	Content identifier	Associates portal content to widgets in Agent Workspace custom landing pages. **Note:** Currently, only HR Service Delivery Agent Workspace has base system components that shows content for Content Publishing. This field only appears when you select **Workspace** from the **Content location** field. When the custom landing page of Agent Workspace renders, the following components search for scheduled content that matches the content identifier, applies to the current user, and current time: ○ Announcements ○ Quick Links ○ My frequently used apps **Note:** The base system provides these components, but the labels can be changed. To find content identifiers for the base system provided workspace landing pages, see Create a custom landing page in UI Builder.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: For more information, see Setting up landing pages in a workspace.

4. Select **Submit** or **Update**.
   You can also select **Publish with Approval** when a content request and content request item have been approved by the content requester. For more information, see Add or remove content approvers.

Create a publish plan for your content

After you create content in the Content Library, add one or more publish plans to control where the content is delivered, the audience, and the period of time it is available.

Before you begin

Role required: sn_cd.content_manager

Note:
When the Enable Content Management Ownership sys properties are activated, you can only schedule and publish content assigned to you. For more information, see Content Ownership

To publish Rich content to the UIB Workspace, you must create a schedule content record, as publish plans do not support publishing to the UIB Workspace.

Procedure

1. Navigate to **Content Publishing** > **Content Library**.
2. Select the content you want to publish.
   If you can't find the content you want to publish, ensure the **Active** field is checked on your content.
3. Select **Save** or **Save and continue**.
4. Select the **Publish** tab.
5. Select **Add a publish plan**.
6. Fill in the form.

Add a publish plan

Field	Description
Schedule name	The name that describes the schedule for your content.
WHERE	
Location	Where you want your content to appear. Your choices are: ○ Service Portal ○ Mobile (for News articles only)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Workspace: Requires the Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) plugin to be activated.
Section	This option appears if you select **Mobile**. The section in the mobile app where you want the news content to appear. This is a read-only field. An Admin can update this field from the **Content Publishing** > **Advanced** > **Properties**. For more information, see Properties installed with Content Publishing.
Page	This option appears when you select **Service portal** or **Workspace**. The page on your Employee Center you want your content to appear. A page is a pre-existing record that contains code and structure that define how to display content you want to schedule and make available to your employees. **Note:** Templates are contained in a topic and references a page. Templates have a direct relationship with a page, but multiple topics can be associated with a template/page. For example, the base system provides the emp_employee-taxonomy page and most of the topics are associated with that page. For more information, see Create topic page template. When a page has topics associated with it, the **Taxonomy** field appears and you can filter by it and you can select topics associated with the taxonomy. Select a page and only the widget instances that appear on the page are available in the Widget instance choice list. Select the Preview this record icon ( to view the page record. **Note:** Using Page to help filter the available widgets across the portal can be useful, but is optional.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Widget	The widget you want your content to appear in. Widgets contain properties and CSS specific to that instance. A list of filtered widget instances appear when you select a page from the **Page** choice list. Select the Preview this record icon () to view the widget record. **Note:** If you schedule Styled or Banner content to the Content Experiences widget on the emp_taxonomy_topic page, the original topic banner image does not display for the topics on the schedule.
Taxonomy	The taxonomy or top level in the organization hierarchy you want your content to appear under. Also allows you to filter your preview by taxonomy. Taxonomy is a collection of hierarchical topics that brings together different content types, like requests, articles, quick links, and employee communications. A taxonomy is the top-level of the hierarchy and can have multiple topics under it. For example, you can have taxonomies for HR and IT so you can group specific topics under each. When you use **Page** or **Add Topic** to filter your preview, the value in this field can change because the topic might not be under the taxonomy or on the page you selected. When this field is greyed out, it indicates for the page and topic selected, there is only one taxonomy.
Add Topic	The topic you want your content to appear under. Also, allows you to preview content associated with a topic. Topics are organized under a taxonomy. When the Allow Ownership for Topics (sn_cd.activate_topic_ownership) sys

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	property is set to **Yes** and the topic is assigned to you or a group you belong to, you only see topics assigned to you or topics that do not have restrictions. For more information, see Properties installed with Content Experiences and Assign ownership of content. Ownership of a topic includes: ○ Ability to restrict what groups or users can schedule content for publication. ○ Ability to edit content assigned to the topic. ○ Ability to preview content for the topic. **Note:** Other users that have access to the content can view the content scheduled to the restricted topic, but cannot remove the topic from the schedule. For more information, see Content Ownership.
Who	
Add audience (at least one)	Who you want to see the content. For more information, see Audiences. **Note:** You do not have the option of scheduling content for individual users. You can only schedule content for an audience. To schedule content for individual users, see Scheduling the delivery of content.
WHEN	
Always active	Content appears indefinitely until you replace or take it down.
Active for a specific duration	Content appears for a specific date and time range.
Inactive	Content is available for use, but does not appear on the Employee Center.

7. Select **Save publish plan**.

   After you create a publish plan, the **Preview on portal** button appears in the **Publish** tab, which redirects you to view how the content will appear on the employee portal once published.

   Once rich or portal content is published, you must checkout the content to edit it. See Checkout published content.

Content management on topic pages

Manage the content available on the topic pages on your Employee Center portal.

Taxonomy and connected content

Using the taxonomy and content personas, you can keep track and manage the new content updates on the topic pages. Connect new content to the categories linked to the topics. Monitor the categories to track new content available as the associated connected content types.

Gain visibility into new and invalid content and manage content life cycle through automation for performance improvement.

You can make the topic pages include the most updated content available for the employees.

- The taxonomy and topic managers can add, remove, move, and review new content available for the connected content types associated to the categories.
- You can manually review, add, or dismiss the content updates from the notifications and the **Associated catalog and kb categories** record.
- Track and manage outdated connected content from a dedicated the **Outdated Connected Content** tab.
- Alternatively, you can also autosync the new content updates by enabling a **Taxonomy category content autosync** system property.
- The connected content types supported for the features are Knowledge Base articles and Service Catalog items.

Connected content is available on the Browser Extension for Employee Center. For more information, see Browser Extension for Employee Center.

Manage connected content from topic pages

Link your desired categories to the topics and track the additions and removals to have easier management of unconnected content.

Before you begin

Role required: taxonomy_admin

User criteria required: Taxonomy Manager, Taxonomy Contributor, Topic Manager, Topic Contributor.

About this task

A Fix script is shipped with the feature that automatically runs when you upgrade to Utah. Link your desired categories to the topics manually, for new installations, for new taxonomy created, or for new categories required on the existing taxonomies.

Note:
The feature is only available Utah release onwards.

- The script goes through all the connected content on the topics and identifies the categories for those connected content.
- The fix script works for all the active taxonomies.
- The **Catalog and knowledge Categories** tab displays the identified categories to be linked to the topics, after the fix script is successfully executed.
- Linking a category to a topic bulk-connects all its connected content to the topic.

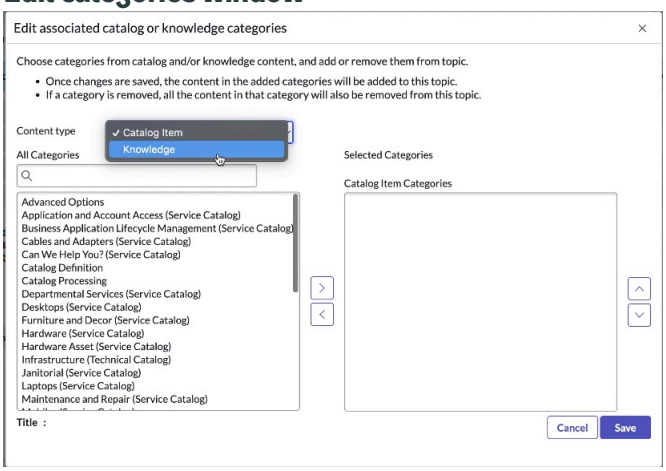
A weekly scheduled job runs to recognize new content to be associated to the topics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information on the execution and modification of the scheduled job, see

- Run the scheduled job for content association and for manual checking and updation of each record.
- for autosync.

Procedure



1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Go to the **Catalog and knowledge Categories** tab on your desired topic page to add another category, and select **Edit**.
   The following are the available fields on the tab:

Configuration fields

Field	Value
Content type	Catalog Item, Knowledge Base
Connected Category	Category linked to the topic pages based on the content type
Available content for association	The number of new content detected on the linked categories

3. Select the **Content type** on the pop-up window and select the category to link to the topic page.

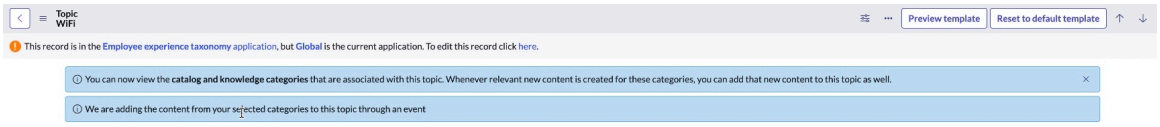
Edit categories window

   All the content in the category is associated to the topic.

4. You can perform the following content actions:

   a. Go to **Category** and the related list **Catalog Item** > **New** to add the record.

   b. Go to **Category** and the related list **Catalog Item** > **Actions on selected rows** > **Delete** to remove the record.



Category removal

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Run the scheduled job for content association to surface the unconnected content of categories.
6. Select **Save** or **Reload form** the topic page.

   A confirmation displays on the screen.

Confirmation notifications

7. Select **View Details** on the pop-up notification displayed on the topic page to see the content additions and removals available.
8. **Optional:** View **Associated catalog and kb categories** to see the **update type**, such as Added or Removed.
9. Add or dismiss content, as required, with **Update topic with content** or **Dismiss content** respectively.

Result
Access all the connected content to the categories linked to the topic pages.

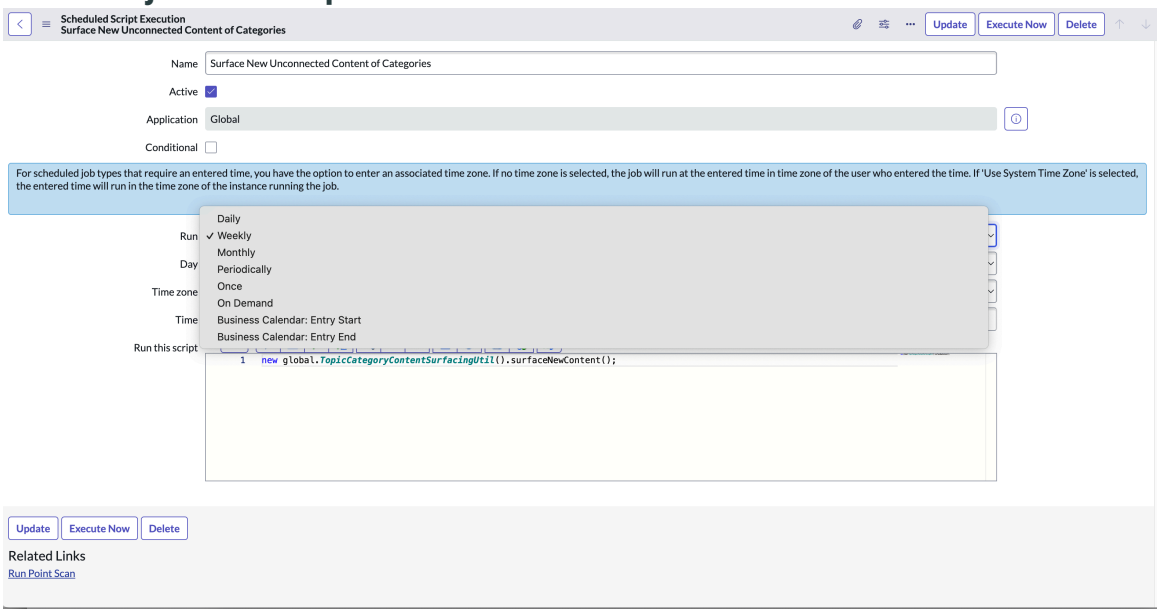
What to do next
Click the **Add/remove content from categories** related link to see the **update type**, such as Added or Removed.

Update type: Add and Remove

Run the scheduled job for content association

Change the scheduled job frequency, as required, to ensure that the notification of new content availability to add to the topic pages is regular and uninterrupted.

Before you begin
Role required: admin



About this task
Surface New Unconnected Content of Categories helps you identify the new unconnected content.

- Use the scheduled job for manual additions and removals of content.
- for automatic additions and removals of content.

Procedure
1. Navigate to **All** > **System Definition** > **Scheduled Jobs** > **Surface New Unconnected Content of Categories**.
2. Select your preferred **Run** time option, for the scheduled job, from the available list on the field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scheduled job run-time options

Note:
The default scheduled job run-time is weekly. Edit and update the frequency of execution, as required.

3. Select **View Details** on the pop-up notification displayed on the topic page to see the new content available for association.

New content availability notification

4. **Optional:** View **Associated catalog and kb categories** to see the **update type**, such as Added or Removed.

Update type: Add and Remove

5. Add or dismiss content, as required, with **Update topic with content** or **Dismiss content** respectively.

Integrated service and experience feedback management

Manage the experience and service feedback widgets according to your organizational need.

Modify the experience flow feedback widget

Customize the appearance of the experience flow feedback widget with the instance options.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **All** > **Employee Center**.
2. From the Mega Menu, select a topic page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Press the control button and simultaneously select and hold (or right-click) to get the menu options.
4. Select **Instance Options** and modify the following options.

Feedback widget instance options

Instance options	Description
Data	**Record ID param**: Page record ID to receive feedback.
Data	**Table**: Record table ID chosen for the feedback. **Note:** The record table is primarily used for the **Service - workflow** feedback type.
Presentation	**Title**: Title of the In page feedback widget you want to display.
Presentation	**Alignment**: Alignment preference for the display text.

5. Select **Save**.

Result
The In page feedback widget is customized according to your preference.

Modify the workflow feedback widget

Customize the appearance of the workflow feedback widget with the instance options.

Before you begin
Role required: sn_hr_sp.esc_admin

Procedure

1. Navigate to **All** > **Employee Center**.
2. In any record details page, press the control button and simultaneously select and hold (or right-click) to get the menu options.
3. Select **Instance Options** and customize the appearance of the widget.
4. On the feedback widget instance options window, fill in the fields.
   For a description of the field values, see Modify the experience flow feedback widget.

Result
The workflow feedback widget is customized according to your preference.

Improve portal performance

Discover ways to reduce portal loading time and enhance portal display.

Review widget performance metrics

The **Performance details** feature provides comprehensive tracking of each widget on a page, enabling better assessment of the user experience. You can view load times, customization status, and display visibility for each widget. For guidance on accessing the widget performance metrics, see View widget performance metrics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable asynchronous loading for widgets

By default, widgets try to load and display data simultaneously. This can cause longer load times in content-heavy portals. To improve loading speed and reduce employee wait times, select the **Asynchronous** option to enable widgets to display data as it becomes available, instead of waiting for all the data to load.

The following widgets support asynchronous loading:

- Content experience
- Recommended for you
- Popular topics
- Quick Links
- My applications
- My active items

Note:
Performance tracking is not supported for widgets with asynchronous data loading enabled.

For step-by-step instructions to enable asynchronous loading, see Improve portal load time with asynchronous loading.

Reduce the amount of connected content

Reducing the amount of connected content can help improve page load times, as topics with more linked items—like quick links, knowledge articles, and catalog items—take longer to load. Aim to connect only 80% of published content to topics, allowing the remaining items to be accessible through search. Also, remove any unnecessary content, such as outdated or unpublished versions, from topics.

For guidance on navigating to a topic and viewing its connected content, see Create and associate topics.

Improve portal load time with asynchronous loading

Reduce the time employees spend waiting for the portal to load by enabling widgets to load data asynchronously. This allows widgets to display information as it becomes available, improving overall portal performance.

Before you begin
Role required: sp_admin

About this task
By default, widgets try to load and display data simultaneously. This can cause longer load times in content-heavy portals. To improve loading speed and reduce employee wait times, select the **Asynchronous** option to enable widgets to display data as it becomes available, instead of waiting for all the data to load.

Procedure

1. Navigate to **All** > **Employee Center**.
2. Go to the following widgets, press and hold the control key, right-click the widget, and then select **Instance Options**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Content experience
- Recommended for you
- Popular topics
- Quick Links
- My applications
- My active items

Note:
The following widgets support asynchronous loading.

3. Select the **Asynchronous** loading configuration option (wording can change, depending on the widget).
4. Click **Save**.

Improve the image load time on Employee Center

Use CDN URLs to reduce the load time of the banner images, background images, and app icons on the Employee Center portal.

Before you begin
Role required: esc_admin

Enable the System Property [sn_ex_sp.enable.image.url.support] for the feature support on the Employee Center portal.

About this task
You can manage the icon images, background images on the profile pages, banner images of the topic pages, by storing all of it in a local CDN server. It doesn't need to be fetched from the ServiceNow AI Platform® server.

The feature considerably improves the first load time of the graphics. The load time keeps improving as frequently you use and reload the pages.

The CDN URL support is available for the Popular topics, the Quick Links, and the My applications widgets.

Note:

- My applications is only available with the Employee Center Pro license.
- The ServiceNow AI Platform® provides support to create and manage your own CDN server and URL. The configuration and maintenance are the responsibility of the customer.

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Select a topic to update the **Icon URL** and the **Banner Image URL**.
   Update the **Icon URL** and the **Banner Image URL** from your local CDN server. This enables you to have enhanced load time and better accessibility to the images.
3. Go to **All** > **Content Taxonomy** > **Quick Links**.
4. Select and item to update the **Background image URL** and the **Icon URL** from your local server.
5. Go to **All** > **Employee Center** > **Web Applications**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select a web application to update the **Application icon URL**.

Note:

- Popular topics and Quick links have base system preference set to the CDN URLs. If a URL image is available, the icons and images from the ServiceNow AI Platform® server are not used.
- My application has preferences set for the **Application icon**. You must delete the **Application icon** for the CDN URL to be detected and used.

Add hotspots to track custom widget performance

Hotspots help capture and log widget load times, which enables better debugging of long portal load times.

Before you begin

Role required: sp_admin

About this task

What are hotspots

Hotspots are specific areas of interest that help identify potential performance risks affecting portal load times, especially during high traffic. Logging hotspots allows users to monitor execution times for different processes and calls, including nested ones, to gain insights into what might be slowing down the user experience.

When do hotspots get logged?

Hotspots are logged when the admin enables performance metrics and impersonates a user. Records are only collected for that session and stored in the `sn_ex_emp_fd_portal_performance_stats` table.

To manage data volume, the system automatically deletes these records at the end of each week.

Procedure

1. Navigate to **All** > **Service Portal** > **Widget**.
2. Click the custom widget you want to add the hotspot to.
3. Insert the following code snippets into the **Server script** field:
   Define a start time below the loading configuration expression:

```
var startTime = new GlideDateTime();
```

   Retrieve widget record number:

```
var grInstanceRecord = $sp.getInstanceRecord();
```

   Retrieve widget instance identifier:

```
data.spInstanceId =
                            grInstanceRecord.getUniqueValue();
```

   Add load time tracking:

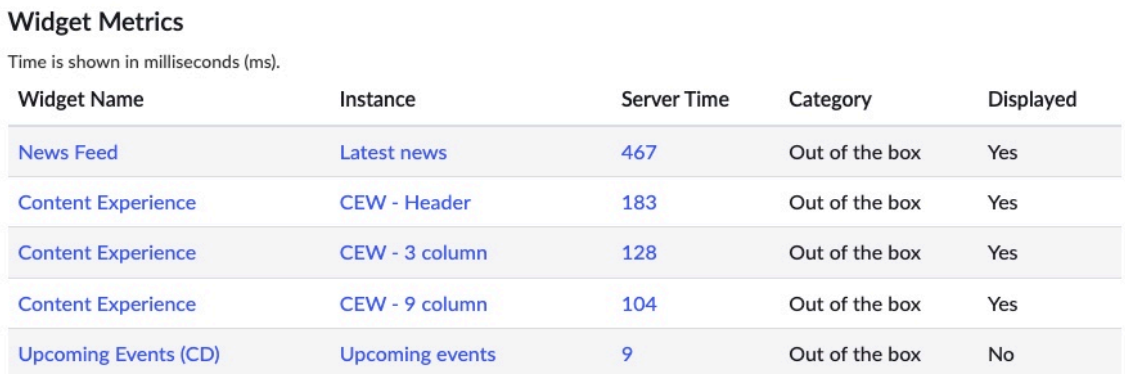
```
new sn_cd.cd_Utils().postInstanceHotspot({
    startTime: startTime,
    callerId: data.spInstanceId,
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
    shortDesc: '{enter name of widget}'
});
```

4. Click **Update**.

What to do next
Open the Performance details window to view how long the custom widget takes to load data: View widget performance metrics



View widget performance metrics

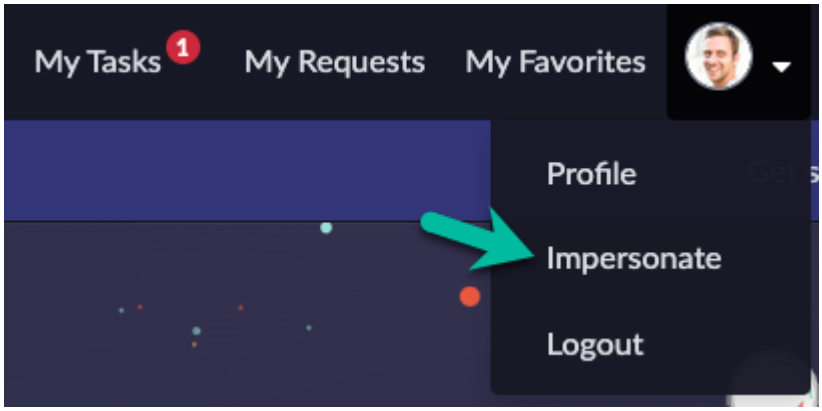
View the metrics provided by the performance window to identify which widgets take the longest to load data.

Before you begin
Role required: sp_admin

To track the performance of a custom widget, add a hotspot to the script: Add hotspots to track custom widget performance

About this task
The **Performance Details** window provides comprehensive tracking of each widget on a page, enabling better assessment of the user experience. You can view load times, customization status, and display visibility for each widget.

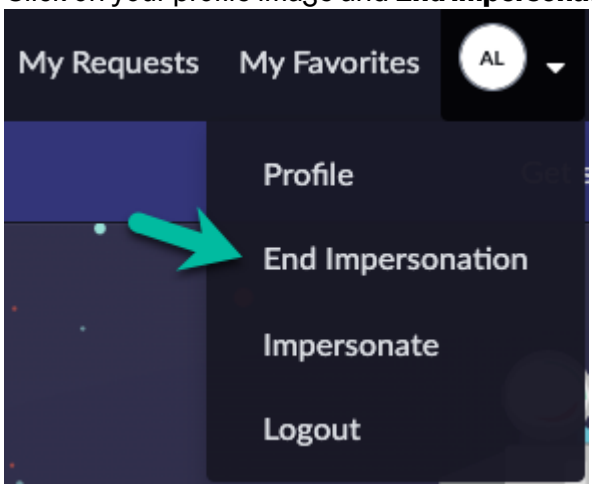
Widget Metrics



Time is shown in milliseconds (ms).

Widget Name	Instance	Server Time	Category	Displayed
News Feed	Latest news	467	Out of the box	Yes
Content Experience	CEW - Header	183	Out of the box	Yes
Content Experience	CEW - 3 column	128	Out of the box	Yes
Content Experience	CEW - 9 column	104	Out of the box	Yes
Upcoming Events (CD)	Upcoming events	9	Out of the box	No

Note:
Performance tracking is not supported for widgets with asynchronous data loading enabled.



Procedure
1. Navigate to **All** > **Employee Center**.
2. Select the clock icon to open the **Performance details** window.
   The clock icon is located at the bottom-left corner of the screen.
3. Click **Enable Performance Stats**.
4. Click **Close**.
5. Impersonate a user to enable the system to capture widget load times for that user.
   a. Click on your profile image.
   b. Click **Impersonate**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Select the user to impersonate.

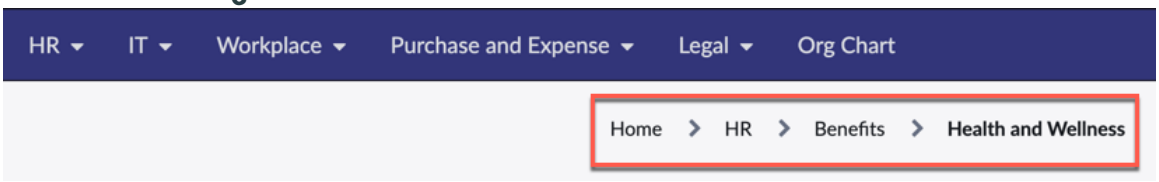
d. Click on your profile image and **End impersonation**.

6. Select the clock icon to open the **Performance details** window.
7. In the **Search for user** field, select the user that you impersonated.
8. Review the **Server time** column to identify which widgets have the longest load times.
9. **Optional:** Export the data as an Excel file.
10. Click **Close** when you are done.

Using Employee Center

Use the Employee Center portal to raise requests, work on to-dos, and search for information.

Use the Employee Center topic pages



The Employee Center topic pages contain the breadcrumbs widget, topic header widget, sub-topic widget, and the topic content widget.

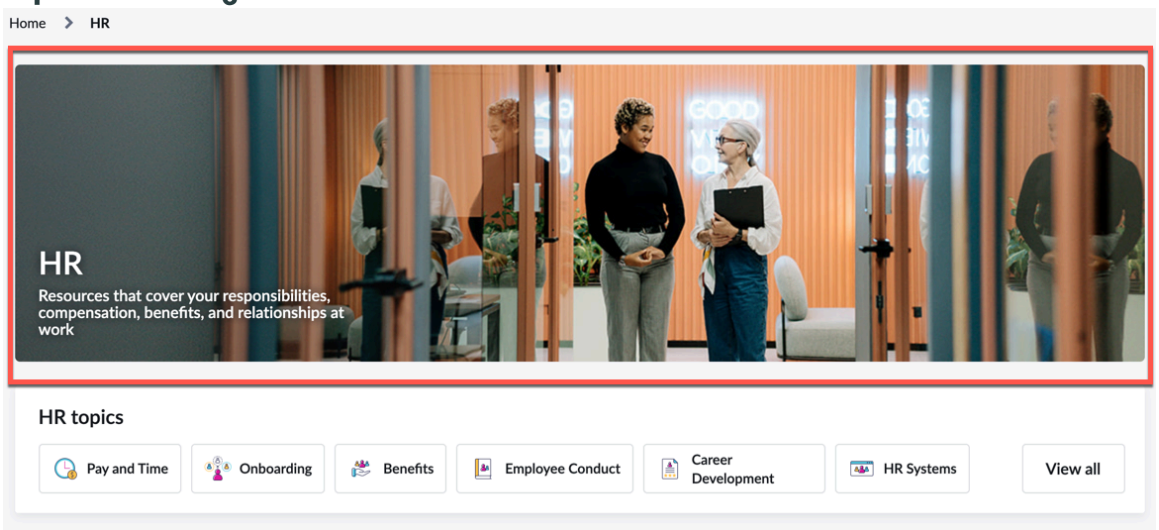
Breadcrumbs widget

The breadcrumbs widget displays information about the pages you navigated to open the current page. For example, from the home page if you click **HR**, and then click **Benefits**, and then click **Health and Wellness**, the breadcrumbs widget shows **Home > HR > Benefits > Health and Wellness**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Breadcrumbs widget

Click a page name on the breadcrumbs widget to navigate to that page. For example, to return to the home page, click **Home**.



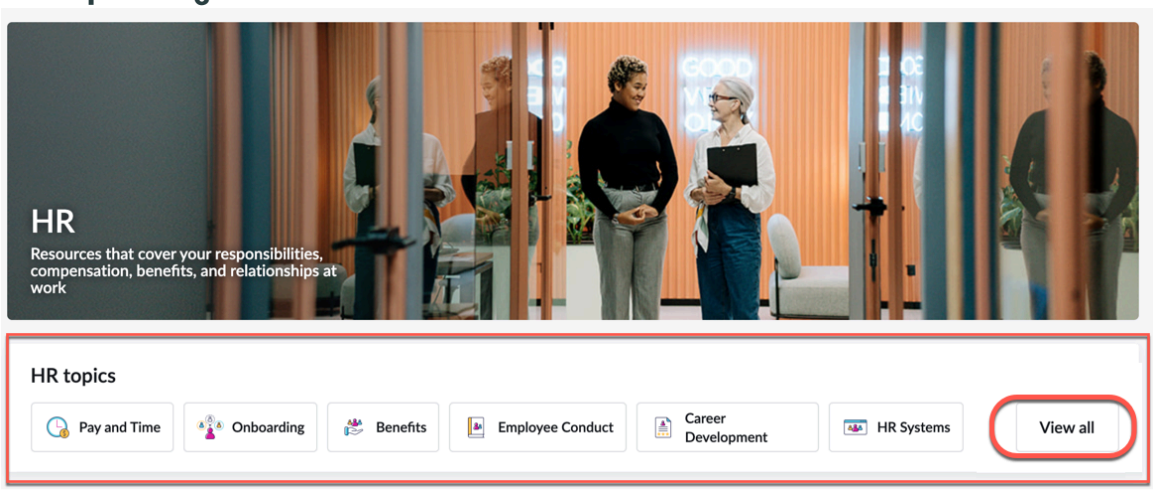
Topic header widget

The topic header widget displays the parent topics. Select a topic from the mega menu to view its details. The topic widget displays the description of the topic and the banner and icon images for the topic, if available.

Note:
If you schedule Styled or Banner content to the Content Experiences widget on the emp_taxonomy_topic page, the original topic banner image does not display for the topics on the schedule.

For more information on creating and scheduling content, see Creating employee communications with Content Publishing.

Topic header widget



You can modify the widget display by configuring the instance options. For more information, see Modify the topic header widget display.

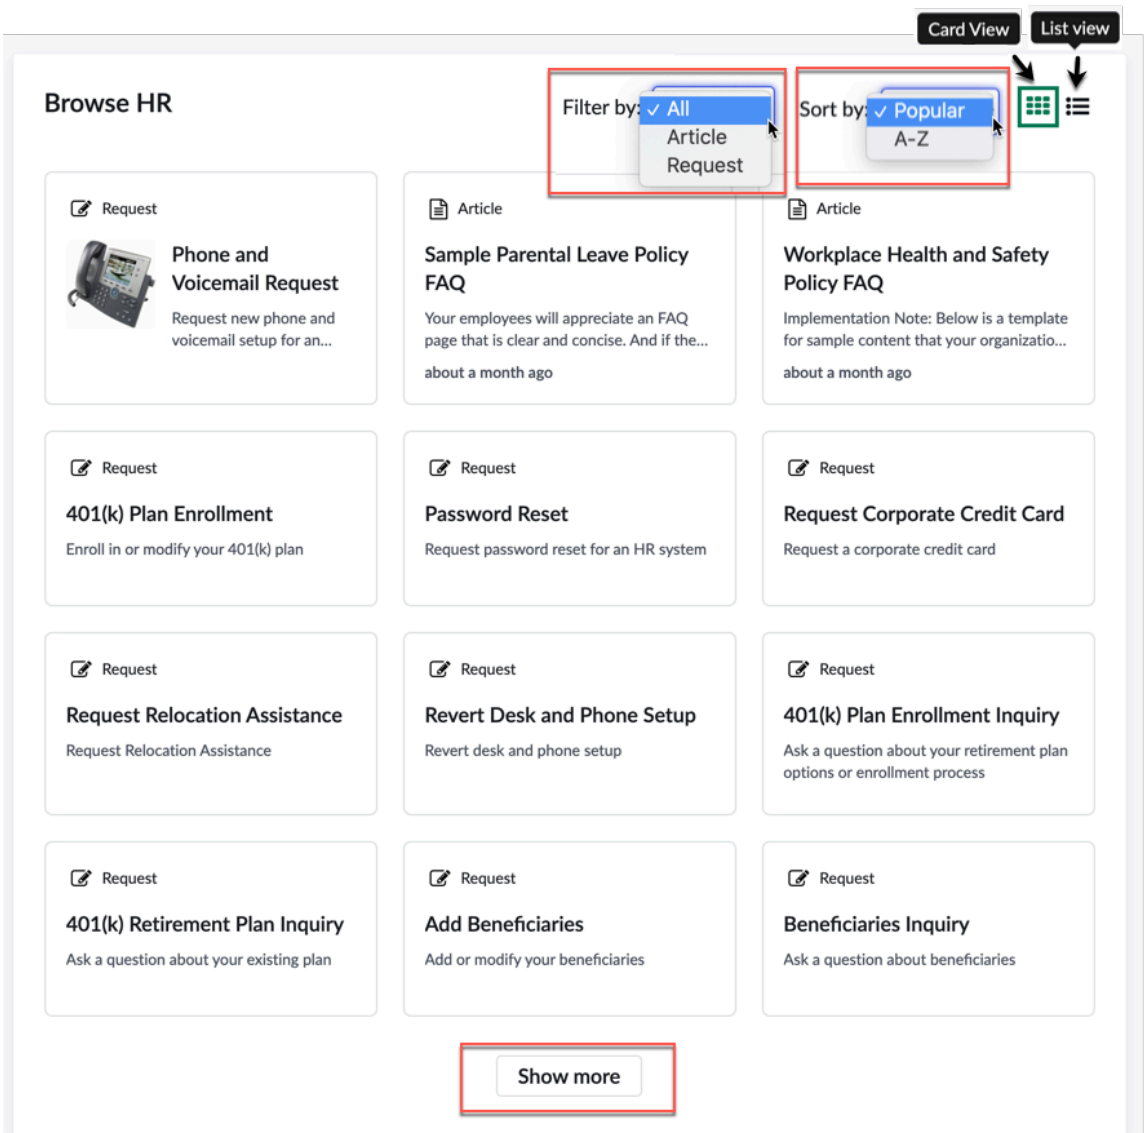
Sub-topics widget

The sub-topics widget displays all the child topics of the parent topic. The sub-topic widget displays only those child topics that have connected content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sub-topics widget

The sub-topics widget shows only six child topics by default. If the parent topic has more child topics, click **View all** to view all the child topics and click the one you want to open.



You can modify the widget display by configuring the instance options. For more information, see Modify the sub-topics widget display.

Topic content widget

The topic content widget displays the knowledge articles and requests associated with the topic.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Topic content widget

The topic content widget has the following options.

Options in the topic content widget

Option	Description
Filter by	How you want to filter the information. The options are: • **All:** Displays both the knowledge articles and requests. • **Article:** Displays only knowledge articles. • **Request:** Displays only requests.
Sort by	How you want to sort the information. The options are: • **Popular:** Displays the most popular knowledge articles and requests. • **A-Z:** Displays the knowledge articles and requests in alphabetical order.
Card View	Displays the knowledge articles and requests in cards.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Options in the topic content widget (continued)

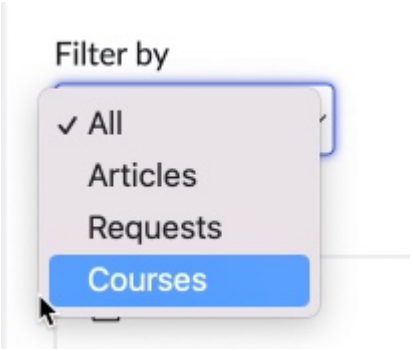
Option	Description
List view	Displays the knowledge articles and requests in lists.
Show more	Displays the next set of 12 content items (knowledge articles and requests), based on the settings of the **Sort by** and **Filter by** options. By default, 12 content items are displayed for a topic. This option appears only when more than 12 content items are associated to a topic.

Note:
The A-Z sorting is not supported for non-English.

Search on the topic pages

Use search on the topic pages that allows you to browse content with its spell check, synonym detection, and other auto-suggestive functionalities.

Search by the topic facets



Narrow your search with hierarchical filters for topics and sub-topics on the global search. Choose single or multiple topic levels or facet levels to get specific search results. For more information, see Improved search functionality.

Learning content on the topic pages

Use learning content as one of the connected content types, available on the topic pages, for the licensed employees. Employees can browse, filter, sort, and add to favourite the course content available on the topic pages relevant to them.

The Unified Browse widget has **Courses** as an addition to the **Filter by** listed options.

Filter by options

You can modify the widget display by configuring the widget instance options. For more information, see Modify the topic content widget display.

Use the integrated service and experience feedback

The integrated service and experience feedback enables quick feedback sharing across the Employee Center portal.

You can enable the experience and service feedback drawer widget on all the pages of your portal. It provides a seamless feedback experience for the users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Experience feedback

You can provide your user experience feedback from the Drawer widget in your portal pages or from the Virtual Agent.

Depending on your portal configuration, the feedback widget might pop-up at regular intervals. You can select **Remind me later** to stop the reminder.

Service feedback

You can share your service experience feedback:

- After raising a Service Catalog item request.
- After accessing a Knowledge Base article.

You can provide your overall user experience for a topic page or any other page on the portal. You can also provide feedback from the Virtual Agent. For more information on how to curate different types of feedback, see Set up the feedback definition.

Along with the rating, available for the service feedback types, you can choose to provide additional comments you may have.

You can choose to stay anonymous and not share your personal information while providing your feedback.

Resolve a feedback task

Resolve a task created from a feedback submitted through the integrated experience and service feedback.

Before you begin

Role required: esc_admin

Procedure

1. Navigate to **Self-Service** > **Employee Center** > **My Tasks**.
2. **Optional:** In the My tasks page, select **Feedback tasks** from the Filter by: options.
   You can select one or more of the following **Feedback task** types:
   - **Experience**
   - **In-Page**
   - **Topic Page**
   - **Workflow**

   Note:
   The **Task type** filter in My tasks can be enabled from the **To-dos filter categories**.
3. In the **Open** tab, select the feedback task you want to resolve.
   The task details show up on the page including the **Feedback provided by**, **Scaled value**, and **Feedback definition** type.
4. Select **Skip** or **Resolve and complete** to close an open feedback task.
5. On the Resolve and complete window, fill in the fields.

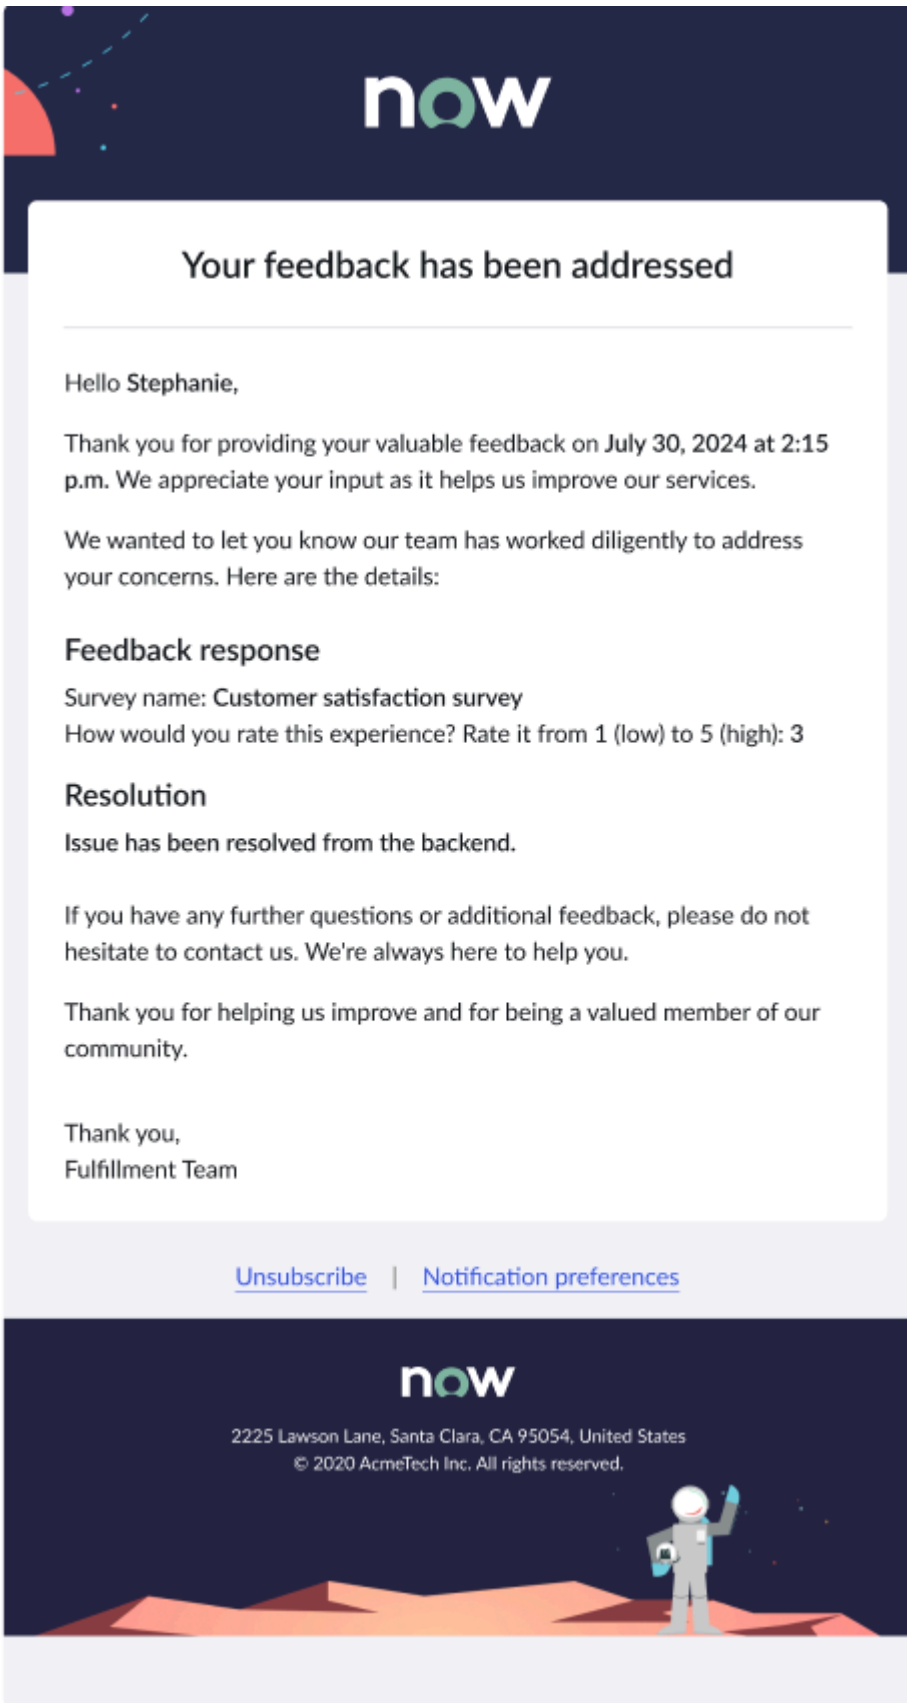
Resolve and complete form

Field	Description
Do you want to notify the feedback provided?	Option to send a notification email to the feedback provider. This field is visible when the feedback provider shares personal information while submitting the feedback.
Provide a resolution (the feedback provider will see this)	Comment box to provide a resolution.

6. Select **Resolve and complete** button to submit the solution and mark it as complete.
7. **Optional:** Go to the **Completed** tab to view your completed feedback task.
   You can use the **Feedback tasks** filter option to view both your open and completed tasks.

> **Note:**
> A feedback notification is sent to the feedback provider when it's resolved. For more information, see Feedback task notification.



Feedback task notification

Feedback task notification is sent to the feedback provider once the resolution is provided.

A notification email is sent to the feedback provider when a feedback task is marked as **Resolved and completed**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Topic managers and contributors for topic page management

While topic managers control the topic level decisions, the contributors manage the connected content, quick links, adding applications, and featured content on the topic page.

Topic manager level permission works in a top-down manner. The managers can move, copy, or change any details on the topic pages they have been provided access to along with the sub-tree further down.

Note:

- **Topic manager** does not have permission to create a root topic.
- **Topic Manager** cannot create or change user criteria, even for topics created by them, unless the manager has user_criteria admin role.
- When the manager moves a topic from one parent to another, the topic loses any cascaded permission configuration and takes on the configuration of the new parent. However, it retains any changes made on a topic level, before the move.
- If a topic is cloned or copied under a new parent topic, the topic loses all its previous permission configuration, both the cascaded ones and the ones made on the topic level.
- The **Topic manager** user criteria can move topics between taxonomies if the manager has access to more than one taxonomy.
- **Topic manager** can perform all the **Topic contributor** actions as well as managing and creating topics.

Topic contributor level has been introduced to manage all topic level tasks, such as, linking Connected content, Quick links, adding applications, and Featured content. Contributors also have a top-down access control. The user criteria only work further down the sub-tree from the topic that it has been added.

Use the My To-dos page

Use the To-dos page to review all tasks that are assigned to you and prioritize them.

My Tasks

The **My Tasks** tab on the Employee Center and Employee Center Pro helps you organize your assigned tasks and allows your employees to view all assigned work in one place. The **My Tasks** tab appears at the top right with the task count. When the tasks are more than 10, tasks count displays 9+.

Open: After selecting **My Tasks**, the left side of the form shows the Open and Completed tabs. Lists all to-dos that have not been completed.

- Required tasks have a **Required** label and appear in the **Open** column with the number of days the task is due or past due.
- When the due date is less than two (2) days or less from the current date, an exclamation point icon () appears to the left of the due date.
- When the due date is overdue, an exclamation point icon appears to the left of the Overdue text.

Completed: Lists all tasks that have been completed. The most current completed tasks appear at the top of the list and sorted by time-stamp.

The status for each open and closed to-do are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Approved
- Completed
- Closed
- Canceled
- Skipped

Note:
The completed status also has a green check mark icon next to it and with information on when the to-do was completed.

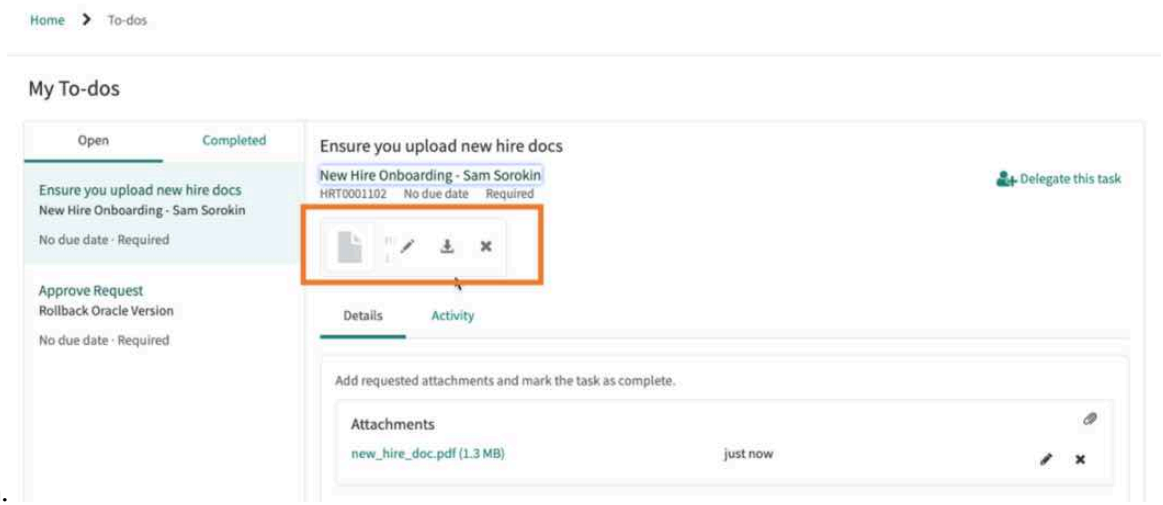
Content Request

A **Content Request** appears under **My Tasks**, if you have been assigned as an approver for new content. For more information about content requests, see Requesting content.

A content request approval appears under **My tasks** under the **Open** column when the content request item is moved to the **In Review** state.

After selecting the content request, the content can be previewed, approved, or rejected.

My Requests



The **My Requests** tab on the Employee Center and Employee Center Pro shows all the requests you have made. There are filters to show open or closed requests. Your requests display with the most current request at the top.

To-do Summary Area: To the right of the **Open** and **Completed** columns is the **To-do Summary Area**. When you highlight a to-do, details appear in this area. The **To-do Summary Area** has two columns:

- Details: Provides information, buttons, and fields about the task so you can complete it.
- Activity: Provides information, buttons, and fields about the activity so you can complete it. You can also access activities from the Lifecycle Event Ticket page.

Note:
Previously, this tab was the **History** pop-over.

Attachments appear at the top of the form.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Hover over an attachment to see a list of actions you can take:

- Rename the attachment
- Download the attachment
- Delete the attachment

You can also preview image attachments.

Note:
Not all attachments can be viewed.

Approvals and rejections

Managers or designated approvers can receive approval tasks under **My Tasks** in the menu bar in the Employee Center or from **My Approvals** under **Self-Service** for

- Requests (REQ): If there are items (RITMs) under a Request (REQ), the items may require additional approvals.
- Requests for items (RITM): The default threshold is $1000 and defined in the Service Catalog Request (sc_request) and found in the Workflow Editor. Any item requested that is $1000 or more requires an approval.

  Note:
  For more information, see Workflow editor.

- HR cases: Some HR cases through their related HR service are configured to require an approval.

  Note:
  For more information, see Configure a service activity for an HR service.

  For example, the base system provides the Tuition Reimbursement Request and Request Corporate Credit Card HR services and they require an approval.

- Granular Delegation: Granular delegation allows employees to delegate their tasks, like approvals, to other employees for specific date and time ranges based on delegation rules.

  Note:
  For more information, see Granular Delegation.

Note:
By default, approvals do not require a comment. Rejections by default require a comment. Customers can add an access control rule (ACL) that prevents a user from writing a comment for rejections. For more information, see Configure ServiceNow access control.

As an approver, use the templates with common info, primary info, tabs, and action groups to make informed decisions.

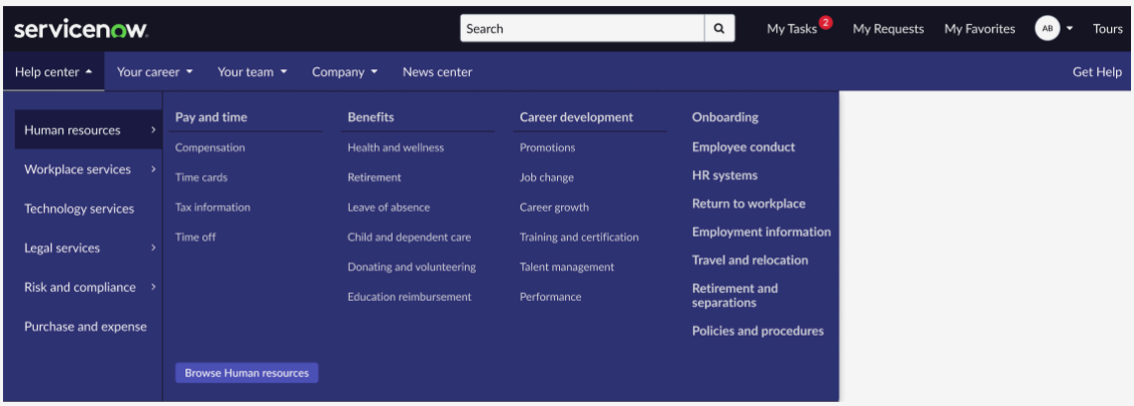
- View the right information based on the approval type.
- Understand the request tables for better approval experience.
- Configure and display relevant and sufficient info and widget details.
- Task configuration provides the following in-context information by default.
- Delegate the approval or perform quick actions such as Approve or Reject.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Understand the approval information available out-of-the-box:

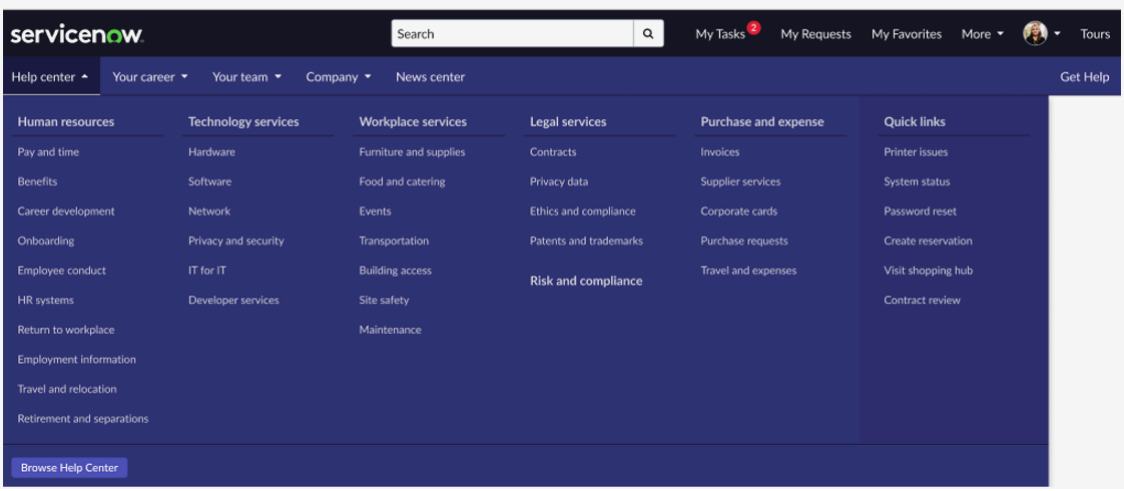
- Requested for
- Created by
- Opened by
- Delegate this task
- Requested items
- Attachments
- Activity
- Action group to approve or reject

Alternatively, you can customize additional fields to streamline the approval workflow further.



View advanced portal navigation

Use the enhanced navigation experience that helps you with better content discovery.



You can easily navigate to the content that is organized to serve your content needs.

Out-of-the-box mega menu architecture options

Employee center information architecture - Expanded

Employee center information architecture - Standard

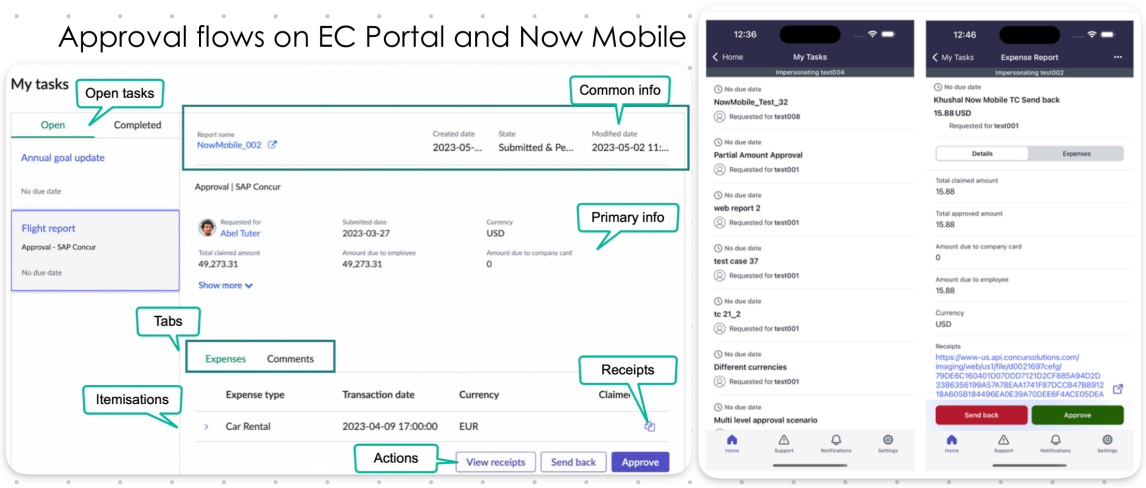
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Navigate to the right content with fewer clicks.
- View the topics and menu items on the primary navigation bar.
- Consume the display preferences for the root-level topics or menu items that are custom-served to suit your needs.



For more information on how to configure the advanced portal navigation, see Configure advanced portal navigation order.

Use approval experience

Use the **My tasks** section to track and fulfill the requests from the portal and Now Mobile.

As an approver, view all your approvals with the in-context details such as common info, primary info, tabs, and the associated action groups.

Approval hub

You can perform the following actions from the portal and Now Mobile.

- View the assigned open tasks and requests on the My tasks section.
- View and track the approval requests from external business applications such as SAP Concur and Workday right from your ServiceNow instance.
- Understand the in-context details such as expense amount, requested for, attachments, state, and last comment for processing the approvals.
- Click URLs and navigate to external sources for additional context and information.
- For Workday, attachments support a max limit of 12 MB. Ensure the attachment size is below 12 MB.
- Apply filters, select multiple line items, and perform actions such as approve all or reject all.
- Navigate to the external sources such as Workday and SAP Concur to view the full report.
- Perform quick actions such as approve, send back, or view details.
- When you enable e-signatures for approvals, the approver must enter the correct credentials to change the approval state. Only when the credentials pass, the approval status changes.

For more information, see Approvals experience reference and Configurable approvals experience.

Manage approvals from Microsoft Teams

Manage Concur expense approvals using Virtual Agent actionable notifications in Microsoft Teams to resolve the approval directly in the Virtual Agent conversation without involving a live agent.

Before you begin

- The Virtual Agent integration is supported only for users who have a user record in your ServiceNow instance. Users must link their accounts to Microsoft Teams and enable Virtual Agent notifications.
- Install the Approvals hub integration with the SAP Concur (sn_ex_cnc) plugin.

For more information on receiving notifications, see Conversational Integration with Microsoft Teams and Enable Virtual Agent notifications. For more information on Virtual Agent, see Virtual Agent.

Role required: approver_user

Procedure

1. Launch the Microsoft Teams application.
2. Open the **Now Virtual Agent** chat window.
3. Enter `Show notification` in the chat window.
4. **Optional:** View the report by selecting **View Report**.
   You can also view the report later by selecting **Skip** and entering `Show notification` in the chat window.
5. **Optional:** View expense and receipt items by selecting **Expenses and Receipts**.
   A maximum of 12 expense items are displayed in the report. To view all items, select **View full report**.
6. Approve or reject the report.

> **Note:**
> You cannot accept or reject a report if the assigned approver has been modified or the report has been updated or closed.

Manage approvals from a Microsoft Outlook email

Approve or reject Concur expense reports from a Microsoft Outlook email message.

Before you begin

The Approvals hub integration with SAP Concur (sn_ex_cnc) plugin must be installed.

Role required: approver_user

Procedure

1. Launch the Microsoft Outlook application.
2. Open the Concur Pending Approval Report email message.
3. **Optional:** View expenses and receipt items by selecting **Expenses and receipts**.
   A maximum of 12 expense items are displayed in the report. To view all items, select **View full report**.
4. Approve or reject the report.

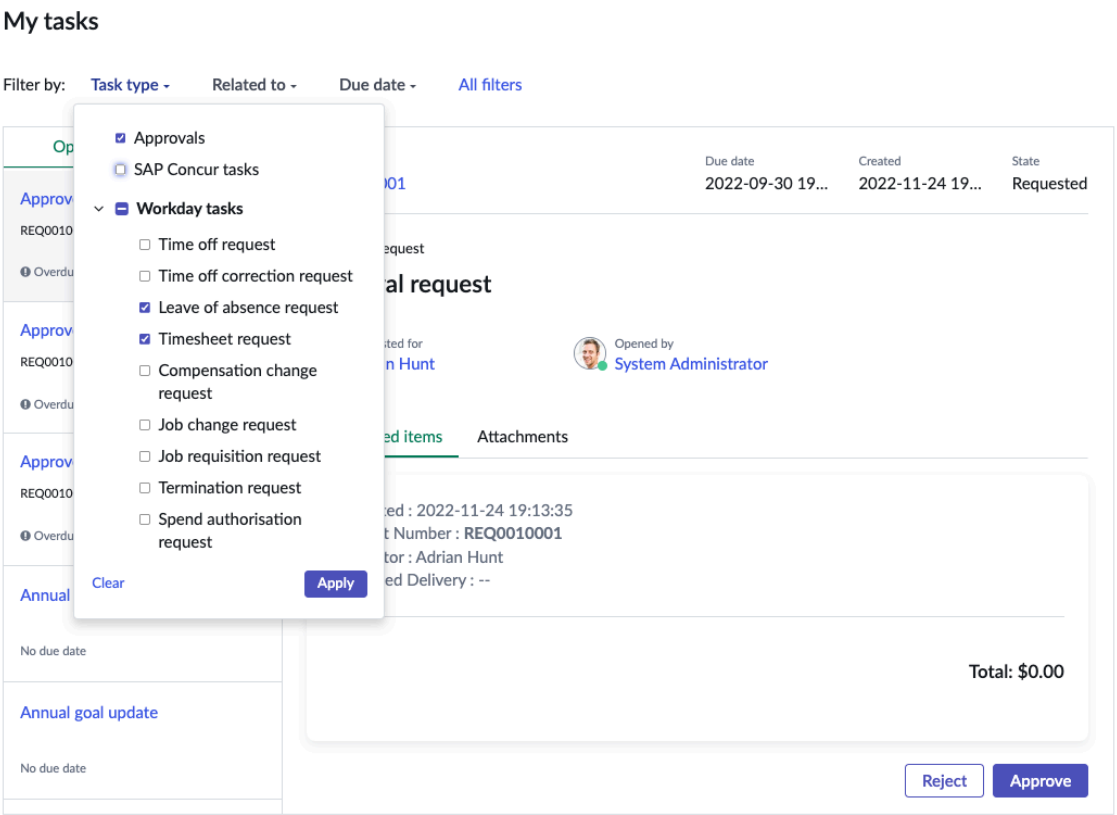
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You cannot accept or reject a report if the assigned approver has been modified or the report has been updated or closed.



Task filters on My tasks

Use the enhanced filters experience to manage and prioritize the tasks. Using the filters, employees and managers can have better visibility into the time-sensitive and business-critical tasks.

With filters, Admins empower employees to search, filter, and narrow-down the desired tasks that are time-sensitive and business-critical. Using the options, employees can manage their tasks using the admin-configured filters from the **My Tasks** page.

Use filters to easily filter, discover, and fulfill the tasks in a few clicks. Select these filters and see the records that meet the selected filter condition.

Filter preferences on the my tasks page

- Organize and view the tasks by different filters like Task type, Priority, Due date, My team approvals, and so on.
- Use the Task type filter to choose from Approvals, SAP Concur tasks, Workday tasks, Requests, and so on.
- Select, change, and remove filters to discover your tasks.
- Discover and fulfill the tasks such as on-boarding, approvals, and learning.

For configuration steps, see Configurable task filters

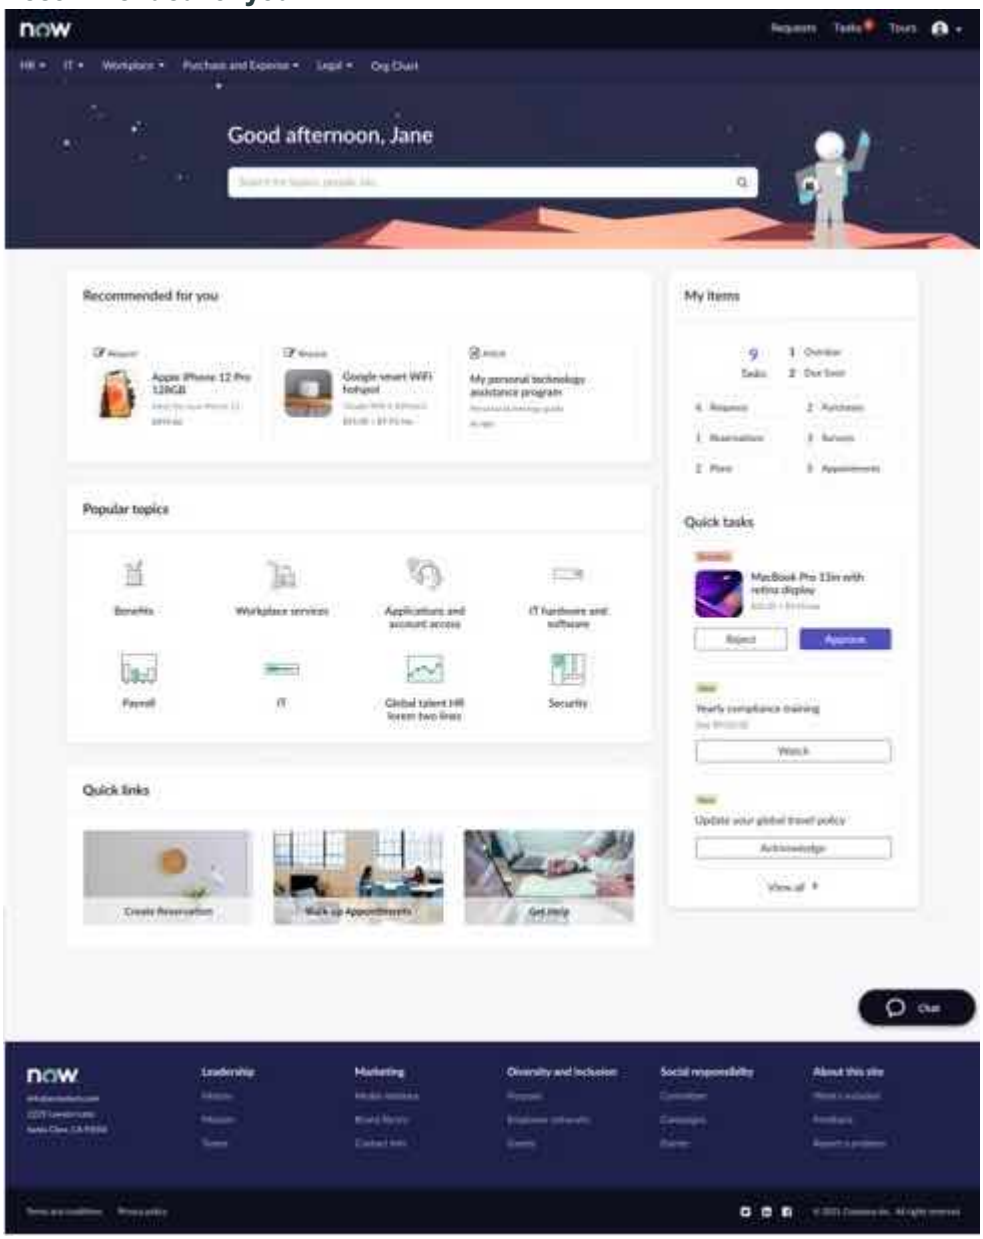
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



View the Recommended for you content

Access all the content recommended for you from from a central location in one-click.

As an employee, you can access the recommended knowledge articles or catalog items from the **Recommended for you** widget.

- Knowledge articles recommendations are based on the view count of article.
- Catalog item recommendations are based on the number of times it is requested for.
- The recommendations associated to the portal taxonomy are displayed on the home page.

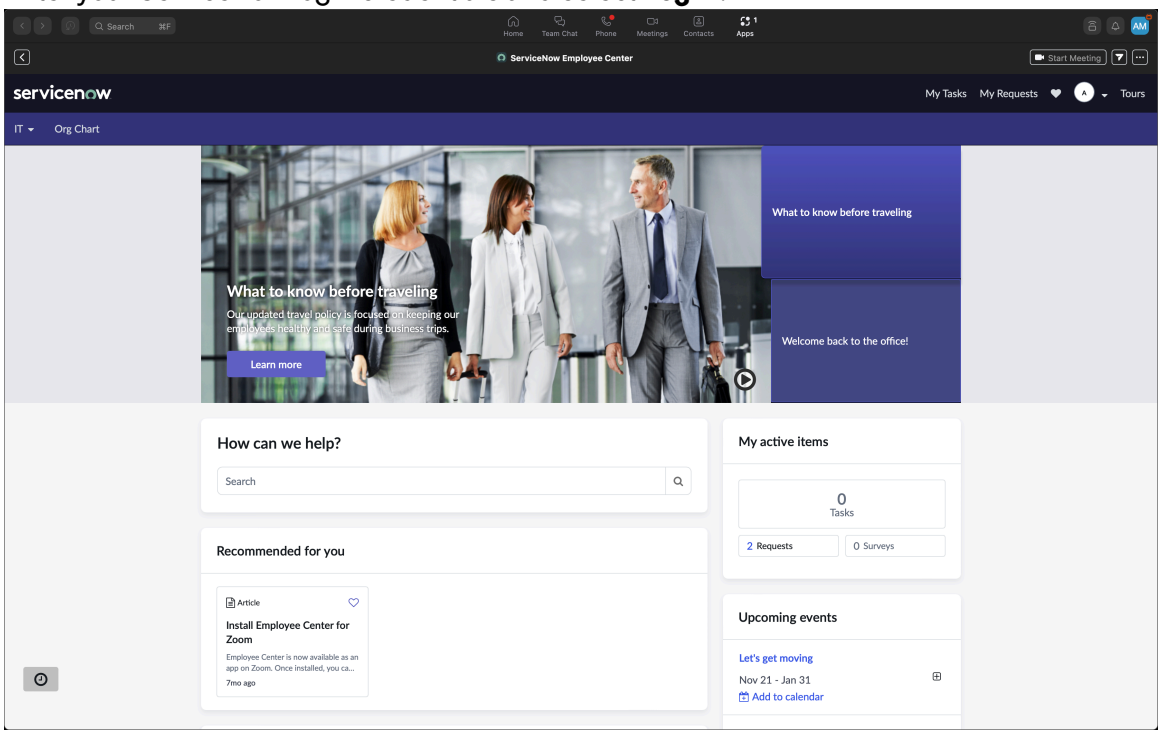
Use Employee Center from Zoom

Access and use the ServiceNow® Employee Center capabilities from Zoom client.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Before you begin

Only if your admin has connected the Zoom account to ServiceNow instance, you (employee) can access ServiceNow Employee Center in the Zoom application or you can install ServiceNow Employee Center from Zoom App Marketplace.

Role required: Employee

Procedure

1. Log in to your Zoom application.
2. Navigate to **Apps** > **Discover**.
3. Search for and select **ServiceNow Employee Center**.
4. Enter your ServiceNow login credentials and select **Log in**.

The ServiceNow Employee Center homepage is displayed.

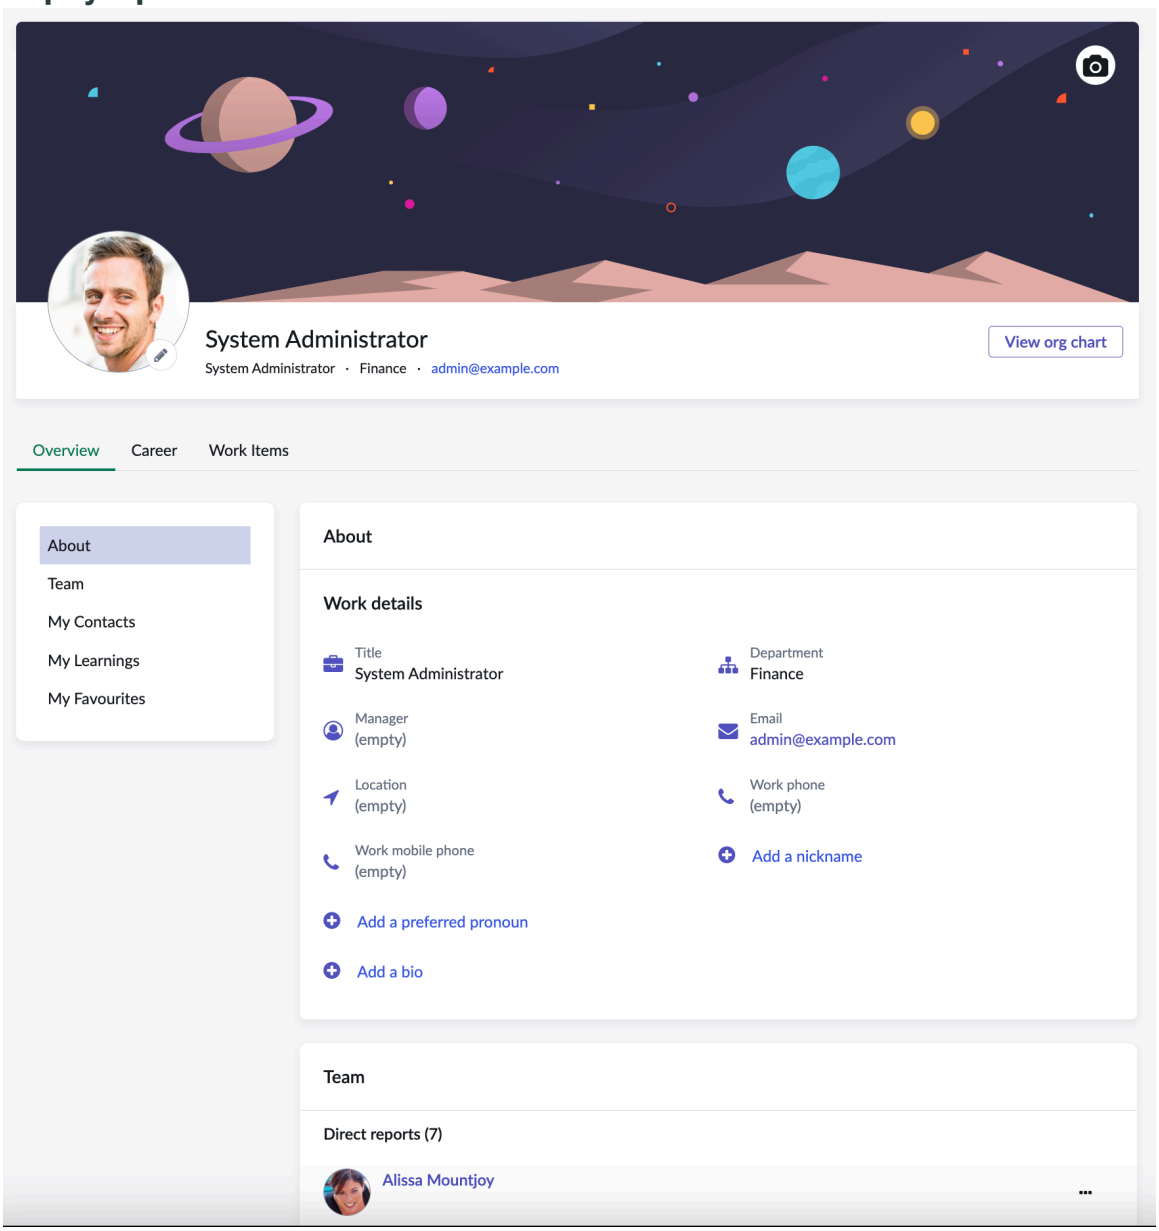
View employee profile

View the employee profile with your personal information from the employee portal and Now Mobile.

Manage your profile

As an employee, you can view or update the *About, Profile Picture, Add Bio, Personal information, Background Banner, Contact details, Employment details, Preferred Pronoun, and My team* fields:

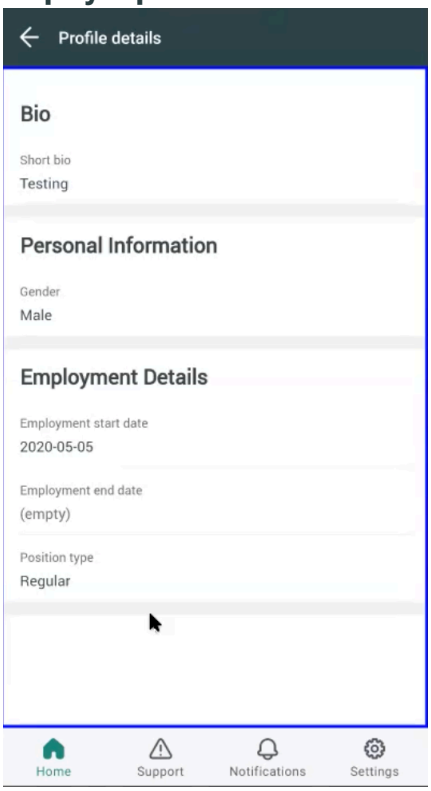


You can view and edit the employee profile from the portal from the header. The different tabs (such as Overview, Career, and Work Items) are visible in a sticky format even when the user scrolls through the page. All widgets under a particular tab are available in the form of the left navigation menu items.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The admin can use the instance options to configure the visibility of the left navigation menu by selecting the **Widget overview panel** check box.

Note:
From Employee Profile version 11.0.3, the Widget overview panel check box is configured from the Profile Portal Configuration.



Employee profile overview

You can view the employee profile from mobile application:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee profile on Now Mobile

Specify your data visibility and privacy preferences by marking the field information for public or private distribution:

- Define work-related data on your profile.
- Manage the profile data visibility and privacy.
- Learn more about your team and organizational structures.

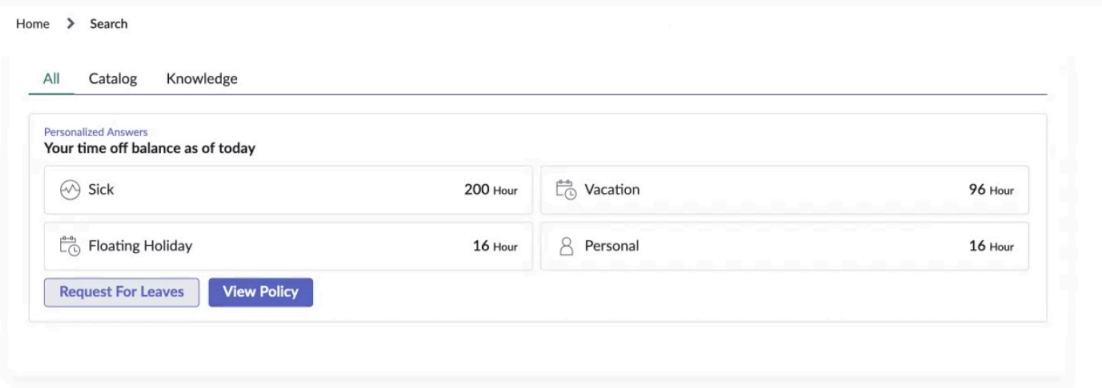
Employee profile

Use Personalized Answers

Employees can use the AI-search enabled feature to seek information about their leave balance and more on the Employee Center search page.



Personalized Answers is an AI search-enabled feature, integrated with one or more third-party integrations to provide relevant and informative content from the search page on Employee Center.

Personalized Answers- time off feature has location-specific data. The default third-party integrations available are Kronos and Workday for specific regions that show the leave balances of employees of that region.

Employees can simply go to the Employee Center search page and look for their remaining paid time-off time. In addition to searching for all kinds of leave balances, the employees can search for information about types of leave. For example, an employee can search for 'how much sick leave do I have left' to see information pertaining to only sick leave.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Personalized answer page for leave balance

Employee can quickly scan the remainder of leaves for the year and select **Request For Leaves** to apply for it. **View Policy** is entirely company-specific.

Employee Profile org chart widget

Use the Employee Profile org chart widget to easily browse, search, and navigate through the organization chart.

As an employee, you can do the following:

- Navigate through a visual employee directory of names and title information.
- Learn more about an employee and the org structure by navigating to a detailed employee profile.
- View the other managers of the current user in a pop-up.
- View direct reports and other reports of a user. The total number of reports is displayed on the user card.
- Perform quick actions based on the org chart action group.

For more information on widget instance options, see Modify the org chart widget display.

RTL support for Employee Center

As an employee, you can change the display of the user interface from right-to-left.

Based on your language preferences, the entire hierarchy of existing infrastructure for styling left-to-right languages—the theme, page, widget, and widget instance SCSS—is converted to CSS for right-to-left languages.

- When the session language is a right-to-left language, for example Hebrew, the direction of the portal user interface displays from right to left.
- The arrow next to View Org Chart in employee_profile widget, View All in ec_pro_dashboard, employee taxonomy topic widget, and across Employee Center points to left per the RTL format.

For more information, see Enable support for right-to-left languages.

Manage favorites

Mark the content as your favorites and easily access all your favorites.

Before you begin

Role required: Employee

Employee Center reference

Reference topics provide additional information about Employee Center components and forms.

Activity Configuration form

Use the Activity Configuration form to do a basic configuration or an advanced configuration for an activity.

Activity Configuration form

Field	Description
Activity Name	Name of the activity.
Activity navigation	Internal or external resource you want to open when you click an activity. The choices are: • **Internal** • **External**
Activity portal page	Internal portal page you want to open when you click an activity. This field appears only when **Internal** is selected from **Activity navigation** field.
External URL	URL of the external website you want to open when you click an activity. This field appears only when **External** is selected from **Activity navigation** field.
Application	Application that you want to configure the activity for.
Primary	Option to set the activity as primary. You can set only one activity as primary.
Active	Option to activate the activity for use.
Sort By	How you want to sort the activity. This field is set to **sys_created_on** by default. This field appears only for a basic configuration after you select the **Primary** option.
Sort Order	Order in which you want to sort the activity. The choices are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity Configuration form (continued)

Field	Description
	• **Ascending** • **Descending** This field is set to **Ascending** by default. This field appears only for a basic configuration after you select the **Primary** option.
Icon	Select a suitable icon for the Activity Name field from the available list.
Order	Order in which you want the activity to appear.
Advanced	Option to do an advanced configuration.
Summary view script	Script to read existing configurations and display the count of activities in the Summary view of the My Active Items widget. This field appears only when you select the **Advanced** option.
List view script	Script to read existing configurations and display tasks only for the primary activity. These tasks are shown in the List view of the My Active Items widget. This field appears only when you select the **Advanced** option.

Activity Configuration Detail form

Use the Activity Configuration Detail form to specify which records you want to retrieve from a table when certain conditions are met for a basic activity configuration.

Activity Configuration Detail form

Field	Description
Activity Configuration	Name of the activity configuration.
Target Page	Page that you want to open when you click an activity on the My Active items widget.
Activity card mapping	Section to specify what records you want to retrieve from a table and how that information must be displayed. The choices are: • **Basic** • **Scripted**
Table	Table that you want to retrieve the data from.
Application	Application that you want to create the activity configuration for.
Active	Option to activate the activity configuration for use.
Order	Order in which the activity configuration must appear.
Condition	The conditions in which the activity configuration applies. Specify filter conditions on the selected table. A condition includes a field, an operator, and a value. To add conditions, to the right of the fields, click **AND** or **OR**. Delete conditions by clicking the X icon next to the condition.

Activity Configuration Detail form (continued)

Field	Description
Basic Card View	Section that displays the fields corresponding to the table that you selected in the **Table** field. Choose how the My Activity widget displays information in the List View by filling in these fields: • **Badge** • **Badge Color** • **Image** • **Title** • **Description** • **Field 1** • **Field 2** • **Action group** When you select **Action group**, you can perform actions right from the my active items section itself. For more information on action groups, see Action framework. This section appears only when **Basic** is selected from the **Activity card mapping** field.
Advanced Card View	In the Card mapping script section, add a JSON script to retrieve records from a table based on the on-screen example. This section appears only when **Scripted** is selected from the **Activity card mapping** field.

Approvals experience reference

Use the following reference information for better approval experience.

Default task configurations

Use the following default task configurations available for approvals.

- Request with *sysapproval* as reference column and *sc_request* as reference table.
- Requested item with *sysapproval* as reference column and *sc_req_item* as reference table.

You can customize the task configurations to suit your requirements. The data model is an extension to the Employee Center **To-do configuration** as a related list. Follow the instructions Enable task configuration for approvals about configuring the approval experience. For more information on how to configure approvals, see Configurable approvals experience.

Note:
A user must have the approval_user or business_stakeholder role to approve IT requests (not applicable to other requests such as HR approvals) on Employee Centre. Role validation has not been implemented in Core UI16 because modifying ACLs in UI16 might have broader implications at the NowPlatform level.

Unable to see Approval todos

Ensure you have the approver_user or business_stakeholder roles to see the approval todos for the **sc_request** or **sc_req_item** items. In the *_getClosureFunction()* method of Script Include todoPageUtils:

```
if (tableName == 'sysapproval_approver') {
 if (!(gs.getUser().hasRole('approver_user') ||
 gs.getUser().hasRole('business_stakeholder'))) {
  var queryString =
 "sysapproval.sys_class_name!=sc_request^sysapproval.sys_class_n
ame!=sc_req_item^NQsysapprovalISEMPTY";
  grTask.addEncodedQuery(queryString);
 }
}
```

Fallback to parent table configuration

When the child table does not have task configuration, fallback is one level above its hierarchy and picks the task configuration of the parent table. When the task parent is not available, fallback is to the default configuration.

SAP Concur reference info

Use the following information for SAP Concur integration.

- All Concur actions are present in **SAP Concur Spoke** (sn_sap_concur_spok) plugin.
- Scheduled job **Pull concur reports** (sysauto_script) is triggered daily. This scheduled job internally calls the **Concur Integration** record from the **Integration Source** table (sn_hr_integr_fw_source) of the ESM framework.
- Schedule job runs and updates the record in the **Concur Sync Details** table (sn_ex_cnc_concur_sync_details) with latest timestamp.
- Concur reports from ServiceNow are synced in the **Concur Expense Report Staging** table (sn_ex_cnc_concur_report_staging).
- Reports from the Staging table are transformed in the **Concur Expense Report** table (sn_ex_cnc_concur_report) by the ESM framework. Use the transformation map **Concur Report Transform Map** in the **Table Transform Map** table (sys_transform_map).
- Approval record is created in the **Pulled Integration To-do** table (sn_hr_integr_fw_todo_inbound) based on the Approver field in the **Concur Expense Report** table.

Workday reference info

Use the following information for Workday integration.

- Workday uses RAAS reports to send data to external system. For more information on RAAS and field-level info about leaves, timesheets, compensation, job change, job requisition, or leave of absence, see Workday HR Spoke.
- Only the open requests are displayed on the approvers **My tasks** page.
- Approval and rejection actions are performed using an *Integration System User (ISU)*. ISU is a virtual user (and not an actual user) which helps in the safe-keeping of approver credentials. With the use of ISU, approval and rejection records protect the sensitive data according to your configuration in Workday. For example,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - When John Doe, the approver enters time sheet approved as comment, the comment shown as `John Doe(john.doe@acme.com): Time sheet approved`.
  - When John Doe performs the action `Approve`, a comment is added in Workday as `John Doe (john.doe@acme.com): Action - Approve`.
  - When John Doe performs the action `Reject`, a comment is added in Workday as `John Doe john.doe@acme.com): Action - Reject`.
  - When John Doe performs the action `Reject with a comment-Request is not in compliance with company policy`, two comments are added `John Doe (john.doe@acme.com): Action-Reject John Doe(john.doe@acme.com): Request is not in compliance with company policy`.
- Approve or reject actions are shipped out-of-the-box for all use cases.
- When an approval is delegated from one approver to another in Workday; report data source is not able to handle the delegation change such as delegated task and other delegation details.
- When a request requires a multi-level approval with level 1 approved in Workday and ServiceNow, you may see two entries for the same approval. This is a limitation with the ISU use.
- Attachments support a max limit of 12 MB. Ensure the attachment size is below 12 MB.
- Use the following scripts:
  - WorkdayApprovalToDosClientUtilSNC: Retrieves records for the purge process in Workday approvals.
  - WorkdayApprovalToDosHelperSNC: Contains constants related to Workday approvals.
  - WorkdayApprovalToDosClientUtil: Extends WorkdayApprovalToDosClientUtilSNC and allows users to define custom code.
  - WorkdayApprovalToDosHelperUtils: Extends WorkdayApprovalToDosHelperUtilsSNC and enables users to define custom code.
  - WorkdayApprovalToDosHelperUtilsSNC: Provides functions for Workday approvals.
- Ensure you configure the right user controls and privileges for Compensation Change and Spend Authorization use cases. Only the authorized users can view the sensitive records and data from Workday.
- For data protection, use the default purge policy to delete data more often. By default, data purge happens after in 30 days.
- Ensure only the HR administrator [sn_hr_core.admin] has access to the sensitive information as explained in Remove HR Administrator role from IT System Administrators.

For more information on how to configure approvals, see Configurable approvals experience.

Approvals on mobile

Only approvals that are in **sysapproval_approver** table are shown using the generic card in Now Mobile.

To disable the feature change the value of this sys_property: sn_me_todos.all_approvals_mobile_enabled to false.

OOTB action group use

Use the out-of-the-box **Approvals action group** to display the actions such as **Approve** and **Reject**. For more information, see Action framework.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For actions to appear in my items widget, you can add the OOTB **Approvals action group** from **All** > **Employee Center** > **Administration** > **To-dos Configurations**, click an existing to-dos configuration, navigate to the **To-do Configuration Details** record, and use the OOTB action group under **Fields Mapping**.

Additional information

- Click the URLs for additional information and context.
- Allow BUs to add non-task tables easily to the list in the To-dos or Task configuration reference tables by passing non-task tables as an array in the *`Scripted Extension Points`*. *`sn_hr_sp.TodoNonTaskTables`*, and *`sn_ex_sp.RefNonTaskTables`*.

Block content form

Block content form

Block content fields

Fields	Description
Name	Name of the block content. The name is what you select when you pull in block content for a community blog.
Allow personalization	Enables the use of variables taken from either the HR Profile or Sys User tables to personalize your content. Select the box and **User reference table** appears.
User reference table	Determines the variables you can use to personalize text for the block content. Select **HR Profile** to select variables from the sn_hr_core_profile table. Select **User** to select variables from the sys_user table.
Select variables	Displays variables dependent on the table selected in **User reference table**. Variables pull information from the selected table to personalize the block content.
Rich text	Text that comprises the block content. To insert variables, place your cursor in the desired location and click the variable. Use the formatting tools to apply formatting options such as bold, italic, underline, and font styling.

Browser Extension for Employee Center forms

The Browser Extension for Employee Center forms provide information about various configurations required to set up the extension.

Website configuration form

The field descriptions provide a point of reference when you're configuring the Browser Extension for Employee Center for a website.

Website for Browser extension

Field	Description
Site name	Name of the website.
Parent website	Parent website helps with the logical grouping of certain related websites.
Enable resources search	AI search results, if applicable.
Site URL	URL of the website being configured.
Active	Option to enable the Browser Extension configuration for the website.
Apps Associated	List of active applications to be associated with access from the website through the Browser Extension. **Note:** Applications can also be added to the configured website from the **Associated Websites** tab on the application page.
Quick links Associated	List of quick links from the portal to be associated with access from the website through the Browser Extension. **Note:** Quick links can also be added to the configured website from the **Associated Websites** tab on the quick links page.
Topics Associated	List of topic pages from the portal to be associated with access from the website through the Browser Extension. **Note:** Topic pages can also be added to the configured website from the **Associated Websites** tab on the specific topic page.
Contents Associated	List of connected content from the portal to be associated with access from the website through the Browser Extension. **Note:** Content can also be added to the configured website from the **Associated Websites** tab on the specific content page.

Browser Extension policy form

The Policy form provides the field descriptions to set up the Browser Extension policies on the supported browsers.

Browser extension policy for web browser

Field	description
Instance	URL to connect the browser extension with the ServiceNow instance. **Note:** The URL is functional with or without the `https://` prefix.
Browser extension portal	Portal identifier for Browser Extension for Employee Center.
Employee portal	Portal identifier for Employee Center.
Extension title	Title for the browser extension web page.
Extension icon path	Icon URL to navigate to the browser extension. **Note:** The URL requires the entire filepath including the `https://` prefix.
Enable notifications	true **Note:** Enable this setting to get Chrome browser notifications along with the notifications in your Browser Extension.
Enable context menu	true **Note:** Enable select and hold (or right-click) context menu.
Open search in browser extension	Option to open search in the browser extension or in a new tab.
Allowed sites	List of websites where the extension is enabled. **Note:** The domain name is required for the extension to be active. For example, `Google`, `Amazon`, or `Workday`.
Context menu title for search	Text displayed for the context menu search.
Context menu title for search in portal	Text displayed for the select and hold (or right-click) context menu search.
Empty state title	Header text for the empty state message on unsupported websites.
Empty state message	Text displayed as empty state message on unsupported websites.
Empty state action label	Text displayed on button navigating to the Employee Center portal.
Empty state action label	Text displayed on the button to navigate to the Employee Center portal along with the empty state message.
Enable state header logo	Logo displayed on the empty state header.

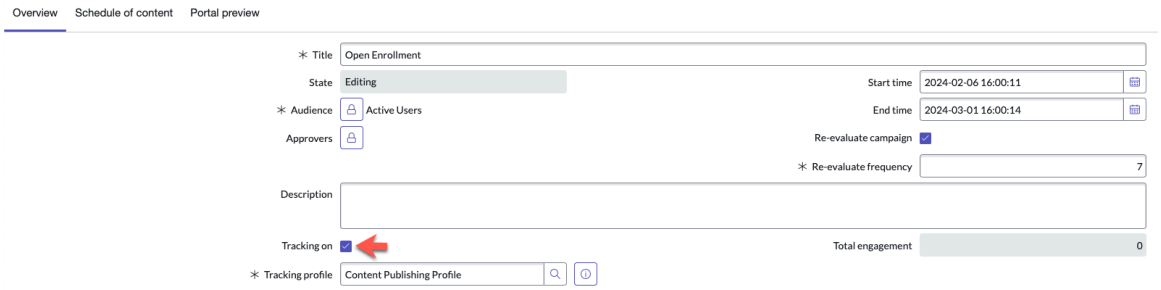
Browser extension policy for web browser (continued)



Field	description
	Note: The URL requires the entire filepath including the `https://` prefix.

Campaign overview and Campaign analytics dashboards

Content Analytics collects data on user interactions and generates visualizations to help campaign managers determine the effectiveness of campaigns.

Use Content Analytics to measure the effectiveness of a campaign and the content provided to your employees. Content Analytics is one of several resources to help you improve your campaigns. To learn about the other resources, see Analyzing your campaign for effectiveness.

When tracking is enabled for a campaign, Content Analytics generates data visualizations. For more information on how to enable tracking, see Create a campaign.

Note:
We recommend waiting at least 24 hours after publishing for data to appear on the dashboards.

Interaction tracking

Dashboards display data visualizations for specific parameters, such as user interactions with content.

Note:

- An interaction is an action performed by the user, such as a download, link click, to-do completion, or video play.
- An impression is an instance of content appearing for a user. Each time a user views the content, it is counted as an interaction.

Content Analytics tracks the following user interactions (depending on content type). When content is rendered in the portal, the system counts that as an impression. When an employee clicks on content, the system counts that as a clickthrough, download, or played (depending on the content type).

- Banner clickthrough
- Banner impression
- Calendar download
- Calendar impression

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Email clickthrough
- Event download
- Event impression
- Image-based link clickthrough
- Image-based link impression
- Link clickthrough
- Rich content clickthrough
- Rich content impression
- To-do completion
- To-do impression
- Video impression
- Video played

Campaign overview dashboard

The Campaign overview dashboard displays performance metrics by campaign, including tasks closed and user actions.

Campaign performance metrics

Visualization	Description
Open Campaign Tasks	Number of tasks in each state by campaign. The value in each cell links to a list of the tasks in that state and campaign.
Campaign Task Closures This Week	Stacked bar chart that shows the number of tasks that were closed this week. Mouse over a bar to see metrics specific to a campaign.
Event Activity Over Time	Total number of user interactions with content.
Events Over Time by Content	Number of user interactions with content, where each line represents a piece of content. Mouse over a line to see metrics specific to a piece of content.
Events Over Time by Action	Number of user interactions with content, where each line represents a type of interaction. Mouse over a line to see metrics specific to a type of interaction.
Action Activity	Pie chart that shows the proportions of each type of interaction and impressions compared to the total number of actions.
Top Content	Bar chart showing the most accessed content. Clicking a bar shows metrics for the specific content and action.
Top Notifications	Bar chart showing the most clicked email notifications during the campaign.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Campaign analytics dashboard

The Campaign analytics dashboard displays data on campaign engagement, to-dos, and impact. Use filters to specify the metrics to include in the visualizations. Choose from **Campaign** and **Campaign Success Goal**, then specify which campaign or campaign success goal.

Campaign Engagement tab

Visualization	Description
Campaign info	Displays the campaign title and audience
Days running	The start and end dates of a campaign and the total days the campaign has run to date
Total engagement	This metric provides statistics on how many employees are interacting with the campaign. It shows the percentage of campaign targets who have visited the destination portal and have engaged with content by clicking or viewing. Those campaign targets who have never been to the portal are not part of this calculation. **Note:** Currently, email link clicks are tracked as anonymous and do not affect the campaign engagement score.
Event activity over time	Total number of user interactions with content.
Events over time by content	Number of user interactions with content, where each line represents a piece of content. Mouse over a line to see metrics specific to a piece of content.
Events over time by action	Number of user interactions with content, where each line represents a type of interaction. Mouse over a line to see metrics specific to a type of interaction.
Action activity	Pie chart that shows the proportions of each type of interaction and impressions compared to the total number of actions.
Top content	Bar chart showing the most accessed content. Clicking a bar shows metrics for the specific content and action.
Top notifications	Bar chart showing the most distributed notifications during the campaign.

To-dos tab

Visualization	Description
All campaign to-dos	Shows campaign data in a bar chart for the last 12 months for to-dos by state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To-dos tab (continued)

Visualization	Description
	• Closed complete • Closed incomplete • Open

Campaign impact tab

Visualization	Description
Campaign impact	Campaign impact shows data related to your established campaign success goals. For more information on creating campaign success goals, see Create campaign success goals. Select a campaign success goal to view a chart that shows how your campaign is progressing. The campaign impact chart shows: • Evaluation count: Shows current data during campaign duration. Use this information to compare against your baseline and target count shows how your campaign is progressing. • Baseline count: Shows historical data based on past, similar campaigns. • Target count: The count you hope to reach when no historical data is available. • Trend: Depends on how you set your campaign success goal type. If you select Deflection, your trend should point down. If you select Drive action, your trend should point up. • Forecast Evaluation Count: Shows how close the campaign is to the target count and when it might be reached.

Components installed with Employee Center Pro

Several types of components install with the activation of the Employee Center Pro plugin, including user roles and tables.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Employee Center [com.sn_hr_service_portal] plugin activates the sn_hr_sp.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only Employee Center admin user by requiring a minimum number (default is two) of active users with this role.

Tables installed

Tables installed

Table	Description
EC Portal Configuration [sn_hr_sp_esc_portal_config]	EC portal configuration table.
To-dos Configuration [sn_hr_sp_todos_config]	To-dos configuration table.
To-dos Widget Mapping [sn_hr_sp_todos_widget_mapping]	To-dos widget mapping table.

For further information on table administration and how to manage data, see Table administration.

Widgets installed

Widgets installed

Widget	ID	Description
App Launcher	app-launcher	Appears on the home page to provide one-click access to recently-used applications and favorites.
Complete feedback task	complete-feedback-task	
Dotted Managers Org Chart	dotted-managers-org-chart	
EX Feedback Survey	ex-feedback-survey	Provides the survey feature in the portal.
Experience Feedback Drawer	experience-feedback-drawer	
Experience Feedback Header Item	experience-feedback-header-item	Provides a header menu for the Experience feedback functionality in Now Mobile®.
Experience Feedback Header Wrapper	experience-feedback-header-wrapper	
Experience Feedback Mobile	experience-feedback-mobile	
Experience Feedback Modal	experience-feedback-modal	
Experience feedback rating	experience-feedback-rating	Drives the presentation logic of the feedback ratings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widgets installed (continued)

Widget	ID	Description
Experience Feedback Wrapper	experience-feedback-wrapper	
Experience Flow Feedback	experience-flow-feedback	
Experience Workflow Feedback	experience-workflow-feedback	Drives the feedback workflow.
Feedback to do details	ex-feedback-to-do-details	
MESP Feedback Wrapper	mesp_feedback_wrapper	
Organization Chart (EC)	org_chart	Displays the employees organization chart, the relationships to other employees, and more.
Rating Emoji Feedback	rating-emoji-feedback	Captures feedback through emojis.
Rating Numeric Feedback	rating-numeric-feedback	Captures numeric rating feedback.
Rating Star Feedback	rating-star-feedback	Captures 5-star rating feedback.
Rating Thumb Feedback	rating-thumb-feedback	
Skip feedback task	skip-feedback-task	
Web Applications	web_applications	Provides one-click access to applications assigned to the user.

Components installed with Content engagement

Several types of components are installed with activation of the Content engagement plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

For more information about tables, see Table administration.

Roles installed

Roles installed

Role title [name]	Description	Contains roles
Engagement Admin [sn_ce.admin]	Configures the reactions	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Components installed with Content Experiences

Several types of components install with the activation of the Content Experiences [sn_cd] plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

For more information about tables, see Table administration.

Demo data is available for this feature.

Note:
The Content Experiences [sn_cd] plugin activates the sn_ca.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only Content Experiences admin user by requiring a minimum number (default is two) of active users with this role.

Roles

The following roles are included when you install the Employee Center application (sn_ex_sp):

Roles

Role title [name]	Description	Contains roles
Campaign Approver [sn_ca.campaign_approver]	When configured, can approve content for a campaign. Requires approval before a campaign publishes.	Content Approver [sn_cd.content_approver]
Content Admin [sn_ca.campaign_admin]	Grants access to all Content Experiences information and privileges. Can create, configure, administer, and schedule campaigns. Can access read and write records to the Content Experiences tables. Can use an analytics tracking profile with a campaign. **Note:** Does not inherit Content Delivery Analytics Admin [sn_cda.analytics_admin] role to set up tracking profiles.	Content Experiences Manager [sn_ca.campaign_manager]
Content Manager [sn_ca.campaign_manager]	Provides access to all Content Experiences content. This includes:	• Campaign Approver [sn_ca.campaign_approver] • sn_esign.config_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles (continued)

Role title [name]	Description	Contains roles
	Creating and scheduling content for the Employee Center and campaigns.	• sn_cda.analytics_reader • sn_cd.content_approver

Scheduled jobs installed

Scheduled jobs installed

Scheduled job	Description
Content Experiences: Add Non-Portal Campaign Content	Creates sn_ca_campaign_item_user_records for sent emails. It does not send the email. Runs every four hours by default.
Content Experiences: Calculate Campaign Engagements	Calculates the total number of actionable engagements (videos viewed, links clicked) recorded divided by the total number possible with an engagement percentage. Runs on a designated repeating interval.
Content Experiences: Campaign Success Criteria	Populates the base count and evaluation period count. Runs the evaluation criteria set up for a campaign. Takes the success goals from published or finished (end date has passed) campaigns and evaluates them to calculate the: • Baseline count • Target count • Evaluation count Evaluation count analyzed against the Target count to determine success. Runs daily.
Content Experiences: Create To-dos	Creates to-do tasks for assigned audience for a campaign. Runs every hour by default.
Content Experiences: Deactivate Campaign Users	Deactivates users assigned to a campaign that has ended. Runs every six hours by default.
Content Experiences: Manage Content States	Updates the state of targeted content and marks content as available or expired. For example: • A Targeted Content record is available starting on 12-01-2019. • Today is 11-27-2019.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scheduled jobs installed (continued)

Scheduled job	Description
	• When 12-01-2019 arrives, the state of the targeted content changes from Pending to Ready or Available. • If the same content is only available until 12-05-2019 and the date is 12-06-2019, the state of the targeted content changes to Complete or Incomplete. Runs every hour and five minutes by default.
Content Experiences: Process SNC analytics	Processes analytics captured using a ServiceNow tracker to update campaign statistics. Runs daily. **Note:** Available to use if the SNC tracking profile fails to upgrade and work with flow designer.
Content Experiences: Purge Campaign Data	Purges campaigns and users based on the Content Experiences Configurations Properties settings. See the Purging section in Properties installed with Content Experiences. Runs every hour by default.
Content Experiences Profile	Works with the trigger associated with Content Experiences Profile. Processes analytics collected by the Content Experiences Profile tracker to update campaign statistics. Runs daily.
Content Experiences: Send Email Notifications	Sends the emails for a campaign. Runs every hour by default.
Content Experiences: Send Push Notifications	Sends SMS notifications for a campaign. Runs on a designated repeating interval.
Content Experiences: Send MS Teams Notifications	Sends an MS Teams notification for a campaign. Runs every 90 minutes by default.
Content Experiences: Update Campaign Audience	Reevaluates the audience for a campaign and removes employees that no longer satisfy the criteria. Adds users that match your defined criteria to the campaign. Users show up in the Campaign Targets related list for a campaign. You can view the updated audience from the Campaign Targets tab of a campaign. See View campaign targets. Runs daily by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed

Tables installed

Table	Description
Campaign [sn_ca_campaign]	Defines high-level information about a campaign, including the to and from date range a campaign runs and the audience that can view it.
Campaign Bundle [sn_ca_campaign_bundle]	Grouping mechanism for items that have the same triggering mechanism and availability.
Campaign Content [sn_ca_campaign_item]	Campaign content associated with a bundle.
Targeted Content [sn_ca_campaign_item_user]	Campaign content available to the audience. After a campaign publishes and content is available, users appear under the Campaign Target tab of the campaign,
Campaign Target [sn_ca_campaign_user]	Who in your company is part of a campaign.
Creation Status [sn_ca_creation_status]	Tracks whether a campaign target has visited a particular widget instance that is part of the campaign.

Components installed with Content Publishing

Several types of components install with the activation of the Content Delivery [com.sn_content_delivery] plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Note:
The Content Publishing [com.sn_content_delivery] plugin activates the sn_cd.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only Content Publishing admin user by requiring a minimum number (default is two) of active users with this role.

Roles installed

The following roles are included when you install Employee Center application (sn_ex_sp):

Roles installed

Role title [name]	Description	Contains roles
Content Publishing Admin[sn_cd.content_admin]	Grants access to all Content Publishing information and privileges. Can access read and write records to the content publishing tables.	• Content Publishing Manager [sn_cd.content_manager] • Template Manager [sn_cd.content_template_owner]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed (continued)

Role title [name]	Description	Contains roles
	Can add or edit content type. Can create or edit Content templates. Can schedule content for the service portal or Employee Center.	
Content Publishing Manager[sn_cd.content_manager]	Can create and schedule content for Content Publishing.	None
Template Manager [sn_cd.content_template_owner]	Can create and view content templates for news articles.	None
Campaign manager [sn_ca.campaign_manager]	Provides access to all Content Experiences content. This includes: Creating and scheduling content for the Employee Center and campaigns.	• sn_esign.config_manager • sn_cda.analytics_reader • sn_cd.content_approver
Content Publishing Analytics Admin[sn_cda.analytics_admin]	Required to set up an analytics profile.	None
Content Publishing Analytics Reader[sn_cda.analytics_reader]	Can access and view analytics reports.	None

Scheduled jobs installed

Scheduled jobs installed

Scheduled job	Description
Content Publishing: Send Notifications	Sends email notification for a specified audience and specified date. Runs every hour by default.
Content Publishing: Post to Forums	Posts community content to community forums. Runs every hour by default.
Content Publishing: Process To-dos	Creates to-do tasks for assigned audience. Runs every hour by default.
Content Publishing: Send MS Teams Notifications	Sends a scheduled notification to employees in MS Teams Runs every hour by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed

Tables installed

Table	Description
Audience [sn_cd_audience]	A targeted group of users.
Audience Data [sn_cd_audience_data]	Used when **Audience type** is **Upload File** from the Audience form. Where you store uploaded users.
Block Content[sn_cd_block]	Reusable content for notifications, rich-text announcements, or community posts (when you install communities).
Community Content [sn_cd_content_community]	Content posted to a topic or forum in a community. Community content can be: • Blog • Event • Video • Post list
To-do Content [sn_cd_content_todo]	Defines the to-do content. To-do content are tasks assigned to employees that can be a part of a campaign. To-dos can also trigger additional content after completing the initial task. Users verify task completion by: • Button click • Video launch • Link click
Content Task [sn_cd_task]	Extends the HR task [sn_hr_core_task] table and where you create tasks for the Employee Center to-dos.
Org Chart Configuration [sn_cd_config_org_chart]	What information appears on the Org Chart.
User Display Configuration [sn_cd_user_display_configuration]	Controls when users display on the Org Chart page and HRI My Team widget in the Employee Center.
Content [sn_cd_content_base]	Base table for fields common to Content tables.
News Content [sn_cd_content_news]	Company news and announcements published to the portal via widgets.
Notification Content [sn_cd_content_notification]	Defines an email blast announcing important news and links directing the user to the service portal.
Portal Content [sn_cd_content_portal]	Content or information you make available to your employees on the Employee Center. Content can be a banner, calendar, event, image-based link, rich text, URL, or video.
Content Type [sn_cd_content_type]	Classifies the content you want to appear on the Employee Center.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widgets installed (continued)

Widget	ID	Description
		body as created in the Rich Content Editor.
News Dataloader	cd-news-dataloader	Can be added to the Article details page to facilitate data sharing between the widgets on the page, which reduces the page loading time.
News Feed	cd-news-feed	Appears on the home page, News Center, and article details pages and holds previews of news articles.
News Header	cd-news-header	Appears on the Article details page and holds the headline, subheadline and image thumbnail.
News Info	cd-news-info	Appears on the Article details page and holds the news article publication date and Copy Link button.
Organization Chart (CD)	cd-orgchart	Shows an organization chart of an employee.
Preview Mobile Content (CD)	cd-preview-mobile-content	Notifications that show up in mobile view.
Preview of Content To-do (CD)	preview_content_todos	Shows a preview of to-do content.
Quick Links (CD)	cd-quick-links	Shows portal content with content type of Image-based Link. Shows a row of clickable images.
Rich Content (CD)	cd-richcontent	Allows you to publish rich content like a long-form article within a widget on the portal (page or topic). Shows previews of three pieces of rich content. Appears as a carousel when are there more than three published pieces of rich content.
Styled Content (CD)	cd-styled-content	Shows portal content with content type of Styled Content. Shows informative banners or text.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widgets installed (continued)

Widget	ID	Description
		You can configure color, alignment, and other options for text and background. Appears as a carousel when there are multiple items.
Upcoming Events (CD)	cd-upcoming-events	Shows portal content with content type of Event. Shows upcoming events.
Video Carousel (CD)	cd-video-carousel	Shows portal content with content type of Video. Multiple videos show in a carousel. You can show a scrolling list of videos using this widget. **Note:** Only YouTube and Vimeo embedded links are supported.
Welcome Banner (CD)	cd-banner	Shows portal content with content type of Banner. Generally used to show informative banners/text. Shows in a carousel when there are multiple items.

Note:
These widgets support the Content Experience widget; they are not mean to be used directly in the portal: CD Preview widget, CE Banner content, CE Carousel Layout, CE List Layout, CE Styled Content, and CE Tile Layout.

Components installed with Content Governance

Several types of components install with the activation of the Content Governance [sn_cg] plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Note:
The Content Governance [sn_cg] plugin activates the sn_cda.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only Governance admin user by requiring a minimum number (default is two) of active users with this role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed

Roles installed

Role title [name]	Description	Contains roles
Content request user [sn_cg.content_request_user]	Gives read and write access to content request records. This role is automatically assigned to the Content Publishing Content admin (sn_cd.content_admin) and Content manager (sn_cd.content_manager) roles.	None
Content items request user [sn_cg.content_request_item_user]	Gives read and write access to content items records. This role is automatically assigned to the Content Publishing Content admin (sn_cd.content_admin) and Content manager (sn_cd.content_manager) roles.	None

Tables installed

Tables installed

Table	Description
Content Request Item [sn_cg_content_request_item]	Content created from the Content Governance interface
Content Request [sn_cg_content_request]	Request for content created by an employee or manager

Components installed with Content Analytics

Several types of components install with the activation of the Content Analytics [sn_cda] plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Note:
The Content Analytics [sn_cda] plugin activates the sn_cda.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only Content Analytics admin user by requiring a minimum number (default is two) of active users with this role.

Roles installed

Roles installed

Role title [name]	Description	Contains roles
Analytics admin [sn_cda.analytics_admin]	Creates tracking profiles, assigns the sn_cda.analytics_admin and sn_cda.analytics_reader roles, and can view the dashboards.	None
Analytics reader [sn_cda.analytics_reader]	Can view tracking profiles and dashboards.	None

Scheduled jobs installed

Scheduled jobs installed

Scheduled job	Description
Content Experiences: Calculate Campaign Engagements	Calculates the engagement score for every published campaign with tracking turned on. By default, runs every five minutes.
Content Experiences: Process SNC analytics	Converts analytics from the Tracked Event [sn_cda_tracked_evt_agg] table into the Analytics Statistic [sn_ca_analytics_stat] table. This fills in campaign, action, and content references. By default, runs daily.

Note:
You can trigger or run a tracking profile scheduled job from the Tracking Profile list. You may have to add the **Trigger** field by using the Update Personalized List feature. See Personal lists.

Tables installed

Tables installed

Table	Description
Analytics Import [sn_cda_import]	Stores information regarding profile imports.
Analytics Log [sn_cda_analytics_log]	Stores logs created when profile validation or import fails.
Analytics Visit Statistic [sn_cda_analytics_visit_stat]	An accumulation of visit statistics on a per day and per profile basis. For example, the number of visitors and page views per session.
Browser [sn_cda_visit_browser]	Stores unique list of browsers.
Browser Statistic [sn_cda_browser_stat]	Stores analytics related to visits based on browsers and devices.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed (continued)

Table	Description
Device Statistic [sn_cda_device_stat]	Stores analytics related to device types (for example, desktop, mobile).
Event Statistic [sn_cda_event_stat]	Stores browser event analytics (for example, video plays, button clicks) from all profiles.
External Tracking Profile [sn_cda_external_tracking_profile]	Generic table that holds external tracking profiles.
Page Statistic [sn_cda_page_stat]	Stores page view analytics from all profiles.
Profile Trigger [sn_cda_profile_trigger]	Stores schedule jobs, one per profile, which imports data for the tracking profile.
Restricted Country [sn_cda_m2m_prof_country]	Defines what countries you do not want to track. Do not track users that reside in the defined country.
ServiceNow Tracking Profile [sn_cda_snc_tracking_profile]	Stores profiles when tracking with ServiceNow. Extends Tracking Profile [sn_cda_tracking_profile]
Tracked Event [sn_cda_tracked_evt_agg]	Stores raw tracked events for ServiceNow profiles. When imported, transforms to the sn_cda_event_stat table.
Tracked Field Value [sn_cda_tracked_fld_value]	Helper table to use during tracking for storing references to unique field/value combinations. Enables analytics breakdowns.
Tracked Page [sn_cda_tracked_page_agg]	Stores raw page view events for ServiceNow profiles. When imported, transforms to the sn_cda_page_stat table.
Tracking Profile [sn_cda_tracking_profile]	Generic table that holds analytics profiles.
Tracked Visit [sn_cda_tracked_visit_agg]	Stores raw visit events for ServiceNow profiles. When imported, transforms to the sn_cda_visit_analytics_stat table.
Visit Referral [sn_cda_visit_referral]	Stores analytics related to page referrals.

Tables installed with Content Experiences and Content Analytics

Table	Description
Analytics Statistic [sn_ca_analytics_stat]	Stores aggregate analytics for a campaign, including interactions with campaign, action, and content.
Archived Campaign Statistic [sn_ca_campaign_arch]	Stores archived campaign statistics.
Tracked Action [sn_ca_tracked_action]	What unique actions you want to track with a campaign.
Campaign Tracked Action [sn_ca_m2m_campaign_action]	Track the many-to-many relationships between actions and a campaign. Track only actions that are part of a campaign.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Content Experiences and Content Analytics (continued)

Table	Description
Convertive Action [sn_ca_m2m_action_content_type]	Many-to-many relationship between actions and content types. Defines what types of actions contribute to the engagement score of a campaign. For example, a banner impression action should not change the engagement score, but a banner click-through should.

Widgets installed

Widgets installed

Widget	ID	Description
Content Analytics Site Tracker	cda-site-analytics	Helps analyze user behavior, usage metrics, and more from the user experience dashboard.

Connected Content form

Use the connected content form to associate content to the topics in your taxonomy.

Connected Content form

Field	Description
Content Type	The type of content you want to associate with a topic. The choices are: • **Catalog Item** • **Knowledge** • **Quick Link**
Catalog item	The catalog item you want to associate with the topic. This field appears only when **Catalog Item** is selected from **Content Type** field.
Knowledge	The knowledge article you want to associate with the topic. This field appears only when **Knowledge** is selected from **Content Type** field.
Quick link	The quick link you want to associate with the topic. This field appears only when **Quick Link** is selected from **Content Type** field.
Topic	The topic that you want to associate the content with.

Content Analytics dashboards

Content Analytics display data visualizations for portal data collected in the default tracking profile.

Content Analytics dashboard

The Content Analytics dashboard displays portal engagement metrics, including unique users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Dashboard widgets

Widget	Description
Adoption	Tracks the number of new and returning (unique) users each day
Bounce Rate	The percentage of users who leave the portal after viewing only one page without further interaction
Average Session Duration	Average number of minutes a user spends in a session. The system tracks a session as either • 30 minutes after a user opens a page • Until the user closes the tab
Average Time per Page	Average number of minutes a user spends looking at a page
Engagement Metrics	Type of engagement (page views and session) by week represented with vertical bars, with a line representing average weekly page views
Visits by Browser	Number of views by browser type
Visits by Device	Number of views by device type
Unique Users	Total number of users from the previous day

Content Analytics- Basics dashboard

The Content Analytics dashboard displays portal page visits and views, including visits per day and most-frequently viewed pages.

Dashboard widgets

Widget	Description
All Visits in Last 365 Days	Total number of visitors in the last 365 days
Average Page Views Per Session	Average pages a user views in a session. The system tracks a session as either • 30 minutes after a user opens a page • Until the user closes the tab
This Week's Top Pages	Bar chart displaying the most viewed pages from the previous seven days
Page Views Per Day	Line graph displaying the number of pages viewed each day
Visits Per Day	Line graph displaying the number of visitors to the portal each day
Yesterday's Top Pages	Bar chart displaying the most viewed pages from the previous day

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content engagement dashboard

Content analytics displays data visualizations of engagement metrics for content published to the portal or Now mobile app in the Content Engagement dashboard.

Dashboard overview

The Content engagement dashboard displays metrics for user engagement, such as content views, reaction icon clicks, comments, and replies to comments. For more information, see Content engagement

Content Engagement Visualizations

Visualization	Description
Total engagement over articles posted	Number of reactions and comments/replies by day
Unique views	Number of unique views by day
Reported content	Lists content items with reported comments.
Reported comments	Lists reported comments.

Content Library Overview dashboard

Content analytics displays data visualizations of performance metrics for content published to the portal or Now mobile app in the Content Library Overview dashboard.

Dashboard overview

The Content Library Overview dashboard displays metrics for content published via a schedule or publish plan. This dashboard does not display content delivered via a campaign. For campaign content data visualizations, see Campaign overview and Campaign analytics dashboards.

Content Library visualizations

Visualization	Description
Open Content Tasks	Number of tasks by status (such as open or closed complete). Each bar in the chart links to a list of the tasks with that status.
Recent Content Task Closures	Vertical bar chart that shows the number of tasks that were closed by time period. Each bar in the chart links to a list of tasks closed within that time frame
Event Activity Over Time	Total number of user interactions with content.
Events Over Time by Content	Number of user interactions with content, where each line represents a piece of content. Mouse over a line to see metrics specific to a piece of content.
Events Over Time by Action	Number of user interactions with content, where each line represents a type of interaction. Mouse over a line to see metrics specific to a type of interaction.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Library visualizations (continued)

Visualization	Description
Top Content	Bar chart showing the most accessed content. Clicking a bar shows metrics for the specific content and action.
Action Activity	Pie chart that shows the proportions of each type of interaction and impressions compared to the total number of actions.
Top Notifications	Bar chart showing the most clicked notifications for the specific time period.

Interaction tracking

Dashboards display data visualizations for specific parameters, such as user interactions with content.

Note:

- An interaction is an action performed by the user, such as a download, link click, to-do completion, or video play.
- An impression is an instance of content appearing for a user. Each time a user views the content, it is counted as an interaction.

Content Analytics tracks the following user interactions (depending on content type). When content is rendered in the portal, the system counts that as an impression. When an employee clicks on content, the system counts that as a clickthrough, download, or played (depending on the content type).

Note:
The Rich Content Clickthrough feature counts any click within rich content areas, including links, but does not distinguish between link clicks and other clicks. For example, clicking a link or an image in the rich content area both count as clicks, but the feature does not specify which was clicked.

- Banner clickthrough
- Banner impression
- Calendar download
- Calendar impression
- Email clickthrough
- Event download
- Event impression
- Image-based link clickthrough
- Image-based link impression
- Link clickthrough
- News article tab clickthrough
- News article clickthrough
- News article impression

Employee Center Pro widgets

EC Pro widgets

Widget	ID	Description
App Launcher	app-launcher	Appears on the home page to provide one-click access to recently-used applications and favorites.
Organization Chart (EC)	org_chart	Displays the employees organization chart, the relationships to other employees, and more.
Web Applications	web_applications	Provides one-click access to applications assigned to the user.

Content Publishing widgets

Content Publishing

Widget	ID	Description
Announcements (CD)	cd-announcements	Shows portal content with content type of Rich Text. Generally, a brief broadcast message and shows in a carousel when there are multiple items.
Category News Feed	cd-news-feed-category	Shows previews of news articles for a specific category.
Content Experience	cd-content-experience	Delivers targeted, actionable communications to employees. For more information, see Creating campaigns with Content Experiences.
Content To-do (CD)	cd-content-todo	This widget is part of the HR to-do completion process used in the Employee Service Center, but cannot be used as a standalone widget.
Event Calendar (CD)	cd-event-calendar	Shows portal content with content type of Calendar. Shows schedules.
Featured News	cd-news-featured	Shows highlighted articles at the top of the News Center.
Information Links (CD)	cd-information-links	Shows portal content with content type of URL. Shows hyperlinks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Publishing (continued)

Widget	ID	Description
News Article Detail	cd-news-article-detail	Appears on the Article details page and holds the article body as created in the Rich Content Editor.
News Dataloader	cd-news-dataloader	Can be added to the Article details page to facilitate data sharing between the widgets on the page, which reduces the page loading time.
News Feed	cd-news-feed	Appears on the home page, News Center, and article details pages and holds previews of news articles.
News Header	cd-news-header	Appears on the Article details page and holds the headline, subheadline and image thumbnail.
News Info	cd-news-info	Appears on the Article details page and holds the news article publication date and Copy Link button.
Organization Chart (CD)	cd-orgchart	Shows an organization chart of an employee.
Preview Mobile Content (CD)	cd-preview-mobile-content	Notifications that show up in mobile view.
Preview of Content To-do (CD)	preview_content_todos	Shows a preview of to-do content.
Quick Links (CD)	cd-quick-links	Shows portal content with content type of Image-based Link. Shows a row of clickable images.
Rich Content (CD)	cd-richcontent	Allows you to publish rich content like a long-form article within a widget on the portal (page or topic). Shows previews of three pieces of rich content. Appears as a carousel when are there more than three published pieces of rich content.
Styled Content (CD)	cd-styled-content	Shows portal content with content type of Styled Content. Shows informative banners or text.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Publishing (continued)

Widget	ID	Description
		You can configure color, alignment, and other options for text and background. Appears as a carousel when there are multiple items.
Upcoming Events (CD)	cd-upcoming-events	Shows portal content with content type of Event. Shows upcoming events.
Video Carousel (CD)	cd-video-carousel	Shows portal content with content type of Video. Multiple videos show in a carousel. You can show a scrolling list of videos using this widget. **Note:** Only YouTube and Vimeo embedded links are supported.
Welcome Banner (CD)	cd-banner	Shows portal content with content type of Banner. Generally used to show informative banners/text. Shows in a carousel when there are multiple items.

Note:
These widgets support the Content Experience widget; they are not mean to be used directly in the portal: CD Preview widget, CE Banner content, CE Carousel Layout, CE List Layout, CE Styled Content, and CE Tile Layout.

Content Analytics widgets

Content Analytics

Widget	ID	Description
Content Analytics Site Tracker	cda-site-analytics	Helps analyze user behavior, usage metrics, and more from the user experience dashboard.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Profile

List of widgets for Employee Profile

Widget	ID	Description
Employee Profile Details	employee_profile_details	Displays the basic profile and work- related information of an employee.
Employee Profile Header	employee_profile_header	Appears across the employee profile page.
Employee Profile My Team	employee_profile_my_team	Displays my team information.
Employee Profile Overview	employee-profile-overview	Displays the employee profile overview.
Public Profile Visibility	public_profile_visibility	Shows the visibility setting for the profile. You can modify the visibility settings based on your needs.

For more information, see Employee profile.

Employee Center Pro Kiosk widgets

List of widgets for EC Pro Kiosk

Widget	ID	Description
Kiosk Header	eck-header	Appears across the kiosk portal and provides quick access to My requests, My favories, Employee profile, and so on.
Employee Center Pro Kiosk Portal login	ec-pro-kiosk-portal-login	Enables the login and access to the kiosk portal.
Employee Upcoming Shift	employee-upcoming-shift	Shows upcoming events.
Timeoff Accrual Balance	timeoff-accrual-balance	Shows the time off and leave balances.
Timeoff Accrual Balance - Home Page	timeoff-accrual-balance-home-page	Shows the time off and leave balances home page.
Preferences	preferences	Shows the user preferences such as accessibility and language.

For more information, see Employee Center Pro Kiosk.

For more information on configuring widgets, see Customize the Employee Center with widgets.

Employee Profile form

An option in the Employee Profile configuration that provides a list of employee profile fields.

Upgrade scenarios for Employee Profile

Portal	Upgrade Scenario
Employee Center	• All active tabs are associated with the profile page. • The widget overview panel is visible. **Note:** To disable the widget overview panel, you must create a profile portal configuration. For more information, see Configure Employee Profile for a portal. • If an Employee Profile header configuration record doesn't exist, the default record is used. • If an Employee Profile header configuration record exists, it's updated with the following fields and values: ○ Action Groups: Filled from the widget instance options ○ Background Image: Selected ○ Edit Images: Selected ○ Disable Links: Cleared
Custom portal	• All tabs are associated and visible on the profile page. • The widget overview panel is visible. • If an Employee Profile header configuration record doesn't exist, the default record is used. • If an Employee Profile header configuration record exists, it's updated with the following fields and values: ○ Action Groups: Filled from the widget instance options ○ Background Image: Selected ○ Edit Images: Selected ○ Disable Links: Cleared

Enhanced Requests Experience forms

The forms provide information to set up the Enhanced Requests Experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Request source form

The field descriptions provide a reference point when you're creating a request source.

Request source form

Field	Description
Title	Title of the request source to understand the type.
Description	Short description of the request source.
Table	Source table for the request type.
Application	Scope of the request source
All portals	Option to apply the request source to all your portals.
Filter	**Add filter condition**: Add a filter condition to the request source.
Filter	**Add OR Clause**: Add an OR clause to the filter condition.
Filter	**Add Sort**: Add a sorting clause to the filter condition.
Title field	Title of the request shown on the request card in the portal.
Description field	Description type to be shown on the request card in the portal. **Note:** The maximum number of description type supported is two.
Portal page	Page where you are redirected when you click on the request card in the portal.
Active	Selected Option to mark the request source record active.

Request filter definition form

The field descriptions provide a reference point when you're creating a Requests filter definition.

Request filter definition

Field	Description
Name	Name of the view filter that shows up in the portal within the multi-tab interface.
Description	Short description for the filter definition record.
All portals	Option to enable the filter definition in all your portals.
Render as view	Option to render the filter definition for all your portals. **Note:** The **Render as view** check box throws an error when there are different filter definitions already selected for different applications using the **All portal** check box.
Application	Application scope where the filter definition record resides.
Active	Option to enable the filter definition.
Order	Order of priority to determine which filter definition to prioritize.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Request filter definition (continued)

Field	Description
Available for	Option to add the users the filter definition is available for.
Not available for	Option to choose any audience if they should be excluded from accessing the filter definition.
Filter type	Type of filter you can use on the tab you're configuring with the view filter for the My Requests page. The two types available are: **Choice**: Choice of selecting one or more filter options on the My Requests tab. **Note:** You must select the **Filter condition** for each **Filter type** you create. **Reference**: Point of reference to select as a filter option, like location.
Filter type	**Reference table**: The record table for the point of reference selected, like location. This field appears only when **Reference** is selected from **Filter type**.
Filter type	**Reference conditions**: Option to add second-level filter conditions for the reference filter, like location. This section appears only when **Reference** is selected from **Filter type**.
Filter type	**Search field**: Label of the reference filter type visible on the Requests page.
Multi-Select	Option to enable multiple selections for **Choice Filter type**.
Request filter configurations	Sub-filters configured under the filter option.
Associated Tabs	Tabs associated to the filter.

Request filter configuration form

The field descriptions provide a reference point when you're creating a Requests filter configuration.

Filter configuration form

Field	Description
Label	Name of the filter visible on the Requests page.
Request filter definition	Filter definition under which this filter is being configured.
Application	Application scope where the filter record resides.
Active	Option to enable the filter configuration.
Order	Order of priority to determine which filter configuration to prioritize.
Apply on load	Option to enable the filter on the Requests page even when it is reloaded.
Available for	Option to add the users the filter configuration is available for.

Filter configuration form (continued)

Field	Description
Not available for	Option to choose any audience if they should be excluded from accessing the filter on the Requests page.
Reference table	Source table for the reference filter, like location. This field appears only when **Reference** is selected from the **Filter type** in the filter definition.
Reference condition	Conditional suggestion like **Add Filter Condition**, **Add OR Clause**, and **Add Sort** to add to the filters. This field appears only when **Reference** is selected from the **Filter type** in the filter definition.
Search field	Specifics of the selected reference filter column item to be displayed on the portal page. For example, if **Location** is the filter column item, you can select **City** or **Country** on the **Search field**.
Associated Filters	List of filters associated with the tab.

Request filter condition form

The field descriptions provide a reference point when you're creating a Requests filter definition.

Filter condition form

Field	Description
Table	Record table from where the filter condition options are sourced.
Filter config	Filter configuration under which the filter condition is being created.
Application	Application scope where the filter condition record resides.
Active	Option to enable the filter condition.
Filter	**Add filter condition**: Add a filter condition.
	Add OR Clause: Add an OR clause to the filter condition.
	Add Sort: Add a sorting clause to the filter condition.

External Link form

Use the External Link form to create an external link.

External Link form

Field	Description
Title	Title for the external link.
Short description	Short description for the external link.
URL	URL of the external link; for more information, seeCreate an external link

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Featured Content form

Use the featured content form to mark the associated connected content as featured content for a topic.

Featured Content form

Field	Description
Connected Content	Connected content associated with the topic. Search for and select the connected content associated with the topic. **Note:** You can't add a quick link as a featured item.
Topic	Topic in which you want the featured content to appear.
Order	Order in which you want the featured content to appear.

Feedback Analytics dashboard

Track all your feedback responses with the Feedback Analytics for portals, email, Virtual Agent, kiosks, and Now Mobile®.

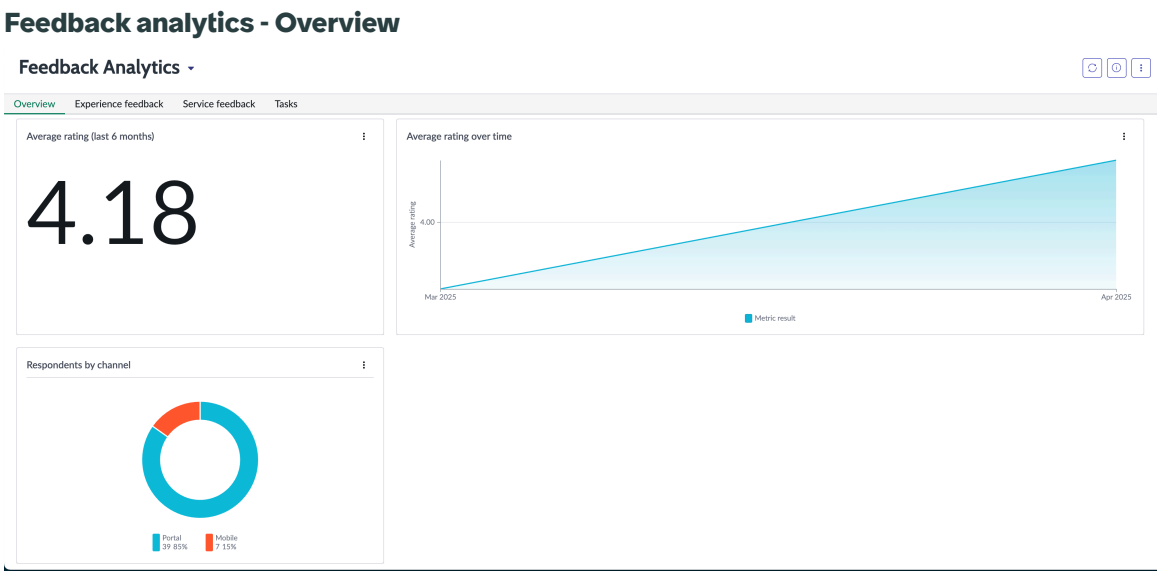
The Feedback Analytics, previously called the Experience feedback dashboard, helps you track all the feedback responses gathered from your users, in one place.

Feedback Analytics dashboard supports the Next Experience theme.

The following roles are required to access or view the dashboard:

Feedback Analytics dashboard roles

Role	Description
assessment_admin	This role has access to the assessment components.
esc_admin	This role is the Employee Service Center admin.
survey_reader	This role can view the contents of the dashboard.



Note:
Feedback Analytics is a read-only dashboard. You must clone the Feedback Analytics dashboard to customize it.

Clear the **Portal** filter option, if you want to view the trend of responses, regardless of their channels.

You can see the following trends on the dashboard.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

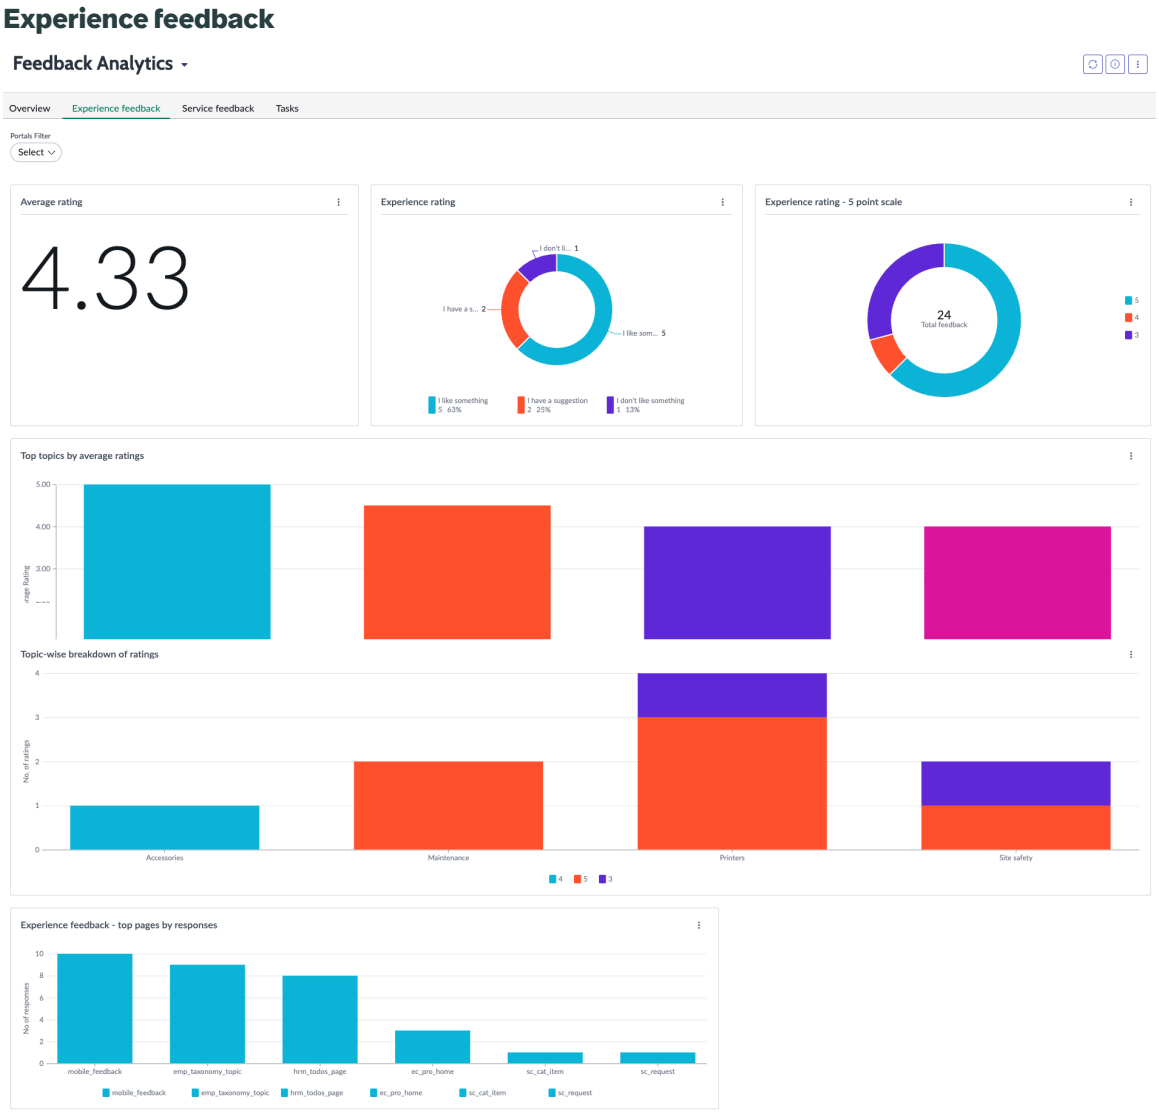
Feedback Analytics Overview

Average rating (last 6 months): Shows the average rating gathered in the last six months.

Average rating over time: Shows the average rating gathered for a period.

Respondents by channel: Shows the number of responses received based on the type of channel used to get it. For example portal, mobile, email, kiosks, or Virtual Agent feedback.

Average rating for service feedback definitions: Shows the average rating for each feedback definition created. For example, the average rating for topic pages residing in different taxonomies or the average rating for workflows.



Service feedback - top pages by responses: Shows the top choices in the pages where feedback is received on the portal.

Experience feedback responses: Shows the number of responses received through the drawer widget or on the modal in the portal.

Experience feedback - top pages by responses: Shows the top choices in pages where experience feedback is used.

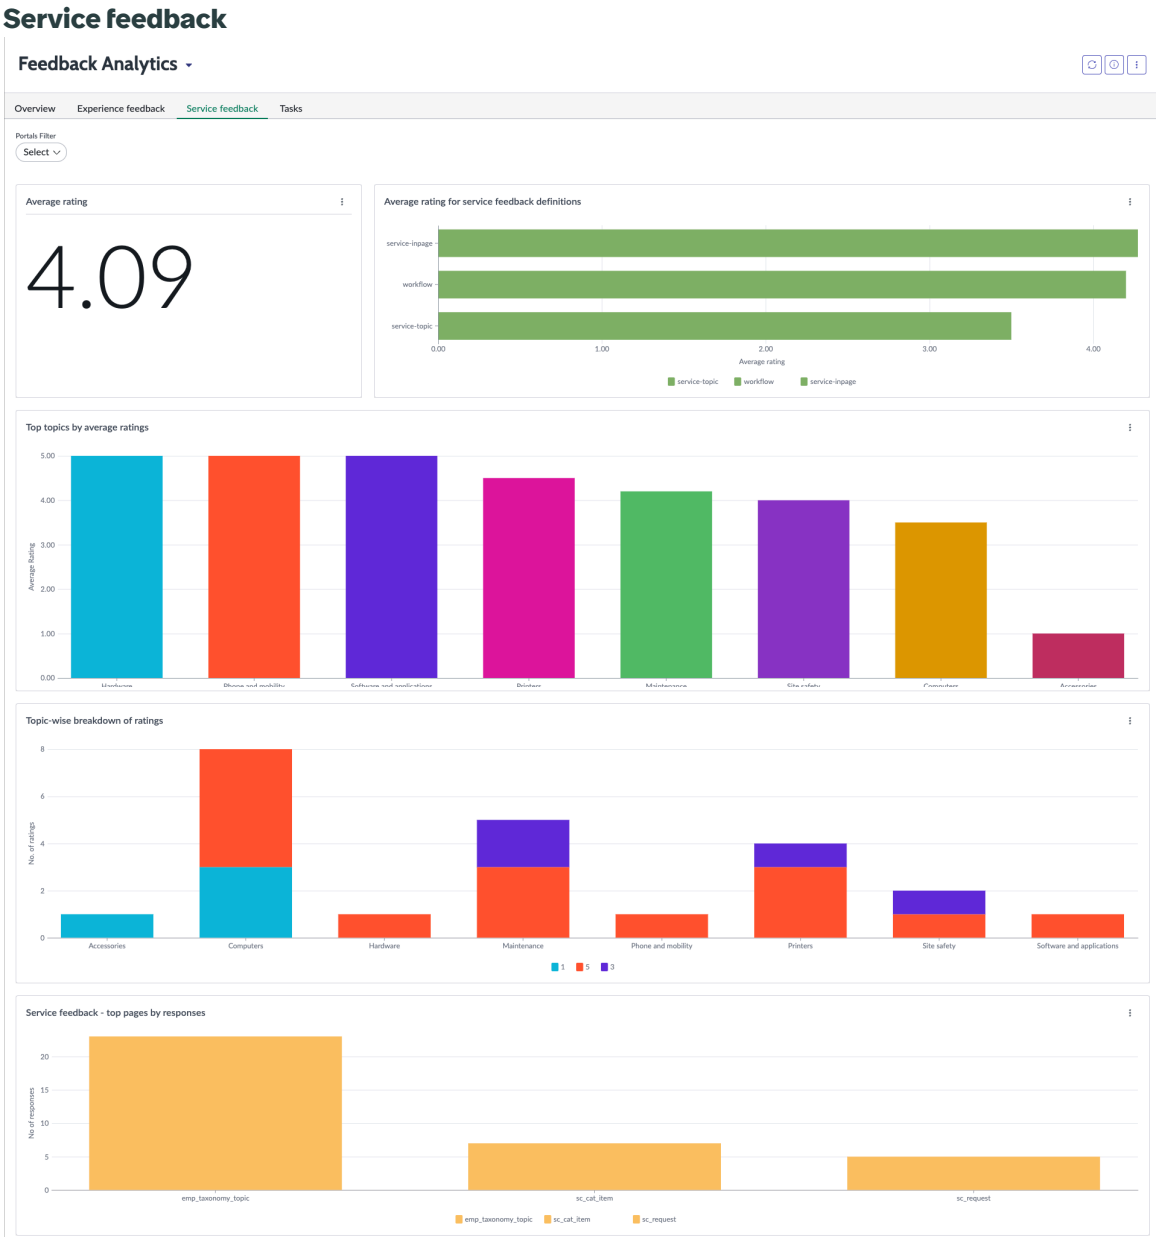
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Experience feedback

Average rating: The average of the ratings received for Experience feedback.

Experience rating: Basic experience feedback rating data received presented by percentage.

Experience rating - 5 point scale: Number and type of ratings received in both 5 point scale and 5 point numeric rating scale.



Top topics by average ratings: Top topics according to the rating received in descending order.

Topic-wise breakdown of ratings: Topic-wise breakdown of the point-scale rating received.

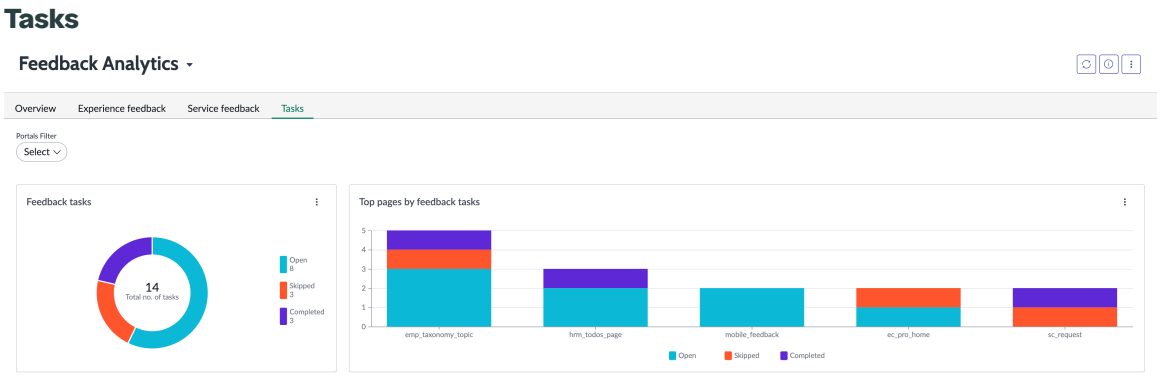
Experience feedback - top pages by responses: Top pages with the most experience feedback ratings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Service feedback

Average rating: Average of the ratings received for Service feedback.

Average rating for service feedback definition: Average of the ratings received by Service feedback definition types.



Top topics by average ratings: Top topics according to the rating received in descending order.

Topic-wise breakdown of ratings: Topic-wise breakdown of the point-scale rating received.

Service feedback - top pages by responses: Top pages with the most service feedback ratings.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tasks

Feedback tasks: Number of tasks displayed by their respective states.

Top pages by feedback tasks: Top pages where feedback is shared and the number of tasks displayed by their respective states.

User experience dashboard

The user experience dashboard helps get a consolidated view of the feedback data. It provides a quick view of all types of feedback data in the User Experience Analytics dashboard.

The user experience dashboard shows feedback data gathered from different users at a glance. It provides data from the experience, service, and survey feedback.

If you're already familiar with the User Experience Analytics dashboard, track all your feedback data from different portals here.

The following are the different components of the experience and service feedback visible in the user experience dashboard.

Experience feedback

See the following analytics insight for the experience feedback data.

- **Page Id**: Page ID where the feedback is provided.
- **Rating**: Rating grouped to understand the percentages of positive or negative feedback.
- **Users**: User ID of the feedback provider.

  If the feedback provider chose to be anonymous, the user ID is displayed as Guest.
- **Comment**: Percentage projection of the user sentiments collected through the ratings.

> **Note:**
> The comment insight is only available for the Employee Center portal not for the Employee Center Pro Kiosk and the Mobile Employee Service Portal.

Experience feedback 5-point scale

See the following analytics insight for the experience feedback 5-point scale.

- **Comment**: Percentage projection of the user sentiments collected through the ratings.
- **Page Id**: Page ID where the feedback is provided.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Rating**: Rating grouped to understand the percentages of positive or negative feedback.
- **Users**: User ID of the feedback provider.

  If the feedback provider chose to be anonymous, the user ID is displayed as Guest.

Service feedback

See the following analytics for the service feedback data.

- **Page Id**: Page ID where the feedback is provided.
- **Record Id**: A workflow tracking system where it shows whether the feedback is from a portal or an email.
- **Rating**: Rating grouped to understand the percentages of positive or negative feedback.
- **Users**: User ID of the feedback provider.

  If the feedback provider chose to be anonymous, the user ID is displayed as Guest.

- **Topic Name**: Topic page where the feedback is provided.
- **Comment**: Percentage projection of the user sentiments collected through the ratings.

Survey feedback

See the following analytics for the survey feedback data.

- **Page Id**: Page ID where the feedback is provided.
- **Survey Name**: Name of the survey.
- **User Id**: User ID of the feedback provider.

  If the feedback provider chose to be anonymous, the user ID is displayed as Guest.

Feedback configuration form

Description of the feedback configuration form fields to target a portal for feedback responses.

Feedback configuration form

Field	Description
Name	Name of the table record
Feedback portal	Targeted portal for feedback
Anonymous response	• **User opt-in**: Admin receives the user details from the feedback. • **Anonymous**: User details remain anonymous.
Application	Application scope where the record resides.
Active	Selected Option to enable the application scope.
Order	Order of priority for the record.
Overlay session limit	Number of times the feedback widget reloads.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Feedback configuration form (continued)

Field	Description
Feedback title	Introductory text for the feedback request.
Feedback button label	Text visible on the button of the feedback widget.
Privacy Information	• **User privacy link**: Link that contains terms and conditions of company privacy policy. • **User privacy text**: Prompt text to notify the user about the privacy policy. • **User privacy help text**: Help text with a short description of the privacy policy.
Success Message Preferences	• **Success icon**: Icon to display with the success message. • **Success text**: Success message that is displayed to the user after submitting feedback. • **Success description**: Acknowledgment message that is displayed after you submit your feedback.
Drawer Options	• **Drawer text**: Welcome text on the feedback drawer widget. • **Page placement**: Placement of the feedback drawer on the portal page. • **Orientation**: Orientation of the feedback drawer on the portal page. • **Position from top**: Position where the Drawer shows up on the page.

Feedback definition form

Description of the feedback definition form fields to curate the experience and service feedback widgets in the portal pages.

Feedback definition form

Field	Description
Name	Name of the feedback definition
Feedback type	• **Experience:** Feedback through the drawer widget visible across the portal or through the Virtual Agent. • **Service - in page:** Feedback after using any page on the portal. • **Service - topic page:** Feedback for a topic page under a taxonomy. **Note:** Admin must select the topic page where the feedback prompt appears. • **Service - workflow:** portal, Virtual Agent, or email where you want to set up the feedback experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Feedback definition form (continued)

Field	Description
	Note: • You can exclude a page on the portal manually from all the feedback types except **Service - topic page**. • You can view **Survey** as a feedback type only if you have a **Survey Instances** set up. For more information on setting up a survey instance, see Configure a survey in the survey designer.
Widget mode	**Drawer:** Drawer widget shows up on the portal pages. This widget mode is visible when the feedback type is **Experience**.
Widget mode	**Modal:** Feedback widget visible unless there's an overlay setting in place to stop the reload. **Note:** **Overlay session limit** can be configured from the feedback configuration form.
Widget mode	**Inline:** Feedback widget visible inline on the portal page.
Channel	**Portal**: Channel to receive feedback from the portal pages.
Channel	**Mobile**: Channel to receive feedback from the MESP pages.
Channel	**Email**: Channel to receive feedback via Outlook email. This channel is visible only when **Service - workflow** or **Survey** is selected from the **Feedback type**.
Channel	**Virtual Agent**: Channel to receive the feedback via the Virtual Agent. This channel is visible only when **Service - workflow** or **Survey** is selected from the **Feedback type**.
Active	Selected Option to keep the feedback definition record active.
Portals	Portal where the feedback shows up. Each feedback definition targets one portal that provides flexibility of creating separate definitions for different portals. This field is only available when the **Channel** is **Portal** or **Mobile**.
Audience	Target audience for the feedback. This field is only available when the **Channel** is **Portal** or **Mobile**.
Order	Order of priority for the feedback.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Feedback definition form (continued)

Field	Description
	The larger the order in number, the higher is the priority of the feedback definition.
Feedback content	**Use existing survey**: Option to enable the **Survey** field to add a survey to the definition. The check box is available for both **Experience** and **Service - in page Feedback type**.
Feedback content	**Question**: Question to provide feedback on that is visible to the user. This field appears only when **Feedback type** is **Service -in page**, **Service - topic page**, or **Service - workflow**.
Feedback content	**Rating**: Type of rating chosen for the feedback. The options available are the following: • **Experience** • **Numeric - 5 point scale** • **Stars - 5 point scale**
Feedback content	**Additional information label**: Text field to write additional feedback. This field is visible when **Allow additional information** box is checked.
Feedback content	**Additional information requirement**: Additional information of varying requirements to be provided. The following options are available: • **Optional**: Additional information is optional before submitting the feedback. • **Mandatory**: Additional information is mandatory before submitting the feedback. • **Mandatory based on rating threshold**: Additional feedback is mandatory if the rating is equal to or below the set threshold. The threshold is configurable.
Feedback content	**Rating threshold**: Rating threshold below which additional information is mandatory to submit the feedback. This field is only visible when the **Additional information requirement** is **Mandatory based on rating threshold**.
Feedback content	**Survey**: Existing survey to be added to the **Feedback type**. To use a survey for the **Email Channel**, Outlook Actionable Messages must be selected in the survey definition. To use a survey for the **Virtual Agent Channel**, **Chat Survey** must be selected in the survey definition. For more information about chat surveys, see Create chat surveys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Feedback definition form (continued)

Field	Description
	For more information about survey definitions, see Modify a survey definition.
Feedback content	**Survey rating metrics**: Survey question type that is used to gauge customer satisfaction. It captures feedback data for the User Experience Dashboard. **Note:** A feedback task is generated when the rating provided is beneath or equal to the value set for the **Rating threshold** field. The question must have a numeric answer type. Text-type answers aren't supported in this field. This field is available only when a **Survey** is selected from the list of surveys in the **Survey** field.
Page selection	**All pages:** Selected Option to choose all pages for a **Feedback type**.
Page selection	**Included pages:** Pages where the feedback type is available. This field is visible when the **All pages** check box is cleared.
Page selection	**Excluded pages:** Pages the feedback type isn't added. The **Included pages** field is replaced by the **Excluded pages** field when **All pages** is checked.
Overlay settings	Overlay settings for the feedback to determine how and when it shows up to the user. **Widget trigger:** Trigger type for the overlay settings. The following are the available widget triggers. **Manual:** Feedback widget is only available when selected. This field is only available for **Widget mode Drawer**. **Delay:** Feedback widget is available after an allotted delay. **On scroll:** Feedback widget is available on scrolling. **On load**: Feedback widget is available on loading the page. **Widget delay**: Delay in loading the feedback widget measured in seconds. This field appears only when **Delay** is selected in **Widget trigger**.
User Engagement	**Feedback Exclusion Period**: Period of time selected as a buffer when the user won't be reminded to provide feedback when they land on a page.
Post-feedback Configuration	**Rating threshold**: Rating value below which a feedback task is generated. **Note:** Feedback task for any feedback type is generated when the rating provided is beneath or equal to the value set for the **Rating threshold** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Feedback definition form (continued)

Field	Description
	Assignment groups: Group that receives the feedback task when generated. **Create feedback task**: Selected Option to create a feedback task post-feedback submission.

Footer form

Use the Footer form to create a new footer that you want to appear in the Employee Center or Employee Center Pro.

Footer form

Field	Description
Name	Name of the footer.
Portal	The portal that you want to associate this footer with.
Logo	The logo of your company that you want to appear in the footer.
Organization Content	Information about your company that you want to appear in the footer.
Copyright	The copyright information to appear in the footer.
Active	Option to activate this footer for use.

Footer Menus form

Use the Footer Menus form to create a new footer menu that you want to appear on your Employee Center or Employee Center Pro.

Footer Menus form

Field	Description
Footer	The name of the footer that you want to create menus for.
Menu	The main category under which you want the footer links displayed.
Link Type	How you want the links on the menu to appear in the footer on the Employee Center. Select any of the following options: • **Navigation Links**: Displays links at the top of the footer. You can add links that let you navigate to different information resources and pages. • **Bottom Links**: Displays links at the bottom of the footer. You can add links to information such as, terms and conditions, privacy statement, and so on. • **Social Icons**: Displays social media icons, such as Twitter, Facebook, and LinkedIn.
Order	The order in which you want the menu to appear in the footer.

Guided Self-Service reference

Use the following reference information for the Guided Self-Service functionality.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Guided Self-Service: Things to remember

You can display Guided Self-Service as a widget on the home page or as a quick link or as a widget on topic pages. Remember the following information:

- Ensure that the **sn_hr_sp.esc_admin** user has the **playbook.write** role to edit the playbook design and **playbook_experience.admin** to preview the guided experience.
- Only when the playbook and guided help process are in an active state, the guided help process appears on the Employee Center.
- Guided Self-Service can't be created from the playbook page directly, create the process from the GSS form, see Configure Guided Self-Service.
- Guided Self-Service flow is a single-stage flow.
- The Activity Definition [sys_pd_activity_definition] table lists the definitions for the activities that you can add to a playbook in **Workflow Studio**.

  To access the activity definitions, navigate to **Process Automation** > **Process Automation Administration** > **Activity Definitions**
- State management of your choices in an activity is retained for 24 hours only.
- When a guided process activity is partially completed or aborted mid-way, you can resume and complete the rest of the process within 24 hours.
- Currently, the option to restart the activity or change the selections isn't supported after 24 hours. The process restarts afresh.
- The completed self-service is purged after 30 days with the auto-flush schedule available from sys_trigger_list.
- The `Cancel incomplete guided help playbook` scheduled job for the automatic cancellation of incomplete guidance is only available for admin.
- Deleting the GSS process from `sn_ex_sp_gd_help_process` doesn't delete the process from `sys_pd_process_definition`.

Use Guided Self-Service

Link content form

Link content form.

Link Content

Field	Descriptions
Name	The name that describes the link to content.
URL	The URL link to content to appear on the service portal. This field only appears when you select **Video** or **Link** from the **Type** list.
To-do content	The to-do content you want to reference to your link content. This field only appears when you select **To-do** from the **Type** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Link Content (continued)

Field	Descriptions
	Note: Use this field to reference your to-do content to a link that can be used in a banner or styled content. For more information, see Creating to-do content.
Type	The type of link for the content. • Video: Link is a video. **Note:** Must be an embedded link. • Link: Link is to content, information, image, or documentation. • To-do: Link is a to-do. **Note:** Use this when you want to place a to-do link in a banner or styled content. • Forums Link: Link to a Communities forum post. Only appears when Communities plugin [com.sn_communities] is installed. **Note:** After link content is associated with Portal Content, the **Type** cannot be modified. See Content Library.
Load link in	You can override how your links open within your portal. Previously, all link content loaded in a new tab. Use this field to load your link into the current portal page. New tab: Default value and loads your link content in a new tab on your portal. Current page: Select to load your link content in your portal and not as a separate tab.
Forum	The forum in Communities you want the link to appear and share with members of the forum. Only appears when **Forums Link** is selected from **Type** and the Communities plugin [com.sn_communities] is installed. For information on Communities, see Communities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Link Content (continued)

Field	Descriptions
Topic	Topic you want the link to appear in. Topics are subcategories to a forum. For example, HR is the forum and Benefits is a subcategory to HR. Only appears when **Forums Link** is selected from **Type** and the Communities plugin [com.sn_communities] is installed.
Forum post	The list of posts from the topic or forum the link appears. For example: • Forum: HR • Open Enrollment: Benefits • Forum post: Only appears when **Forums Link** is selected from **Type** and the Communities plugin [com.sn_communities] is installed.

Menu Item form

Use the Menu Items form to configure the items for the **More** menu on the Employee Center header.

Add any new menu items to the EC Header under the **More** option.

Note:
Currently, Filtered or Scripted menu items are not supported as Filtered or Scripted List must be top-level Menu Item.

More Items form

Field	Description
Label	Name that appears for the item in the menu.
Parent Menu	This field should already contain the name of the menu you are adding items to.
Order	Value that determines where the item appears in the menu in relation to other menu items.
Type	The type of page the item links to. For example, you can link to another page in the portal or an external URL. Form fields vary depending on the option you select from this list.
Application	Application for the menu item
Page	Name of the portal page the item links to.
Condition	Determines what conditions are required for menu items to show in the header.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

More Items form (continued)

Field	Description
Glyph	Icon that appears next to the menu item.

Configuring translation for Content Publishing after upgrade

Content Publishing supports multi-lingual content creation by enabling content managers to easily change the interface language and request content translation through the Localization Framework.

For more information on multiple language support in the Content Library, see Switch language for Content Publishing.

For information on translating custom widgets, see Translate a client script message

- Translation is available through Content Publishing versions 21.0.15 and later.
- When upgrading your version of Content Publishing, you will not automatically receive translations support for all fields. The following tables are not updated to use translated text instead of the original type field:
  - Portal Content (sn_cd_content_portal)
  - Block Content (sn_cd_block)
  - To-Do Content (sn_cd_content_todo)
  - News Content (sn_cd_content_article)
  - Notification Content (contains emails) (sn_cd_content_notification)

  Admins can manually enable the changes to the tables to use translations. Go into the table definitions (sys_db_object) for each table and change the field types to Translated Text or Translated HTML.

> **Warning:**
> Before you change the field types for a table, ensure you perform a back up your data into another column or by exporting the data first. This is a safe guard against losing any data.

The tables and fields that require changing are:

Tables to manually enable translations

Table	Field	Original type	New type
Portal Content (sn_cd_content_portal)	button_text	String	Translated Text
Portal Content (sn_cd_content_portal)	link_text	String	Translated Text
Portal Content (sn_cd_content_portal)	rich_text	HTML Script	Translated HTML
Rich Content HTML (sn_cd_content_portal)	headline	HTML	Translated HTML
Rich Content HTML (sn_cd_content_portal)	heading_text	String	Translated Text

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables to manually enable translations (continued)

Table	Field	Original type	New type
Block Content (sn_cd_block)	rich_text	HTML	Translated HTML
Block Content (sn_cd_block)	rich_text_user_specific	HTML Script	Translated HTML
To-do Content (sn_cd_content_todo)	button_text	String	Translated Text
News Content (sn_cd_content_article)	headline	String	Translated Text
News Content (sn_cd_content_article)	rich_content_html	HTML	Translated HTML
News Content (sn_cd_content_article)	title	String	Translated Text
Notification Content (sn_cd_content_notification)	rich_text_plain_html	HTML	Translated HTML
Notification Content (sn_cd_content_notification)	subject	String	Translated Text
Notification Content (sn_cd_content_notification)	description	String	Translated Text

Integration with Localization Framework

Language translation fulfillers can provide translations faster and more efficiently by integrating with Localization Framework.

Content creators can initiate a translation workflow to request their content to be translated from Content Publishing and includes portal, block, notification, and to-do content.

Note:
Only existing translatable content types are supported. Calendar is not supported.

Supported Content Publishing tables are able to communicate to Localization Framework via artifact records and scripts. This allows you to set up how you want your content to be translated.

For more information on Localization Framework, see Localization Framework.

Language plugin

Content Experiences and Content Publishing uses UTF-8 for international characters when at least one language plugin has been activated.

Localization Framework should install automatically when a language plugin is installed.

For more information, see Activate a language.

Enable Localization Framework

To use Localization Framework with Content Publishing, enable the sn_cd.enable_localization_framework_integration system property. For more information, see Properties installed with Content Publishing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When you activate the sn_cd.enable_localization_framework_integration system property, created content from the Content Library displays the **Translate content** button. This allows you to request translation for the content to the language you selected.

> **Note:**
> If you do not see the sn_cd.enable_localization_framework_integration system property, ensure Localization Framework is installed and you have the Content Admin (sn_cd.content_admin) role.

Workflows in the Localization Framework

You can configure how translations are handled using the workflows provided in Localization Framework. You can configure how translations are processed using workflows. This ranges from a manual process to an automatic translation and automatic publication.

For more information, see Workflows in the Localization Framework.

Translation modes

There are various translation modes you can use, like machine translations, send to a translation management system, send via email, or export/import. For more information, see Translation modes.

Translate content

Content creators can initiate a translation workflow to request their content to be translated from Content Publishing.

> **Note:**
> The translation workflow your company has chosen determines how translations are performed. The following provides instructions on how the base system process works.

- Create or select existing content from the Content Library or **Block Content** under **Re-usable Components**. For more information, see Content Library or Add or modify block content

  From the **Design** tab of **Content Preview**, select the **Translate content** button to initiate the translation workflow your company has configured.

- Or, from **Content Categories**, select a category.
  - Create or select existing content you want translated from the list.
  - Select the **Translate content** button to initiate the translation workflow your company has configured.
- You can also select **Link Content** or **Block Content** from **Re-usable Components**.
  - For **Link Content**, select the content under the **Portal Content** tab.
  - Select the **Translate content** button to initiate the translation workflow your company has configured.
  - For more information, see Reusable components.
- Select the language you want your content translated to from the **Translate content** modal that appears.
- Select **Submit** and a translation request is sent.
- Translation requests appear in the **Localization Requested Items** list under **My Requested Items** under Localization Framework.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- There is one localization request item (LRITM with a sequential number) for each language selected.
- You can find assigned localization request items from **My Requested Items** under **Localization Framework**.
- To see a list of all localization request items from **My Requested Items** under **Localization Framework**, change the filter to **All**.

- Each localization request item also has an associated localization task (LFTASK is the prefix with a sequential number).
  - You can find all localization tasks from **My Tasks** under **Localization Framework**. To see a list of all localization tasks, change the filter to **All**.
  - Localization tasks can be assigned to individuals with the localization_fulfiller role or a group that has this role.
  - Individuals or groups assigned to localization tasks, can provide translations from the **Localization Task** form and selecting the **Translate button**.
  - After providing the translation, select the **Publish Translations** button.

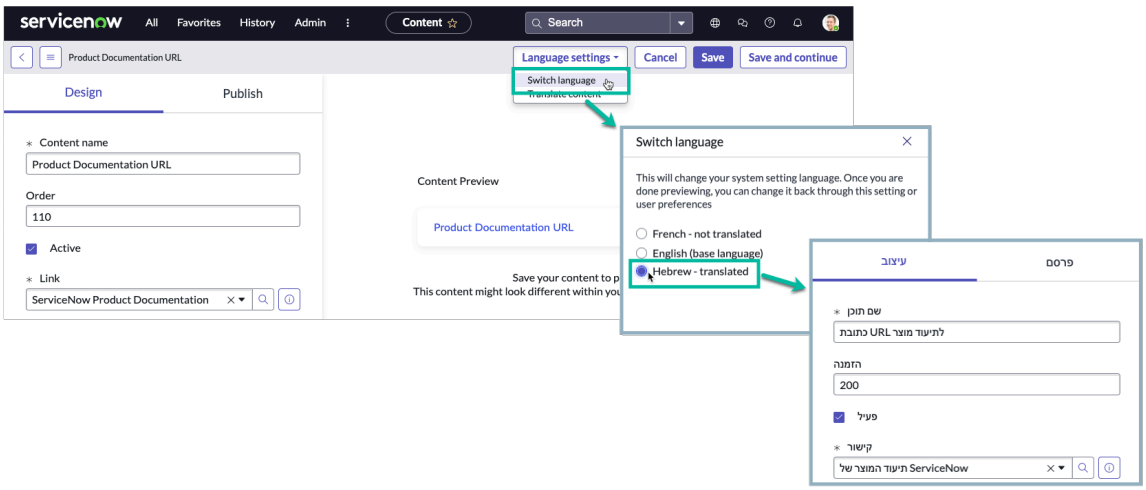
    Note:
    Selecting **Publish Translations** does not publish the content, but creates the translation for the content. To publish your content with the published translations, you must schedule and publish your content. For more information, see Create a publish plan for your content.

  - For more information, see Fulfill a localization task.

Switch language for Content Publishing

When creating content from the Content Library, you have the option to select a different language to view in your session similar to changing your language at login.

For more information on using a specific language, see User specific language.



Note:
You must have additional languages installed before using. For more information, see Activate a language.

Activate the sn_cd.enable_language_switching system property to use this feature. For more information, see Properties installed with Content Publishing and Content Library.

When you activate the sn_cd.enable_language_switching system property, created content from your Content Library displays the **Switch language** button. This allows you to switch your system settings language to a different language. The fields on the content form switch to the language you selected and changes the entries in each field if translations are available.

When you switch to a different language, you can also see if there are translations available in that language. For example, **Spanish - translated** indicates translations are available in Spanish for the content you have displayed from the Content Library.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When you select a different language and there are translations available for that content, the translations appear as well as all text in the session you are logged in.

Note:
You can also edit the translated text that appears in your content.

You can preview the translated text before your publish your content via the **Preview on portal** button.

Select the **Switch language** button again after reviewing to switch back to your original language.

Note:
The Switch language feature is not available in the lists and forms version for Portal, Notification, Mobile, and To-do content found under **Content Categories**.

Notification content form

Notification content form

Notification Content form

Field	Description
Title	Title that displays for the push notification.
From	The email address of the person or organization you want the notification to come from. **Note:** This field only appears when **Content type** is **Email**.
Reply to	Email address you want to appear in the **Reply to** field of the email.
Subject	The subject of the email.
Use block content	Indicates you want to use block content as a notification.
Block content	Only displays when you check **Use block content**. Select the block content you want to appear as a notification or select **New** to create block content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notification Content form (continued)

Field	Description
	Note: For more information, see Add or modify block content.
Body	Only displays when you check **Use block content**. Enter message text for your notification. **Note:** You can use the rich text edits to enhance your notification.
Description	Only appears when you select **Push** from the **Content type** list. A description for the push notification.
Content type	The type of notification you want to send. Set the value to `Push` or `Email`.
Active	Option to activate the push notification for use. **Note:** Your content must be active in order to publish it.

Employee Profile Overview section form

The overview section form enables you to configure a section on the Employee Profile UI.

Overview Section form

Field	Description
Name	Unique name that identifies the section. For example, About and Personal information.
Layout	Layout determines how the section content is displayed: • Single Column: Displays the content in a single column layout. • Two Column: Displays the content in a two-column layout.
Hide section name	Display settings for the section name.
Application	Domain to which the section belongs to.
Order	Order in which the section is displayed.
Active	Option that indicates if the section content is active or not.
Section visibility	Visibility settings for the section: • Mobile only • Desktop only • Desktop and mobile

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties installed with Content Experiences

The Content Experiences [sn_ca] plugin adds properties that determine how a campaign runs related to scheduled jobs and performance.

To access Content Experiences properties, navigate to **Content Experiences** > **Configurations** > **Properties**.

Content Experiences properties determine how the scheduled jobs run and help to ensure that there is limited impact on the performance of your instance.

Note:
Properties with an asterisk (*) in front of the name indicates that the default values are recommendations when the number of users targeted is 100,000 or less. If your audience is over 100,000 and the scheduled jobs run longer than expected, you can try increasing the values.

Approvals

Property	Usage
All approvers must approve any schedule content record to publish it (sn_ca.all_must_approve)	Indicates that all approvers must approve any scheduled content prior to publishing it. If you check **No**, only one approver is required to publish a campaign.

Enable Content Management Ownership

Property	Usage
Allow Ownership for Audiences (sn_cd.activate_audience_delegation_controls)	Indicates you want to be able to enable audience ownership within Content Experiences. For more information, see Content Ownership.
Allow Ownership for Content Items (sn_cd.activate_content_authoring_controls)	Indicates you want to be able to enable content item ownership within Content Experiences. For more information, see Content Ownership.
Allow Ownership for Topics (sn_cd.activate_topic_ownership)	Indicates you want to enable topic ownership within Content Experiences. Ownership of a topic includes: • Ability to restrict what groups or users can schedule content to a topic for a campaign. • Ability to edit content assigned to the topic. • Ability to preview content for the topic. **Note:** Other users that have access to the content can view the content scheduled to the restricted topic, but cannot remove the topic from the schedule.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable Content Management Ownership (continued)

Property	Usage
	For more information on this and what roles are required, see Content Ownership.
Allow Ownership for Portal pages (sn_cd.activate_page_ownership)	Indicates you want to exclude groups or non-applicable content managers (specific users) from assigning content to a specific portal page.

Add users

Property	Usage
*Max run time in seconds of scheduled job (Job will finish processing current item after time has elapsed) (sn_ca.add_users.max_run_time)	The maximum amount of time (in seconds) the Content Experiences: Update Campaign Audience scheduled job runs. Limits the length of the scheduled job, but completes any work in progress and does not pick up any new work. Default value: 1,800 seconds
The number of seconds to stagger events to process campaigns by (sn_ca.add_users.event_stagger.campaign)	The amount of time between campaign events when a scheduled job runs. Staggering provides time for the events to be processed during the staggered time. Default value: 300 seconds
The number in seconds to stager events to add user by (sn_ca.add_users.event_stagger.users)	The amount of time between campaign events to add users when the Content Experiences: Update Campaign Audience scheduled job runs. Staggering provides time for the events to be processed during the staggered time. Default value: 3 seconds
Max number of events to add users per campaign (sn_ca.add_users.max_events)	The maximum number of events that users can be added for a campaign when the Content Experiences: Update Campaign Audience scheduled job runs. Default value: 1,000
Max number of users to add per event (sn_ca.add_users.max_users_per_event)	The maximum number of users you can add in a single event. Default value: 1000

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Non-Portal Content

Property	Usage
*Max run time in seconds of scheduled job (Job will finish processing current item after time has elapsed) (sn_ca.campaign.max_run_time)	The maximum amount of time (in seconds) the Content Experiences: Add Non-Portal Campaign Content scheduled job runs. Limits the length of the Content Experiences: Send Email Notifications scheduled job, but completes any work in progress and does not pick up any new work. Default value: 2,700 seconds
*Max number of campaign targets to process per job run (sn_ca.campaign.max_records_process)	The maximum number of people a campaign can target per scheduled job run. Default value: 100,000
*Max number of records to create per job run (sn_ca.campaign.max_records_create)	The maximum number of records to create per job run. Default value: 100,000
The number of seconds to stagger events to process pending content by (sn_ca.campaign.pending.event_stagger)	The number of seconds between each time the Content Experiences: Add Non-Portal Campaign Content scheduled job runs to try to send non-portal content. Default value: 3 seconds

Non-Portal content limitations

Note
These properties determine limits on non-portal content (emails and SMS). The Content Experiences: Send Email Notifications scheduled job runs every hour by default and attempts to send non-portal content not sent in the first pass. Customers with a large database should consider increasing this property after testing the impact it could have on performance.

To-do Content

Property	Usage
Max run time in seconds of scheduled job (Job will finish processing current item after time as has elapsed) (sn_ca.task.max_run_time)	The maximum amount of time (in seconds) the Content Experiences: Create To-dos scheduled job runs. Limits the length of the scheduled job, but completes any work in progress and does not pick up any new work. Default value: 300 seconds
Max number of records to create per job run (sn_ca.task.max_records_create)	The maximum number of records to create per scheduled job run. Default value: 25,000

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notifications

Property	Usage
The maximum number of users to add per event for SMS (sn_ca.sms_notification.max_users_per_event)	The maximum number of users to add per event for an SMS notification. Default value: 1,000
*Max run time in seconds of scheduled job (Job will finish processing current item after time has elapsed) (sn_ca.notification.max_run_time)	The maximum amount of time (in seconds) the Content Experiences: Send Email Notifications, Content Experiences: Send Push Notifications, Content Experiences: Send SMS Notifications scheduled jobs run. Default value: 1,800 seconds
*The maximum number of events to queue per job run for SMS (sn_ca.sms_notification.max_events)	The maximum number of events to queue for SMS messages when the Content Experiences: Send Email Notifications, Content Experiences: Send Push Notifications, Content Experiences: Send SMS Notifications scheduled jobs run. Default value: 100 **Note:** The Notify (com.snc.notify) plugin must be activated for this sys property and Content Experiences: Send SMS Notifications scheduled job to appear.
The number of seconds to stagger events by (sn_ca.notification.event_stagger)	The amount of time between events when the Content Experiences: Send Email Notifications, Content Experiences: Send Push Notifications, Content Experiences: Send SMS Notifications scheduled jobs run. Staggering provides time for the events to be processed during the staggered time. Default value: 3 seconds
*The maximum number of events to queue per job run for Email (sn_ca.notification.max_events)	The maximum number of events to queue for the Content Experiences: Send Email Notifications, Content Experiences: Send Push Notifications, Content Experiences: Send SMS Notifications scheduled jobs run. Default value: 100
The maximum number of events to queue per job run for Email (sn_ca.notification.max_events)	The maximum number of events to queue per job run for email notifications. Default value: 100
The maximum number of users to add per event for Email (sn_ca.notification.max_users_per_event)	The maximum number of users to add per event for email notifications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notifications (continued)

Property	Usage
	Default value: 1,000

State Management

Property	Usage
The number of seconds to stagger the sn_ca.campaign.published event after kicking off the Create To-Dos and Send Notifications Flow Designer Actions. Default is 2700 seconds or 45 minutes. (sn_ca.campaign.published.event_stagger)	Determines the time to delay the publication of a campaign after the Create To-Dos and Send Notifications Flow Designer Actions are started. This sys property determines when the state of a campaign is set back to Published after going through the other states. The Published state is required for the scheduled jobs to pick up for future processing. Default value: 2700 seconds or 45 minutes.
Max run time in seconds of scheduled job (Job will finish processing current item after time has elapsed) (sn_ca.state_management.max_run_time)	The maximum amount of time (in seconds) the Content Experiences: Manage Content States scheduled job runs. Default value: 300 seconds
Used to manage whether we want to trigger the campaign publishing process immediately after publishing the campaign. (sn_ca.publish.campaign.immediately)	Check **Yes** to indicate you want a campaign to trigger immediately after selecting the Publish button. Checking **Yes** is recommended for campaigns targeting less than 100,000 users. **Note:** Selecting **Yes** bypasses the scheduled jobs and is dependent on the start date and time.
Max number of records to update per job run (sn_ca.state_management.max_records_update)	The maximum number of records to update per job run. Default value: 25,000

User Deactivation

Property	Usage
Max run time in seconds of scheduled job (Job will finish processing current item after time has elapsed) (sn_ca.user_deactivation.max_run_time)	The maximum amount of time (in seconds) the Content Experiences: Deactivate Campaign Users scheduled job runs. The scheduled job deactivates flagged users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Deactivation (continued)

Property	Usage
	Default value: 300 seconds
Max number of users to deactivate per job run (sn_ca.user_deactivation.max_users_per_job)	The maximum number of users to deactivate per job run. The Content Experiences: Deactivate Campaign Users scheduled job runs every six hours by default. Default value: 25,000 users

Content Experiences limitations

Note
These properties determine limits on the Content Experiences: Deactivate Campaign Users scheduled job for optimal performance. Customers with a large database should consider increasing this property after testing the impact it could have on performance.

Purging

Property	Usage
Max run time in seconds of scheduled job (Job will finish processing current item after time has elapsed) (sn_ca.purging.max_run_time)	The maximum amount of time (in seconds) the Content Experiences: Purge Campaign Data scheduled job runs. Default value: 300 seconds
Max number of users to purge per job run (sn_ca.purging.max_users_per_job)	The maximum number of users to purge per job run. Default value: 25,000
Purge campaign data after the campaign ends (sn_ca.purging.purge_after_campaign_end)	Purge all campaigns when the end date is reached. Default value: Yes
Number of days after the campaign ends to start purging campaign data (sn_ca.purging.days_after_campaign_end)	The number of days after the campaign end date when campaigns are purged. Default value: 180 days
Purge campaign data for a user after user exits campaign (sn_ca.purging.purge_on_user_removed)	Indicates if campaign information for a user should be purged after the user is removed from the campaign. Default value: Yes
Number of days after user exits campaign to start purging campaign data (sn_ca.purging.days_after_user_removed)	The number of days after a user is removed from a campaign to remove the campaign information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Purging (continued)

Property	Usage
	Default value: 180 days

Campaign Re-evaluation

Campaign Re-evaluation

Property	Usage
The number of days after which the campaign audience to be re-evaluated (sn_ca.campaign.reevaluation_frequency)	The default number of days to re-evaluate a campaign audience. You can override this default from the **Re-evaluate campaign** and **Re-evaluate frequency** fields on the Campaign form. For more information, see View campaign targets. Default value: 7 days

Portal Preview

Portal Preview

Property	Usage
Service Portal URL suffix you want to use for portal previews (sn_cd.preview.portal_url_suffix)	The URL suffix of the service portal or Employee Center (EC) your company uses for portal previews. You can change this system property when you want to preview your content over different portals. Default value: esc

Properties installed with Content Governance

The Content Governance [sn_cg] plugin adds properties that determine how many records to show in the Content Operations dashboard.

Content Operations dashboard

Property	Usage
Set amount of days from when campaign content will be expiring	Sets the number of days for the "Campaign content expiring within x days" card in the Content library and campaigns section Default value: 7 days

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Content Operations dashboard (continued)

Property	Usage
Set amount of days from when content needs approval	Sets the number of days for the "Content requests due within x days" card in the Content requests section Default value: 7 days
Set amount of days from when schedule content will be expiring	Sets the number of days for the "Content expiring within x days" card in the Content library and campaigns section Default value: 7 days

Properties installed with Content Publishing

The Content Publishing [com.sn_content_delivery] plugin adds the following properties that are designed to control how scheduled jobs work in relation to notifications, to-dos, and communities.

To modify Content Publishing properties as a Content Admin [sn_cd.content_admin], navigate to **Content Publishing** > **Advanced** > **Properties**.

Content Publishing properties determine how the scheduled jobs run and help to ensure that there is limited impact on the performance of your instance.

Approvals

Properties	Description
sn_cd.all_must_approve	Indicates that all approvers must approve any scheduled content prior to publishing it. If you check No, only one approver is required to publish it.

Enable Content Management Ownership

Properties	Description
Allow Ownership for Audiences (sn_cd.activate_audience_delegation_controls)	Indicates you want to be able to enable audience ownership within Content Publishing. For more information, see Content Ownership.
Allow Ownership for Content Items (sn_cd.activate_content_authoring_controls)	Indicates you want to be able to enable content item ownership within Content Publishing. For more information, see Content Ownership.
Allow Ownership for Topics (sn_cd.activate_topic_ownership)	Indicates you want to enable topic ownership within Content Publishing. Ownership of a topic includes:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enable Content Management Ownership (continued)

Properties	Description
	• Ability to restrict what groups or users can schedule content for publication. • Ability to edit content assigned to the topic. • Ability to preview content for the topic. **Note:** Other users that have access to the content can view the content scheduled to the restricted topic, but cannot remove the topic from the schedule. For more information, see Content Ownership.
Allow Ownership for Portal pages (sn_cd.activate_page_ownership)	Indicates you want to exclude groups or non-applicable content managers (specific users) from assigning content to a specific portal page.

Enable Content Versioning and Change History

Properties	Description
sn-cd.activate_content_snapshots	Select the checkbox to enable Content Versioning for the Content Library. See Content versioning

Notifications

Properties	Description
sn_cd.notification.max_run_time	The maximum amount of time (in seconds) the Content Publishing: Send notifications scheduled job runs. Limits the length of the scheduled job, but completes any work in progress and does not pick up any new work. Default value: 600
sn_cd.sms_notification.max_recipients	The maximum number of people you can send an SMS notification to. Default value: 50,000. **Note:** When the maximum is exceeded, the SMS is not sent. The **Notification status** on the Schedule Content form is **Max Exceeded**.
sn_cd.sms_notification.max_users_per_event	The maximum number of users to add per event for an SMS notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notifications (continued)

Properties	Description
	Default value: 1000.
sn_cd.notification.event_stagger	The amount of time between events when a scheduled job runs. Staggering provides time for the events to be processed during the staggered time. Default value: 60 seconds.
sn_cd.notification.max_events	The maximum number of events from campaigns to process during the scheduled job. Default value: 50.
sn_cd.notification.max_users_per_event	The maximum number of users to add per event for an email notification.
sn_cd.notification.max_recipients	The maximum number of recipients allowed per email notification.

To-dos

Properties	Description
sn_cd.todo.max_run_time	The maximum run time in seconds for the Content Publishing: Create To-dos scheduled job. When the job finishes running, any current items are still processed after the elapsed time.
sn_cd.todo.event_stagger	The number of seconds between events.
sn_cd.todo.max_events	The maximum number of events that are queued per scheduled job run.
sn_cd.todo.max_users_per_event	The maximum number of users that can be added per event.
sn_cd.todo.max_assignees	The maximum number of people you can assign to a task.

Forums

Properties	Description
sn_cd.content_community.max_posts	The maximum number of posts to a forum allowed per Content Publishing: Post to Forums scheduled job.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Translations and Language switching

Properties	Description
sn_cd.enable_language_switching	Allows you to change your system setting language in the Content Library. When you turn this system property on, the **Switch language** button appears after creating content from the Content Library. Selecting the **Switch language** button allows you to view the fields on the form to appear in the language you select. You can select the button after reviewing to switch back to your original language. For more information, see Content Library.
sn_cd.enable_localization_framework_integration	Enables integration with Localization Framework. For more information, see Integration with Localization Framework.

Portal Preview

Properties	Description
Service Portal URL suffix you want to use for portal previews (sn_cd.preview.portal_url_suffix)	The URL suffix of the service portal or Employee Center (EC) your company uses for portal previews. You can change this system property when you want to preview your content on a different portal. Default value: esc

News

Properties	Description
Limits how many news articles are shown in the News widgets (sn_cd.content_page_limit)	Sets a maximum of news articles that can appear in any of the news widgets, with a system maximum of 500 articles.
Page ID you want to use for News Center (sn_cd.news_center_page_id)	Defines the landing page for news content. The **News Center** button in the main navigation redirects to this page, as well as breadcrumbs and the Call to action button in the widgets.
Page ID you want to display News articles in (sn_cd.news_article_page_id)	Defines the page where a full news article is viewed. When a user clicks a news article in a News widget, the widget redirects to this page.
Sys ID (sys_id) from the Record Section (sys_sg_item_section) table for where news	Defines the section in the mobile app where the news article is viewed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

News (continued)

Properties	Description
articles will be displayed in the mobile app (sn_cd.mobile_record_section)	

Rich Content Editor

Properties	Description
Enables the ability to edit the HTML and CSS within a Rich Content design (sn_cd.activate_rce_edit_code)	Select **Yes** to allow content managers to edit rich content source code.

Content Providers

Properties	Description
The number of seconds to wait before timing out a video content provider subflow (sn_cd.provider_timeout)	Sets the period of time that the Employee Center attempts to connect to the video content provider. See Video hosting integrations framework

Content engagement

While Content engagement capabilities are delivered via the Content engagement plugin, the properties are configured in Content Publishing.

Properties	Description
Allow comments (sn_cd.allow_comments)	Displays a checkbox in the new content and content template forms for content managers to allow employees to comment on news articles
Allow replies to comments (sn_cd.allow_replies_to_comments)	Displays a checkbox in the new content and content template forms for content managers to allow employees to reply to comments on news articles
Allow reactions (sn_cd.allow_reactions)	Displays a checkbox in the new content and content template forms for content managers to allow employees to select a reaction icon
Show view count (sn_cd.show_views)	Displays the number of unique views for a news article at the top of the article

Quick Link form

Use the Quick Link form to create a new quick link and specify the content type for the quick link.

© 2026 ServiceNow, Inc. All rights reserved.

Quick Link form

Field	Description
Content Type	The type of content that you want the quick link to display. The choices are: • **Knowledge** • **Catalog item** • **Page** • **External link** • **Guided Self-service**
Name	The name of the quick link.
Knowledge	Knowledge article you want to open when you click the quick link. This field appears only when **Knowledge** is selected from **Content Type** field.
Catalog item	Catalog item that you want to open when you click the quick link. This field appears only when **Catalog item** is selected from **Content Type** field.
Page	Page you want to open when you click the quick link. This field appears only when **Page** is selected from **Content Type** field.
Additional query parameters	For the page that you selected in the **Page** field, you can specify additional query parameters here. This field appears only when **Page** is selected from **Content Type** field.
External link	External link you want to open when you click the quick link. This field appears only when **External** is selected from **Content Type** field. The background image for quick link is now visible to external users.
Guided Self-service	Guided Self-service that you want to open when you click the quick link. This field appears only when **Guided Self-service** is selected from **Content Type** field.
Active	Option to activate the quick link for use.
Title	The title that you enter in this field overrides the default title of the quick link.
Short description	The short description that you enter in this field overrides the default short description of the quick link.
Background image	The background image for the quick link.
Icon	The icon for the quick link.
Domain	The application scope on which the functionality runs.

Standard banner and icon sizes

Use the following sizes for the banner and icons for optimal portal performance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Images and sizes

Images	Sizes
Home page	1440 x 400px Height is 400px and width is responsive. For desktop: 1440px width viewport, 1440 x 400px **Note:** For troubleshooting the background banner image for employee center in mobile view, see KB1280740 and other related KBs.
Topic page	1258 x 300px Height is 300px and width is responsive. For desktop: 1440px with viewport, 1258 x 300px
Icons	Topic icon: 56 x 56px **Note:** The **Background image** and the **Icon** fields show the required specifications of the respective image sizes when you hover over the field labels.

Tips for image size

Note
Tip: The updated recommendations for image sizes are available on the widget Instance Options (Control + select and hold or right click).

Tab widget mapping form

You can use the tab widget mapping form to display widgets on a tab and control their visibility.

Tab widget mapping form

Field	Description
Name	Name of the widget-mapping record that is available in the **widgetTitle** variable of the widget options object. Use this variable value as the widget title.
Application	Application of the tab. For example, you can select one of the applications such as **Employee Center Pro** or **Employee Center Pro Kiosk**.
Active	Option to activate the widget in the tab.
Order	Order number in which you want the widget to appear on the tab.
Tab	Unique name of the tab that you want to associate with.
Accessible by	Users who can view the widgets.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tab widget mapping form (continued)

Field	Description

	• Employee only
	• Manager only
	• Employee and manager
	• Everyone
	• Manager and Other Managers
	• Employee, Manager, and Other Managers
	• User criteria: Provide the access only to specific users, groups, and roles with the user criteria. The widget is visible to the users based on the following:
	  ○ Available For: User group for whom the widget is visible. Define and select the user group based on your business needs.
	  ○ Not Available For: User group for whom the widget isn't visible. Define and select the user group based on your business needs.
	Values that are defined in the Not Available For group take precedence over the values defined in the Available For group. If both aren't defined, the widget is visible to all users. For more information on widget visibility based on user criteria, see User Criteria output.
	Note: Use the user criteria cautiously because the profile page load time can take longer based on your criteria.
	Based on your selection, the profile visibility is either locked or made available for editing by the employee.

Allow employee to control visibility	This field appears only when you select one of the Employee only, Employee and manager, or Everyone options. **Note:** To view and change the visibility setting, embed the *`Public Profile Visibility`* widget inside the configured widget. When you select the value as **true**, employees can see the edit option used to modify the visibility settings. The modified visibility setting *`(employee_profile.widget_visibility)`* is stored in the user preference table. **Note:** Settings configured in the **Allow employee to control visibility** field take precedence over the settings configured in the **Accessible by** field to display the information. Employees can change the admin configuration and determine how much of the profile information is visible to the public.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tab widget mapping form (continued)

Field	Description
	Here's a sample code for invoking the Public Profile Visibility widget. `data.publicProfileWidget = $sp.getWidget("public_profile_visibility", { tabWidgetMappingId: options.tabWidgetMappingId ? options.tabWidgetMappingId : "", isUserSelectionEnabled: options.isUserSelectionEnabled ? options.isUserSelectionEnabled : "", widgetTitle: options.widgetTitle ? options.widgetTitle : “” });`  `To embed it in your widget use the sp-widget directive. For example, <sp-widget widget="data.publicProfileWidget"></sp-widget>` This field value is available in the **isUserSelectionEnabled** variable of the widget options object.
Widget	Widget to display on the tab. **Note:** Only when you map a widget to the tab, the information displays inside the tab on the employee profile page. When the widget is visible on the UI, set the *`isVisible`* variable value to **true** in the server script data object to indicate the widget visibility. For example, *`data.isVisible = true`*. For optimal tab load time, use a max of seven associated widgets, which can take 250 ms or equivalent. **Note:** If the widget type is Employee Profile Overview, you can select the set of sections to be displayed under this widget.
Widget parameters	Comma-separated list of widget parameters auto-populated with default values. For the **Employee Schedule** widget, to send Email or SMS, specify the widget parameters `enable_send_email` and `enable_send_sms` values to true. For more information, see Configure the mail and SMS send to self. For default calendar view, specify `default_calendar_view` value to day or week or month.

Taxonomy form

Use the taxonomy form to create your own taxonomy for the Employee Center portal.

Taxonomy form

Field	Description
Name	Unique name that identifies the taxonomy. See Unified Taxonomy for Employee Center.
Managers	Managers or manager group of the taxonomy content.
Application	Application scope that the taxonomy belongs to. For example, Employee Center Pro or Employee Center Pro Kiosk.
Active	Indicates if the taxonomy content is active or not.
Domain	Domain the taxonomy content belongs to.
Description	Description of the taxonomy content.

Related topics

Unified Taxonomy for Employee Center

To-do content form

Use the To-do content form to add to-dos to your portal page.

To-do Content form

Field	Description
Title	Name that identifies the to-do link.
Content type	Defines the kind of to-do link. • Button Complete: Employee selects a button to complete the task. • Play Video: Employee launches video to complete the task. • View Link: Employee selects a link to complete the task. • E-Signature: Requires an e-signature to complete to task. **Note:** For more information, see Add or modify content type for Content Publishing.
Use block content	Indicates that you want to use block content in your to-do.
Block content	The block content for the to-do. Appears when you check **Use block content**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To-do Content form (continued)

Field	Description
	Note: For more information, see Add or modify block content.
Active	Indicates the to-do content is active and available to use.
Button text	Text describing the button. For example, to indicate completions of enrollment in a benefits plan, enter Enrollment Complete. Appears when Button Complete is selected from **Content type**.
E-signature template	The e-signature template used with the e-signature content type. **Note:** For more information, see Configure an e-signature template.
Video	The video link you want an employee to click. Appears when you select **Play Video** in **Content type**. Define video links in Link Content. **Note:** For more information, see Add or modify block content.
Link	The link you want an employee to click. Appears when **View Link** is selected from **Content type**. Define links in Link Content. For more information, see Add or modify block content. **Note:** Depending on your configurations or extensions, your link may open in a new window.
Rich text	Area to provide detailed information about the task. Use the editing tools to enhance the appearance of the text. Appears if you do not check **Use block content**.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Topic form

Use the topic form to create topics for the new or cloned taxonomy.

Topic form

Field	Description
Name	Name for the topic. **Note:** For better topic discovery and search results, avoid special character **/** and ensure you re-index the content after topic name edits. Ensure that the topic table changes are manually reindexed for their corresponding indexed sources, see Create and associate topics.
Taxonomy	Taxonomy with which you want to associate the topic. For example, Employee Center Pro or Employee Center Pro Kiosk.
Template	Name of the topic template. Available options are **emp_taxonomy_topic** (for EC portal) and **eck_taxonomy_topic** (for kiosk).
Parent topic	Parent topic with which you want to associate this topic. Leave this field blank if the topic you're creating is the parent topic. **Note:** When you clone or move a topic, the associated guided self-service also is cloned or moved accordingly.
Application	This field is set to Employee Center by default.
Active	Option to make the topic available for use.
Apply template to child topics	Option to apply the parent topic template on the child topics.
Order	Order in which you want the topic to appear.
Description	Brief description of the topic.
Icon	Icon that you want to display for the topic. Click the **Click to add** option to browse and select an image you want to set as the topic icon. Supported file types include .jpg, .png, .bmp, .gif, .jpeg, .ico, and .svg. The recommended size for icons is: • Topic icon: 56 x 56px • Sub-topic icon: 28 x28px Use the default icons that align with the EC theme such as Coral.
Banner Image	Banner that you want to display for the topic. Click **Click to add...** to browse and select an image you want to set as the topic banner. Supported file types include .jpg, .png, .bmp, .gif, .jpeg, .ico, and .svg.

Topic form (continued)

Field	Description
	The recommended size for banners is: • Home page banner: 1440 x 400px • Topic page: 1258 x 300px
Topic manager	Names of the topic managers with access to the topic.
Topic contributor	Names of the topic contributors with access to the topic.
Enable user criteria check	When you opt in, you can select the user criteria for the topic visibility. Enable user criteria check to determine visibility of current topic and its child topics in navigation and popular topics widget. The criteria set also applies to child topics. Criteria in connected content still govern content visibility on topic pages. **Note:** When you have a lot of topics, ensure you set up user criteria for your topics. Default: Disable For more information, see Enable user criteria for topics.
Available For	User group for whom the topic is visible. Ensure you specify the user criteria to make topics available for specific users and user groups. **Note:** When you do not specify any values for both **Available For** and **Not Available For**, the topics do not appear. This field is available when the **Enable user criteria check** is selected.
Not Available For	User group for whom the topic isn't visible. Ensure you specify the user criteria to make topics unavailable for specific users and user groups. **Note:** When you do not specify any values for both **Available For** and **Not Available For**, the topics do not appear. This field is available when the **Enable user criteria check** is selected.

Employee Center and ITSM workflows

Employee Center and ITSM workflow

Connect everything and easily scale across the enterprise to deliver experiences you need. Provide a modern employee experience platform across the enterprise to:

- Improve case-deflections for the admins to focus on more complex tasks
- Improve service management like managing the Service Catalog and the Knowledge Base articles on ITSM
- Improve self-service for the employees
- Increase employee engagement
- Increase employee productivity

The following requirements must be met to use Employee Center with ITSM.

- You can use Employee Center with ITSM or ITSM Pro subscription.
- You must subscribe to Employee Center Pro separately from the ServiceNow store.

Employee Center versus Employee Center Pro

Employee Center is one portal that is packaged as two separate store applications:

- Employee Center: Multi-department service delivery that enables employees to report issues, request items or services, find service-related answers, and complete to-dos. This application and its capabilities are available to all customers by default.
- Employee Center Pro: Subscription-based application that extends the standard Employee Center capabilities including content creation capabilities, multi-stage and multi-channel content delivery, and portal analytics. This application requires additional licensing.

Use	Integration	Reference
		
From the ServiceNow® Employee Center, managers and employees work with the Talent app and related features on career growth and development.	Integrate with different applications to expand the capabilities and effectiveness of the Talent app.	Reference information provides important details related to how the Talent Development Core app works.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Explore Talent Development Core

The Talent Development Core application provides employees and managers with an intuitive and streamlined process for managing career growth and development.

When you open Career hub from the Employee Center, you see a summary of your career growth plan that includes only your information.

Career hub overview

The Career hub tab provides a summary view of your growth and development plans.

Career hub is a simplified and intuitive way to start building your development plans. Use Career hub to do the following:

- Get an overview of where you are with your growth and development and where you're going.
- Create aspirations that motivate you, inspire you, and point you in the right direction.
- View and complete career plan suggestions that are tailored to your development plan.
- View your assigned career growth tasks such as trainings, connections with your peers, and meetings with your manager.
- Navigate ongoing aspirations and find inspiration by motivating, inspiring, and pointing you in the right direction.
- View your profile and provide employment and personal details. View details such as your manager, coworkers, personal contacts, and update your Career hub skills.
- View your growth plan tasks and stay on track by completing tasks that might need your attention.
- View courses in Learning to complete your training to help you grow and show off all your learning achievements.
- View your current learning development and keep up with your assigned, saved, and ongoing courses.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Connect with coworkers and managers and view your scheduled conversations.
- View your recent conversations and manage your talking points and follow-up items.
- Grow your network for career support by making connections.

Note:
You can also add people to your circle, which highlights the people that might help motivate and inspire you in your career journey. Simply select **Add people to your circle** to add people, search the directory, and add mentors, peers, and people who help push you to grow.

Career hub widgets overview

Widget	Description
Application status	Helps you track and manage internal jobs for which you applied. It provides you with the latest status of your job application.
Aspirations	Shows you specific skills and roles that help you with ongoing aspirations and with finding new aspirations.
Career growth tasks	Shows you all your tasks such as assigned courses and trainings that help manage your career growth.
Create an aspiration	Get motivated, inspired, and pointed in the right direction.
Current learning	How you keep up with your assigned, saved, and ongoing courses and trainings.
Growth plan tasks	Helps you stay on track by completing tasks that are upcoming, overdue, and due soon.
Grow with intent	Shows you actionable items or suggestions that are specific to you.
Latest achievement	Shows you all your earned achievements based on your learning progress. **Note:** Because achievements expire, you can only see achievements that aren't expired.
Make new connections	Lets you search the org chart to browse peers with whom you can make connections.
Opportunities	Provides you with a recommendation of internal job opportunities. The job opportunities in this widget are mapped to the job opportunities in the following widgets that appear in the Opportunity marketplace module: • Browse opportunities that might interest you • See opportunities based on an evaluation of your skills
Recent conversations	Helps you manage all your talking points and follow-up conversation items.
See the impact that	A time-line that reflects your milestones. You can use a filter to control whether the time-line displays the following milestones:

© 2026 ServiceNow, Inc. All rights reserved.

Career hub widgets overview (continued)

Widget	Description
you have made	• Aspirations (in-progress or complete) • Growth plans (in-progress or complete) • Learning (in-progress or complete) • Skills gained • Role updates
Skill Self-Rating	As you work on your career and talent development activities, you receive monthly reminders for you to refresh your career profile. Read more about updating your profile and skills in the Career tab in Employee Center topic.
Upcoming conversations	Shows you all your scheduled and upcoming conversations by week.
Your skill range	Gets you started with uploading a resume and adding skills to your profile.

Aspirations overview

Create and set your aspirations to help inspire and guide you on your career growth and development journey.

Create and track personal and professional aspirations.

Aspiration Types

A general category used to help focus your aspiration.

Interest

Interest gives you an opportunity to contribute to a given area of interest. You can set an aspiration for any topics you want to explore.

Skill

Skill gives you the opportunity to become a specialist in something you're already good at, or to tackle something new.

Role

Role gives you the opportunity to earn a new title in your current trajectory, or to try something in a different field.

General

If your aspiration falls outside the interest, skill and role categories, general gives you the opportunity to make something from scratch.

Growth plans overview

Build your growth plan to organize and track your career goals.

Growth plans are a simplified and intuitive way to build growth plans that give your career goals guidance and structure and are used to do the following:

- Create a growth plan.
- View tasks connected to your growth plan such as trainings or connections with peers or managers.
- View growth plan items and their state, progress, and status updates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View growth plan details such as due dates and plan activities, plan status, and edit your plan details.
- View and add additional plan activities.
- Learn more about how growth plans can help you develop and discover new opportunities.

Note:
Create a growth plan based on your aspirations and conversations or you can build a growth plan from scratch based off criteria selected during the creation of your growth plan.

Growth plans are tailored to your individual needs and aspirations to help provide a roadmap to your career goals. With support from your peers and manager, you can achieve new heights in your career.

Growth plan home

Features overview

Feature	Description
Create a growth plan (based on aspirations and conversations)	A growth plan is initially created based on your aspirations or conversations. Growth plans can be shared with your manager to make career growth clear, achievable, and rewarding.
Build a growth plan (from scratch)	Takes you through the steps to build a new growth plan based on review activities or trending learning courses. 1:1 Check-in with your manager is Required.
Growth plan details page	Shows you the overall growth plan details where you can view details about your plan, and axes before you fillyour plan activities. You can discard, share, launch and set a growth plan due date and view your plan activities and add activities such as learning, check-in, mentorship, or something else.
Your next tasks	Shows you activities that help you stay on track by completing some tasks that need your attention. You can start any activity listed in this section. The status of a plan item might be listed as any one of the following (upcoming, required, overdue, due soon, and up next).
Your growth plans	Shows you plan details such as plan name, state, progress, and the last updated date. You can sort and search plans.
Past growth plans	Shows you plan details such as plan status (all, completed, canceled), name, state, and date completed.

Here are some examples of development opportunities offered with growth plans:

- Job shadowing or mentorship programs
- Coaching or career counseling services
- Professional development programs or certifications

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Leadership development programs or courses
- Team building and collaboration exercises
- Conferences, seminars, or networking events
- Tuition reimbursement or other educational benefits

Note:
connect with your manager or HR representative to find out what development opportunities are available to you, to help create a development plan that aligns with your career goals and the priorities of the organization.

Conversations overview

Conversations with managers, peers, and mentors are a critical part of your career growth. Identify and manage the important conversations you have.

You must have the Career Conversations app installed for Conversations to work.

Learning overview

Identify, manage, and complete all your learning goals from the Learning tab in Talent Development.

Learning helps you grow in all aspects of your career with courses and trainings specific to your career development plans and is used to do the following:

- View course and training reminders that help you stay on track and complete your assigned learnings and pick up where you left off.
- View learning tasks, your current learning challenges, and your latest achievements to view your development progress and success.
- View recent learning activity such as assigned learnings, saved learnings, learnings that you've shared, and learning history.

Note:
Learning also lets you set challenges to help prioritize your career growth. You decide what courses you want to take and when you want to complete them. You can also set the frequency of completion, when you want to start, and track how many courses you want to complete in a given period.

Learnings are tailored to your course and training aspirations. Learning lets you view your learning progress and achievements.

Learning widgets overview

Widget	Description
Finish these learnings before they're due	Shows your overdue courses and trainings so that you can plan to complete them before they're due.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning widgets overview (continued)

Widget	Description
Learning tasks	Shows your learning tasks that are in progress and assigned and displays the progress in the last 30 days.
Your current challenge	Shows you the challenges that you've started, the amount of days left before the challenges start, and also lets you discover new things to learn.
Latest achievement	Latest achievement shows you all your earned achievements based on your learning progress.
Continue where you left off	Shows you the courses or trainings that you started but never finished, and gives you the chance to continue where you left off.
Recent activity	Shows your assigned, saved, shared courses and trainings, and also shows your learning history.
Trending now	Shows you courses, paths, or collections that are trending now so that you can discover new things to learn.
Track your learning	Shows your assigned, saved, shared with, history, challenges, and completed courses.
Achievements	Shows your Learning achievements. When you learn something new and complete a course, you can earn achievements and see them on the Learning tab.

Opportunity Marketplace overview

The Opportunity Marketplace is a single, unified space where individuals and organizations can share opportunities that are discoverable by employees.

Opportunities in the marketplace include internal jobs that are relevant to employee aspirations, which help with career exploration, growth, and internal mobility.

Use the following marketplace features to help you grow in your career journey:

- Search for available opportunities within the organization.
- View opportunities that might interest you based on roles that fit with your skills, experience, and aspirations.
- View opportunities that have been shared with you and share opportunities with other coworkers.
- View opportunities that are featured by the organization.
- View testimonials from your coworkers that highlight their success.
- View recommended opportunities based on your current role, aspirations, and top skills.

Note:
When searching for opportunities of interest, you can update your preferences to your working style, job level, and job location. You can also view your favorite jobs, share opportunities, and create aspirations.

The Opportunity Marketplace app helps you find the next steps in your career journey.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Features overview

Feature	Description
Search available opportunities	Use the search field to populate a list of potential jobs based on job title, location, or description. **Tip:** The Opportunity Marketplace app supports the following search engines: • AI search • Zing search
Internal job (opportunities list)	An internal job listing shows the job title, job location, match analysis, quick view, favorite option, create an aspiration, and share this opportunity option. **Note:** You can also filter and sort the job list.
Match analysis (Job)	Shows how your skills match with a specific opportunity by displaying the skills requirements, skills needed, and preferences such as working style and location.
Quick view (Job)	Shows the job location, description, and applicant criteria details.
Create an aspiration	Optional feature that lets you create an aspiration for a specific job. You can choose an aspiration name, add a description, and save the draft aspiration.
Share this opportunity	Optional feature that enables you to share an opportunity with another coworker. You can choose who to share it with, add a personal note, and share opportunity.
Opportunities that might interest you	Shows specific opportunities that might interest you based on your profile details, current role, and skills.
Opportunities shared with you	Shows opportunities that have been shared with you by coworkers within the organization. **Note:** You can review these opportunities, favorite them, create an aspiration, and share it with other coworkers.
Featured by your company	Shows opportunities that your company has highlighted as a potential interest.
Testimonials from your coworkers	Shows testimonials or comments from your coworkers.

Internal Jobs

Feature	Description
Internal job (Based on your current role)	Shows recommendations based on your current role. Internal job listings show the job title, job location, match analysis, quick view, favorite option, create an aspiration, and share this opportunity option. **Note:** You can also filter and sort the job list.
Internal job (Based on your aspirations)	Shows recommendations based on your aspirations. Internal job listings show the job title, job location, match analysis, quick view, favorite option, create an aspiration, and share this opportunity option. **Note:** You can also filter and sort the job list and view aspirations.
Internal job (Based on your skills)	Shows recommendations based on your top skills. Internal job listings show the job title, job location, match analysis, quick view, favorite option (heart button), create an aspiration, and share this opportunity option. **Note:** You can also filter and sort the job list and view a profile.

Note:
While mobile capabilities are supported for the Vancouver and Xanadu release, mobile capability is not supported in the Utah release.

Hiring Core

Hiring Core provides a repository to store information for your hiring requirements. Activate the Hiring Core plugin (app-hiring-core) to start using it. For more information on the hiring core tables, see Components installed with Talent Development Core.

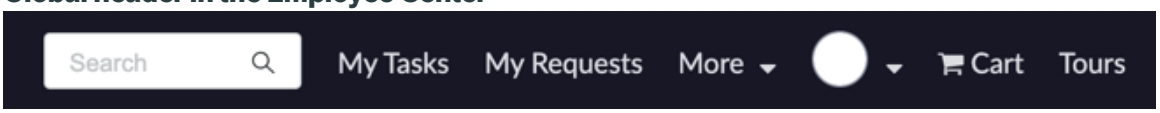
AI search

Artificial intelligence (AI) embedded into a search engine helps you find what you're looking for through an intelligent, AI-powered search. AI search is an assistive technology tool that promotes accessibility through its search features. In contrast with Zing search, the search engine used in previous releases, AI search is more interactive, helpful, and faster at finding the answers you need. Employees and opportunity owners can find answers quick and conveniently with features like auto-complete search queries, natural language support, and typo handling.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When AI search is enabled via the ServiceNow® AI Search application, the Opportunity Marketplace app is able to leverage AI search and use its intelligent query features for all searches in the marketplace. With AI search enabled, the portal search engine captures information about the employee—such as their role, location, department, assets, and search history—and returns search results that are relevant and personalized. AI search also yields genius results that enable employees to interact directly with the search results that display the best answer for the search query.

Employees and opportunity owners experience the benefit of generating more sophisticated search results when they use the following search fields to explore opportunities in the marketplace:



Opportunity Marketplace

- The search field in the Welcome to the Opportunity Marketplace widget. This widget appears when you access the home page for the Opportunity Marketplace.
- The search field in the Search available opportunities widget. This widget appears when you access the Internal jobs page.

Employee Center

The search bar that appears on the global header in the Employee Center portal. The global header is the first row in the Employee Center portal. This search bar is accessible from any page in the portal excluding the home page.

Global header in the Employee Center

For more information on AI search and Zing search features, refer to the following topics to help your organization determine which search engine to implement and use:

- Exploring AI Search
- Features of Zing text indexing and search engine

For more information on AI search and how to enable it, refer to AI Search.

Install and configure the Talent Development Core app

Install and configure the Talent Development Core app. Talent Development Core is an app in a suite of ServiceNow apps and features that define a workflow for employees and managers to take control of their career development and growth.

Install the Talent Development Core application

Install the Talent Development app to enable employees and managers to identify, create, and manage career growth and development plans.

Before you begin

Dependent plugins and apps for Talent Development:

- Manager Hub
- Skills Foundation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When the Skills Foundation property **sn_skills_int.enable_skills** is set to true, the use of Skills Foundation is enabled for all Talent applications that support the use of Skills Foundation. See Configuring Skills Foundation for more information about Skills Foundation properties.

- Install Employee Center Pro

Role required: admin

About this task

When an administrator installs the Talent Development Core app from the ServiceNow store, it integrates learning, skills identification, aspirations, and planning for a personal career growth and development plan.

Procedure

1. Go to the ServiceNow Store and find the Talent Development Core application using the filter criteria and search bar.

   In the list next to the **Install** button, the versions that are available to you are displayed.

2. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to install it, select the **Load demo data** check box.

   Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

5. Select **Install**.

Administer and maintain the Talent Development Core app

Administering and maintaining the Talent Development Core app requires the role of a ServiceNow administrator or an Talent admin.

Anyone that is assigned the Talent Development Core admin role [sn_egd_core.admin] can maintain Growth Plans, Administration, and Aspirations features and configurations.

Growth Plans

A Talent Development Core admin administers the core application, which is the**Growth Plans Outcome Types**, **Activity Types**, **Activity Categories**, **Activity Templates**, and **Activity Template Recommendations**.

Administration

Set **Properties** Talent Development Core properties, including manager skill approvals, activities settings on launch, and usage of the Skills Foundation application.

Aspirations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Aspirations** are created to help employees identify and track personal and work related goals.
- Administrators define **Aspiration Types** that are displayed in the user interface. Employees select different **Aspiration Types** that help them to meet goals.
- Create **Interests** that are available for employees to select when creating an aspiration.

Create Talent Development Outcome Types

As an Talent admin you create outcome types that can be used in growth plans.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
An **Outcome Type** is used to categorize activities into logical outcomes.

Procedure

1. Navigate to **All** > **Talent Development Core** > **Growth Plans** > **Outcome Types**.
2. Select **New**.
3. Complete the **Outcome Types** form.
   Read details about the different fields in Talent Outcome Types reference
4. Select **Submit**

Create Talent Development Activity Types

As a Talent Development Core admin you create **Activity Types** that are used in growth plans.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
An **Activity Types** help to identify what an activity is intended to do.

Procedure

1. Navigate to **All** > **Talent Development Core** > **Activity Types**.
2. Select **New**.
3. Complete the **Activity Type** form.
   Read details about the different fields in Talent Activity Types reference.
4. Select **Submit**

Create Talent Development Core Activity Categories

As an Talent Development Core admin you create **Activity Categories** that are used in growth plans.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
An **Activity Category** helps to identify what an activity is intended to do.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Talent Development Core** > **Activity Categories**.
2. Select **New**.
3. Complete the **Activity Categories** form.
   Read details about the different fields in Talent Activity Category reference.
4. Select **Submit**

Create Talent Development Activity Templates

As a Talent Development Core admin you create **Activity Templates** that are used in growth plans.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
An **Activity Template** logically groups activities by name and requires an **Activity type**.

Procedure

1. Navigate to **All** > **Talent Development Core** > **Activity Templates**.
2. Select **New**.
3. Complete the **Activity Templates** form.
   Read details about the different fields in Talent Activity template reference.
4. Select **Submit**

Create Talent Development Activity Recommendations

As an Talent admin you create **Activity Template Recommendations** that are used in growth plans.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
Controls whether the activity is **Required** or **Recommended** for the growth plan.

Procedure

1. Navigate to **All** > **Talent Development Core** > **Activity Template Recommendation**.
2. Select **New**.
3. Complete the **Activity Template Recommendation** form.
   Read details about the different fields in Talent Activity Template Recommendation form.
4. Select **Submit**

Set Talent Development Properties

Set properties to control manager skill approvals and activity completion flows.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
Set the following Talent properties:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Talent properties to control manager skill approvals

- **no**: Manager skill approvals are skipped.
- **optional**: Manager skill approvals are automatically suggested, but not required.
- **required**: Manager skill approvals are automatically created.

Set all activities to ready when Growth Plans are launched

Set all activities to ready when **Growth Plans** are **Published**.

Procedure

1. Navigate to **All** > **Talent Development Core** > **Administration** > **Properties**.
2. Select the property settings.
   For more information on Talent properties, read Talent Properties reference.
3. Select **Save**.

Create a Talent Development Core featured growth item

Use the Featured Growth Items table to define the roles, skills, and opportunities that appear in the Featured by your company widget. This widget can be used to promote desirable career opportunities and skills that foster growth and development for employees within your organization.

Before you begin

Role required: admin [sn_egd_core.admin or sn_egd_shared_lib.admin]

Procedure

1. Navigate to **All** > **Talent Development Core** > **Administration** > **Featured Growth Items**.
2. Select **New**.
3. Use the **Type** field to specify the feature growth item you want to promote.
   The form displays new fields that are specific to the option you selected in the **Type** field.
4. Set the corresponding fields that appear on the form depending on the option you selected in the **Type** field.
5. **Optional:** Add an image for the opportunity that you want to promote by selecting the **Click to add...** link in the **Image** field.
   The **Image** field only appears when the **Type** field is set to **Opportunity**.
6. **Optional:** Indicate the order in which the feature growth item appears by entering a numeric value in the **Order** field.
7. Make your featured growth item available to employees within your organization by selecting the check box associated with the **Active** field.
8. **Optional:** Specify the employee groups to whom the feature growth item is available by using the **User criteria** field.
9. **Optional:** Enter a description in the **Description** field to provide further details about the role, skill, or opportunity you want to promote.
10. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The feature growth item that you defined appears in the Featured by your company widget for the employees you specified in the **User criteria** field.

The Featured by your company widget appears on the Aspirations landing page.

Important:
Only job titles and skills that you define using the Featured Growth Items table will appear in the Featured by your company widget on the Aspirations landing page. The opportunities that you define will appear in the Featured by your company widget on the Opportunity Marketplace landing page.

Add sample texts to Talent Development related content

As an Talent admin you can add **Sample Text**.

Before you begin
Role required: sn_egd_core.admin or admin

Procedure
1. Navigate to **All** > **Talent Development Core** > **Administration** > **Sample texts**.
2. Select **New**.
3. Complete the **Sample texts** form.
   Read details about the different fields in Talent Sample texts reference.
4. Select **Submit**

Add Talent Development Aspirations

An Talent admin can manage **Aspirations** that employees create and share.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
Aspirations are used by employees to identify and track personal and professional goals. An employee can create a growth plan from an **Aspiration**.

Procedure
1. Navigate to **All** > **Talent Development Core** > **Aspirations** > **Aspirations**.
2. Select **New**.
3. Complete the **Aspiration New record** form.
   Read details about the different fields in Talent Aspirations reference.
4. Select **Submit**

What to do next
As an Talent admin you can create and maintain aspiration types, see Add Talent Development Aspirations Types.

Add Talent Development Aspirations Types

As an Talent admin you can add or manage **Aspiration Types**, which are used to identify employee aspirations.

Before you begin
Role required: sn_egd_core.admin or admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Talent Development** > **Aspirations** > **Aspiration Types**.
2. Select **New**.
3. Complete the **Aspiration Type New record** form.
   To see details about the different fields, see Talent Aspiration types form.
4. Select **Submit**

Add Talent Development Interests

As a Talent Development Core admin, you can add **Interests** that help employees understand and create an aspiration.

Before you begin
Role required: sn_egd_core.admin or admin

Procedure

1. Navigate to **All** > **Talent Development Core** > **Aspirations** > **Interests**.
2. Select **New**.
3. Complete the **Interests** form.
   To see details about the different fields, see Talent Interest form.
4. Select **Submit**.

License Talent Development Core users

Talent Development Core uses the Employee Profile licensing feature to license user.

Before you begin
Role required: sn_employee.admin or admin

Procedure

1. Navigate to **All** > **Employee Profile** > **Application licensing** > **Employee licensing**.
2. Select **New**.
3. Fill in the **Employee Application Access Criteria** form.
   Read about the fields in this form in Employee Application Access Criteria reference. Use a filter condition that meets your criteria for who should be licensed.

   Note:
   All conditions on a single criteria form must be met. However, a user doesn't have to meet all of the criteria listed for employee licensing, they just have to meet the criteria for one of the records.

4. Select **Submit**.

What to do next
You can view the list of licensed users by navigating to **All** > **Employee Profile** > **Application licensing** and opening a record.

View Talent Development Core licensed profiles

You can view a list of profiles that are licensed for Talent Development.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_egd_core.admin or admin

About this task
The **Employee Profile** licenses users by the employee profile number. Each number is associated with a user. You can view the user name in the profile.

Procedure
1. Navigate to **All** > **Employee Profile** > **Application licensing** > **Employee licensing**.
2. Open an existing record.
   If you don't have any existing **Employee Application Access Criteria** records, you can create a record and view the matched profiles.
3. In an existing **Employee Application Access Criteria** record, select the link above the **Criteria** field.
   The link shows the number of profiles that match the condition. If you only see the employee profile number, select the gear icon, and add the **User** field to the selected column.

Achievements and Credentials in Talent Development Core

View all types of user credentials acquired outside the current organization (currently populated from Credly) in Achievements and Credentials.

Achievement credentials, like badges, are digital or physical symbols that recognize and verify an individual's accomplishment, skill, or participation in a specific activity or goal.

The credentials imported from Credly have skills data, and other metadata such as user and badge information. Skills associated with the Credly badges are analyzed as follows:

- If Credly badge skills match exactly or mapped to the skills in the skills library, they are added to the employee profile, in case the employee doesn't already have them.
- If a skill exists in the employee profile and also receives a badge associated with the same skill, then the employee gets a Prompt (Review Skills Profile Prompt) to update the skill's proficiency. For more information, see Proactive Prompts for Skills Foundation.
- If the skill is new, it’s added to the queue pipeline for harmonization. For more information, see Dynamic skill import for harmonization.
- The harmonized new skills are added to the skills library (cmn_skills table) and updated in the credential badge skills metadata after the import is complete.
- Employee's skill profile is updated with the new skill(s) linked to their earned badge.

View credentials in Achievements and Credentials

View all type of user credentials in Achievements and Credentials.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > Achievements and Credentials > **Achievement Credentials**.
2. On the achievement credentials page, view the details stored in the following format.

Note:
You can select the user, credential template, state, and URL options to view more information about these fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Achievement credentials table

Field	Description
User	Name of the user.
Credential template	Achievement credential template associated with the user.
State	Current state of the credential (whether it was accepted or rejected).
Public	Visibility of the credential.
Expiry date	Date and time on which the credential has expired (if expired).
URL	URL of the source of the credential. For example: Credly account URL.
External ID	External ID corresponding t o the user.
Issued date	Date and time when the credential was issued.
Created	Date and time when the credential was created.
Created by	Information about the role that created the credential.
Domain	Domain information of the credential
Tags	Option to add tags to a credential.
Updated	Date and time when the credential was last updated.
Updated by	Information about the role that made the last update to the credential.
Updates	Information about the most recent updates made to the credential.

View achievement credential templates

View achievement credential templates in Achievements and Credentials.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Achievements and Credentials** > **Achievement Credential Templates**.
2. Select an existing record.
3. On the achievement credential template page, view the details stored in the following format.

Achievement credential Template form

Field	Description
Name	Name of the credential template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Credential type	Information about the type of credential.
Source	Source of the credential. For example: Credly.
Issuer	Details of the issuer of the credential template.
Image URL	URL of the credential source.
Achievement template skills	Skills attached to the template. To attach a new skill to the template, see .

Add skill to an achievement template

Associate a skill to an achievement credential template in Achievements and Credentials.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Achievements and Credentials** > **Achievement Credential Templates**.
2. Select an existing record.
3. Click **New** in the Achievement Template Skills related list.
   On the form, fill in the fields:

Achievement Template Skills form

Field	Description
Credential template	Name of the credential template record that you want to associate a skill to. **Note:** Use the information icon,to view the credential template record
Skill	Option to select the skill you want to associate to the achievement template. **Note:** Use the search option to look up from a list of existing skills.

4. Select **Submit**.

Using the Talent Development Core application

Managers and employees can create and track career development and growth plans. Managers access Talent from Employee Center menus **Your careerGrowth Plans** to track employee development.

Create a growth plan

Create a growth plan to give your career goals guidance and structure.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: None

About this task
Growth plans are based on your individual needs and aspirations and help you make the most of your potential and reach your career goals.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. At the **Your Career** drop-down list, select **Growth plans**.
3. Select the **Create a growth plan** button.
4. Select **Get Started** if this is your first time creating a growth plan.

   Note:
   If you have any open aspirations or recent conversations, they might be displayed as potential **focus** areas. If you don't have any open aspirations or conversations, you can build a plan from scratch by selecting **Build a plan from scratch** option.

5. Enter a plan name in **Growth plan name**.
6. **Optional:** Enter Description
7. Select the **Next** button.

   Tip:
   Creating a plan will start to process and find some activities for your plan.

8. Select the **Next** button.

   Tip:
   If learning and activities are installed, Growth plan might show some suggested learnings, or you can search learning to add things to your Growth plan.

9. Select **Create plan**

Result
The draft growth plan is created and will be shared with your manager once the plan is launched.

What to do next
- Launch plan so it can be shared with your manager.
- Review your progress.
- Continue to edit your growth plan.

Edit a growth plan

Edit, set a due date, or add additional activities to a growth plan.

Before you begin
Role required: None

About this task
Growth plans are based on your individual needs and aspirations and can help you make the most of your potential and reach your career goals.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. At the **Your Career** drop-down list, select **Growth plans**.
3. Select a draft or published growth plan.
4. Select the button next to the **Mark complete** button (if viewing a published growth plan).
5. Select **Edit plan**.
6. **Optional:** In the **About this plan** section, select the **Set due date** link to give your growth plan a due date.
7. **Optional:** Select the **Add an activity** button to additional activities.
8. Create the activity by following the fly-out prompts.
9. Select **Finish editing** (if viewing a published growth plan).

> **Note:**
> Different options might be available based on the Talent Development related plug-in installs and what skills you selected to focus on. The **Something else** option will always be available. If you selected skills for your growth plan, the **Skill validation** option will be available and might be displayed if you already have **Skill validation** tasks for all your focus skills. The **Learning** and **Check-in** options might be displayed when **Learning** and **Career Conversations** are installed.

Result
The activity will be added to your growth plan.

What to do next
- Launch plan so it can be shared with your manager.
- Review your progress.
- Continue to edit your growth plan.

Create a growth plan from an aspiration or main skill

Create a growth plan based on one of your aspirations or main skill.

Before you begin
Role required: None

About this task
Growth plans are based on your individual needs and aspirations and can help you develop your main skills.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. At the **Your Career** drop-down list, select **Growth plans**.
3. Select the **Create a growth plan** button.
4. Select **Get Started** if this is your first time creating a growth plan.
5. Select the skill-based **Aspiration.**
6. Select the **Next**button.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If **Learning** is installed, growth plans might show some suggested learnings. If the Skills Foundation property **sn_skills_int.enable_skills** is set to **true**, growth plans might show learning courses related to the skill you've selected for your aspiration, if applicable. You can search learning to add courses to your growth plan.

7. Select **Create plan**

Result
The draft growth plan is created and will be shared with your manager once the plan is launched.

What to do next
- Launch plan so it can be shared with your manager.
- Review your progress.
- Continue to edit your growth plan.

Create a growth plan from an aspiration

Create a growth plan based on one of your aspirations to help you move towards a new role.

Before you begin
Role required: None

About this task
Growth plans are based on your individual needs and aspirations and can help you move towards a new role.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. At the **Your Career** drop-down list, select **Growth plans**.
3. Select the **Create a growth plan** button.
4. Select **Get Started** if this is your first time creating a growth plan.
5. Select the role-based **Aspiration.**
6. Select the **Next**button.

Note:
If the Skills Foundation property **sn_skills_int.enable_skills** is set to **true**, growth plans will give you the option to select skills to focus on that are related to the role.

7. Select additional activities for your growth plan.

Note:
The additional activities might be either required or optional.

8. Select **Create plan**

Note:
If **Learning** is installed, growth plans might show some suggested learnings. If the Skills Foundation property **sn_skills_int.enable_skills** is set to **true**, growth plans might show learning courses related to the skill you've selected for your aspiration, if applicable. You can search learning to add courses to your growth plan.

Result
The draft growth plan is created and will be shared with your manager once the plan is launched.

What to do next
- Launch plan so it can be shared with your manager.
- Review your progress.
- Continue to edit your growth plan.

Create a growth plan from discussions

Create a growth plan based on your discussions or aspirations.

Before you begin
Role required: None

About this task
Growth plans are based on your individual needs and aspirations and can help you develop your main skills.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. At the **Your Career** drop-down list, select **Growth plans**.
3. Select the **Create a growth plan** button.
4. Select **Get Started** if this is your first time creating a growth plan.
5. Select the **Aspiration** or **Discussion.**
6. Select the **Next**button.

> **Note:**
> If creating a growth plan for a discussion, provide the **Growth plan name** and a description and select the **Next** button. The next screens might show you additional activities you can add to your growth plan and might be either required or optional.

7. Select **Create plan**

> **Note:**
> If **Learning** is installed, growth plans might show some suggested learnings.

Result
The draft growth plan is created and will be shared with your manager once the plan is launched.

What to do next
- Launch plan so it can be shared with your manager.
- Review your progress.
- Continue to edit your growth plan.

View and edit employees' growth plans

Review your employees' growth plans to keep track of their progress and help them in their career development.

Before you begin
Role required: sn_mh.manager_hub_user

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
Growth plans are based on employees' individual needs and aspirations and can help them make the most of their potential and reach their career goals.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. At the **Your Career** drop-down list, select **Growth plans**.
3. Select and use the **sorting, searching, and filtering** sections to find the desired growth plan.
4. Select the button next to the **Mark complete** button (if viewing a published growth plan).

   Note:
   Any growth plan shared with you will be displayed in the list, including **Draft Growth plans**.

5. Select the desired **Growth plan**.
6. Review the growth plan and activities.
7. Select **Edit plan**.

   Note:
   Draft growth plan will already be editable.

8. **Optional:** In the **About this plan** section, select the **Set due date** link to give your growth plan a due date.
9. **Optional:** Select the **Add an activity** button to additional activities.

   Note:
   Different options might be available based on the Talent Development related plug-in installs and what skills you selected to focus on. The **Something else** option will always be available. If you selected skills for your growth plan, the **Skill validation** option will be available and might be displayed if you already have **Skill validation** tasks for all your focus skills. The **Learning** and **Check-in** options might be displayed when **Learning** and **Career Conversations** are installed.

10. Select **Finish editing** (if viewing the publishing Growth plan).

Result
The activity will be added to your growth plan.

What to do next
- Launch plan so it can be shared with your manager.
- Review your progress.
- Continue to edit your growth plan.

Create a Talent Development Aspiration

Create Aspirations to define and track professional and personal interests.

Before you begin
Role required: None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. From the Employee Center, navigate to **Your Career** > **Aspirations**.
2. Select **Create a new aspiration**.
3. Select from the available **Aspiration Types**.
   If you don't see an aspiration type that matches your goal, you can select **Something else** to create a customized aspiration.
4. Select **Next**.
5. Select from the available **Interests**.
   If you selected **Something else**, you go directly to a form for creating your **Aspiration**.
6. Fill in the form for creating an **Aspiration**.
   Some of the fields are filled in with your previous selections. Complete any empty or selectable fields.
7. Select **Next**.
   You have the option to **Save as draft** so that you can take sometime to think about your aspiration before submitting it.
8. Select who you want to share your aspiration with.
9. Select **Submit**.

What to do next

You can create a **Growth Plan** from your **Aspiration**. For details about creating growth plans, see Create a growth plan

View Credly badges

As an employee, sync external badges into your organization's Credly account and view them on your career profile.

Before you begin

Role required: learning.user

Procedure

1. Navigate to **All** > *Employee Center*.
2. In the *Employee Center*, navigate to**Profile** > **Career**.
3. Select the **Achievements** menu item and view your Credentials and badges.
4. Select **Get credentials** to import your credentials from the Credly application.
5. Select **Refresh credentials** to sync your organization's Credly account with the latest credentials in your Credly account.

Note:

- If you don't see your credentials, contact your admin to setup your Credly account.
- To sync your external badges, see KB00010001.

Integrate with the Talent Development Core application

Integrations enable the expansion of features and services among available apps. Integrations can include internal (ServiceNow®) and external (third party) applications.

Talent Development Core is closely integrated with several ServiceNow applications and plugin features.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Key apps

Talent Development is integrated into the Employee Center portal along with Manager Hub enabling you to navigate through the different Talent Development features and applications.

Employee Center

One of the key features of the Employee Center is the Employee Profile. Talent Development applications and features access data from employee profiles, see View employee profile. You can view, update, and manage information about your career from the Career tab in Employee Center.

Manager Hub

Integrates with Talent features used by mangers to help manage and proactively engage with employees, see Manager Hub.

Talent Development applications

There are several applications developed to extend and improve your experience with Talent Development.

Skills Foundation

The ServiceNow® Skills Foundation application is an AI-driven platform that you can use in your organization to develop a workforce that is based on skills.

Career Conversations

Supports an end-to-end process for individuals and managers to create and manage career growth conversations.

Learning

The Learning application enables you to discover, manage, and engage with career development content. It enables the configuration of learning catalogs that contain course items from both internal and external learning systems.

The Career Assessment application is part of the Learning application. The Career Assessment application works as an exam engine that provides the ability to create exams that help with career advancement and help test a learner's knowledge of a subject.

Mentoring

The ServiceNow® Mentoring application is a platform that connects individuals seeking mentorship with experienced mentors. It creates a seamless experience for both mentees and mentors.

Employee Goals

The ServiceNow® Employee Goals application lets employees view and track their career goals from the Employee Center. This application is a tool that enables employees to stay focused and aligned with your company's strategic objectives, resulting in improved overall organizational performance.

Leader Hub

Leader Hub empowers organizational leaders to understand the strengths of their teams, identify gaps in skills, and facilitate changes that are simultaneously conducive to their workforce and the achievement of desired business outcomes.

Opportunity Marketplace overview

Opportunity Marketplace enhances career mobility. It provides employees an intuitive experience to explore career opportunities. Customizable match

preferences are seamlessly integrated with your Applicant Tracking System (ATS) to enhance employee engagement with transparent and efficient career development.

Talent Development Core application reference

Administrators use reference information to configure and maintain applications and features.

Talent Growth Plan reference

Employee growth plans are created by administrators and used by managers and employees to help facilitate and track growth plans.

Growth plan fields reference

Field	Description
Actual start	The date that an employee starts working on a growth plan.
Additional comments (Customer visible)	Comments that can be added to help the employee and manager understand the purpose of a growth plan. Comments can be instructions or conceptual information.
Assigned to	The name of the employee that the growth plan is assigned to.
Description	A description of the growth plan. The description helps employees and managers understand what the growth plan is focused on.
Due date	A date for when the growth plan is expected to be complete. Due dates aren’t required for growth plans.
Name	The name of the growth plan helps managers and employees determine what the growth plan is intended for.
Outcome type	An outcome type represents the intent of the growth. Growth plans can include job related or personal goals. • **Custom** types are used for personal growth plans or a growth plan that doesn't fit into **Job growth** or **Skill development** types. • **Job growth** types are used for growth plans the fit into the regular career goals and development of an employee. • **Skill development** types are used to track focused efforts on developing a skill.
Role level	A role level is associated with skills that have different levels of accomplishment such as beginner or expert.
Shared with	The manager who the growth plan is shared with.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Growth plan fields reference (continued)

Field	Description
State	The current standing of the growth plan. • **Canceled** state means that the growth plan is no longer active. • **Closed complete** state indicates that all the requirements of the growth plan are finished. • **Closed incomplete** state indicates that the growth plan wasn't completed, but it has been closed. State indicates that the growth plan is no longer active. • **Published** state indicates that the employee has started the growth plan and has shared it with their manager. • **Draft** state means that the employee is still editing, adding activities to the growth plan but hasn't started it.

Talent Outcome Types reference

Outcome types are created by administrators.

An **Outcome Type** indicates the desired outcome of a growth plan. Administrators define outcome types to help managers and employees create meaningful growth plans.

Outcome type fields reference

Field	Description
Active	Indicates whether this outcome type is available for use in a growth plan.
Name	The name of an outcome type that indicates what the achievement goal is for the growth plan.
Order	A numeric value that determines the display order of outcome types in the user interface (UI).
Value	A string that's used for tracking and grouping outcome types.

Talent Properties reference

Properties control how skills approvals are managed and whether Skills Foundation is used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property to control manager skill approvals in Growth plans

- Select **no** to skip approvals.
- Select **optional** to recommend approval. Optional approvals aren't required.
- Select **required** to create required approvals.

Set all activities to ready when Growth plans are launched

Select the check box to set the property to **Yes**. When the property is set to yes, all activities in the growth plan are automatically set to the ready state.

Talent Activity Types reference

Administrators create activity types that are used by managers and employees.

Activity type fields

Field	Description
Active	Select **Active** to make the activity type available for use in Growth plans.
Description	The description displayed in the user interface (UI) for the activity type.
Name	The name of the activity type.
Order	A numeric value used to determine the display order of activity types.
Value	The value used to track the activity type.

Talent Activity Category reference

Administrators create activity categories that are used by managers and employees.

Activity Category fields

Field	Description
Active	Select **Active** to make the activity category available for use in Growth plans.
Description	The description displayed in the user interface (UI) for the activity category.
Label	The UI visible text for the category.
Name	The name of the activity category.
Order	A numeric value used to determine the display order of activity categories.
Value	The value used to track the activity category.

Talent Aspirations reference

Administrators manage aspirations used by managers and employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Aspiration form

Field	Description
Aspiration type	Select for a list of aspirations available in your organization. Administrators create different **Aspiration types**. Here are some examples of types of aspirations. • **General** • **Interest** • **Position** • **Skill**
Comments	Comments can be added by you, or people you share your aspiration with.
Details	Details of the aspiration can help to keep you on track with the goals you have for the aspiration.
Employee	The employee profile number of the employee who created the aspiration.
Name	A descriptive name of your aspiration.
Shared with	Select from the list of people in your organization with who you can share your aspiration.
State	Use the state to track the stages of your aspiration. • **Draft** • **In Progress** • **Completed** • **Archived**
Timeframe	A general guiding time within which you plan to complete your aspiration. • **Within the next six months** • **Within the next year** • **Within the next several years**

Talent Feature growth item reference

Administrators create featured growth items that are used by managers and employees.

Note:
This form is dynamic. The fields that appear depend on the options you select as you complete the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Featured growth item reference

Field	Description
Active	Option to indicate whether the feature growth item is available for use to the employees you specify in the **User criteria** field.
Description	Description that provides further details about the feature growth item you want to define.
Image	Image for the opportunity that you want to promote as a feature growth item. This field only appears when the **Type** field is set to **Opportunity**.
Job requisition	Job requisition number to identify the job role that you want to promote as a feature growth item. This field only appears when the **Opportunity type** field is set to **Internal Job**.
Opportunity type	Type of opportunity that you want to promote as a feature growth item to employees within your organization. This field only appears when the **Type** field is set to **Opportunity**.
Order	A numeric value that determines the order in which a feature growth item appears in the user interface (UI).
Role level	Title for the role that you want promote as a feature growth item to employees within your organization. This field only appears when the **Type** field is set to **Job Title**.
Skill	Skill that can be selected from the list of available skills for your organization. This field only appears when the **Type** field is set to **Skill**.
Skill level	Level of expertise in a skill that is required for the feature growth item you want to define. This field only appears when the **Type** field is set to **Skill**.
Type	Type of feature growth item. Options are as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Featured growth item reference (continued)

Field	Description
	• Select **Job Title** to indicate the title of a job that you want to promote as a feature growth item. The job title that you want to promote appears in the **Role level** field. • Select **Skill** to promote a skill as a feature growth item that your employees can acquire. • Select **Opportunity** to define an opportunity type you want to promote as a feature growth item.
User criteria	Criteria to target specific groups of employees to whom the feature growth item is available. Groups, created by administrators, are logical containers composed of similar users.

Talent Activity template reference

Activity templates are used by managers and individuals to create activities in a growth plan. Administrators create activity templates.

Activity Template form

Field	Description
Active	Select **Active** to indicate that the activity template is available to use.
Activity type	Select from the list of activity types available in your organization.
Assignee	The role that this template is intended for. • **Employee** • **Manager**
Activity category	A list of available categories for your organization, such as: • **Development** • **Other** • **Review** • **Validation**
Name	Enter a meaningful that managers and employees can understand.
Table	Select a table to use for tracking the activity from the list of tables.
Template	The location to the activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity Template form (continued)

Field	Description
User criteria	Select a criterion for the users that the template is intended for.

Talent Sample texts reference

Sample text is content that is used in different types of content in a selected document. Administrators create sample text templates.

Sample text form

Fields	Description
Active	Indicates whether this sample text is available for use.
Linked content	Add links to the content that you want to add to the sample.
Name	A descriptive name for the content sample. The name of the sample helps administrators select with documents to add the content to.
Order	A numeric value that determines the display order of the sample text in the user interface (UI).
Sample for	Select a denouncement from the list where the sample text is used.
Sample text	The sample text that's used in the selected document.
Table	The table used to track where the sample text is used.

Talent Aspiration types form

Administrators create aspiration types that are use by employees and managers.

Aspiration Type form

Field	Description
Active	When selected, the aspiration type is available to be used.
Application	The application that's associated with this aspiration type.
Description	Details about the type of aspiration that helps guide you to the appropriate aspiration.
Icon	Select an icon that's displayed for each aspiration. You're responsible to provide any icon files for your instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Aspiration Type form (continued)

Field	Description
Name	A descriptive name of the aspiration type that helps employees identify which type they want to use.
Order	A numeric value that determines the order in which the **Aspiration type** is displayed in the user interface (UI).
Tip	Text that's display in the UI with each listed aspiration type.
Title	The UI text that's visible for each listed aspiration type.

Talent Activity Template Recommendation form

Administrators create activity template recommendation templates that employees and managers use to create career growth plans.

Activity Template Recommendation reference

Fields	Description
Active	When selected, the activity template is available to be used in a conversation.
Activity template	Select an **Activity template** from the list of template available to your organization.
Availability	• Select **Recommended** to make the activity available as a choice to use, but it isn't required. • Select **Required** to make the activity required to use.
Description	More detailed information about the activity. Detailed information can help managers and employees decide if they want to use this activity.
Name	The title is visible in the user interface (UI). A helpful title provides information to help make a choice whether to use the activity.
Outcome type	• Select **Free form** if the activity template doesn't fit into the **Job growth** or **Skill development** categories. • Select **Job growth** if the activity is directly related to growth and development for your job.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity Template Recommendation reference (continued)

Fields	Description
	• Select **Skill development** for training that's related to a any skill you want to improve. Skill development can be job-related or for personal development.
User criteria	Select the criteria that must meet to have access to this talking point.

Talent Interest form

Administrators create interests that employees and managers use to create career growth plans.

Interest reference

Fields	Description
Active	When selected, the aspiration interest is available to be used in a conversation.
Description	More detailed information about the aspiration interest. Detailed information can help managers and employees decide if they want to use this activity.
Name	A name of the aspiration interest that's visible in the user interface (UI).
Order	A numeric value used to determine the display order of aspiration interest.
Related skills	Select from the list of skills that are related to your aspiration.
Resource link	Links to additional resources that may help to fulfill the aspiration.
Title	A descriptive name for the interest that helps you determine if this interest is appropriate for your aspiration.
Topic	Learning topics that are available in your organization.

Components installed with Talent Development Core

Several type of components are installed with Talent Development Core, including roles and tables.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Access Criteria reference

Field	Description
Application	The scope for creating the access criteria.
Criteria	The criteria that are evaluated to license users for the application. Users must meet all the conditions in order to be licensed.
Employee Licensed Application	The application that the licensing is for.
Name	A descriptive name for the access criteria.

Skills Foundation

The ServiceNow® Skills Foundation application is an AI-driven platform that you can use in your organization to develop a workforce that is based on skills.

Important:
Skills Foundation uses Artificial Intelligence (AI) to help your organization leverage skills data for talent management and employee development. Skills Management application enables you to manually create skills and skill categories, and also assign them to users manually. Activating the Skills Foundation plugin (com.sn_skills_int) will also activate the Skills Management plugin (com.snc.skills_management). For information on Skills Management, see Skills Management.

You can empower your employees by enhancing their essential skills as part of their career aspirations using Talent Development and Skills Foundation.

Skills Foundation offerings

The key components of the Skills Foundation application are dynamic AI-driven skill ontology, AI models, proactive prompts to drive adoption, and a comprehensive skills profile.

Dynamic AI-driven skills ontology

A dynamic AI-driven skills ontology can help your organization to define and measure the relationships between the skills, roles, and your employees. The skills ontology provides actionable data that guides learned decisions and effectively addresses skill gaps. Powered by AI, the skills ontology is constantly learning, inferring, collecting, and maintaining information about the skills, which means that your organization doesn't need to update the data manually. You can augment the skills ontology with your organization's internal data to further enrich the ontology.

Skills-based career data

Match the career data of your organization with skills to enhance the development of your employees by aligning actual job roles with relevant skills. You can empower your employees to excel in their current roles while fostering opportunities for future growth and advancement within the company.

AI models

The AI models embedded in skills ontology enable organizations to establish links between different skills, as well as link the skills to job titles. AI algorithms are used to match, detect, and normalize aggregated skills data collected from various data sources and to create the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

interconnections within the ontology. These models help organizations to recognize the skill outputs, identify skill gaps, and offer skill and learning recommendations to your employees. Your organization can also leverage AI to send recommendations to determine the skills that must be mapped to individual employees.

Proactive Prompts to drive adoption

Drive adoption in your organization by sending prompts proactively to your employees and managers so that they perform the specific tasks in their natural flow of work. For example, prompts can be used to request an employee to update their skills or for a manager to validate the skills of their team. You can use Proactive Prompts in multiple engagement channels like Microsoft Teams, Microsoft Outlook, Zoom, and the short messaging services (SMS). Your employees can easily update their skills.

Employee skills profile

Build a complete understanding of your talent with a comprehensive view of the skills that they possess. Your employees can regularly monitor and update their skills profiles to gain the knowledge and capabilities to thrive in dynamic business environments. By leveraging their skills profiles, your employees can easily import their skills from resumes or LinkedIn profiles.

Exploring Skills Foundation

The Skills Foundation platform uses AI to process external industry data, extracting information about skills and job titles. Learn how Skills Foundation can help transform your organization to build a workforce that is based on skills.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Overview of Skills Foundation

The core capability of the platform is the underlying technology that resides in the Skills Foundation engine. The Skills Foundation application is equipped with base system data, which contains an extensive inventory of over 6000 skills. Access to this vast skills data enables you to build and optimize your workforce based on these comprehensive skills insights.

Skills Foundation for Talent Development

The Skills Foundation engine acts as the foundational layer that powers all the capabilities within Talent Development. Talent Development applications use skills at its core to guide managers and employees through their career plans. This approach not only supports individual development but also contributes to achieving better business outcomes. For more information, see Talent Development.

Note:
Skills Foundation is only integrated with Talent Development applications.

Skill Validation in Manager Hub

As a manager, you can review and validate the skill proficiency levels updated by your employees by opening the conversations scheduled with them. Within Conversations there's a dedicated section that offers details about skills that require validation. For more information, see Validate skills in Manager Hub.

Skills-driven Learning recommendations

Talent Development uses Skills Foundation to deliver learning recommendations for employees and their managers, keeping them engaged and productive. For more information, see Learning overview. The Skills Foundation application integrates with Learning to introduce skills-driven learning search results that your managers can use to recommend courses based on the skills of your employees. For more information, see Learning integration with Skills Foundation.

Proactive Prompts integrated with Skills Foundation

Proactive Prompts enable contextual and proactive engagement for your managers and employees by bringing actionable insights as prompts into their flow of work. You can use these prompts in multiple engagement channels, such as Microsoft Teams, Microsoft Outlook, Zoom,

and the short messaging service (SMS). For more information, see Proactive Prompts for Skills Foundation.

Support for multiple languages in Skills Foundation

Employees can view the skill names and their descriptions translated when they change their preferred language to a non-English language. Skills Foundation supports the following 10 languages.

Note:

- Make sure that the respective language plugins are installed to ensure that the skill translations are also downloaded for those languages.
- The translations are only provided for the base system skills which are included by default in the Skills Foundation application. If you have custom skills, you must get the custom skills translated and upload them separately.
- When searching for skills using the Search option, use only your preferred language. For example, if your preferred language is Dutch, you search in Dutch.

Supported languages in Skills Foundation

Language	Language code
Dutch	nl
French	fr
German	de
Japanese	ja
Italian	it
Spanish	es
Korean	ko
Portuguese	pt
Simplified Chinese	zh
Arabic	ar

Hiring core for Skills Foundation

Hiring Core provides a repository to store information for your hiring requirements. Activate the Hiring Core plugin (app-hiring-core) to start using it. Skills Foundation runs predictions on the data in the hiring core tables and offers skill recommendations for role groups. For more information, see Hiring Core.

Key benefits

Connect skills to action in the transformation of your workforce and accelerate business outcomes by using the Skills Foundation application.

© 2026 ServiceNow, Inc. All rights reserved.

Skills Foundation benefits

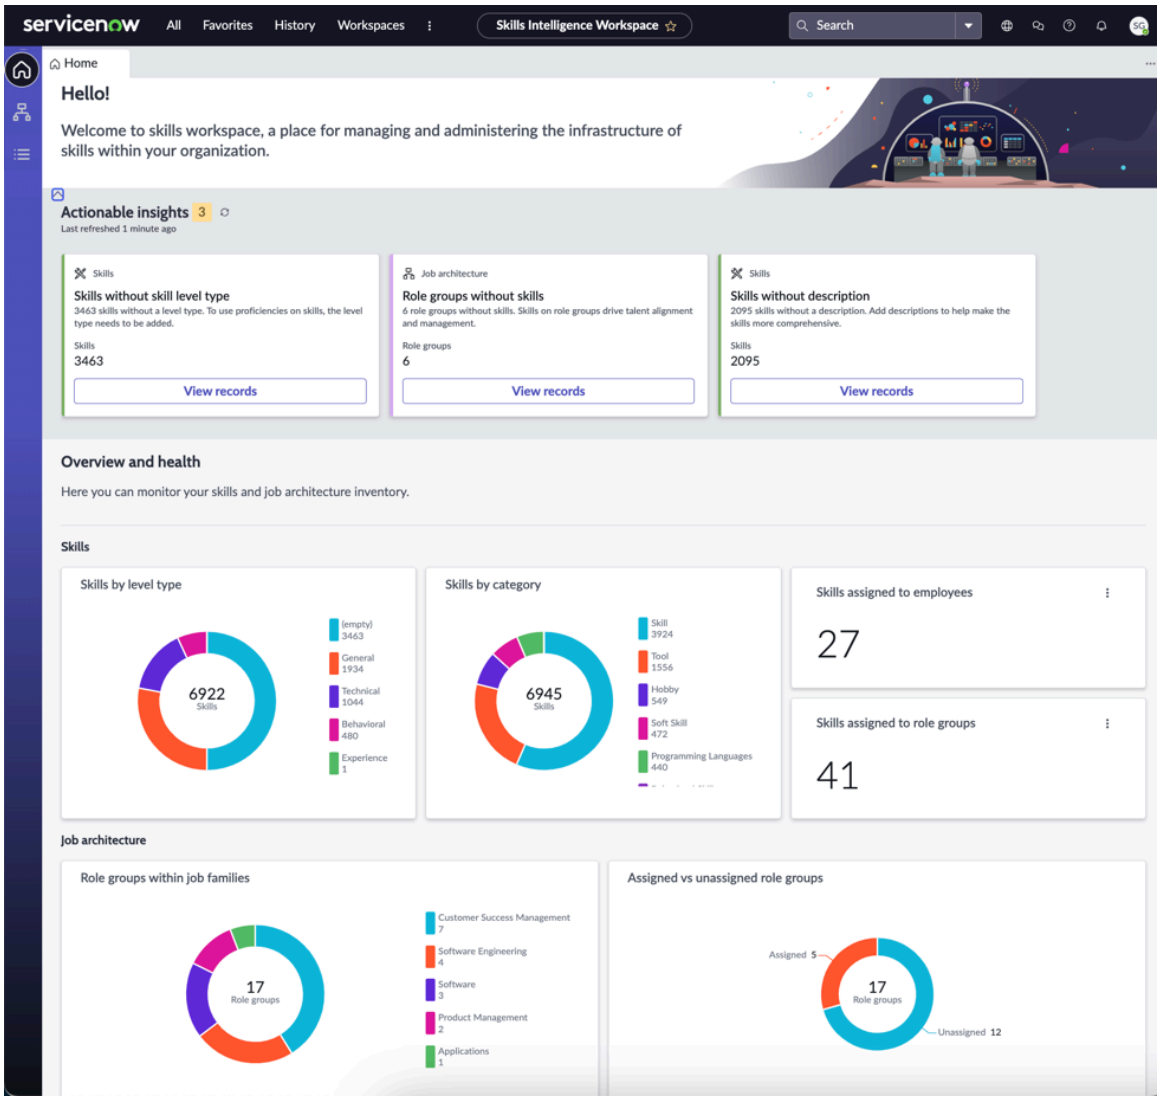
Features	Benefits
Employee skills profile	Provides a comprehensive view of the skills that your employees have.
Pre-seed employee skills	Identifies the essential skills of an employee by analyzing the external data and data provided by employees about skills and titles. Prompt employees to update their skills based on this information.
About Job Architecture	Associates the career data of your organization with skills.
Proactive Prompts for Skills Foundation	Enables contextual and proactive engagement for your managers and employees by bringing actionable insights as prompts into their flow of work.
Import skills from your resume or LinkedIn profile	Imports skills from resumes and LinkedIn profiles of employees.
Validated skills	Managers validate the skill proficiency level of employees in the Manager Hub and employees can see these validated skills on their skills profile.
View activity insights	Managers can view and review activities related to the skill that an employee has made progress on before validated them.
Add skills by using the skill recommender	Enables your employees to search for skills that they're interested in developing or improving and then adding them to their skills profile.

Skills Workspace

You can update and maintain skills and job architecture data from a single place using the Skills Workspace.

Workspace users

Access to the Skills Workspace requires the sn_skills_int_ws.workspace_user role or any role that contains it. For more information on roles in Skills Foundation, see Components installed with Skills Foundation.



Home page

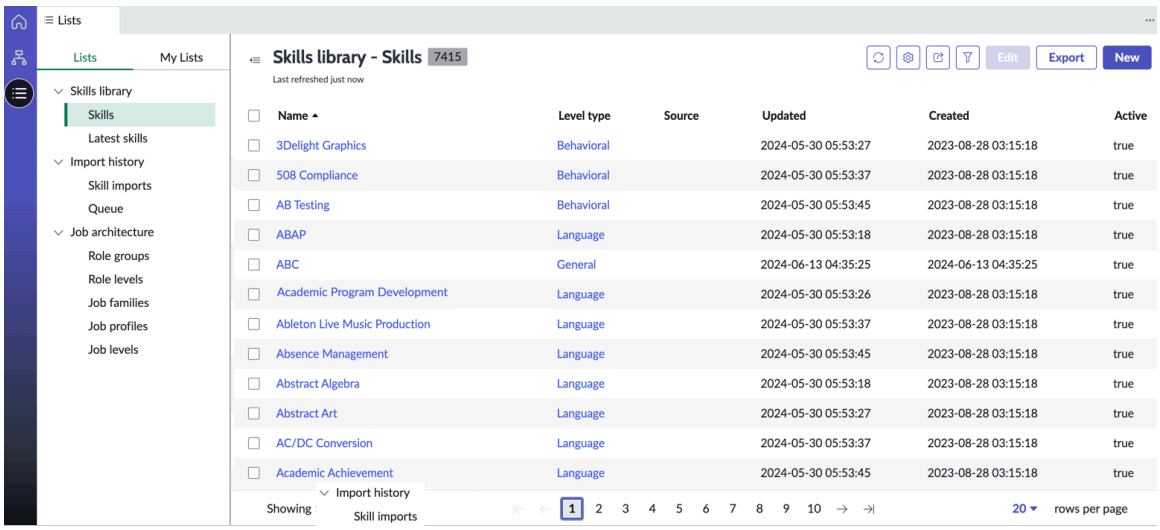
Access the following information on the Skills Foundation Home page to manage skills-related tasks:

- Skills Intelligence data overview.
- Critical information gaps that require your immediate attention such as role groups without a role level, skills without a skill level type, or role groups without skills.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Actionable insights - Notifications of various system checks as suggestions for the users to act on to improve their skills or job architecture data. The **View records** option enables you to see the detailed list view of the records.
- Overview and Health - Charts to enable you to monitor job architecture data and skills inventory.

Job architecture view



Get a visual and hierarchical overview of Job architecture data that is loaded and created to get a structural understanding of job families and role groups and skills related to them.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Lists view

Quickly access information about skills library, skills import history, and job architecture data by using the Lists view.

Bring in skills through Skills import

Import the skills specific to your organization into your Skills Foundation application through the Skills Workspace.

Before you begin

Role required: sn_skills_int.admin

Procedure

1. Navigate to **All** > **Skills Workspace**.
2. Select the Lists icon ( ).
3. Select **Import history** > **Skill imports**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Skill imports display all the imports at various stages. You can have an import in Draft, In-progress, Completed, or Canceled state. You can only have a single import in draft/ in-progress state at any given point. The current import must be canceled or completed to start another import.

4. Select **Import**.
5. In the Create a new skill import window, Get started section, enter a description for the import in the Import description field.
6. Select **Next**.
7. In the Select a source section, choose how you want to import the skills.
8. Select **Next**.
9. In the Existing matches section, skills that are identical to the existing skills in the library (cmn_skills table) are identified by AI Search and are not processed again, but are only listed as existing skills.
   You have the following tabs to review the skills:
   - Summary - Overview of skill matches.
   - Existing matches - Skills that have been mapped to the existing skills in the cmn_skills table.
   - Previously mapped - Skills that have been mapped in the previous import.
   - Previously discarded - Skills that have been discarded in the previous import.
10. Select **Continue upload**.
11. In the Review upload section, review the uploaded skills displayed in various categories.
    - Summary - Overview of the uploaded skills.
    - Errors - Skills with errors. For example, missing description, missing Level type and so on.
    - Incomplete - Skills that don't have data in the required fields.
    - Duplicate in source - Skills that exist more than once in the source file.
    - Ignored from upload
    - All - All the uploaded skills.

    You can edit the incomplete skills, duplicate skills, or skills with errors at this stage and correct them before the actual upload.
12. Select **Upload skills**.

    Note:
    The skills with errors are not uploaded.

    The upload process takes some time to complete depending on the number of skills imported. For example, uploading a thousand skills takes around five minutes.
13. In the Review skills section, review the uploaded skills.
    The uploaded skills are analyzed by AI Search and are displayed in the following tabs.

Review uploaded skills

Review skills categories	Description
Summary	Summary of the skills processed.
Needs review	Review the skills manually for normalization and identifying possible duplication. The AI Search calculates match strength by looking

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Review skills categories	Description
	at how closely imported skill names align with existing skill. Evaluate the possible matches to mark new skills by selecting **Create as new**, **Accept possible matches** or **Discard**. You can select multiple skills or all skills at a time and perform these action. You can select multiple skills or all skills at a time and perform these actions. If you select a single skill, a pop-up opens where you can select the possible match for duplication.
All	All imported skills are displayed.

Note:
You can go back to the previous section using the **Back** button or restart the entire import with the Restart Playbook option in the menu. This option is available from the third step in the import only after the actual import happened.

You can cancel the import at any stage by selecting the **Cancel import** button.

14. After all the skills are reviewed in the Needs review list, select **Mark as complete** to complete the import process successfully.

Note:
New skills are added to the skills library (cmn_skills table) only after selecting **Mark as complete** for the import.

Result
In the **Skills in this import** tab, you can check all the imported skills. All the skills will be read only after marking the import as complete.

Import skills through file upload

Import your industry specific skills data to your Skills Foundation application using a predefined skills import template so you can import your data in the required format.

Before you begin
Role required: sn_skills_int.admin

Procedure
1. Navigate to **All** > **Skills Workspace**.
2. Select the Lists icon ( ).
3. Select **Import history** > **Queue**.
4. Select **Import**.
   You are redirected to the Playbook experience.
5. Prepare the file to upload.
   a. Select **download a template**.
   b. Open the skills import template(.xlsx file) on your local system.
   c. Enter the skill information in the appropriate columns.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The fields in the template are **Name**, **Level type**, **Description**, and **Source** (non-required fields).

d. Save the Excel file.

6. Select **Attach file** to select the file for upload in excel or CSV format.
7. Select your Excel data file.
8. Select **Open**.

Note:
After the file is attached, you'll have the options to download, rename the file, or delete the attached file.

Workday spoke integration in Skills Foundation

Import skills from Workday Learning and Workday HR spoke into your Skills Foundation application using the skills import flow.

Prerequisites for Workday Spoke integration.

- Required plugins - Workday Learning Spoke and Workday HR spoke.
- After the Workday HR spoke plugin is installed and configured, set the following properties:
  - sn_skills_int.workday_hr_report_owner: The workday username of the report owner.
  - sn_skills_int.workday_hr_look_up_skills_report: The "All skills" report.
  - sn_skills_int.workday_hr_look_up_employee_skills_report: The "User skills" report.

The integration options available are:

- Workday - All: Imports all skills found in Workday. If you want to import only a subset of skills, modify the report used for the import. This option is available when any one of the Workday Learning Spoke or Workday HR Spoke plugins is installed.
- Workday - Course skills: Imports course-related skills depending on the learning courses that you have in Workday. This option is available when the Workday Learning Spoke plugin is installed.
- Workday - User skills: Imports all skills employees have in their Workday profiles. This option is available when the Workday HR Spoke plugin is installed.

  Internally, the user skills are imported in the following steps:

  1. Skills (general definitions) are imported. This step is similar to the Workday - All import.
  2. Skills are added to employee profiles.

     Note:
     To add user skills to the employee profiles, make sure the sys_user.employee_number values match with the workdays employee numbers.

  3. Skill levels are imported. The following defaults are taken for the skill levels:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Minimum level: 1
- Maximum level: 5
- Skill Level Type for newly created skills: General

However, these defaults can be changed by modifying the import flow.

Note:
To import Skill levels, Skills Cloud must be enabled in Workday.

SAP SuccessFactors integration Skills Foundation

Import skills (skill data and user-specific skill data) from SAP SuccessFactors into your Skills Foundation application using the skills import flow to maintain data consistency.

Prerequisites for SAP SuccessFactors integration.

- Upgrade to SAP SuccessFactors Spoke(sn_successfactors) plugin v 4.6.1-7 or later.
- You must have Human Resources Scoped App: Core (com.sn_hr_core) plugin on Australia family release.
- For earlier releases, you might encounter Restricted Caller Access (RCA) approval messages requesting for an update in the access request. Approve the RCA and re-import the skills manually. You can also manually create the required RCA to avoid re-work prior to skills import.
- After the SAP SuccessFactors plugin is installed and configured, set the following properties:
  - sn_skills_int.default_skill_level_type: The sys_id of a skill level type has unique number in the Value field. In case the Value field has an invalid number, an error message is displayed saying that the user has to restart the flow after providing the correct value.
  - sn_skills_int.allow_import_to_override_skill_level: This system property when set to True will override the proficiency of the existing skills of an employee. The highest proficiency whether it's from the import or the existing proficiency value will be retained.

    If the system property is False, there is will be no change in the proficiency values, but if a skill is validated for an employee, the same will be reflected in employee profile after the import.

The integration options available are:

- SuccessFactors - All: Imports all the skills from SuccessFactors.
- SuccessFactors - User skills: Imports all the skills from the user profiles SuccessFactors. After the import and harmonization is complete, the skills are added to the respective employee profiles and also validated by the manager.

Dynamic skill import for harmonization

Import, review, and harmonize the new skills brought in from third-party sources (currently only through Credly) into the skills library (cmn_skills table).

Before you begin

Role required: sn_skills_int.admin

Let's see how dynamic skills are processed in the context of Credly:

- Skills associated with the Credly badges are analyzed.
- Skills are validated to check if they don't already exist in the skills library and also not mapped to an existing skill.
- New skills are pushed to the queue pipeline for harmonization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, an employee Abel Tuter receives a badge which has three skills - Java, Python, and J2EE. The system checks the skills library (cmn_skills table) to determine the skills that already exist. Java and J2EE are already present in the system, so they are immediately added to the Abel Tuter's employee profile. Python skill is not available in the system, so it's moved to the queue for skill harmonization. Once the admin reviews and harmonizes the Python skill, it's also added to the skills library and Abel Tuter's employee profile.

Working of skill mapping - Skill mapping is the process of linking a skill, either imported or from a badge to an existing skill in the skill library. The mapping can be done automatically or manually, to avoid duplicates.

- System Mapping (Automatic): If a new skill, for example, Java 1.8 is similar to the existing skill, for example, Java in the cmn_skills table, the system detects it as a duplicate and maps it automatically.
- Admin Mapping (Manual): An administrator can manually map a skill. For instance, if Python is imported, the admin might map it to Jupyter Notebook depending on the relevance.

Important behavior - When a skill is mapped, a new entry is not created for the imported skill. Instead, the existing skill is used in the employee profile. For example, if Java 1.8 is mapped to Java, and Python is mapped to Jupyter Notebook, only Java and Jupyter Notebook appear in the employee profile, not Java 1.8 and Python.

Note:
You can also customize your skill data and use it as a source by calling specific APIs.

Procedure

1. Navigate to **All** > **Skills Workspace**.
2. Select the Lists icon ().
3. Select **Import history** > **Queue**.
4. Select one or more records for the import.

   Note:
   Use **Select all** option to bulk import the skills. Alternatively, use the Custom import option in the Skill import playbook to import all the skills in the dynamic queue. For more information, see Bring in skills through Skills import.

5. **Optional:** Select the **Edit** option to update missing data in the Description, Skill import tracker, Level type, and Source fields.
6. **Optional:** Select **Update**.
7. Select **Import**.
   You are redirected to the Playbook experience and the custom import option is selected automatically.
8. Select **Next**.
   Follow the next steps to complete the import. For more information, see Bring in skills through Skills import.

Result

The harmonized new skills are added to the skills library (cmn_skills table) and updated in the credentials badge skills metadata. For more information, see Achievements and Credentials in Talent Development Core.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Working with job architecture

Create, update or modify skills and job architecture data from a single location in the Skills Workspace.

Creating a new role group through the Skills Workspace

Add a new role group in the Skills Workspace to create a category of roles in your organization.

About this task

After each step, select **Save and continue** to move to the next step.

Before you begin

Role required: sn_skills_int.job_arch_admin

Procedure

1. Navigate to **All** > **Skills Workspace**.
2. Select the Lists icon ().
3. Go to **Job architecture** > **Role groups**.
4. Select **New**.
5. Either create your role group manually or by copying data from an existing group.
6. For the Add Role levels page, provide a job profile name, title, and job level for each role level in the role group

   Role levels enable you to create a hierarchical structure to classify roles based on skills and proficiencies in your organization.
7. **Optional:** Add more levels by selecting **Add level**.
8. Add relevant skills for the roles within this group.
   Skills ensure alignment between required and desirable capabilities.
   a. Select a skill name from the **Skill** drop-down list.
   b. Determine the skill relevance by selecting **High**, **Medium**, or **Low** from the **Skill relevance** drop-down list.
   c. If the skill is required, select the **Required** check box.
   d. **Optional:** To add more skills, select **Add skills** and provide details about the skill.
9. Add related role groups to enhance career progression and provide employee aspiration suggestions for this role group.
   a. Select a role group in the **Role group** field.
   b. Determine the type of relationship between the role groups by selecting a value in the **Relationship type** field.
      - Bidirectional (between role groups)
      - Unidirectional (from newly created role group)
      - Unidirectional (to newly created role group)
   c. **Optional:** Add more role groups either by selecting the role group directly or from suggested role groups.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To add a role group directly, select **Add group** and provide details about the role group.
- To add a role group from suggestions, select the Recommendations icon () and select **Add** on the role group.

10. Select **Submit**.

> **Note:**
> A new role group is created with all the data.

Result

The new role group is opened in form view starting with the Skills matrix. You can see all the skills and role levels related to the role group. You can add more skills to the role group after it is created if necessary. For more information, see Add more skills to a role group.

Add more skills to a role group

Add new skills at each role level in a role group that were not added when creating the role group using the Skills Matrix in the Skills Workspace.

Before you begin

Role required: sn_skills_int.job_arch_admin

Procedure

1. Navigate to **All** > **Skills Workspace**.
2. Select the Lists icon ().
3. Go to **Job architecture** > **Role groups**.
4. Select a role group for which you want to add new skills.
5. Select the **Skills Matrix** tab.
6. Select **Add skills**.
7. In the Add skills pop-up window, select the skill in the **Skill** field.
8. Select the suitability level of the skill by selecting **High**, **Medium**, or **Low** in the **Skill relevance** field.
9. If the skill is required for this role level, select the **Required** check box.
10. **Optional:** Add more skills by selecting **Add skill** and providing the skill information.
11. Select **Add**.
12. Select **Save**.

Edit skills and proficiencies in the Skills Matrix

Edit skills data and their proficiency levels to manage the progression at each role level in a role group using the Skills Matrix in the Skills Workspace.

Before you begin

Role required: sn_skills_int.admin

Procedure

1. Navigate to **All** > **Skills Workspace**.
2. Select the Lists icon ().

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Go to **Job architecture** > **Role groups**.
4. Select a role group for which you want to edit the skills data.
5. Select the**Skills Matrix** tab.
6. Select the check box next to the skills to be edited.
7. Select the **Edit** button.
8. **Optional:** Insert proficiency levels for the skill from the Skills [cmn_skills] table by selecting **Autofill proficiency levels**.
   - To update only missing proficiency levels, select **Update only empty fields**
   - To update all proficiency levels and overwrite any existing information, select **Update and replace all the existing fields**
9. **Optional:** Modify the mandatory or optional setting of a skill by selecting **Update required status** and selecting the appropriate value.
10. **Optional:** Remove the selected skill or skills by selecting **Remove skills**.
11. Select **Save**.

Create related role groups

Create a connection between two different role groups in the Skills Workspace to enable a transition path for the employees to move across different role groups.

Before you begin

Creating a related role group record creates a configuration for the progression from one job level to another job level across the role groups. This configuration is used by Talent Development to help employees choose their career progression. For example, Front-end engineering and Back-end engineering are two different role groups. By creating a bilateral relation between these two role groups, an Associate front-end Engineer (IC1) can move to an Associate back-end Engineer (IC1) role and vice-versa.

Role required: sn_skills_int.job_arch_admin

Procedure

1. Navigate to **All** > **Skills Intelligence Workspace**.
2. Select the Lists icon ().
3. Go to **Job architecture** > **Role groups**.
4. Select a role group to open it.
5. Select the **Related Role Groups** tab.
6. Either create your related role group manually or by selecting from the recommendations.

7. If you want to associate job levels to the selected role groups, select them in the **From Job Level** and **To Job Level** fields.
   The field values are populated from the job levels defined in the Job levels [sn_skills_int_job_level] table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you don't select a value in the **From job level** and **To job level** fields, the initial job levels of the role group (as defined in Job levels under Job architecture) are considered automatically.

8. Select **Save**.

Result
A new relation between two role groups is created.

Career tab in Employee Center

View update, and manage all aspects of your career using the **Career** tab in Employee Center.

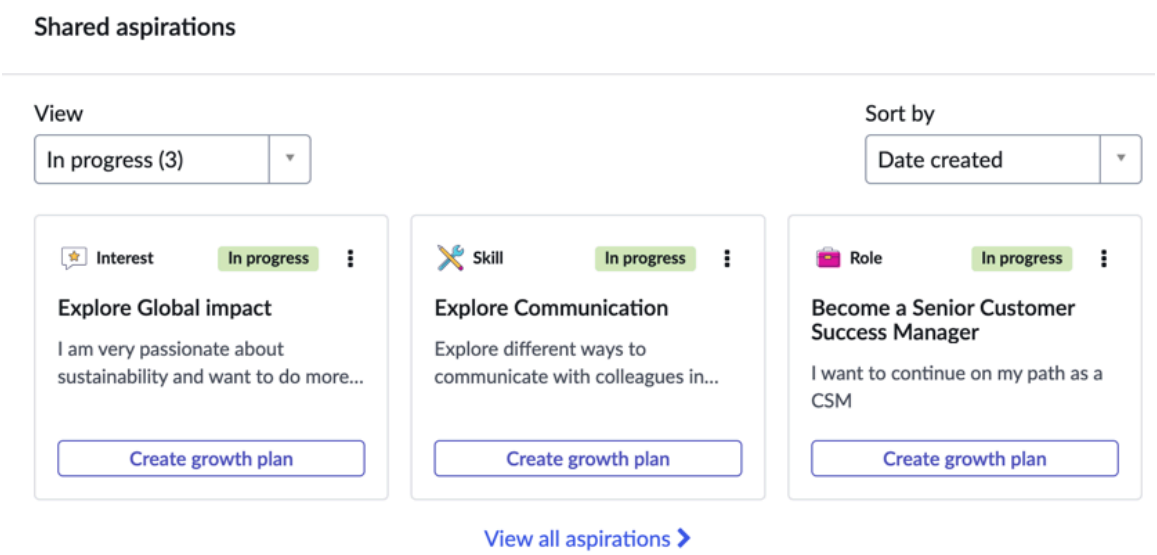
Role required: sn_skills_int.emp

The **Career** tab contains various widgets to manage your work data like, experience, aspirations, and skills in your profile.

Note:
The **Career** tab and the widgets are activated with the installation of the Skills Foundation application driven by the sn_skills_int.enable_skills property. For more information, see Add the Career tab and enable the Skills widget in the Employee Profile.

Role details

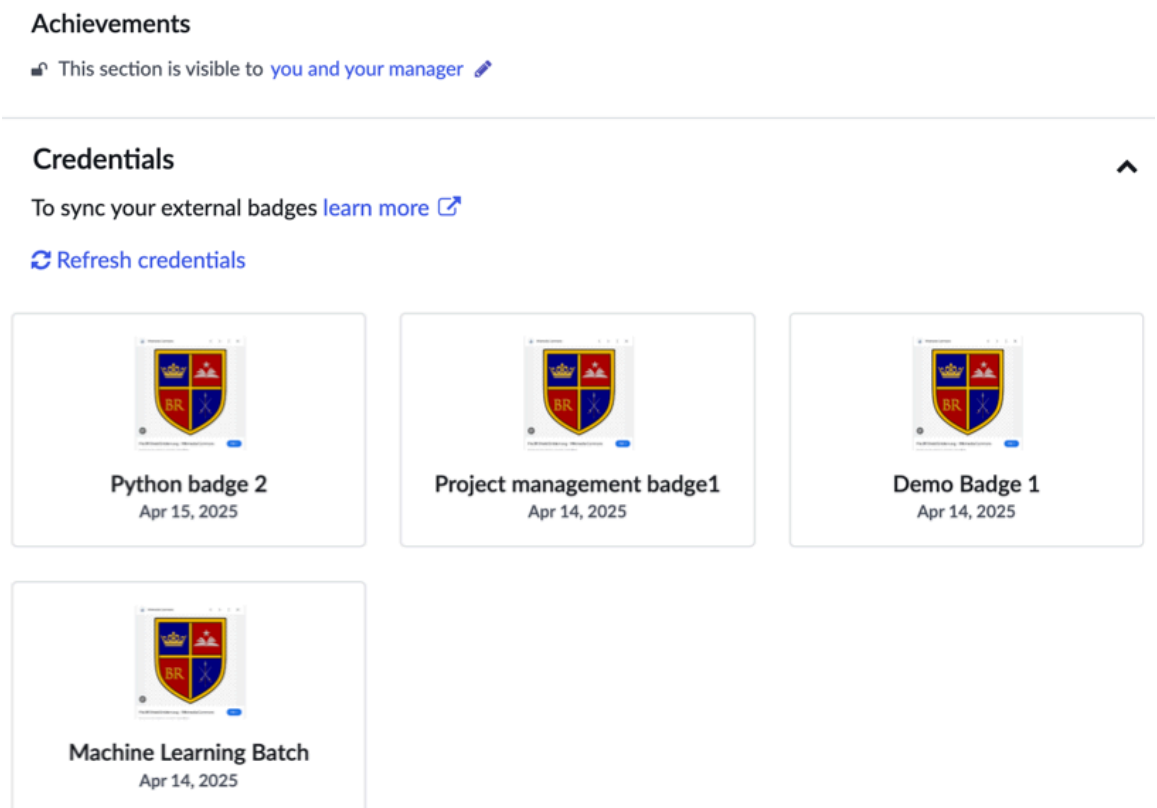
View your business title, role group and your role specialty that accurately reflect your position in the organization and enable you to get personalized skill recommendations.



Note:

- The Business title is derived from the Employee position table (sn_employee_position) where the primary role is marked as true because an employee can have multiple job profiles.
- The Employee position table updates whenever the HR profile table (sn_skills_int_job_profile) is updated.
- A scheduled job synchronizes the HR jobs table (sn_hr_core.job) and HR profiles table, ensuring accurate data during integration.
- The Job code in the Job profile table (sn_skills_int_job_profile) and HR jobs table (sn_hr_core.job) should match for the Role specialty to be populated.

Shared aspirations

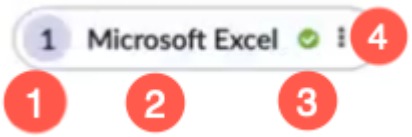


View objectives that enable you to excel in your career and also promote growth in your organization. Aspirations can be based on your interest, skill, or role. For more information on aspirations, see Create a Talent Development Aspiration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Achievements

Import and view your accomplishments as credentials from Credly by syncing the badges into your organization's Credly account.



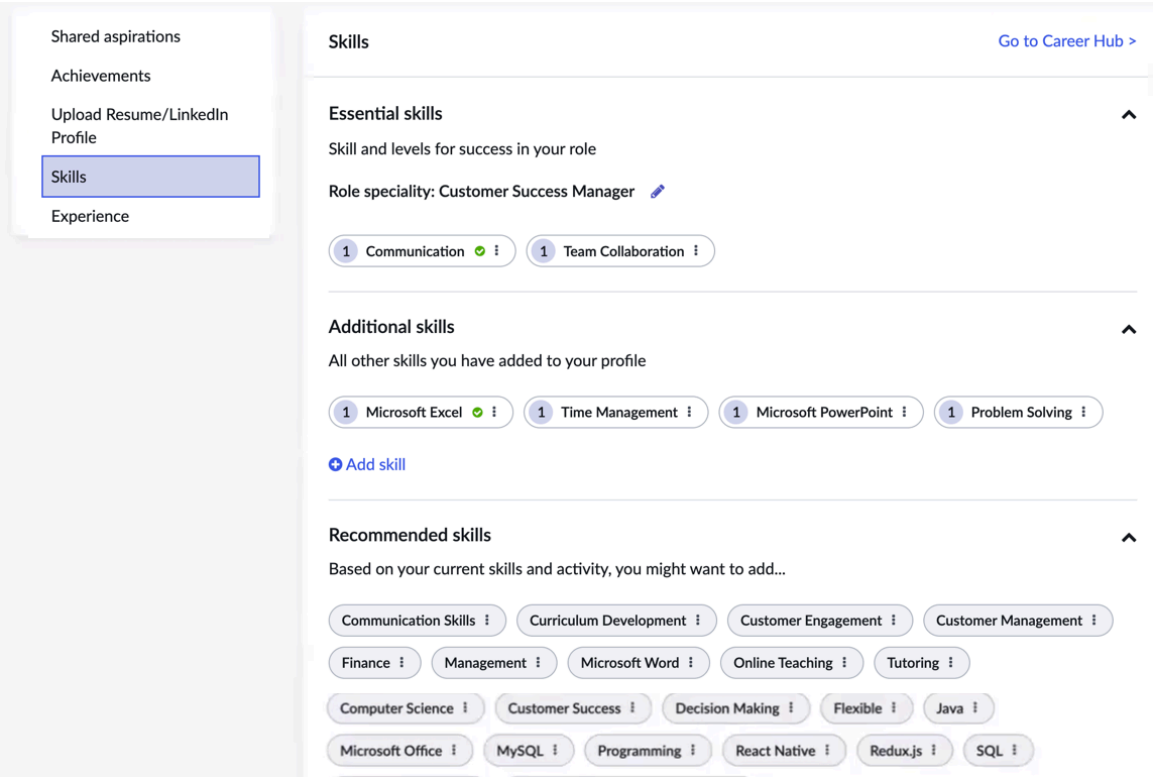
Upload Resume/LinkedIn Profile

Get your existing skill set quickly by uploading your resume or LinkedIn profile to your Employee Profile using the **Upload resume or LinkedIn profile** button. For more information on the import process, see Import skills from your resume or LinkedIn profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Skills

Manage your skills data by adding skills, removing skills, adding skills via a role level, and updating the proficiencies of the skills. Use the skills profile to understand your skill gaps and learn new skills to stay relevant to your role in your organization. A skill in your profile is displayed as an individual UI component called Skill pill.



Skill pill elements

UI elements	Description
1	A numerical indication of your proficiency level in that skill.
2	Skill name.
3	A green tick on the skill signifies validation by your manager, indicating their approval of your proficiency in that skill. After a skill is validated, you can only increase the proficiency level of the skill, you can't decrease the proficiency level or delete the skill from the profile. For more information on how to validate a skill, see Validate skills in Manager Hub.
4	Menu to access proficiency level or delete options. The skill proficiency level indicates your level of competency in that skill. To learn how to change a skill proficiency level, see Update your skill proficiency level.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

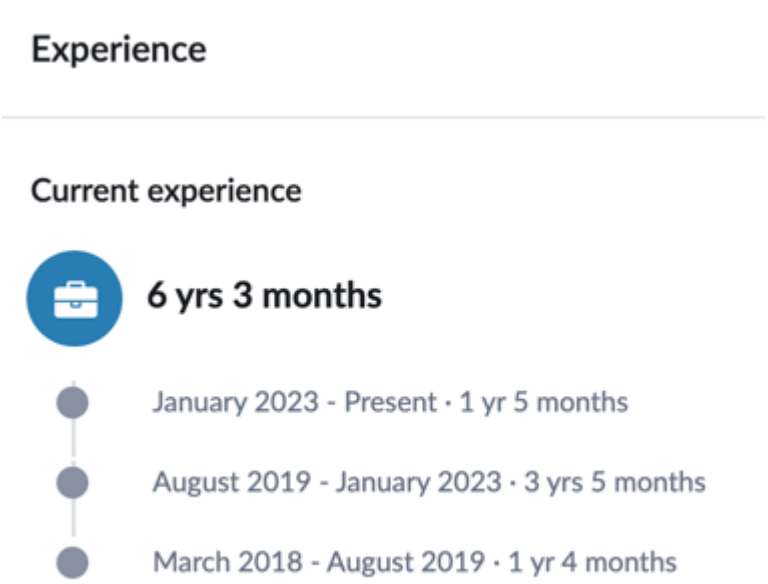
There are three sections within the skills widget. All the skills within these sections are sorted by the highest (required) to the lowest (recommended) skill rating.

Essential skills

This section displays the skills that are derived from your associated role group based on your current position. You can use the essential skills section to determine the skills required for the role and see the recommended learning opportunities to bridge the skill gaps. You can also focus on excelling in the skills and pursue growth opportunities. For more information, see Selecting a Role specialty.

Additional skills

Skills in your profile that are not part of your role level are displayed in the additional skills section. The skills that have been derived from your resume or added manually using the **Add skill** option are also part of the additional skills. For more information, see Add skills by using the skill recommender.



Recommended skills

The Recommended skills section displays the additional skills that are related to your profile. These details are based on your role and existing profile.

Experience

Displays the experience journey in your organization with the roles that you have taken up and the duration in each role along with the starting and ending months.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Selecting a Role specialty

Update your skills profile by selecting a role level as your role specialty to get personalize skill recommendations based on your job family and job profile.

Before you begin

Role required: sn_skills_int.emp

Procedure

1. Navigate to **All** > *Employee Center*.
2. In the *Employee Center*, navigate to > **Profile** > **Career** tab.
3. Select the **Role details** widget.
4. In the Role specialty field, select the **Select my role specialty** button.

> **Note:**
> Usually your role level is displayed as your role specialty.

5. To change the role specialty, select the pencil the ( ) icon.
6. In the Select your role specialty pop-up, select your role level.
7. Select **Save**.

Result

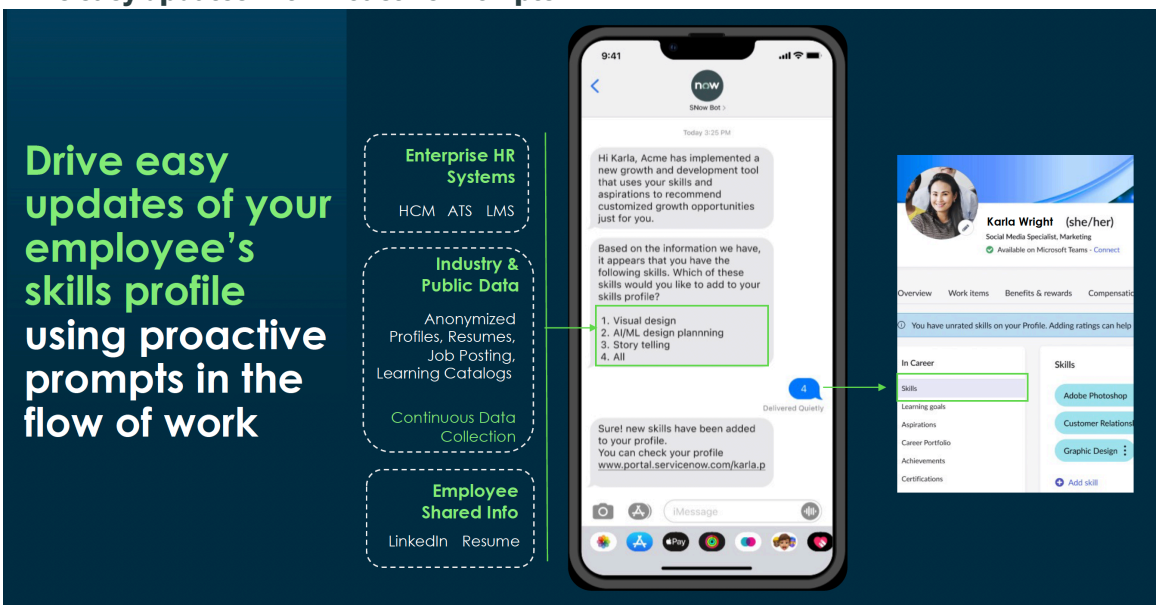
The skills related your role specialty are displayed under Essential skills section in the Skills widget. You can change the proficiency of the skills according to your expertise level. For more information, see Update your skill proficiency level.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- You can't delete a role specialty, only add or change it. If you change the role specialty, the skills in your profile are changed based on the selected role level. If you have a skill that is validated, or if you have updated its proficiency, then that skill is moved to the Additional skills section. If the skills are not validated or if the proficiency is unchanged, then that skill is removed.
- If you don't see any suggestions for the role specialty, contact your admin to configure the job architecture data by creating a role profile that matches your job family and skills. For more information, see Adding a job profile to the employee.

Solve the challenge of adoption with Proactive Prompts



With Proactive Prompts for the Skills Foundation application, your managers and employees can proactively bring actionable insights as prompts into their flow of work.

Proactive Prompts for Skills Foundation

One of the biggest challenges that an organization faces is getting their employees to update their skills profiles. With the Proactive Prompts for Skills Foundation application, you can solve this challenge easily because you can use the prompts in multiple engagement channels, such as Microsoft Teams, Microsoft Outlook, Zoom, and the short messaging service (SMS).

The following example shows how proactive prompts are used to drive easy updates to employees in their flow of work.

Drive easy updates with Proactive Prompts

As you can see in the example, the employee receives a prompt to update the suggestions that the Skills Foundation application detected. The prompt sent to the employee clearly communicates the information. The employee just has to select a button to add the suggested skills to their skills profile.

With this feature, the managers in your organization don't have to follow up or encourage their employees to take action at the right time. Skills recommendations can help your employees keep their skills profiles up to date without constant reminders from their managers. For more information, see Proactive Prompts for Skills Foundation.

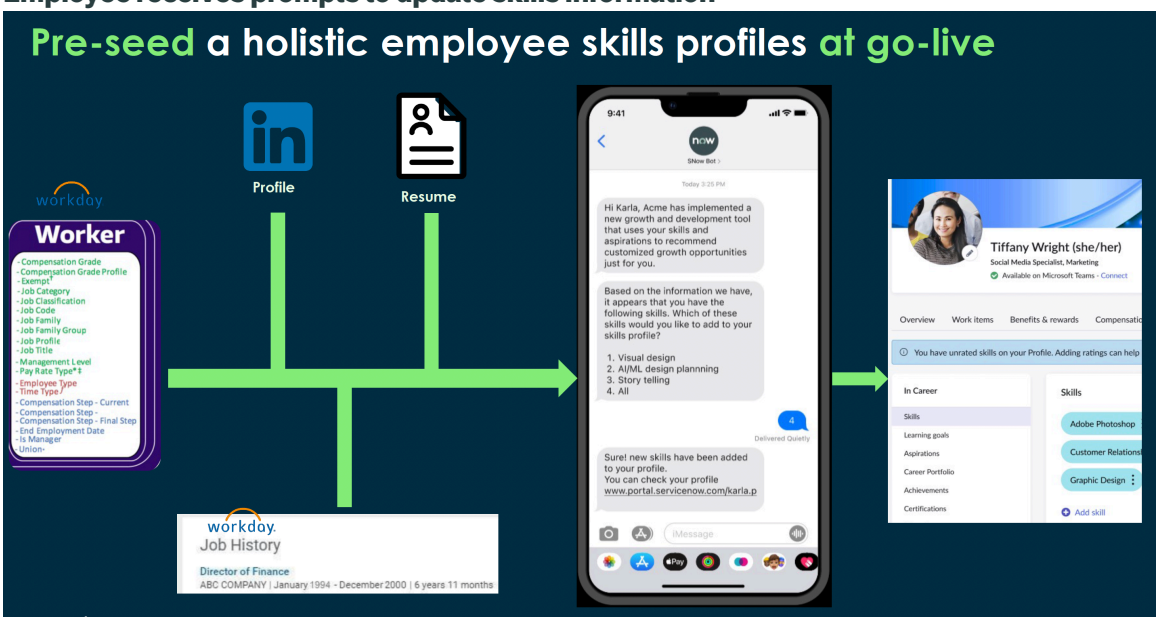
Pre-seeding employee skills

The Skills Foundation application can automatically detect skill gaps and prompt the employee to add pre-seeded, or necessary, skills to their profiles. This way, the employee profile is always kept up to date.

About pre-seeding

Pre-seeding refers to the automated inclusion of essential skills that are required for a specific role without the need for employees to manually list them. The Skills Foundation application uses natural language processing (NLP) techniques to extract and categorize these skills from resumes or LinkedIn profiles. These necessary skills are automatically detected by the system and are notified to the employee when they're onboarded with the help of Proactive Prompts.



How pre-seeding works

The application is constantly analyzing anonymous profiles or resumes with selected job portals. It extracts the skills and tracks what titles people use in their resumes. The application can also extract more information to provide customizable solutions that are unique to your requirements.

The application matches the information that is provided by the employee in the form of resumes or LinkedIn profiles. By using AI models, the application analyzes this information and detects that this employee should have certain foundational skills that seem to be missing in their profile. This prompt with the pre-seeded skills helps your employees to update their skills.

The following example shows how an employee receives a prompt with pre-seeded skills.

Employee receives prompts to update skills information

In the example, the employee received a notification that is based on what the application knows about that employee. The application notices that there's a skill gap in their profile and then prompts the employee to add the needed information to the profile to remove the skill gap.

Configuring Skills Foundation

As an admin, add skills and import data into job architecture tables in your ServiceNow instance to start using Skills Foundation in your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugin dependencies

- Skills Management (com.snc.skills_management)
- Data Services Base Client (com.glide.data_services.base)
- Skills Library Data for Skills Management (com.snc.skills_management.seed_data)

App dependencies

Employee profile (sn_employee) version 8.0.2.

Other requirements

- To access multi-channel prompts, you must have Proactive Prompts (com.sn_pp) version 2.0.0 installed.
- Employee profiles must exist. For more information, see Employee profile.

Setup process

The following procedure describes the steps to install Skills Foundation, upload or create the required data, and start using Skills Foundation in your organization.

Note:
A successful Skills Foundation installation requires the Skills Workspace plugin, use the Guided setup to install and configure the Skills Foundation application instead of a manual process.

1. Install the Skills Foundation [com.sn_skills_int] plugin.
2. Install the Skills Library Data for Skills Management (com.snc.skills_management.seed_data) plugin.
3. Install the Proactive Prompts plugin, which provides access to multi-channel prompts. For more information, see Install Proactive Prompts.
4. Download industry skills data. For more information, see .
5. Load custom skills. For more information, see Load your custom skills into Skills Foundation.
6. Upload job architecture data. For more information, see About Job Architecture.
7. Create a job level progression from a job level to a higher job level to indicate the growth path for employees in your organization. For more information, see Creating a job level progression.

   Note:
   Although this step is optional, creating job level progressions enables you to obtain skill-based suggestions for employee career progression as part of employee growth and development. For more information, see Talent Development Core.

8. Create a configuration that sets the proficiency automatically for skills across role levels based on the skill level type and role group. For more information, see Set the job proficiency level automatically.
9. Create role groups and role levels based on the type of roles in your organization. For more information, see Adding role groups and role levels for skills administration.
10. Create role-level mapping to industry titles. For more information, see Map industry titles to role levels.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

11. Assign a role level to an employee using Proactive Prompts or manually. For more information, see Map a role level to the employee profile.
12. Assign users to roles to enable them to perform tasks in Skills Foundation. For more information, see Components installed with Skills Foundation.
13. Provide access to the Skills widget where employees can view and edit skills in their profile in Employee Portal by setting the *sn_skills_int.enable_skills* system property to True.

Guided setup

Install and set up Skills Foundation and Company Job Architecture confidently with step-by-step instructions using guided setup.

The advantages of using the guided setup for Skills Foundation are:

- A single interface enables you to access in one place all the information necessary for installation like data loading and creating roles.
- Provides guidance for planning the roll-out of the application and performing the basic configuration.
- Configuration activities are organized into categories for more efficient access.
- Enables you to track your implementation progress.

To access the guided setup, navigate to Skills Foundation and Administration, then select the Guided Setup. Select the Continue button on the welcome page to start the configuration. You will see a list of different setup categories. Select the Start button under each category to start the configuration.

Skills Foundation guided setup

Install and set up Skills Foundation and Company Job Architecture confidently with step-by-step instructions using guided setup.

Before you begin

Role required: sn_skills_int.admin

The advantages of using the guided setup for Skills Foundation are:

- A single interface enables you to access in one place all the information necessary for installation like data loading and creating roles.
- Provides guidance for planning the roll-out of the application and performing the basic configuration.
- Configuration activities are organized into categories for more efficient access.
- Enables you to track your implementation progress.

Procedure

1. Navigate to **All** > *Skills Foundation* > **Guided Setup**.
2. On the welcome page, select **Continue**.
3. Read through the checklist and keep the files handy.
   - Prepare the Job Architecture Data for the installation.
   - Prepare the list of custom skills specific to your organization.
   - Prepare employee mappings with Job Architecture Data from your organization.

4. Select **Get started**.
5. Expand any category to view detailed status and related tasks.
   - Select **Start** button on each setup category to start the configuration.
   - Select **Mark as complete** after you finish a category.
   - Select **Skip** to leave out a category.
   - Select **Back** to go back to the previous category.

Skills Foundation Guided Setup

Category	Description
Skills Foundation Onboarding	Learn about the concepts and working of Skills Foundation through product documentation. Related task - Product Documentation.
Set up Relevant Plugin(s)	Install the optional plugins that enhance the Skills Foundation experience. Related tasks: ○ Skills Workspace plugin. ○ Proactive Prompts plugin.
Set up Access Roles	Assign roles to employees in your organization to ensure appropriate access in Skills Foundation. Related task - Assign Access Roles to users.
Skills Management	Upload your skills data into your ServiceNow instance. These skills are the basis for all the activities in your Skills Foundation application. Related task - Onboard Custom Skills. For more information, see Load your custom skills into Skills Foundation.
Company Job Architecture	Upload your existing company job architecture data, set the growth path using job level progressions, and automatically assign the proficiency for each skill across role levels, providing a structure to the imported data. Related tasks:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Category	Description
	○ Upload Company Job Architecture. For more information, see Load job architecture data into your ServiceNow instance. ○ Create Job Level Progressions. For more information, see Creating a job level progression. ○ Create Proficiency Autofill Configurations. For more information, see Set the job proficiency level automatically.
Employee Profile Upload and Setup	Upload the employee data and set up the roles and profiles required in your organization to associate jobs to the employees based on roles and skills. This category is crucial in making the employee and job data connection. Related tasks - Upload Employee Data - Uploading an excel sheet with employee data or manually map job profile with the employee. For more information, see Adding a job profile to the employee. **Note:** ○ If the Human Resources Scoped App (sn_hr_core) is installed, all setup steps like uploading employee data, adding profiles, and assigning roles are completed automatically. ○ You must have Human Resources Scoped App: Core (sn_hr_core) plugin on Australia family release. For earlier releases, you might encounter Restricted Caller Access (RCA) approval messages requesting for an update in the access request. Approve the RCA and re-import the skills manually. You can also manually create the required RCA to avoid re-work prior to skills import.
Configure System Properties	Control various Skills Foundation features using these system properties. Related task - Enable Skills Foundation for Employee Growth and Development.

6. Select **Complete** after you have finished all the tasks within all categories.

Install Skills Foundation

You can install the Skills Foundation application (com.sn_skills_int) if you have the admin role.The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Skills Intelligence application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: sn_skills_int.admin

About this task

The following items are installed with Skills Foundation:

- Roles
- Tables

For more information, see Components installed with Skills Foundation.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Skills Foundation application (com.sn_skills_int) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Load your custom skills into Skills Foundation

Upload the skills specific to your organization or human capital management practices in your ServiceNow instance.

Before you begin

For information about the format to add and upload the custom skills in your organization, see Custom Skills Sample Data.

Role required: import_admin, sn_skills_int.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Import Sets** > **Load data**.
2. In the **Import set table** field, select **Existing table**.
3. Select the Skills Staging [sn_skills_int_skills_staging] table from the drop-down list.

   Note:
   If no values appear in the table for the level types and proficiencies for a skill, the skill will be created without this information. For more information, see Define a skill level type.

4. In the **Source of the import** field, select **File**.
5. Select the source of the CSV file by selecting **Choose File**.
6. Select **Submit**.
7. Transform the data from the staging table format to the job architecture table format by selecting **Run transform**.
8. Select **Transform**.

Result

The custom skills are added to the existing skills in the Skills [cmn_skills] table.

About Job Architecture

Company job architecture data enables you to optimize career growth and development of employees by identifying required, recommended, and additional skills for employee roles.

Assess the skills of the employee and suggest learning to acquire new skills, promoting talent management via Manager Hub or through Skills profile in Employee Portal. For more information, see Career tab in Employee Center.

Prepare company job architecture data from any HCM (human capital management) platform in CSV format and import it to your ServiceNow® instance. After transformation, the data is transferred to the relevant tables like Job Family, Role Group, and Job Profiles. For more information on the transformation process, see Load job architecture data into your ServiceNow instance.

Note:
You must import your company job architecture data before being able to onboard employee job profiles in your ServiceNow instance.

From the Company Job Architecture Staging [sn_skills_int_company_job_arch_staging] table, the data is populated into the following tables:

- Job Family [sn_skills_int_job_family] table: Groups similar jobs. For example, Software Engineering, Application Development, Finance and Purchasing, Human Resources, and so on.
- Job Profiles [sn_skills_int_job_profile] table: Provides an information record about a job that includes a summary and description. For example, Sr. Software Engineer, Project Manager, and so on.
- Job Levels [sn_skills_int_job_level] table: The level of the job profile. For example, IC1, and IC2.
- Role Groups [sn_skills_int_role_group] table: Includes roles with a similar set of skills. For example, Front-end, Back-end, Full-stack, and so on.
- Role Levels [sn_skills_int_role_level] table: The designation of the role in a role group, with the name indicating its level (IC1, IC2). For example, Associate Software Engineer - Backend – IC1 – JavaScript L1.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Role Group Skills [sn_skills_int_role_group_skill] table: The mapping of role groups and their skills.
- Role Level Skills [sn_skills_int_role_level_skill] table: The mapping of role level and skills with the level of proficiencies for the role level.

For more information about the tables in the Skills Foundation application, see Components installed with Skills Foundation.

Note:

You can also add data specific to your organization to these tables manually.

After the data is imported, connect the job architecture data to the employee profile. For more information, see Map a role level to the employee profile.

Load job architecture data into your ServiceNow instance

Load your existing company job architecture data to build a customized career architecture in your ServiceNow instance.

Before you begin

Role required: import_admin, sn_skills_int.job_arch_admin

Procedure

1. Navigate to **All** > **System Import Sets** > **Load data**.
2. In the **Import set table** field, select **Existing table**.
3. Select the Company Job Architecture Staging [sn_skills_int_company_job_arch_staging] table from the drop-down.
4. In the **Source of the import** field, select **File**.
5. Select **Choose File** and select the source CSV file.
6. Select **Submit**.
   The data is imported into the job architecture staging table.
7. **Optional:** Validate the imported data.

   a. Select the Loaded data related list.
   The newly imported data in the staging table is displayed.

   b. Select the **Validate latest import set** related link.
   A report is generated with a bar graph showing the insights about missing data in the staging table. The possible errors are:
   - Empty job code and job title
   - Empty job family and role group
   - Skill missing
   - Skill inactive
   - Skill level type missing
   - Proficiency mismatch

   c. Select the bars on the graph to go the staging table and act on any missing data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Select **Run transform** to transform the data from the staging table to the Job architecture tables.
   The selected import set is displayed.
9. Select **Transform**.
   After transformation, the message `Transformation completed` is displayed. The extracted and transformed data is loaded into the respective tables: Job family, Job profile, Role group, and Role level.

Creating a job level progression

Create a progression from one job level to another to identify the growth path in your organization.

Before you begin

Role required: sn_skills_int.job_arch_admin, sn_skills_int.job_arch_editor

Procedure

1. Navigate to **All** > **Job Architecture** > **Job Families**.
2. Select **Job Level Progression**.
3. Select **New**.
4. Set the beginning and end of the job level progression.

> **Warning:**
> Make sure not to create more than one vertical progression from the same starting job level. For example, if an X to Y vertical progression exists, then an X to Z vertical progression is not allowed. Similarly, don't create more than one vertical progression to the same target job level. For example, if an X to Z progression exists, then a Y to Z progression is not allowed.

   a. Set the beginning of the job level progression by selecting a job level in the **From job level** field.
   b. Set the end of the job level progression by selecting a job level in the **To job level** field.

> **Note:**
> A job level progression for the same level is also possible, for example, IC1 to IC1 where both IC1s belong to different role groups.

5. Mark the direction of the progression in the **Type** field.
   - **Vertical** - The progression for an employee is within the same role group
   - **Lateral** - The progression for an employee is either within the same role group or related role groups (sn_skills_int_related_role_group).
6. Select **Submit**.

Result

A job level progression record is created.

Set the job proficiency level automatically

Set the proficiency level automatically for the skills across jobs based on the skill level type and role group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
The job level progression must have been defined. For more information, see Creating a job level progression.

Role required: sn_skills_int.admin

About this task

Note:
If no configuration is created for the proficiency level, the default configuration is applied to all the progressions.

Procedure

1. Navigate to **All** > **Job Architecture** > **Role Groups**.
2. Select **Proficiency Autofill Configuration**.
3. Select **New**.
4. On the Proficiency autofill form, fill in the fields.
   For a description of the field values, see Proficiency level autofill configuration form.
5. Select **Submit**.

What to do next
Run the scheduled job **Role level skill proficiency autofill** to populate the proficiencies automatically.

Adding role groups and role levels for skills administration

Create additional role groups and role levels based on the various roles in your organization and create a comprehensive role-based structure to accommodate various employee roles in your organization.

About this task
You can add role groups and role levels by importing them through the job architecture data import. For more information, see Load job architecture data into your ServiceNow instance.

This procedure describes how to add role groups and role levels to the Role Groups [sn_skills_int_role_group] and Role Levels [sn_skills_int_role_level] tables manually after the job architecture data is imported.

Before you begin
Role required: sn_skills_int.job_arch_admin

Procedure

1. Navigate to **All** > **Job Architecture** > **Role Groups**.
2. Create a role group.
   a. Select **New**.
   b. Enter a name and description for the role group.
   c. In the **Job family** field, select a relevant job family for the role group.
   d. **Optional:** Indicate that this role group is an addition to the existing role group by selecting **Is supplemental**.
   e. Select **Submit**.
3. Create new role levels for the role group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select the newly created role group.

b. Select the **Role Levels** tab.

c. Select **New**.

d. Enter a title and description for the role level.

e. The **Role group** field is already preselected with the newly created role group.

> **Note:**
> You can also choose a different role group for the role level. When changing the role group of the existing role level, the skills that belong to the previous role group will be removed. However, any skills explicitly added to the role level will be retained.

f. **Optional:** Select a **Job profile** the role level should belong to.

g. **Optional:** Make the role level active by selecting **Active**.

h. Select **Submit**.

4. Add skills to the role groups and role levels.

> **Note:**
> - If a skill is marked as required at the role group level, the setting will be applied to that skill in all the role levels of that role group. You cannot edit the field on the role level.
> - The setting for a skill relevance as High, Medium, or Low at the role group level will also be applied to that skill in all the role levels of that role group. You cannot change the relevance on the role level.
> - The skills in role groups are automatically attached to the role levels.

What to do next

Create transitions using the **From Role Groups** and **To Role Groups** related lists. Related role groups have similar skill sets and can be used in suggesting the next possible lateral roles for an employee in other role groups. Adding a role group to the To Role Groups list will update the From Role Groups list of other role groups.

Adding a job profile to the employee

Adding a job profile to an employee identifies the position of the employee in the organization, further identifying the skills.

Before you begin

If you want to add or update employee job profile details manually, follow the procedure.
Role required: sn_skills_int.job_arch_admin, sn_skills_int.admin

Procedure

1. Navigate to **All** and type `sn_employee_position.LIST` in the search bar.
2. Select **New**.
3. In the Employee job profile form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee job profile form

Fields	Description
Employee profile	The employee to link the job profile.
Job profile	The job profile relevant to the selected employee.
Location	The location of the employee.
Employment type	If the employee is permanent or on a contract.
Location type	If the location is remote or flexible.
Primary	Indicates if the job profile is the primary job profile for the employee.
Work description	General description of the work the employee is expected to perform.
Start date	The beginning date of this job for the employee.
End date	The end date of this job for the employee.
Job family	The category of job the employee belongs to. **Note:** If you don't see this field, add it to the form by configuring the form layout.
Source	The source of the job profiles.

Note:
Employees can see suggestions while selecting their role specialty in the Career tab on the ESC portal only when the following requirements are met.

- The Primary field must be checked.
- The job family field must contain a value.
- the job selected is the current job of the employee.

4. Select **Submit**.

Map a role level to the employee profile

Mapping a role level to the employee is a critical step that links the job architecture data with the employee data in your organization, which enables you to track the skills of the employee.

About this task

The standard method to assign a role level is to create a Proactive Prompts configuration that is triggered when the job architecture tables are loaded and checks whether employees have one or more relevant role levels based on employee profiles and job profiles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If an employee has more than one role level, a prompt with a list of relevant roles is sent to the employee. The employee selects suitable role levels from the list that are then added to the employee's profile.
- If an employee has a single relevant role, a scheduled job triggered in set intervals that checks for employees who do not have a primary role assigned automatically attaches the primary role to the employee profile.

This procedure describes how to run this scheduled job on demand.

Before you begin
Role required: sn_skills_int.job_arch_admin, sn_skills_int.admin

Procedure
1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. Search for and select the *`Attach unique role levels to employees`* scheduled job.
3. Select **Execute Now** button to run the job.

Result
The primary role of employees with a single role level are updated automatically in their profiles.

Map industry titles to role levels

Create a connection between common job titles in your industry with the role levels in your organization to provide relevant skill recommendations at the role groups level.

About this task
Role levels for employees must have either been imported into the Role level [sn_skills_int_role_level] table or added manually. For more information on the import process, see Load job architecture data into your ServiceNow instance.

Before you begin
Role required: sn_skills_int.job_arch_admin, sn_skills_int.admin

Procedure
1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. Search for and select the **Train Title classification** scheduled job.
3. Select **Execute now** to run the job.
4. Make the Job architecture title classification solution active.
   a. Navigate to **All** and enter `ml_solution.list` in the filter navigator.
   b. In the drop-down list of the **Search**
5. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
6. Search for and select the **Predict Title classification** scheduled job.
7. Select **Execute now**.

Result
The mapping is created in the Role Level M2M Industry Title [sn_skills_int_role_level_m2m_ind_title] table. A maximum of one industry title is fetched for each role level.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Adding a skill in Skills Foundation

Add the skills required across your organization by Identifying the skills you currently have and might need. These skills can be associated with people and roles to deliver employee growth.

Before you begin

Role required: sn_skills_int.admin

Procedure

1. Navigate to **All** > *Skills Foundation* > **Skills**.
2. Select **New**.
3. Enter a name and description for the skill.
4. In the **Level type** field, select an appropriate skill level type.

   The available level types are:

   - Generic
   - Behavioral
   - Experience
   - Language
   - Technical

   Note:
   The Generic level type is available by default. For the remaining level types, you must select the option to install the skills demo data.

   For more information on defining a skill level type, see Define a skill level type.
5. Activate the skill by selecting the **Active** check box.
   The source field indicates whether the skills are managed Skills Foundation or by the admin.
6. Click **Submit**.

Add the Career tab and enable the Skills widget in the Employee Profile

Add the **Career** tab and enable the Skills widget in the Career tab to upload your resume/ LinkedIn profile and work with skills-related data in your Employee Profile.

Before you begin

Role required: sn_skills_int.admin, sn_skills_int.emp

Procedure

1. Navigate to **All** > *Employee Profile* > **Employee Definitions**.

   a. Select sys_user employee definition.

   Note:
   If you don't see an employee definition, create one by selecting **New** and saving it.

   b. Select **Generate Employee Profiles**.

2. Navigate to **All** > *Employee Profile* > **Setup**.

   a. Select **Opt-in** to choose employee profiles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. To enable Skills widget in the **Career** tab, navigate to **All** > **System Properties** > **All properties**.
   a. Search the Name column with `*skill`.
   b. Select the sn_skills_int.enable_skills property.
   c. Set the Value field to **True**.

> **Note:**
> Make sure that you have the appropriate Read roles and Write roles as displayed in the property.

Result
The Career tab and Skills widget are added to your profile in the Employee Center.

Use a custom tab for the Career tab in Skills Foundation

Use a custom tab as a replacement for the **Career** tab in Employee Profile by updating the tab ID so employees are redirected to this custom tab.

Before you begin
Create a custom tab to display skills-related content in the employee profile. For more information on creating a tab, see Manage profile tabs and visibility in Employee Profile.

Role required: sn_skills_int.admin, sn_hr_sp.esc_admin

Procedure
1. Access the sys_id of the custom tab.
   a. Navigate to **All** > *Employee Profile* > **Profile Tabs**.
   b. Select the tab that you want to use instead of the **Career** tab.
   c. Select the Additional actions icon ( ) and select **Copy sys_id**.
2. Access the sn_skills_int-tab_id system property.
   a. Select **All**.
   b. In the navigation filter, type `sys_properties.list`.
   c. Search for `*skill` in the **Name** field.
   d. Select sn_skills_int.tab_id.
   e. In the **Value** field, replace the existing value with the sys_id of the customized tab.
   f. Select **Update**.

Result
The employee will be directed to the customized tab to view and modify the skills in *Employee Profile*.

Using Skills Foundation

By using the Skills Foundation application, your organization can identify the skills that an employee needs, determine the skill gaps within a role, and recommend the learning opportunities that the employee can do to bridge those gaps.

Employees can use the skills profile to add, delete, and update skills. For more information on skills profiles, see Career tab in Employee Center.

Import skills from your resume or LinkedIn profile

Import the skills residing in your resume or LinkedIn profile and add them to your Employee Profile in the *Employee Center* so that you have all your skills at one place and focus on your career development in the organization.

Before you begin

Role required: sn_skills_int.emp

Procedure

1. Navigate to **All** > **Employee Center**.
2. On the Employee Center home page, select the User options drop-down menu ().
3. Select **Profile**.
4. Select the **Career** tab.
5. Select the **Upload resume or LinkedIn profile** button.
6. Select **Browse files** to select the file in your local machine.
   The supported file formats are:
   - .pdf
   - .text
   - .docx
   - .zip (for LinkedIn)
7. Select **Open**.
   All the skills obtained from your resume or LinkedIn profile are displayed.
8. De-select the skills that you don't want to add to your Employee Profile.
9. **Optional:** Select the proficiency level for the skills by dragging the horizontal slider on the skill.
10. Select **Add to your profile**.

Result

The skills are added to the Additional skills section on the skills widget.

Add skills as part of your onboarding journey

Upload your resume or LinkedIn profile as part of your onboarding journey and add skills from them to your profile in *Employee Center* so that you can focus on growth and career development in the organization.

About this task

Note:
You can upload your resume or LinkedIn profile after your employee profile is created in *Employee Center*. For more information, see Import skills from your resume or LinkedIn profile.

Before you begin

To enable recording skills when you join the organization, an activity item **Upload resume/ LinkedIn files to add skills to profile** is created as part of the Week 1 activity set of your onboarding journey. Make sure to check for the activity item and follow the procedure to add skills. Contact your system admin if you don't see the activity item.

Role required: sn_skills_int.emp

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-service** > *Employee Center*.
2. On the Employee Center home page, select **My Tasks**.
3. Select the **Upload resume/LinkedIn files to add skills to profile** task.
4. Select **Click here** to upload the file.
   A new page is opened in the *Employee Center* to browse files.
5. Select **Browse the file** to select the file in your local machine.
6. Select **Open**.
   All the skills obtained from your resume or LinkedIn profile are displayed.
7. Select the skills that you want to add to your profile in *Employee Center*.
8. Select the Proficiency level for the skills that you selected.
9. Select **Add skills to profile**.
   A confirmation message is displayed after the skills are added successfully.
10. **Optional:** Select **View profile** to verify that the skills that were added.

Update your skill proficiency level

Update and track your proficiency level for each skill that you list in your skills profile by using the Skills Foundation application.

Before you begin
Role required: sn_skills_int.emp

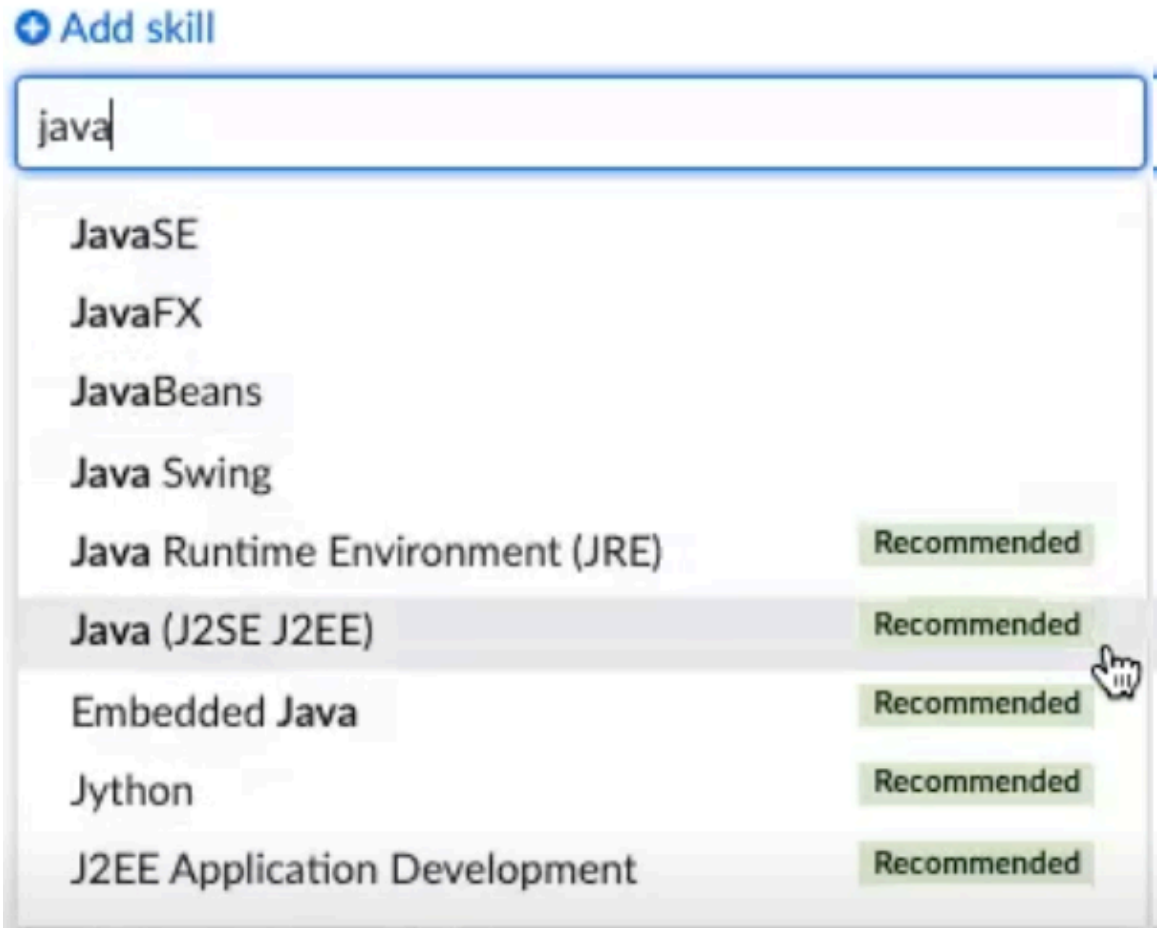
Procedure

1. Navigate to **All** > *Employee Center*.
2. In the *Employee Center*, navigate to **Profile** > **Career** tab.
3. Select the Skills widget.
4. On the skills pill, select the menu icon ⋮.
5. Select **Change skill proficiency**.
6. Move the horizontal slider to adjust your skill proficiency level.
   Moving the slider to the right-hand side increases the proficiency level, and moving it to the left-hand side decreases the proficiency level.
7. Select **Update**.

Result
Your skill proficiency level is successfully updated in your skills profile.

Add skills by using the skill recommender

Search for the skills that you're interested in developing or improving and then add them to your skills profile by using the skills recommender in the Skills Foundation application.



Before you begin
Role required: sn_skills_int.emp

About this task
By adding skills to your profile, you can track all these details in one place.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center**.
2. In the Employee Center, navigate to **Profile** > **Career**.
3. On the skills widget, select the **Add skill** button.
4. In the search bar, search for the name of the skill that you want to add as shown in the following example.
   Search results are sorted alphabetically, with the top results displaying first.

Note:
If you don't see the skill recommendations, it indicates that the AI Search setup is broken. Clear your instance cache by entering `server_url/cache.do` in your browser. If the problem persists, then contact your system admin.

5. From the list of recommendations, select the skill that you want to add to your profile.

Result
The skill is added to your additional skills section.

Delete skills from skills profile

Employees can delete skills from the additional skills section in their skills profile.

Before you begin
Role required: sn_skills_int.emp

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center**.
2. In the **Employee Center**, navigate to **Profile** > **Career**.
3. On the skills widget, select the menu icon that is in the skill pill and then select **Delete skill**.

> **Note:**
> After a skill is validated, the employee can't delete the skill from the additional skills section of their skills profile.

4. Select **Yes, delete skill** to delete the skill.

Proactive Prompts for Skills Foundation

Recommend roles, skills, and missing proficiencies to the employees and get approval from managers in their flow of work using Proactive Prompts.

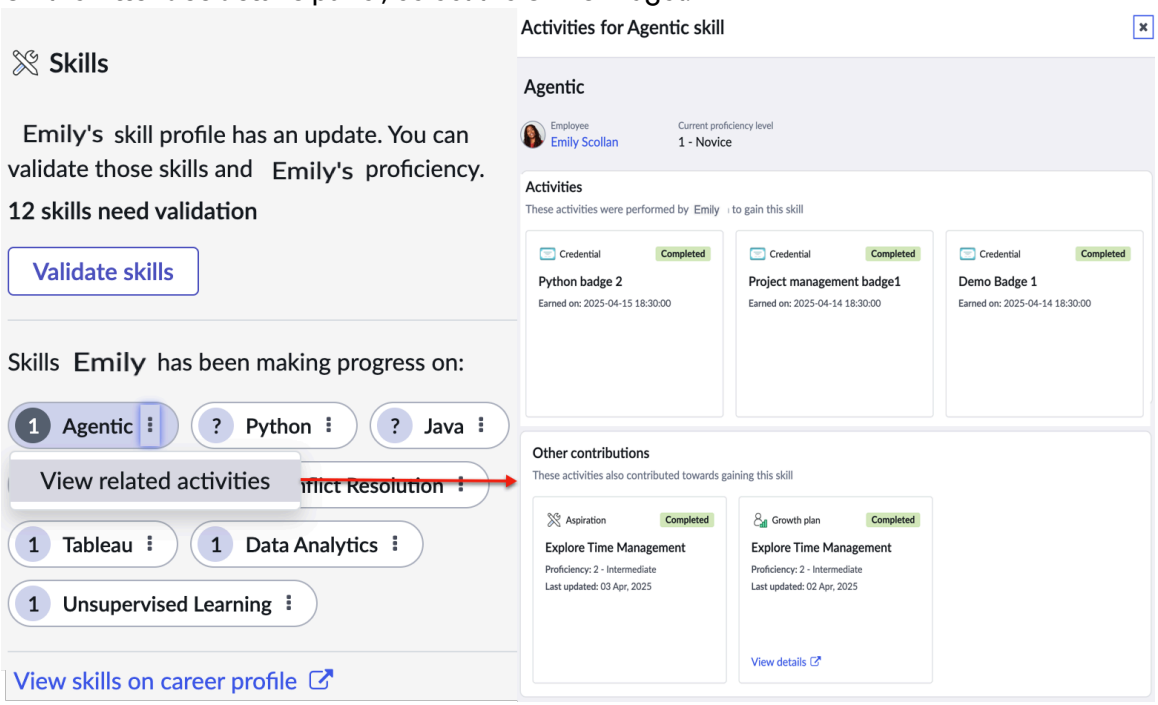
Make sure that the signals are configured and scheduled to deliver the prompts. Prompts are displayed in Employee Portal and Virtual Agent.

Prompts to Managers and Employees

Prompts	Description
Employee Role Selection Prompt to Managers	Signal configuration to trigger prompts for employees to associate a primary role to their employee profile.
Skills Update Reminder Prompt to Managers	Signal configuration to trigger prompt for managers that their employees didn't update their skills for a long time and reminding them to update those.
Employee Role Selection Prompt to Employees	Signal configuration to trigger prompt for employees to associate skills to the primary role in their profile.
Employee Skill Selection Prompt to Employees	Signal configuration to trigger prompt for employees to add appropriate skills to their profile.
Skill Proficiency Update Prompt to Employees	Signal configuration to trigger prompt for employees to update the proficiency for the skills in their profile.
Skills Update Reminder Prompt to Employees	Signal configuration to trigger prompt for employees to either add new skills or update proficiencies for the existing skills.
Review Skills Profile Prompt to Employees	Signal configuration to trigger prompt for employee to update their profile based on the recent activities.

Validate skills in Manager Hub

Affirm the skills that your employee claims to have by reviewing and validating them in Manager Hub.



Before you begin

Role required: sn_skills_int.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center**.
2. In the Employee Center home page, navigate to **Your team** > **Conversations**.
3. Open a conversation that is scheduled with your employee.
4. On the **Attendee details** panel, select the **Skills** widget.

5. Select the **Validate skills** button, and then select the skills that you want to validate.
   The validated skills window displays the skill types, such as the required skills and all the other added skills, that your employee has.
6. Additionally, select any skill to review activities related to the skill that your employee has made progress on before you can validate it.
7. Select **Validate selected skills**.
8. On the Skill pill, select the menu icon (⋮) and select **View related activities** to see the activity details of the skill.
   Any credentials obtained by the employee to gain the skill are displayed as activities. You can also see Other contributions towards gaining the skill.

Result

The validated skills are marked with a green tick in the employee skills profile, indicating that you validated the skills of your employee. For more information, see Career tab in Employee Center.

Skills Intelligence Reference

Reference topics provide additional information about the properties and tables.

Components installed with Skills Foundation

Several types of components are installed with the activation of the Skills Foundation application, including user roles and tables.

sn_ta_hiring_core_recruitment_task	Recruitment task table.

Note:
You can use the record tables according to your requirement.

Proficiency level autofill configuration form

Form to create a configuration to autofill the proficiency for a skill.

Proficiency level autofill form

Field	Description
Skill level type	The applicable skill level type for the configuration.
Role group	The applicable role group for the configuration. **Note:** The configuration is applied only to the selected role group. To indicate a global configuration that is applied to all role groups, leave the field blank.
Initial job level	The beginning job level for the configuration.
Initial proficiency	The beginning level of proficiency for the initial job level.
Active	Option to mark the configuration as active.
Order	The order in which to apply the configuration. For example, an order of 100 is applied first and an order of 200 is applied next.
Progression	The progression from one level to another. The options are: • None - No progression is applied. • Incremental - Increasing order of progression.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Proficiency level autofill form (continued)

Field	Description
	• Decremental - Decreasing order of progression. • Fixed - Fixed order of progression.
Progression type	The type of progression based on the option selected in the **Progression** field. The options are: • Step - The progression increases or decreasing one step at a time across the job levels. • Spread - The progression is uniformly spread across the job levels.

Career Conversations

Supports an end-to-end process for individuals and managers to create and manage career growth conversations.

Explore

Learn now Career Conversations help managers and employees have important conversations.

Install and configure

ServiceNow administrators install and configure the Career Conversations app and related features.

Administer

Administrators maintain the Career Conversations app and related features over time as the organization grows and evolves.

Use

From the Employee Center managers and employees use the Career Conversations app to have conversations about career growth and development.

Reference

Reference information for Career Conversations.

Explore Career Conversations application

The Career Conversations app provides employees and managers with the ability to create and track conversations between managers and employees.

Career Conversations is an application closely integrated with Talent Development Core. It is used to manage conversations between employees and manager. It also interacts with the Talent Development Core application to provide a complete career growth and development solution.

Discover and get apps on the Store

Go to the ServiceNow Store website to discover the new apps, solutions, and integrations that you can get.

For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Career Conversations

The Career Conversations application supports dialogue between subordinates and their leaders. This application enables your employees to engage in meaningful conversations that are focused on the employee's growth and development.

When the Career Conversations app is installed, you can use it to create and track conversations from the Employee Center. An employee's growth and development is produced substantially by the conversations held in the one-on-one discussions with their managers. These conversations are imperative in building strong relationships in the workplace. The effectiveness is optimized when the dialogue revolves around the employee's aspirations and growth plans. The Career Conversations app facilitates the administration of one-on-one conversations between leaders and their subordinates. It simultaneously improves the effectiveness of communication by enabling you to establish the topics of discussion.

Benefits of the Career Conversations app

The Career Conversations app provides the following benefits to your employees, managers, and organization:

Employees and managers

- Enables both employees and managers to initiate one-time or recurring conversations with each other to discuss the employee's growth and development within your organization.
- Add suggested or custom talking points so that the employees and managers can indicate pertinent topics of discussion associated with the employee's growth plans and aspirations. Talking points can be about aspirations or growth plans that employees share with their managers.
- Create action items to specify discrete tasks that must be accomplished by the employee or manager to support subordinates with their goals and aspirations.
- Compose concealed notes for each conversation that an employee and a manager have with each other.

Organization

- Fosters an environment that promotes and increases internal mobility.
- Decreases attrition related to employee dissatisfaction.
- Boosts cost savings through employee retention.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration with Microsoft Outlook

The Career Conversations app provides an integration with Microsoft® Outlook® so you can conveniently schedule conversations with your employees or manager from the Employee Center. This integration enables you to view your employees or manager's calendar as it appears in Microsoft Outlook so you can effectively schedule meetings for each conversation during the conversation creation process. The integration with Microsoft Outlook lets your employees and managers schedule meetings using a single interface, thus developing a seamless process for creating conversations. This streamlined process simplifies the steps to create and schedule a conversation, which helps to promote the adoption of the Career Conversations app across your organization.

Conversation types

The Career Conversations app supports three types of conversations that you can use to facilitate discussions between subordinates and their leaders. To accommodate dialogue for the dynamic relationships that exist within an organization, this application supports the following conversation types:

Conversation type field values in Discussion Series form

Conversation type	Description
Growth conversations	A one-time or recurring conversation to discuss an employee's growth and development within your organization. This conversation type is intended for the employee-manager relationship.
Growth plan check-ins	A one-time check-in conversation to discuss a growth plan for career advancement that an employee shares with their manager. This conversation type is intended for the employee-manager relationship.
Mentoring conversations	A one-time conversation to discuss topics from which the mentee can benefit most and to provide counsel on career development. This conversation type is intended for the mentee-mentor relationship.

Components of the Career Conversations app

Depending on your role within your organization, the Career Conversations app displays the following widgets when you access the Conversations home page from the Employee Center portal:

Roles and corresponding widgets on the Conversations home page

Role	Widget
Employee	Your conversations

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles and corresponding widgets on the Conversations home page (continued)

Role	Widget
Manager	• Your team's conversation • Coming up soon **Tip:** This widget reflects conversations that are set to transpire within one week of the system date.

After a conversation is created between an employee and manager, the Career Conversations app displays the agenda page. This page contains the following components that you can use to enhance your conversation:

Your agenda section

This section contains four widgets that you can use to administer, facilitate, and navigate your conversation. The Your agenda section contains the following widgets:

- Suggested talking points
- Talking points
- Action items
- Your notes

Contextual side panel

This side panel reflects your employee's name and job title in your organization. The contextual side panel also contains a list of details specific to the employee to whom the conversation pertains. A description for each employee detail appears on an accordion. When you expand an accordion, more information about the corresponding employee details appears. The contextual side panel provides the following accordions for each employee with whom you create a conversation:

- Aspirations
- Growth plans
- Feedback
- Skills
- Goals

The name of the contextual side panel changes depending on whether a manager or employee has accessed the conversation. The Career Conversations app displays the following names for the contextual side panel depending on your role within your organization:

Roles and corresponding names for the contextual side panel

Role	Contextual side panel name
Employee	Your details
Manager	Employee details

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The contextual side panel doesn't appear when the corresponding conversation is defined as a mentoring conversation.

Related topics

- Create a growth conversation
- Schedule a growth conversation
- Update a growth conversation
- Schedule a growth plan check-in conversation
- Schedule a mentoring conversation

Install and configure Career Conversations

Install and configure the features and components for the Career Conversations application.

Install Career Conversations

Install the Career Conversations app to enable employees and managers to create, manage, and track conversations.

Before you begin

Dependent plugins and apps for Career Conversations

- Manager Hub 3.0.0
- Talent Development Core
- See Install the Talent Development Core application.

Role required: admin

About this task

Note:

Before installing Career Conversations 3.5.2, first upgrade to an **MSI trued-up patch** of the Store Apps family version. This ensures all MSI fixes are applied correctly.

Important:
You must install the Talent Development Core app before you install Career Conversations.

Career Conversations is dependent on features in Talent Development Core.

Procedure

1. Go to the ServiceNow Store and find the Talent Development Core application using the filter criteria and search bar.

   Under the **Request Install** button in the **Version** section, a list of available versions is displayed.

   Note:
   Select **Other App Versions** to view a list of all available versions of an application.

2. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to install it, select the **Load demo data** check box.

   Demo data includes sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.
5. Select **Install**.

Administer and maintain Career Conversations

Administering and maintaining the Talent Development app requires the role of a Career Conversations system administrator or an Talent Development activities admin.

Add and manage Talking Points

As a Career Conversations admin, you can add or update talking points that are used by managers to help create a conversation with an employee.

Before you begin
Role required: sn_egd_act.admin or admin

Procedure
1. Navigate to **All** > **Career Conversations** > **Suggested Talking Point**.
2. Select **New**.
3. Complete the **Suggested Talking Point New record** form.
4. Select **Submit**.

Add Conversations

As an Career Conversations admin you can add or manage conversations that are assigned to employees on behalf of managers.

Before you begin
Role required: sn_egd_act.admin or admin

Procedure
1. Navigate to **All** > **Career Conversations** > **Conversations**.
2. Select **New**.
3. Complete the Discussion Series form.
4. Select **Submit**.

Configure automatic closure of past conversations

Use a system property to define whether a batch job can automatically close conversations that have transpired.

Before you begin
Role required: admin [sn_egd_act.admin]

Procedure
1. Navigate to the **All** menu, and enter `sys_properties.list` in the navigation filter.
   The System Properties [sys_properties] table appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. In the **Search** field that appears underneath the Name column, enter `*egd`.
   A list of system properties associated with the Talent Developmentsuite of applications appears.
3. Select the *`sn_egd_act.automatic_close`* property.
4. Use the **Value** field to specify the option that enables or deactivates a batch job from automatically closing past conversations.
5. Select **Update**.

Set system properties for Microsoft Outlook integration

Use system properties to enable integration between Career Conversations and Microsoft® Outlook® so you can simultaneously create and schedule conversations with the Career Conversations app.

Before you begin
Role required: admin [sn_egd_act.admin]

Procedure

1. Navigate to the **All** menu, and enter `sys_properties.list` in the navigation filter.
   The System Properties [sys_properties] table appears.
2. In the **Search** field that appears underneath the Application column, enter `Career Conversations`.
   A list of system properties associated with the Career Conversations app appears.
3. Select the following system properties and define the corresponding values.

> **Important:**
> Select **Update** to save the values you defined for each of the previously mentioned system properties.

Using the Career Conversations application

Career Conversations enables manager and employees to create and track conversations from the Employee Center.

Create a growth conversation

Use the Career Conversations app to create a one-time or recurring conversation with an employee. Discuss the employee's growth and development as a professional within your organization.

Before you begin
You must install the Career Conversations application to access it from the Employee Center.

You must provide your employees with a license to enable access to the Career Conversations app. For more information about employee licensing, refer to License Talent Development Core users.

Role required: employee [sn_egd_act.employee] or manager [sn_egd_act.manager]

About this task
The functionality described in this task is applicable to organizations using the Career Conversations application without the Microsoft® Outlook® integration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Use the navigation path that corresponds to your role within your organization to access the Career Conversations app.
3. Select the **Create a conversation** button.
   The Create a conversation panel appears.
4. In the panel, set the following fields.

Create a conversation panel

Field	Description
Have this conversation with	The employee or manager with whom you want to converse. For employees, this field is automatically set to the name of the manager to whom they report. Alternately, managers can choose a specific employee that reports to them.
Conversation title	Name of the conversation. Depending on your role within your organization, this field is automatically set to one of the following options: ○ **Conversation with <employee first name>** ○ **Conversation with <manager first name>** You can change the value.
Date	Date of the conversation. The format is <YYYY-MM-DD>
Reoccurs	The frequency at which the conversation occurs.

5. Select **Create conversation**.

Result

A notification is sent via email to the employee or manager with whom you created a conversation.

What to do next

Update the agenda for your upcoming conversation by using an option that corresponds to your role within your organization:

Employees

Use the Your conversations widget to access the conversation you created.

Managers

- Use the Your team's conversations widget to access the conversation you created.
- Use the Coming up soon widget to access the conversation that you created if it transpires within one week of the system date.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule a growth conversation

Use the Career Conversations app to simultaneously create and schedule a one-time or recurring conversation with your employee or manager. For each conversation you schedule, discuss the employee's growth and development as a professional within your organization.

Before you begin

You must install the Career Conversations application to access it from the Employee Center.

You must provide your employees with a license to enable access to the Career Conversations app. For more information about employee licensing, refer to License Talent Development Core users.

You must configure integration between the Career Conversations application and Microsoft® Outlook®. This integration enables you to view your employee or manager's calendar as it appears in Microsoft Outlook so you can schedule a meeting for your conversation during the conversation creation process. For more information about the integration process with Microsoft Outlook, refer to Integrating with Microsoft Outlook.

You must update system properties to enable integration between the Career Conversations application and Microsoft Outlook. For more information about updating the required system properties, refer to Set system properties for Microsoft Outlook integration.

Role required: employee [sn_egd_act.employee] or manager [sn_egd_act.manager]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Use the navigation path that corresponds to your role within your organization to access the Career Conversations app.
3. Select the **Schedule conversation** button.
   The Schedule a conversation panel appears.
4. In the panel, set the following fields.

Schedule a conversation panel

Field	Description
Have this conversation with	The employee or manager with whom you want to converse.
Conversation title	Name of the conversation. Depending on your role within your organization, this field is automatically set to one of the following options: ○ **Conversation with <employee first name>** ○ **Conversation with <manager first name>** You can change the value.
Date	Date of the conversation. The format is <YYYY-MM-DD>. You can use the **Show Calendar for Date** icon to select a date.
Start	The time at which the meeting starts. You can use the calendar that appears in this

Field	Description
	panel to determine availability for the date you specified in the **Date** field.
End	The time at which the meeting ends. You can use the calendar that appears in this panel to determine availability for the date you specified in the **Date** field.
Reoccurs	The frequency at which the conversation occurs.

5. Select **Send invite**.

Result
A meeting for a conversation is scheduled on both yours and the recipient's calendar in Microsoft Outlook.

What to do next
Update the agenda for your upcoming conversation by using an option that corresponds to your role within your organization:

Employees

Use the Your conversations widget to access the conversation you created.

Managers

- Use the Your team's conversations widget to access the conversation you created.
- Use the Coming up soon widget to access the conversation you created if it transpires within one week.

Employees and managers

Use the link in the meeting invitation email.

Schedule a mentoring conversation

Use the Career Conversations app to schedule a conversation with your mentee or mentor. For each conversation you schedule, discuss topics from which the mentee can benefit the most through the mentorship program.

Before you begin
You must install the Career Conversations application to access it from the Employee Center.

You must provide your employees with a license to enable access to the Career Conversations app. For more information about employee licensing, refer to License Talent Development Core users.

You must configure integration between the Career Conversations application and Microsoft® Outlook®. This integration enables you to view your mentee or mentor's calendar as it appears in Microsoft Outlook so you can schedule a meeting for your conversation during the conversation creation process. For more information about the integration process with Microsoft Outlook, refer to Integrating with Microsoft Outlook.

You must update system properties to enable integration between the Career Conversations application and Microsoft Outlook. For more information about updating the required system properties, refer to Set system properties for Microsoft Outlook integration.

A mentor must accept the request for mentorship from a mentee.

Role required: employee [sn_egd_act.employee] or manager [sn_egd_act.manager]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the Your career drop-down list, select **Mentoring**.
3. Select the **You mentorships** tab.
4. In the Ongoing mentorships widget, select the **More Mentoring relationship actions** (vertical ellipsis) icon associated with the name of your mentee or mentor.
5. Select **Create conversation**.
   The Create a conversation panel appears.
6. **Optional:** Revise the name of the conversation in the **Conversation title** field if you don't want to accept the default.

   Tip:
   This field is automatically set to **Conversation with <mentee first name>**.

7. Select **Create conversation**.
   A record for the conversation you created appears underneath the name of your mentee or mentor when you expand the corresponding accordion.
8. Select the Conversation record that you created.
   The Conversation details panel appears.
9. Select **Schedule conversation**.
   The Schedule a conversation panel appears.
10. In the panel, set the following fields.

Schedule a conversation panel

Field	Description
Date	Date of the conversation. The format is `<YYYY-MM-DD>`. You can use the **Show Calendar for Date** icon to select a date.
Start	The time at which the meeting starts. You can use the calendar that appears in this panel to determine availability for the date you specified in the **Date** field.
End	The time at which the meeting ends. You can use the calendar that appears in this panel to determine availability for the date you specified in the **Date** field.

11. Select **Send invite**.

Result

A meeting for a conversation is scheduled on both yours and the recipient's calendar in Microsoft Outlook.

What to do next

Use the link in the meeting invitation email to update the agenda.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule a growth plan check-in conversation

Use the Career Conversations app to schedule a check-in conversation with your employee or manager about a growth plan explicitly related to the employee's career advancement within your organization.

Before you begin

You must install the Career Conversations application to access it from the Employee Center.

You must provide your employees with a license to enable access to the Career Conversations app. For more information about employee licensing, refer to License Talent Development Core users.

You must configure integration between the Career Conversations application and Microsoft® Outlook®. This integration enables you to view your employee or manager's calendar as it appears in Microsoft Outlook so you can schedule a meeting for your conversation during the conversation creation process. For more information about the integration process with Microsoft Outlook, refer to Integrating with Microsoft Outlook.

You must update system properties to enable integration between the Career Conversations application and Microsoft Outlook. For more information about updating the required system properties, refer to Set system properties for Microsoft Outlook integration.

An employee must create and share a growth plan with their manager.

Role required: employee [sn_egd_act.employee] or manager [sn_egd_act.manager]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Use the navigation path that corresponds to your role within your organization to access the Growth plans module.
3. Use the widget that corresponds to your role within your organization to select the growth plan for which you want to create a conversation.
4. In the topic header widget, select the **More growth plan actions** (vertical ellipsis) icon.

   Tip:
   The topic header widget is the widget that reflects the name of the growth plan.
5. Select **Edit plan**.
6. In the Plan activities widget, select the Add an activity drop-down list.
7. Select **Check-in**.
   The Add check-in activity panel appears.
8. Select **Add**.
   A new activity for a check-in conversation appears in the Plan activities widget.
9. Select the activity for the check-in conversation you created.
   The Activity details panel appears.
10. Select **Schedule conversation**.
    The Schedule a conversation panel appears.
11. In the panel, set the following fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule a conversation panel

Field	Description
Conversation title	Name of the conversation. This field is automatically set to **Check in and review your progress with your manager**. You can change the value.
Date	Date of the conversation. The format is `<YYYY-MM-DD>`. You can use the **Show Calendar for Date** icon to select a date.
Start	The time at which the meeting starts. You can use the calendar that appears in this panel to determine availability for the date you specified in the **Date** field.
End	The time at which the meeting ends. You can use the calendar that appears in this panel to determine availability for the date you specified in the **Date** field.

12. Select **Send invite**.

Result
A meeting for a conversation is scheduled on both yours and the recipient's calendar in Microsoft Outlook.

What to do next
Update the agenda for your upcoming conversation by using the link in the meeting invitation email.

Update a growth conversation

Use the Career Conversations app to update the agenda for an upcoming conversation with your employee or manager. Center the focus of the discussion around the employee's growth and development as a professional within your organization.

Before you begin
You must provide your employees with a license to enable access to the Career Conversations app. For more information about employee licensing, refer to License Talent Development Core users.

Role required: employee [sn_egd_act.employee] or manager [sn_egd_act.manager]

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Use the navigation path that corresponds to your role within your organization to access the Career Conversations app.
3. Use the widget that corresponds to your role within your organization to select the conversation that you want to update.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tip:
Employees and managers can use the link in the meeting invitation email to access the agenda for a conversation that is scheduled on their Microsoft® Outlook® calendar.

4. **Optional:** Select the **Edit details** button if you must reschedule your conversation.

   Tip:
   The Career Conversations app displays the same panel that appears during the conversation creation process when you select this button.

5. In the Suggested talking points widget, add a suggested talking point that is relevant by selecting the **+ Add** button.

   Tip:
   A suggested talking point must be defined by an administrator for the Suggested talking points widget to appear.

6. In the Talking points widget, select **Add talking point** and specify a topic of discussion applicable to the conversation that you want to have with your employee or manager.

   Tip:
   Talking points can be about aspirations or growth plans that employees share with their managers. These aspirations and growth plans appear in the corresponding accordion in the contextual side panel. Employees and managers can use talking points to guide the conversation.

   After you finish conversing about a talking point, you can select the corresponding check box to indicate that the conversation occurred.

7. In the Action items widget, select **Add action item** and specify tasks that must be accomplished by you.

   Tip:
   After the action item is completed, you can select the corresponding check box to indicate completion of the task.

8. In the Your notes widget, select **Add notes** and enter comments about the conversation that happened with your employee or manager.

   Tip:
   You can use this widget to reflect ideas that surfaced as a result of your conversation or to create reminders for yourself. The information you enter in this widget is only visible to you.

9. In the Skills widget, select any **Skill pill** to view skills and activity details related to the skill selected.

   Note:
   This widget is only available for manager-employee conversations.

What to do next

Managers can manually close a conversation by indicating whether the conversation is canceled or complete. To indicate whether a conversation is canceled or complete, a manager must select the corresponding vertical ellipsis icon. This icon appears in the following locations:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To the right of the **Edit details** button when you are viewing the agenda for a conversation.
- To the right of the Status column in the Your team's conversations widget.

Managers can provide a summary to reflect the details of a conversation that transpired when they select the option to complete a conversation. A notification is sent via email to the employee to indicate the conversation is complete. If the manager provided a summary, it is included in the email that the employee receives.

Career Conversations reference

Administrators use reference information to configure and maintain applications and features.

Career Conversations Conversations reference

Career Conversations administrators create conversations that are used by managers and employees.

Conversations are created by managers to facilitate growth and development plans with employees. Growth Plans can be created from a conversion.

Discussion Series form

Field	Description
Employee	Select from the list of users in your organization. This field replaces the **Mentee** field when the **Conversation type** field is set to **Growth Conversations** or **Growth Plan Check-ins**.
Manager	Select from the list of managers in your organization. This field replaces the **Mentor** field when the **Conversation type** field is set to **Growth Conversations** or **Growth Plan Check-ins**.
Mentee	Select from the list of users in your organization. This field replaces the **Employee** field when the **Conversation type** field is set to **Mentoring Conversations**.
Mentor	Select from the list of users in your organization. This field replaces the **Manager** field when the **Conversation type** field is set to **Mentoring Conversations**.
Cadence	Select the frequency at which the conversation occurs.
Conversation type	Select from the list of conversations available in your organization.

Learning

The Learning application enables you to discover, manage, and engage with career development content. It enables users to configure learning catalogs that contain course items from both internal and external learning systems.

Learning includes the following key features:

Focus on your learnings

My learning is a new and modern centralized space to manage your learnings. Using this learning portal will give you clear view of your in-progress and assigned coursework that enables you to focus on your learnings. For more information, see My Learning.

Manage your activities

View and manage content activity and history. Learning administrators can create meaningful learning for learners with proper governance.

Track your achievements

Track your learning using the achievements feature. Achievements provide badges and certifications for gamification.

Share your learnings

Share learnings using functional lists of all content that you have interacted with from the beginning of your learning. Personal collections enable you to save content into customized folders for easy reference and sharing.

Leverage Skills Foundation

Skills Foundation integrates with Learning to introduce skills-driven learning search results. Skills Foundation recommends and suggests courses based on your skills.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Manager Hub
- Skills Foundation

  When the Skills Foundation property **sn_skills_int.enable_skills** is set to true, the use of Skills Foundation is enabled for all Learning. See Configuring Skills Foundation for more information about Skills Foundation properties.

Role required: admin

About this task

When an administrator installs the Learning app from the ServiceNow store, it integrates learning, skills identification, aspirations, and planning for a personal career growth and development plan.

Procedure

1. Go to the ServiceNow Store and find the application using the filter criteria and search bar.

   In the list next to the **Install** button, the versions that are available to you're displayed.

2. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to install it, select the **Load demo data** check box.

   Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

5. Select **Install**.

What to do next

Allow RCAs

After you install Learning you might encounter Restricted Caller Access (RCA) approval messages requesting an update in the access request. Allow the following RCAs:

- Target Human Resources Core
- Target Journey Accelerator
- Target Journey Designer

Dependencies

The Learning application depends on other applications such as Learning Core and Employee Profile.

Activate and setup Learning

Learn how to set up and start using Learning.

Activating application

You can activate the Learning from the ServiceNow store. This application includes demo data and activates related plugins if they aren't already active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Learning is available with the Employee Center application. Some of the features of Learning work only when the HR Service Delivery and Employee Journey Management applications are activated.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Licensing

Learning leverages the new, Talent Development licensing module. This licensing feature allows registered ServiceNow applications to grant users licenses for the apps based on employee profile and other additional criteria.

Configuring data

Learning comes with optional demo data.

For more information, see Install and configure Learning and Learning reference.

Skills Foundation integration with Learning

Learning integrates Skills Foundation to skill based recommendations for a learner. Learning admins can add skills to a learning course by searching and selecting skills using the skills Intelligent widget.

For more information, see Using My Learning.

Using My Learning

Use My Learning in Employee Center to access your learnings and achievements.

Enroll in a course collection on My Learning

Enroll in a course collection to pursue courses that can enhance your skills.

Before you begin
Role required: learning.user

Procedure

1. Navigate to **All** > **Employee Center** > **My Learning** > **Discover**.
2. Select a course collection or path that you want to pursue.

   Note:
   The option to enroll is available only within a course collection or a path.

3. Select **Enroll**.
4. Select **Start** to start learning.
5. **Optional:** Select **Skip** within a course collection and continue to the next course.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. **Optional:** Toggle the **Show completed** switch to view the courses that you've completed and ignore the ones that you've skipped.

Note:

- Although certain courses can be skipped in a course collection or a path, they must be completed or skipped in the order that they appear.
- The Show completed toggle switch is available only for content that is skipped within a course collection or path.

Resume a course

Use this widget to easily access and resume any course that you may have left mid-way.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Employee Center** > **My Learning**.
2. In the Overview page, select the course, course collection, or path that you want to resume from the Continue where you left off widget.

Note:
This widget is only available when you have courses that are in the in-progress state.

3. Select **Resume**.

Create a personal course collection

Create personal collections to include the courses and paths that you would like to access easily.

Before you begin

Role required: user

Procedure

1. Navigate to **All** > **Employee Center** > **My Learning**.
2. Select the context menu icon on any course that is displayed on the screen.
3. Select **Save to collection**.
4. Select **Create New**.
5. On the form, fill in the fields.

Create new collection form

Field	Description
Collection name	Name of the new personal collection.
Description	Brief description of the personal collection.

6. Select **Save**.

Save courses to your personal collection

Save courses of interest to your personal collection for easy access and to plan your learning.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Create a personal course collection. For more information, see Create a personal course collection.

Role required: user

Procedure
1. Navigate to **All** > **Employee Center** > **My Learning**.
2. Select the context menu icon on any course displayed on the screen.
3. Select the collection that you want to save the course to.
4. Select **Apply**.

> **Note:**
> If you haven't yet created a personal collection, see Create a personal course collection.

Create a Learning challenge

Create a Learning challenge to challenge yourself to complete a particular number of courses within a time frame that you choose.

Before you begin
Role required: none

About this task
Learning challenge is a new widget available on the Overview tab that gives you a quick overview of all the challenges you've created to track your learning progress.

Procedure
1. Navigate to **All** > **Employee Center** > **My Learning**.
2. On the My Learning home page, select **Start a Learning Challenge**.
3. On the form, fill in the fields.

Set a learning challenge form

Field	Description
Give your challenge a title	Title for your challenge.
How frequently do you want to track your course completion?	Suitable frequency to track your course completion status. The available frequencies are: ○ Weekly ○ Monthly ○ Quarterly ○ Yearly
When do you want to start?	Month in which you intend to begin with the challenge.
How many courses do you want to complete in each tracking period?	Number of courses that you target to finish for each tracking period.

4. Select **Save changes**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
A Learning challenge is created along with a new widget on the Overview tab to track your progress.

Complete a learning challenge

Complete a learning challenge whenever you're ready to finish with it.

Before you begin
Role required: no role required

Procedure

1. Navigate to **All** > **Employee Center** > **My Learning**.
2. On the learning challenge widget, click the context ⋮ icon.

   Note:
   You might see different labels on the widget depending on your current status on the challenge. If you have started the challenge, you will see Your current challenge.

3. Select **Complete challenge**.
4. Click **Yes, I'm done**.

Result
The current challenge will be completed, but you can always revisit it under the **Activity** tab.

Restart a learning challenge

Restart a challenge when you want to reset the progress you have made on the challenge.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Employee Center** > **My Learning**.
2. On the learning challenge widget, select the context ⋮ icon.

   Note:
   You might see different labels on the widget depending on your current status on the challenge. If you have started the challenge, you will see Your current challenge.

3. Select **Start again**.
4. On the **Do you want to restart this challenge** pop-up, click **Yes, I'm done**.

View recent activity

Review your recent learning activity with easy access to your assigned, saved, shared with, and history tabs.

Before you begin
Role required: learning.user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **My Learning**.
2. View your assigned, saved, shared with you, and history of completed courses using the following tabs available under the **Activity** tab on My Learning.
   - Assigned: View courses that are assigned to you here.
   - Saved: View courses saved to your personal collection here.
   - Shared with: View courses that are shared with you by others here.
   - History: View information on your completed courses here.

Assign Learning to your team

As a manager, assign Learning to your team members to enhance their skills.

Before you begin

Role required: sn_lc.learning_manager

Procedure

1. Navigate to **All** > **Employee Center** > **My Learning** > **Assigned to your team**.
2. Select **Assign learning**.
3. On the form, fill in the fields:

Assign Learning form

Field	Description
Assign this Learning to	Learner who the learning is assigned to.
Assigned material	Learning material to be assigned to the assignee.
Assignment description	Reason for assigning this Learning to the learner.
Due by	Date that the Learning is due.

4. Select **Assign**.

Manage Learning

Using Learning, learning administrators can manage user activities. To aid the users learning journey, learning admins can create achievements, define achievement rules, and monitor the overall learning activity of a user.

Create a content collection

Create a content collection in Learning to dynamically group Learning content that includes multiple internal and external courses.

Before you begin

Every collection must be a part of a course catalog. Create a course catalog before you create a collection. For more information, see Create a course catalog.

Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Collection**.
2. Select **New**.
3. On the Collection form, fill in the fields.
   For a description of the field values, see Collection form.
4. Select **Submit**.

Collection form

Add course items to collection

Add learning course sections

Add course items to collection

After you create a collection, add course items as groupings of courses that are orchestrated within ServiceNow®.

Before you begin

Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Create a content collection. For more information, see Create a content collection.

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Collection**.
2. Select the collection that you want to add course items to.
3. On the **Course Collection Items** tab, select **New**.
4. On the form, fill in the fields:

Collection course item

Field	Description
Collection	Associated course collection.
Course	Course item to be added to the selected collection.
Order	Order that defines the start of a new section. All learning courses that have order greater than this defined order will be displayed under this section.
Mandatory	If it is mandatory for the course item to be added to the collection.

Define user access to course within a collection

Define user access to the collection to define who has read access to the collections.

Before you begin

Role required: admin

Create a collection. For more information, see Create a content collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Collection**.
2. Open the collection that you want to define user access for.
3. On the Can Read related list, select **Edit**.
4. Add users who should have access to the course catalog.
5. On the Cannot Read related, select **Edit**.
6. Add users who should not have access to the course catalog.

> **Note:**
> When a user is present in both Can Read and Cannot Read related lists then Cannot Read takes precedence, and the user is restricted from read access to that course catalog.

Add learning course sections

Add learning course sections to collections.

Before you begin
Role required: sn_lc.learning_admin

Create a collection. For more information, see Create a content collection.

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Collection**.
2. Open the collection that you want to add learning course sections to.
3. On the Learning Course Sections related list , select **New**.
4. On the form, fill in the fields:

Learning course section

Field	Description
Title	Name of the learning course section.
Course item	Associated course item.
Order	Order of the learning course item within the collection.
Short description	Description of the learning course item.

5. Select **Submit**.

Assign topics to a collection

Add assigned topics to collections.

Before you begin
Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Procedure

1. Navigate to **All** > **Content** > **Collection**.
2. Open the collection that you want to add assigned topics to.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the Assigned Topics related list , select **Add**.
4. Select a topic to be added as connected content to the collection.

Create internal Learning content

Create internal Learning courses so that employees can learn new content and enhance their skills set.

Before you begin

Role required: sn_lc.catalog_manager

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Internal Content**.
2. Select **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Learning internal content form.
4. Select **Submit**.

What to do next

Add associated skills to external learning content in Learning. For more information, see Add associated skills to Learning content.

Related topics

Learning internal content form

Define user access to course within internal learning content

Define user access to define who has read access to internal learning content.

Before you begin

Role required: admin

Create internal learning content. For more information, see Create internal Learning content.

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Internal Content**.
2. Open the internal learning course that you want to define user access for.
3. On the Can Read related list , select **Edit**.
4. Add users who should have access to the internal learning course.
5. On the Cannot Read related list , select **Edit**.
6. Add users who should not have access to the internal learning course.

> **Note:**
> When a user is present in both Can Read and Cannot Read related lists then Cannot Read takes precedence, and the user is restricted from read access to that internal learning course.

Assign topics to internal content

Add assigned topics to internal learning content.

Before you begin
Role required:sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Procedure

1. Navigate to **All** > **Content** > **Internal Content**.
2. Open the internal learning course that you want to add assigned topics to.
3. On the Assigned Topics related list, select **Add**.
4. Select a topic to be added as connected content to the internal learning course.

View external Learning content

View the details of all course items that are pulled from external sources into the Learning application.

Before you begin
Role required: sb_lc.learning_admin

Procedure

1. Navigate to **All** > **Learning** > **Content** > **External Content**.
2. Select the course item that you want to view.
3. On the Learning External Content form, view the fields.
   For a description of the field values, see Learning External Content form.

Define user access to course within external learning content

Define user access to configure who has read access to external learning content.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Learning** > **Content** > **External Content**.
2. Open the external learning course that you want to define user access for.
3. On the Can Read tab, select **Edit**.
4. Add users who should have access to the external learning course.
5. On the Cannot Read tab, select **Edit**.
6. Add users who should not have access to the external learning course.

> **Note:**
> If a user is present in both Can Read and Cannot Read related lists, the Cannot Read takes precedence and the user is restricted from read access to that external learning course.

Assign topics to external content

Assign topics to external learning content in Learning.

Before you begin
Role required:sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Procedure

1. Navigate to **All** > **Content** > **External Content**.
2. Open the external learning course that you want to add assigned topics to.
3. On the Assigned Topics tab, select **Add**.
4. Select a topic to be added as connected content to the external learning course.

Add associated skills

Add associated skills to external learning content in Learning.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Content** > **External Content**.
2. Open the external learning course that you want to add assigned topics to.
3. On the **Associated skills** tab, select **New**.
4. On the form, fill in the fields.

Skill form

Field	Description
Name	Name of the skill.
Description	Detailed description about the skill.
Level Type	Level type to which the skill belongs.
Active	Option to enable the skill.

5. Select **Submit**.
6. On the **Associated skills** tab, select **Edit**.
7. Add users who should have access to external learning content skills.

Create a learning library

Create a learning library that includes learning content from internal and external content repositories.

Before you begin

Role required: sn_lc.catalog_manager, sn_lc.catalog_group_manager

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Learning Libraries**.
2. Select **New**.
3. On the Learning library form, fill in the fields.
   For a description of the field values, see Learning library form.
4. Select **Submit**.

Add course items to learning library

To add course items to the catalog

Before you begin
Role required: admin

Create a learning library. For more information, see Create a learning library

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Learning Library**.
2. Select the learning library that you want to add course items to.
3. On the Content related list, select **Add**.
4. On the Select content window, select courses and click **Add selected**.

Add users to learning library

You can add applicable users to a learning library.

Before you begin
Role required: admin

Create a learning library. For more information, see Create a learning library

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Learning Library**.
2. Select the learning library that you want to add course items to.
3. On the Applicable Users related list, select **Edit**.
4. On the Edit Members window, select courses and click **Save**.

Create a learning task

Assign a learning task to an employee that can be completed from the To-dos page in Employee Center.

Before you begin
Role required: sn_lc.task_creator

Procedure

1. Navigate to **All** > **Learning** > **Tasks** > **Learning Tasks**.
2. Select **New**.
3. On the Learning task form, fill in the fields.
   For a description of the field values, see Learning task form.
4. Select **Submit**.

Learning task form

Create an achievement definition

Create definitions for achievements to define the end goal.

Before you begin
Role required: sn_lep.achievement_manager

Procedure

1. Navigate to **All** > **Learning** > **Achievements** > **Achievement Definitions**.
2. Select **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Achievement form.

Define user access for achievements

Define user access to the collection to configure who has can and can't read access to the achievements.

Before you begin
Role required: sn_lc.learning_admin, sn_lep.achievement_manager

Create an achievement. For more information, see Create an achievement definition.

Procedure

1. Navigate to **All** > **Learning** > **Achievements** > **Achievement definitions**.
2. Open the achievement that you want to define user access for.
3. On the Can Read related list, select **Edit**.
4. Add users who should have access to the achievement.
5. On the Cannot Read related list, select **Edit**.
6. Add users who shouldn't have access to the achievement.

> **Note:**
> When a user is present in both Can Read and Cannot Read then Cannot Read takes precedence, and the user is restricted access to that achievement.

Add associated skills to an achievement

Add associated skills to define the scope of an achievement.

Before you begin
Role required: sn_lep.achievement_manager

Create an achievement. For more information, see Create an achievement definition.

Procedure

1. Navigate to **All** > **Learning** > **Achievements** > **Achievement definitions**.
2. Select the achievement that you want to add associated skills to.
3. On the Associated skills related list, select **Edit**.

Procedure

1. Navigate to **All** > **Achievements** > **Achievement Rules**.
2. Open the achievement rule that you want to add an achievement rule item to.
3. In the achievement rule item section, select **New**.
4. On the form, fill in the fields.

User achievement form

Field	Description
Name	Name of the user whose achievements are projected.
Type	Status of the achievement. If it's current, at risk, or expired.
Achievement rule	The associated achievement rule.
Active	Option to indicate that the achievement rule item is available for use.
Content	Content associated with the achievement.
Order	Order in which the achievement rule item appears.

5. Select **Submit**.

Skill sensing for learning content

Skill sensing is an automated approach to identify and extract skills from the title and description of a course so that the admin can associate the skills to a course.

Plugin requirement: Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai), Learning core plugin (sn_learning_core), and Skills foundation plugin (sn_skills_int).

You can add skills to the learning courses using skill sensing in two ways:

- Add skills at the individual course level. For more information, see Add skills to a course with skill sensing.
- Add multiple skills automatically using the skill sensing configuration or you can review the skills manually. For more information, see Configuration for bulk skill sensing and Add or discard multiple skills with skill sensing.

Add skills to a course with skill sensing

Add skills to a course manually using the Large Language Model (LLM) skills recommendations based on the title and description of the course.

Before you begin

Role required: Learning admin

Plugin requirement: Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai), Learning core plugin (sn_learning_core), and Skills foundation plugin (sn_skills_int).

Note:
Manual skill recommendation works for Internal courses, external courses, exams and assessments. The recommendations don't work for Paths and collections.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Internal content/External content**.
2. Select a course for which you want to add skills.
3. Select **Add skills**.
4. Select **Get recommendations**.
   - The skills recommended are populated from the Review skills recommendation table based on the title and description of the course.
   - The existing skills that are tagged to a course are not recommended again.
   - The **Get recommendations** option is displayed only when you are adding skills to a course for the first time. From the next time onwards, the **Refresh recommendations** option is displayed.
5. In the Recommended skills list, select **Add** to add the skill, and **Discard** to reject the skill.
   - Skills once discarded are not recommended again unless manually deleted from the Recommended skills list.
   - The discarded skills are in the Review skills recommendation table in the Rejected state. You can manually restore the skills status from this table.
6. In the Selected skills list, you can see the skills that are added also change the level type of a skill.
7. In the Search for a skill field, type in a skill name and add it to the selected skills list.
   You cannot add the skills that are already in the Selected skills list.
8. Select **Add skill(s)** to confirm the selection.
   Only after you select the Add skills(s) option, the changes are saved.

Result

- The added skills are linked to the course and displayed in its Associated skills list. They are also stored in the Course item skills table (sn_lc_course_item_m2m_cmn_skill) and removed from the Review skills recommendation table.
- Discarded skills move to the Review skills recommendation table with a Rejected status. You can later change their status to Pending or Accepted.

Configuration for bulk skill sensing

Define conditions to create a sub set of learning courses on which you can run the scheduled job enabling you to accept multiple recommended skills.

Before you begin

Role required: Learning admin

Plugin requirement: Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai), Learning core plugin (sn_learning_core), and Skills foundation plugin (sn_skills_int).

Procedure

1. Navigate to **All** > **Learning** > **Learning Skill Recommendations** > **Skill Sensing Configuration**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Skill Sensing Configuration form

Fields	Description
Table	The table from which the courses are extracted.
Condition	Use the **Add Filter Condition** option to refine the learning courses for the condition types that are set. All the learning courses that meet this condition receive skill recommendations. **Note:** ○ The trigger conditions are based on Learning Course items (internal courses, external courses, and exams). ○ If there are no records matching the condition, you cannot generate the recommended skills.
Exclude courses below minimum skills count	Filter the learning courses that already have a specific number (Minimum skills count) of skills tagged. For example, if the Minimum skill count is three, the courses that have three skills or above are not considered.
Exclude courses that already have recommended skills	Omits the learning courses that already have skills recommended by Large Language Model (LLM).
Include active courses with recent learner activity	Include learning courses that have any recent activity like a course being assigned, started, in-progress. Note: Apart from the filter conditions, the above three fields can be used to further filter the courses.
Active	Make the configuration active. **Note:** Only one skill sensing configuration must be active at a given point.
Description	A description for the configuration.

4. Select **Submit**.
5. Select **Generate recommended Skills** to generate skills recommendations.

Note:
If you don't have the Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai) installed, the **Generate recommended Skills** option is not displayed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Proceed** to create the records in the Review skills recommendation table.

> **Note:**
> If the system property sn_lc.auto_accept_llm_recommendations is set to True, all the recommended skills are automatically accepted and added to the Course item skills table (sn_lc_course_item_m2m_cmn_skill). The skills will also be linked to the respective learning courses based on the table mapping. By default, this property is set to False.
>
> .

Add or discard multiple skills with skill sensing

Review and approve the Large Language Model (LLM) recommended skills before tagging them to the learning courses.

Before you begin

Role required: Learning admin

Plugin requirement: Now Assist for HR Service Delivery (HRSD) plugin (sn_hr_gen_ai), Learning core plugin (sn_learning_core), and Skills foundation plugin (sn_skills_int).

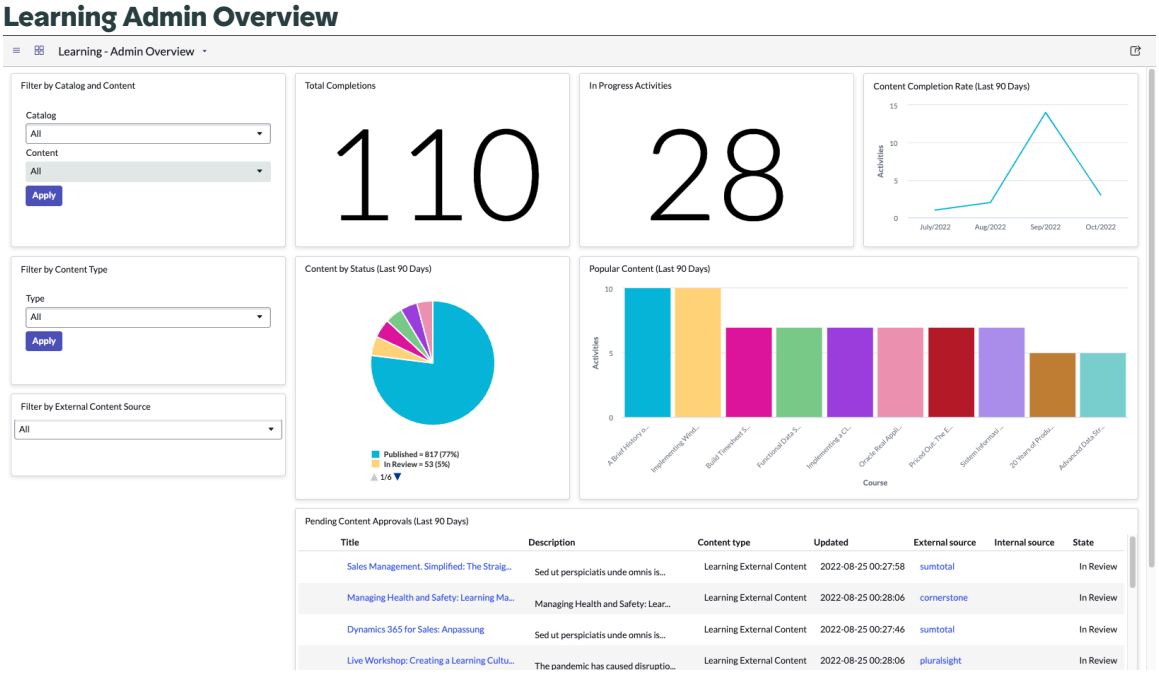
Procedure

1. Navigate to **All** > **Learning** > **Learning Skill Recommendations** > **Review Skill Recommendations**.
   - All recommended skills from learning courses are shown, including those in Pending and Rejected states, listed in the order they were imported.
   - The Source column shows where the skills originated: LLM for AI-generated skills and NULL for skills created manually.
2. Select the skills that you want to accept.
3. Select the **Actions on selected rows** drop-down.
   - Select **Accept skills** to approve the skills.
   - Select **Reject skills** to decline the skills.

> **Note:**
> Skills in the Pending state are deleted six months after their creation, while skills in the Rejected state are deleted nine months after the created date.

4. Select **Proceed** to accept the selected skills.
   The selected skills are added to the Course item skills table (sn_lc_course_item_m2m_cmn_skill) and linked to the relevant learning courses. They are then removed from the Course Item Recommended Skills list.

Reporting solutions for Learning

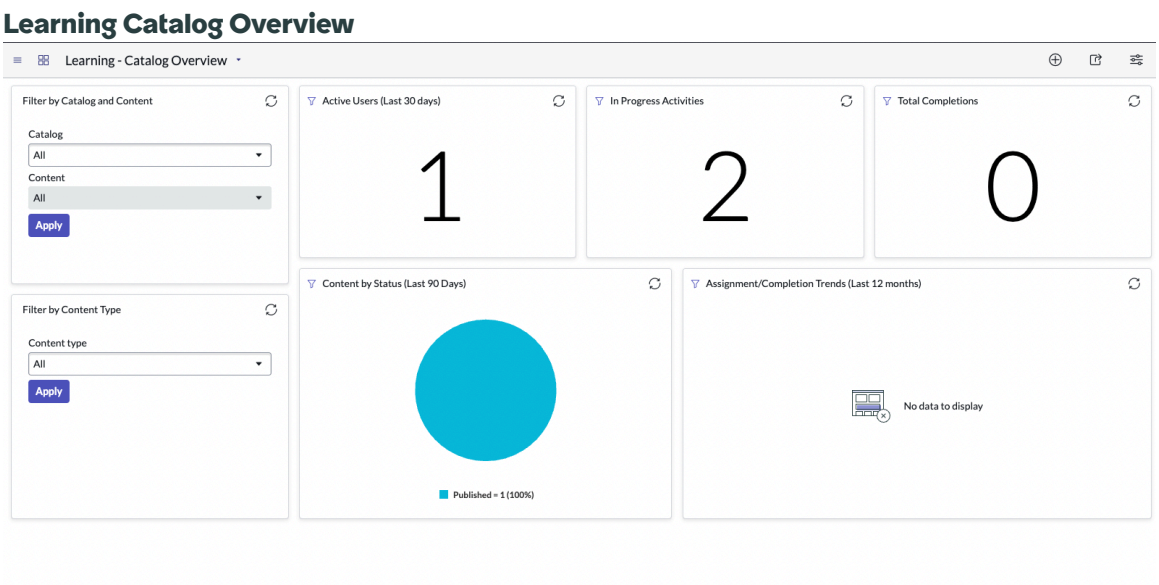


Learning comes with the following dashboards that project targeted reports to provide consolidated data on all user activities that help measure the success of learning content.

Learning admin overview dashboard

Learning admin overview dashboard provides the learning administrator with a consolidated report on user course activities.

The Learning Admin Overview dashboard provides the learning administrator (sn_lc.learning_admin) with helpful information of the overall activity on the Learning application.

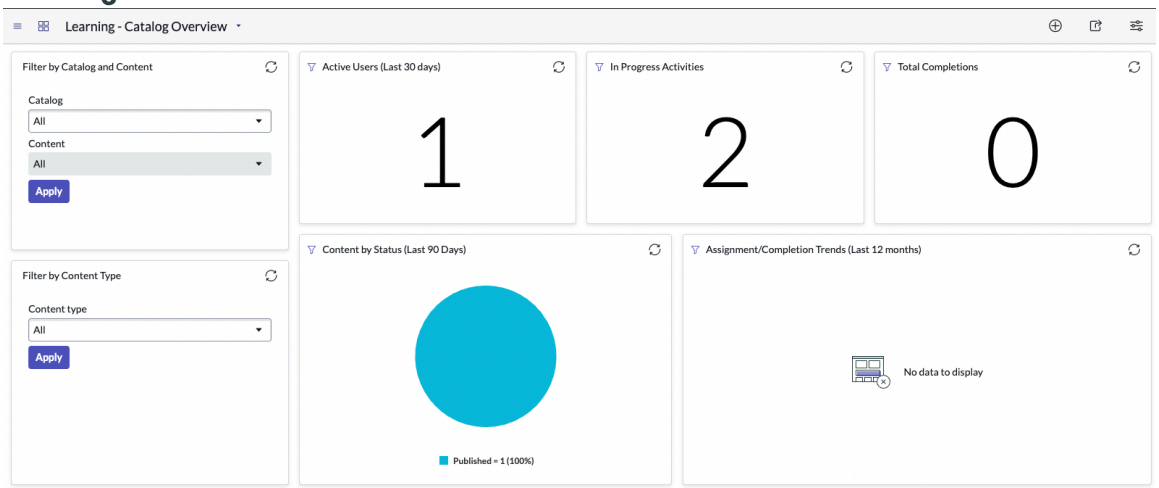


© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning catalog overview

Learning catalog overview dashboard provides the learning catalog manager with a detailed view of the user activities.

The Learning Catalog overview dashboard gives a bird's eye view of all the learning activity of the users to the Catalog manager.



Learning content author overview dashboard

Learning content author overview dashboard provides a detailed report of user activities to the content author.

Learning content author dashboard is also shared with the Learning admin.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning content author dashboard

Learning reference

All information regarding the system properties and tables installed with learning experience are listed here.

Collection form

Use the Collection form to create a content collection in Learning Core to dynamically group Learning content that includes multiple internal and external courses.

Collection form

Field	Description
Title	Name of the collection.
Course catalog	Course catalog associated with the collection.
Level	The difficulty level of content in the collection. • **Beginner** • **Intermediate** • **Advanced**
Course type	The type of content in the collection. • **Collection** • **Path**
State	Current state of the collection.
Active	Option to enable the collection. When this check box is selected, the collection can be accessed by users.
Image	Image associated with the collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Collection form (continued)

Field	Description
Estimated duration	Estimated duration of the collection in days, hours, minutes, and seconds.
Details	
Short description	Brief description about the collection.
Description	Detailed description about the collection.
Approval	Approval status of the collection.
Audience	
Non discoverable	Option for the visibility of the collection. When this check box is selected, the collection doesn't appear in the search results on the Learning portal. Every collection is discoverable by default.
Metrics	
Average rating	Average rating of content in the collection.
Release Lifecycle	
Published	Published date of the collection.
Planned publish date	Scheduled publish date of the collection.
Valid until	Retirement date of the collection.

Learning internal content form

Use the Learning internal content form to create internal Learning courses so that employees can learn new content and enhance their skills set.

Learning Internal Content form

Field	Description
Internal source	Type of Learning content that is created. • **Knowledge article** • **URL** • **Free form** • **Quiz**
Knowledge Article	Knowledge article to be included in theLearning content. This field is available only when **Knowledge article** is selected from the **Internal source** field.
URL Domain	Link to be included in internal Learning content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning Internal Content form (continued)

Field	Description
	• **Youtube** • **Vimeo** • **Other** This field is available only when **URL** is selected from the **Internal source** field.
URL	URL for the selected domain. This field is available only when **URL** is selected from the **Internal source** field.
Title	Title of the Learning content.
Course catalog	Course catalog associated with the internalLearning course.
Level	Level of complexity of the Learning content.
State	Current state of the internal Learning course.
Author	Name of the user who created the Learning content.
Days to expire	Number of days before the content expires.
Active	Option to indicate that content is available for use.
Estimated duration	Total duration of the course content in days and hours. For example, for a video, it's the duration of the video. For a Knowledge article, the duration is estimated based on the length of the article.
Image	Image associated with the internal Learning course.
Details	
Short description	Brief description of the internal content.
Description	Full description of the internal content.
Objective	End goal of the internal content being created.
Audience	
Non discoverable	Determines if the course is discoverable by the audience. If a course is non-discoverable, it can’t be assigned and doesn't appear in the search results on the portal.
Metrics	
Average rating	Rating given to the content.
Release Lifecycle	
Published	Published date of the internal content.
Planned publish date	Date when the internal content is due for publishing.
Valid until	Date until when the internal content is valid.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning External Content form

Description of the field values in the Learning External Content form.

Learning External Content form

Field	Description
Title	Title of the content that is pulled from a third-party learning system.
Correlation ID	Unique identifier for the course item that is generated from an external system.
External source	Name of the external learning system that the course item is pulled from.
Active	Option that indicates that the course item is active and available to use.
Mobile deeplink	Deeplink that is generated from an external system. Deeplink enables you to navigate to a course from a native application.
URL	URL used to open the course item on an external system.
Description	Description of the course item that is pulled from an external learning system.
Type	Type of service (OnDemand Push or Scheduled Pull) that interacts with an external learning system.
Updated	Date and time when the course item was last updated.
Estimated duration	Estimate of the total time that is taken to complete the course item.

Learning library form

Use the learning library form to create a learning library.

Learning Library form

Field	Description
Title	Name of the catalog.
Active	Option to indicate that the catalog is available for use.
Applicable to groups	Option to enable the assignment of course to groups. **Note:** This field is applicable only to WFO/Coaching application.
Description	Description of the catalog.
Manager Access Restrict To	Employees that the catalog is visible to or employees who can curate the items in the catalog. **Note:** This field appears only when **User criteria** is selected in the **Restrict Type** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning task form

Assign a learning task to an employee that can be completed from the To-dos page in Employee Center.

Learning task form

Field	Description
Number	Unique identifier of the learning task.
Assigned to	User to whom you want to assign the learning task.
Learning Library	Name of the learning library that is assigned via the learning task.
Course Item	Name of the course item that is assigned via the learning task.
Optional	Option to make the learning task non-mandatory.
State	Current state of the task.
Due date	Date by which the assignee must complete the learning task.
Opened by	Name of the user who has created the learning task.
Short description	Additional details of the learning task.

Achievement form

Create achievement definitions to associate them with courses.

Achievement form

Field	Description
Name	Name of the achievement definition.
Image	Relevant images that you attach to support the achievement.
Course catalog	Associated course catalog for the achievement definition.
Type	The type of achievement definition. • **Certification** • **Badge**
Expires	The achievement expires after a certain period of time.
Description	Description of the achievement received.

Achievement rule form

Create achievement rules to define the criteria to be met to complete an achievement.

Achievement rule form

Field	Description
Name	Name of the achievement rule.
Achievement	Associated achievement of the achievement rule.
Active	Whether the achievement rule is active or not.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Achievement rule form (continued)

Field	Description
Order	Order in which the achievement appears.
Completion requirement	Completion of an achievement. If all items, or count of items is required.
Item count	Number of items required to be completed to gain an achievement. This field is available only when **Count of items** is selected from the **Completion requirement** field.
Description	Description of the achievement rule.

Learning course catalog form

Use the course catalog form to create a new learning course catalog.

Learning Course catalog form

Field	Description
Title	Name of the catalog.
Owner	The owner of the course catalog.
Publish flow	Flow for publishing the course. Use **Insta publish flow** for immediate publishing of course catalogs.
Retire flow	Flow for publishing the course. Use **Insta retire flow** for immediate retirement of course catalogs.
Description	Description of the catalog.
Management	
Admins	Suitable administrator role for the course catalog.
Content properties	
Extension duration (days)	Number of days until which any course within the catalog can be extended.
Pending retirement duration (days)	Number of days remaining for the course to retire.

Life-cycle stages of a content collection in Learning Core

The State transition of a collection guides you through the stages of its life cycle.

Collection life-cycle stages

Life-cycle stage status	Description
Draft	Default value for a new collection.
In Review	Collection that is pending review.
Scheduled for Publish	Collection that is scheduled for publish.
Published	Collection that is published.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Collection life-cycle stages (continued)

Life-cycle stage status	Description
Pending Retirement	Collection that is pending for retirement.
Retired	Collection that is retired.

Components installed with Learning

Several types of components are installed with the activation of Learning, including tables, user roles, and scheduled jobs.

Roles installed

Roles in Learning

Role title	Description	Contains roles
sn_lc.learning_admin	Sets up Learning application configurations. Performs all the actions in the application. Possesses CRUD access for all tables.	sn_lc.learning_admin
sn_lc.catalog_group_manager	Manages catalogs and catalog groups on Learning application.	sn_lc.catalog_group_manager
sn_lc.learning_manager	Sets up Learning application configurations. Performs all the actions in the application. Possesses CRUD access for all tables.	sn_lc.learning_manager
sn_lc.catalog_manager	Manages catalogs on Learning application.	sn_lc.catalog_manager
sn_lc.task_creator	Responsible for creating learning tasks on Learning application.	sn_lc.task_creator
sn_lep.achievement_manager	Creates and manages achievements on Learning application.	sn_lep.achievement_manager

Tables installed

Tables installed with Learning

Table	Description
Achievement [sn_lep_achievement]	Stores details of all achievements configured on Learning.
User achievement [sn_lep_user_achievement]	Stores information of all user achievements on Learning.
Achievement rule [sn_lep_achievement_rule]	Defines the rules to define achievements on Learning.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Learning (continued)

Table	Description
Achievement rule item [sn_lep_achievement_rule_item]	Stores information of all the achievement rules on Learning.
Achievement skill [sn_lep_m2m_achievement_skill]	Maps the achievements to the associated skill.

Career Assessment

The Career Assessment application works as an exam engine that provides the ability to create exams that help with career advancement and help test a learner's knowledge of a subject.

Career Assessment is a test taking application that enhances the learning experience of users in Career Assessment. Career Assessment offers a unique user experience. In the back-end, learning administrators create exams and learning paths using Career Assessment to create customized learning journeys for users.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activating application

You can activate the Career Assessment from the ServiceNow store. This application includes demo data and activates related plugins if they aren't already active.

Note:
Career Assessment is available with the Employee Center application. Some of the features of Learning work only when the HR Service Delivery and Employee Journey Management applications are activated.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Licensing

Career Assessment leverages the new Talent Development licensing module. This licensing feature allows registered ServiceNow applications to grant users licenses for the apps based on employee profile and other additional criteria.

Configuring data

Career Assessment comes with optional demo data.

For more information, see Configuring Career Assessment and Career Assessment reference.

Using Career Assessment in Employee Center

Use Career Assessment to get a better understanding of your learnings. Act on items that need immediate attention, keep yourself up to date on upcoming content items and assessments.

For more information, see Using Career Assessment.

Career Assessment integration with Learning

Career Assessment integrates with Learning to improve assessment based learning. Learners can track their learnings and assess their knowledge using the quizzes available for different courses that they take on My Learning.

For more information, see Using My Learning.

Configuring Career Assessment

Configure Career Assessment by setting up the following.

Allow RCAs

After you install Career Assessment, you might encounter Restricted Caller Access (RCA) approval messages requesting an update in the access request. Allow the following RCAs:

- Target Human Resources Core
- Target Journey Accelerator
- Target Journey Designer

Using Career Assessment

Use Career Assessment to create exams.

Create exam catalogs

Create exam catalogs to be able to segregate exams based on category.

Before you begin

Role required: sn_exam.catalog_admin

Procedure

1. Navigate to **All** > **Career Assessment** > **Exam Catalogs** > **Create New**.
2. On the form, fill in the fields.

Exam catalog form

Field	Description
Name	Name of the exam catalog.
Admins	Option to select administrators for the exam catalog.
Owner	Person who owns the exam catalog.
Description	Description of the contents of the exam catalog.

3. Select **Submit**.

Define user access for an exam catalog

After creating an exam catalog, define user access criteria at the exam catalog level.

Before you begin

Role required: sn_exam.catalog_admin

Users configured as part of the admin list, can contribute user criteria or owner of the associated catalog can define user access for the catalog.

Create an exam catalog. For more information, see Create exam catalogs.

Procedure

1. Navigate to **All** > **Career Assessment** > **Exam Catalogs** > **All**.
2. Open the exam catalog that you want to define user access for.
3. On the Can Read tab, select **Edit**.
4. Add users who should have access to the exam catalog.
5. On the Cannot Read tab, select **Edit**.
6. Add users who should not have access to the exam catalog.

> **Note:**
> If a user is present in both Can Read and Cannot Read related lists, the Cannot Read takes precedence and the user is restricted from read access to that exam catalog.

7. Select **Save**.
8. On the Can Contribute tab, select **Edit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Add users who can contribute to the exam catalog.
10. Select **Save**.
11. On the Cannot Contribute tab, select **Edit**.
12. Add users who cannot contribute to the exam catalog.
13. Select **Save**.

Add exams to a catalog

Add exams to an exam catalog in Career Assessment.

Before you begin

Role required: sn_exam.catalog_admin

Create an exam catalog. For more information, see Create exam catalogs.

Procedure

1. Navigate to **All** > **Career Assessment** > **Exam Catalogs** > **All**.
2. Open the exam catalog that you want to add exams to.
3. On the Exams tab, select **New**.
4. On the form, fill in the fields.
   For a description of the field values, see Exam form.
5. Select **Submit**.

Create an exam

Create an exam on Career Assessment.

Before you begin

Role required: sn_exam.catalog_admin

Users configured as part of the admin list, can contribute user criteria or owner of the associated catalog can create exams.

Procedure

1. Navigate to **All** > **Career Assessment** > **Exams** > **Create New**.
2. On the form, fill in the fields.
   For a description of the field values, see Exam form.
3. Select **Submit**.

Result

The exam is created in Draft state.

Note:
The exam may only be published when it contains at least one question and two options with the required number of options marked as correct.

What to do next

Add questions to an exam. See, Add questions to an exam.

Add questions to an exam

Add questions for an exam in Career Assessment.

Before you begin
Role required: sn_exam.catalog_admin

Users configured as part of the admin list, can contribute user criteria or owner of the associated catalog can add questions for an exam.

Create an exam. See, Create an exam.

Procedure

1. Navigate to **All** > **Career Assessment** > **Exams** > **All**.
2. Select the exam you want to add questions to.
3. Select **Move to Edit** if the exam is in Published state.
4. In the questions section, click **New**.
5. On the form, fill in the fields.
   For a description of the field values, see Question form.
6. Select **Submit**.

What to do next
Add options to a question. See, Add options to a question.

Add options to a question

Add options for a question on Career Assessment.

Before you begin
Role required: sn_exam.catalog_admin

Users configured as part of the admin list, can contribute user criteria or owner of the associated catalog can add options for questions in an exam.

Create an exam. See, Create an exam.

Create a question. See, Add questions to an exam.

Procedure

1. Navigate to **All** > **Career Assessment** > **Exams** > **All**.
2. Select the exam you want to add questions to.
3. Select **Move to Edit** if the exam is in Published state.
4. Select the question you want to add options to.
5. In the question options section, select **New**.
6. On the form, fill in the fields.
   For a description of the field values, see Question option form.
7. Select **Submit**.

Add exams to a learning path from Career Assessment

Create internal learning content to add exams as content items within a learning path from Career Assessment.

Before you begin
Role required: sn_lc.catalog_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Procedure

1. Navigate to **All** > **Learning** > **Content** > **Internal Content**.
2. Select **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Learning internal content form.
4. Select **Submit**.

Related topics

Learning internal content form

View an exam instance

View an exam instance to verify number of attempts, scores and completion status of an exam assigned to a user.

Before you begin

Role required: sn_exam.admin, sn_exam.catalog_admin, user

Only a user with the sn_exam.catalog_admin role who is configured as part of the admin list or is an owner of the catalog may view an exam instance within the associated catalog. Users assigned to the exam may also view associated exam instances.

Procedure

1. Navigate to **All** > **Career Assessment** > **Exams** > **Exam Instances**.
   The following modules are available based on the state of the instances.
   - **All**: Displays exam instances in all states.
   - **Assigned**: Displays exam instances that are yet to be attempted.
   - **In Progress**: Displays exam instances that are in progress.
   - **Complete**: Displays exam instances that are complete.
2. Select the exam instance number that you want to view from the required module.
3. Review the fields of the form.
   For a description of the field values, see Exam instance form.

View number of exam instance attempts

View number of exam instance attempts by a user.

Before you begin

Role required: sn_exam.admin, sn_exam.catalog_admin, user

Only a user with the sn_exam.catalog_admin role who is configured as part of the admin list or is an owner of the catalog may view an exam instance within the associated catalog. Users assigned to the exam may also view associated exam instance attempts.

Procedure

1. Navigate to **All** > **Career Assessment** > **Exams** > **Exam Instances**.
   The following modules are available based on the state of the instances.
   - **All**: Displays exam instances in all states.
   - **Assigned**: Displays exam instances that are yet to be attempted.

Learning internal content form (continued)

Field	Description
	Select **Quiz** to add an exam to the learning path.
Quiz	Exam to be added to the learning path. This field is available only when **Quiz** is selected from the **Internal source** field.
Title	Title of the learning content.
Course catalog	Course catalog associated with the internal learning course.
Level	Level of complexity of the learning content.
State	Current state of the internal learning course.
Author	Name of the user who created the learning content.
Days to expire	Number of days before the content expires.
Active	Option to indicate that content is available for use.
Estimated duration	Total duration of the course content in days and hours. For example, for a video, it is the duration of the video. For a Knowledge article, the duration is estimated based on the length of the article.
Image	Image associated with the internal learning course.
Details	
Short description	Brief description of the internal content
Description	Full description of the internal content.
Objective	End goal of the internal content being created.
Audience	
Non discoverable	Determines if the course is discoverable by the audience. If a course is non-discoverable, it cannot be assigned and will not appear in the search results on the portal.
Metrics	
Average rating	Rating given to the content.
Release Lifecycle	
Published	Published date of the content.
Planned publish date	Date when the internal content is due for publishing.
Valid until	Number of days until the content is valid.

Exam Instance form

Field	Description
Number	System-generated unique exam instance number.
Assigned to	Name of the user assigned to the exam instance.
Score	Latest marks obtained by the user.
Score percent	Percentage of latest marks obtained by the user.
Exam	Name of the exam associated with the exam instance.
State	Current state of the exam instance.
Result	Pass or fail status of the exam instance.
Current completed attempts	Number of attempts completed currently.
Reattempt time	Wait time before the next attempt.

Exam instance attempt form

Description of the field values in the Exam instance attempt form.

Exam instance attempt form

Field	Description
Number	System-generated unique exam instance attempt number.
Attempt number	Current attempt number of the exam.
Total questions	Total number of questions in the exam.
Correct questions	Total number of questions answered correctly by the user.
Score	Latest marks obtained by the user.
Score percent	Percentage of latest marks obtained by the user.
Exam instance	Exam instance number associated with the exam instance attempt.
State	Current state of the exam instance attempt.
Result	Pass or fail status of the exam instance attempt.
Start time	Start time of the exam instance attempt.
End time	End time of the exam instance attempt.
Current Position	Position user was in before quitting the exam instance attempt. • Question order • **review** • **score**

Mentoring

The ServiceNow® Mentoring application is a platform that connects individuals seeking mentorship with experienced mentors. It creates a seamless experience for both mentees and mentors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Mentoring has the following features:

Enrollment

Employees can choose to enroll as either a Mentee/Mentor or as both roles by indicating their enrollment preferences – skills, focus areas and other preference for mentorship. For more information, see Enroll as a mentor or mentee.

Skills Preferences

Mentees can choose skills as of one of their Mentorship enrollment preferences. Mentors can choose skills that they can provide mentorship assistance. For more information, see Search and add skills.

Suggested Mentors

Enrolled Mentees can instantly view Mentor suggestions based on their enrollment preferences and also view additional match insights & mentor expertise to be able to choose an appropriate mentor. For more information, see View suggested mentors.

Mentor Search

Employees can search for mentors by name, job profile. They can also use additional filters to search from the list of mentors.

For more information, see Search for a mentor.

Match Insights Card

Employees, both mentees and mentors can view the match insights based on the match score calculated based on the skills and preferences set by them. For more information, see View match insights.

Detailed information on Mentoring

Using Mentoring

Using

Mentoring reference

Reference

Exploring Mentoring

Mentoring is a new and modern platform that provides an opportunity for employees to find and build meaningful mentoring relationships to drive employee growth and engagement.

Exploring Mentoring

Learn how to set up and start using Mentoring.

Activating application

You can activate the Mentoring from the ServiceNow store. This application includes demo data and activates related plugins if they aren't already active.

Note:
Mentoring is available with the Employee Center application. Some of the features of Mentoring work only when the Career Conversations application is activated.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Licensing

Mentoring leverages the new Talent Development licensing module. This licensing feature allows registered ServiceNow applications to grant users licenses for the apps based on employee profile and other additional criteria.

Configuring data

Mentoring comes with optional demo data.

For more information, see Configuring mentoring and Mentoring reference.

Using Mentoring

Use Mentoring to get a better understanding of your learnings. Act on items that need immediate attention, keep yourself up to date on upcoming content items, courses, and so on.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Using Mentoring.

Skills Foundation integration with Mentoring

Mentoring integrates Skills Foundation to skill based recommendations for a mentor/mentee.

Mentoring home page

Mentoring home page provides you with a bird's eye view of all your mentorship relationships, requests, and programs.

Overview

The Overview tab is the first thing you see when you access Mentoring after navigating from Employee Center. Use this tab to view your current mentorships, mentorship requests, suggested mentors, and learn more about mentorship.

Your mentorships

Use the **Your mentorships** tab to find trending courses across your organization. You can browse through highlighted content promoted by the learning team, popular learning-related searches, and recommended content based on learners similar to you.

Configuring mentoring

Configuring Mentoring.

Before you begin

Install dependent plugins and apps for Mentoring.

Role required: sn_ecn.mentoring_admin

About this task

When an administrator installs the Mentoring app from the ServiceNow store, it integrates learning, skills identification, aspirations, and planning for a personal career growth and development plan.

About this task

Note:

Before installing Mentoring 2.0.1, first upgrade to an **MSI trued-up patch** of the Store Apps family version. This ensures all MSI fixes are applied correctly.

Procedure

1. Go to the ServiceNow Store and find the application using the filter criteria and search bar.

   In the list next to the **Install** button, the versions that are available to you're displayed.

2. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to install it, select the **Load demo data** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

5. Select **Install**.

What to do next
Allow RCAs

After you install Mentoring you might encounter Restricted Caller Access (RCA) approval messages requesting an update in the access request. Allow the following RCAs:

- Target Human Resources Core
- Target Journey Accelerator
- Target Journey Designer

Dependencies

The Mentoring application depends on other applications such as Career Conversations and Employee Profile.

Create a Mentoring program

Create a customized mentoring program that can be adopted by a mentee.

Before you begin
Role required: sn_ecn.mentoring_admin

Procedure

1. Navigate to **All** > **Mentoring** > **Programs**.
2. Select **New**.
3. On the form, fill in the fields.

Mentoring programs form

Field	Description
Name	Name of the program.
Minimum duration	Minimum duration of the program in months.
Default duration	Default duration of the program in months.
State	State of the program.
Maximum duration	Maximum duration of the program in months.

4. Select **Save**.

Add a new Mentoring participant

As a manager, add members from your team either as mentors or mentees to participate in mentorship program.

Before you begin
Role required: sn_ecn.mentoring_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Mentoring** > **Participants**.
2. Select **New**.
3. On the form, fill in the fields.

Mentoring participant form

Field	Description
Employee	Name of the employee you want to add as a participant.
Program	Name of the program that you want add the participant to.
Type	Type of participant ○ **Mentor** ○ **Mentee**
State	State of the participant. ○ **Draft** ○ **Enrolled** ○ **Unavailable**

4. Select **Save**.

Create a Mentoring relationship

As a manager, create a mentoring relationship between two of your employees.

Before you begin

Role required: sn_ecn.mentoring_admin

Procedure

1. Navigate to **All** > **Mentoring** > **Relationships**.
2. Select **New**.
3. On the Mentoring relationship form, fill in the fields.

   For a description of the field values, see Mentoring relationship form.

4. Select **Save**.

Using Mentoring

Use Mentoring in Employee Center to access your learnings and achievements.

Enroll as a mentor or mentee

Enroll as a mentor or mentee to learn from your peers in new ways.

Before you begin

Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **Your career** > **Mentoring**.
2. Select **Get started**.
3. Select one from the following options:
   - I want to be a mentee
   - I want to be a mentor

   Note:
   You can do both, but you will have to enroll as a mentee and mentor separately.
4. Select **Next** and answer the questions that appear in the wizard.

Add mentee preferences

As a mentee, add your preferences to find the right mentor to guide you through your career.

Before you begin

Enroll as a mentee. For more information, see Enroll as a mentor or mentee

Role required: none

Procedure

1. On the mentee preferences wizard, answer the required questions.
2. Use the **Search skills** option to add skills that a mentor can help you with.
   To add skills, see Search and add skills.
3. Select **Next**.
4. On the **What are you looking for from your mentor?** question, set preferences that will help you match with the right mentor.

   Note:
   Select at least one preference.

Mentor relationship preferences

Preference	Description
What industry expertise would you like your mentor to have?	Options available are: ○ Aerospace ○ Artificial Intelligence ○ Accounting ○ Financial Services ○ Consumer Goods ○ Health Care ○ Telecommunications ○ Government Administration
What topics of interest would you like to focus on with your mentor?	Options available are: ○ Developing Career Path ○ Leadership Development

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Preference	Description
	○ Problem Solving ○ Harnessing Feedback ○ Decision Making ○ Networking
What communities would you like your mentor to be involved in?	Options available are: ○ Women in the workspace ○ BIPOC employee resource group ○ LGBTQ+ employee resource group ○ Veterans ○ Working Parents ○ Career Beginners

5. Select **Next**.
6. On the **What are some of your other mentor preferences** question, add or remove options as per your choice.

Additional mentor relationship preferences

Other preferences	
Which department you want your mentor to be from?	Option to add the department you want your mentor from.
Which roles are you looking for your mentor to be in?	Option to search for mentors in particular roles.
Which timezones work best for you?	Option to add appropriate timezones.
Which locations work best for you?	Option to add an appropriate location to meet with your mentor.
What languages do you communicate in?	Option to select preferred languages.

7. Select **Enroll**.

> **Note:**
> You can also save your preferences by select **Save as draft**, if you are not ready to enroll as a mentee yet.

Search and add skills

As a mentee, search for a skill name or a keyword to find a mentor who specialises in that skill to help you.

Before you begin
Enroll as a mentee. For more information, see Enroll as a mentor or mentee

Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. On the mentee preferences wizard, answer the required questions.
2. Use the **Search skills** option to add skills that a mentor can help you with.
3. On the **Search for more skills** wizard, specify the proficiency level from one of the following using the slide bar.
   - Unrated
   - Novice
   - Intermediate
   - Advanced
   - Expert
4. Select **Add Skills**.

Result

Selected skills are added to current skill preferences. You can go ahead and complete the mentee preferences wizard after adding skills.

Add mentor preferences

As a mentor, add your preferences to help mentees find out if you're the right match for them

Before you begin

Enroll as a mentee. For more information, see Enroll as a mentor or mentee

Role required: none

Procedure

1. On the mentor preferences wizard, answer the required questions.
2. Select **Next**.
3. On the **What are you looking for from your mentor?** question, set preferences that will help you match with the right mentor.

Note:
Select at least one preference.

Employee Goals

The ServiceNow® Employee Goals application lets employees view and track their career goals from the Employee Center. This application is a tool that enables employees to stay focused and aligned with your company's strategic objectives, resulting in improved overall organizational performance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get started

Explore  Learn how employees and managers use Employee Goals.	Install and configure  Install the Employee Goals app from the ServiceNow store. As an administrator, you can configure application features when configuration options are available.	Integrate  Extend the capabilities of the Employee Goals app by integrating with HCM software.
Using  View and revisit your goals to align individual efforts with company objectives.	Reference  Get details about components like fields, tables, and properties.	

Exploring Employee Goals

The Employee Goals application provides employees and managers with visibility into business goals set by your organization and personal goals that are specific to an employee. This application helps employees cultivate their goals into growth plans to bolster the talent in your organization.

The Employee Goals app is closely integrated with the following apps in the Talent Development suite:

- Talent Development Core
  - Career profile
  - Growth plans
- Career Conversations

It also provides an integration with the following HCM systems that are widely used across organizations for goal management:

- Oracle Cloud HCM
- SAP SuccessFactors
- Workday

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

These integrations create a seamless process for employees and managers to view and track their goals from the Employee Center.

Employee Goals overview

The Employee Goals application integrates with the Talent Development suite of applications to enhance the professional growth of employees in your organization. This application enables employees to access and monitor their career goals via specific applications in the Talent Development suite.

When the Employee Goals app is installed, you can use certain applications in the Talent Development suite to view and track goals from the Employee Center. Employees continuously seek growth in their careers, and development often begins with a goal to support their professional endeavors. Goals provide employees with a sense of direction and focus, and keep employees motivated by fostering a culture of accountability. The Employee Goals app improves the employee and manager experience associated with using the Talent Development suite of apps by incorporating goals into the employee's career path. Its features provide the following advantages from which your employees and organization can benefit significantly:

- Establishes the prioritization of work.
- Assists employees to enhance their decision-making skills.
- Fosters an environment that promotes teamwork.
- Helps measure success.

Human capital management (HCM) integration

HCM software is an integrated suite of technologies that can help businesses manage their employees, from onboarding to retirement. A complete HCM system provides meaningful insights into the health of your workforce; it prioritizes employee experience and professional development to drive business outcomes. It also supports strategic processes and tasks, such as goal management, to help an organization function and evolve as its employees grow. To provide an integration with varying HCM systems, the Employee Goals app uses spokes to facilitate the connection. This integration enables you to view and track your goals using a single interface, thus creating a seamless process for goal management. This streamlined process simplifies the steps to view and track your goals, which helps to promote the adoption of the Employee Goals app across your organization.

The Employee Goals app provides an integration with the following HCM systems:

- Oracle Cloud HCM
- SAP SuccessFactors
- Workday

Talent Development integration

The Employee Goals app imports the data from your HCM system to the Employee Goals [sn_egd_goals_employee_goal] table. Once the goal data is imported, you can view the corresponding goal from the Employee Center. You can access your goals using the following applications in the Talent suite:

Career profile

Employees can view their goals by accessing their career profile. The career profile contains the Goals widget that displays a card for each goal that was imported from your organization's HCM system. The Goals widget contains the following tabs that filter your goals into categories, which facilitates fast and convenient access to the goals that you want to view:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Active**
- **Completed**
- **Archived**

You can select the **View details** link associated with a goal that appears in the Goals widget to retrieve more information about a specific goal. When you select the **View details** link, the Goal details panel appears. This panel displays the following information for each goal:

- Status (On track, At risk, Complete)
- Title
- Type of goal (Business, Personal)
- Description
- Date created
- Due date
- Start date

Career Conversations

Employees can view their goals using the Career Conversations app. The Career Conversations app provides an accordion for goals in the contextual side panel that appears during a growth conversation. When you expand the Goals accordion, a card for each goal appears.

If an employee shares a goal with their manager, the manager can view the corresponding goal in the contextual side panel during a growth conversation. The goals that appear in the Career Conversations app help the employee and manager initiate a conversation based on a goal that the employee wants to share with their manager. This integration creates convenience for your employees and managers by enabling them to view and reference goals through a single interface during one-on-one conversations that revolve around the employee's growth and development.

Growth Plans

Employees can create a growth plan based on an active goal. The Growth plans app displays the three most recent goals when an employee initiates the growth plan creation process. Similar to the process of creating a growth plan that originates from an aspiration or conversation, employees can select a goal that they want to develop into a growth plan. The Employee Goals app enables employees to use a goal as context to start a growth plan.

Installing and configuring Employee Goals

Install the Employee Goals application to import the goal management data stored on your human capital management (HCM) system to the ServiceNow AI Platform®. When configuration options are available, administrators can configure components of the application to meet the specifications of your organization.

After goal data is imported from your HCM system to the ServiceNow AI Platform, employees can conveniently access their goals from the Employee Center.

Install the Employee Goals application

Install the Employee Goals application to incorporate goals as a tool for developing your organizational talent. The Employee Goals app gives employees access to their goals from the Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

The Employee Goals app has dependency on the following applications:

- Career Conversations
- Talent Development Core
- Employee Center or Employee Center Pro

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Integrations for Employee Goals

Extend the Employee Goals application's capabilities by integrating with your organization's human capital management (HCM) system to make employee goals accessible while using the Talent Development suite of applications.

This integration enables the Employee Goals app to import goal management data from your HCM system to the Employee Goals [sn_egd_goals_employee_goal] table. Once the goal data is imported, employees in your organization can view and track their goals from the Employee Center.

The Employee Goals app provides an integration with the following HCM systems:

Oracle Cloud HCM

Integrate Oracle Cloud HCM with the Employee Goals app to access goals seamlessly from the Employee Center. For more information about the integration process with Oracle Cloud HCM, refer to Oracle HCM Cloud Spoke.

SAP SuccessFactors

Integrate SAP SuccessFactors with the Employee Goals app to access goals seamlessly from the Employee Center. For more information about the integration process with SAP SuccessFactors, refer to SuccessFactors Spoke.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workday

Integrate Workday with the Employee Goals app to access goals seamlessly from the Employee Center. For more information about the integration process with Workday, refer to Workday HR Spoke.

Using Employee Goals

Use the Employee Goals app to access goal management data across several applications in the Talent Development suite.

View your employee goals

View your goals by accessing your career profile. Your goals that appear in the Goals widget are filtered into the following categories: active, complete, archive.

Before you begin
Role required: employee [sn_egd_act.employee]

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the User options drop-down list, select **Profile**.

   Tip:
   The User options drop-down list is an icon that contains your user's profile picture.

   The employee profile appears.
3. Select the **Career** tab.
   The career profile appears.
4. Select **Goals** in the navigation menu to navigate directly to the Goals widget.
5. Select the **Active**, **Completed**, or **Archived** tabs in the Goals widget to view your goals by the category in which they're filtered.

Employee Goals reference

Reference topics provide additional information about the components and forms associated with the Employee Goals application.

Employee Goals table

The records in the Employee Goals table contain goal management data. Each record is created when the Employee Goals application imports the corresponding goal data from your organization's human capital management (HCM) system.

The form that appears when you select a record in the Employee Goals table contains the following fields:

Employee Goal form

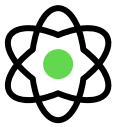
Field	Description
Name	A name for the goal that was set by the employee.
Owner	The employee to whom the goal belongs.
State	One of the following options to describe the status of the goal in terms of its progression:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Goal form (continued)

Field	Description
	• **Draft** • **In Progress** • **Approved** • **Complete** • **Pending** • **Achieved** • **Not Achieved**
Active	A check box to indicate whether the goal is active.
Archived	A check box to indicate whether the goal is archived.
Start date	The date at which the goal starts.
End date	The date at which the goal ends.
Shared with manager	A check box to indicate whether the employee shared their goal with their manager.
Description	Free-form text to describe the goal in detail.
Type	One of the following options to indicate the goal type: • **None** • **Business goal** • **Personal goal**
Status	One of the following colors to represent the status of the goal: • **None** • **Green** • **Yellow** • **Red**
Domain	The domain associated with the employee specified in the **Owner** field.

Opportunity Marketplace



Opportunity Marketplace enhances career mobility. It provides employees an intuitive experience to explore career opportunities. Customizable match preferences are seamlessly integrated with your Applicant Tracking System (ATS) to enhance employee engagement with transparent and efficient career development.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Opportunity Marketplace enables the creation, posting, and tracking of several types of opportunities. Base system opportunities include:

- **Internal jobs**
- **Projects**
- **Gigs**
- **Volunteer**

You can also create custom opportunities. For more details about custom opportunities, see Creating custom opportunity types in Opportunity Marketplace.

Explore	Install and configure	Using
		
Learn more about Opportunity Marketplace	Install the Opportunity Marketplace (OPM) app from the ServiceNow Store. As an administrator you can configure OPM features.	Talent Development Users access OPM from the Employee Center portal to view, manage, and track job opportunities.
	Reference	
		
	View technical details of the installed tables, roles, and other related Opportunity Marketplace technical information.	

Explore Opportunity Marketplace (OPM)

Manage opportunities for long-term or short-term projects that are available at your company. Employees can find and track opportunities while managers can post opportunities for projects, gigs, volunteer opportunities, and internal jobs.

User criteria added to opportunities by owners control the visibility of the opportunity to potential applicants.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Internal jobs

Opportunity Marketplace enable you to create, publish, and maintain internal job posting. You can explore open roles (positions) within your company.

Recommendations are based on your current role (job position), aspirations, and skills.

Internal jobs are tracked in the Job Posting [sn_ta_hiring_core_job_posting] table. You can view the best match analysis based on your current role, aspirations, or skills.

Artificial Intelligence (AI) is used in search to make sure the most relevant opportunities are returned.

Opportunity Marketplace best fit recommendations

Based on your current roles, aspirations, and skills Opportunity Marketplace (OPM) recommends opportunities for you.

Based on your current role

OPM looks at your current role and skills then compares it to the available published opportunities.

Within an opportunity you can see more information related to your role and what is used in making the recommendation. Select **Match analysis** to view details about how you were matched to the opportunity. Select **View details** to view information about the opportunity.

Based on your aspirations

OPM reviews any aspirations that you created in Talent Development and identifies potential opportunities that match with your aspirations.

Based on your skills

The OPM recommender looks at the skills that are in your profile to compare your skills needed for the opportunities.

You can read more about best fit recommendations and match analysis in these topics:

- View an opportunity match analysis

  Opportunity Marketplace (OPM) generates match analyses based on your current role, aspirations, and skills. Match analysis is based on your skills and preferences.

- Set opportunity preferences

  Opportunity preferences are used to evaluate which opportunities are best for you.

- Career tab in Employee Center

  View, update, and manage all aspects of your career using the Career tab in Employee Profile. Opportunity Marketplace looks at to skills to identify opportunities for you.

Gig opportunities

Gigs have a single role with one or more vacancies. Gigs and other opportunity types are configured by ServiceNow admins from the Opportunity Type Configuration form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Gigs refer to temporary jobs that involve well-defined tasks or projects. Gigs are flexible opportunities that can be short-term or long-term employment contracts. Gigs enable companies to find specialized skills or to scale their workforce according to project demands without committing to long-term resource commitments. For more information about opportunity types, see Manage and create opportunity types in Opportunity Marketplace.

Project opportunity

Projects facilitate creating a team consisting of multiple roles filled by multiple people. Projects can be broad in scope and be long-term or short-term in duration. Projects and other opportunity types are configured by ServiceNow admins from the Opportunity Type Configuration form.

Projects are temporary opportunities, but they can be either long-term or short-term in duration. Projects enable areas of career growth and development that can help employees gain visibility and experience. Projects can be customized to fit your needs.

- Demonstrate skills
- Innovate processes and deliverables
- Solve complex problems
- Demonstrate the ability to handle responsibility
- Lead teams

Projects enable managers to pull quickly from an available pool of resources and skills. For more information about opportunity types, see Manage and create opportunity types in Opportunity Marketplace.

Volunteer opportunities

Opportunities to volunteer can include multiple roles and skills for multiple people volunteering for activities related to the opportunity. Scope and duration can be long-term or short-term. Volunteer opportunities and other opportunity types are configured by ServiceNow admins from the Opportunity Type Configuration form.

Volunteer opportunities are positions or roles to which individuals offer their time and skills without expectation of compensation. Volunteer opportunities have many benefits.

- Contribute to a community (Give back!)
- Gain experience
- Develop personal and professional skills

Volunteer opportunities are often found in non-profit organizations, community groups, and other service-oriented entities. They can also be work opportunities that are outside an individual's normal scope of activities.

Engaging in volunteer work enables individuals to contribute to their community, gain experience, and develop personal and professional skills. Volunteer opportunities can vary widely, from short-term events to long-term commitments, and they often provide a platform for networking, learning, and personal growth. For more information about opportunity types, see Manage and create opportunity types in Opportunity Marketplace.

Opportunities you own in Opportunity Marketplace

From the Opportunities you own page in Opportunity Marketplace you can create, manage, and monitor opportunities. User criteria enables access to creating and updating opportunities.

Select a category to view a list of opportunities and applicants. Further refine the list of opportunities by filtering on the **Opportunity type**, **Status**, or **Sort by** filters and supports text search.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

All opportunities

Select **All opportunities** to view a list of all the opportunities that you own. The **Opportunity title** links to the opportunity details page.

New applicants

Select **New applicants** to view opportunities that have new applications that have not been reviewed.

Accepting applicants

Select **Accepting applications** to view a list of active opportunities that employees can apply to.

Use Opportunity Marketplace

Employees in your company use Opportunity Marketplace to find opportunities, apply for roles in the opportunity, and track the application process. Some employees create and publish opportunities to gather and evaluate resources for gigs, projects, and volunteer opportunities.

To access and use Opportunity Marketplace you must be a licensed Opportunity Marketplace user.

Access to opportunities is controlled by user criteria defined in the opportunity. Only opportunities for which you match the user criteria are visible.

Share an internal job opportunity

Share internal job opportunities with your coworkers.

Before you begin
Role required: None

Note:
Access is based on user criteria.

About this task
Sharing internal jobs enables you to connect with coworkers within the organization.

Procedure

1. From the Employee Center **Opportunity marketplace** > **Internal jobs**.
2. Locate any **Internal job** post.

   Note:
   Internal job posts are available from multiple locations.

3. Populate a list of names by selecting **Search by name**.
4. Select the name of the person that you want to share the opportunity with.
5. **Optional:** Add a personal note.
6. Select **Share opportunity**.

Result
The opportunity is sent to the coworker that you shared it with.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
When you share an opportunity with a coworker, you and the person you share the opportunity with receive an email notification that the job was shared.

Update Job Preferences

Make updates to your job preferences to help you apply for opportunities. Your job preferences are used by Opportunity Marketplace to do a match analysis with roles.

Before you begin
Role required: None

Note:
Access is based on user criteria. You must be an OPM licensed user.

About this task
Your job preferences are used to make accurate recommendations for you. Opportunity Marketplace enables you to update your internal job preferences for different roles within the organization.

Updating your internal job preferences let's you apply for roles related to your preferences.

Procedure
1. From the Employee Center go to **Opportunity Marketplace** > **Internal jobs**.

   Note:
   Internal jobs is used as an example for this task. You can also update opportunity preferences from **Other opportunities**.

2. Select **Edit Preferences**.

   Opportunity preferences are configured by your organizations administrator. You can see different preferences depending on the opportunity and how your organization configures the opportunity.

Opportunity preferences

Field	Description
Which working style do you prefer?	Working styles are configured for the opportunity type. Your organization can have different opportunity types.
How much travle are you comfortable with?	This fields is asking you to give an amount of your time that you are willing to travel for this opportunity. This field is configured in the **Opportunity type** by an administrator. Your organization may have different preferences.
Which job levels are you interested in?	Job levels are configured by you organizations administrator. Job levels can be specific for you organization.
Which work locations do you prefer?	Select from the list of available job locations. Job locations are configured as part of the **Opportunity type**. Locations will depend on

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	how your organization has configured the opportunity type.

3. Select **Save and close**.

What to do next
Continue to apply for jobs based on your updated preferences.

Create other opportunities in Opportunity Marketplace

Opportunity owners create gigs, projects, and volunteer opportunities. These opportunities are different from internal jobs. OPM enables you to manage any opportunities you create and track applications. The ability to create opportunities is based on user criteria.

Before you begin
Role required: none

Note:
Access is based on user criteria.

Procedure

1. From the Employee Center, go to **Opportunity Marketplace** > **Opportunities you own**.
   Any existing opportunities that you own are listed. For the first opportunity you create, you see the message **No opportunities yet**.
2. Select **Create an opportunity**.
   The **Create an opportunity** widget is started. There are 3 opportunity templates provided with the base system. If you need a different opportunity type, you can create your own custom opportunity types.

   Note:

   Access to create custom opportunities is controlled by user criteria maintained in the Opportunity Type table [sn_opp_market_opportunity_type].

   Creating and editing of opportunity, position, or application table records from lists and forms can result in unwanted behavior. Lists and forms should be updated from the Employee Center portal.

   - Gig: For details on gigs, see Gig opportunities.
   - Project: For details about what a project is, see Project opportunity
   - Volunteer: For details about what a volunteer opportunity is, see Volunteer opportunities

   Tip:
   If you need a different opportunity type, you can create custom opportunity types. For more details, read Creating custom opportunity types in Opportunity Marketplace.

3. Select a template, then select **Next**.
4. Fill in the form with the details for the opportunity that you selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. From the **Opportunity owner** list, select co-owners to an opportunity to enable management of the opportunity.
The user who creates the opportunity is by default the owner of the opportunity. You can add additional owners by selecting users from the list.

b. From the **Who can view this opportunity?** list, select a group of users who to enable them to view this opportunity.
User criteria control the access of the users who can see the opportunities. Leaving this field empty, enables everyone in your organization to see the opportunity.

To read details about the opportunity forms and fields, see Form fields for creating opportunities in Opportunity Marketplace.

5. Select **Next**.
6. Select **Add a role**.

> **Note:**
> Because a gig can contain only one role, adding additional roles isn't available for Gig opportunities.

7. Fill in the form with the role details.
To read more details about the role form and fields, see Form fields for creating opportunities in Opportunity Marketplace.
8. Review the details of your opportunity.
Select the **Edit** icon if you must change any of the details.
9. When you're satisfied with your opportunity, select **Publish**.

Set opportunity preferences

Set your preferences for opportunities so that your preferences match any opportunities you're interested in.

Before you begin
Role required: none

> **Note:**
> Access is based on user criteria.

Procedure

1. From the Employee Center go to **Opportunity marketplace** > **Other opportunities**.
2. Select **Edit preferences**.

Opportunity preference settings

Field	Description
Which working style do you prefer?	Select your preferred work style. You can select more than a single work style. Not selecting any work style indicates that you're open to all work styles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Onsite** ○ **Remote** ○ **Hybrid**
How many hours per week are you looking to commit?	Enter the number of hours that you're willing to work on an opportunity. The value for this field is for an entire work week.
Which job levels are you interested in?	Select all of job levels that you're interested in. You can select both individual contributor (IC) and manager (M) job levels. ○ **IC1 - IC4** ○ **M1 - M2**
Which work locations do you prefer?	Select the field and then select a listed location. You can select more than one location.
Save and close	Save and close the preferences form to make your preferences immediately available.

3. Select **Save and close** to save your selections and make the immediately available for opportunities.

View an opportunity match analysis

Opportunity Marketplace (OPM) generates match analyses based on your current role, aspirations, and skills. Match analysis is based on your skills and preferences.

Before you begin
Role required: none

Note:
Access is based on user criteria.

About this task
Only opportunities that match the opportunity's user criteria and have been published are evaluated for match analysis.

OPM provides helpful analyses and recommendations for available opportunities, and it enables you to view the details for the recommended opportunities.

Procedure

1. From the Employee Center go to **Opportunity marketplace** > **Other opportunities**.
2. In an opportunity card, select **Match analysis** to view details about the match.

   Match analysis is based on matched skills and preferences. Skills make up 80% of the match analysis and 20% comes from your preferences. It's important to keep your preferences and skills current so that the match analysis finds relevant opportunities. For more information about skills, see Using Skills Foundation.

   The different sections of the analysis display information about the match.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **How your skills match this opportunity** shows skills that match the requirements of the opportunity, and it gives you recommendations for skills you can work on to improve your match with the opportunity.
- **How your preferences match this opportunity** shows the settings that are configured in your OPM preferences.

3. In an opportunity card, select **View details** to the recommended opportunity.
   From the opportunity, you can view your **Match analysis** and **Sign up** for the opportunity.

Sign up (apply) for an opportunity

Apply for an opportunity from the opportunity details page.

Before you begin

Role required: none

Note:
Access is based on user criteria.

About this task

Once you find an opportunity that you're interested in, you must sign up and apply for the opportunity.

Procedure

1. From the Employee Center go to **Opportunity marketplace** > **Other opportunities**.
   Look at the opportunities on the **Other opportunities** page to find the opportunity role you want to apply for.

   Tip:
   Select the heart next to the vertical ellipses to add the opportunity to **Your Favorites** tab in the in the Employee Center portal.

2. Select **View details** for the opportunity role that you're interested in applying for.
   Opportunities with multiple roles don't display the **View details** button. You must open the opportunity and select **View details** for a role in the opportunity.
3. From the role details page, select **Sign up**.
4. Fill in the form to apply for the opportunity role.

Role application form

Field	Description
Craft a note	Write a note to send to the owner of the opportunity.
Your skills	Your available skills are automatically added to the opportunity. If no skills are listed, you can add skills to your profile before you submit the application.
Your experience	This section enables you to add more relevant details about your experience by adding files and links to the application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Add attachments ○ Add links

5. Select **Sing up and apply** to submit your application to the opportunity owners.

Manage job postings in Opportunity Marketplace

Job postings must be created and managed directly in the Job Posting [sn_ta_hiring_core_job_posting] table.

Before you begin

Role required:

- sn_ta_hiring_core.admin
- sn_ta_hiring_core.recruiter
- admin

About this task

The Job Posting [sn_ta_hiring_core_job_posting] is contained in the Hiring Core application. The Job Posting table stores and tracks hiring information that you create or received from third party talent acquisition platforms for your hiring requirements.

You must create job postings from the Job Posting [sn_ta_hiring_core_job_posting] table. You must have one of the roles listed in Role required.

Procedure

1. Navigate to **All**.
2. In the **Filter** field, enter `sn_ta_hiring_core_job_posting.list`.
3. Select **New**.
4. Fill in the **Job Posting New record** form.

   The **Number** field is automatically filled with the next job posting number. Here's a list of some of the important fields needed for job postings. This list of important fields isn't exhaustive. There are many other fields available. Use the fields that meet your requirements for a job posting.

Important job posing fields

Field	Description
Job board	An online platform or website where companies post job openings and job seekers can search for and apply to these positions. Job boards can be internal or external sites.
Title	The title of the job that applicants see in the internal job posting.
Scheduled start date	The date the job starts.
Country	The country location where the job is available.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Location flexibility	The available types of roles for working, for example ○ Flexible work environment: An open environment to meet individual needs. ○ Hybrid work environment: An environment where you can work in more than one location such as in office or from home. ○ In-office work environment: An environment where you must be in the office for the entire work time.
Posted by	The person who posted the internal job in OPM
Job requisition	The job requisition number used by OPM for tracking. Job requisitions can have multiple associated job postings. **Note:** Job requisitions aren't required for posting a job.
State	An indication of where the job posting is in the process of managing job postings.
Job qualifications	A list of qualifications that applicants see for the job posting. These qualifications are searchable by applicants.
Posting date	The date that the job posting is published so that it's visible to applicants.
Posting description	A short description of the job that can be searched so that applicants can find jobs that meet their requirements.
Preferred skills	A list of skills that are preferred but not required. This field is an applicant searchable field.
Required skills	The minimum skills that are needed for this job. This field is applicant searchable.
Travel requirement	An estimate of the amount of time travel required for this job.

View job postings in Opportunity Marketplace

Job postings forms can be viewed from the Job Posting [sn_ta_hiring_core_job_posting] table.

Before you begin

Role required: All Opportunity Marketplace users

About this task

The Job Posting [sn_ta_hiring_core_job_posting] is contained in the Hiring Core application. The Job Posting table stores and tracks hiring information that you create or received from third party talent acquisition platforms for your hiring requirements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You must view job postings forms from the Job Posting [sn_ta_hiring_core_job_posting] table.

Procedure

1. Navigate to **All**.
2. In the **Filter** field, enter `sn_ta_hiring_core_job_posting.list`.
3. Select a job posting to view.
   Depending on how your list view is configured, select a field label that links to the job posting.
4. You can only view the form for the selected job posting.

Reference Opportunity Marketplace roles and tables

Roles help to control access to features. Tables are used to store application data used by Opportunity Marketplace (OPM) features and interaction with other applications.

Related application reference topics

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Opportunity Marketplace tables (continued)

Table label [name]	Description
Opportunity Preference Configs [sn_opp_market_opportunity_preference_config]	Tracks the details of the opportunities, such as • **Display name** • **Name** • **Active** • **Type** • **Table** • **Field**
Opportunity Type [sn_opp_market_opportunity_type]	Tracks details about opportunities (Gig, Project, Volunteer), such as • **Title**: The type of opportunity. The standard opportunities provided with OPM are Gig, Project, and Volunteer. You can create your own opportunity types, see Create other opportunities in Opportunity Marketplace. • **Description** • **Role display** • **Icon** • **Active** • **Updated**: The date the opportunity was last updated.
Role Application [sn_opp_market_position_application]	Tracks details of the application for a role by an applicant. • **Employee**: The name of the applicant. • **Role**: The position being applied for. • **State** • **Submission Message**: The message that an applicant created to submit with the application. • **Created**: The date the application was submitted.
Position Skill [sn_opp_market_opportunity_position_skill]	Tracks the skills that are associated with a role, such as • **Opportunity role** • **Skill** • **Skill level**
Application Quick Link [sn_opp_market_quick_link]	Tracks quick link details that are displayed on an application form, such as

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Opportunity Marketplace tables (continued)

Table label [name]	Description
	• **Application** • **Display order** • **Title** • **URL**
Shared Opportunity [sn_opp_market_shared_opp]	Tracks the details of opportunities that have been shared with an employee, such as • **Created**: The date the opportunity was created. • **Opportunity**: The number for an opportunity. An opportunity can be a job posting, an opportunity, or an opportunity role. • **Recipient**: The employee who the opportunity was shared with. • **Sender**: The employee who sent or shared the opportunity with another employee.

Hiring Core tables and roles

Hiring Core [sn_ta_hiring_core] is a dependent application that is installed when you install OPM.

Hiring Core provides a repository where you can store information that you've created or received from any third party talent acquisition platform for your hiring requirements.

The description contains examples of some of the available columns. Select the gear icon to see all the available columns (fields).

Hiring Core tables used by OPM

Table label [name]	Description
Applicant certification [sn_ta_hiring_core_applicant_certification]	Tracks data related to an applicant's certifications, such as • **Certificate name** • **Issuer name** • **Valid till** .
Applicant education [sn_ta_hiring_core_applicant_education]	Tracks an applicant's related educational data, such as • **Institute name** • **Field of study**

© 2026 ServiceNow, Inc. All rights reserved.

Hiring Core roles

Role	Description
[sn_ta_hiring_core.admin]	Admin
[sn_ta_hiring_core.applicant]	Applicant
[sn_ta_hiring_core.external_applicant]	This role is for the external applicants and contains the applicant and the [snc_external] role.
[sn_ta_hiring_core.hiring_manager]	Hiring manager
[sn_ta_hiring_core.internal_applicant]	This role is for the internal applicants and contains the applicant and the [snc_internal] role.
[sn_ta_hiring_core.interviewer]	Interviewer
[sn_ta_hiring_core.recruiter]	Recruiter
[sn_ta_hiring_core.recruitment_coordinator]	Recruitment coordinator

Opportunity Type Configuration for Opportunity Marketplace

Opportunity Marketplace (OPM) supports different opportunity types that are designed for unique types of opportunities and roles.

Admins can create opportunity types. There are three opportunity types that automatically come with OPM. Admins can create other opportunity types.

Base application opportunity types

Opportunity type	Description
Gig	A Gig is an opportunity that consists of just a single role that can have one or many vacancies.
Project	A Project is an opportunity that is intended to enable sourcing a team that consist of multiple roles with one or many vacancies according to the role.
Volunteer	A Volunteer is an opportunity that consists of multiple roles with one or many vacancies according to role for volunteering-related activities.

Opportunity Type record fields

Field name	Description
Title	A title for the opportunity that is visible from the Opportunity Marketplace in the Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Opportunity Type record fields (continued)

Field name	Description
Role display	Controls the number of roles that can be added to an opportunity. • **Embedded within opportunity (1 position only)** • **Separate from opportunity (1 or more positions)**
Opportunity details	A list of available opportunity descriptions. The **Opportunity details** are visible in the opportunity. **Opportunity details** are stored in the Project opportunity creation details [sn_opp_market_opportunity] table. Opportunity details and Roles and requirements are record producer records in the Catalog Item [sc_cat_item] table. The record producer is a configuration of the layout for which fields are shown. There are 3 opportuntiy types included with the base system (Gigs, Project, and Volunteer). Clone one of the base opportunity types to create a custom **Opportunity type**.
Roles and requirements	A list of available opportunity roles and requirements. Opportunity Marketplace roles and requirements are stored in the Opportunity position [sn_opp_market_opportunity_position] table. Opportunity Marketplace roles are the job roles or positions for the opportunity.
Description	The text for the description of the opportunity that is displayed in Opportunity Marketplace the Employee Center.
Hiring approval flow	A list of available approval flows for managing the hiring process for an opportunity.
Active	Select to make the record active.
User criteria	Criteria to restrict access to the opportunity record. User criteria defined in the opportunity type determines who can create an opportunity type.
Icon	You can add an icon to opportunity types or view the icons for existing opportunity types.
Help link label	The text that is visible to users as the link for help. Add the label from the opportunity type page. The link appears at the bottom of the

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Opportunity Type record fields (continued)

Field name	Description
	Create an opportunity page in the Employee Center.
Help link URL	The URL that is associated with the **Help link label**.

Opportunity details and descriptions in Opportunity Marketplace

Admins can view detailed information about opportunities.

Here's a list of the columns displayed by the base system for opportunities. You can modify which columns to display and the order they're displayed by selecting the gear icon.

Opportunity details

Field	Description
Title	A name given to the opportunity by the opportunity owner.
Opportunity type	The base system opportunity type: • Gig • Project • Volunteer You can add custom opportunity types with names that are appropriate for your needs.
State	The **State** of the opportunity reflects the stage in the process where the opportunity is.
Owners	One or more owners of an opportunity can make updates and remove opportunities.
User criteria	User criteria gives access to groups of users for an opportunity.
Start date	The date the opportunity is published.
End date	The date the opportunity is closed.

You can update some of the fields. Double-click (or use the keyboard shortcut) to determine if it's editable.

Role Applicants for Opportunity Marketplace

Admins can view and update some of the opportunity applicant information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Position Applications fields and descriptions

Field	Description
Employee	The name of the employee applying for the opportunity. It's linked to the applicant's **Employee Profile**.
Position	The name of the opportunity position. It references to the **Opportunity position** record.
State	The **State** value helps to track where in the process that the applicant is for the listed opportunity.
Submission message	A message provided by the applicant for the opportunity.

Form fields for creating opportunities in Opportunity Marketplace

Gigs, projects, and volunteer opportunities have 2 forms with several fields.

Form fields for creating an opportunity

Field	Description
Opportunity owner	You're listed as the owner of opportunities that you create. You can add additional co-owners from the list. This field is in the **Opportunity** table[sn_opp_market_opportunity].
Opportunity title **Note:** The name for this field varies depending on the opportunity type.	An opportunity title is visible to users and it's used to help in the search for available opportunities. This field is in the **Opportunity** table[sn_opp_market_opportunity].
Opportunity description **Note:** The name for this field varies depending on the opportunity type.	Include all relevant details for an opportunity. Add the details of opportunities to help potential applicants decide whether they want to apply for the opportunity. This field is in the **Opportunity** table[sn_opp_market_opportunity].
Start date	The beginning date for the role. This field is in the **Opportunity** table[sn_opp_market_opportunity].
End date	The end date for the opportunity. This field is in the **Opportunity** table[sn_opp_market_opportunity].
Who can view this opportunity?	Select from the list to make the opportunity visible to a certain group of applicants. Leaving the field empty makes the opportunity visible to everyone.
Additional details	Add additional details that an applicant might want to learn about or want to understand.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Form fields for creating an opportunity (continued)

Field	Description
Add attachments	Attachments can include related information such department details of the team an applicant would be working with or more extensive details about gigs, projects, or volunteer opportunities. Attachments are attached to the corresponding opportunity record.

Form fields for adding roles to your opportunities

Field	description
How many openings are available for this role?	The number of openings for this role.
What is the estimated time commitment for this role?	An estimate of the time you would be expected to commit to for this role.
Application deadline	The last day that applications are accepted for this role.
Role location • **In-person opportunity** • **Hybrid opportunity** • **Remote opportunity**	Where you would be expected to work from for this role.
Location	The physical office location for this role.
Required skills • **Actions** edit or delete. • **Skill**: List of available skills. • **Proficiency level**: Level of proficiency associated with the skill.	There are 3 controls for **Required skills**. The skill and proficiency level help to set expectations of the type of work expected for this role. The minimum skills that the opportunity owner believes are needed.
Add skills from a job title	Select a job title to add skills relevant to a certain job.
Preferred skills • **Actions** edit or delete • **Skill**: List of available skills. • **Proficiency level**: Level of proficiency associated with the skill. Form fields for adding roles to your opportunities (continued)

Field	description
	information about skills, job levels, and roles, see Configuring Skills Foundation.
Add attachments	Attachments provide more details about skills and roles for the opportunity.

Install and configure Opportunity Marketplace

Admins install and configure the Opportunity Marketplace (OPM) application and configure features.

An administrator must install the Opportunity Marketplace application from the ServiceNow store. If you have the role [sn_opp_market.admin], you are able to configure and manage OPM features.

Go to these topics for installation and configuration tasks and information.

Install Opportunity Marketplace

Opportunity Marketplace (OPM) is a key application that works as part of the Talent Development suite of applications. OPM improves employee engagement and retention with internal mobility.

Before you begin

Opportunity Marketplace has the following dependencies. When you install OPM it activates or installs the following:

Note:
Opportunity Marketplace installs the latest required versions of dependent apps and plugins.

- Talent Development Core
- Manager Hub
- Skills Foundation
- Finance Common Architecture
- Hiring Core
- Proactive Prompts
- Talent Development Shared Library [app-egd-shared-library]

Note:
The shared library isn't visible in the ServiceNow Store, but the latest required version is installed with OPM.

Role required: admin

Procedure

1. Go to the ServiceNow Store and find the Opportunity Marketplace [sn_opp_market] application using the filter criteria and search bar.
2. Select a version from the list and select **Install**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the Review Installation Details dialog box, any dependencies installed with your application are listed.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to include it, select the **Load demo data** check box.

   Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.
5. Select **Install**.

Manage and create opportunity types in Opportunity Marketplace

As an Opportunity Marketplace admin [sn_opp_market.admin], you can manage Opportunity types that are provided with the base system or create custom opportunity types.

Before you begin

Role required: Opportunity Marketplace admin [sn_opp_market.admin]

About this task

The opportunity types provided by the base system cover Gig opportunities, Project opportunities, and Volunteer opportunities. If you have special requirements for an opportunity, you can add custom opportunity types for your enterprise.

Note:
If an Opportunity Marketplace admin modified or removed any of these fields in the **Record Producer** form for an opportunity, there could be an unintended impact to the matching score for an opportunity.

- **Opportunity Title**
- **Opportunity Owner**
- **Start or End date**

Procedure

1. Navigate to **All** > **Opportunity Marketplace** > **Opportunity Type Configuration**.
2. To create a custom opportunity type, select **New**.
3. Fill in the **Opportunity type new record** form.

Custom opportunity type fields and descriptions

Field	Description
Title	This field is visible to users. The title of an opportunity type should be descriptive to help opportunity owners and applicants understand the purpose of the opportunity type.
Role display	○ **Embedded within opportunity (1 role only)** Select this option for an opportunity that needs only a single role.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Embedded within opportunity (1 or more roles)** Select this option so that you can embed multiple roles within an opportunity.
User criteria	Select from the list of available user criteria. **User Criteria Records** are created and maintained from **All** > **Change** > **Administration** > **User Criteria**, see Create a user criteria record for Change Management.
Opportunity details	Opportunity details are created and maintained by the OPM admin. The Opportunity details are stored in the Service Catalog as a Record producer item under **All** > **Service catalog** > **Record Producers** with the application scope set to Opportunity Marketplace.
Roles and requirements	A list of existing Opportunity types that you can select to define an opportunity type's roles and requirements.
Description	The information is this field is visible to applicants and opportunity owners. The description helps opportunity owners and applicants under the intent of the type of opportunity and its scope.
Active	Select **Active** to enable the opportunity type to be used by others.
Icon	Add an icon that represents the type of opportunity.
Help link label	The text displayed to opportunity owners for a link to help for this form.
Help link URL	A URL that links to help for this form.

4. Select **Submit**.

View and manage the opportunities created in Opportunity Marketplace

Opportunities are created to solicit individuals to apply for roles within the opportunity. As an Opportunity Marketplace admin [sn_opp_market.admin], you can view and manage opportunity records.

Before you begin

Role required: Opportunity Marketplace admin [sn_opp_market.admin]

About this task

There are times that opportunities must be updated by someone other than the opportunity owner. Having the role of Opportunity Marketplace admin [sn_opp_market.admin] enables you to update opportunities without being the opportunity owner.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Opportunity Marketplace** > **Opportunities**.
   Opportunities records contain several fields. Here are some of the fields that help you to identify opportunities. Some of the listed fields are linked to their respective records for the applicant.

Important role applicant fields and descriptions

Field	Description
Title	The title of the opportunity that applicants and opportunity owners see when looking at opportunities.
Opportunity type	There are 3 opportunity types that come with the base system. ○ **Gig** ○ **Project** ○ **Volunteer** As an admin, you can add custom opportunity types, see Manage and create opportunity types in Opportunity Marketplace.
State	The **State** of an opportunity indicates where an opportunity is in the approval process. ○ **Cancelled** ○ **Closed** ○ **Complete** ○ **Draft** ○ **Edited** ○ **Published**
Published date	The date that the opportunity is available to applicants.

2. Select an opportunity.
3. Update any field that must be changed.
4. Select **Update**.

View and manage role applicants from Opportunity Marketplace

Role applicants are employees who have applied to a role that is part of an opportunity. As an Opportunity Marketplace [sn_opp_market.admon], you can view and manage role applicant records.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Opportunity Marketplace** > **Role Applicants**.
   The role applicant records contain several fields. Here are some of the fields that help you to identify a role applicant. The listed fields are linked to their respective records for the applicant.

Important role applicant fields and descriptions

Field	Description
Employee	The names of the applicants links to their **Employee Profile**, see Employee Profile table.
Role	A role that is listed in an opportunity. Opportunities can 1 or more roles depending on the opportunity type.
State	The **State** of a role applicant indicates the progression of the applicant in the process. ○ **New applicant**: An applicant that hasn't been looked at by the opportunity owner. ○ **Pending review** An applicant that has passed the initial review process and is under consideration. ○ **Accepted** An applicant that has been accepted for the role in an opportunity. ○ **Declined** An applicant that has been declined for a role. ○ **Canceled** An applicant that is no longer part of the opportunity role review process.

2. Select the field that you want to update.
3. Select the green check mark to apply and save your changes.

Add a role applicant to an opportunity role

Role applicants are employees who have applied to a role that is part of an opportunity. As an Opportunity Marketplace admin [sn_opp_market.admin], you can add role applicants to an opportunity role.

Before you begin

Role required: Opportunity Marketplace [sn_opp_market.admin]

Procedure

1. Navigate to **All** > **Opportunity Marketplace** > **Role Applicants**.
2. Select **New**.
   - **Employee**
   - **Role**
   - **State**
   - **Submission message**
   - **Work notes**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the **Employee** from a list of employees with active profiles.
4. Select the **Role** from a list of roles that are available to applicants.
5. Select the appropriate **State** for the applicant.
6. Enter a **Submission message** on behalf of the applicant.
7. Add **Work notes** if you want the opportunity owners to have additional information about the applicant.
8. Select **Submit**.

Creating custom opportunity types in Opportunity Marketplace

Opportunity Marketplace comes with 3 base system **Opportunity types**. If you need a different opportunity type, you can create custom opportunity types to meet the needs of your organization. You can also create custom user criteria, opportunity details, and roles and requirements.

There are several fields that make up an **Opportunity type** record. To read details about **Opportunity type** fields, see Opportunity Type Configuration for Opportunity Marketplace.

There are 2 of the fields that are included in the **Service Catalog Catalog Definitions Record Producers** table.

- **Roles and requirements**
- **Opportunity details**

The quickest way to create custom versions of these tables is to copy an existing record and make updates to customize it to your needs.

Create a custom opportunity type

Opportunity Marketplace comes with a few base system opportunity types. You can create a custom opportunity type to meet the needs of your organization.

Before you begin
Role required: admin

About this task
You can customize several areas for an opportunity type or use existing records. If you plan to create custom **User criteria**, **Opportunity details**, or **Roles and requirements**, you should create them before creating your custom **Opportunity type**.

Procedure
1. Navigate to **All** > **Opportunity Marketplace** > **Opportunity Type Configuration**.
2. Select **New**.
3. In the **Title** field, enter a name for your **Opportunity type**.
4. From the **Role display** list, select how you want to embed roles in the opportunity type.
   - **Embedded within opportunity (1 position only)**
   - **Separate from opportunity (1 or more positions)**
5. Select a **User criteria** record to restrict access to a group of people that match that user criteria.
   Leave the field empty if you want to enable access to all licensed Opportunity Marketplace users. To create custom user criteria, see Create a user criteria record in Service Catalog.
6. Select and existing **Opportunity details** record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you want a customized **Opportunity details** record, see Create custom opportunity details records in Opportunity Marketplace.

7. Select an existing **Roles and requirements**.
   If yo want a customized **Roles and requirements** record, see Create custom roles and requirements in Opportunity Marketplace.
8. Add a description for your **Opportunity type**.
9. If you want an icon to display for your **Opportunity type**, select **Click to add**.
   You can also add links for help topics. The help appears at the bottom of the **Create an opportunity** page in the Employee Center under **Opportunities you own**.
10. Select **Submit**.

Select or create user criteria

Opportunity Marketplace user criteria are maintained in the Service Catalog under Catalog Definitions. There are several user criteria records to select from, or you can create your own user criteria.

User criteria records are contained in the **Opportunity** [sn_opp_market_opportunity] table. To create custom user criteria, see Create a user criteria record in Service Catalog.

Note:
When you create user criteria records from an application, the **Application** field shows the associated app.

Create custom opportunity details records in Opportunity Marketplace

You can customize the details for an opportunity type in Opportunity Marketplace.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Opportunity Marketplace** > **Opportunity type configuration**.
2. Select an existing **Opportunity type**.
3. Open an existing **Opportunity details** record.
   a. Select the information icon next to the **Opportunity details** field to preview the record.
   b. Select **Open Record**.
   You're taken to the **Record Producer** record for the opportunity roles and requirements.
4. Select **Copy**.
   A copy of the record is created. Copying this record can take sometime.
5. When a copy of the record is available, update the following fields.
   - **Name**
   - **Short description**
6. Review and update any other fields you want to change.
7. Select **Update**.

What to do next
The copied (cloned) opportunity details record is available to select by opportunity owners.

Create custom roles and requirements in Opportunity Marketplace

Create custom roles and requirements to meet the needs of your organization. Roles and requirements are maintained as records in the **Opportunity role** [sn_opp_market_opportunity_position] table.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Opportunity Marketplace** > **Opportunity type configuration**.
2. Select an existing **Opportunity type**.
3. Open an existing opportunity roles and requirements record.
   a. Select the information icon next to the **Roles and requirements** field to preview the record.
   b. Select **Open Record**.
   You're taken to the **Record Producer** record for the opportunity roles and requirements.
4. Select **Copy**.
   A copy of the record is created. Copying this record can take sometime.
5. When a copy of the record is available, update the following fields.
   - **Name**
   - **Short description**
6. Review and update any other fields you want to change.
7. Select **Update**.

Talent Feedback

Talent Feedback is a new plugin available in Yokohama release. Skill Feedback is one of the features of Talent Feedback. Skill Feedback allows managers to request feedback on employee skills from the employee's collaborators,

Exploring Talent Feedback

Learn about Talent Feedback and its benefits as managers and employees looking to leverage a feedback engine.

Talent Feedback overview

Talent Feedback is a plugin that allows managers to view feedback and request feedback from employees. Skill feedback is one of the features supported in Talent Feedback.

Talent Feedback users

Users

User	Description
Managers	• Managers can request skill feedback for their team members on required skills, from the employee's collaborators. • Managers can view skill feedback of an employee consolidated in one page. • Managers can view all the feedback received for a skill along with skill activities, during skill validation – This helps them get a full-fledged view of an employee's proficiency. • Managers can also view the status of requests sent and choose to withdraw them when needed.
Employees	Employees receive feedback requests sent to them in their Employee Center To-dos, where they can provide feedback and skill rating for one or more skills in the request.

View and submit skill feedback for other employees or decline any feedback request.	• View skill feedback submitted • Decline a feedback request	Employee

Talent Feedback requires the following related applications

Skills Foundation

The ServiceNow® Skills Foundation application is an AI-driven platform that you can use in your organization to develop a workforce that is based on skills.

Manager Hub

The ServiceNow® Manager Hub increases a manager's self-service and proactive engagement with their team by providing insights and recommended actions for what's most urgent and important to drive team success. It enables managers to grow as leaders through curated and personalized resources.

What to explore next

To learn more about configuring and using Talent Feedback, see:

- Configuring Talent Feedback
- Using Talent Feedback
- Talent Feedback reference

Configuring Talent Feedback

Set up Talent Feedback to be able to use it along with Talent Development.

Install Talent Feedback

You can install the Talent Feedback application if you have the admin role.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Talent Feedback application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

About this task

The following items are installed with Talent Feedback:

- Plugins
- Store applications
- Roles
- Scheduled jobs
- Tables

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Talent Feedback application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Using Talent Feedback

Learn how to use Talent Feedback to request and provide feedback for any skills.

Overview of Talent Feedback

- Skill feedback is a feature in Talent Feedback that allows you as a manager to effectively assess your employees' skills and identify the right growth opportunities for them.
- Using Skill feedback, managers can Request skill feedback from the different views and widgets in Employee Center
- Using Skill feedback, employees can View skill feedback submitted as requested by their managers.

Working with Skill feedback in Talent Feedback

Skill feedback is one of the main features of Talent Feedback that can be used by managers to request feedback for their employees, and by employees to provide feedback for their peers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Request skill feedback

  As a manager, request skill feedback from an employee.

- View feedback requests

  As a manager, view and manage all the feedback requests raised for your employees.

- View skill feedback submitted

  As an employee, view and submit feedback requested from you.

Request skill feedback

Using Talent Feedback you can request feedback for one or more skills from your employees.

Role required: admin

There's more than one way you can request skill feedback on Talent Feedback. You can choose from one of the following ways to request feedback, based on the existing information.

- Request skill feedback - When there are no existing feedback requests, use the **Request feedback** option on the Skill feedback requests sent widget.
- Request feedback from skill distribution Use the **Request feedback** option from skill distribution view.
- Request skill feedback from skill expectationsUse the **Request feedback** option from skill expectations view using skill pills.

Request feedback from skill distribution

You can request feedback from skill distribution using skill view or employee view.

Before you begin
Role required: manager

Procedure

1. In Employee Center navigate to **Your team** > **Skills**.
2. On the skill distribution widget, select **View all**.
3. Here you can request feedback in two ways, either by selecting the employee or the skill pill.
   - From Employee view, click  on the employee and select **View skill feedback** and then select **Request skill feedback**.
   - From Skill view, click  on the skill pill and select **Request skill feedback**.

     Note:
     You can use the toggle option to switch between **Employee view** and **Skill view**.

4. On the **Request skill feedback** form, fill in the information.

Request skill feedback form

Field	Description
Skills	Skills that you want to request feedback for.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: If there are any unvalidated skills associated with the employee, those are populated in this field.
Request feedback from	Employee from whom you are requesting the feedback.
Feedback due by	Option to set the date by when the feedback is due.
Notes	This is an optional entry for you to add any other information that you'd like to add as a note to the feedback provider.

5. Select **Send request**.

Request skill feedback from skill expectations

You can request skill feedback from the skill expectations widget on the Skills tab in Employee center.

Before you begin

Role required: admin

Procedure

1. In Employee Center navigate to **Your team** > **Skills**.
2. On the skill expectations widget, select **Score analysis** of the employee you want to request feedback from.
3. On the skill score analysis fly out, click  on any skill pill and select **Request skill feedback**.
4. On the **Request skill feedback** form, fill in the information.

Request skill feedback form

Field	Description
Skills	Skills that you want to request feedback for. **Note:** Since this feedback was requested from a skill pill, this field is pre-populated from the skill selected.
Request feedback from	Employee from whom you are requesting the feedback.
Feedback due by	Option to set the date by when the feedback is due.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Notes	This is an optional entry for you to add any other information that you'd like to add as a note to the feedback provider.

5. Select **Send request**.

Request skill feedback

You can request skill feedback from the skill feedback requests sent widget when there no existing feedback requests sent.

Before you begin

Role required: manager

Procedure

1. In Employee Center navigate to **Your team** > **Skills**.
2. On the skill feedback requests sent widget, select **Request feedback**.
3. On the **Request skill feedback** form, fill in the information.

Request skill feedback form

Field	Description
Employe	Employee for whom you want to request the feedback.
Skills	Skills that you want to request feedback for. **Note:** Since this feedback was requested from the **Skill feedback requests sent** widget, this field needs to be manually populated.
Request feedback from	Employee from whom you are requesting the feedback.
Feedback due by	Option to set the date by when the feedback is due.
Notes	This is an optional entry for you to add any other information that you'd like to add as a note to the feedback provider.

4. Select **Send request**.

View and submit feedback

You can view any feedback request sent to you and submit the feedback on Talent Feedback.

Before you begin

Role required: manager/employee

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Employee Center** > **My tasks**.
2. Select the feedback request that you want to view or submit feedback.

> **Note:**
> Feedback requests are categorized based on the requester. If there are multiple feedback requests from the same employee, you will see them one after the other.

3. On the feedback request form, fill in the fields.

Feedback request form

Field/option	Description
Add rating	Option to add a rating for the skill
Which proficiency would you rate this skill at?	Toggle drag option to set the rating for the skill. **Note:** This option is enabled only when **Add rating** option is selected in the previous step.
Feedback	Text box to write your feedback.

4. Select **Save** to review the feedback at a later time.
5. Select **Submit** to complete the feedback form.

> **Note:**
> Repeat these steps for other skills requested (if any) and then select **Submit**.

Decline a feedback request

You can decline a feedback request sent you if you do not wish to provide feedback for any reason.

Before you begin
Role required: employee

Procedure

1. Navigate to **All** > **Employee Center** > **My tasks**.
2. Select the feedback request that you want to view or submit feedback.

> **Note:**
> Feedback requests are categorized based on the requester. If there are multiple feedback requests from the same employee, you will see them one after the other.

3. Select **Decline**.
4. Add a reason for declination in the pop-up and select **Decline**.

View skill feedback submitted

As a manager, view all the skill feedback submitted by employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: manager

Procedure

1. In Employee Center navigate to **Your team** > **Skills**.
2. On the skill feedback requests sent widget, select **View details** on any of the feedback listed.
3. On the skill feedback form, view the information.

Skill feedback

Field	Description
Feedback for	Employee who this feedback is for.
Requested to	Employee who the feedback is requested from.
Requested on	Date on which the feedback was requested.
Feedback due by	Date by which the feedback is due.
Status	Current status of the feedback request.
Feedback	Contents of the feedback and the rating for selected skill. **Note:** If there are multiple feedback requests from the same employee, you will see them one after the other.

4. Select **Close** to close the feedback request form.

View feedback requests

You can view and feedback requests platform under the Talent Feedback module.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Talent Feedback** > **Feedback requests**.
2. Select the feedback request you want to view.
3. View the information on the **Talent Feedback Request** form.

Talent Feedback Request form

Field	Description
Number	Number allotted to the feedback request.
Requested for	Employee for whom the feedback is requested.
Opened by	Manager who opened the feedback request.
State	Current state of the feedback request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Assigned to	Employee from whom the feedback is requested.
Due date	Date by when the feedback is due.
Short description	A description of the nature of skill or feedback requestd.

Note:
You can also view the **Talent Feedback Request Skills** in the related links section of the form.

Begin a discussion from a Talent Feedback request

You can choose to begin a discussion regarding a talent feedback request using the Discuss option.

Before you begin
Role required: manager

Procedure

1. Navigate to **All** > **Talent Feedback** > **Feedback requests**.
2. Select the feedback request you want to start a discussion for.
3. Select the **Discuss** option.
4. On the Start a Sidebar discussion form, fill in the information

Sidebar discussion form

Field	Description
Record number	Number allotted to the feedback request.
Subject	A description for the discussion. **Note:** This is auto-populated from the short description of the Feedback Request.
Add participants	Option to add participants to the discussion.
Include a brief message for participants	A message to the participants explaining the feedback/skill.

5. Select **Start discussion**.

Talent Feedback reference

Reference topics provide more information regarding the dependencies, components, and tables installed along with Talent Feedback.

Components installed with Talent Feedback

Several types of components are installed with activation of the Talent Feedback plugin, including tables, user roles, and scheduled jobs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed

Role title [name]	Description	Contains roles
Talent feedback admin [sn_tf.admin]	Manages all the Talent Feedback in the module.	None

Tables installed

Table	Description
Talent Feedback Request [sn_tf_feedback_request]	Stores all the details of the feedback request.
Talent Feedback Request Skill [sn_tf_feedback_request_skill]	Stores all the skill related information for the feedback request.

Granular Delegation

Granular delegation allows employees to delegate their tasks to other employees for specific date and time ranges based on delegation rules.

Granular delegation provides the ability to delegate specific records by table and condition. It also allows admins to delegate approvals and/or task assignments for task tables they administer.

A task is delegated when it matches the delegation rules specified for a delegation. For example, William can assign Jane as a delegate for approvals or tasks when the priority is set to High.

Service delegation options are available, like limiting a delegation to specific record types. For example:

- Limiting records that match a filter condition.
- Limiting records to only approvals.
- Limiting records to only task assignments.

Note:
Granular Delegation is intended for employee users, not fulfiller or agent users, such as in ITSM. Depending on your use cases, fulfiller and agent delegation is better managed via Advanced Work Assignment.

Terms

The following terms are applicable:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Delegate Admin: An employee that defines the tables used for delegation rules, defines delegation rules, and can assign delegates for employees.
- Delegator: An employee who delegates their tasks to another employee through a delegation record, specifying the delegate user, time frame, and delegation rules.
- Delegate: An employee who is delegated tasks that are assigned to another employee. The delegate also receives tasks assigned from the delegator. The delegate also receives notifications of these assignments and the time frame the delegation covers.

Granular Delegation with HR Service Delivery

Granular Delegation with the HR Service Delivery base system supports the HR task (sn_hr_core_task) table. Along with filter conditions, you can filter delegations for delegators and delegates.

For more information on how user criteria filters delegations for delegators and delegates, see Create delegation rules.

For information on HR criteria and user criteria, see:

- HR criteria
- User criteria for Service Portal

Access control rules (ACLs)

Access control rules (ACLs) in HR Service Delivery were modified to look for the Assigned to person on an HR task. Other domains that want to use Granular Delegation must modify their ACLs to use this feature. For more information about ACLs, see Access control list rules.

Rule-based and ad-hoc delegations

- Rule-based: The delegation_admin configures delegation rules, which automatically reassign tasks to specific employees.
- Ad-hoc: An employee who is defined as a delegator can delegate their tasks from the **My Delegates** widget in the Employee Center.

Note:
The delegation_admin must define a delegation rule table, delegation rules, and delegates. For more information on defining a delegation rule table see Add delegation rule tables. For more information on defining a delegation rule, see Create delegation rules. For more information on defining delegators and delegates, see Create a delegate.

Exploring Granular Delegation

Use Granular Delegation to allow your employees to delegate their tasks to other employees.

The base system provides your employees with the ability to delegate their tasks to other employees. This feature provides flexibility to your employees when:

- Out-of-the-office
- Assigned tasks are for the incorrect employee
- Assigned tasks require escalation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables

Granular delegation introduces two new tables:

Granular Delegate [sys_granular_delegate]

This table specifies:

- Who the service delegate is
- When the service delegation occurs
- What notifications to send the delegate

Delegation Rule [sys_delegation_rule]

This table specifies the condition for which task records are delegated if the rule is used in a delegation.

Application menu

Users can access the granular delegation tables from the **Granular Delegation** application menu.

Delegation Rules

Link to the Delegation Rule [sys_delegation_rule] table.

Delegation Rule Tables

Link to the Delegation Rule Table [sys_delegation_rule_table].

My delegates

Link to the Delegate [sys_granular_delegate] table showing records where the current user has delegated tasks to another user.

Delegated to me

Link to the Delegate [sys_granular_delegate] table showing records where the current user is the delegate.

Approvals and assignments

Granular delegation allows you to delegate approvals and assignments separately. Task records include extensions of the Task table such as Change, Incident, and Problem records. Use a delegation rule to grant a delegate approval or assignment authority.

Note:
Flows and workflows ignore delegation rules. If you use flows or workflows to manage task approvals or assignments, you must use the existing service delegation features instead.

Approvals

Approval authority allows a delegate to approve or reject approval requests. Add delegation rule conditions to specify which records your delegate can approve. Only records matching the condition appear in the delegate's list of approvals.

Note:
A user must have the approval_user or business_stakeholder role to approve IT requests (does not apply to HR approvals) on Employee Centre. This role validation has not been implemented in Core UI 16 because modifying ACLs in UI16 might have broader implications at the NowPlatform level.

Assignments

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Assignment authority grants a delegate access to the task records assigned by delegation. Add delegation rule conditions to specify which records your delegate has access to work on. Only records matching the condition appear in the delegate's list of task assignments.

Granular delegation does not change a delegate's access to records. To access records, a delegate must already have the necessary roles. For example, to delegate task records, a delegate must have a role such as itil to access the Task table and its extensions.

Some HR records explicitly grant access to delegates.

Notifications

Each time you authorize a delegate, the delegate receives these notifications.

Start of delegation

The delegate receives a notification at the start of the delegation period.

Assignment by delegation

The delegate receives a notification each time an approval or task is assigned.

You can also specify additional notifications options.

All notifications

Option to send the delegate a copy of all notifications you receive during the delegation period. Select this option when you want the delegate to receive the delegation notification. For example, you want the delegate to receive notifications about activity stream or record updates. It is set to False by default to avoid concerns around getting notifications that has critical and sensitive data.

All columns are contained in the Granular Delegate [sys_granular-delegate] table.

Note:
Notifications with the **Exclude Delegates** option enabled override the True setting of this option. Use the **Exclude Delegates** option to prevent delegates from seeing confidential or protected information.

Meeting invitations

Option to forward delegates meeting invitations. Select this option to forward the delegate any meeting invitations the instance generates or receives for you. It is set to False by default.

System property

Administrators can specify which versions of service delegation they want to support from the glide.approval.delegation.version system property.

The glide.approval.delegation.version system property specifies the service delegation features to support. Choices include `v1`, `v2`, and `v3`.

Enter `v1` to support only the prior service delegation features. This value disables support for granular delegation features.

Enter `v2` to support only granular delegation feature. This value disables support for the existing service delegation features.

Enter `v3` to support both granular and existing service delegation features.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Type: string
- Default value: v3
- Choices: v1, v2, v3
- Location: System properties

Scheduled jobs

The following scheduled jobs are provided:

- Notify new delegates
- Clean Granular Delegation Records

E-signature support

Granular delegation supports Approvals with e-Signature (com.glide.e_signature_approvals). When enabled, the system requires delegates to enter their credentials to fulfill an approval.

Setting up Granular Delegation

Set up Granular Delegation so your employees can delegate their tasks to other employees.

Activate the Granular Delegation plugin (com.glide.granular_service_delegation) for the ServiceNow AI Platform if you have the admin role. For more information, see Activate Granular Delegation.

Granular delegation has separate records for specifying a delegate and specifying what content the delegate can access. You create a Delegate record each time you want to delegate your service tasks to another user.

Administrators create delegation rules to allow the delegation of specific records. Access Control Rules (ACLs) determine if a delegate can access the records that match the delegation rules assigned to them. Creating delegation rules requires an administrator to be familiar with the data model of the delegated services.

Roles installed

Role	Description	Contains roles
Delegation admin [delegation_admin]	Manages granular delegation, setting up delegation rules.	N/A

User Criteria (user_criteria)

Granular delegation can use the User Criteria (user_criteria) table to determine who can be a delegate or a delegator. For more information, see Create delegation rules.

System properties

The **com.glide.delegation.default_days_since_update** system property determines how many days to retain inactive delegation records for users or delegates. The default is seven (7) days and can be changed to a maximum of 30 days.

Any delegate record that was created before the start date and hasn't been updated within the last seven days (or the value entered in the sys property) is not assigned to a delegate until the delegate record is updated. For example, approval tasks that were created before the number of days in the sys property are not visible to the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

assigned user. You can create a work note to update the delegate record to make the approval visible to the assigned user.

Note:
Changing the value in the sys property does not affect delegate records created before the original value entered.

Scheduled jobs

The **Clean Granular Delegation Records** scheduled job runs daily and deletes inactive delegation records based on the **com.glide.delegation.default_days_since_update** system property value.

The **Notify new delegates** scheduled job runs every 10 minutes and triggers a notification to delegates that their delegation period is starting.

Activate Granular Delegation

You can activate the Granular Delegation plugin (com.glide.granular_service_delegation) for the ServiceNow AI Platform if you have the admin role.

Before you begin

Role required: admin

If the Human Resources Scoped App: Core (com.sn_hr_core) plugin is activated, the Employee Center is also included. On-demand delegations can be performed with the Employee Center or the ServiceNow® mobile.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Granular Delegation plugin (com.glide.granular_service_delegation) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

Note:
When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Add delegation rule tables

To create delegation rules, you must add a task table to the **Delegation Rule Tables**.

Before you begin

Role required: delegation_admin

Note:
Adding a table to a delegation rule table does not automatically support delegation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Granular Delegation** > **Delegation Rule Tables**.
2. Select **New**.

> **Note:**
> Ensure you are in the correct scope you want to create delegation rules for. Only tables for the scope you are in appear.

3. From the **Table** list, select a task table from your current scope that supports delegation.
4. Select the **Active** option.
5. Select **Submit**.

What to do next

Next, create a delegation rule to specify the records that are available for employees to delegate. See Create delegation rules.

Create delegation rules

Specify which records are available for service delegation. Specify records by table name, by a condition, and by whether they are an approval or an assignment.

Before you begin

Role required: delegation_admin

If you have not done so already, create a delegation rule table. See Add delegation rule tables.

About this task

Administrators create delegation rules to allow the delegation of specific records. Access Control Rules (ACLs) determine if a delegate can access the records that match the delegation rules assigned to them. Creating delegation rules requires an administrator to be familiar with the data model of the delegated services.

> **Important:**
> Granular delegation does not change a delegate's access to records. To access records, a delegate must already have the necessary roles. For example, to delegate task records, a delegate must have a role such as itil to access the Task table and its extensions.

Procedure

1. Navigate to **All** > **Granular Delegation** > **Delegation Rules**.
2. Click **New**.
3. On the form, fill in the fields:

Delegation Rule form

Field	Description
Name	Label for the delegation rule.
Application	Application associated with the delegation rule. This field is not editable and shows the application of your correct scope.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Short Description	Summary of the delegation rule. Provide enough detail that users can determine when to select the rule.
Active	Option for activating or deactivating a delegation rule.
Table	Type of records you want your delegate to access. Each delegation rule only applies to one table and does not apply to table extensions. Create a delegation rule for each table you want to grant a delegate access to.
Conditions	Filter applied to records in the table. Delegates can only access records that match these conditions. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Approvals	Option to delegate approvals. Approval authority allows a delegate to approve or reject approval requests.
Assignments	Option to delegate assignments.

4. Select **Save** or **Submit**.
   The **Delegation Rule** list returns with the **Delegates**, **Delegator User Criteria**, and **Delegate User Criteria** tabs.

   Note:
   If there are delegates using the rule, you cannot delete it and can only edit the **Name** and **Short description** fields.

   The **My Delegates** widget on the Employee Center does not appear unless there is an active delegation rule.

5. Select the **Delegates** tab.
   Admins see a list of all delegates. You can select a delegate from the list and edit the start and end dates, notifications, and current delegation rules.
6. Select the **Delegator User Criteria** tab to further define who can be a delegator.
7. Select **Edit**.
8. Use condition filters and you can select types of users that can be delegators for the delegation rule.
   For example, you can select **Active is true** and move **Managers** from the **Collection** column to the list on the right. This condition determines only active managers are eligible to be a delegator.
9. Select **Save**.
10. Select the **Delegate User Criteria** tab to further define who can be a delegate.
11. Select **Edit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

12. Use condition filters to select types of users that can be delegates for the delegation rule. For example, you can select **Active is true** and move **Users with 'sn_hr_core.case_writer' role** from the **Collection** column to the list on the right. This condition determines only users with the HR case writer role can be a delegate.
13. Select Save.
    The **Delegation Rule** form returns.
14. Select **Update**.

What to do next

Organize the delegation rules into categories to make delegating large batches of tasks easy and efficient for your employees. See Create delegation rule categories.

Delegate assigned tasks for a specific period of time. See Create a delegate.

Employees can now delegate their assigned tasks to other employees. See Delegate on-demand tasks.

Create delegation rule categories

Create categories or sets of granular delegation rules that make delegating large batches of tasks easy and efficient for your employees.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Granular Delegation** > **Delegation Rule Categories**.
2. Click **New**.
3. On the form, fill in the fields:

Delegation Rule Category form

Field	Description
Name	Label for the delegation rule category.
Application	Application associated with the delegation rule. This field is not editable and shows the application of your correct scope.
Active	Option for activating or deactivating a delegation rule category.

4. Select **Save** or **Submit**.
   If you select **Submit**, click the delegation rule category to edit it.
5. Create or assign existing delegation rules to the delegation rule category:
   - Under the Delegation Rule tab, click **New**. Follow the steps to Create delegation rules.
   - Click **Edit** to select from existing delegation rules.
6. Click **Update**.

What to do next

Delegate assigned tasks for a specific period of time. See Create a delegate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employees can now delegate their assigned tasks to other employees. See Delegate on-demand tasks.

Create a delegate

Delegation admins (delegation_admin) can delegate tasks from one employee to another using **Granular Delegate**.

Before you begin

Role required: delegation_admin

Ensure that the delegate user (the person to whom tasks will be reassigned) has the necessary roles to complete those tasks.

Procedure

1. Navigate to **All** > **Granular Delegation** > **Create New Delegate**.
2. Fill in the form.

Granular Delegate

Field	Description
User	User (delegator) who delegates service tasks to a delegate.
Starts	Date when service delegation begins.
Delegate	User authorized as delegate.
Ends	Date when service delegation ends.
All notifications	Option to send the delegate a copy of all notifications you receive during the delegation period. Select this option when you want the delegate to receive the delegation notification. For example, you want the delegate to receive notifications about activity stream or record updates. It is set to False by default to avoid concerns around getting notifications that has critical and sensitive data. **Note:** Notifications with the **Exclude Delegates** option enabled override the True setting of this option. Use the **Exclude Delegates** option to prevent delegates from seeing confidential or protected information.
Meeting invitations	Option to forward delegates meeting invitations. Select this option to forward the delegate any meeting invitations the instance generates or receives for you. It is set to False by default.

3. Select **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Delegation Rules** related list appears.

4. Select **Edit** to assign delegation rules to a delegate.
   You can use condition filters to search for delegation rules.
5. Select delegation rules under the **Collection** column you want to assign to a delegate and move them to the **Delegation Rules List** column.
6. Select **Save**.
   The **Granular Delegate** form returns.

Using Granular Delegation

Employees can use Granular Delegation to delegate their tasks to another eligible employee.

Delegate on-demand tasks

You can delegate an assigned task to another employee from your Employee Center.

Before you begin
Role required: none

You can also delegate an assigned task from the ServiceNow® mobile. For more information, see Using granular delegation on ServiceNow mobile.

Note:
You must create delegation rules before you can delegate on-demand tasks. For more information, see Create delegation rules.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Select your login name or picture at the top, right corner.
3. Select **Profile**.
4. Scroll down to the **My Delegates** section and select the **Add Delegate** button.
5. Fill in the form.

Select a delegate and duties

Field	Description
Delegate	The name of the person you are delegating your tasks to.
Start date	Select the **Show calendar** icon ( ) and select the date you want delegations to start.
End date	Click the **Show calendar** icon ( ) and select the date you want delegations to end.
Duties	Select the duties you want to assign to the delegate for the time period you select. If your admin organized the duties into categories, the categories are listed before the individual duties. When you select a

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	category, all of the duties in that category are selected.

6. Select **Submit**.

> **Note:**
> You can also navigate to **Granular Delegation** > **My Delegates** and select **New**, or **Granular Delegation** > **Create New Delegate** to assign your tasks to another employee. For more information, see View my delegates.

7. Select the edit icon, then select **Remove delegate** to remove the delegate
8. Select the down arrow icon [to view a list of delegates you have assigned your tasks to.
9. Select the edit icon to remove delegates when you have multiple delegates.

View my delegates

Use the **Granular Delegates** list to view a list of employees that you have delegated your tasks to. You can also delegate your tasks to another employee as an alternative to using the Employee Center.

Before you begin

- Role required: any role with access to task tables such as HR Task [sn_hr_core_task]
- Create one or more Delegation Rule records
- Verify that your delegate has access to the records specified by your delegation rules

> **Note:**
> Admins can use the **Create New Delegate** form to assign tasks from a delegator to a delegate. For more information, see Create a delegate.

Procedure

1. Navigate to **All** > **Granular Delegation** > **My Delegates**.
2. Click **New**.
3. On the form, fill in the fields:

Delegate form

Field	Description
User	User (delegator) who delegates service tasks to a delegate.
Delegate	User you want to delegate tasks to.
Starts	Date when service delegation begins.
Ends	Date when service delegation ends.
All notifications	Option to send the delegate a copy of all notifications you receive during the delegation period. Select this option when you want the delegate to receive the delegation notification. For example, you

Field	Description
	want the delegate to receive notifications about activity stream or record updates. It is set to False by default to avoid concerns around getting notifications that has critical and sensitive data. **Note:** Notifications with the **Exclude Delegates** option enabled override the True setting of this option. Use the **Exclude Delegates** option to prevent delegates from seeing confidential or protected information.
Meeting invitations	Option to forward delegates meeting invitations. Select this option to forward the delegate any meeting invitations the instance generates or receives for you. It is set to False by default.

4. Select **Save**.
5. From the **Delegation Rules** related list, select **Edit**.
6. Select the delegation rules records you authorize this delegate to have.
7. Select **Save**.
   The **Granular Delegate** form returns.
8. Select **Update**.

View delegations assigned to me

Use **Granular Delegates** list to view granular delegate records for the logged in user or employees that have delegated tasks to you.

Before you begin

- Role required: any role with access to task tables such as HR Task [sn_hr_core_task]
- Create one or more Delegation Rule records
- Verify that your delegate has access to the records specified by your delegation rules

Procedure

1. Navigate to **All** > **Granular Delegation** > **Delegated to Me**.
   A list of delegation records assigned to you appears.
2. To view a delegation record, select the date link under the **Starts** column.
3. To view the user record of the delegator, select the user link under the **User** column.
4. To create a new the delegation, select **New**.
5. Fill in the form.

Granular Delegate

Field	Description
User	Logged in user (delegator) who delegates service tasks to a delegate.
Starts	Date when service delegation begins. The default is the current date and time.
Delegate	User you want to delegate tasks to. **Note:** The default value is the logged in user. You need to change this to the user you are delegating tasks to.
Ends	Date when service delegation ends.
All notifications	Option to send the delegate a copy of all notifications you receive during the delegation period. Select this option when you want the delegate to receive the delegation notification. For example, you want the delegate to receive notifications about activity stream or record updates. It is set to False by default to avoid concerns around getting notifications that has critical and sensitive data. **Note:** Notifications with the **Exclude Delegates** option enabled override the True setting of this option. Use the **Exclude Delegates** option to prevent delegates from seeing confidential or protected information.
Meeting invitations	Option to forward delegates meeting invitations. Select this option to forward the delegate any meeting invitations the instance generates or receives for you. It is set to False by default.

6. Select **Save**.
   The **Delegation Rules** related list appears.
7. Select **Edit** to assign delegation rules to a delegate.
   You can use condition filters to search for delegation rules.
8. Select delegation rules under the **Collection** column you want to assign to a delegate and move them to the **Delegation Rules List** column.
9. Select **Save**.
   The **Granular Delegate** form returns.

Using granular delegation on ServiceNow® mobile

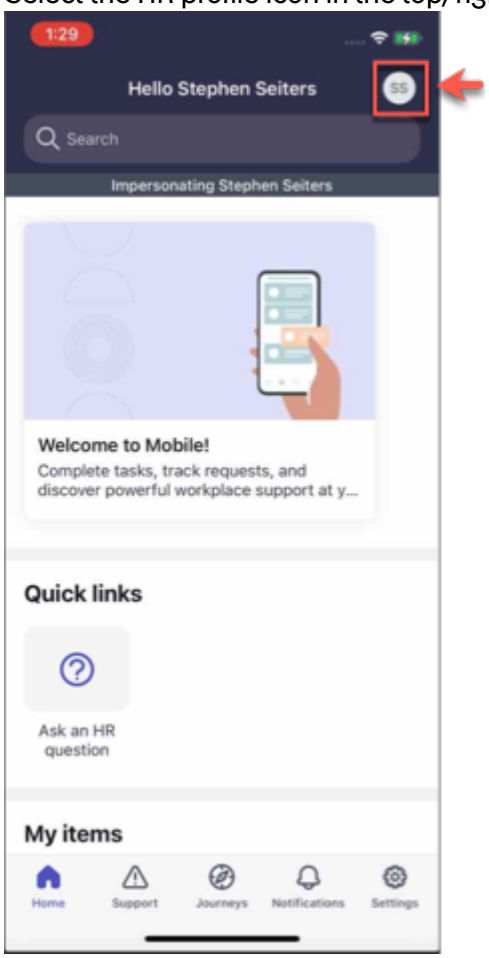
You can use Granular Delegation to delegate tasks from ServiceNow® mobile.

To delegate your tasks using the ServiceNow® mobile:

- Select your HR profile
- Add a delegate
- Add details of the delegation
- Submit the delegation

For more information on the ServiceNow® mobile application, see ServiceNow Mobile.

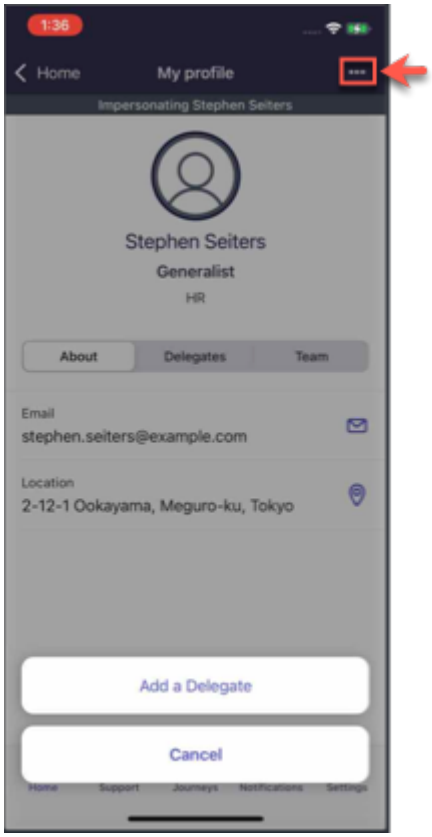
Delegate tasks using the ServiceNow® mobile



You can delegate tasks to other eligible users from the ServiceNow® mobile.

Before you begin

Role required: sn_hr_core.case_writer



Procedure

1. Navigate to the **All** > **ServiceNow mobile home page**.
2. Select the HR profile icon in the top, right corner.

3. Select the edit icon (▪▪▪).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select the **Add a Delegate** button.
5. Fill in the form.

Granular Delegation mobile form

Field	Description
Delegate	Person authorized as a delegate. Select a person you want to delegate your duties to.
Start date	Date when the service delegation begins.
End date	Date when the service delegation ends.
Duties	The duties you want to delegate. A list of duties appears after you select **Duties**. Select the duties you want to delegate and a check mark appears next to the duty.

6. Select **Submit**.
   Your Employee Profile appears. To see a list of people you have delegated tasks to, select the **Delegates** tab.

View tasks delegated to you on the ServiceNow® mobile

You can use the ServiceNow® mobile to view tasks delegated to you.

Before you begin

Role required: sn_hr_core.case_writer

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notification of delegated tasks are sent to your email address if your HR profile contains that information. For more information, see HR Profile.

Note:
If your company uses Connect, you can choose what notifications you receive. For more information on notifications, see Enable or disable Connect notifications globally.

Procedure

Navigate to the mobile **All** > **Home** > **My Tasks**.
A list of tasks delegated to you appears.

Health and Safety

ServiceNow Health and Safety enables businesses to ensure safe and healthy working conditions for their employees.

This video shows a visual overview of ServiceNow Health and Safety and its capabilities.

https://player.vimeo.com/video/1012534924?h=ce4c8293c8&badge=0&autopause=0&player_id=0&app_id=58479

To deliver on Environmental, Social, and Governance (ESG) goals, companies must correctly record, track, and report on health and safety related employee incidents. ServiceNow Health and Safety provides at-your-fingertips capabilities such as reporting incident and observation and filing job safety analysis (JSA) and a one-stop-shop for all safety knowledge in your company. Further, it also provides the tools to reduce safety incidents, keep the costs down, and assess and manage risks.

Health and Safety applications

Health and Safety includes the following applications:

Health and Safety Incident Management

The ServiceNow® Health and Safety Incident Management application is a solution in Health and Safety that enables organizations to record, track, and report on health and safety related employee incidents and observations. Furthermore, it provides capabilities to investigate and reduce incidents.

Health and Safety Incident Management OSHA Content Pack

With the ServiceNow® Health and Safety Incident Management OSHA Content Pack application, you can automatically fill and export OSHA forms for injuries and illnesses that happened in an establishment under your organization.

Health and Safety Case Management

The ServiceNow® Health and Safety Case Management application provides capabilities to support employees' health and safety inquiries and their return to work after an injury or illness.

Health and Safety Contractor Management

The ServiceNow® Health and Safety Contractor Management application provides capabilities to manage contractor companies and workers for their health and safety.

Health and Safety Risk Management

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The ServiceNow® Health and Safety Risk Management application provides capabilities to enable workers, line managers, and safety personnel to work safely and reduce the likelihood of injuries that risks or hazards create.

Mobile experience for Health and Safety

You can use ServiceNow® Now Mobile app to work on the Health and Safety applications.

For more information, see Mobile experience for Health and Safety.

Domain separation for Health and Safety applications

The Health and Safety applications support domain separation at basic level. For more information, see Domain separation and Health and Safety Incident Management and Domain separation and Health and Safety Risk Management. For a deeper understanding of the support levels, see Application support for domain separation.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Health and Safety Core

The ServiceNow® Health and Safety Core application provides the data model that is required for consistent employee and operational experiences in Health and Safety.

Health and Safety Core overview

The Health and Safety Core data model supports the functionality of the following Health and Safety applications.

- Health and Safety Incident Management
- Health and Safety Contractor Management
- Health and Safety Case Management
- Health and Safety Risk Management

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Exploring Health and Safety Core

Health and Safety Core enables the organizations to streamline and automate essential business functions across the Health and Safety applications.

Health and Safety Core overview

The Health and Safety Core application provides the core date model for Health and Safety. This data models consists of common components and data structure to enable the functioning of related Health and Safety applications.

- Health and Safety Workspace is used by safety agents to perform their safety tasks. All health and safety applications that are installed use the Health and Safety Workspace.
- Health and Safety dashboard provides a centralized overview of your organization's safety performance. It helps safety teams monitor, analyze, and manage key safety metrics such as incidents, injuries, risks, and corrective actions across various locations and time periods.
- Health and Safety user profile provides safety teams access to all the information associated with health and safety records in a central location.
- Safety teams can manage safety meetings and tasks such as scheduling a meeting or recording notes.
- Report field mapping enables the safety agents to generate PDF reports for the records.
- Health and Safety documents enable the safety teams to view documents associated with a safety record.
- Health and Safety action scheduler helps to create scheduled actions across the organization.

User Personas

Health and Safety Core is aimed at the following personas:

Benefits and user personas

Benefits	Feature	User
Access the workspace to process safety records.	Health and Safety Workspace	Safety agents

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Benefits and user personas (continued)

Benefits	Feature	User
Get insights into key safety metrics with a centralized interface.	Health and Safety dashboard	Safety team
Access the user information in one central location.	Health and Safety user profile	Safety team
Create safety report field mapping to map fields in your reporting PDF template to the corresponding fields in the Health and Safety records.	Report field mapping	Safety report mapping manager
Log and track the meetings in the Health and Safety application.	Safety meetings	Safety meeting manager
Create an action schedule to schedule actions across the organization.	Health and Safety action scheduler	Safety agents

Health and Safety Workspace

The Health and Safety Workspace provides a single location for safety teams to process safety records. Agents can use it to manage incidents, risks, contracts, or cases depending on the applications installed.

Workspace users

The following users can use the Health and Safety Workspace. The workspace is personalized for different roles.

Workspace users

User	Description
Safety manager	Keeps track of safety frequency rates and assigns safety tasks to safety agents.
Safety agent	Works on incidents, observations, corrective and preventive actions, and conducts investigations.
Safety operations manager	Accesses Health and Safety operations landing page to report safety incidents and observations.
Safety compliance manager	Manages the establishments list and the generation of reports such as OSHA forms.
Executive	Views the Health and Safety executive landing page to gain insight into company's safety metrics.
Application admin	Configures the workspace as per business requirements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

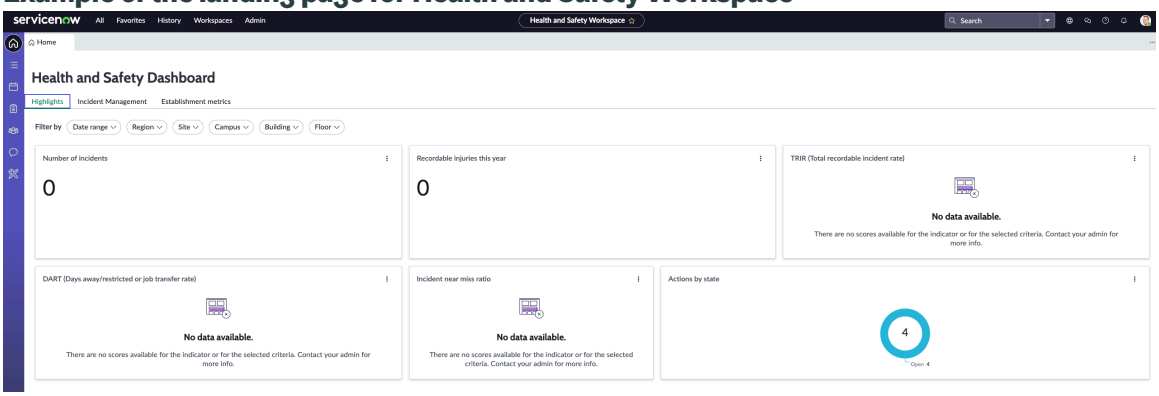
Workspace users (continued)

User	Description
	For more information, see these links: • Configure a workspace in Workspace Builder • Next Experience UI Builder

Accessing the workspace

To open the workspace, navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.

The Health and Safety Workspace opens in a new tab of the browser window.



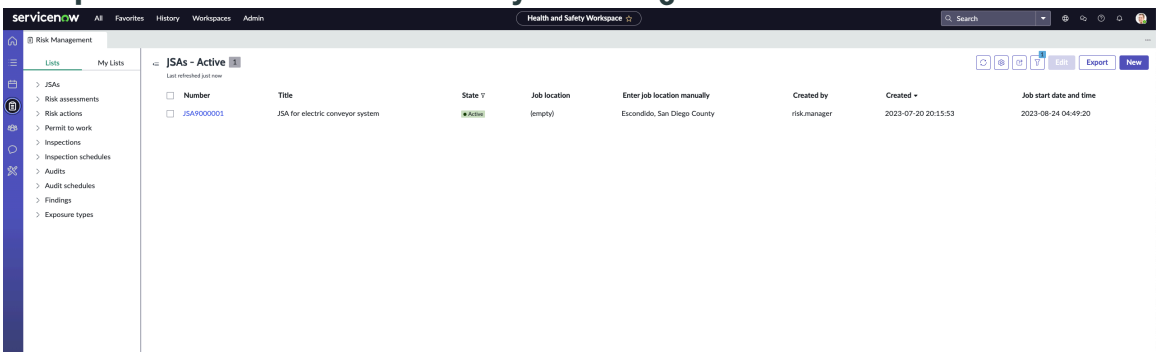
Landing page

On the workspace landing page, the Health and Safety dashboard gives a quick overview of the widgets under the **Highlights** tab showing metrics and scores based on the Health and Safety applications installed. You can monitor the status and explore each component to see the list behind the score in these widgets. The widgets also help you and your team to monitor your workload, focus on high-priority items, and easily manage your responsibilities.

Note:
The widgets and the data that are displayed in the widgets depend on your role.

The following is an example of the workspace landing page for the Health and Safety Core where the Health and Safety Incident Management application is installed.

Example of the landing page for Health and Safety Workspace



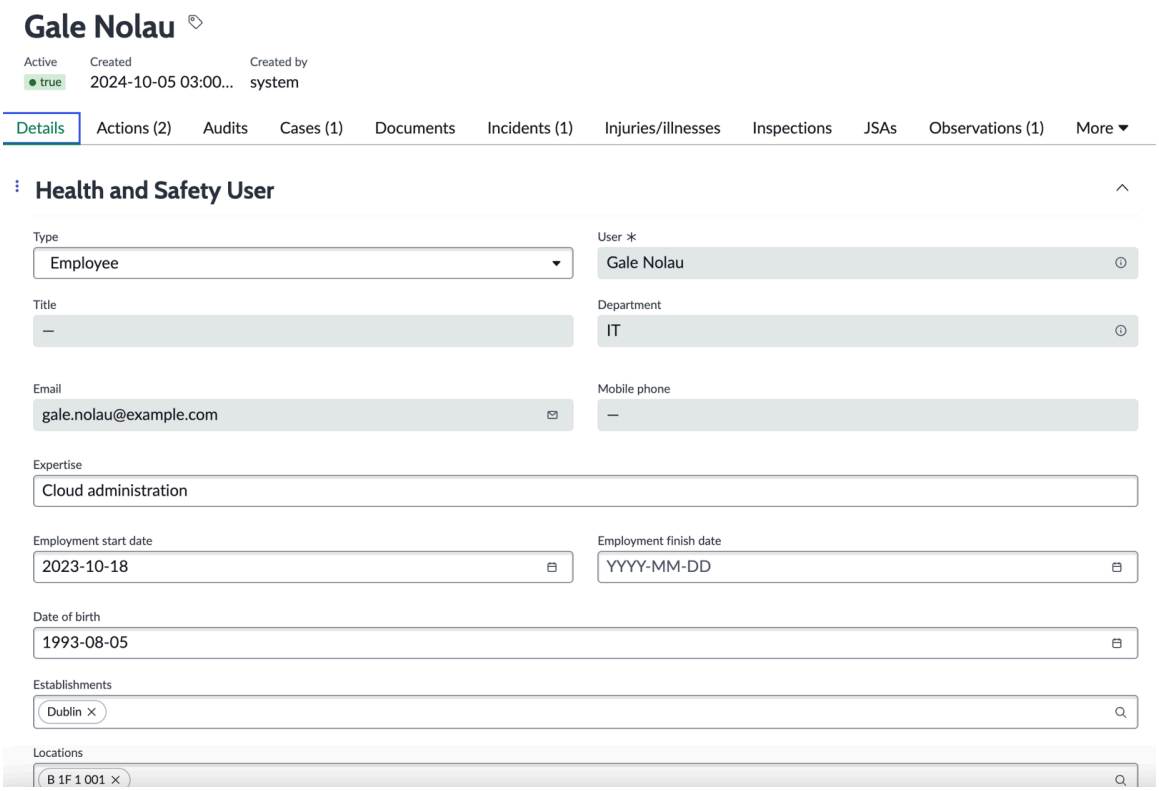
Primary navigation

The primary navigation displays icons for the installed Health and Safety applications. Clicking on these icons takes you to the list view for each application. For example, if you have the Health and Safety risk management application installed, then you can view the risk related records by clicking the **Risk management** icon .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example of list view for health and safety risk management

Health and Safety user profile



A Health and Safety profile provides safety team with all the information about a user in one central place.

It enables them to access all safety-related information about users (including employees, visitors, and contractors) in the organization. They can see safety training records of workers and can easily track who is trained in what, and view safety incidents and other safety-related records associated with them.

Overview of a Health and Safety profile

The following image shows an example profile of a Health and Safety user.

Example Health and Safety profile

The **Details** tab displays key information about the user such as their expertise, location, and employment start date.

The profile also shows the following health and safety-related records associated with the user in the respective tabs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Actions that are assigned to the user
- Audits the user is involved in
- Cases opened by the user
- Documents that are associated with the user
- Exposures the user is affected by
- Incidents the user is involved in
- Injury and illnesses where they user is injured
- Inspections the user is assigned
- Job safety analyses (JSAs) the user is involved in
- Observations the user is involved in
- Risk Assessments the user is involved in
- Site access the user is involved in

The tabs in a profile appear based on the installed Health and Safety applications.

Accessing Health and Safety profile

To open the Health and Safety profile for a user,

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon () and select the **Health and safety profiles** list.

Assigning Health and Safety profile

- To assign Health and Safety profile for a user, see Assign Health and Safety profile to a user.
- To assign Health and Safety profile for a contract worker, see Assign Health and Safety profile to a contractor worker.

Setting up Health and Safety Core

You can set up your implementation for the Health and Safety Core data model by installing the data model and reviewing and configuring the components that are installed with the data model.

Install Health and Safety Core

You can install the Health and Safety Core (sn_ohs_im) if you have an admin role. This data model includes demo data and installs related ServiceNow® Store plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application .
- Review the Health and Safety Core application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Health and Safety Incident Management:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Plugins
- Store applications
- Roles
- Scheduled jobs
- Tables

For more information, see Components installed with Health and Safety Core.

This table lists the optional applications that can be installed for additional features:

Optional applications for additional features in Health and Safety Core

Application	Description
Geo map component [sn_geo_map]	Provides access to enable the map component in the Health and Safety Workspace from the application properties. To install, see Activate a plugin
Geolocation plugin [com.snc.geolocation]	Enables geolocation feature on the Now Mobile app and gives access to manual tracking options. For more information, see Enabling and selecting location tracking options
Learning Core [sn_lc]	Installs Learning Core to enable learning content in Health and Safety actions. For more information, see Configuring Learning Core.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Health and Safety Core application (sn_ohs_im) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.

6. Select **Install**.

Set up your workplace location data

In the Workplace Core application, set up data related to your workplace locations so you can select a location in your safety records, for example, your safety incidents and observations.

Before you begin
Role required: sn_wsd_core.admin

Procedure

Configure the workplace locations.
For more information on what you can configure, see Providing your workplace data.

Result
The **Location** field on safety forms, for example, incidents and observations, shows the configured workplace locations.

Enable a Health and Safety table for configuring report field mapping

Enable a Health and Safety table for report field mapping. You can then configure its mapping with your reporting PDF template, enabling safety agents to generate reports for records in this table.

Before you begin
Verify that the application scope is selected as Health and Safety Core. For more information, see Application picker.

Role required: sn_ohs_im.admin

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety administration** > **Properties**.
2. In the property *Report field mapping tables*, add the table name, for example, `sn_ohs_im_action`, to enable it for report field mapping.
`sn_ohs_im_incident`, `sn_ohs_im_observation`, and `sn_ohs_im_injury_illness` tables are set as default value in this property.
3. Select **Save**.

Result

- The table is available in the **Mapping table** field when configuring a report field mapping for this table.
- The **Generate report** button becomes available in all records for this table.
- Once a report field mapping is set up for this table, the **Generate report** button becomes available for all its records.

What to do next
To generate a report for this table's records, you must configure its report field mapping. For more information, see Create a safety report field mapping.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a safety report field mapping

Create a safety report field mapping to map fields in your reporting PDF template to the corresponding fields in the Health and Safety records.

Before you begin

- The imported reporting PDF template, that you want to create the mapping for, must be fillable.
- The Health and Safety table to be mapped is enabled for report field mapping. For more information, see Enable a Health and Safety table for configuring report field mapping.

Role required: sn_ohs_im.report_mapping_manager

About this task

The report field mapping enables you to do the following:

- Import your own PDF templates that you need to use for reporting such as for regional conformance or industry-specific needs.
- Map the fields in your reporting PDF template with the fields in safety records, such as an incident, observation, and injury and illness.
- Using the PDF template, generate reports from safety records with fields auto-populated, making the reporting process more efficient.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ().
3. In the **Configuration** tab, select **Report field mappings** and then **All**.
4. Create a report field mapping or modify an existing one.
   - To create a report field mapping, select **New**.
   - To review an existing one, open the one that you want to configure.
5. On the form, fill in the fields.

Report field mapping details

Field	Description
Number	System-generated unique number for the report field mapping.
Location	Location that this report field mapping applies to.
Short description	Brief description about the report field mapping.
State	State of the report field mapping. ○ **Draft**: Select to perform mappings in the Form Field Mapping tab. ○ **Published**: Select to publish and mark this mapping available for use. Only the published mappings are available to select during report generation. ○ **Obsolete**: Select to mark this mapping as obsolete.
Mapping table	Health and Safety table to map PDF fields to, for example, Health and Safety incident [sn_ohs_im_incident] or Injury and illness [sn_ohs_im_injury_illness].

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Only the tables enabled for report field mapping appear in this field.
PDF document	PDF template that you need to use for reporting and map the safety record fields to. Select **Attach file** to import the reporting PDF template.

6. Select **Save**.
   The **Form field mapping** tab appears. The **Field mappings** section shows all fields extracted from the imported PDF. A preview of the attached PDF is available alongside the **Field mappings**.
7. In the **Field Mappings** section, map Health and Safety fields to each field extracted from the PDF.

   Tip:
   In the PDF preview, select a fillable field to highlight the corresponding field in the Field Mappings list. Alternatively, select a field in the Field Mappings list and it's highlighted on the PDF preview.

8. Check that the field mappings are active.

   To deactivate a field mapping, select the more options icon (⋮) beside the field mapping and then select **Deactivate**.
9. Select **Save**.

Result

- The fields in the imported reporting PDF template are mapped to the fields in the selected mapping table.
- The published report field mapping is available to select during a report generation in mapped safety table records. For example, see Generate a report for a safety incident, observation, or injury.

Configure groups for Health and Safety

Configure user groups for Health and Safety for assignment of safety incidents, observations, and actions. You can assign roles to groups to provide access to all group members or assign roles to individual users.

Before you begin

Role required: sn_ohs_im.admin and admin

About this task

User groups are used across most processes in the ServiceNow AI Platform for assigning work to teams and requesting approvals.

Any rule that is applied to a group is automatically assigned to group members. For example, roles and assignment rules applied to a group are automatically assigned to group members.

Procedure

1. Navigate to **All** > **User Administration** > **Groups**.
2. Create a group or modify an existing group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To create a group, select **New**.
- To review an existing group, open the group that you want to configure.

3. On the form, fill in the fields.
   For detailed instructions and field descriptions, see Create a user group.
4. Select **Submit** or **Update**.

What to do next

- Assign roles to the group. For more information, see Assign a role to a group.
- Add users to the group.

Configure scheduled job to generate frequency rates

Configure the scheduled job to load the safety frequency rates and ensure that the safety metrics on the Health and Safety Workspace landing page are up to date.

Before you begin

Ensure that the application scope is selected as Health and Safety Incident Management PA Content Pack. For more information, see Application picker.

Role required: sn_ohs_im.admin

About this task

The *[OHS] Safety Metrics* job is set to run daily by default.

Procedure

1. Navigate to **All** > **Performance Analytics** > **Jobs**.
2. Search and open the *[OHS] Safety Metrics* scheduled job.
3. In the **Run** field, set the frequency of the scheduled job.
4. To activate the scheduled job, select the **Active** check box.
5. Select **Update**.

> **Note:**
> To run the scheduled job and update metrics on demand, select **Execute Now**.

Assign Health and Safety profile to a user

Assign the Health and Safety profile to all users in your organization, including employees, visitors, and contractors.

Before you begin

Role required: sn_ohs_im.hs_profile_writer

About this task

For more information on Health and Safety user profiles, see Health and Safety user profile.

> **Note:**
> The **Generate Health And Safety Profiles** scheduled job runs weekly and automatically creates health and safety user profiles for users [sys_user] with an assigned role in any of the Health and Safety applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ( ).
3. In the **Lists** tab, select **Health and safety profiles** and then **All**.
4. Select **New**.
5. On the form, fill in the fields.
   For information on form field descriptions, see Health and Safety profile form.
6. Select **Save**.

Result

- The user is listed in the **Health and safety profile** list under **Configuration** on the Health and Safety Workspace.
- The user profile is saved in the Health and Safety profile [sn_ohs_im_health_and_safety_profile] table.

Add a Health and Safety visitor

Create a record for a Health and Safety visitor so that they can be easily referenced in the **Visitor** field on related records.

Before you begin
Role required: sn_ohs_im.hs_profile_writer

About this task
A visitor is a person from outside the organization who came to visit the site.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ( ).
3. In the **Configuration** tab, select **Health and safety visitors** and then **All**.
4. Select **New**.
5. On the form, fill in the fields.

Health and Safety visitor form

Field	Description
First name	Visitor's first name.
Middle name	Visitor's middle name.
Last name	Visitor's last name.
Visitor ID	System-generated ID for the visitor.
Phone number	Visitor's contact number.
Company	Organization that the visitor works for.
Email	Visitor's email address.

6. Select **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

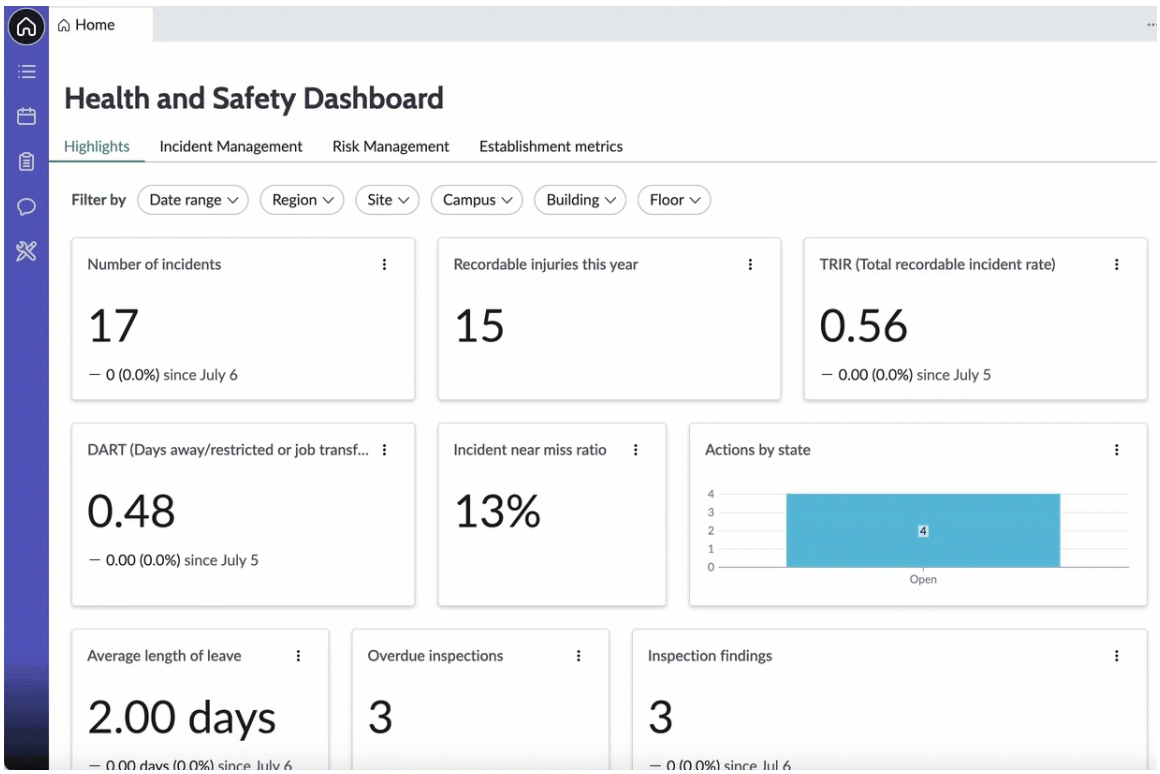
A Visitor ID is generated for the visitor.

7. Assign the Health and Safety user profile to the visitor record.

   For more information, see Assign Health and Safety profile to a user.

> **Note:**
> Only a visitor with the assigned Health and Safety profile is available to select in the **Visitor** field on a form.

Result



- The visitor is listed in the **Health and safety visitors** list under **Configuration** and is saved in the Health and Safety visitor [sn_ohs_im_health_and_safety_visitor] table.

> **Note:**
> If the Workplace Visitor Management (com.sn_wsd_visitor) application is also installed on your instance, then the list of WSD visitors from the Visitor [sn_wsd_visitor_visitor] table is automatically synchronized with the Health and Safety visitors list in the Health and Safety visitor [sn_ohs_im_health_and_safety_visitor] table. So, the WSD visitors also show up in the **Health and safety visitors** list and should be assigned the Health and Safety user profile.

- The visitor's Health and Safety user profile is saved in the Health and Safety profile [sn_ohs_im_health_and_safety_profile] table.
- The visitor is available to be referenced in the **Visitor** field on Health and Safety records such as safety incidents that the visitor is involved in.

Working with the Health and Safety dashboard

With the Health and Safety dashboard, you can actively monitor and manage workplace safety performance across different locations in your organization and identify areas needing attention.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Key features of the dashboard

- The dashboard provides a centralized view of key safety indicators such as incident counts, recordable injuries, and safety action status. You can monitor the status, see trends, and drill down into the details from a single view.
- The available filters help you to refine the view by date range, region, site, campus, building, and floor.
- Depending on your role, the dedicated tabs for **Incident Management** and **Risk Management** help you to easily track incidents and assess risks.

Dashboard tabs

The dashboard features several tabs to enable you to navigate between different areas of workplace safety. The tabs and their widgets are available based on the installed Health and Safety applications in your ServiceNow instance.

Highlights

This tab features a selection of key cards from the Incident Management and Risk Management tabs, to provide a high-level summary of key safety metrics such as the total incidents, recordable injuries, and open risk assessments.

Incident Management

This tab focuses on tracking and managing safety incidents, injuries, and observations. For detailed information on incident management metrics, see Monitoring and analyzing safety incident metrics.

Establishment Metrics

This tab shows key cards from the Incident Management tab, presented with a breakdown by establishment for more localized insights.

Risk Management

This tab shows metrics identifying, assessing, and mitigating risks. For detailed information on safety risk management metrics, see Monitoring and analyzing safety risk metrics.

Customizing widgets

You can customize the widgets in the dashboard to display relevant metrics by using the UI Builder. For more information, see UI Builder tutorial.

Required roles

- sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.compliance_manager, needed to see dashboard home page. The metrics on each tab are dependent on the user's access to that table.
- sn_ohs_im.admin and the following roles, to edit the dashboard:
  - pa_admin, to edit the Performance Analytics (PA) components used in the dashboard.
  - ui_builder_admin, to edit the dashboard visualizations that are built using the UI Builder.

Access the Health and Safety dashboard

To open the Health and Safety dashboard, navigate to **Workspaces** > **Health and Safety Workspace**.

Using Health and Safety Core

Learn how the Health and Safety Core data model provides capabilities to manage safety meetings, schedule safety actions, and manage and monitor safety records.

Managing safety meetings

Safety meeting management provides the safety team and safety meeting manager with a structured way to manage safety meetings, including tasks such as scheduling, tracking actions, and recording notes.

Key features of safety meeting management

- Schedule different types of safety meetings for all person types-including employees, visitors, and contractors.
- Add multiple attendees using a condition builder
- Log meeting minutes and actions.
- Flag meetings and minutes as sensitive.

Log a safety meeting

Log a safety meeting and keep a track of it in the Health and Safety application.

Before you begin

Role required: sn_ohs_im.meeting_manager or sn_ohs_im.meeting_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the meetings icon ( ).
3. In the **Meetings** tab, select **Meetings** and then **All**.
4. Create a meeting or open an existing one.
   - To create a meeting, select **New**.
   - To open an existing meeting, select the one that you want to track. Alternatively, to quickly edit the meeting, select the edit icon ( ) in the list and start updating the meeting in the side panel.
5. On the form, fill in the fields.
   For field descriptions, see Health and Safety meeting form.
6. Select **Save**.
   The **Attendees**, **Meeting minutes**, **Documents**, and **Actions** tabs appear for this meeting.
7. In the **Attendees** tab, select **Add** or **New** to add attendees for this meeting.
   For more information, see Add attendees to a safety meeting.
8. **Optional:** In the **Documents** tab, select **Add** to add any documents that cover topics to be discussed or shared in this meeting.
   For information on storing documents in the Health and Safety Workspace, see Add a Health and Safety related document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. **Optional:** In the **Actions** tab, select **New** to add any actions for the safety meeting. For field descriptions, see Health and Safety action form.

Result

- The safety meeting is listed in the **Meetings** list in the Health and Safety Workspace and is saved in the Meeting [sn_ohs_im_meeting] table.
- The documents associated with this meeting are saved in the Health and Safety m2m meeting document [sn_ohs_im_m2m_meeting_document] table.

What to do next

In the **Meeting minutes** tab, meeting minutes taker can add minutes of this meeting to track discussions and add any actions for the recorded minutes. You can add as many meeting minutes to a safety meeting as needed. For more information, see Create a meeting minute for a safety meeting.

Add attendees to a safety meeting

Add users to a safety meeting who need to attend this meeting.

Before you begin

Role required: sn_ohs_im.meeting_manager or sn_ohs_im.meeting_writer

About this task

Using the **Attendees** tab of a safety meeting, you can keep track of all attendees and absentees for the meeting in the same place.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the meetings icon ().
3. In the **Meetings** list, select the one that you want to add attendees to.
4. In the **Attendees** tab, select **Add** or **New** to add attendees for this meeting.

Result

- The attendees are listed in the **Attendees** tab of the meeting and are saved in the Health and Safety meeting attendee [sn_ohs_im_meeting_attendee] table.
- For an attendee internal to your organization, the **Attendee profile** column of this list shows the user's Health and Safety profile.
- For an external attendee, the **Attendee profile** column of this list is empty.

Create a meeting minute for a safety meeting

Create a meeting minute for a safety meeting to track discussions and accountability.

Before you begin

Verify that the minute taker is added as an attendee to this safety meeting. For information on adding a meeting attendee, see Add attendees to a safety meeting.

Role required: sn_ohs_im.meeting_minute_taker

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

You can create multiple meeting minutes for different timestamps of a safety meeting. For each minute record, you can add relevant actions to ensure safety concerns are addressed and contributors remain accountable.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the meetings icon ().
3. In the **Meetings** list, select the one that you want to create meeting minutes for.
4. In the **Meeting minutes** tab, select **New**.
5. On the form, fill in the fields.

Safety meeting minute form

Field	Description
Short description	Brief description about this meeting minute.
Time stamp	Time of the discussion during the meeting.
Contributors	Attendees involved in this discussion.
Sensitive content	Option to indicate that this meeting minute contains sensitive information. Only a user with the Sensitive meeting content user [sn_ohs_im.sensitive_meeting_content_user] role can view a meeting minute marked as sensitive. **Note:** Selecting a meeting minute as sensitive content doesn't mark the entire safety meeting or the other meeting minutes for this meeting as sensitive.
Topic discussed	Description about the topic discussed.

6. Select **Save**.
   The **Actions** tabs appear for this meeting
7. **Optional:** In the **Actions** tab, assign any actions related to this meeting minute.
   - To create an action, select **New**.
   - To associate an action from the existing list of actions for this meeting, select **Add**.

   For field descriptions, see Health and Safety action form.

Result

- The meeting minute is listed in the **Meeting minutes** tab of the meeting and is saved in the Health and Safety meeting minute [sn_ohs_im_meeting_minute] table.
- Any action for this meeting minute is listed in the **Actions** tab of the minute record. The action is saved in the Health and Safety m2m meeting minute action [sn_ohs_im_m2m_meeting_minute_action] table.

© 2026 ServiceNow, Inc. All rights reserved.

Scheduling Health and Safety actions

Use the Health and Safety action scheduler to create and schedule actions across the organization and auto-assign them to specific individuals using the condition builder.

Create a Health and Safety action schedule

Create an action schedule to schedule actions across the organization such as learning activities and recurring tasks.

Before you begin

Role required: sn_ohs_im.agent

About this task

The action scheduler uses the condition builder to create and assign actions to individuals based on specified conditions.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. Select the **Action schedules** list and then **All**.
4. Select **New**.
5. On the form, fill in the fields.

   For information on field descriptions, see Health and safety action schedule form.
6. In the **Assign to** field, add conditions to auto-assign the generated actions.
   This criteria is based on the Health and Safety profile [sn_ohs_im_health_and_safety_profile] table. It automatically adds users with the Health and Safety profile to the action records generated for this schedule.

   a. Select **Set conditions**.

   b. In the condition builder, define conditions to choose people this action should be assigned to, and select **Set**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can choose fields from the Health and Safety profile table and dot-walk fields when selecting a field in the condition builder. For example, the following image shows the conditions to select users in the Warehouse department in Dublin.

7. Select **Save**.

Result

- The action schedule is saved in the Action schedule [sn_ohs_im_action_schedule] table.
- The **Actions** tab appears for the action schedule.
- In the **Actions** tab, the action scheduler creates and auto-assigns actions based on the condition builder. An action schedule might generate multiple actions for people over time.
- The created actions appear in the assigned user's **My Tasks** list on both the Employee Center and the Now Mobile app. From either location, the user can respond to the action and update its status. For information on action form fields, see Health and Safety action form.

Add a Health and Safety related document

Add and store documents Health and Safety related documents so that they can be easily and appropriately referenced in related records.

Before you begin

Role required: sn_ohs_im.document_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ( ).
3. In the **Configuration** tab, select **Standards and documents** and then **All**.
4. Select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To review an existing document, open the one that you want to review.

5. On the form, fill in the fields.
   For more information on field descriptions, see Health and Safety document form.
6. Select **Save**.

Result

- The document is listed in the **Standards and documents** list under **Configuration** and is saved in the Health and Safety document [sn_ohs_im_document] table.
- The document is available to be referenced in Health and Safety records such as **Documents** tab on the Contractor company form when uploading documents related to the company or its workers.

Health and Safety Core reference

Learn about the components, such as the roles, tables, plugins, and store applications, that are installed when the Health and Safety Core data model is installed.

Components installed with Health and Safety Core

Several types of components are installed with installation of the Health and Safety Core data model, including tables, user roles, and scheduled jobs. This data model is automatically installed with Health and Safety applications.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Plugins installed

Plugins installed with Health and Safety Core

Plugin	Description
Playbook Experience Core [com.glide.playbook_experience.config]	Activates playbook for Health and Safety incidents.
Explicit Roles	Enables the assignment of [snc_external] role for external workers such as contractor workers.

Store applications installed

Store apps installed with Health and Safety Core

Store application	Description
Workplace Core [sn_wsd_core]	Enables workplace locations for Health and Safety Incident Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Store apps installed with Health and Safety Core (continued)

Store application	Description
	Important: The application installation doesn't install the location demo data for the Workplace Core location model. As a workaround, repair the Workplace Core plugin with the **Load demo data** option.
Health and Safety Components	Seismic component that enables the visual injury and illness picker, for example, in the Health and Safety Incident Management application. The component is used by safety teams to log injuries associated with an injury and illness report and quickly see the types and severity of injuries.

Roles installed

Roles in Health and Safety Core

Role title [name]	Description	Contains roles
Safety admin [sn_ohs_im.admin]	Administrator for Health and Safety applications who can: • Configure the Health and Safety Core and other Health and Safety applications • Has read, write, and create access to health and safety data • Grant Health and Safety roles	• template_read_gl • agent_workspace • sn_ohs_im.manag • workspace_user • sn_hs_rm.safety_ • sn_hs_rm.hierarc • sn_ohs_im.hs_pro • sn_hs_rm.risk_as • sn_ohs_im.operat • sn_hs_rm.safety_ • sn_hs_crm.contra • sn_hs_rm.risk_ma • sn_hs_cm.case_m • sn_hs_rm.risk_ca • sn_hs_rm.risk_da • sn_ohs_im.report • sn_ohs_im.compl • sn_hs_rm.safety_ • sn_hs_rm.permit_

Safety incident reader [sn_ohs_im.incident_reader]	Can view Health and Safety incidents	• sn_hs_rm.risk_ca • sn_hs_rm.hazard_ • sn_hs_rm.templa
Safety incident reporter [sn_ohs_im.incident_reporter]	Can submit Health and Safety incidents	• sn_ohs_im.hs_pro • sn_hs_rm.risk_ca • sn_hs_rm.hazard_ • sn_wsd_core.loca
Safety incident writer restricted [sn_ohs_im.incident_writer_restricted]	Can create and update Health and Safety incidents when all restrictions have been met	sn_wsd_core.locatio
Safety observation manager [sn_ohs_im.observation_manager]	Can perform all operations related to Health and Safety observations	• sn_ohs_im.observ • sn_ohs_im.observ
Safety observation writer [sn_ohs_im.observation_writer]	Can create and update Health and Safety observations	sn_wsd_core.locatio
Safety observation reporter [sn_ohs_im.observation_reporter]	Can submit Health and Safety observations	• sn_ohs_im.hs_pro • sn_wsd_core.loca
Safety observation reader [sn_ohs_im.observation_reader]	Can view Health and Safety observations	None
Safety observation writer restricted [sn_ohs_im.observation_writer_restricted]	Can create and update Health and Safety observations when all restrictions have been met	sn_wsd_core.locatio
Document admin [sn_ohs_im.document_admin]	Administrator for Health and Safety documents who can: • Add, update, and delete Health and Safety related documents in the **Standards and documentation** list • Grant access to **Standards and documentation** list	• sn_ohs_im.docum • sn_ohs_im.docum
Document reader	Can view Health and Safety documents	None

Roles in Health and Safety Core (continued)

Role title [name]	Description	Contains roles
[sn_ohs_im.document_reader]		
Document writer [sn_ohs_im.document_writer]	Can add and update Health and Safety related documents in the **Standards and documentation** list	None
Safety meeting manager [sn_ohs_im.meeting_manager]	Safety meeting coordinator who can: • Schedule safety meetings and create invite lists and agendas • Create Health and Safety actions for safety meetings • Add related documents to safety meetings • Mark safety meetings as sensitive and assign the sensitive meeting content user role	• sn_ohs_im.meetir • sn_ohs_im.meetir
Sensitive meeting content user [sn_ohs_im.sensitive_meeting_content_user]	Can view safety meetings and meeting minutes marked as sensitive	None
Safety meeting minute taker [sn_ohs_im.meeting_minute_taker]	Safety meeting minute taker who can: • Log meeting minutes for a safety meeting • Mark attendance for meeting attendees • Create actions for meeting minutes • Mark meeting minutes as sensitive	• sn_ohs_im.meetir • sn_ohs_im.meetir
Safety meeting writer [sn_ohs_im.meeting_writer]	Can create and update Health and Safety meetings	• sn_ohs_im.action • sn_ohs_im.docum • sn_ohs_im.meetir • sn_ohs_im.action
Safety meeting reader [sn_ohs_im.meeting_reader]	Can view Health and Safety meetings	• sn_ohs_im.action • sn_ohs_im.docum • sn_ohs_im.hs_pro • sn_wsd_core.loca • sn_ohs_im.action

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles in Health and Safety Core (continued)

Role title [name]	Description	Contains roles
Safety meeting minute writer [sn_ohs_im.meeting_minute_writer]	Can create and update meeting minutes for Health and Safety meetings	• sn_ohs_im.action • sn_ohs_im.meeti
Safety meeting minute reader [sn_ohs_im.meeting_minute_reader]	Can view meeting minutes for Health and Safety meetings	• sn_ohs_im.hs_pro • sn_ohs_im.action
Health and Safety profile writer [sn_ohs_im.hs_profile_writer]	Health and Safety profile writer who: • Has create access to the Health and Safety profile [sn_ohs_im_health_and_safety_profile] table • Can assign and update Health and Safety profile to users in your organization, including employees, visitors, and contractors	sn_ohs_im.hs_profi
Health and Safety profile reader [sn_ohs_im.hs_profile_reader]	Can view users with Health and Safety profile in your organization	none
Safety action schedule writer [n_ohs_im.action_schedule_writer]	Can write, create, or delete access for action schedule table.	• sn_ohs_im.action • sn_ohs_im.action
Safety action schedule reader [sn_ohs_im.action_schedule_reader]	Can view safety action schedules.	sn_ohs_im.action_r
Health and Safety workspace user [sn_ohs_im.workspace_user]	Has access to the Health and Safety Workspace.	workspace_user

Tables installed

Tables installed with Health and Safety Core

Table	Description
Health and Safety action [sn_ohs_im_action]	Stores all actionable outputs from all safety incidents, observations, and root cause analyses. This table extends the Health and Safety task [sn_ohs_im_task] table.
Health and Safety document	Stores all Health and Safety related documents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Health and Safety Core (continued)

Table	Description
[sn_ohs_im_document]	
Health and Safety profile [sn_ohs_im_health_and_safety_profile]	Stores all users with Health and Safety profile in your organization, including employees, visitors, and contractors.
Asset [sn_ohs_im_m2m_task_sn_ent_asset]	Maps Health and Safety task [sn_ohs_im_task] to Enterprise Asset to track assets involved in incidents and observations. **Note:** Installs only when Expanded Model and Asset Classes [sn_ent] application is installed. For more information, see Additional features in Health and Safety
Meeting [sn_ohs_im_meeting]	Stores all safety meeting records. This table extends the Health and Safety task [sn_ohs_im_task] table.
M2M action task sn_ohs_im_m2m_ohs_task_action	Stores all action tasks created for safety meetings.
Health and Safety m2m meeting document [sn_ohs_im_m2m_meeting_document]	Stores all documents related to safety meetings.
Health and Safety m2m meeting minute action [sn_ohs_im_m2m_meeting_minute_action]	Stores all actions created for safety meetings.
Health and Safety meeting attendee [sn_ohs_im_meeting_attendee]	Stores all attendees added to safety meetings.
Health and Safety meeting minute [sn_ohs_im_meeting_minute]	Stores all meeting minute records created for safety meetings.
5 Whys root cause analysis [sn_ohs_im_rca_five_whys]	Instance of a Root Cause Analysis used by the safety team to identify the root cause of safety tasks, for example, Health and Safety incident [sn_ohs_im_incident].
Root cause analysis	Reference base Health and Safety task [sn_ohs_im_task] so that it can be associated with any table that extends Health and Safety

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Health and Safety Core (continued)

Table	Description
[sn_ohs_im_rca]	Task, for example, Health and Safety incident [sn_ohs_im_incident]. This table is the base table extended by all RCA types.
ICAM root cause analysis [sn_ohs_im_rca_icam]	Instance of a Root Cause Analysis [sn_ohs_im_rca] used by the safety team to identify the root cause of safety inspection findings.
Report field mapping [sn_ohs_im_report_field_mapping]	Stores all report field mappings created. These mappings enable you to import your reporting PDF templates and map its fields with safety record fields.
Form field mapping [sn_ohs_im_report_form_field_mapping]	Stores all form field mappings created between your reporting PDF templates' fields and safety records' fields. These mappings help to generate reports from safety records with fields auto-populated in your PDF template.
Schedule [sn_ohs_im_schedule]	Stores all records of Health and Safety related schedules. Several Health and Safety tables extend this table, for example, Audit schedule [sn_hs_rm_audit_schedule].
Action schedule [sn_ohs_im_action_schedule]	Stores records of Health and Safety action schedules.
Health and Safety task [sn_ohs_im_task]	Extends core Task table. Several Health and Safety tables extend this table for shared fields, for example, WSD Location [sn_wsd_core_workplace_location].
Health and Safety visitor sn_ohs_im_health_and_safety_visitor	Stores records of all visitors that have visited your organization or site.

Health and Safety action form

Safety agents can use the Health and Safety action form to assign an action for a safety incident or observation.

For more information, see Add an action for a safety incident or observation.

Health and Safety action form fields

Field	Description
Health and Safety task	Parent Health and Safety record this action is related to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and Safety action form fields (continued)

Field	Description
	If the action belongs to an existing safety record such as an injury or risk assessment, select that record.
State	State of the action.
Number	System-generated unique number for the action.
Assignment group	User group responsible for this action.
Assigned to	User responsible for this action.
Location	Location this action item applies to.
Due date	Date by when this action should be complete.
Type	Type of the action. • **Corrective**: An action to eliminate the causes of non-conformities or undesirable situations to stop them from happening again. • **Preventive**: An action to prevent the occurrence of such non-conformities. • **Task**: A generic task assigned as an action. • **Learning**: An action that includes a learning for the user, for example, completing a training. **Note:** The **Learning** option in this field appears only when the Learning Core (sn_lc) application is installed on your instance. For more information, see Additional features in Health and Safety.
Learning material	Learning material for the training, for example, knowledge article or URL for a training video. This field appears if the **Type** is set as **Learning**. **Note:** This field lists the learning content created in Learning Core. For more information, see Managing course and catalog content.
Short description	Brief description of the action.
Description	Detailed description about this action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and safety action schedule form

Safety team can use the action schedule form for actions to be created and assigned based on defined conditions.

For information on setting up a health and safety action schedule, see Create a Health and Safety action schedule.

Health and Safety action schedule

Field	Description
Short description	Brief description about this action schedule.
Active	Option for marking the action schedule available for use. An action schedule must be active for actions to be created and assigned to people.
Location	Location that this action item applies to. The action is assigned to the people at this location.
Type	Type of the action. • **Corrective**: An action to eliminate the causes of non-conformities or undesirable situations to stop them from happening again. • **Preventive**: An action to help prevent the occurrence of non-conformities. • **Task**: A generic task assigned as an action. • **Learning**: An action that includes a learning for the user, for example, completing a training. **Note:** The **Learning** option in this field appears only when the Learning Core (sn_lc) application is installed on your instance. For more information, see Additional features in Health and Safety.
Learning material	Learning material for the training, for example, knowledge article or URL for a training video. This field appears only when **Learning** is selected from **Type**. **Note:** This field lists the learning content created in Learning Core. For more information, see Managing course and catalog content.

Health and Safety action schedule (continued)

Field	Description
Days to complete action after creation	Number of days by when this action should be complete after it's generated and assigned to a user. This field sets the due date of the created action.
Assign to	Users with the Health and Safety profile the generated actions are assigned to. Use the **Set conditions** builder in this field to define the criteria for assigning this action to specific individuals. For more information, see Create a Health and Safety action schedule.
This is recurring action	Option for marking this action as recurring. When this option is selected, the **Duration details** section and fields appear.

The following duration details section appears only when the action schedule is set as recurring.

Duration details

Frequency	Frequency at which the system generates an action record such as daily, weekly, or monthly.
Weekly	Weekday when the recurring action records should be generated. You can select which particular day of the week to generate action records for—The action doesn't have to be created every day in the week. This field appears only when **Frequency** is set as **Weekly**.
Months to generate	Months when the recurring action records should be generated. You can select which particular months to generate action records for—The action doesn't have to be created every month. This field appears only when **Frequency** is set as **Monthly**.
Day	Day of the selected month when the schedule should run to generate the recurring action records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Duration details (continued)

	If the selected month has fewer days, the schedule will run on the last day of the month. This field appears only when **Frequency** is set as **Monthly**.

Health and Safety profile form

Safety manager can use the health and safety profile form to assign the Health and Safety profile to employees, visitors, and contractor workers.

For information on assigning the Health and Safety profile for a user, see Assign Health and Safety profile to a user.

Health and Safety profile form fields

Field	Description
Type	Type of the person who's assigned the Health and Safety profile. • **Employee**: An employee of your organization. • **Visitor**: A person from outside the organization who came to the site as a visitor. • **Contractor**: A contract worker from a contractor company who came to the site to perform required tasks. This option appears only when the Health and Safety Contractor Management (sn_hs_crm) application is installed on your instance. For more information, see Additional features in Health and Safety Incident Management.
User	Name of the user. This field appears only when **Employee** or **Contractor** is selected from **Type**. **Note:** When **Contractor** is selected from **Type**, this field only lists users who have the [snc_external] role assigned to them.
Visitor	Name of the visitor. This field appears only when **Visitor** is selected from **Type**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and Safety profile form fields (continued)

Field	Description
	Note: This field only lists users who've been added to the Health and Safety visitor [sn_ohs_im_health_and_safety_visitor] table. For more information, see Add a Health and Safety visitor.
Title	Job title of the user.
Department	Department that the user works in.
Email	User's official email address.
Mobile phone	User's mobile number.
Expertise	User's areas of work expertise. This field appears only when **Employee** or **Contractor** is selected from **Type**.
Date of birth	User's birth date. This field appears only when **Employee** or **Contractor** is selected from **Type**.
Employment start date	Start date of user's employment in the organization. This field appears only when **Employee** or **Contractor** is selected from **Type**.
Employment finish date	End date of user's employment in the organization. This field appears only when **Employee** or **Contractor** is selected from **Type**.
Establishments	Establishments in the organization that the user works for.
Locations	Locations that the user works at.

Health and Safety document form

Safety team such as safety agent and contractor coordinator can use the Health and Safety document form to add or modify a safety-related document.

For more information, see Add a Health and Safety related document.

Health and Safety document form fields

Field	Description
Number	System-generated unique number for the document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and Safety document form fields (continued)

Field	Description
Short description	Brief description of the document.
Document type	Type of the document. • **Attachment**: A document uploaded and attached in this record. • **Hyperlink**: A link for the document stored at another location. • **Knowledge article**: A knowledge article stored at another location.
Document subtype	Further information on the type of the document such as Certificate, Signed document, and Standard.
Standard type	Option to indicate whether the document is an internal or external standard to the company. This field appears only when **Standard** is selected from **Document subtype**.
Document	Document attached in this record. Select **Attach File** to upload the document. This field appears only when **Attachment** is selected from **Document type**.
Linked document	URL of the document location. This field appears only when **Hyperlink** is selected from **Document type**.
Knowledge article	Knowledge article record. This field appears only when **Knowledge article** is selected from **Document type**.
Active	Option to mark this document available for use in other Health and Safety records. A document must be active to be used.
Expiry date	Date when the document expires.
Assigned to	User assigned to this document.
Location	Location this document applies to.
Task references	Health and Safety action task this document was added to. **Note:** If this document was added to a task, this field is auto-populated with the task number.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and Safety document form fields (continued)

Field	Description
Description	Detailed description about this document.

Health and Safety meeting form

A safety team such as a safety meeting manager can use the Health and Safety meeting form to add or modify a safety-related meeting.

For more information, see Log a safety meeting.

Meeting form

Field	Description
Category	Category for the meeting. The list in this field displays the choices defined for the `Category` column in the Meeting [sn_ohs_im_meeting] table.
State	State of the meeting.
Short description	Brief description about this meeting.
Start date and time	Date and time when the meeting starts.
End date and time	Date and time when the meeting ends.
Location	Location for the meeting.
Meeting URL	Link for the meeting if it's online.
Host	Safety meeting manager hosting the meeting.
Additional hosts	Additional hosts assigned to the meeting who can also host the meeting when the main host is unavailable.
Sensitive content	Option to indicate that the meeting contains sensitive information. Only a user with the Sensitive meeting content user [sn_ohs_im.sensitive_meeting_content_user] role can view a meeting marked as sensitive.
Agenda	Rich text field for adding the meeting agenda.

Attendees

Field	Description
External attendees (Deprecated)	Names of the external users attending this meeting.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Attendees (continued)

Field	Description
	Note: This field is deprecated. To add an external attendee, you can use the **Public attendee** field on the meeting attendee form. For more information, see Add attendees to a safety meeting.

Outcome

Field	Description
External absentees (Deprecated)	Names of the external users who didn't attend this meeting. **Note:** This field is deprecated. To mark the absence for an external attendee, you can use the **Attendance** field for the public attendee. For more information, see Health and Safety meeting attendee form.
Meeting notes	Rich text field for adding meeting notes when the meeting is in progress or after the meeting.

Health and Safety meeting attendee form

A safety team such as a safety meeting manager can use the Health and Safety meeting form to add an external attendee or a single internal attendee to a safety meeting.

For more information, see Add attendees to a safety meeting.

Meeting attendee form

Field	Description
Public attendee	Option to indicate that the meeting attendee is an external user, from outside your organization.
Public attendee name	Name of the public attendee. For a public person, enter the name. This field appears only when the **Public attendee** option is selected.
Attendee profile	User with the Health and Safety profile in your organization. This field appears only when the **Public attendee** option is not selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Meeting attendee form (continued)

Field	Description
User group	User group that the meeting attendee belongs to. This field appears only when the **Public attendee** option is not selected. It is automatically set based on the Health and Safety profile of the attendee.
Email	Email ID of the meeting attendee. For a public attendee, enter the email ID. This field is available only when the **Public attendee** option is selected. For an employee or visitor, the email ID is auto-populated from the user or visitor profile.
Attendance	Status of attendance of the meeting attendee.
Type	Type of meeting attendee such as Employee, Contractor, Visitor, or Public. This field is automatically set based on the value of **Public attendee** and **Attendee profile** fields.
Work notes	Notes for the meeting attendee.

Health and Safety Incident Management

The ServiceNow® Health and Safety Incident Management application is a solution in Health and Safety that enables organizations to record, track, and report on health and safety related employee incidents and observations. Furthermore, it provides capabilities to investigate and reduce incidents.

This solution automates processes that facilitate cross-departmental collaboration and enable everyone to monitor and track incident status, from initiation to resolution and reporting needs.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and Safety Incident Management overview

The image shows an overview of Health and Safety Incident Management and its capabilities such as:

- Report incidents and observations through mobile or Employee Center.
- Report safety concern anonymously through the **Anonymous Report Center**.
- Investigate incidents and log injuries
- Mitigate incidents through tools such as root cause analyses and actions
- Educate employees through Health and Safety knowledge articles

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Explore	Set up	Submit incidents
Learn about how employees, safety managers, and agents use Health and Safety Incident Management.	Set up Health and Safety Incident Management.	Submit and track safety incidents and observations.

Manage safety incidents and observations to investigate and resolve them.	Fill and export reporting forms for injuries and illnesses in your organization.	Get details about components such as roles, tables, plugins, and store applications that are installed.

Exploring Health and Safety Incident Management

Health and Safety Incident Management enables the safety department to receive incidents and observations and conduct detailed legal investigations by conducting interviews, gathering evidence, and preparing final reports and recommended actions.

Features

- Puts safety in the hands of all employees
  - Report incidents and observations
  - Access Health and Safety knowledge articles
- Provides anonymous reporting capabilities
  - Report safety concerns anonymously
  - Flags incidents, observations, and concerns as sensitive.
- Gives powerful tools to safety team to investigate incidents and observations such as:
  - Injury and illness logging
  - Incident Playbook
- Resolve incidents and prevent them from happening again in future with the following methods:
  - Root cause analyses
  - Corrective and preventative action assignment
- Provides reporting capability
  - Auto-fill and export reports for safety incidents and the injuries and illnesses
  - Establishment list and saved annual reports per establishment
- Provides structured way to manage safety meetings
  - Schedule and track health and safety related meetings and attendees
  - Log meeting minutes and actions.
  - Flag meetings and minutes as sensitive

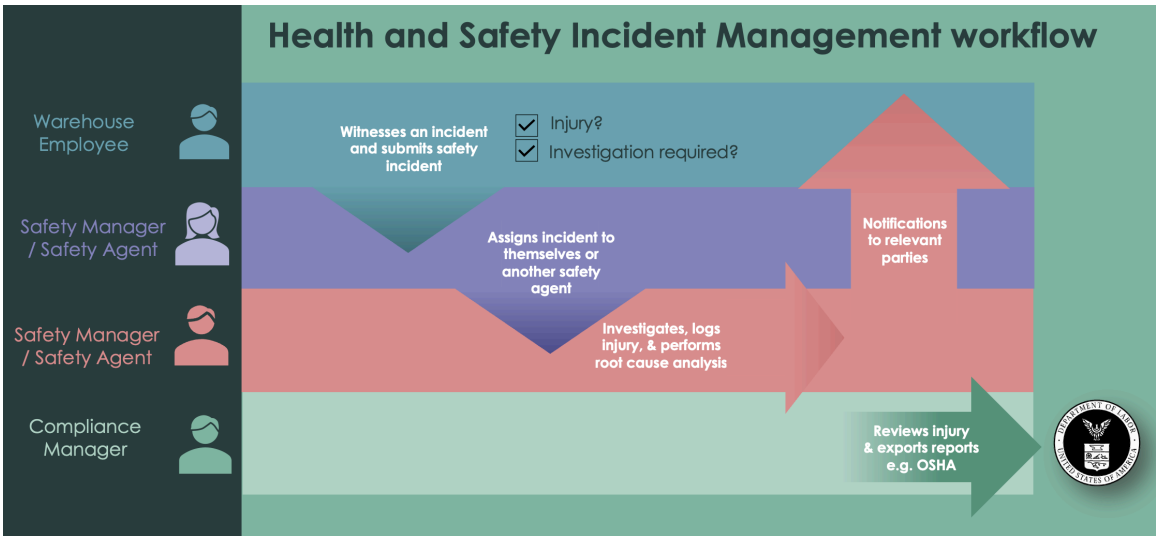
Personas

Health and Safety Incident Management is aimed at the following personas:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User personas for Health and Safety Incident Management

Persona	Description
Administrator	Safety admin who's responsible for configuring the application.
End users (requesters)	Safety requesters who report safety incidents and observations. The following users can submit incidents and observations: • Employees (through Employee Center and Now Mobile app) • Safety agent (can directly create a safety incident from workspace) • Safety operations manager such as line manager or supervisor (through workspace)
Fulfillers	Safety team responsible for working on safety tasks such as incidents and observations that come to the safety team. The following agents work on safety tasks: • Safety agent • Safety manager • Safety operations manager
Reporting	Compliance manager who accesses and manages report generation such as OSHA 300 log, 300A summary, and 301 injury and illness incident reports.
Executives	Executives who access the Health and Safety executive landing page to view safety metrics and gain insight into how the safety team and company are performing in terms of safety.



Health and Safety Incident Management workflow example

The safety incident workflow available with Health and Safety Incident Management connects employees and safety department and agents to quickly initiate, investigate, and resolve safety incidents and observations in your organization.

The following graphic shows a simplified example of the safety incident reporting workflow in Health and Safety Incident Management. It shows at a high level, the end-to-end scenario of what happens when a warehouse accident is reported in ServiceNow Health and Safety Incident Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and Safety Incident Management workflow example for handling a safety incident

When a safety incident is created, the **Report an incident** workflow initiates a playbook configured for safety incidents. Safety agents log in to Health and Safety Workspace, complete their assigned tasks, and update incident status throughout the workflow. The incident playbook guides agents through the steps that are needed to resolve it.

As an employee, operations manager, or safety manager

A warehouse employee sees a colleague getting injured in an accident at the workplace. The employee submits an incident in the Employee Center with a description of what happened.

The employee can also notify a safety operations manager (such as a line manager) or safety manager who can then create a safety incident on behalf of the injured person.

As a safety manager or safety agent

1. A safety manager or agent opens the incident from the incident list, assigns it to themselves or another safety agent, and updates its details in the incident playbook.

   The incident workflow is triggered automatically.

2. The safety manager or agent starts the investigation using the incident playbook activities that might include:
   - Gathering information and updating the incident details
   - Adding people involved in the incident such as an injured person, witnesses, and so on.
   - Logging an injury and illness report for the injured person and adding the assets involved
   - Performing root cause analysis for the incident
3. The manager or agent also prepares recommended actions to avoid such an incidence in the future.

As a safety compliance manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the incident playbook, a compliance manager reviews the injury and generates reporting forms, for example, an OSHA 301 form.

Setting up Health and Safety Incident Management

You can set up your implementation for the Health and Safety Incident Management application by installing the application and reviewing and configuring the components that are installed with the application.

Install Health and Safety Incident Management

You can install the Health and Safety Incident Management application (sn_hs_im_incident) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

Important:

- Starting from version 10, the previously known Health and Safety Incident Management (sn_ohs_im) application has been renamed to Health and Safety Core. There is no impact on existing customers using versions up to 9. However, to receive the latest updates for incident management, customers on version 9 and earlier must also install (sn_hs_im_incident).
- When you upgrade from Health and Safety Incident Management v9 to Health and Safety Core v10, certain reference fields and column labels related to Health and Safety user profile might not update correctly. To resolve this issue, see the KB article [KB2057452] in the Now Support Knowledge Base to create and run a Fix Script.

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Health and Safety Incident Management application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Tip:
The application installation does not install the location demo data for the Workplace Core location model. The location picker on incident and observation forms is mandatory so that users can't submit these forms unless they are populated with locations. As a workaround, repair the Workplace Core plugin with the **Load demo data** option.

Role required: admin

About this task

The following items are installed with Health and Safety Incident Management:

- Plugins
- Store applications
- Roles
- Scheduled jobs
- Tables

For more information, see Components installed with Health and Safety Incident Management.

This table lists the optional applications that can be installed for additional features:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Optional applications for additional features in Health and Safety Incident Management

Application	Description
Anonymous Report Center [com.sn_anonymous_report_center]	Installs anonymous reporting capability for Health and Safety Incident Management. For more information, see Activate the Anonymous Report Center. To configure the **Anonymous report center**, see Setting up the Anonymous Report Center.
Expanded Model and Asset Classes [sn_ent]	Enables tracking and managing of enterprise assets that are associated with the safety incidents and observations.
Geo map component [sn_geo_map]	Provides access to enable the map component in the Health and Safety Workspace from the application properties. To install, see Activate a plugin
Geolocation plugin [com.snc.geolocation]	Enables geolocation feature on the Now Mobile app and gives access to manual tracking options. For more information, see Enabling and selecting location tracking options
Health and Safety Case Management [sn_hs_cm]	Installs case management capability for Health and Safety Incident Management. For more information, see Install Health and Safety Case Management.
Human Resources Scoped App: Core [com.sn_hr_core]	Installs Case and Knowledge Management for creating HR cases from injury and illness records. For more information, see Activate Case and Knowledge Management. **Note:** For creating HR cases from injury and illness records, this plugin needs to be activated together with the Health and Safety Case Management (sn_hs_cm) application. For more information, see Create an HR case from an injury or illness.
Health and Safety Contractor Management	Installs contractor management capability for Health and Safety Incident Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Optional applications for additional features in Health and Safety Incident Management (continued)

Application	Description
[sn_hs_crm]	For more information, see Install Health and Safety Contractor Management.
Health and Safety Incident Management OSHA Content Pack [com.snc.sn_hs_im_osha]	Installs OSHA reporting capability for Health and Safety Incident Management. For more information, see Install Health and Safety Incident Management OSHA Content Pack.
Learning Core [sn_lc]	Installs Learning Core to enable learning content in Health and Safety actions. For more information, see Configuring Learning Core.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Health and Safety Incident Management application (sn_ohs_im) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Configure groups for Health and Safety

Configure user groups for Health and Safety for assignment of safety incidents, observations, and actions. You can assign roles to groups to provide access to all group members or assign roles to individual users.

Before you begin

Role required: sn_ohs_im.admin and admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
User groups are used across most processes in the ServiceNow AI Platform for assigning work to teams and requesting approvals.

Any rule that is applied to a group is automatically assigned to group members. For example, roles and assignment rules applied to a group are automatically assigned to group members.

Procedure
1. Navigate to **All** > **User Administration** > **Groups**.
2. Create a group or modify an existing group.
   - To create a group, select **New**.
   - To review an existing group, open the group that you want to configure.
3. On the form, fill in the fields.
   For detailed instructions and field descriptions, see Create a user group.
4. Select **Submit** or **Update**.

What to do next
- Assign roles to the group. For more information, see Assign a role to a group.
- Add users to the group.

Configure property to set employee hours worked

Configure the property that sets the total number of employee hours worked for your organization in the past 12 months. These hours are for the entire organization and are not broken down per establishment.

Before you begin
Role required: sn_ohs_im.admin

About this task
This property is required to generate the safety frequency rates metrics on the Health and Safety Workspace landing page.

The property value is also used to auto-fill the total hours worked when exporting an injury and illness report, such as the OSHA 300A form, when annual information is not available for the establishment.

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety administration** > **Properties**.
2. In the property *`Total Hours Worked`*, enter the total number of employee hours worked for your organization in the past 12 months.
3. Select **Save**.

Configure scheduled job to generate frequency rates

Configure the scheduled job to load the safety frequency rates and ensure that the safety metrics on the Health and Safety Workspace landing page are up to date.

Before you begin
Ensure that the application scope is selected as Health and Safety Incident Management PA Content Pack. For more information, see Application picker.

Role required: sn_ohs_im.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
The *[OHS] Safety Metrics* job is set to run daily by default.

Procedure
1. Navigate to **All** > **Performance Analytics** > **Jobs**.
2. Search and open the *[OHS] Safety Metrics* scheduled job.
3. In the **Run** field, set the frequency of the scheduled job.
4. To activate the scheduled job, select the **Active** check box.
5. Select **Update**.

Note:
To run the scheduled job and update metrics on demand, select **Execute Now**.

Disable the safety incident playbook

If you need to enable a tab-based experience for safety incidents in your instance, configure the property that disables the **Report an incident** playbook.

Before you begin
Ensure that the application scope is selected as Health and Safety Incident Management. For more information, see Application picker.

Role required: sn_ohs_im.admin

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety administration** > **Properties**.
2. In the *Flag to disable the playbook for Health and Safety Incidents* property, select **Yes**.

Result
The following changes occur when the safety incident playbook is turned off:

- Enables a tab-based experience for safety incidents. You can record the incident related information into these tabs:
  - People involved
  - Injury and illness
  - Assets
  - Root cause analysis
  - Health and Safety actions
- Enables the association of multiple injuries and illnesses to a single incident.

Submitting safety incidents and observations

Safety team can begin the investigation process by creating incidents and observations based on reports received from employees. Employees can also directly submit incidents and observations from the Employee Center portal. They can select a report type, fill out the necessary form, and then submit it.

Submit a safety incident as an employee

Submit a safety incident through the Employee Center to report it to the safety department for an investigation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_ohs_im.requestor

About this task
If there's an emergency, you can use the Health and Safety contacts knowledge article to access the emergency contact list. This knowledge article includes the local health and safety team contact numbers, emergency response numbers, or any other contacts that employees can use if there's a health and safety incident or emergency.

To open the emergency contacts knowledge article from the Employee Center, navigate to **Health and Safety** > **Policy and procedures** > **Health and Safety contacts**.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center, select the **Health and Safety** menu and then select **Health and Safety Incidents**.
   - Select **Report Health and Safety Incident - Basic** to report an incident with basic information.
   - Select **Report Health and Safety Incident - Advanced** to report an incident that includes its detailed information such as injured people, injury details, hazards, and assets involved in the incident.
3. On the form, fill in the fields.

   Note:
   The **Contractor** option appears only when the Health and Safety Contractor Management (sn_hs_crm) application is installed on your instance. For more information, see Additional features in Health and Safety. The field only lists users who have the [snc_external] role assigned to them and have their Health and Safety profile created. For more information, see Assign Health and Safety profile to a user.

4. If you have selected the **Report Health and Safety Incident - Advanced** form, use the **Describe the event** section to add more details about the incident.

Describe the event fields

Field	Description
Is there an injured person?	Option to indicate if there's an injured person resulting from the incident. The **Injured people** section appears when **Yes** is selected in this field.
Injured people	Name and injury details of the person injured during the incident. **a.** Select **Select injured people**. **b.** In the **Add injured person** section, add the person who got injured and the type of the injury. **c.** In the **Add injured body parts** section, add injury details for each body part injured during the incident.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select a body part in the visual injury picker, then select **Severity** and **Affected body part**, and add **Description** about the injury. **d.** Select **Save**. If there are more than one affected persons in this incident, add each.
Other people involved	People who are directly or indirectly connected to the incident, such as an injured person, collaborators, witnesses, and other relevant individuals. These individuals can be from within or outside your organization. If there are other people involved in the incident, add their names. Select **Add people involved** to add them. For more information, see People Involved form. If the incident involves more than one person, add each.
Select hazards	If there's a hazard identified during this incident, add it using the **Select hazards** button. Select all the hazards identified for this incident. If there are other hazards that are identified and not available in the **Select hazards** window, enter them manually in the **Other hazards** field.
Add Assets	If an asset was involved in this incident, add it using the **Select assets** button. Add all the assets that are involved in this incident. **Note:** The assets field appears only when Expanded Model and Asset Classes [sn_ent] application is installed. For more information, see Additional features in Health and Safety

5. **Optional:** If necessary, attach an image about the incident using the add attachments icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Submit**.
7. **Optional:** To track the status and updates to your safety incident, navigate to the **My Requests** list and open the record.

Result

- The safety incident is submitted in the New state and is available in the **My Requests** list in the Employee Center.
- The affected employee receives a pre-configured email notification about the incident submission.

What to do next

As a safety manager or agent, if the incident isn't assigned to you, you can assign it to yourself and start working on it. You can also assign it to another safety agent. For more information, see Assign a safety incident or observation.

Submit a safety observation as an employee

Submit a safety observation through the Employee Center to report it to the safety department for an investigation.

Before you begin

Role required: sn_ohs_im.requestor

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center, under the **Health and Safety** menu, select the **Health and Safety Observations** option and then select **Report Health and Safety Observation**.
3. On the form, fill in the fields.

   Note:

   - The **Contractors involved** option appears only when the Health and Safety Contractor Management (sn_hs_crm) application is installed on your instance. For more information, see Additional features in Health and Safety. The field only lists users who have the [snc_external] role assigned to them and have their Health and Safety profile created. For more information, see Assign Health and Safety profile to a user.
   - The **Assets** field appears only when Expanded Model and Asset Classes [sn_ent] application in installed. For more information, see Additional features in Health and Safety.

4. **Optional:** If necessary, attach an image about the observation using the add attachments icon ( ).
5. Select **Submit**.
6. **Optional:** To track the status and updates to your safety observation, navigate to the **My Requests** list and open the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- Based on the selected category, a safety observation is submitted in the New state and is available in the **My Requests** list in the Employee Center.
- The affected person receives a pre-configured email notification about the observation submission.

What to do next

As a safety manager or agent, if the observation isn't assigned to you, you can assign it to yourself and start working on it. You can also assign it to another safety agent. For more information, see Assign a safety incident or observation.

Create a safety incident or observation as a safety agent or supervisor

Begin the investigation for a safety incident or observation by reporting it on behalf of an employee.

Before you begin

Role required: sn_ohs_im.operations_manager, sn_ohs_im.manager, or sn_ohs_im.agent

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ( ).
3. In the **Lists** tab, open the safety incident or observation list.
   - For the safety incidents list, select **Safety Incidents** and then **All**.
   - For the safety observations list, select **Safety Observations** and then **All**.
4. Select **New**.
5. On the form, fill in the fields.
   - For a safety incident, fill in the fields in the **Enter incident summary** activity in the **Report an incident** tab.
   - For a safety observation, fill in the fields in the **Details** tab.

   Note:
   To enable the map component in the Health and Safety Workspace install the Geo map component [sn_geo_map] plugin. For more information, see Additional features in Health and Safety.

6. **Optional:** If necessary, attach an image about the incident or observation using the Attachments section.
7. Select **Save**.

Result

Based on the selected category, a safety incident or observation is created in the New state.

What to do next

As a safety manager or agent, you can assign the incident or observation to yourself and start working on it. You can also assign it to another safety agent. For more information, see Assign a safety incident or observation.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Managing Health and Safety incidents and observations

As a member of the safety department, work on the submitted safety incidents and observations to resolve them and suggest corrective and preventative actions.

For safety incidents and observations to be resolved effectively, the safety fulfillers can evaluate the reported incident in detail to identify sources for information, add or modify involved people, interview questions to collect key details, and attach supporting and relevant documentation.

Use Health and Safety Workspace to perform these activities with tools such as incident playbook, injury and illness logging, root cause analysis, and corrective and preventative action.

Assign a safety incident or observation

Assign a safety incident or observation to yourself or to another safety agent to start working on it.

Before you begin

Role required: sn_ohs_im.manager or sn_ohs_im.agent

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. In the **Lists** tab, open the safety incident or observation list.
   - For the safety incidents list, select **Safety Incidents** and then **Unassigned**.
   - For the safety observations list, select **Safety Observations** and then **Unassigned**.
4. In the list, select a record to open it.
5. Navigate to the **Assignment group** field.
   - For the safety incidents, select **Report an incident** tab and then **Enter incident summary** playbook activity.
   - For the safety observations list, select **Details** tab.
6. In the **Assignment group** field, select the safety group.
   For more information on safety groups, see Health and Safety groups.
7. In the **Assigned to** field, select your name.
   To assign to another agent, select the user.
8. Select **Save**.

Result

The incident or observation is assigned to you or the selected agent.

What to do next

The assigned agent can start working on it to resolve it.

Work on a safety incident

Work on a safety incident assigned to you to collect incident information, ensure that any outstanding tasks are completed, and resolve the incident.

Before you begin

Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Use the **Report an incident** playbook available with Health and Safety Incident Management to manage safety incidents and resolve them. You can access the **Report an incident** playbook tab when a safety incident is assigned to you.

For more information on how to interact with a playbook, see Playbooks.

Note:
To work in a tab-based experience for safety incidents, your administrator can disable the playbook through Health and Safety properties. For more information, see Disable the safety incident playbook.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. In the **Lists** tab, select **Safety Incidents** and then **All**.
4. In the list, select the incident to work on.
5. Select the **Report an incident** tab.
   This playbook guides you through the steps that are involved in resolving an incident.
6. Record the information related to the incident using the playbook activities and tasks.

   Selecting **Mark complete** marks an activity as complete and makes the next activity or stage available in the playbook. However, you can also select **Skip** to move to the next activity. You can go back to previous activities and update them later.

   - **Add event details**, to add event location and sequence of events. For more information, see Log sequence of events.
   - **Add people involved**, to add people involved in the incident such as an injured person, witnesses, and collaborators. For more information, see Add or modify people involved.
   - **Add injury and illness**, to log an injury and illness report for each affected person during the incident. For more information, see Log an injury and illness
   - **Add assets involved**, if an asset was involved in this incident. For more information, see Associate an asset to the incident.
   - **Add root cause analysis**, to perform root cause analysis for the incident. For more information, see Perform root cause analysis.
7. Add actions based on your root cause analysis.
   For more information, see Add an action for a safety incident or observation.
8. Record your findings that you gathered about the incident.
   You can use these sections to add your findings:
   - **Attachments** section to attach findings in the form of image, video, and documentation such as a signed witness statement.
   - **Activity** section to add findings in the form of free text. You can also use this section to add links to related knowledge base articles.
9. **Optional:** Generate a report for the safety incident, if needed.
   For more information, see Generate a report for a safety incident, observation, or injury.
10. **Optional:** Close the safety incident after all activities are complete.
    The incident moves to the Closed Complete state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add hazards and log sequence of events for a safety incident

Add hazards and log a sequence of events for a safety incident as part of its investigation.

Before you begin
Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. In the **Safety Incidents** list, open a safety incident assigned to you in which you want to add the sequence of events.
4. Select the **Report an incident** tab.
   The incident playbook opens.
5. In the **Enter incident summary** stage, under the **Add event details** activity, add the following information.
   a. Location where this incident happened.
   b. Add hazards identified during this incident.
   c. Log the sequence of events as you know them right now.
      You can use the available formatting tools to format the text.
6. Select **Save**.
7. **Optional:** To mark this activity as complete, select **Mark complete**.
   The next activity or stage becomes available in the playbook.
8. **Optional:** If necessary, revisit the sequence of events using the edit icon in the section.

Result
The logged events appear in the Sequence of events section in the **Incident Overview** tab.

What to do next
Add people involved in the incident such as injured person, witnesses, and collaborators.

Manage people involved in a safety incident

Add a person involved or modify the information of an existing person involved in a safety incident.

Before you begin
Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

About this task
People involved are individuals who are directly or indirectly connected to an incident, such as an injured person, collaborators added to the watch list, witnesses, and other relevant individuals. These individuals can be from within or outside your organization.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Open a safety incident assigned to you in which you want to add involved people.
3. Select the **Report an incident** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The incident playbook opens.

4. In the **Add people involved** activity, add or modify a person involved.
   - To add a person involved, fill in the fields in the **Add persons involved** section.
   - To modify the record of an existing person involved, select the person in the **People involved** list to open it.

   For field descriptions, see People Involved form.
5. Select **Save**.
6. **Optional:** To mark this activity as complete, select **Mark complete**.
   The next activity or stage becomes available in the playbook.

Result
The involved person is listed in the People involved section of the activity. The involved person's card also appears in the People involved section in the **Incident Overview** tab.

What to do next
If this incident involves more than one person, create a record for each.

Log an injury and illness

Log an injury and illness that resulted from a health and safety incident.

Before you begin
Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

About this task
Add an injury and illness record for each affected person during the incident.

> **Note:**
> If your admin has turned off the playbook and you're using a tab-based experience for safety incidents, you can associate multiple injuries and illnesses to a single incident. For more information, see Disable the safety incident playbook.

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon () and navigate to the **Lists** tab.
3. Open a safety incident assigned to you to add the injury to.
4. Select the **Report an incident** tab.
   The incident playbook opens.
5. In the **Add injury and illness** activity, add the injury and illness.
   a. Select **New**.
   b. On the form, fill in the fields in the **Person**, **Healthcare**, and **Injury and illness details** sections.
   For field descriptions, see Injury and illness fields.
6. Select **Save**.
   The injury picker section is enabled where you can add injuries on a human body.
7. In the **What was the injury?** section, add the injury.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the visual human body part picker, select the injured body part.

b. Fill in the fields and select **Save**.

Injury details

Field	Description
Severity	Seriousness of the injury.
Affected body part	Body part that was injured.
Description	Details of the injury.

c. **Optional:** If there's more than one injury, select the other injured body parts and add their details like the earlier step.

- The selected body parts are highlighted on the injury picker based on the severity of the injury. For example, a red region on the body represents a serious injury.
- The color on an injury detail card matches with the highlighted color of the related body part.

8. Select **Save**.
9. **Optional:** Create an HR case for the injury or illness using the **Create HR Case** button, if needed.

Note:
This button appears only when the following conditions are met:

- Health and Safety Case Management (sn_hs_cm) application and the Human Resources Scoped App: Core (com.sn_hr_core) plugin are installed on your ServiceNow instance.
- Safety case manager [sn_hs_cm.case_manager] role assigned to you.
- **Employee** is selected in the **Person type** field.

For more information, see Create an HR case from an injury or illness.

10. **Optional:** Create a return to work case for the person involved in this injury or illness using the **Create RTW Case** button, if needed.

Note:
This button appears only when the following conditions are met:

- Health and Safety Case Management (sn_hs_cm) application is installed on your ServiceNow instance.
- Safety case manager [sn_hs_cm.case_manager] role assigned to you.
- **Employee** is selected in the **Person type** field.

However, the button doesn't appear when the Human Resources Scoped App: Core (com.sn_hr_core) plugin is also installed on the instance.

For more information, see Create a return to work case from an injury or illness.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- The injury is listed in the Injury and Illness section of the activity. The injury card also appears in the Injuries and Illnesses section in the **Incident Overview** tab.
- The **Generate OSHA 301 form** button appears based on the following conditions:
  - The Health and Safety Incident Management OSHA Content Pack (com.snc.sn_hs_im_osha) application is installed on your ServiceNow instance.
  - The **Recordable** option is selected on the injury and illness report.
  - The safety compliance manager [sn_ohs_im.compliance_manager] role is assigned to you.

What to do next
If an asset was involved in this injury, add it in the next playbook activity.

Associate an asset with a safety incident

Associate an enterprise asset with a safety incident.

Before you begin
Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

About this task
Add all the assets that are involved in an incident.

Note:
The assets can be associated only when the Expanded Model and Asset Classes [sn_ent] application is installed. For more information, see Additional features in Health and Safety

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Click the incident management icon () and navigate to the **Lists** tab.
3. In the **Safety Incidents** list, open a safety incident assigned to you to which you want to associate the asset.
4. Select the **Report an incident** tab.
   The incident playbook opens.
5. Navigate to the **Add assets** stage and then **Add assets involved** activity.
6. In the Add asset involved section, fill in the fields.
   a. In the **Asset** field, select the asset that was involved.
      The fields related to the selected asset are auto-populated from the asset record.
   b. In the **Asset involvement** field, enter the type of its involvement.
7. Click **Save**.
8. **Optional:** If required, add more assets that are involved in this incident.

Result
The selected asset is listed in the Assets involved section of the activity. It also appears in the Assets involved section in the **Incident Overview** tab.

What to do next
Add a root cause analysis to perform root cause analysis for this incident.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Perform root cause analysis for a safety incident

Perform a root cause analysis (RCA) for a safety incident as you go through its investigation.

Before you begin
Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

About this task
The application includes the Five whys technique of root cause analysis. You can add as many root cause analyses as you need to an incident.

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Open a safety incident assigned to you to add the root cause to.
3. Select the **Report an incident** tab.
   The incident playbook opens.
4. In the **Add root cause analysis** activity, fill in the fields in the Add root cause analysis section.
5. In the **Problem** field, enter the problem statement.
6. To identify the precise one underlying reason, ask why to each of the subsequent responses and enter in **Why?** fields.
7. In the **Root cause** field, enter the answer to the last Why.
8. Select **Save**.
9. **Optional:** If necessary, add more root cause analysis for this incident.

Result
The root cause analysis is listed in the Root cause analysis section of the activity. The root cause card also appears in the Root cause analysis section in the **Incident Overview** tab.

What to do next
Add a corrective or preventive action based on your root cause analysis.

Work on a safety observation

Work on a safety observation assigned to you to resolve it.

Before you begin
Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. In the **Lists** tab, select **Safety Observations** and then **All**.
4. Open the safety observation to work on and change the state to Work in Progress.
5. Record the following information related to the observation.
   You can record this information in any order as needed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the **Assets** tab, select **New** to associate an asset to the observation.

> **Note:**
> The assets field appears only when Expanded Model and Asset Classes [sn_ent] application is installed. For more information, see Additional features in Health and Safety

The fields related to the selected asset are auto-populated from the asset record.

b. In the **People involved** tab, select **New** to add people involved in the observation such as witnesses and collaborators.
   - For a description of the field values, see People Involved form.
   - If an observation involves more than one person, add a record for each.
   - To modify the record of an existing person involved, select it in the list to open it and update.

c. In the **Root cause analysis** tab, select **New** to perform the root cause analysis for the observation.
The application includes the Five whys technique of root cause analysis. You can add as many root cause analyses as you need to an observation.

6. Add an action based on your root cause analysis.
For more information, see Add an action for a safety incident or observation.
7. Record your findings that you gathered about the observation.
You can use these sections to add your findings:
   - **Attachments** section to attach findings in the form of image, video, and documentation such as a signed witness statement.
   - **Activity** section to add links to related knowledge base articles.
8. **Optional:** Generate a report for the safety observation, if needed.
For more information, see Generate a report for a safety incident, observation, or injury.
9. **Optional:** Close the safety observation after all activities are complete.

Result
The observation moves to the Closed Complete state.

Create an HR case from an injury or illness

Create an HR case for an employee who is on leave because of an injury or illness or needs any other assistance from the HR department.

Before you begin
Ensure that the following conditions are met:

- The Health and Safety Case Management (sn_hs_cm) application is installed on your ServiceNow instance. For more information, see Install Health and Safety Case Management.
- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed on your instance. For more information on activating it, see Activate Case and Knowledge Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- HR service property for creating an HR case for an injury is configured. For more information, see Configure HR service for creating an HR case for an injury.
- **Employee** is selected in the **Person type** field on the injury and illness record. For more information, see Injury and illness fields.

Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager, and sn_hs_cm.case_manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon () and navigate to the **Lists** tab.
3. Open an injury and illness record to add the HR case to.
4. Select **Create HR Case** and then select **Confirm**.

Result

The HR case is created and added to the **HRSD case record** field on the injury form. For more information, see Injury and illness fields.

Create a return to work case from an injury or illness

If an employee is returning to work after an injury or illness, create a return to work case to assess the employee's capability to work before they return.

Before you begin

Ensure that the following conditions are met:

- The Health and Safety Case Management (sn_hs_cm) application is installed on your ServiceNow instance. For more information, see Install Health and Safety Case Management.
- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is not installed on your instance. For more information on activating it, see Activate Case and Knowledge Management.
- **Employee** is selected in the **Person type** field on the injury and illness record. For more information, see Injury and illness fields.

Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager, and sn_hs_cm.case_manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon () and navigate to the **Lists** tab.
3. Open an injury and illness record to add the return to work case to.
4. Select **Create RTW case** and then select **Confirm**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- The return to work case is created and added to the **RTW case record** field on the injury form. For more information, see Injury and illness fields.
- The injury and illness record is auto-populated in the **Injury and illness** tab of the return to work case. For more information, see Health and Safety case.

Add an action for a safety incident or observation

Add an action to address the root causes of the reported safety incident or observation. You can add multiple actions for the incident or observation.

Before you begin

Role required: sn_ohs_im.manager or sn_ohs_im.agent

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. In the **Lists** tab under **Incident Management**, open the safety incident or observation list.
   - For the safety incidents list, select **Safety Incidents** and then **All**.
   - For the safety observations list, select **Safety Observations** and then **All**.
3. In the list, open a safety incident or observation to add the action to.
4. In the **Health and Safety actions** tab, select **New**.
5. On the form, fill in the fields.
   For information on field descriptions, see Health and Safety action form.
6. Select **Save**.
7. **Optional:** If necessary, add more actions for the incident or observation.

Result

- The action appears in the list of actions in the **Health and Safety actions** tab of the incident or observation. It is also listed in the **Actions** list on Health and Safety Workspace.
- The action appears in the assigned user's **My Tasks** list on both the Employee Center and the Now Mobile app. From either location, the user can respond to the action and update its status.

What to do next

- You can assign the action to yourself or to another safety team member to start working on it.
- You can share the action, independent of the incident, with other groups or agents, so that they can prevent the similar incident from happening at any of their locations. To share an action, select **Copy action**. For more information, see Share an action with other teams.

Share an action with other teams

Share an action, independent of the incident or risk, with other groups or agents at another location, so that they can prevent the similar issue from happening at any of their locations.

Before you begin

Role required: sn_ohs_im.manager or sn_ohs_im.agent

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. In the **Lists** tab under **Incident Management**, open the safety incident or observation list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- For the safety incidents list, select **Safety Incidents** and then **All**.
- For the safety observations list, select **Safety Observations** and then **All**.

3. In the list, open a safety incident or observation you want to copy the action from.
4. In the **Health and Safety actions** tab, select to open the action you want to share with other groups.
5. Select **Copy action**.
   The action is duplicated. However, if the original action includes a Learning material, it is not copied to the duplicated action.
6. Share the action using the **Assignment group** or **Assigned to** field and select **Save**.

Result

- The action appears in the **My Tasks** list of the assigned user on the Employee Center.
- The action is also listed in the **Actions** list on the Health and Safety Workspace.

Generate a report for a safety incident, observation, or injury

Generate a report for a safety incident, observation, or an injury that you want to export for your regional or industry-specific requirements.

Before you begin

Role required: sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.operations_manager

About this task

The report generation uses a report field mapping for your reporting PDF template. A report field mapping includes mappings of fields from the safety record (such as incident or observation) to the fields in the reporting PDF template. When generating a report, the exported PDF fills in information from the selected safety record through mapped fields. This field mapping, therefore, speeds up the report filling for incidents, observations, or injury and illness records. For more information on report field mapping, see Create a safety report field mapping.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the Incident Management icon ( ).
3. In the **Lists** tab, open the safety incident, observation, or injury and illness list.
   - For the safety incidents list, select **Safety Incidents** and then **All**.
   - For the safety observations list, select **Safety Observations** and then **All**.
   - For the injury and illness list, select **Injury / illnesses** and then **All**.
4. In the list, open a safety record to generate a report for.
5. Select **Generate report**.
6. In the **Generate report** dialog box, select a report mapping in the **Select report** field.
   Only the published report mapping forms are available to select in the **Select report** field.
7. Select **Generate**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- The report is generated based on the selected report mapping and its PDF template.
- The PDF template is automatically filled with the values from the selected safety record.
- The generated report is available in the **Attachments** section of the safety record, for example, safety incident.

Close a safety incident or observation

Close a safety incident or observation assigned to you when you complete all activities for resolving it.

Before you begin

Ensure that you've completed all related activities before closing the safety incident or observation.

Role required: sn_ohs_im.manager or sn_ohs_im.agent

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon () and navigate to the **Lists** tab.
3. Open a safety incident or observation to close.
   - For the safety incidents list, select **Safety Incidents** and then **Assigned to me**.
   - For the safety observations list, select **Safety Observations** and then **Assigned to me**.
4. Select the safety incident or observation to close.
5. Close the incident or observation.
   - For a safety incident, select **Close incident** and then select **Resolve**.
   - For an observation, select **Close observation** and then **Confirm**.

Result

The incident or observation moves to the Closed Complete state.

Reopen a safety incident or observation

If a safety incident or observation requires further investigation after it was closed or canceled, you can reopen it to work on it again.

Before you begin

Role required: sn_ohs_im.manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. In the **Lists** tab, open the safety incident or observation list.
   - For the safety incidents list, select **Safety Incidents** and then **All**.
   - For the safety observations list, select **Safety Observations** and then **All**.
4. Open the safety incident or observation to reopen and change the state to **Work in Progress**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The safety incident or observation is reopened.

What to do next
Work on the safety incident or observation to complete it.

Managing an anonymous safety concern

You can submit, track, and manage an anonymous report and get it addressed without revealing the identity of the individual reporting the safety concern.

The Anonymous Report Center promotes anonymous reporting of safety incidents, observations, and near-misses without fear of retaliation, discrimination, or personal consequences. This type of reporting helps maintain a safe, supportive environment while upholding the overall well-being of all employees.

Use the Employee Center to report an anonymous concern and use the Health and Safety Workspace to manage the anonymous safety concern.

Submit an anonymous safety concern

Report a safety concern or observation without revealing your identity.

Before you begin
Role required:

- For **Employee Center**: sn_ohs_im.requestor
- For **Anonymous Report Center**: None/Anonymous reporter

About this task
The **Anonymous report center** [com.sn_anonymous_report_center] plugin must be installed to enable reporting a safety concern anonymously. For more information, see Activate the Anonymous Report Center.

Procedure
1. Navigate to **All** > **Self service** > **Employee Center**.
2. In the Health and Safety tab
   - Select the **Anonymously report a safety concern** quick link.
   - Select **Health and safety observations** and then select the **Anonymously report a safety concern** card.
   - Select the **Browse health and safety** button and then select the **Anonymously report a safety concern** card.
3. Select **Continue** on the modal dialogue.
   You are signed out of the Employee Center and signed into the **Anonymous Report Center** as a guest user.
4. Select the **Submit an Anonymous Report** card and then select the **Health and safety concern** card.
5. On the form, fill in the details.

Health and safety concern form

Field	Description
Do your best to describe the situation	Information that accurately describes the safety concern that you witnessed with as

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	much detail and your recollection of the events as possible. **Note:** All information provided is confidential.
List the people who are involved and how they are involved	The names of the individuals involved in the safety incident. Include any witnesses to the incident. **Note:** Full names, job titles, teams, and departments are valuable for the investigators.
Provide the date and time relevant to the situation	The date and time of the safety concern. **Note:** Estimated dates are acceptable.
Let us know where this situation is taking/ took place	The name of the location where the safety concern occured. **Note:** Details like room, desk spaces, or areas within the building the safety concern took place are all helpful to investigators.
I understand that the information I'm providing, including any sensitive or personal details, will be reviewed by the appropriate agents and teams.	After completing the form, check the box.

6. Enter the verification code and select **Submit**.
7. Select **Download report copy** to save a PDF copy of your record.
   The report key and report number are required to:
   - Access updates or comments related to your anonymous report.
   - Track, ask questions, and view or add details about the anonymous case.
   - Respond to any follow-up questions.

   Note:
   The anonymous report can’t be accessed without the report key.

Result

The anonymous report is submitted and you can use the report key and report number to check the progress of the report.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Follow up on an anonymous report

You can retrieve your anonymous report to submit or view comments and updates from the agents working on your anonymous report. You must have the report key and report number to access your anonymous report.

Before you begin
Role required: none

About this task
After submitting the anonymous report, you'll see a modal dialogue requesting you to download a report copy. This copy contains a unique key that gives you access to the anonymous report you created.

> **Note:**
> The anonymous report can't be accessed without the report key. If you no longer have this information, submit a new an anonymous report. Add details on the safety incident and indicate that you lost the report key and report number from your previous anonymous report.

Procedure

1. Navigate to **All** > **Self Service** > **Employee Center**
2. In the Health and Safety tab,
   - Select the **Anonymously report a safety concern** quick link.
   - Select **Health and safety observations** and then select the **Anonymously report a safety concern** card.
   - Select the **Browse health and safety** button and then select the **Anonymously report a safety concern** card.
   - Select the **Anonymous report center**URL on the report copy.
3. Select **Continue** on the modal dialogue.
   You are signed out of the Employee Center and signed into the **Anonymous Report Center** as a guest user.
4. Select the **Follow up on a Report** card.
5. Enter the report key and the report number from the report copy.
6. Enter the text verification code.
7. Select **Next**.
8. Enter questions or comments related to the anonymous report.
9. Select **Post**.

Work on an anonymous safety concern

Only an agent with the sensitive content role [sn_ohs_im.sensitive_observation_content_user] can view and work on the anonymous report in the Health and Safety Workspace.

Before you begin
Role required: sn_ohs_im.sensitive_observation_content_user

Procedure

1. Navigate to **All** > *Health and Safety* > *Health and Safety Workspace*.
2. Select the incident management icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

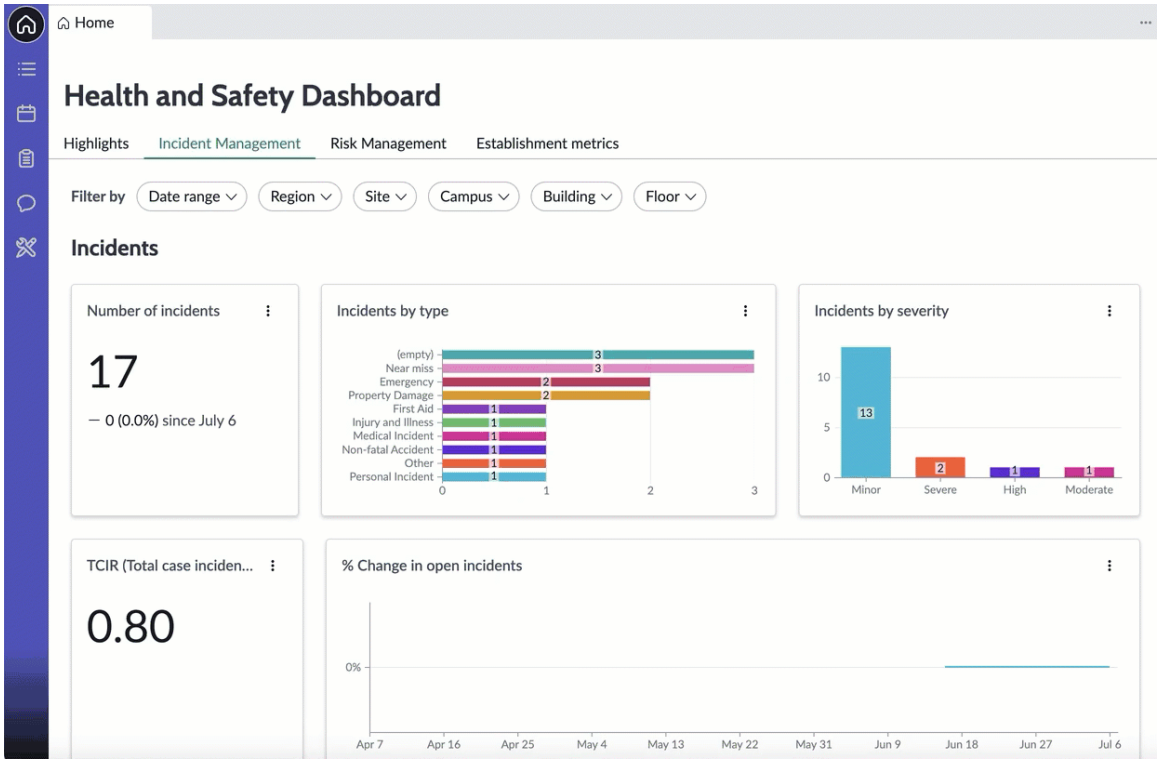
3. In the **Lists** tab, select **Safety Observations** and then **All**.
4. Open the anonymous safety observation to work on and change the state to work in progress.
5. On the form, fill in the fields.
   - The **Opened by** field automatically displays **Anonymous reporting user** for an anonymous safety incident.
   - The comments that the agent adds in the **Details** related item reflects in the anonymous report.
   - In the **Details** related item, the sensitive content field indicates that the incident contains sensitive information. This field is automatically selected when the anonymous safety concern is created. Only a user with a sensitive content role can view a report marked as sensitive.
   - The **What was observed** field displays the responses of the anonymous reporter to the Health and Safety concern form.
6. Record the following information related to the observation.
   You can record this information in any order as needed.

   a. In the **Assets** tab, select **New** to associate an asset to the observation.
   The fields related to the selected asset are auto-populated from the asset record.

   b. In the **People involved** tab, select **New** to add people involved in the observation such as witnesses and collaborators.
      - For a description of the field values, see People Involved form.
      - If an observation involves more than one person, add a record for each.
      - To modify the record of an existing person involved, select it in the list to open it and update.

   c. In the **Root cause analysis** tab, select **New** to perform the root cause analysis for the observation.
   The application includes the Five whys technique of root cause analysis. You can add as many root cause analyses as you need to an observation.

7. Add an action based on your root cause analysis.
   For more information, see Add an action for a safety incident or observation.
8. Record your findings that you gathered about the observation.
   You can use these sections to add your findings:
   - **Attachments** section to attach findings in the form of image, video, and documentation such as a signed witness statement.
   - **Activity** section to add findings in the form of free text. You can also use this section to add links to related knowledge base articles.
9. **Optional:** Generate a report for the safety observation, if needed.
   For more information, see Generate a report for a safety incident, observation, or injury.
10. **Optional:** Close the safety observation after all activities are complete.



Result
The observation moves to the Closed Complete state.

© 2026 ServiceNow, Inc. All rights reserved.

Monitoring and analyzing safety incident metrics

The **Incident Management** tab of the Health and Safety dashboard provides a comprehensive view for monitoring and analyzing safety incident metrics, including incident counts, injury data, observation trends, and action tracking across various organizational levels.

For any selected period and location, you can drill down into detailed data, empowering your teams to respond faster, improve conditions, and build a safer workplace.

Prerequisites

- Ensure that the Health and Safety Incident Management application is installed. For more information, see Install Health and Safety Incident Management.
- Configure total annual hours for an establishment. For more information, see Add total hours worked for an establishment.
- Run the *[OHS] Safety Metrics* scheduled job to update the safety metrics on demand. For more information, see Configure scheduled job to generate frequency rates.

> **Note:**
> The *[OHS] Safety Metrics* job is set to run daily by default.

Required roles

- sn_ohs_im.manager, sn_ohs_im.agent, or sn_ohs_im.compliance_manager, needed to see dashboard home page. The metrics on each tab are dependent on the user's access to that table.
- sn_ohs_im.admin and the following roles, to edit the dashboard:
  - pa_admin, to edit the Performance Analytics (PA) components used in the dashboard.
  - ui_builder_admin, to edit the dashboard visualizations that are built using the UI Builder.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access the Health and Safety Incident Management metrics

Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Incident Management** tab on the Health and Safety dashboard.

Note:

- To view a high-level summary of key incident metrics such as the total incidents and recordable injuries, select the **Highlights** tab.
- To view top incident metrics with data broken down by each establishment for localized analysis, select the **Establishment Metrics** tab. Use the **Establishment** filter in this tab to show the data by establishment.

Metrics on Incident Management tab

The availability of cards and metrics in this tab depends on the user's access to the table where the data comes from.

Incidents section

Card	Description	PA indicators
Number of incidents	Count of open safety incidents and a one-week trend. Select the card to further drill down and visualize data, for example, see trend over different time aggregation of data.	Health & Safety - Open Incidents
Incidents by type	Breakdown of active safety incidents filtered by incident category, for example, injury/ illness and near miss, to help identify common risks. Select a category in the bar graph to view a complete list of active safety incidents of that type.	None
Incidents by severity	Breakdown of active safety incidents filtered by severity level, for example, major or minor. Select a severity level in the column chart to view a complete list of active safety incidents of that type.	None

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Incidents section (continued)

Card	Description	PA indicators
TCIR (Total case incident rate)	Number of recordable workplace injuries and illnesses per 100 full-time employees over a one-year period, with the `Location` and `Establishment` breakdowns. The score is calculated according to this formula: `[OHS Total number of Injuries or Illness reported last year from Jan to the end of Dec] * 200000) / [OHS Total Hours Worked Establishment]`	• OHS - TCIR (Total Case Incident Rate) • OHS - Total number of Injuries or Illness reported last year - from Jan to the end of Dec • OHS - Total Hours Worked Establishment
% Change in open incidents	Line graph highlighting how the number of open incidents has changed (in percentage) over time, helping identify increase or reduction in reporting or resolution. Select the card to further drill down and visualize data.	• Health & Safety - Open Incidents - % Change • Health & Safety - Open Incidents
Incident near miss ratio	Ratio of safety incidents reported for the **Near miss** category vs total actual incidents (example, ones with injury/illness records) in a calendar year. This metric is useful for assessing proactive safety culture. The score is calculated according to this formula: `[(Health & Safety Near Miss Incidents) / (Health & Safety All Incidents)] * 100`.	• Health & Safety - Near Miss % • Health & Safety - All Incidents • Health & Safety - Near Miss Incidents
Active incidents map	Visual geographic spread on a global map showing where active incidents are occurring across regions or sites. It also shows a count of active incidents on the map at each location.	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Incidents section (continued)

Card	Description	PA indicators
	You can zoom into locations within a country (example, state or county) and drill down to a list of incidents at the lowest level.	
Incidents by state	Breakdown of active safety incidents by state, that helps track incident resolution progress. Select a state in the graph to view a complete list of active incidents in that state.	None

Injuries section

Card	Description	Indicators
Recordable injuries this year	Count of injuries deemed recordable that happened in the current year. Select the card to view a complete list of recordable incidents in the year.	None
Days since last injury	Number of days passed since the last injury recorded in the last 12 months, with the `Location` and `Establishment` breakdowns. Select the card to further drill down and visualize data.	• OHS - Days since last injury and illness report opened • OHS - Days since last injury and illness report opened - longest streak • OHS - Days since last injury and illness report opened - average streak • OHS - Total number of lost work days and transferred or restricted days due to injury or illness
Lost days from injury	Line graph showing the count of lost work days and transferred or restricted days due to injury or illness over last 12 months, with the `OHS.Injury.Illness.Classification` and `Establishment` breakdowns.	• OHS - Total number of lost work days and transferred or restricted days due to injury or illness • OHS - Days since last injury and illness report opened

Injuries section (continued)

Card	Description	Indicators
		• OHS - Days since last injury and illness report opened - longest streak • OHS - Days since last injury and illness report opened - average streak
Injury by category	Breakdown of injuries by category per column to help identify common risks. Select a category in the graph to view a complete list of injuries of that type.	None
Injury by severity	Breakdown of active injuries by severity level per column. Select a severity level in the graph to view a complete list of injuries of that type.	None
LTIR (Lost time case rate)	Number of incidents involving lost work time per 100 full-time workers. This safety metric is used to measure the frequency and severity of workplace injuries/illnesses resulting in employees missing work. The score is calculated according to this formula: `[OHS Total number of Injuries or Illnesses that resulted in days away from work] * 200000) / [OHS Total Hours Worked Establishment]`	• OHS - LTIR (Lost Time Case Rate) • OHS - Total number of Injuries or Illnesses that resulted in days away from work • OHS - Total Hours Worked Establishment
LTIFR (Lost time injury frequency rate)	How often lost-time injuries occur, usually per one million hours worked. The score is calculated according to this formula: `[OHS Total number`	• OHS - LTIFR (Lost Time Injury Frequency Rate) • OHS - Total number of Injuries or Illnesses that

Injuries section (continued)

Card	Description	Indicators
	`of Injuries or Illnesses that resulted in days away from work] * 1000000) / [OHS Total Hours Worked Establishment]`	resulted in days away from work • OHS - Total Hours Worked Establishment
TRIFR (Total recordable injury frequency rate)	Number of recordable injury/illness (needed more than just first-aid) per a fixed number of hours worked. The score is calculated according to this formula: `[OHS Total number of Injuries or Illnesses that required professional medical treatment] * 1000000) / [OHS Total Hours Worked Establishment]]`	• OHS - TRIFR (Total Recordable Injury Frequency Rate) • OHS - Total number of Injuries or Illnesses that required professional medical treatment • OHS - Total Hours Worked Establishment
TRSR (Severity rate)	Seriousness of incidents, typically based on lost workdays. This metric measures the severity on injury/illness by calculating the average number of lost workdays and restricted workdays per recordable incident, helping to assess the seriousness of incidents in the given period. The score is calculated according to this formula: `[OHS Total number of lost work days and transferred or restricted days due to injury or illness] * 200000) / [OHS Total Hours Worked Establishment]`	• OHS - TRSR (Severity Rate) • OHS - Total number of lost work days and transferred or restricted days due to injury or illness • OHS - Total Hours Worked Establishment

Injuries section (continued)

Card	Description	Indicators
TRIR (Total recordable incident rate)	Number of recordable injuries and illnesses per 100 full-time employees over a one-year period. It's a standardized metric used to measure safety through recordable incidents. The score is calculated according to this formula: `[OHS Total number of Injuries or Illnesses that required professional medical treatment] * 200000) / [OHS Total Hours Worked Establishment]`	• OHS - TRIR (Total recordable incident rate) • OHS - Total number of Injuries or Illnesses that required professional medical treatment • OHS - Total Hours Worked Establishment
DART (Days away/restricted or job transfer rate)	Rate of serious incidents resulting in time away from work, restricted duties, or job transfers. It's a standardized metric used to track incidents that resulted in workers being unable to perform their usual duties and needing to take time off or be transferred to lower impact work duties. The score is calculated according to this formula: `([OHS Total number of Injuries or Illnesses that resulted in days away from work] + [OHS Total number of Injuries or Illnesses that resulted in transferred or restricted days]) * 200000) / [OHS Total Hours Worked Establishment]`	• OHS - DART (Days Away/ Restricted or Job Transfer Rate) • OHS - Total number of Injuries or Illnesses that resulted in transferred or restricted days • OHS - Total number of Injuries or Illnesses that resulted in days away from work • OHS - Total Hours Worked Establishment

Observations section

Card	Description	Indicators
Number of observations	Count of open safety observations including a trend line, with the `Location` breakdown. Select the card to further drill down and visualize data, for example, see trend over different time aggregation of data.	Health & Safety - Open Observations
Overdue corrective actions	Number of corrective type actions that are past their due dates. Select the card to view a complete list of overdue corrective actions.	None
Overdue preventive actions	Number of preventive type actions that are past their due dates. Select the card to view a complete list of overdue preventive actions.	None
Observation status by state	Breakdown of active safety observations by state. Select a state in the graph to view a complete list of active observations in that state.	None
Positive observations reported	Count of positive safety observations that reinforce good practices. Select the card to view a complete list of positive observations.	None
Open corrective and preventive actions	Count of ongoing actions (both corrective and preventive) over time. The line graph includes a line for each action type showing a count of each over time. The score is calculated according to this formula: `[Health & Safety Open Actions] - [Health & Safety`	• Health & Safety - Corrective Actions # • Health & Safety - Open Actions • Health & Safety - Open Corrective Actions • Health & Safety - Open Preventative Actions

Observations section (continued)

Card	Description	Indicators
	`Open Corrective Actions]` Select the card to further drill down and visualize its data.	
Actions by state	Breakdown of active Health and Safety actions (created for safety incidents and observations) by their current state. Select a state column in the graph to view a complete list of active actions in that state.	None

Customizing widgets

You can customize the widgets in the dashboard to display relevant metrics by using the UI Builder. For more information, see UI Builder tutorial.

Health and Safety Incident Management reference

Learn about the components, such as the roles, tables, plugins, and store applications, that are installed when you install the Health and Safety Incident Management application.

Components installed with Health and Safety Incident Management

Several types of components are installed with installation of the Health and Safety Incident Management application, including tables, user roles, and scheduled jobs. The application also installs related plugins and store applications if they aren't already installed.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Store applications installed

Store apps installed with Health and Safety Incident Management

Store application	Description
Health and Safety Core	Installs core data model for Health and Safety. This data model includes common components such as Health and Safety user profile and actions that are used in the Health and Safety applications. For more information on store applications, roles, and tables installed with Health and

Store apps installed with Health and Safety Incident Management (continued)

Store application	Description
	Safety Core, see Components installed with Health and Safety Core.
Health and Safety Incident Management PA Content Pack	Generates the safety frequency rate metrics on the Health and Safety Workspace landing page.
Workplace Core [sn_wsd_core]	Enables workplace locations for Health and Safety Incident Management. **Important:** The application installation doesn't install the location demo data for the Workplace Core location model. As a workaround, repair the Workplace Core plugin with the **Load demo data** option.

Roles installed

Roles in Health and Safety Incident Management

Role title [name]	Description	Contains roles
Safety agent [sn_ohs_im.agent]	Agent for Health and Safety teams who can: • View the overall status of safety incidents and observations • Work on safety incidents and observations to resolve them	• sn_ohs_im.incident_writer_restricted • workspace_user • sn_ohs_im.report_mapping_reader • sn_wsd_core.location_reader • sn_ohs_im.workspace_user • sn_ohs_im.incident_reader • canvas_user • sn_ohs_im.establishment_reader • sn_hs_cm.case_reporter • sn_ohs_im.observation_writer_restricted • sn_ohs_im.reporter • sn_ohs_im.action_reader • sn_ohs_im.action_writer_restricted • sn_ohs_im.observation_reader • sn_hs_cm.case_writer
Safety executive [sn_ohs_im.executive]	Executive who can: • Access the Health and Safety	• workspace_user • sn_ohs_im.report_mapping_reader • sn_wsd_core.location_reader • sn_ohs_im.workspace_user

Tables installed with Health and Safety Incident Management (continued)

Table	Description
Health and Safety establishment [sn_ohs_im_establishment]	Stores establishment information for an organization . The establishment records are used to group injury and illness records for auto-filling reports such as OSHA 300, 300A, and 301 forms.
Health and Safety incident [sn_ohs_im_incident]	Stores all safety incident records reported by employees that have happened in the workplace. This table extends the Health and Safety task [sn_ohs_im_task] table.
Regional details [sn_ohs_im_injury_region_data]	Stores all region specific information.
People involved [sn_ohs_im_involved_party]	Stores all logged people involved with investigation s. People can be existing [sys_users] or external, for example, contracts and on-site visitors.
Periodic total work hour [sn_ohs_im_periodic_work_hour]	Stores periodic total hours of work per year per establishment.
Health and Safety observation [sn_ohs_im_observation]	Stores all safety observations records reported by employees in their workplace. This table extends the Health and Safety task [sn_ohs_im_task] table.
Health and Safety incident observation [sn_ohs_im_m2m_incident_observation]	Stores all safety observation records linked to the incidents that are reported by employees in the their workplace.
Injury [sn_ohs_im_injury]	Stores all logged injuries associated with all injury and illness reports. A custom Seismic component is available to log injuries.
Injury and illness [sn_ohs_im_injury_illness]	Stores all logged injuries and illness records. Information tracked in this table can be used for generating reports such as OSHA forms.

Injury and illness fields

Safety managers and agents can use the Injury and illness form to log an injury or illness. A safety compliance manager can access an injury and illness report and mark it as recordable for reporting purposes. They can also use it to generate the injury and illness reports.

For more information, see Log an injury and illness.

Injury and illness form

Field	Description
Person	
Person type	Type of the person who's injured or ill. • **Employee**: An employee of the organization where this injury happened. • **Visitor**: A person from outside the organization who came to the site as a visitor. • **Public**: A person from public who was present at the site of safety incident or observation. • **Contractor**: A contract worker from a contractor company who came to the site to perform required tasks. This option appears only when the Health and Safety Contractor Management (sn_hs_crm) application is installed on your instance.
Employee	Name of the employee who's injured or ill. This field appears only when **Employee** is selected from **Person type**. **Tip:** If an incident affected more than one person, you must create an injury and illness report for each.
Visitor	Name of the visitor who's injured or ill. This field appears only when **Visitor** is selected from **Person type**. **Note:** This field only lists visitors who have Health and Safety profile assigned to them. For more information, see Add a Health and Safety visitor.
Name	Name of the public person who's injured or ill. This field appears only when **Public** is selected from **Person type**.
Contractor	Name of the contract worker who's injured or ill. This field appears only when **Contractor** is selected from **Person type**. **Note:** This field only lists users who have the [snc_external] role assigned to them and have their Health and Safety profile created. For more information, see Assign Health and Safety profile to a user.
Redact name	Option to redact the employee's name from the record, if there's a privacy concern. Redacting protects the privacy of the affected employee. When this option is selected for a recordable injury and illness, the employee's name is redacted from any reports that are generated, such as an OSHA form. Their name is replaced with the **Privacy concern case** on the generated reports.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Injury and illness form (continued)

Field	Description
Sensitive content	Option that indicates that the incident contains sensitive information. Only a user with the Sensitive content user role can view a report marked as sensitive. For more information on roles, see Components installed with Health and Safety Incident Management. **Note:** When you generate a report (such as OSHA 300 or 300A), it contains all incidents, including the ones marked as sensitive, according to the template. However, sensitive information is not disclosed in the report as incident details are not included.
Establishment	Name of the establishment where this injury or illness happened. When a safety compliance manager generates a report, such as an OSHA form, only records with an assigned establishment are included.
Healthcare	
Treatment administered offsite	Option to indicate if the treatment for the injury or illness is provided outside the workplace. When this option is selected, all other fields in the **Healthcare** section become available.
Name of physician or other healthcare professional	Name of the physician or healthcare professional providing the treatment.
Facility	Name of the hospital where the treatment is provided.
Facility address	Address of the hospital where the treatment is provided.
Treated in emergency room	Option to indicate that the treatment is provided in an emergency room.
Hospitalized overnight	Option to indicate whether the employee spent the night in the hospital.
Injury and illness details	
Ensure that this section doesn't contain any personal information that can identify the affected employee.	
Number	Auto-generated number for the injury and illness record.
Incident	Safety incident associated with this injury and illness. This field is auto-populated with the safety incident number the injury and illness report is created from.
Classification	Classification for this injury and illness.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Injury and illness form (continued)

Field	Description
OSHA injury type	Type of the injury or illness. This field appears only when the Health and Safety Incident Management OSHA Content Pack (com.snc.sn_hs_im_osha) application is installed on your ServiceNow instance.
Date and time employee began work	Time when the employee starting working before this injury or illness.
Date and time of injury or illness	Date and time when this injury or illness happened.
Days away from work	Number of days the injured employee has been away from work.
Days job transfer or restriction	Number of days the injured employee is restricted in performing their tasks or transferred to another lower impact job, for example, until they are ready to return to their original job.
Recordable	Option that indicates that this injury or illness is recordable for any reporting purpose. Only a safety compliance manager can edit this field. Only records marked as recordable are included when you generate a report, such as an OSHA form. For example, see Pre-requisites for generating OSHA forms.
Unsure of time	Option to indicate that the time of this injury or illness isn't available.
HRSD case record	HR case related to this injury. This field appears only when the following conditions are met: • Health and Safety Case Management (sn_hs_cm) application and the Human Resources Scoped App: Core (com.sn_hr_core) plugin are installed on your ServiceNow instance. • Safety case manager [sn_hs_cm.case_manager] role assigned to you. • **Employee** is selected in the **Person type** field. For more information, see Create an HR case from an injury or illness.
RTW case record	Return to Work case related to this injury. The injury record is auto-populated in the **Injury and illness** tab of the selected case. For more information, see Health and Safety case. This field appears only when the following conditions are met: • Health and Safety Case Management (sn_hs_cm) application is installed on your ServiceNow instance. • Safety case manager [sn_hs_cm.case_manager] role assigned to you. • **Employee** is selected in the **Person type** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Injury and illness form (continued)

Field	Description
	However, the field doesn't appear when the Human Resources Scoped App: Core (com.sn_hr_core) plugin is also installed on the instance. For more information, see Create a return to work case from an injury or illness.
Injury type	Type of injury or illness.
What was the injury?	
What was the injury?	Section where you can select injured body parts and add their details. This field is available only after you click **Save** in the record.
Front	Visual injury picker where you can add injuries on the front parts of a human body. Select a body part to select **Severity** and **Affected body part**, and add **Description** about the injury or illness.
Back	Visual injury picker where you can add injuries on the back parts of a human body. Select a body part to select **Severity** and **Affected body part**, and add **Description** about the injury or illness.
Attachments	
Attachments	Section where you can add attachments related to this injury and illness. If this injury and illness is marked as recordable, all reports generated for it (such as the OSHA 301 form) are available in this area. For more information, see Generate an OSHA 301 form.

People Involved form

Safety managers and agents can use the People involved form to add or modify an involved person in a safety incident or observation assigned to them.

People involved form

Field	Description
Person type	Type of the person involved in the safety incident or observation. If an incident or observation involves more than one person, you must add a record for each. • **Employee**: An employee of the organization where the safety incident or observation happened. • **Visitor**: A person from outside the organization who came to the site as a visitor. • **Public**: A person from public who was present at the site of safety incident or observation. • **Contractor**: A contract worker from a contractor company who came to the site to perform required tasks. This option appears only when the Health and Safety Contractor Management (sn_hs_crm) application is installed on your instance.
Employee	Name of the employee involved.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

People involved form (continued)

Field	Description
	This field appears only when **Employee** is selected from **Person type**.
Visitor	Email id of the visitor involved. This field appears only when **Visitor** is selected from **Person type**. **Note:** This field only lists visitors who have Health and Safety profile assigned to them. For more information, see Add a Health and Safety visitor.
Contractor	Name of the contract worker involved. This field appears only when **Contractor** is selected from **Person type**. **Note:** This field only lists users who have the [snc_external] role assigned to them and have their Health and Safety profile created. For more information, see Assign Health and Safety profile to a user.
Association	Type of involvement of the person. • **Witness**: A person who was present at the safety incident or observation described. • **Injured party**: A person who got injured in the incident. This option appears only for the Employee and Visitor person type. • **Safety team**: A person from safety team handling the investigation of the incident. • **Collaborator**: A person who's collaborating in any in the investigation of this incident or observation. • **Involved**: A person who's involved in any other way with this incident or observation.
Name	Name of the person involved. For a public person, enter the name. This field is available only when the **Public** option is selected from **Person type**. For a visitor, the name is auto-populated from the visitor profile.
Phone	Phone number of the involved person. For a public person, enter the phone number. This field is available only when the **Public** option is selected. For an employee or visitor, the phone number is auto-populated from the user or visitor profile.
Email	Email ID of the involved person. For a public person, enter the email ID. This field is available only when the **Public** option is selected.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

People involved form (continued)

Field	Description
	For an employee or visitor, the email ID is auto-populated from the user or visitor profile.
Preferred contact method	Method to contact the involved person such as email or phone number.

Domain separation and Health and Safety Incident Management

Domain separation is supported for Health and Safety Incident Management. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

Domain-separated tables overview

All tables in the Health and Safety Incident Management can be domain-separated and include the required domain separation field.

How domain separation works in Health and Safety Incident Management

- Each table in Health and Safety Incident Management includes the domain separation fields **Domain** and **Domain path**.
- Customer can use these fields to configure domain separation in their implementation of Health and Safety Incident Management.

Related topics

Domain separation for service providers

Health and Safety injury and illness reports

As a compliance manager, you need to report on employee incidents related to the health and safety. With Health and Safety Incident Management, you can export reports for safety incidents and the injuries and illnesses that occurred in your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To enable this reporting capability for Health and Safety Incident Management, you additionally need to install the relevant reporting application. For example, to enable the Occupational Safety and Health Administration (OSHA) reporting, you must install the Health and Safety Incident Management OSHA Content Pack (com.snc.sn_hs_im_osha) application.

You can also generate a report for an injury and illness using your own PDF templates for your regional or industry-specific requirements.

You can also generate a report for an injury and illness by directly uploading your regional or industry-specific reporting PDF templates into the application. For more information, see Create a safety report field mapping and Generate a report for a safety incident, observation, or injury.

Manage the list of establishments

Manage the establishment list for your organization. The recordable injury and illness records are grouped using this establishment information for auto-filing and exporting the reports such as OSHA 300 and 300A forms.

Before you begin

Role required: sn_ohs_im.compliance_manager

About this task

You can view the exported reports, such as OSHA 300 and 300A forms, for an establishment by navigating to the establishment record in the list. For more information, see View a saved OSHA 300 and 300A form.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. In the **Lists** tab, under the **Establishments** list, select **All**.
   - To add an establishment record, select **New**.
   - To edit an existing establishment record, select the establishment and select **Edit**.
4. On the form in **Details** tab, fill in the fields.

Health and Safety establishment

Field	Description
Industry code	Code indicating the industry that an establishment belongs to based on its business activities. For example, ○ Standard Industrial Classification (SIC) codes assigned by the United States government to establishments ○ North American Industry Classification System (NAICS) codes for establishments in Canada, the United States, and Mexico
Industry description	Brief description about the primary business and business activities of an establishment.

5. Select **Save**.
   The **Annual information** tab appears for the establishment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
This establishment is available in the **Establishment** field's list on an injury and illness report.

What to do next
In the **Annual information** tab, add the annual total hours worked for this establishment. For more information, see Add total hours worked for an establishment.

Add total hours worked for an establishment

Add the total hours worked for an establishment annually.

Before you begin
Role required: sn_ohs_im.compliance_manager

About this task

Note:
The annual total hours information is used for auto-filing the total hours worked by employees in a year when exporting the injury and illness reports for an establishment, for example OSHA 300A form. When the total hours information is not available for a year in the **Annual information** tab, the system uses the default value from the *Total hours worked* system property in the exported report. For more information, see Property to set employee hours worked.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon ().
3. In the **Lists** tab, under the **Establishments** list, select **All**.
4. Select to open the establishment record to add the total hours worked to.
5. In the **Annual information** tab, select **New**.
6. In the **Year** field, enter the year to add the total hours for and select **Save**.
   The **Periodic total work hours** tab appears for the year.
7. In the **Periodic total work hours** tab, add the hours worked for each time period in the year.
   a. Select **New**.
   b. Select start date and end date for the period.
   c. In the **Total hours worked** field, enter the total hours worked for the selected period.
   d. Select **Save**.
8. **Optional:** Repeat step 7 to add the required number of periods and their hours worked.
9. Select **Save**.

Result

- All periodic hours logged for a year are listed in the **Periodic total work hours** tab of the year.
- All periodic hours for a year add up to the annual total hours worked for that year. The total hours worked for a year are listed in the **Total hours worked** column under the **Annual information** tab.

Health and Safety Incident Management OSHA Content Pack

With the ServiceNow® Health and Safety Incident Management OSHA Content Pack application, you can automatically fill and export OSHA forms for injuries and illnesses that happened in an establishment under your organization.

The Occupational Safety and Health Administration (OSHA) is part of the United States Department of Labor, which sets and enforces protective workplace safety and health standards.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Pre-requisites for generating OSHA forms

Before you start the OSHA form generation, you must complete the following tasks.

- Set up Health and Safety Incident Management OSHA Content Pack.
- Review and set the following fields in the injury and illness reports for which the OSHA forms should be generated.
  - **Recordable**: When you generate an OSHA form, only the recordable incidents are included.
  - **Establishment**: Ensure that this field is populated with the establishment name.
- Ensure that you have the safety compliance manager [sn_ohs_im.compliance_manager] role assigned to you.

Setting up the OSHA Content Pack

Set up the Health and Safety Incident Management OSHA Content Pack application to enable the generation of OSHA forms.

The following table gives an overview of the required configuration tasks.

Tasks to configure OSHA forms

Task	Description
Install Health and Safety Incident Management OSHA Content Pack	Install the Health and Safety Incident Management OSHA Content Pack application on your ServiceNow instance that has Health and Safety Incident Management.
Manage establishment list	Update the establishment list for your organization. The OSHA recordable injury and illness records are grouped using this establishment information.
Update saved PDF templates for OSHA forms	Check if the saved PDF templates for the OSHA 300, 300A, and 301 forms are updated. The application includes preconfigured PDF templates and their sys_ids for OSHA forms, and can be customized if changes to the OSHA form PDF files are required.

Tasks to configure OSHA forms (continued)

Task	Description
Configure OSHA system properties	Modify the OSHA base system properties, if required, to configure PDF templates for OSHA forms.

Install Health and Safety Incident Management OSHA Content Pack

You can install the Health and Safety Incident Management OSHA Content Pack application (com.snc.sn_hs_im_osha) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they aren't already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Health and Safety Incident Management OSHA Content Pack application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Health and Safety Incident Management OSHA Content Pack:

- Tables
- System Properties

For more information, see Components installed with Health and Safety Incident Management OSHA Content Pack and Health and Safety Incident Management OSHA Content Pack properties.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Health and Safety Incident Management OSHA Content Pack application (com.snc.sn_hs_im_osha) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.

6. Select **Install**.

Update an OSHA form PDF template

Update a saved OSHA form PDF template if changes to an OSHA form PDF file are required.

Before you begin

Role required: sn_ohs_im.admin or sn_ohs_im.agent

About this task

PDF templates for OSHA forms are required to fill and export OSHA forms for safety incidents and the injuries and illnesses that happened in your organization.

The Health and Safety Incident Management OSHA Content Pack includes preconfigured PDF templates and associated sys_ids for OSHA 300, 300A, and 301 forms. However, if changes to the OSHA form PDF files are needed, they can be updated.

Procedure

1. Upload the new OSHA form PDF template file.
   a. Select **All**.
   b. In the navigation filter, enter `sn_hs_im_osha_template.list` and press the Enter key.
   The HS OSHA PDF template [sn_hs_im_osha_template] table opens and a list of all the available PDF templates for OSHA forms appears.
   c. Select the template that you need to update.
   d. Select **Manage attachments** and delete the old PDF template file and upload the new PDF template file.
   For more information on managing attachments, see Manage attachments.
   e. Select **Update**.
2. Activate the uploaded OSHA form PDF template file and copy its sys_id.
   a. Select **All**.
   b. In the navigation filter, enter `sys_attachment.list` and press the Enter key.
   c. In the list, select the PDF template file attachment that you uploaded in step 1.
   d. Set its **State** value as Available.
   e. Right-click the PDF template file attachment and select **Copy sys_id**.
3. Update the sys_id of the OSHA form PDF template file in the corresponding system property.
   a. Navigate to **All** > **Health and Safety** > **Health and Safety administration** > **Properties**.
   b. Select the corresponding system property for the OSHA form PDF template that you updated.
   For information on the OSHA form PDF template system properties, see Health and Safety Incident Management OSHA Content Pack properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Update the sys_id that you copied in step 2.

d. Select **Save**.

Result

The new OSHA form PDF template is available and is used when exporting the corresponding OSHA form.

Generate an OSHA 301 form

Generate an OSHA 301 form for an injury or illness associated with a safety incident.

Before you begin

Ensure that the following conditions are met.

- The Health and Safety Incident Management OSHA Content Pack (com.snc.sn_hs_im_osha) application is installed on your ServiceNow instance.
- The **Recordable** option is selected on the injury and illness report.

Role required: sn_ohs_im.compliance_manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
   The Health and Safety Workspace opens in a new tab of the browser window.
2. Select the incident management icon () and navigate to the **Lists** tab.
3. Open the injury an illness report from a safety incident or from the injury and illness list.
4. Review the injury and illness report and select the **Recordable** option.
   For more information, see Injury and illness fields.
5. Select **Generate OSHA 301 form**.
6. In the **Generate OSHA 301 form** dialog box, select the file format to generate the form in, for example, CSV or PDF.
7. Select **Generate**.

Result

- The OSHA 301 form is generated using the saved template for OSHA 301 form and is available in the **Attachments** section of the incident.
- The OSHA 301 template is automatically filled with the information available in the injury and illness report.

Generate an annual OSHA 300 or 300A form

Generate an annual 300 or 300A OSHA form for all OSHA recordable injuries and illnesses that happened in an establishment between January 1 and December 31 of a calendar year.

Before you begin

Ensure that the following conditions are met.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Health and Safety Incident Management OSHA Content Pack (com.snc.sn_hs_im_osha) application is installed on your ServiceNow instance.
- The following fields are set in the incidents' injury and illness reports that should be included in the OSHA form.
  - The **Recordable** option is selected. When you generate an OSHA form, only the recordable incidents are included.
  - The **Establishment** field contains the establishment name.

Role required: sn_ohs_im.compliance_manager

About this task

The OSHA 300 and 300A forms are generated per establishment per year.

The system uses the saved PDF templates for OSHA 300 and 300A forms and fills them with the values from the recordable injury and illness reports.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the incident management icon () and navigate to the **Lists** tab.
3. In the **Lists** tab, under the **Injury / illnesses** list, open a report list.
   - For reports marked as recordable, select **Recordable**.
   - For all reports, select **All**.
4. For the injury and illness reports, review the **Recordable** column.
5. Select **Generate OSHA forms**.
6. In the Generate OSHA form dialog box, fill in the fields.

Generate OSHA form dialog box

Field	Description
Form type	Type of OSHA form. ○ **300**: Log of all work-related injuries and illnesses. ○ **300a**: Summary of all work-related injuries and illnesses.
Establishment	Establishment to generate the form for. The form includes all OSHA recordable injuries and illnesses that happened in the selected establishment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: In OSHA 300A form, the total hours worked by employees are auto-filled from the establishment's annual information. However, when the total hours information is not available for the selected year for this establishment, the system uses the default value from the Total hours worked system property in the report. For more information, see Manage the list of establishments.
File type	Type of the file the OSHA form is generated in-CSV or PDF.
Year	Calendar year to generate the form for. The form includes all OSHA recordable injuries and illnesses that happened between January 1 and December 31 of the selected calendar year.

7. Select **Generate**.
8. **Optional:** In the Generate OSHA form dialog box, select the OSHA form name link to download its PDF file.

Result

- The OSHA form is generated based on the selected form type and the saved PDF template for 300 and 300A OSHA forms.
- The PDF template is automatically filled with the values from the recordable injury and illness reports.
- The generated OSHA report contains all incidents, including the ones marked as sensitive, according to OSHA template. However, sensitive information is not disclosed in the form as incident details are not included.
- The filled-in OSHA form is saved in the selected establishment.

What to do next

You can view the saved OSHA form by navigating to the **Establishments** list. For more information, see View a saved OSHA 300 and 300A form.

View a saved OSHA 300 and 300A form

View a saved OSHA 300 and 300A form for an establishment.

Before you begin

Role required: sn_ohs_im.compliance_manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
   The Health and Safety Workspace opens in a new tab of the browser window.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Select the incident management icon ().
3. In the **Lists** tab, under the **Establishments** list, select **All**.
4. Select an establishment record to open it.
5. In the **Attachments** section, select the required OSHA form PDF file to open it.

Health and Safety Case Management users

Users

User	Description
Employee	• Raise health and safety inquiries, such as leaves due to safety incidents or organization's health and safety procedures. • Submit compensation claims for work related incidents.
Line manager	Submit cases related to return of an employee to work considerations.
Safety team	Work on safety cases and the related safety incidents or injuries.

Health and Safety Case Management workflow

1. Health and safety cases are submitted to the safety team in one of the following ways:
   - Employees submit health and safety related questions from the Employee Center.
   - Safety case manager creates cases based on questions received from employees or their line managers.
   - Safety agent (with RTW case manager role), working on safety incidents or injuries, creates return to work cases for employees returning to work after an injury or illness. They can also create HR cases for any assistance from the HR department.
2. Safety case manager works on safety cases to provide information and resolve employees' questions related to health and safety. If it's a return to work case, they can assess the employee's capability to work before they return from their injury or illness.

Configuring Health and Safety Case Management

Set up your implementation for Health and Safety Case Management by installing the application and reviewing and configuring the components that are installed with the application.

Configuration overview

Install Health and Safety Case Management

You can install the Health and Safety Case Management application (sn_hs_cm) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Health and Safety Case Management application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Health and Safety Case Management:

- Plugins
- Store applications

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Roles
- Tables

For more information, see Components installed with Health and Safety Case Management.

Optional applications for additional features in Health and Safety Case Management

Application	Description
Health and Safety Incident Management [sn_hs_im_incident]	Installs safety-related employee incidents and observations capability for Health and Safety Case Management. For more information, see Install Health and Safety Incident Management.
Human Resources Scoped App: Core [com.sn_hr_core]	Installs Case and Knowledge Management for creating HR cases from injury and illness records in Health and Safety Incident Management. • For more information on activating it, see Activate Case and Knowledge Management. • For information on creating HR cases from injury and illness records, see Create an HR case from an injury or illness.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Health and Safety Case Management application (sn_hs_cm) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Configure HR service for creating an HR case for an injury

Configure the HR service that you want to use for creating HR cases for injuries and illnesses.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Ensure that the following conditions are met:

- The Human Resources Scoped App: Core (com.sn_hr_core) plugin is installed on your ServiceNow instance. For more information on activating it, see Activate Case and Knowledge Management.
- The application scope is selected as Health and Safety Case Management. For more information, see Application picker.

Role required: sn_hs_cm.case_manager and sn_hr_core.admin

About this task

For information on HR services and what you can configure, see HR services.

Procedure

1. Copy the sys_id of the HR service.
   a. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
   b. In the list, select the HR service that you want to use for creating HR cases from injury and illness records.
   c. Right-click the HR service and select **Copy sys_id**.
2. Update the sys_id of the HR service in the system property.
   a. Navigate to **All** > **Health and Safety** > **Health and Safety administration** > **Properties**.
   b. In the **HR Service sys_id** (*sn_hs_cm.hr_service_sys_id*) property, update the sys_id that you copied in step 1.
   c. Select **Save**.

Submitting Health and Safety cases

Safety case manager can begin the resolution process by creating cases based on questions received from employees. Employees can also directly ask a health and safety-related questions from the Employee Center. They can fill out the Health and Safety question form, select an appropriate category for their question, and then submit it.

- Ask a Health and Safety question from Employee Center

  As an employee, ask a health and safety question from the safety department to request information such as health and safety procedures, training, or return to work.

- Create a safety case from Health and Safety Workspace

  As a safety case manager, create a case based on questions received from employees or their line managers.

- Create a return to work case from an injury or illness

  As a safety agent working on a safety incident or an injury, create a return to work case for an employee who's returning to work after an injury or illness.

- Create an HR case from an injury or illness

  As a safety agent working on a safety incident or an injury, create an HR case for an employee who is on leave because of an injury or illness or needs any other assistance from the HR department.

Ask a Health and Safety question from Employee Center

Ask a health and safety question from the safety department to request information such as health and safety procedures, training, or return to work.

Before you begin
Role required: sn_hs_cm.case_reporter

About this task
Employees can also submit safety related questions from their mobile device using the ServiceNow® Now Mobile app.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center, select the **Health and Safety** menu and then **Ask a Health and Safety Question**.
3. On the form, fill in the fields.
   a. Select an appropriate category for your question, such as **General inquiry** and **Injury / Incident related leave**.
   b. Add a related safety incident, if any.
4. **Optional:** If necessary, attach an image related to your question using the add attachments icon ( ).
5. Select **Submit**.

Result

- Based on the selected category of your question, a safety case is submitted in the Open state. To view and track the updates to your question, navigate to the **My Requests** list in the Employee Center and open the record.

  Note:
  If you selected someone else in the **Requested For** field to submit this question for, the case won't appear in your **My Requests** list. Instead, it appears in the **My Requests** list of the person you selected.

- The safety case is also listed in the Cases list on Health and Safety Workspace. A safety case manager [sn_hs_cm.case_manager] can view all the filed questions and requests by navigating to the Health and Safety Workspace and selecting the cases icon ( ). For more information, see Work on a Health and Safety case.

Submit a safety compensation claim

Submit a compensation claim for a work-related incident or injury.

Before you begin
Role required: sn_hs_cm.case_reporter

About this task
Employees can also submit safety-related compensation claims from their mobile device using the ServiceNow® Now Mobile app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center, select the **Health and Safety** menu and then **Submit a compensation claim**.
3. On the form, fill in the fields.
   a. If you're submitting this claim for someone else, select the person.
   b. Add a related safety incident, if any.
   c. Enter the total claim amount and a reason for the claim.
4. **Optional:** If necessary, attach an image related to the claim using the add attachments icon ( ).
5. Select **Submit**.

Result

- A safety case for the compensation claim is submitted in the Open state. To view and track the updates to your claim, navigate to the **My Requests** list in the Employee Center and open the record.

  Note:
  If you selected someone else in the **Requested For** field to submit this claim for, it doesn't appear in your **My Requests** list. Instead, it appears in the **My Requests** list of the person you selected.

- The safety case is also listed in the Cases list on Health and Safety Workspace. A safety case manager [sn_hs_cm.case_manager] can view all the submitted requests by navigating to the Health and Safety Workspace and selecting the cases icon ( ). For more information, see Work on a Health and Safety case.

Create a safety case from Health and Safety Workspace

Begin the resolution process by creating cases based on questions received from employees.

Before you begin

Role required: sn_hs_cm.case_manager, sn_hs_cm.case_writer, or sn_hs_cm.rtw_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the cases icon ( ) to open the **Cases** tab.
3. In the **Lists** tab, select **Cases** and then **All**.
4. Select **New** to create a safety case.
5. On the form, fill in the fields.
   For information about safety case form fields, see Health and Safety case form.
6. If it's a return to work case, enter details related to the employee's return to work after an injury or illness in the **Return to work details** section.
   This section appears only when **Yes** is selected from **Return to work**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. **Optional:** If necessary, attach an image related to the employee's question using the add attachments icon ( ).
8. Select **Save**.

Result

- Based on the selected category, a safety case is created in the Open state.
- If it's a return to work case, **Leaves** and **Injury and illness** tabs appear in this case.

What to do next

As a safety case manager, you can assign the case to yourself and start working on it. You can also assign it to another safety agent. For more information, see Work on a Health and Safety case.

Work on a Health and Safety case

Work on a safety case to provide information, ensure that any outstanding tasks are completed, and resolve the employee's questions and compensation claims related to health and safety.

Before you begin

Role required: sn_hs_cm.case_manager, sn_hs_cm.case_writer, sn_hs_cm.rtw_writer, or sn_hs_cm.claim_case_writer

About this task

When an employee or a worker submits a health and safety question or compensation claim, a safety case is created and assigned to the safety team.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the cases icon ( ).
3. In the **Lists** tab, under the **Cases**, open the case list.
   - For your assigned cases, select **Assigned to me**.
   - For all safety cases, select **All**.
4. In the list, select the case to work on.
   To work on a case that is not assigned to you yet, assign it to yourself using the **Assigned to** field on the safety case form.
5. On the form, fill in the fields.
   For information about safety case form fields, see Health and Safety case form.
6. If the case is set as **Return to Work**, assess the employee's capability to work before they return from their injury or illness.

   Only a user with the Return to work case writer [sn_hs_cm.rtw_writer] role can edit fields in this section.

   a. In the **Return to work details** section, fill in the fields.

   b. In the **Leaves** tab, select **New** to fill in the employee's leave details.

   c. In the **Injury and Illness** tab, review any injuries and illnesses associated with this case.
   The injury record is auto-populated in the **Injury and Illness** tab if:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- this case is added to the **RTW case record** field in the injury and illness report of the associated safety incident. For more information, see Injury and illness fields.
- or, this case was created from the associated injury and illness record. For more information, see Create a return to work case from an injury or illness.

7. If the case is set as **Compensation claim case**, fill in these sections.
   Only a user with the Claim case writer [sn_hs_cm.claim_case_writer] role can access these sections.
   a. In the **Employee claim details** section, review the claim and provide details, including a breakdown of the claim amount into different components that add up to the total claim cost.
   b. In the **Closure details** section, fill in the compensation outcome details, amount paid, and closure date.
8. In the **Documents** tab, select **New** to add any documents related to the case.
   For field descriptions, see Health and Safety document form.
9. In the **Actions** tab, select **New** to add any actions for the case.
   For field descriptions, see Health and Safety action form.
10. Provide additional information requested in this case.
    You can use these sections to provide the information and resolve the case:
    - **Attachments** section to attach any information.
    - **Compose** section to add information in the form of free text. You can also use this section to add links to related knowledge base articles.
11. **Optional:** Generate a report for the safety case, if needed.
    a. Select **Generate report**.

    Note:
    The **Generate report** button appears only when the Health and Safety case [sn_hs_cm_case] table is enabled for report field mapping. For more information, see Enable a Health and Safety table for configuring report field mapping.

    b. In the **Generate report** dialog box, select a report mapping in the **Select report** field.
    Only the report mapping forms created and published for the Health and Safety case [sn_hs_cm_case] table are available to select in the **Select report** field. For more information, see Create a safety report field mapping.

    c. Select **Generate**.
12. Select **Close case** to close the safety case after all activities are complete.

Result
The safety case moves to the Closed Complete state.

Tables installed

Tables in Health and Safety Case Management

Table	Description
Health and Safety case	Stores all records of Health and Safety cases. This table extends the Health and Safety task [sn_ohs_im_task] table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables in Health and Safety Case Management (continued)

Table	Description
[sn_hs_cm_case]	
Leave [sn_hs_cm_leave]	Stores Health and Safety cases of type Injury and illness related leave.
Health and Safety Case Payment [sn_hs_cm_payment]	Stores payment details for Health and Safety compensation claim cases.

Health and Safety case form

Safety case manager can use the safety case form to resolve health and safety questions that they receive from employees.

When a health and safety question is submitted, it creates a safety case. Some of the fields on the case form are populated from the request from which it is created.

After the case is assigned, a safety agent fills out the fields on the case from Health and Safety Workspace.

Health and Safety case form

Field	Description
Number	System-generated unique number for the case.
Short description	Brief description of the request.
Requested for	Person for whom the information is requested.
Category	Type of the case or employee's question. • **Health and safety procedures**: Queries related to the organization's health and safety procedures. • **Training**: Queries related to health and safety training. • **Equipment**: Queries related to health and safety equipment. • **Injury / Incident related leave**: Queries related to leaves due to injuries or incidents and the related return to work considerations. • **General inquiry**: Any other general health and safety queries.
Related incidents / observations	Safety incident or observation this case is related to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and Safety case form (continued)

Field	Description
	This field appears only when the Health and Safety Incident Management (sn_hs_im_incident) application is installed on your ServiceNow instance. For more information, see Install Health and Safety Incident Management.
Return to work case	Option whether this case is related to an employee returning to work after an injury or illness. Only a user with the Return to work case writer [sn_hs_cm.rtw_writer] role can edit this field. A Return to work case is usually opened related to an incident where an employee was injured and required time off to recover. The following items appear when **Yes** is selected in this field: • **Return to work details** section on the case form. • **Leaves** and **Injury and illness** tabs for this case.
Compensation claim case	Option whether this case is related to a to compensation claim. The following sections appear when **Yes** is selected in this field. Only a user with the Claim case writer [sn_hs_cm.claim_case_writer] role can edit fields in these sections. • Employee claim details • Closure details
Parent case	Parent Health and Safety case ID number this case is related to.
State	State of the case.
Assignment group	Safety assignment group the case is assigned to. If the case isn't assigned to a user yet, any member of this group can work on the case.
Assigned to	User assigned to this case.
Contact type	Method to contact the person this information is requested for, such as email or phone number.
Description	Detailed description of the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Return to work details

The **Return to work details** section on the Health and Safety case form appears only when **Yes** is selected from **Return to work case**. The fields enable you to assess the employee's capability to work before they return from an injury or illness.

Only a user with the Return to work case writer [sn_hs_cm.rtw_writer] role can edit fields in this section.

Return to work details fields

Field	Description
Leave category	Reason the employee was away from work.
Expected return date	Date the employee is expected to return to work.
Medical clearance received	Option to indicate whether a medical clearance is received for the employee before they return to work from an injury or illness returning.
Accommodations needed	Changes required to help the employee return to work.
Work restrictions	Limitations identified during the return to work planning for the employee.

Domain separation and Health and Safety Case Management

Domain separation is supported for Health and Safety Case Management. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

Domain-separated tables overview

All tables in the Health and Safety Case Management can be domain-separated and include the required domain separation field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

How domain separation works in Health and Safety Case Management

- Each table in Health and Safety Case Management includes the domain separation fields **Domain** and **Domain path**.
- Customers can use these fields to configure domain separation in their implementation of Health and Safety Case Management.

Health and Safety Contractor Management overview

With this application, you can confirm that contractor workers have relevant certificates and skills and have completed the required trainings before they arrive at the site so that they can perform their job safely.

Health and Safety Contractor Management users

Users

User	Description
Safety contractor coordinator	Manage contractor workers from the Health and Safety Workspace for their health and safety and know who is on site at all times. The contractor coordinator confirms that contractor workers have relevant certificates and skills and have completed the required trainings before granting them access to the site.
Employee and Line manager	Add contractor companies from the Employee Center to initiate their health and safety pre-qualification process.
Contractor worker	Complete assigned tasks and upload documents as mentioned in the email notification.

Health and Safety Contractor Management workflow

1. Safety contractor coordinator keeps track of all contractor companies' details in the Health and Safety Workspace. They also list all the contractor workers including their areas of expertise and contact details.
2. Safety contractor coordinator assigns tasks to the contractor workers to ensure that they're up to date on prerequisite training and document uploads before they come on site.
3. Contractor workers receive an email for the assigned tasks and mark them complete.
4. When the prerequisite tasks have been completed by the contractor workers, the contractor coordinator grants them access for the site.

What to explore next

To learn more about configuring and using Health and Safety Contractor Management, see:

- Configuring Health and Safety Contractor Management
- Managing contractors for health and safety
- Health and Safety Contractor Management reference

Configuring Health and Safety Contractor Management

Set up your implementation for Health and Safety Contractor Management by installing the application and reviewing and configuring the components that are installed with the application.

Configuration overview

- Install Health and Safety Contractor Management

  Install the Health and Safety Contractor Management application (sn_hs_crm) if you have the admin role.

- Assign [snc_external] role to contractor workers

  For more information on this role, see Explicit Roles.

- Assign Health and Safety profile to contractor workers

  Assign the Health and Safety profile to all contractor workers who need to complete assigned tasks to work at your site.

Install Health and Safety Contractor Management

You can install the Health and Safety Contractor Management application (sn_hs_crm) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Health and Safety Contractor Management application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

About this task

The following items are installed with Health and Safety Contractor Management:

- Plugins
- Store applications
- Roles
- Tables

For more information, see Components installed with Health and Safety Contractor Management.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Health and Safety Contractor Management application (sn_hs_crm) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Assign Health and Safety profile to a contractor worker

Assign the Health and Safety profile to all contractor workers who need to complete assigned tasks to work at your site.

Before you begin

Confirm that the snc_external role is assigned to the contractor worker. For more information on this explicit role, see Explicit Roles.

Role required: sn_hs_crm.contractor_coordinator

About this task

Note:
The **Generate Health And Safety Profiles** scheduled job runs weekly and automatically creates health and safety user profiles for users [sys_user] with an assigned role in any of the Health and Safety applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ().
3. In the **Lists** tab, select **Health and safety profiles** and then **All**.
4. Select **New** to add a contractor worker for health and safety.
5. On the form, fill in the fields.
   For information on form field descriptions, see Health and Safety profile form.
6. Select **Save**.

Result

- The contractor worker is listed in the **Health and safety profile** list under **Configuration** on the Health and Safety Workspace. The user profile is saved in the Health and Safety profile [sn_ohs_im_health_and_safety_profile] table.
- The user is available for selection on these forms:
  - Contractor company when registering a contractor company for health and safety. For more information, see Add a contractor company from Health and Safety Workspace.
  - Worker form when adding a contract worker to a contractor company.
  - Site access form when granting site access to a contract worker. For more information, see Grant site access to a contractor worker.

Managing contractors for health and safety

Using Health and Safety Contractor Management, contract coordinators can manage contractors for health and safety and know who is on site at all times.

Overview of Health and Safety Contractor Management workflow

Health and Safety Workspace

In the workspace, the safety contractor coordinator performs the following tasks:

1. Add a contractor company from Health and Safety Workspace

   Keep track of all contractor companies' details including their name, address, their primary contact, and overall rating. Additionally, list all the contractor workers including their areas of expertise and contact details.

   Employees or Line managers can also register contractor companies from the Employee Center to initiate their health and safety pre-qualification process. For more information, see Register a contractor company through Employee Center.

2. Assign a task to a contractor worker

   Assign tasks to the contractor workers to confirm that they’re up to date on prerequisite training and document uploads before they come on site.

3. Add a document to a contractor worker

   Upload any documents collected from contractor workers or related to contractor worker in the workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Grant site access to a contractor worker

   Once completed tasks are received by the contractor coordinator, workers can be granted access to the customer's locations.

Contractor tasks via email

Contractor workers complete assigned tasks as received in the email notification.

1. Contract worker receives an email for assigned tasks. They can respond to the actions directly from the buttons in the email.
   - Upload documents
   - View prerequisite training material
   - Mark tasks as complete
2. When prerequisite tasks have been completed, the contractor coordinator grants them access to the site. Contract worker receives another email with an access code that can be used to access the company locations.

Register a contractor company through Employee Center

Register a contractor company to initiate its health and safety pre-qualification process with safety contractor coordinators in your organization.

Before you begin

Role required: sn_hs_crm.reporter

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center, under the **Health and Safety** menu, select **Contractor management** and then select **Register a contractor company**.
3. On the form, fill in the fields.

   a. Enter the company name and select an appropriate industry type for the company.

   b. Add a primary contact from the contractor company.

      This field displays only users who have been assigned the [snc_external] role and have a Health and Safety profile created for them.

      For more information, see Assign Health and Safety profile to a contractor worker.

4. Select **Submit**.

Result

- The contractor company is registered for health and safety.
- The contractor company is listed in the Contractor companies list on Health and Safety Workspace. A safety contractor coordinator [sn_hs_crm.contractor_coordinator] can view all the registered companies by navigating to the Health and Safety Workspace and selecting the contractor management icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

A safety contractor coordinator can complete the pre-qualification information for this company from Health and Safety Workspace. For more information, see Add a contractor company from Health and Safety Workspace.

Add a contractor company from Health and Safety Workspace

Add a contractor company to prequalify it and its workers. You can then manage the contractor workers from this company for their health and safety.

Before you begin

Role required: sn_hs_crm.contractor_coordinator

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the contractor management icon () to open the **Contractor Management** tab.
3. In the **Lists** tab, select **Contractor companies** and then **All**.
4. Select **New** to add a contractor company for health and safety.
5. On the form, fill in the fields.

   a. Enter company details such as Company name, Services provided, Industry type, address, and its star rating.

   b. Add a primary contact from the contractor company in the **Primary contact** field.

      The **Primary contact** field displays only users who have been assigned the [snc_external] role and have the Health and Safety profile created for them.

      For more information, see Assign Health and Safety profile to a contractor worker.

6. **Optional:** If necessary, add attachments related to the company using the add attachments icon ().
7. Select **Save**.

Result

- The contractor company is added for health and safety. The record for this company is stored in the Contractor company [sn_hs_crm_company] table.
- Workers, Documents, and Site access tabs appear for this contractor company.

What to do next

- In the **Workers** tab, select **Add** to add contract workers from this company who will perform required tasks at your site. Add all the contractor workers including their areas of expertise and contact details.

  Note:
  Only users who have been assigned the [snc_external] role and have the Health and Safety profile created for them appear in the list and can be added as contract workers.

- In the **Documents** tab, select **Add** to add any documents collected from the contractor company or its workers. For information on storing safety-related documents in Health and Safety Workspace, see Add a Health and Safety related document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- In the **Site access** tab, select **New** to grant site access to workers from this contractor company so that they can perform required tasks at your location.

  If any workers associated with this company already have the site access, they appear in this list. For information on adding site access for a worker, see Grant site access to a contractor worker.

Assign a task to a contractor worker

Assign tasks to the contractor workers to ensure that they're up to date on prerequisite training and document uploads before they come on site.

Before you begin
Role required: sn_hs_crm.contractor_coordinator

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Open a contractor worker record to assign a task.
3. In the **Actions** tab, select **New**.
4. On the form, fill in the fields.
   For information on field descriptions, see Health and Safety action form.
5. Select **Save**.

Result

- The contractor worker receives an email about the assigned task.
- The task is listed in the **Actions** tab of the contractor worker record.

What to do next

- The contract worker responds to the tasks and completes them directly from these buttons in the email:
- ○ Upload documents
  - ○ View prerequisite training material
  - ○ Mark the task as complete
- When the contract worker completes all prerequisite tasks, the contractor coordinator can grant them access to the site. For more information, see Grant site access to a contractor worker.
- If there are any documents submitted by the contractor worker, the contractor coordinator can upload them to the worker's or contractor company's **Document** tab. For more information, see Add a document to a contractor worker.

Add a document to a contractor worker

Add any documents collected from a contractor worker or related to this contractor worker.

Before you begin
Role required: sn_hs_crm.contractor_coordinator or sn_ohs_im.document_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Open a contractor worker record to add the document to.
3. In the **Documents** tab, select **New**.
4. On the form, fill in the fields.
   For information on form field descriptions, see Health and Safety document form.
5. Select **Save**.

Result

- The document is listed in the **Documents** tab of the contractor worker record.
- The document is also listed in the **Standards and documents** list under **Configuration** and is saved in the Health and Safety user document [sn_ohs_im_m2m_hs_user_document] table.

Grant site access to a contractor worker

When the contractor worker has completed all prerequisite tasks, you can grant them access to the site to perform required tasks.

Before you begin

Role required: sn_hs_crm.contractor_coordinator

About this task

Adding site access for workers also helps the safety team to know who's checked in and out of the site at any given point in time.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Open a contractor worker record to grant the site access to.
3. In the **Site access** tab, select **New**.

   Tip:
   You can also add site access for workers from the **Site access** tab in the contractor company record.

4. On the form, fill in the fields.

Site access form

Field	Description
State	State of the site access. Set it to **Active** to grant the site access.
Worker	Name of the contractor worker. When you create this site access record from a contractor worker record, this field is auto-populated with the worker's name.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Location	Location of the site this access applies to.
Start date	Date when the worker's can first access the site.
End date	Date when the worker's site access ends.

5. Select **Save**.

Result

- The access is listed in the **Site access** tab of the contractor worker record.
- The access is also listed in the **Site access** tab of the contractor company that this worker belongs to.

Store applications installed

Store apps installed with Health and Safety Contractor Management

Store application	Description
Health and Safety Core	Installs core data model for Health and Safety. This data model includes common components such as Health and Safety user profile and actions that are used in the Health and Safety applications. For more information on store applications, roles, and tables installed with Health and Safety Core, see Components installed with Health and Safety Core.
Workplace Core [sn_wsd_core]	Enables workplace locations for Health and Safety applications. **Important:** The application installation doesn't install the location demo data for the Workplace Core location model. As a workaround, repair the Workplace Core plugin with the **Load demo data** option.

Roles installed

Roles in Health and Safety Contractor Management

Role title [name]	Description	Contains roles

Safety contractor coordinator
[sn_hs_crm.contractor_coordinator]
	Coordinator for contractor companies and workers who can
	• View contractor companies and their related records in Health and Safety Workspace
	• Add, update, and delete these from Health and Safety Workspace
	  ○ Contractor companies for health and safety
	  ○ Contractor workers for health and safety profiles
	• Assign safety related tasks and actions to contractor workers
	• Collect safety related documents from contractor companies and workers
	• Grant site access to contractor workers
		• sn_ohs_im.hs_profile_writer
		• sn_ohs_im.workspace_user
		• sn_hs_crm.reporter
		• sn_ohs_im.document_admin
		• canvas_user
		• sn_ohs_im.action_writer
		• sn_ohs_im.action_reader

Safety contractor reporter [sn_hs_crm.reporter]	View and create contractor companies for health and safety from Employee Center	• sn_ohs_im.hs_profile_reader • sn_hs_crm.company_writer • sn_hs_crm.company_reader
Safety contractor company writer [sn_hs_crm.company_writer]	Can write information into the contractor management company table and tables related to it	None
Safety contractor company reader [sn_hs_crm.company_reader]	Can view information from the contractor management company table and tables related to it	None

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed

Tables in Health and Safety Contractor Management

Table	Description
Contractor company [sn_hs_crm_company]	Stores all contractor companies added for Health and Safety.
Site access [sn_hs_crm_location_access]	Stores all contractor workers who've been granted site access.
Document [sn_hs_crm_m2m_company_document]	Stores all safety related documents collected from contractor companies and workers.

Domain separation and Health and Safety Contractor Management

Domain separation is supported for Health and Safety Contractor Management. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

Domain-separated tables overview

All tables in the Health and Safety Contractor Management can be domain-separated and include the required domain separation field.

How domain separation works in Health and Safety Contractor Management

- Each table in Health and Safety Contractor Management includes the domain separation fields **Domain** and **Domain path**.
- Customers can use these fields to configure domain separation in their implementation of Health and Safety Contractor Management.

Exploring Health and Safety Risk Management

Learn more about Health and Safety Risk Management and review the benefits it can provide for different users in your organization.

Health and Safety Risk Management overview

Health and Safety Risk Management provides safety incident prevention capabilities in the form of tools such as Risk assessment, Job Safety Analysis (JSA), Safety registers, and Inspections and Audits.

- Safety Risk Assessment enables safety teams to conduct hazard risk assessments, to assess risk before and after the controls are applied, using custom risk matrixes. Risk assessments help organizations bolster workplace safety, help prevent incidents, and promote a safety-conscious culture by proactively managing risks tailored to their workplace environments and sectors.
- Job Safety Analysis enables employees (and line managers) to analyze job-specific hazards and identify the relevant control measures for high-risk jobs at their point of work. JSAs are intended to promote worker's hazard awareness and help prevent hazards from causing injury. Safety team can also view and assess the filed JSAs to perform risk assessments.
- Safety Register helps safety teams and line managers to track hazardous materials like chemicals and asbestos, as well as attach Safety Data Sheets (SDSs) that employees can easily access.
- Safety inspections and audits enable safety teams to build and manage safety inspections and audits. Inspections and audits support conformance with regulatory standards while reducing the risks of workplace accidents and associated costs.
- Safety exposure management enables seamless monitoring of exposures across an organization. Safety team and industrial hygienists can perform exposure assessment across different locations and follow up actions to control exposures and keep workers safe.
- The permit-to-work process helps manage formal authorization for workers who request permits to perform tasks involving significant risks. This process promotes safety, effective communication, and accountability and enhances operational efficiency.

Health and Safety Risk Management workflow

Safety risk assessment

The safety team performs the following activities via the Health and Safety Workspace to conduct their risk assessments.

- Builds risk matrixes to define levels of risk using likelihood vs severity and define risk tolerances.
- Conducts risk assessments using the pre-defined risk matrixes. The chosen matrix evaluates the level of risk for a risk assessment.
- Assesses risks using risk assessments in their workplace, both pre-and post-control measures. There might be multiple risks identified in a risk assessment

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

each with its own controls. The overall level of risk both before and after controls is based on the highest identified risk from the risks and controls list.

- Risk assessment also identifies people at risk and people responsible for control of the risk.
- After a risk assessment is complete, assigns a reviewer and approver and creates recommended actions, if necessary.

Job Safety Analysis

It includes the following activities:

- Safety team manages the hazard and controls lists in the Health and Safety Workspace.
- Safety team also maintains the job register in the Health and Safety Workspace that pre-identifies hazards and controls for jobs in their organization.
- Employees submit JSAs in Employee Center or on Now Mobile app. They can select a job or job step to pre-populate hazards and controls, or they can start from scratch with an empty JSA.

Safety registers

- Safety team manages safety registers like chemicals and asbestos in the Health and Safety Workspace. The safety team also attaches Safety Data Sheets (SDSs) to safety register records.
- Employees can search and access these SDSs in the Employee Center or on Now Mobile app.

Safety inspections and audits

Safety team members conduct safety inspections and audits at their establishments that involve the following activities:

- Inspection or audit manager pre-builds surveys using Survey Designer and schedules safety inspections or audits in the Health and Safety Workspace.
- Safety inspector or auditor walks around and conducts surveys through the Employee Center or on Now Mobile app.

  They can also complete the inspection or audit surveys offline on the Mobile Agent app. Surveys completed offline are synchronized once an internet connection is established.

- Inspection or audit manager reviews the completed surveys, works on the findings and root cause analysis, and devises actions.

Safety exposure management

The Industrial hygienist carries out the following tasks via the Health and Safety Workspace to manage workplace exposures:

- Defines exposure types and associates them with relevant risk assessments and safety register records.
- Conducts exposure assessments to determine the affected workers across various locations.
- Assigns follow-up actions to ensure proper control of exposures and the safety of workers.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Permit-to-work

The permit to work workflow involves the following activities:

- Permit requester submits a permit to work request for a high-risk job.
- Permit approver conducts a detailed evaluation of the task and approves the permit to work request after confirming that all safety standards are met and appropriate training for the employee to perform the task is in place.
- Permit coordinator oversees regular checks conducted in compliance with permit conditions and supervises the active permit for safety.

Health and Safety Risk Management benefits

Benefits and user personas

Benefit	Feature	Users
Access Employee Center and Now Mobile app based tool that enables any worker to submit a Job safety analysis (JSA) easily. Employees can analyze their job safety at the point of work creating a JSA from scratch or start from a pre-defined job.	Job Safety Analysis (JSA)	• Employee • Line manager
Enable employees to use the pre-defined jobs and get started quickly for their JSAs by automatically populating hazards and controls for their jobs.	Job register	Risk manager
Access the safety risk assessment tool in the workspace to assess risks and implement effective risk mitigation strategies.	Safety risk assessment	• Line manager • Safety manager
Create and manage your visual risk matrixes that adhere to local regulations or to meet differing requirements in each establishment in your organization.	Risk Matrices	• Safety manager • Risk manager
Manage your hazards and controls lists and build and manage job register. Control measures dynamically improve the more you use them.	Risk Configuration	• Safety manager • Risk manager
Log where hazardous materials are used, along with Safety Data Sheets (SDSs).	Safety registers	• Safety manager • Line manager
Support chemical safety awareness through the Employee Center with searchable Safety Data Sheets (SDSs) for all employees.	Access Safety Data Sheets (SDSs)	• Employee • Line manager

Benefits and user personas (continued)

Benefit	Feature	Users
Empower a proactive and compliant safety practice through scheduled and ad-hoc inspections and audits of assets, locations, processes, and more.	Safety inspections and audits	• Safety manager • Safety auditor • Safety inspector
Enable agents to complete inspection or audit surveys offline that are synchronized with the instance once an internet connection is restored.	Offline inspections and audits on mobile	• Safety inspector • Safety auditor
Identify exposure sources and track worker exposure levels across your organization.	Safety exposure management	• Industrial hygienist • Line manager
Identify hazards, implement precautions, and maintain accountability to promote a safe, controlled, and regulated execution of high-risk activities.	Permit-to-work	• Permit requester • Permit approver • Permit coordinator

Setting up Health and Safety Risk Management

Set up your implementation for Health and Safety Risk Management by installing the application and reviewing and configuring the components that are installed with the application.

Install Health and Safety Risk Management

You can install the Health and Safety Risk Management application (sn_hs_rm) if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Health and Safety Risk Management application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Role required: admin

About this task

The following items are installed with Health and Safety Risk Management:

- Store applications
- Roles
- Tables

For more information, see Components installed with Health and Safety Risk Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Health and Safety Risk Management application (sn_hs_rm) using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find the application, you might have to request it from the ServiceNow Store.

   In the list next to the **Install** button, the versions that are available to you are displayed.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Create a safety risk category

Create or modify a risk category to group your workplace hazards into logical categories.

Before you begin

Role required: sn_hs_rm.risk_category_manager or sn_hs_rm.risk_category_writer

Procedure

1. Select **All**.
2. In the navigation filter of the application navigator, enter the following command:
   `sn_hs_rm_risk_category.list`
   The Risk categories list appears.
3. Create a risk category or update an existing one.
   - To create a risk category, select **New**.
   - To modify an existing risk category, open it from the list.
4. On the form, fill in the fields.

Risk category details

Field	Description
Number	System-generated unique number for the risk category.
Name	Name of the risk category.
Short description	Description of the risk category.
Order	Order at which this risk category is listed on the Select hazards form when submitting a Job safety analysis (JSA).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Active	Option to mark this risk category available for use. A risk category must be active to be used.

5. Select **Submit**.

Result

- The risk category is created and saved in the Risk category [sn_hs_rm_risk_category] table.
- The category is listed in the **Risk category** field on the Hazard details form.
- It is also displayed on the Select hazards form when submitting a Job safety analysis (JSA). However, a risk category with no hazards associated with it doesn't appear on the Select hazards form.

What to do next

Associate related hazards with the risk category. For more information, see Define Health and Safety hazards.

Define Health and Safety hazards

Identify and define potential workplace hazards related to a job or task type. Maintain a list of all hazards for all job types in your organization.

Before you begin

Role required: sn_hs_rm.jsa_manager or sn_hs_rm.risk_data_manager

About this task

Review and update your hazard list regularly to verify its continued effectiveness.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ( ).
3. In the **Configuration** tab, select **Hazards** and then **All**.
4. Create a hazard or modify an existing one.
   - To create a hazard, select **New**.
   - To review an existing hazard, open the one that you want to configure.
5. On the form, fill in the fields.

Hazard details

Field	Description
Risk category	Name of the risk category under which this hazard is organized. The list in this field displays items from the Risk category [sn_hs_rm_risk_category] table.
Job location	Job or task location where this job and the associated risks may arise or exists.
Active	Option to mark this hazard available for use. A hazard must be active to be used.

6. Select **Save**.
7. Add all hazards that are possible for a job and location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- The hazard is listed in the **Hazards** list under **Configuration** and is saved in the Hazard [sn_hs_rm_hazard] table.
- The hazard is available to select in the following fields:
  - **Hazard** field on the Hazard and controls form when defining a job in the job register.
  - **Add hazards** window on a JSA form.
  - **Hazard** field on the Risk and controls form when conducting a risk assessment.

Create a safety control measure category

Create or modify a control measure category to group your safety controls into logical categories.

Before you begin

Role required: sn_hs_rm.hierarchy_of_controls_manager or sn_hs_rm.hierarchy_of_controls_writer

Procedure

1. Select **All**.
2. In the navigation filter of the application navigator, enter the following command:
   `sn_hs_rm_hierarchy_of_controls.list`
   The Hierarchy of controls list appears.
3. Create a control measure category or update an existing one.
   - To create a category, select **New**.
   - To modify an existing one, open it from the list.
4. On the form, fill in the fields.

Hierarchy of controls details

Field	Description
Number	System-generated unique number for the control measure category.
Name	Name of the category.
Short description	Brief description of the category.
Order	Order at which this category is listed on the Select control measures form when submitting a Job safety analysis (JSA).
Active	Option to mark the category available for use. A control measure category must be active to be used.

5. Select **Submit**.

Result

- The control measure category is created and saved in the Hierarchy of controls [sn_hs_rm_hierarchy_of_controls] table.
- The category is listed in the **Control measure category** field on the Control measure form.
- It is also displayed on the Select control measures form when submitting a Job safety analysis (JSA). However, a category with no control measures associated with it doesn't appear on the Select control measures form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Associate related control measures with the category. For more information, see Safety control measures.

Define Health and Safety control measures

Define effective control measures to eliminate or minimize the risks associated with each workplace hazard to help prevent workplace accidents and injuries. Maintain a list of all the controls in place in your organization for every type of job and the associated risks.

Before you begin
Role required: sn_hs_rm.jsa_manager or sn_hs_rm.risk_data_manager

About this task
Review and update your list of control measures regularly to ensure its continued effectiveness.

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ().
3. In the **Configuration** tab, select **control measures** and then **All**.
4. Create a control or modify an existing one.
   - To create a control, select **New**.
   - To review an existing control, open the one that you want to configure.
5. On the form, fill in the fields.

Control measure details

Field	Description
Control measure category	Category under which this control measure is organized. The list in this field displays items from the Hierarchy of controls [sn_hs_rm_hierarchy_of_controls] table. For more information on control measure categories, see Create a safety control measure category.
Job location	Job or task location where this control measure should be applied for a risk.
Active	Option to mark this control measure available for use. A control measure must be active to be used.

6. Select **Save**.
7. Add all control measures that are possible for a risk.

Result
- The control measure is listed in the **Control measures** list under **Configuration** and is saved in the Control measure [sn_hs_rm_control_measure] table.
- The control measure is available to select in the following fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Hazard** field on the Hazard and controls form when defining a job in the job register.
- **Add control measures** window on a JSA form.
- **Control measures** field on the Risk and controls form when conducting a risk assessment.

Configure a safety risk matrix

Configure a safety risk matrix to define levels of risk using likelihood vs severity and to define risk tolerances. You can review and modify the risk matrixes available with the application or add new ones for your organization.

Before you begin

Role required: sn_hs_rm.jsa_manager or sn_hs_rm.risk_data_manager

About this task

This video shows an example of how to set up a 3x3 risk matrix and explains its application in assessing risk levels during a risk assessment.

https://player.vimeo.com/video/1015778828?h=79151698a6&badge=0&autopause=0&player_id=0&app_id=58479

The pre-defined risk matrixes can be used by safety team members to create and conduct risk assessments in the Health and Safety Workspace. The selected matrix is used by the risk assessment to evaluate the level of risk. For more information, see Conduct a safety risk assessment.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ( ).
3. In the **Configuration** tab, select **Risk matrices** and then **All**.
4. Create a risk matrix or modify an existing one.
   - To create a risk matrix, select **New**.
   - To review an existing risk matrix, open the one that you want to configure. However, if a risk matrix is already used in a risk assessment, it can't be changed.
5. On the form, fill in the fields.
   a. Describe your risk matrix and choose what kind of grid to use.
   b. Define your custom likelihood and severity descriptions.
   c. Configure your risk tolerance levels.
   For more information about field descriptions, see Risk matrix form.
6. Select **Save**.
7. In the **Risk matrix preview** section, preview the risk matrix.

Result

- The risk matrix is listed in the **Risk matrices** list under **Configuration** and is saved in the Risk matrix [sn_hs_rm_risk_matrix] table.
- The matrix is available for selection on the Risk assessment form when conducting a risk assessment.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Define a job in the job register

Define jobs and their steps (if any), in the job register to predefine hazards and controls for each job type in your organization.

Before you begin

Role required: sn_hs_rm.risk_manager or sn_hs_rm.risk_data_manager

About this task

A job register is a list that safety managers and line managers can use to add jobs, along with their steps, if any, for their organization. Depending on the complexity, a job can be single-step or multi-step.

Each job and job step can have associated hazards and controls. Jobs with predefined hazards and controls for each step enable you to:

- quickly submit job safety analyses (JSAs) and
- perform risk assessments.

Consequently, these predefined jobs simplify the process of submitting JSAs and conducting risk assessments by automatically populating hazards and controls.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ( ).
3. In the **Configuration** tab, select **Job register** and then **All**.
4. Create a job.
5. On the form, fill in the fields.

Job details

Field	Description
Name	Name of this job.
Short description	Description of the job.
Job location	Location that this job or task applies to.
Active	Option for making the job available for use. A job must be active to be used.

6. Select **Save**.
7. If it's a multi-step job, add job steps.

Note:
Create a job step for each task involved in the job.

a. In the **Job steps** tab, select **New**.
This tab appears only when **Multi step** is selected when creating the job.

b. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. In the **Order** field, select the order in which the job step appears.
The value in this field determines the sequence in which job steps appear when submitting a JSA from the Employee Center.

d. Select **Save**.

8. Associate hazards and controls with the job.

a. On the form, fill in the fields.

Hazard details

Field	Description
Number	System-generated unique number for the hazard and its controls for the job or the job step.
Hazard	Hazard associated with the job or the job step. The hazards in this field display items from the Hazard [sn_hs_rm_hazard] table.
Available control measures	All active control measures that are in place and can be added for the selected hazard. The controls in this field display items from the Control measure [sn_hs_rm_control_measure] table. Select the check box for a control measure to add it to the **Selected control measure** list.
Selected control measures	Controls that are selected to be added for the hazard.

b. Select **Save**.

If a job or a job step includes more than one hazard, create a hazard and controls record for each.

9. In the **Document links** tab, select **New** to add any document links related to the job.
10. Select **Save**.

Result

- The job is listed in the **Job register** list under **Configuration** on the Health and Safety Workspace. The job is saved in the Job [sn_hs_rm_job] table and job steps are saved in the Job step [sn_hs_rm_job_step] table.
- The job is available for selection on these forms:
  - JSA form when submitting a JSA. For more information, see Submit JSA form.
  - Risks and controls form when conducting a risk assessment. For more information, see Add a risk and its control measures for a safety risk assessment.
- The job is also available to import hazards and controls from when performing a risk assessment. For more information, see Import hazards and controls from a job.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure a safety inspection or audit survey

Review surveys available with the Health and Safety Risk Management application. Modify the survey, or create one or more surveys to use for different workplaces or to check other areas of concern.

Before you begin

- Surveys are built with the ServiceNow® Survey designer. So, familiarize yourself with Survey administration.
- Ensure that the application scope is selected as Health and Safety Risk Management. For more information, see Application picker.

Role required: safety_inspection_manager, sn_hs_rm.safety_audit_manager, survey_creator, or admin

Procedure

1. Navigate to **All** > **Surveys** > **View Surveys**.
2. Create a new survey or modify an existing one.
   - To create a survey, click **New** or **Survey Designer**.
   - To modify a predefined one, filter the list to show the surveys for the Health and Safety Risk Management application and open the desired survey.
   - For information on building and updating surveys, see Survey designer.
   - **Tip:**
     When assigned to a user, any survey created via the ServiceNow® Assessments and Surveys is available under **My Assessments and Surveys** in the Employee Center. Therefore, it might be a good idea that your survey has the same name as your inspection or audit record. This helps identify the inspection or audit survey quickly in the list of other assessments and surveys the user has been assigned.
3. In the **Source table** field, select the source table.
   - For an inspection survey, select the Inspection [sn_hs_rm_inspection] table.
   - For an audit survey, select the Audit survey [sn_hs_rm_audit_survey] table.

Important:
Selecting this table makes this survey available for selection in the **Inspection survey** or **Audit survey** field on respective safety inspection or audit records.

Result

The survey is available for selection in the safety inspection or safety audit records.

What to do next

Associate the survey to safety inspections or audits. You can associate any of your pre-built surveys with inspection or audit records in Health and Safety Risk Management.

Define a category and measurement unit for an exposure type

Define a category and measurement unit for an exposure type. If needed, you can also associate a subcategory with an exposure type category.

Before you begin

Verify that the application scope is selected as Health and Safety Risk Management. For more information, see Application picker.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Tables**.
2. Create an exposure category or update an existing one.
   a. Select to open the Exposure type [sn_hs_rm_exposure_type] table.
   b. In the **Columns** tab, select `Exposure category` from the list.
   c. In the **Choices** tab, select **New**.
   d. Fill in the fields.
   The value set in the **Value** field is used to associate a sub-category or a measurement unit with this category.
   e. Select **Submit**.
3. **Optional:** Associate a subcategory with an exposure category.
   a. In the **Columns** tab of the Exposure type [sn_hs_rm_exposure_type] table, select the `Exposure sub-category` from the list.
   b. In the **Choices** tab, select **New** and fill in the fields.
   c. In the **Dependent value** field, copy the exposure category's **Value** field defined in step 2d. This associates the subcategory with the required category.
   d. Select **Submit**.

   The subcategory is listed as a choice in the **Sub-category** field for the associated exposure category when creating an exposure type. For more information, see Define an exposure type.
4. Add a measurement unit for an exposure category.
   a. Select to open the Measurement [sn_hs_rm_measurement] table.
   b. In the **Columns** tab, select `Measurement unit` from the list.
   c. In the **Choices** tab, select **New** and fill in the fields.
   d. In the **Dependent value** field, copy the exposure category's **Value** field defined in step 2d. The value in the **Dependent value** field links the measurement unit with the required exposure category.
   e. Select **Submit**.

   The measurement unit is listed as a choice in the **Measurement unit** field during an exposure assessment for the exposure type. For more information, see Add a measurement and exposure source for an exposure assessment.

Configure permit-to-work

Configure permit type, permit checklist, checklist type, and edit a permit form.

Permit-to-work can be configured by an admin. An admin must assign the following roles to the permit coordinator [sn_hs_rm.permit_coordinator] to enable them to configure permit-to-work.

- catalog_admin
- decision_rule_author
- personalize_choices
- personalize_dictionary
- snc_internal
- sn_hs_rm.permit_coordinator

Configure a permit to work request

Edit existing questions or add new questions to the permit-to-work form.

Before you begin
Role required: admin and sn_hs_rm.permit_coordinator

About this task
The admins must assign specific roles to the sn_hs_rm.permit_coordinator role to enable the permit coordinator to perform this configuration. For more information, see Configure permit-to-work.

Procedure

1. Navigate to **All** > **Service catalog** > **Catalog definitions** > **Record producers**.
2. Search and select **Request a permit to work** record.
3. To add new questions:
   a. Select **New** in the **Variables** related link.
   b. On the form, fill in the fields. For more information on the field description, see Variable new record form.
   c. Select **Submit**.
4. To edit or update existing questions:
   a. Select the existing question in the **Variables** related link.
   b. Edit the form and select **Update**.

Configure a permit type

Create a permit type to be selected in the permit-to-work request form.

Before you begin
Role required: admin and sn_hs_rm.permit_coordinator

About this task
The admins must assign specific roles to the sn_hs_rm.permit_coordinator role to enable the permit coordinator to perform this configuration. For more information, see Configure permit-to-work.

About this task
A permit type is a specific category of permit that a permit requestor selects when completing the permit-to-work request form. Each permit type addresses unique risks and safety

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

requirements for different kinds of work. Selecting a permit type in the form automatically adds related questions specific to that permit type.

Procedure

1. Navigate to **All** > **System definition** > **Tables** and select the **Permits to work** table.
2. Select **Permit type** in the **Columns** tab of the related list.
   Opens the **Dictionary entry** for permit type.
3. Select the **Choices** tab in the related list and select **New**.
4. On the form, fill in the fields.
   For more information on the field description, see Choice new record form.
5. Select **Submit**.
   A new permit type is created which appears in the **Permit type** field of the permit-to-work request form. Repeat the steps to create multiple permit types.
6. Automatically display questions specific to a permit type when the user selects it on the permit-to-work request form.
   a. Navigate to **All** > **Service catalog** > **Catalog definitions** > **Record producers**.
   b. Search and select **Request a permit to work** record.
   c. Select **New** on the **Variable sets** tab of the related list.
   d. On the form, select **Single row variable set**.

      This creates a variable set with variables that are grouped.

   e. On the form, fill in the fields. For more information on the field description, see Variable set new record form.
   f. Select **Submit**.

      - Repeat the steps to create additional variable sets for the same record producer. These variable sets includes permit type specific questions that appear on the permit-to-work request form when the permit type is selected.
      - For more information on variable sets and the layout, see Variable set layout.
7. Add customized questions to the permit type.
   a. Open a variable set and on the form fill in the fields. For more information on the field description, see Variable new record form.
   b. Select **Submit**.
8. Link the variable set to permit type.
   a. Navigate to **All** > **System definition** > **Decision tables** and select **Permit type configuration**
   b. Select **Draft** and select **Add new decision row**.
   c. Select the empty cell in the **permit type** column and select the permit type in the **Choice input** field. Select **OK**.
   d. Select the empty cell in the **variable set** column and select the variable set in the **Choice input** field. Select **OK**.
   e. Select **Save**.
   f. Select **Publish** and then select **Publish** in the modal dialogue.

   The variable set with the questions is linked with the permit type and these questions appear on the permit-to-work request form when the permit type is selected.

Configure a permit checklist

Create a permit checklist and link it to the permit type of a permit-to-work request.

Before you begin

Role required: admin and sn_hs_rm.permit_coordinator

About this task

The admins must assign specific roles to the sn_hs_rm.permit_coordinator role to enable the permit coordinator to perform this configuration. For more information, see Configure permit-to-work.

Procedure

1. Navigate to **All** > **Service catalog** > **Catalog definitions** > **Record producers**.
2. Search and select **Permit checklist** record.
3. Select the **Variable sets** tab in the related list and select **New**.
4. Select **single row variable set** on the variable set creation form.

   Creates a variable set with variables that are grouped.

5. On the form, fill in the fields.
   For more information on the field description, see Variable set new record form.
6. Select **Submit**.
   The new variable set is created and can be viewed in the **Variable sets** tab on the related list of the permit checklist record producer.
7. Open the new variable set and on the form fill in the fields.
   For more information on the field description, see Variable new record form.
8. Select **Submit**.
   Repeat the steps 7 and 8 to create more questions.
   A permit checklist with questions customized to the permit type is created.
9. Create a checklist type.

   a. Navigate to **All** > **System definition** > **Tables** and select the **Permits checklist** table.

   b. Select **Checklist type** in the **Columns** tab of the related list.

   c. Select the **Choices** tab in the related list and select **New**.

   d. On the form, fill in the fields.

      For more information on the field description, see Choice new record form.

   e. Select **Submit**.

10. Associate the checklist to a permit type.
    a. Navigate to **All** > **System definition** > **Decision tables** and select **Permit checklist configuration**.
    b. Select **Draft** and select **Add new decision row**.
    c. Select the empty cell in the **permit type** column and select the permit type in the **Choice input** field in the **permit type**, then select **OK**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Select the empty cell in the **checklist type** column and select the checklist type in the **Choice input** field, then select **OK**.

e. Select the empty cell in the **variable set** column and select the variable set in the **Choice input** field, then select **OK**.

f. Select **Save**.

g. Select **Publish** and then select **Publish** in the modal dialogue.

11. Create a flow for the checklist type or modify an existing one.

a. Navigate to **All** > **Process Automation** > **Flow Designer**.

b. Select **Create permit checklist when permit created** from the **Flows** list.

c. Select **Duplicate action** for the existing **Create permit checklist record** action.

The flows are built using ServiceNow Workflow Studio, so make sure you're familiar with the Flow Designer basics.

For information on how to create or modify flows, see Create a flow.

d. Select the new checklist type in the **Checklist type** field.

e. Select **Save** and then select **Activate**.

Result
The checklist is configured and displayed in the checklist tab of the permit-to-work request form when the permit type is selected.

Using Health and Safety Risk Management

Learn how employees and risk teams use the Health and Safety Risk Management application to perform job safety analyses, perform risk assessments, maintain safety registers, conduct safety inspections and audits, and manage exposures for their workplace.

Key capabilities of Health and Safety Risk Management

Job Safety Analysis (JSA)

- Perform Job Safety Analyses
- Import JSA job steps from the job register

Safety risk assessment

- Configure risk matrices
- Perform risk assessments

Safety inspections and audits

- Conduct inspections and audits using Assessments and Surveys
- Complete offline inspections and audits on the Mobile Agent app

Safety registers

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Log hazardous materials used along with Safety Data Sheets (SDSs)
- Access these SDSs in the Employee Center or on Now Mobile app

Exposure management

- Track and manage workers' exposure to workplace hazards
- Schedule actions to control the exposures

Job safety analysis

Job safety analysis (JSA) is a systematic process for identifying potential hazards at a worker's point-of-work. The objective is to increase risk awareness and implement efficient controls to help prevent workplace accidents and injuries.

Any employee in a company working on high-risk activities may complete JSAs. They typically complete a JSA before commencing the high-risk activity with the aim of identifying any hazards and ensuring adequate controls before starting the task. They may identify new hazards or controls, or previously identified ones for their task. Since JSA is a point-of-work assessment, it would typically be done on a mobile device.

JSA provides the following capabilities:

- Employees can assess risks at their point-of-work and the control measures available for them.
- Pre-defined jobs in job register that enable employees to file JSAs quickly.
- Control measures that dynamically improve the more you use them.

Submit a JSA from Employee Center

Submit a job safety analysis (JSA) to identify potential hazards and control measures related to these hazards at your point-of-work.

Before you begin

Role required: sn_hs_rm.jsa_reporter

About this task

Employees can also submit JSAs from their mobile device using the ServiceNow® Now Mobile app. For more information, see Submit a JSA through the Now Mobile app.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. Select the **Health and Safety** menu.
3. Create a JSA.
4. On the form, fill in the fields.
   a. Enter details of the job or task you're about to start.
   b. Add any identified hazards.
   c. Add any control measures that are in place.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tip:
Select a job in the **Select job** field to auto-populate predefined hazards and controls for your job type and quickly submit your JSA. For more information about pre-defined jobs, see Job register.

d. Add any employees or workers who have been informed along with your comments or attachments.

For more information on JSA field descriptions, see JSA form.

5. Select **Submit**.

Result

- The JSA is submitted for your job or task. To view your submitted JSAs, navigate to the **Health and Safety** menu in the Employee Center and then the **View my JSAs** quick link.
- The JSA is also listed in the JSAs list on Health and Safety Workspace. A risk manager [sn_hs_rm.jsa_manager] can view all the filed JSAs by navigating to the Health and Safety Workspace and selecting the JSAs icon ( ).

View submitted JSAs in the workspace

View all submitted JSAs in Health and Safety Workspace. All JSAs that employees have submitted through the Employee Center or ServiceNow® Now Mobile app are available to view in the workspace.

Before you begin
Role required: sn_hs_rm.jsa_manager or sn_hs_rm.job_safety_analysis_reader

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Select the **JSAs** list.
   - For active JSAs, select **Active**.
   - For all JSAs, including both active and expired, select **All**.
4. In the list, select the record to view.

Safety risk assessment

The Risk Assessment is a process of identifying and evaluating potential hazards and risks associated with a process, system, product, or activity, and implementing measures that help prevent or mitigate those risks. The feature enables the safety of people and proactively reduce safety incident rates.

The safety team performs the following activities via the Health and Safety Workspace to conduct their risk assessments.

- Identify and maintain a list of potential hazards associated with each job type. They also develop and implement effective control measures to eliminate or minimize the risks associated with each hazard.
- Builds risk matrixes to define levels of risk for identified hazards.
- Creates and manage risk assessments to assess risk using pre-defined risk matrixes.
- Recommends actions for risk assessments, if applicable.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If a review and approval are required, assigns the assessment to appropriate users.
- Assigned users review and approve the assessments via Employee Center.

Conduct a safety risk assessment

Conduct a safety risk assessment to identify and manage potential hazards and risks, and to ensure the safety of your employees and the public.

Before you begin

Role required: sn_hs_rm.risk_assessment_manager or sn_hs_rm.risk_assessment_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Select the **Risk assessment** list and then **All**.
4. Select **New** to start a risk assessment.
5. On the form, fill in the fields.
   Enter details such as who is at risk, who is responsible for controls, who reviews, and who approves this risk assessment?

   For more information on risk field descriptions, see Risk assessment form.
6. **Optional:** If necessary, attach an image about the risk using the add attachments icon ( ).
7. Select **Save**.
   The **Risks and Controls** and **Risk actions** tabs appear for this risk assessment.
8. List any identified hazards and choose their controls in the **Risks and Controls** tab.
   Create a Risk and Controls record for each identified hazard. For more information, see Add a risk and its control measures for a safety risk assessment.
9. If applicable, assign actions in the **Risk actions** tab.
   For more information, see Add an action for a safety risk.

Result

The overall level of risk, both before and after controls, is based on the severity and likelihood of each hazard that is listed in the **Risks and Controls** tab. It is determined based on the highest identified risk from the risks and controls list. The computed risk levels appear in the **Risk before controls** and **Risk after controls** fields in the risk assessment's form header.

What to do next

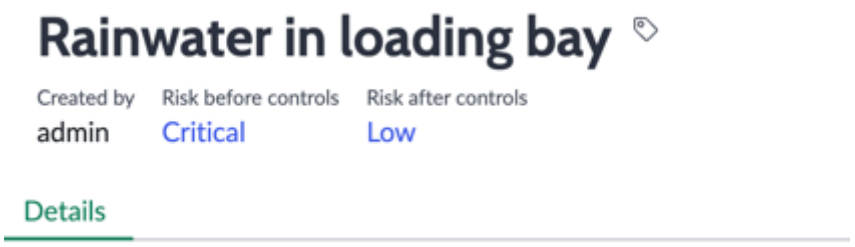
After the risk assessment is complete, assign a reviewer and approver for it, if necessary. Only a user with the Risk assessment approver [sn_hs_rm.risk_assessment_approver] role can be assigned as an approver.

Add a risk and its control measures for a safety risk assessment

For a risk assessment, add an identified risk and choose control measures to assess how they impact and mitigate the risk.

Before you begin

Role required: sn_hs_rm.risk_assessment_manager or sn_hs_rm.risk_assessment_writer



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Select the **Risk assessment** list and then **All**.
4. Open the risk assessment to add the risk and control.
5. In the **Risks and controls** tab, select **New**.
6. On the form, fill in the fields.
   a. Select a hazard to perform its assessment and choose the severity and likelihood of this hazard.
   b. **Optional:** If this risk assessment is for a pre-defined job in the job register, select the job and the applicable job step.
   For more information on job register, see Jobs in job register.
   c. Identify what effect this hazard could have, for example, burns, and enter what control measures could help prevent this hazard.
   d. Choose what the severity and likelihood of this hazard is, after those controls have been put in place.
7. Select **Import hazards and controls** to import hazards and controls from a pre-defined job and assess their risk levels.
   For more information, see Import hazards and controls from a job.
8. Select **Save**.

Result

- The risk matrix of the associated risk assessment evaluates the risk level for the hazard.
  - The severity and likelihood of the hazard before controls are evaluated to show the hazard's risk level in the **Risk before controls** field in the form header.
  - The severity and likelihood of the hazard after controls are evaluated to show the hazard's risk level in the **Risk after controls** field in the form header. After controls, the risk level should be reduced.

For more information on risk level calculation, see Risk matrix form.

- The risk and controls record is listed in the **Risks and controls** tab of the assessment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
If a risk assessment includes more than one hazard, create a risk and controls record for each.

Import hazards and controls from a job

Import hazards and controls from a pre-defined job in the job register to a risk assessment.

Before you begin
Role required: sn_hs_rm.risk_assessment_manager or sn_hs_rm.risk_assessment_writer

About this task
You can conduct a risk assessment for the jobs in your organization to identify associated hazards and assign a risk rating to each job hazard. For information on pre-defined jobs, see Jobs in the job register.

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Select the **Risk assessment** list and then **All**.
4. Open the risk assessment to import the hazards and controls.
5. Select **Import hazards and controls**.
6. In the **Select jobs to import hazards and controls from** field, select the job.
7. Select **Import**.
   All hazards and controls from the selected job are imported.
8. Review the imported hazards and their controls to assess their risk levels.
   For more information on how the risk level for a hazard is evaluated, see Add a risk and its control measures for a safety risk assessment.

Result
All hazards and controls from the selected job are imported and listed in the **Risks and controls** tab of the risk assessment.

Add an action for a safety risk

Add an action to address an identified risk or implement control measures necessary to improve workplace safety. You can add multiple actions for a hazard or control measure.

Before you begin
Role required: sn_hs_rm.risk_assessment_manager or sn_hs_rm.risk_assessment_writer

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ) to open the **Risk assessment** list.
3. Create an action from a risk assessment record or the Risk actions list.
4. On the form, fill in the fields.
   For information on field descriptions, see Health and Safety action form.
5. Select **Save**.
6. **Optional:** If necessary, add more actions for the hazard or control measure.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- If associated with a risk assessment, the action appears in the list of actions in the **Risk actions** tab of that assessment. The action is also listed in the **Risk actions** list on Health and Safety Workspace.
- The action appears in the assigned user's **My Tasks** list on both the Employee Center and the Now Mobile app. From either location, the user can respond to the action and update its status.

What to do next

- You can assign the action to yourself or to another safety team member to start working on it.
- You can share the action, independent of the risk, with other groups or agents, so that they can prevent the similar hazard from happening at any of their locations. To share an action, select **Copy action**.
  - The action is duplicated and appears in the **My Tasks** list of the assigned user on the Employee Center.
  - The action is also listed in the **Actions** list on the Health and Safety Workspace.

Safety inspections and audits

With Health and Safety Risk Management, safety teams can schedule, assign, and conduct workplace safety inspections and audits of particular activities, processes, or areas at their establishments.

Safety inspections and audits within the Health and Safety Workspace enhance the efficiency, accuracy, and consistency of safety inspections and audits across your organization. The objective is to support conformance with regulatory standards while reducing the risks of workplace accidents.

The safety inspections and audits are built on the ServiceNow® Assessments and Surveys and provide the following capabilities:

- Build and manage safety inspections and audits. Use surveys available with the application or build new ones with the Survey designer. For more information, see Survey designer.
- Schedule inspections and audits at regular intervals with the Inspection Scheduler and Audit Scheduler.
- Conduct inspection and audit surveys through Employee Center or on Now Mobile app.
- Complete inspection and audit surveys offline through the Mobile Agent app. Surveys completed offline are synchronized once an internet connection is established. For more information, see Complete a safety inspection or audit survey in the offline mode.
- Maintain standards and documents list enabling standards or regulatory documents to be used as a reference for audit findings.

Set up a safety inspection schedule

Set up an inspection schedule to create a safety inspection at a future date, or to schedule recurring safety inspections, such as daily or weekly, or monthly at once.

Before you begin

Role required: sn_hs_rm.safety_inspection_manager and sn_hs_rm.inspection_schedule_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the **Inspection schedules** list and then **All**.
4. Select **New** to create an inspection schedule.
5. On the form, fill in the fields.
   Enter inspection details and the duration. For more information on inspection field descriptions, see Inspection schedule form.
6. Select **Save**.
   The **Scheduled inspection** related item and the **Create inspections** button appear for this record.
7. **Optional:** In **Scheduled inspection** related item of the record, open a scheduled inspection and add **Findings and RCA** and **Inspection actions** as required.
8. **Optional:** Use the **Create inspection** button to create an inspection record.
   In the modal,
   - Select **Create next scheduled inspection** to create the first upcoming inspection.
   - Select **Create all scheduled inspection at once** to create all scheduled inspections immediately.

Result

- Based on the duration and the selected frequency of the inspection schedule, inspection records are created one by one on the start date.
- All inspection records for an inspection schedule are generated in its **Scheduled inspections** tab. These inspection records are also available under **Inspections** > **All**.
- All required fields are copied from the inspection schedule to its inspection records.
- The assigned user receives a notification about the inspection survey. If the inspection format is set as digital, the notification includes the survey link that they can take in the Employee Center or on Now Mobile app.
- The safety agent can also create actions for the survey responses. For more information, see Add an action from survey response in safety inspection through Employee center

Create and manage a safety inspection

Create a safety inspection to manage your workplace inspection of a particular activity, process, or an area. Review the survey results and add findings, root cause analyses (RCA), and actions for the inspection.

Before you begin

Role required: sn_hs_rm.safety_inspection_manager and sn_hs_rm.safety_inspection_writer

About this task

You can also set up an inspection schedule to create safety inspections. For more information, see Set up a safety inspection schedule.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. Select the **Inspections** list and then **All**.
4. Select **New** to create an inspection.
5. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enter details such as inspection format, survey to use for this inspection, risk matrix used for risk assessments for this inspection, and a due date to complete the survey inspection.

For more information on inspection field descriptions, see Inspection schedule form.

6. Select **Save**.
   - The **Inspection survey results**, **Findings and RCA**, and **Inspection actions** tabs appear for this inspection.
   - The associated inspection survey is assigned for completion and appears in the Employee Center and Now Mobile app of the assigned user. The assigned user receives a notification about the inspection survey. For more information, see Complete a safety inspection survey.
7. **Optional:** If needed, complete the inspection survey in the inspection record by selecting **Open inspection survey**.
   The **Open inspection survey** button appears only when **Inspection format** is set as **Digital**.
8. In the **Inspection survey results** tab, review the survey responses.
   When completed, the survey results for this inspection are available in the **Inspection survey results** tab.
9. In the **Findings and RCA** tab, work on the inspection findings, and perform an RCA for this inspection.
   For more information, see Add a finding and root cause analysis for a safety inspection.
10. If applicable, add actions for findings in the **Inspection actions** tab.
    For more information, see Add an action for a safety inspection or audit.
11. **Optional:** In the **Details** tab, set the state to Closed Complete after all inspection activities are complete and then select **Save**.
    The inspection moves to the Closed Complete state.

Set up a safety audit schedule

Create an audit schedule and define the top-level audit details and the recurrence, for example, monthly or bi-monthly.

Before you begin

Role required: sn_hs_rm.safety_audit_manager or sn_hs_rm.audit_schedule_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. Select **Audit schedules** list and then **All**.
4. Select **New** to create an audit schedule.
5. On the form, fill in the fields.
   Define the audit scope, finalize the goals, and choose regulations for the audit so that the audit process is well structured and organized. For more information on audit field descriptions, see Audit schedule form.
6. Select **Save**.
   - The **Audit surveys** and **Scheduled audits** tabs appear for this audit.
   - An information message that prompts to create an audit survey appears.
7. **Optional:** In the **Audit surveys** tab, select **New** to add surveys to be added to each scheduled audit.
   Surveys can also be added to each scheduled audit individually after they're scheduled.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. In the **Scheduled audits** tab, add the following details to each scheduled audit record.
   - People involved and their responsibilities
   - Standards and documents used to benchmark findings
   - Audit actions
   - Risk assessments

   For more information on completing an audit record, see, Create and manage a safety audit.
9. Alternatively, select **Create Audits** in the audit schedule record to create an audit record. If an audit survey has not been created, an informational message is displayed on the modal, with a prompt to create one before proceeding with scheduling audits. This message is not shown if an audit survey already exists for the audit schedule record. In the modal,
   - Select **Create next scheduled audit** to create the first upcoming audit.
   - Select **Create all scheduled audits at once** to create all scheduled audits immediately.

Result

- Based on the duration and the selected frequency of the audit schedule, audit records are created one by one on the start date.

Note:

Audit records are created using the **Automate audit schedule** flow available with the application. To generate the audits instantly rather than on scheduled days, your administrator can adjust the job in this flow.

The flows are built using ServiceNow Workflow Studio, so make sure you're familiar with the Flow Designer basics.

- All audit records for an audit schedule are generated in its **Scheduled audits** tab. These audit records are also available under **Audits** > **All**.
- All required fields are copied from the audit schedule to its audit records.
- The assigned user receives a notification about the audit survey. They can complete the audit in the Employee Center or on Now Mobile app.
- The safety agent can also create actions for the survey responses. For more information, see Add an action from survey response in safety inspection through Employee center

Create and manage a safety audit

Create a safety audit for a process or regulation with formalized assessment criteria, and record the information collected at each stage—before, during, and after the audit.

Before you begin

Role required: sn_hs_rm.safety_audit_manager or sn_hs_rm.safety_audit_writer

About this task

You can also set up an audit schedule to create safety audits. For more information, see Set up a safety audit schedule.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Select the **Audits** list and then **All**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **New** to create an audit.
   Alternatively, you can open an audit from
   - The **Scheduled audits** tab in an audit schedule.
   - The **Create audits** button that appears when a new audit schedule is saved.
5. On the form, fill in the fields.
   Enter details such as the audit scope, its goals, regulation for the audit, and a start and end date.

   For information on audit field descriptions, see Audit schedule form.
6. Select **Save**.
   The **People involved**, **Documents**, **Audit surveys**, **Findings**, **Risk assessments**, **Observations**, and **Audit actions** tabs appear for this audit.
7. In the **People involved** tab, select **New** to add people involved in this audit and their responsibilities.

   Note:
   - The **Visitors involved** field appears only when the Workplace Visitor Management (com.sn_wsd_visitor) application is installed on your instance. For more information, see Additional features in Health and Safety.
   - The **Contractor** option appears only when the Health and Safety Contractor Management (sn_hs_crm) application is installed on your instance. The field only lists users who have the [snc_external] role assigned to them and have their Health and Safety profile created. For more information, see Assign Health and Safety profile to a user.
8. In the **Documents** tab, add standards and documents used to benchmark findings.
   - Select **Add** to add existing documents.
   - Select **New** to upload new documents. For field descriptions, see Health and Safety document form.
9. In the **Audit surveys** tab, add and assign audit surveys to be conducted as part of this audit. Only the surveys with the **Source table** field set to Audit survey [sn_hs_rm_audit_survey] table are available in this list. For more information, see Configure a safety inspection or audit survey.
10. **Optional:** If needed, complete the audit surveys in this audit record.

    a. Open the audit survey to be completed and select **Open audit survey**.

    b. Answer the survey questions and select **Submit**.
    When completed, the survey results are available in the **Audit survey results** tab of this audit survey.

    c. Add action to the survey responses if needed.

    d. In the **State** field on the audit form, select Closed Complete to close the survey.

    Note:
    An auditor can also complete the audit survey through Employee Center or on Now Mobile app. For more information, Complete a safety audit survey through Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

11. Review the survey responses and gather evidence as part of the audit, for example, document assessments, interviews, and observations.

    a. In the **Audit surveys** tab of a survey, review the survey responses.

    b. In the **Findings** tab, add an audit finding gathered from survey responses and perform its root cause analysis.
    For more information, see Add a finding and root cause analysis for a safety audit.

    c. In the **Risk assessments** tab, select **New** to conduct a risk assessment as part of this audit.
    - You can also select **Add** to associate an existing risk assessment to the audit record.
    - For more information, see Conduct a safety risk assessment.

    d. In the **Observations** tab, add an observation recorded from this audit.
    - Select **Add** to add an existing observation.
    - Select **New** to create and submit a new observation.

    e. In the **Audit actions** tab, select **New** to create and assign any actions based on findings and recommendations.
    For field descriptions, see Health and Safety action form.

12. **Optional:** Generate a report for the safety audit, if needed.

    a. Select **Generate report**.

    Note:
    The **Generate report** button appears only when the Audit [sn_hs_rm_audit] table is enabled for report field mapping. For more information, see Enable a Health and Safety table for configuring report field mapping.

    b. In the **Generate report** dialog box, select a report mapping in the **Select report** field.
    Only the report mapping forms created and published for the Audit [sn_hs_rm_audit] table are available to select in the **Select report** field. For more information, see Create a safety report field mapping.

    c. Select **Generate**.

13. **Optional:** In the **Details** tab, set the state to Closed Complete after all audit activities are complete and then select **Save**.
    In a closed complete state, no further changes can be made to the **People involved**, **Audit surveys**, **Findings**, **Risk assessments**, and **Observations** related items in an audit record.
    The audit moves to the Closed Complete state.

Complete a safety inspection or audit survey through Employee Center

Complete a safety inspection or audit survey assigned to you through the Employee Center.

Before you begin
Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

- You can also take an inspection or audit survey on the Now Mobile app using the **My Assessments and Surveys** applet launcher. For more information, see Surveys in the Now Mobile app.
- You can complete an inspection or audit survey offline as well through the Mobile Agent app. Surveys completed offline are synchronized once an internet connection is established. For more information, see Complete a safety inspection or audit survey in the offline mode.
- For more information on how an admin configures which survey field type should display the **Create action** check box, see Configure the create action check box for safety inspection survey in the Mobile Agent app.
- An inspection or audit manager can also complete a survey from the Health and Safety Workspace by selecting **Open inspection survey** in the inspection record or **Open audit survey** in the audit record.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center, select **Surveys** under **My active items**.
3. In **My Assessments and Surveys**, select the survey that you want to take.
4. Conduct a safety walk for the inspection or audit , fill in the survey, and select **Submit**.

Result

The survey results are linked back to the inspection or audit record that it was initiated from. The completed survey is available on the Health and Safety Workspace at the following places:

- **Inspection survey results** tab of the inspection.
- **Audit survey results** tab of the audit survey in an audit.

Add a finding and root cause analysis for a safety inspection

Record a finding based on the survey results for a safety inspection and perform a root cause analysis (RCA) for it.

Before you begin

Role required: sn_hs_rm.safety_inspection_manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. In the **Inspections** list, select **All** and open an inspection record to add a finding.
4. In the **Findings and RCA** tab, select **New**.
5. On the form, fill in the fields.
   a. In the **Hazard** field, select a risk for the finding to define the risk present.
   b. In the **Potential consequence** and **Potential likelihood** fields, define a consequence and likelihood of the finding to understand its impact.
   c. In the **Incident** field, select the related safety incident, if an incident is caused by this finding.
6. Select **Save**.
   The **5Whys RCA** and **ICAM RCA** tabs appear.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. **Optional:** In the **5Whys RCA** tab, select **New** to perform an RCA using the Five whys technique of root cause analysis.
   a. In the **Problem** field, enter the problem statement.
   b. To identify the precise one underlying reason, ask why to each of the subsequent responses and enter in **Why?** fields.
   c. In the **Root cause** field, enter the answer to the last Why.
   d. Select **Save**.
8. **Optional:** In the **ICAM RCA** tab, select **New** to perform an RCA using the ICAM (Incident Cause Analysis Method) root cause analysis technique.
   a. Using the form's questions, determine the contributing factors to the finding.
   b. In the **Key learnings (Identify the root cause)** field, identify the underlying root causes that led to the finding.
9. **Optional:** If necessary, add more findings for the safety inspection.

What to do next

Add actions for each finding to ensure that any issues are prevented or corrected. For more information, see Add an action for a safety inspection or audit.

Add a finding and root cause analysis for a safety audit

Record a finding based on the audit results and perform a root cause analysis (RCA) for it.

Before you begin

Role required: sn_hs_rm.safety_audit_manager or sn_hs_rm.safety_audit_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. In the **Audits** list, select **All** and open an audit record to add a finding.
4. In the **Findings** tab, select **New**.
5. On the form, fill in the fields.
   For field descriptions, see Finding form.
6. Select **Save**.
   The **5Whys RCA** and **ICAM RCA** tabs appear.
7. **Optional:** In the **5Whys RCA** tab, select **New** to perform an RCA using the Five whys technique of root cause analysis.
   a. In the **Problem** field, enter the problem statement.
   b. To identify the precise one underlying reason, ask why to each of the subsequent responses and enter in **Why?** fields.
   c. In the **Root cause** field, enter the answer to the last Why.
   d. Select **Save**.
8. **Optional:** In the **ICAM RCA** tab, select **New** to perform an RCA using the ICAM (Incident Cause Analysis Method) root cause analysis technique.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Using the form's questions, determine the contributing factors to the finding.

b. In the **Key learnings (Identify the root cause)** field, identify the underlying root causes that led to the finding.

9. **Optional:** If necessary, add more findings for the safety audit.

What to do next

In **Audit actions** tab, add actions for the finding to ensure that any issues are prevented or corrected.

Add an action for a safety inspection or audit

Add an action for each finding to address any issues or implement measures necessary to improve workplace safety. You can add multiple actions for an inspection or audit finding.

About this task

For more information on adding an action for a safety inspection through Mobile Agent, see Add actions for safety inspections survey in Mobile Agent app

Before you begin

Role required:

- For safety inspections: sn_hs_rm.safety_inspection_manager or sn_hs_rm.safety_inspection_writer
- For safety audits: sn_hs_rm.safety_audit_manager or sn_hs_rm.safety_audit_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Create an action from an inspection or audit record or the Actions list.
4. On the form, fill in the fields.
   For information on field descriptions, see Health and Safety action form.
5. Select **Save**.
6. **Optional:** If necessary, add more actions for the safety inspection or audit.

Result

- If associated with a safety inspection, the action appears in the list of actions in the **Inspection actions** tab of the inspection.
- If associated with a safety audit, the action appears in the list of actions in the **Audit actions** tab of the audit.
- The action is also listed in the **Actions** list under the **Inspections and Audits** tab on Health and Safety Workspace.
- The action appears in the assigned user's **My Tasks** list on both the Employee Center and the Now Mobile app. From either location, the user can respond to the action and update its status.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

- You can assign the action to yourself or to another safety team member to start working on it.
- You can share the action, independent of the inspection, with other groups or agents, so that they can prevent the similar situation from happening at any of their locations. To share an action, select **Copy action**.
  - The action is duplicated and appears in the **My Tasks** list of the assigned user on the Employee Center.
  - The action is also listed in the **Actions** list on the Health and Safety Workspace.

Add an action from survey response in safety inspection through Employee center

Learn to add actions to the survey responses on a safety inspection or audit survey to access safety issues discovered during a safety walk.

Before you begin

Role required: sn_hs_rm.safety_inspection_writer

About this task

The safety agent assigned to the survey can create actions on the survey. The actions must first be added to the findings related item of a safety inspection record. For information on adding action to findings, see Add an action for a safety inspection or audit. Actions can also be created on the Now Agent app in offline mode provided all the inspection records are cached before going offline. For more information to access the survey, see. Add actions for safety inspections survey in Mobile Agent app.

Procedure

1. Navigate to **Employee Center** > *Health and Safety* and select the **View safety inspections** quick link.
2. Select **Open Survey** for one of the inspection record.
   - A survey widget with a **Get started** button appears.
   - An **Action** widget appears with the list of available actions in findings related item of a safety inspection record.
3. Select the **Get started** button on the survey widget.
   The survey contains sections, and each section includes questions. When the response is added for the questions in the first section, it's available in the **Action** widget to create an action for.
4. Respond to the questions on the survey and then select the **Create action** button in the **Action** widget.
   Action can be created for each question in all the sections.
5. On the **Create action form**, fill in the fields.

Create action form

Field	Description
Section	The sections of the survey that you have added response for.
Question	The questions that you responded to in the selected section of the survey

For more information to complete the action form, see Health and Safety action form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Create**.
   - A new action is created and can be viewed in the action widget next to the survey.
   - Select more actions Icon to edit or delete the actions on the action widget.
7. Select **Submit**.

Assign safety inspection to agents

Multiple safety agents can be assigned to the same inspection record to enable a collaborative effort. While only one agent can be assigned at a time to a survey related to an inspection record, it allows clear ownership and maintains overall team coordination. This collaboration can be achieved from both Employee center and Health and Safety Workspace.

Before you begin

Role required: sn_hs_rm.safety_inspection_manager or sn_hs_rm.safety_inspection_writer or sn_hs_rm.safety_inspection_agent

About this task

The safety inspection quick link in the Employee center lists the safety inspections assigned to you or any of the assignment groups you're a part of. This functionality is also available on the Mobile Agent app in offline mode provided all the inspection records are cached before going offline.

Procedure

1. From Employee Center,
   a. Navigate to *Health and Safety* and select the **View safety inspections** quick link.
   b. Select **Assign to me** for the required safety inspection record.
   The safety inspection with the related surveys is assigned to you.
   c. **Optional:** Select **Open Survey** and complete the survey.
2. From Workspace,
   a. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
   b. Select the risk management icon ( ).
   c. Select the **Inspections** list and then select **All**.
   d. Open the required inspection record and select the **Assign to me** button on the **Details** related list.
   The safety inspection with the related surveys is assigned to you.
   e. **Optional:** Select the **Open inspection survey** button to complete the survey as needed.
3. From the Mobile Agent app,
   a. Tap **Home** in the navigation bar.
   b. Select **My inspections** from the quick links to open a list of inspections.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Select the inspection record and then select **Assign to me**.

d. Select **Yes** in the confirmation modal.

Result

The safety inspection record and the related survey are assigned to the safety agent even if the survey is in progress.

Note:
When the survey is assigned to a different agent, any progress made on the survey does not transfer to the new agent. The new agent assigned to the survey must review and, if necessary, start the survey from the beginning, as partially completed surveys are not carried over.

Safety registers

Safety Registers help safety teams and line managers to keep track of hazardous materials like chemicals and asbestos, as well as attach Safety Data Sheets (SDSs) that employees can easily access.

- Safety team manages safety registers like chemicals and asbestos in the Health and Safety Workspace. The safety team also attaches Safety Data Sheets (SDSs) to safety register records.
- Employees can search and access these SDSs in the Employee Center or on Now Mobile app.

Manage your safety registers

Manage your safety registers to log and keep track of the hazardous materials used in your organization, along with Safety Data Sheets (SDSs).

Before you begin

Role required: sn_hs_rm.safety_register_manager

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the configuration icon ().
3. In the **Configuration** tab, select **Safety Registers** and then the required register.
   - For chemicals, select **Chemicals** and then **All**.
   - For asbestos, select **Asbestos** and then **All**.
   - For any other hazardous material, select **Other** and then **All**.
4. Create a safety register or modify an existing one.
   - To create a register, select **New**.
   - To review an existing one, open the one that you want to update.
5. On the form, fill in the fields.
6. In the **Safety data sheet** field, select **Attach File** to attach documents, for example, a Safety Data Sheet (SDS) for this material.
7. Select **Save**.
8. Add safety registers for all hazardous materials used in your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
Depending on the selected register type, the safety register is available in the Chemical, Asbestos, or Other register under the **Safety Registers** list.

What to do next
Employees can access the attached safety register document, such as SDS, through the Employee Center. For more information, see Access a safety register document in Employee center.

Access a safety register document in Employee center

Access and view safety register documents for chemicals and asbestos through the Employee Center.

Before you begin
Role required: none

About this task
All Safety Data Sheets (SDSs) that are added to the safety registers through the Health and Safety Workspace are available to view in the Employee Center or on Now Mobile app. Employees can access these SDSs for their safety when working with any potentially hazardous materials. For more information on safety registers, see Manage your safety registers.

For information on viewing these SDSs through Now Mobile app, see View a safety register document in the Now Mobile app.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. In the Employee Center, select the **Health and Safety** menu.
3. Under **Quick links**, select **View safety register documents**.
4. In the list, select the chemical to view its SDS.

   Tip:
   You can narrow down the list using the filters with the list. You can also search the required SDS using the search field available with the list.

5. **Optional:** If needed, you can download the Safety Data Sheet.

Safety exposure management

With exposure management, safety team and industrial hygienists can manage exposures and exposure assessments so they can control any harmful effects on workers.

What is an exposure

An exposure refers to a situation or activity that has the potential to harm a person if they are in the vicinity. The severity of the harm depends on factors such as the duration of exposure and the level of the exposure. For example, loud noise can be considered an exposure, and the noise level (decibels) and length of time a person is exposed to it are important factors in assessing this exposure.

There are various standard categories of exposures, for example:

- Noise
- Chemical
- Environmental

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Physical
- Mechanical
- Ergonomic

Key features of exposure management

Safety exposure management provides the following capabilities:

- Define exposure types on the exposure list and associate risk assessments and records from the safety register.
- Perform exposure assessments that can create multiple exposure records (using a condition builder) for people affected across different locations.
- Assign follow-up actions so that the exposures are controlled, and workers are protected.

Define an exposure type

Identify and define a potential workplace exposure type present in a location in your organization. Maintain a list of all exposures types across your organization.

Before you begin

Role required: sn_hs_rm.industrial_hygienist or sn_hs_rm.exposure_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. Select the **Exposure types** list and then **All**.
4. Create an exposure or modify an existing one.
   - To create an exposure, select **New**.
   - To review an existing exposure, open the one that you want to modify.
5. On the form, fill in the fields.

Exposure type

Field	Description
Number	System-generated unique number for the exposure type.
Location	Location where this exposure and the associated risks exists.
State	State of the exposure type. ○ **Draft**: Select to configure the exposure type. ○ **Active**: Select to mark this exposure type available for use. An exposure type must be active to be used. The **Create exposure assessment** button for this exposure type appears when its state is set as active. ○ **Inactive**: Select to mark this exposure type as unavailable for use. ○ **Obsolete**: Select if this exposure type no longer exists.
Exposure category	Category for the exposure.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The list in this field displays items from the choices defined for the `Exposure category` column in the Exposure type [sn_hs_rm_exposure_type] table.
Exposure sub-category	Subcategory for the exposure. This field appears only when a category is selected from **Exposure category** and subcategories are available for the selected category. The subcategory choices for a category are defined in the `Exposure sub-category` column of the Exposure type [sn_hs_rm_exposure_type] table. For more information, see Define a category for an exposure type.
Safety register	Safety register relevant to this exposure type. For example, if it's a chemical exposure, add a link it to corresponding safety register and the associated chemical safety data sheet.
Risk assessment	Risk assessment associated with this exposure type.

6. Select **Save**.
7. Add all exposure types that are present for a location.
8. Select **Save**.
   The **Exposure assessments** tab appears for this exposure type.

Result

The exposure type is listed in the **Exposure types** list and is saved in the Exposure type [sn_hs_rm_exposure_type] table.

What to do next

1. Create exposure assessment records for all locations in your organization that this exposure type applies to. For more information, see Create an exposure assessment for an exposure type.
2. Perform exposure assessments across different locations for this exposure type. For more information, see Perform an exposure assessment for a location.

Create an exposure assessment for an exposure type

For an exposure type, create an exposure assessment for a site location. You can also generate exposure assessments for multiple locations in your organization at once for an exposure type.

Before you begin

Role required: sn_hs_rm.industrial_hygienist or sn_hs_rm.exposure_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. Select the **Exposure types** list and open the exposure type to create the assessment for.
4. In the **Details** tab, set the **State** as Active.
5. Select **Create exposure assessment**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

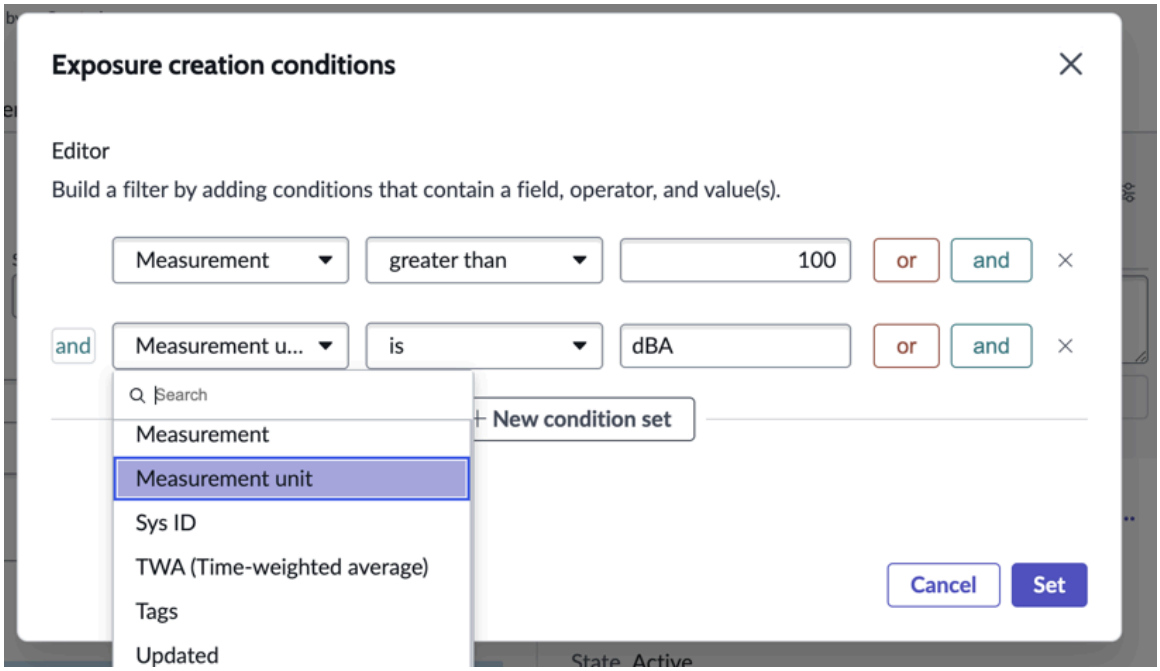
6. In the **Selected locations where this exposure is present** field, select the location to be assessed for this exposure type.
   You can select multiple locations to create exposure assessment records for all of them at once. However, each selected location must be unique, as only one active exposure assessment record can be associated with each location.
7. Select **Create**.

Result
An exposure assessment record for each selected location appears in the **Exposure assessment** tab of the exposure type.

What to do next
In the **Exposure assessments** tab, perform assessments across different locations for this exposure type. For more information, see Perform an exposure assessment for a location.

Perform an exposure assessment for a location

Perform an exposure assessment for an exposure type for each site location in your organization.



Before you begin
Role required: sn_hs_rm.industrial_hygienist or sn_hs_rm.exposure_writer

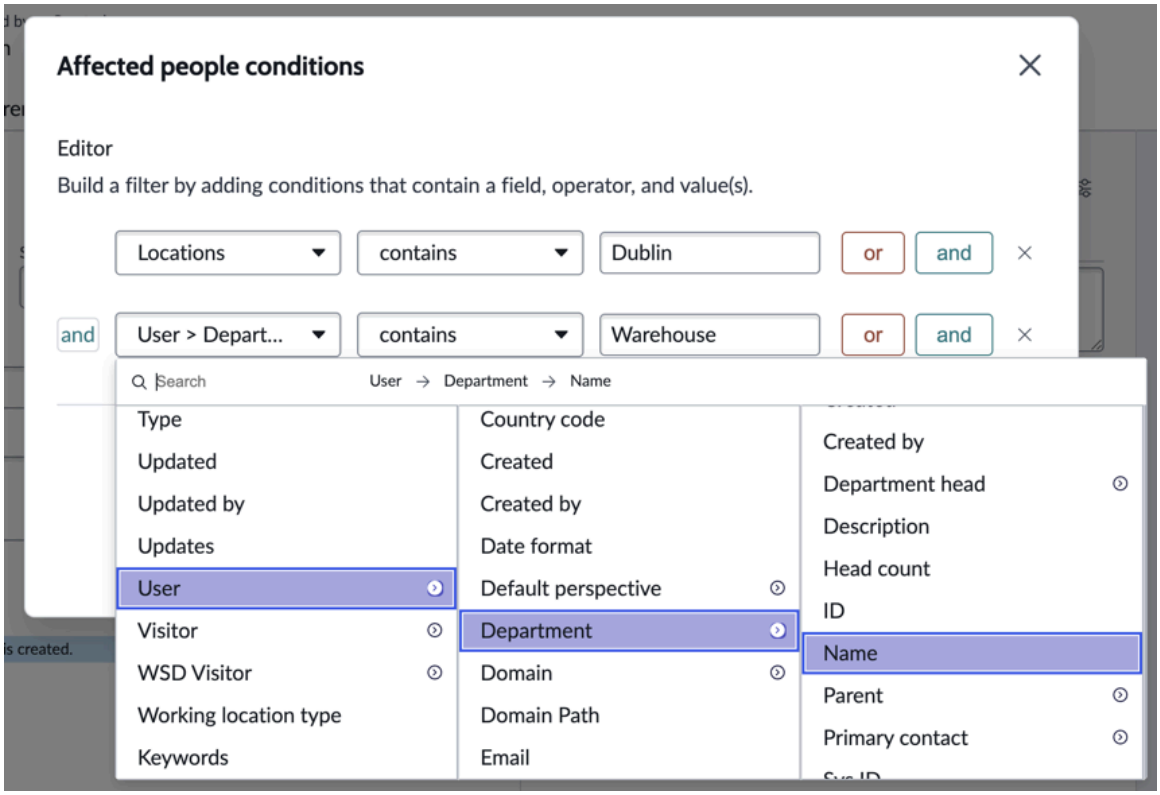
Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. Select the **Exposure types** list and open the exposure type to perform the assessment for.
4. In the **Exposure assessment** tab, select the record for the location that you want to perform the exposure assessment for.
5. In the **Exposure creation conditions** field, add conditions to create exposure records for this assessment.
   The criteria defined in this field—particularly the measurement limit—trigger the creation of exposure records under the **Exposures** tab for this assessment. An exposure assessment might generate multiple exposures over time whenever the measurement limits exceed the defined criteria.

   a. Select **Set conditions**.

   b. In the condition builder, add criteria (including the measurement condition) and select **Set**.
   For example, the following image shows the measurement condition for noise exposure limits.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The measurement condition will only apply when a measurement record is created in the **Measurements** tab.



6. In the **Affected people conditions** field, add conditions to see all the people affected from an exposure.
   This criteria is based on the Health and Safety profile [sn_ohs_im_health_and_safety_profile] table. It automatically adds or updates the affected people in the exposure records generated for this assessment.

   a. Select **Set conditions**.

   b. In the condition builder, define the conditions to identify people affected, and select **Set**. You can choose fields from the Health and Safety profile table and dot-walk fields when selecting a field in the condition builder. For example, the following image shows the

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

conditions to identify people in the Warehouse department in Dublin who are affected by this exposure.

7. In the **Action schedule** tab, set up actions for the affected people.
   The action schedule creates and auto-assigns an action for each affected person when there's an active exposure for this assessment. For more information, see Define an action schedule for affected people.
8. In the **Documents** tab, select **Add** to add any documents related to this assessment.
   For information on storing documents in the Health and Safety Workspace, see Add a Health and Safety related document.
9. In the **Details** tab of the assessment, set the **State** as Active.
10. Select **Save**.
11. In the **Measurements** tab, add the exposure measurement value and the source of the exposure.
    For information on adding a measurement and creation of an exposure from it, see Add a measurement and exposure source for an exposure assessment.

Result

- Based on the exposure creation conditions, affected people conditions, and the measurement value, the following records are created:
  - An exposure is created and listed in the **Exposures** tab of the assessment.
  - The affected people are added to the **Affected people** tab of the generated exposure record.
  - The action scheduler runs for the active exposure and assigns actions to exposed people. The actions for each affected person are listed in the **Actions** tab under the action schedule.
- If an active exposure is manually added to a Health and Safety user's profile, the user is also listed in the **Affected people** tab of the exposure record.
- Any assigned actions appear in the affected people's **My Tasks** list in the Employee Center.

Define an action schedule for affected people

Define an action schedule for the people affected by an exposure. The action schedule creates an action for each affected person when there's an active exposure for an exposure assessment.

Before you begin
Role required: sn_hs_rm.industrial_hygienist or sn_hs_rm.exposure_writer

About this task
The scheduler only runs when there are active exposures so that the actions are assigned to the actively exposed people.

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Select the **Exposure types** list, open the exposure type, and select the exposure assessment record that you want to add the measurement to.
4. In the **Action schedule** tab, select **New**.
5. On the form, fill in the fields.

   For information on field descriptions, see Action schedule form for an exposure.
6. Select **Save**.

Result

- The **Actions** tab appears for the action schedule.
- An action record is created in the **Actions** tab for each affected person whenever there's an active exposure for the exposure assessment. An action schedule might generate multiple actions for the affected people over time.

Add a measurement and exposure source for an exposure assessment

Add a measurement recorded for the exposure type when performing an exposure assessment.

Before you begin
Role required: sn_hs_rm.industrial_hygienist or sn_hs_rm.exposure_writer

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ( ).
3. Select the **Exposure types** list, open the exposure type, and select the exposure assessment record that you want to add the measurement to.
4. In the **Measurements** tab, select **New**.
5. On the form, fill in the fields.

Measurement form

Field	Description
Date and time of measurement	Date and time when this measurement is recorded.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Measurement unit	Unit of measurement for this exposure type. The list shows units based on the exposure category selected in the exposure type. The unit choices for an exposure category are defined in the `Measurement unit` column of the Measurement [sn_hs_rm_measurement] table. For more information, see Define a category and measurement unit for an exposure type.
Measurement	Measurement value recorded for the exposure.
TWA (Time-weighted average)	Time-weighted average for the exposure.
Description	Detailed information about this measurement.

6. Select **Save**.
   The **Exposure sources** tab appears.
7. **Optional:** In the **Exposure sources** tab, select **New** to add the source of this exposure.
   You can add multiple exposure sources, if relevant.
8. Select **Save**.

Result

- The measurement value is listed in the **Measurements** tab of the exposure assessment.
- The source of the exposure type is listed in the **Exposure sources** tab of the measurement record.
- Based on the measurement limit defined in the exposure creation condition, the measurement can trigger an exposure record in the **Exposures** tab in these ways:
  - If the measurement value exceeds the limit, an exposure record is created in the **Exposures** tab. The people affected by this exposure are added in the **Affected people** tab of the generated exposure.

    However, if an active exposure exists for this measurement, no new exposure record is created.
  - If the measurement is below the limit and an active exposure exists for this assessment, the exposure end date is automatically set to the measurement date. It's because the exposure no longer meets the criteria, making it irrelevant. Additionally, the exposure's state is updated to obsolete and the associated action schedule for the exposure is marked as inactive.

Permit-to-work

The permit to work system streamlines request management and efficiently issues work permits.

This system is a process to submit a permit to work request, receive formal approval and issue a permit. A permit is issued after the safety of the job and the site is validated. The permits are requested for potentially hazardous activities, such as:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Hot work
- Confined space entry
- Electrical work
- Excavation
- Lifting operations
- Chemical handling
- Working at heights
- Working under water

If these tasks aren't managed properly, it could pose significant risks. The permit-to-work system enhances operational efficiency and promotes:

- Safety of the workers by identifying hazards and executing risk control measures.
- Accountability by providing a clear trail of documentation when needed for auditing an incident or for legal conformance.
- Adequate training for workers on risks, safety measures, and permit requirements.
- Regular monitoring and supervision on safety conformance and permit conditions throughout the duration of the activity.

Create a permit-to-work request

The permit-to-work request is submitted by the worker who carries out the job with significant risk.

Before you begin

Role required: sn_hs_rm.permit_requestor

Procedure

1. Navigate to **All** > **Employee Center** > *Health and Safety* and select **Permit to work**.
2. Select the **Request a permit to work** card or select the quick link to request a permit-to-work.
3. On the form, fill in the fields.
   For a description of the field values, see Permit-to-work form.

   Note:
   Additional fields must be filled on the permit to work form depending on the type of the permit selected.

4. Select acknowledgment and then select **Submit**.
   The permit request is created where you can view the permit details.
5. Select **My requests** to open the permit.
6. Select the checklist tab of the permit request and complete the checklist as applicable to the task.
   The checklists are also displayed under the **Open** tab of **My tasks.**
7. Select **Save** to save changes.
   If necessary, the checklist can be edited.
8. Select **Mark Complete** when the checklist items are completed.

   Note:
   The checklist can't be edited after it's marked complete.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. From **Actions**:
   - Select **Print permit** to print the permit request.
   - Select **Print checklist** to print the completed checklist.

Note:
The printed permit and checklist can be signed and attached in the attachment tab for this permit. The attached documents can be viewed in the activity stream.

Approve or reject a permit

Review the permit and approve or reject it through the employee center.

Before you begin
Role required: sn_hs_rm.permit_approver

About this task
Once the permit requestor submits the permit-to-work request, the permit approver can review it through the employee center or the workspace. After assessing the risks associated with the job and validating that the safety parameters are in place, the approver can approve or reject the request.

Procedure
1. Navigate to **All** > **Employee center** > *Health and Safety*.
2. Select **My tasks** to view the permit approvals under the **Open** tab.
3. Open the permit link to review the permit details.
4. Add comments on the approve request and approve or reject the permit request.

Issue a permit to work

A permit coordinator can issue a permit after the permit approver approves a request.

Before you begin
Role required: sn_hs_rm.permit_coordinator

Procedure
1. Navigate to **All** > **Health and Safety** > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. Open the **Permit to work** list and select **All** and then select a permit to review.
   The permit coordinator can:
   - Create a *Health and Safety* action.
   - Review the approvers
   - Review the checklist
4. Select **Issue permit** if all safety requirements are met.
   The permit status changes to active and the permit requestor can print the permit through the employee center.
5. Select **Close permit** when the job is complete.

   If necessary, the permit coordinator can perform further actions after closing the permit:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select **Cancel permit** in the UI action menu, if there are unsafe conditions.
- Select **Suspend permit** in the UI action menu, if a danger is expected after the permit is issued. The permit can be suspended until the inspection is completed.

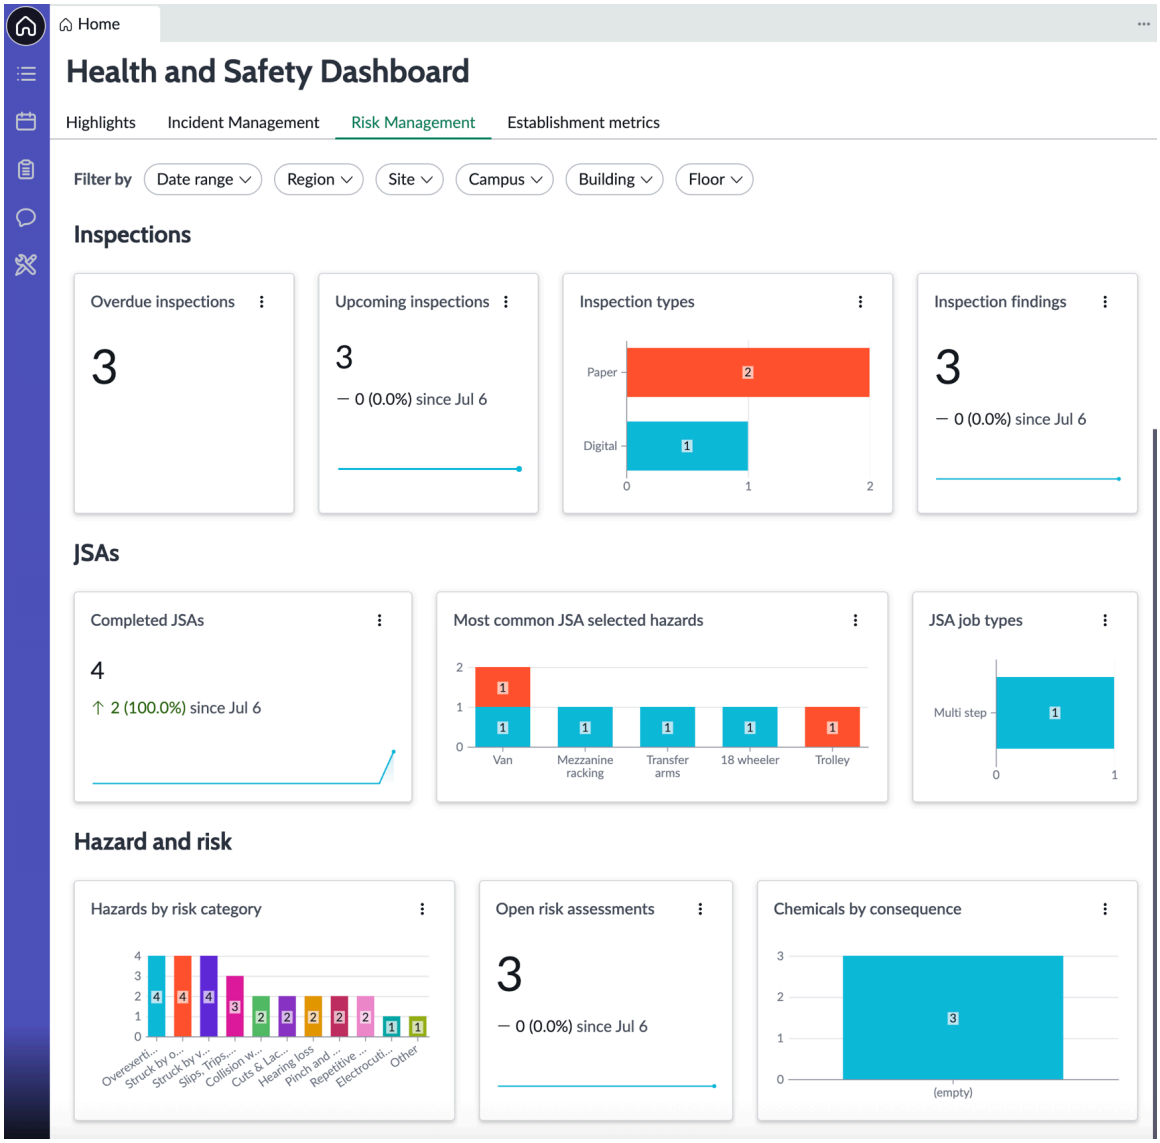
Add an action to a health and safety permit-to-work request

Create a Health and Safety action to a requested permit-to-work. This helps to address the root cause of any reported safety occurrence.

Before you begin

Role required: sn_hs_rm.permit_coordinator

Procedure



1. Navigate to **All** > *Health and Safety* > **Health and Safety Workspace**.
2. Select the risk management icon ().
3. Select the **Permit to work** list and select **All**.
4. Open a permit record to add an action.
5. In the *Health and Safety* actions tab of the related items, select **New**.
6. On the form, fill in the fields.
   For information on field description, see Health and Safety action form.
7. Select **Save**.
   The action appears in the list of actions in the **Health and Safety actions** tab of the permit record. It is also listed in the **Actions** list on Health and Safety Workspace.

Monitoring and analyzing safety risk metrics

The **Risk Management** tab of the Health and Safety dashboard provides a comprehensive and interactive view for monitoring and analyzing safety risk metrics. By providing real-time insights into inspections, job safety analyses (JSAs), and various hazard and risk categories, it enables you to proactively identify trends, respond swiftly to emerging issues, and continuously enhance workplace safety across all organizational levels.

For any selected period and location, you can drill down into detailed data for granular visibility for risk mitigation strategies.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Prerequisites

- Ensure that Health and Safety Risk Management and Health and Safety Incident Management applications are installed. For more information, see Install Health and Safety Risk Management.
- Run the *[OHS] Safety Metrics* scheduled job to update the safety metrics on demand. For more information, see Configure scheduled job to generate frequency rates.

> **Note:**
> The *[OHS] Safety Metrics* job is set to run daily by default.

Required roles

- sn_ohs_im.manager or sn_ohs_im.agent, needed to see dashboard home page. The metrics on the **Risk Management** tab are dependent on the user's access to that table.
- sn_ohs_im.admin and the following roles, to edit the dashboard:
  - pa_admin, to edit the Performance Analytics (PA) components used in the dashboard.
  - ui_builder_admin, to edit the dashboard visualizations that are built using the UI Builder.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Access the Health and Safety Incident Management metrics

Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Risk Management** tab on the Health and Safety dashboard.

Note:
To view only a high-level summary of key risk metrics such as the open risk assessments or overdue inspections, select the **Highlights** tab.

Metrics on Risk Management tab

The availability of cards and metrics in this tab depends on the user's access to the table where the data comes from.

Inspections section

Card	Description	PA indicators
Overdue inspections	Count of safety inspections that are open past their survey due dates. Select the card to view a complete list of these open inspections.	None
Upcoming inspections	Count of open safety inspections that day and a one-week trend. Select the card to further drill down and visualize data, for example, see trend over different time aggregation of data.	Health & Safety - Open Inspections
Inspection types	Number of active safety inspections with bars counting digital and paper type inspections. Select an inspection format in the graph to view a complete list of active inspections of that type.	None
Inspection findings	Count of open safety inspections' findings that day including a trend line. Select the card to further drill down and visualize data, for example, see trend over different time aggregation of data.	Health & Safety - Inspection Findings

JSAs section

Card	Description	Indicators
Completed JSAs	Count of completed JSAs and a trend line. Select the card to further drill down and visualize data.	Health & Safety - Completed JSAs
Most common JSA selected hazards	Chart of the most common hazards that are selected on JSAs.	None
JSA job types	Number of JSA jobs with bars of counts of multi-step and single step jobs. Select a job type in the graph to view a complete list of jobs of that type.	None

Hazard and risk section

Card	Description	Indicators
Hazards by risk category	Count of active hazards in the system grouped by their risk category. Select a hazard in the bar graph to view a complete list of active hazards of that type.	None
Open risk assessments	Count of open safety risk assessments that day with a trend line. Select the card to further drill down and visualize data.	Health & Safety - Open Risk Assessments
Chemicals by consequence	Count of chemicals based on the **Consequence** level in the chemical record. Select a consequence type column in the bar graph to view a list of active chemicals of that type.	None

Customizing widgets

You can customize the widgets in the dashboard to display relevant metrics by using the UI Builder. For more information, see UI Builder tutorial.

Health and Safety Risk Management reference

Using the reference topics, learn about the components, such as the roles, tables, plugins, and store applications that are installed when you install the Health and Safety Risk Management application. Reference topics also provide additional information about the lists and forms that you use to configure and use Health and Safety Risk Management.

Components installed with Health and Safety Risk Management

Several types of components are installed with installation of the Health and Safety Risk Management application, including tables, user roles, and scheduled jobs. The application also installs related store applications if they aren't already installed.

Store applications installed

Store apps installed with Health and Safety Risk Management

Store application	Description
Health and Safety Core	Installs core data model for Health and Safety. This data model includes common components such as Health and Safety user profile and actions that are used in the Health and Safety applications. For more information on store applications, roles, and tables installed with Health and Safety Core, see Components installed with Health and Safety Core.
Workplace Core [sn_wsd_core]	Enables workplace locations for Health and Safety applications. **Important:** The application installation doesn't install the location demo data for the Workplace Core location model. As a workaround, repair the Workplace Core plugin with the **Load demo data** option.

Roles installed

Roles in Health and Safety Risk Management

Role title [name]	Description	Contains roles
Hierarchy of controls manager [sn_hs_rm.hierarchy_of_controls_manager]	Create, update, and delete control measure categories	sn_hs_rm.hierarchy_of_controls_writer
Hierarchy of controls writer	Create and update control	sn_hs_rm.hierarchy_of_controls_reader

Tables installed

Tables installed with Health and Safety Risk Management

Table	Description
Affected people [sn_hs_rm_affected_people]	Stores all users affected by exposures across all locations.
Audits [sn_hs_rm_audit]	Stores all safety audit records created standalone as well as generated from audit schedules. This table extends the Health and Safety task [sn_ohs_im_task] table.
Audit schedule [sn_hs_rm_audit_schedule]	Stores all audit schedules created for safety audits. This table extends the Health and Safety schedule [sn_ohs_im_schedule] table.
Audit survey [sn_hs_rm_audit_survey]	Stores all audit surveys for safety audits. This table extends the Health and Safety task [sn_ohs_im_task] table.
Control measure [sn_hs_rm_control_measure]	Stores all control measures that are in place to help prevent or mitigate hazards in your organization.
Document link [sn_hs_rm_document_link]	Stores all document links for jobs created in the job register.
Exposure [sn_hs_rm_exposure]	Stores all exposure records generated from exposure assessments across all locations.
Exposure assessment [sn_hs_rm_exposure_assessment]	Stores all exposure assessments conducted for exposure types across all locations.
Exposure source [sn_hs_rm_exposure_source]	Stores all exposure sources identified for exposure measurements across all locations.
Exposure type [sn_hs_rm_exposure_type]	Stores all exposure types identified across all locations.
Finding [sn_hs_rm_finding]	Stores all records of findings created for safety inspections. This table extends the Health and Safety task [sn_ohs_im_task] table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Health and Safety Risk Management (continued)

Table	Description
Hazard [sn_hs_rm_hazard]	Stores all identified and potential workplace hazards related to all jobs and task types in your organization.
Hierarchy of controls [sn_hs_rm_hierarchy_of_controls]	Stores all categories for control measures in your organization. All controls that are related to hazards in your organization are arranged under these categories.
Persons informed [sn_hs_rm_informed_persons]	Stores names of all employees and workers who are informed of their job hazards when submitting JSAs.
Inspection [sn_hs_rm_inspection]	Stores all safety inspection records created standalone as well as generated from inspection schedules. This table extends the Health and Safety task [sn_ohs_im_task] table.
Inspection schedule [sn_hs_rm_inspection_schedule]	Stores all inspection schedules created for safety inspections. This table extends the Health and Safety task [sn_ohs_im_task] table.
Job [sn_hs_rm_job]	Stores all jobs with predefined hazards and controls created in the job register. These jobs can be used to quickly submit JSAs and conduct risk assessments.
Hazards and controls [sn_hs_rm_job_hazard]	Stores hazards and controls associated with all of the jobs defined in the job register.
Job Safety Analysis [sn_hs_rm_job_safety_analysis]	Stores all job safety analyses (JSAs) submitted by employees through Employee Center and Now Mobile app.
Job step [sn_hs_rm_job_step]	Stores all jobs steps for the multi-step jobs defined in the job register.
JSA step [sn_hs_rm_jsa_step]	Stores all jobs steps that are added for multi-step jobs when submitting JSAs.
Exposure assessment document [sn_hs_rm_m2m_exposure_assessment_document]	Stores all documents related to exposure assessments across all locations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Health and Safety Risk Management (continued)

Table	Description
Measurement [sn_hs_rm_measurement]	Stores all measurements recorded for exposure assessments across all locations.
Permit checklist [sn_hs_rm_permit_checklist]	Stores information related to items, tasks, or steps in a checklist.
Permit to work [sn_hs_rm_work_permit]	Stores data related to the permit to work request.
Risk assessment [sn_hs_rm_risk_assessment]	Stores all records of risk assessments conducted. This table extends the Health and Safety task [sn_ohs_im_task] table.
Risk category [sn_hs_rm_risk_category]	Stores all risk categories for hazards in your organization. All workplace hazards related to all job types in your organization are arranged in these risk categories.
Risks and controls [sn_hs_rm_risk_controls]	Stores all Risks and controls records associated with all risk assessments.
Risk matrix [sn_hs_rm_risk_matrix]	Stores all risk matrixes created for your organization.
Risk tolerance [sn_hs_rm_risk_tolerance]	Stores all risk tolerance records associated with all risk matrixes created.
Safety Register [sn_hs_rm_safety_register]	Stores all safety registers created for the hazardous material used in your organization. This table extends the Health and Safety task [sn_ohs_im_task] table.
Asbestos Safety Register [sn_hs_rm_safety_register_asbestos]	Stores all safety registers created for asbestos material used in your organization. This table extends the Safety Register [sn_hs_rm_safety_register] table.
Chemical Safety Register [sn_hs_rm_safety_register_chemical]	Stores all safety registers created for chemicals. This table extends the Safety Register [sn_hs_rm_safety_register] table.

Tables installed with Health and Safety Risk Management (continued)

Table	Description
Template [sn_hs_rm_template]	Stores all JSA templates with predefined hazards and controls for each job type in your organization.

Submit JSA form

Employees can use the Submit JSA form to analyze their job safety at their point of work and create a JSA.

For more information on submitting a JSA, see Submit a JSA from Employee Center.

Submit JSA form

Field	Description
Enter job details	
Select job location	Job or task location where this job and the associated risks may arise or exists.
Enter job location manually	Job or task location. If your job location isn't available in the system, enter it manually.
Enter a name of the JSA	Name of this JSA.
Select job	Job with pre-defined hazards and controls for your job type. If you select a job, all hazards and control measures for your job type are auto-populated from this pre-defined job. Only the active jobs from the Job [sn_hs_rm_job] table are available in this list. For more information, see Define a job in the job register.
Job start date and time	Date and time when your job starts.
JSA expiry date and time	Date and time when this JSA for your job expires.
Select hazards and control measures	
Do you want to create a multi step job?	Option to indicate if this JSA is for a single-step or a multi-step job. If you selected a job in the **Select job** field, this field is automatically set depending on the type of the job you selected and is read-only.
Add job steps and their hazards and controls	Job steps and their associated hazards and control measures. This field appears only when it's a multi-step job and **Do you want to create a multi step job?** is set as **Yes**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Submit JSA form (continued)

Field	Description
	If you selected a multi-step job in the **Select job** field, all its job steps and their associated hazards and controls are auto-populated in this field. • However, you can add or remove job steps as required. To remove a job step that isn't relevant for your job, select the remove icon ( ) in the **Actions column**. To remove all job steps, select **Remove all**. • You can also add or remove hazards and controls for each job step. To review them, select the edit icon ( ) in the **Actions column** for the job step.
Add job step	Option to add a job step if it's a multi-step job.
Add hazards and controls	Hazards and the available control measures associated with a job. This field appears only when it's a single-step job and **Do you want to create a multi step job?** is set as **No**. If you selected a single-step job in the **Select job** field, all hazards and control measures for your job type are auto-populated from this pre-defined job. However, you can add or remove them as required. • To remove a hazard and control that isn't relevant for your job, select the remove icon ( ) in the **Actions column**. To remove all of them, select **Remove all**. • To review and modify them, select the edit icon ( ) in the **Actions column**.
Add hazards	Potential hazards that may arise or exist for the job or job step. Select all potential hazards for your job type using the **Add job step** or **Add hazards and controls** button. If you selected a job in the **Select job** field, all hazards are auto-populated from this pre-defined job. However, you can add or remove hazards as required.
Add additional hazards	Any other hazards that are identified but not available in the **Add hazards** window. Enter it manually to add.
Add control measures	Control measures that are available for the selected hazards. Select all controls that are in place in your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Submit JSA form (continued)

Field	Description
	If you selected a job in the **Select job** field, all control measures are auto-populated from this pre-defined job. However, you can add or remove controls as required.
Add additional control measures	Any other control measures that should be in place and aren't available in the **Add control measures** window. Enter it manually to add.
Links to useful documents	Documents links related to the job. This field appears only when you selected a job in the **Select job** field and that job has associated document links. The document links from the selected job are auto-populated in this field.
Add additional details	
Select employee/workers who have been informed	Employees, contractors, and any other workers who've been informed about the risks and controls related to this job at your workplace. They are typically the people who can be impacted by this JSA and must be aware of it. Add them with an acknowledgement using the **Add employee/workers** button. **Note:** • The **Contractor** option in the **Person type** field appears only when the Health and Safety Contractor Management (sn_hs_crm) application is installed on your instance. For more information, see Additional features in Health and Safety. • For a contractor, the **Name** field only lists users who have the [snc_external] role assigned to them and have their Health and Safety profile created. For more information, see Assign Health and Safety profile to a user.
Add remarks	Any comments related to your job or this JSA.
Add attachments	Attachments such as image, video, or document related to this job or JSA.

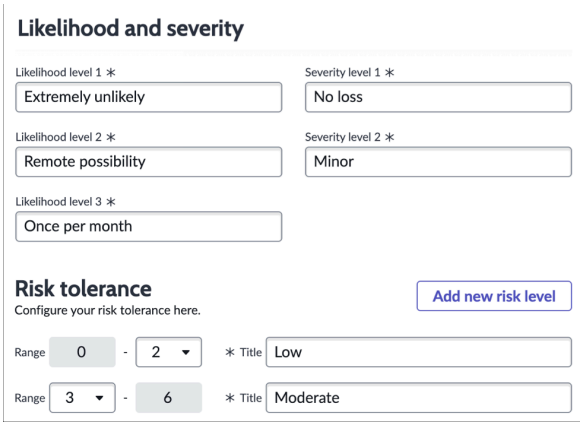
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Risk matrix form

Safety team can use the risk matrixes to create and conduct risk assessments in the Health and Safety Workspace.



For more information, see Conduct a safety risk assessment.

Risk matrix details

Field	Description
Risk matrix details	
Number	System-generated unique number for the risk matrix.
Short description	Brief description about the risk matrix.
Matrix grid	Size of the grid to use, for example, 4*4 and 5*5.
Active	Option for making the matrix available for use. A risk matrix must be active to be used.
Likelihood and severity	
Likelihood level	Description of the likelihood level. These descriptions are used to populate the likelihood options on risk assessments where this matrix is used. The number of likelihood levels is based on the selected grid size. For example, for a matrix grid of size 5*2, there are five likelihood levels.
Severity level	Description of the severity level. These descriptions are used to populate the severity options on risk assessments where this matrix is used. The number of severity levels is based on the selected grid size. For example, for a matrix grid of size 5*2, there are two severity levels.
Risk tolerance	
Risk tolerance	Range and description of the risk level. Select a range and enter a title for it. This risk tolerance range and title computes the risk level for a hazard in the risk assessment form header. For more information, see Risk and controls for a safety risk assessment. The value of the range is determined by multiplying likelihood level by severity level. For example, according to the grid in the following image, a hazard with a level 3 likelihood (Once per month) and a level 2 severity (Minor) has a risk tolerance of 3*2 = 6.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Risk matrix details (continued)

Field	Description
	The risk level for this hazard lies in the range 3 to 6, therefore, its risk level is displayed as Moderate. 

Risk assessment form

Risk assessment managers can use the risk assessment form to conduct their risk assessments.

For information on performing risk assessments, see Conduct a safety risk assessment.

Risk assessment details

Field	Description
Name	Name of the risk assessment.
Short description	Brief description about this risk assessment.
State	State of the risk assessment.
Approval	State of approval of this risk assessment.
Location	Location that this risk assessment applies to.
Select a risk matrix	Risk matrix that is used in the risk assessment to evaluate the risk levels for selected hazards. The matrix determines the risk level, both before and after controls, based on the severity and likelihood of the hazard. The items in this field display active matrixes from the Risk matrix [sn_hs_rm_risk_matrix] table. If there's only one active matrix, it's selected by default.
People at risk	Names of the employees, user groups, or any other people at risk.
People responsible for control	Names of the employees or user groups who are responsible for implementing control measures.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Risk assessment details (continued)

Field	Description
Description	Detailed description about this risk assessment.
Assign to reviewer	Reviewer for the risk assessment. If necessary, select a reviewer after the risk assessment is complete.
Assign to approver	Approver for the risk assessment. Select an approver after the risk assessment is complete. Only a user with the Risk assessment approver [sn_hs_rm.risk_assessment_approver] role can be assigned as an approver. **Note:** Only a user with the Risk assessment manager [sn_hs_rm.risk_assessment_manager] role can assign a risk assessment to an approver.
Additional comments	Any comments related to the assessment.

Inspection schedule form

Safety inspection manager can use the inspection schedule form to set up a recurring workplace safety inspection.

For information on setting up an inspection schedule, see Set up a safety inspection schedule.

Inspection details

Field	Description
Short description	Brief description about this safety inspection.
Active	Option for marking the inspection schedule available for use. An inspection schedule must be active to be used.
Inspection format	Format in which this inspection is carried out. • **Digital**: Triggers the survey selected in the **Inspection survey** field. • **Paper**: The assigned person completes the survey on paper and uploads a photo or document of the completed inspection as an attachment to the inspection record.
Inspection survey	Inspection survey to be completed for this inspection. Select the survey to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Inspection details (continued)

Field	Description
	Only the surveys with the **Source table** field set to Inspection [sn_hs_rm_inspection] table are available in this list. Use surveys available with the application or build new ones with the Survey designer. You can also associate any of your pre-built surveys with inspection records in Health and Safety Risk Management. For more information, see Configure a safety inspection or audit survey. This field appears only when **Inspection format** is set as **Digital**.
Assignment group	User group this inspection survey is assigned to. Only members of this group can view and take this survey.
Assigned to	User this inspection survey is assigned to.
Location	Location that this safety inspection applies to.
Assets	Assets that this inspection is related to. For example, the inspection needs to be conducted on these assets. **Note:** The assets field appears only when Expanded Model and Asset Classes [sn_ent] application is installed. For more information, see Additional features in Health and Safety

Duration details

Field	Description
Start date	Date when an inspection record is first created for this schedule.
End date	Date when the last inspection record is created for this schedule.
Frequency	Frequency between the start and end date at which the system generates an inspection record such as daily, weekly, or monthly.
Months to generate	Months when the recurring inspection records should be generated. When you enter a date range covering an entire year with a monthly frequency, you can select which particular months to generate inspection records for—The inspection doesn't have to happen every month.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Duration details (continued)

Field	Description
	This field appears only when **Frequency** is set as **Monthly**.
Survey expiration period	Number of days for the survey to expire after its start date.

Audit schedule form

The safety audit manager can use the audit schedule form to set up a recurring workplace safety audit.

For information on setting up an audit schedule, see Set up a safety audit schedule.

Audit schedule details

Field	Description
Number	System-generated unique number for the audit schedule.
Short description	Brief description about the audit schedule.
Assignment group	User group this audit is assigned to. Only members of this group can view and work on this audit.
Assigned to	User this audit is assigned to.
Location	Location that this safety audit applies to.
Regulatory Audit	Option to indicate whether this audit is a regulatory audit.
Assets	Assets that this audit is related to. For example, the audit needs to be conducted on these assets. **Note:** The assets field appears only when Expanded Model and Asset Classes [sn_ent] application is installed. For more information, see Additional features in Health and Safety
Risk matrix	Risk matrix used for risk assessments for this audit.
Audit scope	Detailed description about the scope of this audit.
Audit goals	Detailed description about the goals of this audit.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Duration details

Field	Description
Start date	Date when an audit record is first created for this schedule.
End date	Date when the last audit record is created for this schedule.
Frequency	Frequency between the start and end date at which the system generates an audit record such as daily, weekly, or monthly.
Months to generate	Months when the recurring audit records should be generated. When you enter a date range covering an entire year with a monthly frequency, you can select which particular months to generate audit records for—The audit doesn't have to happen every month. This field appears only when **Frequency** is set as **Monthly**.
Weekly	Weekday when the recurring audit records should be generated. You can select which particular day of the week to generate audit records for—The audit doesn't have to happen every day in the week. This field appears only when **Frequency** is set as **Weekly**.

Finding form

When an inspection or audit survey is complete, the safety manager can use the Findings form to log findings gathered from survey responses.

For information on conducting an audit, see Create and manage a safety audit.

Findings form

Field	Description
Finding details	
Number	System-generated unique number for the finding.
Short description	Brief description about the finding.
Location	Location that this finding applies to.
Hazard	Potential hazard identified during the survey.
Risk rating	Risk rating for identified hazard.
Survey finding	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Findings form (continued)

Field	Description
Survey	Audit survey that includes this finding as a survey response.
Section	Category of survey questions. This field appears only when a survey is selected from **Audit survey**. The field lists all question categories from the selected survey.
Question	Survey question this finding was submitted for. This field appears only when a category is selected from **Audit survey category**. The field lists all questions in the selected survey category.
Question Response	Submitted answer for the survey question. This field is auto-populated with the response submitted for the selected survey question in the survey.
Compliance	Compliance status of the system covered in the audit survey.
Work notes	Additional details for the finding.

Action schedule form for an exposure

The industrial hygienist can use the action schedule form for an action to be created when there's an active exposure.

For information on setting up an action schedule for an exposure, see Define an action schedule for affected people.

Action schedule

Field	Description
Short description	Brief description about this action.
Active	Option for marking the action schedule available for use. An action schedule must be active for actions to be created and assigned to the affected people.
Location	Location that this action item applies to. The action is assigned to the affected people at this location. This field is automatically set to the location of the exposure assessment.
Type	Type of the action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Action schedule (continued)

Field	Description
	• **Corrective**: An action to eliminate the causes of non-conformities or undesirable situations to stop them from happening again. • **Preventive**: An action to help prevent the occurrence of non-conformities. • **Task**: A generic task assigned as an action. • **Learning**: An action that includes a learning for the user, for example, completing a training. **Note:** The **Learning** option in this field appears only when the Learning Core (sn_lc) application is installed on your instance. For more information, see Additional features in Health and Safety.
Learning material	Learning material for the training, for example, knowledge article or URL for a training video. This field appears only when **Learning** is selected from **Type**. **Note:** This field lists the learning content created in Learning Core. For more information, see Managing course and catalog content.
Days to complete action after creation	Number of days by when this action should be complete after it's generated and assigned to a user. This field sets the due date of the assigned action.
This is recurring action	Option for marking this action as recurring. When this option is selected, the **Duration details** section and fields appear.

The following duration details section appears only when the action schedule is set as recurring.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Duration details

Field	Description
Frequency	Frequency at which the system generates an action record such as daily, weekly, or monthly.
Weekly	Weekday when the recurring action records should be generated. You can select which particular day of the week to generate action records for—The action doesn't have to be created every day in the week. This field appears only when **Frequency** is set as **Weekly**.
Months to generate	Months when the recurring action records should be generated. You can select which particular months to generate action records for—The action doesn't have to be created every month. This field appears only when **Frequency** is set as **Monthly**.
Day	Day of the selected month when the schedule should run to generate the recurring action records. If the selected month has fewer days, the schedule will run on the last day of the month. This field appears only when **Frequency** is set as **Monthly**.

Permit-to-work form

Field descriptions on the form to request a permit-to-work.

Permit to work form

Field	Description
Type	One or more type of permit.
Short description	Description of the permit.
Urgency	Option used to select the urgency of the permit request.
Risk assessment	Field to add risk assessment associated with the request if any.
Risk before controls	Field is auto-populated when risk assessment is selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Permit to work form (continued)

Field	Description
Risk after controls	Field is auto-populated when risk assessment is selected.
JSA	The JSA on the site that is associated with the request if any.
Safety register	Safety register relevant with the request if any.
Inspection	Option to add an inspection with the permit if needed.
Work task	Field to select the Health and Safety record relevant to the request if any.
Location	Field to select the location of the job.
Work area	Field to add more details about the location.
Start date and time	Field to select the shift start date and time.
End date and time	Field to select the shift end date and time.
Approvals due by	Field to select the permit approval date.
Watch list	Individuals to be aware of the status of the request.
Requested for	Individuals the permit is requested for.
Description	A brief summary of the permit.
Comments	Field to add any comments if needed.
Attachment	Option to add attachments related to this permit. Select the attachment icon ( ) to add the attachment.

Choice new record form

Field description to add a new choice to create a new permit type.

Choice new record form

Field	Description
Table	Field to select the table to create a new permit type.
Element	The column for which the choice is created.
Language	Language code for the label.
Sequence	This field determines the order in which the choice appears.
Inactive	Option to make the choice inactive.
Label	Label to appear in the choice list.
Value	Value related to the label.
Dependent value	Leave empty.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Choice new record form (continued)

Field	Description
Hint	Leave empty.

Variable set new record form

Field description to create a new variable set record.

Variable set new record form

Field	Description
Title	Title of a variable set. Appears if the **Display title** check box is selected.
Internal name	Variable set name for internal use.
Order	Order number for the variable set.
Type	Type of the variable set.
Application	Applications that can use this variable set.
Display title	Adds a title and an expandable header to the right of the variable set.
Layout	Set the layout display.
Description	Description of the variable set.

Variable new record form

Field description to create a new variable record.

Variable new record form

Field	Description
Application	Read-only field that indicates which applications can use this variable.
Type	The variable type that you want to create. For more information, see Types of service catalog variables.
Order	Order that the variable is placed on the page for the catalog item. The variables are organized from top to bottom from least to greatest order value. For example, a variable with an order value of 1 is placed above other variables with higher-order values.
Variable set	Variable set using the variable.
Active	Check box to make the variable available for use
Mandatory	Check box to mark the variable required as part of the ordering process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Variable new record form (continued)

Field	Description
Read only	Option to make a variable read only or editable.
Hidden	Option to hide a variable.
Question	
Question	Question to ask users ordering the catalog item.
Name	A name to identify the question.
Tooltip	Tooltip text to display when users hover over the variable. Enter a brief note to describe the purpose of the 'Question'.
Example text	Hint that is displayed in the question field before a user enters a value. Applicable for the following variables: • IP Address • Email • URL • Single Line Text • Wide Single Line Text • Multi Line Text • Date • Date/Time

Domain separation and Health and Safety Risk Management

Domain separation is supported for Health and Safety Risk Management. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Domain-separated tables overview

All tables in the Health and Safety Risk Management can be domain-separated and include the required domain separation field.

How domain separation works in Health and Safety Risk Management

- Each table in Health and Safety Risk Management includes the domain separation fields **Domain** and **Domain path**.
- Customers can use these fields to configure domain separation in their implementation of Health and Safety Risk Management.

Domain separation for service providers

Mobile experience for Health and Safety

Enable your employees to submit health and safety incidents and observations, Job safety analyses (JSAs), access safety knowledge base, and more on their mobile device using the ServiceNow mobile applications.

Employees can use the Now Mobile app to do the following tasks at any time using their mobile device:

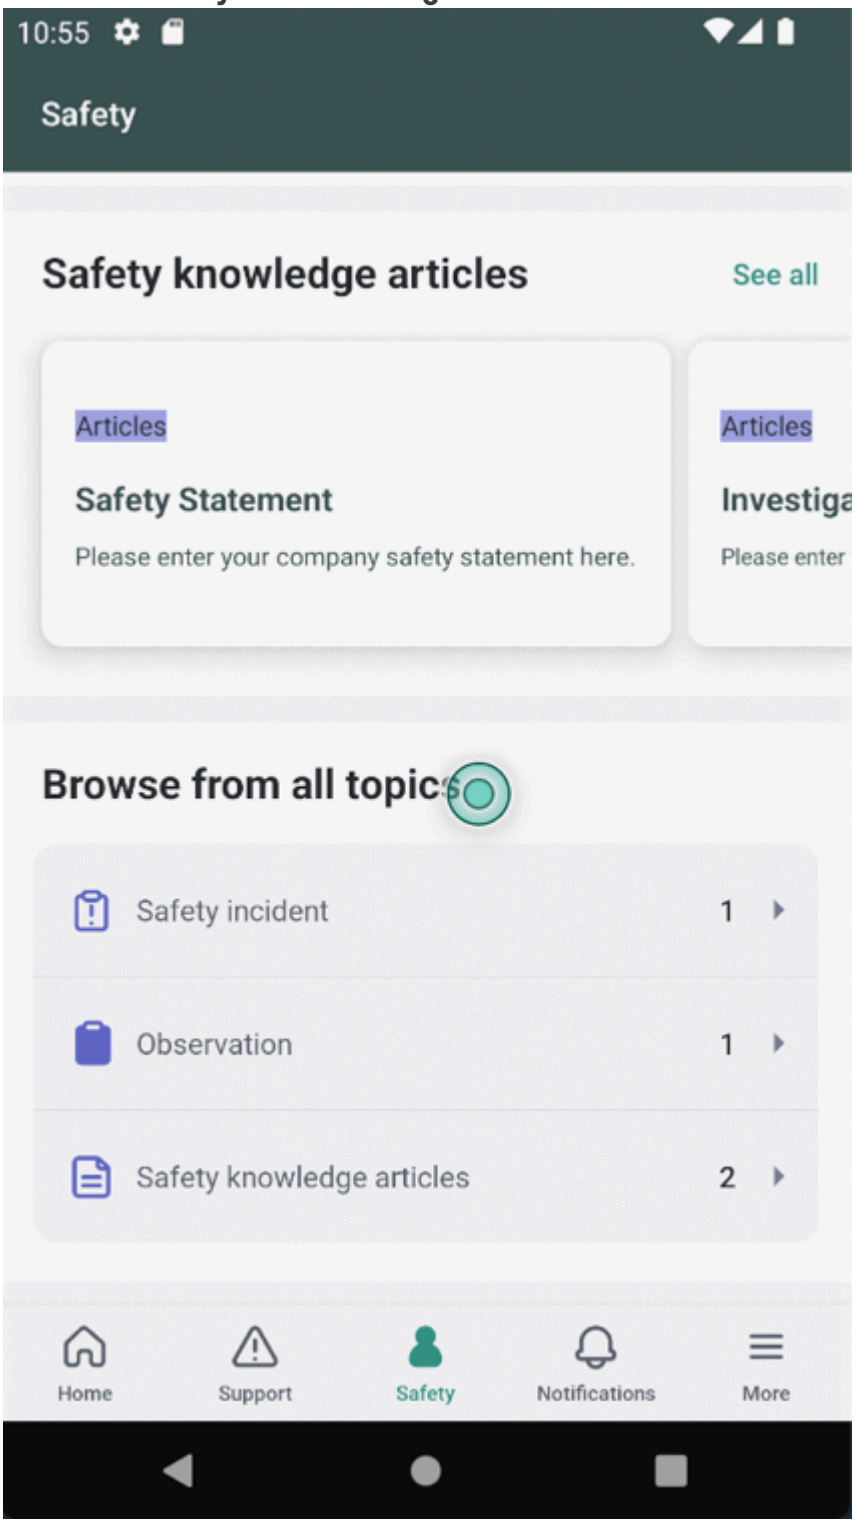
- Submit safety incidents and observations online or offline
- Submit safety related questions and compensation claims
- Submit Job safety analyses
- Take safety inspection and audit surveys
- View safety register documents such as Safety Data Sheets (SDSs)
- Access company's health and safety knowledge base

Safety inspectors and auditors can use the Mobile Agent app to conduct surveys offline.

These apps run on the ServiceNow mobile platform. You can download these mobile apps for the iOS platform from the Apple App Store or for the Android platform from the Google Play Store.

Offline mode for mobile

Use the offline mode of the Mobile Agent and the Now Mobile app to work in areas without an internet connection. You can turn on the offline mode and complete your tasks. Once you go online, the changes are all synchronized automatically. For more information, see Offline mode.



To turn on offline mode on your mobile, do the following:

- Navigate to **Settings**.
- Tap **Download Cache**.
- Enable the **Offline Mode** option.

Tip:
To schedule a periodic download of cache, configure the `glide.sg.offline.scheduled_download.enabled` system property on your instance. For more information, see Configure offline mode behavior.

Health and Safety Incident Management on an Android device

Configure mobile apps to access Health and Safety applications

Configure the ServiceNow mobile apps to access Health and Safety applications for submitting safety incidents, observations, and job safety analyses (JSAs).

Before you begin

Ensure that the ServiceNow instance to be configured on Now Mobile app and Mobile Agent app has the following applications installed with the demo data:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Health and Safety Incident Management for submitting safety incidents and observations.

  Note:
  The demo data for Health and Safety Incident Management includes the launcher required to open it in the Now Mobile app.

- Health and Safety Risk Management to submit JSAs, view safety registers, and conduct inspection and audit surveys.

Role required: none

Procedure

1. Download the following mobile apps for the iOS platform from the Apple App Store or for the Android platform from the Google Play Store.
   - Now Mobile app for submitting safety incidents, observations, and JSAs, and viewing safety register documents.

     For more information on using this mobile app, see Now Mobile app.
   - ServiceNow Agent mobile app for conducting inspection and audit surveys offline.

     For more information on using this mobile app, see Mobile Agent app app.
2. Open the Now Mobile app or Mobile Agent app and tap the plus icon (**+**).
3. Add your ServiceNow instance by entering the instance address.
4. **Optional:** In the **Enter nickname** field, enter an alias for quickly identifying the instance.
5. Tap **Save and login**.
6. Log in to your instance.

Result

- For an instance with the Health and Safety Incident Management application, the **Safety** option appears in the navigation bar of the Now Mobile app in your mobile device. This option enables you to access the Health and Safety Incident Management application through the mobile device.

  Note:
  The **Safety** option appears only if the demo data is installed with the Health and Safety Incident Management on the configured ServiceNow instance.

- For an instance with the Health and Safety Risk Management application, the **Create a job safety analysis** quick link appears in the **Home** tab of the Now Mobile app in your mobile device.

Add Health and Safety launcher tab to Now Mobile app configuration

Add a Health and Safety launcher screen tab to your Now Mobile app configuration. With this launcher tab, your employees can open the Health and Safety Incident Management application in the Now Mobile app on their mobile device.

Before you begin

Role required: sn_ohs_im.admin and admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

- Use this procedure only if the demo data isn't included in the Health and Safety Incident Management application on your ServiceNow instance that needs to be configured on the Now Mobile app.

  The demo data for this application includes the launcher required to open it in the Now Mobile app.

- The Now Mobile app is built using ServiceNow Mobile App Builder, so make sure you're familiar with the Mobile App Builder basics.

For more information about configuring a tab on the navigation bar of Now Mobile app, see Configure the navigation bar and navigation tabs.

Procedure

1. Navigate to **All** > **System Mobile** > **Mobile App Builder**.
2. In the application scope selection screen, select the application scope as **Health and Safety Incident Management**.
3. Select **All mobile records** in the left menu.
4. From the Record type list, select **Launcher tab [sys_sg_applet_launcher_tab]**, and then select **New**.
   The new launcher tab screen appears where you can create a tab for Health and Safety.
5. On the form, fill in the fields.

Launcher tab form

Field	Description
Label	Name that displays for your navigation bar tab. For Health and Safety, enter `Safety`.
Active	Toggle that sets whether the navigation bar tab is active. Inactive navigation bar tabs aren't visible.
Launcher	Launcher screen that appears when you tap the tab. Click **Choose** and select **OHS Launcher**.
Icon	Icon that displays for your navigation tab.

6. Select **Save**.

Configure offline mode in the Now Mobile app for Health and Safety

Setup offline mode in the Now Mobile app for Health and Safety so that users can access it even without an internet connection.

Before you begin

Ensure that the application scope is selected as Now Mobile. For more information, see Application picker.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Enable offline mode for the Now Mobile app so that the users can access it even when they're not connected to the internet.
   a. Navigate to **All** > **System Mobile** > **Mobile branding** > **Mobile App Configs**.
   b. Select **Now Mobile**.
   c. Select the **Offline enabled** option to turn on the offline mode.
   d. Select **Update**.
2. Make the Now Mobile Home page available for offline use in Health and Safety.
   a. Navigate to **All** > **System Mobile** > **Mobile App Builder**.
   The Mobile App Builder opens in a new browser tab and displays the application scope selection screen.
   b. Search for the Health and Safety application scope and then select the name of the application scope.
   To enable offline mode for safety incidents and observations, select Health and Safety Incident Management.
   c. Select **Mobile app configs**, and then select the **Now Mobile** to configure offline mode in it.
   d. If the scope is not set as Now Mobile, select **Edit in original scope**.
   e. Under **Home**, select **Homepage** and then select **Open record**.
   f. Turn on the **Available offline** option.
   g. Select **Save**.

Submit a safety incident or observation through the Now Mobile app

Submit a safety incident or observation to report it your organization's safety department.

Before you begin

Role required: sn_ohs_im.requestor

Procedure

1. Open the Now Mobile app on your mobile device.
2. In the navigation bar, tap **Safety**.
3. In the **Browse from all topics** section on the page, tap a topic to open category items.
   - To report an incident, tap **Safety incident** and then tap **Report Health and Safety Incident**.
   - To report an observation, tap **Observations** and then tap **Report Health and Safety Observation**.
4. Fill in the fields.
5. Tap **Submit**.
   A confirmation message with the incident or observation number appears on the screen.
6. **Optional:** Tap the incident or observation number to review it or update any fields.
7. Tap **Close** to return to the list of safety topics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Report a safety incident or observation in the offline mode

Report a safety incident or observation in the offline mode-without an internet connection-through the Now Mobile app. Once you go online, the incidents or observations reported offline are synchronized automatically.

Before you begin

Verify the following conditions:

- The system properties for the offline mode behavior of the mobile application are configured. For more information, see Configure offline mode behavior.
- The Health and Safety Incident Management application is configured for offline mobile. For more information, see Configure offline mode in the Now Mobile app for Health and Safety.
- The offline mode for the Now Mobile app on your mobile device is turned on. For more information, see Offline mode for mobile.
- The *glide.sg.offline.scheduled_download.enabled* system property for scheduled offline caching is set. If the property is not set, manually update cache before you go offline. To update cache, navigate to **Settings** and tap **Update Cache**.

Role required: none

About this task

For information on how the offline mode works in the mobile app, see Offline mode for mobile.

Procedure

1. Open the Now Mobile app on your mobile device.
2. In the navigation bar, tap **Home**.
3. In the **Quick links** section on the page, select an option.
   - To report a basic incident, tap **Report safety incident**.
   - To report an observation, tap **Report safety observation**.
4. Fill in the fields and tap **Submit**.
5. **Optional:** To review the reported incident or observation, open it from the **My items** section on the page.
   - To view an incident, tap **My H&S incidents** and then tap the incident number.
   - To view an observation, tap **My H&S observations** and then tap the observation number.

Access safety knowledge articles through the Now Mobile app

Access your company's health and safety knowledge base on your mobile device using the ServiceNow Now Mobile app.

Before you begin

Role required: sn_ohs_im.requestor

Procedure

1. Open the Now Mobile app on your mobile device.
2. In the navigation bar, tap **Safety**.
3. Open the required knowledge article from one of these areas on the page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- In the **Browse from all topics** section on the page, tap **Safety knowledge articles** and then tap the required knowledge article.
- In the **Safety knowledge articles** section on the page, tap the required knowledge article.

Submit a JSA through the Now Mobile app

Submit a job safety analysis (JSA) to identify hazards related to your job and identify control measures that should be in place at your point-of-work.

Before you begin

Role required: sn_hs_rm.jsa_reporter

Procedure

1. Open the Now Mobile app on your mobile device.
2. Create a JSA.
3. Fill in the fields.
   For more information on JSA field descriptions, see JSA form.
4. Tap **Submit**.
   A confirmation message with a link to open the JSA appears on the screen.
5. **Optional:** Tap the link to open and review the JSA.

Result

- The JSA is submitted for your job or task. To view your submitted JSAs, navigate to the **My items** section on the **Home** page, tap **My job safety analyses**, and then tap the required JSA.
- The JSA is also listed in the JSAs list on Health and Safety Workspace. A risk manager [sn_hs_rm.jsa_manager] can view all the filed JSAs by navigating to the Health and Safety Workspace and selecting the JSAs icon ().

View a safety register document in the Now Mobile app

View safety register documents for hazardous material on your mobile device using the ServiceNow Now Mobile app.

Before you begin

Role required: none

About this task

All Safety Data Sheets (SDSs) that are added to the safety registers through the Health and Safety Workspace are available to view in the Now Mobile app. Employees can access these SDSs for their safety when working with any potentially hazardous materials.

Procedure

1. Open the Now Mobile app on your mobile device.
2. In the navigation bar, tap **Home**.
3. In the **Quick links** section on the page, tap **Safety register documents**.
4. In the list, tap the material to view its SDS.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tip:
You can narrow down the list using the **Register type** and **Location** filters. Alternatively, enter the name of the chemical in the search bar.

A safety admin can configure the search criteria in the Now Mobile app to help find the information quickly. For more information, see Configure search criteria.

The safety register document associated with the hazardous material shows.

5. Tap the safety register document to open it.

Complete a safety inspection or audit survey in the offline mode

Complete a safety inspection or audit survey assigned to you in the offline mode-without an internet connection- through the Mobile Agent app.

Before you begin

Verify the following conditions:

- The system properties for the offline mode behavior of the mobile application are configured. For more information, see Configure offline mode behavior.
- The offline mode for the Mobile Agent app on your mobile device is turned on. For more information, see Offline mode for mobile.
- The *glide.sg.offline.scheduled_download.enabled* system property for scheduled offline caching is set. If the property is not set, manually update cache before you go offline. To update cache, navigate to **Settings** and tap **Update Cache**. This ensures that the survey is downloaded and it's ready for you to complete.

Role required: none

About this task

Surveys completed offline are synchronized once an internet connection is established.

For more information on how offline mode works in the mobile app, see Offline mode for mobile.

Procedure

1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. In the **My Actions** section on the page, tap **My Assessments and Surveys**.
   All surveys that were downloaded before you went offline are listed.
4. In the list, tap the inspection or audit survey that you want to complete.
5. Conduct a safety walk and fill in the survey.
6. Tap **Submit**.

Configure the create action check box for safety inspection survey in the Mobile Agent app

Determine the survey field types that should display the **Create action** option when inspection agents complete the survey in the Mobile Agent app.

Before you begin

Verify that the application scope is selected as Health and Safety Incident Management. For more information, see Application picker.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

Procedure

1. Navigate to **All** > **Health and Safety** > **Health and Safety administration** > **Properties**.
2. In the property *Survey fields enabled for action creation* add the values, such as, `checkbox,boolean,choice,long,percentage,scale,numericscale` to determine whether a specific survey field should display the **Create action** check box. `checkbox,boolean,choice,long,percentage,scale,numericscale,imagescale,strin multiplecheckboxranking,reference` is set as the default value for this property.
3. Select **Save**.

Result
The **Create action** check box is added to the type of the survey field mentioned in the property.

Add actions for safety inspections survey in Mobile Agent app

Learn how to use the Mobile Agent app to create actions for an inspection survey in online or offline mode.

Before you begin
Verify the following conditions:

- The system properties for the offline mode behavior of the mobile application are configured. For more information, see Configure offline mode behavior.
- The offline mode for the Mobile Agent app on your mobile device is turned on. For more information, see Offline mode for Mobile Agent.
- The *glide.sg.offline.scheduled_download.enabled* system property for scheduled offline caching is set. If the property is not set, manually update cache before you go offline. To update cache, navigate to **Settings** and tap **Update Cache**. This ensures that the survey is downloaded and it's ready for you to complete.

Role required: sn_hs_rm.safety_inspection_agent

About this task
Surveys completed offline are synchronized once an internet connection is established.

For more information on how offline mode works in the mobile app, see Offline mode for mobile.

For more information on how an admin configures which survey field type should display the **Create action** check box, see Configure the create action check box for safety inspection survey in the Mobile Agent app.

Procedure
1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. To open surveys,

4. In the list, tap the inspection survey that you want to complete.
5. Conduct a safety walk and fill in the survey.

   To add actions for survey responses perform the following steps:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select the **Create action** check box for responses to the questions for which you want to add the action.

b. Add the **Short description**, **Type**, and **Due date**.

c. In the **Assigned to** field, enter the name of the agent the survey should be assigned to.

6. Tap **Submit**.

Result

The action created appears in the **Actions** tab of the inspection record and can be edited or deleted by using the More actions Icon.

Create and manage a safety inspection in Mobile Agent app

Create a safety inspection using the Mobile Agent app without scheduling an inspection to manage your workplace inspection.

Before you begin

Role required: sn_hs_rm.safety_inspection_agent

About this task

Easily create new inspection records. Assign these inspection records to yourself or to a safety agent from the assigned groups. From an inspection record open and complete a related survey that is assigned to you. Add new findings or actions to the findings as necessary on the Mobile Agent app.

Procedure

1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. Select **My inspections** from the quick links to open a list of inspections.
4. Select **Create new inspection** to add a new inspection.
   Alternatively, edit or delete the existing inspection record as needed from the **Details** tab of the inspection record.
5. On the form fill, in the details.
   For more information for field description, see Inspection schedule form.
6. Select **Submit**.

   For more information on managing a safety inspection, see Create and manage a safety inspection

Manage Health and Safety incident using the Mobile Agent app

As a safety agent, you can create or manage a safety incident using the Mobile Agent app.

The Mobile Agent app is useful to safety agents who are desk-less workers and must create or update incident records on the site.

Note:
The safety incidents created or modified using the desktop workspace can be viewed on the Mobile Agent app.

The mobile experiences on Mobile Agent app for safety incidents available for safety agents and managers are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create or modify a safety incident on the Mobile Agent app

A safety agent can create or edit a safety incident through the Mobile Agent app.

Before you begin

Role required: sn_ohs_im.agent or sn_ohs_im.manager

About this task

Easily create safety incident records. Assign the new incident records to yourself or to a safety agent from the assigned groups. On the Mobile Agent app, add more details, such as hazards and watch-lists, if necessary. Use the activity stream for each related list to view the activity for that incident record.

Procedure

1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. Tap **Safety incidents** icon from the quick links section.
   Opens the **All safety incidents list** page where you can view the list of safety incidents.
4. To modify an existing safety incident,
   - Swipe left on the safety incident record to view the edit option.
   - Open the safety incident record and tap **More options** icon .
5. To add a new safety incident,
   a. Tap **Create new incident** on the **All safety incidents list** page.
   b. On the form, fill in the details.
   c. Select **Submit**.

   To update the related list, see,
   - Create or modify root cause analysis of a safety incident on the Mobile Agent app
   - Create or modify actions of a safety incident on the Mobile Agent app
   - Create or modify the people involved for a safety incident on the Mobile Agent app
   - Create or modify injury and illness record of a safety incident on the Mobile Agent app

Create or modify injury and illness record of a safety incident on the Mobile Agent app

Log an injury or illness that resulted from a health and safety incident for each person affected during the incident on the Mobile Agent app.

Before you begin

Role required: sn_ohs_im.manager, sn_ohs_im.agent

Procedure

1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. Tap the **Safety incidents** icon from the quick links section.
4. Open a safety incident record.
5. Tap the **Related lists** tab and then tap **Injury and illness**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. To modify an existing injury and illness record,
   - Swipe left on the injury and illness record to view the edit and delete options.
   - Open the injury and illness record and tap **More options** icon , then tap edit or delete.

b. To add a new injury and illness record, tap **Add new injured person**.

6. On the form, fill in the details.
   For more details on field description, see Injury and illness fields.
7. Tap **Submit**.
8. To add injured body parts, open an injured persons record in the **Injury and illness** related list of a safety incident.

   a. Tap **Add new injured body part**.

   b. On the form, fill in the fields.

Injured body part from

Field	Description
Severity	Seriousness of the injury ▪ None- No injury present. ▪ Minor- Mild injury that needs minimal or no treatment. ▪ Moderate- Noticeable injury such as deep cuts, moderate sprain, minor fracture that may limit activity temporarily. Medical intervention may be required but not life threatening. ▪ Severe- Serious injury such as major fractures, head trauma, deep lacerations that impacts function or is potentially life-threatening. Requires urgent medical intervention.
Region	Region of the body where the injury occurred.
Body part	Part of the body where the injury is.
Description	Detailed description of the injury or illness.

9. Tap **Submit**.

Create or modify the people involved for a safety incident on the Mobile Agent app

Add a person involved or modify the information of an existing person involved in a safety incident using the Mobile Agent app.

Before you begin

Role required: sn_ohs_im.manager, sn_ohs_im.agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. Tap the **Safety incidents** icon  from the quick links section.
4. Open a safety incident record.
5. Tap the **Related lists** tab and then tap **People involved**.
   a. To modify an existing people involved record,
      - Swipe left on the people involved record to view the edit and delete options.
      - Open the people involved record and tap **More options** icon , then tap edit or delete.
   b. To add a new people involved record, tap **Add new people involved**.
6. On the form, fill in the details.
   For more details on field description, see Inspection schedule form.
7. Tap **Submit**.

Create or modify root cause analysis of a safety incident on the Mobile Agent app

As an agent or a manager, create or edit a root cause analysis on-site using the Mobile Agent app.

Before you begin

Role required: sn_ohs_im.manager, sn_ohs_im.agent

Procedure

1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. Tap the **Safety incidents** icon  from the quick links section.
4. Open a safety incident record.
5. Tap the **Related lists** tab and then tap **Root cause analysis**.
   a. To modify an existing root cause analysis record,
      - Swipe left on the root cause analysis record to view the edit and delete options.
      - Open the root cause analysis record and tap **More options** icon  then tap edit or delete.
   b. To add a new root cause analysis record, tap **Add new root cause analysis**.
6. On the form, fill in the details.
   For more details on the Five why's technique of root cause analysis, see Perform root cause analysis for a safety incident.
7. Tap **Submit**.

Create or modify actions of a safety incident on the Mobile Agent app

Add an action to address the root causes of the safety incident. You can add multiple actions for the incident.

Before you begin

Role required: sn_ohs_im.manager or sn_ohs_im.agent

Procedure

1. Open the Mobile Agent app on your mobile device.
2. In the navigation bar, tap **Home**.
3. Tap the **Safety incidents** icon from the quick links section.
4. Open a safety incident record.
5. Tap the **Related lists** tab and then tap **Actions**.
   a. To modify an existing actions record,
      - Swipe left on the actions record to view the edit and delete options.
      - Open the actions record and tap **More options** icon , and then tap edit or delete.
   b. To add a new action record, tap **Add new action**.
6. On the form, fill in the details.
   For more details on field description, see Health and Safety action form.
7. Tap **Submit**.

Now Assist for Health and Safety

Use the ServiceNow® Now Assist for Health and Safety application to summarize a health and safety incident. You can enable your safety agent and safety manager to generate concise, informative flash reports that can be quickly shared with relevant stakeholders.

AI limitations

This application uses artificial intelligence (AI) and machine learning, which are rapidly evolving fields of study that generate predictions based on patterns in data. As a result, this application may not always produce accurate, complete, or appropriate information. Further, there is no guarantee that this application has been fully trained or tested for your use case. To mitigate these issues, it is your responsibility to test and evaluate your use of this application for accuracy, harm, and appropriateness for your use case, employ human oversight of output, and refrain from relying solely on AI-generated outputs for decision-making purposes. This is especially important if you choose to deploy this application in areas with consequential impacts such as healthcare, finance, legal, employment, security, or infrastructure. You agree to abide by ServiceNow's AI Acceptable Use Policy, which may be updated by ServiceNow.

Data processing

This application requires data to be transferred from ServiceNow customers' individual instances to a centralized ServiceNow environment, which may be located in a different data center region from the one where your instance is, and potentially to a third-party cloud provider, such as Microsoft Azure. This data is handled per ServiceNow's internal policies and procedures, including our policies available through our CORE Compliance Portal.

Data collection

ServiceNow collects and uses the inputs, outputs, and edits to outputs of this application to develop and improve ServiceNow technologies including ServiceNow models and AI products. In addition, this application will collect information about safety incidents including incident details, actions, and root cause analysis. Customers can opt out of future data collection at any time, as described in the Now Assist Opt-Out page.

For more information, see the Now Assist documentation.

Exploring Now Assist for Health and Safety

With the Now Assist for Health and Safety application, safety agents and managers can use generative AI to summarize the safety incidents.

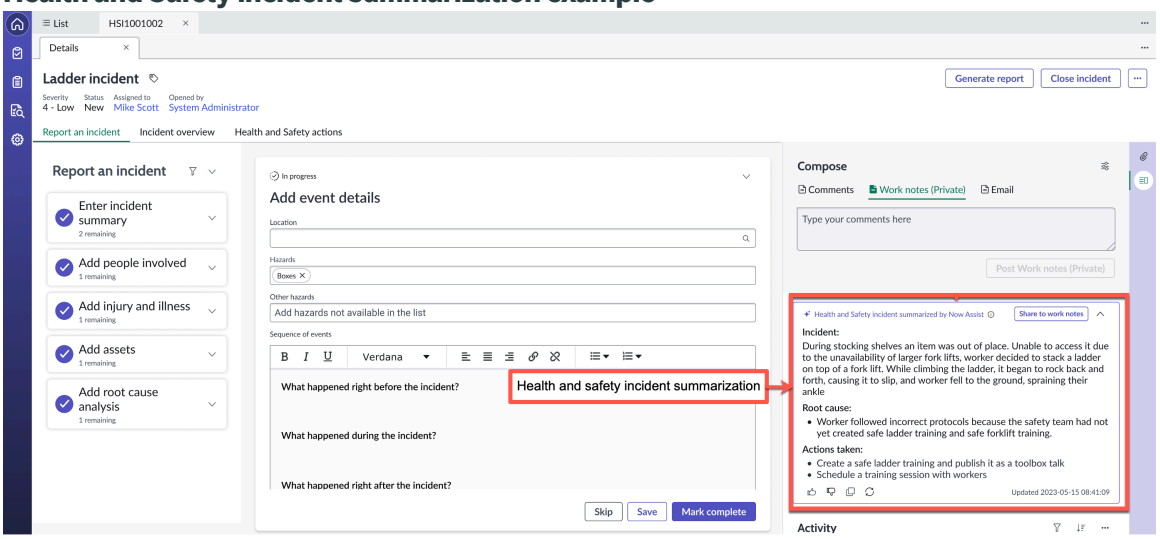
Skills

The Now Assist for Health and Safety application includes the skills and features of generative AI to support safety teams working on resolving safety issues.

Use the following skill provided by the Now Assist for Health and Safety application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and safety incident summarization



Provides a summary of safety incidents including incident details, actions, and root cause analysis. The safety team can view a summary to understand the context, refresh the summary, and post the summary to the work notes.

The summary is displayed above the activity stream and includes the information that the safety agents enter in the following fields:

- Short description
- Description
- Sequence of events
- Root Cause
- Action

The following example shows an AI-generated incident summary.

Health and Safety incident summarization example

For information on activating the Health and Safety incident summarization skill, see Configuring Now Assist for Health and Safety. For information on how to use this skill on Health and Safety Workspace, see Summarize a safety incident by using Now Assist for Health and Safety.

Supporting information for Now Assist for Health and Safety

Get a quick overview of the important information that is related to the Now Assist for Health and Safety application.

Supported versions

Now Assist for Health and Safety is supported starting with the Xanadu release.

Supported user interfaces

The Now Assist for Health and Safety application includes the skills that are listed in the following table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for Health and Safety supported interfaces

Interface	Skill
Health and Safety Workspace	Health and Safety incident summarization
Core UI	Health and Safety incident summarization

Application information

Activate the Now Assist for Health and Safety store app (sn_hs_gen_ai) to use the Health and Safety incident summarization skills.

This store app has a dependency on Health and Safety Incident Management (sn_ohs_im).

Activate the applications in the following order:

1. Health and Safety Incident Management
2. Now Assist for Health and Safety

For more information, see Configuring Now Assist for Health and Safety.

Explore Now Assist AI agents for Health and Safety

Now Assist AI agents help to improve live agent productivity by using AI agents to perform tasks.

AI agents for Health and Safety help to create actions using the Now Assist panel.

- For more information, see Exploring Now Assist AI agents.
- To learn how to manage AI agents and agentic workflows, see AI Agent Studio.

Configuring Now Assist for Health and Safety

Configure the Now Assist for Health and Safety application.

Configuration overview

Install Now Assist for Health and Safety

If you have the admin role, you can install the Now Assist for Health and Safety application (sn_hs_gen_ai) to enable generative AI capabilities for summarizing safety incidents on your instance.

Before you begin
Role required: admin

About this task
Use the Now Assist Admin console to install and configure Now Assist for Health and Safety. This console contains everything that you need to install the plugins and configure the generative AI skills. For additional information, see Now Assist Admin console.

The following table lists the skill that you can access from the Now Assist Admin console.

Health and Safety feature and skill in the Now Assist Admin console

Health and Safety feature	Skill
Now Assist skills for Health and Safety	Health and Safety incident summarization

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

Install the Now Assist for Health and Safety (sn_hs_gen_ai) plugin.

- For information about the plugin dependencies and plugin activation order, see Supporting information for Now Assist for Health and Safety.
- For information about the installation process, see Install Now Assist plugins.

What to do next

Activate the skill to enable the safety team to use the generative AI skills. For more information, see Activate a Now Assist for Health and Safety skill.

Activate a Now Assist for Health and Safety skill

Activate a Now Assist for Health and Safety skill to enable the safety team to use the generative AI skills from Health and Safety Workspace and the Core UI.

Before you begin

Install Now Assist for Health and Safety.

Role required: admin

About this task

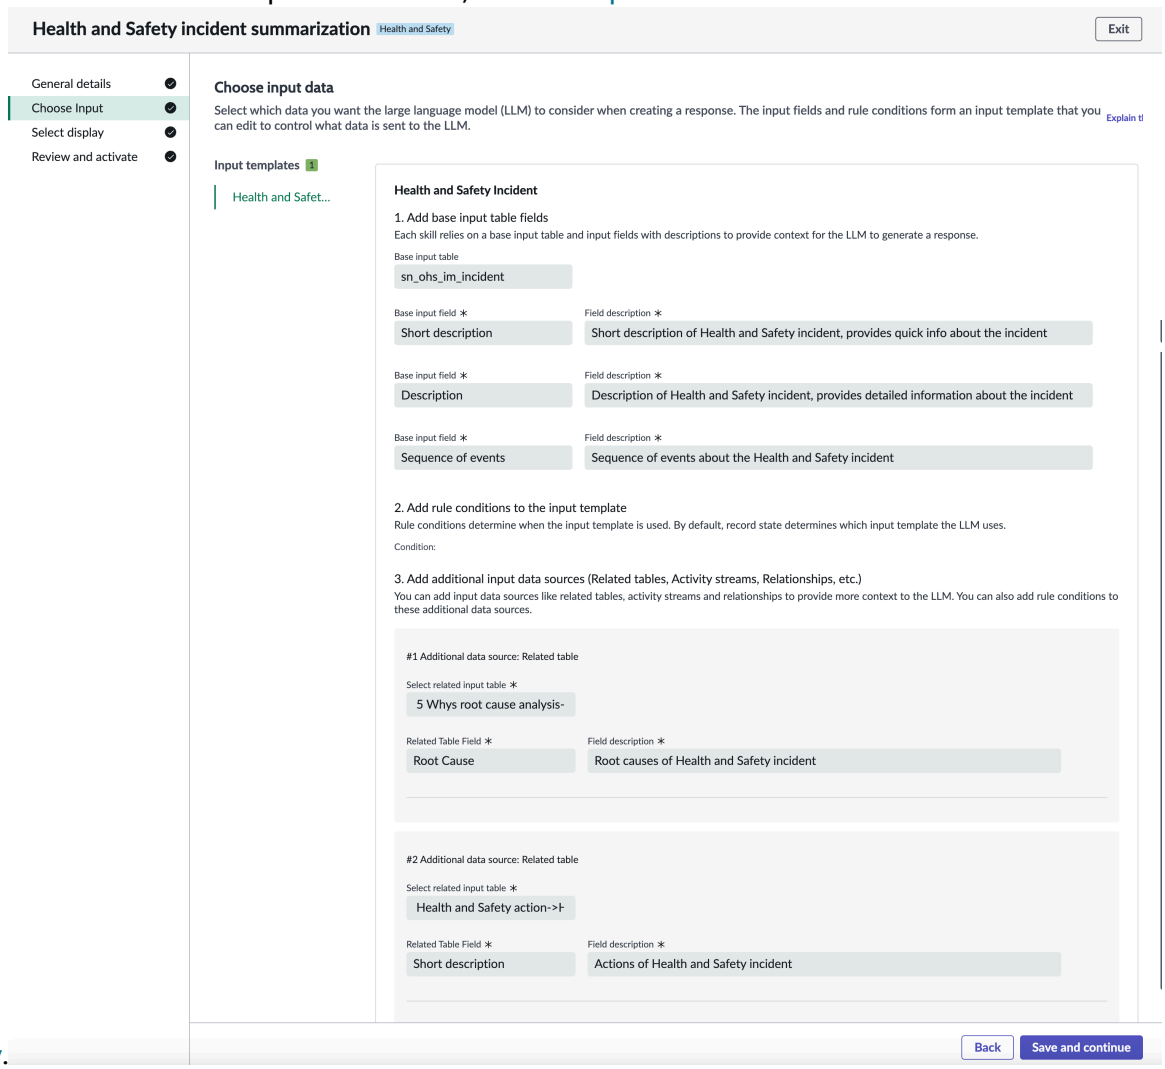
The following table lists the skill that you can access from the Now Assist Admin console.

Health and Safety feature and skill in the Now Assist Admin console

Health and Safety feature	Skill
Now Assist skills for Health and Safety	Health and Safety incident summarization

The Health and Safety incident summarization skill is available in the base system with the required configurations.

Note:



Now LLM Service is currently the only provider for this Now Assist application's skills.

Procedure

1. Navigate to **All** > **Now Assist Admin** > **Skills** to access the **Now Assist Skills** tab of the Now Assist Admin console.
2. From the workflow list, select **Employee** and then select **Health and Safety**.
3. On the tile for your skill, select **Activate skill**.
4. In the General details section, review the details and select **Save and continue**.
5. In the Choose Input section, review inputs for the selected skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information about the inputs for the skill, see Skill inputs for Now Assist for Health and Safety.

6. Select **Save and continue** to go to the next step.
7. In the Select display section, review the interfaces where the skill appears.
   - **In-product**: When selected, the Now Assist skills are displayed on workspaces.

     For the skills that appear in-product, select the down arrow to identify the roles that can use the skill.

   - **Now Assist panel**: When selected, Now Assist skills are available in the Now Assist panel. If you don't see this option, you must activate the Now Assist panel. For more information, see Turn on the Now Assist panel.

     For the skills that appear in the Now Assist panel, select the down arrow to identify the roles that can use the skill.
8. Select **Save and continue**.
9. In the Review and activate section, review your choices and select **Activate** to complete the configuration.
   The skill is configured.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. In the Active skills section of the Health and Safety page, verify that the skill is active from the Status column.

Active skills section

Skill inputs for Now Assist for Health and Safety

Get a quick overview of the skill inputs for Now Assist for Health and Safety.

Overview of skill inputs

An input identifies the data that is used for a skill, such as the table and fields that are used to generate a summary.

Health and Safety incident summarization skill

The Health and Safety incident summarization skill includes inputs that identify the table and fields that are used when a summary is generated.

Note:
These fields are read-only.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Inputs for the summarization of Health and Safety incident

Input table	Input fields
Health and Safety incident [sn_ohs_im_incident]	• Short description • Description • Sequence of events
5 Whys root cause analysis [sn_ohs_im_rca_five_whys]	Root Cause
Health and Safety action [sn_ohs_im_action]	Short description

Configure Now Assist AI agents for Health and Safety

Learn how to configure Now Assist AI agents to execute agentic workflows with AI agents and mapped tools.

- To learn more about configuring the Now Assist AI agents, see Configuring Now Assist AI agents.
- To learn about reducing the exposure of harmful content on your agentic workflow, see Enable Now Assist Guardian in AI agents.
- To choose the large language model (LLM) service provider for Now Assist AI agents in AI Agent Studio, see Select the LLM for AI agents and agentic workflows.

Install Now Assist AI agents for Health and Safety

Install Now Assist AI agents on your ServiceNow instance to enable the agentic AI experience.

Before you begin

To get started with AI agents, you must have:

- A ServiceNow Pro Plus or Enterprise Plus license.
- An instance on Xanadu Patch 7+ or Yokohama.
- AI Search enabled on your instance.

Role required: sn_aia_admin

About this task

AI agents are not standalone applications that you can install directly. To enable AI agents on your instance, you must install and activate Now Assist for Health and Safety.

Procedure

1. Navigate to **All** > **System Definition** > **Plugins**.
2. Search for and select the Now Assist for Health and Safety application.
3. Select **Install**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The AI Agent for Health and safety [sn_hs_ai_agents] plugin associated with the Now Assist for Health and Safety application is installed on your instance.

What to do next
To access AI agents in the Now Assist panel, you must enable the panel. See Turn on the Now Assist panel.

Using Now Assist for Health and Safety

If you have a safety agent or manager role, you can summarize the safety incidents with the Now Assist for Health and Safety application.

Summarize a safety incident by using Now Assist for Health and Safety

Generate a summary from the fields that you selected on the safety incident and quickly understand the incident context by using the Health and Safety incident summarization skill in the Now Assist for Health and Safety application.

Before you begin
Verify that the Health and Safety incident summarization skill is enabled. For more information, see Activate a Now Assist for Health and Safety skill.

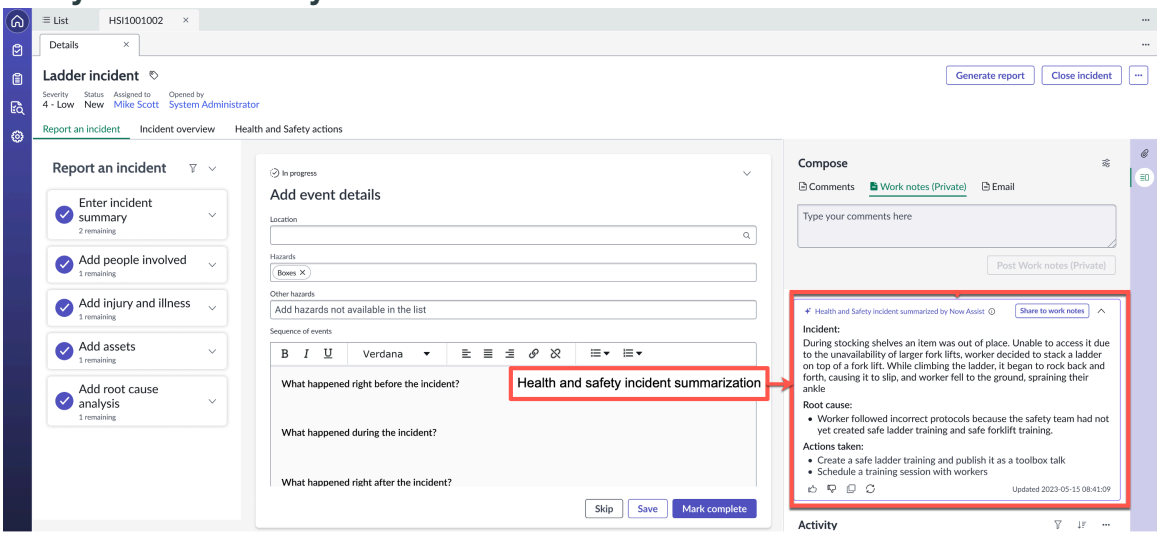
Role required: sn_ohs_im.agent or sn_ohs_im.manager

About this task
The Health and Safety incident summarization skill provides the summary of Health and Safety incidents including the details, actions taken, and root cause analysis. The safety agent and safety manager can view a summary to understand the context, refresh the summary, and post the summary to the work notes.

The incident summarization skill is available in Health and Safety Workspace and in the Core UI. When this skill is enabled on an instance, the Now Assist icon ( ) appears in the workspace.

- In Health and Safety Workspace, use the Health and Safety incident summary by Now Assist component to generate a summary. This component appears above the activity stream.

  Note:
  You can also generate a summary on demand from the Now Assist panel. For more information, see Record summarization.



- In the Core UI, select the **Summarize** button on the incident record to generate a summary.

Procedure
1. Navigate to **Workspaces** > **Health and Safety Workspace** and open a safety incident.
2. Select **Activity** to open the activity stream.
3. In the Health and Safety incident summary by Health and Safety component, select **Summarize**.

   Note:
   Generating and displaying the summary may take several seconds.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Safety incident summary

4. **Optional:** When you're finished summarizing an incident, you can add it to the incident work notes, expand or collapse it, provide feedback, copy it, or view information about the incident.

5. **Optional:** Share the AI-generated summary with relevant stakeholders through the **Email** tab in the activity stream.
   The **Email** tab appears only when the following conditions are met:
   - The email client is enabled for the Health and Safety incident [sn_ohs_im_incident] table on your ServiceNow instance. For more information, see Enable the email client for a table.
   - The user sending the email has the Email composer [email_composer] role. For more information, see Email composer [email_composer].

Using AI agents in Now Assist for Health and Safety Incident Management

Use the Create actions for safety incidents agentic workflow to create one or more autonomous actions for Health and Safety incidents through the Now Assist panel.

Available agentic workflow for Health and Safety Incident Management

Agentic workflow name	Description	Available AI agents
Create actions for safety incidents	The Now Assist panel suggests a list of actions for a safety incident and creates the action in the incident under the Health and Safety actions related items.	• Health and safety incident analysis AI agent • Health and Safety action planner AI agent

Important:
All agentic workflows and AI agent records are read-only by default.

To run the AI agents autonomously, duplicate the agentic workflow if needed and then do the following steps:

- Activate the agentic workflow. For more information, see Activate an agentic workflow template.
- Activate the trigger to invoke the agentic workflow automatically.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create actions for safety incidents agentic workflow

Use the **Create actions for safety incidents** agentic workflow to suggest actions automatically for a specific incident and create actions in the Health and Safety workspace.

To access the agentic workflow:

1. Navigate to **All** > **AI Agent Studio** > **Overview**.
2. Select **Create actions for safety incidents**.

Safety agents and managers with the [now_assist_panel_user] role can view the Now Assist panel. This panel can automatically trigger responses and create actions once an incident is opened. Once the actions are suggested by agentic AI, the safety agents and managers can enter the preferred action number or description. Entering the action number automatically creates that specific action record in the health and safety action-related item in an open incident record.

For more information on the Now Assist panel, see Now Assist panel.

The AI agents and tools used for the **Create actions for safety incidents** agentic workflow are as follows:

AI agents for the Create actions for safety incidents agentic workflow

AI Agent name	Description
Health and safety incident analysis AI agent	Recommended actions from similar health and safety incidents and AIA RAG Retrieval of Knowledge Base articles are suggested to the user.
Health and Safety action planner AI agent	Selected safety actions are added to the safety incident.

Tools used by the Health and Safety incident analysis AI Agent

Name	Type	Execution Mode
Get details of health and safety incident	Flow Actions	Autonomous
Notify user of recommended actions	Scripts	Autonomous
Get actions from similar health and safety incidents	Scripts	Autonomous
Display message of no recommended actions	Scripts	Autonomous
Get relevant Knowledge articles	Search retrievals	Autonomous

Tools used by the Health and Safety planner AI Agent

Name	Type	Execution Mode
Add selected safety actions to safety incident	Scripts	Autonomous

Critical Event Management

The ServiceNow® Critical Event Management (CEM) application enables streamlined response to critical events and global threats. It provides end-to-end management of critical events with structured, repeatable playbooks, facilitating efficient task assignment across teams and locations.

Get started

Exploring Critical Event Management

Learn how agents, on-site responders, and employees use the Critical Event Management application.

Configuring Critical Event Management

Configure the Critical Event Management workspace.

Reporting critical events

Report critical events as an agent or an employee.

Sending notifications during a critical event

Send critical event notification to impacted people and on-site responders.

Managing impacted people

Manage impacted people, view or update their status.

Managing related records in a critical event

Manage critical event tasks, create Health and Safety incidents, and relate child critical events.

Critical Event Management reference

Get detailed description of the forms used in critical event management.

Exploring Critical Event Management

Learn how to create and manage critical event tickets, assign tasks to on-site responders, and track the impacted people.

Critical Event Management overview

Critical Event Management offers a platform to report and manage critical situations. Employees or operators report an event, and on-site responders assist the impacted people. The operator monitors the critical event closely until it's resolved.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Critical Event Management Users

Critical Event Management users

Users	Description
Admin	Administrator for Critical Event Management
Agent	Works on the Critical Event Management record from initiation to resolution.
Employee	Raises emergency requests.
On-site responder	Addresses the emergency incident reported by an agent or employee.

Critical Event Management workflow

1. Report the critical event

   An employee reports the critical event, or an agent creates the critical event.

2. Assign and activate

   The agent assigns the critical event to relevant responders and activates the critical event.

3. Send notifications

   The agent sends notifications to the impacted people and on-site responders.

4. Initiate roll call and coordinate

   On-site responders coordinate people at the assembly point and take roll calls to update their status in the impacted people list.

5. Manage communication and responses

   The agent manages the response from the impacted people and communicates with them and the responders.

6. Close the critical event

   Once the situation is resolved, the agent resolves the critical event, creates Health and Safety incidents if needed, and then closes the event.

Critical Event Management benefits

Critical Event Management benefits

Benefit	Feature	Users
Efficiently manage critical events with the clear, step-by-step guide with a playbook.	CEM Playbook tab	Agent

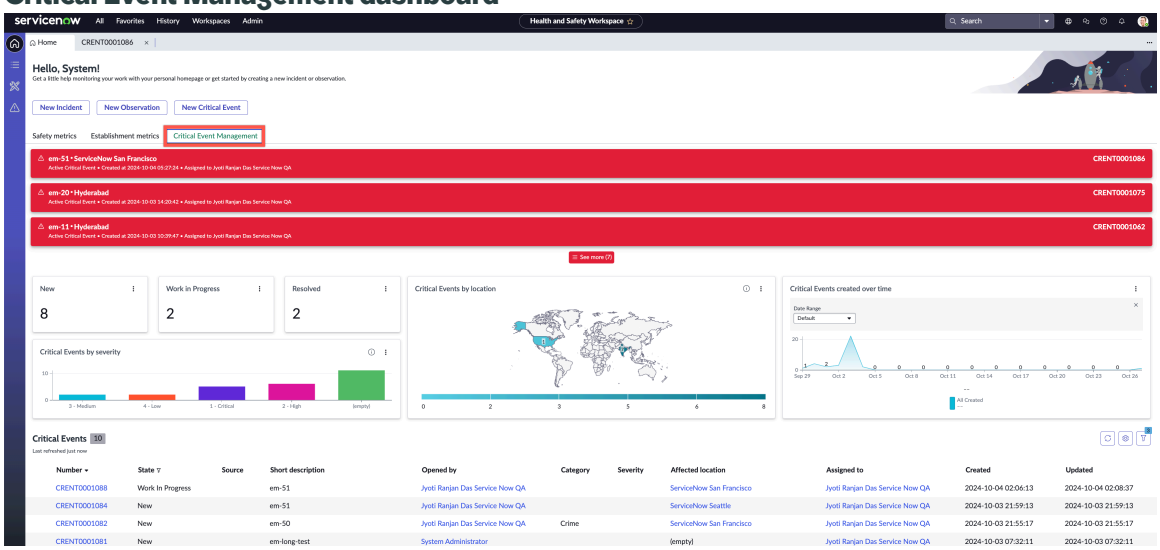
What to explore next



To learn more about configuring and using Critical Event Management, see:

- Configuring Critical Event Management
- Report a critical event as an agent
- Report a critical event as an employee
- Managing impacted people
- Sending notifications during a critical event
- Critical Event Management reference

Critical Event Management dashboard

The dashboard for Critical Event Management (CEM) in the Health and Safety Workspace gives a comprehensive view of all active, ongoing, and resolved critical events, enabling agents to monitor and manage incidents effectively.

Critical Event Management dashboard

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Critical Event Management dashboard provides a high-level summary of active and ongoing events, including quick-access metrics and links to Critical Event Management tools. The dashboard empowers agents to stay organized, prioritize effectively, and respond to incidents in a timely manner.

To view the Critical Event Management dashboard, navigate to **Workspaces** > **Health and Safety Workspace** and select Critical Event Management.

Key features of the dashboard

Feature	Description
Quick action buttons	Buttons that help you quickly initiate actions, such as creating an incident, observation, or critical event.
Active Critical Events	List of active critical events with key details like location, event ID, creation time, and the assigned agent, which helps prioritize urgent events for immediate action.
Event status overview	Number of critical events by their status, such as New, Work in Progress, and Resolved, helping you quickly assess workload and progress.
Critical Events by severity	Bar chart that displays events by severity level, such as Low, Medium, High, and Critical, which helps when prioritizing your response.
Critical Events by location	Map view of critical events by location, which helps identify geographic patterns and areas requiring immediate attention.
Critical Events created over time	Timeline graph that tracks the number of critical events created over time, helping you monitor trends and potential increases in incidents over specific periods.
Critical Events list	Table of all recent critical events with sortable details, including event number, state, source, short description, category, severity, location, assigned agent, and timestamps for event creation and updates.

Benefits of the dashboard

Benefits	Description
Real time monitoring	View and manage critical events in real-time to promote swift responses.
Prioritization	Sort events by severity, location, and status to focus on the most urgent issues.
Trend analysis	Track trends over time to manage and help prevent future incidents.

CEM Critical event record

You can use the Critical Event Management application to create a critical event record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Each tab in a critical event record provides specific functions to support the critical event's life cycle, from initial assessment to resolution and follow-up.

CEM Playbook tab

The **Playbook** tab in Critical Event Management (CEM) provides an agent a step-by-step guide for managing critical events. It tracks tasks across different phases and confirms that all necessary actions are completed.

A playbook serves as a starting point for customers to set up processes tailored to their specific needs.

The **Playbook** tab has the following phases:

- In the Triage Playbook you can:
  - Review the incoming submission to identify and confirm the critical event.
  - Connect the critical event to an existing parent record if it's directly related or part of a larger situation.
  - Assign the critical event to appropriate responders to promote timely action.
- In the Generic Playbook you can:
  - Evaluate the details of the critical event to determine the necessary actions.
  - Monitor that all event details are accurate and current.
  - Coordinate communications with responders and affected individuals, send initial updates and follow-ups as needed.
  - Confirm the statuses of all potentially impacted individuals to account for everyone.
  - Create incident records if needed or review the list of incidents generated.

CEM Notification center tab

On a critical event record, the **Notification center** has preformatted communication templates that agents can send to impacted people and on-site responders during critical situations.

The notification center serves as a centralized hub for creating, viewing, and managing communications during an ongoing or new critical event. This feature is used to send mass notifications or to coordinate directly with on-site responders or employees.

When you navigate to the notification center tab for a new critical event, you can start a new communication task by selecting the **Create new communication** button. For more information, see Create a communication task.

You can compose an email for mass notification by using the available email templates or editing the email body to suit your specific need. The email templates promote consistency and save time. For more information on email templates, see CEM email templates.

Example use case

For a scenario where you want to notify on-site responders to start a roll call at the affected location of the critical event:

- Use Activate on-site responders in the short description field when creating the communication task.
- Use the Roll-call start template to help responders receive a clear and actionable notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

CEM Impacted people tab

In Critical Event Management (CEM), agents can view a list and update the status of impacted people in a critical event.

Tracking the status of people during a critical event is important for their safety and well-being. This feature helps responders and agents to coordinate effectively, prioritize assistance where it's needed most, and maintain a clear communication. By monitoring the status of impacted individuals, organizations can minimize harm, provide timely support, and maintain accountability in managing the critical event.

When a critical event occurs, a list of people impacted by the event automatically populates for that location. On-site responders can only view the impacted people assigned to their specific location. To learn more about configuring the impacted people list, see Location hierarchy and child locations.

If you're an agent, you can access the list of impacted people on the **Impacted people** tab of a critical event record. To learn how to generate this list for new critical events, see Generate impacted people list.

On the record of an impacted person, you can view the person's information, such as status and emergency number. For more information on how to view an impacted person's record, see View an impacted person record. To compare the possible statuses, see Impacted people status.

A critical event might occur when there are visitors at the critical event location. You can manually add and track the status of people who wouldn't generate automatically in the list of impacted people. To learn how to add someone to the list manually, see Add a person manually to the impacted people list.

CEM Related records tab

In Critical Event Management (CEM), the **Related records** tab enables agents to view and manage critical event tasks, Health and Safety incidents, child critical events, and any sent notifications linked to the current critical event.

You can find the **Related records** tab in any critical event record. The tab contains the following sections:

- Critical event tasks

  You can create and manage critical event tasks. Each task represents a specific response or activity required to reduce the impact of the event. You can track the progress of each task, prioritize responses, maintain accountability for each task, and coordinate better as all critical events are listed in one place.

- Health and Safety incidents

  The agent groups with required roles can Create a Health and Safety incident in Critical Event Management.

- Child critical events

  When multiple people report the same critical event, you can mark the duplicate entries as child events to the main parent event. For details on how to create a child critical event, see Relate a child critical event.

- Sent notifications

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Review any notification that you have sent for a critical event to track and verify communication related to the critical event, including who received the notification, what the notification said, and when the notification was sent. To learn how to view the sent notifications, see View sent notifications for a critical event.

Critical event portal

On-site responders use the critical event portal in Critical Event Management to conduct roll calls, coordinate individuals to the assembly point, and gain a complete view of the emergency.

When a critical event occurs, the on-site responders receive an email from an agent notifying them about the emergency at their location. This email contains a link to log in to the critical event portal.

In the portal, you can view the active critical events where you're a member of the responder group for the location of the event. Select the **Show Details** button on an active critical event to conduct roll calls, account for the impacted people, and view emergency details.

- Conducting roll call

  You can view the list of impacted people in your location, manually add more people to the list, such as a visitor from another location, and set each person as **Needs Help** or **Accounted** using the three dot menu. For more details, see Conduct a roll call as an on-site responder.

- Emergency info panel

  The panel displays a summary of the emergency such as the state and severity of the event, the event category, the number of impacted people, and others.

When all impacted people in a critical event are accounted for, the on-site responder receives a notification from the agent to end the roll call.

On-site responders can use the critical event portal on a desktop, tablet, and mobile device.

Employee portal

All employees in an organization can access the Employee portal using the Critical Event Management application.

To access the employee portal, log in to the employee center and navigate to **Health and Safety** > **Workplace Emergency**. All employees are assigned the sn_critical.user role automatically. This role enables the employee to report an emergency and view emergency procedures.

To learn about reporting an emergency as an employee, see Report a critical event as an employee.

Emergency procedures

Employees can find critical information, including emergency plans, contacts, and guidelines, on the Policies and Procedures page in the Critical Event Management knowledge base.

The Policies and Procedures page includes the following sections:

- Emergency Plans

  The organization's plans and procedures in an emergency.

- Emergency Contacts

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A list of local emergency contact numbers, emergency response teams, and other important contacts to use during an emergency.

- Emergency submission guidelines

  Guidelines on when and how to submit an emergency request based on the organization's criteria.

Configuring Critical Event Management

As an admin you can customize the Critical Event Management application by installing the application and reviewing and configuring the components that are installed with the application.

Configuration overview

- Install Critical Event Management

  Install the Critical Event Management application.

- Configure Critical Event Management groups

  Create groups, add members to the group, and assign roles to the members.

- Define communication plans, tasks, and recipients

  Customize communication plans, create tasks, and add recipients.

- Configure Twilio to send SMS notifications

  Send communications using the SMS feature for Twilio.

- Configure Critical Event Management application properties

  Configure important details for the Critical Event Management application.

- Configure notification templates to send email

  Add or edit a notification template.

- Configure emergency procedures for employee portal

  Add knowledge articles about emergency procedures or edit existing ones.

Install Critical Event Management

You can install the Critical Event Management application with the admin role. If the demo data and related applications aren't installed by default, the application includes demo data to install them.

Before you begin

- Verify that the application and all of its associated applications have valid entitlements. For more information, see Get entitlement for a ServiceNow product or application.
- Review the Critical Event Management application listing in the ServiceNow® Store for information on dependencies, licensing, or subscription requirements.

Role required: admin

About this task

The following items are installed with Critical Event Management:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Plugins
- Store Applications
- Roles
- Tables

For more information, see Components installed with Critical Event Management.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Critical Event Management application using the filter criteria and search bar.
   You can search for the application by its name or ID. If you can't find the application, you might have to request it from the ServiceNow Store.
3. Select a version from the list and select **Install**.
   In the Install dialog box that is displayed, any dependencies that are installed along with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Select **Install**.

Location hierarchy and child locations

The list of impacted people is populated based on the selected location and includes individuals from any child locations in the Location [cmn_location] table hierarchy.

The Location table supports a hierarchical parent-child structure, so child locations are nested under primary parent locations. Each child location can also have its own child locations.

When a critical event is assigned to a parent location, the system automatically includes all individuals associated with that location and any child locations. For example, selecting USA as the parent location (Location1) would include child locations such as California (Location2).

To configure, see Define a location hierarchy

Configure Critical Event Management groups

Create groups and assign roles to individuals in the group.

Before you begin
Role required: admin

About this task
Admins can create agent groups, add members to these groups, and add roles to these members.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create Agent and On-site Responder Groups:

  Set up agent or assignment groups and on-site responder groups based on your organization's requirements.

- Assign Roles to Group Members:

  Add members to these groups and assign appropriate roles for their responsibilities.

- Map On-site Responder Groups to Locations:

  A CEM admin can map each on-site responder group to a specific location to promote accurate assignment during critical events.

After you configure group-to-location mapping, the responder groups are automatically populated based on the critical event's location.

Procedure

1. Navigate to **All** > **System Security** > **User and groups** > **Groups**.
2. Create a new group by selecting **New**.
3. In the form, fill in the fields.

Groups form

Field	Description
Name	Name of the group being created.
Manager	Individual responsible for overseeing the group.
Group email	Email address associated with the group.
Parent	Parent group if applicable.
Description	Additional information about the purpose and scope of this group.

4. Select **Submit**.
5. Open the new group and add members and roles for the members.

Note:
Assign the following roles to agent groups to enable them to create Health and Safety incidents through Critical Event Management:

- sn_ohs_im.incident_reader
- sn_ohs_im.incident_writer
- sn_ohs_im.incident_create

Add members to the group

Add members to the group mapped to a location.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Security** > **User and groups** > **Groups**.
2. Open the relevant group to add members.
3. Select the **Group members** tab.
4. Select **New**.
5. On the form, fill in the fields and select **Submit**.

> **Note:**
> For more information to fill a new member form, see New member form.

Add roles to a member

Add roles to a member of the group mapped to a location.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Security** > **User and groups** > **Groups**.
2. Open the relevant group and select a member from the **Groups** tab.
3. Select **Edit** in the **Roles** tab.
4. Select the appropriate role from the list of roles.
5. Select > to add the role to the member.

Add roles to the group

Add roles to groups that are mapped to a location.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Security** > **User and groups** > **Groups**.
2. Open the relevant group.
3. Select **Edit** in the **Roles** tab.
4. Select the appropriate role from the list of roles.
5. Select > to add the role to the group.

Map on-site responder group with location

Map the on-site responder groups with the location, enabling these groups to be automatically populated when the location is selected in a new critical event.

Before you begin
Role required: admin or sn_critical.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > *Health and Safety* > *Critical Event Management* > **Responder Group mapping**, to view the list of the on-site responder groups.
2. Select **New** to add a new on-site responder group.
3. Select the group and location and select **Submit** to configure the group and map it with the entered location.
4. Alternatively, select the Critical Event Management list view.
5. Navigate to **On-site Responder Mapping** > **All** to view the list of on-site groups mapped with their location.
6. Select **New** to add on-site responder groups and their location.
7. Select **Save**.

Define communication plans, tasks, and recipients

Define the communication plan, tasks, and recipients that help the agent create a communication task to send out mass notifications.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Health and Safety** > **Critical Event Management** > **Communication Plan Definition**.
2. Add a communication plan by selecting **New** or edit an existing communication plan.
3. On the form, fill in the fields.
   For more information, see Communication plan form.
4. Select **Submit**.

Note:

- You can add tasks and recipient list to the communication plan based on your organizational needs.
- To learn more about a communication plan and its process, see Task Communications Management process.

Configure Twilio to send SMS notifications

To enable the SMS feature for sending notifications, configure the Twilio telephony service.

To use SMS in addition to email as a communication channel, configure Twilio for SMS. For more information on configuring Twilio, see Configure Notify with Twilio.

Note:

- The system uses employee information from the organization's [sys_user] table to pull contact numbers.
- Enable Twilio Notify bulk SMS.

Configure Critical Event Management application properties

Configure the application properties for Critical Event Management (CEM) to access the map feature on the dashboard and to. set the maximum contacts for Email and SMS according to organizational needs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Health and Safety** > **Critical Event Management** > **Properties**.
2. Set the number of active critical event cards to be displayed on the dashboard.
3. Set the value for the number of contacts to send Email.
   The value can be customized according to need. The maximum contacts the Email can be sent to is 4000.
4. Set the value for the number of contacts to send SMS.
   The value can be customized as needed. The maximum contacts the SMS can be sent to is 10,000.
5. In the Google Map Component Properties section, select the **Enable Geo Map feature** check box.

   Note:
   This configuration is available only when the Geo map application is installed.

6. Add either a client id or an API key:
   - To add a client id, obtain a client id from Google and enter it in the **Client ID from google to access Geo map** field.
   - To add an API key, obtain an API key from Google and enter it in the **Api key from Google to access Geo map** field.

   For more information, see Set up Google Maps API.
7. Select **Save**.

Configure notification templates to send email

Configure notification templates that agents can use to compose and send emails during a critical event.

Before you begin
Role required: email_client_admin

Procedure

1. Navigate to **All** > **Email Client** > **Email Client Templates**.
2. Select **New** to add an email template or edit an existing email template.
3. Fill the form and draft the content for the template. For more information on email templates, see Email templates.
4. Select **Submit**.

Configure emergency procedures for employee portal

Configure the knowledge articles that appear in the Policies and Procedure section of the Workplace Emergency page.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. To learn about the different ways to add knowledge articles, see Create a knowledge article.

   Note:
   Articles for Emergency plans, Emergency contacts, and Emergency submission guidelines are available with the application. You can also edit these knowledge articles as needed for customization and publish.

2. To edit the knowledge articles, see Edit a knowledge article.

Reporting critical events

Report a critical event as an agent or an employee, and self-report your status as an employee.

- Report a critical event as an agent

  Create a critical event as an agent and notify impacted people and on-site responders about the emergency.

- Report a critical event as an employee

  Create a critical event as an employee or user.

- Self-report your status

  Self-report as an employee during an emergency and inform about your safety status.

Report a critical event as an agent

Create a ticket to report a critical event in Critical Event Management as an agent when an emergency alarm is raised offline.

Before you begin
Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace**.
2. Select the **New Critical Event** button.
3. On the Critical Event form, fill out the fields.
   For a description of the field values, see Critical Event form.
4. Select **Save**.

Using a critical event playbook

A critical event playbook in Critical Event Management provides a step-by-step guide to help you manage a critical event from initiation to resolution.

Before you begin
Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety** and select the **New Critical Event** button.
2. On the Critical Event form, fill in the fields and select **Save**.
   For a description of the field values, see Critical Event form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Open the critical event and select the **Playbook** tab.
4. Complete the Triage section.
   a. On the **Review submission** task, review the record details, update the fields as needed, and select **Mark complete**.
   The playbook redirects you to the next task automatically.
   b. **Optional:** If the critical event is related to a larger existing critical event, select that critical event from the list and then select **Link to this parent**.
   If the critical event is the only one for active emergency, select **Skip** instead.
   c. On the Assign critical event form, fill out the fields and select **Move to Work in Progress**.
   d. Mark the event as active by selecting **Activate Critical Event**.
5. Complete the generic playbook section.
   a. Select **Access critical event** under the **Work in progress** section of the playbook.
   b. Choose the **Mark Complete** button or **Skip** button to move to the next task on the playbook.
   c. Complete the **Review and update the critical event information** task as needed, then select **Mark Complete** to proceed.
   d. Select **Compose** on an initial-communication template or select **Go to Notification center** to compose an ad-hoc communication for the impacted people.
   For more details on sending ad-hoc communication, see Create a communication task
   e. Choose the **Activate on-site responder** template and send communication to on-site responders, to inform them of the ongoing event.
   f. Close the sent communication notification and select **Mark Complete** in the **Playbook** tab to proceed to **Conduct roll call** step.
   View the cumulative count of **Total impacted**, **Need help**, **Unknown**, and **Accounted people** individuals.
   g. Select **View Impacted People** to access the list of impacted people and update their status if needed.
   h. Select **Mark Complete** to move to the next step.
   i. Select **Resolve Critical Event** when the described actions are completed and the emergency is resolved.
   j. In the **Post critical event** section, select the appropriate **Closure code** and add notes if necessary.
   k. Select **Close Critical Event** to complete the guided steps in the playbook.

Report a critical event as an employee

Create a ticket to report a critical event in Critical Event Management as an employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_critical.user

Procedure

1. Log in to the Employee Center.
2. Navigate to **Health and Safety** > **Workplace Emergency**.
3. Select **Report Emergency**.
4. In the form, fill in the fields,

Report an emergency form

Field	Description
What happened?	Describe the nature of the emergency or incident.
Where did it happen?	Select the specific location of the incident from predefined options.
...or describe location	Describe the location if the drop down options are not sufficient or applicable.
Additional Information	(Optional). Provide supplementary details, context, or clarification about the incident or emergency.

5. Choose to submit the report immediately or later.
   - To submit the report immediately, select **Submit**.
   - To save the report to change and submit later, select **Save as Draft**.

Self-report your status

Self-report your status as an employee in a critical event through the email or SMS notification that you receive from an agent or responder.

Before you begin
Role required: sn_critical.user

Procedure

Open the email or SMS notification and respond.
You can also enter any additional information about the critical event that you want to send. It's recorded as a note from you in your record that agents can view.

View emergency procedures

View the emergency procedures as an employee by logging in to the employee portal.

Before you begin
Role required: sn_critical.user

Procedure

1. Log in to the employee center.
2. Navigate to **Health and Safety** > **Workplace Emergency**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **Policies and Procedures**.
4. Choose which of the emergency procedures to view:
   - To view what to do in case of an emergency at your organization, select the Emergency Plan page.
   - To view who to contact in case of an emergency, select the Emergency Contacts page.
   - To view when and how to submit an emergency request, select the Emergency submission guidelines page.

   For more information on the types of emergency procedures, see Employee portal.

Sending notifications during a critical event

Send critical event notification to impacted people and on-site responders in Critical Event Management to inform them of the situation and request their response.

Before you begin

The critical event state must be set to **Active** to populate the notification templates.

Role required: sn_critical.agent

About this task

Use the existing notification templates to send messages to impacted people and on-site responders. The templates are preset by the admin.

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Notification center** tab.
4. In the tile for the relevant communication, select the **Compose** button.
   You can manage the communication recipients and the communication record by selecting the More actions icon ( ).

   For more information on managing recipients, see Manage the recipients of a communication task.
5. Edit the message in the template as needed.
6. Select **Send**.

Create a communication task

Create an on-demand, customized message for a critical event in Critical Event Management, choose how often to send it, and select the communication channels.

Before you begin

Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Notification center** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select the **Create new communication** button.
5. In the Communication form, fill in the fields.
   For a description of the field values, see Communication form.
6. Select **Compose communication**.

Result

If you chose **Now** from the **Compose and send communication** field on the Communication form, then a new tab opens so you can choose a template and compose your message. If you chose **Later**, then you're redirected back to the **Notification center** tab.

Note:
You must compose the message before you can send the communication. For more information on composing an existing communication task, see Sending notifications during a critical event.

Manage the recipients of a communication task

Add or edit the list of recipients for various communication tasks.

Before you begin

Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Notification center** tab and then select the **Manage recipients** button.
4. In the **Communication plan** drop-down menu, select the communication task for which you want to manage recipients.
5. In the form, fill in the fields.

Manage recipients form

Field	Description
Add recipient	User, group, or recipient list who receives the communication task.
Designate role	Role that is assigned the user, group, or recipient listed in the **Add recipient** field.
Audience	List of potentially impacted people or important people who receives the communication task.

6. Select **Save**.

Note:
You can also open the Manage recipients form by selecting the More actions icon (⋮) on the communication task.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Managing impacted people

Generate and manage an impacted people list,view an impacted person's record, and update their status in Critical Event Management.

Generate impacted people list

Generate an impacted people list for a critical event in Critical Event Management. The impacted people list is used to account for every individual in the critical event location.

Before you begin

Role required: sn_critical.agent

About this task

Employees are mapped to their workspace location. The employee list is automatically generated according to the location added in the critical event ticket.

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select **New Critical Event**.
   You can also select an existing critical event in the *Critical Event Management* tab.
2. In the Critical Event form, fill out the fields.
   For a description of the field values, see Critical Event form.
3. Select **Save**.
4. Select the **Impacted people** tab.
5. Select the **Load Impacted People** button.
   The list of impacted people is extracted based on the location. To add people manually, see Add a person manually to the impacted people list.

Add a person manually to the impacted people list

Manually add people to the impacted people list who may have visited the critical event location. Adding people help account for visitors, as their names won't be automatically generated in the impacted people list.

Before you begin

Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Impacted people** tab.
4. Select **Add Person**.
5. In the Add Impacted People pop-up, enter the person's name and select the **+** icon.
6. Select the status of the person.
   For details on impacted people status, see Impacted people status.
7. Enter any relevant notes.
8. Select **Save**.

Export an impacted people list

Export an impacted people list as a PDF, CSV, JSON, or Microsoft Excel file in Critical Event Management and either download or email the file.

Before you begin
Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Impacted people** tab.
4. Select the **Export** button.
5. In the File Type drop-down list, choose your desired file format for the exported list.
   The file format options are the following:
   - Excel
   - CSV
   - JSON
   - PDF
6. In the Delivery Type drop-down list, choose where to send the exported file.
   - To download the file to your device, select **Download**.
   - To send the file via email, select **Email**.
7. If you chose to send the file to an email address, then in the **Email** field, enter the email address.
   The **Email** field only appears after selecting **Email** from the drop-down list.
8. Select **Export**.

View an impacted person record

View and track the status of an impacted person's record as an agent in Critical Event Management.

Before you begin
Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Impacted people** tab.
4. Select the individual from the **Total Impacted** list to view that person's record.
   The record shows the following information:
   - Phone number
   - Email
   - Critical event number
   - Name

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- State of the emergency
- Job title
- Last date and time the person responded
- Location of the critical event
- Status
- Manager
- Present on Site
- Notes

The record also shows the activity stream and notifications.

Mark the status of impacted people as an agent

Take attendance of the impacted people in Critical Event Management and request help if needed.

Before you begin

Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Impacted people** tab.
4. On the Total Impacted list, select the check box for the relevant individual.
5. Double-click (or use the keyboard shortcut) the field in the Status column for that impacted person.
6. In the Status drop-down list, select the appropriate status.
   For more information on the different statuses for impacted people, see Impacted people status.
7. Update the status of multiple individuals by selecting multiple check boxes and then selecting the **Accounted** button or selecting the Accounted - More Actions icon and choosing a different status.

View notifications received

View the list of notifications received for an impacted person in Critical Event Management.

Before you begin

Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Impacted people** tab.
4. Select an individual from the **Total Impacted** list.
5. Select the **Notifications** tab.
   This tab shows the communication sent to and received from the impacted person.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Conduct a roll call as an on-site responder

Mark the status of the impacted people in a critical event in the responder portal. You can also manually add more impacted people in the list.

Before you begin
Role required: sn_critical.responder

Procedure

1. Log in to the responder portal through the email sent by an agent.
2. On the critical event, select **Show Details**.
3. Mark the status of the impacted people.
4. If you must undo or change the status of an individual, select either the **Accounted** tab or the **Need Help** tab and find the individual.
   - To undo the status and mark the individual as **Unknown**, clear the check mark ( ).
   - To change the status, select the More actions icon ( ) and select the desire status.
5. If you must add an impacted person manually, select the **Add Person** button.

Managing related records in a critical event

Manage the related records in the **Related records** Related Item of a critical event in Critical Event Management. Related records include other critical event tasks, Health and Safety incidents, child critical events, and sent notifications.

Create a Health and Safety incident in Critical Event Management

Report a Health and Safety incident through the **Related records** Related Item in Critical Event Management.

Before you begin
Role required: sn_ohs_im.incident_reader, sn_ohs_im.incident_writer, and sn_ohs_im.incident_create

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Related records** Related Item.
4. Select *Health and Safety* **incidents**.
5. If you want to populate any existing Health and Safety incidents, select the **Add** button, select the check box next to one or more incidents, and select **Add**.
6. Create a Health and Safety incident by selecting **New**.
   The record opens in a new record tab.
7. Complete the **Report an incident** playbook.

Relate a child critical event

Mark duplicate or related critical events as child events and link them under the main, parent event.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Related records** Related Item.
4. Select **Critical child event**.
5. Select the **Add** button.
   A list of open critical events appears.
6. Select one or more critical events that were created for the same emergency situation as the parent critical event.
7. Mark the critical events as duplicate by selecting **Add**.
   Alternatively, on a child event record, you can link it to a parent record by entering a record number in the **Parent** field.
   The status of the child event is set to **Consolidated**. When you open this child event, the **Details** Related Item displays the parent critical event in the record view.

View sent notifications for a critical event

View all notifications sent for a critical event in the **Related records** Related Item in Critical Event Management.

Before you begin
Role required: sn_critical.agent

Procedure

1. Navigate to **Workspaces** > **Health and Safety Workspace** and select the **Critical Event Management** tab.
2. Open the critical event.
3. Select the **Related records** tab.
4. Select the **Sent notification** tab.

Critical Event Management reference

Reference topics offer additional information about the lists and forms that you use to configure and operate the Critical Event Management application.

Components installed with Critical Event Management

Several types of components are installed with the Critical Event Management application, including tables and user roles.

Store applications installed

Store apps installed with Health and Safety Risk Management

Store application	Description
Health and Safety Core	Installs core data model for Health and Safety. This data model includes common

Store apps installed with Health and Safety Risk Management (continued)

Store application	Description
	components such as Health and Safety user profile and actions that are used in the Health and Safety applications. For more information on store applications, roles, and tables installed with Health and Safety Core, see Components installed with Health and Safety Core.
Workplace Core [sn_wsd_core]	Enables workplace locations for Health and Safety applications. **Important:** The application installation doesn't install the location demo data for the Workplace Core location model. As a workaround, repair the Workplace Core plugin with the **Load demo data** option.

Roles installed

Roles installed with Critical Event Management

Role title [name]	Description	Contains roles
Critical event admin [sn_critical.admin]	Administrator role. Configures the Critical Event Management application properties.	• sn_critical.agent • sn_critical.responder • sn_comm_management.comm_plan_admin • sn_critical.user • sn_critical.manager
Critical event agent [sn_critical.agent]	Works on critical event records from initiation to resolution.	• sn_comm_management.comm_plan_manager • task_editor • canvas_user • sn_ohs_im.workspace_user • sn_critical.read
Critical event manager [sn_critical.manager]	Oversees all critical events and guides agents and responders to resolve them.	sn_critical.agent
Critical event reader [sn_critical.read]	Has read-only access to critical event records.	sn_comm_management.comm_plan_viewer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Critical Event Management (continued)

Role title [name]	Description	Contains roles
On-site responder [sn_critical.responder]	Assists on-site personnel during critical events.	sn_critical.read
Critical event user [sn_critical.user]	Reports emergency as an employee.	None

Tables installed

Tables installed with Critical Event Management

Table	Description
Critical event communication plan [sn_critical_comm_plan]	Stores information about detailed communication strategies during critical events. This table is an extension to the Communication Plan [comm_plan] table.
Critical event communication task [sn_critical_comm_task]	Tracks individual tasks related to the communication plan for critical events. This table is an extension to the Communication Task [comm_task] table.
Critical event [sn_critical_event]	Contains records of critical events. This table is an extension to the Task [task] table.
Impacted people [sn_critical_impacted_people]	Lists individuals impacted by critical events.
On-site responder mapping [sn_critical_on_site_responder_mapping]	Maps responders to on-site locations during critical events.
Critical event task [sn_critical_task]	Stores tasks related to Critical Event Management. This table is an extension to the Task [task] table.

Plugins installed

Plugins installed with Critical Event Management

Plugins	Description
Notify [com.snc.notify]	Provides the ability to set SMS preferences to receive messages from different providers.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugins installed with Critical Event Management (continued)

Plugins	Description
Task Communication Management [com.snc.task_communication_management]	• Activates the base system. • Includes demo data and activates related plugins if they aren't already active.

Store applications installed

Store applications installed with Critical Event Management

Store applications	Description
Health and Safety	Allows you to report Health and Safety incidents.
Task Communications Management UI Components for Configurable Workspace	Stores bundle of UI components required to leverage Task Communications Management core capabilities in workspaces.

Optional applications

Optional applications for additional features in Critical Event Management

Application	Description
Geo Map component sn_geo_map	Enables the map component on the Critical Event Management dashboard.

Critical Event form

Field descriptions on the form for a critical event. It includes the Critical Event form section and the Closure form section.

Critical Event form

Field	Description
Critical Event form section	
Number	Critical event number.
Category	Type of critical event.
Severity	Severity level for the critical event.
Source	Pre-populated with the user who reports the critical event.
Affected location	Location of the critical event.
Opened by	User who created the form.
Additional reporters	Reporter of the child event associated with the parent event.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Critical Event form (continued)

Field	Description
On-site responder group	Responder group from the list of user groups mapped to the location. Only assignment groups with the sn_critical_responder role appear.
Parent	Parent critical event number.
Assignment group	Assignment group of the critical event location. Groups containing individuals with the agent [sn_critical_agent] role appear on selecting this field. Select the correct assignment group.
Assigned to	Critical event agent that is assigned to the critical event.
Short description	Summary of the critical event.
Description	Detailed description of the critical event.
Closure form section	
Closure Code	Type of closure for the critical event. Types are the following: • Critical Event Resolved: Critical event has ended. • Non-Critical Event: Critical event was a false alarm or doesn't require a response.
Close notes	Comments about the critical event closure.

Impacted people status

Descriptions of the possible statues for impacted people.

Impacted people status

Status	Description
Unknown	Default status. No information is available about the impacted person.
Accounted	Impacted person is traced and confirmed safe.
Need Help	Impacted person is traced and needs medical attention or other assistance.

Communication form

Field descriptions on the form for a communication task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Communication form

Field	Description
Compose and send communication	Option to send the communication immediately or schedule it for later. **Note:** Scheduling the communication adds a timer to the communication based on the **Due in (minutes)** field, which prompts the agent to send it manually. It doesn't send automatically.
Frequency	How often the communication should be sent.
Short description	Summary of what the communication is about.
Due in (minutes)	Time in minutes before the communication should be sent. This field appears only when **Later** is selected from the **Compose and send communication** field or when both **Now** is selected from the **Compose and send communication** field and **Recurring** is selected from **Frequency**.
Channels	Channel to send the communication. For example, email or SMS.
Recipients	People who receive the communication.

Communication plan form

Field description to add a new communication plan.

Communication plan form

Field	Description
Name	Unique name for the communication plan.
Table	Table that the plan is attached to when the conditions are met.
Type	Type of communication plan, such as Technical, Internal, External, Customer.
Order	Order in which the communication plans must be associated with the table.
Condition based	Option to define whether the plan is attached to a table based on the conditions. For example, if you want to attach a communication plan to an incident of priority = 2, you can mention the condition in the Condition field.
Active	Option to define whether the plan definition is active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Communication plan form (continued)

Field	Description
Description	Detailed description of the plan definition.
Condition	Condition under which a communication plan gets attached to a table.

CEM email templates

Various email templates are available depending on the purpose of the communication, whether it's for employees, or on-site responders.

Critical Event Management email templates

Template name	Description
Roll-call End	Inform that the roll call for the current emergency is complete.
Default Template	Compose your own email when none of the predefined templates meet your needs.
Roll-call Start	Notify the on-site responder to start the roll call for the active emergency.
Follow-up	Send a reminder to the employees who haven't responded to confirm their safety status.
Emergency Start	Notify the employees of an ongoing emergency and request their safety status.
Update Communication	Inform employees or responders about any updates throughout the emergency situation.
End Emergency	Notify that the emergency has ended.

New member form

Field descriptions to add a new member to a group mapped to a location.

New member form

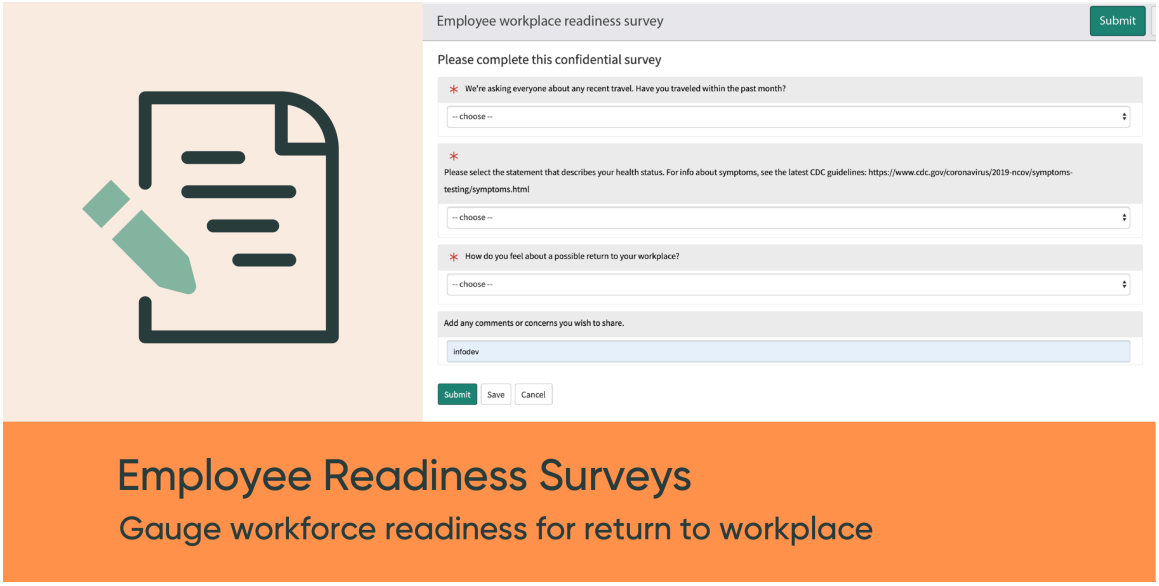
Field	Description
User ID	Unique identifier for the member.
First name	First name of the member.
Last name	Last name of the member.
Title	Member's job title. Search from predefined options.
Department	Department name to which the member belongs.
Password reset	Select this check box to require the member to change the password during the first login.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New member form (continued)

Field	Description
Locked out	Select this check box to lock the member out of the instance and terminate all their active sessions.
Active	Select this check box to make this member active.
Web service access only	Select this check box to designate this member as a non-interactive user.
Internal Integration User	Select this check box to designate this member as a service account.
Email	Member email address.
Language	Preferred language for the member.
Calendar integration	Choose the calendar integration option, such as outlook.
Time zone	Time zone in which the member is located.
Date format	Date format for the member's account.
Business phone	Member's business phone number.
Mobile phone	Member's mobile phone number
Photo	Attach a photo of the member, if appropriate.

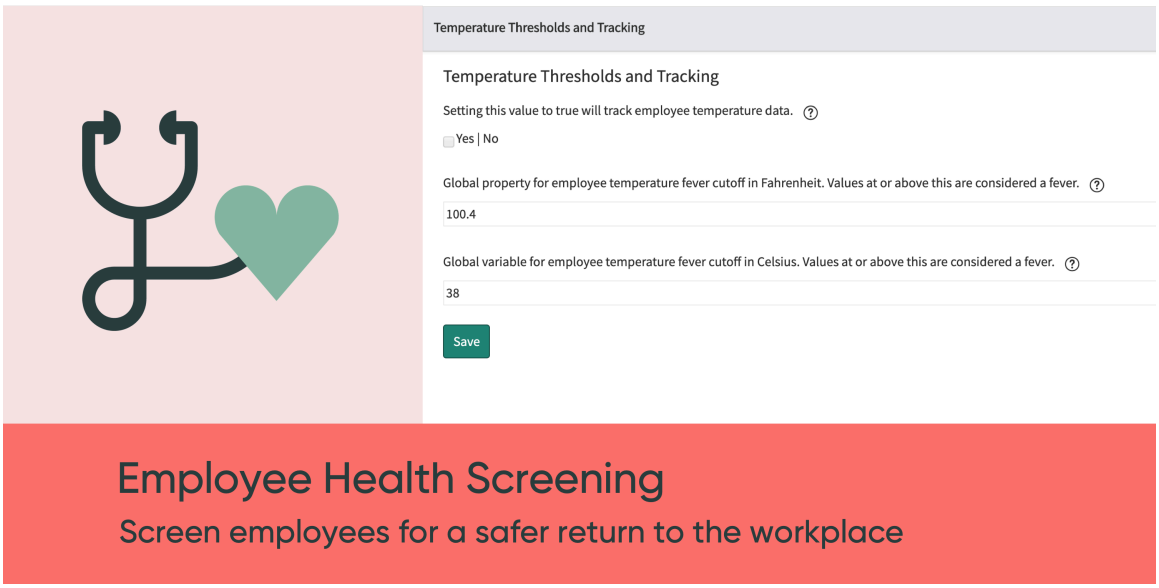
Safe Workplace



ServiceNow® Safe Workplace applications help you reopen your workplaces and support the health and safety of your employees after emergencies and pandemics like COVID-19.

Workforce readiness

Help employees return to the workplace when they're healthy and ready with the following Safe Workplace applications.

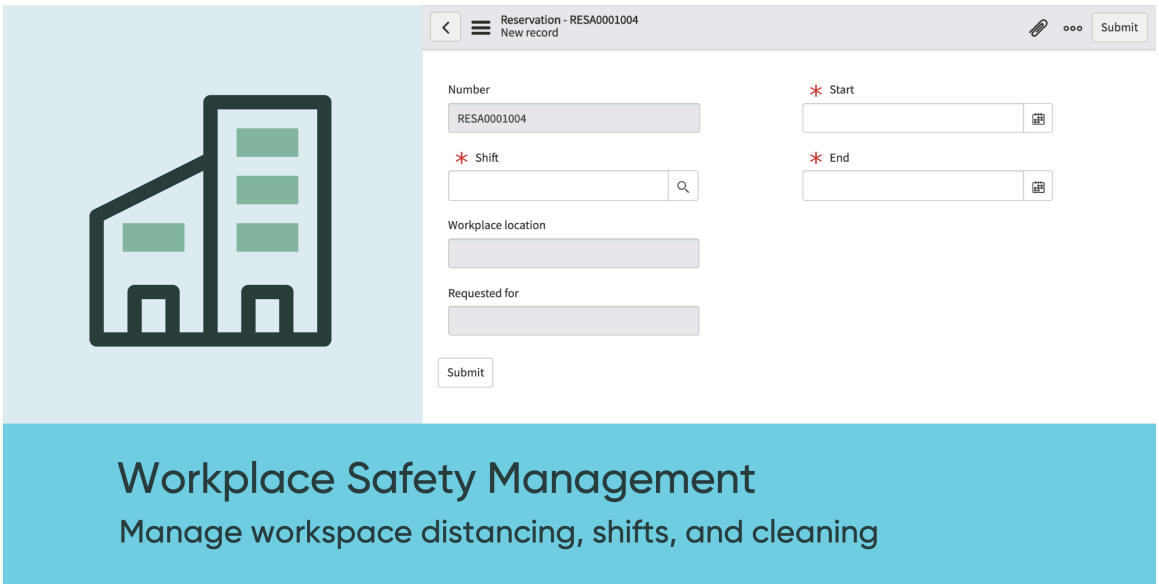


Employee Readiness Surveys

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

With the ServiceNow® Employee Readiness Surveys application, send surveys to help gauge whether users are ready to return to the workplace. Ask questions to get insights into how users feel about returning to work, their current health status, and underlying concerns such as personal health, family obligations, and anxiety about workplace safety. Based on responses, you can measure and determine the steps needed to help users feel safe and secure upon their return.

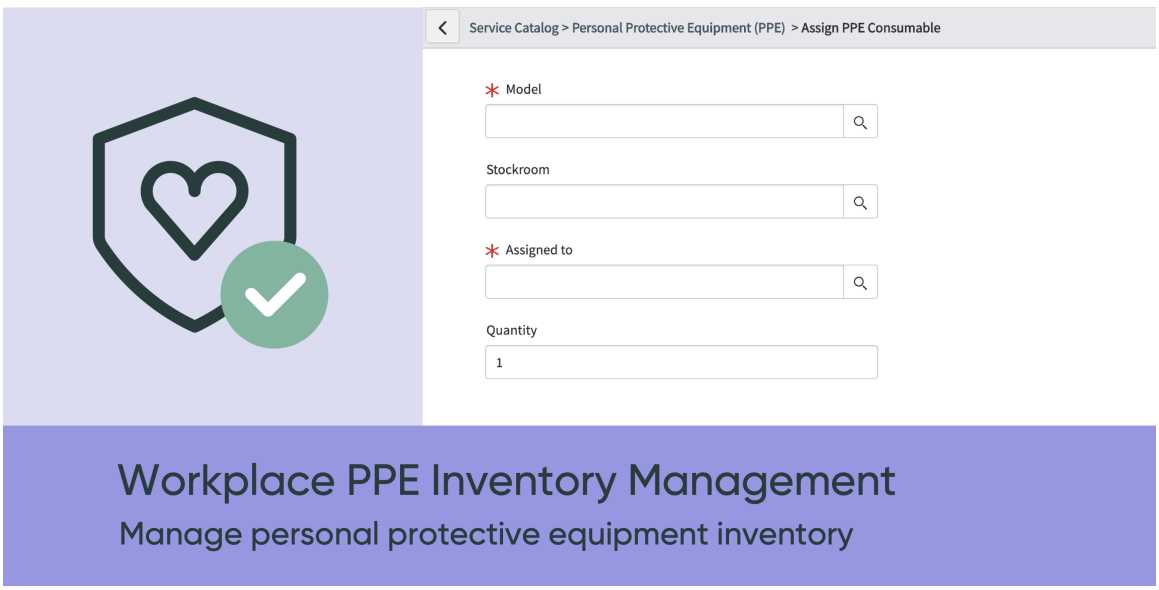
Employee Health Screening



The ServiceNow® Employee Health Screening application enables organizations to screen users before entering the workplace to ensure compliance with the organization's entry requirements, such as a temperature check and personal protective equipment (PPE). Based on their own criteria, organizations can determine whether it’s safe for the user to enter the workplace. Organizations can use a reporting dashboard#o view trends by sites and record the return of users into#heir #facilities.

Workplace readiness

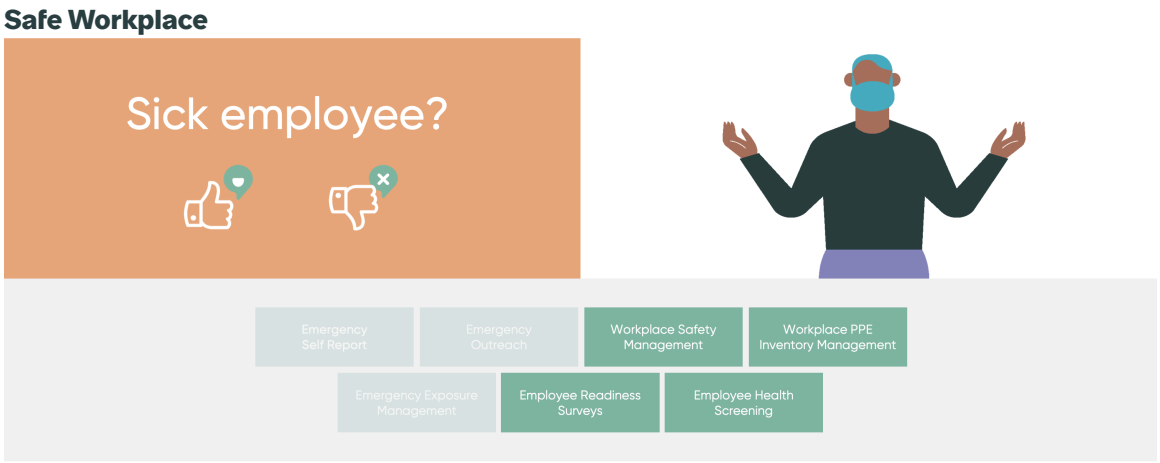
Prepare your workplace for the return of employees with the following Safe Workplace applications.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace Core

Using the ServiceNow® Workplace Core application, quickly configure sanitized and socially distanced workspaces for the return of users. With department leaders, workplace service managers can reserve available workspaces for users in shifts. Workspaces can be scheduled for disinfection before and after these shifts. Through reports and dashboards, workplace managers can view how many of the available workspaces have been reserved. Workplace managers also have a real-time view of all cleaning task statuses, including a full audit trail history.



Workplace Personal Protective Equipment Inventory Management

The ServiceNow® Workplace Personal Protective Equipment Inventory Management application helps you manage and monitor workplace needs for safety equipment provided to your workforce. A dashboard provides a comprehensive view of inventory by each facility, an aggregate scope of the entire workplace, and historical data on how equipment levels have changed over time. You can update current inventory levels daily for accurate and real-time inventory management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the Safe Workplace applications together to automate workflows for determining your employees' readiness and needs for returning to work, preparing sanitized and socially distanced workspaces, and managing the inventory of safety equipment for your workforce.

Use these apps together to support both scenarios:

Sick	Not sick
Check body temperature and ask sick employees to return home	Assign shifts, reserve workspaces, and issue PPE to healthy employees

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Notice regarding use by organizations

All decisions in connection with the implementation of this application are at the sole decision of the Organization utilizing this application. Organizations agree that use of the application is not a representation by ServiceNow regarding the application's compliance with any law or regulation and any suggested language provided out of the box with the application does not constitute legal advice by ServiceNow.

Organizations remain solely responsible for complying with their legal obligations under applicable law, including (but not limited to) data protection and employment laws, and should modify any language within the templates provided to meet the Organizations' specific requirements.

Notice regarding use by government agencies

ServiceNow is offering this application to government agencies and their authorized users, not to employees of government agencies in their individual capacities. Use of this application is being offered free of charge for a limited or extended time period and with no expectation of payment from the government agency to ServiceNow for use during that time period, nor does usage create an actual or implied future obligation on behalf of the government. ServiceNow hereby expressly waives any future claims for payment from the agency in connection with usage of the application. Government customers are solely responsible to confirm with the agency's Ethics Office or its authorized representative that acceptance and usage of the application is permissible.

All decisions in connection with the implementation of this application are at the sole decision of the government agency utilizing this application. Agencies remain solely responsible for complying with their legal obligations under applicable laws and regulations, including (but not limited to) data protection and employment laws and regulations, and should modify any language within the templates provided to meet the agency's specific requirements.

Employee Readiness Surveys

The ServiceNow® Employee Readiness Surveys application lets you evaluate the readiness of your workforce to return to the workplace by asking users to complete a survey.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Readiness Surveys is an application that you install to use with Emergency Outreach. For information about Emergency Outreach and how surveys are sent via outreach notifications, see Emergency Outreach.

After you install the application, the check-in administrator for Emergency Outreach can view and edit the survey questions to suit your needs. New surveys can be added, for example, to evaluate users in different regions or address other concerns.

The check-in administrator sends the surveys to targeted audiences using the Emergency Outreach notification methods.

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Use with other Safe Workplace suite applications

Employee Readiness Surveys is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

- Before users re-enter workspaces, use the Employee Health Screening application to screen users and ensure compliance with your entry requirements, such as a temperature check and PPE.
- With the Explore Workplace Core application, prepare for the return of users by configuring and maintaining clean and socially distanced workspaces for them to use.
- You can manage the inventory of safety equipment for your workforce with the Workplace Personal Protective Equipment Inventory Management application.

All Safe Workplace suite applications are available in the ServiceNow Store.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team. See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

Domain separation for the Employee Readiness Surveys application

Surveys are configured and managed through the Survey Management application on your ServiceNow instance. For information about how domain separation is supported, see Domain separation for Survey Management.

On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

About this task

The Send Outreach form in Emergency Outreach has an option to send a survey instead of a health status request. Users with the sn_imt_checkin.checkin_admin role become owners of the example health readiness survey.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Employee Readiness Surveys`.
3. Select **install**.

   The Application installation dialog box opens.
4. **Optional:** Load the demo data by selecting the **Load demo data**check box.

   (Optional) For information about how to install or reinstall demo data after the initial installation, see the Work around to install demo data if application is already installed [KB0722909] article in the Now Support Knowledge Base.
5. Select **install**.
6. When the installation is complete, select **Close**.

Result

Employee Readiness Surveys is installed on your instance. Use it by navigating to the Emergency Outreach app.

Configure Employee Readiness Surveys notifications

The administrator can add or modify Employee Readiness Surveys notifications. Users with the sn_imt_checkin.checkin_admin or survey_admin role can view the base system survey and copy it to make changes, or add a new survey.

Modify the Employee Readiness Surveys notification

Modify the Employee Readiness Surveys base system email notification.

Before you begin

Review the details about planning for, creating, and modifying system notifications by starting with Create an email notification.

Role required: admin

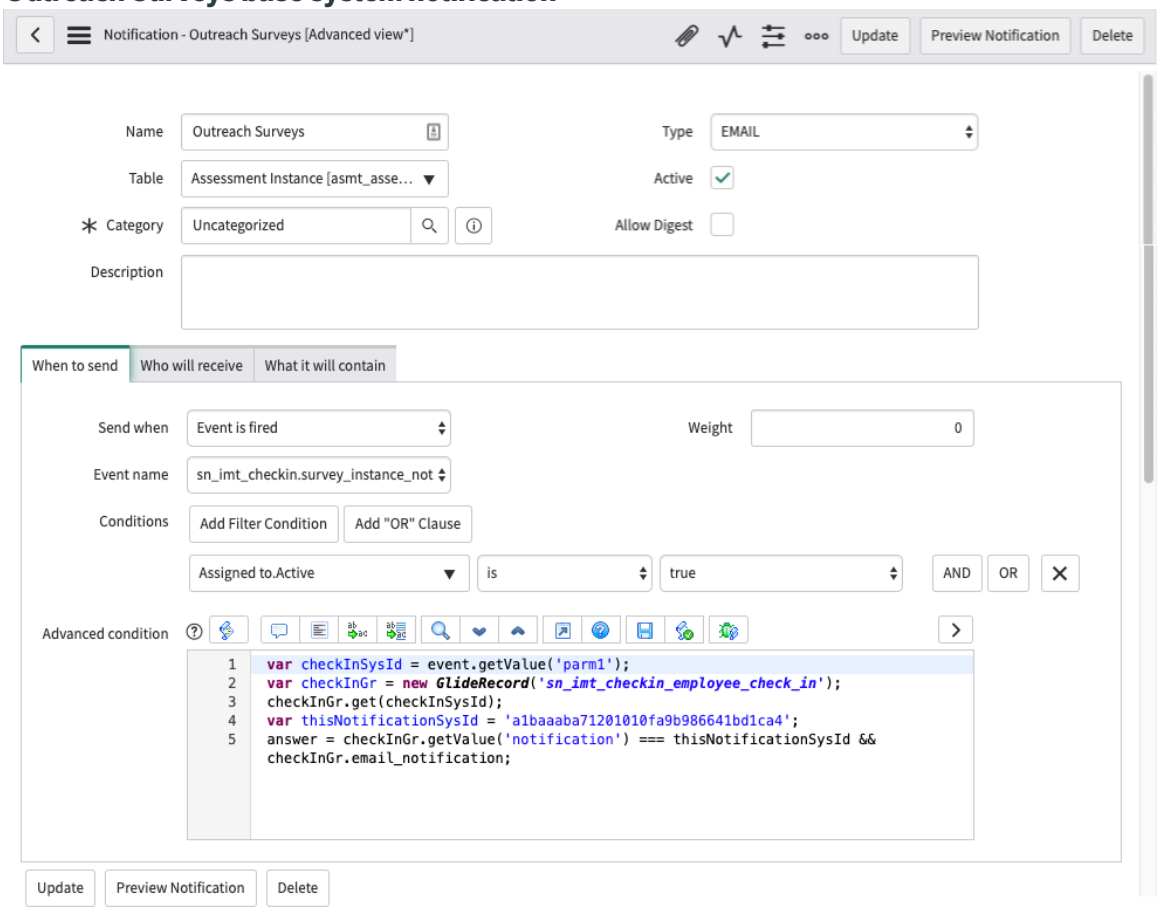
Procedure

1. Navigate to **All** > **Emergency Outreach** > **Send Outreach**, and then select the Content configuration tab.
2. In the **Response Mode** field, select **Survey**.
   The **Survey** field appears and the entry in the **Notification** field changes to **Outreach Surveys**.
3. Select the preview icon ( ) beside the **Notification** field, and then select **Open record**.
4. In the Notification form for this Outreach Surveys notification, modify the details as needed. Retain the default Assessment Instance [asmt_assessment_instance] table value.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Preview Notification** and verify your changes.
6. When you're finished, select **Update**.

Result
The modified notification is used for future Employee Readiness Surveys notifications.



Add an Employee Readiness Surveys email notification

Add a new Employee Readiness Surveys email notification to use in Emergency Outreach to send the survey link.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > **System Notifications** > **Email** > **Notifications**.
2. Review the existing **Outreach Surveys** email notification to familiarize yourself with the scripts and other settings.

Outreach Surveys base system notification

3. Select **New**.
4. In the **Table** field, select the Outreach Surveys [sn_imt_checkin_employee_check_in] table.
5. On the When to send tab, set the conditions.
   - Set the **Conditions** criteria as shown in the image of the base system notification.
   - Enter the *Advanced condition* script with the following change.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For this line: `var thisNotificationSysId = 'a1baaaba71201010fa9b986641bd1ca4';`

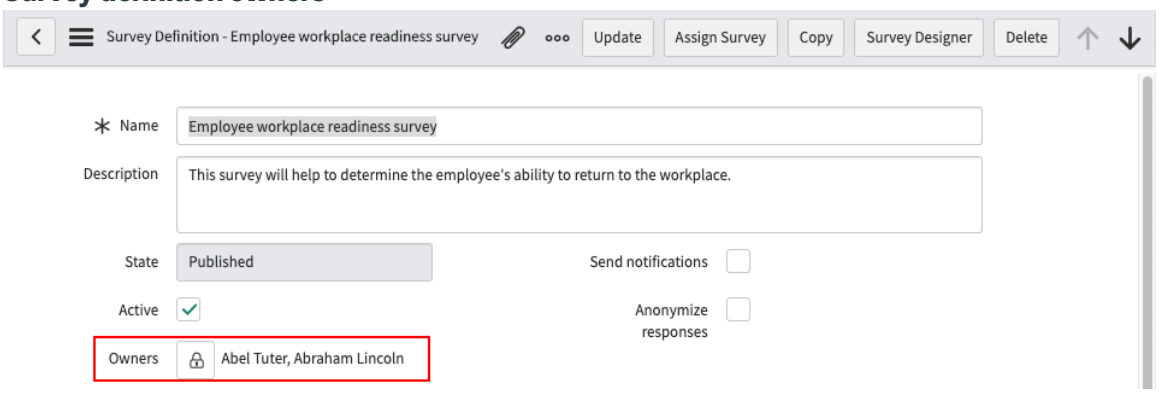
Replace the sys_id with the sys_id notification that you're adding. To get the sys_id, open the additional actions menu, and then select **Copy sys_id**.

6. On the Who will receive tab, open **Users/Groups in fields** and select **Assigned to**.
7. On the What it will contain tab, complete the remaining information.
8. Select **Submit**.
9. In the Notifications list, open the notification that you added and select **Preview Notification**.
10. Review the notification and make any necessary modifications.
11. Select **Update**.

Configure Employee Readiness Surveys

Review the default Employee workplace readiness survey installed with the Employee Readiness Surveys app. Modify the survey, or create one or more surveys to use based on the readiness concerns that you want to address and any legal obligations under applicable law, including data protection laws.

Before you begin

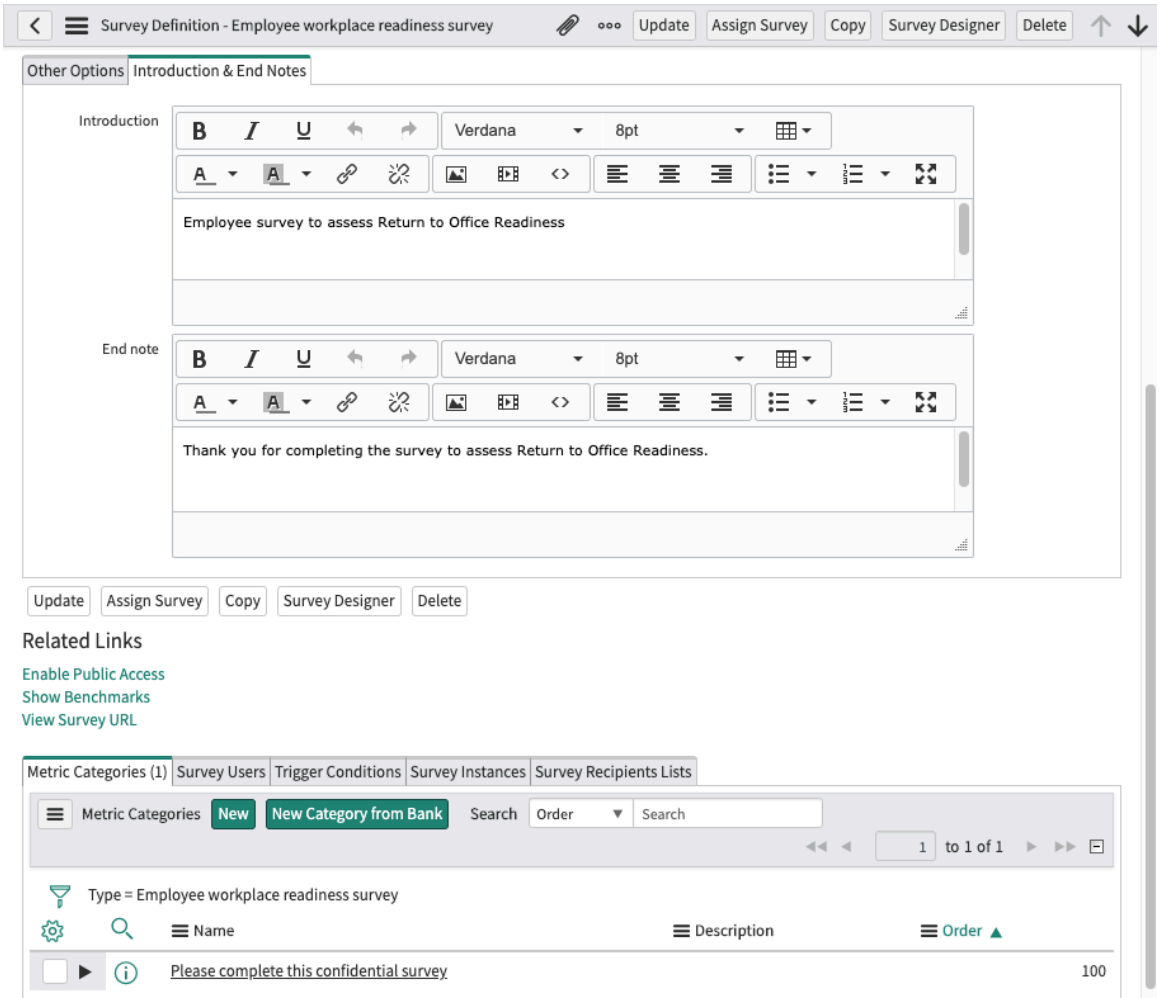


Familiarize yourself with Survey administration. Then meet with other emergency response team stakeholders to plan the changes to the survey. Decide whether to edit the existing survey before you send it to employees, or to create one or more new surveys.

Role required: sn_imt_checkin.checkin_admin, survey_creator, survey_admin, or admin

About this task

Users with the sn_imt_checkin.checkin_admin role have the survey_creator role, and are made owners of the default readiness survey. Users with the survey_creator role can edit or copy the default survey. These users can also add another readiness survey and add other users as owners to collaborate with them.



Survey definition owners

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Surveys** > **View Surveys** and open the **Employee workplace readiness survey**.

2. Using the plan that you made for changing the survey, update any of the following survey elements.

3. Complete any other changes to the survey options, and select **Update**.

Result

The modified survey is used for future outreach surveys.

Add Employee Readiness Surveys

Create one or more additional surveys to use for different workplaces or to evaluate other areas of concern. Start by planning the surveys carefully to gather the best data for your evaluation of readiness to return to the workplace.

Before you begin

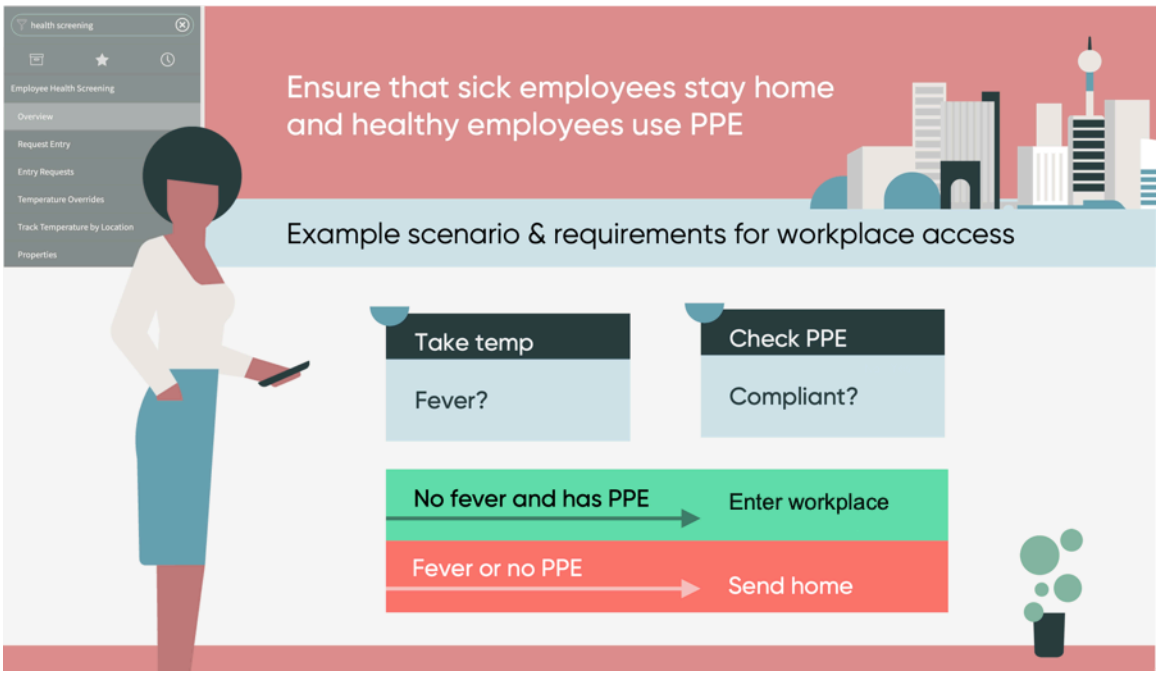
Role required: sn_imt_checkin.checkin_admin, survey_creator, survey_admin, or admin

About this task

Consider how you want to begin to reopen your workplace, and what you must understand about the employees before you can begin. Work with a user with the survey_admin role in your

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

company to plan the types of questions and responses for the survey. For information about adding surveys, see Survey administration and Survey designer.



Procedure

- To create a survey, navigate to **Surveys** > **View Surveys**.
- Select **New** or **Survey Designer** and enter the information to complete the survey from the plan that you made.
  Decide on a naming convention to use for surveys, so that a user with the sn_imt_checkin.checkin_admin role knows which one to select when sending outreach surveys. For example, **Readiness survey India** or **Customer service employees return readiness**.

Employee Health Screening

Screen users before entering the workplace to ensure compliance with the organization's entry requirements, such as a temperature check and PPE. Require that users agree to comply with health and safety policies before they return to the workplace.

The ServiceNow® Employee Health Screening application enables organizations to screen users before entering the workplace to ensure compliance with the organization's entry requirements, such as a temperature check and personal protective equipment (PPE). Based on their own criteria, organizations can determine whether it's safe for the user to enter the workplace. Organizations can use a reporting dashboard#to view trends by sites and record the return of users into#their #facilities.

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integrate with Customer Service Management

Use ServiceNow® Customer Service Management and Employee Health Screening together to provide consumers and contacts with access to a health verification form on your Consumer or Customer Service Portals. Conduct health screenings for consumers and contacts before they can be granted entry to a location. For more information about using Customer Service Management with Employee Health Screening, see Integrate Customer Service Management with Safe Workplace applications.

Use with other Safe Workplace suite applications

Employee Health Screening is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

- With the Employee Readiness Surveys application, evaluate the readiness of your users to return to the workplace by asking them to fill in a survey.
- With the Emergency Outreach application, notify employees of important information about anticipated or occurring emergency situations. Send an outreach notification via email, mobile push message, or SMS message to request an employee response. You can also configure other preferred communication channels.
- With the Explore Workplace Core application, prepare for the return of users by configuring and maintaining clean and socially distanced workspaces for them to use.
- You can manage the inventory of safety equipment for your workforce with the Workplace Personal Protective Equipment Inventory Management application.

All Safe Workplace suite applications are available in the ServiceNow Store.

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Notice regarding use by government agencies

ServiceNow is offering this application to government agencies and their authorized users, not to employees of government agencies in their individual capacities. Use of this application is being offered free of charge for a limited or extended time period and with no expectation of payment from the government agency to ServiceNow for use during that time period, nor does usage create an actual or implied future obligation on behalf of the government. ServiceNow hereby expressly waives any future claims for payment from the agency in connection with usage of the application. Government customers are solely responsible to confirm with the agency's Ethics Office or its authorized representative that acceptance and usage of the application is permissible.

All decisions in connection with the implementation of this application are at the sole decision of the government agency utilizing this application. Agencies remain solely responsible for complying with their legal obligations under applicable laws and regulations, including (but not limited to) data protection and employment laws and regulations, and should modify any language within the templates provided to meet the agency's specific requirements.

Install Employee Health Screening

You can install the Employee Health Screening application if you have the admin role. This application includes demo data and installs the related store applications and plugins if they are not already installed.

Before you begin

Ensure that the application and all of its associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search field.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   If your application requires other applications, install them first if they are not already installed.

   Installing your application also automatically installs the dependent applications or plugins if they are not installed already.

5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.
   Some applications include demo data, which are sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Note:
   If you don't load the demo data for a store application during installation, it's not available to load later.

6. Click **Install**.

Components installed with Employee Health Screening

Roles and tables are installed with the Employee Health Screening application.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles installed

Role title [name]	Description	Contains roles
Health monitor [sn_imt_monitoring.monitoring_user]	Use the health screening page to record returning	• report_user • sn_imt_core.reader

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role title [name]	Description	Contains roles
	employee details. View employee health and safety status.	
Health monitor administrator [sn_imt_monitoring.monitoring_admin]	Configure properties and temperature overrides and view the dashboard.	• report_user • sn_imt_monitoring.monitoring_user

Tables installed

Table	Description
Request for Entry [sn_imt_monitoring_request_for_entry]	Results of employee health screening events. If the *sn_imt_monitoring.auto_create_request* property is enabled, the table also includes results from health monitors looking up an employee's health and safety status. For results from a health screening, the **Source** field is set to **Health screen**. For results from a status lookup, the **Source** field is set to **Auto-checkin**.
Location Override [sn_imt_monitoring_temperature_override]	Locations where temperature thresholds for employees are different from the system property threshold.
Employee Health Verification [sn_imt_monitoring_health_verification]	All health verifications submitted by employees.
Visitor Request For Entry [sn_imt_monitoring_visitor_request_for_entry]	Results of visitor health screening events.
Visitor Location Override [sn_imt_monitoring_visitor_temperature_override]	Locations where temperature thresholds for visitors are different from the system property threshold.
Information Messages [sn_imt_monitoring_information_message]	Messages provided to specific types of users (determined by their audience) when they attempt to enter a location.

Configure Employee Health Screening

Set properties to specify the global maximum temperature thresholds in Fahrenheit and Celsius. Temperatures taken during a health screening are compared to the global temperature threshold, established by the company, to allow or deny entry.

Another property lets you decide whether to generate QR codes when a health verification is submitted. You can also determine whether to store temperature readings within the application, and establish overrides by location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add an email notification and configure an outreach notification for the daily health verification. Send the outreach notification on demand or as scheduled to employees before they return to the workplace. For more information, see Send notifications for daily health verification.

Set up Employee Health Screening properties

Decide whether you store temperatures recorded during screening events. Also set the maximum temperature threshold to use to determine whether it is safe for employees or visitors to enter the workplace.

Before you begin

Role required: sn_imt_monitoring.monitoring_admin or admin

About this task

Employers remain solely responsible for complying with their legal obligations under applicable law, including data protection laws on collection, use, disclosure, and retention of personal data, and should enable, choose not to enable, or customize any functionality available within the application to meet the Employers' specific requirements.

Procedure

1. Navigate to **All** > **Employee Health Screening** > **Properties**.
2. Set the following property values.

Property	Description
Clear health verification daily sn_imt_monitoring.clear_health_verification_daily	If the **Yes/No** check box is selec the **Response** field on health verification records is reset to **N** every day at the specified time. the Employee Health Verificatio Requirement is active, the empl requirement status is reset to **N** **Cleared**. This property is not enabled by default.
Time to reset health verifications sn_imt_monitoring.time_to_reset_health_verifications	Sets the time when health verifi responses are reset to **No** each The reset uses the local time fo each user. For example, if you e 17 : 00 : 00, a user in Seattle ha verification reset at 5:00pm Pac time and a user in Boston has th verification reset at 5:00pm Eas time. The default time is midnight.
Limit health verification submissions to once per day. [sn_imt_monitoring.limit_health_verification_submission]	If the **Yes/No** check box is selec each employee can only submit health verification once per day **Yes/No** check box is cleared, th is no limit on the number of time day that an employee can subm health verification.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. To define overrides for employees, navigate to **Employee Health Screening** > **Location Overrides**. To define overrides for visitors, navigate to **Employee Health Screening** > **Visitor Location Overrides**.
2. Click **New**.
3. On the form, fill in the fields.

Location Override form

Field	Description
Location	The location to set a different maximum temperature threshold.
Track temperature	Option that indicates whether temperature data is stored when screened at this location.
Track PPE	Option that indicates whether PPE compliance is stored when screened at this location.
Show QR Code **Note:** This field is not used for visitors.	Option that indicates whether to generate a QR code when an employee health verification is submitted.
Unit	Temperature measuring unit.
Temperature	Employees or visitors must be at or below this temperature to be considered okay to enter the workplace.

4. Click **Submit**.

Modify the employee health verification page

The Employee Health Screening application provides an employee health verification that is ready to use. However, you can modify the verification if you want to change the criteria that employees must agree to.

Before you begin

Role required: catalog_admin

Procedure

1. Navigate to **All** > **Service Catalog** > **Catalog Definitions** > **Maintain Items**.
2. Click the Health verification catalog item.
3. In the **Description** field, update the criteria that employees must agree to.
4. Click **Update**.

Modify visitor notification emails

The Employee Health Screening application provides visitor notifications that are ready to use. However, you can modify the notifications if you want to customize them for your company.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The Employee Health Screening application uses the following visitor notifications.

Visitor notifications

Notification	Description
Notify about scheduled visit	When the *sn_imt_core.send_email_to_visitor* property is enabled, this email is sent to the visitor when an employee invites them to the workplace. The email is sent immediately after the employee submits the invitation. The email contains a brief confirmation of the scheduled visit, including information about the date of the visit and the name of the employee who invited them. This notification is installed with the Employee Readiness Core application.
Ask for health related data from visitor	This email is sent to the visitor before their scheduled visit. The *sn_imt_core.days_to_ask_for_health_data* property sets when the email is sent. The email contains information about safety requirements and policies that the visitor must agree to follow. The visitor must respond `Yes` to the email to complete the Visitor Invitation Requirement from Employee Health and Safety Status. **Note:** To ensure that a visitor's requirement status is updated when the visitor responds to this email, set the *glide.user.trusted_domain* property to the default value (*). For more information, see **Note:** Inbound mail configuration. If you need to perform filtering on inbound emails, see Email filters. This notification is installed with the Employee Readiness Core application.
Visitor Invitation Criteria Met	This email is sent to the visitor, the employee who invited them, and anyone on the watch list on the invitation. It is sent after the visitor responds `Yes` to the health data email. This email confirms the upcoming visit.
Visitor Invitation Criteria Not Met	This email is sent to the visitor, the employee who invited them, and anyone on the watch list on the invitation. It is sent after the visitor responds `No` to the health data email. This email asks the visitor to reschedule their visit.

For more information about the properties used to configure the email notifications, see Set up Employee Health and Safety Status properties.

Procedure

1. Navigate to **All** > **System Notification** > **Email** > **Notifications**.
2. Click the visitor notification that you want to update.
3. In the What it will contain form section, edit the **Message HTML** field to customize the notification email.
4. To verify your changes, click **Preview Notification**.
5. Click **Update**.

Add message for users during health screening

Add an optional custom message for people to read during their health screenings with additional information or guidelines.

Before you begin
Role required: sn_imt_monitoring.monitoring_admin

Procedure

1. Navigate to **All** > **Employee Health Screening** > **Information Message**.
2. Click **New**.
3. Enter a name for the message in the **Name** field.
4. Select the users you want to receive the message in the **Audience** field.

   Example
   For example, you might have a message or guidelines specifically for users who work in the IT department.
5. Provide the text for the message in the **Message** field.

   Example
   For example, you might want to advise users to remain in a certain location in the building.
6. Click **Submit**.

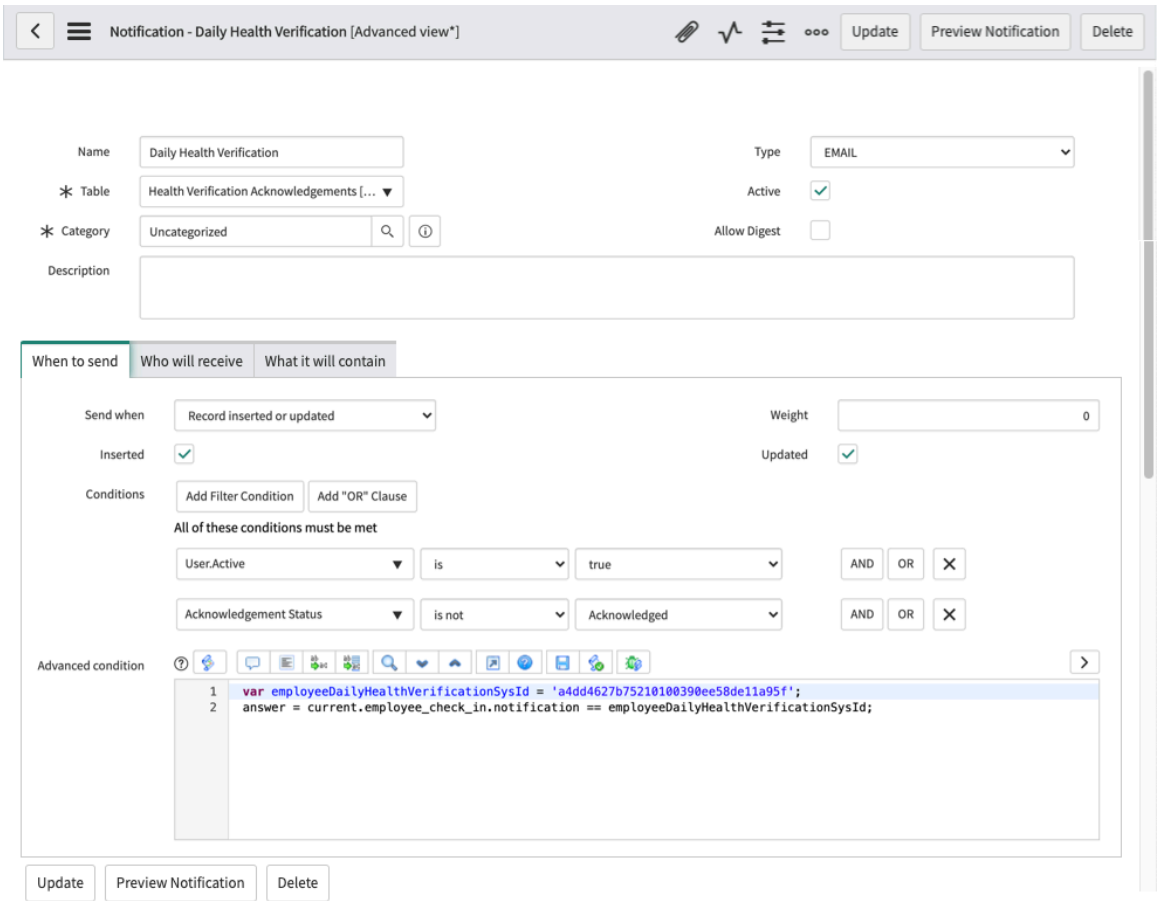
Result
Users in the selected audience will see this message when they complete their health screening.

Add an email notification for daily health verification

Add an Employee Readiness Surveys email notification to use for sending the survey link.

Before you begin
Role required: admin

Procedure



1. Navigate to **All** > **System Notifications** > **Email** > **Notifications**.
2. Review the existing **Daily Health Verification** email notification to familiarize yourself with the scripts and other settings.
3. Select **New**.
4. In the **Table** field, select the Health Verification Acknowledgements [sn_imt_checkin_health_verification_acknowledgement] table.
5. On the When to send tab, set the conditions.
   - In the **Send when** field, select **Record inserted or updated** from the drop-down list.
   - Set the **Conditions** criteria to **[User.Active][is][true]** and **[Acknowledgment Status][is not] [Acknowledged].**.
   - In the *Advanced condition* script, enter the following code:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
var employeeDailyHealthVerificationSysId = <your-sys_id>
answer = current.employee_check_in.notification =
 employeeDailyHealthVerificationSysId;
```

Replace the <your-sys_id> variable with the sys_id notification that you're adding by opening the additional actions menu, selecting **Copy sys_id**, and pasting the sys_id into the code line.

The following figure shows example settings for the Daily Health Verification base system notification.

6. On the Who will receive tab, open **Users/Groups in fields** and select **Assigned to**.
7. On the What it will contain tab, complete the remaining information.
8. Select **Submit**.
9. In the Notifications list, open the notification that you added and select **Preview Notification**.
10. Review the notification and make any necessary modifications.
11. Select **Update**.

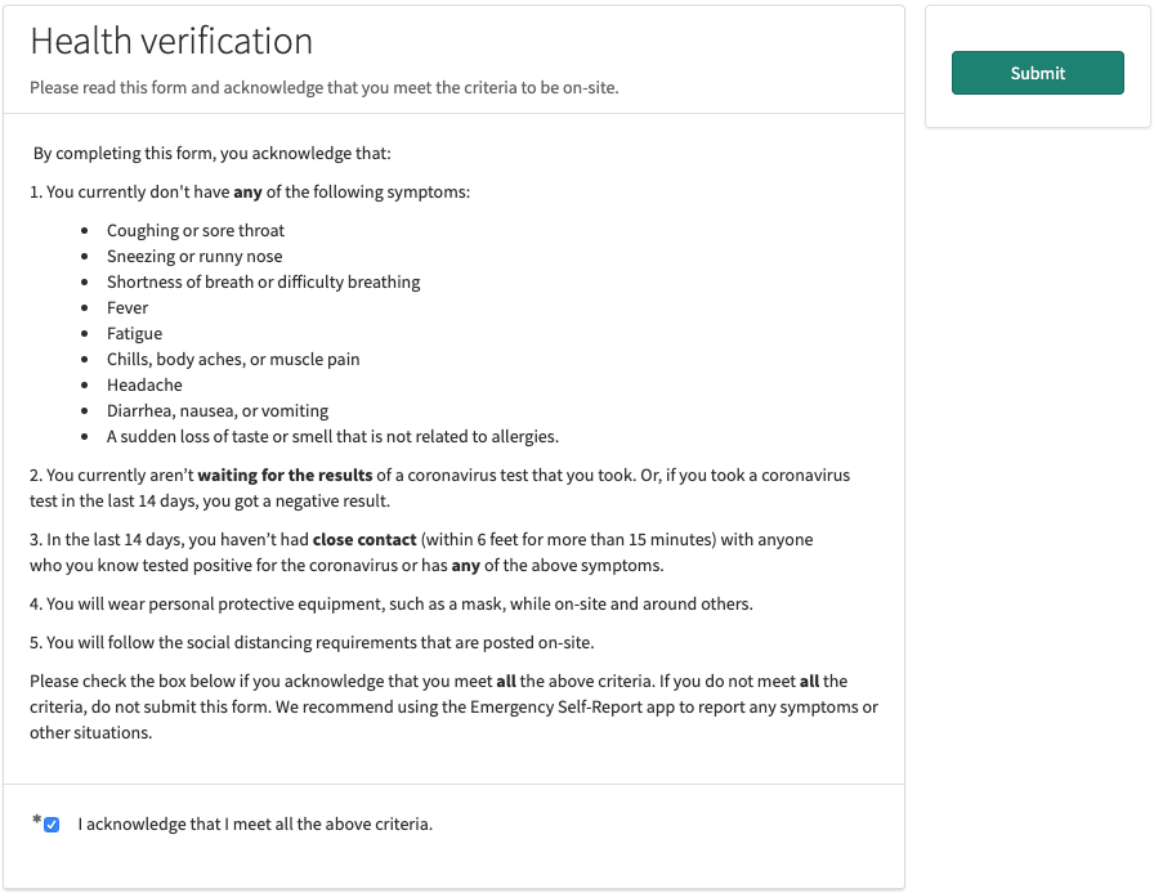
Verify your health status and compliance

Verify that you understand and will comply with your organization's safety requirements and policies before you can be allowed entry to the location.

Before you begin
Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



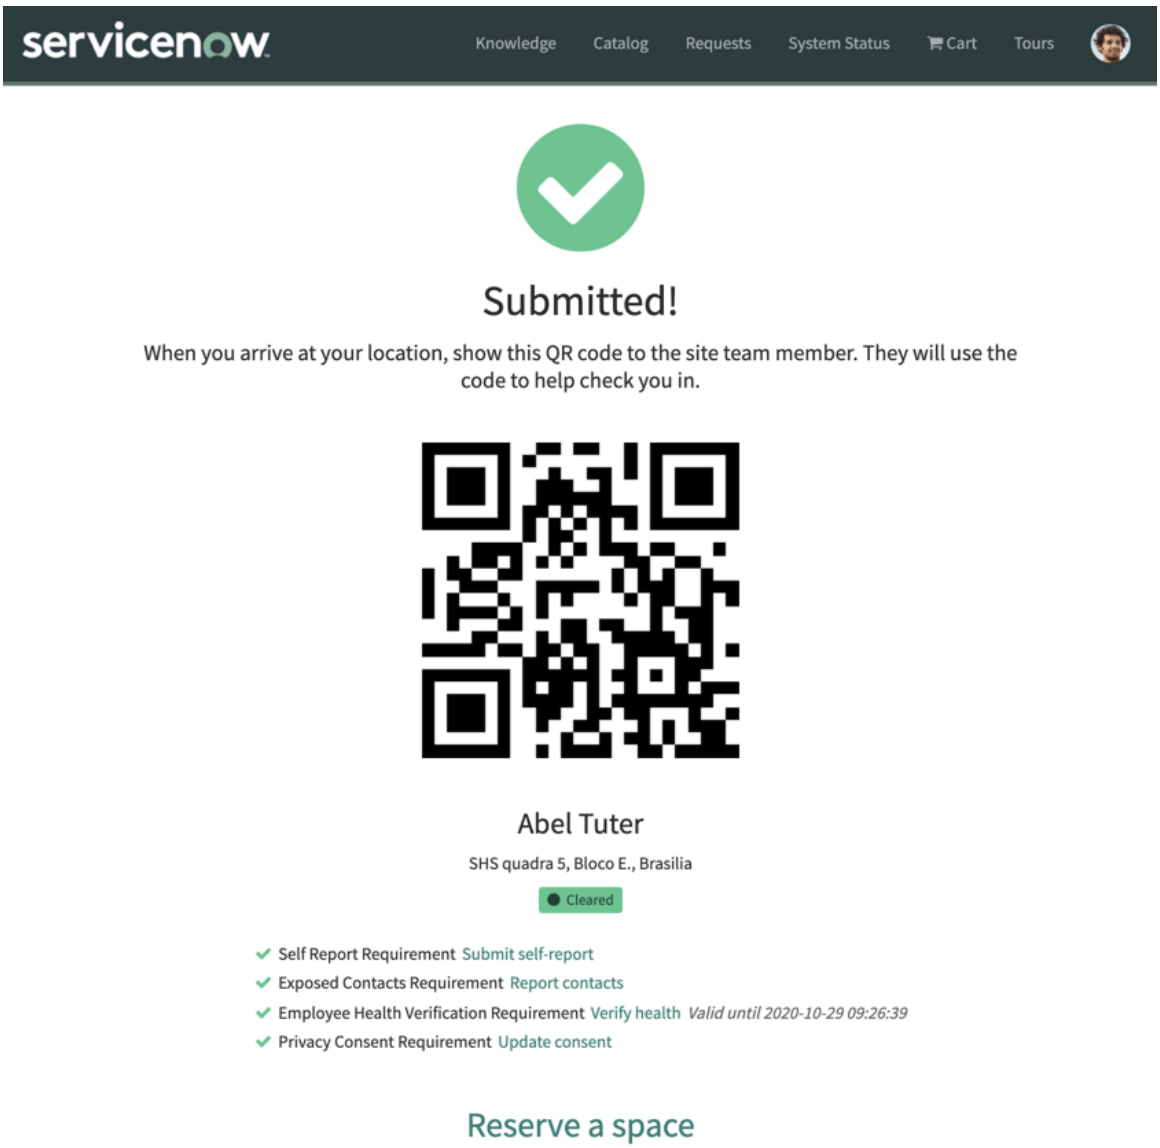
Typically, you receive an email or a mobile notification from your organization with a link to the health verification form.

Note:
If the ServiceNow® Customer Service Management application is activated, consumers and contacts can access the health verification form on the Consumer or Customer Service Portals. To set up the health verification form on the portals, allow external users access to "Health Verification" catalog item (KB0856301). For more information about using Customer Service Management with Employee Health Screening, see Integrate Customer Service Management with Safe Workplace applications.

Procedure

1. Navigate to the health verification form.
   - Click the link provided by your organization.
   - In your organization's ServiceNow instance, navigate to **Employee Health Screening** > **Health Verification**.
   - In the Now Mobile app, navigate to **Health** > **Follow these safety practices** > **Verify my health**.

Health verification form



2. Carefully read the form and evaluate whether you can honestly answer that you agree.
3. Take one of the following actions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Option	Description
If you agree to all statements	Select the **I acknowledge that I meet all the above criteria** check box.
If you can't agree to one or more of the state ments	Exit the form without submitting it.

Confirmation screen

The confirmation screen shows your status for all of your organization's entry requirements. A large green check mark at the top of the page indicates that you've completed all requirements. To complete any unfulfilled requirements, click the link next to the requirement. Some requirements may not have a link. If you need help with completing the requirements, contact your organization.

Note:
If your organization does not use QR codes, the confirmation screen does not display the instructions or the QR code.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** If you're returning to an office and need to reserve a workspace, click **Reserve a space**.
   The link enables you to reserve a space for a specific day. If you want to reserve a space for a longer period of time, you must request it separately and wait for the request to be approved. For more information about reserving a workspace, see Making workplace reservations.

   Note:
   Reserving a workspace requires the sn_wsd_core.workplace_user role. If you do not see the link to reserve a space, contact your system administrator.

What to do next

Your organization may have health monitors at entrances to check that you completed the entry requirements or to conduct a health screening before entry. If you received a QR code when you submitted the health verification, navigate to **Health** > **Prepare for arrival** > **My office entry code** in the Now Mobile app to show your QR code to the health monitor when you arrive at the location.

Conduct a health screen for entry

Use a health screen to verify a person's return requirement status to determine whether the person is able to enter the location.

Before you begin

Role required: sn_imt_monitoring.monitoring_user

About this task

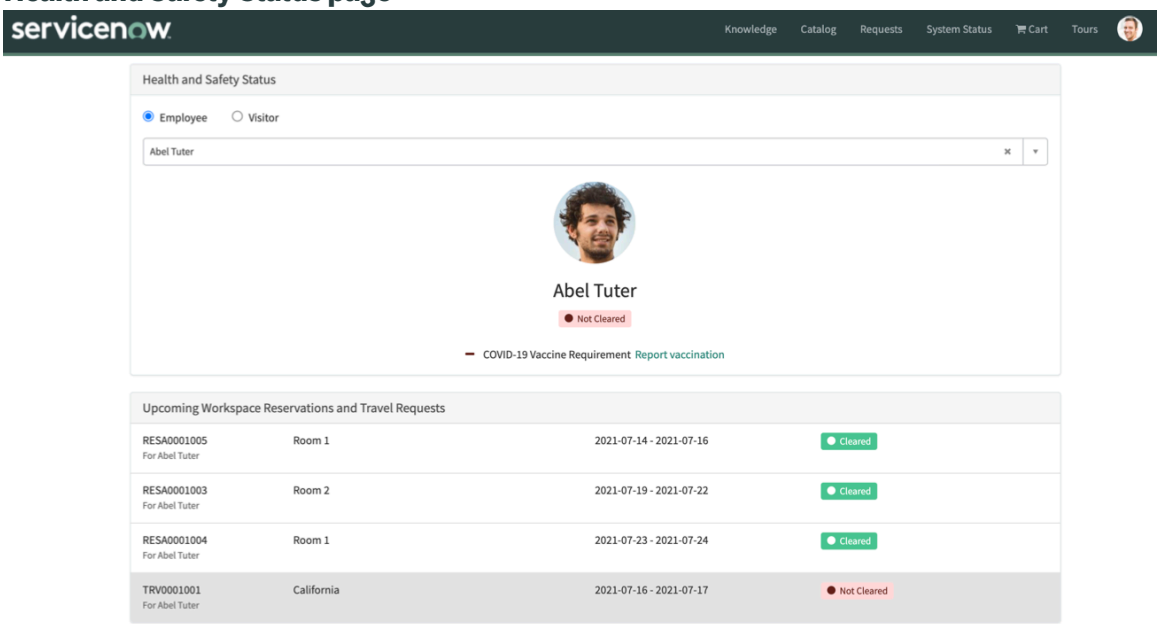
Conduct a health screen before people enter a location, such as employees returning to the workplace or students returning to campus. Verify the person's return requirement status on your smartphone, tablet, or computer. Then complete and submit a health screening form to determine whether the person is able to enter the location.

The following procedure includes the steps your organization might use in setting up health screening. Some of the steps might not be applicable to your location.

Note:
If the ServiceNow® Customer Service Management (CSM) application is activated, the health screen can be performed for CSM consumers and contacts. The customer service agent [sn_customerservice_agent] and consumer service agent [sn_customerservice.consumer_agent] roles can optionally be given to health screeners so that they can view additional CSM information on the health screening form, but these roles are not required for screening consumers and contacts. For more information about using Customer Service Management with Employee Health Screening, see Integrate Customer Service Management with Safe Workplace applications.

Procedure

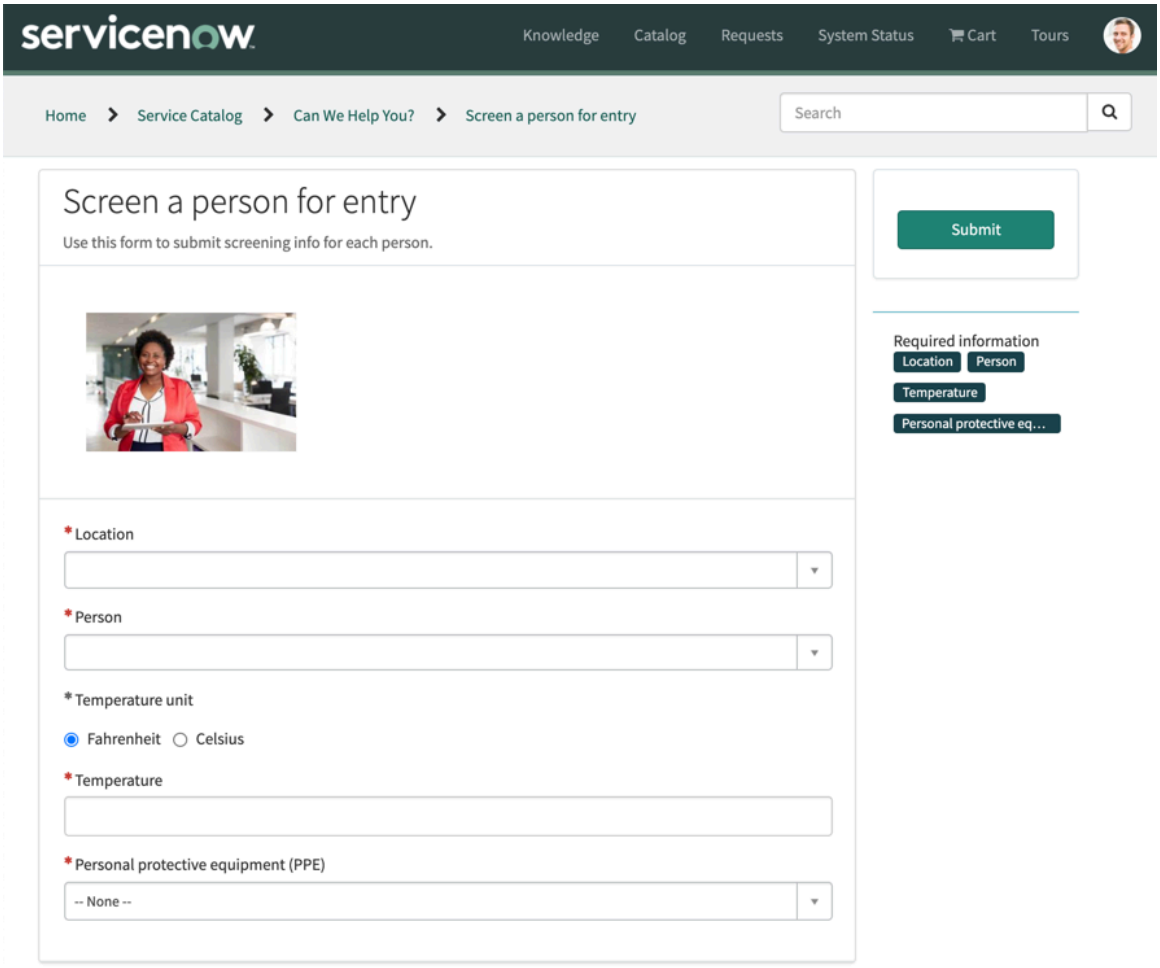
1. Open the QR code scanning or requirement status page based on the type of device that you're using.



2. Review the requirement status to verify that the person is cleared to enter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Requirements are created in the Employee Readiness Core application. For more information, see Employee Health and Safety Status.



If the status is **Not cleared** and your organization's policy is to deny entry at this check point, provide the person with the next steps to take based on your organization's policy. Then, assist the next person in line.

Health and Safety Status page

3. Perform the health screen.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Take the person's temperature and fill out the screening form.

Screen a person for entry form

Field	Description
Location	Location of the health screening, such as the address of a workplace or campus.
Person	The person that you're screening.
Account	The account for the contact. This field appears only when the Customer Service Management application is activated and a contact is selected from the **Person** field. You must have the customer service agent role [sn_customerservice_agent] to view this field.
Suffix	The suffix for the consumer. This field appears only when the Customer Service Management application is activated and a consumer is selected in the **Person** field. **Note:** You must have the consumer service agent role [sn_customerservice.consumer_agent] to view this field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Temperature unit	Temperature unit assigned to this location.
Temperature	The numerical value of the person's temperature.
Personal protective equipment (PPE)	Whether the person is wearing PPE. Values are **Yes** or **No**.

5. Tap or click **Submit**.

Result
You receive a message that indicates whether to allow the person to enter. If the person does not pass the health screening, provide them with the next steps based on your organization's policy.

Screen a visitor for entry to the workplace

Verify the visitor's entry requirement status on your smartphone, tablet, or computer. Then complete and submit the health screening form to determine whether the visitor is able to enter the workplace.

Before you begin
Role required: sn_imt_monitoring.monitoring_user

About this task
A visitor must be invited before they can be screened for entry. If an uninvited visitor needs entry, a health screener can complete the invitation process and then begin screening. For more information, see Invite a visitor to the workplace.

Procedure
1. Open the requirement status page based on the type of device that you're using.

2. Review the status to verify that the visitor is cleared to enter.
   If the status is **Not cleared** and your company policy is to deny entry at this check point, provide the visitor with the next steps based on your company policy. Assist the next visitor or employee in line.
3. Take one of the following actions to perform the health screen.

4. Take the visitor's temperature and fill in the screening form.

Screen a visitor for entry form

Field	Description
Visitor lookup	Visitor ID, which is generally `firstname.lastname`. When the visitor is selected, the form is automatically populated with information about the visitor, such as name, company, and host employee. **Note:** If you can't select the visitor from the list, the visitor hasn't been invited to the workplace. You must invite the visitor before you can screen them for entry.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Visitor's first name	Visitor's first name. This field is automatically populated when the **Visitor lookup** field is selected.
Visitor's middle name	Visitor's middle name. This field is automatically populated when the **Visitor lookup** field is selected.
Visitor's last name	Visitor's last name. This field is automatically populated when the **Visitor lookup** field is selected.
Visitor's company	The company that the visitor works for. This field is automatically populated when the **Visitor lookup** field is selected.
Host employee	The employee who invited the visitor. This field is automatically populated when the **Visitor lookup** field is selected.
Invitation setup date	The date that the host employee submitted the visitor invitation. This field is automatically populated when the **Visitor lookup** field is selected.
Visitor criteria	Indicates whether the visitor has completed the Visitor Invitation Requirement by agreeing to follow safety requirements and policies. This field is automatically populated when the **Visitor lookup** field is selected.
Location	Your location, which may be the address of the workplace.
Temperature Unit	Temperature unit assigned to this location. Change it if necessary.
Temperature	The numerical value of the visitor's temperature.
Personal protective equipment (PPE)	The choice of **Yes** or **No** from the list to record whether the visitor is wearing PPE.

5. Tap or click **Submit**.
   You receive a message that indicates whether to allow the visitor to enter. If the visitor doesn't pass the health screening, provide them with the next steps based on your company policy.

Monitor progress with the Employee Health Screen Overview dashboard

View the dashboard to monitor the entry requests and assess how the return to the workplace is progressing. Evaluate the number of entry requests, how many requests were denied entry, and for what reason.

Before you begin

Role required: sn_imt_monitoring.monitoring_admin

Procedure

Navigate to **Employee Health Screening** > **Overview**.
The Employee Health Screen Overview dashboard opens in a new browser tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

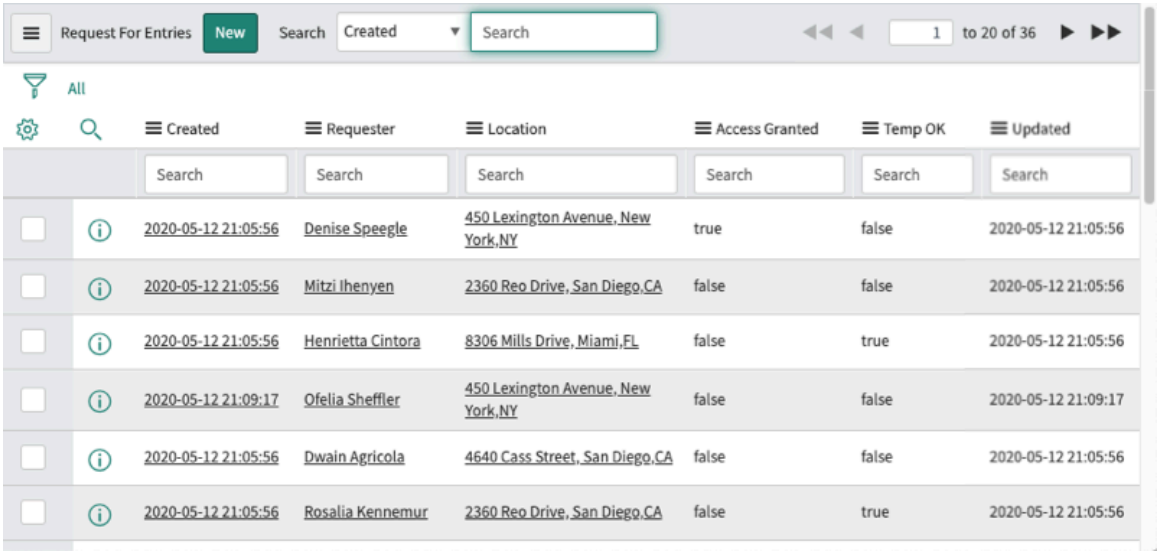
Click any area of a chart to see the corresponding records.

View entry requests

Filter the list of entry requests that were completed to evaluate different areas of your return to work progress. Entry requests are the records submitted by the health screener for each employee who is screened before entry.

Before you begin

Role required: sn_imt_monitoring.monitoring_admin

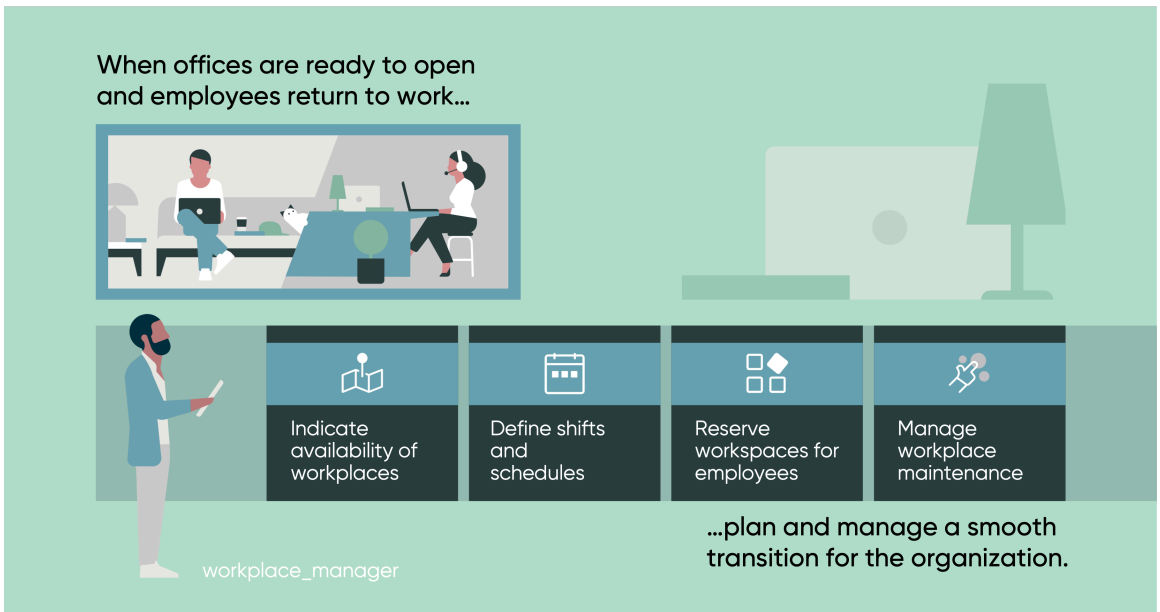


About this task

For example, you could see records for employees in San Diego who were not granted access, and compare the reasons for those denials. The reason for denial is either no personal protective equipment (PPE) or high temperature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure



1. Navigate to **All** > **Employee Health Screening** > **Entry Requests**.

2. To evaluate request for entry data, build a query or sort and group the list by the appropriate columns.

Workplace Core

Use the ServiceNow® Workplace Core application to create safer, managed processes for returning employees to the workplace and staying open. Establish distancing plans, shift assignments, and sanitation scheduling and manage workspace allocation in stages. The Workplace Core is also available as a core application in the Workplace Service Delivery suite.

Space administration

Your organization's workplace administrators can add details for all workplace locations, such as:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Areas such as employee workstations, conference rooms, and cafeterias
- Office buildings and campuses
- Regions of all locations

By tracking the availability of workspaces, workplace managers can plan and implement a phased return of employees to the workplace. For example, after the COVID-19 pandemic, your organization might want to allow a certain percentage (for example, 20%) of the total staff to return at a time at each office location, based on office configuration, local health recommendations, and other factors. Workplace managers can indicate workspace availability, leaving space for physical distancing. They can evaluate the situation periodically and make more workspaces available as conditions improve.

As a workplace manager, you can upload floor plans of your organization so employees can more easily view and select available spaces when they request workspace reservations.

Avoid large gatherings or long queues for locations at your workplace such as the cafeteria, gym, and entry and exit gates by defining arrival intervals and having employees schedule their arrivals.

Shift management

Workplace managers can create shifts for employees and schedule them for specific times and days. They can use this data to start planning for the occupancy levels of your workplaces by allocating employees and available workspaces to specific shifts.

For example, workplace managers can create a morning shift schedule with work hours of 08:00 to 13:00. They can then assign available workspaces to this shift based on organizational guidelines. These assigned workspaces can then be reserved for employees operating from the office during this shift.

Shift owners can review and modify the details of the shifts that they own. They can also view workspace reservations and requests made for the shifts they own.

Workspace reservations

Using the information about available employees and workspaces, workplace managers can reserve areas and workspaces for employees. Workplace managers can also generate reservations for multiple employees at once. Both the employee and the workplace manager are notified of reservations through email.

Employees can request workspace reservations when they are ready to return to the office. Using interactive floor plans, they can choose to reserve workspaces for a specified date range, a single day, or a few hours. Depending on your organizational guidelines, reservation requests might require an approval for confirmation.

If the workplace profiles of all employees are set up, the application automatically assigns available workspaces for employees based on their date and time selection when they make a reservation.

For more advanced workplace reservation options, use Workplace Reservation Management in the Workplace Service Delivery suite. For more information, see Workplace Reservation Management.

Workplace tasks

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace managers can monitor maintenance activities that are scheduled in the workplace for each shift. They can also schedule planned or on-demand maintenance tasks, and generate reports to track the progress of these activities.

Workplace Dashboard

Using data visualizations, you can evaluate the availability of workspaces and occupancy levels of your office locations, and monitor the progress of workplace tasks on the workplace dashboard.

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Use with other Safe Workplace suite applications

Workplace Core is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

- With the Employee Readiness Surveys application, evaluate the readiness of your users to return to the workplace by asking them to fill in a survey.
- Before users re-enter workspaces, use the Employee Health Screening application to screen users and ensure compliance with your entry requirements, such as a temperature check and PPE.
- You can manage the inventory of safety equipment for your workforce with the Workplace Personal Protective Equipment Inventory Management application.

All Safe Workplace suite applications are available in the ServiceNow Store.

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.

Notice regarding use by government agencies

ServiceNow is offering this application to government agencies and their authorized users, not to employees of government agencies in their individual capacities. Use of this application is being offered free of charge for a limited or extended time period and with no expectation of payment from the government agency to ServiceNow for use during that time period, nor does usage create an actual or implied future obligation on behalf of the government. ServiceNow hereby expressly waives any future claims for payment from the agency in connection with usage of the application. Government customers are solely responsible to confirm with the agency's Ethics Office or its authorized representative that acceptance and usage of the application is permissible.

All decisions in connection with the implementation of this application are at the sole decision of the government agency utilizing this application. Agencies remain solely responsible for complying with their legal obligations under applicable laws and regulations, including (but not limited to) data protection and employment laws and regulations, and should modify any language within the templates provided to meet the agency's specific requirements.

Install Workplace Core

You can install the Workplace Core application if you have the admin role. This application includes optional demo data.

Before you begin

Ensure that the application and all of its associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

Role required: admin

On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

About this task

The following components are installed with installation of the Workplace Core application:

- Roles
- Tables

See Components installed with Workplace Core for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from ServiceNow store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   If your application requires other applications, install them first if they are not already installed.

   Installing your application also automatically installs the dependent applications or plugins if they are not installed already.

5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.
   Some applications include demo data, which are sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Note:
   If you don't load the demo data for a store application during installation, it is not available to load later.

6. Click **Install**.

Components installed with Workplace Core

Several types of components are installed with installation of the Workplace Core application, including user roles, scheduled jobs, tables, and business rules.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles installed with Workplace Core

Roles installed with Workplace Core

Role title [name]	Description	Contains roles
Workplace admin [sn_wsd_core.admin]	• Sets up data about the workplace • Has complete access to the application	sn_wsd_core.workplace_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Workplace Core (continued)

Role title [name]	Description	Contains roles
Workplace manager [sn_wsd_core.workplace_manager]	• Reserves spaces at the workplace • Links employees and shifts to spaces • Manages preventive maintenance tasks	• sn_wsd_core.workplace_exposure_analyst • schedule_admin • template_editor_global
Workplace exposure analyst [sn_wsd_core.workplace_exposure_analyst]	Identifies potentially exposed employees in the ServiceNow® Emergency Exposure Management application using workspace reservations.	None
Workplace shift owner [sn_wsd_core.workplace_shift_owner]	• Has edit access to the shifts that they own. • Has edit access to details such as shift schedules, associated users, and spaces of owned shifts. • Has read-only access to workplace tasks of owned shifts. • Can view workspace requests and reservations for owned shifts	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Workplace Core (continued)

Role title [name]	Description	Contains roles
Workplace user [sn_wsd_core.workplace_user]	• Requests area or workspace reservations from the Workplace Service Portal or the Now® Mobile app • Schedules arrival to workplace locations using the Workplace Service Portal or the Now® Mobile app **Note:** From Workplace Core v1.3.2 onwards, this role is required for employees to request reservations from Workplace Service Portal.	None
Workplace core writer [sn_wsd_core.task_writer]	• Create, read, update, and delete Workplace Tasks. • Create, read, update, and delete Task templates.	sn_wsd_core.task_reader
Workplace core reader [sn_wsd_core.task_reader]	Has permission to read all workplace tasks.	None
Workplace knowledge base writer [sn_wsd_core.kb_writer]	• Create, view, publish, and update	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Workplace Core (continued)

Role title [name]	Description	Contains roles
	knowledge base articles. • Retire and republish knowledge base articles.	

Scheduled jobs installed with Workplace Core

Scheduled jobs installed with Workplace Core

Scheduled job	Description
Find upcoming reservation periodically	Finds upcoming workspace reservations between 4–8 hours from the time when this job is executed and sends email notifications to those employees with reservations. By default, this job is set to run every 4 hours.
Reservation check-in & check-out	Performs the following actions. • Notifies employees via email to check in a reservation. • Notifies employees via email to check out a reservation. • Auto cancels a reservation if it is not checked in within 30 minutes after the employee is notified. • Auto checks out a reservation if it is not checked out an hour after the reservation end time.

Tables installed with Workplace Core

Tables installed with Workplace Core

Table	Description
Area [sn_wsd_core_area]	Stores the list of areas on office floors.
Arrival Entry [sn_wsd_core_arrival_entry]	Stores the list of scheduled arrival entries of the employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Workplace Core (continued)

Table	Description
Arrival Schedule [sn_wsd_core_arrival_schedule]	Store the list of scheduled arrival intervals created by the workplace manager.
Building [sn_wsd_core_building]	Stores the list of office buildings.
Campus [sn_wsd_core_campus]	Stores the list of office campuses.
Floor [sn_wsd_core_floor]	Stores the list of office floors.
Html Signing Template [sn_wsd_core_html_signing_template]	Stores the templates to sign off on a planned task and generate a PDF.
Location Shift [sn_wsd_core_m2m_location_shift]	Stores the relationship between shifts and workspace locations.
Planned Task Definition [sn_wsd_core_planned_task_def]	Stores the planned task definitions that workplace managers create for workplace tasks.
Region [sn_wsd_core_region]	Stores the list of regions of workplace locations.
Reservation [sn_wsd_core_reservation]	Stores the relationship between shifts, employees, and workspaces.
Shift [sn_wsd_core_shift]	Stores the list of shifts.
Site [sn_wsd_core_site]	Stores the list of sites of the organization.
Space [sn_wsd_core_space]	Stores the list of workspaces of the organization.
Space Type [sn_wsd_core_space_type]	Stores the list of space type configuration created by the workplace manager.
Space Staging [sn_wsd_core_space_staging]	Acts as an interim placeholder table for imported data about spaces.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Workplace Core (continued)

Table	Description
User Shift [sn_wsd_core_m2m_user_shift]	Stores the relationship between shifts and employees. For existing users who are upgrading from the first version of the app, ensure that you have the **User** field as the display value. For more information, see Select a field as the table display value.
User Workplace Profile [sn_wsd_core_workplace_profile]	Stores the relationship between employees and their designated workspaces.
Workplace Client Role Rule [sn_wsd_core_client_role_rule]	Stores the workplace client role assignment rules created for employees.
Workplace Location [sn_wsd_core_workplace_location]	Parent table for all workspace entity tables such as Regions, Sites, Campuses, Buildings, Floors, Areas, and Spaces.
Workplace Request [sn_wsd_core_workplace_request]	Stores the workplace reservation requests created by employees.
Workplace Task [sn_wsd_core_workplace_task]	Stores all the workplace tasks created for shifts. If you are upgrading from version 1.1.1 or earlier of the app, ensure that the **Default Value** field is empty for the workplace_task_type column of this table. For more information on how to modify the default display value of a table column, see Specify a default field value.
Workplace rooms [sn_wsd_core_room]	Extends the Space [sn_wsd_core_space] table. It holds the reservable items of a room that are available to reserve.

Properties installed with Workplace Core

Customize the properties available with Workplace Core.

These properties are available for Workplace Core.

Note:
All of these properties are located in the System Properties [sys_properties] table. To access the table, enter `sys_properties.list` in the navigation filter.

Properties for Workplace Core

Property	Description
sn_wsd_core.AUTO_ASSIGN_LOCATION	Enables auto-assignment of workspaces when employees make workspace reservation requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Workplace Core (continued)

Property	Description
	• Type: true|false • Default value: false **Note:** Once this feature is enabled, the fields related to workplace locations such as **Area**, **Space preference**, and **Space** do not appear on the Workspace Reservation form. Enable this feature only if all employees have a designated workspace in their user profiles in the User Workplace Profile [sn_wsd_core_workplace_profile] table. For more information, see Mapping employees to their designated workspaces.
sn_wsd_core.CANCEL_RES_BUILDING	Determines whether the reservations made for spaces should be canceled based on the value of the **Is reservable** field. • Type: true|false • Default value: false If this property is set to **true**, then the application cancels all the workspace reservations that are made for the areas and spaces of those buildings or floors for which the value of the **Is reservable** field is set to **false**.
sn_wsd_core.CLEANING_TASK_MAX_DURATION	Determines the duration (in days) by when you want the pre-cleaning and post-cleaning tasks to be executed. • Type: Integer • Default value: 7
sn_wsd_core.floor_plan.portal.show_non_reservables	Determines whether non-reservable workspaces appear in grey on the floor plan in the Workplace Service Portal. • Type: true|false • Default value: false

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Workplace Core (continued)

Property	Description
	Note: Changing this value to true can negatively affect performance.
sn_wsd_core.floor_plan.portal.show_reservation_details	Determines whether reservation details appear when users point to booked spaces on the floor plan in Workplace Service Portal. • Type: true|false • Default value: false
sn_wsd_core.REQUEST_MAX_DURATION	Determines the maximum number of days that an employee can request a space reservation for at one time. This property is applicable when an employee requests a space reservation for multiple days. • Type: Integer • Default value: 7
sn_wsd_core.show_book_uber	Determines the visibility of the **Book Uber** button on the Now® Mobile app. If this property is set to **true**, then employees can select **Book Uber** from their confirmed reservations on their mobile devices. Users are redirected to the Uber mobile app. • Type: true|false • Default value: false
sn_wsd_core.wsd_inbound_email	Checks for emails that are received for the ServiceNow® Workplace Service Delivery and Workplace Case Management applications. This property has been renamed from the *sn_wsd_case.wsd_inbound_email* property in Workplace Case Management version 1.0.1. This property is available only for Workplace Safety Management 2.0.3 or later. • Type: String • Default value: askwsd@example.com • Location: System Property [sys_properties] table

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Workplace Core (continued)

Property	Description
sn_wsd_core.floor_transform_map	Enables you to configure customized transform maps. • Type: string • Default value: 2528fbf70f201010dbc3d2d92f767e04
sn_wsd_core.ENABLE_RSV_CHECK_IN	Enables reservation check-in and check-out via email. If this property is set to **true**, then employees can check in and check out a reservation. • Type: true|false • Default value: false
sn_wsd_core.dfx.rebuild_cache.max_floors	Enables you to specify the maximum number of floors to build for an entity cache at any time. • Type: Integer • Default value: 20
sn_wsd_core.CANCEL_RES_LOCATION	Enables you to cancel all future reservations made on a location level. Set the **Is reservable** field to **false** for the location. • Type: true|false • Default value: false
sn_wsd_core.ALLOW_USER_SHIFT_FILTERING	Enables a user to create shift-based reservations only if the user is part of that shift. • Type: true|false • Default value: false
sn_wsd_core.ALLOW_AVAILABILITY_FILTERING	Displays only the available buildings and floors in the reservation record producers. • Type: true|false • Default value: false **Note:** If the property is set to **true**, then the selected workplace locations take a longer time to load.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Workplace Core (continued)

Property	Description
sn_wsd_core.MULTI_DAY_AVAILABILITY	Displays only the available areas and spaces in multi-day reservation record producers. • Type: true|false • Default value: false **Note:** If the property is set to **true**, then the selected workplace locations take a longer time to load.
ARRIVAL_REQUEST_MAX_FUTURE_DAYS	Enables you to specify the maximum number of days in the future until when employees can schedule their arrival. • Type: Integer • Default value: 7

Providing your workplace data

In the Workplace Core application, provide data related to your workplace locations so you can efficiently assign shifts to employees and designate workspaces for these shifts.

Workspace Record

The information available for each workspace record is:

- Region
- Site
- Campus
- Building
- Floor
- Area
- Space

Each designation should use a unique identifier. For example, if you are indicating the fourth floor in building 7, you would name the floor "7-4" rather than just "4".

Entering data for several work sites

If you have a large organization, you might want to consider using a spreadsheet to contain the more global record information such as regions, buildings, and sites so you can avoid having to manually input repeated information for each workspace record. You can either export the information you've already entered into the application into a spreadsheet or use that information in an existing workspace spreadsheet. You would then import the spreadsheet that contains the full workspace data into the application in bulk form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If you have an existing spreadsheet, you would first manually convert the column headers and data of the global information to match the ServiceNow record names and identifier numbers. You would then do a bulk import of that data into the Workplace Core application so you can assign workspaces.

  For example, say your organization's spreadsheet uses the name "Location" for Sites or "Bldg 1" for every building 1 on every site. You would have to change the spreadsheet column header "Location" to "Sites" and change each "Bldg 1" to the unique identifier from the Workplace Core application records.

- If you don't have an existing spreadsheet, you would enter the repeated global information that you don't want to have to input manually for each space. The data for each field should have a unique identifier. You would then export the information from the application into a spreadsheet where you would have to input only the space information manually.

Floor plans

The ServiceNow AI Platform supports Drawing eXchange Format (.dxf) files for floor plans. You can select the layers you need for end-user floorplans and configure the attributes (tags) you want assigned to fields. For information about how to export an AutoCAD .dwg file to a Drawing eXchange Format (.dxf) file, see the documentation for your version of AutoCAD.

Prior to uploading a .dxf file, work with your AutoCAD designers to ensure the following:

- The file uses block references and not single-line or multi-line text for space labels.
- The blocks attributes have human-understandable tags.
- The block references have attribute values appropriately set.

Note:
Using blocks is highly recommended. Do not use text objects.

Uploading a floor plan creates a floor record. All the workspaces of the floor are automatically added to the Spaces related list of the floor record.

Create records for your workplace data

Create individual records of your workspaces, floors, office buildings, and workplace locations within the Workplace Core application. Either insert new data or add records to the existing workplace data.

Before you begin

Ensure that you have the following details:

- Workplace data for your organization.
- Data of workspaces that can be marked as available.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
In the Workplace Service Delivery Suite, from Workplace Core version 2.5.3, the **Space type (space_type)** choice field is depreciated. After the upgrade, Space types are configured in the **Space Type Configuration**. The **Space type (space_type)** field is migrated as **Space type (location_type)** field in the Space table [sn_wsd_core_space]. Customers having customization on the depreciated **Space type (space_type)** field are advised to manually migrate their flow to use the new **Space type (location_type)** field. A new fix script, **Populate Location Type from Space Type**, is introduced to execute the schedule job, **Populate location_type from space_type**, on the Space table [sn_wsd_core_space] to migrate the depreciated **Space type (space_type)** field value to the new **Space type (location_type)** field.

Role required: sn_wsd_core.admin

About this task

If you have a small number of workspaces, you can enter information individually for each workspace down to the Spaces level.

If you have many work sites, you might want to do the following:

1. Create a skeleton of repeated global information.
2. Add the individual spaces information in a spreadsheet.
3. Import the spreadsheet into the application.

   For more information on importing, see Configuring spreadsheets to import workplace data.

If you have floor plans, you can create records of data until the Buildings level. Uploading the floor plans loads the data of floors and of the spaces associated with these floors.

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Space Administration**.
2. Select the applicable module.
   Create the records in the following order:
   - Regions
   - Sites
   - Campuses
   - Buildings
   - Floors
   - Areas
   - Spaces

   For example, if you want to locations of your offices, select **Sites**.
3. On the form, fill in the fields.

   Note:
   - The visibility of some of the following fields depends on the module that you selected.
   - You can leave a field that does not apply to your organization empty.

   The fields on the form differ based on what module you selected. For example, the following form is for Building.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New record form

Field	Description
Name	Name of the workplace. Ensure that you enter a unique name. For example, if the **Building** field is set to **1C**, and if the **Space** field is set to **WST 1C 1601**, then an appropriate value for the **Name** field can be `1C - 16` **Note:** Do not use workplace locations with the same name because it affects the reservation process.
Region	Region where the office is located. If your organization is located at several regions, select that region where the office that you are adding is located.
Site	Location of the office campus. If there are several sites in a region, select that site where the office that you are adding is located.
Campus	Name of the campus where the office operates. If there are several campuses in a site, select that campus where the office that you are adding is located.
Building	Name of the office building for this workspace. If there are several buildings in a region, select that building where the office that you are adding is located.
Floor	Name or number of the floor where this workspace is present.
Area	Name of the area on the office floor.
Space type	Type of the office space. To configure a new space type, see Add a space type configuration.
Active	Option to indicate that this space is active.
Is reservable	Option to indicate that the spaces for this workplace entity are available for reservation. For example, if you do not mark a Building as reservable, then none the floors, areas, and spaces of this building would be available for reservation.
Latitude	Latitude of a campus or a building. The latitude is displayed in the Workplace Service Portal Location directory map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Longitude	Longitude of a campus or a building. The longitude is displayed in the Workplace Service Portal Location directory map.

4. Click **Submit**.

What to do next

- If you have floor plans for your workplace, you can upload them to create and display floor and workspace data. For more information, see Upload a workplace floor plan.
- If you are using a spreadsheet to enter and import bulk data for workspaces, see Configuring spreadsheets to import workplace data.
- If you have added all of your workplace data, you can define employee shifts. For more information, see Define shifts for your workplace.

Upload a workplace floor plan

Upload Drawing eXchange Format (.dxf) files of floor plans that you can configure and use to reserve space for your employees.

Before you begin

Use workplace floor maps to find and reserve a space within Workplace Core. To view the maps in the Location directory and within Workplace Reservation Management, use Mappedin and Indoor Mapping. For more information on how to use floor maps, refer to Workplace Space Mapping.

To avoid issues while rendering your floor plan, verify that the dxf.json attachment size is 5 MB or smaller. To view the size, download the dxf.json file and view the file properties. If the file size is larger than 5 MB, you can:

- Work with your AutoCAD designers to ensure that spaces are represented as blocks (not single or multi-line text).
- Ensure that the block reference attributes are appropriately set and try to import the dxf.json file again.
- Set the *com.glide.attachment.max_get_size* property to a size that is greater or equal to the dxf.json file size. For more information, see Administering attachments.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Upload Floor Plan**.

   In Workplace Core version 2.19.0 and above, the navigation path for **Upload floor plan** is not available in the application context menu search **All** > **Workplace Core**.

   In Workplace Core version 2.18.11 and later, the navigation path is available in the application context menu search **All** > **Workplace Core** > **Upload floor plan**.

2. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manage Workplace Floor form

Field	Description
Number	A unique number automatically generated by the application that identifies the floor plan.
Name	Name of the floor plan. **Note:** Be specific and have a consistent naming convention when naming your floor plans.
Region	Geographic location of the building the floor plan represents. Select the Lookup using list icon to view a list of regions you can select.
Site	The location of the office or campus within a region. Select the Lookup using list icon to view a list of sites you can select.
Campus	Name of the campus if you have multiple buildings at a site.
Building	Name of the specific building if you have multiple buildings at a campus.
Active	Option to indicate the is active.
Is reservable	Option indicating whether the space manager can reserve this plan for employee use.
Managed by group	The group that manages the space reservation for the floor plan. Select the Lookup using list icon to view a list of groups you can select.
Managed by	The workplace manager of the group that manages the space reservation for the floor plan. Select the Lookup using list icon to view a list of group managers you can select.

3. Select the attachment icon and upload your Drawing eXchange Format (.dxf) file.
   After you attach your .dxf file and import the floor plan, the .dxf file converts to a dxf.json file in your attachments. Don't remove any of these files or your floor plan does not appear. Also, the dxf.json file size must be 5 MB or smaller. Try selecting fewer layers from your .dxf file during the import process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Next**.
5. In the Select layers column on the right, select the layers that you want to appear the plan. For example, you might not want electrical rooms, kitchens, storage closets, or other elements to appear on the floor plan when it renders.
6. Select **Render**.
   The floor plan appears under the **Preview plan** tab. Use your cursor to zoom in and out of the floor plan.
7. Select **Next**.
8. On the form, fill in the fields.

Assign tags to fields

Field	Description
AutoCAD tag	The tag you want to map to your space fields. Tags identify spaces on the floor plan and come from the uploaded .dxf file. The tags that appear are the ones you selected in the **Select layers** column. **Note:** If you do not see any AutoCAD tags, you can use AutoCAD software to change text or text objects into block references.
Space Field	The field in the Space [sn_wsd_core_space] table with which you want to associate the tag. For example, you could associate an attribute named ROOM_NAME with the **Name** field and give it a higher order so it is the second part of the Name. The Space Field represents a specific location on the floor plan that you can assign to an employee.
Order	Determines the order of processing for your AutoCAD tag to Space Field mapping. **Note:** Lower numbers process first.

9. Select **Submit**.

Result

A new floor record is created with the floor plan attached to it. The Spaces related list is populated with all the workspaces of this floor.

Update a workplace floor plan

Update a workplace floor plan by uploading a new plan.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration** > **Floors**.
2. Select the floor you want to update.
3. Select the **Update floor plan** related link.
4. Select **Manage Attachments**, delete the current floor plan file, and attach the new floor plan file.
   You can have only one .dxf file uploaded at a time.
5. Select **Next**.
6. In the Select layers column, select the layers that you want to appear on the floor plan.
   For example, you might not want electrical rooms, kitchens, storage closets, or other elements to appear on the floor plan when it renders.
7. Select **Render**.
   The floor plan appears under the **Preview plan** tab. Use your mouse to zoom in and out.
8. Select **Next**.
9. On the form, fill in the fields.

Assign tags to fields

Field	Description
AutoCAD tag	Tags from the uploaded .dxf file identify spaces on the floor plan. The tags that appear are those that you selected in the **Select layers** column. **Note:** If you do not see any AutoCAD tags, you can use AutoCAD software to change text or text objects into block references.
Space Field	The field in the Space [sn_wsd_core_space] table with which you want to associate the tag. For example, you could associate an attribute named ROOM_NAME with the **Name** field and give it a higher order so it becomes the second part of the name.
Order	Determines the order of processing for your AutoCAD tag to Space Field mapping. **Note:** Lower numbers process first.

10. Select **Preview Changes** and in the **Preview changes** tab, review the changes you are going to make before you commit them.
11. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The following changes occur:

- Map values are filled in.
- Existing spaces that no longer match are deleted.
- If old spaces have been renamed, the new names replace the old ones.
- Any reservations are deleted.

A original floor record is updated with the floor plan attached to it. The Spaces related list is also updated. To view your changes, go to **Floor Plan Update Logs**.

View your workplace floor plan update logs

After updating your workplace floor plan, you can view all changes made.

Before you begin
Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Administration** > **Floor Plan Update Logs**. Logs appear for each floor plan updated with date and timestamps.
2. Select the **Created date** link to view the log record.
3. Select the **Floor** link to view the floor record.

Configuring spreadsheets to import workplace data

Doing a bulk import of the data of all your workspaces into the Workplace Core application through a spreadsheet enables you to avoid manually entering redundant data for each workspace, which saves time and effort.

By using a spreadsheet that contains the global information for your work sites, you can enter only the distinguishing space information instead of having to manually repeat information such as the region, site, building, and floor. You can either create an Excel spreadsheet from the data you've entered into the Workplace Core application or modify an existing workplaces spreadsheet.

Configure an existing workspaces spreadsheet

Customize the information in your organization's existing workspace spreadsheet to avoid having to manually enter repeated information for each workspace. You can then import the data into your ServiceNow instance.

Before you begin
Role required: sn_wsd_core.admin

About this task
If you have a spreadsheet containing your organization's workspaces data, you need to customize it to match the record information in your ServiceNow instance.

This example describes how to modify the floor information for your workspace data. Repeat these instructions to replace the fields for your building, campus, site, and region, as appropriate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Modify the data in the spreadsheet to match the record information in your ServiceNow instance.

   a. Navigate to **Workplace Safety Management** > **Space Administration** > **Floors**.

   b. Search for the desired floor record and open it.

   c. Copy the value of the **Number** field.

   d. Paste the value in place of "Floor 1" in the Excel spreadsheet.

   The example uses the following sample entry for workspaces that belong to Floor 1 of Building 1 at Florida Campus 2, Florida, USA:

   - FLOR0001694 represents Floor 1
   - BLDG0001028 represents Building 1
   - CMPS0001013 represents Florida Campus 2
   - SITE0001007 represents Florida
   - RGIN0001002 represents USA

   Note:
   You can exclude the **Area** column as it is not mandatory. Enter a dummy value in the column instead of leaving it empty.

A	B	C	D	E	F	G	H	I
Name	**Area**	**Floor**	**Building**	**Campus**	**Site**	**Region**	**Is reservable**	**Active**
B 1F 1 001		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE
B 1F 1 002		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE
B 1F 1 003		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE
B 1F 1 004		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE

2. In your workspaces spreadsheet, add individual workspace information in the **Name** column.
3. Save your spreadsheet.

Create a workplace data spreadsheet

Create a Microsoft Excel spreadsheet from the data you entered into the Workplace Core so you can avoid having to manually enter global information such as the site or building names for each workspace. You can then import the data into your ServiceNow instance.

Before you begin
Role required: sn_wsd_core.admin

About this task
If you have a large number of work sites, consider creating a spreadsheet that you can then import into your ServiceNow instance to avoid having to manually enter global information such as the site or building names for each workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you already have an existing workspaces spreadsheet for your organization, follow the instructions in Configure an existing workspaces spreadsheet to customize it for exporting the data.

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Space Administration**.
2. Select the module for the smallest unit for which you want to repeat the data.

   For example, if you have created global information records of regions, sites, buildings, and floors, you would select **Floors**.
3. **Optional:** Customize the columns to be displayed.
   For example, you can choose to hide the **Campus** column if your organization does not have campuses by entering a dummy value instead of leaving it empty.
4. Export the data by holding and selecting (or right-clicking) on any column, selecting **Export**, and selecting **Excel (.xlsx)**.
   Data is exported from the application so that you can download it as an Excel file.
5. Select **Download**.
6. In your workspaces spreadsheet, add individual workspace information in the **Name** column.
7. Save your spreadsheet.

What to do next
Import your workspaces data from an Excel spreadsheet

Import your workspaces data from an Excel spreadsheet

Import your workspaces data from an Excel spreadsheet into the Workplace Core application.

Before you begin
Complete Configuring spreadsheets to import workplace data.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **System Import Sets** > **Load Data**.
2. Select **Existing table**.
3. In the **Import set table** field, select **Space Staging [sn_wsd_core_space_staging]**.
4. In the **Source of the import** field, select **File**.
5. Select **Choose File** and select the source Excel spreadsheet.
6. **Optional:** Specify the worksheet number in the **Sheet number** field and header row number in the **Header row** field.
7. Select **Submit**.
   The imported data is now available in the new Import Set table.
8. Select **Run Transform**.

Important:
Ensure that the Import set field shows sn_wsd_core_space_staging and the selected map is Space Transform map - sn_wsd_core_space.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Select **Transform**.
10. **Optional:** Verify that the data records were imported into the Spaces table by navigating to **Workplace Safety Management** > **Space Administration** > **Spaces**

Related topics

Run an import

Create a transform map

Add a space type configuration

Configure the different types of spaces available in your workplace. You can add spaces based on different space types. The space types enable your employee to identify the different types of spaces that are available on a floor in a Mappedin floor map

Before you begin

Role required:sn_wsd_core.admin or sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace core** > **Administration** > **Space type configuration**.
2. Select **New**.
3. On the form, fill in the fields.

Space Type form

Field	Description
Name	Descriptive name of the space type.
Code	Code for the space type. The code can also be a name.
Table	Table of the space type. The field is automatically set to **Space [sn_wsd_core_space]**. If the space type is a room, select **Room [sn_wsd_core_room]**.
Application	Application of the space type. This field is automatically set. Make sure that **Workplace Safety Management** is selected.
Active	Option to activate the space type.
Available for	Option to specify the type of users for whom the space type is available.

4. Select **Submit**.

Result

The space type is configured. You can select this space type while creating a space or a type mapping.

Mapping employees to their designated workspaces

Map your employees to their designated workplace locations in Workplace Core to automatically fill in that detail in reservation requests and to take advantage of auto-assignment of workspaces if that feature has been enabled.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For employees who had a designated workspace before they started working remotely, create a mapping between the user profile and the designated workspace details. This mapping populates the workspace details on reservation request forms so employees don't have to provide these details manually.

If your system administrator has enabled the auto-assign feature, mapping workspaces for all employees also means that designated workspaces are automatically assigned when employees make a reservation request.

The data from the User Workplace Profile [sn_wsd_core_workplace_profile] table is used to automatically assign the designated workspace to the employee.

- If the user's designated space is available, this space is reserved for the employee.
- If the designated space is unavailable for the requested date or time, the application searches for and reserves an available space in the employee's workplace in the order of Area > Floor > Building > Campus > Site > Region.

  For example, if no spaces are available in the designated area of the employee, the application finds and reserves an available space from the floor of this area.

Map designated workspaces to user profiles

Map existing designated workspaces to employee user profiles in Workplace Core. This mapping is used to automatically allocate workspaces for employees so they don't have to select a workspace manually when requesting a reservation.

Before you begin

- Ensure that your workplace administrator has completed setting up your workplace data. For more information, see Providing your workplace data.
- Ensure that you have the designated workplace information for all the employees.
- You can also Navigate to the User Workplace Profiles [sn_wsd_core_workplace_profile] table by entering `sn_wsd_core_workplace_profile.list` in the navigation filter.

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Create a mapping for all employees and their designated workplaces. You can also perform an easy import of your employee workplace data. For more information, see Easy import.

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Administration** > **Workplace profiles**.
2. Select **New**.
3. On the form, fill in the fields.

User Workplace Profile form

Field	Description
Employee	Employee for whom you want to create a workplace mapping.
Workplace location	Designated workplace of the employee.
Active	Option for indicating that this workplace mapping is active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Enable employee location privacy	Option to set location privacy preference for the workplace profile. Note the following: ○ Set this option only if you want to have a different privacy setup for the workplace profile. ○ By default, the location privacy preference that is set on the building to which the workplace profile is assigned is considered. ○ In case, the building doesn't have any location privacy preference, preference set in the Workplace Reservation Management system property *sn_wsd_core.ENABLE_LOCATION_PRIVACY* is considered. ○ The field is set to **None** by default. For more information about each field, refer to Location privacy settings and impact

4. Select **Submit**.
5. Repeat the procedure for all the employees of the workplace that you manage.

Result
The User Workplace Profiles [sn_wsd_core_workplace_profile] table is populated with all the new profiles.

Assign the workplace user role to employees

Set rules in Workplace Core to assign the workplace user role to employees in only the specific countries where you are starting a return to office operations.

Before you begin
Ensure that the user profiles of all your employees have required details. You can review the employee user profiles by navigating to **User Administration** > **Users**.

Role required: admin or sn_wsd_core.admin

Procedure
1. Navigate to **Workplace Safety Management** > **Administration**.
2. Select **Client Role Assignment Rules**.
3. On the form, fill in the fields.

Workplace Client Role Rule form

Field	Description
Name	Unique name for this assignment rule.
Role	This value is auto-generated with the workplace user role (sn_wsd_core.workplace_user).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Active	Option for indicating whether this assignment rule is active.
Condition	Option to add filter conditions that a user profile must match. To add a condition, select **Add filter condition**. To add a OR clause, select **Add "OR" clause**.
Table	Table on which the conditions must be built. The field is automatically selected as `sys_user`.

4. Select **Submit**.

Result
The workplace user roles are assigned. If a record is created or updated on this table, a role assignment process is triggered in the background.

Configuring shifts for your workplace

Configure shifts for your organization in the Workplace Core application so you can efficiently plan and manage your workplace by assigning employees and workspaces to those schedules.

Define shifts for your workplace

Define shifts in Workplace Core with specific schedules so you can designate areas or workplace and assign employees for each shift.

Before you begin

- Providing your workplace data.
- Ensure you have the following information:
  - Appropriate shift schedules
  - Data of the employees who would operate from the office in this shift
  - Data of the workplaces to be made available for this shift

Role required: sn_wsd_core.workplace_manager

About this task
Workplace managers can later reserve workplaces for employees according to the shifts assigned to them.

If your organization does not organize work in shifts, you can use the general shift schedule that is available with the application by default.

You can also access the Shift form by navigating to **Workplace Core** > **Shift Management** > **Create New**.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Browse Workplace Services**.
2. Select **Add a shift**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Shift form

Field	Description
Name	Name of the shift, for example, Morning Shift.
Schedule	Schedule for the shift. For a general shift schedule, select **General shift**. For more information about how to create a shift schedule, see Define a schedule.
Owner	Shift owner who monitors activities during this shift.
State	Status of the shift. Choose one of the following values: ○ **Draft**: Indicates that the shift details are incomplete. ○ **Ready**: Indicates that the shift is ready for assignments. ○ **Cancelled**: Indicates that the shift is cancelled.
Start	Date from which this shift is active.
End	Date until which the shift is active.
Region	Region of the workplace site.
Site	Site location of the office campus.
Campus	Name of the campus in which the office building is present.
Building	Name of the building in which the office floor is located.
Floor	Name or number of the floor where the area is located.
Area	Area that is active for operation and use during this shift.
Users	Employees assigned to this shift. This field appears only on Workplace Service Portal.
Locations	Workplaces available for reservation during this shift. This field appears only on Workplace Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- If this shift is applicable to all office buildings on your campus, you can leave the **Building**, **Floor**, and **Area** fields empty. The shift and its schedule will be automatically applied to all the records of buildings, floors, and areas associated with this campus.
- When an employee requests to make a reservation with shifts, only shifts that are active on the dates that the employee selected are displayed on the reservation form.

4. Select **Submit**.
5. If you accessed the Shift form from Workplace Service Portal, on the verification page, you can define another shift or view all the existing shifts.

Result

The shift is added to the list of all shifts that you can view by navigating to **Workplace Safety Management** > **Shift Management** > **All**.

If you want to delete a shift, perform the following actions:

- Navigate to **Workplace Safety Management** > **Shift Management** > **All** and select the shift that you want to delete.
- On the form, click**Delete**.
- In the confirmation window, click **Delete**.

  The shift is deleted.

What to do next

If you created the shift using Workplace Service Portal, you can directly create workplace reservations.

You can configure other information such as employees, workplaces, and maintenance tasks associated with this shift later.

- Assign more employees to a shift.
- Associate more workplaces with a shift.
- Associate tasks with a shift.

Assign employees to a shift

Associate employees with a shift in Workplace Core so that they operate from the office only in the shifts to which they are assigned. Workplace managers can later reserve workspaces for these employees according to their assigned shifts.

Before you begin

- Define shifts for your workplace.
- Ensure you have the data for the employees who will operate from the office in this shift.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **Workplace Safety Management** > **Shift Management** > **All**.
2. Open a shift to which you want to add employees.
3. In the Users related list, select **Edit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Add all the employees who should operate from the office in this shift.
5. Select **Save**.

Result
A pre-configured email with the shift details is sent to all employees assigned to this shift.

What to do next
Associate areas and spaces with a shift.

Associate areas and spaces with a shift

Associate work areas and spaces with a shift in Workplace Core so that they are available only for that shift. Workplace managers can later reserve these workplace for employees operating in that shift.

Before you begin
- Define shifts for your workplace.
- Ensure you have the data for the workplaces to be made available for this shift.
- Ensure that the glide.ui.list.allow_extended_fields system property is set to **true** so that the filter criteria is displayed appropriately when you're adding areas or spaces.

Role required: sn_wsd_core.workplace_manager

Procedure
1. Navigate to **Workplace Safety Management** > **Shift Management** > **All**.
2. Open a shift to which you want to add employees.
3. In the Locations related list, select **Edit**.
4. Add all the areas and spaces to be made available for this shift.
5. Select **Save**.

What to do next
Create workplace reservations for an employee.

Managing workplace shifts that you own

Review the workplace shifts that you own in Workplace Core and update the shift details if necessary. You can also monitor the reservations and requests made for the workspaces associated with these shifts.

Update details of the shifts that you own

Review and modify the details of the workplace shifts that you own in Workplace Core. You can modify the general shift details, and add or remove employees or workplaces associated with the shift.

Before you begin
Role required: sn_wsd_core.workplace_shift_owner

Procedure
1. Navigate to **All** > **Workplace Safety Management** > **Shift Management**.
2. Select **Owned by Me**.
3. Open the shift for which you want to view the details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** Modify the shift details.

   a. Edit the details on the shift form.

Shift form

Field	Description
Name	Name of the shift.
Schedule	Schedule for the shift. (Optional) For a general shift schedule, select **General shift**.
Owner	Shift owner who monitors activities during this shift. (Optional) If you select a different user, you will lose access to this shift.
State	Status of the shift. Choose one of the following values: ▪ **Draft**: Indicates that the shift details are incomplete. ▪ **Ready**: Indicates that the shift is ready for assignments. ▪ **Cancelled**: Indicates that the shift is cancelled.
Region	Region of the workplace site.
Site	Site location of the office campus.
Campus	Name of the campus in which the office building is present.
Building	Name of the building in which the office floor is located.
Floor	Name or number of the floor where the area is located.
Area	Area that is active for operation and use during this shift.

Note:
If this shift is applicable to all office buildings on your campus, you can leave the **Building**, **Floor**, and **Area** fields empty. The shift and its schedule will be automatically applied to all the records of buildings, floors, and areas associated with this campus.

   b. Select **Update**.

5. **Optional:** Modify the list of employees assigned to this shift.

   a. In the Users related list, select **Edit**.

   b. Add or remove users.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. **Optional:** Modify the list of workspaces associated with this shift.
   a. In the Locations related list, select **Edit**.
   b. Add or remove areas and spaces.

Review workplace reservations for shifts that you own

Review the workplace reservations and the reservation requests made for the shifts that you own in Workplace Core. You can identify pending requests and work with your workplace manager to resolve them.

Before you begin

Role required: sn_wsd_core.workplace_shift_owner

Procedure

1. Navigate to the reservation requests from employees or workplace reservations by the workplace manager.
2. Review all reservations requested or made for your shift.
3. **Optional:** Open a reservation record to view its details.

   (Optional) If you want to make any changes to the reservation such as assigning another workspace to the employee, or changing the date of the reservation, reach out to the workplace manager to request those changes.
4. **Optional:** If you are viewing employee requests, note any requests in the **Pending** state so you can work with your workplace manager to resolve them.

Managing workplace reservations for employees

Reserve available areas or spaces for your employees and review pending reservation requests from employees in Workplace Core so you can ensure physical distancing measures when they return to the workplace. Once you make reservations, employees are notified about the locations to which they have access. The Workplace Service Delivery also offers more advanced workplace reservation options in the Workplace Reservation Management application.

Creating workplace reservations for employees

Reserving workplace areas

As a workplace manager, you can make reservations for employees for areas on the floors of your office buildings. When employees return to the office, they can work from any of the spaces from the reserved area. The number of employee reservations that you can make for an area of your workplace depend on the capacity defined for that area. If the **Capacity** field of an area is set to **0** or left empty, reservations cannot be made for that area.

Creating a single space reservation

Using the shifts that you defined, you can create a space reservation for an employee for a single day or multiple days.

Creating space reservations in bulk

You can generate in one action reservations for multiple employees who are assigned to a shift for a specific date range. For example, you can use this feature to create reservations for employees of a specific department who would all be assigned to the same shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Child reservation records for employee space reservations

When you reserve a workplace for an employee, the reservation generates child reservation records for every applicable working day of the specified period. The applicable days are determined by the shift schedule that you select for this reservation. The reservation that you initially created acts as the parent reservation record.

If a child reservation conflicts with an existing reservation for any day in the specified period, the child reservation is not created for that day. You can manually create a reservation for a different workplace for that day.

For example, say you created a reservation for the workplace 2CN1612 for Mark Andrews in the afternoon shift from 06-01-2020 to 06-10-2020. Eight child reservation records for Mark Andrews for the workplace 2CN1612 would be created for each working day between 06-01-2020 and 06-10-2020. However, if a reservation for 2CN1612 on 06-08-2020 exists for another employee Jane Doe, the child reservation for Mark Andrews on 06-08-2020 is not created. You can manually create a reservation for Mark Andrews for a different workplace for 06-08-2020.

If you update the details of a parent reservation later, all its child reservations except the ones with dates in the past are updated accordingly.

Working with space reservation requests from employees

After an employee requests a workplace for a given date range and the manager approves the request, the application checks the availability of the requested space. If the workplace is unavailable for any or all days of the specified period, the request moves to the Pending state. As a workplace manager, you can review these pending reservation requests and allocate a different workplace to the employee to complete the request.

Define the capacity of workplace areas

Set the capacity for areas of your workplace in Workplace Core to enable reservations for the area. The capacity ensures a limit to the workplace reservations for these areas so you can ensure safety guidelines.

Before you begin

- Add your workplace data.
- Ensure you have the details of the maximum capacity for the areas of your workplace.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Space Administration** > **Areas**.
2. Open an area to which you want to add the capacity.
3. On the Area form, enter a value for the **Capacity** field.
   For example, if this area can accommodate only 8 people safely according to physical distancing guidelines, set the value to 8.
4. Select **Update**.

Create workplace reservations for an employee

Create workplace reservations for an employee in the Workplace Core application using the shifts and shift schedules that you defined.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Define shifts for your workplace.
- Assign employees to a shift.
- Associate areas and spaces with a shift.
- Define the capacity of workplace areas.
- Ensure you have the data that shows the mapping of employees to the workplaces in your workplace.

Role required: sn_wsd_core.workplace_manager

About this task

Reserve a workplace for an employee according to the assigned shift for a single day or multiple days.

You can also access the Reservation form by navigating to **Workplace Core** > **Space Reservations** > **Create New**.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Browse Workplace Services**.
2. Scroll and select **Reserve a space**.
3. On the form, fill in the fields.

Reservation form

Field	Description
Shift	Shift for which this reservation is being made.
Location	Area or space for which this reservation is being made.
Requested for	Employee for whom this reservation is being made.
Start date	Date and time from which the reservation is active.
End date	Date and time until which the reservation remains active.

4. Select **Submit**.
5. If you accessed the Reservation form from Workplace Service Portal, on the verification page, you can create another reservation or view all the existing reservations.

Result

- If you've reserved a space, then child reservation records are generated for every applicable occurrence of the specified period.
- A preconfigured email with the reservation details is sent to the shift owner and the employee for whom you reserved the workplace.
- The reservation is added to the list of all reservations that you can view by navigating to **Workplace Core** > **Space Reservations** > **All Reservations**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create workplace reservations for multiple employees

Automatically generate workplace reservations in bulk for all employees assigned to a shift for a single day or multiple days.

Before you begin

- Define shifts for your workplace.
- Assign employees to a shift.
- Associate areas and spaces with a shift.
- Ensure that the number of locations associated with the shift is greater than the number of employees assigned to the shift.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **Workplace Safety Management** > **Shift Management** > **All**.
2. Open a shift for which you want to generate the bulk reservations.
3. Select **Generate Bulk Reservation**.
4. Select a date range from the **Start date** and **End date** fields.
   If you want to create the bulk reservation for a single day, you can set the start and end date to the same day. Otherwise, set a date range.
5. Select **OK**.

Result

Reservations for the employees in this shift are created for the locations associated with the shift for the provided dates. You can view these reservations by navigating to **Workplace Safety Management** > **Space Reservations** > **All Reservations**.

Review pending workplace reservation requests

Review pending workplace reservation requests from employees in Workplace Core and assign available workplaces to complete these requests.

Before you begin

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Requests** > **Pending**.
2. Open a pending request that you want to address.
3. Open the related reservation record, which is the parent reservation:
   a. Select the information (ⓘ) icon next to the **Reservation** field.
   b. Select **Open Record** for the desired request.
4. On the reservation form, review the reservation details such as the workplace location being requested, the start and end dates, and the number of reservations confirmed for that period. From these details, you can review the number of days, with their dates, that are missing a reservation for the employee for the requested location.
5. If any dates are missing a reservation for the requested location, adjust the pending request to assign a workplace for all the missing desired dates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Change the workplace location in the parent reservation to a workplace available for all dates, which will also update the location for all applicable future child reservations.
  a. Select a different location from the **Workplace location** field.
  b. Select **Update**.
- Create a child reservation for a new workplace location for this employee for specific dates that are missing a reservation.
  a. In the Reservations related list, select **New**.
  b. Select the start and end dates in the **Start** and **End** fields.
  c. Select a location from the **Workplace location** field.

     The list of spaces displays the locations that are available for the requested dates.

  d. Select **Submit**.

6. After all the days that were missing a reservation are addressed, update the status of the pending workplace task to **Closed complete**.
7. **Optional:** Repeat this process for all pending workplace requests that you want to address.

Result

Once the status of workplace request is updated to **Closed complete**, the reservation information is populated in the **Notes** field of the workplace request.

Setting and tracking arrivals at the workplace

Workplace managers can set arrival intervals in Workplace Core for different locations at your workplace with defined capacities to facilitate staggered entry of employees into the office. Employees can then choose from the defined arrival slots.

Workplace managers can define arrival times and capacity for different locations such as the entry and exit gates, elevator, gym, and cafeteria of your workplace. Employees can then schedule their arrival at these locations for an available time slot.

For example, say you define arrival times for the cafeteria at 12:00 h, 13:00 h, 14:00 h, and 15:00 h, and set a capacity of 15 for every slot. A maximum of 15 employees can schedule their arrival to the cafeteria for each of these times on any given day.

By setting arrival intervals for your workplace, you can facilitate employee actions such as entry and exit to the office, elevator use, lunch pickup, gym use, and so on, without employees having to wait in long lines or causing large gatherings at any of the locations.

Important:
Starting with Workplace Core version 2.3, time zones are introduced in the application. All the arrival schedules that were created on Workplace Core version 2.2 and earlier are deactivated after the upgrade.

Define arrival schedules at the workplace for employees

Define arrival slot times in Workplace Core for different locations at your workplace and indicate the capacity for each slot. Establishing arrival schedules enables safe staggered entry of employees to these locations.

Before you begin

- Add your workplace data.
- Ensure you have the data for arrival schedules of the locations of your workplace.
- Ensure that your time zone is set to the time zone of the building that is used for the arrival.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Starting with Workplace Core version 2.3, time zones are introduced in the application. All the arrival schedules that were created on Workplace Core version 2.2 and earlier are deactivated after the upgrade. Both existing customers and new customers must perform the following actions on existing arrival schedules to set them to active:

1. Set the time zone of the building where you are creating or updating the arrival schedule.

   Note:
   If you are creating or updating the arrival schedule for a floor, area or a space, then select the building where it is located.

   a. Go to **Workplace Safety Management** > **Space Administration**.
   b. Select **Buildings**, **Floors**, **Areas**, or **Spaces** based on where you are scheduling an arrival slot.
   c. Select the building, floor, area, or the space for which you want to set the time zone.
   d. Set the building time zone.
      - If you selected a building, set the time zone in the **Time zone** field.
      - If you selected a floor, area, or the space, on the form, select the preview icon () that is next to the **Building** field.
        - In dialog box, select **Open record**.
        - On the Buildings form, set the time zone in the **Time zone** field.
   e. Select **Update**.

      Note:
      All the active arrival schedules that were created on this building and on associated floors, areas, or spaces will be deactivated. Any future arrival requests that are related to this schedule will be canceled.

   f. Select **Ok** on the warning that appears.
2. Change your session's time zone to the building's time zone.

   Note:
   Ensure that the sn_wsd_core.workplace_manager role is included in the **glide.timezone_changer.roles** property. If it is not included, ask your system administrator to include the role so that you can change your time zone.

   a. Select the settings icon () on your instance header.
   b. Set the **Time zone** field to the time zone of the building where you are creating or updating the arrival schedule.

Role required: sn_wsd_core.workplace_manager

About this task

Procedure

1. Navigate to **Workplace Safety Management** > **Workplace Arrival Scheduling**.
2. Select **Create Arrival Schedules**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the fields.

Arrival Schedule form

Field	Description
Workplace location	Select a building, floor, area or space where you want to schedule the arrival times.
Arrival schedule time	Time (in hours, minutes, and seconds) at which employee arrivals can start at this location, for example, 12 30 00.
Active	Option for indicating whether this schedule time is active. If marked as active, this schedule time will appear every day in the list of available time slots.
Capacity	Maximum number of employees that can schedule their arrival to this location at this slot time.

4. Select **Submit**.

Result

An arrival schedule is created for this workplace location for the indicated time and capacity. You can view arrival schedules by navigating to **Workplace Safety Management** > **Workplace Arrival Scheduling** > **Arrival Schedules**.

Schedule your arrival time at a workplace location

Schedule your arrival in Workplace Core at locations at your workplace so you can prevent long lines and safely enter the location.

Before you begin

To schedule an arrival using your mobile device, you must have the Now® Mobile app.

Role required: sn_wsd_core.workplace_user

Note:

In Workplace Core[var.workplace-safety-management] [sn_wsd_core] version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application search context menu **All** > **Workplace Core**. The Workplace Services Portal is currently being deprecated. You can access the Workplace Services Portal capabilities from the Employee Center portal home page **All** > **Self-Service** > **Employee Center** > **Workplace Services**. For more information, Workplace services on the Employee Center portal[workplace-services-on-employee-center].

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Browse Workplace Services**.
2. Scroll and select **Schedule your arrival**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the fields.

Schedule your arrival form

Field	Description
Entry point	Location where you want to schedule your arrival.
Building time zone	Time zone for the building of the selected entry point.
Date	Date of your arrival.
Arrival time	Time of your arrival. The time is displayed in 24-hour format.

4. Select **Submit**.

Result
The arrival request is created. The web page or your mobile screen is refreshed to show your arrival request details.

What to do next
You can check the details of your arrival schedule anytime.

1. Depending on your platform, do one of the following to view your requests:
   - On the Workplace Service Portal, go to the **Requests** tab to view your requests and reservations.
   - On the Now Mobile navigation bar, tap **For Me** and scroll down to the My Request section to view your requests.
2. If you want to cancel your arrival, select the arrival request and select **Cancel arrival**.

Updating arrival schedules at the workplace

Define building time zones, change the capacity of an arrival schedule, and set the schedule to active or inactive.

Before you begin
- Add your workplace data.
- Ensure that you have the data for the arrival schedules of your workplace locations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Ensure that your time zone is set to the time zone of the building that is used for the arrival.

Important:
Starting with Workplace Core version 2.3, time zones are introduced in the application. All the arrival schedules that were created on Workplace Core version 2.2 and earlier are deactivated after the upgrade. Both existing customers and new customers must perform the following actions on existing arrival schedules to set them to active:

1. Set the time zone of the building where you are creating or updating the arrival schedule.

   Note:
   If you are creating or updating the arrival schedule for a floor, area or a space, then select the building where it is located.

   a. If you are updating the arrival schedule, do the following:

      i. Select the workplace location info icon () that is next to the **Workplace location** field.

      ii. In the dialog box, select **Open record**.

      iii. If the value of **Workplace location** is a floor, area or a space, then select the workplace location info icon () that is next to the **Building** field.

   b. On the Buildings form, set the time zone in the **Time zone** field.

   c. Select **Update**.

      Note:
      All the active arrival schedules that were created on this building and on associated floors, areas, or spaces will be deactivated. Any future arrival requests that are related to this schedule will be canceled.

   d. Select **Ok** on the warning that appears.

2. Change your session's time zone to the building's time zone.

   Note:
   Ensure that the sn_wsd_core.workplace_manager role is included in the **glide.timezone_changer.roles** property. If it is not included, ask your system administrator to include the role so that you can change your time zone.

   a. Select the settings icon () on your instance header.

   b. Set the **Time zone** field to the time zone of the building where you are creating or updating the arrival schedule.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Arrival Scheduling**.
2. Select **Arrival Schedules**.
3. Select the arrival schedule that you want to update.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You cannot update the **Workplace location** or **Arrival schedule time** fields of an arrival schedule if there are any arrival requests associated with it. You must create a new arrival schedule for the changed **Workplace location** or **Arrival schedule time** fields.

4. To activate the schedule, select the **Active** option.
5. To change the capacity, edit the **Capacity** field.
6. Select **Update**.

Result
The arrival schedule is updated.

Making workplace reservations

Make workplace reservations in Workplace Core when you are ready to return to the office. You can reserve a workplace for a day or less directly or request a workplace for a specified period. Once a reservation request is approved and confirmed, you are notified about the reservation details.

Reserving a workplace

As an employee, you can request a workplace reservation using Employee Center.

When making a reservation, you can choose an available space that you want to access or select an available area. If you have made a reservation for an area, you can work from any available space within that area when you return to the office.

You can select a shift of your choice from the shift schedules defined by your organization. If your organization doesn't use shifts, you can select a custom time period. Depending on your organizational guidelines, your reservation request might require an approval.

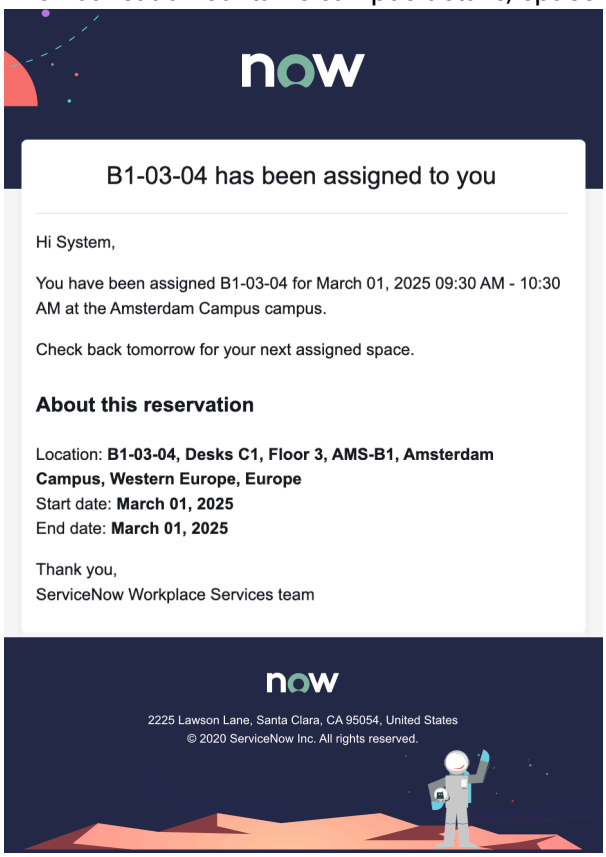
Note:
If you need a workplace for only a day or less, you can reserve it directly and don't have to submit a request and get approval.

Space reservation request states

After you submit a space reservation request, the status changes based on the action taken on it by your approving manager or the workplace manager.

- If your manager hasn't acted on your request, the state of the request remains Awaiting approval.
- If your manager approves your request and the space availability is confirmed, the state of the request changes to Closed complete.
- If your manager rejects your request, the state of the request changes to Closed incomplete.
- If your manager approves your request but the space you requested for isn't available for all or some days, the state of the request changes to Pending.

  You can follow up with your workplace manager to get a new space assigned and resolve your pending space request.



- If you cancel your request, the state of the request changes to canceled.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Email and push notifications

If you submit a space reservation request from the catalog item, or if a request is submitted on your behalf, you will receive an email notification about the request. If you have the Now® Mobile app, you will receive push notifications about your reservation requests.

The notification contains campus details, space details, and the reservation duration.

Request a workplace reservation for multiple days

Request a workplace reservation for the days during which you want to return to office by using Workplace Core.

Before you begin

.

Role required: sn_wsd_core.workplace_user

About this task

Request a workplace reservation either in a defined shift schedule or for a custom time for a specific date range during which you want to work from the office.

You can also access the reservation form using your mobile device. From the Now Mobile app, navigate to **Workplace core** and choose either **Request a short-term shift and space** or **Request a short-term space**.

Procedure

1. Navigate to **All** > **Self-service** > **Employee Center** > **Browse Workplace Services**.
2. Reserve a space for a predefined shift or for a custom time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To reserve a space for a defined shift schedule, select **Request a short-term shift and space**.
- To reserve a space for a custom time, select **Request a short-term space**.

3. On the form, fill in the fields.

> **Note:**
> The visibility of some of the following fields depends on the application settings made by your administrator.

Reserve a short-term space form

Field	Description
Region	Region of your office location.
Site	Location of your office.
Campus	Campus of your office building.
Building	Office building that you want to return to.
Start date	Date from which you want access to the workplace.
End date	Date until which you want to access the workplace.
Shift	The shift schedule during which you want to visit the office. Only the shifts available for the selected location and date range are displayed. Only the shifts that you are part of are displayed. This is dependent on the system properties which were configured by your organization.
Shift detail	Details of the shift that you selected. The shift detail is auto-filled based on your shift selection.
Start time for each day	Time from when you would access the workplace. This field is visible if you selected **Request a short-term space**.
End time for each day	Time until when you would access the workplace. This field is visible if you selected **Request a short-term space**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Floor	Floor of the area or space that you want to access.

4. Select **Submit**.

Result
The state of your request is set to Awaiting approval, which indicates that the request has been sent to your manager for approval.

Reserve a workplace for a day

Reserve workplaces for a day on which you want to return to the office by using Workplace Core.

Before you begin
Role required: sn_wsd_core.workplace_user

About this task
Reserve spaces for a period less than or equal to 24 hours on the day that you want to work from the office. Reserve spaces, either in a defined shift schedule or in your custom timings.

You can also access the reservation form from the Now Mobile app. Navigate to **Workplace Core** and choose one from **Reserve a shift and space for a day** or **Reserve a space for a day**.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace services** > **Browse Workplace Services**.

   Note:
   You can also raise a request from the Employee Center. On the home page, navigate to **Workplace** > **Browse all Workplace** and select the workplace service.

2. Reserve a space either for a defined day shift or a custom date.
   - To reserve a space for a defined shift schedule, select **Reserve a shift and space for a day**.
   - To reserve a space for custom timings, select **Reserve a space for a day**.
3. On the Reserve a space form, fill in the fields.

   For a description of the field values, see Reserve a space form.

   Note:
   The visibility of some of the following fields depends on the application settings made by your administrator.

4. If the **Area** and **Space** fields are available, select an area or a space that you want to reserve.
5. Select **Submit**.

Result
The web page is refreshed to show your reservation details.

What to do next
You will receive an email notification 15 minutes before the reservation to check in and another email notification 30 minutes before the reservation end time to check out.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- In the check-in email, select any of the following actions.
  - **Check in**: Check in your reservation.
  - **Cancel this reservation**: Cancel if the reservation is no longer required.
  - (Optional) **Check out**: Check out early before the reservation end time.

  Note:
  You must check in within 30 minutes from the reservation start time, otherwise the reservation is canceled.

- In the check-out email received before the reservation end time, select **Check out** to check out the reservation.

  Note:
  You must check out within an hour after the reservation end time. Otherwise, the reservation is automatically checked out.

Approve employee workplace reservation requests

Review employee area and space reservation requests in Workplace Core and approve or reject them.

Before you begin

To approve or reject a workplace request using your mobile device, you must have the Now® Mobile app.

Role required: approver_user

Procedure

1. Navigate to a reservation approval task.
2. **Optional:** Review the details of the request.
3. Approve or reject the request by selecting **Approve** or **Reject**.

Managing workplace tasks

Using workplace tasks in Workplace Core, workplace managers can monitor workplace activities that are created and scheduled in the workplace for each shift. They can also schedule planned or on-demand maintenance tasks and generate reports to track the progress of these activities.

Workplace task creation

You can create workplace tasks in the Workplace Core application for various situations.

Automatically created pre-cleaning and post-cleaning tasks

Workplace managers can create shifts and associate employees and spaces to the shift. After workspaces are assigned to a shift and the shift's state is set to Ready, the system automatically creates pre-cleaning and post-cleaning tasks for that shift. These tasks are generated using the respective templates available with the application.

Note:
If a shift doesn't have a space associated to it, pre-cleaning and post-cleaning tasks are not auto-generated for it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Planned tasks

Tasks for recurring planned activities that are independent of shifts.

Ad hoc tasks

Ad hoc tasks when on-demand cleaning is required.

Task assignment

Assignments for tasks depend on the task type:

- Pre-cleaning and post-cleaning tasks are automatically assigned based on their templates.
- Planned tasks are automatically assigned based on the planned task definition that is used to generate these tasks.
- Ad hoc tasks can be assigned manually by workplace managers when they create these tasks.

Signature of completion

For audit and compliance of workplace activities, workplace managers can electronically sign the completed workplace tasks. This action generates a PDF of the signed form and attaches it to the task.

Configure a workplace task template

Configure templates in Workplace Core that can be used to create workplace tasks. You can either modify predefined workplace task templates or create your own templates and associate them with workplace tasks.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Templates simplify the process of creating tasks in Workplace Core by populating fields automatically. The following predefined templates are available with the application:

- Pre-cleaning
- Post-cleaning

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Tasks** > **Workplace Task Templates**.
2. Create a new template or modify an existing template.
   - If you are creating a new template, select **New**.
   - If you are modifying an existing template, open the desired template.

   For information about the template form fields, see Create a template.
3. Select the **Workplace Task [sn_wsd_core_workplace_task]** table in the **Table** field.
4. **Optional:** Apply the template to the required workplace task type.
   a. In the **Template** section, select the **Workplace task type** field in the left column.
   b. Select the required task type in the right column.
5. Select **Submit**.
6. Add a checklist to the template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For steps on how to add a checklist, see Create a workplace task checklist.

7. Select **Update**.

Create a workplace task checklist

You can create a unique checklist for each workplace task template in Workplace Core. You can also quickly create a checklist from an existing checklist template.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Ensure that you have the following:

- A workplace task template already created in the application, if you are adding a checklist for a workplace task template.
- A workplace task already created in the application, if you are adding a checklist for a workplace task.

You can also create checklists for individual workplace task records.

Procedure

1. Create a checklist to be included in all tasks using the same template or add a checklist to a specific task.
2. In the **Checklist** section, select the down arrow ( ) beside the **Checklist** formatter.
3. Add a checklist.
   - If you are creating a new checklist, select **Create new**.
   - If you are using an existing checklist template, select **Create from template** and select a template.
4. Add a checklist item.
   a. Select the Add item icon ( ) and enter text for the checklist item.
   b. Press the Enter key to add the checklist item.
   Add as many additional checklist items as desired.
5. **Optional:** Delete unwanted checklist items by selecting the delete item icon ( ).
6. **Optional:** Change the order of checklist items by selecting the drag icon ( ) and dragging the item to a different position in the list.
7. Select **Update**.

Result

- If you created the checklist for a workplace task template, any task created using this workplace template will also contain this checklist.
- If you created the checklist in a workplace task form, the checklist will be part of only that task.

What to do next

You can save the checklist as a template for easy reuse, if required.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Save a workplace task checklist as a template

You can save a Workplace Core workplace task checklist as a template for easy reuse. A template saves time by adding checklist items automatically in a record where you use it.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task
When you add a template checklist to a record, you can add, edit, or remove checklist items in the record without affecting the template.

Procedure

1. Navigate to the record that contains a checklist you created.
   To find out how to access the record, see Create a workplace task checklist.
2. In the **Checklist** section, select the down arrow ( ) beside the **Checklist** formatter.
3. Select **Save as Template**.
4. Enter a name for the checklist template.
5. From the **User Group** list, select a group to limit who can use the checklist template.

   Only members of the selected group and the user who created the checklist can use the checklist as a template. Leaving this field blank prevents anyone but the template creator from using the checklist template.
6. Select **Save**.

Configure a workplace task signing template

Configure a signing template that you want to make available for signing the completed Workplace Core workplace tasks. You can configure the default signing template available with the application or create a new template.

Before you begin
Role required: sn_wsd_core.admin

About this task
When a workplace manager signs a completed task, an e-signature PDF document is generated using a signing template and is attached to the task. For information about signing a workplace task, see Sign a completed workplace task.

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Administration** > **HTML templates**.
2. Select **New** or open an existing signing template to edit it.
   The application provides a default template called **Task Signing Template**.
3. On the form, fill in or modify the fields.

Html Template form

Field	Description
Acknowledgment text	Text clarifying the meaning of the signature. For example, "I acknowledge that this information is true".

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Name	Name of the signing template.
Table	Table associated with the template. The selected table determines the available variables in the **Select variables** field.
Body	Placeholder for HTML text and variables. The variables are resolved when the PDF is generated. You can select fields from the **Select variables** option to add them as variables to the HTML body.

4. Customize the body of the signing template in the **Body** field.

   a. Enter and format the text to design the body of the template.

      Use the formatting tools to apply formatting options, such as bold, italic, underline, or font styling.

   b. Insert variables by locating your cursor at the desired location and selecting the variable under **Fields**.

      For example, to indicate which location to clean, you might insert the text `Cleaning finished for the Workplace location:` and, after a space, select **Workplace location** under **Select variables**. The variable in the **Body** field text would appear as follows:

      ```
      Cleaning finished for the Workplace location:
       ${workplace_location}
      ```

      The variable is replaced with the actual location when the PDF is generated.

5. At the desired location in the **Body** field, enter the following variables:
   - `${Checklist}`: Adds the checklist variable.
   - `${Signature}`: Adds the signature variable.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the signed PDF document, the signature and checklist are embedded at the same location where you entered these variables into the template body.

6. Select **Submit**.
7. **Optional:** Review the look of the PDF document by impersonating a workplace manager and signing a closed task.

Create planned task definitions

Create planned task definitions in Workplace Core to help workplace managers easily generate tasks that are often repeated and independent of shifts such as cleaning coffee vending machines or cleaning floors. You can quickly specify the task details and the frequency at which the task is to be performed.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace services** > **Browse Workplace Services**.
2. Select **Add planned task definition**.
3. On the form, fill in the fields.

Planned task definition form

Field	Description
Name	Name of the planned task definition. For example, "Clean conference rooms" for the activity of sanitizing conference rooms.
Schedule	Work schedule to be used for planned tasks.
Workplace task template	Template used for the generated planned tasks. Selecting a template automatically populates certain fields such as **Assigned to**, **Short description**, and **Workplace task type** in the generated tasks. For information about workplace task templates, see Configure a workplace task template.
Processing Time (hours)	Amount of time it should take to complete a planned task.
Planned end time	Date and time by which the task should be finished.
Planned start time	Date and time when the task should start.

4. Select **Submit**.
5. If you accessed the form from Workplace Service Portal, on the verification page, you can create another planned task definition or generate planned tasks from this definition immediately.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can also use this definition to generate planned tasks later. See the instructions in the Generate planned tasks topic.

Result

- The planned task definition is added to the list of all planned task definitions that you can view by navigating to **Workplace Core** > **Workplace Tasks** > **Planned Tasks Definitions**.
- If you created planned tasks from this definition, they are added to the list of all planned tasks. You can view those tasks by navigating to **Workplace Safety Management** > **Workplace Tasks** > **Planned Tasks**.

Generate planned workplace tasks

Using planned task definitions in Workplace Core to create planned tasks independent of shifts for recurring activities. For example, you can generate tasks for a selected number of days for cleaning all floors and buildings at midnight every day.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Procedure

1. Navigate to **All** > **Workplace Core** > **Workplace Tasks** > **Planned Tasks Definitions**.
2. In the list, open the planned task definition.
   You can also generate planned tasks immediately when you create a new planned task definition.
3. Select **Planned start time** and **Planned end time** values based on the days and time when you need these tasks to be performed.
4. Select **Generate now**.

Result

- Based on the planned start time and planned end time, planned tasks are created for all occurrences of the schedule and appear in the **Workplace Tasks** related list.
- The **Expected start time** in each generated planned task is auto-calculated from the planned end time and processing time values in the respective tasks as follows:

```
Planned start time = Planned end time – Processing Time
```

You can view all planned tasks by navigating to **Workplace Core** > **Workplace Tasks** > **Planned Tasks**.

Create an ad hoc workplace task

Create an ad hoc task in Workplace Core for unplanned activities. For example, if you notice that something isn't clean in an area or want the area to be cleaned again, you can create an ad hoc workplace task to get the cleaning done immediately.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

You can also access the workplace task form by navigating to **Workplace Core** > **Workplace Tasks** > **Create New**.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace services** > **Browse Workplace Services**.
2. Select **Add a task**.
3. On the form, fill in the fields.

Workplace Task form

Field		Description
Workplace task type		Type of the workplace task. Select **Ad-hoc Task**.
Workplace location		Workplace location where the task should be performed.
Signature template		Task signature template to use for signing off on this task when it is completed. For more information, see Sign a completed workplace task.
State		State of the task.
Assignment group		User group assigned to the task.
Assigned to		User assigned to the task.
Vendor		Vendor whose employees should perform the task.
Short description		Brief description of the ad hoc task.

4. Select **Submit**.
5. If you accessed the form from Workplace Service Portal, on the verification page, you can create another task or view this task record in a list.
6. Add a checklist to the task to track the actions required to complete it.
   To add the checklist, open the task by navigating to **Workplace Core** > **Workplace Tasks** > **All**.
   For more information, see Create a workplace task checklist.

Result

The ad hoc task is added to the list of all tasks that you can view by navigating to **Workplace Core** > **Workplace Tasks** > **All**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sign a completed workplace task

As the workplace manager for a space, sign the workplace tasks Workplace Core for complete and closed activities. Signing a task generates a PDF document for the workplace activity, which is useful for compliance procedures.

Before you begin

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Tasks** > **Closed**.
2. In the list, select to open the workplace task that you want to sign.
3. In the **Sign template** field, review the signing template selected for the task.
   For more information, see Configure a workplace task signing template.
4. Select **Sign Task**.

   Note:
   The **Sign Task** button appears only once you have selected a template in the **Sign template** field.

5. In the **Sign Task** form, sign the form in one of the following ways:
   - In the **Type signature** tab, enter your name in the **Full name** field.
   - In the **Draw signature** tab, draw your signature using your mouse.
6. Select **Accept and complete**.

Result

A PDF document of the signed form is generated based on the signing template associated with the task and is attached to the task.

Workplace knowledge management

As a workplace admin, you can create knowledge base articles for employees. In the articles, provide information to your employees about workplace services, such as workplace updates, self-help, troubleshoot, and others.

With the Workplace Service Delivery application, you can create knowledge base articles and display them as wiki pages or HTML pages. The Workplace Service Delivery Knowledge Management is the same as the ServiceNow AI Platform Knowledge Management, for more information, see Configuring Knowledge Management.

You can perform the following actions on a knowledge base article:

- Publish the article to make it available to employees.
- Update the article at any time if necessary.
- Retire the article if it is no longer required.
- Republish a retired article if necessary.
- Delete an article.

A knowledge base article undergoes the following workflow when it is created:

- Draft
- Review
- Published

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Pending retirement
- Retired

You can add attachments and enable employees to view the attachments individually. If a knowledge base article is relevant only for a short duration, you can specify an end date for the knowledge base article.

You can view and update the knowledge base articles at any time. You can view published articles, unpublished articles and retired articles separately. You can also republish an article whenever needed.

Create a workplace knowledge base article

Provide information to employees through knowledge base articles. Create knowledge base articles with information about workplace updates, self-help, troubleshoot steps, and others.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.kb_writer

About this task

Create a knowledge base article to notify or provide employees with any important information that they must know. After you create a knowledge base article, publish the article to make it available to the employees.

You can perform the following actions on a knowledge base article:

- Publish the article to make it available to employees.
- Update the article at any time if necessary.
- Retire the article if it is no longer required.
- Republish a retired article if necessary.
- Delete an article.

A knowledge base article undergoes the following workflow when it is created:

- Draft
- Review
- Published
- Pending retirement
- Retired

Procedure

1. Navigate to **All** > **Workplace Core** > **Knowledge management** > **Create new article**.
2. Select **New**.
3. On the form, fill in the fields.

Knowledge form

Field	Description
Knowledge base	Name of the knowledge base. Select the **Workplace services** knowledge base.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Category	Relevant category for the knowledge base article. Select an existing category, or select the add category icon (⊕) to add a new category. You can also select or add a subcategory.
Valid to	Date until which the knowledge base article is valid. The date is automatically set to 2100 - 01 - 01.
Article type	Type of article, which you want to create. Choices are as follows: ○ Select **Wiki** to create a wiki page. ○ Select **HTML** to create an html web page.
Workflow	This field is automatically set as **Draft**. Depending on the progress, the workflow of the knowledge base article changes to the following states: ○ Review ○ Published ○ Pending retirement ○ Retired
Attachment link	Option to give an attachment for the knowledge base article.
Display attachments	Option to display the attachments individually.
Short description	Short description for the knowledge base article. The short description is displayed as the title of the article.
Article body	Information that is displayed in the knowledge base article. Use the formatting options to change the style of the content. This field appears only if **HTML** is selected from the **Article type** field.
Wiki	Information that is displayed in the knowledge base article as a wiki. Select the **Wikitext** option to preview the text. This field appears if **Wiki** is selected from the **Article type** field.

4. **Optional:** To search existing articles for any duplicate content, select **Search for Duplicates**.
5. Select **Submit**.

Result
The knowledge base article is created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Publish the knowledge base article. For more information, see Publish a workplace knowledge base article.

Publish a workplace knowledge base article

After creating a knowledge base article, publish the article to make it available for employees.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.kb_writer

Before you publish, create a knowledge base article. For more information, see Create a workplace knowledge base article.

Procedure
1. Navigate to **All** > **Workplace Core** > **Knowledge management** > **Unpublished articles**.
2. Select the knowledge base article that you want to publish.
3. On the knowledge form, select **Publish**.

Result
The knowledge base article is published for employees to view.
For more information on how to view the published knowledge base article, see View workplace knowledge base articles.

For more information on how to edit the publish knowledge base article, see Modify a workplace knowledge base article.

View workplace knowledge base articles

View workplace-related updates, processes, and other information in the knowledge base articles that your team created. Rate articles that you find useful.

Before you begin

Note:
In Workplace Core version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application search context menu **All** > **Workplace Core**. The Workplace Services Portal is currently being deprecated. You can access the Workplace Service portal capabilities from the Employee Center portal page **All** > **Self-Service** > **Employee Center** > **Workplace Services**.

Role required: sn_wsd_core.workplace_user

Procedure
1. Navigate to **All** > **Workplace Service Portal** > **Workplace Service Portal Home**.
2. Open the knowledge base page.
   - Select the **Knowledge** tab.
   - Select the **Knowledge Base** option.
3. In the KB categories list, select the category of the knowledge base article.
4. **Optional:** If you are unsure about the category, search for the article.
5. From the list of published knowledge base articles, select the article that you want to view.
6. **Optional:** Perform any of the following actions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Rate the article** out of 5.
- If you found the article useful, Select **Yes**. If not, select **No**.
- Leave a comment about the article and select **Submit**. You can also attach files.

Modify a workplace knowledge base article

Update a knowledge base article at any time. Retire a published article or republish a retired article.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.kb_writer

About this task

You can perform the following actions on a knowledge base article:

- Publish the article to make it available to employees.
- Update the article at any time if necessary.
- Retire the article if it is no longer necessary.
- Republish a retired article if necessary.
- Delete an article.

A knowledge base article undergoes the following workflow when it is created:

- Draft
- Review
- Published
- Pending retirement
- Retired

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Knowledge management**.
2. Select **All articles**.
   You can also select any of the following options to find your knowledge base article.
   - **Published articles**
   - **Unpublished articles**
   - **Retired articles**
3. Select the knowledge base article that you want to modify.
4. Edit the fields that you want to change and select **Update**.
5. To retire, republish or a delete the knowledge base article, select any of the following options on the top right or at the end of the form.

Result

The knowledge base article is modified with the changes.

Workplace Service Portal

The Workplace Service Portal is a self-service portal for employees, delivering workplace services from a central location. Employees can make reservations, view knowledge base articles, submit and review requests, and get help using virtual agent chat support.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

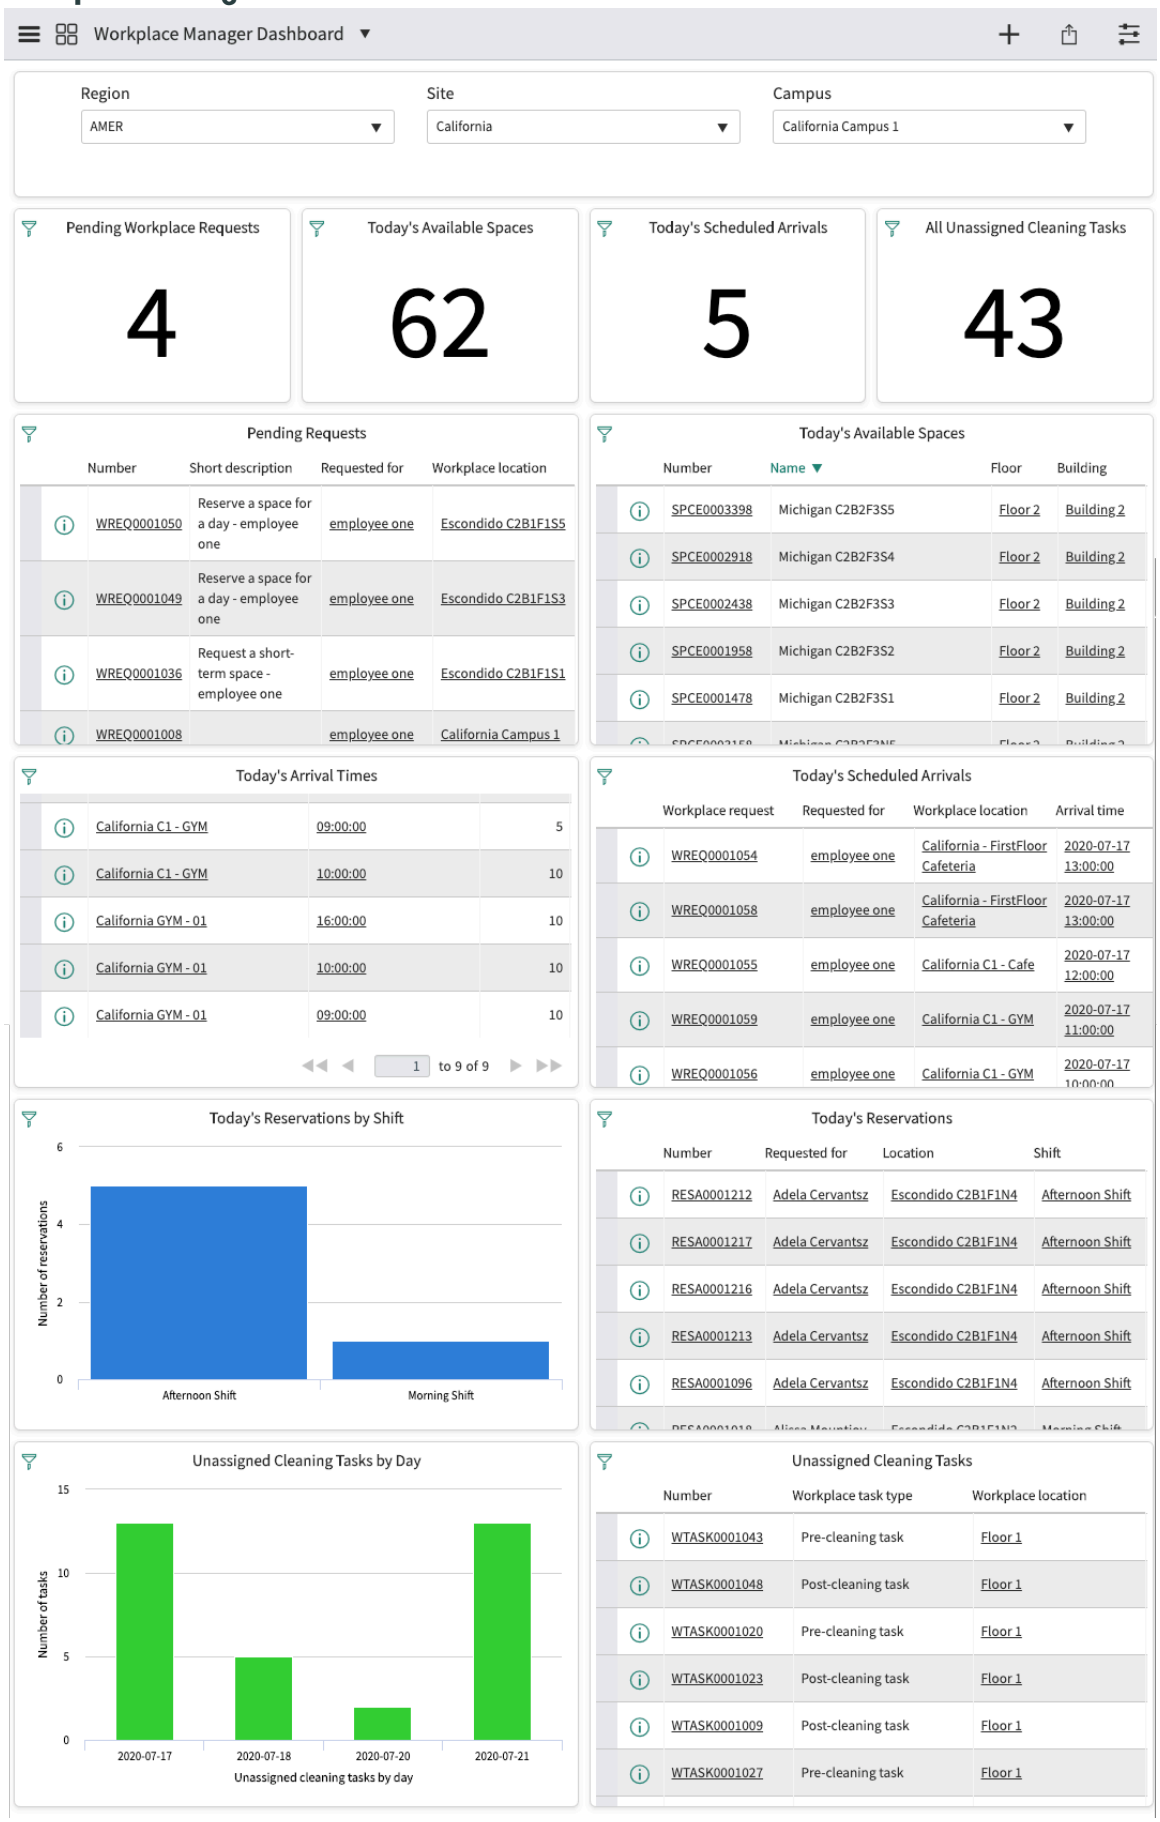
Note:

In Workplace Core version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application search context menu **All** > **Workplace Core**. The Workplace Services Portal is currently being deprecated. You can access the Workplace Services Portal from the Employee Center portal home page **All** > **Self-Service** > **Employee Center** > **Workplace Services**.

From the Workplace Service Portal, you can do the following:

- Open the Reservation portal and make reservations for meeting rooms, desks, or any other reservable workplace items.
- Register visitors in advance and customize their visit. You can register a guest or an off-site colleague for either a short duration or a complete day.
- View and search through top-rated knowledge base articles to find information. As you type, the search field displays suggestions based on keywords.
- View your requests and approvals (if you are an approver).
- Submit requests for general inquiry, registering visitors, shift-based reservations, and other requests.
- Chat with a virtual agent to submit requests and view submitted requests.
- Raise a general help request by selecting from a list of service catalog items.

Workplace dashboards



Use the Workplace dashboards in Workplace Core to get a consolidated view of multiple workplace-related metrics so you can quickly check space utilization and monitor the progress of workplace tasks. Real-time information provides insights to enable making decisions such as how many people in the workforce can be allowed at a given time into the office space.

Workplace Manager Dashboard

Use the Workplace Manager dashboard to monitor the space allocation and workplace maintenance activities at your office campus. For any given day, you can view the details for available spaces, space reservations, pending workplace requests, arrival times for different locations, employee arrivals, and maintenance tasks.

Today's scheduled arrivals	List	List of employee arrivals scheduled for today for different locations on the campus.
Today's reservations by shift	Bar 	Number of workplace reservations for today grouped by their shifts.
Today's reservations	List	Number of workplace reservations for today.
Unassigned cleaning tasks by day	Trend 	Trend of the number of active cleaning tasks per day that are not assigned to anyone and not in the Closed state. The cleaning tasks in this report have a due date between today and the next seven days and include all task types such as planned, unplanned, and ad hoc.
Unassigned cleaning tasks	List	List of active workplace tasks that are not assigned to anyone and not in the Closed state.

Workplace dashboard in Workplace Service Portal

Use the Workplace Dashboard from Workplace Service Portal to visually analyze the available workspace capacity, space request and reservation trends, and monitor the maintenance tasks of your workplace. You can also reserve a space for an employee or create a workplace maintenance task directly from this Workplace Service Portal page.

To open the Workplace dashboard on the Workplace Service Portal, navigate to **Workplace Core** > **Dashboard**.

Selecting a region and site in the filter at the top displays reports for available campuses in separate tabs.

Important:
For new customers, from Workplace Core (sn_wsd_core) version 2.2, the **Dashboard** is removed from the Workplace Service Portal and Service Portal. Customers using Workplace Core version 2.1 and below can still access the dashboard after an upgrade.

on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

Use with other Safe Workplace suite applications

Workplace PPE Inventory Management is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

- With the Employee Readiness Surveys application, evaluate the readiness of your users to return to the workplace by asking them to fill in a survey.
- Before users re-enter workspaces, use the Employee Health Screening application to screen users and ensure compliance with your entry requirements, such as a temperature check and PPE.
- With the Explore Workplace Core application, prepare for the return of users by configuring and maintaining clean and socially distanced workspaces for them to use.

All Safe Workplace suite applications are available in the ServiceNow Store.

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

PPE Assignment Log [sn_imt_ppe_ppe_assignment_log]	Contains a log of PPE assignments over time.

Set up Workplace PPE Inventory Management

Complete setup tasks to start using Workplace PPE Inventory Management. Create models for PPE items, add PPE items to your service catalog, add PPE stock, and create stock rules.

Create models for PPE items

Create models to record the types of PPE in your inventory.

Before you begin

Ready-to-use models are installed with Workplace PPE Inventory Management. Create models for any of your PPE items that don't have an existing model. View all models by navigating to **PPE Inventory Management** > **Models** > **All**.

Role required: sn_imt_ppe.ppe_admin

About this task

A model represents a specific type of PPE item. For example, use one model to track all of your N95 masks, and another model to track all of your nitrile gloves.

Procedure

1. Navigate to **PPE Inventory Management** > **Models** > **Add Model**.

> **Note:**
> To create a model in the Now Mobile app, navigate to **Health** > **Manage PPE Inventory** > **Add Model**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. On the form, fill in the fields.

Add PPE Model form

Field	Description
Type	Select **Consumable** for disposable PPE like masks or gloves. Select **Hardware** for PPE that is not disposable and could be reassigned, like a ventilator.
Name	Name for the model.
Short description	Short description for the model.
Manufacturer	Manufacturer of the item.
Model number	The specific model number assigned to the item by the manufacturer.
Owner	The person responsible for the model.

3. Click **Submit**.

Add PPE models to Service Catalog

Add PPE models through Service Catalog so employees can request the items they need.

Before you begin

Role required: catalog_admin

Procedure

1. Navigate to **All** > **Service Catalog** > > **Catalog Definitions** > **Record Producers**.
2. Filter the category to Personal Protective Equipment (PPE).
3. Click one of the record producers.
   Any record producer in the Personal Protective Equipment (PPE) category will work.
4. Click **Copy**.
5. Update the **Name**, **Model**, **Description**, and **Picture** fields for the item.
6. In the **Script** field, replace the sys_id value with the sys_id for the PPE model that you're adding to your service catalog.
   The sys_id is a unique alphanumeric code. To get the sys_id for a PPE model, navigate to the PPE model record, right-click the form header, and select **Copy sys_id**.
7. Click **Update**.

What to do next

Add the Personal Protective Equipment (PPE) category to your service catalog so employees can see the items. To add the category, navigate to **Self-Service** > **Service Catalog** and click the plus icon (+) in the upper right.

Add PPE stock

Add stock for a PPE model to track the availability of the item at different locations.

Before you begin

Create stockrooms for your PPE. To create a stockroom, navigate to **PPE Inventory Management** > **Inventory** > **Stockrooms**. For more information, see Stockrooms .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_imt_ppe.ppe_admin

Procedure

1. Navigate to **PPE Inventory Management** > **Inventory** and select **Add Consumable Stock** or **Add Hardware Stock**.

   Note:
   To add PPE stock in the Now Mobile app, navigate to **Health** > **Manage PPE Inventory** and select **Add Consumable Stock** or **Add Hardware Stock**.

2. On the form, fill in the fields.

   Add PPE Stock form

Field	Description
Model	The model to add stock for.
Stockroom	The stockroom where the PPE is located. **Note:** Only the stockrooms that have the model appear.
Quantity	The number of items in stock. **Note:** For hardware items, the quantity must be `1` so that each item is tracked with a unique asset tag and serial number. You can only enter an amount that is equal to or less than what is in stock.
Asset tag	The asset tag for the item. This field is only visible for hardware models.
Serial number	The serial number for the item. This field is only available for hardware models.

3. Click **Submit**.
   The stock log is updated with the PPE stock that you added. To view the stock log, navigate to **PPE Inventory Management** > **Inventory** > **Stock Log**.

What to do next

After adding PPE stock, you can view all of your available PPE by navigating to **PPE Inventory Management** > **Inventory** and selecting **Consumables in Stock** or **Available Hardware**.

Note:
The **Consumables in Stock** and **Available Hardware** pages have a **New** button. Do not add PPE stock using the **New** button. Using this button does not update the stock log.

Reduce PPE stock

Reduce stock for a Personal Protective Equipment (PPE) model to reflect accurate inventory at different locations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: sn_imt_ppe.ppe_admin

Procedure

1. Navigate to **All** > **PPE Inventory Management** > **Inventory** and select **Reduce consumable stock** or **Reduce hardware stock**.

   Note:
   To reduce PPE stock in the Now Mobile app, navigate to **More** > **PPE Stock** and select **Reduce Consumable Stock** or **Reduce Hardware Stock**.

2. On the form, fill in the fields.

Reduce consumable stock form

Field	Description
Model	The model to remove stock for.
Stockroom	The stockroom where the PPE is located.
Quantity	The number of items to be reduced from stock. **Note:** This field is not available for hardware items. The quantity must be `1` so that each item is tracked with a unique asset tag and serial number.
Asset tag	The asset tag for the item. This field is only visible for hardware models. **Note:** If you enter an asset tag, only the stockrooms that contain the asset appear.
Serial number	The serial number for the item. This field is only available for hardware models. **Note:** If you enter a serial number, only the stockrooms that contain the serial number appear.
Comments	The reason that you're reducing stock.

Hardware stock

When reducing hardware models, if the asset tag and model number are not entered, the stock is removed from the stockroom listed first and the amount is set to zero (0).

When a model and asset tag are entered, or if the model and serial number are entered, hardware stock is matched and the amount is set to zero (0).

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Consumable stock

If you try to enter a quantity larger than the quantity that is in stock, the system does not allow you to proceed.

3. Click **Submit**.
   The stock log is updated with the PPE stock that you removed. To view the stock log, navigate to **PPE Inventory Management** > **Inventory** > **Stock Log**.

Create stock rules for PPE

Create a stock rule to automatically resupply a stockroom with an item.

Before you begin

Role required: sn_imt_ppe.ppe_admin

About this task

When an item drops below a specified quantity, the stock rule automatically creates a transfer order. The transfer order resupplies the stockroom by transferring the required items from another stockroom. For more information about transfer orders, see Transfer orders.

Procedure

1. Navigate to **All** > **PPE Inventory Management** > **Inventory** > **Stock Rules**.
2. Click **New**.
3. On the form, fill in the fields.

Stock Rule form

Field	Description
Model	The product model for the rule.
Threshold	The item quantity that triggers a restock. For example, enter a threshold of 150 for masks that should be restocked when inventory drops below 150 in the specified stockroom.
Restocking option	Stockroom. This value is automatically populated.
Parent stockroom	The stockroom that the new items are transferred from.
Active	When selected, the rule is active and items are automatically restocked. When cleared, the rule is not active and items are not automatically restocked.
Stockroom	The stockroom that you want to be automatically restocked by the rule.
Order size	The number of new items to order for the stockroom.

4. Click **Submit**.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

PPE Inventory Overview dashboard

Use the PPE Inventory Overview dashboard to track PPE items that are in stock, on order, and assigned to employees.

To view the dashboard, navigate to **PPE Inventory Management** > **Overview Dashboard**.

PPE Inventory Overview dashboard

End users and roles

End user and goal	Required role
PPE Inventory Management admin: Track PPE in stock and assigned over time. Plan ahead to anticipate PPE needs and ensure that all employees have access to the appropriate PPE.	sn_imt_ppe.ppe_admin

Reports

Title	Description
PPE Items Consumed	Number of consumable PPE items assigned to employees.
PPE Items In Stock	Number of PPE items in stock.
PPE Items On Order	Number of PPE items on order.
PPE Items In Transit	Number of PPE items in transit.
PPE Items In Use	Number of hardware PPE items assigned to employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Title	Description
PPE Items Missing	Number of PPE items that are missing.
PPE Stockrooms By Type	Number of each type of stockroom that stores PPE.
Consumables Distributed By User	Number of consumable PPE items assigned to each employee.
Consumables In Stock By Location	Number of consumable PPE items in stock at each location.
Consumable Models	All models for consumable PPE.
Stock Rules	All stock rules for PPE.

Request PPE

Use Service Catalog to request personal protective equipment (PPE) for you to use at your workplace.

Before you begin

Role required: sn_imt_ppe.ppe_admin

Procedure

1. Navigate to **All** > **Self-Service** > **Service Catalog** and click **Personal Protective Equipment (PPE)**.

   Note:
   To request PPE in the Now Mobile app, navigate to **Health** > **Follow These Safety Practices** > **Request PPE**.

2. Click the item that you want to order.
3. Select a quantity for the item.
4. Click **Submit**.

What to do next

View the status of your request by navigating to **PPE Inventory Management** > **My Requests**.

Fulfill a request for PPE

View employee requests for personal protective equipment (PPE). Fulfill the requests to make sure that employees get the PPE they need to stay safe at the workplace.

Before you begin

Role required: sn_imt_ppe.ppe_admin

Procedure

1. Navigate to **All** > **PPE Inventory Management** > **Requests**.
2. Click the request that you want to work on.
3. In the **State** field, select **Work in Progress**.
4. In the **Stockroom** field, select the stockroom that you want the items to come from.
   When you select a stockroom, the **Manager** field is automatically populated with the manager for that stockroom. When you update the request, the **Assigned to** field is also automatically populated with that manager unless you specify another user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the **Quantity** field, enter the number of items to assign to the employee.
   This number might be different from the requested quantity if the employee requested too many items, or if the stockroom doesn't have enough inventory to fulfill the request. If the stockroom doesn't have enough inventory, you will see an error message when you update the request so that you don't assign more items than you have in stock.
6. Click **Update**.

What to do next

When the employee receives their PPE, update the request state to **Closed Complete**. A record is added to the assignment log and the consumable state changes to Consumed.

If the request won't be fulfilled, update the state to **Closed Incomplete**.

Assign PPE to employees

You can assign PPE directly to an employee without them submitting a request.

Before you begin

Role required: sn_imt_ppe.ppe_admin

About this task

If an employee submits a request for PPE, follow the steps to Fulfill a request for PPE instead.

When you assign hardware PPE to an employee, the state changes from **In stock** to **In use**. The state can be updated and the item can be reassigned to another employee.

When you assign consumable PPE to an employee, a consumable record is created with the quantity allocated to the employee. The state is set to **Consumed** and is read-only. Consumable PPE cannot be reassigned to another employee.

Note:
Don't use the **Consume** button on consumable records to assign PPE. Instead, use the following steps.

Procedure

1. Navigate to **PPE Inventory Management** and select **Assign Consumable** or **Assign Hardware**.

   Note:
   To assign PPE in the Now Mobile app, navigate to **Health** > **Manage PPE Inventory** and select **Assign Consumable** or **Assign Hardware**.

2. On the form, fill in the fields.

Assign PPE form

Field	Description
Model	The model to assign.
Issuing stockroom	The stockroom where the PPE is located.
Assigned to	The employee that you're assigning PPE to.
Quantity	The number of items to assign. This field is only available for consumable models.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

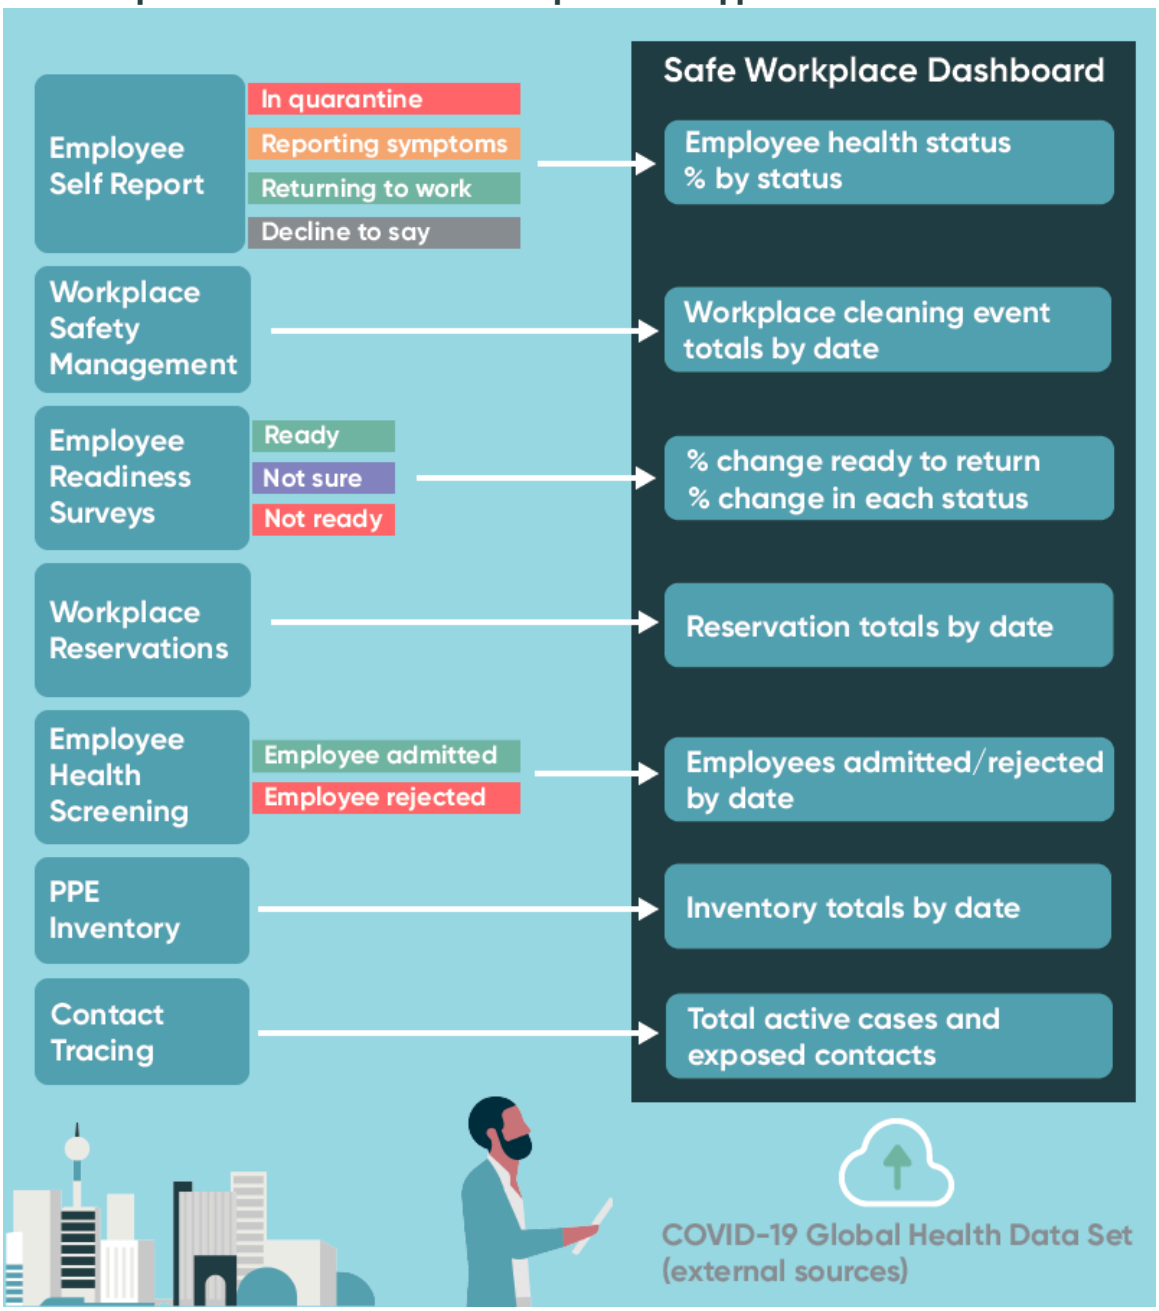
Field	Description
Hardware	The specific item to assign, with a unique asset tag or serial number. This field is only available for hardware models.

3. Click **Submit**.
   The assignment log is updated with the PPE you assigned. To view the assignment log, navigate to **PPE Inventory Management** > **Assignment Log**.

What to do next

After assigning PPE to employees, you can view all assigned PPE by navigating to **PPE Inventory Management** > **Inventory** and selecting **Assigned Hardware** or **Consumed**.

Note:
The **Assigned Hardware** and **Consumed** pages have a **New** button. Do not assign PPE using the **New** button. Using this button does not update the assignment log.



Safe Workplace Dashboard

The ServiceNow® Safe Workplace Dashboard provides leaders in HR, Workplace Services, and Health & Safety with a complete view of operations. Leaders have visual insight into the status of work sites and users to determine whether a site is ready to resume a safe operation.

The Safe Workplace Dashboard relies on ServiceNow® Performance Analytics Premium features to evaluate and display data that comes from other Safe Workplace suite applications and the COVID-19 Global Health Data Set.

© 2026 ServiceNow, Inc. All rights reserved.

Before you begin

Ensure that the application and all of its associated ServiceNow® Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

The *Map existing campus with locations* fix script creates the initial mapping entries between the Campus [sn_wsd_core_campus] table and the Location [cmn_location] table.

Note:
Check that all existing campuses have sites and regions populated before running this script.

Use the default setting **active=false** to avoid incorrect mappings in the Campus [sn_wsd_core_campus] table.

Run this script after activating the Safe Workplace Dashboard (sn_imt_dashboard) plugin and ensuring that your existing campuses have sites and regions populated.

After running the *Map existing campus with locations* fix script, validate that all campuses and locations are accurate. For inaccurate data, remove entries and see Manually map a location and campus for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search field.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   If your application requires other applications, install them first if they're not already installed.

   Installing your application also automatically installs the dependent applications or plugins if they're not already installed.

5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.
   Some applications include demo data, which are sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Note:
   If you don't load the demo data for a store application during installation, it's not available to load later.

6. Click **Install**.
7. When the installation is complete, click **Close**.

Components installed with the Safe Workplace Dashboard

Components are installed with the Safe Workplace Dashboard, including user roles, scheduled jobs, and tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles installed

Role title [name]	Description	Contains roles
Safe Workplace Dashboard user [sn_imt_dashboard.user]	View the dashboard information and drill into locations.	pa_viewer
Safe Workplace Dashboard administrator [sn_imt_dashboard.admin]	Manage alert types and set system properties.	sn_imt_dashboard.user

Scheduled Safe Workplace Dashboard data collector jobs installed

The data collector jobs installed with the Safe Workplace Dashboard are set to run daily and collect data for use in the dashboard and its widgets.

Scheduled job	Description
[PA Workplace Service Delivery] Daily Data Collection	Collects metrics from Safe Workplace suite apps starting from the previous day to the current day. A user with the pa_data_collector role can change the parameters.
Aggregate campus status data	Collects data from check-ins and campus statuses to populate the Reopening Check-In Count [sn_imt_dashboard_reopening_checkin_count] table. Runs daily at 23:00 instance time.

Tables installed

Table	Description
Alerts [sn_imt_dashboard_alerts]	Alerts by campus, generated from active alert types.
Alert Types [sn_imt_dashboard_alert_types]	Alert types are PA thresholds below which an alert is generated and displayed on the Safe Workplace Dashboard.
Breakdown All Time Values [sn_imt_dashboard_campus_all_time_values]	PA breakdown values, stored by campus.
Phase Definitions	Definitions of phases and their assigned locations. Used to categorize what phase

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Table	Description
[sn_sw_planner_phase]	of reopening a location is in. A location can be in only one phase at a time. A phase has a name, location, description, and allowed maximum occupancy percentage that is allowed during the phase. Phase definitions are required for information to populate widgets in the Safe Workplace Dashboard Reopening page.
Campus Statuses [sn_sw_planner_campus_status]	Primary table containing data that determines the current status of each location in the reopening page and widgets of the Safe Workplace Dashboard.
Reopening Check-In Audience [sn_imt_dashboard_reopening_checkin_audience]	Table containing check-in audiences and their criteria based on the organization's configurations. Administrators can create Check-In Audiences using the condition builder to create users. Users are uniquely counted across tables even if they have the same user ID. Check-In Audiences are required to provide information to populate widgets in the Safe Workplace Dashboard Reopening page.
Reopening Check-In Count [sn_imt_dashboard_reopening_checkin_count]	The Aggregate campus status data scheduled job automatically populates the table with the dates and locations of all check-ins.
Campus Status Log [sn_imt_dashboard_reopening_campus_status_log]	Tracks campus statuses and how a location's status changes through each phase.

Safe Workplace Dashboard properties

Set up Safe Workplace Dashboard properties to add your Mapbox API token and configure how indicators are displayed across timezones.

You can obtain a token from Mapbox to add features to the Safe Workplace Dashboard map. The base system map is from OpenStreetMap, a collaborative, open source map application.

Mapbox requires a subscription, and their documentation site describes how to obtain an API token to add the extra features. For more information, open the Mapbox web site and select **Documentation** in the header.

To set properties , navigate to **Safe Workplace Dashboard** > **Properties**.

Safe Workplace Dashboard properties

Property	Description
Enter your Mapbox API Token to enable additional Mapbox features. Obtain	Obtain a Mapbox token to add display features to the Safe Workplace Dashboard. This setting is optional.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Safe Workplace Dashboard properties (continued)

Property	Description
an API token from https://www.mapbox.com/. [sn_imt_dashboard.Mapbox Token]	• Type: **text** • Default value: **none** • Location: **Safe Workplace Dashboard** > **Properties** • Learn more: Read the documentation on the Mapbox website.
Use Indicator PA job timezone [sn_imt_dashboard.Use Indicator Job Timezone]	When enabled, the Performance Analytics (PA) indicators shown on the Safe Workplace Dashboard are displayed using the time zone of the indicator's data collection job. If the indicator job time zone is not set, the instance time zone is used instead. The indicators are displayed identically for all users viewing the dashboard, regardless of the user's time zone. When not enabled, the PA indicators are displayed based on the user's time zone. The indicators may show different daily data to users in different time zones. For example, an event occurs in the evening in Seattle, which is the next day's morning in Berlin. A user in Seattle sees the event in the data for October 5, while a user in Berlin sees the event in the data for October 6.

Safe Workplace Dashboard widgets

The Safe Workplace Dashboard comprises ServiceNow® Service Portal widgets that are populated by Performance Analytics widgets.

Service Portal widgets in the Safe Workplace Dashboard

- Active Contact Tracing Cases
- Safe Workplace Dashboard Announcement
- Safe Workplace Dashboard Survey Sentiment
- Safe Workplace Dashboard Favorite Location
- Safe Workplace Dashboard Filter
- Safe Workplace Dashboard Employee Health
- Safe Workplace Dashboard Main Summary
- Safe Workplace Dashboard Site Details
- Safe Workplace Dashboard Main
- Safe Workplace Dashboard Overview Maps
- Safe Workplace Dashboard Site Details Ba
- Safe Workplace Dashboard PA
- Safe Workplace Dashboard Survey Donut
- Safe Workplace Dashboard Alerts
- Safe Workplace Dashboard Menu
- Safe Workplace Dashboard Vaccination Widget

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information about customizing Service Portal widgets, see Service Portal widgets and the Widget developer guide.

Performance Analytics widgets

- Active Cases
- Number of Workplace Reservable Spaces
- Employees Rejected % Change from Prior Day
- Number of Employees Ready to Return
- Number of Employees Not Ready to Return
- Number of employees rejected
- % of Employees That Want To Return To Work
- Reserved Spaces
- Number of employees surveyed for readiness return
- PPE Inventory (time series)
- PPE Inventory (score)
- Number of Workplace Spaces
- Reservable vs Reserved Spaces
- Number of employees admitted Workplace Reservations
- Reservable Spaces
- Employees Admitted
- Employee Entry Health Monitoring
- Employees Rejected
- Number of Workplace Reserved Spaces
- PPE Inventory % Change from Prior Day

For information about using Performance Analytics, see Performance Analytics.

Create a campus to appear on the Safe Workplace Dashboard

You can create a campus from existing locations to appear on the Safe Workplace Dashboard.

Route the following information to the Safe Workplace Dashboard and display this information by campus:

- User health and willingness to return to work.
- Building readiness.
- Personal protective equipment inventory.
- Active contact tracing cases.
- Potentially exposed contacts under investigation.

Ensure that you install and use the following applications for the Safe Workplace Dashboard. Each application has a reference to a location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- ServiceNow® Emergency Self Report references the location in the user's profile.
- ServiceNow® Emergency Outreach with Employee Readiness Surveys installed. These applications reference the location in the user's profile.
- ServiceNow® Workplace PPE Inventory Management has defined stockrooms, and the location is a required field for a stockroom.
- ServiceNow® Employee Health Screening has a form for selecting a location and a user to submit the compliance values.
- The Space Administration module of ServiceNow Workplace Core is where organization facilities are defined. Within a building, floors, areas, and workspaces are defined. These definitions provide for proximity screening, cleaning assignments, and workspace reservations.

  One or more buildings are assigned to a campus. The location icons displayed on the Safe Workplace Dashboard overview show the campus and any associated buildings when you point to an icon.

- ServiceNow Contact Tracing references the affected person's campus from a case. If the campus information is not available, then Contact Tracing references the location in the affected person's user profile.

Note:
When selecting locations for users, stockrooms, and entry requests, select a company location that existed before you installed Workplace Core. Don't select a site, campus, or building created in the Workplace Core application.

For Workplace PPE Inventory Management, Employee Health Screening, and others, the location must be tied to a Workplace Core campus or building for the location to appear on the Safe Workplace Dashboard.

Safe Workplace Dashboard map with location icons

The locations [cmn_location] defined for the organization are the reference that Performance Analytics uses to generate alerts. Configure the building definitions in Workplace Core with a parent location and the corresponding latitude and longitude.

To associate locations with infectious diseases, such as COVID-19 data, from the COVID-19 Global Health Data Set, verify that all locations are associated with a state or country.

Create a campus to appear on the Safe Workplace Dashboard

There are multiple methods that you can use to create a campus that appears on the Safe Workplace Dashboard.

- Auto-map a location and create a campus.
- Manually associate a location and create a campus.
- Manually map a location to a campus (Workplace Core).

Auto-map multiple locations and create campuses

You can create multiple campuses with corresponding latitude and longitude coordinates and a site automatically by selecting multiple locations.

The campuses appear on the Safe Workplace Dashboard.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manually map a location to a campus

You can map an existing campus to an existing location manually and have it appear on the Safe Workplace Dashboard.

Manually map a location to a campus (Workplace Core)

As an alternative, you can use Workplace Core to manually create a campus and have it appear on the Safe Workplace Dashboard.

Auto-map a location and create a campus

Create multiple campuses automatically by mapping them from locations so that they appear on the Safe Workplace Dashboard.

Before you begin

Role required: sn_imt_dashboard.admin

Procedure

1. Navigate to **All** > **Safe Workplace Dashboard** > **Campus Locations**.
2. Click **Generate Campuses**.
   The Add Locations pop-up appears.
3. Select all the locations that you want to be a campus.
   The *Populate OpenStreetMap data* scheduled job runs every five (5) minutes and queries the Campus Locations [sn_imt_dashboard_locations] table. If the latitude and longitude are missing, an open street API is called to fetch the coordinates and update the Campus [sn_wsd_core_campus] table by passing the zip code and country name.
4. Click **Add Locations to Dashboard**.

Result

A site is created based on the parent name. The parent name is based on the location name. If a region does not exist, a region is created.

Manually map a location and campus

Manually map an existing location to an existing campus and site using Campus Locations.

Before you begin

Role required: sn_imt_dashboard.admin

Procedure

1. Navigate to **All** > **Safe Workplace Dashboard** > **Campus Locations**.
2. Click **New**.
3. On the form, fill in the fields.

Campus Locations form

Field	Description
Location	Click the Lookup using list icon ( ) and select the location that you want to associate with a campus and site.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Campus	Click the Lookup using list icon () and select the campus that you want to associate with a location and site.
Site	Click the Lookup using list icon () and select the site that you want to associate with a location and campus.

4. Click **Submit**.

Manually map a location to a campus (Workplace Core)

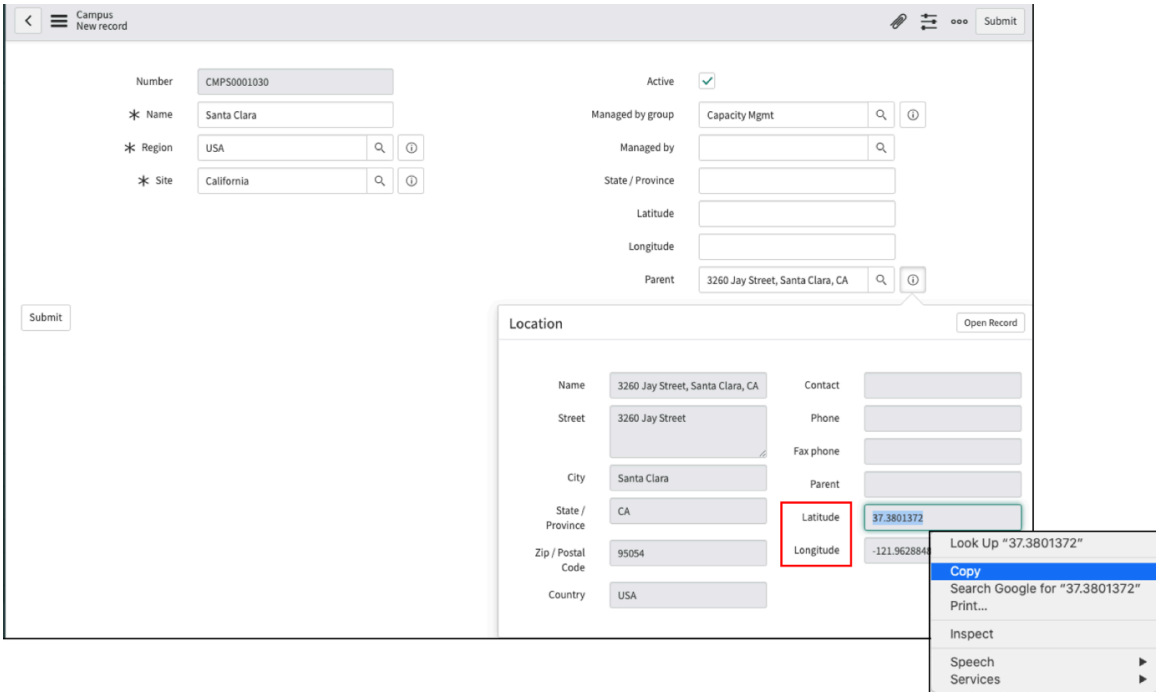
Use Workplace Core as an alternative to the Safe Workplace Dashboard to manually map a location to a campus so that it appears on your Safe Workplace Dashboard.

Before you begin

Role required: sn_wsd_core.workplace_manager

About this task

Procedure



1. Navigate to **All** > **Workplace Core** > **Space Administration** > **Campuses** > , and click **New**.
2. Follow the steps in Configuring the form layout to add the **Parent** , **Latitude** , and **Longitude** fields to the Campus form.
3. In the list of campuses, open a record and complete the following steps.

   a. Select a parent location for the campus.
   Do not select a site, campus, or other building that you set up in Workplace Core. Select a location from preexisting records.

   b. Click the preview icon () next to the parent location.

   c. Copy the latitude and longitude values from the preview window and paste them into the corresponding Campus form fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Click **Update**.

4. Continue updating campus records until they all have a parent location and the corresponding latitude and longitude values.

Alert types used with the Safe Workplace Dashboard

Alert types define the ServiceNow® Performance Analytics (PA) thresholds used to generate alerts on the Safe Workplace Dashboard. Alerts are generated from application data once per day.

Alert types in the base system

Alert type	Description
Employees Want to Return	Uses Employee Readiness Surveys responses to calculate the number of people who are ready or mostly ready, and the number of people who are not sure or not ready to return.
PPE is low	Uses the Workplace PPE Inventory Management count of PPE assets to identify when the available inventory falls below a threshold.
Screening Rejections Low	Uses Employee Health Screening entry requests to calculate the number of people denied entry.
Active Contact Tracing Cases	Uses Contact Tracing cases to determine when the number of active cases is greater than the threshold.

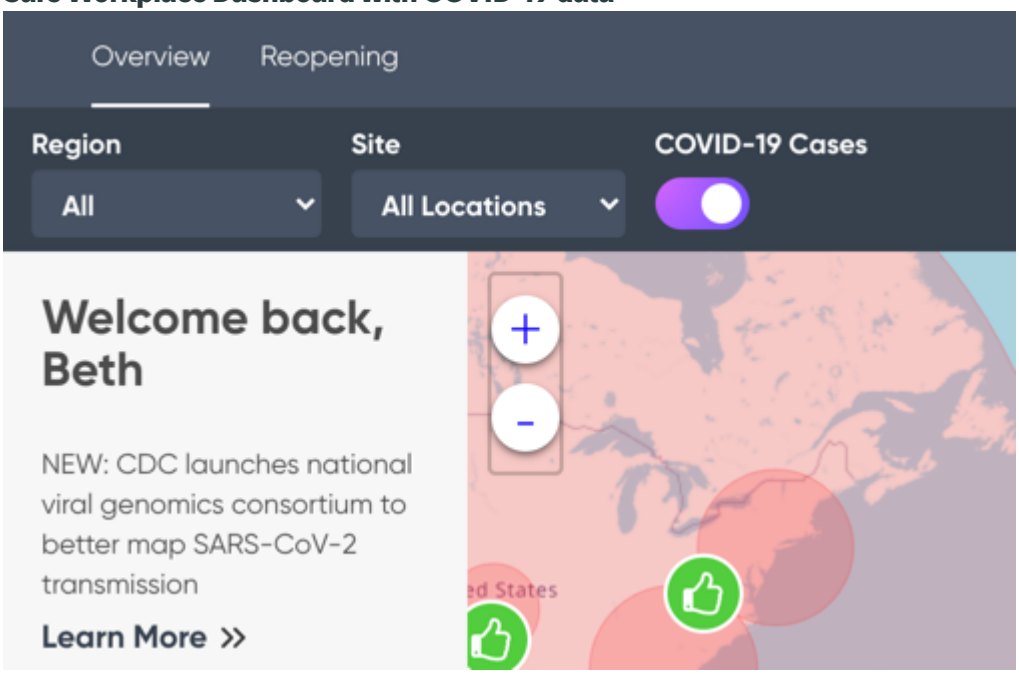
A user with the pa_admin role can define additional alert types. For information about using Performance Analytics, see Performance Analytics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Using the Safe Workplace Dashboard

By using a map, you can review your organization's status regarding personnel and facility readiness to reopen.

Focus on alert information regarding user readiness, personal protective equipment (PPE) inventory levels, health monitoring results, and active contact tracing cases created for affected users. View status data, by facility, to prepare the reopening of the facility and send invitations to users to return.



The Safe Workplace Dashboard presents data when the correlated Safe Workplace suite , ServiceNow® Contact Tracing, and ServiceNow® Emergency Response Management applications are installed. Verify that configuration is complete so that the application data is included when the ServiceNow® Performance Analytics data collection job runs.

Note:
Assign Safe Workplace Dashboard users the pa_viewer role. This role is required to view the dashboard content.

COVID-19 Global Health Data Set

You can use the COVID-19 Global Health Data Set application at no extra charge. COVID-19 Global Health Data Set is installed with the Safe Workplace Dashboard. It appears as an application in the instance navigation menu, and displays global COVID-19 information on request in the Safe Workplace Dashboard.

Safe Workplace Dashboard with COVID-19 data

Navigate to **COVID-19 Global Health Data Set** to view the collected data by date ranges, locations, state/provinces, and countries. Build reports or export the data to use for your own analysis.

COVID-19 Global Health Data Set sources

Data source	Description
European Centre for Disease Prevention and Control (ECDC)	COVID-19 metrics for the European Union and European Economic Area from the European

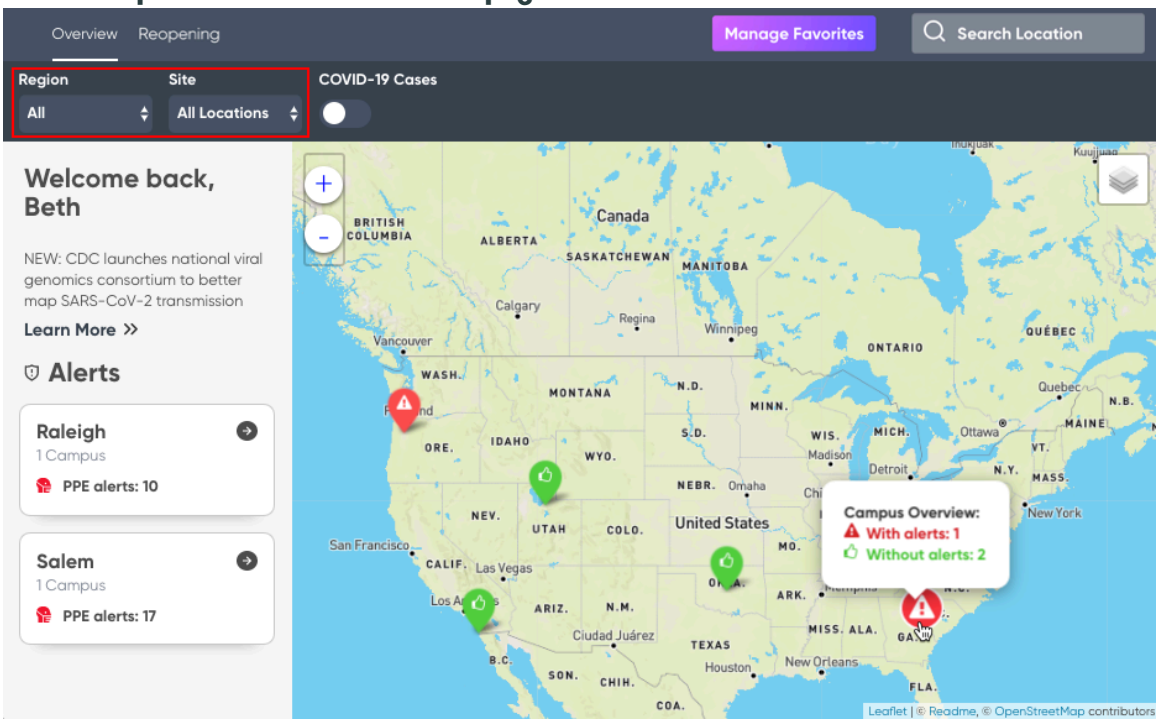
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

COVID-19 Global Health Data Set sources (continued)

Data source	Description
	Centre for Disease Prevention and Control. For more information on this data source, see the European Centre for Disease Prevention and Control website.
Government of Canada Public Health Infobase	COVID-19 metrics for Canada from the Canadian government. For more information on this data source, see the Government of Canada Public Health Infobase website.
Our World in Data (OWID)	Worldwide COVID-19 metrics from Our World in Data. For more information on this data source, see the OWID GitHub repository.
USA Facts	COVID-19 metrics for the United States from USA Facts. For more information on this data source, see the USA Facts website.

Use the Safe Workplace Dashboard

Navigate to **Safe Workplace Dashboard** > **Safe Workplace Dashboard** to open the dashboard in a new browser window.



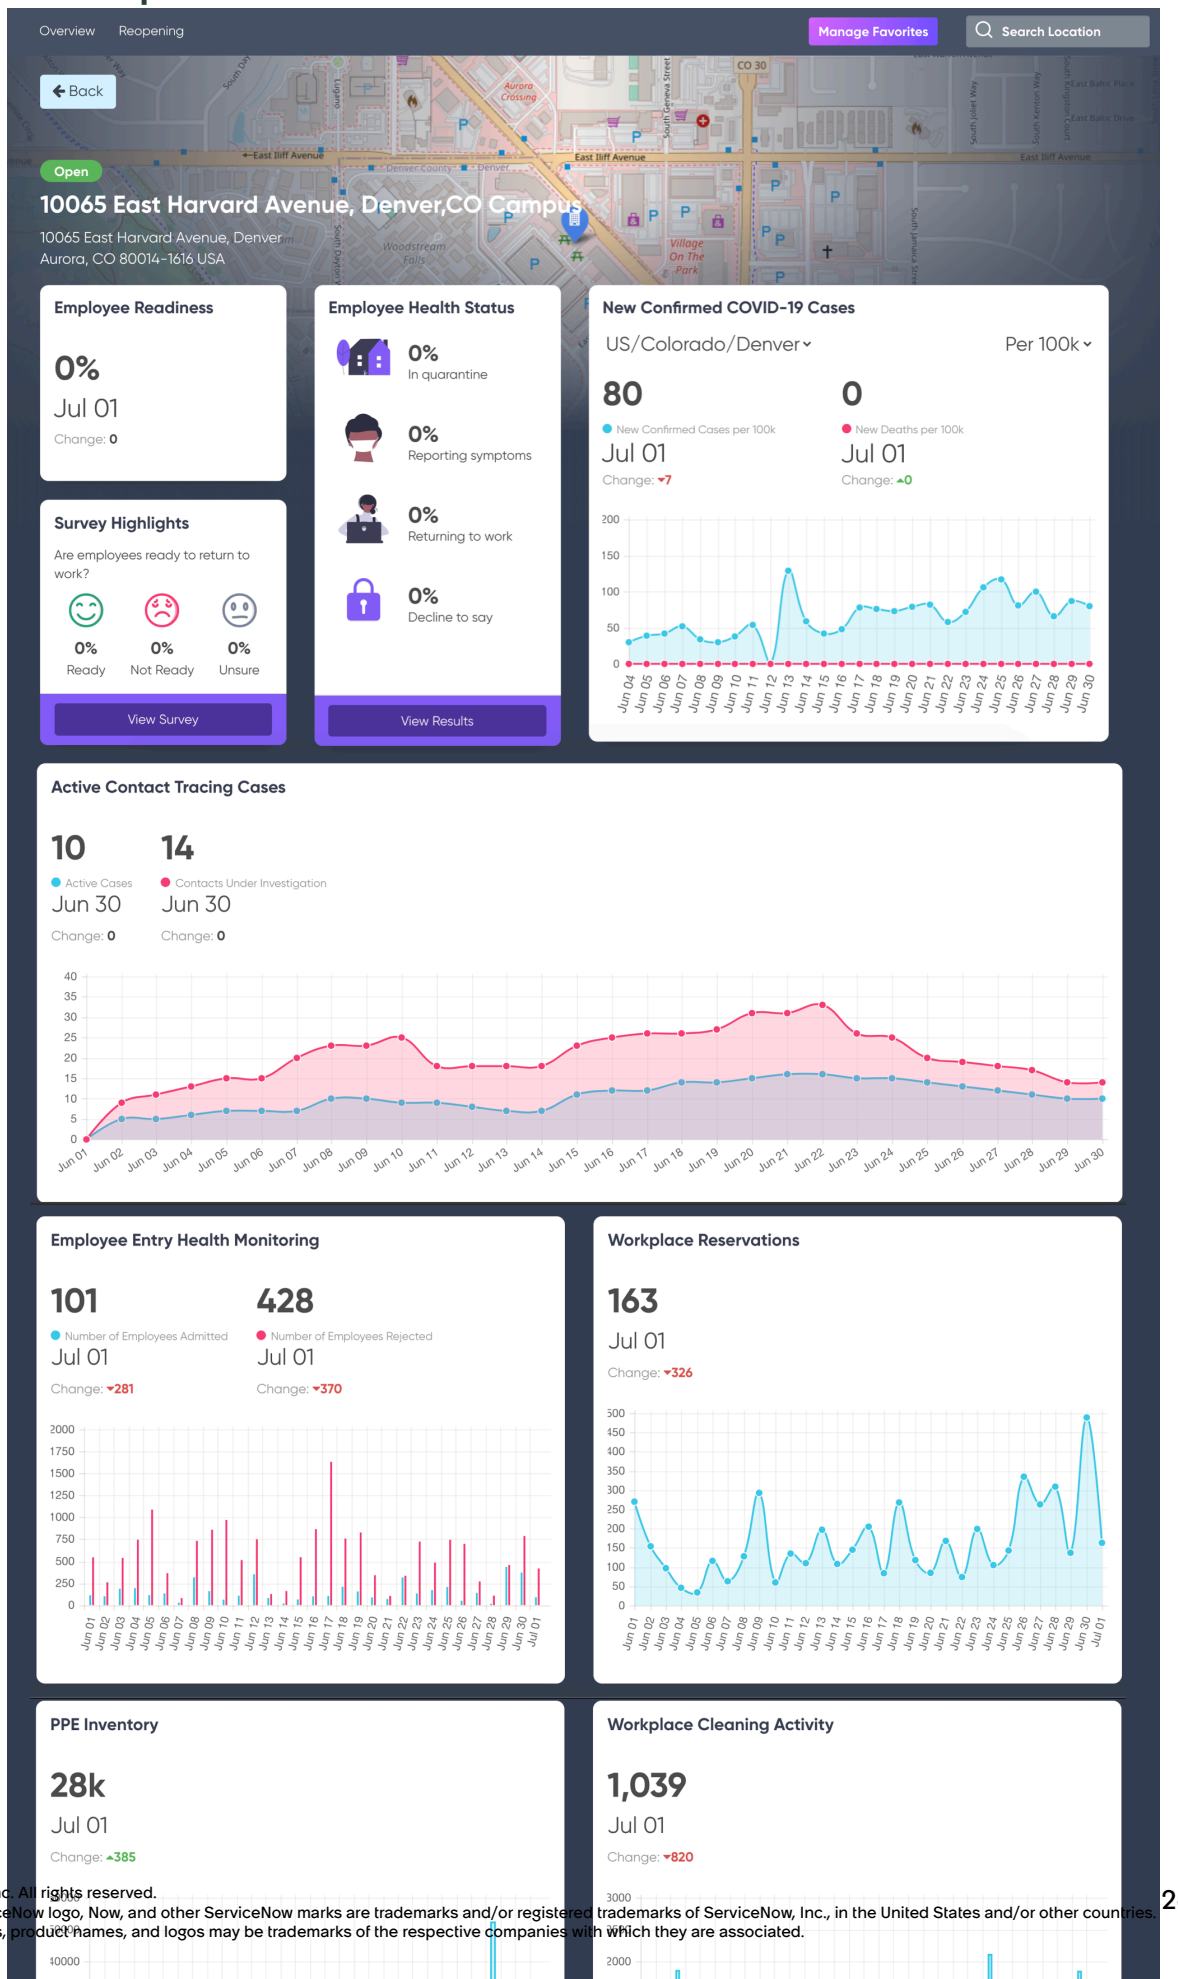
Locations with alerts are listed on the left. Click the arrow on the card or the location icon to zoom in to the location and its alerts. Use the Region and Site lists at the top left to select specific regions and sites to review.

To add a favorite location, click **Manage Favorites** and search for the location. After you select it, the location name appears in the header (**R1 S1** in the example image). Click the location to open it directly. To remove a location from favorites, click **Manage Favorites** again and click the **(x)** on the location you want to remove.

Note:
The Safe Workplace Dashboard shows only PPE inventory and health screening data associated with a Workplace Core campus or building. PPE stockrooms and health screenings must have a Workplace Core campus or building selected in the **Location** field to be displayed on the dashboard. For information about creating Workplace Core campuses and buildings, see Providing your workplace data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Safe Workplace Dashboard overview page



Continue drilling down to a facility to see its recent statuses. The New Confirmed COVID-19 Cases widget provides data from the COVID-19 Global Health Data Set. It shows the number of new cases and deaths for the location, and can also show the number of new cases and deaths per 100,000 people if population data for the location is available. For locations in the United States, you can filter the New Confirmed COVID-19 Cases widget to show data at the state or county level. The *`Populate OpenStreetMap data`* scheduled job retrieves county data for campuses.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

servicenow

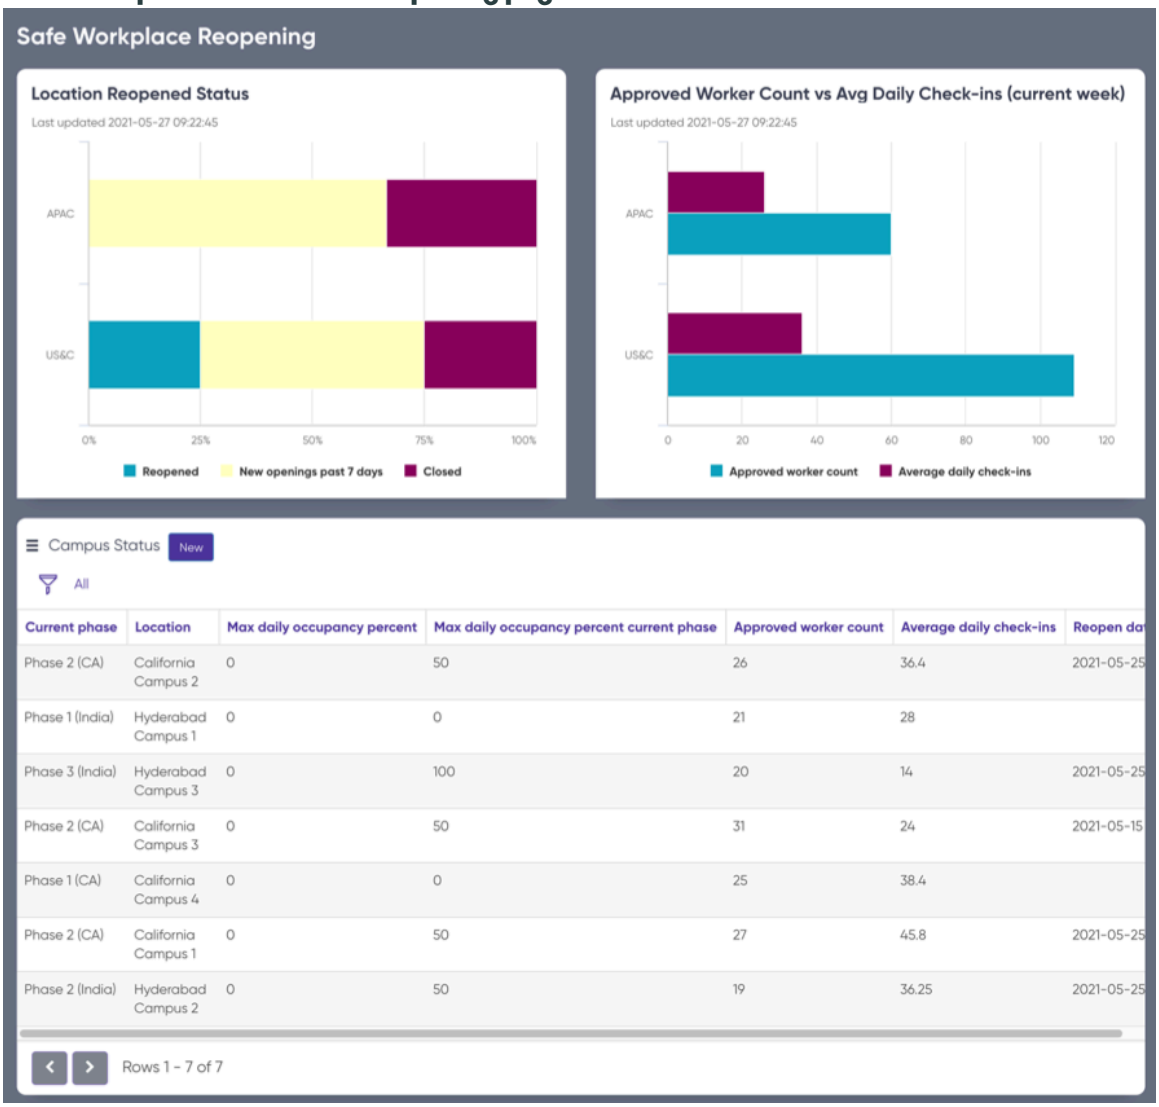
Safe Workplace Dashboard

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the information to organize the reopening of the facility and reduce workplace transmission of infectious diseases, such as COVID-19.

- Order PPE inventory if levels are low.
- Send an outreach survey to reassess user readiness to return.
- Verify that the workplace cleaning schedule is on track to reopen safely.
- Encourage managers to have users make workspace reservations to return.
- Create cases for affected users and tasks for the follow-up interviews with potentially impacted users.

Review the Safe Workplace Dashboard Reopening page



View the Safe Workplace Dashboard Reopening page by clicking **Reopening**to see visualizations of reopening data across three widgets:

- The Location Reopened Status displays what regions are open and shows how many are open by region.
- Approved Worker Count vs. Avg Daily Check-Ins provides information to help determine whether too few or too many people are being checked in for the current week.
- The Campus Status widget is a filterable view with an overview of campus locations and metrics such as the current phase, maximum daily occupancy percent, and number of approved workers. You can manually add or edit locations by selecting the campus or clicking **New**.

> **Note:**
> A location cannot have more than one campus status at a time.

Safe Workplace Dashboard Reopening page

To populate the Safe Workplace Dashboard page, create Phase Definitions to track locations through their various phases. Otherwise, no data will display. Updates are performed daily at 23:00 instance time regardless of the number of campuses in your organization and their geographic location.

For each phase, navigate to **Safe Workplace Dashboard** > **Phase Definitions** and click **New** to create customized phases for your organization. You can define their phases with the following information:

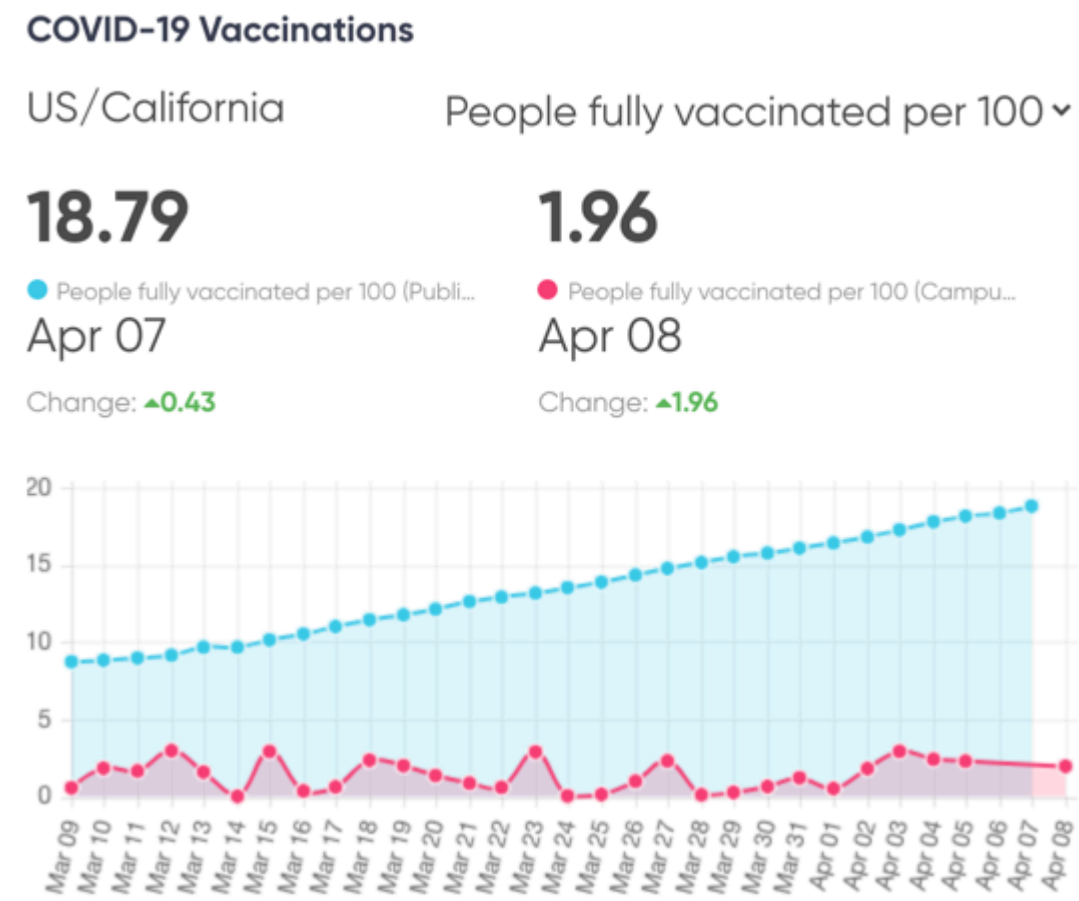
- Names for the phases such as Phases 1, 2, and 3 or red, yellow, and green (**Name**)
- The location the phase applies to (**Location**)
- The maximum daily occupancy percentage (**Max daily occupancy percent**)
- A description of the phase

You can determine your own criteria for what constitutes a check-in. Navigate to **Safe Workplace Dashboard** > **Reopening Check-In Audience** and click **New** to open a new record. Administrators can use the condition builder to define the tables and fields to add to a check-in and mark the Check-In Audience as active.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Review COVID-19 vaccination metrics in the Safe Workplace Dashboard

Organizations with the Vaccination Status application can use data from the application and public data from the COVID-19 Global Health Data Set to review COVID-19 vaccination metrics across the United States and worldwide. Organizations can then compare their vaccination numbers to public numbers to gain a better understanding of their organization's vaccination efforts.



This data is made available through the Safe Workplace Dashboard Vaccination Widget. The following metrics are available in the Safe Workplace Dashboard Vaccination Widget:

- The number of people fully vaccinated per 100
- The number of people vaccinated per 100
- The number of total vaccination doses per 100

Users with the admin role can add the Safe Workplace Dashboard Vaccination Widget to the Safe Workplace Dashboard Site View. For more information, see Add a vaccination widget to the Safe Workplace Dashboard.

Important:
Users must have the sn_imt_dashboard.user and sn_imt_vaccine.vaccine_profile_reader roles to see any vaccination data in the dashboard.

Safe Workplace Dashboard Vaccination Widget

Vaccination data is pulled from the last 30 days and includes campus data based on the vaccine responses per location from the **Vaccination Status** application. The widget is scheduled to

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

update automatically once the COVID-19 Global Health Data Set and **Vaccination Status** are installed. Updates are performed daily at midnight (00:00) instance time, regardless of the number of campuses in your organization and their geographic location.

Note:
If data is unavailable or missing, the widget will not display data for that day (even if available) until the next day the scheduled jobs run successfully.

Add a vaccination widget to the Safe Workplace Dashboard

As an admin, add the Safe Workplace Dashboard Vaccination widget to the Safe Workplace Dashboard Site View portal page.

Before you begin

To successfully add the Safe Workplace Dashboard Vaccination widget and populate it with data, note the following requirements:

- The Vaccination Status application must be installed and configured. For more information, see Vaccination Status.
- The Safe Workplace Dashboard application must be installed and configured. For more information, see Safe Workplace Dashboard.

Role required: admin

Procedure

1. Navigate to **All** > **Safe Workplace Dashboard** > **Safe Workplace Dashboard.**
2. Navigate to a campus and select **View details**
3. Press Control+right-click on the widget instance and select **Page in Designer**.
4. Search for `SWD Vaccination Graph`.
5. Select **SWD Vaccination Graph** and drag it onto the page.
6. Change the chart type to **Line**.
   a. Click the edit icon.
   b. Change the **Chart Type** to **Line**.
   c. Click **Save**.

Result

The Safe Workplace Dashboard Vaccination widget appears in the Safe Workplace Dashboard.

Contact Tracing

The ServiceNow® Contact Tracing application helps organizations reduce workplace transmission of infectious diseases, such as COVID-19, by identifying any on-site users who might have been in contact with an affected user. The user receives updates about the number of reported cases or symptoms in the location. A list of potentially exposed users is created from various data inputs, such as badge scans, Wi-Fi access logs, and daily contact logs.

Features

In Contact Tracing version 1.29.4. and above, the navigation path is not available in the Application search context menu (**All** > **Contact Tracing**) for Zebra and Devvio. The navigation path is available if you are using Contact Tracing 1.29.2 and later versions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Identify on-site users who may have been in contact with a potentially infected user.
- Aggregate contact tracing information across workplace locations, work shifts and reservations, badge scans, Wi-Fi access logs, and self-reporting logs to enhance search criteria.
- Identify potential user interactions with a user using the Wi-Fi access data by correlating who connected to the same Wi-Fi network using laptops, mobile devices, or Bluetooth LE devices. You can get the Wi-Fi access data by manual import or through integration with Mist Systems or Cisco DNA Spaces.
- Get the contact tracing data of users who use handheld or wearable devices at the workplace. You can import the contact tracing report from Zebra MotionWorks Portal.
- Monitor risk scores of users who use wearable devices at the workplace. You can import risk score reports with Devvio integration.
- Create outreach cases and tasks for follow-up interviews with potentially impacted users.
- Assess the status of potentially exposed contacts and their next two levels of potential exposures from within a case using visualization.
- Maintain the data privacy of users, in the context of contact tracing by obtaining their consent.
- Use data retention settings to determine when the data collected for contact tracing is automatically deleted from the system.

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use with other ServiceNow® Safe Workplace suite and applications

The Contact Tracing application provides enhanced capabilities and additional features with other Safe Workplace suite applications.

- Emergency Outreach: Configure and send email and mobile notifications to users requesting them to submit daily contact logs and to get responses for privacy consents.
- Emergency Exposure Management: Run a diagnostic report on affected users to identify potentially exposed users who might have interacted with the affected user. You can use multiple data sources to broaden the coverage of finding potential exposure. Review tracing systems for data sources provided by Contact Tracing to see whether these tracing systems meet your business needs. You can modify these tracing systems or set up a new tracing system for your data source. For more information, see Set up a tracing system for an exposure data source.
- Safe Workplace Dashboard: View the trend of active cases and potentially exposed contacts over a given time period for a campus or location. You can also get alerts to determine when the number of active cases is higher than the threshold in a particular campus or location.
- Emergency Self Report: A case is created automatically for a user who is reported to be in quarantine if no active case exists for the user at the time of reporting.
- Employee Readiness Core:
  - Automatically adds or updates a user's health and safety requirement status when a user is identified as a potentially exposed contact in a case. This up-to-date information helps you evaluate the readiness of your potentially exposed users to return to the workplace.
  - Automatically adds or updates a user's privacy consent requirement status when a user responds to the privacy consent request. This up-to-date information helps you ensure that your users acknowledge the privacy consent before entering the workplace to facilitate contact tracing as desired.
- Vaccination Status: Review a potentially exposed contact's vaccination status in the contact tracing visualization.

Domain separation for the Contact Tracing application

The Contact Tracing application supports domain separation at the Standard* level. For more information, see Domain separation and Contact Tracing. For a deeper understanding of the support levels, see Application support for domain separation.

Notice regarding use by organizations

All decisions in connection with the implementation of this application are at the sole decision of the Organization utilizing this application. Organizations agree that use of the application is not a representation by ServiceNow regarding the application's compliance with any law or regulation and any suggested language provided out of the box with the application does not constitute legal advice by ServiceNow.

Organizations remain solely responsible for complying with their legal obligations under applicable law, including (but not limited to) data protection and employment laws, and should modify any language within the templates provided to meet the Organizations' specific requirements.

Notice regarding use by government agencies

ServiceNow is offering this application to government agencies and their authorized users, not to employees of government agencies in their individual capacities. Use of this application is being offered free of charge for a limited or extended time period and with no expectation of payment from the government agency to ServiceNow for use during that time period, nor does usage create an actual or implied future obligation on behalf of the government. ServiceNow hereby expressly waives any future claims for payment from the agency in connection with usage of the application. Government customers are solely responsible to confirm with the agency's Ethics Office or its authorized representative that acceptance and usage of the application is permissible.

All decisions in connection with the implementation of this application are at the sole decision of the government agency utilizing this application. Agencies remain solely responsible for complying with their legal obligations under applicable laws and regulations, including (but not limited to) data protection and employment laws and regulations, and should modify any language within the templates provided to meet the agency's specific requirements.

Install Contact Tracing

You can install Contact Tracing if you have the admin role.

Before you begin

The following applications are also installed when you install the Contact Tracing application:

- ServiceNow® Emergency Exposure Management
- ServiceNow® Employee Readiness Core

You can also install and activate the following applications to use all Contact Tracing features:

- ServiceNow® Emergency Outreach
- ServiceNow® Emergency Self Report
- ServiceNow® Safe Workplace Dashboard

Role required: admin

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team. See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

The Contact Tracing application requires the ServiceNow® Performance Analytics - Premium application. If you're not already subscribed to Performance Analytics - Premium, you must install it before installing Contact Tracing.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Contact Tracing`.
3. Click **Install**.
4. In the Application installation dialog box, click **Install**.
5. When the installation is complete, click **Close**.
6. **Optional:** Control access to the application by creating a group and assigning roles to the group or individual users.

   (Optional) For more information, see Roles.

Components installed with Contact Tracing

Several types of components are installed with Contact Tracing, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles installed

Role title [name]	Description	Contains roles
Contact Tracing admin [sn_imt_tracing.admin]	Application-specific admin for Contact Tracing and has administrative privileges.	• sn_imt_tracing.case_manager • sn_imt_tracing.badge_admin • sn_imt_tracing.contact_tracing_user
Contact tracing user [sn_imt_tracing.contact_tracing_user]	Can submit daily contacts log and	• sn_imt_checkin.dailylog_user • sn_imt_tracing.privacy_consent_user

Scheduled jobs installed

Scheduled job	Description
Data Retention Job For Contact Tracing	Deletes contact tracing data after the retention period is over from the last updated date for the records related to contact tracing. The data includes badge swipes, Wi-Fi access register data, employee daily contact logs, daily log notes, and daily log acknowledgements, cases and associated case tasks, exposed contacts, diagnostic requests, diagnostic jobs, and workplace reservations. **Note:** The data retention policy doesn't apply to user privacy consent data.
Devvio Integration	Runs daily at 00:00:00 instance time and populates the Devvio Users Risk Report for organizations that use Devvio wearables and the DevvTrace platform.
Load Mist Systems	Runs daily at 00:00:00 and populates the sites for the organizations that use Wi-Fi logs from Mist Systems.

Tables installed

Table	Description
Badge Access Register [sn_imt_tracing_badge_access_register]	Badge swipe records of all users.
Badge Access Register Stage [sn_imt_tracing_badge_access_register_stage]	The Import Set table for importing the badge access data from an Excel spreadsheet. When you load data from the Excel file into the application, the imported records are first saved in this import set table. After you run the transform, or execute the scheduled import script, the records are copied from this table to the Badge Access Register table.
Badge Reader [sn_imt_tracing_badge_reader]	User ID badge reading devices installed in a location.
User Badge [sn_imt_tracing_user_badge]	Users and their ID badge information.
Case [sn_imt_tracing_case]	Outreach cases for affected users to help minimize potential exposure to others.
Case Task [sn_imt_tracing_case_task]	Case tasks in outreach cases to follow up with the potentially exposed users to track health status.
Exposed Contacts	Potentially exposed users that might have interacted with a user who has been diagnosed with an infectious disease. The

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Table	Description
[sn_imt_tracing_exposed_contact]	records in this table are stored when the case manager adds all impacted users to the case. Impacted users are identified through the diagnostic request using multiple data input.
Daily Contact Logs [sn_imt_tracing_daily_contact_log]	The names of users submitted using daily contact logs by another user.
Daily Log Acknowledgements [sn_imt_tracing_daily_log_acknowledgement]	Acknowledgement status to identify which users have responded to the notification to submit the daily contacts log.
Daily Log Notes [sn_imt_tracing_daily_log_note]	Names of users outside of the organization, such as visitors and contractors submitted using daily contact logs by another user.
Devvio Users Risk Report [sn_imt_tracing_devvio_users_risk_report]	Devvio users and their risk scores captured by Devvio wearables. The records in this table are imported from the DevvTrace platform and updated daily.
Location Privacy Configuration [sn_imt_tracing_location_privacy_config]	Configuration for the location-based privacy policy, such as the privacy statement for a location and whether a particular location requires privacy consent.
Privacy Consent Template [sn_imt_tracing_privacy_consent_template]	Template to store the privacy statement for a location and is used in the location privacy configuration.
User Privacy Notice and Consents [sn_imt_tracing_user_privacy_consent]	Responses of users to the privacy consent.
Sites [sn_imt_tracing_site]	Sites in the building of your organization. Each floor is considered as a site. Each site can be further divided into zones. Each zone can have multiple Wi-Fi routers installed, called as Wi-Fi access points.
Wi-Fi Diagnostic Preferences [sn_imt_tracing_wifi_diagnostic_preference]	Type of Wi-Fi data used for contact tracing. For example, you might have real-time data for a location collected through the integration with a network system, such as Mist Systems. For other locations, you might manually upload data from a spreadsheet.
Wi-Fi Access Register [sn_imt_tracing_wifi_access_register]	Entry and exit time records of users who have connected to the office Wi-Fi access points or using the BLE enabled devices.
Wearable Access Register [sn_imt_tracing_wearable_access_register]	User interaction records captured using the proximity sensing data via their handheld or wearable devices when they are in the close proximity for more than the permissible time.

Setting up Contact Tracing

Configure system properties, scheduled jobs, script includes, Wi-Fi access log integration, and outreach notifications to aggregate contact tracing information for various data sources.

In Contact Tracing version 1.29.4. and above, the navigation path is not available in the application context menu search (**All** > **Contact Tracing**) for Zebra MotionWorks and Devvio. The following application modules are not available in the application search context menu Contact Tracing version 1.29.4:

- Handheld/Wearable Access Management (separator)
- Wearable Access Register
- Devvio (Separator)
- Devvio Users Risk Report
- Devvio Users Risk Report Import Set

The navigation path is available if you are using Contact Tracing 1.29.2 and later versions.

Get contact tracing information from various data sources such as workplace locations, work shifts and reservations, badge scans, Wi-Fi access logs, and self-reporting logs. Use these data sources to identify potentially exposed users by running the diagnostic request in the Emergency Exposure Management application.

Identifying potentially exposed users using tracing systems

A tracing system is configured for each contact tracing data source. Review the tracing systems for data sources to see whether these tracing systems meet your business needs. You can modify these tracing systems or set up a new tracing system for your data source.

For more information, see Set up a tracing system for an exposure data source.

Set up Contact Tracing properties

Configure system properties to adjust how contact tracing data is used.

Before you begin

Role required: admin

About this task

Employers remain solely responsible for complying with their legal obligations under applicable law, including data protection laws on collection, use, disclosure, and retention of personal data, and should enable, choose not to enable, or customize any functionality available within the application to meet the Employers' specific requirements.

Note:
For system properties associated with tracing systems, see System properties for tracing systems in Emergency Exposure Management.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Administration** > **Properties**.
2. Set the following property values.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Contact Tracing

Property	Description
sn_imt_tracing.data_retention_period	Number of days after which the data collected for contact tracing is automatically deleted from the system. The retention period is calculated from the last updated date of the data. The retention policy applies to the following contact tracing data: ○ Badge swipe data. ○ User daily contact logs, daily log notes, and daily log acknowledgment data. ○ All closed and canceled cases and associated potentially exposed contacts, case tasks, diagnostic requests and the underlying source data, and diagnostic events. **Note:** A survey associated with cases eligible for deletion after the retention period is not deleted because surveys have their own retention period. For more information, see Clean up assessment data. ○ Wi-Fi access register data The default value is 90.
sn_imt_tracing.auto_create_case_tasks	Enables or disables automatic creation of a case task when a case manager adds a potentially exposed contact to a contact tracing case. If the property value is set to *Yes*, the base system workflow, **Create case tasks for exposed contacts**, triggers the creation of a case task when a potentially exposed contact is added to a case. The default value is *Yes*.

3. Click **Save**.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Domain separation and Contact Tracing

Domain separation is supported for the ServiceNow® Contact Tracing application. The application helps organizations reduce workplace transmission of infectious diseases, such as COVID-19, by identifying anyone on site who might have been in contact with an affected person.

Support level: Standard*

The support level is Standard but has some exceptions or special conditions.

- Includes all aspects of **Basic** level support.
- Business logic: The service provider (SP) creates or modifies processes per customer. The use cases reflect proper use of the application by multiple SP customers in a single instance.
- The instance owner must be able to configure minimum viable product (MVP) business logic and data parameters. This configuration is done per tenant, as expected for the specific application.

Sample use case: An admin must be able to make comments required when a record closes for one tenant, but not for another.

For more information on support levels, see Application support for domain separation.

Contact Tracing and domain separation Overview

Service providers need to be able to manage multiple customers in a single instance to deliver their services via Contact Tracing in the Safe Workplace suite. Beginning with the Paris release, scheduled jobs introduced support for domain separation at the Standard level.

Admins must install the Domain separation plugin before working with the Contact Tracing tables.

See Domain separation and Safe Workplace suite to learn how to set up Contact Tracing with domain separation.

Domain separation for service providers

Modify the scheduled data import job

As an administrator, review and modify the scheduled data import jobs used for importing badge access and Wi-Fi access data from an Excel file into the Contact Tracing application.

Before you begin
Role required: admin

About this task
The following scheduled jobs are installed with the Contact Tracing application:

- *Badge Access Register Scheduled Import*
- *Wi-Fi Access Register Scheduled Import*

These jobs are set for manual execution to import the badge access data or Wi-Fi access data from an Excel file. You can modify the settings based on when and how you want to import the data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Administration** > **Data Import Jobs**.
2. Open a Scheduled Import record.
3. Review and modify the settings as required.
   For more information on configuring a scheduled data import, see Schedule a data import.
4. Click **Update**.

Related topics

Importing data using import sets

Configure the time zone setting for badge and daily log data

Add a script include in the Global scope to consider the affected user's time zone when you run a diagnostic request using the badge reader or user daily log data source.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System UI** > **Script Includes**.
2. Click **New**.
3. In the **Name** field, enter `TimeZoneUtils`.
4. From the Accessible from list, select **All application scopes**.
5. Copy the following script into the **Script** field.

```
var TimeZoneUtils = Class.create();
TimeZoneUtils.prototype = {
 initialize: function() {
 },
 getTimeZone: function(timeZoneString) {
  return
 Packages.java.util.TimeZone.getTimeZone(timeZoneString);
 },
 getTimeZoneOffSet: function(timeZoneString, gdt) {
  var timeZoneObj = this.getTimeZone(timeZoneString);
  var dateTime = new GlideDateTime();
  if (gdt) {
   dateTime.setValue(gdt);
  }
  dateTime.setTZ(timeZoneObj);
  return dateTime.getTZOffset();
 },
 getBoundaryDates: function(timeZoneString, offset, dateTime) {
  var tz = this.getTimeZone(timeZoneString);
  var gd = new GlideDateTime();
  gd.setValue(dateTime);
  gd.add(offset);
  var startTime = '00:00:00';
  var endTime = '23:59:59';
  var actualDate = new GlideDate();
  actualDate.setValue(gd.getValue());
  var startDateTime = new GlideDateTime();
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
  startDateTime.setTZ(tz);
  startDateTime.setDisplayValueInternal(actualDate + ' ' +
 startTime);
  var endDateTime = new GlideDateTime();
  endDateTime.setTZ(tz);
  endDateTime.setDisplayValueInternal(actualDate + ' ' +
 endTime);
  return {
   startDateTime: startDateTime,
   endDateTime: endDateTime
  };
 },
 type: 'TimeZoneUtils'
};
```

6. Click **Submit**.

Result

The script is used when you run the diagnostic request using the badge reader or user daily log data source. These data sources identify the potentially exposed users who might have come in contact with an affected user. The script considers the affected user's time zone while calculating the date and time from the badge swipe data or daily log data.

Configure an email notification for the daily contact log

Configure a custom email notification to use with Emergency Outreach notifications so you can request that users submit a list of other users they came in contact with throughout the workday.

Before you begin

Review the existing **Employee Daily Log Alert** and **Daily Contact Log Notification** email notifications to familiarize yourself with the base scripts and settings.

Role required: admin

About this task

When you configure an email notification for use as a daily contact log, you are creating a customized email notification for contact tracing purposes. The **Employee Daily Log Alert** and **Daily Contact Log Notification** are email notifications you can review for a better understanding on how notifications similar to the one you might create are configured.

Procedure

1. Navigate to **All** > **System Notifications** > **Email** > **Notifications**.
2. Click **New**.
3. **Optional:** In the **Name** field, enter a descriptive name for the notification.
4. In the **Table** field, select the Daily Log Acknowledgements [sn_imt_tracing_daily_log_acknowledgement] table.
5. On the **When to send** tab, set the conditions.
   - Enter conditions in the condition builder to define when users are sent the email notification.
   - Copy the following example script in the **Advanced condition** field and make these modifications.
     - Give the variable a different name, for example, *employeeCheckInAcmeSysId*.
     - Enter the new notification sys_id as the value.
     - Enter the variable name that you declared at the end of the second line.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example
Example Advanced condition script:

```
var employeeCheckInAcmeSysId = '<replace with this notification
 sys_id';
answer = current.employee_check_in.notification ==
 employeeCheckInAcmeSysId
```

6. On the **Who will receive** tab, select from **Users** and **Groups** to determine who will receive the notification.
7. Complete the remaining information on the **What it will contain** tab.

What it will contain tab

Field	Action
Email template	Select the email template used to determine any pre-configured content within the subject line and message body.
Subject	Create the subject line that users see when they receive the email.
Message HTML	In the **Message HTML** field, add and customize the text or source code of the message to meet your organization's needs. **Note:** While entering the email content in the **Message HTML** field, make sure that you include the link to the Daily Contact Log form.

8. Click **Submit**.
9. In the Notifications list, open the notification that you added and click **Preview Notification**.
10. Review the notification and make any changes required.
11. Click **Update**.

Result
You created a custom email notification for use as daily contact log with Emergency Outreach notifications. When you modify or create an Emergency Outreach notification, you can select this notification for the Daily Contact Log or custom outreaches.

What to do next
To use this email notification for as your daily contact log, see Configure an Emergency Outreach notification for the daily contact log.

Configure an Emergency Outreach notification for the daily contact log

As an administrator, create or configure the Emergency Outreach notification to send email and mobile push notifications to employees to ask them to submit a list of co-workers whom they have interacted with on a given day.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Ensure that you have the Emergency Outreach application installed. For details, see Install Emergency Outreach.

Employees must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Role required: sn_imt_checkin.checkin_admin or admin

Procedure

1. Navigate to **All** > **Contact Tracing** > **Administration** > **Daily Log Alerts**.
2. Either edit the existing notification by opening the **Daily Contact Log** outreach record or click **New** to create one.
3. Enter the outreach notification name in the **Event name** field.
4. Select the **Employee Daily Contact Log Alert** check box.
   The **Daily Contact Log** option is selected in the **Response mode** field on the **Content configuration** tab. You cannot change this value if the **Employee Daily Contact Log Alert** check box is selected.
5. On the **Select targeted audience** tab, select the target audience for the notification, and click **Save**.
   - You can choose from user lists, groups, departments, locations, or other search filters such as building, cost center, or country code.
   - If you have the ServiceNow® Employee Health Screening application installed, the **Use Employee Health Screen Data** option is available. Select this check box to include all employees cleared in the health screening to enter the premises. For more information, see Employee Health Screening.
   - If you have the ServiceNow® Workplace Core application installed, the **User Workplace Reservation Data** option is available. Select this check box to include all employees with confirmed or approved reservations for that day. For more information, see Workplace Core.
6. On the **Content configuration** tab, select a notification in the **Notification** field, and choose how to send the notification.
   - To send the notification by email, select the **Email notification** check box and enter the email subject and body.
   - To send a mobile push notification, select the **Now Mobile Push notification** check box and enter or modify the push message and a detailed push message.

     This option is available only if the ServiceNow NowMobile App Screens and Applet Launcher (com.glide.mobile-employee) plugin is activated.

     Push notifications use the ServiceNow Request Application notification device. When users register their mobile application to an instance, this notification device is automatically created in their notification preferences. Ensure that this device is active for the users that you want to receive the push notification.
   - To use a custom notification channel, click the Additional Channels related list, click **Edit**, and move the channel to the Additional Channels List. Click **Save**.

     Make sure that the **Email notification** and **Now Mobile Push notification** check boxes are not selected or notifications will also be sent through those channels.
7. Click **Save**.
   The target audience and content configuration changes are saved.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Click **Schedule**.
9. In the Scheduled Script pop-up window, configure a scheduled job to the notification.
   For more information, see Configure a scheduled job.
10. Click **Submit**.
    A script is added to the scheduled job. The job is associated with the outreach notification.

Result
An outreach notification with a scheduled job is created. The job sends notifications to the target audience per the set schedule.

What to do next
A user with the sn_imt_checkin.checkin_admin role can send the Outreach notification on demand.

A user with the admin or sn_imt_checkin.checkin_admin role can stop the scheduled job to send the notifications automatically. To do so, click **Schedule** and in the dialog box, clear the **Active** check box, and then click **Update**.

Configure Contact Tracing data retention settings

Configure the data retention settings for the data collected for contact tracing such as badge swipe data, employee daily contact logs, and cases.

Before you begin
Role required: admin

About this task
Employers remain solely responsible for complying with their legal obligations under applicable law, including data protection laws on collection, use, disclosure, and retention of personal data, and should enable, choose not to enable, or customize any functionality available within the application to meet the Employers' specific requirements.

A system property and scheduled jobs control the data retention policy for contact tracing data.

- The *sn_imt_tracing.data_retention_period* system property determines the number of days the contact tracing data will be available in the system before it is deleted automatically.
- The *Data Retention Job For Contact Tracing* scheduled job checks for records that have an updated date that is past the defined retention period, and deletes them.

  The data retention policy applies to the following contact tracing data:

  Badge swipe data

  Table impacted: Badge Access Register [sn_imt_tracing_badge_access_register]

  Closed and canceled cases and associated records

  Tables impacted: Case [sn_imt_tracing_case], Case Task [sn_imt_tracing_case_task], Exposed Contacts [sn_imt_tracing_exposed_contact], Diagnostic Request [sn_imt_diagnosis_diagnostic_request], Diagnostics Events [sn_imt_diagnosis_diagnostics_event], and Potential Workplace Exposure [sn_imt_diagnosis_potential_workplace_exposure]

  The Diagnostic Request and Diagnostics Events tables are installed with the Emergency Exposure Management application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
A survey associated with cases that are eligible for deletion after the retention period is not deleted because surveys have their own retention period. For more information, see Clean up assessment data.

Employee daily contact logs

Tables impacted: Daily Contact Logs [sn_imt_tracing_daily_contact_log], Daily Log Acknowledgements [sn_imt_tracing_daily_log_acknowledgement], and Daily Log Notes [sn_imt_tracing_daily_log_note]

Wi-Fi access data

Tables impacted: WiFi Access Register [sn_imt_tracing_wifi_access_register]and Wi-Fi Access Register Job [sn_imt_tracing_wifi_access_register_job]

- The *Purge Contact Tracing Deleted Records (Data Retention)* scheduled job purges all deleted records of contact tracing from the Audit Deleted Record [sys_audit_delete] table. All deleted records with an updated date past the defined retention period are purged.

Procedure

1. Set the period for which you want to keep the contact tracing data.
   a. Navigate to **Contact Tracing** > **Administration** > **Properties**.
   b. Enter a value in the **Contact Tracing data retention period (in days)** property.
   The default value is 90 days.
   c. Click **Save**.
2. Configure the scheduled job to determine when the job runs to check for and delete the contact tracing data.
   a. Navigate to **System Definition** > **Scheduled Jobs**.
   b. Open the *Data Retention Job For Contact Tracing* scheduled job.
   c. Configure the job settings and click **Save**.
   For more information, see Configure a scheduled job.
3. Download, import, and configure the *Purge Contact Tracing Deleted Records (Data Retention)* schedule job in the Global scope to purge deleted records.
   a. Download the Purge Contact Tracing Deleted Records (Data Retention) XML file from the Contact Tracing application page on the ServiceNow® Store.
   b. Navigate to **System Definition** > **Scheduled Jobs**.
   c. Import the downloaded XML file into the Scheduled Job [sysauto] table.
   For more information on importing, see Import a record from the template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Search and open the *Purge Contact Tracing Deleted Records (Data Retention)* record.

e. Select **Active** to activate the job.

f. In the **Run** field, set the schedule for the job to run.

g. Click **Update**.

Create a requirement for potentially exposed contacts to return to work

Create a requirement for potentially exposed employees to meet to verify that they are eligible to return to work.

Before you begin

- Health and safety requirements are available in the ServiceNow® Employee Readiness Core application, which must be installed.
- Health and safety requirements are built with ServiceNow® Workflow Studio, so make sure you're familiar with the Flow Designer basics.

Role required: sn_imt_core.admin

About this task

Define health and safety requirements for employees to return to work. Employees should not be in any potentially exposed contacts investigation of a case. If they are part of an active case investigation, they should meet the requirement of a clear status to be eligible to return to workplace. For more information, see Follow up with potentially exposed contacts.

Note:

This procedure describes how to create a requirement using the base system Exposed Contacts Requirement as an example.

Procedure

1. In Workflow Studio, create an action to add or update the requirement status for an employee added to the potentially exposed contacts list of a case.

   a. Create an action and save it in the Employee Readiness Core application.

   b. In the Inputs section of the Action Outline, create an input for the type of record to use to check whether the employee meets the requirement.

   For example, to meet the Exposed Contacts Requirement, employees must have a record in the Exposed Contacts table [sn_imt_tracing_exposed_contact].

Label	Name	Type	Mandatory
Exposed Contact	exposed_contact	Reference.Exposed Contacts [sn_imt_tracing_exposed_contact]	Yes

   c. Add a **Script Step** to the Action Outline.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. In the **Required Runtime** field, select **Instance**.

e. Create an input variable using the input that you created for the action as the value.

This variable enables you to use the input for the action in a script.

Input Variables

Name	Value
exposed_contact	**Exposed Contact** input that you created in the Inputs section.

f. In the **Script** field, add a script to define the conditions when an employee's requirement status is `cleared` or `not_cleared`.

For the Exposed Contacts Requirement, the requirement is `not cleared` for an employee if the health status in any exposed contact records for the employee is `under_investigation` or `infected`, and `cleared` for any other response.

```
(function execute(inputs, outputs) {

  outputs.requirement_status = 'cleared';
  if (!inputs.exposed_contact.is_primary_exposed_contact) {
    var now_GR = new
GlideRecord('sn_imt_tracing_exposed_contact');
    now_GR.addQuery('exposure_case.active',true);
    now_GR.addQuery('is_primary_exposed_contact',true);
    now_GR.addQuery('user',inputs.exposed_contact.user);
    now_GR.setLimit(1);
    now_GR.query();
    if (now_GR.next()) {
     if(now_GR.status == 'under_investigation' ||
now_GR.status == 'infected'){
      outputs.requirement_status = 'not_cleared';
    }else{
      outputs.requirement_status = 'cleared';
    }
    }else{
      var gr2 = new
GlideRecord('sn_imt_tracing_exposed_contact');
      gr2.addQuery('exposure_case.active',true);
      gr2.addQuery('user',inputs.exposed_contact.user);
      gr2.query();
      while(gr2.next()){
        if(gr2.status == 'under_investigation' || gr2.status
== 'infected'){
      outputs.requirement_status = 'not_cleared';
            break;
        }
      }
    }
  }else{
   if(inputs.exposed_contact.status == 'under_investigation'
|| inputs.exposed_contact.status == 'infected'){
     outputs.requirement_status = 'not_cleared';
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
    }else{
      outputs.requirement_status = 'cleared';
    }
  }
})(inputs, outputs);
```

g. Create an output variable for the requirement status.

This defines the *requirement_status* variable that you used in the script.

Output Variables

Label	Name	Type	Mandatory	Choice (Advanced options)
requirement_status	requirement_status	Choice	Yes	Dropdown with --None--

h. In the Outputs section of the Action Outline, create an output for the requirement status.

Creating this output enables you to use the *requirement_status* output variable from the script as an output returned by the action.

Output Variables

Label	Name	Type	Mandatory	Choice (Advanced options)
Requirement status	requirement_status	Choice	No	Dropdown with --None--

i. Assign the *requirement_status* value to the output.

Output Variables

Label	Value
Requirement Status	*requirement_status* output variable from the script step.

The action returns the value of the *requirement_status* for the employee (`cleared` or `not_cleared`) as an output.

j. Click **Publish**.

2. Create an exposed contacts requirement.

a. Navigate to **Employee Health and Safety Status** > **Health and Safety Requirements**.

b. Click **New**.

c. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Include previous applicable records section defines a set of records that have already been created but should still trigger the requirement flow. Including previous records ensures that employees who complete the requirement before it is activated have their requirement status set to Not Cleared.

Health and Safety Requirement form

Field	Description
Name	Unique name for the requirement. For example, `Exposed Contacts Requirement`.
Requirement flow	Flow to update the requirement status for a potentially exposed employee. Leave this field empty. You will return to the requirement record and fill in this field after you create the flow.
Active	This field is read-only. Once you update all fields for the requirement, you can use the **Activate** button to activate the requirement.
Default status	The default status assigned to employees who are not in the potentially exposed contacts list to meet the health and safety requirement. The options are Cleared and Not Cleared. For example, employees who don't have an exposed contact record are assigned a default status of Not Cleared for the Exposed Contacts Requirement.
Use duration	Option for setting a time limit for the validity of the requirement status. Do not select this field because the employee's status is automatically updated when the status of the exposed contact task for the employee is updated.
Include previous applicable records	
Table	Table to consult for previously created records that will trigger the requirement flow. For example, the Exposed Contacts Requirement uses the Exposed Contacts table [sn_imt_tracing_exposed_contact].
Condition	Conditions to filter the records from the table that will trigger the flow.

d. Click **Submit**.

3. In Workflow Studio, create a flow to update the requirement status for an employee.

a. Create a flow and save it in the Employee Readiness Core application.

b. Add a trigger so that the flow runs whenever the type of record that you're using to check the requirement status is created or updated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, for the Exposed Contacts Requirement, the flow runs whenever an exposed contacts record in a case is created or updated.

Trigger

Trigger	Table	Condition	Run Trigger
Created or Updated	Exposed Contacts [sn_imt_tracing_exposed_contact]	None.	Once

c. Add the action that you created to the flow, with the record from the trigger as the input. For example, for the Exposed Contacts input, add the Exposed Contacts record that was created or updated in the trigger event.

d. Add the Update User Requirement action provided in Employee Readiness Core to the flow.

Update User Requirement inputs

User [User]	Health and safety requirement [Health and Safety Requirement]	Requirement status	Trigger datetime
Employee or **User** field from the trigger record. For example, the **User** field from the Exposed Contacts record.	Health and safety requirement you created for the potentially exposed contacts.	`requirement_status` returned by the action you created.	Select **Date/Time**.

e. Click **Activate**.

4. Complete the health and safety requirement.
   a. Navigate to **Employee Health and Safety Status** > **Health and Safety Requirements**.
   b. Click the requirement.
   c. In the **Requirement flow** field, add the flow that you created to update the requirement status for employees.
   d. Click **Update**.

What to do next

You must activate the requirement before you can track whether employees have fulfilled it. For instructions, see Activate a health and safety requirement.

Create a requirement for employees to acknowledge the privacy consent request

Create a requirement for your employees to respond to the privacy consent request before entering the workplace to facilitate the use of their data for contact tracing.

Before you begin

- Requirements are available in the ServiceNow® Employee Readiness Core application, which must be installed.
- Privacy Consent requirement is built with ServiceNow® Workflow Studio, so make sure you're familiar with the Flow Designer basics.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_imt_core.admin

About this task

Define the privacy consent requirement for employees to return to work. Employees who agree to the use of their data for contact tracing fulfill the privacy consent requirement and are eligible to return to the workplace. Employees who disagree do not fulfill the privacy consent requirement and are not eligible to return to the workplace. For more information, see Respond to a request for privacy consent in Contact Tracing.

Note:
This procedure describes how to create a requirement using the base system Privacy Consent Requirement as an example.

Procedure

1. In Workflow Studio, create an action to add or update the requirement status for an employee who responds to the privacy consent request.

   a. Create an action and save it in the Employee Readiness Core application.

   b. In the Inputs section of the Action Outline, create an input for the type of record to use to check whether the employee meets the requirement.

Label	Name	Type	Mandatory
preference	preference	String	Yes

   c. Add a **Script Step** to the Action Outline.

   d. In the **Required Runtime** field, select **Instance**.

   e. Create an input variable using the input that you created for the action as the value.

   This variable enables you to use the input for the action in a script.

Input Variables

Name	Value
preference	**preference** input that you created in the Inputs section.

   f. In the **Script** field, add a script to define the conditions when an employee's requirement status is `cleared` or `not_cleared`.

   For the Privacy Consent Requirement, the requirement is `not_cleared` for an employee if the employee disagrees to the privacy consent request, and `cleared` if the employee agrees.

```
(function execute(inputs, outputs) {
    if (inputs.preferences == "agree") {
        outputs.requirement_status = "cleared";
    } else if (inputs.preferences == "withdraw_consent") {
        outputs.requirement_status = "not_cleared";
    }
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
})(inputs, outputs);
```

g. Create an output variable for the requirement status.

This output variable defines the *requirement_status* variable that you used in the script.

Output Variables

Label	Name	Type	Mandatory	Choice (Advanced options)
requirement_status	requirement_status	Choice	Yes	Dropdown with --None--

h. In the Outputs section of the Action Outline, create an output for the requirement status.

Creating this output enables you to use the *requirement_status* output variable from the script as an output returned by the action.

Output Variables

Label	Name	Type	Mandatory	Choice (Advanced options)
Requirement status	requirement_status	Choice	No	Dropdown with --None--

i. Assign the *requirement_status* value to the output.

Output Variables

Label	Value
Requirement Status	*requirement_status* output variable from the script step.

The action returns the value of the *requirement_status* for the employee (`cleared` or `not_cleared`) as an output.

j. Click **Publish**.

2. Create a privacy consent requirement.

a. Navigate to **Employee Health and Safety Status** > **Health and Safety Requirements**.

b. Click **New**.

c. On the form, fill in the fields.

The Include previous applicable records section defines a set of records that have already been created but should still trigger the requirement flow. Including previous records ensures that employees who complete the requirement before it is activated have their requirement status set to Cleared.

© 2026 ServiceNow, Inc. All rights reserved.

Health and Safety Requirement form

Field	Description
Name	Unique name for the requirement.
Requirement flow	Flow to update the requirement status for an employee. Leave this field empty. You will return to the requirement record and fill in this field after you create the flow.
Active	This field is read-only. Once you update all fields for the requirement, you can use the **Activate** button to activate the requirement.
Default status	The default status assigned to employees who don't have any activity towards completing the requirement. The options are Cleared and Not Cleared. For example, employees who don't have a record in the User Privacy Notice and Consents [sn_imt_tracing_user_privacy_consent] table are assigned a default status of Not Cleared for the Privacy Consent Requirement.
Use duration	Option for setting a time limit for the validity of the requirement status. Do not select this field because the employee's status is automatically updated when the employee responds to the privacy consent request.
Include previous applicable records	
Table	Table to consult for previously created records that will trigger the requirement flow. For example, the Privacy Consent Requirement uses the User Privacy Notice and Consents table.
Condition	Conditions to filter the records from the table that will trigger the flow.

d. Click **Submit**.

3. In Workflow Studio, create a flow to update the requirement status for an employee.

a. Create a flow and save it in the Employee Readiness Core application.

b. Add a trigger so that the flow runs whenever the type of record that you're using to check that the requirement status is created or updated.

For example, for the Privacy Consent Requirement, the flow runs whenever a user privacy notice and consent record is created or updated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Trigger

Trigger	Table	Condition	Run Trigger
Created or Updated	User Privacy Notice and Consents [sn_imt_tracing_user_privacy_consent]	[Preferences] [changes to] [I Agree] OR [Preferences] [changes to] [Withdraw Consent]	Only if not currently running

c. Add the action that you created to the flow, with the record from the trigger as the input. For example, for the preference input, add the User Privacy Notice and Consent record that was created or updated in the trigger event.

d. Add the Update User Requirement action provided in Employee Readiness Core to the flow.

Update User Requirement inputs

User [User]	Health and safety requirement [Health and Safety Requirement]	Requirement status	Trigger datetime
User field from the trigger record. For example, the **User** field from the User Privacy Notice and Consent record.	Health and safety requirement you created for the privacy consent.	`requirement_status` returned by the action you created.	Leave the field blank.

e. Click **Activate**.

4. Complete the health and safety requirement.
   a. Navigate to **Employee Health and Safety Status** > **Health and Safety Requirements**.
   b. Open the Privacy Consent Requirement record.
   c. In the **Requirement flow** field, add the flow that you created to update the requirement status for employees.
   d. Click **Update**.

What to do next

You must activate the requirement before you can track whether employees have fulfilled it. For instructions, see Activate a health and safety requirement.

Configure an email notification for an exposure notice

Configure an email notification to use in the Emergency Outreach to send to potentially exposed contacts in an exposure case to notify them of potential exposure from an affected employee.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Notifications** > **Email** > **Notifications**.
2. Review the existing **Notify Exposed Contact** email notification to familiarize yourself with the script and other settings.
3. Click **New**.
4. In the **Table** field, select the Exposure Notice [sn_imt_tracing_exposure_notice] table.
5. On the **When to send** tab, complete the following settings.
   a. In the **Send when** field, select **Record inserted or updated**.
   b. Set the **Conditions** criteria to **[User.Active][is][true]** and **[Notification count][changes]**.
   c. In the **Advanced condition** field, enter the following code:

```
var exposedContactNotificationSysId = '<your-sys_id>';
answer = current.outreach.notification ==
 exposedContactNotificationSysId;
```

   Replace the <your-sys_id> variable with the sys_id notification that you're adding by right-clicking in the header, selecting the **Copy sys_id** option, and pasting the sys_id into the code line.
6. On the **Who will receive** tab, open **Users/Groups in fields** and select **Assigned to**.
7. Complete the remaining information on the **What it will contain** tab.
8. Click **Submit**.
9. In the Notifications list, open the notification that you added and click **Preview Notification**.
10. Review the notification and make any changes required.
11. Click **Update**.

What to do next

Configure an Emergency Outreach notification for the exposure notice.

Configure an Emergency Outreach notification for the exposure notice

Configure an Emergency Outreach notification to send email and mobile push notifications to potentially exposed employees in an exposure case to notify them of a potential exposure from an affected employee.

Before you begin

Ensure that you have the Emergency Outreach application installed. For details, see Install Emergency Outreach.

Employees must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Role required: sn_imt_checkin.checkin_admin or admin

About this task

Review the existing **Notify Exposed Contact** outreach notification to familiarize yourself with the configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Emergency Outreach** > **View Outreaches**.
2. Click **New**.
3. Enter the outreach notification name in the **Event name** field.
4. On the **Content configuration** tab, select **Exposure Notice** in the **Response mode** field.
5. **Optional:** Review and edit the introductory message by modifying the subject and body in the **Email subject** and **Email body** fields respectively.
6. Specify how to send the outreach notification.
7. Click **Submit**.
   The content configuration settings are saved.

Result

An exposure notice outreach notification is created. These exposure notice outreach notifications are available for selection when a case manager wants to send notifications to the potentially exposed contacts in a case.

What to do next

A case manager can send the outreach notification to the potentially exposed contacts in a case.

Configure contact tracing visualization to show vaccination status

Configure Contact Tracing so case managers can view the vaccination status of potentially exposed contacts in the contact tracing visualization.

Before you begin

The Vaccination Status application must be installed and configured. For more information, see Vaccination Status.

Role required: admin

Procedure

1. Navigate to **All** > **Contact Tracing** > **Properties**.
2. Set the *sn_imt_tracing.show_contact_vaccination_status* property to **Yes**.
   This step enables vaccination statuses to display on the contact tracing visualization.
3. Click **Save**.
4. Assign the Vaccination Status application sn_imt_vaccine.vaccine_profile_reader role to each case manager.
   The vaccination status and the **Vaccinated** column in **Exposed Contacts** are hidden until you have this role.

   Note:
   If the *sn_imt_tracing.show_contact_vaccination_status* property is set to **No**, case managers with the sn_imt_vaccine.vaccine_profile_reader role can see the **Vaccinated** column, but the column is empty.

Result

Case managers can see the vaccination status of users on the case form in both the contact tracing visualization and the **Exposed Contacts** list. For more information, see Working on a case through contact tracing visualization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Trouble?

If a case manager can't see vaccination statuses even though the *sn_imt_tracing.show_contact_vaccination_status* property is set to **Yes**, confirm that the case manager has the sn_imt_vaccine.vaccine_profile_reader role.

Setting up data privacy consent settings for Contact Tracing

As an admin, you can configure privacy consent templates, location-based privacy configurations, email notifications, and outreach notifications for sending privacy consent alerts in Contact Tracing.

In Contact Tracing, you can configure and send privacy consent notifications that request employees to consent to having their data used for contact tracing purposes.

User privacy regulations vary from country to country. For some countries, consent by employees to use their data is not required but for others it is a must. You can set different privacy policies for different locations and organization setups. Some organizations maintain a separate privacy policy for each location while others maintain a single privacy policy for all locations.

Modify or add a privacy consent template for Contact Tracing

Modify or add a privacy consent template to be used in the location privacy configuration.

Before you begin

Role required: sn_imt_tracing.admin

Procedure

1. **Contact Tracing** > **Privacy** > **Privacy Consent Templates**.
2. Open a **Default Template** record to modify it or click **New** to create one.
3. Enter a unique name of the template in the **Name** field.
4. Enter the privacy policy statement in the **Privacy statement** field.
   If the privacy policy is different for different locations, create one template for each location and specify the policy statement.

   If your organization has a single policy for all locations across the globe, update the default template.
5. Click **Submit**.

What to do next

Use the privacy consent template to update the privacy statement in the applicable location's privacy configurations. For more information, see Generate location-based privacy configurations for Contact Tracing.

Generate location-based privacy configurations for Contact Tracing

As an administrator, generate the privacy configuration for locations set up in your instance.

Before you begin

The privacy statement in the default template is copied in each location's privacy configuration. Ensure that you have reviewed the privacy statement in the default consent template and modified it if necessary.
Role required: sn_imt_tracing.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

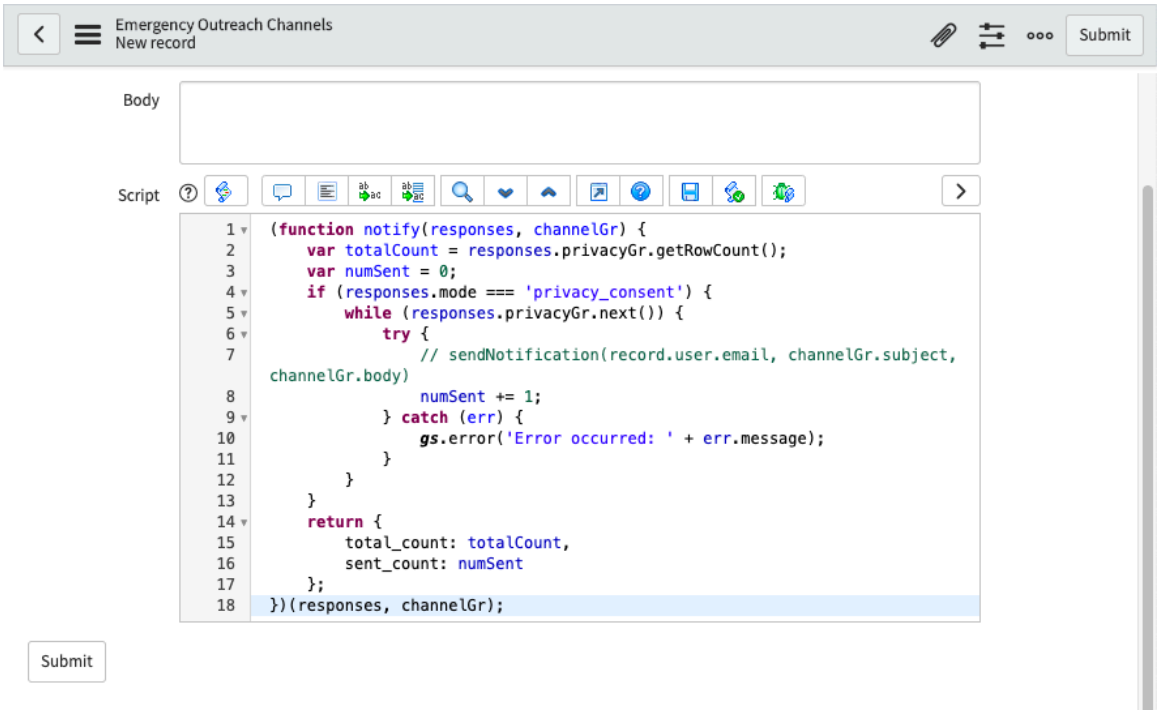
About this task
You can generate a location-based, default privacy configuration for each country available in the Locations [cmn_location] table. For each location, you can specify whether the privacy consent is required and update the privacy policy statement.

Procedure
1. Navigate to **All** > **Contact Tracing** > **Privacy** > **Location Privacy Configuration**.
2. Click **Generate Location Configurations**.
   The default configuration is created for each country and appears in the Location Privacy Configurations list.
3. Open a location to review its configuration and modify it if necessary.
4. Configure the privacy consent text if necessary.
5. Click **Update**.

Result
The location-based privacy configuration is set.

What to do next
Configure an email notification for a privacy consent request.

Create a custom Emergency Outreach notification channel



Create a custom Emergency Outreach notification channel to send privacy consent requests using your company's preferred communication method, such as the Slack or Microsoft Teams collaboration platforms. Create the notification channel using a script or a subflow.

Before you begin
Role required: sn_imt_checkin.checkin_admin or admin

About this task
After you create a notification channel, you can select it when sending a notification. The channel uses the specified subject and body, and sends notifications to the users that you select when you send the privacy consent request.
For example, if your company's IT network group has a Slack channel that they monitor more closely than email, you could create a Slack notification channel. To communicate with IT network group members, you would select the group as the target audience and select the Slack notification channel.

Procedure
1. Navigate to **All** > **Emergency Outreach** > **Channels**.
2. Click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Enter the name of your notification channel.
   Use a short name to indicate the communication method so requesters can easily pick the correct channel.
4. In the **Subject** field, enter the subject of your notification channel message.
5. In the **Body** field, enter the body of the message.
6. Create a script for the notification channel.

   a. In the **Notification type** field, leave the default notification type of **Script**.

   b. In the **Script** field, replace the code in the comment with the script to connect to your channel.

   Example

```
{
            //
 sendNotification(responses.privacyGr.user.email,
channelGr.subject, channelGr.body);
        }
```

   For information about JavaScript APIs for GlideRecord, see GlideRecord - Scoped.

   c. Click **Submit**.

Example

The following example includes code to count the number of privacy consent requests generated when the notification is sent. It displays the number of privacy consent requests that were delivered successfully. Use this information to review and handle errors that appear in the Delivery Log related list in the Outreach record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
(function notify(responses, channelGr) {
 var totalCount = responses.privacyGr.getRowCount();
    var numSent = 0;
    if (responses.mode === 'privacy_consent') {
        while (responses.privacyGr.next()) {
            try {
                // sendNotification(record.user.email,
 channelGr.subject, channelGr.body)
                numSent += 1;
            } catch (err) {
                gs.error('Error occurred: ' + err.message);
            }
        }
    }
    return {
        total_count: totalCount,
        sent_count: numSent
    };
})(responses, channelGr);
```

7. Create a subflow notification channel.

   a. Create a subflow to use in the notification.
   For information about creating, publishing, and testing subflows, see Subflows.

   Use the following inputs in the subflow that you create:

   - *mode* (string)
   - *Privacy Consent* (Records of sn_imt_tracing_user_privacy_consent)

     If the mode is *Privacy Consent*, then acknowledgements are set to a valid GlideRecord and *survey_instances* is `null`.

   - *channel* (Reference of sn_imt_checkin_channels)

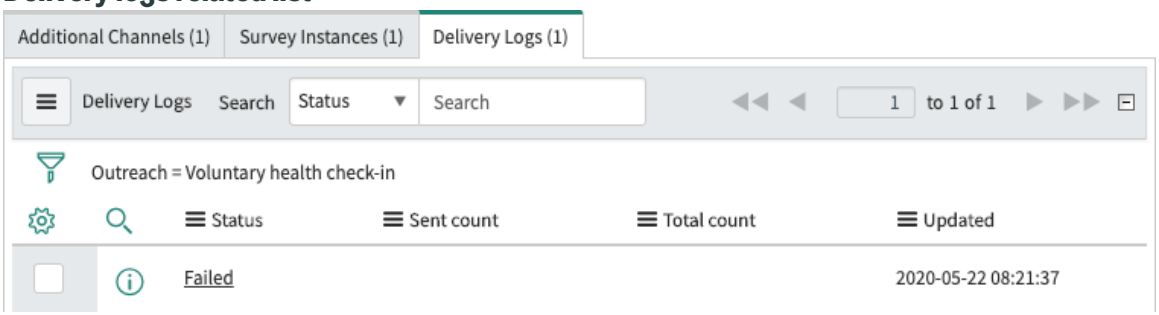
   The following outputs are optional:

   - *total_count* (integer)
   - *sent_count* (integer)

   To review these outputs, include the number of total privacy consent requests versus the successful privacy consent requests.

   b. Select the **Subflow** notification type.
   The Script section changes to Flow, and the **Subflow** reference field appears.

   c. Select the subflow that you created.



8. Click **Submit**.

Trouble?

When a notification is sent using a custom notification channel, a Delivery Logs related list appears in the Outreach message.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

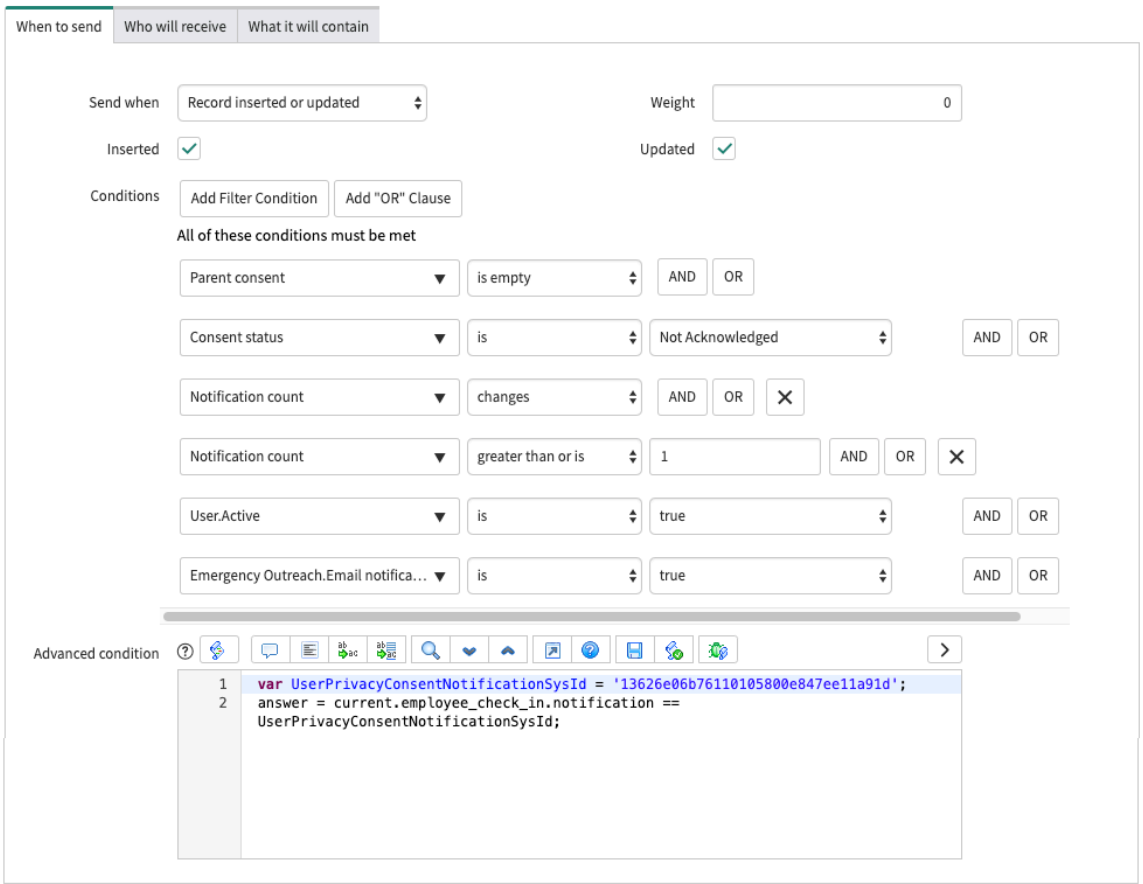
Delivery logs related list

1. Test the notification channel for an outreach message.
2. Open any failed channel record to review the error messages and fix errors that caused the notification to fail.
3. Continue testing the notification channel until the channel no longer fails.

Configure an email notification for a privacy consent request

Configure an email notification to use in the Emergency Outreach app to request that employees review the organization's privacy policy and provide their consent to use their data for contact tracing.

Before you begin



Role required: admin

Procedure

1. Navigate to **All** > **System Notifications** > **Email** > **Notifications**.
2. Review the existing **User Privacy Consent** email notification to familiarize yourself with the script and other settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Privacy Consent base system notification

3. Click **New**.
4. In the **Table** field, select the User Privacy Notice and Consents [sn_imt_tracing_user_privacy_consent] table.
5. On the **When to send** tab, set the conditions.

   a. In the **Conditions** field, set the criteria as shown in the image of the base system notification.

   b. Copy the following example script in the **Advanced condition** field.

```
var employeeCheckInAcmeSysId = '<replace with this
 notification sys_id';
answer = current.employee_check_in.notification ==
 employeeCheckInAcmeSysId
```

   c. Make the following modifications to the example script:

   - Give the variable a different name, for example, *employeeCheckInAcmeSysId*.
   - Enter the new notification sys_id as the value.
   - Enter the variable name that you declared at the end of the second line.

6. On the **Who will receive** tab, open **Users/Groups in fields** and select **Assigned to**.
7. Complete the remaining information on the **What it will contain** tab.
   While entering the email content in the **Message HTML** field, make sure that you include the link to the Privacy Consent form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Click **Submit**.
9. In the Notifications list, open the notification that you added and click **Preview Notification**.
10. Review the notification and make any changes required.
11. Click **Update**.

Configure an Emergency Outreach notification for Contact Tracing privacy consents

As an administrator, create or configure an Emergency Outreach notification to send email and mobile push notifications to employees requesting them to view the privacy policy and seeking their consent to use their data for contact tracing.

Before you begin

Ensure that you have the Emergency Outreach application installed. For details, see Install Emergency Outreach.

You must have generated the location-based privacy configurations.

Employees must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Role required: sn_imt_checkin.checkin_admin or admin

Procedure

1. Navigate to **All** > **Emergency Outreach** > **View Outreaches**.
2. Review and edit the existing outreach record **User Privacy Consent** record or click **New** to create one.
3. Enter the outreach notification name in the **Event name** field.
4. On the **Select targeted audience** tab, select the target audience for the notification, and click **Save**.
   You can choose from user lists, groups, departments, locations, or other search filters such as building, cost center, or country code.
5. On the **Content configuration** tab, select **Privacy Consent** in the **Response mode** field.
6. **Optional:** Enable the outreach to provide location-specific privacy consents by selecting the **Use Country** option on the **Content configuration** tab.

   (Optional) When enabled, the privacy statement text in Location Privacy Configuration takes precedence over text in the privacy consent templates. This text is used for the outreach, system notification email, and push notification. If you need to update the text that users receive, you must change the location's privacy statement.

   For more information on updating a location's privacy statement, see Generate location-based privacy configurations.

7. Select **User Privacy Consent** notification in the **Notification** field, and choose how to send the notification.
   - To send the notification by email, select the **Email notification** check box and enter the email subject and body.
   - To send a mobile push notification, select the **Now Mobile Push notification** check box and enter the push message and a detailed push message.

     This option is available only if the ServiceNow NowMobile App Screens and Applet Launcher (com.glide.mobile-employee) plugin is activated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To use a custom notification channel, click the Additional Channels related list, click **Edit**, and move the channel to the Additional Channels List. Click **Save**.

  Make sure that the **Email notification** and **Now Mobile Push notification** check boxes are not selected or notifications will also be sent through those channels.

  Push notifications use the ServiceNow Request Application notification device. When users register their mobile application to an instance, this notification device is automatically created in their notification preferences. Ensure that this device is active for the users that you want to receive the push notification.

8. Click **Save**.
   The target audience and content configuration changes are saved.
9. Click **Schedule**.
10. In the Scheduled Script pop-up window, configure a scheduled job to the notification.
    For more information, see Configure a scheduled job.
11. Click **Submit**.
    A script is added to the scheduled job. The job is associated with the outreach notification.

Result

An outreach notification with a scheduled job is created. The job sends notifications to the target audience per the set schedule.

Note:
The outreach notification is not sent to users in the selected audience if users do not have a location set in their user profile or the privacy consent is disabled in the location privacy configuration. The privacy consent notification is sent to a user only once even if the user is in the target audience of multiple privacy notifications.

What to do next

A user with the sn_imt_checkin.checkin_admin role can send the Outreach notification on demand.

A user with the admin or sn_imt_checkin.checkin_admin role can stop the scheduled job to send the notifications automatically. To do so, click **Schedule** and in the dialog box, clear the **Active** check box, and then click **Update**.

Map handheld computing devices assigned to employees

Map handheld computing devices that are assigned to employees and running the Zebra MotionWorks software to record proximity logs for contact tracing using those devices.

Before you begin

Handheld computing device data is stored in the Handheld Computing Device [cmdb_ci_handheld_computing] table. The table is installed with the CMDB CI Class Models application available on the ServiceNow Store. Ensure that you have that application installed and active. For more information, see CMDB CI Class Models.

Role required: sn_imt_tracing.wearable_manager

About this task

You can also import your handheld computing devices data from an Excel spreadsheet that you use with the Zebra MotionWorks software. For more information, see Easy import data from a list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Wi-Fi Access Management** > **Handheld Devices**.
2. Click **New**.
3. On the form, fill in the following fields required for contact tracing.

Handheld Computing Device form

Field	Description
Name	Unique name of the handheld computing device.
Asset tag	Unique ID to identify the handheld computing device.
Serial number	Unique serial number of the handheld computing device.
Assigned to	Name of the employee who has the handheld computing device.

4. Click **Submit**.

Result

A mapping of the handheld computing device and the employee to whom it is assigned is created.

Configure KINEXON integration

Configure Contact Tracing and enable the KINEXON SafeZone tracing system to use data from KINEXON wearable devices in diagnostic requests. This data enables the identification of potentially exposed contacts based on the interactions and proximity of users with KINEXON wearable devices.

Before you begin

To successfully enable the KINEXON SafeZone tracing system, note the following requirements:

- The Emergency Outreach application must be installed. For more information, see Install Emergency Outreach.
- Privacy consent settings for Contact Tracing must be configured. For more information, see Setting up data privacy consent settings for Contact Tracing.
- Users must have KINEXON wearable devices managed with KINEXON SafeZone.
- Users should have an email address in the **Name** column in the KINEXON SafeZone software. Email addresses are used to match KINEXON users to users in Contact Tracing.

Role required: admin

Procedure

1. Navigate to **All** > **Contact Tracing** > **Properties**.
2. Set the Contact Tracing property values related to the KINEXON SafeZone integration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact Tracing properties for KINEXON SafeZone integration

Property	Description
sn_imt_tracing.kinexon_api_endpoint	API endpoint used to log in to the KINEXON SafeZone instance and access KINEXON data. This API endpoint is also used to fetch information required for Contact Tracing. Replace the default endpoint with the endpoint of your instance.
sn_imt_tracing.kinexon_api_username	KINEXON administrator user name.
sn_imt_tracing.kinexon_api_password	KINEXON administrator password.
sn_imt_tracing.kinexon_api_param_min_duration	The minimum duration of contact (in seconds) between two KINEXON sensors required to determine whether a user is a potentially exposed contact. The query omits all records with values below this duration. The

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
	default value is 300.
sn_imt_tracing.kinexon_api_param_min_acc_duration	The minimum total duration (in seconds) of all contact between two KINEXON sensors within the queried date range. If the total duration is shorter than this value, the query omits all records of contact between the pair of sensors. The default value is 300.
sn_imt_tracing.kinexon_api_param_max_distance	The maximum distance (in meters) between two KINEXON sensors that determines whether users are in contact. The query omits any instances of contact beyond this distance. The default value is 2.
sn_imt_tracing.kinexon_api_param_max_time_gap_in_sequence	Determines the amount of time that can pass (in seconds) between any two consecutive instances

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
	of contact before the potential exposure is considered two potential exposures. The default value is `15`.

3. Navigate to **Emergency Exposure Management** > **Tracing Systems** and click **Kinexon SafeZone**.
4. Activate the tracing system.
   a. Select **Active**.
   b. Click **Update**.
5. Add all users with KINEXON wearable devices in your organization to the privacy consent audience.
   a. Navigate to **Emergency Outreach** > **Safe Workplace Audience** and click **privacy audience**.
   b. Add users to the audience.
   For detailed instructions on adding users to an audience, see Add a Safe Workplace audience
   c. Click **Update**.
6. Assign the sn_imt_core.privacy_consent_user role to KINEXON users to enable them to access and complete the privacy consent.
7. Send your organization's privacy consent outreach to KINEXON users.
   Users in a location that requires privacy consent must consent to the privacy policy to create exposed contact records. Users who do not have an assigned location or are in a location that does not require privacy consent do not have to submit a privacy consent.

Result

You can now use the KINEXON SafeZone tracing system in diagnostic requests. For more information on identifying potentially exposed contacts using diagnostic requests, see Identify potentially exposed contacts.

Virtual Agent conversations for Contact Tracing

Contact Tracing provides a Virtual Agent conversation to assess the health of potentially exposed contacts via SMS.

Contact Tracing Overview

A Virtual Agent conversation topic enables a dialog between the Virtual Agent (chatbot) and a user to accomplish a specific goal. The provided Exposure conversation topic for Contact Tracing asks potentially exposed contacts questions based on the Exposure Case Task Survey. Contact tracers use the responses to assess the health of a potentially exposed contact.

Contact Tracing uses an SMS outreach to initiate the Virtual Agent conversation and begin the survey. The Exposure Case Task Survey outreach can be sent automatically when users are

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

added to case tasks as exposed contacts. Alternatively, contact tracers can send the survey manually while working on a case task by selecting the **Send SMS Survey** button. Users who receive the survey can reply back via SMS.

Organizations can use the Exposure conversation topic and Exposure Case Task Survey as provided or customize it. For example, you might want to add a "Prefer not to say" answer option to one or more questions.

Note:
To complete the customization, you must apply any changes to both the Exposure conversation topic in **Virtual Agent** > **Designer** and the Exposure Case Task Survey in **Survey** > **View Surveys**. Applying changes to only the conversation topic or the survey will not update both the topic and survey.

- For more information on updating conversation topics, see Virtual Agent Designer.
- For more information on updating surveys, see Survey designer.

Installation and setup requirements

Note the following requirements to use Virtual Agent with SMS:

- A Twilio account and phone number.
- The Emergency Outreach application.

  For details, see Install Emergency Outreach.
- The Virtual Agent plugin (com.glide.cs.chatbot).
- Conversational SMS Integration with Twilio application (sn_va_sms_twilio).

  For more information, see Set up the Conversational SMS Integration with Twilio.

Note the following requirements for users to complete Exposure Case Task Surveys via SMS:

- Your organization must install and set up Virtual Agent for use with SMS.
- To receive SMS messages for Contact Tracing, users must have a mobile phone number listed on their user record [sys_user]. Mobile numbers must be in E.164 format, for example, `+18585551212`.
- Privacy consent for Contact Tracing must be configured before users can reply to SMS messages. For instructions and more information, see Setting up data privacy consent settings for Contact Tracing.
- Users must agree to the privacy consent before they can respond to the survey.

Send Exposure Case Task Surveys automatically via SMS

As an administrator, you can configure Contact Tracing to enable Exposure Case Task Surveys to be automatically sent via SMS.

Before you begin
Ensure that the installation and setup requirements to enable Virtual Agent conversations for Contact Tracing are met. For more information, see Virtual Agent conversations for Contact Tracing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

About this task

Enable the *sn_imt_tracing.enable_sms_exposure_survey* property so that Exposure Case Task Surveys are sent automatically when users are added to Exposed Contacts. Potentially exposed contacts can respond to the surveys via SMS, providing contact tracers with an assessment of their health status.

Procedure

1. Configure the *sn_imt_tracing.enable_sms_exposure_survey* property.
   a. Navigate to **Contact Tracing** > **Administration** > **Properties**.
   b. Set the *sn_imt_tracing.enable_sms_exposure_survey* property to **Yes**.
   c. Click **Save**.
2. **Optional:** Modify the survey questions and answers sent to potentially exposed contacts.

   Example
   For example, add a "Prefer not to say" answer option to one or more questions.

   a. Update the Exposure Virtual Agent conversation topic in **Virtual Agent** > **Designer**.
   For more information on updating conversation topics, see Virtual Agent Designer.

   b. Update the Exposure Case Task Survey in **Survey** > **View Surveys**.
   For more information on updating surveys, see Survey designer.

   Trouble?

   (Optional) To complete the customization, you must apply any changes to both the Exposure conversation topic in **Virtual Agent** > **Designer** and the Exposure Case Task Survey in **Survey** > **View Surveys**. Applying changes to only the conversation topic or the survey will not update both the topic and survey.

Result

When adding users to potentially exposed contacts in case tasks:

- Potentially exposed contacts are automatically added to the Exposure case task survey audience.
- The Exposure Case Task Survey outreach sends the SMS notification to the audience and the Virtual Agent processes the responses, executing the survey as an SMS conversation.
- Survey answers are stored in the [asmt_metric_result] table.

Maintaining user data privacy in Contact Tracing

The Contact Tracing application enables your organization to maintain the data privacy of all users given the high sensitivity of the data collected throughout the contact tracing process.

The following Contact Tracing features can help your organization enforce data privacy for your users:

User privacy consent

Provide your organization's privacy policy to users and enable them to agree or disagree to the use of their data for contact tracing. Use the privacy consent requirement to ensure that your users acknowledge the privacy consent request before entering the workplace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Confidential cases

Enable case managers to mark cases as confidential if they have been created for affected users who need complete privacy protection. Confidential cases can be accessed only by the case manager and users included in the watch list.

Data retention

Set a timeline to keep the data no longer than required.

Organizations remain solely responsible for complying with their legal obligations under applicable law, including data protection laws on collection, use, disclosure, and retention of personal data, and should enable, choose not to enable, or customize any functionality available within the application to meet the Organizations' specific requirements.

User privacy consent for Contact Tracing

The Contact Tracing application enables you to send notification to users seeking their consent for contact tracing. You can use user data for contact tracing based on the privacy configuration set for a location and the user response to the privacy consent.

You can determine whether privacy consents are needed for specific locations. If a location does not need privacy consent, the user data belonging to that location can be automatically considered for contact tracing.

If a location requires privacy consents and a user has not consented to use the data, that user will be flagged, which has the following impact in contact tracing:

- You can create a case for those users but cannot run a diagnostic request for them.
- You cannot create a diagnostic request to identify potentially impacted users for those users.
- If a diagnostic request was created for the user before the user declined to give consent, you cannot run the diagnostic request.
- In a diagnostic request for another affected user, non-consenting users are excluded in the impacted users list. However, they can be added to the impacted users manually.

Privacy consent requirements ensure that your users complete a privacy consent before entering the workplace to facilitate the use of their data for contact tracing.

- Users who agree to the use of their data for contact tracing, the status of their privacy consent requirement updates to Clear. Meeting the privacy consent requirement makes those users eligible to enter the workplace.
- Users who disagree to the use of their data for contact tracing, the status of their privacy consent requirement updates to Not Clear. Meeting the privacy consent requirement makes those users eligible to enter the workplace.

Important:
Any data collected for contact tracing before a user withdraws consent remains in the system. The data will be deleted from the system depending on your data retention settings.

Setting up privacy consents for Contact Tracing

As an admin, you must configure the following settings to use privacy consents with Contact Tracing:

1. Modify or add a privacy consent template for Contact Tracing
2. Generate location-based privacy configurations for Contact Tracing
3. Create a custom Emergency Outreach notification channel

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Configure an email notification for a privacy consent request
5. Configure an Emergency Outreach notification for Contact Tracing privacy consents

Send an Emergency Outreach notification for employee privacy consents in Contact Tracing

Send an Emergency Outreach notification, on demand, to employees to provide the privacy policy and seek their consent to use their data for contact tracing.

Before you begin

Ensure that you have the Emergency Outreach application installed. For details, see Install Emergency Outreach.

Employees must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Role required: sn_imt_checkin.checkin_admin or admin

About this task

Important:
The privacy consent notification is sent to a user only once even if the user is in the target audience of multiple privacy consent notifications.

Procedure

1. Navigate to **All** > **Emergency Outreach** > **View Outreaches**.
2. Open the **User Privacy Consent** outreach record.
3. On the **Safe Workplace Audience** tab, select the audience from the list, and click **Save**.
   If you don't have an audience defined, click **New** and define an audience from user lists, groups, departments, locations, and so on. After you save the Safe Workplace audience, you can use it to send any outreach message. For more information, see Add a Safe Workplace Audience.
4. On the **Content configuration** tab, select **Privacy Consent** in the **Response mode** field.
5. **Optional:** Enable the outreach to provide location-specific privacy consents by selecting the **Use Country** option on the **Content configuration** tab.

   (Optional) When enabled, the privacy statement text in Location Privacy Configuration takes precedence over text in the privacy consent templates. This text is used for the outreach, system notification email, and push notification. If you need to update the text that users receive, you must change the location's privacy statement.

   For more information on updating a location's privacy statement, see Generate location-based privacy configurations.

6. On the **Content configuration** tab, select a notification in the **Notification** field, and choose how to send the notification.
   - To send the notification by email, select the **Email notification** check box.
   - To send a mobile push notification, select the **Now Mobile Push notification** check box.

     This option is available only if the ServiceNow NowMobile App Screens and Applet Launcher (com.glide.mobile-employee) plugin is activated.

     Push notifications use the ServiceNow Request Application notification device. When a user registers their mobile application to an instance, this notification device is automatically created in their notification preferences. Ensure that this device is active for the users that you want to receive the push notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Review the message content.
   - For email notifications, review the email subject and email body and modify it if necessary.
   - For push messages, review the message details.
8. Click **Update**.
   The target audience and content configuration changes are saved.
9. To send the notification, click **Schedule**.
10. In the Scheduled Script pop-up window, click **Execute Now**.

Result
The notification is sent to the target audience.

Note:
The outreach notification is not sent to any users in the selected audience who do not have a location set in their user profile or whose privacy consent is disabled in the location privacy configuration.

What to do next
Review user privacy consents in Contact Tracing to see who has responded to the notification.

Respond to a request for privacy consent in Contact Tracing

When you receive an email or mobile notification for privacy consent, read the privacy policy statement and submit a response indicating whether you agree to the usage of your data for contact tracing.

Before you begin
You must have received a mobile or email push notification to be able to submit your response to the privacy policy request.
Role required: sn_imt_tracing.privacy_consent_user

About this task
You can also click the link included in the notification to submit your response.

Procedure
1. Navigate to **All** > **Contact Tracing** > **Privacy** > **My Privacy Consent**.
2. Read the privacy policy statement in the **Privacy Notice** field.
3. Select your response and click **Submit**.
   - If you agree to the privacy policy and use of your data, select **I Agree**.
   - If you do not want the organization to use your data, select **I Disagree**.

Note:
If you previously agreed to the privacy consent, a **Withdraw Consent** option is available. You can change your response to withdraw your consent by selecting **Withdraw Consent** and clicking **Submit**.

Result
Your current privacy consent decision is updated.
The status of the notification updates to Acknowledged.

If you have the Employee Readiness Core application installed and a health and safety requirement for the privacy consent activated, a record is created with the requirement status:

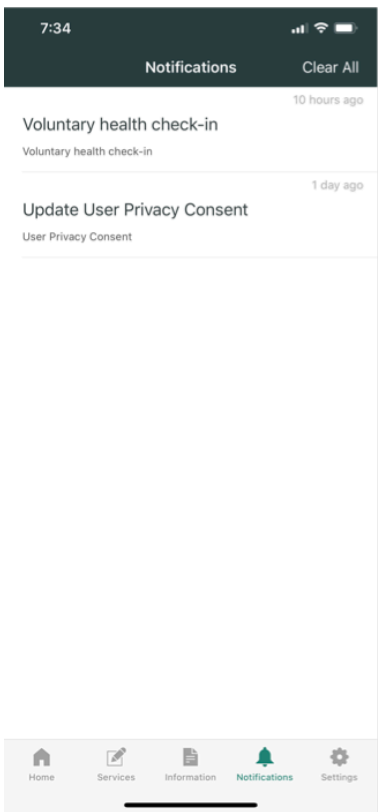
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If you agreed to the privacy policy and use of your data, the requirement status updates to Cleared.
- If you disagreed or withdrew your consent, the requirement status updates to Not Cleared.

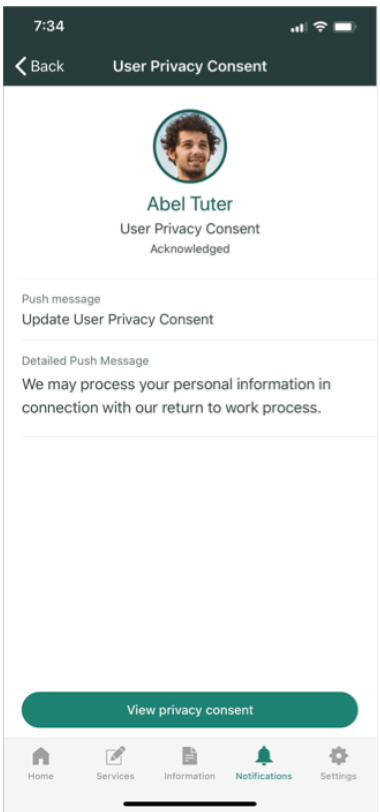
Submit a privacy consent for Contact Tracing from a mobile phone

If you receive a mobile push notification request for a data privacy consent, read the privacy policy statement and indicate whether you agree to the use of your data for contact tracing.

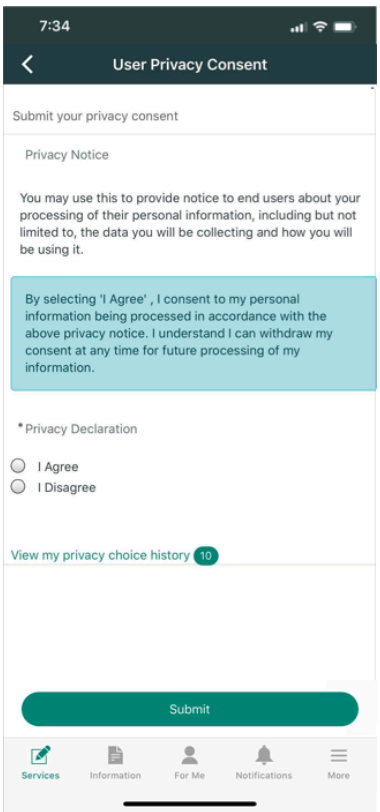
Before you begin



To receive mobile push notifications, you must have the Now® Mobile app.



Role required: sn_imt_tracing.privacy_consent_user



Procedure

1. Tap the notification to open the message.
2. In the message, tap **View privacy consent**.
3. Read the privacy policy statement in the **Privacy Notice** field.
4. Select your response and click **Submit**.
   - If you agree to privacy policy and use of your data, select **I Agree**.
   - If you do not want the organization to use your data, select **I Disagree**.

> **Note:**
> If you previously agreed to the privacy consent, the **Withdraw Consent** option is available. You can change your response to withdraw your consent by selecting **Withdraw Consent** and clicking **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

Your current privacy consent decision is updated.
The status of the notification updates to Acknowledged.

If you have the Employee Readiness Core application installed and a health and safety requirement for the privacy consent activated, a record is created with the requirement status.

- If you agreed to the privacy policy and use of your data, the requirement status updates to Cleared.
- If you disagreed or withdrew your consent, the requirement status updates to Not Cleared.

Review user privacy consents in Contact Tracing

Review user privacy consent responses submitted by employees in answer to notifications seeking their consent to use their data for contact tracing.

Before you begin

Role required: sn_imt_tracing.admin

Procedure

1. Navigate to **All** > **Contact Tracing** > **Privacy** > **User Privacy Consents**.
2. Click the status in the **Consent status** column to open the employee's consent record.
3. Review the employee's responses in the Consent History related list.
   - If employees have responded and agreed to have their data used, the preference is **I Agree**.
   - If employees have responded and have not agreed to have their data used, the preference is **I Disagree**.
   - If employees previously agreed to have their data used but later withdrew the consent, the preference is **Withdraw Consent**.
   - If employees have not responded yet, the preference is **Awaiting Response**.

   Note:
   The consent history record with the latest preference submitted date is the last response from the employee.

   You can send the notification again to employees who have not yet responded.

Collecting user badge data

In the Contact Tracing application, manage data for user badges and badge readers. Identify potentially exposed users who may have come in contact with affected users by importing their badge swipe data into the application.

Use this badge swipe data when running the diagnostic requests in the Emergency Exposure Management application.

Add badge reader details

Create entries for all badge reading devices that are installed at your workplace to control employee access to building, floors, and workspaces.

Before you begin

Role required: sn_imt_tracing.badge_manager

About this task

You can also import your badge reader data from an Excel spreadsheet. For more information, see Easy import data from a list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Badge Management** > **Badge Readers**.
2. To add details of a new badge reader device, click **New**, or select an existing badge reader to edit the details.
3. On the form, fill in the fields.

Badge Reader form

Field	Description
Name	Name of the device. Use a name that makes it easy to identify the device.
Active	Option for marking the functional or availability status of the device. If a badge device reader is not working or is removed, clear this check box.
Status	Status of the device. If the device is under repair or has any issue, you can enter the status in this field.
Device Identifier	Unique ID of the device. This value can be the hardware ID or serial number of the device.
Short description	Brief description of the device.
Floor name	Location where the device is installed on the premises.
Type	Type to determine if the device is installed at the entry or exit point of the workspace, floor, restricted area, or building entrance or exit gates.

4. Click **Submit**.

Add user badges

Add user badges that are assigned to employees to use with badge readers when they enter or exit controlled access locations in the workplace. These badges can be used with badge readers for building entry, exit gates, or floors.

Before you begin

Role required: sn_imt_tracing.badge_manager

About this task

You can also import your user badge data from an Excel spreadsheet. For more information, see Easy import data from a list.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Badge Management** > **User Badges**.
2. Click **New** to add details of a new user badge or select an existing user badge to edit.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Badge form

Field	Description
Active	Option for marking the user badge as active. Only active user badges can be swiped through the badge reader.
Badge number	Unique badge number.
User	Name of the employee who owns the badge.
Facility code	Code that identifies the original location of the employee and badge.

4. Click **Submit**.

Import your badge reader data from an Excel spreadsheet

Import your badge reader data from an Excel spreadsheet into the Badge Access Register table.

Before you begin

Ensure that you have added all your user badge and badge reader data.

Role required: sn_imt_tracing.badge_manager

Procedure

1. Navigate to **All** > **Contact Tracing** > **Badge Management** > **Badge Access Register**.
2. Click **Import Badge Data**.
3. In the Scheduled Data Imports list, open **Badge Access Register Scheduled Import**.
4. Attach the Excel file and load data in the Import Set table.
   a. Click the preview icon ( ) next to the **Data source** field, and then click **Open Record**.
   b. On the Data Source form, click the manage attachments icon ( ).
   c. Click **Choose File** and select the source Excel file.
   d. Click **Download All**.
   The Excel file is attached to the data source record.
   e. Click the **Load All Records** related link to load the Excel data.
   The imported data is available in the new Import Set table, Badge Access Register Stage [sn_imt_tracing_badge_access_register_stage].
5. Click **Execute Now**.
   The process runs in the background to load data from the Badge Access Register Stage table to the Badge Access Register table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Depending on the number of records in the source Excel file, it might take a longer time for the imported data to be available in the Badge Access Register table.

6. **Optional:** Verify that the data records were imported into the Badge Access Register table by navigating to **Contact Tracing** > **Badge Management** > **Badge Access Register**.

Importing data using import sets

Schedule a data import

Collecting risk scores in Contact Tracing

Identify at-risk and potentially exposed users by importing and monitoring risk scores from their wearable devices and external systems.

Use risk scores to identify at-risk and potentially exposed users by integrating the Devvio DevvTrace platform. Create cases to investigate potentially exposed or infected users based on their scores.

The Devvio DevvTrace platform collects data from supported wearable devices and generates a risk score. Use Contact Tracing and the Devvio API to import data into the Devvio Users Risk Reports [sn_imt_tracing_devvio_users_risk_report] table. You can use this data in the following ways:

- Update the Devvio Users Risk Reports table daily with the Devvio Integration scheduled job.
- Create cases and work notes automatically if a risk score is equal to or greater than a risk threshold value.
- Examine the Daily Risk Scores for Devvio users report to analyze daily trends. The indicator source for use in Performance Analytics is Devvio.Users.Risk.Report.

Configure Devvio integration

Configure Contact Tracing properties to import risk scores from the DevvTrace platform using the Devvio API.

Before you begin

Ensure you have a Devvio administrator user name and password.

Role required: sn_imt_tracing.wearable_admin or admin

About this task

ServiceNow Contact Tracing integrates with the DevvTrace platform to collect user risk scores based on interactions at the workplace. To leverage risk scores from DevvTrace, your employees must be using supported wearable devices and you must have access points for Devvio.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Administration** > **Properties**.
2. Set the Contact Tracing property values related to the Devvio integration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact Tracing properties for Devvio integration

Property	Description
sn_imt_tracing.devvio.login.api.endpoint	API endpoint used to log in to the Devvio instance and access DevvTrace data.
sn_imt_tracing.devvio.integration.username	Devvio administrator user name.
sn_imt_tracing.devvio.integration.password	Devvio administrator password.
sn_imt_tracing.devvio.risk.report.api.endpoint	Devvio Risk Report API endpoint used to fetch risk report and scores.
sn_imt_tracing.devvio.risk.threshold	The risk threshold value for Devvio case creation. The default value is 90. ○ If the risk score is greater than or equal to this value but less than 100, the health status is set to **Under Investigation**. ○ If the risk score is equal to 100, the health status is set to **Infected**, regardless of this value.

3. Click **Save**.

Result

The Devvio Users Risk Report updates daily at midnight (00:00) instance time. New cases are created when risk scores trigger Devvio case creation. For these cases, the reported source is set to **Wearable**. If a user has an open case and their risk score is greater than or equal to the risk threshold value, the case is updated and a work note is added.

Note:
If a user with an open case has a health status other than **Cleared**, a work note is added but the source remains unchanged. If a user with an open case has a health status of **Cleared**, their health status updates to **Under Investigation** or **Infected** and a work note is added. The source for the case remains unchanged.

Retrieving Wi-Fi access log data

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact Tracing provides the following options:

- Manually upload data from a Microsoft Excel spreadsheet by using the import Wi-Fi access logs option
- Automatically get the Wi-Fi access logs from external systems by using the integration option

Integration with the following systems is available:

Integration with Mist Systems

Use the Mist Systems API to automatically import the Wi-Fi access logs data into the Wi-Fi Access Register table.

Integration with Cisco DNA Spaces

Import the Cisco DNA Spaces Wi-Fi access data into the Wi-Fi Access Register [sn_imt_tracing_wifi_access_register] table by either generating a proximity report or downloading the access data into a spreadsheet and then uploading it.

- Microsoft Excel spreadsheet: Download the proximity report from Cisco DNA Spaces and attach the file in the diagnostic request task.
- Proximity report: Log in to the Cisco DNA Spaces portal and generate the proximity report by providing the diagnostic request task number. The proximity report containing the Wi-Fi access logs is posted into the Wi-Fi Access Register table.

  For more information, see Fetch potentially exposed user data from a data source.

- Wi-Fi access data files: Import Wi-Fi access data from the files from a Secured FTP server into the Wi-Fi Access Register table. Cisco DNA Spaces system uploads these raw data files containing the Wi-Fi access data each day on a scheduled time. The data is imported from these files when you run the diagnostic request to identify potentially exposed employees.

  Note:
  The file from the SFTP server for a specific day is imported into the Wi-Fi Access Register table only once. Any subsequent diagnostic requests use the data in the table to generate the list of potentially exposed employees.

Add wearable devices assigned to employees

Add wearable devices such as Bluetooth LE-enabled devices that are assigned to employees to enable them to connect to the Wi-Fi network in your workplaces.

Before you begin

The wearable device data is stored in the Wearable Technology [cmdb_ci_wearable] table. The table is installed with the CMDB CI Class Models application available on ServiceNow Store. Ensure that you have the CMDB CI Class Models application installed and active. For more information, see CMDB CI Class Models.

Role required: sn_imt_tracing.wifi_manager

About this task

You can also import your wearable devices data from an Excel spreadsheet. For more information, see Easy import data from a list.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Wi-Fi Access Management** > **Wearables**.
2. Click **New** to add details of a new device or select an existing device to edit.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the following fields required for contact tracing.

Wearable Technology form

Field	Description
Name	Unique name of the wearable device.
Asset tag	Unique ID to identify the wearable device.
Assigned to	Name of the employee who has the device.
Category	Category of the device.
MAC address	MAC address of the device. Follow the steps in Configuring the form layout to add this field to the Wearables form.

4. Click **Submit**.

Create an organization and load sites

Create an organization for which you are collecting the Wi-Fi access logs using Mist Systems. After you have created an organization, load sites using a scheduled job.

Before you begin

Role required: sn_imt_tracing.wifi_admin

About this task

Each floor in the organization can be considered as a site. Each site can be further divided into zones. Each zone can have multiple Wi-Fi access points.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Mist Systems** > **Organizations**.
2. Click **New**.
3. On the form, fill in the fields.

Organization form

Field	Description
Name	Name of the organization.
Organization Id	Unique ID of the organization. You must have the network admin role to get the organization ID. For more information, see the Mist Systems documentation.
Active	Option for marking the availability status of the organization. If the organization is removed, clear this check box.
Vendor	Mist Systems
API token	API token that is generated for the organization. You must have the network admin role to get the API token. For more information, see the Mist Systems documentation.

4. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Click **Load Sites**.
   The sites of the organization are fetched from the Mist Systems and displayed in the **Sites** related list. Later, the **Load Mist Sites** scheduled job runs at the configured time and updates the sites list for each of the organizations.

   The **BLE enabled** option helps you to identify potentially infected employees from the Wi-Fi access logs by correlating everyone who connected to the Wi-Fi network using Bluetooth LE devices. If a site is BLE enabled, the **BLE enabled** check box on the Sites form is selected.

Configure Cisco DNA Spaces settings for Wi-Fi access logs

Set up the Cisco DNA Spaces integration for Wi-Fi access logs.

Before you begin
Role required: admin

About this task
Cisco DNA Spaces integration provides two options to get the Wi-Fi access data from Cisco DNA Spaces into your ServiceNow instance.

- By generating and downloading the proximity report from the Cisco DNA Spaces portal or through a manual import.
- By importing Wi-Fi access raw data files from a secured FTP (SFTP) server. These files are uploaded from Cisco DNA Spaces every day at a scheduled time.

To specify which option to use, configure the *sn_imt_tracing.wifi_log_cisco_tier* system property. For each option, you must also complete additional settings.

Procedure
1. Complete the following steps for using Wi-Fi access data from the proximity report.

   a. Create an OAuth application endpoint for Cisco DNA Spaces and share the Client Id and Client Secret with Cisco to complete the integration on their side.

      On the Application Registries form, enter the following callback URL in the **Redirect URL** field based on the region:

      - USA region: `https://dnaspaces.io/integrations/servicenow`
      - Europe region: `https://dnaspaces.eu/integrations/servicenow`

      For more information on creating the OAuth application endpoint and description of other fields on the form, see Create an endpoint for clients to access the instance.

   b. Log in to the Cisco DNA Spaces portal to register and authenticate the application to complete the integration.

   c. Set the proximity level in the *sn_imt_tracing.wifi_proximity_preference* system property to consider employee interaction with an affected employee as potential exposure.
      For more information, see System properties for tracing systems in Emergency Exposure Management.

   d. Review the base system *DiagnosticTaskImportUtil* script include.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The `DiagnosticTaskImportUtil` script include creates a data source from the attachment in a diagnostic request task and imports the data into the Wi-Fi Access Register [sn_imt_tracing_wifi_access_register] table.

For more information, see Script includes.

2. Set system properties to use the Wi-Fi access data files imported from the SFTP server into the Wi-Fi Access Register table.

   a. Navigate to **Contact Tracing** > **Administration** > **Properties**.

   b. Configure the following system properties:

   - `sn_imt_tracing.wifi_log_sftp_server`
   - `sn_imt_tracing.wifi_log_sftp_port`
   - `sn_imt_tracing.wifi_log_sftp_file_path`
   - `sn_imt_tracing.wifi_log_sftp_load_time`
   - `sn_imt_tracing.wifi_log_sftp_username`
   - `sn_imt_tracing.wifi_log_sftp_password`

   For more information on these properties, see System properties for tracing systems in Emergency Exposure Management.

3. Configure office locations that contain Cisco Wi-Fi devices.

   a. Navigate to **Contact Tracing** > **Wi-Fi Access Management** > **Wi-Fi Diagnostic Preferences**.

   b. Click **Generate Location Preferences**.

   c. In the Generate Location Preferences window, select **Use Cisco DNA Spaces** from the list.

   d. Click **OK**.
   All locations with the **Use Cisco DNA Spaces** preference use the Wi-Fi access data from Cisco DNA Spaces.

What to do next

Run the diagnostic request using the Wi-Fi access logs for an employee who is classified as positive for a condition, such as COVID-19, and is from a location with a Cisco Wi-Fi network. The Wi-Fi access logs provide a list of potentially impacted employees who used the same Wi-Fi network as the affected employee. For more information on running the diagnostic request, see Identify potentially exposed users.

Import your Wi-Fi access logs spreadsheet

Import Wi-Fi access logs from an Excel spreadsheet into the Wi-Fi Access Register table.

Before you begin

Role required: sn_imt_tracing.wifi_manager

Procedure

1. Navigate to **All** > **Contact Tracing** > **Wi-Fi Access Management** > **Wi-Fi Access Register**.
2. Click **Import Wi-Fi Access Data**.
3. In the Scheduled Data Imports list, open **Wi-Fi Access Register Scheduled Import**.
4. In the **Data Source** field, open the **Wi-Fi Access Register Data Source** record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Click the manage attachments icon ().

b. Click **Choose File** and select the source Excel file.

c. Click the **Load All Records** related link to load the Excel data.

5. Navigate to Scheduled Import record.

6. Click **Execute Now**.
   The process runs in the background to load data from the Wi-Fi Access Register Stage table to the Wi-Fi Access Register table.

   Note:
   The number of records in the source Excel file affect the time needed before the imported data is available in the Wi-Fi Access Register table.

7. **Optional:** Verify that the data records were imported into the Wi-Fi Access Register table by navigating to **Contact Tracing** > **Wi-Fi Access Management** > **Wi-Fi Access Register**.

Use Wi-Fi access logs from Mist Systems

Identify potentially exposed employees using Wi-Fi access logs from Mist Systems.

Before you begin
Role required: sn_imt_tracing.wifi_admin

About this task
ServiceNow Contact Tracing integrates with an external application, Mist Systems, to collect and process Wi-Fi access logs for organizations. To leverage access logs from Mist Systems, you must have Mist access points installed at your workplace.

Procedure

1. Set up the Contact Tracing Wi-Fi properties.
   - By default, the asset data is available in the Computer table [cmdb_ci_computer]. If you are using a different table, specify it using the *sn_imt_tracing.wifi_client_table* property.
   - Ensure that the MAC address is populated in the **mac_address** field in the table that has the asset data.

   For more information, see System properties for tracing systems in Emergency Exposure Management.

2. Set up the Contact Tracing BLE properties.
   - By default, the asset data is available in the Wearable Technology [cmdb_ci_wearable] table. If you are using a different table, specify it using the *sn_imt_tracing.wifi_ble_client_table* property.
   - Ensure that the MAC address is populated in the **mac_address** field in the table that has the asset data.

   Note:
   The Wearable Technology [cmdb_ci_wearable] table is installed with the CMDB CI Class Models application available on ServiceNow Store. For more information, see CMDB CI Class Models.

   For more information on adding BLE-enabled devices or other wearable devices, see Add wearable devices assigned to employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Set up an organization and load sites.
   For more information, see Set up an organization and load sites.
4. Indicate that the diagnostic data should be accessed from Mist Systems.
   a. Navigate to **Contact Tracing** > **Wi-Fi Access Management** > **Wi-Fi Diagnostic Preferences**.
   b. Click **Generate Location Preferences**.
   c. In the Generate Location Preferences window, select **Use Mist Integration** from the list.
   d. Click **OK**.
   The access log data for all locations will be taken from Mist Systems access log files.
5. If you want to use manually loaded access logs rather than Mist Systems logs for a specific location, create a separate location assignment.
   a. Click **New**.
   b. Specify the location for which you want to set the diagnostic preference.
   c. Set the **Preference** value to **Use Manual Load**.
   d. Click **Submit**.
6. Run the diagnostic request.
   a. Select the **Use Wi-Fi access log** check box.
   b. Specify the start date and end date.
   c. Click **Run Diagnostics**.
   For more information about how to run a diagnostic request, see Run a diagnostic request.

Result

Mist Systems identifies the MAC addresses of the affected user for the specified start date and end date. The MAC addresses identify the zones visited by the affected employee. Potentially exposed employees who visited those zones are identified and displayed in the related list of the diagnostic request.

Use imported Wi-Fi access logs

Identify potentially exposed employees by manually importing Wi-Fi access logs into the Wi-Fi Access Register table.

Before you begin

Role required: sn_imt_tracing.wifi_admin

Procedure

1. Set up the Contact Tracing Wi-Fi properties.
   By default, the asset data is available in the Computer table [cmdb_ci_computer]. If you are using a different table, specify it using the *sn_imt_tracing.wifi_client_table* property.

   For more information, see System properties for tracing systems in Emergency Exposure Management.
2. Indicate that the diagnostic data should be accessed from manually loaded access logs.
   a. Navigate to **Contact Tracing** > **Wi-Fi Access Management** > **Wi-Fi Diagnostic Preferences**.
   b. Click **Generate Location Preferences**.
   c. In the Generate Location Preferences window, select **Use Manual Load** from the list.
   d. Click **OK**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The access log data for all locations will be taken from manually loaded access logs.

3. If you want to use Mist Systems access logs rather than manually loaded logs for a specific location, create a separate location assignment.
   a. Click **New**.
   b. Specify the location for which you want to set the diagnostic preference.
   c. Set the **Preference** value to **Use Mist Integration**.
   d. Click **Submit**.
4. Import Wi-Fi access logs into the Wi-Fi Access Register table [sn_imt_tracing_wifi_access_register] using an Excel spreadsheet.
   For more information, see Import your Wi-Fi access logs spreadsheet.
5. Run the diagnostic request.
   a. Select the **Use Wi-Fi access log** check box.
   b. Specify the start date and end date.
   c. Click **Run Diagnostics**.
   For more information about how to run a diagnostic request, see Run a diagnostic request.

Result

Potentially exposed employees are displayed in the related list of the diagnostic request.

Tracking employee contacts using daily logs

After employees start returning to the workplace, use daily contact logs to help promote the health and safety of all your employees. Let employees submit a list of other people with whom they come in contact during the day. Send mobile and email push notifications to employees to submit their contact log for the day.

Keep a track of the employees who have responded from the daily contact log responses. You can resend notifications to employees who have not responded to alert them for submitting their daily contact log.

The employee daily contact log in the Contact Tracing application works with the Emergency Outreach application. For more information, see Emergency Outreach.

A user with the sn_imt_checkin.checkin_admin role for Emergency Outreach can review and modify the outreach notification for the daily contact log. For more information, see Configure an Emergency Outreach notification for the daily contact log.

An administrator can modify the schedule associated with the outreach notification to configure the timing to send notifications to employees. For more information, see Configure a scheduled job.

Note:
If you are using Service Portal using a URL suffix other than the default `/sp`, update the same in the Daily Log form for it to work properly. You must associate the form with the service catalog. For more information on Service Portal, see Create a portal and for Service Portal page navigation, see Page navigation by URL.

Send an Outreach notification for the daily contact log

Send an Emergency Outreach notification, on demand, to employees to ask them to submit a list of co-workers whom they have interacted with on a given day.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Ensure that you have the Emergency Outreach application installed. For details, see Install Emergency Outreach.

Employees must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Role required: sn_imt_checkin.checkin_admin or admin

Procedure

1. Navigate to **All** > **Contact Tracing** > **Administration** > **Daily Log Alerts**, and then click **New**.
2. On the **Safe Workplace Audience** tab, select the target audience for the notification, and click **Save**.
   - If you don't have an audience defined, click **New** and define an audience from user lists, groups, departments, locations, and so on. For more information, see Add a Safe Workplace Audience.
   - If you have the Employee Health Screening application installed, the **Use Employee Health Screen Data** option is available. Select this check box to include all employees cleared in the health screening to enter the premises. For more information, see Employee Health Screening.
   - If you have the Workplace Core application installed, the **User Workplace Reservation Data** option is available. Select this check box to include all employees with confirmed or approved reservations for that day. For more information, see Workplace Core.
3. On the **Content configuration** tab, select a notification in the **Notification** field, and choose how to send the notification.
   - To send the notification by email, select the **Email notification** check box.
   - To send a mobile push notification, select the **Now Mobile Push notification** check box.

     This check box is active if the ServiceNow NowMobile App Screens and Applet Launcher (com.glide.mobile-employee) plugin is activated. The push notification content appears when the check box is active, and you can modify it.

     Push notifications use the ServiceNow Request Application notification device. When a user registers their mobile application to an instance, this notification device is automatically created in their notification preferences. Ensure that this device is active for the users that you want to receive the push notification.
4. Review the message content.
   - For email notifications, review the email subject and email body and modify it if necessary.
   - For push messages, review the message details.
5. Click **Update**.
   The target audience and content configuration changes are saved.
6. To send the notification, click **When to run**.
7. Keep the default mode of **None** and click **Send Notification**.

Result

The notification is sent to the selected audience.

What to do next

Review daily log responses to see who has responded to the notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Submit a list of contacts that you interacted with at the workplace

Submit a list of people that you've come into contact with at the workplace to help your organization identify on-site employees who may have been in contact with a potentially exposed coworker.

Before you begin

Role required: sn_imt_checkin.dailylog_user

About this task

If you're among the employees who have returned to the workplace, you receive mobile or email push notifications to submit a list of people that you've come into contact with at the workplace. You can click the link available in the notification to submit the daily contact log.

Procedure

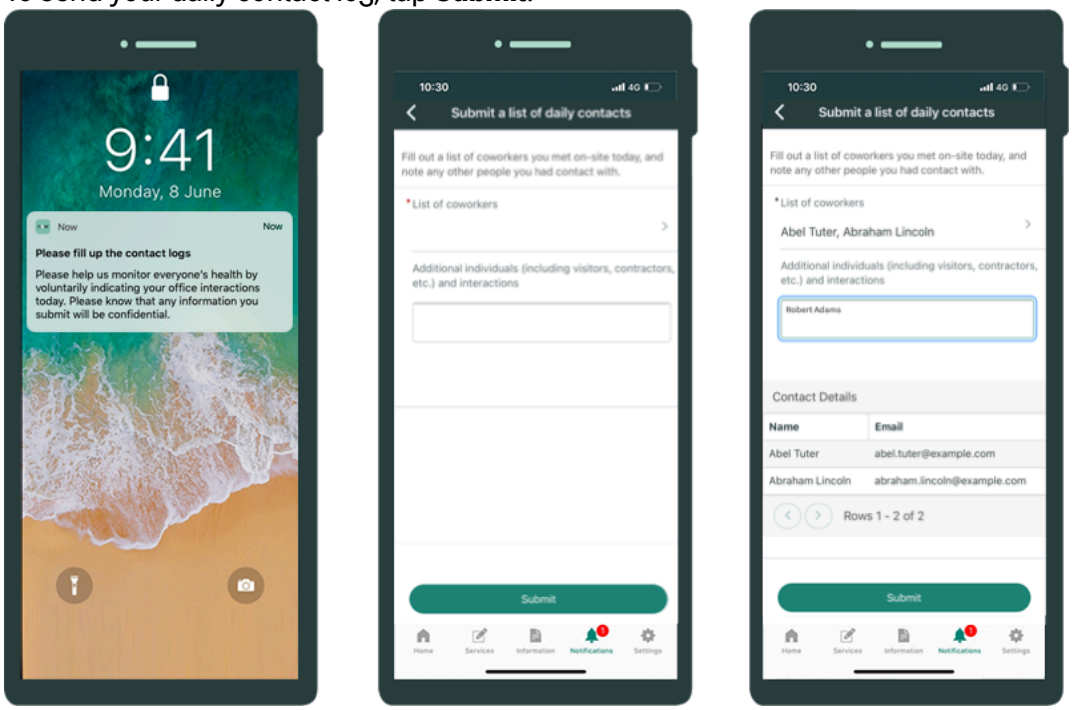
1. Navigate to **All** > **Contact Tracing** > **Daily Contact Log** > **My Daily Contacts**.
2. In the **List of individuals** field, search for and select the employees that you interacted with. The **Contact Details** list appears, listing employee names and their email IDs as you select them.
3. **Optional:** In the **Additional individuals (including visitors, contractors, etc.) and interactions** field, enter the names of other people with whom you interacted during the day.
4. **Optional:** Review the employees that you added in the **Contact Details** list. There can be many employees with the same name, but these employees would have a distinct email ID.
5. To remove any wrong selection, click the x next to the employee name in the **List of individuals** field.
6. Click **Submit**.

Submit the daily contact log from a mobile phone

If you receive a mobile push notification to submit the daily contact log, you can submit a list of people that you interacted with on a day.

Before you begin

To receive mobile push notifications, you must have the Now® Mobile app.



Role required: sn_imt_checkin.dailylog_user

Procedure

1. Tap the notification to open the message.
2. In the message, tap **Select People You Met**.
3. Search for and select the employees in the **List of individuals** field. The Contact Details list appears listing employee names and their email IDs as you select them.
4. **Optional:** In the **Additional individuals (including visitors, contractors, etc.) and interactions** field, enter the names of other people with whom you interacted during the day.
5. **Optional:** Review the employees that you added to the **Contact Details** list. There can be many employees with the same name, but these employees would have a distinct email ID.
6. To remove any wrong selection, click the x next to the employee name in the **List of individuals** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. To send your daily contact log, tap **Submit**.

Result

After you reply to the notification, a record for your response is updated. Your personal information is secure. Only the staff managing the daily contact logs has access to your response.

Review daily log responses

Review daily contact log responses from employees who received a push notification requesting a list of contacts that they interacted with at the workplace.

Before you begin

Role required: sn_imt_checkin.checkin_admin or sn_imt_tracing.admin

Procedure

Navigate to **All** > **Contact Tracing** > **Daily Contact Log** > **Contact Logs**.
Responses to notifications are listed in the Daily Log Acknowledgements list. Because employees respond to the notification by submitting their daily contact log, their records are updated with their acknowledgement status.

- If employees have responded, the status is **Acknowledged**.
- If employees have not responded yet, the status is **Not Acknowledged**.

The **Notification count** field shows the number of times the notification is sent to the employees who have not yet responded. You can send the notification again only to employees who have not yet responded.

Managing cases to follow up with potentially exposed contacts

When an employee who returns to the workplace is classified as positive for a condition, such as COVID-19, the case manager creates a case to identify and follow up with potentially exposed contacts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Run the diagnostic request to identify potentially exposed contacts

The diagnostic request helps you generate a report of all on-site employees who might have been in contact with an affected employee.

If any employee is confirmed to be affected with an infectious disease, send the employee name to the case manager to create a case.

Note:
To protect the privacy of the affected employee, you can mark a case as confidential.

Case management process

The case manager sets up a case for an employee who might have been exposed to any infectious disease.

1. Create a case for an affected employee.
2. Run a diagnostic request to identify all potentially exposed contacts through various tracing systems such as workplace location, workplace shifts and reservations, meetings, employee badge swipe data, and Wi-Fi access data. For more information, see Identify potentially exposed users.
3. Send an outreach notification to potentially exposed contacts to notify them of a potential exposure from an affected employee.
4. Create case tasks to follow up with these potentially exposed contacts to assess their health status using predefined survey questions.

Automated case creation

You must have the Emergency Self Report application installed for the automatic case creation to work. For more information, see Set up Emergency Self Report.

If an employee is reported as being in quarantine through the self-reporting option in the Emergency Self Report application, a case is created automatically for the employee. The case is created automatically only if the employee doesn't have any active case at the time of self-reporting.

If the employee has an active case, a work note is added to the case for the case manager to take appropriate action, if needed.

The **Automated Case Creation from Employee Self Report** flow is installed with Contact Tracing. The contact tracing admin can review and configure the base system flow using the Flow Designer.

Automated case task creation on adding a potentially exposed contact

When a case manager adds a potentially exposed contact to a case, a case task is created automatically. By default, these case tasks are assigned to the case manager, and the case manager can assign it to a contact tracer to follow up with the employee.

Note:
Case task creation occurs automatically only if the *sn_imt_tracing.auto_create_case_tasks* property is set to **Yes**, the default setting.

The **Create case tasks for exposed contacts** workflow is installed with Contact Tracing. The contact tracing admin can review and modify the base system flow using the Flow Designer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Automated SMS outreach delivery to potentially exposed contacts

To take advantage of automatic SMS outreach delivery, you must have Virtual Agent installed and set up for use with SMS and Twilio. For more information on this feature, see Virtual Agent conversations for Contact Tracing.

When a user is added to a case task as a potentially exposed contact, they are automatically sent an SMS notification to answer questions for the Exposure Case Task Survey.

Note:
SMS notifications are sent automatically only if the *sn_imt_tracing.enable_sms_exposure_survey* is set to **Yes**. When disabled (the default setting), you can send an SMS survey while working on a case task by clicking the **Send SMS Survey** button.

Potentially exposed contacts visualization

Contact Tracing provides interactive visualization to view the potentially exposed contacts in a case. The visualization enables case managers to quickly evaluate the contact tracing data on a single page. The potentially exposed contacts visualization includes the following options:

- View potentially exposed contacts with the source of exposure graphically
- Drill down to the next level of exposures to quickly identify the severity of the exposure from the affected employee
- Create and view cases and tasks for potentially exposed contacts
- Change the status of the investigation of potentially exposed contacts
- Filter the view by status or source of exposure, or both

View case metrics in ServiceNow Safe Workplace Dashboard

If you have the Safe Workplace Dashboard application installed, you can view the trends of the following data over a given time period for a campus or location:

- Number of active cases
- Number of potentially exposed contacts

For more information, see Safe Workplace Dashboard.

You can also configure the alert type to determine when the number of active cases is above the threshold in a particular campus or location. For more information, see Alert types used with the Safe Workplace Dashboard.

Create a case for an affected employee

As a case manager, create a case for an affected employee to identify and follow up with other employees who might have come in contact with the affected employee.

Before you begin
Role required: sn_imt_tracing.case_manager

About this task

Important:
There can be only one active case for an affected employee. You can create a new case for the same employee only if the active case is closed or cancelled.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the Emergency Self Report application is installed and an employee is reported being in quarantine through the self-reporting option, the system automatically creates a case. If an active case exists for the employee at the time of reporting, a work note is added to that case.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Case Management** > **Create New Case**.
2. On the form, fill in the fields.

Case form

Field	Description
Reported person	Name of the affected employee.
Location	Location of the affected employee.
Date reported	The date on which the person was reported to be affected.
Reported source	Source from which the employee was reported to be affected, such as through health screening, self-reporting, or location.
Case manager	User assigned to work on the case. Users who have the sn_imt_tracing.case_manager role are listed. **Note:** If a case was automatically created when the employee self-reported as being in quarantine, the case manager field is empty. Case managers can assign the case to themselves or to any other case manager. Only the assigned case manager can work on the case.
Case state	Current state of the case.
Case start date	The date on which the case is created.
Case end date	The date on which the case is closed.
Watch list	Other users who need to know about the status of the case.
Confidential	Option for keeping the case confidential to protect the privacy of the affected user. A confidential case can be accessed only by the case manager and users added in the **Watch list** field.

3. Click **Submit**.

Result

A case for the affected employee is created. If notifications are enabled, the case manager assigned to the case is notified via email.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

An exposed contact record is created for the reported person with the default health status set to Infected.

The Exposed contacts visualization section appears.

The following related lists appear in the case:

- Diagnostics Requests: Used to request a diagnostic report to identify all impacted employees.
- Exposed Contacts: Potentially exposed contacts to follow up with about their health status.
- Case Tasks: The tasks created for each potentially exposed contact to track the follow-up.
- Notes: Notes containing the names of individuals submitted in the daily contact logs by the affected employee during the period specified for the case. If the end date is not specified in the case, all daily log notes submitted by the affected employee after the case start date are listed.

What to do next

Run the diagnostic request to identify all potentially exposed employees and add them to the case for follow-ups.

You can also add potentially exposed contacts to the case manually from the Exposed Contacts related list.

If you have the Safe Workplace Dashboard application installed, you can view a trend of active cases and potentially exposed contacts over a given time period for a campus or location on the dashboard.

Identify potentially exposed contacts

As a case manager, run the diagnostic request to identify other employees who might have come in contact with the affected employee.

Before you begin

The diagnostic request function is available in the Emergency Exposure Management application. Ensure that you have the Emergency Exposure Management application installed.

Role required: sn_imt_tracing.case_manager

About this task

Note:
You cannot create or run a diagnostic request for affected employees who have not consented to use their data for contact tracing. For more information, see User privacy consent for Contact Tracing.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Case Management** > **Cases Assigned to Me**.
2. Open a case from the list of assigned cases.
3. If the case is newly assigned to you, click **Start Work**.
   The state of the case updates to Work in Progress.
4. In the Diagnostic Requests related list, click **New**.
   The details of the affected user are pre-populated in the respective fields from the case record.
5. On the Diagnostic Request form, run the diagnostic request on the affected employee to identify other potentially exposed employees, and add them to the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select one or more tracing systems and a date range.

b. Click **Save**.

c. Click **Run Diagnostics**.
The potentially exposed employees, based on the selected tracing systems, are listed in the All Impacted Users related list on the Diagnostic Request form.

d. Select users from the All Impacted Users related list and select the **Add Users to Case** option in the Actions on selected rows list.

For more information on running a diagnostic request, see Run a diagnostic request.

6. **Optional:** If you know of other employees in addition to employees identified from the diagnostics, click **New** in the Exposed Contacts list and add them as potentially exposed contacts.

Result

The selected users from the All Impacted Users related list on the Diagnostic Request form are added to the Exposed Contacts related list on the Case form.
If automatic case task creation is enabled by the *sn_imt_tracing.auto_create_case_tasks* system property setting, a case task is created for each potentially exposed contact added to the case. These automatically created case tasks are assigned to the case manager by default. From the Case Tasks related list, the case manager can assign them to a contact tracer.

Note:
If a potentially exposed employee added to the case has an active case, the health status of the employee in the current exposed contact record is automatically set from the corresponding exposed contact record of the active case.

These potentially exposed contacts also appear in the exposed contacts visualization section. For more information, see Working on a case through contact tracing visualization.

If you have the Employee Readiness Core application installed and a health and safety requirement for the potentially exposed contacts activated, a record is created with the requirement status as Not Cleared for these potentially exposed employees.

What to do next

Send notification to potentially exposed contacts in a case.

If the automatic case task creation is disabled, create a case task for each exposed contact.

Send notification to potentially exposed contacts in a case

As a case manager, send an outreach notification to potentially exposed employees to notify them of a potential exposure from an affected employee.

Before you begin

Ensure that your administrator has created an outreach notification that you can send to potentially exposed contacts in the case. To create an outreach notification, the ServiceNow Emergency Outreach application must be installed and active. For more information, see Emergency Outreach.

Role required: sn_imt_tracing.case_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Case Management** > **Cases Assigned to Me**.
2. Open a case to send a notification to potentially exposed contacts.
3. In the Exposed Contacts related list, select the employees to whom you want to send a notification.
   If required, you can send a notification to a contact more than once.
4. In the Actions on selected rows list, select **Send Exposure Notice**.
5. In the Send Exposure Notice dialog box, select an outreach notification, and click **Send**.

Result

An email notification is sent to the selected contacts. The **Notice sent date** column for the selected contacts in the Exposed Contacts list updates to the current date.

You can review the notifications by navigating to **Emergency Outreach** > **View Outreaches** and open the outreach notification.

What to do next

Create a case task for each exposed contact.

Create a case task to follow up with an exposed employee

As a case manager, create case tasks for potentially exposed employees. Assign these tasks to contact tracers to follow up with them to evaluate their health status.

Before you begin

Role required: sn_imt_tracing.case_manager

About this task

The *sn_imt_tracing.auto_create_case_tasks* property, enabled by default, and the **Create case tasks for exposed contacts** workflow cause automatic creation of case tasks when potentially exposed employees are added to a case. If the admin has set the property to *No*, you must add a case task for potentially exposed employees added to a case.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Case Management** > **Cases Assigned to Me**.
2. Open a case to create case tasks for the potentially exposed contacts.
3. In the Exposed Contacts related list, select employees for whom you want to create case tasks.
4. In the Actions on selected rows list, select **Create Task**.
   A task for each selected exposed contact is created and available in the Case Tasks related list. To add a case task for a user not in the exposed contacts list, click **New** in the Case Tasks related list. After creation of the task, the user is added to the Exposed Contacts related list.
5. In the Case Tasks related list, update the following fields:
   a. Double-click the **Due date** field and select the date that the task should be completed by.
   b. Double-click the **Assigned to** field and select a user to work on the task.

   If notifications are enabled, the contact tracers are notified via email.

Note:
To update multiple tasks in the list, click in a field, hold the Shift key, and press the Down Arrow or the Up Arrow key. Press the Enter key to open the list editor and enter appropriate values.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The case tasks are created and assigned to the contact tracers to follow up about the health status of the exposed employees.

What to do next
The contact tracers can start working on the tasks by following up with the exposed contacts about their health status.

Follow up with potentially exposed contacts

As a case task owner, contact potentially exposed users to follow up on their health status using the predefined instructions and survey questions.

Before you begin
Role required: sn_imt_tracing.contact_tracer

About this task
The case manager defines instructions for contact tracers to use when following up with potentially exposed users, such as the follow-up frequency. Contact tracers should follow these instructions to work on the assigned tasks.
The Exposure Case Task Survey is available for contact tracers to use to assess the health status of the exposed contact. The administrator can review and modify the survey. For more information, see Survey designer.

Procedure

1. Navigate to **All** > **Contact Tracing** > **Case Management** > **Case Tasks**.
2. Open a task from the list.
3. To start work on a newly assigned task, click **Start Work**.
   The state of the case task updates to Work in Progress.
4. Follow up with the potentially exposed contact specified in the **User** field in one of the following ways:
   - Contact the user by calling or sending an email with the questions specified in the survey by clicking **Take Survey**.
   - Send the survey via SMS for the user to respond via SMS by clicking **Send SMS Survey** if available.

     Note:
     You must have Virtual Agent installed and set up for use with SMS and Twilio to complete SMS outreach delivery. For more information on this feature, see Virtual Agent conversations for Contact Tracing.

   Each follow-up result is added to the Survey results related list.

   Note:
   These follow-up results can be viewed only by the contact tracer to whom the case task is assigned, the case manager, and the contact tracing admin.

5. Update the final health status of the potentially exposed contact in the **Outcome** field when you complete the required number of follow-ups.
   - If the potentially exposed contact reports positive symptoms of the disease, select **Infected**.
   - If the potentially exposed contact reports normal, select **Cleared**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
An exposed contact's health status and the **Outcome** field are updated when changes are made to either item. If there are multiple open case tasks for an exposed contact, the health status in all tasks will be updated to match the outcome of the most recently modified case task.

6. Click **Close Task**.

Result
The case task is closed. If notifications are enabled, the case manager is notified via an email.

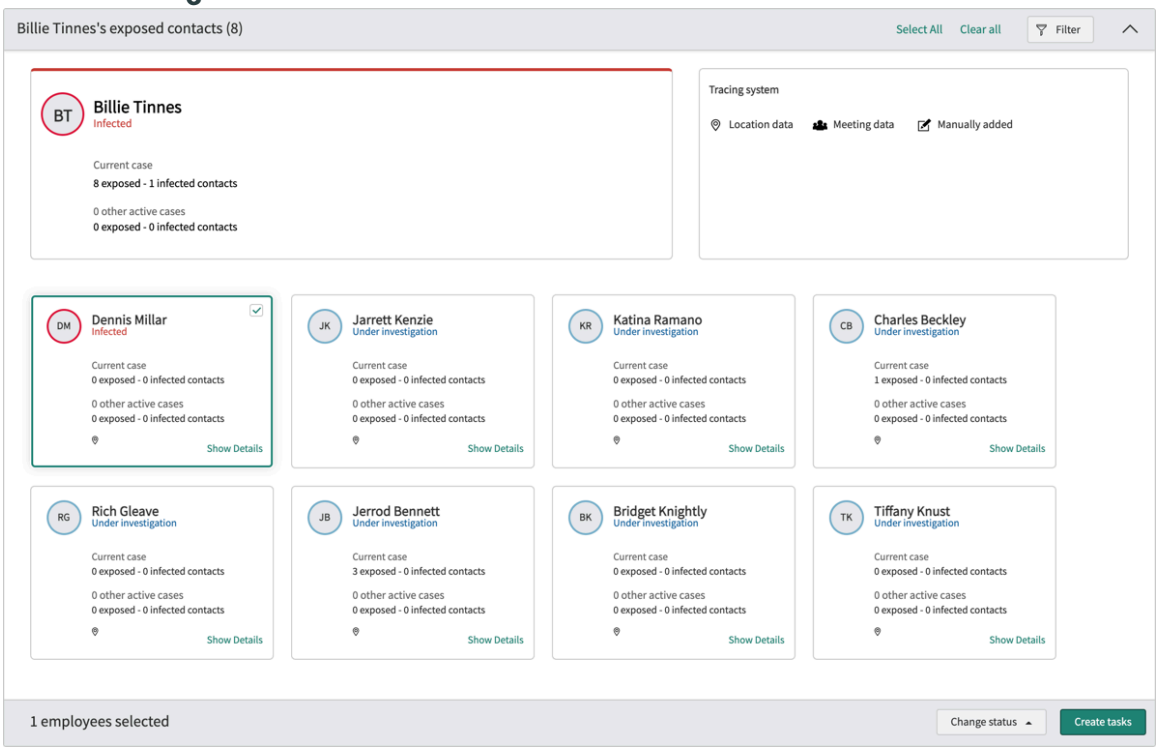
What to do next
The case manager can review the closed task and update the health status of the exposed user's as per the outcome value.

Note:
The case manager can update the health status of an exposed contact only if there is no active case for the user.

If Employee Readiness Core is installed and the potentially exposed contacts requirement activated, the user's health and safety requirement status is also updated.

After all the case tasks in the case have been closed, the case manager can close the case.

Working on a case through contact tracing visualization



The contact tracing visualization in a case is a graphical representation of the affected user and potentially exposed contacts.

About Contact Tracing Visualization

The contact tracing visualization available on the case form provides multiple options based on the status of the potentially exposed contacts. While working on a case, the case manager can use this visualization to view all potentially exposed contacts added to the case, their status, drill down to the next two levels of potential exposures , and take action as needed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact tracing visualization

Each card represents a potentially exposed contact who might have been potentially impacted by the affected user. You can view how many potentially exposed and infected contacts users have for their current case (where they are the reported person) and the totals for other active cases they are in.

Note:
The totals for other active cases do not include numbers from a user's current case.

For example, consider a sample employee's case, Employee A. The employee has five potentially exposed contacts and one of them is infected. One of Employee A's potentially exposed contacts, Employee B, has three potentially exposed contacts from the current case. None of Employee B's contacts are infected. Employee B is also a potentially exposed contact in two other cases. Employee B's card provides the total number of potentially exposed contacts in those cases and how many are infected.

To review details about a potentially exposed contact's current case, click **Show Details**. To navigate to cases in which the contact is a potentially exposed contact, click **other active cases**.

Tip:
Use the **Filter** option to view a filtered list of cards, such as by status or the source of exposure.

Visualization options

Select a card to view various options on the card based on the status of the exposed contact.

You can change the health status or create case tasks for multiple potentially exposed contacts in one step. Select all cards by clicking **Select All**, or select a few cards by pointing to a card and selecting the check box. Updating the health status of an exposed contact updates their health status and outcome in all open case tasks in which they are included as an exposed contact.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Exposed contacts and available options

Status of the exposed contact	Options available on the card
Under investigation The user is being contacted about the health status.	• View basic details of the user such as email ID and location. • View how many potentially exposed and infected contacts users have for their current case and any other active cases the user is in. • Navigate to a user's other active cases. • Create a task for follow-up. • Create a case. • View potentially exposed contacts who might have been in contact with the selected user.
Infected The user has been classified as positive for a condition, such as COVID-19.	• View basic details of the user such as email ID and location. • View how many potentially exposed and infected contacts users have for their current case and any other active cases the user is in. • Navigate to a user's other active cases. • Create a task for follow-up. • Create a case if no case has been created yet. • View the case if a case has been already created. • View potentially exposed contacts who might have been in contact with the selected user. • Change the status.
Cleared The user has been reported safe.	• View basic details of the user such as email ID and location. • View how many potentially exposed and infected contacts users have for their current case and any other active cases the user is in. • Navigate to a user's other active cases. • Create a task for follow-up. • Create a case if no case has been created yet. • Change the status.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Vaccination statuses in contact tracing visualization

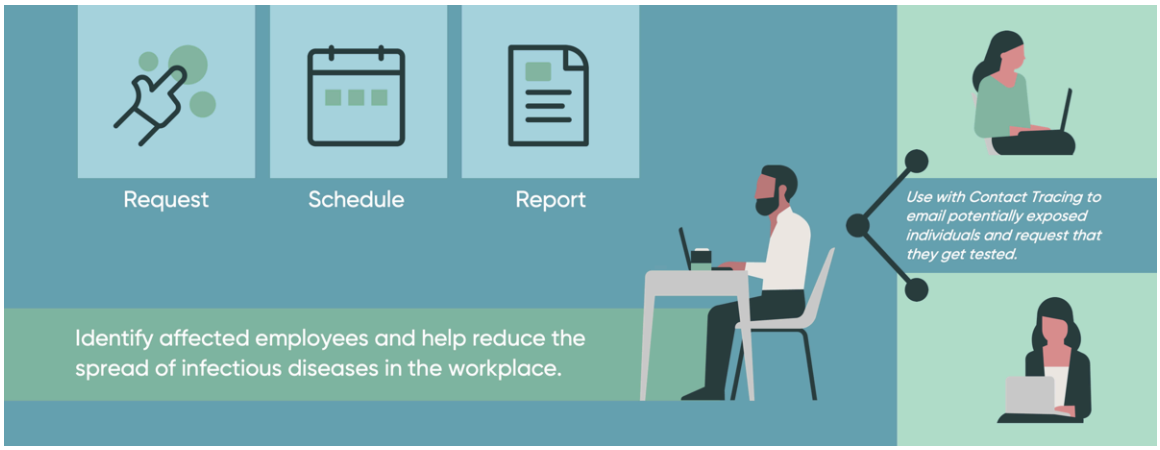
Organizations with Contact Tracing and the Vaccination Status application can view vaccination statuses on the **Exposed Contacts** list and contact tracing visualization. The **Vaccinated** label on a card indicates that the user is vaccinated.

For more information, see Configure contact tracing visualization to show vaccination status.

Potentially exposed contacts with Vaccinated status

Contact Tracing visualization Vaccination status features

Feature	Description
Vaccinated status	Case managers with the Vaccination Status sn_imt_vaccine.vaccine_profile_reader role can see the following: • The **Vaccinated** status that displays for vaccinated contacts. • The **Vaccinated** column appears in the **Exposed Contacts** list with values of **True** or **False**.
Vaccination filter	Case managers with the sn_imt_vaccine.vaccine_profile_reader role can filter exposed contacts based on their vaccination status. In the contact tracing visualization, click **Filter**. Select the **Vaccinated** check box to hide contacts who are not vaccinated. Clear the check box to remove the filter and show all contacts.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contact Tracing visualization Vaccination status features (continued)

Feature	Description
	Note: The **Vaccinated** filter is visible to case managers without the sn_imt_vaccine.vaccine_profile_reader role but it does not reveal any vaccination data. Selecting the check box (without the role) hides all contacts as if none of them were vaccinated because the user does not have the necessary permissions to see vaccination statuses.

Health and Safety Testing

Streamline the user health testing process to help organizations reduce the spread of infectious diseases in the workplace.

The ServiceNow® Health and Safety Testing application streamlines the user health testing process to identify affected users and help reduce the spread of infectious diseases in the workplace. It provides organizations, where they are legally required or permitted to use them, with two options: request that users get tested or allow users to request optional health testing upon being notified of potential exposure to an infectious disease, such as COVID-19. Users can submit health testing preferences such as test type and preferred testing date and location. Administrators can use the employee request forms to coordinate testing availability and scheduling. After health testing is complete, users can use Health and Safety Testing to provide a test result to satisfy the organization's health and safety requirement, clearing the user for a safe return to the workplace.

Use with other Safe Workplace suite applications

Health and Safety Testing is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- With the Employee Readiness Surveys application, evaluate the readiness of your users to return to the workplace by asking them to fill in a survey.
- Before users re-enter workspaces, use the Employee Health Screening application to screen users and ensure compliance with your entry requirements, such as a temperature check and PPE.
- With the Explore Workplace Core application, prepare for the return of users by configuring and maintaining clean and socially distanced workspaces for them to use.
- You can manage the inventory of safety equipment for your workforce with the Workplace Personal Protective Equipment Inventory Management application.
- With the Contact Tracing application, evaluate the readiness of your users to return to the workplace by using data such as badge scans, Wi-Fi access logs, and daily contact logs to help identify potential user interactions.

All Safe Workplace suite applications are available in the ServiceNow Store.

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team. See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

Notice regarding use by organizations

ServiceNow is offering this application to government agencies and their authorized users, not to employees of government agencies in their individual capacities. Use of this application is being offered free of charge for a limited or extended time period and with no expectation of payment from the government agency to ServiceNow for use during that time period, nor does usage create an actual or implied future obligation on behalf of the government. ServiceNow hereby expressly waives any future claims for payment from the agency in connection with usage of the application. Government customers are solely responsible to confirm with the agency's Ethics Office or its authorized representative that acceptance and usage of the application is permissible.

All decisions in connection with the implementation of this application are at the sole decision of the government agency utilizing this application. Agencies remain solely responsible for complying with their legal obligations under applicable laws and regulations, including (but not limited to) data protection and employment laws and regulations, and should modify any language within the templates provided to meet the agency's specific requirements.

Install Health and Safety Testing

You can install Health and Safety Testing if you have the admin role.

Before you begin

Health and Safety Testing requires the ServiceNow® Employee Readiness Core application.

The ServiceNow® Contact Tracing application can optionally be installed to send an email notification to employees who are potentially exposed individuals in a contact tracing case. The notification informs the employee of the potential exposure and provides them with a link to request testing.

The ServiceNow® Emergency Response Management for Now Mobile application can optionally be installed to add a **Health** tab to the Now Mobile app where employees can request testing or report a test result.

Role required: admin

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team. See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)
- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Health and Safety Testing`.
3. Click **Install**.

   The Application installation dialog box opens.
4. Click **Activate**.

Components installed with Health and Safety Testing

Several types of components are installed with Health and Safety Testing, including user roles and tables.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles installed

Role title [name]	Description	Contains roles
Health and Safety Testing admin [sn_imt_health_test.admin]	Application-specific admin for Health and Safety Testing.	sn_imt_health_test.testing_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role title [name]	Description	Contains roles
	Important: By default, the System Administrator [admin] role contains the sn_imt_health_test.admin role. The sn_imt_health_test.admin role should be reassigned to another user and then removed from the admin. This process protects sensitive application data by restricting access to the application.	
Health testing manager [sn_imt_health_test.testing_admin]	Can view and manage health testing requests, results, providers, and test types.	None

Tables installed

Table	Description
Provider [sn_imt_health_test_provider]	Health providers that your organization uses for COVID-19 diagnostic testing.
Test Request [sn_imt_health_test_request]	Test requests submitted by users. Users can review their test requests in **My test requests**.
Test Result [sn_imt_health_test_result]	Test results submitted by users. Users can review their test results in **My test results**. Managers can review the test results of their direct reports in **My Employee's Test Results** if enabled by their organization. For more information, see Configure Health and Safety Testing.
Test Type [sn_imt_health_test_type]	Types of testing offered by providers. The options are **At a facility** and **Self-administered**. You can create additional test types if necessary.

Configure Health and Safety Testing

Complete all configuration tasks to ensure that Health and Safety Testing is set up correctly for your company.

Set up Health and Safety Testing properties

Set up Health and Safety Testing properties to define the data retention period for health testing data and enable or disable emails to potentially exposed individuals.

Before you begin

Role required: sn_imt_health_test.admin

3. Click **Save**.

Configure country-specific data retention settings for Health and Safety Testing

Configure the data retention settings for Health and Safety Testing so that the data-retention policy is country-specific.

Before you begin

Role required: sn_imt_core.admin, sn_imt_health_test.admin, or sn_imt_vaccine.admin

About this task

Employers remain solely responsible for complying with their legal obligations under applicable law, including data protection laws on collection, use, disclosure, and retention of personal data, and should enable, choose not to enable, or customize any functionality available within the application to meet the Employers' specific requirements.

The **Health and Safety Testing data retention period (in days)** property sets the number of days that COVID-19 diagnostic test requests and results are available before they are deleted automatically. The *Data Retention Job for Health and Safety Testing*

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

scheduled job runs daily to delete records that have an updated date past the specified retention period.

Enable the **Use country-specific data retention policy for Health and Safety Testing** property and use the Data Retention module in Employee Health and Safety Status to define policies at the country-level.

Procedure

1. Navigate to **All** > **Health and Safety Testing** > **Properties**.
2. Set the *Use country-specific data retention policy for Health and Safety Testing* to **true**.
3. Click **Save**.
4. Generate location policies for Health and Safety Testing.
   a. Navigate to **Employee Health and Safety Status** > **Data Retention**.
   b. Click **Generate Location Policies**.
   The default number of days is based off the value in the **Health and Safety Testing data retention period (in days)** property.
5. Open the location policy that you want to modify.
6. In the **Retention period (in days)** field, enter the number of days that you want to retain data for.
7. Click **Update**.

Result

When the *Data Retention Job for Health and Safety Testing daily* scheduled job completes or is manually executed, the data for users in those locations have their COVID-19 diagnostic test requests and results retained or deleted based on their country's data retention policy.

Add COVID-19 test providers

Create a list of COVID-19 diagnostic test providers that your company uses to schedule testing for employees.

Before you begin

Role required: sn_imt_health_test.testing_admin

Procedure

1. Navigate to **All** > **Health and Safety Testing** > **Providers**.
2. Click **New**.
3. On the form, fill in the fields.

Provider form

Field	Description
Company	The company providing COVID-19 diagnostic tests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Supported test types	The types of testing offered by the provider. The options are **At a facility** and **Self-administered**. You can create additional test types if necessary.

4. Click **Submit**.

What to do next
When an employee submits a request for testing, use the list of providers to schedule the test according to the employee's preferred test type and location.

Customize the notification for potentially exposed individuals

Modify the notification email that is sent to potentially exposed individuals to customize the notification for your company.

Before you begin
Role required: admin and sn_imt_health_test.admin

About this task
The **Potentially exposed health test request** notification is sent to employees who are potentially exposed individuals in a contact tracing case and have a health status of **Under investigation**. The notification informs the employee of the potential exposure and provides them with a link to request testing. The notification is only used when the *sn_imt_health_test.notify_potentially_exposed* property is enabled.

By default, the notification uses a ServiceNow® banner and a placeholder signature. Update the notification to use your company logo and signature.

Procedure
1. Navigate to **All** > **System Notification** > **Email** > **Notifications**.
2. Click the **Potentially exposed health test request** notification.
3. To view the default notification, click **Preview Notification**.
4. Navigate to the **What it will contain** form section.
5. In the **Message HTML** field, click **Insert/edit image** and select your banner image.

   Tip:
   The image must be added before the mail script so that it appears at the top of the email.

   If you don't already have an email banner image in your ServiceNow instance, you can upload an image to use. For instructions, see Upload one or more images.
6. Click the **Show Notification Scripts** related link.
7. In the **Script** field, the code `template.print(util.getEmailCompanyLogo());` adds the default ServiceNow® banner to the email.
   Comment out or delete this line of code to remove the ServiceNow® banner.
8. In the **Script** field, replace `You can expect [these next outreach steps]` with the next steps that you want to communicate to employees.
9. In the **Script** field, replace `The Site Safety Team` signature with your preferred signature.
10. **Optional:** If you would like to make any other changes to the email notification, update the **Script** field as needed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

11. Click **Update**.
12. Return to the notification record and click **Preview Notification** to confirm your changes.

Set up privacy consents for Health and Safety Testing

Set up privacy consents for users who are providing health and safety testing data to your company.

Before you begin

Role required: sn_imt_core.admin

About this task

Users must agree to a privacy policy in order to be able to request or report diagnostic data. They also must have the sn_imt_core.privacy_consent_user role.

Procedure

1. Customize the privacy consent template.
   a. Navigate to **Employee Health and Safety Status** > **Privacy Consent Templates** and click **Testing Consent Template**.
   b. Fill in the placeholder text with the name of your company and contact information.
   c. Click **Update**.
2. Assign the sn_imt_core.privacy_consent_user role to all users who will be requesting and reporting diagnostic test results.
   This role allows users to complete the privacy consent.
3. Generate the location-based privacy configurations for the locations in your instance.
4. Configure an outreach to send the privacy consent to users.
   a. Navigate to **Emergency Outreach** > **View Outreaches** and click the **Health and Safety Testing Diagnostic Test Placeholder** outreach.
   This outreach is preconfigured to use the Health and Safety Testing Diagnostic Test Placeholder Audience Record and the Testing Consent Template.
   b. Make any modifications to the outreach if needed, such as scheduling a time to send.
   For more information, see Send notifications for an emergency.
   c. **Optional:** Enable the outreach to provide location-specific privacy consents by selecting the **Use Country** option on the **Content configuration** tab.
   When enabled, the privacy statement text in Location Privacy Configuration takes precedence over text in the privacy consent templates. This text is used for the outreach, system notification email, and push notification. If you need to update the text that users receive, you must change the location's privacy statement.
   d. Click **Update**.

Result

Users can request and report diagnostic test results. Users that attempt to request a test are automatically added to the Health and Safety Testing Diagnostic Test Placeholder Audience Record about every 10 minutes. These users will also receive the notification around that time.

Request a COVID-19 diagnostic test

Request a COVID-19 diagnostic test if you have been potentially exposed, are having symptoms, or want testing for another reason.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_imt_core.privacy_consent_user

About this task
You must agree to a user privacy consent when you request a COVID-19 diagnostic test.

Procedure
1. Navigate to **All** > **Health and Safety Testing** > **Set up a COVID-19 diagnostic test**.

   Note:
   To request testing in the Now Mobile app, navigate to **Health** > **Follow These Safety Practices** > **COVID-19 Testing** > **Set up a COVID-19 diagnostic test**.

2. On the form, fill in the fields.

Set up a COVID-19 diagnostic test form

Field	Description
Preferred test type	The type of COVID-19 diagnostic test that you would like to take.
Preferred test date and time	The date and time that you would like to take your COVID-19 diagnostic test. This field appears only when **At a facility** is selected from **Preferred test type**.
Use a provider near me (please enter your address or city)	Your address or city. This field appears only when **At a facility** is selected from **Preferred test type**. Your company's health testing managers will use this address to find a test provider that is near you.
Reason for test	The reason that you are requesting a COVID-19 diagnostic test. The options are **Having symptoms**, **Potential exposure**, **Prefer not to say**, and **Other**.
Shipping address	The address that you want your test kit to be shipped to. This field appears only when **Self-administered** is selected from **Preferred test type**.

3. Click **Submit**.

Result
Your company's health testing managers use your request to schedule a COVID-19 diagnostic test for you. You will receive an email from your company or the test provider with instructions and information about the test.

What to do next
When you receive your test result, you can choose to report the result to your company. For instructions, see Report your COVID-19 diagnostic test result.

Report your COVID-19 diagnostic test result

If you would like to provide your company with an update on your health status, report your COVID-19 diagnostic test result.

Before you begin
Role required: sn_imt_core.privacy_consent_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
You must have agreed to a user privacy consent in order to be able to report your COVID-19 diagnostic test results.

Procedure
1. Navigate to **All** > **Health and Safety Testing** > **Report a COVID-19 diagnostic test result**.

   Note:
   To report your test result in the Now Mobile app, navigate to **Health** > **COVID-19 Testing** > **Report a COVID-19 diagnostic test result**. If the **Health** tab is not available, find **COVID-19 Testing** under **More** instead.

2. On the form, fill in the fields.

Report a COVID-19 diagnostic test result form

Field	Description
Related test request	The test request that you submitted to schedule testing.
Test result	Your test result. The options are **Positive result**, **Negative result**, and **Inconclusive**.
Date you received the result	The date that you received your test result.

3. Click **Submit**.

Review your health test results

If you would like to review your recently reported COVID-19 diagnostic test result or add an attachment to a health test, access your previous test results.

Before you begin
Role required: sn_imt_core.privacy_consent_user

Procedure
1. Navigate to **All** > **Health and Safety Testing** > **My test results**.
2. Select the test results that you would like to modify or review.
3. Modify the record by adding an attachment or review the record.
   - If you are adding an attachment, such as test results, add the attachment and then click **Update**.

     Note:
     For information on managing attachments, see Manage attachments.

   - If you are reviewing the record, review the record and click **Back** to return to the list of test results.

Confirm COVID-19 test results for a user

Confirm a user's reported COVID-19 test results through the Employee Readiness Core Approval Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Your organization must install both Health and Safety Testing and Vaccination Status to use the Approval Portal.

- For information on installing Health and Safety Testing, see Install Health and Safety Testing.
- For information on installing Vaccination Status, see Install Vaccination Status.

Activate the *sn_imt_health_test.allow_managers_ability_to_update_test_result_records* property to enable all managers to review and verify COVID-19 tests of their direct reports. This property assigns the sn_imt_core.approval_portal_manager role to managers and grants access to the Approval Portal for test results.

For more information, see Set up Health and Safety Testing properties.

Role required: sn_imt_vaccine.admin, sn_imt_core.approval_portal_manager, or sn_imt_core.health_and_safety_approver

Role required: sn_imt_vaccine.admin

About this task

Managers can only confirm the COVID-19 test results of their direct reports. Vaccine admins and health and safety approvers can confirm the test results of all users.

Procedure

1. Navigate to **Employee Health and Safety Status** > **Approval Portal**.
   The default view displays all health test, vaccine dose, and exemption request records that require review.
2. **Optional:** Filter the results.
   - Change which record types are displayed by selecting a record type from the **Record** field list.
   - Change how the records are sorted by selecting a value from the **Sort** field list.
3. Search for the user whose health test you want to approve or deny.
   The search behavior for the Approval Portal is a *starts with* search.
4. Select the record to review the information included in the health test modal and any attachments.

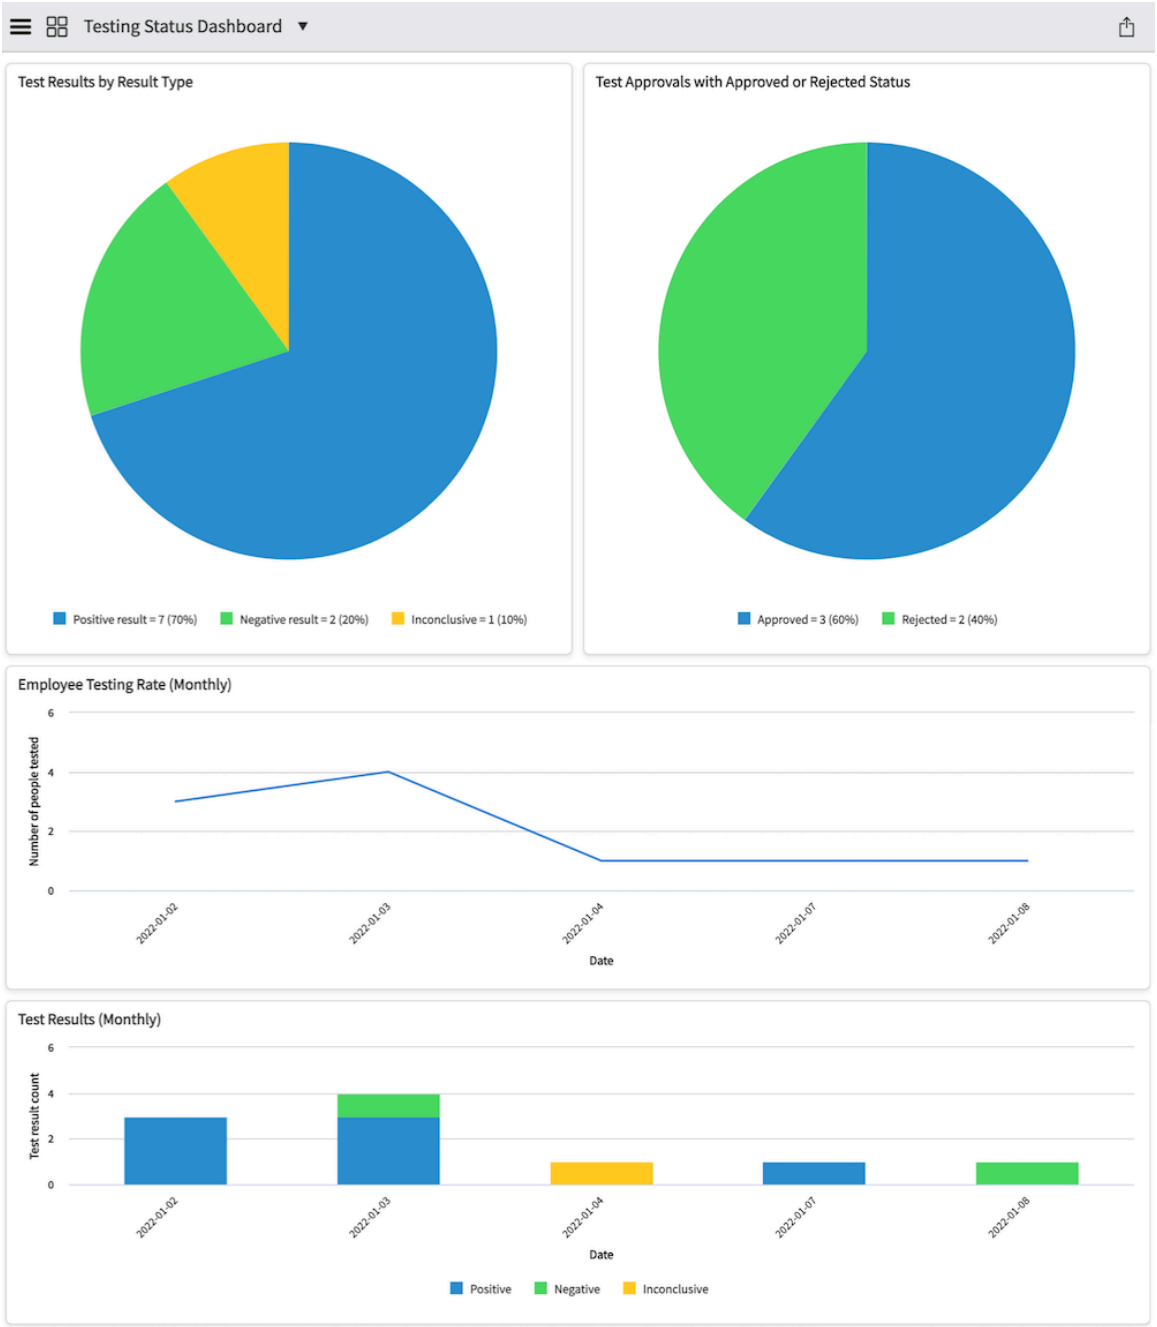
Health test modal

Field	Description
Test review outcome	The status of the health test review.
Related test request	The test request record the health test is related to.
Test result	The results of the test, such as positive or negative.
Date you received the result	The date test results were received.
COVID test result verified by	The person who verified the COVID-19 test result.
Work notes	A log of work notes included for tracking purposes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** Add additional information to the record through work notes and click **Save**. The ability to add work notes is unavailable to managers.
6. Approve or reject the user's health test results.
   - To approve the user's health test results, select **Approve**.
   - To reject the user's health test results, select **Deny**.
7. Click **Verify** to verify the user's test results.

Result



- The record is moved to the **Approved** or **Denied** tab.
- The **COVID test result verified by** field in the user's test result record is updated with your name to confirm you verified the result.
- In the user's vaccine profile, the **Most recent COVID test result verified** option is selected.

Health and Safety Testing dashboard

Use the Health and Safety Testing dashboard to gain insight on the health of your users with reports detailing testing trends, the types of tests performed, and approvals.

To access the Health and Safety Testing dashboard, navigate to **Self-Service** > **Dashboards**.

servicenow

Employee Health and Safety Status

Employees can return to the workplace by fulfilling a set of requirements activated by the HR team.

Example process from the employee and HR manager perspective

HR

Send email to employees that includes a link to the health verification agreement

Optional application: Emergency Outreach

Employee

- Receives an email with a link to the health verification
- Opens, reads, and submits the health verification
- Receives QR code (optional, New York and later releases)

HR

Monitor requirement completion to start bringing employees back into the workplace

Employee

- Returns to work on the scheduled date
- Shows the QR code to the screener at the workplace entry

Screener

If using QR codes, scan the code and review the requirement status page that opens.

Optionally, conduct health screen of employee temperature and PPE to grant or deny entry

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Employee Readiness Core app also provides shared functionality and data structures for Employee Readiness apps, such as ServiceNow® Employee Readiness Surveys, ServiceNow® Employee Health Screening , and ServiceNow® Contact Tracing .

Use guided setup to implement Safe Workplace suite apps

The Safe Workplace guided setup provides a sequence of tasks that help you configure the Safe Workplace and Emergency Response Management applications on your ServiceNow instance. To open the Safe Workplace guided setup, navigate to **Guided Setup** > **Safe Workplace Guided Setup**. For more information about using the guided setup interface, see Using guided setup .

Use with other Safe Workplace suite applications

Employee Readiness Core is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

- With the Employee Readiness Surveys application, evaluate the readiness of your users to return to the workplace by asking them to fill in a survey.
- Before users re-enter workspaces, use the Employee Health Screening application to screen users and ensure compliance with your entry requirements, such as a temperature check and PPE.
- With the Explore Workplace Core application, prepare for the return of users by configuring and maintaining clean and socially distanced workspaces for them to use.
- You can manage the inventory of safety equipment for your workforce with the Workplace Personal Protective Equipment Inventory Management application.
- With the Contact Tracing application, evaluate the readiness of your users to return to the workplace by using data such as badge scans, Wi-Fi access logs, and daily contact logs to help identify potential user interactions.

All Safe Workplace suite applications are available in the ServiceNow Store .

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Install Employee Readiness Core

You can install Employee Readiness Core if you have the admin role.

Before you begin

Employee Readiness Core version 1.1.0 and later requires the following plugins.

- ServiceNow Integration Hub Runtime (com.glide.hub.integration.runtime)
- Workflow Studio Action Step - Payload Builder (com.glide.hub.action_step.payload)
- ServiceNow Integration Hub Action Step - REST (com.glide.hub.action_step.rest)

These plugins must be requested through the Now Support Service Catalog. For instructions, see Request a plugin.

Role required: admin

On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Employee Readiness Core`.
3. Click **Install**.

   The Application installation dialog box opens.
4. **Optional:** Load the demo data by selecting the **Load demo data** check box.

   (Optional) For information about how to install or reinstall demo data after the initial installation, see the Work around to install demo data if application is already installed [KB0722909] article in the Now Support Knowledge Base.
5. Click **Install**.
6. When the installation is complete, click **Close**.

Components installed with Employee Readiness Core

Several types of components are installed with Employee Readiness Core, including user roles, tables, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles installed

Role title [name]	Description	Contains roles
Employee Readiness Core admin [sn_imt_core.admin]	Can create and manage health and safety users, health requirements, privacy consent templates and policies, and Safe Workplace audiences. Can read non-required health and safety records.	• sn_imt_core.reader • flow_operator • sn_imt_core.privacy_consent_user • sn_imt_core.safe_workplace_audience_adm
Employee Readiness Core reader [sn_imt_core.reader]	Can view health and safety requirement statuses in the View Employee and Visitor Status module.	None
Safe Workplace audience admin [sn_imt_core.safe_workplace_audience_admin]	Can create and manage Safe Workplace audiences. Can read non-required health and safety records.	None
External web service user [sn_imt_core.api_logging_user]	External service user that can make table API calls to insert log entries.	None
Privacy consent user	Can submit and update the user	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role title [name]	Description	Contains roles
[sn_imt_core.privacy_consent_user]	privacy consent for themselves.	
Health and safety approver [sn_imt_core.health_and_safety_approver]	Can review the requests and responses of all users in the Approval Portal such as vaccine exemption requests, vaccine responses, and health test results.	None
Approval Portal manager [sn_imt_core.approval_portal_manager]	Can review the requests and responses of their direct reports in the Approval Portal when the appropriate application-specific property is enabled for the corresponding record type. For example, you can enable a property in Vaccination Status to allow managers to review vaccine responses.	None

Tables installed

Table	Description
Health and Safety User [sn_imt_core_health_and_safety_user]	List of users and visitors and their progress toward completing all applicable active requirements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Table	Description
Health and Safety Requirement [sn_imt_core_health_and_safety_requirement]	List of all health and safety requirements.
Employee Health and Safety Requirement [sn_imt_core_employee_health_and_safety_requirement]	List of user and visitor statuses for all active requirements.
Health and Safety Visitor [sn_imt_core_visitor]	List of visitors.
Health and Safety Visitor Invitation [sn_imt_core_visitor_invitation]	List of visitor invitations, including information about their reason for visiting and the location they are invited to visit.
Location Privacy Configuration [sn_imt_core_location_privacy_configuration]	Configuration for the location-based privacy policy, such as the privacy statement for a location and whether a particular location requires privacy consent.
Privacy Consent Template [sn_imt_core_privacy_consent_template]	Template for storing the privacy statement for a location that is used in the location privacy configuration.
User Privacy Notice and Consents [sn_imt_core_user_privacy_notice_and_consent]	Responses of employees to the privacy consent.
Safe Workplace Audiences [sn_imt_core_safe_workplace_audience]	Collections of users based on one or more criteria, such as groups, departments, and locations. Use Safe Workplace audiences to organize lists of users for sending outreach notifications.
Data Retention Policies [sn_imt_core_data_retention]	Configuration for country-specific data retention policies for Health and Safety Testing and Vaccination Status. Users with the sn_imt_core.admin, sn_imt_health_test.admin, or sn_imt_vaccine.admin roles can configure these policies.

Scheduled jobs installed

Scheduled job	Description
Mark expired user requirements	Runs every 30 minutes to update user requirement statuses to **Not Cleared** if they have exceeded the time limit they are valid for.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scheduled job	Description
as not_cleared	**Note:** The scheduled job only runs for requirements that have the **Use duration** field selected.
Collect Safe Workplace users	Runs weekly to create health and safety user records for users [sys_user] with activity or an assigned role in any of the following Safe Workplace suite and Emergency Response Management applications. • Contact Tracing • Emergency Outreach • Employee Health Screening • Employee Readiness Core • Employee Travel Safety • Health and Safety Testing • Safe Workplace Dashboard • Vaccination Status • Workplace PPE Inventory Management • Workplace Core Health and safety user records are also created for visitors who are invited through the Employee Readiness Core app.
Recalculate audiences for requirements	Runs every hour to recalculate audiences for health and safety requirements when users are added or removed from the audience. This job handles when their status would be changed to or from **Not Required** due to their status in or out of an audience.
Recalculate All Employee Health and Safety Requirement Status'	A scheduled job that can be run as a one-time fix script once your organization provides users with their relevant roles and upgrades to the latest version of Employee Readiness Core. This job recalculates each users' Healthy and Safety requirement statuses based on the [sn_imt_core.use_not_required] property and their requirements.
Ensure Approval Portal Manager	Runs weekly by default or may be manually executed to ensure managers are assigned or unassigned the Approval Portal manager [sn_imt_core.approval_portal_manager] role based on whether they are currently a manager and one of three Approval Portal-related properties are active. • Allow managers the ability to update health test results [sn_imt_health_test.allow_managers_ability_to_update_test_result_records] • Allow managers the ability to update vaccine response records [sn_imt_vaccine.allow_managers_ability_to_update_vaccine_response_records] • Allow managers the ability to update vaccine exemption requests [sn_imt_vaccine.allow_managers_ability_to_update_vaccine_exemption_records] Each property provides managers access to the Approval Portal, however, managers are able to see and interact with only records associated with the activated property. Activating multiple properties grants additional capabilities to the reviewing managers.

© 2026 ServiceNow, Inc. All rights reserved.

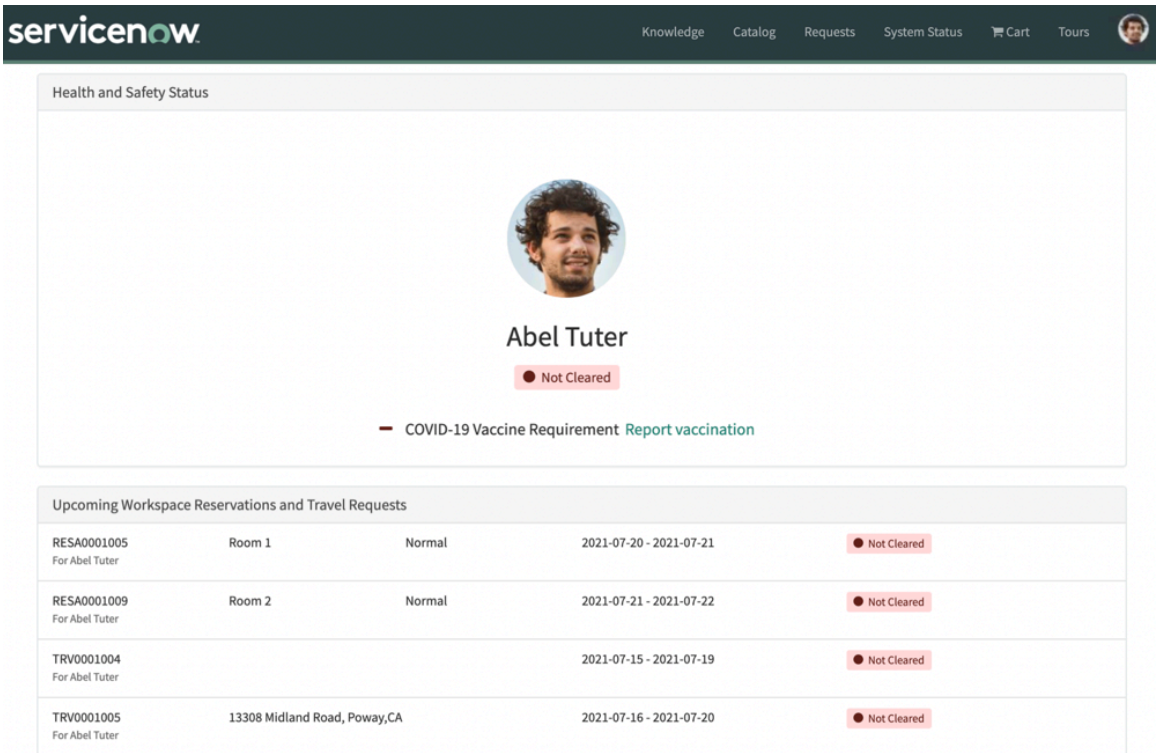
Employee Health and Safety Status



Use the Employee Health and Safety Status feature to track when people are ready to return to the workplace.

Pull data across all Safe Workplace suite and Emergency Response Management applications into a single data point that shows if a user is ready to return to the workplace or travel.

Create and activate requirements that users must fulfill before they can return to the workplace or complete travel to various locations. The requirements can be based on data from any of the Safe Workplace suite and Emergency Response Management applications. When a user fulfills all active requirements, they are ready to return to the workplace.

Due to the ability to set different health and safety requirements for different locations, a user might be cleared for their current travel or location but not for a specific location. For example, a user might be cleared for an active reservation but not travel to a campus across their country.

Note:
If a user has an active travel and active reservation, that reservation takes precedence.

Set up Employee Health and Safety Status properties

Set up Employee Health and Safety Status properties to configure the email notifications that are sent to visitors.

Before you begin

Role required: sn_imt_core.admin

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **Properties**.
2. Set the following property values.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
sn_imt_core.send_email_to_visitor	When enabled, the **Notify about scheduled visit** email notification is sent to the visitor when an employee invites them to the workplace. The email is sent immediately after the employee submits the invitation. The email contains a brief confirmation of the scheduled visit, including information about the date of the visit and the name of the employee who invited them.
sn_imt_core.days_to_ask_for_health_data	Sets the number of days before the scheduled visit that the **Ask for health related data from visitor** email notification is sent to the visitor. The email contains information about safety requirements and policies that the visitor must agree to follow. The visitor must respond `Yes` to the email to complete the Visitor Invitation Requirement.

For more information about the email notifications used by the properties, see Modify visitor notification emails.

3. Click **Save**.

Create health and safety user records

Create health and safety user records to track requirement statuses for all employees and visitors.

Before you begin

If the ServiceNow® Customer Service Management (CSM) application is activated, you can also create health and safety user records for consumers and contacts.

Role required: sn_imt_core.admin

About this task

Health and safety user records are automatically created for users [sys_user] with activity or an assigned role in any of the following Safe Workplace suite and Emergency Response Management applications.

- Contact Tracing
- Emergency Outreach
- Employee Health Screening
- Employee Readiness Core
- Employee Travel Safety
- Health and Safety Testing
- Safe Workplace Dashboard
- Vaccination Status
- Workplace PPE Inventory Management
- Workplace Core

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health and safety user records are also created for visitors who are invited through the Employee Readiness Core app.

Some users might not have activity or assigned roles in the apps, so health and safety user records are not automatically created for them. If you want to view the requirement status for these users, you can manually create health and safety user records for them.

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **Health and Safety Users**.
2. Click **New**.
3. In the **type** field, select **Visitor** or **Employee**.

   Note:
   If you're creating a health and safety user record for a CSM consumer or contact, select **Employee**.

4. Select a value in the **User** or **Visitor** field.
   - If you're creating a record for an employee, consumer, or contact, select the user in the **User** field.
   - If you're creating a record for a visitor, select the visitor in the **Visitor** field.
5. Select a value in the **Working location type** field.
   - If the user is reporting to your organization on-site full time, select **Full time on-site**.
   - If the user is reporting to your organization remotely full time, select **Full time remote**.
   - If the user is reporting to your organization part time remote and part time on-site, select **Part time remote**.
6. Click **Submit**.
   The **Requirement status** field is read-only and is updated after you submit the record. The user or visitor is added to the Health and Safety User table [sn_imt_core_health_and_safety_user]. A record is created for the user or visitor in the Employee Health and Safety Requirement table [sn_imt_core_employee_health_and_safety_requirement] for each active requirement using the default status for the requirement.

What to do next

You can view all health and safety user records by navigating to **Employee Health and Safety Status** > **Health and Safety Users**. The **Requirements status** column shows the user's or visitor's progress towards completing all active requirements. The value is **Cleared** if they have fulfilled all active requirements. The value is **Not cleared** if they are missing any requirements.

You can also look up the requirements status for individual users or visitors by navigating to **Employee Health and Safety Status** > **View Employee and Visitor Status**. The status page can be used during the health screening process for entry to a location. For more information, see Conduct a health screen for entry.

Activate a health and safety requirement

Activate requirements to track when employees are ready to return to the workplace or to safely travel to another site. You can also activate requirements that visitors must complete before entering the workplace.

Before you begin

Role required: sn_imt_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Use health and safety requirements to define the requirements that employees must fulfill before they can return to the workplace, safely travel to another site , or that visitors must fulfill before entering the workplace. Employee Readiness Core includes pre-built requirements. For more information, see Included health and safety requirements.

Requirements are not active by default. A requirement must be activated before you can track whether employees or visitors have fulfilled the requirement.

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **Health and Safety Requirements**.
2. Click the requirement that you want to activate.

> **Note:**
> Pre-built requirements provided by Employee Readiness Core are ready to activate without any modifications. However, you can choose to edit them to meet your company's needs. For example, you can edit the **Use duration** and **Valid for** fields to adjust the amount of time a requirement status is valid for. You can also select the **Actionable** check box to add a link for employees to complete the requirement on the Health and Safety Status page. If you're activating a custom requirement, make sure that you select a flow in the **Requirement flow** field. You must also select a table and conditions in the Include previous applicable records section. You can't activate the requirement unless these fields are populated.

3. Click **Activate**.
   After the requirement is activated, health and safety user records are created for employees or visitors who have activity for the requirement. Health and safety user records are also created for employees or visitors who have activity for the requirement before it was activated.

What to do next

You can view all health and safety user records by navigating to **Employee Health and Safety Status** > **Health and Safety Users**. The **Requirements status** column shows the employee's or visitor's progress towards completing all active requirements. The value is **Cleared** if the employee or visitor has fulfilled all active requirements for their current location. The value is **Not cleared** if the employee or visitor is missing any requirements.

You can also look up the requirements status for individual employees or visitors by navigating to **Employee Health and Safety Status** > **View Employee and Visitor Status**. The status page can be used during the employee or visitor health screening process for entering the workplace. For more information, see Conduct a health screen for entry and Screen a visitor for entry to the workplace .

Create a health and safety requirement

Create requirements to track when employees are ready to return to the workplace or visit a site. You can also create requirements that visitors must complete before entering the workplace.

Before you begin

Role required: sn_imt_core.admin

About this task

Use health and safety requirements to define the requirements that employees must fulfill before they can return to the workplace, or that visitors must fulfill before entering the workplace. Create separate requirements for employees and visitors. A requirement must apply to either employees or visitors, not both. Employee Readiness Core provides some pre-built requirements. However,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

you can create additional requirements using data from any of the Safe Workplace suite or Emergency Response Management apps.

Health and safety requirements are built with Flow Designer. Before creating a requirement, make sure that you're familiar with the basics of ServiceNow® Workflow Studio.

The following steps show how to create a requirement using the pre-built Employee Health Verification Requirement as an example.

Procedure

1. In Workflow Studio, create an action to check the requirement status for an employee or visitor.

   a. Create an action.

   b. Save the action in the Employee Readiness Core application.

   c. In the Inputs section of the Action Outline, create an input for the type of record that you will use to check if the employee or visitor has fulfilled the requirement.

      For example, to fulfill the Employee Health Verification Requirement, employees must have a health verification record in the Employee Health Verification table [sn_imt_monitoring_health_verification].

      Inputs

Label	Name	Type	Mandatory
Employee Health Verification	health_verification	Reference.Employee Health Verification [sn_imt_monitoring_health_verification]	Yes

   d. Add a **Script Step** to the Action Outline.

   e. In the **Required Runtime** field, select **Instance**.

   f. Create an input variable using the input that you created for the action as the value.

      This enables you to use the input for the action in a script.

      Input Variables

Name	Value
health_verification	**Employee Health Verification** input that you created in the Inputs section.

   g. In the **Script** field, add a script to define the conditions when an employee's or visitor's requirement status is `cleared` or `not_cleared`.

      For the Employee Health Verification Requirement, the requirement is `cleared` for an employee if their health verification response is `yes`, and `not_cleared` for any other response.

```
(function execute(inputs, outputs) {
 outputs.requirement_status =
 inputs.health_verification.response == 'yes'
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
    ? 'cleared'
    : 'not_cleared';
})(inputs, outputs);
```

h. Create an output variable for the requirement status.

This defines the *requirement_status* variable that you used in the script.

Output Variables

Label	Name	Type	Mandatory	Choice (Advanced options)
requirement_status	requirement_status	Choice	Yes	Dropdown with --None--

i. In the Outputs section of the Action Outline, create an output for the requirement status.

Creating this output enables you to use the *requirement_status* output variable from the script as an output returned by the action.

Output Variables

Label	Name	Type	Mandatory	Choice (Advanced options)
Requirement status	requirement_status	Choice	No	Dropdown with --None--

j. Assign the *requirement_status* value to the output.

Output Variables

Label	Value
Requirement Status	*requirement_status* output variable from the script step.

The action returns the value of the *requirement_status* for the employee or visitor (`cleared` or `not_cleared`) as an output.

k. Click **Publish**.

2. Create a health and safety requirement.

a. Navigate to **Employee Health and Safety Status** > **Health and Safety Requirements**.

b. Click **New**.

c. On the form, fill in the fields.

The Include previous applicable records section defines a set of records that have already been created but should still trigger the requirement flow. Including previous records

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ensures that employees or visitors who complete the requirement before it is activated have their requirement status set to **Cleared**.

Health and Safety Requirement form

Field	Description
Name	Unique name for the requirement. For example, `Employee Health Verification Requirement`.
Requirement for	Who the requirement applies to. The options are **Employee** and **Visitor**. A requirement must apply to either employees or visitors, not both. For example, the Employee Health Verification requirement only applies to employees.
Requirement flow	Leave this field empty. You will return to the requirement record and fill in this field after you create the flow.
Active	This field is read-only. Once you update all fields for the requirement, you can use the **Activate** button to activate the requirement.
Default status	The default status is assigned to health and safety users who don't have any activity towards completing the requirement. The options are **Cleared** and **Not Cleared**. For example, employees who don't have a health verification record are assigned a default status of **Not Cleared** for the Employee Health Verification Requirement.
Use duration	Option to set a time limit that the requirement status is valid for.
Valid for	Time limit that the requirement status is valid for. For example, the Employee Health Verification Requirement status is valid for seven days. Employees must resubmit their health verification weekly to continue fulfilling the requirement. This field appears only when the **Use duration** field is selected.
Actionable	Option to add a link for employees to complete the requirement on the Health and Safety Status page.
Action name	The name of the action for the employee to complete the requirement. For example,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Submit self-report. This name is shown on the Health and Safety Status page. This field appears only when the **Actionable** field is selected.
Action URL	The URL of the Service Catalog item that employees use to complete the requirement. For example, the Employee Health Verification Requirement is completed by submitting the Health Verification form, which has the URL `?id=sc_cat_item&sys_id=9c578864ed111010fa9b` This field appears only when the **Actionable** field is selected.
Action visibility	Sets when the link to complete the requirement is displayed on the Health and Safety Status page. Select **Visible when false** to only show the link when the employee hasn't completed the requirement, or select **Always visible** to always show the link. This field appears only when the **Actionable** field is selected.
Exclude	When selected, excludes all users in the **Audience** field from the requirement.
Audience	Select the audience to refine the number of users the requirement applies to. For example, you might want to target all users in an audience that happens to be located in California or target an audience you created specifically for a location, regardless of whether they are users who are traveling, visiting, or working in the location. No audience is selected by default and the requirement applies to users based on the rest of the form. **Note:** If **Exclude** is checked, the requirement targets all users except those in the audience.
Include previous applicable records	
Table	Table to look for previously created records that will trigger the requirement flow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For example, the Employee Health Verification Requirement uses the Employee Health Verification table [sn_imt_monitoring_health_verification].
Condition	Add conditions to filter the records from the table that will trigger the flow.

d. Click **Submit**.

3. In Workflow Studio, create a flow to update the requirement status for an employee or visitor.

a. Create a new flow.

b. Save the flow in the Employee Readiness Core application.

c. Add a trigger so that the flow runs whenever the type of record that you're using to check the requirement status is created or updated.

For example, for the Employee Health Verification Requirement, the flow runs whenever a health verification record is created or updated.

Trigger

Trigger	Table	Condition	Run Trigger
Created or Updated	Employee Health Verification [sn_imt_monitoring_health_verification]	None.	For each unique change

d. Add the action that you created to the flow.

e. Add the record from the trigger as the input.
For example, for the Employee Health Verification input, add the Employee Health Verification record that was created or updated in the trigger event.

f. Add the Update User Requirement action provided in Employee Readiness Core to the flow.

Update User Requirement inputs

User [User]	Health and safety requirement [Health and Safety Requirement]	Requirement status	Trigger datetime
Employee or **User** field from the trigger record. For example, the **Employee** field from the Employee	Health and safety requirement you created.	`requirement_status` returned by the action that you created.	**Created** field from the trigger record. Only use this input if you set a value for the **Valid for** field on the requirement.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User [User]	Health and safety requirement [Health and Safety Requirement]	Requirement status	Trigger datetime
Health Verification record.			

g. Click **Activate**.

4. Complete the health and safety requirement.
   a. Navigate to **Employee Health and Safety Status** > **Health and Safety Requirements**.
   b. Click the requirement that you created earlier.
   c. In the **Requirement flow** field, add the flow that you created to update the requirement status for employees or visitors.
   d. Click **Update**.

What to do next
When you create the requirement, it's not active by default. You must activate the requirement before you can track whether employees or visitors have fulfilled the requirement. For instructions, see Activate a health and safety requirement.

Deactivate a health and safety requirement

If you no longer need employees to fulfill a requirement before returning to the workplace, deactivate the requirement.

Before you begin
Role required: sn_imt_core.admin

About this task
When you deactivate a requirement, all records for the requirement in the Employee Health and Safety Requirement table [sn_imt_core_employee_health_and_safety_requirement] are deleted. The requirement is no longer tracked for any employees.

Procedure
1. Navigate to **All** > **Employee Health and Safety Status** > **Health and Safety Requirements**.
2. Click the requirement that you want to deactivate.
3. Click **Deactivate**.

Included health and safety requirements

Employee Readiness Core provides pre-built requirements.

Requirements are not active by default. A requirement must be activated before you can track whether employees or visitors have fulfilled the requirement. Pre-built requirements provided by Employee Readiness Core are ready to activate without any modifications. However, you can choose to edit them to meet your company's needs.

Employee Health Verification Requirement

This requirement checks that employees have submitted their health verification. To fulfill the requirement, the health verification must have been submitted within the past seven days. Employees who don't have a record in the Employee Health Verification table [sn_imt_monitoring_health_verification] have a default requirement status of **Not Cleared**. This requirement uses data from the Employee

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Health Screening application. For more information, see Employee Health Screening.

Self Report Requirement

This requirement checks that employees have submitted a self report with a status of **Returning to work**. Employees who don't have a record in the Crisis Task table [sn_imt_quarantine_crisis_task] have a default requirement status of **Not Cleared**. This requirement uses data from the Emergency Self Report application. For more information, see Emergency Self Report.

Visitor Invitation Requirement

This requirement checks that visitors have agreed to follow the company safety policies outlined in their invitation email. To fulfill the requirement, the agreement must have been submitted within the past two days. Visitors who don't have a record in the Health and Safety Visitor Invitation table [sn_imt_core_visitor_invitation] have a default requirement status of **Not Cleared**. This requirement uses data from the Employee Readiness Core application.

Exposed Contacts Requirement

This requirement checks the status of employees who have been added to the potentially exposed contacts list of a contact tracing case and sets their health and safety requirement status. Employees with the status of Cleared in the Exposed Contacts table [sn_imt_tracing_exposed_contact] have the requirement status of Cleared. Otherwise, their status is Not Cleared. This requirement uses data from the Contact Tracing application. For more information, see Contact Tracing.

Privacy Consent Requirement

This requirement checks that employees have responded to the privacy consent request. Employees who responded to the privacy consent as **I Agree** have the requirement status of Cleared. Otherwise, their status is Not Cleared. This requirement uses data from the Contact Tracing application. For more information, see Contact Tracing.

Testing Requirement Satisfied

This requirement checks the most recently submitted COVID-19 diagnostic test result for employees. Employees with a negative test result have a status of Cleared and employees with a positive test result have a status of Not Cleared. Employees without a test result or an inconclusive test result have a status of Cleared if they aren't a potentially exposed individual in a contact tracing case and Not Cleared if they are a potentially exposed individual. However, submitting an inconclusive test result will not change an employee's status if they have already submitted a positive or negative result. This requirement uses data from the Health and Safety Testing and Contact Tracing applications. For more information, see Health and Safety Testing.

COVID-19 Vaccine Requirement

This requirement checks that employees have received their COVID-19 vaccine. Employees who don't have a record in the Vaccine profile table [sn_imt_vaccine_vaccine_profile] have a default requirement status of **Not Cleared**. This requirement uses data from the Vaccination Status application. For more information, see Vaccination Status.

View your health and safety status

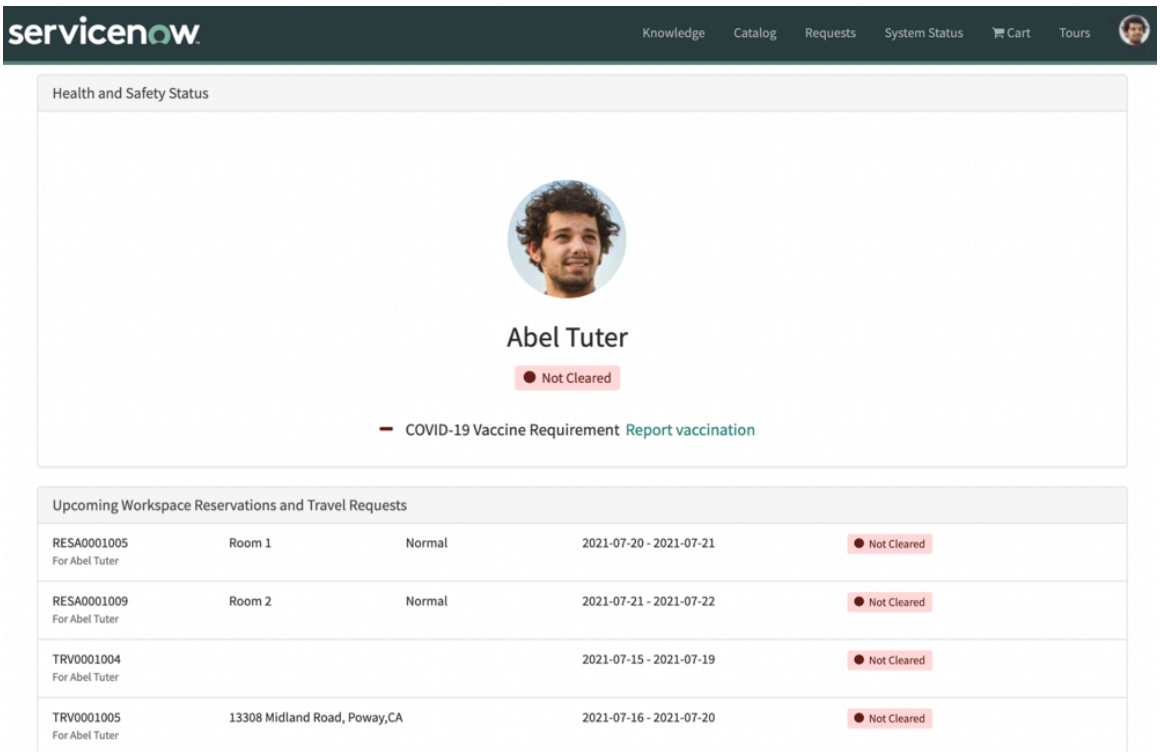
View your health and safety status page to check your progress on company requirements for returning to the workplace or visiting a site.

Before you begin

Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



Your status page lists all the requirements that you must fulfill before you can return to the workplace or visit a site. If you've fulfilled any requirements that are valid for a limited amount of time, your status page shows the amount of time remaining until you must take action to complete the requirement again. If Workplace Core is installed, your status page also shows your upcoming workspace reservations.

Note:
Your status page shows your requirements and eligibility for your current location by default. If a requirement is not required, you cannot see the specific health and safety requirement on your Health and Safety Status page.

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **My Status**.

   Note:
   To view your status page on the Now Mobile app, navigate to **Health** > **Prepare for arrival** > **My readiness checklist**.

2. **Optional:** Select one of your upcoming reservations and travel requests to review your eligibility for a reservation or travel request.
3. Complete any unfulfilled requirements by clicking the link next to the requirement.

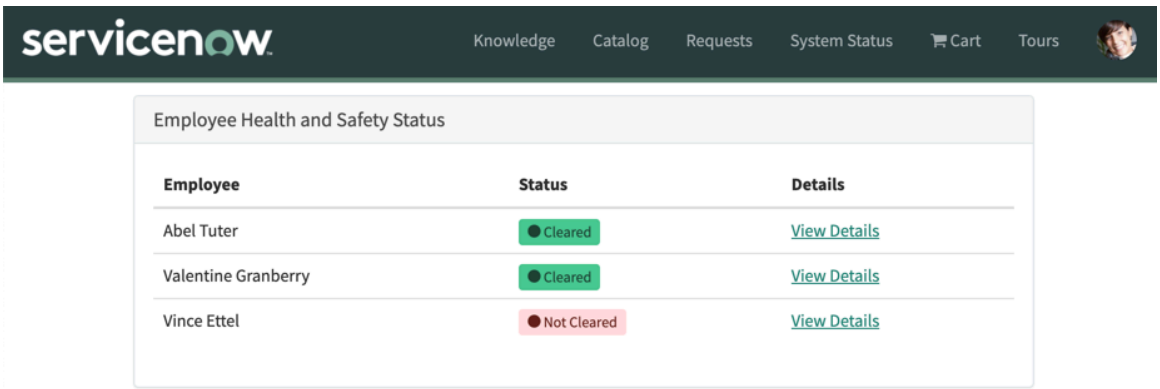
   Note:
   Some requirements might not have a link. If you need help completing the requirements, contact your organization.

View your users' health and safety status

View the health and safety status of your team to check their progress on company requirements for returning to the workplace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_imt_monitoring.monitoring_user



All users can view the health and safety status of their direct reports. However, the sn_imt_monitoring.monitoring_user role is required to view details about team members who are not your direct reports.

Procedure
1. Navigate to **All** > **Employee Health and Safety Status** > **View Team Status**.

   Note:
   To view the status page on the Now Mobile app, navigate to **Health** > **My Team** > **My Team's Safety Status**.

   The status page shows whether each user has completed all requirements for returning to the workplace.

   Note:
   A user is **Cleared** or **Not Cleared** based on the health and safety requirements of their current location.

2. **Optional:** View the specific list of requirements that a user has cleared or not cleared by clicking **View Details**.

Invite a visitor to the workplace

Submit a visitor invitation to send an email to your visitor with information about their upcoming visit. Before visitors can enter the workplace, they must respond to the email and agree to comply with the safety requirements and policies listed in the email.

Before you begin
Role required: None

Procedure
1. Open the visitor invitation form based on the type of device that you're using.

2. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set up a visit to our company form

Field	Description
Host employee	The employee who is inviting the visitor.
Location of visit	Workplace location of the visit.
Date of visit	The date of the visit.
Visitor's first name	Visitor's first name.
Visitor's middle name	Visitor's middle name.
Visitor's last name	Visitor's last name.
Visitor's phone	Visitor's phone number.
Visitor's email	Visitor's email address.
Visitor's company	The company that the visitor works for.
Reason for visit	The reason for the visit.
Watch list	Everyone on the watch list receives an email notification when the visit is approved or canceled.

3. Click **Submit**.

Result
A visitor record is created in the Health and Safety Visitors table [sn_imt_core_visitor], or updated if a record for the visitor already exists. A record is also created in the Health and Safety Visitor Invitation table [sn_imt_core_visitor_invitation].

What to do next
To view all of your invited visitors, navigate to **Employee Health and Safety Status** > **My Visitors**.

Add a Safe Workplace audience

Add a collection of users for Emergency Outreach notifications. Target individual users or specific users based on criteria such as location, department, or group.

Before you begin
Role required: sn_imt_core.admin, sn_imt_checkin.checkin_admin, or admin

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **Safe Workplace Audience** and click **New**.
2. In the **Name** field, enter a descriptive name for the audience.

   Example
   For example, `Building C Network Group` or `Facilities employees reporting to Bob`.
3. Indicate the users who should receive notifications.
4. Select **Submit**.

Synchronize Employee Readiness Core visitors with Workplace Visitor Management

As an administrator, synchronize the visitor tables in the Employee Readiness Core and Workplace Visitor Management applications.

Before you begin

To successfully enable visitor synchronization between Employee Readiness Core and the Workplace Visitor Management application in Workplace Service Delivery, note the following requirements:

- The Workplace Visitor Management application must be installed. For more information, see Install Workplace Visitor Management.
- Ensure your organization has a data backup before running the `Sync Visitors` fix script. Otherwise, syncing is not reversible.

Role required: admin or sn_imt_core.admin

About this task

To maintain consistent data on visitors, organizations may synchronize data between the Employee Readiness Core sn_imt_core_visitor table and the sn_wsd_visitor_visitor table in Workplace Visitor Management.

An initial synchronization using the `Sync Visitors` fix script is required before updates are synced automatically. Newly added fields to either visitor table are ignored by the fix script while existing fields are left as-is. Administrators with the script_include_admin role may customize the `VisitorSyncing` and `WSDVisitorSyncing` script includes called by the fix script to meet their organization's needs, for example, to accommodate new fields added to the visitor tables. Administrators must run the fix script after performing any customizations to the script includes.

Any data conflicts are resolved by using the most recent changes to a table. After the tables are synchronized, updates to one table automatically are reflected on the other.

Important:
Do not delete visitors from the Employee Readiness Core sn_imt_core_visitor table because they do not sync back to Workplace Visitor Management. Deletions from the sn_wsd_visitor_visitor table are performed when you anonymize a visitor. Anonymized data does sync to the sn_imt_core_visitor table. For more information on anonymizing visitors or deleting visitor data in Workplace Visitor Management, see Anonymize a visitor.

Synchronization can be disabled; however, the initial sync is irreversible without a backup.

Procedure

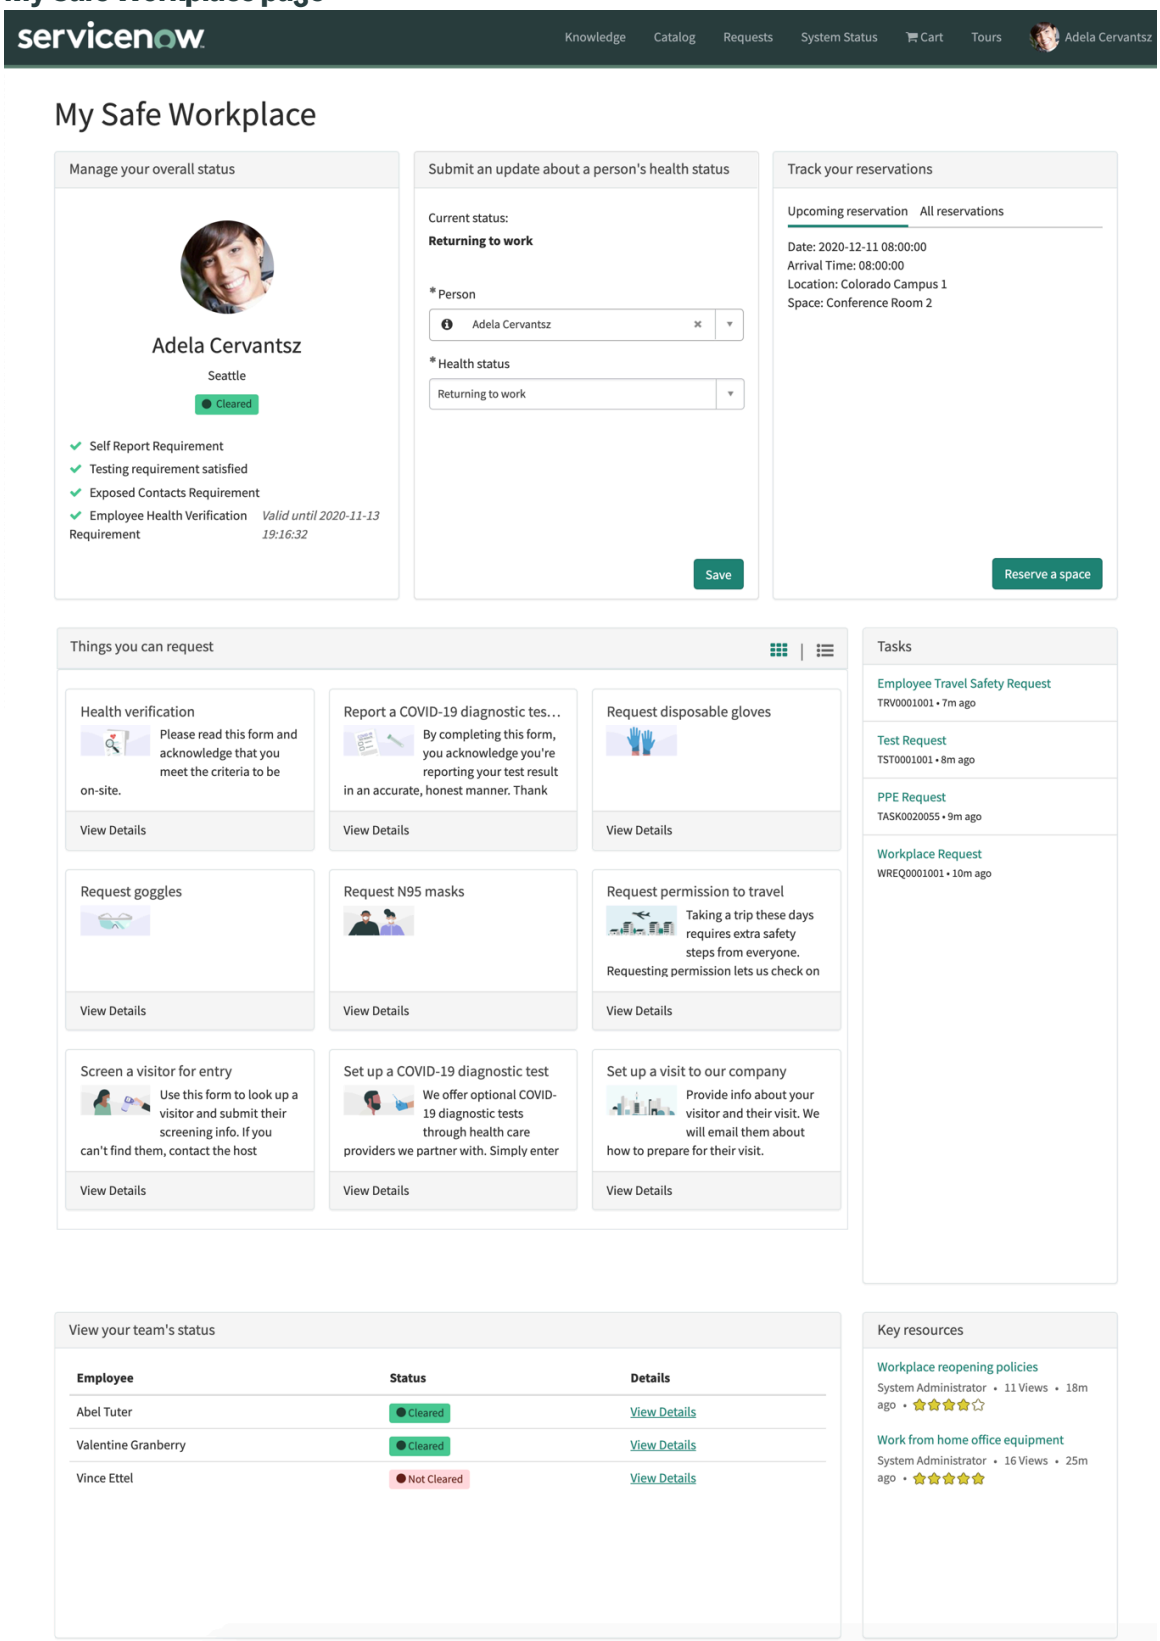
1. Unless the *`sn_imt_core.visitor_syncing`* property is already enabled and the initial fix script run was completed, enable this property.
   This property controls visitor syncing between visitors in Employee Readiness Core and Workplace Visitor Management. It is disabled by default.
   a. Navigate to **Employee Health and Safety Status** > **Properties**.
   b. Set the *`sn_imt_core.visitor_syncing`* property to **Yes**.
   c. Click **Save**.
2. Navigate to **System Definition** > **Fix Scripts**.
3. Open the `Sync Visitors` fix script from the list.
4. If the **Active** check box for **Sync Visitors** is not selected, select it and click **Update**.
5. Click **Run Fix Script**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
Visitor records synchronize between the Employee Readiness Core visitor table and the sn_wsd_visitor_visitor table in Workplace Visitor Management.

Trouble?

If your organization wants to disable synchronization, navigate to **Employee Health and Safety Status** > **Properties**, clear the *sn_imt_core.visitor_syncing* check box, and click **Save**.



My Safe Workplace

Use the ServiceNow® My Safe Workplace page to view all of your information and resources for returning to the workplace. Manage your requirement status for workplace entry, update your health status, track workspace reservations, and create requests for PPE or testing.

To view My Safe Workplace, navigate to **Employee Health and Safety Status** > **My Safe Workplace**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

My Safe Workplace page

Widget	Description
Manage your overall status	View whether you're cleared to enter the workplace based on your completion of entry requirements for your current location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Widget	Description
Submit an update about your health status	View and update your current health status. Managers can also view and update the health status for their direct reports. For managers, this widget is called **Submit an update about a person's health status**.
Track your reservations	The **Upcoming reservation** tab shows your next workspace reservation. The **All reservations** tab shows your next five reservations. Click **Reserve a space** to create a new reservation to reserve a space for a day.
Things you can request	You can take the following actions. • Submit a list of daily contacts for contact tracing • Submit a user privacy consent form for contact tracing • Submit a health verification about your health status and compliance with safety policies • Screen a visitor for entry • Invite a visitor • Request permission to travel • Request a COVID-19 diagnostic test or report your test results • Request personal protective equipment (PPE) such as masks, gloves, or goggles • Reserve shifts and workspaces • Schedule your arrival time at a workplace If some ServiceNow® Safe Workplace suite applications are not installed, some requests may not be available.
Tasks	Track the status of your travel, health testing, workspace reservation, and PPE requests.
View your team's status	View whether your direct reports are cleared to enter the workplace. This widget is only displayed for managers and reflects a user's status for their current location.
Key resources	View featured knowledge articles.

Set up My Safe Workplace

Add or remove widgets that employees can view on My Safe Workplace.

Before you begin

Role required: admin

About this task

My Safe Workplace uses widgets from ServiceNow® Safe Workplace suite applications.

- The **Submit an update about your health status** widget requires the ServiceNow® Emergency Self Report application.
- The **Track your reservations** widget requires the ServiceNow® Workplace Core application.

If these applications are not installed, by default there are blank spaces in My Safe Workplace where the corresponding widgets would be displayed. Complete the setup steps to remove any blank spaces.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

My Safe Workplace also has widgets for employees to create and track requests. The requests use features from the following Safe Workplace suite applications.

- ServiceNow® Contact Tracing
- ServiceNow® Employee Health Screening
- ServiceNow® Employee Readiness Core
- ServiceNow® Employee Travel Safety
- ServiceNow® Health and Safety Testing
- ServiceNow® Workplace PPE Inventory Management
- ServiceNow® Workplace Core

If some of these applications are not installed, employees can still use the widgets to create and view requests based on the applications that are installed. Install the remaining applications to give employees access to all request types.

Procedure

1. Navigate to **All** > **Service Portal** > **Service Portal Configuration**.
2. Click **Designer**.
3. Search for **Safe Workplace Today**.
4. Adjust the page layout to remove any blank spaces.
   You can also remove any widgets that you don't want to use, or add new widgets. For detailed instructions, see Create and edit a page using the Service Portal Designer.

What to do next

To complete the setup, make sure that employees have the required roles to view the widgets.

- The **Submit an update about your health status** widget requires the sn_imt_quarantine.crisis_task_user role.
- The **Track your reservations** widget requires the sn_wsd_core.workplace_user role.
- The **View your team's status** widget is only displayed for managers. The sn_imt_monitoring.monitoring_user role is required for managers to view details about their direct reports.
- There are no required roles for all other My Safe Workplace widgets.

Maintaining privacy consent in Employee Readiness Core

The Employee Readiness Core application enables your organization to maintain the data privacy of all employees and obtain consent to various privacy policies in Safe Workplace suite applications.

Manage your organization's privacy policies with Employee Readiness Core:

- Create and manage privacy consent templates for your various privacy policies.
- Manage location-based privacy configurations and assign templates to various regions.
- Review the consent status to see whether an employee has agreed, disagreed, withdrawn consent, or not responded.
- Use Emergency Outreach to send email and mobile push notifications for employees to consent to privacy policies.
- Enable users to consent to privacy policies when reporting diagnostic test results with Health and Safety Testing.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employers remain solely responsible for complying with their legal obligations under applicable law, including data protection laws on collection, use, disclosure, and retention of personal data, and should enable, choose not to enable, or customize any functionality available within the application to meet the Employers' specific requirements.

Setting up privacy consent settings

As an administrator, you can configure privacy consent templates, location-based privacy configurations, and notifications used to send privacy consent alerts for Safe Workplace suite applications.

With Employee Readiness Core, you can configure various privacy policies such as those governing the use of data or test results, or to track health status, and send notifications to employees seeking consent to the use of their data.

User privacy regulations vary from country to country. For some countries, consent by employees to use their data is not required but for others it is a must. You can set different privacy policies for different locations and organization setups. Some organizations maintain a separate privacy policy for each location while others maintain a single privacy policy for all locations.

As an administrator, you must configure the following settings to use privacy consents with Employee Readiness Core:

1. Modify or create a privacy consent template.
2. Generate or locate privacy-based configurations.
3. Assign the sn_imt_core.privacy_consent_user role to all users who must respond to a privacy policy.
4. Add all users who must respond to a privacy policy to a Safe Workplace audience.

> **Note:**
> For more information, see Add a Safe Workplace audience.

Modify or add a privacy consent template

Modify or add a privacy consent template to be used in the location privacy configuration for Safe Workplace suite applications.

Before you begin

Role required: sn_imt_core.admin

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **Privacy** > **Privacy Consent Templates**.
2. Open a template record to modify it or click **New** to create one.
3. Enter a unique name of the template in the **Name** field.
4. Enter the privacy policy statement in the **Privacy statement** field.
   If the privacy policy is different for different locations, create one template for each location and specify the policy statement for that location.

   If your organization has a single policy for all locations across the globe, update the default template.
5. Click **Submit**.

Generate location-based privacy configurations

As an administrator, generate the privacy configuration for locations set up in your instance to use with Safe Workplace suite applications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_imt_core.admin

About this task
You can generate a location-based, default privacy configuration for each country available in the Locations [cmn_location] table. For each location, you can specify whether the privacy consent is required and update the privacy policy statement.

Procedure
1. Navigate to **All** > **Employee Health and Safety Status** > **Privacy** > **Location Privacy Configuration**.
2. Click **Generate Location Configurations**.
   The default configuration is created for each country and appears in the Location Privacy Configurations list.
3. Open a location to review its configuration and modify it if necessary.
4. Configure the privacy consent text if necessary.
5. Click **Update**.

Send an Emergency Outreach notification for employee privacy consents

Send an Emergency Outreach notification, on demand, to employees to provide a privacy policy and seek consent to use of their data in accordance with the privacy policy.

Before you begin
Ensure that you have the Emergency Outreach application installed. For details, see Install Emergency Outreach.

Employees must have the Now® Mobile app installed on their phones to receive mobile push notifications. For more information, see Now Mobile app.

Role required: sn_imt_checkin.checkin_admin

About this task
Important:
The privacy consent notification is sent to a user only once even if the user is in the target audience of multiple privacy consent notifications.

Procedure
1. Navigate to **All** > **Emergency Outreach** > **View Outreaches**.
2. Review and edit an existing outreach record or click **New** to create one.
3. On the **Safe Workplace Audience** tab, select the audience from the list and click **Save**.
   If you don't have an audience defined, click **New** and define an audience from user lists, groups, departments, locations, and so on. After you save the Safe Workplace audience, you can use it to send any outreach message. For more information, see Add a Safe Workplace audience.
4. On the **Content configuration** tab, select **Privacy Consent (common)** in the **Response mode** field.
5. On the **Content configuration** tab, select a **Privacy consent template**.
6. **Optional:** Enable the outreach to provide location-specific privacy consents by selecting the **Use Country** option on the **Content configuration** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional) When enabled, the privacy statement text in Location Privacy Configuration takes precedence over text in the privacy consent templates. This text is used for the outreach, system notification email, and push notification. If you need to update the text that users receive, you must change the location's privacy statement.

For more information on updating a location's privacy statement, see Generate location-based privacy configurations.

7. Select a notification in the **Notification** field and choose how to send the notification.

   Note:
   The default **Notification** is the **User Privacy Consent (Core)** that references the [sn_imt_core_user_privacy_notice_and_consent] table.

   - To send the notification by email, select the **Email notification** check box.
   - To send a mobile push notification, select the **Now Mobile Push notification** check box.

     This option is available only if the ServiceNow NowMobile App Screens and Applet Launcher (com.glide.mobile-employee) plugin is activated.

     Push notifications use the ServiceNow Request Application notification device. When a user registers their mobile application to an instance, this notification device is automatically created in their notification preferences. Ensure that this device is active for the users that you want to receive the push notification.

8. Review the message content.
   - For email notifications, review the email subject and email body and modify it if necessary.
   - For push messages, review the **Push message** and **Detailed Push message** fields.
9. Click **Update**.
   The target audience and content configuration changes are saved.
10. To send the notification, click **Send Notification**.

Result
The notification is sent to the target audience.

Note:
The outreach notification is not sent to any users in the selected audience who do not have a location set in their user profile or whose privacy consent is disabled in the location privacy configuration.

If you need to resend the notification, navigate to **Emergency Outreach** > **View Outreaches**, select the outreach, and click **Resend Notification**.

Submitting privacy consents

When you receive an email or mobile notification for a privacy consent, read the privacy policy statement and submit a response indicating whether you agree to the use of your data.

Respond to an email notification request for privacy consent

When you receive an email notification for privacy consent, read the privacy policy statement and submit a response indicating whether you agree to the use of your data.

Before you begin
Role required: sn_imt_core.privacy_consent_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Open the link contained in the notification for privacy consent.
2. Read the privacy policy statement in the **Privacy Notice** field.
3. Select your response and click **Submit**.
   - If you agree to the privacy policy and use of your data, select **I Agree**.
   - If you do not want the organization to use your data, select **I Disagree**.

> **Note:**
> If you previously agreed to the privacy consent, a **Withdraw Consent** option is available. You can change your response to withdraw your consent by selecting **Withdraw Consent** and clicking **Submit**.

Result

Your current privacy consent decision is updated.
The status of the notification updates to **Acknowledged**.

If you have a health and safety requirement for the privacy consent activated, a record is created with the requirement status.

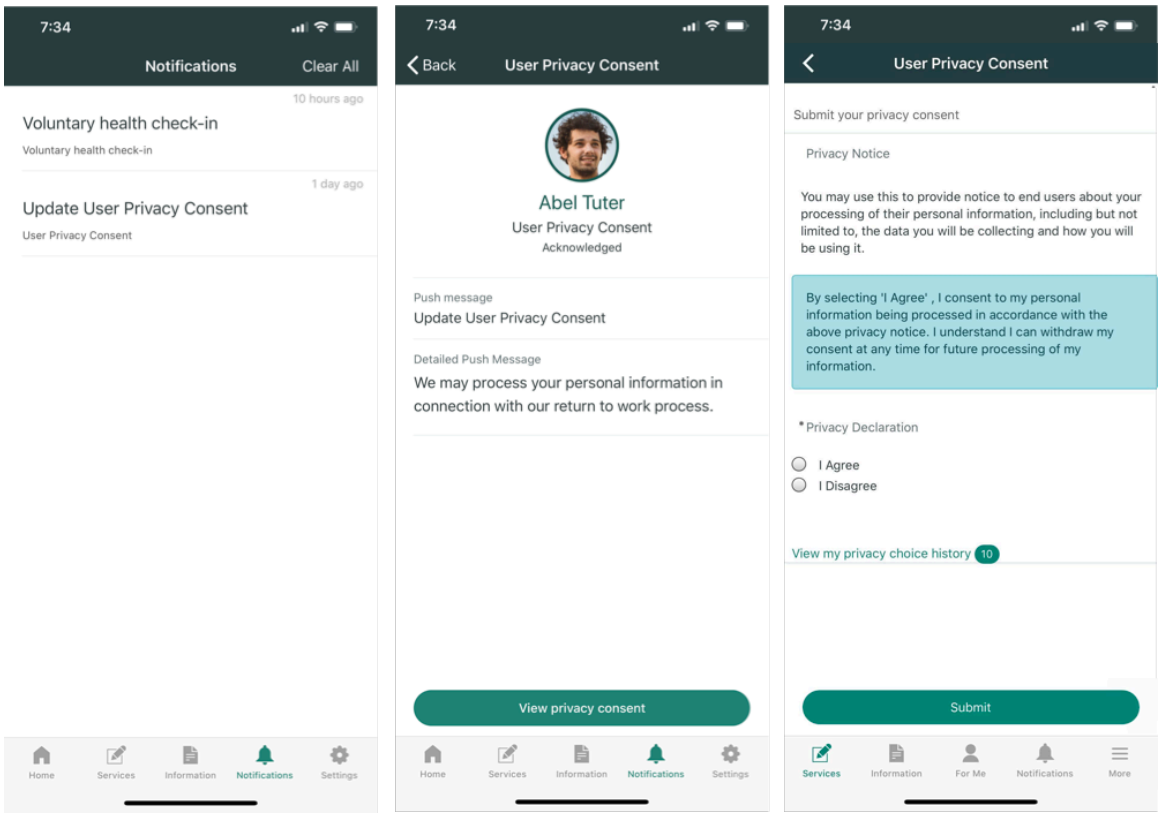
- If you agreed to the privacy policy and use of your data, the requirement status updates to **Cleared**.
- If you disagreed or withdrew your consent, the requirement status updates to **Not Cleared**.

Submit a privacy consent from a mobile phone

If you receive a mobile push notification request for a data privacy consent, read the privacy policy statement and indicate whether you agree to the use of your data in accordance with the policy.

Before you begin

To receive mobile push notifications, you must have the Now® Mobile app.



Role required: sn_imt_core.privacy_consent_user

Procedure

1. Tap the notification to open the message.
2. In the message, tap **View privacy consent**.
3. Read the privacy policy statement in the **Privacy Notice** field.
4. Select your response and click **Submit**.
   - If you agree to privacy policy and use of your data, select **I Agree**.
   - If you do not want the organization to use your data, select **I Disagree**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you previously agreed to the privacy consent, the **Withdraw Consent** option is available. You can change your response to withdraw your consent by selecting **Withdraw Consent** and clicking **Submit**.

Result

Your current privacy consent decision is updated.
The status of the notification updates to **Acknowledged**.

If you have a health and safety requirement for the privacy consent activated, a record is created with the requirement status.

- If you agreed to the privacy policy and use of your data, the requirement status updates to **Cleared**.
- If you disagreed or withdrew your consent, the requirement status updates to **Not Cleared**.

Review user privacy consents

Review user privacy consent responses submitted by employees indicating their response to requests for consent to use their data in accordance with a privacy policy.

Before you begin

Role required: sn_imt_core.admin

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **Privacy** > **User Privacy Consents**.
2. Click the status in the **Consent status** column to open the employee's consent record.
3. Review the employee's responses in the Consent History related list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **I Agree**: Employees have responded and agreed to have their data used.
- **I Disagree**: Employees have responded and have not agreed to have their data used.
- **Withdraw Consent**: Employees previously agreed to have their data used but later withdrew the consent.
- **Awaiting Response**: Employees have not responded yet.

Note:
The consent history record with the latest preference submitted date is the last response from the employee.

You can send the notification again to employees who have not yet responded.

Employee Readiness Core Approval Portal

The Employee Readiness Core Approval Portal enables you to approve or deny submitted COVID-19 vaccine doses, vaccine exemptions, and health tests.

Installation and setup requirements

The Approval Portal is included with Employee Readiness Core. To use the Approval Portal, your organization must install Health and Safety Testing and Vaccination Status.

Note:
Both applications must be installed, but your organization does not have to use both applications.

- For more information on installing Health and Safety Testing, see Install Health and Safety Testing.
- For more information on installing Vaccination Status, see Install Vaccination Status.

Using the Approval Portal

To use the Approval Portal, you must have either the Vaccination Status admin [sn_imt_vaccine.admin], Health and safety approver [sn_imt_core.health_and_safety_approver], or Approval Portal manager [sn_imt_core.approval_portal_manager] roles.

Managers with the Approval Portal manager role can see only approvals for their direct reports. This role is automatically assigned to all managers as long as one of the following properties is enabled:

- Allow managers the ability to update health test results [sn_imt_health_test.allow_managers_ability_to_update_test_result_records]
- Allow managers the ability to update vaccine response records [sn_imt_vaccine.allow_managers_ability_to_update_vaccine_response_records]
- Allow managers the ability to update vaccine exemption requests [sn_imt_vaccine.allow_managers_ability_to_update_vaccine_exemption_records]

Each property provides managers access to the Approval Portal, however, managers are able to see and interact with only records associated with the activated property. Activating multiple properties grants additional capabilities to the reviewing managers.

You can perform the following tasks on the Approval Portal:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- View and approve or deny COVID-19 health test results. For more information, see Confirm COVID-19 test results for a user.
- View and approve or deny an employee's vaccination status and dose details. For more information, see Confirm the reported vaccination status for a user.
- View and approve or deny employee vaccination exemption requests. For more information, see Confirm a vaccine exemption request for a user.
- Review attachments and documentation submitted with the user's responses and requests. Supported documents open in the document viewer. For more information on supported formats, see Document Viewer.
- Review and add work notes to the records.

The Employee readiness approvals page provides employee vaccine and health records in the tabs listed in the following table. You can filter the records that are displayed by selecting a record type from the **Record type** field list, using the search bar, or changing the **Sort** field list.

Note:
The search behavior for the Approval Portal is a *starts with* search.

Employee readiness approvals page tabs

Tab	Description
Approvals to review	Lists records that have not been approved or denied.
Approved	Lists all approved vaccine responses, exemption requests, and health tests.
Denied	Lists all denied vaccine responses, exemption requests, and health tests.

Enterprise Employee Experience Pack

Enterprise Employee Experience Pack is a new store application that delivers preconfigured process flows and sample content to help you quickly implement enterprise-wide use cases across multiple departments.

Return to Workplace Location Readiness and Employee Return to Workplace lifecycle events

The Return to Workplace Location Readiness and Employee Return to Workplace lifecycle events are part of the Enterprise Employee Experience Pack application. These lifecycle events work with other applications to help you administer and coordinate your employees' return to the workplace in a manner that promotes your company's safety requirements.

Bringing your workforce back into your reopened office after a closure requires that you do the following:

- Prepare your employees for returning to the workplace.
- Prepare your offices to be ready and safe for the return of your employees.

Enterprise Employee Experience Pack is an application that works with:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- HR Service Delivery: For more information on using HR Service Delivery, see HR Service Delivery.
- Lifecycle Events: For more information on using Lifecycle Events, see Understanding Lifecyle events for enterprise.
- Content Automation: For more information on using Content Automation, see Creating campaigns with Content Experiences.
- Content Delivery: For more information on using Content Delivery, see Creating to-do content.
- HR Knowledge Management: For more information on using HR Knowledge Management, see HR Knowledge Management.
- Employee Service Center or Service Portal.
  - For more information on using the Employee Service Center (ESC), see Employee Center.
  - For more information on using the Service Portal, see .

Note:
Some of the configurations are installed conditionally based on specific plugin activation.

Store applications

For full functionality, Enterprise Employee Experience Pack works with:

- Emergency Exposure Management
- Contact Tracing
- Workplace PPE Inventory Management
- Employee Health Screening
- Workplace Core

Install Enterprise Employee Experience Pack

You must have the admin role to install the Enterprise Employee Experience Pack application.

Before you begin
To access and use Enterprise Employee Experience Pack, the following plugins must be activated:

- Human Resources Scoped App: Lifecycle Events for Enterprise (com.sn_hr_lifecycle_ent)
- Knowledge Management Advanced Installer (com.snc.knowledge_advanced.installer)
- Employee Center Pro (sn_ex_sp_pro)

The following plugins are activated automatically:

- Human Resources Scoped App: Core (com.sn_hr_core)
- Human Resources Scoped App: Integrations (com.sn_hr_integrations)
- Human Resources Scoped App: Lifecycle Events (com.sn_hr_lifecycle_events)
- Human Resources Scoped App: Mobile (com.sn_hr_mobile)
- Human Resources Scoped App: Mobile Onboarding (com.sn_hr_onboarding)
- Human Resources Scoped App: Security (com.snc.hr.scoped_security)
- Content Experiences (sn_ca)
- Content Publishing (sn_cd)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If Restricted Caller Access (RCA) errors appear, you may be required to allow additional RCA privileges. For more information, see Restricted caller access privilege settings.

Role required: admin

Procedure

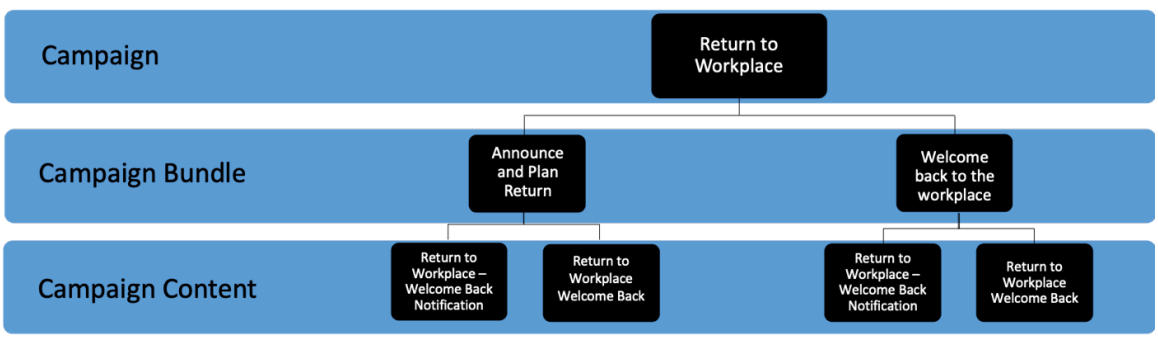
1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Enterprise Employee Experience Pack`.
3. Click **Install**.

   The Application installation dialog box opens.
4. **Optional:** Load the demo data by selecting the **Load demo data**check box.

   (Optional) For information about how to install or reinstall demo data after the initial installation, see the Work around to install demo data if application is already installed [KB0722909] article in the Now Support Knowledge Base.
5. Click **Install**.
6. When the installation is complete, click **Close**.

Return to Workplace campaigns

Use campaigns to deliver important messages and information to your employees that are going through the Return to Workplace process.



For employees that have communicated that they are ready to return to the workplace, you can target them with specific emails or content on your Service Portal or Employee Service Center.

Campaigns are created in Content Automation and use Content Delivery to present information on the Service Portal or Employee Service Center. Emails are created and sent through Content Automation.

Note:
For more information on Content Automation, see Creating campaigns with Content Experiences and for Content Delivery, see Creating to-do content.

Campaign structure

Campaign structure looks like a pyramid with the campaign at the top. A campaign contains campaign bundles. Each campaign bundle contains the content that you want to present to your employees.

The following campaign is part of this application:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Return to Workplace

The Return to Workplace campaign helps keep your employees informed during the return to work planning process.

The target audiences for this campaign are the employees with information on their HR profiles indicating they're ready to return to work and have a specific return date. For more information, see Add or modify an HR profile.

The Return to Workplace campaign contains the following bundles and content:

- Announce and Plan Return
  - Return to Workplace - Get Ready to Return Banner: Provides a banner on the Service Portal or Employee Service Center that links to the Return to Workplace Company Updates (KB0088880) knowledge base (KB) article. You can find this KB article by navigating to **Knowledge** > **Articles** > **All** and searching for KB0088880. The link to the KB article is configured in **Link Content** under Content Delivery. For more information, see Add or modify links to other content sources.
  - Return to Workplace sample Notification: Sends an email with a sample message on returning to the workplace. The email uses notification content created in Content Delivery. For more information, see Create email, SMS, or push notification content.

    The Announce and Plan Return campaign bundle triggers dynamically based on a trigger table and fields. For more information, see Create campaign bundles/stages.
- Welcome back to the workplace
  - Return to Workplace - Welcome Back Notification: Provides a sample email communicating information about plans to reopen the office. The link in the email points to the Workplace Health and Safety Policy FAQ knowledge article (KB0088882). You can find the KB article by navigating to **Knowledge** > **Articles** > **All** and searching for KB0088882. The link to the KB article is configured in **Link Content** under Content Delivery. For more information, see Add or modify links to other content sources.
  - Return to Workplace Welcome Back: Provides a banner on the ESC with a link to the Social distancing and safety tips for common workspaces FAQ (KB0088883) article. You can find the KB article by navigating to **Knowledge** > **Articles** > **All** and searching for KB0088883. The link to the KB article is configured in **Link Content** under Content Delivery. For more information, see Add or modify links to other content sources.

    The Welcome back to the workplace bundle triggers dynamically based on a trigger table and fields. For more information, see Create campaign bundles/stages.

Accessing the Return to Workplace campaign

View and edit the campaign content and campaign bundles in the Return to Workplace campaign.

Before you begin

You may choose to clone a campaign before making edits.

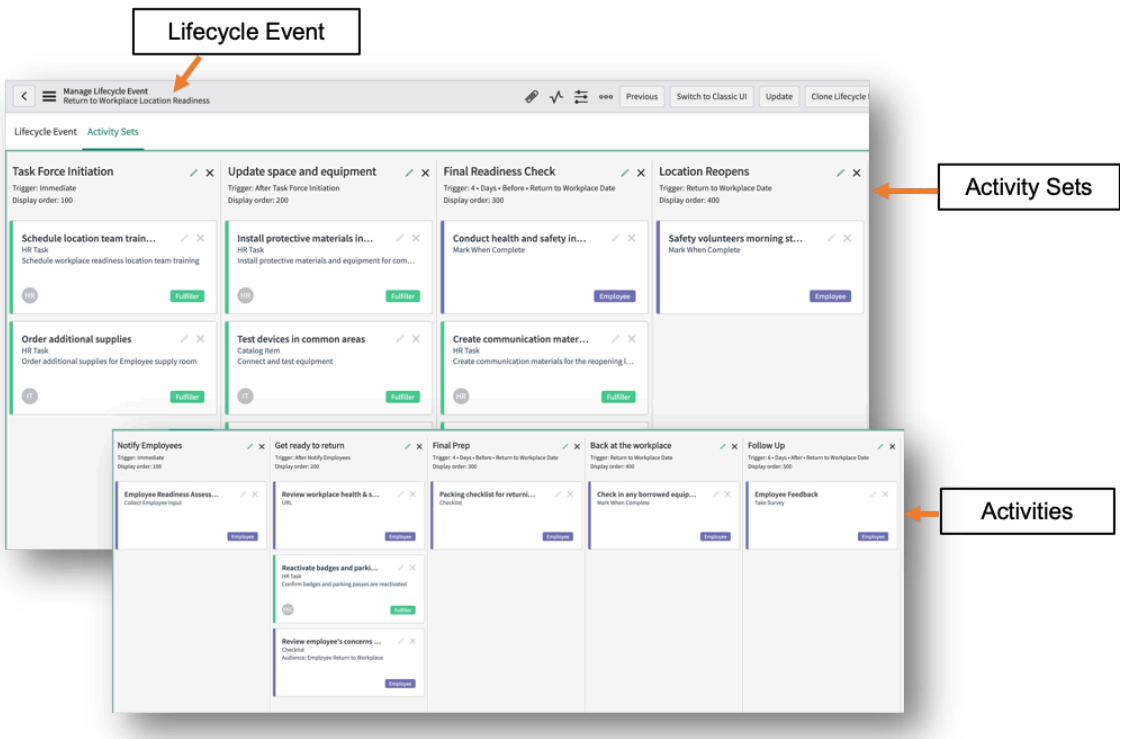
For more information on cloning, editing, and publishing a campaign, seeCampaigns for Content Experiences.

Role required: sn_ca.campaign_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Content Automation** > **Campaigns**.
2. Select **Return to Workplace**.
   You may choose to clone the campaign before editing. Scroll down to see the **Campaign Bundles** and **Campaign Content** tabs.
3. Click a campaign bundle or campaign content to edit.
4. After making edits, click **Update**.



Return to Workplace Location Readiness and Employee Return to Workplace lifecycle events

Lifecycle events enable you to automate a collection of activities to help prepare your employees and your workplace for the return to work.

The target audiences for these lifecycle events are employees with information in their HR profiles indicating that they're ready to return to work and have a specific return date. For more information, see Add or modify an HR profile.

Enterprise Employee Experience Pack structure

The employee experience packs under Enterprise Employee Experience Pack are set up from a lifecycle event. Each employee experience pack consists of multiple activity sets. Each activity set contains one or more activities.

For more information on lifecycle events, see Understanding Lifecyle events for enterprise.

Accessing the lifecycle events

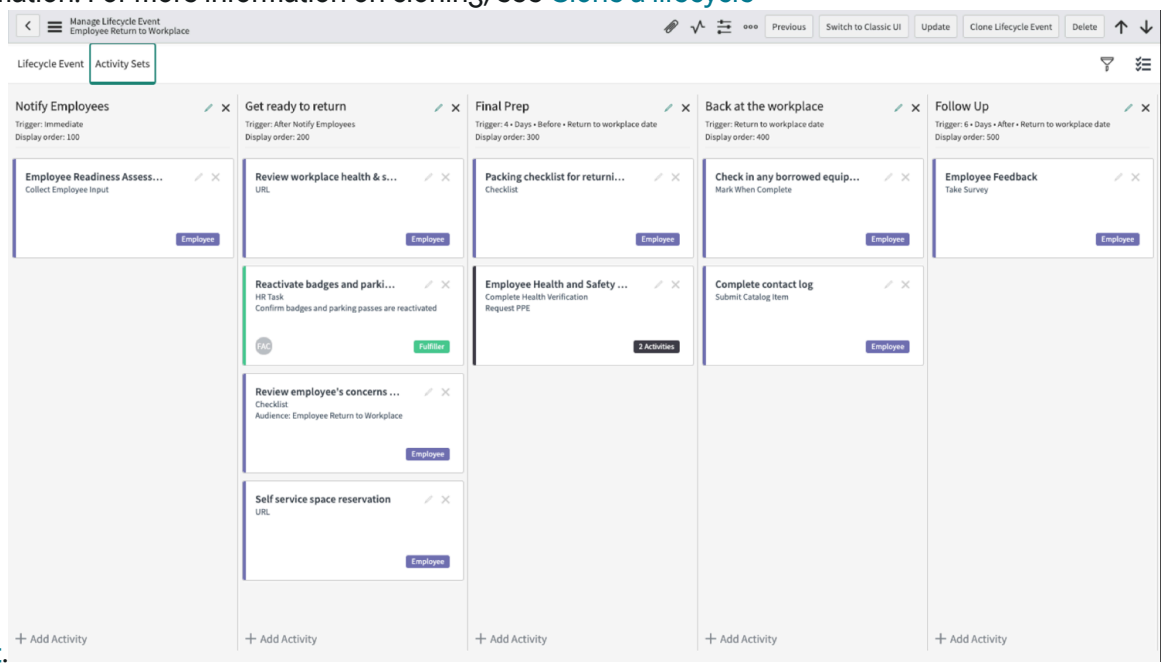
Access the Employee Return to Workplace and Return to Workplace Location Readiness employee experiences from Lifecycle Events.

Before you begin

Role required: sn_hr_le.activity_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure



1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.
2. From the Manage Lifecycle Events list, select **Employee Return to Workplace** or **Return to Workplace Location Readiness**.

Employee Return to Workplace lifecycle event

The Employee Return to Workplace lifecycle event helps to verify that your employees who are working from home are ready to return to the workplace.

The Employee Return to Workplace lifecycle event provides you with preconfigured process flows, activity sets, activities, templates, and sample content items.

Note:
Clone this lifecycle event prior to updating it with your company's specific information. For more information on cloning, see Clone a lifecycle event.

HR case

These HR cases start the Return to Workplace process.

- Request for Employee to Return to Workplace
- Request to prepare a workplace to reopen

Employees, managers, or HR agents can use the Employee Service Center or Service Portal to create the HR case.

HR agents can also use the HR case form.

After the HR case is created and in the Ready state, a survey is sent to the employee. The first activity in the Employee Return to Workplace lifecycle event is the Employee Readiness Assessment.

Employee Return to Workplace - Lifecycle Event

Contains the following activity sets:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notify Employees - Activity Set

Contains the following activity:

Employee Readiness Assessment: An HR task for employees that collects feedback using the Employee Readiness Assessment HR survey.

- The first question on the survey is: How do you feel about a possible return to your workplace?
- The answer provided by the employee maps directly to the HR case form and HR profile of the employee.
- If the employee answers **Yes** and provides a date of return, the Get ready to return activity set triggers. The employee becomes part of the **User has Return to Workplace date** audience.
- If the employee answers **I'm not ready to return** or **I'm not sure**, an HR task is assigned to an HR agent. The employee becomes part of the **Employee Return to Workplace** audience.

Get ready to return - Activity Set

Contains the following activities:

- Review workplace health & safety guidelines: An HR task for employees that provides a URL link to a knowledge base (KB) article. The KB article provides workplace health and safety guidelines.
- Reactivate badges and parking passes: An HR task for agents to verify that work badges and parking passes are activated for employees.
- Review employee's concerns about returning to the workplace: An HR task for agents to review the employee readiness assessments.
- Self-service space reservation: An HR task for employees that provides a URL to select a shift or reserve space to work.

Final Prep - Activity Set

Contains the following activities:

- Packing checklist for returning to the workplace: An HR task for employees to confirm that a checklist of items is completed before returning to work.
- Employee Health and Safety Prep activities:
  - Request PPE: An optional HR task for employees requesting Personal Protective Equipment (PPE).
  - Complete Health Verification: An HR task for employees to complete their health verification form prior to working on site.

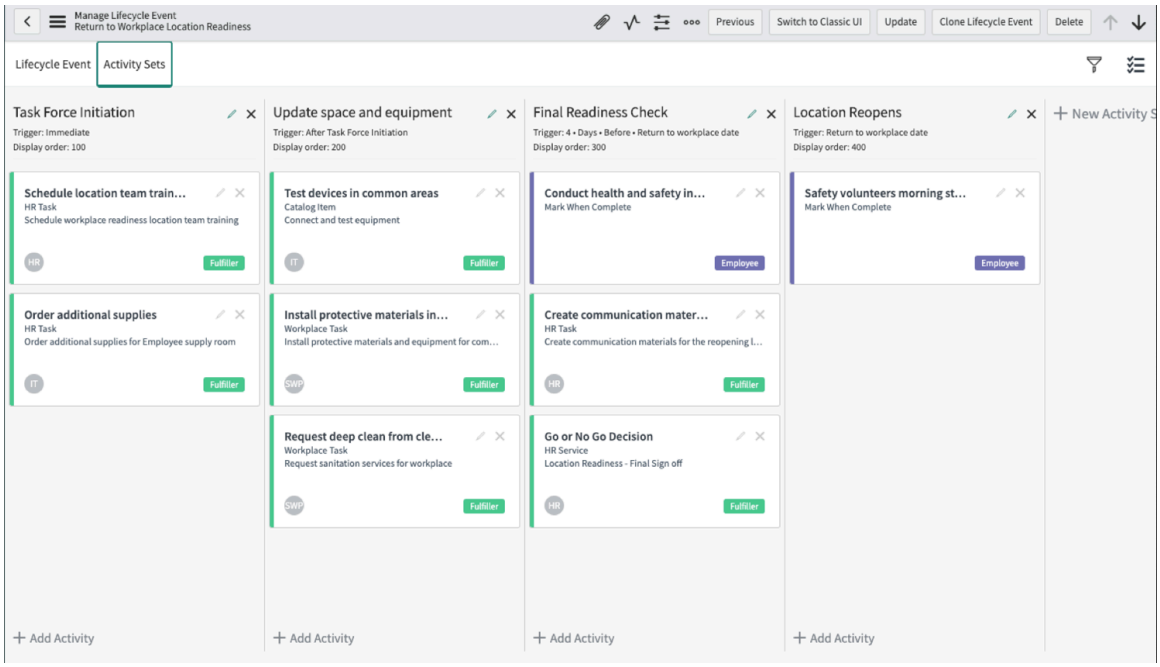
Back at the workplace - Activity Set

Contains the following activities:

- Check in any borrowed equipment to IT: An HR task for employees to return any borrowed IT equipment while working from home.
- Complete contact log: An HR task for the employee to complete their daily contact log after their first day back in the office.

Follow Up - Activity Set

Contains the following activities:



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Feedback: An HR task assigned to employees that collects feedback using the Feedback on your Return to Workplace Experience survey.

Return to Workplace Location Readiness lifecycle event

The Return to Workplace Location Readiness lifecycle event helps you confirm that your workplace is ready for employees to return safely.

The Return to Workplace Location Readiness lifecycle event provides you with preconfigured process flows, activity sets, activities, templates, and sample content items.

The structure for Return to Workplace Location Readiness is hierarchical with the lifecycle event at the top.

Return to Workplace Location Readiness - Lifecycle Event

Provides basic information about the lifecycle event like title, description, active, if the subject person on a case can view it, and the type.

These activity sets appear under the lifecycle event.

Task Force Initiation - Activity Set

Contains the following activities:

- Schedule location team training meeting: An HR task for agents to verify scheduling of workplace readiness training.
- Order additional supplies: An HR task that provides a checklist to agents to confirm supplies for returning to work are ordered.

Update space and equipment - Activity Set

Contains the following activities:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Test devices in common areas: A catalog item assigned to agents to verify equipment in common areas like printers or fax machines are connected and working.
- Install protective materials in common areas: An HR task for agents to confirm that protective materials and equipment are installed in common areas.
- Request deep clean from cleaning services: An HR task for agents that provides a checklist to follow for requesting sanitation services for reopening your workplace.

Final Readiness Check

Contains the following activities:

- Conduct health and safety inspection: An HR task for agents to verify completion of a health and safety inspection.
- Create communication materials for the reopening location: An HR task for agents to create communication materials providing information on your workplace reopening.
- Go or No Go Decision: An HR service that contains an HR task that provides agents with a checklist to follow and help determine if their workplace should reopen. There is also an approval activity type to determine moving to the next activity set.

Location Reopens

Contains the following activity:

Safety volunteers morning standup: An HR task for safety volunteers to meet prior to the reopening of your workplace location.

Return to Workplace Knowledge Management

Knowledge Management provides information to your employees during the return to workplace process.

Providing links to knowledge base (KB) articles enables your employees to be self-sufficient, answer common questions, and helps with the efficiency of the process.

The following knowledge articles are provided with Enterprise Employee Experience Pack. You can edit these articles, or substitute your own articles.

- Return to Workplace Company Updates (KB0088880): Found in the **Return to Workplace - Get Ready to Return Banner** content, under the **Announce and Plan Return** campaign bundle.
- Manager Guide to Return to Work (KB0088881): Sample KB article not used in campaigns or lifecycle events.
- Social distancing and safety tips for common workspaces FAQ (KB0088883): Found in the **Return to Workplace - Welcome Back Notification** campaign content, under the **Welcome back to the workplace** campaign bundle.
- Workplace Health and Safety Policy FAQ (KB0088882)
  - Found in the **Review workplace health & safety guidelines** activity, under the **Get ready to return** activity set, under the **Employee Return to Workplace** lifecycle event.
  - Also found in the **Return to Workplace Welcome Back** campaign content, under the **Welcome back to the workplace** campaign bundle.

For more information on using HR Knowledge Management, see HR Knowledge Management.

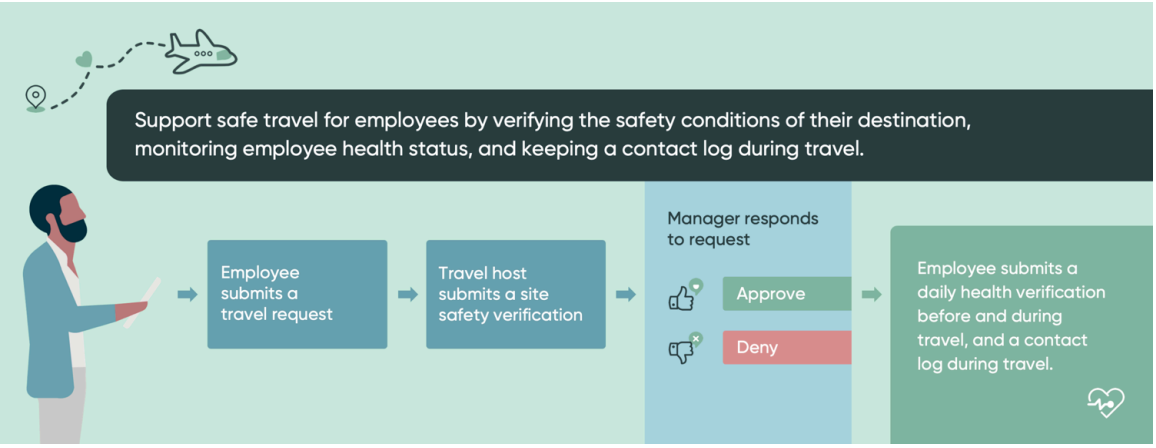
Accessing the Return to Workplace knowledge articles

Create or modify knowledge articles to share information across your organization.



Before you begin
Role required: knowledge_admin

Procedure

1. Navigate to **Knowledge** > **Articles** > **All**.
2. Select a knowledge article to edit.
3. Click **Checkout**.
4. Make your edits.
5. Click **Update**.

Employee Travel Safety

Use the ServiceNow® Employee Travel Safety application to help support safe travel for employees by verifying the site safety and policy compliance of destinations, monitoring employee health status, and keeping a contact log during travel.

Before booking travel in a travel management system, employees request permission for their trips. The employee's manager or a designated travel approver can approve or reject the travel request based on COVID-19 case data and a site safety evaluation for the destination.

When an employee's travel request is approved, monitor their health status using a daily health verification that the employee submits before and during the trip. Employees can also keep a daily contact log for the duration of the trip to track potential exposure.

Use with other Safe Workplace suite applications

Employee Travel Safety is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

- With the Employee Readiness Surveys application, evaluate the readiness of your users to return to the workplace by asking them to fill in a survey.
- Before users re-enter workspaces, use the Employee Health Screening application to screen users and ensure compliance with your entry requirements, such as a temperature check and PPE.
- With the Explore Workplace Core application, prepare for the return of users by configuring and maintaining clean and socially distanced workspaces for them to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- You can manage the inventory of safety equipment for your workforce with the Workplace Personal Protective Equipment Inventory Management application.
- With the Contact Tracing application, evaluate the readiness of your users to return to the workplace by using data such as badge scans, Wi-Fi access logs, and daily contact logs to help identify potential user interactions.

All Safe Workplace suite applications are available in the ServiceNow Store.

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team. See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

Install Employee Travel Safety

You can install Employee Travel Safety if you have the admin role.

Before you begin

Employee Travel Safety requires the following applications.

- ServiceNow® Employee Readiness Core
- ServiceNow® COVID-19 Global Health Data Set

The ServiceNow® Employee Health Screening and ServiceNow® Emergency Outreach applications can optionally be installed to have employees complete a daily health verification before and during travel.

The ServiceNow® Contact Tracing and Emergency Outreach applications can optionally be installed to have employees complete a daily contact log during travel.

Role required: admin

Installation instructions for self-hosted and federal environments

Type	Instructions
Commercial on-premise	Visit the ServiceNow® Store to download and install the application.
Federal hosted	See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
Federal on-premise	If you are a federal on-premise customer and you would like to install this application, reach out to your sales representative or open a Now Support or HIWAVE ticket. In the ticket, request to be routed to the SHOT team. See the Federal downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030260] article in the Store Help Center for more information.
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

If you've subscribed to the Safe Workplace suite and you already have some of the apps installed, refer to the following order of installation for the remaining apps.

- Emergency Outreach (sn_imt_checkin)
- Employee Health Screening (sn_imt_monitoring)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Workplace PPE Inventory Management (sn_imt_ppe)
- Employee Readiness Surveys (sn_imt_readiness)
- COVID-19 Global Health Data Set (sn_imt_c19datafeed)
- Contact Tracing (sn_imt_tracing)
- Emergency Self Report (sn_imt_quarantine)
- Workplace Core (sn_wsd_core)
- Safe Workplace Dashboard (sn_imt_dashboard)
- Emergency Response Management for Now Mobile (sn_imt_mobile)
- Employee Travel Safety (sn_imt_travel)
- Health and Safety Testing (sn_imt_health_test)
- Vaccination Status (sn_imt_vaccine)

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for `Employee Travel Safety`.
3. Click **Install**.

   The Application installation dialog box opens.
4. Click **Activate**.

Components installed with Employee Travel Safety

Several types of components are installed with Employee Travel Safety, including user roles and tables.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles installed

Role title [name]	Description	Contains roles
Employee Travel Safety admin [sn_imt_travel.admin]	Role required to set up Employee Travel Safety properties.	sn_imt_travel.approver
Travel approver [sn_imt_travel.approver]	Role required to view and approve travel requests for all employees. This role is assigned to the Travel Approvers group.	approver_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Role title [name]	Description	Contains roles
	Note: Managers must be assigned the approver_user role to approve travel for the employees that they supervise. Don't assign managers the sn_imt_travel.approver role unless it's acceptable for them to view and approve travel requests for all employees.	

Tables installed

Table	Description
Employee Travel Safety Request [sn_imt_travel_request]	List of all employee travel requests.

Configure Employee Travel Safety

Complete all configuration tasks to ensure that travel notifications and approvals are set up correctly for your company.

Set up travel approvers

Set up user groups and roles so that employee travel can be approved by managers or by designated travel approvers.

Setting up manager approval or designated approvers is a required configuration step for the Employee Travel Safety application.

Manager approval

To set up travel approval by managers, assign the approver_user role to all managers. With this role, managers can only view and approve travel requests for the employees they directly supervise.

Designated approvers

To set up designated travel approvers, add users to the Travel Approvers group. Members of this group can view and approve travel requests for all employees. Don't add managers to the Travel Approvers group unless it's acceptable for them to view and approve travel requests for all employees.

By default, a travel request must be approved by both the employee's manager and a member of the Travel Approvers group. If the employee doesn't have a manager listed in your ServiceNow instance or there are no users in the Travel Approvers group, one approval is enough to approve the travel request. An employee's travel request is automatically rejected if the employee doesn't have a manager listed in your ServiceNow instance and there are no users in the Travel Approvers group. For information about changing the default approval settings, see Modify the travel approval flow.

Set up Employee Travel Safety properties

Set up Employee Travel Safety properties to ensure that site safety verification emails, employee contact logs, and employee health verifications are managed according to your company's requirements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_imt_travel.admin

About this task
Setting up the Employee Travel Safety properties is a required configuration step for the Employee Travel Safety application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
	Health verification notifications are only sent if the *sn_imt_travel.daily.health.verificatio* property is enabled. **Note:** Employees who are already enrolled in daily health v their travel request is approved will see no change. T additional notifications and they will still be enrolled complete.
Cancels a travel request if a health verification is not completed after a number of hours. [sn_imt_travel.allow.cancellation]	When enabled, travel requests are canceled if employee a health verification by the deadline. Enabling this prope *sn_imt_travel.daily.health.verificatio* property is also enabled.
For automatic request cancellation, enter the number of hours. [sn_imt_travel.cancellation_duration]	Sets the deadline for employees to complete a health ve property requires that the *sn_imt_travel.allow.* property is enabled.
Enables outreach to traveling employees about their daily travel contacts. [sn_imt_travel.daily.contact.log.outreach.flag]	When enabled, employees receive notifications to comp log during internal travel. Contact log notifications are no travel. Employees must be assigned the sn_imt_tracing.c receive contact log notifications. This property requires t and Emergency Outreach applications. For more informa logs, see Contact Tracing. **Note:** Employees who are already enrolled in daily contact trip will see no change. They will not receive addition they will still be enrolled after their trip is complete.

3. Click **Save**.

Modify the travel approval flow

Modify the travel approval flow to change the default travel approval settings.

Before you begin

Role required: flow_designer

About this task

Modifying the travel approval flow is an optional configuration step for the Employee Travel Safety application. The travel approval flow is ready to use but can be modified to meet your company's requirements.

If you decide to modify the flow, deactivate the original flow and make a copy. Make any desired changes to the new flow, and then activate it. Modifying the copy makes it easier when you need to upgrade your ServiceNow instance.

Procedure

1. Navigate to **All** > **Flow Designer** > **Designer**.
2. In the Flows section, click **Travel Approval Flow**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Deactivate**, then click **OK** to confirm.
4. In the upper-right corner, click the More actions icon (⋯), then click **Copy flow**.
5. Enter a name for the new flow.
6. In the **Application** field, select **Employee Travel Safety**.
7. Click **Copy**.
8. Make any desired changes to the new flow.
   For example, in cases where an employee has a manager listed in your ServiceNow instance and there are also users in the Travel Approvers group, by default, both the manager and a travel approver must approve the request. This setting is defined in action 8.1 of the flow. You can modify this action so that approval is only required from either a manager or a travel approver, not both. To make this change, the AND condition to approve must be replaced with an OR condition.
9. When you're done modifying the flow, click **Activate**, then click **OK** to confirm.

Customize notification emails

Modify the notification emails that are sent to employees, managers and travel approvers, and employee travel contacts to customize the notifications for your company.

Before you begin

Role required: admin

About this task

Modifying the notification emails is a required configuration step for the Employee Travel Safety application. By default, the notifications use a ServiceNow® banner and the placeholder signature Workplace, Co. Update the notifications to use your company name and logo.

The Employee Travel Safety application uses the following notifications.

Notification	Description
Site Verification Request	This email is sent to the primary contact that an employee provides on their travel request to verify site safety and policy compliance. By default, the email asks the contact to confirm the following policies. • The site screens all employees and visitors for symptoms. • All employees and visitors are required to wear personal protective equipment, such as masks. • All employees and visitors are required to follow social distancing rules. This email is only sent if the *sn_imt_travel.email_site_verification* property is enabled.
Employee Travel Safety Approver Request	This email is sent to an employee's manager and all members of the Travel Approvers group asking them to approve or reject the travel request.
Employee Travel Safety Request Reminder	This email is sent to managers and travel approvers as a reminder to approve or reject pending travel requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Notification	Description
	This email is only sent if the *sn_imt_travel.enable_approval_email_reminders* property is enabled.
Travel Request Approval	This email is sent to an employee if their travel request is approved. The email has a link to your company's travel management system.
Travel Request Rejection	This email is sent to an employee if their travel request is rejected.
Travel-related contacts	This email asks an employee to complete a daily contact log. The email is sent to an employee daily for the duration of their trip. This email is only sent if the *sn_imt_travel.daily.contact.log.outreach.flag* property is enabled.
Travel-related health verification	This email asks an employee to complete a daily health verification. The email is sent to an employee daily once their travel request is approved though the duration of their trip. This email is only sent if the *sn_imt_travel.daily.health.verification.outreach.flag* property is enabled.
Travel request rescinded	This email is sent to an employee if they don't complete a health verification by the deadline. This email is only sent if the *sn_imt_travel.allow.cancellation* property is enabled.

Note:
All notifications except the Employee Travel Safety Approver Request are translated to the language selected on the employee's user profile. The Employee Travel Safety Approver Request is translated to the language selected on the manager's or travel approver's user profile. If no language is selected for a user, notifications are translated to the default language for the instance.

Procedure

1. Navigate to **All** > **System Notification** > **Email** > **Notifications**.
2. Click the notification that you want to update.
3. To view the default notification, click **Preview Notification**.
4. Navigate to the **What it will contain** form section.
5. In the **Message HTML** field, click **Insert/edit image** and select your banner image.

   Tip:
   The image must be added before the mail script so that it appears at the top of the email.

   If you don't already have an email banner image in your ServiceNow instance, you can upload an image to use. For instructions, see Upload one or more images.
6. Click the **Show Notification Scripts** related link.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. In the **Script** field, the code `template.print(util.getEmailCompanyLogo());` adds the default ServiceNow® banner to the email.
   Comment out or delete this line of code to remove the ServiceNow® banner.
8. In the **Script** field, replace all references to `Workplace, Co.` with your company name.
9. **Optional:** If you would like to make any other changes to the email notification, update the **Script** field as needed.
   If you change any text used in calls to `gs.getMessage` or `gs.getMessageLang`, you must provide translations for your custom text in the Message table [sys_ui_message]. For more information, see Message table.
10. Click **Update**.
11. Return to the notification record and click **Preview Notification** to confirm your changes.

Request permission to travel

Before booking travel in a travel management system, request permission for your trip. Your manager or a travel approver can approve or reject your request based on infectious diseases, such as COVID-19 case data and a site safety evaluation for your destination.

Travel request

Use the following process when requesting permission to travel:

1. From your service portal or Employee Service Center (ESC), request permission to travel.
2. An email is sent to your manager to approve or reject the request. The email has a link to the travel request.
3. After approval, the **Additional comments** field on the Employee Travel Safety Request form is updated with the travel destination and details on the number of COVID-19 cases for the past 14 days for the location.
4. Travel requesters can request travel on the **Catalog** or **Request Something** tabs in the service portal.
5. Travel requesters can request travel on the **Catalog** tab in the ESC.
6. Travel requesters can check the status of their requests on the **Requests** tab in the service portal or the ESC.
7. Managers or approval team members can view employee travel requests from the **Employee Travel Safety** form.

Create a request to travel

Before booking travel in a travel management system, follow these steps to request permission for your trip.

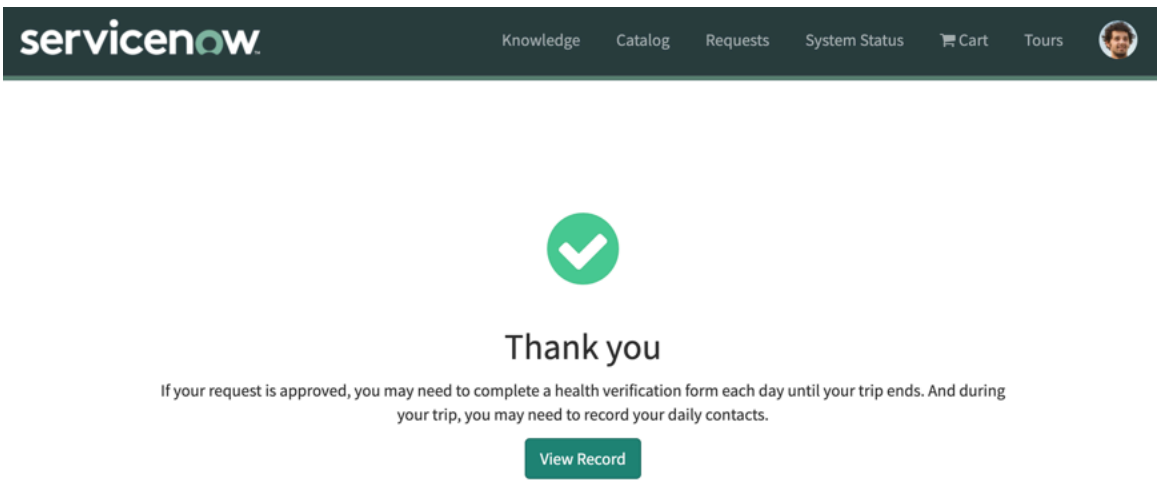
Before you begin

Role required: none

Procedure

1. Navigate to **All** > **Employee Travel Safety** > **Request Travel**.

   Note:
   To create a travel request in the Now Mobile app, navigate to **Health** > **Follow These Safety Practices** > **Request Travel Permission**.



2. On the form, fill in the fields.

Request permission to travel

Field	Description
Travel type	The travel type. Select **Internal** if you're traveling to a location within your company. Otherwise, select **External**.
Location	The company location that you're traveling to. This field appears only when **Internal** is selected from the **Travel type** field.
Area of travel	Country, state, or county that you're traveling to. This field is used to provide managers and travel approvers with infectious diseases, such as COVID-19 case data for your destination.
Primary contact name	Name of your host or other contact at your destination. This field appears only when **External** is selected from the **Travel type** field.
Primary contact email	Email address of your host or other contact at your destination. This field appears only when **External** is selected from the **Travel type** field.
Primary contact company	Company of your host or other contact at your destination. This field appears only when **External** is selected from the **Travel type** field.
Travel start date	Start date of your trip.
Travel end date	End date of your trip.
Reason for visit	Reason for your visit.
Notes	Any additional comments you would like to provide for your manager or the travel approvers.

3. Click **Submit**.
   When you submit the travel request, an email may be sent to your primary contact for the visit if your company has enabled this feature. The email notifies your contact about your intent to travel and asks them to verify the site safety and policy compliance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

You will receive an email notification when your travel request is accepted or rejected.

Depending on your organization's policies, you may need to complete daily health verifications before and during travel. You may also have to complete a daily contact log during travel. If you're required to complete these tasks, you will receive emails with instructions. If you receive the daily health verification email, make sure to submit the health verification every day if you're not symptomatic. Your trip may be canceled if you don't submit the health verification.

To view all your travel requests, navigate to **Employee Travel Safety** > **My Requests**.

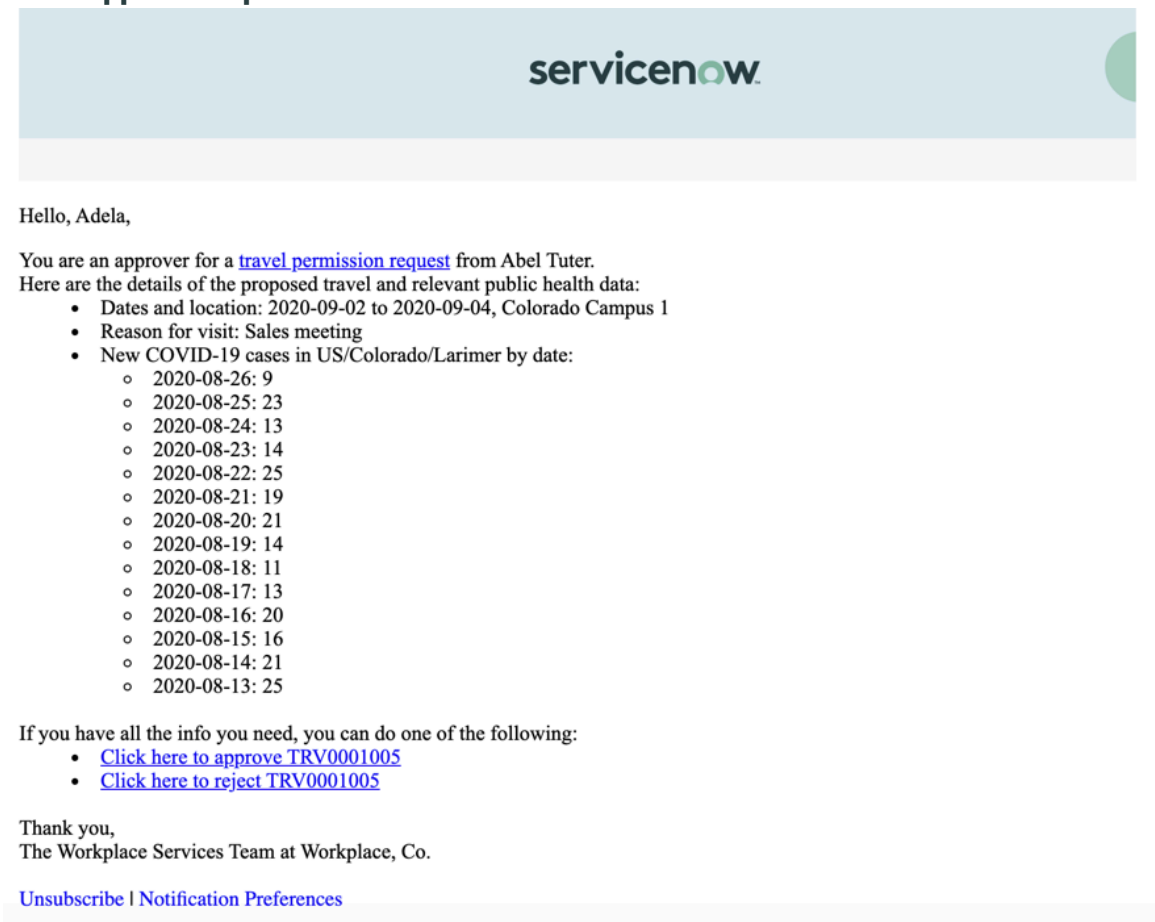
Manage a travel request

As a manager or travel approver, you can approve or reject travel requests.

Before travel requests can be approved, user groups and roles must be set up for managers or travel approvers. For more information, see Set up travel approvers.

There are multiple ways to view requests for travel:

- An email detailing a request for travel sent to the requester's manager and the group assigned.
- On the tabs in the Employee Service Center (ESC).
- On the **My Approvals** or **Requests** tabs in the service portal.
- From the View Travel Requests list.



Approve or reject travel requests

Managers or designated travel approvers are responsible for approving employee travel requests.

When an employee submits a travel request, an email is sent to the employee's manager and all members of the Travel Approvers group asking them to approve or reject the travel request. The email includes infectious diseases, such as COVID-19 case data for the travel destination. If the *sn_imt_travel.email_site_verification* property is enabled, the email also includes the results from the site safety verification. The email provides a link to the travel request, as well as direct links to approve or reject the request.

Travel approval request email

servicenow

Hello, Adela,

You are an approver for a travel permission request from Abel Tuter.
Here are the details of the proposed travel and relevant public health data:

- Dates and location: 2020-09-02 to 2020-09-04, Colorado Campus 1
- Reason for visit: Sales meeting
- New COVID-19 cases in US/Colorado/Larimer by date:
  - 2020-08-26: 9
  - 2020-08-25: 23
  - 2020-08-24: 13
  - 2020-08-23: 14
  - 2020-08-22: 25
  - 2020-08-21: 19
  - 2020-08-20: 21
  - 2020-08-19: 14
  - 2020-08-18: 11
  - 2020-08-17: 13
  - 2020-08-16: 20
  - 2020-08-15: 16
  - 2020-08-14: 21
  - 2020-08-13: 25

If you have all the info you need, you can do one of the following:

- Click here to approve TRV0001005
- Click here to reject TRV0001005

Thank you,
The Workplace Services Team at Workplace, Co.

Unsubscribe | Notification Preferences

Managers can also view travel requests for their employees by navigating to **Employee Travel Safety** > **My Employee's Requests**.

Users in the Travel Approvers group can view travel requests for all employees by navigating to **Employee Travel Safety** > **View Travel Requests**.

Employees receive an email notification when their travel request is approved or rejected.

Cancel a travel request

Cancel a travel request when appropriate, such as when a meeting can be held virtually. You, your manager, or a user with the sn_imt_travel.approver role can cancel a travel request.

Before you begin

Role required: sn_imt_travel.approver or admin

Procedure

1. Navigate to **Employee Travel Safety** and select the appropriate module.
2. Open the travel request to cancel and verify that it is the correct request to cancel. You can't cancel a travel request that is complete.
3. Click **Cancel**.

Result

An email notification stating that the request was canceled is sent to the requester. The notification includes the name of the person who canceled the travel request.

Vaccination Status

The ServiceNow® Vaccination Status application gives HR departments the ability to track the status of user vaccinations in the workplace. Organizations can collect vaccination data for workforce planning, as needed based on business requirements, and report on the readiness of the workplace. Users are empowered to submit documentation of completed vaccinations to meet their organization's health and safety requirement for a safe return to the workplace, while administrators can track the status of user vaccination in the workplace. Status updates can be made manually by the user.

Use with other Safe Workplace suite applications

Vaccination Status is part of a suite of ServiceNow® Safe Workplace suite applications. Use it with these other applications to help your organization prepare its workforce and workplaces to resume operations after emergencies and pandemics like COVID-19.

- With the Employee Readiness Surveys application, evaluate the readiness of your users to return to the workplace by asking them to fill in a survey.
- Before users re-enter workspaces, use the Employee Health Screening application to screen users and ensure compliance with your entry requirements, such as a temperature check and PPE.
- With the Explore Workplace Core application, prepare for the return of users by configuring and maintaining clean and socially distanced workspaces for them to use.
- You can manage the inventory of safety equipment for your workforce with the Workplace Personal Protective Equipment Inventory Management application.
- With the Contact Tracing application, evaluate the readiness of your users to return to the workplace by using data such as badge scans, Wi-Fi access logs, and daily contact logs to help identify potential user interactions.

All Safe Workplace suite applications are available in the ServiceNow Store.

Safe Workplace suite for federal customers

Federal customers using IL4 or FedRAMP environments will see the Safe Workplace suite applications ready and available to install on their nonproduction instances without having to make any special requests. Licenses are required to use Safe Workplace suite applications on production instances. Customers are responsible for configuring the apps to meet U.S. federal regulations and guidelines.

Installation instructions for self-hosted and federal environments

Automating vaccine response reviews

Your organization can automatically validate and review vaccine responses with Vaccination Status by integrating third-party validator services and enabling workflows.

Organizations may want methods to reduce the effort required to validate or approve vaccine responses in bulk. You can choose to automatically validate attachments used in vaccine reviews or automate the entire review process.

Validating vaccine responses

Validation systems work with Vaccination Status to review attachments in a user's vaccine response. First, the user attaches a supported attachment type, such as a SMART health card, and submits their vaccine response. The validator service API and the Vaccination Status flows analyze information from the attachment to see whether there is a match on the following items:

- First and last name
- Date received
- Vaccine code, such as CVX, to verify the vaccine manufacturer

For more information on submitting a vaccine response, see Report vaccination status to your organization.

The validation process creates work notes on the vaccine response record about the validation process to inform you whether the review was completed, and if not, why. You can also see a user's vaccine response record that details each attachment reviewed.

Note:
Work notes might not be comprehensive. If validation failed, you might want to investigate further to ensure that other information isn't also mismatched.

Once the validation is completed, you can review the vaccine response record to approve or deny the response. For more information on manually reviewing a vaccine response or confirming whether the validator service is working, see Confirm the reported vaccination status for a user.

To automate the validation process, you must do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Obtain credentials to integrate with the validator service of your choice.
- Create a connection and credentials alias for the validator service. For more information, see Create a Connection and Credential alias.
- Create a record for the validator service.
- Create a record for the attachment type the vaccine codes can be read from, such as a SMART health card.
- Create a subflow for the validator service. (A sample Validate vaccine response attachment template is available).
- Configure a vaccine code system used to read vaccine codes and validate submitted data. Some systems are included with Vaccination Status. Refer to your validator service for more information on the system they support.
- Configure a list of vaccine codes used by the vaccine code system. Some commonly supported codes are included with Vaccination Status.

> **Note:**
> Other commonly supported codes are provided by the Centers for Disease Control and Prevention (CDC). For more information, see COVID-19 Vaccine Related Codes.

- Activate the Auto-validate vaccine response flow to update the status of vaccine response reviews.

Automating Vaccine response reviews

Vaccination Status can automatically approve vaccine responses based on valid documentation and supported vaccine codes. Unapproved responses are left in the **Not yet reviewed** state so that Vaccination Status administrators or managers (if enabled) can perform a manual review.

To enable the automation of reviews, you must do the following:

- Configure Vaccination Status to automatically validate vaccine responses.
- Activate the *`Allow validation engine approvals to update Vaccine Review Outcome records`* property.

For more information on automating vaccine response reviews, see Automate reviews of vaccine responses.

Provided services and integrations

Validator services provided with Vaccination Status

Validator services	Integration details
The CommonTrust Network	The CommonTrust Network is a supported integration and validator service in Vaccination Status. The following items are provided and supported by Vaccination Status to streamline the integration process for the CommonTrust Network:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Validator services provided with Vaccination Status (continued)

Validator services	Integration details
	• An existing subflow, CommonTrust Network: Validate SMART Health Card • Records for CVX vaccine codes and the SMART health card vaccine system • SMART health card is available as an attachment type and linked to the CommonTrust Network validator service You must still obtain credentials for your organization to provide in the CommonTrust Network record. For more information on SMART health cards, see SMART Health Cards: Vaccination & Testing Implementation Guide. If you want to automate vaccine response reviews, see Automate reviews of vaccine responses.
Azure Form Recognizer service	Vaccination Status can integrate with Azure Form Recognizer. This integration enables the Azure Form Recognizer service to act as an alternate vaccine validation service. The Azure Form Recognizer service reads CDC Vaccination Cards and utilizes a trained machine-learning (ML) service, or model, to determine if there is a match for the user submitting the vaccine response. Validity is by the first and last name as each of these fields generates a confidence score provided by the Azure Form Recognizer service. This score is compared to the confidence threshold set in Vaccination Status. For more information, see Automating vaccine response reviews with the Azure Form Recognizer service. To configure Vaccination Status to use the Azure Form Recognizer service, see Configure Azure Form Recognizer integration for automatic vaccine response reviews.

Validate vaccine responses automatically

Configure Vaccination Status so that validator services can validate vaccine responses automatically with information from supported attachments.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Integrate with the validator service by doing the following:

- Obtain credentials for a validator service.
- Create a connection and credentials alias. For more information, see Create a Connection and Credential alias.

If your organization is using an integration that is already supported, such as the CommonTrust Network, then you need only to add your organization's credentials to the validator service record.

Role required: admin

Procedure

1. Configure the validator service.

   a. Navigate to **Vaccination Status** > **Validator services**.

   b. Select an existing validator service or, if you are creating a new one, click **New**.
   If you are selecting an integration that is already supported, such as the CommonTrust Network, you must enter your Connection alias and confirm the form is correct for your validator service.

   c. Fill in the fields on the form.

Validator service form

Field	Action
Name	The name of the validator service.
Connection alias	The connection alias for your validator service. For more information on creating a connection alias, see Create a Connection and Credential alias.
Validation subflow	The subflow used to confirm whether a submitted attachment is valid. A template flow is provided by default or you may create a flow and add it to this field. For more information on creating flows, see Create a flow. If you create your own subflow, it must have the same inputs and outputs as the template subflow.
Initial validator state	The initial state the validator service starts in prior to the completion of the review, such as **Ready**. The recommended state is **Ready** unless there is a preprocessing step.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Action
	Note: If the initial state is **Preprocessing**, then the redirect page must set the response record validator state to **Ready** so it works with the built-in validation flow.
Redirect page	(Optional) A reference to a service portal page the user will be redirected to after they report their vaccination.
Active	Option to activate the service.
Domain	The domain required for the validator service, such as **global**.

d. Click **Submit**.

2. **Optional:** Configure a vaccine code system used to read vaccine codes and validate submitted data.
   The vaccine code your system uses might be provided with Vaccination Status. Refer to your validator service's requirements for more information.
   a. Navigate to **Vaccination Status** > **Vaccine code systems**.
   b. Select **New**.
   c. Enter the name of the vaccine code system.
   d. Enter the URL for the vaccine code system.
   e. Select **Submit**.
3. Configure the vaccine response attachment type supported by the validator service.
   This attachment type users should use when they submit their vaccine responses.
   a. Navigate to **Vaccination Status** > **Attachment types**.
   b. Select **New**.
   c. Enter the name of the attachment type.
   d. Enter the name of the validator service.
   e. Enable the attachment type by selecting the **Active** check box.
   f. Set the domain to **global**.
   g. Select **Submit**.
4. **Optional:** Add common vaccine codes required by the vaccine code system and service.
   Common codes are provided with Vaccination Status. Refer to COVID-19 Vaccine Related Codes for additional common codes and the third-party service for codes their system supports.
   a. **Vaccination Status** > **Vaccine codes**.
   b. Select **New**.
   c. In the **Code System** field, add the corresponding system.
   d. In the **Code** field, enter the code used to identify information about the vaccine.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

e. Enter a description.

f. Select **Submit**.

5. Activate the Auto-validate vaccine response flow.

a. Navigate to **Process Automation** > **Flow Designer**.

b. Search for the Auto-validate vaccine response flow.

c. Select the flow.

d. Select **Activate**.

Result

You have enabled automated vaccine response validation. Work notes in the vaccine response record are updated with information on whether the attachments, and therefore the response, are valid. You can use this information to manually review vaccine responses in the approval portal.

What to do next

To automate vaccine response reviews so that they are set to **Approved** if validation was successful or left in the state **Not yet reviewed** (a manual review is required), see Automate reviews of vaccine responses.

Automate reviews of vaccine responses

Configure Vaccination Status to automatically approve reviews using the results of vaccine validations.

Before you begin

You must integrate with a third-party validator service and enable Vaccination Status to be able to automatically validate vaccine responses.

For more information, see Validate vaccine responses automatically.

Role required: admin

About this task

This process automates the entire review process so that validator engine can set a vaccine response to **Approved** or **Not yet reviewed** (needs a manual review). These results are based on the validation of vaccine responses. If you want only to validate vaccine responses and their attachments, you can choose to continue doing manual reviews in the approval portal. For more information, see Validate vaccine responses automatically.

Procedure

1. Navigate to **All** > **Vaccination Status** > **Properties**.
2. Locate the *`Allow validation engine approvals to update Vaccine Review Outcome records`* property and select **Yes**.
3. Click **Save**.

Result

Automated vaccine response reviews are enabled for your organization. The validator engine will automatically determine whether a vaccine response is approved or needs a manual review based on information from the attachment type.

Automating vaccine response reviews with the Azure Form Recognizer service

Your organization can automatically review and validate vaccine responses with Vaccination Status by integrating with the Azure Form Recognizer service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Validating vaccine responses with confidence scores

Vaccination Status can work with the Azure Form Recognizer Service to approve vaccine responses or flag them for further review. Use your own trained machine-learning (ML) service from Azure to read Centers for Disease Control and Prevention (CDC) Vaccine Cards or use the trained model provided by the ServiceNow® platform. If you use your own model, the fields compared must exactly match the names expected in the validation code. Currently, those fields are the **First Name** and **Last Name** fields.

- For more information on Azure Form Recognizer service, see Azure Form Recognizer documentation.
- For more information on the Azure Form Recognizer API used by default, see Form Recognizer 2021-09-30-preview.

When the Azure Form Recognizer service reads the uploaded CDC Vaccination Card, it generates a confidence score for each field. The confidence score is compared to the confidence threshold set by a Vaccination Status administrator in Vaccination Status. With a validation engine, the confidence threshold is used to approve or flag the user's response and update their vaccine profile.

- If the uploaded vaccination card passes the confidence threshold and matches the name on the user's vaccine profile, the vaccine response is approved.
- If the uploaded vaccination card has a name that does not match, the outcome of the review in the vaccine profile is updated to require a review (**Not yet reviewed**).

For more information on the validation engine used with the validator services, see the following topics:

- Automate reviews of vaccine responses
- Set up Vaccination Status properties

Integration details

The following items are provided and supported by Vaccination Status to streamline the integration process:

- An existing sub-flow, Azure Form Recognizer: Validate vaccination card
- CDC Vaccination Card is available as an attachment type and linked to the Azure Form Recognizer validator service

  Note:
  You must still obtain credentials for your organization to provide in the Azure Form Recognizer connection alias.

- A trained model that you can use when setting up your integration

For more information on integrating with the service and enabling automatic reviews, see Configure Azure Form Recognizer integration for automatic vaccine response reviews.

Configure Azure Form Recognizer integration for automatic vaccine response reviews

As a Vaccination Status admin, configure Vaccination Status to work with Azure Form Recognizer service and automate vaccine response approvals.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

To integrate with the Azure Form Recognizer service, you should do the following:

- Use Azure Form Recognizer and obtain connection credentials
- Train a machine-learning model if you are using your organization's own model for validation purposes

Role required: sn_imt_vaccine.admin

About this task

When you add your credentials to connect to the Azure Form Recognizer service, you may choose to use a ServiceNow -trained model or a model created by your organization.

- For more information on Azure Form Recognizer service, see Azure Form Recognizer documentation.
- For more information on the Azure Form Recognizer API used by default, see Form Recognizer 2021-09-30-preview.

Procedure

1. Enable the *`Allow validation engine approvals to update Vaccine Review Outcome records`* property to automate the approvals of vaccine responses.
   a. Navigate to **All** > **Vaccination Status** > **Properties**.
   b. Locate the *`Allow validation engine approvals to update Vaccine Review Outcome records`* property and select **Yes**.
2. Configure the Azure Recognizer service confidence threshold property used to validate Centers for Disease Control and Prevention (CDC) Vaccination Cards.
   The value in this step is the confidence level required by the service to determine that a submitted CDC Vaccination Card matches the user.
   a. Navigate to **All** > **Vaccination Status** > **Properties**.
   b. Navigate to the *`Azure Form Recognizer confidence threshold, a decimal value between 0 and 1`* [sn_imt_vaccine.azure_form_recognizer_confidence_threshold] property.
   c. Enter a decimal value to represent the confidence threshold required for a vaccine response to match.
   d. Select **Save**.
3. Add your connection credentials and trained model to the Azure Form Recognizer validator service.
4. Activate the Auto-validate vaccine response flow.
   a. Navigate to **All** > **Process Automation** > **Flow Designer**.
   b. Search for the Auto-validate vaccine response flow.
   c. Select the flow.
   d. Select **Activate**.

Result

When users add CDC Vaccination Card attachments to their vaccine responses and set the attachment type to CDC Vaccination Card, the following occurs:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The card is read by the Azure Form Recognizer service and trained machine-learning (ML) model
- A confidence score is generated
- The confidence score is compared to the configured threshold
- The validation engine sets the Vaccine Review Outcomes based on whether the first and last names matched

Configure country-specific data retention settings for Vaccination Status

Configure the data retention settings for vaccine responses so your data retention policy is country-specific.

Before you begin

Role required: sn_imt_core.admin, sn_imt_health_test.admin, or sn_imt_vaccine.admin

About this task

Employers remain solely responsible for complying with their legal obligations under applicable law, including data protection laws on collection, use, disclosure, and retention of personal data, and should enable, choose not to enable, or customize any functionality available within the application to meet the Employers' specific requirements.

The **Vaccination Status data retention period (in days)** property sets the number of days that the user-reported vaccination status data is available in the Vaccine response table [sn_imt_vaccine_vaccine_response] before it is deleted automatically. The *Data Retention Job for Vaccination Status* scheduled job runs daily to delete records that have an updated date past the specified retention period.

Note:
Any historical data retained for use in the Vaccination Status Dashboard is count data only. Personally identifying information is removed by default. If the vaccine responses are deleted before the duration is met, the reported statuses and attachments are deleted, too.

Enable the **Use country-specific data retention policy for Vaccination Status** property [sn_imt_vaccine.use_country_specific_data_retention_policy] and use the Data Retention module in Employee Health and Safety Status to define policies at the country-level.

Procedure

1. Navigate to **All** > **Vaccination Status** > **Properties**.
2. Set the **Use country-specific data retention policy for Vaccination Status** property to **true**.
3. Click **Save**.
4. Generate location policies for Vaccination Status.
   a. Navigate to **Employee Health and Safety Status** > **Data Retention**.
   b. Click **Generate Location Policies**.
   The default number of days is based off the value in the **Vaccination Status data retention period (in days)** property.
5. Open the location policy that you want to modify.
6. Enter the number of days that you want to retain data for in the **Retention period (in days)** field.
7. Click **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
When the *Data Retention Job for Vaccination Status* daily scheduled job completes or is manually executed, the data of users in those locations have their records retained or deleted based on their country's data retention policy.

Set up privacy consent for Vaccination Status

Set up privacy consent for users who are providing their vaccination data to your organization.

Before you begin
Role required: sn_imt_core.admin and sn_imt_checkin.checkin_admin

About this task
Use Emergency Outreach to send a privacy consent form to users. Users must agree to the privacy consent before they can submit their vaccination status.

Procedure
1. Customize the privacy consent template.
   a. Navigate to **Employee Health and Safety Status** > **Privacy Consent Templates** and click **Vaccine Administration**.
   b. Fill in the placeholder text with the name of your organization and contact information.

      Note:
      If you customize the privacy consent template with HTML, such as including tables or links, the HTML renders properly in the email that is sent to users. The HTML does not render in the privacy consent form when a user is submitting their response.

   c. Click **Update**.
2. Assign the sn_imt_core.privacy_consent_user role to all users who will be reporting their vaccination status.
   This role enables users to complete the privacy consent.
3. Add all users from the User [sys_user] table who will be reporting their vaccination status to a Safe Workplace audience.
   a. Navigate to **Emergency Outreach** > **Safe Workplace Audience** and click **Vaccine Privacy Consent Audience**.
   b. Add users to the audience.
      For detailed instructions about adding users to an audience, see Add a Safe Workplace audience.
   c. Click **Update**.
4. Configure an outreach to send the privacy consent to users.
   a. Navigate to **Emergency Outreach** > **View Outreaches** and click the **Vaccine Privacy Consent Placeholder** outreach.
      This outreach is preconfigured to use the Vaccine Privacy Consent Audience and the Vaccine Administration privacy consent template.
   b. Make any modifications to the outreach if needed, such as scheduling a time to send.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For detailed instructions about configuring an outreach, see Send notifications for an emergency.

c. **Optional:** Enable the outreach to provide location-specific privacy consents by selecting the **Use Country** option on the **Content configuration** tab.

(Optional) When enabled, the privacy statement text in Location Privacy Configuration takes precedence over text in the privacy consent templates. This text is used for the outreach, system notification email, and push notification. If you need to update the text that users receive, you must change the location's privacy statement.

For more information on updating a location's privacy statement, see Generate location-based privacy configurations.

d. Click **Update**.

Configure vaccine or vaccine booster types for Vaccination Status

Create or modify vaccine or vaccine booster types that people can use to report their vaccination status.

Before you begin

Role required: sn_imt_vaccine.admin

About this task

Vaccine and vaccine booster reporting requires Vaccine response definition records. Each record contains vaccine-specific information so that users can properly report their vaccination status with the correct type of vaccine. For example, you can create a record for single-dose or multi-dose vaccine and set the number of days between doses. These configurations determine the questions users must answer when reporting their vaccination. Vaccination Status contains several generic COVID-19 vaccines that do not require configuration.

Procedure

1. Navigate to **All** > **Vaccination status** > **Vaccine response definitions**.
2. Click **New** or open a record.
3. On the form, fill in the fields.

Vaccine response definition form

Field	Description
Vaccine type	The type of vaccine, such as a COVID-19 mRNA vaccine or a vaccine booster.
Manufacturer	The name of the vaccine manufacturer.
SMS friendly name	A display name for the vaccine that displays in SMS messages.
Number of doses required	Number of doses required for full vaccination.
Booster parent vaccine	The parent vaccine the booster supports, such as a booster for a COVID-19 mRNA vaccine.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: The **Booster parent vaccine** field appears only when you set the **Vaccine type** to **Booster**.
Recommended days until booster required	Number of days since vaccination before a booster is required. This field is visible only if **Vaccine type** is set to **Booster**.

4. Click **Submit**.

Virtual Agent conversations for Vaccination Status

Vaccination Status provides a Virtual Agent conversation that enables users to report their vaccination status via SMS.

A ServiceNow® Virtual Agent conversation topic defines the dialog between the Virtual Agent (chatbot) and the user to accomplish a specific goal. The provided Vaccine conversation topic asks whether the user has been vaccinated, the date that they received the vaccine, and the type of vaccine that they received.

Installation and setup requirements

To use Virtual Agent with SMS, your organization must have a Twilio account and phone number. You must also install the Virtual Agent plugin (com.glide.cs.chatbot) and set up the Conversational SMS Integration with Twilio application (sn_va_sms_twilio). For more information, see Set up the Conversational SMS Integration with Twilio.

On-premise customers who install the Safe Workplace applications in the Rome release for the first time require a scoped admin role to create an approved scope-to-scope Restricted Caller Access (RCA) record in Vaccination Status. This cross-scoped access is required for Conversational SMS Integration with Twilio to function in the Vaccination Status application.

The RCA record should have the following values set:

Field	Value
Source Scope	Emergency Outreach
Source Type	Scope
Status	Vaccination Status
Application	Vaccination Status
Target Type	Scope

For more information on creating caller access records, see Set application scope, application resource, and event access.

Configuration

To receive SMS messages for Vaccination Status, users must have a mobile phone number listed on their user record [sys_user]. Mobile numbers must be in E.164 format. For example, `+18585551212`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Privacy consent for Vaccination Status must be configured before users can report their vaccination status via SMS. For instructions, see Set up privacy consent for Vaccination Status.

Note:
Users must agree to the privacy consent before they can submit their vaccination status. The Vaccine conversation topic prompts users to complete the privacy consent via SMS if they haven't already submitted their consent. Users must belong to an audience associated with a vaccine privacy consent outreach to be able to complete the privacy consent via SMS.

Vaccination Status uses an SMS outreach to let users know that they can report their vaccination status via SMS. The outreach provides users with the information that they need to begin interacting with the Vaccine Virtual Agent conversation. To configure the outreach, add users to the placeholder Vaccination status request audience. For detailed instructions about adding users to an audience, see Add a Safe Workplace audience. Then, add the audience to the placeholder Vaccination status request outreach and make any modifications to the outreach if needed, such as scheduling a time to send.

Once users receive the SMS outreach, they can report their vaccination status through the Vaccine Virtual Agent conversation. The Vaccine conversation topic is ready to use without modifications, but can be customized to meet your organization's requirements. To view or edit the Vaccine conversation topic, navigate to **Collaboration** > **Virtual Agent** > **Designer**. For more information about updating conversation topics, see Virtual Agent Designer.

The Vaccine conversation provides the user with options to select which type of vaccine they received. These options are pulled from the Vaccine response definition table [sn_imt_vaccine_vaccine_response_definition]. To set the display name for a vaccine type, enter the name in the **SMS friendly name** field on the vaccine response definition record.

Report vaccination status to your organization

Provide your organization with information about whether you received a vaccine and the date that you received it.

Before you begin

Before you can submit your vaccination status, you must respond to the vaccine privacy consent.

Note:
Vaccine admins can report a user's vaccination status for them, however, the admin must first respond to the vaccine privacy consent.

Role required: sn_imt_core.privacy_consent_user

About this task

You can report your vaccination status to meet the requirements of your organization. Along with the fillable form, you may include any attachments that may be necessary, such as a SMART health card, Centers for Disease Control and Prevention (CDC) Vaccination Card, or any other form of verification that your organization may require.

Note:
For automatic vaccine validation, your organization must configure their instances to support the SMART health card or CDC Vaccination Card attachment types.

Validator Services and Attachment Types

Validator Service	Attachment Type
The CommonTrust Network	SMART health card

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Validator Services and Attachment Types (continued)

Validator Service	Attachment Type
Azure Form Recognizer service	CDC Vaccination Card

Procedure

1. Navigate to **All** > **Vaccination Status** > **Report vaccination**.

   Note:
   To report your or another user's vaccination status in the Now Mobile app, navigate to **Health** > **Follow These Safety Practices** > **Report Vaccination**.

2. Determine the user you are submitting vaccination status for.
   - If you are a Vaccine admin, submit your vaccination status or another user's status by selecting the user you are submitting information for, and complete the Report Vaccination form.
   - If you are not an admin, complete the Report Vaccination form.
3. On the form, fill in the fields.

Report Vaccination form

Field	Description
Do you want to add vaccine dose information?	The vaccine dose information that you want to provide. ○ Selecting **Yes** reveals the fields required to submit vaccine dose or booster information. ○ Selecting **No** confirms that you do not have vaccine doses or boosters to add. ○ Selecting **Prefer not to say** confirms that you do not want to share your vaccine dose or booster information.
Vaccine	The type of vaccine or booster that you received. If you select a vaccine that requires more than one dose, such as **Covid-19 2 dose unknown manufacturer**, or you want to submit multiple different vaccines, you can select how many doses you want to report in the **How many doses do you wish to report?** field. **Note:** The **Vaccine** field appears only when **Yes** is selected as the answer to **Have you been vaccinated?**. Additional **Vaccine** fields appear if you are reporting more than one dose.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
How many doses do you wish to report?	The number of doses that you are reporting. If you select more than one dose, additional **Vaccine** and **Date administered** fields appear for each dose. For example, you can report multiple doses for the same vaccine, multiple vaccines, or a booster with your vaccine doses.
Date administered	The date that you received your dose. If you are reporting more than one dose, add the date administered for each dose or booster (**Second date administered**, **Third date administered**, or **Fourth date administered**). The date that you received your first dose.
Attachment type	The type of attachment that you are submitting if it is required by a validator service to automatically review your vaccinations. For example, a SMART health card or CDC Vaccination Card can be used to automatically validate vaccine responses if enabled by your organization. **Note:** **Attachment type** is not a required field for all attachments. You can submit images or other documentation that might require manual review.

4. **Optional:** Add attachments, such as a SMART health card or an image of supporting documentation, by selecting **Add attachments**.

   (Optional) For more information on supported formats, see Document Viewer.

   Note:
   If you are adding an attachment required by a validator service, ensure that you've selected the correct **Attachment type**.

5. Click **Submit**.
   - If you are a Vaccine admin, you are returned to an empty Report Vaccination form to submit another vaccination.
   - If you are a user, you are returned to the health and safety status page.

What to do next

Your organization might require that you be vaccinated before returning to the site. To check your progress on all site entry requirements, see View your health and safety status.

Note:
You are not considered fully vaccinated until 14 days after receiving your vaccination (single-dose vaccine) or your final dose (multi-dose vaccine).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Depending on your organization's requirements, if your vaccine has a vaccine booster available, you might not be considered fully vaccinated until you report receiving your booster.

Review your vaccine responses

If you would like to review your recently reported COVID-19 vaccinations or add an attachment to a record, access your previous vaccine responses.

Before you begin

Role required: sn_imt_core.privacy_consent_user

Procedure

1. Navigate to **All** > **Vaccination Status** > **My vaccinations**.
2. Select the vaccine response that you would like to add an attachment to or review.
3. Modify the record by adding an attachment or review the record.
   - If you are adding an attachment, such as proof of vaccination, add the attachment and then click **Update**.

     Note:
     For information on managing attachments, see Manage attachments.
   - If you are reviewing the record, review the record and click **Back** to return to the list of vaccine responses.

Confirm the reported vaccination status for a user

As a Vaccination Status admin or manager, use the Employee Readiness Core Approval Portal to confirm a user's reported COVID-19 vaccination status.

Before you begin

Your organization must install both Health and Safety Testing and Vaccination Status to use the Approval Portal.

- For more information on installing Health and Safety Testing, see Install Health and Safety Testing.
- For more information on installing Vaccination Status, see Install Vaccination Status.

Activate the *sn_imt_vaccine.allow_managers_ability_to_update_vaccine_response_records* property to enable all managers to confirm the reported vaccination status of their direct reports. This property assigns the sn_imt_core.approval_portal_manager role to managers and grants access to the Approval Portal for vaccine responses.

Role required: sn_imt_vaccine.admin, sn_imt_core.approval_portal_manager, or sn_imt_core.health_and_safety_approver

About this task

In the Approval Portal, you can review the results of user-reported vaccinations and approve or reject the responses. Approvals can be based on a user's proof of vaccination, such as their attachments submitted with their vaccine response. If the *Reset Covid 19 Vaccine Complete to false if Vaccine Review Outcome is Rejected* property is enabled, a user's COVID-19 vaccine completed status depends on the responses being approved.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Managers can only confirm the vaccine responses only of their direct reports. Vaccine admins and health and safety approvers can confirm the responses of all users.

For more information, see Set up Vaccination Status properties.

Organizations that want to automatically review vaccine responses must configure Vaccination Status to support the functionality. For more information, see Automate reviews of vaccine responses.

Procedure

1. Navigate to **Employee Health and Safety Status** > **Approval Portal**.
   The default view displays all health test, vaccine dose, and exemption request records that require review.
2. **Optional:** Filter the results.
   - Change which record types are displayed by selecting a record type from the **Record** field list.
   - Change how the records are sorted by selecting a value from the **Sort** field list.
3. Search for the user whose vaccination status you want to confirm.
   The search behavior for the Approval Portal is a `starts with` search.
4. Select the record to review the information included in the Vaccine response modal and any attachments.

Vaccine response modal

Field	Description
Manufacturer	The manufacturer of the vaccine or booster dose.
Date administered	Date the vaccine or booster was administered.
Vaccine reviewed date	Date the vaccine response was reviewed.
Verified by	Who verified the vaccine response.
Vaccine review outcome	The result of the vaccine review, such as whether it was approved or denied.
Validator state	If your organization enables the ability for Vaccination Status to automatically validate vaccinations with validator services, such as CommonTrust Network, this field populates based on the review. A status of **Complete** indicates that the validator was able to successfully run. The results of the validation are included in the work notes.
Work notes	A log of work notes included for tracking purposes.

5. **Optional:** Add additional information to the record in the work notes and click **Save**.
   The ability to add work notes is unavailable to managers.
6. Approve or reject the user's submitted vaccination status.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To approve the user's vaccination status, click **Approve**.
- To reject the user's vaccination status, click **Deny**.

Result
The record is moved to the **Approved** or **Denied** tab based on your decision and the **Verified by** field in the user's vaccine response record is updated with your name. Based on your organization's configurations, your review might affect the user's COVID-19 vaccine complete status.

For more information on configuring Vaccination Status, see Set up Vaccination Status properties.

Request a vaccine exemption

Request a vaccine exemption from your organization with information about why you require an exemption.

Before you begin
Vaccine exemptions must be enabled by your organization to submit vaccine exemption requests. If you do not see the Request vaccine exemption module or you are unable to submit vaccine exemption requests, refer to your administrator to enable this feature.

Role required: none

Procedure
1. Navigate to **All** > **Vaccination Status** > **Request vaccine exemption**.

   Note:
   To request a vaccine exemption in the Now Mobile app, navigate to **Health** > **Follow These Safety Practices** > **Request Vaccine Exemption**.

2. On the form, fill in the fields.

Request Vaccine Exemption form

Field	Description
What is the vaccine exemption type?	The type of exemption you are requesting. Available values are religious, medical, or other.
Details for vaccination exemption request	Provide any useful additional details about the request for your organization.

3. **Optional:** Add any relevant attachments to the form.
4. Click **Submit**.
5. **Optional:** Review the status of your vaccine exemption request by navigating to **Health** > **Follow These Safety Practices** > **Vaccine Exemption Requests** in the Now Mobile app.

Result
Your vaccine exemption request is submitted to your organization for an administrator or a manager to review.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Confirm a vaccine exemption request for a user

As a Vaccination Status admin or manager, use the Employee Readiness Core Approval Portal to approve or deny a user's vaccine exemption request.

Before you begin

Your organization must install both Health and Safety Testing and Vaccination Status to use the Approval Portal.

- For more information on installing Health and Safety Testing, see Install Health and Safety Testing.
- For more information on installing Vaccination Status, see Install Vaccination Status.

Activate the *sn_imt_vaccine.allow_managers_ability_to_update_vaccine_exemption_records* property to enable all managers to approve or deny vaccine exemption requests for their direct reports. This property assigns the sn_imt_core.approval_portal_manager role to managers and grants access to the Approval Portal for vaccine exemption requests.

Your organization must enable vaccine exemptions. Exemptions do not affect a user's **Covid 19 Vaccine Complete** status in their vaccine profile. For more information, see Set up Vaccination Status properties.

Role required: sn_imt_vaccine.admin, sn_imt_core.approval_portal_manager, or sn_imt_core.health_and_safety_approver

About this task

Managers can only approve or deny the vaccine exemption requests of their direct reports. Vaccine admins and health and safety approvers can approve or deny the requests of all users.

Procedure

1. Navigate to **Employee Health and Safety Status** > **Approval Portal**.
   The default view displays all health test, vaccine dose, and exemption request records that require review.
2. **Optional:** Filter the results.
   - Change which record types are displayed by selecting a record type from the **Record** field list.
   - Change how the records are sorted by selecting a value from the **Sort** field list.
3. Search for the user whose exemption request you want to approve or deny.
4. **Optional:** Select the user's attachments to review any submitted documentation.
5. Select the record you want to review in the Vaccine exemption modal.

Vaccine exemption modal

Field	Description
Exemption type	Type of exemption being requested.
Status	Status of the exemption. The default status of an open exemption is **Submitted**.
Status updated by	Name of the admin or manager who updated the status of the user's request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Expiration date	The date the exemption expires. If this field is blank, the exemption does not expire. **Note:** If no expiration date is set manually or by your organization's configuration, the exemption does not expire. You can update this field in the modal or Vaccine Exemption Request record. If you need to update this field in the modal, manually enter an expiration date or pick from the calendar.
Details	Details related to the exemption request.
Work notes	A log of work notes included for tracking purposes.

6. **Optional:** Add additional information to the record in the work notes and click **Save**.
   The ability to add work notes is unavailable to managers.
7. Approve or deny the user's submitted exemption request.
   - To approve the user's exemption request, click **Approve**.
   - To reject the user's exemption request, click **Deny**

Result
The record is moved to the **Approved** or **Denied** tab based on your decision. The user's vaccine profile is updated to show who approved the vaccination exemption (if approved) and when it expires (if applicable).

Viewing vaccine profile records

Vaccine profiles contain vaccination information for vaccine admins to review, such as a user's vaccination date, whether users are exempt from receiving a vaccine, or the results of their most recent COVID-19 tests.

Vaccine profile records

You can access vaccine profile records and view a user's booster dose due date by navigating to **All** > **Vaccination Status** > **Vaccine profiles**. Then you can create a record or select an existing record to review.

Note:
You must have the Vaccine profile reader role or Vaccination Status admin role to view vaccine profile records.

In addition to the fields on the profile records, you can review additional details about a user, such as the dates for different manufacturers and doses and the status of a user's exemption request.

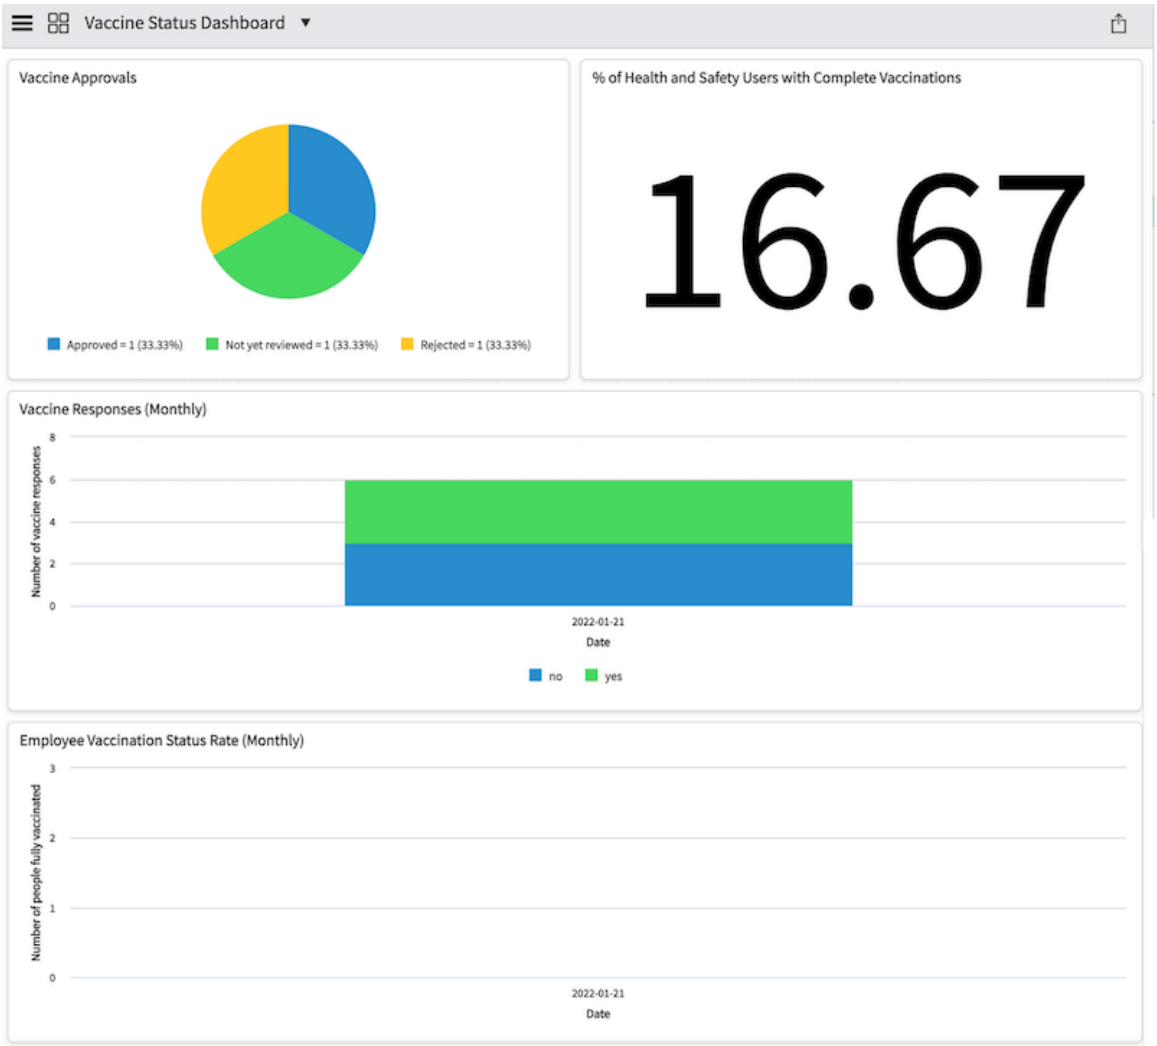
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Vaccine profile records



Field	Description
COVID-19 vaccine completed	Indicates whether a user is considered fully vaccinated. This status depends on a number of factors such as the type of vaccine, how your organization configures various system properties, and whether a booster is due.
User	Name of the user.
Vaccine exemption approved by	Name of the scoped administrator or manager who approved an exemption from requiring a COVID-19 vaccine for the user.
Vaccine exemption expiration date	Date that the vaccine exemption expires as set by the scoped administrator or manager.
Most recent COVID test date	Date that a COVID-19 test was most recently reported for the user.
Most recent COVID test result	The user's most recently reported COVID-19 test result.
Most recent COVID test result verified	Indicates that the most recently reported COVID-19 test result was verified by a scoped manager or administrator. For more information, see Confirm COVID-19 test results for a user.
Vaccine Review Outcome	The outcome of a user's most recently reported COVID-19 vaccine. This field is updated when the vaccine was reviewed by a Vaccination Status admin, manager, or validator service. The review outcome depends on your organization's review process and system configuration. If it was reviewed, it is either approved or rejected. **Note:** A validator service can only approve reviews or leave them in the same status as if they had not been reviewed. If the vaccine response could not be validated and approved, the response must be manually reviewed. For more information, see Confirm the reported vaccination status for a user.

Vaccination Status dashboard

Use the Vaccination Status dashboard to review reports that can provide insight into the vaccination status of your organization.

To access the Vaccination Status dashboard, navigate to **Self-Service** > **Dashboards**.

End user and goals

End user and goal	Required role	Benefits
Vaccination Status administrator: Review how well vaccination goals are being met and whether vaccine responses are being reported by the organization's users.	sn_imt_vaccine.admin	• Review the number of vaccine approvals that have been reviewed • Monitor the percentage of Employee Health and Safety Status users who have been vaccinated • Monitor the number of monthly vaccine responses for your organization • Monitor the monthly vaccine response rate for your organization

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

End user and goal	Required role	Benefits
Employee Readiness Core admin: Must determine employee readiness and understand core vaccination metrics, such as the percentage of users who are or are not vaccinated.	sn_imt_core.admin	• Review the number of vaccine approvals that have been reviewed • Monitor the percentage of Employee Health and Safety Status users who have been vaccinated • Monitor the number of monthly vaccine responses for your organization • Monitor the monthly vaccine response rate for your organization

Data visualizations

Title	Type	Description
Vaccine Approvals	Pie breakdown	A breakdown of vaccine approvals by type: • The number of vaccine responses that are approved • The number of vaccine responses awaiting review • The number of vaccine responses that are rejected
% of Health and Safety Users with Complete Vaccinations	Single score	Displays the percentage of health and safety users in your organization that are considered vaccine complete. **Note:** Vaccine complete depends on your organization's configurations and what number of vaccines (doses, boosters) count as vaccine complete.
Vaccine Responses (Monthly)	Stacked bar chart	Compares how many vaccine responses were received (yes) versus how many vaccine responses were not received (no) at a monthly rate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Title	Type	Description
Employee Vaccination Status Rate (Monthly)	Line	Indicates the number of people fully vaccinated. The rate is determined by the number of users in your organization with their vaccination profile COVID-19 completed status marked as true. **Note:** A historical data collection job, *Generate vaccine history records*, runs daily to ensure that the report chart is up-to-date.

Integrating with Safe Workplace suite

Integrate ServiceNow Safe Workplace suite data with a third-party system. For example, you can integrate Employee Health Screening data with badge reader software to ensure compliance with your workplace entry requirements.

Benefits

Integrate with Safe Workplace suite :

- Ensure compliance with your workplace entry requirements.
- Improve efficiency between multiple systems.
- Ensure accuracy and safety across systems by maintaining a single source of data.

Integrations

You can integrate with Safe Workplace suite in these ways:

Subscribe to request for entry updates

Send the result of each Employee Health Screening entry request to a third-party system by configuring a webhook.

Send data to the Employee Health Screening log

Send data from a third-party system to the Employee Health Screening application log table. You can use this table to create reports and monitor health trends.

Get employee or visitor health data

Send a GET request for Employee Health and Safety Status data to use in your third-party system. Get data to determine an employee or visitor's current health status.

Notice regarding use by organizations

All decisions in connection with the implementation of this application are at the sole decision of the Organization utilizing this application. Organizations agree that use of the application is not a representation by ServiceNow regarding the application's compliance with any law or regulation and any suggested language provided out of the box with the application does not constitute legal advice by ServiceNow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Organizations remain solely responsible for complying with their legal obligations under applicable law, including (but not limited to) data protection and employment laws, and should modify any language within the templates provided to meet the Organizations' specific requirements.

Notice regarding use by government agencies

ServiceNow is offering this application to government agencies and their authorized users, not to employees of government agencies in their individual capacities. Use of this application is being offered free of charge for a limited or extended time period and with no expectation of payment from the government agency to ServiceNow for use during that time period, nor does usage create an actual or implied future obligation on behalf of the government. ServiceNow hereby expressly waives any future claims for payment from the agency in connection with usage of the application. Government customers are solely responsible to confirm with the agency's Ethics Office or its authorized representative that acceptance and usage of the application is permissible.

All decisions in connection with the implementation of this application are at the sole decision of the government agency utilizing this application. Agencies remain solely responsible for complying with their legal obligations under applicable laws and regulations, including (but not limited to) data protection and employment laws and regulations, and should modify any language within the templates provided to meet the agency's specific requirements.

Subscribe to request for entry updates

Send the result of each Employee Health Screening entry request to a third-party system by configuring a webhook.

Before you begin

Sending outbound webhook calls requires the following plugins.

- ServiceNow Integration Hub Runtime (com.glide.hub.integration.runtime)
- Workflow Studio Action Step - Payload Builder (com.glide.hub.action_step.payload)
- ServiceNow Integration Hub Action Step - REST (com.glide.hub.action_step.rest)

These plugins must be requested through the Now Support Service Catalog. For instructions, see Request a plugin.

When you set up the webhook, the system automatically sends a REST request to a third-party endpoint every time an employee or visitor requests entry. Work with an administrator for the third-party system to determine the correct endpoint to provide.

> **Note:**
> The webhook does not include authentication headers in the request. Ensure that you provide an endpoint that includes query parameters to authenticate the request.

To learn more about the Employee Health Screening Request Entry module, see Conduct a health screen for entry.

Role required: sn_imt_core.admin or admin

Procedure

1. Navigate to **All** > **Employee Health and Safety Status** > **Outbound Webhooks**.
2. In the Webhook [sn_imt_core_webhook] table, click **New**.
3. On the form, fill in the fields.

Webhook form

Field	Description
Name	Internal identifier for the third-party endpoint.
Event	Event that you want to subscribe to. Options include:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Employee requested entry**: Sends an update every time an employee requests entry. ○ **Visitor requested entry**: Sends an update every time a visitor requests entry.
Endpoint	Endpoint to send the Employee Health Screening Request Entry data to. **Note:** The webhook does not include authentication headers in the request. Ensure that you provide an endpoint that includes query parameters to authenticate the request.
Secure parameters	Query parameters for the endpoint that must be handled securely, such as an authorization token. Provide parameters in the format `?param1=value&param2=othervalue`. **Tip:** If the third-party system that you're sending data to doesn't provide a securely generated authorization token, you can generate a token in your ServiceNow instance with the following script. `var secureRandom = GlideSecureRandomUtil; var secret = secureRandom.getSecureRandomString(30); gs.log(secret);`
Active	Option to set the record to active.

4. Click **Submit**.

Result

The Employee Health Screening application sends request entry data to the third-party endpoint every time an employee requests entry. The JSON payload contains the following data.

```
{
  "event": "entry.requested",
  "email": "aileen.mottern@example.com",
  "username": "aileen.mottern",
  "user_id": "a8f98bb0eb32010045e1a5115206fe3a",
  "location": "San Antonio",
  "location_id": "108486c7c611227500b093211aa88dcc",
  "access_granted": false,
  "updated": "2020-07-01 22:19:03"
}
```

Property	Description
event	Type of event defined in the Webhook table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
	Data type: String
email	Email address of the employee. Data type: String
username	Username of the employee from the Health and Safety Users [sn_imt_core_health_and_safety_user] table. Data type: String
user_id	Sys_id of the user record from the Health and Safety Users [sn_imt_core_health_and_safety_user] table. Data type: String
location	Location of the health screening. Data type: String
location_id	Sys_id of the location record from the Location [cmn_location] table. Data type: String
access_granted	Flag that indicates whether the employee was granted access as a result of the health screening. Valid values: • **true**: The employee passed the health screening and was granted access. • **false**: The employee did not pass the health screening and was not granted access. Data type: Boolean
updated	Date and time when the employee or visitor requested entry. Data type: Date/Time

Send data to the Employee Health Screening log

Send data from a third-party system to the Employee Health Screening application log table. You can use this table to create reports and monitor health trends.

Before you begin

Role required: sn_imt_core.api_logging_user

Procedure

1. Send a POST request to the Table API on your instance.
   For more information, see Table API.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Construct the endpoint using the Log Import [sn_imt_core_log_import] table.

Example

```
https://<your-instance>.servicenow.com/api/now/table/sn_imt_core_log_import
```

b. Set fields in the Log table by defining these request body parameters.

Field	Description
Source	Internal name to identify the third-party system making the log entry.
Level	User status, log level, or any other meaningful string. For example, you can enter `Allowed` or `Denied` to indicate whether the individual is cleared for entry.
Message	Description of the health screening. For example, `Temp too high`.
User	Employee or visitor email from the Health and Safety User [sn_imt_core_health_and_safety_user] table.
Additional Info	Data to provide any additional information. For example, `{'temperature':'101', 'location':'San Diego'}`.

Example
This example cURL request sends a record to the Log Import table.

```
curl
 "http://<your-instance>.servicenow.com/api/now/table/sn_imt_core_log_import" \
--request POST \
--header "Accept:application/json" \
--header "Content-Type:application/json" \
--data "{\"u_source\":\"BadgesRUs\",\"u_message\":\"Temp too
 high\",\"u_user\":\"abel.tutor@servicenow.com\",\"u_level\":
\"Denied\"}" \
--user 'username':'password'
```

The system automatically inserts the record into the Log [sn_imt_core_log] table.

2. Navigate to the Log [sn_imt_core_log] table to check that the data imported correctly.

What to do next

Generate reports on the data you imported to the Log [sn_imt_core_log] table using Reporting.

Get employee or visitor health data

Send a GET request for Employee Health and Safety Status data to use in your third-party system. Get data to determine an employee or visitor's current health status.

Before you begin

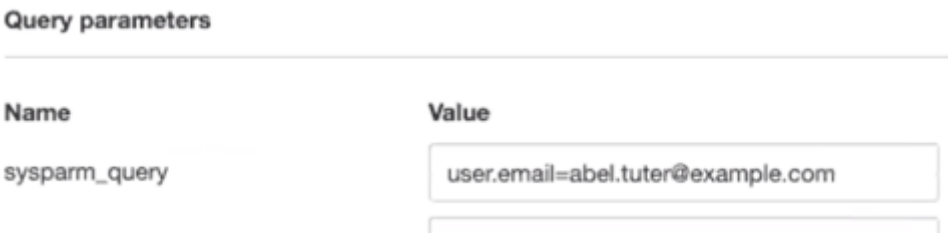
Role required: sn_imt_core.reader

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

Send a GET request to the Table API on your instance.
For more information, see Table API.

a. Construct the endpoint using the Health and Safety User [sn_imt_core_health_and_safety_user] table.



Example

```
https://<your-instance>.servicenow.com/api/now/table/sn_imt_core_health_and_safety_user
```

b. Add a query parameter to query a specific user's email address.

In the API explorer, you can enter one of the following strings in the **sysparm_query** field to generate an endpoint that includes the correct query parameter:

- `user.email=<user-email-address>`: Queries the provided employee's email address.
- `visitor.email=<visitor-email-address>`: Queries the provided visitor's email address.

Example
This example cURL request queries the Health and Safety User table and returns records associated with Abel Tuter's email address.

```
curl
 "http://<your-instance>.servicenow.com/api/now/table/sn_imt_core_health_and_safety_user?sysparm_query=user.email%3Dabel.tuter%40example.com&sysparm_limit=1" \
--request GET \
--header "Accept:application/json" \
--user 'username':'password'
```

Result
The Employee Health and Safety Status application returns the Health and Safety User record associated with the email address in the request. The JSON payload contains the following data.

```
{
  "result": [
    {
      "sys_mod_count": "0",
      "sys_updated_on": "2020-07-14 19:58:00",
      "sys_tags": "",
      "type": "employee",
      "sys_id": "33f184491bce9010e3730e16ec4bcb71",
      "sys_updated_by": "system.administrator",
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
      "manually_created": "true",
      "sys_created_on": "2020-07-14 19:58:00",
      "sys_domain": {
        "link":
 "https://<my-instance>.servicenow.com/api/now/table/sys_user_gr
oup/global",
        "value": "global"
      },
      "requirements_status": "cleared",
      "visitor": "",
      "user": {
        "link":
 "https://<my-instance>.servicenow.com/api/now/table/sys_user/62
826bf03710200044e0bfc8bcbe5df1",
        "value": "62826bf03710200044e0bfc8bcbe5df1"
      },
      "sys_created_by": "system.administrator"
    }
  ]
}
```

All fields are internal, except for the following:

Property	Description
requirements_status	Whether the visitor or employee has completed all requirements to return to the workplace. For more information, see Create health and safety user records and Create a health and safety requirement. • Cleared: The visitor or employee has completed all requirements to return to the workplace. • Not Cleared: The visitor or employee has not completed all requirements to return to the workplace. Data type: String
visitor	If present, this record represents a visitor instead of an employee. **Note:** Only used when returning visitor health data. Data type: Object
visitor.link	Link to the visitor record on the instance. **Note:** Only used when returning visitor health data. Data type: String
visitor.value	Sys_id of the visitor record. **Note:** Only used when returning visitor health data. Data type: String
