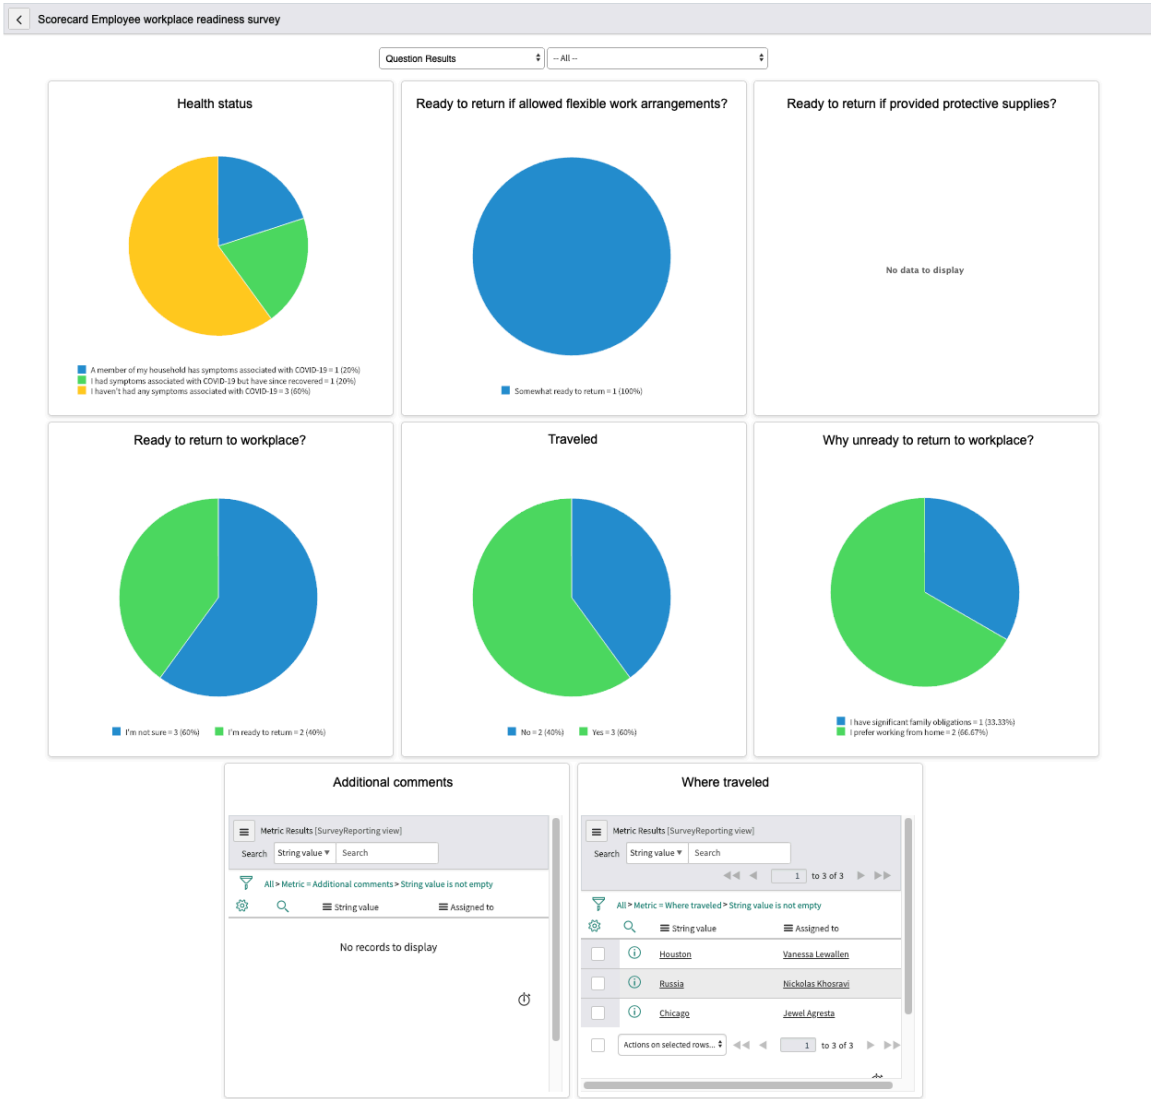
12. To view survey instances, navigate to **Emergency Outreach** > **View Outreaches** and open the survey notification to view.

    Note:
    Users with the sn_imt_checkin.checkin_admin role can see all survey instances. Users who have been assigned the survey can see only their own survey instances.

    As employees complete the survey, the status updates in their survey instance.

    If employees haven't responded yet and instances were successfully created for all users, click **Resend Notification**. The notification is sent again only to employees who have not yet responded.

Trouble?



When an outreach is sent using a custom notification channel, a Delivery Logs related list appears in the outreach record. It lists successful and failed log records for the notification that you sent.

Depending on how the notification channel was created, success messages can show the number of notifications that were successfully sent, and the total number of notifications that were requested. If the total count is higher than the sent count, the difference is the number of notifications that failed.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Open the record and investigate the cause of the errors. Correct the cause of the failures, or use another notification method for the users whose notification was not sent.

13. To view the status of Outreach instances, navigate to **Emergency Outreach** > **View Outreach Instance Logs**.
14. To view the interactive scorecard showing all responses and the results, click the **View Survey Scorecard** related link.

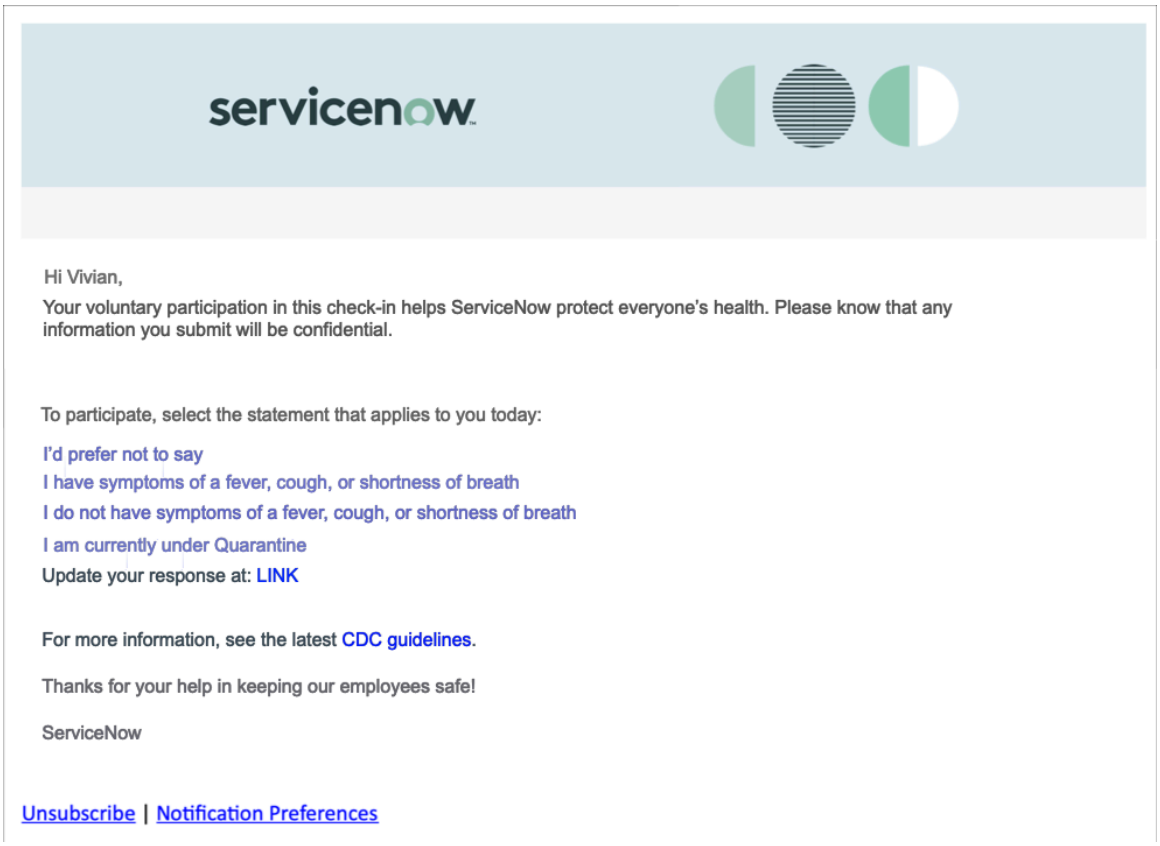
Click any area of a chart to see the corresponding records.

Report your health status

If you receive an email, mobile push notification, or SMS notification to report your health status, you can update your status from the message.

Before you begin

To receive mobile push notifications, you must have the Now® Mobile app.



Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

- To reply to an email notification, select a response from the message and email it.

  Example

- To reply to a mobile push notification:
  1. Tap the notification to open the message.
  2. In the message, tap **Check In**.
  3. **Optional:** On the Check In screen, provide your location and additional comments.
  4. Tap **Status** and then select a response.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

- To reply to an SMS notification:
  1. Open the SMS message on your phone.
  2. Reply with the number of your response.

Result

After you reply to the notification, your response is sent to you and your employer. A record for your response is also updated. Your personal information is secure. Only the staff managing the health situation have access to your response.

Response scripts

Use response scripts to automatically take actions based on user responses to survey questions. Response scripts can be used to create or update records across any of the Emergency Response Management and Safe Workplace suite apps.

Each response script is associated with a survey. The response script runs if a user completes the associated survey and their answers match the response criteria.

Note:
The Employee Readiness Surveys app must be installed to use response scripts.

Included response scripts

Emergency Outreach provides the pre-built Request PPE response script.

The Request PPE response script requires the Workplace PPE Inventory Management app. This response script creates a PPE request for employees who complete the Employee workplace readiness survey and meet the response criteria for the health status, travel, and ready to return to the workplace questions.

The Request PPE response script is not active by default and must be manually activated. It is ready to activate without any modifications, but you can choose to edit the script to meet your company's needs. To activate the Request PPE response script, navigate to **Emergency Outreach** > **Response Scripts** and click the Request PPE record. Select the **Active** check box, then click **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you need to perform additional actions based on survey responses, you can create additional response scripts. Use the included Request PPE response script as an example to help create your own response scripts.

Create a response script

Create a response script to automatically create or update records based on user responses to survey questions.

Before you begin

Role required: sn_imt_checkin.checkin_admin

About this task

Response scripts can be used to create or update records across any of the Emergency Response Management and Safe Workplace suite apps. For example, you could create a response script to reserve a workspace for a user who is ready to return to the workplace.

Procedure

1. Navigate to **All** > **Emergency Outreach** > **Response Scripts** and click **New**.
2. On the form, fill in the fields.

Response script form

Field	Description
Active	Selected.
Name	Name of the script.
Survey	Survey that causes the script to run. When a survey instance is completed by a user, the script runs if the user's responses to the survey questions match the response criteria.
Script	Script to insert or update a record. The script should perform the following steps. ○ Get the sys_id for the user who submitted the survey. `var userSysId = userGr.getUniqueValue();` **Note:** The `userGr` variable is defined in the Run Response Scripts action. This action is used by the Response Script Actions flow, which runs the response scripts when a user completes a survey and fulfills the response criteria. The `userGr` variable is a user GlideRecord, so you can use it to get additional fields from the user as needed. For example, `userGr.getValue('location')` gets the user's location. ○ If the plugin that installs the table you want to write to is active, insert or update a record for the user. **Note:** The following code is provided as an example only. You must provide the correct plugin, table, and field names in your script, and make any additional modifications that you require.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description

	``
	//example code to insert a record
	if (GlidePluginManager.isActive('plugin_name')) {
	    var now_GR = new GlideRecord('table_name');
	    now_GR.initialize();
	    now_GR.user_field = userSysId;
	    now_GR.field = 'value';
	    //update additional fields here as needed
	    now_GR.insert();
	}
	``
	``
	//example code to update an existing record associated
	 with the user
	if (GlidePluginManager.isActive('plugin_name')) {
	    var now_GR = new GlideRecord('table_name');
	    now_GR.get('user_field', userSysId);
	    now_GR.field_to_update = 'value';
	    //update additional fields here as needed
	    now_GR.update();
	}
	``
	``
	//example code to update multiple existing records
	 associated with the user
	if (GlidePluginManager.isActive('plugin_name')) {
	    var now_GR = new GlideRecord('table_name');
	    now_GR.addQuery('user_field', userSysId);
	    now_GR.setValue('field_to_update', 'value');
	    //update additional fields here as needed
	    now_GR.updateMultiple();
	}
	``

3. Save the response script record using the form context menu.
   The Response Criteria related list is automatically populated with all questions from the associated survey.
4. Edit the response criteria to define the answers a user must provide for the response script to run.
   a. Define the required answer in the response criteria for relevant questions.
   b. Delete the response criteria for any questions that don't require a specific answer.
5. Click **Update**.

Domain separation for Emergency Outreach

This application fully supports domain separation service provider (SP) use cases. The following table lists the domain separation use cases for service providers (SPs) using this application.

Domain separation use cases

Use case	Functions	Limitations
SP Internal - SP check-in admin uses the application to contact internal employees by email or through Now Mobile App.	Yes	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Domain separation use cases (continued)

Use case	Functions	Limitations
SP External - SP check-in admin uses the application to contact tenant employees by email or through Now Mobile App.	Yes	None
Tenant - Tenant check-in admin uses the application to contact their employees (in their domain only) by email or through Now Mobile app.	Yes	None

Some modules in the Emergency Outreach application are affected by domain separation.

SEND OUTREACH module (Create New for employee check-in table)

- Notification can be configured to target users, groups, departments, locations or customized for conditional criteria
- Email is standard HTML
- Domain column exists

RESPONSE OPTIONS module (Notification responses table)

- Domain column exists
- Shows response links that appear in notifications

VIEW OUTREACHES module (Employee check-in table)

- Domain column exists
- Shows notification structure and a related list that contains all responses (Table: Check-In Acknowledgement); the response table has domain column row and business logic protections
- Can output an Excel spreadsheet that displays current responses and status

DASHBOARD module

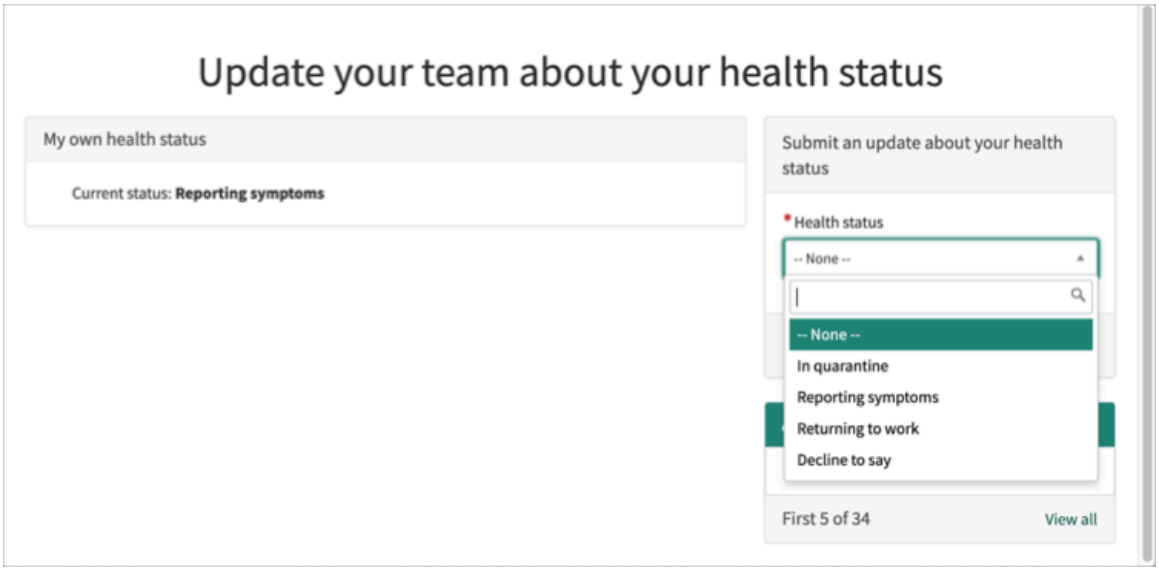
Reporting dashboard, shows aggregate of all notifications and their acknowledgment status.

Emergency Self Report

During a crisis, the ServiceNow® Emergency Self Report application gives users a way to notify their organization of their health status. It also provides a workflow for qualified users to safely return to work. Managers and response teams can track user reporting.

In contrast to email or phone reporting and manual data consolidation, Emergency Self Report provides a digital workflow that captures and automatically rolls up user reporting data for analysis and action. The application offers benefits for various people within the organization, with different views displayed for various roles.

Use guided setup to implement Safe Workplace suite apps



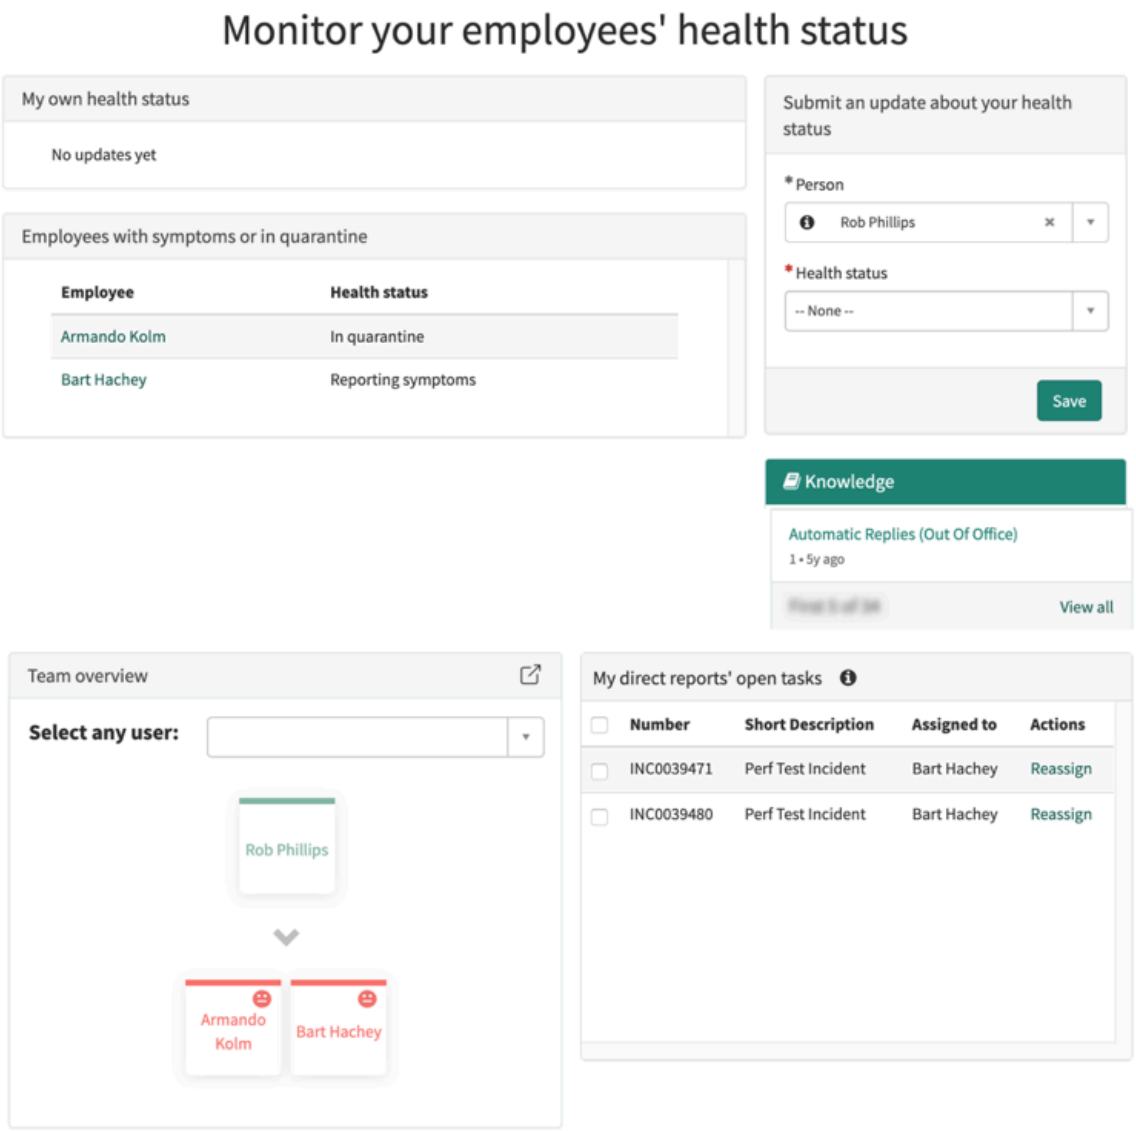
The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Users can report their status

A menu-driven interface enables users to report their status to their managers. Users can use the same interface to update their manager and global response team when they are ready to return to work. Managers can notify users when they may return.

User view



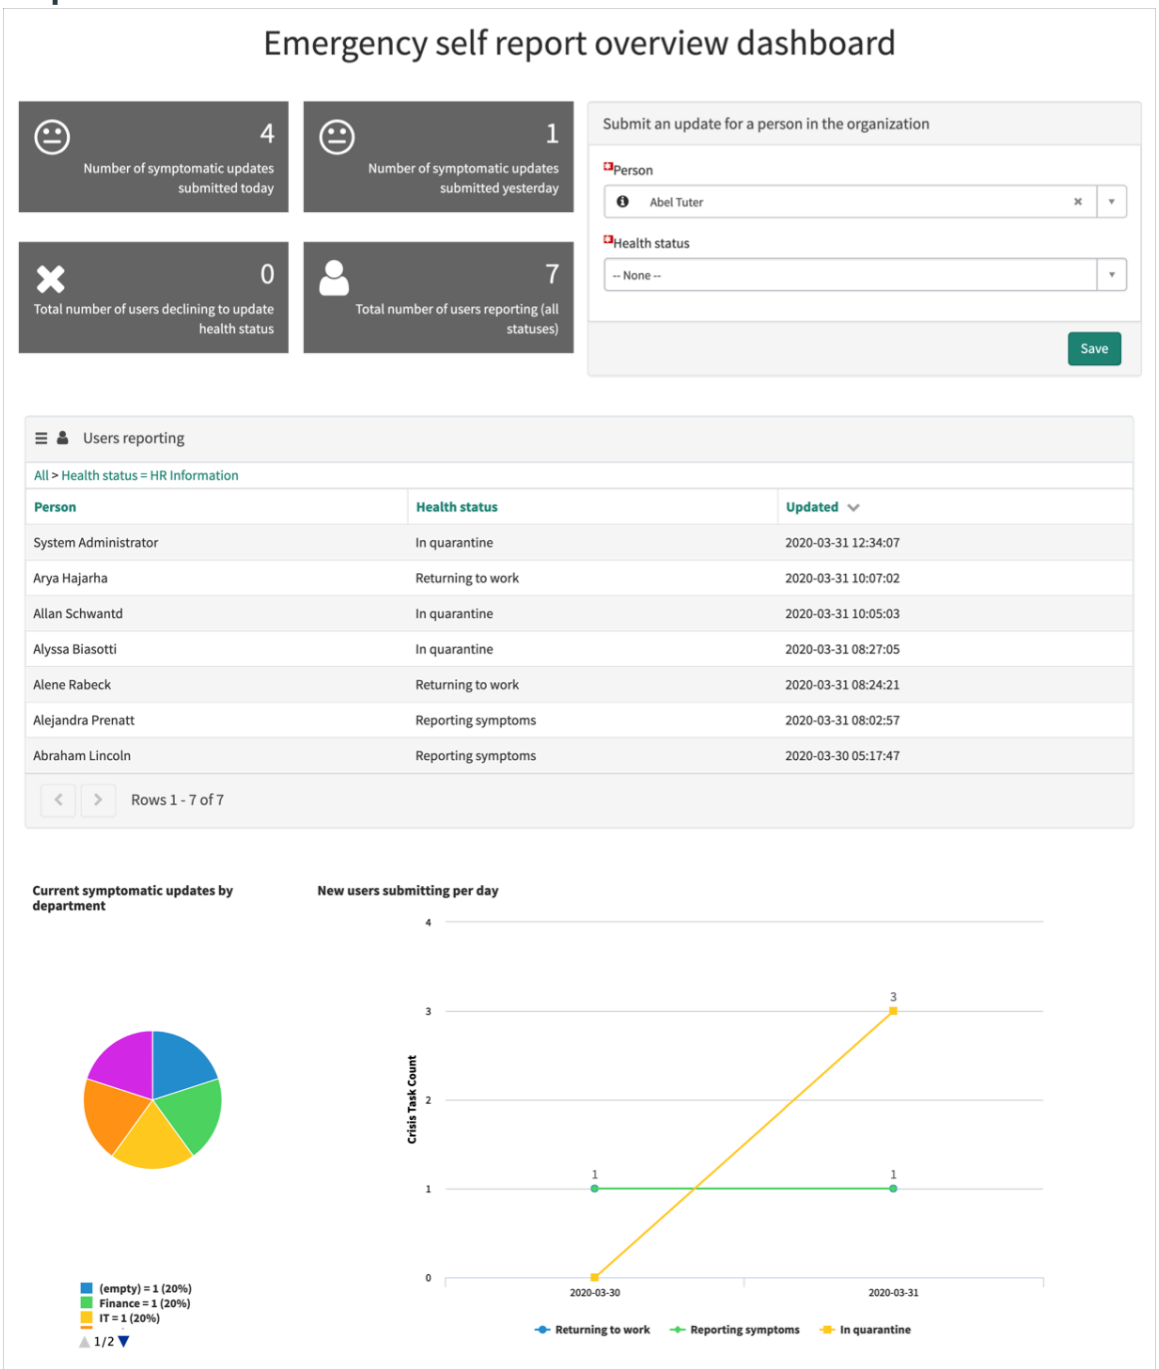
If ServiceNow® Contact Tracing is installed, a case is created automatically for a user who self-reports as being in quarantine. If an active case exists for the user at the time of reporting, a note is added to the case for the self-reporting.

Managers can monitor the status of their teams

Managers can view a summary of their team's reported status and the details of an individual person. They can reassign an affected user's work to others on the team if the work is tracked in the ServiceNow instance. If users don't have access to the application, the manager can submit a report on their behalf.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

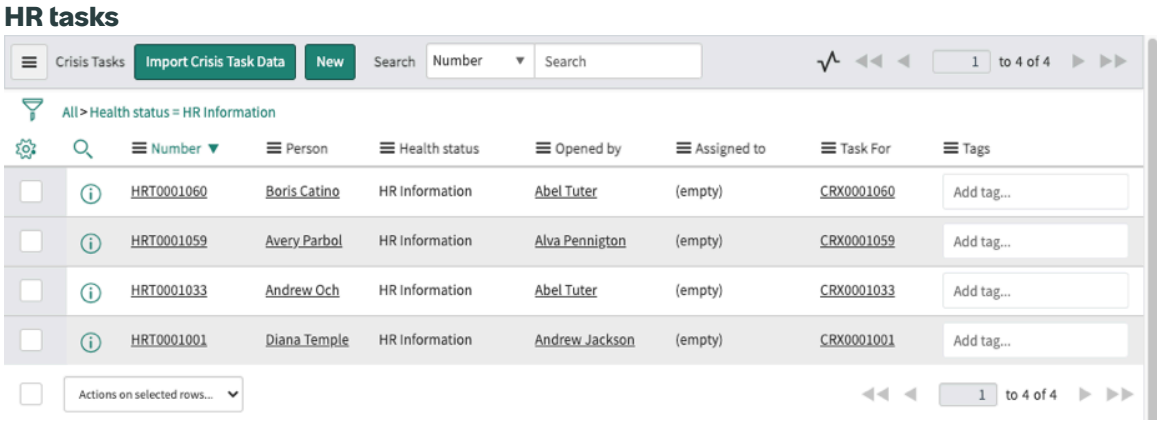
Manager view



Response teams can view the status of all teams

Response teams can view an overview dashboard that summarizes the status for all self-reported users. Data can be viewed and sorted in multiple ways for analysis and action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Response team view

Response team can work with HR tasks

HR tasks are created when a user self-reports. Each HR task is associated with a self-reported crisis task. The response team member can navigate to **Emergency Self Response** > **HR tasks** to view the list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR tasks do not have a specific workflow associated with them. They are created in the Open state, and closing the associated crisis task does not affect the HR task. Your organization can determine how to use or manage HR tasks, if at all. Review the HR task form to determine whether it can be of use within your response strategy.

Use with other Emergency Response Management applications

Emergency Self Report was originally developed to monitor and aid in stopping the community spread of COVID-19 among users. It is part of the suite of ServiceNow® Emergency Response Management applications built on the ServiceNow AI Platform® to assist companies in their emergency response efforts. With the Emergency Exposure Management application, you can identify users who might have been exposed. You can then contact affected users through the Emergency Outreach application. Both applications are available in the ServiceNow Store.

Emergency Response Management for federal customers

Federal customers using IL4 or FedRAMP environments will see the Emergency Response Management applications ready and available to install on their instances without having to make any special requests. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Emergency Self Report`.
3. Click **Install**.

   The Application installation dialog box opens.
4. **Optional:** Load the demo data by selecting the **Load demo data** check box.

   (Optional) For information about how to install or reinstall demo data after the initial installation, see the Work around to install demo data if application is already installed [KB0722909] article in the Now Support Knowledge Base.
5. Click **Install**.
6. When the installation is complete, click **Close**.

Result

The Emergency Self Report application is installed on your instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Components installed with Emergency Self Report

Several types of components are installed with Emergency Self Report, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles installed

Roles in Emergency Self Report

Role title [name]	Description	Contains roles
Self report user [sn_imt_quarantine.crisis_task_user]	Access the Emergency Self Report Dashboard to report health status.	notify_view
Crisis task users [sn_imt_quarantine.humanResourceTeam]	View and manage HR tasks, submit updates for other users, and import crisis tasks. Also grant the self report user role.	notify_view

Tables installed

Tables installed with Emergency Self Report

Table	Description
Crisis Task [sn_imt_quarantine_crisis_task]	Contains all self report crisis tasks, including HR crisis tasks.
Crisis Task Status Log [sn_imt_quarantine_crisis_task_status_log]	Contains a history of all reported health statuses for each user. This table is only populated when the *sn_imt_quarantine.enable.health.status.log* property is set to `true`.
Bulk Import Crisis Tasks [sn_imt_quarantine_bulk_load_crisis_task]	The Import Set table for importing reported health statuses from an Excel spreadsheet to create crisis tasks in bulk. When you load data from the Excel file into the application, the imported records are first saved in this import set table. After you run the transform or execute the scheduled import script, the records are copied to the Crisis Task table.

Configure Emergency Self Report

Configure Emergency Self Report to align with your business needs.

Before you begin
Role required: admin

About this task

Complete the following configurations as needed.

- Grant app access to the appropriate response team members.
- Specify custom system messages to help your users and response team members.
- Set system properties to control how you use Emergency Self Report.
- Configure user health status choices.
- Create a dedicated knowledge base and add it to your Service Portal.

Procedure

1. Add the default application user roles to appropriate groups.

   The application provides the following default roles in the sys_user_role table:

   sn_imt_quarantine.crisis_task_user

   Enables group members or individuals to submit a health alert for themselves. Managers can also submit and monitor alerts for their direct reports.

   sn_imt_quarantine.humanResourceTeam

   Enables group members, such as HR or Global Security team members, to manage the reported health alerts.

   For information about how to assign roles to groups, see Roles.

2. Navigate to **Emergency Self Report** > **UI Configuration**, set the desired message values, and then click **Update**.

Emergency Self Report UI properties

Property name	Description
sn_imt_quarantine.crisisSubmitMessage	Configure the message that is displayed to users after they submit a health status. **Example confirmation message**  Update your team about your health status
sn_imt_quarantine.openTasksInfoMessage	Configure a tooltip for managers who are viewing open tasks for their direct reports. **Example message for open tasks** 

3. Navigate to **Emergency Self Report** > **Emergency Self Report Properties**, set the desired property values, and then click **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Emergency Self Report properties

Property name	Description
sn_imt_quarantine.enable.health.status.log	When this property is set to `true`, a new record is created in the Crisis Task Status Log table [sn_imt_quarantine_crisis_task_status_log] every time that a user health status update is submitted. Crisis task records have a Crisis Task Status Logs related list that shows all health status updates for that crisis task. When this property is set to `false`, the Crisis Task Status Log table is not populated. The default value is `false`.
sn_imt_quarantine.data.retention.period	Sets the number of days that records are stored in the Crisis Task Status Log table [sn_imt_quarantine_crisis_task_status_log] before they are deleted. The default value is 30 days.
sn_imt_quarantine.fetchTaskQuery	Determines the data that is visible in the Emergency Self Report dashboard in the My direct reports' open tasks section. The default value is to show only P1 and P2 requests, incidents for the last month, and those assigned to the manager's direct reports: `sys_created_on>=javascript:gs.beginningOfLastMonth()^active=true^assigned_to.managerDYNAMIC90d1921e5f510100a9ad2572f2b477fe^sys_class_name=incident^ORsys_class_name=sc_task^ORsys_class_name=sc_request^priorityIN1,2`
sn_imt_quarantine.healthStatusChangeTaskBehavior	Sets the behavior of crisis tasks for users who update their health status after their most recent crisis task is closed. When the value is `update`, the user's most recent HR crisis task is reopened and their health status is updated with their new reported status. When the value is `create`, a new HR crisis task is created if an open one doesn't already exist for the user's newly reported status.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property name	Description
	The default value is `update`.
sn_imt_quarantine.healthStatusesToTriggerTaskReopen	Sets the health statuses that reopen tasks or create new tasks if reported by a user after their most recent crisis task is closed. By default, the statuses that reopen or create new tasks are **In quarantine** and **Reporting symptoms**.
sn_imt_quarantine.hrGroup	Members of the global response team, who will have access to your team's user records. You can add a role to a group to act as a global response team or you can add the role directly to the users.
sn_imt_quarantine.MaxOrgLevelLimit	Number of levels in your organization structure. For example, If you have CEO, VP, Director, Manager, and Individual Contributors, you have five levels in your organization structure.
sn_imt_quarantine.outSickDuration	The time frame (in days) after which users are safe to return to work if sick. The default value is 20 days.
sn_imt_quarantine.quarantineDuration	The time frame (in days) after which users are safe to return to work if self-quarantined. The default value is 14 days.

4. Configure the check-in choices that the user can select.

   a. Navigate to **System Definition** > **Choice Lists**.

   b. Set a search filter with the following conditions:
      - **[Table] [is] [sn_imt_quarantine_crisis_task]**
      - **[Element] [is] [request_type]**

   c. Change the label or value for choices in the list, or add new values.

   d. Click **Update**.

5. Configure knowledge articles about the emergency event.

   For example, provide local regulations, organization policies, and how-to information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Create a knowledge base to contain the application's articles.

b. Navigate to **Service Portal** > **Pages**.

c. Search for ID `self_report_dashboard` and click the record.

d. Click the **Emergency Self Report - Container 2** link.

e. Under Column 2, click **Instance of Simple List**.

f. On the Table & Filter tab, name the knowledge base by setting the following filter condition: **[Knowledge Base] [is] [<name>]**.

g. Associate application articles with the application knowledge base.

Report and track health statuses during an emergency

Emergency Self Report is used by users to self-report their health status, by managers to track the health status of their users, and by response teams to view the status for all users and sort the data for analysis and action.

Before you begin

Role required: sn_imt_quarantine.crisis_task_user or sn_imt_quarantine.humanResourceTeam

About this task

The workflow for Emergency Self Report begins with users self-reporting their health status, managers determining the actions that must be taken related to the user's status, and a response team evaluating a unified view of the status of all reporting users.

Procedure

- To report your health status:

1. Navigate to **Emergency Self Report** > **Emergency Self Report Dashboard**.

   Note:
   To report your health status in the Now Mobile app, navigate to the **Health** tab and tap the quick action icon ( ) in the top-right corner.

   If you're a manager, your name is automatically selected in the **Person** field so that you can report your own health status. If you're reporting the status for a direct report, select the user's name from the **Person** field.

   If you're not a manager, you can report only your own status and the **Person** field doesn't appear.

2. Choose an option from the **Health status** list.

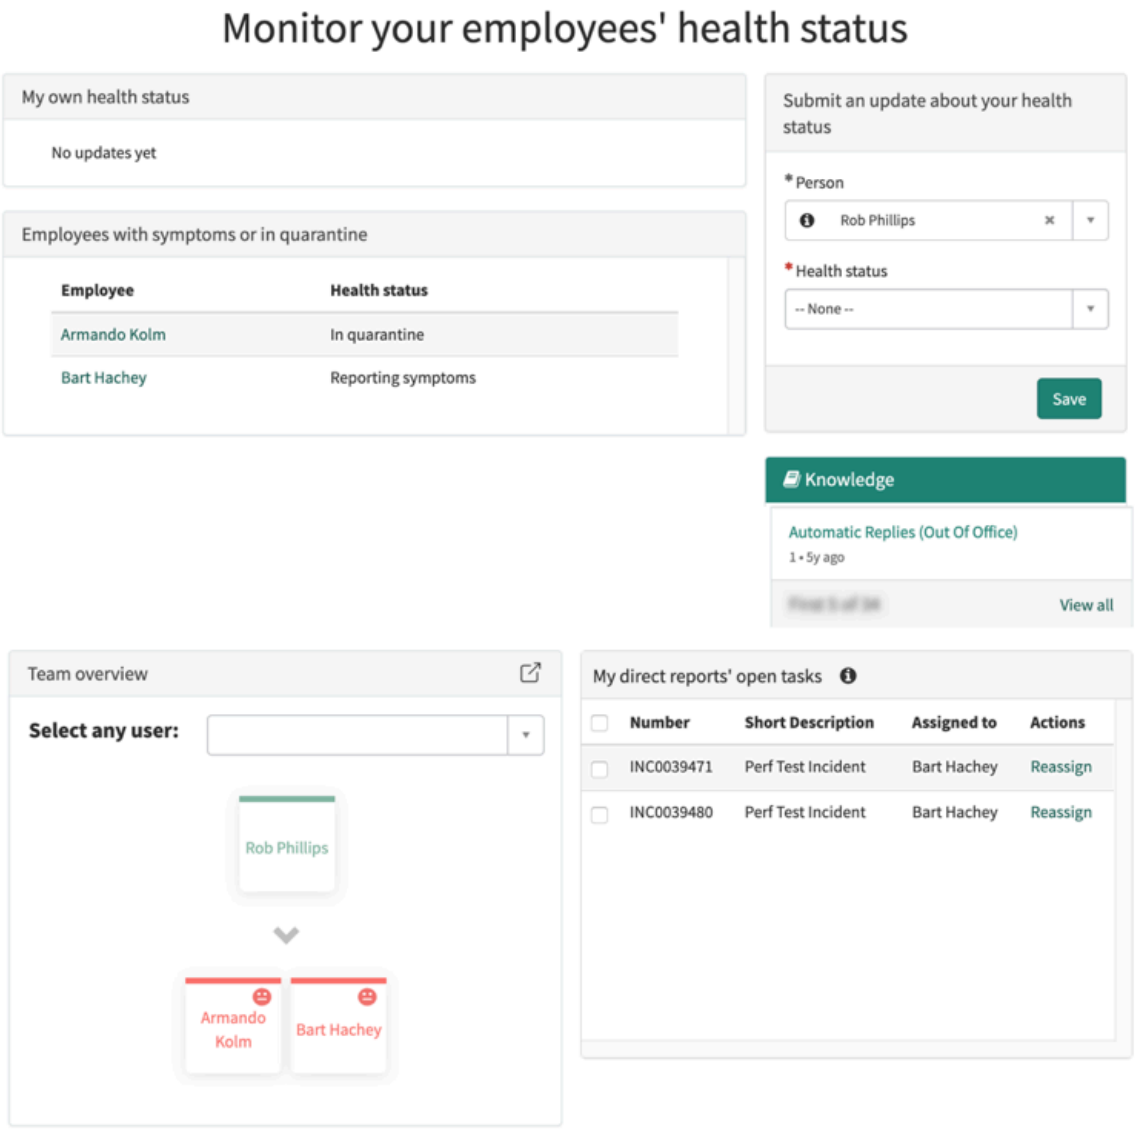
   System administrators can configure these options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

3. Click **Save**.
   The health status is updated on the left side of the screen. A message is sent to your manager, and a crisis task is generated for the response team. The crisis task can be assigned an approver, and the reporting user's assigned tasks can be reviewed.

   If Contact Tracing is installed and you selected the **In quarantine** option, a case is created automatically for the user. If an active case exists for the user at the time of reporting, a note is added to the case about the self-reporting. For more information, see ServiceNow® Contact Tracing.



4. **Optional:** When you're ready to return to work, update your health status to **Return to Work**.
   A Human Resources task is created so that HR can coordinate with you. The HR task is for information, and is not updated automatically when other tasks are updated. In the manager's view, your status changes to green.

- To evaluate the health status of your direct reports if you're a manager:

1. Navigate to **Emergency Self Report** > **Emergency Self Report Dashboard**.

   You see a single screen view of your direct team's status and tasks, and can select individual user records. Green tiles indicate that the user has provided no information. The tiles of affected team members are red and display an icon.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. To display a user's assigned tasks, click a tile.

3. To reassign tasks for the user, click the **Reassign** link in the task row, assign the task to another user, and click **Submit**.

Related topics

View a dashboard of all user reports if you are a response team member

View self-reported user HR tasks

Members of the emergency response team can view all user reports and associated HR tasks on the Emergency Self Report overview dashboard.

Before you begin

About this task

The Emergency Self Report dashboard enables monitoring by and tasks of the emergency response team. Users with the HR emergency response role can also report on behalf of anyone in their organization, and they can easily update records as needed.

Procedure

1. Navigate to **All** > **Emergency Self Report** > **Overview Dashboard**.
   You can also access the dashboard as a service portal page.
2. Review the numbers of reports and updates occurring today, and click any card to see the data.

3. **Optional:** To add someone who does not have self-reporting access, select the user's name in the **Person** field and select a status from the **Health status** list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** To view an HR task for a reporting user, click the user's name in the **Users reporting** list.
5. **Optional:** Export the list of reporting users in PDF, Excel, or CSV format by clicking the icon in the list banner.
6. Review the charts to see at a glance how the organization is affected.
   Click any element in a chart, such as a pie wedge or marker, to see the corresponding data.

Import Crisis Task data

As a crisis task administrator, upload a spreadsheet of self-reported health statuses to create crisis tasks in bulk.

Before you begin

You need a spreadsheet (.csv or .xlsx file) with data in the following columns: Person, User name, and Health Status. You can download a template from the Import Crisis Task Data data source record.

Role required: sn_imt_quarantine.humanResourceTeam

About this task

The Bulk Import Crisis Task Data scheduled job is installed with the Emergency Self Report application. When you upload the spreadsheet, you can manually execute the job to import data into the Crisis Task table. HR tasks and their associated crisis tasks are created for each user based on their reported health status.

Procedure

1. Navigate to **All** > **Emergency Self Report** > **HR Tasks**.
2. Click the **Import Crisis Task Data** button.
3. In the Scheduled Data Imports list, open the **Bulk Import Crisis Task Data** scheduled data import job.
4. In the **Data Source** field, open the **Import Crisis Task Data** record.
   a. Click the attachments icon ( ).
   b. Click **Choose file** and select the source Excel file.
   c. Close the Attachments window.
5. Click **Update**.
   The Scheduled Data Import record appears with the attachment.
6. Click **Execute Now**.
   The process runs in the background to copy data from the Bulk Import Crisis Tasks table to the Crisis Task table.

> **Note:**
> The number of records in the source Excel file affect the time needed before the imported data is available in the Crisis Task table.

Result

Records are imported to the Bulk Import Crisis Tasks table and copied to the Crisis Task table. New HR tasks are created with their associated crisis tasks. Records are not copied to the Crisis Task table in the following situations:

- The user name is invalid or blank.
- The health status is invalid or blank.

- The user has an active case.
- The user is a duplicate.

Domain separation for Emergency Self Report

The following table lists the domain separation use cases for service providers (SPs) using this application.

Domain separation use cases

Use case	Functions	Limitations
SP Internal - SP uses the application for internal employees to self-report their status via a dedicated service portal or web page.	Yes	None
SP External - SP uses the application for tenant employees to self-report their status via a dedicated service portal or web page.	Yes	None
Tenant - Tenant uses the application for their sub-domain for their employees to self-report their status via a dedicated service portal or web page.	Yes	None

Some modules in the Emergency Self Report application are affected by domain separation. These modules can be used by SPs and tenants.

EMERGENCY SELF REPORT DASHBOARD module

- A web page where users can self-report their current status. When they submit their status, a health record is created. (Table: Crisis Task)
- A knowledge base list of articles.

ALL HEALTH RECORDS & HR TASKS module (Crisis Tasks)

- Domain column row protections exist.
- Extended from the Task table and therefore contains the necessary domain-separated business logic.
- Related list, Approvers (Table: Approval) is an established domain-separated table.
- Related list, Tasks (Table: Task) is an established domain-separated table.

Emergency Exposure Management

The ServiceNow® Emergency Exposure Management application helps identify users who might have been exposed to infectious diseases by analyzing multiple data sources such as meetings, location, shifts, Wi-Fi access logs, and badge scans of affected users.

Emergency Exposure Management provides tracing systems to use the following data sources to generate a list of potentially exposed users:

- Microsoft Office 365 meeting invite
- Location of the ServiceNow user profile
- Workspace reservation
- Badge scan log

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Wi-Fi access log
- Employee daily log
- Field service task
- Visitors log
- Handheld or wearable device proximity sensing data

Note:
Some of the tracing systems require you to install other Safe Workplace suite and Emergency Response Management applications. For more information, see Tracing systems in Emergency Exposure Management.

You can also manually add users whom you know might have been potentially exposed to an affected user.

In addition to using the base system tracing systems, you can set up a tracing system that uses your own data source to identify potentially exposed users. For more information, see Set up a tracing system for an exposure data source.

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Use with other Emergency Response Management applications

Emergency Exposure Management was originally developed to monitor and aid in stopping the community spread of infectious diseases, such as COVID-19 among users. It is part of a suite of ServiceNow® Emergency Response Management applications built on the ServiceNow AI Platform® to assist companies in their emergency response efforts. You can also enable users to self-report their health status through the Emergency Outreach and Emergency Self Report applications, which are both available in the ServiceNow Store.

Emergency Response Management for federal customers

Federal customers using IL4 or FedRAMP environments will see the Emergency Response Management applications ready and available to install on their instances without having to make any special requests. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Type	Instructions

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Emergency Exposure Management`.
3. Click **Install**.
4. In the Application installation dialog box, click **Install**.
5. When the installation is complete, click **Close**.

   The Emergency Exposure Management application is installed on your instance.

6. **Optional:** Control access to the application by creating a group and assigning roles to the group or individual users.

   (Optional) For more information, see Roles.

Tables installed

Tables installed with Emergency Exposure Management

Table	Description
Diagnostic Request [sn_imt_diagnosis_diagnostic_request]	Allows a user to create a diagnostic request for the affected user.
Diagnostic Events [sn_imt_diagnosis_diagnostics_event]	Subtasks generated for diagnostic requests. A scheduled job processes the tasks to identify the list of potentially impacted employees.
Diagnostic Request Task [sn_imt_diagnosis_diagnostic_request_task]	Diagnostic request tasks created automatically for diagnostic requests to identify the list of potentially impacted employees. The task is created based on the selected data source in a diagnostic request.
Diagnostic Request Task Config [sn_imt_diagnosis_diagnostic_request_task_config]	Configuration for a diagnostic request task. For a data source selected in a diagnostic request, the corresponding diagnostic request task when created matches the type of task configuration.
Impacted Users [sn_imt_diagnosis_impacted_users]	Employees who may have been exposed to infectious diseases through an affected employee. Populated by analyzing multiple data sources for the affected employees.
Impacted Visitors [sn_imt_diagnosis_impacted_visitor]	Visitors who might have been exposed to infection. Populated by analyzing the visitors request entry records invited by the affected employees. The table is available for use only if you also subscribe to ServiceNow® Contact Tracing and ServiceNow® Employee Health Screening. The data of this table is displayed in the Impacted visitors related list on the Diagnostic Report form.
Potential Workplace Exposure [sn_imt_diagnosis_potential_workplace_exposure]	Potentially exposed employees who had reservations for the same shifts as the affected employee during the specified time period. The table is available for use only if you also subscribe to Workplace Core.
Tracing system [sn_imt_diagnosis_tracing_system]	Data source configuration to identify potentially exposed employees by using diagnostic requests.
Tracing system properties [sn_imt_diagnosis_m2m_tracing_system_properties]	System properties for additional configuration of tracing systems.

Set up Emergency Exposure Management

After installing the Emergency Exposure Management application, set up tracing system for your data sources, diagnostic request task configuration, and register Microsoft applications.

Before you begin

Role required: sn_imt_diagnosis.diagnostics_admin or admin

Procedure

1. Configure Microsoft Office 365 for Emergency Exposure Management.
   Emergency Exposure Management uses Microsoft Office 365 data to analyze the meetings of affected employees to identify other potentially exposed employees.
2. Set up a tracing system for an exposure data source.
   A tracing system corresponds to a contact tracing data source that you can select in a diagnostic request to identify potential exposure from an affected employee.
3. Create or modify a diagnostic request task configuration.
   A diagnostic request task enables you to perform some manual tasks to fetch potentially exposed employees in a diagnostic request report for an affected employee.

Configure Microsoft Office 365 for Emergency Exposure Management

Configure Emergency Exposure Management by setting the application system properties. If you want to search by Microsoft Office 365 meeting information, you also must register the Microsoft application and configure it.

Before you begin

Important:

If you are an on-premise customer with Microsoft Office 365 and you need assistance in configuring Emergency Exposure Management, contact your sales representative or contact Customer Service and Support at *https://support.servicenow.com/now?draw=case*.

Role required: admin

Procedure

1. Register the Microsoft application.
   a. Sign in to your Azure portal.
   b. In the left navigation pane, select **Azure Active Directory**.
   c. Under **Create**, select **App registration**.
   d. On the form, fill in these fields.

Form fields

Field	Value
Name	The name for the application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Value
Supported account types	Select the first option: Accounts in this organizational directory only

The app is created with unique credentials to use.

2. Add permissions to the Microsoft application to read employee calendars.
   a. In the left navigation pane, select **API permissions**.
   b. Click **Add a Permission**.
   c. In the Request API permissions pane, under **Commonly used Microsoft APIs**, select **Microsoft Graph**.
   d. Click **Application Permissions**.
   e. Under **Calendars**, select **Calendars.Calendars read**.
   f. Click **Add permissions**.
   g. Click **Delegated Permissions**.
   h. Under **Calendars**, select **Calendars.Calendars read**.
   i. Click **Add permissions**.
   j. On the Configured permissions screen, click **Grant admin consent**.
3. Obtain a trusted SSL certificate following your company's procedure.
   For information about adding a TLS/SSL certificate in Microsoft Azure App Service, refer to Add SSL Cert in the Microsoft Azure App Service Documentation guide.
4. In the Azure portal, upload the certificate.
   a. Access your Azure portal.
   b. In the left navigation pane, select **Certificates and Secrets**.
   c. Select **Upload certificate** and upload the certificate created in step 3.
5. Create a Java Key Store certificate in your ServiceNow instance.
   a. Navigate to **System Definition** > **Certificates**.
   b. Click **New** and create a new certificate with a **Type** value of *`Java Key Store`*.
   c. Set the **Short Description** text to the alias used in 3.
   d. Set the **Keystore Password** to the password used in step 3.
   e. Attach the `keystore.jks` certificate exported in step 3.
6. In your ServiceNow instance, set system properties for Emergency Exposure Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **Emergency Exposure Management** > **Properties**.

b. Verify the values or modify them for your environment.

c. Add these required properties.
   - Client ID
   - Tenant ID
   - Certificate – The sys_id of the certificate created in Step 5.
   - Private key – Use the password used to generate the keystore in Step 3.
   - (Optional) Location – Location accessible from tables, such as a floor or building.

d. Verify that the Microsoft URL for token generation is correct for your organization.

e. Click **Save**.

Tracing systems in Emergency Exposure Management

A tracing system configured for a contact tracing data source enables you to identify potentially exposed employees by running a diagnostic request.

The diagnostic request for an affected employee queries the contact tracing data to identify people who might have interacted with the affected employee. You can select multiple tracing systems in a diagnostic request to use multiple data sources to broaden the coverage used to find potential exposure.

A tracing system can be a group of other tracing systems with a similar type of input data source. For example, say you have Wi-Fi access data integration with multiple systems such as Cisco DNA Spaces and Mist Systems. You could have a tracing system called Wi-Fi access log and make it the parent tracing system of other tracing systems using the Wi-Fi input data sources.

You can customize the tracing systems for data sources available in Emergency Exposure Management or set up a new tracing system. For more information, see Set up a tracing system for an exposure data source.

For some tracing systems to be available in Emergency Exposure Management, you must install other Safe Workplace suite and Emergency Response Operations applications.

Tracing systems installed with Emergency Exposure Management

These tracing systems are active by default.

Emergency Exposure Management tracing systems

Tracing system	Query
Location	Employees co-located with the affected employee, for example, on the same floor or building.
Outlook meetings Microsoft Office 365	Employees who accepted the same meetings as the affected employee during the specified time period.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tracing system installed with Workplace Core

This tracing system is not active by default. To use this tracing system for identifying potentially exposed employees, activate it and also configure the corresponding data source in Workplace Core.

For more information, see Install Workplace Safety Management.

Workplace Core tracing system

Tracing system	Query
Workplace reservations	Employees who had reservations for the same shifts as the affected employee during the specified time period.

Tracing systems installed with Contact Tracing

These tracing systems are not active by default. To use these tracing systems for identifying potentially exposed employees, activate them and also configure the corresponding data sources in Contact Tracing.

For more information, see Setting up Contact Tracing.

Contact Tracing tracing systems

Tracing system	Query
Badge reader	Queries the Badge Access Register [sn_imt_tracing_badge_access_register] table to fetch employees who swiped their badge on the same badge reader devices as the affected employee during the specified time period.
Employee daily log	Queries the Daily Contact Logs [sn_imt_tracing_daily_contact_log] table to fetch employees with whom the affected employee interacted during the specified time period.
Visitor log	Queries the Visitor Request For Entry [sn_imt_monitoring_visitor_request_for_entry] table to fetch visitors who interacted with the affected employee during the specified time period. Visitors who visited the workplace on invitation from the affected employee and have been screened through and let in are queried. Ensure that you have installed Employee Health Screening to use this tracing system.
Wi-Fi access log	Queries the Wi-Fi Access Register [sn_imt_tracing_wifi_access_register] table to fetch employees who used the same Wi-Fi access points as the affected employee during the specified dates. Wi-Fi access log data used to identify potentially impacted employees depends on Wi-Fi location preferences and available integrations. The tracing system has the following child tracing systems based on the data source:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact Tracing tracing systems (continued)

Tracing system	Query
	• Mist Systems • Cisco DNA Spaces For more information, see Retrieving Wi-Fi access log data. **Note:** The period for which you can get the data via a real-time API depends on the data retention policy of your Wi-Fi service provider.
Handheld/Wearables	Queries the Wearable Access Register [sn_imt_tracing_wearable_access_register] table to fetch employees equipped with handheld or wearable devices who were in the close proximity with the affected employee during the specified time period. The Handheld/Wearables tracing system has the Zebra MotionWorks Proximity tracing system added as a child tracing system.
Kinexon SafeZone	Uses an integration with the KINEXON SafeZone API to identify potentially exposed users with KINEXON wearable devices who were in close proximity with the affected KINEXON user during the specified dates. For more information, see Configure KINEXON integration.

Tracing system installed with Field Service Management

This tracing system is not active by default. To use this tracing system for identifying potentially exposed employees, activate it and also configure the corresponding data source in Field Service Management.

For more information, see Emergency Exposure Management for field service agents.

Field Service Management tracing system

Tracing system	Query
Field service	Customers attended by an affected field agent during the specified time period. Also queries other field agents who interacted with the affected agent or visited the same customer as the affected agent during the specified time period.

Set up a tracing system for an exposure data source

Set up a tracing system for your exposure data source to identify potentially exposed employees by running the diagnostic requests for an affected employee.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

For more information about the available tracing systems, see Tracing systems in Emergency Exposure Management.

Procedure

1. Navigate to **All** > **Emergency Exposure Management** > **Administration** > **Tracing Systems**.
2. Click **New**.
3. On the form, fill in the fields.

Tracing System form

Field	Description
Title	Title of the tracing system. The title is displayed as an option for selection in the **Tracing system** list on the Diagnostic Request form.
Name	Name of the tracing system.
Parent	Tracing system for a group of other tracing systems having the similar type of input data source. If the tracing systems are in a group, only the parent tracing system displays in the **Tracing system** list on the Diagnostic Request form.
Active	Option for making the tracing system active. Only active tracing systems are available for selection as a data source for the diagnostic requests.
Requires dates	Option for enabling the start and end dates to specify a period for querying the data source for the tracing system. If selected, the **Start date** and **End date** fields appear when you select this tracing system on the Diagnostic Request form.
Processing script tab	
Condition	Condition to determine the tracing system data for the diagnostic request on selecting a parent tracing system. For example, if two tracing systems A1 and A2 have the same parent tracing system called A. In a diagnostic request, if you select A as the tracing source, the condition determines whether to query data from A1 or A2. For reference, you can review the condition scripts of the base tracing systems Cisco DNA Spaces and Mist System having the parent tracing system as Wi-Fi access log.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	This field appears only when a tracing system is selected in **Parent**.
Use parent processing script	Option for executing the processing script of the parent tracing system. The parent tracing system's processing script populates the potentially exposed employees data in the corresponding related list on the Diagnostic Request form. If you select this option, the current tracing system's processing script does not process. This field appears only when a tracing system is selected in **Parent**.
Processing script	Script to populate the potentially exposed employees data in the corresponding related list on the Diagnostic Request form.
Contact graph tab	
Legend icon	Icon representing the tracing system as data source for the potentially exposed contact's in the potentially exposed contacts visualization on the Case form. For more information, see Working on a case through contact tracing visualization.
Legend tooltip	Tooltip text that appears when you point to the legend icon.
Order	Order in which the icons appear in the Reason for exposure section.

4. Click **Submit**.

Result
The tracing system is created. The tracing system appears as one of the options in the **Tracing system** field on the Diagnostic Request form.

What to do next
- Associate a system property with a tracing system.
- Create or modify a diagnostic request task configuration.

Associate a system property with a tracing system

Associate a system property with a tracing system to enable additional control on the use of the tracing system's data source.

Before you begin
Role required: admin

About this task
For a list of system properties associated with various tracing systems, see System properties for tracing systems in Emergency Exposure Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Emergency Exposure Management** > **Administration** > **Tracing Systems**.
2. Open a tracing system to associate a system property.
   To associate a new system property with the tracing system, create it by clicking **New** in the System Properties related list and filling in the System Property form.

   For more information about the System Property form fields, see Add a system property.
3. Associate a system property with the tracing system.
   a. In the System Properties related list, click **Edit**.
   b. On the Edit Members form, move the required system properties from the **Collection** column to the**System Properties List** column.
   c. Click **Save**.

System properties for tracing systems in Emergency Exposure Management

System properties associated with tracing systems that are available in the Emergency Exposure Management application.

To configure the system properties available for a tracing system, navigate to **Emergency Exposure Management** > **Administration** > **Tracing Systems** and open the tracing system record.

For more information on setting up or modifying a tracing system, see Set up a tracing system for an exposure data source.

System properties for tracing systems installed with Contact Tracing

For more information, see Setting up Contact Tracing.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create or modify a diagnostic request task configuration

Create or modify a diagnostic request task configuration to auto-create a diagnostic request task in a diagnostic request. Based on the selected tracing system in the diagnostic request, the corresponding task configuration creates a diagnostic request task to identify potentially impacted employees.

Before you begin

The **Diagnostic Request Task Configs** module in the application navigator is available only if you have the Contact Tracing application installed.

Role required: admin

About this task

A diagnostic request task configuration is required only when a tracing system requires additional work to be performed to generate the diagnostic request report. For example, say you select the Wi-Fi access log tracing system in a diagnostic request, and Cisco DNA Spaces is the Wi-Fi input data source. You must work on a diagnostic request task to fetch potentially exposed employees by attaching a Wi-Fi access data file or generating a proximity report from the Cisco DNA Spaces portal.

Procedure

1. Navigate to **All** > **Emergency Exposure Management** > **Diagnostic Request Task Configs**.
2. Click **New**.
3. On the form, fill in the fields.

Diagnostic Request Task Config form

Field	Description
Name	Name of diagnostic request task configuration.
Import set table	Staging table in which records are imported from a data source before transforming those records.
Transform map	A set of field maps that define the relationships between fields in an import set and fields in the target table. For example, the target table to maps fields for Wi-Fi access data is Wi-Fi Access Register [sn_imt_tracing_wifi_access_register]. During transformation, data is copied from the Import Set table to the target table based on the transform map. A single import set field may be mapped to multiple fields on other tables.
Type	Data source type that is queried to identify the potentially impacted employees.
Active	Option for making the configuration active. Only active configurations can create a diagnostic request task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Instructions	Set of instructions to process and complete the assigned diagnostic request task.
Conditions tab	
Table	Diagnostic Request [sn_imt_diagnosis_diagnostic_request] table to check which data source is selected.
Condition	Conditions to get the selected data source in the diagnostic request.
Script condition	Script condition that evaluates any additional parameters.
Post processing tab	
Processing script	Script to run after the completion of the data import.

4. Click **Submit**.

Result
A diagnostic request task configuration for a data source type is created.

Identify potentially exposed users

When a user has indicated a health condition on a self-report, use Emergency Exposure Management to identify other users who might have come in contact with the affected user. You can analyze multiple data sources, such as location, meetings, workspace reservations, badge scans, and Wi-Fi access data of the affected user to identify potentially exposed users.

Before you begin
To query through multiple data sources, the Emergency Exposure Management requires the following applications, plugins, and configurations available on your instance.

Microsoft Office 365

Register and configure to scan Microsoft Outlook meeting data.

Contact Tracing

Badge reader scan, user daily contact log, Wi-Fi access log, handheld or wearable device proximity data, and visitor data.

Employee Health Screening and Contact Tracing

Scans visitor data.

Field Service Management (com.snc.work_management)

Scans field service task data.

Important:

If you are an on-premise customer with Microsoft Office 365 and you need assistance in configuring Emergency Exposure Management, contact your sales representative or contact Customer Service and Support at *https://support.servicenow.com/now?draw=case*.

Role required: sn_imt_diagnosis.diagnostics_admin or admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Note:
You cannot create or run a diagnostic request for affected users who have not consented to use their data for contact tracing. For more information, see User privacy consent for Contact Tracing.

Procedure

1. Navigate to **All** > **Emergency Exposure Management** > **Create New**.
   The **Report generation status** field is set to **Not Initiated** and the **Active** check box is selected.
2. From the **Affected user** field, select the user's name.
3. Click the lock icon () in the **Tracing system** field and select one or more tracing system options to query corresponding data sources.
   You can select multiple sources together for better identification of potentially impacted users.

Tracing systems and corresponding data source queries

Tracing system (Required application/plugin)	Query
Location	Users co-located with the affected user, for example, on the same floor or building.
Outlook meetings (Microsoft Office 365)	Users who accepted the same meetings as the affected user during the specified time period.
Workplace reservations (Workplace Core)	Users who had reservations for the same shifts as the affected user during the specified time period.
Badge reader (Contact Tracing)	Users who swiped their badge on the same badge reader devices as the affected user, during the specified time period.
Employee daily log (Contact Tracing)	The list of users with whom the affected users interacted during the specified time period.
Visitor log (Contact Tracing and Employee Health Screening)	The list of visitors who interacted with the affected user during the specified time period. Visitors who are invited by the affected user and have been screened through and let in are queried.
Wi-Fi access log (Contact Tracing)	Users who used the same Wi-Fi access points as the affected user during the specified dates. Wi-Fi access log data used to identify potentially impacted users depends on the Wi-Fi location preferences and the available integrations. For more information, see Retrieving Wi-Fi access log data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tracing system (Required application/plugin)	Query
	Note: Data received via a real-time API will be for a period based on the data retention policy of your Wi-Fi service provider.
Handheld/Wearables (Contact Tracing)	Users using handheld or wearable devices in the close proximity with the affected user for more than the permissible time during the specified time period.
Kinexon SafeZone (Contact Tracing)	Users who with KINEXON wearables who were in close proximity with other KINEXON users during the specified dates. Data acquired from the KINEXON SafeZone API. Requires an active KINEXON integration. For more information, see Configure KINEXON integration. **Note:** Users who are required to agree to a privacy consent but have not done so are excluded even if they are potentially exposed contacts.
Field service (Field Service Management)	Customers attended by an affected field agent during the specified time period. Also queries other field agents who interacted with the affected agent or visited the same customer as the affected agent during the specified time period.

4. When required for a selected tracing system, provide the start and end dates.
   a. In the **Start date** field, provide the estimated date of infection.

      Because the infection window that you're concerned about may vary, pick a start date such as 14 days prior to the date of reported symptoms.

   b. In the **End date** field, provide the date of reported symptoms, at least one day prior to today.
5. Click **Save**.
   Related lists appear that are filled in after you run a diagnostics report.
6. Click **Run Diagnostics**.
   A scheduled job fetches potentially impacted user data from the selected sources and loads the data in corresponding related lists. Refresh a list to see the potentially impacted users immediately.

   If you selected the **Handheld/Wearables** option, a diagnostic request task is created. Follow the instructions in the task to fetch the potentially exposed users.

   If you selected the **Wi-Fi access log** option, the Wi-Fi data queried is based on the location preference set for the affected user's location. The available options are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Mist Systems integration: The Wi-Fi data is fetched from Mist Systems when you run the diagnostic request.

  If the site network is Bluetooth LE-enabled and the organization has provided users with a BLE device, the Wi-Fi access using the BLE devices is used to identify potentially exposed users.

- Cisco DNA Spaces integration: The Wi-Fi data is available based on the Cisco tier value set in the *sn_imt_tracing.wifi_log_cisco_tier* property:
  - If the *wifi_log_report* value is set, the data is imported from the Wi-Fi access data files for the specified days from the SFTP server and queried by the location path to identify potentially exposed users.
  - If the *proximity_report* value is set, a diagnostic request task is created to fetch the potentially exposed users. Follow the instructions in the task to fetch data on potentially impacted users from the selected data source. For more information, see Fetch potentially exposed user data from a data source.
- Manual import: The Wi-Fi data is imported from a Microsoft Excel spreadsheet into the Wi-Fi Access Register table.

7. **Optional:** Add manually the potentially affected users, for example, users who visited a location with an affected user.

   a. In the Impacted users added manually list, click **New**.

   b. Select the potentially affected user.

   c. Optional: Add comments about why you added the user.
   Entering comments helps identify other users who might be potentially impacted by this user if this user starts to show symptoms.

   d. Click **Submit**.

   The user appears in the Impacted users added manually related list.

Result

The related lists display potentially impacted users. The Impacted visitors, Impacted customers, and Impacted field agents related lists appear only if relevant users exist.

Note:
Users who have not consented to use their data are filtered out from the list of potentially impacted users. However, you can add them to the potentially impacted users list manually.

Related lists and corresponding descriptions

Related list	Description
All Impacted users	All users who might have been potentially exposed. This list is a combination of all the records in the other related lists. Under the **Tracing system** column, you can see the source of the exposure for an user.
Impacted users added manually	This list is empty unless a user with the sn_imt_diagnosis.diagnostics_admin role manually adds additional potentially impacted users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Related lists and corresponding descriptions (continued)

Related list	Description
Impacted visitors	Visitors invited by the affected user who cleared the health screening and interacted with the affected user during the specified time period.
Impacted customers	Customers added from the field service work order analysis. Potentially impacted customers are determined by the work orders attended by an affected field agent between the specified dates.
Impacted field agents	Field agents added from the field service work order analysis. Potentially impacted field agents are determined if they interacted with an affected agent or visited the same customer as the affected agent between the specified dates.

Trouble?

If the diagnostics fail to run, click the **Show related jobs** link to check the status of all jobs that have been launched. You can view the details, including the log message, to determine the reason of failure.

Note:
Failed jobs are automatically retried three times, the default setting in the Emergency Exposure Management properties. To retry the job after you fix the issue, click **Reprocess**.

What to do next

Depending on the applications and plugins installed, you can take the following actions:

- Click **Download Report** to download a spreadsheet listing all affected users. The report includes the email address and location of each user, and the source of identification, such as location, workplace reservation, collaboration, badge reader data, or field service work orders. For manually added users, the comment is included.
- Click **Download Visitor Report** to download a spreadsheet listing all potentially exposed visitors who met the affected user. The report includes the email address and name of each visitor.

  Note:

  The button is available only when you have selected the **Visitor log** tracing system.

- The case manager can create a case for the affected user and add potentially impacted users from the related list to the case to follow up on their health status. For more information, see Create a case for an affected employee.
- The manager of the affected field agents can take further actions such as blocking their future work order assignments. For more information, see Emergency Exposure Management for field service agents .

Fetch potentially exposed user data from a data source

Work on the diagnostic request task to get information about potentially impacted users from a selected data source and populate the corresponding related lists on the Diagnostic Request form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_imt_diagnosis.diagnostics_admin or admin

About this task
The diagnostic request task is created from the diagnostic request task configuration for the data source type selected in the Diagnostic Request form. For more information, see Create or modify a diagnostic request task configuration.

Procedure
1. Navigate to **Emergency Exposure Management** > **All**.
2. Open a diagnostic request from the list.
3. In the Diagnostic Request Tasks related list, open a diagnostic request task.
4. Follow the instructions in the task to fetch data on potentially impacted users from the selected data source.
5. If the task configuration requires you to manually close the task, select **Closed** in the State list.
6. Click **Update**.

Result
The state of the diagnostic request task updates to Close. The potentially exposed users from the data source are added to the corresponding related list on the Diagnostic Request form.

Fetch potentially exposed user data from Cisco DNA Spaces

Fetch potentially exposed user information from the Cisco Wi-Fi access log data and populate the corresponding related lists on the Diagnostic Request form.

Before you begin
Role required: sn_imt_diagnosis.diagnostics_admin or admin

Procedure

Access the potentially exposed user information through an attachment having the Cisco Wi-Fi access log data or by generating a report through the Cisco DNA Spaces portal.

Result
Cisco Wi-Fi access log data includes the proximity level of the users connected to the Cisco Wi-Fi network in the workplace. Based on the proximity level options set by the *sn_imt_tracing.wifi_proximity_preference* property (within 30 feet of the router, on the same floor, or in the same building), the potentially impacted users are identified from the Cisco Wi-Fi access logs. The information about these potentially exposed users populates the corresponding related list on the Diagnostic Request form.

Fetch potentially exposed user data from Zebra MotionWorks proximity report

Upload a spreadsheet containing the Zebra MotionWorks proximity data to fetch a list of potentially exposed users and populate the corresponding related lists on the Diagnostic Request form.

Before you begin
You must have downloaded the Microsoft Excel file from the Zebra MotionWorks Portal.
Role required: sn_imt_diagnosis.diagnostics_admin or admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Click the manage attachments icon ().
2. In the Attachments window, click **Choose file** and select a Zebra MotionWorks proximity report spreadsheet.
3. Select **Closed** in the State list.
4. Click **Update**.

Result

The Zebra MotionWorks proximity report contains a list of users equipped with handheld or wearable devices who were in close proximity to the affected user. The users who were inclose proximity for more than the permissible time with the affected user during the specified dates are identified from this proximity report. The information about these potentially exposed users populates the corresponding related list on the Diagnostic Request form.

Domain separation for Emergency Exposure Management

The following table lists the domain separation use cases for service providers (SPs) using this application.

Note:
This information is subject to change: Limit use to SPs only.

Domain separation use cases for SPs

Use case	Functions	Limitations
SP Internal - SP uses the application for internal employees who might have collaborated with an affected internal employee.	Yes	None
SP External - SP uses the application to identify employees (SP or tenant) who might have collaborated with an affected employee (SP or tenant).	No	Without the domain column, there is no base system platform security that prevents an SP user who has access to the application from seeing tenant information they would otherwise be restricted from seeing. “Limiting” Application Properties for Outlook settings.
Tenant -Tenant uses the application to identify employees who might have collaborated with an affected employee.	No	Without the domain column, there is no base system platform security that prevents a tenant user with access to the application from seeing other tenant information they would otherwise be restricted from seeing. “Limiting” Application Properties for Outlook settings.

Some modules in the Emergency Exposure Management application are affected by domain separation.

CREATE NEW & ALL module (Diagnostic Request)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

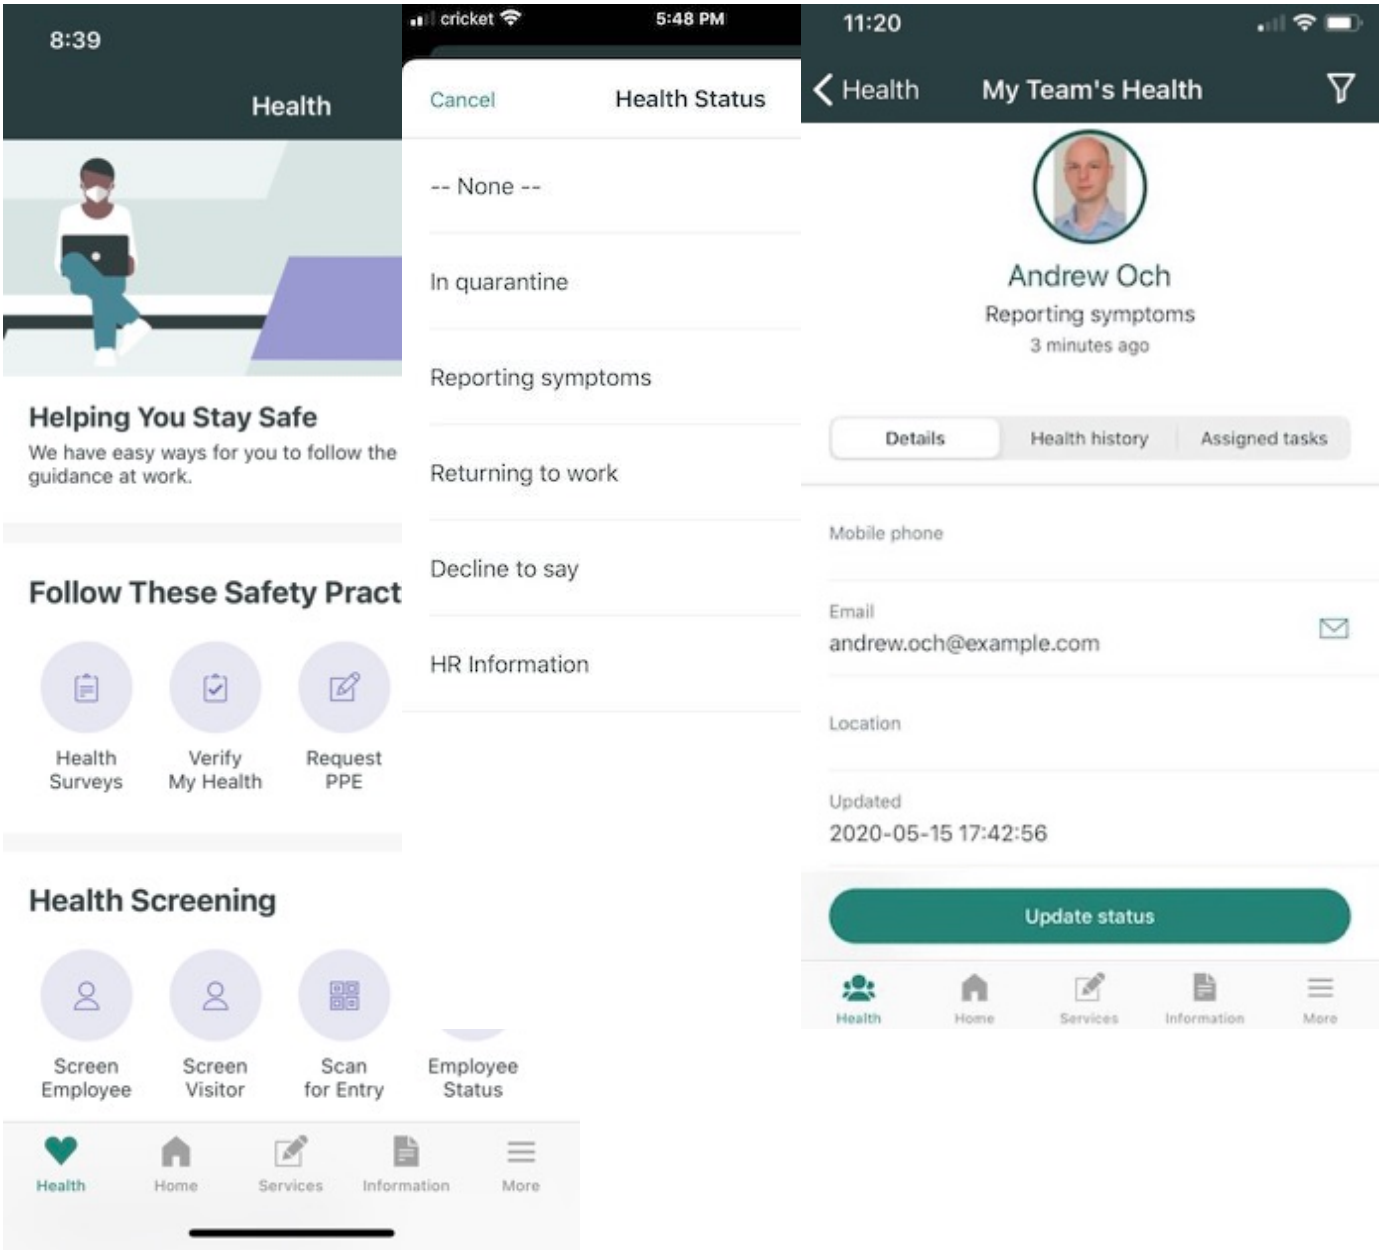
- No domain column row protections or business logic exist.
- Creates a Diagnostic Event based on Outlook meetings, exposure to an affected user, or the user's location, to identify users who might have been potentially exposed through collaboration.
- Results from the Diagnostic Event return back to the Diagnostic Request or can be manually added.

Note:
Because the Diagnostic Request record contains the User (Table: Sys_User) and Location (Table: Cmn_Location) fields, visibility to those reference fields is affected by domain separation. If a user is in a domain that does not have the appropriate visibilities granted, those fields appear empty in the Diagnostic Request even if they contain data.

PROPERTIES module

Standard Application Properties Page, all settings are global for the application.

Note:
This property limits the ability of Outlook support in a domain-separated environment because tenants have different settings from the service provider.



- No domain column row protections or business logic exist.
- Captures the Outlook or Location responses and sends them back to the Diagnostic Request.
- Purely an admin function.

Safe Workplace for mobile

Manage the essential steps for return to workplace from anywhere using the Safe Workplace for mobile app.

The ServiceNow® Safe Workplace mobile experience enables organizations to manage the essential steps for returning users to the workplace from anywhere with the Now Mobile app. With an intuitive mobile design and user-friendly interface, organizations can deliver a seamless return to workplace experience, enabling users to complete health screenings and surveys, set up visits, make reservations, request PPE, and more to support their health and safety.

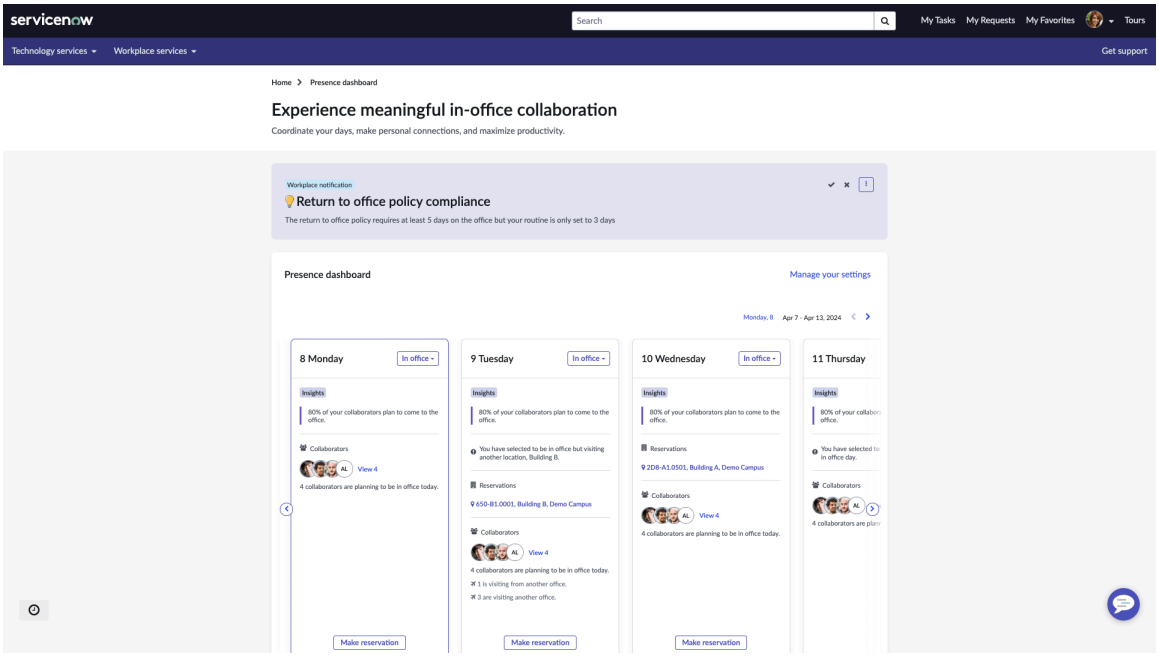
Manage  Manage employee routines and collaborators.	**Components**  Get details about the components installed and key features of Workplace Concierge.	**Reference**  Get details about the forms and lists used in Workplace Concierge.

Explore Workplace Concierge

The Workplace Concierge application is a Workplace Service Delivery application designed to provide employees with real-time insights to optimize their workplace experience.

The Workplace Concierge application helps employees plan their on-site presence, improve in-person interactions using team collaboration, and set a routine to indicate the days that they plan to be in the office. The Concierge experience, that is, the Employee Presence module is available in the Workplace Service Portal, Employee Center, and also on the Now Mobile app.

Presence dashboard



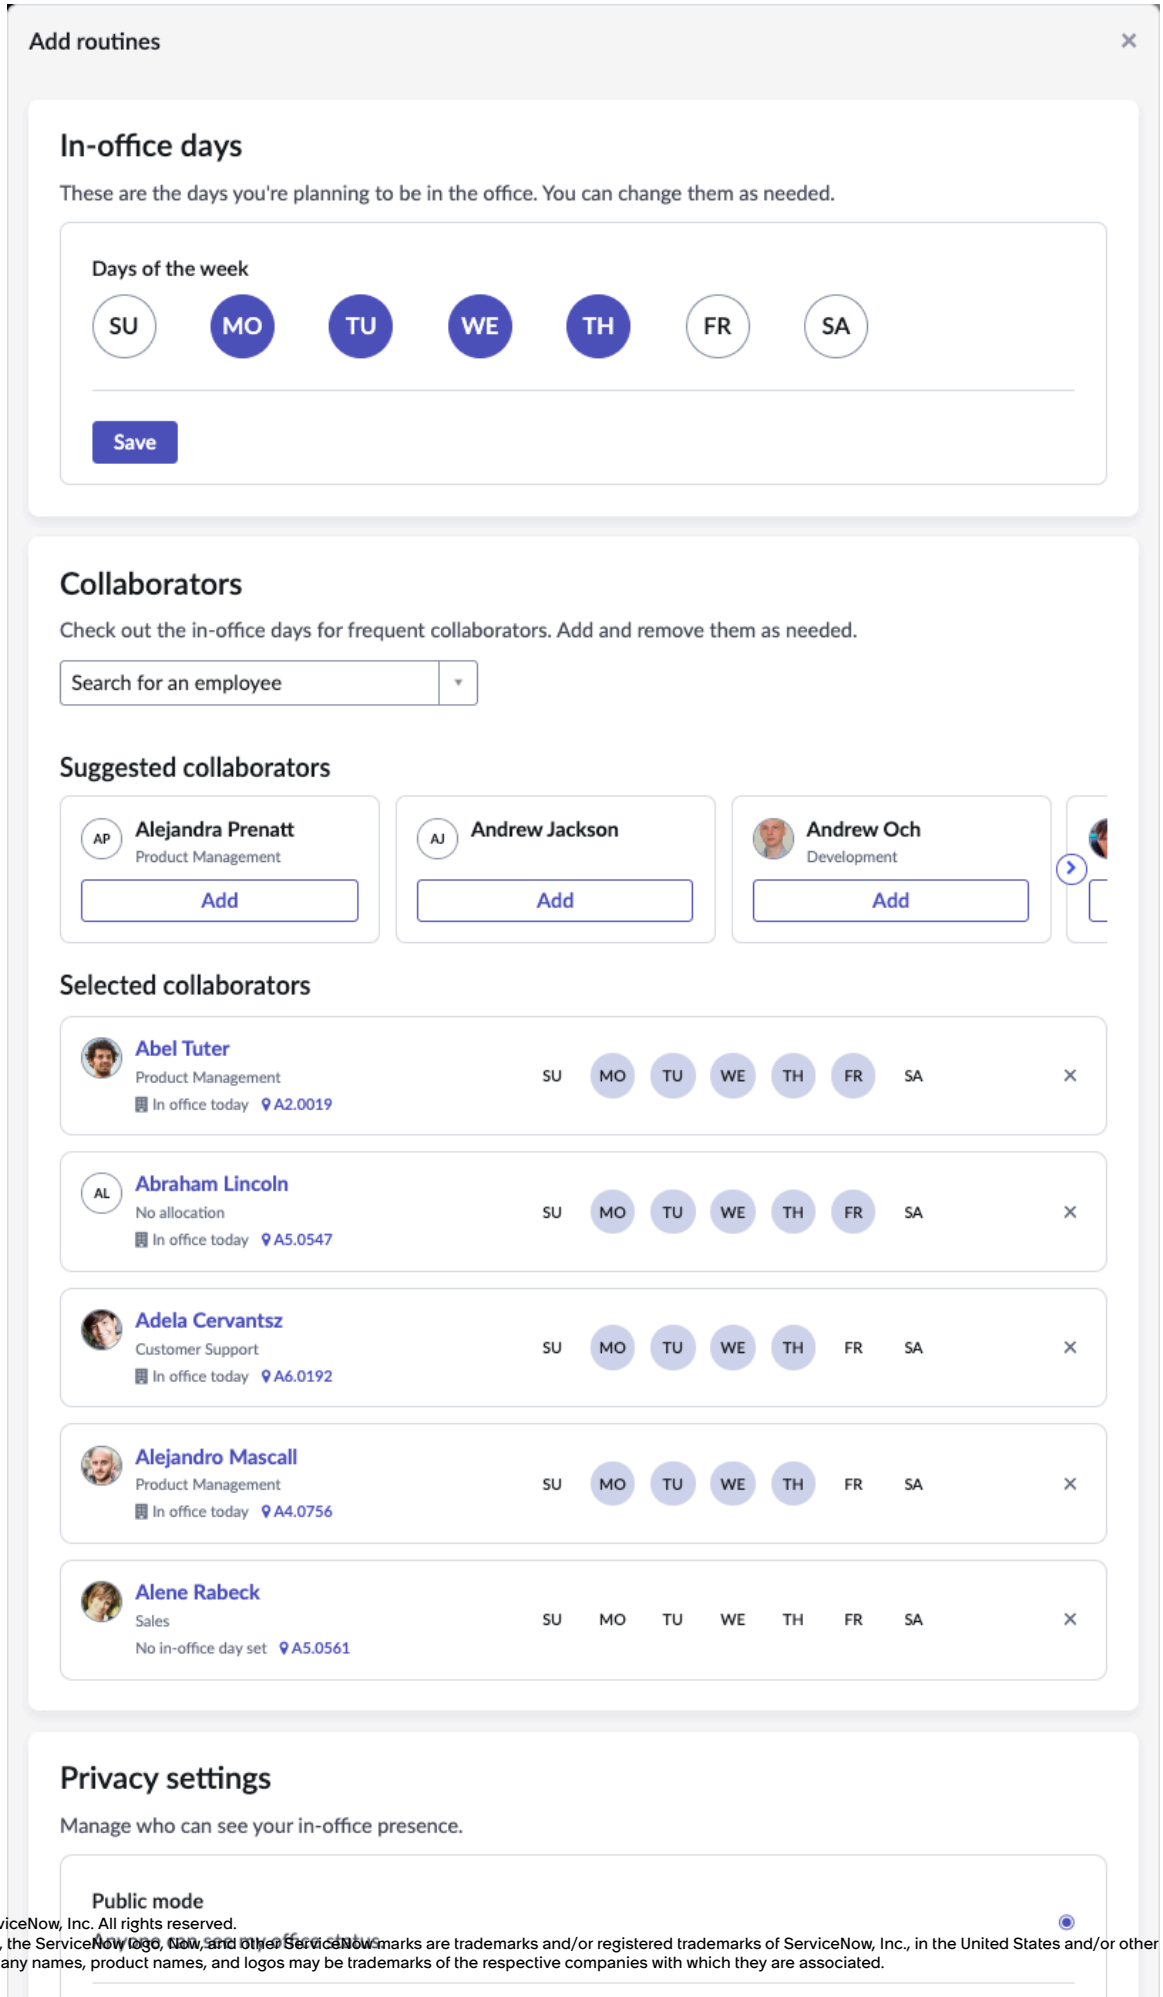
The Presence dashboard can be used to view and optimize employee presence in the workplace. Employees can create exceptions to update their in-office days without changing their routine and create reservations on the days that they're planning to visit the office. Facility managers can use data from the dashboard to plan office space that supports the company's work needs.

The dashboard contains a calendar section with a personalized week view that displays the following information:

- Employee routine
- Routine exceptions
- Routine exceptions at an alternate location
- Collaborators planning to be in the office
- Calendar insights about collaborators and reservations on a specific day
- Personal insights that inform employees about being in office

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Presence dashboard

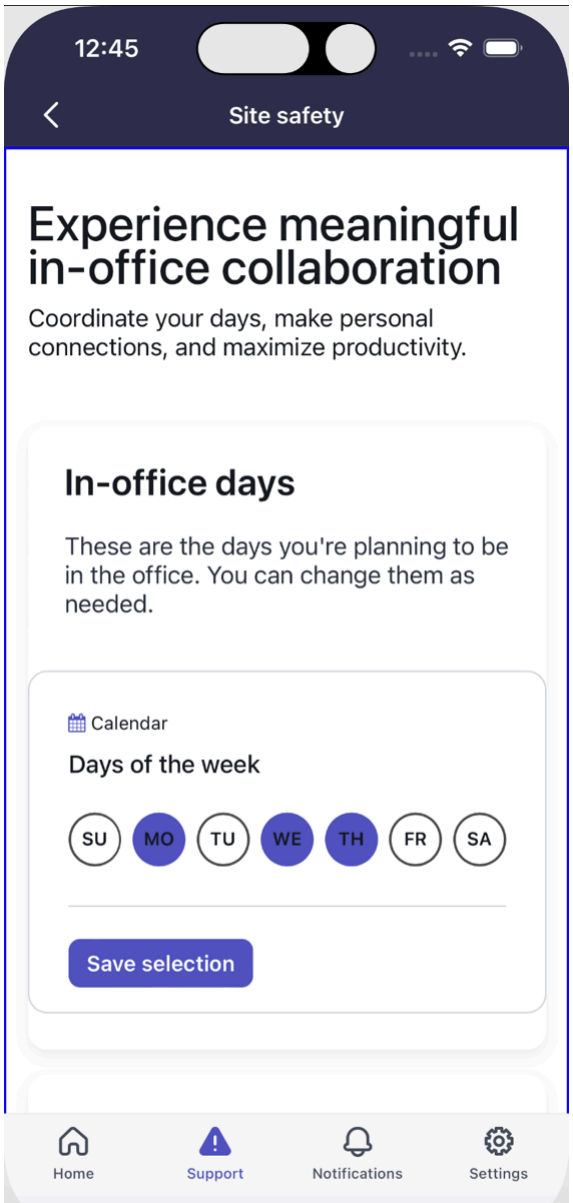


Note:

- Dashboard insights are generated after a set interval, which can be configured by the admin.
- Calendar insights are generated when you open the dashboard and are updated every 30 minutes.

Employee presence routine

The Workplace Concierge application enables employees to set their expected presence in the office. An employee can set the days of a week that they're present at the office. An employee can also add their colleagues, managers, or stakeholders as collaborators to make them aware of their expected in-office presence during the week. By adding collaborators, employees can coordinate their in-office presence for better interaction, planning a meeting, or socializing.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

With the help of collaboration, employees can add each other as collaborators to be aware of each other's expected in-office days. They can plan their routines based on their work progress, meetings, plannings, and more. At any time, an employee can modify their in-office routine or set an exception for better interaction with the collaborators, boosting in-person interactions and performance.

An employee can set their in-office days using the Workplace Service Portal, the Employee Center, and also the Now Mobile app.

As an admin using the Employee Presence module in the Workplace Concierge application, you can perform the following:

- Make updates at any time, if necessary.
- View the collaborators added for an employee. You can view the details of the employee to whom the collaborator is added.
- View routine-related details such as the routine start and end date. At any time, only one employee routine is active. So, when an employee updates their routine, a record is created and the old record becomes invalid and is generated with an end date.
- View routine exceptions raised by employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add or remove sections displayed on the Presence dashboard.
- Set the first day of the week in the calendar section using the *glide.ui.date_picker.first_day_of_week* system property.
- Apply the filter on collaborators using the *sn_wsd_concierge.collaborators_filter* system property. Based on the filter, the collaborators are displayed to employees while adding a collaborator. For more information about setting the property, see Properties installed with Workplace Concierge.
- Create insights for employees, which are personalized and displayed on the Presence dashboard and the calendar section. For more information, see Create custom insights using Proactive Prompts.
- Configure the changing the Signal Configuration schedule to update interval of dashboard insights.

Workplace reservation suggestions

Workplace Concierge and Workplace Core administrators can configure workplace suggestions while suggesting a space to an employee for reservation. For more information, see Configure workplace space suggestions for employees.

The employee can set their workplace schedule and in-office preferences in Workplace Service Delivery for Mobile. When suggesting a space to an employee using the Workplace Service Delivery for Mobile, application uses these preferences. For more information see, Manage workplace schedule and in-office presence using Workplace Service Delivery for Mobile.

Configure Workplace Concierge

Install and configure the Workplace Concierge application.

Install Workplace Concierge

Install the Workplace Concierge application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.

2. Verify that the Workplace Core plugin is activated.

Use the following details when required:

- Name of the application: Workplace Concierge
- ID of the application: sn_wsd_concierge

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Search for the application by its name (Workplace Concierge or ID (sn_wsd_concierge). If you cannot find the application, you may have to request it from the ServiceNow Store.

3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Concierge.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Click **Install**.

Configure calendar sections on the Presence dashboard

As an admin, add or remove calendar sections from the Presence dashboard.

Before you begin

Role required: sn_wsd_concierge.admin

Procedure

1. Navigate to **All** > **Employee Presence** > **Calendar Sections**.
   The default calendar sections are as follows:
   - WSD Presence Collaboration Section
   - WSD Presence Exception Section
   - WSD Presence Insights Section
   - WSD Presence Reservation Section

   Note:
   - The WSD Insights Section is available if you've installed Proactive Prompts.
   - The WSD Presence Reservation Section is available if you've installed Workplace Reservation Management.

2. Change the section order of appearance by editing the values in the Order column.
3. **Optional:** Add a section to the calendar.

   Important:
   Adding a widget that is not optimized for the Presence Dashboard can lead to unexpected results in the UI. If you want to create a widget, make sure that you copy and modify a default widget.

   a. From the Employee Presence Calendar Widgets table, select **New**.

   b. On the Employee Presence Calendar Widget form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For a description of the field values, see Employee Presence Calendar Widget form.

c. Select **Submit**.

Configure workplace space suggestions for employees

Configure the workplace space suggestions table to fetch workspace suggestions. Application provides workspace suggestions based on employee preferences when they are reserving a space.

Workplace Concierge and Workplace Core administrators can configure workplace suggestions while suggesting a space to an employee. Employees can have access to a space matching their needs to complete a set of activity like reserving a space, selecting their in-office presence days, preferred collaborators, and workplace services.

Note:
The option to add your workplace preferences and suggestions are also available on the Employee Center portal. Employees are expected to use the Workplace Service Delivery for Mobile app to reserve a space and to view or modify their preferred workplace locations and workplace schedule suggestions. Reserve a workspace using the Workplace Service Delivery for Mobile app. Get desk suggestions based on your preferred location, past and future reservations, proximity (preferred collaborators), favorite spaces, neighborhoods, and standard services.

When an employee searches for a workspace using Workplace Service Delivery for Mobile, the application provides space suggestions to an employee based on the following criteria:

- Availability of the space based on the Reservable module (Desks) configuration in Workplace Reservation Management
- Employee presence preferences set in Workplace Concierge for primarily (or solely) suggesting the building or location the employee plans to visit while in office.
- Favorite locations (campus, building, floor, or neighborhoods) set by an employee
- Preferred workplace services added in workplace preferences
- Past and future reservations data
- Proximity (preferred collaborators)
- Workplace services

The employee can set their workplace schedule and in-office preferences in Workplace Service Delivery for Mobile. When suggesting a space to an employee, application uses these preferences. For more information see, Manage workplace schedule and in-office presence using Workplace Service Delivery for Mobile.

Set Employee Presence

User Space Suggestions

Employee recommended workspace suggestions are cached in the User Space Suggestions (sn_wsd_core_user_space_suggestions) table record. This table is automatically updated when employees use the workplace preferences option to update their reservations, workplace services, presence and collaborators information. Application uses this cached data while proposing a workspace suggestion to an employee.

Before you begin

The following plugins are required:

- Workplace Core
- Workplace Concierge
- Workplace Reservation Management
- Workplace Space Management

Note:
Administrators don't have to configure or make updates to this table record. The data in this table is prefilled automatically based on employee presence and workplace preferences data.

Role required: sn_wsd_core.admin, sn_wsd_concierge.admin

Procedure

1. Navigate to **All** > **Workplace Concierge** > **Workplace Suggestions** > **User Space Suggestions**.

   Note:
   The table record summarization is for illustration only and administrators don't have to make changes to this record.

2. Select **New**.
   In the User Space suggestions new record, complete the following field information.

User Space Suggestions

Field	Description
User	Indicates an employee user.
Space types	Indicates the Space type column option in the Spaces table record. For example, Workplace/Desks. For more information, see: ○ Properties installed with Workplace Concierge ○ Add a space using Workplace Space Management ○ Add a space type configuration
Building	Indicates the building proposed to an employee or a building selected by an employee based on workplace preferences and suggestions. For more information, see Manage workplace schedule and in-office presence using Workplace Service Delivery for Mobile and Set Employee Presence.

Space suggestion Configuration

Administrators can configure space suggestions for employees to help employees get the most preferred space. Employees can get their preferred workplace suggestions while searching for a space using the Workplace Service Delivery for Mobile. Workplace suggestions for an employee are derived from employee presence data, location preferences, favorite workspaces, past and future reservation data, preferred collaborators, and standard services.

Before you begin

The following plugins are required:

- Workplace Core
- Workplace Concierge
- Workplace Reservation Management
- Workplace Space Management

Note:
Load the demo data available with Workplace Core after installing the application. The demo data available with Workplace Core provides sample data types to illustrate Space Suggestion Configuration table [sn_wsd_core_space_suggestion_configuration] use. If you're using demo data or product data (seed data), some fields are pre-filled. If you aren't using the demo data, you can configure the space suggestions table record as required.

Role required: sn_wsd_core.admin, sn_wsd_concierge.admin

Procedure

1. Navigate to **All** > **Workplace Concierge** > **Workplace Suggestions** > **Space Suggestion Configuration**.
2. Select **New**.
3. Fill in the form fields.

Note:
Make sure only one record exist for each preference type.

Space Suggestion Configuration

Field	Description
Suggestion type	Option to select a suggestion type to display preferred workplace suggestions to employees in the search results when they are reserving a space. Select any of the following Suggestion types: ○ Location: Location set in the Employee's workplace profile is suggested as the preferred workplace location. Employees can change their preferred location (Campus, building, Floor) pm the in-office preferences tab on Workplace Service Delivery for Mobile. ○ Favorites: Spaces favotired by an employee is prioritized and favorite spaces show up first in the search results when an employee searches for a workspace. ○ Past and Future reservations: Workspace suggestions based on employee's past and future reservation data is considered and prioritized while suggesting a space to an employee. ○ Proximity: Employee's preferred workplace collaborators. Preferred collaborators and their in-office days or workday schedule is taken into consideration when proposing a space to an employee. ○ Standard services: Workspace suggestion based on preferred workplace services by an employee. For more information, see Manage your in-office presence preferences and Set Employee Presence.
Weight	Option to provide a weight (integer value) to prioritize the suggestion type while proposing a space to an employee. If the weight given is higher for a **Suggestion type**, application uses the higher weight to prioritize and suggest a space in the search results when proposing a workspace to an employee. Suggestion types with higher weight are ranked first in the search results when an employee searches for a space. For example, if the Suggestion type **Location** is having the weight value of 33, **Proximity** has 32, and **Favorites** has 12, **Location** is given more preference and ranked higher in the search result. Employee's preferred location is

Field	Description
	suggested first to an employee in the search results, followed by **Proximity**, and **Favorites**.
Active	Option to set the check box value to true.
Suggestion Tag	Option to add a tag or label for a space suggestion type. For example,the tags can be added as**Preferred services**, **Near Collaborators**, **Preferred location**, **Your favorite**,**Reserved frequently**, and so on. The tags are displayed on the **Desk suggestions** card in Workplace Service Delivery for Mobile. For more information, see Create a reservation for a day in Workplace.

4. Select **Submit**.
5. Set the properties in Workplace Concierge for employee to enable workplace suggestion types.
   For more information, see Properties installed with Workplace Concierge.

   After the configuration is complete and required properties are enabled, employees can start managing their workplace schedule and preferences. For more information, see Manage workplace schedule and in-office presence using Workplace Service Delivery for Mobile.

Set Employee Presence

Manage Workplace Concierge - Employee Presence

Manage Employee routines, collaborators, and exceptions. Monitor the routines, collaborators, and exceptions created by employees.

View employee presence modules

Track the routines and exceptions created by employees and the collaborators added by employees.

Before you begin

Role required: sn_wsd_concierge.admin

About this task

Using the Employee Presence module, you can perform the following:

- Add or view routine details such as the workplace profile associated with the routine, routine start and end time, and the in-office days set in the routine.
- Add or view the presence exceptions for employee in-office days or remote days.
- Add or view collaborators added by employees.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Presence**.
2. View employee routines by selecting the Routines module.
   A list of routines created in the application is displayed.

   Note:
   The list contains a filter that hides inactive routines.

3. View the routine exceptions by selecting the Exceptions module.
   A list of exceptions created by employees is displayed.

   Note:
   Records that are older than six months are removed from the list.

4. View the collaborators of employees by selecting the Collaborators module.
   A list of your collaborators is displayed.

Create custom insights using Proactive Prompts

Use Proactive Prompts to create insight sections for the employee presence dashboard.

Before you begin

Note:
To create insights, you must install Proactive Prompts version 3.1 or later.

Role required: admin

About this task

As an admin, you can use Proactive Prompts to create insights for employees. These insights are displayed on the presence dashboard and the calendar sections. For more information about Proactive Prompts, see Proactive Prompts.

For information about the default insights installed with Workplace Concierge, see Insights installed with Workplace Concierge.

Procedure

1. Create a signal data source for the insight.
   For more information, see Create a data source for a signal in Proactive Prompts.
2. Navigate to **All** > **Proactive Prompts** > **Signal Configurations**.
3. Select **New**.
4. In the **Channels and actions** field, enter `Presence dashboard`.
5. In the **Category tags** field, enter one of the following values.
   - Presence Calendar Insight: Creates an insight for the calendar section of the presence dashboard.
   - Presence Dashboard Insight: Creates an insight for the presence dashboard.
6. In the **Datasource** field, select the signal data source that you created earlier.
7. In the **Schedule** field, select the **On demand** schedule.

   Note:
   The on demand schedule is applicable for Calendar insights. For more information about signal schedules, see Configure signal schedules in Proactive Prompts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. From the **Receiving user** list, select **Employee**.
9. Fill in the remaining fields based on your requirement, then select **Submit**.

   For a description of the field values, see Signal configuration form.

   For more information about creating a signal configuration, see Create a signal in Proactive Prompts.

Result
You've configured a signal that displays the insight to the user in the scheduled frequency.

Set Employee Presence

Set your in-office days. Collaborate with your coworkers and plan your meeting and in-offce collaborations efficiently.

Set in-office days

As an employee, using the Workplace Service Portal and the Employee Center, you can set your presence at the office.

Before you begin
Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to the employee presence dashboard from one of the following locations.

2. On the Presence dashboard page, select **Manage your settings** to open the Add Routine window.

   Note:
   If you're visiting the dashboard for the first time, select **Get Started**.

3. Under the In-office days section, select the days of the week when you're planning to be at the office.

   Example
   For example, if you're planning to be in the office on Monday and Wednesday, select **MO** and **WE**.

4. After setting the days, select **Save**.
   The selection is saved.
5. **Optional:** You can also add a co-worker as your collaborator and view on what days they're present in the office.
   For more information, refer to Add a collaborator.

Result
You have set your in-office days. At any time, you can modify your selection, for more information, refer to Update your in-office days.

Add a collaborator

Coordinate your in-office days with your co-workers. Add them as your collaborators and view the days that your co-workers are present at the office.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to the Presence dashboard.
   For more information, see the steps mentioned here.
2. On the Presence dashboard page, open the Add Routine window by selecting **Manage your settings**.

   Note:
   If you're visiting the dashboard for the first time, select **Get Started**.

3. **Optional:** Add collaborators from the Suggested Collaborators section.

   Note:
   Suggested collaborators appear after you've added collaborators and reopened the Add Routine window.

4. In the Collaborators section, search for the employee that you want to add as a collaborator.
5. Select the employee from the search results.
   The employee is saved as your collaborator.

Result
The selected employees are added as your collaborators. You can view their in-office routine from the Employee Presence page.

At any time, you can also remove a collaborator. For more information, see Remove a collaborator.

Update your in-office days

Update your in-office days at any time using the Presence dashboard.

Before you begin
Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to the Presence dashboard.
   For more information, see the steps mentioned here.
2. On the Presence dashboard, open the Add Routine window by selecting **Manage your settings**.
3. In the In-office days section, change your existing selections based on your requirement.
   - Select a day to set your in-office presence.
   - Clear a selection to set a remote presence.
4. After setting the days, select **Save**.
   The selection is updated.

Remove a collaborator

Remove an existing collaborator if you don't want to know they routine anymore.

Before you begin
Role required: sn_wsd_core.workplace_user

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

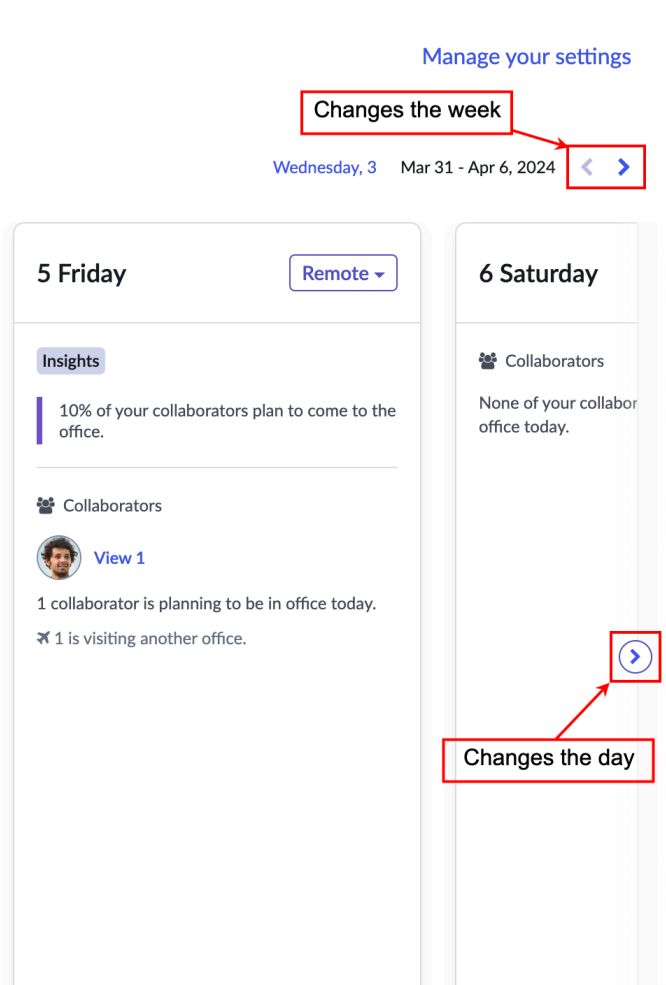
Procedure

1. Navigate to the employee presence dashboard.
   For more information, see the steps mentioned here.
2. On the Presence dashboard page, select **Manage your settings** to open the Add Routine window.
3. In the Collaborators section, under Selected Collaborators, remove a collaborator by selecting the Remove collaborator icon (✕).
4. In the confirmation window, select **Yes, remove**.

Result
The collaborator is removed from your routine.

Update your in-office days as exceptions

As an employee, use the presence dashboard to update your in-office days without changing your routine.



Before you begin
Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to the employee presence dashboard.
   For more information, see the steps mentioned here.
2. Navigate to the day that you want to update.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use the navigation arrows to change the day or week of the calendar.

- Navigate to the current day by selecting the date link.

3. From the drop-down list of the calendar card, select one of the following options.
   - Select **Remote** to change your presence to remote.
   - Select **In-office** to change your presence to your assigned office.
   - Select **Visit another office** to change your presence to an office different from your assigned office, and then select the office that you'll visit.

   An exception is automatically created for the selected day and your presence is updated.
4. **Optional:** Select **Make a reservation** to reserve a space for the day you're visiting the office. For information about making a reservation, see Create a reservation.

Managing presence privacy settings

Manage whether employees can view your in-office presence by selecting your privacy settings.

If you set your presence to private, your routine is hidden from other employees, and you aren't displayed as a collaborator on the Presence dashboard calendar.

Manage privacy settings from the Presence dashboard

Manage your privacy settings from the Presence dashboard.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As a workplace agent, the application enables you to perform the following actions:

- You can view all the workplace cases created using the applications.
- The application displays the cases in the following categories:
  - Your work overview with numbers.
  - Your assigned work with the details of the cases.
  - Your assignment group's work.
  - Unassigned work in your assignment group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- You can work on the cases assigned to you based on their state such as Critical, Open, Resolved
- You can assign cases and tasks to another workplace agent.
- You can update cases and tasks on the go whenever you progress on it or to add any extra information.
- You can navigate to the workplace location on which the workplace case or task is created using the map location. For a move case, you can view both the 'From location' and the 'To location'.
- For a maintenance case, you can view details such as the asset included, product's model and more.
- You can also handle workplace cases and tasks that are associated with the cases individually.
- You can upload attachments to a case at any time.

Workplace Agent for mobile - Capabilities

As a workplace agent, use the Workplace Agent for mobile to handle cases raised from the Workplace Service Delivery applications on your mobile device. You can view, edit, update, and resolve a case from anywhere.

When you log in to the application as an agent, the application displays all the workplace cases that are associated with you. You can get details such as the number of cases that are assigned to you, the details of the cases that are assigned to you, the cases that are assigned to your assignment group, and also the unassigned cases that belong to the agent assignment group.

You can use a quick action to create a case or task without having to connect to a parent case. Use the search icon from the top-right corner to search for cases, tasks, articles, services and people from the Work view page.

The launch screen displays information helpful in managing and resolving cases.

- You can view the workplace case-related information on the **Work view** tab. Refer to the "Case and task information" section for more details.
- Details of the cases/tasks that you're handling in the **My work** section on cards. You can swipe the list to the right to view more cases and also select **See all** to view a complete list of all the cases in a separate screen.
- Searchable knowledge base articles created by your organization on the **Articles** tab.
- Notifications of the cases that have breached SLAs and others on the **Notifications** tab.
- Cases or tasks that you have saved for a quick view or for any other reason on the **Saved** tab.
- Modify settings related to your profile on the **Settings** tab. You can also switch to offline mode so you can work without an internet connection and then synchronize the changes when you return to online mode.

Workplace case details

You can view the full details of a workplace, maintenance, relocation or room configuration case and the tasks associated with the case. The case details view is similar to the view you get when you open the case in a native view on a desktop or laptop.

As a workplace agent, you can work on any case based on its priority, assignment status, current state and more. The **Work view** displays cases based on different categories to help you get started.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

There are different screens with case details depending on the type of workplace case that you open such as:

- Workplace case
- Workplace reservation case
- Move case
- Preventive maintenance case
- Corrective maintenance case

For example, if you open a regular workplace case, the details of the case are displayed in a separate **Workplace case details** screen.

The case details screen for all types of cases displays the complete details of the case along with the related lists.

The default view of the case details provides the following options:

- **Location pin**: Select the Location pin ( ) to view the location pin of the workplace location on the floor map above the related lists.
- **Save**: The **Save** option ( ) enables you to save the case in case you want to view it easily in a single window. You can view the saved cases in the **Saved** tab at the bottom of the screen.
- **Related lists**: The following related lists are displayed:

  Details

  Displays the details of the case such as the description, the workplace service using which the case is requested, the employee for whom the case is requested, the user who opened the case, the workplace location for which the case is created, the date when the case was requested and other details like expected start time and due date.

  - If you're viewing a move case, you can view the details such as the **From location**, **To location**, **Reason** for move, **Requested move date** and the **Due date** by when the move must be performed.
  - If you're viewing a maintenance case, you can view the details such as the **Product model** of an asset and **Enterprise asset**.

  Variables

  Displays the variables entered on the form when the case was requested by the requester.

  Activity

  Displays the various activities performed on the workplace case since its creation.

  Child Cases

  Displays the child cases created for this case.

  Child tasks

  Displays the child tasks created to fulfill the case. You can select the child task to view the task details in a separate page. For more information about viewing task details and more, refer to the **Workplace task details - Overview and actions** topic below.

  Approvers

  Displays the approvers related to the case.

  Case SLAs

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Displays the SLAs associated with the case. If any child case or task breaches an SLA, the case card is displayed with a **Breached** tag.

Attached knowledge

Displays any knowledge articles associated with the case. You can select the link to navigate to the knowledge base article on a separate page.

Related cases

Displays cases related to this workplace if there are any. In case of a preventive case or a corrective maintenance case, the **Related cases** related list is displayed as **Workplace cases**.

Case conflict review

The related list appears only for the move case. Displays the conflicts.

Requested service items

Displays the service items that are requested along with the case.

Fulfillment instructions

Displays the fulfillment instruction to fulfill the workplace case. You can select the link to navigate to the knowledge base article containing the fulfillment instruction on a separate page.

The case details page provides you with the following action options:

Edit case

The **Edit case** option enables to edit a case at any time.

Comment

The **Comment** option enables you to add comments to a workplace whenever you want to add more information or make an update about the progress. You can add work notes to notify other agents and additional comments to inform the requester.

Assign to me

The **Assign to me** option enables you to assign the case to yourself if the case is unassigned and if the case belongs to the assignment group to which you belong. The option is displayed only if the case is unassigned.

Select the action menu ( ) on the top-right header of the case details page to view further actions listed below:

Add comments

The option enables you to post comments to the case. It's the same as the **Comment** action on the page. You can add work notes to notify other agents and additional comments to inform the requester.

Assign case

The option enables you to assign the case to another workplace agent. The option is displayed only if the task is unassigned.

Create task

The option enables you to create a child task and a parent case is already associated.

Attach knowledge

The option enables you to add any knowledge base articles to the workplace case whenever required. You can search from a list of available knowledge base articles. You can add multiple articles to a case.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update checklist

The option enables you to update any checklist items if necessary.

Update state

The option enables you to update the current state of the case.

View attachments

The option enables you to view all the attachments of the case at a single place.

Workplace task details

You can close the workplace tasks at any time in the application. You can open a task from your **Work view** or by opening the case to which it's associated with.

The workplace task details card displays information such as the task number, the priority of the task, the task name, the current state of the task, the assignment group to which the task is assigned, the workplace location for which the task is created and the location pin of the workplace location to view it on the floor map.

When you select the workplace task details card, the task details open in a separate screen. The task details display the details of the task and the activities performed on the task.

On the task details page, you can use the following options:

- **Location pin**: Select the Location pin ( ) to view the location pin of the workplace location associated with the task on the floor map
- **Save**: The **Save** option ( ) enables you to save the case in case you want to view it easily in a single window. You can view the saved cases in the **Saved** tab at the bottom of the screen.

The task details default view displays the following information:

Details

Displays the task details such as the descriptions, the task type, the location for which the task is created, the assignment group, the workplace service item that is included in the task, the vendor, the sign template, the details of the user who opened the task and when the task was opened, and more. You can also view the parent case details of the task. The expected start time and due date details are also displayed.

Activity

Displays the details of all the activities performed on the task. You can also add a comment if necessary and add attachments. You can add attachments like files, images, and even capture a photo or a video with the camera.

You can perform the following actions on a task from the detail page:

Edit

The option enables you to the edit the task details at any time.

Comment

The option enables you to post comments on the task. You can post work notes and also additional comments.

For more actions, select the action menu on the top-right header of the task details page. The following actions are displayed:

Assign task

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The option enables you to assign the task to an agent if necessary. The option is displayed only if the task is unassigned.

Add comment

The option enables you to add comments to the case. You can add work notes to notify other agents and additional comments to inform the requester.

Update checklist

The option enables you to update any checklist items if necessary.

Update state

The option enables you to update the current state of the task based on your progress.

View attachments

The option enables you to view all the attachments of the task at a single place.

Configure Workplace Agent for mobile

Install the Workplace Agent for mobile application to start using it on the ServiceNow Agent mobile application.

Install Workplace Agent for mobile

Install the Workplace Agent for mobile application from ServiceNow Store applications. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.

2. Verify that the following plugins are activated:
   - Workplace Core (sn_wsd_core)
   - Workplace Case Management (sn_wsd_case)
   - Workplace Maintenance Management (sn_wsd_maintenance)
   - Workplace Move Management (sn_wsd_move)
   - Workplace Indoor Mapping (sn_wsd_indoor_map)
   - Expanded Model and Asset Classes(sn_ent)

Use the following details when required:

- Name of the application: Workplace Agent for mobile
- ID of the application: sn_wsd_agent_mob

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can search for the application by its name or ID. If you cannot find an application, you may have to request it from ServiceNow store.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Case Management.

5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Click **Install**.

Use Workplace Agent for mobile

Use the Workplace Agent for mobile to perform workplace case or task related activities using the ServiceNow Agent mobile application.

Manage workplace cases and tasks

Track the workplace cases and tasks that are assigned to you and your assignment group. Know the number of cases that are open, critical, and breached at any time. View the details of the case and perform an action accordingly.

Before you begin

Verify that you have installed the required plugins.

Role required: sn_wsd_case.workplace_agent

About this task

The ServiceNow Agent - Workplace Agent for mobile application enables you to manage the workplace cases and tasks that are assigned to you on the go without the need of a desktop or laptop. You can manage any type of workplace cases such as regular workplace case, maintenance case, move case, space configuration case and reservation case. The application provides you with a category-based display where you can quickly access the works assigned to you and to your assignment group easily. The **Work view** of the application displays your work, your group work, and unassigned work.

Procedure

1. Log in to Workplace Agent for mobile application.
   The launch screen opens with your **Work view**.
2. On the **Work view** page, depending on what cases or tasks you want to check, you can choose from the following options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. To check the knowledge articles added by your organization, select the **Article** tab at the bottom.
   The Articles page opens
4. To view the notifications regarding cases that have breached SLAs or any other, select the **Notifications** tab at the bottom.
   The Notifications page opens. The page displays the following notifications:
   - Case- Assigned to individual
   - Case- Assigned to group
   - Case commented- to Assignee
   - Case escalated– If SLA is breached for a case, a notification is sent to the assignee.

   Select **Delete all** to delete the notifications if they're no longer required.
5. To view the saved cases, tasks, or any attachments, select the **Saved** tab at the bottom.
   The Saved page opens displaying all the cases, tasks, and attachments that you have saved.
6. To log out or make any profile-related settings, select the **Settings** tab at the bottom.

Assign an unassigned case or task

Work on an unassigned case or task. Assign the case or task to yourself or to another agent.

Before you begin

Verify that you have installed the required plugins.

Role required: sn_wsd_case.workplace_agent

About this task

Assign unassigned cases or tasks to yourself or to another workplace agent who belong to your assignment group. You can work on any type of workplace case such as regular workplace case, maintenance case, move case, space configuration case, reservation case, and tasks associated with these cases.

Procedure

1. Log in to Workplace Agent for mobile application.
   The launch screen opens with your **Work view**.
2. On the **Work view** page, to view unassigned cases, do one of the following:

   a. Go to the **Group work** section and select any of the following:

      i. Select **Open unassigned cases by priority** or **Open unassigned** to view a list of unassigned workplace cases and tasks.

      A list of workplace cases and tasks is displayed. Select the  filter icon to filter the cases or tasks.

      ii. **Apply** the changes.

   b. **Optional:** You can also go to the **Unassigned work** section to view the cases and tasks that are unassigned.

3. Select the workplace case/task that you want to assign.
   Based on the selection, the case details page or the task details page opens.
4. To assign the case/task to yourself, on the details page, select **Assign to me**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Assign to me** option is available only for a workplace case.

5. To assign the case/task to another agent, select the action icon on the top-right corner of the header.
6. From the menu, select **Assign case**.
   A list of users is displayed in a separate page where you can search and select the agent to whom you want to assign the case/task.
7. Select **Submit**.
   The case/task is assigned to the select agent.

Edit or view case details on the Workplace Agent for mobile app

Update a workplace case at any time on the go. The application provides you with all the edit-related options to make relevant changes whenever you want to edit.

Before you begin
Verify that you have installed the required plugins.

Role required: sn_wsd_case.workplace_agent

About this task
The application enables you to edit any type of workplace case such as a regular workplace case, maintenance case, move case, space configuration case, and reservation case.

Procedure
1. Log in to Agent Workplace Service for Mobile application.
   The launch screen opens with your **Work view**.
2. On the **Work view** page, go to any one of the following sections to open the case that you want to edit:
   - My work overview
   - My work
   - Group work
   - Unassigned work
3. Select the case that you want to edit.
   The case details page of the selected case opens separately.
4. To edit the fields of the case, do the following:

   a. Select **Edit** to edit the case.
      The Edit case form opens with the existing fields.

   b. On the form, change the fields that you want to edit.
      You can edit fields based on the type of case you're handling.

   c. Select **Submit**.
      The case is edited.

5. To add a comment, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select **Comment**.
   You can also select the icon on the top-right of the header and select **Add comment**.

b. On the Add Comment page, enter your notes and comments in the **Work notes** and **Additional comments (Customer visible)** fields respectively.

c. Select **Post**.
   The comment is posted on the case.

6. To perform other actions, select the icon on the top right of the header and do the following:

   a. To attach a knowledge base article, select **Attach Knowledge**.

      i. On the Attach knowledge page, search for the article that you want to attach and select it.

      ii. Select **Submit**.
      The knowledge base article is attached to the case.

   b. To create a child task, select **Create task**.

      i. On the Create a task form, enter the details. For more information, refer to Create a child task.

      ii. Select **Submit**.
      The child task is created for the case.

   c. To update the checklist of the case, select **Update checklist**.
      On the Checklist page, select the checklist items that you want to add. On the page, the selected checklist items are marked as completed.

   d. To update the current state of the case, select **Update state**.

      i. On the Update state form, select the state to which you want to update the case.

      ii. Select **Submit**.
      The state is updated.

   e. To view, add, or edit the attachments, select **View attachments**.

      i. On the Attachment page, view the list of attachments.

      ii. To edit an attachment, select the icon.

      iii. To delete an attachment, select the icon.

      iv. To preview an image, select the image directly.

7. To save the case for quick reference, select the icon.
   The case is saved. You can select the **Saved** tab at the bottom of the screen to view the case.

Create a child task

Add child tasks to a workplace case when needed. The application enables you to create a child task instantly from the case details page.

Before you begin

Verify that you have installed the required plugins.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_wsd_case.workplace_agent

Procedure

1. Log in to Agent Workplace Service for Mobile application.
   The launch screen opens with your **Work view**.
2. On the **Work view** page, go to any one of the following sections to open the case to which you want to add a child task.
   - My work overview
   - My work
   - Group work
   - Unassigned work
3. Select the case.
   The case details page of the selected case opens separately.
4. Select the  icon on the top right of the header.
5. Select **Create task**.
6. On the form, fill in the fields.
   On the form, the **Parent case** field is automatically set with the case number of the case to which you are adding this child task.

Note:
You can also create a task by quick action without connecting to any parent case from the **Work view** page in the Workplace Agent for mobile application.

Create task form

Field	Description
Workplace task type	Set the type of task
Short description	Enter a short description about the task.
Description	Enter a detailed description about the task.
Workplace location	Select the location for which you're creating the task.
Workplace service item	Select the workplace item if the task is associated with a workplace service item.
Product model	Select the product model.
Asset	Select the asset type.
Priority	Set the priority of the task.
State	Set the state of the task.
Expected start	Enter the expected start date.
Due date	Enter the due date.
Cost	Enter the cost for the task.
Vendor	Select the suitable vendor.
Assignment group	Select the assignment group to which the task belongs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Assigned to	Select the user agent to whom you want to assign the task.
State	Set the state of the task.
Parent case	Task is created for the parent case
Sign template	Select a signing template.
Add attachment	Add attachment related to the task.

7. Select **Submit**.

Result
The child task is created. After creation, the child task details are displayed in a separate page. For more information about actions that you can perform on a task, refer to Edit or view a child task.

Create a workplace case on behalf of an employee through Workplace Agent for mobile

Create workplace cases on behalf of an employee in the Workplace Agent for mobile work view page.

Before you begin
The required plugins must be installed.

Role required: sn_wsd_case.workplace_agent

Procedure

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

i. On the Attachment page, view the list of attachments.

ii. To edit an attachment, select the icon.

iii. To delete an attachment, select the icon.

iv. To preview an image, select the image directly.

9. To save the task for quick reference, select the icon.
The task is saved in the **Saved** tab. You can view the task at any time from this tab directly.

Offline mode

You can switch to an offline mode and work on your workplace cases in the ServiceNow Agent application. When you work on an offline mode, you can perform any action without an internet connection. Once you turn on to the online mode, the changes are all synchronized automatically. If there are any conflicts, you can resolve them in your outbox.

Before you begin

Role required: sn_wsd_case.workplace_agent

To turn on offline mode, perform the following steps:

Procedure

1. Navigate to **Settings**.
2. Select **Download Cache**.
3. Enable the **Offline Mode** option.

Register WSD for Microsoft places

Register the WSD for Microsoft places application in the Microsoft Azure portal.

Before you begin

Role required: admin

Procedure

1. Log in to your Microsoft Azure portal.
2. Click **App registrations**.
3. Click **+ New registration**.
4. In the **Display name** field, provide the name for the application.
   The values for the **Application (client) ID**, **Directory (tenant) ID**, **Object ID**, and **Application ID URL** fields are auto-generated.
5. Set the application permissions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Go to **API permissions**.

b. Under **Configured permissions**, add the following permissions and provide **Grand admin consent for ServiceNow**.
   - Calendars_ReadWrite
   - email
   - offline_access
   - openid
   - profile
   - User_Read

6. Go to **Expose an API**.
7. In the **Application ID URI** field, replace the application ID with the value in the **Application (client) ID** field.

   Example
   For example: `api://msplacesdemo.service-now.com/<Application (client) ID>`.
8. Add a scope.
   a. Click **+ Add a scope**.
   b. Enter the **Scope name** field value as `access_as_user`.
   c. Enter the **Admin consent display name**, **Admin consent description** details and select **Add scope**.
   Scopes record is created.
9. Under **Authorized client applications**, add clients you like to authorize by selecting **+Add a client application**.
   a. In the **Client ID** field, enter the following Client Ids and select the Authorized scopes check box.
      - 5e3ce6c0-2b1f-4285-8d4b-75ee78787346
      - 1fec8e78-bce4-4aaf-ab1b-5451cc387264
      - bc59ab01-8403-45c6-8796-ac3ef710b3e3

Download manifest files

Download manifest files

Download the manifest files as part of configuring and integrating WSD for Microsoft places application in Microsoft Teams.

Before you begin
Role required: admin

Ensure to register the WSD for Microsoft places application in the Microsoft Azure portal.

For more information about registering the WSD for Microsoft places application, refer toRegister WSD for Microsoft places

Procedure

1. Navigate to **Teams** > **ServiceNow for Teams**.
2. Click **New** to create a registry.
3. All the fields are generated, enter a **Short name** and **Full name** according to your requirements.
4. Click **Submit**.
5. Click **Next**.
6. Under the **Configure Virtual agent** tab, select the first option **Configure a ServiceNow instance to your Microsoft Teams tenant**.
7. Click **Next**.
8. Enter the **Application ID** and **Directory (client) ID**.
9. Enter the **Tab name** and click **Next**.
   Application Registry record is created.
10. Click **Download Manifest**.

What to do next
Follow up with modifying the .json file from the manifest zip file.

Modify the manifest file

Modify the manifest file as part of WSD for Microsoft places application in Microsoft Teams.

Before you begin
Role required: admin

Ensure to download the manifest file.

For more information on downloading the manifest files, refer to Download manifest files

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Unzip the manifest file.
2. Open the .json file
3. Follow the instructions to modify:
   a. Search for **id** in the .json file and replace it with the **Application (client) ID**.
   b. Look for **bots**,**Composeextensions**, and **activities** and remove them.

   Note:
   If the users want to open multiple portals, then the second part of the content url **sn_now_teams_ms_login.do** should be replaced with **n_ms_teams_wsd_ms_login.do**.

4. In the ServiceNow instance, navigate to **System properties**> **sn_now_teams.portal.suffix**.
5. Enter **wsp** in the value field.
6. Save the .json file and zip all the files.

What to do next

Follow up with upload the application process to complete the integration of WSD for Microsoft places application with Microsoft Teams.

Upload the WSD for Microsoft places application

Upload the WSD for Microsoft places application in Microsoft Teams.

Before you begin

Role required: admin

Ensure to modify the manifest file (.json file)

For more information about modifying the manifest file, refer to Modify the manifest file

Procedure

1. Log in to Microsoft Teams with the email address.
2. Select **+ Apps**.
3. Select **Manage your apps**.
4. Under **apps**, click **Upload an app**.
5. Select **Upload a customised app**, browse for the updated zip file, and upload.
6. Click **Add** to integrate WSD for Microsoft places application in Microsoft Teams.

Result

The WSD for Microsoft places application is integrated with Microsoft Teams.

WSD for Microsoft places- Key features

The WSD for Microsoft places is designed for a workplace user to create and manage workplace services requests. As an agent, you can create, and view service requests, and monitor its progress.

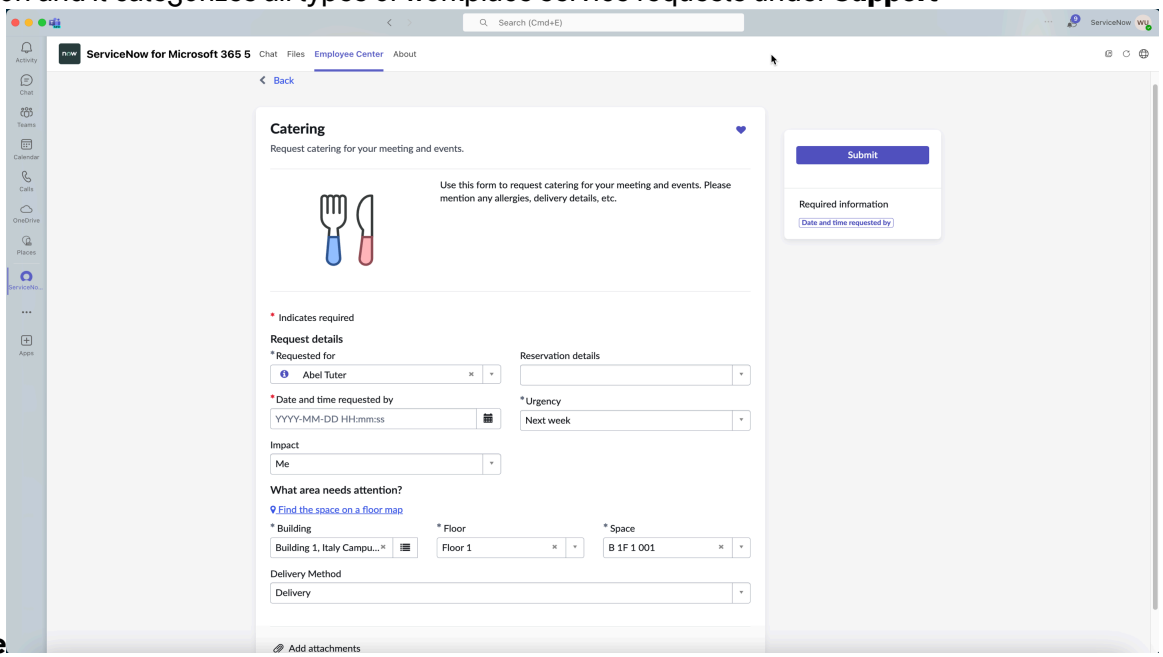
When you log in to the WSD for Microsoft places application as an agent, the application displays all the Workplace services requests under Workplace service topics. You can get details such as the number of open requests. You can also add service requests as favorites to view under **My Favorites**.

The launch screen of the WSD for Microsoft places application displays **Workplace services topics**, **Support resources**,**Open requests**, and **My Favorites**.

The workplace service requests under **Support resources** appear in a **Card view** by default. The view can be changed to **List view**. These requests can be sort by popular and alphabetical, and filter by articles and requests.

WSD for Microsoft places- Workplace service topics

The **Workplace service topics** is the default page that is displayed when you launch the application. **Workplace service topics** categorizes all types of workplace service requests.



- **Equipment**: The launch screen displays the **Equipment** tab by default. The **Equipment** tab displays categorized workplace services requests **Equipment** and **Requested furniture**.
- **Reservation services**: The launch screen displays the **Reservation services** tab by default. The Reservation services tab displays categorized workplace services requests **Catering** and **Tech support**.
- **Site services**: The launch screen displays the **Site services** tab by default. The Site services tab displays categorized workplace services requests **Heating & Cooling**, **Badge request**, and **Cleaning**.

WSD for Microsoft places- Support resources

The **Workplace service topics** is the default page that is displayed when you launch the application. **Workplace service topics** is the main page of the

Learn more about Workplace Services Kiosk to provide efficient check-in, check-out, and self-registration experience for visitors and employees.

Workplace Services Kiosk overview

Customize Workplace Services Kiosk to suit the needs of employees and visitors. Visitors can autonomously check in, check out, self-register, and make workplace reservations on the kiosk map. Efficient visitor check-in process reduces wait times and long queues during busy or peak hours. Visitors can use invitation sent by employees. They can check in or check out using a pass code, name, email, or phone number. Employees can use the Workplace Visitor Management feature to send invites to visitors and receive notification when a visitor checks-in using the kiosk. Workplace Services Kiosk offers following capabilities:

Workplace Services Kiosk users

Users

User	Description
Kiosk Administrator	Kiosk administrators can configure kiosk devices, create kiosk pages. As an admin, you can link the kiosk pages to a configuration.

Configure Workplace Services Kiosk

Plan and configure your Workplace Services Kiosk installation.

Configuration overview

Note:

- The kiosk device automatically maintains the session before it times out. The session timeout value can be configured in the *glide.ui.session_timeout* property.
- The kiosk header contains the session refresh API; ensure that you do not remove or replace the kiosk theme or the kiosk header.

  For information about customizing the kiosk header, see Customize the kiosk header.

Install Workplace Services Kiosk

Install the Workplace Services Kiosk application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.
2. Verify that the Workplace Core plugin is activated.

Use the following details when required:

- Name of the application: Workplace Services Kiosk
- ID of the application: sn_wsd_kiosk

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   Search for the application by its name (Workplace Services Kiosk or ID (sn_wsd_kiosk). If you can't find the application, you may have to request it from the ServiceNow Store.
3. Select **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed if they'll be installed, are currently installed, or must be installed. If there are any plugins or applications that must be installed, you must install them before you can install Workplace Services Kiosk.
5. **Optional:** If demo data is available and you want to install it, select **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
If you don't load the demo data during installation, it's unavailable to load later.

6. Select **Install**.

Create a kiosk configuration

Create a kiosk configuration, assign a homepage, and link a kiosk device module.

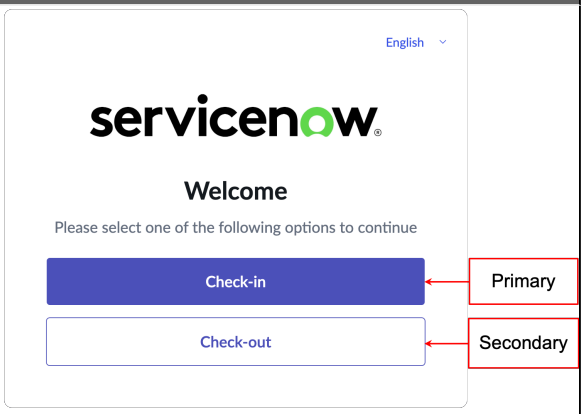
Before you begin

Note:

- The kiosk device automatically maintains the session before it times out. The session timeout value can be configured in the *glide.ui.session_timeout* property.
- The kiosk header contains the session refresh API; ensure that you do not remove or replace the kiosk theme or the kiosk header.

  For information about customizing the kiosk header, see Customize the kiosk header.

Role required: sn_wsd_kiosk.admin



Procedure

1. Navigate to **All** > **Kiosk management** > **All Kiosks**.
   For Workplace Services Kiosk version 1.1.0 or earlier, navigate to **All** > **Kiosk management** > **Kiosk configurations**.
2. On the Kiosk configurations list, select **New**.
3. On the Kiosk configuration form, fill in the fields.
   For a description of the field values, see Kiosk configuration form.
4. Select **Submit**.
5. On the Kiosk module configurations related list, select **New**.
6. On the form, fill in the fields.

Kiosk module configurations form

Field	Description
Kiosk configuration	Kiosk configuration that the module is linked to.
Module configuration	Configuration record for the kiosk module. For more information about creating a module, see Create a kiosk module. For more information about creating a map configuration, see Configure map features for kiosk.
Active	Status of the kiosk module configuration.
Type	Type of color scheme you want to set for the kiosk module configuration. The type can be set to primary or secondary.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	
Order	Order of preference of the kiosk module.

Note:

- The kiosk device automatically maintains the session before it times out. The session timeout value can be configured in the *glide.ui.session_timeout* property.
- The kiosk header contains the session refresh API; ensure that you do not remove or replace the kiosk theme or the kiosk header.

  For information about customizing the kiosk header, see Customize the kiosk header.

7. Select **Submit**.

Result

You have configured a kiosk configuration and linked it to a kiosk module.

Create a kiosk homepage

Create a homepage configuration that is displayed when a user opens the kiosk device.

Before you begin

Note:

- The kiosk device automatically maintains the session before it times out. The session timeout value can be configured in the *glide.ui.session_timeout* property.
- The kiosk header contains the session refresh API; ensure that you do not remove or replace the kiosk theme or the kiosk header.

  For information about customizing the kiosk header, see Customize the kiosk header.

Role required: sn_wsd_kiosk.admin

Procedure

1. Navigate to **All** > **Kiosk management** > **Kiosk homepage**.
2. On the Kiosk homepages list, select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Kiosk homepage form

Field	Description
Name	Name of the kiosk homepage.
Title	Title that is displayed on the kiosk homepage.
Subtitle	Subtitle that is displayed on the kiosk homepage.
Description	Description of the kiosk homepage.
Logo	Logo image that is displayed on the kiosk homepage.
Background image	Background image that is displayed on the kiosk homepage.

4. Select **Submit**.

Create a kiosk module

Create a kiosk module and module configurations to decide the flow and pages that must be displayed on a kiosk.

Before you begin

Note:

- The kiosk device automatically maintains the session before it times out. The session timeout value can be configured in the *glide.ui.session_timeout* property.
- The kiosk header contains the session refresh API; ensure that you do not remove or replace the kiosk theme or the kiosk header.

  For information about customizing the kiosk header, see Customize the kiosk header.

Role required: sn_wsd_kiosk.admin

Procedure

1. Navigate to **All** > **Kiosk management** > **Kiosk modules**.
2. On the Kiosk modules page, select **New**.
3. On the form, fill in the fields.

Kiosk module form

Field	Description
Name	Name of the kiosk module.
Title	Title of the kiosk module.
Entry point	Page displayed on the home screen of the module. For visitor check in, select *visitor_check_in*. For visitor check out, select *visitor_check_out*.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For kiosk indoor mapping, select *kiosk_indoor_map*.

4. Select **Submit**.
5. On the Kiosk module configuration related list, select **New**.
6. On the form, enter a **Name** and **Description** for the record, then fill in the fields.

Module configuration form

Field	Description
Module	Module that the configuration is linked to.
Configuration table	Table that contains the configuration flow for the kiosk. For example, for visitor check in, select the Kiosk Check-in Flow Configuration [sn_wsd_visitor_checkin_flow_configuration] table. For visitor check out, select the Kiosk Check-out Flow Configuration [sn_wsd_visitor_checkout_flow_configuration] table. For a kiosk indoor map, select the Kiosk indoor mapping feature configuration [sn_wsd_indoor_map_feature_configuration] table.
Condition	Condition that selects the configuration flow from the configuration table. The condition must match only one configuration. For example, use the *sys_id* value to ensure only one record matches the condition.
Requires Camera	Option to use the camera of the kiosk device. If this option is selected, the kiosk operator must provide camera permissions on the kiosk device. Visitors can use the camera to scan QR codes or to take their picture. **Note:** If a kiosk flow contains the QR code authentication or requires a visitor picture, this field is automatically enabled when you add the flows to the kiosk.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. **Optional:** Add Page parameters by entering the name and value of the parameter.
8. Select **Submit**.

Customize the kiosk header

Customize the kiosk header by editing the CSS code of the Kiosk Header record.

Before you begin

Role required: sp_admin

Procedure

1. Navigate to **All** > **Service Portal** > **Portals**.
2. From the Service Portals list, select the **Kiosk** record.
3. From the **Theme** field, open the **Kiosk Theme** record.
4. From the **Header** field, open the **Kiosk Header** record.
5. In the **CSS** field, customize the code based on your requirement.

   Example
   For example, you can hide the kiosk header by setting the display of the `header-container` class to `none`.

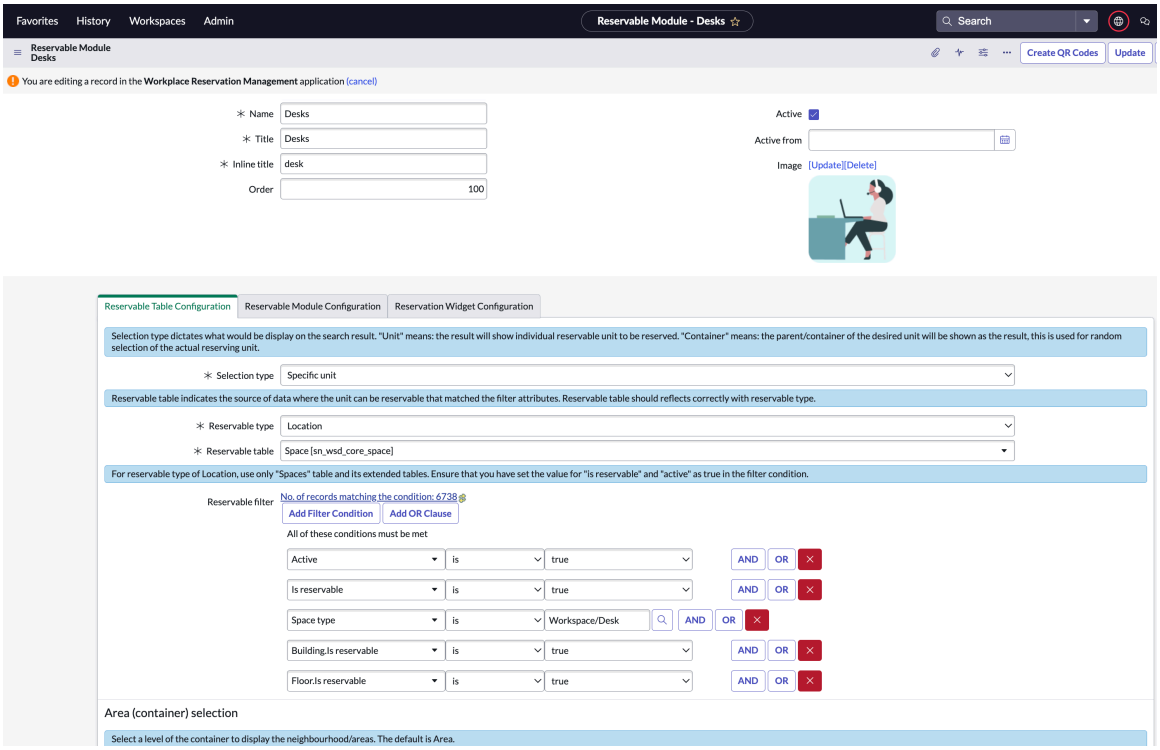
Configure Reservable Module for kiosk reservation

Configure the Reservable Module for Workplace Services Kiosk to enable employees and guests to make reservations. Employees and guests can find available spaces on the kiosk map and make reservations.

Before you begin

Install and configure the following:

- Workplace Reservation Management
- Workplace Services Kiosk
- Workplace Central
- Workplace Indoor Mapping
- Workplace CoreWorkplace Space Management



Role required: admin

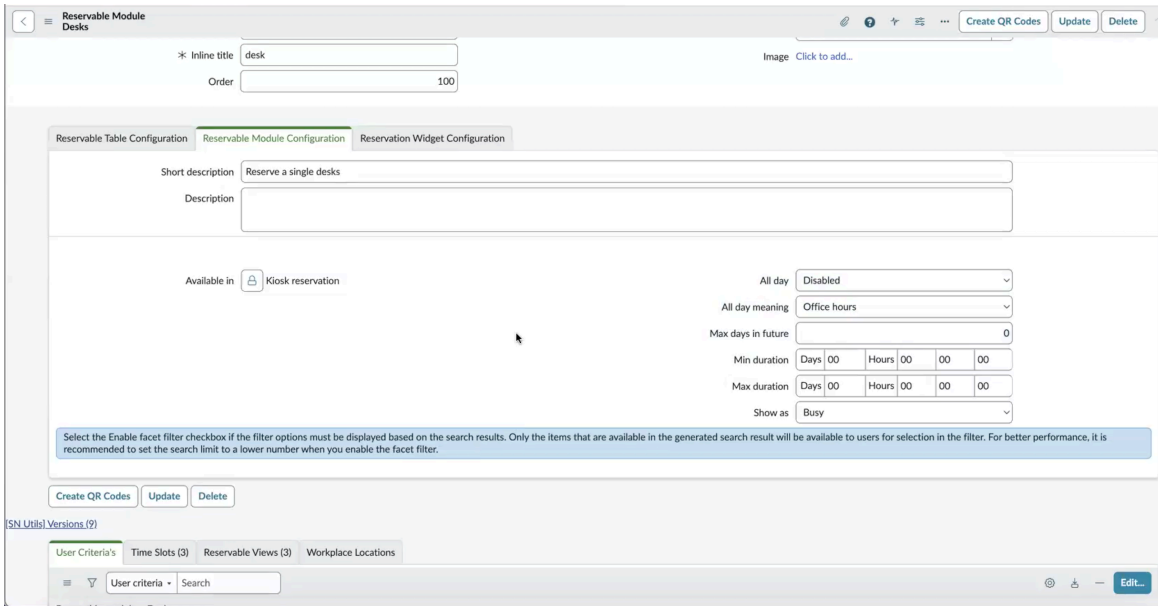
Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Reservable Module**.
   For more information, see Configure a reservable module. On the Reservable Module Configuration page, select the Kiosk module and configure it. This configuration enables employees and guests to select a kiosk on their physical device and make reservations.
2. Complete the following information for creating a kiosk reservation Reservable Module:
   - Name: Name of the Kiosk module.
   - Title: Title of the Kiosk that you want to create.
   - Inline Title: Inline title for the kiosk.
   - Active: Check box option to indicate that Kiosk is active.
   - Image: Add an image for the kiosk.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the Reservable Table Configuration tab.
   On the form, fill in the information.

Reservable Table Configuration



Selection type	Type of selection to display in the search results when employees search. Select one of the following options: ○ **Specific unit**: The search result displays every workplace item. ○ **Container**: The search result displays the parent or container of the workplace items. If you select **Container**, the search results are displayed in groups with a defined quantity available for reservation. Employees can select a container to reserve and any available space from the container is assigned for reservation.
Reservable type	Type of the reservable item. For example, Locations.
Reservable table	Table for the reservable workplace items. **Note:** If you have selected **Location** in **Reservable type**, use only the Space [sn_wsd_core_space] table and its extended tables.
Reservable filter	Filter conditions on the reservable items in the Reservable table. The reservable items

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

	are displayed on the application based on the given conditions. Filter conditions on the reservable items in the Reservable table. The reservable items are displayed on the application based on the given conditions. To add a condition, select **Add Filter Condition**. To add an **OR**condition, select **Add "OR"** Clause. ○ To add a condition, select **Add Filter Condition**. ○ To add an OR condition, select **Add "OR" Clause**. **Note:** When applying filter criteria on a location, verify that the **Active** and**Is reservable** check boxes are active and selected for rooms and spaces that are added to a location. Not performing this step adds and displays the inactive or non-reservable spaces and rooms while making a reservation. Add a room using Workplace Space Management and Add a room form.
Area (Container) selection section	Specify the field details.
Reservable container field	Specify the grouping criteria. The field appears only if you selected **Container** as the **Selection type**. The field is automatically set to **Area**. For example, when the field is set to **Area**, the reservation search results appear as groups based on areas.
Reservable quantity field	Reservable quantity for workplace spaces. The **Reservable Quantity** field determines the number of times a container can be booked within a specific reservation time period. This setting provides with flexibility in setting up space reservations without out the need to create individual space records for reservation. For example, if you select **Reservable Quantity**, the container can be reserved as many times as the combined reservable quantity values of all spaces within that container. The reservable quantity depends on the number of spaces provided in the Capacity column of the Workplace Core Space table.

4. Select the **Reservable Module Configuration** tab.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Kiosk Module configuration enables employees to select a kiosk on their device and make workplace reservations. For more information, see Make workplace reservations on the kiosk.

Fill in the field information.

Reservable Module form

Field	Description
Available in	Select **Kiosk reservation**. **Note:** You can't select any other Reservable Module options along with the Kiosk Module. If you select a different Reservable module along with Kiosk Module, application shows an error message " `A reservable module assigned to Kiosk can't be shared with other experiences. Please update the Available-in accordingly` ". Remove all options in **Available in** before adding the Kiosk Module. For example, remove **Advanced Reservation**, **Quick Reservation**, **Outlook Add-in**, and so on.
All day	All day options can be set to:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Disabled: The All day option is disabled and isn't displayed on the Reservation portal. ○ Default: The All day option is available and the current office time is selected by default. For example, if you're making reservation at 11.30 am, based on your building time zone, the start time of the reservation is selected as 11.30 am. Employees change the timings, if necessary. ○ Enabled: The All day option is available and employees can reserve a space for a day. This configuration is dependent on the (sn_wsd_rsv.day_start) and (sn_wsd_rsv.day_end) reservation property. For more information, see Properties installed with Workplace Reservation Management. ○ Required: The All day option is displayed as selected and can't be changed. The All day field is set as required. Based on the building time zone, regular office hours as set by your administrator is shown. For example, 9 am to 5 pm. For more information, see Properties installed with Workplace Reservation Management.
All day meaning	Set the **All day meaning** to **Full day** (00 to 23.59) or **Office hours** (9 am to 5 pm). Timings are shown based on the building time zone. Full day setting ensures that employees or workplace users must book a space with a Reservable Module for an entire day or full day. The "All day" option is enabled by default on the reservation portal and the time can no longer be edited by employees or workplace users.
Max days in Future	Option to specify the maximum number of the days in the future up to which the reservable module can be reserved. For example, if you set the max number of days in future to 90, employees can make future reservations on this module only up to 90 days in advance. If this option is enabled, users can't select a date beyond the specified value in Max days in future while making a reservation. For more information, see Create a reservation.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

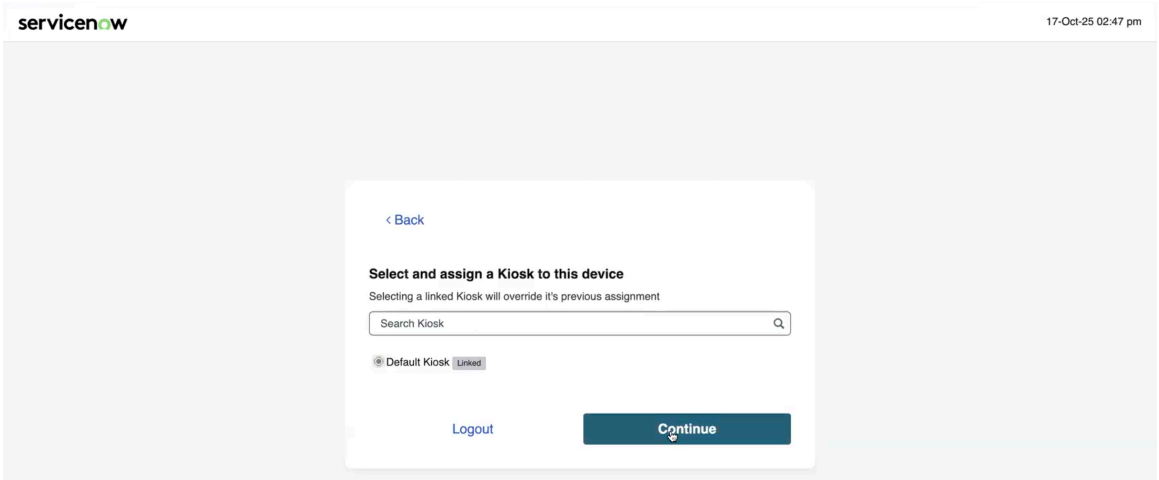
Field	Description
Min duration	Option to specify the minimum reservation duration of the reservable module. When you try to make a reservation beyond the Min duration value, an error message is on the shown on the Kiosk map.
Max duration	Option to specify the maximum reservation duration of the reservable module. When you try to make a reservation beyond the Min duration value, an error message is on the shown on the Kiosk map.
Show as	Option to specify the status of the reservation shown on the employee's calendar when a reservation is synchronized. This field appears only if Workplace Calendar synchronization is installed. ○ **Busy**: The reservation is displayed in the Employee's calendar with a Busy status. The employee's calendar is blocked during the reservation duration. ○ **Free**: The reservation is displayed in the Employee's calendar with a Free status. The employee's calendar won't be blocked during the reservation duration.

5. Select the **Reservation Widget Configuration** and select the **Require Subject** check box. If the **Require Subject** check box is selected, you're required to provide the **Reservation subject** in the Reservation Summary page.
6. After configuring the Kiosk Reservable Module, navigate to **Workspaces** > **Workplace Central**.
7. Select the Kiosk Indoor Mapping icon ( ) and configure the default map configuration for the Kiosk Reservable Module that you created (see Step 4).
   Kiosk default map configuration enables employees to select the Kiosk Reservable Module and assign spaces configured in the reservable module to it. Employees and guests can search for spaces and make reservations on the **Kiosk Map**. For more information, see Configure map features for kiosk.
8. After configuring the kiosk map, kiosk operators can bind or assign the kiosk to a device for employees and guests to make workplace reservations.
   For more information, see Setup a kiosk on a physical device for reservations.

   For more information, see Make workplace reservations on the kiosk.

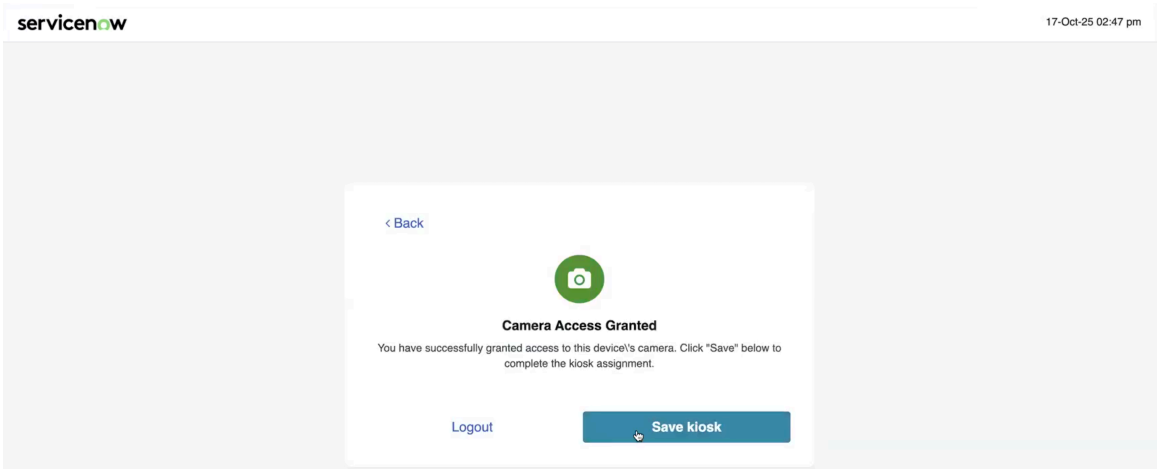
Setup a kiosk on a physical device for reservations

Kiosk operators can bind the kiosk configuration to a physical device for employees and guests to make workplace reservations.



Before you begin

Role required: sn_wsd_kiosk.operator



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Workplace Services Kiosk instance.
2. On the kiosk setup welcome page for a device, select the **Select Kiosk** tab.

3. Search and select the kiosk that you want to assign to your device (for example, **Default kiosk**). The selected kiosk should be assigned to a Reservable module and should have spaces configured for it. For more information, see Configure Reservable Module for kiosk reservation.
4. Select **Continue** and enable the kiosk to access a physical device's camera.
5. Select **Save kiosk** to complete the kiosk assignment to a device.

6. The Welcome to the Kiosk setup page opens and shows the default kiosk as selected.

   You have successfully setup the kiosk on your device for workplace visitors and guests to make a reservation. For more information, see Make workplace reservations on the kiosk.

Integrate Workplace Services Kiosk

Integrate Workplace Services Kiosk with Workplace Service Delivery features to provide different experiences to kiosk users.

Integrating Workplace Services Kiosk with Workplace Visitor Management

Integrate Workplace Services Kiosk with Workplace Visitor Management to create a check-in, check-out, and self-registration experience for visitors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration Overview

1. Create page configurations based on the flows you want to support on the kiosk. For more information, see Configure pages for Workplace Services Kiosk.

   The Authentication, Summary, and End page configurations are required to support check-in and check-out flows. The Self registration page configuration is required to support the self-registration flow. Additionally, you can create an acknowledgement page to display visitor policies on the kiosk.

   Important:
   If the visitor policies for the acknowledgement page contain hyperlinks, visitors can use the links to leave the kiosk environment and they cannot return to the kiosk. The kiosk operator must reload the kiosk environment by using the kiosk URL.

2. Create check-in and check-out flows for the kiosk by using the page configurations. For more information, see Create a flow for Workplace Services Kiosk.

   Alternatively, you can use the default check-in and check-out flow that is included with the Workplace Visitor Management application.

   You can create multiple check-in and check-out flows and link them to different kiosk modules.

3. Create a kiosk module and module configuration. For more information, see Create a kiosk module.

   The kiosk module is linked to the check-in or check-out table to decide the flow and pages for the kiosk.

4. Create a homepage configuration. For more information, see Create a kiosk homepage.
5. Create a kiosk configuration, assign the homepage configuration, and link the kiosk module you created. For more information, see Create a kiosk configuration.
6. Assign the kiosk configuration to a kiosk device. For more information, see Setting up a kiosk device.

After integrating Workplace Services Kiosk with Workplace Visitor Management, visitors can use the kiosk to check-in, check-out, or self-register. For more information, see Use Workplace Services Kiosk.

Note:
The kiosk device automatically pings the instance before the session times out. The session timeout value can be configured in the *glide.ui.session_timeout* property.

Integrating Workplace Services Kiosk with Workplace Indoor Mapping

Integrate Workplace Services Kiosk with Workplace Indoor Mapping to provide options to kiosk users to search for a space, get directions, and raise cases.

Integration Overview

1. Create a kiosk configuration that you want to use for indoor mapping. For more information, see Create a kiosk configuration.

   You can also use existing kiosk configurations if they fit your requirement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can create a custom homepage for the kiosk configuration or use the default one. For more information about creating a homepage, see Create a kiosk homepage.

2. Create a map feature configuration from Workplace Central. For more information, see Configure map features for kiosk.
3. Set up the kiosk position and map settings. For more information, see Configure the kiosk position and map settings.
4. Configure a module for the kiosk indoor map. For more information, see Configure a module for kiosk indoor mapping.
5. Assign the kiosk configuration to a kiosk device. For more information, see Setting up a kiosk device.

After integrating Workplace Services Kiosk with Workplace Indoor Mapping, kiosk users browse the workplace, search for spaces, get directions, and raise cases. For more information, see Using Kiosk Indoor Mapping.

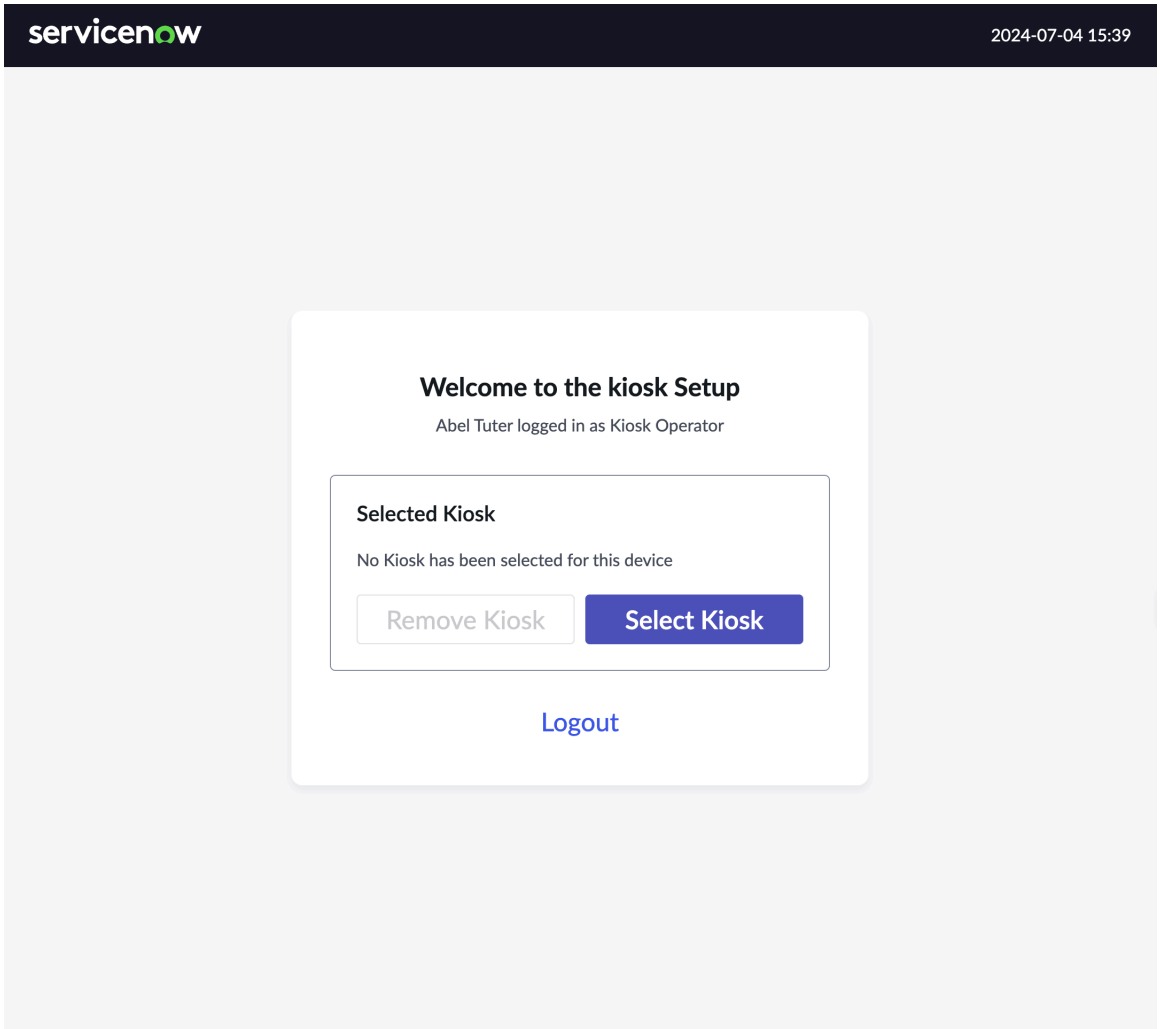
If an error occurs on the kiosk at run time, a generic error page is displayed to the user. As an admin, you can find information about the errors in the system logs. For more information about error scenarios, see Workplace Services Kiosk error scenarios.

The kiosk uses the **Kiosk general request** record producer to create a case from the **Raise an issue** modal. You can configure the record producer by navigating to **Workplace Case Management** > **Workplace Case Management - Setup** > **Record producers**.

Manage Workplace Services Kiosk

Kiosk operators can bind and unbind kiosk devices from kiosk configuration pages.

Configuration checklist



Setting up a kiosk device

Set up a kiosk device by assigning a kiosk configuration to the device.

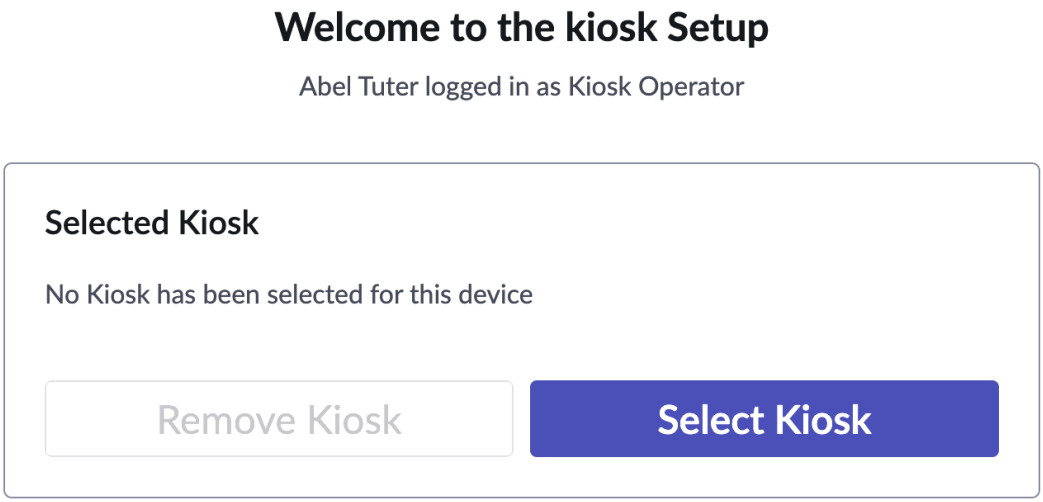
To enable usage of a kiosk device, you must select a kiosk for the device. The module then displays the pages configured by the admin and visitors can use the device to check in and self-register. For more information about configuring kiosk devices, see Create a kiosk configuration.

You can access the kiosk page by using the following URL: `https://<instance name>.service-now.com/kiosk`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

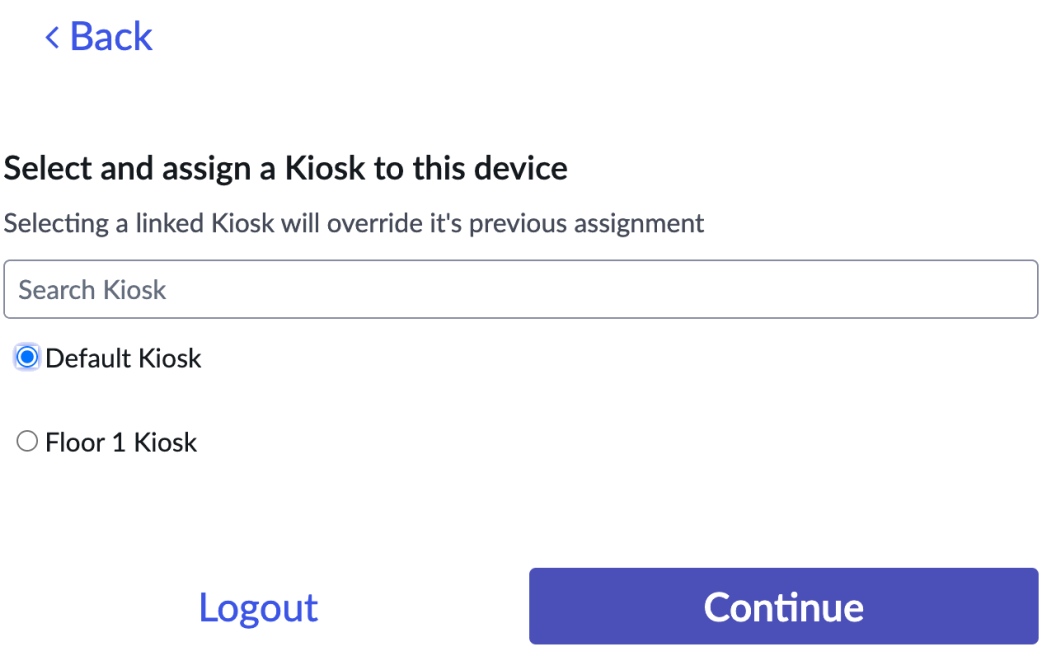
Select a kiosk for a device

Select a kiosk for the device to render the configuration pages created by the kiosk admin.



Before you begin

Role required: sn_wsd_kiosk.operator



Procedure

1. On a kiosk device, login using your operator credentials.
2. On the Kiosk setup page, select **Select Kiosk**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select a kiosk from the list, then select **Continue**.

4. Optional: Provide camera permissions for the kiosk.

a. On the Allow camera access page, select **Continue**.

b. On your browser prompt, select the option to always allow camera access to the website.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you are using the Apple Safari browser, you must allow the website to always access the camera from your browser settings.

(Optional) Security features of Google Chrome on iOS don't allow permanent camera access to websites, therefore, camera-related functions of the kiosk are disabled.

c. After the camera access is granted, select **Save Kiosk**.

If you have existing kiosks that do not have camera permissions, you will receive a notification to update the kiosks and allow camera access.

Change or remove the kiosk for a device

Assign a different kiosk or remove the assigned kiosk from a device.

Before you begin
Role required: sn_wsd_kiosk.operator

Procedure

1. On a kiosk device, login using your operator credentials.
2. On the Kiosk setup page, select any of the following options.

Use Workplace Services Kiosk

Workplace Services Kiosk provides a seamless check-in, check-out, and self-registration experience for visitors.

Check in using an invite

Check in as a visitor by using an invite from an employee.

Before you begin
Role required: sn_wsd_kiosk.viewer

Procedure

1. On the kiosk device, select **Check-in**.
2. Select any of the following check-in options.
   The invitation pass code is the default check-in option.

   Note:
   If the QR code is the default check-in option, the camera is enabled on the check-in page to scan the QR code.

   - Check-in with Qr-code
   - Check-in with invitation passcode
   - Check-in with email address
   - Check-in with phone number
   - Check-in with your name
3. Enter the information based on the check-in option, then select **Continue**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If the provided information is incorrect or not linked to an invite, the kiosk device displays an error page. If the admin has enabled self-registration, you can register your visit by selecting **Register visit**. For more information, see Self-register as a visitor.

4. Verify the details of your visit, then select **Continue**.
5. **Optional:** Take a picture for the check-in process.
   a. On the Let's take a picture page, select **Continue**.
   b. Select the camera icon to start the timer for a picture.
   You can use the time to adjust your position.
   c. Select **Continue** to use the picture for your visit.
   You can also retake your picture by selecting **Retake**.
6. **Optional:** Read the visitor policies, then select **Acknowledge**.
   Based on the configuration set by the admin, you might have to add a signature to acknowledge the policies.

Note:
If you have already signed and agreed to the policies before your visit, the policies might still be displayed based on the configuration set by the admin.

7. View the next steps, then select **Done**.

Self-register as a visitor

Register as a visitor by providing your details such as your name, purpose of the visit, and host.

Before you begin

The self-registration flow must be configured and enabled by the admin. You can self-register only if you try to check-in and the kiosk device displays an error page.

Role required: sn_wsd_kiosk.viewer

Procedure

1. On the error page, select **Register visit**.
2. Fill in the following field values when prompted by the kiosk device.
   a. Purpose of your visit
   b. Your name
   c. Your company name
   d. Your host, who is the employee that you want to meet
   e. Reason for your visit

Note:
The fields can change based on the configuration that is set by the admin.

3. On the Registration summary page, verify the details of your visit, then select **Continue**.
   You can also edit the details based on your requirement.

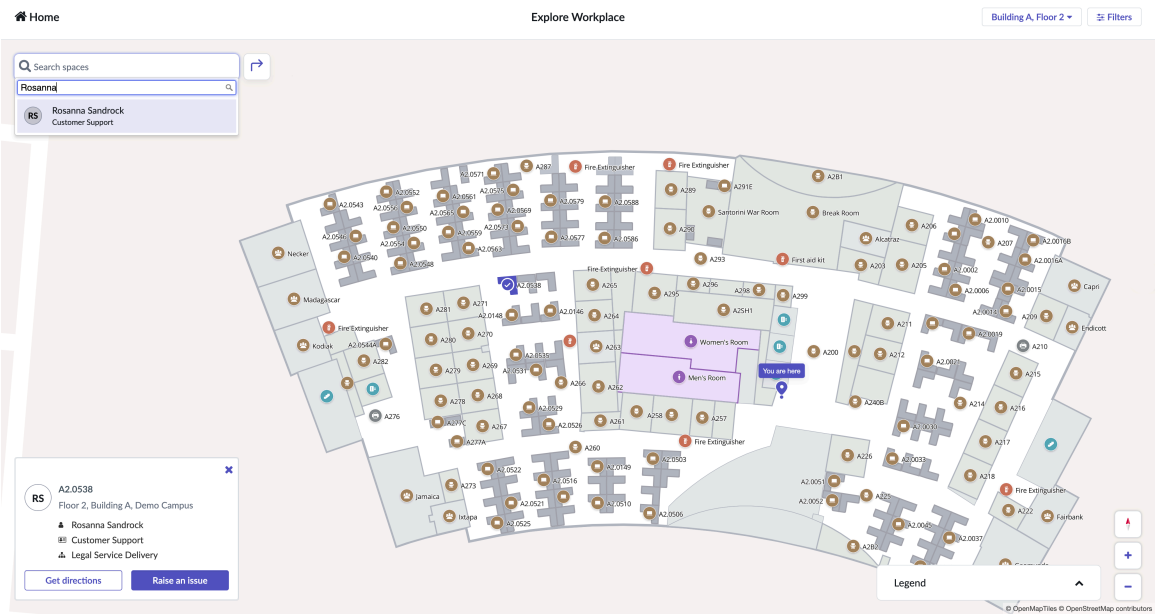
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** Take a picture for the check-in process.

   a. On the Let's take a picture page, select **Continue**.

   b. Select the camera icon to start the timer for a picture.
   You can use the time to adjust your position.

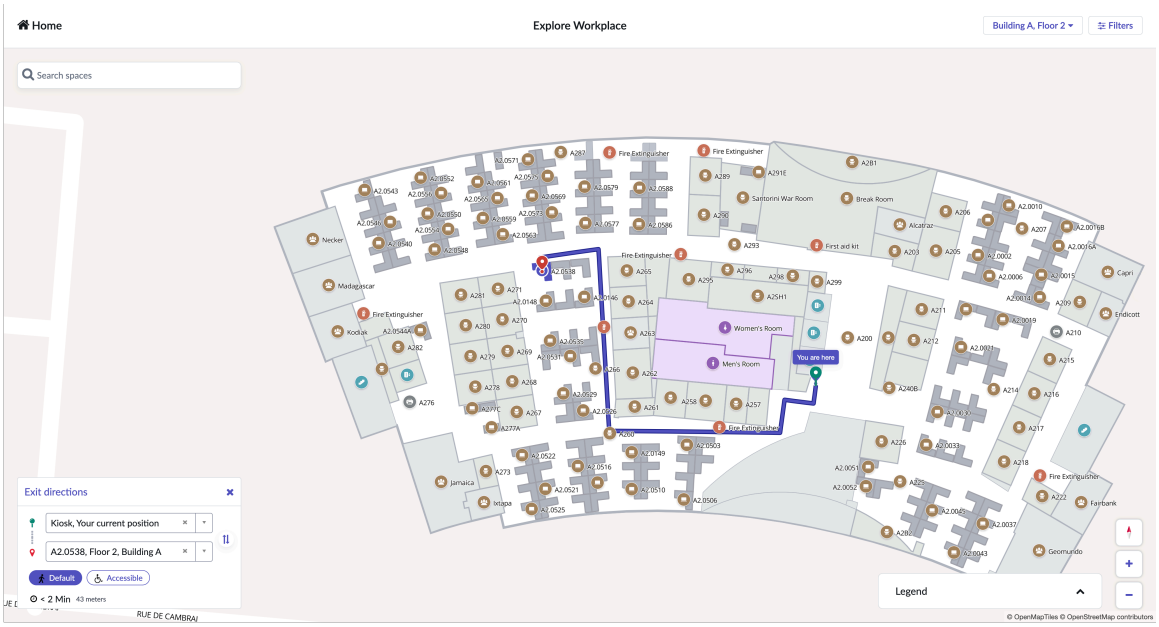
   c. Select **Continue** to use the picture for your visit.
   You can also retake your picture by selecting **Retake**.



5. Read the visitor policies, then select **Acknowledge**.
   Based on the configuration set by the admin, you might have to add a signature to acknowledge the policies.
6. View the next steps, then select **Done**.

Using Kiosk Indoor Mapping

Use the kiosk indoor mapping feature to search for spaces, get directions, and raise cases.



You can access the kiosk indoor map by selecting **Explore workplace** on the kiosk. You can then use the indoor map to do the following.

- Pan, rotate, or zoom the map based on your requirement.
- Select a different building or floor to browse the relevant map.
- Filter spaces based on neighborhoods, reservation and occupancy status, and space type.
- Search for a user or a space by using the search bar and selecting the relevant result. The kiosk highlights the space and displays information such as the user assignment, department, and neighborhood. The displayed information can differ based on the configuration set by the admin.

- View the map legend for information about the icons and elements on the map.
- Get directions to a space after selecting it from the map or the search bar. The kiosk displays the path to your destination, which can be on a different floor or building. You can also opt for an accessible path.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also get directions to a space by selecting the directions button ( ), then selecting the destination.

You can enable step-by-step directions and also select the units that you want to use for the distance. You can select either feet or meters as the measurement unit. The default unit is set based on the kiosk location.

- Raise an issue after selecting a space from the map or the search bar. The kiosk displays a form where you can provide details about the issue, select the urgency, and select a user to raise a request on their behalf.

Make workplace reservations on the kiosk

Workplace visitors and guests with kiosk viewer role can make workplace reservations. They can search and select a space on the Kiosk Map to reserve a space.

Before you begin

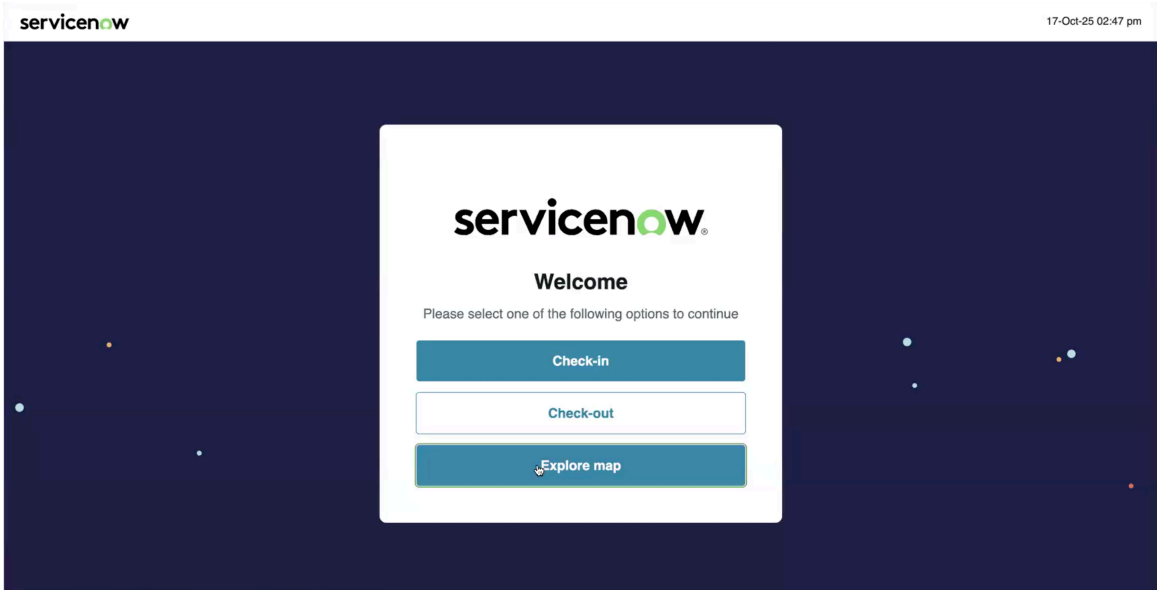
Install and configure the following from the ServiceNow Store.

- Workplace Reservation Management
- Workplace Services Kiosk
- Workplace Central
- Workplace Indoor Mapping
- Workplace Core
- Workplace Space Management

Make sure that your device is set up on a kiosk to enable workplace reservations. For more information, see Setup a kiosk on a physical device for reservations.

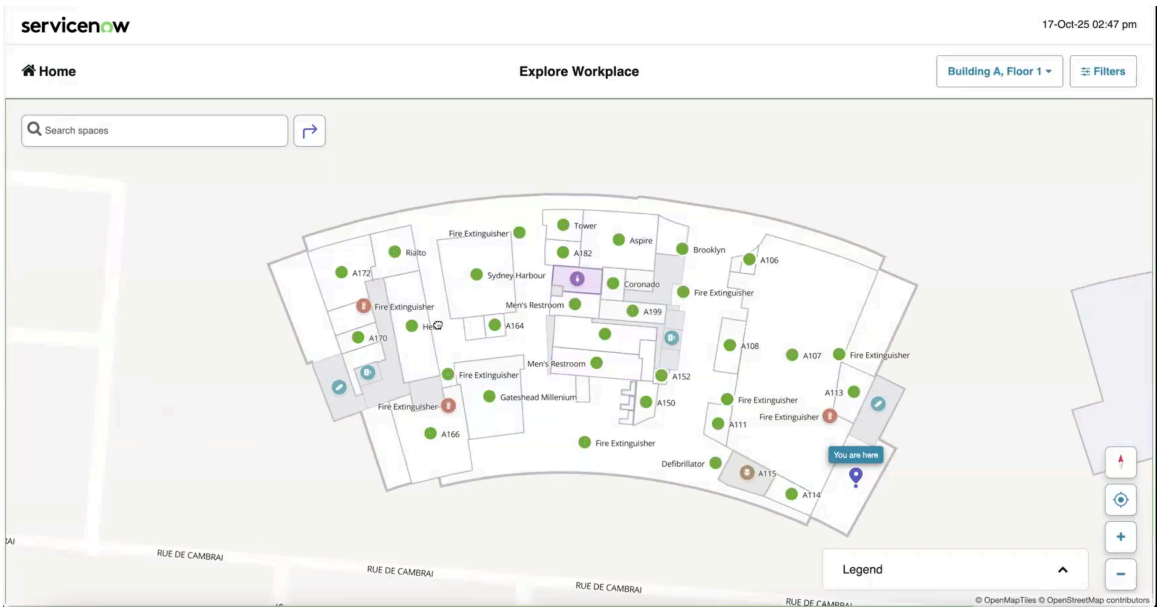
You can't add workplace services to a reservation in kiosk. Recurring, neighborhood, and browse near a person reservations aren't supported for kiosk reservation.

Role required: sn_wsd_kiosk.viewer, sn_wsd.core_workplace_user



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

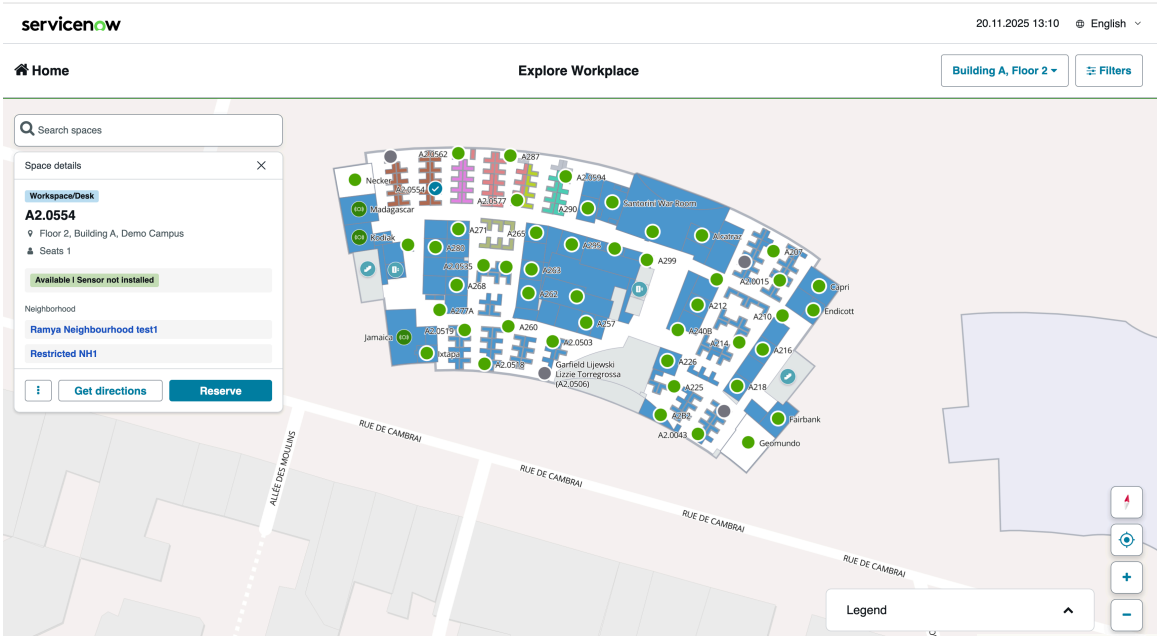
Note:
The sn_wsd.core_workplace_user (workplace user) role is part of the kiosk viewer role. Employees can log in with the sn_wsd.core_workplace_user role to view, search for spaces on a floor map and make a reservation. For more information, see Components installed with Workplace Services Kiosk.



Role: sn_wsd_kiosk.viewer.

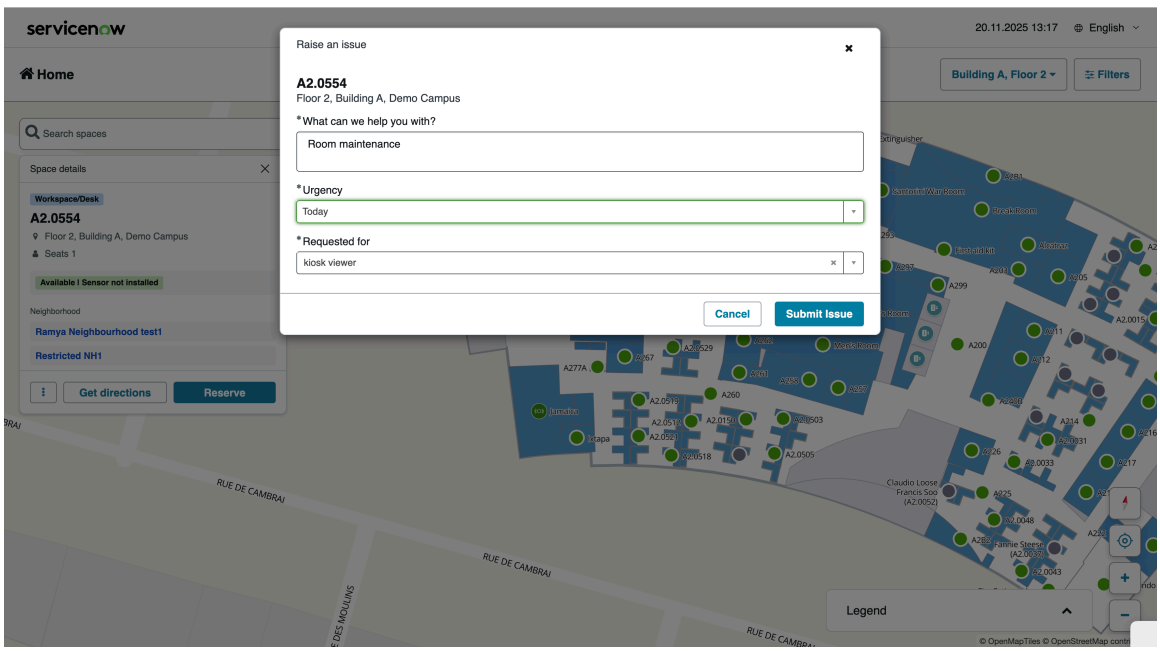
Procedure

1. Log in to your instance with the kiosk viewer role.



2. Select **Explore Map**.
The Explore Workplace page opens and displays workplace locations on the map.

3. From the menu, select **Building** and **Floor** to select a building and a floor.
4. Zoom in and select a space on the map to make a reservation.
5. Space details card for the selected space shows the **Get directions** and **Reserve** button.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the selected space is already reserved, it shows the **Raise an issue** tab. Raise an issue tab is also shown if the space type configuration in the Reservable Module configuration for the kiosk doesn't match the space type configuration of a selected space.

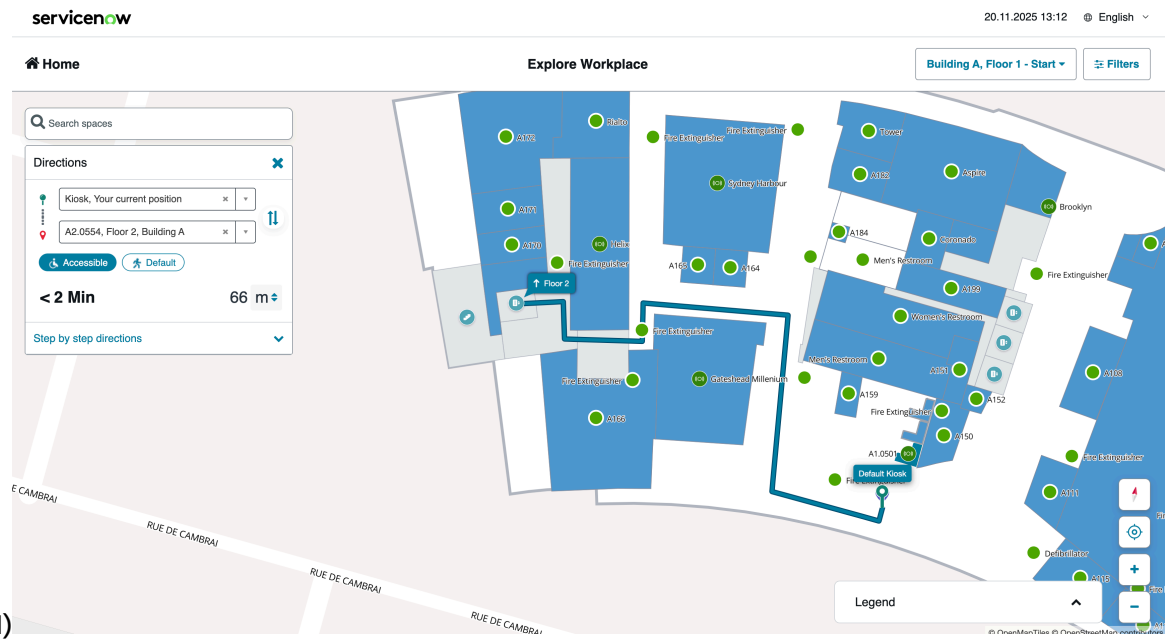
- Select the ellipsis icon (⋮) and select **Raise an issue**.

  The Raise an Issue form opens.

- On the form, fill in the field information.

Raise an Issue form

Field	Description
What can we help you with?	Option to provide the workplace issue for which you want to raise a case.



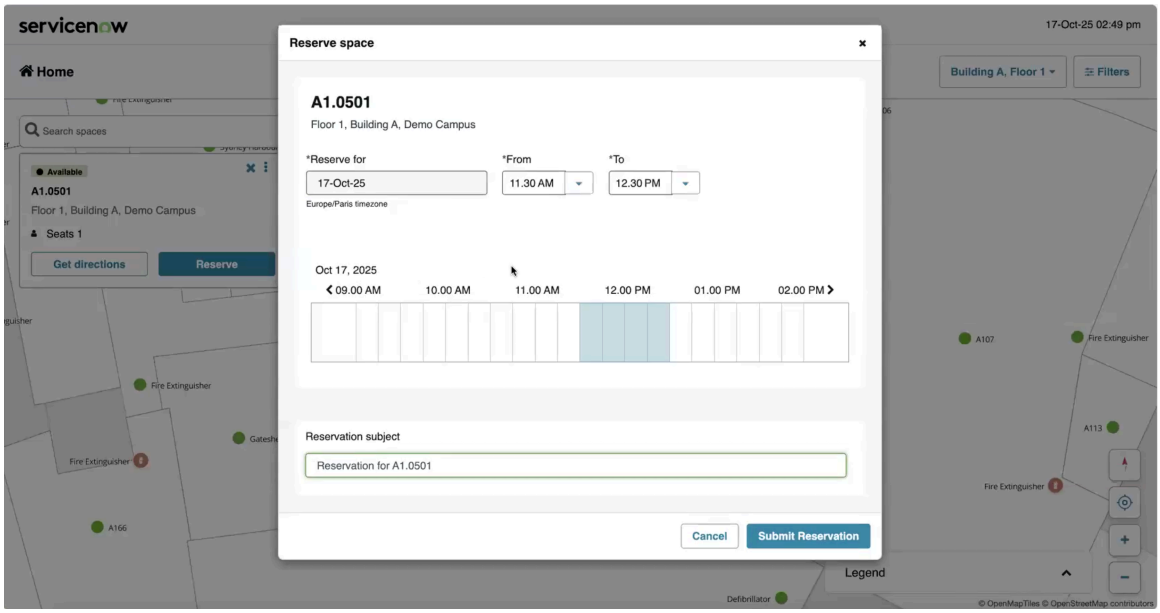
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Urgency	Option to prioritize the urgency of the case. Select any of the following options: ▪ Today ▪ This week ▪ Next week
Requested for	Search and select a user for whom you are raising the workplace issue.

6. Select **Reserve** to create a workplace reservation.

> **Note:**
> Space types configured for you by your administrator are displayed on the map. For example, Meeting rooms or Desks/Spaces. If your administrator has set the space type configuration as Desks/Spaces in the Kiosk Reservable module, the floor map shows only desks or space. If the space type configuration is meeting rooms, the map shows meeting rooms for reservations. For more information, see Configure Reservable Module for kiosk reservation.

7. **Optional:** Select **Get Directions**.



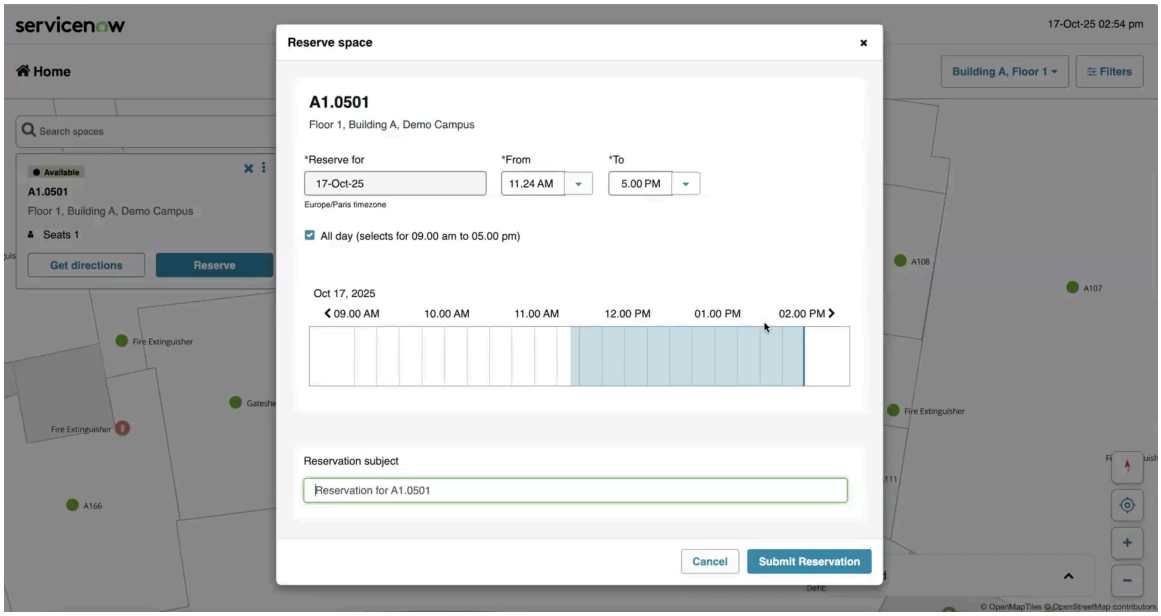
(Optional)

Select your current position on the map, and select the location on the map for getting directions on the map.

Select **Accessible** or **Default** for getting directions to a workplace on the map.

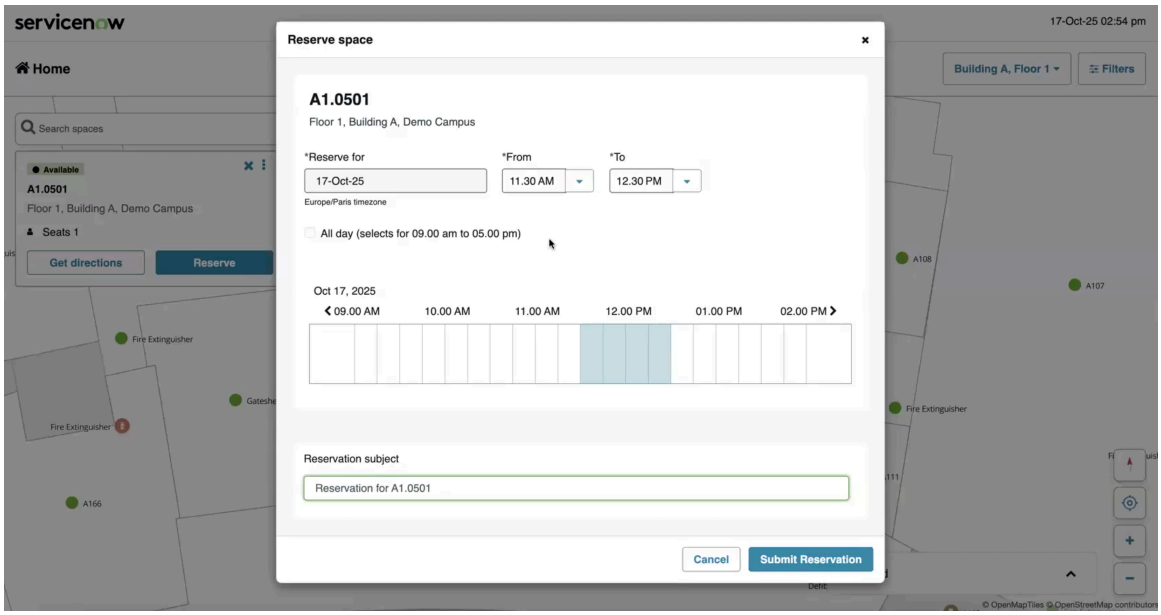
8. The Reserve a space page opens and the selected space is shown on a schedule view calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



On the form, fill in the information.

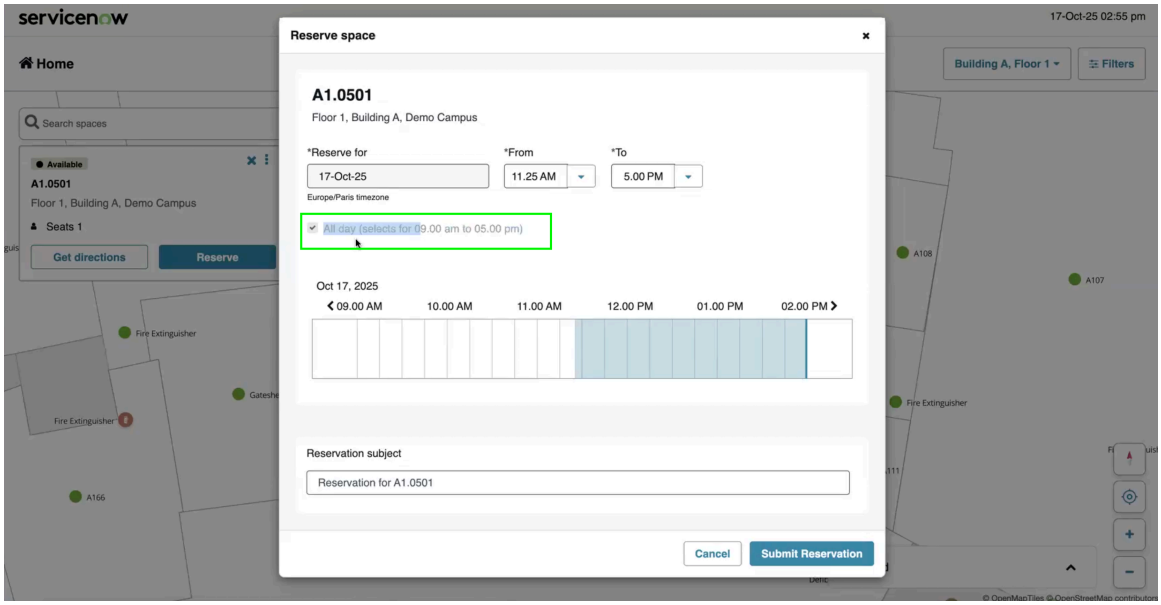
Reserve a space



Field	Description
Reserve for	Option to select a date. If **All day** Reservable module configuration is set to **Disabled**, the current date is selected and the **Reserve for** option is read-only. If Max days in future value is set to more than 1, the **Reserve for** option shows options to select calendar dates.
From	Option to select the start time of the reservation.
To	Option to select the end time of the reservation.
Reservation subject	Option to provide the Reservation subject details. For example, Reservation for AI workflows. If the **Require Subject** check box is selected in the **Reservation Widget Configuration** tab, you're required to enter the Reservation Subject label while submitting the reservation. For more information, see Configure Reservable Module for kiosk reservation

When All day **Reservable Module** setting is set to **Default** on the Reservable module configuration, you see the actual time when you're making a reservation. For example, if you're making the reservation at 11.24 am, reservation start time shows **11.24**. Start and end time for a reservation are based on the building time zone and reservation properties for setting office hours. For more information, see Properties installed with Workplace Reservation Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



If **All day** Reservable configuration is set to **Enabled**, the reservation start and end timings are rounded off. For example, 11.30 am to 12.30. The All day check box isn't selected with office timing shown from 9 am to 5 am. The timing shown depends on your office start time and end time.

If **All day** Reservable module configuration is set to **Required**, the **All day** check box shown in read-only mode and you can't change the start time and end time. The building's current time is shown based on the building time zone.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you're trying to book a space beyond the time specified in the Min or Max duration, application displays an error message. The **All day**, **Min duration** and **Max day duration** values are set by your administrator. For more information, see Configure Reservable Module for kiosk reservation.

9. Select **Submit Reservation**.

   If a reservation can't be created for a space that is already reserved, a message is displayed informing the employee that the space isn't available anymore. The schedule view is refreshed with the latest search results. The **Submit reservation** button is inactive. The employee can change the date or time to find a new, available slot.

Note:
After your reservation is confirmed in the kiosk, email notifications aren't sent to workplace users.

Workplace Services Kiosk reference

Reference topics provide additional information about the lists and forms used in Workplace Services Kiosk.

Components installed with Workplace Services Kiosk

Several types of components are installed with activation of the Workplace Services Kiosk plugin, including tables, user roles, and business rules.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Properties

Properties installed with Workplace Services Kiosk

Property	Description
sn_wsd_kiosk.kiosk_reset_delay	Specifies the duration of inactivity before the kiosk resets to the home page.
sn_wsd_kiosk.kiosk_heartbeat_delay	Specifies the duration after which the kiosk pings the instance to update the **Kiosk Status** table.

Kiosk configuration form

Use the Kiosk configuration form to create a kiosk device configuration.

Kiosk configuration form

Field	Description
Name	Name of the kiosk device.
Homepage configuration	Homepage configuration that must be linked to the kiosk device.
Managed by	User group that can manage the kiosk device.
Location	Location of the kiosk device. The company policies and the list of hosts are displayed based on the selected location. Ensure that the location is not a site or a region. The location must be a campus, a building, or a lower order location. **Note:** To display employees in the list of hosts, the kiosk location must match with the Workplace Profile location of the employees.
Description	Description of the kiosk device.
Default language	Default language displayed on the kiosk device.
Single module mode	Option to enable only a single module for the kiosk configuration. If you have multiple modules linked to the configuration, the module with the lowest order is displayed on the kiosk.
Device ID	Auto-generated identifier for the kiosk device.

Workplace Services Kiosk error scenarios

Find the cause and related information of kiosk errors in the system logs.

The Workplace Services Kiosk displays a generic error page to the user when an error occurs. As an admin, you can find information about the errors in the system logs. An error can occur in the following scenarios:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The kiosk doesn't provide the required parameters.
- The flow configuration record isn't found in the Kiosk module configuration [sn_wsd_kiosk_module_configuration] table.
- The indoor map configuration record isn't found in the Kiosk indoor mapping configuration [sn_wsd_indoor_map_kiosk_configuration] table.
- The configured view type isn't accessible by the kiosk viewer [sn_wsd_kiosk.kiosk_viewer] role.
- The configured campus isn't part of the configured view type.
- The floor where the kiosk camera is set isn't part of the configured view type.
- The floor where the kiosk is positioned isn't part of the configured view type.

Now Assist for Workplace Service Delivery (WSD)

AI limitations

This application uses artificial intelligence (AI) and machine learning, which are rapidly evolving fields of study that generate predictions based on patterns in data. As a result, this application may not always produce accurate, complete, or appropriate information. Further, there is no guarantee that this application has been fully trained or tested for your use case. To mitigate these issues, it is your responsibility to test and evaluate your use of this application for accuracy, harm, and appropriateness for your use case, employ human oversight of output, and refrain from relying solely on AI-generated outputs for decision-making purposes. This is especially important if you choose to deploy this application in areas with consequential impacts such as healthcare, finance, legal, employment, security, or infrastructure. You agree to abide by ServiceNow's AI Acceptable Use Policy, which may be updated by ServiceNow.

Data processing

This application requires data to be transferred from ServiceNow customers' individual instances to a centralized ServiceNow environment, which may be located in a different data center region from the one where your instance is, and potentially to a third-party cloud provider, such as Microsoft Azure. This data is handled per ServiceNow's internal policies and procedures, including our policies available through our CORE Compliance Portal.

Data collection

ServiceNow collects and uses the inputs, outputs, and edits to outputs of this application to develop and improve ServiceNow technologies including ServiceNow models and AI products. In addition, this application will collect data about workplace requests (e.g. reservations). Customers can opt out of future data collection at any time, as described in the Now Assist Opt-Out page.

For more information, see the Now Assist documentation.

Exploring Now Assist for Workplace Service Delivery (WSD)

The Now Assist in Virtual Agent assists Workplace Service Delivery workplace employees to book meeting spaces conveniently and quickly.

Now Assist for Workplace Service Delivery (WSD) overview

Now Assist for Workplace Service Delivery (WSD) provides workplace users with a streamlined, conversational experience based on generative AI. Workplace employees can submit a workplace reservation request to reserve a space and add services to a reservation. Now Assist for Workplace Service Delivery (WSD) enhances the user experience by combining AI Search with Now Assist in Virtual Agent generative AI chat skills.

The generative AI capabilities provides a human-like conversational experience for Workplace Reservation Management reservation request submissions.

Now Assist for Workplace Service Delivery (WSD) users

Users

User	Description
Workplace Reservation Management administrators	The Now Assist for Workplace Service Delivery (WSD) retrieves details from Workplace Reservation Management and provides workplace users by leveraging the Now Assist Gen AI capabilities. • Reserving a space for meeting • Adding co-workers to a reservation • Adding visitors or guests to a reservation • Adding a Zoom meeting link for remote joining • Ordering and adding catering services
Agentic AI Workflow	The following Agentic AI workflows are available for Now Assist for WSD: • Manage temporary space closures • Help manage workplace reservations • Optimize cleaning activities • Automate map updates

Supported Versions

Now Assist for WSD (sn_wsd_gen_ai) is supported on Xanadu v1.1.0

Application Information

Activate the Now Assist for Workplace Service Delivery (WSD) store app to create a reservation.

Installing Now Assist for WSD (sn_wsd_genai) activates the following dependent application:

Now Assist for Platform (sn_genai_platform)

Configuring Now Assist for WSD

Install and configure Now Assist for Workplace Service Delivery (WSD). As a system administrator configure the Now Assist for WSD application so that workplace reservation requesters can leverage the Now Assist generative AI capabilities.

Configuration overview

1. Install Now Assist for Workplace Service Delivery (WSD)
2. Configure Now Assist in Virtual Agent for Workplace Service Delivery

Install Now Assist for Workplace Service Delivery (WSD)

install and activate Now Assist for Workplace Service Delivery (WSD) from ServiceNow® Store.

Before you begin

The System Admin (admin) role is required to install the application.

Make sure that you have installed and configured the following dependent applications:

- Now Assist for Platform (sn_genai_platform)
- Workplace Reservation Management
- Workplace Case Management
- Workplace Visitor Management
- Workplace Concierge

Role required: admin

Procedure

1. Navigate to **System Definition** > **Plugins**.
   - For information about the plugin dependencies and plugin activation order, see Application information.
   - For information about the installation process, see Install Now Assist plugins.
2. Select **Sync now** to synchronize the plugins page with your freshly entitled store application.
3. Search in the search bar for a Now Assist product.

   Search for Now Assist for Workplace Service Delivery (WSD) (sn_wsd_gen_ai).

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Install the plugin and return to your instance.

> **Note:**
> Installing Now Assist for Workplace Service Delivery (WSD) (sn_wsd_gen_ai) activates and installs the Now Assist for Platform (sn_genai_platform).

Configure Now Assist in Virtual Agent for Workplace Service Delivery

Enable your employees to submit a reservation request using a conversational experience based on generative AI.

About this task

Workplace users can leverage the Now Assist in Virtual Agent by configuring the Now Assist for WSD. Now Assist for Workplace Service Delivery (WSD) can be configurted to reserve workplace items, invite visitors, and add extra services. The Now Assist in Virtual Agent application provides conversational experiences for Workplace Service Delivery flows.

For more information about Now Assist in Virtual Agent, see Now Assist in Virtual Agent.

Before you begin

Make sure that you have installed the following applications from the ServiceNow Store:

- Installing Now Assist for Workplace Service Delivery (WSD) activates and installs Now Assist for Platform (sn_genai_platform)
- Workplace Reservation Management
- Workplace Visitor Management

  Workplace Visitor Management is applicable for the **Add Visitors to Reservation** topic block and is optional.

- Workplace Case Management

  Workplace Case Management is applicable for the **Add Catering to Reservation** topic blocks, and is optional.

> **Note:**
> The following topic blocks are published by default.
>
> - Add Catering to Reservation
> - Add Zoom to Reservation
> - Add Visitor to Reservation
>
> To run the related subflows, the required application must be installed and the feature must be enabled in the reservable module configuration.

Role required: admin

Procedure

1. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.
2. From the **LLM Assistant** list, select **Now Assist in Virtual Agent**.
3. Publish the **Reserve Space** topic.
   For more information about publishing a topic, see Publish a Virtual Agent topic.
   The Reserve Space topic is published and can be used from the Virtual Agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

- Create a reservable module to group similar workplace items into a category. For more information, see Configure a reservable module.
  - Enable virtual meeting links for your reservation by configuring a virtual meeting provider. For more information, see Configure virtual meeting providers.
  - Provide extra services, such as catering, for the reservations by creating workplace services and adding them to workplace locations. For more information, see Create a workplace service to provide an extra service for a reservation.
- Select the portals and channels that the Virtual Agent is displayed on. For more information, see Configuring Now Assist in Virtual Agent.

> **Note:**
> Selecting the Workplace Service Portal for Now Assist in Virtual Agent replaces the existing NLU experience.

- Use the Virtual Agent to reserve a workplace item, add services, and invite visitors. For more information, see
  Using Now Assist in VA to reserve a workplace item .

Using Now Assist for WSD

Using Now Assist for Workplace Service Delivery (WSD) for creating a reservation.

Overview of Now Assist for WSD

Now Assist for Workplace Service Delivery (WSD) enhances your ServiceNow® Workplace Services experience with generative AI capabilities. Enhance the employee experience by using a generative experience to interact with your physical workspace.

It allows employees the following:

- Reserving a space for meeting
- Adding co-workers to a reservation
- Adding visitors or guests to a reservation
- Adding a Zoom meeting link for remote joining
- Ordering and adding catering services

Reserve a space using Now Assist in Virtual Agent

The Reserve Space Virtual Agent topic enables you to create a reservation using Now Assist for Workplace Service Delivery (WSD). You can also add services to your reservation.

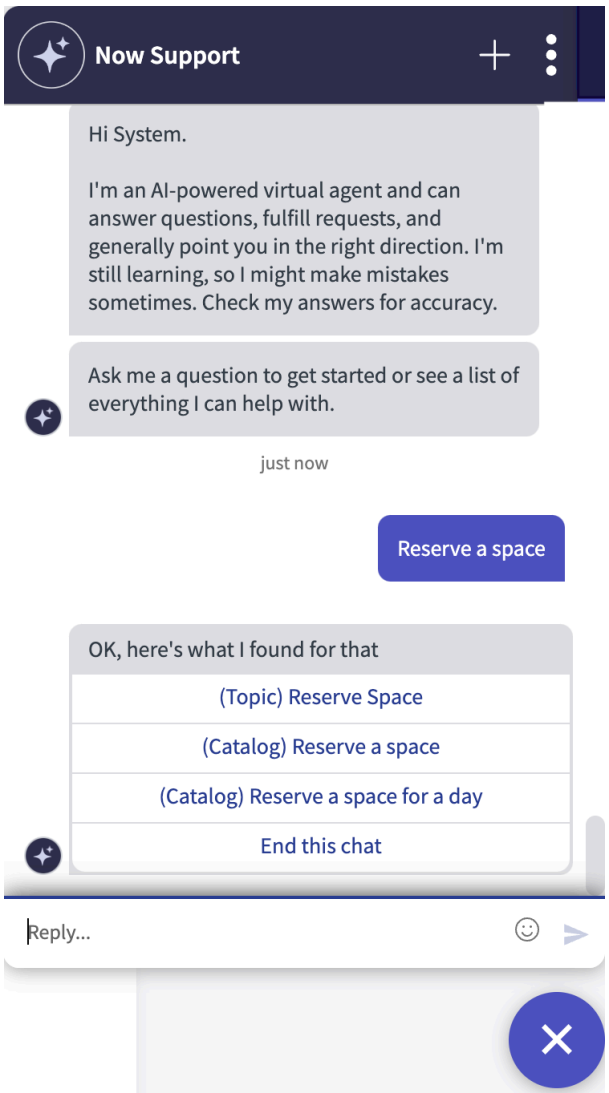
Before you begin

The **Reserve Space** topic should be added to Now Assist in Virtual Agent. For more information, see Configure Now Assist in Virtual Agent for Workplace Service Delivery.

Make sure that you have the following applications:

- Now Assist for Platform (sn_genai_platform)
- Workplace Reservation Management Workplace Reservation Management (sn_wsd_rsv)

Role required: sn_wsd_core.workplace_user



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Employee Center portal.
   For more information, see Workplace services on the Employee Center portal.
2. Select and open the Now Assist in Virtual Agent chat window.
3. Enter your query or key words to reserve a meeting room.

   The Now Assist in Virtual Agent bot supports human-like conversational language. For example, you can query ' 'Reserve a space for me', I want to reserve a space for 10 AM, and so on.
4. After the initial greeting message, the Now Assist in Virtual Agent bot provides an explanation of what you can expect from it.
5. Enter your query or key words to reserve a space.
   A friendly, natural language conversation or utterance can be used while making or submitting your workplace requests.

   While the large language model (LLM) is processing your request (utterance), animated dots in the chat window indicate that the bot is working on your request.
6. The Now Assist in Virtual Agent shows options to reserve a space.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The option to reserve a space using the Now Assist in Virtual Agent is available only if your administrator has added the **Reserve Space** Virtual Agent LLM topic in the Virtual Agent designer. For more information, see Configure Now Assist in Virtual Agent for Workplace Service Delivery

7. Select **(Topic) Reserve Space**.

   When the Topic name button is selected, the workplace requester is launched into that topic flow within the Now Assist in Virtual Agent.

   The application tries to find “keywords” in the sentences that the employee enters. It uses the keywords entered by an employee for reservation requests and shows suggestions for reserving a space step by step. Based on the input provided, the bot tries to get as many data points as possible initially. For example; “I want to reserve a desk for Friday from 9 am till 11 am” are the keywords entered by an employee. The application captures the following data points and shows suggestions:

   - Space type: the system will filter on modules with "space" in it
   - Building AMS-B1, the employee is asked to confirm
   - Start time: 9 am
   - End time: 11 am

   Since, there is no date provided, the employee is asked by the bot to indicate the date.

   For example, If the employee enters "I want a space on next Monday from 9 am to 11 am." The building information is not provided in this input, so the bot asks to indicate the building. The Date is calculated based using the input "Next Monday" and start and end time. The more information an employee provides, less inputs are required by the bot to process and create a reservation.

8. The Now Assist in Virtual Agent bot instructs you to select the type of reservation that you want to make.

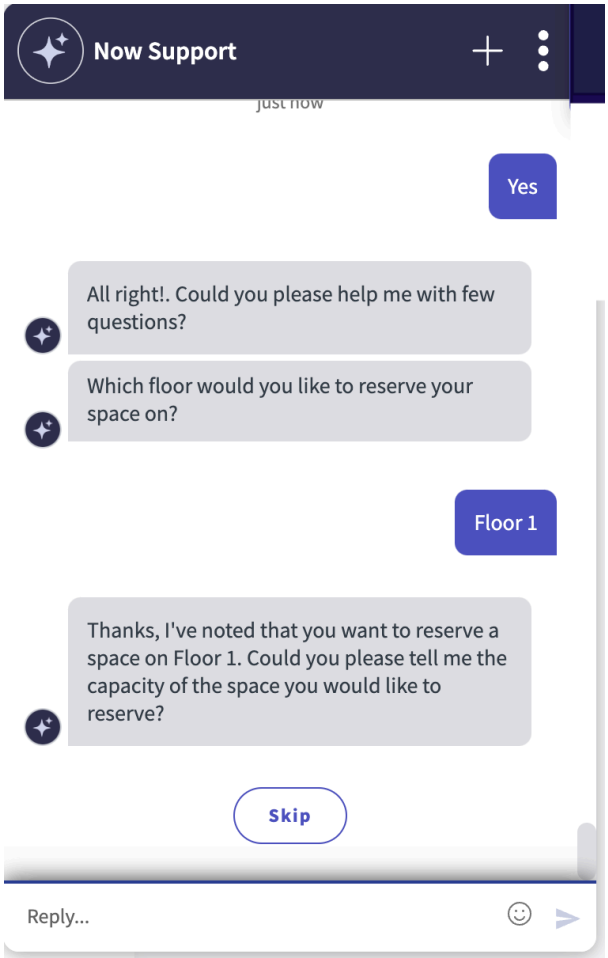
   For example, select **Meeting rooms.**

   Note:
   Only the **Browse All** Reservable module configuration is supported by Now Assist in Virtual Agent. It shows all reservation types available in the **Browse All** Reservable module. For example, **Desks**, **Desks within a shift**, and so on.

   The **Specific Unit Selection type** is supported in the Reservable Table configuration. **Container** isn’t supported for Now Assist in Virtual Agent. For more information, see Configure a reservable module.

9. The Now Assist in Virtual Agent bot instructs you to select a location for reserving a space.
10. Select a building.
    For example, **Cal-B2**.

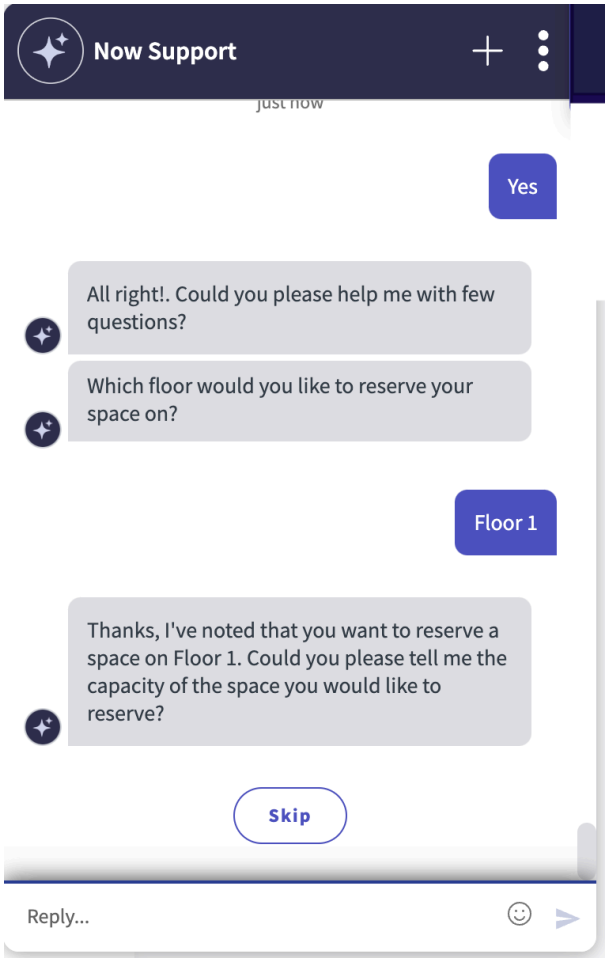
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



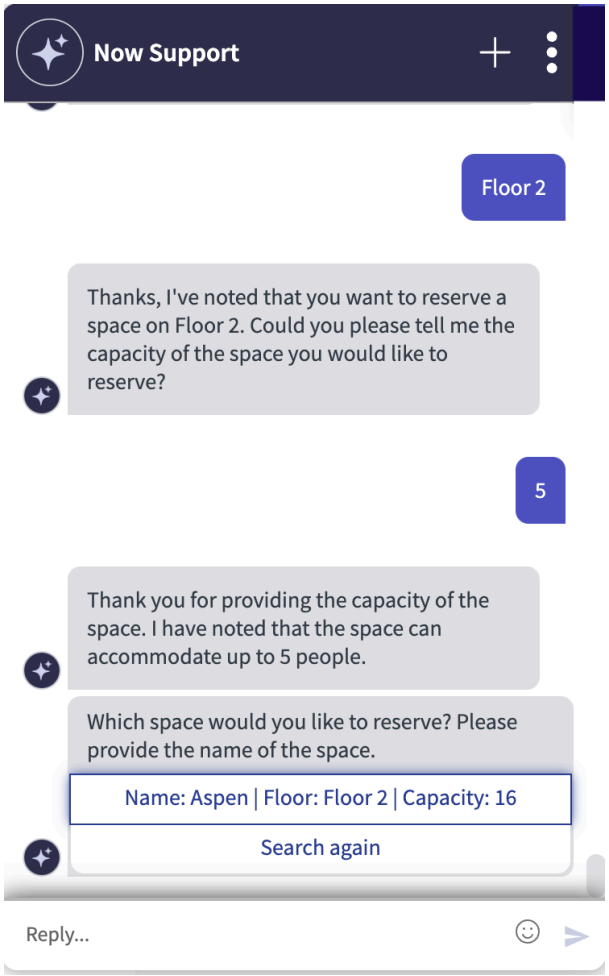
11. Now Assist in Virtual Agent bot instructs you to provide the Start and End dates for the reservation.

> **Note:**
> Recurring reservation and multi-day reservations are currently not available when you book a meeting room using the bot. Only single reservations for a selected date can be created. Make sure that the Start and end dates should be in the building's time zone and can't be in the past.

12. Now Assist in Virtual Agent bot confirms your selection for a location and reservation dates.
13. Now Assist in Virtual Agent bot instructs you to provide the floor name, capacity, and space name where you want to reserve a meeting room.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:
Floor, capacity, and shift schedule are optional inputs. If there are no spaces available, the Now Assist in Virtual Agent bot shows the following message, "Sorry, there are no available spaces currently. Please revise your selections and retry". If the suggestions don't match your requirement, you're also given the option to select **None match my preference**. If invalid user inputs are provided, for example, an incorrect building name or a past date, the bot asks you to enter the details again.

The Now Assist in Virtual Agent bot shows location results. The name of the building, floor, and capacity are displayed in the result.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select a space from the suggestions showed by Now Assist in Virtual Agent.

The Now Assist in Virtual Agent processes the information that you have provided and completes your reservation.

14. To view and update the reservation details, select the link **Please click here to view reservation details.**

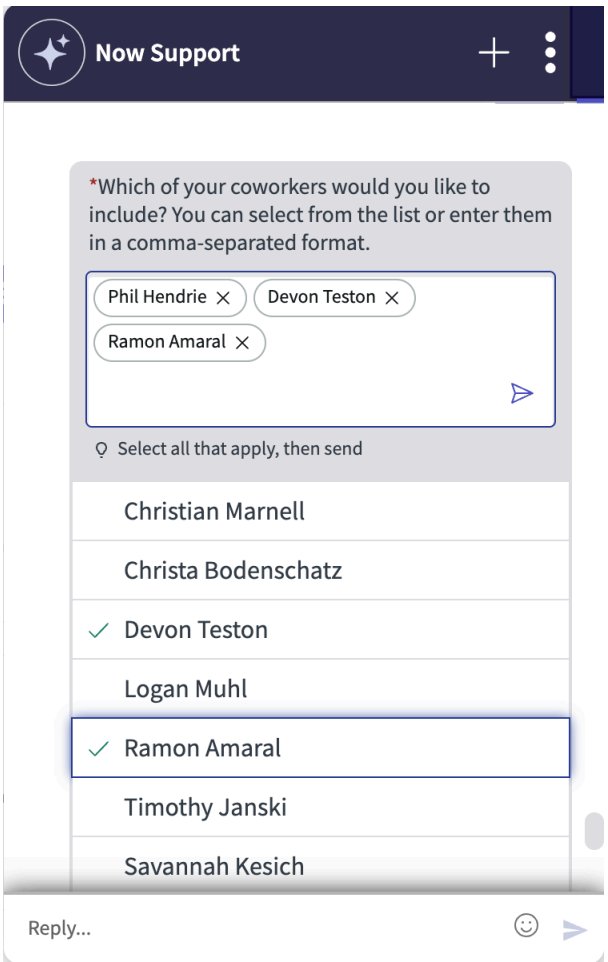
    The Reservation summary page appears. On the Reservation summary page, you can edit and update your reservation details.

15. **Optional:** Now Assist in Virtual Agent provides suggestions to add services to your reservation.

    (Optional) You can add guests and external visitors, Zoom virtual meeting link, or Catering services to your reservation. If you don't want to add any of these services to your reservation, you can skip this step and complete your reservation at this stage.

    Note:
    The option to add workplace services is shown based on the corresponding service availability for a selected location. For example, if Zoom spoke and the virtual meeting provider is configured in the Reservable module, the Added Zoom service option is shown by the bot. This also depends on the availability of a location or reservable module configuration settings by your administrator. So, if there is no Zoom spoke configured or guests are not allowed to a reservation, the bot doesn't display the related questions or suggestions. For catering services, the application checks if these are assigned for a selected location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



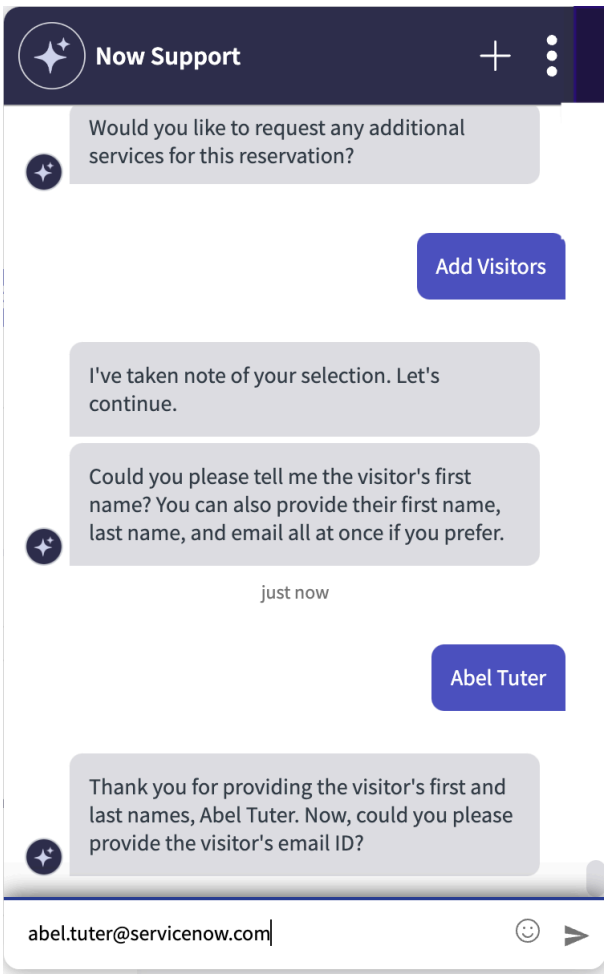
16. **Optional:** Now Assist in Virtual Agent instructs you to invite guests to your reservation.

    Note:
    The option to add guests is shown only when the **Allow Invitees** configuration is enabled in the Reservation module. This option in the Reservable Module enables you to invite attendees and add them to your reservation. You can invite guests to your reservation. For more information, see Configure a reservable module.

17. **Optional:** Select **Yes** if you want to add guests to your reservation.

    Note:
    You can add multiple invitees to your reservation. For more information, see Configure Now Assist in Virtual Agent for Workplace Service Delivery. You also need Workplace Visitor Management.

18. Now Assist in Virtual Agent provides suggestions to select your guests.



19. Now Assist in Virtual Agent confirms the guests details that you have provided.
20. Select **Yes** to proceed.
    Select **No** to change or update your selection.
21. **Optional:** After adding guests, you can add additional services like external visitors to your reservation.

    (Optional) You can only add visitors to a reservation for which you're the host. Workplace users with 'sn_wsd_rsv.manager' or 'sn_wsd_rsv.reservation_planner' roles can add invitees to a

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

reservation. Workplace users with 'sn_wsd_core.workplace_user' role can’t add invitees to a reservation when they aren't the host.

Note:
Multiple visitors can’t be added all at once. You should add visitors sequentially. For example, if you have visitor A, visitor B, and visitor C. Start by adding visitor A first, and add visitor B, and Visitor C.

a. Now Assist in Virtual Agent instructs you to provide the First Name, Last Name, and Email ID of the external visitor.

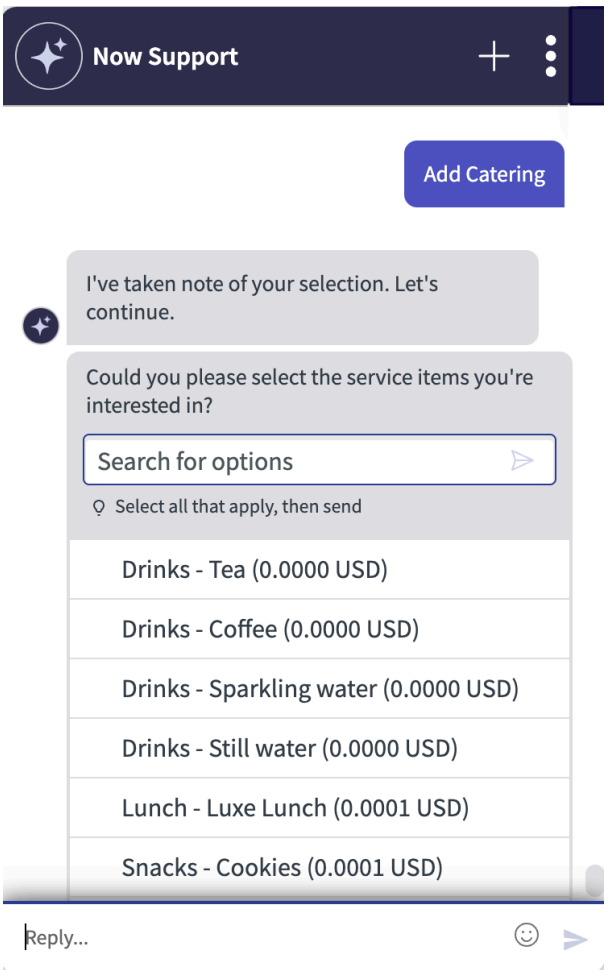
(Optional) If a visitor that is already added to a reservation is added again, the bot provides suggestions to add another visitor.

b. Provide the required details.

c. After adding the visitor, Now Assist in Virtual Agent confirms that visitor registration is done.

d. Now Assist in Virtual Agent provides suggestions to add a few more visitors to your reservation.

e. You can select **Skip** to proceed and continue with your reservation.

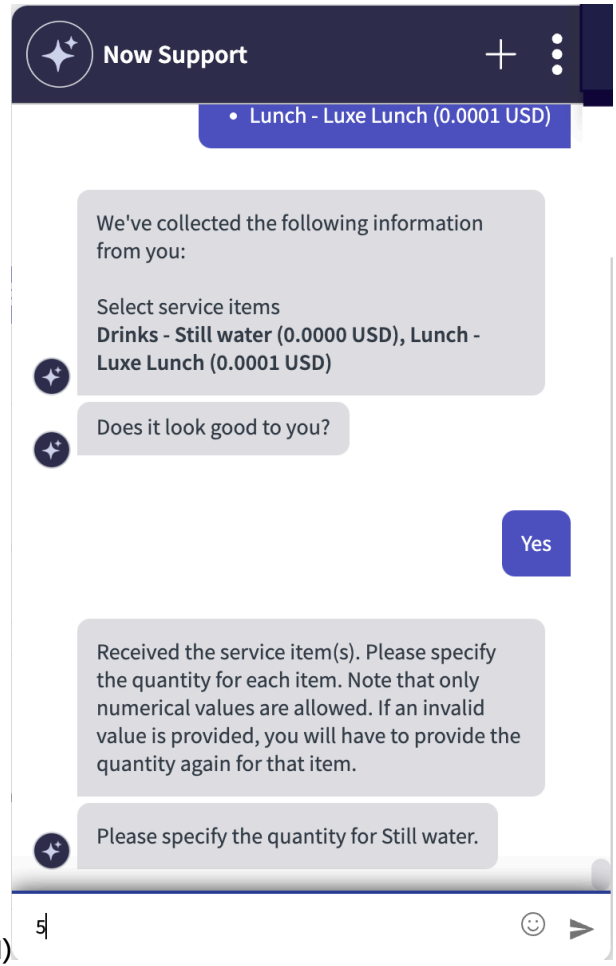


22. Optional: Now Assist in Virtual Agent shows the option to Add Catering services.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The services that you add are default catering workplace services provided with Workplace Reservation Management. It doesn't support any custom catering or workplace services added by you.

a. Select the required catering services (Lunch, Snacks, Drinks).



(Optional) You can also enter or add a conversational text like "Add lunch, some snacks, and drinks", "Add sparkling water and some snacks, and so on".

Note:
When the requested catering service aren’t available, a message is shown that the requested catering service isn’t available.

b. After selecting a catering option, the bot asks you to specify the quantity.

25. The Now Assist in Virtual Agent shows the reservation summary.

Review notifications in the Now Assist panel

Review notifications by AI agents in the Now Assist panel.

Before you begin

Workplace Event Planners can review the notifications and help AI agents take appropriate actions for blocking a space, moving any existing reservations to a new location, or for updating an existing reservation's date, time, or duration.

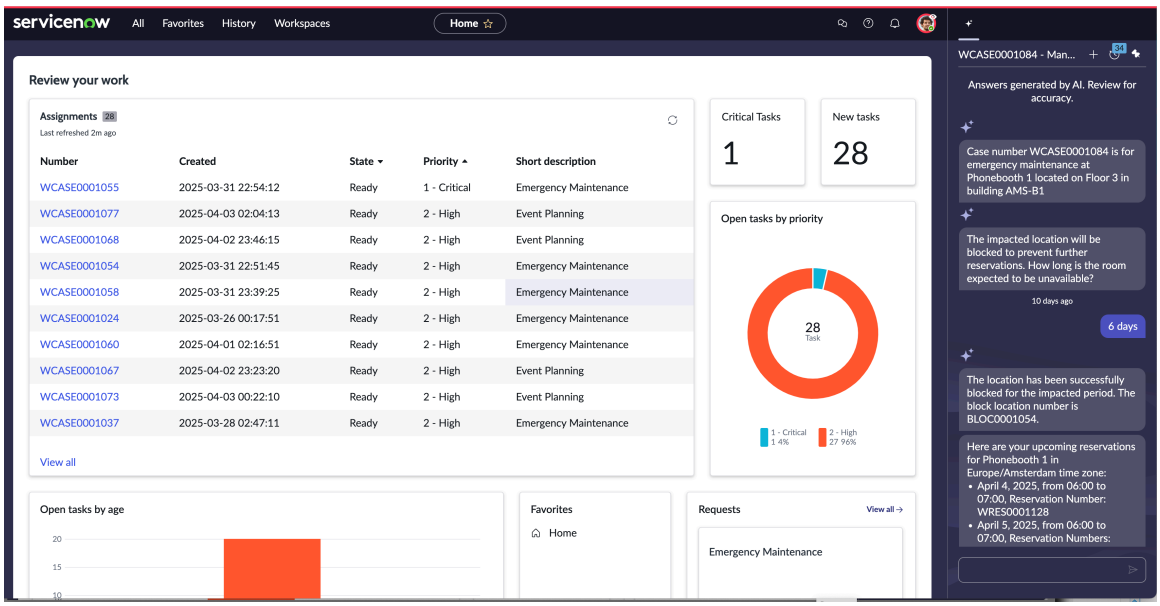
Role required: now_assist_panel_role, sn_wsd_rsv.reservation_planner, sn_wsd_case.case_writer

Procedure

1. In your instance, select the Now Assist sparkle icon in the ( ) navigation menu bar to open the Now Assist panel.

   Use the Now Assist conversational interface to receive notifications, case summarization, and resolution notes.

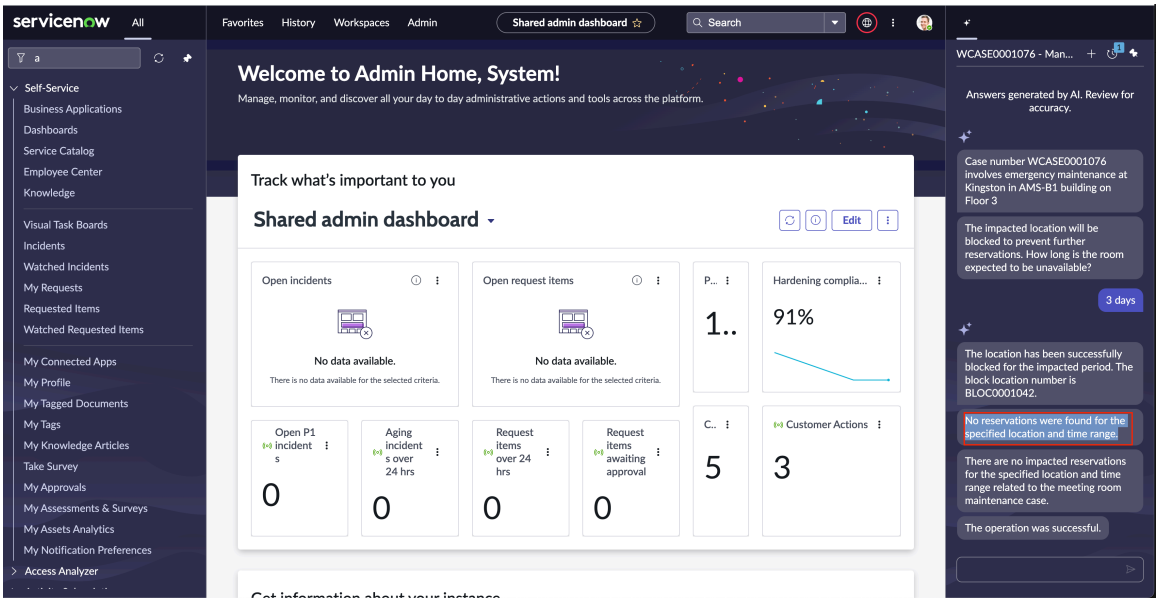
2. To review the notifications by AI agents for an emergency maintenance request, select the Now Assist sparkle icon ( ) in the navigation menu bar of your instance.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

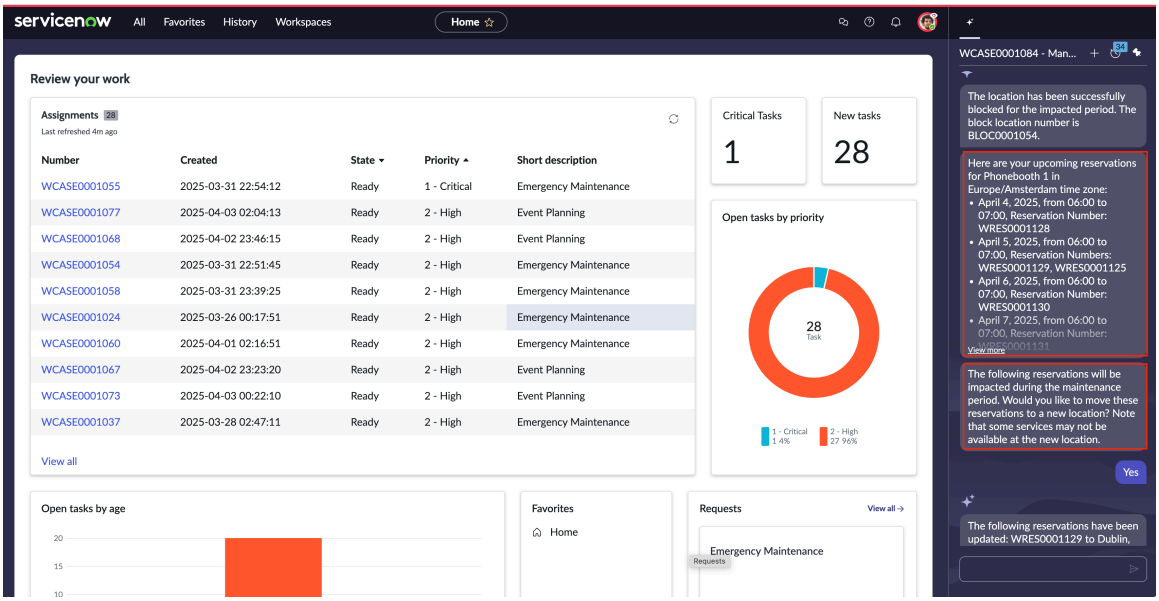
AI agents notifies Workplace Event Planners about actions taken through case resolution and case summarization notes in the conversational interface. Select and open the notifications in the conversation interface to review the case summarization and resolution notes.

For example, an emergency maintenance request is submitted and assigned to a user in the Workplace Event Planners assignment group. When an emergency meeting request is submitted, a workplace case task is created. For more information, see Submit an emergency maintenance request and View emergency maintenance case details.



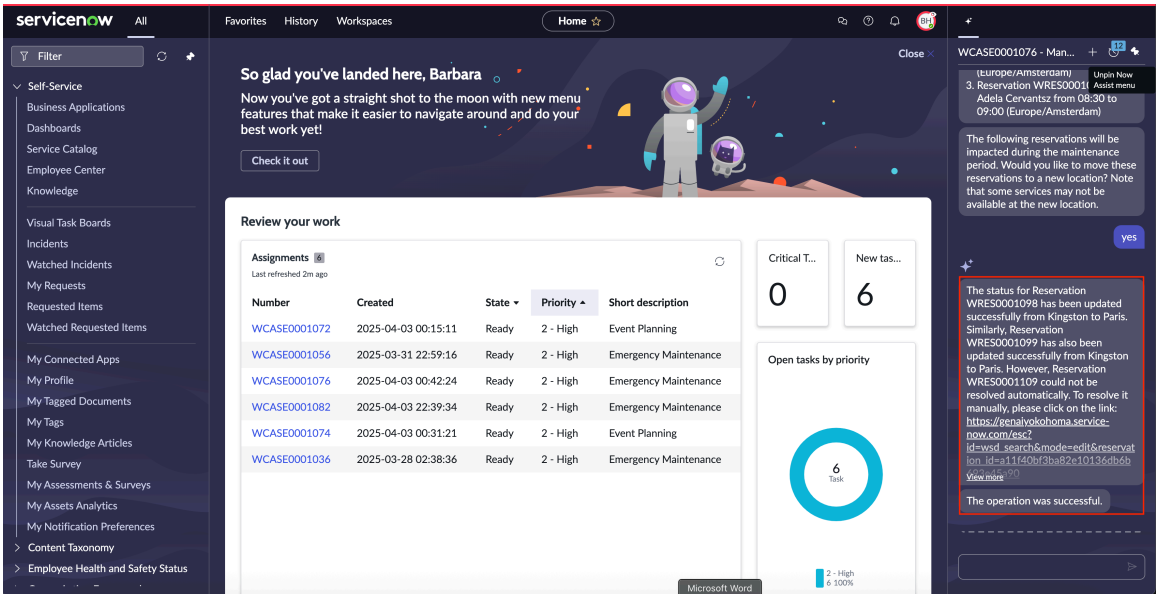
Workplace Event planners are notified by AI agents for blocking a location and moving an existing reservation from a blocked location to another. AI agents notifies the Workplace Event planner user using the Now Assist panel and performs the following activities in the conversational interface:

- Contacts the Workplace Event planner user and summarizes the issue.
- AI agent asks the Workplace Event Planner the duration for which the space should be blocked (unavailable) during the maintenance period.
- After receiving the confirmation, the AI agents creates a block location record in the sn_wsd_core_block_location table. The location is blocked or unavailable during the emergency maintenance period. It autonomously updates the existing reservation to a new location.



- If there are no impacted reservations for a blocked location, AI agents inform the Workplace Event Planners that there are no impacted reservations for a blocked location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- If there are any existing reservations in the blocked location, AI agents lists the impacted reservation or reservations for Workplace Event Planners to review.
- AI agents asks the Workplace Event planners to confirm the impacted reservations.
- Workplace Event planners can confirm the location and help AI agents move the reservation or reservations to an available location.

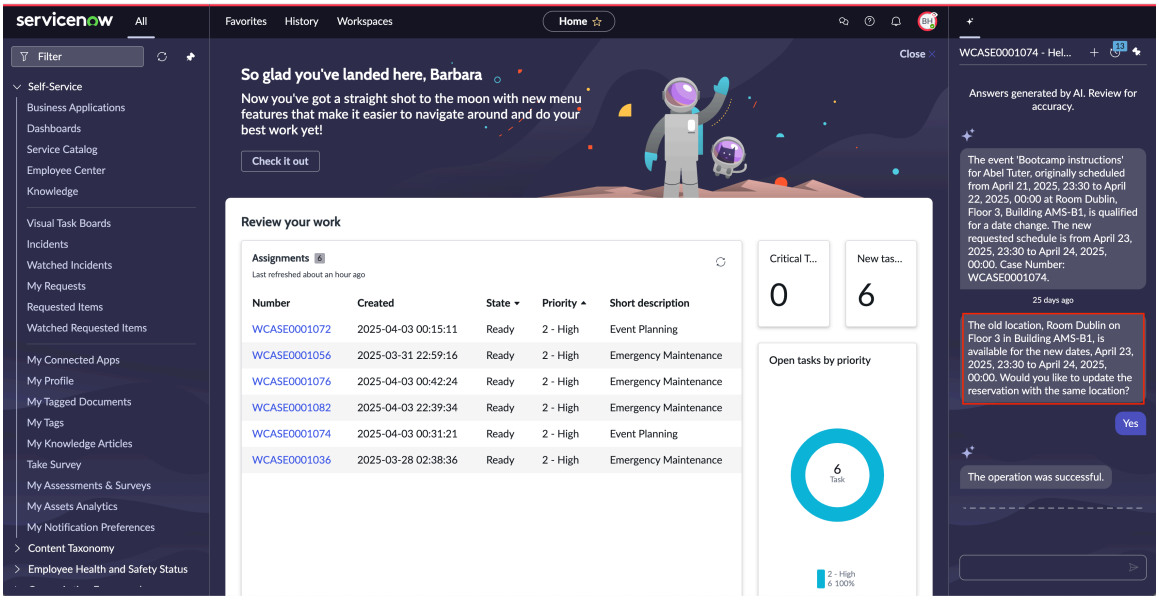
- If you want the reservation to be moved to a different location, enter your suggestion in the conversational interface. If the location is available, AI agents block the location for you.
- If AI agents cannot handle an impacted reservation, it provides a link to the Workplace Event planner to manually moving or updating the reservations. Workplace Event Planners can navigate to the reservation portal page and manually update or reschedule the reservations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Multi-location reservations are not supported by AI agents.

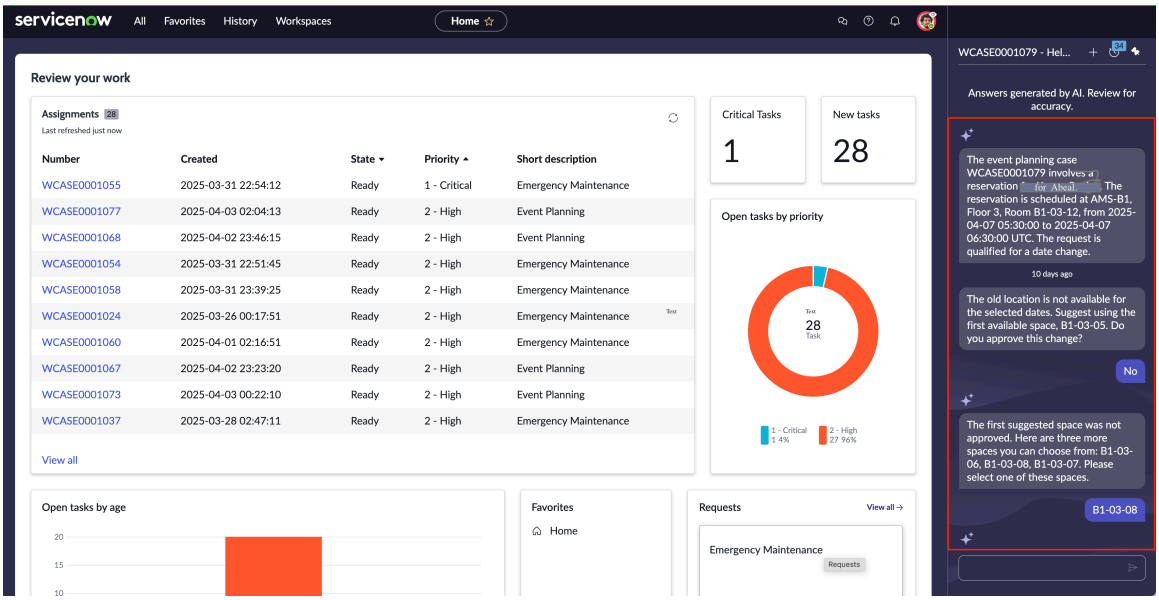
- AI agents share case summarization and resolution notes with Workplace Event Planners.

The emergency maintenance case activities are also added to the work notes of the emergency maintenance case. Workplace Event planners can review the work notes to understand the activities performed by AI agents. For more information, see View emergency maintenance case details.



Another example can be when a change event request is submitted by a workplace user. The change event request case is submitted to update an existing reservation's date, time, and duration. The change event request case is assigned to a user in the Workplace Event Planners assignment group. AI agentic workflow Help Manage workplace reservations is triggered when the case is assigned to a Workplace Event Planner.

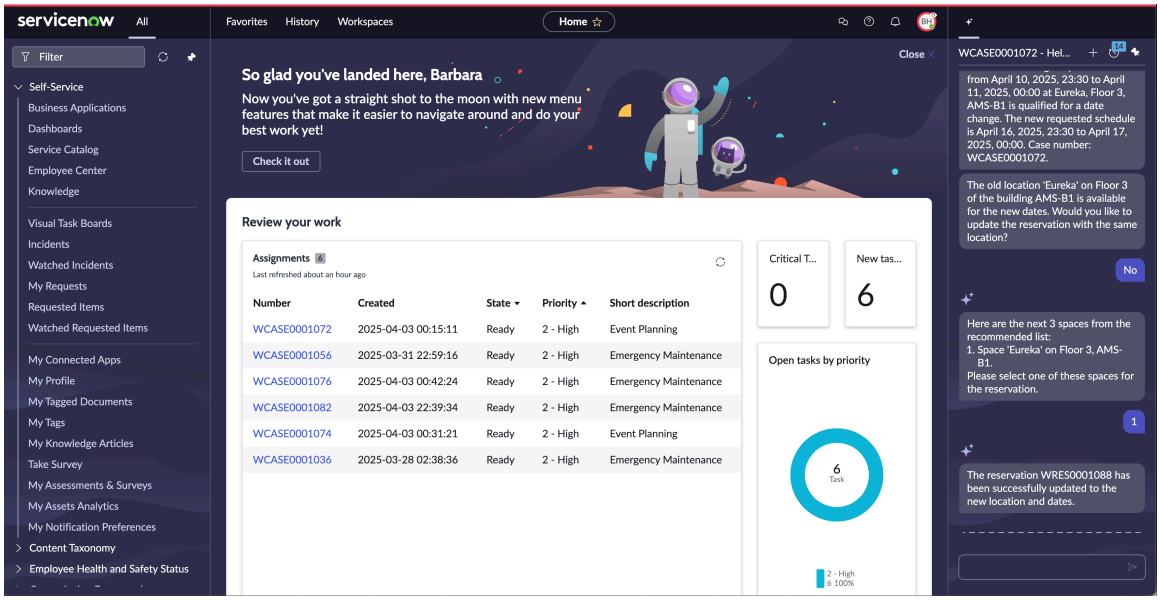
For more information, see Submit a change event request for a reservation and View change event reservation case details.



Select and open the notifications in the conversation interface to review the case summarization and resolution notes.

- Workplace Event planners can review the notification and chat with the AI agent to answer queries for moving a reservation to another location.
- If the old location is available, AI agents move the reservation to the old location when updating an existing reservation's date, time, and duration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- If the old location is not available while updating a reservation, AI agents shows a new location and asks Workplace Event planners to confirm it. You can confirm the location or ask for a different location that you prefer.

- AI agents then show 3 new available spaces for reservation. You can select any one of these. If you want a different location, AI agents provide a link for you to navigate to the reservation portal page and manually select the space that you want.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- AI agents then provide case resolution notes and summarization for Workplace Event planners to review.

The team of AI agents updates an existing reservation with a new date, time, or duration. AI agents notifies Workplace Event Planners using the Now Assist panel conversational interface about the changed date and time for a reservation. If the old location is not available for reservation, AI agents move the reservation with updated date and time to a new location. For more information, see Help manage workplace reservations agentic workflow.

Using AI agent workflows in Now Assist for WSD

Agentic workflows in Now Assist for WSD help complete workplace tasks autonomously.

Table 1. Available AI agent workflows for Now Assist for WSD

	`Waiting user input` state.	

Important:
All use case and AI agent records are read only by default.

To run the AI agents autonomously, you must first duplicate the agentic workflow, and then, do the following steps:

- Activate the use case.
- Activate all agents within the use case.
- Activate the trigger to invoke the use case automatically. If you prefer to invoke it manually, activating the trigger isn't necessary.

Looking for an AI agent?

- There might be AI agents installed with the Now Assist application that are not used in agentic workflows. To learn how to see all agents that are available on your instance, see Find AI agents.
- To find agents that might not be installed on your instance, visit the AI Agent Marketplace on the ServiceNow Store.

Manage temporary space closures agentic workflow

This team of AI agents temporarily block a location when there's an emergency workplace maintenance case is submitted.

Manage temporary space closures workflow overview

AI agent executes maintenance tasks, blocks a room for maintenance, and moves any existing reservation to another location when the emergency workplace maintenance requested is assigned to a user in the Workplace Event Planners assignment group. For more information, see Submit an emergency maintenance request.

The team of AI agents block a room for emergency maintenance and move any existing reservations from the blocked location to another location. AI agents send notification to Workplace Event planners using the Now Assist panel. The team of AI agents autonomously perform the following:

- Retrieves the case details from the emergency maintenance request.

  For more information, see View emergency maintenance case details.

- Retrieves impacted reservation from a location and blocks a location for maintenance.

  For more information, see Block a workplace location.

- AI agents notifies workplace event planners with case resolution and summarization using the Now Assist panel conversational interface.

  AI agents take confirmation from Workplace planners before blocking a location or before moving a reservation to another location. Workplace Event planners can respond to AI agents queries using the conversational interface of the Now Assist panel. For more information, see Review notifications in the Now Assist panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Updates the emergency maintenance request case notes with all the actions taken. Workplace Event planners can review the activity log to know the actions taken by AI agents.

  For more information, see View emergency maintenance case details.

Manage temporary space closures workflow

To access the Maintenance Meeting rooms workflow:

1. Navigate to **All** > **AI Agent Studio** > **Overview** > **Manage Temporary space closures.**.

   The Manage temporary space closure Describe and Connect workflow opens. For more information, see AI agents used in the Manage temporary space closures workflow.

2. Select **Define Trigger** to review the trigger factor (Emergency Meeting rooms) for this agentic workflow. For more information, see Triggers for the Manage temporary space closures.
3. The **Select Display** option enables the Now Assist panel. For more information, see Select display.

AI agents used in the Manage temporary space closures workflow

The **Connect AI agents** section in the Describe and Connect workflow displays the AI Agents that are working on the Manage temporary space closure workflow.

The following agents are used to Manage temporary space closures workflow:

Connect AI agents

AI agent Name	Description	AI agent tools and resources
Workplace Case notes	Workplace case notes updater	Workplace case notes update
Case Retriever	Case Retriever	• Get meeting room maintenance case details. • Get details of change event case details. .
Reservation resolution processing AI agent	Reservation resolution processing AI Agent	• Auto-resolution for all the reservations. • Fetch Reservations for a location and time range,Block location

Triggers for the Manage temporary space closures

When an emergency maintenance request is assigned to a user in the Workplace Event Planners group, AI agentic workflow Manage temporary space closures is triggered. In the Define trigger workflow, the agentic workflow begins executing when the trigger meets the following conditions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Help manage workplace reservations agentic workflow

AI agentic workflow Help manage workplace reservations enables Workplace Event Planners with rescheduling a planned reservation. AI Agents gather relevant information and updates an existing planned reservation with a new date, time, and duration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

AI agents retrieve the reservation from the change event reservation case details. AI agents analyze an existing reservation before updating it with a new date and time. If the old location is not available while updating an existing reservation, AI agents update and move the reservation to a new location. For more information, see Submit a change event request for a reservation.

A change event request is submitted for updating an existing reservation by a workplace user. A workplace case is created with a new workplace service. The workplace case is assigned to a user in the Workplace Event planners assignment group.

The team of AI agents autonomously perform the following:

- Retrieve the change event request workplace case details when it assigned to a Workplace Event planner.
- Analyze the reservation retrieved from the previous step. If the old location is available while updating a reservation's date, time, and duration, AI agents update the reservation. If the old location is not available for reservation, AI agents move the reservation to a new location while updating the reservation date, time, and duration.
- Send notification to Workplace Event planners using the Now Assist panel conversational interface.

  Workplace Event planners can respond to AI agents queries using the conversational interface of the Now Assist panel. AI agents take confirmation from Workplace planners before updating a reservation to another location if the old location is not available. It shows 3 workplace locations. You can select the location or ask the AI agents to show more locations. AI agent provide a link for you to click and navigate to the reservation page to manually select a location of your choice.

  For more information, see Review notifications in the Now Assist panel.
- Update the change event request case work notes with all the actions taken. Workplace Event planners can review the activity log to see the actions taken by AI agents to update a planned reservation event.

  For more information, see View change event reservation case details.

For more information, see View change event reservation case details.

Help manage workplace reservations

To access the Help manage workflow reservations:

1. Navigate to **All** > **AI Agent Studio** > **Overview** > **Help manage workplace reservations.**.

   The Describe and Connect workflow is displayed. For more information, see AI agents used in the Help manage workplace reservations.
2. Select **Define Trigger** to review the trigger factor (Emergency Meeting rooms) for this agentic workflow. For more information, see Triggers for Help manage workplace reservations
3. The **Select Display** option enables the Now Assist panel. For more information, see Select display.

AI agents used in the Help manage workplace reservations

The **Connect AI agents** section in the Describe and Connect workflow displays the AI Agents that are working on the Help manage workplace reservations workflow.

The following agents are used in the Manage temporary space closures workflow:

Optimize cleaning activities agent overview

The Optimize cleaning activities agent performs cleaning activities on a workplace location based on the space utilization threshold data.

This team of AI agents get all open workplace maintenance management cases. The *Workplace Planned Maint Nightly Run* scheduled job runs on a daily or hourly basis to create maintenance cases. Each workplace maintenance case represents a cleaning or a maintenance case on a location for a certain time interval, also known as schedule (on a daily or hourly basis). The Optimize cleaning activities agentic AI workflow retrieves space utilization threshold for each workplace maintenance cases.

Note:
Optimize Cleaning Activities Agentic workflow optimizes a space at the floor level for a selected building. It only optimizes non-reservable spaces like restrooms and so on.

For more information about how to create maintenance management plan records, see Create and publish maintenance plans.

- The Optimize cleaning activities agentic AI workflow is triggered when the *Optimize cleaning activities* scheduled job is executed. The Optimize cleaning activities AI agent optimizes a maintenance plan record and gets space utilization data using the following Workplace Maintenance Management properties.

  For more information, see Components installed with Workplace Maintenance Management

  - The *sn_wsd_maintenance.optimise_plans* property helps in optimizing a maintenance plan for a selected floor. To optimize a maintenance plan, workplace maintenance managers should copy the sys_id from the maintenance plan URL. For example, <https://<instance_name>.service-now.com/now/workplace-management/maintenance-plan/ 59e13dbc3b27ee5090fd390f23e45a68. You can also copy the sys_id of a maintenance plan record by navigating to the Additional actions icon (☰) and select **Copy sys_id**.

    Here, 59e13dbc3b27ee5090fd390f23e45a68 is the sys_id of a maintenance plan record.

    Note:
    Workplace Maintenance managers should manually copy the sys_id of a maintenance plan record. This is a required step to optimize cleaning activities on a floor in a building. The AI agents perform space optimization on the floor of a selected building.

  - After manually copying the maintenance plan sys_id, run the Optimize cleaning activities scheduled job. This schedule job triggers the agentic AI workflow for optimizing cleaning

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

activities on a floor of a selected building. The space optimization for location is done in the UTC time zone.

- The **Case Aggregator AI Agent** fetches all open maintenance cases based on the maintenance plan Id. It fetches cases that are either in **Draft**, **Ready**, or **Awaiting Approval** state in the system for about 48 hours (two days).

- **Utilization rate AI agent** takes a list of available maintenance cases and calculates the utilization rate for each case. The utilization rate calculator calculates the utilization threshold for a floor in a building. The utilization rate calculator calculates the space optimization. It considers the available reservations and visitor registration for a selected floor in a building.
- (Optional) Workplace Maintenance Managers can navigate to the context menu in an instance and enter **sn_aia_execution_plan.list** in the Filter search box to open the Execution Plans table. This table showcases workplace agentic AI workflow execution status. Review the maintenance cases that are executed by the Optimize cleaning activities agentic AI workflow.
  - Select an optimized cleaning activity agentic workflow.
  - Select the **Tools Execution** tab to review the execution tools and execution status.
  - A tag is added to the maintenance case after it's optimized for the first time.

    The tag is added as an identifier to showcase that a selected maintenance case is processed for space optimization. It isn't picked up again by the agentic AI workflow for processing. When a case is updated and processed again, the sys_id of existing tags and the case is not tagged again. The sys_id of the tag is used to identify processed maintenance cases from the non-processed maintenance cases.
- The **Case optimizer AI agent** analyzes cases grouped by location, schedule type, and date to optimize resource utilization. It confirms that maintenance cases stay within the defined utilization thresholds by creating new cases when the utilization rate is too high and deactivating underutilized cases.
  - Retrieves the utilization thresholds.
  - The *sn_wsd_maintenance.optmise_cleaning_min_utilisation_threshold* property analyzes the minimum space utilization threshold. The default value is 40. If the utilization for a workplace maintenance case is below this range, it's deactivated. It's deactivated when it meets all the deactivation criteria.

    Note:
    For example, if a floor has only 1 reservation for a day, then, only 10% of space is optimized for a selected floor. This range falls below the minimum threshold utilization range of 40. The maintenance case in this case is deactivated. The deactivation of a maintenance case also depends on the interval time of a scheduled job. For example, if the schedule job is scheduled to run daily, the maintenance cases that are showing low space optimization are removed or deactivated by the agentic AI workflow. However, if a scheduled job is scheduled to run on an hourly basis, all maintenance cases showing minimum threshold value are removed or deactivated except one. The system retains one underutilized maintenance case before deactivating all other maintenance cases that are scheduled to run on an hourly basis. When cases get deactivated, the status changes to **Closed complete** in the Workplace Maintenance cases table.

  - The *sn_wsd_maintenance.optmise_cleaning_max_utilisation_threshold* property analyzes the maximum utilization threshold for a maintenance case. The default value is 80. If the utilization for a workplace maintenance plan case falls within this range or is higher than this range, a new maintenance case is added by the Optimize Cleaning

Activities agentic AI workflow. A new case is added so that the optimized cleaning activities are handled using a single maintenance case. A new maintenance case can process it efficiently.

Optimize cleaning activities agentic workflow

This team of workplace agents can find open maintenance cases and optimize it for workplace maintenance activities. These agents can optimize a maintenance case based on the utilization rate of a location for which a maintenance case is created.

Optimize cleaning activities agentic workflow overview

This AI agentic workflow enables Workplace teams to schedule and manage cleaning and other maintenance schedules based on space utilization and optimization. This agentic AI retrieves employee reservation data and visitor registration planned for a specific office location and date. It checks the minimum and maximum space utilization threshold to see if cleaning requests are required. It deactivates the cases when a location shows a minimum utilization threshold value (below 40). The agents optimize the cleaning schedule based on how workplace employees plan to use a space or location. It checks space wastage to provide the optimum workplace experience to employees. For more information, see Optimize cleaning activities agent overview.

AI agents used in optimize cleaning activities workflow

Navigate to **All** > **AI Agent Studio** > **Overview**. Select **Optimize cleaning activities** from the list of available agentic AI workflows. The team of agents optimize a location based on the space utilization threshold. This team of agents fetch open maintenance cases and optimize it based on the utilization threshold rate. The optimization is done on the floor of a selected building autonomously by the agents and it doesn't require any approvals needed from a workplace user.

Note:
Workplace Maintenance Managers (sn_wsd_maintenance.manager) and Workplace Maintenance Administrators (sn_wsd_maintenance.admin) can configure this agentic AI workflow.

Optimize Cleaning activities AI agents

AI agent Name	Description
Case aggregator AI agent	This agent fetches all the open maintenance cases based on the maintenance plan ID. Each workplace maintenance case represents a cleaning or a maintenance case for a location for a scheduled interval. The optimization is done on a floor of a selected building. It fetches all the maintenance plan records that satisfy certain criteria. For example, it fetches a set of maintenance plans, and looks for cases that are open for the next 48 hours. The state of the cases should be in **Draft**, **Ready**, or **Awaiting for approval**. For more information, see Create and publish maintenance plans. This agent also considers workplace reservations on a floor. If a case is opened for washroom maintenance, the agent

Optimize Cleaning activities AI agents (continued)

AI agent Name	Description
	identifies the floor on which the washroom is located. It also considers the number of workplace reservations, visitor registrations, and permanent seat assignments before retrieving the space optimization threshold value.
Utilization rate AI agent	This agent can take a list of available maintenance cases to calculate the utilization rate for each case. This utilization rate is used to optimize the cases. It uses the Utilization rate calculator to calculate the utilization rate.
Case Optimizer AI agent	The Case Utilization Optimizer analyzes cases grouped by location, schedule type, and date to optimize resource utilization. It confirms cases stay within defined utilization thresholds by creating cases when utilization is too high and deactivating underutilized cases.

Case Optimizer AI Agent

The Case Optimizer AI Agent analyzes cases grouped by location, schedule type, and date to optimize resource utilization. It verifies that maintenance cases stay within the defined utilization thresholds. It creates maintenance cases when the utilization threshold is too high. When the utilization threshold is low, it deactivates the maintenance cases for underutilized floors. While deactivating a maintenance case, this agent ensures minimum case availability for each maintenance schedule group. It retains at least one maintenance case before deactivating all underutilized maintenance cases. The output from the Utilization rate AI agent is given as input to this agent for space optimization.

Case Aggregator AI Agent

This agent gets all open maintenance cases based on the maintenance plan Id. Each workplace maintenance case represents a cleaning or a maintenance case on a location for a certain time interval, also known as schedule. This agent fetches the open maintenance cases (maintenance plan record IDs) in the maintenance management system.

Utilization rate AI Agent

This agent can take a list of maintenance cases available and calculate the utilization rate of each case. This utilization rate is used to optimize the cases. This agent takes a list of maintenance cases as input and calculates the utilization rate for locations for a given schedule.

Using Now Assist in Virtual Agent

Reserve a space using the create a reservation agent and get insights on your collaborators using the Workplace Collaboration agent.

Employees can interact with the reservation agent and collaboration agent using the Now Assist in Virtual Agent enhanced chat interface.

Making reservations using the Create a reservation agent

The Create a reservation agent enables employees to find an available space and create workplace reservations quickly. Employees can interact with the reservation agent using the Now Assist in Virtual Agent enhanced chat interface in Employee Center. They can also use the Now Mobile® chat interface for interacting with the Virtual Agent.

The reservation agent estimates where the employees are located for a given workday. It considers their workplace profile (assigned space to an employee) and the spaces they most frequently reserve. Based on this information, the reservation agent finds and suggests spaces for reservations. The employees can suggest a different space, time or location using the chat interface. The agent also provides employees with an option to select a space manually from the reservation portal. The option to select a space manually is provided by the reservation agent when it is not able to find a space that is requested by the employee or when the employee wants to search for a different space than what is suggested by the reservation agent.

While searching for a space and making a reservation, the reservation agent considers the following:

- Date and time information when the employee is requesting to book a space for reservation.

  For example, if the reservation agent doesn't find a date in the utterance "Reserve a space for me", the reservation agent reserves a space for the current date and for all day. If time is provided, it tries to find an available space for the suggested time. For example, if you enter the prompt “Reserve a space for me from 3 pm to 4 pm” in the Virtual Agent chat interface, it reserves a space for you from 3 pm to 4 pm.

  If no time is provided, it reserves a space for All day. For more information, see Configure a reservable module.

  - When the **All day meaning** Reservable module configuration value is set to **Office hours**, the reservation agent makes a reservation for daytime. For example, if the office Start time is 9 am and End time is 5 pm, the reservation agent reserves a space based on the start day and end day reservation properties.
  - **All day meaning** Reservable Module value set to **Full day**.

    The reservation agent reserves a space based on the 24-hour clock or 12-hour clock notations. For 24-hour time format, it reserves the space from (00 to 23.59). For 12-hour time format, it reserves a space from (9 am- 12 pm) and evening (1 pm to 5 pm) based on the office working hours. For more information, see Properties installed with Workplace Reservation Management.

- **Max days in future** value in the Reservable Module. This value is set by your workplace administrator. The reservation agent reserves a space and provides dates for reservation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

based on the highest value given in the **Max days in future** configuration. If the **Max days in future** value is empty, the reservation agent provides a navigational link to the Advanced Reservation Portal. Employees can select the link to navigate to the Advanced Reservation portal and select a space manually. For more information, see Create a reservation.

- The reservation agent also checks the Workplace Concierge employee presence dashboard for insights on employees in-office days. For more information, see Configure workplace space suggestions for employees.

  If Workplace Concierge isn't installed, the reservation agent uses the workplace profile information (assigned space to an employee) to reserve an available space. It uses the primary location that is set for an employee to fetch the building location and available spaces for reservation.

  If the workplace profile isn't available, the reservation agent considers the past reservation data of an employee and shows space suggestions based on the past reservation data (most frequently reserved spaces, date, and time). If the reservation agent isn't able to fetch or predict a location, it asks employees to enter manually their preferred workplace locations in the Virtual Agent chat interface. It provides space suggestions based on employee prompt inputs.

Reserve a space using the reservation agent

The Create a reservation agent enables employees to reserve a space with a single prompt query or utterance.

Before you begin

Make sure that you have installed and configured the following applications:

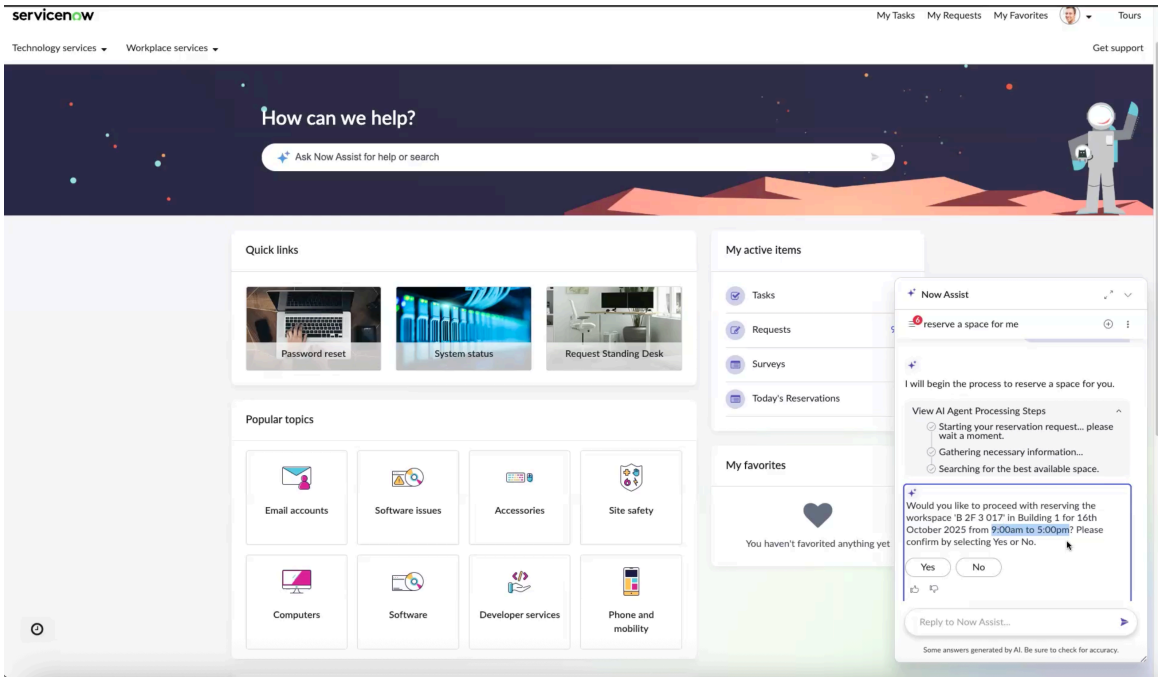
- Now Assist in Virtual Agent.

  Confirm that the enhanced chat is configured for the Employee Center portal by virtual_agent_admin. Select Employee Center from the Portals tab and select the enhanced chat. For more information, see Display your assistant on a portal or channel.

- Workplace Reservation Management
- Workplace Concierge
- Workplace Indoor Mapping
- Workplace Core

Note:
Adding workplace services to a reservation, creating group reservations, multi-building reservations, making a reservation by using the Browse near a person reservable path option, or recurring reservations are currently not supported by the workplace reservation AI agent.

Role required: admin



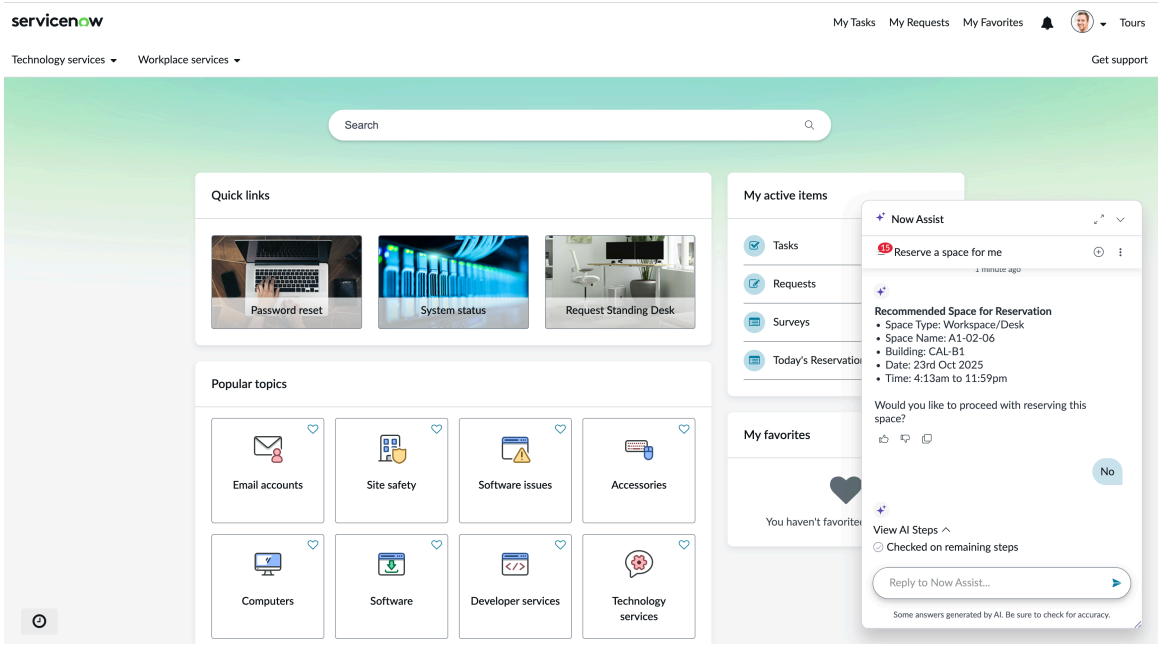
Procedure

1. Navigate to **All** > **Self-Service** > *Employee Center*.
2. From the Employee Center portal home page, select the Now Assist in Virtual Agent chat interface.
   The Virtual Agent shows a greeting message and provides an explanation of what employees can expect.
3. Enter an utterance or query to reserve a space.

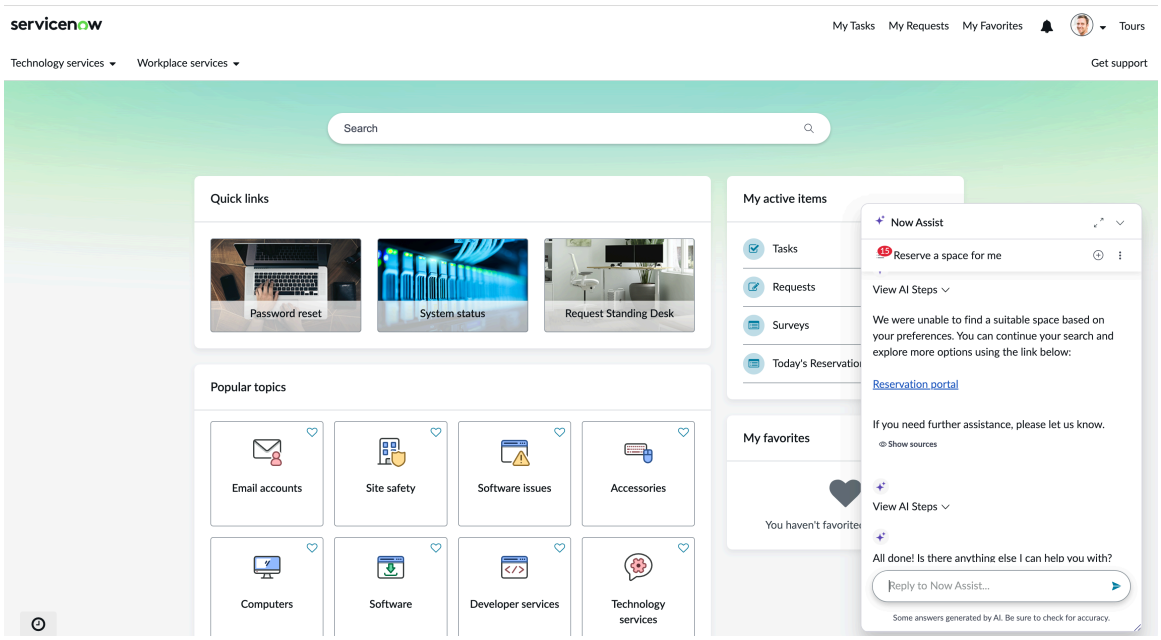
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employees can quickly reserve a space using a single utterance or prompt. For example, enter `I want to reserve a workstation for the afternoon. What is available?` .

While the LLM processes the utterance, animated dots in the chat window let employees know that the reservation agent is working on their request. After you enter an utterance and a search result is found, a synthesized response may appear. A synthesized response includes a brief summary of the requested information and search results.



Each response includes feedback icons. The user can indicate if the response was helpful by selecting thumbs up or select thumbs down if the response wasn't helpful.



4. The reservation agent shows an available building location for reservation and asks employees to confirm the space selection.

> **Note:**
> Selecting **No** prompts the reservation agent to fetch another location or a space for reservation. At a time, the reservation agent shows three space suggestions.

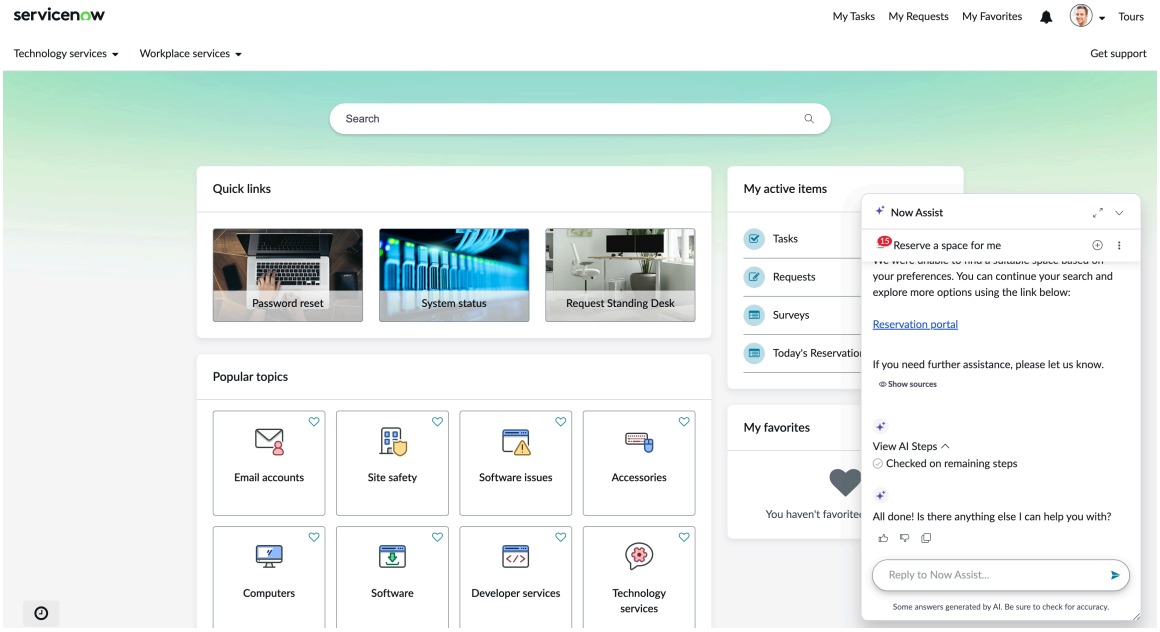
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



5. The reservation displays a navigational link to the Advanced Reservation portal when it is not able to find a suitable space.
   It provides the link to the Reservation portal when employees don't select a space from the suggested spaces shown by the reservation agent. At a time, the reservation agent provides three space suggestions. Employees can search for spaces manually on the reservation portal page and reserve a space.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. When the request is complete, Now Assist in Virtual Agent chat interface displays a message to confirm if employees need any additional help from the Virtual Agent.

Using the Workplace collaboration Agent for space suggestions

The Workplace Collaboration Agent provides insights on your team members in-office attendance. Based on this information, the reservation agent finds and reserves a space for reservation and collaboration. The collaboration agent considers your colleague's in-office days, location, and suggests a space for collaboration when you are in office.

The Create a reservation agent helps employees find a space for reservation. The Workplace collaboration agent provides suggestions for reservations based on colleague’s attendance and proximity. Employees can find and reserve a workspace near a colleague. The collaboration agent helps in improving collaboration and workplace productivity. The collaboration agent provides insights on your colleagues in-office days.

Note:
Desks reservations are supported by the Workplace collaboration agent.

When providing suggestions for collaboration, the Collaboration agent prioritizes the Employee Presence Exceptions data first, then it checks for Employee Presence Routine, and lastly, it considers your current reservations. It gives priority to Employee Presence Exceptions data over Employee Presence Routine and current reservations in the system. If employee's current reservation data and location in available and no workplace presence information is there, the agent prioritizes employee's current reservations over workplace location while suggesting spaces for collaboration. For more information, see Workplace Concierge.

Your collaborators can be categorized as:

- Employee collaborators information derived from Employee Presence Exceptions and Employee Presence Routine in Workplace Concierge.
- Collaborator information is also derived from the invitees that you frequently add to your reservations with while making a reservation.
- Colleagues with whom you collaborate frequently. Your team members and your manager. If you are a manager, your collaborators are your team members reporting to you.

The workplace collaboration agent improves employee's reservation and collaboration experience by providing the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Determines your collaborators (your team members, your presence collaborators (if available), and your reservation attendees).
- Provides insights when collaborators are in office.
- Provides insights about team members who are in office for a specific day.
- Helps to reserve a space near a colleague.
- When multiple collaborators with same name exists, the collaboration agent asks employees to select their preferred collaborator from a list of similar names. The collaboration agent makes suggestions and tries to find your preferred collaborator. For example, if there are two Abel in your organization, but you frequently collaborate with Abel Tuter, the collaboration agent selects Abel Tuter as your preferred collaborator.
- Provides ability to change the workplace preferences of an employee (remote to in-office and vice versa). If employees change their remote day to in-office day, an exception is created by the application in the Employee Presence Exceptions table.

Note:
If you are planning to sit near a colleague, and if your colleague has a desk reservation for one hour and doesn't have an All day reservation, you can make a reservation for one-hour only. If an employee doesn't have any Employee Presence Exceptions and has no reservations made for a day while in office, the collaboration agent prioritizes the employee's workplace profile location and spaces around that location is suggested to the employee for collaboration.

Get space suggestions using the collaboration agent

The Workplace collaboration agent provides space recommendations and insights for collaboration based on employee's workplace presence data, team members or frequent collaborators, attendees in your reservation, and workplace profile (assigned space).

Before you begin

The collaboration agent provides employees with insights about colleagues or team members who are in office. It makes space suggestions based on your collaboration requirements.

Make sure that you have installed and configured the following applications:

- Now Assist in Virtual Agent.

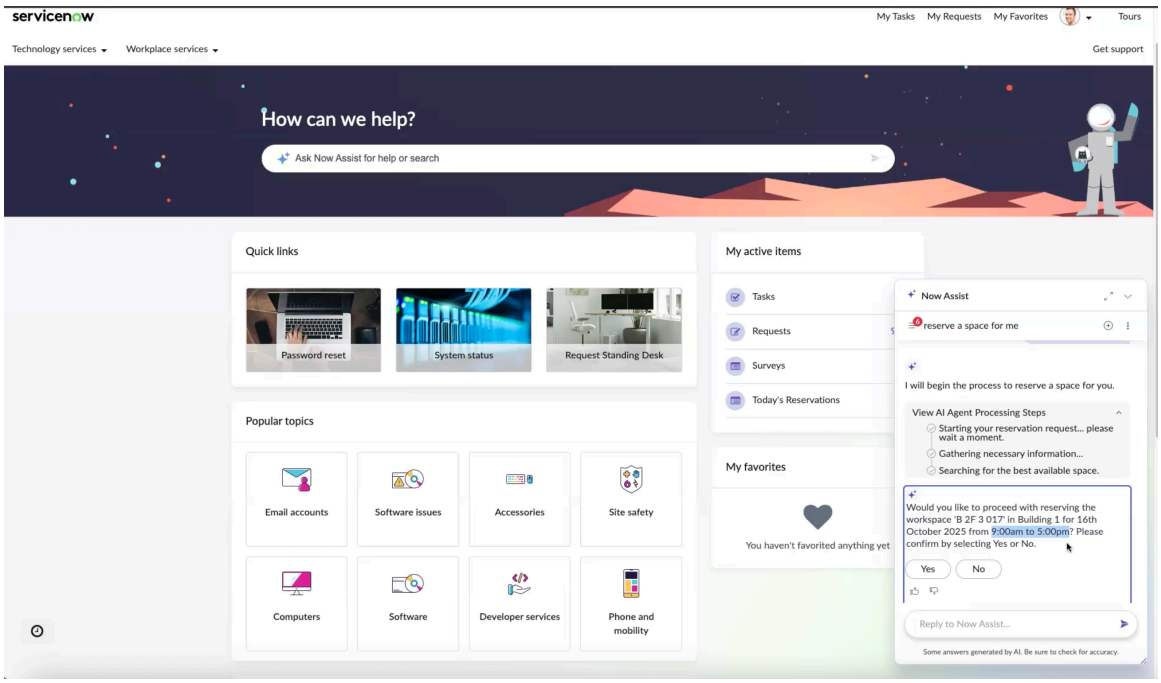
  Confirm that the enhanced chat is configured for the Employee Center portal by virtual_agent_admin. Select Employee Center from the Portals tab and select the enhanced chat. For more information, see Display your assistant on a portal or channel.

- Workplace Reservation Management
- Workplace Concierge
- Workplace Indoor Mapping
- Workplace Core

Note:
Adding workplace services to a reservation, creating group reservations, multi-building reservations, or recurring reservations are currently not supported by the Workplace Collaboration Agent. Collabration agent supports Desks reservations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employees can invoke the collaboration agent by initiating a chat with the Now Assist in Virtual Agent from the Employee Service Center portal.



Role required: admin

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the Employee Center home page, select the search box to initiate chat with Now Assist in Virtual Agent.
   The Virtual Agent shows a greeting message and provides an explanation of what employees can expect.
3. Enter an utterance or query to reserve a space.

   Employees can quickly reserve a space using a single utterance or prompt. For example, enter `Reserve a space for me near Abel Tuter`.

   While the LLM processes the utterance, animated dots in the chat window let employees know that the bot is working on their request. After you enter an utterance and a search result is found, a synthesized response may appear. A synthesized response includes a brief summary of the requested information and search results.

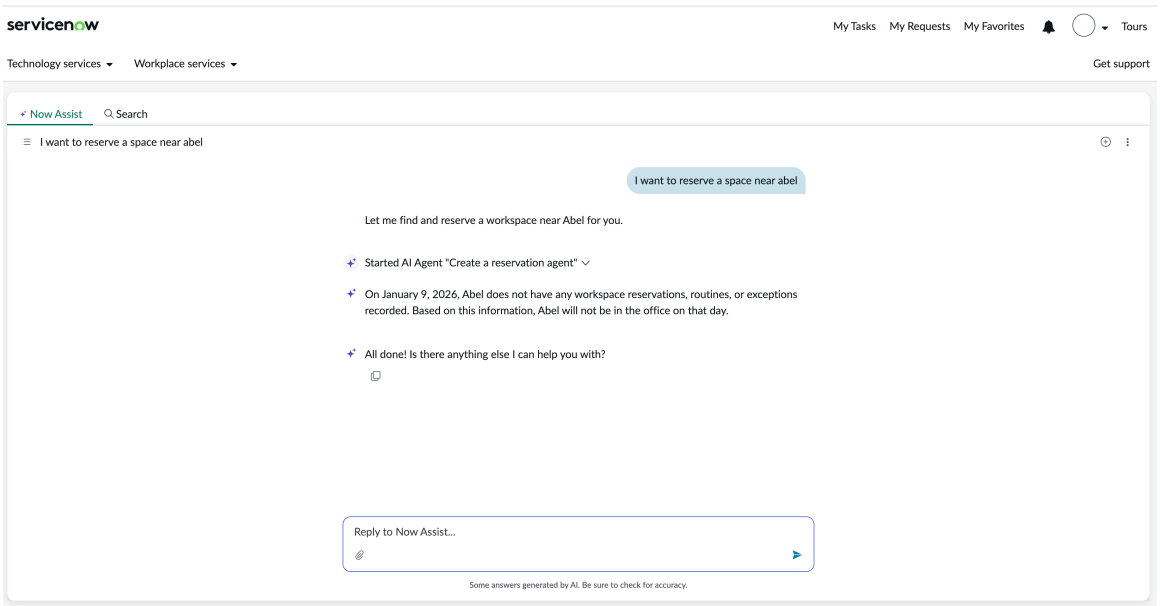
   The Virtual Agent response includes feedback icons. Employees can indicate if the response was helpful by selecting thumbs up or select thumbs down if the response wasn't helpful.

4. The collaboration provides insights about team members who are in office.

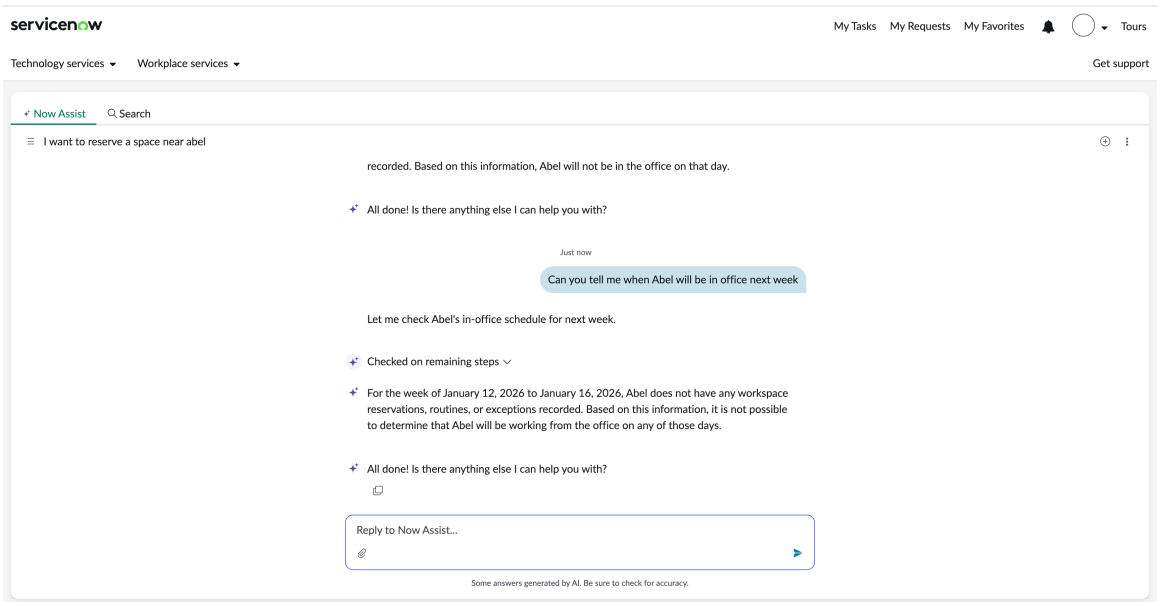
   It suggests a space based on your collaboration requirements.The Agent shows an available building location for reservation and asks employees to confirm the space selection.

   Note:
   Selecting **No** prompts the agent to fetch another location or a space for reservation.

   For example, if you enter "I am visiting office campus in Italy and want to collaborate with Abel. What space is available?



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



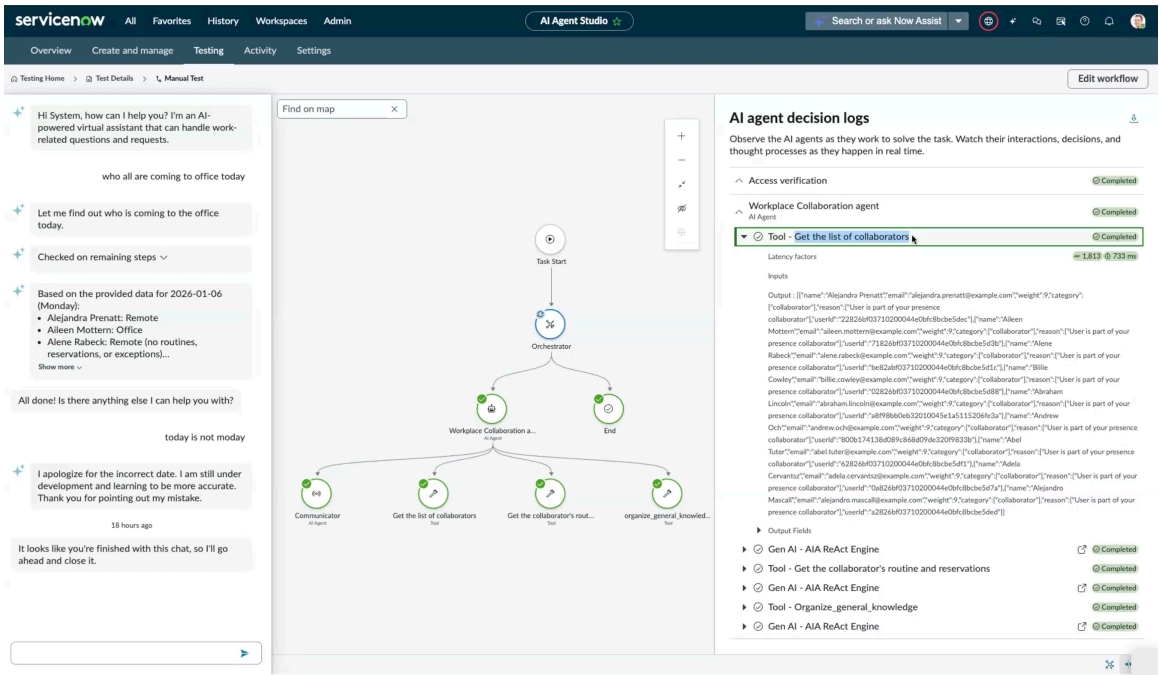
The agent may respond as following:

It is great to see you in the office and connect with your collaborators! Abel will be in the office next Tuesday.We have found an available workspace for you:

- Space Name: B1-03-01
- Building: AMS-B1
- Date: Thursday, 30th October 202
- Time: 1:00pm to 5:00pm (Europe/Amsterdam)

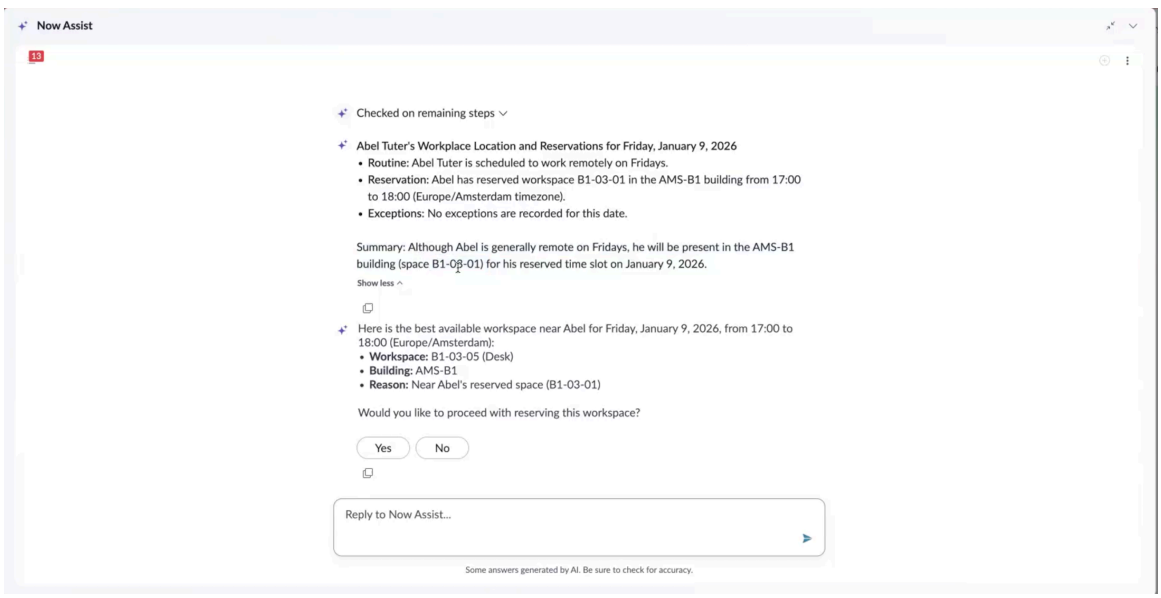
Would you like to proceed with reserving this workspace?

If you respond "yes, that sounds good", the agent creates a reservation and sends you a notification.



5. Chat with the collaboration agent to know which of your team members are available in your in office days.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Insights on a colleague's in office days

Employee Prompt	Agent responses
I am visiting the Hyderabad office and want to collaborate with Sarah. What is the best day?	Sarah is in office on Tuesdays and Wednesdays.
Which space is available for Tuesday?	Space A in Hyderabad is available.
Book this space for me	I have reserved this space for you.

The Collaboration agent also shares insights on the team members available on a particular day. For example, "Who will be in office on Friday? You can also get insights on a team member if they are visiting office "Is Daniel coming to office today?". The agent also makes a reservation for you for a specified day near a team member. "

6. Make a reservation for a specified day near a team member.

Reservation for a specific date near a colleague

Employee Prompt	Agent responses
Can you book me a space near Sarah for Jan 30?	According to Sarah's presence information, Sarah is office on this day, but has not reserved a space as of now. Sarah's office presence schedule is: ○ Monday: Remote ○ Tuesday: In office
Sounds good.	Space B is available, which is near the space Sarah normally reserves. Shall I reserve this?
Book this space for me	I have reserved this space for you.

- While executing the Workflow, the collaboration agent makes the following considerations and checks.
  - Location: Employee's building location is derived using the following logic:
    - The building and floor for today's (current date) reservation.
    - Employee presence information
    - Workplace profile primary location or assigned space

      In case, no desks reservation are found, the collaboration agent checks if there is a workplace profile and a location (desk) assigned to an employee while making space suggestions near a collaborator. If workplace profile primary location is not available, the collaboration agent determines the collaborators location (building/space) based on the employee's workplace presence information.
  - When the employee enters a name, the collaboration agent tries to identify the collaborator. It takes into account the following factors:
    - Your team (this includes your manager. If you are a manager and not an individual contributor, the agent also considers employees reporting to you as your collaborators).
    - Workplace presence Collaborator information. This includes Employee Presence Routine and Employee Presence Exceptions. For more information, see Components installed with Workplace Concierge and Set Employee Presence
    - Your current reservations in the system and invitees added by you.
    - Your workplace profile and the primary location assigned to you.
    - If multiple colleagues are found with the same name, the agent allows you to select a colleague from a list of employee names.
- Time: All day reservation is considered first, and then, the reservation Start time and End time reservation is taken into consideration. For more information, see Properties installed with Workplace Reservation Management.

  In the case multiple desk reservations exist, earliest start time is used to find an available space for collaboration.
- Date: If no date is provided, the collaboration agent assumes that the reservation is for today or the current date. By default, All day reservation is suggested. Employees can change this and suggest a different start time and end time for a reservation.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Adding of workplace services (projectors, catering, and so on) are not supported by the Collaboration agent.

7. Collaboration Agent provides a link to the Reservation portal if it is unable to find a suitable space for you.
   You can navigate to the Reservation portal and manually search for your preferred space.
8. When the request is complete, Virtual Agent displays a message to confirm if any additional help is required.

Contract Management Pro

The ServiceNow® Contract Management Pro is a contract management solution that's easy to use and adopt. You can use it to set up contract document templates, clauses, clause variations, and to initiate contract requests. It also supports Now Assist driven contract analysis and metadata extraction, e-signatures, wet signatures, and external storage systems.

You can use the actionable widgets on Contract Workspace to categorize, prioritize, and efficiently work on contract requests.

With Contracts Dashboard, you can analyze the various contract request trends and also get insights into the volume of contract requests that are handled by your team.

Contract Management Pro overview

Contract Management Pro is a contract management solution that's easy to use and adopt. You can use it to set up contract document templates, clauses, clause variations, and to initiate contract requests. It also supports Now Assist driven contract analysis and metadata extraction, e-signatures, wet signatures, and external storage systems.

The components of Contract Management Pro are:

- Contracts Core
- Microsoft Word add-in for ServiceNow Contracts
- Self-served and non-self-served contract requests

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contract Management Pro benefits

Benefits of the Contract Management Pro

Benefit	Key feature	Role
Effectively manage a library of clause variations.	Clause Management	Contract configurator
Create contract templates or standard letters that are used to generate contracts or documents based on the values in the submitted request.	Word Document Templates	Contract configurator
Add content controls that act as placeholders for the content in Microsoft Word documents on macOS systems and on Windows systems by using an add-in. Content controls can be added manually only on a Windows system.	Microsoft Word add-in for ServiceNow Contracts	Contract configurator
Initiate self-served or non-self-served contract requests.	Self-served and non-self-served contract requests	Contract user
Service a self-served contract request.	Use a self-served contract request	Contract user or Contract fulfiller
Revise, approve, and provide a signature for a non-self-served contract request.	Use non-self-served contract request	Contract user or Contract fulfiller
Get review and feedback from the internal subject matter experts on contract documents.	Internal review overview	Contract fulfiller or Contract reviewer
Get an insight on the volume of contract requests that are handled by your team.	Using the Contracts Dashboard	Contract fulfiller
Work with actionable widgets to categorize, prioritize, and efficiently work on contract requests.	Contract Workspace	Contract user or Contract fulfiller
Track and manage contract obligations to help ensure compliance and minimize risks.	Obligation Management	Obligation user or Obligation fulfiller
Use Now Assist in Contract Management to analyze contracts for non-standard and missing clauses, and to extract information from signed contracts to add in the contract repository.	Now Assist in Contract Management	Now Assist contract fulfiller

Contract Management Pro workflow

The following sample end-to-end workflow shows how different users can work together to configure the foundation data and submit, review, and finalize contract requests.

A Contract Management Pro configurator takes the following actions to set up the end-to-end workflow:

1. Creates the contract type and associates it with a contract model.
2. Creates the clauses and their variations to be used in the document templates.
3. Creates the document templates that are used to generate the contract document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Configures the placeholders for signatories.
5. Completes the template mapping to automatically fill in information that is used in the contract template.
6. Publishes the document template to make it available to generate contracts while submitting the contract request.
7. Creates a template selection rule to identify the contract template to be used to generate the contract document for the contract request.
8. Creates an internal signatory rule to map the signatory to a template by using signatory mappings.
9. Defines the contract repository where contracts are stored and maps the data that was added to the contract document.
10. Creates a contract repository rule to configure the reminders for expiring contracts.
11. Configures the external storage to store the signed contract documents and their revisions.
12. Configures the electronic signature providers to enable signers to sign the contract documents electronically.

Self-served contract request workflow

A workflow for a self-served contract request might progress as shown in this process:

1. The Contract requester initiates a contract request. For more information, see Initiating a contract request.
   - If there are no validation errors, a contract request is created in the Work in progress state.
   - If there are any signatory validation errors, the contract requester resolves them and resubmits the contract request.
2. A contract document is generated from a contract template and the metadata, clauses, signatories, and tables are added dynamically according to predefined conditions.
3. The contract requester edits the requests for any changes and creates a version of the contract document by using the **Regenerate** or **Sync document** option.
4. The contract requester views the contract document and does one of the following actions:
   a. If no changes are required, the document is sent for signature.
   b. If any changes are required, the contract requester submits a change request.
5. Based on the change request, the contract fulfiller can take the following actions:
   a. Initiates an internal review process:
      i. The contract fulfiller submits a review task for an internal review.

      Note:
      The contract fulfiller can create parallel review tasks for the same contract document for different reviewer groups. However, the contract fulfiller can't create a review task for the same document with the same reviewer group if another active task exists.

      ii. A contract reviewer group manager can assign the review task, or a contract reviewer can self-assign it.
      iii. The assigned contract reviewer starts working on the contract document.
      iv. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

v. If a request for more information was submitted, the contract fulfiller shares the information.

vi. The contract reviewer reviews the document, accepts or rejects redlines, proposes edits, and adds comments.

vii. The contract reviewer completes the review and shares the updated contract document if available.

viii. The contract fulfiller receives the updated document and makes the necessary changes based on the feedback:

- For internal storage: If any changes are required, a new document version is created after finalizing the document.
- For external storage: Reviewers collaborate on the contract document revision online in real time. After the review is complete, the fulfiller can finalize the contract document that is available online or create an offline version with the changes.

b. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created.

c. After the document is finalized, the fulfiller sends the document to the requester.

6. The contract requester previews the generated contract and, if no changes are required, sends it to the signatories. If changes are required, the review and revision process continues.
7. If external storage is configured, contract documents are stored in it. Otherwise, they're stored in the ServiceNow instance.
8. If any signatory declines the document, it's sent back to the requester to be reworked and the revision is sent for signature.
9. The signed contract is attached to the contract request record.
10. The signed contract is stored on the ServiceNow instance or an external storage system and referenced in the contract repository. The requester and department members can access the signed contract document from the Contracts repository.

Non-self-served contract request workflow

A workflow for non-self-served contract request might progress as follows:

1. The Contract requester initiates a contract request from the workspace. For more information, see Initiating a contract request.
2. A contract request is created in the Draft state.
3. The Contract requester uploads a single contract or multiple contracts and their supporting documents and classifies them.
4. The contract fulfiller views the contract document attached to the contract request.
5. If necessary, the contract fulfiller reclassifies the contract and supporting documents.
6. If an expert review or feedback is required from internal teams, the contract fulfiller initiates an internal review process.

a. The contract fulfiller submits a review task for internal review.

> **Note:**
> Parallel review tasks for the same contract document can be created for different reviewer groups. However, a review task for the same document with the same reviewer group can't be created if another active task exists.

b. The contract reviewer is assigned the review task

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.

d. If a request for more information was submitted, the contract fulfiller shares the information.

e. The contract reviewer reviews the document, accepts, rejects, or proposes edits, and adds comments.

f. The contract reviewer reviews the contract and provides feedback. If a revised document is available, it's also shared with the contract fulfiller.

g. The contract fulfiller receives an updated document and makes the necessary changes based on the feedback:

   - For internal storage: If any changes are required, a new document version is created after finalizing the document.
   - For external storage: Reviewers collaborate on the contract document revision online in real time. After the review is complete, the fulfiller can finalize the contract document that is available online or create an offline version with the changes.

7. The contract fulfiller uploads the revised contract to the contract request.
8. The contract fulfiller emails the revised contract document to third-party contacts.
9. The contract fulfiller views the responses from the third-party contacts in the activity stream of the contract request.

   Multiple iterations of revisions between your company and the third party might be necessary before the contract document is finalized by all parties. The review process may be conducted again with different reviewer groups.

10. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created. The contract document can be sent for signature only when it has been approved.
11. If there are multiple contract documents, the contract fulfiller prepares for signatures by specifying the order. If there's an e-signature, the contract fulfiller adds the required fields and sends the contract document for signature.
12. Signatories review the contract document:
    - If no change is required, the contract document is signed by all the signatories.
    - If any changes are required, the signature is declined, and the user who is working on the contract request generates a new document and resends it for signature.
13. The signed contract is stored on the ServiceNow instance or an external storage system and referenced in the contract repository. The requester and department members can access the signed contract document from the contracts repository.

Contracts Core

Learn more about Contracts Core through a sample workflow and review the benefits it can provide.

Contracts Core overview

Contracts Core enables you to effectively manage a library of clause variations, requests for electronic signature, receive notifications, and integrate with an external storage system.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Clause variations

A clause variation is a block of content, which can be dynamically added to the contract document, eliminating the need for several templates for the same type of request. For example, say that for a Non-disclosure Agreement contract document only one section needs to be changed based on the geographic region of the signing entity. You would create multiple document templates with identical content with the only difference being location-related content. You could now use the condition-based clause variations to create only one contract template that can generate documents for different locations.

Clause

A clause is a collection of clause variations, which contain a block of content.

Clauses are stored in a clause library, from which you can insert them in contract templates. You can create and add clause variations while creating a contract template or add them later.

Word document templates

Save time and the manual work of filling out contract documents or standard letters from scratch for each request by using contract or document templates to generate them. Word document templates can be used by business units to generate a contract document with predefined content when an employee submits a contract request. For example, you can create a contract template for Non-disclosure agreement to generate a Non-disclosure agreement contract document.

Contracts Core benefits

Benefits of Contracts Core features

Benefit	Feature	Users
Effectively manage a library of clauses and clause variations.	Clause Management	Contract configurator
Create word document template to generate contract documents or standard letters according to the request submitted.	Word Document Templates	Contract configurator

Clause Management

Clause management enables you to effectively manage a library of clauses, clause variations, and word document templates.

Clause Management features

Clause and clause variation management.

Clause Management benefits

- Effectively manage a library of clause variations using Clause Management.
- Use clause variations to dynamically place content in a contract depending on the specified conditions.
- Use contract templates to dynamically generate contracts for different conditions instead of having to create contracts for different circumstances manually.
- Add clauses from clause library to the contract revision during authoring or negotiation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Word Document Templates

Word Document Templates, part of Contracts Core, enables you to create templates or standard letters that are used to generate contracts or documents according to a submitted request.

Word Document Templates features

- Support for contract templates in Microsoft Word format for standard contract documents such as non-disclosure agreements (NDA).
- Support for field, clause, signatories, and table content controls that act as placeholders for content in the document template.

Word Document Templates benefits

- Document templates in Microsoft Word are easier to review, mark, and modify than PDF and HTML templates.
- Document templates reduce the need for rework and maintain uniformity across documents.
- Ability to set up dynamic content generation through mappings and conditions for clauses and tables.

Microsoft Word add-in for ServiceNow Contracts

Microsoft Word add-in for ServiceNow Contracts enables you to add content controls in a Microsoft Word document in both Windows and macOS systems. Content controls act as placeholders for content in a document template

Microsoft Word add-in for ServiceNow Contracts features

- Support for adding content controls for fields, clauses, and signatories that act as placeholders for content in the document template.
- Support for adding content controls in both Windows and macOS systems using desktop or online versions of Microsoft Word.

Microsoft Word add-in for ServiceNow Contracts benefits

The Microsoft Word add-in enables you to add content controls on both macOS systems as well as on Windows systems, whereas adding content controls manually works only on Windows system.

For more information on content controls, see Add document content controls using Microsoft Word add-in for ServiceNow Contracts.

Self-served and non-self-served contract requests

Contract Management Pro supports initiation of self-served and non-self-served contract requests.

The main difference between self-served and non-self-served contract requests is the use of internal paper or third-party paper.

Self-served contract requests

Self-served contract requests are fulfilled using the contract templates that are based on the company's internal paper. Using contract templates, you save time and the manual work of filling out contract documents or standard letters from scratch for each request. In addition, contract

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

templates ensure that the company's contract guidelines are followed maintaining consistency. For example, you can create a contract template for a non-disclosure agreement to generate a non-disclosure agreement contract document. For more information, see Use a self-served contract request.

Non-self-served contract requests

Non-self-served contract requests are requests to review contract documents based on third-party paper. You don't need to create and configure any contract templates for third-party paper contract requests. Non-self-served contract requests support review of multiple contract and supporting documents from a single request. For more information, see Use non-self-served contract request.

Configure Contract Management Pro

Install Contract Management Pro, set up the requirements for managing contract requests.

Install Contract Management Pro

Install the Contract Management Pro application. The application installs related ServiceNow® Store applications and plugins if they aren't already installed.

Before you begin

Review the Contract Management Pro (sn_cm_pro) application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Contract Management Pro:

- Store applications
- Roles
- Scheduled jobs
- Tables

For more information, see Components installed with Contract Management Pro

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Contract Management Pro (sn_cm_pro) application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

   The available versions are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. Select **Install**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the Microsoft Word add-in for ServiceNow Contracts

As an admin, configure the Microsoft Word add-in for ServiceNow Contracts.

Before you begin

Ensure that the Global application for the Content-Security-Policy response header is inactive and the Microsoft Word Add-in for ServiceNow Contracts application is active. For more information, see Configure HTTP response headers.

Role required: admin

About this task

Microsoft Word add-in for ServiceNow Contracts will be installed when you install Contract Management Pro. You need to configure it to be available in the Microsoft Word as an add-in.

Procedure

1. Navigate to **All** > **ServiceNow Add-Ins for Office** > **Office Add-In Manifests**.
2. From the Office Manifests list, select **ServiceNow Contracts**.
3. If your ServiceNow instance is configured with single sign-on (SSO) login, clear the **Login Page not Required** check box, right-click the form header, and then select **Save**.
4. Select **Download Manifest** to download the file.
5. If your ServiceNow instance is configured with single sign-on (SSO) login, update the manifest file.

   a. Open the manifest file.

   b. Locate the `AppDomains` element.

   c. Add a `AppDomain` element and enter the SSO host URL inside it.
   Example

   ```
   <AppDomains>
   <AppDomain><Instance URl></AppDomain>
   <AppDomain><SSO Host URl></AppDomain> <!-- Enter the host URL
    only, e.g., www.<sso provider>.com -->
   </AppDomains>
   ```

   d. Save the manifest file.

6. Configure the add-in.

Result

The **ServiceNow Contracts** add-in is available in the Home ribbon.

Set up Contracts Core

As a contract configurator, create and manage a library of clauses, clause variations and contract templates that will be used to generate contract document when a contract request is submitted.

Perform the following tasks to create and manage the clauses, clause variations, and contract templates that will be used for generating a contract document.

Create a contract type

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a contract type for defining different types of contract requests and associate it to a contract model.

Define an internal signatory rule

Define a user as an internal signatory rule so that the signer can be added to a contract template to automatically add to the contract document for a request.

Create document template categories

Create document template categories to easily identify similar documents and find the correct document template more easily.

Configure contract templates for a contract request

Create a contract template of type .docx that can be used when submitting a contract request to generate a standard contract with predefined content.

Configure dynamic clauses for contract templates

Enable dynamic customized content in contract templates through clauses that contain clause variations for preset conditions.

Activate a system property to generate a certificate of completion

Activate a system property to generate a certificate of completion for electronically signed contracts.

Configure document templates for standard letters or documents

Create Word Document Templates to create standard letters or documents that can be signed by configured participants.

Create a contract type

As a contract configurator, create a contract type for defining different types of contract requests and associate it to a contract model.

Before you begin

Ensure that the application is in Global scope.

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Administration** > **Contract Types**.
2. Create or modify a contract type.
   - To create a contract type, select **New**.
   - To modify an existing contract type, open the contract type from the list.
3. In the **Name** field, enter a unique name for the contract type.
4. The **Description** field, enter a description for the contract type.
5. Select **Active** to enable this contract type.
   Only active contract types are available for use in document templates, contract repository, and contract requests.
6. Add contract model.

   a. In the Contract Model embedded list, double-click **Insert a new row**.

   b. Select Lookup using list icon( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

List of contract models is displayed.

c. Select the contract model from the list or create new one.

Note:
Map only one contract model to a contract type. An error will be displayed when try to save the contract type record after adding more than one contract model.

7. Save the contract type.
   - To save a new contract type, select **Submit**.
   - To save the changes to an existing contract type, select **Update**.

Create document template categories

As a contract configurator, create document template categories to easily identify similar documents and find the correct document template more easily. For example, a document template category of NDA-Japan could group non-disclosure agreements for Japan.

Before you begin

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Document Templates** > **Document Template Categories**.
2. In the **Name** field, enter the name for the category.
3. Select **Active** to make the category active.
4. Select **Submit** to save the category.

Enable users to view email details in activity stream

As a contract configurator, enable users to view email details in the activity stream of contract requests.

Before you begin

Role required: sn_cm_core.contract_config

Procedure

Add the roles to the property.

Activate a system property to generate a certificate of completion

As a contract configurator, activate a system property to generate a certificate of completion for electronically signed contracts.

Before you begin

You must have configured an electronic signature provider. For more information, see Configure an e-signature provider.

Role required: sn_cm_core.contract_config

About this task

Note:
This feature is applicable only for electronically signed contracts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The certificate of completion provided by Docusign or Adobe Acrobat Sign includes the audit trail with the time stamp details about each signatory action during an electronic signature. The audit trail ensures non-repudiation and resolves any objections.

Procedure

1. In the filter navigator, enter `sys_properties.list`.
2. In the **Name** column, search for the `sn_cm_core.enable_executed_contract_audit_certificate` property.
3. Select the property.
4. If you aren't able to edit the property in the current application scope, select the word **here** in the message at the top of the page.
5. Update the **Value** field to `true`.
6. Select **Update**.

Result

A certificate of completion will be issued for the electronically signed contract.

Configure reminders for expiring contracts

Configure reminders for expiring contracts that each business unit can use without the need to create their own.

Before you begin

Ensure Contract Management Pro be installed:

Role required: sn_cm_core.contract_admin

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Administration** > **Contract Repository Rules**.
2. Set the condition for the notification to be sent.
   The available conditions are:
   - Expired – The email notification reminder is not sent and the expiration level in the contract is set as **Expired**.
   - within 7 days – The email notification reminder is sent seven days before the expiration of the contract.
   - within 15 days – The email notification reminder is sent 15 days before the expiration of the contract.
   - within 30 days – The email notification reminder is sent 30 days before the expiration of the contract.

   a. On the Condition Checks page, find the entry whose **Table** field value is Legal Contracts Repository (sn_lg_cnt_repository) and **Condition field** value is expiration_level, and select **Contract** in the **Category** field.

   b. In the Conditions section, select **New** to create a condition.

   c. On the form, fill in the fields.
   For more information on fields, see Expiring Contracts Condition form fields.

   d. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. **Optional:** Customize the message content in the default email notification template.

   a. Select **All** > **System Notification** > **Email** > **Notifications**.

   b. Search for and select **Legal Contract Expiry Reminder**.

      (Optional) If a message regarding the current application scope is displayed, select **here**.

   c. In the Legal Contract Expiry Reminder window, select the **What it will contain** tab.

   d. Enter the content for the email notification message in the **Message HTML** field.

   e. Select **Update**.

Result
After the configurations are complete, email notifications can be sent. For the four existing conditions, the email notification feature is provided out of the box and is automatically enabled for the following users:

- Contract request.Requested for
- Contract request.Opened by
- Contract request.Assigned to

Configuring external applications for Contract Management Pro

Set up external applications that provide services such as electronically signing contract documents and saving signed contracts or the documents related to requests in an external storage system.

The Contract Management Pro application use spokes from Integration Hub to integrate with external applications. The contract configurator (sn_cm_core.contract_config) can complete configuring these external apps after the administrator completes installation and configuration of these spokes.

Integration with external storage systems

Configure external storage provider spokes

The administrator can use the Integration Hub to install and configure the following external storage provider spokes for saving documents attached to contract requests and signed contract documents:

- Google Drive spoke
- Microsoft OneDrive spoke

Configure an external storage provider

The contract configurator can set up the external storage app integrations from **Contract Integrations**. For more information, see Configure an external storage system.

External storage permissions

The permissions are granted at request level. All document folders and documents within the request folder inherit the permissions from the parent folder.

All user roles automatically have Read permission.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Write permission is granted to the following user roles when the contract request state is Work in progress or New (except if the contract document statues is also New):

- Assigned To
- Assignment Group Manager
- Collaborator

Integration with e-signature providers

Configure electronic signature provider spokes

The administrator can use the Integration Hub to install and configure the following electronic signature provider spokes for contract documents:

- Adobe Acrobat Sign spoke
- Docusign spoke

Set up the electronic signature provider app

The configurator can set up the electronic signature app integrations from **Contract Integrations**. For more information, see Configure an e-signature provider.

Configure an external storage system

As a contract configurator, configure an external storage system to store signed contract documents.

Before you begin

Ensure that the administrator has installed and set up spokes for the external storage system you want to configure.

Google Drive spoke v1.3.0 or later version

For more information on the setup and creating the Google Drive account, see Set up Google Drive spoke.

Microsoft OneDrive spoke v2.1.0 or later version

For more information on the setup and creating the Google Drive account, see Set up Microsoft OneDrive spoke .

Role required: sn_cm_core.contract_config

About this task

On configuring external storage, access permissions are granted to users associated with the contract request depending on the contract request state and contract document status. The permissions are granted at request level. All document folders and documents within the request folder inherit the permissions from the parent folder.

All user roles automatically have Read permission.

Write permission is granted to the following user roles when the contract request state is Work in progress or New (except if the contract document statues is also New):

- Assigned To
- Assignment Group Manager
- Collaborator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Integrations** > **Integrations**.
2. Create or modify an external app configuration.
   - To create an external app configuration, click **New**.
   - To modify an existing external app configuration, open the existing external app configuration from the list.
3. On the Contract Integration Type page, click the **External Storage** link.
4. On the form, fill in the fields.

External Storage form

Field	Description
Name	Name of the external app configuration.
Description	Description of the external app configuration.
Active	Option for marking the configuration for external storage as active.
Table	Table configured to store the request details for your application. For example, if your application initiates a contract for incidents, select the table Incident [incident]. Similarly, select the Contract [ast_contract] table for contract repository. **Note:** If you select a different table, you must associate a corresponding flow.
Condition	Filter conditions to determine which integration app to use. For example, say you've already set up the Google Drive external storage integration and want to store only NDA contracts there, you can define the condition as follows: **[Category] [is] [NDA]** and then select the Google Drive. Similarly, you can define conditions based on region, for example, **[Location] [is] [United States]** and then select the Google Drive or **[Location] [is] [India]** and select the Microsoft OneDrive for better discovery.
Execution order	Order in which an external storage system is used for storing contract documents. The system with the lower-order value is chosen first.
App	External storage system such as Google Drive or Microsoft OneDrive.
Folder structure	Filepath to store the signed contract documents in the external storage system. Define a folder structure using a combination of static text and dynamically generated text from the selected fields. For example, the folder structure `Legal/${company}/Contracts/${number}`, where,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ `Legal` and `Contracts` are the static texts ○ `${company}` and `${number}` are the fields chosen from the **Select variables** list. These field variables are dynamically replaced by the values in each field while saving a document.

5. Save the external app configuration.
   - Save a new external app configuration by clicking **Submit**.
   - Save the changes to an existing external app configuration by clicking **Update**.

Result
The configuration for the external storage system is ready to be used for storing contract documents.

Note:
(Optional) You can view, edit, and delete the record.

Configure an e-signature provider

Configure an electronic signature provider to enable users to sign contract documents electronically.

Before you begin
Ensure that the administrator has installed and set up spokes in Integration Hub for the electronic signature providers that you want to configure.

Adobe Sign spoke v2.5.1 or later version

For more information on the setup and synchronizing the Adobe Acrobat Sign group, see Synchronize Adobe Acrobat Sign group with ServiceNow.

DocuSign spoke v3.3.0 or later version

For more information on the setup and creating the Docusign account, see Set up Docusign eSignature spoke using authorization code grant.

Role required: sn_cm_core.contract_config

Procedure
1. Navigate to **All** > **Contracts Core** > **Contracts Integrations** > **Integrations**.
2. Create or modify an external app configuration.
   - To create an external app configuration, click **New**.
   - To modify an existing external app configuration, open the external app configuration from the list.
3. On the Contract Integration Type page, click the **Electronic Signature** link.
4. On the form, fill in the fields.

Electronic Signature form

Field	Description
Name	Name of the external app configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Description	Description of the external app configuration.
Active	Option for marking the external app configuration as active.
Table	Table configured to store the request details for your application. For example, if your application initiates a contract for incidents, select the table Incident [incident]. Similarly, select the Contract [ast_contract] table for contract repository. **Note:** If you select a different table, you must associate a corresponding flow.
Condition	Filter conditions to determine which integration account to use. For example, say you've already set up the Docusign electronic signature account and want only NDA contracts to use that account for signatures, you can define the condition as follows: **[Category] [is] [NDA]** and then select the Docusign in the **Integration provider** and its associated account in **Account**.
Execution order	Order in which an integration account is used for electronic signature of contract documents. Integration account with the lower-order value is chosen first.
App	Electronic signature provider such as Adobe Acrobat Sign or Docusign.
Account	Account number associated with the electronic signature provider. This field appears only when **Docusign** is selected from **Integration provider**.
Group	Group associated with the electronic signature provider. This field appears only when **Adobe Acrobat Sign** is selected from **Integration provider**.
Attributes	Additional configuration items based on your electronic signature provider. Provide the following details: **Host Url**: Add the URL of the selected electronic signature provider that enables you to finalize or update the contract document before sending them to signatories. For example, use Web UI URL for **Adobe Acrobat Sign** or use **Docusign** UI for DocuSign.

5. Save the external app configuration.
   - Save a new external app configuration by clicking **Submit**.
   - Save the changes to an existing external app configuration by clicking **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The configuration for the external storage system is ready to be used for storing contract documents.

Note:
(Optional) You can view, edit, and delete the record.

Configure extension point for notifications

Add or modify an Action and its functionality on the Standard ticket page for a contract request.

Before you begin
Role required: Admin

- Review the configuration of the script include, scripted extension points, and widgets.
- For more information about using and customizing the script includes, see Script includes.
- Ensure that you've set the application scope to this application.

About this task
The base system `ApprovalNotificationWorkspaceURLExt` script provides the configuration of common actions for all request types. You can override these common actions for a specific request type or add more actions.

Procedure

Add or modify an action in the scripted extension point.

a. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.

b. Search and select the **ApprovalNotificationWorkspaceURLExt** extension point.

c. Add or modify an implementation for a practice area.
To add a new implementation for a practice area, click the **Create implementation** related link.

On the Script Include form, update the script as required.

i. To restrict this implementation to the practice area, add the following code to the *canHandle* parameter:

```
appliesTo(parentRecord) {
        return <tablename of the parent record>;
    },
    /**
  * @return {String} workspace to which the user can be navigated to view the contract request from notification
  * The navigation URL is formed in runtime as '/now/' + (getWorkspaceURL return value/output)  + '/record/' + table '/' + sysID.
  *
  * For example:
  * getWorkspaceURL output is  "legal/counsel-center"
  * URL formed in runtime is '/now/legal/counsel-center/record/' + table + '/' + sysId
  */
    getWorkspaceURL: function() {
        return "legal/counsel-center";

    },
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ii. To add a new action, update the *process* method.

For reference, see an existing *process* method of the `DefaultLegalTicketActions` script include or the implementation of another practice area.

d. Click **Update**.

Result

To see a list of available default email notifications, go to **All** > **System Notification** > **Notifications** and search for the **Contracts Support** category.

Use default email notifications

Use the default email notifications to communicate the progress of the request.

Before you begin

Role required: Admin

About this task

You can configure the email notifications for each of your actions to share the status of your approvals. Use the predefined email notifications when

- Approval is initiated.
- Approval is cancelled.
- Approval is approved.
- Approval is rejected.

Procedure

1. Navigate to **All** > **System Notification** > **Notifications**.
2. In the Category field, search for the **Contracts Support** items.
3. Navigate to the existing platform notifications.
4. Add a condition where the Source table is not *sn_cm_core_document_revision*.
5. You must manually activate by updating the Active field to true.

> **Note:**
> These email notifications are inactive by default.

6. Ensure you specify the **getWorkspaceURL** value that's appropriate for your business unit. For example, the Legal Counsel Center getWorkspaceURL:

```
getWorkspaceURL: function() {
        return "legal/counsel-center";
```

. For more information, see Configure extension point for notifications

Result

You can now use the list of available default email notifications.
To create new email notifications, follow the instructions available at Create an email notification .

Auto-populate the start date and end date for contract requests

Configure an extension point implementation to automatically add the start date and end date while creating a contract request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. In the **API Name** field, enter `sn_cm_core.ContractManagementExt`.
3. Select the record.
4. In the Related Links section, select **Create implementation**.
5. On the Script Include form, fill in the fields.

   For a description of the field values, see Scripted Extension Point form fields.
6. In the **Script** field, add a method `populateDataForInitiateContractModal` to define the fields from which the values will be automatically added in the **Start date** and **End date** fields of a contract request.
   You can also define the exact dates for the **Start date** and **End date**.
7. Select **Update**.

Configure contract templates for a contract request

Create contract templates to easily generate Microsoft Word contract documents based on request types.

The contract template takes a Microsoft Word document that contains content controls as an input. The content marked by the content controls are parsed and used to create clauses and clause variations.

You can add content controls either manually or by using the Microsoft Word add-in for ServiceNow Contracts. Use only one method for a single contract template.

Note:

By using Microsoft Word add-in, you can add content controls on macOS as well as Windows systems. The manual method enables you to add content controls only on Windows systems.

For more information, see the following topics:

- Creating a contract template using Microsoft Word add-in for ServiceNow Contracts.
- Create contract template by manually adding content controls.

Configure non-task tables for contract templates

Add non-task tables in the script of an extension point implementation so you can select them while creating contract templates. A non-task table does not extend task tables, and stores records, reference data, or configuration information used across the platform.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. In the **API Name** field, enter `sn_cm_core.DocumentTemplateNonTaskTableConfiguration`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the record.
4. In the Related Links section, select **Create implementation**.
5. On the Script Include form, fill in the fields.

   For a description of the field values, see Scripted Extension Point form fields.

6. In the **Script** field, enter the name of non-task tables that you want to configure for contract templates.
   Use a comma (,) to separate the non-task table names in the script.

   Example
   The following example shows a script in which two non-task tables are being added.

```
      var DocumentTemplateNonTaskTableConfiguration =
 Class.create();
DocumentTemplateNonTaskTableConfiguration.prototype = {
    initialize: function() {},

    /**
     * Description: return the list of non-task tables that
 needs to
     * be added in the table choices in the document template
     * @return {Array} list of tables
     */
    getNonTaskTables: function() {
  return
 ['sn_spend_psd_procurement_request_line','sn_quote_mgmt_core_q
uote'];
    },

    type: 'DocumentTemplateNonTaskTableConfiguration'
};
```

7. Select **Update**.

Result

The non-task tables are available for selection in the **table** drop-down list in the Contract templates view of the Word Templates page of the Contract Administration application.

For more information, see Create a contract template.

Creating a contract template using Microsoft Word add-in for ServiceNow Contracts

Create contract templates by using Microsoft Word add-in for ServiceNow Contracts to add content controls.

Create a contract template to contain content controls

Create a contract template using the Microsoft Word add-in for ServiceNow Contracts to which you can then add content controls.

Before you begin

Verify that the application scope is set to **Global** by selecting the Application scope icon () in the header of your homepage.

If you're creating a contract template for a non-task table, verify that the non-task table is added in the extension script. For more information, see Configure non-task tables for contract templates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Select **New**.
3. On the form, fill in the fields.

Word Template New Record form

Field	Description
Name	Unique name for the contract template.
Table	Table to which you want to associate the contract template.
Category	Document category to which you want to associate the contract template.
Document	Upload a Microsoft Word document of type `.docx`. This document will be replaced with an updated version containing content controls for metadata, signatory, and clauses using Microsoft Word add-in for ServiceNow Contracts.
State	The initial state is automatically set to Draft.
Application	Application to which the contract template belongs. This field is automatically set to the application scope in which you're creating the contract template.
Active	Option to make the template active and available for use.
Signature blocks	Option to enable signature blocks in the contract template based on the number of signatories in the contract request. When this option is selected: ○ You can't upload a participant-based template. ○ The **Participants** related list isn't available. For more information, see Add and configure signature blocks using Microsoft Word add-in for ServiceNow Contracts.
Start date	Date on which the Word document template becomes valid. Providing a start date helps when maintaining multiple versions of same template.
End date	Date until which the Word document template is valid. Providing an end date helps when maintaining multiple versions of same template. If the values in the **Start date** and **End date** fields are empty the template will be always valid. **Note:** If you specify an end date, you must also specify a start date.

4. In the **Contract Type** field, select only one category of the contract type.
   For example, if you're creating a template for a non-disclosure agreement, select **Non Disclosure Agreement** as the contract type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Only active contract types are displayed in the list.

5. Select **Save**.

Result
The contract template is saved in the Draft state.

What to do next
Add document content controls using Microsoft Word add-in for ServiceNow Contracts

Add document content controls using Microsoft Word add-in for ServiceNow Contracts

As a contract configurator, add content controls using the Microsoft Word add-in for ServiceNow Contracts. Content controls act as placeholders in contract templates.

Configure metadata for fields, variables, and variables sets in a contract document

As a contract configurator, add and configure metadata for fields, variable, and variable sets to pre-fill the information in the contract document.

Before you begin
The Microsoft Word add-in for ServiceNow Contracts must have been configured. For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

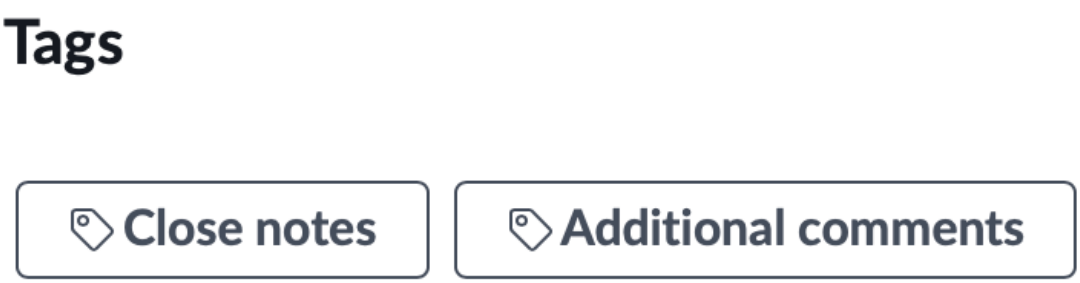
A contract template must exist that is active and is in the Draft or Editing state. For more information, see Create a contract template to contain content controls.

Role required: sn_cm_core.contract_config and canvas_user

About this task
The metadata added for fields, variable, and variable sets act as placeholders for values that will be used in the contract document.

Note:
In Contract Management Pro version 1.4.1, the Legal Contract Request form in Legal Counsel Center and Contract Workspace displays only mapped legal fields for variables in the contract fulfiller view. You therefore need to apply the **Field mapping** option when setting up Metadata mapping for legal contracts. For existing templates with Variable mapping, edit the template and update the configuration with **Field mapping**.

For more information on editing a contract template, see Edit a contract template using Microsoft Word add-in for ServiceNow Contracts.



- The metadata of the type Field mapping gets its value from the table that the contract template is associated with.
- The metadata of type Variables gets its value from the record producer.

Procedure

1. Open the document in which you want to mark the content controls in Microsoft Word.
2. From the Microsoft Word ribbon, select the ServiceNow Contracts add-in.
3. On the login screen, enter the credentials of the ServiceNow instance for which the Microsoft Word add-in is configured.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. On the add-in screen in the **Templates** tab, select the contract template to which you want to add the metadata.
   Only templates that have been created in the global application scope are visible.
5. In the Microsoft Word document, place the cursor where you want to add the placeholder for metadata.
6. In the **Metadata** tab, select **Create metadata mapping**.
7. On the Create mapping form in the **Type** field, select either field mapping or variables.
8. Select **Create**.
   - The metadata is added and displayed as a tile with the field name as the title.

   - The metadata is synced to the ServiceNow instance.

Note:

If you have included the sys_id variable, you must adjust this script to display it correctly. For more information, see Configure fields in contract template to display correct sys_id value in contract documents.

9. **Optional:** Add the metadata to other locations in the document or the header or footer of the Word document by selecting the tile and moving it to the desired location.
10. **Optional:** View the metadata by logging in to your ServiceNow instance and navigating to the **Template Mappings** related list of the contract template.

Configuring signatories in Contract template using Microsoft Word add-in

For signatories to add their signatures in the contract document, you can either create signature blocks or configure participants in a contract template with placeholders.

Add and configure participants for a contract using the Microsoft Word add-in for ServiceNow Contracts

As a contract configurator, configure participants and add placeholders for their signatures using the Microsoft Word add-in for ServiceNow® Contracts.

Before you begin

The Microsoft Word add-in for ServiceNow Contracts must have been configured. For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

A contract template must exist that is active and is in the Draft or Editing state. For more information, see Create a contract template to contain content controls.

Role required: sn_cm_core.contract_config and canvas_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the document in which you want to mark the content controls in Microsoft Word.
2. From the Microsoft Word ribbon, select the ServiceNow Contracts add-in.
3. In the login screen, enter the credentials of the ServiceNow instance from which you downloaded the manifest file.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. On the add-in screen in the **Templates** tab, select the contract template to which you want to add the metadata.
5. In the **Signatory** tab, select **Add signatory**.
6. Add and configure the participant as either an internal or external user.
7. Select **Create**.
   - The signatory is added and the signer card is displayed.
   - The signatory is marked as internal or external depending on the values provided.
   - The signatory added has Sign, Sign date, metadata.
8. Place the **Sign** metadata in the document.
   a. Place the cursor where you want the signature to be added.
   b. Select the Sign tag to place the metadata.
9. Complete the steps for the following metadata:
   - **sign_date**
   - **signatory_name**
   - **signatory_email**
   - **signatory_title**

   For a full list of content controls, see Add content controls in a Microsoft Word document.
10. **Optional:** View the signatory details by logging in to the ServiceNow instance and navigating to the **Participants** related list of the contract template.

Result

The signatory details and the metadata are synced to the ServiceNow instance.

Add and configure signature blocks using Microsoft Word add-in for ServiceNow® Contracts

Add and configure signature blocks in contract templates to define signatories, placeholders for signatures, and other metadata in the contract document. Signature blocks are automatically added in the contract document based on the number of signatories specified in the contract request.

Before you begin

The Microsoft Word add-in for ServiceNow Contracts must be configured. For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

An active contract template must exist in the Draft or Editing state where the **Signature blocks** option is selected. For more information, see Create a contract template to contain content controls.

Role required: sn_cm_core.contract_config and canvas_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the document in which you want to map the tables using Microsoft Word add-in.
2. From the Microsoft Word ribbon, select the ServiceNow Contracts add-in.
3. On the login screen, enter the credentials of the ServiceNow instance for which the Microsoft Word add-in is configured.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. On the add-in screen in the **Templates** tab, select the contract template to which you want to add the signature metadata.
5. In the **Signatory** tab, select **Add signatory**.
6. In the Signatory type section, set the signature type as internal or external, and select **Next**.

   Note:
   You can create one internal signature block and one external signature block.

7. Define the signature block in the Microsoft Word document.
   a. Select a placeholder in the Microsoft Word document.
   b. Select the signature tag.
   c. Select **Next**.
8. Insert the items you want to display in the signature block.
   a. Place the cursor within the signature block.
   b. Select the tag for the metadata you want to add.
      You can add the following metadata:
      - Signature
      - Name
      - Title
      - Date
      - Email
9. Select **Complete**.
10. **Optional:** View the signatory details by navigating to the **Template Mappings** related list of the Contract template form.

What to do next

Define an internal signatory rule to automatically add signatory details in contract documents using the template. For more information, see Define an internal signatory rule.

Map clauses and clause variations using the Microsoft Word add-in for ServiceNow Contracts

As a contract configurator, add clause and clause variations to a contract using the Microsoft Word add-in for ServiceNow Contracts.

Before you begin

The Microsoft Word add-in for ServiceNow Contracts must have been configured. For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

A contract template that is active and is in the Draft or Editing state must exist. For more information, see Create a contract template to contain content controls.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_cm_core.contract_config and canvas_user

Procedure

1. Open the document in which you want to mark the content controls in Microsoft Word.
2. From the Microsoft Word ribbon, select the ServiceNow Contracts add-in.
3. In the login screen, enter the credentials of the ServiceNow instance from which you downloaded the manifest file.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. In the **Templates** tab, select the contract template for which you want to add or modify clauses.
5. Navigate to the **Clauses** tab.
   A list of active clauses associated with the table selected in the contract template is displayed.
6. On the Microsoft Word Home ribbon, select the Show/Hide formatting marks icon (¶) to see the formatting symbols.
7. In the Microsoft Word document, select the content to be tagged along with the paragraph ending symbol (¶).
8. Map the content to the clauses by either using an existing clause variation, creating a clause, or creating clause variation.
   A clause cannot be mapped to more than one piece of content.
9. **Optional:** Select the **View mapped clauses** toggle switch to see the mapped clauses,

Result

- The selected content is tagged with the clause.
- The clause details are synced to the ServiceNow instance. You can access the clause details by logging to the ServiceNow instance and navigating to the **Imported Clauses** related list of the contract template.

What to do next

Upload and parse a Microsoft Word document that includes content controls

Map contract document tables using the Microsoft Word add-in for ServiceNow Contracts

Use the Microsoft Word add-in to map a contract table to a source table in your ServiceNow instance to determine the data that will be added in a contract document. When a contract document is generated from the template, the rows and columns are dynamically added in the mapped table of the contract document.

Before you begin

The Microsoft Word add-in for ServiceNow Contracts must be configured. For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

An active contract template must exist in the Draft or Editing state. For more information, see Create a contract template to contain content controls.

Role required: sn_cm_core.contract_config and canvas_user

Procedure

1. Open the Microsoft Word document in which you want to map tables.
2. From the Microsoft Word ribbon, select the ServiceNow Contracts add-in.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the login screen, enter the credentials of the ServiceNow instance for which the Microsoft Word add-in is configured.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. In the **Templates** tab of the Microsoft Word add-in screen, select the contract template to which you want to map the data source table.
5. In the **Table** tab, create a table mapping for the template.
   - For a first table mapping, select **Configure table mapping**.
   - For subsequent table mappings, select the add icon + beside the search bar.
6. In the **Table mapping details** section, configure the details for the data source table from which you want to add data in the contract document.

   a. In the **Table** field, select the data source table from which you want to add data in a contract document.

   b. **Optional:** In the **Name** field, either retain the default name or enter a unique table name.

   c. In the **Record identifier** field, select a table field to determine which records are added to the contract document.
   For example, if you have selected the Quote Line Item table and you want to include data only from the Quote record that initiated the contract, you would select the **Quote** field.

   d. In the **Table Columns** field, select the columns of the data source table that you want to map to the contract template.

   e. Select **Next**.

7. In the **Table display configuration** section, set the display properties to define how the data appears within the table in the contract document and then select **Next**.

8. Display the formatting symbols by selecting the Show/Hide formatting marks icon (¶) on the Microsoft Word Home ribbon.
9. Initiate the table mapping in the contract template by selecting it along with the paragraph symbol (¶), and then selecting the table tag in the **Map dynamic table** section.
10. Select **Next**.
11. Map the columns in the contract template table by selecting a column in the mapped table and then selecting the appropriate column tag in the **Map table columns** section.
12. Select **Complete**.

Result

The table mapping is completed and is listed under the **Table** tab on the add-in panel.

You can add conditions for the table mapping to filter for the data that appears in the contract. For more information, see Add conditions for a contract table mapping.

Upload and parse a Microsoft Word document that includes content controls

As a contract configurator, after adding the content controls to the Microsoft Word document to be used for the contract template using the Microsoft Word Add-in for ServiceNow Contracts, upload the document to the ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Add metadata, signatory details, and content controls for the clauses before uploading the document. The uploaded document is parsed for the content controls and data populated into the ServiceNow instance. For more information, see Add document content controls using Microsoft Word add-in for ServiceNow Contracts

Role required: sn_cm_core.contract_config and canvas_user

Procedure

1. Open the document in which you have included content controls in Microsoft Word.
2. From the Microsoft Word ribbon, select the ServiceNow Contracts add-in.
3. In the add-in login screen, enter the credentials of the ServiceNow instance from which you downloaded the manifest file.
4. Select **Proceed to select a document**.
5. In the Select Attachment screen, select **Attach file** and select the same file that includes the content controls.
   If the file name of the document you are uploading and the one uploaded in the contract template are different, you are asked to confirm proceeding with the upload.
6. Select **Upload and parse document** to replace the existing document in the contract template with the one you are uploading and parse the content controls in the ServiceNow instance.

What to do next

Complete clause mapping to build a clause library.

Complete clause mapping to build a clause library

As a contract configurator, complete clause mapping to build a clause library of clause variations containing the content marked in the Microsoft Word document using the Microsoft Word Add-in for ServiceNow Contracts.

Before you begin

- Ensure that the application scope is set to **Global**. Otherwise, do the following:
  1. Select the Application scope icon () on the top-right corner.
  2. In the drop- down, select the option consisting **Application scope**.
  3. In the filter navigator, search and select **Global**.
- Map clause and clause variations in the Microsoft Word document using the Microsoft Word Add-in for ServiceNow Contracts. For more information, see Map clauses and clause variations using the Microsoft Word add-in for ServiceNow Contracts
- Upload and parse the document with the content controls. For more information, see Upload and parse a Microsoft Word document that includes content controls.

Role required: sn_cm_core.contract_config

About this task

Clauses that are imported from the Microsoft Word document are used to build a clause library of clause variations.

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. From the list, open the contract template for which you want to complete the clause mapping.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Navigate to the Imported clauses related list.
4. Select **Complete Clause Mapping**.
   - If the mapping is successful, the Clause Mappings related list displays the details of mapped clauses with their contract type.
   - If the mapping is not successful, an error message appears. Possible causes could include:
     - No contract type was selected.
     - All clauses were not assigned a classification.
     - Clauses classified as New clause were mapped to a clause instead of being empty.
     - Clauses classified as Existing clause or No change don't have a clause mapped to them.
5. Select **Update** to save the contract template.
6. **Optional:** View the clause variations associated with a clause by selecting the Display/hide hierarchical lists icon ( ) for the clause.

Add conditions for a contract table mapping

As a contract configurator, use condition builders to define criteria for a table mapping for a contract template so only the essential data from the mapped table is displayed in the contract document.

Before you begin

- Map tables in Microsoft Word document using the Microsoft Word add-in for ServiceNow Contracts. For more information, see Map contract document tables using the Microsoft Word add-in for ServiceNow Contracts.
- Upload and parse the document with the content controls. For more information, see Upload and parse a Microsoft Word document that includes content controls.
- Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. From the list, open the contract template for which you want to add table mapping conditions.
3. Select the **Table Mappings** tab under **Related Links**.
4. Select the table mapping.
5. In the **Condition** field, define a condition for the table mapping.
   For more information, see Create a condition statement using the condition builder .
6. Select **Update**.

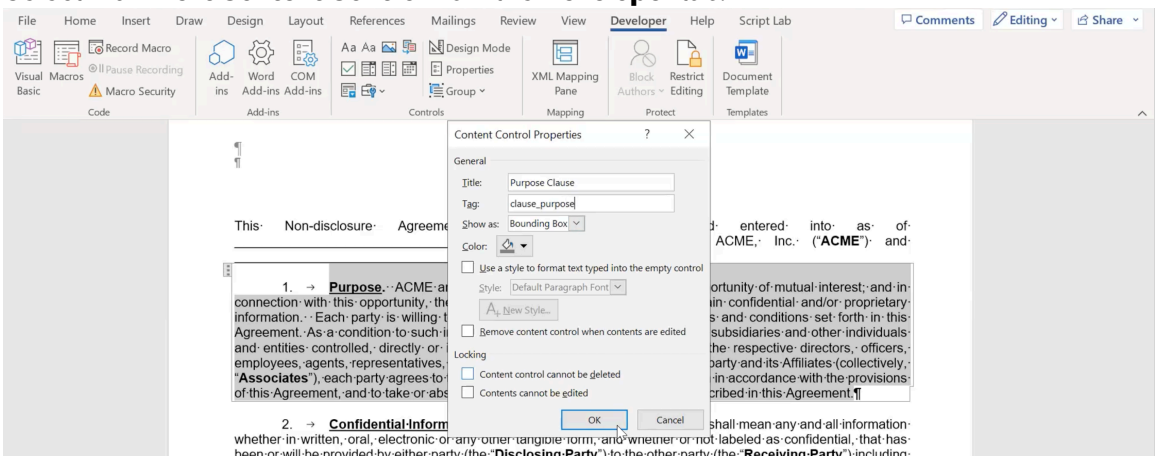
Create contract template by manually adding content controls

Create contract templates by adding content controls manually.

Add content controls in a Microsoft Word document

As a contract configurator, prepare a Microsoft Word document that you want to import as a contract template by marking the content with content controls so it can be efficiently parsed and reused.

Before you begin



Ensure that you are on a Windows system to add content controls in a Microsoft Word document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_cm_core.contract_config

Procedure

1. In Microsoft Word, open the document that you want to import as a contract template.
2. On the Microsoft Word Home ribbon, select the Show/Hide formatting marks icon (¶) to see the formatting symbols.
3. Display the **Developer** tab in Microsoft Word.
   For more information, see the Show the Developer tab topic in the Microsoft Office 365 documentation.
4. Select the content to be tagged.
5. Select **Plain Text Content Control** from the **Developer** tab.

6. Select the **Properties** option from the **Developer** tab.
7. In the **Content Control Properties** dialog box, enter a title for the content control.
8. Enter a tag value.

Note:

- The tag names are not case sensitive. If there are two tag names as clause_PURPOSE and clause_purpose, both will be treated same.
- The maximum character limit for the tag is 200.

Tag names contain a prefix with the content control type.

Supported content control types

Content control type	Description
field_	Indicates metadata.
clause_	Indicates a clause.
signature_	Indicates a signature.
sign_date_	Indicates the signing date.
signatory_name	This content control indicates the name of the signatory (Available only for contract related templates).
signatory_email	This content control indicates the email of the signatory (Available only for contract related templates).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content control type	Description
signatory_title	This content control indicates the title of the signatory (Available only for contract related templates).

9. Select **OK**.

Create a contract template

Create a contract template that can be used to generate a standard contract with predefined content when an employee submits a contract request.

Before you begin

Role required: sn_cm_core.contract_config

If you are creating a contract template for a non-task table, ensure that the non-task table is added in the extension script. For more information, see Configure non-task tables for contract templates.

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
   The Word Templates page opens in the Contract Templates view by default.
2. Select **New**.
3. On the form, fill in the fields.

Word Template New Record form

Field	Description
Name	Unique name for the contract template.
Table	Table to which you want to associate the contract template.
Category	Document category to which you want to associate the contract template.
Document	The document from which you want to import clauses and template field mapping. The selected document should be a Microsoft Word (.docx) document and should have valid content controllers. For more information, see Add content controls in a Microsoft Word document.
State	Current state of the document template. ○ **Draft**: Indicates that the document template is not yet published. ○ **Editing**: Indicates that the document template is being edited after it has been published. ○ **Published**: Indicates that the document template can be consumed by services and cases.
Application	Application to which the contract template belongs. This field is automatically set to the application scope in which you're creating the contract template.
Active	Option to make the template active and available for use.
Start date	Date on which the Word document template becomes valid. Providing a start date helps when maintaining multiple versions of same template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	This field is available only when **Category** is selected.
End date	Date until which the Word document template is valid. Providing an end date helps when maintaining multiple versions of same template. If the values in the **Start date** and **End date** fields are empty the template will always be valid. **Note:** If you specify an end date, you must also specify a start date. This field is available only when **Category** is selected.

When the document is selected, the Participants, Imported Clauses, Clause Mappings, and Template Mappings related list appear.

4. In the **Contract Type** field, select only one category of the contract type.
   If you're creating a template for non-disclosure agreement, select **Non Disclosure Agreement** as the contract type.
5. Select **Parse Document** to extract the content marked by content control from the imported document.
   - The content controls that have *clause_* as prefix are derived from the document and listed under the Imported clauses related list.
   - The content controls that have *field_*, *signatory_*, *signature_*, and *sign_* as prefix are derived from the document and listed under the Template mappings related list.
6. Select **Save**.

Result

The contract template is saved in the Draft state.

What to do next

1. To add participants with whom you must obtain signatures, see Create and configure participants.
2. To insert signatures, open a **Signature_** record in the **Template mappings** related list. For more information, see Update contract template mappings
   a. In **Document field type**, specify `Signature`.
   b. In the **Participant** field, specify the participant with whom you require the signature.
   c. Select **Update**.
   Similarly, update the following records.
   - Sign
   - Sign date
   - field
   - Signatory name
   - Signatory email
   - Signatory title

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For a full list, see Add content controls in a Microsoft Word document

3. Select **Publish**.

Create and configure participants

Add and configure participants that act as placeholder for users who will be assigned as signers of a contract document.

Before you begin

A Microsoft Word document must have been uploaded and parsed to provide clauses for the contract template. For more information, see Create a contract template.

Role required: sn_cm_core.contract_config

Before you begin

- Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open a contract template.
3. In the **Participants** related list, click **New**.
4. On the form, fill in the fields:

   For description on the field values, see Participant form for contract templates.

   For more information on content controls, see Add content controls in a Microsoft Word document.

5. Click **Submit**.

Result

The participant is added to the document template.

Participant form for contract templates

Use the Participant form to add participants in a contract template.

Participant form

Field	Description
Name	Display the name of the mapped participant.
Action	Type of action to be performed by the participant such as **Sign**.
Order	Order in which a task has to be initiated for the participant to complete the action.
User	Mapping the user field to a participant.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Participant form (continued)

Field	Description
	Note: • When you select a value, the participant is considered to be an internal user. When the Participant Name and Participant Email fields (optional for internal user) are filled along with the User field, the electronic signature task is sent to Participant Name and Participant Email, not the Name and Email from the User field. When you do not select a value in the User field, the participant is considered an external user (Participant who does not have access to ServiceNow system). For such participants, specify Participant Name, Participant Email, and Participant Title. • The value in the User field is cleared when you save or update the template with the Advanced script field selected.
Participant name	Option to specify the name when the defined participant is an external user. **Note:** • Participant name and participant email are mandatory when you do not select a value in the **User** field. • The value in the Participant name field is cleared when you save or update the template with the Advanced script field selected. • This field is available only when signing type is AdobeSign or DocuSign.
Participant email	Option to specify an email address when the defined participant is an external user. **Note:** • Participant name and participant email are mandatory when you do not select a value in the **User** field. • The value in the Participant email field is cleared when you save or update the template with the Advanced script field selected. • This field is available only when signing type is AdobeSign or DocuSign.
Participant title	Option to specify the title when the defined participant is an external user. **Note:** • The value in the Participant title field is cleared when you save or update the template with the Advanced script field selected. • This field is available only when signing type is AdobeSign or DocuSign.
Table	Table (sys_user table or any table extending sys_user table) from which you choose to populate the variables.
Document template	Name of the document template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Participant form (continued)

Field	Description
Document task template	Template selected on the Document Template task table to populate additional details for the document task, such as description and short description for fill, sign and review tasks. **Note:** If additional details are not defined, the default values of the template are used in the document template task.
Due date source	Due date for the document task that is created for that participant.
Date offset type	Due date for the document task is picked from the task record. Additionally, you can offset the due date by days, weeks or months.
Advanced script	Option to display the Script field.
Script	Script indicating the participant conditions with User ID, Participant name, Participant email, and Participant title. This field is enabled only when the Advanced script field is selected.
Optional	When enabled, a participant will be skipped if the participant user and participant email is not available. This check is done during runtime only and not while configuring the template.

Classify and map imported clauses

Classify and map imported clauses to use the content from the clauses in a contract template.

Before you begin

A Microsoft Word document must have been uploaded and parsed to provide clauses for the contract template. For more information, see Create a contract template.

Role required: sn_cm_core.contract_config

About this task

The imported clauses contain content that have been extracted from the Microsoft Word document that are marked by the content controls. Classifying and mapping the imported clauses builds a clause library of clause variations containing the content available in the imported clauses.

For more information on clause variations, see Create a clause variation.

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open a contract template.
3. Navigate to the Imported clauses related list.
4. Either update an existing clause variation with the content available in the imported clause or create a new clause or clause variation with that content.
5. Select **Complete Clause Mapping**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If the mapping is successful, the Clause Mappings related list displays the details of mapped clauses with their contract type.
- If the mapping is not successful, an error message appears. Possible causes could include:
  - No contract type was selected.
  - All the clauses were not assigned a classification.
  - Clauses with the classification of New clause were mapped to a clause instead of being empty.
  - Clauses with the classifications of Existing clause or No change don't have a clause mapped to them.

6. **Optional:** View the clause variations associated with a clause by selecting the Display/hide hierarchical lists icon (for a clause.

Update contract template mappings

Update template mappings to pre-fill information that's placed in the contract document.

Before you begin

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open a contract template.
3. Navigate to the Template mapping related list.
4. Select the field to update.
5. On the form, fill in the fields.

Template Mapping form

Field	Description
Field name	This field is automatically populated with the title of the content control. For example: Company
Document field	This field is automatically populated with the tag of the content control. The field has the field type prefixed to the name. For example: field_companyName.
Document field type	The type of field being mapped. The choices are: ○ Text Field: Descriptive metadata. ○ Signature: Signatures during the electronic signature process. ○ Signature date: Date of the signing. ○ Signatory name: Name of the signatory. ○ Signatory email: Email of the Signatory. ○ Signatory title: Title of the signatory.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: ○ These options are available when the template is contracts-related for Contract Management Pro. ○ Ensure you have mapped Signature and Signature date to the participants and delete any unmapped Signature and Signature date fields.
Preview value	A field mapping value used instead of the placeholder when testing the template. This field appears only when **Text field** is selected from **Document field type**.
Format	Format in which values are to be entered by the participant. If the participant doesn't enter a value in the specified format, a validation error appears for the participant.
Read Only	Option for enabling the editing of the field by the selected participant.
Active	Option for activating the template mapping.
Mapping table	This field is automatically set to the table to which the document template is associated.
Mapping field	Mapping field used to map the values from the table field that is inserted when this template is used in a contract. This field appears only when **Text field** is selected from **Document field type**.
Participant	Select the participant associated with the contract template. While creating of participants, ○ To create an internal signer, map user reference to the participant record, for example, P1. ○ To create an external signer, map the Participant name, Participant email, and Participant title fields in the participant record. When you map a participant to signatory name, email, and title fields in the template mappings, the participant record mapped value to the participant name, email, and title fields in the signer tasks. **Note:** When the template has a signatory rule, the signer mapping under the signatory rule takes precedence over the user mapping in participant record.
Advanced script	Option to display the Script editor.
Script	The script configuring the mapping between fields and record producer variables. This field is enabled only when the **Advanced script** field is selected.

6. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Publish a contract template

Publish a contract template to make it available for generating a standard contract document with predefined content when a contract user submits a request.

Before you begin

Ensure that the clause mapping has been completed before you publish a contract template with clauses. For more information, see Complete clause mapping to build a clause library and Classify and map imported clauses.

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Template**.
2. Open a contract template.
3. **Optional:** Review the contract document.
   a. Generate and preview the contract document.
   For more information, see Generate and preview a contract document from a template.
   b. If any changes are necessary, update the document and save it.
4. On finalizing the content of the contract document, select **Publish**.

Result

The contract template is published.

Note:
If the contract type associated with the contract template is deactivated when the contract template is in the Draft or Editing state, an error is displayed when you try to publish the template.

Configure contract template rules

Configure a rule to identify the contract document template used for generating the contract document for the requester.

Before you begin

Role required: sn_cm_core.contract_config

About this task

If you want the variables related to contract request to be available in condition builder, add the contract request reference to your application table. For more information, see Provide access to contract request fields in condition builders

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Administration** > **Contract Template Rules**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contract Template Rule form

Field	Description
Name	Unique name of the contract template rule.
Description	Description of the contract template rule.
Requested table	Table in which the contract requests are saved.
Category	Category of the document template.
Template	The published and active contract template that will be used to generate the contract document.
Applies to	Conditions under which the contract template is selected. For example, to apply a rule when a contract request is submitted in an NDA category, you would enter the condition **[Category][is][NDA]**.
Order	Order in which the selection rule is run. If multiple rules meet the conditions from a contract request, the template rule with the lowest- order number is run for selecting the template.
Active	Option for marking the rule active. Only active rules are considered while submitting a request and identifying the appropriate template

4. Select **Submit**.

What to do next
Create a contract configuration

Define an internal signatory rule

Define an internal signatory rule to map signatories to a template using signatory mappings.

Before you begin
Role required: sn_cm_core.contract_admin and sn_cm_core.contract_config

About this task
If you want the variables related to a contract request to be available in the condition builder, add the contract request reference to your application table. For more information, see Provide access to contract request fields in condition builders

Procedure
1. Navigate to **All** > **Contracts Core** > **Contracts Administration** > **Internal Signatory Rules**.
2. Select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the fields.

Internal Signatory Rules form

Field	Description
Name	Display name of the internal signatory rule.
Template	Template selected from the active and published templates list.
Table	Table that is associated with the selected template. The field is auto-populated when the template is selected.
Description	Description of the internal signatory rule.
Active	Option to indicate that the signatory rule is active and available for use.
Order	Order in which the signatory rule is used.
Applies to	Conditions under which the internal signatory rule is selected. For example, if you select an assignment group and configure a user as signatory, that user will be the internal signatory for contract requests that include the selected assignment group.

4. Right-click the form header and select **Save**.
5. In the **Signers Mappings** section, select **New**.
   a. In the **Participant** field, select a participant.

      Note:
      If signature blocks are configured for the contract template, this field isn't available.

   b. In the **Signer** field, select a user from the list.
   c. Select **Submit**.
6. Select **Update**.

   Note:
   When more than one internal signatory rule is applicable, the signatory rule with the lowest order is considered.

Result
An internal signatory rule is created to map a user as an internal signatory for the corresponding contract template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
During signatory assignment for contract based on own paper, the *Internal Signatory* rule takes precedence.

- A user from **Signers mappings** is picked as a signatory.
- For contract templates configured with participants, when a participant does not meet the *Internal Signatory* rule criteria, a signatory is picked from the user field mapping of the participant list in the template.
- While creating the signer task for an internal user, check whether the user's legal name is available in the user's employee profile. If no value is provided in the **Legal Name** field, use the user name from the Users [sys_user] table. For more information, see Employee Profile form.
- When no data is found, an empty signatory record is created that can update with the correct signatory details.

Create a contract configuration

Define the contract repository where the contracts will be stored and map the data to be added to the contract document.

Before you begin

A contract template and a template rule that will pick the template when the user submits a contract request must exist. For more information, see Configure contract templates for a contract request and Configure contract template rules.

If you want the variables related to contract request to be available in condition builder, add the contract request reference to your application table. For more information, see Provide access to contract request fields in condition builders

Role required: sn_cm_core.contract_config

About this task

To add data to the contract documents, you have to map request table fields to repository fields.

Note:

Third party contracts already have a default contract configuration in the base system.

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Configuration**.
2. Select **New**.
3. On the Contract Configuration form, fill in the fields.
   For more information, see Contract Configuration form.
4. Select **Save**.
5. In the Contract Repository Mappings related list, select **New**.
6. In the **Mapping type**, select the type of mapping you want to do.
   The fields on the form change depending on the selection.
7. Select **Submit** to save the repository mapping.
8. Select **Update** to save the contract configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable keyword search for contract templates

Enable keyword search in contract templates.

Before you begin

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **System Definition** > **Text Index Configuration**.
2. From the list, select the record with the table value **Word Template [sn_doc_word_template]**.
3. Select **Generate Text Index** from the Related Links
4. Select **Ok** in the Generate Text Index dialog box.

Result

The table will be indexed. For more information on how to search for a keyword in a contract template, see Search for keywords in contract templates

Configure dynamic clauses for contract templates

Enable dynamic customized content in contract templates through clauses that contain clause variations for preset conditions.

A clause is a collection of clause variations, which contain a block of content. For example, say only one section in a Non-disclosure Agreement contract document needs to be changed based on the geographic region of the signing legal entity. You would create multiple document templates with the identical content with the only difference being location-related content. You could then use the condition-based clause variations to create only one contract template that can generate documents for different locations.

Clauses are stored in a clause library, from which you can insert them in contract templates. You can create and add clause variations while creating a contract template or add them later.

Benefits of clause variations

The benefits of using clause variations in document templates are:

- Efficient use of a single contract template to produce contracts with different customized details.
- Inclusion of a single clause variation in multiple contract templates.
- Ability to define conditions and set the priority of execution so an appropriate content variation is picked up dynamically in the generated document.

Related information

- Create or edit a contract clause
- Create a clause variation
- Add metadata to a clause using add-in

Create or edit a contract clause

As a contract configurator, create or modify clauses that manage clause variations that are mapped to contract templates.

Before you begin

Role required: sn_cm_core.contract_config

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Contracts Core** > **Contracts Administration** > **Clause Management**.
2. Choose whether you are creating a new clause or modifying an existing clause.
   - To create a clause, select **New**.
   - To modify an existing clause, open a clause from the list.
3. On the form, fill in the fields.

Clause New Record form

Field	Description
Number	This field is automatically populated with a unique number.
Name	Unique name for the clause.
Contract Type	Type of contract for which you want to associate the clause. **Note:** Only active contract types are displayed in the list.
Table	Table to which you want to associate the clause. Example: If you select Legal Contract Request table, only templates connected to that table can see the clause.
Description	Information about the clause.
Application	Application to which the clause belongs. This field is automatically set to the application scope in which you're creating the clause.
Active	Option to make the clause active and available for use. **Note:** While editing an existing clause, you can't set the clause as inactive if an active clause variation is present.

4. Right-click in the form header and select **Save**.
   The clause is saved and the related lists for Clause variations and Templates appear.
5. Save the clause.
   - To save a new clause, select **Submit**.
   - To save the changes to an existing clause, select **Update**.

What to do next

Create clause variations to use them in the document template for a predefined condition. For more information, see Create a clause variation.

Create a clause variation

As a contract configurator, create a clause variation to use in a contract template for predefined condition.

Before you begin

Role required: sn_cm_core.contract_config

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

If you want the variables related to contract request to be available in condition builder, add the contract request reference to your application table. For more information, see Provide access to contract request fields in condition builders

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Clause Management**.
2. Select a clause.
3. In the **Clause Variations** related list, select **New**.
4. On the form, fill in the fields.
   For more information on fields, see Clause Variation form.
5. Right-click in the form header and select **Save**.
   - The Clause Variation Fields related list appears.
   - The imported document is parsed, and the content controls of type Field are extracted and displayed in the Clause Variation Fields related list.
   - If you are editing a clause variation that is associated with a published contract template and have imported a document that has additional content controls, the unmapped content controls will be listed under the Unmapped metadata related list
6. In the Clause Variation Fields related list, select a clause variation field.
7. On the form, view the following details.

Clause Variation Field form

Field	Description
Clause Variation	This field is automatically set to the clause variation name.
Document field title	Tile of the content control.
Document field tag	Tag of the content control.
Read Only	Option to prevent this field from being edited.

8. In the Clause Variation Field form, save the meta data by selecting **Update**.
9. In the Clause Variation form, save the clause variation by selecting **Update**.

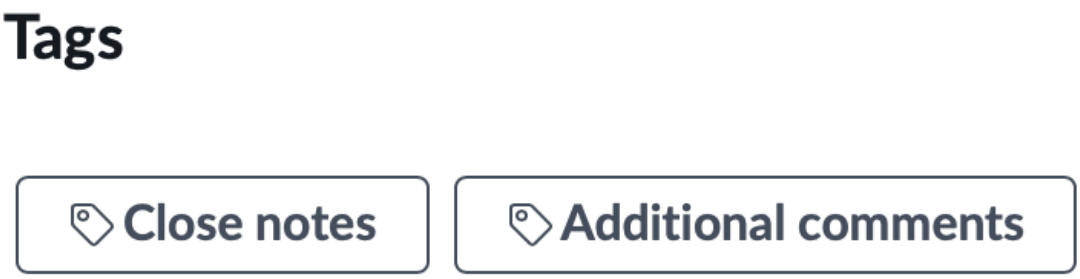
Add metadata to a clause using add-in

As a contract configurator, add metadata to pre-fill information that will be placed in the contract document.

Before you begin

Ensure you have configured the Word add-in. For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

Role required: sn_cm_core.contract_config and canvas_user



Procedure

1. Open a document where you want to mark the content controls in Microsoft Word.
2. From the Microsoft Word ribbon, select ServiceNow Contracts add-in.
   The add-in login screen is displayed.
3. Enter the credentials of the ServiceNow instance from where you downloaded the manifest file.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The add-in screen is displayed with Templates and Clauses tabs.

4. In the Clauses tab, select a clause.
   The clause variation details are displayed.
5. Select the clause variation for which you want to add metadata.
6. In the Microsoft Word, place the cursor at the location where you want to add the metadata.
7. Select **Create metadata mapping**.
   The create mapping form is displayed.
8. In the **Field name** field, enter unique name for the metadata.
9. Select **Create**.
   - The metadata is added and displayed as a tile with field name as the title.

   - The metadata is synced to the ServiceNow instance. You can view the meta data by logging to the ServiceNow instance and navigating to the **Field mapping** related list of a clause variation.
10. **Optional:** Add the created metadata to other locations in the document by clicking on the tag.
11. Upload the document into the ServiceNow instance.

    a. Select **Proceed to select a document**.

    b. In the Select Attachment screen, select **Attach file** and select the same file where you have marked the content controls.
    A confirmation message asking you to proceed with the upload will be shown if the file name of the document you are uploading and the one associated in the contract template are different.

    c. Select **Upload and parse document** to parse the content controls and add the data to the ServiceNow instance.

    The file will be uploaded. If the clause variation is mapped to multiple templates and the variation has metadata, the unmapped metadata is displayed and you must map them for each of the templates.

Configure document templates for standard letters or documents

Create Word Document Templates to create standard letters or documents that can be signed by configured participants.

Document template flow

Document templates can be used by business units other than Legal to generate standard documents. For example, you can use the Word Document Templates feature to generate a standard response template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following flow describes how you can use a Microsoft Word document template from configuring the template through attaching the signed Microsoft Word document to a case.

- Set Content controls in Word Document Templates.
- Configure a Microsoft Word document template.
- Create participants for document templates
- Insert signatures.
- Publish the Microsoft Word document template.
- Document tasks generation.
  - An internal ServiceNow user receives a document task for signing the Microsoft Word document. An external user receives the Microsoft Word document for signing via an email.
  - After all the document tasks are completed, the work notes are updated and the signed PDF document is added as an attachment to the case.

Content controls in Word Document Templates

Word Document Templates supports content controls that act as placeholder for the content.

Note:
You must add content controls in the Microsoft Word document before you Configure document templates for standard letters or documents. Content controls must be added using a Windows system only.

The following types of content controls are supported.

Content controls

Content control type	Description
Field_	This content control is used to indicate meta data.
Signature_	This content control is a placeholder for electronic signature.
Sign_Date_	This content control is used to indicate the date when the signer signs the document electronically.

While creating content control in the word document template, you can prefix the tag with the appropriate content control type. For example, if you want to include company name, you can specify as Field_CompanyName. The Locking settings can be set to prevent the content control from being deleted and edited.

For more information on how to work with content controls, refer to the Microsoft support site.

Configure a Microsoft Word document template

Upload a word document and add participants with whom you require signatures.

Before you begin

- Role required: sn_cm_core.contract_config
- Set content controls in a Microsoft Word document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Document Templates**.
2. Select **New**.
3. Select **Word Document Template**.
4. On the form, fill in the fields:

Word Template form

Field	Description
Name	Name of the word document template.
Table	Tables appear based on the application scope selected.
Category	Document category in which the template is added.
Application	Scope of the application in which the document template is created.
State	Current state of the document template. ○ **Draft**: Indicates that the document template is not yet published. ○ **Editing**: Indicates that the document template is being edited after it has been published. ○ **Published**: Indicates that the document template can be consumed by services and cases.
Active	Option for enabling the word document template for use.
User criteria	Audience criteria for this document. For example, you can create a letter intended for only Canadian employees. **Note:** When defining conditions like case sensitivity or null values, see API GlideFilter - Scoped, Global.
Signing type	Option to specify the application that is used for signing the document. ○ The default value is none. If none, then document will not be triggered for signature. If DocuSign or AdobeSign is selected, then document shall be triggered for electronic signature via cases. ○ You can change the signing type from None to DocuSign or Adobe Sign or vice versa, when the template is in Draft or editing state. **Note:** Signing types are available only when respective integration plugins are installed.
Document	Option to upload the attachment of a word (.docx) files only.
Template date format	Format in which you want the date to appear when an agent previews the document, generates the attachment, or initiates document tasks for participants.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: ○ When signing using a ServiceNow application or the AdobeSign application: If no value is selected in **Template date format**, the value specified in the **template_date_format** system property is considered. If both **Template date format** and **template_date_format** system property are empty, the value in the Date format field from the agent's user profile is considered. ○ When signing using a DocuSign application: The date format selected in Signing settings in the DocuSign application is considered over **Template date format** in the configured word template in a ServiceNow instance.
Template language	Language in which you want dynamic tokens to be translated when an agent previews the document, generates the attachment, or initiates document tasks for participants. **Note:** ○ Template language is a mandatory field. The default language is none. ○ Translation feature is available only when language plugins are installed on the ServiceNow instance.
Source template	Source template from which you created a copy of the current template.
Start date	Date on which the Word document template becomes valid. Providing a start date helps when maintaining multiple versions of same template.
End date	Date until which the Word document template is valid. Providing an end date helps when maintaining multiple versions of same template. If the values in the **Start date** and **End date** fields are empty the template will always be valid. **Note:** If you specify an end date, you must also specify a start date.

5. Select **Submit**.

What to do next

1. To add participants with whom you must obtain signatures, see Create participants for document templates.
2. To create template mappings, click **Parse Word Document**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. To insert signatures, open a **Signature_** record in the **Template mappings** related list.
   a. In **Document field type**, specify Signature.
   b. In the **Participant** field, specify the participant with whom you require the signature.
   c. Click **Update**.
   Similarly, update the following records.
   - Sign
   - Sign date
   - field
   - Signatory name
   - Signatory email
   - Signatory title

   For a full list, see Content controls in Word Document Templates
4. Select **Publish**.

Create participants for document templates

Define actions and the order of actions for participants. The type of action and order are considered while initiating document tasks.

Before you begin

- You need to define participants only when you want to use the document template flow. If you only want to generate a PDF document, defining participants is not mandatory.
- This content applies only to the document templates that are created in the Document Templates application (sn_doc). Document Templates is different from HR Document Templates. For HR Document Templates, refer to HR document templates.
- Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Document Template** > **All Document Templates**.
2. Select the template you want to use.
3. Configure the required template and click **Submit**.
4. In the **Participants** related list, click **New**.
5. On the form, fill in the fields:

   For description on the field values, see Participant form for Microsoft Word document templates.
6. Click **Submit**.

Result

The participant is added to the document template.

Participant form for Microsoft Word document templates

Use the Participant form to add participants in a Microsoft Word document template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Participant form

Field	Description
Name	Unique display name of the mapped participant.
Action	Type of action to be performed by the participant such as **Fill**, **Sign**, or **Review**. **Important:** In case of ServiceNow signing, **Fill** and **Review** actions are available for a PDF template. In case of external signing, **Sign** action is available for PDF and word document templates.
Order	Order in which a task has to be initiated for the participant to complete the action.
User	Mapping user field to a participant. **Note:** • When you select a value, the participant is considered to be an internal user. If Participant Name and Participant Email fields (optional for internal user) are filled along with User field, the electronic signature task will be sent to Participant Name and Participant Email, not the Name and Email from the User field. When you do not select a value in the User field, the participant will be considered an external user (Participant who does not have access to ServiceNow system). For such participants, Participant Name, Participant Email are to be specified. • The value in the User field is cleared when you save or update the template with the Advanced script field selected.
Participant name	Option to specify the name when the defined participant is an external user. **Note:** • When you select a value in User field, the Participant name field will be an optional field. When you do not select a value in User field, the Participant name field will be a mandatory field. • The value in the Participant name field is cleared when you save or update the template with the Advanced script field selected. • This field is available only when signing type is AdobeSign or DocuSign.
Participant email	Option to specify an email address when the defined participant is an external user. **Note:** • When you select a value in the User field, the Participant email field will be an optional field. When you do not select a value in User field, Participant email field will be a mandatory field. • The value in the Participant email field is cleared when you save or update the template with the Advanced script field selected. • This field is available only when signing type is AdobeSign or DocuSign.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Participant form (continued)

Field	Description
Table	Table (sys_user table or any table extending sys_user table) from which you are choosing to populate the variables.
Document template	Name of the document template.
Document task template	Template selected on the Document Template task table to populate additional details for the document task, such as description and short description for fill, sign and review tasks. **Note:** If additional details are not defined, the default values of the template are used in the document template task.
Due date source	Due date for the document task that is created for that participant.
Date offset type	Due date for the document task is picked from the task record. Additionally, you can offset the due date by days, weeks or months.
Advanced script	Option to display the Script field.
Script	Script indicating the participant conditions with User ID, Participant name and Participant email. This field is enabled only when the Advanced script field is selected.
Optional	When enabled, a participant will be skipped if the participant user and participant email is not available. This check is done during runtime only and not while configuring the template.

Add and configure contract request functionality

As contract administrator, add Contract Management Pro functionality application.

Add functionality to enable contract requests in Contract Management Pro.

Add a workspace action button for initiating a contract request

Define an action button in your workspace and map it to the built-in action that initiates a contract request.

Before you begin

Role required: admin

Procedure

1. Add initiate contract request functionality to your workspace.

   a. Navigate to **All** > **Now Experience Framework** > **Declarative Actions** > **Form Actions**
   For more information, see Customizing Configurable Workspace with declarative actions

   b. Select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Set the action to the type UXF client action and map the action to the initiate contract request functionality and by entering the following field values.

Initiate contract request fields

Field	Value
Implemented as	UFX Client Action
Specify client action	Initiate contract

d. On the form, fill in the other fields.

For details, see Action assignment form

e. Right-click the form header and select **Save**.

2. Create an event mapping for the initiate contract declarative action.

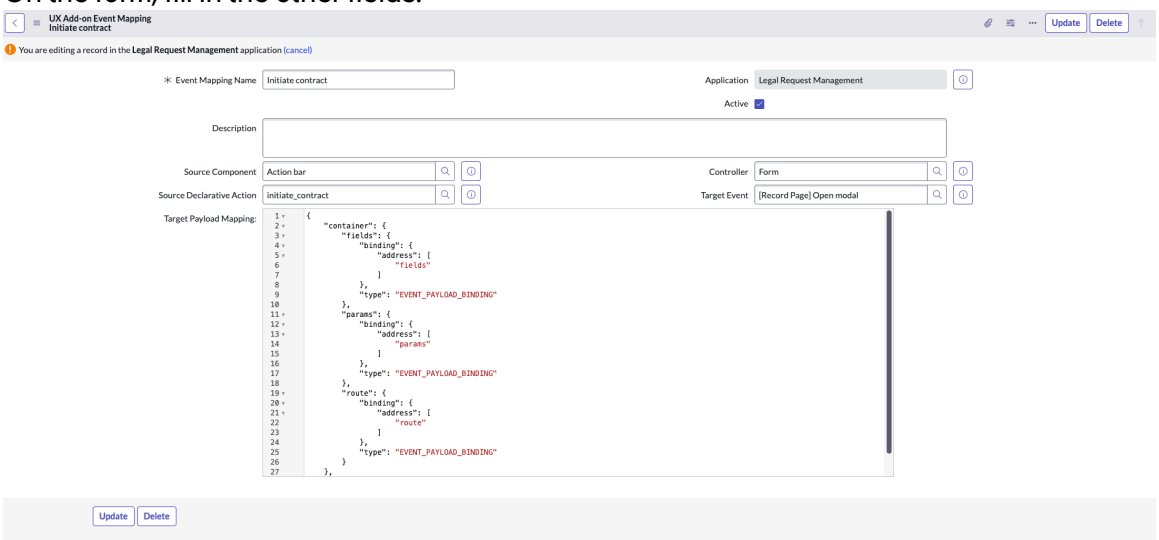
a. Select **Advanced view** listed under Related Links.

b. Select to the UX Add-on Event Mappings related list.

c. Select **New**.

d. In the Source Declarative Action field, select initiate_contract.

e. In the Target Event field, select [Record Page] Open modal.



f. In the **Target Payload Mapping** field, define the fields to send by pasting the following JSON code.

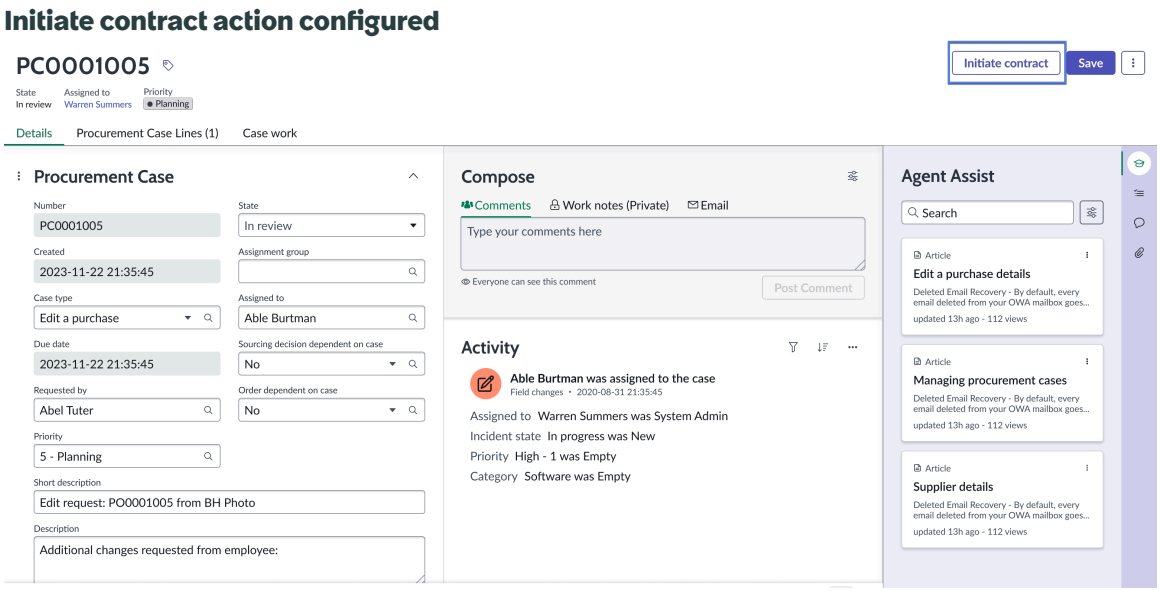
```
{
    "container": {
        "fields": {
            "binding": {
                "address": [
                    "fields"
                ]
            },
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
            "type": "EVENT_PAYLOAD_BINDING"
        },
        "params": {
            "binding": {
                "address": [
                    "params"
                ]
            },
            "type": "EVENT_PAYLOAD_BINDING"
        },
        "route": {
            "binding": {
                "address": [
                    "route"
                ]
            },
            "type": "EVENT_PAYLOAD_BINDING"
        }
    },
    "type": "MAP_CONTAINER"
}
```

g. On the form, fill in the other fields.

For a description of the field values, see UFX Add on Event mapping form.



h. Select **Submit**.

3. **Optional:** Configure visibility conditions for initiate contract action button.
   a. Select **Advanced view** listed under Related Links.
   b. Select to the Conditions related list.
   c. Set the conditions for the visibility of the action button.

Result

An action button to initiate contract requests from a contract record is available in your workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add access to contract request details to a form

As an administrator, add the ability to access contract request details to your form by adding the Contract Request tab.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Tables**
2. Select the table with which the form is associated.
3. Right-click the context menu icon and select **Configure** > **Related Lists**.
4. Determine the view that should include the Contract Request tab.
   - To add the Contract Request tab to the ServiceNow AI Platform form, select **Default view**.
   - To add the Contract Request tab to the Agent Workspace form, select **Workspace**.
5. Add access to contract request details by moving **Contract Request** from the Available list to the Selected list.
6. Select **Save**.
7. Select **Update**.

What to do next

Display the contract documents in the contract request form by adding the contract documents tab to it. For more information, see Display contract documents in the contract request form.

Display contract documents in the contract request form

As an administrator, display contract documents in the contract request form by adding the Contract Document tab to it.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Definition** > **Tables**
2. Select the table configured as a contract repository.
   For more information, see Create a contract configuration.
3. Right-click the context menu icon and select **Configure** > **Related Lists**.
4. Enable display of contract documents by moving **Contract documents** from the Available list to the Selected list.
5. Select **Save**.

Enable the display of contract request details

As an administrator, enable the display of contract request details in the contract request form by adding related fields to display on the form.

Before you begin
Role required: admin

About this task
Display the contract request fields and its values, add the following form headers available in the base system.

Procedure

1. Navigate to **All** > **Now Experience Framework** > **Configuration Settings** > **UX Form Header**.
2. Add UX Form Headers to the contract form by searching for and selecting the related table in the **Table** field.
3. Select the **UX Header Configurations** tab.
4. Select **Edit**.
5. Select your workspace from the Available menu and move it to the Selected menu.
6. Select **Save**.

Group contract documents by contract type in the contract request form

As an administrator, group the contract documents by contract type in the contract request form.

Before you begin
Role required: admin

About this task

Note:
In Legal Counsel Center and Contract Workspace, the contract documents are grouped based on the contract type, by default.

Customize the Standard Record Page (SRP) to display contract documents grouped by contract type in the Contract document tab through UI Builder, a web user interface builder. For more information, see UI Builder.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Now Experience Framework** > **UI Builder**.
2. Search and select your workspace.
3. Navigate to **Record** > **SRP record**.
4. In the Page content list, under **Body** > **Resizable panes** > **left** > **Main Tab** > **Related List**, select **list related**.
5. Define the grouping by selecting the **Config** tab and under the **Default display** section, enter the following code in the **Group by** field:

```
function evaluateProperty({api, helpers}) {
  var isContractRequestForm = api.item.value.parentTable
 =="sn_cm_core_contract_request";
  var isContractRevisionTab = api.item.value.table ==
 "sn_cm_core_document_revision";
  if( isContractRequestForm && isContractRevisionTab){
    return 'document';
  }
return '';
}
```

Note:
If the field is not editable, select the scope applicable to your workspace in the **Select an application** drop-down list at the top of the page.

6. Select **Apply**.

Provide permissions to configure default contract document information

As an administrator, enable a contract user to configure information placed in the contract document by assigning a contract configurator role.

Before you begin
Role required: admin

About this task
Template mappings automatically insert default information in the contract document. To configure template mappings, the contract user requires a contracts configurator (sn_cm_core.contract_config) role.

Procedure

1. Navigate to **All** > **User Administration** > **Users**.
2. Search for and select the user.
3. In the Roles related list, select **Edit**.
4. Move the sn_cm_core.contract_config role from the Available list to the Selected list.
5. Select **Save**.
6. Save the user record by selecting **Update**.

Provide access to contract request fields in condition builders

As an administrator, provide access to contract request fields so they can be selected in condition builders.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Tables**
2. Select the application table whose variables should be used in condition builders.
3. Add the contract request as a reference field to the table.
   a. Select the **Columns** tab and select **New**.
   b. In the **Type** field, select the Lookup using list icon ( ) and search for `Reference` and select it.
   c. Select **Reference Specification** tab.
   d. In the **Reference** field, select the Contract Request [sn_cm_core_contract_request] table.
   e. On the Dictionary entry form, fill in the fields.
   For more information, see Dictionary entry form .
   f. Select **Submit**.
4. Select **Update**.

Add access to obligation management from contract repository records

As an administrator, add the Obligations tab in contract repository records to manage contract obligations.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Contract** > **Contracts** > **All**.
2. Select a contract record.
3. Right-click the context menu icon and select **Configure** > **Related Lists**.
4. In the **View** list, select the workspace view that should include the Obligations tab.
5. Add access to obligation management by moving **Obligation** from the Available list to the Selected list.
6. Select **Save**.
7. Select **Update**.

Result
The Obligations tab will appear in contract repository records.

For more information on roles required to work on obligation management, see Components installed with Contract Management Pro.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configuring Contract Workspace with UI Builder components

Configure and customize Contract Workspace by using the UI Builder web user interface builder.

Configuration overview

For more information about this application, see UI Builder.

Access UI Builder to customize the Contract Workspace by navigating to **All** > **UI Builder**, and then selecting **Contract Workspace**.

For more information, see Working in UI Builder and Configuring Configurable Workspace.

Activate Contract Workspace

You can activate the Contract Workspace plugin (sn_cm_workspace) for Contract Management Pro if you have the admin role.

Before you begin

Review the Contract Workspace application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

Two roles are installed with the Contract Workspace plugin.

For more information, see Components installed with Contract Workspace.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Contract Workspace plugin (sn_cm_workspace) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Configure AI search for Contract Workspace

Get improved search results in Contract Workspace by configuring the ServiceNow® AI Search application to work with it.

Before you begin

Role required: admin

About this task

With the AI Search engine in Contract Workspace, you can search with keywords related to contract requests and find the most relevant search results.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you are a new customer, the AI Search application is configured with your base system.

If you are an existing customer, you have to configure Contract Workspace to use the AI Search application.

For more information on the AI Search application, and how to use most effectively use it, see AI Search. For information about how to associate the AI Search application with Contract Workspace, see Create a search application configuration for AI Search.

Procedure

1. Navigate to **All** > **Now Experience Framework** > **UI Builder**.
2. In the Experiences section, select **Contract Workspace**.
3. Select **Settings**.
4. In the Global search section, in the **Search source** drop-down list, select **Contract Workspace AI Search**.
5. Select **Save**.
6. Navigate to **All** > **AI Search** > **AI Search Index** > **Indexed Sources**.
7. In the AI Search Index Sources page, select **Contract Request** and **Contract Repository**.
8. Index tables to improve the performance and accuracy of search results by selecting **Index All Tables** from the Actions for selected rows drop-down list.

Result

AI Search is configured for Contract Workspace.

Configure Obligation Management notifications

Activate Obligation Management notifications to notify users when an obligation task is created, assigned, submitted, approved, or rejected.

About this task

The Approval Request and Approval Rejected, notifications are triggered when an obligation task is submitted for approval and the obligation task is approved or rejected.

To avoid duplicate notifications for an event, the following notifications are not activated by default:

- Obligation task submitted
- Obligation task approved
- Obligation task rejected

You can activate the notifications specific to obligation tasks and then set up a condition to stop the default system notifications.

For more information about obligation-related notifications, see Obligation Management notifications.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Notification** > **Email** > **Notifications**.
2. In the **Name** column, search for `Obligation`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the obligation notification that you want to activate.
4. On the Notification form, select the **Active** check box.
5. Select **Update**.
6. **Optional:** Ensure that default notifications will not be triggered for any events related to obligation tasks.

   a. Navigate to **All** > **System Notification** > **Email** > **Notifications**.

   b. Search for the default notifications that are triggered when an obligation task is submitted for approval and the obligation task is approved or rejected.
   The default notifications are *`Approval Request`* and *`Approval Rejected`*.

   c. Select the notification.

   d. Select the **When to send** tab.

   e. In the **Conditions** field, set the following condition to ensure that the selected notification will not be triggered for any events related to obligations tasks: **[Source table] [is not] [sn_cm_obligation_obligation_task]**.

Result
The obligation task-specific notifications are activated and the default system notifications are stopped for obligation events.

Use Contract Management Pro

Use Contract Management Pro to initiate contract request for self served and non-self served contracts.

Contract Workspace

As a contract fulfiller, you can work with the actionable widgets on Contract Workspace to categorize, prioritize, and efficiently work on contract requests.

The Contract Workspace homepage provides information on open contract requests, document revisions pending approval, and contracts due to expire. Selecting a widget to displays the related list of contract requests on a separate page. For Donut widgets, you can use the **Group by** filter to view the contract requests by state, status, or type of paper.

Widgets on Contract Workspace

Name	Type	Description
Unassigned	Score 	Number of contract requests that are unassigned.
Assigned to me	Donut 	Number of contract requests assigned to you.
My Collaborations	Donut	Number of contract requests to which you have been added as a collaborator.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widgets on Contract Workspace (continued)

Name	Type	Description
		
Pending approvals	Score 	Number of contract requests assigned to you for approving a contract document revision that are pending.
Contracts due for expiry	Bar 	Number of expiring contracts that you have executed. The contracts are grouped by the number of days before the contract expires.

The Contract Workspace is built through the configurable UI Builder application. For more information, see UI Builder.

Access to the Contract Workspace requires activation of the Contract Workspace plugin. For more information, see Activate Contract Workspace.

Contract Workspace benefits

The Contract Workspace enables contract fulfillers to more efficiently handle contract requests.

Benefits of Contract Workspace features

Benefit	Feature
Overview of open contract requests, pending document revision approvals, and contracts that due to expire.	User action widgets
Ability to view only the open contract requests that require your immediate attention.	Filtering capabilities
More relevant search results with the advanced ServiceNow® AI Search engine.	AI Search

Initiating a contract request

As a case owner or fulfiller, initiate a self-served or non-self-served contract for the case you are working on.

Initiate a self-served contract request

As a case owner or fulfiller, initiate a self-served contract for the case you are working on. Self-served contracts are submitted when you want own paper based contract documents to be sent for review.

Before you begin

Before initiating a self-serve contract request, ensure you have created contract types and templates for them. For more information, see Create a contract type and Configure contract templates for a contract request.

Ensure that the initiate contract button has been added to your workspace. For more information, see Add a workspace action button for initiating a contract request.

Role required: sn_cm_core.contract_user or sn_cm_core.contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to your workspace.
2. Open the case for which you want to initiate a contract.
3. Select **Initiate contract**.
4. In the **Type of paper** drop-down list, select **Own paper**.
5. In the **Contract type** drop-down list, select the type of contract you want to generate.

   Note:
   Only active contract types are displayed in the list.

6. In the **Signature type** drop-down list, select the signature type for the contract document.
7. In the **Start date** field, specify the contract start date.
8. In the **End date** field, specify the contract end date.
   The End date should be later than the Start date.
9. Select **Initiate**.
   If you do not have an active contract template for the selected contract type, an error is displayed.

Result

A contract request is initiated and opens on a new tab displaying the contract request details.

If there are validation errors, the contract request is created in **Draft** state. If there are no validation errors, the contract request is created in **Work in progress** state.

On the Contract request form, you can assign the contract request, add collaborators, add users to the watch list, change the signature type, and also update the start date and end date.

What to do next

The next steps depend on whether there were validation errors:

- If there were validation errors, complete the signatory details and resubmit the contract request. For more information, see Resolve the failure to submit a self-serve contract.
- If there were no validation errors, you can proceed to work on the contract request. For more information see, Work on a self-served contract request and Work on a self-served contract request.

Initiate a non-self-served contract request

As a case owner or fulfiller, initiate the submission of contracts when you want third-party based contract documents to be sent for review.

About this task

The initiated contract is assigned according to an assignment rule or manually by a contract fulfiller or a group manager. The contract administrator can modify the assignment rule to specify the group to which the contract request should be assigned.

Before you begin

Ensure that the initiate contract button has been added to your workspace. For more information, see Add a workspace action button for initiating a contract request.

Role required: sn_cm_core.contract_user, sn_cm_core.contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to your workspace.
2. Open the case for which you want to initiate a contract.
3. Select **Initiate contract**.
4. In the **Type of paper** drop-down list, select **Third-party paper**.
5. In the **Signature type** drop-down list, select the signature type for the contract document.
6. In the **Start date** field, specify the contract start date.
7. In the **End date** field, specify the contract end date.
   The End date should be later than the Start date.
8. Select **Initiate**.

Result

A contract request is initiated and opens in a new tab displaying the contract request details.

If there are validation errors, the contract request is created in the Draft state. If there are no validation errors, the contract request is created in the Work in progress state.

Contract request form

Field	Values
State	A contract request is created in Draft state.
Contract Status	The contract status is set to Draft.
Parent	Parent request that initiated the contract request.
Requested for	User who was assigned the parent request.
Opened by	User who initiates the contract request.
Assignment group	User group assigned according to the assignment rule.
Signature type	Type of signature. • Electronic signature: The signatory electronically signs the contract. • Wet signature: The signatory manually signs the physical version of the contract. The default signature type is Electronic Signature.

What to do next

Add contract documents and submit the contract request. For more information, see Add contract documents to non-self-served contract request.

View and track contract request details

As a contract user or contract administrator, view the details and track the activities of the contract request.

Before you begin

Role required: sn_cm_core.contract_user, sn_cm_core.contract_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. View the details of the contract request.
   - Review the request details by accessing the **Details** tab.
   - State displays the state of the contract request.
   - Contract status displays the status of the contract document.
   - Review the contract document by accessing the **Contract Documents** tab.
     - If the request uses internal storage for attachments, access the document by selecting it.
     - If the request uses external storage, access the document by selecting the link.
   - View the list of supporting documents by accessing the **Supporting Documents** tab. This related list is available only for non-self-served contract request.
   - View a list of signatories and their details by accessing the **Signatories** tab.
   - View the final contract document by accessing the **Contract Repository** tab. When multiple contract documents are attached in non-self-served contract request, a separate record is created for each contract type.
   - View the access levels to documents for various personas by accessing the **Document Access** tab.
4. Track the request's activities and post messages for the fulfiller working on it by accessing the **Activity** tab.

Assign a contract request

As a contract fulfiller or contract administrator, assign a contract request to yourself or to someone in your assignment group.

Before you begin

Role required: sn_cm_core.contract_fulfiller, sn_cm_core.contract_admin

About this task

When a contract user submits a request, it is automatically assigned to a group or user as per the default assignment rule. If the request is assigned to a contract support group, any member from the group can assign the contract request to themselves or assign it to another member of the group.

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. In the list of unassigned requests, open a request by clicking the request number.
4. Assign the request to yourself or to another member from the assigned group.
   - To assign the request to yourself, click **Assign to me**.
   - To assign the request to another member, on the **Details** tab, select a user in the **Assigned to** field and click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use a self-served contract request

Submit contract requests that generate contract documents by using a predefined contract template and template rules.

Features

- Contract templates with the metadata, clauses, tables, and create business rules for selecting the most relevant template for a request.
- Contract templates in Microsoft Word format enable easier contract review and editing for the contract fulfiller.
- Electronic signature integrations with Adobe Acrobat Sign and Docusign.
- Wet signature support for manual signing.
- External storage integrations with Google Drive and Microsoft OneDrive for storing signed contract documents.
- Centralized contracts repository containing the metadata of signed contract documents.
- System property to generate a certification of completion for an electronically signed contract.

Self-served contracts workflow

When a requester submits a self-served contract request, a contract document is created using a standard contract template based on the information from the request. The information from the request is inserted at the appropriate places in the template.

If needed, requesters can request specific changes in the generated contract document. The fulfiller can manage and process these requested changes to make necessary revisions to the contract document from a centralized location. Because contract documents are in Microsoft Word format, reviewing, editing, and finalizing the contract documents is easier than for documents in PDF or HTML format.

If the generated contract document doesn't require any changes, the requester can send it to the signatories for an electronic signature. After all signatories have signed the contract document, it is stored on the ServiceNow instance or an external storage system based on the configuration. The requester and contracts department members can access the signed contract document from the contracts repository.

A workflow for a self-served contract request might progress as shown in this process:

1. The Contract requester initiates a contract request. For more information, see Initiating a contract request.
   - If there are no validation errors, a contract request is created in the Work in progress state.
   - If there are any signatory validation errors, the contract requester resolves them and resubmits the contract request.
2. A contract document is generated from a contract template and the metadata, clauses, signatories, and tables are added dynamically according to predefined conditions.
3. The contract requester edits the requests for any changes and creates a version of the contract document by using the **Regenerate** or **Sync document** option.
4. The contract requester views the contract document and does one of the following actions:
   a. If no changes are required, the document is sent for signature.
   b. If any changes are required, the contract requester submits a change request.
5. Based on the change request, the contract fulfiller can take the following actions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Initiates an internal review process:

i. The contract fulfiller submits a review task for an internal review.

> **Note:**
> The contract fulfiller can create parallel review tasks for the same contract document for different reviewer groups. However, the contract fulfiller can't create a review task for the same document with the same reviewer group if another active task exists.

ii. A contract reviewer group manager can assign the review task, or a contract reviewer can self-assign it.

iii. The assigned contract reviewer starts working on the contract document.

iv. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.

v. If a request for more information was submitted, the contract fulfiller shares the information.

vi. The contract reviewer reviews the document, accepts or rejects redlines, proposes edits, and adds comments.

vii. The contract reviewer completes the review and shares the updated contract document if available.

viii. The contract fulfiller receives the updated document and makes the necessary changes based on the feedback:

- For internal storage: If any changes are required, a new document version is created after finalizing the document.
- For external storage: Reviewers collaborate on the contract document revision online in real time. After the review is complete, the fulfiller can finalize the contract document that is available online or create an offline version with the changes.

b. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created.

c. After the document is finalized, the fulfiller sends the document to the requester.

6. The contract requester previews the generated contract and, if no changes are required, sends it to the signatories. If changes are required, the review and revision process continues.
7. If external storage is configured, contract documents are stored in it. Otherwise, they’re stored in the ServiceNow instance.
8. If any signatory declines the document, it’s sent back to the requester to be reworked and the revision is sent for signature.
9. The signed contract is attached to the contract request record.
10. The signed contract is stored on the ServiceNow instance or an external storage system and referenced in the contract repository. The requester and department members can access the signed contract document from the Contracts repository.

> **Note:**

The contract requester can cancel a contract request when the state is in Draft, New, Awaiting Approval, Awaiting signature, or Work in progress.

Work on a self-served contract request

Review and finalize a contract document according to the contract request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_cnt.contract_fulfiller

About this task
A self-served contract request can be worked on by a contract user. However a contract fulfiller can get assigned to the request by an assignment rule or by a group manager. A contract fulfiller can work on the contract request but can also initiate ad-hoc approvals and create revisions manually, whereas a contract user can't initiate ad-hoc approvals or create revisions manually.

Procedure
1. Navigate to your workspace.
2. Open the contract request that is assigned to you or if you're a collaborator on the contract request.
3. Work on the contract request.

Add signatories in self-served contract request

Add signatories in self-served contract requests when the contract is generated from a template configured with signature blocks.

Before you begin
Role required: sn_cm_core.contract_fulfiller or sn_cm_core.contract_user

Procedure
1. Navigate to your workspace.
2. Open the contract request that is assigned to you or for which you’re a collaborator.
3. In the **Signatories** tab, select **Add**.
4. On the Add Signatory form, indicate whether you are configuring an internal or external signatory by selecting **Internal** or **External**.
5. Configure the signatories.

Create an updated contract document revision after modifying a self-served contract request (Contract Management Pro 1.2.1)

When a contract request is modified, sync the contract document for self-served requests to create a new revision of the document with updated metadata and signatories while retaining the changes made in the previous version of the contact document.

About this task

Note:
The **Sync document** option is available starting with Contract Management Pro version 1.2.1.

You can sync a contract document only when the contract request is in the Work in progress state.

Note:
Tables aren’t updated when you use the **Sync document** option. You must regenerate the document to update the tables. For more information, see Regenerate contract document after modifying request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_cm_core.contract_fulfiller or sn_cm_core.contract_user

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. Select the **Contracts documents** tab.
4. Select **Sync document**.

Result
A new contract document revision is created with the updated metadata and signatories. The changes made in the previous revision are retained.

Regenerate contract document after modifying request

As a contract user or contract fulfiller, regenerate the contract document for self-served requests when the parent request has been modified.

About this task
When the parent request is modified, you can use the **Regenerate** option to generate a new contract document from the contract template with the latest metadata, signatories, and tables. You can regenerate a contract document only when the State is Draft or Work in progress.

Any changes made to the signatory information in the contract request will be overwritten by the signatory information from the contract template. If the signatory information is incomplete or inconsistent after regeneration, you can manually update the signatories. For more information, see Updating and synchronizing signatories.

Before you begin
Role required: sn_cm_core.contract_fulfiller or sn_cm_core.contract_user

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. Select the More Actions icon () and select **Regenerate**.

Result
The results of the regeneration depends on the initial state of the document:

- Draft: Replaces the existing contract document revision.
- Work in progress: Creates a new contract document revision. Any changes made in the previous revision are discarded.

Note that although contract fulfillers can see all contract document revisions, a contract user can see only the latest revision.

Updating and synchronizing signatories

As a contract user or fulfiller, update and sync signatory details when the contract submission has failed, or contract document cannot be sent due to incomplete signatory information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you are using Contract Management Pro version 1.2.1 and the document is stored on your ServiceNow instance, signatories are automatically updated when you send the document for signature or resubmit the contract request.

Resolve the failure to send contract documents for signature (starting with Contract Management Pro 1.2.1)

Update signatory details in an external contract document in Contract Management Pro when there is a failure in sending the document for signature due to a mismatch between the signatory information in the contract request and the contract document.

Before you begin
Role required: sn_cm_core.contract_user, sn_cm_core.contract_fulfiller

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. Select the **Signatories** tab.
4. Select the signatory.
5. Update the signatory information.
6. Select **Save**.
7. Select the **Contracts documents** tab.
8. Select **Sync document**.
   A new contract document revision is created with the updated signatory information.
9. Select **Save** to save the contract request.
10. Select **Send for signature**.
    A message appears displaying details of the contract document that is sent for signature.
11. Select **Send for signature** on the confirmation message.

Resolve the failure to submit a self-serve contract

As a contract user, resubmit a contract request that was not submitted due to incomplete signatory information by updating and syncing signatory information.

Before you begin
Role required: sn_cm_core.contract_user

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. Review the information in the **Activity** stream to find the validation error.
4. Select the **Signatories** tab.
5. Select the signatory and update the information.
6. Select **Save** to save the signatory details.
7. Select the **Signatories** tab.
8. Select **Sync signatories**.
   The contract document is updated with the new signatory details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Select **Save**.
10. Select **Resubmit**.

Result
The contract request is resubmitted and the state changes from Draft to Work in progress.

Resolve an error during send for signature

As a contract user or fulfiller, update and synchronize signatory details when send for signature fails due to a mismatch between signatory information in the contract request and contract document.

Before you begin
Role required: sn_cm_core.contract_user, sn_cm_core.contract_fulfiller

Procedure
1. Navigate to your workspace.
2. Open the contract request.
3. Navigate to the **Activity** stream to find the validation error.
4. Select the **Signatories** tab.
5. Select the signatory and update the information.
6. Select **Save** to save the signatory details.
7. Select the **Signatories** tab.
8. Select **Sync signatories**.
   The contract document is updated with the new signatory details.
9. Select **Save**.
10. Select **Send for signature.**
    A message appears displaying details of the contract document that is sent for signature.
11. Select **Send for signature** on the confirmation message.

Result
A new contract document revision is created with the latest signatory details and sent for signature. The Activity stream displays details of the contract document that is sent for signature.

Reviewing and finalizing a self-serve contract document

Review and finalize the contract document generated after the self-serve contract request is submitted, then send it for signature.

After submitting a self-serve contract request, a contract document is generated based on the contract template and contract template rules. A workflow for reviewing and finalizing a self-serve contract document might progress as follows:

1. The contract user reviews the contract document.
   - If no changes are required, the contract user submits the document for signature.
   - If changes are necessary, the contract user submits a change request to the contract fulfiller and the process continues.
2. An email notification with the details of the change request is sent to the contract fulfiller.
3. The contract fulfiller updates the document and creates a document revision.
4. Contract fulfiller gets ad-hoc approval from the stakeholders.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Contract fulfiller sends the contract document back to the contract user.
6. An email notification is sent to the contract user that the document has been updated.
7. The contract document can shared with stakeholders and on finalizing can be sent for signature.
8. If additional changes are required, the contract user submits the change request again and this process continues until the document is acceptable and can be sent for signature.

Review a contract document in your workspace

As a contract user, review a contract document and submit a change request to the contract fulfiller if changes are required in the contract document.

Before you begin

Role required: sn_cm_core.contract_user

About this task

- Change requests can be submitted only by users who have initiated the contract request or for whom it was initiated.
- The Contract state in the request is Work in progress.
- The **Request changes** option isn't available if a previously submitted change request isn't completed.

Procedure

1. Open the contract request from the workspace that you're using.
2. Select the **Contract documents** tab.
3. Access the contract document.
4. Review the contract document.

Work on a contract change request

As a contract fulfiller, review the change request, update the contract document, and send it back to the contract user.

Before you begin

Role required: sn_cm_core.contract_fulfiller

Procedure

1. Navigate to your workspace.
2. Select the contract request for which the change request has been submitted.
   The details of the change request are included in the **Activity** stream and the notification email.
3. If the contract request is not already assigned to you, select **Assign to me**.
4. Select **Start work** to work on the change request.
5. Select the Contract documents tab.
6. Access and edit the contract document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. If you have downloaded the document from the storage, upload the updated contract document by creating a revision.

   a. Select **Create revision**.

   b. In the Create revision from drop-down list, select a storage type and upload the new document.

      - **In the workspace**: Select **Attach File** and upload the document.
      - **Activity stream**: In the **Document** field, select the document that is displayed based on attachments in the activity stream.

        The documents attached while requesting changes for a contract and the documents received through inbound emails are available in the Activity stream.

      - **External Storage**- In the Document field, select the document. This option is displayed only if external storage is configured

8. **Optional:** Get approval of the updated document from stakeholders.
   For more information, see Initiate an ad hoc approval for a contract document revision.
9. Return the contract document to the requester.

   a. Select **Send document**.

   b. Select **Send document** on the confirmation screen.

Result

The document is sent back to the user and the Contract status updates to Document ready to indicate that the contract document has addressed the change request.

Send a contract document for signature

After a contract document has been reviewed and finalized, send the document for signature.

Before you begin

The contract document must have been reviewed and finalized, and the contract status must be set to Document ready. For more information, see Review a contract document in your workspace and Work on a contract change request.

Role required: sn_cm_core.contract_user

Procedure

1. Navigate to your workspace.
2. Select a contract request.
3. Select the **Contract documents** tab.
4. Select **Send for signature**.
   - If a message is displayed containing the details of the contract document, select **Send for signature**.
   - If a message is displayed stating that the signatories aren't synchronized:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Update and sync the signatures.
   - For versions of Contract Management Pro starting with 1.2.1, see Resolve the failure to send contract documents for signature (starting with Contract Management Pro 1.2.1).
   - For earlier versions of Contract Management Pro, see Resolve an error during send for signature.

b. Select **Send for signature**.

c. Select **Send for signature** in the confirmation message.

Result
The document is sent for signature to the specified signatories. The activity stream displays details of the contract document that is sent for signature.
The contract request state and contract status updates to Awaiting Signature. For more information, see Signature workflow for a contract request.

Use non-self-served contract request

Submit non self-served contract requests for review of contracts based on third-party templates.

Features

Non-self-served contract requests include the following features:

- Ability to submit a third-party document for review.
- Ability to upload multiple contract and supporting documents for review.
- Get review and feedback from the internal subject matter experts on contract documents.
- Electronic signature integrations with Adobe Acrobat Sign and Docusign.
- Support for storing contract documents in your ServiceNow instance or external storage systems such as Microsoft OneDrive and Google Drive.
- Contracts repository containing the metadata of signed contract documents.
- Support for a configurable system property to generate a certification of completion.

Non-self-served contracts request workflow

A workflow for non-self-served contract request might progress as follows:

1. The Contract requester initiates a contract request from the workspace. For more information, see Initiating a contract request.
2. A contract request is created in the Draft state.
3. The Contract requester uploads a single contract or multiple contracts and their supporting documents and classifies them.
4. The contract fulfiller views the contract document attached to the contract request.
5. If necessary, the contract fulfiller reclassifies the contract and supporting documents.
6. If an expert review or feedback is required from internal teams, the contract fulfiller initiates an internal review process.
   a. The contract fulfiller submits a review task for internal review.

> **Note:**
> Parallel review tasks for the same contract document can be created for different reviewer groups. However, a review task for the same document with the same reviewer group can't be created if another active task exists.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. The contract reviewer is assigned the review task

c. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.

d. If a request for more information was submitted, the contract fulfiller shares the information.

e. The contract reviewer reviews the document, accepts, rejects, or proposes edits, and adds comments.

f. The contract reviewer reviews the contract and provides feedback. If a revised document is available, it's also shared with the contract fulfiller.

g. The contract fulfiller receives an updated document and makes the necessary changes based on the feedback:

- For internal storage: If any changes are required, a new document version is created after finalizing the document.
- For external storage: Reviewers collaborate on the contract document revision online in real time. After the review is complete, the fulfiller can finalize the contract document that is available online or create an offline version with the changes.

7. The contract fulfiller uploads the revised contract to the contract request.
8. The contract fulfiller emails the revised contract document to third-party contacts.
9. The contract fulfiller views the responses from the third-party contacts in the activity stream of the contract request.

   Multiple iterations of revisions between your company and the third party might be necessary before the contract document is finalized by all parties. The review process may be conducted again with different reviewer groups.

10. The contract fulfiller initiates an ad-hoc approval from the stakeholders. If the review reveals any required changes, the changes are made and a new document revision is created. The contract document can be sent for signature only when it has been approved.
11. If there are multiple contract documents, the contract fulfiller prepares for signatures by specifying the order. If there's an e-signature, the contract fulfiller adds the required fields and sends the contract document for signature.
12. Signatories review the contract document:
    - If no change is required, the contract document is signed by all the signatories.
    - If any changes are required, the signature is declined, and the user who is working on the contract request generates a new document and resends it for signature.
13. The signed contract is stored on the ServiceNow instance or an external storage system and referenced in the contract repository. The requester and department members can access the signed contract document from the contracts repository.

Modify a non-self-served contract request

As a requester, modify the contract request to update the request details or replace the attached contract document with an updated version.

Before you begin

You can modify a request until it is in the New state.

Role required: sn_cm_core.contract_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the contract workspace and select the contract request.
2. Modify the request.
3. Select **Save** to update the record.

Work on a non-self-served contract review request

Review and revise a non-self-served contract document. As a collaborator on the request, you can email the revised document to stakeholders to verify the revisions, and then send the ready document for an e-signature from within the contract request.

Before you begin

Role required: sn_cm_core.contract_fulfiller

About this task

As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Procedure

1. Navigate to your workspace.
2. On the **Lists** tab, open a contract request by selecting an option under **Contract Requests**.
3. **Optional:** If you need help from other fulfillers to work on the contract request, add them in the **Collaborators** field.

   Note:
   Users with the sn_cm_core.contract_fulfiller role are listed in the **Collaborators** field.

   The collaborators are notified via email that they have been added as collaborators to a contract request.
4. **Optional:** Reclassify the contract or supporting documents submitted for review.

   (Optional) Examples of reclassifying the contract or supporting documents are:

   - You can change the contract document type from a Non-disclosure Agreement to a Partnership Agreement. For more information, see Reclassify contract documents in third-party contract request.
   - You can change the supporting document to a contract document. For more information, see Reclassify supporting documents in the contract request.
5. Open an existing revision of a contract document.
   - For internal storage: Open the document revision record by navigating to the **Contract documents** tab and then selecting the name of the document.
   - For external storage: View the document online by navigating to the **Contract documents** tab and then selecting the link on the **URL** tab.
6. Review the contract documents.
7. Create document revisions.
   For more information, see Create a document revision.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Analyze the contract documents to identify non-standard and missing clauses by using Now Assist in Contract Management.
   For more information, see Contract analysis using Now Assist in Contract Management.
9. If an approval is required from other stakeholders, send the document for ad-hoc approval.
   For more information, see Initiate an ad hoc approval for a contract document revision.
10. Set up an email to stakeholders to have the completed contract document reviewed and the changes confirmed.
    For more information, see Send email to stakeholders.
11. Add the internal or external signatories needed for e-signatures on the contract by navigating to the **Signatories** tab and then selecting **Add**.
12. When all stakeholders have agreed on a contract document revision, select **Prepare for Signature** to prepare and send the document to the signatories for e-signatures.

    Note:
    The option to reorder is seen only when multiple documents are attached.

    a. In the Reorder the document pop-up window, drag and place the documents to define the order.

    b. Select **Prepare for Signature**.

    Note:
    When you select **Prepare for Signature**, the document opens in the configured e-signature system.

    - For DocuSign, the document opens automatically in the e-signature portal without requiring a login.
    - For Adobe Sign, you must log in to the e-signature portal to open the document.

    The document status updates to Preparing for Signature. The contract documents submitted in the non-self-served contract request are combined into a single document and sent for Prepare Signature.
13. Complete the document in the configured e-signature system and send it for signature.
    a. Preview the document to ensure that the content is correct.
    b. Add the required fields, including the **Signature** field.
    c. Select **Send**.
    An e-signature envelope is created and sent to all signatories. If the system receives a success notification from the electronic signature provider, the State and Contract status updates to Awaiting Signature.
14. **Optional:** If you need to cancel the signature request before all signers have completed signing the document, select **Cancel signature**.
    The contract request State updates to Work in Progress and the Contract document Status updates to Signature canceled.

What to do next

- Signatories can sign or decline to sign the contract.

  For more information, see Signature workflow for a contract request.

- Check the contract request state and the contract document status in the request:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If all signatories sign the contract document, the contract document status updates to Contract signed. On the **Signatories** tab, the status of all signatories updates to Signed. You can access the contract repository record from the **Contracts Repository** tab.
- If any signatory declines to sign the contract document, the Contract Status updates to Signing Declined. If more changes are required in the contract document, update it and resend it to the signatories for their signatures.
- After all the signatories have signed the document, an email is sent to the signatories with the finalized contract document attached.

- If the contract is signed by all signatories, you can close the request by selecting **Close Complete**.

Add contract documents to non-self-served contract request

As a contract user or the person for whom the contract was requested, add single or multiple contracts and classify them.

Before you begin

Role required: sn_cm_core.contract_user

About this task

- The non self served contract request supports the upload of contract and supporting documents. Only the contract documents are sent for signature.
- You can attach multiple documents, one document at a time.
- You can attach contract documents when the contract request is in Draft state.

Procedure

1. Navigate to your workspace.
2. Select a contract request.
3. In the Contract Document tab, select **Attach Document**.
4. In the Select contract type drop-down, select the type of contract.
5. Select **Attach file** link.
6. Select the file to be attached.
7. Select **Attach**.
   The selected file is attached and listed in the Contract Documents related list.

Reclassify contract documents in third-party contract request

As a contract fulfiller, reclassify the documents submitted in a third-party contract review request. For example, you need to change the contract document type from Non-disclosure Agreement to Partnership Agreement.

Before you begin

Role required: sn_cm_core.contract_fulfiller

Procedure

1. Navigate to the contract workspace and select the contract request.
2. In the **Contract Documents** related list, select **Reclassify**.
3. In the **Existing contract type** drop-down list, select the contract type that you want to reclassify.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the **Reclassify to** drop-down list, select the contract type into which you want to reclassify. Only active contract types are displayed in the list.
5. **Optional:** Add more information about the document in the **Work notes** field.
6. Select **Reclassify** to update the classification.
7. Select **Save** to save the record.

Modify supporting documents in the contract request

As a contract fulfiller, add, classify, or remove supporting documents submitted in the contract request.

Before you begin

Role required: sn_cm_core.contract_fulfiller

Procedure

1. Navigate to your workspace and select the contract request for which you want to modify the documents.
2. Navigate to **Supporting Documents** tab.
3. Modify the supporting documents.

4. Select **Save** to save the record.

Add supporting documents to the contract request

As a contract user or fulfiller, add single or multiple supporting documents to the contract request and classify them.

Before you begin

Role required: sn_cm_core.contract_user, sn_cm_core.contract_fulfiller

About this task

- The contract requests supports the upload of single contracts or multiple contracts and supporting documents. Only the contract documents are sent for signature.
- You can attach multiple documents one at a time.
- You cannot attach multiple supporting documents with the same name.
- A contract user can attach supporting document when the state is Draft.
- A contract fulfiller can attach supporting document when the state is Work in progress,

You can attach supporting documents only when the State is Draft or Work in progress.

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. In the Supporting Document tab, select **Attach Document**.
4. In the Upload from drop-down, select a storage type and upload a new document.
   - **Computer**: Select **Attach File** and upload a document.
   - **Inbound Email**: In the Document field, select the document that is displayed based on an attachment in the activity stream.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** Add more information about the document in the **Work notes** field.
6. Select **Upload**.
   The selected file is attached and listed in the Supporting Documents related list.

Reclassify supporting documents in the contract request

As a contract fulfiller, reclassify the supporting documents submitted in the contract request. For example you can reclassify the supporting document as a contract document.

Before you begin
Role required: sn_cm_core.contract_fulfiller

About this task
You can reclassify supporting documents only when the State is Work in progress.

Procedure
1. Navigate to your workspace and open the contract request for which you want to reclassify the documents.
2. In the **Supporting Documents** tab, select **Reclassify**.
3. In the **Select document** drop-down, select the document that you want to reclassify.
4. In the **Reclassify to** drop-down list, select the new contract type.
   Only active contract types are displayed in the list.
5. **Optional:** Add more information about the document in the **Work notes** field.
6. Select **Reclassify** to update the classification.
7. Select **Save** to save the record.

Initiate an ad hoc approval for a contract document revision

Initiate an ad hoc approval for a contract document revision from a user or a user group.

Before you begin
Role required: sn_cm_core.contract_fulfiller

About this task
You can request for approval of a revision for contract documents from stakeholders. Here is how the flow works:

- You can assign the approvals to a user or user group in your organization. Users with the group manager or contract fulfiller roles who are in the **assigned to** or **collaborator** fields can raise the approval for the revision.
- When you initiate an approval, the approvers receive an email notification and can act on the approval.
- An approver who does not have access to the contract revision is granted read-only access to the record until the assigned approval record is completed.

Note:
Only latest revision of specific contract type is sent for approval. If an approval of specific revision is pending, you cannot initiate another approval for the same.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to your workspace.
2. Click the list icon ( ).
3. In the **Lists** tab, open a request by selecting an option under **Contract Requests**.
4. In the **Approvers** tab, click **Initiate Approval**.

   You can also initiate an approval by clicking the more actions button ( ) and selecting **Initiate Approval**.
5. On the Initiate Approval dialog box, fill in the fields.

Initiate Approval dialog box

Field	Description
Contract type	From the drop-down list, select only one category of the contract type, for example, **Order Form**. **Note:** When you have only one contract type, then it is auto-populated.
Document revision	The latest revision of the document . For example `Order Form - 1.0`. The number reflects the latest document revision. The revision number is visible from the Approving field. **Note:** The revision number of the latest document is one higher than the previous revision number.
Approval by	Approval required at user level or user group level. ○ **User**: Get approval from an individual user. ○ **User group**: Get approval from a set of users. The **Select user** field is replaced by the **Select user group** field.
Select user	User or user group who must approve the item. If you selected **User** in the **Approval by** field, select a user from whom the approval is required. **Note:** If you selected **User** in the **Approval by** field, an approval record is created for the selected user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Select user group	User or user group who must approve the item. If you selected **User group** in the **Approval by** field, select a user group from whom the approval is required. **Note:** If you selected **User group** in the **Approval by** field, an approval record for each user in the selected user group is created. Anyone from the group can approve.
Approval note	Note for the selected user or user group.

6. Click **Initiate**.
   All the approval records are listed and the approval status changes to **Requested**.

Result
Assigned approvers are added in the **Approvers** tab with other approval details. The assigned approvers get an email notification with a link to open the record for action.

Note:
The contract type revision number is visible from the Approving field of the **Approvers** tab.

What to do next
Approvers can view and Approve or reject a contract document.

Approve or reject a contract document

Review a contract request or attachment and approve or reject it.

Before you begin
You must have received an email notification with a link to the request for approval.
Role required: sn_cm_core.contract_fulfiller

Procedure

1. Open the approval record from the email notification, Self-Service, or Employee Center portal.

2. Review the record and either approve or reject:
   - To approve the record, click **Approve**.
   - To reject the record, enter comments for rejection in the **Comments** field and click **Reject**.

Note:
View the contract revision document available as the attachment on the internal storage or with the view access on the external storage.

Result
The following table shows the result of approve and reject actions on the approval record. Contract fulfiller and collaborators get an email notification about the approval or rejection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result of approving or rejecting an item

Approve	Reject
• The state of approval record updates from Requested to Approved. If the requested item was assigned to a user group for approval, then the state of the approval records for the remaining users updates from Requested to No Longer Required. • Any approver who isn't added to **Watch list** in the request loses access to the approved contract document.	• The state of approval record updates from Requested to Rejected. If the requested item was assigned to a user group for approval, then the state of the approval records for the remaining users updates from Requested to No Longer Required. • The rejection comments posted by the approver are added to the requests Activities section. • Any approver who isn't added to **Watch list** in the request loses access to the rejected contract document.

Cancel an ad hoc approval for a contract document revision

Cancel an ad hoc approval for a contract document revision if it no longer requires any action.

Before you begin

You can only cancel an ad hoc approval that is in the Requested state.

Role required: sn_cm_core.contract_fulfiller

About this task

Procedure

1. Navigate to your workspace and open the contract request.
2. In the **Approvers** tab, click **Cancel Approval**.
3. In the Cancel Approval dialog box, select the approval record from the **Approval for** field that you want to cancel.

   Note:
   When you have only one contract document, then it is auto-populated.

4. Enter comments for canceling the approval record and click **Confirm Cancellation**.

Result

The approval record is canceled and its state updates to Cancelled and comments are added to the approval record. If the approval was requested from a user group, then the corresponding approval records for all users in the user group are canceled.

Internal review overview

Get your contract document reviewed by internal subject matter experts who have the expertise you need.

A workflow for getting content reviewed by subject matter experts might progress as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. For self-served contract requests, contract user submits a change request to the fulfiller for the content that needs internal review.

   Note:
   For non- self-served contract requests, the contract user cannot create a change request. Instead, the contract fulfiller creates a task for internal review.

2. The contract fulfiller submits a review task when contract request is in Work in progress or Awaiting review State.
3. The contract reviewer or the manager assigns the review task.
4. The assigned contract reviewer starts working on the contract document.
5. If the information is incomplete, the contract reviewer requests more information from the contract fulfiller.
6. If a request for more information was submitted, the contract fulfiller shares the information.
7. The contract reviewer reviews the document, accept, reject, or proposes edits, and adds comments.
8. The contract reviewer completes the review and shares the updated contract document if available.
9. The contract fulfiller receives updated document and makes the necessary changes based on the feedback.
   - For internal storage - If any changes are required, a new document version is created after finalizing the document.
   - For external storage - Reviewers collaborate on the contract document revision online in real time. Once the review is complete, the fulfiller can finalize the contract document that is available online or create a new offline version with the changes.

The contract request remains in the Awaiting review State until a review task is active.

Request an internal review

Initiate a review of the contract document by internal subject matter experts.

Before you begin

- For self-service contract requests, you may want review and feedback from the internal subject matter experts. If needed, the contract requester can submit a change request to the contract fulfiller. The contract fulfiller then submits a review task with the change request details. For more information, see Review a contract document in your workspace.
- For non- self-served contract requests, the contract user cannot create a change request. Instead, the contract fulfiller creates a task for internal review.

Role required: sn_cm_core.contract_fulfiller

About this task

- You can raise a review task when the contract request State is Work in progress or Awaiting review.
- You can create parallel review tasks for the same contract document for different reviewer groups. You cannot create a review task for the same document with the same reviewer group if another active task already exists.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the contract request from workspace that you are using.

2. Select the Reviews tab.
3. Select **New task**.
4. On the Create New Review Task form, fill in the details.

Create task for requesting internal review

Field	Value
Contract type	Contract for which you want to submit an internal review request. **Note:** The field is auto-populated when there is only one contract type. The latest revision of contract document is sent for review
Due date	Date to complete the task.
Priority	Level of priority to address the review request.
Assignment group	User group with contract reviewer role to which the task is assigned.
Assigned to	User to whom the task is assigned. If an assignment group is selected, the list shows members of the selected group.
Instructions	Description to specify the content to be reviewed.

5. Select **Create**.

Result

A review task is created, listed in the Reviews tab and the change request details are added to the Activity stream. The Contract status updates to Awaiting review. If the new task doesn't appear in the list, click the refresh list button ( ).

Work on internal review task

As a contract reviewer, review and provide feedback on contract documents

Before you begin

Role required: sn_cm_core.contract_reviewer

Procedure

1. Open the review task from workspace that you are using.

2. If the review task is not already assigned, select **Assign to me**.
3. Select **Start work**.
4. Open the contract document.
   - Internal storage: Download the document.
   - External storage: Select the document link to open it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. If you need additional context to review the document, request more information.

   a. Select the More Actions icon ( ).

   b. Select **Request information**.

   c. In the Comments field, enter the details about the information needed.

   d. Select **Submit**.
   The contract request Status and the review task State changes to Awaiting information andyou can proceed with review after receiving information.

6. Share the review feedback
   The reviewer edits the document, suggest changes through comments, and approve or reject any redlines.
   The review task will be closed, work notes are added to the Activity stream, and the State changes to Closed Complete.

Share requested information for internal review

As a contract fulfiller, share information requested by the reviewer to proceed with the contract document review.

Before you begin
Role required: sn_cm_core.contract_fulfiller

About this task
The work notes added when requesting information are available in the Activity stream. Review the information needed and gather the information to be sent to the reviewer.

Procedure

1. Open the review task from workspace that you are using.

2. Select **Send information**.
3. If you have document to be shared, select **Attach file**.
4. Select the file to be shared.
5. In the Comments field, enter work notes.
6. Select **Send**.

Result
The information is shared with reviewer and the review task State changes to Work in progress.

Cancel an internal review task

As a contract fulfiller, cancel a review task irrespective of its state.

Before you begin
Role required: sn_cm_core.contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the review task from workspace that you are using.

2. Select **Cancel review**.
   If you have selected **Cancel review** from the Reviews tab, select the review task to be canceled in the pop-up window.
3. In the Comments field, enter information for canceling the request
4. Select **Yes, cancel**.

Result

- The review task is canceled and the cancellation comments appear in the Additional Comments section of the contract request.
- When all the review tasks are cancelled or closed, the contract request State updates to Work in progress.

Add clauses during authoring or negotiation

As a contract fulfiller or reviewer, while authoring or negotiating a contract revision, add clauses from the clause library listed in the Microsoft Word add-in for ServiceNow Contracts.

Before you begin
Role required: sn_cm_core.contract_fulfiller or sn_cm_core.contract_reviewer

About this task
When working on own-paper or third party paper based contract document, you can use the clause library to check the document for missing or non-compliant clauses. You can also add clause content from the clause library to the document.
The clause library is available under the following conditions:

- The contract request is in Work in progress state. You are assigned to this request, or you are a group manager or collaborator.
- The contract request is in Awaiting review state. You are assigned the internal review task as a contract reviewer.

Procedure

1. Open the Microsoft Word document that is under review or negotiation.
2. From the Microsoft Word ribbon, select ServiceNow Contracts add-in.
3. On the add-in login screen, enter the credentials of the ServiceNow instance from where you downloaded the manifest file.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. Select the **Clause library** tab.
5. Search the clause by using the clause name.

   Active clauses for the contract type that is associated with the contract document is displayed.
6. Select the clause in the library.
7. Select the content in the document where you want to add the clause.
8. Select **Use this clause** for a specific clause that is applicable.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The clause is added to the document. When a valid metadata mapping exists within clause content, the metadata gets auto-populated. Otherwise, a content control tag name is added and the metadata has to be manually updated. For more information, see Configure metadata for fields, variables, and variables sets in a contract document.

Create a document revision

As a contract fulfiller, create a document revision to upload an updated version of the contract that contains the latest changes in the contract request, corrections, or suggestions from a third party.

Before you begin

Role required: sn_cm_core.contract_fulfiller

About this task

You can create document revisions only when the State is Work in progress.

Note:
If the contract type is inactive, the **Create revision** button isn't available for self-served contract requests.

Procedure

1. Open a contract request from the workspace you are using.
2. In the **Contract Documents** tab, select **Create Revision**.
3. In the **Create revision** window, upload the updated contract.
   a. For non-self-served requests, select the contract type in the **Select contract type** field. Only active contract types are displayed in the list.
   b. In the **Create revision from** drop-down list, select the source of the updated contract and add the file.

Contract source	Action
Computer	In the **Attachment** field, select **Attach File** and upload the updated contract.
Activity stream	In the **Document** field, select the document in the activity stream. The activity stream includes documents attached while requesting changes for a contract or documents received through email.
External storage	If external storage is configured, in the **Document** field, select the document.

4. Select **Create**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The document is added to the contract request. The revision number of the latest document is one higher than the previous document's revision number. The document revision is listed in the **Contract Documents** tab.

5. Select **Save**.

Send email to stakeholders

As a contract fulfiller, set up an email to stakeholders to request review of the contract document reviewed and confirm the changes.

Before you begin

Role required: sn_cm_core.contract_fulfiller

About this task

The option to compose an email is available only when the State is Awaiting approval, Awaiting signature, Contract signed or Work in progress.

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. Select the More Actions icon.
4. Select **Compose email**.
5. In the Compose email pop-up, select the documents to be attached
6. In the **New Email Draft** tab, add recipients' email addresses in the **To**, **CC**, and **BCC** fields as appropriate.
7. Enter the subject of the email in the **Subject** field.
   By default, the short description of the request is populated in the Subject field.
8. Compose an email body.
9. Send the email immediately or later, or discard it.

   For more information, see Communicating via email.

Result

After the email is sent, it is added to the activity stream on the request form. Emails you receive from others are also added to the activity stream.
To see a list of available default email notifications, go to **All** > **System Notifications** > **Notifications** and search for the **Contracts Support** category.

For more information, see Create an email notification.

Signature workflow for a contract request

Contract Management Pro supports electronic signature or wet (manual) signature for a contract request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Electronic Signature: Enables signatories to sign the contract document electronically. For more information, see Configure an e-signature provider.

  If you want to generate a certificate of completion, you must select the **Electronic Signature** as signature type in the contract request. For more information, see Activate a system property to generate a certificate of completion.

- Wet Signature: Enables signatories to sign the contract document manually. You can then upload the signed document to a contract request. For more information, see .

Electronic signature workflow

- Send the finalized document to the signatories for signing.
  - The state and contract status updates to Awaiting Signature and the electronic signature flow is triggered as configured in Configure an e-signature provider.
  - An email notification that the contract document is available for signature is sent to the first signatory. The email contains a link to the contract document that the signatory can open and sign the document through the Docusign or Adobe Acrobat Sign electronic signature provider as configured in the electronic signature integration.

    The first signatory is the one whose Order value in the list of signatories is set the lowest in the contract template rule. For more information, see Configure contract template rules.

- Signatories can sign or decline the contract document.

Signatory action on the contract document

Signatories action	Workflow
All the signatories choose to do an electronic signature	○ First signatory signs the contract document If there is more than one signatory,the contract document is sent to the next signatory in the order. The status of the current signatory in the request updates from Pending Signature to Signed. The status of the next signatory updates from Not Started to Pending Signature. ○ After the last signatory has signed the document, the contract repository record is created and the signed document is attached to it. For contract requests containing multiple contract documents, the signed contract document is split into individual documents and attached to the contract repository record for the respective contract type. The state of the requests updates to Contract Signed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signatories action	Workflow
One or more signatories decide to do a wet signature	○ One or more signatories decided to do a wet signature instead of electronic signature. ○ The wet signed contract document in PDF format is shared with the contract fulfiller. ○ The contract fulfiller uploads the signed document, selects the signatories who have shared the wet signed contract document and proceeds with the signature process by sending the document to the next signatories. The status of the signatory in the request updates from Pending Signature to Signed. The status of the next signatory updates from Not Started to Pending Signature. The signature type is updated to Mixed signature after all the signatories have signed the document. ○ After the last signatory has signed the document, the contract repository record is automatically created and the signed document is attached to it. For contract requests containing multiple contract documents, the signed contract document is split into individual documents and attached to the contract repository record for the respective contract type. The state of the requests updates to Contract Signed.
The document is declined by the signatory.	An email notification that the signer has declined to sign the document is sent to the requester. The Signatory status in the request updates to Declined. The State changes to Work in progress and the Contract status changes to Signing Declined.
The contract document is resent for signature.	For contract request fulfilled by the contract user: A contract user can submit a change request. The contract fulfiller works on the change request and sends the updated document back to the contract requester. The updated contract document is sent for signature by the contract user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signatories action	Workflow
	For contract request fulfilled by contract fulfiller: The contract fulfiller creates a document revision manually or by using regenerate option and resends the document for signature.

If the system property *sn_cm_core.enable_executed_contract_audit_certificate* is set to true, the certificate of completion is generated and attached to the contract repository record.

Wet signature workflow

- Send the finalized document to the signatories for signing.
  - The state and contract status are updated to Awaiting signature.
  - An email notification is sent to the signatories and the contract documents are attached as PDFs in the email.

    The signatory with the lowest Order value in the list of signatories is the first signatory and is placed in the **To** field of the email. The other signatories are placed in the **CC** field.
- Signatories accept or decline the document.

Signatory action on the contract document

Signatories action	Workflow
The signatory accepts the document.	○ The signatory prints the contract document,signs it, and then returns it to the signature requester. ○ If there are multiple signatories for the contract, they can collaborate and send the signed document with everyone's signature or individually sign and send it back to the signature requester.
The document is declined by the signatory.	The signatory sends the document back to the requester for necessary correction. The signatories and the contract fulfiller can collaborate and finalize the contract document.
The contract fulfiller uploads the signed contract document.	○ On receiving the signed contract document, Contract fulfiller uploads the signed contract document in PDF format. ○ The contract document is added to the repository after it is uploaded. For self-served contracts, the state of the request updates to Closed complete and the contract status updates to Contract signed. For non-self-served contracts, the state of the request and the contract status updates

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Signatories action	Workflow
	to Contract signed. To close the contract request, select Close complete. For more information, see .

Access to a contract document is based on the following user roles and conditions:

- A contract fulfiller can view and update contract documents
- Only a contract administrator can delete contract documents.
- Requesters can view only the contract documents for which they submitted the contract request.
- Users added to the watch list can view only contract documents for contract requests they have added.

While generating the contract repository record, mapped fields and their values are validated for data type and correctness. If validation errors are found, an email notification is sent to the contract fulfiller. The email also displays the list of fields that haven't been copied into the final contract document and the link to the contract repository record. The fulfiller then opens the record using the link and corrects the values to resolve the validation errors.

Cancel the signature process

Cancel a wet signature process for contract documents that have been sent to signatories.

Before you begin
Role required: sn_cm_core.contract_fulfiller

About this task
The state of the contract request should be Awaiting signature.

Procedure
1. Navigate to the workspace.
2. Open the contract request.
3. On the Standard Ticket page, from the **Actions** menu, select **Cancel signature**.
4. On the confirmation window, select **Cancel signature**.

Result
The contract status updates to Signature cancelled, and a notification email is sent to all signatories.

Cancel a contract request

Cancel a contract request if it is no longer necessary.

Before you begin

Important:
Cancelling a contract request after it has been sent for signature stops the process in its current state.

Role required: sn_cm_core.contract_user, sn_cm_core.contract_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

You can cancel a contract request when the contract request state is in Draft, New, Awaiting Approval, Awaiting signature, and Work in progress.

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. Select the More Actions  icon.
4. Select **Cancel Request**.
5. Select **Cancel Request** to confirm cancellation.

Result

- The request is canceled and the associated active flows are terminated. The cancellation comments appear in the **Activity** tab of the request.
- The contract request State updates to Canceled and the contract status updates to Contract Canceled.
- The document signature sent to signatories is canceled to block further signing. The signatories get an email notification that the contract request has been canceled.

Preview and download a signed contract document

View and download a signed contract document.

Before you begin

Important:
Cancelling a contract request after it has been sent for signature stops the process in its current state.

Role required: sn_cm_core.contract_user

About this task

When all signatories have signed a contract document, it's considered as the final contract document and is stored in the Contract Request Repositories [sn_cm_core_contract_request_m2m_contract_repository] table.
Access to a contract document is based on the following user roles and conditions:

- Group manager, Assigned to user and collaborator have edit access to the contract repository.
- Contract fulfiller belonging to the same assignment group has view access to the contract repository.
- Contract fulfiller not in assignment group do not have any access to the to the contract repository.
- Only a contracts administrator can delete contract documents.
- Requesters can view only the contract documents for which they submitted the contract request.
- Users can view only contract documents for which they have been added to the watch list of the corresponding contract requests.

When multiple contract documents are attached, a separate contract repository record is created for each contract type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to your workspace.
2. Select a contract request.
3. Navigate to **Contract repository**.
4. Select the contract number.
5. Navigate to **Contract documents** tab.
6. View the contract document.

Obligation Management

Obligation Management in Contract Management Pro enables you to track and fulfill the responsibilities specified in a contract.

With Obligation Management, a contract manager can create obligation records to define specific instructions and obligation task types required to fulfill the contract obligation. Obligation tasks are created to track and complete the activities specified in a contract, such as submitting an IT asset invoice every month.

An obligation record may have two types of obligation tasks:

Ad hoc obligation task

The obligation task may be required only once or on irregular intervals to fulfill the contract obligations.

Recurring obligation task

The obligation task is required at regular intervals to fulfill the contract obligations. Recurring obligation tasks are automatically created based on the defined schedule.

The Obligation Management workflow starts after the signed contract is added to the contract repository record and might progress as follows:

1. A contract manager reviews the contract in the contract repository and creates obligation records for key obligations.
2. The contract manager provides the obligation details, including an obligation task schedule, in the obligation record.

   For more information, see Create obligation records.

3. Obligation tasks are created.
   - For an ad hoc schedule, the contract manager creates an obligation task from the **Obligation tasks** tab.
   - For a recurring schedule, the obligation tasks are automatically created based on the defined schedule.
4. The assigned user is notified when the obligation task is created.
5. The assigned user works on the obligation task and submits it for review.

   The state of the obligation task changes from Open to Awaiting approval.

6. The obligation fulfiller reviews the task and approves or rejects it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If the obligation task is rejected, the state of the task changes to Open, and the assigned user continues to work on it.
- If the obligation task is approved, the state of the task changes to Completed.

Create obligation records

Create obligation records for signed contracts in Obligation Management to fulfill the responsibilities specified in the contract through obligation tasks. Recurring obligation tasks are automatically created from the record. You can also add ad hoc obligation tasks that are performed only once or at irregular intervals.

About this task

Note:
For more information about adding obligation tasks that are performed only once or at irregular intervals, see Create an ad hoc obligation task.

Before you begin

The contract record must be in Active state.

The group managers of the Legal Contract Owners and Obligation Fulfillers groups must also be a member of the respective group.

Role required: sn_cm_obligation.obligation_fulfiller

Procedure

1. Open an executed contract from the your workspace.
2. Select the **Obligations** tab.
3. Select **New**.

   Note:
   If the **New** button is not available, verify that the selected contract is active.

4. On the form, fill in the fields.
   For more information, see Obligation form.
5. Select **Save**.

Create an ad hoc obligation task

Create an obligation task required only once or at irregular intervals to track and fulfill an obligation specified in a contract.

Before you begin

The obligation and contract must be in Active state.

The schedule type in the obligation record must be **Adhoc**.

Role required: sn_cm_obligation.obligation_fulfiller

Procedure

1. Open an obligation from the workspace that you are using.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Select the **Obligation tasks** tab.
3. Select **New**.
4. **Optional:** On the New obligation task page, in the **Assigned to** field, update the assigned user.
5. In the **Due date** field, select the due date for the obligation task.
6. Select **Save**.

Result
The obligation task is created and the assigned user is notified through email.

Submit obligation tasks

As an obligation user, work on obligation tasks to fulfill the obligation specified in the contract, and submit them for review.

Before you begin
Role required: sn_cm_obligation.obligation_user

Procedure
1. Open the obligation task from the email notification or Employee Center.
2. **Optional:** In the **Attachment** field, add the required attachments.

   Note:
   External storage is not available for Obligation Management.
3. In the **Comments** field, add required comments.
4. Select **Submit**.

Result
The obligation task is sent for approval and the state of the task changes to Awaiting approval.

Cancel an obligation task

Cancel an open obligation task in Obligation Management that is no longer required.

About this task
Note:
Obligation tasks that are not submitted or awaiting approval are automatically canceled when you deactivate the parent obligation record.

Before you begin
The task to be cancelled must be in Open, Submitted, or Awaiting approval state.

You must be the group manager of the approver group or the approver of the obligation task.

Role required: sn_cm_obligation.obligation_fulfiller

Procedure
1. Open an obligation task from the workspace that you are using.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Select **Cancel**.
3. In the Cancel obligation task window, add a required comment and select **OK**.

Result
The state of the obligation task changes to Canceled.

Approve or reject obligation tasks

As an obligation fulfiller, review obligation tasks in Obligation Management that have been submitted for approval, and take the appropriate action.

Before you begin
Role required: sn_cm_obligation.obligation_fulfiller

Procedure
1. Open the obligation task from the notification email, Employee Center, or Contract Workspace.
2. Review the obligation task and approve or reject it.

Result
If the obligation task is approved, the assigned user is notified and the state of the obligation task changes to Closed complete.
When the obligation task is rejected, the assigned user is notified and the state of the obligation task changes to Open.

Search for keywords in contract templates

Search for keywords in contract templates easily.

Before you begin
Ensure you have enabled the search functionality for the keyword search. For more information, see Enable keyword search for contract templates.

Role required: sn_cm_core.contract_config

Procedure
1. Navigate to **All** > **Contracts Core** > **Contract Templates**.
2. In the contract template list, select the filter icon .
3. Search for single or multiple keywords.
   - To search for a single keyword set the filter condition to **[Keywords][are][<your-search-term>]**. For example, set filter condition as [Keywords][are][procurement]
   - To search for multiple keywords set the filter condition to **[Keywords][are]["<your-search-term1>" | "<your-search-term2>"]**. For example, set filter condition as [Keywords][are] ["procurement" | "Acme"].
4. Select **Run**.

Result
Any contract template that has the keyword is listed.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Search in Microsoft Word add-in for ServiceNow Contracts

As a contract configurator, search for templates and clauses in the Microsoft Word add-in for ServiceNow Contracts.

Before you begin

Ensure you have configured the Microsoft Word add-in for ServiceNow Contracts add-in. For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

Role required: sn_cm_core.contract_config and canvas_user

Procedure

1. Open a document where you want to mark the content controls in Microsoft Word.
2. From the Microsoft Word ribbon, select ServiceNow Contracts add-in.
3. On the add-in login screen, enter the credentials of the ServiceNow instance from where you downloaded the manifest file.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. On the **Templates** tab, search for templates with a specific name or state by entering search text in the **Search templates** search field.
   Active templates in Draft or Editing state that match the search criteria will be displayed.
5. Search for clauses that are either in the template or only in the clause library.
6. Search for clause variations by name by selecting a clause with variations and entering the name of the clause variation in the **Search clause variations** search field.
   Active clauses that match the search criteria will be displayed.

Manage Contract Management Pro

As administrator work on managing the word document templates and contracts.

Manage clauses, tables, and contract templates

As administrator manage clauses and contract templates.

Edit a contract clause variation

Edit a clause variation to modify the content that will be used in a contract template.

Before you begin

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Clause Management**.
2. Select a clause.
3. In the Clause Variations related list, select the clause variation.
4. On the form Clause Variation form, edit the fields that you want to modify.
   For a description of the field values, see Clause Variation form.
5. Right-click in the form header and select **Save**.
   The imported document is parsed and the content controls extracted are listed in the Clause Variation Fields related list.
6. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

If the updated clause variation is associated with a published contract template and new fields are available after parsing, the Unmapped meta data related list appears with the unmapped fields listing. For instructions on how to complete the template mapping, see Update contract template mappings.

Edit a contract template by manually adding content controls

Edit a contract template to reflect any modifications that must be included in the template to generate a standard contract when an employee submits a contract request.

Before you begin

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open a contract template from the list.
3. On the form, modify the fields.

Word Template New Record form

Field	Description
Name	Unique name for the contract template.
Table	Table to which you want to associate the contract template.
Category	Document category to which you want to associate the contract template.
Document	The document from which you want to import clauses and template field mapping. The selected document should be a Microsoft Word (.docx) document and should have valid content controllers. For more information, see Add content controls in a Microsoft Word document.
State	○ If you edit a contract template in Draft state, it will remain in Draft state. ○ If you edit a contract template in Published state, the state will change to Editing.
Application	Application to which the contract template belongs. This field is automatically set to the application scope in which you're creating the contract template.
Active	Option to make the template active and available for use.

4. Select **Parse Document** to extract any modified content marked by content control from the imported document.
   - The existing imported clauses with no change will be retained along with its Classification and Mapping clause.
   - The imported clauses for which the content controls are deleted in the imported document will be deleted from the list.
   - Any new added content controls will be listed under Imported clauses, Clause Mapping or Template Mappings.
5. Classify and map the newly added Imported clauses.
   For more information, see Classify and map imported clauses.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Update** to save the modifications.
7. On finalizing the content of the contract document, select **Publish**.

Edit a contract template using Microsoft Word add-in for ServiceNow Contracts

Edit the metadata, signatories, or clauses in a contract template that must be included in the contract template to generate a standard contract when an employee submits a contract request using the Microsoft Word add-in for ServiceNow Contracts.

Before you begin

Role required: sn_cm_core.contract_config and canvas_user

Procedure

1. Open a Microsoft Word document that contains content controls.
2. From the Microsoft Word ribbon, select ServiceNow Contracts add-in.
3. Enter the credentials of the ServiceNow instance from where you downloaded the manifest file.
4. In the Template tab, select the contract template that you want to modify.
   The associated contract template should be active and in Draft or Editing state.
5. Modify the document.

Contract template modifications

Modification	Instructions
Modify the metadata, signatories, or clauses using the Microsoft Word add-in for ServiceNow Contracts.	Add document content controls using Microsoft Word add-in for ServiceNow Contracts
Edit or delete signatories.	Edit or delete participants using add-in
Delete content controls	Right-click the content control and select **Remove Content Control**. The content control is deleted from the Microsoft Word document. However, you must upload and parse the document for content controls to be deleted from your ServiceNow instance.

6. On finalizing the content controls, upload the document to the contract templates.
   a. Select **Proceed to select a document**.
   b. In the Select Attachment screen, select **Attach file** and select the modified document.
   If the file name of the document you are uploading and the one uploaded in the contract template are different, you are asked to confirm the upload.
   c. Select **Upload and parse document** to parse the content controls and add the data to the ServiceNow instance.
7. Complete clause mapping in the ServiceNow instance.
   For more information, see Complete clause mapping to build a clause library.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Unmodified existing metadata, signatories, and clauses are retained along with their details.
- Deleted metadata, signatories, and clauses are deleted from the Template mappings, Participants, and Imported clauses related lists of the contract template.
- Any added content controls are listed under Participants, Imported clauses, or Template Mappings.

8. Select **Update**.
9. On finalizing the content of the contract document, select **Publish**.

Edit or delete participants using add-in

As a contract configurator, edit or delete a participant from a Microsoft Word document using the Microsoft Word add-in for ServiceNow Contracts.

Before you begin

A Microsoft Word document with content controls should have been uploaded into the contract template.

Role required: sn_cm_core.contract_config and canvas_user

Procedure

1. Open the Microsoft Word document with content controls.
2. From the Microsoft Word ribbon, select ServiceNow Contracts add-in.
3. On the add-in login screen, enter the credentials of the ServiceNow instance from where you downloaded the manifest file.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. In the **Template** tab, select the contract template.
5. Navigate to the **Signatory** tab.
6. Select the Edit or delete signatory icon (⋮).
7. Edit or delete the signatory.

Result

The changes made to the participants are synced to the ServiceNow instance in Participants related list.

Edit or delete table mappings in a contract template using Microsoft Word add-in

As a contract configurator, edit or delete table mappings in a contract template using the Microsoft Word add-in.

About this task

Using table mappings you can map data source tables in your ServiceNow instance to tables in a contract template. The mappings determine which records from the data source table will be added in the contract and where it will be added.

Before you begin

Role required: sn_cm_core.contract_config and canvas_user

Procedure

1. Open the contract template where you want to edit or delete the table mappings.
2. From the Microsoft Word ribbon, select ServiceNow Contracts add-in.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the login screen, enter the credentials of the ServiceNow instance for which the Microsoft Word add-in is configured.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts
4. Select the **Table** tab.
5. In the list of table mappings, select the mapping or find it by entering the table name in the search bar.
6. Either modify or delete the table mapping.

Create a contract template from an existing template

Create a new contract template from an existing template if you need only a small variation in the content of an existing template.

Before you begin

Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open the contract template from the list.
3. Select **Create Revision**.

   Select the option **Copy** when you are creating template in Default View.

   A template revision is created with the data related to participants, imported clauses, and template mappings.
4. **Optional:** Import clauses and template field mappings from a Microsoft Word document with content controls.
   For more information, see Add content controls in a Microsoft Word document.

   a. In the **Document** field, select **Update**.

   b. Select **Choose file**.

   c. Choose a file and select **Ok**.

   d. Select **Parse document**
   - The document is parsed.
   - The metadata that was already present is retained.
   - The metadata that was present earlier but not found in the recent parsing is deleted.
   - The metadata that is new is added.
   - The clause tags that were already present are retained.
   - The clauses that were present earlier but not found in the recent parsing are deleted.
   - The clause tags that are new are added.

   A new file is uploaded to the contract template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

- Map any new meta data found during parsing. For more information, see Update contract template mappings.
- Classify new clauses found during parsing. For more information, see Classify and map imported clauses

Generate and preview a contract document from a template

View the final form of a contract document with the content controls replaced with the values of the variables or return values of scripts.

Before you begin
Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open a contract template.
3. Select **Preview**.
4. In the Preview Document window, select the Lookup using list icon
5. Select a contract request from the list for which you want to generate a sample contract document.
6. Select **Generate Preview** and close the Preview document pop-up window.
7. In the **Manage Attachments** field, select **View** to view the document.
8. **Optional:** Select the document link to download it.
9. **Optional:** Modify the contract template if you want to make any changes.

Delete a contract template

Delete contract template when you no longer need it.

Before you begin
Role required: sn_cm_core.contract_config

Procedure

1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open a contract template from the list.
3. Select **Delete**.
4. In the Confirmation pop-up, select **Delete**.

Manage contract records

As administrator manage contract records.

View a contract record

View the history of a contract request to track changes, review the audit trail, and update fields. Easily see the date a contract was modified and who modified it.

Before you begin
Role required: sn_lg_cnt.contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. View all contracts by navigating to **Contract Requests** > **All Contracts**.
4. **Optional:** View expired contracts or contracts that will expire soon.
   - To view contracts that will expire within 30 days, select **Expiring contracts**.
   - To view expired contracts, select **Expired contracts**.
5. **Optional:** View a previous version of the contract.
   a. Select the contract from the list.
   b. In the **Contract History** related list, select a date in the **Contract Starts** column to view the earlier version.

Modify a contract record

After a contract record is created, you can change the end date, parent contract, and contract model.

Before you begin

Role required: sn_lg_cnt.contract_fulfiller

About this task

If changes are made to a contract end date or its terms and conditions, a copy of the contract is automatically saved and placed in contract history.

Procedure

1. Navigate to your workspace.
2. Open the contract request.
3. Select a contract.
4. **Optional:** Modify the contract end date.
   a. In the **End date** field, select the Show End date calendar icon ( ).
   b. In the calendar pop-up, select a date.
   c. Select **OK**.
5. **Optional:** Modify the parent contract.
   a. In the **Parent contract** field, select the Search for Record icon ( ).
   b. In the Parent contract pop-up list, select a contract record to assign as the parent contract.
6. **Optional:** Change the contract model.
   a. In the **Contract model** field, select the Search for Record icon ( ).
   b. In the Contract model pop-up list, select the model.
7. Select **Save**.

Configure fields in contract template to display correct sys_id value in contract documents

As a contract configurator, update an advanced script to print the correct display value for sys_id variables in the generated contract document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_cm_core.contract_config

About this task
Because the script for mapping variables using the Microsoft Word add-in for ServiceNow Contracts uses the `toString()` function for the sys_id variable, its display value is not replaced properly in generated contract documents,

Procedure
1. Navigate to **All** > **Contracts Core** > **Contract Administration** > **Contract Templates**.
2. Open a contract template.
3. Navigate to the Template mapping related list.
4. Select the field for which the advanced script is enabled and the display value is not shown properly.
   Field details are displayed along with the advanced script.
5. In the script, replace the occurrences of `toString()` with `getDisplayValue()`.
6. Select **Update**.

Modify assignment rule for contract requests

As a contracts configurator modify the assignment rule available in the base system for any changes required in the user or group to whom the contract request should be assigned.

Before you begin
Role required: sn_cm_core.contract_config

Procedure
1. Navigate to **All** > **System Policy** > **Rules** > **Assignment**.
2. Open the assignment rule Default assignment Group for CLM request
3. On the form, modify the fields.

Assignment Rule form

Field	Description
Name	Unique name of the assignment rule.
Active	Option for marking the assignment rule active. The contract request is assigned to a group or user based on active assignment rules only.
Applies To tab	
Table	Name of the table to which the assignment rule applies.
Conditions	Conditions under which the assignment rule applies.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For example, to apply a rule when a contract request is submitted for Own type paper, you would enter the following condition. **[Type of paper][is][Own paper]**
Assign To tab	
User	User to whom the contract request is assigned.
Group	User group to which the contract request is assigned.

4. Click **Submit**.

Platform Analytics Solutions for Contract Management Pro

The Contracts Dashboard in Contract Management Pro is an analytics and reporting solution that enables you to make data-driven decisions through insights and trends derived from contract request data.

Required roles

The following roles and tasks are associated with Contracts Dashboard:

- ServiceNow AI Platform administrator (admin): Install and activate this solution and make any necessary changes to system properties.
- Performance Analytics administrator (pa_admin): Review the indicators, breakdowns, widgets, and dashboards. Set up and start data collection. Share the dashboards with appropriate stakeholders.

Activate Analytics Pack for Contract Management Pro

You can activate the Analytics Pack for Contract Management Pro plugin (com.sn_cm_pa) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin
Activate the full, subscription version of Performance Analytics on the instance where you are activating this Platform Analytics Solution. You can activate Performance Analytics on a non-production instance without purchasing a subscription. For more information, see Activate your Performance Analytics subscription.

Review the Analytics Pack for Contract Management Pro application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Note:

Before purchasing a subscription, you can evaluate the feature on a non-production instance without charge by requesting it from the Now Support Service Catalog.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Roles and scheduled jobs items are installed with Analytics Pack for Contract Management Pro.

For more information, see Components installed with Analytics Pack for Contract Management Pro.

Procedure

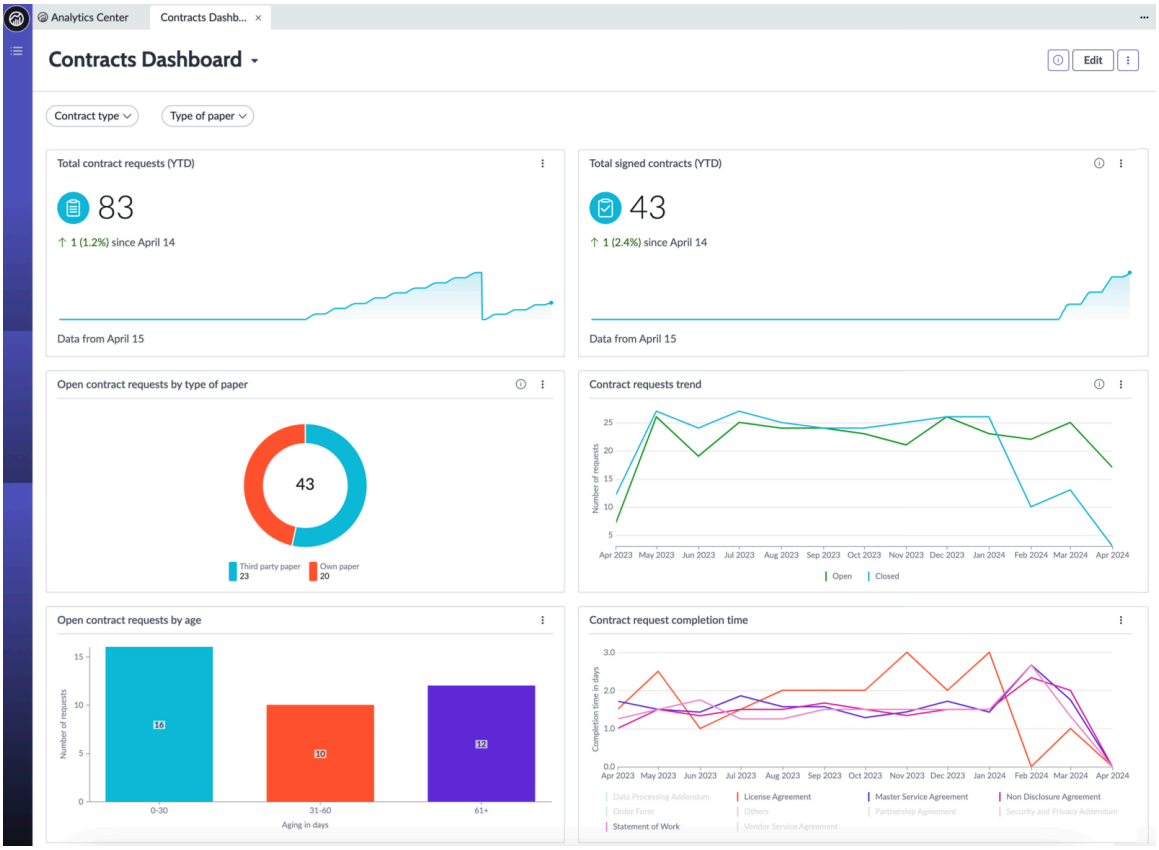
1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Analytics Pack for Contract Management Pro plugin (com.sn_cm_pa) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Using the Contracts Dashboard



With Contracts Dashboard, you can make data-driven decisions by analyzing the trends and insights derived from the contract request data.

On the dashboard, you can analyze the contract request trends, compare data, and drill down into each report to view key performance indicator (KPI) details.

For more information on working with KPI details, see Examining indicators with KPI Details.

Contracts Dashboard

Required ServiceNow AI Platform roles

- Contract Report Publisher [sn_cm_core.contract_report_publisher]: Needed to edit and publish reports related to contract requests and signed contracts data.
- Contract Report Viewer [sn_cm_core.contract_report_viewer]: Needed to view reports related to contract requests and signed contracts data.
- Contract PA Admin [sn_cm_pa.pa_admin]: Needed to activate and configure the Analytics Pack for Contract Management Pro.

Access the Contracts Dashboard

To open the Contracts Dashboard, navigate to **All** > **Contracts Core** > **Contracts Dashboard**.

Using data in Contracts Dashboard

General counsels can make data-driven decisions through insights into the contract requests data with the following metrics:

- Number of contract requests created, and contracts signed so far this year along with a comparison to the data collected during the previous run of scheduled jobs.
- Number of open contract requests by type of paper: own paper and third-party paper.
- Monthly trend of opened and closed contract requests in the last 12 months.
- Number of contract requests by age range.
- Monthly trend of completion time for various contract types in the last 12 months.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Indicators

YTD Contract request

Number of contract requests that have been created so far this year.

YTD Signed Contracts

Number of contracts that have been signed so far this year.

Average contract request completion time per contract type

Monthly trend of the average completion time of contract requests by various contract types.

Contract Request Age

Number of contract requests that have been open for the following periods: 0-30 days, 31-60 days, and 61+ days.

Breakdowns

- Contract Type
- Contract type of paper
- Contract Request Age

Reports

Reports on Contracts Dashboard

Title	Type	Source table	Description
Total contract requests (YTD)	Score 42	Contract Request [sn_cm_core_contract_request]	The number of contract requests created so far this year and the trend for contract request data. This report compares the latest data with the data collected during the previous run of scheduled jobs. It displays the following information: • Increase or decrease in the number of contract requests • Percentage of the increase or decrease • Date when the data was last collected
Total signed contracts (YTD)	Score 42	Contract Request Repository [sn_cm_core_contract_request_m2m_contract_repository]	Number of signed contracts so far this year and the trend for signed contracts.

AI limitations

This application uses artificial intelligence (AI) and machine learning, which are rapidly evolving fields of study that generate predictions based on patterns in data. As a result, this application may not always produce accurate, complete, or appropriate information. Further, there is no guarantee that this application has been fully trained or tested for your use case. To mitigate these issues, it is your responsibility to test and evaluate your use of this application for accuracy, harm, and appropriateness for your use case, employ human oversight of output, and refrain from relying solely on AI-generated outputs for decision-making purposes. This is especially important if you choose to deploy this application in areas with consequential impacts such as healthcare, finance, legal, employment, security, or infrastructure. You agree to abide by ServiceNow's AI Acceptable Use Policy, which may be updated by ServiceNow.

Data processing

This application requires data to be transferred from ServiceNow customers' individual instances to a centralized ServiceNow environment, which may be located in a different data center region from the one where your instance is, and potentially to a third-party cloud provider, such as Microsoft Azure. This data is handled per ServiceNow's internal policies and procedures, including our policies available through our CORE Compliance Portal.

Data collection

ServiceNow collects and uses the inputs, outputs, and edits to outputs of this application to develop and improve ServiceNow technologies including ServiceNow models and AI products. In addition, this application will collect all text from the submitted contract document. Customers can opt out of future data collection at any time, as described in the Now Assist Opt-Out page.

For more information, see the Now Assist documentation.

Exploring Now Assist in Contract Management

With the Now Assist in Contract Management application, you can use the generative AI capabilities to identify the non-standard and missing clauses in contracts, which lead to a quicker and more efficient review process for your organization. You can also save time by reviewing the extracted metadata from the signed contracts and automatically adding the information to the contract repository.

Overview of Now Assist in Contract Management

The following generative AI capabilities are available to a contract fulfiller:

- Extract the metadata from a signed contract to review and add the information to the mapped fields in the contract repository.
- Analyze the contract documents for non-standard and missing clauses by using the suggestions that are generated by the Now Assist application to minimize deviations and reduce turnaround time.

Skills

Contract metadata extraction

Extracts metadata from a signed contract that is attached in a contract repository record and displays the information on the Document Intelligence interface.

For more information on activating the skill, see Configure Now Assist in Contract Management. For more information on extracting the metadata from a contract, see Metadata extraction using Now Assist in Contract Management.

Contract analysis

Reviews the contract document for non-standard and missing clauses.

For more information on activating the skill, see Configure Now Assist in Contract Management. For more information on contract analysis, see Contract analysis using Now Assist in Contract Management.

© 2026 ServiceNow, Inc. All rights reserved.

Now Assist in Contract Management users

Users

User	Description
Administrator [sn_cm_gen_ai.ai_contract_admin]	Provides administrative access to Now Assist in Contract Management. Installs the Now Assist in Contract Management plugin and activates the required skills.
Configurator [sn_cm_gen_ai.ai_contract_config]	Configures the use-case mappings for the Now Assist in Contract Management application.
Fulfiller [sn_cm_gen_ai.ai_contract_fulfiller]	Uses the Now Assist in Contract Management capabilities to analyze the contract documents for deviations and to extract the metadata from signed contracts.

Metadata extraction workflow

The following workflow shows how different users work together to configure and extract the metadata from the contract by using the Now Assist in Contract Management application.

1. The contract AI administrator installs the Now Assist in Contract Management plugin (sn_cm_gen_ai).
2. The administrator activates the Contract metadata extraction skill.
3. In the system properties, the administrator specifies whether the metadata extraction should be automatically or manually initiated.
4. In the use-case mappings configuration, the contract AI configurator specifies the tables for the use case and defines the conditions when the use case would be applicable for extracting metadata.
5. When a signed contract is attached to a contract repository record, a contract manager with the sn_cm_gen_ai.ai_contract_fulfiller role initiates the metadata extraction process.

   The system properties can also be configured to automatically initiate the metadata extraction process when the contract repository record is created. For more information, see Configure system properties for metadata extraction.
6. The contract manager receives a notification when the metadata extraction is successfully completed.

   Note:
   The *Metadata extraction - Completed* notification isn't active by default.
7. The contract manager selects the **Review extracted metadata** button to view the extracted information in the DocIntel viewer.
8. The contract manager submits the verified information to update it in the contract repository.
9. When the extraction process is completed, the **Extraction results** tab opens on the contract repository record and displays the status of the processed information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contract analysis workflow

The following sample end-to-end workflow shows how different users work together to configure and review the contract by using the Now Assist in Contract Management application.

1. The contract AI administrator installs the Now Assist in Contract Management application.
2. The contract AI administrator assigns users to the roles of contract AI fulfiller and contract AI admin.
3. The contract AI administrator activates the Contract review skill.
4. The contract AI configurator uses the non-disclosure agreement (NDA) playbook as a use case that is already available in the base system.
5. The contract AI configurator maps the field group to the clause library, maps the field results to the expected responses, and then maps the use case.
6. The contract AI fulfiller initiates the contract analysis by using the Now Assist in Contract Management application
7. The Now Assist in Contract Management application analyzes the contract and identifies the non-standard and missing clauses.
8. The contract AI fulfiller reviews the analysis and takes the action to use or ignore the clauses.
9. The contract AI fulfiller can also add the missing clauses from the clause library.
10. The contract AI fulfiller completes the review task.

Now Assist in Contract Management benefits

Now Assist in Contract Management benefits

Benefit	Key feature	Role
Automatically extract the key information from the signed contracts and update the contract repository, which improves accuracy and efficiency.	Metadata Extraction	Now Assist contract fulfiller
Minimize the deviations and reduce the turnaround time by identifying non-standard and missing clauses from the contract document.	Contract analysis	Now Assist contract fulfiller

What to explore next

To learn more about configuring and using the Now Assist in Contract Management application, see the following topics:

- Configure Now Assist in Contract Management
- Using Now Assist in Contract Management

Configure Now Assist in Contract Management

As an AI administrator for contracts, you can configure Now Assist in Contract Management so that contract fulfillers can use the Now Assist capabilities while working on contract documents.

Before you begin

Ensure that Contract Management Pro (sn_cm_pro) and Contract Workspace (sn_cm_workspace) are installed before installing Now Assist in Contract Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

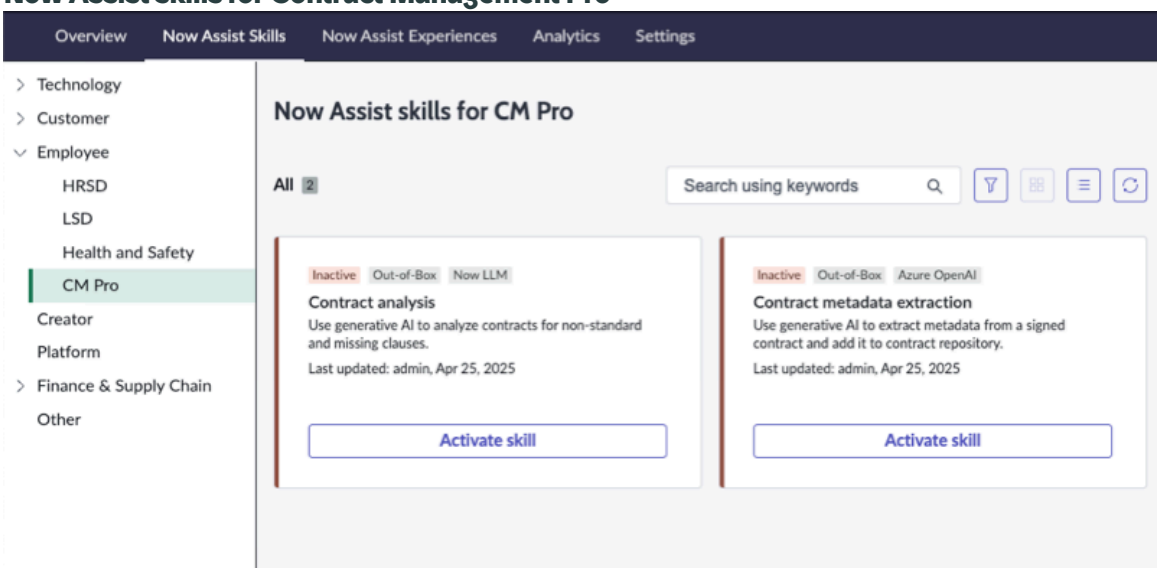
Ensure that the application is in Global or Now Assist in Contract Management scope.

Role required: sn_cm_gen_ai.ai_contract_admin

About this task

Use the Now Assist Admin console to configure Now Assist in Contract Management. The console contains everything that you need to configure the Now Assist skills. For more information, see Now Assist Admin console.

The following table lists the feature and skills available for Contract Management Pro in the Now Assist Admin console.



Now Assist in Contract Management features and skills

Features	Skills
Contract Management Pro	• Contract metadata extraction • Contract analysis

Procedure

1. Install the Now Assist in Contract Management plugin (sn_cm_gen_ai).
   - For information about the plugin installation process, see Install Now Assist plugins.
   - For information about the plugin dependencies and plugin activation order, see Application information.
2. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
3. Navigate to **Employee** > **CM Pro**.
4. On the tile for your skill, select **Activate skill**.

Now Assist skills for Contract Management Pro

5. In the skill guided setup, configure the use cases and other mappings for the skill.
   For more information on configuring contract metadata extraction, see Configuring contract metadata extraction.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information on configuring contract analysis, see Configuring contract analysis.

6. In the Define access page, select the roles to specify who can access the skills.
   - If custom roles were added before upgrading to Now Assist in Contract Management Xanadu patch 10, they are updated automatically by a script and appear on the Define access page.
   - If custom roles were not added, the default role sn_cm_gen_ai.ai_contract_fulfiller, sn_cm_gen_ai.ai_contract_admin, and sn_cm_gen_ai.ai_contract_config automatically appear on the Define access page.
   - If new roles are created after the upgrade, add them manually on the Define access page.
7. In the Review and activate page, select **Activate**.

Result
The Now Assist skill is activated for Contract Management Pro.

You can update or deactivate the skill by selecting **Edit** and **Deactivate** the options menu icon (⋮) of the active skill. For more information, see Deactivate skills for Now Assist in Contract Management.

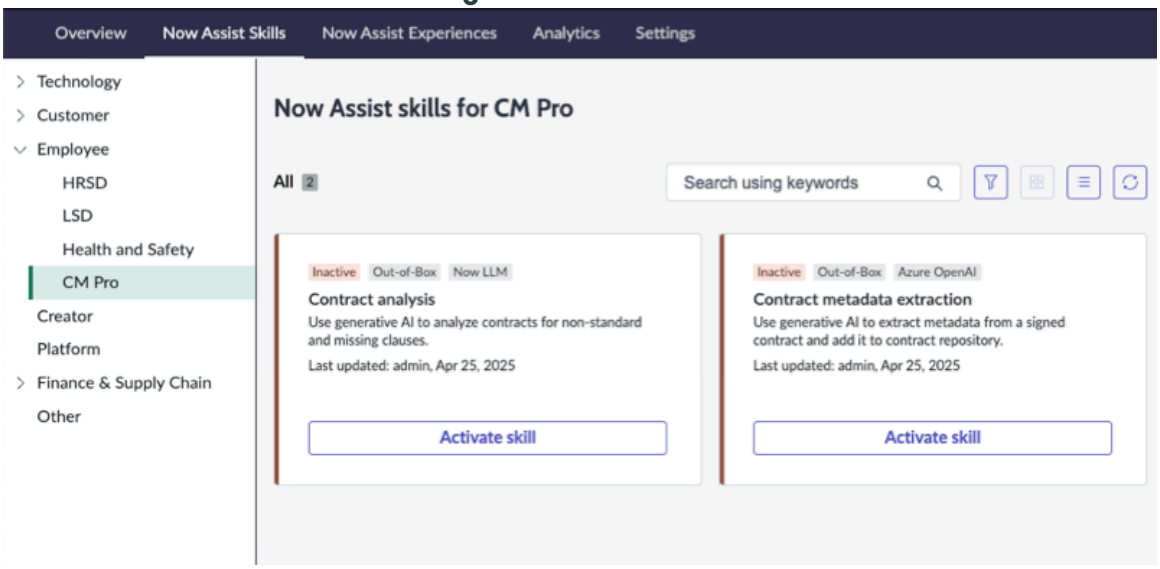
Configuring contract metadata extraction

Configure system properties and use cases for metadata extraction so that a contract manager can use Now Assist to extract metadata from a contract and add the extracted information to the contract repository.

Create use cases for contract metadata extraction

Create a use case for contract metadata extraction to define the information that you want Now Assist to detect in a document.

Before you begin
Role required: sn_cm_gen_ai.ai_contract_config, sn_cm_contract_config



About this task
The CM Pro - Contract Metadata Extraction use case is available with the Now Assist in Contract Management base system. This use case is not editable. For more information about the various fields in the CM Pro - Contract Metadata Extraction use case, see Contract metadata extraction use cases.

Note:
If you create your own use case or customize a copy of an available use case, be sure to test it thoroughly to ensure accuracy.

Procedure
1. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
2. Navigate to **Employee** > **CM Pro**.
3. On the tile for your skill, select **Activate skill**.

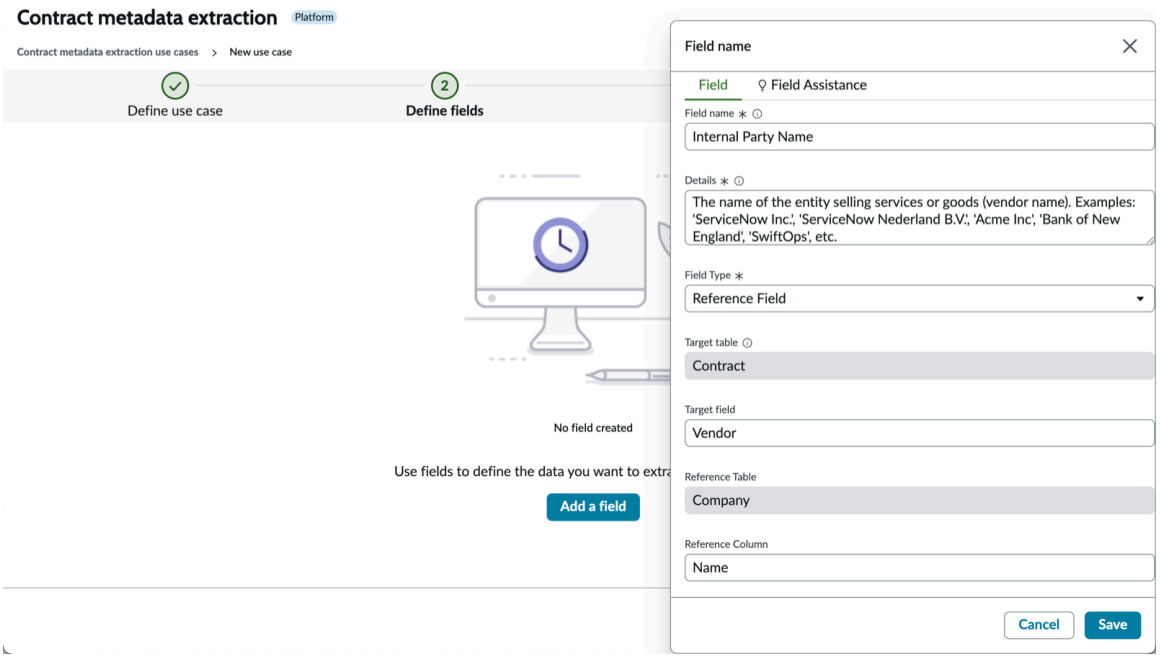
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist skills for Contract Management Pro

4. On the General details page, view the skill details and select **Save and continue**.
5. In the Contract metadata extraction use cases page, select **New use case**.
6. In the Define use case page, add the use case details.
   a. In the **Use case name** field, enter a unique name for the use case.
   b. In the **Target table** field, select the table where extracted information is stored.
   c. Select **Save and continue**.
7. In the Define fields page, select **Add a field** to add fields for the use case.

   a. In the New field window, select **Field**.

   b. Enter details for the new field.



Field form

Field	Description
Field name	Name for the field. The field name appears in the Document Intelligence workspace.
Details	Details of the field, with example. Now Assist uses this information to identify the correct information that is extracted from the document. For example, "The contract number or the number of the reference contract. Examples: 'AGR-2023-0042', 'CON2039739', 'BV-22122KEY'."
Field type	Type of the extracted information. For example, a date field, a text field, a reference field or a number field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Target table	Table that stores the extracted information. The field is automatically set to the value that is selected for the use case target table.
Target field **Note:** This field appears only when Numbers, Date, or Text field is selected on the **Field type** field.	Field on the target table that is linked to this field. The target field will be updated with the extracted information.
Reference table **Note:** This field appears only when Reference field is selected on the **Field type** field.	Indicates the reference table name.
Reference column	Column in the reference table which will be used to display options for a reference field in a contract while reviewing the extracted metadata.

Field page for contract metadata extraction

c. **Optional:** Turn on the toggle switch for **Create multiple fields** to create multiple fields without closing the window.

d. Select **Save**.

Note:
After adding fields, be sure to test them thoroughly to ensure accuracy.

8. Select **Save and Continue**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. **Optional:** Upload a document to test how the contract metadata extraction skill works with the new use case.

   a. Select **Test a new document**.

   b. Upload a document from a record or from the device.
   You can test documents that are in .pdf format.

   c. Select **Continue**.
   The metadata extraction results for the uploaded document is displayed on the side panel.

   (Optional) Upload and test another document by selecting **Test a new document**.

   d. **Optional:** Add new fields or update the existing fields by selecting **Back**.

   e. Select **Save and continue** to proceed.

10. Select **Complete setup**.

Result

The use case is created for the Contract metadata extraction skill. Now Assist uses the use case to extract metadata from signed contract.

What to do next

Map a use case for contract metadata extraction

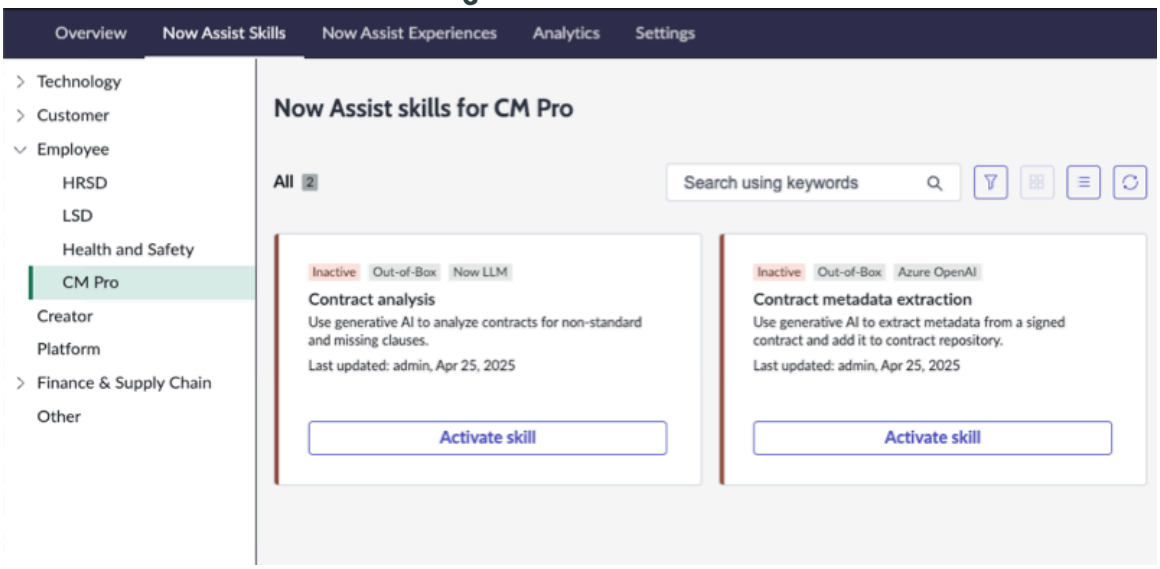
Related topics

Contract metadata extraction use cases

Map a use case for contract metadata extraction

Map a use case to specific tables, and define conditions to apply the use case for metadata extraction.

Before you begin



Role required: sn_cm_gen_ai.ai_contract_config, sn_cm_contract_config

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
2. Navigate to **Employee** > **CM Pro**.
3. On the tile for your skill, select **Activate skill**.

Now Assist skills for Contract Management Pro

4. In the General details page, view the skill details and select **Save and continue**.
5. In the Use case page, select **Save and continue**.
   For more information on creating a use case, see Create use cases for contract metadata extraction.
6. In the Use case mappings page, select **New**.
7. In the Create new use case mapping form, fill in the fields.

Use Case mapping form

Field	Description
Name	Unique name of the use case mapping.
Use case	The use case used to extract metadata from a signed contract. **Note:** Only active use cases for contract metadata extraction are displayed in the list. The **CM Pro - Contract Metadata Extraction** use case is available with the Now Assist in Contract Management base system.
Contract type	The contract type for which the use case will apply. **Note:** Only active contract types are displayed in the list.
Order	Order in which the use case will apply. If multiple use cases meet the same conditions, the use case with the lowest order number is applied first.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Request table	The parent table from which the contract request is created.
Contract repository table	The contract repository table where the extracted metadata will be added.
Request conditions	Conditions under which the use case applies on the request table. The field appears only when the request table is selected. For more information on using the condition builder, see Create a condition statement using the condition builder.
Repository conditions	Conditions under which the use case stores the extracted information on the repository table. The field appears only when the contract repository table is selected. For more information on using the condition builder, see Create a condition statement using the condition builder.

8. Select **Save**.

Configure system properties for metadata extraction

Configure system properties to specify whether the metadata extraction should be automatically initiated or manually.

About this task

The sn_cm_gen_ai.cmpro_initiate_metadata_extraction system property defines how the metadata extraction process is initiated on a contract repository record. By default, the system property is set to initiate the metadata extraction process manually.

Before you begin

Role required: sn_cm_gen_ai.ai_contract_admin

Procedure

1. Navigate to the **All** menu and enter `sys_properties.list` in the navigation filter.
   The System Properties [sys_properties] table appears.
2. In the **Name** column, search for `sn_cm_gen_ai.cmpro_initiate_metadata_extraction`.
3. Select the *`sn_cm_gen_ai.cmpro_initiate_metadata_extraction`* property.
4. Update the **Value** field.
   - To set manual initiation of the metadata extraction process, enter `manual`.
   - To set automatic initiation of the metadata extraction process, enter `automated`.

   The default value is **manual**.
5. Select **Update**.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable notification for metadata extraction

Enable the notification for metadata extraction to receive email notifications when metadata extraction is completed.

About this task

The *Metadata extraction - Completed* notification is not active by default.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Notification** > **Email** > **Notifications**.
2. In the **Name** column, search for `metadata`.
3. Select *Metadata extraction - Completed*.
4. On the Notification form, select the **Active** check box.
5. Select **Update**.

What to do next

Configure the workspace URL for metadata extraction notifications

Configure the workspace URL for metadata extraction notifications

Configure an extension point to update the workspace URL in email notifications, so that users can navigate to the correct workspace and view the extracted metadata.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. In the **API Name** field, search for `sn_cm_gen_ai.PopulateUrlForMetadataExtractionRequestRecordEXT`.
3. Select the record.
4. Select the **Create implementation** related link.
5. On the Script Include form, fill in the fields.

   For a description of the field values, see Scripted Extension Point form fields.

6. In the **Script** field, update the script to define the parent record's table and specify the workspace URL to be included in the email notifications.
   - In the `appliesTo` function, add the table name of the parent record.
   - In the `getWorkspaceUrl` function, add the workspace URL.
7. Select **Update**.

Configure an extension point to add contract metadata

Update the script in an extension point to specify fields in a related contract repository table where you want to add the extracted information for unmapped fields of a metadata extraction use case.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. In the **API Name** field, search for `sn_cm_gen_ai.NowAssistUpdateMetadataExtractedValuesExt`.
3. Select the record.
4. Select the **Create implementation** related link.
5. On the Script Include form, fill in the fields.

   For a description of the field values, see Scripted Extension Point form fields.
6. In the **Script** field, update the script to specify the contract repository related table and the field mapping
   - In the `canHandle` function, add the request table name where you want to update the extracted information.
   - In the `updateContractRepositoryFields` function, add a script to update the fields. The extracted metadata will be fetched from the `retrievedFieldsData` parameter.
7. Select **Update**.

Configuring contract analysis

Configure use cases with associated field groups and fields, and map them to clauses and expected responses. Now Assist uses the applicable use case to analyze a contract document and identify non-standard and missing clauses.

Create use cases for contract analysis

Create a use case for contract analysis that is used by Now Assist to identify non-standard and missing clauses in a contract document.

Before you begin

Role required: sn_cm_gen_ai.ai_contract_config, sn_cm_contract_config

About this task

The contract analysis use case contains field groups and their associated fields.

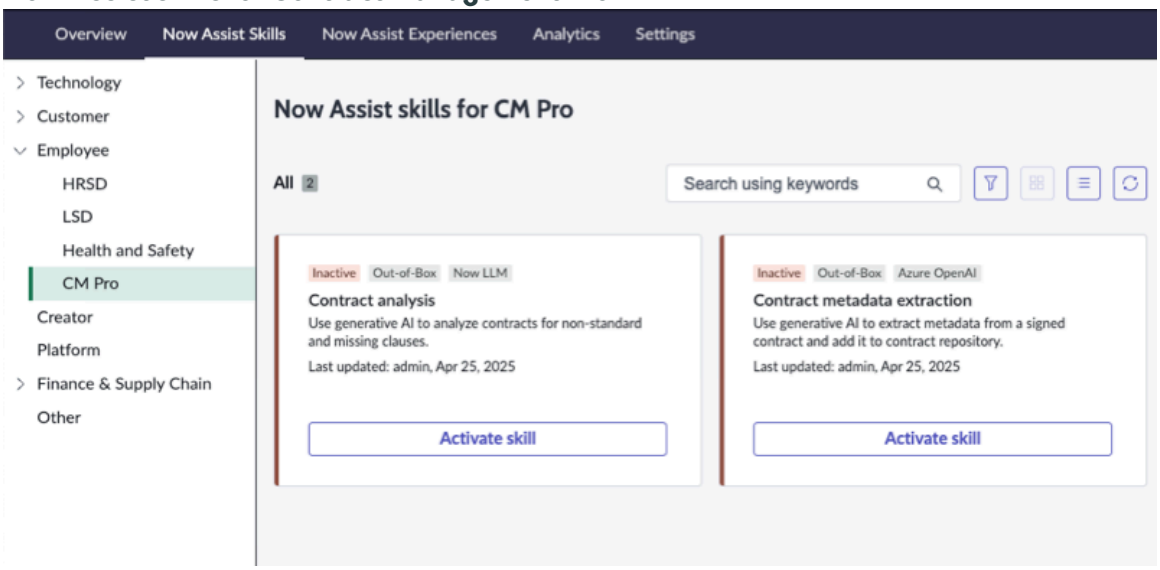
Field groups represent the clauses that are used in the contract document. Field groups are linked to clause variations of a clause library. Now Assist uses the mapped clause content to display suggestions for missing or non-standard clause.

Fields are the prompt questions added for a field group. Fields are mapped to an expected response. Now Assist executes these fields (prompt questions) on a contract document to identify the non-standard clauses.

When creating a use case, add a field group, and then define the fields within that field group to ensure that the fields are linked to the field group.

In Contract Management Pro, the CM Pro - Contract Analysis use case is available in the base system. This use case is not editable.

Note:
If you create your own use case or customize a copy of an available use case, be sure to test it thoroughly to ensure accuracy.



For more information on the computation of non-standard and missing clauses, see the KB1704731 article in the Now Support Knowledge Base.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. **Optional:** Upload a document to test how the contract analysis skill works with the new use case.

   a. Select **Test a new document**.

   b. Upload a document from a record or from the device.
   You can test documents in .pdf or .docx format.

   c. Select **Continue**.
   The contract analysis results for the uploaded document is displayed on the side panel.

   (Optional) To upload and test another document, select **Test a new document**.

   d. **Optional:** Add new fields or update the existing fields by selecting **Back**.

   e. Proceed by selecting **Save and continue**.

10. In the Review and activate page, select **Complete setup**.

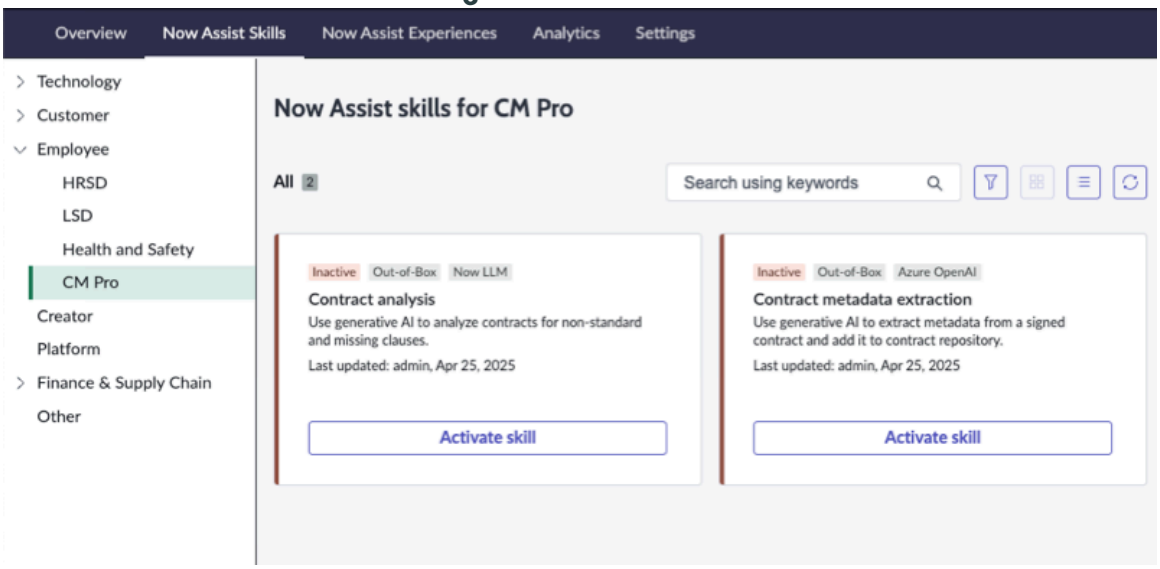
Result
The use case for Contract analysis skill is created.

What to do next
Map a field group to a clause

Map a field group to a clause

Map field groups of a use case to clause variations of a clause library. Now Assist uses the mapped clause content to display suggestions for a missing or non-standard clause.

Before you begin
Ensure that you have active clauses in the clause library.



Role required: sn_cm_gen_ai.ai_contract_config, sn_cm_contract_config

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
2. Navigate to **Employee** > **CM Pro**.
3. On the tile for your skill, select **Activate skill**.

5. In the Use case page, select **Save and continue**.
   For more information on creating a use case, see Create use cases for contract analysis.
6. In the Clause mappings page, select **Save and continue**.
   For more information on mapping a field group to a clause, see Map a field group to a clause.
7. In the Expected response mappings page, select **New response**.
8. On the form, fill in the fields.

Expected Response Mappings form

Field	Description
Use case	Use case that the field is associated with. **Note:** Only active use cases for contract analysis are displayed in the list.
Request table	Table that the contract analysis is executed from.
Field	Field (question prompt) that is mapped to the expected response. **Note:** Only active fields are displayed in the list.
Expected response	Expected response: ○ Yes: When Now Assist returns the same response as expected, the system considers the field as standard. ○ No: When Now Assist returns a response that differs from the expected answer, the system considers the field as non-standard. All such fields within a field group are categorized as non-standard and are displayed in transaction results with AI-generated comments in both the workspace and Word Add-in.
Applies when	Conditional fields that are based on an expected response. **Note:** If this condition fails, the expected answer isn't considered. For more information on using the condition builder, see Create a condition statement using the condition builder.

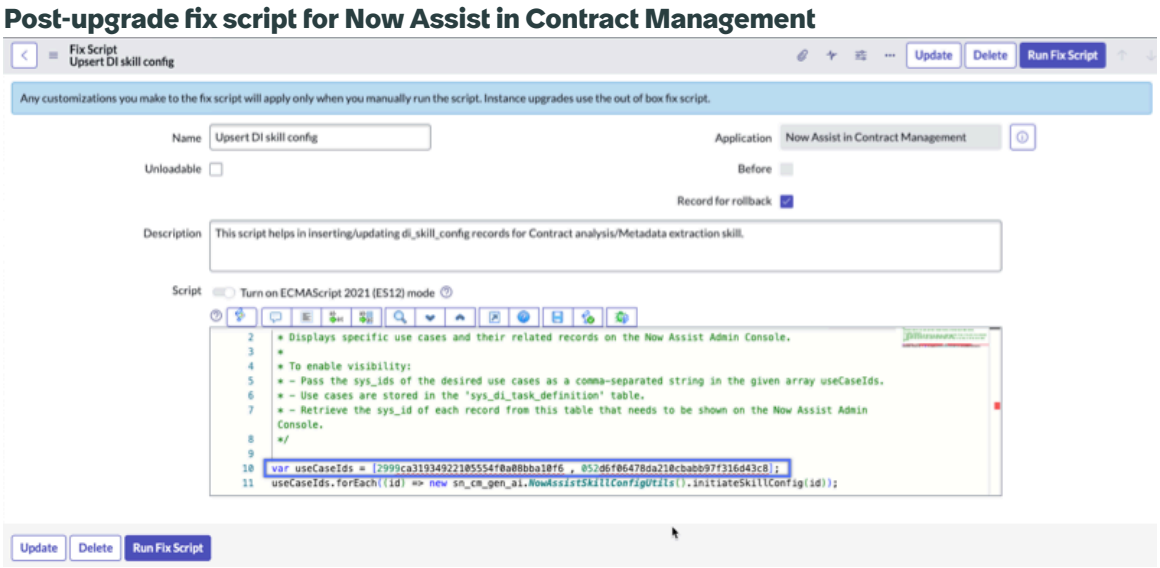
Post-upgrade steps for Now Assist in Contract Management

If you are upgrading to Now Assist in Contract Management starting with Xanadu (Patch 9) from a previous version and you have customized use cases, run a fix script to migrate the existing data to the Now Assist Admin console.



Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. In the **Name** field, search for `Upsert DI skill config`.
3. In the script, add the use case ids that you want to migrate to the Now Assist Admin console.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Run Fix Script**.

Configuring agentic workflows in Now Assist in Contract Management

Configure agentic workflows in Now Assist in Contract Management so that contract fulfillers can use the AI agents to perform specific tasks autonomously.

Complete the following steps to configure agentic workflows in Contract Management Pro.

1. Install the Now Assist in Contract Management plugin (sn_cm_gen_ai).
   - For information about the plugin installation process, see Install Now Assist plugins.
   - For information about the plugin dependencies and plugin activation order, see Application information.
2. Ensure Now Assist panel is turned on. For more information, see Turn on the Now Assist panel.
3. Ensure **Now Assist Panel - Platform (default)** assistant in the CI Admin Experience is turned on. For more information, see Manage LLM virtual agents on the Assistants screen.
4. Activate business rules for the agentic workflow to run the AI agents autonomously. For more information, see Activate business rules for the Manage contract repository agentic workflow.
5. If you want to modify an agentic workflow, duplicate it and then update it.

   For more information see:
   - Duplicate an agentic workflow
   - Create an agentic workflow
   - Modify an agentic workflow
6. If you have customized the Manage contract repository agentic workflow, update the script include to run it autonomously.

   For more information, see Update the contracts AI agents handler script include.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Configure system properties to set the notice period for the Manage contract repository agentic workflow that will be used when the contract renewal notice period and termination of contract renewal notice period are not available in a contract.

   For more information, see Set the default notice period for the Manage contract repository agentic workflow.

Activate business rules for the Manage contract repository agentic workflow

Activate the Agentic AI - Set reminders for contract and the Update Agent Set reminders for contract business rules to autonomously run the Manage contract repository agentic workflow.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Business Rules**.
   The Business Rules table appears.
2. In the Name column, search for `Agentic AI - Set reminders for contract`.
3. Open the *`Agentic AI - Set reminders for contract`* rule.
4. Select the **Active** check box.
5. Select **Update**.
   The Business Rules table appears.
6. In the Name column, search for `Update Agent Set reminders for contract`.
7. Open the *`Update Agent Set reminders for contract`* rule.
8. Select the **Active** check box.
9. Select **Update**.

Result
The Manage contract repository agentic workflow is activated for Now Assist in Contract Management.

Set the default notice period for the Manage contract repository agentic workflow

Configure system properties to set the default notice period for the Manage contract repository agentic workflow.

Before you begin
Role required: sn_cm_core.contract_admin or sn_cm_core.contract_config

About this task
When the contract renewal notice period and termination of contract renewal notice period are not available in a contract, the Manage contract repository agentic workflow uses the default notice period along with other contract details to set the contract milestone reminders.

Note:
The default notice period in the base system is 60 days.

Procedure

1. Navigate to the **All** menu and enter `sys_properties.list` in the navigation filter.
   The System Properties [sys_properties] table appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. In the Name column, search for `sn_cm_gen_ai.contract_notice_period_in_days`.
3. Select the *`sn_cm_gen_ai.contract_notice_period_in_days`* property.
4. Update the **Value** field to set the default notice period.
   The default value is **60**.
5. Select **Update**.

Update the contracts AI agents handler script include

Update the ContractsAIAgentsHelper script include to add the sys_id of a customized Manage contract repository agentic workflow to run the agentic workflow autonomously.

Before you begin
Role required: admin

About this task
When you duplicate the Manage contract repository agentic workflow and create a customized agentic workflow, you must add the sys_id of the new agentic workflow in the ContractsAIAgentsHelper script include to run the agentic workflow autonomously.

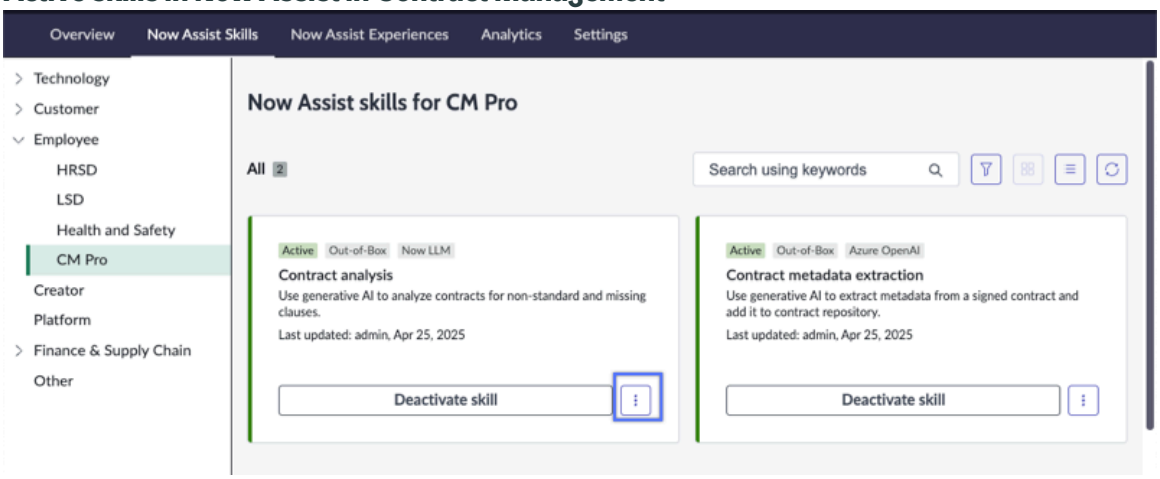
Procedure
1. Navigate to **All** > **System Definition** > **Script Includes**.
   The Script Includes table appears.
2. In the Name column, search for `ContractsAIAgentsHelperSNC`.
3. Open *`ContractsAIAgentsHelperSNC`*.
4. In the **Script** box, copy the `startAiAgentConversation()` method.
5. Navigate back to the Script Include table.
6. In the Name column, search for `ContractsAIAgentsHelper`.
7. Open *`ContractsAIAgentsHelper`*.
8. In the **Script** box, paste the `startAiAgentConversation()` method.
9. In usecaseId, add the sys_id of the new agentic workflow.
   You can copy the sys_id of the new agentic workflow from the Use case [sn_aia_usecase] table.
10. Select **Update**.

Managing skills for Now Assist in Contract Management

Update the Now Assist skills by modifying, deactivating, or deleting use cases, their associated fields, and other mappings.

Manage use cases for Now Assist in Contract Management

Manage use cases for Now Assist in Contract Management by updating the fields, deactivating them when not in use, deleting when no longer required, or copying existing use cases to create new ones.



Before you begin
Role required: sn_cm_gen_ai.ai_contract_config, sn_cm_contract_config

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
2. Navigate to **Employee** > **CM Pro**.
3. On the tile of your activated skill that you want to modify, select **Edit** in the options menu (⋮).

Active skills in Now Assist in Contract Management

4. In the skill guided setup, select **Use cases**.
5. Select the actions icon ⋮ on the use case that you want to update, delete, deactivate, or copy.

Edit

Modify the use case by adding new fields, or updating, deactivating, or deleting existing fields.

For more information on the **Field** form, see and .

The base system use cases, **CM Pro - Contract Metadata Extraction** for contract metadata extraction and **CM Pro - Contract Analysis** for contract analysis cannot be edited, deleted, or deactivated. To customize these use cases, make a copy of the base system use cases and update the copied versions.

> **Note:**
> If you create your own use case or customize a copy of an available use case, be sure to test it thoroughly to ensure accuracy. You can upload a document in the Test outputs tab to test how the contract analysis skill works with the updated use case.

Make a copy

Copy an existing use case to create a new use case with the same fields and field groups. You can edit, delete, or deactivate the fields and field groups in the new use case.

Deactivate

Deactivate a use case to temporarily make it unavailable for the skill.

The **Reactivate** option appears when a use case is deactivated. Use this option to activate a use case.

Deactivate

Deactivate a use case mapping to temporarily make it unavailable for the skill.

The **Reactivate** option appears when a use case mapping is deactivated. Use this option to activate a use case mapping.

Delete

Delete a use case mapping when it is no longer required for the skill.

Result

Now Assist uses the updated use case mapping for contract analysis or metadata extraction.

Related topics

Map a use case for contract metadata extraction

Active skills in Now Assist in Contract Management

5. In the pop-up messages, select **Deactivate**.

Result

The skill is deactivated for Now Assist in Contract Management and displayed in the **All available Contract Management Pro skills** section.

To reactivate the skill, select **Activate skill**. For more information, see Configure Now Assist in Contract Management.

Using agentic workflows in Now Assist in Contract Management

Use agentic workflows for Contract Management Pro to set contract renewal or termination reminders autonomously.

Available agentic workflows for the Contract Management Pro AI agent collection

Agentic workflow name	Description	Available AI agents
Manage contract repository	Uses AI agents to retrieve contract details such as renewal notice period, termination notice period, or auto-renewal clause information, and determine the average lead time for similar contracts to create milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals. **Note:** The agentic workflow is triggered in the Now Assist panel. It is not supported in the Virtual Agent panel.	• Extract contract metadata AI agent • Set contract milestone reminder AI agent • Calculate contract lead time AI agent • Contract record handler AI agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
By default, all agentic workflows and AI agent records are read only.

To modify an agentic workflow, you must first duplicate it, and then update it. For more information see:

- Duplicate an agentic workflow
- Create an agentic workflow
- Modify an agentic workflow

Note:
When you modify an agentic workflow, AI agents, or tools, make sure that you update all instructions accordingly.

If you have customized the Manage contract repository agentic workflow, update the script include to run it autonomously.

Looking for an AI agent?

- There might be AI agents installed with the Now Assist application that are not used in agentic workflows. To learn how to see all agents that are available on your instance, see Find AI agents.
- To find agents that might not be installed on your instance, visit the AI Agent Marketplace on the ServiceNow Store.

Manage contract repository agentic workflow

Use the Manage contract repository agentic workflow to improve productivity by autonomously creating milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals.

Manage contract repository overview

Important:

- To run the AI agents autonomously, activate business rules for the agentic workflow. For more information, see Activate business rules for the Manage contract repository agentic workflow.

  If you have customized the Manage contract repository agentic workflow, update the script include to run it autonomously. For more information, see Update the contracts AI agents handler script include.

- To view the agentic workflow in the Now Assist panel, turn on the Now Assist panel. For more information, see Turn on the Now Assist panel.

The Manage contract repository agentic workflow can help notify business owners or contract administrators about expiring contracts by automatically creating milestone reminders for the notice period of contract renewals or the notice period for termination of contract renewals. The agentic workflow uses AI agents to retrieve contract details such as the renewal notice period, termination notice period for renewals, or auto-renewal clause information, and determine the average lead time for similar contracts to create the milestone reminders.

Note:
If the renewal notice period and termination notice period are not available, it uses the default notice period. For more information, see Set the default notice period for the Manage contract repository agentic workflow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The agentic workflow for a non-self-served request is triggered when the following conditions are met:

- The contract repository record is created with a contract end date, or the end date in a contract repository is modified.
- The **Assigned to** user in the request has the now_assist_panel_user role.

The agentic workflow for a self-served request is triggered when the following conditions are met:

- The contract repository record is created with a contract end date, or the end date in a contract repository is modified.
- The group manager of the **Assignment group** has the now_assist_panel_user role.

  If there is no group manager for the **Assignment group**, one of the users in the **Assignment group** has the now_assist_panel_user role.

  If the user requested changes on the contract request, the **Assigned to** user or the group manager in the request has the now_assist_panel_user role.

Contract fulfillers and assignment group managers with the now_assist_panel_user role can view the agentic workflow conversation in the Now Assist panel.

Note:
The agentic workflow is not supported in the Virtual Agent panel.

Accessing the agentic workflow

Role required: sn_aia.admin

If your generative AI service provider is not Now LLM Service, ensure that the API connections and credentials are configured. For more information, see Configuring API credentials for generative AI capabilities.

1. Navigate to **All** > **AI Agent Studio** > **Create and manage**.
2. Select **Set reminders for contract milestones**.

AI agents used in the Manage contract repository agentic workflow

AI agents names and descriptions

Name	Description
Extract contract metadata AI agent	Extracts the renewal notice period, notice period to terminate the renewals, and auto-renewal clause information from signed contact documents.
Calculate contract lead time AI agent	Determines the average lead time for similar contracts.
Set contract milestone reminder AI agent	Creates contract renewal reminders.
Contract record handler AI agent	Retrieves the contract repository details, such as contract vendor, contract model, contract document's attachment ID, and so on from a specific contract repository record.

Using Now Assist in Contract Management

If you have the sn_cm_gen_ai.ai_contract_fulfiller role, you can review the non-standard and missing clauses in a contract and extract the information from a signed contract to add it to the contract repository by using the Now Assist in the Contract Management application.

Metadata extraction using Now Assist in Contract Management

As a contract fulfiller, use Now Assist in Contract Management Pro to extract metadata from a signed contract and add the information to the mapped fields in the contract repository.

You can review the extracted information and make necessary corrections on the Document Intelligence workspace before adding the information to the contract repository. On completion of the extraction process, the **Extraction results** tab opens on the contract repository record displaying the status of the extracted metadata.

Metadata extraction workflow for a contract fulfiller

The following end-to-end workflow shows how a contract manager extracts metadata from a signed contract and adds the information in contract repository.

1. The contract repository record is created once the signed contract is attached to the contract request.
2. A contract manager with the appropriate role (sn_cm_gen_ai.ai_contract_fulfiller) initiates metadata extraction in the contract repository record.

   The metadata extraction is automatically initiated on creation of the contract repository record, if the automatic extraction process is enabled in system properties. For more information, see Configure system properties for metadata extraction.
3. The contract manager receives a notification once the metadata extraction is successfully completed.

   Note:
   The *Metadata extraction - Completed* notification as is not active by default.
4. The contract manager selects the **Review extracted metadata** button to view the extracted information in the Document Intelligence workspace.
5. The contract manager submits the verified information to update it in the contract repository.
6. When the extraction process is completed, the **Extraction results** tab opens on the contract repository record displaying the status of the processed information.

Initiate metadata extraction from a contract

Extract metadata from a signed contract attached in a contract repository record.

About this task

Note:
You can also configure the system properties to automatically initiate the metadata extraction process once the contract repository record is created. For more information, see Configure system properties for metadata extraction.

Before you begin

Role required: sn_cm_gen_ai.ai_contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open a contract repository record where you want to extract information from a contract.

2. Select **Initiate metadata extraction**.
   A message appears stating that the metadata extraction process has been initiated. You receive an email notification when the process is completed.

   The **Review extracted metadata** button appears on initiating the metadata extraction. You can select the button after the metadata extraction is completed.

Work with extracted metadata

Review the metadata extracted from a contract and add it to the contract repository.

About this task

After the metadata extraction process is completed, you can review and modify the values of the extracted fields in the Document Intelligence workspace before submitting it to update mapped fields in the contract repository.

Before you begin

The metadata extraction process must be completed.

Role required: sn_cm_gen_ai.ai_contract_fulfiller

Procedure

1. Open a contract repository record where you want to review extracted information.

2. Select **Review extracted metadata**.
   The Document Intelligence workspace opens on a different tab displaying the extracted information.
3. Review the extracted information.
4. Enter the value in the extracted fields that are empty.
5. **Optional:** Update the extracted information for the fields with incorrect information.

   a. Select the field.

   b. For text fields, enter the correct value.

      (Optional) The value is automatically saved.

   c. For reference fields, select **Edit**, search for the correct value in the **Matched to** field, and then select **Save**.

   d. For date fields, select **Edit**, select the date, and then select **Save**.

   e. Enter a new value or select a value from the list of available options.

   f. Select **Save**.

6. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The information is submitted to be added to the mapped fields in the contract repository.

When the extraction process is completed, you can view the status of the extracted fields in the **Extraction results** related list in the contract repository record. For more information on the status of the fields, see Metadata extraction results.

Metadata extraction results

The Extraction results tab in the contract repository record displays the processed metadata and their statuses, indicating whether the metadata have been successfully added to the mapped fields in the contract repository.

Metadata extraction statuses

Status	Description
Successful	Metadata has been successfully added to the mapped field in contract repository.
Failed - Access denied	The contract fulfiller performing the metadata extraction does not have the write access to update the field in contract repository.
Failed - Field not mapped	The extracted metadata is not mapped to any contract repository field.
Failed - Invalid value	The extracted metadata does not match the expected format or type for the mapped contract repository field. For example, a contract repository field expects an integer, but the extracted value is not a numeric value.
Failed - Processing error	The extracted metadata for the mapped field violated a business rule on the repository, leading to the process being aborted.

Contract analysis using Now Assist in Contract Management

As a contract fulfiller, you can analyze your contract documents and identify non-standard or missing clauses from the Now Assist contextual side panel by using the Now Assist in the Contract Management application.

You can analyze an entire document and identify any non-standard or missing clauses by the Now Assist in Contract Management application. With Now Assist in Contract Management, your organization can save time and effort by reducing the need for manual review.

Note:
Be sure to review the AI-generated analysis for accuracy.

By using the Now Assist in Contract Management application, your organization can follow a workflow that moves through a series of states, which are displayed in the contract request. For more information on the states of the document during Now Assist analysis, see Contract analysis states in Now Assist in Contract Management.

Analyze a contract document

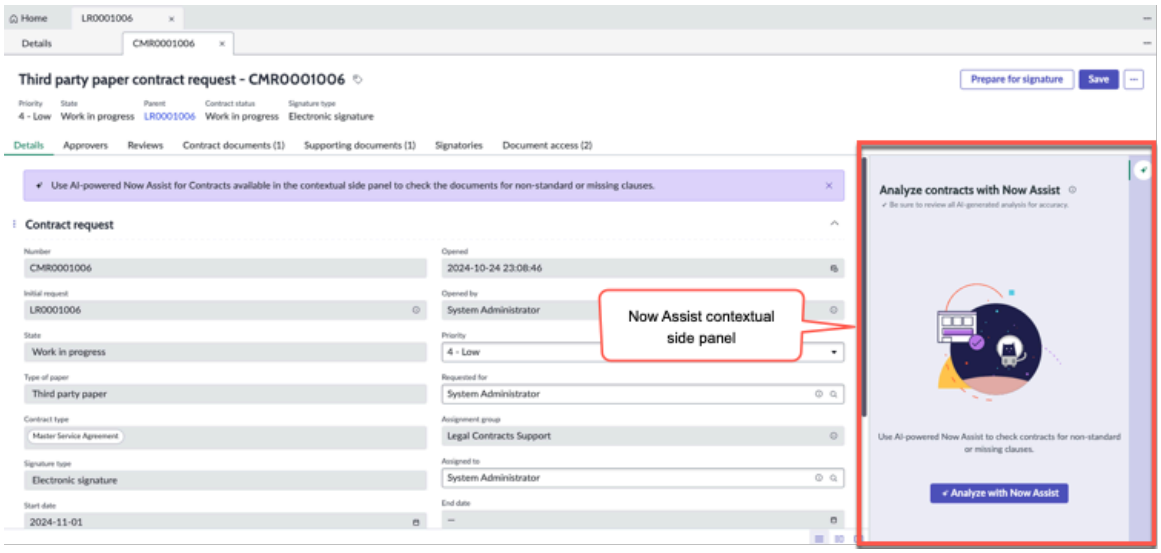
Analyze a contract document with generative AI to identify non-standard and missing clauses. You can do this task by using the Now Assist in Contract Management application.

Before you begin

Role required: sn_cm_gen_ai.ai_contract_fulfiller or sn_cm_core.contract_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



- As an assigned-to collaborator or group manager with the sn_cm_gen_ai.ai_contract_fulfiller role, you can initiate a Now Assist analysis for a contract document when the contract request is in the Work in progress state.
- The Now Assist analysis is run on the latest revision of the contract document.
- Only documents in Microsoft Word (.docx) and PDF formats can be analyzed with the Now Assist application. For more information on the document limitations, see Limitations in Document Intelligence.
- For contract documents that are in a PDF format, you can run the Now Assist analysis but you can't act on a suggestion.

Note:
Be sure to review the AI-generated analysis for accuracy.

Procedure

1. Open the contract request from the workspace that you're using.

2. If the contextual side panel isn't open, select the Now Assist Review for contracts icon ( ). You can analyze contracts in the Now Assist contextual side panel as shown in the following example.

3. On the contract request page, select **Contract documents**.
4. Submit contract documents for Now Assist analysis.
   The latest versions of the documents are automatically selected for analysis.
5. Select **Analyze contract**.
   a. The Now Assist application creates a copy of the documents and starts analysis on the new documents. The status is now Analysis in progress.
   b. A card is created for each document in analyzed contracts within the Now Assist contextual panel. The contract request state updates to the Awaiting review status.
   c. When the analysis of the documents is complete, the status changes to Ready for review. The details are listed in the following table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Status of action taken on the contract analysis suggestions

Section	Description
Pending reviews	Displays the number of deviations reported and pending for review.
Completed	Displays the number of reviewed deviations and any actions taken.

6. Select the document card to view the details of the analysis.
   The details of the contract analysis are displayed with the Now Assist comments. The comments explain the reasons for marking a clause non-standard.
7. View the analysis and select **Back** to go to the analyzed contracts in the Now Assist contextual side panel.
   You can only view the suggestions in the contextual side panel. To act on a suggestion, open a .docx Microsoft Word document and use the Microsoft Word add-in for ServiceNow Contracts. For more information, see Review the Now Assist suggestions for clause deviations.

Review the Now Assist suggestions for clause deviations

Review the Now Assist suggestions for clause deviations and take actions by using the Now Assist in Contract Management application to ensure that the clauses comply with the guidelines of the company.

Before you begin

Before you start to review a document, make sure that the document has been analyzed by the Now Assist application. For more information, see Analyze a contract document.

Role required: sn_cm_gen_ai.ai_contract_fulfiller and sn_cm_core.contract_fulfiller

About this task

A clause is a section in a contract document that outlines the guidelines of the company agreement, such as the purpose, term, or confidentiality.

- As an assigned-to collaborator or group manager with the sn_cm_gen_ai.ai_contract_fulfiller role, review and act on the suggestions from the contract analysis when the contract request is in the Work in progress state.
- The Microsoft Word add-in for ServiceNow Contracts isn't supported when the document is opened from the Google Drive. If you're using Google Drive for external storage, you must download the document from Google Drive and work on it offline.
- If you're using the Microsoft OneDrive configuration for external storage, you can work on the document online or download it to work on it offline.
- If you work on the suggestions offline, you must upload the document manually by creating a revision in the contract request. For more information, see Create a document revision.

Procedure

1. Open the contract request from the workspace that you're using.
2. Select **Contract documents**.
3. If the contextual side panel isn't open, select the Now Assist Review for contracts icon ( ).
4. From the document card, select **Open document**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following table describes the different storage options for internal or external contract downloads.

Contract document downloads for internal or external storage

Storage	Result
Internal storage	The document is downloaded into your local system.
External storage: **a.** Microsoft OneDrive **b.** Google Drive	The document opens online from the external storage.

5. **Optional:** If you configure Google Drive, download the document and open it offline to review the Now Assist suggestions.
6. Review the Now Assist suggestions.

   a. From the Microsoft Word ribbon, select the ServiceNow Contracts add-in.
   For more information, see Configure the Microsoft Word add-in for ServiceNow Contracts.

   b. Enter the legal fulfiller credentials to log in.
   The ServiceNow Contracts add-in displays the tabs as listed in the following table.

Word Add-in tabs

Section	Description
Review analysis	▪ **Pending reviews**: Lists all the non-standard clauses and missing clauses. ▪ **Completed**: Lists all the completed actions over the clause.
Clause library	Lists all the standard clauses that are active for the contract type that the document belongs to.

   c. On the **Review Analysis** tab, select **Pending reviews** to review the Now Assist suggestions.

7. Work on a clause that is tagged as non-standard.

   a. On the **Pending reviews** tab, select the clause card that is tagged as **non-standard**.
      - Microsoft Word navigates to the clause that is associated with the clause card. If it doesn't navigate you to the clause, you must manually navigate to the clause.
      - The following suggestions are displayed in the card:
        - Now Assist comment: Now Assist feedback depending on the clause and the expected responses.
        - Standard clause suggestion: Standard clause content suggestion that is.
        - Show more/less: Option to expand or collapse the text.

   b. Accept or ignore the Now Assist suggestion.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Work on a clause that is tagged as missing.
   a. On the **Pending reviews** tab, select the clause card that is tagged as non-standard.
   b. Accept or ignore the Now Assist suggestion.
9. Review the remaining non-standard and missing clauses and act as required.
   As you review the clauses and take action, they're moved to the **Completed** tab with the details of the action taken.
10. Add a clause from the clause library.
    a. Select the **Clause library** tab.
    b. Search the clause by using the clause name.

       The active clauses for the contract type that is associated with the contract document are displayed.
    c. Select the clause in the library.
    d. Place the cursor on the document where you want to add the clause.
    e. Select **Use this clause**.

    The clause is added to the document. When a valid metadata mapping exists within the clause content, the metadata gets auto-populated. Otherwise, a content control tag name is added and the metadata has to be manually updated. For more information, see Configure metadata for fields, variables, and variables sets in a contract document.
11. Mark the review as complete.
    a. Select **Mark as complete**.
    b. Select **Yes** to mark the review complete.
       You can select **Cancel** to continue working on the suggestions.

    - The review is marked as complete and the file is updated in the configured storage.
    - After the review is marked complete, you can't take any further actions even if there are pending reviews.
    - The Contract state is updated to Work in progress and the Contract status is updated to Review completed.

    Note:
    If you downloaded the document to work on it offline, you must upload the document manually by creating a revision. For more information, see Create a document revision.

Cancel a Now Assist contract analysis

Cancel a Now Assist contract analysis when it's no longer required due to a change in business requirements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
You must have started the contract analysis with Now Assist. For more information, see Analyze a contract document.

Role required: sn_cm_gen_ai.ai_contract_fulfiller and sn_lg_cnt.contract_fulfiller

About this task
You can cancel an analysis for a contract document or for all contract documents by canceling the contract request.

Procedure
1. Open the contract request from the workspace that you're using.
2. Cancel the contract analysis for a contract document or all documents in a contract request.

Result
The contract analysis is canceled.

- If a contract analysis for a specific contract document was canceled, the Now Assist analysis status for the document version is updated to Canceled.
- If a contract analysis for all the contract documents under analysis is canceled, the Now Assist analysis status is updated to Canceled for any pending analysis. For contract documents that are already analyzed, the status remains as Completed.
- The contract request state is Work in progress.
- A cancellation email notification is sent to the contract fulfiller, group manager, and collaborator.

Now Assist in Contract Management reference

Reference topics provide additional information about Now Assist in Contract Management.

Supporting information for Now Assist in Contract Management

Get a quick overview of the important information that is related to the Now Assist in Contract Management application.

Supported Versions

Now Assist capabilities are supported in Contract Management Pro starting with Xanadu (Patch 3).

Application information

Activate the Now Assist in Contract Management plugin (sn_cm_gen_ai) to analyze contract revisions and extract metadata from signed contracts.

The application has the following dependencies:

- Contract Management Pro (sn_cm_pro)
- Contract Workspace (sn_cm_workspace)
- Document Intelligence for Contract Management Content pack (sn_docintel_cm_cp)
- Now Assist for Platform (sn_genai_platform)
- Platform Document Intelligence

Now Assist in Contract Management supported interfaces

Interface	Skill
Workspace	• Contract metadata extraction • Contract analysis

Contract metadata extraction use cases

In contract metadata extraction, use cases specify the information that you want Now Assist to detect in a document, and the use case mappings define the type of information to process.

The CM Pro - Contract Metadata Extraction use case is available with the Now Assist in the Contract Management base system. This use case is not editable.

Note:
If you create your own use case or customize a copy of an available use case, be sure to test it thoroughly to ensure accuracy.

The following fields are configured in the CM Pro - Contract Metadata Extraction use case for metadata extraction.

Contract metadata extraction fields

Field	Description	Default Target Field
Other party name	The name of the company selling services or goods.	vendor
Internal party name	The name of the company buying services or goods.	None
Effective date	The date from which the contract becomes effective.	starts
End date	The date when the contract is set to expire.	ends
Contract number	A unique identifier for the contract.	vendor_contract
Payment terms	The conditions under which payments are to be made.	invoice_payment_terms
Governing law	The jurisdiction under which the contract will be governed.	None
Term	The duration for which a contract is valid.	payment_schedule
Currency	The currency in which the contract is denominated.	None
Contract value	The total value of the contract.	payment_amount
Termination notice Days	The notice period required to inform the other party prior to contract termination.	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contract metadata extraction fields (continued)

Field	Description	Default Target Field
Termination fees	The fees payable if the contract is explicitly terminated for convenience and the contract mentions that such termination includes a payment.	None
Payment frequency	The time interval for making a payment or generating invoice.	payment_schedule
Late payment fees	The fees payable for late payment.	None

Contract analysis states in Now Assist in Contract Management

The Now Assist in Contract Management analysis follows a workflow and moves through a series of states, which are displayed in the contract request. The contract analysis details are available in the activity stream and are also communicated by an email notification to the contract fulfiller, contract collaborator, and assignment group manager.

The following table describes the different states that a document goes through during analysis by the Now Assist application in the **Contract documents** tab.

State displayed in the Contract document tab of the contract request

State	Description
Not started	Now Assist analysis hasn't been requested for the version.
Analysis in progress	Now Assist analysis is in progress.
Ready to review	Now Assist analysis is complete and suggestions are ready for review.
Completed	Now Assist analysis suggestions are reviewed and marked as complete.
Canceled	Now Assist analysis was canceled.
Error	Error occurred when initiating or executing the Now Assist analysis.

The following table describes the status of the documents in the Analyze contracts with Now Assist pop-up window.

Status displayed for each of the contract documents in the Now Assist pop-up window

State	Description
Ready to analyze	Latest version of the contract document is ready for contract analysis.
Not configured	Configuration is missing for the contract type that is associated with the contract document.

State	Description
File type error	File type of the contract document isn't supported.
Analysis in progress	Now Assist analysis is in progress.
Error	Error occurred while evaluating the details for the contract analysis.

Contract Management Pro reference

Reference topics provide additional information about Contract Management Pro.

Components installed with Contract Management Pro

Several types of components are installed with activation of the Contracts Core application that includes the components for Word Document Templates, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles

Roles installed with Contract Management Pro

Role title [name]	Description	Contains roles
Contracts Core user [sn_cm_core.contract_user]	This role is required to initiate and track contract execution.	sn_cm_obligation.obligation_user
Contracts Core administrator [sn_cm_core.contract_admin]	Provides administrative access to Contracts Core and underlying data.	• sn_cm_core.contract_fulfiller • sn_cm_core.contract_config • usage_admin • sn_cm_pa.pa_admin role
Contracts Core configurator [sn_cm_core.contract_config]	Provides access to configure data for contract templates and contract configurations. It doesn't provide access to the transactional data of Contracts Core.	• user_criteria_admin • sn_cm_core.contract_fulfiller • view_changer • sn_doc.writer • contract_manager
Contracts Core fulfiller [sn_cm_core.contract_fulfiller]	This role is required to initiate actions while fulfilling an assigned contract execution. Example: Create revisions, Add Signers, Cancel Signer.	• sn_cm_core.contract_user • sn_cm_core.contract_report_viewer • canvas_user

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles

Roles installed with Analytics Pack for Contract Management Pro

Role title [name]	Description	Contains roles
Contracts PA Admin [sn_cm_pa.pa_admin]	Provides the admin with permission to activate and configure the Analytics Pack for Contract Management Pro application.	Contract Report Publisher [sn_cm_core.contract_report_publisher]

Scheduled jobs

Scheduled jobs installed with Analytics Pack for Contract Management Pro

Scheduled job	Description
Contracts Core: Daily Data Collection	Collects analytics information for the indicators and breakdowns in the Contracts Dashboard. This job runs daily and populates the contract request data in the widgets of the dashboard.
Contracts Core: Monthly Data Collection	Collects analytics information for the indicators and breakdowns in the Contracts Dashboard. This job runs monthly and populates the contract request data in the widgets of the dashboard.
Contracts Core: Historical Data Collection	Provides an immediate insight from your existing contract request data. Run this job when you first activate Analytics Pack for Contract Management Pro or create indicators. When collecting data for the first time, the job generates scores and snapshots for existing records. For more information on running historical data collection jobs, see Collect historical data.

Note:
The jobs must be run in the following sequence:

1. Contracts Core: Daily Data Collection
2. Contracts Core: Monthly Data Collection
3. Contracts Core: Historical Data Collection

Clause Variation form

Use the Clause Variation new record form to create or modify a clause variation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Clause Variation

Field	Description
Number	This field contains an automatically generated unique clause variation number.
Name	Unique name for the clause variation.
Clause	This field is automatically set to the clause name.
Order	Order in which the clause variation is used. If multiple clauses meet a condition, the clause with the lower-order value is chosen first.
Application	This field is automatically set per the application scope setting.
Active	Option to indicate that the clause variation is active and available for use.
Applies when	Filter conditions applied to the selected table field and record producer variables to determine which clause variation to use.
Applies to	Criteria to determine the users to whom the clause variation is applicable. For example, if a clause variation is applicable to employees of a specific location, associate the clause variation with user criteria defining only employees of that region.
Applies to user	User to whom the selected user criteria is applicable. **Note:** If no value is selected in the **Applies when** and **Applies to** fields, the clause variation is applicable for the contract template regardless of the user and selected table.
Document	Select **Update** link to upload the document that has the modified content. The selected document should be of .docx file format and should have valid content controls. For more information, see Add content controls in a Microsoft Word document .
Language	This field is automatically set to the default language.

Contract Configuration form

Use the Contract Configuration New Record form to create or modify a contract configurations.

Contract Configuration form for contract records

Field	Description
Name	Unique name for the contract configuration.
Request Table	Table with which you want to associate the contract configuration.
Contract Repository	Repository where the contract records should be created.
Document type	Indicates how the contract document is generated. The available values are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contract Configuration form for contract records (continued)

Field	Description
	• Word template: Contract document is generated from Word document templates for the contract configuration. • Third-party contract: Contract documents is generated from the documents attached in the third-party contract request.
Template	The contract template to be used to generate a standard contract with predefined content. This field appears only when Word template is selected from **Document type**.
Application	This field is automatically set per the application scope setting.
Active	Option to make the contract configuration active.
Order	Order in which the selection rule is run. If multiple rules meet the conditions from a contract request, the rule with the lowest order number is run first for selecting the configuration.
Applies to	Conditions under which the contract configuration is applied. For example, to apply a configuration when a contract request is submitted in the Non-disclosure agreement category, you would enter the following condition: **[Category][is][Non-disclosure agreement]**.

Properties installed to configure expiry notifications

There are several properties related to Contracts Core that can be used to configure the number of days before which expiry notification should be sent and the generation of audit certificate.

Note:
These properties are located in the System Properties [sys_properties] table. To access the table, enter `sys_properties.list` in the navigation filter.

Properties for Contracts Core

Property	Description
sn_cm_core.contract_expiring_days	Indicates the number of days before which an expiry email notification is sent to the stakeholders. • Type: Integer • Default value: 30
sn_cm_core.enable_executed_contract_audit_certificate	Specifies whether the user needs an audit certificate to accompany the signed contract. • Type: true|false • Default value: false

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Property	Description
Specifies whether the user needs audit certificate combined with the signed contract sn_cm_core.enable_executed_contract_audit_certificate	Generate a certificate of completion for electronically signed contracts.

Expiring Contracts Condition form fields

The Expiring Contracts Condition form is used to create a rule or update an existing rule.

Expiring contracts condition form fields

Field	Description
Name	Name of the condition.
Application	The application where the condition is created and used.
Compliant state	System field. Do not use.
Order	Order in which the conditions are evaluated.
Event name	Name of the event this condition triggers.
Expiration Condition	Condition that must be true for the **Condition check** field to be set to this value. Add as many conditions as are needed. For more information on condition check, see Define a condition check.
Domain	Domain of the condition.
Condition check	Associated condition check for the expiration condition.
Table	Table associated with the condition check.

Contract Management Pro states and status

Contract Management Pro requests follow a specific life cycle and move through a series of states.

The following field values change based on the progress of the approval.

- **State**: State of the contract request.
- **Contract status**: Additional info that describes the status based on the previous action.

State

State: When an approval is in the requested state, the state of the contract reuqest is in **Awaiting approval**.

When an approvals are actioned, the state of the contract reuqest is in **Work in progress**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contract status

Contract status (For latest revision of the TPC) In case of multiple document approval scenario, when the latest contract type revision or more than one contract type revision is sent for approval:

- When for at least 1 document (latest version) revision approval status is **Requested**, the contract status is rolled up as **Awaiting approval**.
- When none of the approvals is in the **Requested** status, with
  - At least one approval is in the **rejected** state, the contract status is **Document approval rejected**.
  - None of the approvals is in the rejected state with atleast one approval in **Approved** state, then the contract status is **Document approved**.
  - None of the approvals is in the **rejected** state or the **approved** state, with one approval in the **Cancelled** state, then the contract status is **Document approval cancelled**
  - None of the approvals is in the **rejected**, **cancelled**, or **approved** state with no new approvals, then the contract status is **Work in progress**

Note:
For single document scenario, the same status are applicable.

Note:
For cumulative approvals in the multiple-document scenario, the approval status of latest revision is considered for populating the contract status.

Action assignment form

The action assignment form is used to define a action in your application.

Action Assignment New record

Field	Description
Action label	Label that appears on the button created through the action. For example: Initiate Contract
Action name	Name for your action that appears in the action assignment list. For example, `initiate_contract`.
Application	Application for the action assignment.
Table	Field to limit this action to activities with this associated table.
View	View of the form on which the action button is displayed.
Enable for all Configurable Experience	Determines whether the action should appear in all experiences or only in specified experiences. If true, the action appears in any applicable form regardless of experience.
Active	Option to activate the action.
Order	Integer that determines the precedence of this action in relation to matching actions with the

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Action Assignment New record (continued)

Field	Description
	same name. The lower the number, the more likely it is to be selected against other actions. This ordering enables you to override other actions with your own.
Tooltip	Text that displays when agents point their cursor over the button.
Description	Description for the action that's displayed in the Action Assignments list.

UFX Add on Event mapping form

The UFX Add on Event mapping form to configure the display of declarative action in your application.

UFX Add on Event Mapping Form

Field	Description
Event mapping name	Name for your map. For example, Initiate contract
Active	Option to activate the mapping.
Description	Description for the action that's displayed in the Action Assignments list.
Source component	The component where the button will appear. For example, the Action bar.
Source Declarative Action	Declarative action used as the source event. For example: initiate_contract.
Controller	A controller that handles the target event. For example, Form.
Target Event	Handled event that the mapping in Target Payload targets.

Obligation form

The obligation form provides the details to create or modify an obligation record in Obligation Management.

Obligation record form

Field	Description
Number	An auto-generated unique number for the obligation record.
Contract	Unique number of the contract repository record.
Name	Name of the obligation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Obligation record form (continued)

Field	Description
Category	Category of the obligation. The available values are: • Operational or service delivery • Legal • Commercial • Compliance • Governance
Subcategory	Subcategory of the obligation. The available values depend on the selected category.
Active	Option to activate the obligation. If a recurring schedule has been defined for obligation tasks, activating the obligation creates obligation tasks based on the defined schedule.
Approver group	Group whose members have appropriate permissions to approve or reject an obligation task.
Approver	Member of the approver group assigned to approve the obligation tasks.
Task assigned to	User to whom the obligation tasks will be assigned by default. This value can be overridden by assigning a user once the obligation task is created. A notification email is sent to the assigned user.
Start date	Date from which the obligation will be in effect.
End date	Date on which the obligation ends.
Instructions	Actions that must be performed as part of the obligation.
Description	Extract from the contract that describes the obligation.
Schedule type	Schedule type of the obligation tasks. **Adhoc** Obligation must be fulfilled once or at irregular intervals. You must create obligation tasks manually. **Recurring** Obligation must be fulfilled regularly at a defined interval. Obligation tasks are automatically

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Obligation record form (continued)

Field	Description
	created based on the interval specified in the **Repeats** field and according to the value in the **Task creation lead time (days)** field.
Repeats	This field appears only when **Recurring** is selected from the **Schedule** field. **Note:** For monthly or yearly repeats, the first obligation task is due on the selected date and recurring obligation tasks are due on the same day of the month or year as the initial value. For example, if you select 2024-08-10 as the **Due date** value, the first obligation task will be due on the 10th of August 2024 and the subsequent tasks will be due on the 10th day of the month in the specified interval or on that date every year. If you select the 31st day of a month as the **Due date** value, the obligation tasks for months with less than 31 days will be due on the last day of that month. The available values are: • **Daily** - Obligation tasks are created daily and are due every day between the start date and end date of the obligation record. • **Weekly** - Obligation tasks are created every week. The value in the **Repeats** field that appears when this value is selected determines the days of the week when the obligation tasks should be fulfilled. • **Monthly** - Obligation tasks are created once a month and are due on the day of the month specified in the **Due date** field that appears when this value is selected. • **Every three months** - Obligation tasks are created every three months and are due on the day of the month specified in the **Due date** field that appears when this value is selected. • **Every six months** - Obligation tasks are created once a month and are due on the day of the month specified in the **Due date** field that appears when this value is selected. • **Yearly** - Obligation tasks are created once a year, with the first obligation task being

Obligation record form (continued)

Field	Description
	due on the selected date and recurring obligation tasks due on the same date every year.
Task creation lead time (days)	This field appears only when **Recurring** is selected from the **Schedule** field. It determines the number of days before the task's due date when the obligation tasks should be automatically created.

Obligation Management notifications

Obligation Management uses email notifications to notify obligation fulfiller and obligation users when an obligation task is created, assigned, submitted, approved, or rejected.

Obligation task notification details

Name	Recipient	Title
Obligation task created/ assigned	Assigned to	${number} is assigned to you
Obligation task submitted	Approver	${number} has been submitted for your approval
Obligation task approved	Assigned to	${number} has been approved
Obligation task rejected	Assigned to	${number} has been rejected

The following notifications are not activated by default:

- Obligation task submitted
- Obligation task approved
- Obligation task rejected

For information about how to activate notifications, see Configure Obligation Management notifications.

Legal Service Delivery

ServiceNow® Legal Service Delivery provides a unified experience between the employees requesting legal support and the legal teams serving them.

Employees can request legal services from an interface with a guided intelligent workflow. Legal departments can automate or streamline routine legal requests so they can focus on higher value work.

The legal teams can use the ServiceNow® Legal Counsel Center that provides request visibility, a prioritized work queue, and practice-specific tools to manage complex legal affairs.

The following video provides an overview of Legal Service Delivery. Video providing an overview of Legal Service Delivery. Approximately five minutes long.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Benefits

Legal Service Delivery enhances your organization's in-house counsel and legal team processes by enabling self-service for employees.

- Provide employees with self-service experiences and faster resolution of legal requests
- Enable the legal department to focus on and prioritize time on more complex business affairs
- Gain insight to operations and drive efficiencies through Performance Analytics Legal Executive and Legal Operations dashboards.

Legal Service Delivery applications

Legal Service Delivery includes the following key applications:

Legal Practice Apps Core

Legal Practice Apps Core is a required application for using all legal practice applications.

Legal Request Management

The ServiceNow® Legal Request Management application provides a single, unified mechanism for employees to get all the information, services, and help that they need from the legal department. Employees can submit legal requests, monitor their progress, read legal knowledge base articles—all through an omni-channel experience across portal, mobile, and virtual agent.

Legal Request Management is the core and required application in the Legal Service Delivery suite. All other applications that you choose to install rest on top of Legal Request Management.

Legal Matter Management

The ServiceNow® Legal Matter Management application enables you to complete legal requests that need cross-departmental tasking and workflow with a mechanism to store documents and track important milestones. With its embedded record level security, you can maintain the confidential and sensitive information of each record.

Matter templates help you with standardized process and workflow for various matter types.

Legal Practice Applications

Legal practice applications in the Legal Service Delivery suite provide solutions for the specific needs of different legal practice areas.

Legal Content Review

The ServiceNow® Legal Content Review application provides a mechanism to raise a legal review request of any marketing material, collateral, or presentation contents and to resolve the issues.

Legal Digital Forensics

The ServiceNow® Legal Digital Forensics application enables you to handle digital forensics requests for data discovery related to custodial and non-custodial data sources that are subject to investigations or litigation.

Legal Investigations

The ServiceNow® Legal Investigations application enables the Legal department in your organization to accept internal complaints through a simple intake process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employees can submit complaints either by name or anonymously through the Anonymous Reporting Center portal. The legal team can conduct legal investigations, including conducting interviews, gathering evidence, and preparing final reports with recommended actions to address these complaints.

Legal Simple Contracts

The ServiceNow® Legal Simple Contracts application enables employees to submit legal requests for getting legal support and guidance for contracts. For example, they can submit legal requests for the creation of Non-disclosure Agreement (NDA) documents with third parties or the review of sales contracts or third-party contracts. The legal department can manage and process them from a centralized location.

Legal Simple Privacy

The ServiceNow® Legal Simple Privacy provides a mechanism to raise a Privacy Assessment request to resolve privacy related concerns.

Legal Simple Compliance

The ServiceNow® Legal Simple Compliance application provides prebuilt legal workflows to submit and manage legal compliance requests. The Legal Simple Compliance includes the following applications.

Gifts and Entertainment Compliance

The ServiceNow® Gifts and Entertainment Compliance enables you to manage the disclosure that might arise from employees giving or receiving gifts or entertainment to internal or external parties. This also enables you to comply with company policies.

Legal Conflict of Interest

The ServiceNow® Legal Conflict of Interest application enables you to manage the disclosure, approval, and registry of conflict of interest that might arise from employees having competing interests or loyalties.

Legal Stock Preclearance

The ServiceNow® Legal Stock Preclearance application enables you to manage stock preclearance requests complying with the company's stock preclearance policy. You can set up trading windows, manage an access persons list, and approve or reject stock preclearance requests.

Now Assist for Legal Service Delivery (LSD)

Use the ServiceNow® Now Assist for Legal Service Delivery (LSD) application to summarize a legal request or legal matter. Request fulfillers can understand the context, refresh the summary, and post the summary to work notes more quickly with generative AI.

Legal Counsel Center

The ServiceNow® Legal Counsel Center application enables lawyers to solve issues faster with a workspace built to facilitate resolutions. From a single view, get the full context of legal issues to resolve them quickly.

External Legal Service Center

The ServiceNow® External Legal Service Center application enables external users like customers, partners, and the public to directly contact your organization for legal information. They can ask for clarifications, submit concerns, and get the legal information they need. This fosters trust and shows organization's commitment to accountability and legal compliance.

Performance Analytics Content Pack for Legal Service Delivery

Performance Analytics Content Pack for Legal Service Delivery Performance Analytics Legal Executive dashboard

Use the Performance Analytics Legal Executive dashboard to get an insight into how your team and business are performing for resolving Legal service requests. General Counsel and practice area leads can make data-driven decisions through insights into legal operations using various pre-configured reports and metrics. You can view the details for top request categories, requests by user locations, practice area, and requesting department, SLA compliance of legal requests and legal matters, average number of requests handled per attorney, and average time to close legal requests and legal matters over time.

Virtual Agent for Legal Service Delivery

Legal Virtual Agent Conversations

The ServiceNow® Legal Virtual Agent Conversations application provides predefined conversation topics to enable automated chats with employees seeking legal services. You can build new topics or customize the predefined topics to handle common legal requests from employees or guide them through self-service tasks.

Mobile experience for Legal Service Delivery

Use the following ServiceNow® mobile apps to work on the Legal Service Delivery applications.

Now Mobile app

The Now Mobile app enables your employees to get legal information and support through their mobile device. They can submit legal requests, track the status of requests, and read knowledge articles.

Mobile Agent app

The Mobile Agent app enables the legal department users to resolve legal requests and legal matters assigned to them using the Mobile Agent app.

For more information, see Legal Mobile.

Domain separation for Legal Service Delivery applications

The Legal Service Delivery applications support domain separation at the Basic level. For more information, see Domain separation and Legal Service Delivery. For more information on support levels, see Application support for domain separation.

Helpful resources

Some ServiceNow resources that can provide you with helpful information are:

ServiceNow Community

Connect with other Legal Service Delivery users at ServiceNow Community.

ServiceNow University

Access real-time courses, self-paced training, and career resources, such as Legal Service Delivery (LSD) Essentials and more, from ServiceNow University.

Legal Request Management

The ServiceNow® Legal Request Management application provides a unified mechanism for employees to get all the information, services, and help that they need from the legal department and a streamlined, collaborative process for the legal department to quickly resolve these requests.

Employees can submit legal requests, monitor their progress, and read legal knowledge base articles across a web portal, mobile platform, and Virtual Agent.

Legal teams can collaborate in a centralized Legal Counsel Center to manage legal intake volume, resolve legal requests, and monitor work analytics.

Explore  Learn about how employees, paralegal staff, and lawyers use Legal Request Management.	**Set up**  Set up practice areas, intake forms, and other configurations.	**Request**  Submit and track legal requests.
Manage  Manage legal requests.	**Analytics and Reporting**  Coordinate work and improve processes with preconfigured dashboards.	**Reference**  Get details about components such as roles, tables, plugins, and store applications that are installed.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Troubleshoot and get help

- Ask or answer questions in the Legal Service Delivery community forum
- Search the Known Error Portal for known error articles
- Contact Customer Service and Support

Exploring Legal Request Management

Legal Request Management enables authorized employees in the organization to submit legal requests and to track their progress while users in the legal department with appropriate roles can work to resolve these requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employees can read legal knowledge base articles, submit legal requests, monitor the progress of submitted requests, and interact through Virtual Agent.

Legal Service Delivery

Features

The features of this application include:

- Submitting legal request across a service portal, mobile device, and Virtual Agent
- Managing legal requests by resolving the issue or answering queries
- Promoting legal request to legal matters that needs cross-departmental tasking and workflow

Benefits

The benefits of this application include:

- Remove manual, unstructured email processes and tasks with an easily accessed self-service experience
- Automate responses for common legal requests with virtual agents
- Make meaningful decisions by gaining real-time visibility on legal service demands
- Track, prioritize, and work on multiple requests concurrently with an optimized Legal Counsel Center

Setting up Legal Request Management

Configure the foundation data to provide legal request services to employees who can use these services to submit requests to the legal department.

As an administrator, review the installed components and modify them or add new ones as applicable.

Practice areas

Set up the practice areas specific to law practices such as Intellectual Property, Privacy, or Compliance. Associate categories to the practice area and assign a legal department user as the practice area lead.

Catalog categories

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create catalog categories to group legal services that employees can use to find a specific legal service request on the Legal Service Portal.

Record producers

Create record producers to define the intake forms for legal request services. These record producers are available in the Legal Operations Catalog on the Legal Service Portal. Employees can use them to submit legal service requests.

External storage system

Configure an external storage system to store documents attached to legal requests and legal matters . The integration with an external storage system enables organizations to have a centralized documentation management and retention policy.

Response templates

Configure a response template with a reusable message that legal fulfillers can use to send users quick and consistent messages through work notes, comments, emails, or chat conversations.

Each response template is associated with a table and can be configured to include field variables from that table. You can use a condition builder to specify the conditions that a legal request or legal matter must meet for the template to be usable through the configured channels. For example, you can define a condition to enable response templates only for legal requests of type digital forensics.

Also, for chat response templates, you can specify a short name that can be used as a shortcut with the slash command to present the response message to a user quickly.

Email notifications

Create or modify email notifications that are sent when specific events occur. Some possible event triggers might be: When a request is assigned to a legal department member to work on, a request is closed or canceled, or a message is posted to get additional information.

New email notification templates are available for Legal Service Delivery applications from Legal Request Management 4.2.2 version onwards when you also have the Employee Center installed. You can differentiate them from the existing ones by the *EC:* prefix in their names.

- These email notifications are active by default for new installations of Legal Request Management 5.0 version and later versions.
- These email notifications are inactive by default when you upgrade from Legal Request Management version earlier than 5.0. You must manually activate them while deactivating the existing notifications.

  To activate the email notifications based on the applications installed, the admin can run the following scripts:

  - `Activate EC email template for legal req`: Activates email notifications for Legal Request Management.
  - `Activate EC email template for lg matter`: Activates email notifications for Legal Matter Management.
  - `Activate EC email template lg contracts`: Activates email notifications for Legal Simple Contracts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- `Activate EC email template for Legal COI`: Activates email notifications for Legal Conflict of Interest.
- `Activate EC email template for lg stock`: Activates email notifications for Legal Stock Preclearance.

Note:
Links in the new email notifications navigate to either Employee Center or Legal Counsel Center based on the user's role:

- For requesters, the link in the email opens the Standard Ticket page in the Employee Center portal.
- For legal fulfillers, the link in the email opens the record form in the Legal Counsel Center.

Legal dispositions of legal request or legal matter

Add the Legal Disposition [sn_lg_ops_legal_disposition] table, which stores dispositions from legal requests and legal matters, as a related list to any Legal Request or Legal Matter form. For more information on adding a related list on a form, see Add a related list to a form.

Install Legal Request Management

You can install the Legal Request Management application (sn_lg_ops) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- If the application requires plugins or other store applications, install them first if they are not already installed.
- Review the Legal Request Management application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Activate the following ServiceNow plugins in your instance before you install the Legal Request Management application:

- Workspace Core (com.workspace_core)
- Checklist (com.glide.ui.checklist)

Role required: admin

About this task

The following components are installed with installation of the Legal Request Management application:

- Plugins
- Store applications
- Roles
- Tables

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Tables specific to practice areas
- Business Rules

For more information, see Components installed with Legal Request Management.

You can also install the following applications:

Legal Counsel Center application (sn_lg_cf_workspace)

The ServiceNow® Legal Counsel Center application enables lawyers to solve issues faster with a workspace built to facilitate resolutions. From a single view, get the full context of legal issues to resolve them quickly.

Legal Mobile (sn_lg_mobile)

The ServiceNow® Legal Mobile (sn_lg_mobile) application enables you to find legal information, submit and track legal requests, and work on these requests on mobile devices. For more information, see Legal Mobile.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Request Management application (sn_lg_ops) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Legal Request Management.
4. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
5. Select **Install**.

What to do next

Use the Legal Service Delivery Guided Setup to configure the application on your instance.

To access Legal Service Delivery Guided Setup, navigate to **Legal Administration** > **Legal Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Configure a practice area table

Configure a practice area table so you can use fields from legal request and legal matter tables to include in the Lists section of Legal Counsel Center.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The record producer uses variables to store field information submitted via intake forms for a legal request or legal matter. If you have to use any of these variables as columns in the list view in Legal Counsel Center, you must add them as columns in the respective practice area tables. These practice area tables extend the Legal Request [sn_lgs_ops_request] table for legal requests and the Legal Matter [sn_lg_matter_matter] table for legal matters. For more information, see Practice area tables for legal requests and Practice area tables for legal matters.

Note:
For using practice area tables for legal matters, you must have the Legal Matter Management installed.

Procedure

1. Add new columns in a practice area table that you want to use to create reports for legal requests or legal matters submitted for the practice area.
   For more information, see Add and customize a field in a table.
2. Create or modify a record producer for a legal request or legal matter for the associated practice area.
   For more information, see Create or modify a record producer for legal services through Classic environment.
3. Update the business rule to synchronize variables with the mapped table columns when users modify the intake form data after they've submitted a legal request or matter.

   a. Navigate to **System Definition** > **Business Rules**.

   b. Open the *`Sync variable with mapped columns`* business rule.

   c. In the **When to run** tab, add a new OR condition for the category.
   For example, to synchronize the variables of a Compliance intake form with the mapped columns of the Compliance [sn_lg_ops_compliance] table, you would enter the following OR condition:

   [Category] [is] [Compliance [sn_lg_ops_compliance]]

   For more information, see Create a business rule.

Create or modify a legal catalog category

Create or modify a catalog category to organize your legal catalog items into logical groups in the Legal Operations Catalog.

Before you begin

Role required: sn_lg_ops.legal_catalog_admin

Procedure

1. Navigate to **All** > **Legal Administration** > **Legal Catalog** > **Maintain Categories**.
2. Create or modify a catalog category.
   - To create a catalog category, click **New**.
   - To modify an existing catalog category, open the catalog category from the list.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Category form

Field	Description
Title	Unique name of the catalog category.
Catalog	Name of the catalog to which the category belongs. Select **Legal Operations Catalog**.
Location	Location relevant for the category.
Description	Description about the category. The description appears under the catalog category name when you select the category on the Legal Service Portal.
Application	Application scope in which the category is applicable.
Active	Option for making the category available on the portal.
Parent	Legal catalog category that is the parent for this category.
Desktop image	Large image that appears with the category on the portal.
Icon	Small icon that appears next to the category name when the category is listed as a subcategory.
Header icon	Icon that appears next to the category header when the category is a top-level category.

4. Click **Submit**.

Result

The service catalog category is created. The catalog categories are listed in the **Service catalog category** field on the Practice Area form.

What to do next

- Associate a record producer with the category using the Catalog Item related list.
- Associate the catalog category with a practice area to map the practice area, record producer, and catalog category together. This mapping helps employees to use the relevant categories to submit legal requests. In turn, these requests are assigned to the correct groups or users through the associated practice area.

  For more information, see Create or modify a practice area.

Create or modify a practice area

Create or modify practice areas for specific areas of law practice, such as Intellectual Property, Privacy, or Compliance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_ops.legal_config

Procedure
1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Click **New**.
3. On the form, fill in the fields.

Practice Area form

Field	Description
Name	Unique name of the practice area.
Active	Option for making the practice area active. Legal requests can be submitted only for active practice areas.
Service catalog category	Name of the catalog category under which the new intake forms for the practice area are organized in the Legal Service Portal. **Note:** This field is applicable only if you use the Legal Service Portal for legal services. To enable legal services on the Employee Center, use the taxonomy mapping. For more information, see Legal services on the Employee Center portal.
Description	Description of the practice area.

4. Click **Submit**.
   The practice area is created and the Intake Forms and Practice Area Leads related lists are displayed.
5. Add one or more users as the lead for the practice area.

   A practice area lead can view all unassigned requests related to the practice area and assign them to practice area members.

   a. In the Practice Area Leads related list, click **Edit**.

   b. On the Edit Members form, select one or more users from the **Collection** list and click **Add** to add them to the **Practice Area Leads List**.
   Only the users of the **Legal Practice Area Leads** group are listed in the **Collection** list.

   c. Click **Save**.
   The selected users are added to the Practice Area Leads related list.

What to do next
Add an intake form to a practice area from the Intake Forms related list.

Add an intake form to a practice area

Add an intake form to a practice area to associate it with a record producer and define assignment rules and service level agreements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_ops.legal_config

Procedure
1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Open a practice area to which you want to add an intake form.
3. In the Intake Forms related list, click **New**.
4. On the form, fill in the fields.

Intake Form form

Field	Description
Name	Unique name of the intake form.
Default subcategory	Default subcategory to associate with the intake form.
Practice area	Practice area to which the intake form belongs.
Short description	Brief description of the intake form.
Record Producer section	
Type	Type of record producers to associate with the intake form. You can select from the following options: ○ **Request**: The practice area lead cannot promote requests submitted under this practice area to a legal matter. ○ **Matter**: Legal department users can submit a matter under this practice area. ○ **Request and Matter**: The practice area lead can promote requests submitted under this practice area to a legal matter. During promotion, the field values from the legal request record are copied over to the matter record.
Request record producer	Record producer to submit requests in the associated practice area. Select an existing request record producer or use the **Create Request record producer** related link to create one. The newly created request record producer contains default values for a few fields that will be pre-populated in the request form. **Note:** The **Create Request record producer** related link appears only when this field is empty.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	This field appears only when **Request** or **Request and Matter** is selected as the Type value.
Matter record producer	Record producer to create a legal matter. If a matter can be created directly, associate an existing matter record producer. To create and associate a new matter record producer, click the **Create Matter record producer** related link. **Note:** The **Create Matter record producer** related link is available when this field is empty. This field appears only when **Matter** is selected as the Type value.
Default matter template	Matter template that is selected by default while promoting the associated legal request to a matter. This field appears only when **Matter** or **Request and Matter** is selected as the Type value.
Options	Options to change the default behavior or flow of legal requests, legal matter, or both as per your business needs. You can select from the following predefined options: ○ **Assigned To field not mandatory**: The **Assigned to** field on the Legal Request form becomes an optional field. ○ **Disable Request Adhoc Approvals**: Legal fulfiller working on the legal request cannot initiate an ad hoc approval for requests or attachments. The **Initiate Approval** button will not be available on the Legal Request form. ○ **Disable Request Reopen**: The requester cannot reopen a legal request that has been closed. The **Reopen Request** button is not available on the Standard Ticket page. ○ **Editable Assignment group in Request**: The practice area lead, group manager, and legal fulfiller (user in the **Assigned to** field) can change the assignment group in a legal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: On changing the assignment group, a member of the existing group member who is not in the updated assignment group might lose access to the request. The **Assigned to** field is also cleared. ○ **Editable Assignment group in Matter**: The practice area lead, group manager, and legal fulfiller (user in the **Assigned to** field) can change the assignment group in a legal matter. **Note:** On changing the assignment group, a member of the existing group member who is not in the updated assignment group might lose access to the matter. The **Matter owner** field is also cleared. ○ **Enable External Storage for attachment**: The documents attached to legal requests and legal matters are uploaded to a configured external storage system. **Important:** Only one external storage provider can be configured for an intake form. ○ **Enable Legal Request creation From Universal Request**: Legal requests can be created from a universal request to get the support of the Legal department for the resolution of the universal request. ○ **Make Request Fulfiller as Matter Owner**: When a legal request is promoted to a legal matter, this legal matter is automatically assigned to the legal request fulfiller. ○ **Generate Document from Template**: When a legal request for contract review is submitted, this option determines whether the document will be generated using a document template. If this option is not selected, the requester must submit the contract for review. **Note:** The option is available only for the sn_lg_ops_contract_request table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Update request fields with variables**: When you submit a legal request for contract review or update the variables, the field values mapped to the variables are automatically updated. ○ **Initialize legal contract**: A contract request is automatically created when a legal request for contracts is submitted.

5. Click **Submit**.
   An intake form is added to the practice area. The Checklist section and related lists to manage subcategories, service level agreement definitions, assignment rules, and matter templates appear.
6. **Optional:** Add to-do items in the Checklist section to provide a list of activities for the request fulfiller.
   When an employee submits a new legal request through the intake form, this predefined checklist appears as the default to-do items in the corresponding request.
   a. Click the more actions icon ( ) next to the **Checklist**.
   b. Click **Create new**.
   c. Enter a description for the to-do item and press the Enter key.

What to do next

- From the Subcategories related list, add a new one subcategory to associate it with the intake form.
- From the SLA Definitions related list, create a service level agreements (SLA) definition, if required.
- From the Assignments Rules related list, create an assignment rule for an intake form.
- Click the **Edit in Catalog Builder** related link to update the record producer for a legal request or matter or both based on the **Type** field value. For more information, see Create or modify a record producer for legal services through Catalog Builder.

  The admin can also create or modify record producers for legal services.
- From the Matter Templates related list, associate a matter template with the intake form if a matter record producer is selected.

Add a subcategory for the intake form

Add a subcategory to an intake form of a practice area to organize legal requests and assignments through the intake form.

Before you begin

Role required: sn_lg_ops.legal_config

About this task

Note:
You can associate a subcategory with the same name to many intake forms. However, an intake form cannot have multiple subcategories with the same name.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Open a practice area.
3. In the Intake Forms related list, open an intake form in which you want to add a subcategory.
4. In the Subcategories related list, click **New**.
   If you are not able to see the **New** button in the current application scope, select the word here in the message at the top of the page to set the correct application scope for displaying the button.
5. In the **Subcategories** field, enter a unique name of the subcategory
6. Select the **Active** check box to indicate whether the subcategory is active.
7. Click **Submit**.

Associate a matter template with an intake form

Associate a matter template with an intake form that can be used when promoting a legal request to a legal matter to include predefined data.

Before you begin

Note:
The Matter Template related list is available on the Intake Form form only when you have selected **Matter** or **Request and Matter** as the **Type** value.

Role required: sn_lg_ops.legal_config or sn_lg_matter.matter_config

About this task

When an existing matter template is updated and published, the intake form reflects the latest version of the associated matter template.

Procedure

1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Open a practice area.
3. Open the intake form from the Intake Form related list to which you want to associate a matter template.
4. In the Matter Template related list, associate an existing matter template or create and associate a new matter template.

Result

The selected matter template is associated with the intake form.

Assigning legal request

Legal requests can be automatically assigned via an assignment rules or Advanced Work Assignment. You can also use Predictive Intelligence to predict the assignment group.

For assigning legal request adopt any one of the following solutions:

- Use assignment rules to directly assign legal requests. For more information, see Assignment rule to automatically assign legal requests or matters.
- Use Advanced Work Assignment for Legal Service Delivery to assign legal requests to agents. This feature considers availability, capacity, and optionally, skills. For more information, see Advanced work assignment for Legal Service Delivery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Use Predictive Intelligence for Legal Service Delivery which uses machine-learning algorithms to predict the subcategory and assignment group. Predictions with high confidence are automatically populated in the fields, while predictions with low and medium confidence are displayed as suggestions. For more information, see Predictive intelligence for Legal Service Delivery.
- Use both assignment rules and Predictive Intelligence for Legal Service Delivery. For predictions with high confidence, the value for the assignment group is automatically updated in the field. For predictions with low and medium confidence, the suggestions are displayed and the assignment rule functionality populates the assignment group based on your configurations.

Assignment rule to automatically assign legal requests or matters

Create an assignment rule for an intake form to assign the associated legal request or matter to a user or group.

Before you begin

Role required: sn_lg_ops.legal_config or sn_lg_matter.matter_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Open the intake form from the Intake Form related list.
3. In the Assignment Rules related list, click **New**.
4. On the form, fill in the fields.

Assignment Rule form

Field	Description
Name	Unique name of the assignment rule.
Active	Option for marking the assignment rule active. A legal request is assigned to a group or user based on active assignment rules only.
Applies To tab	
Table	Name of the table to which the assignment rule applies.
Conditions	Conditions under which the assignment rule applies. For example, to apply a rule when a legal request is submitted in a Privacy category, you would enter the following condition: **[Category][is][Privacy]**.
Assign To tab	
User	User to whom the legal request is assigned.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Group	User group to which the legal request is assigned.

5. Click **Submit**.

Result
An assignment rule with conditions is created. Any legal request or matter that meets the rule's conditions is assigned to the specified group or user.

Activate a system property to close a long-running legal request

As an admin, activate the `sn_lg_ops.allow_request_closure_with_open_matters` system property to close legal requests even when they're linked to long-running requests.

Before you begin
Role required: sn_lg_ops.legal_admin

About this task
`sn_lg_ops.allow_request_closure_with_open_matters` is a configurable system property that is used to configure a legal request to close even though it is linked to long-running requests. The property has no dependency on any other feature. By default, the property is set to **False** and legal requests can't be closed when they are open. To close legal requests even if the primary legal request is open, activate the property by changing it to **True**.

Procedure
1. In the filter navigator, enter `sys_properties.list`.
2. In the **Name** column, search for the `sn_lg_ops.allow_request_closure_with_open_matters` property.
3. Select the property.
4. If you aren't able to edit the property in the current application scope, select the word **here** in the message at the top of the page.
5. Update the **Value** field to `true`.
6. Select **Update**.

Result
The `sn_lg_ops.allow_request_closure_with_open_matters` system property is activated and the related legal requests can be closed even if the primary legal request is open.

Managing record producers for legal services

A record producer helps you set up a legal intake form containing fields that a requester has to fill in and initiate a legal request.

A record producer for a legal service is associated to a practice area and appears under a service catalog category defined in the practice area. The practice area also has the service level agreement and assignment rules configured. Based on the assignment rules, the request is assigned to an appropriate legal group or legal user to resolve.

Create or modify a record producer for legal services through Classic environment

Create or modify a record producer to define an intake form for a legal request. Employees can use these intake forms on the Legal Service Portal to submit legal requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Ensure that you have the Legal Request Management application scope selected.

Role required: sn_lg_ops.legal_catalog_admin

About this task
To manage record producers using Catalog Builder, see create or modify a record producer for legal services through Catalog Builder.

Procedure
1. Navigate to **All** > **Legal Administration** > **Legal Catalog** > **Record Producers**.
2. Create or modify a record producer.
   - To create a record producer, click **New**.
   - To modify an existing record producer, open the record producer from the list.
3. On the form, fill in the fields.

Record Producer form

Field	Description
Name	Unique name of the record producer.
Table name	Name of the table that stores the data collected through the record producer. ○ Select **Legal Request [sn_lg_ops_request]** if you are creating the record producer for legal requests. ○ Select **Legal Matter [sn_lg_matter_matter]** if you are creating the record producer for legal matters. **Note:** You must have installed the Legal Matter Management app to use this option. ○ Select a table specific to a practice area if you want to use the data collected from the record producer for reporting. For more information, see Configure a practice area table.
Application	Application to which the record producer belongs. This field is automatically set to the application scope in which you are creating the record producer.
Active	Option for marking the record producer active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Only active record producers are available as legal intake forms in the Legal Service Portal.
What it will contain tab	
Short description	Brief description of the record producer.
Description	Full description of the record producer.
Script	Script that dynamically assigns values to specific fields on the created record.
Accessibility tab	
Catalogs	Name of the service catalog to which the record producer belongs. Select **Legal Operations Catalog**.
Category	Name of the service catalog category in which the intake form should appear in the Legal Service Portal.

4. Save the record producer.
   - Save a new record producer by clicking **Submit**.
   - Save the changes to an existing record producer by clicking **Update**.
5. In the Variables related list, add or modify variables.
   Variables in a record producer appear as fields on the legal intake form to collect information from employees when they're submitting a legal request.

   Important:
   If you are configuring the record producer for a practice area table, you must map the variable with a column name of the selected table. On the Variable form, select the **Map to field** check box and the column name of the selected practice area table in the **Field**. Only the mapped variables are copied to the columns of the selected table.

   For more information on creating variables, see Create a service catalog variable.
6. In the Assigned topics related list, assign the catalog item to a topic in a taxonomy so that the catalog item is added to the Employee Center portal.
   For more information on assigned topics and taxonomy, see Unified Taxonomy for Employee Center.
7. In the Applicable For and Not Applicable For related lists, apply the user criteria to control access of the record producer.
   User criteria define conditions for user records that enable you to grant or deny access to the record producer for users matching those conditions. For more information on creating a user criteria, see Set up the user criteria.
8. If you have enabled the option to save attached documents for a legal request in an external storage, you can add the script to validate the documents attached to a legal request while submitting.

   a. In the Catalog Client Scripts related list, click **New**.

   b. On the Catalog Client Scripts form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Create a Service Catalog client script.

c. In the **Script** field, copy the following client script which runs on the catalog item to determine if:

- The file size of the document being uploaded is within the permitted limits.

  This check applies to Microsoft OneDrive external storage.

- A file with the same name already exists in the folder.

```
var status = true;
        var uniqueNames = [];
        var duplicateNames = [];
        var largeFileNames = [];
        var attachments =
 this.angular.element("#sc_cat_item").scope().attachments;
        attachments.forEach(function(attachment) {
            var name = attachment['file_name'];
            var size = getSizeInBytes(attachment['size']);
            if (uniqueNames.indexOf(name) != -1) {
                duplicateNames.push(name);
            } else if (size > 4000000) {
                largeFileNames.push(name);
            }
            uniqueNames.push(name);
        });
        if (largeFileNames.length > 0) {
            g_form.addErrorMessage("Size of file should be
 less than or equal to 4Mb");
            largeFileNames.forEach(function(name) {
                g_form.addErrorMessage(name + " is more than
 4Mb");
            });
            status = false;
        }
        if (duplicateNames.length > 0) {
            g_form.addErrorMessage("File names should be
 unique");
            duplicateNames.forEach(function(name) {
                g_form.addErrorMessage(name + " found with a
 duplicate name");
            });
            status = false;
        }
        return status;
    }
}
function getSizeInBytes(size) {
    var unit = size.split(" ")[1];
    var value = parseFloat(size.split(" ")[0]);
    switch (unit) {
        case "MB":
            value = value * 1000000;
            break;
        case "KB":
            value = value * 1000;
            break;
```

```
    }
    return value;
}
```

Create or modify a record producer for legal services through Catalog Builder

Create or modify a record producer using a catalog template to define an intake form for a legal service. Employees can use these intake forms on the Legal Service Portal to submit a legal request or legal matter.

Before you begin

Role required: sn_lg_ops.request_config or sn_lg_matter.matter_config

About this task

Use the following base system catalog item templates installed with Legal Request Management to create a record producer for legal services:

- **Legal request intake form template**: For creating a record producer for legal requests
- **Legal matter intake form template**: For creating a record producer for legal matters

For more information about catalog item templates and catalog items, see Catalog Builder.

Procedure

1. Open Catalog Builder from the application navigator or from an intake form.

2. Based on how each step is defined in the template, specify the required information. For more information, see Create a catalog item using a template.

   In addition to entering other details, make sure to provide the following information for a record producer for a legal service:

Record producer for legal service

Step	Field and default values from the template
Destination	**Table**: ○ For legal requests: Default is **Legal Request [sn_lg_ops_request]**. You can select a practice area table for legal requests as required. ○ For legal matters: Default is **Legal Matter [sn_lg_matter_matter]**. You can select a practice area table for legal matters as required.
Location	○ **Catalogs**: Default is **Legal Operations Catalog**. ○ **Categories**: Legal Request for legal requests and Legal Matter for legal matters. You can select a different catalog and category based on your requirements.
Access	○ **Available for**: ▪ For legal requests: Default is **Users with legal_user role**. ▪ For legal matters: Default is **Legal Matter Catalog**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Step	Field and default values from the template
	Select users with specific roles who are granted access to the record producer. ○ **Not available for**: Select users with specific roles who are denied access to the record producer. **Note:** If you don't specify a user criteria in any option, access is granted to everyone. For more information on creating a user criteria, see Set up the user criteria.

3. To save your changes in each step, click **Save**.
   All edits to the item attributes are automatically saved when you navigate to the next step.
4. To preview the record producer, click **Preview**.
5. In the **Review and Submit** step, review the record producer and click **Submit** to publish the record producer in the selected catalog.

Configure an external storage system for legal requests and legal matters

Configure an external storage system to store documents attached to legal requests and legal matters.

Before you begin

Ensure that the administrator has installed and set up spokes for the external storage system you want to configure for legal apps.

Box spoke v3.1.0 or later version

For more information on the setup and creating the Box account, see Set up Box spoke.

Google Drive spoke v1.3.0 or later version

For more information on the setup and creating the Google Drive account, see Set up Google Drive spoke.

Microsoft OneDrive spoke v2.1.0 or later version

For more information on the setup and creating the Microsoft OneDrive account, see Set up Microsoft OneDrive spoke.

Microsoft SharePoint spoke v2.2.0 or later version

For more information on setting up Microsoft SharePoint, see Configure Microsoft SharePoint Online connection record.

iManage Spoke spoke v1.0.0

For more information on the setup and creating the iManage account, see Set up iManage spoke.

Important:
After setting up the spoke, give the iManage spoke user [sn_imanage_spk.user] role to users accessing iManage external storage.

Role required: sn_lg_ops.request_config

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Administration** > **Legal Integrations** > **Integrations**.
2. Create or modify an external app configuration.
3. On the form, fill in the fields.

External Storage form

Field	Description
Name	Name of the external app configuration.
Description	Description of the external app configuration.
Active	Option for marking the configuration for external storage as active.
Table	Table in which the legal request or legal matter information is stored. For example, ○ To store documents for a legal request, select the **Legal Request [sn_lg_ops_request]** table. ○ To store documents for a legal matter, select the **Legal Matter [sn_lg_matter_matter]** table. ○ To store documents for a contract request, select the **Legal Contract [sn_lg_contracts_repository]** table. The selected table determines the available variables in the **Select variables** field.
Condition	Filter conditions to determine saving documents for a specific request category. For example, say you've already configured the Box external storage integration and want only NDA contract documents to be stored there, you can define the condition as **[Category] [is] [NDA]**. Then, select the external storage name in the **App** field.
Execution order	Order in which an external storage system is used for storing documents. When multiple external storage systems match the conditions, then the one with the lower-order value is chosen to store the documents.
App	External storage system on which the documents are stored. **Note:** The list only shows external storage systems for which spokes have been installed and configured.
Folder structure	Filepath to store documents attached to a legal request or legal matter in the external storage system.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Define a folder structure using a combination of static text and dynamically generated text from the selected field variables in the **Select variables** list. For example, in the folder structure `Legal/${company}/Contracts/${number}`, ○ `Legal` and `Contracts` are static texts ○ `${company}` and `${number}` are the field variables chosen from the **Select variables** list. These field variables are dynamically replaced by the values in each field while saving a document in the external storage.
Select variables	List of variables that can be used in the folder structure. Variables pull information from the selected table to customize the folder structure.
Attributes	Additional configuration items based on your Microsoft SharePoint and iManage configuration. Add the following details: *`Microsoft SharePoint`* ○ **Tenant**: Add the sys_id of the Microsoft SharePoint tenant record. ○ **Site_Name**: Add the name of the site in the tenant. ○ **Document Library**: Add the document library set up in the site where all documents related to legal requests and legal matters are stored. For more information on managing Microsoft SharePoint tenants, sites, and document libraries, see the Microsoft documentation. These fields appear only when **SharePoint** is selected from the **App** field. *`iManage`* ○ **Library**: When a value is specified, the application uploads documents using the designated library. This can also include the creation or using the Workspaces, folders, and so on. This attribute is optional, so if the library is not provided, the preferred library of the iManage service account user is used. ○ **Workspace_type**: Captures the type of Workspace to support the various use cases. For example:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	▪ **Shared**: Use an existing Workspace to upload documents. ▪ **Independent**: Create a separate Workspace for every request and matter. This helps in effectively organising and tracking the documents. Independent Workspace may or may not use a template. ○ **Template_ID**: Unique identifier of the template from iManage. The application uses the identifier to create iManage objects such as Workspaces, folders, and subfolders using the template configurations while uploading the documents. This attribute is used when the Workspace_type is Independent. You can use templates to maintain consistent names and folder structure for Workspaces created in iManage. ○ **Folder_path**: Used to identify the folders or subfolders, in which the document is uploaded. This attribute is used when the Workspace_type is Independent. ○ **Shared_workspace_ID**: Unique identifier of the Shared Workspace. This is used to identify the Workspace to upload the documents when Workspace type is Shared. For more information on iManage, see iManage documentation. **Note:** iManage login credentials are required to access the documentation.

4. Save the external app configuration.
   - Save a new external app configuration by selecting **Submit**.
   - Save the changes to an existing external app configuration by selecting **Update**.

   The external storage configuration is saved.
5. Select **Publish**.

Result
The external storage system integration is published and is ready for storing documents attached to legal requests.

What to do next
Add the **Enable External Storage for attachment** option in the intake forms so that the documents attached to those legal requests or legal matters are stored in the configured external storage. For more information, see Add an intake form to a practice area.

Configure the system properties for Legal Service Delivery apps to administer integration with the external storage provider. For more information, see Legal Service Delivery properties.

Integrating Legal Service Delivery applications with iManage storage

Integrate iManage storage with Legal Service Delivery applications to provide more security to the files.

You can integrate iManage storage with Legal Service Delivery applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The three types of Integrations are:

- Shared Workspace — To use an existing Workspace and folder to upload documents, use the Shared Workspace when needed. For example, you may want to organize the documents by Practice areas. So, you'd follow a shared Workspace scenario where the legal request or legal matter related folders are created inside the existing Workspace and the documents are uploaded to the folders.
- Independent Workspace using a template — To track every request or matter separately and upload documents, use the Independent Workspace when needed. Using a pre-defined iManage template helps you maintain consistent names and folder structure for the Workspace in iManage. The documents are uploaded using the folder mentioned in the Folder_path field.
- Independent Workspace without a template — When you want to track every request or matter separately and upload documents respectively using the folder mentioned in the Folder_path field, use the Independent Workspace.

Shared Workspace

In Shared Workspace, workspaces are shared between the ServiceNow® users registered on iManage and iManage storage.

Shared Workspace attribute details

Attribute	Optional/Mandatory	Sample Values (Manual input)
Library	Optional	None
Workspace_type	Mandatory	Shared
Template_ID	Not applicable	Not applicable
Folder_path	Not applicable	Not applicable
Shared_workspace_ID	Mandatory	Legal!123

- **Folder structure**: <folder>/${number}.
- **How it works**: When a document is uploaded, the application uses an existing Workspace (Legal) and reuses the primary folder. The application creates the folder under this folder hierarchy using the legal request or legal matter number and uploads the document in this path.

  The following example shows the document is uploaded in the specific folder.

  Note:
  If any of the folders don't exist, then the application creates them first and subsequently uses them. In this example, it is ${number}.

  Legal (Workspace) > Folder > LR001.

Independent Workspace using a template

Independent Workspace using a template attribute details

Attribute	Optional/Mandatory	Sample values
Library	Optional	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Independent Workspace using a template attribute details (continued)

Attribute	Optional/Mandatory	Sample values
Workspace_type	Mandatory	Independent
Template_ID	Mandatory	LegalTemplate!120
Folder_path	Mandatory	Documents
Shared_workspace_ID	Not applicable	Not applicable

- **Folder structure**: ${number}.
- **How it works**: The application creates a Workspace using the value provided in the folder structure field as the workspace name and creates the folders as defined in the template. In this example, LegalTemplate!123 is the Template_ID that is used as the template. Then use the folder path provided in the Folder_path field to upload the document to the folder in the path. In this example, the document file is uploaded to the Documents folder.

  The following example shows the document is uploaded in the specific folder:

  LR001 (Workspace) > Documents (Folder).

Independent Workspace without a template

Independent Workspace without a template attribute details

Attribute	Optional/Mandatory	Sample Values (Manual input)
Library	Optional	None
Workspace_type	Mandatory	Independent
Template_ID	Not applicable	Not applicable
Folder_path	Mandatory	Documents
Shared_workspace_ID	Not applicable	Not applicable

- **Folder structure**: ${number}.
- **How it works**: The application creates a Workspace using the value provided in the folder structure field as the workspace name. The application then creates a folder using the Folder_path field information and uploads the document to the last folder.

  The following example shows the document is uploaded in the specific folder:

  LR001 (Workspace) > Documents (Folder).

Create implementation in Scripted Extension Point

Create the implementation in the Scripted Extension Point, provided out-of-the-box, by placing it in the script include in the base application code.

Before you begin

The application scope must be changed to the specific application for which the implementation in the Scripted Extension Point is targeted.

Role required: You must have the specific role for the developer or administrator of the application, or you must have the admin role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

If you want to send additional information while uploading the document, you must create the implementation in the Scripted Extension Point and store it in custom fields in the iManage Workspace. The custom fields are preset on the iManage and must be enabled for mapping. For example, <custom field 1> is mapped to Practice Area, <custom field 2> is mapped to Category, <custom field 3> is mapped to Requested by, and so on.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for **sn_lg_ops.iManageCustomFieldHelperExtension** in the API Name field, under the Legal Request Management application scope.
3. Select the record to open.
4. Select the **Create implementation** in the related link section.
5. On the form, fill in the fields.
   For more information, see Scripted Extension Point form fields.

Result

The Implementation is created in Scripted Extension Point. For more information on how to use the script include for Scripted Extension point, see Use the script include for Scripted Extension Point.

Use the script include for Scripted Extension Point

Use the script include for Scripted Extension Point to update the custom fields on the iManage storage based on the mapping provided in the functions.

The processes below explain how to implement the script include for Scripted Extension Point.

- On the script include form, the script field is auto populated with the structure of expected function definitions. For more information on script include form, see Script includes.
- In the script include, the function have inputs that is available when the implementation is called.
- In case of iManage Extension Point (sn_lg_ops.iManageCustomFieldHelperExtension), following are the function definition, expectation and possible outputs:

Function names, expected results, and possible outputs

Function Name	Usage Information	Output
canHandle	Input: TableName: Name of the table of which the current record is being processed. Use: This function is used to identify whether this implementation should be executed if the TableName you are passing is using the same condition that is defined in the function. Example: In Legal Request Management, you have the input as tableName to identify	True/False True: The current execution should be executed. False: The current execution shouldn't be executed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Function Name	Usage Information	Output
	if this implementation is for the same table. The possible script would be as follows: `canHandle: function(tableName) { return tableName == "The target table of implementation "; },`	
Process	Input: requestRecord: GlideRecord object of the current legal record which is being processed. Use: This function is used to create mapping between the iManage Fields and the fields of the legal record. Example: In Legal Request Management, you have the GlideRecord object of the current legal table record in concern, which is used to get the values of the record fields and map to the custom fields in the process function. The possible script would be as follows: `process: function(requestRecord) { return { custom1: requestRecord.getDisplayValue("practice_area"), custom2: data, custom4: requestRecord.requested_for.country, description: requestRecord.description }; },`	`{ custom1: requestRecord.getDisplayValue(“p custom2: requestRecord.getValue("descript`

Scripted Extension Point form fields

List of fields in the Scripted Extension Point.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scripted Extension Point form fields

Field	Description
Name	Unique name for the extension point. The name can be up to 100 alphanumeric characters, including special characters.
API Name	Name of the extension point API that is pre-pended with the application scope to which it applies. This is a system-assigned name and can't be changed.
Application	Application to which the extension point is assigned. This is system-assigned and can't be changed.
Accessible from	Application scope that defines the applications that can access this scripted extension point. The available values are: • All application scopes — Can be accessed from any application scope. • This application scope — Can be accessed from the current application scope.
Active	Option to enable the scripted extension point.
Description	Descriptive content regarding the scripted extension point.
Script	The server-side script to run when called from other scripts. The script must define a single JavaScript class or a global function. The class or function name must match the **Name** field.
Client callable	Options to make the scripted extension point available to client scripts, list/report filters, reference qualifiers, or, if specified, as part of the URL.

Create or modify a response template for legal services

Create or modify a response template with a reusable message that legal fulfillers can use to send users quick and consistent messages. They can use these reusable messages in their assigned legal requests or legal matter forms, as well as in chat sessions or emails.

Before you begin

Ensure that the Templated Response plugin (com.sn_templated_snip) is installed.

Role required: sn_lg_ops.legal_config

About this task

Response templates are reusable messages that can be used by the legal fulfillers to respond to stakeholders of a legal request or legal matter. For more information, see Response templates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Administration** > **Response Template Configuration**.
2. Create or modify a response template.
   - To create a response template, click **New**.
   - To modify an existing response template, open it from the list.
3. On the form, fill in the fields.
   For field descriptions, see Response Template form.
4. Save the response template.
   - Save a new response template by clicking **Submit**.
   - Save the changes to an existing response template by clicking **Update**.

   The response template is created and the Channels related list appears.
5. Associate one or more channels through which the response template can be used.
   A response template is only available through the channels that you select. You can provide different messages by creating response templates for each channel, such as chat, email, or form.

   a. In the Channels related list, click **Edit**.

   b. On the Edit Members form, select one or more channels from the **Collection** list and click **>** to add them to the **Channels List**.

   c. Click **Save**.
   The selected channels are added to the Channels related list.

Result
The response template is ready to be used by the legal fulfiller through the configured channels.

Configure an Action for legal services on the Standard ticket page

Add or modify an Action and its functionality on the Standard ticket page for a legal request.

Before you begin

- Review the configuration of the script include, scripted extension points and service portal widgets for legal services installed with the Legal Service Delivery apps.
- The Actions is one of the sections of a standard ticket page of the Service Portal, so get familiar with the Standard ticket page and Service Portal.
- For more information about configuring service portal widgets, see Service Portal widgets.
- For more information about using and customizing the script includes, see Script includes.
- Ensure that you've set the application scope to Legal Request Management.

Role required: admin

About this task
The base system `DefaultLegalTicketActions` script provides the configuration of common actions for all legal request types. You can override these common actions for a specific legal request type or add more actions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Add or modify an action in the scripted extension point.

   a. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.

   b. Search and select the **LegalTicketAction** extension point.

   c. Add or modify an implementation for a practice area.

   - To add a new implementation for a practice area, click the **Create implementation** related link.

     On the Script Include form, update the script as required.

     i. To restrict this implementation to the practice area, add the following code to the *canHandle* parameter:

     ```
     canHandle: function(tableName) {
             return tableName == '<TableName>'; //Replace TableName with a practice area table name
         },
     ```

     ii. To add a new action, update the *process* method.

     For reference, see an existing *process* method of the `DefaultLegalTicketActions` script include or the implementation of another practice area.

   - To modify an existing implementation, open a class from the Implementations related list.

     On the Script Include form, update the script as required.

     - To modify an existing action, update the *name* parameter in the JSON object to match the one in the `DefaultLegalTicketActions` script.

       For example, to change the Cancel action's default behavior in a specific practice area, open its extension point implementation keep the *name* parameter as `cancel` while modifying other parameters in the JSON object as required.

     - To add a new action, create a JSON object and change the name and other parameters as required.

   d. Click **Update**.

2. **Optional:** Configure Actions widgets on the standard ticket page for legal services.

   a. Navigate to **All** > **Service Portal** > **Widgets**.

   b. Search and select the **Legal Ticket Actions** widget.

   c. Review the existing script and Angular ng-template for reference and then add or modify them as required.

   d. Click **Update**.

Enable and configure AI Search in Legal Service Portal

The ServiceNow® AI Search application provides a modern consumer-grade search engine for the Legal Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure
1. Add the sys_id of the Legal Service Portal record to the system property that includes the supported portals.
   a. Navigate to **All** > **Service Portal** > **Portals**.
   b. Open the Legal Service Portal record and copy its sys_id.
   c. Open the System Properties table [sys_properties], search, and open *`glide.service_portal.enable_ais_portal.allow_list`*.
   d. In the **Value** field, append the sys_id of Legal Service Portal record.
   e. Click **Update**.
2. Update the Legal Service Portal record.
   a. Navigate to **All** > **Service Portal** > **Portals**.
   b. Open the Legal Service Portal record.
   c. Select the **Enable AI Search** check box.
   d. In the **Search Application** field, select **Legal Service Portal Default Search Application**.
   A search application configuration defines search experience settings, such as the search engine, search results limit, and suggestions limit. A search application configuration is selected by default, but you can change it as needed. For more information on defining a search application configuration, see Search application configurations.
   e. In the **Search Results Configuration** field, select **Legal Portal Search**.
   A search results configuration defines how search results are displayed. A search results configuration is selected by default, but you can change it as needed. For more information on defining a search results configuration, see Create an EVAM definition.
   f. Click **Update**.

Delegation of legal duties and approvals

Legal fulfillers can delegate their legal duties to other users while they are unavailable. The delegate gets the same level of access as the legal fulfillers to work on their legal requests, legal matters, legal matter tasks, and approvals.

Legal Service Delivery supports the following delegations:

ServiceNow AI Platform delegation

This delegation method is active by default. This delegation enables lawyers to delegate all items to the delegate. However, while adding a delegate, lawyers can limit the delegation options:

- Delegate only approvals
- Delegate only assignments
- Delegate both approvals and assignments
- Delegate notifications

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Granular delegation

Granular delegation enables lawyers to choose which items from their assigned legal requests, legal matters, legal matter tasks, and approvals they want to delegate.

Note:
This delegation method requires activation of the Granular Delegation plugin (com.glide.granular_service_delegation).

Before lawyers can use the delegation, the administrator must configure the delegation rule tables, delegation rules, and the **My Delegate** workspace list in the Legal Counsel Center Classic Workspace:

- Set the **My Delegate** workspace list on the Granular Delegate [sys_granular_delegate] table as active.
- Set the **My Delegate** workspace list on the Delegate [sys_user_delegate] table as inactive.

For the new experience Legal Counsel Center Workspace, open *<instance>/sys_ux_list_list.do?sysparm_query=titleLIKEMy%20Delegates*.

The **My Delegate** UX list must be configured as follows:

- The **My Delegates** list on the Granular Delegate [sys_granular_delegate] table must be active.
- The **My Delegates** list on the Delegate [sys_user_delegate] table must be inactive.

A task is delegated when it matches the delegation rules specified for a delegation. For example, you can delegate only the Privacy Assessment requests. A delegation rule can be set on the Legal Request [sn_lg_ops_request] table with the condition as **[Category] [is] [Privacy]**.

Delegate legal duties to another user

Delegate legal duties relating to your assigned legal requests, legal matters, legal matter tasks, and approvals to another user when you might not have time or are unavailable.

Before you begin

Role required: legal_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Set Delegate**, click **My Delegates**.
4. In the My Delegates list, click **New**.
5. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Delegate form

Field	Description
User	User who delegates legal duties to a delegate.
Delegate	User to whom you are delegating legal duties assigned to you. **Note:** The delegate must be from the assignment group of which you are a member.
Starts	Start date of the delegation period.
Ends	End date of the delegation period.
Approvals	Option to delegate approvals. Select this option to authorize the delegate to approve or reject the approvals you've been assigned.
Assignments	Option to delegate assignments. Select this option to grant the delegate the same level of access to all approvals, legal requests, legal matters, and matter tasks as you.
All notifications	Option to delegate notifications. Select this option to send a copy of any notifications you receive to the delegate during the delegation period.

6. Click **Save**.

Result

Setting the delegation has the following effects during the specified period:

- The delegate can access and perform all the functions that you can do for your assigned legal requests, legal matters, matter tasks, and approvals from the **Delegated to me** list.
- Both you and the delegate receive notifications related to activities done on legal requests, legal matters, matter tasks, and approvals.

Delegate specific legal duties to another user using granular delegation

Delegate specific legal duties relating to your assigned legal requests, legal matters, legal matter tasks, and approvals to another user when you might not have time or are unavailable. These specific duties are derived from the pre-defined delegation rules.

Before you begin

- Granular Delegation plugin (com.glide.granular_service_delegation) must be activated.
- In the Legal Counsel Workspace settings, the **My Delegate** workspace list must be configured as follows:
  - The **My Delegate** workspace list on the Granular Delegate [sys_granular_delegate] table must be active.
  - The **My Delegate** workspace list on the Delegate [sys_user_delegate] table must be inactive.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Setting up list view in a workspace.

- For the new experience Legal Counsel Center Workspace, open *<instance>/sys_ux_list_list.do?sysparm_query=titleLIKEMy%20Delegates*.

  The **My Delegate** UX list must be configured as follows:

  - The **My Delegates** list on the Granular Delegate [sys_granular_delegate] table must be active.
  - The **My Delegates** list on the Delegate [sys_user_delegate] table must be inactive.
- Delegate rules must be created by the administrator. For more information, see Create delegation rules.

Role required: legal_fulfiller

About this task

You can use the granular delegation to delegate only specific requests such as Privacy Assessment requests. A delegation rule can be set on the Legal Request [sn_lg_ops_request] table with the condition as **[Category] [is] [Privacy]**.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Set Delegate**, click **My Delegates**.
4. In the My Delegates list, click **New**.
5. On the form, fill in the fields.

Granular Delegate form

Field	Description
Delegate	User to whom you are delegating legal duties assigned to you. **Note:** The delegate must be from the assignment group of which you are a member.
Starts	Start date of the delegation period.
Ends	End date of the delegation period.

6. Click **Save**.
   The delegation is created for the specified period. The **Delegation Rules** tab appears.
7. In the **Delegation Rules** tab, assign only specific legal duties and approvals defined in the delegate rules to the delegate.
   a. In the **Delegation Rules** tab, click **Add Duties**.
   b. In the Add Duties dialog, select the delegation rules you want to assign to the delegate.
   c. Click **Add**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
Setting the granular delegation has the following effects during the specified period:

- The delegate can access and work on your assigned legal requests, legal matters, legal matter tasks, and approvals as per the assigned duties from the **Delegated to me** list.
- Both you and the delegate receive notifications related to activities done on legal requests, legal matters, matter tasks, and approvals.

View and work on delegated legal duties

Delegate legal duties relating to your assigned legal requests, legal matters, legal matter tasks, and approvals to another user when you might not have time or are unavailable.

Before you begin
Role required: legal_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Delegate to me**, click a list item to see records assigned to the user who delegated you their duties.
   - Approvals: Opens a list of all delegated approvals for legal requests, legal matters, and legal matter tasks
   - Requests: Opens a list of all delegated legal requests
   - Matters: Opens a list of all delegated legal matters
   - Matter Tasks: Opens a list of all delegated legal matter tasks
4. Open a record from the list to view and work on it.

Using legal services

Employees can submit a legal request to seek services from the legal department and track its status.

Submit a legal request

Submit a legal request for yourself or on behalf of another user to seek services from the legal department.

Before you begin
Role required: sn_lg_ops.legal_user

About this task
You can also submit a legal request through your mobile device or the Virtual Agent chat.

- For more information on submitting a legal request through a mobile device, see Submit a legal request through Now Mobile.
- To submit a legal request through Virtual Agent chat, you must have the Legal Virtual Agent Conversations application installed on your instance. For more information, see Legal Virtual Agent Conversations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center**.

   Note:
   If you are using Legal Service Portal, you can submit a legal request by navigating to the Legal Service Portal portal and selecting a request from the **Service Catalog**.

2. Select **Legal services** from the header.
3. Select **Browse Legal services**.
4. Filter and search in the categories for the legal service request.
5. Click a legal service item for which you want to submit a request.
   If you are not sure which legal service item to choose to submit your request, select **General Legal Request**.
6. On the form, fill in the fields.

   Note:
   Each legal service request form has a different set of fields based on the selected legal service item.

7. Click **Submit**.

Result

- A legal request is created in the New state.
- The request is assigned to a group or user in the legal department based on the assignment rule set in the associated practice area.
- The Standard Ticket page displays that has the following tabs to perform different tasks:
  - Activity: Track the activity history of the request and post messages for the fulfiller working on the request.
  - Attachments or Documents: Upload and manage the documents in the legal request.

    Note:
    If the external storage option is enabled, the **Documents** tab is displayed. Otherwise, the **Attachments** tab is displayed.

  - Request Details: Review request details.
- If the administrator has configured notifications, you receive notifications about the progress of the request.

Viewing and tracking legal request details

View the details of a legal request after it has been submitted and track request activities.

Before you begin

Role required: sn_lg_ops.legal_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center**.

   Note:
   If you're using Legal Service Portal, open a request by navigating to the Legal Service Portal portal and selecting **My Requests** from the header.

2. Select **My Requests** from the header.
3. Select the legal request from the list.
4. View the details of the legal request.
   - Review the request details by accessing the **Request details** tab.
   - Review the contract document.
     - If the request uses internal storage for attachments, access the **Preview** tab.
     - If the request uses external storage such as Microsoft OneDrive Google Drive, or the like, access the **Document revision** tab.
   - View a list of signatories and their details by accessing the **Signatories** tab.
   - View task SLA details by accessing the **Task SLAs** tab.
   - View the access levels to documents for various personas by accessing the **Document Access** tab.
5. **Optional:** Track the request's activities and post messages for the fulfiller working on it by accessing the **Activity** tab.

Update a submitted legal request

Update request details, add comments, or upload documents in a legal request you submitted while it is still in the New or Assigned state. You can cancel a submitted request irrespective of its state.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Employee Center**.

   Note:
   If you're using Legal Service Portal, open a request by navigating to the Legal Service Portal portal and selecting **My Requests** from the header.

2. Select **My Requests** from the header.
3. Select the legal request from the list.
4. On the Standard Ticket page, review and edit the request details, manage attachments, or cancel the request.
5. **Optional:** In the **Activity** tab, provide comments or more information about your request for the request fulfiller.
6. **Optional:** Manage documents supporting your request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. **Optional:** In the **Approvals** tab, view the approval details associated with the legal request.

   Note:
   The **Approvals** tab appears only when the legal request or its attachment has approval records.

8. **Optional:** In the **Legal Matters** tab, view any legal matter associated with the legal request.

   Note:
   The **Legal Matters** tab appears only when the legal request is associated with a legal matter, and you have permission to view legal matters.

Reopen a closed legal request

Reopen a request if you're not satisfied with the resolution given by the legal team.

Before you begin
Role required: sn_lg_ops.legal_user

About this task
As a requester, you can only reopen your requests that have been closed (Close Complete or Closed Incomplete). You cannot reopen a request that has been canceled.

Note:
The option to reopen is not available for approval-based workflow legal requests, such as stock preclearance approval, conflict of interest disclosure, and non-disclosure agreement with third parties.

Procedure

1. Navigate to **All** > **Employee Center**.

   Note:
   If you're using Legal Service Portal, open a request by navigating to the Legal Service Portal portal and selecting **My Requests** from the header.

2. Select **My Requests** from the header.
3. Select the legal request from the list.
4. On the Standard Ticket page, click **Reopen Request** to open the request.
5. In the dialog box, enter comments to explain why you are reopening the request in the **Reason** field.
6. Click **Reopen Request**.

Result
The request is reopened, and its state changes to Work in Progress. The request is reassigned to the same legal team member to whom it was previously assigned.
If the administrator has configured email notifications, the assigned user, practice area lead, assignment group manager, and any collaborators added to the request will receive notifications about the reopening of the request by the requester. If the legal request assignment group permissions is not No Access then all assignment group members also notified.

Managing legal requests

As a member of the legal department, you work on legal requests submitted by employees to resolve their issues or to answer their queries.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When an employee submits a legal request, it is automatically assigned to a group or user in the legal department. The assignment is done based on assignment rules configured in the intake form of the associated practice area. If the request is assigned to a legal group, the group lead can triage the request to themselves or to any member in the assignment group.

When a requester creates a legal request under the incorrect Practice Area and Category, the legal fulfiller can transfer the request to the correct Practice Area and Category. The transferred request contains all the relevant details copied from the old request, including the attachments. The fulfiller can submit the request or send the request back to the requester to complete.

Note:
The external storage options that support attachments in a transferred request are Microsoft OneDrive and Google Drive.

Use the Legal Counsel Center to work on legal requests assigned to you.

Assign a legal request

Assign a legal request to yourself or to someone in your assignment group.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
When an employee submits a legal request, it is automatically assigned to a group or user in the legal department. The assignment is done based on the assignment rules configured for the intake form of the associated practice area. If the request is assigned to a legal group, any member from the group can triage the request themselves or assign it to another member of the group.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Legal Requests**, click **Unassigned**.
4. In the list of unassigned requests, open a request by clicking the request number.
5. **Optional:** Update the **Assignment group permission** to change the permission level of the legal request for the users.
   - **No Access**: Only the practice area lead, group manager, and user in the **Assigned to** field can access the legal request and assign it to one of the members in the assignment group. The assigned user can then work on the legal request.
   - **Read**: All members from the assignment group can only view the legal request. This option is the default permission level.
   - **Edit**: All members from the assignment group can view and work on the legal request. The Assigned To field becomes optional if this option is set.

   Assignment Group Permission field of a active Legal Request Record can be edited by:
   - Practice area lead, Assignment group manager, Assigned to, and delegated users.
   - Any Assignment group member, if the record is in New state or Assignment group permission is edit or Configured options have assigned_to_field_not_mandatory in it.
6. Based on the permission option, assign the request to yourself or to another member from the assigned group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To assign the request to yourself, click **Assign to me**.
- To assign the request to another member, on the **Details** tab, select a user in the **Assigned to** field and click **Save**.

Result
The state of the request updates to Assigned.

What to do next
The assigned user can start working on the legal request.

Work on a legal request

Work on legal requests assigned to you or as a collaborator to resolve issues or answer queries.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Note:
During times when you're unavailable, you can delegate your legal duties to other users.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. **Optional:** Update the **Assignment group permission** to change the permission level of the legal request for the users.
   - **No Access**: Only the practice area lead, group manager, and user in the **Assigned to** field can access the legal request and assign it to one of the members in the assignment group. The assigned user can then work on the legal request.
   - **Read**: All members from the assignment group can only view the legal request. This option is the default permission level.
   - **Edit**: All members from the assignment group can view and work on the legal request. The Assigned To field becomes optional if this option is set.

   Assignment Group Permission field of a active Legal Request Record can be edited by:
   - Practice area lead, Assignment group manager, Assigned to, and delegated users.
   - Any Assignment group member, if the record is in New state or Assignment group permission is edit or Configured options have assigned_to_field_not_mandatory in it.
5. **Optional:** If the request must be reassigned to a new assignment group due to business needs, select a new assignment group in the **Assignment group** field.

   Note:
   Editing of the **Assignment group** field is available only when the **Editable Assignment group in Request** option is configured in the associated intake form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When the assignment group is changed, existing group users who are not in the updated assignment group might lose access to the request. The **Assigned to** field is also cleared, and the assigned user is notified via email.

6. **Optional:** If you need help from other fulfillers to work on the legal request, add them in the **Collaborators** field.

   Note:
   Users with the sn_lg_contracts.contracts_fulfiller role are listed in the **Collaborators** field.

   The collaborators are notified via email that they have been added as collaborators to a legal request.

7. Work on the legal request to fulfill the requested services or information.
   If the request needs detailed investigation, you can promote the request to a legal matter.

   Note:
   To promote a legal request to a legal matter, you must have the Legal Matter Management app installed and the record producer type for the associated intake form must be set to **Request and Matter**. For more information on setting a record producer type, see Add an intake form to a practice area.

8. Manage documents that part of the resolution to the legal request.
9. **Optional:** Initiate an ad hoc approval for the legal request or its attachments when an approval is required from other stakeholders.
10. **Optional:** Communicate with the requester or other stakeholders using emails, chats, work notes, or comments.
    - Using emails: Communicate with any stakeholders using emails. For more information, see Communicate using emails.
    - Using live chats: Communicate with any stakeholders using chats. For more information, see Start a chat session through Legal Counsel Center Inbox.
    - Using Comments: To communicate with the requester or other stakeholders, in the Compose section, enter your message in the **Comments** field and click **Post Comments**.
    - Using Work notes: Communicate with the other members of the legal department, in the Compose section, enter your message in the **Work notes** field and click **Post Work notes**.

      Using response templates, you can insert predefined content into emails, chats, and legal request and legal matter form fields such as **Comments** and **Work notes**. Select the response template icon ( ) and find an appropriate response template based on the subject of your email. Copy and paste the template's content into the required field.

      Note:
      Response templates configured for legal services are only available to use.

11. Either close the request or cancel it.
    - After you resolve the request, you can close the request.
    - If you identify that the request doesn't need any action, you can cancel it.

Manage attachments for a legal request

Upload supporting documentation, such as documents, email copies, images, or any other files into a legal request while you are working on it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
You can also use these artifacts as a reference material to solve similar requests in future.

If the external storage option is enabled, you can manage document access for users to see these attachments. For more information, see Document access in a legal request.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. **Optional:** Manage documents in the legal request.

Document access in a legal request
Documents attached to legal requests are uploaded to the configured external storage system when the external storage option is enabled on the legal request intake form. The access of these documents to various personas is controlled in real time, via a scheduled job, or on-demand.

Document access for various personas

The following table shows the type of access to documents and when it is granted to various personas.

Document access in a legal request

Persona	Access type	When
Requester, requested for	Read, Write, Delete—on their own documents Read only—on documents attached by the legal request fulfiller	Request is submitted
Group manager	Read, Write, Delete	Request is submitted
Legal request fulfiller (Assigned to)	Read, Write, Delete	Request is assigned
Collaborators	Read, Write, Delete	Added to the **Collaborators** list
Ad hoc approvers	Read only, No delete	Ad hoc approval is initiated
Practice area lead	Read only, No delete	Scheduled job is run or on-demand

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document access in a legal request (continued)

Persona	Access type	When
Members of assignment group	Depends on the **Assignment group permission** field	Scheduled job is run or on-demand
Watch list users	Read only, No delete	Added to the **Watch list**
Delegates	Read, Write, Delete	*`Resolve platform delegation permissions for legal request`* job is run as scheduled, or on-demand
Delegates through granular delegation	Read only, No delete	User is delegated

The scheduled job *`Process External Storage Permissions`* runs at the defined intervals to sync access for all unprocessed permissions on documents for legal requests stored in external storage.

- Requesters can access documents attached to their legal requests from the **Documents** tab on the Standard Ticket page.

  Note:
  Requesters can delete only those documents from the request that they've attached.

- The legal fulfiller assigned to the legal request can access documents from the **Documents** tab of the request record in the Legal Counsel Center.
- Users added to the matter can request on-demand access to documents if they need access before the scheduled job is run.
- The legal fulfiller can revoke a user's access to documents.
- Ad hoc approvers lose document access after they approve or reject the requested item.
- Delegates lose access after the delegation period expires.

Request document access for a legal request

Request access to documents attached to a legal request that you do not currently have access to.

Before you begin
Role required: sn_lg_ops.legal_user or sn_lg_ops.legal_fulfiller

About this task

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **Legal Requests**, click **All**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Open a legal request you want to request access to see the documents attached to it.
5. In the **Documents** tab, click **Request Access**.

Result
The system processes the user's permissions and grants access to the documents in the legal request.

Remove document access of users in a legal request

Remove existing users' access to documents attached to a legal request when they are no longer required to view those documents.

Before you begin
Role required: sn_lg_ops.request_admin

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **Legal Requests**, click **All**.
4. Open a legal request you want to remove users' access to documents attached to it.
5. In the **Documents Access** tab, select users for whom you want to remove the document access.

> **Note:**
> The **Document Access** tab is only visible to the practice area lead, the manager of the current assignment group, and the assigned to person.

6. Click **Remove Access**.

Result
The document access of the selected users is removed, and they're also removed from the list. The user will no longer be able to view the request's documents.

Initiate an ad hoc approval for a legal request or its attachment

Initiate an ad hoc approval for a legal request or its attachments from a user or a user group.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Some cases where approvals can be requested for a legal request or its attachment include:

- Approval for legal contract documents from stakeholders.
- Ad hoc approval for a legal request that needs an authorization from the privacy team before it can be processed.

You can assign these approvals to any user or user group in your organization who have the legal_user role. When you initiate an approval, the approvers receive an email notification and can review and act on the approval.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If a legal request or attachment already has a pending approval record, you cannot initiate another approval for the same item.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. In the **Approvers** tab, click **Initiate Approval**.

   You can also initiate an approval by clicking the more actions button ( ) and selecting **Initiate Approval**.
5. On the Initiate Approval dialog box, fill in the fields.

Initiate Approval dialog box

Field	Description
Approval for	Item that needs an approval. ○ **Request**: Get approval for the entire legal request. ○ **Attachment**: Get approval for an attachment in the legal request.
Select attachment	Attachment in the legal request for which approval is required. This field appears only when **Attachment** is selected from **Approval for**.
Select document	Documents attached to the legal request for which approval is required. This field appears only when **Document** is selected from **Approval for**. **Note:** The Document option in the list appears only when the external storage option is enabled on the intake form of the request type.
Approval by	Approval required at user level or user group level. ○ **User**: Get approval from an individual user. ○ **User group**: Get approval from a set of users. The **Select user** field is replaced by the **Select user group** field.
Select user	User or user group who must approve the item.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Users or user groups with the legal_user role are listed. ○ If you selected **User** in the **Approval by** field, select a user from whom the approval is required. ○ If you selected **User group** in the **Approval by** field, select a user group from whom the approval is required.
Approval note	Note for the selected user or user group.

6. Click **Initiate**.

Result
Assigned approvers are added in the **Approvers** tab based on the following conditions:

- If you selected **User** in the **Approval by** field, an approval record is created for the selected user.
- If you selected **User group** in the **Approval by** field, an approval record for each user in the selected user group is created. Anyone from the group can approve.

The assigned approvers get an email notification with a link to open the record for review and action.

Note:

- An attachment cannot be deleted after an ad hoc approval is initiated and is in the Requested state. To remove such attachments, either cancel the ad hoc approval request or obtain the approval first.
- When you remove an attachment from a legal request, it also deletes the associated ad hoc approval records. A work note is posted with the deletion details in the activity stream of the legal request.

The approval details appear under the **Approvals** tab on the Standard Ticket page.

What to do next
Approvers can review and approve or reject the requested item.

Cancel an ad hoc approval for a legal request

Cancel an ad hoc approval for a legal request if it no longer requires any action.

Before you begin
You can only cancel an ad hoc approval that is in the Requested state.

Role required: sn_lg_ops.legal_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. In the **Approvers** tab, click **Cancel Approval**.
5. In the Cancel Approval dialog box, select the approval record from the **Approval for** field that you want to cancel.
6. Enter comments for canceling the approval record and click **Confirm Cancellation**.

Result

The approval record is canceled and its state updates to Cancelled and comments are added to the approval record. If the approval was requested from a user group, then the corresponding approval records for all users in the user group are canceled.

Approve or reject a legal request or its attachment

Review a legal request or attachment and approve or reject it.

Before you begin

You must have received an email notification with a link to the legal item for approval.
Role required: approver_user and legal_user

Procedure

1. Open the approval record from the email notification, Legal Counsel Center, Self-Service, or Employee Center portal.
2. Review the record and either approve or reject:
   - To approve the record, click **Approve**.
   - To reject the record, enter comments for rejection in the **Comments** field and click **Reject**.

Result

The following table shows the result of approve and reject actions on the approval record.

Result of approving or rejecting a legal item

Approve	Reject
• The approval record's state updates from Requested to Approved. If the requested item was assigned to a user group for approval, then the state of the approval records for the remaining users updates from Requested to No Longer Required.	• The approval record's state updates from Requested to Rejected. If the requested item was assigned to a user group for approval, then the state of the approval records for the remaining users updates from Requested to No Longer Required.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result of approving or rejecting a legal item (continued)

Approve	Reject
Note: If the approval was for an attachment of a legal request, the attachment cannot be deleted from the legal request. • Any approver who isn't added to **Watch list** in the legal request would lose access to the approved item.	• The rejection comments posted by the approver is added to the legal request's Activities section. • Any approver who isn't added to **Watch list** in the legal request would lose access to the approved item.

- Any approver who isn't added to **Watch list** in the legal request would lose access to the approved item.
- Request fulfiller and collaborators get an email notification about the approval or rejection.

Communicate using emails from Legal Counsel Center

Compose and send emails directly from legal request record form in the Legal Counsel Center. You can also save the email as draft to send it later.

Before you begin

Role required: sn_lg_ops.legal_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **Legal Requests**, click **Assigned to Me**.
4. Open a legal request.
5. Click the more actions button ( ) and select **Compose Email**.
   The **Compose Email** button is available only when the legal request is in the Assigned or Work in progress state.
6. In the **New Email Draft** tab, compose a new email or respond to the email received.

   Using response templates, you can insert predefined content into the email body. Select the response template icon ( ) and find an appropriate response template based on the subject of your email. Copy and paste the template's content into the email body.

   Note: Only response templates configured for the email channel are available to use. For more information, see Response templates configured for email channel.

   For more information, see Communicating via email .
7. Send it right away or save it as a draft to send later.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To send the email instantly, click **Send Email**.
- To save the email as draft, click **Save as draft**.

> **Note:**
> You can view the draft emails by clicking the list icon (), selecting the **Drafts** list item under the **Email** category, and opening a draft email.

Result
After the email is sent, it is added to the activity stream on the legal request form. Emails you receive from others are also added to the activity stream.

Promote a legal request to a legal matter

Promote a legal request to a legal matter when the request needs additional investigation and cross-departmental collaboration that might take more time to resolve.

Before you begin
Ensure you have the Legal Matter Management app installed and the record producer type in the associated intake form set to **Request and Matter**. For more information, see Add an intake form to a practice area.

Role required: sn_lg_ops.legal_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ().
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. To promote the legal request to a legal matter, click **Create Matter**.
5. In the Create Matter dialog, indicate whether to use a template to create a legal matter.
   - To create a legal matter record with predefined data, such as phases and tasks, select a template name from the **Matter template** list, and click **OK**.
   - To create a legal matter record without any predefined data, leave the **Matter template** field empty and click **OK**.

Result
- A legal matter is created with details copied from the legal request.
- You (a legal fulfiller or a collaborator) will be added in the **Watch list** of the legal matter to access it.
- If you selected a matter template, then the matter has predefined phases, tasks, and attributes from the template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If the external storage option is enabled, the documents attached to the legal request and stored in the configured external storage are listed under the **Documents** tab of the legal matter's Artifact record.

Note:
Since the documents in the artifact created from the requests are shared, the addition or deletion of any documents in this shared artifact is reflected in both request and matter. Also, the document permission for this shared artifact is managed at the legal request level and not at the legal matter level.

Transfer a legal request

Transfer a legal request to a new practice area or category if the request was submitted with an inappropriate practice area or category.

Before you begin

The transfer request action is available to the users having write access to the request, such as Practice Area Leads, Group Managers, and users with Request manager roles in New state. It is also available to the respective fulfillers to whom the request is assigned in the Assigned state.

Role required: sn_lg_ops.request_fulfiller

About this task

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. Select **Assigned to Me** under **Legal Requests**.

Note:
Practice Area Leads and Group Managers can transfer a legal request without assigning the request to anyone.

4. Open the legal request that you want to transfer.
5. Select the More Actions icon ( ) and then select **Transfer Request**.
6. In the dialog box, fill in the fields.

Transfer Request dialog box

Field	Description
Practice area	Practice area to which you want to transfer the request.
Category	Category associated to the practice area. **Note:** If you select the Third party contract as the category, you need to use **Send to Requester** action instead of **Submit** after transferring the request.
Subcategory	Subcategory associated with the category.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Additional comments	Any comments that would be helpful in relation to the transfer of the legal request.

7. Select **Transfer**.
   The information in the Variables section must be complete.
   - If you have the variable information, update the Variables details and select **Submit**.

     An email notification is sent to the requester, fulfiller, and anyone on the Watch list.

     Note:
     If the legal request is transferred to **Contracts**, the **Submit** button is not available.

   - If you do not have the complete variable information, select **Send to Requester** to send the request back to the requester.

     An email notification is sent to the requester, and requested for. For more information, see Update a legal request by requester.

Result

- The legal request is transferred to the selected practice area.
- A new request is created and the old request is canceled.
- The state of the new request is Draft.
- The fulfiller becomes the collaborator. Collaborators are assignees who have similar privileges as the person to whom the legal request is assigned.
- Any attachments in ServiceNow® storage or external storage like Google Drive and Microsoft OneDrive are transferred to the new request.
- After the request is sent to the requester, the fulfiller's name is moved from the Collaborators field to the Watch list.
- The request state is changed to New after the variables are updated and submitted by the fulfiller or the requester.

Update a legal request by requester

Update the variables in the form fields and submit the legal request by the requester once the request is sent back by the fulfiller.

Before you begin

Ensure that Employee Center portal is installed.

Role required: sn_lg_ops.legal_user

About this task

After the legal request is transferred and the fulfiller sends the request back to the requester, an email notification is sent to the requester. For more information on the transfer of a legal request, see Transfer a legal request.

Note:
If the legal request is created by a different user on behalf of the requester, both users receive the email notification and both can update the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Select the **Review and submit** link in the email.
2. On the My Tasks page in Employee Center, select the required request task.
3. The requested task opens in Employee Center.
4. Fill in the fields in the **Details** tab.
   The fields in the Details tab vary depending on the Practice area or Category of the request.
5. Select **Submit**.

Result

The legal request is updated with the new variable information.

A success confirmation message is displayed.

Close a legal request

You can close a legal request assigned to you when you've resolved it.

Before you begin

If you've installed Legal Matter Management and have a legal request promoted to a legal matter, the system closes legal requests automatically when the matter owner chooses to close the related requests while closing the matter.

Note:
A legal request cannot be closed if there are any open ad hoc approval records for it or its attachments.

Role required: sn_lg_ops.legal_fulfiller

About this task

As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. **Optional:** Attach files that are a solution for the request or a link to the knowledge base article as reference material for the requester.
5. Close the request based on the work done on the request:
   - If your work on the request resolved the request, click **Close Complete**.
   - If you have done some work on the request but were unable to resolve the request, click **Close Incomplete**.
6. In the dialog box, enter comments to explain why the request was closed in the **Additional comments** field.
7. Click **OK**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The legal request is closed based on the system property *sn_lg_ops.allow_request_closure_with_open_matters* and whether or not there is a legal matter associated with the request.

- If the property is set to false and there is an open associated legal matter, the request is closed only after the legal matter is closed.
- If the property is set to true, the request is closed regardless of the state of the associated legal matters.

The state of the request changes to Closed Complete or Closed Incomplete, depending on the option selected.

Legal Request Management reference

Reference topics provide additional information about the lists and forms that you use in Legal Request Management.

Legal Service Delivery properties

There are several properties that you can use to configure integrations for Legal Service Delivery apps.

These properties are available for Legal Service Delivery.

Note:
To configure these properties, navigate to **All** > **Legal Administration** > **Legal Integrations** > **Properties**.

Properties for Legal Service Delivery

Property	Description
External Storage section	
Maximum number of attempts before removing the permission records with errors sn_lg_ops.external_storage_clear_errored_records_after	The number of retries permitted before removing all errored permission entries from the job execution queue. • Type: integer • Default value: 5 • Learn more: Configure an external storage system for legal requests and legal matters
Time in minutes to retry permission records execution sn_lg_ops.integration_retry_after	The amount of time the system waits in minutes before retrying to execute permission records.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Legal Request Management (continued)

Role title [name]	Description	Contains roles
Request Configurator [sn_lg_ops.request_config]	Provides access to configure data such as a practice area and category, and manage record producers through Catalog Builder. It does not provide access to the transactional data of legal requests.	• catalog_builder_editor • catalog_editor • connection_admin • email_client_quick_message_author • sla_manager • sn_lg_ops.legal_assignment_rules_admin • sn_lg_ops.legal_notification_admin • sn_lg_ops.legal_user • sn_lg_stock_cp.stock_config • sn_templated_snip.template_snippet_write
Request Manager [sn_lg_ops.request_manager]	Provides access to all transactional data of legal requests and permission to assign requests.	sn_lg_ops.request_fulfiller

Scheduled jobs

Note:
The following scheduled jobs are applicable when the **Enable External Storage for attachment** option is added to an intake form. For more information, see Add an intake form to a practice area.

Scheduled jobs installed with Legal Request Management

Scheduled job	Description
Process External Storage Permissions	The job selects and executes all scheduled permission records on documents for legal requests stored in external storage.
Retry External Document Failure	The job is executed on demand by the administrator to retry failed document uploads to external storage.

Tables

Note:
In addition to the following tables, tables specific to practice areas are installed with Legal Request Management. For more information, see Practice area tables for legal requests.

Tables installed with Legal Request Management

Table	Description
Catalog Defaults [sn_lg_ops_catalog_default]	Stores service catalog defaults such as any declarations content or templates for specific legal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Legal Request Management (continued)

Table	Description
	Extends the Application File [sys_metadata] table.
Category [sn_lg_ops_category]	Stores intake forms of a practice area. These intake forms categorize legal requests into relevant groups. Extends the Application File [sys_metadata] table.
CRM [sn_lg_ops_integration_crm]	Stores configuration details for Customer Relationship Management (CRM) apps such as Microsoft Dynamics CRM. Extends the Legal Integration table.
Document (sn_lg_ops_external_document)	Stores the details of the documents for legal requests stored in an external storage. This table is applicable when the **Enable External Storage for attachment** option is added to an intake form. For more information, see Add an intake form to a practice area.
Electronic Signature [sn_lg_ops_integration_esignature]	Stores configuration details for external electronic signature such as Adobe Acrobat Sign or Docusign. This table extends the Legal Integration table.
External Apps Configuration (Deprecated) [sn_lg_ops_external_configuration]	The table has been deprecated. Use the Legal Integration, Electronic Signature, and External Storage tables instead.
External Storage [sn_lg_ops_integration_external_storage]	Stores configuration details for external storage systems such as Google Drive or Box. Extends the Legal Integration table.
Integration Provider [sn_lg_ops_integration_provider]	Stores the details of external apps used by Legal Service Delivery applications. Extends the Application File [sys_metadata] table.
Legal Disposition [sn_lg_ops_legal_disposition]	Stores disposition details for legal requests such as patents, contracts, and lobbying.
Legal Event Schedule Entry [sn_lg_ops_schedule_span]	Stores scheduled items such as meetings or appointments for a legal department user.
Legal External Folder (sn_lg_ops_external_folder)	Stores URLs and details of folders created in the external storage system to save documents for each legal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Legal Request Management (continued)

Table	Description
	This table is applicable when the **Enable External Storage for attachment** option is added to an intake form. For more information, see Add an intake form to a practice area.
Legal Integration [sn_lg_ops_integration_core]	Stores configuration details of external applications for storage and electronic signatures.
Legal Profile [sn_lg_ops_legal_profile]	Stores all legal data associated with an employee such as active legal holds, full legal name, and citizenship information that can be used for specific Legal Practice Applications (LPAs).
Legal Profile Association [sn_lg_ops_legal_profile_association]	Stores the association between a legal profile and legal requests or legal matters.
Legal Request [sn_lg_ops_request]	Stores legal requests submitted by a user.
Legal Schedules [sn_lg_ops_schedule]	Stores the schedule for a legal department user.
Legal Types [sn_lg_ops_legal_type_mapping]	Stores the legal request type: Legal request, matter, or matter task.
Milestones [sn_lg_ops_milestone_schedule_span]	Stores the milestones related to a legal request.
Option [sn_lg_ops_option]	Stores the predefined options to change the default behavior of legal requests and legal matters. You can set these options while configuring the intake form of a practice area. For more information, see Add an intake form to a practice area. Extends the Application File [sys_metadata] table.
Practice Area [sn_lg_ops_practice_area]	Stores practice area details. Extends the Application File [sys_metadata] table.
Practice Area Lead [sn_lg_ops_m2m_practice_area_lead]	Stores practice area leads for different practice areas.
Subcategory [sn_lg_ops_subcategory]	Stores the subcategories associated with an intake form of a practice area. Extends the Application File [sys_metadata] table.

Practice area tables for legal requests

Tables specific to practice areas are installed with the Legal Request Management application.

These practice area tables extend the Legal Request [sn_lg_ops_request] table.

If you add columns in a practice area table, you can configure the table to add those columns in the Lists section of Legal Counsel Center. You can also use these tables in other configuration as needed. For more information, see Configure a practice area table.

- Compliance [sn_lg_ops_compliance]
- Corporate Support [sn_lg_ops_corporate_support]
- Crime [sn_lg_ops_crime]
- Digital Forensics [sn_lg_ops_digital_forensics]
- Ethics [sn_lg_ops_ethics]
- General Contract Support [sn_lg_ops_general_contract_support]
- General Legal [sn_lg_ops_general_legal]
- Government Affairs [sn_lg_ops_government_affairs]
- Health, Safety, and Environment [sn_lg_ops_health_safety_and_environment]
- Labor and Employment [sn_lg_ops_labor_and_employment]
- Legal Operations [sn_lg_ops_legal_operations]
- Licensing and Tech Transactions [sn_lg_ops_licensing_and_tech_transactions]

Legal request record - Details tab

List of fields in the **Details** tab of a legal request in the Legal Counsel Center.

A legal request record in the Legal Counsel Center contains the complete information about the request. The **Details** tab contains fields from the legal intake form and other fields required by legal department users.

Details tab fields for a legal request

Field	Description
Number	System-generated number for the legal request.
Practice area	Practice area to which the request belongs.
Category	Category of the legal request associated with the selected practice area.
Subcategory	Subcategory of the legal request associated with the category.
Priority	Level of priority to address the legal request. A higher priority means that the assigned user should act on the legal request sooner.
Watch list	Users with read-only access who can review the legal request and post additional comments in the request. The list shows all users who have the sn_legal_user role. The request fulfiller can add any user from the list or enter the email address of a user who is not in the list.
Collaborators	Users added to the request to help the legal fulfiller in resolving the request. The collaborators get full access to the request to work on. **Note:** The list shows all users who have the request_fulfiller role.

Details tab fields for a legal request (continued)

Field	Description
Opened	Date the legal request was submitted.
Opened by	User who submitted the legal request.
Requested for	User for whom the requester submitted the legal request.
State	Current state of the legal request.
Assignment group	Legal group to which the legal request is assigned.
Assignment group permission	Permission level of the legal request for the assignment group members. • **No Access**: Only the practice area lead and group manager can access the legal request and assign it to one of the members in the assignment group. The assigned user can then work on the legal request. • **Read**: All members from the assignment group can only view the legal request. This option is the default permission level. • **Edit**: All members from the assignment group can view and work on the legal request.
Assigned to	User from the assignment group to whom the legal request is assigned.
Short description	Brief description of the legal request.
Work notes	Comments or notes for the internal users of the legal department who have the access to view the legal request.
Additional comments	Comments or notes for the requester or users in the **Watch list** field who have the access to view the request.

Response Template form

Legal configurator can use the Response Template form to create or modify a response template for reusable messages.

Create or modify a response template by navigating to **All** > **Legal Administration** > **Response Template Configuration**.

Response Template form

Field	Description
Name	Name of the response template.
Short Name	Short description that identifies the response template when using chat in Legal Counsel Center. Use the short name with a quick command (/) to show the text from the template body of the response template while in chat. This feature provides a fast and consistent way to populate text while in chat.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Response Template form (continued)

Field	Description
	For example, the short name `gm` identifies the chat response template for a Good Morning greeting. Enter **/gm** in a chat window to show the text from this response template.
Table	Name of the table that the response template is associated with. **Note:** If you're creating a response template for Legal Counsel Center chat, you must select the Interaction [interaction] table. For other response templates, you must select a table from the Legal Service Delivery apps.
Condition	Conditions to determine when the response template is available for use. When defining conditions like case sensitivity or null values, see API GlideFilter - Scoped, Global. **Note:** The conditions available depend on the table that you select. For chat response templates, specify the condition: **[Type] [is] [Chat]**
Application	The application that created the response template.
Group visibility	User groups who have access to the response template. **Note:** Leaving this field empty makes the response template available to all Legal groups.
Template body	Text of the response template that provides instructions to the legal fulfillers on how to respond to an assigned legal request or legal matter. You can reference field values by selecting variables from the **Variables** list based on the table you select. Place the cursor where you want the custom variable reference to appear, then click **Insert Current User** to insert the current user variable (`${current_user}`) or

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Response Template form (continued)

Field	Description
	Insert Current Date to insert the current date variable (`${Date}`).
Select variables	Fields from the selected table that you can include in the template body as variables. For example, say you selected the Legal Request [sn_lg_ops_request] table in the **Table** field and then inserted the **Requested for** field variable in the template body. When the response template is used, this field variable will be replaced with the actual name of the user for whom the legal request was submitted.

Legal Matter Management

The ServiceNow® Legal Matter Management application enables you to complete legal requests that need cross-departmental tasking and a workflow with a mechanism to store supporting documents and track important milestones.

- With its embedded record-level security, maintain the confidential and sensitive information of each record. Define a standardized process and workflow for various matter types using matter templates.
- With the outside counsel engagement workflow, resolve legal matters using the expertise and services of an outside counsel.

Explore Learn about how employees, paralegal staff, and lawyers use Legal Matter Management.	**Set up** Set up legal matter templates and complete other configurations.	**Assign** Assign legal matters to matter owners.
Manage Manage contract requests.	**Analytics and Reporting** Coordinate work and improve processes with preconfigured dashboards.	**Reference** Get details about components such as roles, tables, plugins, and store applications that are installed.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Troubleshoot and get help

- Ask or answer questions in the Legal Service Delivery community forum
- Search the Known Error Portal for known error articles
- Contact Customer Service and Support

Exploring Legal Matter Management

Legal Matter Management enables you to manage legal matters and cross-functional tasking to effectively complete legal work. You can store relevant documents and track important milestones of these legal matters from a single place.

Creating a legal matter

You can create a legal matter in two ways:

- A paralegal staff or lawyer can promote a legal request to a legal matter if the request needs additional investigation and substantial time to work on.
- A practice area lead can create a legal matter directly. These matters do not have any parent legal request though related requests can be added to them.

Features

The features of this application include:

- Matter templates for different practice areas with predefined phases and tasks
- Privacy and confidentiality at the record level of a legal matter to secure the sensitive information
- Artifacts within the matter record to better manage the legal documents relevant to a legal matter
- Milestones to track the progress of a legal matter
- Integrate legal matter with the third-party Legal Tracker application.

Benefits

The benefits of this application include:

- Manage and track every aspect of a legal matter
- Remove manual, unstructured email processes and tasks
- Track and complete tasks and milestones through notifications
- Make meaningful decisions by gaining real-time visibility on legal matters
- Track, prioritize, and work on multiple legal matters concurrently with an optimized Legal Counsel Center
- Engage with outside firms & counsels by integrating legal matters with Legal Tracker application to track areas or matters handled by outside counsels and track spends on outside counsel engagement.

Integrate Legal Matter Management with the Legal Tracker application

Learn more about the integration through a sample workflow and review the benefits it can provide.

Legal Tracker is a third-party application for legal operations including matter management and e-billing.

By integrating Legal Matter Management with Legal Tracker, you can engage with outside counsel by automatically creating a matter in Legal Tracker. You can also track the outside counsel engagement spends.

Benefits of integration with Legal Tracker

The benefits of integration are:

- Engage and track outside counsel engagement.
- Automatic matter creation in Legal Tracker on approval of Outside Counsel Engagements.
- The matter created in the Legal Tracker can be accessed and updated by the outside counsel.
- Single interface to track and view the updates from Legal Tracker for the Outside Counsel Engagement requests.
- Track the spends for the outside counsel engagement.

Sample workflow for outside counsel engagement using Legal Tracker

1. Legal matter fulfiller reviews a legal matter.
2. Legal matter fulfiller decides to engage with an outside counsel.
3. Legal matter fulfiller initiates an outside counsel engagement request.
4. Legal matter fulfiller enters Legal Tracker details or opts to create a task for the information to be filled later.
5. Legal matter fulfiller submits the outside counsel request for approval.
6. Practice area leads receive an approval request.
7. Practice area lead reviews and approves the outside counsel engagement request. If there are more than one practice area leads, approval from any one is required to mark the request approved.
   a. If the Legal Tracker details are already filled, an integration with Legal Tracker is automatically initiated.
   b. In cases where a task is created to fill the Legal Tracker details, the task fulfiller should initiate the integration manually after filling the details.
8. On successful integration, matter is created in Legal Tracker.
9. Matter details are synced to Legal Matter Management and can be viewed in external matter related list.
10. Outside counsel can access and update the matter in Legal Tracker.

Integration actions

To integrate Legal Matter Management with Legal Tracker, complete the following actions:

- Install the Legal Tracker spoke. For more information, see Legal Tracker Spoke.
- Configure Legal Tracker integration. For more information, see Configure Legal Matter Management to engage with outside counsel using Legal Tracker.

© 2026 ServiceNow, Inc. All rights reserved.

Setting up Legal Matter Management

Configure the foundation data for legal matters through Legal Matter Management to provide legal services to employees.

As an administrator, review the installed components and modify them or add new ones as applicable.

Legal matter templates

Create legal matter templates to standardize legal procedures for handling legal matters.

Email notifications

Configure email notifications to be sent when specific events occur, such as when a legal matter is assigned to a matter owner or when a matter is closed or canceled.

Configure Legal Matter Management to engage with outside counsel using Legal Tracker

Configure the requirements to enable outside counsel engagement and matter creation in Legal Tracker.

Install Legal Matter Management

You can install the Legal Matter Management application (sn_lg_matter) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- If the application requires plugins or other store applications, install them first if they are not already installed.
- Review the Legal Matter Management application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following components are installed with installation of the Legal Matter Management application:

- Plugins
- Store applications
- Roles
- Tables
- Tables specific to practice areas
- Business Rules

See Components installed with Legal Matter Management for more information.

You can also install the following applications:

Legal Counsel Center application (sn_lg_cf_workspace)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The ServiceNow® Legal Counsel Center application enables lawyers to solve issues faster with a workspace built to facilitate resolutions. From a single view, get the full context of legal issues to resolve them quickly.

Legal Counsel Center Components (sn_lg_ws_comps)

The ServiceNow® Legal Counsel Center Components application enhances the workspace experience for the Legal Counsel Center by decoupling the components in the Legal Counsel Center to offer better performance.

Legal Mobile (sn_lg_mobile)

The ServiceNow® Legal Mobile (sn_lg_mobile) application enables you to find legal information, submit and track legal requests, and work on these requests on mobile devices. For more information, see Legal Mobile.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Matter Management application (sn_lg_matter) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Legal Matter Management.
4. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
5. Select **Install**.

What to do next

Use the Legal Service Delivery Guided Setup to configure the application on your instance.

To access Legal Service Delivery Guided Setup, navigate to **Legal Administration** > **Legal Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Legal matter templates

Legal matter templates help you standardize legal procedures, policies, and workflows for various matter types.

Create a legal matter template

Create a legal matter template that you can apply to a legal matter when promoting from a legal request. The legal matter created using the template contains predefined data such as phases, tasks, ownership, and approvals.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_matter.matter_config

About this task
You can also reuse an existing matter template to create a matter template. To do that, you can open an existing template and copy it using the **Copy Template** related link. You can then modify the newly created template as required.

Procedure
1. Navigate to **All** > **Legal Matter** > **Templates** > **All**.
2. Click **New**.
3. On the form, fill in the fields.

Matter Template form

Field	Description
Number	System-generated template number.
Name	Unique name for the matter template.
Flow	Workflow associated with the matter.
State	State of the matter template. The default value when creating a matter template is Draft.
Active	Option for marking the matter template active. Only active matter templates are available for selection when creating a matter.
Intake form mapping	The intake form to which the matter is mapped. While promoting a legal request to a matter, the intake form mapping enables the associated matter template available for legal fulfillers to select and apply to the promoted matter.
Matter Defaults section	
Template	Default values that pre-populate the fields of a legal matter form that is created using the template. Select a field from the list and enter a default value.

4. Click **Submit**.
   A legal matter template is created in the Draft state. The Phases, Tasks, Approvals, and Approver Groups related lists are displayed.
5. In the Phases related list, create phase templates.
6. In the Tasks related list, create task templates.
   You can also create matter task templates from the Tasks related list on the Matter Phase Template form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. In the Approver Groups related list, add user groups to whom the matter template is sent for approval.

   a. In the Approver Groups related list, click **Edit**.

   b. On the Edit Members form, select a user group from the **Collection** list and click **Add** to add it to the **Approver Groups List**.
   Only the user groups from the Legal department are listed in the **Collection** list.

   c. Click **Save**.
   The selected approver groups are added to the Approver Groups related list. The members of these groups are listed in the Approvals related list. An email notification is sent to these members for approval of the matter template.

   Note:
   Any user who belongs to multiple groups will only receive one notification and will only appear once in the Approvals list.

8. Click **Submit for approval**.
   - If an approver group is selected, the template is sent to the group for approval. The state of the matter template updates to Waiting Approval. Anyone from the approver group can review and approve the matter template to publish it.
   - If an approver group is not selected, the matter is directly published and its state is Published.

   Note:
   When an existing matter template is updated and published, any associated intake forms reflect the latest version of the template.

Create a phase template for a matter template

Create a phase template for a matter template for resolving the matter in an organized way. When you apply a legal matter template while creating a matter, the associated phases from the template are added by default to the matter.

Before you begin
Role required: sn_lg_matter.matter_config

Procedure
1. Navigate to **All** > **Legal Matter** > **Templates** > **All**.
2. Open a matter template.
3. In the Phases related list, click **New**.
4. On the form, fill in the fields.

Matter Phase Template form

Field	Description
Number	System-generated phase template number.
Name	Unique name for the phase template.
Parent matter	Matter template to which the phase template belongs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Order	Number that determines the order in which the phase should be worked on to resolve the matter. A phase template with a lower-order number is higher in the queue to be worked on.

5. Click **Submit**.

What to do next
Create task templates within a phase template.

Create a task template within a phase template

Create a task template within a phase template of a legal matter template. When you apply a legal matter template while creating a matter, the associated phases and tasks from the template are added by default to the matter.

Before you begin
Role required: sn_lg_matter.matter_config

Procedure
1. Navigate to **All** > **Legal Matter** > **Templates** > **All**.
2. Open a matter template.
3. In the Phases related list, open a phase template to which you want to add a task template.
4. In the Matter Task Templates related list, click **New**.
5. On the form, fill in the fields.

Matter Task Template form

Field	Description
Number	System-generated task template number.
Name	Unique name for the task template.
Parent	Phase template to which the task template belongs.
Order	Number that determines the order in which the task should be worked on to resolve the matter. A task template with a lower-order number is higher in the queue to be worked on.
Task Defaults section	
Template	Default values populated in fields on a task form in the legal matter that is created using the matter template. Select a field from the list and enter value for it.

6. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A task template is created. The **Checklist** section appears.

7. **Optional:** Add to-do items in the **Checklist** section to provide a list of activities for the task fulfiller.
   a. Click the more actions icon () next to the **Checklist**.
   b. Click **Create new**.
   c. Enter a description for the to-do item and press the Enter key.
   This checklist appears as the default to-do items in the task.
8. Click **Update**.

Approve or reject a matter template

Review and approve or reject a matter template that is assigned to a user group of which you are a member. An approved matter template is published and is available for use when promoting legal requests to legal matters.

Before you begin

Role required: approver_user

Procedure

1. Navigate to **All** > **Self-Service** > **My Approvals**.
2. Open a matter template for review that has a state of **Requested**.
3. In the Summary of Item being approved section, review the matter template details.
4. Approve or reject the matter template.
   - To approve the matter template for publication, click **Approve**.

     The state of the approval request updates to **Approved**.
   - To reject the matter template, click **Reject**.

     The state of the approval request updates to **Rejected**.

Result

- If you approve, the matter template is published. The state of the matter template record updates to Published.
- If you reject, the matter template state updates to Draft. The user who created the matter template can work on the template again to complete the required information and resubmit for approval.

Configure Legal Matter Management to engage with outside counsel using Legal Tracker

Configure the requirements to enable outside counsel engagement and matter creation in Legal Tracker.

Configure Legal Tracker instance URL

Update the system properties to generate the URL specific to External Matter that is displayed in the Legal Tracker matter link field. By selecting the URL, the user can directly open the matter in the Legal Tracker application.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. In the navigation filter, type `sys_properties.list`.
2. On the System Properties page, in the Name search field, enter `sn_lg_matter.legal_tracker_host_url`.
3. Select the system property.
4. **Optional:** In the information message at the top of the page about the current application, select **here** to be able to edit the form.
5. In the **Value** field, enter the instance URL for the Legal Tracker application.
6. Select **Update**.

Result

The system property update to add the new URL to directly open external matters for the Legal Tracker application that is to be integrated with Legal Matter Management.

Configure the webhook registry

Configure a callback URL for communication between the Legal Matter Management and Legal Tracker applications.

Before you begin

Role required: admin, sn_lg_ops.legal_fulfiller

About this task

Configuring the webhook registry is required to synchronize updates in the External Matter record in the Legal Matter Management from the Legal Tracker application. After successful configuration, the Health status of the configuration must be Healthy. If the status is Broken, synchronization of the updates fails.

Procedure

1. Set the application scope to Legal Matter Management.
2. **Optional:** If the application scope is not set correctly, perform the following:
   a. Select the Application scope icon ().
   b. Select the option **Application scope**.
   c. In the filter navigator, search for and select Legal Matter Management.
   d. Refresh the page.
3. Navigate to **All** > **System Definition** > **Tables**.
4. Select **Label** for the Search scope and enter `webhook`.
5. Select **Legal Tracker Webhook Registry** from the list.
6. Select **Show Form** from the Related Links section.
7. In the Description field, enter the description of the webhook.
8. In the Token field, fill in the details.
   a. Select the Lookup using the list icon .
   b. Select **New**.
   c. Fill in the details in the **Token Verification New Record** form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Token Verification New Record form

Field	Description
Name	Name of the token.
Description	Description of the token.
Token	Password to access the token.

d. Select **Submit**.

9. In the Name field, enter the name of the webhook.
10. Right-click in the page header and select **Save**.
11. Select **Callback URL**.
    In the info message that appears, the Callback URL is displayed. Copy this URL to use in the Callback URL field in the Legal Tracker platform.
12. Log in to your Legal Tracker instance and select the settings icon ( ).
13. In the Integrations section, select **Webhooks**.
14. In the Matters section of the Webhooks page, select **Add a new webhook**.
15. On the form, fill in the fields.

Create webhook form

Field	Description
Callback URL	The Callback URL information copied from the Token Verification page.
Events	Events for which automated information is available on the Legal Matter. The available options are: The **Create** and **Update** check box must be selected to receive the information in the associated Legal Matter for any new or modification made in the Legal Tracker platform.
Secret key	Password to access the webhook information.

16. Select **Save & close**.

Result

The webhook for the Legal Tracker application is successfully configured and the matter updates in Legal Tracker will be synced to Legal Matter Management and the details can be seen in external matter records. For a working webhook configuration, the Health status must be Healthy. For any wrong configurations, the Health status is shown as Broken.

Configure data to enable matter creation in Legal Tracker

Configure the data that is required to create a matter in Legal Tracker.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Matter type template in Legal Tracker helps define the fields and default options that are tracked for each matter type. This enables administrators to determine what data will be tracked in Legal Tracker matters. The current integration supports the minimal fields required by the Legal Tracker to create matter. Administrators should identify matter type templates with additional required fields for matter creation and create the records for them in the table Legal Tracker Matter Template [sn_lg_matter_legal_tracker_matter_template].

Data configured in tables serve as values, which submitters select when submitting an outside engagement request form. The values are used in the Legal Tracker to generate a matter.

To avoid failures while creating matter in Legal Tracker, administrators should maintain the same data as in Legal Tracker in the following tables.

Legal Tracker tables

Name	Table
Outside Counsel	sn_lg_matter_outside_counsel **Note:** For more information, see Add outside counsel details
Invoice Approval Route	sn_lg_matter_legal_tracker_invoice_approval_route **Note:** For more information, see Add approval route details

Add outside counsel details

Add outside counsel details for an outside firm to enable matter creation in Legal Tracker.

Before you begin

Verify the schedule job **Fetch Firms Data** has been executed once before you add the outside counsel details for an outside firm.

Role required: sn_lg_matter.matter_config, sn_lg_matter.matter_fulfiller

About this task

To create a matter in Legal Tracker, the information related to an outside firm and its outside counsels should be present in both Legal Tracker and Legal Matter Management.

The scheduled job **Fetch Firms Data** pulls the data for outside firms from Legal Tracker into Legal Matter Management, but there is no scheduled job to pull the name and email of the outside counsels. For enabling matter creation, manually add the outside counsel name and email for the outside firm in Legal Matter Management.

Procedure

1. Collect the outside counsel name and email address for the outside firm from Legal Tracker.
2. Open the outside counsels list.
3. Select the outside counsel for which you want to add the details.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Outside counsel form

Field	Description
Outside Firm	This field is automatically set to the outside firm name.
Outside Counsel Name	Name of the outside counsel.
Outside Counsel Email	Email address of the outside counsel.
Active	Option to make the Outside Counsel record active.

5. Save the Outside Counsel record.
   - If you have added details from the Legal Matter module, select **Update**.
   - If you have added details from the Legal Counsel Center, select **Save**.

Add approval route details

Add approval route details in Legal Matter Management to enable matter creation in Legal Tracker.

Before you begin

Role required: sn_lg_matter.matter_config, sn_lg_matter.matter_fulfiller

About this task

To create a matter in Legal Tracker, the information related to the approval route should be present in both Legal Tracker and Legal Matter Management.

As there is no scheduled job to pull the approval route details, you must manually add it in Legal Matter Management.

Procedure

1. Collect the approval route details from Legal Tracker.
2. In the navigation filter, enter:
   `sn_lg_matter_legal_tracker_invoice_approval_route.list`
3. Select **New**.
4. On the form, fill in the details as present in the Legal Tracker.

Legal Tracker Invoice Approval Routes form

Field	Description
Invoice Approval Route Name	Invoice Approval Route Name from the Legal Tracker.
Active	Option to make the approval route active.
Domain	Name of the outside counsel.
Invoice Approval Route ID	Invoice Approval Route Name from the Legal Tracker.

5. Select **Submit** to save the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the currency symbol for activity stream

Configure currency to be displayed in the activity stream.

Before you begin
Role required: sn_lg_ops.legal_config

About this task
By default, the activity stream displays currency and price fields converted into the user's session locale. Configure the system property `glide.sys.audit_currency_value` to view the currency and price fields as in the value field.

Procedure

1. In the filter navigator, enter `sys_properties.list`.
2. In the **Name** column, search for the `glide.sys.audit_currency_value` property.
3. Select the property.
4. Update the **Value** field to `true`.
5. Select **Update**.

Enable the option to engage with outside counsel for a matter

Enable legal fulfiller to submit requests for outside counsel engagements for a matter.

Before you begin

- Ensure you have installed and activated Legal Tracker spoke. For more information, see Legal Tracker.

> **Important:**
> After setting up the spoke, give the Legal Tracker Spoke user [sn_legal_trckr_spk.user] role to users accessing Legal Tracker

- Ensure you have selected Practice Areas intake forms where the record type is either of the following:
  - Matter
  - Request and Matter
- Ensure you have added details for the outside counsels and approval route. For more information, see Add outside counsel details and Add approval route details.

Role required: sn_lg_ops.legal_config

About this task
While working on matters, you may want to engage with outside counsel to get additional services. You can submit a request to engage with the outside counsel. To view the **Add outside counsel for Legal Tracker** option in a legal matter, you must enable Outside Counsel on Matter for the Practice Areas.

Procedure

1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Select a record from the list of Practice Areas.
3. Select the intake form from the **Intake Forms** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the information message at the top of the page about the current application, select **here** to be able to edit the form.
5. Select the Unlock Options icon in the **Options** field in the Record Producer section.
6. Enter `Enable` in the **Select target record** field.
7. Select **Enable Outside Counsel on Matter** from the list.
8. Select **Update**.

Result

The **Add Outside Counsel for Legal Tracker** button is available in the **Outside Counsel** tab of a matter. Users with the matter fulfiller role and access to update matters can submit Outside Counsel Engagement for Legal Tracker. This option is applicable only for matter and not for requests.

Assign a legal matter to a legal group user

Assign a legal matter to yourself or to someone in the assignment group to start working on the matter.

Before you begin

Role required: sn_lg_matter.matter_manager

About this task

During the creation of a legal matter either directly or by promoting a legal request, it is assigned to an assignment group. The practice area lead or the group manager can assign the legal matter to themselves or to another member of the group.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, under **Legal Matters**, click **Unassigned**.
4. In the list of unassigned matters, click a matter number to open.
5. In the **Details** tab, select your name or the name of another user in the **Matter owner** field to work on the matter.
6. **Optional:** Update the **Assignment Group Permission** to change the permission level of the legal matter for the assigned user group.
   - **No Access**: Only the practice area lead, group manager, and matter owner (user in the **Matter owner** field) can access and work on the legal matter.
   - **Read**: All members from the assignment group can only view the legal matter.
   - **Edit**: All members from the assignment group can view and edit the legal matter.

   Note:
   The matter owner, practice area lead, or group manager can set the assignment group permissions on the legal matter.
7. Click **Save**.

Result

The legal matter is assigned to the selected member of the user group. The state of the matter updates to Assigned.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
The assigned member can start working on the legal matter.

Work on a legal matter

As a matter owner, work on a legal matter assigned to you to resolve issues or answer queries.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Note:
During times when you're unavailable, you can delegate your legal duties to other users.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. **Optional:** Update the **Assignment Group Permission** to change the permission level of the legal matter for the assigned user group.
   - **No Access**: Only the practice area lead, group manager, and matter owner (user in the **Matter owner** field) can access and work on the legal matter.
   - **Read**: All members from the assignment group can only view the legal matter.
   - **Edit**: All members from the assignment group can view and edit the legal matter.

   Note:
   The matter owner, practice area lead, or group manager can set the assignment group permissions on the legal matter.
5. Create artifacts (folders) and attach files to a legal matter artifact to store the collected supporting documents within the matter.
6. **Optional:** If the request must be reassigned to a new assignment group due to business needs, select a new assignment group in the **Assignment group** field.

   Note:
   Editing of the **Assignment group** field is available only when the **Editable Assignment group in Matter** option is configured in the associated intake form.

   When the assignment group is changed, existing group members who are not in the updated assignment group might lose access to the matter. The **Matter owner** field is also cleared, and the matter owner is notified via email.
7. **Optional:** If you need help from other fulfillers to work on the legal matter, add them in the **Collaborators** field.

   Note:
   Users with the matter_fulfiller role are listed in the **Collaborators** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The collaborators are notified via email that they have been added as collaborators to a legal matter.

8. **Optional:** Initiate an ad hoc approval for the legal matter or its artifact's content when an approval is required from other stakeholders.
9. **Optional:** Engage with outside counsel while resolving matters.
10. **Optional:** Communicate with the requester or other stakeholders using emails, chats, work notes, or comments.
    - Using emails: Communicate with any stakeholders using emails. For more information, see Communicate using emails.
    - Using live chats: Communicate with any stakeholders using chats. For more information, see Start a chat session through Legal Counsel Center Inbox.
    - Using Comments: To communicate with the requester or other stakeholders, in the Compose section, enter your message in the **Comments** field and click **Post Comments**.
    - Using Work notes: Communicate with the other members of the legal department, in the Compose section, enter your message in the **Work notes** field and click **Post Work notes**.

    Using response templates, you can insert predefined content into emails, chats, and legal request and legal matter form fields such as **Comments** and **Work notes**. Select the response template icon ( ) and find an appropriate response template based on the subject of your email. Copy and paste the template's content into the required field.

    Note:
    Response templates configured for legal services are only available to use.

11. **Optional:** Create and manage a checklist of items in the Counsel Assist section to track what should be done to resolve the legal matter.
12. Create phases and tasks under phases to organize the investigation.
    You can assign these tasks to users across various departments in your organization.
13. Add milestones to keep a track of timelines to complete important tasks.
14. **Optional:** Associate the matter with another legal request that is similar in nature.
15. Either close the legal matter after you have completed the required activities or cancel it if it does not need further action.
    - To close the matter, follow the instructions in Close the legal matter.
    - To cancel the matter, click the more actions button ( ) and select **Cancel**.
16. If new information surfaces or further investigation is required reopen the legal matter after it has been closed or canceled.

Initiate an ad hoc approval for a legal matter or its artifact

Initiate an ad hoc approval for a legal matter or its artifacts from a user or a user group.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
Some cases where approvals can be requested for a legal matter or its artifact include:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Approval for legal contract documents from stakeholders.
- Ad hoc approval for a legal matter that needs an authorization from the privacy team before it can be processed.

You can assign these approvals to any user or user group in your organization who have the legal_user role. When you initiate an approval, the approvers receive an email notification and can review and act on the approval.

Note:

- If a legal matter or artifact already has a pending approval record, you cannot initiate another approval for the same item.
- Attachments that have an ad hoc approval record in the Requested state cannot be removed from a legal matter. To remove such attachments, either cancel the ad hoc approval request or obtain the approval first.
- When you remove an attachment from a legal matter, it also deletes the associated ad hoc approval records.

As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. In the **Approvers** tab, click **Initiate Approval**.

   You can also initiate an approval by clicking the more actions button ( ) and selecting **Initiate Approval**.
5. On the Initiate Approval dialog box, fill in the fields.

Initiate Approval dialog box

Field	Description
Approval for	Item that needs an approval. ○ **Matter**: Get approval for the entire legal matter. ○ **Artifact**: Get approval for one or all attachments in an artifact.
Select artifact	Artifact in the legal matter for which approval is required. This field appears only when **Artifact** is selected from **Approval for**.
Select attachment	Attachment in the selected artifact for which approval is required. Choose a specific

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	attachment for approval, or leave the field empty to get approval for all attachments. This field appears only when **Artifact** is selected from **Approval for**.
Select document	Documents attached to the legal matter for which approval is required. This field appears only when **Document** is selected from **Approval for**. **Note:** The Document option in the list appears only when the external storage option is enabled on the intake form.
Approval by	Approval required at user level or user group level. ○ **User**: Get approval from an individual user. ○ **User group**: Get approval from a set of users. The **Select user** field is replaced by the **Select user group** field.
Select user	User or user group who must approve the item. **Note:** Users or user groups with the legal_user role are listed. ○ If you selected **User** in the **Approval by** field, select a user from whom the approval is required. ○ If you selected **User group** in the **Approval by** field, select a user group from which the approval is required.
Approval note	Note for the selected user or user group.

6. Click **Initiate**.

Result

Assigned approvers are added in the **Approvers** tab based on the following conditions:

- If you selected **User** in the **Approval by** field, an approval record is created for the selected user.
- If you selected **User group** in the **Approval by** field, an approval record for each user in the selected user group is created. Anyone from the group can approve.

If the external storage option is enabled, document in a legal matter artifact are stored in the external storage systems. Based on the approval request, the document access to the approvers is at the matter, artifact, or document level. For more information on document access, see Document access in a legal matter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The assigned approvers get an email notification with a link to open the record for review and action.

Note:

- An attachment cannot be deleted after an ad hoc approval is initiated and is in the Requested state. To remove such attachments, either cancel the ad hoc approval request or obtain the approval first.
- When you remove an attachment from a legal matter, it also deletes the associated ad hoc approval records. A work note is posted with the deletion details in the Activity stream of the legal matter.

The approval details appear under the **Approvals** tab on the Standard Ticket page.

What to do next

Approvers can review and approve or reject the requested item.

Cancel an ad hoc approval for a legal matter

Cancel an ad hoc approval for a legal matter if it no longer requires any action.

Before you begin

You can only cancel an ad hoc approval that is in the Requested state.

Role required: sn_lg_ops.legal_fulfiller

About this task

As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. In the **Approvers** tab, click **Cancel Approval**.
5. In the Cancel Approval dialog box, select the approval record from the **Approval for** field that you want to cancel.
6. Enter comments for canceling the approval record and click **Confirm Cancellation**.

Result

The approval record is canceled and its state updates to Cancelled and comments are added to the approval record. If the approval was requested from a user group, then the corresponding approval records for all users in the user group are canceled.

Engage with outside counsel

Engage with outside counsel to benefit from their expertise for resolving legal matters.

The following options are available for outside counsel engagement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Using the Legal Invention Disclosure workflow, you can enable inventors to disclose their inventions in a structured manner. For more information, see Legal Invention Disclosure.
- Using integration with Legal Tracker, you can engage with outside counsel, by automatically creating matters in Legal Tracker to track updates and spends on outside counsel engagement.

Sample workflow for outside counsel engagement using Legal Tracker

1. Legal matter fulfiller reviews a legal matter.
2. Legal matter fulfiller decides to engage with an outside counsel.
3. Legal matter fulfiller initiates an outside counsel engagement request.
4. Legal matter fulfiller enters Legal Tracker details or opts to create a task for the information to be filled later.
5. Legal matter fulfiller submits the outside counsel request for approval.
6. Practice area leads receive an approval request.
7. Practice area lead reviews and approves the outside counsel engagement request. If there are more than one practice area leads, approval from any one is required to mark the request approved.
   a. If the Legal Tracker details are already filled, an integration with Legal Tracker is automatically initiated.
   b. In cases where a task is created to fill the Legal Tracker details, the task fulfiller should initiate the integration manually after filling the details.
8. On successful integration, matter is created in Legal Tracker.
9. Matter details are synced to Legal Matter Management and can be viewed in external matter related list.
10. Outside counsel can access and update the matter in Legal Tracker.

Request Outside Counsel engagement

As a legal fulfiller, create an outside counsel engagement request for a matter.

Before you begin

Ensure you have configured Legal Matter Management to engage with outside counsel. For more information, see Configure Legal Matter Management to engage with outside counsel using Legal Tracker.

Role required: sn_lg_matter.matter_fulfiller, sn_lg_ops.legal_fulfiller

Procedure

1. Open a legal matter.
2. Select **Add outside counsel for Legal Tracker** from the down arrow on **Add outside counsel**.
3. On the form, fill in the fields.
   For more information on the form fields, see Legal Tracker Outside Counsel Engagement request form.
4. If do not have the complete the Legal Tracker details and want it to be filled later, select the **Create a task for entering Legal Tracker field details** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A task will be created to fill in the Legal Tracker details once the outside counsel request is approved. You need to fill in the details and submit the outside counsel engagement request for integration with Legal Tracker. For more information, see Assign task created for filling Legal Tracker details and Enter Legal Tracker details and submit for integration.

5. Select **Save**.

Submit outside counsel engagement request for approval

As a legal fulfiller, submit an outside counsel engagement request for approval.

Before you begin

Role required: sn_lg_matter.matter_fulfiller, sn_lg_ops.legal_fulfiller

Procedure

1. Open a legal matter.
2. From the list, open the outside counsel engagement request.
3. Select **Submit for Approval**.

Approve or reject outside counsel engagement request

As a practice area lead, approve the outside counsel engagement request.

Before you begin

Role required: sn_lg_matter.matter_fulfiller, sn_lg_ops.legal_fulfiller

Procedure

1. Open the outside counsel engagement approval request.
2. Review the record and either approve or reject:
   - To approve the outside counsel engagement approval request, in the State field, select **Approved**.

     Note:
     When the outside counsel engagement request is approved and the details for Legal Tracker is filled and no task created for it, the outside counsel engagement request is automatically submitted for integration.

   - To reject the outside counsel engagement approval request, in the State field, select **Rejected**.

     Note:
     When the Practice Area lead rejects the request with the details, the record is sent back to the fulfiller. The state of the record is changed to Rejected. The fulfiller must update the record according to the comment provided and again send the request for approval.

3. Select **Save**.
   If you are using the platform view, select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

Result of approving the outside counsel engagement request

Option to create a task for entering Legal Tracker field details was selected	Legal Tracker details is already filled

On approval of the outside counsel engagement request, a task is created for filling in the Legal Tracker details.	• On approval of the outside counsel engagement request, an integration with Legal Tracker is automatically initiated.
	• On successful integration, the matter created in Legal Tracker will be accessible to the following users with Matter Admin role
	  ○ Matter Owner - User selected as owner of the legal matter.
	  ○ Requested for - User for whom the outside counsel engagement request is submitted.
	  ○ Lead Outside Counsel – User selected as lead outside counsel of the associated Lead firm.
	  ○ Lead company person - User selected as lead of the organization who should coordinate with the outside counsel.
	  ○ #2 company person - User selected as alternative contact person in the absence of the Lead company person.
	  ○ Practice Area leads - One or more users who can approve the Outside Counsel Engagement request.

What to do next

If a task was created to fill in the Legal Tracker details, you need to fill in the details and submit the outside counsel engagement request for integration with Legal Tracker. For more information, see Assign task created for filling Legal Tracker details and Enter Legal Tracker details and submit for integration.

Assign task created for filling Legal Tracker details

As a legal fulfiller, assign the task created for filling Legal Tracker details to the task fulfiller.

About this task

When you submit an outside counsel request, you can choose to fill in the Legal Tracker details later by selecting **Create a task for entering Legal Tracker field details**. On approval of the outside counsel request, a task is created to fill in the Legal Tracker details. Assign this task to the legal user, legal fulfiller or matter fulfiller to fill in the details. For more information on submitting an outside counsel request, see Request Outside Counsel engagement.

Before you begin

Role required:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- sn_lg_ops.legal_user and sn_lg_cf_workspace.legal_workspace_user
- sn_lg_matter.matter_fulfiller
- sn_lg_ops.legal_fulfiller

Procedure

1. Open a task.

2. In the Assigned To field, select the user to whom you want to assign the task.
   By default, the assignment rule OCE Matter task Rule is available that is used to assign a legal task. Review and modify the assignment rule according to your requirement.
3. Select **Save**.

Enter Legal Tracker details and submit for integration

As a task fulfiller, enter the details in the Legal Tracker section of the outside counsel engagement request.

About this task

When you submit an outside counsel request, you can choose to fill in the Legal Tracker details later by selecting **Create a task for entering Legal Tracker field details**. On approval of the outside counsel request, a task is created to fill in the Legal Tracker details. Enter the Legal Tracker details and submit for integration. For more information on submitting an outside counsel request, see Request Outside Counsel engagement.

Before you begin

Role required:

- sn_lg_ops.legal_user and sn_lg_cf_workspace.legal_workspace_user
- sn_lg_matter.matter_fulfiller
- sn_lg_ops.legal_fulfiller

Procedure

1. Open a legal matter task.

2. Fill in the Legal Tracker details.
3. Select **Save**.
4. Select **Submit for Integration** to create matter in Legal Tracker.
   During the matter creation, errors can be reported for the data related to outside counsel engagement request or Legal Tracker details section or both. For more information, see Resolve errors during matter creation.

Result

On successful integration, access permission is granted to the following users for the matter created in Legal Tracker.

- Matter Owner - User selected as owner of the legal matter.
- Practice Area leads - Users selected as practice area leads for the practice area on the legal matter, to whom the Outside Counsel Engagement request approval is sent.
- Requested for - User for whom the outside counsel engagement request is submitted.

Workflow when error is reported in both outside counsel engagement request and Legal Tracker details (continued)

Legal Tracker details	Workflow
	• The task fulfiller fills in the details for Legal Tracker. • The task fulfiller submits the request for integration.

View external matter details

As a legal fulfiller, view the external matter details fetched from in the legal matter.

Before you begin

Role required: sn_lg_matter.matter_fulfiller, sn_lg_ops.legal_fulfiller

Procedure

1. Open a legal matter.
2. Select the **External Matters** tab.
3. Select the Matter ID to view Summary, Spend Information, Firm Details and Other Details.
4. Select link in the Legal Tracker matter link field to open and view the matter in Legal Tracker.

Delete outside counsel engagement request

As a legal fulfiller, you can delete outside counsel engagement request that is no longer required.

Before you begin

Role required: sn_lg_ops.legal_fulfiller, sn_lg_matter.matter_fulfiller

Procedure

1. Open a legal matter.
2. Select the check box of the outside counsel engagement request that you want to delete.
3. Select **Remove**.
   If you are in platform view, select **Delete** from the Action on the selected rows drop-down.

Result

Deletion status

Outside counsel engagement request status	External matter created	Deletion
Work in progress and not integrated with Legal Tracker	No	The Outside counsel engagement request is deleted.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Deletion status (continued)

Outside counsel engagement request status	External matter created	Deletion
Integrated with Legal Tracker	Yes	• The Outside counsel engagement request and the associated external matter are deleted. • The matter created in Legal Tracker is not deleted.

Approve or reject a legal matter or its artifact

Review a legal matter or its artifact's content and approve or reject it.

Before you begin

You must have received an email notification with a link to the legal item for approval.

Role required: none

Procedure

1. Open the approval record from the email notification, Legal Counsel Center, Self-Service, or Employee Center portal.
2. Review the record and either approve or reject:
   - To approve the record, click **Approve**.
   - To reject the record, enter comments for rejection in the **Comments** field and click **Reject**.

Result

The following table shows the result of approve and reject actions on the approval record.

Result of approving or rejecting a legal item

Approve	Reject
• The approval record's state updates from Requested to Approved. If the requested item was assigned to a user group for approval, then the state of the approval records for the remaining users updates from Requested to No Longer Required.	• The approval record's state updates from Requested to Rejected. If the requested item was assigned to a user group for approval, then the state of the approval records for the remaining users updates from Requested to No Longer Required.

Result of approving or rejecting a legal item (continued)

Approve	Reject
Note: If the approval was for an attachment of the legal matter artifact, the attachment cannot be deleted from the legal matter artifact. • Any approver who isn't added to **Watch list** in the legal matter would lose access to the approved item.	• The comments for rejection posted by the approver is added to the legal matter's Activities section. • Any approver who isn't added to **Watch list** in the legal matter would lose access to the approved item.

Communicate using emails from Legal Counsel Center

Compose and send emails directly from legal matter record form in the Legal Counsel Center. You can also save the email as draft to send it later.

Before you begin

Role required: sn_lg_ops.legal_fulfiller

About this task

As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. Click the more actions button ( ) and select **Compose Email**.
   The **Compose Email** button is available only when the legal matter is in the Assigned or Work in progress state.
5. In the **New Email Draft** tab, compose a new email or respond to the email received and send it right away or save it as a draft to send later.
   For more information, see Communicating via email .

Result

After the email is sent, it is added to the activity stream on the legal matter form. Emails you receive from others are also added to the activity stream.

Add a phase to a legal matter

Add a phase to a matter to track specific tasks to complete the matter.

Before you begin

Role required: sn_lg_matter.matter_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
If you created a legal matter using a matter template, you might already have the predefined phases in the matter from the template.

As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. To add a phase, in the **Phases** tab, click **New**.
5. In the **Name** field, enter a unique name for the phase.
6. In the **Order** field, enter a number to determine the order in which the phase should be processed.
7. Click **Save**.

Result
A phase is added to the matter.

What to do next
Add tasks in the phase to manage activities in the matter. If the task has to be done by a different user, assign it to them.

Create a task for a legal matter

Create a task in a legal matter or a phase of the matter that you or another user should perform to resolve the matter.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. Add tasks to a matter or a phase.
   - To add a task to a matter, in the **Tasks** tab of the Legal Matter form, click **New**.
   - To add a task to a phase, open a phase from the **Phases** tab and click **New** in the **Legal Matter Tasks** tab of the phase record.
5. On the form, fill in the fields.

Legal matter task form

Field	Description
Name	Unique name for the task.
Type	Type of the task.
Priority	Level of priority to work on and complete the task. The priority of a task determines its importance for resolving the matter.
Phase	Phase to which the task belongs.
Matter	Matter to which the task belongs.
Event name	Name of the calendar event associated with the task. A calendar event with a due date helps you to track the progress of the task for specific milestones.
State	Current state of the task to determine the progress of the task.
Order	Order in which the task should be worked on when there are multiple tasks in a phase or matter.
Assignment group	User group to which the task is assigned.
Assigned to	User to whom the task is assigned. If an assignment group is selected, the list shows members of the selected group.
Due date	Date to complete the task.
Short description	Short description to specify the expected activities and output involved in completing the task.
Notes section	
Additional comments	Comments or notes that the requester can also see.
Work notes	Comments or notes that only authorized users related to the matter can see.
Risk Details - This section appears only when Risk and Mitigation is selected from Type.	
Risk owner	Owner of the risk.
Risk description	Description of the risk.
Proposed mitigation plan	Plan to mitigate the risk.
Action completed	Actions that have been completed.
Interview Details - This section appears only when Interview is selected from Type.	
Start date and time	The date and start time of the interview.
End date and time	The date and end time of the interview.
Interviewee	Name of the person who you are interviewing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Additional interviewers	Names of the people who conducted the interview.
Interview notes	Notes from the interview.

6. Click **Save**.
7. **Optional:** In the contextual sidebar, add instructions and to-do items for the task.
   - In the **Instructions** section, click **Add** to add instructions for the assigned user to do to complete the task.
   - In the **Checklist** section, click **Create** to add to-do items to track the progress of activities in the matter task.
   - If the matter type is set to Interview, then Interview Template component is visible in contextual sidebar.

Important:
To use interview templates, you must first install the Interview Templates plugin (com.sn_interview_templates) and enable the Requested RCA of Interview Templates for Legal Matter Management and Legal Counsel Center application scope.

8. **Optional:** Add an artifact (folder) in which you or the assigned user can upload files related to the task or its investigation.

Result
A legal matter task is created and is listed in the matter's **Tasks** tab. If the task was added in a phase record, then the task is also listed in the phase's **Legal Matter Tasks** tab.

Tip:
If the new task doesn't appear in the list, click the refresh list button ( ).

Complete a legal matter task

When you finish working on an assigned matter task, mark the task as complete.

Before you begin
Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, under **My Work**, click **Tasks to do**.
4. In the My Tasks list, open the task.
5. **Optional:** In the **Activity** section of the task, enter comments or add attachments.
6. Click **Mark as Complete**.

Result
The matter task is completed and its state updates to Review. It sent to the matter owner for approval.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Approve or reject a legal matter task

As a matter owner, you can review and approve or reject matter tasks that are marked as complete by the task owners.

Before you begin

Role required: sn_lg_matter.matter_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, under **My Work**, click **Items Pending Approvals**.
4. In the Tasks To Do list, click **Requested** to open a matter task for review for approval.
5. Approve or reject the matter task:
   - To approve the matter task, click **Approve**.

     The state of the approval request updates to Approved.
   - To reject the matter task, click **Reject**. In the dialog box, enter comments for approval or rejection in the **Comments** field.

     The state of the approval request updates to Rejected.

Result

- If you approve the matter task, the task is closed. The state of the task updates to Closed Complete.
- If you reject the matter task, the task is opened again. The state of the task updates to Work in Progress. The task owner can work on the task again to fulfill the requirements of the task and mark it complete for approval.

Cancel a legal matter task

You can cancel a matter task if it no longer requires any action.

Before you begin

You can cancel only tasks that are in any of these states: Draft, Assigned, or Work in Progress.

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, under **Legal Matters**, click **Assigned to Me**.
4. In the **Tasks** tab, open the task you want to cancel.

   Note:
   You can also cancel multiple tasks in one go. Select tasks in the list and click **Cancel Tasks**.

5. In the Legal Matter Task form, click **Cancel**.
6. In the Cancel Task dialog box, enter comments for cancelling the task and click **OK**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The matter task is cancelled and its state updates to Cancelled.

Create an artifact for a legal matter

Create an artifact for a legal matter to upload and store documents, emails, and files related to the matter.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Apart from the matter owner, a collaborator or a task fulfiller can also add an artifact to a matter task from the **Tasks** tab.

Note:
If any files were attached to the request before it was promoted to a matter, a default artifact containing those files is created in that matter. If the external storage option is enabled, the documents in the artifact created from the requests are shared. So, the addition or deletion of any documents in this shared artifact is reflected in both request and matter. Also, the document permission for this shared artifact is managed at the legal request level and not at the legal matter level.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. To add an artifact, in the **Artifacts** tab, click **New**.
5. On the form, fill in the fields.

Artifact form

Field	Description
Number	Unique number of the artifact.
Parent matter	Matter with which the artifact is associated.
Content type	Type of content the artifact can contain, such as emails, documents, or images.
Short description	Short description for the artifact, for example, the name of the artifact.
Description	Detailed description for the artifact, for example, the purpose and content of the artifact.
Notes section	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Work notes	Comments or notes that only authorized users related to the artifact and parent matter can see.

6. Click **Save**.
   The artifact with the specified details is created.
7. In the **External Links** tab, add the path or link to external files..
   a. Click **New** to add a new storage path.
   b. Enter a valid link to the storage folder and a short description.
   c. Click **Save**.
8. **Optional:** Associate the artifact with a matter task.

   Note:
   If you create an artifact from a matter task, the artifact is associated to the task by default.

   a. In the **Matter Task** tab, select an artifact and click **Add**.
   b. In the Add Legal Task dialog box, select a matter task and click **Add**.
   When the matter owner assigns this task to a group or a user, they get the access to the artifact automatically. Users who can access the artifact are listed in the **Artifact Users** tab.
9. **Optional:** Revoke the access permission of users who were given default access through the associated matter task.
   a. In the **Artifact Users** tab, select one or more users to whom you want to deny access to the artifact.
   b. Click **Revoke permissions**.
   c. Click **Save**.

What to do next
Attach files to a legal matter artifact.

Attach files to a legal matter artifact

Upload supporting documentation, such as documents, email copies, images, or any other files into the artifact while you are working on a legal matter or matter task. You can also use these artifacts as a reference material to solve similar requests in future.

Before you begin
Role required: sn_lg_matter.matter_fulfiller or sn_lg_ops.legal_user

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the **Artifacts** tab, open an artifact.
5. **Optional:** Add or remove documents from the legal matter.

Document access in a legal matter

Documents attached to legal matters are uploaded to the configured external storage system when the external storage option is enabled on an intake form with All or matter type selected. The access permission of these documents to various personas is controlled in real time, via a scheduled job, or on-demand.

Document access in legal matters for various personas

The following table shows the type of access to documents and when it is granted to various personas.

Document access in a legal matter

Persona	Access type	Access level	When
Requester, requested for	Read only	Document	Legal matter is submitted
Group manager	Read, Write, Delete	Legal matter	Legal matter is submitted or promoted from legal request
Matter owner (Assigned to)	Read, Write, Delete	Legal matter	Legal matter is assigned
Collaborators	Read, Write, Delete	Legal matter	Added to the **Collaborators** list
Ad hoc approvers	Read only, No delete	Legal matter, artifact, or document based on approval requested	Ad hoc approval is initiated
Matter task owner	Read only, No delete	Artifact	Artifact is associated to a matter task or when a task is assigned to a user
Matter task owner	Read only, No delete	Document in artifact associated with the matter task	Artifact is associated to a matter task or when a task is assigned to a user
Members of assignment group	Depends on the **Assignment group permission** field	Document	Job is run as scheduled, or on-demand
Watch list users	Read only, No delete	Legal matter	Added to the **Watch list**
Delegates	Read only, No delete	Legal matter, artifact, or document based on duties delegated	*`Resolve platform delegation permissions for legal matter`* job is run as scheduled, or on-demand
Delegates through granular delegation	Read only, No delete	Legal matter, artifact, or document based on duties delegated	User is delegated

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The scheduled job *Process External Storage Permissions* runs at the defined intervals to sync access for all unprocessed permissions on documents for legal matters stored in the external storage.

Note:

- Requesters can access documents attached to their legal requests from the **Documents** tab on the Standard Ticket page.

  Note:
  Requesters can delete only those documents from the request that they've attached.

- The matter owner assigned to the legal matter can access documents from the **Documents** tab of the Artifacts record in the Legal Counsel Center.
- Users added to the matter can request on-demand access to documents if they need access before the scheduled job is run.
- The legal admin can revoke a user's access to documents of a legal matter and legal requests.
- Ad hoc approvers lose document access after they approve or reject the requested item.
- Delegates lose access after the delegation period expires.

Request document access for a legal matter

Request access to documents attached to a legal matter that you do not currently have access to.

Before you begin
Role required: sn_lg_ops.legal_user or sn_lg_ops.legal_fulfiller

About this task

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, under **Matters**, click **All**.
4. Open a legal matter for which you want to request document access.
5. In the **Artifacts** tab, open an artifact.
6. In the **Documents** tab, select the documents for which you want access, and click **Request Access**.

Result
The system processes the user's permissions and grants access to the documents in the matter artifact.

Remove document access of users in a legal matter

Remove existing users' access to documents attached to a legal matter's artifact when they are no longer required to view those documents.

Before you begin
Role required: sn_lg_matter.matter_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, under **Matters**, click **All**.
4. Open a legal matter for which you want to remove users' access to the documents attached to it.
5. In the **Documents Access** tab, select users for whom you want to remove document access.
6. Click **Remove Access**.

Result
The document access of the selected users is removed, and they're also removed from the list. The user will no longer be able to view the matter's documents.

Add a milestone to a legal matter

Add a milestone to a legal matter to track important calendar events related to the matter.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

You can track the upcoming milestones in a matter in the **Home** tab of the Legal Counsel Center.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. To add a milestone, in the **Milestones** tab, click **New**.
5. In the **Name** field, enter a unique name for the milestone.
6. In the **Due date** field, select a date by which the milestone should be accomplished.
7. Click **Save**.

Result
A milestone with the specified due date is created.

Associate related legal requests with a legal matter

Associate one or more legal requests with a legal matter to organize and resolve related requests through a single matter.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. To associate a legal request, in the **Related Requests** tab, click **Add**.
5. In the Add Legal Request dialog box, select the requests you want to add to the matter and click **Add**.

Note:
Any legal request can be associated with a matter including closed or cancelled requests.

Result
The selected legal requests are added to the matter and listed in the **Related Requests** tab.

Associate an existing legal matter with a legal request

Associate an existing legal matter with a legal request that is similar to provide helpful information in resolving the request.

Before you begin
Role required: sn_lg_ops.legal_fulfiller

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ().
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. To associate an existing matter, in the **Legal Matters** tab, click **Add**.
5. In the Add Legal Matter dialog box, select a legal matter you want to add to the request and click **Add**.

Result
The selected legal matter is associated with the legal request and shows up in the list in the **Legal Matters** tab.

Close a legal matter

Close a legal matter assigned to you when you complete all activities for resolving the legal matter. You can also close the matter if you find that it doesn't need any further action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Ensure that you've closed all related matter tasks before closing the legal matter.

> **Note:**
> A legal matter cannot be closed if it has any open ad hoc approval records or for its artifacts.

Role required: sn_lg_matter.matter_fulfiller

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. **Optional:** In the **Activity** section, enter comments, add links to related knowledge base articles, or attach files.
5. Click **Close Complete**.
6. In the Close Complete Matter dialog box, enter comments in the **Comments** field. Comments entered in the Close Complete Matter dialog box will be posted in all open related requests.
7. Close related legal requests in the Assigned or Work in Progress states along with the parent request by selecting the **Close related requests** check box.
8. Click **OK**.

Result
- The legal matter is closed and its state updates to Closed Complete.
- If the parent legal request of the matter is not associated with any other open matters, the request is also closed.
- If you chose to also close all related requests, they are also closed if they meet the following conditions:
  - The state is either Assigned or Work in Progress.
  - The requests are not associated with any other open matters.

Reopen a legal matter

If a legal matter requires further investigation after it was closed or canceled, you can reopen it to work on it again.

Before you begin
Role required: sn_lg_matter.matter_fulfiller

About this task
As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. Open the legal matter that you want to reopen.
5. Click **Reopen**.
6. In the Reopen Matter dialog box, enter comments in the **Comments** field to note why you are reopening the matter.
   Comments entered in the Reopen Matter dialog box will be posted in all related requests.
7. Reopen related closed or canceled legal requests along with the parent request by selecting the **Reopen related requests** check box.
8. Click **OK**.

Result

- The legal matter is reopened.
- The state of the matter updates to the state it was in before it was closed or canceled.
- If the primary legal request of the matter is closed or canceled, then the request is reopened.
- If you chose to reopen all related requests also, any related legal requests that are in the Closed Complete, Closed Incomplete, or Cancelled state are also reopened.
- Any collaborators added to the matter will receive an email notification that the matter has been reopened.

What to do next

Work on the legal matter to complete it.

Legal Matter Management reference

Reference topics provide additional information about the lists and forms that you use in Legal Matter Management.

Components installed with Legal Matter Management

Several types of components are installed with installation of the Legal Matter Management application, including tables, and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application .

Demo data is available for this feature.

Roles installed with Legal Matter Management (continued)

Role title [name]	Description	Contains roles
Matter Manager [sn_lg_matter.matter_manager]	Provides access to all transactional data of matters and permission to assign matters.	• sn_interview_temp.writer • sn_lg_matter.matter_fulfiller

Tables

Note:
In addition to the following tables, tables specific to practice areas are installed with Legal Matter Management. For more information, see Practice area tables for legal matters.

Tables installed with Legal Matter Management

Table	Description
Artifact Content Type [sn_lg_matter_artifact_content_type]	Stores the content type used for categorizing matter artifacts.
Approver Group [sn_lg_matter_m2m_approver_group]	Stores user groups who can approve legal matter templates.
External Storage [sn_lg_matter_artifact_external_storage]	Stores links of external systems such as Microsoft OneDrive or Microsoft SharePoint where matter documents can be stored.
Legal Artifact [sn_lg_matter_artifact]	Stores the artifact details collected for a matter.
Legal Matter [sn_lg_matter_matter]	Stores legal matters.
Legal Matter Core [sn_lg_matter_core]	Stores the core details of a matter.
Legal Matter Phase [sn_lg_matter_phase]	Stores the phases of a matter.
Legal Matter Task [sn_lg_matter_task]	Stores the tasks associated to a phase or a matter.
Matter Task Artifact [sn_lg_matter_m2m_matter_task_artifact]	Stores the details of the relationship between an artifact and a matter task.
Matter Task Template [sn_lg_matter_template_task]	Stores the tasks defined in a matter template.

Legal Service Delivery Practice Applications

Legal practice applications in the Legal Service Delivery suite provide solutions for the specific needs of different legal practice areas.

Legal Content Review

The ServiceNow® Legal Content Review application enables employees to raise a legal review request of any marketing materials, collaterals, or presentation contents and resolve the issues.

Employees can submit Legal Content Review requests, monitor the progress of the requests, and read related knowledge base articles through a web portal or Virtual Agent. The Legal Content Review request is associated with the Compliance practice area.

Legal teams can collaborate in a centralized Legal Counsel Center to manage legal intake volume, resolve Legal Content Review requests, and monitor work analytics.

Explore  Learn about how employees, paralegal staff, and lawyers use Legal Content Review.	**Set up**  Set up practice areas, intake forms, and other configurations.
Request and Manage Legal Content Review request  Submit and track Legal Content Review requests.	**Reference**  Get details about components such as roles, tables, plugins, and store applications that are installed.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Troubleshoot and get help

- Ask or answer questions in the Legal Service Delivery community forum
- Search the Known Error Portal for known error articles
- Contact Customer Service and Support

Exploring Legal Content Review

The Legal Content Review (sn_lg_cont_review) application enables authorized employees in your organization to submit Legal Content Review compliance requests and to track the progress of the request. Users in the legal department who have appropriate roles can work on and resolve these requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Features

The features of this application include:

- Submitting Legal Content Review request through a service portal or Virtual Agent
- Managing Legal Content Review requests by resolving the issue or answering queries

Benefits

The benefits of this application include:

- Easily accessed employee self-service that replaces manual, unstructured email processes and tasks
- Automated responses for common legal requests with virtual agents
- A centralized Legal Counsel Center that enables you to track, prioritize, and work on multiple requests concurrently
- Real-time visibility on legal service demands that helps you make meaningful decisions

Setting up Legal Content Review

Configure the foundation data to provide Legal Content Review request services to employees who can use these services to submit requests to the legal department.

As an administrator, review the installed components and modify them or add new ones as applicable.

Create or modify a practice area

Set up the practice areas specific to law practices such as Intellectual Property, Privacy, or Compliance. Associate categories to the practice area and assign a legal department user as the practice area lead.

Create or modify a legal catalog category

Create catalog categories to group legal services that employees can use to find a specific legal service request on the Legal Service Portal.

If you are an existing user and upgrading the application, run the `Fix Content Review Intake Form` fix script to map the new Legal Content Review record producer to the content review category.

Create or modify a record producer for legal services through Classic environment

Create record producers to define the intake forms for Legal Content Review request services. These record producers are available in the Legal Operations service catalog on the Legal Service Portal. Employees can use them to submit legal service requests.

Configure an external storage system for legal requests and legal matters

Configure an external storage system to store documents attached to the Legal Content Review requests by the requester or the fulfiller to enable your organization to have a centralized documentation management and retention policy.

Create or modify a response template for legal services

Configure a response template with a reusable message that legal fulfillers can use to send users quick and consistent messages through work notes, comments, emails, or chat conversations.

Each response template is associated with a table and can be configured to include field variables from that table. You can use a condition builder to specify the conditions that a Legal Content Review request must meet for the template to be

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

usable through the configured channels. For example, you can define a condition to enable response templates only for Legal Content Review requests of type marketing presentation.

For chat response templates, you can specify a short name that can be used as a shortcut to present the response message to a user quickly.

Create an email notification

Create or modify email notifications that are sent when specific events occur for example, when a request is assigned, closed, or canceled, or a message has been posted to request additional information.

Configuring the form layout

To track dispositions from Legal Content Review requests, add the Legal Disposition [sn_lg_ops_legal_disposition] table as a related list to any Legal Content Review Request form. For more information on adding a related list on a form, see Add a related list to a form.

Install Legal Content Review

You can install the Legal Content Review application (sn_lg_cont_review) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Content Review application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Install the Legal Request Management (sn_lg_ops) application before you install Legal Content Review.

Role required: sn_lg_cont_review.admin

About this task

The following items are installed with Legal Content Review:

- Plugins
- Store applications
- Roles
- Scheduled jobs
- Tables

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Content Review application (sn_lg_cont_review) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

What to do next

Use the Legal Service Delivery Guided Setup to configure the application on your instance.

To access Legal Service Delivery guided setup, navigate to **Legal Administration** > **Legal Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Reconfigure forms to use new components

As an administrator, after installing Legal Content Review reconfigure forms to use the new content review record producer, catalog category, and content taxonomy.

Before you begin

Role required: admin

About this task

The content review request, that was part of Legal Request Management, has been moved to a new application Legal Content Review. With the new application, new content review components are available for Legal Content Review. You can reconfigure the intake forms to use the new content review record producer, catalog category, and content taxonomy depending on the following points.

- If you use the new content review components, you must redo any customizations you made to the previous forms.
- The previous content review components won't be enhanced for new functionalities.

Procedure

1. Reconfigure the **Intake Form Content Review**.
   a. In the navigation filter, enter `sn_lg_ops_category.list`.
   b. From the list, select Legal Content Review.
   c. In the **Request record producer** field, select the Lookup using list icon ( )
   d. If you aren't able to edit the form in the current application scope, select the word **here** in the message at the top of the page.
   e. In the record producers list, select the Show/hide filter icon ( ).
   f. In the **choose field** field, select **Application**.
   g. In the condition field, select **is** if it is not displayed.
   h. Enter Legal Content Review in the text box.
   i. Select the **Run** button.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

j. Select **Content Review** from the list of record producers that belong to the Legal Content Review application.

k. Select **Update**.

2. Reconfigure the catalog item for Catalog item categories.

a. In the navigation filter, enter `sc_cat_item_category.list`.

b. In the Catalog item categories list, locate **Content Review** and select the Preview this record icon ( ).

c. Select **Open Record**.

d. In the **Catalog item** field, select the Lookup using list icon ( ).
If you are unable to edit the record, select **here** in the access message at the top of the form.

e. In the catalog items list, select the show/hide filter icon ( ).

f. In the **choose field** field, select **Application**.

g. In the condition field, select **is** if it is not already displayed.

h. Enter *`Legal Content Review`* in the text box.

i. Select the **Run** button.

j. Select **Content Review** from the list of catalog items that belong to the Legal Content Review application.

k. Select **Update**.

3. Reconfigure the catalog item for Connected Content.

a. In the navigation filter, enter `m2m_connected_content.list`.
The Connected Content Catalog Item: Content Review form is displayed.

b. In the **Catalog item** field, select the Lookup using list icon ( ).

c. In the catalog items list, select the show/hide filter icon ( ).

d. In the **choose field** field, select **Application**.

e. In the condition field, select **is** if it is not displayed.

f. Enter Legal Content Review in the text box.

g. Select the **Run** button.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

h. Select **Content Review** from the list of record producers that belong to the Legal Content Review application.

i. Select **Update**.

Legal Content Review requests

Legal Content Review is a mechanism to raise a legal review request for any marketing materials, collateral, or presentation contents and seek services from the legal department to resolve the issue and track its status.

When an employee submits a Legal Content Review request, it is automatically assigned to a group or user in the legal department based on assignment rules configured in the intake form of the associated practice area. If the request is assigned to a legal group, the group lead can assign the request to themselves or to any member in the assignment group. You can submit a new request, update or assign an existing request, or even cancel a legal request.

For more information, see Add an intake form to a practice area.

Work on requests assigned to you in the Legal Counsel Center.

Submit a Legal Content Review request

Submit a Legal Content Review request to seek services from the legal department.

Before you begin

Role required: sn_lg_ops.legal_user

About this task

If you have the Legal Virtual Agent Conversations application installed on your instance, you can also submit a Legal Content Review request through Virtual Agent chat. For more information, see Legal Virtual Agent Conversations.

Procedure

1. Access the Legal Content Review intake form.
2. On the Content Review form, fill in the fields.
   For more information on the fields, see Legal Content Review form.
3. Select **Submit**.

Result

- A Legal Content Review request is created in the New state.
- The request is assigned to a group or user in the legal department based on the assignment rule set in the associated practice area. For more information, see Assignment rule to automatically assign legal requests or matters.
- If the administrator has configured notifications, you receive notifications about the progress of the request.

Update a Legal Content Review request

Update request details, add comments, or upload documents in a Legal Content Review request you submitted while it is still in the New or Assigned state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
You can modify a Legal Content Review request only if the request is in the New state.

Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Select **View all requests** from the **My Requests** panel.
3. Open your submitted Legal Content Review request.
   On the Standard Ticket page, review and edit the request details, manage attachments, or cancel the request.
4. Select **Edit Request** from the Actions menu.
5. In the Variables form, modify the request details.
6. Select **Save**.
7. Select **Back** to return to the Standard Ticket page.
   The request is updated with the new information. The changes appear as comments in the Additional Comments section of the request.
8. **Optional:** In the **Activity** tab, provide comments or more information about your request for the request fulfiller.
9. **Optional:** Manage documents supporting your request.
10. **Optional:** In the **Approvals** tab, view the approval details associated with the request.

Note:
The **Approvals** tab appears only when the Legal Content Review request or its attachment has approval records.

Assign a Legal Content Review request

Assign a Legal Content Review request to yourself or to someone in your assignment group.

Before you begin
Role required: sn_lg_cont_review.content_fulfiller

About this task
When an employee submits a legal request, it's automatically assigned to a group or user in the legal department based on the assignment rules configured for the intake form of the associated practice area. If the request is assigned to a legal group, any member from the group can assign the request to themselves or assign it to another member of the group. For more information, see Assignment rule to automatically assign legal requests or matters.

The Assignment group permission level must be Read or Edit to view or change the permission level of the legal request for the users. By default, the permission level is set to Read. To change it to Edit, first select **Assign to me**.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. In the **Legal Requests** field, select **Unassigned**.
4. In the list of unassigned requests, select the request number.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Assign the request to yourself by selecting **Assign to me**.
   The fields in the legal request are in read-only mode until it has been assigned to you.
6. **Optional:** Update the **Assignment group permission** to change the permission level of the legal request for the users.
   - **No Access**: Only the practice area lead, group manager, and user in the **Assigned to** field can access the legal request and assign it to one of the members in the assignment group.
   - **Read**: All members from the assignment group can only view the legal request. This option is the default permission level.
   - **Edit**: All members from the assignment group can view and work on the legal request. The **Assigned To** field becomes optional if this option is set.
7. **Optional:** To assign the request to another member, on the **Details** tab, select a user in the **Assigned to** field.
8. To update the request, select **Save**.

Result
The state of the request updates to Assigned.

What to do next
The assigned user can start working on the legal request. For more information, see Work on a legal request.

Cancel a Legal Content Review request

Cancel a Legal Content Review request irrespective of its state.

Before you begin
Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Select **View all** from the **My Requests** panel.
3. Open your submitted Legal Content Review request.
4. From the Actions menu, select **Cancel Request**.
5. In the Confirm request cancellation dialog box, provide the reason for the cancellation in the **Comments** field.
6. Select **Confirm Cancellation**.
   The request is canceled and the cancellation comments appear in the Additional Comments section of the request.

   Any associated active flows are terminated.

Legal Content Review reference

Reference topics provide additional information about the lists and forms that you use in Legal Content Review.

Components installed with Legal Content Review

Several types of components are installed with activation of the application, including tables and user roles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles

Roles installed with Legal Content Review

Role title [name]	Description	Contains roles
Content Review Admin [sn_lg_cont_review.admin]	Provides administrative access to the Legal Content Review feature and its underlying data.	sn_lg_cont_review.content_fulfiller
Content Review Fulfiller [sn_lg_cont_review.content_fulfiller]	Provides fulfiller access for working on assigned content review requests.	sn_lg_ops.legal_user

Legal Content Review form

List of fields in the Legal Content Review request in the Legal Service Portal.

Legal Content Review form

Field	Description
Description	Description of the Legal Content Review request.
Content owner	The owner of the Legal Content Review request.
Content type	Select from the list of content type from the drop-down list.
Content link	Provide any link to the content, if available.
Purpose	Purpose of the Legal Content Review request.
Requested approval date	Approval date for the Legal Content Review request.
Add attachments	Attachments to add to the request.

Legal Digital Forensics

The ServiceNow® Legal Digital Forensics application enables you to handle digital forensics requests for data discovery related to custodial and non-custodial data sources that are subject to investigations or litigation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Explore  Learn about how employees, paralegal staff, and lawyers use Legal Digital Forensics.	**Set up**  Set up data sources, their fulfillment instructions, and a checklist.	**Request**  Submit and track digital forensics requests.
Manage  Manage digital forensics requests for data sources subject to investigation or litigation.	**Analytics and Reporting**  Coordinate work and improve processes with preconfigured dashboards.	**Reference**  Get details about components such as roles, tables, plugins, and store applications that are installed.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Troubleshoot and get help

- Ask or answer questions in the Legal Service Delivery community forum
- Search the Known Error Portal for known error articles
- Contact Customer Service and Support

Exploring Legal Digital Forensics

Legal Digital Forensics enables different departments in your organization to submit legal requests for discovery and processing of digital data of employees suspected of malicious activity or litigation.

Features

- Intake form to gather request background, custodial and non-custodial data sources with keywords and filter dates.
- Flagging of e-discovery data sources with instructions for data processing.
- Integrated privacy approval flow to get the required approvals before starting the investigation.
- Pre-defined standard digital forensic tasks using a template.
- Record and audit trail of all activities done in support of the investigation and litigation.

You can submit a digital forensics request for the following actions for custodial and non-custodial data on the specified data sources:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Preserve: Option for preserving relevant digital information of custodial and non-custodial data and documenting the facts.
- Collect: Option for collecting digital information of custodial and non-custodial data that may be relevant to the investigation. Collection might involve activities such as imaging storage devices, or copying or printing of the digital information.
- Review: Option for an in-depth, systematic search of facts in the collected information related to the investigation.
- Present: Option for presenting the relevant information of custodial and non-custodial data in an appropriate format to stakeholders.

After the required privacy approvals for investigation, the digital forensics team member working on the digital forensic request can promote it to a legal matter. The legal matter for the digital forensics request can have phases based on the requested actions. Each phase can have tasks for each custodial or non-custodial data for a keyword, data source, and date range.

Legal Digital Forensics workflow

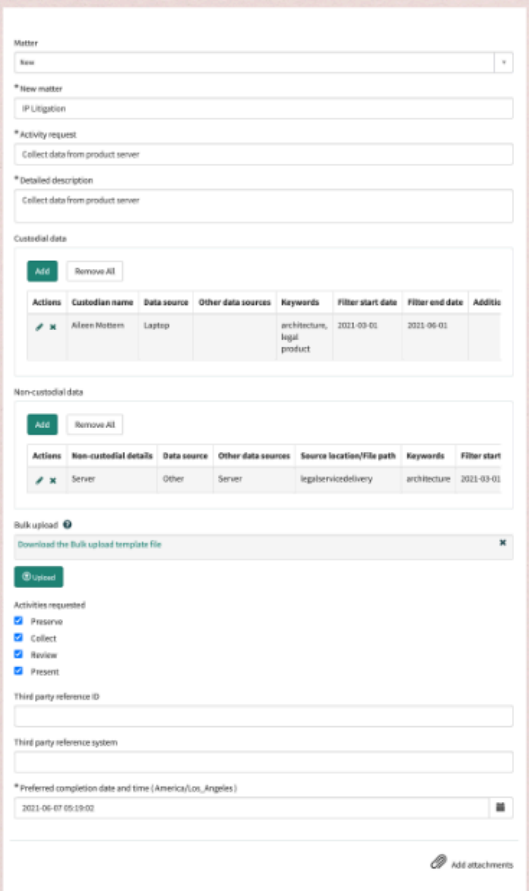
servicenow

Workflow:

Digital Forensics Request

Legal > Legal Operations Catalog > Legal Requests > Information Governance > Digital Forensics Request

Here's an example workflow to request data discovery related for custodial and non-custodial data sources that are subject to investigation or litigation.



Set up the following items in the application:

1) List of data sources for e-discovery
2) Privacy approval workflows
3) Digital Forensics matter template

After setup, here's what the workflow looks like:

- Authorized employee submits a data discovery request for custodial and non-custodial data
- Fulfiller reviews request and gets approvals for data processing
- Fulfiller promotes approved data sources as matter using the predefined matter template
- Legal matter is created with phases and tasks needed to fulfill the request
- Fulfiller assigns the task to teams to process and handle the data
- After all tasks are complete, fulfiller closes the matter
- The legal request is automatically closed

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Setting up Legal Digital Forensics

Configure the foundation data required for managing the digital forensics requests.

As an administrator, you can review the installed components and modify them or add new ones as applicable.

- Configure a data source for digital forensics
- Add fulfillment instructions and checklist for a data source

Install Legal Digital Forensics

You can install the Legal Digital Forensics application (sn_lg_forensics) if you have the admin role. The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Digital Forensics application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Legal Digital Forensics:

- Roles
- Tables

For more information, see Components installed with Legal Digital Forensics.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Digital Forensics application (sn_lg_forensics) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Legal Digital Forensics.
4. Select **Install**.

Configure a data source for digital forensics

Configure a data source a requester can select in a digital forensics request as the source of potentially evidential data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_forensics.forensics_config or admin

Procedure
1. Navigate to **All** > **Legal Administration** > **Digital Forensics Admin** > **Data Sources**.
2. Create or modify a data source.
   - To create a data source, click **New**.
   - To modify an existing data source, open the data source from the list.
3. On the form, fill in the fields.

Data Source form

Field	Description
Source	Name of the data source.
Active	Option for marking the data source active. Only active data sources are available on the digital forensics request intake form in the Legal Service Portal.
Source detail fields	Fields that are applicable for the data source. The selected fields appear on the data source details form in a digital forensics request matter. Task owners provide details in these fields based on the fulfillment activities done by them. For more information, see Create a task for a digital forensic legal matter. The field options in the list are populated from the Data Source Detail [sn_lg_forensics_search_source_detail] table.

4. Save the data source.
   - Save a new data source by clicking **Submit**.
   - Save the changes to an existing data source by clicking **Update**.

What to do next
Add fulfillment instructions and checklist for a data source. When a matter owner creates a task for the source in a legal matter, these instructions are pre-populated in the task. The users to whom the legal matter task is assigned can follow these instructions to resolve the task.

Add fulfillment instructions and checklist for a data source

Add instructions for a data source that a task owner in a legal matter can follow to resolve the task.

Before you begin
Role required: sn_lg_forensics.forensics_config or admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Administration** > **Digital Forensics Admin** > **Data Sources**.
2. Open a data source to which you want to add instructions.
3. In the Fulfillment Steps related list, click **New**.
4. On the form, fill in the fields.

Fulfillment Steps form

Field	Description
Phase	Name of the phase in which the task is created in a legal matter for a digital forensics request.
Search source	Name of the data source for which you are adding the instructions.
Instructions	Instructions for the assigned user to perform to resolve the legal matter task.

5. Click **Submit**.
   A fulfillment step record is created. The **Checklist** section appears.
6. **Optional:** Add to-do items in the **Checklist** section to provide a list of activities for the task fulfiller.
   a. Click the more actions icon ( ) next to the **Checklist**.
   b. Click **Create new**.
   c. Enter a description for the to-do item and press the Enter key.
   This checklist appears as the default to-do items in the corresponding legal matter task.
7. Click **Update**.

Submitting digital forensics requests

Employees from different departments in your organization can submit legal requests for discovery and processing of digital data of employees suspected of malicious activity or litigation.

Submit a digital forensic request

Submit a legal request to access data of current or former employees for internal investigation or litigation reasons.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.

> **Note:**
> If you're using Employee Center, you can submit a legal request by navigating to the Employee Center portal and selecting a request from the **Legal services** > **Browse Legal services** menu.

2. Click **Service Catalog** to view all available request categories.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Search for the digital forensic request item.
4. Click **Digital Forensic Request**.
5. On the form, fill in the fields.

Digital Forensic Request intake form

Field	Description
Add this request to	Option to associate the legal request with an existing legal matter or to a new legal matter. ○ **Existing matter**: Option to associate the legal request with an existing legal matter. Only current legal matters that you have permission to access appear in the list. ○ **New matter**: Option to create a new legal matter and associate the legal request with it.
Existing matter	List of existing legal matters to associate with the legal request. Only current legal matters that you have permission to access appear in the list. This field appears only when the **Existing matter** option is selected.
Name of new matter	Name of the new legal matter. This field appears only when the **New matter** option is selected.
Activity request	Short description of the request.
Detailed description	Detail information of the request, for example, details of the suspicious activities by the custodians or details of the litigation.
Custodial data	Employees on whose data you are requesting the investigation. Also provide other investigation details for a custodian—search keywords, data sources, and search period. For more information, see Add a custodian to a digital forensic request.
Non-custodial data	Resources and assets, such as server, laptop, mobile, or cloud storage, on which you are requesting the investigation. Also provide other investigation details for a non-custodian—search keywords, data sources, and search period. For more information, see Add a non-custodial data to a digital forensic request.
Bulk upload	Export multiple custodian and non-custodial data from a file.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For more information on uploading the data from a file, see Add custodial and non-custodial data from a file.
Activities requested	Type of actions required on the data for the investigation. ○ Preserve: Secure the original data from the source devices in compliance with departmental guidelines to protect and preserve the evidence. ○ Collect: Acquire the digital evidence that may be relevant to the investigation. Collection might involve activities such as imaging storage devices, or copying or printing of the digital information. ○ Review: Conduct an in-depth, systematic examination of the facts in the collected digital evidence related to the investigation. ○ Present: Document and present the relevant information and findings of the examination in an appropriate format to stakeholders.
Third party reference ID	Reference to a legal matter ID stored in your other matter management system.
Third party reference system	Reference to your other matter management system.
Preferred completion date and time	Date by which the investigation must be complete. The date and time is based on the time zone you are in while requesting.

6. Click **Submit**.

Result

- A digital forensic request is created in the New state.
- The Standard Ticket page displays that has the following tabs to perform different tasks:
  - Activity: Track the activity history of the request and post messages for the fulfiller working on the request.
  - Attachments or Documents: Upload and manage the documents in the legal request.

    Note:
    If the external storage option is enabled, the **Documents** tab is displayed. Otherwise, the **Attachments** tab is displayed.

  - Custodial data: View existing custodial details. You can also export the data to a file.
  - Non-custodial data: View existing non-custodial details. You can also export the data to a file.
  - Request Details: Review request details.
- If you uploaded custodial and non-custodial data from an Excel or CSV file, the file is attached as a reference document to the request.

  The number of records successfully uploaded from the file into the request is posted as additional comments in the Activity tab on the Standard Ticket page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If a record from the file isn't added to the request, an error log file is added in the Activity tab. You can review the reason for failure in the error log file, fix the errors in your file, and upload it again by editing the request.

- For each custodian added in the request, a record is created in the Custodial Data [sn_lg_forensics_custodial_data] table. If a legal profile record for each custodian is not already present in the Legal Profile [sn_lg_ops_legal_profile] table, a corresponding record is created.
- For each non-custodial data added in the request, a record is created in the Non Custodial Data [sn_lg_forensics_non_custodial_data] table.

What to do next

On the Standard Ticket page, you can update request details, add comments, manage custodial and non-custodial data, upload supporting documents, or cancel the request. For more information, see Update a submitted digital forensic request.

Any member from the digital forensic team can triage and assign the request to themselves or to any other member in the group. Once the request is assigned, an approval flow is triggered. The flow creates an approval record for each custodial and non-custodial added in the digital forensic request. These approval records are assigned to the privacy team in the legal department. Any member from the legal privacy team can approve the request. After the approval, a digital forensic team member to whom the legal request is assigned can start working on the request. For more information, see Work on a digital forensic request.

Note:

The approval details appear under the **Approvals** tab on the Standard Ticket page.

Add a custodian to a digital forensic request

Add a custodian and related data source details in your digital forensic request.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. On the Digital Forensic Request intake form, in the Custodial data section, click **Add**.
2. On the Add Row dialog box, fill in the fields.

Add a custodian in a digital forensic request

Field	Description
Custodian name	Name of the custodian on whose digital assets you are requesting a digital forensic investigation.
Data source	Source (hardware or software) from which the data for investigation is to be collected.
Other data sources	Source (hardware or software), not listed in the **Data source** field, from which the data for investigation is to be collected. This field appears only when **Other** is selected from **Data source**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Keywords	Terms to look for within the data collected from the custodian data sources. You can provide multiple search terms each separated by a comma.
Filter start date	Start date of the digital forensics investigation period. The digital forensic team member would check for the search terms in the data from this date onwards.
Filter end date	End date of the digital forensics investigation period. The digital forensic team member would check for the search terms in the data until this date.
Additional information	Additional details about the custodial data that would be helpful in resolving the request.

3. Click **Add**.
   The custodian record appears in the Custodial data list on the Digital Forensic Request intake form.

Add a non-custodial data to a digital forensic request

Add a non-custodial data and related search source details in your digital forensic request.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. On the Digital Forensic Request intake form, in the Non-custodial data section, click **Add**.
2. On the Add Row dialog box, fill in the fields.

Add a non-custodial data in a digital forensic request

Field	Description
Non-custodial details	Details of the non-custodial data on which you are requesting a digital forensic investigation. For example, you can enter details such as model number, serial number, or product name of the non-custodial data.
Data source	Source from which the data for investigation is to be collected.
Other data sources	Source (hardware or software), not listed in the **Data source** field, from which the data for investigation is to be collected. This field appears only when **Other** is selected from **Data source**.
Search location/File path	Location of the folder or file from where the data for investigation is to be collected. For

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	example, a URL on a cloud storage or a folder or file in a system.
Keywords	Terms to look for within the data collected from the data sources. You can provide multiple search terms each separated by a comma.
Filter start date	Start date of the digital forensics investigation period. The digital forensic team member would check for the search terms in the data from this date onwards.
Filter end date	End date of the digital forensics investigation period. The digital forensic team member would check for the search terms in the data until this date.
Additional information	Additional details about the non-custodial data that would be helpful in resolving the request.

3. Click **Add**.
   The non-custodial record appears in the Non-custodial data list on the Digital Forensic Request intake form.

Add custodial and non-custodial data from a file

Upload a Microsoft Excel or CSV file containing custodial and non-custodial data to quickly add multiple records in a digital forensic request in one go.

Before you begin
Role required: sn_lg_ops.legal_user

About this task
Use a file with a predefined format available on the digital forensics request page to upload custodial and non-custodial data.

Procedure
1. Download the template file with the predefined columns and add custodial and non-custodial details.

   a. Click the **Download an upload template here** link to download the Excel file template.
   The template file contains sample records for custodial and non-custodial data. During import, the columns marked as Not applicable in the file are ignored.

   b. Review the sample data in the downloaded Excel file and add custodial and non-custodial details in the same format, and then save.

2. On the Digital Forensic Request intake form, in the Bulk Upload section, click **Upload**.
3. Browse and select the Excel file containing the custodial and non-custodial data.
   The file is attached to the request. The data from the file is uploaded into the request when you submit the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update a submitted digital forensic request

Update the request details, add comments, manage custodial and non-custodial data, or upload documents in a digital forensic request you submitted while it is still in the New state. You can cancel a submitted request irrespective of its state.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Open your submitted digital forensic request from the **My Requests** option on the header menu.
3. On the Standard Ticket page, review and edit the request details or cancel the request.
4. **Optional:** In the **Activity** tab, provide comments supporting your request.
5. **Optional:** Manage documents supporting your request.
6. **Optional:** In the **Custodial Data** tab, view the existing custodians added to the request or export to a file by clicking the more options icon (⋮).
7. **Optional:** In the **Non-Custodial Data** tab, view the existing non-custodial data added to the request or export to a file by clicking the more options icon (⋮).

Managing digital forensics requests

As a member of the legal department, work on the digital forensics requests for data discovery related to custodial and non-custodial data sources that are subject to investigations or litigation.

Use the Legal Counsel Center to manage digital forensics requests.

Work on a digital forensic request

As a member of the digital forensic team, you work on a legal request to investigate and resolve the request.

Before you begin

Role required: sn_lg_ops.legal_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon (☑).
3. In the **Lists** tab, under **Legal Requests**, click **All**.
   If you are a collaborator to a legal request, you can open your assigned collaborations from **Collaborations** under **Legal Request**.
4. Open a digital forensic request to work on.
   - If the legal request is unassigned, click **Assign to me** to assign it to yourself. To assign to another member, select the member's name in the **Assigned to** field and click **Save**.

     The state of the legal request updates to Assigned. If the *Digital Forensics - Privacy Approval* flow is active, an approval flow is triggered. For each custodial and

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

non-custodial data in the digital forensic request, one corresponding approval record is created and is assigned to each member in the legal privacy group. Any member from the legal privacy group can review and approve or reject these approval records.

The status of custodial and non-custodial data updates to Pending Approval. You can review the status of the approval records in the **Approvers** tab.

- If you need help from other fulfillers to work on the legal request, add them in the **Collaborators** field.

  The collaborators are notified via email that they have been added as collaborators to a legal request.

  Note:
  The collaborators get the same degree of access as you to work on the legal request, but they can't modify the **Assigned to**, **Assignment group**, and **Assignment group permission** fields.

- In the **Custodial Data** and **Non-custodial Data**, you can add new custodial and non-custodial data by clicking **New** and filling the details. For these newly added custodial and non-custodial records, the approval flow is triggered, which creates approval records and assigns them to each member of the legal privacy group.

  Note:

  The approval details appear under the **Approvals** tab on the Standard Ticket page.

- After getting approvals, promote the approved custodial data in the **Custodial Data** tab and the approved non-custodial data in the **Non-custodial Data** tab to a new or existing legal matter.
  - To promote them to a new legal matter, select them and click **Create Matter**. You can choose to create the matter using a digital forensic matter template to populate the matter with predefined phases and tasks.
  - To promote them to an existing legal matter, select them and click **Add to an Existing Matter**. In the Add to Existing Matter dialog box, select a matter from the list, and click **OK**.

  For more information, see Promote a legal request to a legal matter.

  Note:
  You can promote the legal request to a legal matter only if you have installed Legal Matter Management and set the record producer type in the associated intake form as **Request and Matter**.

  The legal matter to which the custodial and non-custodial data records are promoted appears in the **Legal Matters** tab.

- Associate other related legal matters to the legal request. In the **Legal Matters** tab, click **Add** and select the legal matter to associate.
- Remove a legal matter from the legal request if the legal matter is not required to be tracked for the request. In the **Legal Matters** tab, select the legal matter to remove, and click **Remove**. If the removed matter is a digital forensic legal matter, all custodial and non-custodial records from the legal matter are also removed. The legal matter owner should cancel the associated phases and tasks from the matter manually.
- Close the legal request after you complete the required activities to resolve the matter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
A legal request is automatically closed when it is associated to a legal matter and the matter owner chooses to close the related requests while closing the matter.

- If the request no longer needs any resolution, cancel the request.

  All custodial and non-custodial data records, as well as any pending approval records associated with them, are also cancelled.

Approve or reject the processing of custodial and non-custodial data

Review and approve or reject the processing of a custodial or non-custodial record of a digital forensic request.

Before you begin

Role required: sn_lg_ops.request_fulfiller

About this task

The approval flow for permitting a digital forensic team member to access the custodial or non-custodial data for a digital forensic request is automated through the *Digital Forensics - Privacy Approval* flow. The flow must be in the Published state. The flow is triggered when a digital forensic request is assigned to a digital forensic team member. For each custodial and non-custodial record in the digital forensic request, one corresponding approval record is created and is assigned to each member in the legal privacy group. Any member from the group can review and approve or reject the custodian approval.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **My Work**, click **Items Pending Approval**.
4. In the Items Pending Approval list, open a request by clicking **Requested** in the **State** column.
5. Review the details of custodial and non-custodial data, and approve or reject the request.
   - To approve, click **Approve**.
   - To reject, click **Reject**.

Result

The following table shows the results of approve and reject actions on the approval request.

Result of approving or rejecting a custodial or non-custodial data

Approve	Reject
• The state of the approval record updates from Requested to Approved. • The status of the custodial record and non-custodial record in the legal request	• The state of the approval record updates from Requested to Rejected. • The status of the custodial record and non-custodial record in the legal request updates from Pending Approval to Rejected. updates from Pending Approval to Approved. • The state of the legal request updates from Assigned to Work in Progress.	rejected custodian record cannot be moved to a legal matter. • The state of the legal request remains Assigned.

Work on a digital forensic legal matter

Work on a digital forensic legal matter assigned to you to get the requested actions for the custodial and non-custodial data done to resolve the request.

Before you begin

The practice area lead or the group manager would have assigned the legal matter to you to work on.

Role required: sn_lg_matter.matter_fulfiller

About this task

As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. **Optional:** If you need help from other fulfillers to work on the legal matter, add them in the **Collaborators** field.

   Note:
   Users with the matter_fulfiller role are listed in the **Collaborators** field.

   The collaborators are notified via email that they have been added as collaborators to a legal matter.
5. **Optional:** Add other approved custodians from the associated legal requests.

   a. In the **Custodial Data** tab, click **Add**.

   b. In the Add Custodial Data dialog box, select the custodian records you want to add to the matter.
   All approved custodians in the associated requests but not already added to the legal matter are listed.

   c. Click **Add**.
6. **Optional:** Add new non-custodial data to the matter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the **Non-custodial Data** tab, click **Add**.

b. In the Add Non-Custodial Data dialog box, select the non-custodial records you want to add to the matter.
All approved non-custodial records in the associated requests but not added earlier to the legal matter are listed.

c. Click **Add**.

d. Click **Save**.

7. **Optional:** Remove any existing custodial or non-custodial data that doesn't need further investigation or was mistakenly added to the matter by selecting the record in the **Custodial Data** tab or **Non-custodial Data** tab and clicking **Remove**.
8. Review the phases and tasks in the respective tabs and, if needed, create more phases and create digital forensic matter tasks to organize the data processing of custodial and non-custodial data.

   Note:
   The phases and tasks are available in the legal matter only if you created the matter using the digital forensic matter template.

9. Assign tasks to users across various departments in your organization to work on.
   a. In the **Tasks** tab, open the task by clicking the task number.
   b. On the form, fill in the required fields, and click **Save**.
10. Review legal matter tasks to determine if all its required actions are complete and approve or reject the tasks.
11. Update the status of the associated custodial and non-custodial records to complete.
    - In the **Custodial Data** tab, open the custodian record, update its **Status** to **Complete**, and click **Save**.
    - In the **Non-custodial Data** tab, open the non-custodial record, update its **Status** to **Complete**, and click **Save**.
12. **Optional:** Add milestones to keep a track of timelines to complete important tasks.
13. Create artifacts (folders) and upload files into these artifacts to record and store supporting documents within the legal matter.
14. **Optional:** Associate a new legal request with the legal matter to combine multiple legal requests with the same underlying needs into a single matter.
    All custodial and non-custodial data from the selected request are added to the matter and appear in the respective tabs.
15. **Optional:** Associate the matter with another legal request that is similar in nature.
16. Close or cancel the request as appropriate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Close the legal matter after you complete the required actions for all custodial and non-custodial data in the matter. Ensure you've completed the following items before closing the legal matter.

  - Closed all tasks that are complete or canceled that don't need any actions.
  - Updated the status of all custodial and non-custodial data in the legal matter to either Complete or Cancelled, as appropriate.

- If the matter doesn't need any action, you can cancel it by clicking the more button ( ) and selecting **Cancel**.

  To cancel the requests associated with the matter, select the **Cancel related requests** check box in the Cancel Matter dialog box. These requests are canceled only if they aren't related to any other open matters.

  - If a related request gets canceled, the status of all its open custodial and non-custodial data (status other than Complete) updates to Cancelled.
  - If a related request cannot be canceled, all its open custodial and non-custodial data is removed from the matter. The status of such records updates to Approved.

  When you cancel the matter without opting to cancel related requests, all custodial and non-custodial data, except with the Complete status, are removed from the matter. The status of such records updates to Approved.

Create a task for a digital forensic legal matter

Create a task for a digital forensic legal matter and add instructions and to-do items in a checklist for the task owner to work on.

Before you begin

Role required: sn_lg_matter.matter_fulfiller

About this task

As a collaborator added to a legal matter, you can access and work on the legal matter just as matter owners can. However, you can't modify the **Matter owner**, **Assignment group**, and **Assignment group permission** fields.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. In the Legal Counsel Center tab, select the list icon ( ).
3. In the **Lists** tab, open a legal matter by selecting an option under **Matters**.
4. To add a matter task, in the **Tasks** tab, click **New** to add a task.
   The matter task is created and **Artifacts**, **Approvers**, and **Data Source Details** tabs are displayed.
5. On the Task form, add a new data source.

   a. In the **Data Source Details** tab, click **New**.

   b. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Data Source Details form

Field	Description
Search source	Source in which the digital evidence is to be investigated. One or more fields appear on the form based on the data source configuration. For more information, see Configure a data source for digital forensics.
Type	Type of data—custodial or non-custodial—to investigate.
Custodial data	User whose data need investigation. The list displays custodians added in the legal matter. This field appears only when **Custodial Data** is selected from **Type**.
Non-custodial data	Details of the non-custodial data to investigate. The list displays non-custodial data added in the legal matter. This field appears only when **Non Custodial Data** is selected from **Type**.
Hold notice issued	Option for indicating that the custodian has been notified of the legal hold on the data or device.

c. Click **Save**.

A Data Source Detail record for a selected custodial or non-custodial data is added in the matter task. It appears in the **Data Source Details** tab on both the Task form and Matter form.

If there are fulfillment steps associated with the selected data source, they are added in the Task form as well.

6. Go back to the Task form and in the contextual side bar, add instructions and to-do items for the task.
   - In the **Instructions** section, click **Add** to add instructions for the assigned user to do for completing the task.
   - In the **Checklist** section, click **Create** to add to-do items to track the progress of activities in the matter task.
7. **Optional:** Add an artifact (folder) in which you or the assigned person can upload files related to the task or its investigation.
8. In the **Details** tab of the Task form, select a user in the **Assigned to** field to assign the task to work on.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
The assigned user can work on the matter task by following the instructions and completing the checklist items.

Work on a task for a digital forensic legal matter

Follow the instructions and complete the to-do items in the checklist of a legal matter task assigned to you.

Before you begin
Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **My Work**, click **Tasks to do**.
4. In the Tasks To Do list, open a task you want to work on and mark as complete.
5. Follow the instructions listed in the **Instructions** section on the form and complete the to-do items in the **Checklist** section.
6. Update the data source details with required information.
   a. In the **Data Source Details** tab, click the value in the **Hold notice issued** column to open the data source details record.
   b. On the Data Source Details form, fill in the required fields.

      Note:
      The Data Source Details form has a different set of fields as configured in the data source. For more information, see Configure a data source for digital forensics.

   c. If you have notified the custodians of their data or device being on legal hold, select **Hold notice issued**.
   d. Upload relevant documents from the **Attachments** section.
   e. Click **Save**.
7. **Optional:** In the **Activity** section of the task, enter comments or add attachments.
8. Click **Mark as Complete**.

Result
The matter task is completed and sent to the matter owner for approval.

Legal Digital Forensics reference

Reference topics provide additional information about the lists and forms that you use in Legal Digital Forensics.

Components installed with Legal Digital Forensics

Several types of components are installed with activation of the Legal Digital Forensics application, including tables and user roles.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles

Roles installed with Legal Digital Forensics

Role title [name]	Description	Contains roles
Forensics Administrator [sn_lg_forensics.forensics_admin]	Application-specific administrator role for the Legal Digital Forensics app having the administrative access for the app and full access to the underlying data.	• sn_lg_forensics.forensics_config • sn_lg_forensics.forensics_fulfiller
Forensics Configurator [sn_lg_forensics.forensics_config]	Provides access to configure data for the Legal Digital Forensics app such as search sources.	sn_lg_forensics.forensics_fulfiller
Forensics Fulfiller [sn_lg_forensics.forensics_fulfiller]	Provides the fulfiller access for working on assigned digital forensic requests and matters.	sn_lg_ops.legal_user

Tables

Tables installed with Legal Digital Forensics

Table	Description
Custodial Core [sn_lg_forensics_custodian]	Users from the Legal Profile table that are added in a digital forensics request.
Custodial Data [sn_lg_forensics_custodial_data]	Extends the Custodial Core table and has additional fields to store information of users added in a digital forensics request.
Data Source [sn_lg_forensics_search_source]	Search sources, checklist items, and instructions for the task owners for the resolution of legal requests. You can configure search sources such as Slack, Box, OneDrive, or Microsoft Outlook. Extends the Application File [sys_metadata] table.
Data Source Details [sn_lg_forensics_search_source_detail]	Details recorded for a search source for custodians by the task owner while working on a digital forensics matter task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Legal Digital Forensics (continued)

Table	Description
Fulfillment Steps [sn_lg_forensics_fulfillment_steps]	Steps required for a task owner to fulfill an assigned digital forensics request. Extends the Application File [sys_metadata] table.
Non Custodial Core [sn_lg_forensics_non_custodial_data]	Extends the Custodial Core table and has additional fields to store information of non-custodial records added in a digital forensics request.

Legal Invention Disclosure

Legal Invention Disclosure is a workflow that enables inventors to disclose their inventions in a structured manner. The application is installed by the Legal Simple Intellectual Property application.

Get started

Explore

Learn about the features and benefits of Legal Invention Disclosure.

Configure

Install and configure Legal Invention Disclosure, set up outside firms and outside counsels, and set up and configure inventor rewards.

Manage

Use Legal Invention Disclosure to manage patent requests, create related matter, facilitate the application process, and track progress.

Reference

Get details about components such as roles, tables, and forms.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Exploring Legal Invention Disclosure

Learn more about Legal Invention Disclosure through a sample workflow and review the benefits it can provide.

Legal Invention Disclosure overview

Legal Invention Disclosure streamlines the process of patent application along with the review process and optional rewards for the inventors. Legal Invention Disclosure is installed when the Legal Simple Intellectual Property plugin is installed.

Legal Invention Disclosure benefits

Legal Invention Disclosure benefits

Benefit	Feature	Users
Structured process to create and submit Legal Invention Disclosure requests.	Create a Legal Invention Disclosure request	sn_lg_ip.patent_fulfiller and sn_lg_ops.legal_user
Optional monetary rewards granted to the inventor at selected stages of the patent application process.	Set up optional inventor rewards in Legal Invention Disclosure	sn_lg_ip.patent_fulfiller
Inclusion of outside counsels to review patent application requests.	Set up Outside Firms for Legal Invention Disclosure Set up Outside Counsels for Legal Invention Disclosure	

Legal Invention Disclosure workflow

The Legal Invention Disclosure configuration workflow is as follows:

1. Install the Legal Simple Intellectual Property application to automatically install Legal Invention Disclosure.
2. Set up and add outside firms.
3. Set up and add outside counsels from the respective firms.
4. Enable outside counsel.
5. Set up optional inventor rewards.

The Legal Invention Disclosure task workflow is as follows:

1. Inventor creates and submits a Legal Invention Disclosure request.
2. The patent reviewer or fulfiller reviews the request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. If any clarifications are required, the patent reviewer or fulfiller sends the request back to the requester, who updates the request and returns it.
4. The fulfiller either approves the application and initiates the filing process or rejects the application and closes the request.
5. The fulfiller creates a matter from the request or adds the request to an existing matter if a similar request already exists.
6. The fulfiller proceeds with the application. After that, as configured, a reward for the inventor is automatically generated and need to be sent to the payroll to process and send to the inventor.
7. Add an outside counsel to the legal matter and enable the patent fulfiller to communicate with the outside counsel for reviewing and processing the Legal Invention Disclosure requests.
8. The fulfiller emails the details of the request to the outside counsel.
9. The outside counsel reviews the request.
10. The outside counsel, after approval, files an application with the patent authority. If the request is not approved, the outside counsel informs the fulfiller and the fulfiller closes the request.
11. The outside counsel responds to the email and provide the details of the patent filing to the fulfiller. The details will be available for the fulfiller in the activity stream to take necessary actions.
12. The fulfiller updates the legal matter with the patent filing information.
13. A Patent Repository record is automatically generated with the relevant patent filing details.
14. If a reward for the inventor has been set up for this stage, it is automatically generated and sent to the inventor.
15. The patent authority reviews the patent request and the outside counsel informs the fulfiller about the result of the review through email.
16. If the patent is granted, the fulfiller updates the legal matter with the patent information and closes the request. The Patent Repository record is automatically updated with the information. If the patent application is rejected, the fulfiller closes the request.
17. If a reward for the inventor has been set up for this stage, it is automatically generated and sent to the inventor.

Configuring Legal Invention Disclosure

Install Legal Invention Disclosure and configure the requirements to enable efficient processing and tracking of patent requests.

Configuration overview

1. Install the Legal Invention Disclosure application by installing the Legal Simple Intellectual Property application.
2. Set up outside firms to enable the assignment of outside counsels, who can then be associated with and evaluate Legal Invention Disclosure requests.
3. Set up optional inventor rewards to be granted at three stages of applying for and acquiring a patent.

Install Legal Invention Disclosure

You can install the Legal Invention Disclosure application by installing the Legal Simple Intellectual Property (sn_lg_ip) application if you have the admin role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

Role required: admin

About this task

The following items are installed with Legal Invention Disclosure:

- Roles
- Tables

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Simple Intellectual Property application (sn_lg_ip) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Set up Outside Firms for Legal Invention Disclosure

Configure Outside Firm records to enable the assignment of outside counsels to review and process the patent filing of Legal Invention Disclosure requests.

Before you begin

Role required: sn_lg_matter.matter_config

Procedure

1. Navigate to **All** > **Legal Matter** > **Outside Counsel Setup** > **Setup Outside Firms**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Outside Firm New Record form

Field	Description
Outside Firm Name	Name of the outside firm.
Description	Detailed description about the outside firm.
Office Name	Name of the office of the outside firm.
Street Address	Address of the outside firm.
PO Box number	Post box number of the outside firm.
City	City where the outside firm is located.
State/Province	State or province where the outside firm is located.
Country	Country where the outside firm is located.
Active	Option to make the Outside Firm record active.

4. Select **Submit**.

What to do next
Set up Outside Counsels for Legal Invention Disclosure

Set up Outside Counsels for Legal Invention Disclosure

Create Outside Counsel records to enable outside counsels to work on a Legal Invention Disclosure request.

Before you begin
An Outside Firm record must be active. For more information, see Set up Outside Firms for Legal Invention Disclosure.

Role required: sn_lg_matter.matter_config, sn_lg_matter.matter_fulfiller

About this task
Setting up an outside counsel can be done either as a fulfiller task or when configuring Legal Invention Disclosure after installation.

Procedure
1. Access the form to create an Outside Counsel record.

2. Select **New**.
3. On the form, fill in the fields.

Outside counsel form

Field	Description
Outside Firm	Name of the parent firm for the outside counsel from the lookup which were already added.
Outside Counsel Name	Name of the outside counsel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Outside Counsel Email	Email address of the outside counsel.
Active	Option to make the Outside Counsel record active.

4. Save the Outside Counsel record.
   - On the Outside Counsels New record form, select **Submit**.
   - On the Create New Outside Counsel from the Legal Counsel Center, select **Save**.

Enable Outside Counsel to be added to Legal Invention Disclosure matters

Enable outside counsels to be added to matters related to Legal Invention Disclosure request.

Before you begin

Role required: sn_lg_ip.patent_config, sn_lg_matter.matter_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Select **Intellectual Property** from the list.
3. Select **Invention Disclosure** in the **Intake Forms** tab.

   If a message appears about the application scope, select **here** to be able to edit the record.

4. Select the lock icon in the **Options** field in the Record Producer section.
5. Enter `Enable` in the Select target record field and select **Enable Outside Counsel on Matter** from the list.
6. Select **Update**.

What to do next

Associate an existing Outside Counsel to a legal matter

Set up optional inventor rewards in Legal Invention Disclosure

Set up optional rewards for inventors to be granted at three stages of applying for and acquiring a patent.

Before you begin

You must update the locale settings in the system properties and then configure the system locale currency before configuring the patent rewards. For more information, see Locale settings and Configuring FX Currency global settings.

Role required: sn_lg_ip.patent_config

Procedure

1. Set up a reward cap for the maximum reward amount.
   If there are multiple inventors, the amount is automatically divided equally among them.

   a. Navigate to **All** > **Legal Practice Apps** > **Intellectual Property** > **Patent Reward Caps**.

   b. Select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. On the form, fill in the fields.

Patent Reward Caps form

Start Date	Date from which the patent reward cap is implemented.
End Date	Date until which the patent reward cap is implemented.
Reward Cap	Maximum limit of the reward amount in system currency.

d. Select **Submit**.

2. Configure the reward based on the country of residence of the inventor.

a. Navigate to **All** > **Legal Practice Apps** > **Intellectual Property** > **Patent Rewards per Country**.

b. Select **New**.

c. On the form, fill in the fields.

Patent Rewards Per Countries form

Country	Name of the inventor's country.
From currency	Currency of the selected country.
To currency	The system locale currency.
Country specific reward cap	The maximum limit of the reward amount in the inventor's country's currency and also holds stage wise rewards caps. **Note:** If multiple inventors are associated with the patent request, the reward is automatically split equally among them.
Forex Conversion Rate	Foreign exchange conversion rate of the amount.
Start Date	Date from which the country reward is implemented.
End Date	Date until which the country patent reward is implemented.

3. Determine whether a reward is granted at various stages of the patent application process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **All** > **Legal Practice Apps** > **Intellectual Property** > **Patent Rewards per Country**.

b. Select the amount in the **Country Specific Reward Cap** column of the new country entry.

c. On the Stage rewards form, select **New**.

d. On the form, fill in the fields.

Stage Rewards form

Field	Description
Amount	Amount to be rewarded to the inventor for the selected status.
Patent rewards per country	The country of the inventor to whom the patent is granted. This field is auto-populated.
Application status	The status of the application at which the inventor should be rewarded. The stages of an application at which rewards can be granted are: ▪ Proceed with Application ▪ Patent Filed ▪ Patent Granted

Using the Legal Invention Disclosure

Legal Invention Disclosure provides a streamlined process for inventors to request an application for a patent and for that request to be reviewed both internally and externally by outside counsels. The application is then submitted to patent authorities. You can choose to reward inventors at selected stages of the application process.

Create a Legal Invention Disclosure request

Create a Legal Invention Disclosure request to provide detailed information about the invention.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Access the Legal Invention Disclosure intake form.
   a. Navigate to **All** > **Employee Center**.
   b. From the **Legal Services** menu, select **Intellectual Property**.
   c. Select **Invention Disclosure Request**.
2. On the Legal Invention Disclosure request form, fill in the fields.
   For a description of the field values, see Legal Invention Disclosure form.
3. **Optional:** Add any attachments with details of the invention to the request, if any.
4. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- A Legal Invention Disclosure request is created in the New state.
- A unique request ID is generated.
- The application status in Legal Counsel Center is set to New.
- The request is assigned to a group or user in the legal department based on the assignment rules set in the associated practice area. For more information, see Assignment rule to automatically assign legal requests or matters.
- You will begin receiving notifications about the progress of the request.

Review the Legal Invention Disclosure request

Review a Legal Invention Disclosure request and either approve it to be sent for a patent approval or request clarification from the requester.

Before you begin

Role required: sn_lg_ops.legal_fulfiller, sn_lg_ip.patent_fulfiller

Procedure

1. Navigate to **Workspaces** > **Legal Counsel Center**.
2. Select the List icon () from the primary navigation and in the Legal Requests section of the **Lists** menu, select **All**.
3. Select the request to open.
4. Select **Assign to me**.
5. Select **Start Work**.
6. Review the request.
   - If you are satisfied with the information provided, create the related matter. For more information, see Create a matter or add a Legal Invention Disclosure request to an existing matter.
   - If you are not satisfied with the information, select **Clarification Required**, fill in the details about the information needed in the Clarification Required dialog box, and select **Submit**.

Result

- An email notification is sent to the requester to update the request.
- The State is updated to Assigned.
- The Application status in Legal Counsel Center is updated to Clarification Required.

Respond to a request for clarification for a Legal Invention Disclosure request

Provide information requested by the patent reviewer or fulfiller to complete a Legal Invention Disclosure request for review.

Before you begin

Role required: sn_lg_ops.legal_user

About this task

If you have submitted a Legal Invention Disclosure with missing or incomplete information, the fulfiller will request clarification and you will receive an email notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center**.
2. Select **My Requests**.
3. In the search field, enter the Legal Invention Disclosure request number from the email notification and press Enter.
4. Open the request by selecting the request name.
5. Provide the required information.
   - If you are being asked for clarification of the information you provided, enter the response to the query in the **Type your message here** field and select **Post**.
   - If a field value is incorrect, select **Actions** > **Edit Request** and correct the values in the fields.
6. Select **Submit For Review** to send the request back to the fulfiller with the updated response.

Result
The request is submitted back to the fulfiller for review.

Create a matter or add a Legal Invention Disclosure request to an existing matter

Create a matter from a Legal Invention Disclosure request or add the request to an existing matter to track the details of the complete patent application process if the request is approved for applying for a patent.

Before you begin
A Legal Invention Disclosure request must have been submitted and accepted. For more information, see Create a Legal Invention Disclosure request.

Role required: sn_lg_ops.legal_fulfiller

Procedure

1. Navigate to **All** > **Legal Counsel Center**.
2. Select the List icon () from the primary navigation and in the Legal Requests section of the **Lists** menu, select **All**.
3. Select the Legal Invention Disclosure request to open.
4. Select **Assign to me**.
5. Select **Start Work**.
6. Determine whether a similar request has been submitted previously.
   If a similar request has previously been submitted, you can add the current request to the existing matter related to that request.

   a. In the Legal Counsel Center **Search** field, search for a keyword related to the idea in the request.
   Choose a keyword that is as specific as possible to narrow the search results.

   b. In the search results, if there is a related matter, copy its number.

7. Create a matter from the request or add the request to an existing matter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

A new matter is created from the request or the request is added to an existing matter. The following actions occur:

- The Legal Invention Disclosure matter window opens with all the request information.
- The State is updated to Work In Progress.
- The Application status is In Patent Application for the new matter or In Review for an existing matter.

Associate an existing Outside Counsel to a legal matter

Add existing outside counsels to a legal matter and enable the patent fulfiller to communicate with the outside counsel for reviewing and processing the Legal Invention Disclosure requests.

Before you begin

The following items must have been created:

- An Outside Firm record. For more information, see Set up Outside Firms for Legal Invention Disclosure.
- An Outside Counsel record. For more information, see Set up Outside Counsels for Legal Invention Disclosure.
- A related legal matter. For more information, see Create a matter or add a Legal Invention Disclosure request to an existing matter.

You must have the invention disclosure request ID and the matter ID.

Role required: admin, sn_lg_ops.request_fulfiller

Procedure

1. Navigate to **All** > **Legal Counsel Center**.
2. Select the List icon () from the primary navigation and in the Legal Requests section of the **Lists** menu, select **All**.
3. Select and open the request.
4. Select the **Legal Matters** tab and open the matter.
5. Select **Assign to me**.
6. Select the **Outside Counsel** tab.
7. Select **Add Outside Counsel**.
8. On the form, fill in the fields.

Create Outside Counsel Engagement form

Outside firm	Name of the parent firm for the outside counsel from the lookup which were already added.
Outside counsel	Name of the outside counsel from the lookup which were already added for the specific outside firm.
State	This field is automatically set to Offline and cannot be modified.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Outside Counsel Email	This field is auto-populated with the email address of the outside counsel.

9. Select **Save**.
10. **Optional:** Verify that the outside counsel was added by refreshing the Outside Counsel tab.

Proceed with a Legal Invention Disclosure request

Once an application for a Legal Invention Disclosure request is complete and has been approved, approve the application to proceed for review by an outside counsel.

Before you begin

A legal matter related to the request with which an outside counsel is associated must exist.

Role required: sn_lg_ip.patent_fulfiller

Procedure

1. Navigate to **All** > **Legal Counsel Center**.
2. Select the List icon ( ) from the primary navigation and in the Legal Requests section of the **Lists** menu, select **All**.
3. Open the Legal Invention Disclosure request.
4. Select the **Legal Matters** tab.
5. Open the matter associated with the request.
6. Select **Proceed with application**.

Result

A matter task named "Proceed with application" is generated and can be viewed in the Tasks tab. The State is updated to Work in Progress and the Application status is updated to Proceed with application.

If an optional reward to the inventor at the Proceed with application stage has been set up, it is processed and sent to the inventor. When a rewarding task is generated, the task is sent to the patent fulfiller for approval. After the approval, the information is sent to the payroll team for processing the reward.

What to do next

Once you have associated the outside counsel to a legal matter send an email with the matter details to the outside counsel. For more information, see Provide Legal Invention Disclosure request information to an outside counsel.

Provide Legal Invention Disclosure request information to an outside counsel

Provide the information related to a Legal Invention Disclosure request to an outside counsel for review to determine whether to apply for a patent.

Before you begin

A legal matter related to the request with which an outside counsel is associated must exist.

Role required: sn_lg_ip.patent_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Counsel Center**.
2. Select the List icon () from the primary navigation and in the Legal Requests section of the **Lists** menu, select **All**.
3. Open the Legal Invention Disclosure request.
4. Select the **Legal Matters** tab.
5. Open the matter associated with the request.
6. Select **Proceed with application**.

   A matter task named "Proceed with application" is generated and can be viewed in the **Tasks** tab. The State is updated to Work in Progress and the Application status is updated to Proceed with application.

   If an optional reward to the inventor at the Proceed with application stage has been set up, it is processed and sent to the inventor.
7. Create a document to provide the application information to outside counsel by selecting **Generate PDF**.
   The complete matter details are captured in the PDF and stored in the **Artifacts** tab. You can also save the PDF to external storage if it is configured.
8. Compose and send an email with the matter PDF to the outside counsel for review.
   a. Select **Compose Email**.
   b. Attach the PDF and any other supporting documents by selecting the associated check boxes and then selecting **Select documents**.
   c. In the email message, verify the outside counsel's email address in the **To** field.
   d. **Optional:** Modify the default text in the **Subject** field.
   e. Select **Send email**.

What to do next

Once you receive the decision from the outside counsel about whether the patent is being filed, finalize the request application process. For more information, see Facilitate the patent review process.

Facilitate the patent review process

Update the tracking information through the final resolution of the patent review process after you receive the resolution of the patent application review by an outside counsel.

Before you begin

An email from outside counsel with the decision on patent filing has been received.

Role required: sn_lg_ip.patent_fulfiller

Procedure

1. Navigate to **All** > **Legal Counsel Center**.
2. Based on the resolution of the patent application review by the outside counsel, either close the request or indicate that the patent was filed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Once the outside counsel notifies the patent fulfiller about the resolution of the patent application to the patent authorities, either close the request if the patent was rejected or indicate that the patent was granted.

4. Approve the pending tasks related to the stages of the application process.

   a. Navigate to **All** > **Legal Counsel Center**.

   b. In the **Pending approvals** widget, select the number.

   c. Select all the requests in the Approvals section.

   d. Select **Approve** for bulk approval of the requests.
   In the Task tab, the State of the approved task is updated to Closed Complete.

5. Select **Close Complete** to close the matter.

Legal Invention Disclosure reference

Reference topics provide additional information about the forms that you use in Legal Invention Disclosure.

Components installed with Legal Invention Disclosure

Several types of components are installed with activation of the Legal Invention Disclosure plugin, including tables and user role.

Roles

Roles installed with Legal Invention Disclosure

Role title [name]	Description	Contains roles
Patent Config [sn_lg_ip.patent_config]	Configuration access for working on requests and matters.	sn_lg_ops.legal_user
Legal Fulfiller [sn_lg_ip.patent_fulfiller]	Fulfiller access for working on assigned requests and matters.	• sn_lg_ops.legal_fulfiller • sn_doc.reader

Tables

Tables installed with Legal Invention Disclosure

Table	Description
Patent Repository [sn_lg_ip_patent_repository]	Contains the details of all patents filed for a legal matter.
Patent Rewards Per Country [sn_lg_ip_patent_rewards]	Contains the details of the rewards for different stages of patent filing based on the country of the inventor.
Patent Reward Caps [sn_lg_ip_patent_reward_caps]	Contains the details of the maximum amount to be rewarded to inventora for individual stages of the application process.

Table	Description
Stage Rewards [sn_lg_ip_stage_rewards]	Contains the details of the amounts of rewards for individual stages of the application process for each country.

Legal Invention Disclosure form

List of fields in the Legal Invention Disclosure request in the Legal Service Portal.

Legal Invention Disclosure form

Field	Description
Requester name	Name of the requester. The name is auto-populated with the current requester name but can be modified if requesting for another user.
Inventors	Names and details of inventors.
What title would you like to use to describe your invention	Title of the invention.
Briefly describe what problem your invention solves	Description of the issue that the invention will help to resolve.
Describe the invention	Detailed description of the invention.
Approximate date of conception of invention	Date when the invention was conceived. The date must be either the current date or earlier.
Invention publicly disclosed?	Indicates whether the invention has been disclosed publicly. If the choice is **Yes**, additional fields request detailed information about the disclosure. • **Invention disclosure method** - How the invention was publicly disclosed. • **First public disclosure date** - Date when the first public disclosure of the invention was made.
Invention was implemented into a customer product or is planned on being implemented into a customer product?	Indicates whether the invention is already used anywhere. If the choice is **Yes**, additional fields request detailed information about the implementation. • **Past or future date of release of the product** - Past or future date when the product releases. • **Specify the name of the product** - Name of the product where the invention is used.

Legal Investigations

The ServiceNow® Legal Investigations application enables Legal departments to accept complaints from a simple intake process through multiple channels. The legal team can organize

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

and conduct detailed legal investigations including interviews, gathering evidence, and preparing final reports along with recommended actions.

Complaints submitted to Legal, such as ethics complaints, can include bribery, financial fraud, insider trading, and other ethical violations. If employees suspect an incident of any of these violations, they can report it with specifics to the Legal department for legal investigations.

Integrate Legal Investigations with ServiceNow® Universal Request and HR Service Delivery Employee Relations apps to provide a seamless experience for employees to submit complaints via your universal request and for legal counsels to work on them, transferring them between Legal and HR departments. For more information, see Better together solution: Legal Investigations and HR Service Delivery Employee Relations.

Explore Learn about how employees, paralegal staff, and lawyers use Legal Investigations.	**Set up** Set up allegation types and subtypes, and other configurations.	**Request** Submit and track complaints, such as ethics complaints.
Manage Manage legal requests and legal matters to investigate and resolve complaints.	**Analytics and Reporting** Coordinate work and improve processes with preconfigured dashboards.	**Reference** Get details about components such as roles, tables, plugins, and store applications that are installed.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Troubleshoot and get help

- Ask or answer questions in the Legal Service Delivery community forum
- Search the Known Error Portal for known error articles
- Contact Customer Service and Support

Exploring Legal Investigations

Legal Investigations enables the Legal department to accept complaints and conduct detailed legal investigations by conducting interviews, gathering evidence, and preparing final reports and recommended actions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Features

- Multi-channel intake process including Legal Service Portal, Employee Center portal, and Anonymous Report Center (ARC) portal.
- Option for submitting anonymous or named complaints.
- Intake form to gather detailed information about the incident, complaint type, involved parties, and incident date.

For interdepartmental transfer of complaints between Legal and HR departments, see Better together solution: Legal Investigations and HR Service Delivery Employee Relations.

Legal Investigations - workflow

The following illustration shows the workflow for submitting and handling complaints.

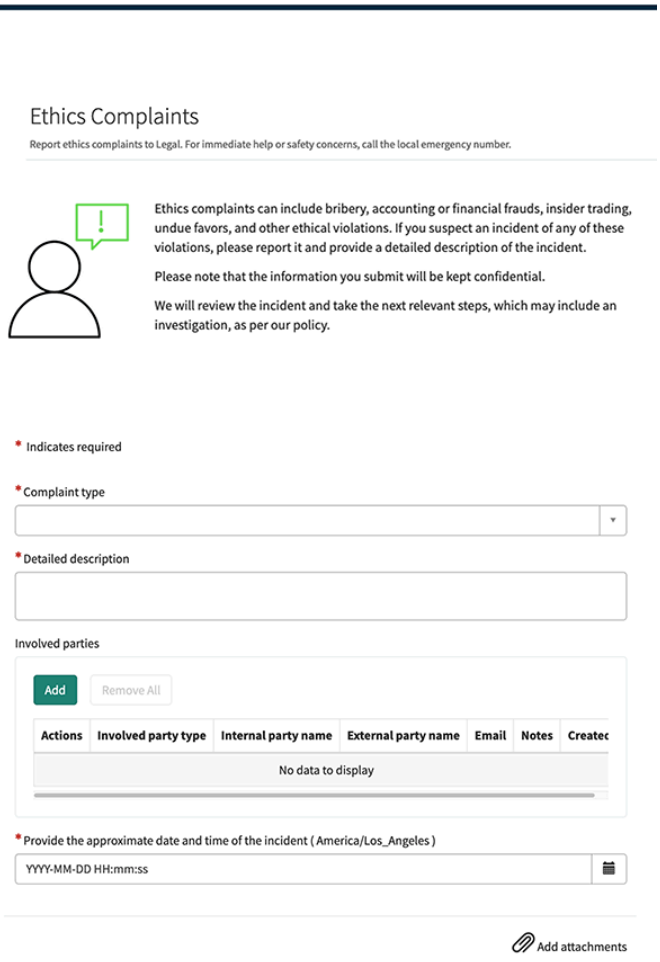
Legal Investigations workflow

Legal Investigations workflow



Enable the Legal department to accept complaints from a simple intake process through multiple channels. The legal team can organize and conduct detailed legal investigations including interviews, gathering evidence, and preparing final reports along with recommended actions.

Setup the following items

- Configure allegation types and allegation subtypes.
- (Optional) Install the Anonymous Reporting Center plugin to enable submitting complaints to Legal anonymously.
- Optional) Install the Interview Templates plugin to enable configuring interview templates for conducting interviews

- Employee submits a complaint with details like complaint type, involved party, description and date of the incident.
- Legal request fulfiller assesses the complaint and, if required, promotes it to a legal matter for detailed investigation.
- Matter fulfiller conducts the legal investigations that might include:
  - Adding more involved parties as a witness, the subject or allegation, etc.
  - Associating more allegations against any of the involved parties.
  - Conducting interviews with the involved parties.
  - Gatehering evidences, documenting and storing them in the legal matterthem in the legal matter.
- Matter fulfiller prepares final report and recommended actions.
- Matter fulfiller closes the legal matter and legal request as required.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Better together solution: Legal Investigations and HR Service Delivery Employee Relations

Employees can submit complaints through the Employee Center portal without worrying about who should investigate the complaint. During the triaging or investigation process, fulfillers working on these issues can transfer them back and forth between the Legal and HR departments as necessary for resolution.

Key features

Using Legal Investigations and HR Service Delivery Employee Relations with Universal Request together for the following key features:

- Omnichannel modes for submitting complaints via Employee Center portal, and Anonymous Report Center (ARC) portal.
- Single triaging queue for all complaints through Universal Request.
- Interdepartmental transfer of basic case details between Legal Service Delivery Legal Investigations and HR Service Delivery Employee Relations.

Setting up Legal Investigations and HR Service Delivery Employee Relations to work together

Complete the following configurations to integrate Legal Investigations with HR Service Delivery Employee Relations.

- Set up Legal Investigations with HR Service Delivery Employee Relations
- Configure Universal Request for legal services

Data mapping

When information related to HR Employee Relations cases and related legal ethics matters is transferred between HR and the Legal departments, a complete data copy with appropriate data mapping is performed. For the Legal to HR transfer, activate the `HRERDepartmentTransferPostProcessor` script to enable copying. For more information, see Data mapping fields.

To perform additional customizations for deep copying, edit the following scripts:

- Legal to HR: `HRERDepartmentTransferPostProcessor` (Employee Relations scope)
- HR to Legal: `LegalDepartmentTransferPostProcessor` (Legal Investigations scope)

In the **Evidence of type link** table, for a Legal to HR transfer, if external storage is enabled for the legal matter, the artifacts are copied into evidences with the URL field containing the document URL. If external storage is turned off, the matter artifact is copied as an evidence with all the attachments.

If external storage is enabled for the legal matter, all the attachments or documents are copied as evidences with an external documents link. For a Legal to HR transfer, no association exists between the interviews and evidences.

In the **Corrective/Recommended Actions** table, for a Legal to HR transfer, attachments in matter and artifacts linked to the Recommended action task are copied as attachments to the HR Corrective Action. If external storage is enabled for the legal matter, all the attachments or documents are copied as evidences with an external documents link.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workflow for handling complaints

The following workflow example explains how routing agents, legal fulfillers, and HR agents can use the applications together to resolve complaint requests submitted by employees.

1. Employees who observe an ethical violation or similar incident report it by submitting a universal request. See Submit a complaint through the Quick Link in Employee Center.
2. A universal request routing agent can triage these complaint requests and create tickets for the appropriate department to work on. See Triaging universal requests for legal investigation complaints.

   Note:
   When the routing agent creates a legal ticket for complaints from the universal request, an ethics legal matter is created directly to handle and resolve the complaint.

3. The fulfiller from the respective department who is assigned the ticket can work on it and close it, transfer it to another department, or transfer to the universal request. See Work on a legal matter for a complaint.
4. When a ticket is transferred from the Legal department to the HR department, the details in the legal ticket, such as the description, short description, and comments, are copied to the HR Case. The legal ticket is closed, and an HR case is created, which is then handled by an HR agent. See Transfer a legal ticket to another department. Similarly, an HR agent working on an HR case can transfer it to the Legal department, which creates an ethics legal matter.

Setting up Legal Investigations

Configure the foundation data required for managing the complaints for legal investigations.

The following components are installed with Legal Investigations:

- Practice area: Ethics
- Category: Ethics Complaints
- Assignment group: Legal — Ethics
- Record producer: Ethics Complaints

  For more information, see Record producers for legal investigations.

- Matter template: Ethics Template

As an administrator, you can review the installed base system components and modify them or add new ones as applicable.

- Configure allegation types and allegation subtypes that will be used by the legal fulfillers when adding new allegations during investigations as needed.
- Add or modify subcategories for the base system Ethics Complaints intake form of the Ethics practice area. These subcategories appear in the **Complaint type** field of the Ethics complaints intake form.
- Enable anonymous complaint submission by completing the following tasks:
  - Install the Anonymous Report Center plugin (com.sn_anonymous_report_center) to enable the Anonymous Reporting Center portal for submitting complaints to Legal.
  - Install the HR Scoped Security plugin (com.snc.hr.scoped_security) to enable the text verification code on the Ethics Complaints intake form on the Anonymous Report Center portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If HR Service Delivery is not installed, you have to modify the permission settings. For more information, see the Anonymous Report Center (ARC) dependency for Legal Services Delivery [KB1171443] article in the Now Support Knowledge Base.

- Enable the base system Ethics Complaints record producers for legal investigations for ARC.

- Create a legal matter template to standardize the process of investigating a complaint.
- Configure an interview template for legal matter tasks of type interview to capture consistent information from the interviews. For example, if you set a questionnaire in the template, the assigned task fulfiller can view a list of predefined questions to ask the interviewees.

  For more information, see Interview Management.

Install Legal Investigations

You can install the Legal Investigations application (sn_lg_investigate) if you have the admin role.The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Investigations application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Legal Investigations:

- Plugins
- Store applications
- Roles
- Scheduled jobs
- Tables

For more information, see Components installed with Legal Investigations.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Investigations application (sn_lg_investigate) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the Review Installation Details dialog box, any dependencies installed with your application are listed.

4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Configure an allegation type and its subtypes

Configure allegation types and allegation subtypes that the legal fulfillers working on complaints can choose when adding new allegations during investigations.

Before you begin

Role required: sn_lg_investigate.config or admin

Procedure

1. Navigate to **All** > **Legal Administration** > **Legal Investigations Admin** > **Allegation Types**.
2. Configure or modify an allegation type.
   - To configure a new allegation type, click **New**.
   - To modify an existing allegation type, open the allegation type from the list.
3. In the **Name** field, enter a unique name for the allegation type.
4. Select the **Active** option to enable the allegation type.
   Only active allegation types are listed in the **Allegation type** field on the Allegation form of a legal matter.
5. Save the allegation type.
   - Save an allegation type by clicking **Submit**.
   - Save the changes to an existing allegation type by clicking **Update**.

   The Allegation Subtypes related list appears.
6. Configure allegation subtypes for the allegation type.

Note:
You can also configure an allegation subtype by navigating to **All** > **Legal Administration** > **Legal Investigations Admin** > **Allegation Subtypes** > **.**

a. In the Allegation Subtypes related list, add an allegation subtype by clicking **New** or modify an existing one by selecting from the list.

Allegation Subtype form

Field	Description
Name	Unique name for the allegation subtype.
Allegation type	Parent allegation type.
Active	Option to enable this allegation subtype.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Save the allegation subtype.

- Save an allegation subtype by clicking **Submit**.
- Save the changes to an existing allegation subtype by clicking **Update**.

Configure system properties to update ethics complaint assignment group

As an admin, configure the `sn_lg_investigate.ethics_complaints_assignment_group` system property to use a different assignment group to assign ethics complaints.

Before you begin

Role required: sn_lg_ops.legal_admin

About this task

`sn_lg_investigate.ethics_complaints_assignment_group` is a configurable system property that is used to configure default assignment group for ethics complaints raised using quick links in Employee Center. The sys_id of any group that is protected with the Universal Request sensitive role and has fulfillers who can work on ethics complaints is enabled to configure the system property.

Alternatively, configure the property from Set up Legal Investigations with HR Service Delivery Employee Relations.

Procedure

1. In the filter navigator, enter `sys_properties.list`.
2. In the **Name** column, search for the `sn_lg_investigate.ethics_complaints_assignment_group` property.
3. Select the property.
4. If you aren't able to edit the property in the current application scope, select the word **here** in the message at the top of the page.
5. Update the **Value** field with the sys_id of the new assignment group.
6. Select **Update**.

Result

You can now use the new assignment group to assign ethics complaints.

Set up Legal Investigations with HR Service Delivery Employee Relations

Set up Legal Investigations with HR Service Delivery Employee Relations to enable complaint requests to be transferred between Legal and HR departments.

Before you begin

Ensure you have the following ServiceNow® apps installed:

- Legal Investigations (sn_lg_investigate)
- Universal Request (com.snc.universal_request)
- HR Service Delivery Employee Relations (com.sn_hr_employee_relations)

Note:
You must approve the requested Restricted Caller Access (RCA) with source scope as Legal Investigations and target scope as Human Resources Employee Relations and Evidence Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Optionally, you can install the Anonymous Reporting Center (ARC) plugin (com.sn_anonymous_report_center) to enable transfer of tickets between Legal and Human Resource (HR) departments. ARC requires a HRSD Pro/Enterprise license in addition to the Legal Investigations subscription.

Role required: admin

Procedure

1. Activate the record producers for complaints submission via the **Quick Link** in Employee Center.
   For more information, see Record producers for legal investigations.

   a. Navigate to **All** > **Service Catalog** > **Record Producers**.

   b. Search and open record producers with the name **Ethics Complaints**.

   c. Verify that **Universal Request [universal_request]** is selected in the **Table name** field.
   There are two record producer records that enable the ethics complaint submission options: one via the Employee Center portal's **Quick Link** and another via the Anonymous Report Center portal.

   d. Select **Active** to activate the record producers for universal requests.

   e. Click **Update**.

   Note:
   You must deactivate the record producers mapped to the Ethics [sn_lg_ops_ethics] table.

2. Review the base system assignment group, **Compliance**, to which the ethics complaint requests will be assigned by default, and make the required changes.

   a. Navigate to **All** > **User Administration** > **Groups**.

   b. Open the assignment group that you want to configure to assign the compliant requests by default.

   c. In the Roles related list, verify that the following roles are assigned to the assignment group.
   - agent_workspace_user
   - sn_uni_req.routing_agent
   - interaction_agent

   d. In the Group Members related list, add users to triage and work on the submitted complaints. These users must be assigned the sn_uni_req.sensitiveinfo_agent role and the following department-specific roles:
   - sn_lg_investigate.fulfiller, for users in the Legal department
   - sn_hr_er.case_writer, for users in the HR department

   For more information, see Create a user group.

3. If you configured an assignment group other than the base system assignment group, make it the default assignment group for ethics complaint requests by updating the system property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Copy the sys_id of the assignment group configured in the last step.

b. Navigate to **All** > **Legal Administration** > **Legal Investigations Admin** > **Properties**.

c. Paste the sys_id of the assignment group in the **Default assignment group** field.

4. Configure the Universal Request property to determine how the primary ticket should be handled while transferring between the departments.

   a. Navigate to **All** > **Universal Request** > **Administration** > **Properties**.

   b. Under **Transfer type**, update the **Select the transfer type to determine how the primary ticket is handled** property (*sn_uni_req.transfer_type*) to **Service**.

   Note:
   If a service isn't selected while transferring the ticket, then the transfer happens to the default service configured for the selected transfer department.

   For more information, see Universal Request properties.

5. For Legal to HR complete data copy to execute, activate **HRERDepartmentTransferPostProcessor**.

   a. Navigate to **All** > **System Definition** > **Script Includes**.

   b. Search for the **HRERDepartmentTransferPostProcessor** script include and activate it.

6. If the **Ethics Complaint** quick link is not visible in the **Quick links** section of Employee Center portal, manually run the **addQuickLinkToECPortal** fix script.

Submitting a complaint for investigation

Employees can submit a complaint to report an incident of compliance violation to request an investigation from the Legal or HR department.

You can submit complaints through various channels.

Submit a complaint through Legal Service Portal

Submit a complaint through the Legal Service Portal to report a violation incident for investigation and resolution.

Before you begin

Role required: sn_lg_ops.legal_user

About this task

To submit a complaint anonymously, see Submit a complaint through the Anonymous Report Center portal.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Search for a legal service request to file a complaint, such as ethics complaint, or click **Service Catalog** to view all available request categories.
3. Select the **Ethics Requests** category from the Categories pane.
4. Click **Ethics Complaints** to submit a request.
5. On the Ethics Complaints form, fill in the fields.
6. To add an involved party, click **Add** in the **Involved Parties** section.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. On the Add Row dialog box, fill in the fields.
For a description of the field values, see Ethics complaints intake form.

b. Click **Add**.

The involved party record appears in the Involved Parties list on the Ethics Complaints intake form.

7. Click **Submit**.

Submit a complaint through Employee Center

Submit a complaint through the Employee Center portal to report a compliance violation incident for investigation and resolution.

Before you begin
Role required: sn_lg_ops.legal_user

About this task
To submit a complaint anonymously, see Submit a complaint through the Anonymous Report Center portal.

Procedure

In the Employee Center portal, submit a complaint using either the **Legal** menu or the **Quick links** section.

Submit a complaint through the Legal menu in Employee Center

Submit a complaint through the Legal menu in the Employee Center portal.

Before you begin
Role required: sn_lg_ops.legal_user

About this task
Note:
This option is available if the admin has activated the record producer that is mapped to the Ethics [sn_lg_ops_ethics] table. For more information, see Record producers for legal investigations.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center portal, click the **Legal** menu and select the **Ethics and Compliance** option.
3. In the Ethics and Compliance request category page, click **Ethics Complaints**.
4. On the Ethics Complaints form, fill in the fields.
For a description of the field values, see Ethics complaints intake form.
5. To add an involved party, in the **Involved Parties** section, click **Add**.

a. In the Add Row dialog box, select an involved party type option to indicate if the involved party is an employee of the organization or a user from outside the organization.

b. Provide the involved party's name, email id, and other notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For an internal employee, the **Email id** field is auto-populated from the user's profile.

c. Click **Add**.
The involved party record appears in the Involved Parties list on the Ethics Complaints intake form.

Repeat these steps to add more involved parties.

6. On the Ethics Complaints form, click **Submit**.

Result
A legal request is created and assigned to a request fulfiller or an assignment group as configured.

Submit a complaint through the Quick Link in Employee Center

Submit a complaint through the Quick Link in the Employee Center portal.

Before you begin
Ensure that the record producer that is mapped to the Universal Request [universal_request] table is activated. For more information, see Record producers for legal investigations.

Ensure that the **Ethics Complaints** widget is added under Quick Links in the Employee Center. For more information, see Modify the Quick links widget display.

Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center portal, click the **Ethics Complaints** link under the **Quick links** section.
3. On the Ethics Complaints form, provide the summary of the complaint.
4. In the **Detailed description** field, provide the details of the complaint, the names of the people involved, and the approximate date and time of the incident.
5. **Optional:** Click **Add attachments** to upload any documents supporting your complaint.
6. Click **Submit**.

Result
A universal request is created and is assigned to the the assignment group as configured. A universal request routing agent can triage and work on it.

Submit a complaint through the Anonymous Report Center portal

Submit a complaint anonymously through the Anonymous Report Center (ARC) portal to report a compliance violation incident for investigation and resolution.

Before you begin
To file a complaint anonymously, admins must have completed the following tasks:

- Installed the Anonymous Reporting Center plugin (com.sn_anonymous_report_center)
- Enabled the Ethics Complaints record producer for submission through ARC portal.

  For more information, Record producers for legal investigations.

Role required: sn_lg_ops.legal_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the Anonymous Report Center portal either via Employee Center portal or using a direct URL.
   If you are using Employee Center or Legal Service Portal, you are signed out of your account to keep your identity anonymous. The Anonymous Report Center portal opens in a new browser tab.

2. In the Anonymous Report Center portal, click **Submit an Anonymous Report**.
3. On the Submit an anonymous report page, click **Ethics Complaints**.
4. On the Ethics Complaints form, fill in the fields.
   Based on the active record producers for ARC, different sets of fields might appear on the Ethics Complaints form.

   For field descriptions, see Ethics complaints intake form in the Anonymous Report Center portal.

5. Enter the text verification code.

   Note:
   For the text verification code to work, you must install the HR Scoped Security plugin.

6. Click **Submit**.
7. **Optional:** To download and save the reported request on your system, in the Thank you for submitting your report dialog box, click **Download report copy**.
8. Note the report key and report number from the respective fields to access your anonymous report in future to track its progress.

Result

Either a legal request or a universal request is created based on the active record producers for legal investigations.

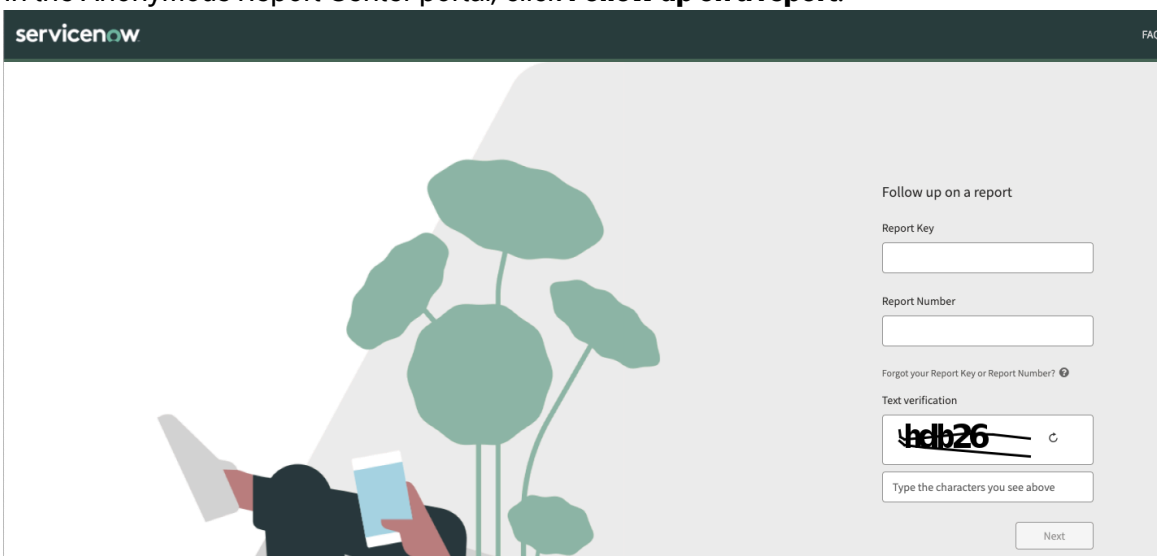
To maintain the anonymity of the requester or requested for users, the request is submitted with the following values for the corresponding fields:

- **Opened by** is populated as `Guest`.
- **Requested for** is empty.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access your anonymous report from the Anonymous Report Center portal

You can follow up on your anonymous report to view comments and updates from the legal fulfiller working on it or add comments.



Before you begin

To access your anonymous report, you must have the report key and report number that was generated when you submitted the request.

Role required: None

Procedure

1. Open the Anonymous Report Center portal either via Employee Center portal or using a direct URL.
   If you are using Employee Center or Legal Service Portal, you are signed out of your account to keep your identity anonymous. The Anonymous Report Center portal opens in a new browser tab.
2. If you're asked to provide credentials to log in, you can copy this URL and enter your instance details to access the Anonymous Report Center.
   For example: https://<instance_name>/arc.
3. In the Anonymous Report Center portal, click **Follow up on a report**.

4. On the Follow up on a report page, enter the details.
   a. In **Report Key**, enter the report key you get after submitting an anonymous report.
   b. In **Report Number**, enter the report number you get after submitting an anonymous report.
5. Enter the text verification code.

> **Note:**
> For the text verification code to work, you must install the HR Scoped Security plugin (com.snc.hr.scoped_security).

6. Click **Next**.
   The report is displayed in the Standard Ticket Page.

Managing complaint requests

As a member of the legal department, work on legal requests for complaints submitted by employees to report non-compliance incidents and conduct legal investigations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Complaints submitted as legal requests

When an employee submits a legal request related to an ethics complaint, it is automatically assigned to a group or user in the legal department. The assignment is done based on the assignment rules configured in the intake form of the associated practice area. If the request is assigned to a legal group, the group lead can triage the request to themselves or to any member in the assignment group.

Complaints submitted as universal requests

If you've enabled submission of ethics complaints using universal requests, it is assigned to a compliance group. The universal routing agent can then create an ethics legal matter from the universal request that can be then assigned to a matter owner to work on. For more information, see Better together solution: Legal Investigations and HR Service Delivery Employee Relations.

Working on complaints

For the legal investigation to be conducted effectively, the legal fulfillers can evaluate the reported incident in detail to:

- Identify sources for information and evidence
- Add or modify involved parties
- Prepare interview questions to collect key details
- Attach supporting and relevant documentation

Use the Legal Counsel Center to conduct legal investigations into the submitted complaints.

Triaging universal requests for legal investigation complaints

When employees observe and report an ethics violation or similar incident, the resulting universal requests are triaged for prioritization and resolution.

Due to the sensitivity of such cases, you can view and work on these universal requests for complaints based on the roles you've been assigned.

Universal Request routing agent

With the sn_uni_req.sensitiveinfo_agent role for handling sensitive requests, you can review and triage these universal requests.

Legal fulfiller

With the sn_lg_investigate.fulfiller role, you can create an ethics legal matter from the universal request.

HR agent

With the sn_hr_er.case_writer role, you can create a Report Misconduct HR case from the universal request.

Create an ethics legal matter from a universal request

Create an ethics legal matter from a universal request to get the Legal department's assistance in resolving the complaints.

Before you begin

Ensure you have the Universal Request application installed and related configuration for legal services completed by the administrator.

Role required: sn_lg_investigate.fulfiller and sn_uni_req.sensitiveinfo_agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
   Alternatively, you can also open a universal request by navigating to **All** > **Universal Request** > **Open**.
2. Click the list icon ( ).
3. Under the **Ethics Complaints**, click **All**.
4. Open the universal request on which you want to work.
5. Assign the universal request to yourself or to another member from the assigned group.
   - To assign the request to yourself, click **Assign to me**.
   - To assign the request to another member, on the **Details** tab, select a user in the **Assigned to** field and click **Save**.

   The assigned member can start working on the universal request and perform the next steps.
6. Based on the subject of the complaint, you can route it to the appropriate department by creating either an ethics legal matter or an HR case.
   For more information on creating a Report Misconduct HR case, see Using HR Service Delivery Employee Relations.
7. Click **Create Legal Ticket**.
8. In the Create Legal Ticket dialog box, fill in the fields.
   a. From the **Ticket type** list, select **Ethics Complaints**.
   b. In **Additional comments**, enter details about the service and support required from the Legal department.
   c. Click **Create**.

Result

- An ethics legal matter is created and becomes the primary ticket for the universal request. The legal matter number is populated in the **Primary Ticket** field.
- All attachments from the universal request are copied to the legal matter. The ethics complaints legal matter template is applied to this legal matter by default.
- The state of the universal request changes to In Progress.
- The **State reason** field displays with the pre-populated value Primary Ticket - In Progress.

What to do next

- If an ethics legal matter is created: In the Legal department, the legal matter is assigned to a matter owner. The assigned matter owner works on the legal matter and provides the resolution, or transfers the legal request to another department or back to the universal request.
- If an HR case is created: In the HR department, the HR case is assigned to an HR agent to work on. For more information, see Work an HR case.

Work on a legal request for a complaint

Work on legal requests for complaints assigned to you or as a collaborator to resolve issues or answer queries.

Before you begin

Role required: sn_lg_investigate.fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Open a legal request assigned to you to review and perform tasks.
   - Work on the legal request to verify the complaint details and conduct an initial inquiry.
   - Add or modify an involved party in the **Involved Parties** tab.
   - If the legal request needs thorough investigation, promote it to a legal matter.
   - Either close the request or cancel the legal request.
     - Close the request after you've resolved it.
     - If you identify that the request doesn't need any action, you can cancel it.

Work on a legal matter for a complaint

Work on a legal matter assigned to you to conduct legal investigations and resolve an internal complaint.

Before you begin

The practice area lead or the group manager would have assigned the legal matter to you to work on.

Role required: sn_lg_investigate.fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **Matters**, click **All**.
4. Open a legal matter to work on.
5. Click **Start Work** to start working on the legal matter.
   The state of the legal matter updates to Work in Progress.
6. During the legal investigation, you can create and record the following information related to the incident and involved parties.
   - Add or modify an involved party in the **Involved Parties** tab.
   - Add an allegation to the matter, and associate it with one or more involved parties of the type Subject of Allegation.
   - Add documentation, interviews, and recommended actions through legal matter tasks as you conduct investigations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For a legal investigation matter, add tasks of the following types:

- **Documentation**: Store documents that you collected as part of the investigations in the legal matter. You can also assign the task of collecting investigation documentation to another user. For detailed instructions, see Add a task in the legal matter.
- **Interview**: Conduct interviews with the involved parties, and as needed, include other users on the interview panel. For detailed instructions on adding interviews, see Add an interview task to a legal matter.
- **Recommended Actions**: Based on the findings of the investigations, provide recommendations for the involved parties. For detailed instructions on adding recommended actions, see Add a recommended actions task to a legal matter.

- Perform other general tasks on the legal matter.

7. Close the legal matter or transfer the legal matter based on the requirements.

Add an allegation record and associate it with an involved party

Add an allegation record to the legal matter as part of your complaint investigation, and associate it with an involved party.

Before you begin
Role required: sn_lg_investigate.fulfiller

About this task
You can also associate an allegation with an involved party from the Involved Party form.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Open a legal matter assigned to you in which you want to add an allegation record.
3. In the **Allegations** tab, add or modify an allegation record.
   - To add an allegation record, click **New**.
   - To modify an existing an allegation record, open an allegation record from the list.
4. On the form, fill in the fields.

Allegation form

Field	Description
Allegation type	Type of the allegation.
Allegation subtype	Subtype of the selected allegation type.
Description	Detailed information about the allegation.

5. Save the allegation record.
   - Save an allegation record by clicking **Save**.
   - Save the changes to an existing allegation record by clicking **Update**.

   The **Subjects of Allegation** tab appears.
6. Associate the allegation to an involved party.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the **Subjects of Allegation** tab, click **Add**.

b. On the Add Involved Party dialog box, select an involved party from the list.

> **Note:**
> An involved party of type Subject of Allegation can only be associated with an allegation record.

c. Click **Add**.

The selected involved party is listed in the **Subjects of Allegation** tab.

Add an interview task to a legal matter

As part of your complaint investigation, add an interview task for the involved parties in the legal investigations matter.

Before you begin

Role required:sn_lg_investigate.fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Open a legal matter assigned to you in which you want to add a legal matter task.
   - To add a task to a matter, in the **Tasks** tab of the Legal Matter form, click **New**.
   - To add a task to a phase, open a phase from the **Phases** tab and click **New** in the **Legal Matter Tasks** tab of the phase record.
3. On the Legal Matter Task form, select **Interview** from the **Type** field.
4. On the form, fill in the fields.
   For field descriptions, see Legal Matter Task form for legal investigations and fields specific to the interview task type.
5. Save the legal matter task.
   - Save a legal matter task by clicking **Save**.
   - Save the changes to an existing legal matter task by clicking **Update**.

Add a recommended actions task to a legal matter

Based on your findings of the complaint investigation, add recommended actions for the involved parties in the legal investigations matter.

Before you begin

Role required: sn_lg_investigate.fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Open a legal matter assigned to you in which you want to add a legal matter task.
   - To add a task to a matter, in the **Tasks** tab of the Legal Matter form, click **New**.
   - To add a task to a phase, open a phase from the **Phases** tab and click **New** in the **Legal Matter Tasks** tab of the phase record.
3. On the Legal Matter Task form, select **Recommended Action** from the **Type** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. On the form, fill in the fields.
   For field descriptions, see Legal Matter Task form for legal investigations and fields specific to the recommended action task type.
5. Save the legal matter task.
   - Save a legal matter task by clicking **Save**.
   - Save the changes to an existing legal matter task by clicking **Update**.

Manage involved parties in a legal request or legal matter

Add a new involved party or modify the information of an existing involved party in a legal request or legal matter related to a complaint.

Before you begin
Role required: sn_lg_investigate.fulfiller

About this task
Involved parties are individuals who are directly or indirectly connected to a complaint, such as complainants, witnesses, the subjects of allegations, and other relevant individuals. These individuals can be from within or outside the organization.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Open a legal request or legal matter assigned to you in which you want to manage the involved parties.
3. In the **Involved Parties** tab, add or modify an involved party.
   - To add an involved party, click **New**.
   - To modify an existing an involved party, open an involved party from the list.
4. On the form, fill in the fields.
   For field descriptions, see Involved Party form.
5. Click **Save**.

Legal Investigations reference

Reference topics provide additional information about the lists and forms that you use in Legal Investigations.

Components installed with Legal Investigations

Several types of components are installed with activation of the Legal Investigations application, including tables, user roles, and scheduled jobs.

Roles

Roles installed with Legal Investigations

Role title [name]	Description	Contains roles
Investigations Administrator [sn_lg_investigate.admin]	Application-specific administrator role for the Legal Investigations app having the administrative access for the app and full access to the underlying data.	• sn_lg_investigate.config • sn_lg_investigate.fulfiller • sn_interview_temp.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Legal Investigations (continued)

Role title [name]	Description	Contains roles
Investigations Configurator [sn_lg_investigate.config]	Provides access to configure data such as allegation type and subtype. It does not provide access to transactional data of requests and matters.	sn_interview_temp.writer
Investigations Fulfiller [sn_lg_investigate.fulfiller]	Provides the fulfiller access for working on assigned requests and matters.	• sn_lg_ops.legal_user • sn_interview_temp.reader

Tables

Roles installed with Legal Investigations

Table	Description
Allegation [sn_lg_investigate_allegation]	Allegations complained on a person, also known as the subject of allegation.
Allegation Type [sn_lg_investigate_allegation_type]	Type of allegation used to file a complaint, such as financial fraud, discrimination, and harassment.
Allegation Subtype [sn_lg_investigate_allegation_subtype]	Subtype used to further classify an allegation type. For example, financial fraud can have subtypes such as undue favours or bribes.
Involved Party [sn_lg_investigate_involved_party]	Users who are involved in a complaint as a complainant, subject of allegation, witness, or any other type.
Associated Allegation [sn_lg_investigate_m2m_allegation_party]	Association between an allegation and its subjects of allegation. One allegation can be associated with one or more subjects of allegation.

Record producers for legal investigations

A record producer helps you set up an intake form containing fields that a requester has to fill in and initiate a request.

When Legal Investigations is installed, record producers for ethic complaints are installed.

When an employee submits a complaint, a legal request or universal request is created based on the active record producers' mapping to different tables.

Important:
At any given time, only one set of record producers mapped to a specific table can be active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Legal requests

The following record producers can be activated for creating legal requests when a complaint is submitted.

Note:
To submit a legal request via the Anonymous Report Center portal, you require a HRSD Pro/ Enterprise license in addition to the Legal Investigations subscription.

Record producers for submitting complaints as legal requests

Record producer name	Mapped table	Description
Ethics Complaints	Ethics [sn_lg_ops_ethics]	• Submitting via Legal Service Portal or via the **Legal** menu option in the Employee Center portal. • Creates a legal request.
Ethics Complaints	Ethics [sn_lg_ops_ethics]	• Submitting via the Anonymous Report Center portal. • Creates a legal request.

Universal requests

The following record producers can be activated for creating universal requests when a complaint is submitted.

Note:
These record producers are inactive by default. If you want to integrate Legal Investigations with HR Service Delivery Employee Relations and transfer complaints between the Legal and HR departments, you must activate them.

Record producers for submitting complaints as universal requests

Record producer name	Mapped table	Description
Ethics Complaints	Universal Request [universal_request]	• Submitting via the **Quick Link** option in the Employee Center portal. • Creates a universal request. • Marks the request as a sensitive case by default.
Ethics Complaints	Universal Request [universal_request]	• Submitting via the Anonymous Report Center portal. • Creates a universal request. • Marks the request as a sensitive case by default.

For more information, see Managing record producers for legal services.

Ethics complaints intake form

Employees can use the Ethics Complaints intake form to report an ethics violation incident.

Ethics Complaints form

Field	Description
Complaint type	Type of complaint or allegation that violated the ethics policy of the organisation.
Detailed description	Detailed information about the incident, such as where and when it occurred.
Involved parties	Users who are the subject of the complaint.
Provide the approximate date and time of the incident	Tentative date when the incident occurred.

Add involved parties from the Add Row dialog box that appears by clicking the **Add** button in the **Involved Parties** section of the Ethics Complaints form.

Involved Parties - Add Row dialog box

Field	Description
Involved party type	Type of involved party. • **Internal**: An employee within the organisation who is the subject of the complaint. • **External**: A user outside of the organisation who is the subject of the complaint.
Internal party name	Name of the involved party. The **Internal party name** field is replaced by the **External party name** field when **External** is selected as the involved party type.
Email	Email ID of the involved party. For the internal employee, the email ID is auto-populated from the User profile. For an external employee, enter the email ID. This field is available only when **External** is selected from **Involved party type**.
Notes	Any additional information about the involved party.

Ethics complaints intake form in the Anonymous Report Center portal

Employees can use the Ethics Complaints intake form in the Anonymous Report Center (ARC) portal to report an ethics violation incident. Different sets of fields appear on the form based on the active record producers.

The following fields appear on the Ethics Complaints form in the ARC portal when the record producer mapped to the Ethics [sn_lg_ops_ethics] table is active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Ethics Complaints form in the ARC portal

Field	Description
Complaint type	Type of complaint or allegation that violated the ethics policy of the organization.
Detailed description	Detailed information about the incident, such as where and when it happened.
Involved parties	Users who are the subject of the complaint. Enter the names or email IDs of the involved parties, each name separated by a comma.
Approximate date of event	Tentative date when the incident happened.
I understand that the information I'm providing, including any sensitive or personal details, will be reviewed by the appropriate teams	Option to acknowledge submitting sensitive information or personal details of people involved through the request.

The following fields appear on the Ethics Complaints form in the ARC portal when the record producer mapped to the Universal Request [universal_request] table is active.

Ethics Complaints form - ARC portal

Field	Description
Summary of complaint	Type of complaint or allegation that violated the ethics policy of the organization.
Detailed description	Detailed information about the incident, such as the detailed description of the incident, the names of the people involved, and the approximate date and time of the incident.

Involved Party form

Legal fulfillers or matter owners can use the Involved Party form to add or modify an involved party in a legal request or legal matter assigned to them.

Involved Party form

Field	Description
Type	Type of involved party. • **Complainant**: A user who submitted the complaint. • **Subject of allegation**: A user against whom the complaint has been submitted. • **Witness**: A user who was present at the incident described in the complaint. • **Other**: A user who can be a stakeholder in the investigation.
External user	Option to specify whether the user is from outside the organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Involved Party form (continued)

Field	Description
Internal party	User added as an involved party. The **Internal party** field is replaced by the **External party** field when the **External user** option is selected.
Email	Email ID of the involved party. For the internal employee, the email ID is auto-populated from the User profile. For an external employee, enter the email ID. This field is available only when the **External user** option is selected.
Notes	Any additional information about the involved party.

Legal Matter Task form for legal investigations

Matter owners can use the Legal Matter Task form for adding task type of Documents, Recommended Actions, and Interviews as part of the legal investigation.

Legal matter task form with Recommended Action Details

Field	Description
Name	Unique name for the task.
Type	Type of the task. Select **Recommended Action**.
Priority	Level of priority to work on and complete the task. The priority of a task determines its importance for resolving the matter.
Phase	Phase to which the task belongs.
Matter	Matter to which the task belongs.
Event name	Name of the calendar event associated with the task. A calendar event with a due date helps you to track the progress of the task for specific milestones.
State	Current state of the task to determine the progress of the task.
Order	Order in which the task should be worked on when there are multiple tasks in a phase or matter.
Assignment group	User group to which the task is assigned.
Assigned to	User to whom the task is assigned. If an assignment group is selected, the list shows members of the selected group.
Due date	Date to complete the task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Legal matter task form with Recommended Action Details (continued)

Field	Description
Internal party	Names of the involved parties to whom the recommended actions apply.
Recommended Action Details section	
Recommended action type	Type of the recommended action such as verbal warning or suspension.
Discussion date and time	Date when the recommended actions should be discussed with the associated involved parties.
Additional attendees	Users other than the involved parties who would be part of the discussion meeting.
Description	Description of the recommended actions.
Notes section	
Work notes	Comments or notes that only authorized users related to the matter can see.
Additional comments	Comments or notes that the requester can also see.

The following table describes about the fields specific to the recommended action task type.

Recommended Action Details section

Field	Description
Recommended action type	Type of the recommended action such as verbal warning or suspension.
Discussion date and time	Date when the recommended actions should be discussed with the associated involved parties.
Additional attendees	Users other than the involved parties who would be part of the discussion meeting.
Description	Description of the recommended actions.

The following table describes about the fields specific to the interview task type.

Interview section

Field	Description
Start date and time	Date and time when the interview starts.
End date and time	Date and time when the interview ends. By default, when you select the start date and time, the end date time is automatically set to one hour after the start time. You can change based on the interview time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Interview section (continued)

Field	Description
Additional interviewers	Users other than the main interviewer (user selected in the **Assigned to** field of the task) who would be on the interview panel. When the task is saved, the additional interviewers are notified via email about the interview task.

Data mapping fields

Data mapping of tables is necessary when ethics matter is transferred by the legal fulfiller to HR and an HR Employee Relations case is transferred to the Legal department.

Legal Simple Contracts

The ServiceNow® Legal Simple Contracts application enables employees to submit legal requests for getting legal support and guidance for contracts. For example, they can submit legal requests for the creation of Non-disclosure Agreement (NDA) documents with third parties or the review of sales contracts or third-party contracts. The legal department can manage and process them from a centralized location.

For example, employees can submit legal requests for the creation of NDA documents with third parties or the review of sales contracts or third-party contracts. The legal department can manage and process these requests from a centralized location.

Important:
Legal Simple Contracts is being prepared for deprecation. It will be hidden and no longer available for activation for new customers but will continue to work and be supported for existing customers. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Contact your ServiceNow account team about Contract Management Pro application, a paid offering, that is tightly integrated with Legal Service Delivery and includes many capabilities found in a traditional CLM (Contract Lifecycle Management) system.

Migration considerations

Contract Management Pro for Legal Service Delivery supports the following additional features as compared to Legal Simple Contracts.

- Clause management to effectively manage a library of clauses and clause variations.
- Clause variations for a Microsoft Word document template to dynamically place content in a contract depending on specified conditions.
- Multiple document support for third-party contract reviews that enables reviewing and finalizing multiple contract documents from a single request.

If you want to start using the features, migrate the Legal Simple Contracts data to Contract Management Pro for Legal Service Delivery, a licensed application that must be installed separately.

For more information, see Migrating to Contract Management Pro for Legal Service Delivery.

Exploring Legal Simple Contracts

Legal Simple Contracts enables employees to submit legal requests for the creation or review of contracts with third parties, such as vendors, customers, and partners. The legal department can manage and process these submitted legal requests for contracts from a centralized location.

Features

- Document templates in HTML, PDF and Microsoft Word format for standard contract documents such as non-disclosure agreements (NDA).
- Template blocks that can replace text based on conditions in the document templates of type HTML.
- Support for contract templates in Microsoft Word format that are easier to review, and modify.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Integration with Microsoft Dynamics CRM to pull sales representatives and associated sales accounts and active opportunities data.
- Integration with electronic signature providers such as Docusign and Adobe Acrobat Sign.
- Integration with external storage providers such as Box, Google Drive, and Microsoft OneDrive to store final signed contract documents.
- Centralized repository of all signed and signed contract documents.

Legal support for contracts

Legal Simple Contracts enables your organization to provide legal support for the following contract requests:

- Non-disclosure agreement requests in Legal Simple Contracts
- Sales contract review requests
- Third-party contract review requests

To find out how to provide legal support for a custom contract type, see Create a legal contract intake workflow.

Setting up Legal Simple Contracts

Set up the foundation data for legal simple contracts so employees can use them to submit a legal request to the legal department.

As an administrator, install and configure components for Legal Simple Contracts.

Install Legal Simple Contracts

Install Legal Simple Contracts application that enables employees to submit legal requests for getting legal support and guidance for contracts.

Activate Word Document Templates

By default Legal Simple Contracts support legal contract templates in HTML and PDF format. To enable the support for legal contract template in Microsoft Word format, install Word Document Templates (sn_doc_word) plugin.

Configure Legal Simple Contracts

Set up the foundation data for legal simple contracts so employees can use them to submit a legal request to the legal department.

Install Legal Simple Contracts

You can install the Legal Simple Contracts application (sn_lg_contracts) if you have the admin role. The application installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Simple Contracts application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Legal Simple Contracts:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Roles
- Tables

For more information, see Components installed with Legal Simple Contracts.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Simple Contracts application (sn_lg_contracts) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If any plugins or applications need to be installed, you must install them before you can install Legal Simple Contracts.
4. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
5. Select **Install**.

Activate Word Document Templates

You can activate the Word Document Templates plugin (sn_doc_word) if you have the admin role. The application activates related ServiceNow® Store applications and plugins if they are not already installed.

About this task

The Word Template [sn_doc_word_template] table is installed with Word Document Templates.

Before you begin

Role required: admin or sn_appclient.app_client_user

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Word Document Templates plugin (sn_doc_word) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Configure Legal Simple Contracts

Set up the foundation data for legal simple contracts so employees can use them to submit a legal request to the legal department.

As an administrator, review the installed components and modify them or add new ones as applicable.

Define a user as an internal signer

Define a user as an internal signer so that the signer can be added to a contract template to automatically populate in a contract document for a request.

Create a contract type

Create a contract type for defining different types of legal contract requests.

Legal contract templates

Create a document template that can be used when submitting a legal contract request to generate a standard legal contract with predefined content. You can create templates of HTML, PDF and Microsoft Word types.

Configure a rule for selecting a legal contract template

Configure a rule to identify and use the correct contract template based on the submitted legal request and generate a contract document for the requester.

Set up external signature and storage configurations

Set up external app configurations for legal contracts to enable services for electronic signature of contract documents and saving the signed contract documents in an external storage.

Email notifications

Configure email notifications to be sent when various events occur. Some possible event triggers might be when a signatory signs or declines to sign a contract document or all signatories have signed the contract document.

Configure Microsoft Dynamics CRM for sales contracts

Integrate with Microsoft Dynamics CRM to import active opportunities data and information on sales representatives and their associated sales accounts into the tables in the ServiceNow instance.

Schedule import set jobs to pull data from the CRM system

Schedule import set jobs to pull sales representatives and associated sales accounts and active opportunities data from the CRM system into the ServiceNow instance.

Create a deflection rule for sales contracts

Create a deflection rule for providing guidance to requesters for a sales contract based on specified conditions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Define a user as an internal signer

Define a user as an internal signer so that the signer can be added to a contract template to automatically populate in a contract document.

Before you begin

Role required: sn_lg_ops.legal_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Internal Signatories**.
2. Define or modify an internal signer.
   - To define a new internal signer, click **New**.
   - To modify an existing internal signer, open the internal signer from the list.
3. On the form, fill in the fields.

Internal Signatories form

Field	Description
Internal signer	User designated as an internal signer. The list shows users from the Users [sys_user] table.
Authorized signatory name	Legal name of the selected user. The legal name is fetched from the Employee Profile form.
Signatory title	Official title of the selected user.
Signatory email	Email id of the selected user.

4. Save the internal signer.
   - Save an internal signer by clicking **Submit**.
   - Save the changes to an existing internal signer by clicking **Update**.

Create a contract type

Create a contract type for defining different types of legal contract requests.

Before you begin

Role required: sn_lg_contracts.contracts_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Types**.
2. Create or modify a contract type.
   - To create a contract type, click **New**.
   - To modify an existing contract type, open the contract type from the list.
3. In the **Name** field, enter a unique name for the contract type.
4. Select the **Active** check box to enable this contract type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Only active contract types are available for use in document templates, contract repository, and third-party or NDA contract-related legal requests.

5. Save the contract type.
   - Save a contract type by clicking **Submit**.
   - Save the changes to an existing contract type by clicking **Update**.

Legal contract templates

Create document templates to generate contract documents depending on various request types.

You can save time and manual rework by using document templates to create contract documents instead of filling out a contract document from scratch for each request. It's also an efficient way of generating consistent contract documents for legal requests.

- Configure legal contract of type HTML
- Create a legal contract template of type PDF
- Configure legal contract templates of type Microsoft Word
- Configure a rule for selecting a legal contract template

Configure legal contract of type HTML

Configure a contract template of HTML format.

Document template blocks for legal contract HTML templates

Document template blocks are dynamic blocks of content that you can use when only a section of a template has to be changed for different requirements or request types. For example, say in an NDA contract document, only one section needs to be changed based on the geographic region of the signing legal entity. Ideally, you would create multiple document templates with the identical content with the only difference being location-related content. The condition-based document template blocks, on the other hand, enable you to create only one document template that can generate documents for different locations.

The following are the key features of using document template blocks in document templates:

- Use a single document template block in multiple document templates for different versions of the same contract.
- Add multiple document template block contents to a document template block with defined conditions and execution order. An appropriate block content is picked up dynamically in the generated document based on these defined conditions and execution order.
- Add multiple document blocks in a document template.

Create a document block for legal contract templates

Create document blocks that you can use in multiple document templates for legal contracts.

Add block content in a document template block

Add one or more block contents in a document template block and define its condition and execution order.

Create a legal contract template of type HTML

Create a document template of type HTML.

Create a document block for legal contract templates

Create document blocks that you can use in multiple document templates for legal contracts.

Before you begin
Role required: admin

About this task
Note:
All document template blocks must be created in the Legal Request Management application scope only.

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Template Blocks**.
2. Click **New**.
3. On the form, fill in the fields.

Document Templates Block form

Field	Description
Name	Unique name for the document template block.
Table	Table to which you want to associate the document template block. Select **General Contract Support [sn_lg_ops_general_contract_support]**.
Active	Option to make the document template block active and available for use.
Description	Information about the document template block.

4. Click **Submit**.

What to do next
Add block content in a document template block.

Add block content in a document template block

Add one or more block contents in a document template block and define its condition and execution order.

Before you begin
Role required: admin

About this task
Note:
All block content in a document template block must be created in the Legal Request Management application scope only.

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Template Blocks**.
2. Select a document template block.
3. In the **Document Templates Block Contents** related list, click **New**.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document Template Block Contents form

Field	Description
Name	Unique name for the block content.
Block	Name of the document template block associated with the document block content.
Order	Order in which a block content is used. If multiple block contents meet a condition, the block content with the lower-order value is chosen first.
Active	Option to indicate that the block content is active and available for use.
Applies when	Filter conditions applied on the selected table to determine which document template block to use.
Applies to	User criteria to which the block content is applicable. For example, a block content applicable to employees of a specific location, associate the block content with a user criteria containing only employees of that region.
Body	Text in the block content that appears on the document generated from the associated document template. Include fields from the selected table from the **Select Variable** pane.

5. Click **Submit**.

What to do next
Create a legal contract template of type HTML.

Create a legal contract template of type HTML

Create a document template of type HTML.

Before you begin
Role required: admin

About this task
Legal contract templates help you to create and organize standard contract templates along with fillable metadata placeholders. You can create templates of HTML, PDF and Microsoft Word types. In an HTML document template type, you can map the inputs provided in the intake form to the fillable metadata placeholders.

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Select **New**.
3. Select **HTML Document Template**
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HTML Template form

Field	Description
Name	Unique name of the template.
Table	Name of the table that contains the fields to include in the document template. Select **General Contract Support [sn_lg_ops_general_contract_support]**. **Note:** Tables are shown depending on the selected application scope.
Contract type	Contract type to which the template is associated.
User criteria	User criteria to control which users can use the document.
Body	Content to include in the generated legal contract document. Insert columns from the selected table to the document template: **a.** Point the cursor to the desired location in the text editor. **b.** In **Select variables**, click the plus icon (⊞) beside **Fields**. **c.** From the fields list, select a column name. The selected column is added at the cursor position. **Note:** The variables from the legal intake form must be mapped to a column so that they can be used to populate the template.
Select variables	List of variables that can be used in the body of the template. Variables pull information from the selected table to customize the template.
Header tab	
Header Image	Image file to use in the document header.
Header image height	Maximum height of the header image.
Header Position	Position of the image within the header.
Footer tab	
Footer image	Image file to use in the document footer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Footer image height	Maximum height of the footer image.
Footer image position	Position of the image within the footer.
Footer text	Text such as privacy and confidential statement to appear in the footer.
Footer text position	Position of the footer text within the footer.
Vertical alignment	Placement of the footer text relative to the footer image.
Page tab	
Page size	Page size of the document.
Custom font	Font of the text on the page.
Top/Bottom margin	Margin to leave on the top and bottom sides of the page.
Left/Right margin	Margin to leave on the left and right sides of the page.

5. **Optional:** Click **Insert Date** to insert a date at the cursor location in the template.
   You can insert multiple date types mapped to different date columns from the selected table such as start date, end date, or current date.
6. **Optional:** Add a document template block to insert condition-based content on the generated document.

   a. Point the cursor to the desired location in the text editor and click the **Add Blocks** button.

   b. In the Add Blocks pane, search for a document template block.

   c. Select a block to add to the template and click **Insert to Template**.
   The selected block is inserted at the selected point in the template.

   d. **Optional:** Drag the inserted block to place it to another location in the template.

7. Save the contract template.
   - Save a contract template by clicking **Submit**.
   - Save the changes to an existing contract template by clicking **Update**.

   The contract template is saved in the Draft state. The Participants related list appears.
8. Add participants in the contract template.

   a. In the Participants related list, click **New**.

   b. In the **Name** field, enter the display name for the participant.
   For example, for an internal signatory, you could enter `Internal Signer 1`.

   c. In the **Order** field, enter the order in which the signature request will be initiated for the participant.

   d. In the **Signer** field, select a user field from the list of fields populated from the selected table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The user in the mapped field is automatically added as a signatory in the document.

e. In the **User** field, select the same field as in the **Signer** field.

f. Click **Submit**.

9. Insert signatures in the contract template.
   a. Place the cursor in the desired location in the **Body** field.
   b. Select **Insert Signature** to insert signature variable for a participant.
   c. In the Add a signature window, select a participant.
   d. Click **OK**.
10. Insert signature date in the contract template.
    a. Place the cursor in the desired location in the **Body** field.
    b. Enter the code `${sign_date:<Participant Name>}` to insert signature date variable for a participant.
    For example: To capture the signature date for the participant Abel in the contract template, enter `${sign_date:Abel}`.
11. To make the template available for usage, click **Publish**.

Create a legal contract template of type PDF

Create a document template of type PDF by uploading an editable and fillable PDF file.

Before you begin
Role required: admin

About this task
Legal contract templates help you to create and organize standard contract templates along with fillable metadata placeholders. You can create templates of HTML, PDF and Microsoft Word types. In a PDF document template type, you can upload a fillable PDF file and map fields in the PDF file with fields in a table.

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Select **New**.
3. Select Create **PDF Document Template**.
4. On the form, fill in the fields.

PDF Template form

Field	Description
Name	Unique name of the template.
Table Name	Name of the table that contains the fields to include in the document template. Select **General Contract Support [sn_lg_ops_general_contract_support]**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Contract type	Contract type to which the template is associated.
Active	Option for marking the contract template as active.
User criteria	User criteria to control which users can use the document.
Document	Option to upload a fillable PDF for further customization. Click the **Click to add** link to upload a PDF file.

5. Save the contract template.
   - Save a contract template by clicking **Submit**.
   - Save the changes to an existing contract template by clicking **Update**.

   The contract template is saved in the Draft state. Related lists to manage participants and to map PDF Template fields appear.
6. Add participants in the contract template.
   a. In the Participants related list, click **New**.
   b. In the **Name** field, enter the display name for the participant.
   For example, for an internal signatory, you could enter `Internal Signer 1`.
   c. In the **Order** field, enter the order in which the signature request will be initiated for the participant.
   d. In the **Signer** field, select a user field from the list of fields that are populated from the Signer [sn_lg_contracts_signer] table.

      Note:
      You can select only the highlighted user fields.

      The user in the mapped field is automatically added as a signatory in the document.
   e. In the **User** field, select a user field from the list of fields that are populated from the Users [sys_user] table.
   f. Click **Submit**.
7. Map a PDF field mapping to a field in the selected table.
   a. Click the **Parse PDF** related link.

      Note:
      The related link appears only if the attached PDF file is editable.

      The editable fields from the attached PDF file are added in the PDF Template Mappings related list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. In the PDF Template Mappings related list, click **Field name** to open the field mapping.

c. On the PDF Template Mappings form, update the fields.

PDF Template Mapping form

Field	Description
Field name	Name that represents the field mapping and stored as part of the document mapping in the database.
PDF template	Name of the PDF template to which the mapping record belongs.
Document field	Field from the editable PDF file. **Warning:** Editing the document field might break the document template flow.
Document field type	Type of the mapping field.
Preview value	Value of the mapping field for preview. You can use this field to validate a field value that would appear in the generated document without creating a legal request to test your mappings.
Format	Format to enter values by the participant in the field. A validation error appears when the participant doesn't enter a value in the specified format.
Read only	Option for enabling the editing of the field by the selected participant.
Mandatory	Option for marking the field as required to be filled by the assigned participant.
Active	Option for marking the field mapping as active.
Mapping table	Table from which the mapping fields are referenced.
Mapping field	Field from the mapping table that maps to the field in the **Document field**.
Participant	User who can edit the field in the document. The list is populated from the Participants related list.
Advanced script	Option for using scripted fields for complex mapping of a field. On selecting, the **Script** field appears.
Script	Enter a script to configure script fields for a complex field mapping.

d. Click **Update**.

8. Specify an area in the PDF document where you want to collect the signatures of the participants.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Click the **Mark Signatures** related link.

b. In the Mark Signature Blocks dialog box, click **Add Field**.

c. In the document preview pane, mark an area by dragging the mouse device.

d. In the **Name** field, enter a name for the signature-mapping record.

e. In the **Mapping** list, select a user as the signer.
The list shows participants from the Participants related list.

f. Click **Save**.

9. **Optional:** Click **PDF Preview** to preview the document.
10. To make the template available for usage, click **Publish**.

Configure legal contract templates of type Microsoft Word

Configure a contract template of Microsoft Word format that are easier to review and modify.

Add content controls in a Microsoft Word document

As a legal contract configurator, prepare a Microsoft Word document that you want to import as a contract template by marking the content with content controls so it can be efficiently parsed and reused.

Before you begin

Ensure that you are on a Windows system to add content controls in a Microsoft Word document.

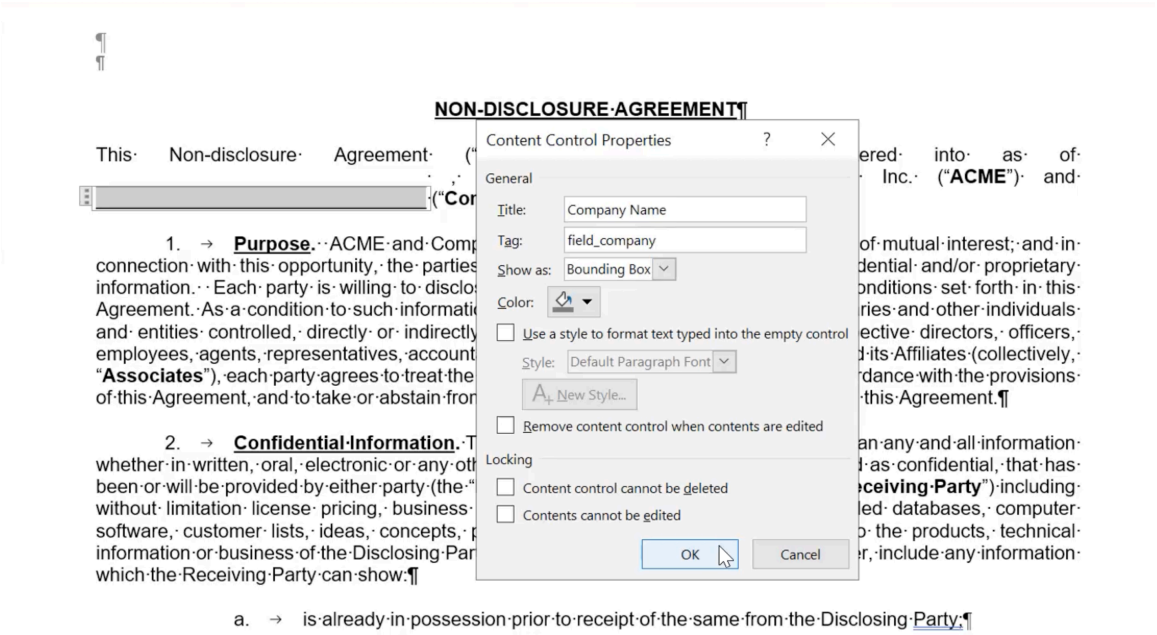
Role required: sn_lg_contracts.contracts_config

Procedure

1. In Microsoft Word, open the document that you want to import as a contract template.
2. Display the **Developer** tab in Microsoft Word.
For more information, see the Show the Developer tab topic in the Microsoft Office 365 documentation.
3. Select the content to be tagged.
4. Select **Plain Text Content Control** from the **Developer** tab.
5. Select the **Properties** option from the **Developer** tab.
6. In the **Content Control Properties** dialog box, enter a title for the content control.
7. Enter a tag value.

Note:

- The tag names are not case sensitive. If there are two tag names as field_COMPANY and field_company, both will be treated same.
- The maximum character limit for the tag is 200.



Tag names contain a prefix with the content control type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Supported content control types

Content control type	Description
field_	Indicates metadata.
signature_	Indicates a signature.
sign_date_	Indicates the signing date.

For example, Microsoft Outlook Add-In for Legal Service Delivery If you are adding a metadata for company name, you would name the tag *field_company*.

8. Select **OK**.

Create a Microsoft Word legal contract template

Create a legal contract template in Microsoft Word format that can be used to generate a standard contract with predefined content when an employee submits a contract request.

Before you begin

Role required: sn_lg_contracts.contracts_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Select **New**.
3. Select **Word Document Template**.
4. On the Word Template New Record form, fill in the fields.
   For a description of the field values, see Word Template New Record form.
5. Extract the content marked by the supported content controls from the imported document by selecting **Parse Document**.

   The supported content controls are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **field** - Indicates metadata
- **signature_** - Indicates a signature
- **sign_date_** - Indicates the signing date

For more information on the supported content controls and tagging guidelines, see Add content controls in a Microsoft Word document.
The content controls derived from the documentare listed in the Template mappings related list.

6. Select **Save**.

Result
The contract template is saved in the Draft state.

Create and configure participants for legal contract template

Add and configure participants that act as placeholder for users who will be assigned as signers of a contract document.

Before you begin
A Microsoft Word document must have been uploaded and parsed to provide template mappings for the contract template. For more information, see Create a Microsoft Word legal contract template.

Role required: sn_lg_contracts.contracts_config

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Open a contract template.
3. In the Participants related list, click **New**.
4. On the form, fill in the fields.

Participant New record form

Field	Description
Name	Unique display name of the mapped participant. **Note:** The length of the name should be equal to or less than the length allocated in the Word document template for a signer.
Order	Order in which the signature request will be initiated for the participant.
Signer	User field from the list of fields that are populated from the Signer [sn_lg_contracts_signer] table. **Note:** You can select only the highlighted user fields. The user in the mapped field is automatically added as a signatory in the document.

5. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update contract template mappings for legal contract template

Update template mappings to pre-fill information that will be placed in the contract document.

Before you begin

Role required: sn_lg_contracts.contracts_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Open a contract template.
3. Navigate to the Template mapping related list.
4. Select the field to update.
5. On the form, fill in the fields.

Template Mapping form

Field	Description
Field name	This field is automatically populated with the title of content control. For example: Company
Document field	This field is automatically populated with the tag of the content control. The field has the field type prefixed to the name. For example: field_companyName.
Document field type	The type of field being mapped. The choices are: ○ Text Field: A placeholder for metadata. ○ Signature: A placeholder for signatures during the electronic signature process. ○ Signature date: A placeholder for the date of the signing.
Preview value	A field mapping value used instead of the placeholder when testing the template. This field appears only when **Text field** is selected from **Document field type**.
Format	Format in which values are to be entered by the participant. A validation is displayed if the entered value does not match the specified format, This field appears only when **Text field** is selected from **Document field type**.
Read Only	Option for enabling the editing of the field by the selected participant.
Active	Option for activating the template mapping.
Mapping table	This field is automatically set to the table to which the document template is associated.
Mapping field	Mapping field used to map the values from the table field that will be inserted when this template is used in a contract. This field appears only when **Text field** is selected from **Document field type**.
Participant	Select the participant associated with the contract template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ If **Document field type** is set to **Text field**, the selected participant is responsible for the task. ○ If **Document field type** is set to **Signature**, the selected participant is responsible for signing the document. ○ If **Document field type** is set to **Signature date**, the date of signing by the signatory will be placed in the document.
Advanced script	Option to display the Script editor.
Script	Script configuring the mapping between fields and record producer variables. This field is enabled only when the **Advanced script** field is selected.

6. Select **Update**.

Publish a contract template

Publish contract template to make it available for generating a standard legal contract document with predefined content when a legal user submits a contract request.

Before you begin

Ensure the template mappings has been completed before you publish a contract template mappings. For more information, Update contract template mappings for legal contract template.

Role required: sn_lg_contracts.contracts_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Open a contract template.
3. **Optional:** Review the contract document template.
   a. Generate and preview the contract document.
   For more information, see Preview a contract document for a Word document template.
   b. If any changes are necessary, update the document and save it.
4. On finalizing the content of the contract document, select **Publish**.

Result

The state of the contract template is published.

Configure a rule for selecting a legal contract template

Configure a rule to identify and use the correct legal contract document template based on the submitted legal request and generate a contract document for the requester.

Before you begin

Role required: sn_lg_ops.legal_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Template Rules**.
2. Configure or modify a contract template rule.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To configure a new contract template rule, click **New**.
- To modify an existing contract template rule, open the contract template rule from the list.

3. On the form, fill in the fields.

Contract Template Rule form

Field	Description
Name	Unique name of the contract template rule.
Active	Option for marking the rule as active.
Description	
Contracts table	Table in which the contract requests are saved.
Condition	Conditions under which the contract template selection rule applies. For example, to apply a rule when a legal request is submitted in an NDA category, you would enter the following condition: **[Category][is][NDA]**.
Document template	Published and active document template that will be picked for generating the contract document when the specified conditions are met.
Execution order	Order in which the selection rule is run. If there are multiple rules that meet the conditions from a legal request, a template rule with a lower-order number is run for selecting the template.

4. Save the contract template rule.
   - Save a contract template rule by clicking **Submit**.
   - Save the changes to an existing contract template rule by clicking **Update**.

   The Internal Signatories Mapping related list appears.
5. Map internal signers.
   a. In the Internal Signatories Mapping related list, click **New**.
   b. In the **Internal Signer** field, select a user from the list of internal signers.
   The list shows all users from the Signer [sn_lg_contracts_signer] table.
   c. In the Participant field, select user from the list of participants added in the template selected in the **Document template** field.
   d. Click **Submit**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configuring external applications for legal contracts

Set up external applications that provide services such as electronically signing contract documents and saving signed contracts or the documents related to legal requests in an external storage system.

The Legal Service Delivery applications use spokes from Integration Hub to integrate with external applications. The legal configurator can complete configuring these external apps after the administrator has installed and configured these spokes.

Integration with external storage systems

Configure external storage provider spokes

The administrator can use the Integration Hub to install and configure the following external storage provider spokes for saving documents attached to legal requests and signed contract documents:

- Box spoke
- Google Drive spoke
- Microsoft OneDrive spoke

Configure an external storage provider

The legal configurator can set up the external storage app integrations for legal apps from **Legal Integrations**. For more information, see Configure an external storage system for legal requests and legal matters.

Integration with e-signature providers

Configure electronic signature provider spokes

The administrator can use the Integration Hub to install and configure the following electronic signature provider spokes for contract documents:

- Adobe Acrobat Sign spoke
- Docusign spoke

Set up the electronic signature provider app

The legal configurator can set up the electronic signature app integrations for legal apps from **Legal Integrations**. For more information, see Configure an e-signature provider for legal contracts.

Configure an e-signature provider for legal contracts

Configure an electronic signature provider to enable users to sign contract documents electronically.

Before you begin

Ensure that the administrator has installed and set up spokes in Integration Hub for the electronic signature providers that you want to configure.

Adobe Sign spoke **spoke v2.5.1 or later version**

For more information on the setup and synchronizing the Adobe Acrobat Sign group, see Synchronize Adobe Acrobat Sign group with ServiceNow.

DocuSign spoke **spoke v2.2.0 or later version**

For more information on the setup and creating the Docusign account, see Set up Docusign eSignature spoke using authorization code grant.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_lg_ops.request_config or sn_lg_contracts.contracts_config or sn_lg_matter.matter_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Legal Integrations** > **Integrations**.
2. Create or modify an external app configuration.
   - To create an external app configuration, click **New**.
   - To modify an existing external app configuration, open the external app configuration from the list.
3. On the Integration Type page, click the **Electronic Signature** link.
4. On the form, fill in the fields.

Electronic Signature form

Field	Description
Name	Name of the external app configuration.
Description	Description of the external app configuration.
Active	Option for marking the external app configuration as active.
Table	Table in which the contracts data is stored. Select the **General Contract Support [sn_lg_ops_general_contract_support]** table.
Condition	Filter conditions to determine which integration account to use. For example, say you've already set up the Docusign electronic signature account and want only NDA contracts to use that account for signatures, you can define the condition as follows: **[Category] [is] [NDA]** and then select the Docusign in the **Integration provider** and its associated account in **Account**.
Execution order	Order in which an integration account is used for electronic signature of contract documents. Integration account with the lower-order value is chosen first.
App	Electronic signature provider such as Adobe Acrobat Sign or Docusign.
Account	Account number associated with the electronic signature provider. This field appears only when **Docusign** is selected from **Integration provider**.
Group	Group associated with the electronic signature provider. This field appears only when **Adobe Acrobat Sign** is selected from **Integration provider**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Attributes	Additional configuration items based on your electronic signature provider. Provide the following details: **Host Url**: Add the URL of the selected electronic signature provider that enables you to finalize or update the contract document before sending them to signatories. For example, use Web UI URL for **Adobe Acrobat Sign** or use **Docusign** UI for DocuSign.

5. Save the external app configuration.
   - Save a new external app configuration by clicking **Submit**.
   - Save the changes to an existing external app configuration by clicking **Update**.

   The external app configuration is saved.
6. Click **Publish**.

Result
The configuration of the e-signature app is published and is ready to be used for the electronic signing of contract documents.

Configure Microsoft Dynamics CRM for sales contracts

Configure Microsoft Dynamics CRM to import the sales representatives, sales accounts, and active opportunities data into the tables in the ServiceNow instance for the sales contracts support.

Before you begin
Ensure that the administrator has installed and set up spokes for the CRM app you want to configure.

Microsoft Dynamics CRM spoke v1.3.0 or later version

For more information on the setup and creating the Microsoft Dynamics CRM account, see Set up Microsoft Dynamics CRM spoke.

Role required: sn_lg_ops.request_config, sn_lg_contracts.contracts_config, or sn_lg_matter.matter_config

Procedure
1. Navigate to **All** > **Legal Administration** > **Legal Integrations** > **Integrations**.
2. Create or modify an external app configuration.
   - To create an external app configuration, click **New**.
   - To modify an existing external app configuration, open the external app configuration from the list.
3. On the Integration Type page, click the **CRM** link.
4. On the form, fill in the fields.

CRM form

Field	Description
Name	Name of the CRM app configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Description	Description of the CRM app configuration.
Active	Option for marking the configuration for CRM app configuration as active.
Table	Table in which the information about sales contracts is stored.
Condition	Filter conditions to determine which CRM app configuration to use.
Execution order	Order in which a CRM app is used for creating contract documents. The system with the lower-order value is chosen first.
App	CRM app such as Microsoft Dynamics CRM.

5. Save the external app configuration.
   - Save a new external app configuration by clicking **Submit**.
   - Save the changes to an existing external app configuration by clicking **Update**.
6. Click **Publish**.

Result
The configuration for the Microsoft Dynamics CRM app is published and is ready to be used in sales contract review requests.

What to do next
- Schedule import set jobs to pull data from the CRM system
- Create a deflection rule for sales contracts

Schedule import set jobs to pull data from the CRM system

Schedule import set jobs to pull sales representatives and associated sales accounts and active opportunities data from the CRM system into the ServiceNow instance.

Before you begin
Configure Microsoft Dynamics CRM for sales contracts.

Role required: admin

About this task
- By default, the import set job is scheduled to run daily to pull the data from the CRM system.
- Only active sales representatives and opportunities are pulled from the CRM system. All opportunities that are not won or lost are considered as active opportunities.
- When an opportunity is closed and not associated in any other active legal requests, the scheduled job will remove the opportunity record from the ServiceNow instance.

The import set jobs trigger a Workflow Studio flow that pulls the data from the CRM system into the ServiceNow instance. The maximum number of records pulled each time the job runs is based on the following Workflow Studio properties:

- **The maximum number of records to return when fetching data** (*sn_flow_designer.action_picker_limit*)
- **The maximum amount of iterations that a loop will run in flow designer** (*sn_flow_designer.max_iterations*)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Based on the number of records pulled for your system, you can modify the values of these properties. For more information, see Workflow Studio system properties.

Procedure

1. Navigate to **All** > **System Import Sets** > **Administration** > **Scheduled Imports**.
2. Open a scheduled data imports record to update.
   The following scheduled data import jobs for pulling data from the CRM system are available:
   - **Sales Representatives Scheduled Data Import**
   - **Sales Accounts Scheduled Data Import**
   - **Sales Opportunities Scheduled Data Import**

   For more information, see Scheduled data imports
3. Configure the data import job as needed.
   For more information on configuring a data import set schedule, see Schedule a data import.
4. **Optional:** To pull data from a different set of fields from the CRM system, update the corresponding transformation maps.
   For more information on configuring a transformation map, see Create a transform map.

Create a deflection rule for sales contracts

Create a deflection rule for providing guidance to requesters for a sales contract based on the specified conditions.

Before you begin

Role required: sn_lg_contracts.contracts_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Deflection Rules**.
2. Create or modify a deflection rule.
   - To create a deflection rule, click **New**.
   - To modify an existing deflection rule, open the deflection rule from the list.
3. On the form, fill in the fields.

Deflection Rule form

Field	Description
Name	Unique name of the deflection rule.
Order	Order in which the deflection rule is run. If there are multiple rules that meet the conditions from a legal request, a deflection rule with a lower-order number is run for providing the guidance.
Active	Option for marking the deflection rule as active.
Short description	Brief description about the deflection rule.
Table	Table in which the contract requests are saved.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The table name is automatically set to **Sales Contract Support [sn_lg_ops_sales_contract_support]**.
Conditions	Conditions under which the deflection rule applies. For example, to apply a rule when a sales contract has an opportunity size greater than or equal to $50,000, you would enter the following condition: **[Opportunity size][greater than or is] [$50,000]**.
Guidance	Message that is shown to the requester while submitting a sales contract review request to provide guidance. For example, you can add a link to knowledge base article relevant to the legal request or to external web page. **Note:** Some formatting options, such as text alignment, underline text, and different fonts and sizes, might not apply in the output.

4. Save the deflection rule.
   - Save a deflection rule by clicking **Submit**.
   - Save the changes to an existing deflection rule by clicking **Update**.

Activate a system property to generate a certificate of completion

As an admin, activate the *sn_lg_contracts.enable_executed_contract_audit_certificate* system property to generate a certificate of completion for electronically signed non-disclosure agreements (NDA) and third-party contracts.

Before you begin

You must have configured an electronic signature provider. For more information, see Configure an e-signature provider for legal contracts.

Role required: sn_lg_ops.legal_admin

About this task

Note:
This feature is applicable only for electronically signed contracts. For more information on submitting NDA and third-party contracts, see Submit a legal request for a NDA and Submit a legal request for a third-party contract review.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The certificate of completion provided by Docusign or Adobe Acrobat Sign includes the audit trail with the timestamp details about each signatory action during an electronic signature. The audit trail ensures non-repudiation and resolves any objections.

Procedure

1. In the filter navigator, enter `sys_properties.list`.
2. In the **Name** column, search for the `sn_lg_contracts.enable_executed_contract_audit_certificate` property.
3. Select the property.
4. If you aren't able to edit the property in the current application scope, select the word **here** in the message at the top of the page.
5. Update the **Value** field to `true`.
6. Select **Update**.

Result
A certificate of completion will be issued for the contract.

Create a legal contract intake workflow

Create a legal contract intake workflow by creating a record producer and configuring base system settings so that employees can request the legal department's guidance on legal contracts.

Before you begin
Role required: sn_lg_contracts.contracts_config, admin

About this task
The legal support for a contract request works based on a workflow, so you must provide specific information while setting up the intake process.

Procedure

1. Create a record producer for a new contract type.
   For more information, see Create or modify a record producer for legal services through Classic environment. On the form, you must provide the following specifications in the record producer for a new contract type:

   a. In the **Table name** field, select the General Contract Support [sn_lg_ops_general_contract_support] table.
   The contract workflow is associated with the General Contract Support table.

   b. Set the **contract_type** field to a contract type name such as `NDA`, `MSA`, or `SOW`, if you wish to set up the intake form to select specific contract type.

   Example
   For example, to set the contact type to NDA, enter the following code:

   ```
   current.contract_type = 1;
   ```

   c. If the contract requires the signature of outside parties, in the Variable Sets related list, click **Edit** and add the **External signatory details** variable set.

2. Add a new intake form in the Contracts practice area.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Add an intake form to a practice area. Ensure to provide the following details in the respective fields.

a. From the **Type** drop-down list, select **Request**.

b. In the **Options** field, select **Assigned To field not mandatory**.

c. For third-party contract intake form, the **Generate Document from Template** option must not be enabled.

d. From the **Request record producer** field, select the record producer created in the Step 1 to associate with the intake form.

3. Create legal contract templates.
   - For more information, see Legal contract templates.
   - In the **Conditions**, you must select the new category added for the new contract.
4. Configure a rule for selecting a legal contract template when a legal contract request is being created by a user.
5. Configure the settings in the Standard Ticket Page for legal requests.

Note:
The following settings must be updated in the Legal Simple Contracts application scope.

a. Navigate to **Standard Ticket** > **Standard Ticket Configuration**.

b. Select the **sn_lg_ops_request** ticket configuration.

c. On the Ticket Configuration form, select **Documents** in the Tab Configuration related list.

d. On the Tab Configuration form, add the condition **[Category][is][<CategoryName>]** in the **Visible** field, where <CategoryName> is the category created for the new contract.

e. Click **Update**.

f. Repeat steps 5c-5e for the **Preview** tab configuration.

For more information, see Configure the standard ticket page

Migrating to Contract Management Pro for Legal Service Delivery

Migrating from Legal Simple Contracts to Contract Management Pro for Legal Service Delivery enables you to use Microsoft Word templates and contract templates.

Preparing for migration from Legal Simple Contracts to Contract Management Pro for Legal Service Delivery

Prepare the ServiceNow instance to migrate the data from Legal Simple Contracts to Contract Management Pro for Legal Service Delivery.

Note the following requirements to prepare your ServiceNow instance for migration:

- Contract Management Pro for Legal Service Delivery is installed.

Note:
Contract Management Pro for Legal Service Delivery is a licensed application and must be installed separately from the ServiceNow® Store. For more information, see Install Contract Management Pro for Legal Service Delivery.

- Any customizations done in Legal Simple Contracts must be reproduced in Contract Management Pro for Legal Service Delivery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Any changes to the contract repository records should be done before closing the legal request or the changes will have to be done manually after migration.
- Record producers available in Legal Simple Contracts should be re-created in Contract Management Pro for Legal Service Delivery.
- If you have configured external storage for Legal Simple Contracts, ensure you have done so for Contract Management Pro for Legal Service Delivery.
- Create Microsoft Word document templates in Contract Management Pro for Legal Service Delivery that are equivalent to the HTML or PDF contract templates available in Legal Simple Contracts.
- Ensure that Contract Management Pro for Legal Service Delivery is set up correctly. For more information, see Configure Contract Management Pro for Legal Service Delivery

Migrate to Contract Management Pro for Legal Service Delivery from Legal Simple Contracts

As a legal contracts administrator, migrate data from Legal Simple Contracts to Contract Management Pro for Legal Service Delivery using the migration script.

Before you begin

Ensure you have prepared the ServiceNow instance for migration. For detailed information, see Preparing for migration from Legal Simple Contracts to Contract Management Pro for Legal Service Delivery.

Role required: sn_lg_cnt.contract_admin

About this task

- Migrating a large number of records can take a significant amount of time, so consider running the migration during non-peak working hours.
- The data related to Legal Simple Contracts will be available even after migration.
- During migration, the following artifacts are copied to Contract Management Pro for Legal Service Delivery:
  - Contract types
  - Contract repository records

  For more information, see Data copied to Contract Management Pro for Legal Service Delivery during migration from Legal Simple Contracts

  Note:
  Legal requests that are in progress are not migrated. Once a request is closed and the contract finalized, the contract repository records created are automatically copied to Contract Management Pro for Legal Service Delivery if you have run the migration script.

- During migration, data related to Sales contract review will not be migrated.
- During migration, contract revisions and intake forms will not be migrated.

Procedure

1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Types**.
2. Note the contract types listed in the table.
3. Navigate to **All** > **Contracts Core** > **Contracts Administration** > **Contracts Types**.
4. Create the contract types noted in step 2.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

While creating contract type ensure you associate it with a contract model. For more information, see Create a contract type

5. Navigate to **All** > **Legal Practice Apps** > **Legal Contracts** > **All Contracts**.
6. Note the number of records in the list of contract repository records.
7. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
8. Select the *`Migrate Old Contracts`* scheduled job.
9. Select **Execute Now** to migrate the data.
10. Compare the number of records created in the Legal Contracts Repository [sn_lg_cnt_repository] table to the number of records you noted to track the progress and the total migration success.
11. Access the log messages to check for any failures.
    a. Check for error messages with the prefix *`ContractMigrationUtils`*, which indicates a failure to migrate a record.
    b. For any failed records, check the *`Migrate contract related records`* and *`Copy Contract Attachments`* subflow to determine the cause of the failure.
    c. Fix the errors and re-run the migration script.

Data copied to Contract Management Pro for Legal Service Delivery during migration from Legal Simple Contracts

A migration utility copies data from Legal Simple Contracts tables to Contract Management Pro for Legal Service Delivery tables.

Tables migrated

Legal Simple Contracts tables	Contract Management Pro for Legal Service Delivery tables
Contract type [sn_lg_contracts_type]	Contract type [sn_cm_core_contract_type]
Legal Contract [sn_lg_contracts_repository]	Legal Contracts Repository [sn_lg_cnt_repository]

Contract type table

The contract type table is copied to Contract Management Pro for Legal Service Delivery.

If a contract type already exists in the Contract Management Pro for Legal Service Delivery table, the contract type is not migrated.

After migration, any modification or deletion of the contract type in the Legal Simple Contracts table will not be automatically synced to the Contract Management Pro for Legal Service Delivery table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Data migrated

Contract type [sn_lg_contracts_type]	Contract type [sn_cm_core_contract_type]	Description
Name	Name	Name of the contract type.
Active	Active	State of the contract type.
Domain	Domain	Regional domain.

Legal Contract Repository table

Legal requests for non-disclosure agreement and third-party contract reviews that are in the Close Complete state are copied to Contract Management Pro for Legal Service Delivery

The following table provides the details of the Legal Simple Contracts data and the corresponding Contract Management Pro for Legal Service Delivery data.

Data copied from Legal Contract to Legal Contracts Repository

Legal Contract [sn_lg_contracts_reposito	Legal Contracts Repository [sn_lg_cnt_repository]	Description
Contract Request	Contract Request	Contract request number
Contract Status	State	The state of the request. The mapping between states in the old and new repository. • Terminated in the old repository is marked as Cancelled in the new repository. • If the start date of the contract is in the past, Amended in the old repository is marked as Active. • If the start date of the contract is in the future, Amended in the old repository is marked as Draft. • Expired in the old table without dates is marked as Expired in the new table. • Expired in the old table with contract start date in the past is marked as Active. • Expired in the old table with a contract end date in past is marked as expired. • Expired in the old table with a contract start date in future is marked as Draft.

Result of migration from Legal Simple Contracts to Contract Management Pro for Legal Service Delivery

On the running the script to migrate data from Legal Simple Contracts to Contract Management Pro for Legal Service Delivery, the data is copied along with other changes made to Legal Simple Contracts modules, Legal Counsel Center, and the Legal Executive dashboard.

- After migration, the following modules of Legal Simple Contracts are marked as legacy:
  - **Simple Contracts Admin**
  - **Simple Contracts**
  - **Legal Contracts**
- Legal contract requests that are not yet complete continue to be visible in the Legal Counsel Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

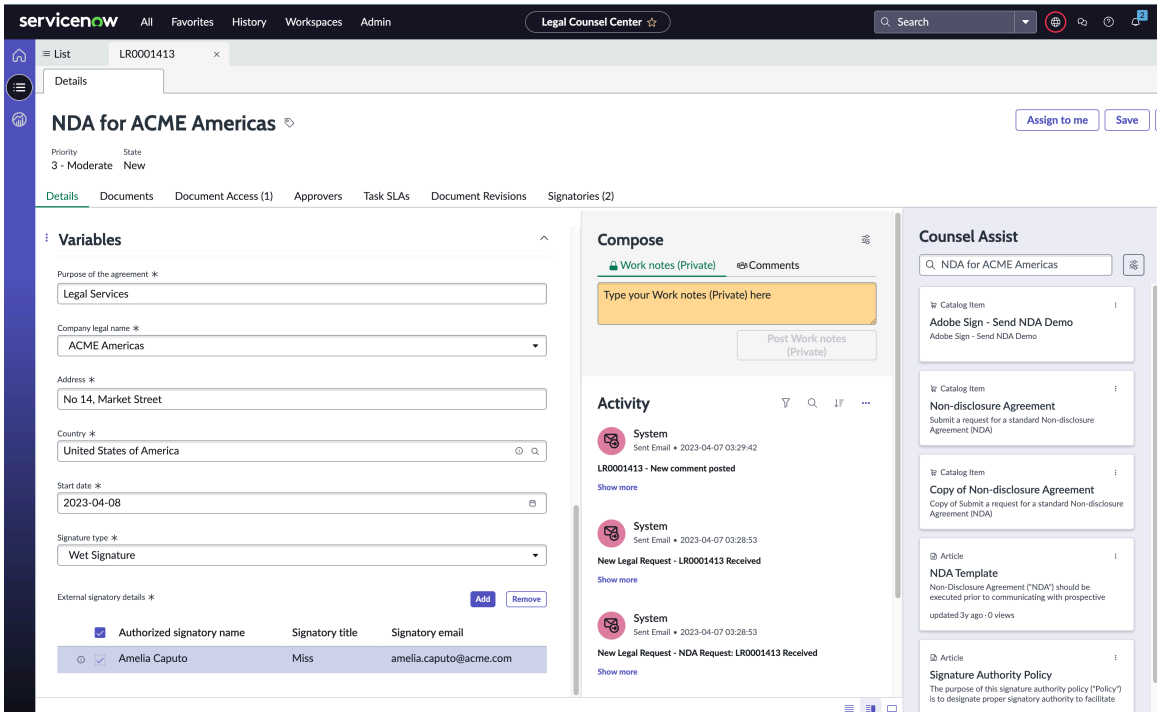
- In the Legal Counsel Center, the migrated contract repository records are displayed in the All Contracts list in Legal Contracts, which you can access by navigating to **Lists** > **Legal Contracts** > **All Contracts**.
- In the Legal Executive dashboard, legacy contract requests from Legal Simple Contracts are displayed in the following tabs:
  - Contracts(legacy) tab
  - Contracts tab: Navigate to the Legacy contract requests section to view the contract requests.
- Any new contract repository records created due to completion of a legal request are automatically migrated to Contract Management Pro for Legal Service Delivery.

Non-disclosure agreement requests in Legal Simple Contracts

Employees can submit legal requests for creating non-disclosure agreement (NDA) contracts with third parties such as vendors, customers, and partners. The legal department can manage and process these requested changes from a centralized location.

Features

- Contract templates with metadata and business rules for selecting the most relevant template for a request.
- Complete self-service for creating standardized NDA contracts.
- Requests to change the standardized contracts routed to the legal team.
- Support for electronic signatures.
- Electronic signature integrations with Adobe Acrobat Sign and Docusign.
- Support for wet signature to enable effective collaboration between the signatories.
- Document storage on the ServiceNow instance as well as external storage systems such as Box, Google Drive, and Microsoft OneDrive.
- Legal contracts repository containing the metadata of signed contract documents.
- Configurable system property to generate a certification of completion for an electronically signed non-disclosure agreement (NDA). For more information, see Activate a system property to generate a certificate of completion.



Non-disclosure agreement contract request - Workflow

When a requester submits a legal request, an NDA contract document is created using a standard contract template based on the information from the request. The information from the request is inserted at the appropriate places in the template.

If needed, requesters can request specific changes in the generated NDA contract document. The legal department can manage and process these requested changes to make necessary revisions to the NDA contract document from a centralized location.

If the generated NDA document doesn't require any changes, the requester can send it to the signatories for an electronic or manual signature. After all signatories have signed the contract document, it's stored in the ServiceNow instance or an external storage system. The requester and legal department members can access the signed contract document from the Legal Contracts repository.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example: Workflow for a non-disclosure agreement contract request

A sample workflow for a non-disclosure agreement contract request might progress as follows:

1. Setting up the following items in the application:
   - Multiple variations of NDA templates
   - Template selection rule to choose the correct template based on the legal request
   - Internal signatories for different templates
   - E-signature integration - Adobe Acrobat Sign or Docusign
2. Employee fills out the NDA intake request form.
3. Employee previews the generated contract with metadata and sends it to the signatories.
4. All signatories submit the required signatures.
5. The signed contract is attached to the legal request record.
6. A contract repository record is created with the metadata and signed contract.
7. (Optional) The signed contract is moved to the configured storage and referenced in the contract repository section.

Submit a legal request for a NDA

Submit a legal request for a non-disclosure agreement with third parties such as vendors, customers, or partners.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Access the non-disclosure agreement intake form.

2. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Non-disclosure agreement intake form

Field	Description
Is this for a Vendor, Customer, or Partner?	Category of the third party.
Purpose of the Agreement	Purpose of the agreement. Example: Non-disclosure agreement for new business investments.
Company legal name	Legal name of the third party with whom you are making an agreement. If the company name isn't listed, select **[Company not listed]** option and enter the name in the **New company legal name**.
Address	Mailing address of the third party.
Country	Country of the third party.
Start date	Start date of the agreement period.
Signature type	Type of signature. ○ Electronic signature: The signatory digitally signs the contract. ○ Wet signature: The signatory manually signs the physical version of the contract. The default signature type is Electronic Signature.
External signatory details	List of people from the selected third party who would sign the agreement.

3. **Optional:** Modify the list of signatories.
   - (Optional) To add a signatory, select **Add** and provide the signatory's details.
   - (Optional) To modify a signatory's information, select the Edit row icon (✎) on the signatory's row and update the details.
   - (Optional) To remove a signatory, select the Remove row icon (✖) on the signatory's row.
4. Select **Submit**.
   - A legal request for generating a contract document for non-disclosure agreement is created in the New state.
   - A contract document in the Document Ready status is generated with data from the request using a contract template based on the contract template rules. Internal signatories based on the template are also populated in the generated document. For more information, see Configure a rule for selecting a legal contract template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- If more signatories have been added in the request than are needed for the contract as defined in the contract template, only the default number of signatories are necessary for signing the contract. Other signatories are marked as Not Considered.
- If fewer signatories are included in the request than are required for the contract, you can add more signatories.

In either case, you can submit a change request to update the number of signatories as required for your contract.

- A record for each external signatory is created in the Signer [sn_lg_contracts_signer] table.

For more information on how to view and track a legal request, see Viewing and tracking legal request details.

5. **Optional:** If you need changes in the generated document, submit a change request to the legal department.
   For more information, see Review and finalize the contract document.
6. **Optional:** Modify the request details or manage signatories by selecting **Actions** and then selecting **Edit Request**.
   This option is available only if the request state is New and the document status is Document Ready. For more information, see Modify a legal request.
7. When the contract document is finalized, send it to the signatories for getting it signed.
   For more information, see Review and finalize the contract document.

Work on a legal contract request

As a member of the legal contracts support team, review and revise a contract document as per the requested changes. Upload the revised document to the request and send the document to the requester from within the request.

Before you begin

The practice area lead or group manager should have assigned you the request. If not, you can open the request to assign it to yourself or someone in the group.

Role required: sn_lg_ops.legal_fulfiller

About this task

As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Note:
During times when you're unavailable, you can delegate your legal duties to other users.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. **Optional:** If you need help from other fulfillers to work on the legal request, add them in the **Collaborators** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Users with the sn_lg_contracts.contracts_fulfiller role are listed in the **Collaborators** field.

The collaborators are notified via email that they have been added as collaborators to a legal request.

5. **Optional:** Initiate an ad hoc approval for a legal request or its attachment for the legal request or its attachments when an approval is required from other stakeholders.
6. **Optional:** In the **Signatories** tab, review the signatories for the contract document and their status.
7. In the Activity section, review the changes requested by the requester and make necessary changes in the contract document.
   For the contract documents is in DOCX format,
   - When external storage is configured, you can edit and save the document revision directly from the external storage.
   - When internal storage is configured, download the contract document, edit, save it and upload it using Create revision option.
8. Upload the revised contract document.
   a. In the **Document Revisions** tab, click **Create Revision**.
   b. In the Upload Revision dialog box, click the **Attach File** link and upload the revised document.
   c. **Optional:** Add work notes to provide any information on the attached document.
   d. If the attached file is the final revision and is ready to be sent to the requester for review and confirmation, select the **Mark as ready** check box.
   e. Click **Upload**.
   The attached document is added to the request. The revision number of the latest document is one higher than the previous document revision number. The document is listed in the **Document Revisions** tab.
9. Click **Send Document** to send the contract document that is marked as ready to the requester.

Result
The updated document is sent to the requester for the review. The document status updates to Document Ready.

Review and finalize the contract document

Review and finalize the contract document for sending it for signature.

Before you begin
Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Select **My Requests** from the form context menu.
3. Select **View all requests** from the drop-down list.
4. Select the legal request from the list.
5. Review the contract document from the Preview tab.
   In the preview tab, the contract document of type PDF or HTML will be downloaded in PDF format, whereas contract document of type Microsoft Word will be download in DOCX format.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. **Optional:** If any changes need to be made to the contract document, submit a change request.

   a. From the **Actions** drop-down list, select **Request Changes**.

   b. In the Request Changes dialog box, enter the details you want to update.

   c. Select **Submit**.
   The change request is submitted to the legal department for revision in the contract document and its status updates to Work in Progress. The document status of the contract document updates to Internal Legal Review.

   Anyone from the legal department can make the requested changes in the document and send the updated document back to you.

   Note:
   You cannot access a document preview until the legal department sends back the revised document.

What to do next

When the contract document is finalized, send it for signature by selecting **Send for signature**.

Signature process for a legal request

You can require either an electronic or a wet (manual) signature for a legal request. The contract approval process differs depending on the signature type selected.

- Electronic Signature: Enables users to sign contract documents electronically. For more information, see Configure an e-signature provider for legal contracts. Select the signature type as Electronic Signature if you also want to generate a certificate of completion. For more information, see Activate a system property to generate a certificate of completion.
- Wet Signature: Enables the finalization of the contract manually rather then electronically. You can then upload the finalized document. For more information on uploading the document, see Add a manually signed contract.

When the contract document is finalized, it is sent it to the signatories to get it signed.

Submitting a Contract document for signature

For Electronic Signature	For Wet Signature
• The document status updates to Sent for Signature and electronic signature flow is triggered as in legal integration. An email notification that the contract document is available for signature is sent to the first signatory. The email contains a link to the contract document that the signatory can open and sign the document through the Docusign or Adobe Acrobat Sign electronic signature provider as configured in the electronic signature legal integration. The first signatory is the one whose Order value in the list of signatories is set the	• The document status updates to Pending Signature. • An email notification is sent to the signatories with the contract document attached. • The signatories print the document, sign it, and return it to the legal requester. • The legal requester uploads the contract document in PDF format to the request. For more information, see Add a manually signed contract.

Submitting a Contract document for signature (continued)

For Electronic Signature	For Wet Signature
lowest in the contract template rule. For more information, see Configure a rule for selecting a legal contract template. An email is sent to the next signatory in order after the first has signed the contract to request their signature. • Signatories can accept or decline the signature request. For more information, see Sign or decline a legal contract electronically in Legal Simple Contracts.	

Sign or decline a legal contract electronically in Legal Simple Contracts

As a signatory, you can review and sign or decline to sign a contract document.

Before you begin

Role required: none

About this task

This task is applicable only for contracts that have the signature type set to **Electronic Signature**. If the contract requires a wet (manual) signature, the signatories receive an email with the contract attached, sign it, and return it to the legal requester. The legal requester then attaches the contract document in PDF format to the request.

Procedure

1. Select the link in the email notification.
2. Review the contract document and sign it or decline to sign it.

Result

The following table shows the results of signing the contract document and declining to sign it.

Result of approving or rejecting a contract

Sign the contract document	Decline to sign the contract document
• If there are more signatories to sign the contract document, it's sent to the next signatory in the order. The status of current signatory in the request updates from Pending Signature to Signed. The status of the next signatory updates from Not Started to Pending Signature.	• The contract document is sent back to the requester. An email notification that the signer has declined to sign the document is sent to the requester. The requester can review the document and request changes in the document and resend to signatories for signature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result of approving or rejecting a contract (continued)

Sign the contract document	Decline to sign the contract document
• If the last signatory has signed the document, a legal contract record is created. The document status updates to Contract Signed. • If the system property `sn_lg_contracts.enable_executed_contract_audit_certificate` is set to `true`, the certificate of completion is generated and appended to the finalized contract document.	The Signatory status in the request updates to Cancelled. • The document status in the request updates from Pending Signature to Contract Declined.

Wet Signature workflow

The wet signature workflow is triggered when a legal request with signature type as Wet Signature is sent to the signatories for signing.

The signature type is specified while submitting a legal request. For more information, see Submit a legal request for a NDA.

The generic workflow for wet signature might progress as follows.

As a signatory:

- Receive an email notification requesting your signature.
- Open the contract document attached to the email.
- Print the contract attachment.
- Sign the contract printout and send it back to the requester.

As a legal requester:

- After receiving the signed contract document from all signatories, generate digital copy in PDF format.
- Attach the digital copy of the contract document to the legal request. For more information, see Add a manually signed contract.

Add a manually signed contract

As a legal requester, on receiving the signed contract document from the signatories, add the digital version to the legal request record.

Before you begin

You must have a PDF version of the signed contract.

Role required: sn_lg_ops.legal_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.

   Note:
   If you're using Employee Center, you can submit a legal request by navigating to the Employee Center portal and selecting a request from the **Legal services** > **Browse Legal services** menu.

2. Select **My Requests** option in the form context menu.
3. Select **View all requests** from the drop-down list.
4. Select the legal request from the list.
5. Select **Upload Contract** and navigate to the file.
6. Select **Open**.
7. If you have uploaded an incorrect file, upload the correct document by selecting **Reupload Contract** from the **Actions** drop-down list.
8. Select **Close Complete** to close the legal request.

   Note:
   You can't make any changes to the legal request after the legal request is closed.

Result

When the legal request is closed, an email with the final contract document attached is sent to the signatories.

Sales contract review requests

Sales team members can submit legal requests for sales contract review when they have to engage legal counsel for customer queries, review the terms and conditions provided by customers, or for legal guidance. The commercial legal team can review the sales contract and provide the requested contract support.

Features

- Routing requests to the legal team for changes to standard contracts and on-demand approvals for content changes.
- Configurable deflection rules to provide predefined legal guidance based on the CRM data, such as account segment and opportunity size.
- Ad hoc approvals for contract drafting.
- Legal contracts repository containing metadata of signed contract documents.

Setting up a sales contracts review request

The administrator must set up the following items for the sales team members to see their assigned sales accounts and opportunities while submitting legal requests for sales contract review:

- Configure Microsoft Dynamics CRM for sales contracts
- Schedule import set jobs to pull data from the CRM system
- Create a deflection rule for sales contracts

© 2026 ServiceNow, Inc. All rights reserved.

Sales contracts review request - Workflow

As a sales team member, you can submit a legal request for getting legal support on sales contracts for the sales opportunities or accounts you own. On clicking the **Submit** button, the system checks for a deflection rule to match its defined conditions with the information entered in the request.

- If the conditions in any deflection rules do not match the details of the request, the legal request is submitted and assigned to the legal sales contract group.
- If the conditions of a deflection rule match the details of the request, the preconfigured legal guidance text appears in a dialog box. You can choose to take one of the following actions:
  - Follow the guidance and cancel submitting the Legal request.
  - Provide appropriate reasons in **Business justification** and submit the request.

The legal department can manage and process these requested changes to make necessary revisions to the contract document from a centralized location.

Legal Simple Contracts - Non-disclosure Agreement workflow

Sales Contract Review Request workflow

Sales team members can submit legal requests for sales contract reviews when they have to engage legal counsel for customer queries, review the terms and conditions provided by customers, or for legal guidance. The commercial legal team can review the sales contract and provide the requested contract support.

Setup the following items in the application

- Configure Microsoft Dynamics CRM to import the sales representatives, sales accounts, and active opportunities data.
- Configure deflection, based on specified conditions, that will provide guidance to sales persons.
- (Optional) Integration with external storage provider to store signed contracts.

- Employee fills out the sales contract form with details like **Sales account** and **Opportunity**, that is pulled from the CRM system.
- (Optional) Employees upload sales contract document.
- System checks for deflection rules to provide legal guidance based on the entered information.
  - If no deflection rules match, then the legal request is submitted.
  - If the deflection rules match, preconfigured legal guidance, appears.
    - Follow the guidance and cancel submission.
    - To get more guidance, provide business justification and submit the request.
- (Optional) Fulfiller obtains ad hoc approval from stakeholders for documents.
- Fulfiller makes necessary revisions to the document and uploads it to the request.
- The sales contract document is

Submit a legal request for sales contract review

Submit a legal request to the legal team for review and legal support for a sales contract.

Before you begin

Role required: sn_lg_contracts.sales_user

About this task

You can submit a request for review of a sales contract to engage legal counsel, get a response to customer questions, or have the terms and conditions provided by customers reviewed.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.

   Note:
   If you're using Employee Center, you can submit a legal request by navigating to the Employee Center portal and selecting a request from the **Legal services** > **Browse Legal services** menu.

2. Click **Service Catalog** to view all the available request categories.
3. Search and open the **Sales Contract Review** request item.
4. On the form, fill in the fields.

Sales Contract Review intake form

Field	Description
What does your request involve?	Category of the contract. If the required category is not listed, select **Others**.
Provide details if others	Details of the category. This field appears only when **Others** is selected from **What does your request involve?**.
Account	Sales accounts, owned by you, pulled from the Microsoft Dynamics CRM system. **Note:** Only the sales account that you have been assigned to are listed.
Opportunity	List of active opportunities associated with the selected account. If no opportunity is associated with the selected account, leave the field empty. **Note:** Only the opportunities that you have been assigned to are listed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Deal closure date	Expected closure date of the opportunity, pulled from the CRM system. You can modify the deal closure date to any future date, as required.
Additional information	Additional information about the sales contract.

5. **Optional:** Click the add attachments icon ( ) to upload an attachment to the request.
6. Click **Submit**.
   The system checks for deflection rules to provide guidance based on the entered information.
   - If the conditions in any deflection rules do not match the details of the request, the legal request is submitted.
   - If the conditions of a deflection rule match the details of the request, the preconfigured legal guidance text appears in a dialog box. You can choose to take any one of the following actions:
     - Follow the guidance and cancel submitting the Legal request.
     - Provide appropriate reasons in **Business justification** and submit the request.

Result
The legal request is created and assigned to the legal sales contract group.

Work on a sales contract review request

As a member of the legal contracts support team, review and revise a sales contract document as per the requested changes. Upload the revised document to the request and send it to the requester directly from the request.

Before you begin
The practice area lead or group manager should have assigned you the request. If not, you can open the request to assign it to yourself or someone in the group.

Role required: sn_lg_ops.legal_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.
4. **Optional:** If you need help from other fulfillers to work on the legal request, add them in the **Collaborators** field.

   Note:
   Users with the sn_lg_contracts.contracts_fulfiller role are listed in the **Collaborators** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The collaborators are notified via email that they have been added as collaborators to a legal request.

5. **Optional:** Initiate an ad hoc approval for a legal request or its attachment for the legal request or its attachments when an approval is required from other stakeholders.
6. In the Activity stream section, review the changes requested by the requester and make necessary changes in the contract document.
7. **Optional:** Communicate using emails from Legal Counsel Center with the requester or other stakeholders.
8. Download the attached contract document to make changes requested by the requester
9. **Optional:** After the sales contract is finalized, create a legal contract repository record to store the document.

   a. In the **Legal Contracts** tab, click **New**.
   The Legal Contract form displays that contains most fields auto-populated from the legal request fields.

   b. Upload the updated contract document.

   Upload contract document

Option	Steps
Upload the contract document in the request	In the **Attachments** section, attach the contract document file. ▪ If you are attaching a file for the first time, click **Browse**. ▪ If you are attaching additional files, click the add attachment icon (+).
Upload the contract document to an external storage and add its link	In the **Signed Contract** field, enter the URL of the contract document that is uploaded on the external storage system.

   c. Click **Save**.

10. After resolving the legal request, close the request by clicking **Close Complete**.

Third-party contract review requests

Employees can submit legal requests for review of third-party contracts by the legal team.

Features

Third-party review requests include the following features:

- Electronic signature integrations with Adobe Acrobat Sign and Docusign.
- Support for storing contract documents in your ServiceNow instance or external storage systems such as Microsoft OneDrive and Google Drive.
- Legal contracts repository containing the metadata of signed contract documents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Support for a configurable system property (`sn_lg_contracts.enable_executed_contract_audit_certificate`) to generate a certification of completion. For more information, see Activate a system property to generate a certificate of completion.

Third-party contract review request - Workflow

As a legal fulfiller on the legal team, you can work on the assigned third-party review requests by completing the following activities:

- Review the contract document attached to the legal request and make any necessary changes.
- Email the revised contract document to third-party contacts for review directly from the Legal Counsel Center.
- View responses from third-party contacts in the activity stream of the legal request.

  Multiple iterations of revisions between your company and the third party might be necessary before the contract document is finalized by all parties.
- Complete the document in the configured e-signature system by adding required fields and send it for signature
- Send the contract document to the required signatories (both internal and external) for their electronic signatures.

After all signatories have signed the contract document, it is stored on the ServiceNow instance or an external storage system. The requester and legal department members can access the signed contract document from the Legal Contracts repository.

Submit a legal request for a third-party contract review

Submit a legal request for review of third-party contracts by the legal team.

Before you begin

Role required: sn_lg_ops.legal_user

About this task

- You can submit a request for review of a third-party contract to engage legal counsel, get answers to questions from the third party, or have the terms and conditions provided by them reviewed.
- The certificate of completion is generated only if you have configured the system property `sn_lg_contracts.enable_executed_contract_audit_certificate`. For more information, see Activate a system property to generate a certificate of completion.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.

   Note:
   If you're using Employee Center, you can submit a legal request by navigating to the Employee Center portal and selecting a request from the **Legal services** > **Browse Legal services** menu.

2. Select **Service Catalog** to view all the available request categories.
3. Search for and open the **Third Party Contract Review** request item.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. On the Third Party Contract Review form, fill in the fields.
   For a description of the field values, see Third Party Contract Review form.
5. Click **Submit**.

Result
A legal request for reviewing of the attached third-party contract document is created in the New state.
For more information on how to view and track the legal request, see Viewing and tracking legal request details.

What to do next
As a member of the legal department contract support team, you can work on the request to review the contract and get it signed. For more information, see Work on a TPC review request.

Modify a legal request

As a legal user, modify a legal request to update the request's details or replace the attached contract document with an updated version.

Before you begin
You can modify a request until it is in the New state.

Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Open your submitted legal request from the **My Requests** option on the header menu.
3. On the Standard Ticket page, from the Actions menu, select **Edit Request**.
4. Update the request's details or replace the attached contract document with an updated version.
5. Select **Save** to update the record.

Work on a TPC review request

As a member of the legal contracts support team, review and revise a third-party contract document. You can email the revised document to stakeholders to verify the revisions and then send the ready document for e-signature from within the legal request.

Before you begin
Role required: sn_lg_contracts.contracts_fulfiller

About this task
As a collaborator added to a request, you can access and work on the request just as assignees can. However, you can't modify the **Assigned to** and **Assignment group** fields.

Note:
During times when you're unavailable, you can delegate your legal duties to other users.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the list icon ( ).
3. In the **Lists** tab, open a legal request by selecting an option under **Legal Requests**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** If you need help from other fulfillers to work on the legal request, add them in the **Collaborators** field.

   Note:
   Users with the sn_lg_contracts.contracts_fulfiller role are listed in the **Collaborators** field.

   The collaborators are notified via email that they have been added as collaborators to a legal request.

5. In the **Document Revisions** tab, manage all revisions of the contract document.

   Note:
   If you mark the current document revision as Ready, any previous document versions that were marked as Ready are cleared.

6. **Optional:** Send the document for ad-hoc approval when an approval is required from other stakeholders.
7. Send an email to stakeholders to have the completed contract document reviewed and the changes confirmed.

   a. Click **Compose Email**.

   b. In the **New Email Draft** tab, add recipients' email addresses in the **To**, **CC**, and **BCC** fields as required.
   The **To** field is pre-populated with the third-party point of contact email entered in the request, and the **CC** field with the requester's email id.

   c. Enter the subject of the email in **Subject**.
   The short description of the request is populated by default.

   d. In the **Attachments** field, click the **+Add File** link to add the documents and then select the source of the file.
   If you've marked a contract document revision as Ready, it is attached to the email by default.

   e. Enter the message in the email body.

   f. Click **Send Email** to send the email immediately, or **Save as draft** to send it later.

8. In the **Signatories** tab, add signatories to whom the contract will be sent for e-signature.
9. When all stakeholders have agreed on a contract document revision, click **Prepare for Signature** to prepare and send the document to the signatories for e-signature.

   Note:
   When you select **Prepare for Signature**, the document opens in the configured e-signature system.

   - For DocuSign, the document opens automatically in the e-signature portal without requiring a login.
   - For Adobe Sign, you must log in to the e-signature portal to open the document.

   The document status updates from Internal Legal Review to Preparing for Signature.

10. Complete the document in the configured e-signature system and send it for signature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Preview the document to ensure that the content is correct.

b. Add the required fields including the Signature field.

c. Click **Send**.
An e-signature envelop is created and sent to all signatories. If the system receives a success notification from the electronic signature provider, the document status updates from Preparing for Signature to Pending Signature.

What to do next

1. Signatories can review and sign or decline to sign the contract document.
2. You can check the document status in the request.
   - If all signatories sign the contract document, the document status updates to Contract Signed. A legal contracts repository record is created where the signed document is attached or linked. You can also access the legal contract repository record from the **Legal Contracts** tab.
   - In the **Signatories** tab, the status of all signatories updates to Signed.
   - If any signatory declines to sign the contract document, the document status updates to Contract Declined.If more changes are required in the contract document, update it and resend it to the signatories for signature.
3. If the contract is signed by all parties, you can close the request by clicking **Close Complete.**

Cancel a legal request

Cancel a third-party contract request if it is no longer necessary.

Before you begin

Important:
Cancelling a legal contract request after it has been sent for signature stops the process in its current state.

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Open your submitted legal request from the **My Requests** option on the header menu.
3. On the Standard Ticket page, from the Actions menu, select **Cancel Request**.
4. In the dialog box, enter comments to explain why the request was canceled.
5. Select **Confirm Cancellation**.

Result

- The request is canceled and the associated active flows are terminated. The cancellation comments appear in the **Activity** tab of the request.
- The document status changes to Contract Voided.
- The document signature sent to signatories is canceled to block further signing. The signatories get an email notification that the legal request has been canceled.

Preview and download a signed contract document

Preview and download a signed contract document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lg_ops.legal_user

About this task
When all signatories have signed a contract document, it is considered the final contract document and stored in the Legal Contract [sn_lg_contracts_repository] table.

Access to a contract document is based on the following user roles and conditions:

- A Contracts Fulfiller can create, view, and update contract documents.
- Only a Contracts Administrator can delete contract documents.
- Requesters can view only contract documents for which they submitted the legal request.
- Users can view only contract documents for which they are included on the watch list of the corresponding legal requests.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the list icon ( ).
3. In the **Lists** tab, under **Simple Contracts**, select **Legal Contracts** .
4. In the list of legal contracts, select a company name to open the contract.
5. Review the contract document and associated request details.
6. **Optional:** Download the contract document.
   - If an external integration is active and published, open the external storage location to download the contract document by selecting the link in the Signed Contract list in the **Details** tab.
   - If an external storage integration is not available, select the attachment icon in the Counsel Assist sidebar and then in the Attachments section, click the actions icon ( ) and select **Download**.

Manage Legal Simple Contracts
As administrator work on managing the legal contract templates and legal contracts.

Edit a contract template of type Microsoft word
Edit a contract template to reflect any modifications that must be included in the template to generate a standard contract when an employee submits a contract request.

Before you begin
Role required: sn_lg_contracts.contracts_config

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Open a contract template from the list.
3. On the form, modify the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Word Template New Record form

Field	Description
Name	Unique name for the contract template.
Table	Table to which you want to associate the contract template.
Category	Document category to which you want to associate the contract template.
Document	The document from which you want to import template field mapping. The selected document should be a Microsoft Word (.docx) document and should have valid content controllers. For more information, see Add content controls in a Microsoft Word document.
Template date format	Format in which you want the date to appear when an agent previews the document, generates the attachment, or initiates document tasks for participants. **Note:** ○ When signing using a ServiceNow application or the AdobeSign application: If no value is selected in **Template date format**, the value specified in the **template_date_format** system property is considered. If both **Template date format** and **template_date_format** system property are empty, the value in the Date format field from the agent's user profile is considered. ○ When signing using a DocuSign application: The date format selected in Signing settings in the DocuSign application is considered over **Template date format** in the configured word template in a ServiceNow instance.
Template language	Language in which you want dynamic tokens to be translated when an agent previews the document, generates the attachment, or initiates document tasks for participants. **Note:** ○ Template language is a mandatory field. The default language is none. ○ Translation feature is available only when language plugins are installed on the ServiceNow instance.
State	The state is automatically set to Draft.
Application	Application to which the contract template belongs. This field is automatically set to the application scope in which you're creating the contract template.
Active	Option to make the template active and available for use.

4. In the **Contract Type** field, select only one category of the contract type.
   If you're creating a template for non-disclosure agreement, select **Non Disclosure Agreement** as the contract type.
5. Select **Parse Document** to extract any modified content marked by content control from the imported document.
   Any new added content controls will be listed under Template Mappings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Map any new meta data found during parsing.
   For more information, see Update contract template mappings for legal contract template.
7. Select **Update** to save the modifications.

Preview a contract document for a Word document template

View the final form of a contract document with the content controls replaced with the values of the variables or return values of scripts.

Before you begin
Role required: sn_lg_contracts.contracts_config

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Open a contract template.
3. Select **Preview**.
4. In the Preview Document window, select the Lookup using list icon
5. Select a legal contract request from the list for which you want to generate a sample contract document.
6. Select **Generate Preview** and close the Preview document pop-up window.
7. In the **Manage Attachments** field, select **View** to view the document.
8. **Optional:** Select the document link to download it.
9. **Optional:** Modify the contract template if you want to make any changes.

Create a Word document contract template from an existing template

Create a new contract template from an existing template if you need only a small variation in the content of an existing template.

Before you begin
Role required: sn_lg_contracts.contracts_config

Procedure
1. Navigate to **All** > **Legal Administration** > **Simple Contracts Admin** > **Contract Templates**.
2. Open the contract template from the list.
3. Select **Copy**.
   A template revision is created with the data related to participants and template mappings.
4. **Optional:** Import template field mappings from a Microsoft Word document with content controls.
   For more information, see Add content controls in a Microsoft Word document.

   a. In the **Document** field, select **Update**.

   b. Select **Choose file**.

   c. Choose a file and select **Ok**.

   d. Select **Parse document**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The document is parsed.
- The metadata that was already present is retained.
- The metadata that was present earlier but not found in the recent parsing is deleted.
- The metadata that is new is added.

A new file is uploaded to the contract template.

What to do next

Map any new meta data found during parsing. For more information, see Update contract template mappings for legal contract template.

Legal Simple Contracts reference

Reference topics provide additional information about the lists and forms that you use in Legal Simple Contracts.

Components installed with Legal Simple Contracts

Several types of components are installed with activation of the Legal Simple Contracts application, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles

Roles installed

Role title [name]	Description	Contains roles
Contracts Administrator [sn_lg_contracts.contracts_admin]	Application-specific administrator role for the Legal Simple Contracts app having the administrative access for the app and full access to the underlying data.	• sn_lg_contracts.contracts_config • sn_lg_contracts.contracts_fulfiller
Contracts Configurator [sn_lg_contracts.contracts_config]	Provides access to configure data such as document templates, internal signatories, template rules. It does not provide	• connection_admin • sn_docusign_spoke.docusign_user • sn_adobesign_spoke.Adobe_Sign_User • sn_lg_ops.legal_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed (continued)

Role title [name]	Description	Contains roles
	access to transactional data of requests and matters.	
Contracts Fulfiller [sn_lg_contracts.contracts_fulfiller]	Provides the fulfiller access for working on assigned contract requests.	sn_lg_ops.legal_user
Sales User [sn_lg_contracts.sales_user]	Provides the read access on sales opportunities and accounts data.	sn_lg_ops.legal_user

Scheduled data imports

Scheduled data imports installed

Scheduled data imports	Description
Sales Representatives Scheduled Data Import	Pulls all sales representatives data from the CRM system into the Sales Representative [sn_lg_contracts_sales_representative] table. This is the main scheduled data import job that is scheduled to run once daily at the set time.
Sales Accounts Scheduled Data Import	Pulls Accounts associated with the sales representative into the Sales Account [sn_lg_contracts_sales_account] table. This job runs after the Sales Representatives Scheduled Data Import job finishes.
Sales Opportunities Scheduled Data Import	Pulls Opportunities associated with the sales representative into the Sales Opportunity [sn_lg_contracts_sales_opportunity] table. This job runs after the Sales Accounts Scheduled Data Import job finishes.

Tables

Tables installed

Table	Description
Contract Request Mapping [sn_lg_contracts_repository_request_m2m]	Stores the details of the relationship between a request in the General Contract Support

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed (continued)

Table	Description
Sales Opportunity Import Set [sn_lg_contracts_sales_opportunity_import_set]	Staging table for sales opportunity records pulled from the Microsoft Dynamics CRM system.
Sales Representative [sn_lg_contracts_sales_representative]	Stores sales representatives received from the CRM system. The data is pulled from the Microsoft Dynamics CRM system using a scheduled import set job that runs daily.
Sales Representative Import Set [sn_lg_contracts_sales_representative_import_set]	Staging table for sales representative records pulled from the Microsoft Dynamics CRM system.
Signer [sn_lg_contracts_signer]	Stores information of internal and external signatories.
Signer Config [sn_lg_contracts_signer_config]	Stores the mapping between an internal signatory and the participant field of a document template.
Signer Task [sn_lg_contracts_signer_task]	Stores all signatory information, including the order of signatories to sign the contract document and current signature status a request.

Third Party Contract Review form

The Third Party Contract Review form is used to submit a legal request to the legal department to get the third-party contracts reviewed.

Submit a legal request for a third-party contract review.

Third Party Contract Review form

Field	Description
Is this for a Vendor, Customer, or Partner?	Third party type with whom the contract has to be signed.
Purpose of the contract	Subject and purpose of the contract.
Contract type	Type of contract. Only active contract types are listed in the field. For more information, see Create a contract type.
Upload contract document	Contract document to be reviewed by the legal department.
Company legal name	Legal name of the third party with whom the contract has to be signed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Third Party Contract Review form (continued)

Field	Description
Expected completion date	Date by which the contract review has to be completed.
Other party legal point of contact name	Name of the person from the third party who is the point of contact.
Other party legal point of contact email	Email address of the point of contact.

Word Template New Record form

The Word Template New Record form is used to create document template.

Word Template New Record form

Field	Description
Name	Unique name for the contract template.
Table	Table to which you want to associate the contract template.
Category	Document category to which you want to associate the contract template.
Document	The document from which you want to import template field mapping. The selected document should be a Microsoft Word (.docx) document and should have valid content controllers. For more information, see Add content controls in a Microsoft Word document.
Template date format	Format in which you want the date to appear when an agent previews the document, or generates the attachment.
Template language	Select a language from the drop-down list. **Note:** Although this field is not marked as mandatory, it is required to process the template.
Contract Type	The type of contract that is generated using the word document template. For example, if you're creating a template for a non-disclosure agreement, you would select Non Disclosure Agreement as the contract type. **Note:** Although this field is not marked as mandatory, it is required to process the template.
State	The state is automatically set to Draft.
Application	Application to which the contract template belongs. This field is automatically set to the application scope in which you’re creating the contract template.
Active	Option to make the template active and available for use.
Start date	Date on which the Word document template becomes valid. Providing a start date helps when maintaining multiple versions of same template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Word Template New Record form (continued)

Field	Description
	This field is available only when **Category** is selected.
End date	Date until which the Word document template is valid. Providing an end date helps when maintaining multiple versions of same template. If the values in the **Start date** and **End date** fields are empty the template will always be valid. **Note:** If you specify an end date, you must also specify a start date. This field is available only when **Category** is selected.

Legal Simple Privacy

The ServiceNow® Legal Simple Privacy provides a mechanism to raise a Privacy Assessment request to resolve privacy related concerns.

As a legal requester, you can submit a **Privacy Assessment** request and track it.

As a legal fulfiller, you can collaborate in a centralized **Legal Counsel Center** to work on privacy assessment requests and resolve them.

Explore  Learn about the features and benefits of Legal Simple Privacy.	**Set up**  Install the application, and set up practice areas, intake forms, and other configurations.
Request and Manage privacy assessment request  Submit and track privacy assessment requests.	**Reference**  Get details about components such as roles, tables, plugins, and store applications that are installed.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.

Troubleshoot and get help

- Ask or answer questions in the Legal Service Delivery community forum
- Search the Known Error Portal for known error articles
- Contact Customer Service and Support

Explore Legal Simple Privacy

The ServiceNow® Legal Simple Privacy provides a mechanism to raise a request for a privacy assessment to resolve privacy-related concerns.

Features

The features of this application include:

- The ability to submit a request for privacy assessment.
- Tracking of privacy assessment requests.

Benefits

The benefits of this application include:

- An easily accessed **Privacy Assessment** service through a service catalog to replace manual, unstructured email processes and tasks.
- Efficient collaboration with teams to resolve requests.

Setting up Legal Simple Privacy

Configure the foundation data to enable submitting a privacy impact assessment request to the legal department.

As an administrator, review the installed components and modify them or add new ones as applicable.

Create or modify a practice area

Set up the practice areas specific to law practices such as Intellectual Property, Privacy, or Compliance. Associate categories to the practice area and assign a legal department user as the practice area lead.

Create or modify a legal catalog category

Create catalog categories to group legal services that employees can use to find a specific legal service request on the Legal Service Portal.

Configure an external storage system for legal requests and legal matters

Configure an external storage system to store documents attached to the Legal Simple Privacy requests by the requester or the fulfiller, which enables your organization to have a centralized documentation management and retention policy.

Create or modify a response template for legal services

Configure a response template with a reusable message that legal fulfillers can use to send users quick and consistent messages through work notes, comments, emails, or chat conversations.

For chat response templates, you can specify a short name that can be used as a shortcut to present the response message to a user quickly.

Create an email notification

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create or modify email notifications that are sent when specific events occur,for example, when a request is assigned, closed, or canceled, or a message has been posted to request additional information.

Configuring the form layout

To track dispositions from Legal Simple Privacy requests, add the Legal Disposition [sn_lg_ops_legal_disposition] table as a related list to any Legal Simple Privacy Request form.

Install Legal Simple Privacy

Install the a Legal Simple Privacy (sn_lg_privacy) application if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they aren't already installed.

Before you begin

- Review the Legal Simple Privacy application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.
- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Ensure that the application Legal Request Management (sn_lg_ops) is installed before you install Legal Simple Privacy.

Role required: admin

About this task

The following items are installed with Legal Simple Privacy:

- Plugins
- Store applications
- Roles
- Scheduled jobs
- Tables

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Simple Privacy (sn_lg_privacy) application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

   The available versions are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.

6. Select **Install**.

What to do next

(Optional) Reconfigure the forms in the application to use the new privacy assessment record producer, catalog category, and content taxonomy. For more information, see Reconfigure forms to use new components

Use the Legal Service Delivery Guided Setup to configure the application on your instance. To access Legal Service Delivery guided setup, navigate to **Legal Administration** > **Legal Guided Setup**. For more information about using the guided setup interface, see Using guided setup .

Reconfigure forms to use new components

As an administrator, after installing Legal Simple Privacy reconfigure forms to use the new privacy assessment record producer, catalog category, and content taxonomy.

Before you begin

Role required: admin

About this task

The privacy assessment legal request that was part of Legal Request Management has been moved to a new application Legal Simple Privacy. With the new application, new privacy assessment components are available for Legal Simple Privacy. You can reconfigure the intake forms to use the new privacy assessment record producer, catalog category, and content taxonomy depending on the following points.

- If you use the new privacy assessment components, you must redo any customizations you made to the previous forms.
- The previous privacy assessment components won't be enhanced for new functionalities.

Procedure

1. Reconfigure the **Intake Form Privacy Assessment**.
   a. In the navigation filter, enter `sn_lg_ops_category.list`.
   b. From the list, select **Privacy Assessment**
   c. In the **Request record producer** field, select the Lookup using list icon ( )
   d. If you aren't able to edit the form in the current application scope, select the word **here** in the message at the top of the page.
   e. In the record producers list, select the Show/hide filter icon ( ).
   f. In the **choose field** field, select **Application**.
   g. In the condition field, select **is** if it is not displayed.
   h. Enter *`Legal Simple Privacy`* in the text box.
   i. Select the **Run** button.
   j. Select **Privacy Assessment** from the list of record producers that belong to the Legal Simple Privacy application.
   k. Select **Update**.
2. Reconfigure the catalog item for Catalog item categories.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the navigation filter, enter `sc_cat_item_category.list`.

b. In the Catalog item categories list, locate **Privacy Assessment** and select the Preview this record icon ( ).

c. Select **Open Record**.

d. In the **Catalog item** field, select the Lookup using list icon ( ).
If you are unable to edit the record, select **here** in the access message at the top of the form.

e. In the catalog items list, select the show/hide filter icon ( ).

f. In the **choose field** field, select **Application**.

g. In the condition field, select **is** if it is not already displayed.

h. Enter *`Legal Simple Privacy`* in the text box.

i. Select the **Run** button.

j. Select **Privacy Assessment** from the list of catalog items that belong to the Legal Simple Privacy application.

k. Select **Update**.

3. Reconfigure the catalog item for Connected Content.

a. In the navigation filter, enter `m2m_connected_content.list`.
The Connected Content Catalog Item: Privacy Assessment form is displayed.

b. In the **Catalog item** field, select the Lookup using list icon ( ).

c. In the catalog items list, select the show/hide filter icon ( ).

d. In the **choose field** field, select **Application**.

e. In the condition field, select **is** if it is not displayed.

f. Enter *`Legal Simple Privacy`* in the text box.

g. Select the **Run** button.

h. Select **Privacy Assessment** from the list of record producers that belong to the Legal Simple Privacy application.

i. Select **Update**.

Privacy assessment requests

Privacy assessment requests enables employees to seek services from the Legal Privacy department to resolve privacy-related concerns.

Submit a privacy assessment request

Submit a privacy assessment request for yourself or on behalf of another user to seek services from the legal department.

Before you begin

Role required: sn_lg_ops.legal_user

About this task

If you have the Legal Virtual Agent Conversations application installed on your instance, you can submit a privacy assessment request through the Virtual Agent chat. For more information, see Legal Virtual Agent Conversations.

Procedure

1. Open privacy assessment intake form, using one of the following options.
2. On the Privacy Assessment form, provide a description of the project or initiative for which you need the privacy assessment and the project sponsor.
3. Indicate whether personal data is involved in the **Is personal data involved?** field.
4. If you have selected **Yes** to indicate that personal data is involved, fill in the details for additional fields as following.
5. Select **Submit**.

Result

- A privacy assessment request is created in the New state.
- The request is assigned to a group or user in the legal department based on the assignment rule set in the associated practice area. For more information, see Assignment rule to automatically assign legal requests or matters.
- If the administrator has configured notifications, you receive notifications about the progress of the request.

Update a privacy assessment request

Update request details, add comments, or upload documents in a privacy assessment request you submitted while it is still in the New or Assigned state.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Select **View all** from the **My Requests** panel.
3. Open your submitted privacy assessment request.
4. On the standard ticket page, review and edit the request details.
5. From the Actions menu, select **Edit Request**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. In the Variables form, modify the request details.
7. Select **Save**.
8. Select **Back** to return to the standard ticket page.
   The request is updated with the new information. The changes appear as comments in the Additional Comments section of the request.
9. **Optional:** In the **Activity** tab, provide comments or more information about your request for the request fulfiller.
10. **Optional:** Manage documents supporting your request.
11. **Optional:** In the **Approvals** tab, view the approval details associated with the request.

Note:
The **Approvals** tab appears only when the privacy assessment request or an attachment has approval records.

Assign a privacy assessment request

Assign a legal privacy assessment request to yourself or to someone in your assignment group.

Before you begin
Role required: sn_lg_simple_priva.privacy_fulfiller

About this task
When an employee submits a legal request, it is automatically assigned to a group or user in the legal privacy department. The assignment is done based on the assignment rules configured for the intake form of the associated practice area. If the request is assigned to a legal group, any member from the group can triage the request themselves or assign it to another member of the group. For more information, see Assignment rule to automatically assign legal requests or matters.

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Select the List icon ( ).
3. In the **Legal Requests** section, select **Unassigned**.
4. In the list of unassigned requests, open a request by selecting its request number.
5. **Optional:** Update the **Assignment group permission** to change the permission level of the legal request for the users.
   - **No Access**: Only the practice area lead, group manager, and user in the **Assigned to** field can access the legal request and assign it to one of the members in the assignment group.
   - **Read**: All members from the assignment group can only view the legal request. This option is the default permission level.
   - **Edit**: All members from the assignment group can view and work on the legal request. The **Assigned To** field becomes optional if this option is set.
6. Based on the permission option, assign the request to yourself or to another member from the assigned group.
   - To assign the request to yourself, select **Assign to me**.
   - To assign the request to another member, on the **Details** tab, select a user in the **Assigned to** field and select **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The state of the request updates to Assigned.

What to do next
The assigned user can start working on the legal request. For more information, see Work on a legal request.

Cancel a privacy assessment request

Cancel a privacy assessment request if it is no longer necessary.

Before you begin
Note:
You can cancel a privacy assessment request regardless of its state.

Role required: sn_lg_ops.legal_user

Procedure
1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Select **View all** from the **My Requests** panel.
3. Open your submitted privacy assessment request.
4. From the Actions menu, select **Cancel Request**.
5. In the Confirm request cancellation dialog box, provide the reason for the cancellation in the **Comments** field.
6. Select **Confirm Cancellation**.
   The request is canceled and the cancellation comments appear in the Additional Comments section of the request.

   Any associated active flows are terminated. Any pending approval record is also canceled and a comment is posted in the Additional Comments section of the approval record.

Install Legal Simple Compliance

Install the Legal Simple Compliance application to offer prebuilt workflows for various legal compliance needs. It enables you to manage legal compliance requests.

Before you begin

Review the Legal Simple Compliance (sn_lg_simplecompl) application listed in the ServiceNow® Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

When you install the Legal Simple Compliance application, the following applications are installed along with the other dependent applications and plugins if they aren't already installed:

Note:
You can also install these applications separately.

- Gifts and Entertainment Compliance
- Legal Conflict of Interest
- Legal Stock Preclearance

Note:
You can also install these applications separately.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Simple Compliance (sn_lg_simplecompl) application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

   The available versions are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. Select **Install**.

Gifts and Entertainment Compliance

The ServiceNow® Gifts and Entertainment Compliance enables you to manage the disclosure that might arise from employees giving or receiving gifts or entertainment to internal or external parties. This also enables you to comply with company policies.

Explore Gifts and Entertainment Compliance

The Gifts and Entertainment Compliance application enables you to manage disclosures and its approval arising from employees giving or receiving gifts or entertainment.

Gifts and Entertainment Compliance overview

Gifts and Entertainment Compliance enables you to streamline the giving and receiving of gifts and entertainment as per the configured gift policies. You can create and manage gift policies according to your organizations policies.

Disclosure requests are auto-approved when the value of disclosure is within the limits configured in the gift policy. This expedites the approval process, so you get quick responses.

Gifts and Entertainment Compliance users

Users

User	Description
Gifts and entertainment administrator	Administers Gifts & Entertainment application with full access to the underlying data.
Gifts and entertainment configurator	Manages gifts and entertainment policies.
Gifts and entertainment fulfiller	Works on Gifts & Entertainment disclosure requests with access to all disclosure records.

Gifts and Entertainment Compliance workflow

1. The Gifts and entertainment configurator defines a gift policy.
2. An employee with legal user role submits a gift or entertainment disclosure request.
   - If a policy is configured and the value of gift or entertainment disclosure is within the permissible limits, the request is auto-approved.
   - If a policy is configured and the value of gift or entertainment disclosure is not within the permissible limits, the request is sent for manager's approval.
   - If there is no policy configured, the request is sent for manager's approval.
3. After manager's approval the request is sent to the members of Legal - Gifts Compliance group for approval.
4. Any one of the members of the Legal - Gifts Compliance group approves the disclosure request.
5. The manager or Legal - Gifts Compliance group members can reject the approval which will result in the request being rejected.

- Gifts and Entertainment Compliance reference

Setting up Gifts and Entertainment Compliance

Configure the foundation data required for managing the gift and entertainment disclosure requests.

As an administrator, you can review the installed components and modify them or add new ones as applicable.

- Approver group for managing Gifts and Entertainment Compliance requests
- Gift policies for Gifts and Entertainment Compliance.
- Notifications to inform different stakeholders at different stages of a gift and entertainment disclosure requests.

Install Gifts and Entertainment Compliance

You can install the Gifts and Entertainment Compliance application (sn_lg_gifts) if you have the admin role.

Before you begin

Note:

The Gifts and Entertainment Compliance application is installed automatically when you install the Legal Simple Compliance suite.

Gifts and Entertainment Compliance requires a separate subscription from the rest of the ServiceNow AI Platform.

To purchase a subscription, contact your ServiceNow account manager. When you purchase a subscription, certain plugins are activated automatically. If a paid plugin isn't activated automatically, you can manually activate it from the All Applications list in your instance.

Note:

Before purchasing a subscription, you can evaluate the feature on a non-production instance without charge by requesting it from the Now Support Service Catalog.

Role required: admin

About this task

The following items are installed with Gifts and Entertainment Compliance:

- Store applications
- Roles
- Flows
- Tables

For more information, see Components installed with Gifts and Entertainment Compliance.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Gifts and Entertainment Compliance plugin (sn_lg_gifts) using the filter criteria and search bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

Note:
When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Configure gift policy for Gifts and Entertainment Compliance

Configure a gift policy in accordance with your organization's policy. This policy will outline the conditions under which approval is required.

Before you begin

Ensure that the Gifts and Entertainment Compliance application scope is selected.

Role required: sn_lg_gifts.gifts_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Gifts Admin** > **Gift Policies**.
2. Select **New**.
3. On the form, fill in the fields:

   For description on the field values, see Gift Policies form.

4. Click **Save**.

Configure approval workflow for Gifts and Entertainment Compliance

Review the flows installed with the Gifts and Entertainment Compliance application and configure them to align to your company's policy.

Before you begin

Ensure that the Gifts and Entertainment Compliance application scope is selected.

Role required: sn_lg_gifts.gifts_config

About this task

Gifts and Entertainment Compliance uses the Gifts Approval flow to trigger multi-level approvals when an employee submits a gifts and entertainment disclosure request

The flows are built using ServiceNow Workflow Studio, so make sure you're familiar with the Flow Designer basics.

Procedure

1. Navigate to **All** > **Process Automation** > **Flow Designer**.
2. Find the *`Gifts Approval`* and click the name of the flow to open.
3. Modify the trigger to set the conditions for the flow to trigger, and actions to add or update the approval levels.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information on how to create or modify flows, see Create a flow.

4. Click **Save**.
5. Test the flow by clicking **Test**.

   For more information, see Test a flow.

6. If not already active, click **Activate** to enable the flow.

Requesting legal clearance for gifts and entertainment

Employees who engage in giving or receiving gifts and entertainment can submit a disclosure and obtain the legal clearance for their transaction.

Submit a gifts and entertainment disclosure

Submit a disclosure to obtain the legal clearance for gifts and entertainment.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Employee Center** > **Legal services** > **Ethics and compliance**.
2. Select **Gifts & Entertainment Disclosure**.
3. **Note:**
   For description on the field values, see Gift and entertainment disclosure form

   On the form, fill in the fields and click **Submit**.

Result

- A gifts and entertainment disclosure request is created in the New state. If the value of the disclosure is within the maximum amount allowed, the request is auto-approved and the state is updated to Approved.
- The approval flow is triggered under the following conditions.
  - There are no gift policies defined or there are no active policies.
  - The value of the disclosure is more than the maximum amount allowed.
  - The external company name is not available in the list and was manually entered.
- The Standard Ticket page displays the following tabs to perform different tasks:
  - Activity: Track the activity history of the request and post messages for the fulfiller working on the request.
  - Attachments or Documents: Upload and manage the documents in the legal request.

    Note:
    If the external storage option is enabled, the **Documents** tab is displayed. Otherwise, the **Attachments** tab is displayed.

  - Request details: Review request details.

Managing gifts and entertainment disclosure requests

As a member of the Legal - Gifts Compliance group, review gifts and entertainment disclosure requests from employees and approve or reject them.

Use the Legal Counsel Center to manage gifts and entertainment disclosure requests.

Approve or reject a gifts and entertainment disclosure request

Approve or reject a gifts and entertainment disclosure request assigned to you or a Legal - Gifts Compliance group of which you're a member.

Before you begin

Role required: sn_lg_gifts.gifts_fulfiller or sn_lg_ops.request_fulfiller

About this task

The *Gifts Approval* flow available in the base system, automatically routes your gifts and entertainment disclosure request through multiple approval levels. Once your request gets approved, it moves on to the next level.

Note:
If the approval is assigned to an approval group, any member from the group can approve or reject the request.

Procedure

1. Open the approval request
2. In the **Approvers** tab, click **Requested** in the **State** column to open the approval form.
3. Approve or reject the request.
   - To approve the gifts and entertainment disclosure request, click **Approve**.
   - To reject the gifts and entertainment disclosure request, click **Reject**.

Result

The approval status of the request is updated in the Approvers tab.

The following table shows the results of approve and reject actions on the approval request.

Results of actions on the approval request

Approve	Reject
• The state of the current approval level in the request updates to Approved. • If available, the request advances to the next approval level and is assigned to an approver or approver group set in the approval level. The state of the next approval is set as Requested. • If the current approval is the last in the approval flow, the approval moves to the Approved state. The legal request status changes to Approved.	• The state of the current approval level in the request updates to Rejected. • All the subsequent approval levels in the approval flow are skipped. • The legal request status updates to Rejected. • The comments for rejection posted by the approver is added to the request.

Update a submitted gifts and entertainment disclosure request

Update request details, add comments, or upload documents in a gifts and entertainment disclosure request you submitted while it is still in the New state. You can cancel a submitted request irrespective of its state.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Self Service** > **Employee Center**.
2. Open your submitted legal request from the **My Requests** option on the header menu.
3. On the Standard Ticket page, review and edit the request details, manage attachments, or cancel the request.
4. **Optional:** In the **Activity** tab, provide comments or more information about your request for the request fulfiller.
5. **Optional:** Manage documents supporting your request.

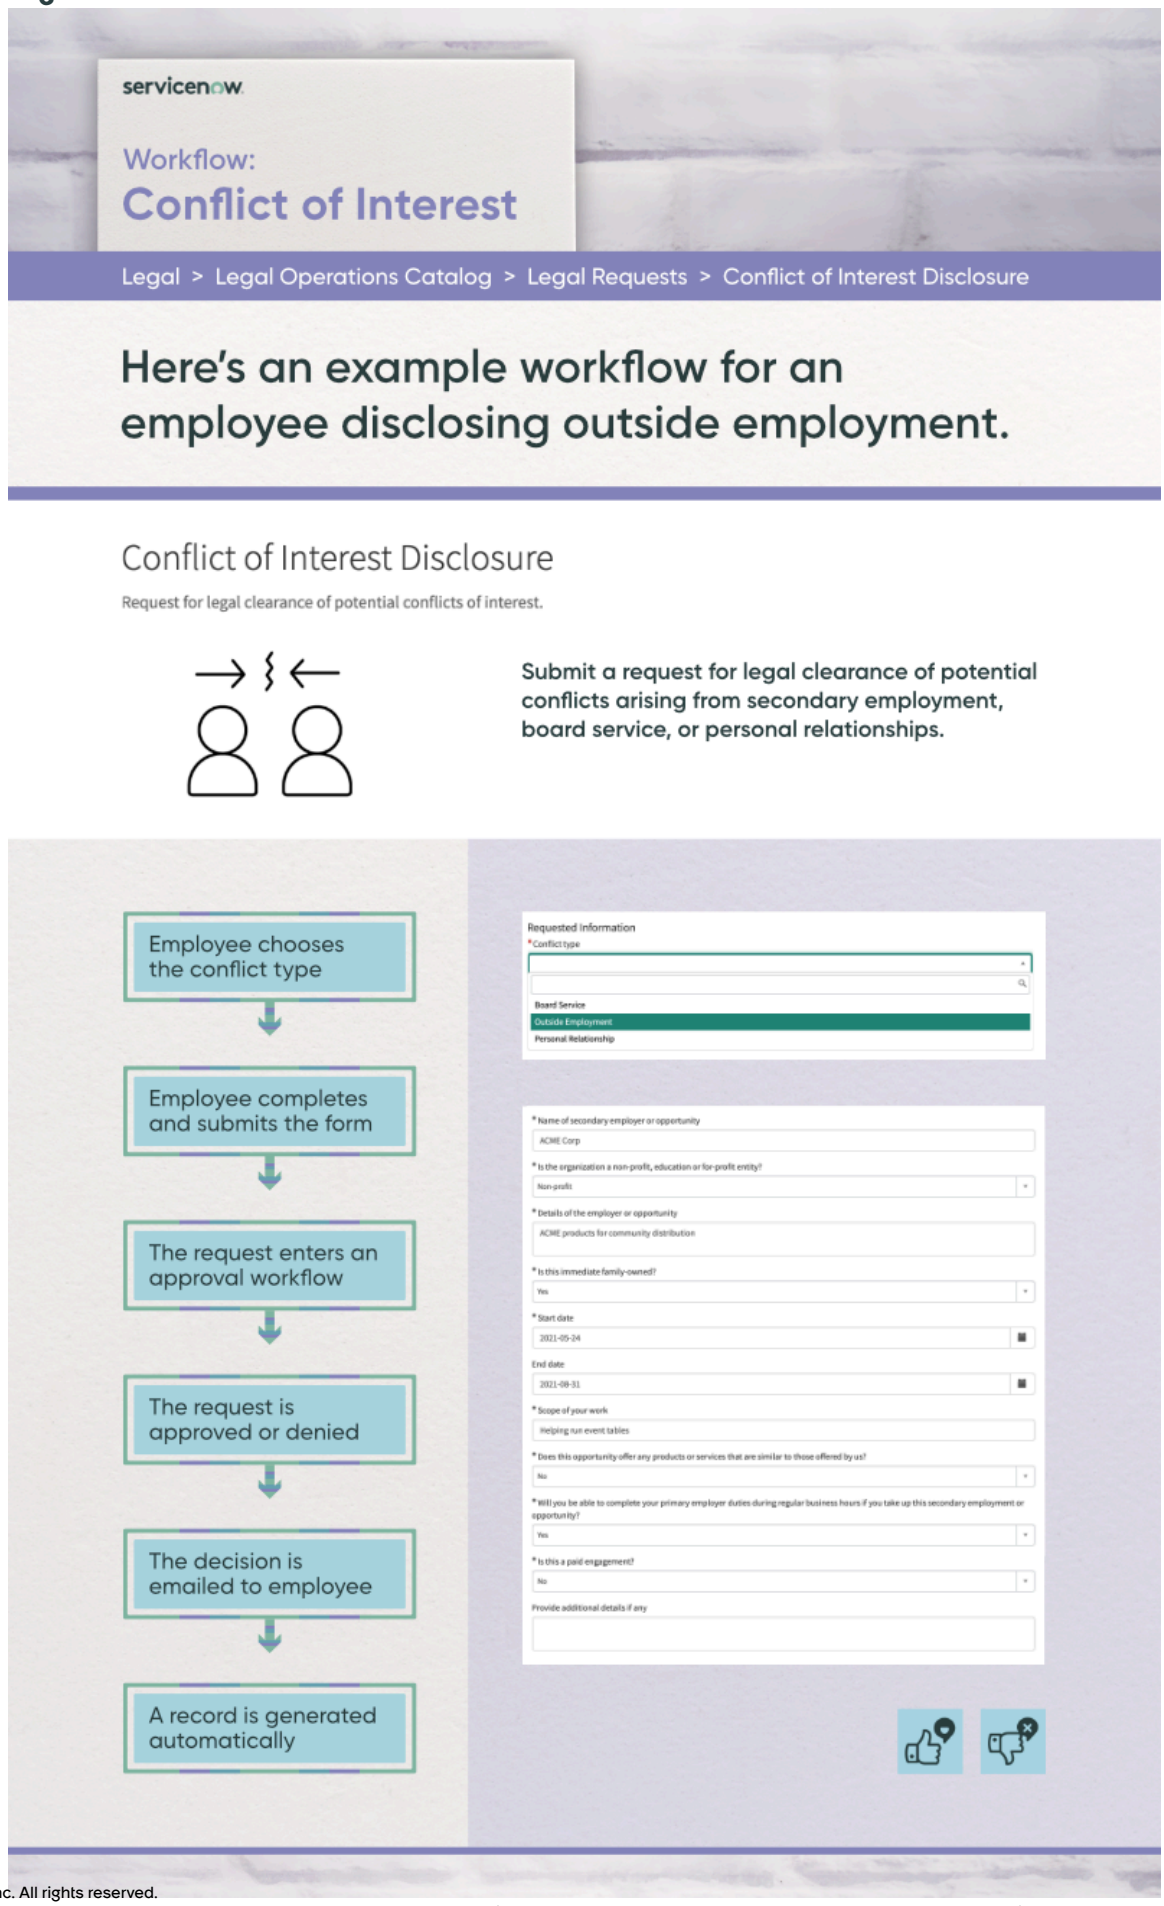
Exploring Legal Conflict of Interest



The Legal Conflict of Interest application enables you to manage the disclosure, approval, and registry of conflict of interest that might arise from employees having competing interests or loyalties.

Features

- Configurable approval flows in accordance with the organization's Conflict of Interest (COI) policy.
- Centralized register for all the disclosure of potential conflicts.
- Continuous monitoring of all disclosure requests for their validity.
- Automated reminders to the requesters before the expiry of their conflict approvals.

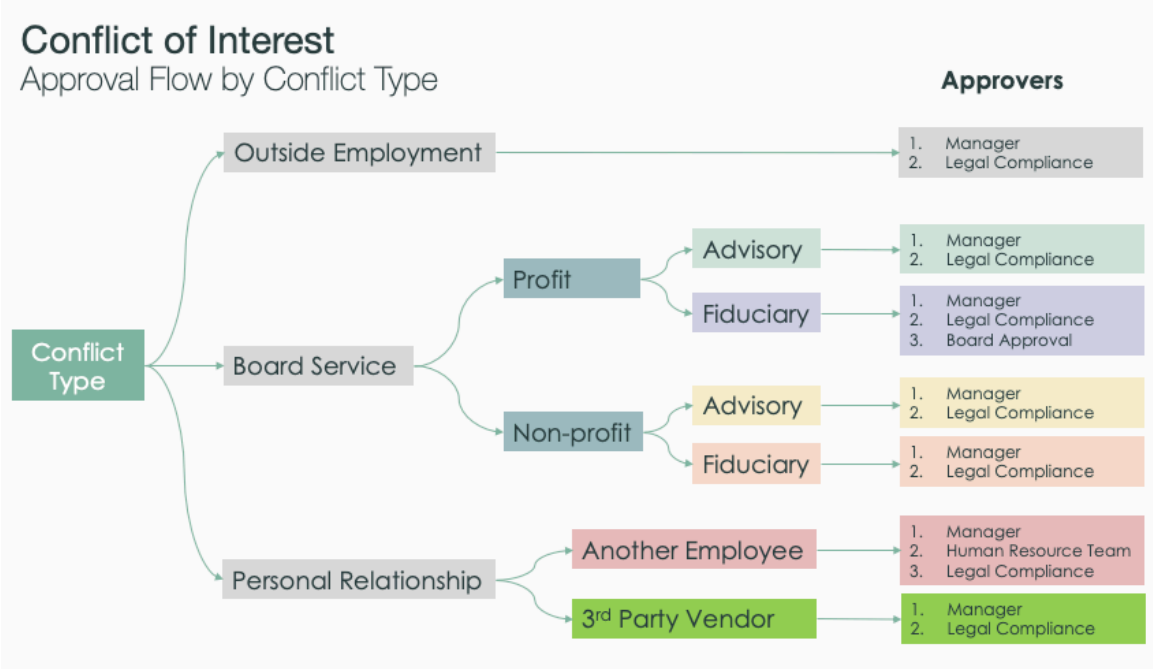
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Automated approval flow



The approval flow for approving a conflict of interest disclosure request is automated. When all designated approvers have approved the conflict of interest disclosure request, a corresponding registry for the conflict is created.

A notification is sent to the requesters before the expiry of the validity of their COI disclosure records. If the requesters need an extension, they should review and resubmit a request to get the legal clearance for the extended period.

The approvers and the number of approval levels differ based on the conflict type.

Following illustration shows the approvers and number of approval levels for each conflict type. For example, the Outside Employment conflict type has two approval levels. The first-level approver is the manager of the requester, and the second-level approver is the legal compliance group.

Conflict of Interest approval flow

The administrator can modify the approval flow in the following ways:

- Change the number of levels of approval required.
- Add or modify approvers or approver groups at each level of approval.

For more information, see Configure flows for Legal Conflict of Interest.

Setting up Legal Conflict of Interest

Configure the foundation data required for managing the conflict of interest requests.

As an administrator, you can review the installed components and modify them or add new ones as applicable.

- Approver group for managing conflict of interest requests
- Flows for Legal Conflict of Interest
- Notifications to inform different stakeholders at different stages of a conflict of interest request

Install Legal Conflict of Interest

You can install the Legal Conflict of Interest application (sn_lg_coi) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they aren't already installed.

Before you begin

Note:

The Legal Conflict of Interest application is installed automatically when you install the Legal Simple Compliance suite.

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Conflict of Interest application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Install the Legal Request Management (sn_lg_ops) application before you install Legal Conflict of Interest.

Role required: admin

About this task

The following items are installed with Legal Conflict of Interest:

- Plugins
- Store applications
- Roles
- Tables
- Business Rules

For more information, see Components installed with Legal Conflict of Interest.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Conflict of Interest application (sn_lg_coi) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

   In the list, next to the **Install** button, the versions that are available are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.

6. Select **Install**.

What to do next

Use the Legal Service Delivery Guided Setup to configure the application on your instance.

To access Legal Service Delivery guided setup, navigate to **Legal Administration** > **Legal Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Configure flows for Legal Conflict of Interest

Review the flows installed with the Legal Conflict of Interest application and configure them to align with your business needs.

Before you begin

Ensure that the Legal Conflict of Interest application scope is selected.

Role required: sn_lg_coi.coi_admin and admin

About this task

Legal Conflict of Interest uses the following flows:

- COI Approval flow: Triggers multi-level approvals when an employee submits a conflict of interest request
- Scheduled Flow to Deactivate COI: Triggers to validate and deactivate any existing conflict of interest disclosure record that has the end date before the current date. The flow triggers at a scheduled time.

The flows are built using ServiceNow Workflow Studio, so make sure you're familiar with the Flow Designer basics.

Procedure

1. Navigate to **All** > **Process Automation** > **Flow Designer**.
2. Find the *COI Approval flow* and click the name of the flow to open.
3. Modify the trigger to set the conditions for the flow to trigger, and actions to add or update the approval levels.

   For information on how to create or modify flows, see Create a flow.
4. Click **Save**.
5. Test the flow by clicking **Test**.

   For more information, see Test a flow.
6. If not already active, click **Activate** to enable the flow.

Requesting legal clearance for conflict of interests

Employees who engage in activities that could potentially conflict with their primary employment duties can disclose these potential conflicts and obtain the legal clearance by submitting a request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Submit a new conflict of interest disclosure request

Submit a request to obtain the legal clearance before you involve in any activity that might pose a risk of potential conflict with the primary employer duties.

Before you begin

Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.

   Note:
   If you're using Employee Center, you can submit a legal request by navigating to the Employee Center portal and selecting a request from the **Legal services** > **Browse Legal services** menu.

2. Click **Service Catalog** to view all available request categories.
3. Search for the conflict of interest disclosure request item.
4. Click **Conflict of Interest Disclosure**.
5. In the **Conflict type** field, select the type of conflict.
   The following options are available to select:
   - **Board Service**: A conflict of interest when a board member's interest might compromise the organization's interest or derive a financial or personal gain from a direct or indirect relationship.
   - **Outside Employment**: A conflict of interest when employees take up a second job that might be in conflict with the primary job duties.
   - **Personal Relationship**: A conflict of interest when employees having personal relationships also have a professional relationship within the organization.

   Based on the selection, more fields appear to fill in the required information.
6. On the form, fill in the fields and click **Submit**.

Result

- A conflict of interest disclosure request is created in the New state and is sent for approval. The approval flow for the selected conflict type controls the request to go through the required number of approval levels. Approvers assigned at each approval level can approve the request. Once the approval flow gets triggered, the state of the request updates to Work in Progress.
- The Standard Ticket page displays that has the following tabs to perform different tasks:
  - Activity: Track the activity history of the request and post messages for the fulfiller working on the request.
  - Attachments or Documents: Upload and manage the documents in the legal request.

    Note:
    If the external storage option is enabled, the **Documents** tab is displayed. Otherwise, the **Attachments** tab is displayed.

  - The approval details appear under the **Approvals** tab on the Standard Ticket page.
  - Request Details: Review request details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update an existing conflict of interest disclosure request

Update an existing conflict of interest disclosure request to obtain the legal clearance again before it expires. You might want to get fresh approvals for an extension of the period or for the revised conditions that might pose a risk of potential conflict with the primary employer duties.

Before you begin
Role required: sn_lg_ops.legal_user

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.
2. Click **Service Catalog** to view all available request categories.
3. Search for the conflict of interest disclosure request item.
4. Click **Conflict of Interest Disclosure**.
   If you have any existing conflict of interest records, the form shows the **Do you want to create new / update existing COI ?** field.
5. In the **Do you want to create new / update existing COI ?**, select **Update** to update the details of the request you submitted in the past.
   To submit a fresh request, select **New**. See Submit a new conflict of interest disclosure request.
6. In the **Active / Inactive COI Records** field, select a COI record that you want to update.
   More fields appear with the values filled in from the previous request. Update these fields as required.
7. On the form, update the fields and click **Submit**.

   Note:
   You cannot update a few fields on the form, and so they show up as inactive.

8. **Optional:** Manage documents supporting your request.

Result
The conflict of interest disclosure request is updated and the state is set as New. The Activities stream shows the details of the updated fields. The request is sent for approval. The approval flow for the selected conflict type controls the request to go through the required number of approval levels. Approvers assigned at each approval level can approve the request. After the approval flow gets triggered, the state of the request updates to Work in Progress.

The approval details appear under the **Approvals** tab on the Standard Ticket page.

Managing conflict of interest disclosure requests

As a member of the legal department, review conflict of interest requests from employees and approve or reject them. You can also update the approved disclosure records to extend their validity or their status.

Use the Legal Counsel Center to manage conflict of interest disclosure requests or records.

Approve or reject a conflict of interest disclosure request

Approve or reject a conflict of interest disclosure request assigned to you or a legal user group of which you're a member.

Before you begin
Role required: sn_lg_ops.coi_fulfiller or sn_lg_ops.request_fulfiller

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The multi-level approval flow for a conflict of interest disclosure request is automated through the *COI Approval flow*. The flow controls the request to advance to the next approval level when approved at one approval level. After the final-level approval, a conflict of interest disclosure record is created. The approval or rejection of the request and the end date specified in the request determines the state of the newly created disclosure record.

For more information on approval flow, see Conflict of Interest – Approval flow.

Note:
If the approval is assigned to an approval group, any member from the group can approve or reject the request.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **My Work**, click **Items Pending Approval**.
4. In the Items Pending Approval list, open a request by clicking the request number in the **Approval for** column.
5. If it's an existing request that is updated by the requester, review and validate the changes from the Activities stream.
6. In the **Approvers** tab, click **Requested** in the **State** column to open the approval form.
7. Approve or reject the request.
   - To approve the conflict of interest disclosure request, click **Approve**.
   - To reject the conflict of interest disclosure request, click **Reject**.

Result

The approval status of the request is updated in the Approvers tab.

The following table shows the results of approve and reject actions on the approval request.

Results of actions on the approval request

Approve	Reject
• The state of the current approval level in the request updates to Approved. • If available, the request advances to the next approval level and is assigned to an approver or approver group set in the approval level. The state of the next approval is set as Requested. • If the current approval is the last in the approval flow, the approval moves to the Approved state. The legal request status changes to Closed. • For a new request, a corresponding conflict of interest disclosure record is created. For an existing request, the related conflict of interest disclosure record is updated.	• The state of the current approval level in the request updates to Rejected. • All the subsequent approval levels in the approval flow are skipped. • The legal request status updates to Closed. • The comments for rejection posted by the approver is added to the request. • For a new request, a corresponding conflict of interest disclosure record is created in the Rejected state. • For an existing request, the related conflict of interest disclosure record is updated without changing its existing state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Results of actions on the approval request (continued)

Approve	Reject
The state of the conflict of interest disclosure record is based on the following conditions: ○ If the end date of the record is empty or later than the approval date, the state is Active. ○ If the end date of the record is prior to the approval date, the state of the record is Inactive.	

Update an existing conflict of interest disclosure record

You can update an existing conflict of interest disclosure record to change the validity period or the status of the record.

Before you begin

Role required: sn_lg_ops.coi_fulfiller

About this task

You can only update conflict of interest disclosure records that have the conflict status as Active.

Procedure

1. Navigate to **All** > **Legal Practice Apps** > **Conflict of Interest** > **All**.
2. Open a conflict of interest disclosure record that you want to review or update.
3. On the form, update the fields as required.
   You can update only the following fields that are available based on the conflict type of the disclosure record:
   - **Start date**: Available in Board Service and Outside Employment conflict types.
   - **End date**: Available in Board Service and Outside Employment conflict types.
   - **Conflict status**: Available in all conflict types.
4. Click **Update**.

Setting up Legal Stock Preclearance

Configure the foundation data for your stock preclearance process to enable employees to submit preclearance approval requests before they trade in the securities.

As an administrator, you can review the installed components and modify them or add new ones as applicable.

- Legal stock approvers
- Fiscal calendar
- Trading windows
- Trading holidays
- Access Persons list
- Notifications

Install Legal Stock Preclearance

You can install the Legal Stock Preclearance application (sn_lg_stock_cp) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they aren't already installed.

Before you begin

Note:

The Legal Stock Preclearance application is installed automatically when you install the Legal Simple Compliance suite.

- Verify that the application and all of its associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Legal Stock Preclearance application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following components are installed with installation of the Legal Stock Preclearance application:

- Plugins
- Store applications
- Roles
- Tables
- Business Rules

For more information, see Components installed with Legal Stock Preclearance.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Legal Stock Preclearance application (sn_lg_stock_cp) using the filter criteria and search bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

3. In the *Application installation* dialog box, review the application dependencies.

   Dependent plugins and applications are listed that are already installed, will be installed, or must be installed. If any plugins or applications need to be installed, you must install them before you can install Legal Stock Preclearance.

4. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
5. Select **Install**.

What to do next
Use the Legal Service Delivery Guided Setup to configure the application on your instance.

To access Legal Service Delivery Guided Setup, navigate to **Legal Administration** > **Legal Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Set up a trading window

Set up a trading window for a period in which certain designated employees of the organization are permitted to trade in the securities of your organization.

Before you begin
Role required: sn_lg_stock_cp.stock_config

About this task
During an open trading window, the designated employees such as directors and executives can trade in compliance with your organization's Insider Trading Policies.

Procedure
1. Navigate to **All** > **Legal Administration** > **Stock Preclearance Admin** > **Trading Windows**.
2. Click **New** to set up a trading window.
3. On the form, fill in the fields.

Trading Window form

Field	Description
Short description	Unique short description for the trading window.
Fiscal quarter	Fiscal quarter for which the trading window is open.
Opening date	Date the trading window opens.
Closing date	Date the trading window closes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Request submission start date	Date from which you can start submitting preclearance requests.
Earnings date	Date of your company's earnings.
Approval validity days	Number of days a stock preclearance approval is valid for.
Exclude trading holidays	Option to exclude trading on holidays that fall within the trading window. Selecting this option extends the approval validity days by the number of holidays during the trading period. **Note:** By default, weekend days are excluded for calculating the validity due date. For example, say that a trading window opens from January 1 to January 31 and you have set the approval validity days to 10 days. If January 24 and 25 are trading holidays, then, ○ If the preclearance is approved on January 8, the approval validity is until January 22 (10 days from January 8 + 4 days of two weekends). ○ If the preclearance is approved on January 15, the approval validity is until January 31 instead of January 25 (10 days + 4 days of two weekends + 2 holidays from January 15). ○ If the preclearance is approved on January 21, the approval validity is until February 6 (10 days + 2 holidays from January 20 + 4 days of two weekends). However, as the trading window closes earlier than the validity of approval, the last date is January 31 rather than February 6.

4. Click **Submit**.

Add trading holidays

Add trading holidays during which the trading is closed.

Before you begin
Role required: sn_lg_stock_cp.stock_config

About this task
A trading holiday might impact the stock preclearance approval validity period based on the **Exclude trading holidays** field's setting in the trading window. For more information, see Set up a trading window.

Procedure
1. Navigate to **All** > **Legal Administration** > **Stock Preclearance Admin** > **Trading Holidays**.
2. Click **New**.
3. Enter the calendar year for which you want to add trading holidays and click **Submit**.
4. Open the calendar year you created to add trading holidays.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the Holidays related list, click **New**.
6. On the form, fill in the fields.

Holiday form

Field	Description
Short description	Unique short description for the trading holiday, such as New Year, Labor Day, or Christmas.
Date	Date of holiday.

7. Click **Submit**.

Manage access persons list

Add users who have access to non-public information regarding the trade of securities of your organization.

Before you begin

Role required: sn_lg_stock_cp.stock_config

Procedure

1. Navigate to **All** > **Legal Administration** > **Stock Preclearance Admin** > **Access Persons**.
2. To add a user to the access persons list,
   a. Click **Add Users**.
   b. In the Add User dialog box, select users from the list to add as access persons.
   The list shows only active users from the Users [sys_user] table.
   a. Scroll down to the Actions on selected rows menu and choose **Add Users to Access List**.
   The selected users are added to the Access Persons list.
3. To modify a user's information in the Access Persons list,
   a. Click the preview icon ( ) and click **Open Record**.
   b. On the form, update the fields.

Access Persons form

Field	Description
User	Name of the user.
Entry date	Date on which the user was added to the access persons list. This field is not available for modification.
Exit date	Date the user is automatically removed from the access persons list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Sec 16 officer	Option for marking the user as a Section 16 officer.

c. Click **Update**.

Submit a preclearance approval request

As a designated access person, submit a request to obtain the preclearance approval from the legal department before you can trade in the securities of your organization.

Before you begin

Role required: sn_lg_ops.legal_user

About this task

You can submit a preclearance request during an open trading window period only if you are in the Access Persons list.

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Service Portal**.

   Note:
   If you're using Employee Center, you can submit a legal request by navigating to the Employee Center portal and selecting a request from the **Legal services** > **Browse Legal services** menu.

2. Click **Service Catalog** to view all available request categories.
3. Search for the stock preclearance request item.
4. Click **Stock Preclearance**.
5. On the form, fill in the fields.

Stock Preclearance form

Field	Description
Transaction type	Type of securities transaction for which you need a preclearance approval. ○ Purchase ○ Sell ○ Transfer ○ Gift
Number of securities	Number of shares to trade.
Nature of securities	Type of shares for which you need a preclearance approval. ○ Open Market ○ ESPP (Employee Stock Purchase Plan) ○ ESOP (Employee Stock Option Plan) ○ RSU (Restricted Stock Unit)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Proposed transaction date	Date on which you want to perform the securities transaction. The date must be within the current trading window.
Short description	Description for the preclearance approval.
I agree	Option to confirm your consent to trade in securities in accordance with your organization's insider trading policies.

6. Click **Submit**.

Result

- A preclearance approval request is created and assigned to the legal stock approvers group. If configured by the administrator, you get the notification about the progress of your request.

  Note:

  The approval details appear under the **Approvals** tab on the Standard Ticket page.

- When submitting the stock preclearance request as a Sec-16 officer, the **Subcategory** in the request is automatically set as Sec-16 Officer.
- The Standard Ticket page displays that has the following tabs to perform different tasks:
  - Activity: Track the activity history of the request and post messages for the fulfiller working on the request.
  - Attachments or Documents: Upload and manage the documents in the legal request.

    Note:
    If the external storage option is enabled, the **Documents** tab is displayed. Otherwise, the **Attachments** tab is displayed.

  - Request Details: Review request details.

Approve or reject a stock preclearance approval

As a member of the legal stock approvers group, approve or reject a stock preclearance approval request so that the requester can trade in the securities of the organization.

Before you begin

Role required: sn_lg_ops.legal_fulfiller

Procedure

1. Navigate to **All** > **Legal Request** > **Legal Counsel Center**.
2. Click the list icon ( ).
3. In the **Lists** tab, under **My Work**, click **Items Pending Approvals**.
4. Open a stock preclearance approval request record by clicking **Requested**.
5. Approve or reject the stock preclearance approval request.
   - To approve the stock preclearance approval request, click **Approve**.

     The state of the approval request updates to **Approved**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To reject the stock preclearance approval request, click **Reject**.

  The state of the approval request updates to **Rejected**.

Result

- If you approve the stock preclearance approval request, the requester can perform the requested securities transaction within the current trading window. The approval is valid based on the approval validity days settings or the closing date of the current trading window, whichever is earlier.
- If you approve the request on a holiday, the approval validity starts from the next business day.
- If you reject the request, the requester cannot perform any securities transactions.

Legal Stock Preclearance reference

Reference topics provide additional information about the lists and forms that you use in Legal Stock Preclearance.

Components installed with Legal Stock Preclearance

Several types of components are installed with activation of the Legal Stock Preclearance application, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles

Roles installed with Legal Stock Preclearance

Role title [name]	Description	Contains roles
Stock Preclearance Administrator [sn_lg_stock_cp.stock_config]	Provides access to set up stock preclearance data such as trading windows, holidays, and access persons.	sn_lg_ops.legal_user

Tables

Tables installed with Legal Stock Preclearance

Table	Description
Access Persons [sn_lg_stock_cp_access_person]	Stores users designated as Access Persons to submit a stock preclearance request.
Calendar year [sn_lg_stock_cp_trading_year]	Stores calendar years used for setting up trading holidays for your organization during which no trading in securities is permitted.

AI limitations

This application uses artificial intelligence (AI) and machine learning, which are rapidly evolving fields of study that generate predictions based on patterns in data. As a result, this application may not always produce accurate, complete, or appropriate information. Further, there is no guarantee that this application has been fully trained or tested for your use case. To mitigate these issues, it is your responsibility to test and evaluate your use of this application for accuracy, harm, and appropriateness for your use case, employ human oversight of output, and refrain from relying solely on AI-generated outputs for decision-making purposes. This is especially important if you choose to deploy this application in areas with consequential impacts such as healthcare, finance, legal, employment, security, or infrastructure. You agree to abide by ServiceNow's AI Acceptable Use Policy, which may be updated by ServiceNow.

Data processing

This application requires data to be transferred from ServiceNow customers' individual instances to a centralized ServiceNow environment, which may be located in a different data center region from the one where your instance is, and potentially to a third-party cloud provider, such as Microsoft Azure. This data is handled per ServiceNow's internal policies and procedures, including our policies available through our CORE Compliance Portal.

Data collection

ServiceNow collects and uses the inputs, outputs, and edits to outputs of this application to develop and improve ServiceNow technologies including ServiceNow models and AI products. In addition, this application will collect information about the Legal Request and/or Legal Matter (including related field information, comments and work notes), and information about search requests (including search prompts and results) from Knowledge articles in Legal Counsel Center and Employee Center. Customers can opt out of future data collection at any time, as described in the Now Assist Opt-Out page.

For more information, see the Now Assist documentation.

Exploring Now Assist for Legal Service Delivery (LSD)

With the Now Assist for Legal Service Delivery (LSD) application, request fulfillers can use generative AI to summarize a legal request or legal matter. Request fulfillers or legal users can also generate actionable answers from knowledge article search results in Employee Center, Legal Counsel Center, and global search.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for Legal Service Delivery (LSD) overview

The following generative AI capabilities are available in Now Assist for Legal Service Delivery (LSD):

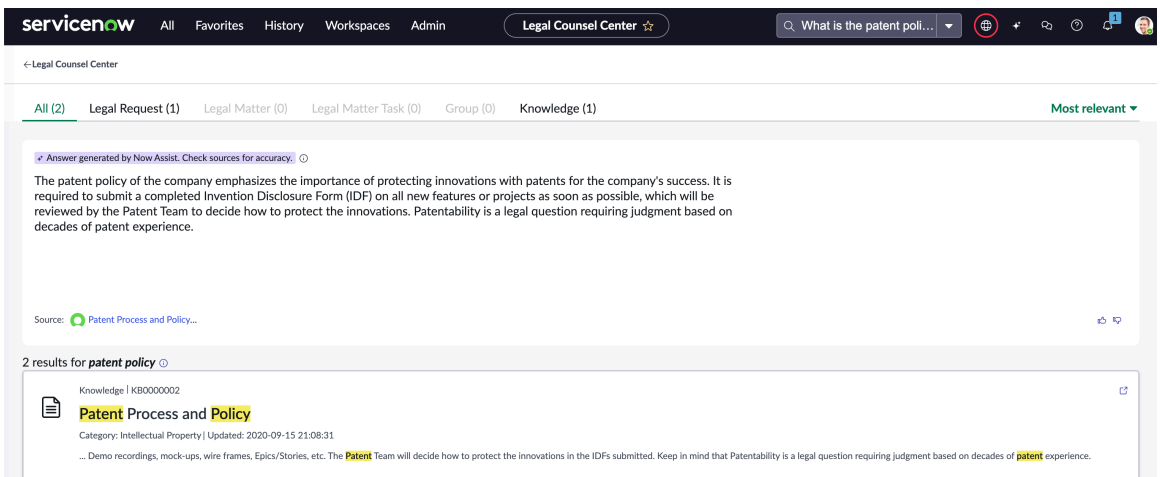
- Summarization capability for the request fulfillers to get a concise summary of a request or matter. This generative AI summary enables a request fulfiller to understand the context of the request so that they can close the request or matter more quickly. The summarization capability is available in Legal Counsel Center as well as the Now Assist panel.
- Q&A Genius Results capability for request fulfillers and legal users to generate concise, actionable answers from knowledge article results in Legal Counsel Center, Employee Center, and global search.

Legal Request and Legal Matter summarization skills

The Now Assist for Legal Service Delivery (LSD) application provides an AI-generated summary of the legal request or matter. The summary includes the request or matter details and the actions that were taken for this request or matter. A request fulfiller can view this summary to understand the context, refresh the summary, and post the summary to the work notes.

The summary is displayed above the activity stream and includes the information from the fields and variables configured as inputs.

For more information on the fields and variables that are considered for summarization, see Skill inputs for Now Assist for Legal Service Delivery (LSD) and Configure variables for Now Assist summarization.



For information on activating the Legal Request summarization skill or the Legal Matter summarization skill, see Configure Now Assist for Legal Service Delivery (LSD). For information on how to use the skills on Legal Counsel Center, see Summarize a legal request or matter by using Now Assist for Legal Service Delivery (LSD).

Q&A Genius Results

Q&A Genius Results use the Now LLM Service to generate search results from knowledge article results in Employee Center, Legal Counsel Center, and global search.

The Q&A Genius Result answer card shows a topic snippet and an answer snippet that was extracted from a knowledge article. You can view the full article directly from the answer card. For more information, see Genius Results.

It is enabled when both AI Search and Now Assist for Legal Service Delivery (LSD) are activated.

© 2026 ServiceNow, Inc. All rights reserved.

Supporting information for Now Assist for Legal Service Delivery (LSD)

Get a quick overview of the important information that is related to the Now Assist for Legal Service Delivery (LSD) application.

Supported versions

Now Assist for LSD is supported starting with Xanadu (Patch 3).

Application information

Activate the Now Assist for LSD store app (sn_lg_gen_ai) to use the summarization skills.

This store app has the following dependencies which will be installed automatically:

- Legal Request Management (sn_lg_ops)
- Now Assist for Platform (sn_genai_platform)
- Now Assist Admin Console (sn_nowassist_admin)

You need to install the following applications manually:

- Legal Counsel Center (sn_lg_cf_workspace) - Version 1.5.1 and above
- Legal Matter Management (sn_lg_matter) – Required for Legal Matter summarization

For more information, see Configure Now Assist for Legal Service Delivery (LSD).

Supported user interfaces

The Now Assist for LSD application includes the skills that are listed in the following table.

Now Assist for LSD supported interfaces

Interface	Skill
Core UI	• Legal Request summarization • Legal Matter summarization
Legal Counsel Center	• Legal Request summarization • Legal Matter summarization • Now Assist Q&A Genius Results
Employee Center	Now Assist Q&A Genius Results
Global search	Now Assist Q&A Genius Results

Configure Now Assist for Legal Service Delivery (LSD)

If you have the admin role, you can configure the Now Assist for Legal Service Delivery (LSD) application so that legal users or request fulfillers can use the generative AI skills from Legal Counsel Center and Core UI.

Before you begin

Ensure you have installed Legal Counsel Center (sn_lg_cf_workspace) - Version 1.5.1 or a later version.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

About this task

Use the Now Assist Admin console to configure the Now Assist for Legal Service Delivery (LSD) application. This console contains everything that you need to install the plugins and configure the generative AI skills. For additional information, see Now Assist Admin console.

The following table lists the features and skills that you can access from the Now Assist Admin console.

Legal Service Delivery feature and skills in the Now Assist Admin console

LSD features	Skills
Legal Request and Matter	• Legal request summarization • Legal matter summarization

The legal request summarization and legal matter summarization skills are available in the base system with the required configurations. To create a customized skill, you must create a copy of the skill that is in the base system before you modify the configuration. The parent skill is automatically deactivated when you activate your new customized skill. For more information, see Customize a summarization skill in Now Assist for Legal Service Delivery (LSD).

Note:

Now LLM Service is currently the only provider for this Now Assist application's skills.

Procedure

1. Install the Now Assist for Legal Service Delivery (LSD) plugin (sn_lg_gen_ai).
   - For information about the plugin dependencies and plugin activation order, see Application information.
   - For information about the installation process, see Install Now Assist plugins.
2. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
3. Navigate to **Employee** > **LSD**.
4. On the tile for your skill, select **Activate skill**.
5. In the General details step, view the fields.
6. After viewing the details for the selected skill, select **Save and continue** to go to the next step.
7. Customize the Now Assist context menu configuration.
   Customize the Now Assist context menu configuration to control which options should appear and how they are displayed in the Now Assist summarization.

   Note:
   Selecting the Enable Extended Tables check box applies the Now Assist context menu configuration to all the extended tables of the legal request and legal matter.

   For more information about the Now Assist context menu summarization, see .
8. After you customize the Now Assist context menu, select **Save and continue** to go to the next step.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can return to a previous step by using the **Back** button.

9. Select the inputs for the selected skill.
   For information about the inputs for each skill, see Skill inputs for Now Assist for Legal Service Delivery (LSD).

10. After you configure the inputs for the selected skill, select **Save and continue** to go to the next step.
    You can return to a previous step by using the **Back** button.
11. Customize the prompt output.
    Review and test the prompt for each input template configuration.
12. After you customize the prompt output, select **Save and continue** to go to the next step.
    You can return to a previous step by using the **Back** button.
13. Define the availability of the skill.
    You can configure the skill to be always available to users or you can select the conditions that your users must meet before the skill is available. Selecting **Customize skill availability** displays a condition builder.
14. After you configure the skill availability, select **Save and continue** to go to the next step.
15. Select where you would like to display the skill.
16. After you configure the display for the selected skill, select **Save and continue** to go to the next step.
17. Review your choices and select **Activate** to complete the configuration.
    Your skill is configured.
18. Configure the variables of the practice areas that you want to be considered as inputs for the legal request or matter summarization.
    For more information, see Configure variables for Now Assist summarization.

Skill inputs for Now Assist for Legal Service Delivery (LSD)

Get a quick overview of the skill inputs for Now Assist for Legal Service Delivery (LSD) so that you can configure how and when a skill is used.

Depending on the selected skill, you can configure inputs. An input identifies the data that is used for a skill, such as the table and fields that are used to generate a summary.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the variables of practice areas that you want to be considered as inputs for legal request or matter summarization. To add variables, see Configure variables for Now Assist summarization.

Legal Request summarization

The Legal Request summarization skill includes the inputs that identify the table and fields that are used when a summary is generated.

Note:
These fields are read-only.

Inputs for the summarization of a request in the New state, Work in progress, or Closed state

Input table	Input fields
Legal Request [sn_lg_ops_request]	• Short description • Description • Priority • State • Additional comments • Work notes • Opened by

For requests in the Work in progress or closed state, the following additional related tables and fields are considered for summarization.

Inputs for the summarization for request in the Work in progress or Closed state

Input table	Input fields
Task SLA->Task	• Has breached • Breach time • SLA definition • Stage • Business time left • Condition for Stage

Legal Matter summarization

The Legal Matter summarization includes the inputs that identify the table and fields that are used when a summary is generated.

Note:
These fields are read-only.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Inputs for the summarization of a matter in the New, Work in progress, or Closed state

Input table	Input fields
Legal Matter [sn_lg_matter_matter]	• Short description • Description • Priority • State • Additional comments • Work notes • Parent request
Legal Matter Task->Matter	• Name • State • Order • Priority • Requested by • Phase • Matter • Event name • Assigned to • Due date • Additional comments • Work notes • Short description
Legal Request	Legal Request
Approvers	• State • Approver • Comments • Approving

Customize a summarization skill in Now Assist for Legal Service Delivery (LSD)

If you have the admin role, you can customize a Now Assist for Legal Service Delivery (LSD) skill so that you can use the generative AI skills in Legal Counsel Center and in Core UI.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

From the Now Assist Admin console, you can select the input table, related records, and fields for each input template of the request summarization skill, and then configure the prompt headers to include in the general summary.

The Legal Request summarization and Legal Matter summarization skills are available in the base system with the required configurations. To create a customized skill, create a copy of the skills available in the base system and modify the configurations. When the customized skill is activated, the parent skill is automatically deactivated.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
2. Navigate to **Employee** > **LSD**.
3. Create a copy of the Now Assist for LSD feature summarization skill for customization.

   a. On the feature card that is associated with the skill that you would like to activate, select the More actions icon for the skill in the Active skills section and create a copy that you can customize by selecting **Make a copy**.

   b. On the confirmation pop-up, select **Make a copy**.
   A guided setup leads you through the configuration of the general details, input, prompt, availability, display, review, and activation of the customized skill. If you complete the entire walk-through, the summarization skill is activated.

4. In the General details step, fill in the fields.
   For information about the inputs for each skill, see Skill inputs for Now Assist for Legal Service Delivery (LSD).

   a. Enter a name and description for the skill.

   b. Select **Save and continue** to go to the next step.

5. Customize the Now Assist context menu configuration.
   Customize the Now Assist context menu configuration to control which options should appear and how they are displayed in the Now Assist summarization.

   Note:
   Selecting the Enable Extended Tables check box applies the Now Assist context menu configuration to all the extended tables of the legal request and legal matter.

   For more information about the Now Assist context menu summarization, see .

6. View the input data for each skill, such as the base input fields and related lists for the different input templates (New, Work in progress, or Closed states).

   Configure the base input table fields and related lists for the different input templates (New, Work in progress, or Closed states) for the skill.

   Each skill relies on a base input table and input fields with descriptions to provide context for the Now LLM Service to generate a response.

   Select only those related tables that are offered as the base system, as part of the input data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. For each input template state (New, Work in progress, or Closed), select **+New base input field** and configure the base input table fields.

Add multiple base input fields, as necessary.

The following table lists the base input table fields and descriptions, including a relevant example.

Base input fields

Field	Description
Base input field	Field in the table whose value this skill uses in its response. For example, `Short description`.
Field description	Description of the base input field value. For example, `Short description of legal request, provides quick info about the request.`

b. For each input template state (New, Work in progress, or Closed), configure the rule conditions by using the condition builder to filter the data.

The rule conditions determine when the input template is used. By default, the record state determines the input template that the Now LLM Service uses.

You can build the condition out further by selecting **+New condition set** and configuring additional parameters.

The following table lists the input template states.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Input template states

State	Description
New	State is New.
Work in progress	State is Work in Progress.
Closed	State is Closed.

c. For each input template state (New, Work in progress, or Closed), select **+New data source** to configure the additional related table and activity stream data, as needed.

Adding input data sources, like the related tables and activity streams, provide more context to the Now LLM Service in a related list.

You can also add the rule conditions to these additional data sources.

The selection of the related table fields may have a direct impact on the quality of the corresponding prompt header. For example, if a prompt header requires a specific field from the related table, but that field isn't selected as input, the summary for that prompt header will contain missing information. For example, for a legal request, you see one related table, such as Service level agreement (SLA), that includes all the required fields and filtering conditions for the prompt header. The SLA prompt header is preselected to help you understand how the related table, its fields, and the prompt header work together to produce a summary. You can use the SLA as a reference to configure the other related tables to determine which fields to select and which description adds the requirements of their respective prompt headers. Apply any additional conditions to filter the data further.

d. Select **Save and continue** to go to the next step.

7. Customize the prompt.

Review and test the prompt for each input template configuration. You can edit the prompt by adding new predefined sections and reordering them, as needed.

a. For each input template state (New, Work in progress, or Closed), select the prompt sections from the list of available sections to include in the generated summary.

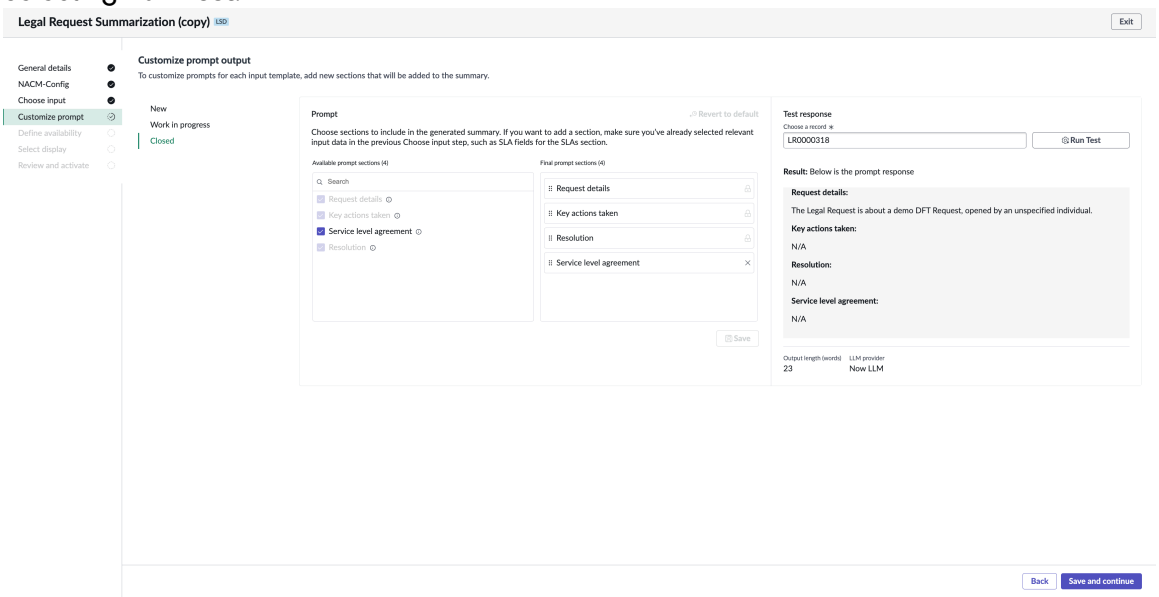
To add a section, you must configure the relevant input data prior to this step.

The available prompt sections that you can select:

- **Request or matter details**
- **Key Actions Taken**
- **Resolution**

The following table lists the mandatory prompt headers.

Mandatory prompt headers for legal request summarization



Input template state	Mandatory prompt header
New	Request or matter details

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Input template state	Mandatory prompt header
Work in progress	▪ Request details ▪ Key Actions Taken ▪ Service level agreement (only for request summarization)
Resolved	▪ Request details ▪ Key Actions Taken ▪ Service level agreement (only for request summarization) ▪ Resolution

b. Select **Save** to continue to the test response.

c. Select a record in the Test response section, and test the prompt response output format by selecting **Run Test**.

d. Select **Save and continue** to go to the next step.

8. Define how the skill is available to your users.

a. Configure the skill to be always available to users or select conditions that must be met before the skill is available.
Selecting **Customize skill availability** displays a condition builder to filter the data further.

b. Select **Save and continue** to go to the next step.

9. Configure where to display the summarization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select either **In-product**, or **Now Assist panel**.

- **In-product**: When selected, the Now Assist skills are displayed on the forms and workspaces.

  For the skills that appear in-product, select the down arrow to identify the roles that can use the skill.

- **Now Assist panel**: When selected, the Now Assist skills are available in the Now Assist panel.

  If you don't see this option, you must activate the Now Assist panel. For more information, see Turn on the Now Assist panel.

  For the skills that appear in the Now Assist panel, select the down arrow to identify the roles that can use the skill.

b. Select **Save and continue** to go to the next step.

10. Review and activate the skill.
    Review your choices and select **Activate** to complete the skill customization.
    You can now select **Summarize** to generate the summary.
11. Configure the variables of the practice areas that you want to be considered as inputs for the legal request or matter summarization.
    For more information, see Configure variables for Now Assist summarization.

Configure variables for Now Assist summarization

Configure the variables of the practice areas that you want to be considered as inputs for legal request or matter summarization by using the Now Assist application.

Before you begin

Role required: admin or sn_lg_ops.legal_admin

Procedure

1. Navigate to **All** > **Legal Administration** > **Practice Areas**.
2. Select the practice area, such as Contracts, Ethics, or Compliance, that you want to add the variables to.
3. On the **Intake Forms** tab, select and open the record.
4. In the information message at the top of the page, select the link **here** to edit the intake form record.
5. Unlock and select the variables by selecting the variables for summarization ( ) icon.

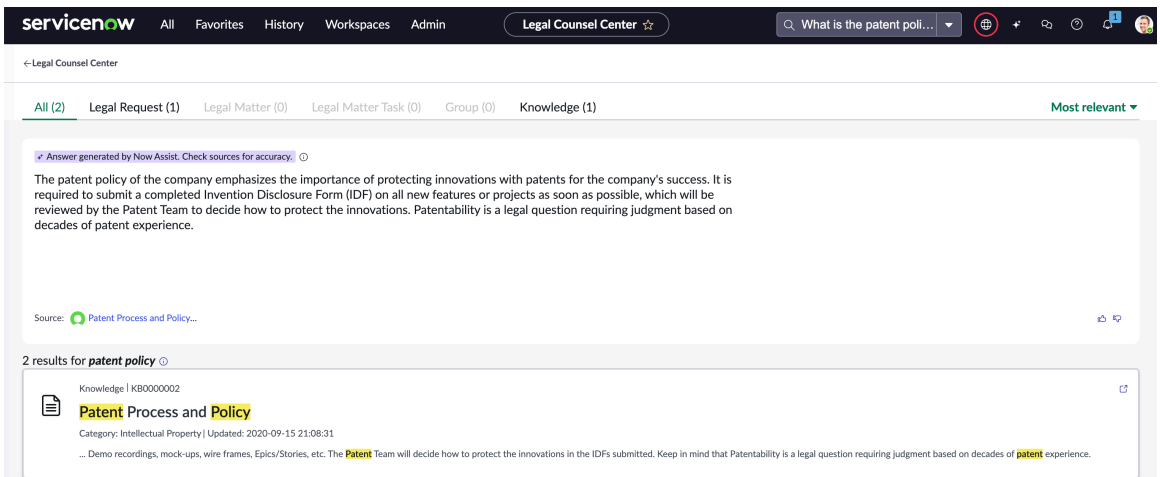
   Note:
   Only single-row variables that aren't mapped to a field are visible.

6. Add a single variable or multiple variables to an intake form of the practice area.
7. Lock the selected variables by selecting the unlock key icon).
8. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
All the selected variables are added to the intake form of the practice area.

What to do next
You can add variables to the intake forms of other practice areas by repeating the steps in this procedure.



To summarize a legal request or legal matter, see Summarize a legal request or matter by using Now Assist for Legal Service Delivery (LSD).

Configuring Q&A Genius Results in Now Assist for Legal Service Delivery (LSD)

By using Q&A Genius Results in the Now Assist for Legal Service Delivery (LSD) application, you can quickly find the most optimal information in Employee Center, Legal Counsel Center, and global search.

Q&A Genius Results overview

The Q&A Genius Results capability enables request fulfillers and legal users to generate concise, actionable answers from knowledge article results in Legal Counsel Center, Employee Center, and global search.

Q&A Genius Results configuration

For Legal Counsel Center, the Q&A Genius Results feature is activated by default when you install and activate AI Search and the Now Assist for Legal Service Delivery (LSD) application.

For global search and Employee Center, you must enable Q&A Genius Results manually. For more information, see Enabling Now Assist Q&A Genius Results and Enable Now Assist genius results.

For more information on the other supported search engines, see Search in Legal Service Delivery.

Configuring the Triage legal requests agentic workflow

You can configure the Triage legal requests agentic workflow in the Now Assist for Legal Service Delivery (LSD) application to analyze the general legal requests, predict the appropriate legal category, and initiate a transfer upon a confirmation from the legal fulfiller or group manager.

You must complete the following tasks for the Triage legal requests agentic workflow:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Install the Now Assist for Legal Service Delivery (LSD) plugin (sn_lg_gen_ai).
2. Ensure Now Assist panel is turned on. For more information, see Turn on the Now Assist panel.
3. Ensure **Now Assist Panel - Platform (default)** assistant in the CI Admin Experience is turned on. For more information, see Manage LLM virtual agents on the Assistants screen
4. Configure AI Search. For more information, see Configuring AI Search.
5. Activate the business rule Trigger Transfer Legal Request agentic workflow. For more information, see Activate the business rule for the Triage legal requests agentic workflow.
6. Include the legal practice application tables for AI Search indexing. For more information, see Add the legal request child tables for indexing.
7. Configure the semantic index settings to define how AI Search indexes the content. For more information, see Configure the semantic index settings for legal request tables.
8. Add the description, short description, and legal category field to the semantic index record to be indexed for the semantic search. For more information, see Add fields to the semantic index for legal records.
9. Create restricted caller access (RCA) privileges for accessing the legal request table. For more information, see Add restricted caller access privileges for accessing the legal request table.

Important:
The Now Assist Features panel for LSD lists the following skills required for the Triage legal requests agentic workflow.

- Triage Legal Request AI search
- Triage Legal Request Capability

You can access the Now Assist Features panel by navigating to **All** > **Now Assist Admin** > **Skills** > **Employee** > **LSD**.

The skills are available in an active state in the base system and should not be modified.

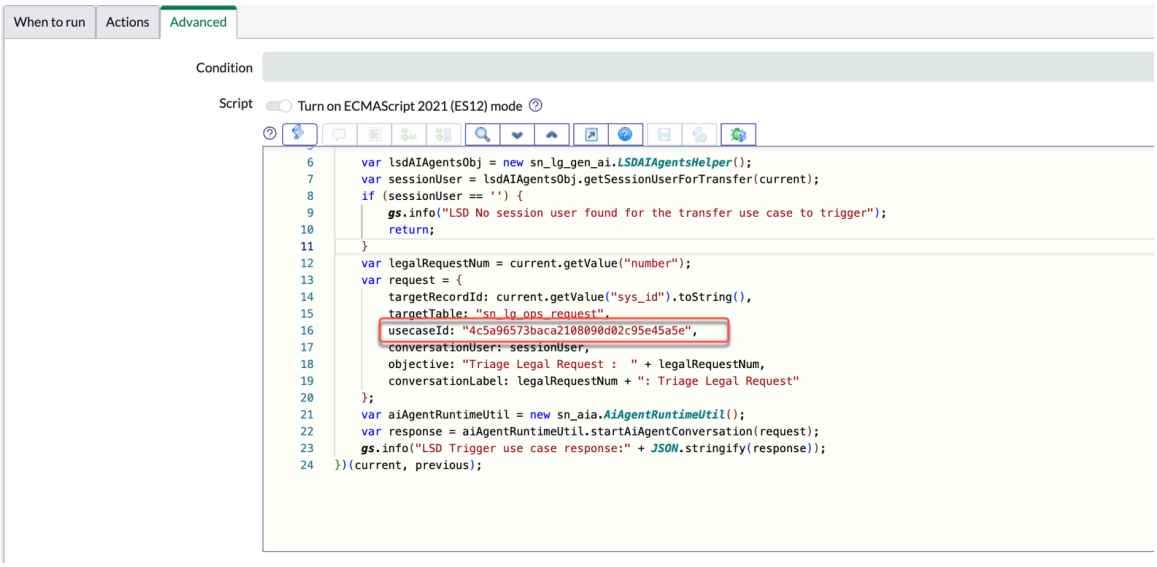
Activate the business rule for the Triage legal requests agentic workflow

Activate the business rules for the Triage legal requests agentic workflow in the Now Assist for Legal Service Delivery (LSD) application.

Before you begin
Role required: admin

About this task
The Triage legal requests agentic workflow is shipped in an inactive state in the base system. To activate it, you must enable the business rule named the Trigger Triage Legal Request use case.

By default, the script include in this business rule contains the sys_id of the Trigger Triage Legal Request use case. If you have a customized use case, you must update the script include in the business rule with the sys_id of your customized use case.



Procedure
1. Navigate to **All** > **System Definition** > **Business Rules**.
   The Business Rules table appears.
2. In the Name column, search for `Trigger Triage Legal Request use case`.
3. Open the *`Trigger Triage Legal Request use case`* rule.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select the **Active** check box.
5. **Optional:** For a customized agentic workflow, update *usecaseId* in the script with the sys_id of the customized agentic workflow.

   a. Navigate to the Advanced related list.

   b. In the script, update the value for *usecaseId* with the sys_id of the customized agentic workflow.

   To get the sys_id of a customized use case, navigate to the use cases list, right-click the customized use case record, and select#**Copy sys_id**.

6. Select **Update**.

Result

The Triage legal requests agentic workflow is activated for Now Assist for Legal Service Delivery (LSD).

Add the legal request child tables for indexing

Add the legal request child tables to be considered for data indexing for AI Search in the Now Assist for Legal Service Delivery (LSD) application. The legal request child tables are indexed so that you can get relevant AI Search results for the legal records.

Before you begin

Set the application scope to **Legal Counsel Center** in the application picker. For more information, see Application picker.

Role required: admin

About this task

Include the legal request tables as child tables to define them as indexed sources. These added tables are then selected for indexing. For more information on the indexing of sources for AI Search, see Indexed source retention policies and filter conditions.

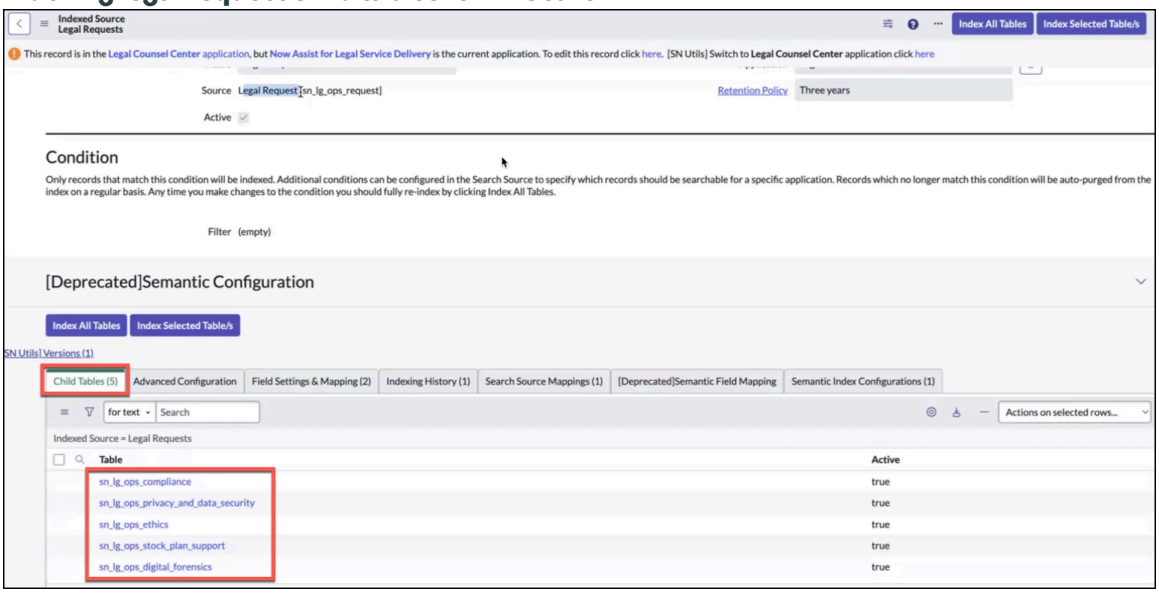
Procedure

1. Navigate to **All** > **AI Search** > **AI Search Index** > **Indexed Sources**.
2. In the Name column, search for `Legal Requests`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the Legal Requests indexed source.
4. In the Condition section, set the filter condition to **[State][is not][Cancelled]**.
5. Select the Child Tables related list.
6. Add the child tables by selecting **New**.
7. In the application picker, set the application scope to **Legal Request Management**.
8. On the form, fill in the fields.

Child Table New Record form



Field	Description
Indexed Source	Reference to the indexed source. The **Indexed Source** field is automatically set to **Legal Requests**.
Application	Name of the application that the Indexed Source belongs to. The **Application** field is automatically set to **Legal Request Management**.
Table	Label and name for the child table that you want to enable content indexing for. You can only select from tables that extend the indexed source table.
Active	Option to activate indexing for the child table.

9. Select **Submit**.
10. Select **Index All Tables**, to index the data of the added tables.

Result

The legal request child tables are indexed for AI Search.

Indexing legal request child tables for AI Search

What to do next

Define the semantic indexing configuration settings that you want to apply when AI Search indexes the records for a legal request table. For more information, see Configure the semantic index settings for legal request tables.

Configure the semantic index settings for legal request tables

Configure the semantic index settings to define how AI Search indexes the content from the legal request tables in the Now Assist for Legal Service Delivery (LSD) application.

Before you begin

Set the application scope to **Legal Counsel Center** in the application picker. For more information, see Application picker.

Role required: admin

About this task

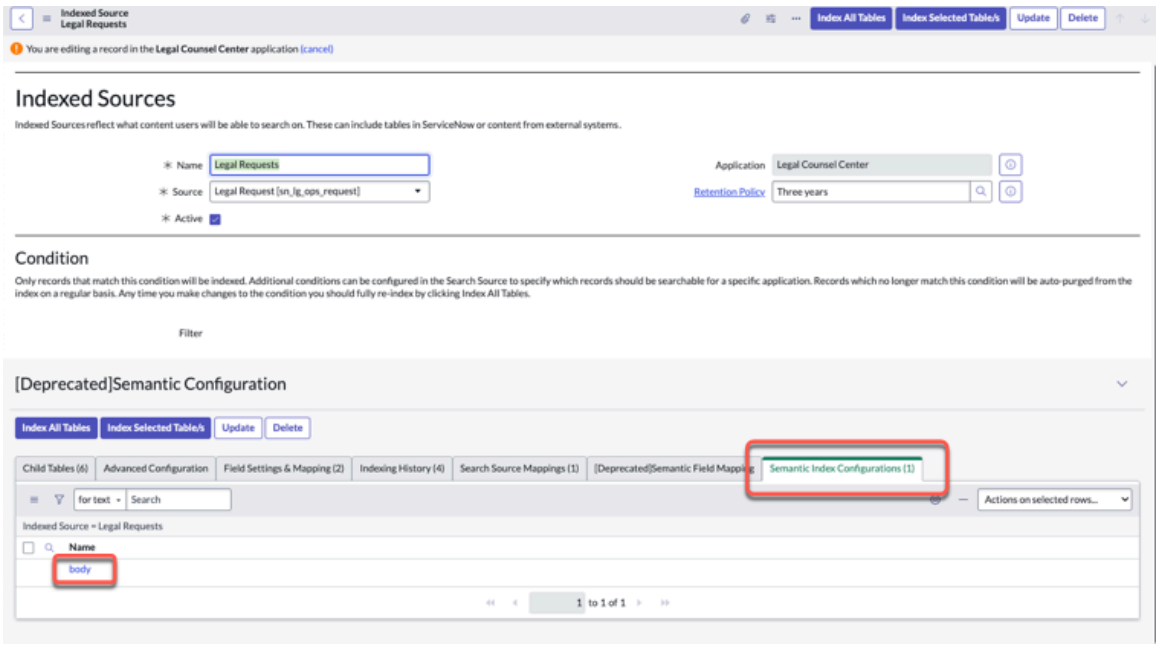
These semantic index settings specify how AI Search indexes the content from the indexed source for use with the semantic vector search. For more information on the indexing of sources for AI Search, see Semantic index configuration for indexed sources.

Procedure

1. Navigate to **All** > **AI Search** > **AI Search Index** > **Indexed Sources**.
2. In the Name column, search for `Legal Requests`.
3. Select the Legal Requests indexed source.
4. Select the Semantic Index configurations related list.
5. Add the semantic index configuration by selecting **New**.
6. On the form, fill in the fields.

Semantic Index configurations New Record form

Field	Description
Name	Name of the semantic index. In the **Name** field, enter `body`.
Embedded Models	List of the embedded models to use for the semantic index configuration. The **Embedded Models** field is automatically set to **Embedded Models**.
Active	Option to make the semantic index configuration active for your instance. AI Search ignores inactive semantic index configurations when indexing content from the specified index source.
Indexed Source	Reference to the AI Search indexed source that you want to apply this semantic index configuration to. The **Indexed Source** field is automatically set to**Legal Counsel Center**.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Application	Name of the application to which the semantic index belongs. The **Application** field is automatically set to **Legal Counsel Center**.

7. Select **Submit**.

Result
The data from the legal request tables are indexed for AI Search according to the semantic index settings.

Semantic index record

What to do next
Add fields to the semantic index record by selecting **body**. For more information, see Add fields to the semantic index for legal records.

Add fields to the semantic index for legal records

Add the description, short description, and legal category field to the semantic index record to be indexed for a semantic search in the Now Assist for Legal Service Delivery (LSD) application. During AI Search, the legal records are retrieved based on the description, short description, and legal category fields that are added in the semantic index.

Before you begin
Set the application scope to **Legal Counsel Center** in the application picker. For more information, see Application picker.

Role required: admin

About this task
These semantic index settings specify how AI Search indexes the content from the indexed source for use with the semantic vector search. For more information on the indexing of sources for AI Search, see Semantic index configuration for indexed sources.

Procedure

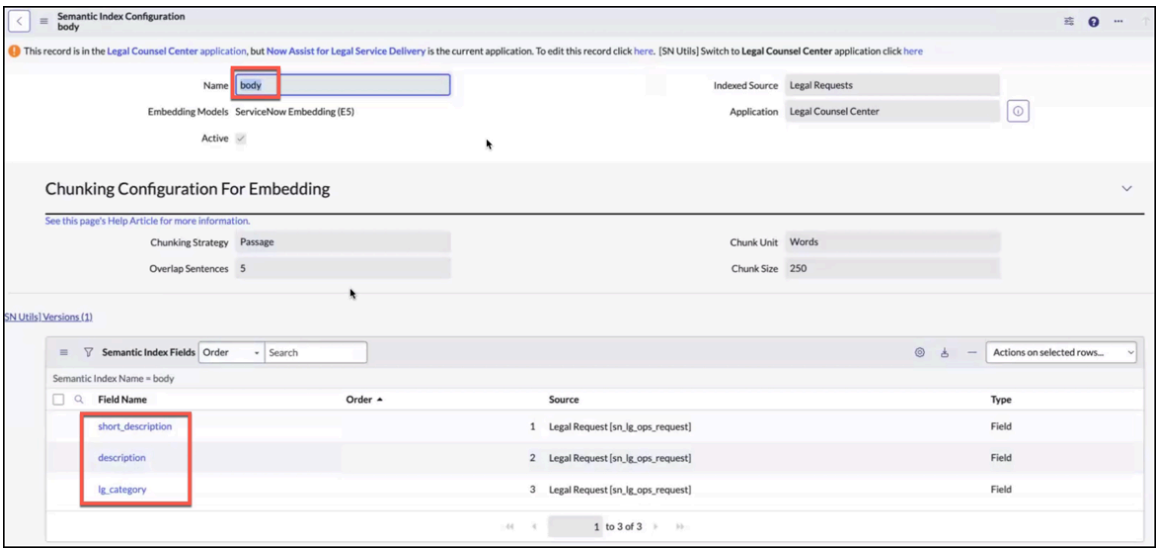
1. Navigate to **All** > **AI Search** > **AI Search Index** > **Indexed Sources**.
2. In the Name column, search for `Legal Requests`.
3. Select the Legal Requests indexed source.
4. Select the Semantic Index configurations related list.
5. Select the record **body**.
6. Select **New**.
7. In the application picker, set the application scope to **Legal Request Management**.
8. On the form, fill in the fields.

Semantic Index Fields New Record form

Field	Description
Semantic Index Name	Name of the semantic index. The **Semantic Index Name** field is automatically set to **body**.
Source	Source table whose value you want to include in the semantic index. The **Source** field is automatically set to **Legal Request**.
Type	Type of object to index for a semantic vector search. From the drop-down list, select **Field**.
Application	Name of the application that the Semantic Index belongs to. The **Application** field is automatically set to **Legal Request Management**.
Order	Order of concatenation for this field's value relative to the values of other semantic index fields that are defined in the same semantic index configuration. The fields with lower values appear first in the concatenation.
Field Name	Name of the legal request field to include in the semantic index. Select the **short-description** field to include in the semantic index.

9. Select **Submit**.
10. Repeat the steps 6 and 7 to add the following fields from the Legal Request [sn_lg_ops_request] table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- **description**
- **lg-category**

> **Note:**
> You must add all description, short description, and legal category fields (**description**, **short_description**, and **lg-category**) to the Semantic Index **body** record.

Result

The description, short description, and legal category fields are indexed for the semantic search.

Add fields to the semantic index

Add restricted caller access privileges for accessing the legal request table

Create restricted caller access (RCA) privileges to ensure authorized access to the legal request table in the Now Assist for Legal Service Delivery (LSD) application.

Before you begin

Set the application scope to **Legal Request Management** in the application picker. For more information, see Application picker.

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **Application Restricted Caller Access**.
2. Create an RCA for a script include.
   a. Select **New**.
   b. On the form, fill in the fields.

Create RCA for script include form

Field	Description
Source Scope	Scope of the calling application. Select **Now Assist AI Agents**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Source Type	Type of record that is calling the application resource. Select **Script Include**.
Source Table	Table that contains the Source record. Select **Script Include [sys_script_include]**.
Source	Cross-scope record that is accessing a restricted application resource. ▪ Select Lookup Documents by using the list icon ( ). ▪ In the field document, search and set the value as **Script Include: AiAgentRuntimeRequest**.
Status	Status of the access request. From the drop-down list, select **Allowed**.
Application	Application of the target resource. The field is automatically set to **Legal Request Management**.
