Install Safe Workplace for mobile

Install the Now® Mobile app and Safe Workplace for mobile app.

Before you begin

The Safe Workplace for mobile app (sn_imt_mobile) is dependent on the com.sn_imt_quarantine plugin.

The Safe Workplace for mobile app also has an optional dependency on other Safe Workplace applications. If you have any of these plugins installed, the corresponding applications will appear in your Safe Workplace for mobile app:

- sn_imt_checkin
- sn_imt_core
- sn_imt_monitoring
- sn_imt_ppe
- sn_imt_tracing
- sn_imt_travel
- sn_imt_health_testing

Role required: admin

Installation instructions for self-hosted and federal environments (continued)

Type	Instructions
On-premise	See the Commercial downloads for the Emergency Response Management and Safe Workplace suite apps [KB0030258] article in the Store Help Center for more information.

Procedure

1. On your mobile device, download the Now Mobile app for Apple iOS or Google Android from the Apple App Store or the Google Play store.
2. In your instance, navigate to **System Applications** > **All Available Applications** > **All**.
3. Search for `Safe Workplace for mobile`.
4. Click **Install**.
5. In the Application installation dialog box, click **Install**.
6. When the installation is complete, click **Close**.
7. **Optional:** Control access to the application by creating a group and assigning roles to the group or individual users.

   (Optional) For more information, see Roles.

Report your health status in Now Mobile

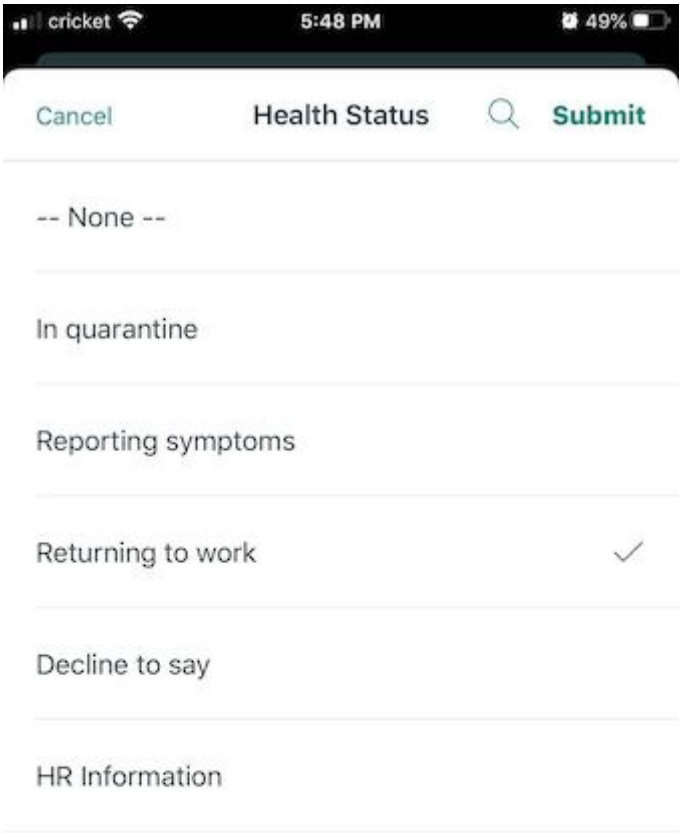
Use the Now® Mobile app to report your health status.

Before you begin

Role required: sn_imt_quarantine.crisis_task_user

To access this content, you must have the Now Mobile app. Your instance must have the Emergency Self Report application installed.

About this task



From the Safe Workplace for mobile app, users can access applications from the Emergency Response Management and Safe Workplace product suites.

> **Note:**
> The Emergency Response Management for Now® Mobile app was renamed to Safe Workplace for mobile.

Procedure

1. Open the Now Mobile app.
2. At the top of the Health page, click the quick action icon to open the self-report applet.
3. Select your health status from the list, and tap the check icon ( ) to confirm your status.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click **Submit**.

View your health status in Now Mobile

Use the Now Mobile app to view your health status record.

Before you begin

Role required: none

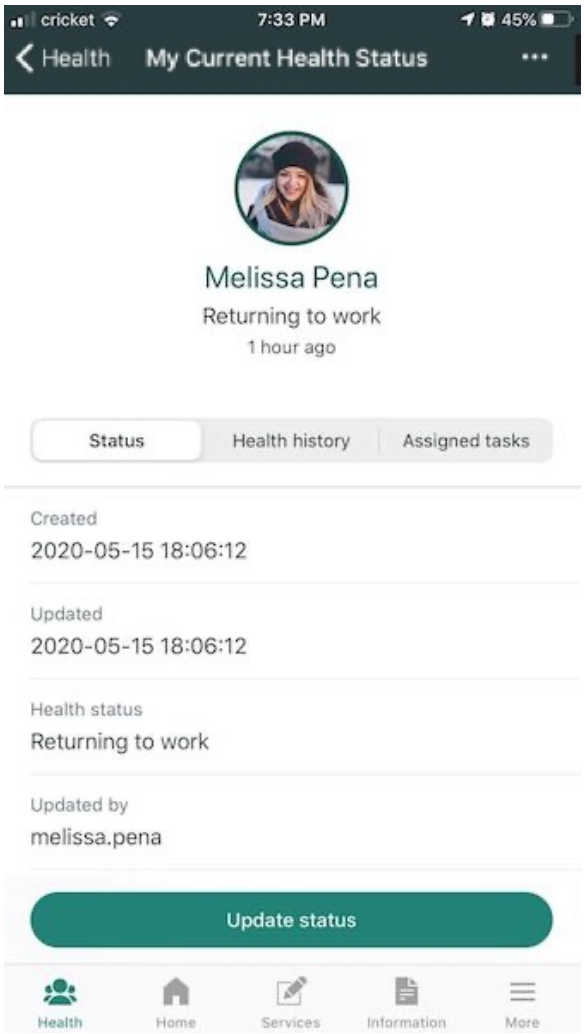
To access this content, you must have the Now Mobile app. Your instance must have the Emergency Self Report application installed.

About this task

From the Safe Workplace for mobile app, users can access applications from the Emergency Response Management and Safe Workplace product suites.

Note:
The Emergency Response Management for Now® Mobile app was renamed to Safe Workplace for mobile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Open the Now Mobile app.
2. Scroll down to **My Current Health Status** and click the **See All** link.
3. Click your name.

My Current Health Status screen

The **My Current Health Status** screen displays the following information:

- Use the **Status** tab to see your current reported status.
- Use the **Health history** tab to see a history of your health status updates.
- Use the **Assigned tasks** tab to see the tasks assigned to you.
- Use the **Update status** button to change your health status.
- If you're a manager, use the **Reassign all** action from the top menu icon ··· to reassign all your tasks.

Manage the status of your direct reports in Now Mobile

Use the Now Mobile app to view the health status of your direct reports.

Before you begin

To access this content, you must have the Now Mobile app. Your instance must have the Emergency Self Report application installed.

Role required: none

About this task

Procedure

1. Open the Now Mobile app.
2. Scroll down to the My Team section and click **My Direct Reports Open Tasks**.

My Direct Reports Open Tasks link

A list all open tasks assigned to your direct reports is displayed.

3. To view details about the task, click the open task.
4. To reassign a task, swipe left and click **Reassign**.
5. Search for a user that you want to reassign the task to and select the name of the user.
6. Click **Submit**.

Domain separation and Safe Workplace suite

The Safe Workplace suite applications support domain separation at the Basic level with the exception of Safe Workplace Dashboard.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

With domain separation, you can separate data, processes, and administrative tasks into logical groupings called domains. You can then control aspects in each domain, including what users can see or whether they can access the data.

Domain separation support

ServiceNow applications that support domain separation might support the separation of data and data routing only, have advanced business logic separation, or support customer-level administration of the application. ServiceNow applications are defined with incremental support levels from the perspective of actual use cases and the people who use them.

- **Basic**
  - Data is domain-separated.
  - Logic exists to ensure proper data routing, caching, rollups, and aggregations.
  - Global configuration is operational for multiple tenants
- **Standard**
  - Application properties are domain-aware as needed.
  - Business logic can be domain-separated by the instance owner per tenant.
- **Enhanced**: Data-driven process enables failsafe configuration by tenants through the UI to drive business logic.

For more detail on the support levels, see Application support for domain separation.

How domain separation works in Safe Workplace applications

The following applications use the Safe Workplace domain table:

- Contact Tracing
- Health and Safety Testing
- Emergency Outreach (Daily Contact Logs, Privacy Consent, and Privacy Consent (common))
- Emergency Exposure Management

Admins must install the Domain separation plugin before working with these application tables. Most of those tables contain a **sys_domain** field so they are able to be domain-separated if they have data that needs to be partitioned by domain.

- Core domain table: Included in the Safe Workplace plugin is an sn_imt_core_domain table. Domains in this table are iterated when scheduled jobs run.
- Property table: The sn_imt_core_property table extends the sys_properties table and adds a sys_domain field. Adding that field allows sys_properties values to be overridden for a domain.

Note:
Values are handled differently for `password2` fields than for other property types. Therefore, the value displays as blank in the domain-separated properties list view.

The following tables do not have the sys_domain field:

- app-imt-checkin
  - sn_imt_checkin_outreach_sysauto_script (extends sysauto_script)
  - sn_imt_checkin_response_criteria
  - sn_imt_checkin_response_option_for_health

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

  - sn_imt_checkin_response_option_survey
  - sn_imt_checkin_response_script
- app-imt-diagnosis: task_compliance_result

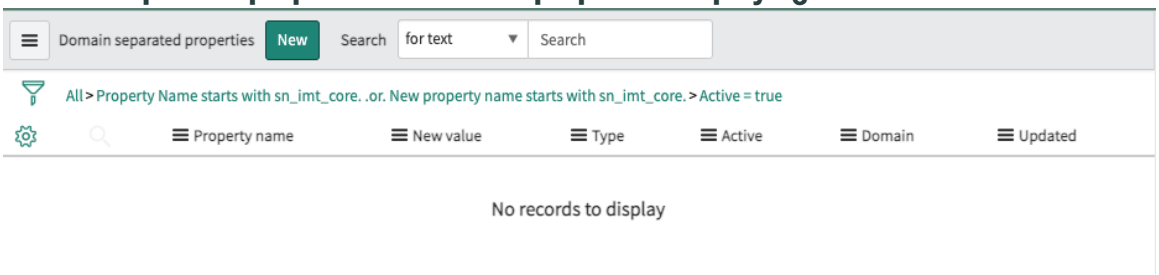
- app-imt-tracing
  - sn_imt_tracing_wifi_access_register_job
  - sn_imt_tracing_wifi_access_register_stage
- app-imt-core: sn_imt_core_sysauto_script (extends sysauto_script)

Scheduled jobs in applications with this level of domain separation run separately for each domain in the table. Scheduled jobs use the core table as the domain source table, and the **Domain Iterator** check box is automatically enabled by default when domain separation is installed. When the **Domain Iterator** option is enabled, the job can run in multiple domains.

The **Domain Source Table** value is also set to Safe Workplace Domains by default. If you don't see the tables, verify that the **Domain Iterator** and Safe Workplace Domains settings are selected, and refresh the instance.

Domain iterator option selected in the Employee Readiness Core Scheduled Script Execution form

Parent-child domains

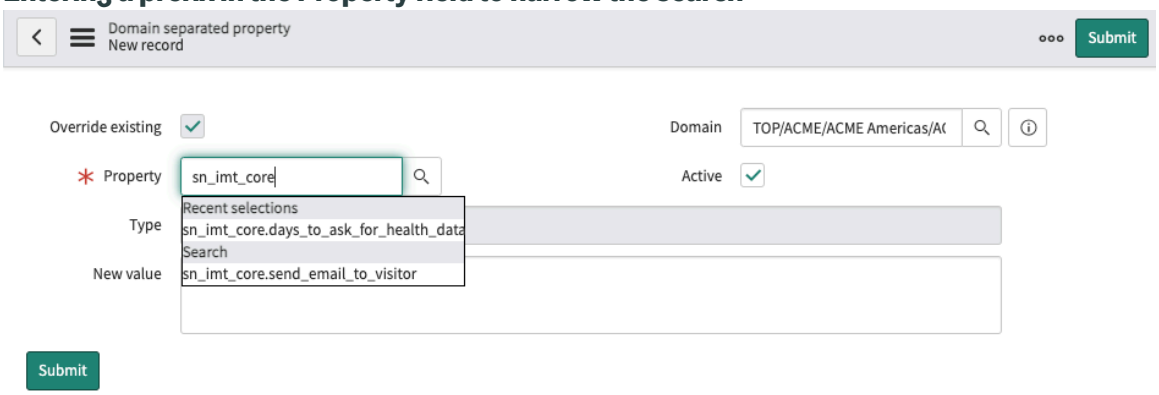


Domains that also contain a sub-domain or “child” domain are not supported in these applications. Running a job in a parent domain that has a child would mean running the job twice and thus processing the data more than once. You could add a parent domain or add just the child domain but not both.

Working with domain-separated properties in the Safe Workplace Suite

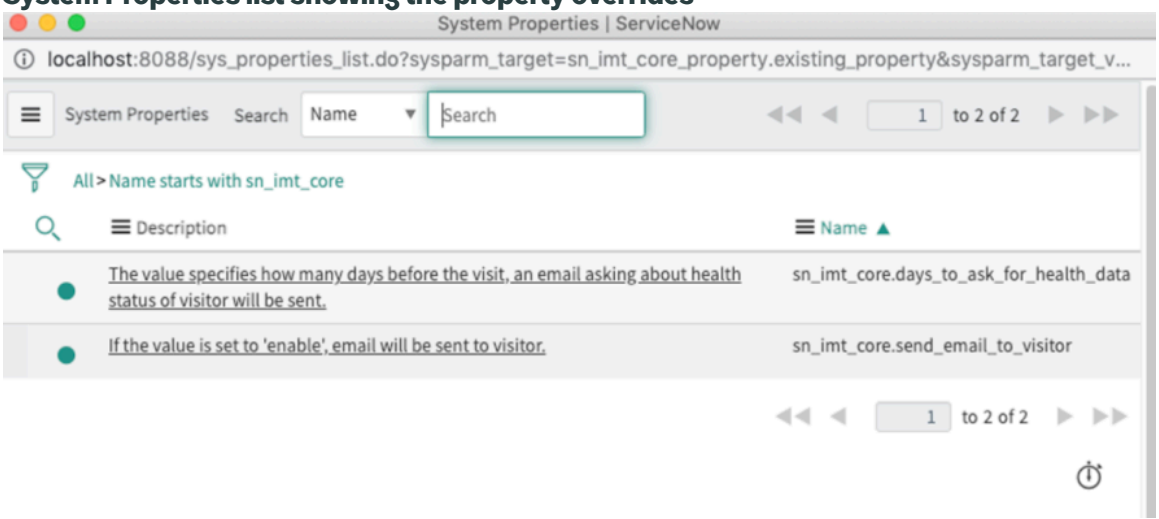
When the Domain separation plugin is installed and you navigate to the Properties page in any of the four Safe Workplace domain-separated applications, their properties do not display by default. You must override properties for a domain before they appear in the list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Domain-separated properties list with no properties displaying

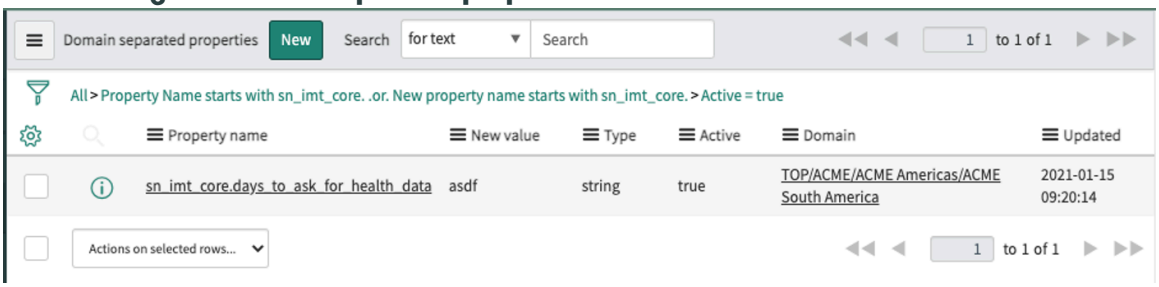
To display the properties, click **New** on the Properties page. In the form that creates a new domain-separated property, search in the reference field for the property you would like to override. Enter a specific prefix to narrow your search:



- `sn_imt_core` for Employee Readiness Core
- `sn_imt_diagnosis` for Emergency Exposure Management
- `sn_imt_health_testing` for Health and Safety Testing
- `sn_imt_tracing` for Contact Tracing

Entering a prefix in the Property field to narrow the search

The properties display with a full description of the overrides.



System Properties list showing the property overrides

After you create your domain-separated property override, the form displays the domain-separated properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

List showing the domain-separated properties

You can navigate back to the record form by selecting a property name in the list.

Property functions

Learn more about how these properties function in the following topics:

- Health and Safety Testing properties
- Contact Tracing properties
- System properties for tracing systems in Emergency Exposure Management
- Employee Health and Safety Status properties

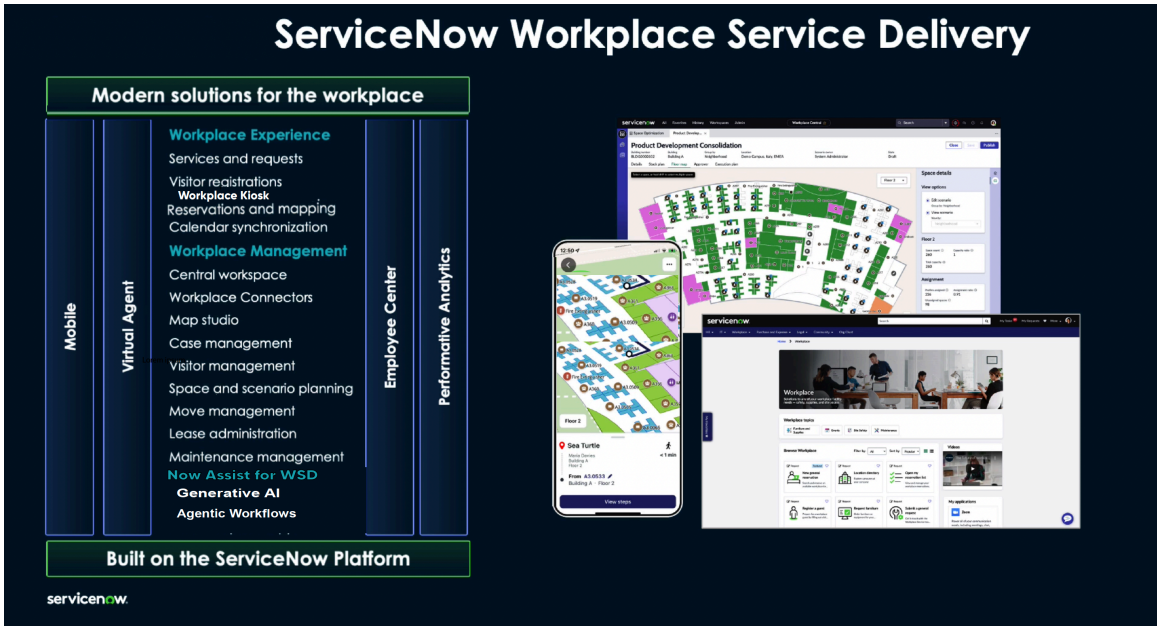
Domain separation for service providers

Workplace Service Delivery

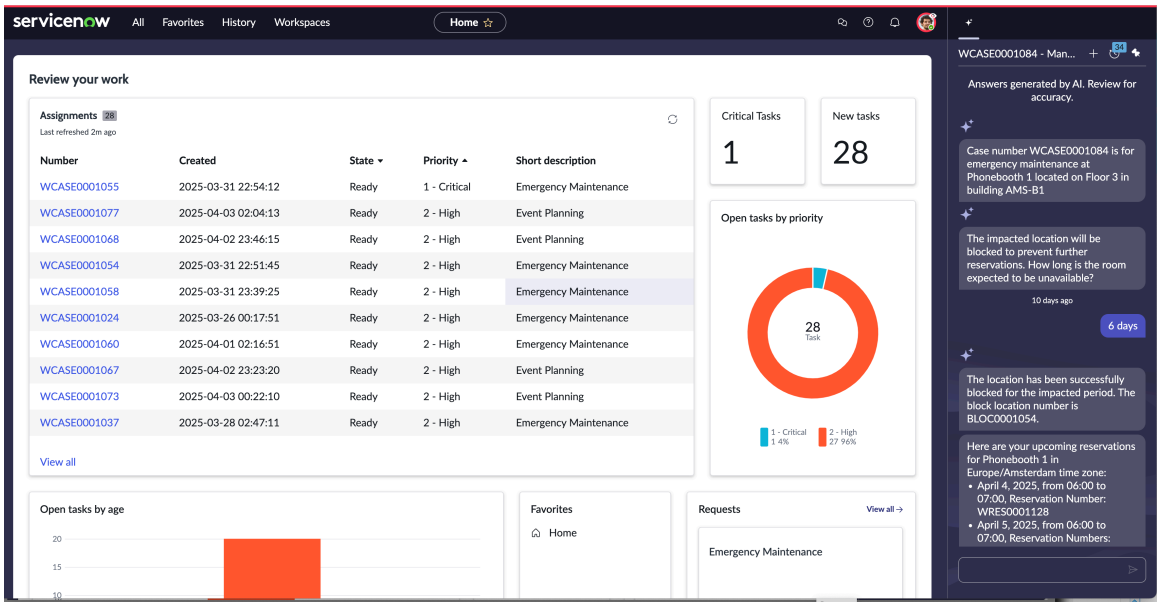
Provide employees with a single place to manage workplace tasks like reserving rooms, ordering supplies, reporting maintenance issues, or requesting cleaning with the ServiceNow® Workplace Service Delivery. Reduce the back-end complexity of setting up and maintaining a streamlined experience for your workplace.



Workplace Service Delivery (WSD) provides digitized workplace experiences to employees for managing their workplace activities. It provides flexible modern workplace solutions to drive employee productivity and workplace decisions.

https://player.vimeo.com/video/1154437552?h=b3302191f2&badge=0&autopause=0&player_id=0&app_id=58479

Enhanced Employee Experience with digitized workplace services



WSD provides digital entities and automation tools to enhance and streamline work processes for employees. Employees can digitize their hybrid workplace days, collaborate, and gain access to physical workspaces in their organization. Employees can manage their reservations, reserve their favorite or preferred desks, meeting rooms and parking spaces. Employees can manage workspaces tailored to their privacy and location preferences. Administrators and facility managers can get detailed insights on employee engagement and real-estate usage to manage capacity planning. Workplace digitization helps create a more connected work environment by transforming how teams interact, share information, and collaborate across platforms and businesses.

Intelligent routing of workplace requests with Now Assist for WSD

With WSD you can optimize workplace operations with smart building integrations. Workplace Service Delivery AI agents can assist and act autonomously to resolve issues and make decisions. AI agents can autonomously block a meeting room in case of an emergency maintenance request and move your existing meetings from the blocked location to a new one by interacting with your environment. AI agents use Out-of-the-box ServiceNow AI Platform® capabilities. Enhance employee self-service requests with Generative AI for improving workplace productivity, enhanced employee experience, and reduced case deflections.

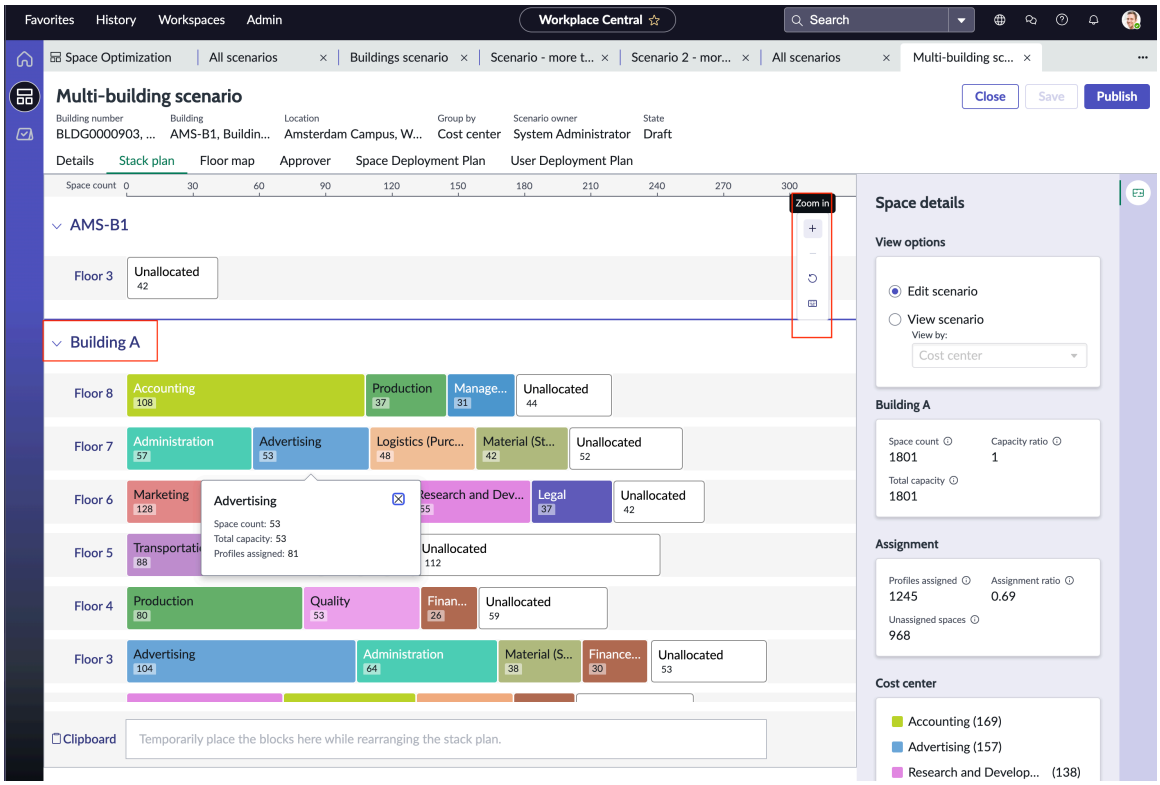
Automated workflows

Workflow automation in WSD provides both digital workspace apps and physical workplace resources to redesign workplace facilities. Workplace procedures and tasks are automated for employees to increase workplace productivity and collaborate effectively with preferred collaborators in their in-office presence days.



Optimize space management with space utilization insights

WSD provides a single platform and solution to efficiently manage your organization's real-estate portfolio. Workplace services team can maintain facilities more efficiently using a single workspace. Plan and manage your maintenance, leases, and mappings using Workplace Central and Workplace Lease Administration.

Using the dashboard and analytics capabilities of Workplace Central, workplace managers can allocate workspaces to employees based on their preferences and requirements while simultaneously keeping a tab on space utilization. Facility managers can view space capacity using stack plans and measure the frequency of workspace utilization.

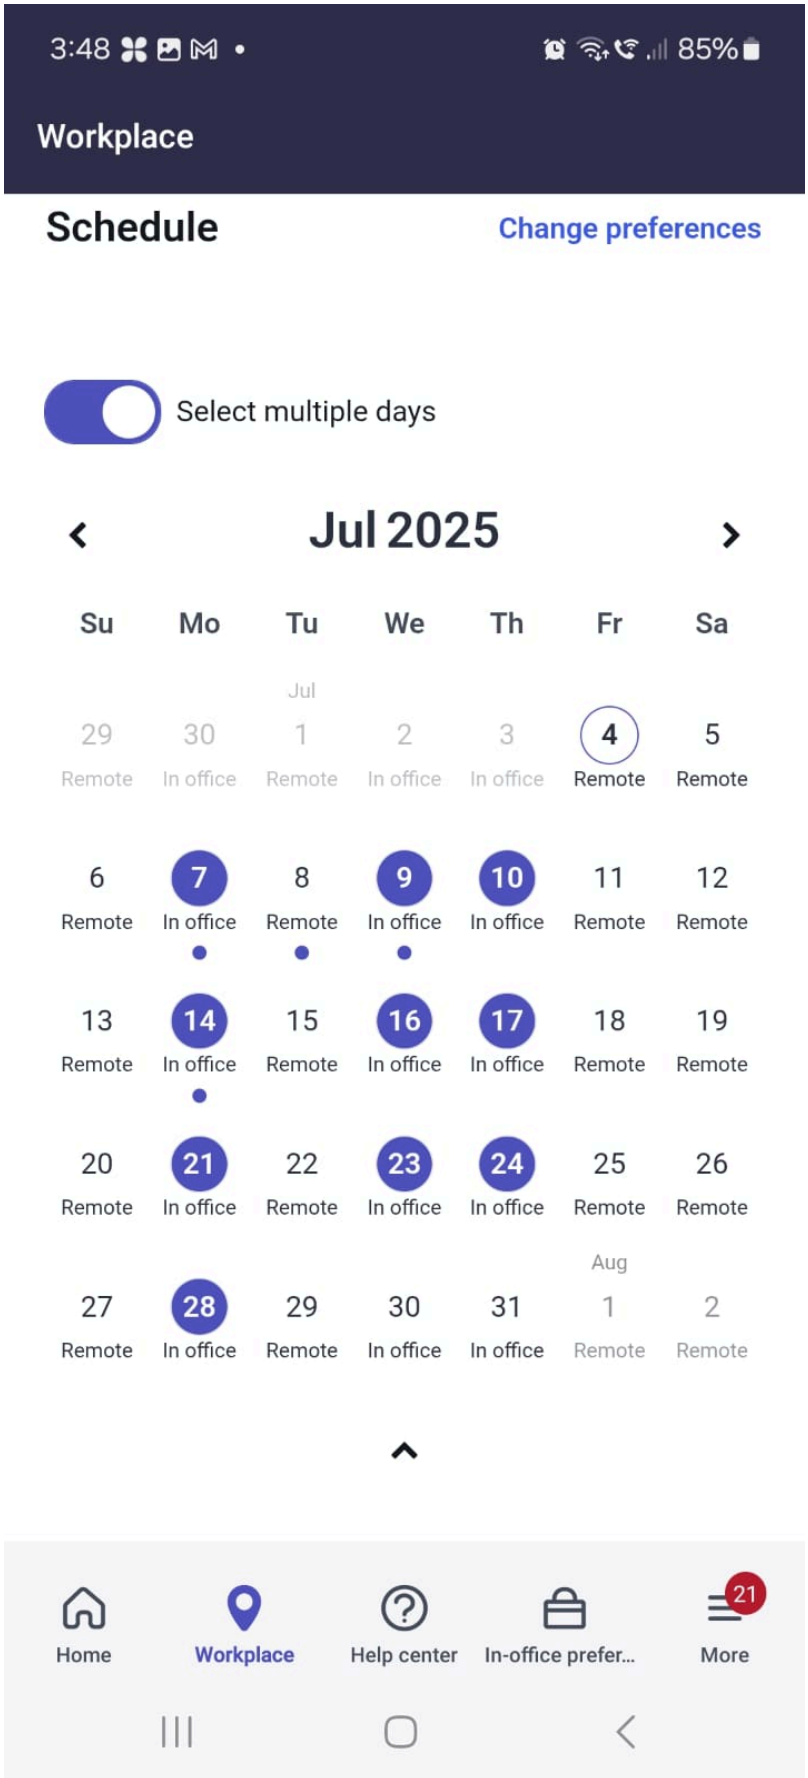
Workplace Service Delivery data model helps facility managers to optimize real-estate decisions and remove redundant spaces that are no longer in use. Occupancy sensors provide real-time utilization data, guiding employees to available spaces. Workplace administrators and managers can design and build custom reservation services. Workplace portfolio managers can access insights on individual space type utilization. It helps you align your real-estate decisions with your organizational goals to setup a modern workplace. Workplace Service Delivery provides a single platform to help you optimize your existing and future real-estate investments. Monitor, view, and optimize workplaces and space allocation in real-time to make real-estate decisions.



Lease Administration

Track workplace lease contracts, assets, services, and locations that are part of a contract using Workplace Lease Administration. Workplace managers can use Workplace Lease Administration to create and track workplace contracts. Workplace Managers are notified about expiring contracts, and track services that are part of a contract. Teams can also track locations that are part of a contract and maintain a list of assets in a contract, and manage contract documents.

Mobile workplace reservations

Enhance and increase workplace efficiency by using the Workplace Service Delivery for Mobile app. It enables employees, workplace managers and agents to access reservation, employee presence, and work schedule capabilities while on the move from any location any time.

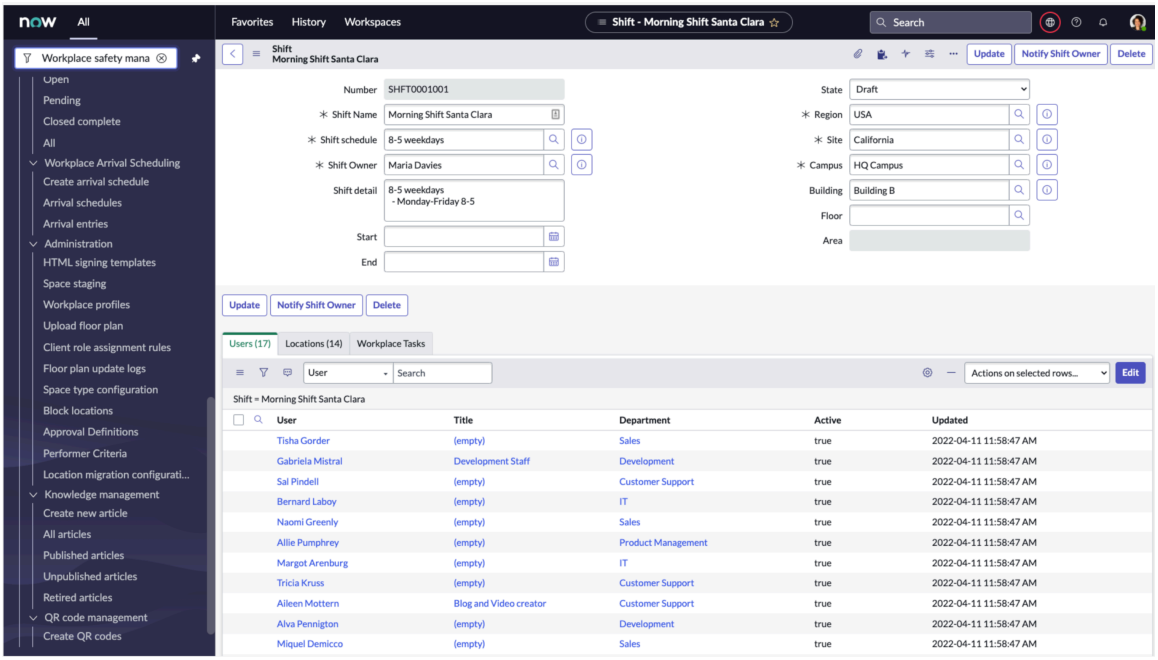
Workplace Service Delivery applications

ServiceNow® Workplace Service Delivery provides a suite of applications for improved employee experience and productivity. Download the ServiceNow® Workplace Service Delivery Suite, ServiceNow® Workplace Service Delivery Professional, or ServiceNow® Workplace Service Delivery Enterprise to automatically install all the Workplace Service Delivery applications at once.

Applications installed with Workplace Service Delivery



Workplace Core

Workplace Core serves as the foundation for managing workplace data and operations. Organizations can define key workplace elements such as campus, buildings, floors, and space types to support maintenance activities, employee and visitor reservations, and workplace requests. It enables coordination and efficiency across workplace processes.

With the Workplace Core (sn_wsd_core) application, workplace managers can efficiently manage workspace allocation for employees and monitor preventive maintenance activities across the organization.

- Space Administration: Manage workplaces by defining locations within a location hierarchy, such as spaces, areas, floors, buildings, campuses, sites, and regions. Workplace managers can efficiently plan and implement workplace strategy for better space utilization and optimization.
- Location Directory: Employees can view and search for spaces to make reservation or search for team members within the workplace.
- Shift Management: Workplace Managers can create shifts and schedule them for specific times and days. Start planning for workplace occupancy levels by allocating employees and available spaces to specific shifts.
- Dashboard: Analyze the availability of spaces and occupancy levels of office locations through data visualization.

Workplace Reservation Management

Workplace Reservation Management application makes it easier for employees to reserve meeting rooms, conference rooms, desks, and workplace services from the reservation portal or the mobile application. Employees can efficiently search and reserve locations based on privacy and location preferences. Employees can make a single-day, recurring, multi-day, multi-building reservations. They can edit or update their reservations as and when require.

Workplace Reservation Management enables employees to search, reserve, modify, and check-in reservations for any workspace from an omnichannel self-service interface. Employees can reserve a desk, conference room, equipment, or a parking space based on availability. Employees can add invitees, workplaces services, or amenities to their reservation request. The application provides quick reservations by enabling employees to set up recurring events, create single or multi-day reservations, or even schedule multi-location reservations and request room configurations.

- Reserve any workspace including desks, conference rooms, collaboration spaces, or parking spaces from any device.
- Quickly view physical spaces on a floor map using Indoor Mapping to identify reserved, available, and non-available spaces.
- Easily add invitees, external visitors, or guests to your reservation, assign them to a space. Notify them and track their acceptance status.
- Easily create a hybrid meetings and share it with meeting attendees.
- Add workplaces services or raise requests for managing events, conferences,#trainings, and customer visits.
- Workplace managers can import space administration tables, define reservable and non-reservable spaces, and track reservations.
- Control employee location visibility when an employee is searching for a workspace.
- Facility managers can create open, restricted, and non-restricted neighborhoods and assign to employees. Enable employees to reserve spaces in eligible neighborhoods. Employees can search, browse, or navigate neighborhoods using the Location directory.

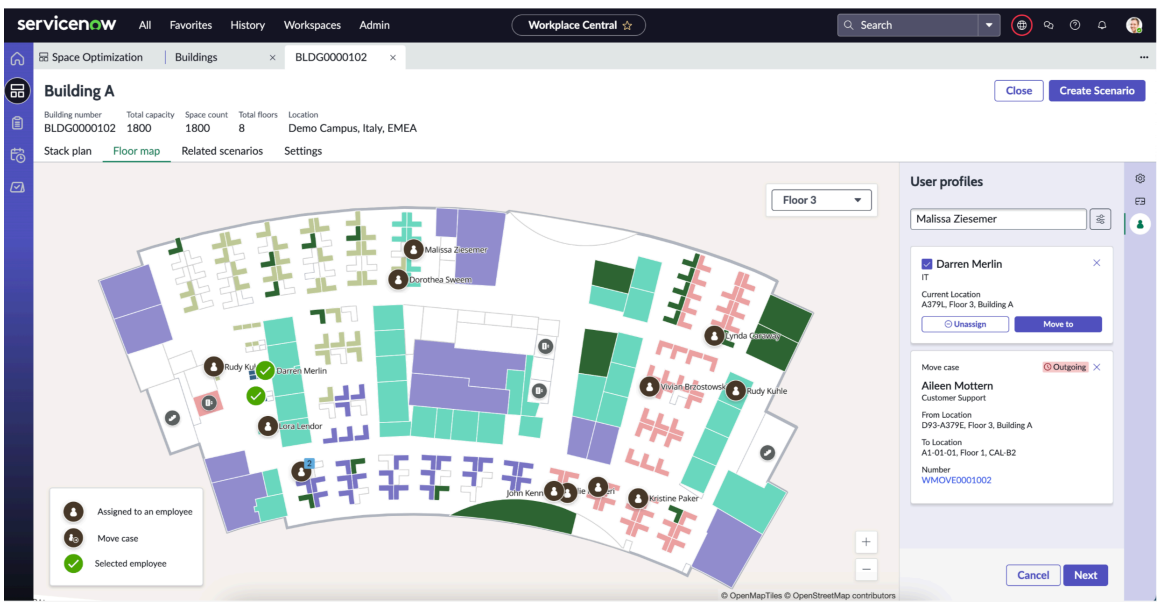
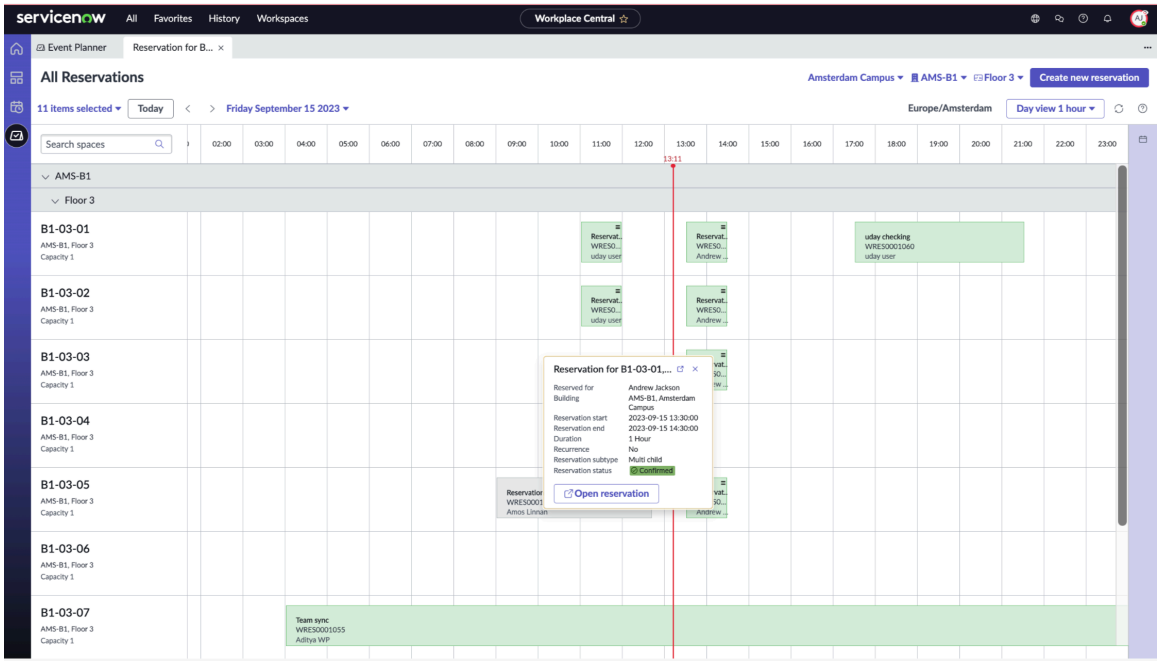
Agentic AI in Workplace Service Delivery (WSD) enables autonomous management of tasks like temporary space closures, optimizing workflows, and reducing manual effort. in case of emergency maintenance requests, AI agents autonomously block an affected space, move existing reservations to a new location. AI agents send notifications to Workplace Event Planners using the Now Assist Conversational Interface. Workplace Event Planners can engage with AI agents to suggest another space using Conversational Q&A.

Workplace Concierge



The Workplace Concierge application is a Workplace Service Delivery application designed as a one-stop application to help employees with their workplace experience. They can set their in-office days and more.

Workplace Concierge provides employees with real-time insights to optimize their on-site presence in the workplace with their co-workers, improving team collaboration and learning. Using personalized suggestions, employees are guided to the best workspace when they plan to visit their home office or travel to another office.



- Indicate in-office work days for collaborator's visibility
- Add collaborators and view their planned in-office days
- Optimize in-office days using a personalized dashboard supported with insights
- Get personalized suggestions when searching for an available workplace for today or a specific date

Workplace Central

Workplace Central provides a unified experience for workplace managers and other key personas such as space planners, move managers, and maintenance planners. They can strategize, plan, and maintain real-estate requirements more efficiently.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space optimization:

- Create open and restricted neighborhoods and assign employees to them and manage space assignments through a floor map.
- Build multiple space scenarios and visualize them based on their assignments, cost centers, or departments to optimize spaces.
- Adjust space scenarios by drag and dropping items on the plan to glean overall utilization and unallocated space.
- Easily identify unassigned and flexible spaces using the floor map view. Assign users directly, change a space's assignment type, and view space details by directly selecting the space on the floor.

Lease Administration:

- Create and track workplace contracts
- Get notified about expiring contracts
- Track services provided as part of the contract
- Track locations that are part of the contract
- Maintain a list of assets that are part of the contract
- Manage contract documents

Preventive maintenance:

- Create preventive maintenance plans for enterprise assets and workplace locations. The latter can be used to do maintenance planning for soft services like house-keeping.
- View preventive maintenance cases, as an outcome of preventive maintenance planning, in the overview tab. The overview tab is a focus area for maintenance planners and maximizes the information in one Viewport.
- Assess preventive and corrective maintenance cases for the current month in the personalized landing page for maintenance planners.

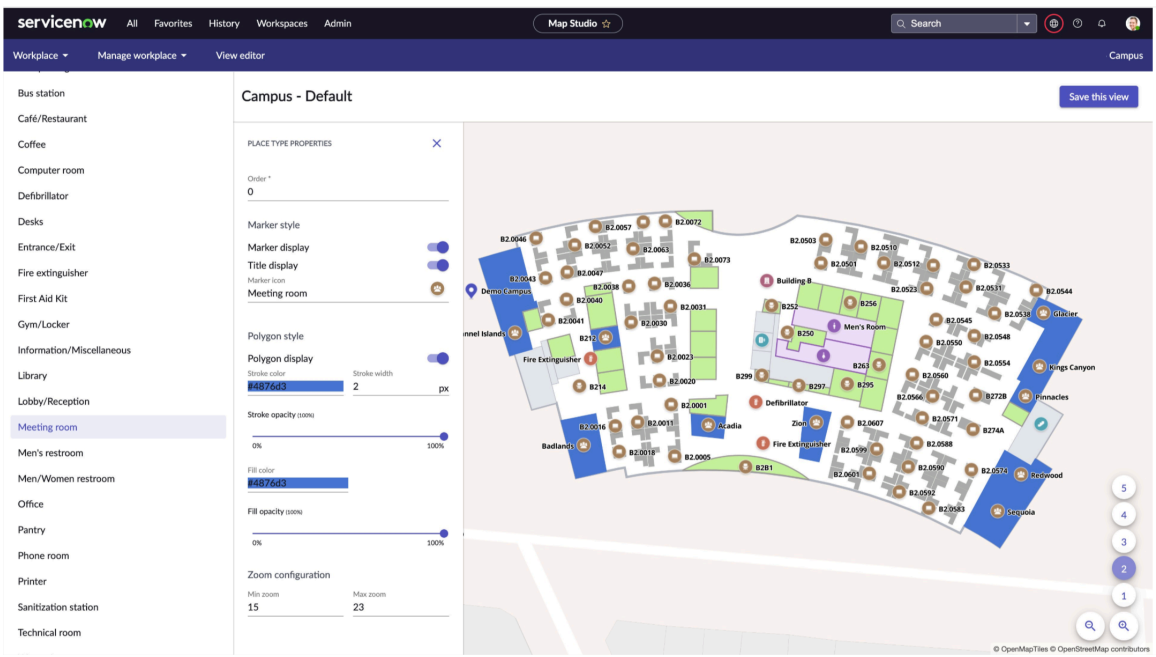
Move Management:

- Track move cases and associated tasks seamlessly with the move management module.
- Use the Move Scheduler, a visual move planning tool, to group move cases into projects and create an organized and logical plan for bulk moves.



Reservation Management:

- Equip planners and space managers with information on how spaces are being used.
- Optimize space reservations by manually changing the start date and time, or location.
- Manage reservations quickly and easily on behalf of employees.

Indoor Mapping

Indoor Mapping provides indoor visualization and navigation capabilities as part of Workplace Service Delivery application.

Employees can visualize and get directions to and from points of interest. They can visualize workplace interiors, room reservation states, along with other indoor and outdoor details for a selected campus, building, and floor. From the Indoor Mapping Map Studio, workplace administrators can design, edit, and manage inbuilt indoor maps for interactive locations and wayfinding.

- Provides indoor navigation and mapping capabilities in Workplace Service Delivery
- Employees can report a workspace issue using the floor map and notify the facilities team for fulfillment.
- Provides indoor mapping experiences for employees and visitors within a workplace along with interactive directions and wayfinding
- Employees can browse, search, and navigate around workplaces to discover available services, reservable spaces, and amenities.
- Enable workplace managers to edit floor plans in real-time for seamless navigation of workspaces.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Switch between locations, floors, or workspaces to view or create reservations across Workplace Reservation Management and Workplace Indoor Mapping.
- Provide an intuitive kiosk experience to search and navigate spaces, view space details, booking options, and occupancy data

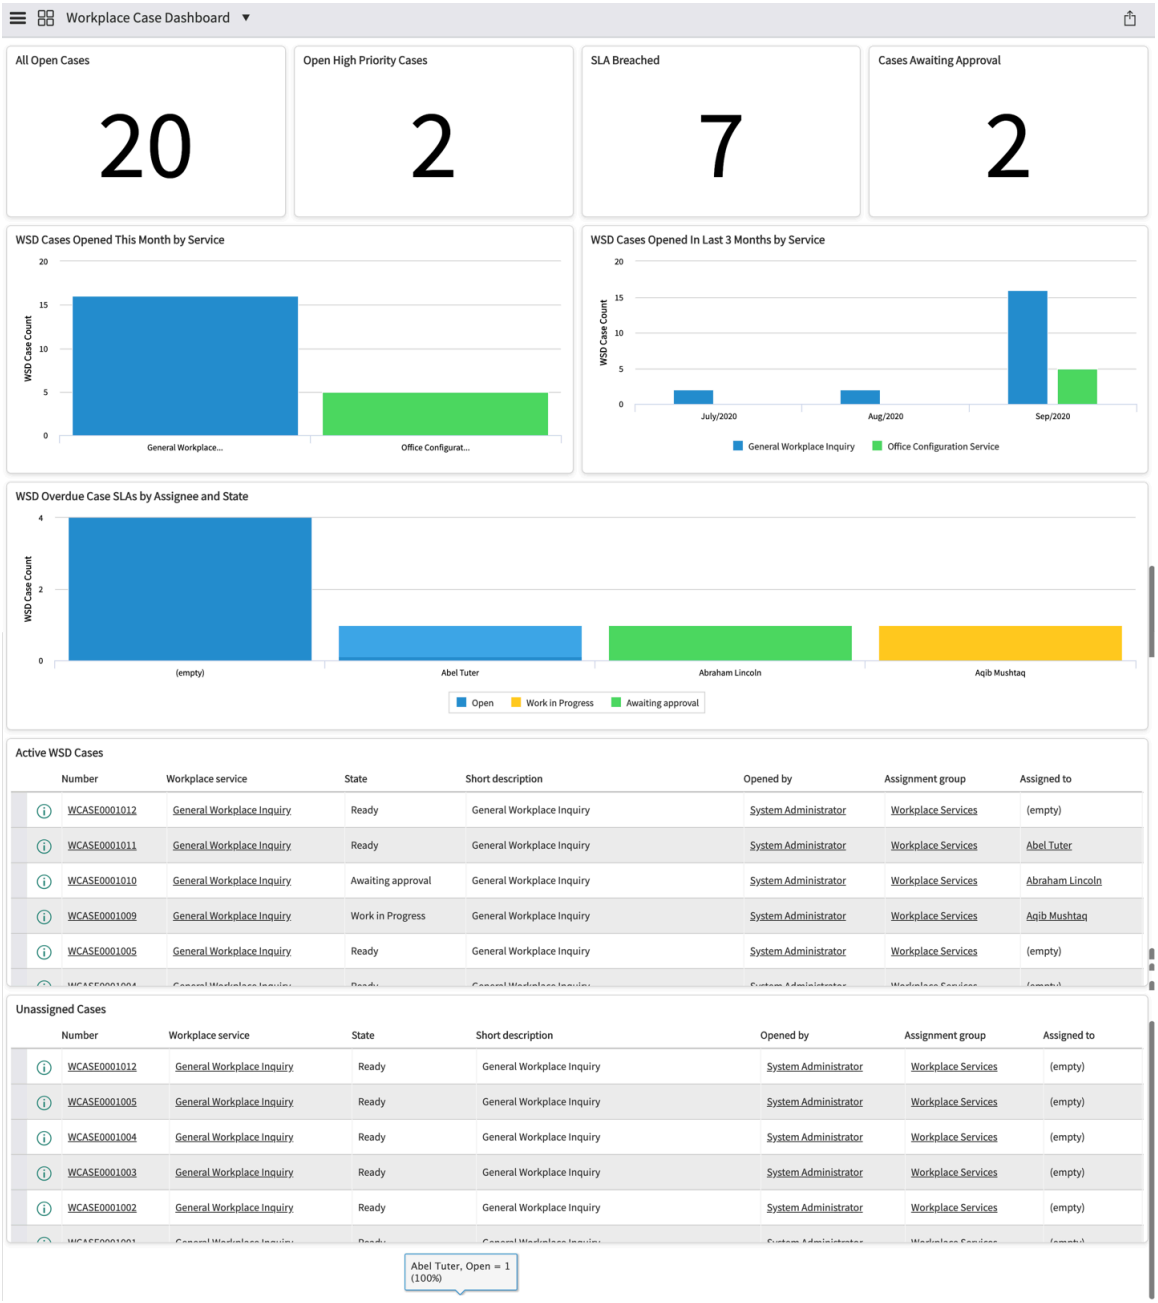
Workplace Reservations for Microsoft Outlook Add-in

Workplace Reservations for Microsoft Outlook Add-in provides the capabilities of Workplace Reservation Management within the Microsoft Outlook application. While creating a new event, updating an existing event, or an appointment, an employee can find available spaces easily. Employees can add requests or services such as room configurations or catering without using a separate application.

All reservations and requested services managed within the Workplace Reservation Management application are included with the Workplace Service Delivery solution.

- Find available spaces by applying various search criteria and filters.
- Add spaces directly to an event or allow the add-in to add the spaces.
- Request extra services along with your reservation. This is based on the available extra services menu card defined by workplace teams for each location or space (catering, room configurations, and so on.).
- Update existing reservations, add or change services, and select a different location.
- Provide location privacy preferences to employees while reserving a space.

Workplace Calendar Synchronization



Enhance your workplace's reservation experience by synchronizing your reservations with your calendar provider by using the ServiceNow® Workplace Calendar Synchronization application.

Workplace Case Management

ServiceNow® Workplace Case Management enables workplace services and facilities teams to manage interactions with employees, without relying on any generic tools like email, phone calls and walkups. Standardize the process, interaction and fulfillment of inquires, requests, and

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

case transfers across the enterprise. Gain clear visibility into the quantity and types of cases workplace teams are receiving for continuous service improvement.

- Enable workplace teams to#provide timely help to#employees.
- Configure approvals for quick fulfillment of cases raised by employees.
- Enable workplace teams to route requests to the right team members, contractors#, or vendors.
- Enable employees to report any workplace issue using the interactive floor maps.

  Use floor maps to facilitate inquiry requests. Users can locate precisely where a case is raised, whether in a specific meeting room, or a printer located in a hallway.

Workplace Move Management

Workplace Move Management Workplace Move Management enables employees to collaborate, communicate, and easily manage one-off seat changes from start to finish. Both employees and

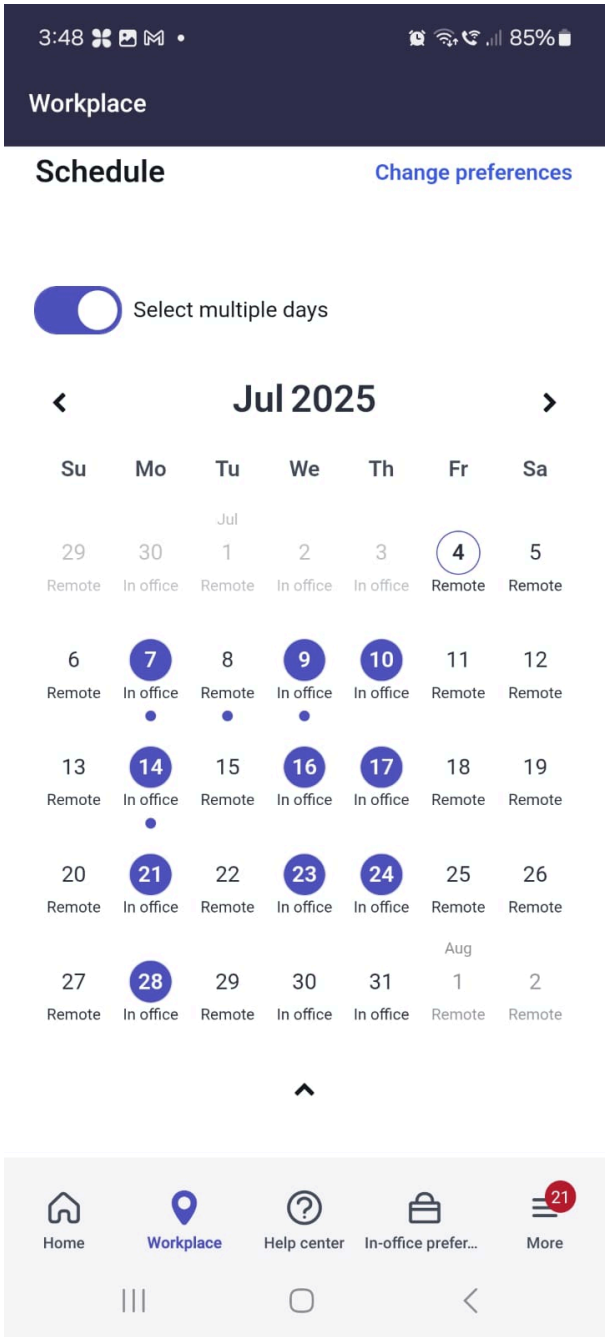
managers can make move requests through a configurable automated process so that workplace managers can supervise the movement of employees and their belongings with minimal to no disruption.



- Enable employees to submit their move requests and easily manage seat changes.
- Streamline move requests by the means of move cases and associated tasks.
- Automate and configure approvals and email notifications for relevant stakeholders.
- Modify, approve, or reject upcoming or ongoing move requests.
- Schedule and coordinate bulk moves using a visual move planning tool.
- Enable workplace teams to identify seating conflicts while executing move requests.
- Automate after-move updates.

Workplace Service Delivery for Mobile

Workplace Service Delivery for Mobile brings the capabilities of Workplace Reservation Management and wayfinding on the ServiceNow Mobile Platform to native mobile. An employee can search, reserve, modify, and check-in a reservation using the WSD Mobile app and synchronize the changes in real-time with the Workplace Service Delivery application.

- Find available spaces by applying various search criteria and filters.
- Find available spaces near a colleague or within an area.
- Reserve a space and edit your reservation using a floor map.
- Create a reservation for yourself or on behalf of a colleague.
- Manage existing single reservations.
- Check in or check-out reservations.
- Add a virtual meeting link to a reservation.
- Interactive location directories and wayfinding.

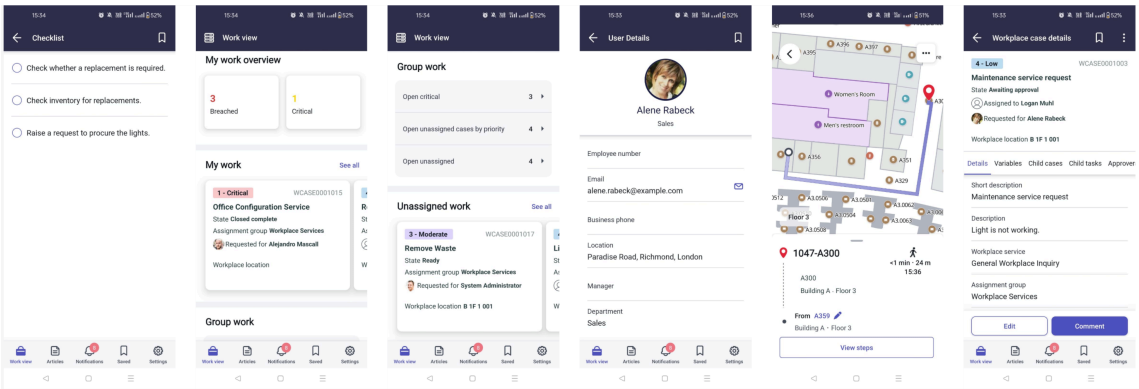
Workplace Agent for mobile

Workplace Agent for mobile delivers a mobile-first experience for workplace technicians and fulfillers to manage their work assignments and interactions with employees, without relying on any generic tools such as email, phone calls, and walkups.



The app boosts technician productivity with an intuitive interface to easily access assigned work, visibility to critical and breached cases, wayfinding to the employee location, and so on.

With the Workplace Agent for mobile application, any case fulfillment process can be simplified.

- Enable workplace technicians and fulfillers to#provide timely help to#employees.
- Easily access and manage assigned work - workplace cases and tasks.
- View the group's unassigned cases and tasks and assign to self in a single action.
- View assigned cases in a calendar view to track scheduled cases.

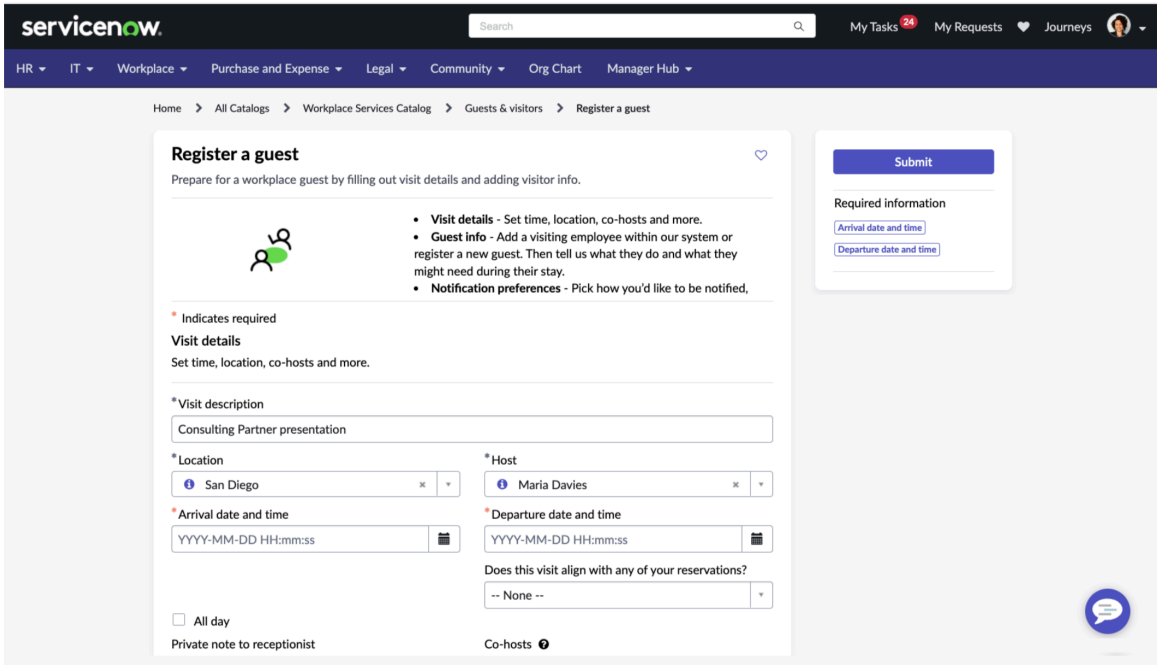
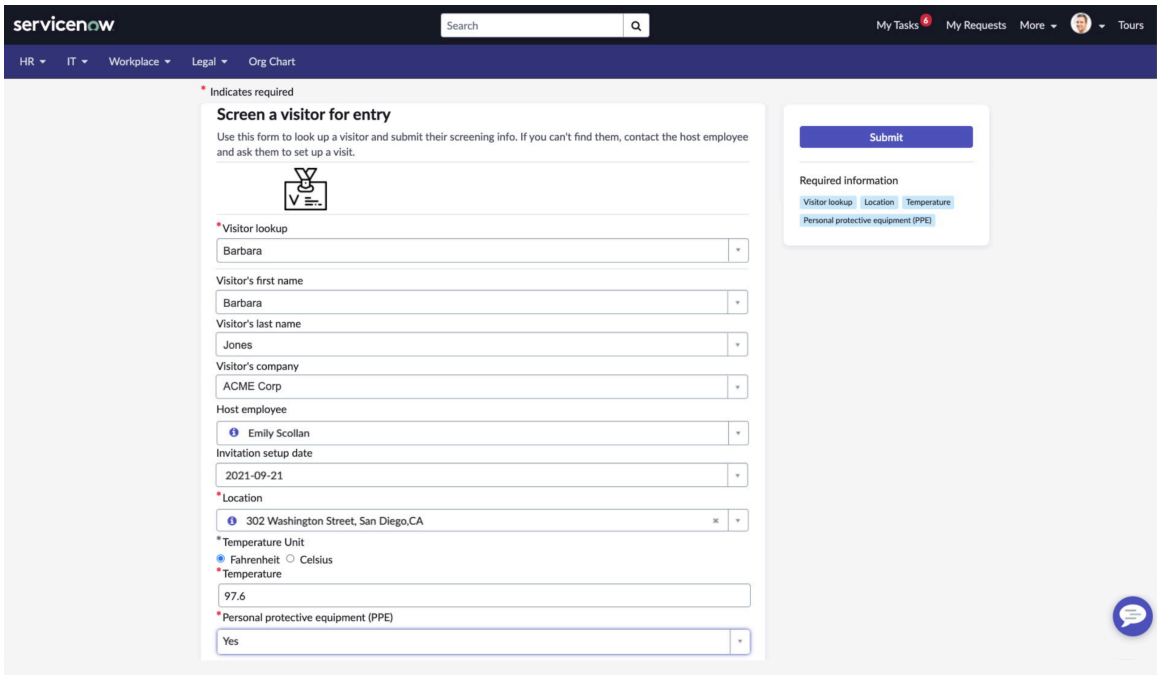
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Easily wayfinding to the workplace location of the employee or where the case is logged using maps.
- Create a workplace case on behalf of the employees.
- Log a report by creating a workplace task.
- View and search knowledge articles for the case.
- View fulfillment instructions and checklists.
- Receive push notifications on your mobile.
- Quick actions to leave comments, notes, update status, and so on



Workplace Visitor Management



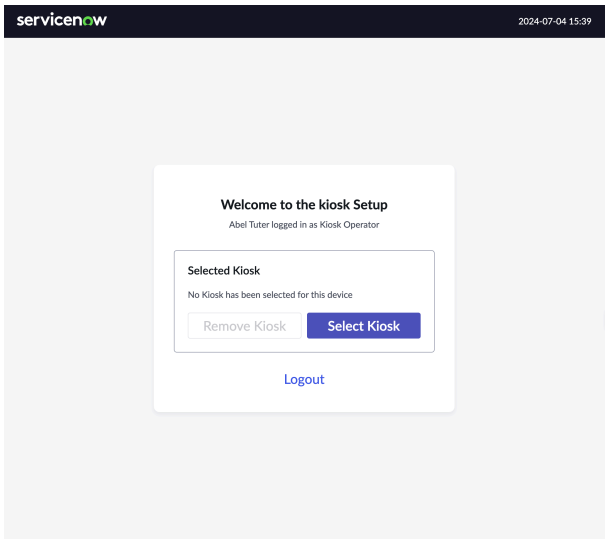
Welcome your guests and off-site employees with a smoother, more hassle-free experience. Use ServiceNow® Workplace Visitor Management to optimize your front-desk operations and welcome your guests and off-site employees. You can register visitors as well as pre-plan what they will require.

Workplace Visitor Management enables employees to seamlessly register guests expected at the workplace and enables organizations to manage safe and secure check-in procedures. Once visitors are registered, automate tasks such as communications, badge printing, health surveys, and paperwork required prior to their scheduled arrival.

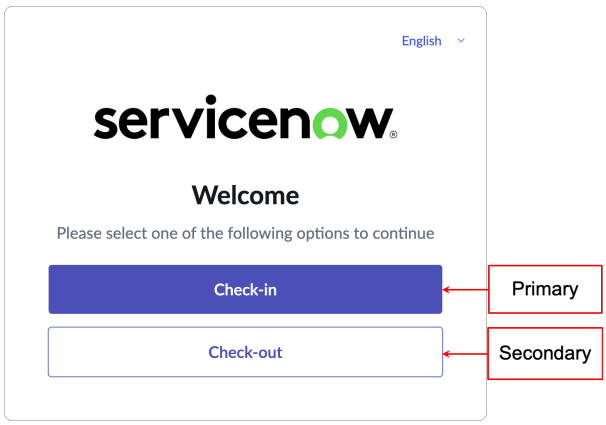
The workplace teams and office receptionists can easily monitor a visitor's arrival status with real-time dashboards. Tasks and approvals are automatically generated to initiate building access, grant Wi-Fi access, add a parking space, link to an existing room reservation or include any other requirements for their scheduled arrival.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Easily register guests visiting your premises with required entry information and guidance.
- Manage a safe and secure check-in process with automated health screening surveys and communications.
- Extend on-site access with daily pre-printed visitor badges for easy identification and check-in
- Route visitor access approvals for special locations and optimize use with advanced dashboards and reports.
- Provide visitors with a self-service check-in, registration, and check-out experience to visitors when the Workplace Services Kiosk application is installed.



Workplace Services Kiosk



The Workplace Services Kiosk provides a seamless check-in, check-out, and self-registration experience for visitors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Now Assist for Workplace Service Delivery (WSD) enhances your ServiceNow® Workplace services experience with generative AI capabilities. Request spaces quickly and intuitively, add workplace services, and guests to a new reservation.

Workplace Services Kiosk provides a new kiosk portal and a UI for Workplace Service Delivery features. The initial August '24 release focuses on Visitor Management Kiosk features, including self check-in, self check-out, and self-registration, which require the Visitor Management App. The February '25 release focuses on Indoor Mapping. Future releases expand capabilities.

Workplace Services Kiosk offers:

- New Kiosk portal
- Customizable interface
- Multi-language support

If Visitor Management is installed:

- Self Check-in
- Self-Registration
- Self Check-out

If Workplace Indoor Mapping is installed, it also provides Interactive maps.

Workplace Space Mapping

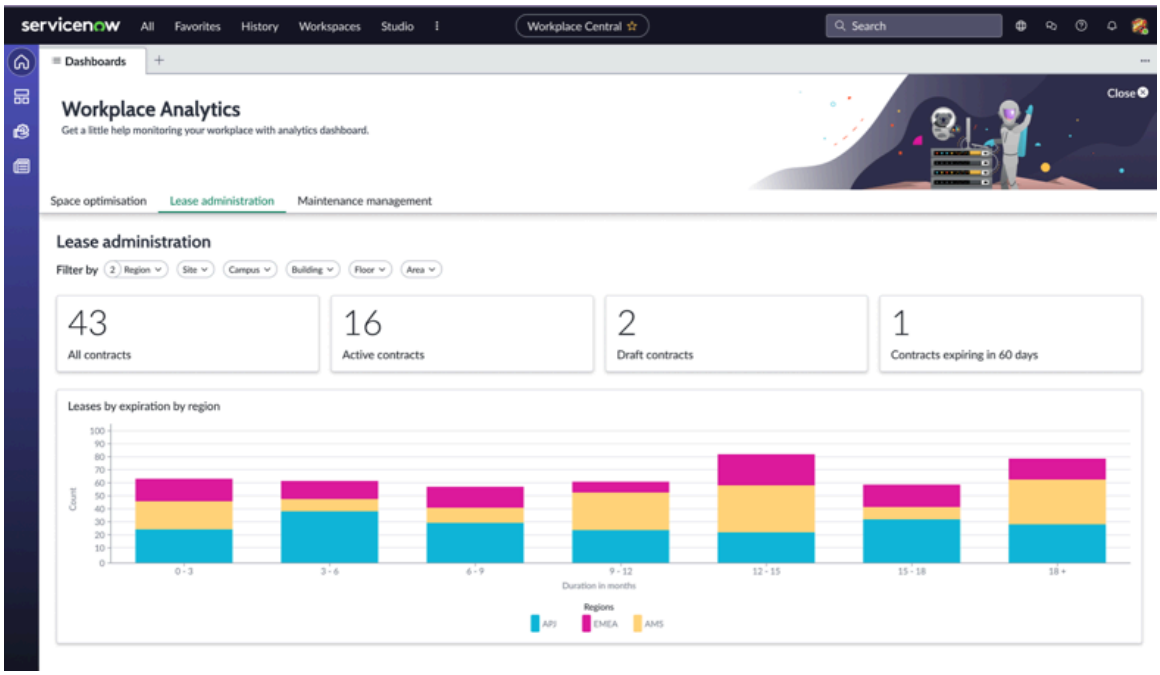
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace Space Mapping delivers interactive indoor maps for reservation management. It provides capabilities for indoor navigation within workplace locations to find services or amenities using inbuilt Indoor Mapping as the map provider.

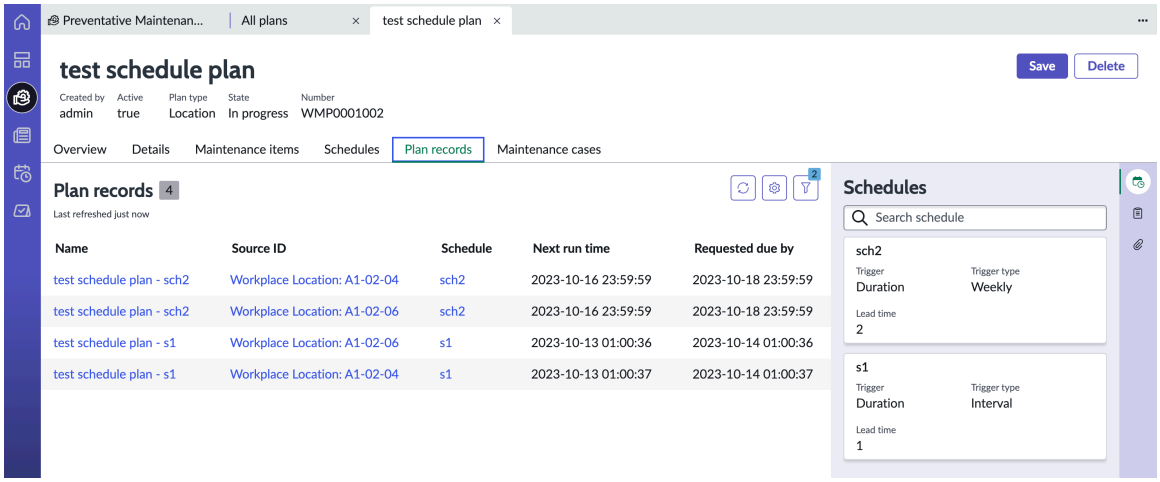


- Report a workplace issue using the floor map and notify the facilities team for fulfillment.
- Provide guided mapping experiences for employees and visitors joining you on premises with workplace wayfinding.
- Browse search, and navigate around workplaces to discover available services, reservable spaces, and amenities.
- Enable workplace managers to edit floor plans in real-time and publish changes to employee-mapping experiences for seamless navigation of workspaces.
- Switch between locations, floors, or workspaces to view or create reservations across Workplace Reservation Management and Workplace Indoor Mapping or Workplace Space Mapping.

Workplace Space Management

Efficiently supervise every single location of your organization by using the ServiceNow® Workplace Space Management application.

Workplace Lease Administration



The ServiceNow® Workplace Lease Administration enables you to create, manage and track workplace contracts from a single interface. You can also add workplace contract services, assets, locations, documents and track important dates.

Workplace Maintenance Management

ServiceNow® Workplace Maintenance Management enables workplace maintenance planners to plan for preventive maintenance for facilities assets (chairs, and so on) and soft services (house-keeping). Capture corrective or reactive maintenance issues like spills or messes or other breaks in workplace locations. Provides visibility into preventive, corrective cases, and associated trends for decision making.

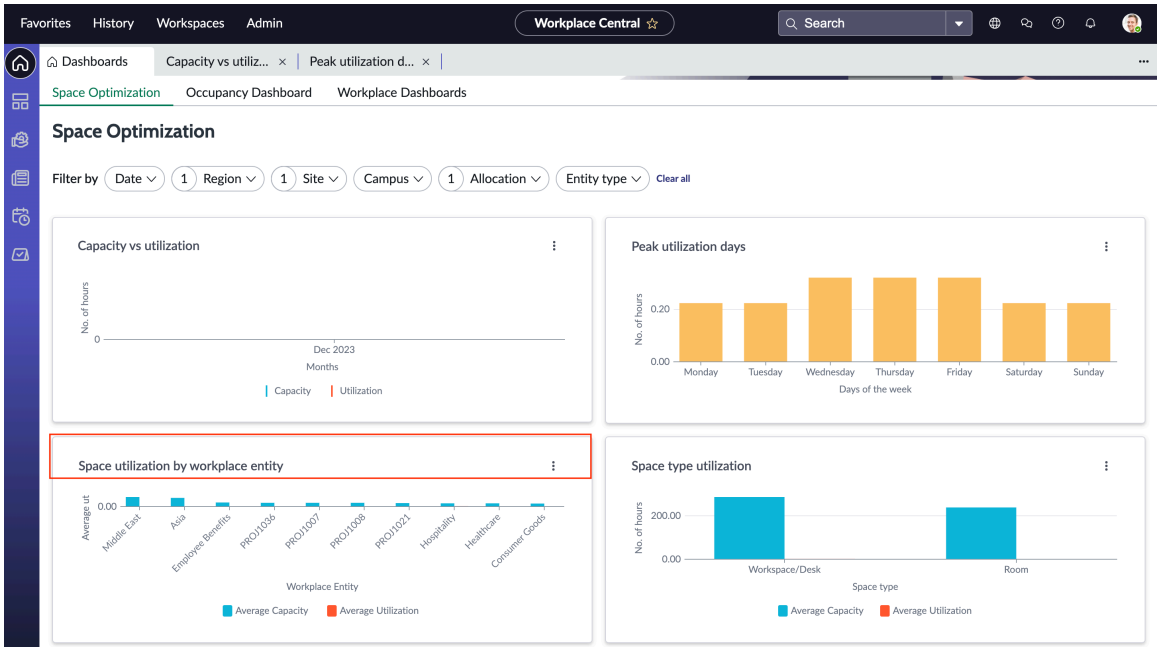
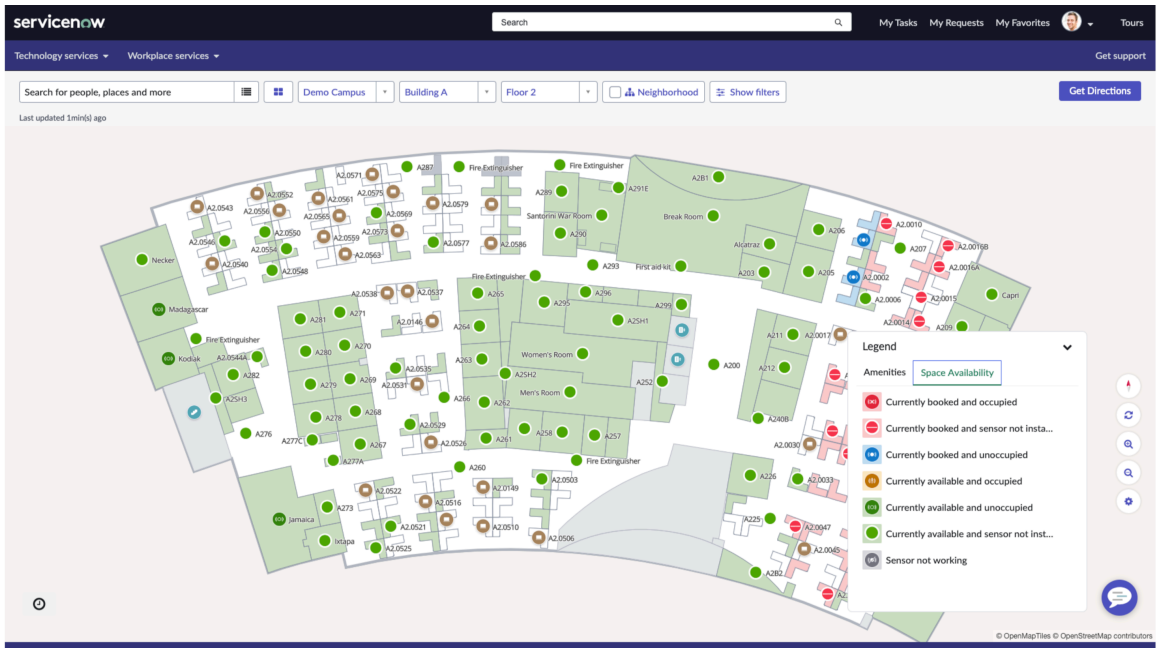
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- Create preventive maintenance plans for enterprise assets and workplace locations. Perform maintenance activities like house-keeping.
- View preventive maintenance cases as part of preventive maintenance planning in the Overview tab. The Overview tab is a focus area for maintenance planners to maximize the information in one viewport.
- View preventive and corrective maintenance cases for the current month in a personalized landing page for maintenance planners.
- Use maintenance cases to log any issues for workplace maintenance, spills, messes, or breaks.



Workplace Connectors

Workplace Connectors is an integration framework leveraging employee interactions within the workplace (such as badging systems, occupancy sensors, environmental sensors). It helps drive better space utilization and optimization decisions using analytics and planning tools within the Workplace Service Delivery solution.

Workplace Service Portal

The Workplace Service Portal is a self-service portal for employees, delivering workplace services from a central location. Employees can make reservations, view knowledge base articles, submit and review requests, and get help using virtual agent chat support.

Note:

In Workplace Core [sn_wsd_core] version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application search context menu **AllWorkplace Core**. The Workplace Services Portal is currently being deprecated. You can access the Workplace Services Portal from the Employee Center portal home page **All** > **Self-Service** > **Employee Center** > **Workplace services**. For more information, Workplace services on the Employee Center portal.

From the Workplace Service Portal, you can do the following:

- Open the Reservation portal and make reservations for meeting rooms, desks, or any other reservable workplace items.
- You can also make a reservation for a time slot directly using the Reservation widget on the home page.
- Register visitors in advance and customize their visit. You can register a guest or an off-site colleague for either a short duration or a complete day.
- View and search through top-rated knowledge base articles to find information. As you type, the search field displays suggestions based on keywords.
- View your requests and approvals (if you are an approver).
- View the location directory of your organization. Search for a co-worker, a space or any workplace location on the world map.

© 2026 ServiceNow, Inc. All rights reserved.

Note:
To view the maps in the Location directory and within Workplace Reservation Management, use Mappedin and Indoor Mapping. For more information on how to use floor maps, refer to Workplace Space Mapping.

- Submit requests for general inquiry, registering visitors, shift-based reservations, and other requests.
- Chat with a virtual agent to submit requests and view submitted requests.
- Raise a general help request by selecting from a list of service catalog items.
- Raise a move request to move from one location to another.
- Request a new furniture.

Explore Workplace Core

The ServiceNow® Workplace Core application enables you to create well-maintained and well-managed processes for employees in the workplace. You can manage various units of you workplace such as workplace locations, maintenance, space administrations, reservations, requests, visitors, moves and more. The Workplace Core is the core application of the Workplace Service Delivery suite.

Space administration

Your organization's workplace administrators can add details for all workplace locations, such as:

- Areas such as employee workstations, conference rooms, and cafeterias
- Office buildings and campuses
- Regions of all locations

As a workplace manager, you can upload floor plans of your organization so employees can more easily view and select available spaces when they request workplace reservations.

Avoid large gatherings or long queues for locations at your workplace such as the cafeteria, gym, and entry and exit gates by defining arrival intervals and having employees schedule their arrivals.

Shift management

Workplace managers can create shifts for employees and schedule them for specific times and days. They can use this data to start planning for the occupancy levels of your workplaces by allocating employees and available workplaces to specific shifts.

For example, workplace managers can create a morning shift schedule with work hours of 08:00 to 13:00. They can then assign available workplaces to this shift based on organizational guidelines. These assigned workplaces can then be reserved for employees operating from the office during this shift.

Shift owners can review and modify the details of the shifts that they own. They can also view workplace reservations and requests made for the shifts they own.

Workplace reservations

Using the information about available employees and workplaces, workplace managers can reserve areas and workplaces for employees. Workplace managers

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

can also generate reservations for multiple employees at once. Both the employee and the workplace manager are notified of reservations through email.

Employees can request workplace reservations when they want to return to the office. Using interactive floor plans, they can choose to reserve workplaces for a specified date range, a single day, or a few hours. Depending on your organizational guidelines, reservation requests might require an approval for confirmation.

If the workplace profiles of all employees are set up, the application automatically assigns available workplaces for employees using the data stored in Workplace profile table.

The Workplace Service Delivery provides more advanced workplace reservation options in the Workplace Reservation Management. For more information, see Workplace Reservation Management.

Workplace tasks

Workplace managers can monitor maintenance activities that are scheduled in the workplace for each shift. They can also schedule planned or on-demand maintenance tasks, and generate reports to track the progress of these activities.

Workplace Dashboard

Using data visualizations, you can evaluate the availability of workplaces and occupancy levels of your office locations, and monitor the progress of workplace tasks on the workplace dashboard.

Workplace Case Management

As a workplace manager, you can enable employees to raise workplace-related requests. The Workplace Case Management application enables you configure services using which employees case can raise their requests.

As a case manager, you can manage the requests raised by the employees in the form of workplace cases. You can create task, sub-tasks a s per requirement and perform various other actions. For more information, refer to Workplace Case Management.

Visitor management

Manage visitors expected at the workplace. Register visitors and manage their visit such as getting a visitor agreement, printing their visitor badge, and more. For more information, refer to Workplace Visitor Management.

Manage workplace moves

As a workplace manager, the application enables you to manage the move requests raised by employees. You can track the expected start and due date by when a move must be fulfilled. You can perform various other actions. For more information, refer to Workplace Move Management.

Workplace Central

As a workplace manager, save your time by focusing on all your main workplace activities in a single workspace, that is, Workplace Central. The workplace central is a workspace available on the Employee Center. It is a one-stop workspace from where you can check all the dashboards, perform space allocation activities, manage move requests, manage reservations and more. For more information, refer to Workplace Central.

Note:

In Workplace Core [sn_wsd_core] version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application context search menu **AllWorkplace Core**. You can access the Workplace Service from the Employee Center portal home page. Select **Workplace Service**, **Site safety**. For more information, see Workplace services on the Employee Center portal.

Workplace Core customers using Workplace Core version 2.18.1 and later can access Workplace services portal from **All** > **Workplace Core** > **Workplace service portal** > **Workplace Service Portal Home**.

Use with other Workplace Service Delivery applications

Workplace Core is the core application of the ServiceNow® Workplace Service Delivery. Use it along with other applications that are part of the suite. For information about other applications available in the suite, see Workplace Service Delivery applications

All Safe Workplace suite applications are available in the ServiceNow Store.

Workplace services on the Employee Center portal

Avail workplace-related services using the Employee Center portal. The Employee Center portal is a unified portal that brings all the employee-related services at one place.

The Employee Center portal allows employees to raise a workplace request for a department. The Employee Center portal enables you to request a workplace service available to you. Using the Content Taxonomy Framework, you can modify the base taxonomy - Employee to provide your workplace services as child topics.

To enable **Workplace services** menu option on the Employee Center portal, ensure that you have the following plugins and applications installed:

- Employee Center plugin (sn_ex_sp). For more information, refer to: Employee Center plugins
- Employee Experience Taxonomy plugin (sn_ect)
- Workplace Service Delivery (sn_wsd) suite with all the applications.

Note:
Before you install the Workplace Service Delivery (sn_wsd) plugin, ensure that you have the latest Employee Center plugin.

Workplace Services on Employee Center

After you install the required plugins, the **Workplace Services** menu option appears on the Employee Center homepage. Select it to raise workplace service requests.

The **Workplace Services** option shows the list of following workplace services:

- **Furniture and Supplies**: Request a furniture or an equipment for your workplace or any meeting.
- **Events**: Register a guest or a co-worker for a visit or for an upcoming event.
- **Site safety**: Raise workplace-related requests such as general reservation and shift-based reservation. View the location directory, add a shift or a task. Schedule your arrival.
- **Maintenance**: Raise a request to change your office setup or for any general inquiry. Add a planned task definition.

Enabling Workplace services on the Employee Center portal

The base taxonomy - Employee, is installed when you install the Employee Experience Taxonomy plugin. Complete the following tasks to enable Workplace services on the Employee Center portal:

- Customize the taxonomy. First, copy the base taxonomy and then make the required changes.
- Create the content, such as Create a workplace service record producer or Knowledge base article.
- Associate the content to the taxonomy.

Virtual Agent for Workplace Service Delivery

Workplace Service Delivery provides you with delivered conversations in Virtual Agent, which is an automated chatbot that enables employees to request services or raise inquiries. The Virtual Agent is available on the Employee Center where employees can find all their workplace-related information.

For more information about Virtual Agent, see Virtual Agent.

Predefined Virtual Agent topics for Workplace Service Delivery

As an employee, you can use the Virtual Agent chat support available in the Workplace Service Portal to request workplace services or know the status of any requested service. You can select the chat icon () displayed at the bottom-right of the portal to start a conversation with the Virtual Agent.

The Workplace Service Delivery Virtual Agent enables you to raise requests and view updates related to reservations, visitor registrations, and workplace service requests. The following predefined topics are available in the Workplace Service Delivery Virtual Agent chatbot:

Workplace Reservation Management

- Create a reservation for a location
- View reservations for the current day
- See when your reservation will start or happen
- Cancel a reservation

Workplace Case Management

- Request a workplace service
- View the status of your submitted cases
- View the cases that are awaiting acceptance

Workplace Visitor Management

- Register a guest
- See your expected visitors for the current day

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- See when your visitor is expected to arrive
- Cancel a registered visitor

Activate Virtual Agent for Workplace Service Delivery

To activate Virtual agent for Workplace Service Delivery, activate the following plugins:

1. Activate the Glide Virtual Agent plugin (com.glide.cs.chatbot) that provides the Virtual Agent framework.
2. Activate the Workplace Core plugin (sn_wsd_core).

For more information, refer to Activate Virtual Agent for Workplace Service Delivery.

Configure Workplace Core

Install Workplace Core application. Provide your workplace data to configure spreadsheets and import workplace data. Modify your existing spreadsheets. Upload floor plans to provide floor maps for a selected floor.

Install Workplace Core

You can install the Workplace Core application if you have the admin role. This application includes optional demo data.

Before you begin

Ensure that the application and all of its associated store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application.

Role required: admin

About this task

The following components are installed with installation of the Workplace Core application:

- Roles
- Tables

See Components installed with Workplace Core for more information.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from ServiceNow store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   If your application requires other applications, install them first if they are not already installed.

   Installing your application also automatically installs the dependent applications or plugins if they are not installed already.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.
   Some applications include demo data, which are sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Note:
   If you don't load the demo data for a store application during installation, it is not available to load later.

6. Click **Install**.

Providing your workplace data

In the Workplace Core application, provide data related to your workplace locations so you can efficiently assign shifts to employees and designate workspaces for these shifts.

Workspace Record

The information available for each workspace record is:

- Region
- Site
- Campus
- Building
- Floor
- Area
- Space

Each designation should use a unique identifier. For example, if you are indicating the fourth floor in building 7, you would name the floor "7-4" rather than just "4".

Entering data for several work sites

If you have a large organization, you might want to consider using a spreadsheet to contain the more global record information such as regions, buildings, and sites so you can avoid having to manually input repeated information for each workspace record. You can either export the information you've already entered into the application into a spreadsheet or use that information in an existing workspace spreadsheet. You would then import the spreadsheet that contains the full workspace data into the application in bulk form.

- If you have an existing spreadsheet, you would first manually convert the column headers and data of the global information to match the ServiceNow record names and identifier numbers. You would then do a bulk import of that data into the Workplace Core application so you can assign workspaces.

  For example, say your organization's spreadsheet uses the name "Location" for Sites or "Bldg 1" for every building 1 on every site. You would have to change the spreadsheet column header "Location" to "Sites" and change each "Bldg 1" to the unique identifier from the Workplace Core application records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If you don't have an existing spreadsheet, you would enter the repeated global information that you don't want to have to input manually for each space. The data for each field should have a unique identifier. You would then export the information from the application into a spreadsheet where you would have to input only the space information manually.

Floor plans

The ServiceNow AI Platform supports Drawing eXchange Format (.dxf) files for floor plans. You can select the layers you need for end-user floorplans and configure the attributes (tags) you want assigned to fields. For information about how to export an AutoCAD .dwg file to a Drawing eXchange Format (.dxf) file, see the documentation for your version of AutoCAD.

Prior to uploading a .dxf file, work with your AutoCAD designers to ensure the following:

- The file uses block references and not single-line or multi-line text for space labels.
- The blocks attributes have human-understandable tags.
- The block references have attribute values appropriately set.

> **Note:**
> Using blocks is highly recommended. Do not use text objects.

Uploading a floor plan creates a floor record. All the workspaces of the floor are automatically added to the Spaces related list of the floor record.

Create records for your workplace data

Create individual records of your workspaces, floors, office buildings, and workplace locations within the Workplace Core application. Either insert new data or add records to the existing workplace data.

Before you begin

Ensure that you have the following details:

- Workplace data for your organization.
- Data of workspaces that can be marked as available.

Role required: sn_wsd_core.admin

About this task

If you have a small number of workspaces, you can enter information individually for each workspace down to the Spaces level.

If you have many work sites, you might want to do the following:

1. Create a skeleton of repeated global information.
2. Add the individual spaces information in a spreadsheet.
3. Import the spreadsheet into the application.

   For more information on importing, see Configuring spreadsheets to import workplace data.

If you have floor plans, you can create records of data until the Buildings level. Uploading the floor plans loads the data of floors and of the spaces associated with these floors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select the applicable module.
   Create the records in the following order:
   - Regions
   - Sites
   - Campuses
   - Buildings
   - Floors
   - Areas
   - Spaces
   - Order

   For example, if you want to create locations of your offices, select **Sites**.
3. On the form, fill in the fields.

   Note:
   - The visibility of some of the following fields depends on the module that you selected.
   - You can leave a field that does not apply to your organization empty.

   The fields on the form differ based on what module you selected. For example, the following form is for Building.

Building form

Field	Description
Name	Name of the workplace. Ensure that you enter a unique name. For example, if the **Building** field is set to **1C**, and if the **Space** field is set to **WST 1C 1601**, then an appropriate value for the **Name** field can be `1C-16` **Note:** Do not use workplace locations with the same name because it affects the reservation process.
Region	Region where the office is located. If your organization is located at several regions, select that region where the office that you are adding is located.
Site	Location of the office campus. If there are several sites in a region, select that site where the office that you are adding is located.
Campus	Name of the campus where the office operates. If there are several campuses in a site, select that campus where the office that you are adding is located.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Building	Name of the office building for this workspace. If there are several buildings in a region, select that building where the office that you are adding is located.
Floor	Name or number of the floor where this workspace is present.
Area	Name of the area on the office floor.
Managed by group	Group that manages the entire workplace-related operations.
Managed by	Workplace manager who manages all the workplace-related operations.
Time Zone	Time zone of the location where the building is located.
Active	Option to indicate that this space is active.
Is reservable	Option to indicate that the spaces for this workplace entity are available for reservation. For example, if you do not mark a Building as reservable, then none the floors, areas, and spaces of this building would be available for reservation.
Street	Street details of the location where the building is located.
City	City where the building is located.
State/province	State/province where the building is located.
Zip/Postal Code	Zip/postal code of the location where the building is located.
Space type	Type of the office space. To configure a new space type, see Add a space type configuration.
Latitude	Latitude of a campus or a building. The latitude is displayed in the Workplace Service Portal Location directory map.
Longitude	Longitude of a campus or a building. The longitude is displayed in the Workplace Service Portal Location directory map.
Enable employee location privacy and preference	Location privacy preference for the building. The following options are provided: ○ **None**: Select this option if you don't have any particular privacy preference on the building. When you set this option, the privacy preference that is set by your organization is considered. The field is set to **None** by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **No privacy**: Select this option if you don't have any privacy requirement. ○ **Workplace profiles only**: Select this option to set privacy on workplace profiles. ○ **Reservations only**: Select this option to set privacy on workplace reservations. ○ **Reservations and workplace profiles**: Select this option to set privacy on both workplace profiles and workplace reservations.
Allow employees to override location privacy on reservations	Specify if you want to let employees override the location privacy while reserving spaces that belong to this building. The field provides the following override options: ○ **None**: Select this option if you don't have any particular privacy requirement. When you set this option, the location privacy override preference that is set by your organization is considered. The field is set to **None** by default. ○ **Yes**: Select this option if you want to let employees override the privacy preference that is configured for the location that they want to reserve. ○ **No**: Select this option if you want to restrict employees from overriding the privacy preference that is set on the location that they want to reserve.

4. Click **Submit**.

Result
The workplace location record is added.

What to do next

- If you have floor plans for your workplace, you can upload them to create and display floor and workspace data. For more information, see Upload a workplace floor plan.
- If you are using a spreadsheet to enter and import bulk data for workspaces, see Configuring spreadsheets to import workplace data.
- If you have added all of your workplace data, you can define employee shifts. For more information, see Define shifts for your workplace.

Upload a workplace floor plan

Upload Drawing eXchange Format (.dxf) files of floor plans that you can configure and use to reserve space for your employees.

Before you begin
Use workplace floor maps to find and reserve a space within Workplace Core. To view the maps in the Location directory and within Workplace Reservation Management, use Mappedin and

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Indoor Mapping. For more information on how to use floor maps, refer to Workplace Space Mapping.

To avoid issues while rendering your floor plan, verify that the dxf.json attachment size is 5 MB or smaller. To view the size, download the dxf.json file and view the file properties. If the file size is larger than 5 MB, you can:

- Work with your AutoCAD designers to ensure that spaces are represented as blocks (not single or multi-line text).
- Ensure that the block reference attributes are appropriately set and try to import the dxf.json file again.
- Set the *com.glide.attachment.max_get_size* property to a size that is greater or equal to the dxf.json file size. For more information, see Administering attachments.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Upload Floor Plan**.

   In Workplace Core version 2.19.0 and above, the navigation path for **Upload floor plan** is not available in the application context menu search **All** > **Workplace Core**.

   In Workplace Core version 2.18.11 and later, the navigation path is available in the application context menu search **All** > **Workplace Core** > **Upload floor plan**.

2. On the form, fill in the fields.

Manage Workplace Floor form

Field	Description
Number	A unique number automatically generated by the application that identifies the floor plan.
Name	Name of the floor plan. **Note:** Be specific and have a consistent naming convention when naming your floor plans.
Region	Geographic location of the building the floor plan represents. Select the Lookup using list icon to view a list of regions you can select.
Site	The location of the office or campus within a region. Select the Lookup using list icon to view a list of sites you can select.
Campus	Name of the campus if you have multiple buildings at a site.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Building	Name of the specific building if you have multiple buildings at a campus.
Active	Option to indicate the is active.
Is reservable	Option indicating whether the space manager can reserve this plan for employee use.
Managed by group	The group that manages the space reservation for the floor plan. Select the Lookup using list icon to view a list of groups you can select.
Managed by	The workplace manager of the group that manages the space reservation for the floor plan. Select the Lookup using list icon to view a list of group managers you can select.

3. Select the attachment icon and upload your Drawing eXchange Format (.dxf) file.
   After you attach your .dxf file and import the floor plan, the .dxf file converts to a dxf.json file in your attachments. Don't remove any of these files or your floor plan does not appear. Also, the dxf.json file size must be 5 MB or smaller. Try selecting fewer layers from your .dxf file during the import process.
4. Select **Next**.
5. In the Select layers column on the right, select the layers that you want to appear the plan.
   For example, you might not want electrical rooms, kitchens, storage closets, or other elements to appear on the floor plan when it renders.
6. Select **Render**.
   The floor plan appears under the **Preview plan** tab. Use your cursor to zoom in and out of the floor plan.
7. Select **Next**.
8. On the form, fill in the fields.

Assign tags to fields

Field	Description
AutoCAD tag	The tag you want to map to your space fields. Tags identify spaces on the floor plan and come from the uploaded .dxf file. The tags that appear are the ones you selected in the **Select layers** column.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: If you do not see any AutoCAD tags, you can use AutoCAD software to change text or text objects into block references.
Space Field	The field in the Space [sn_wsd_core_space] table with which you want to associate the tag. For example, you could associate an attribute named ROOM_NAME with the **Name** field and give it a higher order so it is the second part of the Name. The Space Field represents a specific location on the floor plan that you can assign to an employee.
Order	Determines the order of processing for your AutoCAD tag to Space Field mapping. **Note:** Lower numbers process first.

9. Select **Submit**.

Result
A new floor record is created with the floor plan attached to it. The Spaces related list is populated with all the workspaces of this floor.

Update a workplace floor plan

Update a workplace floor plan by uploading a new plan.

Before you begin
Role required: sn_wsd_core.workplace_manager

Procedure
1. Navigate to **All** > **Workplace Core** > **Space Administration** > **Floors**.
2. Select the floor you want to update.
3. Select the **Update floor plan** related link.
4. Select **Manage Attachments**, delete the current floor plan file, and attach the new floor plan file.
   You can have only one .dxf file uploaded at a time.
5. Select **Next**.
6. In the Select layers column, select the layers that you want to appear on the floor plan.
   For example, you might not want electrical rooms, kitchens, storage closets, or other elements to appear on the floor plan when it renders.
7. Select **Render**.
   The floor plan appears under the **Preview plan** tab. Use your mouse to zoom in and out.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Select **Next**.
9. On the form, fill in the fields.

Assign tags to fields

Field	Description
AutoCAD tag	Tags from the uploaded `.dxf` file identify spaces on the floor plan. The tags that appear are those that you selected in the **Select layers** column. **Note:** If you do not see any AutoCAD tags, you can use AutoCAD software to change text or text objects into block references.
Space Field	The field in the Space [sn_wsd_core_space] table with which you want to associate the tag. For example, you could associate an attribute named ROOM_NAME with the **Name** field and give it a higher order so it becomes the second part of the name.
Order	Determines the order of processing for your AutoCAD tag to Space Field mapping. **Note:** Lower numbers process first.

10. Select **Preview Changes** and in the **Preview changes** tab, review the changes you are going to make before you commit them.
11. Select **Submit**.

Result
The following changes occur:

- Map values are filled in.
- Existing spaces that no longer match are deleted.
- If old spaces have been renamed, the new names replace the old ones.
- Any reservations are deleted.

A original floor record is updated with the floor plan attached to it. The Spaces related list is also updated. To view your changes, go to **Floor Plan Update Logs**.

Configuring spreadsheets to import workplace data

Doing a bulk import of the data of all your workplaces into the Workplace Core application through a spreadsheet enables you to avoid manually entering redundant data for each workplace, which saves time and effort.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

By using a spreadsheet that contains the global information for your work sites, you can enter only the distinguishing space information instead of having to manually repeat information such as the region, site, building, and floor. You can either create an Excel spreadsheet from the data you've entered into the Workplace Core application or modify an existing workplaces spreadsheet.

Configure an existing workspaces spreadsheet

Customize the information in your organization's existing workspace spreadsheet to avoid having to manually enter repeated information for each workspace. You can then import the data into your ServiceNow instance.

Before you begin

Role required: sn_wsd_core.admin

About this task

If you have a spreadsheet containing your organization's workspaces data, you need to customize it to match the record information in your ServiceNow instance.

This example describes how to modify the floor information for your workspace data. Repeat these instructions to replace the fields for your building, campus, site, and region, as appropriate.

Procedure

1. Modify the data in the spreadsheet to match the record information in your ServiceNow instance.

   a. Navigate to **Workplace Safety Management** > **Space Administration** > **Floors**.

   b. Search for the desired floor record and open it.

   c. Copy the value of the **Number** field.

   d. Paste the value in place of "Floor 1" in the Excel spreadsheet.

      The example uses the following sample entry for workspaces that belong to Floor 1 of Building 1 at Florida Campus 2, Florida, USA:

      - FLOR0001694 represents Floor 1
      - BLDG0001028 represents Building 1
      - CMPS0001013 represents Florida Campus 2
      - SITE0001007 represents Florida
      - RGIN0001002 represents USA

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can exclude the **Area** column as it is not mandatory. Enter a dummy value in the column instead of leaving it empty.

A	B	C	D	E	F	G	H	I
Name	**Area**	**Floor**	**Building**	**Campus**	**Site**	**Region**	**Is reservable**	**Active**
B 1F 1 001		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE
B 1F 1 002		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE
B 1F 1 003		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE
B 1F 1 004		Floor 1	Building 1	Florida Campus 2	Florida	USA	TRUE	TRUE

2. In your workspaces spreadsheet, add individual workspace information in the **Name** column.
3. Save your spreadsheet.

Create a workplace data spreadsheet

Create a Microsoft Excel spreadsheet from the data you entered into the Workplace Core so you can avoid having to manually enter global information such as the site or building names for each workspace. You can then import the data into your ServiceNow instance.

Before you begin
Role required: sn_wsd_core.admin

About this task
If you have a large number of work sites, consider creating a spreadsheet that you can then import into your ServiceNow instance to avoid having to manually enter global information such as the site or building names for each workspace.

Note:
If you already have an existing workspaces spreadsheet for your organization, follow the instructions in Configure an existing workspaces spreadsheet to customize it for exporting the data.

Procedure
1. Navigate to **All** > **Workplace Safety Management** > **Space Administration**.
2. Select the module for the smallest unit for which you want to repeat the data.

   For example, if you have created global information records of regions, sites, buildings, and floors, you would select **Floors**.

3. **Optional:** Customize the columns to be displayed.
   For example, you can choose to hide the **Campus** column if your organization does not have campuses by entering a dummy value instead of leaving it empty.
4. Export the data by holding and selecting (or right-clicking) on any column, selecting **Export**, and selecting **Excel (.xlsx)**.
   Data is exported from the application so that you can download it as an Excel file.
5. Select **Download**.
6. In your workspaces spreadsheet, add individual workspace information in the **Name** column.
7. Save your spreadsheet.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Import your workspaces data from an Excel spreadsheet

Activate Virtual Agent for Workplace Service Delivery

Activate Virtual Agent for Workplace Service Delivery to provide user assistance to employees through a chat interface.

Before you begin

Role required: admin

About this task

- Activate the Glide Virtual Agent plugin (com.glide.cs.chatbot) that provides the Virtual Agent framework.
- Activate the Workplace Core plugin (sn_wsd_core).

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from ServiceNow store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release note information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   If your application requires other applications, install them first if they are not already installed.

   Installing your application also automatically installs the dependent applications or plugins if they are not installed already.

5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.
   Some applications include demo data, which are sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Note:
   If you don't load the demo data for a store application during installation, it is not available to load later.

6. Click **Install**.

   Important:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

Manage workplace safety activities

Monitor your workplace activities. Perform workplace-related actions using the Workplace Core application such as import data, managing locations and configuring other workplace-related settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Import your workspaces data from an Excel spreadsheet

Import your workspaces data from an Excel spreadsheet into the Workplace Core application.

Before you begin
Role required: sn_wsd_core.admin

About this task
Complete Configuring spreadsheets to import workplace data.

Procedure

1. Navigate to **All** > **System Import Sets** > **Load Data**.
2. Select **Existing table**.
3. In the **Import set table** field, select **Space Staging [sn_wsd_core_space_staging]**.
4. In the **Source of the import** field, select **File**.
5. Select **Choose File** and select the source Excel spreadsheet.
6. **Optional:** Specify the worksheet number in the **Sheet number** field and header row number in the **Header row** field.
7. Select **Submit**.
   The imported data is now available in the new Import Set table.
8. Select **Run Transform**.

> **Important:**
> Ensure that the Import set field shows sn_wsd_core_space_staging and the selected map is Space Transform map - sn_wsd_core_space.

9. Select **Transform**.
10. **Optional:** Verify that the data records were imported into the Spaces table by navigating to **Workplace Safety Management** > **Space Administration** > **Spaces**

What to do next
Define shifts for your workplace

Related topics

Run an import

Create a transform map

Add a space type configuration

Configure the different types of spaces available in your workplace. You can add spaces based on different space types. The space types enable your employee to identify the different types of spaces that are available on a floor in a Mappedin floor map

Before you begin
Role required:sn_wsd_core.admin or sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace core** > **Administration** > **Space type configuration**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space Type form

Field	Description
Name	Descriptive name of the space type.
Code	Code for the space type. The code can also be a name.
Table	Table of the space type. The field is automatically set to **Space [sn_wsd_core_space]**. If the space type is a room, select **Room [sn_wsd_core_room]**.
Application	Application of the space type. This field is automatically set. Make sure that **Workplace Safety Management** is selected.
Active	Option to activate the space type.
Available for	Option to specify the type of users for whom the space type is available.

4. Select **Submit**.

Result
The space type is configured. You can select this space type while creating a space or a type mapping.

Block a workplace location

Block a workplace location for a specific period. The blocked workplace location is unavailable during the specified period for any type of reservation on the Workplace Reservation Management Reservation portal.

Before you begin
Note:
The blocked location will be unavailable only on the Workplace Reservation Management Reservation portal for reservation.

Role required: sn_wsd_core.admin

About this task
You can block a workplace location, such as a region, a site, campus, a building, a floor, an area, a room, or a space. When you block a location, the location is unavailable for any type of reservation on the Workplace Reservation Management Reservation portal. Because of the block action, any existing reservations made on the workplace location are automatically canceled.

You can also block a location directly. Open the location and click the **Block location** option on the form.

Procedure
1. Navigate to **All** > **Workplace Core** > **Administration** > **Block location**.
2. Click **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Block Location form

Field	Description
Number	Number of the location. This field is automatically set.
Location	Location that you want to block.
Opened by	User who is blocking the location.
Reason	Reason for blocking the location. Select from a list of available options.
Comment	Comment that explains the reason for blocking the location or any important information.
Active	Option to activate the block action.
Progress state	Current progress state of the block action.
Start time	Start time of the block.
End time	End time of the block.

4. Click **Submit**.

Result

The workplace location is blocked for the specified period. You cannot make any reservations for the location on the Workplace Reservation Management Reservation portal during this period. All existing reservations that are made on the workplace location are canceled.

Configure Workplace entity and entity types

Create a business hierarchy based on your organization's businesses. Allocate workplace locations based on the business to which they are associated with. Configure workplace entity types and workplace entities to create the structure. For example, add entity types such as Business Units, Marketing Units, and associate workplace entities such as ITSM, Facilities, and more under them.

The Workplace Core applications enable you to classify your workplace locations based on their cost center, department, and workplace entity. The workplace entity-based allocation helps you in create an organized business structure where you can configure parent-child-based hierarchies and manage various workplace-related activities. You can create a structure exactly as your organization's business by configuring workplace entity types and workplace entities. You can associate locations based on the business to which they are associated with.

As a workplace manager, you can manage space allocations based on their entity levels that is set and ensure proper space utilization according to business. You can visualize data on the stack plan and floor map based on the workplace entities that you've configured. You can view the space allocations of a building based on workplace entities. At any time, you can select a space and know its hierarchy level, that is, the details of its parent and child if present. This business-based hierarchy model, that is, workplace entity-based allocation, enables you to control the space consumption of each business in your organization. The Space Optimization dashboard also enables you to visualize data based on the different workplace entities configured. For more information about how workplace entities and other allocations work, refer to Allocation - types, setting, and impact.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
You cannot create a scenario based on workplace entities. You can only view and make map based space administration for workplace entities.

At any time, you can filter your workplace locations and perform various actions easily on these entities directly. The application enables you to specify an order to each entity type based on which a hierarchy is set. For a parent-child hierarchy, you can also perform direct actions on a parent if you want to implement the same throughout its child entities.

With the hierarchy-based configuration, you can perform the following actions:

- You can create various entity types and set their level using the entity-mapping options. When you create workplace entities, you can assign them to these entity types.
- You can set the order of an entity type based on its level in the hierarchy. The lower the order, the higher the entity type is set in the hierarchical structure. The lowest ordered entity type is set in the highest level in the hierarchy. For example, if you set ABC with order 1000 and XYZ with order 600 then XYZ is placed on top in the hierarchy level and ABC is set to lowest.
- At any time, you can use the **Push down** option if you want to push down the workplace entity to child locations. For more information about how an allocation works, refer to Allocation - types, setting, and impact.
- You can activate or deactivate a workplace entity. Deactivating a workplace entity also deactivates the child workplace entity.

Important:
You can not activate a workplace entity if the parent is inactive.

Add a workplace entity type

Create an entity type according to your organizational requirement. You can group your workplace entities under this entity type and perform various actions on all entities that belong to this type at a time.

Before you begin
Role required: Workplace manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Workplace Entity Types**.
2. Select **New**.
3. On the form, fill in the fields.

Entity Type form

Field	Description
Name	Name of the entity type. For example, Business Unit, Marketing Units, Projects and more.
Entity-mapping column	Workplace entity reference column from the Workplace Entity table where the denormalized workplace entity information is stored.
Order	Order of an entity type based on its level in the hierarchy. The lower the order, the higher the entity type is set in the hierarchical

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	structure. The lowest ordered entity type is set in the highest level in the hierarchy. For example, if you set ABC with order 1000 and XYZ with order 600 then XYZ is placed on top in the hierarchy level and ABC is set to lowest.
Active	Option to activate the entity type.

4. Select **Submit**.

Result
The entity type is created.

What to do next
Add workplace entities to an entity type

Add workplace entities to an entity type

Create workplace entities based on your organization's business structure. Specify the entity type to which they belong. You can also specify a parent to the entity based on its hierarchy.

Before you begin
Add a workplace entity type

Role required: Workplace manager

About this task
Create and associate a workplace entity with an entity type so that it can be easily classified. Assign the entity to a parent.

Procedure
1. Navigate to **All** > **Workplace Core** > **Administration** > **Workplace Entities**.
2. Select **New**.
3. On the form, fill in the fields.

Workplace Entity form

Field	Description
Name	Name of the workplace entity.
Parent	Parent of the workplace entity.
Entity type	Entity type to which the workplace entity belongs.
Active	Option to activate the workplace entity.
Managed by group	Group that manages the workplace entity. Users of the selected group receive a notification when an allocation for the entity is going to expire.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Managed by	User that manages the workplace entity. The selected user receives a notification when an allocation for the entity is going to expire.

4. Select **Submit**.

Result
The workplace entity is created and assigned to the selected parent and entity type.

What to do next
For more information about how workplace entities and other allocations work, refer to Allocation - types, setting, and impact.

To populate the Entity-mapping column for existing workplace entities, the application provides you with the following flows:

- **Set hierarchy from scratch via subflow**: Run this flow to recalculate the entity-mapping columns for the complete hierarchy.
- **Process entity updates via subflow**: This flow runs everyday to update the workplace entity-mapping columns only for those workplace entities where the 'update_type' column is set.

Enable favorites option for Workplace Service Portal

Enable employees to set a workplace location as their favorite while using the Workplace Service Portal. Integrate with Employee Service Center to configure the favorites option.

Before you begin
To enable the favorites option for Workplace Service Portal, ensure that you have the latest versions of the following applications and plugins installed:

- Employee Center Core (sn_ex_sp)
- Employee Experience Taxonomy plugin (sn_ect)
- Employee Experience Foundation (sn_ex_emp_fd)

Role required: esc_admin or sn_wsd_core.admin

About this task
Configure the favorites option so that employees can set any workplace location as their favorite. The employees can view their favorite locations anytime by selecting the **Favorites** tab on the Employee Center homepage. The locations that they set as their favorite are given the first priority when they search for available locations to make a reservation.

Procedure
1. Navigate to **All** > **Favorites** > **Favorite Content Configuration**.
2. Ensure that the following Content types are listed in the Favorite Content Configuration form:
   - Desks (sn_wsd_core_space)
   - Rooms (sn_wsd_core_rooms)
3. Navigate to **All** > **Service Portal** > **Portals**.
4. In the Service portals list, perform the following actions:
   a. Go to **Workplace Services**.
   b. In the **Enable favorites** column, set the option to **true**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The favorites option is enabled for employees to set any workplace location as their favorite.

Create a workplace performer criteria

Configure the users who are permitted to perform important actions in Workplace Service Delivery. Add approvers to approve workplace cases and reservations that are created through Workplace services.

Before you begin
Role required: sn_wsd_core.admin

About this task
Configure workplace performer criteria and enable a set of users to perform actions such as approval and more. The configured users can perform approval actions, workplace-related activities and reservation-related approvals. The users configured in the criteria will be used to perform various important actions throughout the Workplace Service Delivery application.

Procedure
1. Navigate to **Workplace Core** > **Administration** > **Performer Criteria**.
2. Click **New**.
3. On the form, fill in the fields.

Workplace Performer Criteria form

Field	Description
Name	Name of the performer criteria.
Table	Table for which you want to create the performer criteria. This field appears only if the **Is dynamic** option is selected.
User criteria	User criteria for the performer criteria for approvals. This field appears only if the **Is dynamic** option is not selected. To add a user criteria, refer to Create a user criteria record.
Active	Option to activate the performer criteria.
Is dynamic	Option to create the performer criteria with a dynamic behavior. If you enable the option, you can select the user fields directly that you want to set as approvers.
User field	Users or user groups who perform any important Workplace Service Delivery application-related actions. This field appears only if the **Is dynamic** option is enabled.

4. Click **Submit**.

Result
The performer criteria are added for the selected table.

Create an approval definition

Add an approval definition so that you can implement an approval process that is over that definition. The approval is applied on reservations that match the conditions.

Before you begin

Important:
Starting with Workplace Reservation Management version 2.1.2, the approval options function as follows:

- For existing customers, it was possible to configure approval functionality on the Reservable module to approve reservations. After the upgrade, this possibility remains the same until a new approval definition is configured using the following procedure. After you configure a new approval definition, the approval process will run based on the upgrade.

  After the upgrade, disable the **WSD Reservation Approval Flow** in the **Flow designer**.

- For new customers, the following procedure explains how to configure an approval definition to approve a reservation.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **Workplace Core** > **Administration** > **Approval Definitions**.
2. Click **New**.
3. On the form, fill in the fields.

Workplace Approval Definition form

Field	Description
Name	Name of the approval definition.
Applicable to	Table on which the approval definitions must be applied.
Application	Application for which you are creating the approval definition. This field is automatically set.
Active	Option to activate the approval definition.
Order	Order in which the approval definition must be implemented. For example, if you the selected Reservation table in the **Applicable to** field and there a reservation matches more than one approval definition, then the approval definition with the lowest order is applied. However, do not maintain approval definitions with the same order.
Conditions	Option to add filter conditions based on which the approval definition must be implemented. The conditions are applied on the table selected in the **Applicable to**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	field. To add a condition, select **Add filter condition**. To add an OR clause, select **Add "OR" clause**. For example, if the Reservation table is selected in the **Applicable to** field, then the approval definition is implemented on the reservations that match the filter conditions.

4. Click **Submit**.

Result
The approval definition is created for the reservation table. If a reservation matches more than one approval definition, then the approval definition with the lowest order is applied.

What to do next
Add approvers to approve the reservations that match the approval definition. For more information, refer to Add a workplace approval configuration.

Add a workplace approval configuration

Add approvers to an approval definition. The assigned approvers receive the approval requests of those reservations that match the conditions defined in the approval definition.

Before you begin
Role required: sn_wsd_core.admin

Procedure
1. Navigate to **Workplace Core** > **Administration** > **Approval Definitions**.
2. Select the approval definition to which you want to add a workplace approval configuration.
3. On the form, scroll down to the Workplace Approval Configurations related list.
4. Click **New**.
5. On the form, fill in the field.

Workplace Approval Configuration form

Field	Description
Name	Name of the workplace approval configuration.
Approval definition	Definition of the approval. The field is automatically set.
Approvers	Approvers for the approval definition. Select one or more approvers to approve the reservations that match the approval definition. To add approvers, refer to Create a workplace performer criteria.
Application	Application for which you are creating the approval definition.
Wait for	Type of approval required to approve the reservation. Options are as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Any approver can approve. ○ All approvers must approve. ○ The first response from any approver is an approval.
Missing all approvers	What action to take if all the approvers are missing.
Level	Importance level of the approval. The approval with the lowest level is implemented first.

6. Click **Submit**.

Result
The workplace approval configuration is added.

Mapping employees to their designated workspaces

Map your employees to their designated workplace locations in Workplace Core to automatically fill in that detail in reservation requests and to take advantage of auto-assignment of workspaces if that feature has been enabled.

For employees who had a designated workspace before they started working remotely, create a mapping between the user profile and the designated workspace details. This mapping populates the workspace details on reservation request forms so employees don't have to provide these details manually.

If your system administrator has enabled the auto-assign feature, mapping workspaces for all employees also means that designated workspaces are automatically assigned when employees make a reservation request.

The data from the User Workplace Profile [sn_wsd_core_workplace_profile] table is used to automatically assign the designated workspace to the employee.

- If the user's designated space is available, this space is reserved for the employee.
- If the designated space is unavailable for the requested date or time, the application searches for and reserves an available space in the employee's workplace in the order of Area > Floor > Building > Campus > Site > Region.

  For example, if no spaces are available in the designated area of the employee, the application finds and reserves an available space from the floor of this area.

Note:
From Workplace Core version 2.16.1, the workplace user profiles are created in the Workplace Profile Location Assignment [sn_wsd_core_workplace_profile_location] table. A new field **Is Primary** is added in the table so that you can specify if a location is the primary location when there are multiple locations. In case of existing user profiles created in the User Workplace Profiles [sn_wsd_core_workplace_profile] table, a fix script will run and will automatically consider the latest workplace location added to the profile as the primary workplace location.

If you have installed Workplace Space Management application, as a Workplace manager, you can also view the reason for an anomaly in a workplace profile if there are any. A schedule job will also enable you to view a detailed report of all the anomalies logged in the application via an email. Navigate to **Workplace Core** > **Administration** > **Workplace profiles** and switch to the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space Management view, a **Reason for anomaly** column appears as a glide list. An anomaly can happen due to a mismatch in the allocation or assignment type. For more information about anomalies, see Workplace location assignment anomaly types.

From Workplace Space Management 1.12.0, only open spaces from the user's allocation type that are within the allocation start and end dates are listed. After an allocation expires, the anomaly is recalculated to the appropriate value.

Important:
Starting from Workplace Core version 2.16.1, the allocation type **Department and cost center** is no longer available. A new allocation type, **Workplace entity** is introduced that provides more advantages.

Map designated workspaces to user profiles

Map existing designated workspaces to employee user profiles in Workplace Core. This mapping is used to automatically allocate workspaces for employees so they don't have to select a workspace manually when requesting a reservation.

Before you begin

- Ensure that your workplace administrator has completed setting up your workplace data. For more information, see Providing your workplace data.
- Ensure that you have the designated workplace information for all the employees.
- You can also navigate to the User Workplace Profiles [sn_wsd_core_workplace_profile] table by entering `sn_wsd_core_workplace_profile.list` in the navigation filter.

Note:
From Workplace Core version 2.16.1, the workplace user profiles are created in the Workplace Profile Location Assignment [sn_wsd_core_workplace_profile_location] table. A new field **Is Primary** is added in the table so that you can specify if a location is the primary location when there are multiple locations. In case of existing user profiles created in the User Workplace Profiles [sn_wsd_core_workplace_profile] table, a fix script will run and will automatically consider the latest workplace location added to the profile as the primary workplace location.

Important:
Starting from Workplace Core version 2.16.1, the allocation type **Department and cost center** is no longer available. A new allocation type, **Workplace entity** is introduced that provides more advantages.

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Create a mapping for all employees and their designated workplaces. You can also perform an easy import of your employee workplace data. For more information, see Easy import.

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Administration** > **Workplace profiles**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User Workplace Profile form

Field	Description
Employee	Employee for whom you want to create a workplace mapping.
Workplace entity	Workplace entity of your workplace to which the employee belongs. You can view this option only if you have installed the Workplace Space Management plugin and the view is set to **Space management** view.
Primary Workplace location	Primary or the main workplace location of the employee. The location is automatically set based on the Workplace Profile Location Assignment that is set as true. If there are no workplace locations assigned to the employee, then the field is set to read-only and empty.
Active	Option for indicating that this workplace mapping is active.
Enable employee location privacy	Option to set location privacy preference for the workplace profile. Note the following: **Note:** The field will be set to read-only and **None** if there are no workplace locations assigned to the employee. Otherwise, if a primary workplace location is set, then the privacy set on the primary workplace location is considered. ○ Set this option only if you want to have a different privacy setup for the workplace profile. ○ By default, the location privacy preference that is set on the building to which the workplace profile is assigned is considered. ○ In case, the building doesn't have any location privacy preference, preference set in the Workplace Reservation Management system property *sn_wsd_core.ENABLE_LOCATION_PRIVACY* is considered. ○ The field is set to **None** by default. For more information about each field, refer to Location privacy settings and impact

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Submit**.
5. Repeat the procedure for all the employees of the workplace that you manage.

Result
The User Workplace Profiles [sn_wsd_core_workplace_profile] table is populated with all the new profiles.

Set the primary location of a workplace profile

Assign a primary location for the workplace profile if there are multiple locations assigned.

Before you begin

Note:
From Workplace Core version 2.16.1, the workplace user profiles are created in the Workplace Profile Location Assignment [sn_wsd_core_workplace_profile_location] table. A new field **Is Primary** is added in the table so that you can specify if a location is the primary location when there are multiple locations. In the case of existing user profiles created in the User Workplace Profiles [sn_wsd_core_workplace_profile] table, a fix script runs and automatically considers the latest workplace location added to the profile as the primary workplace location. To set the primary location of a workplace profile, refer to Set the primary location of a workplace profile.

Role required: admin

About this task
When there are multiple locations to which as user workplace profile is assigned, you can specify the primary workplace location. The primary workplace location is considered as the main location. The following areas are impacted when you set a primary workplace location:

- When an employee raises a workplace service request, depending on the user for whom the request is being used, the fields are automatically filled. In the case where a location is required on the form, the application automatically fills it with the specified primary location.
- When an employee searches for spaces nearby to the user's location to make a reservation, the primary location is considered.

Procedure

1. Navigate to **All** > **Workplace core** > **Administration** > **Workplace profiles**.
2. Select the **Active** field of the workplace profile that you want to modify.
   For example, select **true** in the **Active** column to open the record.
3. On the form, scroll down to the Workplace Profile Location Assignment related list.
4. Set the primary location.
   - To add a new location and then it set it as primary, do the following:
     a. Select **New**.
     b. Add the location. Refer to Map designated workspaces to user profiles.
     c. Ensure that the **Is primary** field is selected.
   - To set an existing location as primary, do the following:
     a. Go to the **Is primary** field of the workplace location.
     b. Set the field to **true**.
5. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The primary workplace location is set. The **Primary Workplace location** field is updated with the location.

Assign the workplace user role to employees

Set rules in Workplace Core to assign the workplace user role to employees and apply conditions accordingly.

Before you begin
Ensure that the user profiles of all your employees have required details. You can review the employee user profiles by navigating to **User Administration** > **Users**.

Role required: admin or sn_wsd_core.admin

Procedure
1. Navigate to **Workplace Safety Management** > **Administration**.
2. Select **Client Role Assignment Rules**.
3. On the form, fill in the fields.

Workplace Client Role Rule form

Field	Description
Name	Unique name for this assignment rule.
Role	This value is auto-generated with the workplace user role (sn_wsd_core.workplace_user).
Active	Option for indicating whether this assignment rule is active.
Condition	Option to add filter conditions that a user profile must match. To add a condition, select **Add filter condition**. To add a OR clause, select **Add "OR" clause**.
Table	Table on which the conditions must be built. The field is automatically selected as `sys_user`.

4. Select **Submit**.

Result
The workplace user roles are assigned. If a record is created or updated on this table, a role assignment process is triggered in the background.

Configuring shifts for your workplace

Configure shifts for your organization in the Workplace Core application so you can efficiently plan and manage your workplace by assigning employees and workspaces to those schedules.

Define shifts for your workplace

Define shifts in Workplace Core with specific schedules so you can designate areas or workplaces and assign employees for each shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Providing your workplace data.
- Ensure you have the following information:
  - Appropriate shift schedules
  - Data of the employees who would operate from the office in this shift
  - Data of the workplaces to be made available for this shift

Important:
Starting with Workplace Core (sn_wsd_core) version 2.1, all updates and new features are available only on the Workplace Service Portal. The workplace services provided by ServiceNow® are removed from the Service Portal on Workplace Core (sn_wsd_core) beginning with version 2.1. To configure the Workplace service catalog in the Service Portal, see Configure a catalog in Service Portal.

Role required: sn_wsd_core.workplace_manager

About this task

Workplace managers can later reserve workplaces for employees according to the shifts assigned to them.

If your organization does not organize work in shifts, you can use the general shift schedule that is available with the application by default.

You can also access the Shift form by navigating to **Workplace Core** > **Shift Management** > **Create New**.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Browse Workplace Services**.
2. Select **Add a shift**.
3. On the form, fill in the fields.

Shift form

Field	Description
Name	Name of the shift, for example, Morning Shift.
Schedule	Schedule for the shift. For a general shift schedule, select **General shift**. For more information about how to create a shift schedule, see Define a schedule.
Owner	Shift owner who monitors activities during this shift.
State	Status of the shift. Choose one of the following values:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Draft**: Indicates that the shift details are incomplete. ○ **Ready**: Indicates that the shift is ready for assignments. ○ **Cancelled**: Indicates that the shift is cancelled.
Start	Date from which this shift is active.
End	Date until which the shift is active.
Region	Region of the workplace site.
Site	Site location of the office campus.
Campus	Name of the campus in which the office building is present.
Building	Name of the building in which the office floor is located.
Floor	Name or number of the floor where the area is located.
Area	Area that is active for operation and use during this shift.
Users	Employees assigned to this shift. This field appears only on Workplace Service Portal.
Locations	Workplaces available for reservation during this shift. This field appears only on Workplace Service Portal.

Note:

- If this shift is applicable to all office buildings on your campus, you can leave the **Building**, **Floor**, and **Area** fields empty. The shift and its schedule will be automatically applied to all the records of buildings, floors, and areas associated with this campus.
- When an employee requests to make a reservation with shifts, only shifts that are active on the dates that the employee selected are displayed on the reservation form.

4. Select **Submit**.
5. If you accessed the Shift form from Workplace Service Portal, on the verification page, you can define another shift or view all the existing shifts.

Result
The shift is added to the list of all shifts that you can view by navigating to **Workplace Safety Management** > **Shift Management** > **All**.

If you want to delete a shift, perform the following actions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Navigate to **Workplace Safety Management** > **Shift Management** > **All** and select the shift that you want to delete.
- On the form, click**Delete**.
- In the confirmation window, click **Delete**.

  The shift is deleted.

What to do next

If you created the shift using Workplace Service Portal, you can directly create workplace reservations.

You can configure other information such as employees, workplaces, and maintenance tasks associated with this shift later.

- Assign more employees to a shift.
- Associate more workplaces with a shift.
- Associate tasks with a shift.

Assign employees to a shift

Associate employees with a shift in Workplace Core so that they operate from the office only in the shifts to which they are assigned. Workplace managers can later reserve workspaces for these employees according to their assigned shifts.

Before you begin

- Define shifts for your workplace.
- Ensure you have the data for the employees who will operate from the office in this shift.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **Workplace Safety Management** > **Shift Management** > **All**.
2. Open a shift to which you want to add employees.
3. In the Users related list, select **Edit**.
4. Add all the employees who should operate from the office in this shift.
5. Select **Save**.

Result

A pre-configured email with the shift details is sent to all employees assigned to this shift.

What to do next

Associate areas and spaces with a shift.

Associate areas and spaces with a shift

Associate work areas and spaces with a shift in Workplace Core so that they are available only for that shift. Workplace managers can later reserve these workplaces for employees operating in that shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Define shifts for your workplace.
- Ensure you have the data for the workplaces to be made available for this shift.
- Ensure that the glide.ui.list.allow_extended_fields system property is set to **true** so that the filter criteria is displayed appropriately when you're adding areas or spaces.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **Workplace Safety Management** > **Shift Management** > **All**.
2. Open a shift to which you want to add employees.
3. In the Locations related list, select **Edit**.
4. Add all the areas and spaces to be made available for this shift.
5. Select **Save**.

What to do next

Create workplace reservations for an employee.

Managing workplace shifts that you own

Review the workplace shifts that you own in Workplace Core and update the shift details if necessary. You can also monitor the reservations and requests made for the workspaces associated with these shifts.

Update details of the shifts that you own

Review and modify the details of the workplace shifts that you own in Workplace Core. You can modify the general shift details, and add or remove employees or workplaces associated with the shift.

Before you begin

Role required: sn_wsd_core.workplace_shift_owner

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Shift Management**.
2. Select **Owned by Me**.
3. Open the shift for which you want to view the details.
4. **Optional:** Modify the shift details.

   a. Edit the details on the shift form.

Shift form

Field	Description
Name	Name of the shift.
Schedule	Schedule for the shift. (Optional) For a general shift schedule, select **General shift**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Owner	Shift owner who monitors activities during this shift. (Optional) If you select a different user, you will lose access to this shift.
State	Status of the shift. Choose one of the following values: ▪ **Draft**: Indicates that the shift details are incomplete. ▪ **Ready**: Indicates that the shift is ready for assignments. ▪ **Cancelled**: Indicates that the shift is cancelled.
Region	Region of the workplace site.
Site	Site location of the office campus.
Campus	Name of the campus in which the office building is present.
Building	Name of the building in which the office floor is located.
Floor	Name or number of the floor where the area is located.
Area	Area that is active for operation and use during this shift.

Note:
If this shift is applicable to all office buildings on your campus, you can leave the **Building**, **Floor**, and **Area** fields empty. The shift and its schedule will be automatically applied to all the records of buildings, floors, and areas associated with this campus.

b. Select **Update**.

5. **Optional:** Modify the list of employees assigned to this shift.
   a. In the Users related list, select **Edit**.
   b. Add or remove users.
6. **Optional:** Modify the list of workspaces associated with this shift.
   a. In the Locations related list, select **Edit**.
   b. Add or remove areas and spaces.

Review workplace reservations for shifts that you own

Review the workplace reservations and the reservation requests made for the shifts that you own in Workplace Core. You can identify pending requests and work with your workplace manager to resolve them.

Before you begin
Role required: sn_wsd_core.workplace_shift_owner

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to the reservation requests from employees or workplace reservations by the workplace manager.

2. Review all reservations requested or made for your shift.
3. **Optional:** Open a reservation record to view its details.

   (Optional) If you want to make any changes to the reservation such as assigning another workspace to the employee, or changing the date of the reservation, reach out to the workplace manager to request those changes.

4. **Optional:** If you are viewing employee requests, note any requests in the **Pending** state so you can work with your workplace manager to resolve them.

Managing workplace reservations for employees

Reserve available areas or spaces for your employees and review pending reservation requests from employees in Workplace Core so you can ensure physical distancing measures when they return to the workplace. Once you make reservations, employees are notified about the locations to which they have access. The Workplace Service Delivery also offers more advanced workplace reservation options in the Workplace Reservation Management application.

Creating workplace reservations for employees

Reserving workplace areas

As a workplace manager, you can make reservations for employees for areas on the floors of your office buildings. When employees return to the office, they can work from any of the spaces from the reserved area. The number of employee reservations that you can make for an area of your workplace depend on the capacity defined for that area. If the **Capacity** field of an area is set to **0** or left empty, reservations cannot be made for that area.

Creating a single space reservation

Using the shifts that you defined, you can create a space reservation for an employee for a single day or multiple days.

Creating space reservations in bulk

You can generate in one action reservations for multiple employees who are assigned to a shift for a specific date range. For example, you can use this feature to create reservations for employees of a specific department who would all be assigned to the same shift.

Child reservation records for employee space reservations

When you reserve a workplace for an employee, the reservation generates child reservation records for every applicable working day of the specified period. The applicable days are determined by the shift schedule that you select for this reservation. The reservation that you initially created acts as the parent reservation record.

If a child reservation conflicts with an existing reservation for any day in the specified period, the child reservation is not created for that day. You can manually create a reservation for a different workplace for that day.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, say you created a reservation for the workplace 2CN1612 for Mark Andrews in the afternoon shift from 06-01-2020 to 06-10-2020. Eight child reservation records for Mark Andrews for the workplace 2CN1612 would be created for each working day between 06-01-2020 and 06-10-2020. However, if a reservation for 2CN1612 on 06-08-2020 exists for another employee Jane Doe, the child reservation for Mark Andrews on 06-08-2020 is not created. You can manually create a reservation for Mark Andrews for a different workplace for 06-08-2020.

If you update the details of a parent reservation later, all its child reservations except the ones with dates in the past are updated accordingly.

Working with space reservation requests from employees

After an employee requests a workplace for a given date range and the manager approves the request, the application checks the availability of the requested space. If the workplace is unavailable for any or all days of the specified period, the request moves to the Pending state. As a workplace manager, you can review these pending reservation requests and allocate a different workplace to the employee to complete the request.

Define the capacity of workplace areas

Set the capacity for areas of your workplace in Workplace Core to enable reservations for the area. The capacity ensures a limit to the workplace reservations for these areas so you can ensure safety guidelines.

Before you begin

- Add your workplace data.
- Ensure you have the details of the maximum capacity for the areas of your workplace.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Space Administration** > **Areas**.
2. Open an area to which you want to add the capacity.
3. On the Area form, enter a value for the **Capacity** field.
   For example, if this area can accommodate only 8 people safely according to physical distancing guidelines, set the value to 8.
4. Select **Update**.

Create workplace reservations for an employee

Create workplace reservations for an employee in the Workplace Core application using the shifts and shift schedules that you defined.

Before you begin

- Define shifts for your workplace.
- Assign employees to a shift.
- Associate areas and spaces with a shift.
- Define the capacity of workplace areas
- Ensure you have the data that shows the mapping of employees to the workplaces in your workplace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Starting with Workplace Core (sn_wsd_core) version 2.1, all updates and new features are available only on the Workplace Service Portal. The workplace services provided by ServiceNow® are removed from the Service Portal on Workplace Core (sn_wsd_core) beginning with version 2.1. To configure the Workplace service catalog in the Service Portal, see Configure a catalog in Service Portal.

Role required: sn_wsd_core.workplace_manager

About this task

Reserve a workplace for an employee according to the assigned shift for a single day or multiple days.

You can also access the Reservation form by navigating to **Workplace Core** > **Space Reservations** > **Create New**.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Browse Workplace Services**.
2. Scroll and select **Reserve a space**.
3. On the form, fill in the fields.

Reservation form

Field	Description
Shift	Shift for which this reservation is being made.
Location	Area or space for which this reservation is being made.
Requested for	Employee for whom this reservation is being made.
Start date	Date and time from which the reservation is active.
End date	Date and time until which the reservation remains active.

4. Select **Submit**.
5. If you accessed the Reservation form from Workplace Service Portal, on the verification page, you can create another reservation or view all the existing reservations.

Result

- If you've reserved a space, then child reservation records are generated for every applicable occurrence of the specified period.
- A preconfigured email with the reservation details is sent to the shift owner and the employee for whom you reserved the workplace.
- The reservation is added to the list of all reservations that you can view by navigating to **Workplace Core** > **Space Reservations** > **All Reservations**.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create workplace reservations for multiple employees

Automatically generate workplace reservations in bulk for all employees assigned to a shift for a single day or multiple days.

Before you begin

- Define shifts for your workplace.
- Assign employees to a shift.
- Associate areas and spaces with a shift.
- Ensure that the number of locations associated with the shift is greater than the number of employees assigned to the shift.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **Workplace Safety Management** > **Shift Management** > **All**.
2. Open a shift for which you want to generate the bulk reservations.
3. Select **Generate Bulk Reservation**.
4. Select a date range from the **Start date** and **End date** fields.
   If you want to create the bulk reservation for a single day, you can set the start and end date to the same day. Otherwise, set a date range.
5. Select **OK**.

Result

Reservations for the employees in this shift are created for the locations associated with the shift for the provided dates. You can view these reservations by navigating to **Workplace Safety Management** > **Space Reservations** > **All Reservations**.

Review pending workspace reservation requests

Review pending workplace reservation requests from employees in Workplace Core and assign available workplaces to complete these requests.

Before you begin

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Requests** > **Pending**.
2. Open a pending request that you want to address.
3. Open the related reservation record, which is the parent reservation:
   a. Select the information (ⓘ) icon next to the **Reservation** field.
   b. Select **Open Record** for the desired request.
4. On the reservation form, review the reservation details such as the workplace location being requested, the start and end dates, and the number of reservations confirmed for that period. From these details, you can review the number of days, with their dates, that are missing a reservation for the employee for the requested location.
5. If any dates are missing a reservation for the requested location, adjust the pending request to assign a workplace for all the missing desired dates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Change the workplace location in the parent reservation to a workplace available for all dates, which will also update the location for all applicable future child reservations.
  a. Select a different location from the **Workplace location** field.
  b. Select **Update**.
- Create a child reservation for a new workplace location for this employee for specific dates that are missing a reservation.
  a. In the Reservations related list, select **New**.
  b. Select the start and end dates in the **Start** and **End** fields.
  c. Select a location from the **Workplace location** field.

     The list of spaces displays the locations that are available for the requested dates.

  d. Select **Submit**.

6. After all the days that were missing a reservation are addressed, update the status of the pending workplace task to **Closed complete**.
7. **Optional:** Repeat this process for all pending workplace requests that you want to address.

Result

Once the status of workplace request is updated to **Closed complete**, the reservation information is populated in the **Notes** field of the workplace request.

Setting and tracking arrivals at the workplace

Workplace managers can set arrival intervals in Workplace Core for different locations at your workplace with defined capacities to facilitate staggered entry of employees into the office. Employees can then choose from the defined arrival slots.

Workplace managers can define arrival times and capacity for different locations such as the entry and exit gates, elevator, gym, and cafeteria of your workplace. Employees can then schedule their arrival at these locations for an available time slot.

For example, say you define arrival times for the cafeteria at 12:00 h, 13:00 h, 14:00 h, and 15:00 h, and set a capacity of 15 for every slot. A maximum of 15 employees can schedule their arrival to the cafeteria for each of these times on any given day.

By setting arrival intervals for your workplace, you can facilitate employee actions such as entry and exit to the office, elevator use, lunch pickup, gym use, and so on, without employees having to wait in long lines or causing large gatherings at any of the locations.

Important:
Starting with Workplace Core version 2.3, time zones are introduced in the application. All the arrival schedules that were created on Workplace Core version 2.2 and earlier are deactivated after the upgrade.

Define arrival schedules at the workplace for employees

Define arrival slot times in Workplace Core for different locations at your workplace and indicate the capacity for each slot. Establishing arrival schedules enables safe staggered entry of employees to these locations.

Before you begin

- Add your workplace data.
- Ensure you have the data for arrival schedules of the locations of your workplace.
- Ensure that your time zone is set to the time zone of the building that is used for the arrival.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
Starting with Workplace Core version 2.3, time zones are introduced in the application. All the arrival schedules that were created on Workplace Core version 2.2 and earlier are deactivated after the upgrade. Both existing customers and new customers must perform the following actions on existing arrival schedules to set them to active:

1. Set the time zone of the building where you are creating or updating the arrival schedule.

   Note:
   If you are creating or updating the arrival schedule for a floor, area or a space, then select the building where it is located.

   a. Go to **Workplace Safety Management** > **Space Administration**.
   b. Select **Buildings**, **Floors**, **Areas**, or **Spaces** based on where you are scheduling an arrival slot.
   c. Select the building, floor, area, or the space for which you want to set the time zone.
   d. Set the building time zone.
      - If you selected a building, set the time zone in the **Time zone** field.
      - If you selected a floor, area, or the space, on the form, select the preview icon () that is next to the **Building** field.
        - In dialog box, select **Open record**.
        - On the Buildings form, set the time zone in the **Time zone** field.
   e. Select **Update**.

      Note:
      All the active arrival schedules that were created on this building and on associated floors, areas, or spaces will be deactivated. Any future arrival requests that are related to this schedule will be canceled.

   f. Select **Ok** on the warning that appears.
2. Change your session's time zone to the building's time zone.

   Note:
   Ensure that the sn_wsd_core.workplace_manager role is included in the **glide.timezone_changer.roles** property. If it is not included, ask your system administrator to include the role so that you can change your time zone.

   a. Select the settings icon () on your instance header.
   b. Set the **Time zone** field to the time zone of the building where you are creating or updating the arrival schedule.

Role required: sn_wsd_core.workplace_manager

About this task

Procedure

1. Navigate to **Workplace Safety Management** > **Workplace Arrival Scheduling**.
2. Select **Create Arrival Schedules**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the fields.

Arrival Schedule form

Field	Description
Workplace location	Select a building, floor, area or space where you want to schedule the arrival times.
Arrival schedule time	Time (in hours, minutes, and seconds) at which employee arrivals can start at this location, for example, 12 30 00.
Active	Option for indicating whether this schedule time is active. If marked as active, this schedule time will appear every day in the list of available time slots.
Capacity	Maximum number of employees that can schedule their arrival to this location at this slot time.

4. Select **Submit**.

Result

An arrival schedule is created for this workplace location for the indicated time and capacity. You can view arrival schedules by navigating to **Workplace Safety Management** > **Workplace Arrival Scheduling** > **Arrival Schedules**.

Update arrival schedules at the workplace

Define building time zones, change the capacity of an arrival schedule, and set the schedule to active or inactive.

Before you begin

- Add your workplace data.
- Ensure that you have the data for the arrival schedules of your workplace locations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Ensure that your time zone is set to the time zone of the building that is used for the arrival.

Important:
Starting with Workplace Core version 2.3, time zones are introduced in the application. All the arrival schedules that were created on Workplace Core version 2.2 and earlier are deactivated after the upgrade. Both existing customers and new customers must perform the following actions on existing arrival schedules to set them to active:

1. Set the time zone of the building where you are creating or updating the arrival schedule.

   Note:
   If you are creating or updating the arrival schedule for a floor, area or a space, then select the building where it is located.

   a. If you are updating the arrival schedule, do the following:

      i. Select the workplace location info icon () that is next to the **Workplace location** field.

      ii. In the dialog box, select **Open record**.

      iii. If the value of **Workplace location** is a floor, area or a space, then select the workplace location info icon () that is next to the **Building** field.

   b. On the Buildings form, set the time zone in the **Time zone** field.

   c. Select **Update**.

      Note:
      All the active arrival schedules that were created on this building and on associated floors, areas, or spaces will be deactivated. Any future arrival requests that are related to this schedule will be canceled.

   d. Select **Ok** on the warning that appears.

2. Change your session's time zone to the building's time zone.

   Note:
   Ensure that the sn_wsd_core.workplace_manager role is included in the **glide.timezone_changer.roles** property. If it is not included, ask your system administrator to include the role so that you can change your time zone.

   a. Select the settings icon () on your instance header.

   b. Set the **Time zone** field to the time zone of the building where you are creating or updating the arrival schedule.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Arrival Scheduling**.
2. Select **Arrival Schedules**.
3. Select the arrival schedule that you want to update.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You cannot update the **Workplace location** or **Arrival schedule time** fields of an arrival schedule if there are any arrival requests associated with it. You must create a new arrival schedule for the changed **Workplace location** or **Arrival schedule time** fields.

4. To activate the schedule, select the **Active** option.
5. To change the capacity, edit the **Capacity** field.
6. Select **Update**.

Result
The arrival schedule is updated.

Approve employee workplace reservation requests

Review employee area and space reservation requests in Workplace Core and approve or reject them.

Before you begin
To approve or reject a workplace request using your mobile device, you must have the Now® Mobile app.

Role required: approver_user

Procedure
1. Navigate to a reservation approval task.
2. **Optional:** Review the details of the request.
3. Approve or reject the request by selecting **Approve** or **Reject**.

Managing workplace tasks

Using workplace tasks in Workplace Core, workplace managers can monitor workplace activities that are created and scheduled in the workplace for each shift. They can also schedule planned or on-demand maintenance tasks and generate reports to track the progress of these activities.

Workplace task creation

You can create workplace tasks in the Workplace Core application for various situations.

Automatically created pre-cleaning and post-cleaning tasks

Workplace managers can create shifts and associate employees and spaces to the shift. After workspaces are assigned to a shift and the shift's state is set to Ready, the system automatically creates pre-cleaning and post-cleaning tasks for that shift. These tasks are generated using the respective templates available with the application.

Note:
If a shift doesn't have a space associated to it, pre-cleaning and post-cleaning tasks are not auto-generated for it.

Planned tasks

Tasks for recurring planned activities that are independent of shifts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Ad hoc tasks

Ad hoc tasks when on-demand cleaning is required.

Task assignment

Assignments for tasks depend on the task type:

- Pre-cleaning and post-cleaning tasks are automatically assigned based on their templates.
- Planned tasks are automatically assigned based on the planned task definition that is used to generate these tasks.
- Ad hoc tasks can be assigned manually by workplace managers when they create these tasks.

Signature of completion

For audit and compliance of workplace activities, workplace managers can electronically sign the completed workplace tasks. This action generates a PDF of the signed form and attaches it to the task.

Configure a workplace task template

Configure templates in Workplace Core that can be used to create workplace tasks. You can either modify predefined workplace task templates or create your own templates and associate them with workplace tasks.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Templates simplify the process of creating tasks in Workplace Core by populating fields automatically. The following predefined templates are available with the application:

- Pre-cleaning
- Post-cleaning

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Tasks** > **Workplace Task Templates**.
2. Create a new template or modify an existing template.
   - If you are creating a new template, select **New**.
   - If you are modifying an existing template, open the desired template.

   For information about the template form fields, see Create a template.
3. Select the **Workplace Task [sn_wsd_core_workplace_task]** table in the **Table** field.
4. **Optional:** Apply the template to the required workplace task type.
   a. In the **Template** section, select the **Workplace task type** field in the left column.
   b. Select the required task type in the right column.
5. Select **Submit**.
6. Add a checklist to the template.
   For steps on how to add a checklist, see Create a workplace task checklist.
7. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a workplace task checklist

You can create a unique checklist for each workplace task template in Workplace Core. You can also quickly create a checklist from an existing checklist template.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Ensure that you have the following:

- A workplace task template already created in the application, if you are adding a checklist for a workplace task template.
- A workplace task already created in the application, if you are adding a checklist for a workplace task.

You can also create checklists for individual workplace task records.

Procedure

1. Create a checklist to be included in all tasks using the same template or add a checklist to a specific task.
2. In the **Checklist** section, select the down arrow ( ) beside the **Checklist** formatter.
3. Add a checklist.
   - If you are creating a new checklist, select **Create new**.
   - If you are using an existing checklist template, select **Create from template** and select a template.
4. Add a checklist item.
   a. Select the Add item icon ( ) and enter text for the checklist item.
   b. Press the Enter key to add the checklist item.
   Add as many additional checklist items as desired.
5. **Optional:** Delete unwanted checklist items by selecting the delete item icon ( ).
6. **Optional:** Change the order of checklist items by selecting the drag icon ( ) and dragging the item to a different position in the list.
7. Select **Update**.

Result

- If you created the checklist for a workplace task template, any task created using this workplace template will also contain this checklist.
- If you created the checklist in a workplace task form, the checklist will be part of only that task.

What to do next

You can save the checklist as a template for easy reuse, if required.

Save a workplace task checklist as a template

You can save a Workplace Core workplace task checklist as a template for easy reuse. A template saves time by adding checklist items automatically in a record where you use it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task
When you add a template checklist to a record, you can add, edit, or remove checklist items in the record without affecting the template.

Procedure
1. Navigate to the record that contains a checklist you created.
   To find out how to access the record, see Create a workplace task checklist.
2. In the **Checklist** section, select the down arrow ( ) beside the **Checklist** formatter.
3. Select **Save as Template**.
4. Enter a name for the checklist template.
5. From the **User Group** list, select a group to limit who can use the checklist template.

   Only members of the selected group and the user who created the checklist can use the checklist as a template. Leaving this field blank prevents anyone but the template creator from using the checklist template.
6. Select **Save**.

Configure a workplace task signing template

Configure a signing template that you want to make available for signing the completed Workplace Core workplace tasks. You can configure the default signing template available with the application or create a new template.

Before you begin
Role required: sn_wsd_core.admin

About this task
When a workplace manager signs a completed task, an e-signature PDF document is generated using a signing template and is attached to the task. For information about signing a workplace task, see Sign a completed workplace task.

Procedure
1. Navigate to **All** > **Workplace Safety Management** > **Administration** > **HTML templates**.
2. Select **New** or open an existing signing template to edit it.
   The application provides a default template called **Task Signing Template**.
3. On the form, fill in or modify the fields.

Html Template form

Field	Description
Acknowledgment text	Text clarifying the meaning of the signature. For example, "I acknowledge that this information is true".
Name	Name of the signing template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Table	Table associated with the template. The selected table determines the available variables in the **Select variables** field.
Body	Placeholder for HTML text and variables. The variables are resolved when the PDF is generated. You can select fields from the **Select variables** option to add them as variables to the HTML body.

4. Customize the body of the signing template in the **Body** field.

   a. Enter and format the text to design the body of the template.

      Use the formatting tools to apply formatting options, such as bold, italic, underline, or font styling.

   b. Insert variables by locating your cursor at the desired location and selecting the variable under **Fields**.

      For example, to indicate which location to clean, you might insert the text `Cleaning finished for the Workplace location:` and, after a space, select **Workplace location** under **Select variables**. The variable in the **Body** field text would appear as follows:

      ```
      Cleaning finished for the Workplace location:
       ${workplace_location}
      ```

      The variable is replaced with the actual location when the PDF is generated.

5. At the desired location in the **Body** field, enter the following variables:
   - `${Checklist}`: Adds the checklist variable.
   - `${Signature}`: Adds the signature variable.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the signed PDF document, the signature and checklist are embedded at the same location where you entered these variables into the template body.

6. Select **Submit**.
7. **Optional:** Review the look of the PDF document by impersonating a workplace manager and signing a closed task.

Create planned task definitions

Create planned task definitions in Workplace Core to help workplace managers easily generate tasks that are often repeated and independent of shifts such as cleaning coffee vending machines or cleaning floors. You can quickly specify the task details and the frequency at which the task is to be performed.

Before you begin

Important:
Starting with Workplace Core (sn_wsd_core) version 2.1, all updates and new features are available only on the Workplace Service Portal. The workplace services provided by ServiceNow® are removed from the Service Portal on Workplace Core (sn_wsd_core) beginning with version 2.1. To configure the Workplace service catalog in the Service Portal, see Configure a catalog in Service Portal.

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace services** > **Browse Workplace Services**.
2. Select **Add planned task definition**.
3. On the form, fill in the fields.

Planned task definition form

Field	Description
Name	Name of the planned task definition. For example, "Clean conference rooms" for the activity of sanitizing conference rooms.
Schedule	Work schedule to be used for planned tasks.
Workplace task template	Template used for the generated planned tasks. Selecting a template automatically populates certain fields such as **Assigned to**, **Short description**, and **Workplace task type** in the generated tasks. For information about workplace task templates, see Configure a workplace task template.
Processing Time (hours)	Amount of time it should take to complete a planned task.
Planned end time	Date and time by which the task should be finished.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Planned start time	Date and time when the task should start.

4. Select **Submit**.
5. If you accessed the form from Workplace Service Portal, on the verification page, you can create another planned task definition or generate planned tasks from this definition immediately.

Note:
You can also use this definition to generate planned tasks later. See the instructions in the Generate planned tasks topic.

Result

- The planned task definition is added to the list of all planned task definitions that you can view by navigating to **Workplace Core** > **Workplace Tasks** > **Planned Tasks Definitions**.
- If you created planned tasks from this definition, they are added to the list of all planned tasks. You can view those tasks by navigating to **Workplace Safety Management** > **Workplace Tasks** > **Planned Tasks**.

Generate planned workplace tasks

Using planned task definitions in Workplace Core to create planned tasks independent of shifts for recurring activities. For example, you can generate tasks for a selected number of days for cleaning all floors and buildings at midnight every day.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

Procedure

1. Navigate to **All** > **Workplace Core** > **Workplace Tasks** > **Planned Tasks Definitions**.
2. In the list, open the planned task definition.
   You can also generate planned tasks immediately when you create a new planned task definition.
3. Select **Planned start time** and **Planned end time** values based on the days and time when you need these tasks to be performed.
4. Select **Generate now**.

Result

- Based on the planned start time and planned end time, planned tasks are created for all occurrences of the schedule and appear in the **Workplace Tasks** related list.
- The **Expected start time** in each generated planned task is auto-calculated from the planned end time and processing time values in the respective tasks as follows:

```
Planned start time = Planned end time – Processing Time
```

You can view all planned tasks by navigating to **Workplace Core** > **Workplace Tasks** > **Planned Tasks**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create an ad hoc workplace task

Create an ad hoc task in Workplace Core for unplanned activities. For example, if you notice that something isn't clean in an area or want the area to be cleaned again, you can create an ad hoc workplace task to get the cleaning done immediately.

Before you begin

Important:
Starting with Workplace Core (sn_wsd_core) version 2.1, all updates and new features are available only on the Workplace Service Portal. The workplace services provided by ServiceNow® are removed from the Service Portal on Workplace Core (sn_wsd_core) beginning with version 2.1. To configure the Workplace service catalog in the Service Portal, see Configure a catalog in Service Portal.

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

About this task

You can also access the workplace task form by navigating to **Workplace Core** > **Workplace Tasks** > **Create New**.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace services** > **Browse Workplace Services**.
2. Select **Add a task**.
3. On the form, fill in the fields.

Workplace Task form

Field		Description
Workplace task type		Type of the workplace task. Select **Ad-hoc Task**.
Workplace location		Workplace location where the task should be performed.
Signature template		Task signature template to use for signing off on this task when it is completed. For more information, see Sign a completed workplace task.
State		State of the task.
Assignment group		User group assigned to the task.
Assigned to		User assigned to the task.
Vendor		Vendor whose employees should perform the task.
Short description		Brief description of the ad hoc task.

4. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. If you accessed the form from Workplace Service Portal, on the verification page, you can create another task or view this task record in a list.

6. Add a checklist to the task to track the actions required to complete it.
   To add the checklist, open the task by navigating to **Workplace Core** > **Workplace Tasks** > **All**.
   For more information, see Create a workplace task checklist.

Result
The ad hoc task is added to the list of all tasks that you can view by navigating to **Workplace Core** > **Workplace Tasks** > **All**.

Sign a completed workplace task

As the workplace manager for a space, sign the workplace tasks Workplace Core for complete and closed activities. Signing a task generates a PDF document for the workplace activity, which is useful for compliance procedures.

Before you begin
Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Workplace Tasks** > **Closed**.
2. In the list, select to open the workplace task that you want to sign.
3. In the **Sign template** field, review the signing template selected for the task.
   For more information, see Configure a workplace task signing template.
4. Select **Sign Task**.

   Note:
   The **Sign Task** button appears only once you have selected a template in the **Sign template** field.

5. In the **Sign Task** form, sign the form in one of the following ways:
   - In the **Type signature** tab, enter your name in the **Full name** field.
   - In the **Draw signature** tab, draw your signature using your mouse.
6. Select **Accept and complete**.

Result
A PDF document of the signed form is generated based on the signing template associated with the task and is attached to the task.

Apply the archive rule

Apply the archival policy for Workplace Core to archive old table records.

Before you begin
Role required: admin

About this task
The archival policy archives old table records to improve performance and restrict table size growth.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Archiving** > **Archive Rules**.
2. Filter out the Workplace Core archive rules.
   The following Workplace Core archive rules are displayed:
   - WSD: Archive old workplace tasks: Archives old Workplace Core workplace tasks.
   - WSD: Archive old reservations: Archives old core reservation records.
   - WSD: Archive blocked location records: Archives old blocked location records.
3. Select any of the archival records listed in step 3 to edit them.
   For example: Select the **WSD: Archive old workplace tasks** to open it in edit mode.

   Primary workplace tasks table, sn_wsd_core_workplace_task in Workplace Core records that are more than one year old are archived.
4. Select the **Active** option to activate the archival policy for a selected archival rule.
5. Apply the required filter conditions.
6. Select **Recalculate Estimate** to see the records eligible for archiving.
7. Select the **Run Archive Now** related link to run the archival rule.

Note:
The child tables in the following applications are also archived when this archive policy is run:
- Workplace Case Management: Components installed with Workplace Case Management
- Workplace Reservation Management: Components installed with Workplace Reservation Management
- Workplace Calendar Synchronization: Components installed with Workplace Calendar Synchronization
- Workplace Move Management: Components installed with Workplace Move Management

Workplace knowledge management

As a workplace admin, you can create knowledge base articles for employees. In the articles, provide information to your employees about workplace services, such as workplace updates, self-help, troubleshoot, and others.

With the Workplace Service Delivery application, you can create knowledge base articles and display them as wiki pages or HTML pages. The Workplace Service Delivery Knowledge Management is the same as the ServiceNow AI Platform Knowledge Management, for more information, see Configuring Knowledge Management.

You can perform the following actions on a knowledge base article:

- Publish the article to make it available to employees.
- Update the article at any time if necessary.
- Retire the article if it is no longer required.
- Republish a retired article if necessary.
- Delete an article.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A knowledge base article undergoes the following workflow when it is created:

- Draft
- Review
- Published
- Pending retirement
- Retired

You can add attachments and enable employees to view the attachments individually. If a knowledge base article is relevant only for a short duration, you can specify an end date for the knowledge base article.

You can view and update the knowledge base articles at any time. You can view published articles, unpublished articles and retired articles separately. You can also republish an article whenever needed.

Create a workplace knowledge base article

Provide information to employees through knowledge base articles. Create knowledge base articles with information about workplace updates, self-help, troubleshoot steps, and others.

Before you begin

Role required: sn_wsd_core.admin or sn_wsd_core.kb_writer

About this task

Create a knowledge base article to notify or provide employees with any important information that they must know. After you create a knowledge base article, publish the article to make it available to the employees.

You can perform the following actions on a knowledge base article:

- Publish the article to make it available to employees.
- Update the article at any time if necessary.
- Retire the article if it is no longer required.
- Republish a retired article if necessary.
- Delete an article.

A knowledge base article undergoes the following workflow when it is created:

- Draft
- Review
- Published
- Pending retirement
- Retired

Procedure

1. Navigate to **All** > **Workplace Core** > **Knowledge management** > **Create new article**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge form

Field	Description
Knowledge base	Name of the knowledge base. Select the **Workplace services** knowledge base.
Category	Relevant category for the knowledge base article. Select an existing category, or select the add category icon (⊕) to add a new category. You can also select or add a subcategory.
Valid to	Date until which the knowledge base article is valid. The date is automatically set to 2100 - 01 - 01.
Article type	Type of article, which you want to create. Choices are as follows: ○ Select **Wiki** to create a wiki page. ○ Select **HTML** to create an html web page.
Workflow	This field is automatically set as **Draft**. Depending on the progress, the workflow of the knowledge base article changes to the following states: ○ Review ○ Published ○ Pending retirement ○ Retired
Attachment link	Option to give an attachment for the knowledge base article.
Display attachments	Option to display the attachments individually.
Short description	Short description for the knowledge base article. The short description is displayed as the title of the article.
Article body	Information that is displayed in the knowledge base article. Use the formatting options to change the style of the content. This field appears only if **HTML** is selected from the **Article type** field.
Wiki	Information that is displayed in the knowledge base article as a wiki. Select the **Wikitext** option to preview the text. This field appears if **Wiki** is selected from the **Article type** field.

4. **Optional:** To search existing articles for any duplicate content, select **Search for Duplicates**.
5. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The knowledge base article is created.

What to do next
Publish the knowledge base article. For more information, see Publish a workplace knowledge base article.

Publish a workplace knowledge base article

After creating a knowledge base article, publish the article to make it available for employees.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.kb_writer

Before you publish, create a knowledge base article. For more information, see Create a workplace knowledge base article.

Procedure

1. Navigate to **All** > **Workplace Core** > **Knowledge management** > **Unpublished articles**.
2. Select the knowledge base article that you want to publish.
3. On the knowledge form, select **Publish**.

Result
The knowledge base article is published for employees to view.
For more information on how to view the published knowledge base article, see View workplace knowledge base articles.

For more information on how to edit the publish knowledge base article, see Modify a workplace knowledge base article.

View workplace knowledge base articles

View workplace-related updates, processes, and other information in the knowledge base articles that your team created. Rate articles that you find useful.

Before you begin

Note:
In Workplace Core version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application search context menu **All** > **Workplace Core**. The Workplace Services Portal is currently being deprecated. You can access the Workplace Service portal capabilities from the Employee Center portal page **All** > **Self-Service** > **Employee Center** > **Workplace Services**.

Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to **All** > **Workplace Service Portal** > **Workplace Service Portal Home**.
2. Open the knowledge base page.
   - Select the **Knowledge** tab.
   - Select the **Knowledge Base** option.
3. In the KB categories list, select the category of the knowledge base article.
4. **Optional:** If you are unsure about the category, search for the article.
5. From the list of published knowledge base articles, select the article that you want to view.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. **Optional:** Perform any of the following actions.
   - **Rate the article** out of 5.
   - If you found the article useful, Select **Yes**. If not, select **No**.
   - Leave a comment about the article and select **Submit**. You can also attach files.

Modify a workplace knowledge base article

Update a knowledge base article at any time. Retire a published article or republish a retired article.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.kb_writer

About this task
You can perform the following actions on a knowledge base article:

- Publish the article to make it available to employees.
- Update the article at any time if necessary.
- Retire the article if it is no longer necessary.
- Republish a retired article if necessary.
- Delete an article.

A knowledge base article undergoes the following workflow when it is created:

- Draft
- Review
- Published
- Pending retirement
- Retired

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Knowledge management**.
2. Select **All articles**.
   You can also select any of the following options to find your knowledge base article.
   - **Published articles**
   - **Unpublished articles**
   - **Retired articles**
3. Select the knowledge base article that you want to modify.
4. Edit the fields that you want to change and select **Update**.
5. To retire, republish or a delete the knowledge base article, select any of the following options on the top right or at the end of the form.

Result
The knowledge base article is modified with the changes.

QR code management

Generate and print QR codes for spaces and rooms. Employees can use these codes to make reservation-related actions on the Now Mobile app.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As a workplace manager, the application enables you to perform the following actions:

- Create and generate QR codes for a single space or rooms.
- Apply condition filters to generate a QR code only for certain types of spaces or rooms.
- Print the QR codes and specify a file name for the codes. You can also configure the layout of the QR code and preview before printing.
- Configure, manage, and delete the QR codes that are generated in the application.

As an employee, use your Now Mobile app to scan the QR code and view the reservation that is made on the space or room. After scanning, you can perform the following actions on your Workplace Service Delivery for Mobile application on the Now Mobile app:

- Check in or check out the reservation.
- Update the reservation.
- Cancel the reservation.

Generate and print QR code for a space or room

Generate and print a QR code for a single space or room, or for multiple spaces or rooms. Employees can scan the QR code to view their reservation details using the Now Mobile app.

Before you begin

Enable mobile universal linking

Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

Procedure

1. Navigate to **Workplace Core** > **QR code management** > **Create QR codes**.
   If needed, other possible navigation options include the following:
   - Navigate to **Workplace Core** > **QR code management** > **Manage QR codes** and click **New**.
   - Navigate to **Workplace Core** > **Administration** > **Space type configuration**.

     Select a space type for which you want to generate and print QR code and click **Create QR codes**.
   - For rooms, navigate to **Workplace Core** > **Space Administration** > **Rooms**.

     Select a room and click **Create QR code**.
   - For spaces, navigate to **Workplace Core** > **Space Administration** > **Spaces**.

     Select a space and click **Create QR code**.
2. On the form, fill in the fields.

Generate QR form

Field	Description
Number	Number of the QR code.
Table	Table for which you want to add a QR code. By default, the table is set a as **Space [sn_wsd_core_space]**.
State	Status of the QR code generation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Short description	Description about the QR code.
Conditions	Filter conditions based on which the QR code must be generated. ○ To add a condition, select**Add Filter Condition**. ○ To add an OR condition, select **Add "OR" Clause**.

3. Click **Submit**.
4. To print the QR code, click **Print QR codes**.
5. In the Print QR codes dialog box, do the following:

   a. Specify a file name for the printed QR code in the **Enter file name** field.
   All the QR codes of the selected spaces are in a single PDF file with the specified file name.

   b. View the number of QR codes to be printed in the **Count** field.

   c. Select the layout of the QR code in the **Label layout** field.

   d. Preview the QR code print.

   e. Click **Print**.
   The QR code generation runs in the background.

Result
The QR codes are generated. The QR codes are printed in a single PDF file with the specified file name. You will receive an email notification after the QR code generation is completed with the QR code details.

What to do next
After the QR code generation is completed, go to **Manage QR codes** to view the generated file. For more information, refer to Manage QR codes.

Click **download** to download the PDF file.

Manage QR codes

View, update, or print the already generated QR codes in the application. Before printing, you can change the conditions of already generated QR codes if required.

Before you begin
Role required: sn_wsd_core.admin or sn_wsd_core.workplace_manager

Procedure
1. Navigate to **All** > **Workplace Core** > **QR code management** > **Manage QR codes**.
2. **Optional:** To generate a new QR code, click **New**.
   For more information, refer to Generate and print QR code for a space or room.
3. Select the QR code that you want to view or update.
4. **Optional:** Do any of the following actions with the QR code:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To update the QR code, change any field and click **Update**.
- To print the generated QR code, click **Print QR Codes**, and then click **download** to download the file.

  Note:
  The printed QR code is generated with the same file name. The last generated PDF file is replaced with the latest file.

- To delete the QR code, click **Delete**.

Location migration

Learn how to migrate location data from the ServiceNow Locations table to the Workplace Location table to use them in Workplace Service Delivery applications.

You can create a hierarchy to be used while migrating location data from the ServiceNow Location table [cmn_location] to the Workplace Location [sn_wsd_core_workplace_location] table.

You can perform the following actions while creating a location migration record:

- Configure location migration records by setting a parent location and a child location based on which the locations created in the Locations table [cmn_location] are migrated to the Workplace Location [sn_wsd_core_workplace_location] table.
- Specify conditions to filters the locations from the Locations table [cmn_location] based on their Location types.

You can set a location hierarchy configuration as optional depending on the Floor infrastructure. For example, for the **Floor** > **Area** > **Room/Space** hierarchy, you can set the location migration configuration record of **Area** > **Room** as an optional hierarchy because some floors might not have areas or only have spaces or rooms.

When you set a configuration as optional, then the records that do not match that configuration are matched with the next hierarchy. For example, if there are locations that do not match the **Area** > **Room** hierarchy, then they are matched with the next hierarchy, which is **Floor** > **Room**. If there are Rooms that are not assigned to any Areas, then they are matched with Floors because Area is optional.

After migrating the locations, if you create a location in the Workplace Core application, the location is automatically added in the ServiceNow® Location [cmn_location] table. You can configure the type of the location by setting Dictionary Overrides.

Configure location migration hierarchy

Create a hierarchy for how the location data from the ServiceNow® Location table [cmn_location] must be migrated to the Workplace Location [sn_wsd_core_workplace_location] table of Workplace Service Delivery.

Before you begin

Role required: sn_wsd_core.admin

About this task

The following location hierarchy is followed throughout the Workplace Service Delivery applications. The location migration configurations for these hierarchies are also available by default:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The location migration configuration records of the following location hierarchies are inactive by default.

Workplace Service Delivery location hierarchy

Parent	Child
None	Region
Region	Site
Site	Campus
Campus	Building
Building	Floor
Floor	Area
Area	Room
Area	Space

For more information about location migration configuration and conditions, refer to Location migration.

After you create the location migration configurations, you must perform the migration separately. To perform the migration after location migration configuration, refer to Migrate locations from Location table to Workplace locations table.

Note:
You cannot migrate locations if they are not as the same as the Workplace Service Delivery location migration hierarchy, which is Region > Site > Campus > Building > Floor > Area > (Room > Space) or (Space > Room).

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Location migration configuration**.
2. Select **New**.
3. On the form, fill in the fields.

Location Migration Configuration form

Field	Description
Parent table	Parent workplace location table. The **Workplace location** is considered as the child workplace location table. The parent location is automatically generated after you select the **Workplace location**.
Workplace location table	Child workplace location table. This location is set as the child location in the hierarchy configuration.
Is optional hierarchy	Option to set this location migration configuration as optional. For example, if there are locations that do not match the Area > Room hierarchy, then they are

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	matched with the next hierarchy, which is Floor > Room. If there are Rooms that are not assigned to any Areas, then they are matched with Floors directly because Area is optional.
Application	Application of the location migration configuration. Ensure that **Workplace Safety Management** is selected. This field is automatically set.
Active	Option to activate the location migration configuration.
Domain	Domain of the location migration configuration. This field is automatically set.
Location condition	Conditions based on which the locations must be filtered for migration. The locations are filtered based on their Location type for the migration.

4. Click **Submit**.

Result
The location migration configuration record is added. The locations that match the specified conditions are filtered.

What to do next
Migrate locations from Location table to Workplace locations table.

Migrate locations from Location table to Workplace locations table

After you configure the location migration records, perform the migration action to migrate the locations from the ServiceNow® Location table [cmn_location] to the Workplace Location [sn_wsd_core_workplace_location] table in Workplace Service Delivery.

Before you begin
Ensure the following:

- The location migration configurations are active. For more information, refer to Configure location migration hierarchy.
- The location migration configuration from Campus to lower levels must always be in the Campus > Building > Floor > Area > Room/Space order. You can also have an optional hierarchy for a location migration configuration.

If you want to change the location type of a location created in the Location table [cmn_location], see Set the location type in Location table.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Location migration configuration**.
2. On the Location Migration Configurations page, select the location migration configurations that you want to migrate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Ensure that the location migration configurations are active.

3. Click **Migrate Locations**.
4. In the confirmation dialog box, click **OK**.

Result
The location migration process runs in the background.

Set the location type in Location table

Set the location type of a location by creating a dictionary override of the table.

Before you begin
Role required: admin

About this task
When you create a location in the Workplace Core application, that location is automatically added in the ServiceNow® Location [cmn_location] table. The Location type of that location is set based on the Dictionary Overrides. The Dictionary Overrides are configured for all location tables such as Site, Region, Campus, Building, Floor, Area, and Room, except for the Space table. To set the Location type of the Space table, you can add a choice in the Location type and use it in the Space table's Location type dictionary override.

Procedure
1. Navigate to **All** > **System Definition** > **Tables**.
2. Select the **Location [cmn_location]** table.
3. In the Columns related list, select **Location type**.
4. In the Location type Dictionary Entry form, scroll down to the Dictionary Overrides related list.
5. Select the Dictionary Entry Override that you want to view or edit.
6. Edit the override by changing the **Default value**.

   The Location type of the locations that are created in the Workplace Core are set as per the specified default value. For example, if you have changed the default value of the Region Dictionary Entry Override to Zone, then the new locations created as a Region are set with the Location type as Zone.

7. **Optional:** If there is no default value that suits the location type, add a default value.

   a. In the Location type Dictionary Entry form, select the Choices related list.

   b. Click **New**.

   c. Specify the choice details.
   The choice is added. The choice is displayed while specifying a default value.

Result
The location type is set for the selected location table.

© 2026 ServiceNow, Inc. All rights reserved.

View workplace service usage analytics with User Experience Analytics

The ServiceNow® User Experience Analytics provides you with qualitative analytics on how the services provided by the Workplace Service Delivery applications are used by the workplace managers, employees, and other workplace users.

User analytics

The User Experience Analytics application provides you with data as to how an employee uses the various services and other actions that you provide them in the Workplace Service Portal. You can understand how an employee experiences and uses those services, such as their behavior and their journey around the portal. You can get an insight about the performance of the application by viewing a real-time analysis through data visualization.

You can log the events and get the analysis by enabling the analytics-related setting either on the Workplace Service Portal level, on the workplace service level, and anywhere throughout Workplace Core.

For more information about User Experience Analytics, refer to .

System properties

ServiceNow®, by default, provides a set of properties with User Experience Analytics that are common to all application using which you can specify how you want to enable analytics. As an admin, you can enable or disable the analytics for specific portals, specific users, or at the instance level. For detailed information about the system properties related to user experience analytics, refer to User Experience Analytics related properties.

Settings

The User Experience Analytics application enables you to specify the analytics settings on the portal level. Navigate to **All** > **Service Portal** > **Portals** > **Workplace Services** and select **Create Analytics Settings** to enable user analytics.

Request employee-related services

Use your workplace services. Make a reservation, schedule your arrival and more.

Note:

In Workplace Core [sn_wsd_core] version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application search context menu **AllWorkplace Core**. You can access the Workplace Services Portal from the Employee Center portal home page **All** > **Self-Service** > **Employee Center** > **Workplace services**.

For more information, see Workplace services on the Employee Center portal.

Schedule your arrival time at a workplace location

Schedule your arrival at a workplace location by using Workplace Core. Prevent long lines and safely enter the location.

Before you begin

To schedule an arrival using your mobile device, you must have the Now® Mobile app.

Role required: sn_wsd_core.workplace_user

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Browse Workplace Services**.
2. Scroll and select **Schedule your arrival**.
3. On the form, fill in the fields.

Schedule your arrival form

Field	Description
Entry point	Location where you want to schedule your arrival.
Building time zone	Time zone for the building of the selected entry point.
Date	Date of your arrival.
Arrival time	Time of your arrival. The time is displayed in 24-hour format.

4. Select **Submit**.

Result
The arrival request is created. The web page or your mobile screen is refreshed to show your arrival request details.

What to do next
You can check the details of your arrival schedule anytime.

1. Depending on your platform, do one of the following to view your requests:
   - On the Workplace Service Portal, go to the **Requests** tab to view your requests and reservations.
   - On the Now Mobile navigation bar, tap **For Me** and scroll down to the My Request section to view your requests.
2. If you want to cancel your arrival, select the arrival request and select **Cancel arrival**.

Making workplace reservations

Make workplace reservations in Workplace Core when you are ready to return to the office. You can reserve a workplace for a day or less directly or request a workplace for a specified period. Once a reservation request is approved and confirmed, you are notified about the reservation details. The Workplace Service Delivery also offers more advanced workplace reservation options in the Workplace Reservation Management application.

Reserving a workplace

As an employee, you can request a workplace reservation using Employee Center.

When making a reservation, you can choose an available space that you want to access or select an available area. If you have made a reservation for an area, you can work from any available space within that area when you return to the office.

You can select a shift of your choice from the shift schedules defined by your organization. If your organization doesn't use shifts, you can select a custom time period. Depending on your organizational guidelines, your reservation request might require an approval.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you need a workplace for only a day or less, you can reserve it directly and don't have to submit a request and get approval.

Space reservation request states

After you submit a space reservation request, the status changes based on the action taken on it by your approving manager or the workplace manager.

- If your manager hasn't acted on your request, the state of the request remains Awaiting approval.
- If your manager approves your request and the space availability is confirmed, the state of the request changes to Closed complete.
- If your manager rejects your request, the state of the request changes to Closed incomplete.
- If your manager approves your request but the space you requested for isn't available for all or some days, the state of the request changes to Pending.

  You can follow up with your workplace manager to get a new space assigned and resolve your pending space request.

- If you cancel your request, the state of the request changes to canceled.

Email and push notifications

If you submit a space reservation request from the catalog item, or if a request is submitted on your behalf, you will receive an email notification about the request. If you have the Now® Mobile app, you will receive push notifications about your reservation requests.

The notification contains campus details, space details, and the reservation duration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Request a workplace reservation for multiple days

Request a workplace reservation for the days during which you want to return to office by using Workplace Core.

Before you begin

To request a workplace reservation using your mobile device, you must have installed the Now® Mobile app.

Role required: sn_wsd_core.workplace_user

About this task

Request a workplace reservation either in a defined shift schedule or for a custom time for a specific date range during which you want to work from the office.

You can also access the reservation form using your mobile device. From the Now Mobile app, navigate to **Workplace core** and choose either **Request a short-term shift and space** or **Request a short-term space**.

Procedure

1. Navigate to **All** > **Self-service** > **Employee Center** > **Browse Workplace Services**.
2. Reserve a space for a predefined shift or for a custom time.
   - To reserve a space for a defined shift schedule, select **Request a short-term shift and space**.
   - To reserve a space for a custom time, select **Request a short-term space**.
3. On the form, fill in the fields.

Note:
The visibility of some of the following fields depends on the application settings made by your administrator.

Reserve a short-term space form

Field	Description
Region	Region of your office location.
Site	Location of your office.
Campus	Campus of your office building.
Building	Office building that you want to return to.
Start date	Date from which you want access to the workplace.
End date	Date until which you want to access the workplace.
Shift	The shift schedule during which you want to visit the office. Only the shifts available for the selected location and date range are displayed. Only the shifts that you are part of are displayed. This is dependent on the system

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	properties which were configured by your organization.
Shift detail	Details of the shift that you selected. The shift detail is auto-filled based on your shift selection.
Start time for each day	Time from when you would access the workplace. This field is visible if you selected **Request a short-term space**.
End time for each day	Time until when you would access the workplace. This field is visible if you selected **Request a short-term space**.
Floor	Floor of the area or space that you want to access.

4. Select **Submit**.

Result
The state of your request is set to Awaiting approval, which indicates that the request has been sent to your manager for approval.

What to do next
You can check the status of your reservation request or choose to cancel your request using Workplace Service Portal or the Now Mobile app.

- On Workplace Service Portal, go to the **Requests** tab to view your requests and reservations.
- On the Now Mobile app's navigation bar, tap **For Me** and scroll down to the **My request** section to view your requests and reservations.
- To cancel a reservation, go to the **Requests** page in the Workplace Service Portal or **My request** page in the Now Mobile:
  - To cancel the reservation request, select **Cancel request**.
  - To cancel a single reservation within the reservation request, select **Reservation details**. Select the reservation you want to cancel and select **Cancel reservation**.

Reserve a workplace for a day

Reserve workplaces for a day on which you want to return to the office by using Workplace Core.

Before you begin
To reserve a workplace using your mobile device, you must have the Now® Mobile app.

Role required: sn_wsd_core.workplace_user

About this task
Reserve spaces for a period less than or equal to 24 hours on the day that you want to work from the office. Reserve spaces, either in a defined shift schedule or in your custom timings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also access the reservation form from the Now Mobile app. Navigate to **Workplace Core** and choose one from **Reserve a shift and space for a day** or **Reserve a space for a day**.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace services** > **Browse Workplace Services**.

   Note:
   You can also raise a request from the Employee Center. On the home page, navigate to **Workplace** > **Browse all Workplace** and select the workplace service.

2. Reserve a space either for a defined day shift or a custom date.
   - To reserve a space for a defined shift schedule, select **Reserve a shift and space for a day**.
   - To reserve a space for custom timings, select **Reserve a space for a day**.
3. On the Reserve a space form, fill in the fields.

   For a description of the field values, see Reserve a space form.

   Note:
   The visibility of some of the following fields depends on the application settings made by your administrator.

4. If the **Area** and **Space** fields are available, select an area or a space that you want to reserve.
5. Select **Submit**.

Result
The web page is refreshed to show your reservation details.

What to do next
You can check the details of your reservation or choose to cancel it anytime using Workplace Service Portal or the Now Mobile app.

- On the Workplace Service Portal, go to the **Requests** tab to view your requests and reservations.
- On the Now Mobile app's navigation bar, tap **For Me** and scroll down to the My Request section to view your requests and reservations.

  If your organization has enabled the functionality to book an Uber from your mobile device, you would see a **Book Uber** option on your reservation details screen on Now Mobile. Tapping on it would redirect you to the Uber mobile app, if you have the app installed on your mobile device.

You will receive an email notification 15 minutes before the reservation to check in and another email notification 30 minutes before the reservation end time to check out.

- In the check-in email, select any of the following actions.
  - **Check in**: Check in your reservation.
  - **Cancel this reservation**: Cancel if the reservation is no longer required.
  - (Optional) **Check out**: Check out early before the reservation end time.

  Note:
  If you do not check in at the reservation start time, the reservation is automatically set to *No Check In* after 24 hours.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- In the check-out email received before the reservation end time, select **Check out** to check out the reservation.

> **Note:**
> If you do not check out at the reservation end time, the reservation is automatically set to *No Check Out* after 24 hours.

Manage workplace activities and services with Location directory

Explore workplace campuses, sites, buildings, and neighborhoods using the Location directory. Get directions using map routes to a meeting room, building, or co-workers to collaborate effectively. Search for employees, locations, and neighborhood spaces. Reserve a space, request, or report a workplace service issue. Filter spaces by reservation states, occupancy states to get insights on space availability.

The location directory provides the Map view and the Card view to manage workplace activities and services. Indoor Mapping must be configured so that your locations can be viewed on a floor map. If a location doesn't have a floor map, then only Card view is displayed.

Reservation and occupancy status on the Location directory

Configure the Location directory to filter spaces by reservation and occupancy states.

> **Note:**
> This is controlled through the **Show reservation and/or occupancy information on Location directory** map property and when it is set to true, you can view the reservation and occupancy status for a selected location on the floor map. The Workplace Reservation Management and Workplace Connectors must be installed and configured to show both reservation and occupancy statuses. Occupancy state for a location is displayed when an occupancy sensor provider is integrated with Workplace Connectors and occupancy sensor data is available for a selected location. For more information, see Configure map properties for Location Directory.

Filter spaces by occupancy and reservation statuses for a selected space.

- When only Workplace Reservation Management is configured and available for a selected location, filters for reservation status are available. Option to filter by occupancy status isn't available on the Show filters panel.
- When only Workplace Connectors with occupancy sensor data is configured, filters for Occupancy status are available. Option to filter by reservation status isn't available on the Show filters panel.
- When both Workplace Reservation Management and occupancy sensor plugins are configured and available. The Show filters panel shows both occupancy and reservation statuses.

Based on the occupancy and reservation status, the Location directory shows the following states for space availability on the Card and Map view.

- **Available**: Status to indicate that a selected space is available for reservation.
- **Currently booked**: Status to indicate that a space is booked or reserved for a meeting.
- **Not available**: Status to indicate that the space isn't available for reservation. This state is shown when Workplace Reservation Management is configured but the **Is Reservable** field on the Reservation portal is set to **false** (**All** > *Workplace Reservation Management* > **Administration** > **Workplace Spaces**).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Currently Occupied**: Status to indicate that a location has occupancy sensors. The occupancy state is shown as **Currently Occupied** on the floor map.
- **Currently unoccupied**: Status to indicate that a location has occupancy sensors but the space isn't occupied.
- **Sensor not installed**: Status to indicate that occupancy sensor is not installed and configured for a location.
- **Sensor not working**: Status to indicate that the occupancy sensor data is in an invalid state or it isn't functional for a location.

Map display settings

Configure map display setting options to show permanently assigned workplace locations on the map. If privacy is enabled, workspaces allocated for private users aren't displayed on the map. For more information, see Work with the Map view on the Location Directory.

Auto-refresh reservation and occupancy states on Location directory

Configure Map properties to refresh automatically and get the latest reservation and occupancy status on the Location directory. Use filters on the Location directory to filter out and view either reservation or occupancy status or both reservation and occupancy status.

Configure map properties for Location Directory

Configure map properties to enable reservation states, occupancy states, display permanent seat assignments, or auto-refresh time interval for showing the latest reservation and occupancy information on the map. Show or hide neighborhoods on the Location directory by using a map property.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Space mapping** > **Map properties**.
2. Configure the map properties for the Location directory.

   For more information about the map properties, see Properties installed with Workplace Space Mapping.

3. Select **Save**.
   The updated map configuration properties are available on the Location directory.
4. Display the name of a person reserving a space on the map by following these steps.
   a. In the filter navigator, enter `sys_properties.list`.
   b. Select the **sn_wsd_core.floor_plan.portal.show_reservation_details** property.
   c. Set the value of the property to **true** and save the record.

Work with the Map view on the Location Directory

Work with Map view to search for workplace users, locations, spaces, and neighborhoods. Get directions to a workplace location, meeting rooms, or an employee to collaborate quickly and effectively. Filter spaces based on reservation and occupancy states, space types, or neighborhoods.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Workplace Core
- Workplace Reservation Management (Optional)

  Filter and display the reservation status for a selected location on the Location directory.

- Workplace Connectors (Optional)

  Filter and display the occupancy status for a selected location on the Location directory.

- Indoor Mapping
- Workplace Space Mapping

Note:
Confirm that the map properties for the Location directory are configured by your administrator. Map properties for the Location directory provide options to:

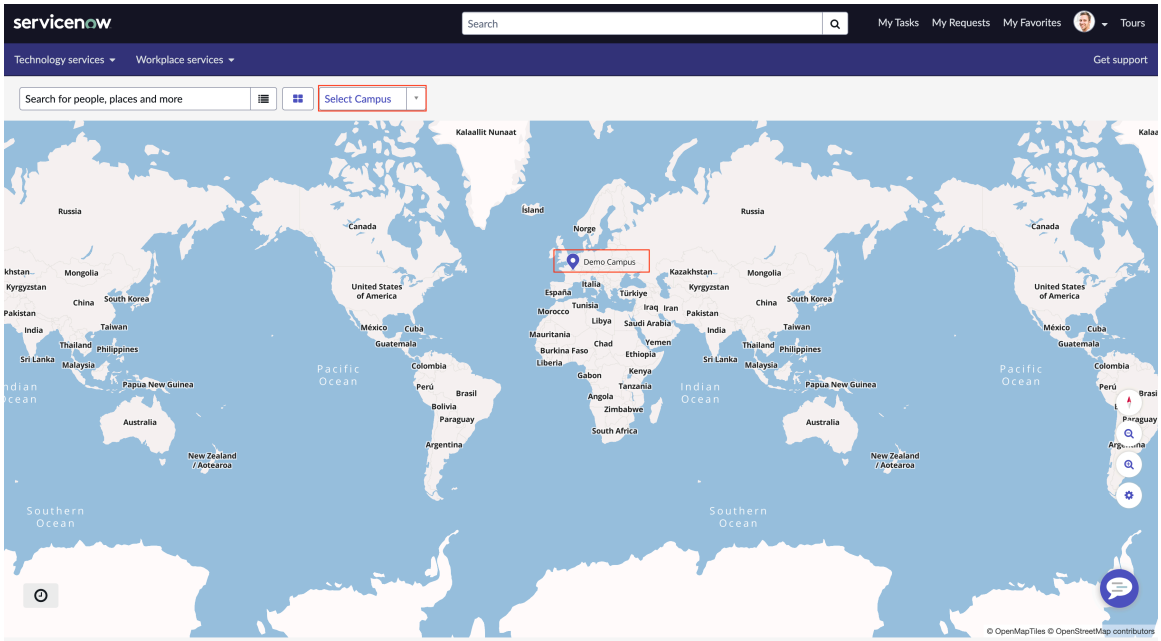
- Filter spaces based on reservation and occupancy states
- Automatically refresh reservation and occupancy data on the Location directory
- Control the Map display setting options to display permanent and private workplace profile users.
- Show or hide neighborhoods for a location.

For more information, see Configure map properties for Location Directory.

The latitude and longitude of your regions, sites, campuses, and buildings must be created. If the latitude and longitude aren't specified, you can't view a campus or its buildings on the map. Contact your administrator for more information.

While reserving or viewing a space, the employee can see if a space is part of a neighborhood. The neighborhood icon ( ) is displayed on the space card.

Role required: sn_wsd_core.workplace_user



Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace Services**.
2. From the **Workplace Services** list, select **Browse Workplace services**.
3. From the **Support resources** section, select **Location directory**.

   By default, the Location directory home page opens on the World map.

   Your location is displayed with a location pin ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

.

4. To select a campus on the map, enter the name of a campus or select a campus name from the **Select Campus** list.

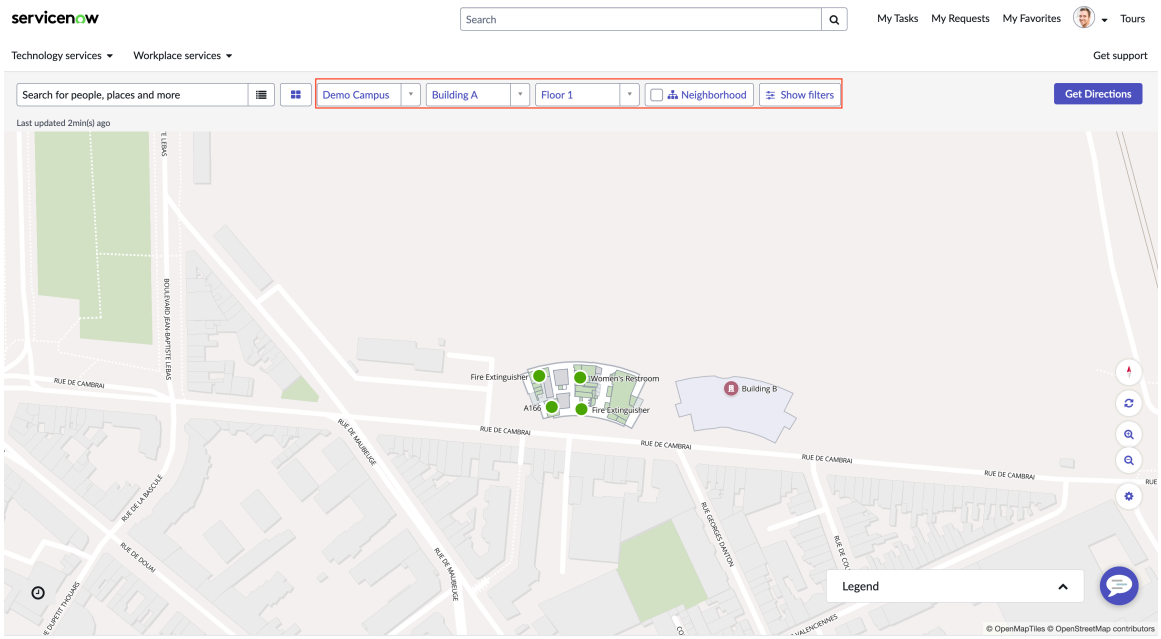
   a. Select a campus from the list or search for a campus in the search bar.
   If you search for a Neighborhood, all the campuses that contain the neighborhood are displayed on the map and the neighborhood card. You can copy the neighborhood URL from the context menu.

   b. **Optional:** Additionally, use the zoom in ( ) controls on the map to bring into focus your location or select the location pin marker icon ( ).

   (Optional) The campus when selected or zoomed into shows the buildings within a campus.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The selected campus is displayed on the map.



5. When you select a campus, the **Select Building** tab is enabled on the menu.
   If you search for a Neighborhood, all the buildings that contain the neighborhood are displayed on the neighborhood card. You can copy the neighborhood URL from the context menu.
6. Select a building from the **Select Building** list option.
   For example: Building A

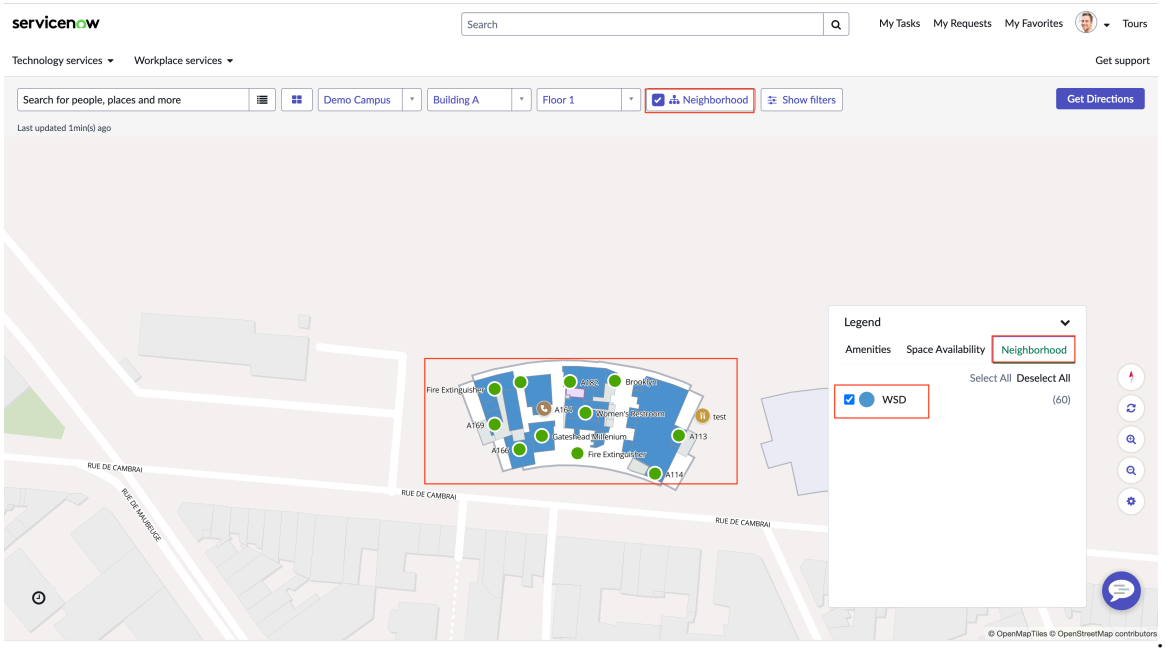
   You can also use the Zoom in controls on the map to select a building from a campus.
7. When you select a building, the **Floor**, and **Neighborhood** menu options are enabled on the menu.

   If you search for a Neighborhood, all the floors that contain the neighborhood are displayed on the neighborhood card. You can copy the neighborhood URL from the context menu.

   The **Show filters** option is enabled when a floor is selected from the **Floor** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

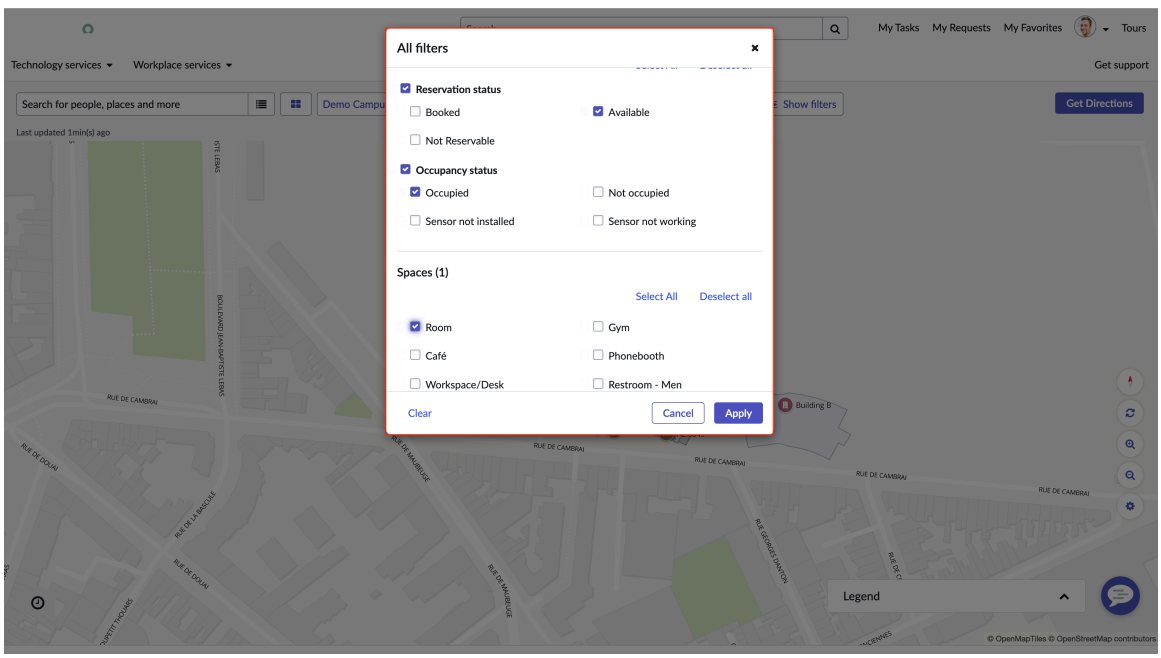
Note:
The **Last updated <time interval>** label is shown on the map after selecting a building. For example,**Last updated 1 min ago**. The map is automatically refreshed if your administrator has enabled the map property (**Auto Refresh time interval (in mins) for showing Reservation and/or Occupancy information on the Location directory**). This property fetches the latest reservation and occupancy data on the map.



8. Select a floor from the **Floor** list option.
   Floors that don't have Indoor Mapping maps are tagged as **Floor <number>- No map** in the Floor tab list. For example, **Floor 5 - No map**.

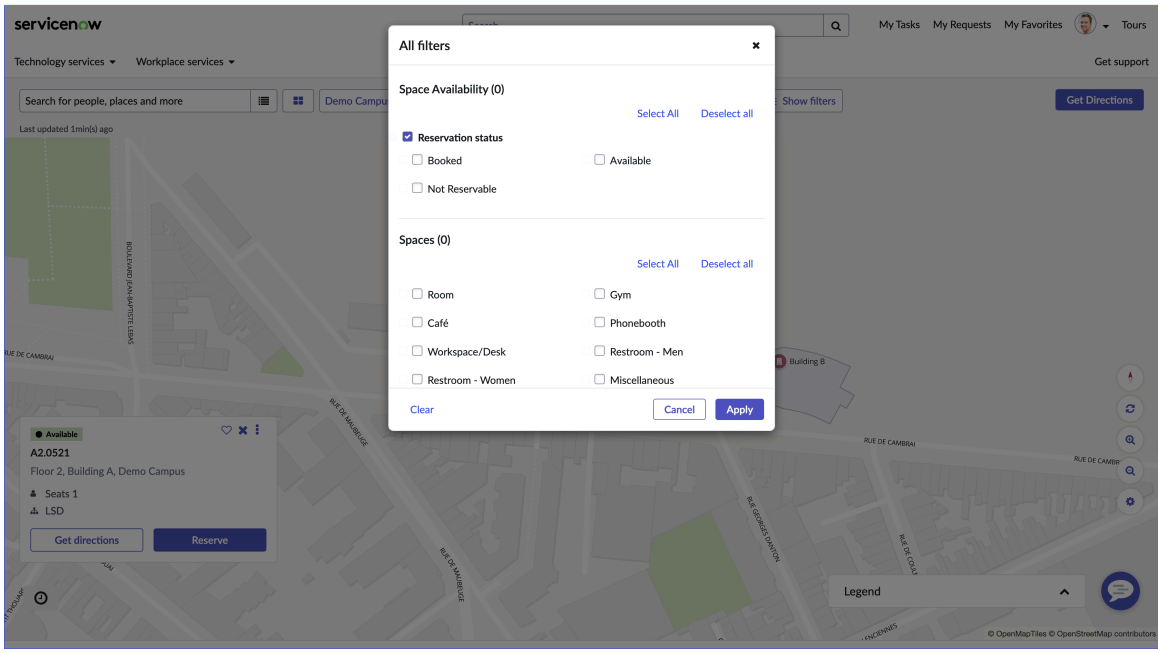
   Note:
   When a floor doesn't have a map associated with it, you're redirected to the Card view. If a location doesn't have Indoor Mapping, the Card view is displayed by default.

9. Select the **Neighborhood** check box to show designated neighborhoods for a selected location.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Neighborhoods are color-coded based on the assigned department, cost center, or workplace entity. For more information, see Step 17.



10. **Optional:** Select the **Refresh view** icon on the map ( ) to refresh the map.
When you manually refresh the map, the application fetches the latest reservation and occupancy status for a selected location.
11. **Optional:** Select **Show Filters** to filter spaces on the map by reservation states, occupancy states, and space types (rooms, gym, elevator, and so on).

> **Note:**
> The **Show filters** button is displayed on the map when **Show Reservation and/or Occupancy information on the Location directory** [sn_wsd_space_map.show_rsv_occ_data_loc_dir] map property is set to **Yes** by your administrator. Filters can be applied at a floor or space level. When this property is set to **No**, only space type filters are available for you to select.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select and filter any of the following available options in the All filters dialog box:

- View space availability and reservation status on the map, select the **Reservation status** check box.

  The map displays reservation status and spaces are shown with color-coded icons for different reservation states on the map. For more information, see Legends in Step 17.

- Filter spaces on the map with only reservation status. Select any of the following options:
  - Booked
  - Available
  - Not Reservable
  - Currently booked
- Selecting the **Select All** option enables all reservation statuses (Booked, Available, Not Reservable, and so on) on the map.

- Select the **Occupancy status** check box to view only occupancy sensor data icons on the map.

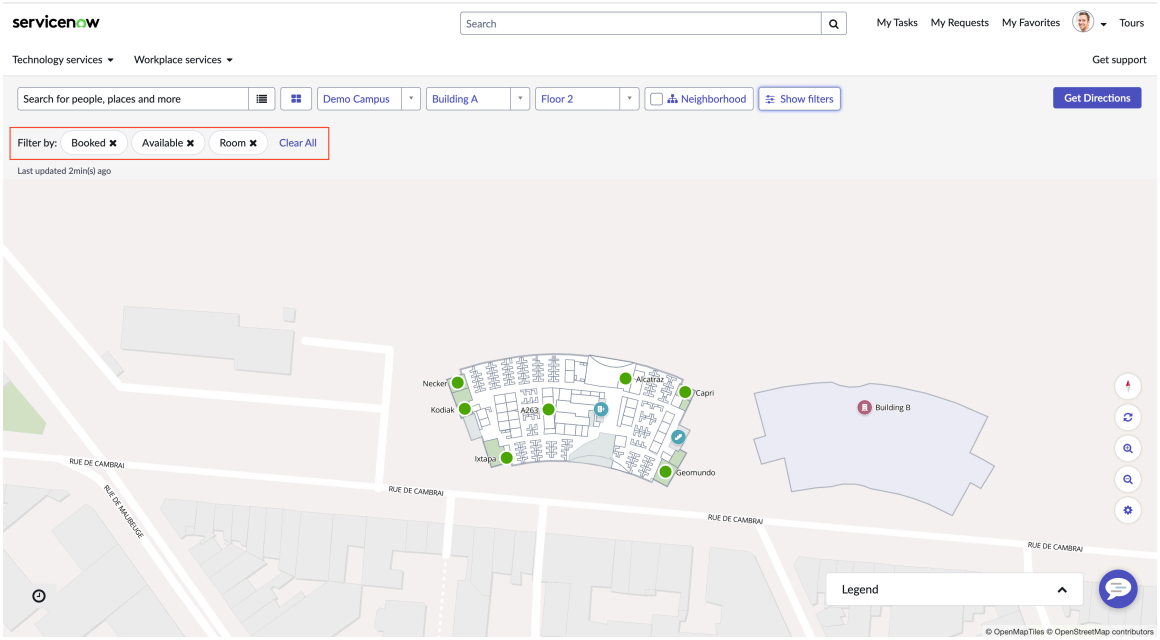
  The map displays reservation status and spaces are shown with color-coded icons for different reservation states on the map. For more information, see Legends in Step 17.

- Select any of the following occupancy states and filter spaces on the map with occupancy data.
  - Occupied
  - Not Occupied
  - Sensor not installed
  - Sensor not working
- Selecting the **Select All** option to filter all occupancy states on the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Occupancy states are only shown on the map if Workplace Connectors is installed and configured for a selected location. Your administrator must also configure the map property **Show Reservation and/or Occupancy information on Location directory [sn_wsd_space_map.show_rsv_occ_data_loc_dir]**.

Spaces on the map with matching the filter conditions are highlighted. Spaces that don't fulfill the filter conditions or that don't have a filter applied are shown in white (polygon color).



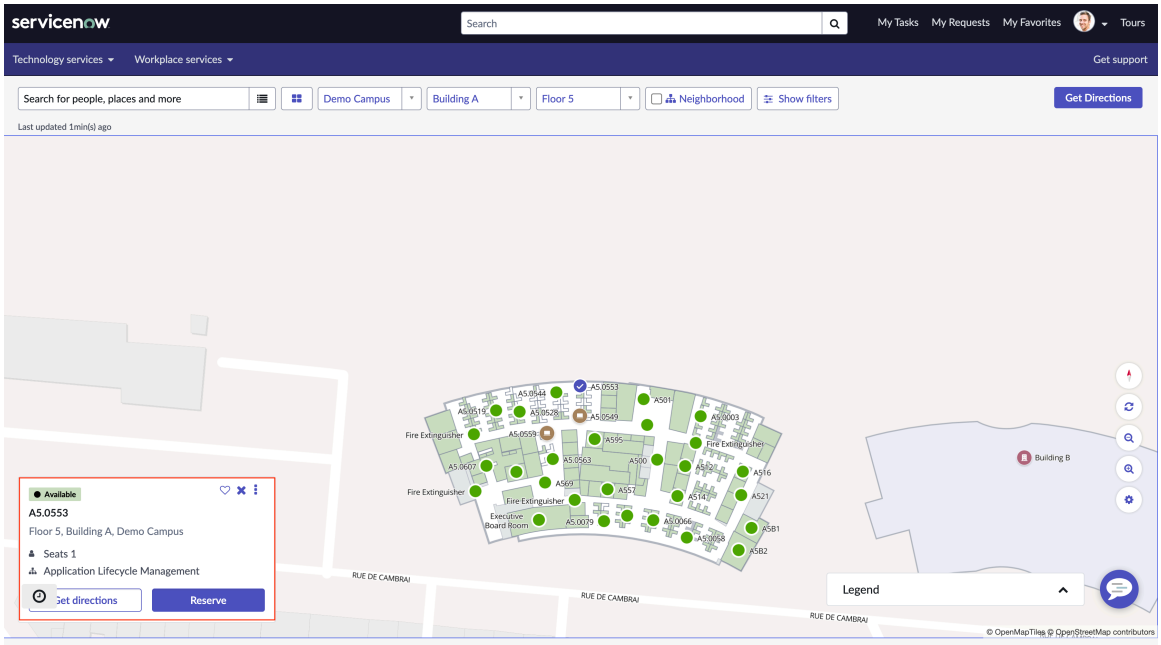
- When both reservation and occupancy filters are applied, then maps shows both reservation and occupancy states for a selected floor.
- When only reservation or occupancy filters are applied, then only reservation or occupancy states are displayed.

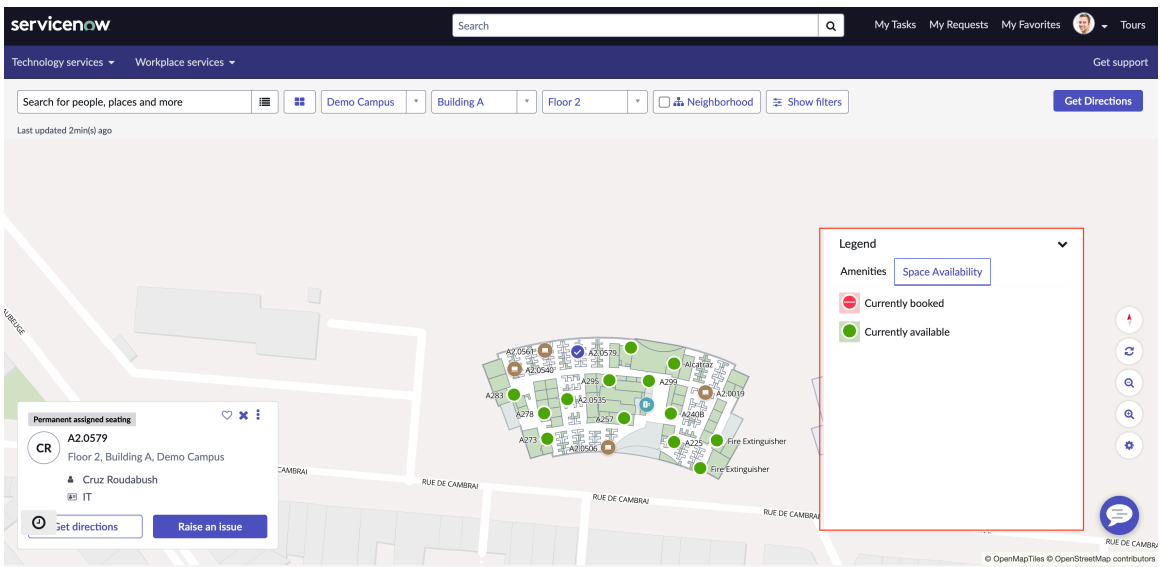
- Select the **Spaces** check box to filter selected space types on the map. For example, the following space types can be selected:
  - Rooms
  - Gym
  - Cafe
  - Phone booth
  - Workspace/Desk
  - Restroom-Men
  - Restroom-Women
  - Miscellaneous
  - Elevator
- Select the **Select All** option to select all the space types available for a location.

  Note:
  Indoor Mapping place types are displayed as space types on the Location directory.

12. **Optional:** Select **Apply**.
    The selected filters are applied and the **Filter by label** on the map shows filtered items as pills on the map. For example: Booked, Available, and so on. Select **Clear All** to remove the filter pills from the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



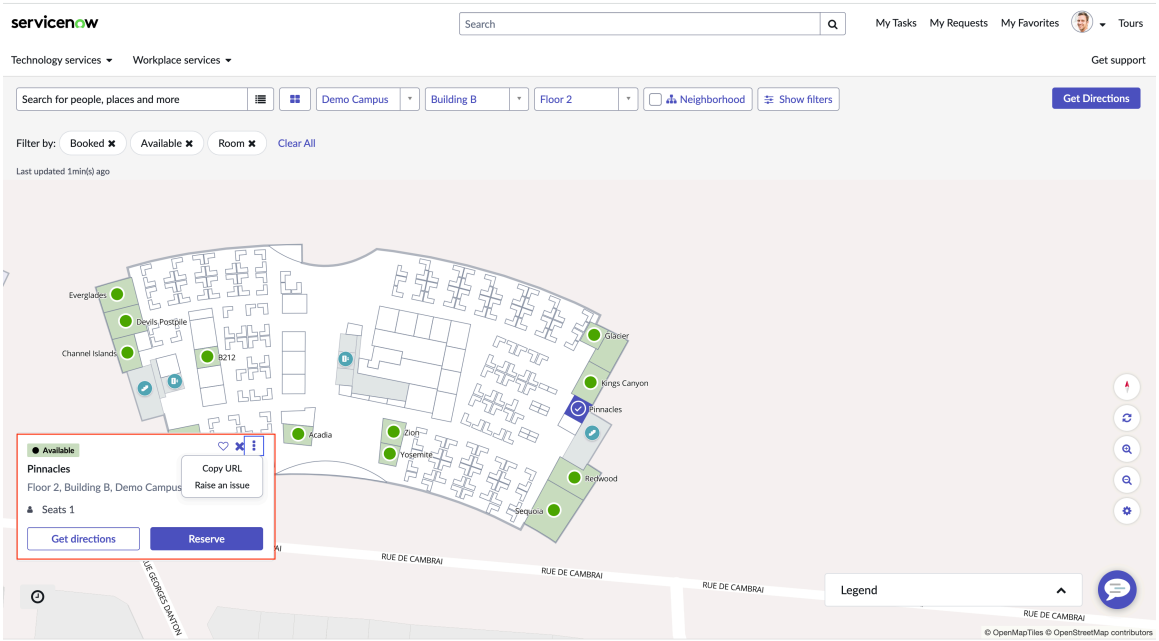


13. Select a space on the map to view the Space card details.

You can view the following information on the space card:

- Labels for space occupancy and reservation status are displayed on the space card panel. For example, **Available**, **Currently booked**, **Booked**, **Blocked**, and so on.
- Check if a space is being used by an employee or a team member.
- View the spaces surrounding your desk or workplace location.
- View employee avatar or workplace profile initials on the space card details.
- View your team and collaborators.
- Private spaces are hidden when the profile or space is indicated as private. The employee name isn't displayed.
- View permanent seat assignment. Permanently assigned spaces are displayed with workplace profile names.
- View standard workplace services for a selected space.
- View a designated neighborhood, The neighborhood icon ( ) is displayed along with the number of seats.

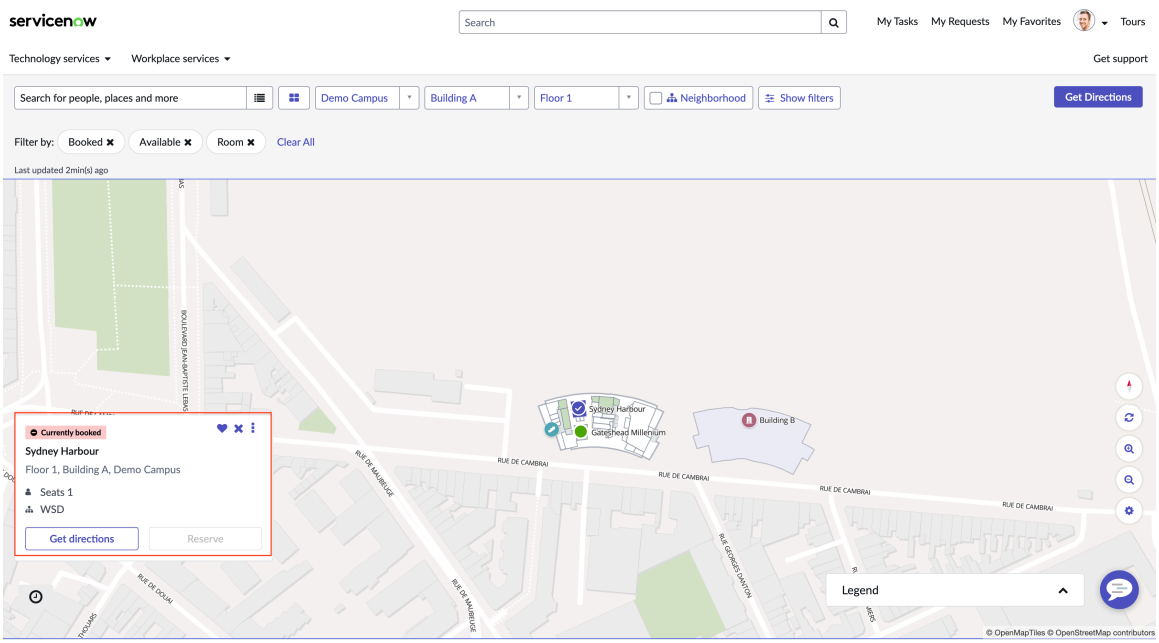
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



a. Select the More actions icon (⋮) and use any of the following options as required:

- Copy URL: Option to copy a space location link. The Copy URL link, when selected, copies the location URL link to a clipboard. The location URL link can be shared with your team members and colleagues.
- Raise an issue: Option to raise a workplace service request or a workplace service issue. For example, catering, cleaning, furniture, and so on

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



b. Select **Reserve** to reserve an available space.

The employee can see the availability of the space and see if it's reserved. A tag is added to indicate the space is occupied and used when a space is already reserved. If the reservation status label on the space card panel is **Currently booked**, the **Reserve** button isn't available for selection and is inactive.

c. Select **Get Directions** for wayfinding and navigating to a meeting room or to where your co-worker is seated.
You can find directions with the same floor or the same building or to a different floor or a different building.

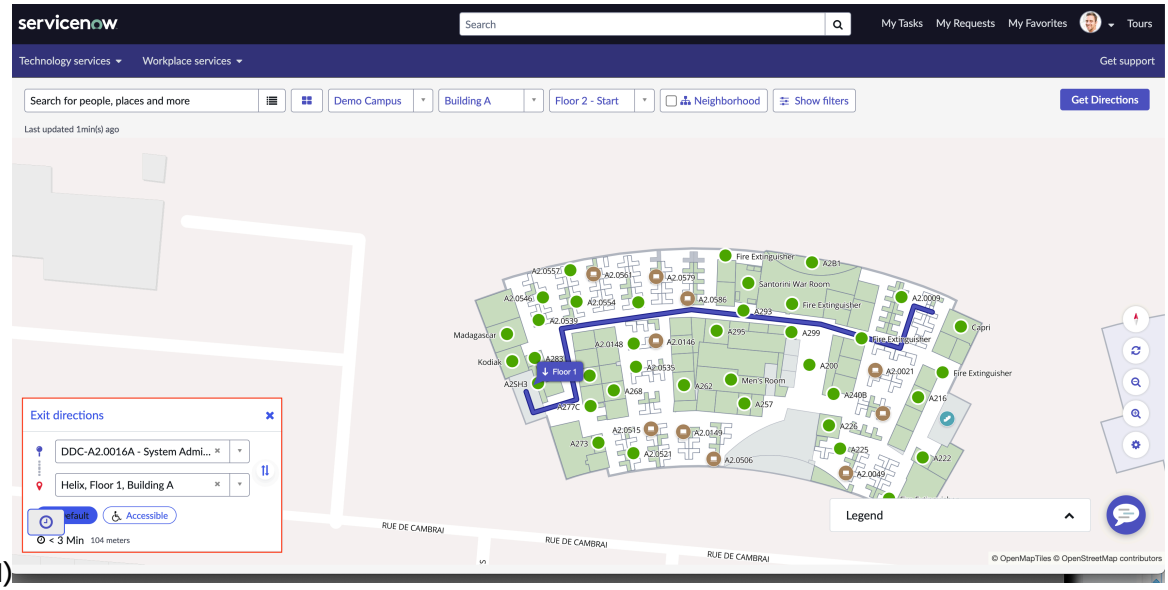
https://player.vimeo.com/video/1098053076?h=532bc7393e&badge=0&autopause=0&player_id=0&app_id=58479

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

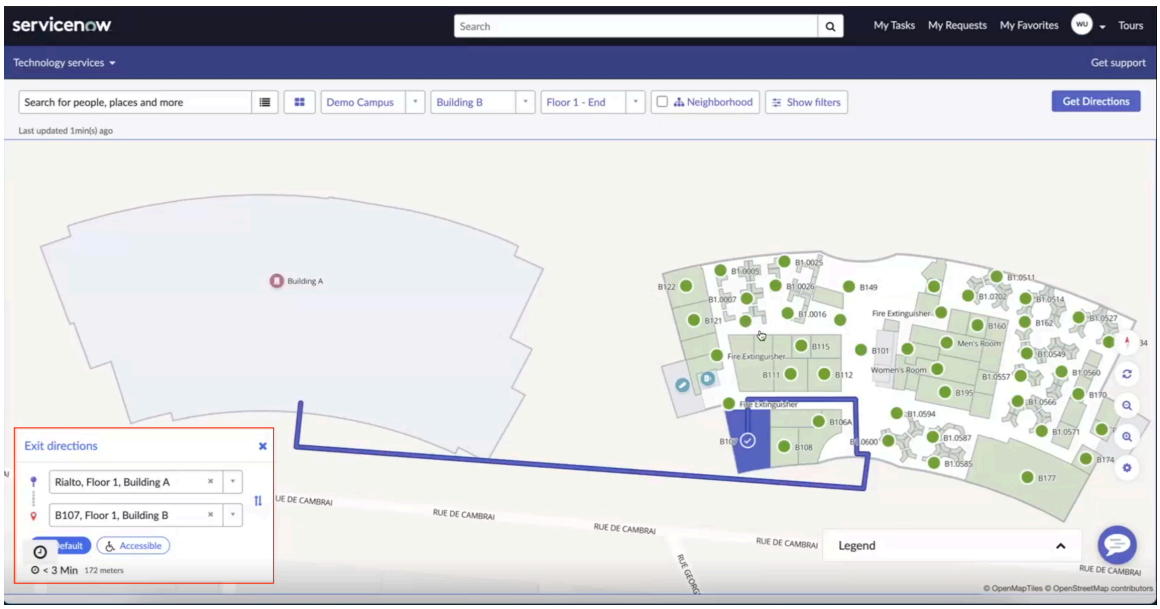
14. **Optional:** To get directions from one space to another, perform the following actions on the map.

> **Important:**
> When privacy is enabled for an employee, using the Get directions option doesn't display the employee or colleague's workplace location.

a. Select a space and on the space card details panel, select **Get directions**.



b. Enter the start and end points for navigation and wayfinding.



(Optional) Complete the following:

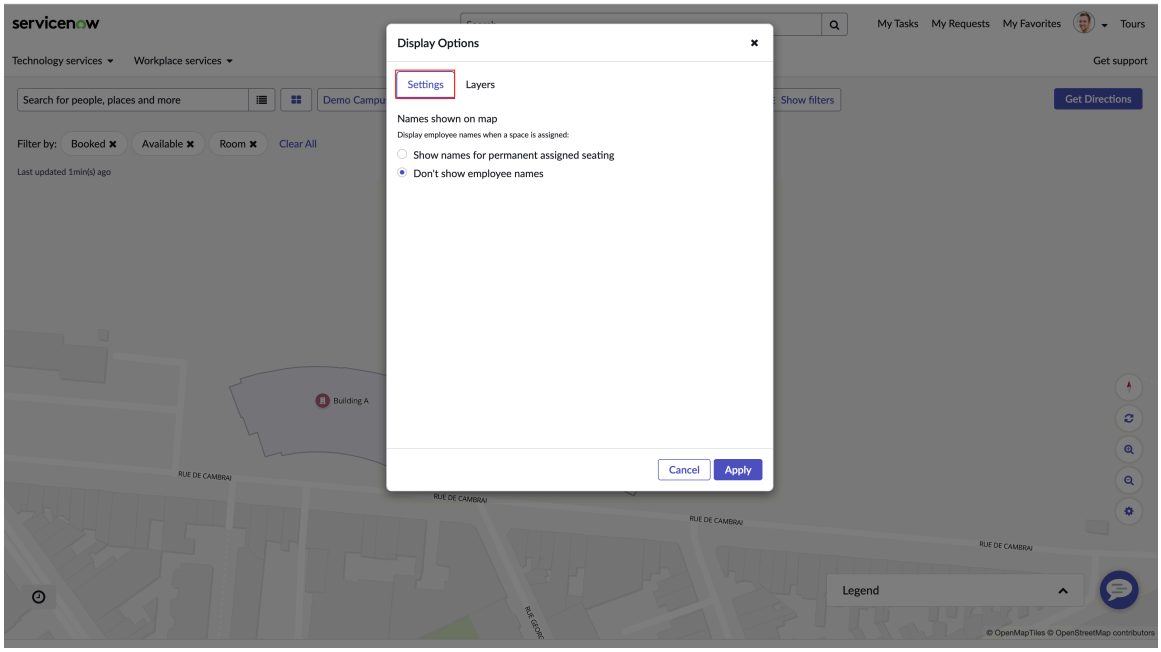
- Select start point: Option to enter the starting point from where you want your direction or wayfinding route to start. For example, select a floor in a building from the list. You can also select a different building. For example, Starting point as Building A or Building B. You can enter a collaborator or colleague's name to find directions to their desk or location on the map.
- Select end point: The End point is selected by default for a selected building and floor. You can change it to another building or to a location or workplace profile user of your choice.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional)

c. Select direction modes as **Default** or **Accessible**.

> **Note:**
> Accessible wayfinding paths are placed near or adjacent to an elevator.



d. Optional: Change the distance measurement units by selecting the distance value. You can select either meters or feet based on your preference. The default unit is set based on your location.

e. Optional: Enable step-by-step directions on the directions card. The system displays directions from the start point to the end point. The distance is displayed in feet or in meters based on your selection.

15. Select the Map display settings icon ( ) to open the Display options panel.

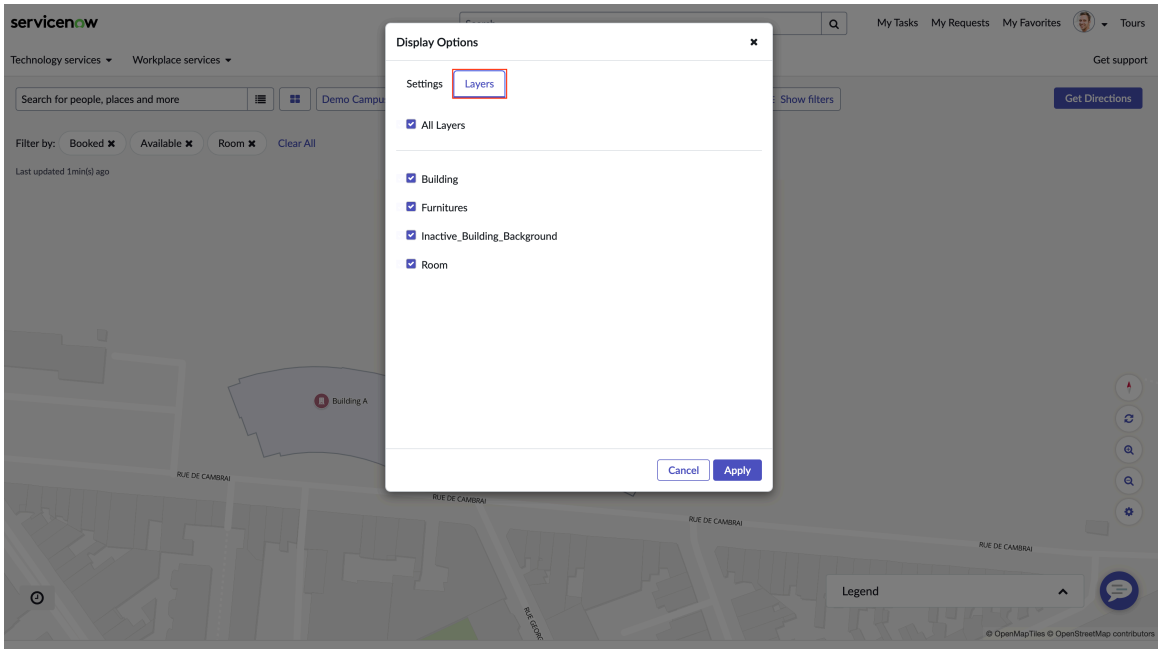
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Show names for permanent assigned seating: Option to show users with permanently assigned seats on the map. Select the check box if you want to display permanent workplace user profiles on the map.
- Don't show employee names: Option To hide private workplace users profile names on the map. Select the check box to hide private users on the map.
- Select **Apply**.



a. To show layers on the map, select all the available layers for a location or select layers as required.

> **Note:**
> The Layers that you have defined in Indoor Mapping are shown on the map.

b. Select **Apply**.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

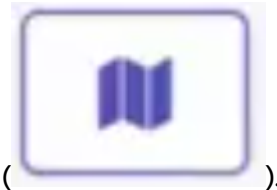
16. To reset the map to north, select the **Reset North** icon ( ) on the map.
17. Select a **Legend** list to view and interpret the colors and symbols or icons available on the map.

    Legend shows the following options.

    - Amenities: Option to view map legend assigned for Spaces types. For example, Room, lounge, desk, and so on.

    - Space Availability: Option to view map legends for space availability based on reservation states and occupancy states. For example: Available, currently booked, Occupied, and so on.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- Neighborhood: If you have selected the **Neighborhood** check box, the map legend shows a toggle option to show or hide neighborhoods on the map. If the Neighborhood check box isn't selected on the map menu (See step 17), you don't see the option to show or hide the neighborhood on the Legend.

  Note:
  Option to show or hide a neighborhood for a location is dependent on a map property configuration [sn_wsd_space_map.display_neighborhood_on_the_map]. This property is set by your administrator.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select the Neighborhood toggle on and toggle off button to show or hide the neighborhoods on the map.
- Neighborhoods are color-coded based on the department, cost center, or workplace entity. For more information, see the Legend on the map.
- Selected locations or workspaces with a neighborhood are filled with neighborhood-assigned colors.
- The **Select all** and **Deselect all** options are available on the Legend to select or deselect neighborhoods.
- If a space belongs to more than one Neighborhood, it's represented with a unique color on the map and the Neighborhood is displayed on the map legend with "&."

18. To switch to the Card view, select the toggle button ().

Work with the Card view on the Location directory

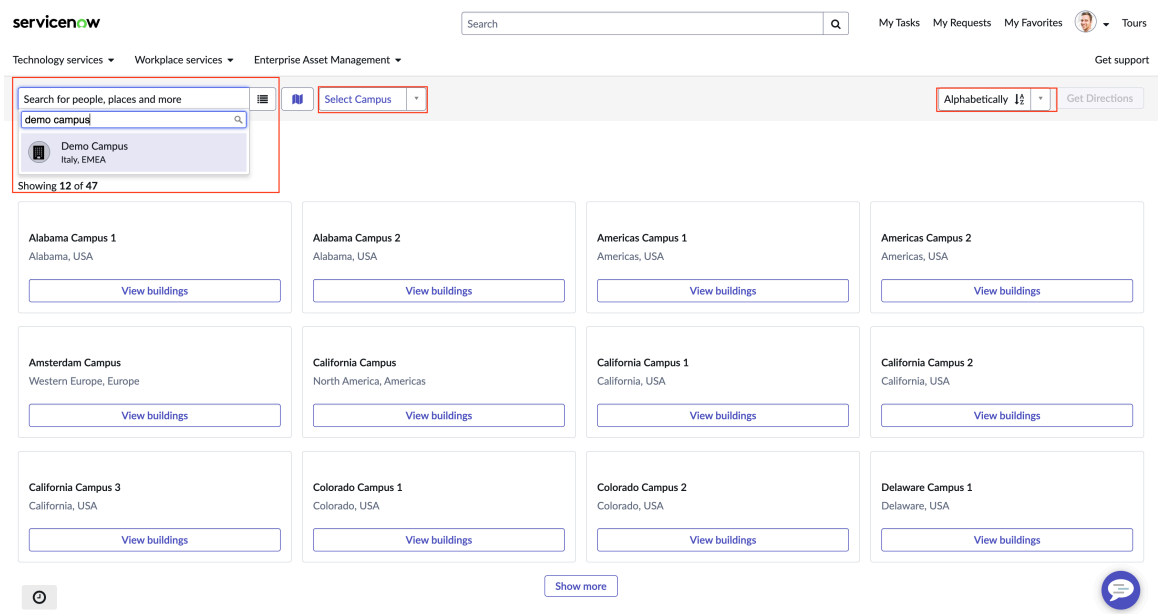
Work with Card view to reserve a space or raise a workplace service request. Filter spaces based on reservation and occupancy data. View designated neighborhoods on the space card. Switch to Map view anytime when you want to locate a workplace location on the map or to get directions to a collaborator or location.

Before you begin

Make sure to activate and configure the following plugins:

- Workplace Core
- Workplace Reservation Management
- Workplace Connectors
- Indoor Mapping
- Workplace Space Mapping

Role required: admin



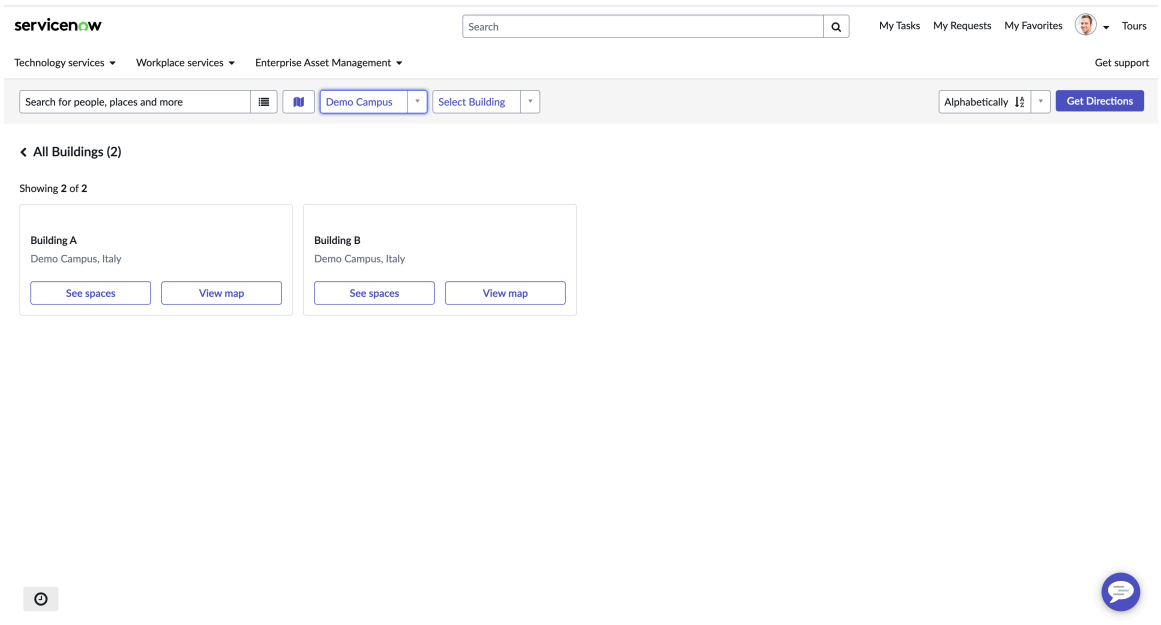
Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace Services**.
2. From the **Workplace Services** list, select **Browse Workplaces** > **Support resources** > **Location Directory**.

   Location directory home page is displayed. By default, the Location directory opens in the Map view. If there are no maps available for a location, the Card view is opened by default.

   .
3. If you are on the Map view, select the Card view icon ( ) to switch to the Card view.
   The Card view home page is displayed with a list of all campuses.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

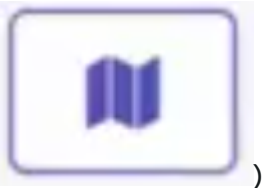


4. Select a campus from the **Select campus** tab.

   You can also search for a campus using the search field option on the Card view.

   To sort locations alphabetically, select **Alphabetically** and sort as required (A to Z or Z to A).

5. When you select a campus, the **Select Building** tab is enabled.



6. Select a building from the **Select Building** list option.
   For example, Building A.

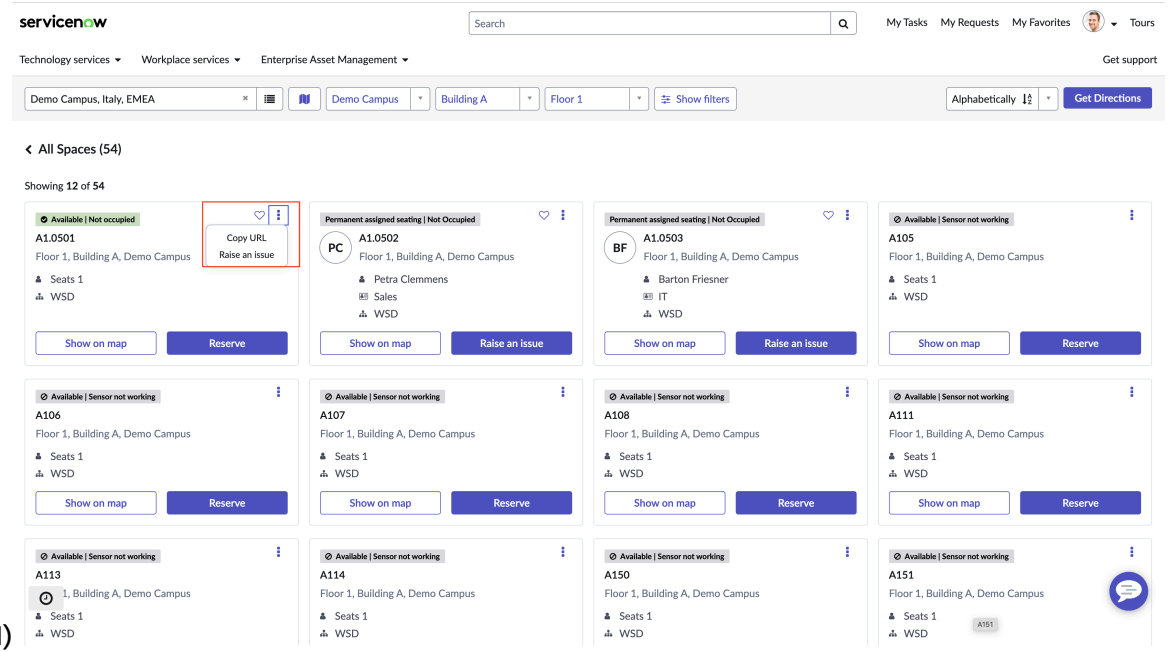
   When you select a building, the **Floor** tab is enabled on the Card view. After selecting a floor, the **Show Filters** option is enabled.

7. After selecting a building, select **See Spaces** to view the number of allocated workspaces for a building.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The All spaces page for a selected building is displayed. All spaces in a building are displayed as individual cards.

Note:
Space card doesn't show the Show on map option when there's no map available for a building. The toggle button icon () to switch to Map view is also grayed out on the Card view.



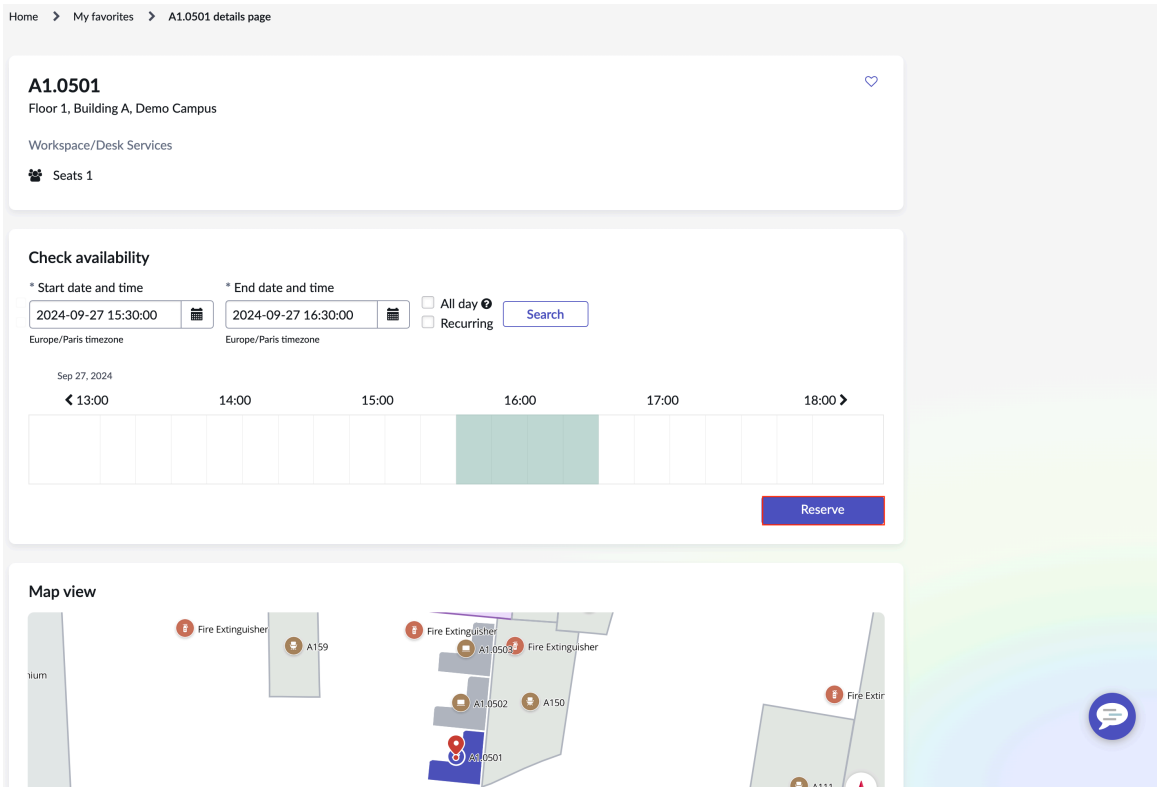
Labels or tags available on a space card show Reservation and Occupancy status, number of seats available in that space, and designated neighborhoods. The space card also provides the following information:

- Option to mark a space as favorite (♡)
- Space name
- The employee avatar or workplace profile initials are displayed as image on the space card details.
- Occupancy status
- Reservation status
- Space image
- Floor, building, and campus name and details
- Space Capacity
- Standard workplace services
- Neighborhood

8. **Optional:** On the space card, select the More actions icon (⋮).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional)



Select the following options as required:

- Copy URL: Option to share the space location browser link and share it with your team members.
- Raise an Issue: Option to raise a workplace service request. This option is available in the More actions option only for a space that can be booked or reserved. In case if a space is already reserved or not available, then the Raise an issue option is available as a button in the space card.

9. Select **Reserve** to reserve a space.

   The selected space opens in a browser tab. The space card details page shows options to select reservation **Start date and time** and **End date and time**. The selected space is also shown on the map (if floor map is available). Complete the reservation process on the Reservation details page.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. Navigate back to the All spaces page on the Card view and select **Show on map**.
    The space card details panel opens on the map and shows option to raise a request or reserve a space, and get directions to a location for wayfinding. For more information, see Work with the Map view on the Location Directory.
11. **Optional:** Select **Raise an issue** to request a workplace service or raise a workplace service issue.
    You're redirected to the General Request page on the Employee center.
12. Select **Show filters** to filter spaces based on reservation states, occupancy states, and space types.

> **Note:**
> The **Show filters** button is displayed on the map when **Show Reservation and/or Occupancy information on the Location directory** [sn_wsd_space_map.show_rsv_occ_data_loc_dir] map property is set to **Yes** by your administrator. Filters can be applied at a floor or space level. When this property is set to **No**, only space type filters are available for you to select.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select and filter any of the following options as required:

a. Select the **Reservation status** check box filter to view space availability on the map.

b. Select the required reservation status to filter spaces based on reservation data for a selected location.
For example, the following reservation states are displayed on the map for a selected space.

- Booked
- Available
- Not Reservable
- Currently booked

a. Select the **Occupancy status** check box to view the occupancy status for a selected space or a location on the map.

> **Note:**
> Occupancy states are only shown on the map if Workplace Connectors is configured for a selected location. Your administrator must also configure the map property **Show Reservation and/or Occupancy information on Location directory [sn_wsd_space_map.show_rsv_occ_data_loc_dir]**. For more information, see Configure map properties for Location Directory.

b. Select the following options as required:

- Occupied
- Not Occupied
- Sensor not installed
- Sensor not working

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- When both reservation and occupancy filters are applied, then spaces fulfilling both these conditions are shown.
- When only reservation or occupancy filters are applied then only reservation or occupancy states are displayed.
- Spaces on the map that are matching the filter conditions are highlighted.
- Spaces that don't fulfill the filter conditions or that don't have a filter applied are shown in white (polygon color).

a. Select the **Spaces** check box to filter selected space types on the Card view.

> **Note:**
> Indoor Mapping place types are available as space types on the Location directory.

b. Select the required spaces.

For example, the following space types can be selected:

- Rooms
- Gym
- Cafe
- Phone booth
- Workspace/Desk
- Restroom-Men
- Restroom-Women
- Miscellaneous
- Elevator

13. Select **Apply** to apply the filters.
The selected filters are applied and the **Filter by label** shows filtered items as pills. For example: Booked, Available, and so on. Select **Clear All** to remove the filters.

14. To switch to Map view, select the toggle button ( ).
For more information, see Work with the Map view on the Location Directory.

Publish Now Assist in Virtual Agent topics for Workplace Service Delivery

Publish Virtual Agent topics to enable your employees to submit a reservation request by using Now Assist in Virtual Agent.

About this task

A Virtual Agent topic is created to meet a specific objective or goal, such as fulfilling a user's request. To enable a feature in the Virtual Agent, you must publish the topic. For more information about Virtual Agent topics, see Create a Virtual Agent topic .

Topic blocks are reusable components to run common tasks and conversational elements in Virtual Agent conversations. For more information about topic blocks, see Maximizing code reuse with topic blocks .

Before you begin

Make sure that you are on the Xanadu release and the following applications are installed on your instance. If they aren't installed, add the applications from the ServiceNow Store .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Now Assist for HR Service Delivery (HRSD)

  For more information about the application, see Now Assist for HR Service Delivery (HRSD).

- Workplace Reservation Management

  For more information about the application, see Workplace Reservation Management.

- Workplace Visitor Management

  For more information about the application, see Workplace Visitor Management

- Workplace Case Management

  For more information about the application, see Workplace Case Management.

Note:
to

Role required: admin

Procedure

1. Navigate to **All** > **Conversational Interfaces** > **Virtual Agent** > **Designer**.
2. In the LLM Assistant list, select **Now Assist in Virtual Agent**.
3. Publish the **Reserve Space** topic.
   For more information about publishing a topic, see Publish a Virtual Agent topic.
   The Reserve Space topic is published and can be used from Virtual Agent.

What to do next

- Configure a reservable module.
  - Configure virtual meeting providers.
  - Create a workplace service to provide an extra service for a reservation.
- Select the portals and channels that Virtual Agent is displayed on. For more information, see Configuring Now Assist in Virtual Agent.

  Note:
  Enabling Now Assist in Virtual Agent for Workplace Service Portal replaces the existing NLU experience.

- Use Virtual Agent to reserve a workplace item, add services, add coworkers, or invite visitors. For more information, see
  Using Now Assist in Virtual Agent topics for Workplace Service Delivery.

Using Now Assist in Virtual Agent topics for Workplace Service Delivery

The Now Assist in Virtual Agent assists Workplace Service Delivery hybrid employees to book meeting spaces more conveniently and quickly.

Now Assist in Virtual Agent provides workplace requesters to have a streamlined, conversational experience based on generative AI. Workplace employees can submit a workplace reservation request to reserve a space and add services to a reservation. Now Assist in Virtual Agent enhances the user experience by combining AI Search with generative AI chat skills.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The generative AI capabilities can provide a human-like conversational experience for Workplace Reservation Management request submissions.

The Now Assist in Virtual Agent retrieves details from Workplace Reservation Management and provides workplace users with the following:

- Reserving a space for meeting
- Adding co-workers to a reservation
- Adding visitors or guests to a reservation
- Adding a Zoom meeting link for remote joining
- Ordering and adding catering services

Analytics and reporting solutions for Workplace Core

Monitor the progress of your workplace activities using the workplace dashboards and logs.

View your workplace floor plan update logs

After updating your workplace floor plan, you can view all changes made.

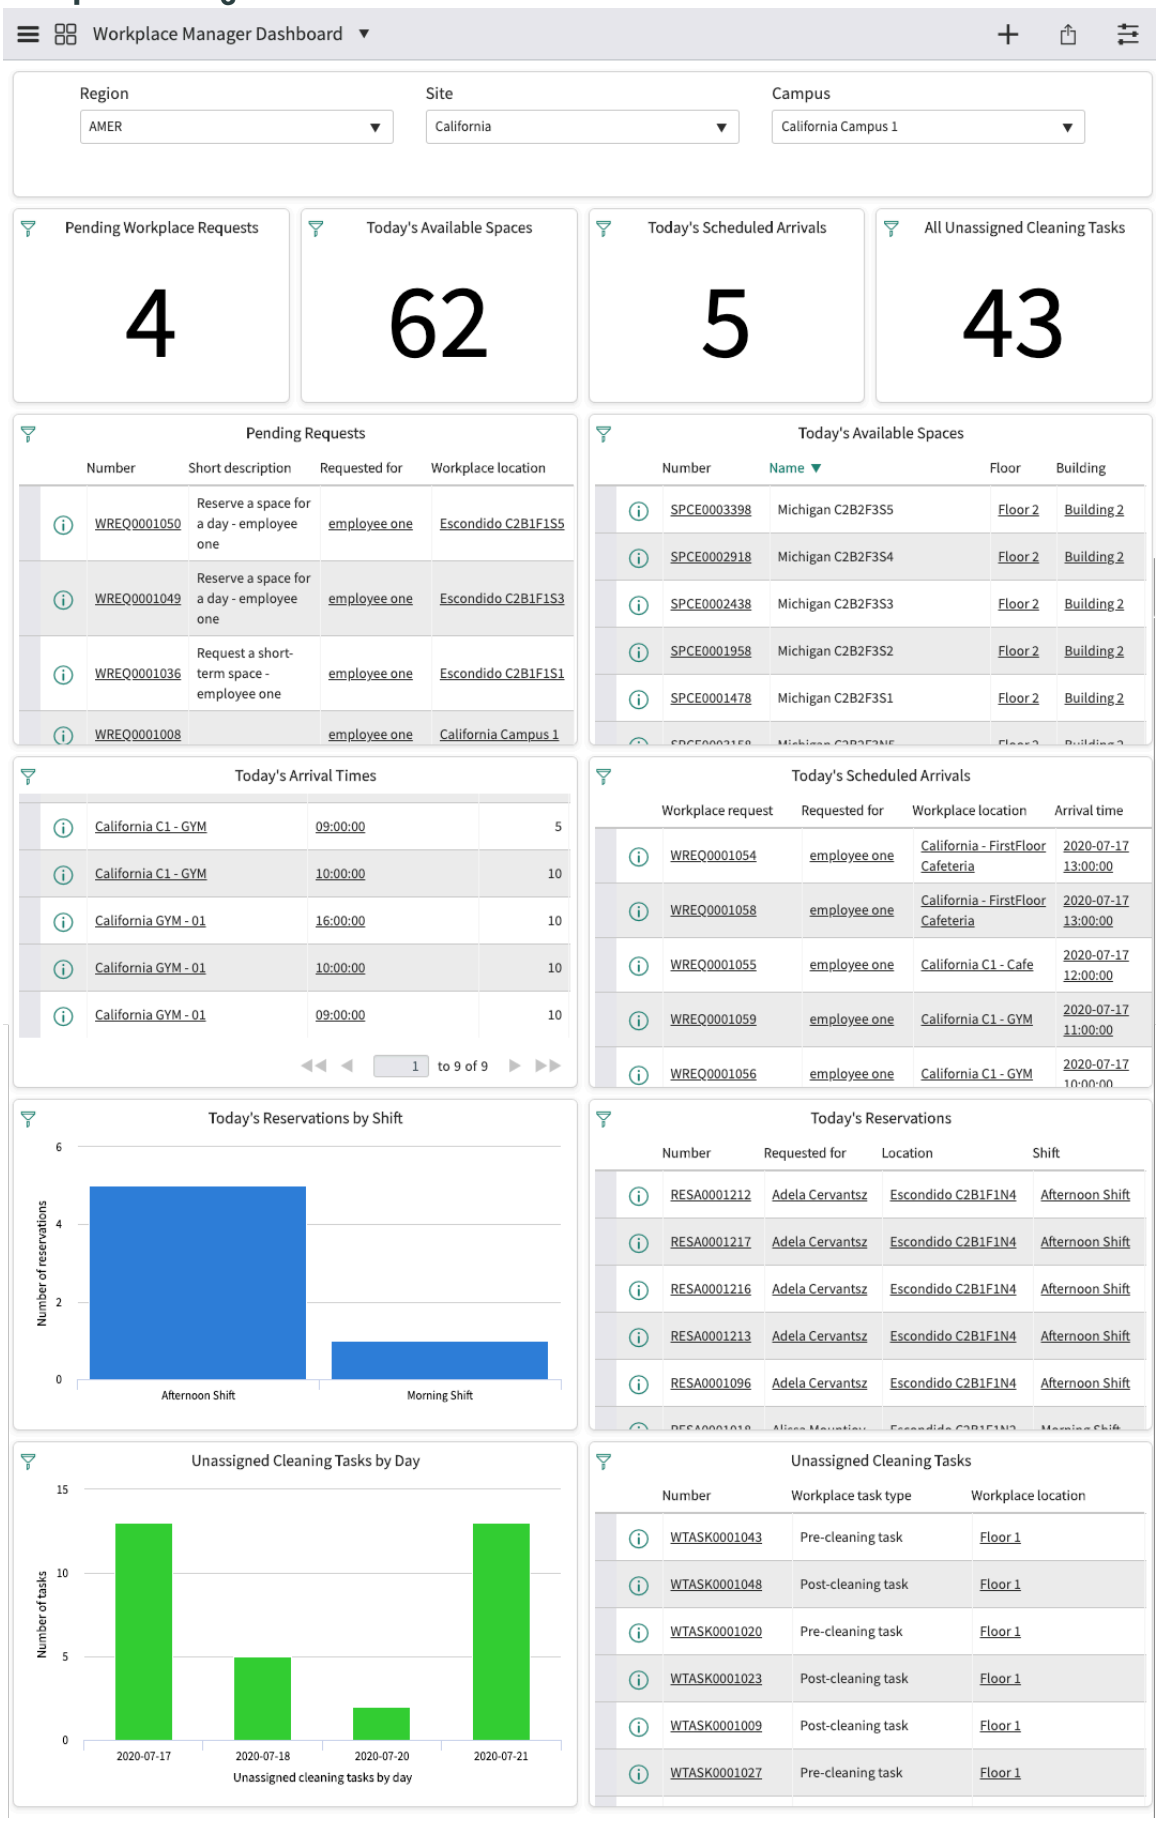
Before you begin
Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Safety Management** > **Administration** > **Floor Plan Update Logs**. Logs appear for each floor plan updated with date and timestamps.
2. Select the **Created date** link to view the log record.
3. Select the **Floor** link to view the floor record.

Workplace dashboards

Use the Workplace dashboards in Workplace Core to get a consolidated view of multiple workplace-related metrics so you can quickly check space utilization and monitor the progress of workplace tasks.



Real-time information provides insights to enable making decisions such as how many people in the workforce can be allowed at a given time into the office space. Track the workplace reservations, workplace cases and visitor registrations at any time.

Workplace manager dashboard

Use the Workplace manager dashboard to monitor the space allocation and workplace maintenance activities at your office campus. For any given day, you can view the details for available spaces, space reservations, pending workplace requests, arrival times for different locations, employee arrivals, and maintenance tasks.

Dashboard data (continued)

Title	Type	Description
Today's arrival times	List	List of arrival times scheduled for today for different locations on the campus.
Today's scheduled arrivals	List	List of employee arrivals scheduled for today for different locations on the campus.
Today's reservations by shift	Bar 	Number of workplace reservations for today grouped by their shifts.
Today's reservations	List	Number of workplace reservations for today.
Unassigned cleaning tasks by day	Trend 	Trend of the number of active cleaning tasks per day that are not assigned to anyone and not in the Closed state. The cleaning tasks in this report have a due date between today and the next seven days and include all task types such as planned, unplanned, and ad hoc.
Unassigned cleaning tasks	List	List of active workplace tasks that are not assigned to anyone and not in the Closed state.

Workplace dashboard in Workplace Service Portal

Use the Workplace Dashboard from Workplace Service Portal to visually analyze the available workspace capacity, space request and reservation trends, and monitor the maintenance tasks of your workplace. You can also reserve a space for an employee or create a workplace maintenance task directly from this Workplace Service Portal page.

To open the Workplace dashboard on the Workplace Service Portal, navigate to **Workplace Core** > **Dashboard**.

Important:
Starting with Workplace Core (sn_wsd_core) version 2.2, or new customers, the **Dashboard** is removed from the Workplace Service Portal and Service Portal. Customers using Workplace Core version 2.1 and below can still access the dashboard after an upgrade.

Selecting a region and site in the filter at the top displays reports for available campuses in separate tabs.

Tables installed with Workplace Core (continued)

Table	Description
User Shift [sn_wsd_core_m2m_user_shift]	Stores the relationship between shifts and employees. For existing users who are upgrading from the first version of the app, ensure that you have the **User** field as the display value. For more information, see Select a field as the table display value.
User Workplace Profile [sn_wsd_core_workplace_profile]	Stores the relationship between employees and their designated workspaces.
Workplace Safety User [sn_wsd_core_workplace_user]	Stores information about all the Workplace Service Delivery users.
Workplace Client Role Rule [sn_wsd_core_client_role_rule]	Stores the workplace client role assignment rules created for employees.
Workplace Location [sn_wsd_core_workplace_location]	Parent table for all workspace entity tables such as Regions, Sites, Campuses, Buildings, Floors, Areas, and Spaces.
Workplace Request [sn_wsd_core_workplace_request]	Stores the workplace reservation requests created by employees.
Workplace Task [sn_wsd_core_workplace_task]	Stores all the workplace tasks created for shifts. If you are upgrading from version 1.1.1 or earlier of the app, ensure that the **Default Value** field is empty for the workplace_task_type column of this table. For more information on how to modify the default display value of a table column, see Specify a default field value.
Workplace rooms [sn_wsd_core_room]	Extends the Space [sn_wsd_core_space] table. It holds the reservable items of a room that are available to reserve.
Workplace Performer Criteria [sn_wsd_core_performer_criteria]	Extends the Application file table. Stores information about all the performer criteria created in the application. The performer criteria stores the list of users who are eligible to perform approval-related actions.
Workplace Approval Definition [sn_wsd_core_approval_definition]	Extends the Application file table. Stores information about all the approval definitions. The tables store information such as which entities require approval.
Workplace Approval Configuration [sn_wsd_core_approval_configuration]	Extends the Application file table. Stores information about all the workplace approval configurations.

Properties for Workplace Core (continued)

Property	Description
	or reserved spaces. For more information, refer to Location privacy settings and impact. • Type: true|false • Default value: false
sn_wsd_core.ALLOCATION_TYPE	Enables you to specify the allocation type based on which the spaces must be retrieved and displayed to users while searching for spaces to reserve, during scenario planning, and more. • Type: choice list • Default value: none By default the following allocation types are provided with the applications: • Cost center = cost_center • Department = department • Workplace entity = workplace_entity

Workplace Profile Location Assignment form

The location assignment form helps you assign a location or a neighborhood to a workplace profile.

Workplace Profile Location Assignment form

Field	Description
Workplace profile	Workplace profile record that the location must be assigned to. A workplace profile can have multiple location assignments. For more information about workplace profiles, see Map designated workspaces to user profiles.
Profile type	Type of assignment you want to set for the workplace profile. Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.
Neighborhood	Neighborhood record that you want to assign to the profile. This field appears only if the **Profile type** is set to Neighborhood assignment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace Profile Location Assignment form (continued)

Field	Description
Workplace location	Workplace location record that you want to assign to the profile.
Schedule plan	Schedule plan that you want to use to assign workplace locations to the profile. For more information about schedule plans, see Schedule Planning.
Active	Option to activate the record.
Is primary	Option to specify if the assigned workplace location is the primary location for the profile. A workplace profile can only be assigned one primary location. For more information about setting a primary location, see Set the primary location of a workplace profile.
Reason for anomaly	Anomaly that occurred due to a mismatch in the allocation or assignment type. For more information about anomalies, see Workplace location assignment anomaly types. This field is automatically calculated based on the workplace location and profile records.
Enable employee location privacy	Option to specify whether employees can hide their location assignments from other users.
Source	Source from which the location assignment record was created. This field is automatically generated and is only visible in the Workplace Profile Location Assignments related list.

Workplace location assignment anomaly types

Anomalies occur when there's a mismatch in the allocation or assignment of a workplace profile and workplace location.

Anomaly types

Reason for anomaly	Description
No anomaly	There's no anomaly.
Assignment type mismatch	The **Assignment type** of both the user profile and the **Workplace location** to which the user is assigned doesn't match.
Allocation mismatch	The allocation of both the user profile and the **Workplace location** to which the user is assigned doesn't match. The allocation mismatch considers the allocation set in the Allocation type [*sn_wsd_core.ALLOCATION_TYPE*] system property. Time-bound allocations

© 2026 ServiceNow, Inc. All rights reserved.

Anomaly types (continued)

Reason for anomaly	Description
	follow only the start date and end date of the allocation, which are set in the system time zone. For more information, see Allocate a cost center, department, or workplace entity.
Assignment type and allocation mismatch	The **Assignment type** and the allocation of both the user profile and the **Workplace location** to which the user is assigned doesn't match.
Restricted neighborhood assignment mismatch	This anomaly arises due to any one of the following mismatches: • When a user profile is assigned to a space that is assigned to a restricted neighborhood but the user profile isn't assigned to that restricted neighborhood. • When a user profile is assigned to a space that is not assigned to the restricted neighborhood but the user profile is assigned to that neighborhood.

Reserve a space form

The reserve a space form helps you select the location and duration of your reservation.

Reserve a space form

Field	Description
Region	Region of your office location.
Site	Location of your office.
Campus	Campus of your office building.
Building	Office building that you want to return to.
On-site date	Date on which you want access to the workplace.
Shift	The shift schedule during which you want to visit the office. Only the shifts available for the selected location and date range are displayed. Only the shifts that you are part of are displayed. This depends on the system properties which were configured by your organization.
Shift detail	Details of the shift that you selected.

© 2026 ServiceNow, Inc. All rights reserved.

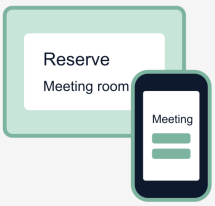
Smarter Workplace Reservations with ServiceNow



The Challenge

- **Wasted time finding spaces**
- **Double bookings and conflicts**
- **No visibility into workplace usage**

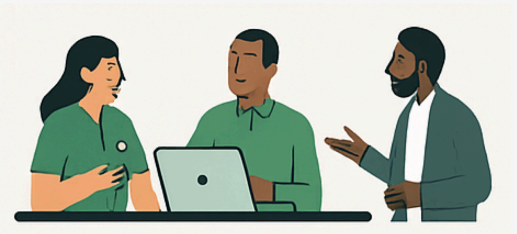
Solution

One intuitive app to reserve **desks, meeting rooms, and** workplace services—anytime, anywhere

For Employees

- **Reserve instantly** desks, rooms, services
- **Browse via floor maps,** favorites, or near colleague
- **Add virtual meeting** links (Teams, Zoom)
- **Track and approve** reservations

For Managers Admins



- **Configure reservable modules**
- **Enable shift group reservations** Add services like catering or AV
- **Generate QR codes for check-in**

Integrations Automation

- **Seamlessly integrated** with tools you already use
- **Get insights into space usage. Optimize layouts** Reduce costs

Integrations Automation

zoom Outlook Google Calendar

With ServiceNow Workplace Reservation Management

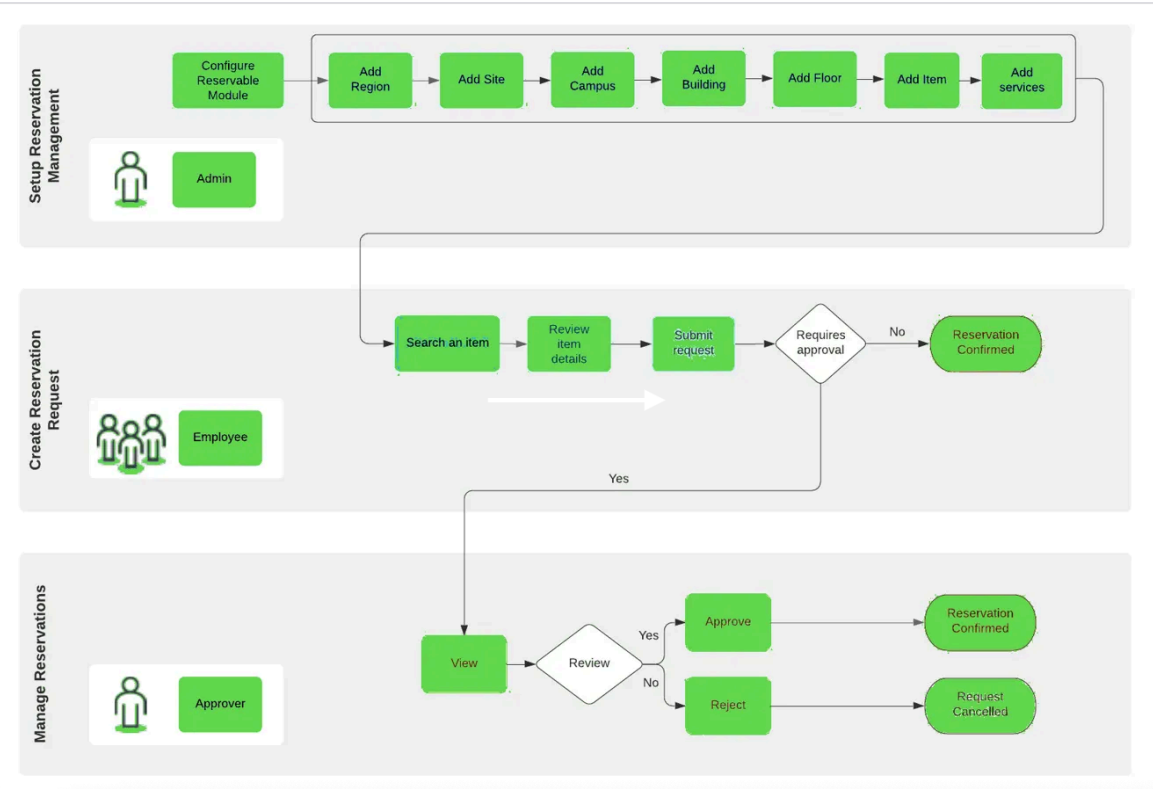
You are not just booking spaces, you are creating smarter connections.

Workplace Reservation Management provides flexibility to employees as to where to work from, where to meet, and how to collaborate with team members without wasting time or searching

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

for an open desk or room. Workplace Reservation Management provides a single, intuitive application that makes it easy for employees to reserve desks, meeting rooms, conference spaces, or any workplace services. Employees can book a desk near their teammate or colleagues or plan a recurring meeting across multiple buildings.

Employees can create single, recurring, or group reservations, invite colleagues and visitors, add virtual meeting links, and even download iCalendar invites to sync with their schedules.



Workplace administrators can configure Reservable Modules, assign spaces, and add standard or flexible services like catering, seating arrangement, AV equipments, and so on. They can enable approvals, manage shift-based or group bookings, and track reservations.

Workplace Reservation Management integrates seamlessly with Microsoft Teams, Microsoft, Zoom, Microsoft Outlook, and Calendars. Reservation conflicts are auto-resolved, approvals are streamlined, and employees get real-time notifications.

Workplace and facility managers get actionable insights through dashboards, analytics and reporting. They can optimize space usage, reduce costs, and improve the workplace experience for everyone. With Workplace Reservation Management, workplace administrators can build smarter and connected workplace experiences.

Workplace Reservation Management provides a modern, intuitive reservation experience for employees, while giving workplace and facility managers the control and insights they need to optimize the workplace.

The following diagram explains the reservation workflow:

Simplify reservations with self-service for employees

Employees can perform the following using Workplace Reservation Management:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Find and reserve spaces instantly. Reserve desks, meeting rooms, conference rooms, parking spots, or even services like catering, seating arrangement, projectors, and so on.
- Opt to reserve a space for an hour, for an entire day, across multiple days, or even multiple buildings.
- View the availability of a workplace item for a day using Map, Card, or Schedule options.
- View details of workplace items such as capacity, location, layout, and services available.
- Browse locations on floor maps and make reservations or raise a workplace issues based on space availability.
- Book recurring meetings with automatic conflict resolution so that workplace schedules stay on track.
- Add multiple buildings to a single reservation.
- Make reservations and browse near colleagues for better and efficient collaboration, browse by neighborhood or by an area.
- Set your In-office presence days on Workplace Presence Dashboard using Workplace Concierge. Change your remote days, visiting another office, or In-Office days as required using the presence dashboard. Match your In-office days with your colleagues' In-office days for better collaboration and productivity.
- Invite attendees and external visitors to a meeting invite. Employees can add invitees or external visitors to their reservations and include virtual meeting links for Microsoft Teams or Zoom.
- Share reservation details using iCalendar so that everyone in a team stays aligned.
- Set favorites so their preferred spaces appear first every time they try to make a reservation.
- Make reservations using a Kiosk Map.
- Create a reservation for yourself or on behalf of someone else.
- View, update, or cancel your reservations or reservations created for others.
- While reserving a room for a meeting, specify the meeting type as private for confidential meetings.
- Request extra services along with a reservation such as catering, seating arrangements, projectors or stationery supply.
- Reserve a workplace near a co-worker.
- Share your reservation details with others.
- Create a group reservation and assign workplaces to different employees in a single reservation.
- Download the iCalendar to download the reservation details and save it to your calendar.
- Set a workplace as favorite. The favorite space is displayed first when you search for workplaces to make a reservation,
- Create a virtual meeting link of the reservation to enable invitees outside the office to join.
- Invitee attendees such as co-workers or even external workers to attend a meeting.
- Create a virtual meeting link of the reservation to enable invitees outside the office to join.
- Invitee attendees such as co-workers or even external workers to attend a meeting.
- Set location privacy preferences on an organization or a building level.
- Integration of Workplace Reservation Management with Workplace Concierge provides employees with real-time insights to optimize their on-site presence in the workplace with their

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

co-workers, improving team collaboration and learning. By using personalized suggestions, employees are guided to the best workspace when they plan to visit the office or travel to another office.

For more information, see Create a reservation.

Enhanced workplace monitoring, compliance, and visibility for workplace administrators and facility managers

Workplace Reservation Management allows workplace administrators and facility managers to monitor space allocations and utilization across a workplace. They can monitor space utilization. It provides them with greater visibility and monitoring capabilities.

- Configure reservable modules to group similar workplace items—like desks or meeting rooms.
- Set approval policies to match organizational needs, so reservations follow the right workflows.
- Enable shift-based reservations for workplaces with staggered schedules.
- Allow group reservations, letting one manager book for an entire team.
- Add standard or flexible services—everything from projectors to catering—to make meetings more productive.
- Generate QR codes for easy check-ins, displayed at reservable locations.
- Configure Outlook Add-in, Advanced Reservation, Kiosk Reservation, Workplace Experience, Quick Reservation capabilities, and so on.
- Display seat assignments on floor maps and enable automatic check-ins for no-hassle reservations.
- Configure the Reservations widget to display different types of reservable items which employees can reserve.
- Configure a wide range of standard services that are available with the reservable items.
- Configure reservable modules to group similar types of reservable items. Activate/deactivate a module to control its availability for the employees to reserve.
- Indicate if an approval is required. Doing so triggers an approval request whenever an employee tries to reserve any reservable item of the reservable module.
- Enable shift-based reservation on a reservable module. An employee can make a shift reservation for a workplace item of that reservable module.
- Enable group reservation on a reservable module. An employee or a manager can reserve multiple places for different employees in a single group reservation.
- Enable iCalendar generation so that employees can add the reservation to their calendar.
- Enable employees to invite attendees such as co-workers or external visitors.
- Configure virtual meeting providers to enable employees to share a virtual meeting link along with their reservation.
- Enable multi-building reservation.
- Enable browse by neighborhood.

For more information, see Configure a reservable module.

Smarter Integrations and Automation

Employees can create reservations using:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Microsoft Teams and Zoom
- Workplace Calendar Synchronization with Microsoft Outlook or Google Calendar, ensuring reservations show up in personal schedules.
- iCalendar downloads so employees can stay aligned across devices.

  When reservation conflicts arise (such as two employees booking the same spac), the system uses the proximity logic to automatically find the closest available alternative.

  For more information, see Manage Workplace Reservations for Microsoft Outlook Add-in.

Data-driven workplace optimization

Workplace Reservation Management isn't just about booking—it's about improving the workplace experience. With built-in dashboards and reporting, workplace administrators and facility managers can perform the following:

- Track reservation patterns over a period of time.
- Understand space utilization across buildings, floors, and areas.
- Identify underused spaces and optimize layouts.
- Support smarter planning for hybrid work and future growth.

As a Workplace Reservation Management manager, you can:

- Manage reservations created by employees. You can view, update, and approve or reject the reservations created by the employees based on your organization's guidelines.
- Generate reports to track the reservation requests over time.
- Add reservable purposes to a workplace item.
- Assign neighborhood spaces to an area.
- Assign spaces to an area
- Assign spaces to a neighborhood

For more information, see Analytics and Reporting Solutions for Workplace Reservation Management.

Workplace Reservation Event planner

The Workplace Reservation Event Planner enables you to track your organization's reservations from a single workspace in Workplace Central. The Event planner dashboard is available to both Reservation planner and Reservation viewer roles. As a reservation planner, manage the reservations on behalf of your employees. View reservation details, optimize reservations, and manage multiple workplace reservations using the schedule view.

For more information, refer to Event Planner.

Make a reservation

The 'Make a reservation' form also referred to as the Reservation portal, is a central location for reserving workplace items, such as meeting rooms and desks. You can also view and manage your reservations. After a reservation request is confirmed, you're notified about the reservation details.

You can reserve a workplace item for any period between 00:00 to 23:59 (midnight to 11:59 p.m.) on the same day. For example, you can make a reservation until anytime before 23:59. If the reservation continues to another day, you must create a separate reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can make a reservation from the Workplace Reservation Management application and the Workplace Service Portal.

- To open the 'Make a reservation' form from the application, navigate to **Workplace Reservation Management** > **New Reservation**.
- To open the 'Make a reservation' form from the Workplace Service Portal, perform the following actions:
  1. Select **Reservations** > **Make a reservation**.
  2. Select **Make a reservation** directly on the home page.
  3. Select **New general reservation** from the Workplace services catalog.
     a. Select **Catalog** > **Browse by categories** > **Workplace Services Catalog**.

        Note:
        If there are multiple catalogs configured on the portal, from the Catalogs list, select **Workplace Services Catalog**.

     b. Select **Reservation Management** > **New general reservation**.

The 'Make a reservation' form enables you to do the following:

- View workplace items such as meeting rooms and desks for your location or for a different location.
- View the availability of a meeting room or desk before making a reservation request.
- Use workplace floor maps to find and reserve a space within Workplace Core. To view the maps in the Location directory and within Workplace Reservation Management, use Mappedin and Indoor Mapping. For more information on how to use floor maps, see Workplace Space Mapping.
- Check for any standard services that are available with workplace items, such as whiteboards, seating capacity, and projector.
- Reserve a workplace item for yourself or on behalf of someone else.
- Reserve multiple buildings for a single reservation. For more information, see Create multi-building reservations.
- View the details of the reservations that you've created.
- Modify or cancel the reservations that you've created.
- Share reservation details with others.
- Browse workplace locations near a person and make a reservation.
- Reserve multiple workplace locations in a single reservation.
- Make a group reservation for different users in a single reservation. You can manage the group reservation in the parent reservation.
- Download an iCalendar of a reservation to add the reservation to your calendar.

You can also use the Virtual Agent chat support on the Workplace Service Portal to make a reservation and view your reservation details. The chat support enables you to do the following:

- Create a reservation for a location.
- View the reservations that you created on the current day.
- See when your reservation will start or happen.
- Cancel a reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Recurring reservations

When you reserve a workplace item for a recurring event, the reservation gets repeated for the indicated days of the specified period. You determine the applicable days when you create the request. The reservation that you initially created acts as the parent reservation record.

If a reservation occurrence conflicts with an existing reservation on a particular day, the reservation occurrence for that day is not confirmed and the state changes to **Conflicted**. The system tries to find an alternative space automatically for **Conflicted** states.

- If a floor map is available, the Workplace Reservation Management application finds a space closest to the same capacity, then looks for one with more capacity, and lastly, for one with less capacity.
- If no floor map is available, the application finds an alternative space in the same area or on the same floor.
- The favorite spaces are prioritized over 'location' (within the same area or proximity).
- The employee can find an alternative space easily if no alternative space was found.
- The employee is notified when the application assigns an alternative space.

For more information about automatically resolving recurring conflicts, see Configure a reservable module and Create a reservation.

If Workplace Reservation Management is unable to find a new workplace, date, and time, relevant messages are shown to the user so that the conflicted reservation can be manually resolved by selecting a different workplace item or by changing the time of the reservation.

For example, if you have reserved a workplace item for a meeting that occurs every Wednesday for one month. Four reservation records are created for each occurrence. But if another employee reserved that same room for the same time as one of your recurring reservations, then your reservation occurrence will conflict with the other employee's reservation. In such a case, you can modify your reservation for that day by selecting a different meeting room or time.

Reservation states

After you make a reservation, the state of the reservation changes to **Confirmed**.

If the reservation requires approvals, its status changes depending on what your approver does. You receive email notifications of these changes. The possible changes are the following:

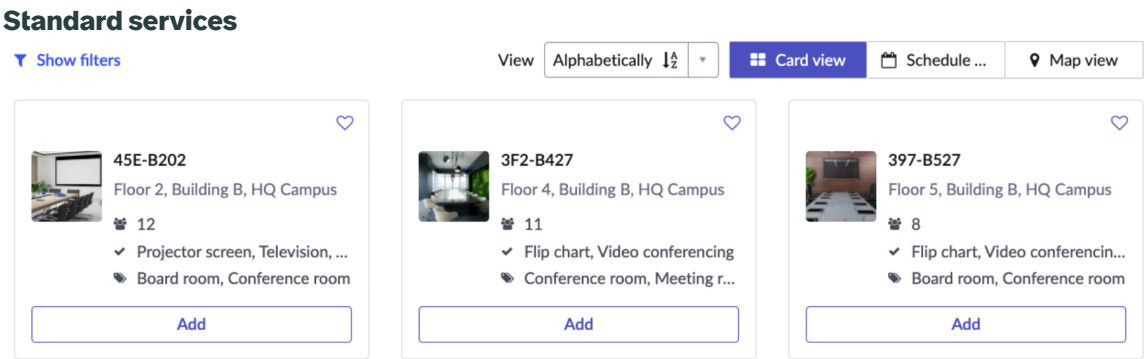
- If your approver has not taken action on your reservation, the state of the request stays **Awaiting approval**.
- If your approver approves your reservation and the availability is confirmed, the state of the reservation changes to **Confirmed**.
- When the recurring reservations are automatically resolved, the **New Space** state is shown below the **Confirmed** state to indicate that Workplace Reservation Management has assigned a new workspace, date, or time.
- If your approver rejects your reservation, the state of the reservation changes to **Rejected**.
- If your approver approves your reservation but the workplace item is not available for the selected date and time, the state of the reservation changes to **Conflicted**.

> **Note:**
> If there are recurring conflicts, employees are expected to manually resolve the reservation conflicts by selecting a new workspace, time, and date. For more information, see Create a reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If you're reserving a workplace item for recurring days, the reservation gets confirmed for the days and times when the item is available. For the remaining days and time, the state of the reservation remains as **Conflicted**.

  You can modify your reservation and follow up with your approver to resolve your conflicting reservation.



- If you cancel your reservation, the state of the reservation changes to **Cancelled**.

Standard services

Standard services are amenities or basic services that are available with a workplace item by default with their reservation. You can review the standard services associated with a workplace item at the time of creating a reservation request.

Standard service is like a basic provision available to employees which they can use in their reservation without having to request separately. For example, when an employee reserves a meeting room, services like telephone, computer, plugs, video call items are considered as standard services unless until the company makes it a requested service.

Employees can see details of the available standard services with each workplace item that an employee can reserve in the Workplace Reservation Management. The standard services are also displayed as icons in the card view of workplace items when you search for an item. For example, the following image shows standard services available with a meeting room:

Configure Workplace Reservation Management portal

As a Workplace Reservation Management admin, you can decide what can be made reservable in the organization. You can add different types of reservable items in the application for employees to reserve.

You can configure what must be available in the application for reservation. You can configure the reservable modules displayed on the application.

The Reservation portal enables you to make a reservation and perform reservation-related actions. You can access the Reservation portal from the Workplace Reservation Management application and the Workplace Service Portal. For more information about the reservation portal, refer to Make a reservation.

As a Workplace Service Delivery admin, you can perform any action on the Workplace Reservation Management application. You can add reservable workplace items and perform other actions.

As a Workplace Reservation Management admin, the application enables you to perform the following actions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Enable manager approvals on reservable modules for reservation.
- Make reservations on behalf of others.
- View all the reservations made.
- Modify existing reservable modules.
- Activate or de-activate reservable items and control its availability on the application.
- Configure standard services.
- Add reservable purpose on reservable items for employees to make easy selection.
- Configure check-in and check-out requirement on a reservable module.
- View the current state, synchronization state and the check-in state of a reservation.
- View the source, sub-source, last updated source and last updated sub-source of the reservation.
- If you have the Workplace Space Management application installed, you can specify if a cost center/department check is required to reserve the workplace item.
- Create archiving rules. Select from archive rules provided by ServiceNow®.
- Create and assign time slots to reservable modules that are configured for the Quick Reservation widget on the Workplace Service Portal
- Configure the views of the reservable module such as Map view or Schedule view.
- Enable group reservation on workplace items of a module.
- Enable employees to download an iCalendar of a reservation.
- Specify the search limit on a module.
- Assign workplace locations that are allowed to be reserved in a reservable module.

Install Workplace Reservation Management

Install the Workplace Reservation Management application from ServiceNow Store applications. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Complete the following setup checklist for a smooth installation and configuration.

Required setup tasks

Setup tasks	Description
Verify that Workplace Service Delivery - Core (sn_wsd_core) plugin of minimum version 2.0 is activated.	Navigate to **Subscription Management** > **Subscriptions** in your instance. The list displays the subscriptions that your organization has purchased.

Role required: admin

About this task

Activate the Workplace Service Delivery - Core plugin (sn_wsd_core) of minimum version 2.0 in your ServiceNow instance before you install Workplace Reservation Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from ServiceNow store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Reservation Management.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.
6. Click **Install**.

Add a workplace space for reservation

Add different types of workplace spaces like a workspace, desk, or similar spaces for employees to reserve.

Before you begin

- Ensure that you have the following details:
  - Workplace data for your organization
  - Data of workspaces that can be marked as available

For more information about adding the workspaces, see Create records for your workplace data.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Workplace spaces**.
2. Click **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For a description of the field values, see Space form.

4. Click **Submit**.

Result
The space is added and is available for reservation.

Add a workplace room for reservation

Add a workplace room for employees to reserve.

Before you begin

- Ensure that you have the following details:
  - Workplace data for your organization
  - Data of workspaces that can be marked as available

For more information about adding the workspaces field information, see Create records for your workplace data.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Workplace Rooms**.
2. Click **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Add a room form.
4. Click **Submit**.

Result
The room is added and is available for reservation in the application.

Configure a reservable module

Create a Reservable Module to add a group of similar reservable workplace items. These workplace items are displayed in a single category on the Reservation portal.

Before you begin

Warning:
Starting with Workplace Reservation Management version 2.1.2, to create or view approvers or performer criteria, navigate to **Workplace Core** > **Administration** > **Performer Criteria**.

- After the upgrade, the Reservable module's **Require approval** option is changed to **Override approval policy**.

  Before the upgrade, if a reservable module has the **Require approval** option enabled, then, after the upgrade, it is migrated as **Always require approval** in the **Override approval policy** option. Otherwise, the **Override approval policy** is set to **Never require approval**.

- For existing customers, the Reservable module's approval functionality that were configured earlier to approve reservations remain the same until a new approval definition is configured. After you configure a new approval definition, the approval process will run according to the upgrade.

  After the upgrade, disable the **WSD Reservation Approval Flow** in the **Flow designer**.

Ensure that you have the following details:

- Workplace data for your organization.
- Data of workspaces that can be marked as available.
- Configure approvers/performer criteria

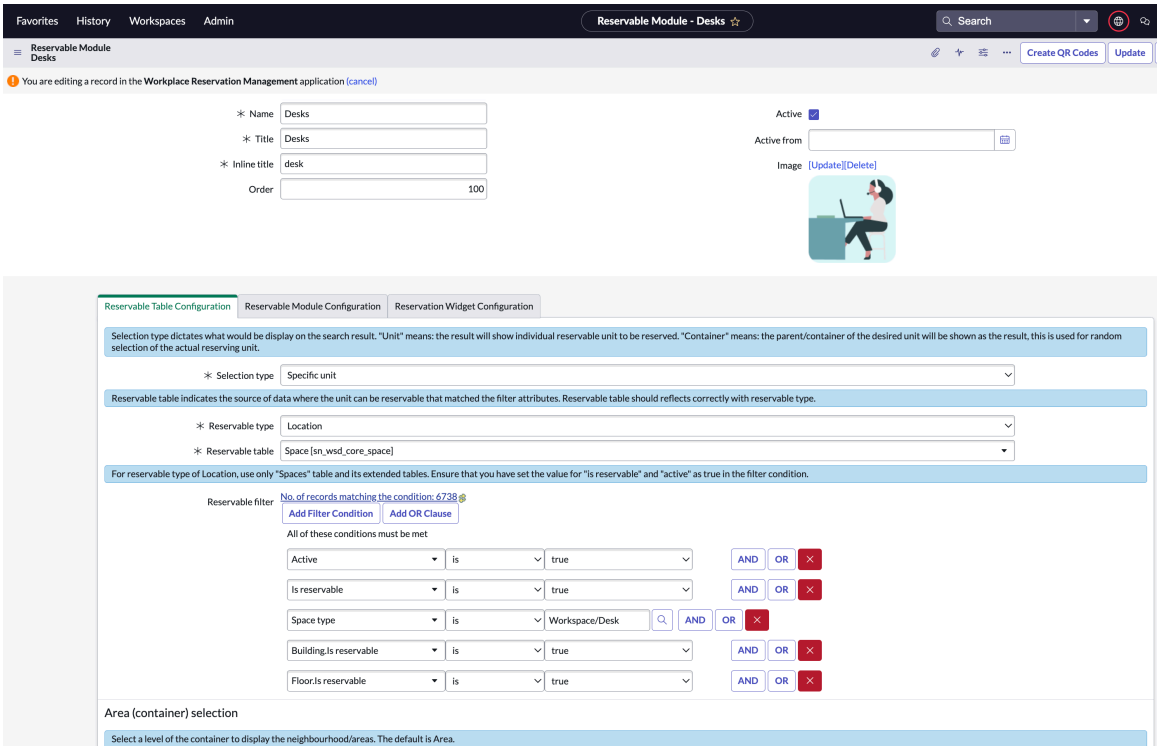
See Create records for your workplace data to add workplace data.

Role required: sn_wsd_rsv.admin

About this task

A Reservable module groups similar types of workplace items. Employees can view these similar items in one category. For example, a room is a reservable module and it contains similar workplace items like meeting rooms, conference rooms, and other rooms.

Procedure



1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. Select **New**.
3. On the form, fill in the fields.

Reservable module form

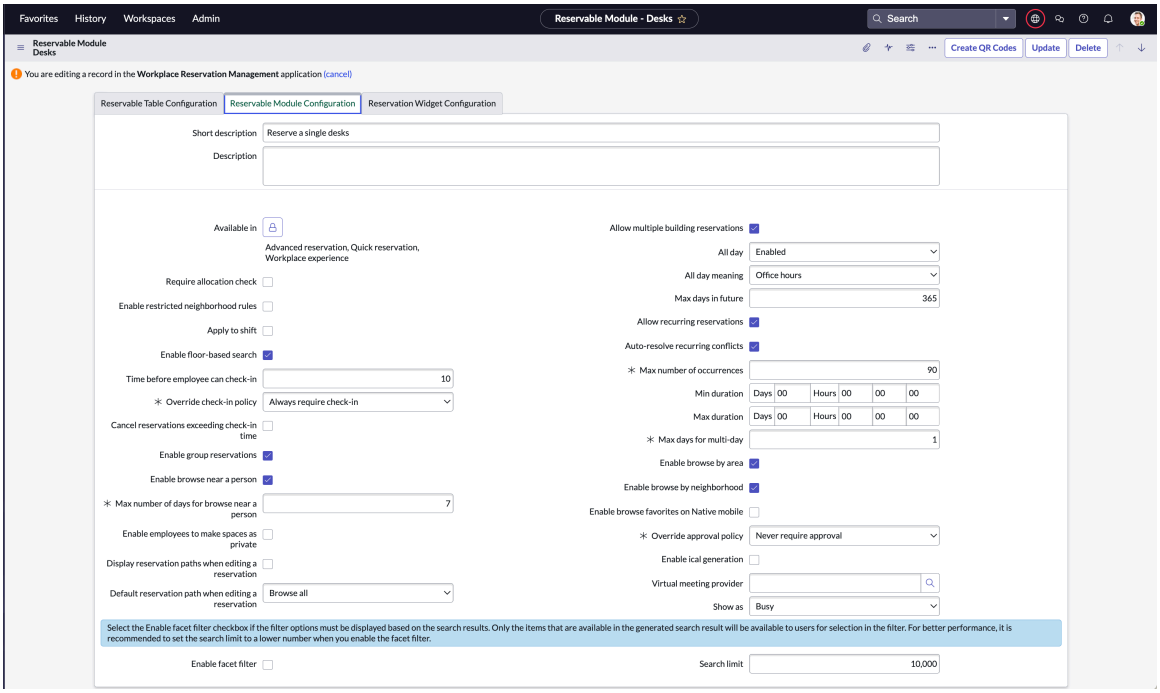
Field	Description
Name	Name for the reservable module. For example, for meeting rooms, the name should be categorical like `Desks` , `Meeting rooms`, or `Rooms` and so on.
Inline title	Title for the reservable module. The title is displayed inline with a descriptive text on the Workplace Service Portal.
Order	Order in which the reservable module must appear on the Reservation portal.
Active	Option to make the module available for reservation.
Active from	Date from when the reservable module must be active and available for reservation.
Image	Image of the reservable module.

4. Select the Reservable Table Configuration tab.
   On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Reservable Table Configuration

Selection type	Type of selection to display in the search results when employees searche. Select one of the following options: ○ **Specific unit**: The search result displays every workplace item. ○ **Container**: The search result displays the parent or container of the workplace items. If you select **Container**, the search results are displayed in groups with a defined quantity available for reservation. Employees can select a container to reserve and any available space from the container is assigned for reservation.
Reservable type	Type of the reservable item.
Reservable table	Table that contains the reservable workplace items. **Note:** If you selected **Location** for the **Reservable type** field, then use only the Space [sn_wsd_core_space] table and its extended tables.
Reservable filter	Filter conditions on the reservable items in the Reservable table. The reservable items are displayed on the application based



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

	on the given conditions. You can do the following: ○ To add a condition, select **Add Filter Condition**. ○ To add an OR condition, select **Add "OR" Clause**. **Note:** If you are adding a filter on a location, ensure that the **Active** and **Is reservable** fields are set to **True**. If you do not, then inactive items that are not reservable will be displayed as reservable.
Area (Container) selection section	Specify the field details.
Reservable container field	Specify on what basis must the be grouped. The field appears only if you selected **Container** as the **Selecttion type**. The field is automatically set to **Area**. For example, when the field is set to **Area**, the reservation search results will appear as groups based on areas.
Reservable quantity field	Reservable quantity for workplace spaces. The **Reservable Quantity** field determines the number of times a container can be booked within a specific reservation time period. This setting provides with flexibility in setting up space reservations without out the need to create individual space records for reservation. For example, if you select **Reservable Quantity**, the container can be reserved as many times as the combined reservable quantity values of all spaces within that container allow. The reservable quantity depends on the number of spaces provided in the Capacity column of the Workplace Core Space table.

5. Select the Reservable Module Configuration tab.

   On the form, fill in the fields.

Reservable Module Configuration

Field	Description
Short description	A short description about the module.
Description	Detailed description about the module and the reservable items.
Available in	Option to specify in which reservations the module must be available. ○ **Advanced reservation**: Select this option to make the module available only on the Reservation portal. ○ **Quick reservation**: Select this option to make the module available in the Reservation widget on the Workplace Service Portal homepage.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Workplace Experience**: Option to display workplace option on Workplace Service Delivery for Mobile. **Note:** The Workplace experience" is available in the Desks Reservable module level by default. If the **All day** Reservable Module checkbox is not selected, the **Workplace Experience** option is not available in **Available-In** option. Workplace users get an error when they open the In-Office Preferences page and the Workplace page from the Workplace Service Delivery for Mobile "This page cannot be loaded due to a configuration issue. Please review your configuration settings and make the necessary changes." For more information, see Create a reservation for a day in Workplace.
Require allocation check	Option to check if there is an allocation mismatch between the workspace item and the logged-in user. This option appears only if you have Workplace Space Management installed. For Workplace Entities, the search results also display locations that are allocated to the parent entity.
Enable allocation duration check	Option to display spaces in the search results based on the start and end dates of the allocation. This field appears only when the **Require allocation check** field is selected. For recurring reservations, the allocation duration is only checked for the first occurrence. **Note:** ○ In Workplace Space Management version 1.12.0, spaces that have the overlapping allocation and reservation time-frames are qualified for the reservation. ○ From Workplace Space Management version 1.13.0, spaces that do not have overlapping allocation and reservation time-frames are considered unallocated spaces and are qualified for reservation.

Field	Description
Enable restricted neighborhood rules	Option to apply neighbourhood restrictions on the spaces while displaying search results. The search results are displayed based on the restrictions applied on spaces. Restricted users cannot view spaces that they are not allowed to access. The restricted neighbourhoods are automatically filtered out if the logged in user is restricted.
Enable browse by area	Option to enable employees to search for a workplace based on area.
Enable browse by neighborhood	Reservation admin can indicate if neighborhood spaces are available for reservations. Employees can search in the context of a neighborhood and only the available spaces in a neighborhood are displayed for space reservation. For more information, see Create neighborhood reservations. This option is also available on the Now Mobile app.
Enable browse favorites on Native Mobile	Option to enable employees to search from their favorite spaces on the Now Mobile app. **Note:** This option appears only if you have Employee Center 25.0.0 and for employees who have Now Mobile app installed. Ensure that the Mobile Employee Service Portal is enabled. **Note:** This option is available only for the Now Mobile app app.
Override approval policy	Option to specify how to implement the approval policy. Choices are as follows: ○ **No override**: The approval policy is implemented as set in the **Requires approval** field of a workplace space or room. ○ **Always require approval**: The approval policy is required regardless of what is set in the **Requires approval** field of a workplace space or room. ○ **Never require approval**: The approval policy is removed irrespective of what is set in the **Requires approval** field of a workplace space or room.
Apply to shift	Option to enable shift-based reservation on the module.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Recurring reservations are not support for a shift-based reservation. Employees cannot add attendees and view their availability on the reservation search page while making a reservation. For more information, see Create a reservation and Add invitees as collaborators and create a reservation.
Enable floor-based search	Option to enable employees to search for a workplace based on floor using the **Browse All**.
Time before employee can check-in	Option to specify the time before an employee can check in their reservation before it starts.
Override check-in policy	Option to specify how to implement the reservation check-in policy. Choices are as follows: ○ **No override**: The check-in policy is implemented as set in the **Requires check-in** field of a workplace space or room. ○ **Always require check-in**: The check-in policy is required regardless of what is set in the **Requires check-in** field of a workplace space or room. ○ **Never require check-in**: The check-in policy is removed irrespective of what is set in the **Requires check-in** field of a workplace space or room.
Cancel reservations exceeding check-in time	Option to cancel a reservation if an employee does not check in within the specified time.
Enable group reservation	Option to allow group reservation for a selected Reservable Module Configuration. For example, **Desks**. **Note:** If the **Allow invitees** check box option is selected in the Reservation Widget Configuration, you cannot make a group reservation. The Reservation Widget Configuration tab is available in the Reservable Module.
Enable employees to make spaces as private	Option to enable employees to make the space details private when they make a reservation. When an employee is creating a reservation, the option **Make space details private** is

Field	Description
	displayed only if the employees are allowed to override their privacy preference for the selected space. Whether an employee can override privacy or not depends on the location privacy setup.
Enable ical generation	Option to enable user to generate an icalendar. **Note:** A user cannot download an iCalendar for spaces and reservations that already synchronizes with their calendar provider.
Default reservation path when editing a reservation	Option to set the context (Reservation Path) when editing a reservation. This option is also available on the Now Mobile app. The reservation paths define the available search criteria. Select any of the following options from the drop-down list: ○ **Based on reservation**: While editing a reservation, employees can search in the context (Reservation Path) used while creating a reservation. For example: **Browse all**,**Browse an area**, **Browse by neighborhood**. ○ **Browse all**: When editing a reservation, the context (path) is defaulted to **Browse all**. Employees can change the selected space or date and time of the reservation. For more information, see Create a reservation. **Note:** This option is not available on the Now Mobile app.
Virtual meeting provider	Select a virtual meeting provider to enable employees to create a virtual meeting link. If an employee selects the **Add a virtual meeting link** option, a virtual meeting link is automatically generated by the virtual meeting provider.
Allow Multiple Building Reservations	Option to add multiple buildings and select spaces from the buildings in a single reservation. The buildings can belong to

Field	Description
	different regions or locations and can be from different time zones. **Note:** Adding multiple buildings to a reservation is available only on the Workplace Service Portal. Recurring reservations are not supported for multi-building reservations. For more information, see Create multi-building reservations.
Allow all day reservation	Option to enable employees to reserve a reservable module for an entire day. If this option is unchecked, the **All day reservation** field is disabled. If the **Max days for multi-day** Reservable Module value is set to more than 1 day, the **All day** option is disabled on the Reservation portal. Employees can only make a single day or all day reservation in this case. For more information, see the **Max days for multi-day** property description. **Warning:** From Workplace Reservation Management version , the **Allow all day reservation** and **Require all day reservation** fields are merged under the **All day** field as **Enabled** and **Required** respectively.
Require all day reservation	Option to enforce employees to make **All day** reservation. This option depends on the **Allow All day reservation** option. If the **Allow all day reservation** option is disabled, this option is cleared and disabled. **Note:** When **Require all day reservation** is selected, employees while making or updating the reservation will find the **All day** option on the Reservation portal enabled by default. Employees can modify the Start date but not the time on the reservation portal. For more information, see Create a reservation

Field	Description
	Warning: From Workplace Reservation Management version , the **Allow all day reservation** and **Require all day reservation** fields are merged under the **All day** field as **Enabled** and **Required** respectively.
All day	Option to enable workplace users to reserve a Reservable Modile Configuration for an entire day. For example, Desk Reservable Module Configuration. ○ **Disabled**: The All day option will be disabled and is not displayed on the Reservation portal. ○ **Enabled**: The **All day** option is available and employees can reserve a space for a day. This configuration is dependent on the (sn_wsd_rsv.day_start) and (sn_wsd_rsv.day_end) reservation property. For more information, see Properties installed with Workplace Reservation Management. ○ **Default**: The **All day** option is available and selected by default. However, the employees can deselect or change the timings if they want. ○ **Required**: The **All day** option is displayed as selected and cannot be changed. The **All day** field is set as mandatory. ○ **Note:** If the **All Day** check box is not selected, **Workplace Experience** option is inactive in the **Available in** Reservable Module Configuration. Workplace users get an error when they open the In-Office Preferences page and the Workplace page from Workplace Service Delivery for Mobile "This page cannot be loaded due to a configuration issue. Please review your configuration settings and make the necessary changes". For more information, see Create a reservation for a day in Workplace.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Warning: From Workplace Reservation Management version , the **Allow all day reservation** and **Require all day reservation** fields are merged under the **All day** field as **Enabled** and **Required** respectively.
Max days in future	Option to specify the maximum number of the days in the future up to which the reservable module can be reserved. For example, if you set the max number of days in future to **90**, employees can make future reservations on this module only up to 90 days in advance. If this option is enabled, users cannot select a date beyond the specified value in **Max days in future** while making a reservation. For more information, see Create a reservation. On Now Mobile app, if you try to select a date too far in the future than what is specified in the **Max days in future**, no results are returned. **Note:** **Max days in future** field indicates that the user cannot make a reservation beyond the number of days configured as the **Max days in future** value for any reservation. **Max days in future** is a reservation property and **Max number of occurrences** is a recurring reservation property. **Max days in future** value takes priority when both these options are used for the reservation. For example, if the **Max days in future** is 90 days, then the number of occurrences in the recurring reservation can not exceed 90 days even if the user has initially configured the value for Max number of occurrences as 180 days in the Reservable module.
Allow recurring reservations	Option to enable employees to make recurring workplace item reservations. Select the check box to display the recurring reservation options available to users as a search parameter while making a reservation.
Auto-resolve recurring conflicts	Option to automatically resolve recurring reservation conflicts. This option is available

Field	Description
	when you have enabled the **Allow recurring reservations** option. The system will find an alternative space by using proximity calculation in case of conflict in reservation and will automatically resolve it. If you are using floor maps, then spaces are selected based on the proximity logic. Option to automatically resolve recurring reservation conflicts. This option is available when you have enabled the **Allow recurring reservations** option Resolving a conflict uses one of the following proximity calculations: ○ If a floor map is available, in that case, the application tries to find a space that is closest by using proximity. ○ If in case a floor map is not available, then the application tries to find a space within the same area or floor. **Note:** Favorite spaces are always preferred in both the options. ○ Lastly, the application searches for an alternative space either with: ▪ same capacity ▪ more capacity ▪ less capacity For more information, see Create a reservation and Auto-resolve recurring reservations.
Max number of occurrences	Option to specify the maximum number of occurrences for recurring reservation that can be made on the reservable module. The default value is 180. This option depends on the **Allow recurring reservations** check box field. If **Allow recurring reservations** is not selected, the **Max number of occurrences** field is disabled.
Min duration	Option to specify the minimum reservation duration of the reservable module.
Max duration	Option to specify the maximum reservation duration of the reservable module.
Max days for multi-day	Option to make a multi-day reservation. Employees can reserve an available space covering or spanning multiple

Field	Description
	days. For example, 5 days or more. For more information, see Create a multi-day reservation. Default value for this Reservable Module property is 1. To make a single day reservation, set the value to 1. Value 0 (zero) is not allowed. When the **Max days for multi-day** value is more than 1, the **All day** option is disabled on the Reservation portal while making a reservation. **Note:** The number of days for this property must not exceed the **Max days in future** value on the Reservable Module.
Enable browse near a person	Option to enable users to search for spaces near a person. When a user searches for a space near a person, the available spaces located on the user's floor are displayed. The display criteria are also based on the nearby area of the space or tags assigned to the spaces. **Note:** The search limit criteria is not applicable if the option is enabled.
Max number of days for browse near a person	Option to specify the number of days employees can reserve a space near a colleague. Admins can configure the maximum number of days an employee would like to reserve a space near a colleague using this property. Default value is 7. Admins can change this value to more than 7 days and enable employees to select the max number of days they would like to book a seat near a team member or a colleague. For more information, see Create a reservation.

Field	Description
	Note: This field is displayed only when the **Enable browse near a person** Reservable module property is enabled on the Reservable Module. The number of days provided for this property cannot be 0 or a negative number (for example, -10). The number of days for this property must not exceed the **Max days in future** value on the Reservable Module.
Enable facet filter	Option to enable facet filter on the workplace items. If the select this option, the filter options are displayed based on the search results. Only the items that are available in the generated search result are available to users for selection in the filter.
Search limit	Option to specify the maximum limit of search results when an employee searches for a workplace location.

6. Select the Reservation Widget Configuration tab.

   On the form, fill in the fields.

Reservable Widget Configuration

Field	Description
Requires subject	Option to make a reservation subject required before making a reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Require cancel notes	Option to make a cancellation note required before making a cancellation.
Warn employee for duplicate reservation	Option to warn employees if a reservation exists for the selected space type module during the specified date and time for that employee. The warning is displayed based on the date and time specified in the search criteria.
Warn employee about presence exception	Option to warn employees if their presence is set to remote on the date of the reservation. The warning is displayed based on the presence routine of the employee. This option is available if Workplace Concierge is installed.
Allow attendees-based search	Option to add meeting attendees and search for their availability on the Make a reservation portal page. Employees can collaborate with attendees effectively by adding them to their meetings. This option is dependent on the **Allow Invitees** reservable module configuration. If the **Allow Invitees** option is not enabled, this option is unavailable for selection and cannot be enabled. The ability to search and add colleagues or attendees based on their availability is supported only for Microsoft Exchange Online. **Note:** Colleagues can be added on the reservation portal search page. The application retrieves their availability to add them as reservation attendees. Guests can be added on the reservation details page after you've selected a space. For more information, see Add invitees as collaborators and create a reservation.
Allow invitees	Option to enable employees to invite attendees to their reservation. Employees can invite co-workers and also external visitors.

Field	Description
	○ If the **Allow invitees** check box is selected, the **Display number of attendees** and **Enable Group Reservations** check box options are unselected by default. ○ If **Display number of attendees** is selected, the **Allow invitees** check box selection is unselected by default.
Display number of attendees	Option to enable employees to specify the number of attendees while making a reservation. If the option is not selected, then the number of attendees is automatically set to **1**. ○ If the **Allow invitees** check box is selected, the **Display number of attendees** and **Enable Group Reservations** check box options are unselected by default. ○ If **Display number of attendees** is selected, the **Allow invitees** check box selection is unselected by default.
Display on behalf of	Option to enable employees to specify on whose behalf they are making a reservation. The option is enabled by default. An error is displayed if the option is disabled.
Display sensitivity	Option to enable employees to set the sensitivity of the reservation. They can set a reservation to **Normal** or **Private**. If the option is not selected, the sensitivity is set to **Normal** and the subject will be visible to others.
Allow reservation message	Option to add notes to a meeting and attach images while making a reservation. The notes and images can be shared with the meeting invitees. **Note:** When calendar sync is enabled for a space, the message or notes will also be added to the body when we sync the reservation. For Now Mobile app, the message is displayed on the summary page but employees cannot add or edit a message. For more information, see Create a reservation. .
Additional details record producer	Option to link to the record producer that you have configured with additional fields. You can display additional fields on the

Field	Description
	reservation form. For more information, refer to Configure reservable module with additional details.
Show as	Option to specify what status must the reservation show on the employee's calendar when a reservation is synchronized. This field appears only if Workplace Calendar Synchronization is installed. ○ **Busy**: The reservation will be displayed in the Employee's calendar with a Busy status. The employee's calendar is blocked during the reservation duration. ○ **Free**: The reservation will be displayed in the Employee's calendar with a Free status. The employee's calendar will not be blocked during the reservation duration. **Note:** For the **Show as** feature to work correctly, you must have the following versions of the connections: ○ For Microsoft, you must have Microsoft Exchange Online spoke version 3.2.4. ○ For Google Calendar, you must have the Google Calendar version 2.3.1.

The *time_picker_interval_size* property for reservation start time and reservation end time is configured using the Widget instances. The start time and end time field increment value depends on the value set in the *time_picker_interval_size*. Default reservation time increment value duration is 30 minutes. For more information see, https://www.servicenow.com/docs/bundle/xanadu-platform-user-interface/page/build/service-portal/concept/c_ConfigureWidgetInstances.html

7. Click **Submit**.

Result

The Reservable module configuration is added to the application. The reservable items are available to employees based on the filter conditions and properties that are configured. The filter conditions can be applied in the Reservable Table Configuration for a location.

Configure a reservable module to group spaces in an area

Create a reservable module to group spaces in an area. Enable employees to reserve a space in an area.

Before you begin

- Ensure that you have the following details.
  - Workplace data for your organization
  - Data of workspaces that can be marked as available
- Create the records in the following order.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Regions
2. Sites
3. Campuses
4. Buildings
5. Floors
6. Areas
7. Spaces

Role required: sn_wsd_rsv.admin

About this task
An employee can view all the spaces of an area in a single module.

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. Click **New**.
3. On the Reservable Module form, fill in the fields.

Reservable Module form

Field	Description
Name	Name for the Reservable module. For example, as the module is to display all the spaces of an area, the name should be categorical like 'Desks within an area'.
Title	Title for the Reservable module.
Active	Option to make the module available for reservation.
Active from	Date from when the reservable module must be active and available for reservation.
Reservable Table Configuration	
Selection type	Selection type dictates what would be displayed on the search result. From the drop-list select **Container**. **Note:** Specific unit indicates that the search result will show individual reservable unit to be reserved.
Reservable type	Type of the reservable item. Select **Location**.
Reservable table	Table that contains the reservable workplace items.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select the Space [sn_wsd_core_space] table. **Note:** If you selected Location for the Reservable type field, then use only the Space [sn_wsd_core_space] table and its extended tables.
Reservable quantity field	Select Reservable quantity.
Reservable filter	Filter conditions on the reservable items in the Reservable table. The application displays the reservable items based on the given conditions. ○ To add a condition, select **Add Filter Condition**. ○ To add an OR condition, select **Add OR Clause**. **Note:** If you are adding a filter on a location, ensure that the **Active** and **Is reservable** fields are set to **True**. If these conditions are not set, the application displays even the inactive items that are not reservable as available for Rservation.
Container selection, reservable quantity settings	
Reservable container field	Level of the container. This field is automatically set to **Area**.
Reservable Module Configuration	
Short description	Short description about the module.
Description	Detailed description about the module and the reservable items.
Override check-in policy	Option to specify how to implement the reservation check-in policy. ○ **No override**: The check-in policy is implemented as set in the **Requires check-in** field of a workplace space or room. ○ **Always require check-in**: The check-in policy is required irrespective of what is set in the **Requires check-in** field of a workplace space or room. ○ **Never require check-in**: The check-in policy is removed irrespective of what is set in the **Requires check-in** field of a workplace space or room.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Requires Approval	Option to make approval required before making a reservation.
Requires subject	Option to make a reservation subject required before making a reservation.
Require cancel notes	Option to make a cancellation note required before making a cancellation.
Apply to shift	Option to enable shift-based reservation on the module.
Max days in future	The maximum number of the days in the future up to when an employee can make a reservation. For example, if you set the number of days to 10, employees can make future reservation on this module only up to 10 days in advance.
Min duration	Minimum reservation duration of the reservable module.
Max duration	Maximum reservation duration of the reservable module.
Allow whole day reservation	Option to enable employees to reserve a workplace item of the module for an entire day.

4. Click **Submit**.

Result
The reservable module is added to the application. On the Reservation portal, employees can view the spaces of an area in this module.

Add workplace locations to a reservable module

Configure workplace locations that must be available to users for reservation when they select a reservable module. Restrict the usage of a workplace by adding only those workplaces that are can be reserved.

Before you begin
Role required: sn_wsd_rsv.admin

About this task
Add workplace locations to a reservable module so that employees can access only those workplaces while making a reservation. By default, there are no workplace locations added to a reservable module.

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. Select the reservable module to which you want to add workplace locations.
3. On the form, scroll down to the Workplace Locations related list.
4. Click **Edit...**.
5. On the Edit members form, set the filter option **Active** to **True**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select the workplace locations by doing the following:

   a. Select the workplace location from the **Collection** column on the left.

   b. Move the selection to the **Workplace Locations List** column on the right.
   To move the location, use the add/remove icon ( ).

   c. Click **Save**.

Result
The workplace locations are added to the reservable module. When an employee selects the reservable module to make a reservation, only the configured workplace locations are displayed.

Generate and print a QR code for a reservable module

Generate and print a QR code for an entire reservable module. Place the QR codes at reservable workplace locations so that employees can scan the code, make a reservation, or perform reservation-related actions.

Before you begin
Role required: sn_wsd_core.workplace_manager, sn_wsd_rsv.admin, or sn_wsd_rsv.manager

About this task
Generate and print QR code for a reservable module such as Desks, Meeting rooms, Parking and more. For example, when you generate and print a QR code for Parking reservable module, then the generated QR code can be used for all the locations that are assigned to Parking reservable module. You can download the QR code, print and place it at all the locations that belong to the Parking reservable module.

Procedure
1. To generate a QR code, do the following:

   a. Generate QR code using the following navigation paths:

   You can generate QR code using any of the following navigation paths:

   - Navigate to **Workplace Core** > **QR code management** > **Create QR codes**.
   - Navigate to **Workplace Core** > **Space Administration** > **Rooms**. Select a room and click **Create QR code**.
   - Navigate to **Workplace Core** > **Space Administration** > **Spaces**. Select a space and click **Create QR code**.

2. On the form, fill in the fields.

Generate QR form

Field	Description
Number	Number of the QR code.
Table	Table for which you want to add a QR code. By default, the table is set a as **Space [sn_wsd_core_space]**.
State	Status of the QR code generation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Short description	Description about the QR code.
Conditions	Filter conditions based on which the QR code must be generated. ○ To add a condition, select**Add Filter Condition**. ○ To add an OR condition, select **Add "OR" Clause**.

3. To print the QR code, click **Print QR codes**.
4. In the Print QR codes dialog box, do the following:

   a. Specify a file name for the printed QR code in the **Enter file name** field.
   All the QR codes of the selected spaces are in a single PDF file with the specified file name.

   b. View the number of QR codes to be printed in the **Count** field.

   c. Select the layout of the QR code in the **Label layout** field.

   d. Preview the QR code print.

   e. Click **Print**.
   The QR code generation runs in the background.

What to do next
The QR codes are generated. The QR codes are printed in a single PDF file with the specified file name. You will receive an email notification after the QR code generation is completed with the QR code details.

After the QR code generation is completed, go to **Manage QR codes** to view the generated file. For more information, refer to Manage QR codes.

Click **download** to download the PDF file.

Create a record producer to add additional details

Configure a record producer with additional details and add it to the reservable module. The fields configured for additional details will be displayed to the employee when they make a reservation.

Before you begin
Before you configure the record producer, refer to Additional details record producer - Mapping Variable types and limitations.

Note:
The record producer is only used to retrieve data related to the additional fields.

If you want to add details that aren't included in the Workplace Reservation (sn_wsd_rsv_reservation) table, you must perform the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
In the Workplace Reservation (sn_wsd_rsv_reservation) table, Columns related list, when you add fields (columns) that aren't included, note the following:

- On the Dictionary Entry form, the **Mandatory**, **Read only** and **Display** fields are not applicable.
- The columns in the table are created to only store the data.
- The **Max length** field is considered to save the data with **Max length**.

1. Navigate to **All** > **System Definition** > **Tables**.
2. Open the Workplace Reservation (sn_wsd_rsv_reservation) table.
3. On Table form, scroll down to the Columns related list.
4. Select **New**.
5. On the Dictionary Entry form, fill in the fields.

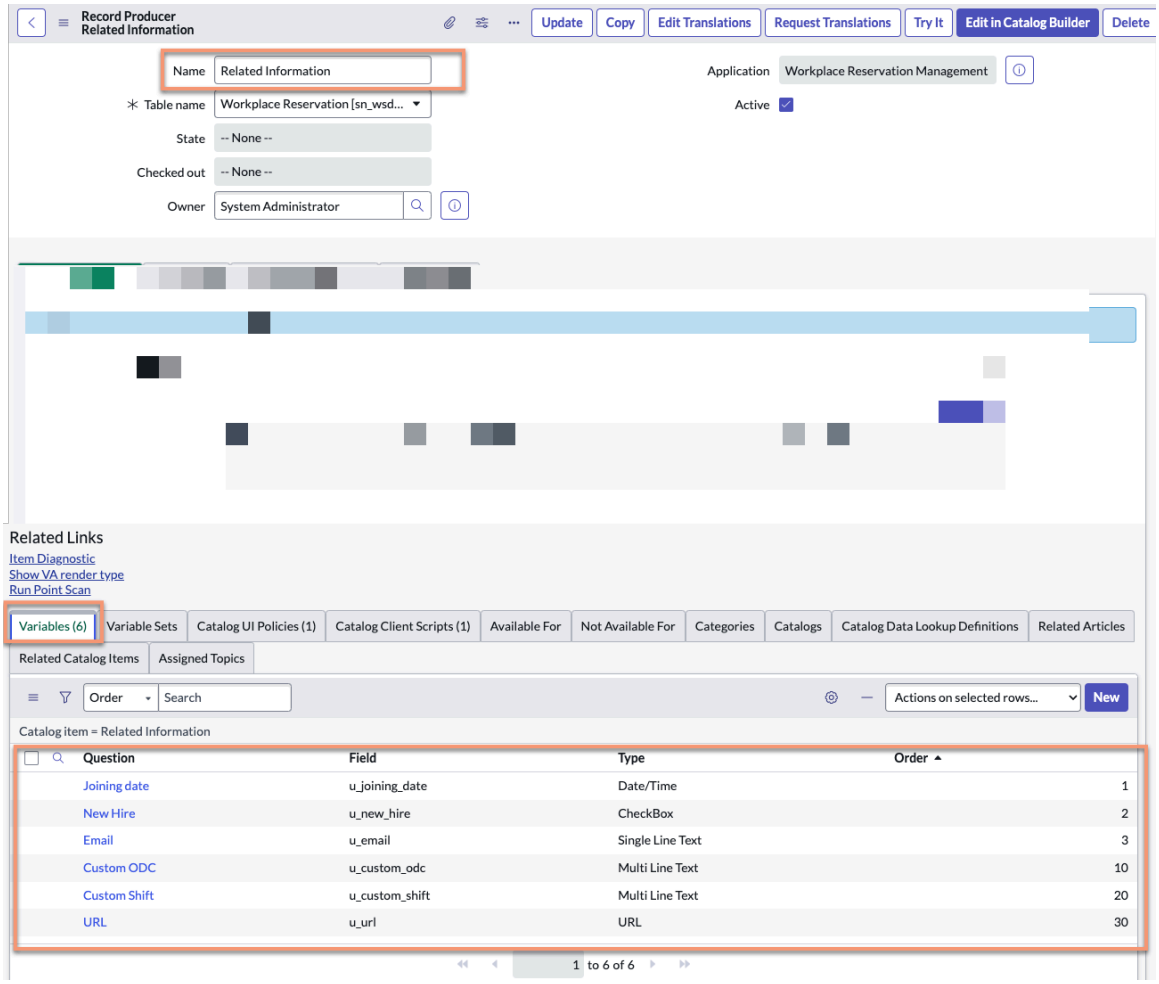
   For more information on columns and fields, refer to Field administration.
6. Select **Submit**.

   The table column is added.
7. **Update** the Workplace Reservation (sn_wsd_rsv_reservation) table

Note:

When you configure the record producer, note the following:

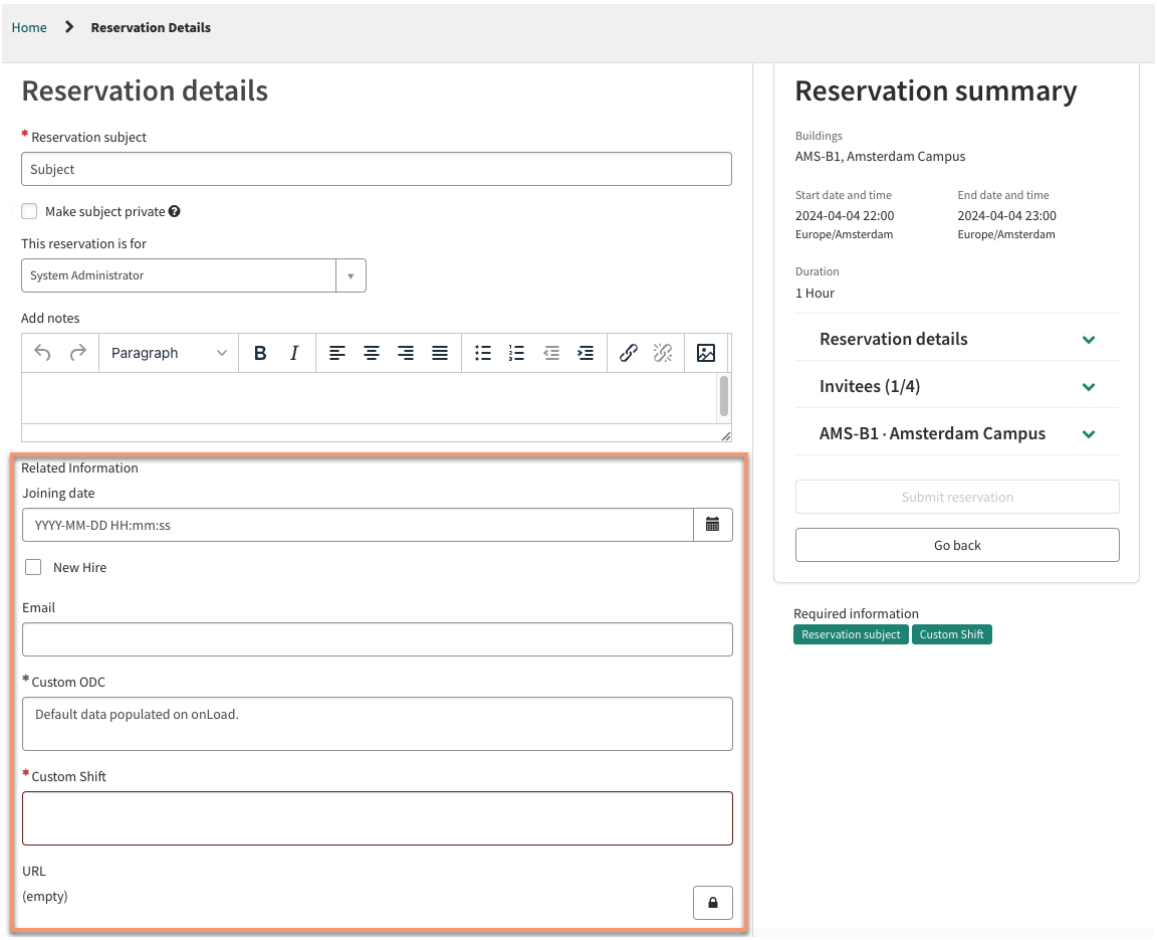
- You can add **Catalog UI Policies** to the record producer.
- Only the following **Catalog Client Scripts** types are supported:
  - OnChange
  - OnLoad
- Code added in the **Script** isn't supported.
- The following record producer related lists aren't supported:
  - Variable Sets
  - Not Available For
  - Categories
  - Catalogs
  - Catalog Data Lookup Definitions
  - Related Articles
  - Related Catalog Items
  - Assigned Topics



Role required: sn_wsd_rsv.admin

About this task

Create a record producer with additional details and link it with the reservable module on which you want the details to be displayed to an employee. For example, if you add a record producer - Related Information and link it with the Meeting rooms reservable module, then the reservation form in the Reservation Portal displays an additional section - Related Information as follows:



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Record producer form of 'Related Information':

Reservation portal - Reservation form with the 'Related Information' section:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Service Catalog** > **Catalog Definitions** > **Record producers**.
2. Select **New**.
3. Enter the **Name** of the record producer.
4. In the **Table name** select Workplace Reservation (sn_wsd_rsv_reservation) table.
5. Select **Active** to activate the record producer.
   For further form field descriptions, refer to Record Producer form.
6. Select and hold (or right-click) on the form header and select **Save**.
   The record producer is created. After creation, a list of record producers created in the application is displayed.
7. From the list, open the record producer that you created.
8. In the **Variables** related list, add the additional details that you want to configure.

   Variables collect information from the user, and are used to ask questions and map answers to fields. You can add as many variables as you need to the reservation form. Commonly used variable types include:

   - Checkbox
   - Multiple Choice
   - Reference
   - Select Box
   - Single Line Text

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To learn more about the different types of variables and how to configure them, see Types of service catalog variables Types of service catalog variables.

a. Select **New**.

b. On the Variable form, select **Map to field**.

c. In the **Order** field, specify in what order should the field appear.

d. In the **Field** field, select the field that you want to add.
You can select from a list of fields available with the Workplace Reservation (sn_wsd_rsv_reservation) table.

e. Select **Active** to activate the field.

f. **Optional:** To set the field as required, select **Mandatory**.

g. **Optional:** To set the field as read only, select **Read only**.

h. **Optional:** To hide the field, select **Hidden**.

i. In the **Question** related list, enter the name of the field in the **Question** field.
The name specified in the **Question** field is displayed on the form.

j. Select and hold (or right-click) on the header and select **Save**.
The field is added. Repeat the above steps if you want to add more fields.

Important:
The Permission and Availability related lists aren't supported for the variable.

9. Navigate back to the Record producer form.
The added fields are displayed in the **Variables** related list.
10. **Optional:** You can add **Catalog UI Policies**.
Refer to Service catalog UI policy
11. **Optional:** You can add **Catalog Client Scripts**.
Refer to Create a Service Catalog client script.

Note:
Only the following Client Scripts types are supported:

- OnChange
- OnLoad (Note: The script part must be wrapped in setTimeout)

12. Select **Update**.

Result
The record producer is created with the additional details.

What to do next
Create a record producer to add additional details

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure reservable module with additional details

The application enables you configure a reservable module with additional details based on your organization's requirements.

Before you begin

Verify that you have the following details.

- Workplace data for your organization
- Data of workspaces that can be marked as available
- Record producer with the additional details fields. Refer to Create a record producer to add additional details.

Role required: sn_wsd_rsv.admin

About this task

Configure a reservable module to use the additional details fields that you want to display on the reservation form when employees make a reservation. The fields appear under an additional details section, along with the existing form fields provided by the application based on your configuration. For more information about the reservable module configuration, refer to Configure a reservable module.

The additional details are displayed when an employee requests a single, multi, recurring and a group reservation. The details entered in the additional details are also displayed in the Reservation summary of the reservation.

To add custom fields:

- You must create a record producer with the fields. Refer to Create a record producer to add additional details.
- Link the reservable module with the record producer.

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. **Optional:** Select **New** if you want to create a reservable module.
   To fill the form, refer to Configure a reservable module.
3. Select the reservable module to which you want to add additional details.
4. On the Reservable module form, select **Reservation Widget Configuration**.
5. In the **Additional details record producer**, select the record producer that you created with the additional details.
6. Select **Update**.

Result

The reservable module is configured with additional details.

Assign spaces to an area

Add spaces to an area to make them available for reservation. On the Reservation portal, when an employee searches for an area, all the available spaces that are assigned to that area are displayed.

Before you begin

Ensure that the area to which you are assigning spaces is configured in the application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Navigate to **Workplace Core** > **Space Administration** > **Areas**.
2. Check that the area is configured.

Ensure that the spaces are assigned to the area.

1. Navigate to **All** > **Workplace Core** > **Space Administration** > **Spaces** and select the space.
2. On the form, ensure that the **Area** field has a value.

For more information, see Providing your workplace data.

Role required: sn_wsd_core.workplace_manager or sn_wsd_rsv.admin

About this task

Assign desks or spaces that belong to an area. When an employee searches for an area to make a reservation, all the available spaces or desks that belong to that area are displayed. You can add spaces individually or in bulk. For example, you can add spaces individually like C1 and C2, or you can add one space C with a quantity of 100.

Procedure

1. Navigate to **Workplace Core** > **Space Administration** > **Spaces**.
2. Select the space that you want to assign to the area.
3. Open the form in the Workplace view.
   a. On the top-left corner of the form, right-click the additional actions icon.
   
   b. In the list, select **View** > **Workplace**.
4. On the Space form, in the **Organization details** tab, select the area in the **Area** field.
5. **Optional:** To add a bulk quantity of this space, specify a quantity in **Reservable quantity** field in the **Extra information** tab.
6. Click **Update**.

Result

The space is added to the area. On the Reservation portal, the following actions are performed:

- When an employee searches for the area, the assigned space is displayed.
- If you have added bulk quantity for a space, the space is displayed with a maximum capacity in the card view. When an employee makes a reservation for this space, the capacity is deducted. The space is again displayed with the available capacity for the next reservation until the maximum capacity is 0.

If the reservable module to which the space is assigned has the **Enable restricted neighborhood rules** option enabled, then the space is displayed to the user based on the restrictions. That is, if the user is restricted to view the spaces of this neighbourhood, then the space is not displayed to him in the search results. If the user is restricted to view the spaces of a neighbourhood to which they don't belong or, if the user is not added in the Neighbourhood User Assignment table.

What to do next

To view the spaces assigned to an area, navigate to **Workplace Core** > **Space Administration** > **Areas** and select an area. The assigned spaces are displayed in the Spaces related list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a standard service

Create a Standard service to make it available to employees by default when they make a reservation.

Before you begin
Role required: sn_wsd_rsv.admin

About this task
A Standard service is a basic provision available with a reservable workplace item when a reservation is made. For example, white board, additional monitor, and similar other standard services.

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Standard Services**.
2. Click **New**.
3. On the form, fill in the fields.

Standard services form

Field	Description
Name	Enter the name of the standard service
Active	Select active to make it available in reservations.
Service Configuration	
Short description	Enter a short description about the service.
Font awesome icon	A font awesome icon in the 'fa-(name)' format. Currently, the **Font Awesome** library of version 4.7 is supported.

4. Click **Submit**.

Result
The standard service is added to the application.

What to do next
Add the standard service to a workplace room or space. For more information, see Add a standard service to workplace.

Add a standard service to workplace

Add a standard service to a workplace space or room based on where it is made available.

Before you begin
Create a standard service

Role required: sn_wsd_rsv.admin

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration**.
2. Based on where you are adding the standard service, make the following selection:'

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To add the service to a workplace space, select **Workplace Spaces**.
- To add the service to a workplace room, select **Workplace Rooms**.

3. Select the Workplace Space/Room where you want to add the standard service.
4. On the form, scroll down and click **Edit** in the **Standard Services** section.
5. On the Edit Members form, select the service.

   a. Select the standard service from the **Collection** column on the left.

   b. Move the selection to the **Standard Services List** column on the right.
   Use the Add-remove. icon to move the services.

6. Click **Save**.

Result
The Standard service is added to the selected workplace space or room.

Create a flexible service

Create a flexible service and provide it as an extra service to employees. Employees can use the flexible service and other basic standard services when they make a reservation.

Before you begin

Warning:
Starting with Workplace Reservation Management version 2.1.2, you cannot create any extra services or flexible services directly using the Workplace Reservation Management application. Beginning from Workplace Reservation Management version 2.1.2, you can create an extra service only as a workplace service using the Workplace Case Management application only. The Workplace Case Management application is automatically available for installation after the upgrade. If you have installed Workplace Reservation Management version 2.1.2 or above directly (as a first time user), there will be no impact and the following conditions does not apply to you.

- After the upgrade, the existing flexible services are removed from the Workplace Reservation Management application and are listed as workplace services in the Workplace Case Management application.

  For more information on how to create an extra service after the upgrade, refer to Create a workplace service to provide an extra service for a reservation.

- Each category of a flexible service is created as a workplace service. The flexible services that belonged to that category are created as Workplace Service Items of that workplace service.
- The locations to which the flexible services were available are listed in the Workplace Service Item Locations Related list of that workplace service.
- There is no effect to employee experience on the Reservation portal.
- All the extra services requested by employees along with their reservation in the past six months are restored automatically. The extra service requests are logged in the Requested Service Items [sn_wsd_case_service_item_request] table of the Workplace Case Management application.
- To migrate the subcategories and to create the case and task templates automatically, you must run the Script include `Choice and Template Migration Script`. The instructions on how to run the script are included in the Script include description.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: sn_wsd_rsv.admin

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Flexible Services**.
2. Click **New**.
3. On the form, fill in the fields.

Flexible Services form

Field	Description
Name	Name of the flexible service.
Description	Short description about the service.
Category	Category of the flexible service. To add a new category, do the following: **a.** Right-click **Category** and select **Configure choices**. **b.** On the Configure Category Choices form, in the **Enter a new item** field, enter the name of the category that you want to add. **c.** Click **Add**.
Sub Category	Subcategory of the selected category of the flexible service. You can also add a subcategory by following the same steps as when adding a category.
Active	Option to activate the flexible service.
Image	Image of the flexible service.
Service Configuration	
Preparation duration	Time required to prepare the flexible service. For example, if the flexible service is a catering service, then specify the time that is required to prepare the items. The workplace location will be blocked for the specified duration to prepare before the reservation starts. Enable the [sn_wsd_rsv.is_blocker_mandatory] system property to create a blocker reservation.
Cleanup duration	Time required to clean up the items that are provided in the flexible service. The workplace location will be blocked for the specified duration to clean up after the reservation ends. Enable the [sn_wsd_rsv.is_blocker_mandatory] system property to create a blocker reservation.
Quantity enabled	Maximum quantity of items that are available to reserve.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Price per unit	Pricing of the flexible service.

4. Click **Submit**.

Result
The flexible service is added to the application.

What to do next
Add the flexible service to a workplace space or room, so that the service is available to employees when they make a reservation. For more information, see Add a flexible service to workplace item.

Add a flexible service to workplace item

Enable employees to request for extra services. Add an extra service to a workplace space or room, and make the service available to employees when they make a reservation.

Before you begin
Make sure you have already created a flexible service. See Create a flexible service.

Warning:
Starting with Workplace Reservation Management version 2.1.2, The Flexible Services related list is no longer available. If you have installed Workplace Reservation Management version 2.1.2 or above directly (as a first time user), there will be no impact and the following conditions does not apply to you.

After upgrading, the flexible services are available as Workplace Service Items. To view the available workplace service items, view the Workplace Service Items related list. To add a workplace service item to the workplace space/room, open the Workplace Service and select the Workplace Service Item. After you open the Workplace Service Item record, add the workplace in the Workplace Service Item Locations related list. For more information, refer to Make a workplace service item available to a workplace location.

Role required: sn_wsd_rsv.admin

About this task
Configure flexible services and add them to a workplace space or room. When an employee makes a reservation for the workplace space or room, they can use the flexible services as extra services.

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration**.
2. Based on where you are adding the flexible service, do one of the following.
   - To add the service to a workplace space, select **Workplace Spaces**.
   - To add the service to a workplace room, select **Workplace Rooms**.
3. Select the workplace space room where you want to add the flexible service.
4. On the form, scroll down and click **Edit** in the Flexible Services related list.
5. On the Edit Members form, select the service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. From the **Collection** column on the left, select the flexible service.

b. To move the service to the **Flexible Services List** column on the right, use the add-remove icon.

6. Click **Save**.

Result
The flexible service is added to the selected workplace space or room.

Create a workplace service to provide an extra service for a reservation

Create a workplace service and provide it as an extra service to employees while making a reservation. Use the Workplace Case Management application to create the workplace service.

Before you begin
Ensure that you have the following:

- Have the Workplace Case Management application installed.
- Task templates and Case templates to link to the workplace service.
- Record producer to link to the workplace service.
- Active flows in case you want to create a workplace service flow.

Role required: sn_wsd_case.admin or sn_wsd_case.manager

About this task
To understand workplace services and the workplace service-related options, refer to Workplace Services.

Procedure
1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Click **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Workplace Service form.
4. Click **Submit**.

Result
The workplace service is created and will be available to employees as an extra service.
When an employee requests an extra service, a workplace case is created in the Workplace Case Management application. If the extra service is modified by the employee, then the existing workplace case is canceled and a new workplace case is again created with the modified details.

What to do next
- If the extra service requires an employee to select from a list of options, then you must add those options as workplace service items to the workplace service. To add workplace service items, refer to the following:
  - Add a workplace service item to a workplace service.
  - Make a workplace service item available to a workplace location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To view the workplace cases, navigate to **Workplace Case Management** > **Workplace Cases**.
- You can also view the reservation details of a Workplace case. To view the details, perform the following actions:
  1. Right-click the form header.
  2. Select **View** > **Reservation View**.

     In the **Reservation view**, you can view details such as the reservation and comments added by the employee while requesting an extra service.
- You can also view the extra service cases and tasks in the Workplace Reservation Management application.
  - To view the cases, navigate to **Workplace Reservation Management** > **Reservation Overview** > **Extra Service Cases**.
  - To view the tasks created for the cases, navigate to **Workplace Reservation Management** > **Reservation Overview** > **Extra Service Tasks**.

Create a reservable view

Configure a view that employees can view while making a reservation on the Reservation portal.

Before you begin

The following reservable views are available with the Workplace Reservation Management application:

- card
- map
- schedule

To view workplace items in the above views while making a reservation, configure the reservable module to use the reservable views. For more information, refer to Configure a reservable view on a reservable module.

Note:
The Workplace Reservation Management application does not support DXF maps.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Views**.
2. Click **New**.
3. On the form, fill in the fields.

Reservable View form

Field	Description
Name	Name of the view.
Label	Label with which this reservable view is displayed on the Reservation portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Application	Application of the reservable view. This field is automatically set. Ensure that **Workplace Reservation Management** is selected.
Icon class name	Icon class name of the reservable view.
Active	Option to activate the reservable view.

4. Click **Submit**.

Result
The reservable view is added.

What to do next
Add the view to a reservable module. The workplace items of the reservable module to which the view is added will be displayed in that view. For more information, refer to.

Configure a reservable view on a reservable module

Assign different views on a reservable mobile. The workplace items of the module can be viewed in the configured views while making a reservation on the Reservation portal.

Before you begin
The Workplace Reservation Management by default assigns the following views to a reservable module until they are set to False.

- Card view
- Schedule view

Role required: admin

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. Select the reservable module to which you want to assign a reservable view.
3. On the form, scroll down to the Reservable Views related list.
4. Click **Edit...**.
5. On the Edit members form, set the filter option **Active** to **True**.
6. Select the reservable view by doing the following:
   a. Select the time slot from the **Collection** column on the left.
   b. Move the selection to the **Reservable Views List** column on the right.
      To move the time slot, use the add/remove icon ( ).
   c. Click **Save**.
7. To set a default reservable view, set the **is default** value of the reservable view as **True**. Ensure that except the selected default reservable view, the value of all other reservable views are set to **False**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. To specify an order in which the reservable views must be displayed on the portal, do the following:
   a. Select the Preview icon ( ).
   b. Click **Open Record**.
   c. On the Reservable Module View Configuration form, specify the **Order**.
   d. Click **Update**.
   e. Repeat the same procedure until you specify the order for every reservable view.

Result
The reservable view is added to the module. The workplace items of the module can be viewed in the selected view.

Create a user criteria record

Add a user criteria record to decide which users, roles, and groups can access a reservable module.

Before you begin
Role required: sn_wsd_rsv.admin

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **User Criteria**.
2. Click **New**.
3. On the form, fill in the fields.

   For a description of the field values, see User criteria form.
4. Click **Submit**.

Result
The user criteria is added to the application.

What to do next
Apply user criteria on a reservable module

Apply user criteria on a reservable module

Apply a user criteria to give permission for employees and groups to view and make reservations on a reservable module.

Before you begin
Role required: sn_wsd_rsv.admin

About this task
When a user criteria is applied, the availability of the reservable items in the reservable module will be displayed only to the specified users.

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. Select the reservable module that you want to apply the user criteria on.
3. In the User criteria's related list, click **Edit...**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. On the Edit members form, set the filter option **Active** to **True**.
5. Select the user criteria by doing the following:
   a. Select the user criteria from the **Collection** column on the left.
   b. Move the selection to the **User Criteria's List** column on the right.
      Use the Add/remove icon ( ) to move the user criteria.
   c. Click **Save**.
6. Click **Save**.

Result
The selected user criteria is applied on the reservable module.

Configure a reservable purpose

Create a purpose that describes the use of a workplace item. Add this purpose to a relevant workplace space or room so that the purpose is displayed on the reservation portal.

Before you begin
Role required: sn_wsd_rsv.manager

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Purposes**.
2. Click **New**.
3. On the form, fill in the fields.

Reservable Purpose form

Field	Descriptions
Name	Descriptive name for the purpose.
Active	Option to activate the reservable purpose.
Description	Short description with details on the purpose of the reservable item. The description is not displayed to the employees.

4. Click **Submit**.

Result
The reservable purpose is added.

What to do next
Add a reservable purpose to a workplace item.

Add a reservable purpose to a workplace item

Define the purpose of a workplace item by adding a reservable purpose. The purpose is displayed in the details of the workplace item so that employees can select the appropriate item.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_wsd_rsv.manager

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration**.
2. Based on the type of workplace item that you want to add a reservable purpose to, do one of the following.
3. In the Reservable Purposes related list, click **Edit**.
4. On the Edit Members form, select the reservable purpose.
   a. Select the reservable purpose from the **Collection** column on the left.
   b. Move the selection to the **Reservable Purposes List** column on the right.
      To move the purposes, use the add-remove icon ( ).
5. Click **Save**.

Result
The reservable purpose is added to the workplace item.

Create a quick reservation time slot

Create a time slot for the reservable module that is available in the Quick Reservation widget on the reservation portal. When an employee wants to reserve a workplace item of that reservable module, the employee can select a suitable time slot instead of specifying a start and end times for the reservation.

Before you begin
Role required: sn_wsd_rsv.admin

About this task
Create a time slot for reservation. You can specify the order of appearance of the time slot in the selection list for reservations.

Note:
You can add a time slot only to the reservable module that is configured as available on the Quick Reservation widget.

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Time Slots**.
2. Click **New**.
3. On the form, fill in the fields.

Time slot form

Field	Description
Name	Name of the time slot.
Short description	Short description about the time slot.
Start time	Start time of the time slot.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
End time	End time of the time slot.
Active	Option to activate the time slot.
Order	Order in which the time slot is displayed in the selection list.

4. Click **Submit**.

Result
The time slot is created.

What to do next
Add the time slot to the reservable module. The time slot will be displayed in the selection list when an employee wants to reserve a workplace item from the reservable module that has this time slot. For more information, see Add a time slot to a reservable module.

Add a time slot to a reservable module

After you create a time slot, assign the time slot to a reservable module that is configured for reservation on the Quick Reservation widget. When an employee wants to reserve a workplace item of this reservable module, the employee can select a time slot for reservation.

Before you begin
Create a quick reservation time slot.

Role required: sn_wsd_rsv.admin

About this task
After you create a time slot, you must assign the time slot to the reservable module to make it available for reservation.

Procedure
1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. Select the reservable module to which you want to add a time slot.
3. On the form, scroll down to the Time Slots related list.
4. Click **Edit...**.
5. On the Edit members form, set the filter option **Active** to **True**.
6. Select the time slot by doing the following:
   a. Select the time slot from the **Collection** column on the left.
   b. Move the selection to the **Time Slots List** column on the right.
      To move the time slot, use the add/remove icon ( ).
   c. Click **Save**.

Result
The time slot is added to the reservable module. When an employee uses the Quick Reservation widget to reserve a workplace item of this reservable module, the time slot is displayed.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
When the reservable module is configured, the minimum and maximum duration set to 4 and 8 hours are not validated it impacts quick reservation.

Configure virtual meeting providers

Enable employees to provide a virtual meeting link with their reservation. Configure the virtual meeting providers so that the virtual meeting link of that provider is automatically generated when the employee makes a reservation.

Before you begin

The Workplace Reservation Management application provides the **Template** virtual meeting provider by default. The following virtual meeting providers are also supported if they are configured:

- Microsoft Teams: Refer to Connect Workplace Reservation Management with Microsoft Teams. Microsoft Teams.
- Zoom: To use Zoom, you must have a Zoom user account. Refer to Connect Workplace Reservation Management with Zoom.

Warning:
The Zoom spoke version 3.0.0 is not supported. Only the Zoom spoke versions 3.0.3 and later are supported.

- Ensure the following:
  - Update the Workplace Reservation Management application only after installing the Microsoft Teams and Zoom spokes. Otherwise, you must repair the Workplace Reservation Management application.
  - Microsoft Teams works only with a Microsoft account (Exchange Online, Exchange OnPrem). If you have both Google and a Microsoft Teams account, the virtual meeting provider cannot be added. If you want to create a Microsoft Teams account, you must create a Microsoft account. The Microsoft Teams account is mapped to the Microsoft account and not to the Google account.
  - For Microsoft Teams, to create a meeting link on behalf of other users, refer to Microsoft documentation.

Important:
The virtual meeting providers are deactivated by default. Change the **Active** status of the desired virtual meeting provider to **true** to start using.

To configure a virtual meeting provider, you must have the following flows already created to use for the virtual meeting provider:

- Create meeting
- Cancel meeting
- Get meeting details
- Update meeting
- Get recording

For more information on how to create a flow, refer to Create a flow.

Role required: sn_wsd_rsv.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Virtual Meeting Providers**.
2. Click **New**.
3. On the form, fill in the fields.

Virtual Meeting Provider form

Field	Description
Name	Name of the virtual meeting provider.
Create meetings	Flow to create a meeting.
Cancel meeting	Flow to cancel the meeting.
Get meeting detail	Flow to get the meeting details.
Provider identifier	URL that must be used to validate the generated meeting links. When a meeting is created in the employee's calendar provider, the specified URL is used to validate the meeting link during the synchronization with Workplace Reservation Management.
Application	Application for which you are adding the virtual meeting provider. This field is automatically set. Ensure that **Workplace Reservation Management** is selected.
Update meeting	Flow to update the meeting.
Get recording	Flow to get the recording of the meeting.
Order	Order in which the virtual meeting provider must appear.
Active	Option to activate the virtual meeting provider.

4. Click **Submit**.

Result

The virtual meeting provider is added. To enable employees to add a virtual meeting link along with their reservation, select the **Virtual meeting provider** option in the Reservable module.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
When a reservation includes a virtual meeting link, then the meeting link will appear as follows when it is synced with the Microsoft Outlook calendar provider of the attendees:

- Zoom: If a Zoom meeting link is added, the link appears in the **Location** field of the email containing the meeting invite.
- Microsoft Teams: When a reservation is created with a virtual meeting link, the application retrieves the meeting link and the joining-related details and saves them on the reservation record. When this reservation is synchronized with Microsoft Outlook calendar, the meeting link and the joining-related details are added to the body of the calendar event. Similarly, when a reservation is created in the Microsoft Outlook calendar using the **Teams meeting** toggle button, the meeting link is retrieved and saved as a virtual meeting link on the reservation record.

  Note:
  As the meeting link appears in the body of the email, in any case, if you want to update or change the meeting details, you must do it only using the Workplace Reservation Management. Because when a reservation synchronization is performed, the details (in this case, the meeting link and details) are synchronized only in one way, that is, from Workplace Reservation Management to the calendar provider(in this case Microsoft Teams). If you already made any changes to the meeting details or the notes from the calendar provider, it is overwritten by Workplace Reservation Management when a synchronization is performed. For more information, refer to Explore Workplace Calendar Synchronization.

- **Any other virtual meeting providers**: The meeting link is added in the **Location** field of the email containing the meeting invite.

For the meeting link to appear as above, the following plugin versions are required:

- Microsoft Exchange Online spoke version 3.5.0 and later.
- Microsoft Teams Communications spoke version 1.3.0 and later.
- Latest version of Workplace Reservation Management application.

Configure Microsoft Teams as virtual meeting provider

Set Microsoft Teams as your virtual meeting provider.

Before you begin

- Ensure the following:
  - Update the Workplace Reservation Management application only after installing the Microsoft Teams spoke. Otherwise, you must repair the Workplace Reservation Management application.
  - Microsoft Teams works only with a Microsoft account (Exchange Online, Exchange OnPrem). If you have both Google and a Microsoft Teams account, the virtual meeting provider cannot be added. If you want to create a Microsoft Teams account, you must create a Microsoft account. The Microsoft Teams account is mapped to the Microsoft account and not to the Google account.
  - For Microsoft Teams, to create a meeting link on behalf of other users, refer to Microsoft documentation.

The Workplace Reservation Management application provides the **Template** virtual meeting provider by default. After you setup a connection between Workplace Reservation Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

and Microsoft Teams, the system, by default, provides the **Microsoft Teams** virtual meeting provider configured with the following flows:

Microsoft Teams - Flows

Field	Flow
Create meeting	`Create Microsoft Teams Meeting`
Get meeting details	`Get MS Teams Thread ID`
Get recording	`Get Microsoft Teams Recording`

For more information on how to create a flow, refer to Create a flow.

Important:
The virtual meeting providers are deactivated by default. Change the **Active** status of the desired virtual meeting provider to **true** to start using.

Role required: sn_wsd_rsv.admin

Procedure

1. Connect Workplace Reservation Management and Microsoft Teams.
   To create a connections, refer to Connect Workplace Reservation Management with Microsoft Teams.
   After the connection is configured, the application by default provides with the **Microsoft Teams** virtual meeting provider.
2. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Virtual Meeting Providers**.
3. Select **Microsoft Teams**.
4. On the form, to activate, select the **Active** check box.

Result
Microsoft Teams is set as the virtual meeting provider.

Connect Workplace Reservation Management with Microsoft Teams

Establish connection between Microsoft Teams Communications and Workplace Reservation Management.

Before you begin
Ensure that the following plugins are installed:

- Microsoft Teams Communications spoke (for creating meeting links)
- Microsoft Teams Graph Spoke (to get recordings)
- Workplace Reservation Management

Role required: admin

Procedure

1. Authenticate Microsoft Teams with Microsoft Azure.
2. For Microsoft Teams, to create a meeting link on behalf of other users, refer to Microsoft documentation.
3. Setup OAuth connectivity with Microsoft Teams Connections spoke for virtual meeting.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Setup OAuth connectivity between ServiceNow and Microsoft Teams Graph.
5. Create credential for Microsoft Teams Communication.
6. Create connection and credential for Microsoft Teams Graph.

Authenticate Microsoft Teams with Microsoft Azure

Set up authentication with Microsoft Azure to connect Microsoft Teams with Workplace Reservation Management application.

Before you begin

Role required: Azure Active Directory administrator

About this task

In order for Workplace Reservation Management to be able to generate Microsoft Teams meeting link and get the recordings, via Microsoft Graph API, permissions must be added.

Procedure

1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. **Optional:** If you do not have an app registration, click **New registration**.
   a. On the form, enter the **Name** of the registration.
   b. Select the **Supported account types** of your choice.
   c. **Optional:** Specify the **Redirect URL**.
   Specify the following details:
      i. Select the platform as **Web**.
      ii. Enter the URL in the following format: https://<instance-Name>.service-now.com/oauth_redirect.do
4. If you already have an app registration, select the app registration.
   a. Navigate to **Manage** > **Authentication**.
   b. Navigate to **Add a platform** > **Web applications** > **Web**.
   c. On the Configure Web form, fill the fields.

Configure web form

Field	Description
Redirect URL	Enter a URL in the format: https://[instance].service-now.com/oauth_redirect.do
Implicit grant	Check **Access tokens**, and **ID tokens**

   d. Click **Configure**.
5. Add a client secret.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **Manage** > **Certificates and secrets**.

b. Click **New client secret**

c. In the **Description** field, enter a short description about the secret.

d. Under **Expires**, select an expiry.

e. Click **Add**.

f. After adding, in the Client secrets section, copy the value by clicking **Copy to clipboard**.

6. Add a permission.

a. Navigate to **Manage** > **API permissions**.

b. Click **Add a permission**.

c. Select **Microsoft Graph**.

d. Select **Application permissions**.

Application permissions

Permission name	Description	Required to
User.Read.All	Read all users profiles	Create virtual meeting link
OnlineMeetings.ReadWrite.All	Read and create online meetings	Create virtual meeting link
Directory.Read.All	Read directory data	Create virtual meeting link
Chat.Read.All	Read all chat messages **Note:** This is optional and is required only to retrieve meeting recordings.	Retrieve meeting recording

e. Select **Chat.Read.All**, **Directory.Read.All**, **OnlineMeetings.ReadWrite.All** and **User.Read.All**.

Note:
Select **Chat.Read.All** to retrieve the meeting recordings.

f. Click **Add permissions**.

g. On the Configured permissions screen, click **Grant admin consent for ServiceNow**.

h. Click **Yes**.
A confirmation message is displayed that admin consent is granted for the requested permissions.

7. Configure application access policy and allow applications to access online meetings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Open the Windows' PowerShell as an administrator to run scripts.

b. Identify the app's application (client) ID and the user IDs of the users on whose behalf the app is authorized to access online meetings.

c. Connect to Skype for Business PowerShell with an administrator account.

d. Create an application access policy containing a list of app IDs.
Run the following cmdlet, replacing the Identity, AppIds, and Description (optional) arguments.

```
New-CsApplicationAccessPolicy -Identity Test-policy
 -AppIds "ddb80e06-92f3-4978-bc22-a0eee85e6a9e",
 "ccb80e06-92f3-4978-bc22-a0eee85e6a9e",
 "bbb80e06-92f3-4978-bc22-a0eee85e6a9e" -Description
 "description here"
```

e. Grant the policy to the user to allow the app IDs contained in the policy to access online meetings on behalf of the granted user.
Run the following cmdlet, replacing the PolicyName and Identity arguments.

```
Grant-CsApplicationAccessPolicy -PolicyName Test-policy
 -Identity "748d2cbb-\
3b55-40ed-8c34-2eae5932b22a"
```

f. Optional: Grant the policy to the whole tenant (Applies to users who don't have an application access policy assigned).
Run the following cmdlet, replacing the PolicyName argument.

```
Grant-CsApplicationAccessPolicy -PolicyName Test-policy
 -Global
```

Note:
All employees who can create or update reservations must be included in the application access policy.

Result
The Microsoft Teams is set up with Microsoft Azure.

Note:
For more information about allowing applications to access online meetings, see Microsoft documentation.

Setup OAuth connectivity with Microsoft Teams Connections spoke for virtual meeting

Register your Microsoft Teams Communications spoke with ServiceNow instance for OAuth authorization.

Before you begin
Ensure the following:

- Authenticate Microsoft Teams with Microsoft Azure
- Change the application scope to Microsoft Teams Communication spoke.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Click **New**.
3. Click **Connect to a third-party OAuth provider**.
4. On the form, fill in the fields:

Third-party OAuth Provider form

Field	Description
Name	Unique name to identify the record, for example, Microsoft Teams Communications.
Client ID	Client ID created during the app creation. You can copy it from **Application overview** in the Microsoft Azure portal.
Client Secret	The password you generated when creating the app in Microsoft Azure.
Default Grant Type	Grant type used to establish the token. Select **Client Credentials**.
Authorization URL	OAuth authorization code endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/authorize`.
Token URL	OAuth server token endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/token`.
Redirect URL	OAuth callback endpoint. The URL is automatically filled as `https://<instance-name>.service-now.com/oauth_redirect.do`.

5. Right-click in the form header and click **Save**.
   A system-generated OAuth entity profile is created and displayed in the OAuth Entity Profiles related list. For example, `Microsoft Teams Communication default_profile`.
6. Update the OAuth entity profile.
   a. Select the default OAuth entity profile.
   b. On the form, in the OAuth Entity Profile Scopes related list, double-click **Insert a new row...**.
   c. In the OAuth Entity Scope field, click the Search icon.
   d. In the OAuth Entity Scope window that opens, click **New**.
   e. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

OAuth Entity Scope

Field	Description
Name	Enter a descriptive name, for example, MS Teams Communications.
OAuth provider	Provider associated with this scope, for example, MS Sync.
OAuth scope	The scope that you are granted by the provider. Enter `.default` .

f. Click **Submit**.

7. Save the changes.

Result
The OAuth registration is added for Microsoft Teams Communications spoke.

Setup OAuth connectivity between ServiceNow® and Microsoft Teams Graph

Register your Microsoft Teams Graph with ServiceNow® instance for OAuth authorization to get recordings after a virtual meeting.

Before you begin
Authenticate Microsoft Teams Graph with Microsoft Azure. Follow the similar procedure explained in Authenticate Microsoft Teams with Microsoft Azure.

Role required: admin

Procedure
1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **Microsoft Teams Graph**.
3. On the form, edit the following fields:

Third-party OAuth Provider form

Filed	Description
Client ID	Client ID created during the app creation. You can copy it from **Application overview** in the Microsoft Azure portal.
Client Secret	The password you generated when creating the app in Microsoft Azure.
Authorization URL	OAuth authorization code endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/authorize`.
Token URL	OAuth server token endpoint. Enter `https://login.microsoftonline.com/`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Filed	Description
	`<tenant_id>/oauth2/v2.0/token>`.
Redirect URL	OAuth callback endpoint. The URL is automatically filled as `https://<instance-name>.service-now.com/oauth_redirect.do`.

4. Right-click in the form header and click **Save**.
   A system-generated OAuth entity profile is created and displayed in the OAuth Entity Profiles related list. For example, `Microsoft Teams Graph default_profile`.
5. Save the changes.

Result
The OAuth registration is added for Microsoft Teams Graph.

Create credential for Microsoft Teams Communication

Setup credentials for Microsoft Teams Communication spoke.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > **Connections & Credentials** > **Credentials**.
2. Click **New**.
   The system displays the message, `What type of Credentials would you like to create?`
3. Select **OAuth 2.0 Credentials**.
4. On the form, fill in the fields.

OAuth 2.0 Credentials form

Field	Description
Name	Name to uniquely identify the record.
Active	Option to actively use the credential record.
OAuth Entity Profile	OAuth profile created in the application registration of the provider.
Applies to	MID Servers that can use this credential. For example, select **All MID Servers**.
Order	Order that the credentials are used. For example, enter 100.
Credential alias	Unlock, search and select the `sn_msteams_com_spk.MSTeamsCommunicationsSp` Connection & credential alias record.

5. **Save** the form.
   Right-click the form header and click **Save**.
6. To generate the OAuth token, click the **Get OAuth Token** related link.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create connection and credential for Microsoft Teams Graph

Setup connection and credentials alias for Microsoft Teams Graph.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Connections & Credentials** > **Credentials**.
2. Click **New**.
   The system displays the message, `What type of Credentials would you like to create?`
3. Select **OAuth 2.0 Credentials**.
4. On the form, fill in the fields.

OAuth 2.0 Credentials form

Field	Description
Name	Name to uniquely identify the record.
Active	Option to actively use the credential record.
OAuth Entity Profile	OAuth profile created in the application registration of the provider.
Applies to	MID Servers that can use this credential. For example, select **All MID Servers**.
Order	Order that the credentials are used. For example, enter `100`.

5. **Save** the form.
   Right-click the form header and click **Save**.
6. To generate the OAuth token, click the **Get OAuth Token** related link.
7. Create a connection.

   a. Navigate to **All** > **Connections & Credentials** > **Connection**.

   b. Click **New**.

   c. On the form, fill in the fields.

HTTP(s) connection form

Field	Description
Name	Name to uniquely identify the record. For example, `Exchange Connection`.
Credential	Credential record created for this connection.
Connection alias	Alias record associated with this connection. Select

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	`sn_msteams_ahv2.Microsoft_Teams_Spoke` Connection & credential alias record.
URL builder	**Note:** Do not select the check box.
Connection URL	Connection URL. Enter `https://graph.microsoft.com`.
Use MID server	Option to use a MID Server. If the check box is selected, define the fields in the Advanced MID Server Configuration related list.
Active	Option to actively use the connection.
Domain	Domain that the action or activity runs in.

d. Click **Submit**.

Connect Workplace Reservation Management with Zoom

Establish connection between Zoom and Workplace Reservation Management.

Before you begin

Ensure that the following plugins are installed:

- Zoom spoke
- ServiceNow Integration Hub Action Template - Data Stream (for getting recordings)
- Workplace Reservation Management

Role required: admin

Procedure

1. Setup Zoom to enable virtual meeting.
   Refer to the Create a connected app in Zoom topic in Set up the

   Note:
   While setting up zoom, ensure the following:
   - Copy the url specified in **Redirect URL for OAuth** to **Add allow list** as well.
   - Select the following scopes:
     - In **Meeting**, select the following:
       - **View and manage sub account's users meetings (meeting: master)**
       - **View and manage all user meetings (meeting:write:admin)**
     - In **Recording**, select **View all users recordings (recording:read:admin)**

   .
2. Setup OAuth connectivity between ServiceNow and Zoom.
3. Create connection and credential for Zoom.

Setup OAuth connectivity between ServiceNow and Zoom

Register Zoom with ServiceNow instance for OAuth authorization to get create virtual meetings and get recordings after a virtual meeting.

Before you begin

Ensure the following:

- Setup Zoom to enable virtual meeting.

  Refer to the Create a connected app in Zoom topic in Set up the .

  Note:
  While setting up zoom, ensure the following:
  - Copy the url specified in **Redirect URL for OAuth** to **Add allow list** as well.
  - Select the following scopes:
    - In **Meeting**, select the following:
      - **View and manage sub account's users meetings (meeting: master)**
      - **View and manage all user meetings (meeting:write:admin)**
    - In **Recording**, select **View all users recordings (recording:read:admin)**

- Set the application scope to Zoom spoke.

Role required: admin

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **Zoom**.
3. On the form, update the following fields.

Application Registries form

Filed	Description
Client ID	Client ID created during the app creation. Copy from the **Application credentials** in Zoom.
Client Secret	Client secret created during application registration.
Default Grant Type	Grant type used to establish the token. Select **Authorization code**.
Redirect URL	OAuth callback endpoint. The URL is automatically filled as `https://<instance-name>.service-now.com/oauth_redirect.do`.

4. Right-click the form header, and click **Save**.
   A system-generated OAuth entity profile is created and displayed in the OAuth Entity Profiles related list. For example, `Zoom default_profile`.
5. Save the changes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The OAuth registration is added for Zoom.

Create connection and credential for Zoom

Setup connection and credentials alias for Zoom.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Connections & Credentials** > **Credentials**.
2. Click **New**.
   The system displays the message, `What type of Credentials would you like to create?`
3. Select **OAuth 2.0 Credentials**.
4. On the form, fill in the fields.

OAuth 2.0 Credentials form

Field	Description
Name	Name to uniquely identify the record.
Active	Option to actively use the credential record.
OAuth Entity Profile	OAuth profile created in the application registration of the provider. For example, Zoom default_profile
Applies to	MID Servers that can use this credential. For example, select **All MID Servers**.
Order	Order that the credentials are used. For example, enter `100`.

5. **Save** the form.
   Right-click the form header and click **Save**.
6. To generate the OAuth token, click the **Get OAuth Token** related link.
7. Create a connection

   a. Navigate to **All** > **Connections & Credentials** > **Connection**.

   b. Click **New**.

   c. On the form, fill in the fields.

HTTP(s) connection form

Field	Description
Name	Name to uniquely identify the record. For example, `Zoom Connection`.
Credential	Credential record created for this connection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Connection alias	Alias record associated with this connection. Select `sn_zoom_spoke.Zoom` Connection & credential alias record.
URL builder	**Note:** Do not select the check box.
Connection URL	Connection URL. Enter `https://api.zoom.us`.
Use MID server	Option to use a MID Server. If the check box is selected, define the fields in the Advanced MID Server Configuration related list.
Active	Option to actively use the connection.
Domain	Domain that the action or activity runs in.

d. Click **Submit**.

Display permanent seat assignments on floor maps

Display permanent space assignments along with employee names on maps.

Before you begin

Verify that you've installed the following to display permanent seating assignment on the map:

- Indoor Mapping
- Workplace Space Mapping
- Workplace Case Management

Employees must have a dedicated workspace allocation in their workplace profiles. Permanent seats along with employee names are displayed on the map based on the following considerations:

- If an employee is assigned two or more workspaces, then only the primary work location is displayed on the map.
- If privacy settings are enabled for an employee, the employee name isn't displayed on the floor map. Selected space shows **Private user**.
  - If two employees are sharing a space with privacy settings enabled, the floor map for a selected space doesn't show the employee name but shows **Private user**.
  - If two employees are sharing a space and only one of them has the privacy settings enabled, the floor map shows **Private user** for the employee who has privacy enabled.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. To enable permanent seat assignment display on the floor maps, enable the following map property and place type field options:

   a. Navigate to **All** > **Space Mapping** > **Map properties.**.

   b. Select the edit page option on the Map properties page.

   c. Select **Enable display of permanent seat assignments on map** (sn_wsd_space_map.display_seat_assignment).

   > **Note:**
   > This property is displayed in the Map properties menu only when the Workplace Indoor Mapping plugin is installed.

   d. Select **Yes** to enable the property.

   Activating this property to display permanent seat assignments along with employee names on floor maps. By default, this property is set to **No**.

2. Navigate to **All** > **Workplace Reservation Management**.

   a. The following web application widgets display the permanent seat assignments on a map:
   - Make a reservation
   - Space Details
   - Location Directory
   - General request (Order something)

3. On the Make a reservation page, perform the following steps:
   For more information about how to make a reservation or update an existing reservation, see Create a reservation.

   a. Select a location and building.

   b. Select a space from the search result.

   c. Select **Map view**.

   d. On the map, select a floor from the **Floor** drop-down list.

   e. Zoom in to display spaces.

   f. On the map, select the **gear settings icon ( )**.

   g. Enable the **Display employees permanent seat assignments on floor maps** toggle button.

   h. Select **Apply**.

   The map shows permanent seat assignments for employees along with their names.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. From the Reservation Portal home, select the **Location Directory** widget.

   You can access the Location Directory widget from the Employee Center portal. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace Services** > **Site Safety** > **Location Directory**.

   a. On the Interactive floor map, select a location and floor from the drop-down options.

   b. Zoom in to see spaces or permanent seating assignments for employees.

   c. On the map, select the **gear settings icon ( )**.

   d. Enable the **Display employees permanent seat assignments on floor maps** toggle button.
   Employee names along with their assigned seats are displayed for a selected space.

5. Navigate to **All** > **Self-service** > **Employee Center** > **Workplace Services** > **General Request** to browse the workplace service catalog and request workplace services.

   a. On the General Request form, fill in the request details and select the clickable link **Find the space on a floor map**.
   Select a space and open the **Find the space on a floor map** link to view an interactive floor map.

   - Request a desk change.
   - Request furniture.
   - Submit a general request.

   a. Select **Request a desk change**.

   b. Complete the steps for a move request.
   For more information, see Raise a move request for a space change.

   c. Select the **Find the space on a floor map** link.

   d. Select a building and floor on the interactive floor map.

   e. Zoom in and select a space.

   f. On the map, select the **gear settings icon ( )**.

   g. Enable the **Display employees permanent seat assignments on floor maps** toggle button.
   Employee names along with their permanent seats are displayed for a selected space.

   a. Select **Request a furniture.**

   b. Complete the steps for ordering furniture or equipment.
   For more information, see Request furniture for a space.

   c. Select the **Find the space on a floor map** link.

   d. Select a building and floor on the interactive floor map.

e. Zoom in and select a space.

f. On the map, select the **gear settings icon ( )**.

g. Enable the **Display employees permanent seat assignments on floor maps** toggle button.
Employee names along with their assigned seats are displayed for a selected space.

a. Select **Submit a general request.**

b. Complete the steps for submitting a general workplace service request.
For more information, see Raise help request for a workplace inquiry.

c. Select the **Find the space on a floor map** link.

d. Select a building and floor on the interactive floor map.

e. Zoom in and select a space.

f. On the map, select the **gear settings icon ( )**.

g. Enable the **Display employees permanent seat assignments on floor maps** toggle button.
Employee names along with their assigned seats are displayed for a selected space.

6. Navigate to the My favorites page from the Employee Center page.

a. Select a favorite space or navigate to **Workplace services** > **Quick Links** > **Create reservation**.

b. To make a reservation, enter the required information.
For more information, see Set a location as favorite using the Space details page.

c. Select **Map view**.

d. On the map, select the **gear settings icon ( )**.

e. Enable the **Display employees permanent seat assignments on floor maps** toggle button.
Employee names along with their assigned seats are displayed for a selected space.

Display name of the person reserving a space

Display the name of a person who booked a space on the floor map.

Before you begin

On the floor map, when a space is booked, an option to display the name of the person who reserved the space is available.

Ensure that the following plugins are installed:

- Workplace Core
- Indoor Mapping
- Workplace Reservation Management

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

Procedure

1. In the navigation filter search context, enter **sys_properties.list**.

   List of properties in the System Properties [sys_properties] table appears.

2. Search for **sn_wsd_core.floor_plan.portal.show_reservation_details** and set the Workplace Core property **sn_wsd_core.floor_plan.portal.show_reservation_details** to **true**.
3. Make a reservation or check for an existing reservation in Workplace Reservation Management.

   For more information, see Create a reservation.

4. On the Map view, select the location, building, and a floor where you have made the reservation.
5. Select **Show name of the person who booked the space**.
6. Select **Apply**.

   Reserved or booked spaces show the name of person who booked the space.

7. Select a reserved space to open the Space details page
   Name of the person who booked or reserved the space is shown.

Manage check-in and check-out reservations

Reservation check in and check- out reminders are managed through the Check-in and check out reminder scheduled jobs

The following properties are being used in this scheduled job:

- sn_wsd_rsv.time_before_check_in_out_reminder
- sn_wsd_rsv.time_when_reservation_cancelled_without_check_in

Ensure check-in is required on the Reservable module at the space level. For more information, see Configure a reservable module.

- This can be enforced through the Reservable Module property value *`Override check-in policy`*" on the Reservable Module to **always require check-in**
- This can be managed at the space level. Space is indicated as check-in required. Set *`Override check-in policy`* on the Reservable Module to **no override**.
- On the Reservation summary page, the check-in state should be set to **awaiting_check_in**.
- Reservations are only cancelled when the *`Cancel reservations exceeding check-in time`* check box is selected on the Reservable Module
- The check-in and check-out schedule job runs every 30 minutes by default. It takes into account all the workplace reservations that require check-in or check-out, and validates the next action.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Check-in Check-out process

Check-in required	Within time_before_check_in_o is 30min by default	Within time_when_reservation_ is 30min by default	Action
No	Yes	No	Reservation is not handled by the scheduled job.
Yes	No, before start time	No	No action required.
Yes	Yes, 10 minutes past reservation start time.	No	Employee receives an email notification. Template: Check-in Reminder PL
Yes	Yes	Yes, 40min past the reservation start time.	Reservation is cancelled.
Yes	Yes, 10 minutes past the reservation end time.	NA	If the reservation is checked in, employee receives an email notification. Template: Check-out Reminder PL

Note:

- Takes about 30 minutes (based on the default configuration) to receive an email notification for an employee who has not checked in the reservation.
- Takes about 60 minutes (based on the default configuration) for the reservation to be cancelled in case the employee did not check-in the reservation.

The daily scheduled job **Reservation daily tasks** closes all reservations at the end of the office working hours. Reservation may be closed the day after. The check-in state for reservations that are checked-in is indicated as **no_check_out**.

Configure automatic check-in for reserved spaces

Configure automatic reservation check-in using the Occupancy state of a location or space. If a location is using occupancy data sensors, it checks for Occupancy state of each space in the Space Occupancy data table

The Workplace Reservation Management scheduled job **Check-in/out reminder** runs every half an hour (30 minutes) daily. It checks for the location state (Occupied, Unoccupied, Invalid, currently not occupied, etc.) in the Space Occupancy data table. It also checks if the reservation is checked in or checked out. For more information, see Retrieving Space Occupancy Data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Reservation check-in and check-out is currently not supported for multi-location reservations (combining two or more reservations into one reservation). Check-in or check-out of reservations with multiple locations for the same date and time and with the same reservation owner is not allowed by the application. In case of group reservations, each space is assigned to a different employee, check-in for group reservations is also not allowed in bulk. You have to check-in a reservation one at a time.

Role required: sn_wsd_rsv.admin

If the space state is Occupied, it triggers an automatic check-in process and sends an updated push notification to Workplace Service Delivery for Mobile "Your reservation for <location_name> has started. You are automatically checked in based on the presence detected at the space. No further action is required."

Navigate to **All** > *Workplace Reservation Management* > **Administration** > **Reservable Module** and ensure that the following properties are configured:

- The Override check-in policy: Select **Always require check-in**.
- Cancel reservations exceeding check-in time: Select the check box.
- Time before employee can check-in value: Enter a value. For example, 10 minutes.

In Reservation properties list (**All** > *Workplace Reservation Management* > **Administration** > **Properties**), configure the following properties:

- **The amount of time in minutes until a reminder should be sent to the reservation host** [sn_wsd_rsv.time_before_check_in_out_reminder]. For example, set the property value to 5 minutes.
- **The amount of time in minutes until a reservation is cancelled without a check-in** [sn_wsd_rsv.time_when_reservation_cancelled_without_check_in]. For example, set the property value to 30 minutes.

  For example, after setting the above properties and reservable module properties, if an employee creates a reservation at 5 pm, the application checks for the following conditions:

  - The Workplace Reservation Management application waits till 5.05 PM as per the value set in the property **Amount of time in minutes until a reminder should be sent out to the reservation host (sn_wsd_rsv.time_before_check_in_out_reminder)** to check whether the reservation is checked in or not.
  - After 5.05 PM, the scheduled job **Check-in/out reminder** checks the Space Occupancy data table to check if the reserved space (for example, A1001) is available in the Space Occupancy data table.
  - In the Workplace Connectors, the system property **sn_wsd_wc.stale_time** checks if the **Event Timestamp** field in the Space Occupancy data table has the latest timestamp. This property checks for the time beyond which the occupancy data is considered stale. Beyond the stale time, the fresh data is fetched from the Occupancy data provider (for example, Metrikus Spoke). If the **sn_wsd_wc_stale_time** property value is set to 30 minutes, application queries the Space Occupancy table and fetches the fresh data state for a location or space from Metrikus Spoke.

    If the state is **Occupied**, then, application automatically checks in the reservation. The reservation state moves to **In progress** state. A push notification is sent to Workplace Service Delivery for Mobile "Your reservation has started. You are automatically checked in based on the presence detected at the space. No further action is required."

  - When workplace spaces are having occupancy sensor and if the state of the space is unoccupied or Invalid, application sends push notification "Your reservation for Reservation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

for <space-name> has started. Check in to confirm your attendance or Release Booking to Cancel the space reservation".

- When the workplace spaces are not having a occupancy sensor, and if the user does not check in the reservation, application cancels the reservation if the Reservable Module property **Cancel the reservation exceeding check in time** is selected.
- If the **Cancel the reservation exceeding check in time** is not selected, then the reservation is moved to **Confirmed** state, and the Workplace Reservation Management scheduled job **Reservation daily tasks** takes care of such reservations at the end of the day.

Configure reservation multi-day settings in Reservable Module

Set the Max days in future value for configuring reservation.

The option to create a multi-day reservation is configured by your administrator using the **Max days for multi-day** Reservable Module Configuration property. For more information, see Configure a reservable module. Multi-building selection is supported for multi-day reservation. For more information about multi-day reservation, see Create a multi-day reservation.

For multi-day reservation covering multiple days, the start date and end date span across multiple days (for example, Start date: October 12, 2023. End date: October 17, 2023). For more information, see Create a multi-day reservation.

- If your administrator has set a limit on the maximum days that you can reserve in future, you can't select days in the future beyond the set the date by the admin. A warning is displayed about the limitation.
- For example, if your administrator has limited the days of future to 45 days, you can't select a date beyond 45 days while making a recurring reservation. The number of days available for **End on this date** option differs based on the **Daily**, **Weekly**, or **Monthly** selections. The end date and time specified for recurring reservation are used to indicate the end date and time of the reservation.
- If no such limitation is set by your administrator on the future days in the Reservable module, you can select any date. This also depends on how many occurrences you can select and make.

> **Note:**
> You can't select a date beyond a duration that is configured in the Max days in the future reservable module. For example, if Max days in future value are 45, you can't select a date beyond this duration while making a recurring reservation. The number of days available for **End on this date** option differs based on the **Daily**, **Weekly**, or **Monthly** selections. If the **Max days in future** value isn't configured on the Reservable module, the date selection isn't restricted and employees can select a date based on the **Max number of occurrences** configuration.

Space and reservation planners (sn_wsd_rsv.reservation_planner) with the dedicated role (sn_wsd_rsv.bypass_module_validation) can ignore or bypass certain settings in the Reservable module configuration. For more information, see Allow Event planners to handle reservations with more flexibility.

For example, reservation planners or space planners with the dedicated role (sn_wsd_rsv.bypass_module_validation) can ignore or bypass the following settings in the Reservable module:

- Max days in the future
- Max number of occurrence
- Min and Max duration

- Available in
- All day

Reserve workplace items

Make a reservation for a workplace location or any reservable item of your organization. Make a single, recurring or a group reservation using the Reservation portal.

Create a reservation

Create reservations across multiple buildings, campuses, neighborhoods, or sites. Create a reservation spanning across multiple days. Add attendees or visitors to a reservation. Synchronize reservation details and resolve conflicts when scheduling recurring reservation events. Add workplace services (room configurations, catering, and so on) to your reservation.

Before you begin
Install and configure the following:

- Workplace Core
- Workplace Central
- Workplace Space Management
- Workplace Case Management
- Workplace Indoor Mapping
- Workplace Visitor Management
- Workplace Maintenance Management

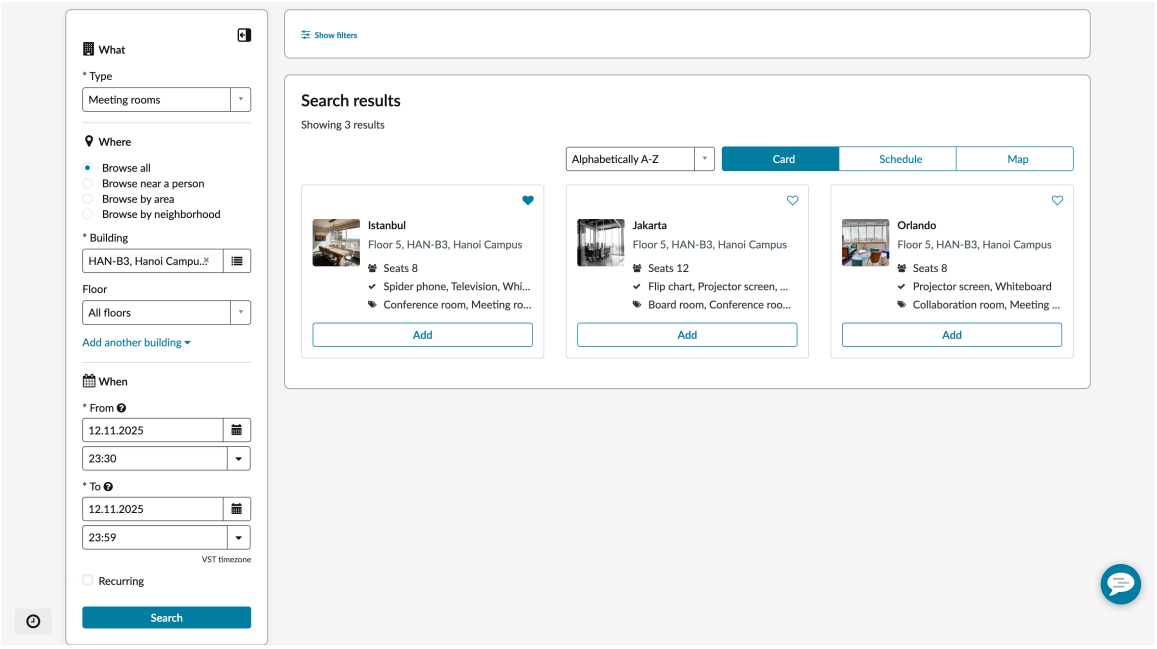
Role required: sn_wsd_core.workplace_user

About this task
Reserve a workplace space based on your office working hours.

Create a workplace reservation for a single day or for multiple days. Administrators can set the max days in future value in the **Reservable Module Configuration** tab. For more information, see Configure reservation multi-day settings in Reservable Module.

Space and reservation planners (sn_wsd_rsv.reservation_planner) with the dedicated role (sn_wsd_rsv.bypass_module_validation) can ignore or bypass certain settings in the Reservable module configuration. For more information, see Allow Event planners to handle reservations with more flexibility.

For example, reservation planners or space planners with the dedicated role (sn_wsd_rsv.bypass_module_validation) can ignore or bypass the following settings in the Reservable module:



- Max days in the future
- Max number of occurrence
- Min and Max duration
- Available in
- All day

Role: sn_wsd_core.workplace_user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Select any of the following context menu navigation options to make a workplace reservation.
   The Make a Reservation page opens in a new tab.

2. From **Type**, select a Reservable Module configuration.

   For example, select any of the following Reservable Module configuraiton. For more information, see Configure a reservable module.

   - Desks
   - Desks with an Area
   - Meeting rooms require approval
   - Meeting rooms
   - Desks with a shift

3. From **Where**, select any of the Reservable paths:

   The following reservation paths are available for a selected Reservable Module.

   - Browse all
   - Browse near a person
   - Browse by area
   - Browse by neighborhood
   - Browse all spaces

4. **Optional:** Select **Browse all**.
   The **Browse all** reservable path is selected by default.

   a. Search for a workplace item that you want to reserve using the following available criteria.

5. Complete the following information.

   On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Make a reservation form

Field Name	Description
Building	Name of the building for a selected campus. Select a building from the list. For example, Demo Campus. The building names and location names are alphabetically sorted or sorted according to the **Order** that you have configured on the Buildings and Regions tables. When a sort **Order** is configured for a building or region, the building names and locations are sorted accordingly. If the sorting **Order** value isn't specified for an item, the items are listed on top of the list (ascending order), and sorted alphabetically. The building names and location names are alphabetically sorted based on the label name. For example Building A, Building B, and so on.
Floor	Floor of a building where you want to make a reservation. The floor names are either alphabetically sorted or the values are sorted based on the indicated sort order. You can configure the sort **Order** in the Floors table. If the sorting **Order** value is not specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The Floor names are alphabetically sorted based on the names and labels.
From **Note:** The time directive fields (From, time, To) are also available on the MESP (Mobile Employee Service Portal) on the Now Mobile app.	Start date of your reservation. For a single day reservation, only the **From** field is shown and not the option to enter the end date. ○ Employees can't select a date and create a reservation if the start date exceeds the Max days in future Reservable module value. Thisn't value is configured on the Reservable module by your administrator. For more information, see Configure a reservable module. When the Max days in future value is configured by your administrator, you can't select a date past the max allowed date. The dates in the calendar date picker are inactive for dates that are too far in future.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	Note: If the Max days in future value isn't configured, the date selection isn't restricted. Date selection is based on the Max number of occurrences value. For more information, see Configure a reservable module. ○ If you enter an invalid date which is greater than what is specified in the **Max days in future** value, the application resets the date to the current date.
Time	Start time when the reservation begins. Employees can select time using the drop-down list or by entering the time in the field. The time increment value depends on the value set by your administrator. Default reservation time duration available for selection is 30 minutes. The *time_picker_interval_size* property for reservation start time and reservation end time is configured using the Service Portal Widget instances. The start time field increment value depends on the value set in the *time_picker_interval_size*. Default reservation time increment value duration is 30 minutes. **Note:** You can't select a date that occurs in the past. The time for a selected location depends on the building time zone.
To	End date of your reservation. Employees can't select a date and create a reservation when the End date exceeds the Max days in future value. The Max days in future value specifies the maximum number of the days in the future up to which the Reservable module can be reserved. **Note:** In the case of a single day reservation, option to enter the end date isn't available. If you enter an invalid date which is greater than what is specified in the **Max days in future** value, the application resets the date to the current date.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	Note: If the **Max days in future** value isn't enabled, then the date selection isn't restricted and is based on the **Max number of occurrences** value configured in the Reservable module. For more information, see Configure a reservable module.
Time	End time when you would stop using the workplace item. Employees can select the end time using the drop-down list or by entering the time in the field. The end time increment value depends on the value set by your administrator. Default reservation end time duration is 30 minutes. The *time_picker_interval_size* property for reservation start time and reservation end time is configured using the Service Portal Widget instances. The start time and end time field increment value depends on the value set in the *time_picker_interval_size*. Default reservation time increment value duration is 30 minutes. **Note:** You can't select a date that occurs in the past. For example, If the start time is 09:00, you can select an end time after this duration. You can't select a time before 09:00 on the same day. The time for a selected location depends on the building time zone.
All day	Option to reserve the workplace item for an entire day or a single day. This option appears if your Workplace administrator has enabled the All day reservation setting on the selected **Type**. The start and end times of the reservation depend on the timings set by your organization. The **All day** option is also available on the Space details page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	Note: The **All day** option's appearance depends on your administrator's configuration. If your admin has mandated all day reservation for a selected **Type**, the reservation is automatically made for the entire day. In case of All day you can only modify the Start date of the reservation.
Add another building	Reserve multiple workplace items spanning multiple buildings. The buildings time zones are different for a same date and time in a reservation. **Note:** This option is available if you have selected **Allow multiple reservations** check box on the **Reservable Module** > **Reservable Module Configuration** tab. For more information, see Create multi-building reservations.

6. **Optional:** Select Recurring to make a recurring reservation.

   (Optional) When making a recurring reservation, select the most suitable recurring pattern (Daily, Weekly, or Monthly) based on the space availability within the recurring series.

   Note:
   Reservations in a recurring series cannot be updated in bulk. To update a reservation from a recurring series, select a reservation and edit it as required. The option to make a recurring reservation is configured by your administrator. The *`Allow recurring reservations`* Reservable Module configuration option should be enabled for making recurring reservations. This option is dependent on the *`Max days in future`* and *`Max number of Occurrences`* value. For more information, see Configure a reservable module Reservations with single occurrences are converted to a single-day reservation.

   Shift-based reservable module configuration is not supported for Recurring reservations.

   Calculate and set a recurring meeting pattern define the frequency and recurrence pattern in the Add Recurrence dialog box.

   a. Set a start date, end date, and duration (start time and end time) for your reservation.

      For example:

      - Start date: Select 25/02/2026 as your reservation start date.
      - End date: Select 23/08/2026 as your reservation end date.
      - From: Select a start time for your reservation.

        (Optional) Duration or start time and end time depends on the selected building time zone.

      - To: Select a time when you want to end your meeting or reservation.

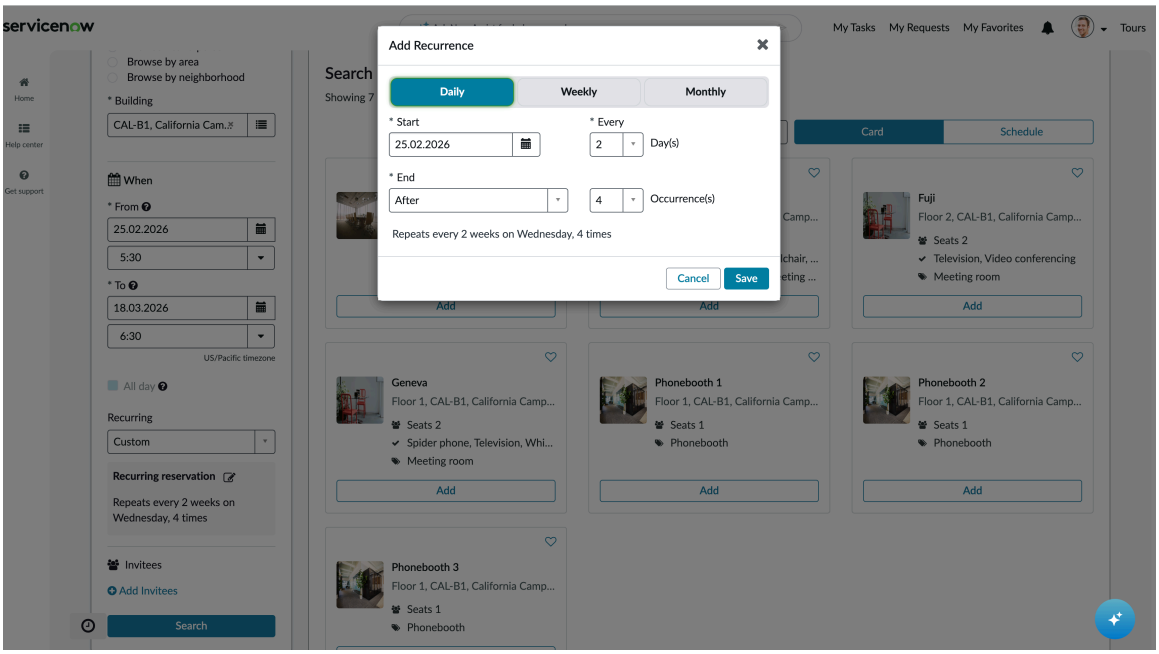
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The end time is based on the standard working hours (full day) of your office.

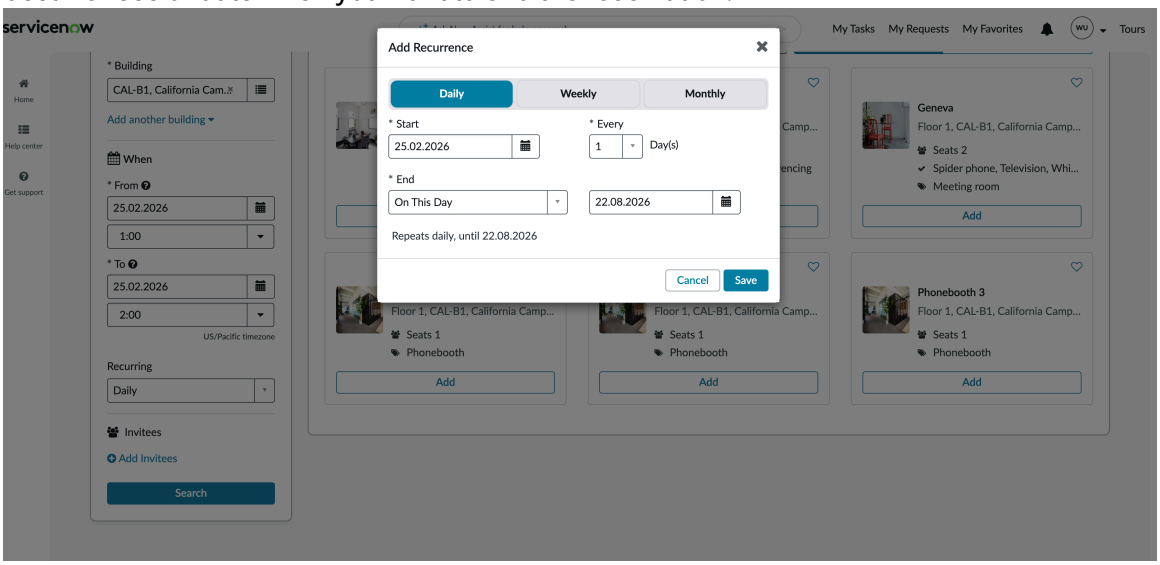


> **Note:**
> The start date is reset if you select a different start and end date in the Add recurrence dialog box. For more information, see Step c. It's recommended that you select the start and end dates prior to setting the recurrence patterns in the Add recurrence dialog box.

b. Select Recurring list options as required:

- **Daily**: Option to set daily recurring series.
- **Weekly on Wednesday**. This option label changes as per the weekday that you have selected as your start day. For example, selecting Wednesday as your meeting weekday shows **Weekly on Wednesday**.
- **Monthly on fourth Wednesday**. This option label changes as per the selected weekday. For example, selecting Wednesday as your meeting start day shows Monthly on fourth Wednesday.
- **Every weekday (Monday to Friday)**
- **Custom**: Customize your recurring reservation options as required for Daily, Weekly, or Monthly recurrences.

c. Select any of the following recurring patterns to open the Add recurrence dialog box and select the required recurring pattern:

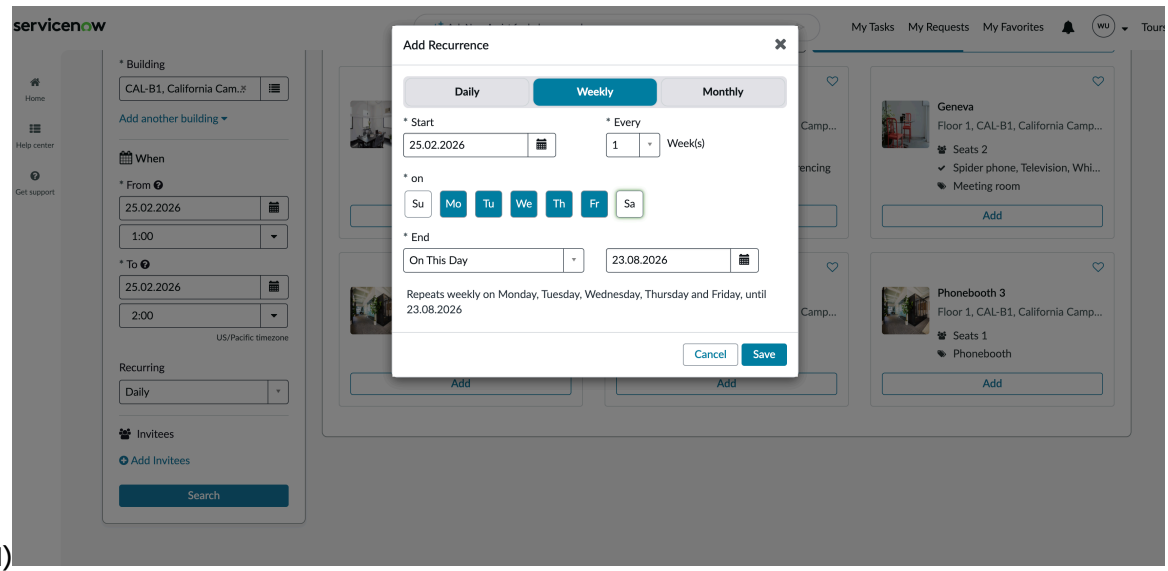


i. Daily:The meeting occurs every day. You can define a repeat interval of every X days.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. (Optional) In the Add recurrence dialog box, confirm that the start and end dates are correct. Select the required recurrence pattern.

   Select the duration, repeat duration, and number of occurrences or date when you want to end the reservation.



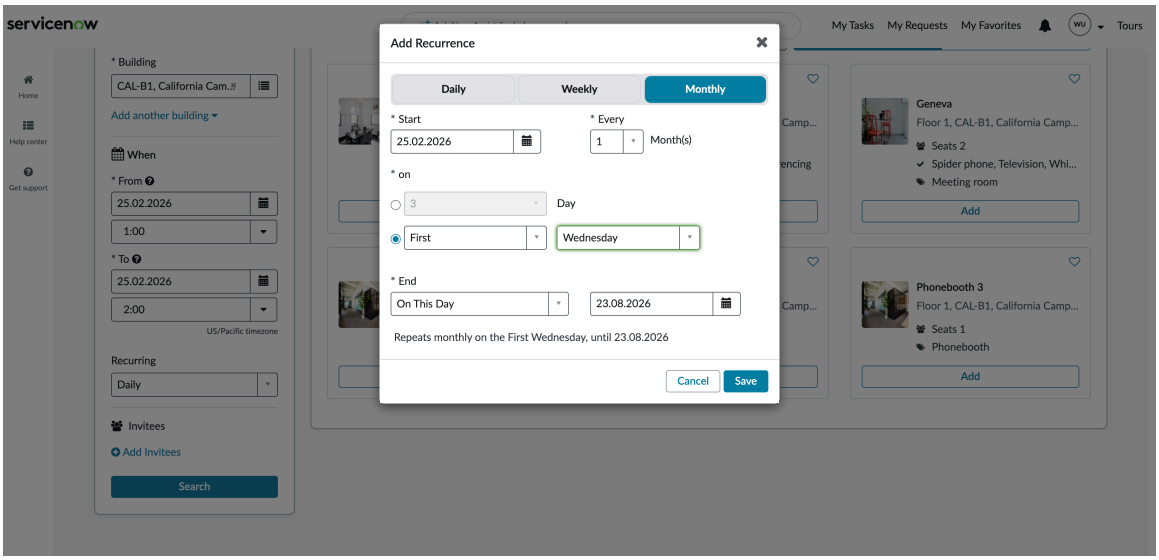
2. (Optional) Select **Save**.

ii. Weekly: The meeting takes place on the same weekday each week. You can define a repeat interval of every X weeks. For example, select the following recurrence Pattern for weekly or biweekly reservations.

- Weekly, Every 1 week on Wednesday. The meeting occurs every Wednesday starting Feb 25, 2026, ending on Aug 19, 2026 (the last Wednesday before Aug 23). Confirm that the start and end dates are correct. Select the required recurrence pattern.

(Optional)

- Bi-Weekly (Every 2 Weeks). Every 2 weeks on a selected weekday. For example, bi-weekly on Wednesday.
- Select **Save** after selecting the required weekly recurring pattern and duration.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the reservation time duration has only one occurrence in case of weekly recurring reservation, the single occurrences are converted to a single-day reservation. For example, consider a recurring reservation from 13-02-2026 to 18-02-2026 set to repeat weekly once on every Monday. Since, in this duration, there's a single Monday when the reservation is scheduled to repeat weekly, it is considered as a single-day reservation.

iii. Monthly: Specific day of a month. For example, the last Wednesday of every 1 month. In the Add recurrence dialog box, confirm that the start and end dates are correct. Select the required recurrence pattern. You can define a repeat interval of every X Month. To select a day of the month, select **On**. Select from a date range, for example **29**, **30**, **31** or **Last day**

Day 29,30, and 31: You can only select these days for a month, if the selected dates are available for a selected month. For example, February and April are skipped by the application if you select the date as **31**. If you set it to the **Last day** option, it selects the last day of a month automatically.

.

Note:
If you select an invalid date range or number of occurrences for a recurring patter, the **Save** button is not available for selection. Reset the date range to save your changes.

d. Custom: Customize your recurring reservation options as required for Daily, Weekly, or Monthly recurrences.

Note:
If you change the start and end time duration for a reservation after setting a recurring reservation, it resets the duration for the reservation. You should add or update the recurring series and pattern again.

Note:
The option to set a recurring reservation pattern is also available on the My favorites page. Select a favorite space. On the Space details page, you can set a reservation to recurring.

Consider the following when selecting a recurrence pattern. For example, select a recurring reservation from Feb 25, 2026 - August 23, 2026:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Total Reservation Duration: The date range span covers approximately 179 days, which is about 25 weeks.
- Reservation End duration: If the pattern extends beyond the end date 23.08.26, application ends the reservation. You can choose to end the recurrence after a certain number of occurrences. The calendar doesn't allow you to select a range beyond what is specified in the *Max number of occurrences* reservable module property configuration.
- If your workplace manager has enabled time-bound allocations, the workplace availability changes based on the start and end date of an allocation. For example, if you select five recurring days, and the workplace is allocated for 3 out of the five days, the availability of the workplace is 3/5. Only the first occurrence of the recurring reservation is checked for time-bound allocations.

Upon confirming the required recurring reservation pattern and saving your changes, the Make a reservation portal page displays the recurring reservation duration selected by you.

To update or edit recurring reservation series, select the edit option to edit your recurring reservation.

Note:
Recurring series cannot be edited. You can edit single reservation at a time and not the entire series.

7. Select Add Invitees.

   This option is available when your administrator has enabled the Reservable Module property configuration *Allow attendees based search* on the Reservation Widget Configuration. This option allows employees to add attendees to a reservation and search for their availability on the Make a reservation portal page. For more information, see Configure a reservable module and Add invitees as collaborators and create a reservation.

8. Select **Search**.
   Available spaces for reservations are displayed automatically. The first building card is selected by default in the search result.
9. **Optional:** The application performs auto-search for reservable items when the reservation property (*sn_wsd_rsv.enable_auto_search*) is enabled by your administrator.
   If an auto-search reservation property is configured by your administrator, the **Search** button is hidden on the reservation portal. The application searches for reservable locations and items automatically while creating a reservation. An auto- search is triggered when any of the following is changed or updated:
   - Reservable module.
   - Reservable paths.
   - Building.
   - Floor.
   - Start Date.
   - End Date.
   - All day.
   - Recurring (Daily/Weekly/Monthly)
10. **Optional:** Select **Refresh the results** manually to refresh the search results on the advanced reservation portal page while making a reservation.

    (Optional) When the auto-search property is enabled, the reservation portal search page shows a message to refresh the page when an employee stays too long on a page or when the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

search results are outdated. Select **Refresh the results** manually to fetch the latest reservation search results data.

11. Select the toggle option **Show Filters** to filter by:
    - Minimum Capacity: Filter by space capacity.
    - Services: Filter by Workplace Services
    - Purposes: Filter by Location purposes.
    - Floors: Filter by Floors for a selected building.

    Select **Apply** to apply the selected filter option.

12. **Optional:** Select **Alphabetically A-z** list option to sort the workplace items in an alphabetical order (Z-A or A-Z)

    The **My favorites First** sort option is automatically selected if you have favorite locations. Your favorite locations are displayed first in an alphabetical order followed by the other locations that match the search criteria.You can view and perform the following actions after you set a space as favorite:

    a. When searching for a space, you can sort the workplace items to display your favorite locations at first using the **My favorites first** sort option. By default, if you have favorite locations, the default sort option is set to **My favorites first**.

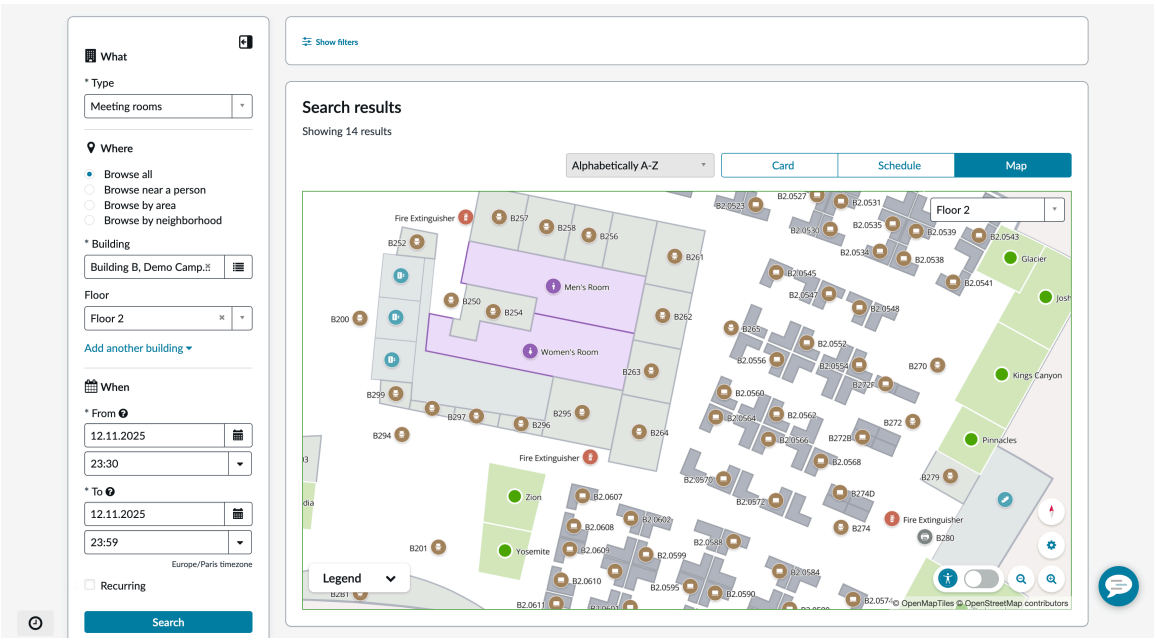
       The workplace items are sorted and all your favorite locations are displayed first in an alphabetical order.

    b. If you're browsing for a workplace location near a person, you can sort the workplace items to display your favorite locations first using the **My favorites first** sort option.

       The favorite locations are displayed based on the proximity closest to the person's location.

    Note:
    You can’t sort workplace items in alphabetical order or by your favorite locations if you're browsing spaces near a person. The spaces near a person are searched based on proximity.

13. Select a location or locations from Search Results.
14. View search results using the **Card**, **Schedule**, or **Map** tab.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

15. Select the workplace item that you want to reserve using any of the following options:

- Select the **Card**, **Schedule**, or **Map** tab.

  - Select a Campus on the Map.

  - Select a Floor from the drop-down list.

    The floor names are alphabetically sorted or sorted based on the sorting **Order**. The values are sorted based on the indicated sort order, if it's available. You can indicate the sort order in the Floors table. If the sorting Order value isn't specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The Floor names are alphabetically sorted based on the label names. For example Floor A, Floor B, and so on. For more information about sorting order, see Add a floor using Workplace Space Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If the **Order** is null for all available buildings in a selected campus, then floor names are alphabetically sorted based on floor name label. For example Floor A, Floor B, and so on.

- Zoom in to select a building and location

  The building names are alphabetically sorted or sorted according to the **Order** that you have configured in the Buildings table.

- Select a space and then, select **Add** to add a space.

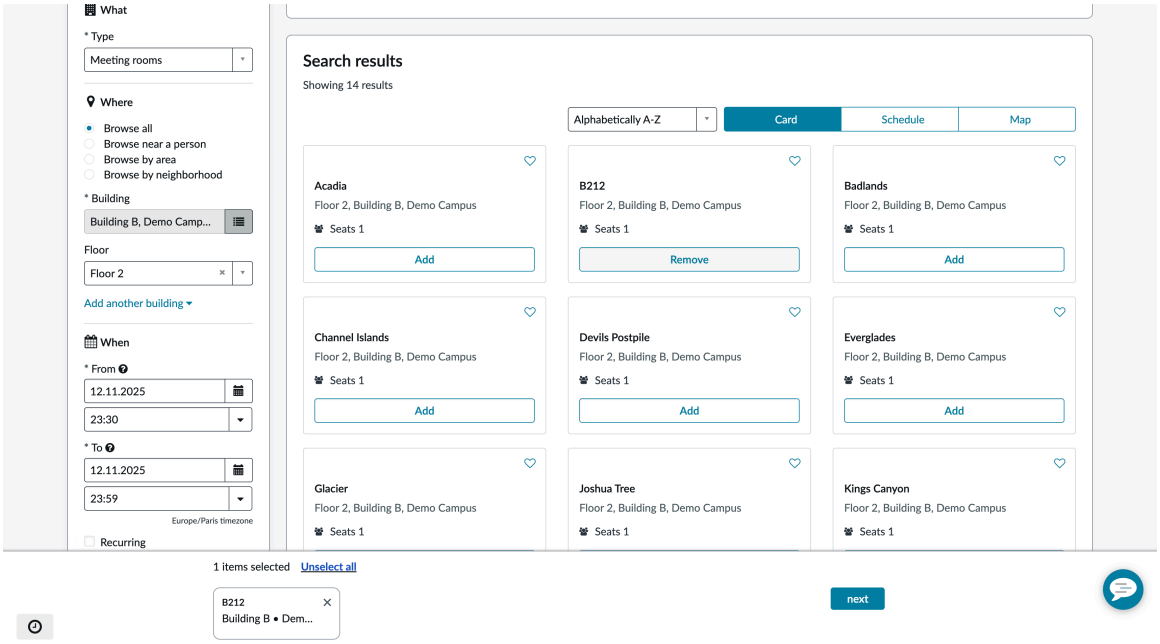
  While reserving or viewing a space, the employee can see if a space is part of a neighborhood. The neighborhood icon ( ) is displayed on the space card.

  If your organization is using floor maps, you can view the floor maps for a location using Indoor Mapping as your map provider.

  .

  If you have selected the **Browse by neighborhood** option in Step 6, the reservation portal shows spaces for a neighborhood.

  When you browse by neighborhood, all spaces belonging to a neighborhood are displayed but you can only select available spaces within a neighborhood.



16. To show or hide spaces or layers on the Map, do the following:
    - Select a building or a floor on the Map.
    - Select the Filter out layers and places icon ( ) to filter out spaces and layers on the map.
    - From the **Display Options** list, select **Spaces** or **Layers** and clear to remove the selected spaces or layers from the Map View.
    - Select **Apply**.

    By default, all the spaces and layers are selected or checked.

    Note:
    The spaces and layers that are displayed on the floor map are based on the Layer types and Place types table configuration settings in Indoor Mapping. Navigate to **All** > **Indoor Mapping** > **Place types** or **All** > **Indoor Mapping** > **Layer types** to open the Places or Layer types page respectively. Set the Filter out layers and places **Filter out layers and places** column to **true** to display the places (spaces) or layers that you want to display on the floor map.

17. **Optional:** Select a space and mark a location as favorite by selecting the favorite icon ( ) on the space card.
18. Select **Next** to add spaces and make a reservation.

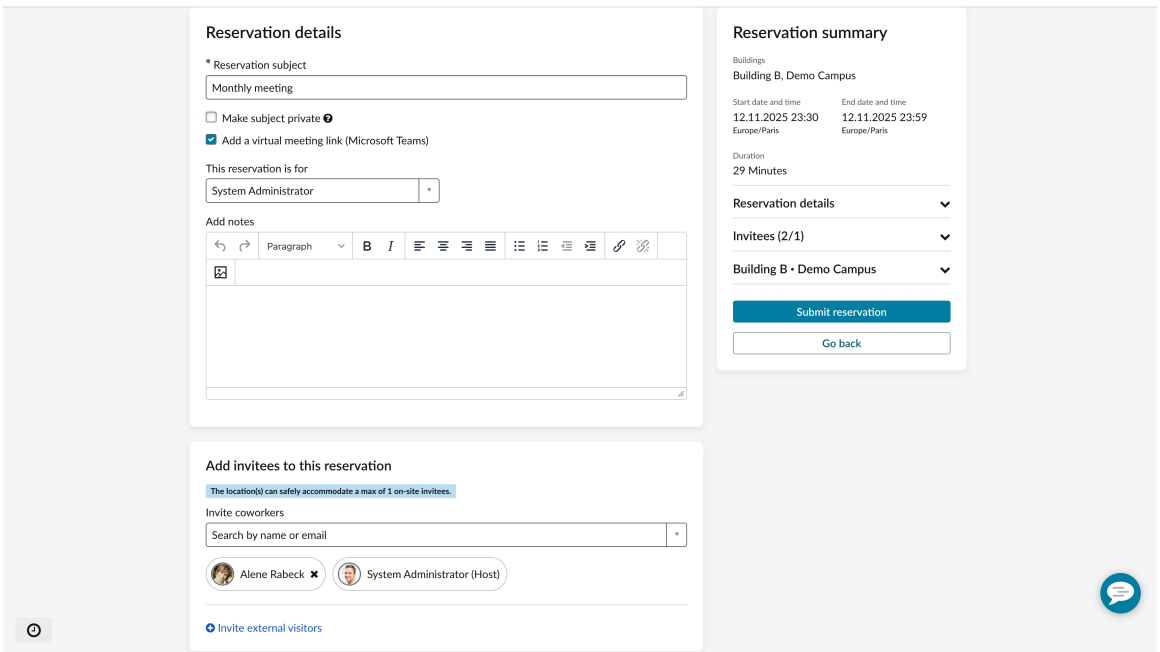
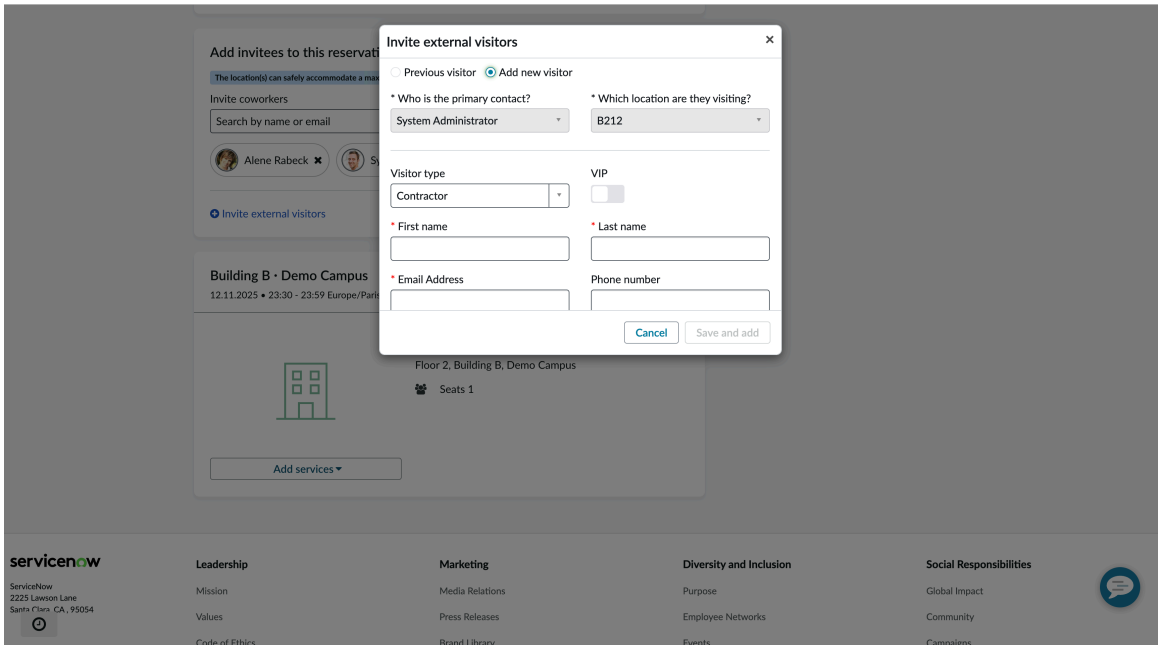
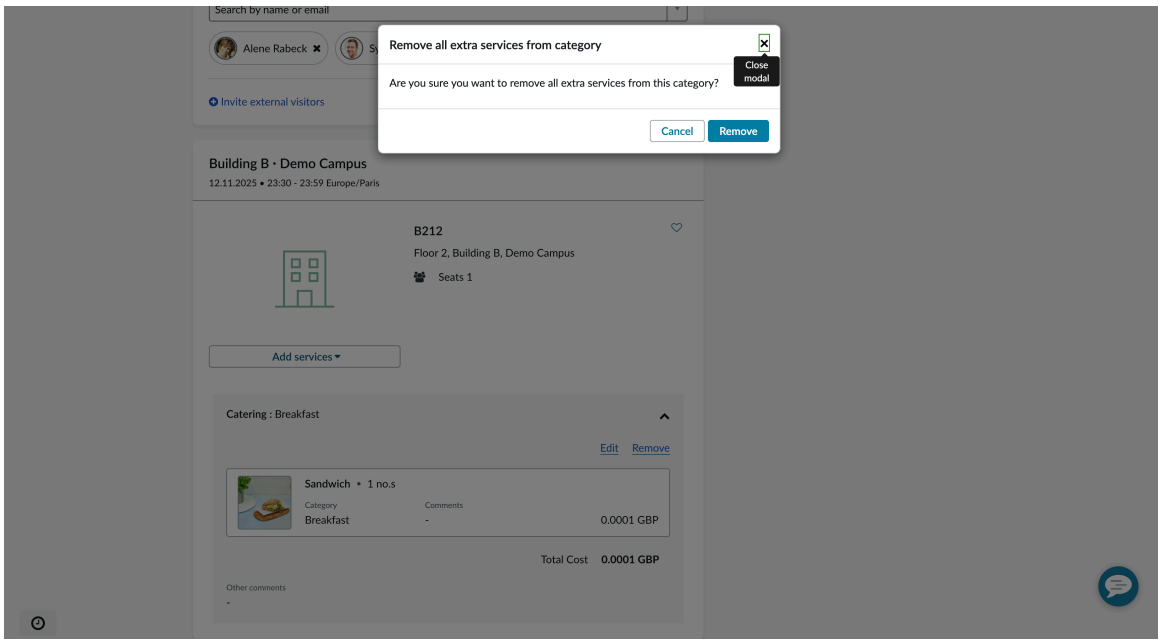
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



When you create a reservation in a sync-enabled space or location using Personal Authentication mode, a valid OAuth token is required to access your Microsoft Outlook or Google Calendar account.



Note:
If you have activated Personal Authentication mode in Workplace Calendar Synchronization and attempt to reserve a sync-enabled space or location without a token, a pop-up notification is displayed informing you that the token is unavailable. To retrieve the token, log in using the respective email credentials: Microsoft Exchange Server credentials for Microsoft Outlook or Google Calendar credentials for Google Calendar.



Selected space is added to reservable items. The Reservation Details page opens.

19. On the Reservation Details form, fill in the fields.

Field	Description
	h. Enter the **Organization** details of the visitor. **i.** Enter the **Title** of the visitor. **j.** In the Private notes section, specify any private information. **k.** In the **Visitor preferences** and **Notification preferences** fields, select the visitor's preferences. **l.** Add the visitor by selecting **Save and add**.
Add extra services	Select **Add extra services** to select a service from the list to add a workplace service to your current reservation. **Note:** The **Add extra services** option is not available for recurring reservation. When you select multiple buildings while adding a reservation, new services are shown for selected locations. You can add these services as required to your reservation. From the list options, select Space arrangement as an extra service. Select the following options: ○ On the **Add Space Arrangement** dialog box, select a service from the list. For example, select **Chair layout**. ○ Select the Chair layout options: ▪ Classroom style ▪ Banquet rounds ▪ Theater style ○ Select the Number of seats. ○ Add additional comments for the service item. ○ Select **Add**. ○ A new case is created when a reservation or services are updated. A reference is added to the old and new service. ○ Application tries to retain the services when you update a location. When updating a reservation, if the location isn't updated, the services are visible and you can update the reservation after changing the date and time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ In case, if space or location is changed while updating a reservation, the application tries to propose available services for a new location. Select the required services and add it to your reservation while updating or modifying a reservation. ○ If you're adding a new space while updating a reservation, you must add the services manually. **Note:** If a workplace service is added to a reservation, a workplace case is created. If you update the reservation date, time, or location and update services by retaining or removing the services, a reference is added to the updated workplace service. The **replacement case for** option is displayed on the new case record form and also a reference is added to the old service. A summary is added to a workplace case record for items that are added, updated, or removed. For more information, see View and track workplace cases.
Edit <services name>	Select **Edit** to update the services. ○ The Update <services name> dialog box is shown. ○ Select **Update** to update the services.
Remove <services name>	Select **Remove** to remove the services from a reservation. A confirmation message is shown to confirm whether you want to remove the services from a reservation.

20. Select **Submit reservation**.
    The Reservation Summary page opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the workplace item doesn't require any approval, the selected item is reserved. The reservation details are displayed on the Reservation summary page. The state of the request is updated to **Confirmed**. If your request requires approval, it's submitted to a workplace approver. The state of the request is updated to **Awaiting approval**. For more information, see Approve a reservation.

An email notification is sent regarding the reservation confirmation along with the details to the organizer and the user is added to the reservation. If you have invited attendees or any visitors, they receive a notification for the reservation invite. You receive email notifications when reservable synchronization is configured for Workplace Calendar Synchronization. You receive notifications for your reservation on your mobile device when push notification is enabled.

21. Review the reservation summary page.

> **Note:**
> For multi-day reservation, the reservation summary shows reservation end time duration. For a single day, reservation, only the start date and time are shown.

While reserving or viewing a space, the employee can see if a space is part of a neighborhood.

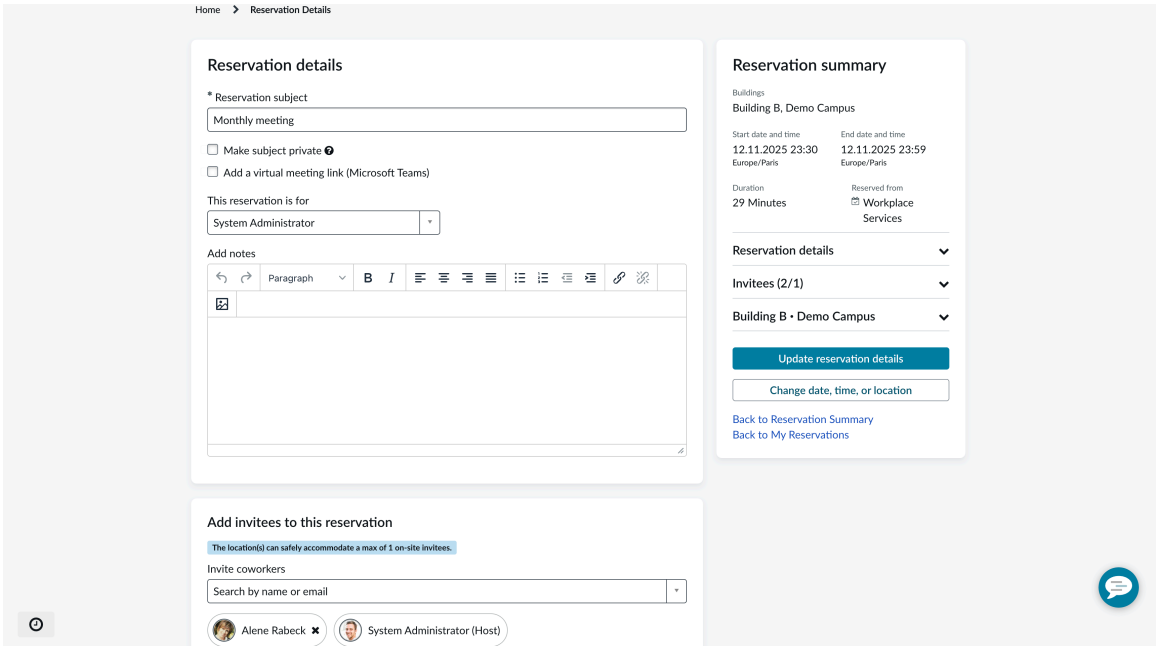
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select **Check in** to check in a reservation, if the workplace item that you have reserved requires check-in and check out.

> **Note:**
> You must check in within 30 minutes before the reservation start time. If the reservation isn't checked in within 30 minutes before the reservation start time, your reservation is canceled. An email notification is sent for the canceled reservation. The Check-in option is also available on the My Reservations page.
>
> In case, if you have occupancy sensors installed in your workplace location, your reserved spaces are automatically checked in. You also receive a push notification on the Workplace Service Delivery for Mobile app when your reserved spaces are checked in automatically. If the workplace location or space state is Occupied, the application automatically checks in the reservation. The reservation state moves to In progress state. A push notification is sent to Workplace Service Delivery for Mobile "Your reservation has started. You're automatically checked in based on the presence detected at the space. No further action is required." If the state of the space is Unoccupied or Invalid, the application sends a push notification "Your reservation for Reservation for <space-name> has started. Either Check in to confirm your attendance or Release Booking to Cancel the space reservation". For more information, see Configure automatic check-in for reserved spaces.

b. Select **Check out** to check out a reservation.
Check out within 30 minutes after the reservation end time. If the reservation isn't checked out within 30 minutes after the reservation end time, you receive an email reminder to check out the reservation. The Check out option is also available on the My Reservations page.

c. Select the **Invitees** tab to view, add, or remove any invitees from the Reservation Summary page.
The details of the invitee such as their name, email, assigned location, and invite acceptance states are displayed.



d. If you have selected multiple workplace items and you want to reassign the invitees to a different location, do the following:

- Select the Invitees check box.
- Select **Actions** > **Assign to**.
- In the **New location assignment** field, select the location to be assigned to an invitee.
- Select **Send update**

e. To add or remove an invitee, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. On the Reservation summary page, select **Actions** > **Change reservation details**.

b. On the Reservation details page, scroll to view Add Invitees to this reservation section.

c. Add a new invitee or remove an existing invitee by selecting the invitee name from the search option.

d. Select the **Update reservation details** tab.
Invitees and visitors receive email notifications for the following actions:

- When a reservation is created.
- When a reservation is canceled or updated.
- When an invitee or visitor is removed from the reservation, a cancellation mail is sent.

22. If your administrator has configured the **Default reservation path when editing a reservation** value on the Reservable Module, the following reservable paths are shown while editing or updating a reservation:

For more information see, Configure a reservable module

Note:
This option isn't available on the Now Mobile app.

Default reservation path when editing a reservation

Based on reservation	You can search locations in the context of a Reservable Path that was used while creating a reservation as shown in Step 2. For example; **Browse all**, **Browse by area**, **Browse by neighborhood**.
Browse all	If you have selected this option on the Reservable module, then while editing a

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

	reservation, the context (Reservable Path) is defaulted to **Browse all**. You can change or update the selected space, date, or time of the reservation.

23. After reviewing the workplace services added to a reservation, you can select a new date, time, and location to update the reservation details.
24. On the Reservation Details page, select**Change date, time, or location** to update a reservation.
25. On the Update meeting room reservation page, modify the date, time, and location as required.
26. When you update a reservation, the Reservation details page shows the **Retain extra services** option to retain the services from the previous location and reservation.

    When you update or change a location, a message is shown to indicate that certain services are going to be removed. This happens when workplace services for an updated location are not available. Users are notified if the services are available for a location. The Reservation details page shows services that are available on the new location and also shows the services that aren't available on the new location.

    Workplace Services are automatically retained when the date or time changes for a reservation. But if a location is changed, or if a new location or space is added, you must select to **Retain** your existing workplace services. You can retain, review, or discard the proposed services. When this action is performed, the services are considered **Resolved** for that location. When all location workplace services are resolved, confirm the changes. If location workplace services aren't resolved, a pop-up message is displayed to confirm the action.

    Note:
    In this case, if the **Allow only single service item selection** option is selected on the Workplace services page, the **Retain Services** option isn't shown on the Reservation details page and the existing services are removed after updating the reservation details for a space (location). You can add new services using the **Add extra services** option as shown in step 11. For more information, see Create a workplace service to provide an extra service for a reservation.

    On the form, fill in the fields.

Retain Services

Field	Description
Retain extra services	URL link to the workplace location to view the list of services that are retained after updating the reservation details. Select the location link to review services to be retained or removed.
Discard	Option to remove services for a location.
Retain	Option to retain services after updating the reservation details. Workplace services are automatically retained when date and time are updated for a reservation. Select **Retain**, when a location is changed or when a new location is added to a reservation. You can retain or remove the proposed workplace services. The workplace

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	services are resolved for a location when you update a reservation. **Note:** If workplace services are retained, the quantity is reset to 1. Review the retained workplace service. Workplace services such as space configurations and space layouts aren't retained for a reservation.

- Services are canceled if they aren't available or applicable for a location.
- While updating a multi-location reservation, employees are notified after matching the workplace services from previous workplace locations.
- When you change an existing service or services for a reservation, existing workplace case is canceled. A new workplace case is created as a replacement for an existing case and the workplace services are updated.
- A state is added to the changed service. A note is added on the new service case with the changes to the ordered services (added, updated, removed, no changes). For more information, see View and track workplace cases.
- The costs of services are shown based on the case or requested item fields.
- The cost is updated when a workplace service is updated.

Note:
Cost of service items are updated if an employee updates existing service offerings. For example, if you have not changed your extra service item but have changed the time for a reservation record, the cost of the service item is updated based on the latest pricing of the service item. In case, if you remove a space (location) and the service item is also removed from a reservation record, suggested services in the **Retain Services** option show the latest pricing or cost in the reservation record.

Result

- Select **Reservations** > **My Reservations** to view and track your reservation on the Reservation portal home page or on the Reservation summary page.
- **Confirmed**: Reservation State to indicate that the reservation for the selected building is confirmed.

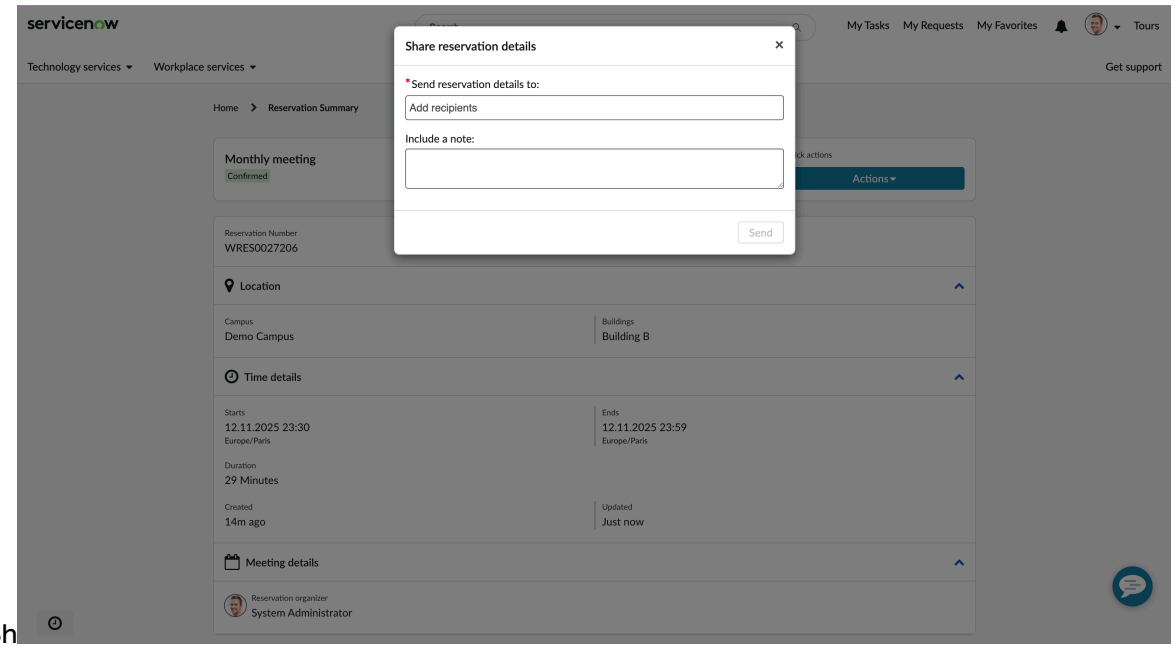
Note:
The **New space** state indicates that a new space is assigned due to a conflicted reservation.

- **Conflicted**: Reservation State on the Reservation summary page. This state shows that the application was not able to resolve the recurring reservation. You must manually find an alternate space, date, and time. Use the **Actions** tab on the Reservation Summary page to select the **Change reservation occurrence**, **Cancel series**, or **Share reservation**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

An email notification is sent and the reservation is updated with your changes.

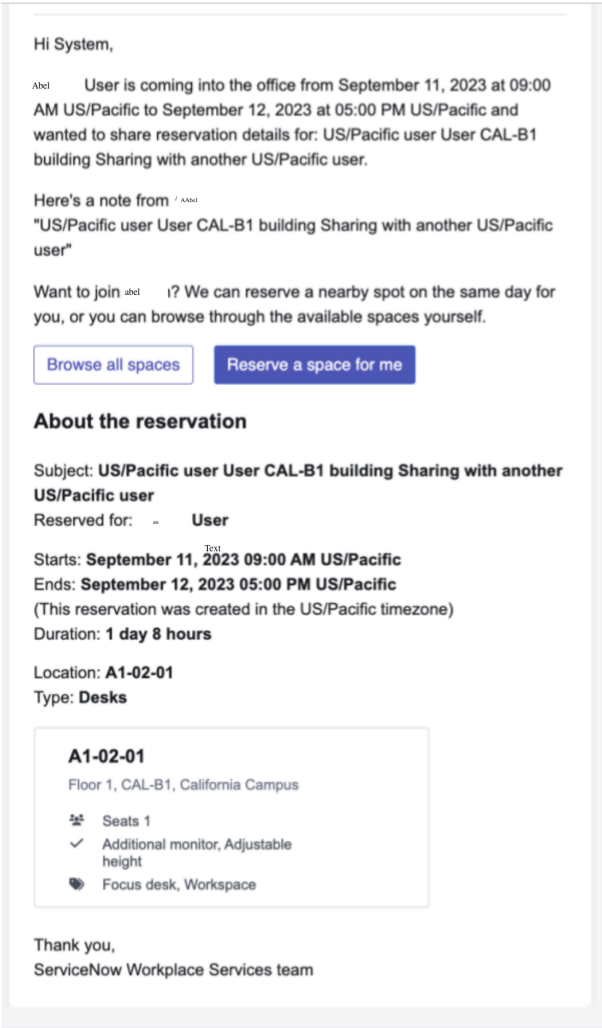
Note:
When a conflicting recurring reservation gets auto-resolved with the auto-resolution feature, its status in the **Reservation subtype** column is shown as **Exception** on the Workplace Reservations table.



For more information, see Auto-resolve recurring reservations.

What to do next

Review your reservation details on the Reservation Summary page.
While reserving or viewing a space, the employee can see if a space is part of a neighborhood. The neighborhood icon ( ) is displayed on the space card.



- To share the reservation details with others, perform the following actions:

1. On the Reservation summary page, select **Actions** > **Share reservation**.

2. In the **Send reservation details to** field, select the users that you want to share the reservation with.
3. In the **Include a note**, enter a note if necessary.
4. Select **Send**
5. When you share a reservation, invitees receive an email notification.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. You can perform the following from a shared reservation email:
   - Log in as an administrator.
   - Navigate to **All** > **Emails** > **Open shared reservation**.
   - Two navigational links **Browse all spaces** and **Reserve a space for me** are shown:
     - **Browse all spaces**: Select the **Browse all spaces** link to open the reservation portal page.

       If the shared reservation start date (current date) is within the number of days specified in the Max number of days for browse near a person, the **Browse all spaces** clickable link. The clickable links are shown from a shared email notification with pre-filled dates for a selected team member.

       - The **Browse near a person** reservable path is selected by default. If it path isn't available, the **Browse all** path is used.
       - All the fields are pre-filled for a selected team member or a colleague.
       - For multi-day reservation, the first day of a multi-day reservation is prefilled. If the first day is in the past but the current date is still within the reservation time, the current date is selected. In case of multi-day reservation, consider the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- From: The start date of your reservation.
- Time: Select the start time for your reservation from the drop-down list.
- To: End date of your reservation.
- Time: Select the end time for your reservation from the drop-down list.

For more information about multi-day reservation, see Create a multi-day reservation.

Note:
If the start day (current date) of a shared reservation is past the value set in the **Max number of days for browse near a person** Reservable module property, the **Browse all spaces** link doesn't show prefilled dates on the Make a reservation page. The application shows a validation error message "**Reservation date for the selected user has changed. Select a date**. You must manually, select the start date and time and end date and time for a reservation.

- **Reserve a space for me**: When you select the **Reserve a space for me** URL link from an email, the space reserved for a colleague or team member is selected by default on the reservation portal. A reservation is created with the same start and end date and time from your previous reservation. If the start date of the reservation falls prior to the current date, the current date is taken as the start date of the reservation. For example, if the start date of your previous reservation is October 15, 2023 and the current date is October 17, 2023, the application uses the current date (October 17, 2023).

Note:
When making a reservation directly by using the **Reserve a space for me** navigational link option, the application ignores the value set in the **Max number of days for browse near a person** Reservable module configuration and creates a reservation.

The reservation details are shared when a reservation is **Confirmed**. If you edit the reservation details after sharing, you're prompted to send an email update to reservation invitees.

- To edit or cancel your reservations, see Share, modify, or cancel a reservation.
- To download an iCalendar, see Download an iCalendar for a reservation.

- If you want to reserve a space using a shared reservation, after you select **Reserve a space for me**, the application automatically reserves one of your favorite locations that has the closest proximity to the space reserved in the shared reservation details.
- Navigate to **All** > **Workplace Reservation Management** > **Reservation Overview** > **All Reservations** to view all workplace reservations.
- Navigate to **All** > **Workplace Reservation Management** > **Reservation Overview** > **My Reservations** to view all reservations made by you.

Add invitees as collaborators and create a reservation

Employee can add their colleagues as collaborators while making a reservation. Employees can view availability of their colleagues on the reservation portal search page while making a reservation to find an available space.

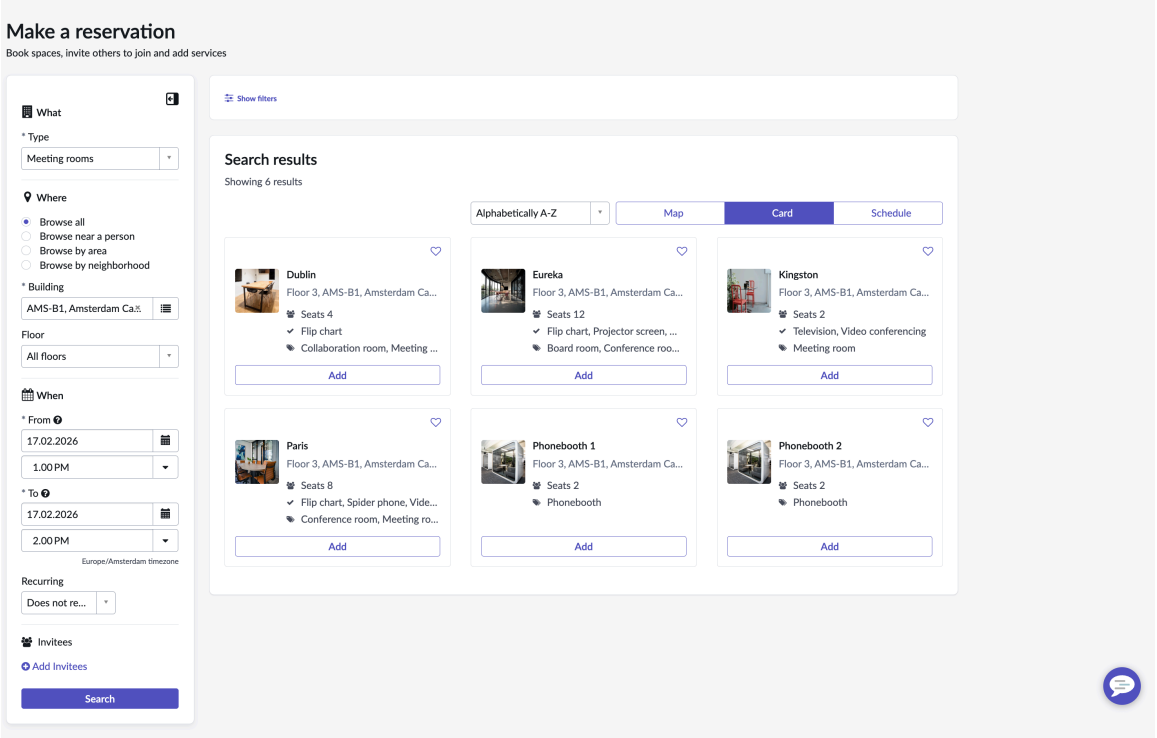
Before you begin

The option to add invitees or colleagues as collaborator is available on the Make a reservation portal page. The option to add guests is available on the Reservation details page once you have selected an available space for reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace Reservation Management should be integrated with Microsoft Exchange Online. The *Find Meeting Times* Spoke and *Lookup Schedules* Spoke action in Microsoft Exchange Online is used to view the availability of invitees. The application retrieves free, busy, out of office, and other availability status for selected attendees. Application suggests alternative meeting times and available spaces when there's a conflict or when the selected employees are unavailable.

For more information about setting up Microsoft Azure portal configuration, see Set up Microsoft Exchange. To set up the Find Meeting Times and Lookup Schedules spoke actions for Microsoft Exchange Online, see Microsoft Exchange Online Spoke Action.



- Microsoft Exchange Online integration is enabled with Workplace Reservation Management with availability of Spoke action 'Find Meeting Times'.
- Ensure the Reservable Module property *Allow attendees-based search* option is enabled by your administrator. This property is available when you've installed and configured Workplace Calendar Synchronization. For more information, see Configure Workplace Calendar Synchronization
- The sys_user table must be populated with valid user data. Employees can select attendees for their event from the sys_user table.
- Valid user email Id should be configured in Microsoft Exchange Online. When email Id is missing or not configured, the status of an employee is shown as unknown in the add attendee list.
- Workplace Calendar Synchronization should be installed and configured.

Role required: admin

Procedure

1. Navigate to **All** > **Self-service** > **Employee Center** > **Workplace Services** > **Browse Workplace Services** > **New General Reservation**.
2. Reserve a workplace location and add attendees as collaborators.
   On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Make a reservation

Type	Select a Reservable Module (Example, Desks, Meeting rooms, and so on) **Note:** Allow attendee-based search is not supported for shift-based Reservable Module configuration. For more information, see Configure a reservable module. Google Calendar and Microsoft On premises are not supported for you to add colleagues as collaborators in a reservation.
Where	Select a reservable path (Example: Browse all, Browse near a person, and so on).
Building	Select a building where you want to make the reservation.
Floor	Select a floor.
When	Select the meeting duration. The meeting duration is shown based on your building time zone. For example, Europe/Amsterdam timezone. The start date and end date is dependent on the on Max days in future value. If Max days in future module configuration value is 6, you cannot reserve a location beyond this duration. /Max number of occurrences.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

	Employees cannot select a date beyond the range specified in these Reservable Module configuration. For more information, see Configure a reservable module.
From	Select the start date and time.
To	Select the end date and time.
Recurring	Select the required recurring event option from the drop-down list. For example, Daily, Weekly, Monthly, Custom and so on. For more information, see Create a reservation. **Note:** Recurring event scheduling is dependent on the *Max number of Occurrences* and *Max days in future* Reservable Module property value. You cannot select recurring occurrences beyond the value specified in the *Max number of Occurrences* Reservable module property value. In case of recurring reservations (Daily, Weekly, Monthly, or Custom), time suggestions for selected attendees are shown only for a single day (24-hour) duration. For Weekly, time suggestion for the first occurrence in a series is shown. For Daily and monthly recurring reservations, time suggestion for the first occurrence is shown.

3. Select **Add invitees**.

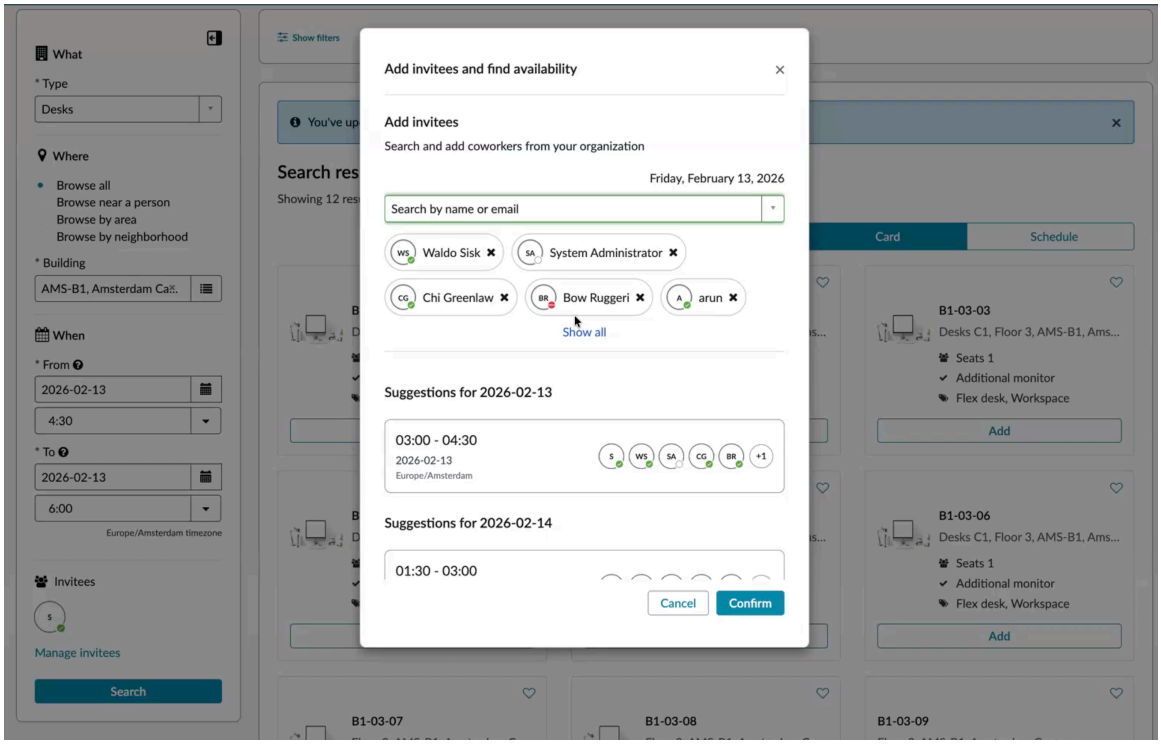
   In the The Add invitees and find availability dialog box appears. It shows the host calendar availability at first. If you are making a reservation and adding invitees, you are shown as the host. You can search for attendees that you want to add to your meeting for collaboration. You can search by your colleagues name or email address to find their availability. You can add as many invitees to your meeting as your collaborators. The attendees list is fetched from Microsoft Exchange Online based on the collaborator or invitees calendar events. When you search for attendees, the attendees availability is also shown as Suggestions.

   Note:
   Application supports adding guests to reservations on the Reservation Details page after you have selected a space for reserving. For guess, application doesn't retrieve the colleagues' availability for them on the reservation portal search page.

   An attendee's availability on the Add Attendees dialog box is shown using Microsoft Exchange Online calendar events color scheme. Out of office calendar event displays purple or white dot against the selected employee name. A new date and time is suggested by the application for a duration when the attendee is available in office. Employees can view suggested reservation options and select any one. If attendees user mail ID is not configured with Microsoft Exchange Online, unknown user (null or no color) is shown against their availability status.

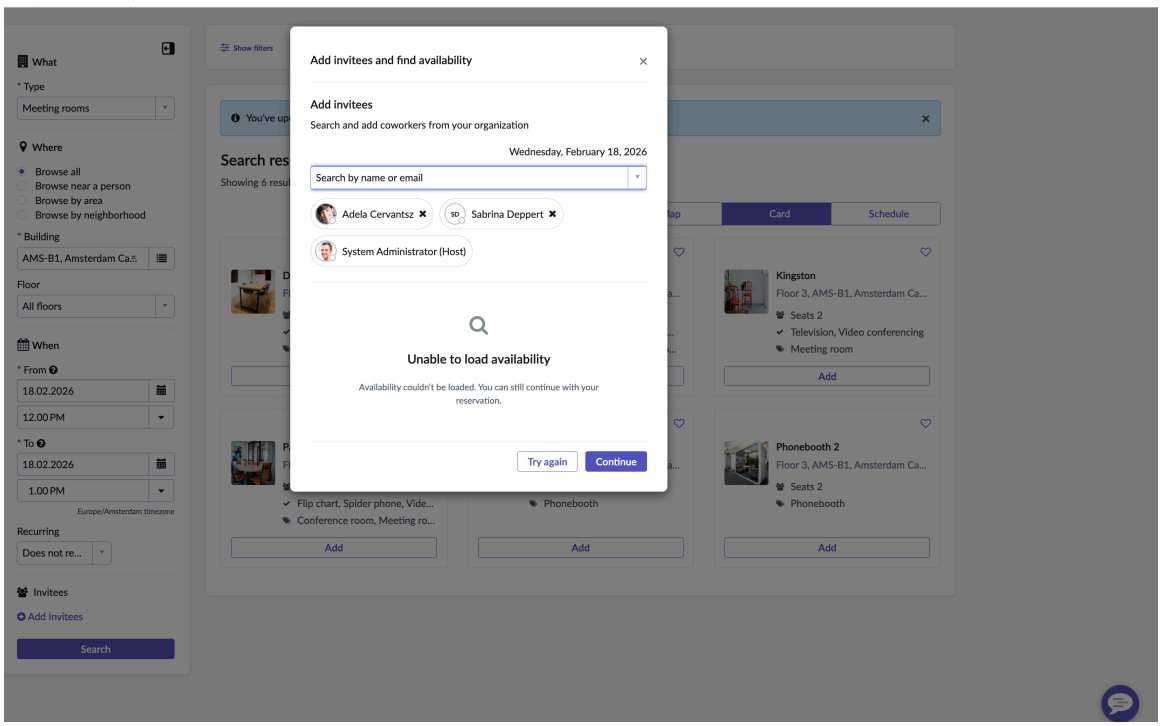
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When creating or viewing an event, the "Show As" setting in Microsoft Exchange Online determines how your time appears to others:



- Busy (Solid Bar/Color): You are unavailable; others cannot book this time.
- Tentative (Diagonal Striped Bar): You have a tentative appointment, but might be free.
- Free (White/Transparent Bar): You are available, even if a calendar item is present.
- Away (purple or yellow/Specific Indicator): You are away from your desk.
- Working Elsewhere (Dashed/Different Color): You are working, but not in your usual location.
- Solid Green Dot: Available.
- Solid Red Dot: Busy, in a call, or in a meeting.
- Red Dot with Horizontal Line: Do not disturb.
- Yellow Dot with Clock: Away or Be right back.
- White, pink dot or arrow in Purple: Often appears for Out of Office events or shared calendar items.

Note:
These colors and icons may vary slightly between classic Microsoft Outlook, New Microsoft Outlook, and Microsoft Outlook on the web, but "Show As" meanings (Busy/Free/Tentative) remain consistent.



4. In the Add invitees and find availability dialog box, select attendees or collaborators that you want to add to your meeting.

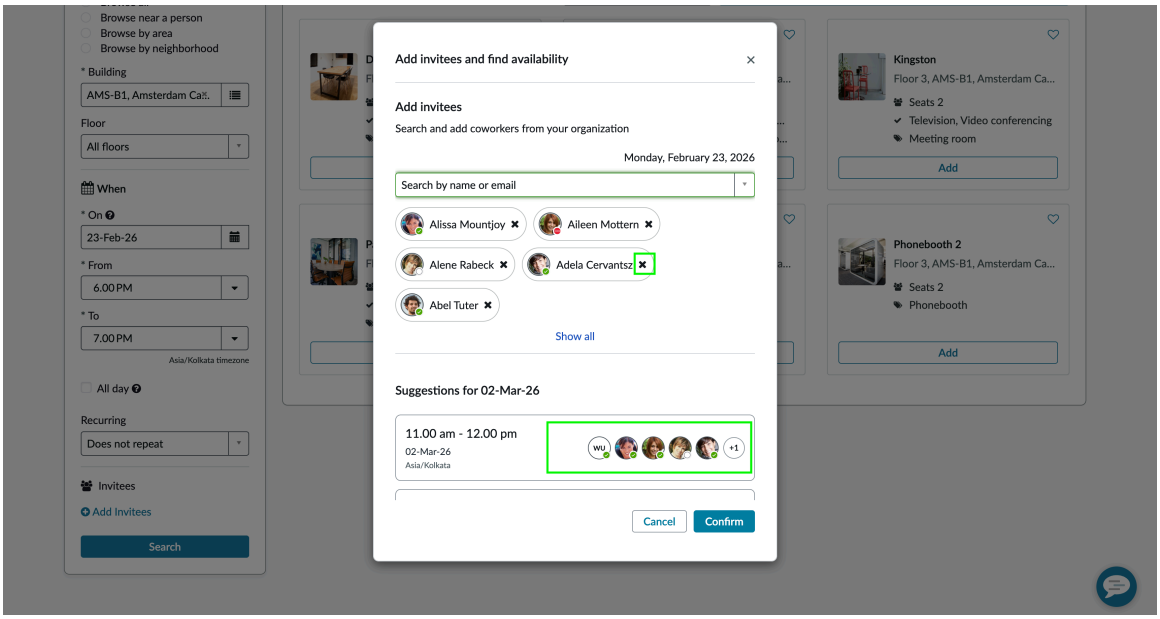
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The application adds attendees to your meeting and syncs the attendees calendar event to your calendar.

When the application is unable to fetch attendees availability, it shows a message. “Unable to load availability. Availability cannot be loaded. You can continue with your reservation”.

Note:
If you change the start and end date, the list is refreshed.

Employees can select event attendees, and the application checks their availability for a selected date and time.



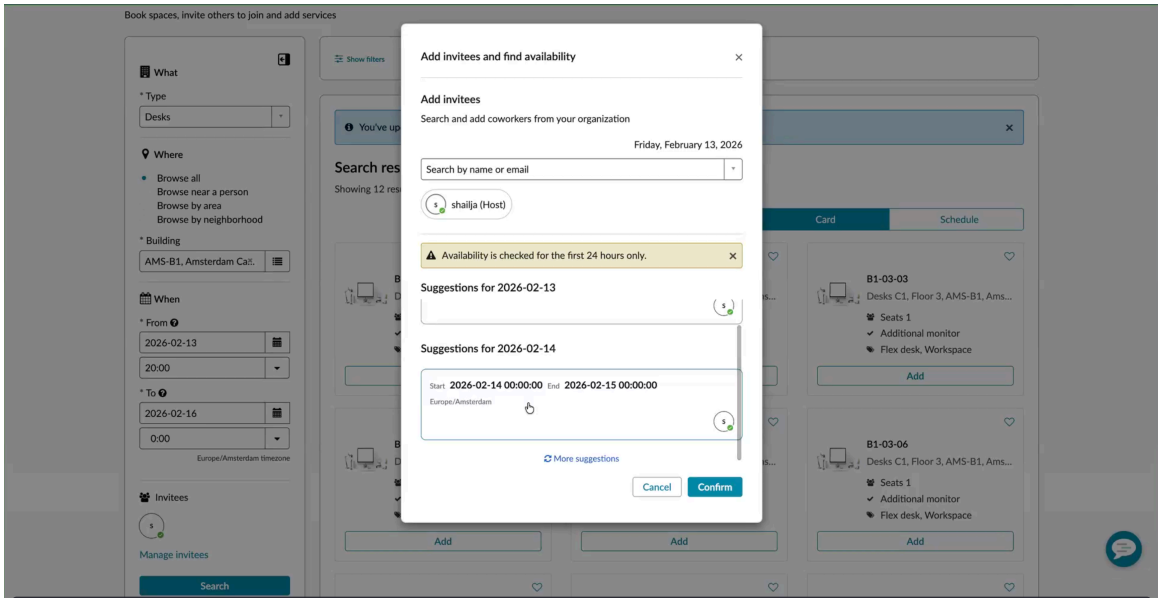
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Employees can view the availability of attendees or an attendee. Application recommends available spaces based on attendee's availability.
- If there are conflicts, application suggests a space with optimal availability. Application suggests alternative meeting options based on selected attendees' availability for a date and time duration.
- Adding guests to reservations is supported but the application doesn't retrieve availability for them on the reservation portal search page.

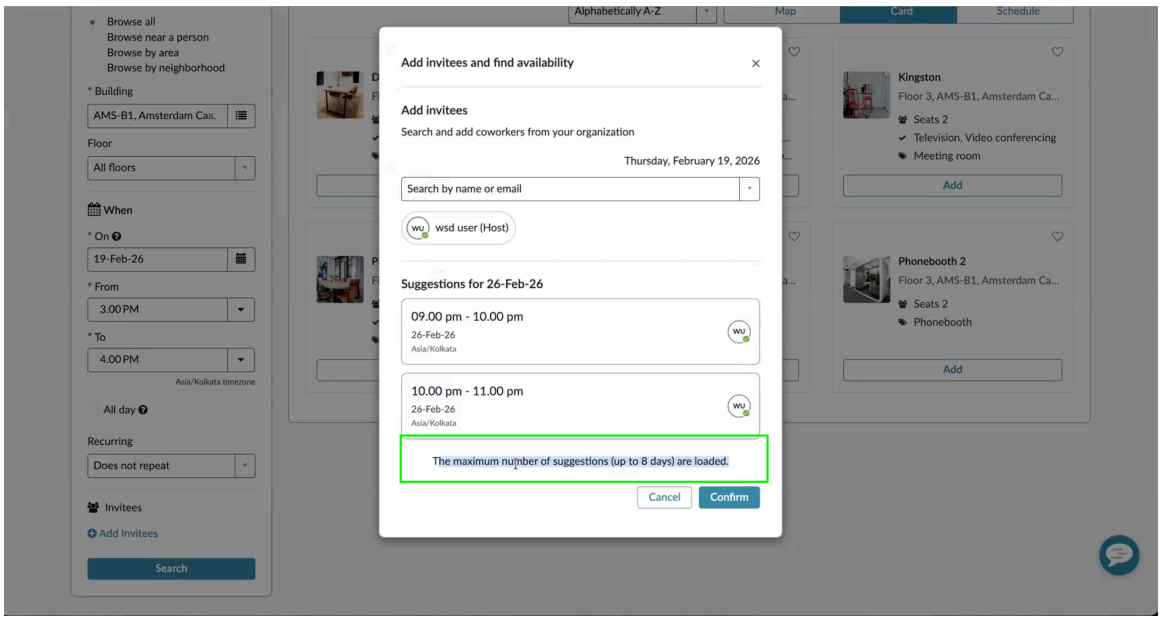
5. From Suggestions panel, select a date and time of your choice.

   Suggestions are displayed based on your selected start date and end time and the duration of your meeting. For example, if you select 2 hours as the duration of your meeting, suggestions are displayed based on two-hour time duration. For example, if you select your meeting start time as 12 pm, suggestions are displayed from 12 pm onwards.

   If you add multiple attendees or invitees, the users are displayed in horizontal sequence or series. At a time, five attendees names are displayed. If there are more than five attendees, expand the plus option to view additional attendees.



You can remove an attendee by selecting the remove option icon (×).



Note:
Availability for selected attendees is shown for 24-hour duration only. If you select a duration beyond this, the application shows "Availability is checked for the first 24-hours only". Suggestions are shown only for 24-hour duration for attendees availability. Microsoft Exchange Online's *`Find Meeting Times`* spoke action doesn't return attendees' availability for more than 24-hours.

For recurring reservations, application shows availability based on the first occurrence, and doesn't calculate the availability based on all occurrences or a sub-set of it. For Weekly, time suggestion for the first occurrence in a series is shown. For Daily and monthly recurring reservations, time suggestion for the first occurrence is shown.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select **More Suggestions** to load additional suggestions. At a time, the maximum number of suggestions up to 7 days are displayed or shown at a time. This is dependent on the *`Max days in future`* Reservable Module configuration property. If your Max days in future value is 5, you get suggestions for 5 days only.

6. Select **Confirm**.

   Upon confirmation, application adds the attendees as invitees before synchronizing the event to the calendar. The **Manage Invitees** option appears on the reservation page after you confirm and add invitees to your meeting.

   If the application is unable to load invitee's availability, it shows **Continue** instead of **Confirm**. Select **Continue** to move forward with your reservation.

   The invitees or attendees are added to your meeting. You can add additional invitees to your meeting using the **Manage Invitees** option. You can also remove invitees as required.

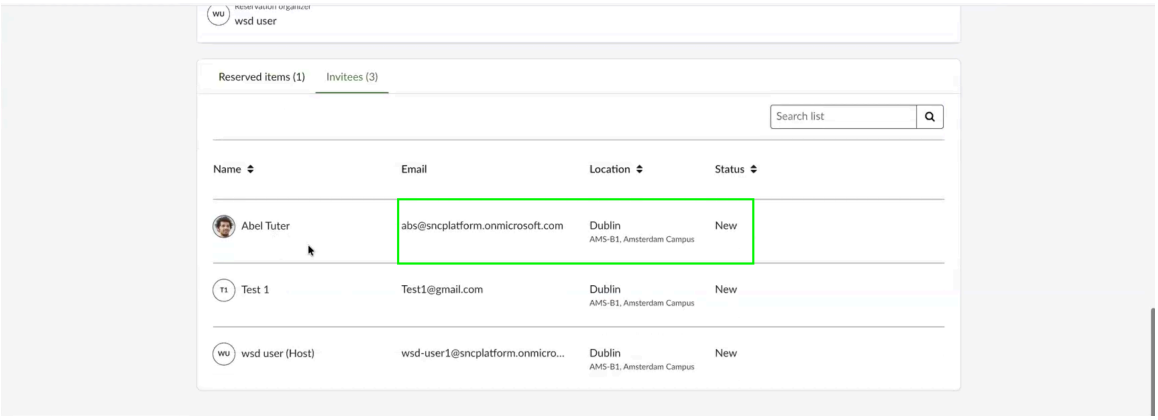
7. Select **Search**.

   Search results page shows available spaces for selected location, date, and time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Select **Add** to add space or spaces to your reservation.
9. Select **Next**.

   The Reservation details page appears. On the Reservation details page, you can add visitors or guests.



10. Complete the required information on the Reservation details page.
    For more information, see Create a reservation.
11. Select Invite Attendees to add external visitors or guests.

    Review the number attendees or invitees added to your reservation.

12. Add or remove workplace services as required.
13. Edit or update your reservation or workplace services as required.

    For more information, see View or update reservations

14. Select **Submit** to create a reservation and add invitees as collaborators to your reservation.
15. Review the Reservation summary page.

The Reservation summary page displays the invitees or attendees that are added to your reservation. The internal invitees (attendees) column that you've added shows Microsoft Exchange Online user mail IDs. External visitors' column show their personal mail IDs.

Auto-resolve recurring reservations

While making a recurring reservation, only the availability of the first occurrence is checked. It's possible that a future occurrence of the meeting may run into conflicts. To avoid such conflicts, while scheduling a recurring reservation, the Workplace Reservation Management application tries to auto-resolve any recurring conflicts.

Before you begin

Administrators can choose to auto-resolve recurring reservation conflicts at the Reservable module level.

> **Note:**
> Ensure that you have enabled **Allow recurring reservations** and **Auto-resolve recurring conflicts** options on the Reservable Module form. For more information, see Configure a reservable module.

If you're upgrading from a previous version of Workplace Reservation Management and if you've updated the form layout before, you must edit the form view again to display the **Auto-resolve recurring conflicts** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Reservations in a recurring series cannot be updated in bulk. To update a reservation, select a reservation and edit it as required.

The application tries to find an alternative space automatically for conflicted occurrences based on the following logic:

- When floor maps are available, the application tries to find a space closest to the same capacity, then looks for one with more capacity, and lastly, for one with less capacity.
- When no floor map is available, the application finds an alternative space in the same area or on the same floor.
- Favorite spaces are prioritized over 'location' (within the same area or within proximity).
- Application searches for a space of the same type.
- Application searches for a space with similar standard services.
- Employee is notified through the Reservation Summary page and via email when the application assigns an alternative space.

Note:
Adding extra services option isn't available for Recurring reservations.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Administration** > **Reservable Module**.
2. Navigate to **Workplace Core** > **Workplace service portal** > **Workplace Service Portal Home** > **Make a Reservation**.
3. Create a reservation.

   For more information about how to create a reservation, see Create a reservation.

   For example, two workplace users, Abel Tutor and Abel L create reservations. Abel L creates a reservation for Tuesday 11/22 10.00 AM to 12.00 PM in Room A1-02-01.
4. Select **Recurring** to make a recurring reservation.
5. Make the required changes and submit the reservation.
6. Another workplace user (Abel Tutor) makes a recurring reservation.
   Abel Tutor makes the reservation for the week 11/21 to 11/25 from 09:00 to 3 PM for the same space (Room A1-02-01). For more information, see step 3.
7. After submitting the reservation, notice that the user (Abel Tutor) is now assigned a different space for Tuesday since it was already booked by Abel L in Step 3.

   The new space is visible on the reservation summary page. When the conflicting reservation occurrences are resolved, the application tries to assign a new workplace, date, and time within the same module or an alternative space is assigned for the existing date and time. You're also notified via email.

   The **New space** state indicates that a new space is assigned due to a conflicted reservation.

   Note:
   When a conflicting recurring reservation gets auto-resolved, its status is shown in the Reservation table, and the **Reservation subtype** column is set to **Exception**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

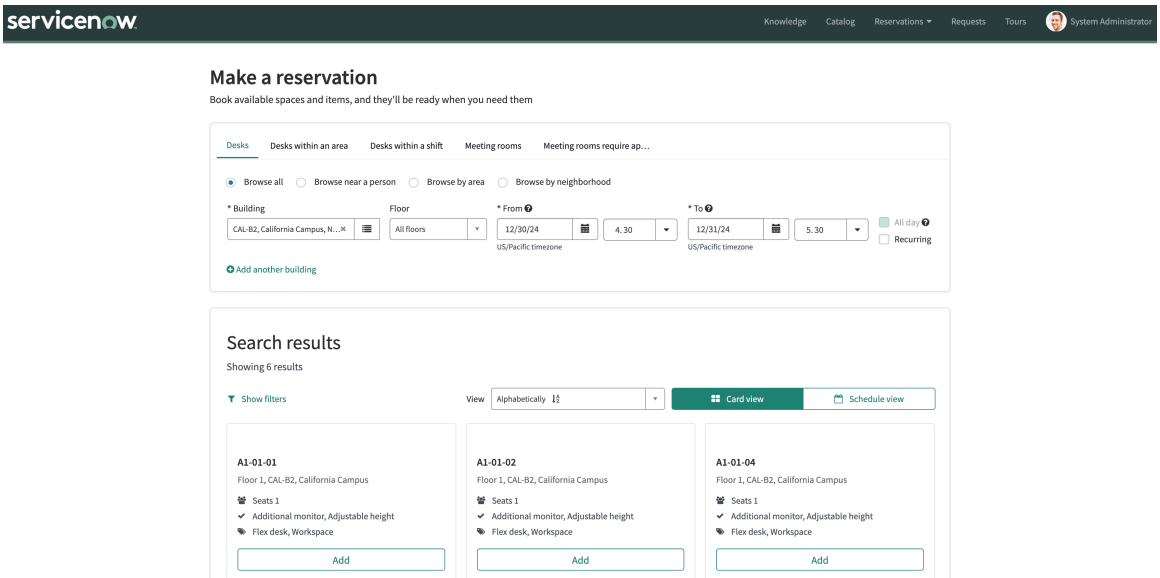
8. If the **Auto-resolve recurring conflicts** property is set to false or not enabled in the Reservable module, and you try to make a reservation (see Step 3), conflicting reservations occur if the same space is booked by another workplace user.
   In such cases, the employee is expected to resolve the reservation conflicts manually by finding an alternative space, date, and time.
9. When viewing the details of a conflicting reservation, the employee can find an alternative space and time using the **Recurrences** option on the Reservation Summary page.

10. Select the required options from the **Actions** drop-down list on the Reservation Summary page:
    - Change reservation occurrence
    - Cancel occurrence
    - Cancel series
    - Share reservation
11. From the email notifications that you receive, select the **View reservation series** option to update space and time for a conflicted reservation.
12. Find an available space or time and create a reservation.
13. Submit the reservation.
    If the **Auto-resolve recurring conflicts** option is enabled, the conflicting recurring reservation in a series is resolved and the user is assigned an available space. When this option isn't enabled, workplace users must manually update the time and space for a given reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Reserve a space near your colleague

Make a workplace reservation and reserve a space near your team member or a colleague.



Before you begin

https://player.vimeo.com/video/1098053047?h=d5c2f4b985&badge=0&autopause=0&player_id=0&app_id=58479

Role required: admin

Procedure

1. Select any of the following context menu navigation options to make a workplace reservation and reserve a space near your preferred colleague or a team member.
   The Make a Reservation page opens in a new tab.

2. Select a Reservable Module configuration.

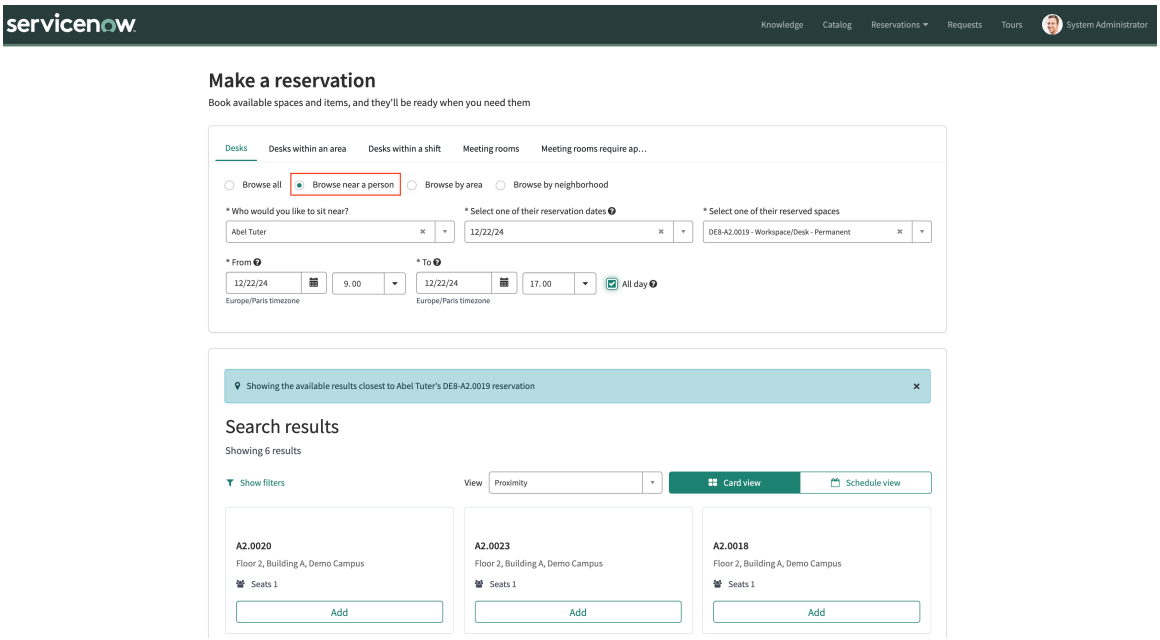
   For example, select any of the following Reservable Module configuraiton. For more information, see Configure a reservable module.

   - Desks
   - Desks with an Area
   - Meeting rooms require approval
   - Meeting rooms
   - Desks with a shift

3. Select **Browse near a person** to search for available spaces near a colleague or team member.

   Note:
   This option appears only if the **Enable browse near a person** Reservable Module property is enabled. For more information, see Configure a reservable module.

   The **Max number of days for browse near a person** Reservable Module property can be configured to reserve a space near a colleague for a maximum number of days. The default value of this property is 7. The **Browse near a person** is displayed only when the **Enable browse near a person** option is selected on the Reservable Module. The system counts **Max**



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

number of days for browse near a person from the current date (day 1). Here, seven days includes current date (day 1) and the next six available calendar days.

Note:
When browsing near a person, if there are any private spaces, the private spaces aren't displayed in the reservation search result.

If a cost center or department is enabled for a user profile's location, only those spaces or desks that have the same cost center or department as profile locations are displayed. Only spaces or desks that are assigned as flexible or none are displayed. The search results doesn't display permanent spaces or desks.

All required fields must be filled in on the form when you're creating a reservation and when the auto-search option is enabled by your administrator. The auto-search option doesn't work if the required field inputs are missing on the reservation page.

a. **Who would you like to sit near?**: Select the user or colleague that you want to reserve a space nearby.

b. Specify the following details to search for the most suitable space near a colleague or team member.

Note:
You can't create a Recurring reservation if you're making a reservation near a team member or colleague.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Select one of their reservation dates**: Reservation dates to make a reservation.

  Note:
  In case, if your colleague has a workplace profile, all dates (date range) specified in the **Max number of days for browse near a person** are displayed. In case, if there's no workplace profile, only the available reservation dates, if applicable, are shown for a colleague or team member. After selecting the dates, you can reserve available spaces. Spaces with privacy enabled (Private) spaces aren't available for selection.

  The dates are visible, based on the following considerations:

  - Maximum days specified in the **Max number of days for browse near a person** Reservable Module property. For more information, see Configure a reservable module.
  - Start date and End date: If a multi-day reservation is enabled, you can select a date in the range of a colleague's multi day reservation when making a reservation.

    For example, if **Max days for multi-day** is 10 and you try to make a reservation for 15 days, the application shows a validation error. You're only allowed to make a reservation for the next 10 days from the current date.

    For more information, see Create a multi-day reservation

- **Select one of their reserved spaces**: Option to show dedicated spaces and reserved spaces that aren't marked as private for a colleague or team member with a workplace profile. In case, if the selected user or colleague doesn't have a workplace profile, only the available reserved spaces (if applicable) are displayed.

  Note:
  If a colleague has a permanently assigned space and has also had a reservation for the same day or has multiple reservations, you can select either of these spaces to make a reservation near their colleague.

- **From**: Reservation start date. The time is displayed based on the selected building's time zone.
- **To**: Reservation end date. The time is displayed based on the selected building's time zone.
- **All day**: Select this option to reserve the workplace item for an entire day. The start date and time of the reservation depends on the date and time set by your organization. This option appears if your Workplace administrator has enabled the **All day** reservation setting for a selected workplace location.

- For a multi-day reservation, the **From** and **To** fields show the date range specified for a multi-day reservation.

4. Select **Search** to select available spaces from the Card View, Map View, or Scheduled view.

   Note:
   You can't sort workplace items in alphabetical order or by your favorite locations if you're browsing spaces near a person. The spaces near a person are searched based on proximity.

5. Select Add to add a space.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Next** to proceed with reserving the selected space.
7. Review the Reservation details.
8. Add workplace services as required.
9. Select **Submit Reservation**.

Create multi-building reservations

Reserve multiple spaces spanning across multiple buildings in different timezone. Create multi-building reservations for the same date and time in a single reservation.

Before you begin

Role required: sn_wsd_core.workplace_user

About this task

Reserve multiple spaces belonging to different buildings in a single reservation using the **Add another building** option on the Make a reservation page. For example, if you want to have a meeting where your colleagues are joining from different locations, you can create a single reservation with multiple locations from different time zones. Some of your colleagues may join from California while others may join from Amsterdam, and so on. Workplace Reservation Management automatically takes care of the timezone conversion based on the buildings selected and their associated timezones.

The **Allow multiple building reservations** option should be configured by your administrator to make a multi-building reservation. For more information, see Configure a reservable module.

https://player.vimeo.com/video/1098053036?h=d3391768c2&badge=0&autopause=0&player_id=0&app_id=58479

Procedure

1. Navigate to **Workplace Reservation Management** > **Portal** > **New Reservation**.
   Select the type of spaces that you want to reserve. The types are displayed as tabs, such as Desks, Meeting rooms, or Parking.

   You cannot make a multi-building reservation when using shifts.

2. Provide the name of the primary or first building and the floor of the building where you want to make a reservation along with date and time.

   You must select a space for the primary building when making a multi-building reservation using the web portal.

3. Select the **Add another building** option to add multiple buildings and spaces within a single reservation and provide the required details like Building name, floor, start date and time.

   The selected buildings can belong to different regions or locations and different time zones. The application automatically adjusts the time zones variations accordingly.

   The first building that you select is considered the primary building and the other buildings that you add after the first building are the secondary buildings. The application uses the date and time from the primary building to convert the applicable time zones for the secondary buildings.

4. Click **Search**.
   By default, the search results first shows the primary building with spaces available in that building. Building card shows details like the building name, the campus that a building belongs to, and the number of spaces selected in a building.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If auto-search is enabled, the search results are automatically displayed. For more information, see Create a reservation.

5. Switch between the **Card view** and **Schedule view** tabs to review and select the available spaces.
   In the schedule view, for a selected building, you can see the date and time as applicable.
   The bottom pane will show the number of items that you've selected from the search results.
6. If your organization has uploaded floor maps, view the **Floor maps** using Mappedin or Indoor Mapping map providers.
7. To revisit and update the search criteria, click **Edit search**.

   Click the remove building icon (✕) to remove a building. If you remove a secondary building, the spaces associated with the building are also removed.
8. Click **Next**.

   If you missed adding a space to a building, the application alerts to add a space. A space must always be added to a primary building. Select a building card and click **Add** to add selected spaces from the search results.

   After adding a space or room to a building, you're taken to the Reservation details page.
9. Click **Add Services** to add room configurations or catering for selected spaces.
10. Review the reservation summary details.
11. Click **Submit Reservation**.

Note:
When you create a multi-building reservation using the Workplace Reservation Management application and synchronize it with the Workplace Calendar Synchronization service and later on, if you update this reservation in calendar service by removing all spaces from a primary building, then, the primary building will continue to remain as a primary building with no reserved spaces.

This behavior is different when compared to multi-building reservations created using the Workplace Reservation Management application, as it does not allow you to proceed with the reservation if you have not selected a space in the primary building.

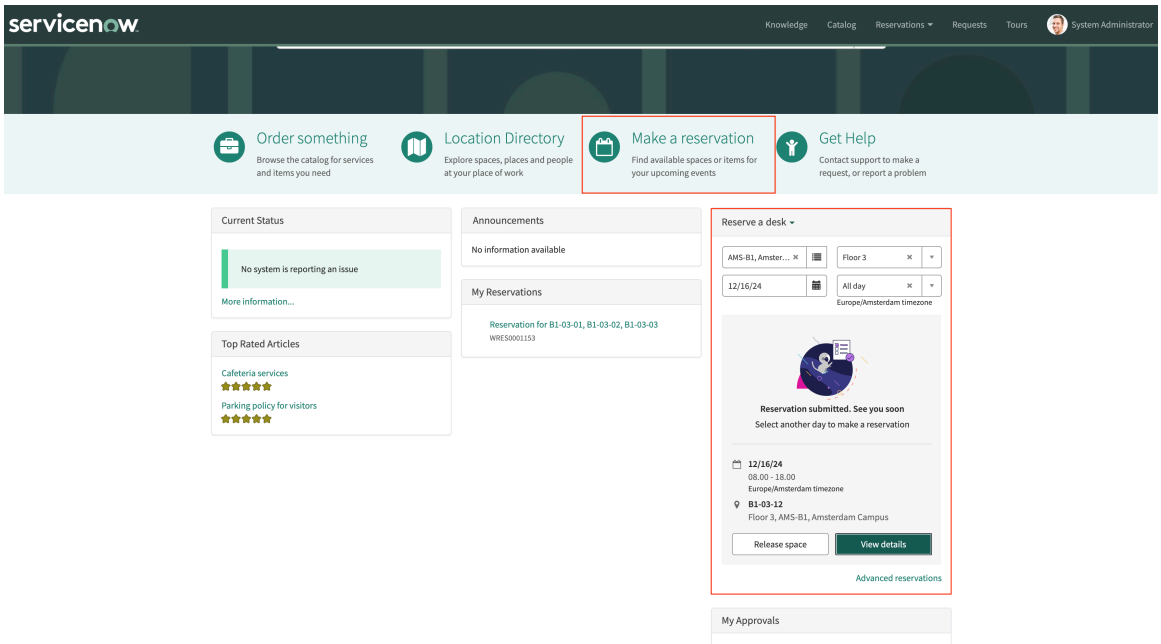
Create a multi-day reservation

Workplace users can now reserve a space covering multiple days. Employees can reserve a space that spans across multiple days.

Before you begin

Multi-day reservations can be made when **Max days for multi-day** Reservable Module property value is set in the Reservable module configuration. Default value of this property is set to 1. If the value for **Max days for multi-day** property is set to 1, then it will be considered a single day reservation and multi-day reservation will not be allowed. If the **Max days for multi-day** value is more than 1, the **All day** or single day reservation option is disabled on the reservation portal.

For more information, see Configure a reservable module.



This property is dependent on the **Max days in future** value. If the value of **Max days for multi-day** is more than **Max days in future** Reservable Module property, application will show a validation error and will not create a multi-day reservation.

Role required: sn_wsd_core.workplace_user

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Select any of the following context menu navigation options to make a multi-day.

The Make a Reservation page opens in a new tab.

2. Select a Reservable Module configuration.

   For example, select any of the following Reservable Module configuraiton. For more information, see Configure a reservable module.

   - Desks
   - Desks with an Area
   - Meeting rooms require approval
   - Meeting rooms
   - Desks with a shift

3. On the Make a reservation page, select any of the Reservable paths:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The following reservation paths available for a selected Reservable Module.

- Browse all
- Browse near a person
- Browse by area
- Browse by neighborhood
- Browse all spaces

4. **Optional:** Select **Browse all**.
   The **Browse all** reservable path is selected by default.
   a. Search for a workplace item that you want to reserve using the following available criteria.
5. Complete the following information.

Fill in the form fields.

Make a reservation form

Field Name	Description
Building	Name of the building for a selected campus. Select a building from the list. For example, Demo Campus. The building names and location names are alphabetically sorted or sorted according to the **Order** that you have configured on the Buildings and Regions tables. When a sort **Order** is configured for a building or region, the building names and locations are sorted accordingly. If the sorting **Order** value isn't specified for an item, the items are listed on top of the list (ascending order), and sorted alphabetically. The building names and location names are alphabetically sorted based on the label name. For example Building A, Building B, and so on.
Floor	Floor of a building where you want to make a reservation. The floor names are either alphabetically sorted or the values are sorted based on the indicated sort order. You can configure the sort **Order** in the Floors table. If the sorting **Order** value is not specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The Floor names are alphabetically sorted based on the names and labels.
From	Start date of your reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
Note: The time directive fields (From, time, To) are also available on the MESP (Mobile Employee Service Portal) on the Now Mobile app.	○ Employees can't select a date and create a reservation if the start date exceeds the Max days in future Reservable module value. Thisn't value is configured on the Reservable module by your administrator. For more information, see Configure a reservable module. When the Max days in future value is configured by your administrator, you can't select a date past the max allowed date. The dates in the calendar date picker are inactive for dates that are too far in future. **Note:** If the Max days in future value isn't configured, the date selection isn't restricted. Date selection is based on the Max number of occurrences value. For more information, see Configure a reservable module. ○ If you enter an invalid date which is greater than what is specified in the **Max days in future** value, the application resets the date to the current date.
Time	Start time when the reservation begins. Employees can select time using the drop-down list or by entering the time in the field. The time increment value depends on the value set by your administrator. Default reservation time duration available for selection is 30 minutes. The *time_picker_interval_size* property for reservation start time and reservation end time is configured using the Service Portal Widget instances. The start time field increment value depends on the value set in the *time_picker_interval_size*. Default reservation time increment value duration is 30 minutes. **Note:** You can't select a date that occurs in the past. The time for a selected location depends on the building time zone.
To	End date of your reservation. Select a number of days or dates on the calendar to make a multi-day reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	Employees can't select a date and create a reservation when the End date exceeds the Max days in future value. The Max days in future value specifies the maximum number of the days in the future up to which the Reservable module can be reserved. **Note:** In the case of a single day reservation, option to enter the end date isn't available. If you enter an invalid date which is greater than what is specified in the **Max days in future** value, the application resets the date to the current date. **Note:** If the **Max days in future** value isn't enabled, then the date selection isn't restricted and is based on the **Max number of occurrences** value configured in the Reservable module. For more information, see Configure a reservable module.
Time	End time when you would stop using the workplace item. Employees can select the end time using the drop-down list or by entering the time in the field. The end time increment value depends on the value set by your administrator. Default reservation end time duration is 30 minutes. The *time_picker_interval_size* property for reservation start time and reservation end time is configured using the Service Portal Widget instances. The start time and end time field increment value depends on the value set in the *time_picker_interval_size*. Default reservation time increment value duration is 30 minutes. **Note:** You can't select a date that occurs in the past. For example, If the start time is 09:00, you can select an end time after this duration. You can't select a time before 09:00 on the same day. The time for a selected location depends on the building time zone.
Recurring	Option to reserve the workplace items on a recurring basis. Specify the number of days

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	and the number of times that you want to repeat the reservation in a recurring series. For weekly reservations, select the days of the week for the reservation. The Recurring option is displayed based on the configuration that your admin has set. Also, if there are any recurring reservation conflicts, they're auto-resolved if your admin has configured the same. Auto-resolve recurring conflicts</uicontrol> option is enabled on the Reservable module form. The application tries to auto-resolve recurring reservation conflicts. For more information, see Auto-resolve recurring reservations. **Note:** Adding extra services option isn't available for Recurring reservations.
All day	Option to reserve the workplace item for an entire day or a single day. This option appears if your Workplace administrator has enabled the All day reservation setting on the selected **Type**. The start and end times of the reservation depend on the timings set by your organization. The **All day** option is also available on the Space details page. **Note:** The **All day** option's appearance depends on your administrator's configuration. If your admin has mandated all day reservation for a selected **Type**, the reservation is automatically made for the entire day. In case of All day you can only modify the Start date of the reservation.
Add another building	Reserve multiple workplace items spanning multiple buildings. The buildings time zones are different for a same date and time in a reservation. **Note:** This option is available if you have selected **Allow multiple reservations** check box on the **Reservable Module** > **Reservable Module Configuration** tab. For more information, see Create multi-building reservations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Add another building**.
   Reserve multiple workplace items across multiple locations and buildings belonging to the same neighborhood.

   The buildings can belong to different time zones for the same date and time in a single reservation.

   Note:
   This option is available if you've selected **Allow multiple reservations** check box on the Reservable Module Configuration.

   For more information, see Create multi-building reservations.

7. Click **Search**.
   The workplace items that match the search criteria and which are available for reservations are displayed. By default when you click **Search**, the first building card is shown as selected and the available spaces in that building are shown.

   Note:
   While browsing near a person, if there are any private spaces, then they are not displayed in the search result.

8. The card view shows all the available spaces.

   Note:
   You can switch between the **Card view** tab and the **Schedule view** tab to review the reservation timelines and the availability of workplace items.

   (Optional) To mark a location as favorite, click the **Card view** or **Schedule view** click the favorite icon (Favorite icon.)

9. Click **Map view**, select a space and then select **Add** to add the space.

   The map view shows available and booked spaces.

   - If your organization is using floor maps, view the floor maps using Mappedin or Indoor Mapping as your map provider.

     .

     - Select a Campus on the Map view.
     - Select a Floor from the drop-down list.
     - Zoom in to select a building and location

       The building names are alphabetically sorted or sorted as per the **Order** that you have configured in the Buildings table.

10. For a multi day reservation search, the **Schedule view** shows available spaces in a day view.

    The schedule view shows available as well as unavailable spaces.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Clicking the chevron will take you to the next day and previous day.
- In case of a single day reservation, one-hour blocks are used to show the time scale for a day.

11. Click **Add**.
12. Select a Space or Spaces.
13. Select **Next**.
14. On the form, fill in the fields.

Reservation details from

Field	Description
Reservation subject	Subject of your meeting.
Make all space details private	Option to make all the selected spaces as private. **Note:** The option is displayed based on the location privacy setup of the selected space(s). If you have selected multiple spaces, you can also specify your privacy preference for each space individually, using the **Mark space details private** below each space on the form.
Make space details private	Option to set the space details of the space as private.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: The option is displayed based on the privacy setup of the space.
Make subject private	Option to mark the subject of the reservation as private.
Reserve these items together for the same person	Option to reserve all the workplaces for the same user. This option appears if you've selected multiple workplace items for reservation.
Add a virtual meeting link	Option to generate a virtual meeting link so that remote employees can join the reservation. **Note:** (Only applicable for Microsoft Teams) As of the May Store 2023 release, when adding a meeting link, the application will retrieve the meeting details while synchronizing the event with a calendar provider.
This reservation is for	If you're requesting a reservation on behalf of someone else, select the name of that person. Leave this field empty if you're requesting a reservation for yourself.
Number of attendees	Number of people expected to attend the meeting.
Add notes	Option to add the meeting note to a reservation using the rich text editor. The notes can be shared with the meeting invitees. Users can also copy and paste text to the editor. The message can contain a maximum of 65,000 characters. Note is saved on the reservation record. Employees can update the note when required. The invitees receive a notification when note is added or updated. The reservation summary page shows the summary of the meeting note. This option is available only if you have selected the **Allow reservation message** option on the Reservation widget configuration. For more information, see Configure a reservable module.
Add invitees to this reservation

Field	Description
	k. In the **Visitor preferences** and **Notification preferences** fields, select the visitor's preferences. l. Add the visitor by clicking **Save and add**.
Add extra services	Click the **Add extra services**drop-down list to select a service that you want to add to your current reservation. **Note:** The **Add extra services** option is not available for recurring reservation. When the employees select multi-building locations, new services are shown for the selected spaces so that they can add the services. For example: In case if you have selected space arrangements as an extra service, then select the following items: ○ On the **Add Space Arrangement** dialog box, select a service from the drop-down list. For example, select **Chair layout**. ○ Select the Chair layout options: ▪ Classroom style ▪ Banquet rounds ▪ Theater style ○ Select the Number of seats. ○ Add additional comments for the service item. ○ Click **Add**. ○ A new case is created when a reservation or services are updated. A reference is added to the old and new service. ○ Application tries to retain the services. In case while updating a reservation, the space or location is not changed, then the services are visible and employees can update the reservation after changing the date and time. ○ In case, if space or location is changed while updating a reservation, then the application tries to propose the available services and applicable for a new location. Employees must select the suggested

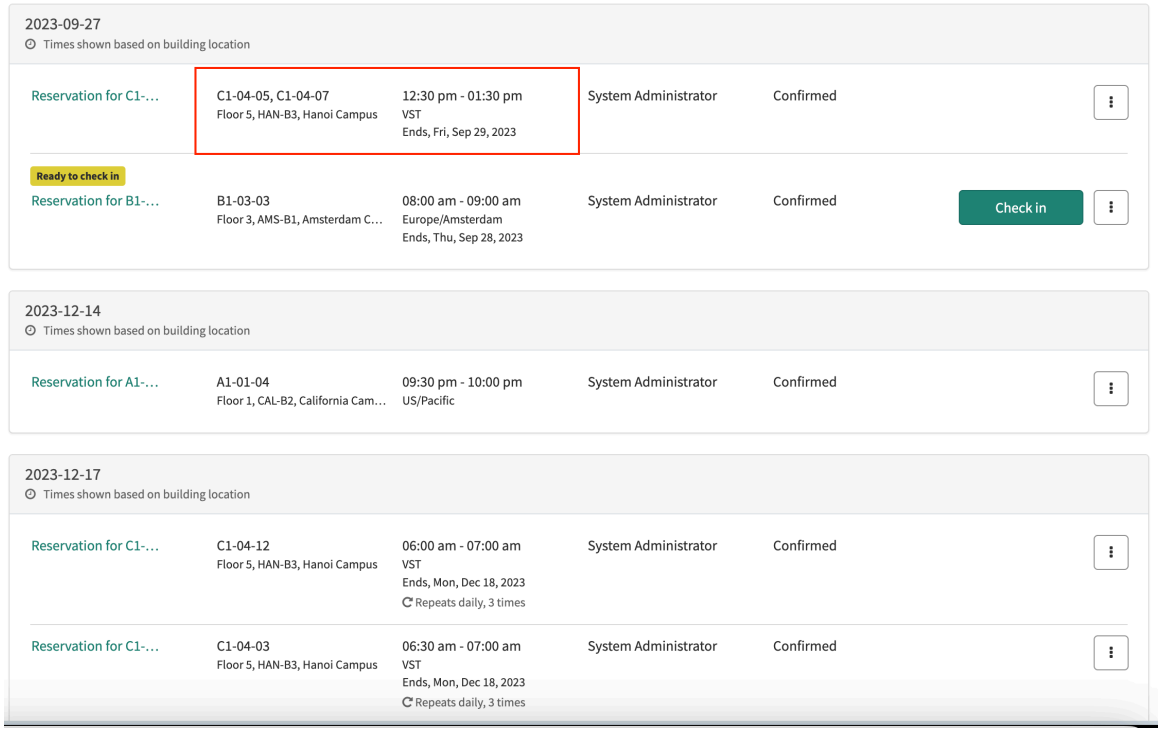
Field	Description
	services and add it to their reservation while updating it. ○ In case if you are adding a space while updating a reservation, then you must add the services manually. **Note:** In case, if you add a service item, a new case is created. If you update the reservation date, time, or location and update services by retaining or discarding them, then a reference is added to the new service (replacement case for) on the new case record and also a reference is added to the old service. A summary is added to the new case for items that are added, updated, or removed. For more information, see View and track workplace cases.
Edit <services name>	Click **Edit** to update the services. ○ The Update <services name> dialog box is shown. ○ Click **Update** to update the services.
Remove <services name>	Click **Remove** to remove the services from a reservation. A confirmation message is shown to confirm whether you want to remove the services from a reservation.

15. After verifying the services, employees can select a new date, time, and space to update the reservation details.

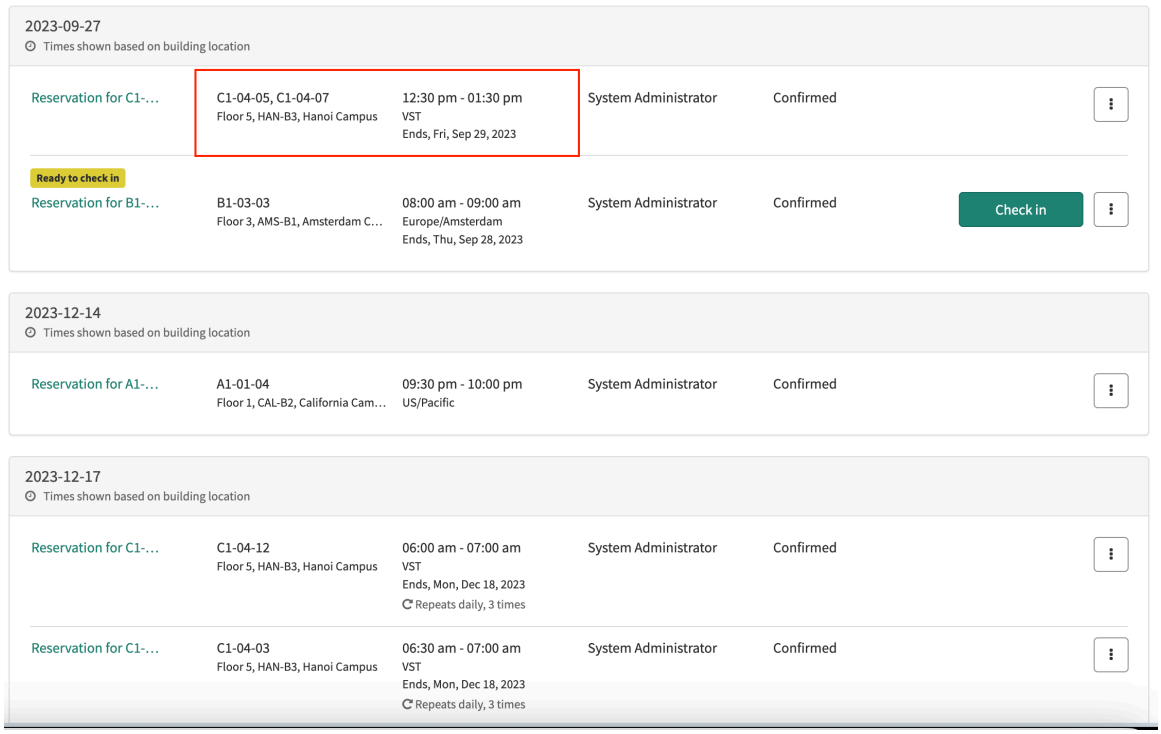
    On the **Reservation Details** page, select **Change date, time, or location** to update a reservation.

    On the Update meeting room reservation page, modify the **Start date and time** and **End date and time**. For more information about how to modify a reservation, see Share, modify, or cancel a reservation. If the item doesn't require any approval, the selected workplace item is reserved. The reservation details are displayed on the Reservation summary page. The state of the request is updated to **Confirmed**.



16. When you update a reservation, the Reservation details page shows the **Retain extra services** option to retain the services from the previous location and reservation.
    For more information about how to retain services, see Create a reservation.

17. Click **Submit reservation**.



18. Click **Reservation Summary** to navigate to the Reservation Summary page.

    In case of multi-day reservation, the Reservation Summary page will show the reservation end duration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

19. Click **My Reservation** to navigate to the My Reservations page.
20. View and track the progress of your reservation status using the My Reservations page.

- **Confirmed**: State to indicate that the reservation for the selected building is confirmed.

> **Note:**
> The **New space** state indicates that a new space is assigned due to a conflicted reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Conflicted**: State to indicate that the application was not able to resolve the recurring reservation. Employees must manually find an alternate space, date, and time. Use the **Actions** field on the Reservation Summary page to **Change reservation occurrence**, **Cancel occurrence**. **Cancel series**, or **Share reservation**.

  Note:
  When a conflicting recurring reservation gets auto-resolved with the auto-resolution feature, it's status in **Reservation subtype** column is shown as **Exception** on the Workplace Reservations table.

  For more information, see Auto-resolve recurring reservations.

21. The Reservation Summary page shows reserved spaces and it's status along with the duration for the reservation in case of multi-day reservation.

    Employees are informed in the case if they are viewing a multi-day reservation.

22. The **Actions** tab on the Reservation Summary page shows the following options:
    - Share Reservation: Perform the following steps to share a reservation:
      a. Select **Actions** > **Share reservation**.
      b. In the **Send reservation details to** field, select the users that you want to share the reservation with.
      c. In the **Include a note**, enter a note if required.
      d. Click **Send**.

      The reservation details are shared after the state of the reservation is **Confirmed**. If you edit the reservation details after sharing, the application will prompt you asking whether you want to send an email update to the users that you shared the reservation details with earlier.
    - Update Reservation details
    - Cancel Reservation: To edit or cancel your reservations, see Share, modify, or cancel a reservation.
23. Click **Check in** to check in a reservation, if the workplace item that you've reserved requires check-in and check-out.

    In the case an employee checks in their reservation, the complete reservation is checked in. The admin can indicate if a check in is allowed when there is still an active reservation happening on that space.

    Note:
    You must check in within 30 minutes before the reservation start time. If the reservation is not checked in within 30 minutes before the reservation start time, then the reservation is canceled. You will receive an email about the cancellation. The Check in option is also available on the My Reservations page.

24. Click **Check out** to check out a reservation.

    In the case an employee checks out their reservation, the end date and time is updated and the space is made available again.

    Check out within 30 minutes after the reservation end time. If the reservation is not checked out within 30 minutes after the reservation end time, you receive an email reminder to check out the reservation. The Check out option is also available on the My Reservations page.

You can perform the following from a shared reservation email:

- Login as System Administrator.
- Navigate to **All** > **Emails** > **Open shared reservation**.
- Two clickable links **Browse all spaces** and **Reserve a space for me** are shown:
  - **Browse all spaces**: Click the **Browse all spaces** link to open the Reservation portal search page.

    If the shared reservation start date (current date) is within the number of days specified in the **Max number of days for browse near a person** Reservable Module property, then the **Browse all spaces** clickable link from a shared email notification will show pre-filled dates for a selected team member or colleague on the reservation portal search page.

- On the Reservation portal search page, the **Browse near a person** is selected by default.

  If this path is not available, then, the **Browse all** path is used.

- All the fields are pre-filled for a selected team member or colleague.

- In case of multi-day reservation, the first day of a multi-day reservation is pre-filled. If the first day is in the past but the current date is still within the reservation time, the current date is selected. In case of multi-day reservation, consider the following:
  - Start date and time: The first day of the multi-day reservation is shown. Start time is the start time of the reservation.
  - End date and time: The End date and time of the reservation is pre-filled.

  For more information about multi-day reservation, see Create a multi-day reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If the start day (current date) of a shared reservation is past the value set in the **Max number of days for browse near a person** Reservable module property, the **Browse all spaces** clickable link will not show pre-filled dates on the Make a reservation search page. Application shows a validation error message "**Reservation date for the selected user has changed. Select a date**'. In this case, employees must manually, select the **Start date and time** and **End date and time**.

- **Reserve a space for me**: When an employee clicks open the **Reserve a space for me** link from an email, the space reserved for a colleague or team member is selected by default. The system will create a reservation with the same start and end date and time. If the start date of the reservation falls prior to the current date, then the current date will be taken as the start date of the reservation. For example, if the start date is October 15, 2023 and the current date is October 17, 2023, the system will use the current date (October 17, 2023).

Note:
When making a reservation directly by using the **Reserve a space for me** clickable link option, application ignores the value set in the **Max number of days for browse near a person** Reservable module property and creates a reservation.

- **1.** On the Reservation summary page, select **Actions** > **Share reservation**.
  2. In the **Send reservation details to** field, select the users that you want to share the reservation with.
  3. In the **Include a note**, enter a note if required.
  4. Click **Send**
  5. When you share a reservation, invitees will receive an email notification.

6. You can perform the following from a shared reservation email:
   - Login as System Administrator.
   - Navigate to **All** > **Emails** > **Open shared reservation**.
   - Two clickable links **Browse all spaces** and **Reserve a space for me** are shown:
     - **Browse all spaces**: Click the **Browse all spaces** link to open the Reservation portal search page.

       If the shared reservation start date (current date) is within the number of days specified in the **Max number of days for browse near a person** Reservable Module property, then the **Browse all spaces** clickable link from a shared email notification will show pre-filled dates for a selected team member or colleague on the reservation portal search page.

       - On the Reservation portal search page, the **Browse near a person** is selected by default.

         If this path is not available, then, the **Browse all** path is used.

       - All the fields are pre-filled for a selected team member or colleague.

       - In case of multi-day reservation, the first day of a multi-day reservation is pre-filled. If the first day is in the past but the current date is still within the reservation time, the current date is selected. In case of multi-day reservation, consider the following:
         - Start date and time: The first day of the multi-day reservation is shown. Start time is the start time of the reservation.
         - End date and time: The End date and time of the reservation is pre-filled.

         For more information about multi-day reservation, see Create a multi-day reservation.

       Note:
       If the start day (current date) of a shared reservation is past the value set in the **Max number of days for browse near a person** Reservable module property, the **Browse all spaces** clickable link will not show pre-filled dates on the Make a reservation search page. Application shows a validation error message "**Reservation date for the selected user has changed. Select a date**'. In this case, employees must manually, select the **Start date and time** and **End date and time**.

     - **Reserve a space for me**: When an employee clicks open the **Reserve a space for me** link from an email, the space reserved for a colleague or team member is selected by default. The system will create a reservation with the same start and end date and time. If the start date of the reservation falls prior to the current date, then the current date will be taken as the start date of the reservation. For example, if the start date is October 15, 2023 and the current date is October 17, 2023, the system will use the current date (October 17, 2023).

Note:
When making a reservation directly by using the **Reserve a space for me** clickable link option, application ignores the value set in the **Max number of days for browse near a person** Reservable module property and creates a reservation.

The reservation details are shared after the state of the reservation is **Confirmed**. If you edit the reservation details after sharing, the application will prompt you asking whether you want to send an email update to the users that you shared the reservation details with earlier.

- To edit or cancel your reservations, see Share, modify, or cancel a reservation.
- To download an iCalendar, see Download an iCalendar for a reservation.
- To view, add, or remove any invitees from the reservation, do the following:

1. On the Reservation summary page, select the **Invitees** tab.

   The details of the invitee their name, email, assigned location, and invite acceptance states are displayed.

2. If you've selected multiple workplace items and you want to reassign the invitees to a different location, do the following:
   a. Select the check box next to the invitee.
   b. Select **Actions** > **Assign to**.

      You can also select the Actions icon (⋮) next to the invitee details.

   c. In the **New location assignment** field, select the location where you want to move the invitee.
   d. Click **Send update**.
3. Add or remove an invitee.
   a. On the Reservation summary page, select **Actions** > **Change reservation details**.
   b. On the Reservation details page, go to the **Add invitees to this reservation** section.
   c. Add an invitee by selecting the invitee name from the search list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Remove an invitee by clicking the remove icon () near the invitee name.

e. Click **Update reservation details** tab.

Invitees and visitors receive email notifications for the following actions:

- When a reservation is created, they will receive an email notification that they are invited to the reservation.
- When a reservation is cancelled or updated.
- When an invitee or visitor is removed from the reservation, they will receive an email notification that the invite has been canceled for them.

Note:
If push notifications are enabled in your organization and you have the Workplace Service Delivery for Mobile application, you will receive notifications for your reservation on your mobile device. For more information on reservation-related push notifications, see Mobile push notifications for workplace reservations.

For more information about making multi-day reservation using the Space Details page, see Set a location as favorite using the Space details page.

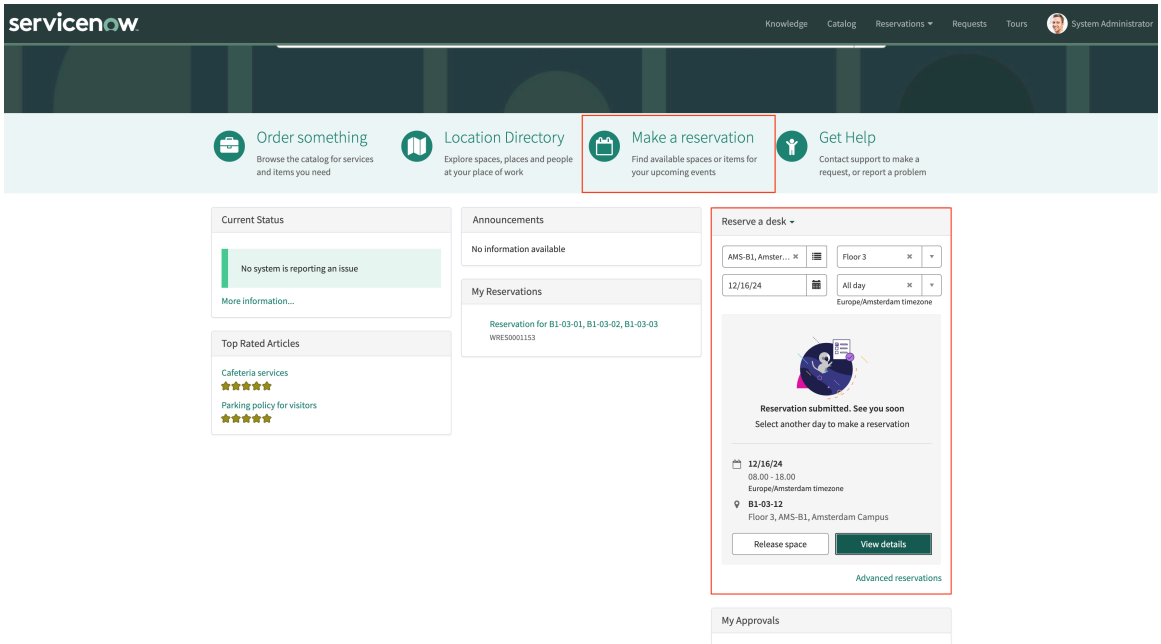
Create neighborhood reservations

Reserve neighborhood spaces using Advanced reservation.

Before you begin

The option to reserve neighborhood spaces is available only if your administrator has enabled the **Enable browse by neighborhood** option on the Reservable Module Configuration. For more information, see Configure a reservable module.

The employee can see and select neighborhoods on the reservation portal only when:



- The employee is assigned to the neighborhood, and the neighborhood is restricted.
- The employee is assigned to the neighborhood, and the neighborhood is not restricted.
- The neighborhood is not restricted and the employee is not assigned to it.

Role required: sn_wsd_core.workplace_user

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Select any of the following context menu navigation options to make a neighborhood reservation.

The Make a Reservation page opens in a new tab.

2. Select a Reservable Module configuration.

   For example, select any of the following Reservable Module configuraiton. For more information, see Configure a reservable module.

   - Desks
   - Desks with an Area
   - Meeting rooms require approval
   - Meeting rooms
   - Desks with a shift

3. To search for reservable spaces in a neighborhood, select **Browse by Neighborhood**.

> **Note:**
> The **Browse by Neighborhood** option is only available if the **Enable browse by neighborhood** option is selected on the Reservable Module configuration page. For more information, see Configure a reservable module.

https://player.vimeo.com/video/1098053063?h=55e60c885e&badge=0&autopause=0&player_id=0&app_id=58479

4. Complete the following information.

Fill in the form fields.

Make a reservation form

Field Name	Description
Building	Name of the building for a selected campus. Select a building from the list. For example, Demo Campus. The building names and location names are alphabetically sorted or sorted according to the **Order** that you have configured on the Buildings and Regions tables. When a sort **Order** is configured for a building or region, the building names and locations are sorted accordingly. If the sorting **Order** value isn't specified for an item, the items are listed on top of the list (ascending order), and sorted alphabetically. The building names and location names are alphabetically sorted based on the label name. For example Building A, Building B, and so on.
Floor	Floor of a building where you want to make a reservation. The floor names are either alphabetically sorted or the values are sorted based on the indicated sort order. You can configure the sort **Order** in the Floors table. If the sorting **Order** value is not specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The Floor names are alphabetically sorted based on the names and labels.
From **Note:** The time directive fields (From, time, To) are also available on the MESP (Mobile Employee Service Portal) on the Now Mobile app.	Start date of your reservation. For a single day reservation, only the **From** field is shown and not the option to enter the end date. ○ Employees can't select a date and create a reservation if the start date exceeds the Max days in future Reservable module value. Thisn't value is configured on the

Field Name	Description
	Reservable module by your administrator. For more information, see Configure a reservable module. When the Max days in future value is configured by your administrator, you can't select a date past the max allowed date. The dates in the calendar date picker are inactive for dates that are too far in future. **Note:** If the Max days in future value isn't configured, the date selection isn't restricted. Date selection is based on the Max number of occurrences value. For more information, see Configure a reservable module. ○ If you enter an invalid date which is greater than what is specified in the **Max days in future** value, the application resets the date to the current date.
Time	Start time when the reservation begins. Employees can select time using the drop-down list or by entering the time in the field. The time increment value depends on the value set by your administrator. Default reservation time duration available for selection is 30 minutes. The *time_picker_interval_size* property for reservation start time and reservation end time is configured using the Service Portal Widget instances. The start time field increment value depends on the value set in the *time_picker_interval_size*. Default reservation time increment value duration is 30 minutes. **Note:** You can't select a date that occurs in the past. The time for a selected location depends on the building time zone.
To	End date of your reservation. Employees can't select a date and create a reservation when the End date exceeds the Max days in future value. The Max days in future value specifies the maximum number of the days in the future up to which the Reservable module can be reserved.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	Note: In the case of a single day reservation, option to enter the end date isn't available. If you enter an invalid date which is greater than what is specified in the **Max days in future** value, the application resets the date to the current date. **Note:** If the **Max days in future** value isn't enabled, then the date selection isn't restricted and is based on the **Max number of occurrences** value configured in the Reservable module. For more information, see Configure a reservable module.
Time	End time when you would stop using the workplace item. Employees can select the end time using the drop-down list or by entering the time in the field. The end time increment value depends on the value set by your administrator. Default reservation end time duration is 30 minutes. The *time_picker_interval_size* property for reservation start time and reservation end time is configured using the Service Portal Widget instances. The start time and end time field increment value depends on the value set in the *time_picker_interval_size*. Default reservation time increment value duration is 30 minutes. **Note:** You can't select a date that occurs in the past. For example, If the start time is 09:00, you can select an end time after this duration. You can't select a time before 09:00 on the same day. The time for a selected location depends on the building time zone.
Recurring	Option to reserve the workplace items on a recurring basis. Specify the number of days and the number of times that you want to repeat the reservation in a recurring series. For weekly reservations, select the days of the week for the reservation. The Recurring option is displayed based on the configuration that your admin has set.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	Also, if there are any recurring reservation conflicts, they're auto-resolved if your admin has configured the same. Auto-resolve recurring conflicts</uicontrol> option is enabled on the Reservable module form. The application tries to auto-resolve recurring reservation conflicts. For more information, see Auto-resolve recurring reservations. **Note:** Adding extra services option isn't available for Recurring reservations.
All day	Option to reserve the workplace item for an entire day or a single day. This option appears if your Workplace administrator has enabled the All day reservation setting on the selected **Type**. The start and end times of the reservation depend on the timings set by your organization. The **All day** option is also available on the Space details page. **Note:** The **All day** option's appearance depends on your administrator's configuration. If your admin has mandated all day reservation for a selected **Type**, the reservation is automatically made for the entire day. In case of All day you can only modify the Start date of the reservation.
Add another building	Reserve multiple workplace items spanning multiple buildings. The buildings time zones are different for a same date and time in a reservation. **Note:** This option is available if you have selected **Allow multiple reservations** check box on the **Reservable Module** > **Reservable Module Configuration** tab. For more information, see Create multi-building reservations.

5.

6. Click **Search**.
   The available spaces in a neighborhood are displayed.

   Note:
   Space admins or space planners determine if employees are permitted to view the neighborhoods on the location directory.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. From the Search results, select **Add** to add a reservable space.
8. Switch between the **Card view** and **Schedule view** tabs to review and select the available spaces.
   In the schedule view for a selected building, you see the applicable date and time.
   The bottom pane shows the number of items that you've selected from the search results.
9. Select the **Map view** tab if your organization is using Indoor Mapping for interactive locations and wayfinding.
   The floor map shows the neighborhood spaces based on the availability and employee assignment.
10. Click **Next**.

    Verify the reservation details for selected spaces.
11. Select **Add Services** to add room configurations or catering for selected spaces.
12. Review the Reservation Summary details.
13. Click **Submit Reservation**.
    If any of the items don't require approval, the selected workplace items are reserved. The status of the request is updated to **Confirmed**. If any of the items need approval, your request is submitted for approval. The status of the request is updated to **Awaiting approval**.

Create reservation for multiple workplace items

Reserve multiple workplace items for the same date and time in a single reservation.

Before you begin

Role required: sn_wsd_core.workplace_user

About this task

Reserve multiple workplace items at the same time, either for yourself or on behalf of others.

Before booking a room or desk, check the availability of the selected item using the Schedule view. Review the standard services that are available with the workplace items.

Note:
As an admin or reservation manager, you cannot edit a reservation opened manually using a URL.

Procedure

1. Navigate to the Make a Reservation page from any of the following starting points.
   The Make a Reservation page opens in a new tab.
2. Select a Reservable Module configuration such as **Desks**, **Meeting rooms Desks within an area** and so on.

   For more information how to configure a Reservable module, see Configure a reservable module.
3. Select **Search**.
   The available workplace items which match the search criteria appear.

   Note:
   While browsing near a person, if there are any private spaces, then they are not displayed in the search result.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can switch between **Card view** tab and **Schedule view** tab to review the availability of workplace items. If your organization uses indoor map providers like Indoor Mapping or Mappedin, use the **Map view** to provide interactive locations and wayfinding to workplaces. Indoor Mapping is inbuilt map provider with WSD while Mappedin is a third-party map provider that is integrated with WSD. DXF maps are not supported.

4. **Optional:** Sort the workplace items in alphabetical order or by using a filter with the **Show filter** option.

   (Optional) You can also sort the workplace items to display your favorite locations first. To view the option, you must have access to the Employee Center and also have favorite locations. Your favorite locations are displayed first in an alphabetical order followed by the other locations that match the search criteria.

5. Select the workplace item that you want to reserve using any of the following options.
   - Click **Add**.
   - If you have selected the **Schedule view** tab, click **Add**.
   - If you have selected the **Map view** tab, select any space that is colored green and click **Add**.
6. Select **Next**.
7. On the form, fill in the fields.

Reservation Details form

Field	Description
Reservation subject	Subject of your meeting.
Make subject private	Option to make reservation subject as private.
Make subject private	Option to mark the subject of the reservation as private.
Reserve these items together for the same person	Select this option to reserve all the workplaces for the same user.
This reservation is for	If you are requesting a reservation on someone else's behalf, select the name of that person. Leave this field empty if you are requesting a reservation for yourself.
Number of attendees	Number of people expected to attend the meeting.
Add invitees to this reservation **Note:** This section appears only if your administrator has enabled the configuration to invite attendees to this workplace location. This option will not appear if the **Number of attendees** option is displayed.	
Invite coworkers	Select the employees whom you want to invite to the reservation.
Invite external visitor	Option to invite external visitor.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: This option appears only if you have Workplace Visitor Management application installed. ○ If you have already registered the visitor before, do the following: **a.** Select **Previous visitor**. **b.** In the **Select a prior visitor** field, select the visitor. You can also preview the visitor details and modify any details if required. The details are updated automatically in all the visitor-related records and registration records. ○ If you are registering the visitor for the first time, do the following: **a.** Select **Add new visitor**. **b.** Select the **Visitor type**. **c.** If the is a special guest, enable **VIP**. **d.** Enter the **First name** of the visitor. **e.** Enter the **Last name** of the visitor. **f.** Specify the **Email Address** of the visitor to send registration details and communications. **g.** Enter the **Phone number** of the visitor. **h.** Enter the **Organization** details of the visitor. **i.** Enter the **Title** of the visitor. **j.** Specify any private information in the **Private notes** section. **k.** Select their preferences in the **Visitor preferences** and **Notification preferences**. **l.** Click **Save and add** to add the visitor.
Sensitivity	Nature of your meeting. Select **Private** if you want to hold a confidential meeting.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: When you mark a meeting as **Private**, the **Reservation subject** becomes hidden for other people and is displayed as ** **private** **. Only you or the person for whom you have requested this meeting can see the subject.

8. Click **Submit reservation**.

Result

If the items do not require any approval, the selected workplace items are reserved. The status of the request is updated to Confirmed.

If any of the items needs approval, then your request is submitted to the approver. The status of the request is updated to Awaiting approval.

What to do next

- To view, edit or cancel your reservations, see Share, modify, or cancel a reservation.
- To view, add or remove any invitees from the reservation, do the following:
  1. On the Reservation summary page, select the **Invitees** tab.
  2. To change the location of any invitees, do the following:
     a. Select the check box next to the invitee.
     b. Select **Actions** > **Assign to**.

        You can also select the actions icon (⋮) next to the invitee details.

     c. In the **New location assignment** field, select the location where you want to move the invitee.
     d. Click **Send update**.

        An email is sent to the invitees about the reservation changes.
  3. To add or remove an invitee, do the following:
     a. On the Reservation summary page, select **Actions** > **Change reservation details**.
     b. In the Reservation details page, go to the **Add invitees to this reservation** section.
     c. To add an invitee, select the invitee name from the search list.
     d. To remove an invitee, click the remove icon (✖) near the invitee name.
     e. Click **Update reservation details**.

     If you have added an invitee, an email is sent to the invitee with the reservation details. If you have removed an invitee, an email is sent that the reservation is canceled.

Create a group reservation

Reserve multiple spaces for different users in a single group reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Note:
Workplace users can make a group reservation only if the Reservable Module configuration property *Allow group reservation* is set by your workplace administrator. Make sure that the *Allow invitees* property is unchecked in the Reservation Widget Configuration. You cannot add or invite attendees to a group reservation. For more information, see Configure a reservable module.

Role required: sn_wsd_core.workplace_user

About this task

Reserve multiple spaces at a time for different employees in a single group reservation. After you submit the reservation, the reservations are created individually for each employee along with a parent reservation. You can view all the individual reservations in a single parent reservation and modify any details if required.
For example, if you are reserving four workplaces for four different employees. After you submit the reservation, a total of five reservations are created. The fifth reservation is the parent reservation where you can see all the child reservation details and update these reservations as required.

Procedure

1. Navigate to the Make a Reservation page from any of the following starting points.
   The Make a Reservation page opens in a new tab.
2. Select a Reservable module.
   By default, the **Desks** reservable module is selected.
3. Select a Reservable Path.
   By default, **Browse All** Reservable path is selected.

   - **Campus**: Option to select a campus.
   - **Building**: Option to select a building where you want to make the reservation.
   - **Start date**: Option to enter the start date for your reservation.
   - Time: Option to select the start time for your reservation. The time is displayed based on the selected building's time zone.
   - **End date**: Option to enter the end date for your reservation.
   - Time: Option to select the end time for your reservation.
   - All day: Option to create an all day reservation.
   - **Recurring**: Option to create a recurring reservation on a recurring basis. Select this field and specify the number of days and the number of times that you want to repeat the reservation. For weekly reservations, select the days of the week for reservation.
4. Select **Search**.
   The available workplace items that match the search criteria appear.

   Note:
   You can select a space using **Card view**, **Map view** or **Schedule view**.

   Map view displays workspace on a floor map. Make sure that you have configured Indoor Mapping as your map provider.

5. Select the workplace item that you want to reserve using any of the following options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Select **Add**.

  Select multiple spaces as required for the group reservation. For example, if there's a group with five workspace users, you can add five spaces for a selected campus or location.

6. Select **Next** to reserve the selected spaces.
7. On the form, specify the reservation details.

   a. In the **Reservation subject**, the reservation name or subject is auto-populated. Change or modify the reservation subject, as required.

   b. **Optional:** To enable privacy for a selected workspace, check the **Mark space details private** check box.

   c. Clear the **Reserve these items together for the same person** option.

> **Note:**
> When the **Reserve these items together for the same person** is unchecked, the **This reservation is for** option is not displayed on the Reservation details page since this is a group reservation. The space cannot be reserved for a single workplace user.

   Selected spaces in a campus are displayed.

8. From a campus, select a workplace user from **This reservation is for** drop-down list.

   Provide a workplace user name for whom you are creating this reservation. Repeat this step for all the spaces displayed for a campus.

9. Click **Submit reservation**.

Result

The group reservation is created. You can view the reservation details on the Reservation summary page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Individual reservations are created for each user. Users can view the reservation details in their own My reservations page. They cannot edit or cancel the reservation.

  Note:
  You cannot share the details of a group reservation from the parent reservation directly. Instead, you can share the individual reservations that are created from the group reservation.

- To edit a reservation, open the parent reservation and click **Actions** > **Change reservation details**. After making the changes, click **Update reservation details**.

Enable shift-based reservation

As an admin, enable employees to reserve a workplace item for a shift. Configure the spaces that can be reserved for a shift. Specify the users who can make shift-based reservation.

Before you begin

To enable shift-based reservation, select the **Apply to shift** field on the reservable module form of the workplace item.

Ensure you have the following information:

- Appropriate shift schedules.
- Data of the employees who would operate from the office in this shift.
- Data of the workplace spaces to be made available for this shift.

Ensure that the **Building** field on the Shift form has a value.

Role required: sn_wsd_core.workplace_manager

Procedure

1. Navigate to **Workplace Core** > **Shift Management** > **All**.
2. Select the shift to which you want to assign spaces and users.
3. To assign users to the shift, scroll down and click **Edit** in the Users related list.
   Only the assigned users can make reservations for this shift on the Reservation portal.
4. On the Edit members form, add users to the shift by doing the following.

   a. Select the users from the **Collection** column on the left.

   b. To move the selection to the **Users List** column on the right, use the add-remove icon.

   c. Click **Save**.

5. To assign spaces to the shift, scroll down and click **Edit** in the Locations related list.
   Only the assigned spaces are displayed for shift-based reservation on the Reservation portal.
6. On the Edit members form, add spaces to the shift by doing the following.

   a. Select the spaces from the **Collection** column on the left.

   b. To move the selection to the **Locations List** column on the right, use the add-remove icon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Click **Save**.

7. Click **Update**.

Result

The users and spaces are assigned to the shift. When an employee wants to make a shift reservation, the Reservation portal displays the following information:

- The shifts for which the employee can make a reservation.
- The spaces that are available for reservation in the selected shift.

Set a location as favorite using the Space details page

Set your preferred workspace as your favorite. Your preferred or favorite spaces are prioritized and shown on top of the search results when reserving a space.

Before you begin

Important:
The favorite option appears only if you have access to the Employee Center and if your administrator has enabled the favorite option.

Role required: sn_wsd_core.workplace_user

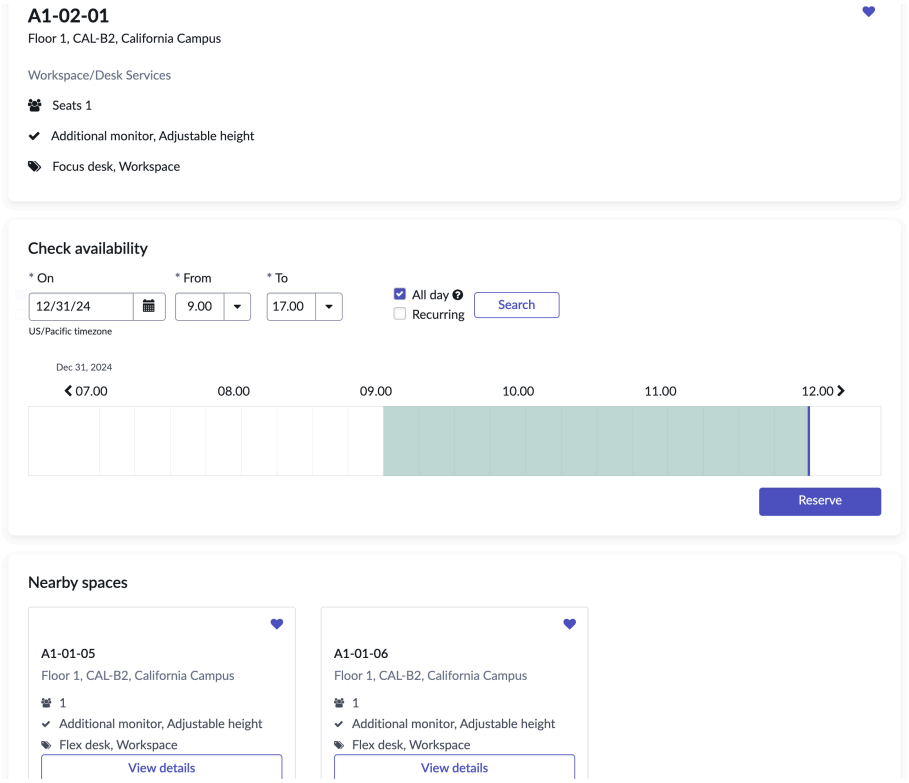
About this task

You can set a location as favorite from any one of the following locations in the Workplace Service Portal:

- Quick Reservation widget
- Make a reservation
- Location Directory
- Space card details

You can directly select and reserve your favorite locations from the My favorites page on the Employee Center.

Note:
For more information about the derivation logic used by Workplace Reservation Management on the Space details page to assign reservable modules, see Reservable module derivation logic for Space details.



Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. From the top right menu, select the favorite icon (♡).

   My favorites page is displayed.
3. Select a space to view the space details page.

   For example: **Desk A1.0501**.
4. On the **Check Availability** section, select the start date, time, and end date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the **Max days for multi-day** Reservable Module property value is set and is greater than 1, employees can reserve a space for multiple days. Default value of **Max days for multi-day** property is 1. For example, if **Max days for multi-day** value is set to 10 days from the current date, then, only the next available 10 days are available for you to select and make a reservation. Other dates are disabled and are not available for selection.

5. Select **Search**.
6. In the **Card view**, **Schedule view** or **Map view** In the Card view, Schedule view or Map view, Mark a location as favorite by clicking the favorite icon (♡)
7. The **Schedule view** in case of multi-day reservation displays available spaces in a day view.
   - Clicking the chevron will take you to the next day and previous day.
   - Three-hour blocks are used to show the time scale in a 24-hour format.
   - In case of a single day reservation, one-hour blocks are used to show the time scale for a day.
8. The calendar shows the available time lines when the reservable modules can be reserved.
9. Map view shows the selected workplace spaces on a map, if maps are enabled by your organization.
   If employees have a permanent assignment in their workplace profile, the employee names are displayed on the map for a selected space. For more information, see Display permanent seat assignments on floor maps.
10. Select **Reserve**.
11. Review the Reservation details page.

    For more information about Reservation details page, see Create a reservation
12. Submit your Reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

13. Sort the workplace items to display your favorite locations using the **My favorites first** sort option.

    a. By default, if you have favorite locations, the default sort option is set to **My favorites first**.

       The workplace items are then sorted and all your favorite locations are displayed first in an alphabetical order followed by the other workplace items that match the search criteria.

    b. If you are browsing for a workplace location near a person, you can sort the workplace items to display your favorite locations first using the **My favorites first** sort option.

       The favorite locations are displayed based on the closest proximity with the person's location.

14. To remove a location from the favorites list, deselect the favorite icon in the location details.
15. On the Reservation Portal, you can view and perform the following actions after you set a location as favorite:

    a. After your perform the search operation, you can sort the workplace items to display your favorite locations at first using the **My favorites first** sort option. By default, if you have favorite locations, the default sort option is set to **My favorites first**.

       The workplace items are then sorted and all your favorite locations are displayed first in an alphabetical order followed by the other workplace items that match the search criteria.

    b. If you are browsing for a workplace location near a person, you can sort the workplace items to display your favorite locations first using the **My favorites first** sort option.

       The favorite locations are displayed based on the closest proximity with the person's location.

    c. If you are creating a recurring reservation, you can see the recurring availability within the series of the space on the space details page.

16. To remove a location from the favorites list, deselect the favorite icon in the location details.
17. On the Reservation Portal, you can view and perform the following actions after you set a location as favorite:

    a. After your perform the search operation, you can sort the workplace items to display your favorite locations at first using the My favorites first sort option.

       By default, if you have favorite locations, the default sort option is set to **My favorites first**. The workplace items are then sorted and all your favorite locations are displayed first in an alphabetical order followed by the other workplace items that match the search criteria.

    b. If you are browsing for a workplace location near a person, you can sort the workplace items to display your favorite locations first using the My favorites first sort option.

       The favorite locations are displayed based on the closest proximity with the person's location.

18. In the Workplace Service Portal Quick Reservation widget, after you specify the search criteria, the most suitable location is displayed based on your favorite location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If there is any favorite location that best matches the search criteria, the Quick Reservation widget displays that location as the best match.
- You can also set a best match workplace location as favorite directly from the Quick Reservation widget.

19. If you want to reserve a space using a shared reservation, after you click **Reserve a space for me**, the application automatically reserves one of your favorite locations that has closest proximity with the space reserved in the shared reservation details.

Result
The location is added to your favorites list.

Create a reservation along with a shared reservation

Reserve a workplace near to your co-worker using their shared reservation details.

Before you begin
Role required: sn_wsd_core.workplace_user

Procedure

1. Open the email containing the reservation details sent by your co-worker.
2. Review the reservation details and scroll down to the end of the email.
3. To search for all the available spaces that are available near the co-worker's workplace, select **Browse all spaces**.
   The Reservation portal is opened with pre-filled details as per your co-worker's reservation. You can select a suitable workplace by yourself.

   For more information on how to make a reservation on the Reservation portal, refer to Create a reservation.
4. To automatically reserve the most suitable and nearby space to your co-worker, select **Reserve a space for me**.
   An available and the most nearby space in your co-worker's building is reserved. The details are displayed in the Reservation summary page. The reservation is confirmed when the state changes to Confirmed.

   Note:
   This option is unavailable for multi-reservation.

Create a reservation including a virtual meeting link

Enable employees who are located outside the office to join a reservation by using a virtual meeting link. A virtual meeting link is created for an employee selected in "On behalf of".

Before you begin

Note:
You can create a virtual meeting link only if your administrator has enabled the virtual meeting configuration. For more information, see Configure a reservable purpose and Create a reservation.

Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to the Make a Reservation page from any of the following starting points.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Make a Reservation page opens in a new tab.

2. Select the type of workplace item that you want to reserve.
   The types are displayed as tabs, such as a meeting room or desk.
3. **Optional:** Select **Browse all**.
   The **Browse all** reservable path is selected by default.
   a. Search for a workplace item that you want to reserve using the following available criteria.
4. Click **Search**.
   The workplace items which match the search criteria and which are available for reservation are displayed.

   Note:
   While browsing near a person, if there are any private spaces, then they are not displayed in the search result.

   Note:
   You can switch between the **Card view** tab and **Schedule view** tab to review the availability of workplace items. If your company uploads floor maps, view the maps using Mappedin or Indoor Mapping. For more information on how to use floor maps, refer to Workplace Space Mapping.

5. **Optional:** Sort the workplace items in alphabetical order or by using a filter with the **Show filter** option.

   (Optional) You can also sort the workplace items to display your favorite locations first. To view the option, you must have access to the Employee Center and also have favorite locations. Your favorite locations are displayed first in an alphabetical order followed by the other locations that match the search criteria.

   Note:
   You cannot sort workplace items in alphabetical order or by your favorite locations if you are browsing spaces near a person. The spaces near a person are searched based on proximity.

6. Select the workplace item that you want to reserve using any of the following options:
   - Click **Add**.
   - In the **Schedule view** tab, click **Add**.
   - In the **Map view**, select any space that is colored green and then select **Add**.
7. Select **Next**.
8. On the form, fill in the fields.

Reservation details from

Field	Description
Reservation subject	Subject of your meeting.
Make subject private	Option to make reservation subject as private.
Make subject private	Option to mark the reservation as private and to hide the reservation subject.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Add a virtual meeting link	Option to generate a virtual meeting link so that remote employees can join the reservation. **Note:** ○ If a virtual link is not created successfully, the reservation details page doesn't display a meeting link and this option is cleared in the reservation record. To generate a meeting link again, select this option and submit the record. ○ If you add a meeting link for Microsoft Teams, the application retrieves meeting details while synchronizing the event with a calendar provider.
This reservation is for	If you are requesting a reservation on someone else's behalf, select the name of that person. Leave the field empty if you are requesting a reservation for yourself.
Add invitees to this reservation	
Note: This section appears only if your administrator has enabled the configuration to invite attendees to this workplace location.	
Invite coworkers	Select the employees whom you want to invite to the reservation.
Invite external visitor	Option to invite an external visitor. **Note:** This option appears only if you have the Workplace Visitor Management application installed. ○ If you have already registered the visitor before, do the following: **a.** Select **Previous visitor**. **b.** In the **Select a prior visitor** field, select the visitor. You can also preview the visitor details and modify if required. The details are updated automatically in all the visitor-related records and registration records. ○ If you are registering the visitor for the first time, do the following: **a.** Select **Add new visitor**. **b.** Select the **Visitor type**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	c. If the visitor is a special guest, enable **VIP**. d. Enter the **First name** of the visitor. e. Enter the **Last name** of the visitor. f. Specify the **Email Address** of the visitor to send registration details and communications. g. Enter the **Phone number** of the visitor. h. Enter the **Organization** details of the visitor. i. Enter the **Title** of the visitor. j. In the **Private notes** section, specify any private information. k. In the **Visitor preferences** and **Notification preferences** fields, select the visitor's preferences. l. Click **Save and add** to add the visitor.
Add extra services	Extra services available with the reservation.

9. Click **Submit reservation**.

Result

The reservation is created with a virtual meeting link. If you have invited attendees to the reservation, the meeting link is provided to them along with the reservation details.
To view the reservation recording, go to Reservation summary of the reservation and select **Additional details**. If passcode is configured for virtual meeting provider, then, in the **Additional details**, you can also view the relevant passcode. Only the organizer and the user specified in the **This reservation is for** field can view the passcode.

- Zoom: If a Zoom meeting link is added, the link appears in the **Location** field of the email containing the meeting invite.
- Microsoft Teams: When a reservation is created with a virtual meeting link, the application retrieves the meeting link and the joining-related details. When this reservation is synchronized with Microsoft Outlook calendar, the meeting link and the joining-related details are added to the body of the calendar event. Similarly, when a reservation is created in the Microsoft Outlook calendar using the **Teams meeting** toggle button, the meeting link is retrieved and saved as a virtual meeting link.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
As the meeting link appears in the body of the email, in any case, if you want to update or change the meeting details, you must do it only using the Workplace Reservation Management. Because when a reservation synchronization is performed, the details (in this case, the meeting link and details) are synchronized only in one way, that is, from Workplace Reservation Management to the calendar provider(in this case Microsoft Teams). If you already made any changes to the meeting details or the notes from the calendar provider, it is overwritten by Workplace Reservation Management when a synchronization is performed.

- **Any other virtual meeting providers**: The meeting link is added in the **Location** field of the email containing the meeting invite.

Create a shift reservation

Reserve a workplace item for a shift. Create a single reservation or a recurring reservation for the same shift.

Before you begin
Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to the Make a Reservation page from any of the following starting points.
   The Make a Reservation page opens in a new tab.
2. Search for a workplace item that you want to reserve using the following available criteria.
   - **Building**: Name of the building.
   - **Type**: Workplace item that you want to reserve, such as a meeting room or desk.
   - **Shift schedule**: Shift for which you want to reserve a workplace item.
   - **Start date**: Date when you want to reserve the workplace item.
   - **Recurring**: Option for reserving the workplace item on a recurring basis.
   - **Recurring end date**: This option appears if you select the **Recurring** option. Select the end date of the recurring reservation.
3. Click **Search**.
   The workplace items which match the search criteria and which are available during this shift are displayed.

   Note:
   You can switch between the **Card view** tab and **Schedule view** tab to review the availability of workplace items. If your company uploads floor maps, view the maps using Mappedin or Indoor Mapping. For more information on how to use floor maps, refer to Workplace Space Mapping.

4. **Optional:** Sort the workplace items in alphabetical order or by using a filter with the **Show filter** option.

   (Optional) You can also sort the workplace items to display your favorite locations first. To view the option, you must have access to the Employee Center and also have favorite locations. Your favorite locations are displayed first in an alphabetical order followed by the other locations that match the search criteria.

5. Select the workplace item that you want to reserve using any of the following options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Click **Add**.
- If you have selected the **Schedule view** tab, click **Add**.
- If you have selected the **Map view** tab, select any space that is colored green and click **Add**.

6. Select **Next**.
7. On the form, fill in the fields.

Reservation details form

Field	Description
Reservation subject	Subject of your meeting.
Sensitivity	Nature of your meeting. Select **Private** if you want to hold a confidential meeting. **Note:** When you mark a meeting as **Private**, the **Reservation subject** becomes hidden for other people and is displayed as ** **private** **. The only people who can see the subject are you or the person for whom you have requested this meeting.
This reservation is for	If you are requesting a reservation on someone else's behalf, select the name of that person. Leave this field empty if you are requesting a reservation for yourself.

8. Click **Submit reservation**.

Result
If the item does not require any approval, then the selected workplace item is reserved. The status of the request is updated to Confirmed.

If you requested reservation for an item that requires approval, then your request is submitted to the approver. The status of the request is updated to Awaiting approval.

What to do next
Review your reservation details. To edit or cancel your reservations, see Share, modify, or cancel a reservation.

Share, modify, or cancel a reservation

You can view, modify (update), or cancel a reservation. Update the reserved workplace item or the date and time for a reservation.

Before you begin
Role required: sn_wsd_core.workplace_user

About this task
When you submit a reservation, you receive an email notification with the details of your reservation and its status. However, you can also view the details of your reservations, modify or cancel your reservation, and track the progress of your reservation using the **My Reservations** page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
As an admin or reservation manager, you cannot edit a reservation opened manually using a URL.

You can also view, edit, or cancel a reservation using the Virtual agent chat support. Navigate to **Workplace Core** > **Workplace service portal**, then select the chat icon ( ). Enter your question or select **Show Me Everything** to select from a list of available options to make your reservation changes.

You can also update the reserved workplace item in your reservation and change the date and time of the reservation.

Note:
You can't edit a reservation made using Microsoft Exchange Online.

Procedure

1. Navigate to **My Reservations** page from any of the following starting points.
   The **My Reservations** page opens in a new tab. All the reservations are listed according to the reservation date. The time is displayed based on the selected building's time zone.
2. **Optional:** To view the reservations that you have made on behalf of others, select **Requested for** > **Reserved for others** > **.**
3. **Optional:** Select **View** to view reservations based on their status such as **Upcoming**, **Pending**, **Past**, **Cancelled**, or **All**.
4. **Optional:** To search for a reservation, enter the details in **Search my reservation**.
5. Select a reservation to view its details.
   Review the details of your reservation such as reservation number, status, item details, and services available.
6. Perform the following actions on your reservation:

Actions that you can perform on a reservation

Action	Steps
Update a reservation	**a.** Select **Change reservation details** from the Actions list. **b.** On the form, update the information that you want to change. **c.** Select **Update reservation details**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Action	Steps
	Note: ○ If you're changing the location of a reservation, ensure that you change the location name in the subject in case it's mentioned. ○ If you have additional services in the reservation, the workplace service case remains open until all the service item requests are fulfilled. Based on the configuration set by the admin, unfulfilled service item requests are either updated, or canceled and recreated.
Update additional services of a reservation	**a.** Select **Change reservation details** from the Actions list. **b.** Select **Edit** for the service that you want to update. **c.** On the pop-up, perform either of the following steps based on your requirements: ▪ Add another service item ▪ Change the quantity of an existing item ▪ Remove an existing item **d.** Select **Update reservation details**. Service items that are within their lead time can't be modified. If a back-end error occurs and you're not able to edit the services, contact your admin or case manager to modify the service items. **Note:** Based on the configuration set by the admin, one of the following scenarios might occur when you edit a service: ○ The unfulfilled requests that have changes are moved to **Closed Skipped**, and only those requests are created again with the updated information. ○ All the unfulfilled service item requests are moved to **Closed Skipped**, and new requests are created with updated information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Action	Steps
Share reservation details	**a.** Select **Share reservation** from the Actions list. **b.** In the **Send reservation details to** field, select the users with whom you want to share the reservation. **c.** In the **Include a note**, enter a note if necessary. **d.** Select **Send**. The reservation details are shared via an email notification after the reservation is confirmed. **Note:** You can't share the details of a group reservation from the parent reservation directly. Instead, you can share the individual reservations that are created from the group reservation.
Cancel a reservation	**a.** Select **Cancel reservation** from the Actions list. **b.** Specify a reason for canceling the request in the **Cancel notes** field. **c.** Select **Yes**.

Result
The reservation is updated with your changes and an email notification is sent with the details of your reservation.

Reserve a workplace using the Quick Reservation widget

Reserve a workplace quickly by using the Quick Reservation widget in the Workplace Service Portal. The widget enables you to select from a list of available time slots instead of specifying the start and end times.

Before you begin
Role required: sn_wsd_core.workplace_user

About this task
With the Quick Reservation widget, you can directly make a quick reservation. Specify the type of space that you are looking for, the date, the time slot, and the building in which you want to reserve a space. Depending on your specifications, the workplace that best matches your specifications is displayed. You can either make a reservation directly using the Quick reservation widget or use the Reservation portal to search for more suitable workplaces. Select **Advanced reservations** to open the Reservation portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

In Workplace Core version 2.19.0 and above, the navigation path for Workplace Services Portal is not available in the application search context menu **All** > **Workplace Core**. The Workplace Services Portal is currently being deprecated. You can access the Workplace Service portal capabilities from the Employee Center portal page **All** > **Self-Service** > **Employee Center** > **Workplace Services**.

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Portal** > **New Reservation**.
2. Select the Quick Reservation widget on the home page.
3. In the Quick Reservation widget, specify the details to make a reservation.

   a. In the **Reserve a** field, select the type of workplace that you want to reserve.

   b. To select the date of reservation, click the calendar icon ()

   c. In the **Time slot** field, select a time slot for which you want to make a reservation.

   Note:
   Employees are not allowed to create a reservation too far in the future if they have enabled **Max days in future** value on the Reservable module. A warning message is shown in case if an employee tries to enter a date that is greater than the **Max days in future** value. For example, if the **Max days in future** value is 90 days, and if you try to select a date beyond 90 days, a warning message is displayed. For more information, see Create a reservation and Configure a reservable module.

   If the**Max days in future** value is not enabled, users can select a date as per the **Max number of occurrences** on the Reservable module.

   d. In the **Location** field, click the location selection icon to select the building where you want to make a reservation.
   

   e. In the **Floor** field, select the floor on which you want to make a reservation.

   f. If you want to change the privacy of the space, select or deselect the **Mark space details private** option.

   The space that best matches the reservation criteria is displayed. If you have set favorite locations, then those locations are prioritized first for the best match.
4. **Optional:** To set the space as favorite, click on the Favorite icon.
   

   Note:
   The Favorite icon will appear only if you have access to the Employee Center.

5. To make the reservation, select **Reserve this desk**.

   If a space is part of a neighborhood, employees can see the neighborhood information on the space details card.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. **Optional:** To apply more filter criteria or to view all the spaces that match the specified criteria on the Reservation portal, select **Advanced reservations**.
   For more information on how to make a reservation on the Reservation portal, see Create a reservation.

Result
The workplace is reserved for the selected time slot.
To view the details of the reservation, click **View details**. To cancel the reservation, click **Release space**.

Download an iCalendar for a reservation

Add the reservation to your office calendar by downloading the iCalendar of the reservation.

Before you begin
You can download an iCalendar only if your organization has enabled the configuration on the reserved workplace item.
Role required: sn_wsd_core.workplace_user

About this task
Download an iCalendar of a reservation directly from the Reservation summary page. After you download the iCalendar, an `.ics` file is generated which opens a meeting appointment window directly in your calendar provider application. You can review the details and save to add the appointment to your calendar.

For example, assume that your calendar provider is Microsoft Outlook. After you download an iCalendar of a reservation, the iCalendar opens a new meeting appointment window directly in Microsoft Outlook. You can view the details and click **Save and close** to add the reservation to your calendar.

Procedure

1. Navigate to **My Reservations** page from any of the following starting points.
   The **My Reservations** page opens in a new tab.
2. Click the reservation for which you want to download an iCalendar.
3. Click **Actions**.
4. Select **Download iCalendar**.
   An `.ics` file is downloaded.
5. Open the downloaded `.ics` file.
   The `.ics` file opens an appointment window directly in your calendar. For example, if you are using Microsoft Outlook, when you open the `.ics` file, an appointment window opens directly in Outlook.
6. Review the reservation details if required.
7. Save the reservation.

Result
The reservation is added to your calendar.

Manage employee reservations

Using the Reservation Overview, workplace managers and reservation desk executives can monitor the reservations created and scheduled for a location. They can also view the reservations they have created on behalf of their employees. They can use the dashboard to track the trend of reservations over a time period.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

After an employee submits a reservation for a workplace item for a given date, the reservation is confirmed based on the availability of that item. If the workplace item requires an approval before reservation, the approver receives an approval request in the approval queue.

If the workplace item is unavailable for the specified day or time, the request moves to the Conflicted state. As a workplace manager, you can review the reservations submitted by the employees for that day. You can view the reservations that you created, all the reservations, and the reservations scheduled for that day. For more information, see View or update reservations.

Based on the pending reservations for the items that require approval you can take appropriate actions to complete the reservation. For more information, see Approve a reservation.

Event planner

In the Workplace Central workspace, the Workplace Reservation Event Planner enables you to track your organization's reservations from a single workspace. In the Event planner, using a schedule view, you can view reservation details, optimize reservations by dragging, and manage multiple workplace reservations at a time. You can access the Event planner dashboard with both Reservation planner and Reservation viewer roles. The Event planner provides you with a schedule view of all the reservations requested by the employees and also the reservations that are requested by you. You can access the Event planner both as a reservation planner and a reservation viewer. As a reservation planner, you can manage the reservations on behalf of the employees.

For more information, refer to Event Planner.

View or update reservations

View or update reservation requests submitted through the Reservation portal. You can view the current day's reservations and the ones made by you for the others.

Before you begin

Role required: sn_wsd_rsv.admin or sn_wsd_rsv.manager

About this task

You can view all the reservations made through the application an update accordingly.

Note:
You can also view and edit reservations on the Reservation portal.

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Reservation Overview**.
2. Select any of the following options to view reservations:
   - **My Reservations**: Select this option to view the reservations that you created.
   - **All Reservations**: Select this option to view all the reservations made through the application.
   - **Today's Reservations**: Select this option to view the current day's reservations.
3. Select a reservation request to view its details.
4. **Optional:** Review the reservation details in the **Reservation Details** and **Cancel Details** tabs.

Note:
The **Cancel Details** is populated only when the submitter cancels the reservation request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** Click **Open Reservation** to view the reservation details in the portal.
6. **Optional:** If you want to update the reservation information, modify the information and then click **Update**.

Approve a reservation

Review employee reservations raised using Workplace Reservation Management and approve or reject them.

Before you begin

Role required: approver_user

Procedure

1. Navigate to **All** > **Self-Service** > **My Approvals**.
2. Select the reservation that you want to approve or reject.
3. **Optional:** Review the details of the reservation.
4. Approve or reject the reservation by selecting **Approve** or **Reject**.

Manage Workplace Reservations for Microsoft Outlook Add-in

Employees can create reservations using the Microsoft Outlook Add-in. They can calendar events or meetings to the Workplace Reservation Management 3.0.2 manifest add-in file.

As of Workplace Reservation Management version 3.0.2, you're no longer required to install the Microsoft Outlook Add-in plugin. The advanced search widget in the Workplace Reservation Management 3.0.2 version is used for Outlook Add-in reservations. The advanced search widget in the Workplace Reservation Management 3.0.2 version is used for Microsoft Outlook Add-in reservations. To use Microsoft Outlook Add-in, install and configure Workplace Calendar Synchronization. Administrators can configure the manifest add-in file to complement integration with Workplace Calendar Synchronization.

Employees can enable advanced search to filter spaces, work with a reservable module, and make multi-building space selection. Employees can search for a space using the **Map** or **Card** options while making reservations. Employees can update current or existing reservations quickly by updating date, time, location, or workplace services.

When a meeting is created in Microsoft Outlook, the meeting event on the resource is synchronized with Workplace Reservation Management to create a reservation.

Workplace Reservation Management administrators can enable the Reservable module configuration for Microsoft Outlook Add-in. They can migrate or update existing Microsoft Outlook add-in version 1.12.2 or earlier versions to the latest Workplace Reservation Management 3.0.2 For more information, see Configure Reservable Module for Microsoft Outlook.

Employees can perform the following using Workplace Reservation Management 3.0.2.

Note:
Shift-based, Reservable Modules aren't supported for Microsoft Outlook add-in reservations. Group and recurring reservations are also not supported.

- Create reservations using a Reservable Module (for example Meeting rooms).
- Create reservations for multi-building and recurring reservations.
- Select reservable paths based on the neighborhood or Browse near a person.
- Invite colleagues or guests to a meeting or event.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Edit and update existing reservations.
- Add workplace services and edit or remove them as required.

  Extra services (catering, IT support, furniture arrangements, and so on) can be configured and requested alongside workplace reservations.

Workplace calendar synchronization allows employees to use Calendar Providers (MS Outlook or Google) to create reservation records in Workplace Reservation Management. For more information, see Microsoft Exchange Online - Calendar synchronization.

Configure Reservable Module for Microsoft Outlook

Configure Reservable Module settings for Microsoft Outlook in Workplace Reservation Management version 3.0.2. Employees can create a meeting or an event in the Microsoft Outlook calendar, and reserve a space using the Workplace Reservation Management manifest add-in file.

Before you begin

Configure the Reservable module for Microsoft Outlook Add-in, and configure it with a Reservable Module.

Note:
Employees assigned to one or more Reservable Modules should have the sn_wsd.workplace_user role.

Note:
If you're updating or migrating from Microsoft Outlook Add-in 1.12.2 version or earlier to Workplace Reservation Management 3.0.2, the *sn_wsd_msaddin.default_reservable_module* is updated automatically. The sys_id of the default Reservable Module in this property is updated to the latest version of the Outlook Add-in Manifest file. After installing Workplace Reservation Management 3.0, employees can select the updated Reservable Module (for example, Desks). They can also opt to use any other Reservable Module assigned to them.

Install and configure the following:

- Workplace Reservation Management
- Workplace Core
- Workplace Calendar Synchronization
- Workplace Indoor Mapping
- Workplace Case Management
- Workplace Space Management

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Reservation Management** > **Reservable Module**.
2. Select a Reservable Module.
   For example: Meeting rooms
3. The Reservable Module form opens.

   On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Reservable Module form

Field	Description
Name	Name for the reservable module. For example, for meeting rooms, the name should be categorical like meeting rooms or rooms.
Title	Title for the reservable module. The title is displayed on headline on reservation page on portal. For example, meeting rooms.
Inline Title	Inline Title for the reservable module. The title is displayed inline with a descriptive text on the reservation Portal. For example, meeting rooms.
Order	Order in which the reservable module must appear on the Reservation portal. For example, 100
Active	Option to enable the reservable module available for reservation. Select the check box to enable it.
Active from	Date from when the reservable module must be active and available for reservation.

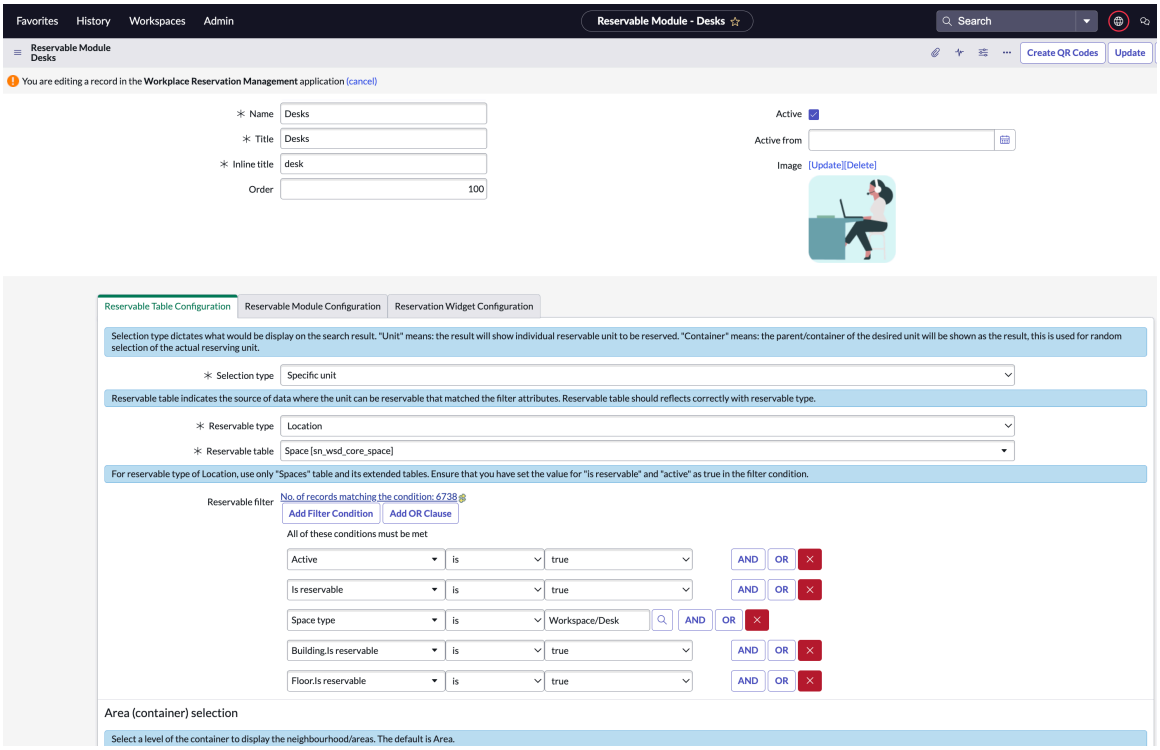
Administrators can configure the following form options:

- **Reservable Table Configuration**

  Option to configure buildings and spaces for a location.

- **Reservable Module Configuration**

  Option to select the Outlook Add-in configurations for multi-building, neighborhood reservations, and so on.



- **Reservable Widget Configuration**

  Option to configure invitees, reservation subject, reservation cancel notes, additional details record producer, display reservation on behalf of, and so on.

For more information, see Configure a reservable module.

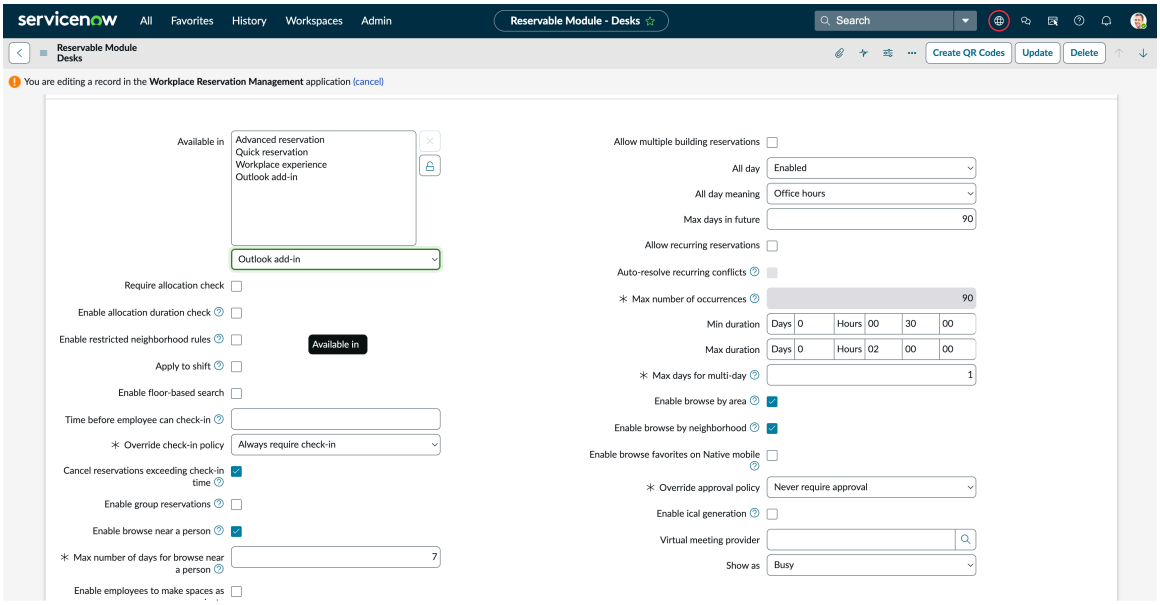
4. Select the **Reservable Table Configuration** tab to configure locations for reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

On the form, fill in the fields.

Reservable Table Configuration

Selection type	Type of selection to display in the search results when employees search. Select one of the following options: ○ **Specific unit**: The search result displays every workplace item. ○ **Container**: The search result displays the parent or container of the workplace items. If you select **Container**, the search results are displayed in groups with a defined quantity available for reservation. Employees can select a container to reserve and any available space from the container is assigned for reservation.
Reservable type	Type of the reservable item. For example, Location
Reservable table	Option to select the workplace items for reservation from a table. The table contains the reservable workplace spaces or items. **Note:** If you have selected **Location** as **Reservable type**, you should use only the Space [sn_wsd_core_space] table and its extended tables.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Reservable filter	Option to apply filter conditions on the reservable items in the Reservable table. The reservable items are displayed on the application based on the given conditions. ○ To add a condition, select **Add Filter Condition**. ○ To add an OR condition, select **Add "OR" Clause**. For example: Active = True & Is reservable = True & Space type = Desk & Building.Isreservable = True & Floor.is reservable= true **Note:** If you're adding a filter on a location, verify that the **Active** and **Is reservable** fields are set to **True**. If these values aren't selected, inactive items or non-reservable items are displayed while making a reservation.
Area (Container) selection section	Enter the required field values.
Reservable container field	Specify on what basis that the reservable module should be grouped. The field appears only if you have selected **Container** value in the **Selection type** field. The field is automatically set to **Area**. For example, when the field is set to **Area**, the reservation search results appear as groups based on areas.
Reservable quantity field	Option to specify the reservable quantity for workplace items. The **Reservable Quantity** field determines the number of times a location or reservable items can be booked within a specific reservation time period. This setting provides flexibility in configuring space reservations without out the need to create individual space records for reservation. For example, if you select **Reservable Quantity**, the container can be reserved as many times as the combined reservable quantity values of all spaces within that container. The reservable quantity depends on the number of spaces provided in the Capacity column of the Workplace Core Space table.

5. Select the **Reservable Module Configuration** tab.

Note:
Recurring, shift-based, and group reservations aren't supported for Microsoft Outlook add-in reservations.

On the form, fill in the fields.

Reservable Module Configuration

Field	Description
Available in	Select **Outlook Add-in** to enable Microsoft Outlook Add-in reservations. For more information, see Create a reservation in Microsoft Outlook add-in **Note:** If you're updating or migrating from Microsoft Outlook Add-in 1.12.2 or earlier, the default Reservable Module's sys_id in the *sn_wsd_msaddin.default_reservable_modul* is updated to Workplace Reservation Management 3.0.2. Employees can continue using the default Reservable Module after migrating. They can also use a different Reservable Module assigned to them. For more information, see Manage Workplace Reservations for Microsoft Outlook Add-in.
Require allocation check	Option to check if there's an allocation mismatch between the workspace item and the logged-in user. This option appears only if you have Workplace Space Management installed. For workplace entities, the search results also display locations that are allocated to the parent entity.
Enable allocation duration check	Option to display spaces in the search results based on the start and end dates of the

Field	Description
	allocation. This field appears only when the **Require allocation check** field is selected. For recurring reservations, the allocation duration is only checked for the first occurrence. **Note:** ○ In Workplace Space Management version 1.12.0, spaces that have the overlapping allocation and reservation time-frames are qualified for the reservation. ○ From Workplace Space Management version 1.13.0, spaces that don't have overlapping allocation and reservation time-frames are considered unallocated spaces and are qualified for reservation.
Enable restricted neighborhood rules	Option to apply neighborhood restrictions on the spaces while displaying search results. The search results are displayed based on the restrictions applied on spaces. Restricted users can't view spaces that they aren't enabled to access. The restricted neighborhoods are automatically filtered out if the logged-in user is restricted.
Enable browse by area	Option to enable employees to search for a workplace based on area.
Enable browse by neighborhood	Reservation admin can indicate if neighborhood spaces are available for reservations. Employees can search in the context of a neighborhood and only the available spaces in a neighborhood are displayed for space reservation. For more information, see Create neighborhood reservations. This option is also available on the Now Mobile app.
Enable browse favorites on Native Mobile	Option to enable employees to search from their favorite spaces on the Now Mobile app. **Note:** This option appears only if you have Employee Center 25.0.0 and for employees who have Now Mobile app installed. Verify that the Mobile Employee Service Portal is enabled.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: This option is available only for the Now Mobile app app.
Override approval policy	Option to specify how to implement the approval policy. Choices are as follows: ○ **No override**: The approval policy is implemented as set in the **Requires approval** field of a workplace space or room. ○ **Always require approval**: The approval policy is required regardless of what is set in the **Requires approval** field of a workplace space or room. ○ **Never require approval**: The approval policy is removed irrespective of what is set in the **Requires approval** field of a workplace space or room.
Apply to shift	Option to enable shift-based reservation on the module. **Note:** Shift-based reservations aren't supported for Microsoft Outlook Add-in reservations.
Enable floor-based search	Option to enable employees to search for a workplace based on floor using the **Browse All**.
Time before employee can check-in	Option to specify the time before an employee can check in their reservation before it starts.
Override check-in policy	Option to specify how to implement the reservation check-in policy. Choices are as follows: ○ **No override**: The check-in policy is implemented as set in the **Requires check-in** field of a workplace space or room. ○ **Always require check-in**: The check-in policy is required regardless of what is set in the **Requires check-in** field of a workplace space or room. ○ **Never require check-in**: The check-in policy is removed irrespective of what is set in the **Requires check-in** field of a workplace space or room.
Cancel reservations exceeding check-in time	Option to cancel a reservation if an employee doesn't check in within the specified time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Enable group reservation	Option to enable group reservation for a selected Reservable Module Configuration. For example, **Desks**. **Note:** If the **Allow invitees** check box option is selected in the Reservation Widget Configuration, you can't make a group reservation. The Reservation Widget Configuration tab is available in the Reservable Module.
Enable employees to make spaces as private	Option to enable employees to make the space details private when they make a reservation. When an employee is creating a reservation, the option **Make space details private** is displayed only if the employees are allowed to override their privacy preference for the selected space. Whether an employee can override privacy or not depends on the location privacy setup.
Enable ical generation	Option to enable user to generate an icalendar. **Note:** A user can't download an iCalendar for spaces and reservations that already synchronizes with their calendar provider.
Default reservation path when editing a reservation	Option to set the context (Reservation Path) when editing a reservation. This option is also available on the Now Mobile app. The reservation paths define the available search criteria. Select any of the following options from the drop-down list: ○ **Based on reservation**: While editing a reservation, employees can search in the context (Reservation Path) used while creating a reservation. For example: **Browse all**,**Browse an area**, **Browse by neighborhood**. ○ **Browse all**:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	When editing a reservation, the context (path) is defaulted to **Browse all**. Employees can change the selected space or date and time of the reservation. For more information, see Create a reservation. **Note:** This option isn't available on the Now Mobile app.
Virtual meeting provider	Select a virtual meeting provider to enable employees to create a virtual meeting link. If an employee selects the **Add a virtual meeting link** option, a virtual meeting link is automatically generated by the virtual meeting provider.
Allow Multiple Building Reservations	Option to add multiple buildings and select spaces from the buildings in a single reservation. The buildings can belong to different regions or locations and can be from different time zones. **Note:** Adding multiple buildings to a reservation is available only on the Workplace Service Portal. Recurring reservations aren't supported for multi-building reservations. For more information, see Create multi-building reservations.
Max days in future	Option to specify the maximum number of the days in the future up to which the reservable module can be reserved. For example, if you set the max number of days in future to **90**, employees can make future reservations on this module only up to 90 days in advance. If this option is enabled, employees can't select a date beyond the specified value in **Max days in future** while making a reservation. For more information, see Create a reservation. On Now Mobile app, if you try to select a date too far in the future than what is specified in the **Max days in future**, no results are returned.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: **Max days in future** field indicates that the user can't make a reservation beyond the number of days configured as the **Max days in future** value for any reservation. **Max days in future** is a reservation property and **Max number of occurrences** is a recurring reservation property. **Max days in future** value takes priority when both these options are used for the reservation. For example, if the **Max days in future** is 90 days, then the number of occurrences in the recurring reservation can't exceed 90 days even if the employee has initially configured the value for Max number of occurrences as 180 days in the Reservable module.
Max number of occurrences	Option to specify the maximum number of occurrences for recurring reservation that can be made on the reservable module. The default value is 180. This option depends on the **Allow recurring reservations** check box field. If **Allow recurring reservations** isn't selected, the **Max number of occurrences** field is inactive.
Min duration	Option to specify the minimum reservation duration of the reservable module.
Max duration	Option to specify the maximum reservation duration of the Reservable Module.
Max days for multi-day	Option to make a multi-day reservation. Employees can reserve an available space covering or spanning multiple days. For example, 5 days or more. For more information, see Create a multi-day reservation. Default value for this Reservable Module property is 1. To make a single day reservation, set the value to 1. Value 0 (zero) isn't enabled. When the **Max days for multi-day** value is more than 1, the **All day** option is inactive on the Reservation portal while making a reservation. **Note:** The number of days for this property must not exceed the **Max days in future** value on the Reservable Module.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Enable browse near a person	Option to enable employees to search for spaces near a person. When an employee searches for a space near a person, the available spaces located on the user's floor are displayed. The display criteria are also based on the nearby area of the space or tags assigned to the spaces. **Note:** If the option is enabled, the search limit criteria are not applicable.
Max number of days for browse near a person	Option to specify the number of days employees can reserve a space near a colleague. Admins can configure the maximum number of days an employee would like to reserve a space near a colleague using this property. Default value is 7. Administrators can change this value to more than 7 days and enable employees to select the max number of days they would like to book a seat near a team member or a colleague. For more information, see Create a reservation. **Note:** This field is displayed only when the **Enable browse near a person** Reservable module property is enabled on the Reservable Module. The number of days provided for this property can't be 0 or a negative number (for example, -10). The number of days for this property must not exceed the **Max days in future** value on the Reservable Module.
Allow all day reservation	Option to enable employees to reserve a workplace item of the module for an entire day. If the check box is cleared, the Require all day reservation field is inactive. Note: If the Max days for multi-day Reservable Module value is set to more than 1 day, the All day option is inactive on the Reservation portal. If the Max days for multi-day value is set to 1, then employees can only make a single day or all day reservation. For more information, see the Max days for multi-day property description.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For example: Default value 9 AM to 5 PM.
All day	Option to enable manage **All day** reservation option on the reservation portal. Select one of the following options: ○ Disabled: The **All day** option is disabled and not available for employees while making a reservation. The **All day** option isn't displayed on the Reservation portal. ○ Enabled: The **All day** option is available to the employees on the reservation portal. They can opt to select the option when required. ○ Default: The **All day** option is available and selected by default. The employees can opt not to select the check box or change the timings if necessary. ○ Required: The **All day** check box is selected and can't be changed on the reservation portal. The **All day** field is set as required.
Max days in future	Option to specify the maximum number of the days in the future up to which the reservable module can be reserved. For example, if the Max number of days in future is set to 90, employees can make future reservations only up to 90 days in advance. If this option is enabled, users can't select a date beyond the specified value in Max days in future while making a reservation. For more information, see Create a reservation. **Note:** **Max days in future** value indicates that the user can't make a reservation beyond the number of days configured in this option. Max days in future is a reservation property and Max number of occurrences is a recurring reservation property. Max days in future value takes priority when both these options are used in a reservation. For example, if the **Max days in future** is 90 days, the number of occurrences in

Field	Description
	the recurring reservation can't exceed 90 days even when an employee has initially configured the value for Max number of occurrences as 180 days in the Reservable module.
Max number of occurrences	Option to specify the maximum number of occurrences for recurring reservation that can be made on the reservable module. The default value is 180. This option depends on the Allow recurring reservations check box field. When **Allow recurring reservations** check box isn't selected, the **Max number of occurrences** option is inactive.
Min duration	Option to specify the minimum reservation duration of the reservable module.
Max duration	Option to specify the maximum reservation duration of the reservable module.
Max days for multi-day	Option to make a multi-day reservation. Employees can reserve an available space covering or spanning multiple days. For example, 5 days or more. For more information, Create a multi-day reservation. Default value for this Reservable Module property is 1. To make a single day reservation, set the value to 1. Empty value or zero isn't enabled. When the Max days for multi-day value is more than 1, the **All day** option is inactive on the Reservation portal while making a reservation. **Note:** The number of days provided for this property must not exceed the Max days in future value on the Reservable Module.
Enable browse near a person	Option to enable users to search for spaces near a colleague or team member for better collaboration. When employees search for a space near a team member, available spaces near the team member are displayed. Select the check box to enable this option. **Note:** The search limit property value isn't enabled if this option is enabled.

Field	Description
	options are cleared and not selected by default. ○ If **Display number of attendees** is selected, the **Allow invitees** check box selection is unselected by default. **Note:** You can't make Group reservations for Microsoft Outlook Add-in. **Note:** For Microsoft Outlook Add-in reservations, you should set the *sn_wsd_rsv.display_invitees_on_outlook* value to true. If the **Allow invitees** option is selected and the *sn_wsd_rsv.display_invitees_on_outlook* is set to true,employees can see the option to select invitees when making a reservation using Microsoft Outlook Add-in. For more information, see Properties installed with Workplace Reservation Management. If **Allow invitees** is set to false, and *sn_wsd_rsv.display_invitees_on_outlook* property is set to true, then the property value is given priority and employees are allowed to add invitees to a reservation. If **Allow invitees** is true, and *sn_wsd_rsv.display_invitees_on_outlook* is set to false, employees can't add invitees to a reservation.
Display number of attendees	Option to enable employees to specify the number of attendees while making a reservation. If the option isn't selected, then the number of attendees is automatically set to **1**. **Note:** If the **Allow invitees** check box is selected, the **Display number of attendees** becomes inactive and read only. The **Enable Group Reservations** check box in the **Reservable Module Configuration** tab also becomes read only and inactive. You can't make group reservations for Microsoft Outlook Add-in.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Display on behalf of	Option to enable employees to specify on whose behalf they're making a reservation. The option is enabled by default. An error is displayed if the option is inactive.
Display sensitivity	Option to enable employees to set the sensitivity of the reservation. They can set a reservation to **Normal** or **Private**. If the option isn't selected, the sensitivity is set to **Normal** and the subject will be visible to others.
Allow reservation message	Option to add notes to a meeting and attach images while making a reservation. The notes and images can be shared with the meeting invitees. **Note:** When calendar synchronization is enabled for a space, the message or notes are added to the body of the reservation. For Now Mobile app, the message is displayed on the summary page but employees can't add or edit a message. For more information, see Create a reservation. .
Additional details record producer	Option to link to the record producer that you have configured with additional fields. You can display additional fields on the reservation form. For more information, refer to Configure reservable module with additional details.
Show as	Option to specify what status of the reservation that is shown on the employee's calendar when a reservation is synchronized. This field appears only if Workplace Calendar synchronization is installed. ○ **Busy**: The reservation is displayed in the Employee's calendar with a Busy status. The employee's calendar is blocked during the reservation duration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Free**: The reservation is displayed in the Employee's calendar with a Free status. The employee's calendar won't be blocked during the reservation duration. **Note:** For the **Show as** feature to work correctly, you must have the following versions of the Microsoft Outlook connections: ○ For Microsoft, you must have Microsoft Exchange Online spoke version 3.2.4. ○ For Google Calendar, you must have the Google Calendar version 2.3.1.

Redirect WSD RSV MOA OAuth registry

Redirect MOA Outh access (moa_login) for Microsoft Outlook Add-in version 1.12.2 or earlier to WSD RSV MOA OAuth registry (rsv_moa_login) registry.

Before you begin

Workplace users using Microsoft Outlook Add-in version 1.12.2 or earlier versions, can migrate to Workplace Reservation Management 3.0.2. After migrating, redirect the MOA OAuth registry (moa_login) to WSD RSV MOA OAuth registry (rsv_moa_login).

Workplace Reservation Management 3.0.2 Microsoft Outlook Add-in capabilities provide enhanced reservation experience for employees. For more information, see Manage Workplace Reservations for Microsoft Outlook Add-in.

Role required: admin

Procedure

1. Navigate to **All** > **Services Portal** > **Page Route Map**.
2. Select **WSD Microsoft Outlook Add-in**.
   The Page Route Map form opens. By default, all field values are preloaded in the Page Route Map form. Select the edit option to edit the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Page Route Maps form

Field	Description
Short Description	Optional short description to describe the redirect.
Service Portal(s)	Portals that apply the redirect. If you don't select a portal, the redirect applies to all portals in the instance.
Route from	Original page you're redirecting from. For example, *moa_login*.
Route to	Page you're redirecting to. For example, *rsv_moa_login*.
Active	Page Route Map record is active or inactive. The redirect from *moa_login* to *rsv_moa_login* happens when the record is active.
Roles	Roles to which the page route map applies. Employees that don't have any of the roles specified in this field aren't redirected to the new page. If no roles are specified, the page route map is applicable to all users.
Order	Priority of the Page Route Map record. If more than one active record has the same value in the **Route from** field, the record with the lowest order applies. The system evaluates records from lowest to highest. If multiple records have a matching order, the system prioritizes the oldest record.

3. Select or clear the **Active** check box.
   The **Active** check box is selected by default.

   When the **Active** check box is selected, MOA OAuth registry (moa_login) is redirected to WSD RSV MOA OAuth registry (rsv_moa_login) in Workplace Reservation Management 3.0.2 version.

   Note:
   If you don't want to redirect and update to rsv_moa_login and opt to use Microsoft Outlook Add-in 1.12.2 or earlier versions MOA OAuth registry (moa_login), clear the **Active** check box.

4. Select **Update** to save the changes you made to the Page Route Maps form.
   All references in the **Route from** field redirect to the page in the **Route to** field.

Activate the add-in for Microsoft Outlook

Workplace Reservation Management administrators can activate the manifest add-in for Microsoft Outlook. Add a manifest add-in file and customize it as per your requirements.

Before you begin

Download the sample manifest file *Workplace_Outlook_add_in_manifest_example.xml*. Navigate to ServiceNow®

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Store Workplace Reservation Management version 3.0.2. From the Links and Documents page, download the *Workplace_Outlook_add_in_manifest_example.xml* manifest file.

Note:
If you are using Microsoft Outlook Add-in 1.12.2 version or earlier, update to Workplace Reservation Management 3.0.2. After installing and configuring Workplace Reservation Management 3.0.2, upload a new manifest file. Employees can create an event or a meeting invite in Outlook Calendar and make reservations using the manifest add-in file.

Role required: admin

Procedure

1. Navigate to where you have downloaded the sample manifest add-in file for Microsoft Outlook.
2. Open the sample manifest add-in file and make customizations as per your organizational requirements.

   In the sample manifest file, change the following parameters as required.

Sample Manifest file custom parameters

Field	Description
Id	Unique ID for the add-in
DisplayName	Display name of the add-in. The name is displayed in the Microsoft Outlook app ribbon.
Description	Description about the add-in.
IconUrl	Link to the icon image. The icon is installed along with the application for the add-in. If you are setting your own icon, ensure that you specify a navigation (URL) link to the icon. The following icon formats are supported: ○ 16x16 ○ 32x32 ○ 64x64 ○ 80x80
Images	Link to the images used in the add-in, if any.
SupportUrl	Link to a supporting environment.
SourceLocation	Link to a supporting environment. You can link your own environment, or a different website.
URL	Link to the instance where the add-in is installed.

3. **Optional:** Save the manifest file with a different name.
   The manifest file for the add-in is created. Employees can now make reservations in Workplace Reservation Management using the add-in file. For more information, see Create a reservation in Microsoft Outlook add-in.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Upload the manifest file for a workplace employee

Upload the manifest file (add-in for Microsoft Outlook) for a workplace employee (single user). Employees can create workplace reservations using the Microsoft Outlook add-in file.

Before you begin

Activated the add-in for Microsoft Outlook. For more information, see Activate the add-in for Microsoft Outlook.

Role required: admin

Procedure

1. Open Microsoft Outlook mailbox.
2. Select an event in Outlook calendar.
3. From the Tools menu on the Outlook ribbon, select **Get Add-ins**.
4. In the Custom add-ins section, select **Add a custom add-in** > **Add from file**.

Upload the add-in file Microsoft Office 365

Upload the manifest file to Microsoft Office 365. Employees can view and use the add-in from Microsoft Office 365 Outlook.

Before you begin

Note:
Workplace Reservations made using Microsoft Outlook Add-in application does not support Microsoft Exchange On-Premises.

Role required: admin

Procedure

1. Log in to the Microsoft Office 365 admin account.
2. Select app launcher and select **Admin**.
3. In the admin center, go to **Settings** > **Services & add-ins**.
4. Select **Deploy Add-in** and select **Next** in the overview page.
5. Select **Upload custom apps**.
6. Select **I have the manifest (.xml) file** on this device check box.
7. Select **Choose file** to select the manifest file that you have created for the add-in.
8. Select **Upload**.
9. In the **Assign users section**, select one of the following options to specify whom to deploy the add-in.
   - Everyone: Select this option to deploy the add-in to everyone.
   - Specific users/groups: Select this option to deploy the add-in to only selected users or user groups. Use the search option to find users or groups to whom you want to deploy the add-in.
   - Just me: Select this option to deploy the add-in only to you.
10. In the Deployment method section, select an option to specify how to deploy the add-in to users.
11. Select **Deploy**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A green tick appears when the add-in deployment is successful. Follow the instructions provided on the page to test if the add-in deployment is successful.

The add-in is uploaded to Microsoft Office 365. Employees can view the add-in option and make a workplace reservation while scheduling a meeting. For more information, see Create a reservation in Microsoft Outlook add-in.

Using Workplace Reservations for Microsoft Outlook Add-in

Make reservations in Microsoft Outlook using the Workplace Reservation Management manifest add-in file.

Employees can create and edit workplace reservations, delegate reservations on behalf of a team member, and add or remove workplace services.

Create a reservation in Microsoft Outlook add-in

Employees can create a workplace reservation in Microsoft Outlook. They can use the Workplace Reservation Management manifest add-in file for Microsoft Outlook add-in.

Before you begin

Install and configure the following:

- Workplace Reservation Management
- Workplace Calendar Synchronization
- Workplace Core
- Workplace Case Management
- Workplace Concierge
- Indoor Mapping

Verify that you have completed the following Microsoft Outlook add-in manifest file configuration:

- Add a manifest file for Microsoft Outlook add-in
- Upload the manifest file in Microsoft Outlook Add-in. Depending on your usage, complete the following:
  - Upload the manifest file for a single user
  - Upload the manifest in Microsoft Outlook

  For more information, see Activate the add-in for Microsoft Outlook.

Role required: sn_wsd_core.workplace_user

Procedure

1. Open your mailbox in Microsoft Outlook to make a reservation.
2. Perform any one of the following actions depending on the type of reservation that you want to make:
   - To set up a meeting in Microsoft Outlook, open the calendar and select "New Event" or "New Meeting."
   - Complete the New Event form details in Outlook Calendar:
     - New Event: Option to provide the meeting title or subject.
     - Add Attendees: Add meeting attendees.Use **Optional** field to enter any optional meeting attendees.

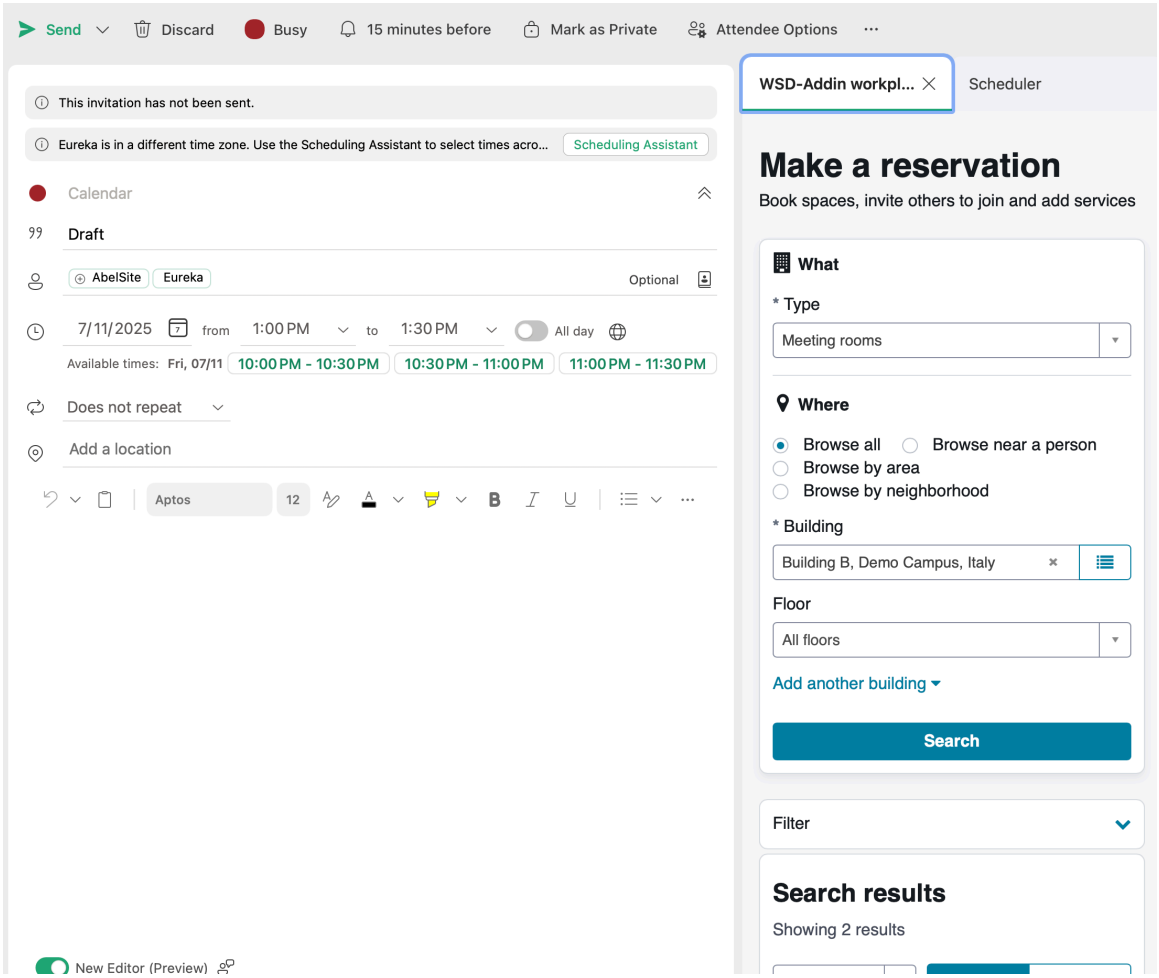
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Date: Option to select a Date for your reservation.
- From: Option to select the start time of your reservation.
- To: Option to select the end time of your reservation.
- All day: Option to enable **All day** reservation. For more information, see Configure Reservable Module for Microsoft Outlook.
- Add a location: Option to display the meeting location. The locations you select on the Make a reservation form on the Outlook side bar in Step 3 is added in this field option. You can also opt to end the location manually using this option.
- Use the **Scheduling Assistant** in Microsoft Outlook calendar to find a time that works for everyone and add a location or online meeting details.

3. Select the **See more items** icon ( ) from the Microsoft Outlook ribbon, and, select the reservation add-in manifest file.

   For example: *Workplace_Outlook_add_in_manifest_example.xml*

   Note:
   When you open the add-in manifest file for the first time, the MOA OAuth login screen appears. Provide your instance login access credentials. When the manifest add-in file is opened for the first time, it takes some time to load and display the Make a Reservation form.



4. Select **Allow**.
5. The add-in opens in a sidebar and displays the Make a reservation form.

   Employees can search for a space and add locations for a given date and time. You can create multi-building reservations, neighborhood reservations, or make a reservation near your

colleague. Employees can add workplace services to a reservation. They can edit a reservation or workplace services added to a reservation.

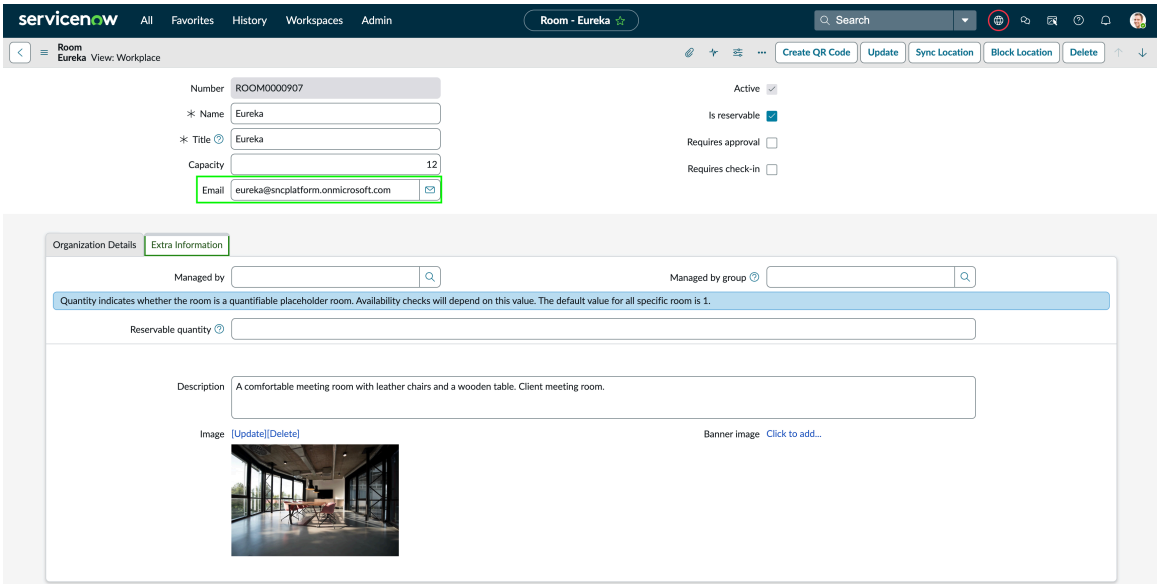
Fill in the field information:

Make a reservation form

Field	Description
Type	Option to select a Reservable Module type. For example: Meeting rooms **Note:** Employees can only select a Reservable Module assigned to them by their administrator. For more information, see Configure Reservable Module for Microsoft Outlook.
Where	Option to select a reservable path. ○ **Browse all** ○ **Browse by area** ○ **Browse by neighborhood**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Browse near a person** For more information, see Create a reservation. **Note:** **Browse by Shift** Reservable path is available for Microsoft Outlook Add-in reservations.
Building	Select a building where you want to make the reservation.
Floor	Select a Floor. **Note:** If the Reservable Module Configuration option **Enable floor-based search** option isn't configured by your administrator, this option to search by floors is displayed on the form. For more information, see Configure Reservable Module for Microsoft Outlook.
Add another building	Select this option to add another building to your reservation. You can create multi-building reservations using this option.



6. Select **Search** to search for a space.

   If the Auto-search option is enabled by your administrator, the Search button is not displayed and the spaces are fetched automatically for reservation.

   Note:
   Administrators can enable the auto-search by setting the *sn_wsd_rsv.enable_auto_search* system property to true. For more information, see Properties installed with Workplace Reservation Management.

   Note:
   If a selected room for a meeting invite or event has an email address configured to it, the search results shows only the room that is configured with the email configuration. For example, eureka@sncplatform.onmicrosoft.com. Microsoft Outlook doesn't show any other locations while you're searching for spaces while making a reservation. For more information, see Add a room using Workplace Space Management.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. **Optional:** Select the **Filter** drop-down list to set filter criteria to search with the following criteria.

   - Minimum capacity: Option to increase or decrease the space capacity.
   - Services: Option to add services
   - Purposes: Option to add location purposes.
   - Floors: Option to include floor-based search in a selected building.

   Select **Clear all** to clear the filters.

   Select **Apply** to apply the filters.

8. The search results are displayed on the **Card** view and **Map** view. Employees can select the Card or Map view to reserve a space.
9. Select Card or Map view to view a space on the Card or Map view.

   Note:
   The Workplace Reservation Management by default assigns the following two views to a reservable module:

   - **Card**
   - **Schedule**

   Map view is only available when Indoor Mapping is active.

   a. Card view: Select the **Card** tab. View and select a location or locations using the Card View.

   b. Map view: Select the **Map** tab. View and select location or locations on the map.

   - Floor: Select a **Floor**.
   - Select a space on the map. The space details card is displayed. Select Add to add the space to your reservation.

7. Review the Reservation Summary page for the updated reservation details.
8. **Optional:** Navigate to **All** > **Workplace Reservation Management** > **All Reservations**.

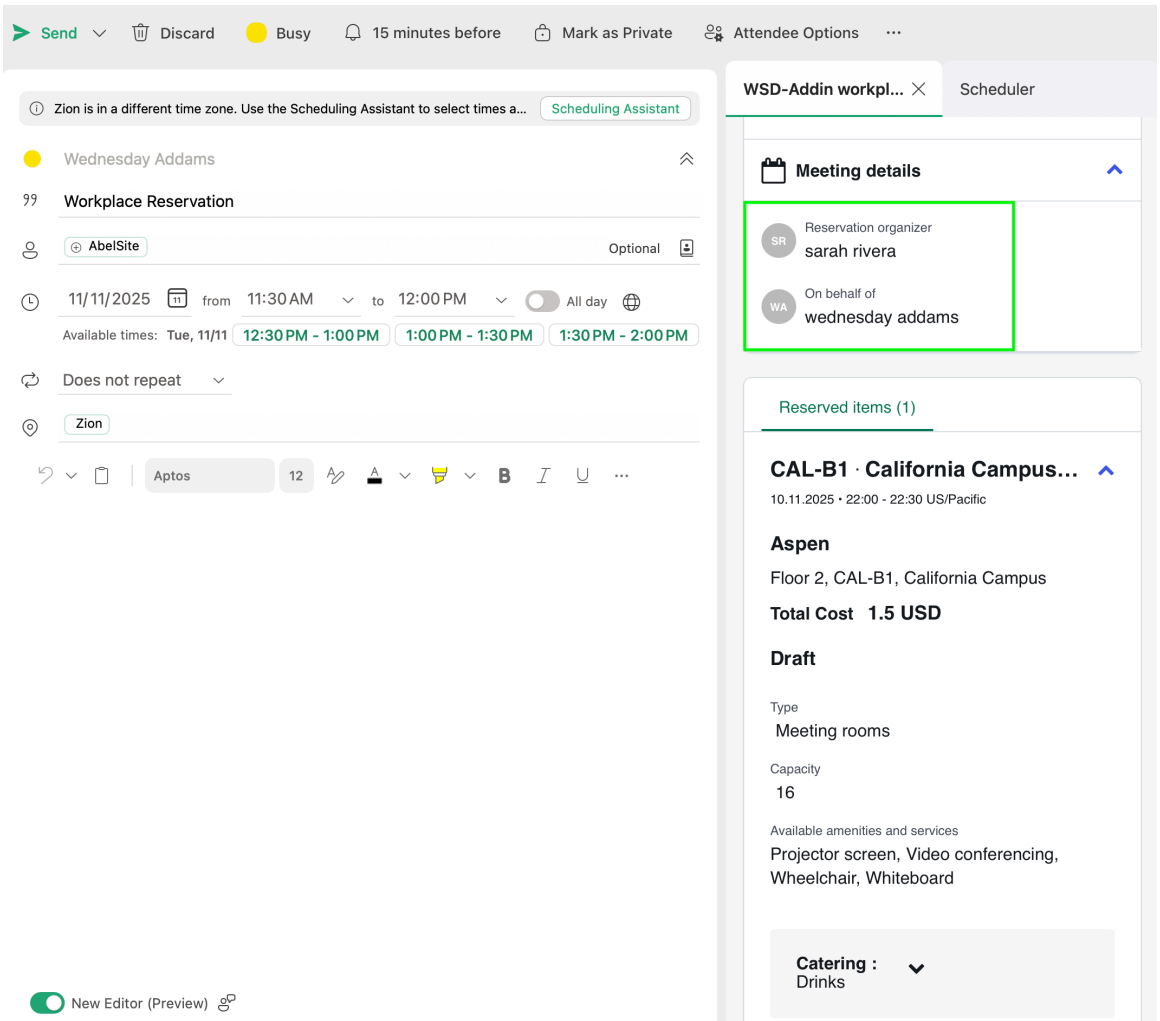
   (Optional) Select your reservation to review the details on Workplace Reservation Management.

Delegate reservations in Microsoft Outlook add-in

Delegate additional permissions to read, create, or change items in your Microsoft Outlook mailbox. Delegate access to a colleague or team member. Delegates can create and reserve resources (desks, rooms, equipment, services like catering) for other employees.

Before you begin

When you grant a delegate access, you can determine the level of access that the delegate has to your calendar or mail folders. You can grant a delegate permission to read items in your folders or permission to read, create, change, and delete items.



Role required: admin

Procedure

1. Open the Microsoft Outlook application.
2. Select the **Calendar** > **People's calendar** to select a team member's calendar to who you want to delegate access to your calendar.
   For example: Select Wednesday Addams' calendar. Here, Sarah Rivera is the meeting organizer who has provided Wednesday Addams the delegation rights to Sarah's calendar.

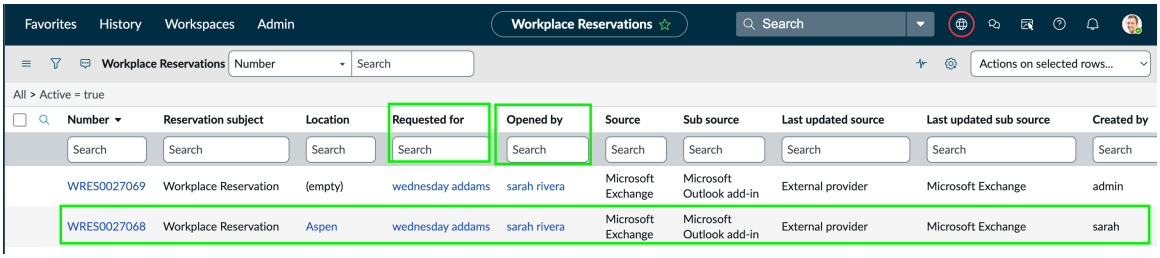
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select a date on the calendar, select and hold (or right-click) to select **New event**.
   You can also select a date and double-click to open the New Event calendar invite form.
4. On the New Event form, fill in the required information.
   For more information, see Create a reservation in Microsoft Outlook add-in.
5. Select the add-in manifest file of your instance and create a reservation using the Make a reservation form.
   For more information, see Create a reservation in Microsoft Outlook add-in.
6. Review your reservation in the Reservation Summary page.

7. Select **Send** to send the meeting invite.



> **Note:**
> An event or meeting invite when it's initially created in Microsoft Outlook is in a **Draft** state. When the meeting invite is sent, it is sent to the Microsoft Exchange Online server. It takes some time for a meeting or reservation request sent from the client server to be synchronized with the Microsoft Exchange Online server. After synchronization, the reservation changes to **Confirmation** state.

8. **Optional:** Navigate to **All** > **Workplace Reservation Management** > **All Reservations**.

   (Optional) Select your reservation to review the details on Workplace Reservation Management.

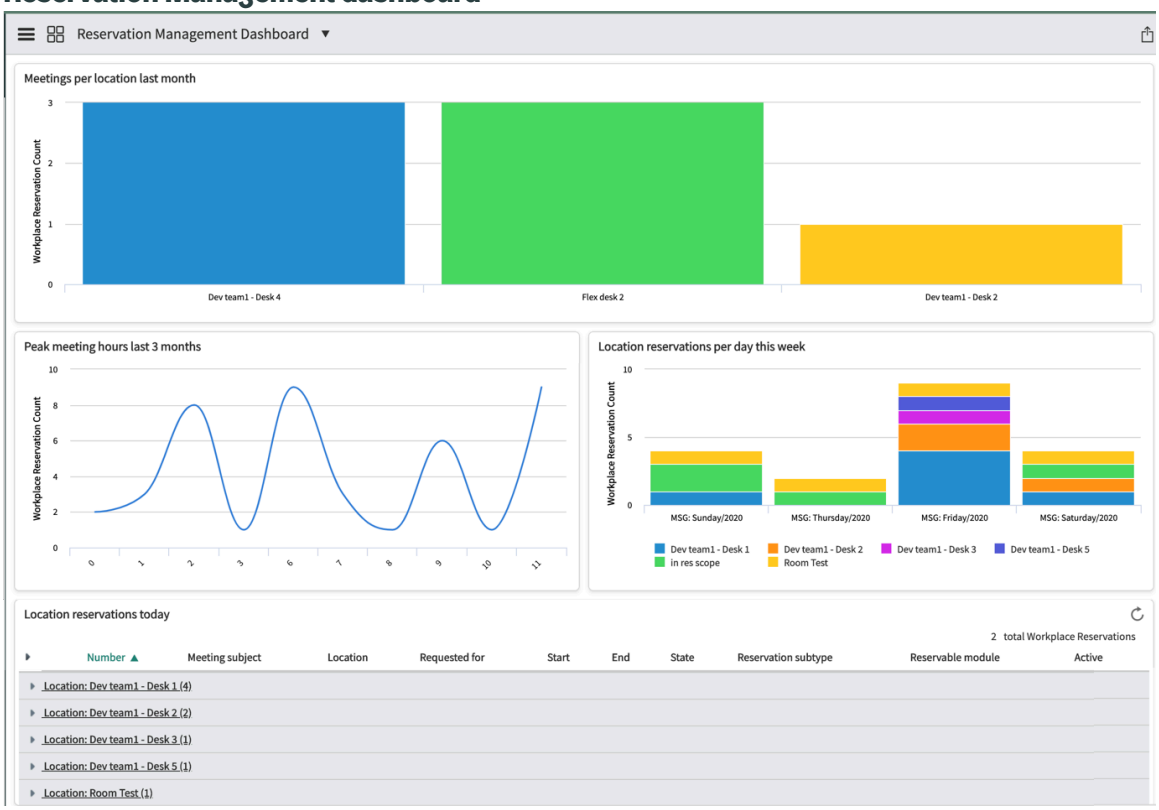
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If you have delegated access to create a reservation, the All Reservations page shows the reservation details along with updated **Requested for** and **Opened by** column values.

Analytics and Reporting Solutions for Workplace Reservation Management

Monitor the status of reservations made in your organization.

Reservation Management dashboard



Use the Reservation Management dashboard to monitor the reservations and meeting frequency in your organization. On any day, you can view details such as number of reservations, peak meeting times, and number of meetings for different locations.

Note:
The Workplace Reservation Management dashboard is migrated to Workplace Central. You can start using the migrated dashboards from Workplace Central. The out-of-the-box dashboards are also migrated to Workplace Central.

Old dashboards are not supported for new Workplace Service Delivery customers. For existing customers, old dashboards are currently available but will be deprecated soon.

For more information about the migrated dashboard, see Reservation Management dashboard.

These properties are also listed in the System Properties [sys_properties] table. To access the table, enter `sys_properties.list` in the navigation context-menu filter.

Properties for Workplace Reservation Management

Property	Description
sn_wsd_rooms.default_page_size	This property enables you to specify the number of reservable entries displayed on a page. This value is used on the following pages: • On the Search page while loading reservable items. • On the Reservation summary page while loading sibling occurrence. • On the My reservations page. If an incorrect value is configured in the widget, the value specified in this property is used as a default value. • Type: Integer • Default value: **8**
sn_wsd_rsv.enable_auto_search	This property controls auto-search capability on the reservation portal while creating a reservation.By default, this property value is set to false. If set to true, the search button is not visible on the Advanced reservation portal page and the space details page. An auto search is triggered when one of the following information is changed in the reservation: • Building • Floor. • Start Date. • End Date. • All day option is enabled. • Recurring (Daily/Weekly, Monthly, and For/Until) is enabled. • Reservable modules are updated. • Reservable paths are updated.

© 2026 ServiceNow, Inc. All rights reserved.

Properties for Workplace Reservation Management (continued)

Property	Description
	Note: All mandatory fields must be entered. The auto search capability is not triggered on the advanced search page if the mandatory fields are not filled in.
auto_refresh_search_rsv_data	Auto Refresh time interval(in mins) for showing reservables information while making a reservation. No auto refresh if set to 0 or negative number. Default value is 2 mins. Every 2 minutes (depending on the property value that you have provided in the sn_wsd_rsv.auto_refresh_search_rsv_data), the search results are refreshed. If results on the search page are outdated, the following message is shown along with a clickable referesh link, "The results you are viewing may be outdated. Please refresh to ensure you see the latest updates. Refresh the results."
[sn_wsd_rsv.search_limit]	This property enables you to specify the number of workplace items to be displayed in the search result. If an employee applies any filter or sorting on the search results, the first 100 workplace items that match the criteria are displayed at a time. 100 is the default value. The value specified in this property is used only if there is no value specified in the **Search limit** field of a reservable module. • Type: Integer • Default value: **100**
sn_wsd_rsv.time_before_check_in_out_reminder	This property enables you to configure when to send a notification email as a reminder to employees to check in or check out a reservation. The value must be set in minutes. • Type: Integer • Default value: **30**
sn_wsd_rsv.day_start	This property enables you to specify the start time of an all day reservation. The value must be set in 24-hour format.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Workplace Reservation Management (continued)

Property	Description
	• Type: String • Default value: **09:00**
sn_wsd_rsv.day_end	This property enables you to specify the end time of an all-day reservation. The value must be set in 24-hour format. • Type: String • Default value: **17:00**
sn_wsd_rsv.is_blocker_mandatory	This property enables you to specify if the blocker reservations are mandatory. The blocker reservations are created for preparation and clean-up activities if an extra service is requested along with the reservation. If you enable this property, and if the blocker reservations collide with another reservation, then the extra service will not be requested. The employee who made the reservation with these extra service, can view the message about the rejected service on the Reservation summary page. **Note:** If an extra service is requested for a workplace location that requires approval, the blocker reservations are sent for approval along with the actual reservation. • Type: true/false • Default value: **false**
sn_wsd_rsv.blocker_user	This property enables you to specify the user who is used to create the blocker reservations. • Type: String • Default value: **9b21b32ddb88b01097acc900399619d8**
sn_wsd_rsv.cancel_unconfirmed_reservations	This property enables you to specify after how many minutes should a reservation be canceled if there is no confirmation from the calendar provider.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Workplace Reservation Management (continued)

Property	Description
	• Type: Integer • Default value: **360**
sn_wsd_rsv.time_when_reservation_cancelled_without_check_in	This property enables you to specify after how many minutes should a reservation be canceled if it is not checked in. Ensure that the you have enabled the **Cancel reservations exceeding check-in time** option in the reservable module on which you want to apply this action. • Type: Integer • Default value: **30**
sn_wsd_rsv.default_quick_reserve_reservable_module	This property enables you to specify the default reservable module that must be available on the Now Mobile app to employees for quick reservation. Specify the sys_id of the reservable module that supports quick reservation. • Type: String • Default value: empty
sn_wsd_rsv.meeting_provider	This property enables you to set the virtual meeting providers to generate a meeting link. • Type: choice list • Default value: none
sn_wsd_rsv.recording_buffer_time	This property enables you to set the time in minutes by when ta meeting recording must be retrieved. • Type: integer • Default value: 30
sn_wsd_core.ENABLE_LOCATION_PRIVACY	This property enables you to set privacy on location and also specify what type of privacy you want to set. • Type: choice list • Default value: none
sn_wsd_rsv.enable_recurring_score	This property enables you to display recurring availability within the series of a workplace location when an employee

Properties for Workplace Reservation Management (continued)

Property	Description
	searches for workplace to make a recurring reservation. • Type: true/false • Default value: false
sn_wsd_rsv.lead_time_info_message_for_limited_services	This property enabled displays a message "Only items that can be prepared on time are available". This message is displayed only for the special user sn_wsd_case.bypass_services_limitation and not for regular employees.

Workplace Reservation Management - Field descriptions

Find the field descriptions of forms used in the Workplace Reservation Management application.

Space form

Use the Space form to add a space for a reservation.

New space form

Field	Description
Name	Enter the name of the space.
Space type	Type of the office space.
Capacity	Specify the maximum capacity of the space for reservation.
Active	Select this option to make the space active for reservation.
Is reservable	Select this option to make the space reservable for employee use.
Requires approval	Select this option if the reservation made on this space requires approval.
Requires check-in	Select this option if the reservation made on this space requires a check-in.
Organization details	
Region	Office region where the room is located.
Site	Site location of the office campus.
Campus	Campus from which the office operates.
Building	Office building where the space is located.
Floor	Floor on which the space is located.
Area	Area on the floor where the space is located.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New space form (continued)

Field	Description
Extra information	
Reservable quantity	If there are multiple spaces of the same type, specify the reservable quantity. Employees can reserve the space up to the specified number. This value is used while assigning spaces to an area.
Managed by	The workplace manager of the group that manages the reservation for the floor plan. Click the Lookup using list icon () to view a  list of group managers you can select.
Managed by group	he group that manages the reservation for the floor plan. Click the lookup using list icon () to view a list of groups you can select.
Description	Short description about the space.
Image	Upload an image of the space. The supported ratio of an image is: 26:17.

Add a room form

Use the room form to add a room for workplace reservation.

New room form

Field	Description
Name	Enter the name of the room
Capacity	Specify the maximum capacity of the room for reservation.
Email	Email address of the room to make a reservation request. The email address is used to check availability of the room and to block its calendar for a reservation. If you have installed Workplace Calendar Synchronization application, ensure that the email address is same as the one set in the calendar provider. Later, as an admin, you can change the email address of the room. The changes are automatically applied in the Reservable Sync Configuration. The calendar provider synchronizes the resources based on the entered email.
Active	Select this option to make the room active for reservation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New room form (continued)

Field	Description
Is reservable	Select this option to make the room reservable for employee use.
Requires approval	Select this option if the reservation made on this space requires approval.
Requires check-in	Select this option if the reservation made on this room requires a check-in.
Organization details	
Region	Office region where the room is located.
Site	Site location of the office campus.
Campus	Campus from which the office operates.
Building	Office building where the room is located.
Floor	Floor on which the room is located.
Area	Area on the floor where the room is located.
Extra information	
Managed by	The workplace manager of the group that manages the reservation for the floor plan. Click the Lookup using list icon to view a list of group managers you can select.
Managed by group	The group that manages the reservation for the floor plan. Click the lookup using list icon to view a list of groups you can select.
Reservable quantity	If there are multiple rooms of the same type, specify the quantity. Employees can reserve the room up to the specified quantity. The quantity is used when assigning neighborhood spaces to an area.
Description	Short description about the room.
Image	Upload an image of the room. The supported ratio of an image is: 26:17.

User criteria form

Use the User Criteria form field information when creating a new user criteria record.

User criteria form

Field	Description
Name	Name of the user criteria.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User criteria form (continued)

Field	Description
Users	Users who can access the reservable modules when you apply the user criteria. Click the unlock users icon ( ) to select users. Click the add me icon ( ) to add yourself as a user.
Groups	Groups who can access the reservable modules when you apply the user criteria. Click the unlock groups icon ( ) to select the groups.
Roles	Roles who can access the reservable modules when you apply the user criteria. Click the unlock roles icon ( ) to select the groups.
Advanced	Option to create a script for the user criteria.
Application	This field is automatically set to `Workplace Reservation Management`.
Active	Option to make the user criteria available.
Companies	Companies who can access the reservable modules when you apply the user criteria. Click the inlock companies icon ( ) to select the companies.
Location	Locations which can access reservable modules when you apply the user criteria. Click the unlock locations icon ( ) to select the locations.
Departments	Departments who can access reservable modules when you apply the user criteria. Click the unlock departments icon ( ) to select the departments.
Match All	Option to make every condition required when the user criteria is applied. The conditions are set in the previous fields, such as **Location**, **Department**, and so on

Related topics

Create a user criteria record

Apply user criteria on a reservable module

Proximity calculation when browsing near a person

When an employee searches for a space near a person using the **Browse near a person** option, the workplace locations are displayed based on the closest proximity.

Proximity calculation flow

The factors that influence the proximity based search are explained below:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. **Floor plan**: After the employee specifies the colleague near whom they want to reserve a space, the application checks if the colleague's location has a floor plan defined.
   - If there is a floor plan, then the floor map coordinates are used to find the nearest space.
   - If there is no floor plan, then the next step is performed.
2. **Area**: If there are no floor plans defined for the colleague's location, then the application checks if the location is part of an area.
   - If the location is part of an area, then the available spaces are displayed based on the area configuration.
   - Only available spaces on the floor where the employee is located are displayed.
   - If the location is not part of any area, then the next step is performed.
3. **Tag**: If the location is not part of any area, then the application checks if the colleague's location has any tags.
   - If the location has a tag, then all the available spaces with the same tag value are displayed.
   - Only available spaces on the floor where the employee is located are displayed.
   - If the location does not have a tag, then all the available spaces of the floor where the colleague is located are displayed.

- For proximity based search that involves area and tag, only the available spaces on the floor where the employee is located are displayed.
- If there are is no area or tag defined, then the available spaces of that floor are displayed. If there are no available spaces on that, then a message is displayed that there no matching spaces found.
- By default the **My favorites first** sort option is selected when an employee searches for spaces using the **Browse all** or **Browse by area** option.
- If an employee searches for a space using the **Browse near a person** option, then the spaces are displayed based on the closest proximity. If the employee selects the **My favorites first** sort option, then the favorite spaces of that employee which have the closest proximity are displayed first.

By default, all the available spaces are displayed based on the above proximity calculations. In case the employee has set favorite locations and has selected the **My favorites first** sort option, then the favorite locations are displayed at first.

Reservable module derivation logic for Space details

While selecting a reservable module from the Space details page, system identifies the reservable module based on the derivation logic.

When you select a space from the Space details page, application selects a suitable reservable module to make a reservation. The system attempts to select a reservable module with no **Min durations** and **Max durations**. In the absence of such a module, a reservable module with **Min durations** and **Max durations** set is chosen. In either case, if there are multiple modules satisfying the space criteria, the following logic is applied:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Reservable Modules without Min and Max duration values

- Workplace Reservation Management first selects a reservable module that has no **Min duration** and **Max duration** values set. If there are multiple modules with no **Min Duration** and **Max Duration** values, then application assigns the reservable module based on the following:

- ○ System checks for Reservable Modules where the **Override approval policy** is **Never require approval**, in case it does not find such a module, priority is given to a module with approval policy **No Override** followed by **Always require approval**.
  - ○ If there are multiple modules having the same approval policy, system assigns the reservable modules where **Recurring** reservation is allowed.
  - ○ If **Recurring** is allowed for multiple modules, system tries to assign the reservable modules where **Allows all day** reservation is allowed.
  - ○ If **Recurring** is allowed and **All day** is set, the system selects a reservable module where **All day** is not mandatory.

Reservable Modules with Min and Max duration values

The same selection criteria for reservation modules is applied in this case as with no **Min duration** and **Max duration** values. Only difference is that the system checks for whether the **Start time** and **End time** duration matches with the **Min duration** and **Max duration** values. If there are multiple modules having similar field values, system assigns the reservable module on the following logic:

- If there are multiple modules having the same approval policy, system assigns the reservable modules where **Recurring** reservation is allowed.
- If **Recurring** is allowed for multiple modules, system checks for and assigns the reservable modules where **Allows all day** reservation is allowed.
- If **Recurring** is allowed and **All day** is also set, then, system selects a reservable module where **All day** is not mandatory.

For more information, see Configure a reservable module.

Mobile push notifications for workplace reservations

As a workplace admin, you can configure push notifications that you want to send to an employee on their mobile devices to alert them about important events and enable them to perform an action.

To configure mobile push notifications, refer to Mobile push notifications.

As an employee, to receive push notifications, you must have the following:

- Push notifications are enabled by your organization.
- Following plugins:
  - ○ Workplace Reservation Management
  - ○ Workplace Service Delivery for Mobile version 1.5.1.

    Workplace Service Delivery for Mobile version 1.5.1 supports the Tokyo family release. If you are using Workplace Service Delivery for Mobile version 1.3.4 or earlier versions, it is not possible to receive any push notifications.
- You must be logged in on your mobile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Push notifications are sent for events such as, when a reservation is created or updated on your behalf, or when a reservation is required to check in or check out.

- The push notifications are triggered by the following scheduled jobs when there are any upcoming events.
  - **Check-in/out reminder**: The schedules job runs periodically and sends out notifications regarding upcoming reservation check in and check out. The scheduled jobs uses the *sn_wsd_rsv.time_before_check_in_out_reminder* and *sn_wsd_rsv.time_when_reservation_cancelled_without_check_in* system properties for the time intervals.
  - **Trigger mobile push notifications for upcoming reservation events**: The schedules job runs periodically and sends out notifications regarding upcoming reservation events.
- The system also sends actionable push notifications with actions such as **Check-In** and **Check-Out** to the mobile devices.
- Notifications are sent in English.
- Push notifications are sent on iOS and Android mobile devices.

Push notifications scenarios

As an employee, you will receive push notification for the following scenarios:

Reservation is ready for check in

An actionable push notification is received that you can check in the reservation. You can check in the reservation directly from the notification by selecting the **Check-In** option. After the selection, the reservation is checked in and you are navigated to the reservation details page.

Reservation check in about to start in a few minutes

Push notification is received that you can check in the reservation in a few minutes.

Reservation is created for you by someone

Push notification is received that a reservation is created for you by someone on your behalf.

Reservation about to start

Push notification is received that the reservation is about to start.

Reservation cancelled due to check in delay

Push notification is received that the reservation is cancelled as it was not checked in on time.

Reservation created for you by someone is updated

Push notification is received that the reservation made on your behalf by someone has been updated.

Reservation about to end

Push notification is received that the reservation is about to end.

Reservation is ready for check out

An actionable push notification is received that you can check out the reservation. You can check out the reservation directly from the notification by selecting the **Check-Out** option. After the selection, the reservation is checked out and you are navigated to the reservation details page.

Reservation started but pending check in

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Push notification is received that you are yet to check in the reservation even after the reservation start time.

Reservation ended but pending check out

Push notification is received that you are yet to check out the reservation even after the reservation time has started.

Location privacy settings and impact

Set location privacy on workplace reservations and workplace profiles in your organization. Implement privacy throughout the organization or only on a building using the Workplace Service Delivery location privacy settings.

System property settings

Using the Workplace Reservation Management system properties you can specify your location privacy preferences on workplace profiles and workplace reservations that belong to your organization.

You can set the location privacy using the following navigation:

- **All** > **Workplace Reservation Management** > **Administration** > **Properties**
- System Properties [sys_properties] table. To access the table, enter sys_properties.list in the navigation filter.

The following properties are provided in the application to implement location privacy:

- *sn_wsd_core.ENABLE_LOCATION_PRIVACY*: Enables you to set location privacy preference. You can apply privacy on workplace profiles and workplace reservations. The following options are provided:
  - **No privacy**: Select this option if you don't want to set any privacy. The property is set to **No privacy** by default.
  - **Workplace profiles only**: Select this option to set privacy on workplace profiles.
  - **Reservations only**: Select this option to set privacy on workplace reservations.
  - **Reservations and workplace profiles**: Select this option to set privacy on both workplace profiles and workplace reservations.
- *sn_wsd_core.OVERRIDE_RESERVATION_PRIVACY*: Enables you to let employees override the location privacy on a reservation. The property is set to **no** by default.
- *sn_wsd_core.PRIVACY_INFORM_EMPLOYEE*: Enables you to inform employees when privacy is applied on a workplace profile or reserved spaces. The property is set to **false** by default.

Building settings

If required, you can apply different location privacy settings on a building. That is, you can set privacy on workplace profiles or reservations made on that building. The privacy setup on the building won't affect other locations of your organization.

When you enable location privacy on a building, the privacy is inherited by the locations and workplace profiles in that building. The privacy setup of the building is considered instead of the privacy setup made on an organization level using the system properties.

In a building record, specify your location privacy preferences in the following fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Enable employee location privacy and preference**: Use this field to set your location privacy preference for the building. The following options are provided:
  - **None**: Select this option if you don't have any particular privacy preference on the building. When you set this option, the privacy preference that is set in the Workplace Reservation Management system property *sn_wsd_core.ENABLE_LOCATION_PRIVACY* is considered. The field is set to **None** by default.
  - **No privacy**: Select this option if you don't have any privacy requirement.
  - **Workplace profiles only**: Select this option to set privacy on workplace profiles.
  - **Reservations only**: Select this option to set privacy on workplace reservations.
  - **Reservations and workplace profiles**: Select this option to set privacy on both workplace profiles and workplace reservations.
- **Allow employees to override location privacy on reservations**: Use this field to specify if you want to let employees override the location privacy while reserving spaces that belong to this building. The field provides the following override options:
  - **None**: Select this option if you don't have any particular privacy requirement. When you set this option, the location privacy override preference that is set in the Workplace Reservation Management system property *sn_wsd_core.OVERRIDE_RESERVATION_PRIVACY* is considered. The field is set to **None** by default.
  - **Yes**: Select this option if you want to let employees override the privacy preference that is configured for the location that they want to reserve.
  - **No**: Select this option if you want to restrict employees from overriding the privacy preference that is set on the location that they want to reserve.

Workplace profile setting

If required, set location privacy on a workplace profile directly. By default, the location privacy preference that is set on the building in which the workplace profile is located is considered. In case, the building doesn't have any location privacy preference, the preference set in the Workplace Reservation Management system property *sn_wsd_core.ENABLE_LOCATION_PRIVACY* is considered.

The **Enable employee location privacy** field provides the following options:

- **None**: If you set this option, then the privacy setting made on the building where the workplace profile is assigned is considered. The field is set to **None** by default.
- **Yes**: Select this option if you want to set privacy on the workplace profile.
- **No**: Select this option if you don't want to set privacy on the workplace profile.

To specify privacy on a workplace profile, refer to Map designated workspaces to user profiles. The location privacy is implemented as follows:

- If set you set the field as **Yes**, then privacy is set on the workplace profile.
- If you set the field as **No**, then the workplace profile isn't set as private. Even if the building to which the workplace profile is located has privacy enabled, the workplace profile will still remain private.

Reservable module setting

Apart from the location privacy settings that you make in the system properties or on a building, the application also enables you to make a setting on the reservable module. You can enable employees to set the space details as private while making reserving a space that belongs to the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

reservable module. Use the **Enable employees to make spaces as private** option to specify your location preference. For more information, refer to Configure a reservable module.

The privacy override of a space while making a reservation, depends on the following:

- If the **Enable employees to make spaces as private** is enabled on the reservable module and if location privacy override by employees is set to **Yes** in the privacy override setup, then the employees can override privacy in their reservation. The **Make space details private** option appears to the employees while making a reservation.
- If either the **Enable employees to make spaces as private** is turned off on the reservable module or if the location privacy override by employees is set to **No** in the privacy override setup, then the employees can't override privacy in their reservation. The **Make space details private** option doesn't appear to the employees while making a reservation.

Location privacy processing

The location privacy is processed as follows:

- Always, the privacy setup that is made in the Workplace Reservation Management system property is considered except in case a building or a workplace profile has its own privacy setup.
- Similarly, the privacy override setup that is made in the Workplace Reservation Management system property is considered except in case a building or a workplace profile has its own privacy override setup.
- **Workplace profile**:
  - If a workplace profile has privacy setup, then that is considered.
  - If a workplace profile has no privacy setup, then the privacy setup that is set on the building in which the workplace profile is located is considered. If the building has no privacy setup, then the privacy setup that is set in the Workplace Reservation Management system property is considered.
- **Building**:
  - If a building has privacy setup, then that setup is considered.
  - If a building has no privacy setup, then the privacy setup made in the Workplace Reservation Management system property is considered.

Privacy information

When a reservation is requested, to know more about privacy-related setting, open the list of reservations through one of the following:

- Workplace Core: Navigate to **All** > **Workplace Core** > **Space Reservations** > **All reservations**.
- Workplace Reservation Management: Navigate to **All** > **Workplace Reservation Management** > **Reservation Overview** > **All Reservations**.

From the list view of the reservations, you can know the following:

- Privacy setting by viewing the **Space details private** column of the reservation. The column displays if the privacy setting is set as **True** or **False**.
- Privacy information, that is, from which source the privacy has been implemented, by viewing the **Privacy info** column. The column provides details of how the privacy has been set for the reservation in detail.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Impact of location privacy

Depending on the location privacy preferences, the following areas are affected.

Browse near a person

Based on the location privacy, the fields in the Reservation portal **Browse near a person** section is influenced as follows. The following scenarios are explained using examples:

- If either the workplace profile of Employee A or if the reserved space of Employee A is private, then when another employee - Employee B searches for this employee to reserve a space nearby, the details related to the reserved space do not appear.
- If the reservation is made by Employee B for Employee A, or if Employee B is invited to the reservation, or if the reservation is shared with Employee B, only then, the reservation details of Employee A's reserved space appears in the search results for Employee B.

Schedule view

On the Reservation portal, if a reservation is marked as private, the **Schedule view** of the space won't show any employee-related details if there's a reservation for a certain time.

If a reservation is made by Employee B for Employee A, or if Employee B is invited to the reservation, or if the reservation is shared with Employee B, only then the employee-related details of Employee A will appear in the **Schedule view** for Employee B.

Location directory

When an employee uses the Workplace Service Portal Location directory to search for a colleague or a space, depending on the privacy setting, the following happens:

- If the colleague for which an employee is searching for has their workplace profile set as private, then their location details aren't displayed.
- If there's an ongoing private reservation of Employee A on a workspace/desk Space 123, on then
  - If Employee B searches for Employee A, then the reserved space, Space 123, won't appear in the search. A **Private** tag is displayed on the search result card.
  - If Employee B searches for Space 123, then the details of Employee A who reserved this space won't be displayed in the search results. A **Private profile** tag is displayed on the search result card.
- If a reservation is made by Employee B for Employee A, or if Employee B is invited to the reservation, or if the reservation is shared with Employee B, only then, the employee-related details appear in the Location directory for Employee B.

Workplace Service Delivery for Mobile

If Employee A's workplace profile is set as private or has an ongoing private reservation, then when an Employee B searches for Employee A, or tries to get directions, the details related to the Employee A's location aren't displayed. Also, the **Get directions** option isn't displayed to Employee B.

If any reservation is made by Employee B for Employee A, or if Employee B is invited to a reservation made by Employee A, or if the reservation by Employee A is shared

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

with Employee B, only then, the employee-related details appear to Employee B. The **Get directions** option is displayed to Employee B.

Quick Reservation widget

If the **Enable employee location privacy and preference** is set to **Reservations only** or **Reservations and workplace profile** in the privacy setup, then the space that is suggested as best match has privacy enabled by default.

The option **Mark space details private** is displayed only if the employees are allowed to override their privacy preference for the space. Whether an employee can override privacy or not depends on the location privacy setup.

Workplace Reservations for Microsoft Outlook Add-in

In the add-in, the privacy of the spaces that are displayed in the search results depends on their privacy setup. The option **Mark all space details private** is displayed only if the employees are allowed to override their privacy preference for the selected space. Whether an employee can override privacy or not depends on the location privacy setup.

Workplace Calendar Synchronization

If a reservation is made using the Reservable Sync Configuration, then the privacy is implemented on the reservation based on the privacy setup made on the building to which the space belongs.

Additional details record producer - Mapping Variable types and limitations

When you create a record producer to configure additional details on a reservation form, the variables types and column type must be set differently. In case of reservations, the record producer supports only a few UI policies and client scripts.

Mapping Variable 'Type' with column type

When you add variables to the record producer, based on the type of field you want, select the **Type** of the variable as follows. For example, In the Workplace Reservation table, in the Columns related list, to set the column **Type** as a **String**, on the record producer, select the variable **Type** as **Multi Line Text**:

Workplace Reservations Table, Column - 'Type' mapping with Record producer, Variable - 'Type'

Workplace Reservations Table, Column - 'Type'	Record producer, Variable - 'Type'
True/False	checkbox
Date	Date
Date/Time	Date/Time
Duration	Duration
HTML	HTML
IP Address (Validated IPV4, IPV6)	IP address
List	List collector
Choice	Lookup multiple choice
Choice	Lookup Select Box
Password (1 & 2 Way Encrypted)	Masked

© 2026 ServiceNow, Inc. All rights reserved.

Workplace Reservations Table, Column - 'Type' mapping with Record producer, Variable - 'Type' (continued)

Workplace Reservations Table, Column - 'Type'	Record producer, Variable - 'Type'
String	Multi Line Test
Choice	Multiple Choice
Integer	Numeric Scale
Reference	Reference
Choice	Select Box
String	Single Line Text
URL	URL
String	Wide Line Single Text
Choice	Yes/no

Note:
The max length of a **Single Line Text** is 40. For a longer length, use **Multi Line Text**.

Additional details record producer - Limitations

When you configure the record producer, note the following:

- **Script** field is not applicable.
- You can add **Catalog UI Policies** to the record producer.
- Only the following **Catalog Client Scripts** type are supported:
  - OnChange
  - OnLoad

Note:
The record producer is only used to retrieve data related to the additional fields.

Record producer Related list: The following record producer related lists are not applicable:

- Variable Sets
- Not Available For
- Categories
- Catalogs
- Catalog Data Lookup Definitions
- Related Articles
- Related Catalog Items
- Assigned Topics

In the Available For Related list, you must create a **User Criteria** with the **Advanced** setting enabled. In the **Script** field, you must set "answer=false", so that the record producer is not be visible outside the reservation details page.

Variables Related list: The following Variables related lists are not applicable:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Permission
- Availability

Configuring additional details column in Workplace Reservation table - Limitations

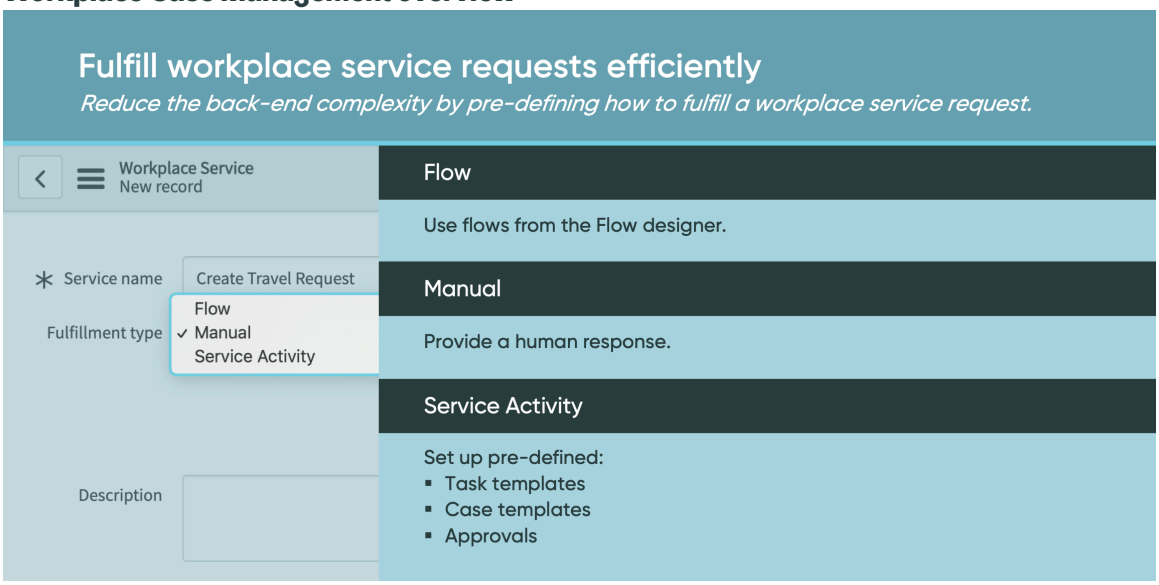
In the Workplace Reservation (sn_wsd_rsv_reservation) table, Columns related list, when you add fields (columns) that are not included, note the following:

- On the Dictionary Entry form, the **Mandatory**, **Read only** and **Display** fields are not applicable.
- The columns in the table are created to only store the data.
- The **Max length** field is considered to save the data with **Max length**.

Workplace Case Management

Fulfilling employee workplace requests involves multiple, complex back-end processes, including analyzing the requests for type and routing them to human or automated responses, approvals, or other tasks. The ServiceNow® Workplace Case Management application makes these processes simpler and more efficient by letting you create pre-defined steps to fulfill requests.

Get started



Explore Learn about Workplace Case Management concepts and features.	**Configure** Configure workplace services and related settings using which employees can submit workplace requests.	**Request** Request workplace-related services. Raise a general enquiry, office reconfiguration, and more.
Manage Manage workplace cases, approvals and more.	**Integrate** Extend the Workplace Case Management abilities by integrating with other applications.	**Analytics and Reporting Solutions** Coordinate work and improve processes with dashboards and reports.
	Reference Get details about components like fields, tables, and properties.

Explore Workplace Case Management

Fulfilling employee workplace requests involves multiple, complex back-end processes, including analyzing the requests for type and routing them to human or automated responses, approvals, or other tasks. The ServiceNow® Workplace Case Management application makes these processes simpler and more efficient by letting you create pre-defined steps to fulfill requests.

Workplace Case Management overview

Request a workplace service

As an employee, the Workplace Service Portal allows you to submit requests for workplace services like general inquiries, cleanliness requests, and travel-related requests. For example, you can create a request for HVAC issues, broken chairs, floor spills, move requests, and more.

Manage workplace cases

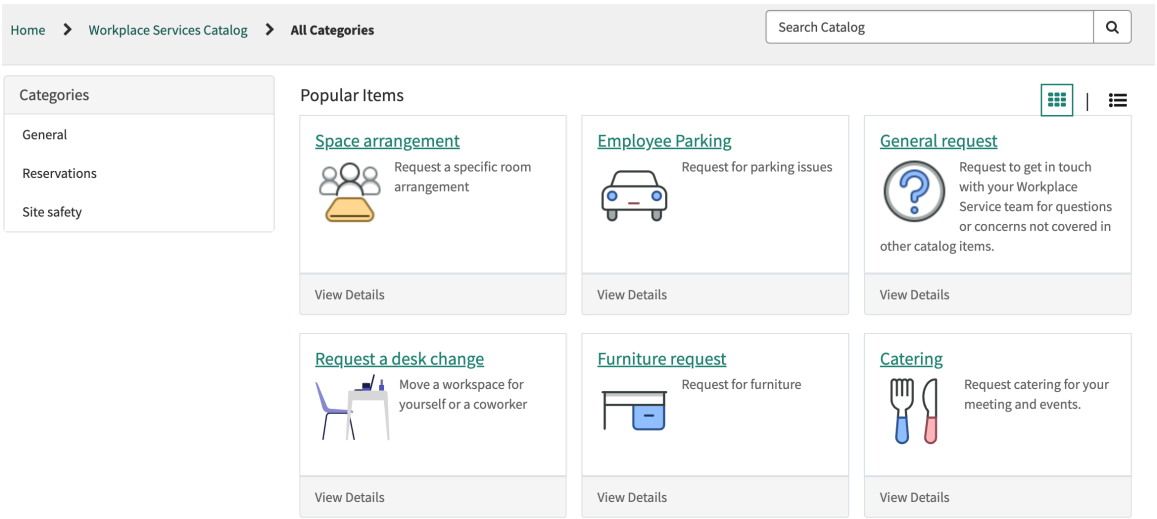
As a Workplace Case Management Manager and Admin, you can:

- Configure whether a request must be fulfilled manually or if it requires a set of automated tasks.
- Configure approval options for tasks.
- Create case and task templates.
- Create catalog items called record producers so that employees can raise requests.
- View and modify all cases created in the application.
- Configure an escalation rule for an assignment groups.
- Add fulfillment instructions.
- Create an SLA definition.

Workplace Central - Case Management workspace

You can also manage all the workplace cases from a single place using the Case management workspace in the Workplace Central workspace. The Case management workspace helps you to handle hundreds of workplace cases requested in the organization on a daily basis. Instead of using the Workplace Case Management application to monitor the cases, the workspace provides you a simple and efficient display of the same cases under various categories to help

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



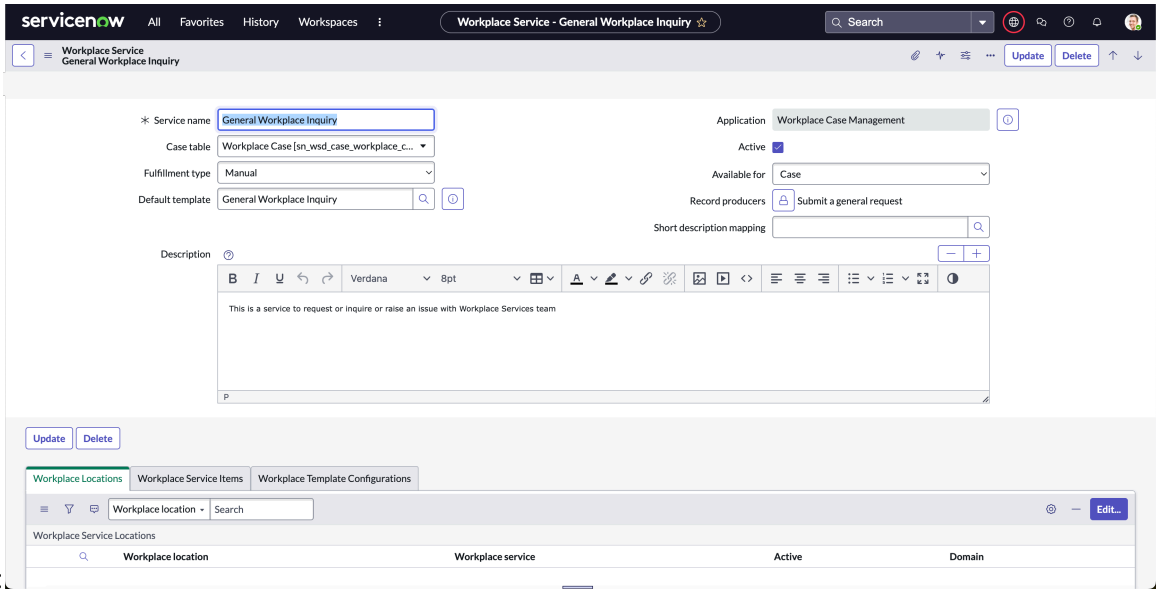
you handle them easily. Instead of verifying hundreds of cases and reading the data specified in detail, the workspace analyzes them and presents the data accordingly. The case details are displayed in a manner where you can find the most the important information easily with few clicks and perform quick actions.

For more information, refer to Case management.

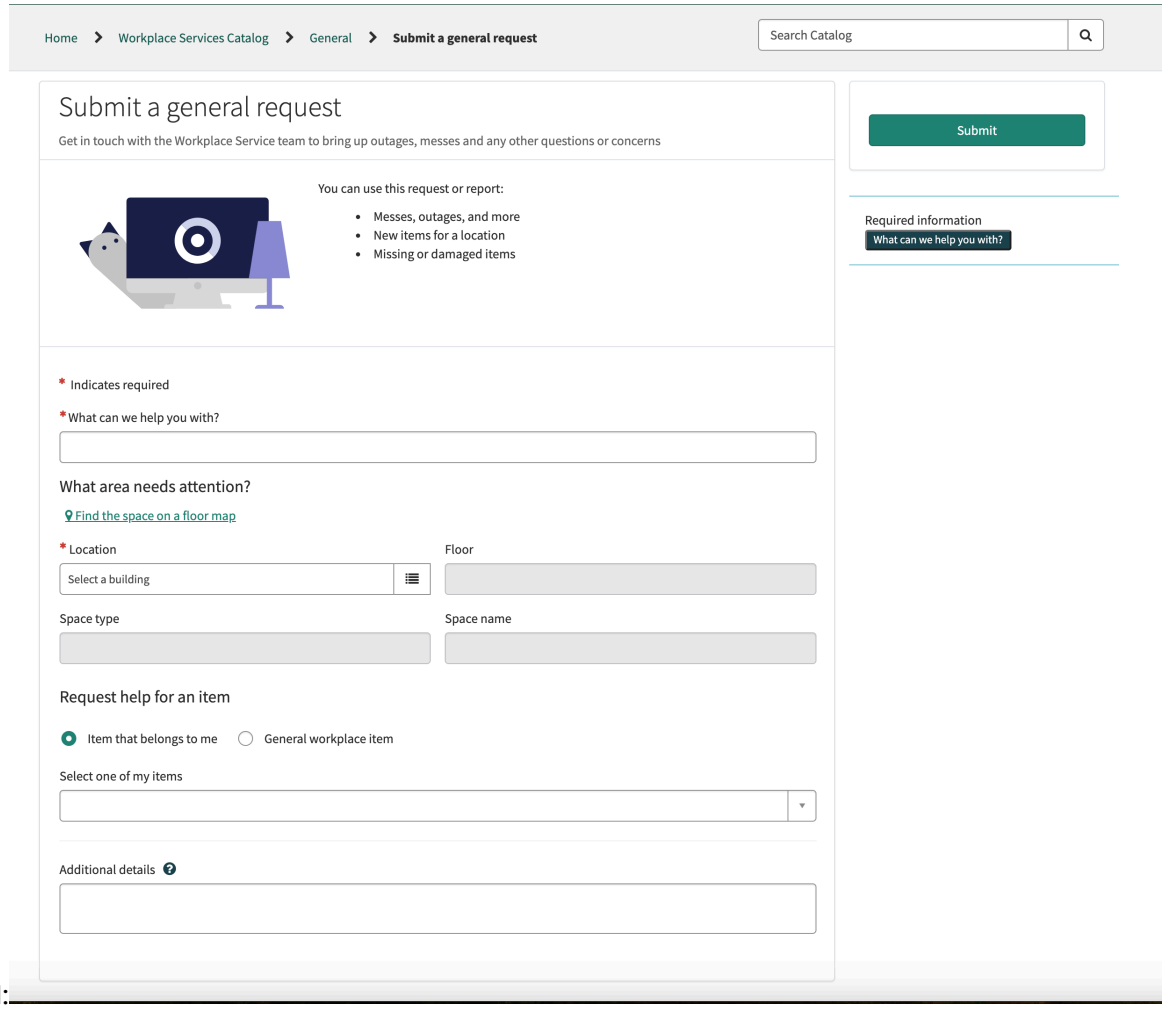
Workplace Services

The ServiceNow® Workplace Case Management application enables you to create a workplace service with pre-defined steps for fulfillment. You can create workplace services for requests like cleanliness, IT, office setup, and travel requests. For example, you can create a request for HVAC issues, broken chairs, floor spills, move requests, and more.

The workplace services that you create using the Workplace Case Management application are displayed in the Workplace Service Portal in a Workplace Service Catalog under various categories as follows:



When you create a workplace service, you can configure the steps based on the type of fulfillment required. The ServiceNow® Workplace Case Management application provides the following fulfillment types:



- **Manual**: The Manual option enables you to configure a workplace service with human response. This works for services like general inquiries or complaints, and similar requests. Following is an example of how a manual workplace service is configured and displayed in the Workplace Service Portal.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manual Workplace Service created as 'General Workplace Enquiry' in the Workplace Case Management application:

The workplace service 'General Enquiry' displayed as 'Submit a general request' in the Workplace Service Portal:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Service Activity**: The Service activity option enables you to select the type of activity triggered when a request is raised. You can specify the order in which these activities must be executed. You can select from the following types of workplace service activities:
  - **Approval**: Enables you to set approvals on workplace service activity. You can configure what type of approval is required on selecting the workplace service. You cannot set more than one approval activity in a single order.
  - **Task**: Enables you to add a task using a task template. When the workplace service is selected, the task is created based on the order specified.
  - **Child case**: Enables you to trigger child cases on selecting the workplace service. A workplace service must be provided for a child case. The child case is created based on the order specified.
  - **Execute service item**: Executes the tasks or cases created for workplace service items ordered by an employee along with the workplace service. For more information, see Add a workplace service item to a workplace service.
  - **Automated task**: Creates an automated task that will be closed without any manual intervention.
- **Flow**: The flow option enables you to select an existing sub-flow from the application. For more information about Flows, see Flows.

Raise workplace service requests

You can request a workplace service using the Workplace Service Portal or the Now Mobile app.

The Workplace Services catalog displays a list of workplace services from which you employees can submit requests. The following default Workplace services are provided by ServiceNow®:

- Request general workplace help.
- Reconfigure an office space.
- Raise a move request for a desk change.
- Request furniture for a space.
- Request for an employee parking space
- Request a specific space arrangement
- If you have installed Workplace Central plugin, then the following workplace services are available:
  - Workplace User Assignment and Move Service via Scenario Planning
  - Workplace Assignment Type Service
  - Workplace Allocation Change Service
- Space request

- The above workplace services are triggered automatically based on the type of change implemented while scenario planning. For more information about Space optimization - scenario planning and it's features, refer to Scenario Planning.

You can also use the Virtual agent chat support on the Workplace Service Portal to submit a general inquiry. The chat support enables you to do the following:

- Request a workplace help.
- View the status of your submitted cases.
- View the cases that are awaiting acceptance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Case and Task Templates

As a Workplace case manager, you can create templates to simplify the process of creating tasks and cases by populating fields automatically.

You can create the following types of template:

- **Case template**: A case template auto-populates fields when a case is being created.

  For information about creating case templates, see Create a Workplace case template.

- **Task template**: A task template auto-populates fields when a task is being created. You can modify predefined workplace task templates or create your own templates and associate them with workplace tasks.

  For information about creating task templates, see Create a Workplace task template.

Configure Workplace Case Management

As an admin, you can configure Workplace services and enable Workplace Services users to submit requests through it. The application enables you to configure workplace services with pre-defined fulfillment types.

The ServiceNow® Workplace Case Management application enables you to administrate all the workplace services and cases created using these workplace services.

As a workplace case admin or a case manager, you can perform the following actions.

- Configure Workplace services.
- Configure Case templates for workplaces cases.
- Configure Task templates for workplace tasks.
- Configure Record producers and link them with a workplace service.
- Configure the Approval options and select the type of approvals that are required for a service activity.
- Create Workplace Service Activities such as tasks, approvals, and child cases.

Install Workplace Case Management

Install the Workplace Case Management application from ServiceNow Store applications. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin
Complete the following setup checklist.

Setup checklist

Setup tasks	Description
Verify that Workplace Service Delivery - Core (sn_wsd_core) plugin of minimum version 2.0 is activated.	Navigate to **Subscription Management** > **Subscriptions** in your instance. The list displays the subscriptions that your organization has purchased.
Verify that Workplace Case Management (sn_wsd_case) plugin is activated.	Navigate to **Subscription Management** > **Subscriptions** in your instance. The

Setup checklist (continued)

Setup tasks	Description
	list displays the subscriptions that your organization has purchased.

Activate the Workplace Service Delivery - Core plugin of minimum version 2.0 (sn_wsd_core) in your ServiceNow instance before you install Workplace Case Management.

Use the following details when required:

- Name of the application: Workplace Case Management
- ID of the application: sn_wsd_case

Role required: admin

About this task

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.
   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from ServiceNow store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Case Management.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.
6. Click **Install**.

Create a Workplace case template

Create a Workplace case template for use when creating workplace services.

Before you begin

Role required: sn_wsd_case.admin or sn_wsd_case.manager

About this task

A Case template simplifies the process of creating cases in Workplace Case Management by populating fields automatically.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Case templates**.
2. Create a template or modify an existing template.
   - To create a template, select **New**.
   - To modify an existing template, select the template from the list.

   For information about the template form fields, see Create a template.
3. In the **Table** field, select the **Workplace case [sn_wsd_case_workplace_case]** table.
4. Select **Submit**.

Result
The case template is created. You can use the template for workplace services.

What to do next
Create a case template with user acceptance, for more information, see Create a User acceptance Workplace case template.

Create a User acceptance Workplace case template

Create a Workplace case template with user acceptance.

Before you begin
Role required: sn_wsd_case.admin or sn_wsd_case.manager

About this task
Create this case template for use when a user's approval or rejection is required to close the request.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Case templates**.
2. Create a template or modify an existing template.
   - If you are creating a new template, click **New**.
   - If you are modifying an existing template, open the desired template.

   For information about the template form fields, see Create a template.
3. In the **Table** field, select the **Workplace case [sn_wsd_case_workplace_case]** table.
4. In the **Template** field, enable user acceptance and acceptance time-out.
   a. In the left column, select **Enable user acceptance** and in the right column, select **True**.
   b. In the left column, select **Acceptance timeout** and in the right column, specify the duration after which the acceptance request can expire.
5. Click **Submit**.

Result
The Case template is created with user acceptance options enabled.

What to do next
Use the template in Workplace services where user acceptance is required. For more information about creating Workplace services, see Create a Workplace service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a Workplace task template

A Task template simplifies the process of creating tasks in Workplace Case Management by populating fields automatically.

Before you begin
Role required: sn_wsd_case.admin or sn_wsd_case.manager

About this task
Create a task template for use when creating a workplace service.

> **Note:**
> Administrators may use task assignment rules to control the automatic assignment of workplace tasks as long as the task template is not already assigning a person or group to the task. For more information on assignment rules, see Define assignment rules.

Procedure
1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Task templates**.
2. Create a template or modify an existing template.
   - If you are creating a template, click **New**.
   - If you are modifying an existing template, open that template.

   For information about the template form fields, see Create a template.
3. In the **Table** field, select the **Workplace Task [sn_wsd_core_workplace_task]** table.
4. Click **Submit**.

Result
The task template is created. You can use this template for Workplace services.

Configure Approval options

Add approvers to approve cases created through Workplace services.

Before you begin

> **Warning:**
> Starting with Workplace Case Management version 1.8.2, the option to configure approval options has been moved to the core application Workplace Core version 2.9.2. To create or view approval options, navigate to **Workplace Core** > **Administration** > **Performer Criteria**.
>
> - After the upgrade, the existing approvers are migrated from the Approval Option [sn_wsd_case_approval_option] table in the Workplace Case Management to the Workplace Performer Criteria [sn_wsd_core_performer_criteria] table in Workplace Core.
> - The **Workplace Performer Criteria** has the same functionality as the Workplace Case Management **Approval** option. In addition, you can configure static approvers using the User criteria.

Ensure that you have the following details:

- Workplace Case table.
- User fields to select an approver from.

Role required: sn_wsd_case.admin or sn_wsd_case.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
The ServiceNow® Workplace Case Management application provides the following default Approval options:

- **Manager**
- **Workplace location managed by**
- **Workplace location managed by group**

Procedure
1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Approval options**.
2. Click **New**.
3. On the form, fill in the fields.

Approval options form

Field	Description
Name	Name of the Approval option.
Case table	Case table for the option. Select the Workplace Case [sn_wsd_case_workplace_case] table.
User field	User or a user group to set as approver.
Application	Application for the option. This field is automatically set. Make sure the application is set to **Workplace Case Management**.
Active	Option to activate the approval option. Select this option.

4. Click **Submit**.

Result
The Approval option is added and will be listed wherever approvals are configured.

Configure a Record producer

Make a Workplace service available to employees as a self-service option. Configure a record producer to display the service as a catalog item in the Workplace Services catalog.

Before you begin
Role required: sn_wsd_case.admin or sn_wsd_case.manager

Procedure
1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Record producers**
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace case management - record producer form

Field	Description
Name	Name of the record producer.
Table name	Workplace Case (sn_wsd_case_workplace_case) table that the record producer is associated with. **Note:** Make sure that the workplace case table for the record producer matches that of the associated workplace service.
Model	Product model table if relevant for the record producer.
Application	This field is already set to `Workplace Case Management`.
Active	Option to activate the record producer for use.
Preview link	Link to preview how the record producer appears to users in the Workplace Service Delivery catalog
Expand help for all questions	Select this option to enable users to expand help for all questions.

4. Fill the following related lists fields appropriately:
   - **What it will contain**
   - **Accessibility**
   - **Generated Record Data**
   - **Portal Settings**
5. In the **What it will contain** related list, provide the following script:

```
new sn_wsd_case.WSDServiceUtils(current,
 gs).createCaseFromProducer(producer, cat_item.sys_id);
```

6. In the **Variables** related list, configure the variables for the Workplace Services catalog item as appropriate.

   Variables collect information from the user, and are used to ask questions and map answers to fields. You can add as many variables as you need to the Workplace Services catalog item. Commonly used variables types include:
   - Checkbox
   - Multiple Choice
   - Reference
   - Select Box
   - Single Line Text

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To learn more about the different types of variables and how to configure them, see Types of service catalog variables Types of service catalog variables.

7. Select **Submit**.

Result
The record producer is created.

What to do next
Link the record producer to the workplace service, see Create a Workplace service.

Configuring a record producer for request edit

Configure a record producer for editable workplace service requests.

The request edit feature in Workplace Service Delivery lets users modify the details of their submitted requests. Cases that are created with record producers on the Workplace Case or Workplace Case Extension tables can be edited, keeping records current and accurate.

To configure the edit functionality of a record producer, follow the steps in the following sections.

Creating a record producer

You must first create a record producer on the Workplace Case or Workplace Case Extension tables, then map it to the **Record Producer** field of a Workplace Service. For more information about creating a record producer, see Configure a Record producer.

If you want to integrate the record producer with Workplace Reservation Management, see Configuring a record producer for reservation.

Enabling the edit functionality

You can enable the button by selecting `Case` or `Case and Reservation` in the **Available for** field, then selecting the **Allow request modifications** field of the workplace service.

When the **Allow request modifications** option is enabled on a workplace service, users see the **Edit request** action in the request summary page for all the record producers associated with that service.

For more information about the fields of a workplace service, see Workplace Service form.

Redirecting to the Case Editor page

When users select the edit request option for their request, they're redirected to the WSD Case Editor page, which looks like the record producer to provide a familiar interface for users.

After making their changes, users can save the updated case, which makes the following changes:

- The Workplace Case record is updated with the new values provided by the user.
- New service item requests are created based on the updated case information, if necessary.

Configuring the record producer for editing

Handling variables with default values on load

Condition

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Variables that have default values on load can cause data inconsistency on the edit page. The edit page must fill variables based on the submitted request.

For example, the system tries to populate the logged-in user in the Requested for field instead of picking the data from the submitted request.

Remedy

While setting the default value for any variable, ensure that it only applies to the new request submission. You can use the `id` parameter from the page URL in the client scripts to determine whether it's a request submission page or an edit page.

For more information, refer to any record producers installed with Workplace Case Management, like `Catering`.

Triggering an event on submission

For the edit page, you must trigger the `wsd.serviceEditor.onSubmit.success` event in the `onSubmit` catalog client script (last executable script) of the record producer with the parameter `success: true`. Ensure that the last executable client script has the **UI type** field set to `All`.

Triggering the event makes sure that all the onSubmit client scripts are validated and that the updated variable data can be used to update the case record.

For more information, refer to any record producers installed with Workplace Case Management, like `Catering`.

Using custom widgets in the record producer

Condition

To use custom widgets in the record producer, ensure that the widget can pre-fill data based on the submitted request. The reference for the widget can be taken from the Workplace Service widget.

Remedy

Ensure that if you are on the edit page, you can use the `sys_id` parameter from the URL to get the sys_id of the submitted request. Use the sys_id to retrieve the case data and populate the existing data on the widget during the first load.

Alternatively, you can use the following variable sets that are installed with Workplace Case Management:

- For both item and space selection in the request, use the `Workplace Service widget Variable set`.
- For only space selection, use the `Multilevel space picker widget variable set`.

Configuring a record producer for reservation

Configure a record producer to integrate it with Workplace Reservation Management.

Integrating a record producer with Workplace Reservation Management provides administrators with flexible choices to handle service requests. If a record producer is mapped to the **Record producer for reservation** field in a workplace service, it's displayed to users during the reservation process. If no record producer is mapped, the system displays a custom widget for service item requests.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The dual approach with a record producer and a custom widget provides a streamlined and unified experience:

- Using a record producer automatically populates and hides fields with known data from the reservation context like requested for, date and time, space details. It makes sure that users only provide the necessary information, simplifying the process and improving data accuracy.
- Using the custom widget maintains backward compatibility for workplace services that don't have a record producer.

Enabling a record producer for editing

You must first create a record producer on the Workplace Case or Workplace Case Extension tables and configure it for editing. For more information, see Configuring a record producer for request edit.

For more information about creating a record producer, see Configure a Record producer.

While creating the record producer, make sure that you follow these steps.

Important:
If you don't follow these steps, the record producer doesn't load correctly on the reservation portal.

- You must use the `Workplace Service widget Variable set` in your record producer to ensure that space selection and service item selection widgets are included and function correctly.

  The variable set includes the following widgets:

  - WSD Multilevel Space Picker: The widget used to select building, floor, and space information.
  - WSD Workplace Service: The widget used to select specific service items.
- You must adhere to specific names for the variables so the system can automatically pass data from the reservation to your record producer. These variables are populated with known data from the reservation and are typically hidden on the form.

  Make sure that you use the specified names for the following variables:

  - **Requested for**: requested_for
  - **Date and time requested by**: delivery_time
  - **Urgency**: urgency
  - **Impact**: impact

- Sections like request details and space selection are hidden on the request form as they are derived from the reservation data. For more information, refer to any record producers installed with Workplace Case Management, like `Catering`.

Mapping the record producer to the reservation page

To map the record producer to the reservation page, you must first add it to the **Record producer** field of the workplace service. You must then add it to the **Record producer for reservation** field of the same workplace service.

For more information about the fields of a workplace service, see Workplace Service form.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure workplace services topic

Configure catalog items for the child topics under the Workplace service topic within the Workplace Service Delivery integration with Microsoft Places application.

Before you begin

Role required: sn_wsd_case.admin or sn_wsd_case.manager

Procedure

1. Navigate to **All** > **Content Taxonomy** > **Topics**.
2. Search for the Workplace services topic.
3. Select the Workplace service topic that you want to modify to add more catalog items to the Workplace Service Delivery integration with Microsoft Places application.
4. Select the topic or category for which you want to add the new catalog item.
5. On the form, scroll down and click **New** under the **Connected Content** tab.
6. On the form, fill in the fields.

Content New Record

Field	Description
Content type	Type of the taxonomy content configuration for which you want to add the catalog item.
Topic	The name of the topic. This field is preloaded with the selected topic name.
Catalog item	The catalog item that you want to add to the topic. Ensure to select the item that is related to the topic.

7. Click **Submit**.

Result

The Workplace service catalog item is added. The catalog item will be applied to the specific topic within the Workplace Service Delivery integration with Microsoft Places application.

Create an SLA Definition

Configure SLAs to ensure that cases are resolved according to the expectations of customers. SLAs set up performance parameters, such as specifying minimum uptime or the amount of time that a task needs in order to reach a certain condition.

Before you begin

Role required: sn_wsd_case.admin or sn_wsd_case.manager

About this task

Create an SLA definition and use it in Workplace cases. An SLA definition record defines the timings, conditions, workflows, and other information required to create and progress task SLAs. For more information, refer to Service Level Agreement (SLA) definition.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **SLA Definitions**.
2. Create an SLA Definition or modify an existing one.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If you are creating an SLA Definition, click **New**.
- If you are modifying an existing SLA Definition, open the desired SLA Definition.

For information about the template form fields, see Create an SLA Defintion.

3. In the **Table** field, select the **Workplace Case [sn_wsd_case_workplace_case]** table.
4. In the **Flow** field, select **Default SLA flow**.
5. In the Application field, ensure **Workplace Case Management** is selected.
6. Click **Submit**.

Result
The SLA Definition is created.

Create a Workplace service

Create a workplace service with pre-defined steps of fulfillment. Select the fulfillment type required based on the workplace service. Create workplace services like catering, office supply request, parking, or any service to support employees needs.

Before you begin
Ensure that you have the following details:

- Task templates and Case templates to link it to the workplace service.
- Record producer to which the workplace service must be linked.
- Active flows in case you want to create workplace service flow.

Role required: sn_wsd_case.admin or sn_wsd_case.manager

About this task
Create a workplace service and specify how the workplace service must be fulfilled. You can choose to fulfill the workplace service manually, by triggering a series of tasks i.e by a service activity or using a flow. Specify the following for the workplace service:

- Name of the workplace service. The workplace service will be displayed at all location with this name.
- The fulfillment type like manual, service activity or flow.
- Specify from where you want to enable users to order. That is, specify if users can order through a workplace service request or while making a reservation or both.
- Specify if an employee can request more than one workplace item that belongs to the same category.
- Select a template to pre-fill certain values when creating a workplace case or a workplace task.
- The record producer to which you want to link the workplace service if you want to make it available. The workplace service can be requested only through a record producer created in the Workplace Case Management application.
- Description about the workplace. You can enter a brief description about the purpose of workplace service. You can enter a regular text or a HTML text.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the Workplace service form, fill in the fields.
   For a description of the field values, see Workplace Service form.
4. Select **Submit**.

Result

The workplace service is created and is requested whenever the associated record producer is selected. If you want to create a workplace service activity for the workplace service, refer to Create a Workplace service activity.

Create a Workplace service activity

Create a Workplace service activity to trigger a background activity when a Workplace service is selected. The activity can be an approval action, task, or a child case.

Before you begin

Role required: sn_wsd_case.admin or sn_wsd_case.manager
Ensure that you have the following details:

- Task templates and Case templates to link to a workplace service activity.
- A workplace service with fulfillment type selected as **Service activity**. For more information, see Create a Workplace service.

About this task

Activities can be approvals, tasks, or child cases. You can specify the order in which these activities must be triggered.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Select the workplace service that you want to modify to add more workplace service activities.
3. Click **New** under the **Workplace Service Activities** section in the **Workplace services** form.
4. On the form, fill in the fields.

Workplace service form fields

Field	Description
Name	Enter a name for the service activity.
Activity type	Select the type of service activity that you want to create: ○ **Approval**: Creates an approval activity. ○ **Task**: Creates a task activity. ○ **Child case**: Creates a child workplace case. ○ **Execute service item**: Executes the tasks or cases created for workplace service items ordered by an employee along with the workplace service. For more

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	information, see Add a workplace service item to a workplace service. ○ **Automated task**: Creates an automated task that will be closed without any manual intervention.
Missing all approves	This field appears if you select the **Activity type Approval**. From the list of options, select what action to take if all the approvers are missing.
Wait for	This field appears if you select the **Activity type Approval**. Select the type of approval required to close the case. From the options, select whether any approver can approve, all approvers must approve, or if the first response from any approver is an approval. Point to the options to view more details.
Application	This field is auto-generated. However, ensure that **Workplace Case Management** is selected.
Parent service	This field is auto-populated with the Workplace service to which you are adding this activity.
Order	Specify an order for this activity. Depending on the order, the service activity initiated. **Note:** You can specify only one Service Activity of type **Approval** in a single order.
Approvers	This field appears if you select the **Activity type Approval**. Select approvers for the case from the configured performer criteria. Click the unlock icon ( ) to select.
Workplace case service	This field appears if you select the **Activity type** as **Child case**. Click the search ( ) icon and select the Workplace service you want to set as a child case. To add a Workplace service, see Create a Workplace service.
Continue if incomplete	Select this option if you want this activity to continue even if the activity is closed or incomplete.

5. **Optional:** Enter the conditions in the condition builder that you want to trigger the background activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example
For example, a task for the activity will be created only when the condition matches the case record.
In releases prior to the Quebec release, fields had to be selected from the Workplace Case [sn_wsd_case_workplace_case] table and service catalog variables such as questions could not be referenced.

6. Click **Submit**.

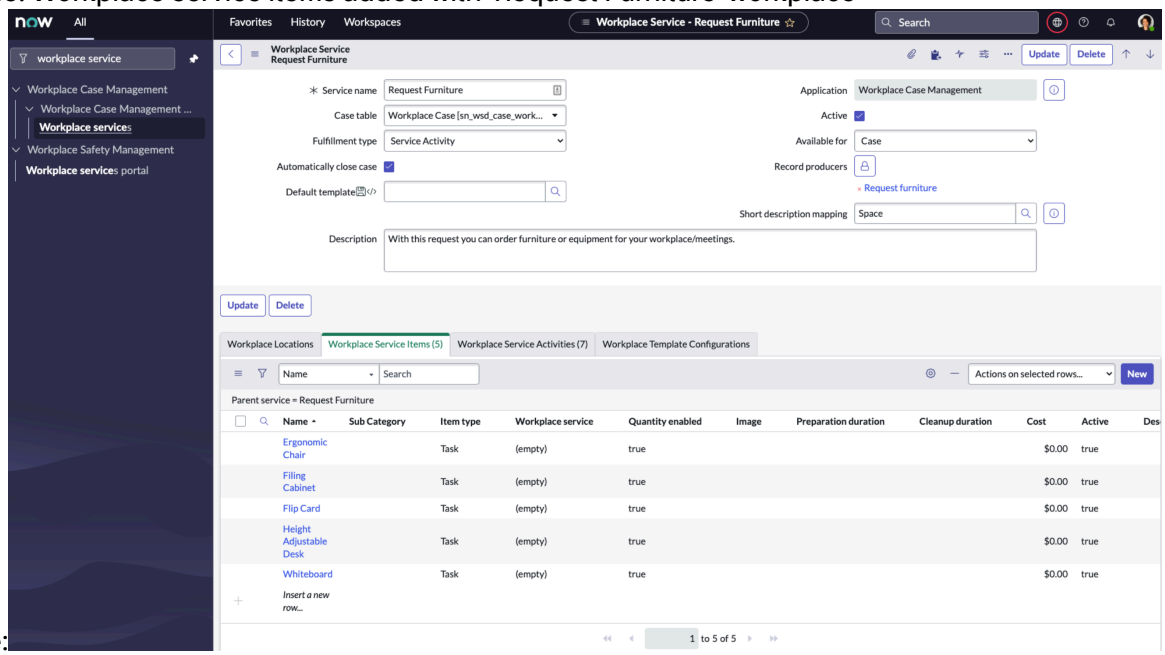
Result
The Workplace Service Activity is created and will be executed when the parent Workplace service is requested.

Add a workplace service item to a workplace service

Configure a workplace item that an employee can order along with a workplace service request or as part of their reservation. For example, while making a reservation, an employee can order a workplace service item such as catering, an additional chair, whiteboard, marker, and more.

Before you begin
Role required: sn_wsd_case.manager

About this task
Add a workplace item to make it available for employees to order when they make a workplace service request. Specify the following details related to the workplace item:



- Specify a name for the workplace item. The item will be displayed to the employees with the specified name.
- Select a template to pre-fill certain values when creating a workplace case or a workplace task.
- The parent workplace service to which you are adding the workplace item.
- The subcategory to which the item belongs.
- An image describing the workplace item. The image will be displayed to the employees while they are making a selection. The image is displayed to the customers while using the Reservation portal and Workplace Reservations for Microsoft Outlook Add-in.
- A brief description about the workplace item. The description will be displayed to the employees while they are making a selection. You can add a normal text or an HTML text. The description can contain a text and a link. If you enter a long description, the text will be displayed to the employees along with a **Show more** option. The description is displayed to the customers while using the Reservation portal and Workplace Reservations for Microsoft Outlook Add-in.

  Note:
  The Workplace Reservations for Microsoft Outlook Add-in doesn't inform about the services in lead time instead the services are not requested when the reservation gets submitted.

- Cost of the workplace item. You can select the applicable currency based on your location.
- Time duration required to prepare the item and clean up the item. You can specify the time in days and or hours.
- Specify if you want to enable employees to specify their required quantity or capacity.
- Configure the locations where the workplace service item shall be available.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example: Workplace service items added with 'Request Furniture' workplace service:

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Select the workplace service to which you want to add a workplace service item.
3. On the form, scroll down to the Workplace Service items related list.
4. Click **New**.
5. On the form, fill in the fields.

Workplace Service item form

Field	Description
Name	Name of the workplace service item.
Item type	Type of workplace service activity that must be generated for this workplace service item when an employee makes an order. Choices are as follows: ○ **Case**: Option to generate a child workplace case to fulfill this item. ○ **Task**: Option to generate a child workplace task to fulfill this item. ○ **Manual**: Option to generate a manual fulfillment workplace service to fulfill this item.
Workplace service	The workplace service that you want to set as a child case to fulfill the item. This field appears only if **Case** is selected from the **Item type** field.
Task table	The task table that must be used to create a child workplace task to fulfill the item. This

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	field appears only if **Task** is selected from the **Item type** field.
Default template	The default task template to fulfill the task. For more information, refer to Create a Workplace task template. This field appears only if **Task** is selected from the **Item type**.
Application	Application of the service item. This field is automatically set. ○ If you are adding the workplace service item for a workplace case-related service, select**Workplace Case Management**. ○ If you are adding the workplace service item for a workplace service that is available for employees while making a reservation, then select **Workplace Reservation Management**.
Parent service	The workplace service to which you are adding this activity. This field is automatically set.
Sub Category	Sub category to which the workplace item belongs. A list of subcategories is available from which you can select.
Active	Option to activate the workplace service item.
Image	Image describing the workplace service item. The image is be displayed to employees while making a selection.
Description	Brief description about the workplace service item. The description can be in a normal text or an HTML text.The description will be displayed to Workplace Reservation Management users while making a selection. The description can contain a text and a link. The description will be displayed to the customers while using the Reservation portal and Workplace Reservations for Microsoft Outlook Add-in.
Default Configurations	
Quantity enabled	Option to enable specify their required quantity.
Capacity enabled	Option to enable employees to specify a capacity. The maximum capacity that is specified for the selected workplace location is used as the maximum capacity limit. To specify a maximum capacity, change the **Max capacity** field of the workplace service item location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: If the Workplace Service item isn't assigned to any location, there will be no capacity restrictions.
Cost	Cost of the workplace item. To specify the currency of the cost, click the currency icon ($).
Preparation duration	Time required to prepare the item, if needed.
Cleanup duration	Time required to clean up the item, if needed.
Lead time for ordering	Time provided for the service team for preparing or arranging the service item. Configuring **Lead time for ordering** restricts in adding any extra service items to a reservation, when the service is within the lead time. This option is enabled at service item and service location level. If a user changes the date of a reservation or a case and the new date is within the lead time, the system displays an error specifying the lead time of the service item. Service items that are within the lead time can't be modified while editing a reservation.
Restrict cancellation of requested services	Option to restrict employees to cancel the requested services.

6. Click **Submit**.

Result

The workplace service item is added to the workplace service. An employee can order the workplace item while requesting the workplace service.

Important:
While adding a service item to a reservation, if a particular service item is within the lead time, then that service item won't appear in the items list.

A regular employee can’t remove any service items to an existing reservation in the following scenarios:

- When a reservation is arranged
- When the service items are within the **Lead time of ordering**
- When the **Restrict cancellation of requested services** option is enabled

Employee can move a reservation to another date or time. While moving, if one or more services collide with the Lead time for ordering, then the employee is informed.

The employee shouldn't be able to remove any services that are being prepared or arranged.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The employee is informed if there are one or more services in the lead time while saving the reservation.

Note:
Canceling a reservation cancels the requested service, even when the service item is restricted from cancellation.

What to do next
Specify the workplace locations where the workplace service item is available for ordering. For more information, see Make a workplace service item available to a workplace location.

Make a workplace service item available to a workplace location

Make a workplace service item available to specific workplace locations. Select any workplace location such as a region, site, campus, building, floor, area, or a space.

Before you begin
Role required: sn_wsd_case.manager

About this task
Select workplace locations where the workplace item must be available. Employees can order the item while making a workplace service request. Select a parent location such as a region, site, or a campus. You can also select child locations such as a building or its spaces.

- You can specify different costs for different workplace locations by creating multiple Workplace Service Item Location records.
- The cost of the workplace service item is also applied to all the child workplace locations of that selected workplace location. If the workplace item has a different cost specified for any child workplace location, then the same cost is applied instead of the parent location. For example, assume you specified the cost of the workplace item as $100 for the region ABC. You also specified a separate cost for the workplace item in its site XYZ as $75. Then, the cost of the child workplace location ($75) is applied.
- If the workplace service item isn't assigned to any location, then the availability of the item depends on the availability of the workplace service to the specified workplace locations. You can view the details of the workplace locations where the workplace service is available in the Workplace locations related list.
- The availability of a workplace service item depends on the locations specified in the workplace service location and the workplace service item location.
  - If there are no workplace service location and no service item location specified for a Workplace service, then the workplace service items are available to all the locations.
  - If there is a workplace service location specified and there is no service item location specified for a Workplace service, then the workplace service items are available to that location and child locations specified in a Workplace service location.
  - If you specified locationA for the workplace service and specified locationB (not in the hierarchy of locationA) in the workplace service item location (in Workplace Service Item Locations related list of the workplace service item), then the following actions are performed when an employee raises a workplace service request:
    - If the employee raises the request for locationA or any locations in the hierarchy of locationA, then all the workplace service items that are available to locationA, except items available to locationB are displayed.
    - If the employee raises the request for locationB or any locations in the hierarchy of locationB, then no workplace service items are displayed as it isn't in any hierarchy of locationA.

    The same logic is applied while displaying workplace service items associated with workplace spaces in general.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configuring **Lead time for ordering** restricts in adding any extra service items to a reservation, if it is within the lead time for ordering.

Restrict cancellation of requested services restricts employees to cancel the requested services.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Select the workplace service in which the workplace service item is added.
3. On the form, scroll down to the Workplace Service items related list.
4. Select the workplace service item that you want to assign to a workplace location.
5. On the form, scroll down to the Workplace Service Item Locations related list.
6. Click **Edit...**.
7. To select and move the service, do the following:
   a. On the Edit Members form, select the service.
   b. From the **Collection** column on the left, select the workplace location.
   c. To move the workplace location to the **Workplace location List** column on the right, use the add-remove icon.
      Select the add-remove icon ( ).
8. Click **Save**.
9. **Optional:** To change the cost of the item for a particular workplace location, do the following:
   a. On the form, scroll down to the Workplace Service Item Locations related list.
   b. To change the cost, select the preview icon next to the workplace location.
      Select the preview icon (**Open record**).
   c. In the preview dialog box, click.
   d. On the form, edit the **Cost** field.
   e. Click **Update**.

Result

The workplace service item will now be available to order at the specified locations. The cost of the workplace item at a location depends on the cost specified on its nearest workplace location in the workplace location hierarchy. For example, if a cost is specified for a campus and also for its building, then the cost that is specified on the building is applied.

Create a workplace template configuration

Define a template that must be applied to fulfill a workplace case. Set conditions based on common employee responses for requests. The template will be applied to those workplace cases that match the conditions specified.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

About this task
Create a template and configure the conditions that a workplace case must match so that the template is applied. If the conditions don't match, then the default template that is specified in the workplace service is applied.
A Workplace template configuration can be directly applied to a workplace service or a workplace service activity.

Procedure
1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Select the workplace service to which you want to add a Workplace template configuration.
3. On the form, scroll down to the Workplace Template Configurations related list.
4. Click **New**.
5. On the form, fill in the fields.

Workplace Template Configuration form

Field	Description
Configuration table	Configuration table of the workplace service.
Configuration document id	Configuration id of the workplace service.
Template	Template that must be applied to the workplace service or the workplace service activity.
Application	Application of the template. This field is automatically set. Ensure that **Workplace Case Management** is selected.
Active	Option to activate the Workplace template configuration.
Order	Order of the template.
Table	Workplace case table that is used to apply the template.
Condition	Conditions that must be met to apply the template. Use the **AND**, **OR**, and **New criteria** options to build conditions. After you create a condition, click **Preview** to preview the number of records that match the conditions.

6. Click **Submit**.

Result
The Workplace template configuration is added. The template will be applied to those workplace services or workplace service activities that match the specified condition.

Create a workplace field mapping

Create a field mapping record to copy the field information of a parent case to the child workplace service activities or to workplace item-related tasks. Skip the process of re-entering the same details of a parent case to a child case by using field mapping records.

Before you begin

Role required: sn_wsd_case.manager

About this task

Save time from manually entering details in a child case or task triggered by a parent workplace case. The Workplace Service Activity Field Mapping or Workplace Service item Field Mapping enables you to copy the details specified in a parent case's field to its child cases and tasks. This option is available only for the workplace services of the type Workplace Service activity and for tasks or cases triggered by a Workplace Service item request. You must create individual field mapping records for each field mapping.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Select the workplace service to which you want to apply the field mapping.
3. On the form, scroll down to the related list section.
4. Select the related list where you want to add a field mapping record.
   - Workplace Service item: Select this related list to add a field mapping record to a workplace service item.
   - Workplace Service Activities: Select this related list to add a field mapping record to a workplace service activity.
5. Based on the select related list, select the Workplace service item or the Workplace Service Activity to which you want to add a field mapping.
6. On the form, scroll down to the related lists section.
   If you selected Workplace service item, then the Workplace Service item Field Mapping related list appears. If you selected a workplace service activity, then the Workplace Service Activity Field Mapping related list appears.
7. Select the relevant related list.
8. Click **New**.
9. On the form, fill in the fields.

Workplace Field Mapping form

Name	Name of the field mapping.
From / Condition table	Table that is used to copy fields and build conditions.
Map from field	Field from which the value must be mapped.
Active	Option to activate the mapping.
Map to table	Table to which the field details are copied.
Map to field	Field to which the value is copied.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Order	Order in which the field mapping must be performed when there are multiple field mappings.
Condition	Conditions that must be matched to apply the field mapping. Click **New criteria** to add conditions.

10. Click **Submit**.

Result
The field mapping record is added.

Configure an escalation rule

Escalate a workplace case to the relevant assignment group by using an escalation rule.

Before you begin
Role required: sn_wsd_case.admin or sn_wsd_case.manager

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Escalation rules**.
2. Click **New**.
3. On the form, fill in the fields.

Case Tier Escalation form

Field	Description
Escalate from	Assignment group from which you want to escalate the workplace case.
Escalate to	Assignment group to which you want to escalate the workplace case.
Domain	Domain of your application. This field is automatically set to your application domain.

4. Click **Submit**.

Result
The escalation rule is created. The rule is displayed under the Related links of those workplace cases that have the assignment group (specified in **Escalated from**) for which the rule is created.

Add Fulfillment instructions

Provide instructions to workplace agents on how to fulfill a workplace case. Add instructions for new workplace agents and for complicated workplace cases.

Before you begin
Role required: sn_wsd_case.admin or sn_wsd_case.manager

About this task
Add instructions for fulfilling a workplace case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Fulfillment instructions**.
2. Click **New**.
3. On the form, fill in the fields.

Fulfillment Instruction form

Field	Description
Name	Name for the fulfillment instruction.
Table	Table containing workplace cases. The field is automatically set to the `Workplace Case` table.
Condition	Conditions that a workplace case should satisfy before you implement the fulfillment instruction. The instruction appears in the workplace case records which match this condition. ○ To add a condition, select **Add Filter Condition**. ○ To add an "OR" condition, select **Add "OR" Clause**.
Active	Option to activate the fulfillment instruction.
Order	The order in which the instruction is followed when there are multiple fulfillment instructions for a workplace case record.
Instruction	Fulfillment instructions to follow. Use the formatting options to change the style of the content.
Knowledge articles	Knowledge article to support the instructions. Select the unlock knowledge articles icon ( ) to add an article. Select the lookup icon ( ) to search for an article.

4. Click **Submit**.

Result
The fulfillment instruction is added. The instruction is displayed in the workplace case records that match the specified conditions.

Group similar workplace cases under a parent case

Categorize cases that have similar issues and that require the same resolution under a single parent case. Reduce the time spent on resolving multiple workplace cases.

Before you begin
Role required: sn_wsd_case.admin or sn_wsd_case.manager or sn_wsd_case_workplace_agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Assign a workplace case to a parent workplace case. The resolution provided to the parent case will also be applied to the child case.
You can also assign a case to a parent case even if the **State** field of the parent is set as Canceled or Closed Complete. When the case is assigned, the state of the child case is automatically updated as Canceled or Closed complete.

The following dependencies can occur when you assign a parent case:

- You can view all the cases associated to a parent case in the **Related Cases** tab.
- The child case is updated whenever the parent case is updated. Updates like comments, work notes, and state changes are automatically applied to the child case. If the state of the child case is set as Canceled, the updates will no longer be applied. If you do not want to copy the comments, work notes and state changes to the child cases, you can set the *`Update Child Case - Work Notes & Comments`* to **False**.
- State changes in the parent case are copied to the child case, except for state changes to Awaiting acceptance.
- Any updates individually made on the child case will not be applied to the parent case.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Cases**.
2. Select one of the following modules:
   - All
   - Open - Unassigned
   - Open
   - Assigned to my group
   - Assigned to me
3. Select the workplace case to which you want to assign a parent workplace case.
4. In the **Parent case** field, select the workplace case that you want to assign as a parent.

   Important:
   Do not select a child case as a parent case. Otherwise, the case will encounter looping. For example, if WCASE0001001 is parent of WCASE0001002 and WCASE0001003, then WCASE0001002 and WCASE0001003 can't be parent of WCASE0001001.

5. Click **Save**.

Result

The workplace case is assigned to a parent case.

Important:
The case selected in the **Parent case** field and the case displayed in the **Parent** field are different. The workplace case displayed in the **Parent** field is generated from the workplace service to which the case is associated. A parent is assigned automatically if the **Activity type** of the workplace service is **Task** or **Child case**.

Request a workplace service

Raise a general enquiry or any workplace improvement-related services.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

Note:
While submitting a request for a workplace service from Workplace Reservation Management to Workplace Case Management, user needs to allow the "sys restricted caller access".

Reconfigure an office space

Provide details on how an office space should be reconfigured.

Before you begin

Important:
Starting with Workplace Core (sn_wsd_core) version 2.1, all updates and new features are available only on the Workplace Service Portal. The workplace services provided by ServiceNow® are removed from the Service Portal on Workplace Core (sn_wsd_core) beginning with version 2.1. To configure the Workplace service catalog in the Service Portal, see Configure a catalog in Service Portal.

Role required: sn_wsd_core.workplace_user

About this task

Raise this request to rearrange your office space. Specify any extra information needed by the team responsible for the reconfiguration.
You can also raise a request from the Employee Center. On the home page, navigate to **Workplace** > **Browse all Workplace**. Select **Reconfigure an office space** and **Submit** the request after you fill the form.

Procedure

1. Navigate to **All** > **Workplace Core** > **Workplace service portal**.
   The Workplace Service Portal opens.
2. Open the **General** category where the workplace service is located, do the following:
   a. Click **Catalog**.
   b. Click **Browse by Categories**.
   c. In the Workplace Services Catalog, select **General**.

   Note:
   If there are multiple catalogs configured on the portal, go to the Catalogs list and select **Workplace Services Catalog** > **General**.
3. Select **Reconfigure an office space**.
4. On the form, fill in the fields.

Reconfigure office space form fields

Field	Description
On behalf of	Name of the requester who is requesting to reconfigure.
Region	Region of your office location.
Site	Location of your office.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Campus	Campus of your office building.
Building	Office building of your space.
Floor	Floor of the area or space that you want to reconfigure
Area	Area of the space you want to reconfigure.
Space	Office space you want to reconfigure.
Is there anything else we should know?	Extra information about the reconfiguration you are requesting.

5. **Add attachments** if required.
6. Click **Submit**.

Result
Your request is submitted.

What to do next
You can check the details of your request or choose to cancel it anytime using the Workplace Service Portal or the Now Mobile app. Click **Cancel Request** to cancel the request.

- On Workplace Service Portal, go to the Requests tab to view your requests and reservations.
- On the Now Mobile app's navigation bar, tap **For Me** and scroll down to the My Request section to view your requests.

When the request is resolved, select **Accept** or **Reject** based on the resolution received.

Raise help request for a workplace inquiry

Submit a general workplace service request for issues that need a human response. Request help for issues that are not covered by current automated workflows.

Before you begin

Important:
Starting with Workplace Core (sn_wsd_core) version 2.1, all updates, and new features are available only on the Workplace Service Portal. The workplace services provided by ServiceNow® are removed from the Service Portal on Workplace Core (sn_wsd_core) beginning with version 2.1. To configure the Workplace service catalog in the Service Portal, see Configure a catalog in Service Portal.

Role required: sn_wsd_core.workplace_user

About this task
Request a workplace-related help or raise an issue about anything related to the workplace.

If the workplace has a QR code available, you can scan the QR code and submit your request.

Procedure
1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. On the Employee Center landing homepage, select the **Workplace Services** > **Maintenance**.
3. Select **General request**.
4. On the form fill in the field details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the **Requested for** field, specify the user for whom you are raising the request.
   If a workplace profile is defined for the requester, the Building, Floor, and the Space fields are filled in automatically.
6. In the **Date and time requested by** field, select the date and time of the request for the service.
7. In the **Urgency** field, select the urgency of the general request.
8. In the **Impact** field, select the Impact of the unavailability of the service.
9. In the **What can we help you with?** field, enter your query or issue.
10. **Add attachments** if required.
11. In the **What area needs attention**, specify the location details for which you are raising the request.
    If the Workplace Space Mapping plugin is installed, you can also click the **Find the space on a floor map** option to select the space directly on the map.

    If employees have a permanent assignment in their workplace profile, the employee names are displayed on the map for a selected space. For more information, see Display permanent seat assignments on floor maps.

    a. In the **Location** field, select the building where the space is located.
    b. In the **Floor** field, select the floor where the space is located.
    c. In the **Space** field, select the workspace.
12. In the Request help for an item section, choose whether you want to request help for the item that belongs to you or a general workplace item.
    a. If you choose **Item that belongs to me** option, select the required item from the list.
    b. If you choose **General workplace item** option, select the required workplace item from the list.
13. In the **Additional details** field, enter any additional information or instructions related to the general request.
14. Select **Add attachments** to attach any required files.
15. Click **Submit**.

Result
Your request is submitted.

What to do next
Depending on your platform, do one of the following to view your requests:

- On the Workplace Service Portal, go to the **Requests** tab to view your requests and reservations.
- On the Now Mobile app's navigation bar, tap **For Me** and scroll down to the My Request section to view your requests.
- In the virtual agent chat, type your question or select **Show Me Everything** to select from a list of available options.

If you want to cancel a request, Click **Cancel Request**.

When the request is resolved, select **Accept** or **Reject**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Raise a move request for a space change

Create a move request to relocate to another space. Specify why you want to move and when you want to move. You can select a space that is located in your current building or at a different building. You can also select a desk directly on the floor map.

Before you begin

Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. On the Employee Center landing homepage, select the **Workplace Services** > **Site safety**.
3. Select **Request a desk change**.
4. On the form, fill in the fields.

Request a desk change form

Field	Description
Requested for	Option to specify the user for whom you are requesting the space arrangement. If a workplace profile is defined for the requester, the Building, Floor, and the Space fields are filled in automatically.
Select a move reason	Reason for moving from the current location. Select from the list of available reasons.
Date and time requested by	Date and time of the request for the service.
Urgency	Select the Urgency of the desk change request
Impact	Select the Impact of the unavailability of the service.
Moving from?	
Fine the space on a floor map	Option to directly select the current space on the floor map.
Building	Building in which the current desk is located.
Floor	Floor on which the current desk is located.
Space	Space in which the current desk is located.
Moving to?	
Fine the space on a floor map	Option to directly select the current space on the floor map. If employees have a permanent assignment in their workplace profile, the employee names are displayed on the map for a selected space. For more information, see Display permanent seat assignments on floor maps.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Building	Building in which the target desk is located.
Floor	Floor on which the target desk is located.
Space	Space in which the target desk is located.
What should be moved?	Workplace service Items that can be moved from the current desk to the new target desk.
Anything else we should note?	Extra information regarding the move request.
Add attachment	Attached files that support the move request if required.

5. Click **Submit**.

Result
The move request is submitted.
If the state of the move request is Closed complete, it means that the move request has been completed successfully. If the state is set to Closed incomplete, it means that the move request could not be completed due to various reasons. You can raise another request if required.

Depending on your platform, do one of the following to view your requests:

- On the Workplace Service Portal, go to the **Requests** tab to view your requests and reservations.
- On the Now Mobile app's navigation bar, tap **For Me** and scroll down to the My Request section to view your requests.
- In the virtual agent chat, type your question or select **Show Me Everything** to select from a list of available options.

If you want to cancel a request, Click **Cancel Request**. When the request is resolved, select **Accept** or **Reject**.

Request furniture for a space

Order furniture or equipment for your workplace or for any event.

Before you begin
Role required: sn_wsd_case.manager

About this task
Use the **Request furniture** workplace service to request a piece of furniture or equipment, such as a chair, a table, adjustable desk, cabinet, flip card, white board, or other items.

Role required: sn_wsd_core.workplace_user

Procedure
1. Navigate to **All** > **Workplace Core** > **Workplace service portal**.
   The Workplace Service Portal opens.
2. To open the **General** category where the workplace service is located, do the following:

   a. Click **Catalog**.

   b. Click **Browse by Categories**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. In the Workplace Services Catalog, select **General**.

> **Note:**
> If there are multiple catalogs configured on the portal, go to the Catalogs list and select **Workplace Services Catalog** > **General**.

3. Select **Request furniture**.
4. On the form, fill in the fields.

Request furniture form

Field	Description
Requested for	Name of the requester. If a workplace profile is defined for the requester, then the **Building**, **Floor**, and the **Space** fields are automatically filled.
Find a space on a floor map	Option to select a space directly on the floor map. If employees have a permanent assignment in their workplace profile, the employee names are displayed on the map for a selected space. For more information, see Display permanent seat assignments on floor maps.
Building	Building that has the space for the requested furniture.
Floor	Floor that has the space for the requested furniture.
Space	Space for the requested furniture.

5. In the Add Furniture section, click **Add**.
   You can request more than one piece of furniture. Click **Add** to add more pieces of furniture.
6. In the **Select Furniture** field, select the furniture that you want to request for your space.
   The availability of the furniture depends on the configuration set by the workplace manager for the workplace location.
7. In the **Quantity** field, specify the required quantity.
   The **Cost** field is automatically calculated depending on the selected furniture and the quantity specified. The cost also depends on the cost defined by the workplace manager for the selected location.
8. Click **Add**.
   The furniture is added to the request.
9. **Optional:** In the **Is there anything else we should know?** field, specify any instruction or extra information if required.
10. **Optional:** Select **Add attachments** to attach any files of required.
11. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The furniture request is submitted.
The state of the request changes to Awaiting approval for approval by the respective manager. After the request is approved, the state of the request changes to Work in progress. Depending on the progress of the background tasks that are assigned to fulfill the request, the state of the request further changes.

Raise a space assistance request

Submit a workplace service request to get space allocation recommendations using the Workplace Service Portal. The Workplace Service Delivery space assistance provides you with the best space allocation plan options based on the space quantity and the department that you specify. You can select the most suitable allocation or none. Depending on your selection, the Space planner deploys the plan to use.

Before you begin
Ensure the following:

- Workplace Central plugin is installed.
- Workplace Case Management plugin is installed.
- To view the space recommendations on the map, the floor map must be configured using Workplace Indoor Mapping.

Role required: sn_wsd_core.workplace_user

About this task
Specify the department and number of spaces that you want to assign to that department on a floor. Specify the location where you want to see the allocation recommendation. Depending on the specification submitted on the form, the system provides you with options containing the most suitable space allocation plans in that building. If the selected department exists on the floor that you selected, then the spaces are recommended nearby to that department.

You can select the best option and submit the selection. If an approval is configured, then the plan is sent for an approval to your manager. The selected space plan is directed to the space planner. The space planner reviews the plan and deploys it accordingly.

Procedure

1. Navigate to **All** > **Workplace Core** > **Workplace service portal**.
   The Workplace Service Portal opens.
2. Open the General category.
   a. Select **Catalog**.
   b. Select **Browse by Categories**.
   c. In the Workplace Services Catalog, select **General**.

   Note:
   If there are multiple catalogs configured on the portal, go to the Catalogs list and select **Workplace Services Catalog** > **General**.
3. Select **Space assist request**.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space assist request form

Field	Description
Request name	Descriptive name for the request.
Allocate space by	The allocation type is set with the default allocation type set by your administrator. **Note:** If there is no allocation type specified, then you cannot proceed with the request.
Requested for	Option to specify the user for whom you are raising the space assistance request.
Select a department	Department based on which you want to allocate spaces. This option appears if **Department** is set in the **Allocate space by** field.
Select a Cost center	Cost center based on which you want to allocate spaces. This option appears only appears if **Cost center** is set in the **Allocate space by** field.
Select a workplace entity type	Workplace entity type based on which you want to allocate spaces. This option appears if **Workplace Entity** is set in the **Allocate space by** field.
Select a workplace entity	Workplace entity based on which you want to allocate spaces. This option appears if **Workplace Entity** is set in the **Allocate space by** field.
Reason for request	Option to select the reason for the request.
Space type	Option to specify what type of spaces you want.
Exact match (Space type)	Option to confirm that you want to see only the spaces that are an exact match to the selected space type.
Assignment type	Option to specify if you want flexible or permanent spaces.
Quantity/Capacity	Number of spaces that you want to allocate.
Region	Region where you want to make space allocation.
Campus	Campus where you want to make space allocation.
Site	Site where you want to make space allocation.
Building	Building where you want to make space allocation.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Exact match (Building)	Option to confirm that you want see only the spaces that are an exact match to the selected building.
Move-in date	Option to specify the date from when you want to implement the space allocation.
Exact match (Move-in date)	Option to confirm that you want see only the spaces that are available on the selected move-in date. This option is not available from Workplace Space Management version 1.12.0.
Move-out date	Option to specify the date until when you want to allocate the spaces.
Exact match (Move-out date)	Option to confirm that you want see only the spaces that are available until the selected move-out date. This option is not available from Workplace Space Management version 1.12.0.
Add attachments	Option to attach any supporting files if necessary.

5. Select **Submit**.
   The request is submitted. After the submission, the request details page is opened.
6. In the My request page, select **Space plans**.
   Refresh the page to view space plan options.
   The page displays options that have the most suitable space allocations for the select cost center or department on the selected floor, along with the match percentage.
7. Review the options that are displayed.
   The match percentage is displayed under each option.
8. **Optional:** View the space allocations on the map by selecting **View spaces on map**.

   Note:
   You can view the space allocations on the map only if the floor has a floor map configured.

9. Select an option from the provided options.

   a. In the My request page, select **Tasks/To-dos**.

   b. In the **Select a space plan option**, select **View task**.
   A page with all the options that are displayed in the **Space plan** is displayed for selection.

   c. Select **Select** next to the option that you want to proceed with.

   d. **Optional:** If you do not want to select any option for any reason, select **None of the above**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you select **None of the above**, the request is closed and the state will be set to **Closed complete**

e. After selection, select **Submit**.

Result

The option that you selected is submitted. At any time, you can view your selected option in the **Space plans** tab. After you submit the selection, the following actions are performed based on the approval process configured by your organization:

- If an approval process is configured for your user profile, then the space request is sent to your manager for approval. The state of the space request changes to Awaiting approval.
  - If your manager approves, the space request is sent for deployment and the state changes to Approved.
  - If your manager rejects, then the space request is rejected and the state changes to Closed incomplete.
- If your user profile doesn't require an approval, then the space request is transferred to your organization's space planner and the state changes to **Approved.**

Submit a maintenance request

Raise a maintenance request for an equipment for a location using either the Workplace Service Portal or the Employee Center.

Before you begin

Role required: sn_wsd_core.workplace_use

Procedure

1. Navigate to the portal from one of the following locations.

2. On the form, fill in the fields.

Submit a maintenance request form

Field	Description
What would you like to report?	Select the type of your maintenance request from the following options: ○ **Equipment issue**: Select this option if the maintenance request is related to an asset or a physical item. ○ **Location**: Select this option is the maintenance request is related to a location.
Item	Select the item that you want raise the request for. **Note:** The option appears only if you selected **Equipment issue** as the type.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Find the space on a floor map	Select the location on the floor map. **Note:** The option appears only if you selected **Location** as the type.
Building	Select the building where the location is located. **Note:** The option appears only if you selected **Location** as the type.
Floor	Select the floor where the location is located. **Note:** The option appears only if you selected **Location** as the type.
Space	Select the space that you want to report. **Note:** The option appears only if you selected **Location** as the type.
Describe the issue	Enter a detailed description of the issue.
Add attachments	Select the option if you want to add any attachments.

3. Select **Submit**.
   The maintenance request is submitted. A workplace maintenance case is created and the state is set to Work in Progress.

Submit a catering request

Raise a catering request service using either the Workplace Service Portal or the Employee Center.

Before you begin

Role required: sn_wsd_core.workplace_use

About this task

Use the **Catering** workplace service to request for food service for meetings and events at your workplace.

Procedure

1. Navigate to the portal from one of the following locations.

2. On the Submit a **Catering** request form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Catering request form

Field	Description
Requested for	Name of the requester. If a workplace profile is defined for the requester, then the **Building**, **Floor**, and the **Space** fields are automatically filled.
Reservation details	The details of the reservation. Reservation details field appears only when the reservation plugin is installed. The reservation field is available when the added service item is available for case and reservation. If the reservation details are selected, then the **Requested for**, **Date and time requested by**, **Building**, **Floor**, and the **Space** fields are automatically filled based on the reservation.
Date and time requested by	**Date and time requested** for the service.
Urgency	Choose the **Urgency** for the catering service.
Impact	Choose the **Impact** of service's unavailability.
Building	**Building**, that has requested for catering service.
Floor	**Floor**, that has requested for catering service.
Space	**Space**, that has requested for the catering service.
Delivery method	Select **Delivery** method of the catering service.

3. You can add service items to the reservation.

   Note:
   This option appears only if there is atleast one service item available for the specific location.

   The availability of the service items is determined based on the service items notifications. For more information about adding a workplace service item to a workplace service, refer to Add a workplace service item to a workplace service

4. Click **Submit**.

Result
The catering request is submitted.

The state of the request changes to Awaiting approval for approval by the respective manager. After the request is approved, the state of the request changes to Work in progress. Depending on the progress of the background tasks that are assigned to fulfill the request, the state of the request further changes.

Raise an employee parking request

Submit a request for an employee parking space through either the Workplace Service Portal or the Employee Center. You can request short-term or long-term parking spaces, visitor or guest parking spaces, parking spaces for an electric car, or other parking issues.

Before you begin
Role required: sn_wsd_core.workplace_user

About this task
Use the **Employee Parking** request for visitor a parking space, electric parking space, or any other parking issues at your workplace.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. On the Employee Center home page, select the **Workplace Services** > **Site safety**.
3. Select **Employee Parking** request.
4. On the Employee Parking form, fill in the fields.
   For a description of the field values, see Employee Parking form.
5. Select **Add attachments** to attach any required files.
6. Select **Submit**.

Result
The Employee Parking request is submitted.

The state of the request changes to Awaiting approval for approval by the respective manager. After the request is approved, the state of the request changes to Work in progress. Depending on the progress of the background tasks that are assigned to fulfill the request, the state of the request changes further.

Raise a space arrangement request

Submit a space arrangement request to plan and configure office spaces for meetings, events, or collaborative work. Select the existing reservation and specify the space layout details.

Before you begin
Role required: sn_wsd_core.workplace_user

About this task
Use the **Space arrangement** workplace service to request a specific room configuration for meetings and events. You can also specify the required space arrangement such as courtyard, rooftop, if the space you want to reserve is not available from the list of options.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. On the Employee Center home page, select the **Workplace Services** > **Maintenance**.
3. Select **Space arrangement** request.
4. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space arrangement form

Field	Description
Requested for	Option to specify the user for whom you are requesting the space arrangement. If a workplace profile is defined for the requester, the **Building**, **Floor**, and **Space** fields are filled in automatically.
Date and time requested by	Date and time of the request for the service.
Urgency	The urgency of the space arrangement request.
Impact	The impact of the unavailability of the service.
Reservation details	The details of the reservation. The **Reservation details** field only appears if the reservation plugin is installed. The reservation field is available if the added service item is available for the case and the reservation. When the reservation details are selected, the **Requested for**, **Date and time requested by**, **Building**, **Floor**, and the **Space** fields are automatically filled based on the reservation. **Note:** In the Space arrangement details section, the reservation details are displayed in a banner.

5. Enter the description of the space if the space that you want to reserve is not listed.
6. Select the **Space layout** for the space arrangement.
7. Select the required **Layout Option** from the available list.
   The banner displays the space arrangement pattern based on the selected layout option.
8. Enter the number of chairs required for the event or meeting.
9. Enter any additional information or instructions for the space arrangement.
10. Select **Add attachments** to attach any required files.
11. Select **Submit**.

Result
The **Space arrangement** request is submitted.

The state of the request changes to Awaiting approval for approval by the respective manager. After the request is approved, the state of the request changes to Work in progress. Depending on the progress of the background tasks that are assigned to fulfill the request, the state of the request further changes.

Edit a workplace request

Edit the details of a workplace request or change workplace service items included in a workplace request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Editing a request is supported for the following request types:

- Badge requests
- Catering
- Cleaning
- Employee parking
- Equipment
- Furniture request
- General request
- Heating and cooling request
- Space arrangement request
- Tech support

If you have created a request from a workplace reservation, you can only edit the request from the reservation summary page. For more information, see Share, modify, or cancel a reservation.

Note:

- Based on the configuration set by your admin, you might not be able to edit a request.
- Editing a request is only supported for open requests. If a request is closed or complete, it can't be edited.
- Editing a request is supported only if the request contains workplace service items.
- If all the workplace services of a request are fulfilled, the request can't be edited, even if it's an open request.
- Service items that are within the lead time can't be modified.

Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
   a. On the Employee Center landing homepage, select the **Workplace Services** > **Maintenance**.
   b. Select **Submit a maintenance request**.
2. On the Employee Center landing page, select **My Requests**.
3. From the My Requests list, select the workplace request that you want to edit.
4. On the request details page, select **Actions**, then select **Edit request**.
5. Edit the details of the request based on your requirement.
6. **Optional:** Edit workplace service items that are included in your request.
   You can add or remove workplace service items from the request. You can also change the quantities of service items that are already added to the request.

   Note:
   A workplace service item can't be edited if it has already been fulfilled.

7. Select **Save**.
   The Workplace Request is updated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

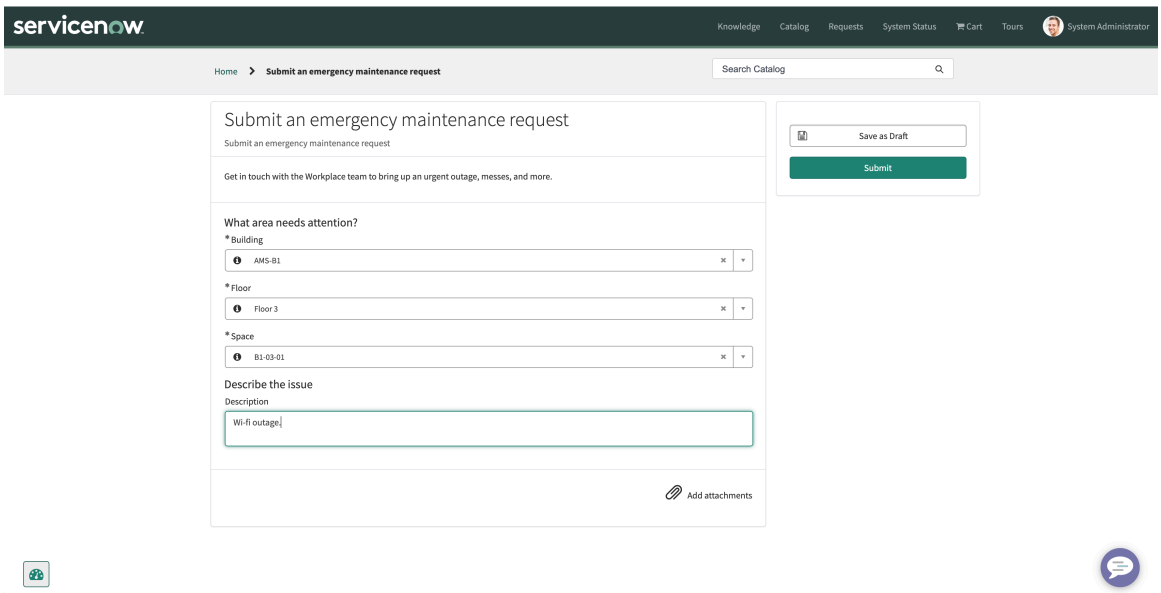
Submit an emergency maintenance request



Submit an emergency maintenance case request for meeting room maintenance.

Before you begin

Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to **All** > **Service Portal** > **Service Portal Home** > **Catalog** on the navigation menu bar. You can also access the Emergency Maintenance request form using the Employee Center portal. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace Services** > **Maintenance** > **Submit an emergency maintenance request**.
2. Select **Submit an emergency maintenance request** record form.

3. Fill in the field information.

What area needs attention

Field	Description
Building	Building for which the maintenance request is raised.
Floor	Floor where the maintenance is to be carried out.
Space	Workspace which needs maintenance.
Describe the issue	Short description of the maintenance case.

4. Select **Submit**.
   A workplace case is created and it is assigned automatically to the Workplace Event Planners assignment group. It is then assigned manually to a user in the Workplace Event Planners assignment group. For more information, see View emergency maintenance case details.

   When the emergency maintenance request case is assigned to a Workplace Event Planners assignment group, the AI agentic workflow **Manage temporary space closures** is triggered. The team of AI agents block a workspace location for maintenance. AI agents create a record

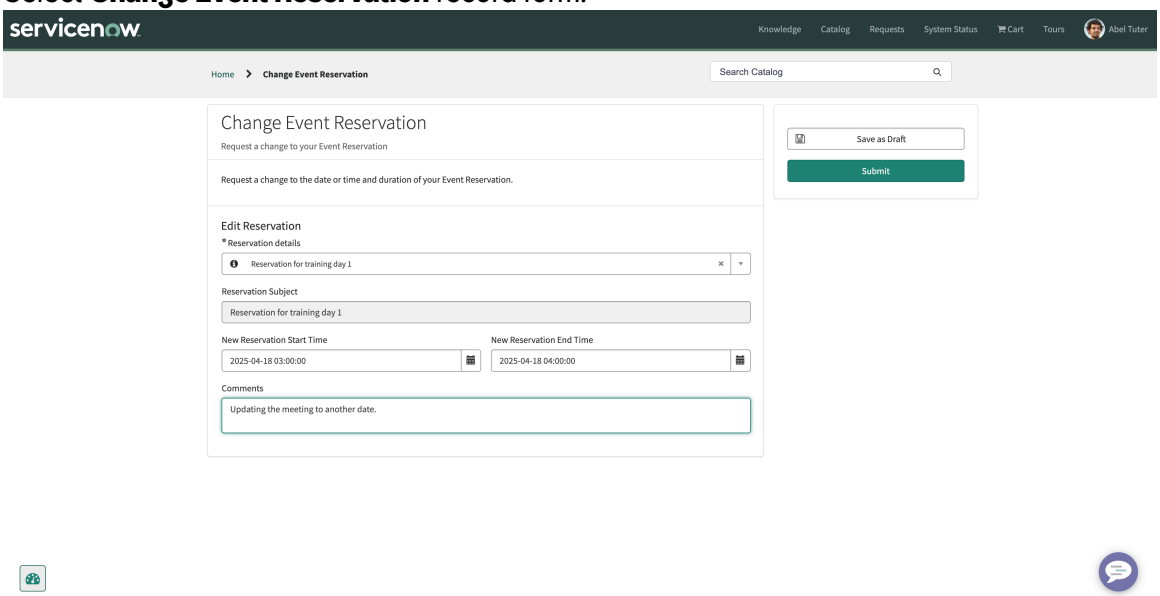
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

in the sn_wsd_core_block_location table for blocking a location. If there are any impacted reservations for a blocked location, AI agents move any existing reservations to a new location.For more information, see Manage temporary space closures agentic workflow.

Submit a change event request for a reservation

As a workplace employee, request a change to the date, time, and duration of your planned event reservation.

Before you begin



Note:
Only reservations created by an employee or if they are set as requested by in Workplace Reservation Management are visible for you to select and update.

Select a reservation that you want to update and select the new date, time, and duration for which you want to update your reservation. A workplace case is created with an updated or a new workplace service.

Role required: sn_wsd_core.workplace_user

Procedure

1. Navigate to **All** > **Service Portal** > **Service Portal Home** > **Catalog** on the navigation menu bar. You can also access the Emergency Maintenance request form using the Employee Center portal. Navigate to **All** > **Self-Service** > **Employee Center** > **Workplace Services** > **Maintenance** > **Change Event Reservation**.
2. Select **Change Event Reservation** record form.

3. Fill in the field information.

Change Event Reservation

Field	Description
Reservation details	Description that you gave while creating a reservation. Select the description from the drop-down list. As you type, system auto-fills the description from the cached information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Reservation subject	Reservation purpose for which you are reserving a room. When you select the Reservation details field, this information is automatically updated.
Start Date and Time	Start date and time for a reservation. Select the start date and time.
End Date and Time	End date and time for a reservation. Select the end date and time.
Comments	Optional. Add any comments, if required.

4. Select **Submit**.

   When a change event request is submitted, a workplace case is created. The case is automatically assigned to the Workplace Event Planners assignment group. It is then assigned manually to a user in the Workplace Event Planners assignment group.

   When the workplace case is assigned to a user in the Workplace Event Planners assignment group, the AI agentic workflow **Help Manage workplace Reservations** is triggered. AI agents retrieve a reservation from case details, analyze the reservation, and update the reservation case notes for workplace event planners to review. If the same location is available for the updated date and time, application reserves a space for you. If you cannot find a location of your choice when you are changing the date, time, and duration of a reservation, application provides a link for you to select a preferred location manually.

   For more information, see View change event reservation case details and Help manage workplace reservations agentic workflow.

Manage Workplace cases

As a Workplace case manager, you can manage workplace cases created through workplace services. You can view and update cases if required.

View and track workplace cases

View and track open, closed, and unassigned workplace cases.

Before you begin

Role required: sn_wsd_case.admin, sn_wsd_case.manager, sn_wsd_case.case_reader

About this task

You can view any workplace case when required. View the details provided by the user in the Variables section of the workplace case.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Cases**.
2. Select any of the following options to view workplace cases:
   - **Assigned to me**: Select this option to view workplace cases assigned to you.
   - **Assigned to my group**: Select this option to view workplace cases assigned to your group.
   - **Open:** Select this option to view open workplace cases.
   - **Open-unassigned**: Select this option to view open but unassigned workplace cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Closed**: Select this option to view closed workplace cases.
- **All**: Select this option to view the workplace cases.

3. To view all the workplace cases, select **All**.
4. Select any workplace case to view the details.

Workplace cases form

Field	Description
Number	Unique ID assigned to a workplace case request.
State	State of a workplace case request. For example: Workplace case is active, closed, complete, or work in progress, ready, or canceled.
Workplace case task type	
Workplace location	Location for which the workplace case request was raised.
Workplace service item	Name of the service item. For example, space arrangement, tea, coffee, and so on.
Quantity	Service item quantity number.
Created	Date and time when the workplace case was created.
Updated	Date and time when the workplace case was updated.
Assignment group	Workplace assignment group to which the case is assigned to.
Assigned to	User assigned to this case task.
Vendor	Name of the vendor fulfilling the request.
Parent	Parent case ID number.
Delivery time	Delivery time of the requested service item.
Clean up duration	Clean up the duration time for a space.
Preparation start time	Start time when the service item will be prepared.
Preparation duration	Preparation duration for a service item request.
Cost	Cost of the service items.
Active	Option to enable and indicate that the case task is active.
Replacement for	When a service is updated or edited on the Workplace Reservation Management portal, the workplace case that was originally raised is replaced by a new workplace case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	This notification is meant for the workplace manager or workplace agent and does the following: ○ On the old case, a notification is displayed pointing to the new case. ○ On the old case, a notification is displayed to enable easy access to the previous case to look up past actions. For example: If while making a reservation, the original case that you raised for a service request is WCASE0001207. After you edit or update while changing a space (location), date, and time, a new service case, WCASE0001208, is raised as a replacement to the original case request (WCASE0001207). When you open the newly created request WCASE0001208, the following notification is displayed: `This is a replacement task, please check the parent case comments to see the changes, if required. The previous parent case: WCASE000127.` For more information about retaining or discarding services while updating a reservation location, see Create a reservation.

5. Select the Personalized list icon () to add the additional fields that you require. For example, the **Quantity**, **Total cost**, **Reservation** fields, and so on.
6. **Optional:** Select the **Fulfillment instructions** tab and select the Checklist list to create a checklist for fulfilling the service request.
7. Check the Comments and Work Notes section to see the comments added to a service request, date and time when the service was updated, or when the service was canceled.

   Applicable only for cases created as part of a reservation. When the employee changes the service and a new case is created, a summary is added to the work notes of the new case showing the following information:

   ○ Added
   ○ Changed
   ○ Removed
   ○ Not changed

   The work notes also shows the services that are not changed along with the name of the service and quantity.
8. To see tasks associated with a case (applicable only when services are ordered as part of a reservation), select the **Child tasks** related link.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New child cases for services on a category level can be created and replaced with existing ones after an employee changes services or updates a reservation. The previous cases are set to **Cancelled**.

- Select the child task to see the details, if applicable.

  A message is displayed describing that this case is a replacement case for a previous case.

- Select the case ID to view the previous case request details.

For more information, see Create a reservation.

9. Costs are visible in the case and task level and are calculated and updated when an employee orders or edits services as part of a reservation.

   - **Parent**: In a Parent case, cost is shown as a sum of the active child (category) cases.
   - **Child (category)**: For child cases, cost is shown as a sum of the costs for the related tasks and cases.
   - **Tasks**: In related tasks and cases, cost is shown as price per item, quantity, and the total costs.

10. To retain services while making a reservation using the Workplace Reservations for Microsoft Outlook Add-in, employees must open the reservation and open the plugin to change the date, time, or locations.
11. To ensure that services are retained, select **Save reservation**.

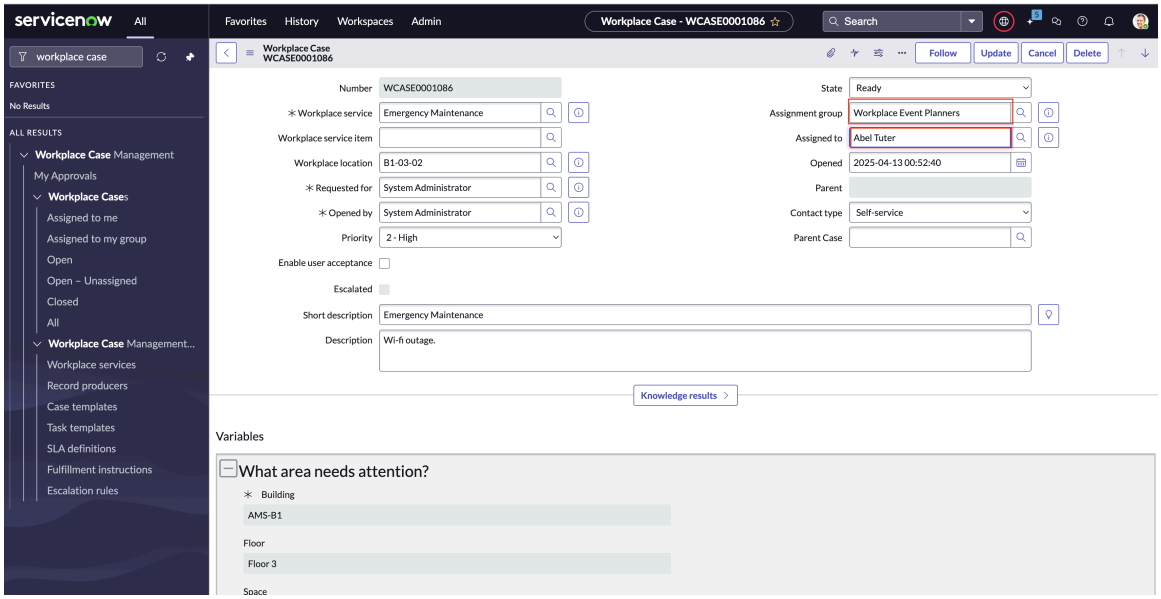
> **Note:**
> Only updating the reservation in Workplace Reservations for Microsoft Outlook Add-in cancels the services.

View emergency maintenance case details

Workplace Event planners can view the emergency maintenance case details and the actions taken by AI agents in the case work notes.

Before you begin

The following applications should be installed:



- Workplace Core
- Workplace Case Management
- Workplace Reservation Management
- Workplace Concierge

Role required: sn_wsd_rsv.reservation_planner, sn_wsd_case.case_writer

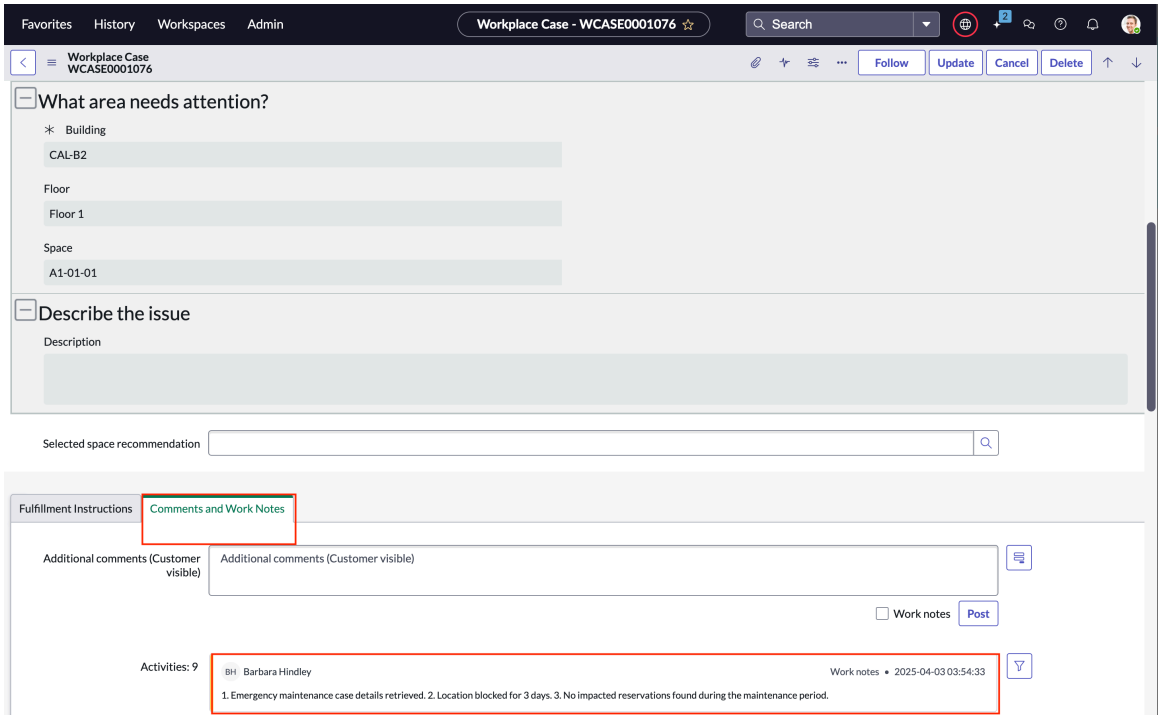
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

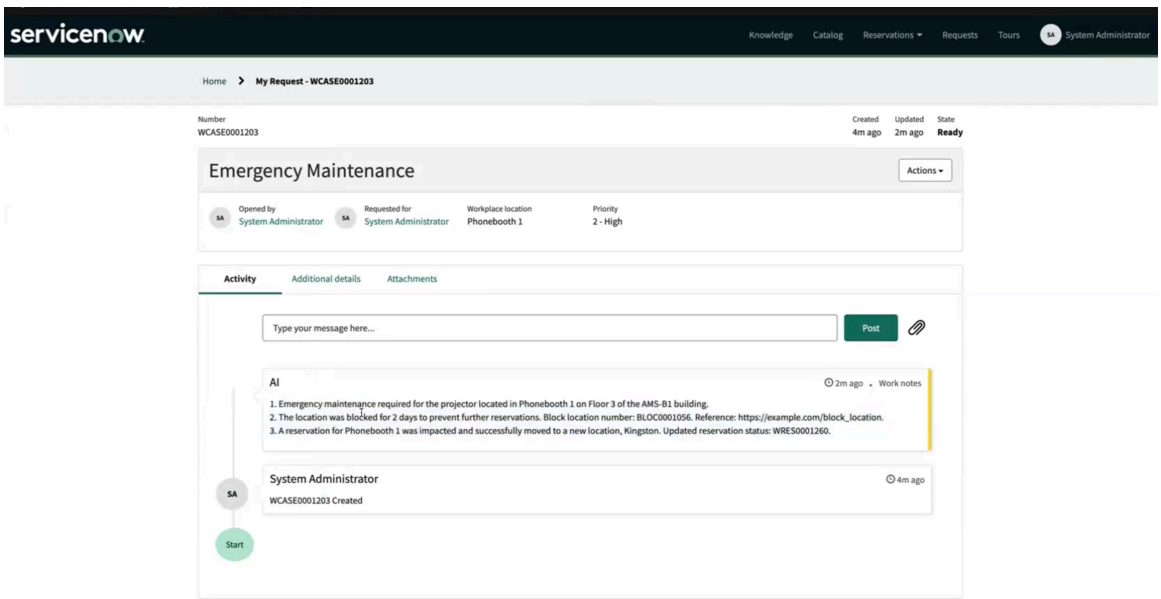
1. Navigate to **All** > **Workplace Case Management** > **Workplace Cases** > **All**.

When an emergency maintenance request is submitted, a workplace case is created. For more information about the emergency maintenance request, see Submit an emergency maintenance request.

The change event request workplace case is automatically assigned to the Workplace Event Planner assignment group. It is then assigned manually to a user in the Workplace Event Planners assignment group. When it is assigned to a Workplace Event Planner, AI agentic workflow Manage temporary space closures is triggered. AI agents block a location for maintenance and move any impacted reservations from the blocked location to an available new location. For more information, see Manage temporary space closures agentic workflow.



Event planners can review the notifications sent by AI agents in the Now Assist panel. AI agents notifies Workplace Event Planners about actions taken through case resolution and case summarization notes in the conversational interface. For more information, see Review notifications in the Now Assist panel.



The team of AI agents also update the case work notes.

2. To review the work notes for a case, select an emergency maintenance request case (**All** > **Workplace Case Management** > **Workplace Cases** > **All**).
3. Scroll down and select the Comments and Work Notes section.

   The emergency maintenance case activities are also added to the work notes of a case. Workplace Event planners can review the work notes to understand the activities performed by AI agents. Review the activity log and resolution notes provided by AI agents for an emergency maintenance case.

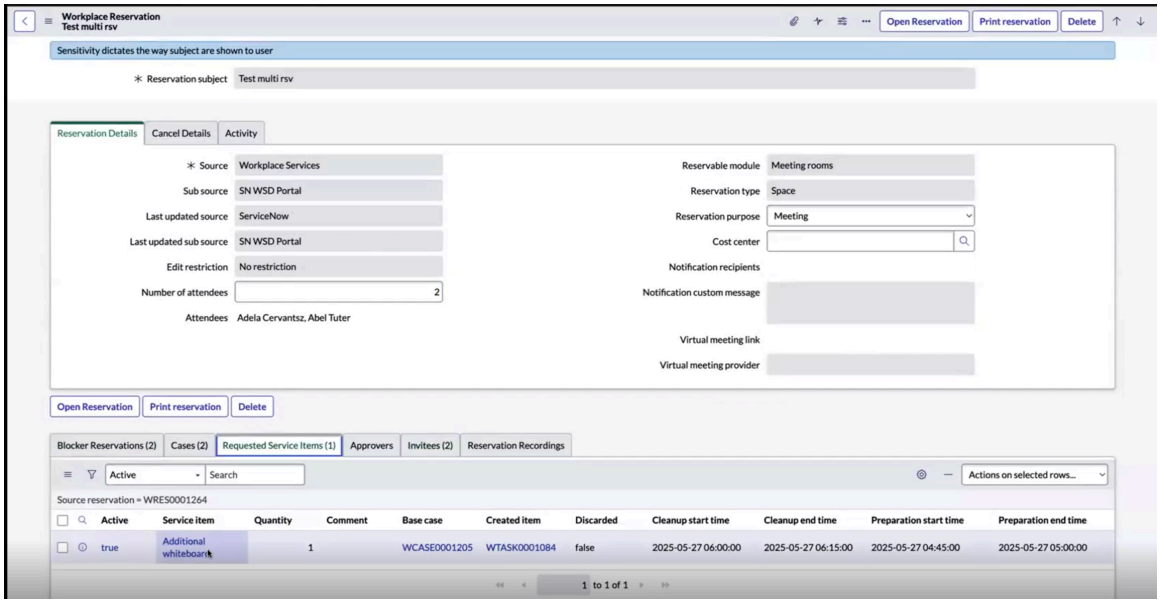
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

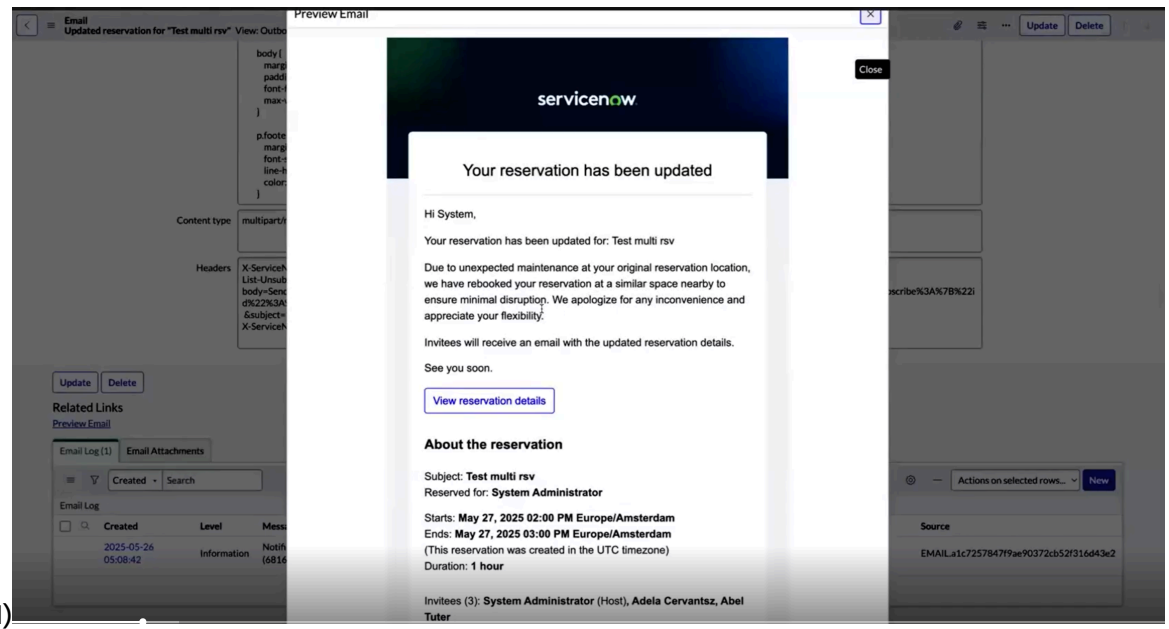


4. **Optional:** Navigate to **All** > **Workplace Reservation Management** > **All Reservations** > **Workplace Reservations**.
   - Review the multi-building or single building reservation that was canceled from a location for workplace maintenance.

     (Optional) The reservation gets moved to a new location. For example, Kingston campus.
   - Select and open the reservation (Kingston) that is in confirmed state and moved to a new location.
   - From the Related List, select the **Requested Service Items** tab.

     Verify the workplace reservation services that are moved from the canceled reservation location to the new reservation location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- From the Related List, select the **Invitees** tab.

  Verify the invitees that are moved to the selected or moved reservation location.

- Navigate to the Reservation summary page to verify the canceled reservation and the updated reservation with a new location.

5. **Optional:** An email notification is triggered and sent to workplace reservation administrators and event planners for the updated reservation location.

(Optional)

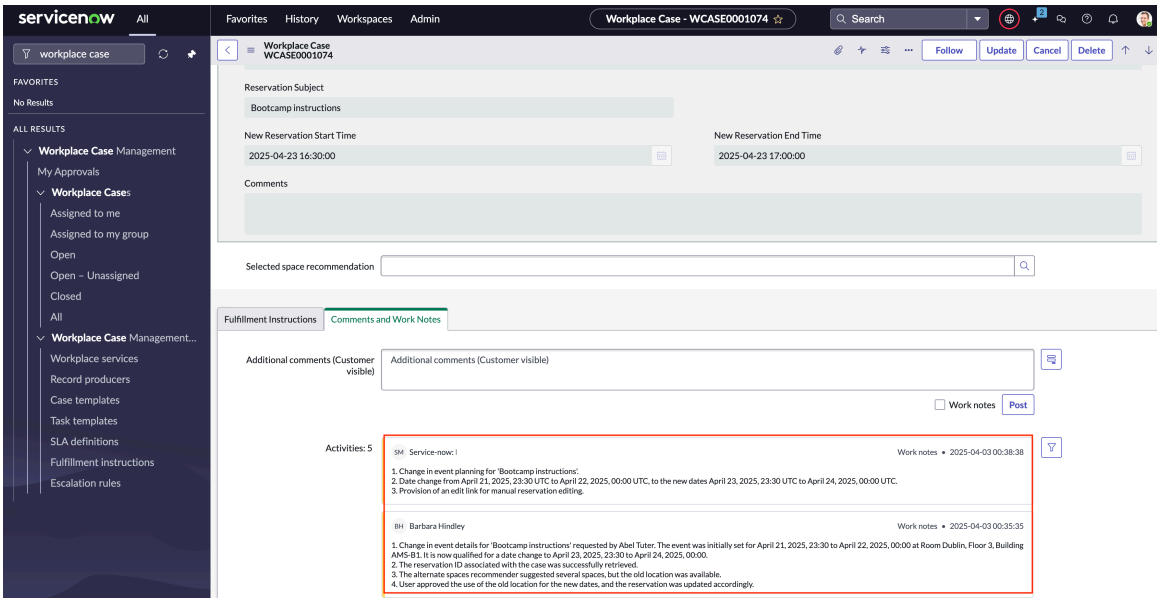
View change event reservation case details

Workplace Event planners can view the change event reservation case details and the actions taken by AI agents in the case work notes.

Before you begin

The following applications should be installed:

- Workplace Core
- Workplace Case Management



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Workplace Reservation Management
- Workplace Concierge

Role required: sn_wsd_rsv.reservation_planner, sn_wsd_case.case_writer

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Cases** > **All**.
   Select and review the work notes details for a change event reservation case. For more information, see Submit a change event request for a reservation.

   When a change event reservation request is submitted by a workplace user, a workplace case is created. The workplace case is assigned automatically to the Workplace Event Planners group. It is then assigned manually to a user in the Workplace Event Planners assignment group. When the case is assigned to a Workplace Event planner, the AI agentic workflow Help manage workplace reservations is triggered. AI agents autonomously retrieve the reservation from the case details and analyze the reservation to update it to a new date, time, and duration. For more information, see Help manage workplace reservations agentic workflow.

   AI agents notifies the Workplace Event Planners using the Now Assist panel conversational interface. For more information, see Review notifications in the Now Assist panel. The workplace notes are also added for a change event request case.

   The team of AI agents also update the case work notes.

2. To review the workplace case notes, select a change event request case (**All** > **Workplace Case Management** > **Workplace Cases** > **All**).
3. Scroll down and review the Comments and Work Notes section.

Review the activity log and resolution notes provided by AI agents for a change event request case.

Workplace Service Delivery integration with Universal Request

Combine Workplace Service Delivery services with Universal Request so that you can provide a convenient workplace experience to your employees. Provide a common help desk so that your employees can submit requests that are related to their workplace without having to search the Workplace services catalog.

The integration with Universal Request enables an employee to submit a general inquiry for any workplace-related issue. An employee can get support by selecting a single-help option for services that are not included in the catalog.

For more information about a Universal Request, see Universal Request.

Benefits of integrations with Universal Request

The integration enables you to perform the following actions:

- Create a workplace case directly from the Universal Request application using the **Create a workplace case** option.
- Transfer a workplace case to another department or back to the Universal Request queue by using the **Transfer** option.
- Configure a workplace service as a Universal Request.
- View workplace cases created by Universal Request under **Workplace Cases** > **All**.
- On the Workplace Service Portal, an employee can view the Universal Request raised by them in **Workplace Service Portal** > **Requests**.

System requirements to integrate Workplace Service Delivery with Universal Request

The following plugins must be installed:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Universal Request (com.snc.universal_request)
- Workplace Service Delivery - Core (sn_wsd_core)
- Workplace Case Management (sn_wsd_case)

Universal Request and workplace cases

When employees cannot find a workplace service that is suitable to their issue on the Workplace Service Portal, they can select the **Request help** option. The following actions are performed when an employee selects **Request help**:

1. The option navigates the employee to a help form where the employee can specify any issue details. This help request triggers a Universal Request.
2. The Universal Request is assigned to a routing agent. The agent analyzes the request as a workplace-related query and creates a workplace case.
3. The workplace manager handles the workplace case and changes the state of the case depending on the progress.
4. The Universal Request is then closed only when the employee accepts the resolution.

As a workplace manager, you can transfer a workplace case that was created by Universal Request back to the Universal Request queue if it does not relate to workplace services.

Employees can view the details related to their Universal Request anytime.

Configure a workplace service record producer as a Universal Request

Enable an employee to submit a universal request using a workplace service record producer from the Workplace Service Portal. Configure a workplace service to create Universal Request whenever an employee makes a selection.

Before you begin

Ensure that you have activated the Universal Request plugin.

Ensure that you have the following:

- A workplace service that is linked to a record producer. For more information, see Configure a Record producer.
- An active record producer.

Role required: sn_wsd_case.admin or sn_wsd_case.manager

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Record producers**.
2. Select the record producer that you want to configure as a universal request.
3. Select **Universal Request Config** tab.
4. To enable the universal request feature, select **Create Universal Request**.
5. If the universal request requires an extra review, select **Requires Additional Review**.
6. Click **Update**.

Result

The workplace service record producer is configured as a universal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When an employee submits an inquiry using this workplace service, a universal request is created. The request is automatically assigned to the Workplace services assignment group.

Create a workplace case from Universal Request

As a routing agent, create a workplace case from a universal request and then assign it to the Workplace services assignment group. The workplace manager handles the workplace case and takes further actions to fulfill the request.

Before you begin

Ensure that you have the following plugins installed:

- Universal Request (com.snc.universal_request)
- Workplace Service Delivery - Core (sn_wsd_core)
- Workplace Case Management (sn_wsd_case)

Role required: routing_agent and sn_wsd_case.case_writer

Procedure

1. Navigate to **Universal Requests** > **All**.
2. Open the universal request record from which you want to create a workplace case.
3. Click **Create Workplace Case**.

Result

A workplace case is created and is automatically assigned to the Workplace services assignment group. If required, you can also add more details on the Workplace Case form.

On the Workplace Case form, the universal request number that was used for creating the workplace case is displayed. The Workplace case number appears in the primary **Ticket** field on the Universal Request form and also under the Associated Tickets related list.

Work on a workplace case from a Universal Request

As a workplace manager, work on a workplace case that is created from a Universal Request. Provide a resolution to the workplace case.

Before you begin

Role required: sn_wsd_case.case_writer

About this task

You can configure the state changes that are described in the following procedure as per your requirements. For more information, see Universal Request state mapping.

Procedure

1. Navigate to **Workplace Case Management** > **Workplace cases** > **All**.
2. Select the workplace case record that is created from the Universal Request.
3. On the form, change the **State** field to **Work in progress**.

> **Note:**
> If the workplace case does not relate to any workplace service, then transfer the case to the relevant department or back to the Universal Request queue. Select **Transfer** to transfer the case. For more details on how to transfer a case, see Transfer a workplace case created from a universal request.

4. When you resolve the case, change the state to **Closed complete**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

The state of the Universal Request is updated based on the state of the workplace case. For more information about state changes of a Universal Request, see Universal Request states and reasons.

If you change the state of the workplace case to Close incomplete without transferring the case back to the Universal Request queue or to another department, then one of the following actions is performed:

- If the **Needs Additional Review** option is selected on the Universal Request, then the state of the request changes to the In progress state.
- If the **Needs Additional Review** option is not selected on the Universal Request, then the request is closed based on the state mapping.

Transfer a workplace case created from a universal request

Transfer a workplace case back to the Universal Request, to another department, or to another service. You can transfer the request with or without providing a resolution.

Before you begin

Note:
To transfer a case, either you must be part of the assignment group or the case must have been assigned to you.

Role required: sn_wsd_case.case_writer

Procedure

1. Navigate to **Workplace Case Management** > **Workplace cases** > **All**.
2. Select the workplace case record that you want to transfer.
3. Click **Transfer**.
4. In the Transfer Ticket dialog box, provide the transfer details.

Transfer Ticket form

Field	Description
Department	Department that you want to transfer the case to.
Transfer reason	Reason why you are transferring the request to the department.
Transfer notes	Brief description on the reason for transferring the primary ticket. These notes are read by the UR Routing agent who handles universal requests.
Copy additional comments and attachments	Option to copy the comments and attachments of this case while transferring. The option is automatically selected. **Note:** The transfer action does not copy work notes.

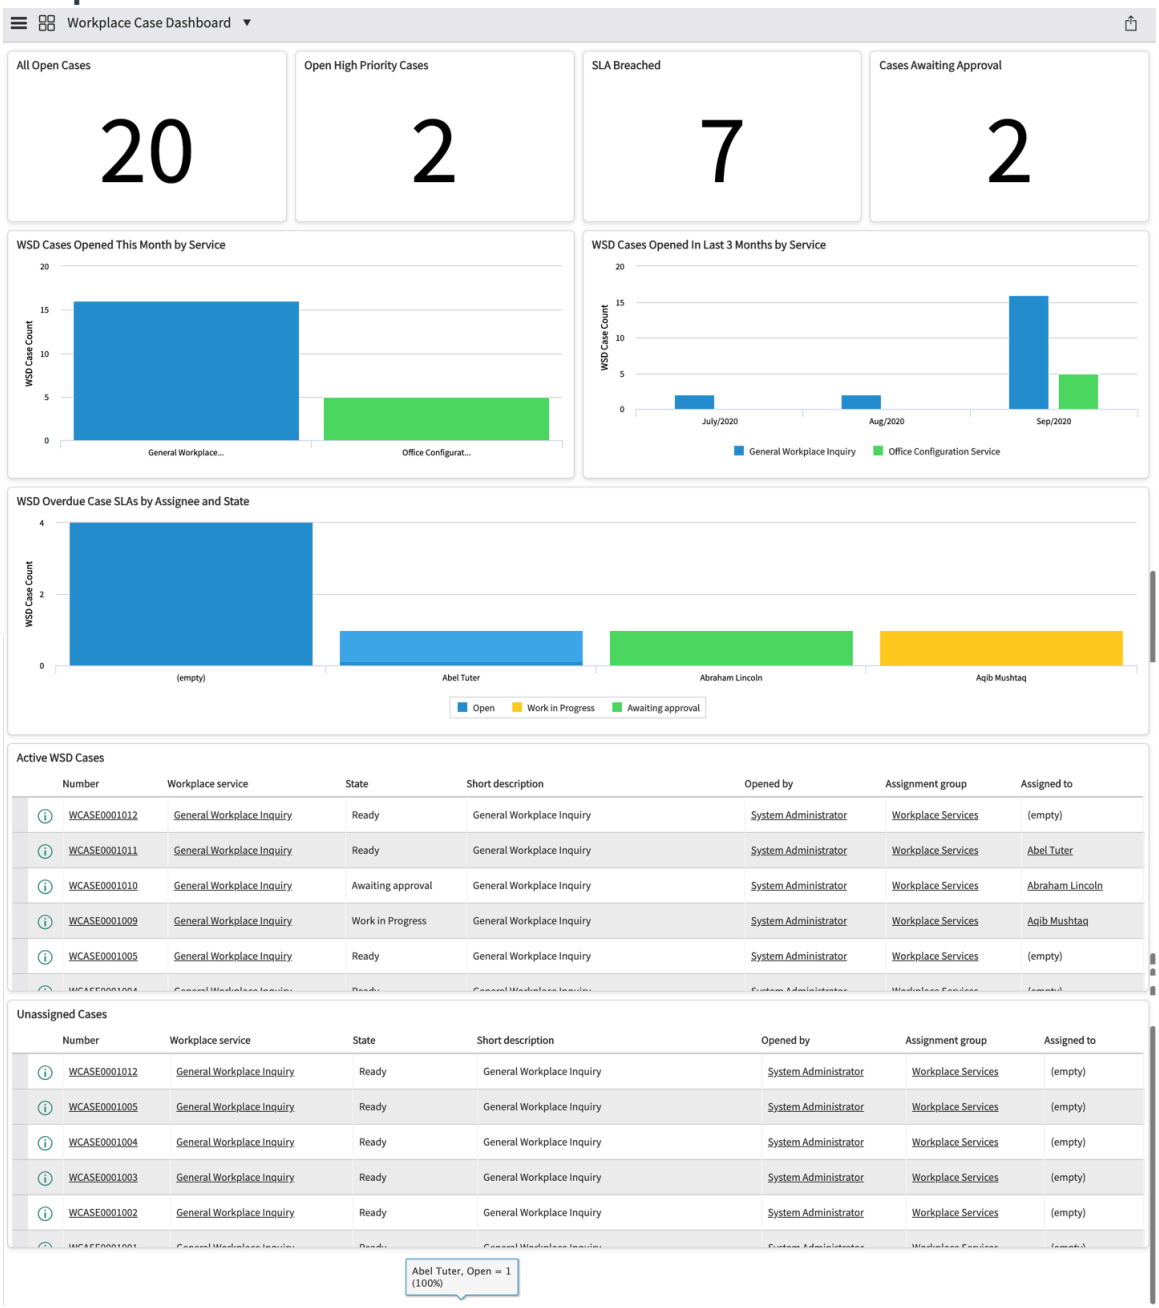
5. Click **Transfer**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The case is transferred to the selected department.

Analytics and Reporting Solutions for Workplace Case Management

Monitor the status of workplace cases raised in your organization.



Workplace Case dashboard

Use this dashboard to track the number of workplace cases that were created using the workplace services from the Workplace Service Delivery or from the Workplace Service Portal. Monitor the number of open cases, cases that require approval, and other cases on any given day.

The Workplace Case Management dashboard is migrated to Workplace Central. You can start using the migrated dashboards from Workplace Central. The out-of-the-box dashboards are also migrated to Workplace Central. Old dashboards are not supported for new Workplace Service Delivery customers. For existing customers, old dashboards are currently available but will be deprecated soon.

Employee Parking form (continued)

Fields	Description
End date	The end date by which the parking request is required. Select the date from the calendar. **Note:** The parking duration must not be longer than two weeks.
Reason for request	Enter the reason for the parking request.
Additional details	Enter additional information or instructions if necessary.

Workplace Service form

Use the Workplace Service form to specify details such as the case table, default template, and record producers.

Workplace service form

Field	Description
Service name	Enter a name for the Workplace service.
Case table	Table that is used for the workplace service.
Fulfillment type	Fulfillment type for the workplace service. You can select one of the following values: • **Manual**: Select this option for manual fulfillment. This option enables you to fulfill the request with a human response. • **Service activity**: Select this option to trigger activities to fulfill the workplace service. Save the form to create or update workplace service activities. For more information, see Create a Workplace service activity • **Flow**: Select this option to use an existing subflow from the application for fulfillment. For more information about Flows, see Create a subflow. **Note:** If you are creating a custom subflow, ensure that the input fields are set to following: ○ Label: Workplace Case ○ Name: workplace_case ○ Type: Reference.Workplace Case
Automatically close case	Option to close the case automatically if the service activities are closed.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace service form (continued)

Field	Description
	This field appears if you select the **Fulfillment type** as **Service Activity**.
Flow	Flow that is used for the workplace service. This field appears if you select the **Fulfillment type** as **Flow**.
Default template	Case template for the workplace service. For more information on templates, refer to Case and Task Templates.
Reinitiate activities on updates	Option to close all child tasks and create them again when a user modifies the workplace service items of a case. If this option is not selected, the requested item record is updated and only the child tasks that have changes are cancelled and created again. Child tasks that are already closed are not created again. If a user modifies the location, date, time, or any other request data, all the child tasks are re-initiated, even if this field is not selected. Selecting this field is helpful if you have service activities like approvals, which must be completed before other activities.
Application	Application that the workplace service is created for.
Active	Option to activate the workplace service.
Available for	Option to specify where the workplace service is available. • **Case**: Select this option to make the workplace service available only to Workplace Case Management users. • **Reservation**: Select this option to make the workplace service available for employees while making a reservation. • **Case and Reservation**: Select this option to make the workplace service available to both Workplace Case Management users and to employees making a reservation.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace service form (continued)

Field	Description
	Note: The **Reservation** and **Case and Reservation** options appear only if the Workplace Reservation Management application is installed.
Allow request modifications for	Option to specify where users can modify the workplace service requests. You can select the **Case**, **Reservation**, or both options based on your requirement. This field is only available for the sn_wsd_case.admin role.
Allow request modifications	Option to enable modifications of the workplace service requests. This field is available from Workplace Case Management 1.23.1.
Record producers	Record producer through which users can request the workplace service. You can select one or more record producers for a workplace service. The record producer must be created in the Workplace Case Management application.
Record producer for reservation	Record producer to be used while adding extra services to a reservation. This field appears only if the value of the **Available for** field contains reservation. If this field is empty, a generic interface is used while adding or editing extra services for a reservation. If services are added using a record producer, the same record producer is used while editing the service till all the items are fulfilled. If the record producer is changed or removed before the items are fulfilled, the earlier record producer is still used while editing the services. If the selected record producer is deleted or made inactive, users will see an error while editing the service items. Users must then contact the administrator or case manager to update the services.

Explore Workplace Visitor Management

Welcome your guests and off-site employees with a smoother, more hassle-free experience. Use ServiceNow® Workplace Visitor Management to optimize your front-desk operations and welcome your guests and off-site employees. You can register visitors as well as pre-plan what they will require.

Workplace Visitor Management overview

Employee, admin, and reception staff can use the Workplace Visitor Management application for different purposes.

Register visitors

Employees can register external visitors and off-site company colleagues for a visit. You can specify their visit dates, their parking, and WiFi requirements. You can co-host visitors with others. You can specify if a visitor is a VIP. You can leave a special note to receptionists to customize their visit.

Manage visitor registrations

Admins and reception staffs can manage and update visitor registrations. Using the Workplace Visitor Management, you can view visitors who are currently checked in, expected visitors, the visitors who are on break and the visitors who have checked out. Once the visitors are on the premises, the application allows you to perform the following actions:

- Check in
- Break check out
- Break check in
- Check out
- Cancel
- Print badges
- Update with no show

Visitor registration

As an employee, the Workplace Visitor Management application enables you to register visitors in advance.

With Workplace Visitor Management, you can do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Register visitors and specify their visit date, timings, and visiting location.
- Reserve a complete day or a short duration.
- Specify a co-host, especially if you are unavailable.
- Provide any private information to the receptionist if the visitor has special requests.
- Register an off-site colleague.
- Notify the visitors with all the information that they need during their visit.

You can also use the Virtual agent chat support on the Workplace Service Portal to register a visitor and view your visitor registration details. The chat support enables you to do the following:

- Register a guest.
- Know your expected visitors on the current day.
- Know when your visitor is expected to arrive.
- Cancel a registered visitor.
- View the visit logs to know the current state of a visitor.
- Create a visitor policy or modify the existing policy which a visitor must accept before visiting. Enable or disable a visitor policy if it is not a compulsion.
- Check the visitor policy confirmations

Once you submit the registration, the reception staff receives the registration in the application. When visitors are at the premises, the reception staff checks in the visitors, prints their badges, updates their breaks, and updates their other statuses during the day.

For more information about how you can register a visitor, see Make a visitor registration.

Configure Workplace Visitor Management

Install the Workplace Visitor Management application and configure visitor registrations related settings.

Install Workplace Visitor Management

Install the Workplace Visitor Management application from ServiceNow Store applications. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Complete the following setup instructions.

1. Navigate to **Subscription Management** > **Subscriptions** in your instance. The list displays the subscriptions that your organization has purchased.
2. Verify that the following plugins are activated:
   - Workplace Core (sn_wsd_core) minimum version 2.0.3.
   - Workplace Visitor Management (sn_wsd_visitor)

Role required: admin

Use the following details when required:

- Name of the application: Workplace Visitor Management
- ID of the application: sn_wsd_visitor

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.
   Search for the application by its name (Workplace Visitor Management) or ID (sn_wsd_visitor).
   If you cannot find the application, you may have to request it from ServiceNow store.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   Dependent plugins and applications are listed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Visitor Management.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.
6. Click **Install**.

Create a visitor policy

Define a policy that must be accepted by a visitor prior to their arrival. Send email notification to the visitor about the policy and enable them to accept the policy by replying to the email.

Before you begin

Role required: sn_wsd_visitor.admin

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Visitor Policies**.
2. Click **New**.
3. On the form, fill in the fields.

Policy form fields

Field	Description
Title	Title of the visitor policy.
Active	Option to activate the policy.
Short Description	Short description about the policy.
Description	Detailed description of the policy. Policy content that should be read and accepted by the visitors.

4. Click **Submit**.

Result

The visitor policy is added.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Assign the visitor policy to workplace locations.

Assign visitor policy to a workplace location

Add one or more workplace location to a visitor policy. Visitors who are registered to arrive at that locations will receive an email notification in prior to accept the policy.

Before you begin
Role required: sn_wsd_visitor.admin

About this task
Assign visitor policy to a workplace location.
You can also assign visitor policy by selecting the workplace location in **Building**. Select the building and ensure that the **Visitor policy view** option is enabled. Click **Edit** and assign the policy.

- Go to Building
- Select the building
- Ensure we have the view “Visitor policy view” selected
- Click on Edit to assign the available policies to the location

Procedure
1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Visitor Policies**.
2. Select the visitor policy to which you want add the workplace location.
3. **Optional:** In the Locations related list, apply the policy to internal/external visitors.
   Select **True** or **False** under the **Required for external** and **Required for internal** column of the workplace location.
4. In the Locations related list, click **Edit**.
5. On the Edit Members form, select the workplace location.
   a. Select the workplace location from the **Collection** column on the left.
   b. Move the selection to the **Locations List** column on the right.
      To move the location, use the add-remove icon ( ).
6. Click **Save**.

Result
The visitor policy is assigned to the selected workplace location.

Create a record producer for visitor management

Make visitor-related services available to employees as a self-service option. Create a record producer to display these services as catalog items in the Workplace Services catalog.

Before you begin
Role required: sn_wsd_visitor.admin

Procedure
1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Record producers**.
2. Click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. On the form, fill in the fields.

Record producer form

Field	Description
Name	Name of the record producer.
Table name	Visitor Registration (sn_wsd_visitor_visitor_registration) table that the record producer is associated with. **Note:** Make sure that the Visitor Registration table for the record producer matches that of the associated workplace service.
Model	Product model table if relevant for the record producer.
Application	This field is set to `Workplace Visitor Management`.
Active	Option to activate the record producer for use.
Expand help for all questions	Select this option to enable users to expand help for all questions.

4. Fill the following tab fields appropriately:
   - **What it will contain**
   - **Accessibility**
   - **Generated Record Data**
   - **Portal Settings**
5. In the **What it will contain** tab, provide the following script:

```
var visitorService = new sn_wsd_visitor.WSDVMVisitorService();
visitorService.createVisitorRegistrationRecord(producer,
 current.sys_id);

producer.portal_redirect = "?id=my_requests";
```

6. In the **Variables** tab, configure the variables for the Workplace Services catalog item as appropriate.

   Variables collect information from the user, and are used to ask questions and map answers to fields.

   To learn more about the different types of variables and how to configure them, see Types of service catalog variables.

7. Click **Submit**.

Result
The record producer is created.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a visitor badge template

Create an HTML template that can be used to print badges for your workplace locations.

Before you begin

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Visitor badge templates**.
2. On the Html Templates list, select **New**.
3. On the form, fill in the fields.

Html Template form

Field	Description
Name	Name of the HTML template record.
Body	Body of the HTML template. You can use the source code icon (**<>**) to edit the HTML code of the body. You can select fields from the **Select variables** option to add them as variables to the HTML body.
Table	Table that variables for the template are picked from. The Visitor Registration [sn_wsd_visitor_visitor_registration] table is selected by default.

4. Select **Submit**.
   The badge template record is created.

What to do next

Assign the badge template to a workplace location. For more information, see Assign badge templates to a workplace location.

Assign badge templates to a workplace location

Assign a badge template to a workplace location.

Before you begin

Role required: sn_wsd_visitor.manager, sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Visitor badge templates**.
2. On the Html Templates list, select the badge template that you want to use.
3. On the Workplace Locations related list, select **Edit**.
4. From the **Collection** column, select the workplace locations that the template must be assigned to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Move the workplace location to the **Workplace location List** column by using the add-remove icon ( ).

   Note:
   You can remove workplace locations from the **Workplace location list** column by using the add-remove icon ( ).

6. Select **Save**.

Result

The badge template is assigned to the selected locations. After a visitor is checked-in, you can print a badge from the visitor registration record.

You can verify the badge template that is assigned to a location in the **Badge template** field of the workplace location record. If the **Badge template** field isn't available on the workplace location record, you can add it by configuring the form layout.

If a location doesn't have an assigned badge template, the nearest template from its location hierarchy is selected while printing a badge. If a template doesn't exist in the hierarchy, the badge template specified in the *sn_wsd_visitor.default_badge_template* system property is selected.

If the visitor picture is not found, a default avatar is used for the badge template. You can change the avatar picture in the *sn_wsd_visitor.visitor_avatar.png* record of the Images [db_image] table.

Configuring Workplace Visitor Management for Workplace Services Kiosk

You can configure pages, check-in flows, check-out flows to integrate Workplace Visitor Management with the Workplace Services Kiosk.

For more information about the Workplace Services Kiosk, see Workplace Services Kiosk.

Configure pages for Workplace Services Kiosk

Configure pages that you want to display for check-in or check-out flows on the Workplace Services Kiosk.

Before you begin

Role required: sn_wsd_visitor.admin

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Page Configurations**.
2. On the Kiosk Page Configurations list, select **New**.
3. On the Kiosk Page Configuration form, fill in the fields.
   For a description of the field values, see Kiosk Page Configuration form.

   Important:
   If the visitor policies for the acknowledgement page contain hyperlinks, visitors can use the links to leave the kiosk environment and they cannot return to the kiosk. The kiosk operator must reload the kiosk environment by using the kiosk URL.

4. Save the record.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Pages that have the Authentication or End page type can be further customized by using the related lists. For more information, see Kiosk Page Customizations.

Create a flow for Workplace Services Kiosk

Create a check-in or check-out flow for the Workplace Service Kiosk.

Before you begin

Role required: sn_wsd_visitor.admin

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Administration**.
2. Select either of the following modules based on your requirement.
   - Check-in Flows
   - Check-out Flows

   Based on your selected module, either the Kiosk Check-in Flow Configurations list or Kiosk Check-out Flow Configurations list opens.
3. On the list, select **New**.
4. On the form, fill in the fields.
   For a description of the field values, see one of the following topics based on the selected module.
   - Kiosk Check-in Flow Configuration form
   - Kiosk Check-out Flow Configuration form

Quick start test for Workplace Visitor Management

Validate Workplace Visitor Management after any configuration change such as an upgrade or after developing a functionality. Copy and customize these quick start test when using your instance-specific data.

All test suite and test should be run on a default implementation. To validate a custom implementation, copy the automated test and configure it for your customization.

By default, the Quick start test is disabled and a read-only test template. The quick start test provides a pass result only when you run it with the demo data or feature plugin.

Copy and configure the quick start test to produce a pass result when you run it with your instance-specific data.

The Agile Development 2.0 (com.snc.sdlc.agile.2.0) and the Agile Development 2.0 - ATF Tests (com.snc.sdlc.agile.2.0.atf) plugins must be enabled.

Note:
When running the quick start test, demo data is required.

Workplace Visitor Management

Workplace Visitor Management quick start tests require activating the Workplace Visitor Management.

Workplace Visitor Management

Test	Description	Release version
Test Register Guest	Ensure that the workplace users or employees can access the record producer and that the form has all the mandatory field values before submitting the record.	Washington DC

Run quick start test for Workplace Visitor Management

Workplace Visitor Management provides quick start test that you can run on your instance.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Automated Test Framework** > **Tests**.
2. Search and select the quick start test you want to run.
   For information on available quick start test, see Quick start test for Workplace Visitor Management.
3. Select **Run Test**.
   The **Test Steps** tab provides steps for running the quick start test.
   After running the test, the **Step Results** tab shows the status of test steps. Screen shots also appear at the top of the form as attachments.

Registering a visitor

Submit a visitor registration to register your invitees before their visit to the organization. As a visitor, accept or decline visitor policies based on your preference.

Make a visitor registration

Pre-plan your visitor or off-site colleagues visit. Specify their visit details like date, time, location, and more.

Before you begin

Important:
Starting with Workplace Core (sn_wsd_core) version 2.1, all updates, and new features are available only on the Workplace Service Portal. The workplace services provided by ServiceNow® are removed from the Service Portal on Workplace Core (sn_wsd_core) beginning with version 2.1. To configure the Workplace service catalog in the Service Portal, see Configure a catalog in Service Portal.

Role required: sn_wsd_core.workplace_user

About this task
Submit this request to register a guest. Specify if there are any additional requirements for the visit as a private note to the reception staff.

Workplace Visitor Management admin and reception staff can also register visitors directly from the application. Navigate to **Workplace Visitor Management** > **Reception Staff** > **Register Visitors**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also register a visitor using the Virtual agent chat support. Navigate to **Workplace Core** > **Workplace service portal** > **Workplace Service Portal Home** and select the chat icon (). Enter your question or select **Show Me Everything** to select from a list of available options to register a visitor.

Procedure

1. Navigate to **All** > **Workplace Core** > **Workplace service portal**.

   Note:
   You can also raise a request from the Employee Center. On the home page, navigate to **Workplace** > **Browse all Workplace** and select the workplace service.

2. Open the **Visitor Management** category.

   a. Select **Catalog**.

   b. Select **Browse by Categories**.

   c. In the Workplace Services Catalog, select **Visitor Management**.

   Note:
   If there are multiple catalogs configured on the portal, go to the Catalogs list and select **Workplace Services Catalog** > **Visitor Management**.

3. Select **Register a guest**.
4. On the form, fill in the fields.

Register a guest form

Field	Description
Visit description	Description with details about the purpose of the visit.
Location	The location of the visit.
Host	The name of the host of the visitor. By default, the field is set to **System Administrator**.
Arrival date and time	The date and arrival time of the visit, shown as the arrival date and time icon ().
Departure date and time	This field is automatically set to 1 hour after the specified arrival date and time. You can change this field by selecting your own time using the departure date and time icon ().
All day	Option for visits that last for an entire day.
Private note to receptionist	Additional requirements or a private note to the receptionist.
Co-hosts	Co-hosts for the visitor. The co-hosts and the main host are notified about the registration.

5. Select **Add an external visitor**, to add a visitor.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select **Add**.

b. On the form, fill in the fields.

Add an external visitor form

Select a known visitor	Option for selecting from a list of known visitors if the visitor has visited before. This selection automatically sets the name, email, and other relevant information of the visitor.
Visitor type	The type of visitor.
First name	The visitor's first name.
Last name	The visitor's last name.
Title	A title for the visitor if necessary.
Visitor's email	The visitor's email address.
Visitor's phone number	The visitor's contact number.
Organization	The organization of the visitor.
Wifi	Option for giving WiFi access to the visitor.
VIP	Option for marking the visitor as an important person (VIP). This option helps the receptionist to prioritize the visitor.
Parking preferences	The visitor's parking preference.
License plate	The visitor's license plate details.

c. Select **Add**.

You can edit or remove a row from the form table using the add-remove row icon ( ).

6. Select **Add a company employee**, to add a colleague.

a. Select **Add**.

b. On the form, fill in the fields.

Add a company employee form

Select a colleague	The name of your colleague. The **First name**, **Last name**, and **Email** fields are automatically set. To edit any details, select the preview record icon ( ) and **Save** the changes.
Email	This field automatically sets t with the email address of the selected colleague. You can edit it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Parking Type	The colleague's parking preference.
License plate	The colleague's license plate details.

c. Select **Add**.

You can edit or remove a row from the form table using the Add-remove row icon ( ).

7. In the **Notification preferences** section, select the channel to be notified on when the visitor checks into the building.
   You can link the Virtual Agent with other channels like Microsoft Teams or Slack. For more information, see Integrating Virtual Agent with other channels .
8. Select **Submit**.

Result
Your visitor registration is submitted and you can view your requests. The details about the visit are sent to the visitor's email address.

If any visitor policies are applicable for the visit, the email sent to the visitor contains options to accept or decline the policies. If the visitor declines the policies in the email, they can still accept them while checking in through the Workplace Services Kiosk. For more information about the kiosk check-in process, see Check in using an invite.

What to do next
You can check the details of your request. You can also edit or cancel the request.

- You can view your requests by following one of the following steps.
  - On the Workplace Service Portal, go to the Requests tab to view your requests and reservations.
  - On the Now Mobile app navigation bar, select **For Me** and scroll down to the My Request section to view your requests.
  - In the virtual agent chat, enter your question or select **Show Me Everything** to select from a list of available options to view your visitor details.
- On the request details screen, you can cancel a request by selecting **Cancel Request**.
- You can search for registered visitors in the **Visitors list** using the search option.

Review visitor policies

Review the workplace policies before your visit, then accept or decline the policies.

Before you begin
Role required: none

About this task
When you register a visit to a workplace, or if someone creates a visitor registration on your behalf, you might receive an email about reviewing the workplace policies. You can review and accept the policies based on your preference.

Unsubscribe | Notification Preferences

You can also accept the policies on the Workplace Services Kiosk during the visitor check-in process. For more information about the kiosk check-in process, see Check in using an invite.

Note:
If you accept the policies before your visit, the policies aren't displayed during the kiosk check-in process.

Procedure

1. Open the email that you received about the workplace policies.
2. Accept or decline the visitor policies based on your preference.

Manage visitor registrations

As an admin and as a reception staff, you can track visitor registrations and update their status while the visitors are on the premises.

As an admin and as a reception staff, you can perform the following actions on visitor registrations:

- Register visitors using the application as well as the service portal.
- View all the visitor registrations.
- View any visitor registrations for the current day or which were created by you.
- Create visitor-related services for your employees as a self-service.
- Monitor visitor registrations using the Visitor Reception Dashboard.
- Create visitor policies and assign it to workplace locations.

As an admin, you can also view visit logs containing details about the state changes for the visitor registrations.

Update a visitor registration

Track visitor registrations and update the status of a visitor while the visitor is on the premises.

Before you begin

Role required: sn_wsd_visitor.admin or sn_wsd_visitor.staff

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Visitor Overview**.
2. Select any of the following options to update the visitor registration.
   - **All Visitor Registrations**
   - **My Visitor Registrations**
   - **Today's Registrations**
3. Select the visitor registration which you want to update.
4. **Optional:** Select multiple registrations if you want to update them with the same status.
5. Based on the state change that you want to make, select any of the following options.
   For more information about different states and about allowed state changes on a visitor registration, see Visitor registration states.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The status of the visitor registration is updated.

View visitor registrations

View visitor registrations submitted through the service portal. You can view all visitor registrations, the ones for the current day, and the ones that were made by you.

Before you begin
Role required: sn_wsd_visitor.admin or sn_wsd_visitor.staff

- A reception staff can update the state of the visitor registration.
- You can print badges from anywhere in the Workplace Visitor Management application.

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Visitor Overview**.
2. Select any of the following options to view visitor registrations:
   - **All Visitor Registrations**: Select this option to view all the visitor registrations made through the application.
   - **My Visitor Registrations**: Select this option to view the visitor registrations that you created.
   - **Today's Registrations**: Select this option to view the current day's visitor registrations.
3. Select a visitor registration to view its details.
   - The Visit Details tab contains information like the location, host, co-hosts, arrival, and departure times.
   - The Visitor Details tab contains the visitor's information like the name, email address, phone number, and consent.
   - The Visitor Services tab contains information like the parking type and license plate, and whether the visitor is a VIP or requires WiFi.

   You can also see whether the visitor has accepted or declined the visitor policies by selecting the record in the Visitor Policy Confirmation related list. For more information about visitor policy confirmations, see View visitor policy confirmations.

View visitor policy confirmations

View policy confirmations that were submitted by the visitors.

Before you begin
Role required: sn_wsd_visitor.staff

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Visitor policy confirmations**.
   You can also navigate to the Visitor registration record of the visitor.
2. From the Visitor Policy Confirmations list, select the record that you want to view.
3. View the details about the Visitor Policy Confirmation.

Note:
For policies that require a signature, the signature is attached to the record as an image. If the admin anonymizes the visitor, the signature is removed from the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Visitor Policy Confirmation record

Field	Description
Visitor registration	Visitor registration record that contains information about the visit, visitor, and visitor services.
Location policy	Policies that are linked to the location of the visit.
Active	Option to activate the record.
State	State of the policy confirmation. This field is automatically updated based on whether the visitor has accepted, declined, or not responded to the policies.

Visitor registration states

The visitor logs display the current state of visitor registrations. These states can be changed to other states.

The different states of a visitor registration are explained as follows.

Visitor registration states

State	Description
Planned	This is the initial state of a visitor registration after it is created. This state can be changed to the following states: • Check-in • Cancel • Didn't show up
Checked in	The visitor is checked in by the reception staff. This state can be changed to the following states • Check out • Break check out You can print a visitor badge by selecting **Print badge**.
Checked out	The visitor is checked out by the reception staff.
Break checked in	The visitor is checked in by the reception staff after the visitor returned from a break.
Break checked out	The visitor is checked out by the reception staff after the visitor went on a break.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Visitor registration states (continued)

State	Description
	This state can be updated to the following states • Break check in • Check out
Completed	The visitor has completed the visit and checked out.
Cancelled	The visitor registration is cancelled.
No show	The visitor didn't show up.
Disappeared	There is no update about the visitor or has checked out without updating the reception staff.

Anonymize a visitor

As an admin, you can anonymize a visitor to delete the visitor record and all the details of the visitor. Any future registrations of the visitor are canceled.

Before you begin

Role required: sn_wsd_visitor.admin

About this task

As an admin, you can anonymize a visitor. Employees can request to anonymize a visitor due to security reasons or for any other reason.

When you anonymize a visitor, the visitor record is deleted. In all current visitor registrations, the visitor data is replaced with a random value. Any future registrations of the visitor are canceled.

Note:

- If you have installed Workplace Services Kiosk, any visitor pictures and signatures are removed when you anonymize a visitor.
- After you anonymize a visitor, the visitor details must be deleted from the audit records for one time. To automatically delete the details from the audit records, a fixed script is provided along with the application on the store. Download the fixed script *WSD_Fix_Visitor_Anonymize_data.xml* attached with the Workplace Visitor Management application from the ServiceNow Store under the supporting documents.

Procedure

1. Navigate to **System Definition** > **Tables**.
2. Search for the Visitor [sn_wsd_visitor_visitor] table.
   - In the **Label** field, type `Visitor`.
   - In the **Name** field, type `sn_wsd_visitor_visitor`.
3. Select the Visitor [sn_wsd_visitor_visitor] table.
4. Under Related links, select **Show List**.
5. **Optional:** In the application **Filter navigator**, type `sn_wsd_visitor_visitor.list` and search.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. From the list of visitors, select the visitor that you want to anonymize.
7. On the visitor form, select **Anonymize Visitor Data**.
8. In the Confirmation dialog box, click **OK**.

Result

The visitor is anonymized and all the details of the visitor are deleted. Any future registrations for the visitor are canceled, and the data in the fields are replaced with random values.

Apply visitor management archive policy

Apply the archival policy for Workplace Visitor Management. The archival policy will archive old visitor records and visitor registration records that are more than one year old.

Before you begin

The archival policy improves performance and controls table size growth by archiving old data.

Role required: admin

Procedure

1. Navigate to **All** > **System Archiving** > **Archive Rules**.
2. In the Archival Rules search box, filter by **WSD**.
   WSD (Workplace Service Delivery).
3. Select and click open the following visitor management archival rules in edit mode as required:
   - **WSD: Archive 1 year old Visit record**: Archives one-year old visitor records for the past one year in Workplace Visitor Management.
   - **WSD: Archive 1 year old Visit registration**: Archives one-year old visitor registration records in Workplace Visitor Management.
4. Select the **Active** check box to activate the archival policy for a selected table.
5. Apply the required filter conditions.
6. Select **Recalculate Estimate** to know the records eligible for archiving.
7. Select **Run Archive Now** under related links to run the archival rule.

Roles installed with Workplace Visitor Management

Roles installed with Workplace Visitor Management

Role title [name]	Description	Contains roles
Workplace visitors admin [sn_wsd_visitor.admin]	As an admin, you can: • Has complete access to the application. • Perform all actions of a Visitor manager. • Access visitor logs. • Configure application settings. • View and manage the related record producers.	• sn_wsd_visitor.manager • catalog_editor • catalog_admin
Workplace visitors manager [sn_wsd_visitor.manager]	As a manager, you can: • Perform all actions of a Visitor staff. • Create, review and assign visitor policies that a visitor must accept before visiting the location. • View, manage, and update visitor registrations. • View the Visitor Reception Dashboard. • Register visitors.	sn_wsd_visitor.staff
Workplace reception staff [sn_wsd_visitor.staff]	As a reception staff, you can: • View, manage, and update visitor registrations. • View and update visitor records. • Register visitors • View the Visitor Reception Dashboard. • Print badges for visitors.	sn_wsd_core.workplace_user

Tables installed with Workplace Visitor Management

Tables installed with Workplace Visitor Management

Table	Description
User Visitor [sn_wsd_visitor_m2m_user_visitor]	Stores information about the link between a visitor and an employee. The employee must have specified this information while registering the visitor.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Workplace Visitor Management (continued)

Table	Description
Organization [sn_wsd_visitor_organization]	Stores information about the visitor's organization, such as the organization's name and description.
Visit [sn_wsd_visitor_visit]	Stores information about the visit. Each visitor is linked to a visit. A visit can hold multiple visitors.
Visitor [sn_wsd_visitor_visitor]	Stores information about all the visitors who have visited. An employee can reuse the visitor details for future registrations.
Visitor Registration [sn_wsd_visitor_visitor_registration]	Stores information about all the visitor registrations created in the application.
Visit Log [sn_wsd_visitor_visit_log]	Stores information about the state changes that were logged during a visit.
Policy [sn_wsd_visitor_policy]	Stores information about all the visitor policies created in the application.
Location Policy [sn_wsd_visitor_m2m_location_policy]	Stores information about the visitor policies added to workplace locations.
Visitor Policy Confirmation [sn_wsd_visitor_visitor_policy_confirmation]	Stores information about all the confirmations received for a visitor policy.
Kiosk Page Configurations [sn_wsd_visitor_page_configuration]	Stores information about the pages created for Workplace Services Kiosk.
Kiosk Checkin Flow Configurations [sn_wsd_visitor_checkin_flow_configuration]	Stores information about the check-in flows created for Workplace Services Kiosk.
Kiosk Checkout Flow Configurations [sn_wsd_visitor_checkout_flow_configuration]	Stores information about the check-out flows created for Workplace Services Kiosk.
Kiosk Authentication Option [sn_wsd_visitor_authentication_option]	Stores information about the authentication options created for the Workplace Services Kiosk.
Visitor Authentication Option [sn_wsd_visitor_page_m2m_authentication_option]	Stores information about authentication options added to an authentication page configuration.
Kiosk Next Step [sn_wsd_visitor_next_step]	Store information about the next steps added to an end page configuration.

Properties installed with Workplace Visitor Management

There are several properties available with Workplace Visitor Management.

Note:
All of these properties are located in the System Properties [sys_properties] table. To access the table, enter `sys_properties.list` in the navigation filter.

Properties for Workplace Visitor Management

Property	Description
sn_wsd_visitor.policy_response_due_in_days	This property enables you to send emails to visitors to remind them to submit their visitor policy acceptance or rejection. If a visitor doesn't respond, the reception staff is notified to check the same when the visitor visits the reception desk. **Note:** The visitor registration isn't canceled if the visitor doesn't provide their response toward visitor policy. • Type: integer • Default value: **1**
sn_wsd_visitor.visitor_inbound_email	This property enables you to specify a generic email address to send or receive visitor requests. • Type: string • Default value: **askvisitor@example.com**
sn_imt_core.visitor_syncing	This property enables visitor synchronization between the Safe Workplace and Workplace Visitor Management applications. When a visitor is registered with the Workplace Visitor Management application, the visitor details are also sent to the Safe Workplace application so that other visitor-related actions can be performed. • Type: true/false • Default value: **true** • Location: System Property [sys_properties] table
sn_wsd_visitor.default_badge_template	This property specifies the sys_id of the badge template that is used if no badge is found in the location hierarchy of the visitor registration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties for Workplace Visitor Management (continued)

Property	Description
	The default value is the sys_id of the *Visitor Badge (Black and White)* template.

Kiosk Check-in Flow Configuration form

Use the Kiosk Check-in Flow Configuration form to create a check-in flow for the Workplace Services Kiosk.

Kiosk Check-in Flow Configuration form

Field	Description
Name	Name of the check-in flow configuration.
Authentication page configuration	Page configuration that contains the check-in authentication.
Self-registration page configuration	Page configuration that contains the self-registration flow.
Acknowledgment page configuration	Page configuration that contains the check-in policies for the visitor to acknowledge. For more information about policies, see Create a visitor policy.
Picture page configuration	Page configuration that uses the camera to take a picture of the visitor.
Summary page configuration	Page configuration that contains the summary of the visit.
End page configuration	Page configuration that displays the next steps for the visitor to follow.
Active	Option to make the page configuration active.

Note:
The Acknowledgment, Summary, Picture, and Self-registration pages are optional. If an optional page is not configured, it is skipped in the check-in flow.

Check-in flows based on self-registration

Scenario	Flow
Authentication is successful	**Authentication page** > **Summary page** > **Picture Page** > **Acknowledgement page** > **End page** > **Kiosk home page**
Authentication fails and self-registration is not configured	**Authentication page** > **Authentication error** > **Kiosk home page**
Authentication fails, self-registration is configured, and the visitor opts out of self-registration	**Authentication page** > **Authentication error** > **Self-registration page** > **Kiosk home page**
Authentication fails, self-registration is configured, and the visitor opts to self-register	**Authentication page** > **Authentication error** > **Self-registration page** > **Picture Page** >

Check-in flows based on self-registration (continued)

Scenario	Flow
	Acknowledgement page > **End page** > **Kiosk home page**

Kiosk Check-out Flow Configuration form

Use the Kiosk Check-out Flow Configuration form to create a check-out flow for the Workplace Services Kiosk.

Kiosk Check-out Flow Configuration form

Field	Description
Name	Name of the check-out flow configuration.
Authentication page configuration	Page configuration that contains the check-out authentication. If the authentication is successful, the kiosk displays the summary page. If the summary page is not configured, the kiosk displays the end page.
Summary page configuration	Page configuration that contains the check-out summary. The summary page configuration is optional. If the visitor selects **Continue**, the kiosk displays the end page.
End page configuration	Page configuration that contains the check-out confirmation. If the visitor selects **Done**, or if the page is idle for thirty seconds, the kiosk displays the authentication page.
Active	Option to make the page configuration active.

Kiosk Page Configuration form

Use the Kiosk Page Configuration form to create pages for the Workplace Services Kiosk.

Kiosk Page Configuration form

Field	Description
Name	Name of the page configuration.
Title	Title that is displayed when the page is displayed on a kiosk.
Page type	Type of page that you want to create for the kiosk flow. For more information, see Kiosk Check-in Flow Configuration form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Kiosk Page Configuration form (continued)

Field	Description
Subtitle	Subtitle that is displayed when the page is displayed on a kiosk.
Application	Application scope of the page configuration record. This field is automatically filled based on the application scope of your instance.
Optional step	Option to allow kiosk users to skip taking a picture. This field appears only if the page type is **Picture**.
Always display policies	Option to always display the policies page, even if the visitor has accepted the policies earlier.
Record producer	Record producer that contains the self-registration logic. This field appears only if the page type is **Self-registration**. You can use the default **WSD VM Self registration** record producer that is included with the Workplace Visitor Management application.
Primary authentication option	Authentication option that opens by default on the authentication page. This field appears only if the page type is **Authentication**. **Note:** If the **Primary authentication option** field is not visible on the form, you must add it to the form layout. For more information about form layouts, see Configuring the form layout.

Self-registration record producer configuration

As an admin, you can configure the default record producer by navigating to **All** > **Workplace Visitor Management** > **Administration** > **Record Producers**, then selecting the **WSD VM Self registration** record producer.

The Variables related list contains the variables that are included with the record producer. The following variables are not displayed on the kiosk:

- *Location*: The location of the kiosk device determines the company policies and the list of hosts for the kiosk device.

  The location value is automatically filled at run time based on the kiosk configuration. For more information, see Create a kiosk configuration.

- *Duration*: The duration of the visit is used to determine the expected departure time of the visitor.

  The default value of the duration is **1h**, which specifies one hour. You can enter a combination of numbers with `h` to specify hours or `m` to specify minutes. For example, `5h` is five hours, `30m` is thirty minutes, `1h30m` is one hour and thirty minutes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Kiosk Page Customizations

The Page Configurations created for the Workplace Services Kiosk can be further customized by using their related lists.

Authentication Page

After creating an authentication page configuration, you can add the authentication options to the page. To add an authentication option from the Visitor authentication options list, select **New**, then fill in the Visitor authentication option form.

Visitor authentication option form

Field	Description
Authentication option	Option used for visitor authentication. For more information, see the following Authentication options table.
Page configuration	Authentication page configuration that the option is linked to.

Authentication options

Authentication option	Description
Check-in with Qr-code	Visitor must scan the invitation QR code for authentication. The QR code is in the email invite that is sent to the visitor. **Note:** Ensure that the kiosk operator provides camera permissions on the kiosk to scan the QR code. For more information, see Setting up a kiosk device.
Check-out with Qr-code	
Check-in with email address	Visitor must use their email address for authentication.
Check-out with email address	
Check-in with invitation passcode	Visitor must use the invitation pass code for authentication. The pass code is in the email invite that is sent to the visitor.
Check-out with invitation passcode	
Check-in with phone number	Visitor must use their phone number for authentication.
Check-out with phone number	
Check-in with your name	Visitor must use their full name for authentication.
Check-out with your name	

End Page

After creating an end page configuration, you can add further steps for the visitor. To add a step from the Kiosk Next Steps list, select **New**, then fill in the Kiosk Next Step form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Kiosk Next Step form

Field	Description
Name	Name of the next step record.
Title	Title of the step on the kiosk end page.
Subtitle	Subtitle of the step on the kiosk end page.
Order	Order of the step. Steps with a higher order are displayed later in the page.
Page	End page that the record is linked to.
Active	Option to make the record active.

Location Policy form

Use the location policy form to assign a visitor policy to a workplace location, apply the policy to internal/external visitors and configure whether the policies require signatures.

Location Policy form

Field	Description
Location	Workplace location to which the visitor policy it linked.
Policy	Visitor policy that is linked being linked to the workplace location.
Active	Option to activate the record.
Required for internal	Option to enable the policy for internal visitors.
Require signature for internal	Option to enable signatures for internal visitors to acknowledge the policy. The visitor signature is stored in the visitor policy confirmation record.
Required for external	Option to enable the policy for external visitors.
Require signature for external	Option to enable signatures for external visitors to acknowledge the policy. The visitor signature is stored in the visitor policy confirmation record.

Analytics and Reporting Solutions for Workplace Visitor Management

Monitor the status of visitor registrations made in your organization.

View visit logs

View the visit logs which display all the state changes of a visitor registration.

Before you begin

Role required: sn_wsd_visitor.admin

About this task

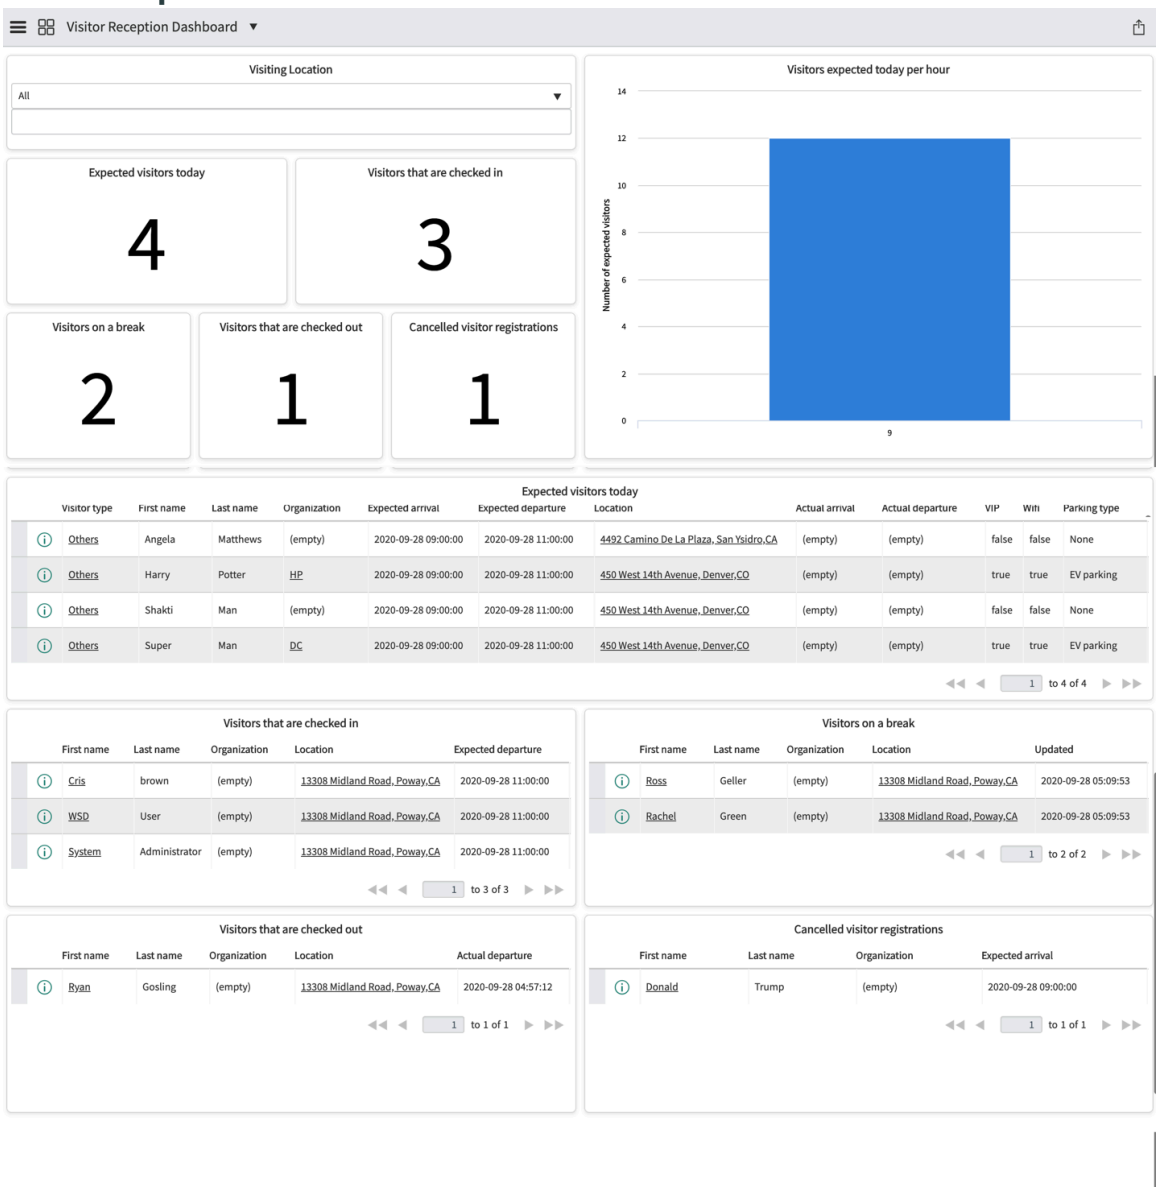
You can view all the status changes of a visitor registration at any point. You can also make status updates from here.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Visitor Management** > **Administration** > **Visit Logs**.
2. Search for the visitor registration which you want to view.
3. **Optional:** View the current and previous states by selecting the info icon () next to the visit log.
   For more information about each state, see Visitor registration states.

Visitor Reception Dashboard



With the Visitor Reception Dashboard, you can track visitor registrations created in the application on any day. Track the statuses of visitors who are on the premises. View the number of visitors who are expected, have checked in, have checked out, are on break, or have not showed up.

Note:
The Workplace Visitor Management dashboard is migrated to Workplace Central. You can start using the migrated dashboards from Workplace Central. The out-of-the-box dashboards are also migrated to Workplace Central. Old dashboards are not supported for new Workplace Service Delivery customers. For existing customers, old dashboards are currently available but will be deprecated soon.

For more information about the migrated dashboard, see Reservation Management dashboard.

Workplace Calendar Synchronization

Enhance your workplace's reservation experience by synchronizing your reservations with your calendar provider by using the ServiceNow® Workplace Calendar Synchronization application. Enable your employees to make reservations with ServiceNow® Workplace Reservation Management or with your organization's calendar service providers, such as Outlook (Cloud or On-Premises) and Google.

Get started

Explore

Learn about Workplace Calendar Synchronization concepts and features.

Configure

Install the Workplace Calendar Synchronization application.

Synchronize

Synchronize reservations between Workplace Reservation Management

Manage

Manage reservation synchronizations, view the synchronization deltas. Know about sync conditions and troubleshooting.

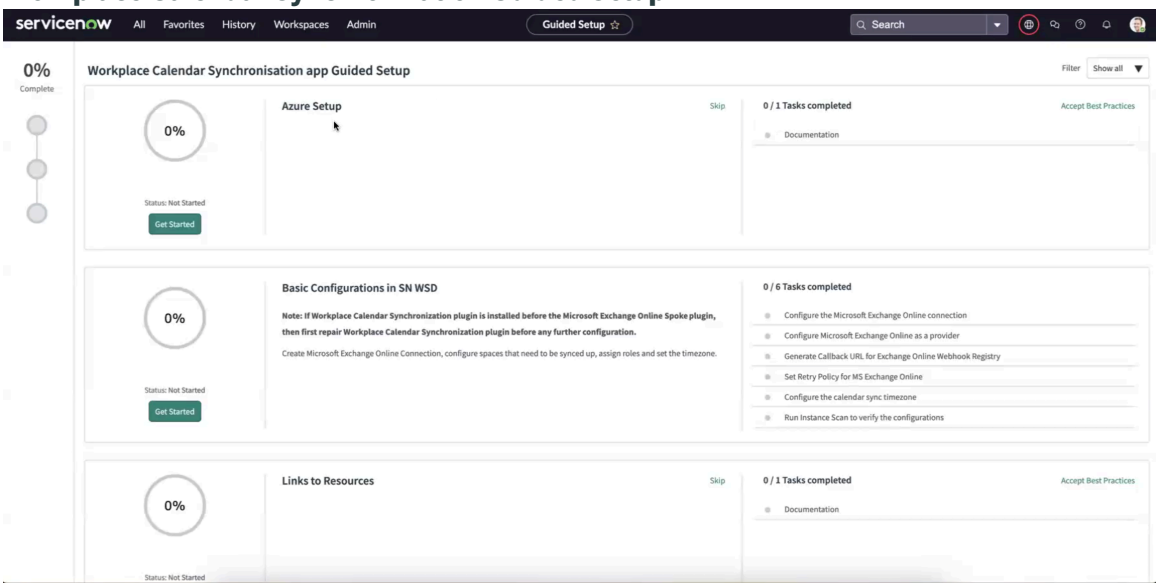
Analytics and Reporting Solutions

Coordinate work and improve processes with the synchronization dashboard.

Reference

Get details about components like roles, tables, properties, scheduled jobs and flows.

Explore Workplace Calendar Synchronization



Enhance your workplace reservation experience. Synchronize your reservations with your calendar provider by using the ServiceNow® Workplace Calendar Synchronization application. Enable your employees to make reservations with ServiceNow® Workplace Reservation Management or with your organization's calendar service providers, such as Microsoft Exchange Online.

The Workplace Calendar Synchronization application synchronizes reservation-related information based on the configuration made on the requested workplace room. When you synchronize with a calendar provider, the reservations are directly added to the calendars of your employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Workplace Calendar Synchronization Guided setup is available for system administrators and is provided out of the box with the application. The Guided setup can be accessed from **All** > **Workplace Calendar Synchronization** > **Administration** > **Guided setup**.

Workplace Calendar Synchronization Guided Setup

The Workplace Calendar Synchronization application supports the following calendar services:

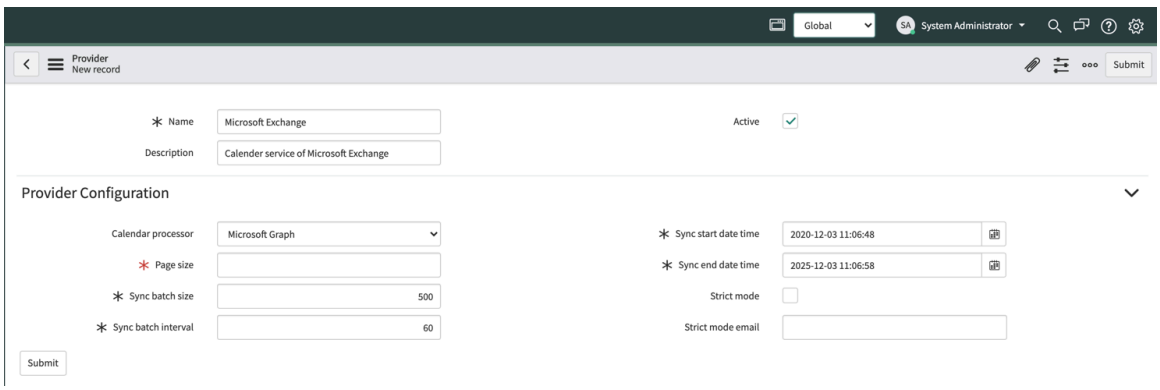
- Microsoft Exchange Online
- Google Calendar
- Microsoft Exchange On - Premises

Note:
Workplace Calendar Synchronization does not support hybrid Microsoft Exchange environments.

The Workplace Calendar Synchronization application uses the calendar service as the primary source. However, the availability for a workplace room can be checked either using the calendar provider or the Reservation portal separately. Events are sent and received from the calendar provider for updates. The calendar provider confirms reservations on rooms created using the Workplace Reservation Management Reservation portal.

Specify your connection and synchronization settings

As an admin, you can do the following:



- Configure connections with a calendar service.
- Configure workplace items that require synchronization when they're reserved.
- Monitor events and calendar events that are created in the applications. For information about how events work, refer to Events in Workplace Calendar Synchronization.
- For Google Calendar and Microsoft Exchange, receive calendar updates via synchronization deltas (Sync deltas). A Sync delta contains a token using which the application retrieves only the changes that happened since the last interval instead of displaying the complete calendar history of the workplace item.

Note:
If you're using Microsoft Exchange Online, you cannot view synchronization deltas.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- For Microsoft Exchange Online, receive calendar updates through subscriptions and callback events. A callback event triggers the application to retrieve the calendar information.
- For Google Calendar and Microsoft Exchange On Premises, receive calendar updates via synchronization deltas (Sync deltas). A Sync delta contains a token using which the application retrieves only the changes that happened since the last interval instead of displaying the complete calendar history of the workplace item.

You can create a connection with your calendar service by using the following configuration form:

Create or update reservations

As an employee, you can do the following:

- Make a reservation for a workplace item in both the Workplace Reservation Management application and synchronize it with your calendar service.
- Update a reservation or cancel a reservation using the calendar provider or the Workplace Reservation Management application. View the reservation details, add attendees, change location or more.

> **Warning:**
> Reservations that are created using calendar providers cannot be edited in the Workplace Reservation Management application

- Check the availability of workplace items using both Workplace Reservation Management and your calendar service.
- Using the calendar provider, plan meetings, add a location, invite attendees and more. The meeting is synchronized to Workplace Reservation Management as a reservation.
- See all your workplace reservations in a single place.

> **Note:**
> Only rooms added in the Rooms [sn_wsd_core_room] table are synchronized using the calendar provider. To synchronize spaces, that spaces must be added as rooms in the Rooms [sn_wsd_core_room] table.

Synchronized information

When you synchronize your calendar provider and Workplace Reservation Management, whenever a reservation is created or updated, the following information is synchronized:

- Details of the reserved location
- Subject of the reservation
- Start and end times of the reservation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Privacy of the reservation
- Invitees of the reservation

Configure Workplace Calendar Synchronization

Install and configure the Workplace Calendar Synchronization application to create personalised calendars across supported platforms, such as , Google Calendar, or Microsoft Exchange On-Premises.

Install Workplace Calendar Synchronization

Install the Workplace Calendar Synchronization application from ServiceNow Store applications. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Complete the following setup instructions to view the available subscriptions:

Navigate to **Subscription Management** > **Subscriptions** in your instance. The list displays the subscriptions that your organization has purchased.

Use the following details when required:

- Name of the application: Workplace Calendar Synchronization
- ID of the application: sn_wsd_rsvsync

Role required: admin

About this task

The following plugins are activated when you install Workplace Calendar Synchronization:

- Workplace Core (sn_wsd_core) minimum version 2.3.3
- Workplace Reservation Management (sn_wsd_rsv) minimum version 1.3.3
-
- Depending on the calendar provider that you want to configure, instal the following plugins:

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   Search for the application by its name (Workplace Calendar Synchronization) or ID (sn_wsd_rsvsync). If you cannot find the application, you may have to request it from the ServiceNow Store.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Calendar Synchronization.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
If you don't load the demo data during installation, it's unavailable to load later.

6. Click **Install**.

Setup Workplace Calendar Synchronization

As an admin, establish connections with your calendar service and synchronize reservations.

Perform the following actions to synchronize reservations using the Workplace Calendar Synchronization:

- Authenticate ServiceNow with your calendar provider.
- Set up an OAuth connectivity with your calendar provider: Create an application registry and generate OAuth entities.
- Configure connection & credential aliases.
- Configure calendar providers.
- For Microsoft Exchange On-Premises and Google Calendar, activate the **WSDRS Sync Calendar items** scheduled job.

For more information about scheduled jobs and flows, refer to Scheduled jobs installed with Workplace Calendar Synchronization and Flows installed with Workplace Calendar Synchronization.

Important:
You will not be notified when an event is rejected or declined by Microsoft Outlook. For the same reason, a scheduled job - **Clean-up Awaiting/Rejected Reservations**, is available that you can run on any suitable frequency to clear the reservations rejected or declined by the Microsoft Outlook calendar.

Warning:
Reservations that are created using calendar providers can’t be edited in the Workplace Reservation Management application.

Workplace Calendar Synchronization version 1.6.1 and older

If you are using Workplace Calendar Synchronization version 1.6.1 and older, to set up a connection with Microsoft Exchange Online, refer to Microsoft Exchange Online - Calendar synchronization.

Workplace Calendar Synchronization version 2.0.1 and later

From Workplace Calendar Synchronization 2.0.1 and later, the application uses Microsoft Exchange Online spoke. It’s required to install Microsoft Exchange Online spoke version 3.2.1, otherwise, the application doesn’t work.

Workplace Calendar Synchronization 2.0.1 and later uses Integration Hub the REST API to connect with Microsoft Exchange Online spoke.

To set up a connection with Microsoft Exchange Online spoke, refer to Create a connection with Microsoft Exchange Online spoke.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set Workplace Calendar Synchronization properties

Configure the properties for the Workplace Calendar Synchronization to set the Exchange Online Sync Integration Mode to Strict, Personal Authentication, or Normal mode to synchronize reservations.

Before you begin

Role required: sn_wsd_rsvsync.admin

Note:
The Exchange Online Sync Integration Mode property isn't supported for Google Calendar.

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Properties**.
2. Set the Exchange Online Sync Integration Mode property value to any of the following:

Exchange Online Sync Integration Modes

Mode	Description
Strict	To use strict mode user to manage all reservations in Outlook using an authorization code, set up Strict mode authentication to connect Microsoft Exchange Online with Workplace Calendar Synchronization.
Personal	To manage a user's own reservations in Outlook using their personal token, configure the connections and settings with Microsoft Exchange Online in Personal Authentication mode. This process ensures synchronization of reservations and restricts unauthorized access to the user's calendar. **Note:** This property isn't supported for Google Calendar and Microsoft Exchange On-Premises.
Normal	To manage all reservations in Outlook using admin client credentials, set up a Normal mode authentication to connect Microsoft Exchange Online with Workplace Calendar Synchronization.

3. Select **Save**.

Microsoft Exchange Online - Calendar synchronization

Synchronize reservations between Microsoft Outlook and Workplace Reservation Management.

The Workplace Calendar Synchronization application provides a medium to establish a connection between your Microsoft Outlook calendar and the Workplace Reservation Management application. You can synchronize reservations made in the Reservation portal to the Microsoft Outlook calendar and block the date and time. Similarly, you can also synchronize the events made in the Microsoft Outlook calendar with the Workplace Reservation Management application and track the reservations and its details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Microsoft Graph API

The Microsoft Graph API provides access to data stored across Microsoft 365 services. So, to synchronize reservations, the Microsoft Graph connection plays a crucial role. When you install Microsoft Exchange Online Spoke, the following credentials are installed:

- **MS Graph 1**
- **MS Graph 2**

To install the Microsoft Exchange Online Spoke, refer to Create a connection with Microsoft Exchange Online spoke.

Subscriptions

When you activate a reservable sync configuration to synchronize reservations with Microsoft Exchange Online, a subscription is created automatically. The application notifies if a subscription renewal fails. The notification is sent to the users with the Workplace Calendar Synchronization admin [sn_wsd_rsvsync.admin] role. Subscriptions are created only for active reservable sync configurations. A subscription notifies you about the changes to events on the room mailbox. For more information about subscriptions, refer to https://learn.microsoft.com/en-us/graph/api/subscription-post-subscriptions?view=graph-rest-1.0&tabs=http.

A webhook registry contains the subscription-related details to perform a call-back. To configure a webhook registry, refer to Configure the webhook registry of Microsoft Exchange Online spoke.

Synchronization from Workplace Service Delivery to Microsoft Exchange Online

To synchronize reservations made using the Workplace Reservation Management application to the Microsoft Outlook calendar, you must first create a connection with Microsoft Exchange Online. Depending on how you want to establish the connections, refer to the respective topics:

- To configure a normal mode connection with Microsoft Exchange Online, refer to Create a normal mode connection with Microsoft Exchange Online.
- To configure a strict mode connection with Microsoft Exchange Online, refer to Create a strict mode connection with Microsoft Exchange Online.

Synchronization from Microsoft Exchange Online to Workplace Reservation Management

The process of synchronizing reservations made in an Microsoft Outlook calendar to the Workplace Reservation Management is performed with the help of subscriptions. A subscription is created in the calendar provider for the room (reservable sync record). The application is notified by the subscription whenever an action is performed on the room. For more information about subscriptions, refer to https://learn.microsoft.com/en-us/graph/api/subscription-post-subscriptions?view=graph-rest-1.0&tabs=http.

Strict mode

The Workplace Calendar Synchronization application enables you to configure your connections and configurations with Microsoft Exchange Online in strict mode as well. In strict mode, events are not directly created in an employee's calendar, instead, they are sent to a general email address. Employees are invited to the event. You can specify a strict mode email id through which you want to sync reservations. Employees can only make changes using the Workplace Reservation Management application.

To configure strict mode, enable the **Strict mode** option while configuring the Microsoft Exchange Online as calendar provider. The requesters are considered as invitees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Sync past reservations

The Workplace Calendar Synchronization application enables you to sync reservations that were made in the past. You can specify the duration in date and time to get those past reservations to sync with Microsoft Exchange Online or Workplace Reservation Management. You can configure the setting using the **Synchronize past reservations**. Specify the **Sync start date time** manually from the subscription record of the reservable sync record for which you are synchronizing the past reservations. In the **Sync end date time**, you can specify the end time as you want.

Multi-provider setup

The Workplace Calendar Synchronization enables you to configure a multi-provider setup with Microsoft Exchange Online. That is, configure multiple connections and credentials with Microsoft Exchange Online. For more information on how to set up a multiprovider, refer to Create single or multiple calendar providers with Microsoft Exchange Online.

Important:
Multi-provider is not supported or is not the same as Exchange hybrid configurations.

'No request' handling

No request is a mechanism to validate the generated syntax of a payload of an event created for the calendar. But, instead of sending the event to the calendar provider, it is only created. The admin can validate the payload content of the event (JSON) to ensure that is generated as expected. 'No request' ensures that the application does not make any API calls to the calendar provider when you create, update, or cancel a reservation in the Workplace Reservation Management application.

Run instance scan

Execute an Instance scan on your Workplace Calendar Synchronization configurations with Microsoft Exchange Online. The Instance Scan application diagnoses the configurations with the calendar provider by running a series of checks using suites.

Refer to Run Instance scan to check Microsoft Exchange Online synchronization configuration.

Create a normal mode connection with Microsoft Exchange Online

Perform the following steps to establish a normal mode connection with Microsoft Exchange Online.

Configure Microsoft Azure in normal mode

Set up a normal mode authentication with Microsoft Azure to connect Microsoft Outlook with Workplace Calendar Synchronization.

Before you begin
Role required: Exchange administrator

About this task
Add normal mode permissions so that you can synchronize Workplace Calendar Synchronization with Microsoft Exchange Online via GraphAPI.

Procedure

1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. **Optional:** If you do not have an app registration, select **New registration**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. On the form, enter the **Name** of the registration.

b. Select the **Supported account types** of your choice.

c. **Optional:** Specify the **Redirect URL**.
Specify the following details:

i. Select the platform as **Web**.

ii. Enter the URL in the following format: https://<instance-Name>.service-now.com/oauth_redirect.do

4. If you already have an app registration, select the app registration.

a. Navigate to **Manage** > **Authentication**.

b. Navigate to **Add a platform** > **Web applications** > **Web**.

c. On the Configure Web form, fill the fields.

Configure web form

Field	Description
Redirect URL	Enter a URL in the format: https://[instance].service-now.com/oauth_redirect.do
Implicit grant	Check **Access tokens**, and **ID tokens**

d. Select **Configure**.

5. Add a client secret.

a. Navigate to **Manage** > **Certificates and secrets**.

b. In the **Description** field, enter a short description about the secret.

c. Under **Expires**, select an expiry.

d. Select **Add**.

e. After adding, in the Client secrets section, copy the value by selecting **Copy to clipboard**.

6. Add a permission.

a. Navigate to **Manage** > **API permissions**.

b. Select **Add a permission**.

c. Select **Microsoft Graph**.

d. Select **Application permissions**.

e. Under **Calendars**, select **Calendars.ReadWrite**.

f. Select **Add permissions**.

g. On the Configured permissions screen, select **Grant admin consent for ServiceNow**.

Result

The Microsoft Exchange Online is set up with Microsoft Azure.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Configure resources Microsoft Exchange Online in the calendar. For more information, refer to https://learn.microsoft.com/en-us/exchange/recipients-in-exchange-online/manage-resource-mailboxes.

Create a connection with Microsoft Exchange Online spoke

Set up OAuth connection with Microsoft Exchange Online

Create a connection with Microsoft Exchange Online spoke

Connect to the Microsoft Exchange Online spoke by creating a connection.

Before you begin

Ensure the following:

1. Install Microsoft Exchange Online spoke from the ServiceNow Store. For more information, refer to Microsoft Exchange Online spoke.

   Important:
   After installing Microsoft Exchange Online spoke, check that the **Data Stream action** field of the Data source **Exchange Online Calendar** is not set to empty. Otherwise, repair the Microsoft Exchange Online spoke plugin.

2. After installing Microsoft Exchange Online spoke, depending on what type of customer you are, perform the following actions:
   - If you are a new customer, to install the applications, refer to Install Workplace Calendar Synchronization.
   - If you are an existing customer, upgrade to the latest versions of the following applications:
     - Workplace Reservation Management
     - Workplace Calendar Synchronization
3. Repair the Microsoft Exchange Online spoke. Perform the following repair if you never had an internal dependency on the *com.glide.hub.action_type.datastream* plugin.
   a. Navigate to **All** > **System Definition** > **Plugins**.
   b. Search and select Microsoft Exchange Online Spoke.
   c. **Repair** the plugin.

Role required: admin

About this task

Synchronize reservations using a connection with the Microsoft Exchange Online spoke.

Procedure

1. Ensure that the Microsoft Exchange Online spoke is installed.
   Refer to the **Before you begin** section.
2. Set up Microsoft Exchange Online spoke.
   If you are a new customer, in the **Create Connection records for the Microsoft Exchange Online spoke** procedure, perform the following actions:
   - For **Microsoft_Exchange_Online** Connection and Credential alias, in the Connection related list, select **MS Graph 1** and make the changes.

     Do not change the **Name** and **Credential**. In the OAuth Entity Profile form of the **MS Graph 1** credential, ensure that the **Grant type** field is selected as **Client Credentials**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- For **Microsoft_Exchange_Online_clientCred** Connection and Credential alias, in the Connection related list, select **MS Graph 2** and make the changes.

  Do not change the **Name** and **Credential**. In the OAuth Entity Profile form of the **MS Graph 2** credential, ensure that the **Grant type** field is selected as **Client Credentials**.

What to do next

Set up OAuth connection with Microsoft Exchange Online

Set up OAuth connection with Microsoft Exchange Online

Register your Microsoft Exchange Online with ServiceNow instance for OAuth authorization.

Before you begin

Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon () on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Ensure that you performed the following steps:

- Configure Microsoft Azure in normal mode
- Configured resources Microsoft Exchange Online in the calendar. For more information, refer to https://learn.microsoft.com/en-us/exchange/recipients-in-exchange-online/manage-resource-mailboxes .
- Create a connection with Microsoft Exchange Online spoke

Role required: admin

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **Microsoft Exchange Online_clientCredentials**
3. On the form, fill in the fields with the specified details.

Third-party OAuth Provider form

Field	Description
Name	Unique name to identify the record, for example, Microsoft Exchange for Sync.
Client ID	Client ID created during the app authentication in Microsoft Azure.
Client Secret	The password you generated when creating the app in Microsoft Azure.
Default Grant Type	Grant type used to establish the token. Select **Client Credentials**.
Authorization URL	OAuth authorization code endpoint. Enter `https://`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	`login.microsoftonline.com/<tenant_id>/oauth2/v2.0/authorize`.
Token URL	OAuth server token endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/token`.
Redirect URL	OAuth callback endpoint. The URL is automatically filled as `https://<instance-name>.service-now.com/oauth_redirect.do`.

4. Right-click in the form header and select **Save**.
   A system-generated OAuth entity profile is created and displayed in the OAuth Entity Profiles related list. For example, `Microsoft Exchange Online default_profile`.

Result

The OAuth registration is added for Microsoft Exchange Online.

What to do next

1. Depending on whether you want to use the default alias or you want to create your own alias, do one of the following:
   - To use default alias: Configure Connection and credential alias for Microsoft Exchange Online using the default credentials and connections
   - To create your own alias: Create your own connection and credential alias for Microsoft Exchange Online

   Create a connection with Microsoft Exchange Online spoke
2. Configure Microsoft Exchange Online calendar provider

.

Configure Connection and credential alias for Microsoft Exchange Online using the default credentials and connections

Establish connection and credential alias for Microsoft Exchange Online so that you can synchronize reservations. Configure the default credentials and connections. Ensure that the values for the connection and credentials alias are set as specified.

Before you begin

- Configure Microsoft Azure in normal mode
- Set up OAuth connection with Microsoft Exchange Online.

Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Starting from Workplace Calendar Synchronization version 2.0.1, to synchronize the reservations automatically with Microsoft Exchange Online, create a connection with Microsoft Exchange Online spoke version 3.2.1. If you have upgraded to Workplace Calendar Synchronization version 2.0.1, then the following procedure is no longer required. For more information on how to install Microsoft Exchange Online spoke and to set up a connection, refer to Create a connection with Microsoft Exchange Online spoke.

Role required: admin

Procedure

1. Navigate to **All** > **Connection & Credentials** > **Credentials**.
   Perform the following actions individually:

   a. Select **MS Graph 1**.
   On the form, check if the **OAuth Entity Profile** is set as **Microsoft Exchange Online_clientCredentials default_profile**. If it is not set, then set the profile as specified.

   b. Go back to the **Credentials** list.

   c. Select **MS Graph 2**.
   On the form, check if the **OAuth Entity Profile** is set as **Microsoft Exchange Online_clientCredentials default_profile**. If it is not set, then set the profile as specified.

2. Navigate to **All** > **Connection & Credentials** > **Connections**.
   Perform the following actions individually:

   a. Select **MS Graph 1**.
   Check if the fields are set as follows:
   - **Connection alias**: **sn_ex_online_spke.Microsoft_Exchange_Online**
   - **Credential**: **MS Graph 1**
   - **Connection URL**: https://graph.microsoft.com

   b. Go back to the **Connections** list.

   c. Select **MS Graph 2**.
   Check if the fields are set as follows:
   - **Connection alias**: **sn_ex_online_spke.Microsoft_Exchange_Online_clientCred**
   - **Credential**: **MS Graph 2**
   - **Connection URL**: https://graph.microsoft.com

Result
The Connection and credential alias is set.

- Configure new rooms(resources) in Microsoft Exchange Online to synchronize reservations.
- After synchronization, ensure that the meeting subject is unchanged. If the meeting subject is changed, use Microsoft PowerShell to make changes.

What to do next
Configure Microsoft Exchange Online calendar provider

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create your own connection and credential alias for Microsoft Exchange Online

Configure your own connection and credential alias for Microsoft Exchange Online if you do not want to use the default connection and credential aliases provided by the application.

Before you begin

Set up OAuth connection with Microsoft Exchange Online

Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon () on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Role required: admin

About this task

Create your own connection and credential alias, if you do not want to use the default alias. If you want to use the default alias, refer to Configure Connection and credential alias for Microsoft Exchange Online using the default credentials and connections.

Procedure

1. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.
2. Select **New**.
3. On the form, fill in the fields.

Connection & Credential Aliases form

Field	Description
Name	Name for the connection and credential alias.
ID	The field is automatically generated after you save the form based on the specified **Name**.
Application	Ensure that the application is set as **Microsoft Exchange Online Spoke**
Parent alias	Select **sn_ex_online_spke.Microsoft_Exchange_Online**.

4. Select **Submit**.
   The Connection and Credential alias record is created.
5. Create an OAuth 2.0 credential to use in the newly created connection and credential alias record.

   a. Navigate to **All** > **Connections & Credentials** > **Credentials**.

   b. Select **New**.

   c. Select **OAuth 2.0 Credentials**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. On the form, fill in the fields.

OAuth 2.0 Credentials form

Field	Descriptions
Name	Name of the credential. Provide a unique name to differentiate from the default credentials provided by the application.
Active	Option to activate the credential.
OAuth Entity Profile	Select the default OAuth entity profile that was generated when you performed the application registry in Set up OAuth connection with Microsoft Exchange Online.
Applies to	Specify how you want to apply to the MID servers.
Order	Order for the credential.

e. Select **Submit**.
The credential record is created.

f. Open the credential record that you created.

g. On the form, select **Get OAuth Token**.
On the Microsoft window that opens, enter your credentials.

h. Select **Update**.

6. Configure connection for the connection and credential alias.

a. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.

b. Select the connection and credential record that you created in the initial steps.

c. On the form, in the Connections related list, select **New**.

d. On the form, fill in the fields.

HTTPs Connection form

Field	Description
Name	Name of the connection.
Credential	Select the credential record that you created in Step 5.
Connection alias	The field is automatically set with the connection and credential alias.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Connection URL	Enter https://graph.microsoft.com

e. Select **Submit**.

Result
The connection and credential record is created with specified credentials and connections.

What to do next
To use it for the calendar provider, see Configure Microsoft Exchange Online calendar provider.

Configure Microsoft Exchange Online calendar provider

Configure Microsoft Exchange Online as a calendar provider in normal mode to synchronize reservations.

Before you begin
Important:
If you do not want to use the default alias provided by the application for the calendar provider, you can create your own connection and credential alias. Refer to Create your own connection and credential alias for Microsoft Exchange Online.

Configure Connection and credential alias for Microsoft Exchange Online using the default credentials and connections. If you do not want to use the default alias then create your own alias. Refer to Create your own connection and credential alias for Microsoft Exchange Online.

Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Note:
For calendars to synchronize successfully, you must have an email address that matches that of the provider.

Role required: admin

About this task
Configure Microsoft Exchange Online as calendar provider. If you want to specify your own alias, then enable the **Override alias** option. To create your own alias, refer to Create your own connection and credential alias for Microsoft Exchange Online.

Procedure
1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Calendar Providers**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Provider form

Field	Description
Name	Name of the calendar provider. For example, Microsoft Exchange.
Description	Description of the calendar service.
Active	Option to activate the calendar provider.
Provider Configuration	
Calendar processor	Calendar processor for the synchronization. Select **Microsoft Graph**.
Override alias?	Option to enable selection of your own connection and credential alias. If the option is not enabled, then the default connection and credential alias is used.
Connection & credential alias	Select the connection and credential alias that you created on your own for the calendar provider. This option appears only if you have selected the **Override alias?** option. If an alias is not specified, then the default connection and credential alias is used.
Sync start date time	The start date and time of the synchronization. The sync generates information from this date. Specify the **Sync start date time** manually from the subscription record of the reservable sync record for which you are syncing the past reservations. **Important:** The past sync duration must not exceed 1825 days.
Sync end date time	End date and time of the synchronization. The sync generates information until this date. The recommended setting is at least 5 years from the **Sync start date time**. **Important:** The past sync duration must not exceed 1825 days.
Sync past reservations	Select the option to synchronize all the past reservations from the specified **Sync start date time** to the **Sync end date time**. You can configure the setting using the **Synchronize past reservations**.
Strict mode	Don't select the option. If you enable this option, events are not directly created in the employee's calendar,

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	instead, they are sent to a general email address. Employees are invited to the event. They can only make changes using the Workplace Reservation Management application.

4. Select **Submit**.

Result
The calendar provider is added.

> **Warning:**
> Reservations that are created using calendar providers cannot be edited in the Workplace Reservation Management application.

Create a strict mode connection with Microsoft Exchange Online

For a strict mode connection with Microsoft Exchange Online, you must perform the following actions.

Configure Microsoft Azure

Set up a strict mode authentication with Microsoft Azure to connect Microsoft Exchange Online with Workplace Calendar Synchronization.

Before you begin
As a strict mode user, you must have a valid mailbox in the Microsoft Exchange Online. The user is identified by the email address. The same email address must be specified in the strict mode email address where it is necessary.

Role required: Exchange administrator

About this task
Add strict mode permissions to synchronize Workplace Calendar Synchronization with Microsoft Exchange Online via GraphAPI in strict mode.

Procedure

1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **Azure Active Directory** > **Manage** > **App registrations**.
3. **Optional:** If you do not have an app registration, select **New registration**.
   a. On the form, enter the **Name** of the registration.
   b. Select the **Supported account types** of your choice.
   c. **Optional:** Specify the **Redirect URL**.
   Specify the following details:
      i. Select the platform as **Web**.
      ii. Enter the URL in the following format: https://<instance-Name>.service-now.com/oauth_redirect.do
4. If you already have an app registration, select the app registration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **Manage** > **Authentication**.

b. Navigate to **Add a platform** > **Web applications** > **Web**.

c. On the Configure Web form, fill the fields.

Configure web form

Field	Description
Redirect URL	Enter a URL in the format: https://[instance].service-now.com/oauth_redirect.do
Implicit grant	Check **Access tokens**, and **ID tokens**

d. Select **Configure**.

5. Add a client secret.
   a. Navigate to **Manage** > **Certificates and secrets**.
   b. In the **Description** field, enter a short description about the secret.
   c. Under **Expires**, select an expiry.
   d. Select **Add**.
   e. After adding, in the Client secrets section, copy the value by selecting **Copy to clipboard**.
6. Add a permission.
   a. Navigate to **Manage** > **API permissions**.
   b. Select **Add a permission**.
   c. Select **Microsoft Graph**.
   d. Select **Delegated permissions**.
   e. Under **Calendars**, select **Calendars.ReadWrite**, **Calendars.ReadWrite.Shared** and **Offline_access**.
   f. Select **Add permissions**.
   g. On the Configured permissions screen, select **Grant admin consent for ServiceNow**.

What to do next

1. Configure resources Microsoft Exchange Online in the calendar. For more information, refer to https://learn.microsoft.com/en-us/exchange/recipients-in-exchange-online/manage-resource-mailboxes.
2. Create a strict mode configuration in Microsoft Exchange Online
3. Create connection with Microsoft Exchange Online Spoke in strict mode

Create connection with Microsoft Exchange Online Spoke in strict mode

Configure a strict mode connection with the Microsoft Exchange Online spoke.

Before you begin

Ensure the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Install Microsoft Exchange Online spoke from the ServiceNow Store. For more information, refer to Microsoft Exchange Online spoke.

   Important:
   After installing Microsoft Exchange Online spoke, check that the **Data Stream action** field of the Data source **Exchange Online Calendar** is not set to empty. Otherwise, repair the Microsoft Exchange Online spoke plugin.

2. After installing Microsoft Exchange Online spoke, depending on what type of customer you are, perform the following actions:
   - If you are a new customer, to install the applications, refer to Install Workplace Calendar Synchronization.
   - If you are an existing customer, upgrade to the latest versions of the following applications:
     - Workplace Reservation Management.
     - Workplace Calendar Synchronization.
3. Repair the Microsoft Exchange Online spoke. Perform the following repair if you never had an internal dependency on the *com.glide.hub.action_type.datastream* plugin.
   a. Navigate to **All** > **System Definition** > **Plugins**.
   b. Search and select Microsoft Exchange Online Spoke.
   c. **Repair** the plugin.

Role required: admin

About this task

Synchronize reservations using a connection with the Microsoft Exchange Online spoke.

Procedure

1. Ensure that the Microsoft Exchange Online spoke is installed.
   Refer to the **Before you begin** section.
2. Set up Microsoft Exchange Online spoke.
   If you are a new customer, in the **Create Connection records for the Microsoft Exchange Online spoke** procedure, perform the following actions:
   - For **Microsoft_Exchange_Online** Connection and Credential alias, in the Connection related list, select **MS Graph 1** and make the changes.

     Do not change the **Name** and **Credential**. In the OAuth Entity Profile form of the **MS Graph 1** credential, ensure that the **Grant type** field is selected as **Client Credentials**.
   - For **Microsoft_Exchange_Online_clientCred** Connection and Credential alias, in the Connection related list, select **MS Graph 2** and make the changes.

     Do not change the **Name** and **Credential**. In the OAuth Entity Profile form of the **MS Graph 2** credential, ensure that the **Grant type** field is selected as **Client Credentials**.
   - Get OAuth token.
     a. Select the credentials (**MS Graph 1** and **MS Graph 2**) that you created previously.
     b. In the Related links section, select **Get OAuth Token**.
     c. In the Microsoft Exchange Online login page that appears, login with the strict mode user's email credentials.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Create a strict mode configuration in Microsoft Exchange Online

Setup strict mode OAuth connectivity with Microsoft Exchange Online

Create a strict mode configuration in Microsoft Exchange Online

Specify your strict mode email in the Microsoft portal.

Before you begin
Create connection with Microsoft Exchange Online Spoke in strict mode

Role required: Microsoft admin

Procedure

1. Go to https://admin.microsoft.com/ .
2. On the left panel, select **Resources Rooms & equipments**.
3. Select a resource of **Type** - **Room** to which you to configure strict mode.
4. On the room details, edit the **Delegates** field.
5. Specify the users or the strict mode email address.
6. Select **Save changes**.

> **Important:**
> Repeat the steps from Step 3 to Step 6 for every resource of the type **Room** on which you want to configure the strict mode.

Result
The user is configured as the strict mode user.

What to do next
Setup strict mode OAuth connectivity with Microsoft Exchange Online

Setup strict mode OAuth connectivity with Microsoft Exchange Online

Create a strict mode app registry for Microsoft Exchange Online with ServiceNow instance for OAuth authorization.

Before you begin
Configure Microsoft Azure

Create a strict mode configuration in Microsoft Exchange Online

Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **New**.
3. Select **Connect to a third party OAuth Provider**
4. On the form, fill in the fields with the specified details.

Third-party OAuth Provider form

Field	Description
Name	Unique name to identify the record as a strict mode record, for example, MsExchange strict mode.
Client ID	Client ID created during the app creation in Microsoft Azure.
Client Secret	The password you generated when creating the app in Microsoft Azure.
Default Grant Type	Grant type used to establish the token. Select **Authorization Code**.
Authorization URL	OAuth authorization code endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/authorize`.
Token URL	OAuth server token endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/token`.
Redirect URL	OAuth callback endpoint. The URL is automatically filled as `https://<instance-name>.service-now.com/oauth_redirect.do`.

5. Right-click in the form header and select **Save**.
   A system-generated OAuth entity profile is created and displayed in the OAuth Entity Profiles related list. For example, MsExchange Strict mode default profile.
6. Create a OAuth Entity Scope.
   a. In the OAuth Entity Scopes related list, select **Insert a new row...**
   b. Enter the name as `Calendars.ReadWrite` for the scope.
   c. Enter the OAuth scope as `Calendars.ReadWrite`.
   d. Select the Save icon.
   e. Right-click the Application Registry form header and select Save.
   The system creates the scope record. Similarly, create the following entity scopes:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Name**: Calendars.ReadWrite.Shared

  OAuth scope: Calendars.ReadWrite.Shared

- **Name**: offline_access

  OAuth Scope: offline_access

7. Select **Update**.
8. On the Application registry form, select the **OAuth Entity Profiles** related list.
   In the following steps, you add the OAuth Entity Scopes that you created in Step 6 to the default profile.

   a. Select the default entity profile, for example, MsExchange Strict mode default profile.

   b. On the OAuth Entity Profile form, do the following:

      i. In the OAuth Entity Profiles Scopes section, double-click **Insert a new row**.

      ii. Select the Lookup icon ( ).

      iii. Select `Calendars.ReadWrite` that is assigned to the OAuth provider that you created in Step 6.

      iv. Repeat the previous steps and also add the following OAuth Entity Profiles Scopes created in Step 6:

      - `Calendars.ReadWrite.Shared`
      - `offline_access`

9. Select **Update**.

Result
The strict mode OAuth registration is added for Microsoft Exchange Online with strict mode OAuth entity profiles and OAuth entity scopes.

What to do next
Configure the connection and credential alias. You can configure the default alias ore create your own alias.

To configure the default alias, refer to Configure strict mode Connection and Credential alias for Microsoft Exchange Online.

Configure strict mode Connection and Credential alias for Microsoft Exchange Online

Establish a strict mode connection and credential alias for Microsoft Exchange Online. Ensure that the values for the connection and credentials alias are set as specified.

Before you begin
Setup strict mode OAuth connectivity with Microsoft Exchange Online

Note:
Starting from Workplace Calendar Synchronization version 2.0.1, to synchronize the reservations automatically with Microsoft Exchange Online, create a connection with Microsoft Exchange Online spoke version 3.2.1. If you have upgraded to Workplace Calendar Synchronization version 2.0.1, then the following procedure is no longer required. For more information on how to install Microsoft Exchange Online spoke and to set up a connection, refer to Create a connection with Microsoft Exchange Online spoke.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon () on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Role required: admin

About this task

Configure the default connection and credential alias to use the default entity profile created during the strict mode application registry (in Setup strict mode OAuth connectivity with Microsoft Exchange Online). You can also create your own connection and credential alias, if you do not want to use the default alias. To create your own alias, refer to Create your own credential and connection alias for strict mode.

Procedure

1. Navigate to **All** > **Connection & Credentials** > **Credentials**.
2. Check if the OAuth entity profile is set as follows:
   Perform the following actions individually:

   a. Select **MS Graph 1**.
   On the form, check if the **OAuth Entity Profile** is set with the OAuth entity profile that was created when they created the strict mode app registry (performed in Setup strict mode OAuth connectivity with Microsoft Exchange Online). If it is not set, then set the profile as specified.

   b. To generate the OAuth token, select the **Get OAuth Token** related link.
   In the Microsoft Exchange login page that appears, login with the strict mode user email credentials. You must be prompted for credential. When asked, specify the strict mode email credentials.

   > **Warning:**
   > If you are not prompted for the credential, it may use the credential of the logged-in user on the same browser, which is incorrect. You must close the browser and refresh to be prompted about the credential.

   c. Go back to the **Credentials** list.

   d. Select **MS Graph 2**.
   On the form, check if the **OAuth Entity Profile** is set with the OAuth entity profile that was created when they created the strict mode app registry (performed in Setup strict mode OAuth connectivity with Microsoft Exchange Online). If it is not set, then set the profile as specified.

   > **Warning:**
   > If you are not prompted for the credential, it may use the credential of the logged-in user on the same browser, which is incorrect. You must close the browser and refresh to be prompted about the credential.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The Connection and credential alias is set.

- Configure new rooms(resources) in Microsoft Exchange Online to synchronize reservations.
- After synchronization, ensure that the meeting subject is unchanged. If the meeting subject is changed, use Microsoft PowerShell to make changes

What to do next
Configure Microsoft Exchange Online calendar provider in strict mode

Create your own credential and connection alias for strict mode

Configure your own connection and credential alias if you do not want to use the default alias created during the strict mode application registration. You can configure your calendar to use the alias as an override alias.

Before you begin
Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Role required: admin

About this task
The application by default providers connection and credential. Perform this procedure if you want to create your own connection and credential alias instead of using the default alias. If you want to use the default alias then refer to Configure strict mode Connection and Credential alias for Microsoft Exchange Online.

Procedure
1. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.
2. Select **New**.
3. On the form, fill in the fields.

Connection & Credential Aliases form

Field	Description
Name	Name for the connection and credential alias.
ID	The field is automatically generated after you save the form based on the specified **Name**.
Application	Ensure that the application is set as **Microsoft Exchange Online Spoke**
Parent alias	Select **sn_ex_online_spke.Microsoft_Exchange_Online**.

4. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Connection and Credential alias record is created. As the next step, you must create a OAuth 2.0 credential record.

5. Create an OAuth 2.0 credential to use in the newly created connection and credential alias record.

   a. Navigate to **All** > **Connections & Credentials** > **Credentials**.

   b. Select **New**.

   c. Select **OAuth 2.0 Credentials**.

   d. On the form, fill in the fields.

   OAuth 2.0 Credentials form

Field	Descriptions
Name	Name of the credential. Provide a unique name to differentiate from the default credentials provided by the application.
Active	Option to activate the credential.
OAuth Entity Profile	Select the default OAuth entity profile that was generated when you performed the strict mode app registry in Setup strict mode OAuth connectivity with Microsoft Exchange Online.
Applies to	Specify how you want to apply to the MID servers.
Order	Order for the credential.

   e. Select **Submit**.
   The credential record is created.

   f. Open the credential record that you created.

   g. On the form, select **Get OAuth Token**.

   Note:
   If you are configuring strict mode, then you must perform this step.

   On the Microsoft window that opens, enter your credentials.

   h. Select **Update**.

6. Configure connection for the connection and credential alias.

   a. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.

   b. Select the connection and credential record that you created in the initial steps.

   c. On the form, in the Connections related list, select **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. On the form, fill in the fields.

HTTPs Connection form

Field	Description
Name	Name of the connection.
Credential	Select the credential record that you created in Step 5.
Connection alias	The field is automatically set with the connection and credential alias.
Connection URL	Enter https://graph.microsoft.com

e. Select **Submit**.

Result
The connection and credential record is created with specified credentials and connections.

What to do next
To use it for the calendar provider, see Configure Microsoft Exchange Online calendar provider in strict mode.

Configure Microsoft Exchange Online calendar provider in strict mode

Configure Microsoft Exchange Online as a calendar provider in strict mode to synchronize reservations.

Before you begin
Ensure the following:

- As a strict mode user, you must have valid mailbox in the Microsoft Exchange Online. The user is identified by the email address. The same email address must be specified in the strict mode email address where it is necessary.
- Configure strict mode Connection and Credential alias for Microsoft Exchange Online. If you want to use your own alias, then refer to Create your own credential and connection alias for strict mode.

Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Note:
For calendars to synchronize successfully, you must have an email address that matches that of the provider.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Calendar Providers**.
2. Select **New**.
3. On the form, fill in the fields.

Provider form

Field	Description
Name	Name of the calendar service. For example, Microsoft Exchange Strict mode
Description	Description of the calendar service.
Active	Option to activate the calendar provider.
Provider Configuration	
Calendar processor	Calendar processor for the synchronization. Select **Microsoft Graph**.
Override alias?	Option to enable selection of your own connection and credential alias. If the option is not enabled, then the default connection and credential alias is used.
Connection & credential alias	Select the connection and credential alias that you created on your own for the calendar provider. This option appears only if you have selected the **Override alias?** option. If an alias is not specified, then the default connection and credential alias is used.
Sync start date time	The start date and time of the synchronization. The sync generates information from this date. Specify the **Sync start date time** manually from the subscription record of the reservable sync record for which you are syncing the past reservations. **Important:** The past sync duration must not exceed 1825 days.
Sync end date time	End date and time of the synchronization. The sync generates information until this date. The recommended setting is at least 5 years from the **Sync start date time**. **Important:** The past sync duration must not exceed 1825 days.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Sync past reservations	Select the option to synchronize all the past reservations from the specified **Sync start date time** to the **Sync end date time**.
Strict mode	Select the option to enable strict mode. If you enable this option, events are not directly created in th employee's calendar, instead, they are sent to a general email address. Employees are invited to the event. They can only make changes using the Workplace Reservation Management application.
Strict mode email	Strict mode email address that is used to create reservations and to receive reservation-related notifications. Employees are considered as invitees in the reservation.

4. Select **Submit**.

Result
The calendar provider is added.

Warning:
Reservations that are created using calendar providers cannot be edited in the Workplace Reservation Management application.

Create a personal authentication mode connection with Microsoft Exchange Online

As an admin, establish a personal authentication mode connection with Microsoft Exchange Online to synchronize reservations. A user-level authentication token is generated that enables you to create, update, or cancel reservations to synchronize events on the outlook calendar.

Integrations

System-to-system integrations would be used for all actions that aren’t triggered by the user and that must be synchronized with Outlook. For all other user-triggered actions, the user's personal token is used.

Subsources to cater reservations

A new subsource, `sn_wsd_rest_api`, has been introduced to distinguish the reservations originating from the REST API. This action enables the use of system-to-system credentials to synchronize the reservations with Outlook in personal authentication mode.

Handling upgrade scenarios

If the Strict mode is enabled for active calendar providers before the upgrade, the system property is automatically set to Strict after the upgrade.

If the Normal mode is configured for active calendar providers before the upgrade, the system property is automatically set to Normal after the upgrade.

The Strict Mode check box is no longer displayed in the calendar provider, because the corresponding column has been deprecated in the calendar provider. To configure the Strict

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

mode, you must set the system property `sn_wsd_rsvsync.sync_integration_mode` at instance level.

Strict mode can now be configured using the system property at the instance level. For more information, see Set Workplace Calendar Synchronization properties.

Reservation restrictions

Review the restrictions for creating, updating, or deleting user reservations, as well as for blocker and group reservations, when personal authentication mode is enabled.

Restrictions

Reservation type	Description
Blocker reservations	Blocker reservations are created in delegated user's calendar with the requested for user as an invitee when Personal mode is enabled. If the `sn_wsd_rsv.blocker_user` system property specifies a blocker user, the system creates the reservation in the delegated user's calendar and adds the blocker user as an invitee.
Onbehalf user reservation	The **This reservation is for** field is not displayed in personal authentication mode. In personal mode, you can't create Onbehalf user reservations, as you don't have access to other user's calendar. However, you can create on-behalf reservations for non-synchronized rooms.
Group reservations	Group reservations aren't supported in Personal mode for synchronize-enabled rooms, even if the **Enable group reservations** check box is selected in the reservable module. You can create group reservations for non-synced rooms.
Create reservation	The following restrictions apply when creating reservations from the Workplace Service Delivery portal, event planner, Quick Reservation, and Now Mobile: **In Personal mode** If the requested-for user doesn't match the session user, the reservation can't be created. **In Strict or Normal mode** Reservations can be created without any restrictions.
Update or cancel reservation	The following restrictions apply when updating or canceling reservations from WSD portal, event planner, and Now Mobile: **In Normal mode** All reservations can be updated or canceled. **In Personal authentication mode**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Restrictions (continued)

Reservation type	Description

	• If the Sync mailbox of the reservation is set to **other** (reservation created in the delegated user calendar), the reservation can be updated or canceled in delegated user calendar.
	• If the Sync mailbox is set to **user**, the following rules apply:
	  ○ If the reservation is edited or canceled from sources other than WSD Portal, Quick Reservation, WSD Mobile, or Event Planner, it can't be updated or canceled.
	  ○ If the session user (the person who is updating or canceling the reservation) doesn't match the requested-for user, the reservation can't be edited or canceled.
	  ○ If a personal token doesn't exist for the user updating or canceling the reservation, the reservation can't be updated or canceled.
	  ○ In all other cases, the reservation can be updated or canceled.
	Note: All the above reservations that can't be updated or canceled appears grayed out in the schedule view of event planner workspace.
	In Strict mode
	Users can only update or cancel a reservation if the Sync mailbox is set to **other** in strict mode.

Configure Microsoft Azure

Set up a personal mode authentication with Microsoft Azure to connect Microsoft Exchange Online with Workplace Calendar Synchronization.

Before you begin

In Personal Authentication mode, a valid delegated user account with an associated email address on Microsoft Exchange Online is required. The user's identity is determined by their email address, which must also be specified in the delegated user email field, where applicable.

Role required: Exchange administrator

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in to the Microsoft Azure portal.
2. Navigate to **Azure Services** > **App registrations**.
3. **Optional:** If you don't have an app registration, select **New registration**.
   a. On the form, enter the **Name** of the registration.
   b. Select the **Supported account types** of your choice.
   c. **Optional:** Specify the **Redirect URL**.
   Specify the following details:
      i. Select the platform as **Web**.
      ii. Enter the URL in the following format: https://<instance-Name>.service-now.com/oauth_redirect.do
4. If you already have an app registration, select the app registration.
   a. Navigate to **Manage** > **Authentication**.
   b. Navigate to **Add a platform** > **Web applications** > **Web**.
   c. On the Configure Web form, fill the fields.

Configure web form

Field	Description
Redirect URL	Enter a URL in the format: https://[instance].service-now.com/oauth_redirect.do
Implicit grant	Check **Access tokens**, and **ID tokens**

   d. Select **Configure**.
5. Add a client secret.
   a. Navigate to **Manage** > **Certificates and secrets**.
   b. In the **Description** field, enter a short description about the secret.
   c. Under **Expires**, select an expiry.
   d. Select **Add**.
   e. After adding, in the Client secrets section, copy the value by selecting **Copy to clipboard**.
6. Add a permission.
   a. Navigate to **Manage** > **API permissions**.
   b. Select **Add a permission**.
   c. Select **Microsoft Graph**.
   d. Select **Delegated permissions**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

e. Under **Calendars**, select **Calendars.ReadWrite**, **Calendars.ReadWrite.Shared**, and **Offline_access**.

f. Select **Add permissions**.

g. **Optional:** On the Configured permissions screen, select **Grant admin consent for ServiceNow**.

Result
The Microsoft Exchange Online is set up with Microsoft Azure.

What to do next
Configure resource rooms in Microsoft Exchange Online

Configure resource rooms in Microsoft Exchange Online

Specify your delegated user email in the Microsoft portal to access the resource calendar.

Before you begin
Role required: Microsoft admin

Procedure

1. Go to https://admin.microsoft.com/ .
2. On the panel, select **Resources Rooms & equipments**.
3. Select a resource of **Type** - **Room** to which you to configure strict mode.
4. On the room details, edit the **Delegates** field.
5. Specify the users or the delegated user email address.
6. Select **Save changes**.

> **Important:**
> Repeat the steps from Step 3 to Step 6 for every resource of the type **Room** on which you want to configure the strict mode.

Result
The user is configured as the delegated user.

What to do next
Setup personal authentication mode OAuth connectivity with Microsoft Exchange Online.

Setup personal authentication mode OAuth connectivity with Microsoft Exchange Online

Create a personal authentication mode application registry for Microsoft Exchange Online with ServiceNow instance for OAuth authorization.

Before you begin
Configure Microsoft Azure

Ensure that the application scope is set to **Workplace Calendar Synchronization**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the Employee Center home page.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Workplace Calendar Synchronization**.
4. Refresh the page.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **Microsoft Exchange Online_personalAuth** OAuth provider created for personal authentication.
3. On the form, specify the OAuth provider details as described in the following table:

Third-party OAuth Provider form

Field	Description
Name	Unique name to identify the OAuth provider. For example, Microsoft Exchange Online_personalAuth.
Client ID	Client ID created during the app creation in Microsoft Azure.
Client Secret	The password you generated when creating the app in Microsoft Azure.
Default Grant Type	Grant type used to establish the token. Select **Authorization Code**.
Authorization URL	OAuth authorization code endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/authorize`.
Token URL	OAuth server token endpoint. Enter `https://login.microsoftonline.com/<tenant_id>/oauth2/v2.0/token`.
Redirect URL	OAuth callback endpoint. The URL is automatically filled as `https://<instance-name>.service-now.com/oauth_redirect.do`.

4. Right-click in the form header and select **Save**.
   A system-generated OAuth entity profile is created and displayed in the OAuth Entity Profiles related list. For example, Microsoft Exchange Online_personalAuth default profile.
5. Select the OAuth Entity Scopes list and verify that the following OAuth scopes are already defined for the OAuth provider profile:
   a. Calendars.ReadWrite
   b. Calendars.ReadWrite.Shared
   c. Offline_access
6. Select **Update**.

Result

The OAuth registration is added for Microsoft Exchange Online with personal authentication mode OAuth entity profiles and OAuth entity scopes.

Configure personal authentication mode Connection and Credential alias for Microsoft Exchange Online

Establish a personal authentication mode connection and credential alias for Microsoft Exchange Online. Ensure that the values for the connection and credentials alias are set as specified.

Before you begin

Ensure that the application scope is set to **Workplace Calendar Synchronization**.

Role required: admin

About this task

Configure the default connection and credential alias to use the default entity profile created during the personal authentication mode application registry.

Procedure

1. Navigate to **All** > **Connection & Credentials** > **Connection & Credential Aliases**.
2. Select Microsoft_Exchange_Online_PersonalAuth connection and credential child alias type created for personal authentication.
3. Perform the following to check the HTTP Connection details:
   a. On the Connection & Credential Aliases form, under the Connections tab, select the connection name.
   b. In the Connection alias field, verify that the child alias inherits the properties from the parent alias.
   c. Verify that the Connection URL is set to https://graph.microsoft.com https://graph.microsoft.com
   d. Select **Update**.
4. Perform the following to check the OAuth Credentials details:
   a. On the **Connection & Credential Aliases** form, under the Connections tab, select the Credential name.
   b. On the **OAuth 2.0 Credentials** form, check if the **OAuth Entity Profile** is set with the default OAuth entity profile that was created when creating the personal authentication mode app registry.
5. Perform the following to request a new OAuth access token using the configured OAuth entity profile created for personal authentication:
   a. Navigate to **All** > **Connection & Credentials** > **Credentials**.
   b. Select Ms Graph 1.
   c. Set the OAuth Entity Profile to the default personal authentication OAuth entity profile that was generated when you performed the personal authentication mode application registry.
   d. Select **Get OAuth Token**.
   In the Microsoft Exchange login page that appears, login with the delegated user email credentials.
6. Perform the following to request a new OAuth access token using the configured OAuth entity profile created for personal authentication:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **All** > **Connection & Credentials** > **Credentials**.

b. Select Ms Graph 2.

c. Set the OAuth Entity Profile to the default personal authentication OAuth entity profile that was generated when you performed the personal authentication mode application registry.

d. Select **Get OAuth Token**.
In the Microsoft Exchange login page that appears, login with the delegated user email credentials.

Result
The Connection and credential alias is set.

Configure your own connection and credential alias for personal authentication mode

Configure your own connection and credential alias if you don't want to use the default alias created during the personal authentication mode application registration. You can configure your calendar to use the alias as an override alias.

Before you begin
Note:
Configure your own connection and credential alias only when multiple delegated user emails are required. Ensure that the alias is specified on the calendar provider as well.

Ensure that the application scope is set to **Workplace Calendar Synchronization**. Otherwise, do the following:

1. Select the Application scope icon () on the top-right corner of your Employee Center home page.
2. In the drop- down, select the option consisting **Application scope**.
3. In the filter navigator, search and select **Workplace Calendar Synchronization**.
4. Refresh the page.

Role required: admin

About this task
The application by default provides a connection and credential. Perform this procedure if you want to create your own connection and credential alias instead of using the default alias. If you want to use the default alias, refer to Configure personal authentication mode Connection and Credential alias for Microsoft Exchange Online.

Procedure
1. Navigate to **All** > **Connections & Credentials** > **Connection & Credential Aliases**.
2. Select **New**.
3. On the form, fill in the fields.

Connection & Credential Aliases form

Field	Description
Name	Name for the connection and credential alias.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
ID	The field is automatically generated after you save the form based on the specified **Name**.
Application	Ensure that the application is set as **Workplace Calendar Synchronization**
Parent alias	Select **sn_ex_online_spke.Microsoft_Exchange_Online**.

4. Select **Submit**.
   The Connection and Credential alias record is created. As the next step, you must create a OAuth 2.0 credential record.
5. Create an OAuth 2.0 credential to use in the newly created connection and credential alias record.

   a. Navigate to **All** > **Connections & Credentials** > **Credentials**.

   b. Select **New**.

   c. Select **OAuth 2.0 Credentials**.

   d. On the form, fill in the fields.

   OAuth 2.0 Credentials form

Field	Descriptions
Name	Name of the credential. Provide a unique name to differentiate from the default credentials provided by the application.
Active	Option to activate the credential.
OAuth Entity Profile	Select the default OAuth entity profile that was generated when you performed the personal authentication mode app registry in Setup personal authentication mode OAuth connectivity with Microsoft Exchange Online.
Applies to	Specify how you want to apply to the MID Servers.
Order	Order for the credential.

   e. Select **Submit**.
   The credential record is created.

   f. Open the credential record that you created.

   g. On the form, select **Get OAuth Token**.

   Note:
   If you're configuring a strict mode, then you must perform this step.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

On the Microsoft window that opens, enter your credentials.

h. Select **Update**.

6. Configure the connection for the connection and credential alias.

a. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.

b. Select the connection and credential record that you created in the initial steps.

c. On the form, in the Connections related list, select **New**.

d. On the form, fill in the fields.

HTTPs Connection form

Field	Description
Name	Name of the connection.
Credential	Select the credential record that you created in Step 5.
Connection alias	The field is automatically set with the connection and credential alias.
Connection URL	Enter https://graph.microsoft.com

e. Select **Submit**.

Configure Microsoft Exchange Online calendar provider in personal authentication mode

Enhance your workplace reservation experience with the Workplace Calendar Synchronization application to synchronize reservations with your calendar provider. Configure Microsoft Exchange Online to synchronize reservations with your calendar provider using personal authentication mode. The Workplace Calendar Synchronization application uses the calendar provider as the primary source, ensuring events are updated and confirmed for room bookings through the Workplace Reservation Management portal.

Before you begin

Ensure the following:

- As a personal authentication mode user, you must have a valid mailbox in the Microsoft Exchange Online. The user is identified by the email address. The same email address must be specified in the delegated user email address where it's necessary.

Ensure that the application scope is set to **Workplace Calendar Synchronization**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the top-right corner of your Employee Center home page.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Workplace Calendar Synchronization**.
4. Refresh the page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For calendars to synchronize successfully, you must have an email address that matches that of the provider.

Role required: sn_wsd_rsvsync.admin

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Calendar Providers**.
2. Select **New**.
3. On the form, fill in the fields.

Provider form

Field	Description
Name	Name of the calendar provider.
Description	Description of the calendar provider.
Active	Option to activate the calendar provider.
Provider Configuration	
Calendar processor	Calendar processor for the synchronization. Select **Microsoft Graph**.
Override alias?	Option to enable selection of your own connection and credential alias. If the option isn't enabled, then the default connection and credential alias are used.
Connection & credential alias	Select the connection and credential alias that you created on your own for the calendar provider. This option appears only if you have selected the **Override alias?** option. If an alias isn't specified, then the default connection and credential alias are used.
Sync start date time	The start date and time of the synchronization. The synchronization generates information from this date. Specify the **Sync start date time** manually from the subscription record of the reservable sync record for which you're syncing the past reservations. **Important:** The past sync duration must not exceed 1825 days.
Sync end date time	End date and time of the synchronization. The sync generates information until this date. The recommended setting is at least 5 years from the **Sync start date time**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Important: The past sync duration must not exceed 1825 days.
Delegated user email	Delegated user email address that is used to create reservations and to receive updates on room calendars as notifications. **Note:** If multiple delegated users manage multiple rooms, a separate calendar provider record must be created for each user to manage their respective rooms. This process requires retrieving individual tokens for each user, creating separate connections and credential aliases, and mapping them to the respective calendar provider.

Note:
The Strict mode field is deprecated and you must set the Exchange Online Sync Integration Mode property to Strict, Personal, or Normal mode. Additionally, the strict mode email has been updated to Delegated user email.

4. Select **Submit**.

What to do next
To access resource calendars and generate a subscription ID, you must add a Reservable Sync Configuration. For more information, see Add a Reservable Sync Configuration.

Related topics
Run Instance scan to check Microsoft Exchange Online synchronization configuration

Configure the webhook registry of Microsoft Exchange Online spoke
Configure callback URL for communication between the Workplace Calendar Synchronization application and Microsoft Exchange Online calendar.

Before you begin
Ensure that the application scope is set to **Microsoft Exchange Online Spoke**. Otherwise, do the following:

1. Select the Application scope icon ( ) on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Microsoft Exchange Online Spoke**.
4. Refresh the page.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Microsoft Exchange Online Spoke** > **Webhook Registry**.
2. Select the **WSDRS Event Subscription** registry.
   The webhook registry is provided by default with the application.
3. On the form, select **Callback URL**.
   The **Client State** and **Callback URL** is automatically generated.
4. Select **Update**.

Create single or multiple calendar providers with Microsoft Exchange Online

For the Microsoft Exchange Online provider, configure single or multiple calendar providers.

Before you begin

You must have Microsoft Exchange Online spoke version 3.2.4 or later installed.

Important:
Multi-provider is not supported or is not the same as Exchange hybrid configurations.

For strict mode:

- Ensure that every strict mode user (in the calendar provider) has a different connection & credential alias, connection, and credential records. However, you can reuse the same OAuth Entity profile in all the credential records.
- While performing the **Get OAuth token** action for each credential, you must be prompted for credential. When asked, specify the strict mode email credentials.

  Note:
  If you are not prompted for the credential, it may use the credential of the logged-in user on the same browser, which is incorrect. You must close the browser and refresh to be prompted about the credentials.

Role required: admin

Procedure

1. For normal mode users
   a. Configure Connection and credential alias for Microsoft Exchange Online using the default credentials and connections or Create your own connection and credential alias for Microsoft Exchange Online.
   b. Create multiple calendar providers and specify the alias.Configure Microsoft Exchange Online calendar provider
2. For strict mode users:
   - If there is a single strict mode user, do the following:
     - Configure strict mode Connection and Credential alias for Microsoft Exchange Online or Create your own credential and connection alias for strict mode.
     - Create a calendar provider. Refer to Configure Microsoft Exchange Online calendar provider in strict mode.
   - For multiple strict mode users:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create connection and credential record for each strict mode user. Refer to Configure strict mode Connection and Credential alias for Microsoft Exchange Online or Create your own credential and connection alias for strict mode.
- Create calendar providers for each user and specify the alias. Refer to Configure Microsoft Exchange Online calendar provider in strict mode.

Result
Multiple providers are created for a single provider.

Approve a reservation

Review employee reservations raised using Workplace Reservation Management and approve or reject them.

Before you begin
Role required: approver_user

Procedure

1. Navigate to **All** > **Self-Service** > **My Approvals**.
2. Select the reservation that you want to approve or reject.
3. Review the details of the reservation.
4. Approve or reject the reservation by selecting Approve or Reject.

> **Note:**
> If approval for a reservation is rejected, a delete request is sent to the room calendar to release the room.

Reservation approvals in Microsoft Exchange Online

Track the approval status from Microsoft Outlook when a reservation request is either approved or rejected by the delegate.

If you create a reservation in Workplace Service Delivery for a room with approvals enabled in Microsoft Outlook, the reservation status is initially set to Awaiting confirmation. When a callback is received from Microsoft Outlook, the reservation status updates to Awaiting approval. The reservation remains in this state until a delegate manually accepts or rejects the request.

- If the approver accepts the request in Microsoft Outlook, the reservation status in **Workplace Reservations** [sn_wsd_rsv_reservation] table changes to Confirmed.
- If the approver declines the request, the reservation status in **Workplace Reservations** [sn_wsd_rsv_reservation] table changes to Cancelled.

A new column **External Approval State** has been added to the **Workplace Reservations** [sn_wsd_rsv_reservation] table to track the approval statues. This column retrieves data from Outlook callbacks and reflects the status of the approval request.

- **Awaiting Approval** – Indicates that the request is pending action from the delegate
- **Accepted** – Indicates that the request has been approved by the delegate
- **Declined** – Indicates that the request has been rejected by the delegate
- **Not Required** – Indicates that approvals aren't required for this room in Outlook

> **Note:**
> If a room has approvals enabled in both Workplace Service Delivery and Microsoft Outlook, the reservation status remains in Awaiting approval until it's approved in both systems.

Google Calendar - Calendar synchronization

Create a connection with Google Calendar and synchronize reservations made using the Workplace Reservation Management application. You can synchronize all the reservations that are made using the Workplace Reservation Management to the Google Calendar and vice versa.

The reservation synchronization from a Google Calendar to the Workplace Reservation Management is performed using various approaches like events, and occurrences.

Important:
The application does not support a strict mode configuration for Google Calendar.

Synchronization from Workplace Reservation Management to Google Calendar

The synchronization process from Workplace Reservation Management to Google is performed using the Google Calendar spoke. You can configure a connection with Google using the Flow designer.

The synchronization process includes the following steps:

1. Install Google Calendar Spoke.
2. Set up Google Calendar spoke
3. Authenticate ServiceNow with Google. Refer to Authenticate Google for calendar synchronization.
4. Configuring the Google Calendar Spoke connection using the Flow designer. Refer to Create a Connection and credential record for Google.
5. Creating the Google Calendar provider. Refer to Configure Google as calendar provider.

The application also enables you to create your own connection and credential alias instead of using the default alias created by using the flow designer. Refer to Configure your own Google connection and credential alias.

Synchronization from Google Calendar to Workplace Reservation Management

The reservation synchronization from the Google Calendar to Reservation portal is done by pulling the latest calendar updates in Google Calendar by using a scheduled job, *`WSDRS Sync Calendar items`*. All the events related to the sync-enabled rooms are read and updated in the Workplace Reservation Management application. The application creates Create, Update, Delete, and Read events in the **Events** table.

The scheduled job, *`WSDRS Sync Calendar items`*, is provided with the application to get the latest changes for all the active reservable sync configurations. The scheduled job is set to **False** by default and it must be enabled to start synchronizing. By default, the scheduled job is set to run for every five minutes. However, you can set the scheduled job time as you want. At any time, you can also manually execute it.

An approach called, Delta synchronization is used by the Workplace Calendar Synchronization application. With Delta synchronization, you retrieve only the incremental changes made on a resource email id of the calendar using a reference point called as synchronization token. That is, for each room (each reservable sync record), linked to the on-premises calendar provider you get the synchronization tokens, which are the reference points to get the update from the calendar in increments.

- Based on the **Page size**, **Sync batch size** and the **Sync batch interval**, the information is retrieved by the synchronization tokens. For example, if you specified the values as **5**, **500**, and **60** respectively (in the previous fields). It means that you can raise 500 requests in an interval of 60 seconds. The synchronization results five changes in a page.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- When you create a reservable sync configuration record under the Google calendar, you must ensure that it is activated.
- When the sync record is activated, a flow is triggered and a synchronization token for that reservable synchronization record is created in the **Sync Deltas** module.
- The scheduled job, *WSDRS Sync Calendar items*, is provided with the application to get the latest changes for all the active reservable sync configurations. The scheduled job is set to **False** by default and it must be enabled to start synchronizing. By default, the scheduled job is set to run for every five minutes. However, you can set the scheduled job time as you want. At any time, you can also manually execute it.
- The changes made on the reservable sync configurations are created as events in the **Events** module. The application creates Create, Update, Delete, and Read, events for the Google Calendar.
- For each sync record, an event is created. Depending on the page size specified on the calendar provider, the changes are displayed. If there are any pending changes, it is displayed during the next scheduled job run.
- The API that is used to get the synchronization tokens, saves the response in the **Response** field of the event. The API provides changes made on a single reservation, multi-reservation, and the parent recurring reservation.
- Using the response created by the API, a reservation is created in the Workplace Reservation Management application.
- With every scheduled job run, the synchronization token is also updated which is used as the reference point for the next synchronization.

Synchronizing past reservations

he Workplace Calendar Synchronization enables you to also synchronize reservations made in the past. You can specify the date and time range in the **Sync start date time** and **Sync end date time** fields. For the on-premises calendar, the following conditions must be met to sync past reservations:

- The calendar provider that is the Google Calendar calendar provider that you configured must be active.
- The **Synchronize past reservations** field must be selected.
- The reservable sync configuration for which you want to sync past reservations must be active.

> **Note:**
> After you enable the **Synchronize past reservations**, you must navigate to the locations of each reservable sync configuration record and select **Sync Location**.

'No request' handling

No request is a mechanism to validate the generated syntax of the payload of an event created for the calendar. But, instead of sending the event to the calendar provider, it is only created. The admin can validate the payload content of the event (JSON) to ensure that is generated as expected. 'No request' ensures that the application does not make any API calls to the calendar provider when you create, update, or cancel a reservation in the Workplace Reservation Management application.

Authenticate Google for calendar synchronization

Set up Google to start with reservation synchronization with the Workplace Reservation Management application. Create scopes, credentials and more.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Ensure the following:

1. Install Google Calendar Spoke.
2. Set up Google Calendar spoke

Role required: Google Admin

Procedure

1. Log in to https://admin.google.com/.
2. **Optional:** If you want to manage users for the Google account, do the following:
   a. Select **Manage** in the **Users** card on the homepage.
   b. Add, delete, or update user details.
3. Log in to https://console.cloud.google.com/ with your google workspace credentials.
4. Create a project to get the OAuth authentication and the permission to use the Google Calendar from ServiceNow.
   a. Select **Select a project** on the top panel.
   b. On the select a project window, select **NEW PROJECT**.
   c. Enter project details.
      i. Specify the **Project name**.
      ii. Select your **Organization**.
      iii. In the **Location** field, select **Browse** and select your organization.
   d. Select **CREATE**.
      A notification is displayed that the project is created.
   e. In the notification window, select **SELECT PROJECT**.
5. Set Google Calendar API permissions.
   a. On the homepage, select **APIs & Services**.
   b. On the top panel, select **+ ENABLE APIS AND SERVICES**.
   c. On the Welcome to the API Library page, under the Google Workspace, select **Google Calendar API**.
   d. On the Google Calendar API details page, select **ENABLE**.
      The Google calendar API is enabled on your project.
6. Create credentials to use when creating a connection and credential for Google
   a. On the Google Calendar API details page, select **CREATE CREDENTIALS**.
   b. On the Google Calendar API credentials form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

i. In the **Select an API** field, select **Google Calendar API**.

ii. Under the **What data will you be accessing?** section, select **User data** to create an OAuth application.

c. Select **NEXT**.

d. In the OAuth Consent Screen section, fill the fields:

i. In the **App name** field, specify a name for the OAuth app.

ii. In the **User support email** field, specify the user email to which consent-related questions can be sent.

iii. In the App logo section, select **BROWSE** to upload a logo for the OAuth app.

iv. In the Developer contact information section, specify the email address to which any project-related changes and updates must be sent.

e. Select **SAVE AND CONTINUE**.

7. Add or remove scopes.
Specify permissions to access the Google Calendar API.

a. Under Scopes section, select **ADD OR REMOVE SCOPES**.

b. Select the following scopes:

- https://www.googleapis.com/auth/calendar
- https://www.googleapis.com/auth/calendar.events

c. Select **UPDATE**.

d. Select **SAVE AND CONTINUE**.

8. Generate the OAuth Client ID and related details.

a. Under the OAuth Client ID section, in the **Application type** field, select **Web application**.

b. In the **Name** field, enter a name for the application.

c. Under the Authorized JavaScript origins, select **+ADD URL** to add the JavaScript URL.

d. Under the Authorized redirect URIs section, select **+ADD URL** to add a redirect URL.
Enter the URL of your ServiceNow instance.

e. Select **CREATE**.
The credentials for the OAuth application are created.

f. Select **DOWNLOAD** to download the JSON file that contains the credential details.

g. Copy and save the Client ID.

9. Select **DONE**.

Create a Connection and credential record for Google

Connect Google with the ServiceNow using the flow designer to synchronize reservations.

Before you begin

Ensure the following:

- Authenticate Google for calendar synchronization.
- Ensure that you have the Super admin role in Google.

Role required: admin

About this task

Configure the Google connection and credential record. Perform steps in the flow designer. Configure the default Google Calendar spoke. You can also create your own connection and credential alias, if you don't want to configure the default Google Calendar spoke using the flow designer. To create your own alias, refer to Configure your own Google connection and credential alias.

Procedure

1. Navigate to **All** > **Process Automation** > **Flow Designer**.
2. Select the **Connections** tab.
3. In the **Search all connections** bar, search for Google.
4. Select **Google_calendar (sn_gcalendar_spoke)**.
5. On the Google_Calendar card, select **View Details**.
6. Select **Configure** next to the **Google_Calendar** connection.
7. On the Configure Connection window, enter the following credentials:
   - **Connection URL**: Enter `https://www.googleapis.com`.
   - **API Version**: Enter `v3`. The field is auto-filled.
   - **OAuth Client ID**: Enter the client ID that you copied while authenticating Google with ServiceNow in Authenticate Google for calendar synchronization.
   - **OAuth Client Secret**: Enter the client secret that you copied while authenticating Google with ServiceNow in Authenticate Google for calendar synchronization.
   - **OAuth Redirect URL**: Enter `https://<instance-name>.service-now.com/oauth_redirect.do`
   - **OAuth Authorization URL**: Enter `https://accounts.google.com/o/oauth2/v2/auth`
   - **OAuth Token URL**: Enter `https://www.googleapis.com/oauth2/v4/token`
8. Select **Configure and Get OAuth Token**.
9. In the Google window, log in to the Google Workspace and get the OAuth Token.
   Enter your Google Super admin credentials.

Result

The Google connection and credential record is created. To view the connection and credential alias record, navigate to **All** > **Connections & Credentials** > **Connection & Credential Aliases** and select **Google_Calendar**.

What to do next

Configure Google as calendar provider

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure your own Google connection and credential alias

You can configure your own Google connection and credential alias if you do not want to use the default alias **Google_calendar**.

After you authenticate Google with ServiceNow, instead of configuring the connection and credential alias using the Flow designer connection configuration, you can also create your own connection and credential.

If you want to use the default alias, refer to Create a Connection and credential record for Google.

Setup OAuth connectivity with Google Calendar

Create an application registry for Google Calendar with ServiceNow to synchronize reservations. Perform this app registration if you want to create your own connection and credential alias for Google Calendar.

Before you begin

Authenticate Google for calendar synchronization

Ensure that the application scope is set to **Google Calendar Spoke**. Otherwise, do the following:

1. Select the Application scope icon () on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Google Calendar Spoke**.
4. Refresh the page.

Role required: admin

Procedure

1. Navigate to **All** > **System OAuth** > **Application Registry**.
2. Select **New**.
3. Select **Connect to a third party OAuth Provider**
4. On the form, fill in the fields with the specified details.

Third-party OAuth Provider form

Field	Description
Name	Unique name to identify the record, for example, Google calendar Own.
Client ID	Client ID created during the app authentication in Google.
Client Secret	The password you generated when creating the app in Google.
Default Grant Type	Grant type used to establish the token. Select **Authorization mode**.
Authorization URL	OAuth authorization code endpoint. Enter `https://accounts.google.com/o/oauth2/v2/auth`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Token URL	OAuth server token endpoint. Enter `https://www.googleapis.com/oauth2/v4/token`.
Redirect URL	OAuth callback endpoint. The URL is automatically filled as `https://<instance-name>.service-now.com/oauth_redirect.do`.

5. Right-click in the form header and select **Save**.
   A system-generated OAuth entity profile is created and displayed in the OAuth Entity Profiles related list. For example, Google Calendar Own default profile.
6. Create a OAuth Entity Scope.
   a. In the OAuth Entity Scopes related list, select **Insert a new row...**
   b. Enter the name as `Calendar` for the scope.
   c. Enter the OAuth scope as `Calendar`.
   d. Select the Save icon.
   e. Similarly, create another scope and enter the following details:
      - **Name**: calendar.events
      - **OAuth scope**: calendar.events
   f. Right-click the Application Registry form header and select Save.
      The system creates the scope records.
7. Select **Update**.
8. On the Application registry form, select the **OAuth Entity Profiles** related list.
   In the following steps, add the OAuth Entity Scopes that you created in Step 6 to the default profile.
   a. Select the default entity profile, for example, Google Calendar Own default profile.
   b. On the OAuth Entity Profile form, do the following:
      i. In the OAuth Entity Profiles Scopes section, double-click **Insert a new row**.
      ii. Select the Lookup icon ( ).
      iii. Select `calendar` that is assigned to the OAuth provider that you created in Step 6.
      iv. Repeat the previous steps and also add `calendar.events`.
9. Select **Update**.

Result
The OAuth connectivity is added for Google.

What to do next

Create your own connection and credential alias for Google

Create your own connection and credential alias for Google

Instead of using the default **Google_Calendar** alias, you can create your own connection and credential alias to use it with your Google Calendar provider.

Before you begin

Setup OAuth connectivity with Google Calendar

Ensure that the application scope is set to **Google Calendar Spoke**. Otherwise, do the following:

1. Select the Application scope icon () on the top-right corner of your Employee Center homepage.
2. In the drop- down, select the option consisting **Application scope:**.
3. In the filter navigator, search and select **Google Calendar Spoke**.
4. Refresh the page.

Role required: admin

Procedure

1. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.
2. Select **New**.
3. On the form, fill in the fields.

Connection & Credential Aliases form

Field	Description
Name	Name for the connection and credential alias.
ID	The field is automatically generated after you save the form based on the specified **Name**.
Application	Ensure that the application is set as **Google Calendar Spoke**
Parent alias	Select **sn_gcalendar_spoke.Google_Calendar**.

4. Select **Submit**.
   The Connection and Credential alias record is created. As the next step, you must create a OAuth 2.0 credential record.
5. Create an OAuth 2.0 credential to use in the newly created connection and credential alias record.

   a. Navigate to **All** > **Connections & Credentials** > **Credentials**.

   b. Select **New**.

   c. Select **OAuth 2.0 Credentials**.

   d. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

OAuth 2.0 Credentials form

Field	Descriptions
Name	Name of the credential. Provide a unique name to differentiate from the default credentials provided by the application.
Active	Option to activate the credential.
OAuth Entity Profile	Select the default OAuth entity profile that was generated when you performed the app registry in Setup OAuth connectivity with Google Calendar.
Applies to	Specify how you want to apply to the MID servers.
Order	Order for the credential.

e. Select **Submit**.
The credential record is created.

f. Open the credential record.

g. On the form, select **Get OAuth Token**.
On the Google window that opens, enter your credentials.

h. Select **Update**.

6. Configure connection for the connection and credential alias.

a. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.

b. Select the connection and credential record that you created in the initial steps.

c. On the form, in the Connections related list, select **New**.

d. On the form, fill in the fields.

HTTPs Connection form

Field	Description
Name	Name of the connection.
Credential	Select the credential record that you created in Step 5.
Connection alias	The field is automatically set with the connection and credential alias.
Connection URL	Enter https://www.googleapis.com.

e. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The connection and credential record is created with specified credentials and connections.

What to do next
Configure Google as calendar provider

Configure Google as calendar provider

Configure Google as calendar provider to start synchronizing reservation. Link it to the connection and credential alias and configure rooms to start synchronizing.

Before you begin
Ensure the following:

- You have created the connection and credential alias. If not, do one of the following:
  - Configure the default connection and credential alias. Refer to Create a Connection and credential record for Google.
  - Create your own connection and credential alias if you do not want to use the default alias. Refer to Configure your own Google connection and credential alias.
- Application scope is set to **Google Calendar Spoke**. Otherwise, do the following:
  1. Select the Application scope icon ( ) on the top-right corner of your Employee Center homepage.
  2. In the drop- down, select the option consisting **Application scope:**.
  3. In the filter navigator, search and select **Google Calendar Spoke**.
  4. Refresh the page.

Note:
For calendars to synchronize successfully, you must have an email address that matches that of the provider.

Role required: admin

About this task
Configure Google Calendar as a calendar provider. If you want to use your own alias, enable the **Override alias** option and specify the alias.

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Calendar Providers**.
2. Select **New**.
3. On the form, fill in the fields.

Provider form

Field	Description
Name	Name of the calendar service. For example, Google Calendar.
Description	Description of the calendar service.
Active	Option to activate the calendar provider.
Provider Configuration	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Calendar processor	Calendar processor for the synchronization. Select **Google Calendar**.
Override alias?	Option to enable selection of a Connection and credential alias. Select this option if you want to use your own connection and credential alias only. If the option is not selected, the default connection and credential alias, **Google_Calendar** is used.
Connection & credential alias	Select the Connection and credentials alias that you created on your own. This option appears only if you have selected the **Override alias?** option. If an alias is not specified, then the default connection and credential alias is used.
Page size	Page size of the calendar items.
Sync batch size	Size of batches during a synchronization. This field is automatically set to **500**, which means a sync batch handles 500 items at a time. If there are more than 500 items, the rest is displayed in the next sync batch.
Sync batch interval	Time interval between sync batches. This field is automatically set to **60** seconds.
Sync start date time	The start date and time of the synchronization. The sync generates information from this date. **Important:** The past sync duration must not exceed 1825 days.
Sync end date time	End date and time of the synchronization. The sync generates information until this date. The recommended setting is at least 5 years from the **Sync start date time**. **Important:** The past sync duration must not exceed 1825 days.
Sync past reservations	Select the option to synchronize all the past reservations from the specified **Sync start date time** to the **Sync end date time**.

4. Select **Submit**.

Result
Google Calendar is configured as calendar provider.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

- Set the scheduled job, *WSDRS Sync Calendar items* to **True**. The scheduled job is set to **False** by default and it must be enabled to start synchronizing. You can set the scheduled job time as you want. At any time, you can also manually execute it.

- If you enabled the **Sync past reservations** field, you must perform the following actions:

  1. Scroll down to Reservable Sync Configurations related list
  2. In the **Location** column, select location.
  3. On the Location form, select **Sync Location**.
     Perform Step 2 and Step 3 on all the Reservable sync config records.

- Add a Reservable Sync Configuration

Microsoft Exchange On-Premises - Calendar synchronization

Create a connection with Microsoft Exchange On-Premises and synchronize reservations made using the Workplace Reservation Management application. You can synchronize all the reservations that are made using the Workplace Reservation Management to the On-Premises calendar and vice versa. The reservation synchronization from an On-Premises calendar to the Workplace Reservation Management is performed using various approaches like subscriptions, synchronization tokens, events, and occurrences.

The Microsoft Exchange On-Premises, unlike other calendar providers, isn't accessible online. The provider is remote and is accessible only by the organization locally. To synchronize calendar reservations with this on-premise setup, the Workplace Calendar Synchronization application enables you to communicate using the MID server. A MID server is installed in the same local setup where the Microsoft Exchange On-Premises is installed. This way, a communication can be established with the MID server and communicate frequently. To support the on-premises calendar provider, a new calendar processor, Microsoft EWS is supported in the Workplace Calendar Synchronization application.

1. Connect MID server with ServiceNow®.
2. Create a connection and credential alias.

> **Important:**
> The Workplace Reservations for Microsoft Outlook Add-in application does not support Microsoft Exchange On-Premises.

Synchronization from Workplace Reservation Management to Microsoft Exchange On-Premises

Synchronize reservations to the on-premises calendar from Workplace Reservation Management by communicating using the MID server.

- Install Microsoft Exchange Server Spoke.
- Set up the Microsoft Exchange Server spoke
- Connect Microsoft Exchange On-Premises MID server with ServiceNow
- After configuring the MID server, create a connection and credential alias to connect it with the calendar provider. For more information, refer to Create a Connection and credential alias for Microsoft Exchange On-Premises.
- After setting up the connection and credential aliases, configure Microsoft Exchange On-Premises as a calendar provider. For more information, refer to Configure Microsoft Exchange On-Premises as calendar provider. To support the on-premises calendar provider, a new calendar processor, Microsoft EWS is added.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Synchronization from Microsoft Exchange On-Premises calendar to Workplace Reservation Management

The reservation synchronization from the Microsoft Exchange On-Premises calendar to the Reservation portal is done by running a timely scheduled job, *WSDRS Sync Calendar items*.

An approach called, Delta synchronization is used by the Workplace Calendar Synchronization application. With Delta synchronization, you retrieve only the incremental changes made on a resource email id of the calendar using a reference point called as synchronization token. That is, for each room (each reservable sync record), linked to the on-premises calendar provider you get the synchronization tokens, which are the reference points to get the update from the calendar in increments.

- Based on the **Page size**, **Sync batch size** and the **Sync batch interval**, the information is retrieved by the synchronization tokens. For example, if you specified the values as **5**, **500**, and **60** respectively (in the previous fields). It means that you can raise 500 requests in an interval of 60 seconds. The synchronization results five changes in a page.
- When you create a reservable sync configuration record under the on-premises calendar, you must ensure that is activated.
- When the sync record is activated, a flow is triggered and a synchronization token for that reservable synchronization record is created in the **Sync Deltas** module.
- The scheduled job, *WSDRS Sync Calendar items*, is provided with the application to get the latest changes for all the active reservable sync configurations. The scheduled job is set to **False** by default and it must be enabled to start synchronizing. By default, the scheduled job is set to run for every five minutes. However, you can set the scheduled job time as you want. At any time, you can also manually execute it.
- The changes made on the reservable sync configurations are created as events in the **Events** module. The application creates Create, Update, Delete, Read, and Retrieve attendees events for Microsoft Exchange On-Premises calendar.
- For each sync record, an event is created. Depending on the page size specified on the calendar provider, the changes are displayed. If there are any pending changes, it is displayed during the next scheduled job run.
- The API that is used to get the synchronization tokens, saves the response in the **Response** field of the event. The API provides changes made on a single reservation, multi-reservation, and the parent recurring reservation.
- Using the response created by the API, a reservation is created in the Workplace Reservation Management application.
- With every scheduled job run, the synchronization token is also updated which is used as the reference point for the next synchronization.

Strict mode

The Workplace Calendar Synchronization application enables you to configure your connections and configurations with Microsoft Exchange On-Premises in strict mode as well. In strict mode, events are not directly created in an employee's calendar, instead, they are sent to a general email address. Employees are invited to the event. You can specify a strict mode email id through which you want to sync reservations. Employees can only make changes using the Workplace Reservation Management application.

To enable strict mode, you can enable the **Strict mode** option in the while configuring the on-premises calendar provide. The requesters are considered as invitees.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Synchronizing past reservations

The Workplace Calendar Synchronization enables you to also synchronize reservations made in the past. You can specify the date and time range in the **Sync start date time** and **Sync end date time** fields. For the on-premises calendar, the following conditions must be met to sync past reservations:

- The calendar provider that is the Microsoft Exchange On-Premises calendar provider that you configured must be active.
- The **Synchronize past reservations** field must be selected.
- The reservable sync configuration for which you want to sync past reservations must be active.

Note:
Ensure that the reservations that you want to sync from the past are not above 1000. If in cases the expected number of past events are more than 1000, it is recommended to modify the system property *sn_wsd_rsvsync.ewsPastSyncPeriodInMonths*. Specify the value in months keeping in mind the expected past reservations. A single sync syncs reservations from those many months. Ensure that the specified number of months do not have more than 1000 reservations per room/resource.

'No request' handling

No request is a mechanism to validate the generated syntax of the payload of an event created for the calendar. But, instead of sending the event to the calendar provider, it is only created. The admin can validate the payload content of the event (JSON) to ensure that is generated as expected. 'No request' ensures that the application does not make any API calls to the calendar provider when you create, update, or cancel a reservation in the Workplace Reservation Management application.

Create a normal mode connection for Microsoft Exchange On-Premises

Configure a normal mode connection between the Microsoft Exchange On-Premises and ServiceNow.

Connect Microsoft Exchange On-Premises MID server with ServiceNow®

Configure connection between the MID server of Microsoft Exchange On-Premises and ServiceNow® to synchronize reservations.

Before you begin

Ensure the following:

- Install Microsoft Exchange Server Spoke.
- Set up the Microsoft Exchange Server spoke
- You must have the Microsoft Exchange Server login credentials.
- A user is configured in the ServiceNow® instance with the role mid_server.

Role required: admin

Procedure

1. Download the MID server from your ServiceNow® instance on the system where the Microsoft Exchange Server is hosted.
   a. Navigate to **All** > **MID Server** > **Downloads**.
   b. Select and download the suitable MID server.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. Go to your system's **Downloads** folder and unzip the file.
3. Open **agent** > **config.xml**.
4. In the config.xml file, do the following:
   a. Specify your ServiceNow® instance details in `<parameter name="url" value="https://YOUR_INSTANCE.service-now.com/"/>`.
   b. Enter the credentials of the user with the mid_server role in `<parameter name="mid.instance.username" value="YOUR_INSTANCE_USER_NAME_HERE"/>` and `<parameter secure="true" name="mid.instance.password" value="YOUR_INSTANCE_PASSWORD_HERE"/>`.
   Enter the credentials of the user with the mid_server role.
   c. Enter a unique name in `<parameter name="name" value="YOUR_MIDSERVER_NAME_GOES_HERE"/>`.
   d. Save the file.
5. After performing the changes, start or run the MID server.
6. Open ServiceNow® instance.

   Note:
   Ensure that you are logged in as an admin.

7. Navigate to **All** > **MID Server** > **Servers**.
   You notice that the mid server that you configured is created.
8. Select the MID server to open.
   On the form, initially, you notice that the **Status** is set to **Down** and the **Validated** field is set to **No**.
9. To validate the server, in the Related links, select **Validate**.
   After a few seconds, the server is validated. The **Status** is set to **Up** and the **Validated** field is set to **Yes**.

Result
A platform is set to communicate with the Microsoft Exchange On-Premises MID server and ServiceNow® instance.

What to do next
Create a Connection and credential alias for Microsoft Exchange On-Premises

Create a Connection and credential alias for Microsoft Exchange On-Premises

Establish a connection and credential alias for Microsoft Exchange On-Premises so that you can synchronize reservations. Ensure that the values for the connection and credentials alias are set as specified.

Before you begin
Connect Microsoft Exchange On-Premises MID server with ServiceNow

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Connections & Credentials** > **Connections & Credentials Aliases**.
2. Select **Exchange_https**.
3. On the form, create a connection.

   a. In the **Connections** related list, select **New**.

   b. On the form, enter the following details:
   - **Name**: Enter a name for the connection.
   - **Credentials**: Create a credential.
     i. Select the **Lookup using list** icon.
     ii. On the Credentials window that opens, select **New**.
     iii. In the **What type credentials would like to create?** section, select **Basic Auth Credentials**.
     iv. Enter a **Name**.
     v. Enter your **username** and **password**.
     vi. Select **Submit**.
   - In the **Connection alias** field, enter `sn_exchange_spoke.Exchange_https`.
   - In the **Connection URL** field, enter the URL in the `<hostname>.<domain>.com/EWS/Exchange.asmx` format. Enter the respective host and a fully qualified domain where the Microsoft Exchange Server is installed. For example, `https://exchange2016.newlab.service-now.com/EWS/Exchange.asmx`.
   - Select the **Use MID server** check box.

     An **Advanced MID Server Configuration** tab opens.
   - In the **Advanced MID Server Configuration** tab, do the following:
     - In the **MID Selection** field, select **Specific MID Server**.
     - In the **MID Server** field, select your server from the lookup list.
   - Select **Submit**.

Result
The Connection and Credentials alias is created.

What to do next
Configure Microsoft Exchange On-Premises as calendar provider

Configure Microsoft Exchange On-Premises as calendar provider

Set Microsoft Exchange On-Premises as calendar provider to sync reservations. Specify the calendar processor, the sync-related settings, and strict mode preference.

Before you begin

Note:
For calendars to synchronize successfully, you must have an email address that matches that of the provider.

Role required: admin

Connect Microsoft Exchange On-Premises MID server with ServiceNow®

Configure connection between the MID server of Microsoft Exchange On-Premises and ServiceNow® to synchronize reservations.

Before you begin

Ensure the following:

- Install Microsoft Exchange Server Spoke.
- Set up the Microsoft Exchange Server spoke
- You must have the Microsoft Exchange Server login credentials.
- A user is configured in the ServiceNow® instance with the role mid_server.

Role required: admin

Procedure

1. Download the MID server from your ServiceNow® instance on the system where the Microsoft Exchange Server is hosted.
   a. Navigate to **All** > **MID Server** > **Downloads**.
   b. Select and download the suitable MID server.
2. Go to your system's **Downloads** folder and unzip the file.
3. Open **agent** > **config.xml**.
4. In the config.xml file, do the following:
   a. Specify your ServiceNow® instance details in `<parameter name="url" value="https://YOUR_INSTANCE.service-now.com/"/>`.
   b. Enter the credentials of the user with the mid_server role in `<parameter name="mid.instance.username" value="YOUR_INSTANCE_USER_NAME_HERE"/>` and `<parameter secure="true" name="mid.instance.password" value="YOUR_INSTANCE_PASSWORD_HERE"/>`.
   Enter the credentials of the user with the mid_server role.
   c. Enter a unique name in `<parameter name="name" value="YOUR_MIDSERVER_NAME_GOES_HERE"/>`.
   d. Save the file.
5. After performing the changes, start or run the MID server.
6. Open ServiceNow® instance.

   Note:
   Ensure that you are logged in as an admin.

7. Navigate to **All** > **MID Server** > **Servers**.
   You notice that the mid server that you configured is created.
8. Select the MID server to open.
   On the form, initially, you notice that the **Status** is set to **Down** and the **Validated** field is set to **No**.

Before you begin

Connect Microsoft Exchange On-Premises MID server with ServiceNow

Role required: admin

Procedure

1. Navigate to **All** > **Connections & Credentials** > **Connections & Credentials Aliases**.
2. Select **Exchange_https**.
3. On the form, create a connection.

   a. In the **Connections** related list, select **New**.

   b. On the form, enter the following details:
      - **Name**: Enter a name for the connection.
      - **Credentials**: Create a credential.
        i. Select the **Lookup using list** icon.
        ii. On the Credentials window that opens, select **New**.
        iii. In the **What type credentials would like to create?** section, select **Basic Auth Credentials**.
        iv. Enter a **Name**.
        v. Enter your **username** and **password**.
        vi. Select **Submit**.
      - In the **Connection alias** field, enter `sn_exchange_spoke.Exchange_https`.
      - In the **Connection URL** field, enter `https://exchange2016.newlab.service-now.com/EWS/Exchange.asmx`.
      - Select the **Use MID server** check box.

        An **Advanced MID Server Configuration** tab opens.
      - In the **Advanced MID Server Configuration** tab, do the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- In the **MID Selection** field, select **Specific MID Server**.
- In the **MID Server** field, select your server from the lookup list.

- Select **Submit**.

Result
The Connection and Credentials alias is created.

What to do next
Configure Microsoft Exchange On-Premises as calendar provider in strict mode

Configure Microsoft Exchange On-Premises as calendar provider in strict mode

Configure Microsoft Exchange On-Premises as calendar provider in strict mode to sync reservations. Specify your strict mode setting and the strict mode email address.

Before you begin
Create a strict mode Connection and credential alias for Microsoft Exchange On-Premises

Note:
For calendars to synchronize successfully, you must have an email address that matches that of the provider.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configurations** > **Calendar Providers**.
2. Select **New**.
3. Fill in the form fields.

Calendar Providers form

Field	Description
Name	Enter the name of the provider. For example: On Premises
Description	Enter a short description.
Active	Option to activate the On-premises calendar provider.
Provider Configuration	
Calendar processor	Calendar processor for the synchronization. Select **Microsoft EWS** as the processor.
Override alias?	Option to enable selection of your own connection and credential alias. If the option is not enabled, then the default connection and credential alias is used.
Connection & credential alias	Select the connection and credential alias that you created on your own for the calendar provider. This option appears only if you have selected the **Override alias?** option. If an alias is not specified, then the default connection and credential alias is used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Page size	Page size of the calendar items. You can set the page size from 1 to 500.
Sync batch size	Size of batches during a synchronization. This field is automatically set to **500**, which means a sync batch handles 500 items at a time. If there are more than 500 items, the rest is displayed in the next sync batch.
Sync batch interval	Time interval between sync batches. This field is automatically set to **60** seconds.
Synchronize attendees	Enable this option to synchronize attendees as well while synchronizing reservations.
Sync start date time	The start date and time of the synchronization. The sync generates information from this date. **Important:** The past sync duration must not exceed 1825 days.
Sync end date time	End date and time of the synchronization. The sync generates information until this date. The recommended setting is at least 5 years from the **Sync start date time**. **Important:** The past sync duration must not exceed 1825 days.
Strict mode	Select the option to enable strict mode. If you enable this option, events are not directly created in the employee's calendar, instead, they are sent to a general email address. Employees are invited to the event. They can only make changes using the Workplace Reservation Management application.
Strict mode email	Strict mode email address used to create reservations and to receive reservation-related notifications. Employees are considered as invitees in the reservation.
Sync past reservations	Select the option to synchronize all the past reservations from the specified **Sync start date time** to **Sync end date time**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Ensure that the reservations that you want to sync from the past are not above 1000 per room. If in cases the expected number of past events are more than 1000, it is recommended to modify the system property *sn_wsd_rsvsync.ewsPastSyncPeriodInMonth*. Specify the value in months keeping in mind the expected past reservations. A single sync syncs reservations from those many months. Ensure that the specified number of months do not have more than 1000 reservations.

4. Select **Submit**.
   The On-premises calendar provider is created.
5. In the Reservable Sync Configurations related list, add the reservable sync configurations with which you want to synchronize reservations.
   To add a new one, refer to Add a Reservable Sync Configuration.

What to do next

- Set the scheduled job, *WSDRS Sync Calendar items* to **True**. The scheduled job is set to **False** by default and it must be enabled to start synchronizing. You can set the scheduled job time as you want. At any time, you can also manually execute it.
- Add a Reservable Sync Configuration

Create single or multiple providers with Microsoft Exchange On-Premises

Configure single or multiple providers to the Microsoft Exchange On-Premises calendar provider.

Before you begin

Connect Microsoft Exchange On-Premises MID server with ServiceNow

Role required: admin

Procedure

1. Create connection and credential aliases.
   For multiple connections, create separate connection and credential records.

   a. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.

   b. Select **New**.

   c. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Connection & Credential Aliases form

Field	Description
Name	Name for the connection and credential alias.
ID	The field is automatically generated after you save the form based on the specified **Name**.
Application	Ensure that the application is set as **Microsoft Exchange Online Spoke**
Parent alias	Select **sn_exchange_spoke.Exchange_https**.

d. Select **Submit**.
The Connection and Credential alias record is created. As the next step, you must create a Basic Auth credential record.

2. Create a Basic Auth credential to use in the newly created connection and credential alias records.
For multiple connections, create a separate credential record.

a. Navigate to **All** > **Connections & Credentials** > **Credentials**.

b. Select **New**.

c. In the **What type credentials would like to create?** section, select **Basic Auth Credentials**.

d. Enter a **Name**.

e. Enter your **username** and **password**.

f. Select **Submit**.

3. Configure connections to the connection and credential alias.

a. Navigate to **All** > **Connections & Credentials** > **Connection & Credential aliases**.

b. Select the connection and credential alias record that you created in the initial steps. Depending on how you want to add connections, select the appropriate alias record.

c. On the form, in the **Connections** related list, select **New**.

d. On the form, fill in the fields.

HTTPs connection form

Field	Description
Name	Unique name to identify the record. For example, `Exchange on prem Connection`.
Credential	Select a credential record that you created. If you created multiple credentials, select the appropriate credential for this connection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Connection alias	The connection alias is automatically filled with the connection and credential alias to which you are adding this connection.
URL builder	**Note:** Do not select the check box.
Connection URL	Connection URL. Enter `https://exchange2016.newlab.service-now.com/EWS/Exchange.asmx`.
Use MID server	Select the check box. An **Advanced MID Server Configuration** tab opens.
Active	Option to activate the connection.

e. In the **Advanced MID Server Configuration** tab, do the following:
   - In the **MID Selection** field, select **Specific MID Server**.
   - In the **MID Server** field, select your server from the lookup list.

f. Select **Submit**.
The connection is added to the alias. Depending on the number of connections you want to add, repeat the steps.

4. Configure calendar providers.
Create a single provider or multiple providers for on-premises. If you want to create

a. Navigate to **All** > **Workplace Calendar Synchronization** > **Configurations** > **Calendar Providers**.

b. Select **New**.

c. Fill in the form fields.

Calendar Providers form

Field	Description
Name	Enter the name of the provider. For example: On Premises
Description	Enter a short description.
Active	Option to activate the On-premises calendar provider.
Provider Configuration	
Calendar processor	Calendar processor for the synchronization. Select **Microsoft EWS** as the processor.
Override alias?	Option to enable selection of your own connection and credential alias. If the option

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	is not enabled, then the default connection and credential alias is used.
Connection & credential alias	Select the connection and credential alias that you created on your own for the calendar provider. This option appears only if you have selected the **Override alias?** option. If an alias is not specified, then the default connection and credential alias is used.
Page size	Page size of the calendar items. You can set the page size from 1 to 500.
Sync batch size	Size of batches during a synchronization. This field is automatically set to **500**, which means a sync batch handles 500 items at a time. If there are more than 500 items, the rest is displayed in the next sync batch.
Sync batch interval	Time interval between sync batches. This field is automatically set to **60** seconds.
Synchronize attendees	Enable this option to synchronize attendees as well while synchronizing reservations.
Sync start date time	the start date and time of the synchronization. The sync generates information from this date.
Sync end date time	End date and time of the synchronization. The sync generates information until this date. The recommended setting is at least 5 years from the **Sync start date time**,
Strict mode	Select the option to enable strict mode. If you enable this option, events are not directly created in the employee's calendar, instead, they are sent to a general email address. Employees are invited to the event. They can only make changes using the Workplace Reservation Management application.
Strict mode email	Strict mode email address used to create reservations and to receive reservation-related notifications. Employees are considered as invitees in the reservation.
Sync past reservations	Select the option to synchronize all the past reservations from the specified **Sync start date time** to the current date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Ensure that the reservations that you want to sync from the past are not above 1000. If in cases the expected number of past events are more than 1000, it is recommended to modify the system property *sn_wsd_rsvsync.ewsPastSyncPeriodInMonth* Specify the value in months keeping in mind the expected past reservations. A single sync syncs reservations from those many months. Ensure that the specified number of months do not have more than 1000 reservations.

d. Select **Submit**.
The On-premises calendar provider is created. Repeat Step 4 to add another calendar provider.

Result
Multiple connections and providers are created.

Add a Reservable Sync Configuration

Add workplace-workspace/desk (or) rooms that must be synchronized with the calendar provider whenever an employee makes a reservation.

Before you begin
Refer to Explore Workplace Calendar Synchronization.

Role required: sn_wsd_rsvsync.admin

Procedure
1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Reservable Sync Configuration**.
2. Select **New**.
3. On the form, fill in the fields.

Reservable Sync Configuration form

Field	Description
Location	Workplace item that you want to synchronize with the calendar provider whenever an employee makes a reservation. For example, this field can be the location of a meeting room, conference room, or board room.
Reservable module	The reservable module, which contains the workplace item.
Email	The email address of the workplace room/ space, such as for a meeting room or

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	conference room. The email address is used to check calendar statuses and events. **Important:** The **Email** field will not be auto-populated with the email address that is specified in the room/space configuration form. After you specify the email address and save the form, the following actions are performed: ○ If there is no email address specified on the room/space configuration form, then the **Email** field of the room/space configuration form is auto-filled with the email address that you specified here. ○ If an email address is specified on the room/space configuration form, and it does not match the email address that you specified here, an error is displayed.
Active	Option to activate the workplace item for synchronization. **Important:** The **Active** field is read-only and inactive if you are adding the reservable sync config record to the Microsoft Exchange Online or Microsoft Exchange On-Premises calendar provider. To activate the reservable sync config record, you must select the **Activate** option after you save the form.
Provider Configuration	
Provider	Calendar provider that you want to synchronize with the workplace item.
No request	Option to test synchronization. Select this option to test if a reservation is synchronized or not when the workplace item is active. Validate the configuration and events to ensure that everything is set up correctly. Selecting this option will only generate events and not send them to the calendar service.

4. Select **Submit**.

Result
The workplace item is added.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
If you are adding the reservable sync config record to the Microsoft Exchange Online calendar provider, the reservable sync config record will be de-activate after creation. To activate the reservable sync record, you must select the **Activate** option on that reservable sync config record form.

Note:
When a Reservable Sync configuration is changed or updated, the synchronization deltas (Sync delta) are cleared from the application.

Activate or deactivate a Reservable sync configuration

You can activate or deactivate a reservable sync configuration if it is not required at any time.

Before you begin

Note:
You can activate or deactivate a reservable sync configuration for the Microsoft Exchange calendar provider only.

Role required: admin

About this task

When you configure a reservable sync config record for Microsoft Exchange Online and Microsoft Exchange On-Premises calendar provider, it is deactivated by default. In order to activate it, you must manually activate it using the **Activate** action.

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Calendar Providers**.
2. Select the Microsoft Exchange calendar provider to which the reservable sync configuration is added.

   Note:
   If the calendar provider is already deactivated, you cannot activate or deactivate any reservable sync configuration related to it.

3. On the Provider form, scroll down to the Reservable sync configuration related list.
4. In the related list, to activate or to deactivate the reservable sync configuration, do any one of the following:
   - From the related list, select the reservable sync configurations that you want to activate or deactivate. After selection, do the following:
     a. Select **Action on selected rows...**
     b. From the drop-down, select any one of the following options:
        - Activate
        - Deactivate
   - Open the reservation sync configuration that you want to activate or deactivate and on the form, select **Activate** or **Deactivate**.

     Note:
     The appearance of the above options depends on the **Active** status of the reservation sync configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The selected reservation sync configurations is activated or deactivated.

No request handling

Make a 'No request' call to test the configuration with the calendar provider.

Before you begin
Role required: admin

About this task
No request is a mechanism to validate the generated syntax of the payload of an event created for the calendar. But, instead of sending the event to the calendar provider, it is only created. The admin can validate the payload content of the event (JSON) to ensure that is generated as expected. 'No request' ensures that the application does not make any API calls to the calendar provider when you create, update, or cancel a reservation in the Workplace Reservation Management application.

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Reservable Sync Configuration**.
2. Select the reservable sync record for which you want to enable 'No request.
3. On the form, ensure that the **Active** option is enabled.
4. Enable the **No request** option.
5. Select **Update**.

Synchronize past reservations

Sync reservations made in the past, that is, before configuring the reservation synchronization setup.

Before you begin
Ensure that the calendar provider is active.

Note:
In case of Microsoft Exchange On-Premises, ensure that the reservations that you want to sync from the past are not above 1000 per room/resource. If in cases the expected number of past events are more than 1000, it is recommended to modify the system property *sn_wsd_rsvsync.ewsPastSyncPeriodInMonths*. Specify the value in months keeping in mind the expected past reservations. A single sync syncs reservations from those many months. Ensure that the specified number of months do not have more than 1000 reservations per room/resource.

Role required: admin

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Calendar Providers**.
2. Select the calendar provider for which you want to synchronize past reservations.
3. On the Provider form, ensure that the **Active** option is enabled.
4. Enable the **Sync past reservations** field.
5. In the **Sync start time**, specify the start time from the past from when you want to synchronize reservations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For Microsoft Exchange Online calendar provider, specify the **Sync start time** manually from the subscription record of the reservable sync record for which you are synchronizing the past reservations.

6. In the **Sync end time**, specify the end time from the past until when you want to synchronize reservations.

Important:
The past sync duration must not exceed 1825 days.

7. Select **Update**.

Result
The past reservations are synchronized.

Retrieve reservations

Retrieves all the events for active reservable sync configurations from Microsoft Outlook to Workplace Service Delivery.

Before you begin
Role required: sn_wsd_rsvsync admin

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Calendar Providers**.
2. Select the calendar provider for which you want to retrieve reservations from the **Retrieve reservations**.
3. On the Provider form, select **Retrieve reservations**.

Note:
The **sync start date time** is the current time and the **sync end date time** is the time taken to complete the synchronization.

4. Select **Confirm**.
On demand sync execution record for active **Reservable sync configurations** is generated.

Note:
On demand sync execution record is generated at provider level. You can click the active resource separately to generate an on demand sync record.

5. Click the **On demand sync executions** record.
It displays all the resources to be synced.
6. Click **Sync execution for reservable sync configuration**, and check whether the **State** is turned to **Success**.

Result
There is another table called Sync execution for **Reservable sync configuration spoke events** where all the events for the active **Reservable sync config** are displayed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Export reservations to the calendar provider

As a one time procedure, export all your confirmed reservations to your calendar provider for synchronization.

Before you begin

You must have the Workplace Reservation Management application installed.

Role required: admin

About this task

If you have installed Workplace Calendar Synchronization after using Workplace Reservation Management for a long time, run the export scheduled job to export all your confirmed present and future reservations to your calendar provider. During the export, for every 45 seconds, the scheduled job exports 10 reservations to the calendar.

The export runs based on the following conditions:

- The reservations made on the past date are not exported. Only the reservations that are on the current date and future dates are exported.
- Only the reservations that are in confirmed state are exported.
- Only the reservations made on spaces and rooms that have Reservable sync configuration are exported. For more information on how to add a Reservable sync configuration for a room or a space, refer to Add a Reservable Sync Configuration.

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Configuration** > **Scheduled jobs**.
2. Select **Export reservations to calendar** scheduled job.
3. Select the **Active** field to activate the scheduled job.
4. Click **Update**.
   The export process is initiated.

Result

The export process runs in the background. For every 45 seconds, 10 reservations are exported to the calendar.

Note:
The application will not send any notification when the export process is complete and if any reservation is not exported.

Manage calendar synchronizations

As an admin, monitor the number of events and calendar items in the Workplace Calendar Synchronization application whenever a reservation is synchronized.

As an admin, the application enables you to view and manage the following:

- Approvals
- Events
- Calendar items
- Synchronization deltas

When you configure synchronization, you must keep in mind a few important conditions. Refer to Synchronization - Prerequisites and implementation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Approvals

If there are any reservations created from the calendar provider application that requires approval, you can approve them using the Workplace Core approval configuration. For more information on how to approve a reservation or create a performer criteria, refer to Create a workplace performer criteria.

Events

Every action during a reservation synchronization triggers an event. These actions include creating, updating, or canceling a reservation. The Workplace Calendar Synchronization handles these events and sends notifications to the calendar services. For more information about an event and the type of events created in the application, refer to Events in Workplace Calendar Synchronization.

- An event can create one or more calendar items.
- An event contains a request and a response to the request.
- To ensure that multiple calendar services can communicate with Workplace Reservation Management, events translate the reservations and messages from the calendar provider into standardized actions in Workplace Reservation Management.

When a workplace item is synchronized with the calendar service, an event is created to get the latest details. The response from the calendar service also creates an event. Similarly, events are created whenever a reservation is created or updated within Workplace Reservation Management for workplace items that are configured to synchronize. You can convert an event into JSON format. You can also reprocess an event if there was an error or for any reason.

Calendar items

Every action performed by the calendar service is converted to a calendar item that is handled in the Workplace Reservation Management application. A calendar item is either a new reservation or a reservation update. Using calendar items, you can also create, update, or cancel a reservation in the Workplace Reservation Management application. You can convert a calendar item into JSON format.

Synchronization deltas

When a workplace item is synchronized, a delta key is generated. A delta key is used and updated every time a workplace item synchronizes with the calendar service. Each sync delta contains a token that indicates how much information was synced last time so that a delta with the new changes can be returned in the next request instead of the complete calendar history. You can know the details of the workplace item such as the number of reservations created, or any changes made on the reservation. The delta key ensures that only the changes that occurred between the previous and the current synchronization is retrieved. The delta key retrieves details of any new, updated, and canceled reservations on the workplace item.

Note:
Synchronization deltas are used only for Microsoft Exchange On-Premises and Google Calendar.

View synchronization details

Check the number of the events and calendar items that are created during a synchronization.

Before you begin
Role required: sn_wsd_rsvsync.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Calendar Synchronization** > **Synchronization**.
2. Select any of the following options to view the synchronization details:
   - **Calendar Items**: Option to view calendar items that are created after a reservation synchronization.
   - **Events**: Option to view events that are created by actions taken on a reservation.
   - **Sync Deltas**: Option to view synchronization deltas of workplace items that are synchronized.

Events in Workplace Calendar Synchronization

For every reservation-related action, an event is created in Workplace Calendar Synchronization

About Events

When a synchronization is performed, the Workplace Calendar Synchronization application creates an entry for every new reservation, creation, reservation update, and reservation cancellation. To view events, navigate to **All** > **Workplace Calendar Synchronization** > **Synchronization** > **Events**.

The following events are created:

- **Create**: A **Create** event is created whenever a reservation is created in the Workplace Reservation Management Reservation portal.
- **Update**: An **Update** event is created whenever there's an update to the reservation created in the Workplace Reservation Management Reservation portal or when a reservation is checked out
- **Delete**: A **Delete** event is created whenever there is a reservation cancellation or a No show.
- **Read**: A **Read** event is created when the Workplace Reservation Management application intends to read the reservations created on the rooms calendar in the calendar provider. The **Read** event is created only for Google Calendar and Microsoft Exchange On-Premises calendar providers.
- **Retrieve attendees**: The **Retrieve attendees** event is created for Microsoft Exchange On-Premises calendar provider to retrieve details related to attendees included in a reservation. The **Read** event does not return attendee details for Microsoft Exchange On-Premises calendar provider.

Event details

When an event is created, it is set to New state by default. Depending on the processing, the state changes to Processing, Processed or Error.

When an event is created, the event details on an Event form are displayed as follows:

- In the Request related list:
  - **Payload**: The **Payload** field contains the details of the reservation in a string format. It contains reservation-related details such as it create, update, or cancel. The format of the payload is set based on the Reservation portal form.
  - **Provider payload**: The **Provider payload** contains the same details displayed in the **Payload** field but in the format of the calendar provider's reservation form. That is, in the format in which the calendar provider reads.
- In the Response related list, the **Response** field displays the response to the event from the calendar provider in a string format.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The response is displayed only when an event is processed. That is, when an event is set to Processed or Error.
- When an event returns an error, you can view the error-related details in the **Response** field

- On the form, you can view details such as:
  - The reservation for which the event is created.
  - Location of the event.
  - State and substate of the event.
  - For what action the event is created.
  - The provider for which the event is created.
  - The error details if an event results in an error.
- You can also change the **Payload**, **Provider Payload** and **Response** format from string format to JSON format using the **Format JSON** option. The **Format JSON** helps with the readability of these fields.
- If an event fails, you can also manually reprocess the event using the **Re-process** option.

Synchronization - Prerequisites and implementation

When you connect to your calendar provider for synchronization, you may incur a few connection or synchronization-related issues.

Synchronization prerequisites

When you synchronize reservations, it is important to know the following:

- You can't edit a reservation that is created using the calendar provider in the Workplace Reservation Management application.
- During reservation synchronization, only the notes added to the reservation using the Workplace Reservation Management application is considered. That is, if the body of the reservation is updated in Microsoft Exchange, those updates are not synchronized back to Workplace Reservation Management.
- When you create, update or delete a reservation, it's performed directly on the employee's calendar. During synchronization, the events are read from the resource calendar, that is, the room calendar.
- If an event is rejected or declined by the calendar provider resource, in such case the reservation remains in the Awaiting confirmation state. For the same reason, a scheduled job **Clean-up Awaiting/Rejected Reservations** is available that you can run on any suitable frequency to clear the reservations that are rejected or declined
- For Microsoft Exchange Online, after synchronization, ensure that the meeting subject is unchanged. If the meeting subject is changed, use Microsoft PowerShell to make changes. For more information, refer to https://learn.microsoft.com/en-us/exchange/troubleshoot/client-connectivity/calendar-shows-organizer-name .

Synchronization implementation

Rooms and spaces

While performing reservation synchronization, you can synchronize both rooms and spaces.

Invitees

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Invitees of a reservation can be synchronized in both the ways, that is, from Workplace Reservation Management to the calendar provider or vice versa.

- If the reserved room has reservation synchronization enabled, then the details of the reservation are sent to the invitees from their calendar provider such as Google or Microsoft Exchange.
- When synchronizing a reservation with invitees, the application performs the following:
  - The application checks if the invitees are known users, or visitors and categorizes in the reservation accordingly.
  - If an invitee isn't a known user or a visitor, then they are categorized as "External" in the reservation. The details of these invitees aren't displayed on the Reservation summary.
  - The invitees receive a notification when a reservation is changed or updated in the Workplace Reservation Management application. However, a notification is not received if the reservation is created or updated in the calendar provider.

Notes

If a note is added in a reservation created in the Workplace Reservation Management application, it is saved on the reservation record. An employee can update a note when required. The reservation summary page displays the summary of the meeting note. When this reservation (with notes) is synchronized, then the following actions are performed in the calendar provider:

- The notes are added to the body of the meeting email.
- If there are any notes added to the reservation from the calendar provider, it is overwritten with the notes added using the Workplace Reservation Management application when there is a reservation update.
- During reservation synchronization, only the notes added to the reservation using the Workplace Reservation Management application is considered. That is, if the body of the reservation is updated in Microsoft Exchange, those updates are not synchronized back to Workplace Reservation Management.

Privacy

If an employee reserves a room using their calendar provider, then the privacy of the reservation depends on the privacy setup made on the building to which the space or room belongs. The privacy of such reservations can be changed or overridden using Workplace Reservation Management or Workplace Service Delivery for Mobile.

Virtual meeting link

If a reservation is created in Microsoft Exchange using Zoom or Microsoft Teams, during synchronization, the meeting link is retrieved and added to the reservation record in Workplace Reservation Management as a virtual meeting link. However, it is dependant on whether the virtual meeting provider is configured in Workplace Reservation Management or not. If it is not configured, then the meeting link is not included.

When a Workplace Reservation Management reservation includes a virtual meeting link, then the meeting links appear as follows when it's synchronized with the Microsoft Exchange calendar of the attendees:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Zoom**: If a Zoom meeting link is added, the link appears in the **Location** field of the email containing the meeting invite.
- **Microsoft Teams**: If a Microsoft Teams link is added, the meeting link and the joining-related details are added to the body of the calendar event. Similarly, when a reservation is created in the Microsoft Exchange calendar using the **Teams meeting** toggle button, the meeting link is retrieved and saved as a virtual meeting link on the reservation record in Workplace Reservation Management application.

  Note:
  As the meeting link appears in the body of the email, in any case, if you want to update or change the meeting details, you must do it only using the Workplace Reservation Management. Because when a reservation synchronization is performed, the details (in this case, the meeting link and details) are synchronized only in one way, that is, from Workplace Reservation Management to the calendar provider (in this case Microsoft Teams). If you already change the meeting details or the notes from the calendar provider, it is overwritten by Workplace Reservation Management when a synchronization is performed.

- **Any other virtual meeting providers**: The meeting link is added in the **Location** field of the email containing the meeting invite.

To set up Microsoft Teams, refer to Connect Workplace Reservation Management with Microsoft Teams.

To set up Zoom, refer to Connect Workplace Reservation Management with Zoom.

Debugging, handling throttling and other

Debug *Workplace Service Delivery* **to** *Microsoft Exchange Online*:

Note:
Ensure that Developer Trace is to be enabled for debugging. Navigate to **Process Automation Designer** > **Properties**. Set the **Level of reporting data generated by the flow engine** flow designer properties to **All configuration and runtime values (For debugging only)**.

1. Check for events in **Workplace Calendar Synchronization** > **Synchronization** > **Events** > **.**
2. Ensure that all the events are processed successfully and their Response has “Event ID” & “Icaluid”.
3. If an event fails with “Too many requests” error, enable **WSDR Reprocess Events** scheduled job with a 5-minute frequency.
4. For an exact response message from “Rest”, navigate to **Flow Designer** > **Executions**. Apply the filter by the name “Create Calendar Event”.
5. For any other external error above the 400 error code, validate the setup on the Azure Portal according to the error code. Following are the most common errors:
   - Access to oData is inactive
   - Invalid Object
6. To fix these errors, the resource or the user must be in the scope of tenant Id(Client Id)

Debug *Microsoft Exchange Online* **to** *Workplace Service Delivery*

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Make sure that the **Create and Update Reservations from Events** scheduled job is active.
2. Verify that there is an event entry in **Microsoft Exchange Online Spoke** > **Events**.
3. If there is no entry, validate. Navigate to **Workplace Calendar Synchronization** > **Configuration** > **Reservable Sync Configuration** > **..**
4. Verify if the room email is active.
5. Check if the subscription field is populated and verify if that subscription status is active and the status is 200.
6. If the subscription is not populated, deactivate and activate the individual reservable sync configuration record.
7. If the subscription is still not populated, then navigate to **Flow designer** > **Executions** > **Create or Update Subscription** and validate the flow.
8. If there is an issue with the resource, you may see errors like resource not found, invalid Resource, the SMTP address has no mailbox associated with it or others. The error might have occurred for the below reasons:
   - Invalid email ID
   - Must have proper resource mail box in office.com
   - Resource/User must be in scope of tenant Id(Client Id)
9. For more information on the errors, check https://learn.microsoft.com/en-us/graph/errors and fix the root cause.

Throttling issue (HTTP Error 429) in *Microsoft Exchange Online* while processing huge reservations:

If you are processing huge reservation requests at a time, there might be a throttling on Microsoft Exchange, that is, you might incur HTTP Error 429. In such cases, it is recommended that you configure the Retry policies in the Integration Hub application. Perform the following actions to configure:

1. Go to **IntegrationHub** > **Retry Policies**.
2. Select **MS Exchange Online HTTP Retry Policy**.
3. In the **Retry Strategy** field, select **Honor "Retry-After" Header**.
4. In the **Max Elapsed Time (seconds)**, set the value to 120.

> **Tip:**
> Set the value to 120 or above.

Run Instance scan to check Microsoft Exchange Online synchronization configuration

Execute an Instance scan on your ph keyref="var.workplace-calendar-sync"/> configuration with Microsoft Exchange Online. The Instance Scan application diagnoses the configurations with the calendar provider by running a series of checks using suites.

Before you begin
Role required: sn_wsd_rsvsync.admin

About this task
Run the instance scan using the Instance Scan application to check if there are any incorrect configurations while configuring the Microsoft Exchange Online calendar provider. The scan runs and notifies about any incorrectness.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The ph keyref="var.workplace-calendar-sync"/> application provides you the *Workplace Calendar Synchronization Configurations* suite in the Instance Scan application. For more information about Instance scan, refer to Instance Scan. You can run the suite at any time to diagnose the configurations. The suite runs the following configuration checks:

- **Reservable Sync Configurations Check**: Checks if the reservation sync configurations are correct.
- **Calendar Sync Active Providers Check**: Checks if there are no active providers as the sync can't be configured.
- **Webhook Registry Configurations Check**: Checks for callback URL and the client state in the webhook registry.
- **Calendar Provider Configurations Check**: Checks if the active calendar provider configurations are correct.

Procedure

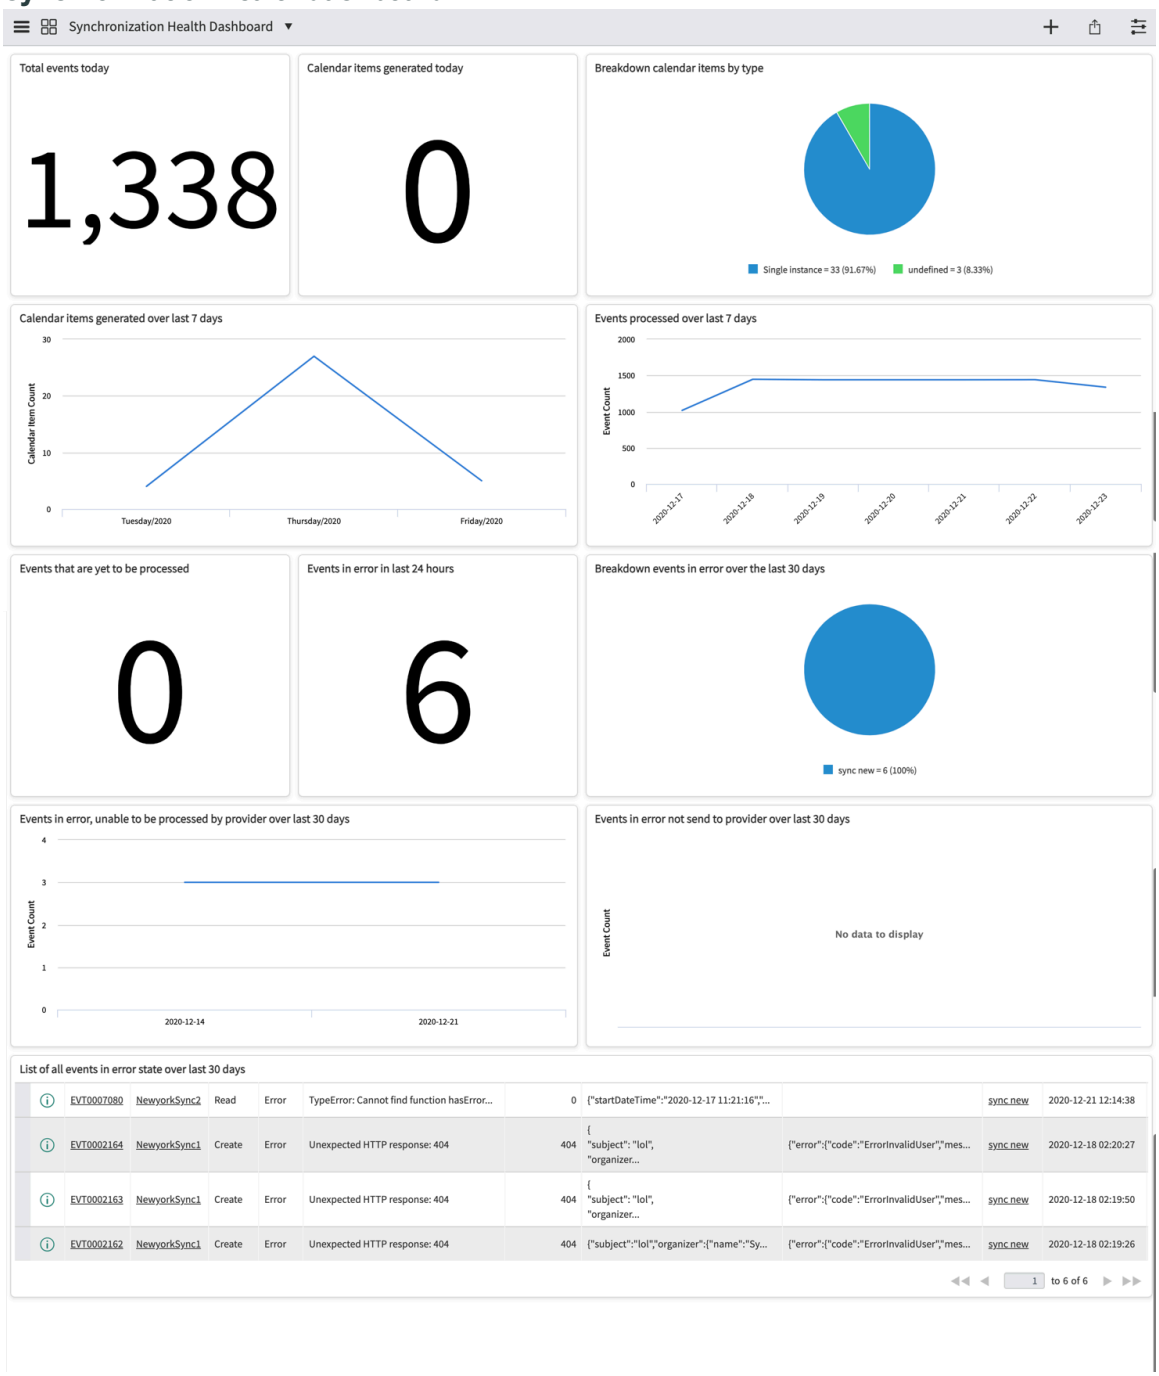
1. Navigate to **All** > **Instance Scan** > **Suites**.
2. Select **ph keyref="var.workplace-calendar-sync"/> Configurations**.
   The form opens. On the form, view the above checks in the Checks Related list.
3. To run the scan, select **Execute Suite Scan**.
4. In the Scan Suites Now window, select **Full instance**.
5. Select **Execute Scan**.
   The scan executes and you can view the progress.
6. On the Execute Suite Scan progress window, select **Go to Result** to view the scan results.
7. On the Scan Result form, review the findings in the Scan Findings related list.
   In the Scan Findings related list, you can view the following information:
   - The **Check** column displays the check that diagnosed the issue.
   - The **Source Table** and **Source** column displays the source where the issue was found.

     The **Source** displays the record that caused the issue.
   - The **Finding Details** column displays the details of the finding, that is, the issue and its details. Hover on the finding to view the full details. For information about the finding messages, refer to Instance scan findings.
8. Fix the scan findings.
9. After fixing the issues listed in the Scan Findings related list, select **Rescan** on the Scan Result form.
   The scan displays the latest results with the implemented fixes.

Analytics and Reporting Solutions for Workplace Calendar Synchronization

Monitor the status of reservation synchronizations.

Synchronization Health Dashboard



Use this dashboard to track the reservation synchronization. Monitor number of events and calendar items created in the application and other details related to them.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Workplace Calendar Synchronization dashboard is migrated to Workplace Central. You can start using the migrated dashboards from Workplace Central. The out-of-the-box dashboards are also migrated to Workplace Central. Old dashboards are not supported for new Workplace Service Delivery customers. For existing customers, old dashboards are currently available but will be deprecated soon.

For more information about the migrated dashboard, see Reservation Management dashboard.

Synchronization health dashboard

To access the Synchronization health dashboard, navigate to **All** > **Workplace Central** > **Workplace Dashboards** .

Properties for Workplace Calendar Synchronization

Property	Description
sn_wsd_rsvsync.use_user_default_tz	This property enables you to synchronize reservations created by users according to their time zone. Either the system's time zone or the user's time zone is used to update and synchronize reservation. First, the property checks if the user has a time zone specified or not. If the user has not specified any time zone, the system's time zone is used. Again, if the system has no time zone specified, then the property uses the UTC time zone. Reservations synchronized from Microsoft Exchange and Google Calendar to Workplace Service Delivery are not affected. • Type: true/false • Default value: **false**
sn_wsd_rsvsync.create_blocking_rsv	This property enables you to create blocker reservations on workplace locations that are synchronized with the calendar provider. • Type: true/false • Default type: **true**
sn_wsd_rsvsync.max_event_retry_count	This property enables you to specify after how many times an event must be reprocessed. • Type: Integer • Default value: **10**
sn_wsd_rsvsync.use_default_tz	This property enables you to use the default time zones during the reservation synchronization. • Type: true/false • Default type: **true**
sn_wsd_rsvsync.exchange_callback_time_limit	This property enables you to specify the maximum time limit to wait for Microsoft exchange to notify with a callback. Specify the

Property	Description
	time limit in negative seconds as specified in the default value. **Note:** You won't be notified when an event is rejected or declined by Microsoft Outlook. For the same reason, a scheduled job - **Clean-up Awaiting/ Rejected Reservations**, is available that you can run on any suitable frequency to clear the reservations rejected or declined by the Microsoft Outlook calendar. • Type: Integer • Default value: **-18000** (5 hours)
sn_wsd_rsvsync.outlook_event_sync_interval	This property is used internally by the application, it enables you to set the time(in minutes) to synchronize events received by Microsoft Exchange with Workplace Reservation Management application. Ensure that the time that you set in this property is more that the time specified in the **Create and Update Reservations from Events** scheduled job's repeat interval. • **Type**: Integer • **Default value**: 2
sn_wsd_rsvsync.google_event_sync_interval	This property is used internally by the application while updating the attendee details on the reservations. Ensure that the time that you set in this property is more than the time specified in the **Update attendees of Workplace Reservation (Google)** scheduled job's repeat interval. • **Type**: string • **Default value**: 5
sn_wsd_rsvsync.ewsPastSyncPeriodInMonths	This property enables you specify the number of months that you want a sync to run in order to sync past reservation. A single sync will run for specified number of months for past reservation. Ensure that a single sync does not return more 1000 reservations. Specify the number of months based on the same.

Scheduled jobs installed with Workplace Calendar Synchronization

The Workplace Calendar Synchronization includes scheduled jobs to process a few synchronizations seamlessly.

Scheduled jobs installed with Workplace Calendar Synchronization

Scheduled job	Scope	Active	Time	Description
Clean-up Awaiting/ Rejected Reservations	Workplace Calendar Synchronization	True	Repeats every 5 hours	This scheduled job clears the reservations that have been stuck in awaiting confirmation for more than 5 hours (due to rejection from outlook)
Create and Update Reservations from Events	Workplace Calendar Synchronization	True	Repeats every 1 minute	This scheduled job inserts/ updates reservations from **Microsoft Exchange Online spoke** > **Events** table.
Check room calendar for reservations stuck in awaiting confirmation	Workplace Calendar Synchronization	True	Repeats every 10 minutes	This schedule job runs every 10 minutes and selects the reservations that are stuck in Awaiting confirmation and were last updated between 2 to 15 minutes ago. The job performs a look-up call to the room calendar to verify if the event exists. If the event does not exist (due to conflicts with

				expiration time. If a subscription is marked with status as Being deleted, then the record is deleted and is not considered for renewal.

Instance scan findings

After the instance scan completes, on the Scan Result form, review the findings in the Scan Findings related list.

Scan findings

The following findings are reported in the scan report:

- `Could not find the sn_ex_online_spke.Microsoft_Exchange_Online Connection and credential alias.`
- `The Connection & credential alias specified in the Override alias is not a child alias to the sn_ex_online_spke.Microsoft_Exchange_Online Connection and credential alias.`
- `There are multiple/no connections associated with the ' + selectedAlias.getValue('name') + ' Connection and credential alias.`
- `There are multiple/no connection attributes associated with ' + selectedAlias.getValue('name') + ' Connection and credential alias.`
- `Incorrect 'Connection URL' specified in the " + selectedAlias.getValue('name') + " Connection and credential alias."`
- `OAuth provider associated with the OAuth Entity Scope - ' + scope + ' is not same as the one associated with OAuth Entity Profile of this scope.`
- `The OAuth Scope - ' + scopesExpected[i] + ' must be associated with the grant type ' + grantType + '.`
- `The Default grant type of the OAuth provider must be same as the Grant type of the OAuth Entity Profile.'`
- `OAuth Token has expired.`
- `Please generate an OAuth Token.`
- `Invalid token URL associated with Application Registry - ' + applicationRegistryGr.getValue('name') + '.`
- `Invalid authorization URL associated with Application Registry - ' + applicationRegistryGr.getValue('name') + '.`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Invalid redirect URL associated with Application Registry - ' + applicationRegistryGr.getValue('name') + '.
- There is no OAuth Entity Profile associated with the credential - ' + credentialGr.getValue('name') + '.
- There is no credential associated with the connection - ' + connectionGr.getValue('name') + '.
- There is no active credential associated with the connection - ' + connectionGr.getValue('name') + '.
- Invalid Credential record associated with connection - ' + connectionGr.getValue('name') + '.
- If the grant type of the connection (linked with provider) is set as Authorization Code, the provider must have Strict mode enabled with a valid Strict mode email.
- Synchronization is not configured - could not find an active provider.
- There are multiple subscriptions associated with this resource.
- Calendar provider associated with this Rsv Sync Configuration is inactive.
- Could not find an email with this Rsv Sync configuration.
- The Rsv Sync configuration email must be same as the email specified in the 'Email' field of the location record.
- The same email is associated with a different Rsv sync configuration.
- The Subscription has expired.
- The Subscription status is ' + status + '.
- Invalid Subscription.
- Could not find a subscription for this Rsv Sync Configuration.

To fix a finding, refer to the following:

- Microsoft Exchange Online - Calendar synchronization
- Synchronization - Prerequisites and implementation

Workplace Space Mapping

ServiceNow® Workplace Space Mapping provides indoor maps for interactive locations and wayfinding with Indoor Mapping and Mappedin. Indoor Mapping is part of the Workplace Service Delivery suite while Mappedin a third-party map provider.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Get started

Explore Learn about Workplace Space Mapping and space optimization in your workplace with map providers.	**Configure** Configure and install Workplace Space Mapping with Indoor Mapping or Mappedin as your map provider.
Using Use Workplace Space Mapping for interactive locations and reservation management in your workplace.	**References** Work with Workplace Space Mapping tables, properties, and components.

Explore Workplace Space Mapping

Workplace Space Mapping provides interactive locations and wayfinding solutions in your workplace with Indoor Mapping and Mappedin. Indoor Mapping provides inbuilt indoor maps for Workplace Space Mapping. Mappedin is a third-party map provider.

Synchronize Workplace Indoor Mapping with Workplace Service Delivery

- Indoor Mapping is the inbuilt map provider with Workplace Service Delivery suite for wayfinding within workplaces.

  Note:
  Install both Indoor Mapping and the dependent plugin Workplace Indoor Mapping.

- To synchronize Indoor Mapping map data and map objects (campus, buildings, floors, place, and place types) that you created in Indoor Mapping Map Studio with Workplace Service Delivery, see Synchronize Indoor Mapping with Workplace Service Delivery.

Using External IDs

Use external IDs to resolve spaces that do not match the locations in Workplace Service Delivery from Indoor Mapping or Mappedin maps after importing or synchronizing a building.

Configure Workplace Space Mapping

Install and Configure Workplace Space Mapping with Indoor Mapping and Mappedin (third-party map provider).

Setting up Workplace Space Mapping

Configure and synchronize Indoor Mapping and Mappedin map data and objects with Workplace Service Delivery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activating Workplace Space Mapping

Activation of the Workplace Space Mapping plugin depends on what family release you are currently using.

For Workplace Service Delivery to work with Workplace Indoor Mapping and Mappedin install both Indoor Mapping and Workplace Indoor Mapping plugins from store. For Mappedin install the Mappedin plugin (sn_wsd_mappedin) from store.

Configure Indoor Mapping with Workplace Service Delivery

Synchronize the Indoor Mapping map data and map objects to work with Workplace Service Delivery, see Configure Workplace Indoor Mapping.

Configure Mappedin with Workplace Service Delivery

To use Mappedin as your third-party map application, complete the configuration requirements.

Mappedin integration requirements

Requirement	Description
Obtain Mappedin credentials and export credentials	ServiceNow uses credentials provided by MappedIn to import space data (buildings, floors, and spaces). Export credentials are required by the ServiceNow AI Platform to render a Mappedin map and to successfully periodically reimport updated floor plans. • The Client ID credential is the equivalent of a user name in Workplace Core • The Client Secret is the equivalent a password in Workplace Core
Install and activate the Mappedin integration	Install and activate the Mappedin integration in order to use Workplace Space Mapping to manage imported data and customize the map. For more information, see Install the Mappedin integration
Enter credentials in Workplace Space Mapping	You must enter your Mappedin credentials in Workplace Space Mapping. For more Maintain Workplace Service Delivery Mappedin credentials
Configure a connection in Workplace Space Mapping	The base system provides a pre-configured connection to Mappedin.

Maintain Workplace Service Delivery Mappedin credentials

To configure and work with Mappedin ensure that you have a valid login credential. Work with the Mappedin to obtain these credentials.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_wsd_mappedin.admin

Procedure
1. Navigate to **All** > **Space Mapping** > **Mappedin Administration** > **Credentials**.
2. Click **Mappedin Credentials**.
   These credentials are the Client ID and Client Secret that enables you to render a map.
3. Enter the information provided by Mappedin.
4. Click **Update**.
5. Click **Mappedin Export Credentials**.
   These credentials are the Client ID and Client Secret that enables you to export a map.
6. Enter the information provided by Mappedin.
7. Click **Update**.

Customize the map properties

Customize how your map renders in the Workplace Service Portal by configuring Workplace Space Mapping properties.

Before you begin
Role required: admin

About this task
Indoor maps properties are specific to ServiceNow AI Platform capabilities. Map properties are customizable and define and determine the appearance of the legend, labels, or text that is displayed on an indoor map. Select Indoor Mapping or Mappedin as your map provider. Indoor Mapping is an inbuilt map provider with Workplace Service Delivery.

Procedure
1. Navigate to **Space Mapping** > **Map properties**.
2. Set the following property values.

Map properties

Property	Description
Define whether the Mappedin or Indoor Mapping map provider is used for reservations and wayfinding. [sn_wsd_space_map.mapping_technology]	Select **Indoor Mapping** or **Mappedin** as your map provider. **Note:** Indoor Mapping is a part of the Workplace Service Delivery suite. Mappedin is a third-party map provider and requires a separate installation license.
Text to display for 'Available' legend. [sn_wsd_space_map.legend_available_text]	Option in the map legend for spaces that can be booked or reserved. Select **Available**, **Free**, or **Open**.
Color to use for 'available' rooms (must be a valid CSS color), leave empty to use the default color.	Option to indicate the CSS color or color name for spaces that can be reserved. If the

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
[sn_wsd_space_map.legend_available_color]	color is not a valid CSS or if the property is empty, the indoor map uses the default color.
Write the name of the image you want to use for available spaces pattern [sn_wsd_space_map.pattern_available]	Image pattern to show available spaces on a floor map. For example: pattern-available.svg
Text to display for 'Booked' legend. [sn_wsd_space_map.legend_booked_text]	Option in the map legend to indicate spaces that are already booked or reserved. Select **Booked**, **Reserved**, or **Taken**.
Color to use for 'booked' rooms (must be a valid css color), leave empty to use the default color. [sn_wsd_space_map.legend_booked_color]	The CSS color or color name to indicate spaces that are already booked or reserved. If the color is not a valid CSS color or if the property is empty, the indoor map uses the default color.
Color to use for a selected item on the map (must be a valid css color), leave empty to use the default color. [sn_wsd_space_map.selected_item_color]	The CSS color or color name to indicate space that is selected. If the color is not a valid CSS color or the property is empty, the map will use the default color.
Write the name of the image you want to use for reserved space patterns. [sn_wsd_space_map.patter_booked]	Image pattern to show reserved spaces on a floor map. For example: pattern-booked.svg.
Enable display of permanent seat assignments on map. [sn_wsd_space_display_seat_assignment]	Displays permanent seat assignments on a map. The employee names are also displayed if the employee names are part of a workplace profile. Select **Yes**. A Toggle button is available on the floor map to enable or disable this option. For more information, see Display permanent seat assignments on floor maps. **Note:** This property is available when you have Indoor Mapping maps.
(Mappedin specific) Adjust the margin between labels measured in pixels (1-50) [sn_wsd_space_map.margin_between_labels]	Sets the space between labels and determines how many labels are visible at once. A lower value results in more labels while a higher value results in fewer labels. This property is available only for Mappedin indoor maps.
Show Reservation and/or Occupancy information on Location Directory [sn_wsd_space_map.show_rsv_occ_data_loc_dir]	Displays Reservation and Occupancy states on the Location directory portal. Set the value to **Yes** to see the occupancy and reservations states on the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
Configure the default state for the neighborhood indicator on the location directory [sn_wsd_space_map.display_neighborhood_on_the_map]	Map property to display the neighborhood on the Location directory. Select any of the following available list options as required: ○ Available: The employees can view and filter spaces by neighborhoods. The **Neighborhood** check box is not selected by default. Select the check box to view neighborhoods for a selected floor. ○ Inactive: The **Neighborhood** check box is inactive and not available on the Location Directory. Employees can't view neighborhoods for a selected floor. ○ Default: By default, the **Neighborhood** check box is available and enabled on the Location directory. ○ User preference: By default, the **Neighborhood** check box on the Location directory isn't enabled. If you select this option, your preference is stored in your next browser session. To disable neighborhoods on the Location directory, you can deselect the Neighborhood check box.
Enable persistence of filters on the location directory [sn_wsd_space_map.location_directory_filter_persistence]	Select **Yes** to enable persistence of space availability filters for browser sessions and tabs on the location directory. By default, this property is set to true. The filters are retained or persist across browser sessions and tabs. If you log out and log in to the Location directory, space availability filter information is retained from your last browser session.

3. Click **Save**.

Configure Workplace Indoor Mapping

Configure Indoor Mapping map data and objects to work with Workplace Service Delivery with Indoor Mapping.

Role: admin.

Create and manage indoor map data and map objects with Indoor Mapping Map Studio. Add indoor maps as your map provider and import the indoor map objects in Workplace Service Delivery. Integrate your maps and place types to provide indoor navigation and wayfinding.

Navigate through indoor spaces with inbuilt indoor maps Workplace Service Delivery. You can manage reservations, locate a space or desk near a colleague, or move a desk or report issues. Employees can use the Workplace Service Delivery service portal. Indoor Mapping provides interactive locations and wayfinding for workplace users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Get real-time insights on space utilization within a building like meeting rooms, venue, and workspaces using Reservation Management.
2. Fulfill service requests quickly with Workplace Service Delivery case management. View space details and use indoor maps to locate a campus, building, or floor interiors.
3. Use Workplace Service Delivery move management to request a desk move from one location to another if a workspace is mapped to Indoor Mapping map data.
4. Provide interactive locations and wayfinding solutions by entering the start and destination points on indoor maps from a space in a campus, building, or floor for workplace users.

Install Workplace Indoor Mapping dependent plugins

Install the dependent plugins for Indoor Mapping.

Before you begin

Role required: admin

Visit the ServiceNow Store website to view the required apps for integrating Indoor Mapping with Workplace Indoor Mapping.

Note:
Install the Workplace Indoor Mapping Core plugin (sn_wsd_indoor_map) in your ServiceNow instance before you install Indoor Mapping plugin (sn_map_core).

For cumulative release notes and information for all released apps, see the ServiceNow Store version history release notes.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Search for **Workplace Indoor Mapping** and **Indoor Mapping** in the application name using the filter criteria.
3. Review the application dependencies.

   Install the dependent plugins before installing Indoor Mapping.
4. The following dependent plugins must be installed to integrate Indoor Mapping with Workplace Service Delivery.

Dependent plugins required for Indoor Mapping installation

Dependent plugins	Description
Workplace Core (sn_wsd_core)	Provides workplace shift management and scheduling capabilities for workplace managers.
Workplace Space Mapping (sn_wsd_space_map)	Provides space-mapping capabilities to support Workplace Service Delivery. **Note:** When Workplace Indoor Mapping is installed, it automatically installs Workplace Space Mapping.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Dependent plugins	Description
Workplace Reservation Management (sn_wsd_rsv)	A universal reservation application offering unified reservation experience to your employees. The application enables employees to reserve rooms, desks, or any other workplace item at their desired time. You can view relevant information and services that are available for reservation at each location using Indoor Mapping maps.
Workplace Case Management (sn_wsd_case)	Workplace Case Management application that fulfills workplace service requests.
Workplace Move Management (sn_wsd_move)	Enables an employee to relocate from one location to another. Employees can collaborate, communicate, and easily manage space changes using the Workplace Service Portal.

Create a new Indoor Mapping space

Create a Indoor Mapping space in Workplace Indoor Mapping.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Space Mapping** > **Indoor Maps Administration** > **New Indoor Mapping Space**.
2. Complete the following information:

New Indoor Mapping Space

Field	Description
Number	Auto-generated unique number to identify a space.
Active	Space is active or inactive.
Name	Place name as it appears in a workplace.
Is Reservable	Workplace user can reserve the space using the reservation management.
Title	Space title that appears on Indoor maps.
Space Type	Space type. For example: meeting rooms
Region	Geographical region where the space is located.
Site	Site name.
Campus	Campus where the space is located.
Building	Building where the space is located.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Floor	Floor name.
Area	Area name.
Is reservable	Check box option to specify if the space can be reserved.
Space type	Type of space or place. For example: Elevator, cafe, restroom and so on.
Managed by group	Workplace Service Delivery user group name.
Managed by	Workplace Service Delivery facility manager or admin user name.
Indoor map place	Indoor mapping location. Ensure that the parent hierarchy is synced to view available locations. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.

3. Click **Submit**.

Configure Mappedin

Mappedin is a third-party Indoor map provider. Integrate Mappedin with Workplace Service Delivery to provide indoor navigation.

Mappedin overview

Mappedin version 1.11.0 is not available for new customers to install. Existing customers can upgrade to Mappedin version 1.11.0.

Mappedin indoor mapping software is integrated with Workplace Service Delivery to deliver digital mapping platform for employees and workplace users.

Integrate Mappedin with Workplace Service Delivery

Integrate Mappedin with Workplace Service Delivery to provide employees, facility managers, and workplace users the ability to leverage indoor navigation capabilities. Floor plans are updated in real-time to provide a seamless navigation inside the workplace areas, buildings, and floors. Mappedin provides interactive locations and wayfinding solutions within a workplace space. The integration allows customers to easily switch back and forth from the Workplace Service Delivery solution to the Mappedin map editor using Single Sign-On (SSO).

Facility managers can edit floor plans in real-time and employees can reserve a workplace space using the interactive floor maps to view the reserved, unavailable, and available spaces for booking a meeting room and so on. The spaces are color coded to differentiate such spaces from each other.

Install the Mappedin integration

Activate the Mappedin integration if you have the admin role.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Mappedin is integrated with Workplace Service Delivery depending on the release version:

- For the Rome and later releases, install the Workplace Service Delivery with Mappedin (sn_wsd_mappedin) plugin and the Mappedin plugin from store.

- For the New York release with the full Workplace Service Delivery Suite (sn_wsd_suite) or just a few applications, ServiceNow Customer Service must first activate the following plugins:
  - ServiceNow IntegrationHub Runtime (com.glide.hub.integration.runtime)
  - ServiceNow IntegrationHub Action Step - REST (com.glide.hub.action_step.rest)

  After these plugins are activated, activate Workplace Space Mapping (sn_wsd_space_map).

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Maintain import properties

Use Import Properties when you create your own credential records, scheduled imports, or data sources. Currently, the properties are configured for the records used when importing.

Before you begin

Role required: sn_wsd_mappedin.admin

Procedure

1. Navigate to **All** > **Space Mapping** > **Mappedin Administration** > **Import properties**.

   Note:
   Only make edits if you are configuring your own credential records, scheduled imports, or data sources.

2. Make edits to properties.
3. Click **Save**.
   Other properties are found under the System Property [sys_properties] table.
4. Enter `sys_properties.list` in the navigation filter and open the following properties

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Convert Mappedin data to Workplace Space Mapping data

Use the **Mappedin Type Mappings** table to convert data from Mappedin to Workplace Space Mapping data.

The **Mappedin Type Mappings** table has configurations to convert the Type and Subtype data used in a Mappedin map to **Table** and **Space type** used in Workplace Core.

Terms

The terms used in Mappedin and how they relate to Workplace Core:

Mappedin and Workplace Core terms

Mappedin term	Workplace Core term
Venue	Building
Map	Floor
Location	Spaces

Mappedin data

For example, you want to convert a Mappedin map with the following information:

- Single floor building
- 14 total locations
  - 10 desks (Mappedin type = Desk)
  - Two conference rooms (Mappedin type = Meeting room)
  - Two restrooms (Mappedin type = Amenities, Subtype = Universal Washroom)

Workplace Core data

You want to convert the Mappedin data from the 14 locations, and want them converted to:

- Desks
- Rooms
- Restrooms

Note:
You don't want all the Mappedin data to be converted to Spaces or Desks.

Type mappings

To ensure your locations move to the correct Space (sn_wsd_core_space) or Room (sn_wsd_core_room) tables, and ensure that the locations have the correct type (Restroom or Desk), make the following type mappings in the **Mappedin Type Mappings** table:

- Mappedin locations with the type = Desk (no subtype) converted to the Space (sn_wsd_core_space) table and have the Space type set to Workspace/Desk.
- Mappedin locations with the type = Meeting room (no subtype) converted to the Room (sn_wsd_core_room) table and have the Space type set to Room.
- Mappedin locations with the type = Amenities and subtype = Universal Washroom converted to the Space (sn_wsd_core_space) table and have the Space type set to Restroom.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can import a Mappedin building (single floor building) and the 14 locations go to the correct tables and have the correct types.

Maintain type mappings

Use **Type mappings** to convert the Type and Subtype locations in Mappedin to the Table and Space type used in Workplace Space Mapping.

Before you begin

Role required: sn_wsd_mappedin.admin

Important:
In the Workplace Service Delivery Suite, from Workplace Core version 2.5.3, the **Space type (space_type)** choice field is depreciated. After the upgrade, Space types are configured in the **Space Type Configuration**. The **Space type (space_type)** field is migrated as **Space type (location_type)** field in the Space table [sn_wsd_core_space]. Customers having customization on the depreciated **Space type (space_type)** field are advised to manually migrate their flow to use the new **Space type (location_type)** field. A new fix script, **Populate Location Type from Space Type**, is introduced to execute the schedule job, **Populate location_type from space_type**, on the Space table [sn_wsd_core_space] to migrate the depreciated **Space type (space_type)** field value to the new **Space type (location_type)** field.

Procedure

1. Navigate to **All** > **Space Mapping** > **Mappedin Administration** > **Type mappings**.
2. Click **New** and complete the following:

Mappedin Type Mapping

Field	Definition
Mappedin type	The Mappedin Location type. When a Mappedin map imports, the type is associated with the Space type. The base system provides Mappedin types and subtypes that are associated with Workplace Core Table and Space type.
Mappedin subtype	The Mappedin Location Amenities type. For example: ○ Women's washroom ○ Men's washroom
Table	The Space (sn_wsd_core_space) table you want to import a Mappedin Location into. **Note:** The Location type and Subtype must match the Mappedin type and Mappedin subtype fields.
Space type	The space type you are associating a Mappedin location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Definition
	Note: The Location type and subtype must match the Mappedin type and Mappedin subtype fields. The value in this field appears on the rendered map when an employee reserves a space.

3. Click **Submit** or **Update**.

Import a new building - Mappedin

Use **Import a new building** to import the Mappedin map and define the building details.

Before you begin

Role required: sn_wsd_mappedin.admin

Note: You can only import Mappedin maps. Before running an import, back up the building, floor, and spaces.

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Import a new building**.
2. Fill in the fields.

Mappedin venue

Field	Description
Number	A unique number automatically generated by the application that identifies the building.
Name	Name of the building. **Note:** Be specific and have a consistent naming convention when naming your buildings.
Region	Geographic location of the building. Click the Lookup using list icon to view a list of regions you can select.
Site	The location of the building within a region. Click the Lookup using list icon to view a list of sites you can select.
Campus	Name of the campus if you have multiple buildings at a site.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Select a venue to import	The name of the Mappedin venue you want to import.
External ID	The Mappedin external ID that represents the map you are importing. The value defaults to the name of the Mappedin venue. **Note:** After selecting a venue, do not change the External ID.
Active	Option indicating whether this building is active.
Is reservable	Option indicating whether a workplace user can reserve spaces for the building.
Managed by group	The group that manages the space reservation for the building. Click the Lookup using list icon to view a list of groups you can select.
Managed by	The workplace manager of the group that manages the space reservation for the building. Click the Lookup using list icon to view a list of group managers you can select.

3. Click **Import**.
   The **Import Building On-Demand** designer flow initiates. The **Floors**, **Areas**, and **Spaces** related list tabs appears. If values do not appear, try refreshing the form.
4. Review the imported Mappedin data and make corrections.
5. Click **Update**.

Import an existing building - Mappedin

Follow these steps to import an existing building for a Mappedin map.

Before you begin

Role required: sn_wsd_mappedin.admin

Procedure

1. Create external IDs for the buildings you want to import.
   For instructions, see Use external IDs to match spaces between Workplace Service Delivery for Mappedin.
2. Click **Yes** in the confirm dialog box.
   An email arrives with links to the buildings, floors, and space lists in a specific view. The list layout in the email has columns relevant to Mappedin.
3. Export the records in a spreadsheet and send to Mappedin with the floor plans.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Mappedin creates floor plans with the external IDs.

4. Navigate to **Workplace Core** > **Space Administration** > **Buildings**.
5. Select the building and click the **Update this building's Mappedin import** related link.
6. From the **Select a venue to import** list, select the venue.
7. Select **Update**.

Using Workplace Space Mapping

With Workplace Space Mapping, your organization can integrate with third-party applications such as Mappedin, customize imported maps, and manage the required data.

Type mappings

When you integrate with a indoor map provider - Indoor Mapping or Mappedin, you must first associate the map types to the map types used by Workplace Service Delivery. This association ensures that your spaces are imported to the correct table with the correct type (Workplace and Desk).

- Indoor Mapping provides inbuilt indoor maps for indoor navigation and wayfinding. Synchronize Indoor Mapping place types with Workplace Indoor Mapping places and spaces. Configure Indoor Mapping place and place type in the Map studio and then import the map objects and place types in Workplace Indoor Mapping. After the map data and map objects are synchronized, use Workplace Service Portal for managing reservations within workplace, case management, and move management. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
- Mappedin is a third party map provider and provides indoor maps and wayfinding for workplace users. For more information on how type mappings are converted from Mappedin to Workplace Space Mapping, see Convert Mappedin data to Workplace Space Mapping data.
- For more information on maintaining type mappings for Mappedin, see Maintain type mappings.

Import flow

The weekly (Saturday) **Auto-Import Buildings** iHub Flow keeps your map up to date by querying the API of your integrated applications. Any changes to one building in the application's software should be reflected in Workplace Space Mapping.

For example, if you integrate with Mappedin and the Auto-import Buildings iHub Flow runs successfully:

- The Auto-Import Buildings iHub Flow queries for all buildings associated with Mappedin.
- The Auto-Import Buildings iHub Flow works with the Mappedin export API to look for any changes to a building made by Mappedin. If there are changes, the building is updated.

External IDs

Use external IDs to resolve spaces that don't match locations between Workplace Service Delivery Mappedin after importing a building or for existing buildings. For more information, see Use external IDs to match spaces between Workplace Service Delivery for Mappedin.

Configuring map properties

Configure map properties to customize the way your map renders in the Workplace Service Portal location directory. For more information, see Customize the map properties. For more

© 2026 ServiceNow, Inc. All rights reserved.

information about space update and allocation using interactive floor maps, see Map-based Administration Edit a building's spaces using a map.

Use external IDs to match spaces between Workplace Service Delivery for Mappedin

After importing a new Mappedin building or after importing an existing Mappedin building, if the locations don't match in Mappedin and Workplace Service Delivery, then use external IDs to resolve space location issues.

Before you begin
Role required: employee and admin

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration** > **Buildings**.
2. Click a building that has spaces that don't match locations.
3. Click the **Generate external IDs** related link.
4. Click the **Spaces** tab.
   External IDs appear for each space. You can also create external IDs for multiple buildings.
5. From the **Buildings** list, check each building that you want external IDs for.
6. Click **Action on selected rows** and select **Generate external IDs**.

   Note:
   Buildings with spaces that have existing external IDs are ignored.

7. Click **Yes** on the **Confirm** pop-up.
   An email notification verifies the generated external IDs for the spaces, floors, and buildings. Use the links in the email to export a file that you can provide to Mappedin.

Properties installed with Workplace Space Mapping

The following properties are installed with Workplace Space Mapping. Navigate to **All** > **Workplace Space Mapping** > **Properties** or enter sys_properties.list in the context menu and search for Workplace Space Mapping properites.

Workplace Space Mapping properties

Property	Description
sn_wsd_space_map.mapping_technology	Specifies the map provider that is used for workplace reservations and wayfinding. You can select Mappedin or Indoor Mapping as the map provider for your instance.
sn_wsd_space_map.legend_available_text	Text that is displayed for the `Available` legend.
sn_wsd_space_map.legend_available_color	Color that is used for available rooms. The value must be a valid CSS color. If this property is empty, the default color is used.
sn_wsd_space_map.pattern_available	Name of the image that you want to use for available space patterns.
sn_wsd_space_map.selected_item_color	Color that is used for a selected item on the map. The value must be a valid CSS color. If this property is empty, the default color is used.
sn_wsd_space_map.legend_booked_text	Text that is displayed for the `Booked` legend.
sn_wsd_space_map.legend_booked_color	Color that is used for booked rooms. The value must be a valid CSS color. If this property is empty, the default color is used.
sn_wsd_space_map.display_seat_assignment	Displays the permanent seat assignments on the location directory.
sn_wsd_space_map.pattern_booked	Name of the image that you want to use for reserved space patterns.
sn_wsd_space_map.margin_between_labels	Adjusts the margin between labels measured in pixels. The range of values is between `1` and `50`. This property is specific to Mappedin.
sn_wsd_space_map.show_rsv_occ_data_loc_dir	Displays Reservation and Occupancy information on the location directory.
sn_wsd_space_map.auto_refresh_show_rsv_occ_data_loc_dir	Add a refresh time interval in minutes to show reservation and occupancy information on location directory. Auto-refresh is turned off if this property is set to 0 or a negative number. Based on this value, the map is automatically updated to display the latest reservation and occupancy information for a selected location.
sn_wsd_space_map.display_neighborhood_on_floor_map	Shows the neighborhood indicator on the location directory.

Workplace Space Mapping properties (continued)

Property	Description
	You can select one of the following options: • **Available**: The employees can view and filter spaces by neighborhoods. You can select the **Neighborhood** check box on the location directory to view neighborhoods for a selected floor. • **Inactive**: The **Neighborhood** check box is inactive and not available on the location directory. Employees can't view neighborhoods for a selected floor. • **Default**: The **Neighborhood** check box is available on the location directory and selected by default. • **User preference**: The **Neighborhood** check box is available on the location directory but not selected. If you select this option, your preference is stored in your next browser session. To disable neighborhoods on the location directory, you can clear the **Neighborhood** check box.
sn_wsd_space_map.location_directory_filter_persistence	Enable persistence of filters on the location directory. If this property is set to **true**, filters are retained across browser sessions and tabs. If you log out and log in to the location directory, the space availability filter is retained from your last browser session.
sn_wsd_space_map.map_default_location	Default location that is zoomed into when you open the location directory. You can select one of the following values: • **World map**: The location directory opens in the world map view and doesn't zoom into any location. • **Workplace Profile**: The location directory opens and zooms into your workplace profile location. • **User preference**: The location directory zooms into the location that you select.
sn_wsd_space_map.default_label_on_map	Default value that is used for the labels on the map. Select one of the following options:

© 2026 ServiceNow, Inc. All rights reserved.

Exploring Workplace Space Management

Space Management helps workplace users find and book a desk near their team members, reserve meeting rooms for a client or team meeting, and reserve parking spaces. It allows the inventory of available workplace spaces to be optimized for employees so that they can perform their work more efficiently.

Enhanced space administration

The Workplace Space Management application is an enhanced and upgraded version of the existing Space administration module that is available in the ServiceNow® Workplace Core application. While you have a complete access to the Workplace Core application, the Workplace Space Management application in addition enables you to perform workplace-related forms in the Space Management view.

Workplace Space Management

Monitor workplace locations

As a Workplace manager, the application enables you to administer any workplace location, such as employee workspaces, conference rooms, office buildings, campuses and more. You can perform any action on a workplace location at a single place in simple steps. You can manage regions, sites, campuses, buildings, floors, areas, rooms, and spaces using the application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Perform exclusive space-related actions

Apart from the features provided by Workplace Core, the Workplace Space Management application enables you to do the following exclusive space-related actions:

- Use all space administration-related actions available in the Workplace Core application.
- Specify the measurement details of a location such as the measuring unit and size of a space.
- Assign a cost center or department to a space.
- Configure a workspace or desk as flexible or permanent.
- Configure a space type as usable.
- Update or recalculate a workplace location's total and usable size whenever there are changes.
- View the reason for anomalies caused in a workplace profile.

For more information about each feature, refer to Managing workplace locations.

Optimize spaces by planning scenarios

Install Workplace Central application to use the Space optimization feature that helps you plan scenario to your allocate spaces, change user assignment and make other space-related changes in an efficient way. Perform scenario planning using stack plans and a floor map view. For more information about Workplace Central - Space optimization, refer to Space Optimization.

Use Workplace Core features

The application enables you to perform the following actions the same as you would do in the Workplace Core application, but with extra features:

- Create records for your workplace data.
- Configuring spreadsheets to import workplace data.
- Add a space type configuration.
- Block a workplace location.

Space Optimization

As a space planner, you can use the Workplace Central to monitor all your scenarios and workplace-related information from a single page called Space Optimization.

Benefits of Space Optimization

As a space planner, you can do the following using the Space Optimization module:

- View the active number of all the scenarios created in your organization, the ones that were created by you, published scenarios and draft scenarios.
- View and work on space assistance requests raised in the organization.
- Monitor the total number of space assistance requests raised and view their current status at any time.
- Create a scenario for a building or multiple buildings.
- Open a scenario owned by you and make changes using the stack plan.
- View a scenario and see the space allocations in a stack plan or floor map view. You can review a scenario in a read-only mode and share your feedback on space allocations with the scenario owner or other stake holders.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create a single scenario or multiple scenarios. You can work on multiple scenarios at a time, and publish them so that your colleagues or stake holders can review. After finalizing, you can deploy the best one.
- View all buildings stack plans of your organization. You can also create a scenario directly from the building details page.
- Perform map-based administration with Workplace Indoor Mapping maps. View space allocations and assignments on a floor map. Change allocations on the map directly.
- View users assigned to a space, assign a user to a space or remove an assigned user.
- Change a space assignment from flexible to permanent or vice versa.
- Add, change, or remove a single allocation or multiple allocations at a time if you want to change their existing department or cost center.

For more information about the Space Optimization homepage key features, refer to Space Optimization - Key features and actions.

Installing and accessing Space Optimization

You must install the following plugins to use the Space Optimization module:

- Workplace Central
- Workplace Space Management
- Workplace Case Management
- Workplace Indoor Mapping

To open the Space Optimization module, follow any of the following steps on Employee Center:

- Navigate to **Workspaces** > **Workplace Central** > **Space Optimization**.
- Navigate to **All** > **Workplace Central** > **Workplace Central** > **Space Optimization**

You can also view the scenarios created by you from **All**

View Space Optimization metrics

You can view Space Optimization metrics in the Workplace Analytics dashboard. For more information, see View Space Optimization metrics.

View Space Occupancy metrics

Ensure that you have installed the Workplace Connectors application. For more information Occupancy Dashboard metrics, see View Occupancy Dashboard.

Scenario Planning

Manage space allocations in your workplace in the most efficient way using the Space optimization scenario planning feature. Adjust your existing space allocations, floor arrangements, and employee seating plan by creating a scenario and deploying it.

Overview of Scenario Planning

The Workplace Central is like a central homepage where you can monitor all your workplace-related tasks. The Workplace Central provides you the Space optimization module that enables you to create scenarios using a stack plan and view the plan on the floor map. Using the Space optimization module, as a space planner you can perform several actions related to scenarios

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

such as creating a scenario, monitoring the number of scenarios created and more. For more information about the Space optimization module, refer to Space Optimization.

Space Optimization enables you to perform scenario planning using a stack plan and a floor map. Scenario planning enables you to create multiple versions of a building with different space allocations until you finalize the best plan. You can share a scenario between multiple stake holders and deploy the best plan to the production.

Working with Scenario planning

To create a scenario using the space optimization feature, you must install the latest version of the following plugins:

- Workplace Central
- Workplace Space Management
- Workplace Move Management
- Workplace Indoor Mapping

Install the plugins from the from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes. .

Using the Space optimization module you can create scenarios for a single building or multiple buildings. You can perform the following actions while working with a scenario:

- A scenario creates a copy of a building with its entire space allocation plan and displays in on a stack plan, according to floors. A stack plan enables you to view all the allocations made on different floors of a building with clear divisions and colors.
- Using the stack plan, visualize spaces and departments as bars and move them to different floors as required. The bars are color-coded and depending on the allocation, the numbers are displayed. You can view unallocated spaces on a floor. You can categorize the spaces based on their department or cost center. You can switch views depending on how you want to view the spaces.
- You can also create a copy of an existing scenario. You can create multiple scenarios of a building and compare the best plan with your stake holders. You can share these scenarios with other colleagues or stake holders by changing the ownership of the scenario and deploying it after finalizing one.
- Create a single scenario or multiple scenarios. You can work on multiple scenarios at a time, publish them so that your stake holders can review.
- Send a scenario for approval after you publish it. The application provides a default approval definition which is used to process approvals.
- You can view your approver and approval-related details in an Approver tab.
- You can deploy an approved scenario directly. In case the scenario is rejected, you can view the details of rejected and implement changes. You can send a scenario for approval multiple times till it is approved.
- Change space assignments on a floor, move a department or cost center from one floor to another, add or remove spaces, view the number of unallocated spaces, and more.
- Change the user assignment of a space, such add or remove a user.
- Vacate a floor easily by moving all the allocations to another floor with simple bar movement on the stack plan.
- Assign a space as permanent or flexible or remove the setting.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- You can also directly move spaces on a floor using the Floor map view. The Workplace Indoor Mapping floor map enables you to make allocations, assignment type, and user assignment-related actions.

Note:
Ensure that you have installed Indoor Mapping to visualize and reserve spaces using floor maps.

Schedule Planning

Manage space assignments to help employees head back to the office.

Schedule Planning overview

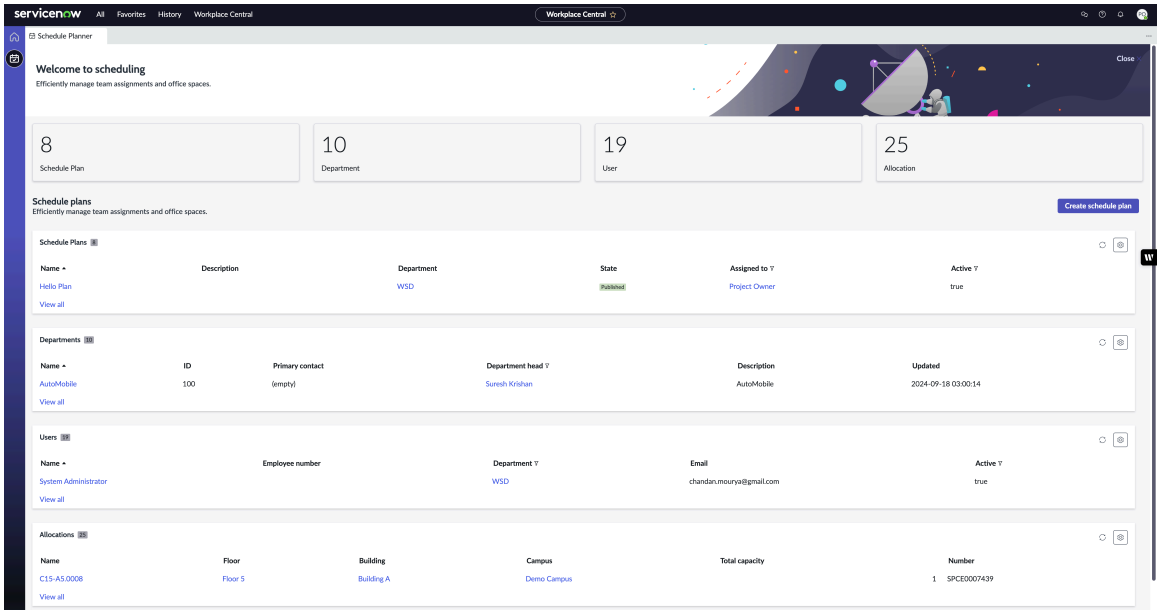
Schedule Planning provides a streamlined experience for project managers to assign and manage employee assignments based on project time frames.

As a project manager, you can do the following:

- View a list of employees assigned to your project
- View a list of spaces allocated for your project
- Create a schedule plan for a specific period to map spaces to the employees
- Execute a schedule plan to assign spaces to the Workplace Profile of the users

Accessing Schedule Planning

You must install the following plugins to use the Schedule Planner module:



- Workplace Central
- Workplace Space Management

You can install the plugins from the ServiceNow Store. You can also visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information of all the released apps, see the ServiceNow Store release notes.

Important:
You must set a value for the *sn_wsd_core.ALLOCATION_TYPE* property to enable schedule planning.

To access the Schedule Planner, navigate to **All** > **Workplace Central**, then select the **Schedule Planner** module in the workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

As a project owner, you can view the created schedule plans, projects assigned to you, and the spaces and users assigned to the projects. You can create a schedule plan or edit existing schedule plans. For more information, see Working with Schedule Planning.

Note:
A project owner can create schedule plans for the projects that are assigned to them. Projects can be assigned to a user from the following fields:

- **Primary contact** field of the department
- **Manager** field of the cost center
- **Managed by group** or **Managed by** field of the workplace entity

Only one of the fields is considered for the project list based on the *sn_wsd_core.ALLOCATION_TYPE* property.

Schedule Plan states

A schedule plan can be in one of the following states:

- Draft: Project owner has created a new schedule plan but has not filled the details or started the workplace assignments.
- In Progress: Project owner has filled the schedule plan details and the workplace locations are being assigned to the users.
- Published: Schedule plan is created and the workplace locations are assigned to all the users.
- Complete: Schedule plan has reached the specified end date and the workplace location assignments are made inactive.
- Cancelled: Project owner has cancelled the schedule plan and the workplace location assignments are made inactive.

Note:
The *Complete the lapsed schedule plan* job runs every day to check which schedule plans have reached the end date and move them to the **Complete** state.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Allocation - types, setting, and impact

You can categorize the locations in your organization based on cost center, department, or workplace entity.

Allocate your workplace location to a type based on which at any time the location can be classified when performing various workplace-related activities.

Allocation types

You can allocate your workplace location under the following system provided allocation types:

- Cost center
- Department
- Workplace entity

Important:
Starting from Workplace Core version 2.16.1, the allocation type **Department and cost center** is no longer available. A new allocation type **Workplace entity** is introduced that provides more advantages.

System property

The application provides you with the system property, Allocation type [*sn_wsd_core.ALLOCATION_TYPE*], which enables you to specify an allocation type based on which you want spaces to be retrieved and displayed to users while searching for spaces to reserve, during scenario planning, space recommendation and more.

When a user searches for a space to reserve, depending on the allocation type, the workplace profile of the user, and the **Reservation Allocation check** and **Enable allocation duration check** settings in the reservable module, the spaces are displayed to the users. The duration check follows only the start and end dates of the allocation, which are set in the system time zone.

If you do not specify any allocation in the system property, then the **Require Allocation check** field is not available in the reservable module form.

Setting an allocation type

On the workplace location's record, you can create or activate an existing allocation in the Allocations related list. For more information, refer to Allocate a cost center, department, or workplace entity.

If you are an existing customer and are using Workplace Core version below 2.16.1, then a fix script is automatically applied to map your existing allocations to the Allocation type [*sn_wsd_core.ALLOCATION_TYPE*] property. For example, if your allocations are based on Department, then the property is set as Department. Similarly, if your allocations are based on Cost center, then the property is set as Cost center. If your allocations include both Cost center or Department, then the property is set as empty and warnings are displayed to specify an allocation type.

Impact of allocation

Depending on a workplace location's allocation, the following actions are performed:

- When an employee searches for a location to reserve and if the **Require allocation check** and **Enable allocation duration check** options are enabled on the reservable module, the appearance of the resultant locations depends on the allocations that the employee can

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

access. The duration check follows only the start and end dates of the allocation, which are set in the system time zone.

- You can make allocations based on the cost center, department, and the workplace entity to which a location or employee belongs.
- You can make allocations based on the business hierarchy of your organization. You can assign a location or an employee to a workplace entity and create a hierarchy. The application enables you to configure entity types based on your businesses and assign workplace entities to them. You can also create a parent-child hierarchy between workplace entities. For more information, refer to Configure Workplace entity and entity types.
- During scenario creation, you can specify based on what type of allocation you want to group the spaces. The grouping options are displayed to you based on the allocation that is specified in the system property *sn_wsd_core.ALLOCATION_TYPE*.

> **Important:**
> You cannot create a scenario based on workplace entities. You can only view and make map space administration for workplace entities.

- During scenario planning, you can also change the **View by** option of a scenario to view based on different allocations. However, you cannot edit the scenario if the **View by** that you selected is different than the **Group by** setting of the scenario.
- In the case of scenarios that are created with a **Group by** option that is not the same as the current allocation type set in the *sn_wsd_core.ALLOCATION_TYPE* system property, then such scenarios can only be viewed in a read-only mode.
- For a space, you can create multiple allocations of different types.
- When an employee raises a space assistance request, the allocation type of the spaces is set based in the allocation type that is specified in the Allocation type [*sn_wsd_core.ALLOCATION_TYPE*] system property.

Push down functionality in Workplace Space Management

The Workplace Space Management application enables you to push down the cost center or department of a parent workplace location to its child locations.

You can assign the cost center or department to child locations such as areas, rooms, and spaces. Select the **Push down** option on the Floor or Area form to apply the values of the **Cost center** or **Department** fields. The cost center or department is applied based on the **Push down** option selected in child workplace locations.

The following table explains how the push down functionality works with respect to **Cost center** and **Department** field configuration of a workplace profile and a space:

Access to spaces based on allocation

Users can be assigned a Cost Center, Department, or Workplace Entity. The Cost Center or Department is assigned from the Users [sys_user] table and the Workplace Entity is assigned from the User Workplace Profile [sn_wsd_core_workplace_profile] table.

Access to a space depends on the type of allocation set in the sn_wsd_core.ALLOCATION_TYPE system property and the allocation set in the space configuration.

Configuring Workplace Space Management

Install and configure Workplace Space Management for workplace space optimization.

Install Workplace Space Management

Install the Workplace Space Management application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin
Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.

2. Verify that the following plugins are activated:
   - Workplace Core (sn_wsd_core), minimum version 2.6.2
   - Workplace Space Management (sn_wsd_spcmgmt), minimum version 1.0

Use the following details when required:

- Name of the application: Workplace Space Management
- ID of the application: sn_wsd_spcmgmt

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   Search for the application by its name (Workplace Space Management) or ID (sn_wsd_spcmgmt). If you cannot find the application, you may have to request it from the ServiceNow Store.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Space Management.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   > **Important:**
   > If you don't load the demo data during installation, it's unavailable to load later.

6. Click **Install**.

Managing workplace locations

Apart from the space administration features provided by Workplace Core, the Workplace Space Management application enables you to configure exclusive space-related settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To create workplace location records for buildings, floors, areas, and spaces you can use Workplace Core or Workplace Space Management. To add a workplace records using Workplace Core, see Create records for your workplace data.

Workplace Space Management provides more options for workplace-related functionality to the workplace location records. You can use the Workplace Space Management application to view the workplace location forms in the Space Management view.

The following features are available in the Space Management view on the workplace location form:

Measurement details

Specify the measurement details of the workplace location such as the location size and the unit of measurement. For buildings, floors, and areas, you can also specify the total size and the usable size to plan infrastructure and other maintenance activities. For more information, see Compute CAD file properties to extract space or room surface area.

Allocation

Allocate or assign a cost center, department, or a workplace entity to workplace locations to track locations and perform workplace-related activities.

Push down the allocation to child locations

Automatically assign the allocation type of the parent location to the child locations. Specify how you want to implement the push down functionality in the **Push down** field. You can track the progress of the push down process in the **Push down state** field.

The push down functionality depends on the following conditions:

- If the child location has an existing allocation, the child location's allocation is either replaced or not replaced based on the **Push down** option specified in the parent location.
- The accessibility of the spaces assigned with an allocation depends on whether the user workplace profile configuration and the Space type configuration match. For more information, see Allocation - types, setting, and impact.

Space usability

Specify whether a space type is usable. If a space type is usable, the spaces assigned to that space type are included in reservation-related activities and the usable size calculation of the parent location. If a space type isn’t set as usable, then the spaces assigned to that type aren’t included in reservation-related activities or the usable size calculation of the parent location.

Flexible or permanent spaces

Configure a space as a flexible or a permanent space. This feature is applicable only to spaces of the space type **Workspace/desk**. If you configure a space as flexible, then the space is available for reservation on the Reservation portal. If you configure a space as permanent, then the spaces ares not available for reservation on the Reservation portal.

View anomalies caused in a workplace profile

You can view the reason for anomalies in a workplace profile. Anomalies in workplace profiles are caused by a mismatch in the cost center, department, or assignment type between the user and the workplace location. For more information, see Workplace location assignment anomaly types.

Add a campus

A Workplace Service Delivery campus contains buildings, floors, areas, or spaces.

Before you begin

Role required: sn_wsd_core.admin and sn_wsd_spcmgmt.manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration** > **Campuses**.
2. Continue with one of the following options.

Working on a campus record

Option	Action
To add a campus manually	Click **New**.
To edit or update a campus	Click open the campus that you want to edit.

3. Click **New** to create a new campus.
   Fill in the form field information.

New campus record form

Field	Description
Name	Name of the campus. Ensure that you enter a unique name. **Note:** Do not use duplicate names because it may affect the reservation process. If you change the name of campus after updating it, a message is displayed to show that the **Name** will be overwritten in the next synchronization process. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
Title	Title of campus as it appears on the map.
Region	Region where the campus is situated. Click to search for a region.
Site	Campus site name. Click the search icon () to search for a site.
Managed by	User assigned to manage the campus.
Managed by group	Group assigned to manage the campus.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: If a Workplace Service Delivery campus is synchronized with Indoor Mapping campus and if new Indoor mapping objects are added, workplace user groups are notified to synchronize the latest changes in Indoor Mapping with Workplace Service Delivery. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
Latitude	Latitude coordinates of a campus location.
Longitude	Longitude coordinates of a campus location.
Active	Option to show that the campus is in active state.
Street	Street where the campus is located.
City	Address of the campus.
Zip/Postal Code	Zip or Postal code of the campus location.
Order	When a sort Order is configured for a campus, the floor names are sorted accordingly. If the sorting Order value is not specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The campus names are alphabetically sorted based on the label name.
Indoor map campus	Search and select the Indoor Mapping campus that you want to integrate with Workplace Core campus. The name of the Indoor Mapping campus should be same as your Workplace Core campus. Your default map provider should be Indoor Mapping.

4. If you are integrating your campus with Indoor Mapping, perform the following steps:
   a. From the Related list, select **Buildings** and set the **Is reservable** column to true for a building.
   b. Repeat Step a for floor or floors in a building.
   c. Repeat Step a for Space types.
5. The place type mappings for Workplace Core space types and Indoor Mapping place types is available in the Place types mapping table (**All** > **Indoor Mapping** > **Place types** > **Space mapping** > **Indoor Mapping administration** > **Place Type mapping**).
   If you have multiple domains in your instance, then you might have to recreate the place type mapping records in the same domain as your location records. Place types and Space types must belong to the same domain.
6. Click **Synchronize** to synchronize floors, areas, and spaces in a campus.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Time zone of Workplace Service Delivery campus location is required to synchronize. Workplace reservation is created in a location timezone. For more information, see Indoor Mapping place types with Workplace Service Delivery space types, see Synchronize Indoor Mapping with Workplace Service Delivery.

7. To add an Indoor map campus, select the Additional Actions icon ( ) to select **View** > **Workplace Indoor Mapping Campus**.
   a. In the **Indoor map Campus** field, search for a campus and add it.
8. Click **Update** to edit a campus.
9. Building, floors, areas, and spaces available in a campus are listed.

Add a building using Workplace Space Management

Create a record for every building that is part of your organization. Specify to which region, site, and time zone does the building belong to.

Before you begin
Ensure that the region, site, and the campus of the building are active.

Role required: sn_wsd_core.admin and sn_wsd_spcmgmt.manager

About this task
Add details of your building. If your organization has several offices located all over the world, then add the details such as, in which region, site of the region, and campus in the site, the building that you are adding is located.

Procedure
1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select **Buildings**.
3. Click **New**.
4. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
   The form view changes.
5. On the form, fill in the fields.

Building form

Field	Description
Name	Name of the building. Ensure that you enter a unique name. For example, use the location name `<location-name>-16` rather than just `16`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Do not use duplicate names as it may affect the reservation process. If you change the name of a building after updating it, a message is displayed to show that the **Name** will be overwritten in the next synchronization process. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
Region	Select the region where the building is located.
Site	Select the site in the region where the building is located.
Campus	Select the campus of the site where the building is located.
Managed by group	Group that manages the entire workplace-related operations.
Managed by	Workplace manager who manages all the workplace-related operations.
Active	Option to activate the location. This field depends on the **Status** field. If the **Status** is set as **Future** or **Retired**, then the **Active** field is turned off.
Is reservable	Option to indicate that the spaces for this building are available for reservation. For example, if you do not mark a Building as reservable, then none the floors, areas, and spaces of this building would be available for reservation.
Order	When a sort**Order** is configured, the building names are sorted accordingly. If the sorting order is not specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The building names are alphabetically sorted based on the label name.
Status	Status of the location. ○ If the status of the location is active, select **Active**. If you set the status to **Active**, the **Active** field is enabled. ○ if the location will be available only in the future, select **Future**. If you set the status to **Future**, the **Active** field is turned off. ○ If the location is no longer functional for usage select **Retired**. If you set the status as **Retired**, the **Active** field is turned off.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ To make the location available only for a temporary duration, select **Temporary**. This space is available when assigned to a user or for any workplace-related activities. The **Active** field is always enabled.
Planned start date	Date for when you are planning to activate or reactivate the location. If the status is set to **Temporary**, then this date is when the location is reactivated.
Planned end date	Date by when you are planning to end the **Future** or **Retired** status of the location.
Actual start date	The date starting when the location should be active.
Actual end date	The date by when the location must be retired.
Time zone	Time zone of the building.
Latitude	Latitude of a campus or a building. The latitude is displayed in the Workplace Service Portal Location directory map.
Longitude	Longitude of a campus or a building. The longitude is displayed in the Workplace Service Portal Location directory map.
Measurement Details	
Unit	Measuring unit of the size. Depending on the selected unit, the **Total size** and **Usable size** field name changes. For example, if you select **Square feet** as the unit, then the fields are displayed as **Total square feet** and **Usable square feet**. For more information, see Compute CAD file properties to extract space or room surface area.
Total size	Total size of the building that is calculated based on the **Size** specified for each room or space on the floor. Depending on the selected unit, the **Total size** field name changes. For example, if you select **Square feet** as the unit, then the fields is displayed as **Total square feet**. The size is calculated regardless of the usability that is specified in the Space type configuration for child rooms and spaces. This field is automatically set based on the size specified in its child locations.
Usable size	Usable size in the building.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Depending on the selected unit, the **Usable size** field name changes. For example, if you select **Square feet** as the unit, then the field is displayed as **Usable square feet**. This is the amount of space that is available for planning maintenance activities, infrastructure, and so on. The usable size is calculated based on the Space type configuration for child rooms and spaces. If the **Space type** of a space is configured as **Usable**, then the size of the space is included in the calculation. This field is automatically set based on the size specified in its child locations.
Enable employee location privacy and preference	Option to set location privacy preference for the building. Note the following: ○ Set this option only if you want to have a different location privacy setup for the building. ○ By default, the location privacy preference that is set in the Workplace Reservation Management system property *sn_wsd_core.ENABLE_LOCATION_PRIVACY* is considered. ○ The field is set to **None** by default. ○ You can specify if you want to set privacy on workplace profiles, or reservations, or on both. ○ You can also select **No privacy** if you don't want any privacy for the building. ○ If the field is set as **None**, then, the privacy preferences set in the Workplace Reservation Management system property *sn_wsd_core.ENABLE_LOCATION_PRIVACY* is considered. For more information about each field, refer to Location privacy settings and impact
Allow employees to override location privacy on reservations	Enables you to let employees override the location privacy while reserving spaces that belong to this building. The field is set to **None** by default. For more information, refer to Location privacy settings and impact.

6. Select **Unlink Building** to unlink a building from Indoor Mapping map provider.
   For more information about how to link and synchronize Indoor Mapping map data objects with Workplace Indoor Mapping see, Synchronize Indoor Mapping with Workplace Service Delivery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. To add an Indoor map campus, select the Additional Actions icon ( ) to select **View** > **Workplace Indoor Mapping Building**.
   a. In the **Indoor map building** field, search for a campus and add it.
8. Select **Block location** to define a time period to block these locations for reservation.
9. Click **Submit**.

Result
The building is added to the selected region, site, and campus.

Add a floor using Workplace Space Management

Create a record for every floor of a building. Specify the measurement details of the floor such as the total size and the usable size.

Before you begin
Ensure that the building of the floor record is active.

Role required: sn_wsd_core.admin

About this task
You can assign a an allocation to all the entities of the floor by using the push down functionality. Specify the gross and usable size of the floor to plan maintenance activities, infrastructure, workspace allocation, and more.

Procedure
1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select **Floors**.
3. Click **New**.
4. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
      The form view changes.
5. On the form, fill in the fields.

Floor form

Field	Description
Name	Name of the floor. Ensure that you enter a unique name. For example, use the location name `<location-name>-16` rather than just `16`.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Do not use duplicate names as it may affect the reservation process. If you change the name of a building after updating it, a message is displayed to show that the **Name** will be overwritten in the next synchronization process. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
Region	Region where the office is located. If your organization is located at several regions, select that region where the office that you are adding is located.
Site	Location of the office campus. If there are several sites in a region, select that site where the office that you are adding is located.
Campus	Name of the campus where the office operates. If there are several campuses in a site, select that campus where the office that you are adding is located.
Building	Building where the floor is located.
Active	Option to activate the location. This field depends on the **Status** field. If the **Status** is set as **Future** or **Retired**, then the **Active** field is turned off.
Is reservable	Option to indicate whether the areas, rooms, and spaces that are located on this floor are available for reservation.
Order	When a sort Order is configured, the floor names are sorted accordingly. If the sorting Order value is not specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The floor names are alphabetically sorted based on the label name.
Status	Status of the location. ○ If the status of the location is active, select **Active**. If you set the status to **Active**, the **Active** field is enabled. ○ if the location will be available only in the future, select **Future**. If you set the status to **Future**, the **Active** field is turned off. ○ If the location is no longer functional for usage select **Retired**. If you set the status as **Retired**, the **Active** field is turned off.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ To make the location available only for a temporary duration, select **Temporary**. This space is available when assigned to a user or for any workplace-related activities. The **Active** field is always enabled.
Planned start date	Date for when you are planning to activate or reactivate the location. If the status is set to **Temporary**, then this date is when the location is reactivated.
Planned end date	Date by when you are planning to end the **Future** or **Retired** status of the location.
Actual start date	The date starting when the location should be active.
Actual end date	The date by when the location must be retired.
Push down	Definition of the push down functionality if the floor is associated to any allocation. The allocation is assigned to the child locations of the floor, such as rooms, areas, and spaces, based on the selected push down action. The following choices are available: ○ **No, keep floor and space/area info separate**: The cost center or department is not assigned to the areas, rooms, and spaces of the floor. ○ **Yes, and replace existing allocations**: The cost center or department is assigned to all the areas, rooms, and spaces of the floor. If an area, room, or space already has an allocation, then it is replaced. ○ **Yes, but keep existing allocations**: The cost center or department is assigned to all the areas, rooms, and spaces of the floor. If an area, room, or space already has an allocation, then it is not replaced. **Note:** The push down functionality also depends on if the **Push down** functionality is enabled on the child locations.
Push down state	State of the push down functionality. The statuses are as follows: ○ **In progress**: The push down process is still running. ○ **Completed**: The push down process is complete.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Managed by group	Group that manages the workplace-related operations.
Managed by	Workplace manager who manages all the workplace-related operations.
Measurement Details	
Total size	Total size of the floor that is calculated based on the **Size** specified for each space or room on the floor. Depending on the selected unit, the **Total size** field name changes. For example, if you select **Square feet** as the unit, then the fields is displayed as **Total square feet**. The size is calculated regardless of the usability that is specified in the Space type configuration for child rooms and spaces. This field is automatically set based on the size specified in its child locations.
Usable size	Usable size on the floor. Depending on the selected unit, the **Usable size** field name changes. For example, if you select **Square feet** as the unit, then the field is displayed as **Usable square feet**. This is the amount of space that is available for planning maintenance activities, infrastructure, and so on. The usable size is calculated based on the Space type configuration for child rooms and spaces. If the **Space type** of a space is configured as **Usable**, then the size of the space is included in the calculation.

6. The **Time zone** of a location is required to synchronize Indoor Mapping and Workplace Service Delivery.
   Workplace reservation is created in a location's timezone.

   For more information, see Indoor Mapping place types with Workplace Service Delivery space types, see Synchronize Indoor Mapping with Workplace Service Delivery.

7. Select **Unlink Floor** to unlink a floor from Indoor Mapping map provider.
   For more information about how to link and synchronize Indoor Mapping map data objects with Workplace Indoor Mapping see, Synchronize Indoor Mapping with Workplace Service Delivery.
8. Select **Block location** to define a time period to block these locations for reservation.
9. To add an indoor map, select the Additional Actions icon ( ) to select **View** > **Workplace Indoor Mapping Floor**.
   a. In the **Indoor map floor** field, search for a floor and add it.
10. Click **Submit**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The floor is added to the building.

Add an area using Workplace Space Management

Create a record for every area that is located on a floor.

Before you begin
Ensure that the floor of the area record is active.

Role required: sn_wsd_core.admin and sn_wsd_spcmgmt.manager

Procedure
1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select **Areas**.
3. Click **New**.
4. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
      The form view changes.
5. On the form, fill in the fields.

Area form

Field	Description
Name	Name of the area. Ensure that you enter a unique name. For example, use the location name `<location-name>-16` rather than just `16`. **Note:** Do not use duplicate names as it may affect the reservation process. If you change the name of a building after updating it, a message is displayed to show that the **Name** will be overwritten in the next synchronization process. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
Region	Region where the office is located. If your organization is located at several regions, select that region where the office that you are adding is located.
Site	Location of the office campus. If there are several sites in a region, select that site where the office that you are adding is located.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Campus	Name of the campus where the office operates. If there are several campuses in a site, select that campus where the office that you are adding is located.
Building	Name of the building where the area is located.
Floor	Floor name or the number of the floor where this area is located.
Order	When a sort **Order** is configured for an area, the area names are sorted accordingly. If the sorting **Order** value is not specified for an item, then the items are listed on top of the list (ascending order), and then, sorted alphabetically. The area names are alphabetically sorted based on the label name.
Active	Option to activate the location. This field depends on the **Status** field. If the **Status** is set as **Future** or **Retired**, then the **Active** field is turned off.
Is reservable	Option to indicate whether the area, rooms, and spaces that are located in this area are available for reservation.
Status	Status of the location. ○ If the status of the location is active, select **Active**. If you set the status to **Active**, the **Active** field is enabled. ○ if the location will be available only in the future, select **Future**. If you set the status to **Future**, the **Active** field is turned off. ○ If the location is no longer functional for usage select **Retired**. If you set the status as **Retired**, the **Active** field is turned off. ○ To make the location available only for a temporary duration, select **Temporary**. This space is available when assigned to a user or for any workplace-related activities. The **Active** field is always enabled.
Planned start date	Date for when you are planning to activate or reactivate the location. If the status is set to **Temporary**, then this date is when the location is reactivated.
Planned end date	Date by when you are planning to end the **Future** or **Retired** status of the location.
Actual start date	The date starting when the location should be active.

Field	Description
Total size	Total size of the area that is calculated based on the **Size** specified for each room, or space in the area. Depending on the selected unit, the **Total size** field name changes. For example, if you select **Square feet** as the unit, then the fields is displayed as **Total square feet**. The size is calculated regardless of the usability that is specified in the Space type configuration for child rooms and spaces. This field is automatically set based on the size specified in its child locations.
Usable size	Usable size in the area. Depending on the selected unit, the **Usable size** field name changes. For example, if you select **Square feet** as the unit, then the field is displayed as **Usable square feet**. This is the amount of space that is available for planning maintenance activities, infrastructure, and so on. The usable size is calculated based on the Space type configuration for child rooms and spaces. If the **Space type** of a space is configured as **Usable**, then the size of the space is included in the calculation. This field is automatically set based on the size specified in its child locations.
Size Square Feet/Meters	Surface area computed in square feet or square meters. Ability to compute surface area automatically in square meters or square feet from the CAD polylines if polylines are defined as closed shapes or if a unit is set. For more information, see Compute CAD file properties to extract space or room surface area.

6. Select **Block location** to define a time period to block these locations for reservation.
7. Click **Submit**.

Result
The area is added to the floor.

What to do next
You can add an allocation if there is none. For more information on how to add an allocation, see Allocate a cost center, department, or workplace entity. In the procedure, select the Areas module instead of the Floors module.

Add a room using Workplace Space Management

Create a record for every room located in an area or a floor. Specify the size of the room. Assign the room to a cost center or a department.

Before you begin

Ensure that the area and floor of the room are active.

Role required: sn_wsd_core.admin and sn_wsd_spcmgmt.manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select **Rooms**.
3. Click **New**.
4. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
   The form view changes.
5. On the form, fill in the fields.

Room form fields

Field	Description
Name	Name of the room. Ensure that you enter a unique name. For example, use the location name `<location-name>-16` rather than just `16`. **Note:** Do not use duplicate names as it may affect the reservation process. If you change the name of a building after updating it, a message is displayed to show that the **Name** will be overwritten in the next synchronization process. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
Region	Region where the office is located. If your organization is located at several regions, select that region where the office that you are adding is located.
Site	Location of the office campus. If there are several sites in a region, select that site where the office that you are adding is located.
Campus	Name of the campus where the office operates. If there are several campuses in a

Measurement Details	
Unit	Measuring unit of the size.
Size	Size of the room.
Size Square Feet/Meters	Surface area computed in square feet or square meters. Ability to compute surface area automatically in square meters or square feet from the CAD polylines if polylines are defined as closed shapes or if a unit is set. For more information, see Compute CAD file properties to extract space or room surface area.

6. Select **Create QR code** to generate and print QR codes for this space.
7. Select **Unlink Space** to unlink a space from Indoor Mapping map provider.
   For more information about how to link and synchronize Indoor Mapping map data objects with Workplace Indoor Mapping see, Synchronize Indoor Mapping with Workplace Service Delivery.
8. Select **Block location** to define a time period to block these locations for reservation.
9. To add an image, select the Additional Actions icon ( ) to select **View** > **Workplace**.
   a. Select the **Extra Information** tab.
   b. Select an **Image** that you want to add for a room and upload it.
      The image is used in the space cards used in the reservation experience and location directory.
10. Click **Submit**.

Result
The room is added to the area and room.

What to do next
You can add an allocation if there is none. For more information on how to add an allocation, see Allocate a cost center, department, or workplace entity. In the procedure, select the Rooms module instead of the Floors module.

Add a space using Workplace Space Management

Create a space record for every workspace located on a floor. Specify the space type and the size of the space.

Before you begin
Ensure that the room, area, and floor of the space are active.

Role required: sn_wsd_core.admin and sn_wsd_spcmgmt.manager

Procedure
1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select **Spaces**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **New**.
4. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
      The form view changes.
5. On the form, fill in the fields.

Space form

Field	Description
Name	Name of the space. Ensure that you enter a unique name. For example, use the location name `<location-name>-16` rather than just `16`. **Note:** Do not use duplicate names as it may affect the reservation process. If you change the name of a building after updating it, a message is displayed to show that the **Name** will be overwritten in the next synchronization process. For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.
Title	Title of the space.
Region	Region where the office is located. If your organization is located at several regions, select that region where the office that you are adding is located.
Site	Location of the office campus. If there are several sites in a region, select that site where the office that you are adding is located.
Campus	Name of the campus where the office operates. If there are several campuses in a site, select that campus where the office that you are adding is located.
Building	Name of the office building for this workspace. If there are several buildings in a region, select that building where the office that you are adding is located.
Floor	Name or number of the floor where this workspace is present.
Area	Name of the area on the office floor.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Active	Option to activate the location. This field depends on the **Status** field. If the **Status** is set as **Future** or **Retired**, then the **Active** field is turned off.
Is reservable	Option to indicate whether the space is available for reservation.
Status	Status of the location. ○ If the status of the location is active, select **Active**. If you set the status to **Active**, the **Active** field is enabled. ○ if the location will be available only in the future, select **Future**. If you set the status to **Future**, the **Active** field is turned off. ○ If the location is no longer functional for usage select **Retired**. If you set the status as **Retired**, the **Active** field is turned off. ○ To make the location available only for a temporary duration, select **Temporary**. This space is available when assigned to a user or for any workplace-related activities. The **Active** field is always enabled.
Planned start date	Date for when you are planning to activate or reactivate the location. If the status is set to **Temporary**, then this date is when the location is reactivated.
Planned end date	Date by when you are planning to end the **Future** or **Retired** status of the location.
Actual start date	The date starting when the location should be active.
Actual end date	The date by when the location must be retired.
Space type	Type of the office space. To configure a new space type, see Add a space type configuration.
Space function	The field value is derived from the space type configuration of the space.
BOMA type	BOMA type that you want to associate this space with. If the Space type that you selected is already mapped with a BOMA type, the field is auto-filled with the mapped BOMA type. For more information about BOMA types and to configure a BOMA type, refer to Configure a BOMA type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
BOMA type overridden	Option to specify the override behaviour when the space type and BOMA type mapping is changed.
Assignment type	Assignment type of the space. Specify if the space is a flexible or a permanent workspace. This field appears only when you select the **Space type** as **Workspace/Desk**.
Managed by group	Group that manages the workplace-related operations.
Managed by	Workplace manager who manages all the workplace-related operations.
Capacity	Capacity of the location. By default, the value is set to 1.
Capacity ratio	Capacity ratio of the location. By default, the value is set to 1. The field signifies the number people the location can accommodate, for example, 1.5,2 etc.
Total capacity	The field is automatically filled and is read-only. The total capacity is calculated as: Total capacity = Capacity * Capacity ratio.
Occupancy status	The occupancy status of the space.
Measurement Details	
Unit	Measuring unit of the size.
Size	Size of the space.
Size Square Feet	Surface area computed in square feet or square meters. Ability to compute surface area automatically in square meters or square feet from the CAD polylines if polylines are defined as closed shapes or if a unit is set. For more information, see Compute CAD file properties to extract space or room surface area.

6. Select **Create QR code** to generate and print QR codes for this space.
7. Select **Unlink Space** to unlink a space from Indoor Mapping map provider.
   For more information about how to link and synchronize Indoor Mapping map data objects with Workplace Indoor Mapping see, Synchronize Indoor Mapping with Workplace Service Delivery.
8. Select **Block location** to define a time period to block these locations for reservation.
9. To add an image, select the Additional Actions icon ( ) to select **View** > **Workplace**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Select the **Extra Information** tab.

b. Select an **Image** that you want to add for a room and upload it.

The image is used in the space cards used in the reservation experience and location directory.

10. Click **Submit**.

Result
The space is added to the area. The size of the area and the floor are calculated based on the specified space size.

What to do next
Add an allocation, that is, associate the space to a cost center, department and workplace entity. For more information on how to add an allocation, see Allocate a cost center, department, or workplace entity. In the procedure, select the Spaces module instead of the Floors module.

Configure a space type as usable with Workplace Space Management

Specify if a space type is usable or not by using the Space type configuration functionality. Specify if the space can or cannot be used for reservations.

Before you begin
Ensure that you have the following:

- The space type is configured in the application. Otherwise, refer to Add a space type configuration.
- Workplace Space Management is installed.

Role required: sn_wsd_spcmgmt.manager

About this task
Configure a space type as usable. Specify if the space type can be used for reservations or for any space-related planning. The space type is not usable if it is a storage space or a standalone space that cannot be reserved nor included in space-related activities.

Procedure
1. Navigate to **All** > **Workplace Core** > **Administration** > **Space type configuration**.
2. Select the space type that you want to configure as usable.
3. Open the form in the Space Management view.

   a. Right-click the form header.

   b. Select **View** > **Space Management**.
   The form view changes.

4. Select the **Usable** check box to enable the feature.
5. Click **Update**.

Result
The space type is configured as usable.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The size of all the spaces that are assigned to this space type is calculated in the **Usable size** fields of their areas, floors, and buildings.

Allocate a cost center, department, or workplace entity

Assign either a cost center, department, or workplace entity to a workplace location. Manage space consumptions, expenses, workplace assignments, and reservations based on an employee cost center, department, or workplace entity.

Before you begin

Important:
Starting from Workplace Core version 2.16.1, the allocation type **Department and cost center** is no longer available. A new allocation type **Workplace entity** is introduced that provides more advantages.

Role required: sn_wsd_spcmgmt.manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select the applicable module.
   - Spaces
   - Rooms
   - Areas
   - Floors

   Example

   For example, if you want to allocate a cost center, department or a workplace entity to a floor, select the Floors module.
3. Select the location to which you want to add the allocation.
4. On the form, scroll down and select **New** in the Allocation related list.
5. On the form, fill in the fields.

Note:
The **Start date** and **End date** fields follow the system time zone. Ensure that you fill in the dates in the context of the workplace location.

Allocation form

Field	Description
Type	Option to specify if you want to add a cost center, a department, or a workplace entity.
Cost center	Cost center to which you want to assign the floor. This field appears only when **Cost center** is selected in the **Type** field.
Department	Department to which you want to assign the floor. This field appears only when **Department** is selected in the **Type** field.
Workplace entity	Workplace entity to which you want to assign the space. This field appears only when **Workplace entity** is selected in the **Type**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	field. A parent entity and its child entity can be allocated to the same workplace location. The start and end date of the child entity must be within the start and end date of the parent entity.
Start date	Date on which the allocation begins. If the start date and end date are not filled, the allocation is considered permanent. If the start date is filled but the end date is not filled, the allocation is considered permanent after the start date.
End date	Date on which the allocation ends. You can set an end date only after setting a start date. After an allocation reaches the end date, the *Deactivate expired allocations* scheduled job sets the allocation record to inactive. When the end date of the allocation is within thirty days, the *Allocation Expiry Notification* scheduled job sends a notification to the following users: ○ User assigned to the **Primary contact** field of the department ○ User assigned to the **Manager** field of the cost center ○ Users assigned to the **Managed by group** or **Managed by** field of the building ○ Users assigned to the **Managed by group** or **Managed by** field of the workplace entity
Allocation Profile	Specify if the allocation is for rent or for ownership. If the allocation is rented, select **Tenant**, otherwise, if the allocation is owned, select **Owner**.
Allocation Percentage	Specify the percentage of the allocation out of 100%. Ensure that the allocated percentage sums up to 100% including other allocations with the same allocation profile of the location. For example, if A and B allocations have **Tenant** as the allocation profile, then the allocation percentage of both A and B's tenancy in total must be 100 %, like 50-50%, or, 25- 75%, or any sum.
Active	Option to activate the allocation.
Location	Location for which you're allocating the cost center, department, or a workplace entity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	This field is automatically set to the name of the workplace location to which you're adding the allocation.

6. Select **Submit**.

Result
The allocation is added to the workplace location.
You can assign the allocation to the child locations such as areas, rooms, and spaces. Select the **Push down** option on the Floor or Area form to apply the allocation. The allocation is applied depending on the **Push down** setting specified in the child locations.

Note:
For time-bound allocations, only the dates are considered for allocation.

Configure a workspace or desk as flexible or permanent

Define if a space is flexible or permanent. On the Reservation portal, the availability of a space for a user profile depends on its assignment type.

Before you begin
Ensure the following:

- The space is added in the application. Otherwise, refer to Add a space using Workplace Space Management.
- The **Space type** field of the space is set to **Workspace/desk**.

Role required: sn_wsd_spcmgmt.manager

About this task
You can specify if a desk or workspace is a permanent space or flexible. If you set a space as permanent, then the space will not be displayed to employees when they are making a reservation on the portal.

Procedure
1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select **Spaces**.
3. Select the space that you want to assign as a flexible or permanent space.
4. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
   The form view changes.
5. In the **Assignment type** field, select any one of the following options:
   - **None**: The **Assignment type** is set to **None** by default. The space is available both for reservation on the Reservation portal and for the workplace user profiles created in the Workplace Core application.
   - **Flexible**: Select this option if the space is a flexible workspace. If you select this option, the space is made available for reservation on the Reservation portal. However, the space, as

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

it is set as **Flexible**, cannot be assigned to a user profile as it may cause anomalies. Only **Permanent** spaces can be assigned to a user profile.

- **Permanent**: Select this option if the space is a permanent workspace. If you select this option, the space is displayed as available only for users created in the Workplace Core application. The space will not be available for reservation on the Reservation portal.

  If you are changing the **Assignment type** from **None** or **Flexible** to **Permanent**, then all the future reservations made on this space will be automatically canceled. A notification is sent about the cancellation.

6. Click **Update**.

Result

The space is configured as flexible or permanent based on the assignment type that you selected.

Update the measurement details of a workplace location

Specify the size of a location. If the location is an area, floor or building, then you can update or recalculate the total and usable size.

Before you begin

Ensure that the space, room, area, floor, or building is active.

Role required: sn_wsd_spcmgmt.manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select the applicable module.
   - **Spaces**
   - **Rooms**
   - **Areas**
   - **Floors**
   - **Buildings**

   For example, if you want to update the size of a space, select **Spaces**.
3. Go to the **Measurement details** section and update the measurements.

Measurement details section

Field	Description
Size	Size of the area, floor, or building. This field appears if you selected the Spaces or Rooms module.
Total size	Total size of the area, floor, or building.
Usable size	Usable size of the area, floor, or building.
Measurement unit	Measurement unit that is used to view the sizes. This field is automatically set based on the value selected in the *sn_wsd_spcmgmt.default_area_measurement_un* system property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** Recalculate the size.
   Click the recalculate size icon ( ) next to the **Total size** or **Usable size** field.The recalculate size icon appears if you change the sizes manually. If the size of any child location of the selected location changes, the sizes are automatically recalculated.
5. Click **Update**.
6. **Optional:** To recalculate the sizes of multiple workplace locations at a time, do the following:

   a. Select the workplace location module on which you want to perform the recalculation.
   For example, to recalculate the sizes of multiple buildings, go to **Workplace Core** > **Space Administration** > **Buildings**.

   b. Select the locations on which you want to perform recalculation.
   For example, if you are in the Buildings module, select the check box next to each building that you want to recalculate.

   c. **Optional:** Perform recalculation on all the locations at the same time.
   Select the check box on the bottom, next to the **Action on selected rows...** option.

   d. Click **Action on selected rows...**.
   After clicking, do the following:
   - **Recalculate Total Sizes**: Select this option to recalculate the **Total size** of all the locations.
   - **Recalculate Usable Sizes**: Select this option to recalculate the **Usable size** of all the locations.

Result
The size of the workplace location is updated.

Change the status of a workplace location

Change the availability of a workplace location to Active, Future, Temporary, or Retired. The availability of a workplace location for any workplace-related activities is determined based on the status that is set.

Before you begin
Role required: sn_wsd_core.admin

About this task
Set a status for a location. Specify the dates for when the status must be applied. Depending on when you want to plan to set the status, specify a planned start and end date. After you confirm a date for when the status change must be applied, specify the actual start and end date.

- You can specify the status for Campus and below hierarchy locations. The status changes are applied from higher to lower hierarchy.
- The status change is applied to only those child locations that have the same status. For example, if you have changed the status of a floor from **Active** to **Future**, then the status of only those rooms of that floor that have the status as **Active** are changed to **Future**. If there are rooms that have the status as **Temporary**, **Future** or **Retired**, then their status remains unchanged. The status change is applied the same way to child workplace locations, that is to the spaces of that room.
- If you change the status of a location to **Future** or **Retired**, then the **Active** field is turned off and that location is unavailable for any workplace-related activities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- When you create a record for a workplace location, the **Status**, **Planned start date**, **Planned end date**, **Actual start date**, and **Actual end date** fields are automatically filled with the parent location's field values of that location.
- The **Planned start date** and **Planned end date** must be on or between the **Planned start date** and **Planned end date** fields of the parent location.
- If there are any child locations that are currently reserved, have an active workplace case, or are assigned as a permanent location to a user, you cannot change the status of a location from **Active** to either **Future** or **Retired**.
- If you change the status of a location to **Future** or **Retired**, employees cannot reserve that location and any of its child locations. The locations are not displayed to employees while making a reservation. If an employee sets any one of the locations as the employee's favorite, then the **Reserve** option for that location is turned off in the employee's My favorites page.
- If the status of any of the child locations is **Active** or **Temporary**, then the status of its parent location cannot be changed to **Future** or **Retired**. For example, if a space is **Active** or **Temporary**, you cannot change the status of the Floor to **Future** or **Retired**.

Procedure

1. Navigate to **All** > **Workplace Core** > **Space Administration**.
2. Select **Spaces**.
3. Click **New**.
4. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
   The form view changes.
5. Change the status in the **Status** field.
6. Select the **Planned start date** for when you are planning to activate/reactivate the location.
7. Select the **Planned end date** by when you are planning to retire the location.
8. Select the **Actual start date** for when the location is active.
9. Select the **Actual end date** on which the location must be retired.
10. Click **Update**.

Result

The status of the location is changed and applied to all the child locations.

A schedule job runs every month and a reminder email is sent to the workplace managers regarding the activation or retirement of locations. The managers must manually change the status of the locations that are listed in the email.

- The reminder email includes information regarding the locations that require activation based on the **Planned start date**. The email also includes the locations that require retirement based on the **Actual end date**.
- Apart from the monthly emails, reminder emails regarding the location activation or retirement are sent on the following days:
  - For activation:
    - One week before the **Planned start date**.
    - On the **Planned start date**.
  - For retirement:

- One week before the **Actual end date**.
- On the **Actual start date**.

Configure a BOMA type

Define a BOMA type using which you can classify a space based on its BOMA standard.

Before you begin

Ensure that Workplace Space Management application is installed.

Role required: sn_wsd_core.admin and sn_wsd_spcmgmt.manager

About this task

Classify a space based on Building Owners and Managers Association (BOMA) standards. Based on the BOMA type of a space, the organization derives what type of a space it is, plans real-estate, calculates chargebacks, performs vendor management and more. Similar to Workplace Core Space type configuration, additionally, you can categorize a space with respect to the BOMA standard and map both.

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **BOMA type configuration**.
2. Click **New**.
3. On the BOMA type form, enter a **Name** for the BOMA type.
4. Select **Active** to activate the BOMA type.
5. Click **Submit**.

Result

The BOMA type is configured. To map the BOMA type with a Space type, refer to Map a space type with BOMA type.

Map a space type with BOMA type

Using Workplace Space Management, map a space type that you created using Workplace Core with a BOMA type.

Before you begin

Ensure the following:

- Space type is configured. To configure a space type, refer to Add a space type configuration.
- BOMA type is configured. To configure a BOMA type, refer to Configure a BOMA type.

Role required: sn_wsd_core.admin and sn_wsd_spcmgmt.manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Space type configuration**.
2. Select the space type that you map with BOMA type.
3. Open the form in the Space Management view.
   a. Right-click the form header.
   b. Select **View** > **Space Management**.
   The form view changes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the **BOMA type** field, select the BOMA type with which you want to map the space type.
5. Click **Update**.

Result
The space type is mapped with a BOMA type. All the spaces that are assigned to this space type, will be classified with the selected BOMA type.

Create a Space Recommender rule

Define a space recommender rule using which the qualifying spaces must be calculated when a user raises a space assistance request using Workplace Service Portal. You must have Workplace Central plugin.

Before you begin
Ensure the following:

- Workplace Central plugin is installed.
- Workplace Case Management is installed.
- Workplace Core is installed.

Role required: sn_wsd_core.admin

About this task
Create space recommender rules and specify the type of rule based on which space results must be calculated. Rule types such as Condition, Advanced script, Ignore blocked spaces and Proximity are available to set for a rule.

Procedure
1. Navigate to **All** > **Workplace Core** > **Administration** > **Space Recommender Rules**.
2. Select **New**.
3. On the form, fill in the fields.

Space Recommender Rule form

Field	Description
Rule name	Name of the rule.
Rule type	Type of rule. Select any one of the following options: ○ **Condition**: Option to set the rule with conditions. You can select the table on which you want to set the conditions and add conditions that must be met in the rule. ○ **Advanced script**:Option to configure a script to run on the Space table. Ensure that the script returns a query on the Space table. ○ **Ignore blocked spaces**: Option to set the rule to ignore blocked spaces while recommending spaces. By default, the option is set to **Ignore blocked spaces**. ○ **Proximity**: Option to set the rule that the space must be of exact proximity with the

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	specified Cost center or Department. You can specify the location level where you want to implement the proximity.
Active	Option to activate the rule.
Condition **Note:** This tab appears only if you select **Condition** in the **Rule type** field.	
Condition table	Table on which you want to run the conditions.
Conditions	Conditions that you want to run on the table. Select **New criteria** to add multiple conditions.
Script **Note:** This tab appears only if you select **Advanced script** in the **Rule type** field.	
Script	Script that you want to run on the Space table. The script will run on the table and return qualifying spaces. Ensure that the scripts returns a query on the Space table.
Proximity	
Proximity at	Select the location level where the proximity must be implemented.

4. Click **Submit**

Result
The Space recommender rule is created.

What to do next
Add space recommender rules to a space recommender rule set

Configure a Space Recommender Rule set

Create a space recommender rule set consisting multiple rules. The rule set calculates the qualifying spaces when a user submits a space assistance request using the Workplace Service Portal. You must have Workplace Central plugin.

Before you begin
Ensure the following:

- Workplace Central plugin is installed.
- Workplace Case Management is installed.
- Workplace Core is installed.

Role required: sn_wsd_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The Space Recommender Rule Set is a collection of space recommender rules based on which the spaces are qualified. By default, the **Space Recommendations Default Rule Set** is used to result qualifying spaces when a space assistance request is submitted.

If you are creating a new rule set, in order for the exact match action to work on the space assistance request, the rules that you add in the new rule set must also have the rules that are added in the **Space Recommendations Default Rule Set**. The **Rule type** of the rules must be **Advanced script**. You can refer to existing default rule set for more information on how the advanced script is configured to work with the exact match action.

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Space Recommender Rule sets**.
2. Select **New**.
3. On the form, fill in the fields.

Space Recommender Rule sets form

Field	Description
Rule Set Name	Name of the rule set.
Description	Description of the rule set.
Result Configuration	Option to specify based on which location level the resultant spaces must be displayed. Specify whether spaces of same floor, same building or same campus must be displayed.
Active	Option to activate the rule set.
Order	Order of implementation. The rule set with the lowest order is applied.
Condition table	Table on which you want to apply the conditions. By default, the Workplace Case table is selected.
Condition	Conditions that you want to apply on the selected **Condition table**. To add conditions, select **New Criteria**.

4. Click **Submit**.

Result

The Space Recommender Rule set is created.

What to do next

Create a Space Recommender rule

Add space recommender rules to a space recommender rule set

Add rules to a space recommender rule set based on which qualifying spaces must be calculated when a space assistance request is raised using the Workplace Service Portal. A rule set is a collection of rules.

Before you begin

Ensure the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Workplace Case Management is installed.
- Workplace Core is installed.
- Space recommender rules are already created. Otherwise, Create a Space Recommender rule.
- Space recommender rule set is already created. Otherwise, Configure a Space Recommender Rule set.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **Space Recommender Rule sets**.
2. Select the space recommender rule set to which you want to add the rule.
3. On the form, scroll down to the Space Recommender Rules related list.
4. Click **Edit...**.
5. On the Edit members form, set the filter option **Active** to **True**.
6. Select the rules by doing the following:

   a. Select the rules from the **Collection** column on the left.

   b. Move the selection to the **Space Recommender Rules List** column on the right.

   To move the rule, use the add/remove icon ( ).

   c. Click **Save**.

Result

The space recommender rule is added to the selected space recommender rule set.

Raise a space assistance request

Submit a workplace service request to get space allocation recommendations using the Workplace Service Portal. The Workplace Service Delivery space assistance provides you with the best space allocation plan options based on the space quantity and the department that you specify. You can select the most suitable allocation or none. Depending on your selection, the Space planner deploys the plan to use.

Before you begin

Ensure the following:

- Workplace Central plugin is installed.
- Workplace Case Management plugin is installed.
- To view the space recommendations on the map, the floor map must be configured using Workplace Indoor Mapping.

Role required: sn_wsd_core.workplace_user

About this task

Specify the department and number of spaces that you want to assign to that department on a floor. Specify the location where you want to see the allocation recommendation. Depending on the specification submitted on the form, the system provides you with options containing the most suitable space allocation plans in that building. If the selected department exists on the floor that you selected, then the spaces are recommended nearby to that department.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can select the best option and submit the selection. If an approval is configured, then the plan is sent for an approval to your manager. The selected space plan is directed to the space planner. The space planner reviews the plan and deploys it accordingly.

Procedure

1. Navigate to **All** > **Workplace Core** > **Workplace service portal**.
   The Workplace Service Portal opens.
2. Open the General category.
   a. Select **Catalog**.
   b. Select **Browse by Categories**.
   c. In the Workplace Services Catalog, select **General**.

   Note:
   If there are multiple catalogs configured on the portal, go to the Catalogs list and select **Workplace Services Catalog** > **General**.
3. Select **Space assist request**.
4. On the form, fill in the fields.

Space assist request form

Field	Description
Request name	Descriptive name for the request.
Allocate space by	The allocation type is set with the default allocation type set by your administrator. **Note:** If there is no allocation type specified, then you cannot proceed with the request.
Requested for	Option to specify the user for whom you are raising the space assistance request.
Select a department	Department based on which you want to allocate spaces. This option appears if **Department** is set in the **Allocate space by** field.
Select a Cost center	Cost center based on which you want to allocate spaces. This option appears only appears if **Cost center** is set in the **Allocate space by** field.
Select a workplace entity type	Workplace entity type based on which you want to allocate spaces. This option appears if **Workplace Entity** is set in the **Allocate space by** field.
Select a workplace entity	Workplace entity based on which you want to allocate spaces. This option appears if

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Workplace Entity is set in the **Allocate space by** field.
Reason for request	Option to select the reason for the request.
Space type	Option to specify what type of spaces you want.
Exact match (Space type)	Option to confirm that you want to see only the spaces that are an exact match to the selected space type.
Assignment type	Option to specify if you want flexible or permanent spaces.
Quantity/Capacity	Number of spaces that you want to allocate.
Region	Region where you want to make space allocation.
Campus	Campus where you want to make space allocation.
Site	Site where you want to make space allocation.
Building	Building where you want to make space allocation.
Exact match (Building)	Option to confirm that you want see only the spaces that are an exact match to the selected building.
Move-in date	Option to specify the date from when you want to implement the space allocation.
Exact match (Move-in date)	Option to confirm that you want see only the spaces that are available on the selected move-in date. This option is not available from Workplace Space Management version 1.12.0.
Move-out date	Option to specify the date until when you want to allocate the spaces.
Exact match (Move-out date)	Option to confirm that you want see only the spaces that are available until the selected move-out date. This option is not available from Workplace Space Management version 1.12.0.
Add attachments	Option to attach any supporting files if necessary.

5. Select **Submit**.
   The request is submitted. After the submission, the request details page is opened.
6. In the My request page, select **Space plans**.
   Refresh the page to view space plan options.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The page displays options that have the most suitable space allocations for the select cost center or department on the selected floor, along with the match percentage.

7. Review the options that are displayed.
   The match percentage is displayed under each option.
8. **Optional:** View the space allocations on the map by selecting **View spaces on map**.

   Note:
   You can view the space allocations on the map only if the floor has a floor map configured.

9. Select an option from the provided options.

   a. In the My request page, select **Tasks/To-dos**.

   b. In the **Select a space plan option**, select **View task**.
   A page with all the options that are displayed in the **Space plan** is displayed for selection.

   c. Select **Select** next to the option that you want to proceed with.

   d. **Optional:** If you do not want to select any option for any reason, select **None of the above**.

   Note:
   If you select **None of the above**, the request is closed and the state will be set to **Closed complete**

   e. After selection, select **Submit**.

Result

The option that you selected is submitted. At any time, you can view your selected option in the **Space plans** tab. After you submit the selection, the following actions are performed based on the approval process configured by your organization:

- If an approval process is configured for your user profile, then the space request is sent to your manager for approval. The state of the space request changes to Awaiting approval.
  - If your manager approves, the space request is sent for deployment and the state changes to Approved.
  - If your manager rejects, then the space request is rejected and the state changes to Closed incomplete.
- If your user profile doesn't require an approval, then the space request is transferred to your organization's space planner and the state changes to **Approved.**

Create a view-by configuration

Create a configuration to filter the view of the scenario planner or building overview.

Before you begin

Role required: sn_wsd_spcmgmt.space_planner

Procedure

1. Navigate to **All** > **Workplace Core** > **Administration** > **View-by Settings Configuration**
2. On the View by Configurations list, select **New**.
3. On the View by Configuration form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For a description of the field values, see View by Configuration form.

4. Select **Submit**.

Reviewing allocation changes

Review allocation changes in the Space Allocation Type Change Tracker table to plan changes for your scenarios.

The Space Allocation Type Change Tracker [sn_wsd_spcmgmt_space_allocation_type_change_tracker] table contains information about allocation changes in your workplace.

You can review the table columns for information about the type of allocation changes.

After you review the allocation changes, you can make changes to your scenario. For example, if the parent of a workplace entity is changed, you can move the existing spaces to the previous parent and allocate spaces from the new parent. If a cost center or department is deleted or made inactive, you can remove the allocations from your scenario.

Space Allocation Type Change Tracker columns

Column	Description
Type of change	Type of allocation change made on the workplace. **Inactive** The allocation was made inactive. **Deleted** The allocation was deleted. **Reparent** The parent of the workplace entity was changed.
Cost center	The allocation type that is impacted by the change. Only one of these columns is filled based on the allocation change.
Department	
Neighborhood	
Workplace Entity	
Deleted record ID	Sys ID of the allocation record that was deleted. This field is filled only if the type of change is **Deleted**.
Domain	Domain in which the allocation was changed.
Parent table	Table in which the type of allocation is stored in.
Previous parent	Previous parent of the workplace entity. This field is applicable for workplace entities and filled only if the type of change is **Reparent**.

Managing Neighborhoods

Neighborhoods are a group of spaces assigned to employees within an organization. A neighborhood can be located anywhere within the organizational structure.

Space admins and space planners can create a neighborhood and perform the following:

- Assign multiple neighborhoods to employees. An employee can be assigned to a space in a neighborhood or to the neighborhood itself. For more information, see Create a neighborhood for workplace users.
- Assign employees to a neighborhood using user assignment rules that can run on a schedule. For more information, see Execute User Assignment Rules.
- You can also assign a user to a neighborhood from their workplace profile directly. Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.
- Employees can reserve a space in a neighborhood if they're part of the neighborhood or if the neighborhood isn't restricted.
- Add or remove spaces in a neighborhood.
- Add or remove users from one neighborhood to another.
- View and reserve neighborhood spaces using floor maps on the reservation portal.

> **Note:**
> Ensure that you've installed Indoor Mapping and dependent plugins to view neighborhoods on a floor map. For more information, see Configure Indoor Mapping.

Neighborhoods can be used for the following workplace requirements:

- Scenario planning. For more information, see Create a scenario.
- Reservation management: Employees can reserve neighborhood spaces using the reservation management portal. Space admins can restrict access to spaces in a neighborhood if the neighborhood is indicated as restricted or private. For more information, see Create neighborhood reservations.
- Location directory: Employees can view spaces belonging to a neighborhood on the location directory. For more information, see Manage workplace activities and services with Location directory.

Create a neighborhood for workplace users

Create a neighborhood and assign users to available spaces in a neighborhood. Add or remove users in bulk and allocate available neighborhood spaces to users in a department, cost center, or group.

Before you begin

> **Note:**
> Verify that Workplace Core is installed to set up and manage neighborhoods.

> **Important:**
> If you're using Workplace Space Management version1.11.1 or later, to add a user to the neighborhood, refer to Add or edit a neighborhood assignment of a workplace profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
From Workplace Space Management version 1.11.1, the **Neighbourhood User Assignments** table is no longer available. Instead, the user assignment can be performed on a workplace profile directly using the **Workplace Profile Location Assignment** table (displayed a related list on the form) in the Workplace Core application. The **Workplace Profile Location Assignment** in the Workplace Core is now configured with additional fields such as **Profile type**, **Neighborhood**, and **Source** where all the data is saved. This table helps a space manager to perform scenario planning and save any user assignment-related changes performed on a neighborhood directly on the workplace profile.

On a neighborhood, when you configure a user assignment rule, the neighborhood assignment changes on the workplace profile are automatically saved on the user's workplace profile. On the user's workplace profile, you can check the type of assignment from the **Profile type** field.

If you're an existing customer, upon upgrading, the entities in the **Neighbourhood User assignments** table are automatically migrated to the **Workplace Profile Location Assignment** of the user's workplace profile.

Role required: sn_wsd_spcmgmt.admin, sn_wsd_spcmgmt.space_planner

About this task

Procedure

1. Navigate to **All** > **Workplace Core** > **Neighborhood** > **Create New**.
   You can also create a neighborhood or update an existing neighborhood by navigating to **All** > **Workplace Core** > **Neighborhood.**
2. On the form, fill in the fields.

Neighborhood form

Field	Description
Name	Name of the neighborhood.
Active	Status of the neighborhood workplace location. The availability of a workplace location for any workplace-related activities is determined based on the status that is set. For more information, see Change the status of a workplace location.
Restricted	A private or restricted neighborhood. If an employee is assigned to the neighborhood by user assignment rule or is added manually (on-demand basis), the employee can reserve a space in the neighborhood. Otherwise, employees won't see the neighborhoods. see Location privacy settings and impact.

3. Select **Submit**.
   A neighborhood is created.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

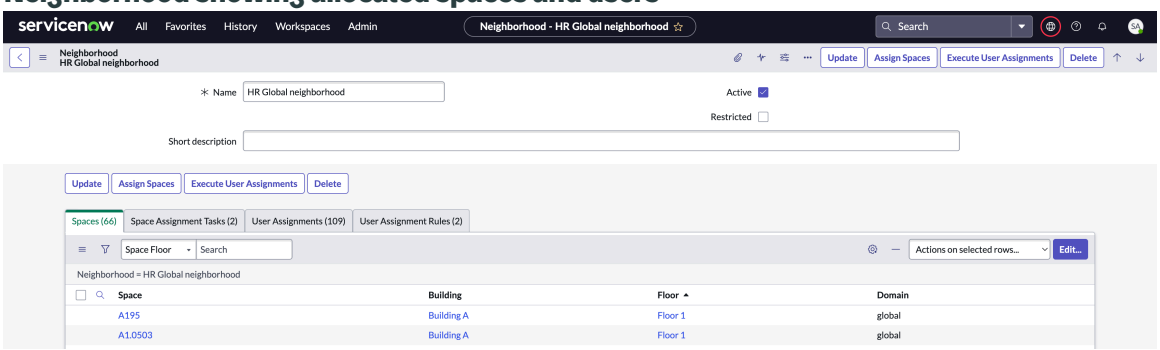
4. To view existing neighborhoods with assigned spaces and user allocation, navigate to **All** > **Workplace Core** > **Neighborhood** > **All**.
5. Select a neighborhood, then add spaces from a group, cost center, or department, by selecting **Assign spaces**.
6. On the form, fill in the fields.

Workplace Task form

Field	Description
Neighborhood	Neighborhood name that the spaces are assigned to.
Table	By default, the following tables are available. ○ Cost Center/Department [sn_wsd_spcmgmt_location_cc_dept_map] ○ Room [sn_wsd_core_room] ○ Room [sn_wsd_core_room]
Filter	Filter to show the number of matching records that match the conditions in the condition builder. The space planner can assign spaces in a neighborhood based on department, business unit, cost center, or group. For more information about filters, see Filter condition builder.
State	The space assignment request state moves from **Open** to **Work in progress** and then when spaces are assigned, the state moves to **closed**.
Workplace task sub type	○ **Append**: Add this space to an existing list of spaces in a neighborhood. ○ **Remove all and replace**: Available spaces are removed (already available spaces on the **Spaces** tab) from a neighborhood. Add new spaces that match the filter condition builder.

7. Select **Submit**.
   The **Space Assignment Tasks** related list shows the newly assigned space.
8. To edit, select a space, change the required details, and select **Update**.
9. After making the required changes, select **Save**.
10. Assign users to spaces by selecting the **User Assignment Rules** tab.
    You can also select **All** > **Neighborhood** > **Assign Employees** to assign a workplace user to a department, group, or cost center.
11. Create a new user assignment task by selecting **New**.

    On the form, fill in the fields.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Neighborhood User Assignment Rule form

Field	Description
Name	Name of the user assignment rule.
Neighborhood	Neighborhood field. Select a neighborhood using the lookup list icon (🔍) to search for available neighborhoods.
Building	Building that the user is assigned to in a neighborhood. Only buildings that are part of a selected neighborhood can be selected.
Floor	Floors in a selected building.
Table	By default, the **sys_user** table is selected. User criteria reference various user fields (from the User [sys_user] table), such as department, cost center, and group.
Filter	Add filter conditions using the condition builder to assign users to a cost center or department. For example: **Cost center is Finance**.
Active	Option to make users active in a neighborhood.

12. Select **Submit**.
    The employee is added (auto-assigned) to a selected neighborhood. Employees belonging to an indicated hierarchy (auto-assigned), or employees that are added manually (on demand) can interact with a neighborhood.
13. Select the **Execute User Assignments** tab to trigger all assignment rules (users to added or removed space allocation) to this neighborhood directly.

Neighborhood showing allocated spaces and users

Note:
Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.

By default, the *`Execute User Assignment`* scheduled job runs daily or weekly on an instance. You may want to run it for the first time directly. When you run the scheduled job for

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

each user, a workplace profile record is created (if it's not in your instance already), and the neighborhood is assigned to that workplace profile.

- When an employee is assigned to a neighborhood, a workplace profile is created.
- Neighborhoods are assigned to a workplace profile, even if an employee has multiple workplace profiles. All neighborhood assignments are done only on one workplace profile.
- An employee can be assigned to multiple neighborhoods. Each assignment is a separate record in the Workplace Profile Location Assignment Related list on the workplace profile form.
- The changes are captured in the execution details table and the changes are mentioned as type **Allocation**.
- If new spaces are assigned to a neighborhood, the spaces are updated in the neighborhood record.
- If spaces are removed from a neighborhood, the neighborhood record is updated when you run the execute user assignment task.

  Workplace Profile records are updated, added, or removed. A move task is initiated for employees who have a new space allocation and who are moved from one floor to another.

14. To create and manage a neighborhood in Workplace Central for a scenario, see Create a scenario.
15. To view and reserve spaces in a neighborhood using the Reservation Management portal, see Create neighborhood reservations.
16. **Optional:** To add a user to the neighborhood, refer to Add a user to the neighborhood.

Add a user to the neighborhood

Assign one or more users to a neighborhood. Create a workplace profile and add the user directly.

Before you begin

If you're using Workplace Space Management version 1.11.1 or later, you can also add a user to the neighborhood from their workplace profile directly. Refer to Add or edit a neighborhood assignment of a workplace profile.

Important:
From Workplace Space Management version 1.11.1, the **Neighbourhood User Assignments** table is no longer available. Instead, the user assignment can be performed on a workplace profile directly using the **Workplace Profile Location Assignment** table (displayed a related list on the form) in the Workplace Core application. The **Workplace Profile Location Assignment** in the Workplace Core is now configured with additional fields such as **Profile type**, **Neighborhood**, and **Source** where all the data is saved. This table helps a space manager to perform scenario planning and save any user assignment-related changes performed on a neighborhood directly on the workplace profile.

On a neighborhood, when you configure a user assignment rule, the neighborhood assignment changes on the workplace profile are automatically saved on the user's workplace profile. On the user's workplace profile, you can know the type of assignment from the **Profile type** field.

If you're an existing customer, upon upgrading, the entities in the **Neighbourhood User assignments** table are automatically migrated to the **Workplace Profile Location Assignment** of the user's workplace profile.

About this task

Edit an existing user in a neighborhood or add a user to a neighborhood.
To add a user to the neighborhood, the user must have a workplace profile. If the user doesn't have a workplace profile created, create a workplace profile and add the user using the following procedure.

Procedure

1. Navigate to **All** > **Workplace Core** > **Neighborhood** > **All**.
2. Select the neighborhood to which you want to assign a user.
3. **Optional:** If you're using Workplace Space Management version 1.10.0 or below, to add a user, do the following:

   a. On the form, select the User Assignments Related list.

   b. Select **New**.

   c. On the User Workplace Profile form, do the following:

      i. Select the **Employee** whom you want to add.

      ii. Select the **Workplace Entity** to which the employee belongs.

      iii. Select **Submit**.

      The workplace profile is created for the user and is also added to the neighborhood.

4. **Optional:** If you're using Workplace Space Management version 1.11.1 or later, to add a user, do the following:

   a. On the form, select the Workplace Profile Location Assignment related list.

   b. Select **New**.

   c. On the Workplace Profile Location Assignment, do the following:

      i. In the **Workplace profile** field, select the user's workplace profile who you want to add.

      ii. Select the **Profile type** as **Neighbourhood assignment**.

      iii. In the **Workplace location** field, select the workplace location in the neighborhood to which you want to assign the user.

      The user is added to the neighborhood. The workplace profile of the user is updated with the neighborhood assignment. You can also make or edit the neighborhood assignment from the workplace profile. For more information, refer to Add or edit a neighborhood assignment of a workplace profile.

5. Select **Update**.

Result

The user is added to the neighborhood. The Workplace Profile Location Assignment of the user is updated. The Workplace Profile Location Assignment related list in the Workplace Profile form of the user and the Neighborhood form are updated. Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.

For more information about the Workplace Profile Location Assignment, see Workplace Profile Location Assignment form.

Add or edit a neighborhood assignment of a workplace profile

Add a user or edit a user's neighborhood assignment from their workplace profile directly.

Before you begin
Role required: sn_wsd_spcmgmt.admin, sn_wsd_spcmgmt.space_planner

About this task
You can also add a user or modify a user's neighborhood assignment from their workplace profile directly instead of making changes to the neighborhood. The changes are applied on both the neighborhood and the workplace profile. You can edit a user's **Neighborhood**, neighborhood's **Workplace location**, the **Profile type** and other details.

Procedure
1. Navigate to **All** > **Workplace Core** > **Administration** > **Workplace profiles** > **.**.
2. Select the user whose neighborhood assignment you want to add or edit.
   a. On the User Workplace Profiles list, select the Preview icon ( ) next to the **Employee** name.
   b. Select **Open Record**.
3. On the User Workplace Profile form, go to the Workplace Profile Location Assignments related list.
4. To edit the existing user assignment, do the following:
   a. Double click the field that you want to edit.
   b. Select **Save**.
   c. Select **Update** to update the profile.
5. To add a neighborhood assignment, do the following:
   a. Select **New**.
   b. On the Workplace Profile Location Assignment form, do the following:
      i. Set the **Profile type** as **Neighborhood assignment**.
      ii. In the **Neighborhood** field, select the neighborhood to which you want to assign the user.
      iii. In the **Workplace location** field, select the workplace location in the neighborhood to which you want to assign the user.
      iv. Select **Submit**.
      The neighborhood assignment is updated.
6. Select **Update** to update the workplace profile.

Result
The user's neighborhood assignment and the neighborhood to which the user belongs is updated. Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.

Edit a user assignment of a neighborhood

Edit an existing user's workplace profile assigned to the neighborhood.

If you're using Workplace Space Management version 1.11.1 or later, you can also edit or remove a user from a neighborhood from their workplace profile directly. Refer to Add or edit a neighborhood assignment of a workplace profile.

Important:
From Workplace Space Management version 1.11.1, the **Neighbourhood User Assignments** table is no longer available. Instead, the user assignment can be performed on a workplace profile directly using the **Workplace Profile Location Assignment** table (displayed a related list on the form) in the Workplace Core application. The **Workplace Profile Location Assignment** in the Workplace Core is now configured with additional fields such as **Profile type**, **Neighborhood**, and **Source** where all the data is saved. This table helps a space manager to perform scenario planning and save any user assignment-related changes performed on a neighborhood directly on the workplace profile.

On a neighborhood, when you configure a user assignment rule, the neighborhood assignment changes on the workplace profile are automatically saved on the user's workplace profile. On the user's workplace profile, you can know the type of assignment from the **Profile type** field.

If you're an existing customer, on upgrading, the entities in the **Neighbourhood User assignments** table are automatically migrated to the **Workplace Profile Location Assignment** of the user's workplace profile.

Role required: sn_wsd_spcmgmt.admin, sn_wsd_spcmgmt.space_planner

About this task

You can add only users with workplace profiles to a neighborhood. Perform the following steps to edit user assignments that have workplace profiles.

Procedure

1. Navigate to **All** > **Workplace Core** > **Neighborhood** > **All**.
2. Select the neighborhood in which you want to edit the user assignment.
3. **Optional:** If you're using Workplace Space Management version 1.10.0 or below, to edit a user, do the following:
   a. On the form, select the User Assignments Related list.
   b. Select **Edit...**.
   c. On the Edit members form, add or remove users between **Collections** and **User Assignments list**.
   d. Select **Save**.
   The user assignment is updated.
4. **Optional:** If you're using Workplace Space Management version 1.11.1 or later, to edit a user, do the following:
   a. On the form, select the Workplace Profile Location Assignment related list.
   b. Edit the details of the user directly from the list view or select the Preview icon ( ).
   Select **Open Record**.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. On the Workplace Profile Location Assignment form of the user, change the fields that you want to edit.

d. Select **Update**.
The user assignment is updated and the workplace profile of the user is updated with the changes.

5. Select **Update**.

Result
The user assignment is updated. Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.

Add or edit the workplace location of a user in the neighborhood

Add a workplace location to a user assignment or update the existing workplace location of the user assignment.

Before you begin
If you're using Workplace Space Management version 1.11.1 or later, you can also edit the workplace location of a user from their workplace profile directly. Refer to Add or edit a neighborhood assignment of a workplace profile.

Important:
From Workplace Space Management version 1.11.1, the **Neighbourhood User Assignments** table is no longer available. Instead, the user assignment can be performed on a workplace profile directly using the **Workplace Profile Location Assignment** table (displayed a related list on the form) in the Workplace Core application. The **Workplace Profile Location Assignment** in the Workplace Core is configured with additional fields such as **Profile type**, **Neighborhood**, and **Source** where all the data is saved. This table helps a space manager to perform scenario planning and save any user assignment-related changes performed on a neighborhood directly on the workplace profile.

On a neighborhood, when you configure a user assignment rule, the neighborhood assignment changes on the workplace profile are automatically saved on the user's workplace profile. On the user's workplace profile, you can know the type of assignment from the **Profile type** field.

If you're an existing customer, on upgrading, the entities in the **Neighbourhood User assignments** table are automatically migrated to the **Workplace Profile Location Assignment** of the user's workplace profile.

Role required: sn_wsd_spcmgmt.admin, sn_wsd_spcmgmt.space_planner

Procedure
1. Navigate to **All** > **Workplace Core** > **Neighborhood** > **All**.
2. Select the neighborhood that you want to update.
3. **Optional:** If you're using Workplace Space Management version 1.10.0 or below, to edit a user, do the following:

a. On the form, select the User Assignments Related list.

b. Double-click the workplace location of the workplace profile to add or edit the location.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Search and select the location.

> **Note:**
> You can only select a floor, area, or a space as the workplace location.

d. Select **Save**.
The workplace location of the user is updated.

4. **Optional:** If you're using Workplace Space Management version1.11.1 or later, to edit a user, do the following:

a. On the form, select the Workplace Profile Location Assignment related list.

b. Double-click the workplace location of the workplace profile to add or edit the location.

c. Search and select the location.

> **Note:**
> You can only select a floor, area, or a space as the workplace location.

d. Select **Save**.

5. Select **Update**.
The workplace location is updated and the workplace profile of the user is updated with the changes.

Result

The workplace location is updated for the selected workplace profile. You can also make neighborhood-related changes on the workplace profile directly. Refer to Add or edit a neighborhood assignment of a workplace profile. Neighborhood assignments are applicable if Neighborhood is selected as the group by or view by option in a scenario or building overview. Location assignments are applicable for all other options.

Workplace Space Management references

View by Configuration form

The view by configuration form helps you select the table and field used to filter the view on the scenario planner or building overview.

View by Configuration form

Field	Description
Title	Title of the view by configuration that is displayed on the scenario planner or building overview.
View by table	Table that contains the field you want to use for the view by configuration. The following tables are supported for view-by configurations: • Scenario Plan Space Detail [sn_wsd_spcmgmt_scenario_plan_space_detail] • Space [sn_wsd_core_space] • Space Detail [sn_wsd_spcmgmt_space_detail]
View by field	Field that is used to filter the view of the scenario planner or building overview. You can dot-walk to a maximum of two fields. You can only select fields that are of the reference, choice, or true/false type.
Active	Option to activate the record.
Application	Application that the record is created in. This field is automatically set to Workplace Space Management and can't be edited.
Mode	Mode where the view by configuration is enabled.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View by Configuration form (continued)

Field	Description
	Note: • Building overview is not supported for the Scenario Plan Space Detail [sn_wsd_spcmgmt_scenario_plan_space_detail] table. • Scenario planning is not supported for the Space Detail [sn_wsd_spcmgmt_space_detail] table.
Order	Order of the view by configuration in the drop-down list of the scenario planner or building overview.
Domain	Domain for the view by configuration. This field is automatically set to global.

Workplace Maintenance Management

Workplace Maintenance Management provides preventive maintenance plans for enterprise assets and workplace locations. Maintenance managers can perform maintenance planning for workplace services.

Get started

Explore Learn about Workplace Maintenance Management concepts and features	**Configure** Install and Configure Workplace Maintenance Management
Manage Manage Workplace Maintenance Management location records	**References** Learn about Workplace Maintenance Management roles, properties, and components

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Exploring Workplace Maintenance Management

Workplace administrators and managers can create maintenance plans for preventive maintenance. Create duration or meter-based schedules for locations or assets. Associate different templates to your plan records to create maintenance cases.

You can create and manage maintenance plans for workplace models (assets) and location (spaces). Preventive maintenance cases are created in response to time elapsed or measured usage of an asset. For example: Coffee machines, elevators, lighting, and furniture.

Publish your maintenance plans and automate schedules to create maintenance cases for plan records. Maintenance cases are created in response to workplace issues where remedial work is required. For example: coffee spills, broken furniture, and so on.

Workplace agents are assigned maintenance cases to act on scheduled cases. Workplace agents can create, view, update, and delete maintenance cases.

Benefits

Administrators and workplace managers can perform the following:

- Create maintenance plans for workplace models (assets) and workplace locations.
- Create schedules or copy an existing schedule for a maintenance plan.
- Create duration-based or meter-based schedules.
- Associate a template (Workplace service) to a plan record, maintenance plan, asset, or location. You can construct any condition on the Workplace Maintenance Service Configuration (sn_wsd_maintenance_service_config) table, and the template is assigned to a maintenance case when a condition is satisfied. Associate multiple templates across maintenance plans and also within maintenance plans.

  For example, maintenance plans created for printers for a location use Template A. Similarly, maintenance plans for office desks use Template B. To achieve further granularity within maintenance plans, you can assign different templates for different printer types or model types (HP, Cannon, and so on). You can also use a different template for different maintenance schedules (daily, weekly, quarterly, and so on).

- Schedule job checks for an associated template and creates maintenance cases. It also pre-creates maintenance cases for plan records whose schedule is less than a day.
- Track and monitor maintenance plan records and maintenance cases on Workplace Central.
- Analyze metrics and trends to show preventive maintenance cases versus corrective maintenance cases. Administrators and workplace managers can take appropriate measures to reduce corrective maintenance issues. For example, sudden outages and printer breakdown. Create maintenance plans for your models and assets to reduce the volume of corrective cases. For more information, see Workplace Maintenance Management dashboard and analytics.

Configuring Maintenance Management

Install and configure Workplace Maintenance Management for creating and managing workplace maintenance plans.

Install Workplace Maintenance Management

Install the Workplace Maintenance Management (application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Installing Workplace Maintenance Management (sn_wsd_maintenance) activates/installs the following:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.

2. Verify that the following plugins are activated:
   - Workplace Core (sn_wsd_core)
   - Workplace Central (sn_wsd_central)
   - Enterprise Model and Asset Classes (sn_ent)
   - Workplace Case Management (sn_wsd_case)
   - Workplace Move Management (sn_wsd_move)

Use the following details when required:

- Name of the application: Workplace Maintenance Management
- ID of the application: sn_wsd_maintenance

Role required: sn_wsd_maintenance.admin

About this task

Note:
Activate Workplace Central plugin (sn_wsd_central) and ensure you have the role sn_wsd_maintenance.admin assigned.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.

   Search for the application by its name (Workplace Maintenance Management or ID (sn_wsd_maintenance). If you cannot find the application, you may have to request it from the ServiceNow Store.

3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.

   A list of dependent plugins and applications are displayed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you install Workplace Maintenance Management.

Result

Workplace Maintenance Management is installed.

Manage Workplace Maintenance Management plans

Manage Workplace Maintenance plans for workplace models (assets) and workplace locations.

Workplace users (sn_wsd-central.workspace_user) can access the Preventive Maintenance tab on Workplace Central.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

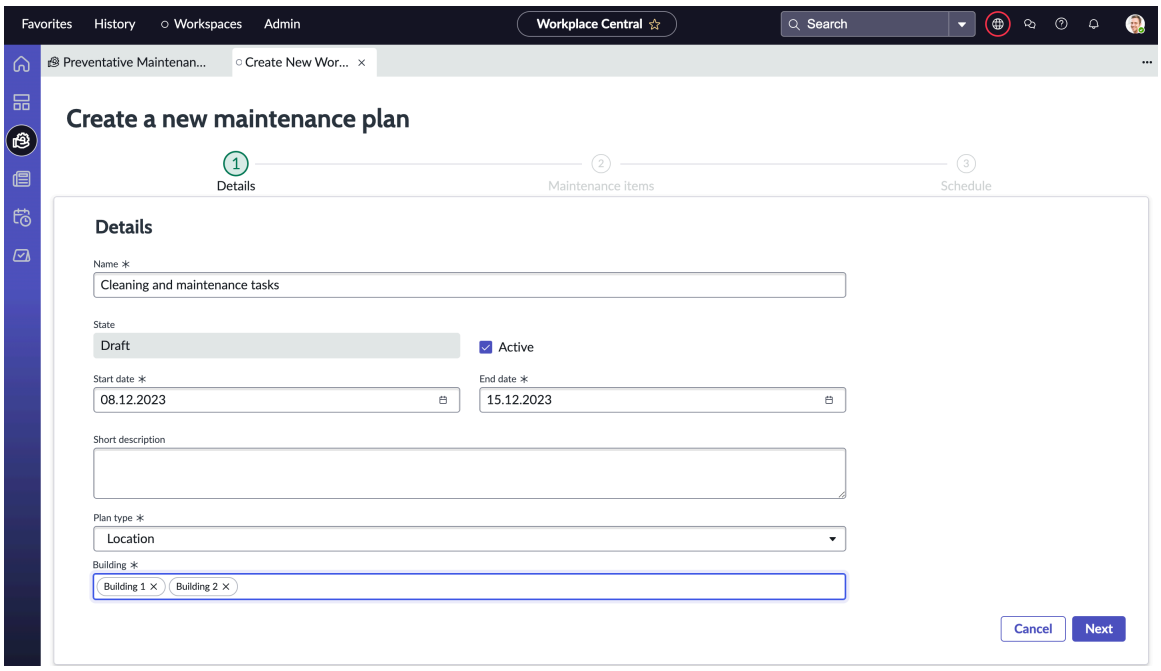
Role: sn_wsd_maintenance.admin and sn_wsd_maintenance.manager.

Create and publish maintenance plans

Create a maintenance plan for workplace assets and locations. Associate multiple services to different plan records based on the type of workplace maintenance activity.

Before you begin

Ensure that the following plugins are installed:



- Workplace Central
- Enterprise Model and Asset Classes (sn_ent)
- Workplace Service Delivery
- Workplace Core
- Workplace Indoor Mapping
- Workplace Case Management
- Workplace Reservation Management

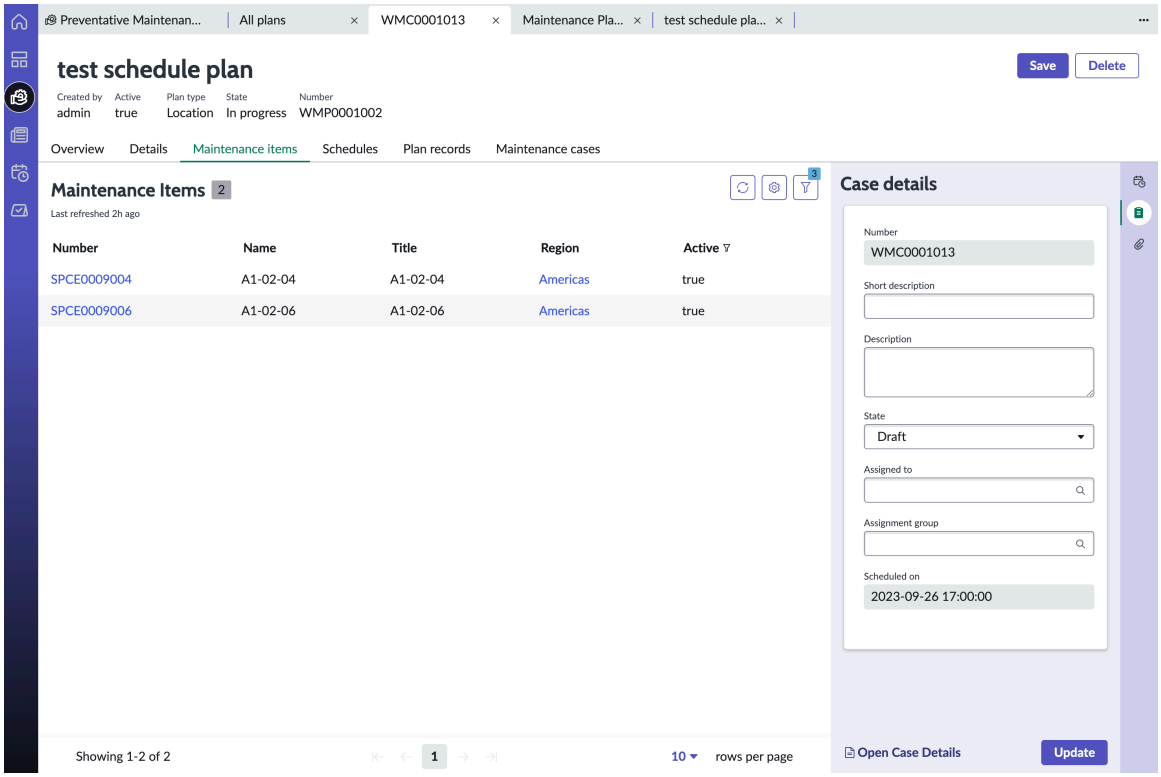
Role required: sn_wsd_maintenance.manager, sn_wsd_maint.admin

About this task

Procedure

1. Navigate to **Workspaces** > **Workplace Central**.
2. Select the **Preventative Maintenance** tab icon ( ).
3. Select **All plans** > **New** on the home page.

4. On the form, fill in the fields.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a maintenance plan

Field	Description
Name	Title of the maintenance plan.
State	All maintenance plans start in a Draft state by default
Active	The active check mark is selected by default.
Start date	The start date of a maintenance plan. Select a date and select **OK**.
End date	The end date of a maintenance plan. Select a date and select **OK**.
Plan type	Enterprise assets (models) and workplace spaces (locations or buildings). Select **Model** or **Location** from the drop-down list. Models: List of enterprise models or assets that need maintenance. For example, printers, coffee machines, fire extinguishers, and so on. Locations: Option to select a Workplace location (sn_wsd_core_workplace_location). Select a building from the list of buildings. **Note:** For Optimize cleaning activities AI agent, select the Plan type as **Location**. Model plan type is not optimized by the agentic AI workflow. For more information about how to optimize a maintenance plan record using the Agentic AI workflow, see Optimize cleaning activities agent overview.
Model/Building	Select assets or locations. If the selected building or model doesn't show a maintenance item, select **Go back** to select another asset or location. Based on your selection in the **Plan type** field, different options for locations or assets are displayed. If you have selected **Model**, then assets or models are available for you to select. if you have selected **Location**, then**Buildings** are available for selection. For example: Select **Building B**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Next**.
6. The maintenance items for a selected location or model are filtered based on your selection of a model or location in Step 4.

Select one or more maintenance items.

If you've selected a building in step 4, the floors, spaces, and areas associated with that building are displayed and included as part of the maintenance item.

> **Note:**
> The Optimized Cleaning Activities Agentic AI workflow only optimizes spaces at the floor level of a selected building. AI agents autonomously optimizes a space in a floor to get the space utilization threshold. For more information, see Optimize cleaning activities agentic workflow.

7. Select **Go back** to make updates or edits on the maintenance details page.
8. Select **Next**.

   The new maintenance plan is saved in a **Draft** state.

   The maintenance items go to the next step for scheduling.

9. **Optional:** Select **Create a schedule** or **Copy a schedule** from the drop-down list.

   (Optional) Select the **Skip scheduling** option if you don't want to create a schedule now and prefer to create it later. After publishing a maintenance plan, you can create a schedule or copy an existing schedule for a plan.

   For more information, see Create or copy a maintenance schedule. For more information about how the scheduled job creates maintenance cases for a plan record, see Workplace planned maintenance scheduled job and Components installed with Workplace Maintenance Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. Select **Save**.
11. Select **Publish**.
    The maintenance plan is published. A contextual sidebar is available for you to search for schedules, view workplace maintenance case details, and view attachments for a plan.

    Note:
    The **Publish** option is not available when you select **Skip Scheduling**. You must open the maintenance plan again separately and select **Publish** to publish the plan.

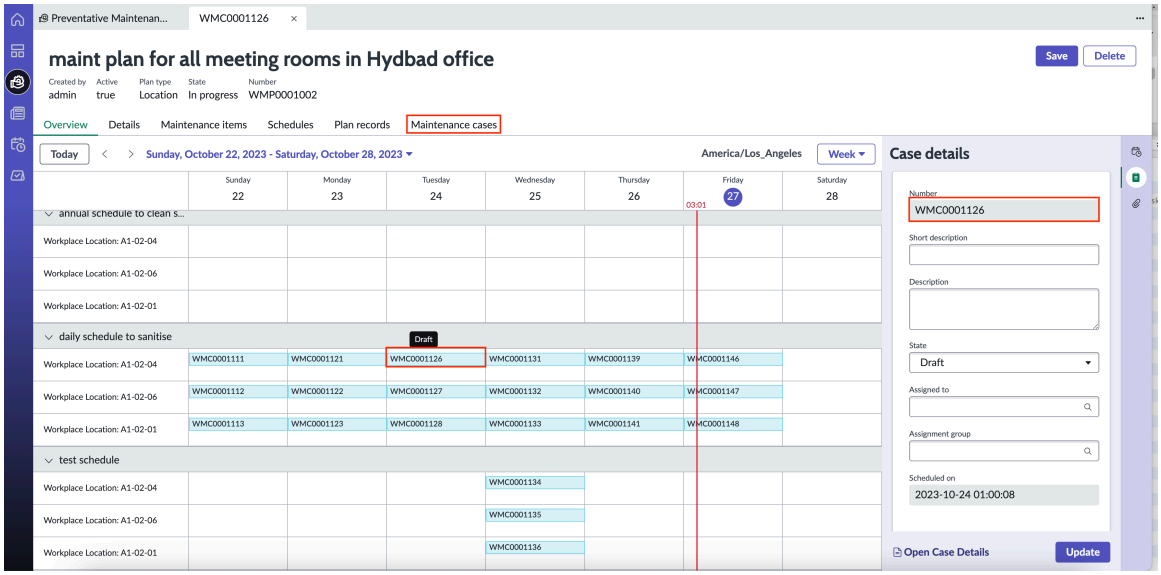
    The published maintenance plan is available for you to view in a calendar view. For more information, see Maintenance plan calendar view.

12. Review the maintenance plan details on the calendar view.
    Status of the maintenance plan moves to the **In progress** state. For more information about the calendar view, see Maintenance plan calendar view.

    The **Schedules tab** shows the **Next run time** for a scheduled job. The scheduled job **Workplace Maintenance Nightly run** runs every 48 hours (2 days) and creates maintenance cases for active plan records. The schedule job can be scheduled on a daily or hourly basis. For more information, see Workplace planned maintenance scheduled job.

    Optimize cleaning activities Agentic AI workflow autonomously optimizes maintenance plan record Ids based on maintenance threshold data for a selected location. For more information, see Optimize cleaning activities agent overview.

Maintenance plan calendar view

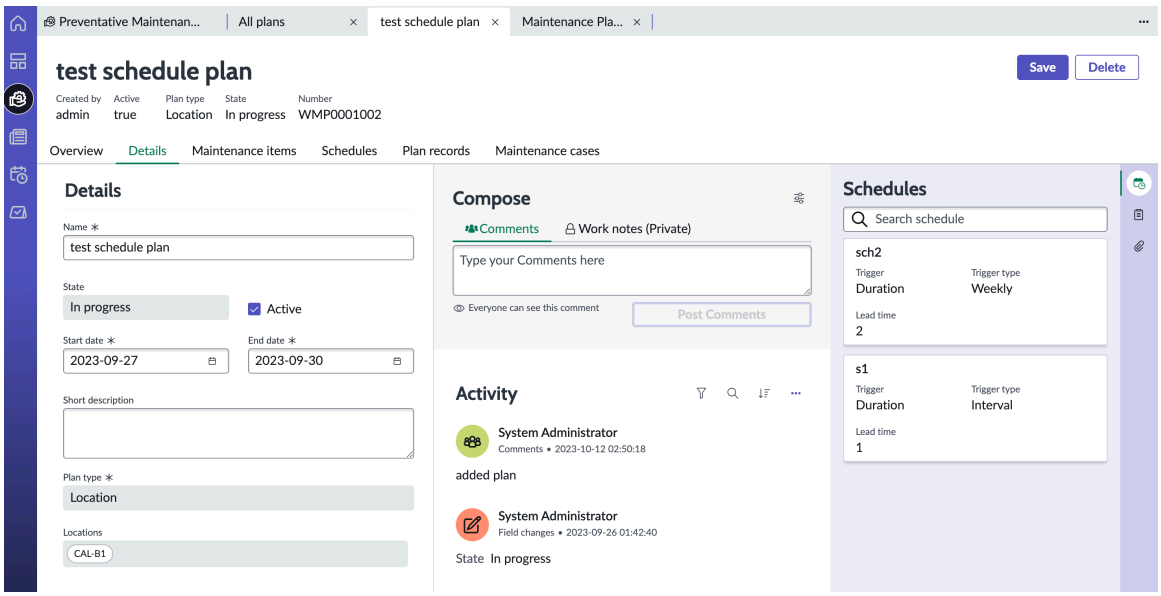


After publishing a maintenance plan, the plan opens in a calendar view. The calendar view shows the plan details, maintenance items, schedules, plan records, and maintenance cases for a selected plan record.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Workplace Central**.
2. Select the **Preventative Maintenance** tab and select **All Plans**.
3. Click open an existing plan to view the published maintenance plan in a calendar view.
   The calendar view page is displayed by default when you publish a maintenance plan.
4. The **Overview** tab shows a weekly calendar for a selected plan record.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Overview tab currently supports the weekly view and the current system time zone.

5. Click open the **Details** tab.

The **Details** tab shows the state of the maintenance plan. Changes can be made to the maintenance plan state to reflect whether the maintenance plan is in Draft, In progress, or Active state. Work notes can be created but are only visible to a workplace manager or administrator creating the maintenance plan.

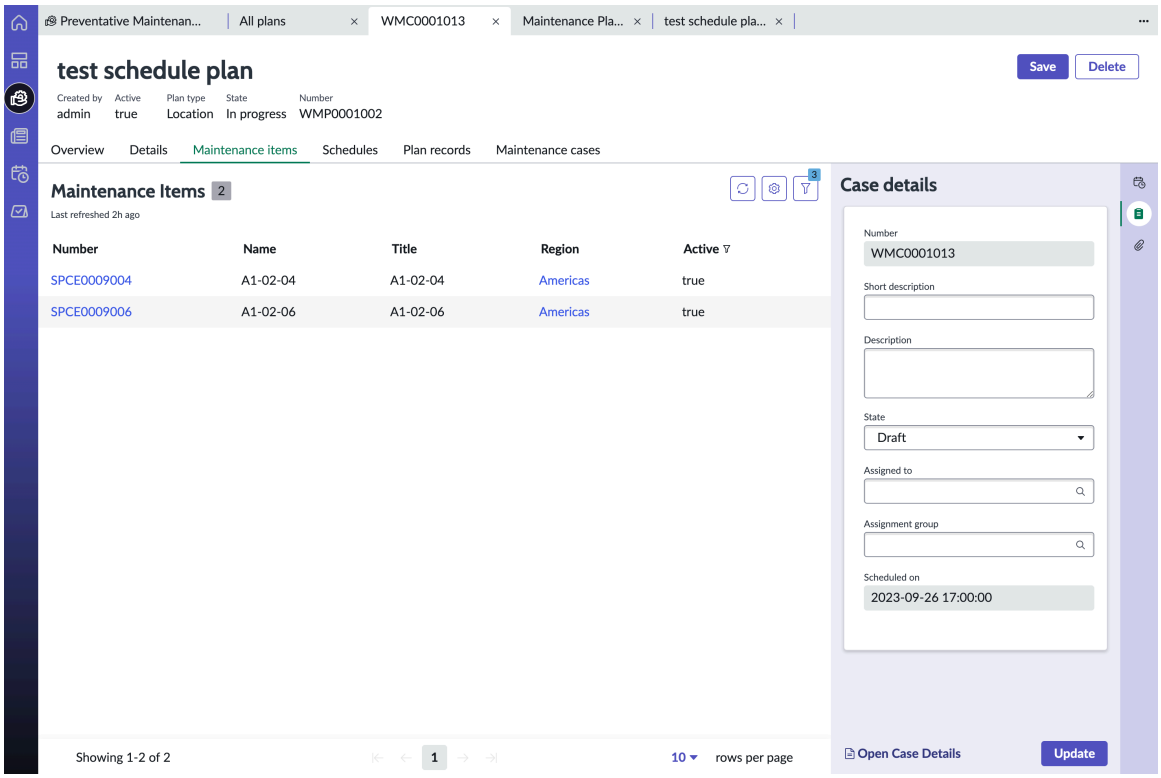
a. Name: Name of the Workplace Maintenance Plan.

b. Active: Plan is active.

c. Start date: Start date of the scheduled maintenance plan.

d. End date: The end date is when the scheduled maintenance plan ends.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



e. Compose:

- Comments: Option to add comments for Workplace Managers.
- Work notes Private: Private work notes.

f. Activity: Activity initiated on a Workplace maintenance plan.

g. Schedules: Search for schedules.

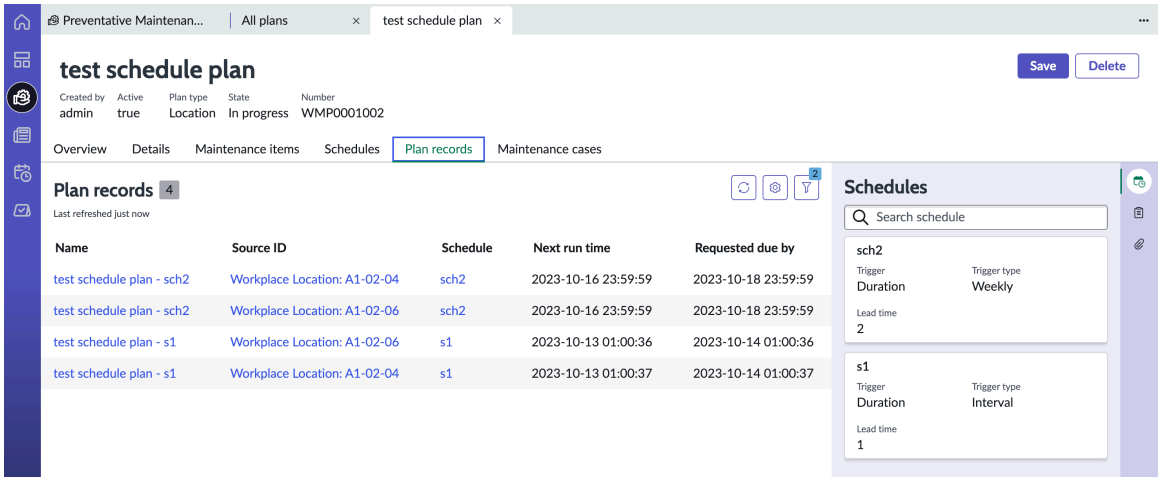
6. Select open the **Maintenance items** tab to view maintenance items that you added in the plan type (location or asset) field while creating a maintenance plan.

a. Select the record number for a maintenance item (for example, SPCE0009004) to view details for the Workplace Core Space form.

Floors, spaces, and areas associated for a selected building are displayed as part of the maintenance items.

b. Case Details panel on the right shows the Workplace Case Management case ID number.

- State: Indicates status of a maintenance case.
- Assigned to: Indicates the user assigned to a workplace maintenance case.
- Assignment group: Indicates user group assigned to a workplace maintenance plan case.



For more information, see Workplace maintenance cases.

7. **Optional:** If you selected **Skip Scheduling** while creating the plan, you can publish the plan here using the **Publish** option.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Publish** option is not available when you select **Skip Scheduling** while creation.

8. To view the schedule plan for a maintenance record, click the **Schedules** tab.
   You also have the option to create or copy a schedule. For more information, see Create or copy a maintenance schedule.
9. Select **Plan records**.

Plan records page shows the following pre-filled values:

Plan records

Column	Description
Name	Schedule name for a maintenance item.
Source ID	The items associated with the maintenance plan record.
Schedule	Link to the schedule details.
Requested due by	Maintenance plan schedule date.
Next run value	The schedule job run time for a maintenance plan record.
Last completion time	Scheduled job run time completion.

10. Select **Maintenance cases** tab.

    The workplace Maintenance cases are created only if the corresponding plan record can pick a template by satisfying a condition in the Workplace Maintenance Service Configuration (sn_wsd_maintenance_service_config) table. You can construct any condition on the Workplace Maintenance Service Configuration table, and the template is assigned to a maintenance case when a condition is satisfied. For more information, see Create plan service configuration.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Maintenance cases

Column	Description
Number	Case ID for a maintenance case. It is linked to the case details, schedules, and attachments.
Short description	Description of a maintenance plan.
State	Status of a maintenance item.
Scheduled on	The date on which the maintenance case is scheduled to run.
Scheduled value	The value is equal to the time (days) which the schedule is set to run.
Assigned to	The name of the user in the case is assigned to (set by the manager).
Assignment group	The user group assigned to a case and is set by a workplace manager or workplace administrator.
Opened	The date on which the case was opened.

A contextual sidebar is available on the right page for Schedules, Case details, and Attachments. You can search for schedules, update case details, and add attachments to workplace maintenance plans.

11. Select **Save.**

Create or copy a maintenance schedule

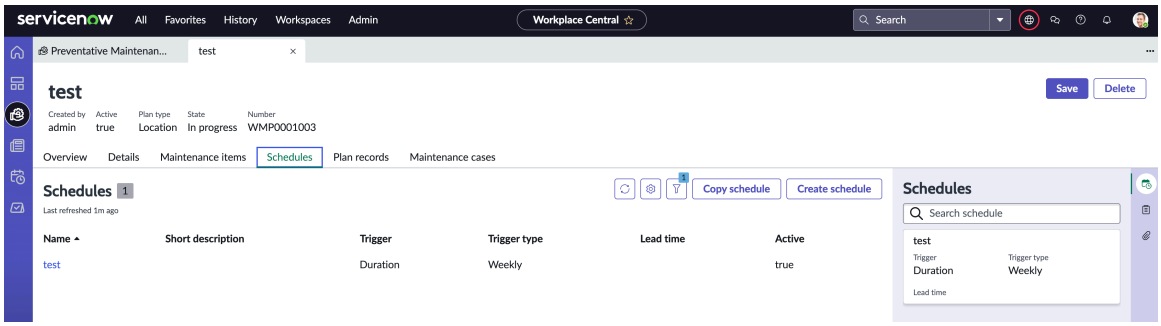
After creating a maintenance plan, define a maintenance schedule for a maintenance plan. Define duration or meter-based schedules for your assets or locations on a daily, weekly, monthly, or yearly basis.

Before you begin

Role required: admin

About this task

Maintenance schedules are duration or meter based. For example, on the Maintenance Schedule form, select Duration or Meter as the trigger for replacing a printer ink cartridge. Define the maintenance schedule duration as three months and the paper sheets as 10,000. The schedule is triggered when the paper sheets need refill and the printer ink cartridges are replaced based on this trigger. The maintenance schedule populates the **Next run time** (duration-based schedules) and **Next run value** (meter-based schedules) in the Plan Service configuration. Maintenance schedule job checks for a maintenance schedule template in a plan record and creates maintenance cases.



For more information, see Create plan service configuration and Workplace planned maintenance scheduled job.

Procedure

1. Navigate to **All** > *Workplace Central*.
2. Select the **Preventive Maintenance** tab.

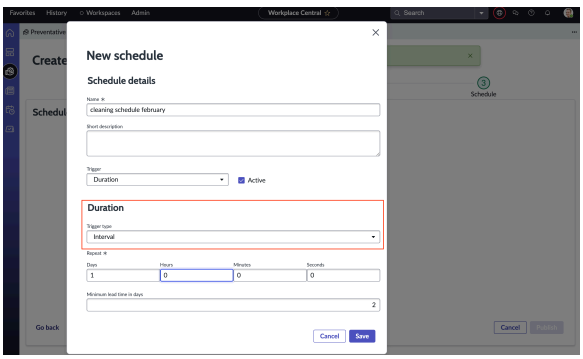
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

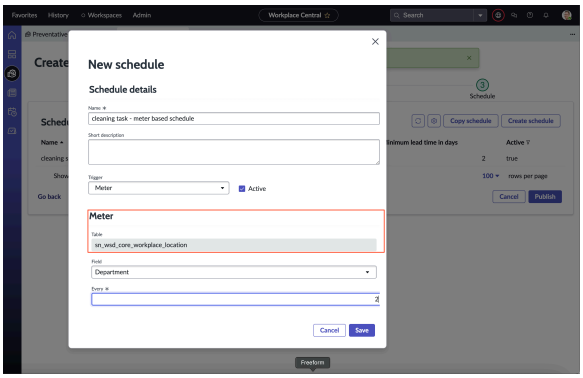
3. Select open a published maintenance plan from **My Plans** or **All plans**.
4. On the maintenance calendar view, select the **Schedules** tab.

5. Select **Copy schedule** to copy a maintenance schedule for an existing maintenance plan.
6. Search for a maintenance plan name from the list.
7. Select **Copy**.

   An existing schedule is copied over to a maintenance plan item.

   Note:
   You can also create a maintenance schedule if copying a schedule isn't the best option for a maintenance plan.



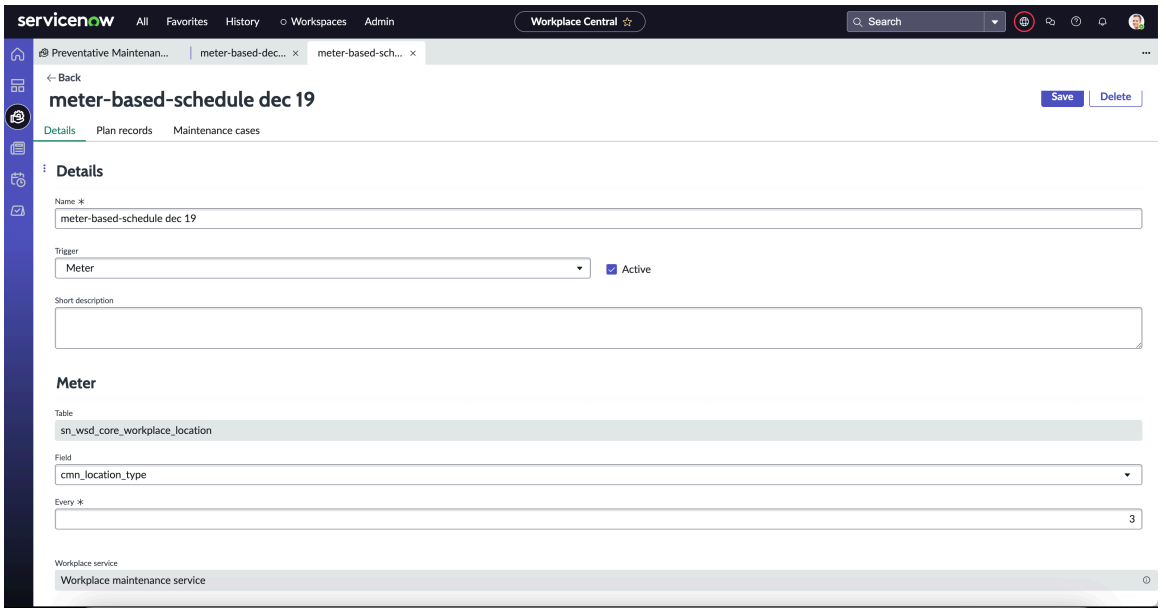


8. To create a schedule, select **Create schedule**.

   The New Schedule form opens. Fill in the form fields.

New Schedule form

Field	Description
Name	Name for the schedule. For example: Weekly schedule for meeting rooms.
Short description	Brief description about the schedule or schedule type.
Interval	The time or duration during which the schedule job should run. For example, select any of the following from the drop-down list: ○ Weekly ○ Monthly ○ Annually ○ Week in a month
Active	Select the check box to activate the schedule for a maintenance plan.
Trigger	Option to create a duration or meter-based scheduled maintenance. ○ **Duration**: Maintenance to be performed based on time (Next Run time). Depending on your selection, additional fields are displayed to define a duration. For example: Quarterly, weekly, hourly, and so on. ○ **Meter**: Maintenance to be performed based on count. Based on your selection, **Every** and **Field** options appear. For example: Change the printer cartridge after every 1000 printed sheets.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Trigger type (Duration)	Trigger type determines the schedule run time interval duration (weekly, monthly, annual, and so on).  For a duration-based schedule, complete the following field information: **Interval**: For example, select a duration from the drop-down options. For example: **Weekly** Repeat: Repeat interval hours. For example: 1 hour.
Trigger type (Meter)	For meter-based schedule, complete the following field information:  ○ **Table**: Workplace Location or Model. Selected by default. The selection depends on your selection of Model (asset) or Location while creating a maintenance plan. For more information, see Create and publish maintenance plans. ○ **Field**: Field value for the trigger type. Select a value from the drop-down options. For example, **Start Date and time**. ○ **Every**: The repeat interval duration. The number of occurrences that must be recorded before the maintenance plan is executed. Takes an integer-based value and the value must be greater than zero (0). For example: 2 days.
Minimum lead time in days	Applicable only for a duration-based schedule and takes integer-based values (For example: 2). Number of days prior to the scheduled due date to determine the date on which the work should begin. That date is pre-filled in the Scheduled start field for the task. This field appears when Duration is selected for Trigger. The scheduled job ensures that the **Next run time** duration has the lead time value considered (Next run time value = Next schedule target date - Lead time).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For example, if your **Due day of week** is next week Monday and your lead time is 2, then your lead time is Friday (the current week). By Friday, the maintenance plan schedule is assigned to a Workplace Manager or administrator for executing or triggering the schedule next week Monday.

9. Select **Save**.
10. Publish the plan.
11. Select the published plan record and on the calendar view, navigate to the **Schedules** tab.
12. Select and open the schedule to view details.

Related topics

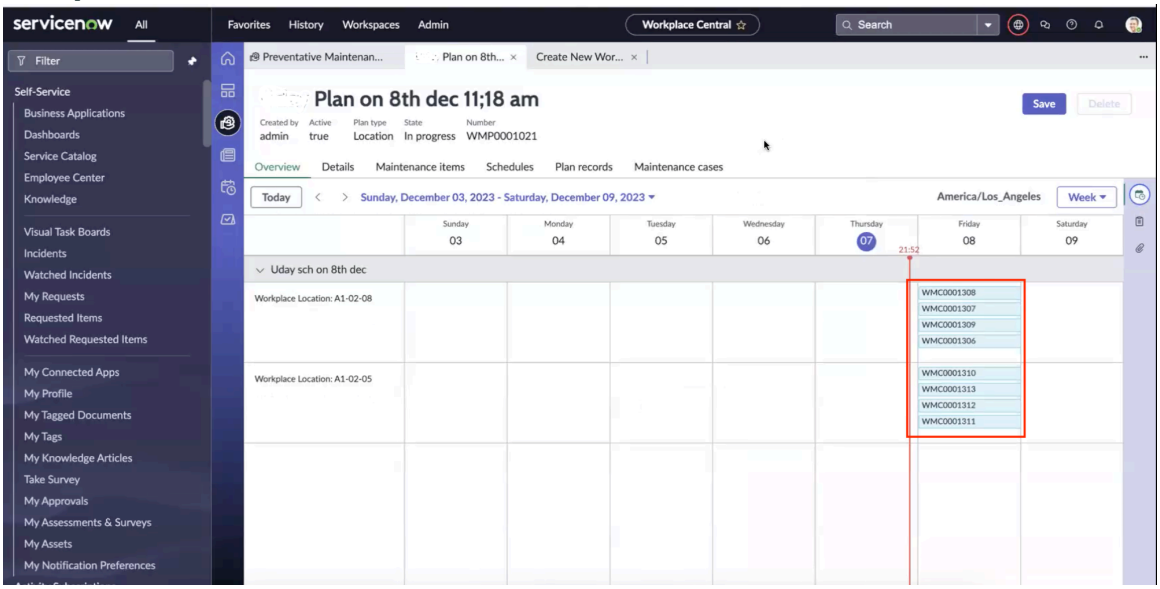
Workplace maintenance cases

Workplace planned maintenance scheduled job

The scheduled Job **Workplace Planned Maintenance Nightly Run** runs at the configured time and creates maintenance cases. It also pre-creates maintenance cases when the scheduled duration is less than a day.

The scheduled job can pre-create cases for day and up to two days ahead of the scheduled time. This is based on the time difference between the system time zone where the job is running, and the workplace agent time zone working on the cases.

The scheduled job **Workplace Planned Maintenance Nightly Run** performs the following:



- Creates duration-based cases.
- Creates meter-based cases.

The scheduled job can also pre-create maintenance cases when the schedule configured is less than a day. The duration is based on your system time zone settings. For example, if you have a maintenance schedule of six hours, it creates the following number of maintenance cases:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

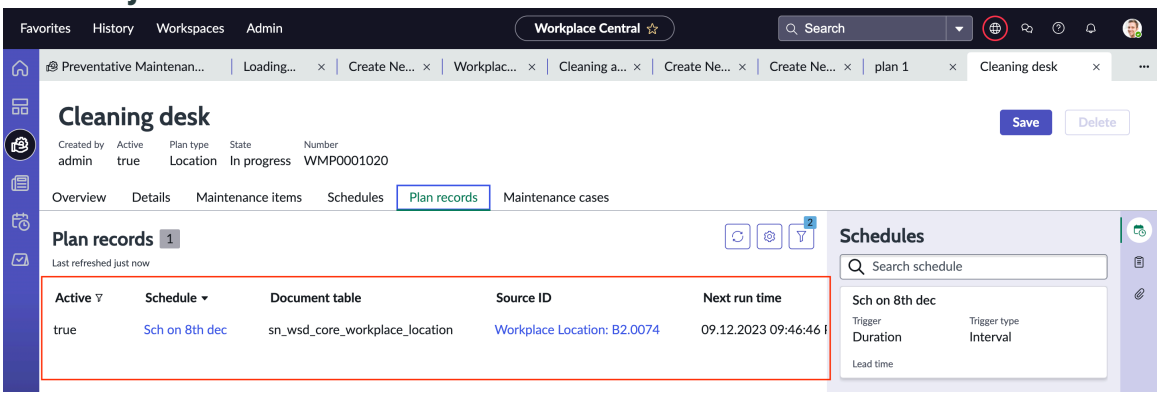
- For a six-hour schedule, four maintenance cases are created for each maintenance asset or location in a day.
- For a six-hour schedule, eight maintenance cases are created for two maintenance assets or locations in a day (four cases for each).

Workplace Maintenance cases

- For a six-hour schedule, 12 maintenance cases are created for three maintenance assets or locations (four cases for each).

When the scheduled job runs, it creates maintenance cases only for those planned records that have a template associated to a maintenance schedule.

Note:
When a maintenance schedule is created, it picks up a template from the Workplace maintenance service configuration table (sn_wsd_maintenance_service_config). Based on your requirements, associate a template to a plan record. Multiple templates can be created and associated to a maintenance plan. For more information, see Create a workplace template configuration.



Duration-based cases

For duration-based cases, the **Workplace Planned Maintenance Nightly Run** scheduled job performs the following:

- Fetches all active plan records having the **Next run time** duration.
- Filters out plan records where the Next run time is 48 hours or less than a day.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule job Next run time

- Checks for an entry in the Workplace Maintenance Service Configuration (sn_wsd_maintenance_service_config) table.
- Gets all records from the Workplace Maintenance Service Configuration table.
- For each record in the Workplace Maintenance Service Configuration table, the schedule for the current plan record must have a template associated to it.
  - If there's a template, the scheduled job creates a maintenance case and updates the **Next run time** in the Workplace Maintenance Service Configuration table for a plan record.
  - If there's no template associated to a plan record, the scheduled job fetches the next plan record in a queue.

Note:
When defining a duration-based maintenance schedule, you can define the **Minimum lead time in days** (takes integer-based values). For example, If if the lead time is 0, it indicates that the cases for the current day are created today itself. But if the lead time is 1, the cases were created yesterday, that is, the cases are generated one day ahead of the schedule. The **Next run time** duration has the lead time value defined for a schedule. For more information, see Create or copy a maintenance schedule.

Meter-based cases

For meter-based cases, the **Workplace Planned Maintenance Nightly Run** scheduled job performs the following:

- The scheduled job fetches all active plan records having a **Next run value**.
- For each plan record, the **Next run value** depends on the **Field** name value. The **Field** value is available when you're creating a meter-based schedule.

  For more information, see in Create or copy a maintenance schedule.
- The scheduled job retrieves the value of the **Field** name from the Asset (sn_ent_asset) table and compares it with the **Next run value** for a plan record.
- The schedule job checks if the **Next run Value** is less than the actual value in the Asset table and proceeds further.
- if the **Next run value** is more, it fetches the next plan record in a queue.
- The maintenance schedule for a current plan record must have an entry in the Workplace Maintenance Service Configuration (sn_wsd_maintenance_service_config) table.
- Gets all the records from the Workplace Maintenance Service Configuration table for that schedule in a Plan record.

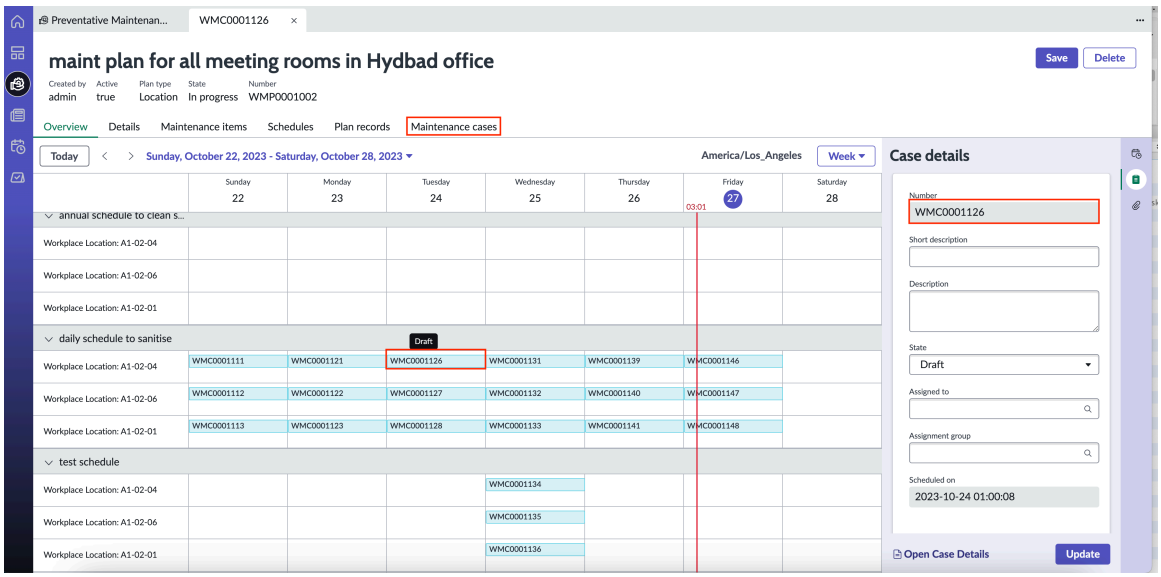
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- For each record in the Workplace Maintenance Service Configuration table, the schedule for the current plan record must have a template associated to it.
  - If there's a template associated to a maintenance schedule, the schedule job creates a workplace maintenance case and updates the **Next run value** for a plan record.
  - If there's no template associated to a maintenance schedule, the scheduled job picks up the next plan record in a queue.

Workplace maintenance cases

The schedule job creates maintenance cases for plan records.

Before you begin



The scheduled job Workplace Planned Maintenance Nightly runs every 48 hours (end of day tomorrow) and creates duration-based and meter-based cases.

Role required: admin

Procedure

1. Select a published plan record.
2. On the calendar view, select the **Maintenance case** tab to view cases created by the scheduled job.

   The **Workplace Maintenance Nightly run** scheduled job generates maintenance cases for maintenance plan records.

3. Select a maintenance case to view the **Workplace Service** associated with a maintenance case and the scheduled job value for a case.

   For more information, see Create plan service configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** Select a maintenance case to open the Case details panel and perform the following to update the record:
   a. State: Update the maintenance case details by changing the maintenance plan state (Draft, Work in progress, Complete, and so on).
   b. Assigned to: Select a user to assign this case.
   c. Assigned to group: Select a user group to assign this case.
   d. Select **Update**.
5. **Optional:** Navigate to **All** > **System Definitions** > **Scheduled jobs**.
   a. Search for Workplace Maintenance Management in the Application Column.
   b. **Workplace Maintenance Nightly run**: This scheduled job runs every 48 hours (end of day tomorrow) and generates maintenance cases for maintenance plan records.
   c. To execute the schedule job before the scheduled time, select **Execute Now**.
   The scheduled job checks for active plan records with a **Next Run time** (duration-based schedule) or **Next run value** (meter-based schedule) and checks for a schedule template in a plan record. When it finds a schedule template, it creates maintenance cases.
   For more information about how to create a scheduled job and how the scheduled job picks up plan records based on conditions and workplace services, see Create or copy a maintenance schedule and Workplace planned maintenance scheduled job.
6. To optimize cleaning activities for a selected location using Agentic AI workflow, the Optimize cleaning activity scheduled job is executed.
   For more information, see Components installed with Workplace Maintenance Management and Optimize cleaning activities agent overview.

Create workplace services

Create Workplace services like catering, office supply, parking, or any other service. Associate this service to a default general request template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Services.**.
2. On the workplace service form, fill in the fields:
   - Service Name: Name of the workplace service. For example, Workplace cleaning.
   - Case table: Name of the case or request table. Select the **Workplace Maintenance Case** (sn_wsd_maintenance_case) table.
   - Fulfillment Type: Select **Service Activity** from the drop-down options.
   - Default Template: Default template for Workplace Maintenance Management. Search for the **General maintenance request** template using the lookup list icon ().
3. Select **Update**.

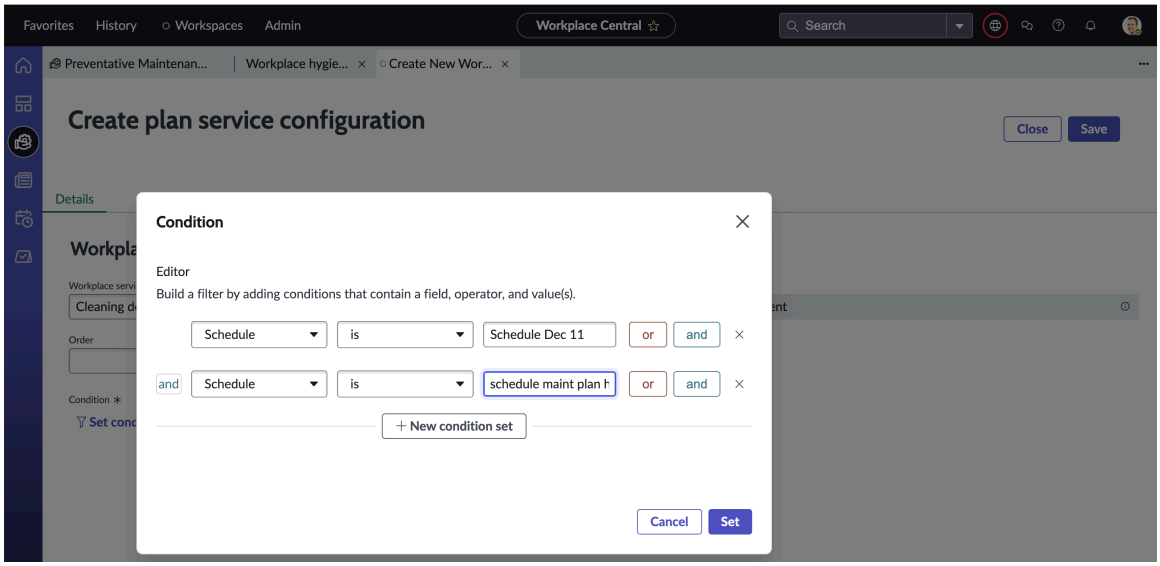
Create plan service configuration

Configure a plan service to associate workplace services and set scheduling conditions for a plan record.

Before you begin
The maintenance schedule must have an entry in the Workplace Maintenance Service Configuration (sn_wsd_maintenance_service_config) table for a plan record. Set conditions for a scheduling job to create maintenance cases for active plan records.

Role required: admin

Procedure



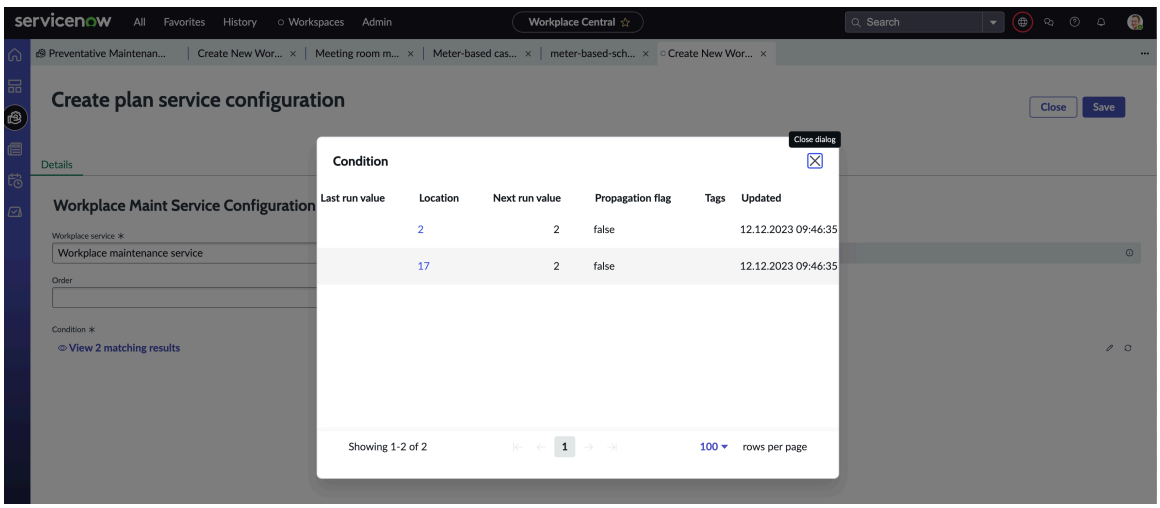
1. Navigate to **All** > *Workplace Central* > **Preventive Maintenance** > **Plan Service Configurations**.
2. Select **New**.
3. On the Workplace Maintenance Configuration form, fill in the fields:
   a. Workplace service: Name of the Workplace service.
      Select the lookup list icon () and workplace service for a plan record. For example: Cleaning desk.

      For more information, see Create workplace services.

   b. Order: Integer-based value.
      The highest order value is prioritized. For example: 100.

   c. Select the **Set conditions** filter and apply filter conditions for a selected item.
      For example, select **ScheduleisWorkplace cleaning**. The selected condition is applied to all plan records in a selected plan.

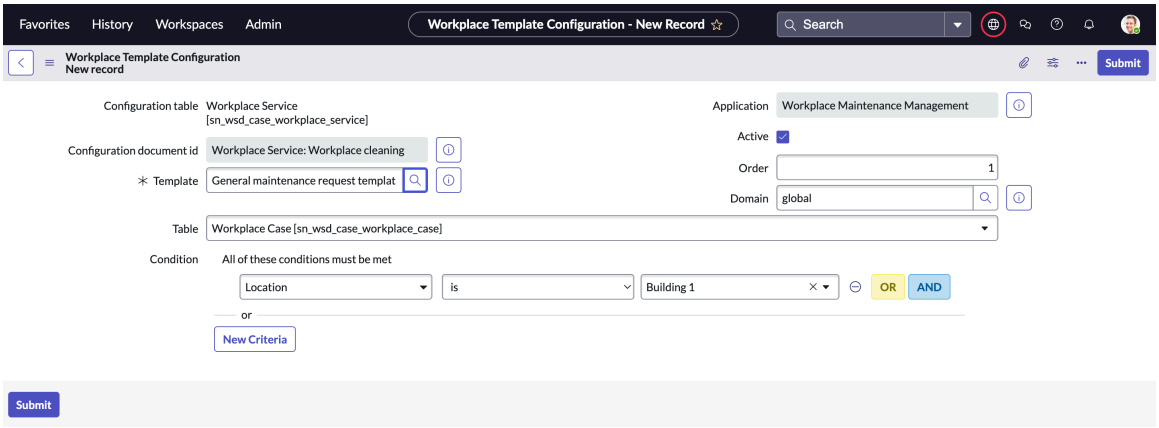
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



For more information about Workplace services, see Create workplace services.

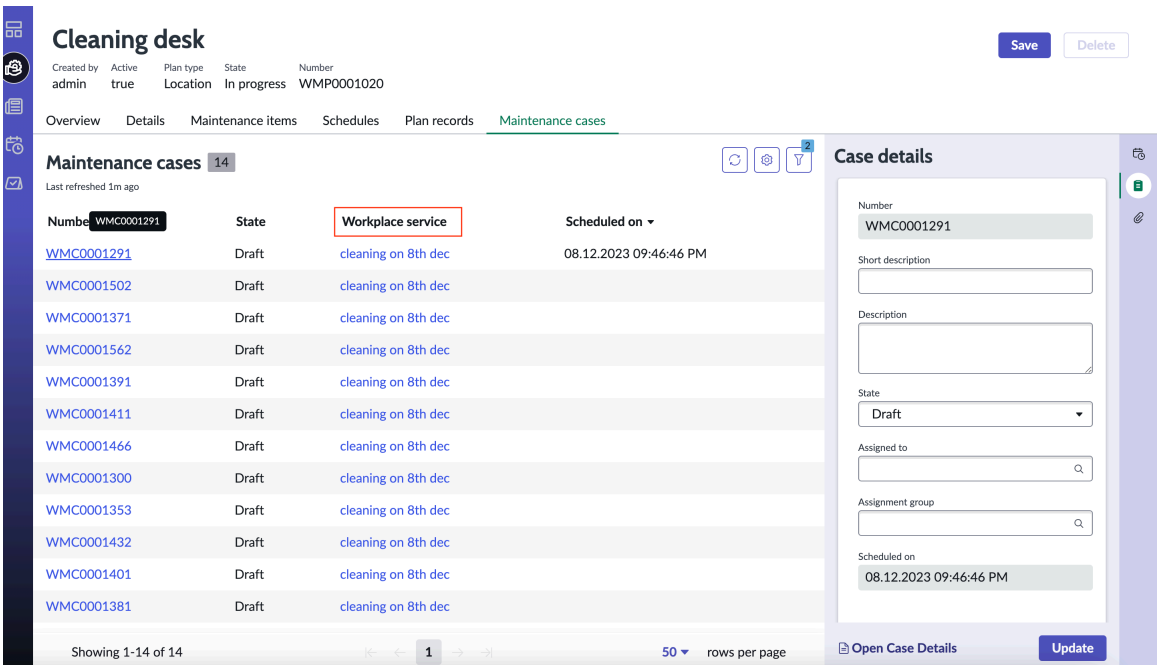
.

d. Select **Set**.



e. Expand **View matching results** to see services associated with a plan service configuration.

a. Select and open the **View matching results** to see the schedule job **NameNext run time** or **Next run value** duration.



The selected schedule is updated in the Workplace Maintenance Service Configuration table and the schedule template is associated to it. If there's a template associated to a schedule, it creates a workplace maintenance case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Workplace planned maintenance scheduled job and Workplace maintenance cases.

4. Select **Save**.
5. The schedule job **Workplace Planned Maintenance Nightly Run** runs and creates maintenance cases for a workplace service in a plan record.
6. Navigate to a published plan record.
7. Select **Maintenance cases** in the calendar view.
8. The Workplace Services column shows the plan service configuration associated with a plan record.

This record is updated in the Workplace Maintenance Service Configuration table.

For more information, see Workplace maintenance cases.

Workplace Maintenance Management dashboard and analytics

The Workplace Maintenance Management dashboard and reporting module provide high-level reporting on maintenance plans, plan records, and cases. Preventive maintenance dashboard

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

provides insights for workplace managers and administrators on all plans, live active plans, plans in draft state, and maintenance cases.

To view the dashboard, you must be assigned one of the following roles:

- sn_wsd_maint.admin
- sn_wsd_maint.manager

Access the dashboard by navigating to **All** > **Workplace Central** > **Preventive Maintenance** > **Maintenance Plans**. Within the Preventive Maintenance tab, the different parts of the dashboard can be selected.

Note:
Two scheduled jobs **Workplace Maintenance Case Daily Data Collection** and **Workplace Maintenance Case Historical Data Collection** collect data to provide insights in Workplace Maintenance Management Dashboard.

A filtered list of workplace management plans can be viewed by clicking the following score components:

Dashboard data

Data	Description
All Plans	Total number of maintenance plan records. The **All plans** view provides a summary of all your maintenance plans. You can monitor plans, including the plan start and end dates and review the status of a maintenance plan (plans in work in progress or in a draft state).
My Plans	Personal assigned plans. Shows workplace management plans created by workplace users.
Active Plans	Live active plans that are initiated.
Draft Plans	Plans that are in a **Draft** state.
Maintenance cases this month	Graphically presented in a pie or line chart. Provides insights on the total number of Preventive and Corrective maintenance plans. Click an item on the chart to view maintenance case details for a maintenance plan record.

Point to the graph or pie chart to view details. Selecting the pie chart or the graph takes the user to a tab that lists the maintenance cases.

Selecting a plan from the list of plans take the user to a tab that lists the details for that plan record. Selecting the **New** button enables you to create a maintenance plan. For more information, see Create or copy a maintenance schedule.

Workplace Maintenance Management references

Several roles and views are available to help manage plan records with Workplace Maintenance Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Maintenance plan schedule examples

Maintenance plans are created for models (assets) or locations. The schedule trigger type defined for a maintenance plan can be meter or duration-based schedule. Associate multiple templates to maintenance schedules as required. The scheduled job fetches plan records that have a template associated to it and creates maintenance cases for a maintenance plan.

For example, use cases for creating maintenance plans can be based on the following:

- Schedule printer ink cartridge replacement
- Schedule coffee beans refill

Maintenance schedule for printer ink cartridge replacement

Schedule a printer ink cartridge replacement after printing a specified number of pages for a location. For example, 10,000 pages. Define a general plan with a meter-based maintenance schedule. Associate a schedule template, for example, Schedule template A.

1. Create a model-based maintenance plan for HP Printer Cartridge Replacement and publish the plan.

   For more information, see Create and publish maintenance plans.

2. Create a meter-based schedule:
   - Name: Schedule name.
   - Trigger: Select **Meter**.
   - Trigger Type: Select the following trigger types for a meter-based schedule:
     - Table: Pre-filled values based on your plan type (model or location).
     - Field: For example, select the location type.
     - Every: Integer-based value. For example: 3

The maintenance plan schedules the HP printer to replace ink cartridges after printing 10, 000 pages.

Schedule coffee beans refilling for coffee machines

Schedule coffee beans refilling for coffee machines daily. Associate a schedule template, for example, Schedule template B. The schedule should have an entry in the Workplace Maintenance Service configuration table.

1. Create a model-based maintenance plan for Coffee machines and publish the plan.
2. Create a duration-based schedule:
   - Name: Schedule name.
   - Active: Select this option to activate the schedule for a maintenance plan.
   - Trigger: Select **Duration**.
   - Trigger Type: Interval. Specify the duration in days and hours since this is a daily schedule.

The coffee beans are refilled daily based on the scheduling condition and template associated to this maintenance plan.

For more information, see Workplace planned maintenance scheduled job.

Components installed with Workplace Maintenance Management

Different roles and components or tables are available with the installation of Workplace Maintenance Management.

Roles installed with Workplace Maintenance Management

Navigate to **All** > **System Definition** > **Roles** > **.**

Roles installed with Workplace Maintenance Management

Role title [name]	Description	Contains roles
sn_wsd_wc.manager	Provides read access to all data including Occupancy Dashboard and other dashboards.	sn_wsd_wc.user
sn_wsd_wc.admin	Provides admin access to configure and set up the Workplace Connectors application	sn_wsd_wc.manager
sn_wsd_wc.user	Provides read access to only a few columns and fields. The read access is set up by administrators.	None

Tables installed with Workplace Maintenance Management

Navigate to **All** > **System Definition** > **Tables.**

Tables installed with Workplace Maintenance Management

Table	Description
Workplace Maintenance Plan [sn_wsd_maintenance_plan]	Stores preventive maintenance plans.
Workplace Maintenance Plan Items [sn_wsd_maintenance_m2m_plan_maint_item]	Stores all the items (locations or assets) that are part of a maintenance plan.
Workplace Maintenance Schedule [sn_wsd_maintenance_schedule]	Stores all the schedules (daily, weekly, monthly and so on) created for a Maintenance plan.
Create a maintenance case [sn_wsd_maintenance_case]	Stores information about maintenance cases.
Maintenance Plan Record [sm_m2m_maint_plan_to_record]	Stores the plan records (a record for every schedule and maintenance item combined).
Workplace Maintenance Service Configuration (sn_wsd_maintenance_service_config)	Associates workplace services and sets scheduling conditions for a plan record.

Tables installed with Workplace Maintenance Management (continued)

Table	Description
	The schedule job fetches plan records that have a maintenance schedule template for a workplace service to create maintenance cases. For more information, see Create plan service configuration and Workplace planned maintenance scheduled job.

Workplace Maintenance Management Scheduled Jobs

Navigate to **All** > **System Definition** > **Scheduled Jobs.**

Scheduled jobs installed with Workplace Maintenance Management

Scheduled Job	Description
Workplace Planned Maintenance Nightly Run	A scheduled job runs every 48 hours (2 days) to fetch plan records and create maintenance cases. For more information, see Workplace planned maintenance scheduled job.
Workplace Maintenance Case Daily Data Collection	This scheduled job collects data and populates it in the Workplace Maintenance Management Dashboard. Collects data as specified in the Relative start and Relative end fields. The collection time is time zone specific.
Workplace Maintenance Case Historical Data Collection	This scheduled job collects historical data and populates it in the Workplace Maintenance Management Dashboard. Collects data as specified in the Relative start and Relative end fields. The collection time is time zone specific.

Properties installed with Workplace Maintenance Management

Navigate to the **All** context menu in your instance and enter **sys_properties.list** in the search Filter option. Search for Workplace Maintenance Management properties in the Application context menu.

Workplace Maintenance Management System Properties

Properties	Description
sn_wsd_maintenance.optimise_plans	Property to optimize plans by the Optimise Cleaning Activities Agentic AI workflow. For more information, see Optimize cleaning activities agentic workflow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace Maintenance Management System Properties (continued)

Properties	Description
	Note: Workplace Maintenance managers should enter the sys ID of the maintenance plan record in the Value field. For multiple plans that you want to optimize, enter comma separate mainteance plan ID values. For example- "*a23321432, 3243245dsf*". Copy the Sys ID of a maintenance plan from your ServiceNow® instance URL link. https://<instance_name>.service-now.com/now/workplace-management/maintenance-plan/3243245dsf. Here, the maintenance plan sys ID is 3243245dsf.
sn_wsd_maintenance.optmise_cleaning_min_utilization_threshold	Property to enable the minimum space utilization threshold. Default value is *40*. If the utilization for a workplace maintenance plan is below this range, it is deactivated if it meets all the deactivation criteria set forth by the Optimise Cleaning Activities Agentic AI workflow. For more information, see Optimize cleaning activities agentic workflow.
sn_wsd_maintenance.optmise_cleaning_max_utilization_threshold	Property to enable the maximum utilization threshold. Default value is *80*. If the utilization for a workplace maintenance plan case goes beyond this range, a new maintenance case is added by the Optimize Cleaning Activities Agentic AI workflow. For more information, see Optimize cleaning activities agentic workflow.

Scheduled Job installed with Maintenance Management

Navigate **All** > **System Definition** > **Scheduled Jobs** or enter `sys_properties.list` in the Filter search box or context menu of an instance. Search for Workplace Maintenance Management scheduled jobs.

Scheduled Jobs

Scheduled Job	Description
Optimise cleaning activities	Optimise cleaning Activities Agentic Workflow is triggered when this scheduled job is run. This scheduled job runs in the UTC time zone. For more information, see Optimize cleaning activities agentic workflow
Workplace Maintenance Case Historical Data Collection	Schedule job to gather data from existing records for the first time or when a new case is added. This allows to analyze trends and performance metrics over time by collecting snapshots of data using scheduled

Scheduled Jobs (continued)

Scheduled Job	Description
	jobs, which can be configured for various frequencies, such as daily, monthly, or yearly.
Workplace Planned Maint Nightly Run	Schedule job to automatically create maintenance cases for planned workplace maintenance based on active maintenance plan records in your instance. It runs nightly, checks maintenance plans for upcoming required work, and if a plan has an associated maintenance template, it generates a maintenance case and updates the plan's next run time. It fetches all active maintenance plan records that have a "Next run time" indicating maintenance is due soon. If the plan has a template defined, the scheduled job creates a new maintenance case for that plan and updates the plan's "Next run time" for the subsequent maintenance cycle. If no maintenance template is associated with a plan, the job moves to the next plan record in the queue. When this scheduled job is executed, Maintenance cases are generated in Preventative Maintenance.
Workplace Maintenance Case Daily Data Collection	Schedule job to automatically create planned maintenance cases based on existing planned maintenance records with associated templates and schedules. This job runs nightly to populate the Maintenance Management dashboard with data, enabling facilities teams to manage and execute routine maintenance tasks effectively. The job is scheduled to run daily, typically at night. It collects data from the Workplace Maintenance service configuration and Maintenance Schedule records. For planned maintenance records with an associated template and schedule, the job creates new, open maintenance cases. The collected data then populates the Maintenance Management dashboard, providing a clear overview of planned maintenance activities. It automates the process of creating maintenance cases, reducing manual effort and improving efficiency.

Workplace Lease Administration

The ServiceNow® Workplace Lease Administration enables you to create, manage and track workplace contracts from a single interface. You can also add workplace contract services, assets, locations, documents and track important dates. ServiceNow®

Exploring Workplace Lease Administration

The ServiceNow® Workplace Lease Administration enables you to create, manage and track workplace contracts from a single interface. You can also add workplace contract services, assets, locations, documents and track important dates.

Key features

Workplace Lease Administration provides the following features:

- Single interface to create and manage workplace contracts.
- Include terms and conditions in a contract.
- Attach documents to a contract record.
- Associate assets with a contract.
- Receive notifications regarding the expiry of the contracts.

Benefits

The benefits of this application include:

- Manage and track workplace contracts from a single interface.
- Manage contract services and related costs that are part of the workplace contract.
- Maintain various versions of documents efficiently by adding it to the workplace contract.
- Use the notifications received to manage the renewal and payments of the workplace contracts in a timely way.
- View the approval and contract history.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace contract details

Using Workplace Lease Administration you can create workplace contracts with the following details:

- Workplace contract- Basic details for a workplace contract.
- Financial- Financial details, for example, a payment schedule, payment amount, and various costs.
- Renewal - Automatic renewal of a contract.
- Terms and Condition- Legal terms and conditions for a workplace contract.
- Associated contract items:
  - Workplace Service Contracts- Common contract services and their costs covered as part of the workplace contract.
  - Contract locations- Locations covered as part of the workplace contract.
  - Assets covered- Assets covered as part of the workplace contract.
  - Documents- Contract-related documents.

Workplace contract notifications

You will receive notifications on a weekly basic with the list of contracts that are near to their expiration date. For information about how to renew contracts, see Renew workplace contract in Core UI.

Configure Workplace Lease Administration

As an admin, you can configure Workplace Lease Administration and enable workplace lease administration users to create and manage workplace contracts.

Activate Workplace Lease Administration

You can activate the Workplace Lease Administration plugin (sn_wsd_la) for Workplace Lease Administration if you have the admin role. The application includes demo data and installs related ServiceNow® Store applications and plugins if they are not already installed.

Before you begin
Workplace Lease Administration requires a separate subscription from the rest of the ServiceNow AI Platform.

To purchase a subscription, contact your ServiceNow account manager. When you purchase a subscription, certain plugins are activated automatically. If a paid plugin isn't activated automatically, you can manually activate it from the All Applications list in your instance.

Note:

Before purchasing a subscription, you can evaluate the feature on a non-production instance without charge by requesting it from the Now Support Service Catalog.

Role required: admin

About this task
The following items are installed with Workplace Lease Administration:

- Plugins
- Roles
- Tables

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Components installed with Workplace Lease Administration and Scripts installed with Workplace Lease Administration.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Workplace Lease Administration plugin (sn_wsd_la) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Using Workplace Lease Administration

As a lease manager or administrator manager, you can create, manage, and track workplace contracts. You can add workplace contract services, relevant documents, and track important milestones.

As a lease administrator or manager, you can do the following:

- Create workplace lease contracts.
- Track the lease contracts as a tenant.
- Add workplace contract services along with its costs.
- Add contract locations.
- Add assets to a contract.
- Add documents.
- Build and add Terms and Conditions.
- Receive notifications regarding the lease contracts expiry.
- Renew workplace lease contracts before or after the expiry.

As a lease administration user, you can only view the workplace contracts.

You can access Workplace Lease Administration, either from the Core UI or Workplace Central. For more information on how to access and use the application from different views, refer to the following topics.

- Working with Workplace Lease Administration from the Core UI
- Working with Workplace Lease Administration from the Workplace Central

For more information about installing Workplace Central, see Install Workplace Central.

For more information on the workplace contract workflow, states, and substates, see Contract life cycle.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Working with Workplace Lease Administration from the Core UI

Create and manage workplace contracts from **Core UI**.

Access Workplace Lease Administration from Core UI

To access Workplace Lease Administration, navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.

For information about installing Workplace Lease Administration, see Activate Workplace Lease Administration.

Create workplace contracts in Core UI

As a lease administrator or manager, you can create workplace contracts and also add assets, terms and conditions, contract locations, and documents to a contract.

Before you begin

Role required: sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select **New**.
3. In the **Contract Model** field, select **Lease**.
4. In the **Terms and conditions** section, specify the legal information in the contract.
   For more information, see Add and build contract terms and conditions in Core UI
5. On the form, fill in the rest of the fields.
   For description of the field values, see Workplace contract new record form.
6. Right-click the form header and select **Save**.
7. **Optional:** Add contract services, contract locations, assets, or documents to the contract.
   For more information, see the following topics:
   - Add a workplace contract service to a contract in Core UI
   - Add a workplace contract location in Core UI
   - Add assets to a workplace contract in Core UI
   - Add a document to a workplace contract in Core UI
8. Save and exit the contract or submit it for review.
   - To save and exit the contract, select **Update**.
   - To send a notification to the approver, select **Submit for Review**.

     For information about the approval process, see Approve or reject a workplace contract in Core UI.

Add a workplace contract service to a contract in Core UI

Workplace contract services are the common services offered as part of the lease contract. You can add and track the services along with their associated costs.

Before you begin

Role required: sn_wsd_la.manager or sn_wsd_la.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select the contract.
3. In the **Workplace Contract Services** related list, select **New**
4. On the form, fill in the fields.

Workplace contract services form

Field	Description
Name	Name of the contract service.
Cost	The currency and cost of the contract service.
Workplace Contract	The contract name is auto-filled.
Description	Description of the contract service.
Domain	The domain for the service.

5. If the contract service type you want does not appear in the **Workplace Contract Service type** field drop-down list, create it.
   a. Right-click **Category** and select **Configure choices**.
   b. On the Configure Category Choices form, in the **Enter a new item field**, enter the name of the category that you want to add.
   c. Select **Add**.
6. Select the desired category from the **Workplace Contract Service type** field drop-down list.
7. Select **Submit**.

Add a workplace contract location in Core UI

Add a location that is covered by the contract to a workplace contract.

Before you begin

Role required: sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select a contract.
3. If the locations are not in the Contract locations related list, create them.
   a. Select **New**.
   b. Provide the location information in the Location form.
   c. Select **Submit**.
4. In the Contract locations related list, select the locations covered by the contract.
5. Select **Save**.

Result

The locations are added to the contract.

Add assets to a workplace contract in Core UI

Add assets to a workplace contract, including software licenses, to specify what the contract legally covers.

Before you begin

You must have an existing contract.

Linking a contract with assets clarifies what the contract legally covers. The Assets Covered related list is available only after you save or submit a workplace contract.

Role required: sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select a contract.
3. Review the assets in the Assets Covered related list.
4. If a desired asset covered by the contract is not available for selection, create it.
   a. Select **New**.
   b. Select the type of asset to create.
   c. Fill in the form related to the asset type.
   d. Select **Submit**.
5. In the Assets Covered related list, select **Edit**.
6. Select the assets covered by the contract.
7. Select **Save**.

Result

The selected assets are added to the contract.

Add and build contract terms and conditions in Core UI

Add and build terms and condition when a contract is in the Awaiting Review, Rejected, or Renewal Rejected substate.

Before you begin

Role required: sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select a contract.
3. In the **Terms and Conditions** section, double-click **Insert a new row**.
4. Select the Lookup using list icon and see whether the terms and conditions record you want to add to the record exists.
5. If the record doesn't exist, create it.
   a. Select **New**.
   b. In the Terms and conditions form, provide a name and description for the terms and conditions record.
   c. Select **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select the terms and condition record.
7. **Optional:** Enter a number in the **Order** field to specify the sequence in which the record should appear in the terms and condition document.

   Note:
   If you attempt to enter a duplicate terms and conditions record for a contract and save the record, an error message appears and the new duplicate record is not added.

8. In **Related Links**, select **Build Terms and Conditions**.
   All records from the Terms and Conditions related list are added to the **Terms and Conditions** section of the contract record. The terms and conditions records are built in the sequence specified in the **Order** field.

Add a document to a workplace contract in Core UI

Add documents to the workplace contract to maintain a record of all relevant documents and different versions of those documents.

Before you begin

Role required: sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select the contract.
3. View the documents listed in the Documents related list.
4. If the document record is not included in the Documents related list, create it.
   a. Select **New**.
   b. Fill in the form related to the document record.
   c. Select **Submit**.
5. Link a document record to the contract.
   a. Select **Edit**.
   b. Select the document record from the list by selecting its check box.
   c. In **Actions on selected rows** drop-down menu, select **Link Documents**.
6. **Optional:** Add a new version of a document to a record
   a. In the **Documents** related list, right-click the doc record.
   b. Select **Upload Version**.
   c. Select the file type that you want to upload.
   d. Select OK.

Submit workplace contract for review in Core UI

You can send a contract that is in Draft state for approval.

Before you begin

Role required: sn_wsd_la.manager or sn_wsd_la.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select a contract in Draft state.
3. In the **Approver** field, select an approver for the contract.
4. Select **Submit For Review**.

Result

An email message is sent to the selected approver and the contract substate changes to Under Review.

Approve or reject a workplace contract in Core UI

As a lease administrator or manager, you can approve or reject a workplace contract after it is submitted for review.

Before you begin

Role required: sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select a contract in the Requested state.
3. Either approve or reject the contract.
   - To approve the contract, select **Approve**.

     The contract substate changes to Approved.
   - To reject the contract, select **Reject** and enter a rejection reason in the **Comments** field.

     The contract substate changes to Rejected.
4. Select **Update**.

Result

- Contracts with the state set to Draft and a start date set in the future are kept in the Draft state until the start date is reached.
- If the contract has a substate of Approved, the system changes the state to Active and removes the Substate value.
- When a contract with a state of Draft and a start date set to a date in the past is approved, the State value is automatically set to Active and the Substate value is left empty.

Working with Workplace Lease Administration from the Workplace Central

Create and manage workplace contracts from the Workplace Central.

Access Workplace Lease Administration from the Workplace Central Workspace

- Activate Workplace Central plugin (sn_wsd_central).
- Ensure you have the role sn_wsd_la.workplace_central_user assigned.
- Access Workplace Lease Administration using one of the following methods:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Navigate to **All** > **Workplace Central** > **Workplace Central** > **Lease Administration**
- Navigate to **Workspaces** > **Workplace Central** > **Lease Administration**

For information about installing Workplace Lease Administration, see Activate Workplace Lease Administration.

Create workplace contracts in Workplace Central

As a lease administrator or manager, you can create workplace contracts and also add assets, terms and conditions, contract locations, and documents to a contract.

Before you begin

Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.
3. Click **New**.
4. In the **Contract Model** field, select **Lease**.
5. In the **Terms and conditions** section, specify the legal information in the contract.
   For more information, see Add and build terms and conditions in Workplace Central
6. On the form, fill in the rest of the fields.
   For description of the field values, see Workplace contract new record form.
7. Click **Save**.
8. **Optional:** You can submit the contract for review or add contract services, contract locations, assets, terms and condition, or documents to the contract.
   For more information, see the following topics:
   - Add a workplace contract service in Workplace Central
   - Add workplace contract locations in Workplace Central
   - Add assets to a workplace contract in Core UI
   - Add documents to a workplace contract in Workplace Central
9. Either save the contract or submit it for review.
   - Click **Save** to save the contract.
   - Click **Submit for Review** to send notification to the approver.

     For information about the approval process, see Approve or reject workplace contract in Workplace Central.

Add a workplace contract service in Workplace Central

Workplace contract services are the common services offered as part of the lease contract. You can add and track the services along with their associated costs.

Before you begin

Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the contract.
4. In the **Workplace Contract Services** related list, click **New**.
5. On the form, fill in the fields.

Workplace contract services form

Field	Description
Name	Name of the contract service.
Cost	The currency and the cost of the contract service.
Workplace Contract	Name of the contract. The contract name is auto-filled.
Workplace Contract Service type	The Workplace Contract Service type. The available options are Parking, Janitorial, or Common Area Maintenance.
Description	Description of the contract service.
Domain	The domain for the service.

6. Select **Save**.

Add workplace contract locations in Workplace Central

Add locations to the workplace contract for the locations the contract covers.

Before you begin
Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

Procedure
1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.
3. Select a contract.
4. In the **Contract locations** related list, either select an existing location or add a new location.

Result
The locations covered are added to the contract.

Add asset to workplace contract in Workplace Central

Add assets to the workplace contracts.

Before you begin
Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

About this task
Linking a contract with assets clarifies what the contract legally covers. The Assets Covered related list is shown only after you save or submit a workplace contract.

Procedure
1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.
3. Select a contract.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Review the assets in the Assets Covered related list.
5. If a desired asset covered by the contract is not available for selection, create it.
   a. In the **Assets Covered** related list, select **New**.
   b. Fill in the form related to the asset type.
   c. Select **Save**.
6. In the **Assets Covered** related list, select **Add** to add assets.
7. Select the assets that is covered by the contract.
8. Select **Add**.

Add and build terms and conditions in Workplace Central

After you create a terms and conditions record, add the record to a lease contract that is in the Awaiting Review, Rejected, or Renewal Rejected substate.

Before you begin

Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

Procedure

1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.
3. Select a contract.
4. In the **Terms and Conditions** section, double-click **Insert a new row**.
5. Click the reference lookup using list icon .
6. Select the Lookup using list icon  and see whether the terms and conditions record you want to add to the record exists.
7. If the record doesn't exist, create it.
   a. Select **New**.
   b. In the Terms and conditions form, provide a name and description for the terms and conditions record.
   c. Select **Submit**.
8. Select the terms and condition record.
9. **Optional:** Enter a number in **Order** to specify the sequence in which the record should appear in the terms and condition document.

   Note:
   If you attempt to enter a duplicate terms and conditions record for a contract and save the record, an error message appears and the new duplicate record is not added.

10. In **Related Links**, select **Build Terms and Conditions**.
    All records from the Terms and Conditions related list are added to the **Terms and Conditions** section of the contract record. The terms and conditions records are built in the sequence specified in the **Order** field.

Add documents to a workplace contract in Workplace Central

Add documents to the workplace contract to maintain all the relevant documents in a single place and maintain different versions of the document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

Procedure
1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.
3. Select a contract.
4. Link an existing document record.
   a. In the **Documents** related list, select **Link documents**.
   b. Select the document you want to add and select **Ok**.
5. If the document record that you are looking for is not available, create a new document record.
   a. In the **Documents** related list, select **New**.
   b. On the Create New Documents form, fill in the fields.
   For a description of the field values, see Create New Documents form
   c. Select **Submit**.
6. Upload document versions to a document record.
   a. In the **Documents** related list, select a document record.
   b. In the attachment pane, select **Browse**.
   c. Select a document to be uploaded.
   d. Select **Upload**.
   e. Select **Submit.**

Submit a workplace contract for review in Workplace Central

You can send a contract that is in Draft state for approval.

Before you begin
Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

Procedure
1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.
3. Select a contract in **Draft** state.
4. Select an **Approver** for the contract.
5. Click **Submit For Review**.

Result
An email message is sent to the selected approver and the contract substate changes to Under Review.

Approve or reject workplace contract in Workplace Central

Approve or reject a workplace contract after it is submitted for review.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_wsd_la.workplace_central_user, sn_wsd_la.manager or sn_wsd_la.admin

Procedure
1. Navigate to **Workspaces** > **Workplace Central**.
2. Select **Lease Administration**.
3. Select a contract in **Requested** state.
4. Either approve or reject the contract.
   - To approve the contract, select **Approve**.

     The contract substate changes to Approved.
   - To reject the contract, select **Reject** and enter a rejection reason in the **Comments** field.

     The contract substate changes to Rejected.

Result
- Contracts with the state set to Draft and a start date set in the future are kept in the Draft state until the start date is reached.
- If the contract has a substate of Approved, the system changes the state to Active and removes the Substate value.
- When a contract with a state of Draft and a start date set to a date in the past is approved, the State value is automatically set to Active and the Substate value is left empty.

Manage workplace contracts

Lease administrators and managers can track, renew, and view information related to workplace contracts.

You can access Workplace Lease Administration, either from the Core UI or Workplace Central from different views, refer to the below topics.

- Manage workplace contracts from Core UI
- Manage workplace contracts from Workplace Central

For more information on the lease contract workflow, states, and substates, see Contract life cycle.

Manage workplace contracts from Core UI

Lease administrators and managers can track, renew, and view information related to workplace contracts from Core UI.

Renew workplace contract in Core UI

Renew a workplace contract after you have created it, when it is approaching expiration, or when it has expired.

Before you begin
Role required: sn_wsd_la.manager or sn_wsd_la.admin

About this task
You will receive an email notification when contracts are close to their expiration date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can renew a contract that meets the following conditions:

- The state is Active or Expired
- The substate is None or Rejected

Procedure

1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select a contract in the Active or Expired state.
3. Select **Renew**.
4. On the form, fill in the fields.

Contract renewal form

Field	Descriptions
Approver	User to approve or reject the contract.
Options	Length of time for the renewal in years.
Renewal Start Date	Date on which the renewed contract takes effect.
Renewal End Date	Date on which the renewed contract expires.
Cost Adjustment Type	Type of cost adjustment applied to the renewed contract. The available values are None, Fixed, Manual, or CPI.
Cost adjustment amount	Numerical increase or decrease in price of the renewed contract. A negative number indicates a decrease in price. You can specify a value for **Cost Adjustment** or **Cost Adjustment Percentage** but not both.
Cost Adjustment Percentage	Percentage increase or decrease in the price of the renewed contract. A negative percentage indicates a decrease in price. You can specify a value for **Cost Adjustment** or **Cost Adjustment Percentage** but not both.

5. Save your changes.
   - To save all entered data, select **Submit for Review**.

     The contract is sent to the specified approver and the substate is changed to Under Review.

   - To save all entered data, select **Save**.

     You can submit the contract for renewal later. The substate is changed to Awaiting Review.
6. **Optional:** Change any information on the Contract form.
7. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
If you selected the **Save** option, ensure that you select **Renew** when you're ready to submit the contract renewal for approval.

Adjust workplace contract in Core UI

Change the start date, end date, or payment amount after the contract is in the Active state.

Before you begin
Role required: sn_wsd_la.manager or sn_wsd_la.admin

About this task
To adjust a contract, its state must be Active.

Procedure
1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select **Adjust**.
3. On the form, fill in the fields.

Contract values form

Field	Description
Start Date	Date on which the contract takes effect.
End Date	Date on which the contract expires.
Payment Amount	Total amount paid for the contract. If the contract has one or more rate cards, this field shows the total of all rate card base costs.

4. Select **Submit Adjustments**.

Cancel workplace contract in Core UI

Cancel an active contract if it is no longer relevant.

Before you begin
Role required: sn_wsd_la.manager or sn_wsd_la.admin

Procedure
1. Navigate to **All** > **Workplace Lease Administration** > **Workplace Contracts**.
2. Select a contract.
3. Select **Cancel Contract**.
4. Click **Yes** to confirm contract cancellation.

Result
The contract state changes to Canceled.

Manage workplace contracts from Workplace Central

Lease administrators and managers can track, renew, and view information related to workplace contracts from Workplace Central.

Renew workplace contract in Workplace Central

Renew a workplace contract after you have created it, when it is approaching expiration, or when it has expired.

Explore Workplace Reservations for Microsoft Outlook Add-in

Reserve a workplace space in less than a minute without using the Reservation portal. The ServiceNow® Workplace Reservations for Microsoft Outlook Add-in enables you to make a reservation using Microsoft Outlook directly.

Note:
As of Workplace Reservation Management version 3.0.2, you are no longer required to install the Microsoft Outlook Add-in plugin. The advanced search widget in the Workplace Reservation Management 3.0.2 version is used for Outlook Add-in reservations. To use Microsoft Outlook Add-in, install and configure Workplace Calendar Synchronization. Administrators can configure the manifest add-in file to complement integration with Workplace Calendar Synchronization.

Workplace Reservation Management 3.0.2 manifest add-in file for Microsoft Outlook provides enhanced reservation experience and capabilities for employees. Employees can make reservations using multiple Reservable Modules. They can make multi-building, browse near a person, or neighborhood reservations. It provides advanced reservation web portal capabilities within the Microsoft Outlook Add-in manifest file.

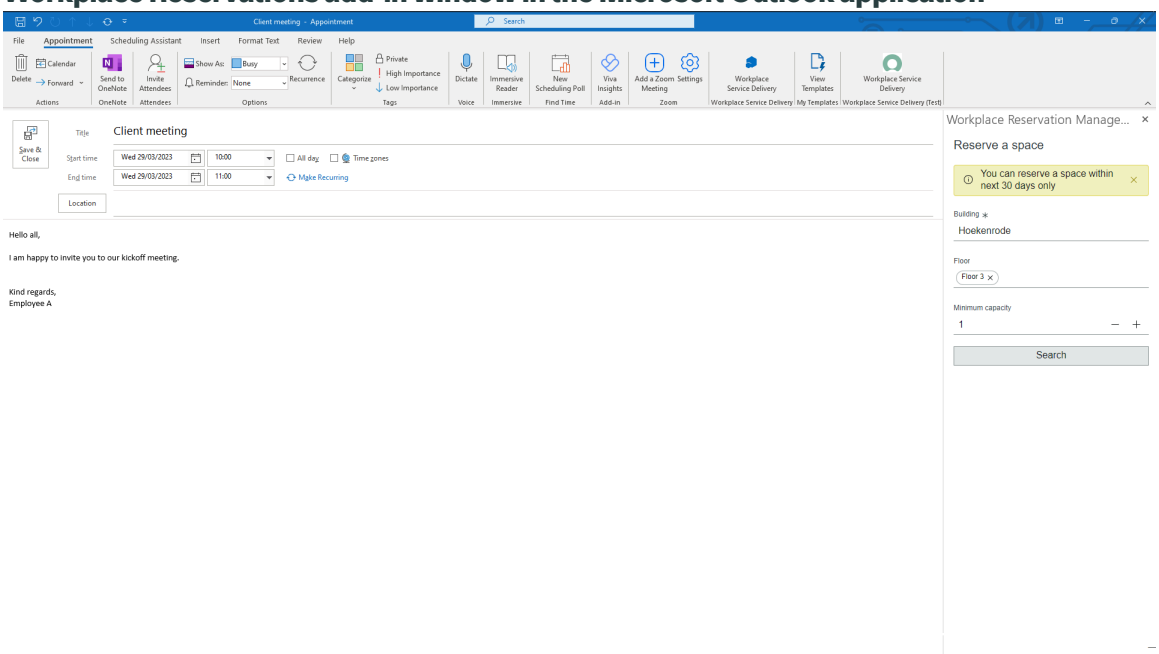
Migrate or update to Workplace Reservation Management 3.0.2 version. For more information, see Manage Workplace Reservations for Microsoft Outlook Add-in.

The Workplace Reservations for Microsoft Outlook Add-in application is created on the Seismic workspace and uses Seismic components. The components are stored in the Workplace Service Delivery Components plugin to enhance the employee experience while using the add-in.

As an employee, you can easily reserve a space using Microsoft Outlook directly. The ServiceNow® Workplace Reservations for Microsoft Outlook Add-in provides you the capabilities of the Workplace Reservation Management application within the Microsoft Outlook application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The add-in enables an employee to create an appointment or edit an existing appointment. An employee can find the available spaces easily and request extra services without the need to open a separate application. Only the locations that exist in both the Microsoft Exchange Online and Workplace Reservation Management are displayed for reservation. Only rooms added in the Rooms [sn_wsd_core_room] table are sychronized using the calendar provider. To synchronize spaces, that spaces must be added as rooms in the Rooms [sn_wsd_core_room] table.



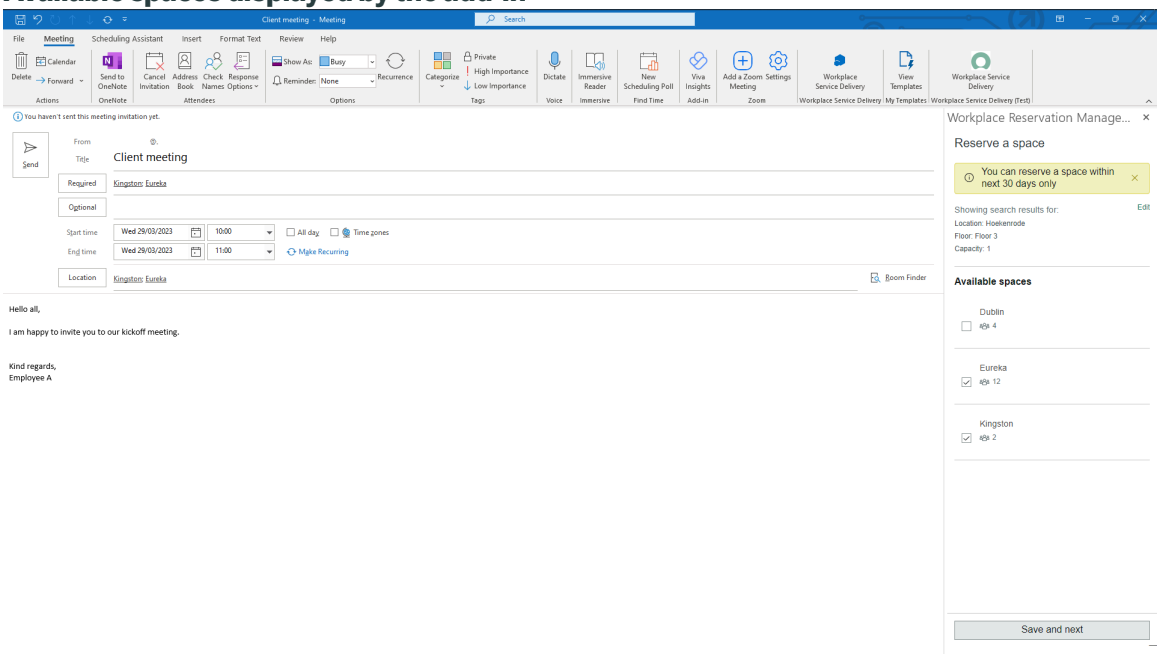
The add-in is displayed in the Microsoft Outlook ribbon. When you select the add-in icon, it displays a reservation form in a sidebar. You can configure a manifest file and upload it to the Microsoft Outlook application to view the add-in feature.

As a workplace admin, you can specify the reservable module that you want to use for reservations in the *sn_wsd_msaddin.default_reservable_module* system property. Only one reservable module can be used in the Workplace Reservations for Microsoft Outlook Add-in.

Only the workplace locations that are assigned to the reservable module are displayed to employees while making a reservation. All the reservations and the extra services requested by employees are managed within the Workplace Reservation Management application.

Important:
The Workplace Reservations for Microsoft Outlook Add-in application does not support Microsoft Exchange On-Premises.

Workplace Reservations add-in window in the Microsoft Outlook application

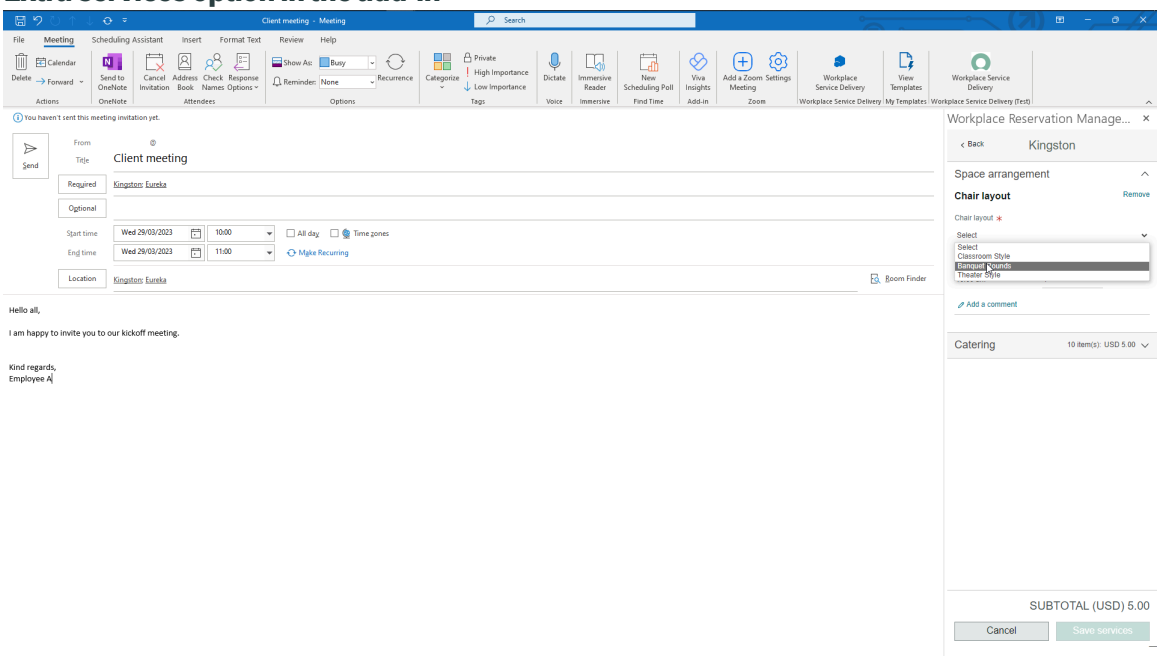


Workplace Reservation Management and the Microsoft Outlook Add-in

As an employee, the add-in enables you to make a reservation without using the Workplace Reservation Management Reservation portal, thus saving time. The add-in reduces the time to search for a location by directly displaying the available locations. The add-in enables you to perform the following actions:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

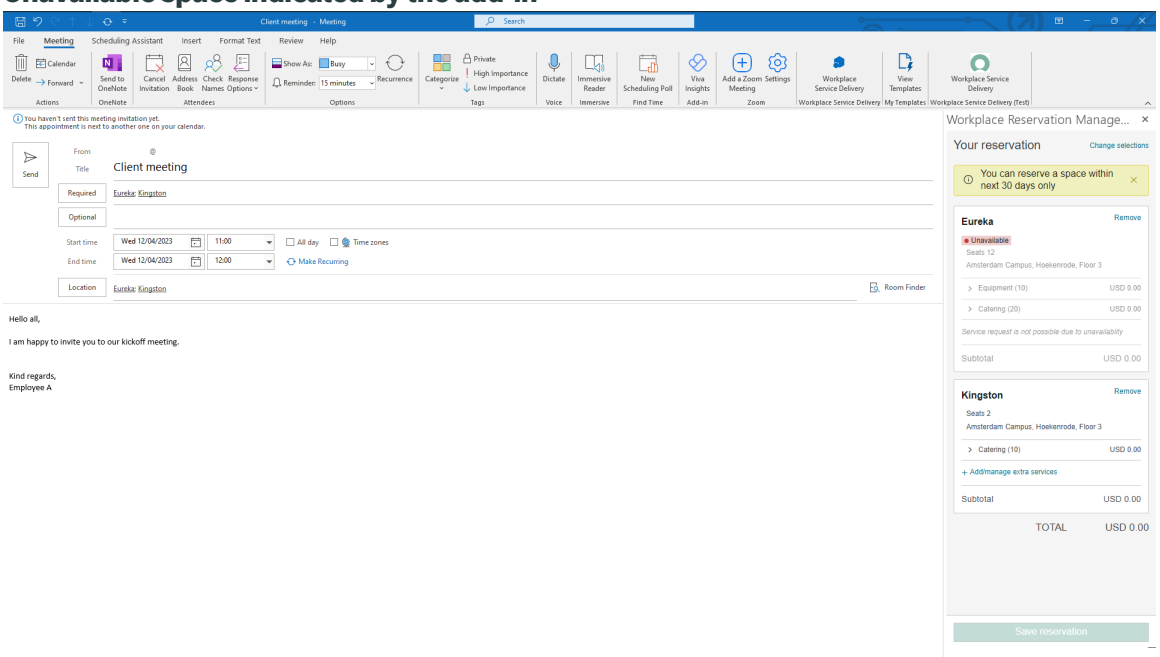
- Find available spaces by applying multiple search criteria.



Available spaces displayed by the add-in

- Add spaces directly to an existing or a new event using the add-in directly.
- Request a reservation for yourself or on behalf of others.
- Make a reservation for any workplace location such as a conference room, parking lot, workspace, desk and more.
- Make reservation on behalf of a visitor or to meet a visitor.
- Specify the reservation duration.
- Request extra services.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Extra services option in the add-in

- Update an existing reservation or modify the extra services. You can change the location and add/remove services.

If any selected space becomes unavailable for any reason or if the date or time has changed, the add-in indicates the same.

Unavailable space indicated by the add-in

You can use the existing reporting tools available with Workplace Reservation Management application to report any issue.

Important:
Currently, it is not possible to use Microsoft Outlook on the web using the Apple Safari browser. Instead, you can use Mozilla Firefox or Google Chrome.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Workplace Calendar Synchronization

You can also synchronize your reservations with your calendar provider by using the ServiceNow® Workplace Calendar Synchronization application. Enable your employees to make reservations with ServiceNow® Workplace Reservation Management or with your organization's calendar service providers, such as Microsoft Exchange Online.

For more information, refer the following:

- Explore Workplace Calendar Synchronization
- Setup Workplace Calendar Synchronization

Configure Workplace Reservations for Microsoft Outlook Add-in

Install Workplace Reservations for Microsoft Outlook Add-in and configure the manifest file.

Install Workplace Reservations for Microsoft Outlook Add-in

Install the Workplace Reservations for Microsoft Outlook Add-in application from ServiceNow Store applications. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin
Also install the Workplace Service Delivery Components application from the store as the Workplace Reservations for Microsoft Outlook Add-in application is built on the Seismic workspace. The Workplace Service Delivery Components store the components built on Seismic to enhance the experience brought to employees while using the Workplace Reservations for Microsoft Outlook Add-in application.

Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance. The list displays the subscriptions that your organization has purchased.
2. Verify that the following plugins are activated:
   - Workplace Core (sn_wsd_core) minimum version 2.6.
   - Latest version of Workplace Reservation Management (sn_wsd_rsv).
   - Latest version of Workplace Calendar Synchronization (sn_wsd_rsvsync).

Use the following details when required:

- Name of the application: Workplace Reservations for Microsoft Outlook Add-in
- ID of the application: sn_wsd_msaddin

Important:
The Workplace Reservations for Microsoft Outlook Add-in application uses the credentials used for Microsoft Exchange Online Synchronization.

Role required: admin

Warning:
If you are installing the Workplace Reservations for Microsoft Outlook Add-in application in a Windows system, it is required to have the "WebView2 runtime" installed on the client devices. You can download it here: https://developer.microsoft.com/en-us/microsoft-edge/webview2/.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   Search for the application by its name (Workplace Reservations for Microsoft Outlook Add-in) or ID (sn_wsd_msaddin). If you cannot find the application, you may have to request it from the ServiceNow Store.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Reservations for Microsoft Outlook Add-in.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Click **Install**.

Create a manifest file for Microsoft Outlook Add-in

Create a manifest file and customize it as per your organization standards to configure the add-in in Microsoft Outlook.

Before you begin

Role required: none

Download the sample manifest file *Workplace_Outlook_add_in_manifest_example.xml* along with the Workplace Reservations for Microsoft Outlook Add-in application from the ServiceNow Store. You can also create a manifest file, for more information on how to create a manifest file, refer to the Microsoft documentation.

About this task

In this task, you can create a manifest file by customizing the sample manifest file downloaded from the ServiceNow Store. The parameters in the manifest file that can be customized are explained in the procedure.

Procedure

1. Navigate to the directory where you have downloaded the sample manifest file.
2. Open the manifest file to make customization.
3. In the sample manifest file, change the following parameters as per your organization requirements.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Parameters in the manifest file that can be customized

Parameter	Description
Id	Unique ID for the add-in. For more ore information, refer to the Microsoft documentation.
DisplayName	Display name of the add-in. The name is displayed in the Microsoft Outlook app ribbon.
Description	Description about the add-in.
IconUrl	Link to the icon image. A Youmoji icon is installed along with the application for the add-in. If you are setting your own icon, ensure that you specify a url linking to the icon. The following icon formats are supported: ○ 16x16 ○ 32x32 ○ 64x64 ○ 80x80
Images	Link to the images used in the add-in.
SupportUrl	Link to a supporting environment.
SourceLocation	Link to a supporting environment. You can link your own environment, or a different website.
Url	Link to the instance where the add-in is installed.

4. Save the manifest file with a different name.

Result
The manifest file for the add-in is created.

What to do next
Perform any of the following actions as per requirement:

- Upload the manifest file for a single user
- Upload the manifest file in Microsoft Office 365

Upload the manifest file for a single user

After you create the manifest file, make it available for usage within Microsoft Outlook. You can upload the add-in for a single user use.

Before you begin
Ensure that you have created a manifest file for the add-in.

Role required: sn_wsd_msaddin.admin

Procedure

1. Open **Microsoft Outlook**.
2. On the Outlook ribbon, click **Get Add-ins**.
3. Select **My add-ins**.
4. In the Custom add-ins section, select **Add a custom add-in** > **Add from file**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select the manifest file that you have created for the add-in.
6. Click **Next** > **Install**.

Result

The Workplace Reservations for Microsoft Outlook Add-in is installed. The add-in appears while scheduling a meeting in the Outlook.

Upload the manifest file in Microsoft Office 365

After you create a manifest file, upload it to Microsoft Office 365. You can view and use the add-in Microsoft Office 365 after you upload the manifest file.

Before you begin

Important:
The Workplace Reservations for Microsoft Outlook Add-in application does not support Microsoft Exchange On-Premises.

Role required: sn_wsd_msaddin.admin

Procedure

1. Log in to the Microsoft Office 365 with your admin account.
2. Select the app launcher icon in the upper-left and click **Admin**.
3. In the admin center, go to **Settings** > **Integrated apps**.
4. Select **Deployed apps** and select **Upload custom apps**.
5. Select **App type** as **Office Add-in**.
6. Select **Upload manifest (.xml) file from device** option.
7. Click **Choose File** to select the manifest file that you have created for the add-in.
8. Click **Next**.
9. In the Assign users section, select one of the following options to specify whom to deploy the add-in.
   - **Entire organization**: Select this option to deploy the add-in to everyone.
   - **Specific users/groups**: Select this option to deploy the add-in to only selected users or user groups. Use the search option to find users or groups to whom you want to deploy the add-in.
   - **Just me**: Select this option to deploy the add-in only to you.
10. Click **Next**.
11. In the Deployment method section, review app permissions and selected settings.
12. Click **Finish deployment**.
    A green tick appears when the add-in deployment is successful. Follow the instructions provided on the page to test if the add-in deployment is successful.
13. On the final page, click **Cancel** to close the dialog box.

Result

The add-in is uploaded to Microsoft Office 365. The users to whom the add-in is deployed can view the add-in option while scheduling a meeting.

© 2026 ServiceNow, Inc. All rights reserved.

Make a reservation using Workplace Reservations for Microsoft Outlook Add-in

Schedule an event or appointment in the Microsoft Outlook using the additional features provided by the Workplace Reservations for Microsoft Outlook Add-in application.

Before you begin

- Create a manifest file for Microsoft Outlook Add-in.
- Upload the manifest file. Perform any one of the following actions depending on the usage:
  - Upload the manifest file for a single user.
  - Upload the manifest file in Microsoft Office 365.

Role required: admin

Procedure

1. Open **Microsoft Outlook** application.
2. Perform any one of the following actions depending on what type of reservation you want to make:
   - To create an appointment or event, navigate to **New items** > **Appointment**.
   - If you want to send a meeting invite, navigate to **New items** > **Meeting**.
3. In the Appointment window, select the reservation add-in.
   The add-in opens a side-bar that contains a reservation form.

   Note:
   The name of the add-in depends on the name specified in the manifest file.

4. Select a date and time for the reservation.

   If **Max days in future** is enabled, and if the start date and end date exceeds the **Max days in future** value, a warning message is displayed to show that reservation can only be made up to the number of days specified in **Max days in future**. The **Max days in future** value is configured on the Reservable module and specifies the maximum number of the days in the future up to which the Reservable module can be reserved.

   Note:
   If the **Max days in future** value is not enabled, users can select a date as per the **Max number of occurrences** on the Reservable module. For more information, see Configure a reservable module.

   - If an employee clicks open the calendar icon () and tries to select a date greater than the **Max days in future** value, the dates are disabled in the calendar date picker.
   - For example, if the **Max days in future** value is 90 days, and if you try to select a date beyond 90 days, then the number of days beyond 90 days is disabled in the calendar date picker.
   - A warning message is shown that you can reserve a space within the next 90 days only. The date defaults to the current date.
   - If an employee manually enters a date that is greater than what is specified in the **Max days in future** value, then the application resets the date to the current date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If the number of days for a reservation exceeds the **Max days in future** value, the **Save Reservation** and **Add extra services** options are disabled. The employee is not able to save the selected services. The employee can send out the invitation through Outlook, but no services are added.

5. In the Reserve a space sidebar, fill in the following fields:
   a. Select the **Building** in which you want to make an appointment.
   b. Select the **Floor** in which you want to reserve a space for the appointment.
   c. Select the required **Capacity**capacity of the space.
   The spaces will be displayed depending on the capacity specified.
6. Click **Search**.
   The available spaces are displayed based on the search.
7. Select a space from the list of available spaces.
   You can also select multiple spaces.
8. If you have selected multiple spaces, to mark all the space details as private, select **Make all space details private**.

   Note:
   The option is displayed based on the privacy settings set on the selected spaces.

9. **Optional:** If you have selected multiple spaces, to set privacy for a space individually, use the **Make space details private** option placed below each space.

   Note:
   The option is displayed based on the privacy settings set on the space.

10. Click **Save and next**.
11. Click **+Add extra services** to request extra services along with your reservation.
12. **Optional:** If you have selected multiple spaces, select **+Add extra services** under each space separately.
13. In the services form, select from the following services:
    - **Catering**: Option to request food services. Specify breakfast and/or lunch preferences and the quantity required.
    - **Equipment**: Option to request any special equipment for the meeting.
14. Click **Save services**.
15. Review your reservation details.
16. To edit your reservation, click **Change reservation**.
17. To edit the extra services requested, click **+Add/manage extra services**.
18. Click **Save reservation**.
    The reservation is created and logged in the Workplace Reservation Management application.
19. In the Outlook appointment window, click **Send** to send the meeting request.
    The meeting request will be sent to the selected spaces to confirm the reservation.

Analytics and Reporting Solutions

Coordinate work and improve processes with dashboards and reports.

Exploring Workplace Move Management

Manage and fulfill employee requests with Workplace Move Management.

Enable employees to collaborate, communicate, and easily manage space changes from start to finish. As an employee, you can submit a request using the Workplace Service Portal. As a manager, you can make requests directly through the application.

As a manager, the automated process helps you to closely supervise the movement of employees and their belongings with minimal to no disruption. You can fulfill move requests through move cases and associated tasks. You can view the move requests raised by employees, and approve or reject a request anytime. The application enables you to identify seating conflicts while fulfilling move requests.

As an employee, raise a move request to move from one place to another using the Workplace Service Portal. Move to another space located in the same building or a different building. You can perform the following actions:

- Raise a move request for yourself or for a co-worker.
- Select a reason for move.
- Select a date on which you want the movement to be implemented.
- Specify the 'From' and 'To' location. You can also select a workplace directly on the floor map of the building.
- Select equipment that must be moved along with the request.
- Specify any extra information or instruction if required.

As an admin, the Workplace Move Management application enables you to perform the following actions:

- Raise a move request for an employee directly using the application rather than using the Workplace Service Portal.
- Monitor the move requests that are created in the application. Identify seating conflicts while processing move requests.
- View or modify move requests or move tasks that are assigned to you, the ones that are currently open, and also all the move requests.
- Automate and configure approvals for those move requests that require permissions.
- Send email notifications to relevant stakeholders regarding the move requests when required.
- Modify, approve, or reject a planned or ongoing move request.

Workplace Central - Move management

Group multiple move requests under a move project and track their progress at a time using the Workplace Central Move Management workspace. For more information, refer to Move Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Configuring Workplace Move Management

Install and configure Workplace Move Management for workplace users.

Install Workplace Move Management

Install the Workplace Move Management application from the ServiceNow Store. Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Before you begin

Complete the following setup instructions:

1. Navigate to **Subscription Management** > **Subscriptions** in your instance.

   The list displays the subscriptions that your organization has purchased.

2. Verify that the following plugins are activated:
   - Workplace Core (sn_wsd_core) minimum version 2.6.2.
   - Workplace Case Management (sn_wsd_case)

Use the following details when required:

- Name of the application: Workplace Move Management
- ID of the application: sn_wsd_move

Role required: admin

Procedure

1. Navigate to **System Applications** > **All Available Applications** > **All**.
2. Find the application by using the filter criteria and search bar.
   Search for the application by its name (Workplace Move Management) or ID (sn_wsd_move). If you cannot find the application, you may have to request it from the ServiceNow Store.
3. Click **Install**.
4. In the Application installation dialog box, review the application dependencies.
   A list of dependent plugins and applications are displayed if they will be installed, are currently installed, or need to be installed. If there are any plugins or applications that need to be installed, you must install them before you can install Workplace Move Management.
5. **Optional:** If demo data is available and you want to install it, click **Load demo data**.

   (Optional) Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Important:
   If you don't load the demo data during installation, it's unavailable to load later.

6. Click **Install**.

Managing Workplace Move Management requests

As an admin, you can create or edit workplace services and record producers related to move requests. You can create or edit move tasks to fulfill a move request case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Request a desk change** service is a default workplace service in the Workplace Service Portal. Employees can use this service to submit a move request.

A workplace service, **Request an employee's desk change** is by default available in the application. The service can be accessed only by the admin or the workplace manager.

To create a move-related workplace service, refer to Create a Workplace service. To configure and link the workplace service to a record producer, refer to Configure a Record producer.

As a workplace manager, the application enables you to also implement the actions that are available in the Workplace Case Management and the Workplace Core.

For example, in the Workplace Case Management application, you can do the following:

- Create a move-related workplace service and link it to a record producer. You can also create a record producer if required.
- Configure Case and Task templates for workplaces cases.
- Create child move cases and tasks if required.

And in the Workplace Core application, you can do the following:

- Create knowledge base articles for employees and publish them.
- View the knowledge base articles created in the application and modify an article whenever required.

You can also group multiple move requests under a move project and track their progress at a time using the Workplace Central Move Management workspace. For more information, refer to Move Management.

Create a move request on behalf of an employee

Create a move request on behalf of an employee from the application directly instead of using the Workplace Service Portal.

Before you begin

Role required: sn_wsd_move.manager

About this task

Specify the current location or current desk that the employee is moving from, and the target location or target desk that the employee is moving to. Select the date of movement and the reason for moving. You can also provide extra information related to the move if required.

Procedure

1. Navigate to **All** > **Workplace Move Management** > **Move requests**.
2. Click **Create new**.
3. On the form, fill in the fields.

Request an employee's desk change form

Field	Description
On behalf of	Name of the employee for who you are raising the move request. If you are raising the move request for yourself, select your name.
Requested move date	Date on which the movement must be completed. Select a date from the calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Move reason	Reason for moving from the current location. Select from the list of available reasons.
From:	
Region	Region where the current desk is located.
Site	Site where the current desk is located.
Campus	Campus in which the current desk is located.
Building	Building in which the current desk is located.
Floor	Floor on which the current desk is located.
Space	Space in which the current desk is located.
To:	
Region	Region where the target desk is located.
Site	Site where the target desk is located.
Campus	Campus in which the target desk is located.
Building	Building in which the target desk is located.
Floor	Floor on which the target desk is located.
Space	Space in which the target desk is located.
What should be moved?	Items to be moved from the current desk to the target desk.
Additional notes	Extra information regarding the move request.

4. Click **Submit**.

Result

The move request is submitted to change the employee's desk. If there are personal items such as communication equipments, ergonomic furniture, or any personal belongings to be moved to the new location, then the **Move personal items** workplace service-related service activities are performed.

If the state is set to Closed incomplete, it means that the move request could not be completed due to various reasons. As a manager, you can review if there are any conflicts with the move request in the Conflicts review related list.

What to do next

To view and monitor move requests created by you on behalf of an employee or for yourself, see View move requests.

Raise a move request for a space change

Create a move request to relocate to another space. Specify why you want to move and when you want to move. You can select a space that is located in your current building or at a different building. You can also select a desk directly on the floor map.

Before you begin

Role required: sn_wsd_core.workplace_user

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Self-Service** > **Employee Center**.
2. On the Employee Center landing homepage, select the **Workplace Services** > **Site safety**.
3. Select **Request a desk change**.
4. On the form, fill in the fields.

Request a desk change form

Field	Description
Requested for	Option to specify the user for whom you are requesting the space arrangement. If a workplace profile is defined for the requester, the Building, Floor, and the Space fields are filled in automatically.
Select a move reason	Reason for moving from the current location. Select from the list of available reasons.
Date and time requested by	Date and time of the request for the service.
Urgency	Select the Urgency of the desk change request
Impact	Select the Impact of the unavailability of the service.
Moving from?	
Fine the space on a floor map	Option to directly select the current space on the floor map.
Building	Building in which the current desk is located.
Floor	Floor on which the current desk is located.
Space	Space in which the current desk is located.
Moving to?	
Fine the space on a floor map	Option to directly select the current space on the floor map. If employees have a permanent assignment in their workplace profile, the employee names are displayed on the map for a selected space. For more information, see Display permanent seat assignments on floor maps.
Building	Building in which the target desk is located.
Floor	Floor on which the target desk is located.
Space	Space in which the target desk is located.
What should be moved?	Workplace service Items that can be moved from the current desk to the new target desk.
Anything else we should note?	Extra information regarding the move request.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Add attachment	Attached files that support the move request if required.

5. Click **Submit**.

Result
The move request is submitted.
If the state of the move request is Closed complete, it means that the move request has been completed successfully. If the state is set to Closed incomplete, it means that the move request could not be completed due to various reasons. You can raise another request if required.

Depending on your platform, do one of the following to view your requests:

- On the Workplace Service Portal, go to the **Requests** tab to view your requests and reservations.
- On the Now Mobile app's navigation bar, tap **For Me** and scroll down to the My Request section to view your requests.
- In the virtual agent chat, type your question or select **Show Me Everything** to select from a list of available options.

If you want to cancel a request, Click **Cancel Request**. When the request is resolved, select **Accept** or **Reject**.

Update a move request workplace service

As a workplace manager, modify a move request that is created in the Workplace Case Management application. You can add move tasks, edit a task template, add child move cases, and more.

Before you begin
Ensure that you have the following applications installed:

- Workplace Core
- Workplace Case Management.

Role required: sn_wsd_case.manager or workplace manager

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Workplace services**.
2. Select any of the following move-related workplace services that you want to edit:
   - **Workplace Move Service**
   - **Move Employee Personal Items**
3. On the form, edit the fields that you want to update.
   For more information about each field on the form, see Create a Workplace service.
4. **Optional:** To edit a workplace service activity, go to the Workplace Service Activity related list and select the workplace service activity that you want to edit.
   For more information about each field on the form, see Create a Workplace service activity.
5. Click **Update**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The workplace service is updated.

Update a move-related workplace service record producer

Update a move-related workplace service record producer. Link a workplace service to one or more record producers.

Before you begin
Ensure that you have the following applications installed:

- Workplace Core
- Workplace Case Management

Role required: sn_wsd_case.manager or workplace manager

About this task
After a workplace service is created, the service is linked to a record producer. The record producer is displayed to employees when the employee tries to select the workplace service.

Procedure

1. Navigate to **All** > **Workplace Case Management** > **Workplace Case Management - Setup** > **Record Producers**.
2. Select any of the following record producers which you want to edit:
   - **Request a desk change**
   - **Request an employee's desk change**
3. On the form, edit the fields that you want change.
   For more information about each field on the form, see Configure a Record producer.
4. Click **Update**.

Result
The record producer is updated.

Create a move-related knowledge base article

Create a knowledge base article so that you can provide move-related information or notices to employees.

Before you begin
Ensure that you have the following applications installed:

- Workplace Core
- Workplace Case Management.

Role required: sn_wsd_core.admin or sn_wsd_core.kb_writer

Procedure

1. Navigate to **All** > **Workplace Core** > **Knowledge management** > **Create new article**.
2. Select **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge form

Field	Description
Knowledge base	Name of the knowledge base. Select the **Workplace services** knowledge base.
Category	Relevant category for the knowledge base article. Select an existing category, or select the add category icon (⊕) to add a new category. You can also select or add a subcategory.
Valid to	Date until which the knowledge base article is valid. The date is automatically set to 2100 - 01 - 01.
Article type	Type of article, which you want to create. Choices are as follows: ○ Select **Wiki** to create a wiki page. ○ Select **HTML** to create an html web page.
Workflow	This field is automatically set as **Draft**. Depending on the progress, the workflow of the knowledge base article changes to the following states: ○ Review ○ Published ○ Pending retirement ○ Retired
Attachment link	Option to give an attachment for the knowledge base article.
Display attachments	Option to display the attachments individually.
Short description	Short description for the knowledge base article. The short description is displayed as the title of the article.
Article body	Information that is displayed in the knowledge base article. Use the formatting options to change the style of the content. This field appears only if **HTML** is selected from the **Article type** field.
Wiki	Information that is displayed in the knowledge base article as a wiki. Select the **Wikitext** option to preview the text. This field appears if **Wiki** is selected from the **Article type** field.

4. **Optional:** To search existing articles for any duplicate content, select **Search for Duplicates**.
5. Select **Submit**.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The knowledge base article is created.

What to do next
Create a workplace knowledge base article

Review move conflicts

View the reason behind a move request conflict.

If the state of a move request is set to Closed incomplete, it means that the move request could not be completed due to various reasons. As a move manager, you can review if there are any conflicts with the move request in the Conflicts review related list.

Following are the different types of conflicts:

- **Selected destination location is not active**: Conflict due to inactive to location selected to move.
- **Selected destination location is already occupied**: Conflict due to unavailability of the location selected to move.
- **The cost centre/department of user and the selected destination location does not match**: Conflict due to mismatch in the user's cost centre/department and the location selected to move. The conflict is considered based on the Allocation type [*sn_wsd_core.ALLOCATION_TYPE*] system property
- **The selected destination location is a flexible location**: Conflict due to the location that is selected to move is a flexible location.
- **Created a workplace move request for a space that is a workplace profile of another user**

You can also customize the list of validations that you want run on a move request. You can add validations or change existing validations in the *WSDMoveRequestValidations* script include.

Analytics and reporting solutions for Workplace Move Management

Raise a move request on behalf of an employee, update a move request workplace service or a move-related workplace record producer, or create a move-related knowledge base article with Workplace Move Management

Create, update, or raise a move request on behalf of an employee.

View move requests

Monitor the move requests that are assigned to you, the requests that are currently open, and all the other requests that are created in the application.

Before you begin
Role required: sn_wsd_move.manager

Procedure

1. Navigate to **All** > **Workplace Move Management** > **Move requests**.
2. To view move requests, select any of the following options:
   - **Assigned to me**: Select this option to view the move requests that are assigned to you.
   - **Open requests:** Select this option to view open move requests.
   - **All move requests**: Select this option to view all the move requests.

Workplace Service Delivery for Mobile

Access your workplace-related services and other information on your mobile device using the ServiceNow Workplace Service Delivery for Mobile.

Get started

Explore Learn about Workplace Service Delivery for Mobile concepts and features.	**Configure** Configuration required for Workplace Service Delivery for Mobile.
Using Use Workplace Service Delivery for Mobile to make a reservation, get directions to a workplace and more.	**Reference** Get details about components like fields, tables, and properties.

Exploring Workplace Service Delivery for Mobile

Manage your workplace reservations using the ServiceNow Now Mobile app.

Install and configure the Workplace Service Delivery for Mobile plugin on your ServiceNow instance. Install the application separately as it is not available within the Workplace Service Delivery suite.

Use the workplace services provided by your organization on your mobile directly. The Workplace Service Delivery for Mobile for Mobile application enables you to do the following:

- Manage your workplace service requests at any time using your mobile device.
- Make single or multiple reservations for workplaces.
- Make multi-day reservations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Reserve a neighborhood space.
- Scan the QR code and quickly reserve a space.
- Get directions to your workplace.
- Check in and check out your reservations.
- Search for locations based on standard services and reservable purposes.
- Review, edit, and cancel your reservations.
- Search for a campus, building, and a space using AI search.
- View meeting notes added to a reservation, if applicable.

Note:
Using the application, you can create, edit, cancel, check in, and check out a reservation. But you cannot create a recurring reservation or group reservation using the application.

Configure Workplace Service Delivery for Mobile

Configure Workplace Service Delivery for Mobile to make reservations using the Now Mobile app.

Mobile Wayfinding Administration

Configure map providers to enable Workplace Service Delivery for Mobile users to get directions to another workplace easily.

Mobile wayfinding functionality is available for mobile users.

Note:
Indoor Mapping spatial map data and objects can be integrated in Workplace Service Delivery and viewed using responsive mobile.

- Create a custom Map provider. Configure Indoor mapping as your map providers so that directions are displayed from one location to another.

  For more information, see Configure a custom Map provider.

- Configure a custom Map screen. Configure map screens for wayfinding.

  For more information, see Configure a custom map screen.

- Indoor Navigation User profile: Use an employee's workplace profile for wayfinding. The Get directions option appears based on these conditions.
  - Employee must have a floor map configured Indoor Mapping or Mappedin.
  - Indoor wayfinding-My Reservation: Get directions to a location from the reservation details page. The specified location must have a floor map defined to view the **Get Directions** option. For more information, see Get directions to a workplace.

  Employees must have an ongoing reservation. If there is no reservation, the location specified in the employee's workplace profile is used.

Configure a custom map screen

Configure a map screen to see location-based information on a map from a mobile app. The map highlights points of interest and users can switch between a map view and list view.

Before you begin
Role required: sn_wsd_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Space Mapping** > **Mobile Wayfinding Administration** > **Custom Map Screen**.
2. Provide the Custom map screen name and description.
3. On the form, complete the following form field information

4. Click **Submit**.

Result

Map screens displays a map with locations that are associated to the records in a data item.

Configure a custom Map provider

Configure map providers so that directions are displayed from one location to another in Workplace Service Delivery for Mobile

Before you begin

Ensure that you have the following:

- Workplace Service Delivery for Mobile.
- Indoor Mapping is the inbuilt map provider with the Workplace Service Delivery application.
- Mappedin is a third-party map provider.

Note:
You must configure a map provider for each building individually.

Role required: sn_wsd_core.admin

Procedure

1. Navigate to **All** > **Space Mapping** > **Mobile Wayfinding Administration** > **Custom Map Provider**.
2. Click **New**.
3. On the form, fill in the fields.

Custom Map Provider

Field	Description
Key table	Table entry for which you want to configure the map provider. f you have selected Building [sn_wsd_core_building] from the list.
Key	Table entry for which you want to configure the map provider. For example, if you have selected Building [sn_wsd_core_building] as your key table. Search for a document on the Select the document dialog box that appears.and select, Building:BuildingC. Search using the lookup list icon ( ).
iOS location provider	Location provider for iOS. Select **Apple** or **Atlas** as the location provider.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Android location provider	Location provider for Android. Select **Atlas**.
Application	Name of the application. This field is auto-generated. Ensure that the application is set to **Workplace Core**.
Map provider	From the drop-down list, select any of the following based on the map provider that you are using: ○ **ServiceNow**: For Indoor Mapping. ○ **Mappedin**: For Mappedin
Location provider app id	Location provisioning In IndoorAtlas for indoor positioning or blue dot experience. From your Atlas account, navigate to **Apps** > **IA support** > **API Key** and copy the API key id. This option is available only if you have selected **ServiceNow** (Indoor Mapping) as your map provider. **Note:** If you have Apple as your location provider, then, this is an optional step for you. Location app Id Shows the current location or positioning of employees (bluedot experience) on the maps. The start location in wayfinding is automatically determined by the application. If location positioning is enabled, you can see the positioning icon ( ) on your mobile app for wayfinding.
Location provider app secret	From your Atlas account, navigate to **Apps** > **IA support** > **API Key** and copy the API key secrete id. This option is available if you have installed Indoor Mapping as your **Note:** If you have Apple as your location provider, then you are not required to fill this field information. This option is available only if you have selected **ServiceNow** (Indoor Mapping) as your map provider
Map provider app id	User name for Mappedin. Available only if you have installed Mappedin as your map provider.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	To find the user name, navigate to **Space Mapping** > **Mappedin Administration** > **Credentials**. Select **Mappedin Credentials** and copy the user name.
Map provider app secret	App secret of the map provider (Mappedin). Available only if you have installed Mappedin as your map provider.

4. Click **Submit**.
   The custom map provider is configured for the table entity that you selected. For example, the map provider shows directions for locations in Building1.The custom map provider is configured for the table entity that you selected. For example, the map provider shows directions for locations in Building1.

   Note:
   The **CustomMapConfigId** is mapped with sys Id of mapped reservations of Indoor Mapping and Mappedin. To get Indoor Mapping maps, users must update **CustomMapDefaultProviderId** and **CustomMapConfigId** in both **location_custom_map** and **locations_custom_map**. The **CustomMapDefaultProviderId** is the sys Id of Indoor Mapping associated record in the custom map provider. For more information, see Enable map view to create reservations.

   For more information on how to select a map provider map properties, see Customize the map properties.

Enable map view to create reservations

Enable map view for mobile employee users so that they can reserve spaces using floor maps Now Mobile app.

Before you begin
Role required: sn_wsd_core.admin

About this task
Activate the Enable Map view option. Users can view maps supported by Indoor Mapping or Mappedin while reserving a space.

Procedure

1. Navigate to **All** > **Space Mapping** > **Custom Map Provider** to modify the base system map provider.
   Modify the base system map provider to use one of your buildings as a key and use either your Workplace Indoor Mapping or Mappedin credentials.
2. Mappedin: If your Map provider is Mappedin, perform the following steps:

   a. Open the base system custom map provider record.
   This record does not have a name. If your system has multiple custom map providers, you have to identify this record by its sys_id. To check the sys_id of a record, right-click the record, select **Copy sys_id** from Additional Actions on top left , and paste the sys_id **c5d49d2265072010f87794bf508527f6** into a text document.

   b. Modify the following fields on the Custom Map Provider form:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Custom Map Provider form

Field	Description
Key	Table entry for which you want to configure the map provider. For example, Building1.
Map provider app id	User name for the Mappedin credentials. To find the user name, navigate to **All** > **Space Mapping** > **Mappedin Administration** > **Credentials**. Select your Mappedin Credentials and copy the user name.
Map provider app secret	Your map provider's (Mappedin) app secret credentials.

c. Select **Update**

d. For Mappedin, update **CustomMapDefaultProviderId** and **CustomMapConfigId** in both location_custom_map and locations_custom_map with corresponding Sys IDs.

e. Navigate to **All** > **sys_sg_input_list** to open the Inputs page.

f. Select and open the **location_custom_map** and **locations_custom_map** and make the following changes for both these properties:

i. On the Location Map View and Locations Map view page, Edit the **CustomMapDefaultProviderId** and verify that it is mapped with sys id of Mappedin associated record on the Custom map provider page (see step 2a).

ii. Edit the **CustomMapConfigId** and verify that it is mapped with sys id of sys_sg_custom_map_config.list. To copy the sys_id, navigate to **All** > **sys_sg_custom_map_config.list**. Select **Mapped Reservations** and copy the sys_id and then paste it for **CustomMapConfigId**.

3. If you have installed Indoor Mapping as your map provider, perform the following steps:

a. Navigate to **All** > **Space Mapping** > **Custom Map Provider** to modify the base system map provider.

b. A new map provider **ServiceNow** is created for Workplace Indoor Mapping in the Custom Map Provider.

c. Open the base system custom map provider record to edit.

d. Right-click the record, select **Copy sys_id** from Additional Actions on top left, and paste the sys_id **5a0a15aac35301100f926ff4c840dd9a** into a text document.

e. Modify the following fields on the Custom Map Provider form:

Custom Map Provider form

Field	Description
Key table	Building (sn_wsd_core_building) that is integrated with Workplace Indoor Mapping.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Selecting a building to enable map functionality for all other Workplace Indoor Mapping buildings.
Key	Workplace Indoor Mapping building name. For example: Building A.
Map provider	Select **ServiceNow** from the drop-down list.

f. Click **Update**.

g. To get Workplace Indoor Mapping maps, user needs to update **CustomMapDefaultProviderId** and **CustomMapConfigId** in both location_custom_map and locations_custom_map with corresponding sys ids.

h. Navigate to **All** > **sys_sg_input_list** to open the Inputs page.

i. Select and open the **location_custom_map** and **locations_custom_map** and make the following changes for both these properties:

i. On the Location Map View and Locations Map view page, Edit the **CustomMapDefaultProviderId** and verify that it is mapped with sys id of ServiceNow associated record in Custom map provider page (see step 3c).

ii. Edit the **CustomMapConfigId** and verify that it is mapped with sys id of sys_sg_custom_map_config.list. To copy the sys_id, navigate to **All** > **sys_sg_custom_map_config.list**. Select **Mapped Reservations-Indoor Map** and copy the sys_id and then paste it for **CustomMapConfigId**.

4. Click **Update**.
5. Navigate to **All** > **Workplace Service Delivery for Mobile** > **Properties**.
6. Navigate to the Enable Map view option for WSD Mobile Reservations property.
7. Select the Enable Map view option for WSD Mobile Reservations property to enable it.
8. Select **Save**.

Result

Option to view a floor map using the Map view instead of a list view is available for Workplace Service Delivery for Mobile users. You can use the **Toggle map view** option while making a reservation to view floor maps and select spaces. For more information, see Configure the Toggle map view property.

Configure the Toggle map view property

Configure the Toggle map view option on the Now Mobile app app while reserving a space.

Before you begin

Role required: sn_wsd_rsv.admin

Procedure

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Toggle Map view** is not shown in this case. When a user proceeds with this option, map visualization (Map view) is used. If there is no map available for a building or a floor, users are not able to select a space (as users can only select a space using a floor map).

For more information, see Enable map view to create reservations and Make a reservation using the Now Mobile app.

Configure AI search for Workplace Service Delivery for Mobile

Install and configure AI search with Workplace Service Delivery for Mobile. Users can use AI search to search for campus, buildings, floors, or spaces.

Before you begin
Role required: admin

Note:
To enable AI search for Workplace Service Delivery for Mobile, you need to request for AI search and activate AI search. For more information about how to install and configure AI Search, see AI Search.

Procedure

1. Navigate to **AI Search** > **AI Search Status**.
   A message is displayed that AI search application is not available and enabled on your instance.
2. Click the **Request AI Search** button to trigger automatic activation of AI Search on your instance.
   Your request is processed and it may take some time for the AI Search application to be activated.
3. After installing and configuring AI search, ensure that you have installed Workplace Core and Workplace Service Delivery for Mobile.
4. Navigate to **All** > **Search Configurations** > **NowMobile App Search Configurations**.
5. Change the Search engine to AI Search.
6. Click **Save**.
7. Navigate to **All** > **AI Search Index** > **Indexed Sources** > **Workplace Location Table**.
8. Select the **Index All Tables** button on the top right pane to open the Indexed Source History page.
   Indexed Source is queued for indexing. You can monitor the progress by refreshing this page. Once the Ingestion State is **Indexed**, the process is complete.

Result
When the **Ingestion State** is **Indexed**, the AI search configuration is complete and you can login to the Workplace Service Delivery for Mobile app to search for campuses, buildings, and spaces using AI search.

Configure map properties for Location directory

Configure map properties to enable reservation states, occupancy states, display permanent seat assignments, or auto-refresh time interval for showing the latest reservation and occupancy information on the map. Show or hide neighborhoods on the Location directory.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > **Space mapping** > **Map properties**.
2. Configure the following map properties for Location directory:

Map properties for Location directory

Map property	Value
Show Reservation and/or Occupancy information on Location directory [sn_wsd_space_map.show_rsv_occ_data_loc_dir]	Option to show the reservation and occupancy states on the Location directory. Set the map property to **Yes** to display reservation and occupancy status on the location directory.
Auto Refresh time interval (in mins) for showing Reservation and/or Occupancy information on the Location directory.	Option to auto-refresh reservation and occupancy information on the Location directory. Enter the map property value in minutes. Default value is 2 minutes. Based on this value, the map is updated and refreshed automatically every 2 minutes with the latest reservation and occupancy information for a selected location. You can change the default value as appropriate. Zero or negative integer value deactivates this property. Decimal values are not supported. **Note:** Make sure that you have enabled the map property Show Reservation and/or Occupancy information on Location directory. Auto-refresh time interval is displayed on the Location directory only when the Show Reservation and/or Occupancy information on Location Directory map property is enabled. If the Show Reservation and/or Occupancy information on Location Directory is set to **No**, the auto-refresh of reservation and occupancy information is not shown on the Location directory.
Configure the default state for the neighborhood indicator on the location directory [sn_wsd_space_map.display_neighborhood_on_the_map]	Map property to display the neighborhood on the Location directory. Select any of the following available list option as required: ○ Available: The **Neighborhood** toggle button is available on the Location Directory but is not selected. Select the check box to view neighborhoods for a selected floor. ○ Disabled: The **Neighborhood** toggle button is disabled and not available on the

Map property	Value
	Location Directory. Employees cannot view neighborhoods for a selected floor. ○ Default: By default, the **Neighborhood** toggle button is available and enabled on the Location directory. ○ User preference: By default, the **Neighborhood** toggle button on the Location directory is not enabled. If you select this option, your preference is stored in your next browser session. To disable neighborhoods on the Location directory, you can deselect the Neighborhood check box.
Enable persistence of filters on the location directory [sn_wsd_space_map.location_directory_filter_persistence]	Select **Yes** to enable persistence of space availability filters for browser sessions and tabs on the location directory. By default, this property is set to true. The filters are retained or persist across browser sessions and tabs. Applied filter information is retained from your last browser session.

3. Select **Save**.
   The updated map configuration properties are available on the Location directory.

Manage workplace schedule and in-office presence using Workplace Service Delivery for Mobile

Employees can plan their hybrid workplace schedule using the Workplace Service Delivery for Mobile. They can reserve a space for a day or make bulk reservations using Workplace.

Employees can indicate their preferred office location (office, remote, or visiting another office), get desk suggestions based on their location preferences, add workplace services available for a location, add preferred collaborators and match their in-office days with collaborators in-office days to increase productivity and collaborate effectively. While reserving or viewing a space, employees can see if the selected space is part of a neighborhood.

Note:
The option to add your workplace preferences and suggestions are also available on the Employee Center portal. Employees are expected to use the Workplace Service Delivery for Mobile app to reserve a space and to view or modify their preferred workplace locations and workplace schedule suggestions. Reserve a workspace using your mobile app before coming to the office. Get desk suggestions based on your preferred location, past and future reservations, proximity (preferred collaborators), favorite spaces, neighborhoods, and standard services.

When proposing a space to an employee for reservation, the application considers the following employee preferences and Space Suggestions table configurations:

- Location preferences (campus, building, floor, and neighborhood)
- Favorite space or spaces set by an employee

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Past and future reservation data
- Preferred collaborators
- Start time and end time (based on building time zone and Reservable module configuration for a location).

Administrators can configure the following to provide better workspace suggestions to employees:

- Space Suggestions table configuration based on Suggestion types (location, proximity, past and future reservation data, standard services, and collaborators). Each of these Suggestion type is a given a weight value (integer value). While proposing a space to an employee, application takes into account these weight values and accordingly ranks it in the search results based on the priority or weightage given to a Suggestion type. If any of the spaces doesn't fulfill the criteria, the employee is shown the next available preferred space. If a preferred workspace is not available for an employee they are also given the option to manually search for available spaces using the advanced reservation option.

  For more information, see Space suggestion Configuration

- Employee presence configuration in Workplace Concierge

  For more information, see Set Employee Presence.

- Properties enabled for Workplace suggestions and preferences.

  For more information, see Properties installed with Workplace Concierge.

Application also considers the following configurations when fetching your preferred workplace locations:

- Filter and fetch locations from the Available Reservable Modules:
  - Fetch locations from all Reservable Modules that are marked for workplace experience in the Space types property [sn_wsd_concierge.suggestions_space_types]. For more information see Properties installed with Workplace Concierge
  - Verifies if it matches one of the allowed space types in the sn_wsd_concierge.suggestions_space_types property.
- Filter locations by Building: For each Reservable Module, application checks if employee's preferred location exists in the specified building. It retains Reservable Modules that are available in a building.
- Selects the Best Reservable Module:Looks at all matching Reservable modules and picks the best one based on the following:
  - If a module has no **Max days in future** Reservable Module property restriction, it is selected.
  - Then, it considers and selects the Reservable Module with the highest value in the **Max days in future** property configuration.

For more information, see Configure a reservable module.

Manage your in-office presence preferences

Employees can customize and manage their in-office or workday presence preferences.

Before you begin

Employees can reserve a space and get space suggestions based on their preferred locations, neighborhoods, workplace services, and collaborators. Employees can modify or update their

Note:
The option to manage your workplace preferences is also available on the Employee Center portal (**All** > **Employee Center** > **Workplace Services** > **Site safety** > **Workplace Preferences**). Employees are recommended to use the Workplace Service Delivery for Mobile to manage their hybrid work schedule and reserve a space before coming to office.

4. Fill in the form fields.

Preferred Location

Field	Description
Campus	Campus name. If an employee has a workplace profile, this field value is automatically set to employee's primary location. **Note:** If an employee doesn't have a workplace profile, the Campus, Building, Floor fields are empty. This is a mandatory field information and employees should search for and select their preferred campus from the available list. Application provides workspace suggestions based on your preferred campus locations. Employee's location preferences are used while searching for a space to create a reservation.
Building	Building name. If an employee has a workplace profile this field value is automatically set to the preferred building. This is a mandatory field and employees should search for and select their preferred building from the available list. Application provides workspace suggestions based on your preferred building location to create a reservation. **Note:** Building must be active and should be reservable.
Floor	Floor name. Employees can search for and add a preferred floor in a building. Application provides workspace suggestions based on your preferred floor selection.
Neighborhoods	Neighborhoods name. Employees can search for search for and add a preferred neighborhood or multiple neighborhoods.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	If an employee has assigned neighborhoods, the field value is automatically set to a neighborhood or neighborhoods. Employees can search for and add a new neighborhood. Neighborhoods are sorted based on the assigned group for an employee. Application provides workspace suggestions based on your preferred neighborhoods. **Note:** Neighborhood is only available when Workplace Space Management is installed.
Sit near	Preferred Collaborators name. Option to add preferred collaborators to collaborate while you are in office. Selected collaborators will be used when suggesting spaces Application provides workspace suggestions based on your preferred collaborators. You can add multiple collaborators that you want to collaborate with while you are visiting your office. If the collaborators are available on your in-office days, application provides space suggestions accordingly. Application fetches preferred collaborators data from the Employee presence in Workplace Concierge. You have the option of removing collaborators and adding new ones as required for a selected location and as per your in-office presence day schedule.To add more than 10 preferred collaborators, you can use the Employee Presence dashboard in Workplace Concierge to add them. For more information, see Add a collaborator.
Services	Available workplace services for a reservation and a selected location. Option to add preferred workplace services to a reservation. The employee can search for and select multiple standard services as required. The employee can remove or add available standard services as required. They can search for a new service and add a service if it is available for a selected location. For example, wheel chair, video conferencing, whiteboard, water bottles, projector, furniture, and so on.

5. Select **Apply**.
   You can now manage your workplace schedule and reserve a space using the desk suggestions and presence data. For more information, see Create a reservation for a day in Workplace.

Create a reservation for a day in Workplace

Reserve your preferred workspace in Workplace using the Workplace Service Delivery for Mobile app.

Before you begin

View your workday presence schedule, office as well as remote days in the schedule calendar.

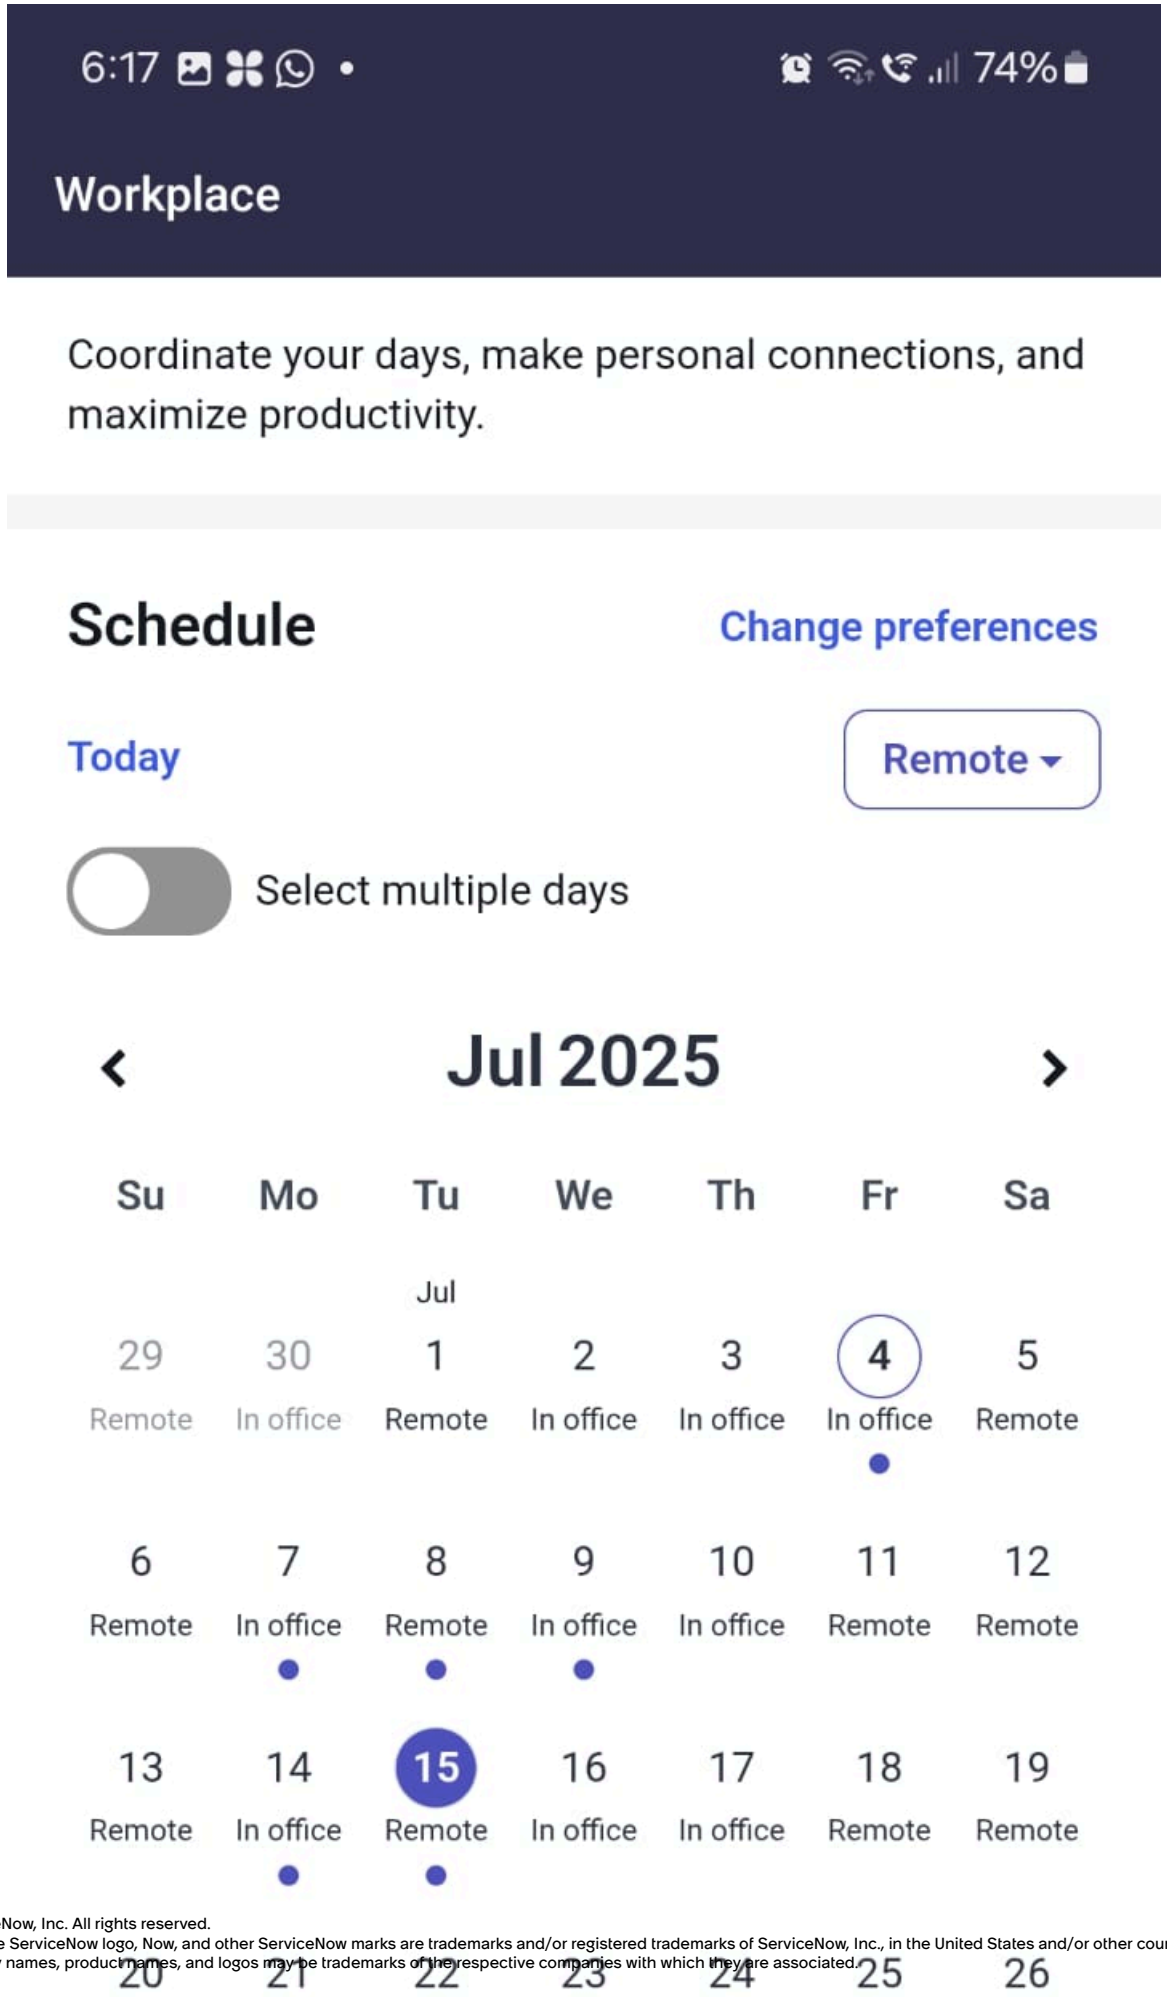
Employees can plan their hybrid workplace schedule and modify workplace presence preferences (in-office, Remote, and visiting another office) in Workplace Service Delivery for Mobile. Employees can view their preferred in-office days and get insights on their preferred collaborators. They can reserve a space by selecting their preferred workspace and collaborators.

Get insights on workplace collaborators who plan to be in office on the days when you are in office. Change your workplace preferences and workplace presence information as and when required to maximize workplace productivity and collaboration. If no collaborators are available in your in-office days, update your in-office presence days to match it along with that of your preferred collaborators.

Make sure that you have the following applications:

- Workplace Service Delivery for Mobile
- Workplace Core
- Workplace Reservation Management
- Workplace Concierge
- Indoor Mapping
- Workplace Central
- Workplace Space Management
- Workplace Space Mapping

Role required: sn_wsd_core.workplace_user



Procedure

1. Log in to the Now Mobile® app.
2. Access your Workplace Service Delivery for Mobile instance.
3. Tap and select the **Workplace** location pin icon () from the mobile home page.

   The location pin changes to a blue pin icon (). The workplace screen appears for you to coordinate your workdays and collaborate with your preferred collaborators.
4. Tap and select a date labeled as **In-office** day on the calendar to make a reservation.

   The Schedule calendar view shows the current date as selected by default. The text label **Today** is displayed for the current date of a month. When you select a future date,the label for **Today** is inactive. This label is not available for making bulk reservations.
5. On the **Schedule** calendar view, make the following changes as required:
   If you have an existing reservation for a selected date, the date is shown with a dot on the calendar. By default, the current week, day, and month is selected on the calendar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

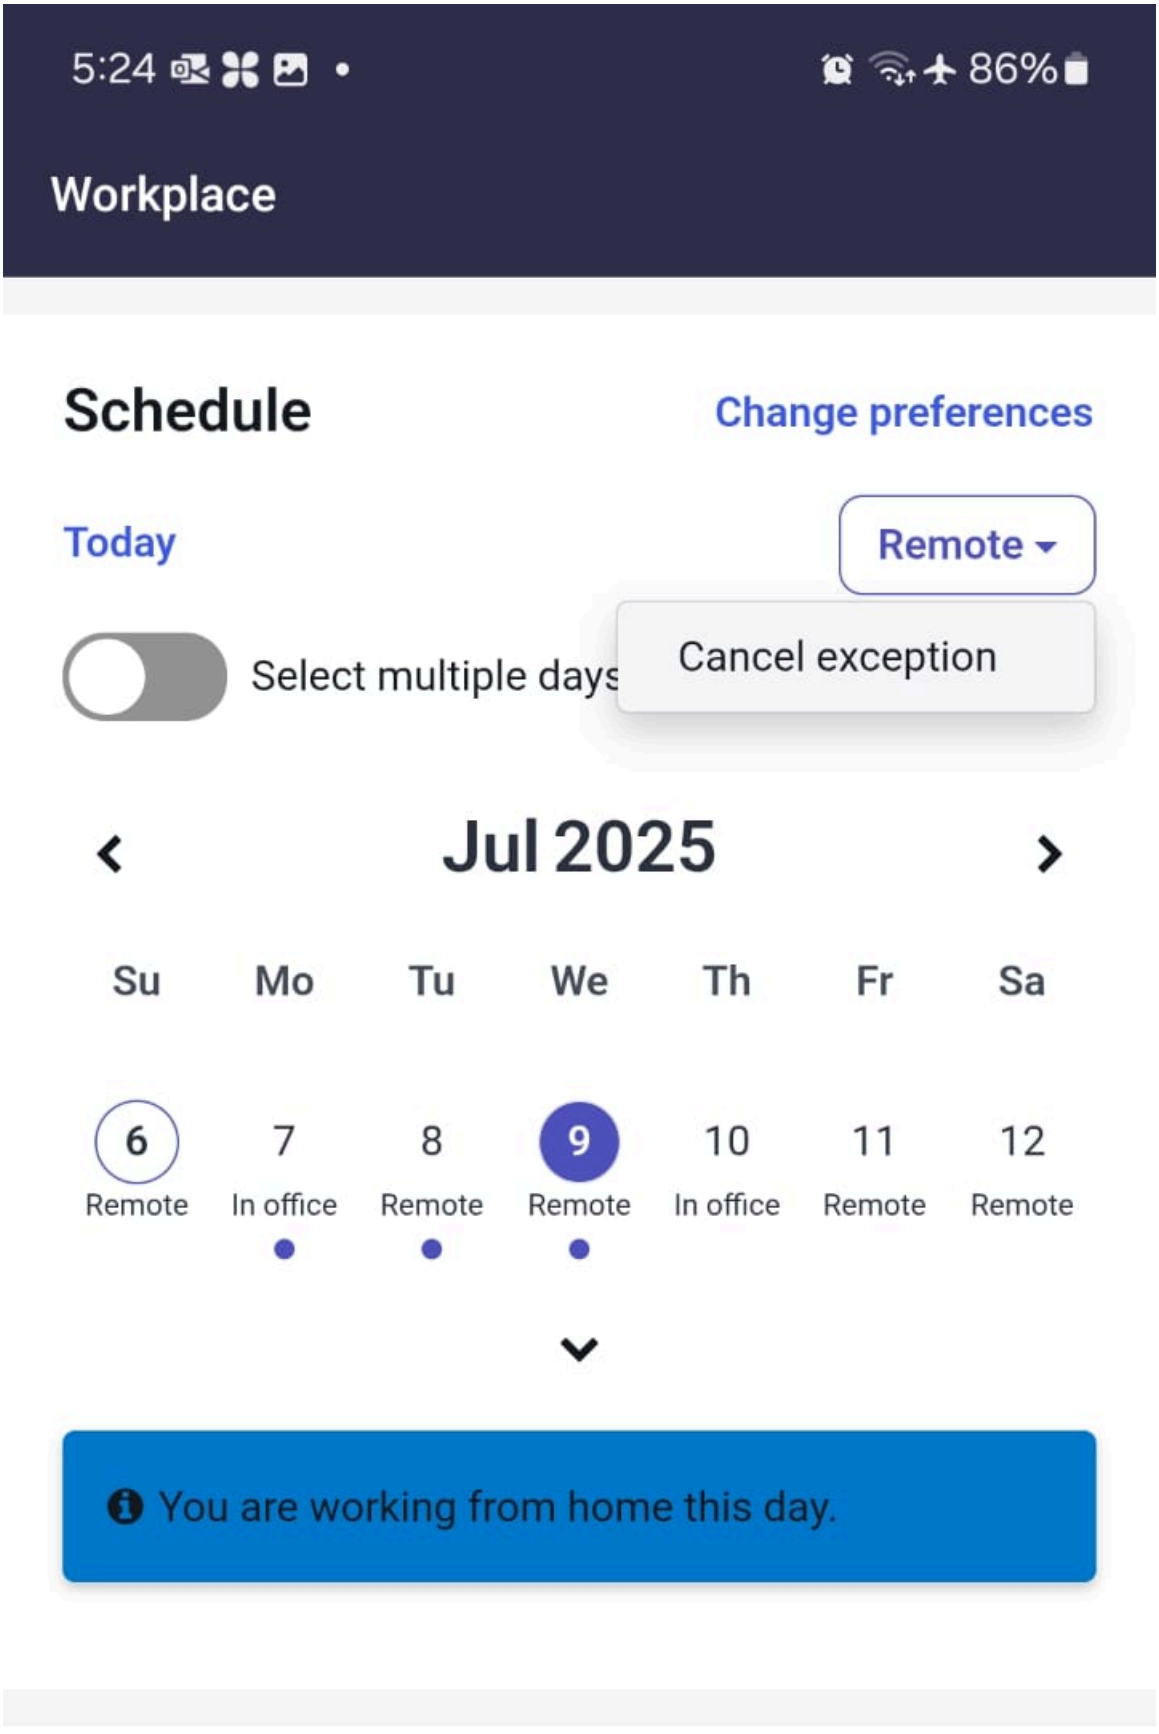
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. View your in-office, remote workday schedule for a week on the calendar.

The calendar view shows your hybrid workday schedule (In-office, Remote). Use the chevron buttons on the calendar to toggle between different calendar views (Day, Week, and Month). Adjust your calendar view as required.

- Use the chevron next button () to view the next or future week when you are in a week view on the calendar. To view the next month in a calendar, expand the calendar and tap the next button. By default, the calendar view is collapsed to show only a week view.
- Use the chevron previous button () to go back to the previous week or weeks.
- Use the chevron expand button () to expand the calendar view for a month if it is in a collapsed state (shows only a week view for a selected month when collapsed).



b. Change your workplace presence information from **In-office**, **Remote**, or **Visiting another office**.
The application fetches presence information from the Employee presence configuration. For information, see Set Employee Presence. This option is not available for creating bulk reservations.

Note:
If you try to select a date which is labeled as **Remote**, the Remote day is changed to an **In-office** presence day and this record is updated in the Employee Presence Exceptions table (**All** > **Workplace Concierge** > **Employee Presence** > **Exceptions**). The **Location** column in this table is updated with the building name that you using to reserve a space for your **In-office** day. For more information, see Components installed with Workplace Concierge.

6. Tap and select **Change preferences** to change your workplace preferences.

   The In-office preferences page opens for you to update your in-office days. Change or modify your location, collaborators, and workplace services as required. For more information, see Manage your in-office presence preferences.

7. In **Space suggestions**, review the suggested building, floor, and a space.
   By default, the **Space suggestions** card displays your preferred desk or space. If you want to reserve a different location or space than what is suggested to you, application fetches other locations from the search results shown on the reservation portal.

   If the user has reservations on a selected day, following information is shown in the suggested workspace card;

   - Reservation time based on building time zone and location.
   - Reservation status (Confirmed, Completed, Awaiting confirmation, and so on.)
   - Space Name
   - Campus, Building, and Floor name.
   - Time. The reservation time depends on the reservation system property for start time (sn_wsd_rsv.day_start) and end time (sn_wsd_rsv.day_end). The reservation time depends on the building time zone.
   - Reservable module name: Desks.
   - Capacity: Meeting room capacity.
   - Standard services and Location purposes
   - Workspace Image (if the workspace has an image associated with it)

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. To update or change a suggested workspace from Space Suggestions, select the **Suggest another** refresh button icon ().

Application shows the available spaces in a building. At a time, the application shows 10 maximum suggestions when an employee taps and selects the refresh button repeatedly. After the tenth attempt, the application shows a message, " Still looking for a space that fits your requirements? Click here to review suggestions again." Selecting **Click here to review suggestions again** displays a list of workspace suggestions.

Note:
If there are no available spaces based on employee preferences, the **Suggest another** option can also show a single space or few spaces (and not 10 preferred available spaces always) when an employee selects the refresh button.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

13. Tap and select the **Insights** tab to view your collaborators and get insight on their in-office days.

    Match your In-office days with that of your collaborators to maximize productivity and collaboration. The application fetches your preferred collaborators information from the Employee presence configuration. For information, see Set Employee Presence.

    Application shows the following information for your preferred collaborators:

    - The number of collaborators who plan to be in office while you are visiting office
    - View details of collaborators who are visiting another office in your in-office day.
    - Collaborators who are working remotely on your in-office day

    If there are no collaborators for a selected in office day, application shows "None of your collaborators plan to be in office on this day."

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

14. Review your in office days insights for a selected date.

    If all your preferred collaborators are planning to be in office on your in-office day, application shows "100% of your collaborators plan to come to the office". For days when you are working from home or remotely, application shows "No insights present for this date."

Create bulk reservations in Workplace

Create bulk reservations in Workplace using the Workplace Service Delivery for Mobile. Employee can manage multiple planned reservations from the Workplace page.

Before you begin

Create bulk reservations using the Workplace page. Select multiple days in the Schedule calendar view and reserve all selected days simultaneously. Check in or check out reservations, edit reservations, view reservation summary details, or cancel a reservation using Workplace. Manage your reservations and presence information using your mobile app. Change your **Remote** working days to **In-office** or **Visiting another office** presence days.

Select your preferred space or desk. Add or edit workplace services to your reservations. Get insights on your preferred collaborators who plan to be in office on the days when you are working from your office. Change your workplace preferences, workplace presence information as and when required to maximize workplace productivity and collaboration. If no collaborators are available in your In-office days, update your In-office presence days to match it with your preferred collaborators.

Note:
The *sn_wsd_concierge.workplace_day_selection_limit* property is configured by your administration. This property when set to an integer value (for example, 3, 5, and so on) enables employees to select multiple dates or days on the calendar to make bulk reservations. For example, if this property is set to 5, employees can make bulk reservations and select only five dates or days on the calendar to make bulk reservations. For more information, see Properties installed with Workplace Concierge.

If the Reservable Module Configuration property *Max days in future* is set to 5 days by your administrator, and the *sn_wsd_concierge.workplace_day_selection_limit* property is set to 6 by your Workplace administrator, employees can select only five dates or days on the calendar for making bulk reservations. The least minimal value is selected for default bulk days selection the calendar by the application.

When an employee creates a future date reservation from the Workplace page, the **All day** check box is selected on the reservation page. The **All day** check box is selected, even if the **All day** is set to **Full day** or **Office hours** in the Reservable Module Configuration by your administrator. When an employee creates a reservation and selects today's date or current date after the standard office hours **Start time** and **End time**, the **All day** check box is not selected on the reservation page. The **All day** check box is not selected on the Make a Reservation page as the timings specified are outside of the standard office or working hours. For more information about the office hours start and end property, see Properties installed with Workplace Reservation Management.

Make sure that you have the following applications:

- Workplace Service Delivery for Mobile
- Workplace Core
- Workplace Reservation Management
- Workplace Concierge

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Indoor Mapping
- Workplace Central
- Workplace Space Management
- Workplace Space Mapping

Role required: sn_wsd_core.workplace_user

Procedure

1. Log in to the Now Mobile® app.
2. Access your Workplace Service Delivery for Mobile instance.
3. Tap and select the **Workplace** location pin icon () from the mobile home page.

   The location pin changes to a blue pin icon (). The Workplace page opens for you to reserve your preferred workspaces, coordinate your workdays and collaborate with your preferred collaborators.
4. Tap the **Select Multiple days** toggle button.
   Make bulk reservations or select multiple days on the calendar to make multiple reservations at once. When this toggle button is selected, users can select multiple days on the calendar for making reservations. When you turn on the toggle **Select multiple days** the calendar is expanded by default and shows a month view.

   Note:
   If the employee selects or manually enters past timings on the reservation page, it resets to the n-1 slot. For example, if the current time of building is 2:00 PM (n), the available time slots are from 1:30 PM (n-1) onwards. When you manually enter 1:00 PM in the Start time, the time is reset to 1:30 PM (n-1).

   Past dates are disabled on the calendar view and are not visible to workplace employees when the **Select multiple days** toggle button is selected. Only the current date and future dates are available for selection on the calendar.

   If the Workplace Concierge property (*sn_wsd_concierge.allow_overlapping_reservations*) is set to **Yes**, the dates on which you are already having an existing reservation are not disabled and displayed with a dot on the calendar. If this property is set to **No**, the reserved dates on the calendar are disabled and employees cannot select those dates. If overlapping reservations are allowed, the **In office** days are selected. This also includes exceptions when the employee plans to be in the office (changing the Remote day to In-office day) and when the employee is visiting another office. If overlapping reservations are not allowed, only allowed days indicated as **In office** are selected. This also includes exceptions where the employee is visiting another office.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If the sn_wsd_concierge.allow_overlapping_reservations property is set to *false* by your workplace administrator, you cannot create an overlapping or parallel reservations for a day. You can make only a single reservation for a day.

Note:
If you try to select a date which is labeled as **Remote**, the Remote day is changed to an **In-office** presence day and this record is updated in the Employee Presence Exceptions table (**All** > **Workplace Concierge** > **Employee Presence** > **Exceptions**). The **Location** column in this table is updated with the building name that you using to reserve a space for your **In-office** day. For more information, see Components installed with Workplace Concierge.

5. Tap and remove dates from calendar that are selected by default and select few days of your choice.

   Note:
   You can only those number of dates on the calendar that is set by your administrator in the *sn_wsd_concierge.workplace_day_selection_limit* property.

   If the user has no reservations for a selected day, a message appears 'You have no reservations for the this day".

   When there's no reservations for a selected workday, the application shows "You have no desk reservations for today." If you don't make a reservation, application shows "You have not made a reservation for this week's in-office day for (<date and month name>)". If you select a remote day, application shows "You are working from home this day."

6. In **Space suggestions** list view, review the suggested workspaces before making bulk reservations.

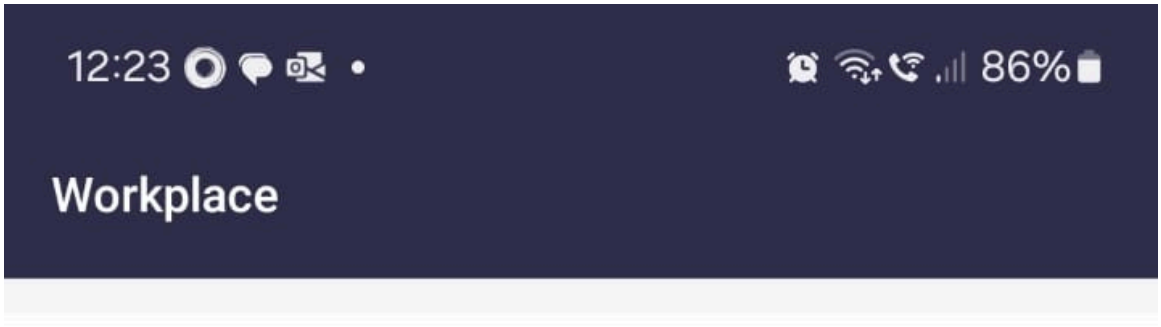
ServiceNow, the ServiceNow logo, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Application provides workspace suggestions based on the following employee preferences and usage:

- Past and future reservation data
- Frequently used desk or workspace
- Preferred locations
- Favorite spaces
- Preferred workplace services
- Preferred collaborators

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



The tags displayed on a suggested space is fetched from the Space Suggestion configuration table. These tags are displayed on the Space Suggestions card. For example, **Reserved frequently**, **Near your location**, **Your favorite**, and so on. When an employee is visiting another office, the suggestions are provided from the office that an employee is visiting and is not based on the employees in-office preferences set in the Presence dashboard. For more information, see Space suggestion Configuration and Properties installed with Workplace Concierge.

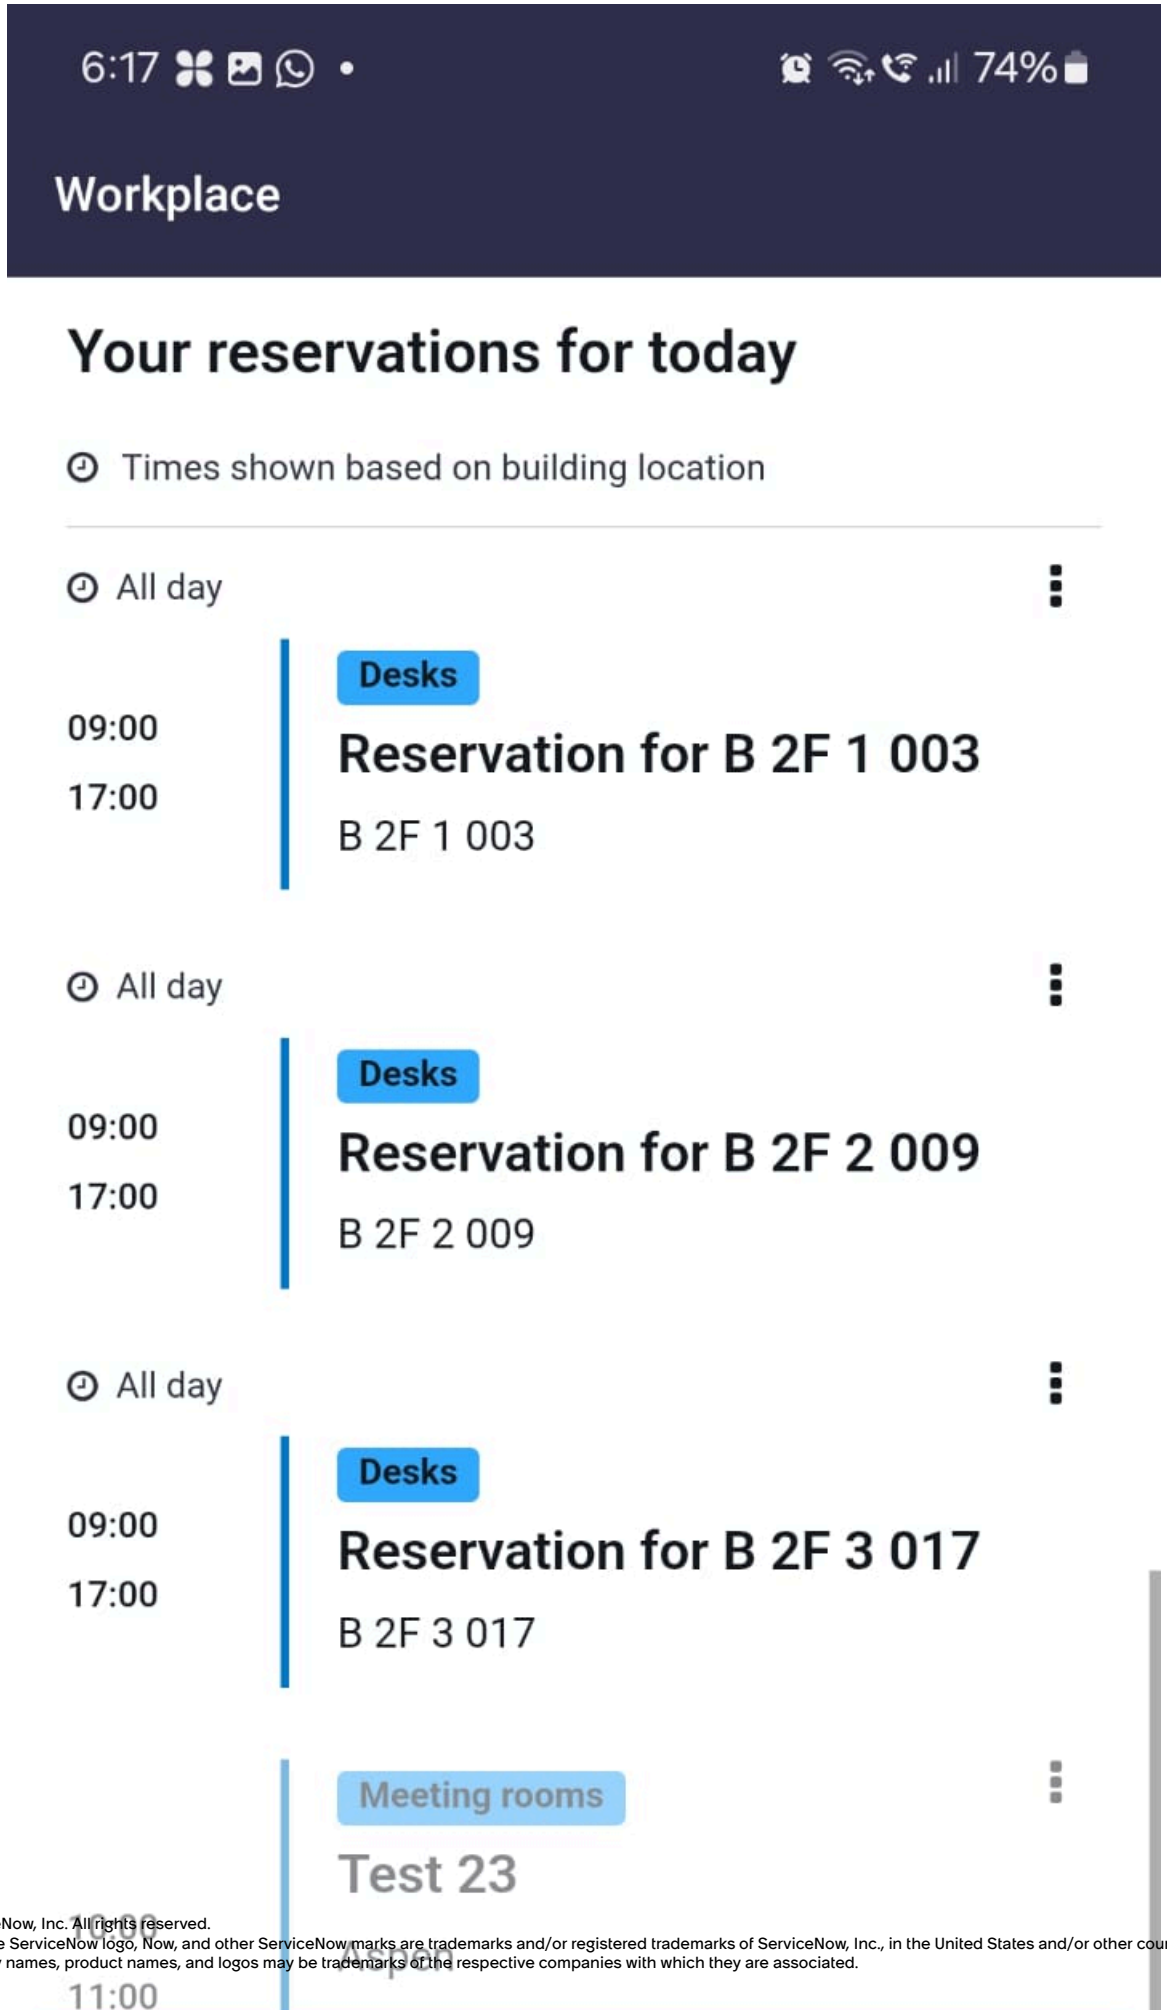
suggestions when an employee taps and selects the refresh button repeatedly. After the tenth attempt, the application shows a message, " Still looking for a space that fits your requirements? Click here to review suggestions again." Selecting **Click here to review suggestions again** displays a list of new workspace suggestions.

> **Note:**
> If there are no available spaces based on employee preferences, the **Suggest another** refresh option can also show a single space or few spaces (and not the 10 preferred available spaces always).



To review previous suggestions, tap and select "Click here to review suggestions again".

8. **Optional:** Select **Search all spaces** if you don't find the workspace that you are looking for. Selecting **Search all spaces** opens the Make a reservation page on your mobile app. If you want to reserve a space than what is suggested in the Space Suggestions card, use the Make a reservation page to reserve a space.
9. Select **Reserve Selected days** to reserve multiple spaces shown in the Space Suggestions card.
10. Tap and select **Clear selected days** to remove a selected date or dates from the calendar before making bulk reservations.
    You can also clear selected dates by tapping the selected dates on the calendar. When you tap a date, the date is removed from your selection and space suggestions are not shown for the unselected dates.
11. Tap the **Reservations** tab to view all your reserved spaces in an Agenda view.

    The Agenda view shows all your existing reservations. It shows all reservations that you have made using the Advanced Reservation portal and reservations created using the mobile app.

12. Tap a reservation on the Agenda view and select the more information icon (⋮) to open the Actions menu.

g. Select **Show on map** to open the location directory page and reserve a space using a floor map.

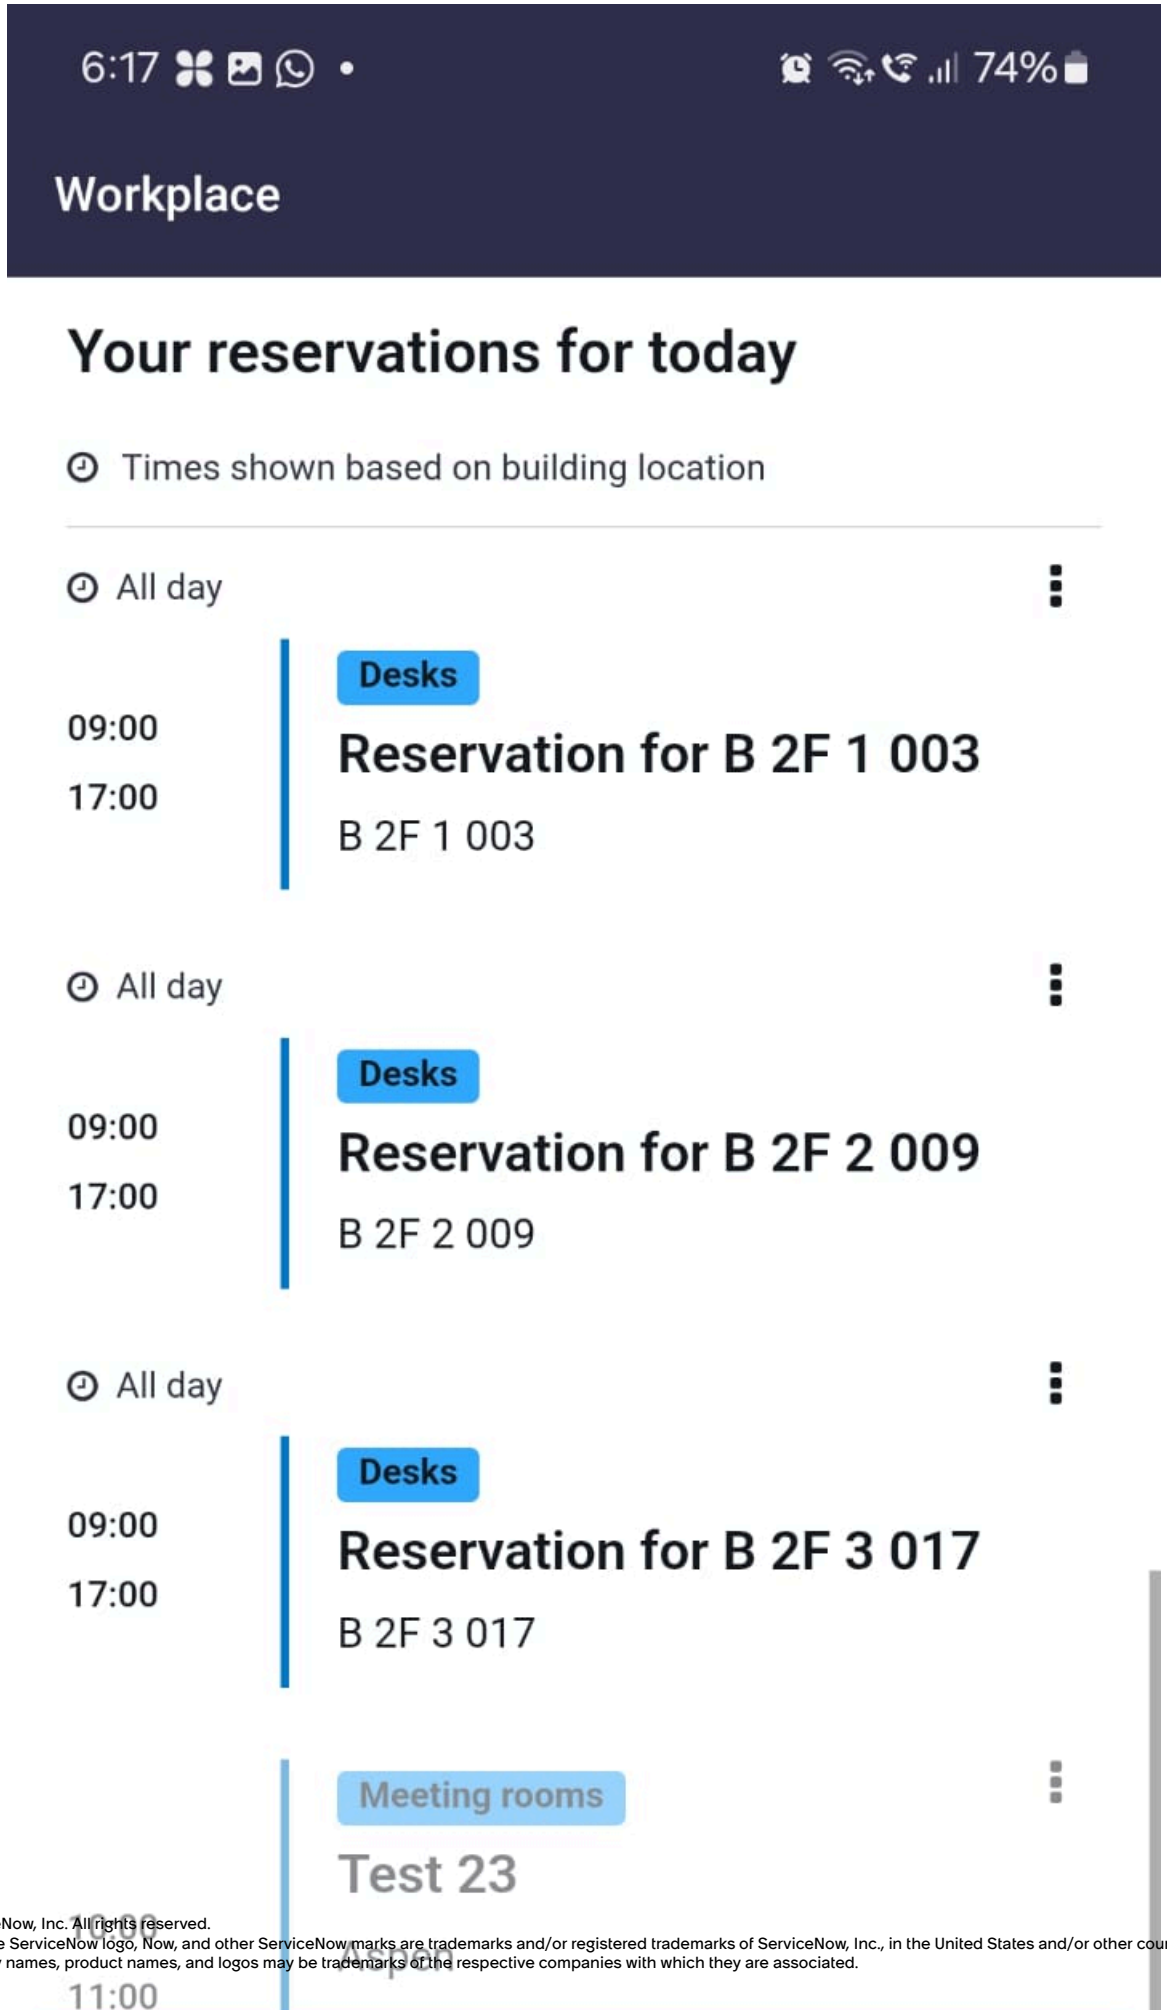
Review and edit your reservations in Workplace

Update or edit reservations in Workplace using the Workplace Service Delivery for Mobile application. Update your location, date, and time of your existing reservations.

Before you begin

Make sure that you have the following applications:

- Workplace Service Delivery for Mobile
- Workplace Core
- Workplace Reservation Management
- Workplace Concierge
- Indoor Mapping
- Workplace Central
- Workplace Space Management
- Workplace Space Mapping



Role required: sn_wsd_core.workplace_user

Procedure

1. Log in to the Now Mobile® app.
2. Access your Workplace Service Delivery for Mobile instance.
3. Tap and select the **Workplace** location pin icon () from the mobile home page.

   The location pin changes to a blue pin icon (). The workplace screen appears for you to coordinate your workdays and collaborate with your preferred collaborators.
4. Create a reservation for a day or create bulk reservations.
   For more information, see Create a reservation for a day in Workplace and Create bulk reservations in Workplace.
5. Select the **Reservations** tab.
   By default, the **Reservations** tab is selected.
6. Review your reservations available in **Your reservations for today** (in case of a single day reservation) or **Your reservations for <selected-date>** (in case of bulk reservations) Agenda view.
7. The agenda view shows all reservations created from using the Advanced Reservation web portal and the Now Mobile® app.
   You can view the type of reservation in the agenda view. For example, All day, Group reservation, neighborhood reservations, and so on.

9. Select **Update reservation** to update your reservation.

Using Workplace Service Delivery for Mobile

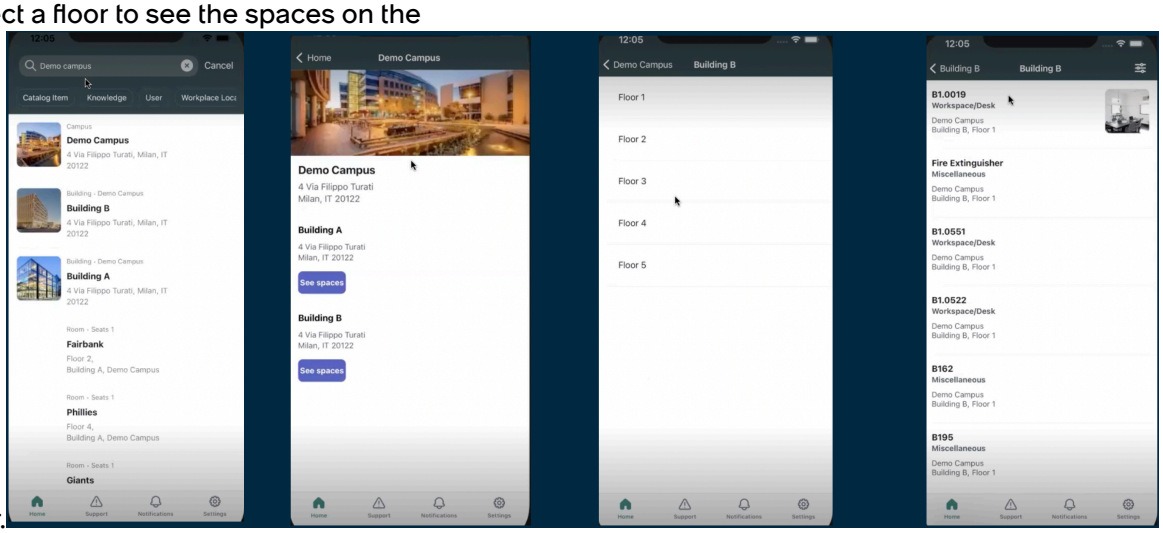
Use the Workplace Service Delivery for Mobile for making reservations using the Now Mobile app. Edit or update reservations, sharing reservation details with workplace users, for wayfinding.

Use workplace floor maps to find and reserve a space within Workplace Core. To view the maps, use Mappedin and Indoor Mapping.

Search for a campus, building and a space using AI Search

The AI search capability in Workplace Service Delivery for Mobile provides AI contextual search for campuses, buildings, floors, and spaces.

Before you begin



Role required: sn_wsd_core.workplace_user

About this task

Ensure that you have installed and configured AI search for Workplace Service Delivery for Mobile before searching for a campus, building, or space using AI search.

Procedure

1. Login to Workplace Service Delivery for Mobile mobile.
   The Welcome page appears.
2. In the search box, search for a campus or building or a space.
   For example, search for a campus (Demo Campus).
3. On selecting a campus, the campus details appear.
4. Click **See spaces** user is directed to select a floor.
5. Select a floor to see the spaces on the floor.

6. Select a space and click **Submit** to reserve the space.
7. Click **Get Directions** for getting directions in a workplace.

> **Note:**
> The **Get Directions** option appears only if the workplace has a floor map and you have configured a map provider (**Indoor Mapping** or **Mappedin**) in the Map Properties.

Result

AI search provides better search results based on the following.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Recent and popular searches: When tapping the search bar, search results are personalized and based on your recent browse history.
- Auto-correct typos: Incorrect terminologies or words are automatically corrected while entering the search key terms.
- Synonym handling: The search engine looks for synonyms from the search key terms and shows the search results accordingly. For example, type 'Building A', AI searches for Building A as well as all floors that belong to Building A.

Make a reservation using the Now Mobile app

Reserve a workplace location from anywhere and at any time using the Now Mobile app.

Before you begin

Ensure that you have the following applications installed:

- Workplace Core (sn_wsd_core).

  For more information, see Install Workplace Core.

- Workplace Reservation Management (sn_wsd_rsv).

  For more information, see Install Workplace Reservation Management.

- Workplace Service Delivery for Mobile

To view floor maps, you must have the following installed:

- Workplace Space Mapping, Workplace Indoor Mapping, and Mappedin are installed
- Ensure Map view is enabled. For more information, see Enable map view to create reservations.

Note:
Creating reservations for shift-based modules aren't supported on native mobile.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

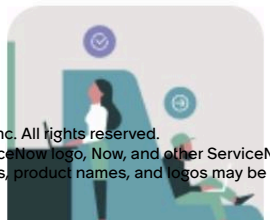
uday desks
Reserve up to 90 days in advance
Reserve for up to 7 days total

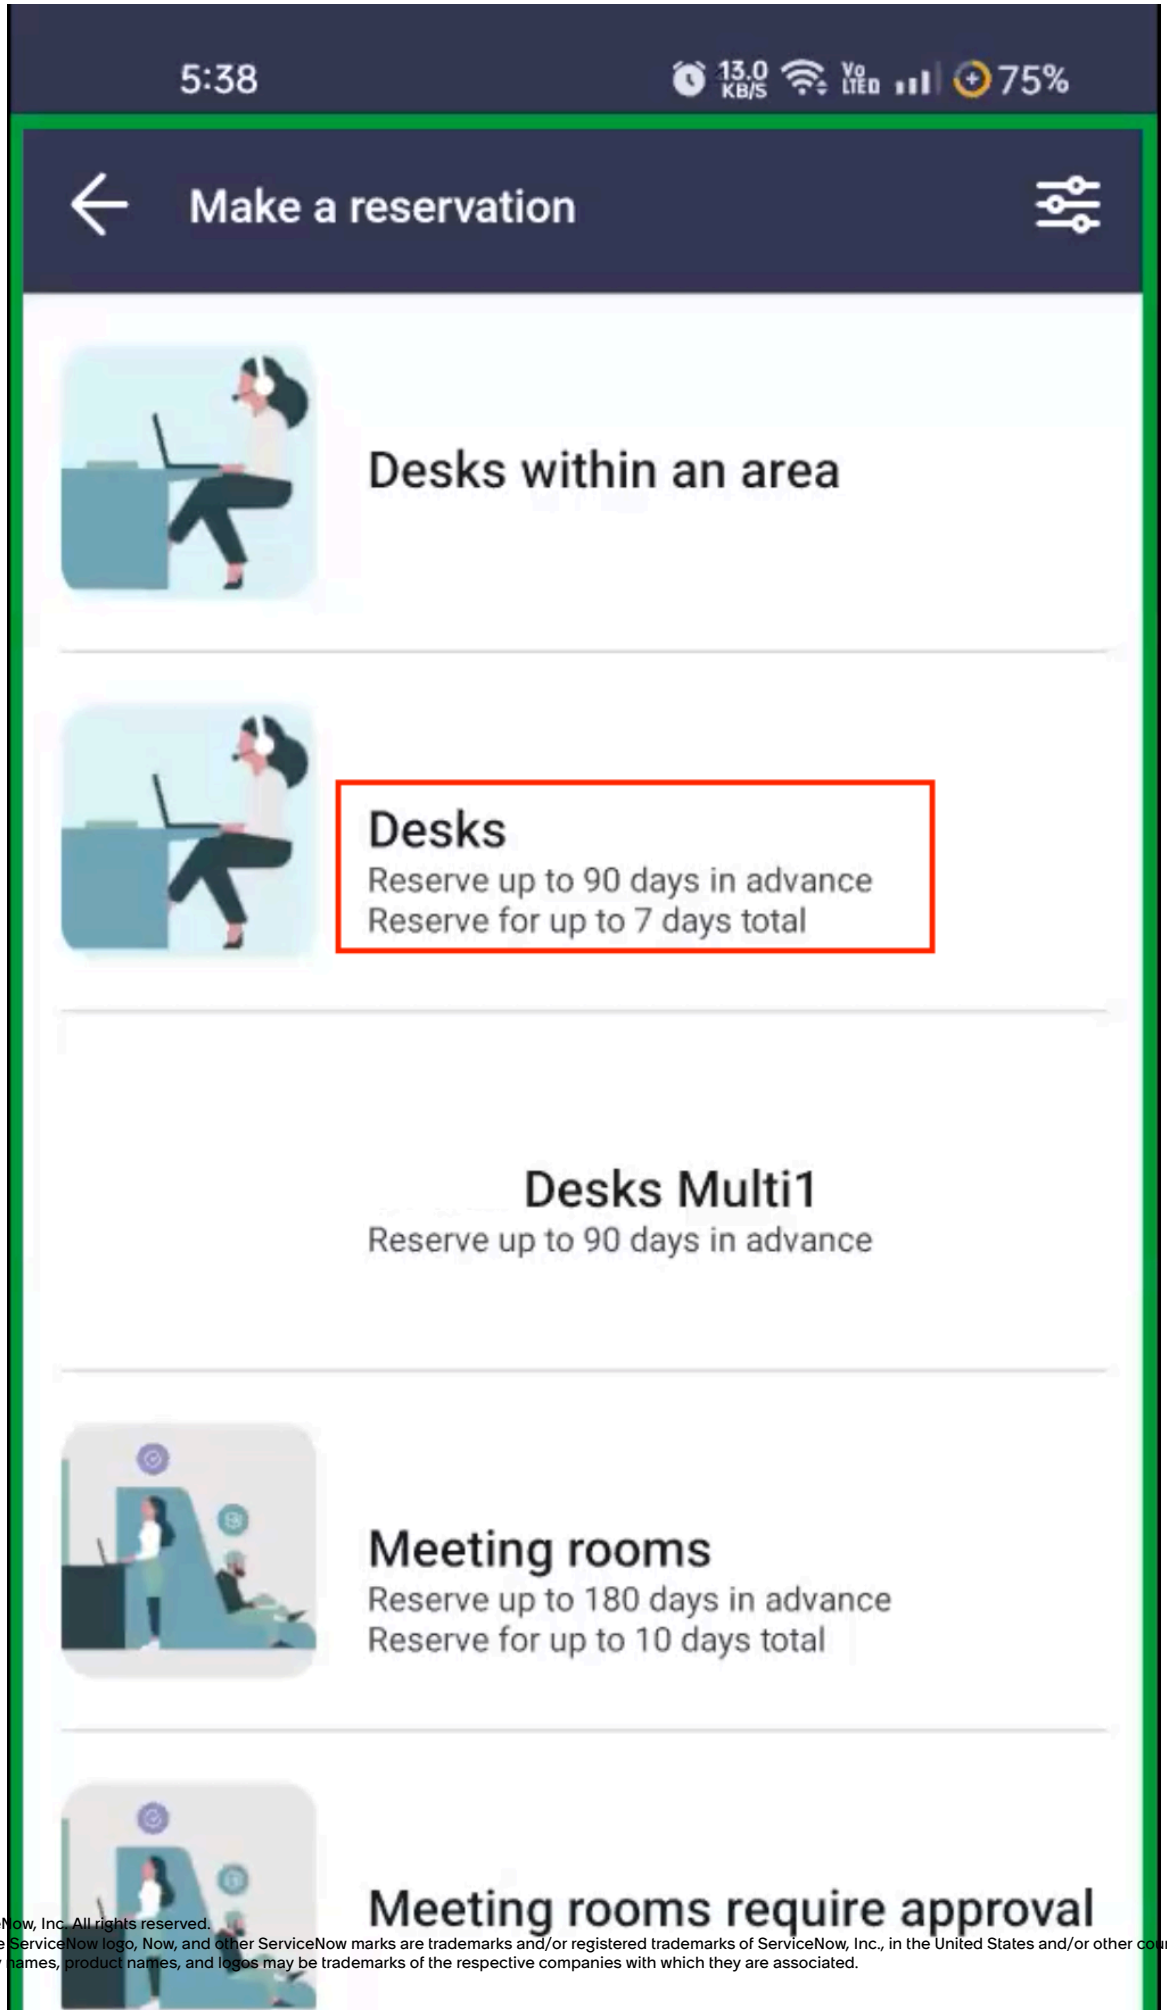


Desks within an area
Reserve up to 180 days in advance

Desks
Reserve up to 90 days in advance

Desks 1
Reserve up to 90 days in advance

Meeting rooms
Reserve up to 180 days in advance



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In case, if you have set the Reservable Module property **Max days for multi-day** for two or more days, the **Make a reservation** screen shows the number of reservable days up to which a multi-day reservation can be made.

   The default value of **Max days for multi-day** is 1.

   If the **Max days for multi-day** value is set to 1, only single day reservations can be made and the **All day** option is enabled while making a reservation. If the **Max days for multi-day** value is set to 2 or higher value, the **All day** reservation option is disabled.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Max days in future** is configured on the Reservable module by your administrator, the number of days in the future up to which the reservation can be made is displayed on the card. The **Max days in future** value is 1 or higher. If an employee tries to select an invalid date range, search results for a reservation aren't returned.

5. **Optional:** To make a quick reservation for any workplace, under the Quickly reserve section, tap **Reserve this location**.
   If you have set any favorite locations in the Workplace Reservation Management Reservation portal, the Quick reserve section displays your favorite location in **My favorites**.

   Note:
   The workplace type that is available in the Quick reserve section depends on the configuration made by your organization.

6. Select a reservable path.

   Multi-day reservation is available for all the reservable paths. For example: Select Browse all.

   - Browse all
   - Browse near a person
   - Browse by area
   - Browse by neighborhood

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Add room or space requirements.

a. On the form, fill in the fields.

Create a reservation

Field	Description
Building	Building where you want to reserve the workplace.
Floor	Floor where you want to reserve the workplace.
Reservation start	Start time of the reservation.
All day	Option to enable the **All day** or a single day reservation. Time: All day depends on the start and end day reservation properties set by your administrator.
Start Date Time and End Date Time.	Option to select the Select the Start Date Time and End Date Time. **Note:** Reservable module property for multi-days **Max days for multi-day** is dependent on the Reservable Module **Max days in future** value. You can reserve a space for multi days only within the range (number of days) specified for the **Max days in future** value. If the reservation start date and end date range is more than the **Max days in future** value, the application shows a validation error and the End date and time is defaulted to the current date.
Reservation end	End time of the reservation. This field is automatically set to an hour after the start time.
Capacity	Capacity of the reservation. **Note:** If you're using an iOS device, tap on **Done** after specifying the capacity.
Standard services	Option to select from available standard services based on which the locations must be filtered.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: The field is visible only if you are using Workplace Service Delivery for Mobile version .
Reservable purposes	Option to select from available reservable purposes based on which the locations must be filtered. The field is visible only if you are using Workplace Service Delivery for Mobile version . If you specified both **Standard services** and **Reservable purposes**, the search returns only those locations that have met both the specified criteria.
Toggle Map view	View the available reservations using a floor map view instead of a list view. The option to view a map is available only if the map property is set by your administrator for a selected space or room. For more information, see Configure the Toggle map view property.

Note:
Reservation uses the workplace profile's building, floor, start and end date and time details, in case if no user preferences are set. If the selected space isn't mapped to any area, then the building and floor details are auto-populated or pre-filled in **Browse all spaces**. If a space is mapped to an area, building and floor details are pre-filled in **Browse by area**. If both user preference and a workplace profile exists, user preference takes precedence, and space mapping is done by user preference. The **Browse by area** field is auto-populated based on user preferences and not by workplace profile.

8. Click **Next**.
9. Select the locations that you are reserving.
   Locations that are set as favorite on the Reservation portal are prioritized and displayed in an alphabetical order followed by other workplace locations.
   Tap Building to show the floor level information, and select a floor.

   - On the list view, you can select one or more locations.

     To search for a location, enter the exact location name in the search box.

     Note:
     If you're browsing a space near a user, only the five most suitable spaces are listed.

   - On the map view, you can zoom in on the map to select one or more locations.

     Use the **All floors** drop-down list to switch between floors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Click the **Selected** button to review your selections, or select **All** to navigate back to the map view. You can also select rooms on different floors.

> **Note:**
> Map view is available only if it's enabled by your administrator.

10. Click **Next**.
11. **Optional:** To browse all the available spaces, select **Browse all spaces**.
12. To search for reservable spaces in the context of a neighborhood, select the **Browse by Neighborhood** option.

> **Note:**
> **Browse by Neighborhood** option is only available if **Enable browse by neighborhood** option is configured by your administrator.

a. Specify the following details to search for the most suitable space in an area.
   - **Neighborhood**: Name of the neighborhood.
   - **Building**: Name of the building available in a neighborhood. For example: NBH2
   - (Optional) **Floor**: Floor of the building where you want to make a reservation. The reservation admin can indicate in the Reservable Module if an employee can use a floor in the search.
   - **Start date and time**: Date and time when you would start using the workplace item. The time is displayed based on the selected building's time zone.
   - **End date and time**: Date and time when you would stop using the workplace item. The time is displayed based on the selected building's time zone.

13. **Optional:** To reserve a space from your favorite space, tap **Browse favorites**.
    The spaces that you have set as favorite using the Workplace Reservation Management Reservation portal are displayed with the favorite icon (♡). If you want to set any location as favorite, refer to Set a location as favorite using the Space details page.

> **Note:**
> The favorite option appears only if you have Employee Center 25.0.0 and if your administrator has configured the settings.

14. **Optional:** To reserve an available space near a person, tap **Browse near a person**.

a. Select the user near whom you want to reserve a space in the **Look for spaces near this colleague**.

> **Note:**
> If there are any private reserved spaces near the person, then they aren't displayed in the search result.

b. Select a reservation made by the user in the **Choose colleague's reservation**.

c. **Optional:** Select **Toggle Map view** to review the available reservations using a map view instead of a list view.
   This option is available only if activated by your administrator.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

15. **Optional:** To reserve an available space in a particular area, tap **Browse by area**.

    a. Select the **Building** of the area where you want to make a reservation.

    b. Select the **Area** where you want to make a reservation.

    c. Select a start date and time in the **Start date and time**.

    d. Select an end date and time in the **End date and time**.

    e. **Optional:** Select **Toggle Map view** to review the available reservations using a map view instead of a list view.
    The available favorite space is highlighted on the map.

    > **Note:**
    > This toggle is available only if activated by your administrator.

    f. Select a floor from the **Floor** drop-down list on the Map view.
    For example: Floor 1.

    g. Available spaces belonging to a neighborhood for a building are shown.

16. Tap **Next**.
17. On the Map view, select **Get Directions** for wayfinding and indoor navigation.
    For more information, see Work with Location Directory for Now Mobile app.
18. Click **Submit**.
    In personal authentication mode, to reserve a sync-enabled room, you must check your email and click the link to log in to Microsoft Exchange. After logging in and obtaining the token through the redirect link, you can return to the reservation screen and submit the reservation.
19. The Reservation Information screen shows the **Details** tab with reservation details.

    In the case of multi-day reservation, the Reservation Information screen shows the number of days in a series for which a space is reserved (start date time and end date time).

Reservation Details

Field	Description
Give your reservation a name	Option to provide a subject or name for your reservation.
This reservation is for	User name. For example: Abel Tuter.
Start Date and time	Reservation start date and time.
End Date and time	Reservation end date and time.
Virtual Meeting link	Option to generate a virtual meeting link so that remote employees can join the reservation.
Additional message	Users can view the meeting note for a reservation on the mobile app. Employees can't add or update the meeting note on the mobile app. They can only view it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The meeting notes can be added on the advanced reservation web portal.
Workplace location	Workplace reservation location.
Floor	Floor name.
Building	Building name.
Sensitivity	Subject appears on your calendar and is viewable by everyone except when the reservation sensitivity is set to private.
Make all Space details private	Specify your privacy preferences. **Note:** This option is displayed based on the privacy setup made on the selected space. You have the following options to set your reservation to: ○ None ○ Normal ○ Private ○ Confidential
Check-in-state	Awaiting check-in. When workplace spaces are having occupancy sensor and if the state of the space is unoccupied or Invalid, application sends push notification "Your reservation for Reservation for <space-name> has started. Either Check in to confirm your attendance or Release Booking to Cancel the space reservation". For more information, see Configure automatic check-in for reserved spaces.
Created	Reservation created date and time.
Updated	Reservation details updated date and time.

The **Related reserved items** will show the related workplace service items for a reservation.

20. Tap the additional information icon ( ) to perform the following:
    - Edit reservation: (Optional) If required, enter the following information:
      - Set the **Reservation subject** field.
      - Set the **On behalf of** field to the user for whom you want to make the reservation.
    - Share reservation
    - Cancel reservation
21. Tap **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

22. Click **Check in** to check in a reservation, if the workplace item that you've reserved requires check-in and check out.

    Note:
    You must check in within 30 minutes before the reservation start time. If the reservation isn't checked in within 30 minutes before the reservation start time, then the reservation is canceled. You receive an email about the cancellation. The Check in option is also available on the My Reservations page.

    In case, if you have occupancy sensors installed in your workplace location, your reserved spaces are automatically checked in. You also receive a push notifications on Workplace Service Delivery for Mobile app when your reserved spaces are checked in automatically. If the workplace location or space state is Occupied, then, application automatically checks in the reservation. The reservation state moves to In progress state. A push notification is sent to Workplace Service Delivery for Mobile "Your reservation has started. You are automatically checked in based on the presence detected at the space. No further action is required." If the state of the space is Unoccupied or Invalid, application sends push notification "Your reservation for Reservation for <space-name> has started. Either Check in to confirm your attendance or Release Booking to Cancel the space reservation". For more information, see Configure automatic check-in for reserved spaces.

Result
The workplace reservation is confirmed.

What to do next
View your reservation status in the My reservations section. For more information, see Edit or cancel a reservation on Now Mobile app.

In the case of multi-day reservation, My reservations show the status of the reservation along with the number of days the multi-day reservation is spanning across.

If the workplace item that you've reserved requires check-in and check out, see Check in or check out a reservation.

To reserve a space using the QR code scanning option, see Scan the QR code to reserve a space.

Edit or cancel a reservation on Now Mobile app

Modify your upcoming reservation or cancel the reservation at any time using the Now Mobile app.

Before you begin
Role required: sn_wsd_core.workplace_user

Procedure
1. On your mobile device, open the Now Mobile app.
2. In the Workplace Reservations section, tap **My reservations**.

   You can also open the My reservations section by tapping the more options icon () and selecting **My reservations**.
3. Select the reservation that you want to edit.

   Note:

   You can edit a reservation only if the option is enabled. The  will appear if the editing option is available.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Tap **Edit reservation**.
5. Modify the field information.
   When you edit a reservation the Standard services and Reservable purposes fields are auto-filled.
   - In case of a single reservations, where the reservation is created for a single location, the fields are already set with the standard services and reservable purposes mapped to the location.
   - In case of multi-reservations, where the reservation is created for multiple locations, the fields are already set with the standard services and reservable purposes that are commonly available at all the locations.
6. **Optional:** Select **Toggle Map view** to review the available reservations using a map view instead of a list view.
   This toggle is available only if activated by your organization.
7. Select **Next**.
8. Select the locations you want to reserve.
9. Tap **Submit**.
10. To cancel the reservation, click **Cancel**.

    You can also click the more options icon ()

Note:
The appearance of the icon depends on the type of device that you are using.

Result
The reservation is updated or canceled accordingly.

Check in or check out a reservation

Check in an upcoming reservation or check out an ending reservation using the Now Mobile app.

Before you begin
If you have occupancy sensors installed in your workplace location, your reserved spaces are automatically checked in. You also receive a push notifications on Workplace Service Delivery for Mobile app when your reserved spaces are checked in automatically. If the workplace location or space state is **Occupied**, then, application automatically checks in the reservation. The reservation state moves to In progress state. A push notification is sent to Workplace Service Delivery for Mobile "Your reservation has started. You are automatically checked in based on the presence detected at the space. No further action is required." If the state of the space is **Unoccupied** or **Invalid**, application sends push notification "Your reservation for Reservation for <space-name> has started. Either Check in to confirm your attendance or Release Booking to Cancel the space reservation". For more information, see Configure automatic check-in for reserved spaces.

Note:
Reservation check-in and check-out is currently not supported for multi-location reservations (combining two or more reservations into one reservation). Check-in or check-out of reservations with multiple locations for the same date and time and with the same reservation owner is not allowed by the application. In case of group reservations, each space is assigned to a different employee, check-in for group reservations is also not allowed in bulk. You have to check-in a reservation one at a time.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. On your mobile device, open the Now Mobile app.
2. In the Workplace Reservations section, tap **My reservations**.
   You can also open the My reservations section by selecting the services icon ( ).
3. Select the reservation that you want to check in or check out.
4. To check in or check out, do one of the following:
   - To check in the reservation, tap **Check in reservation**.
   - To check out the reservation, tap **Checkout reservation**.

> **Note:**
> You can check out a reservation only after you check in. After you check out the reservation, the status of the reservation is shown as **Complete**.

Result
The reservation is checked in or checked out accordingly.

Share your reservation details with other users

Share the details of your reservation with a colleague. An email notification is sent to the colleague with the details. The colleague can also make a reservation near to your workplace.

Before you begin
Role required: sn_wsd_core.workplace_user

Procedure

1. On your mobile device, open the Now Mobile app.
2. In the Workplace Reservations section, tap **My reservations**.
   You can also open the My reservations section by selecting the services icon ( ).
3. Select the reservation that you want to share.
4. Tap the more options and select the **Share icon**.
   icon ( )

   The appearance of the icon depends on the type of device that you are using.
5. In the **Send reservation details to** field, select one or more users with whom you want to share the reservation details.
   Close the page after selecting the users.
6. In the **Add note** field, add a note that is sent along with the reservation.
7. Tap **Send**.

Result
After the reservation is confirmed, the reservation details are shared with the selected users.

Scan the QR code to reserve a space

Scan the QR code of a workplace and quickly reserve a space using the Now Mobile app.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Perform the following steps:

   a. Reserve available time slot: Select a time slot for your reservation.

      - Suggestion for available reservation time slots is displayed in horizontal blocks with a scroll bar.
      - To view the time slots in a vertical list, select **View all**.

      The time slot duration is dependent on the **Max duration**and **Min duration** values configured by your administrator in the Reservable Module configuration. For more information, see Configure a reservable module.

      The time displayed in the time slot considers the Start time of the working day (sn_wsd_rsv.day_start) and End time of the working day (sn_wsd_rsv.day_end) properties set by your administrator. If office hours are from 9 AM to 5 PM, then all the available reservation slots between 9 to 5 are divided into 2-hour intervals (based on the values that you've provided for Max and Min duration). However, if there are any existing reservations, then these aren't displayed. Only available time slots for a reservation are displayed. If the available slot for a reservation is from 9 AM to 12 PM, and the maximum duration for a meeting is two hours, then 9–11 is the first time slot and 11–12 is the next time slot.

      For example, If the Max duration is two hours and the Min duration is 30 minutes. The office timings are from 9 AM to 5 PM, and a space (Building A, Floor 3, Meeting room 1) has two existing reservations. The first reservation is from 9 AM to 1.45 PM and another reservation is from 2 PM to 3 PM. Then, 3 PM to 5 PM can be the next time slot.

      Note:
      QR code reservation is not supported for **All day** reservation. Multi-day and recurring reservation is also not supported for QR code reservations.

   b. Check availability: Manually select a Start date and time and End date and time for your reservation. If you try to select a past date or select any future dates, tThe time is reset to the current date. Time durations can be changed.

   c. The Schedule view shows the time slot in vertical bars. Select the chevron icon (>) to move forward or select the icon (<) to go back and check the reservation time slot availability for a day.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The selected time slot (Step 9a) is highlighted in green on the scheduled view. Existing reservations and unavailable time slots show shaded blocks. Vertical lines indicate a 1-hour duration while the dotted lines indicate a 30-minute duration.

d. If the selected time slot isn't available or if the selected space is not available, a validation message is shown. Users can use the **Nearby spaces** option to check for available spaces or check for next available time slot. **Nearby spaces** section shows list of spaces that are nearby the scanned space and are available for reservation.

e. Select **View details** to see the space details.

8. Tap **Reserve** to make your reservation.
   Check in your reservation by the start time and check-out the reservation after it ends. Open your reservation to check in directly using the My Reservations option on the home page.
9. Review the reservation summary details.
10. Tap **Check in** to check in your reservation.
    For more information, see Check in or check out a reservation.
11. Select the **Actions** drop-down options to:
    - Change reservation details
    - Cancel reservation
    - Share reservation
12. **Optional:** To submit a general inquiry or raise a complaint request, select **Submit a request**.

    Note:
    This option appears only if the Workplace Case Management plugin is installed.

    a. In the **What can we help you with?** field, enter your inquiry details.

    b. Tap **Submit**.
    A case is submitted for the inquiry.

    c. After reviewing the inquiry details, tap **Close**.

13. To view and change your reservation details, select **See my reservation**.
    This option appears only if you have a reservation on this space.

    a. Select the more options icon.
    ()

    The availability of the icon depends on the type of device that you're using.

    b. To edit the reservation, tap **Edit reservation**.

Work with Location Directory for Now Mobile app

Work with Map view and Card view on the Location directory. Search for employees, locations, and neighborhoods. Filter spaces based on reservation status, occupancy status, and space types. Get directions to a workplace location or collaborators or a workplace profile user using floor maps. Reserve a space or raise a workplace service request or an issue for a location.

Before you begin

Make sure that the following applications are configured:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Workplace Core
- Indoor Mapping
- Workplace Reservation Management (Optional)

  Filter and display reservation status for a selected location on the Location directory.

- Workplace Connectors (Optional)

  Filter and display occupancy status for a selected location on the Location directory.

- Workplace Space Mapping

Note:
Confirm that the map properties for the Location directory are configured by your administrator. Map properties for the Location directory provide options to:

- Filter spaces based on the reservation and occupancy states.
- Automatically refresh reservation and occupancy data on the Location directory.
- Control the Map display setting options to display permanent and private workplace profile users.
- Show or hide neighborhoods for a location.

For more information, see Configure map properties for Location directory

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

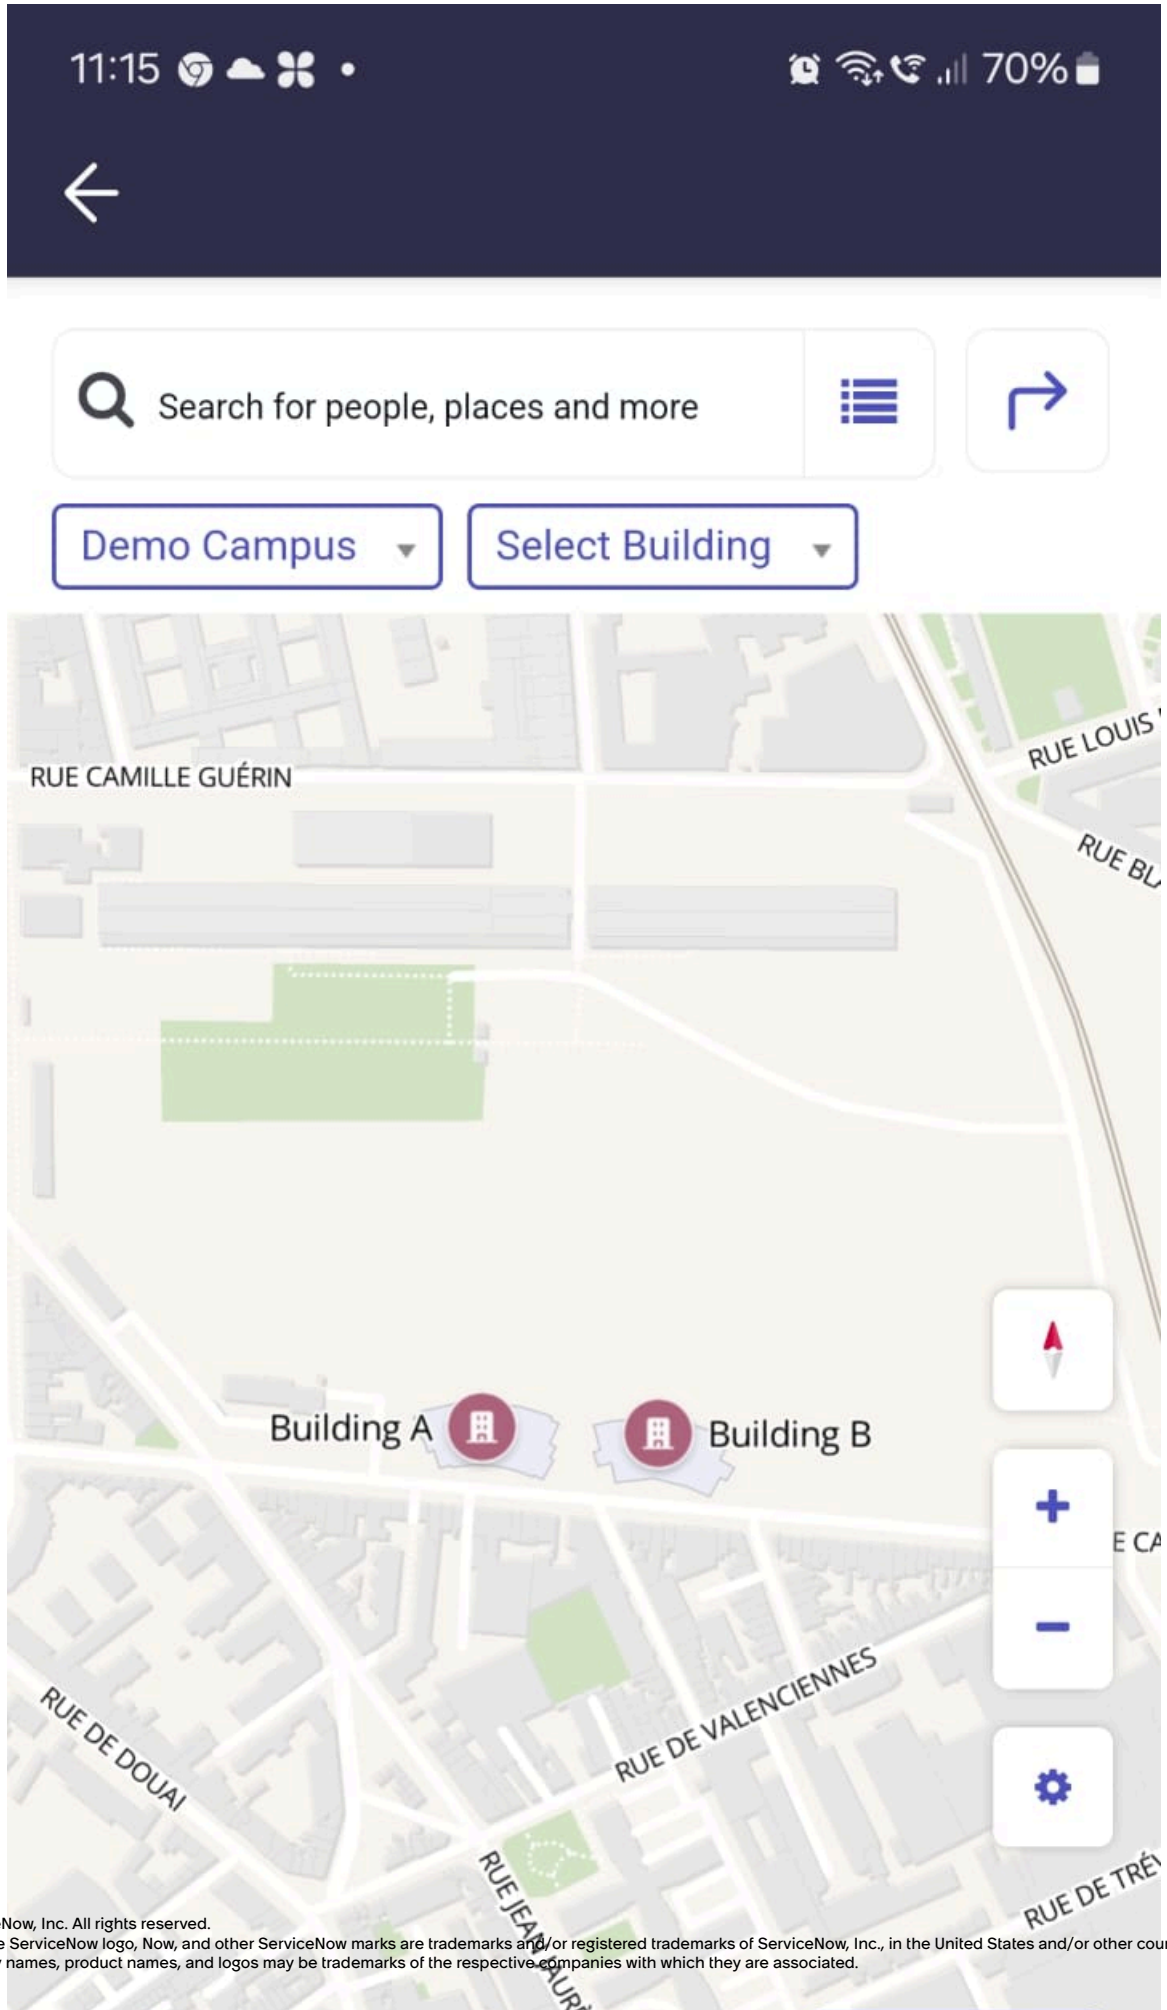
You can also search for a campus or zoom in to select a campus or location.

a. On the search bar, search for a campus or location.

b. Use the zoom in ( ) controls on the map to bring into focus the location pin marker icon () to select a campus.



c. Employees can also pinch to zoom in the location.

You can also swipe your mobile screen and move around the map to select a location.

4. When you select a campus, the **Select Building** tab is enabled and the buildings in a campus are displayed.

For example, Demo campus with Building A and Building B.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select **Filters**.
   Filter spaces or locations on the map by reservation states, occupancy states, and space types (rooms, gym, elevator, and so on).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

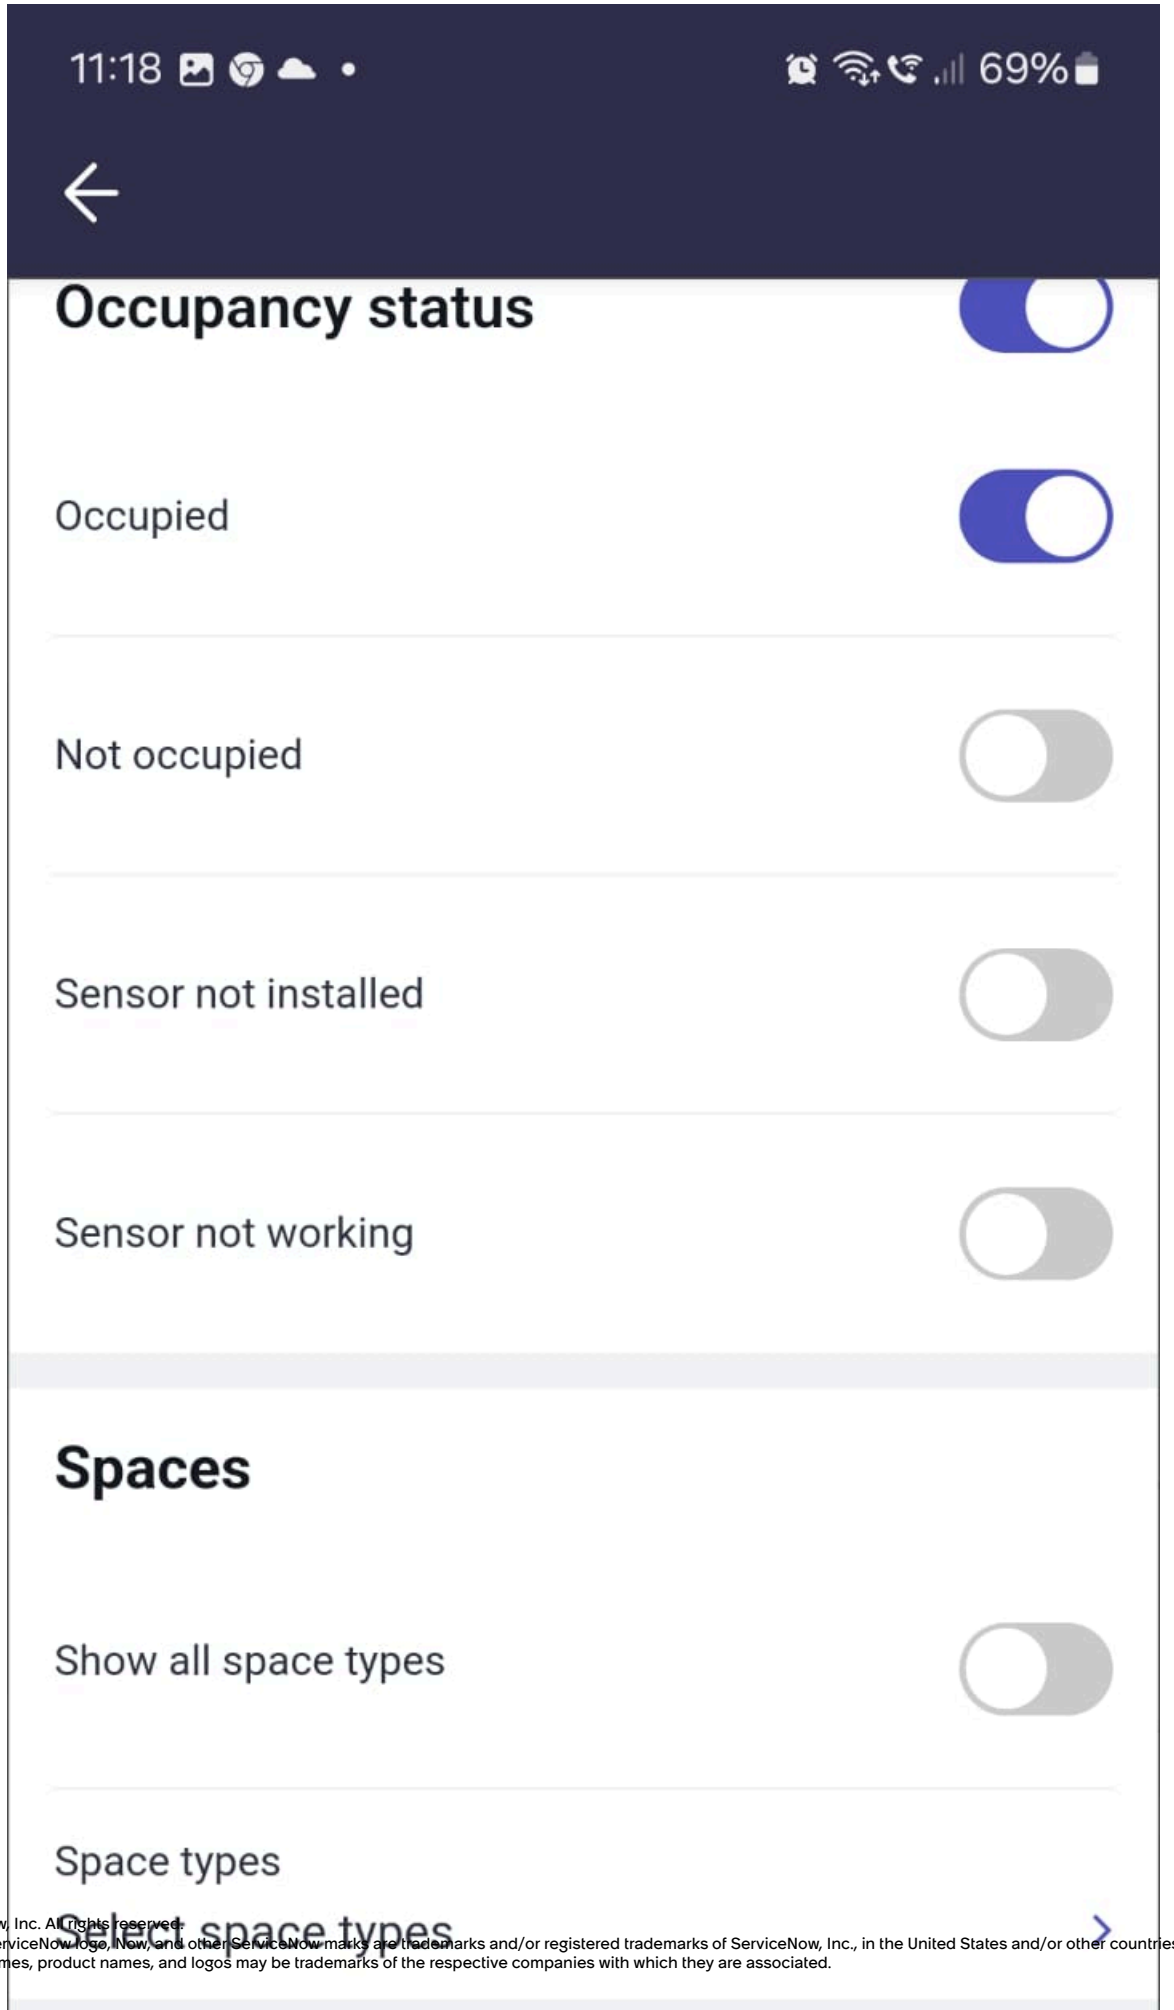
Spaces are filtered and the ones that match the filter conditions are displayed on the map. Spaces that don't fulfill the filter conditions or that don't have a filter applied are shown in white (map polygon color).

- When both reservation and occupancy filters are applied then spaces fulfilling both these conditions are shown.
- When only reservation or occupancy filters are applied then only reservation or occupancy states are displayed.

Note:
The option to show **Filters** option is configured by your administrator using a map property [sn_wsd_space_map.show_rsv_occ_data_loc_dir]. Filters can be applied at a floor or space level for both Card view and Map view.

a. Tap to select the **Reservation status** check box to display reservation status and icons on the map.
For more information about Legends, see Step 12.

b. Select and filter spaces based on reservation states.



For example, you can select any of the following reservation states to display only the selected filter conditions on the map:

- Booked
- Available
- Not Reservable
- Currently booked

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Tap to select the **Occupancy status** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

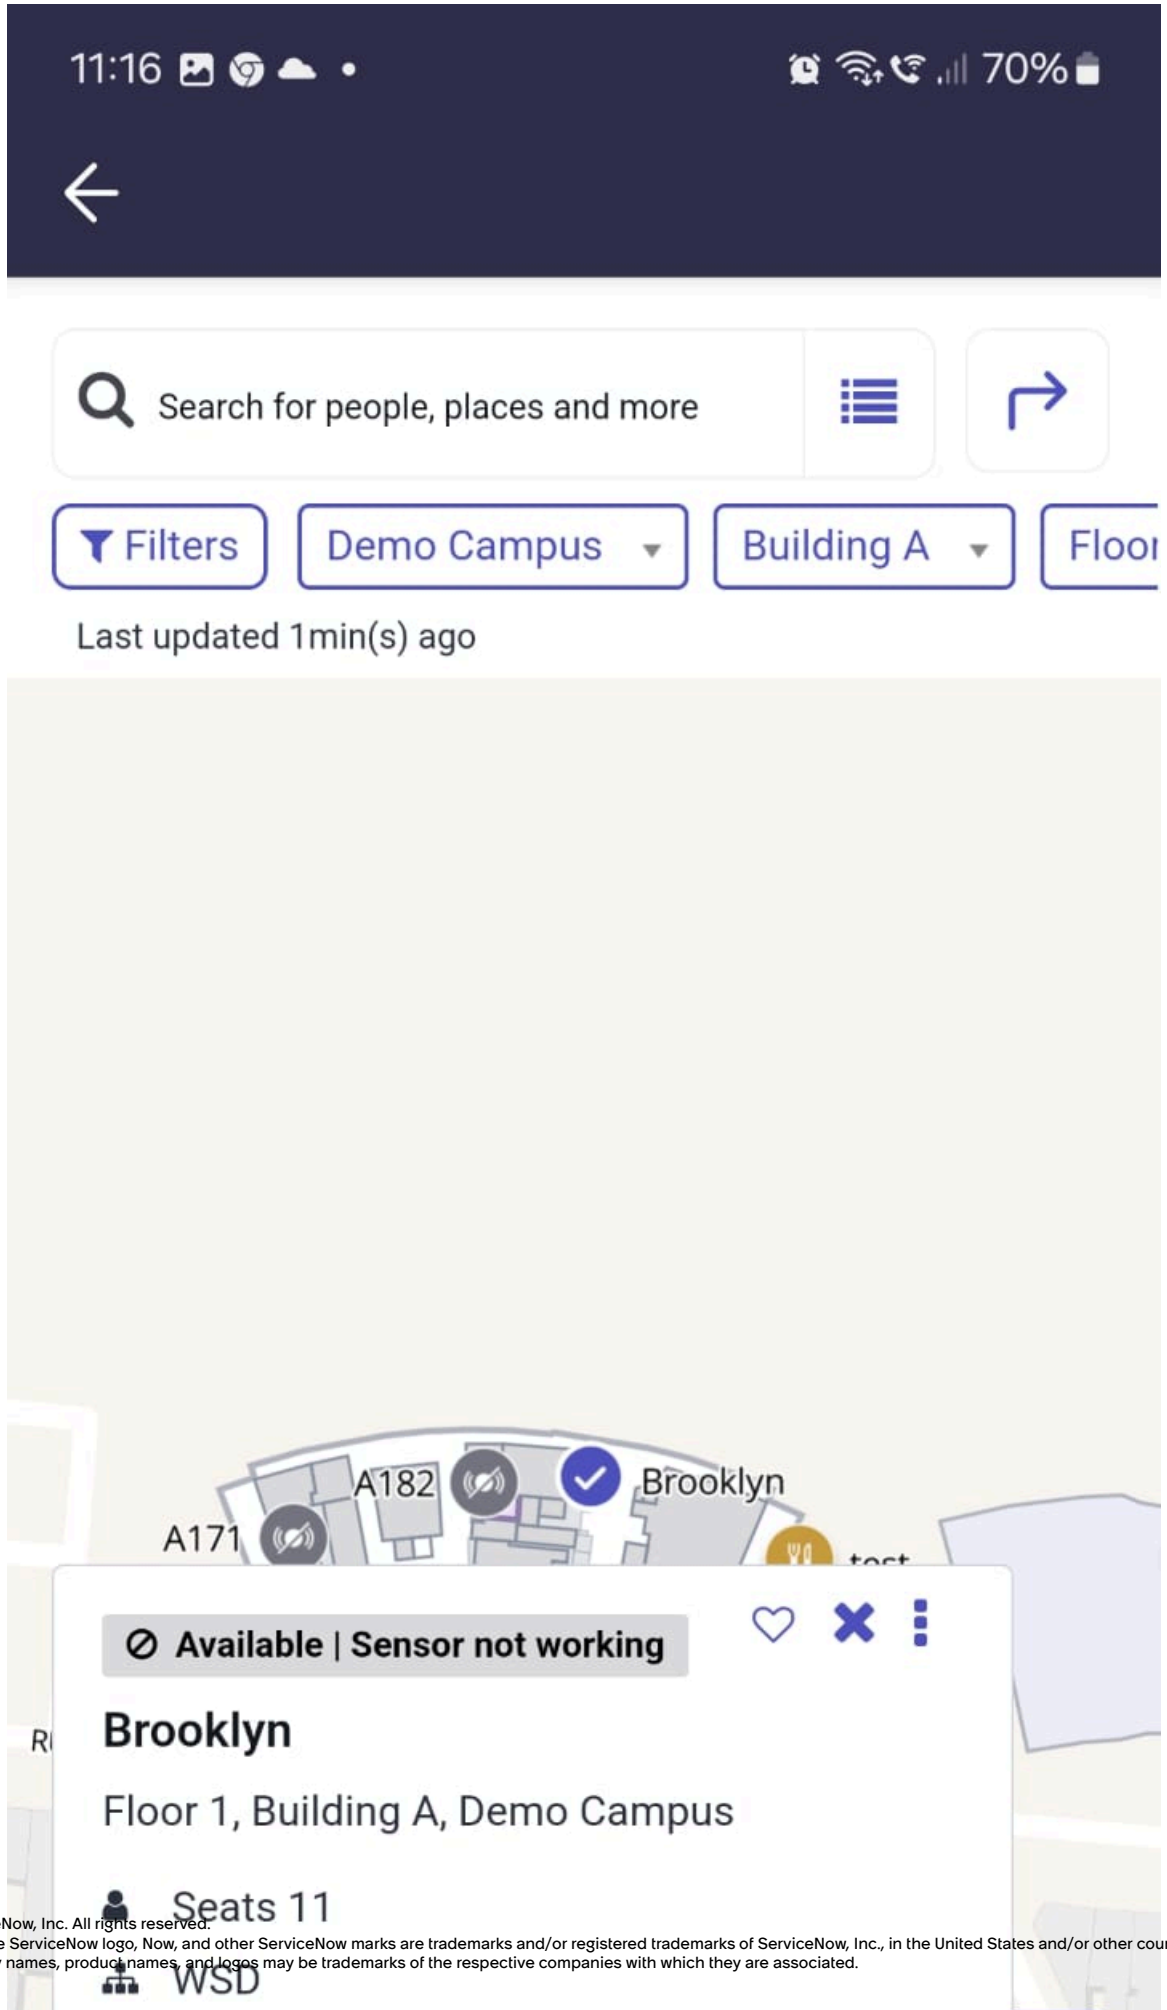
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Occupancy status and related icons are displayed on the map. For more information about Legends, see Step 12.

b. Filter spaces by occupancy states.

For example, select any of the following occupancy states to display on the map:

- Occupied
- Not Occupied
- Sensor not installed
- Sensor not working



- Tap to select **Spaces** > **Show all space types**.
- Filter selected space types on the map. For example, the following space types can be selected:
  - Rooms
  - Gym
  - Cafe
  - Phone booth
  - Workspace/Desk
  - Restroom-Men
  - Restroom-Women
  - Miscellaneous
  - Elevator

  Note:
  Indoor Mapping places types are shown as Spaces types on the Location directory.

- Select **Apply** to apply your changes on the map.
- Tap and select **Clear** to remove filters.

8. Tap to select a space on the map to view the space card details panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

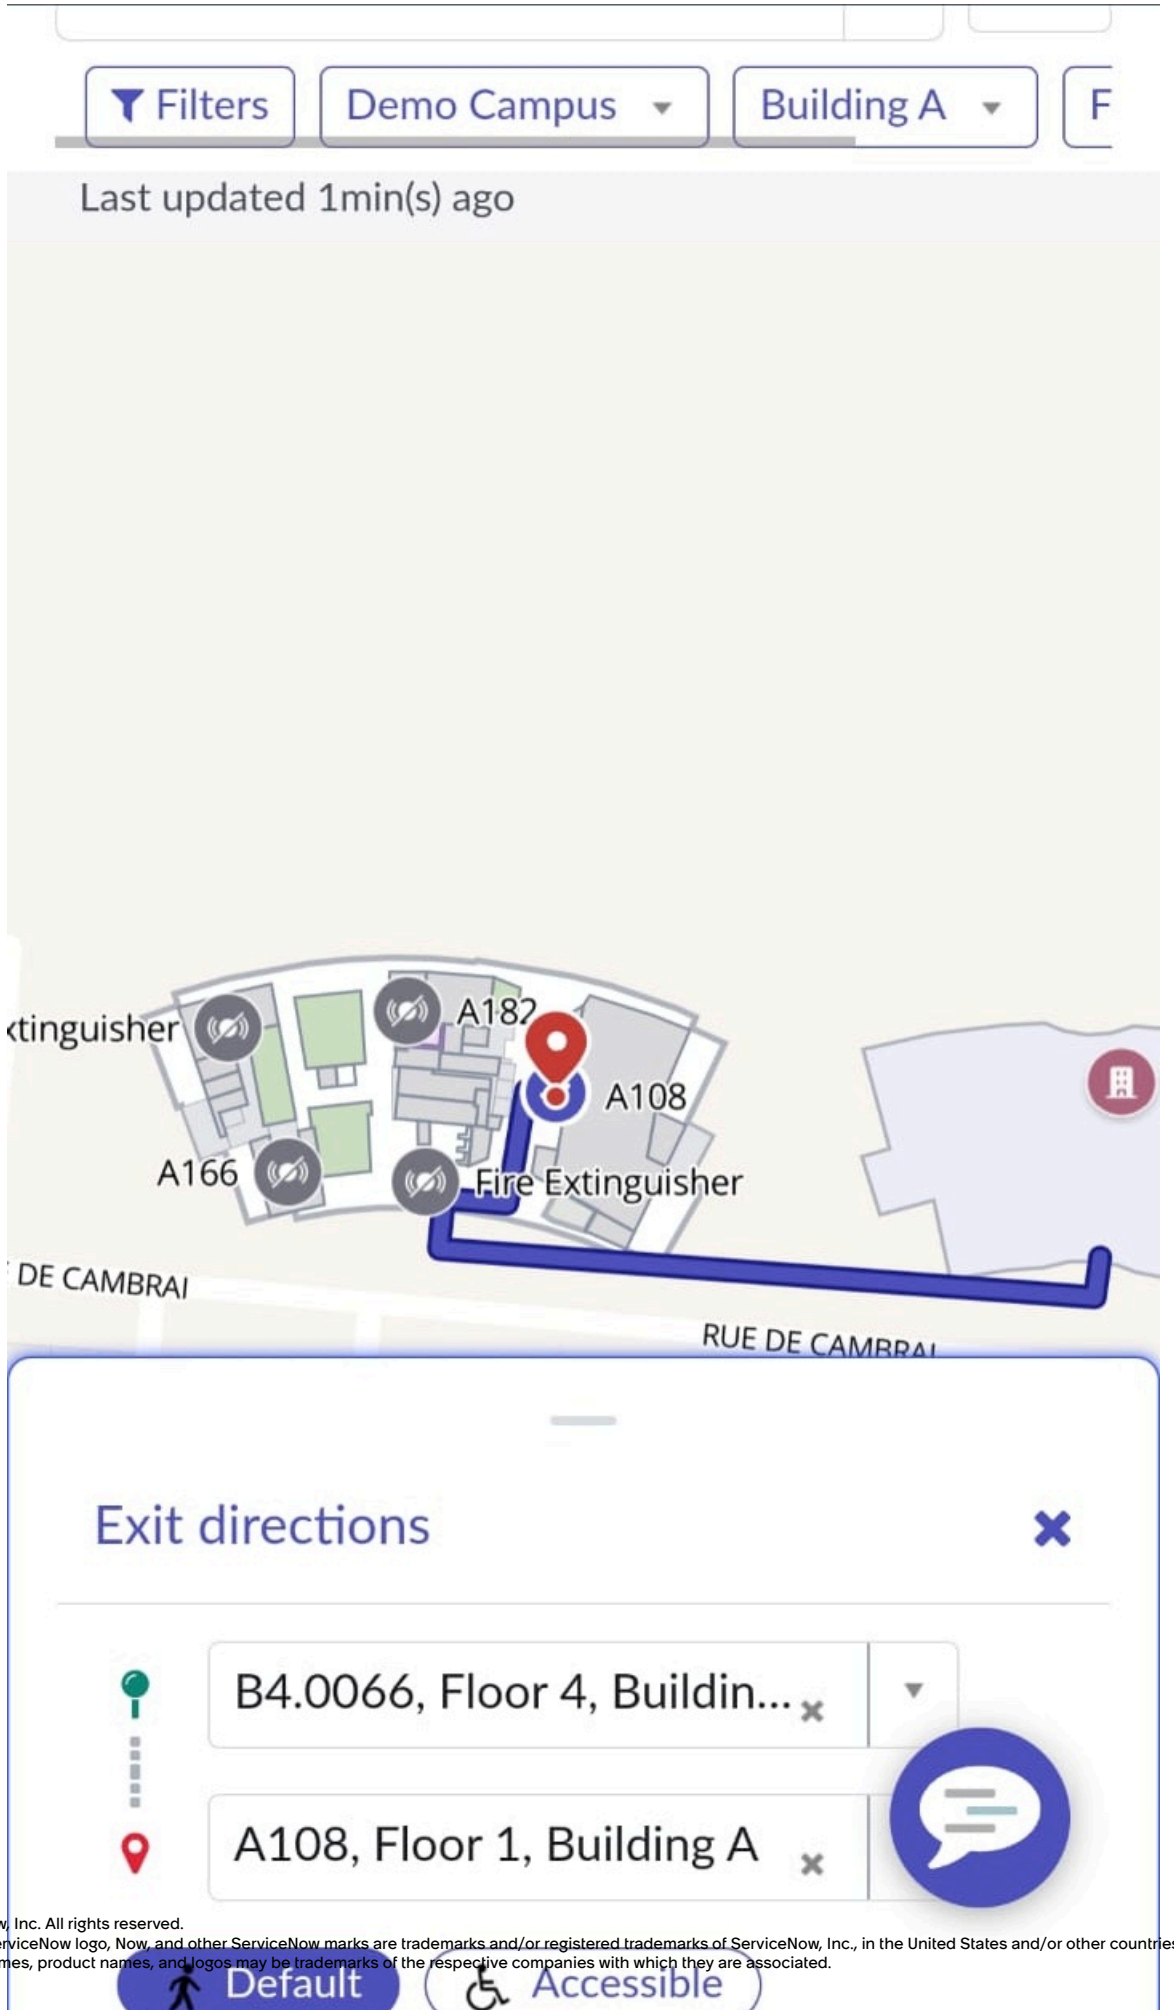
a. Tap and enter the starting route for wayfinding in the **Select start point**.

You can enter a workplace profile name, location, desk, or meeting room.

> **Note:**
> When you select a location, workplace profile or desk that is not configured by your administrator for you to use, a message is displayed `Sorry this location isn't configured to be shown on the map`.

b. Tap and enter the destination for the wayfinding route in **Select End Point**.



The location is selected by default. You can change it as required to another building, space, or to a workplace profile.

c. Select **Default**or **Accessible**.

Accessible routes or pathways are near or adjacent to an elevator.

The directions are displayed on the map. You can define directions from one building or floor to another building or floor. For example, get directions from Building A to Building B.

18. Select **Show on map** to show the selected space on the map.
    The selected space opens in the Map view and displays the space card panel.

    Note:
    The Show on the map is inactive or grayed out when there's no floor map available for a space.

19. Select **Reserve** to reserve a space.
    Complete your reservation using the Reservation details screen.
20. **Optional:** On the Space card panel, select **Get directions** for wayfinding and visual representation of the routes on a map to navigate to a workplace location or a team member. On selecting **Get directions**, you're redirected to the Map view.
21. **Optional:** Select **Raise an issue** to request a workplace service or raise a workplace service issue.
22. Select a space and select the More actions icon (⋮).
    - Copy URL: Option to share the space location URL link and share it with your team members.
    - Raise an Issue: Option to raise a workplace service request. This option is available in the More actions option only for a space that can be booked or reserved. In case if a space is already reserved or not available, then the Raise an issue option is available as a button in the space card.

Get directions to a workplace

View the directions from one workplace location to another using the Workplace Service Delivery for Mobile.

Before you begin

The Workplace Space Mapping application must be installed.

Note:
The **Get Directions** option appears only if the workplace has a floor map defined and a map provider is selected as **Indoor Mapping** or **Mappedin** in Map Properties.

Native mobile Indoor Mapping capabilities are dependent on the Tokyo family release.

Role required: sn_wsd_core.workplace_user

About this task

Using the Workplace Service Delivery for Mobile, get directions for workplace from any of the following locations:

- From your current or any location to a colleague's workplace directly. The workplace location of your colleague is fetched from their ongoing reservation or from their workplace profile.
- From the My reservations page to get directions to a reserved workplace.

Important:
If the colleague has privacy enabled, then, you cannot view any of their details.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. On your mobile device, open the Now Mobile app.

2. **Note:**
   When using the Now Mobile app, the privacy setting will apply for all spaces in the reservation.

   Use workplace floor maps to find and reserve a space within Workplace Service Delivery For more information, see Make a reservation using the Now Mobile app.

3. To get direction to a colleague's workplace, perform the following steps:

   a. Type your colleague's name in the search bar.
   Use the search icon () in the home screen.

   a. Select your colleague's profile.

   b. On the profile page, select **Get Directions**.

   Note:
   If the colleague's profile is set as private, then the **Get Directions** option is not displayed.

4. To get directions to a reserved workplace, perform the following steps:

   a. In the Workplace Reservations section, tap **My reservations**.
   You can also open the My reservations section by selecting the services icon ().

   b. Select the reservation for which you want to get the direction.

   c. **Optional:** For a multi-location reservation, do the following:

      i. Select the **Related reserved items** tab.

      ii. Select the reservation that was made on the location that you want to go to.

5. Select **Get directions** from the reservation record summary.
   Enable indoor positioning or location provisioning on you mobile location settings for automatically enabling the blue dot experience in wayfinding for Indoor Mapping. For more information, about configuring and enabling indoor positioning from one destination to another in a workplace, see Configure a custom Map provider.

6. Select your start and end location using the pointer if required, and close the map.
   The directions are displayed from the selected location to your colleague's workplace location. You can define directions from one building or floor to another building or floor. For example, get directions from Building A to Building B.

7. **Optional:** To get directions from one space to another, perform the following actions on the map.

   a. Select a space and click **Get directions to location**.

   b. Set the start and end points for wayfinding navigation routes.

   c. Select direction modes as **Default** or **Accessible**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional) **Accessible** only shows workplace directions or routes near or adjacent an elevator.

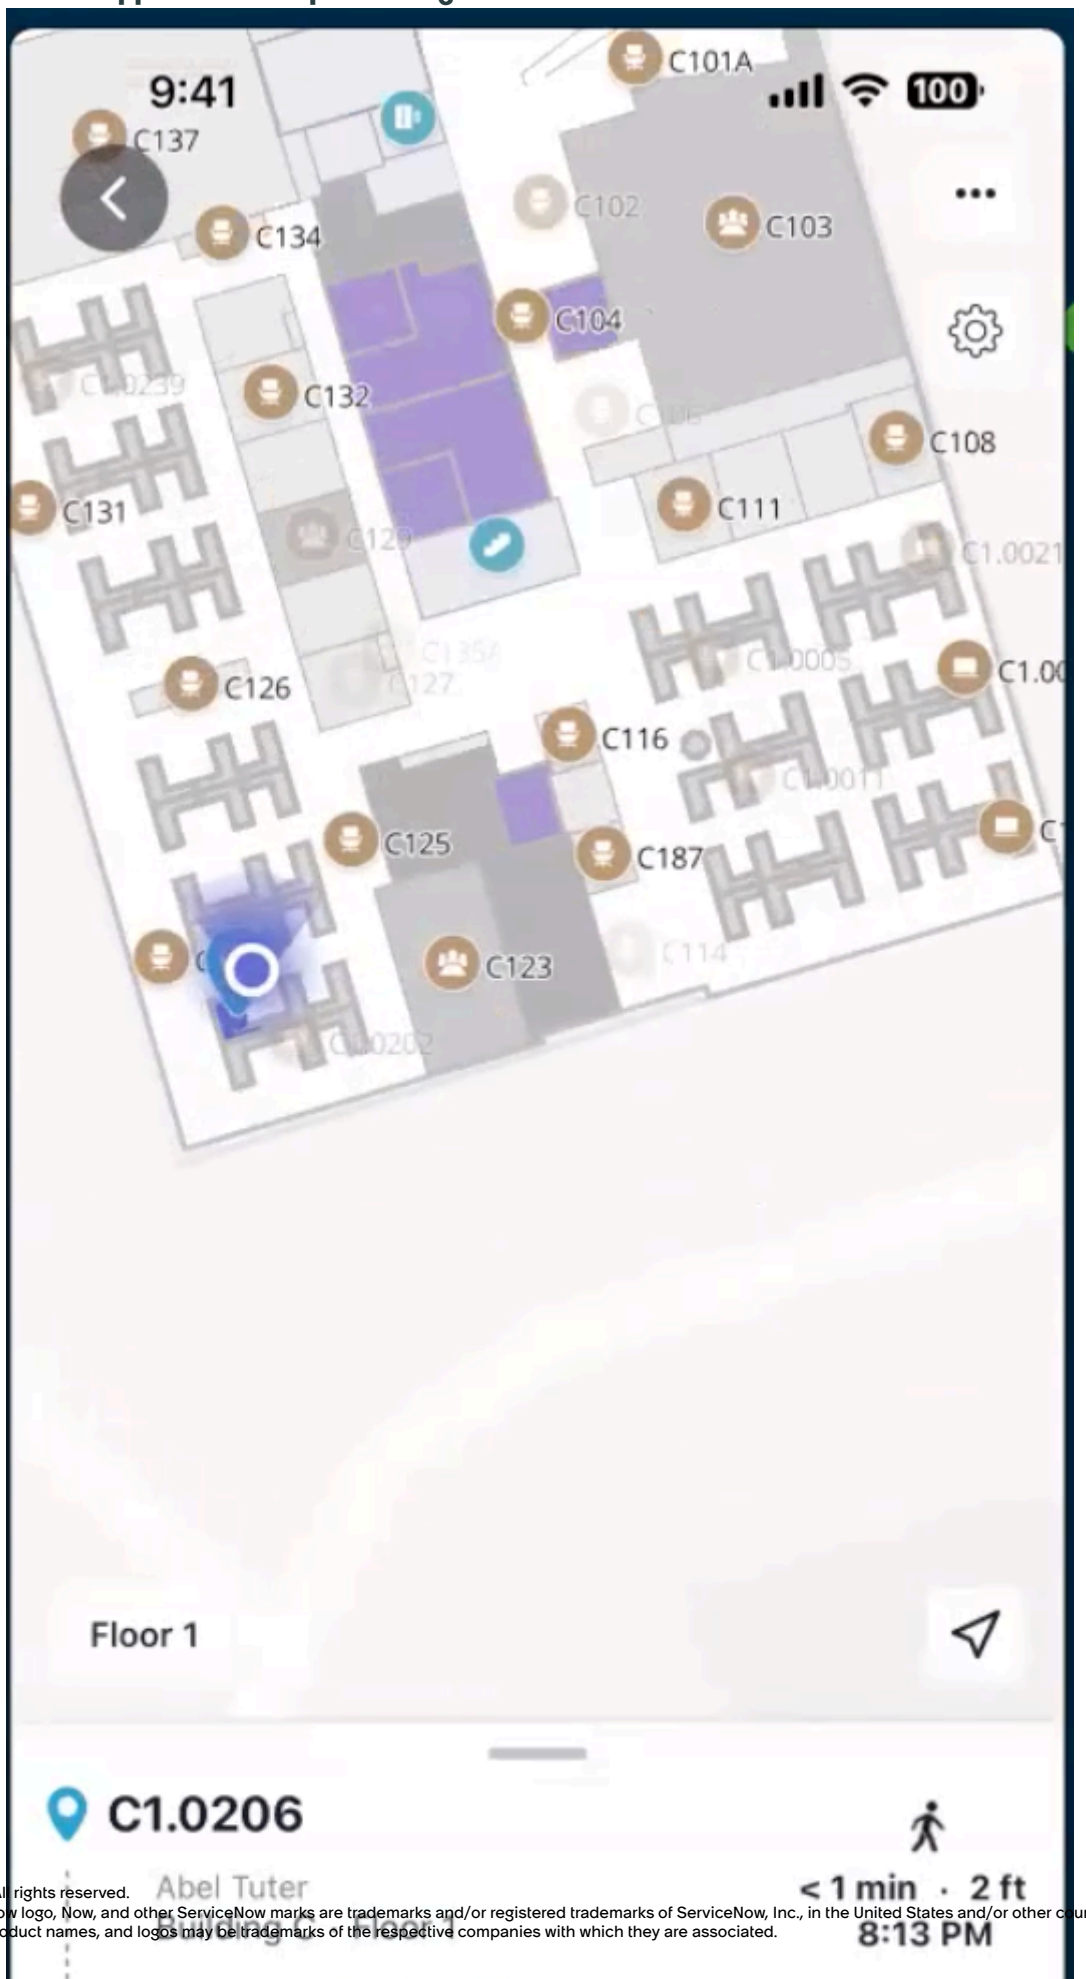
The map displays the navigation path between the selected spaces.

8. **Optional:** To view the direction as steps, select **View steps**.
9. **Optional:** Integrate with IndoorAtlas and Apple to determine the current location of the employee and show the current location of the employee on the mobile app.

   (Optional) This option is available only when you are using Indoor Wayfinding with native screens. Search for a space (using AI search) and navigate to it.

   To enable indoor positioning, configure and customize your Indoor Mapping map provider properties. For more information, see Configure a custom Map provider.

   Note:
   Indoor positioning is available with Workplace Service Delivery Suite v1.7.



10. **Optional:** To automatically determine the start location in wayfinding, select **Start directions**.

    (Optional) This option is available only when you are using Indoor Wayfinding with native screens. Search for a space (using AI search) and navigate to it.

    Blue dot provides real-time location and navigation signs as you move in a given space.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

11. **Optional:** Use the zoom options on the map to get a closer view of the spaces.
12. **Optional:** Sort the spaces in alphabetical order or by using the sort option in the card view.
13. **Optional:** Filter the space based on space types using the filter option in the card view.
14. **Optional:** To view a space on the floor, select the space from the card view or directly on the map.
    The map highlights the space.
15. **Optional:** To search for a user, type the user's name or their location.
    The user details are displayed based on their desk reservation if there are any or will be displayed based on their workplace profile location.
16. **Optional:** To submit a request related to a space, select **Raise a general inquiry**.
    For more information, see Raise help request for a workplace inquiry. The location details are pre-defined.

Result

The directions are displayed to the desired location.

These properties are derived from the system properties [sys_properties.list] table.

Indoor Mapping

Indoor Mapping Map Studio provides building visualization and wayfinding capabilities to workplace users within a campus, building, floor, and work spaces. Indoor Mapping Map Studio is the interface where you visualize and design your maps to create digitalized interactive locations within workplaces and buildings.

Design and manage your indoor maps

Create campus, buildings and floors, import your floor plan source files, and manage and update your maps objects and data in Map Studio.

Get started

Explore Learn about Indoor Mapping concepts and features.	**Configure** Install and configure Indoor Mapping as your map provider
Manage Create Indoor Mapping map objects and map data	**References** Work with Indoor Mapping components, roles, and properties

Explore Indoor Mapping

Indoor maps objects and data can be synchronized with Workplace Service Delivery and can be used for reservation management, case management, move management, and within the location directory for wayfinding.

Map creation and content management

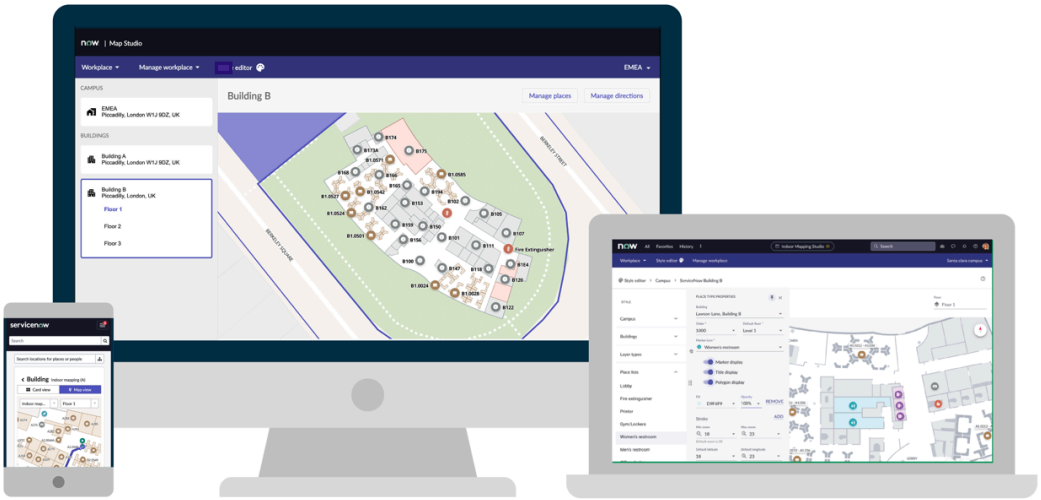
Create, manage, and edit your maps from a single place with Indoor Mapping Map Studio. End users can visualize the building interiors, other indoor and outdoor details for a selected campus, building, or floor.

Indoor Mapping provides capabilities within the Map Studio to digitalize workplace floor plans. Using the Map Studio interface, map admins and map editors can create and update maps that can be used across the Workplace Service Delivery suite:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. Get real-time insights on space utilization within a building for meeting rooms, venue, and workspaces using Reservation Management.
2. Fulfill service requests quickly with Workplace Service Delivery case management. View space details and use indoor maps to locate a campus, building, or floor interiors.
3. Use Workplace Service Delivery move management to request and move a desk from one location to another. Ensure that the workspace is mapped to Indoor Mapping map data.
4. Provide interactive locations and wayfinding solutions by providing the start and destination points on indoor maps.

Note:
Step by step directions for wayfinding within workplaces are only available on Now Mobile app. For more information, see Work with Location Directory for Now Mobile app.



Indoor maps can be created by importing and converting existing architectural or engineering floor plan to create indoor maps. Indoor Mapping supports AutoCAD files (DWG and DXF) and raster sources (PNG) files. For more information, see Import CAD files to Map Studio and Import Raster files.

Customize and manage maps with Indoor Mapping Map Studio. Collaborate in real time and update map data and objects. For more information, see Manage map objects and data.

Indoor Mapping Map Studio

© 2026 ServiceNow, Inc. All rights reserved.

Configure Indoor Mapping

Install and configure Indoor Mapping map instance data and properties.

Install Indoor Mapping

Install the Indoor Mapping application (sn_map_core) with dependent plugins.

Before you begin

- Ensure that the application and all of its associated ServiceNow Store applications have valid ServiceNow entitlements. For more information, see Get entitlement for a ServiceNow product or application .
- Review the Indoor Mapping application listing in the ServiceNow Store for information on dependencies, licensing or subscription requirements, and release compatibility.

Note:
The application includes demo data and installs related applications and plugins. For Indoor Mapping map objects and map data to work with Workplace Service Delivery[workplace-service-delivery], install both Workplace Indoor Mapping[workplace-indoor-mapping] and Indoor Mapping[indoor-mapping] in your instance.

Role required: map admin, admin

About this task

The following items are installed with Indoor Mapping:

- Roles
- Tables
- Scheduled jobs

For more information, see Map components installed with Indoor Mapping.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Indoor Mapping application (sn_map_core) using the filter criteria and search bar.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can search for the application by its name or ID. If you cannot find the application, you can request it from the ServiceNow Store.

In the list next to the **Install** button,available application versions are listed.

3. Select **Install**.

Configure your map instance data

Indoor Mapping provides a set of default parameters to display and configure all your maps.

Before you begin

Note:
Map editor limited role in the Map Studio has access to only a campus or few assigned campuses. This role can only edit map objects and data for the campuses assigned to it. For more information, see Configure role-based access in Indoor Mapping.

To customize and change the map data parameters, update the default parameters in Indoor Mapping. Consider the following before creating your campuses and buildings.

Role required: map editor, map admin

Procedure

1. Navigate to **All** > **Indoor Mapping**.
2. Select any of the following map objects to configure and customize the default parameters:
   - **Campuses**: List of campuses within your organization. Edit to activate or deactivate the campuses.
   - **Layer types**: Source layers specified in your maps. For example, building, grass, raster, room, wall, etc. Edit the layer types to change names and domains, visible attributes, active and inactive status.
   - **Place types**: Place types available to display places on the maps. For example, auditorium, bike parking, bus station, etc. Place types are used to display content on the maps. You can edit and modify the names and domains, visible attributes, active and inactive status.
   - **Direction modes**: Direction modes available for your users. For example, default (walking), accessible, bike, etc. You can edit and modify the names and domains, average speed (used to compute estimated time of arrival), direction mode icons, active and inactive status.
   - **Connector types**: Connector types available on your maps. For example, stair, elevator, escalator, ramp, etc. Edit and modify the name and domain, wait time per floor, icon and zoom attributes, active and inactive status.
   - **Icons**: Icons available on your maps. For example, auditorium, fire extinguisher, computer room, building, etc. Edit and modify the name, title, and domain, active and inactive status, actual file image.
   - **View types**: View types available on your maps. For example, All, default, minimal. Edit and modify the name, title, and domain, outdoor style, active and inactive status.
   - **Place groups**: Place groups available on your maps. Edit and modify the name, description, and domain, related campus, active and inactive status.
   - **Fonts**: Font types available on the map. Edit and modify the name, description, and domain, upload new fonts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Outdoor styles**: Outdoor styles available on your maps. For example, default, OpenStreetMap, etc. Edit and modify the name and description, GeoJson description, inactive and active status.

  Default Outdoor navigation styles. Outdoor Style records can be created and modified by map admins (map_admin role). Outdoor style records have a name and a style file. Style files should comply with the Mapbox style specification. For example: `default.json`, `empty.json`, or `openstreetmap.json`.

  The default.json is the default outdoor map style provided and hosted by Indoor Mapping based on OpenStreetMap data and OpenMapTiles. An empty outdoor style has a white background with no outdoor map data at all. The openstreetmap.json has the standard map tiles from OpenStreetMap directly coming from OpenStreetMap.

  Note:
  Users must refer to OpenStreetMap license before using this in production.

- Indoor Mapping properties: For more information about how to set the configuration properties, see Indoor Mapping properties.

Configure role-based access in Indoor Mapping

Configure Indoor Mapping to update role-based access for map administrators, map editors and the map editor limited roles.

Before you begin

Role-based access to Indoor Mapping Map Studio requires the following three roles:

- Map administrator (sn_map_core.map_admin): Map admins in Map Studio can set up the map data and objects in Indoor Mapping Map Studio and has complete access to the application. Map admins can also manage user criteria records.
- Map editor (sn_map_core.map_editor): Map editors can set up maps in the Indoor Mapping Map Studio, import floor plans, and can manage maps (edit or delete) in the Map Studio.
- Map editor limited (sn_map_core.map_editor_limited): This role has limited access to a campus or only few campuses. Users with this role can view and edit campuses that are assigned to them. The Indoor Mapping **All** > **Indoor Mapping** > **Map Studio** menu is hidden and is not available for this role.

  Map administrators can add user criteria record to provide access to a campus for the map editor limited role. Users with map editor limited role cannot view a Campus in the application context menu search **All** > **Indoor Mapping** > **Campuses**.

Add a user criteria record to decide which users, roles, and groups can access a campus.

Role required: map admin

Procedure

1. Navigate to **All** > **User Administration** > **Users**.
2. Select and open a user record.
3. In the **Roles** related list, click **Edit**.
4. In the **Collection** list, select the **sn_map_core.map_editor_limited** role, and click **Add**.
5. Select **Save**.
6. To provide access to a campus in Map Studio, navigate to **All** > **Indoor Mapping** > **Campuses**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. From the Campus page, select a campus to open it.

   Select a campus for which you want which you want to provide the map editor limited role access.

8. Select **Campus Editors** tab in the Related List section.
9. Select **User criteria**, click **New**.
   On the form, fill in the fields.

Campus Editors new record

Field	Description
User criteria	Search and select Users with sn_map_core_map_editor_limited role.
Campus	Select a campus or create a new campus to provide user access to this role.

10. Click **Submit**.

> **Note:**
> If a user with map editor limited role deletes a building, the building is only made inactive in the database and is not actually deleted from the database.

Indoor Mapping properties

Customize and render map components and objects by updating the Indoor Mapping properties.

Before you begin

Role required: map admin, map editor

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Indoor Mapping Properties**.
   Indoor Mapping properties are displayed. Customize the map component properties as required.
2. Fill in the form fields.

Indoor Mapping Properties

Field	Description
Map import service URL	Option to define the URL from where the Map Import Service can be reached to enable floor plans. This property is mapped to the *(sn_map_core.map_import_service.url)* system property.
Default outdoor style used in the Map Studio	Specifies the default outdoor style used in the Map Studio. This property uses the outdoor style table record including the default ones and customized styles. This property is mapped to the *sn_map_core.studio.default_outdoor_style* system property.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Do not use the “Empty” outdoor style as you cannot georeference floor plans with it.
Decide whether or not the system should prevent studio to make a call to Google geocoding API.	Mapped to the *sn_map_core.studio.prevent_google_geocoding* system property. This option if selected helps to prevent the Map Studio from making a call to Google geocoding API. The Google geocoding API is used by default in the Map Studio to provide suggestions for location address and center the map on the selected location address while creating a campus. You can prevent the use of the Google geocoding API while creating a campus by zooming into the world map to point to the location of the campus.
Maximum number of user criteria considered to determine campus editors.	Maximum number of users that can be campus editors. This property can be increased if the number of users as campus editors is more than 100. This may impact the Map Studio performance. Default value is 100 and is mapped to the *sn_map_core.max_user_criteria_count* system property.
Maximum distance in centimeters between the first and last point to convert a line to a polygon while importing an AutoCAD file	Option to automatically close all lines that are one centimeter apart on a CAD file. Creating a polygon on the map requires the poly lines to be closed in a CAD file before you import the CAD file in the Map Studio. When the lines are not closed, enabling this property helps to deduct and close the open lines in a polygon.
Set to true to ignore hidden CAD layers during imports	Option to ignore any hidden CAD layers present in the AutoCAD source file. When this option is enabled, the hidden CAD layers are not shown on the map.
Comma-separated list of CAD layers to ignore during imports (e.g. layer1,layer2)	Option to ignore the CAD layers that you do not want to display or show on the map. The layers even if not hidden are ignored. Provide the names of layers that you want to ignore as a comma-separated list. The ignored layers are not displayed on the map after you import the CAD file.
Set to true to enable the simplification of GeoJSON features during CAD imports	Option to reduce the complexity of geometries extracted from the CAD file to improve performance using the *sn_map_core.cad_simplify_enabled* system property.
Tolerance of the simplification algorithm that can be run during AutoCAD imports if all conditions are met	Option to change the accuracy of the simplification algorithm by using use the system property *sn_map_core.cad_simplify_tolerance*. It is set to 0.1 by default which defines the level of simplification where '0' is the original geometry and nothing is changed in the geometry. When this option is set to 0.1, it provides the most accurate results by simplifying the geometry.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	For example, if you increase the value to 0.8, then a circle may become a triangle and the accuracy of geometry is reduced as it removes the coordinates on a geometry.
Minimum number of coordinates in a GeoJSON feature to run the simplification algorithm (if enabled) during AutoCAD imports.	Threshold to simplify complex shapes or geometries that have 20 or more coordinates by using the *sn_map_core.cad_simplify_coords_cnt_threshold* property. Default value is 20 coordinates. After uploading the CAD file in the Map Studio, import it to see the reduced coordinates or points on the map.

3. Click **Save**.

Manage CAD source files

Manage your CAD source files using the Autocad import tool in Indoor Mapping v1.8.0.

- Customers using Indoor Mapping v1.8.0 can import and configure CAD source files using the Autocad import tool. By default, the Autocad import tool is enabled in the Map Studio.
- Existing customers using Indoor Mapping v 1.7.0 and later version can migrate the CAD source files using the latest Autocad import tool in Indoor Mapping v1.8.0. If you don't want to migrate to the latest version, disable the option to configure and import the latest Autocad processing tool in the Map Studio. For more information, see Configure the AutoCAD import tool.

  If you have not installed Indoor Mapping v1.8.0, you can continue using the Autocad tool in Indoor Mapping v1.7.0 and later version.

Autocad import requirements

After adding a building, you can start importing your CAD floor plan source file in the Map Studio.

Creating indoor maps in Indoor Mapping can be done by manually importing the CAD floor plan sources or by automating the import process using the AutoCAD import capability in the Map Studio. CAD files must meet certain requirements in the Map Studio before the CAD source files are imported. For more information, see ServiceNow Blog

Note:
Map administrators must ensure that their CAD sources adhere to the import requirements of Indoor Mapping Map Studio. Before importing, ensure that the AutoCAD sources are reviewed by graphic designers for design corrections and accuracy. Import of JSON or GEOJSON files is only available for third-party mapping provider migration process.

AutoCAD files up to 200 MiB can be uploaded to the Map Studio. Uploading larger files can result in performance degradation.

Please note that even if the file is below 200MiB, the generated data might be higher depending on the file features, and this can also result in performance degradation or import issues.

File

Floors in a building should reside on an isolated file. Indoor Mapping Map Studio can only read and load one floor per file. Hence, it is important that each floor is on a unique file.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Layers

All building layers must be separated. Floor plans in AutoCAD are created using a layer system. It is important that each building element is on a different layer to style or delete elements. Display only layers that your map users need. Make sure you don't have any unnecessary details on your file as layers with too many elements can block the import process.

Note:
Interactive maps must be as clear as possible. Remove non-essential items such as sinks or windows. Sort the elements when importing your floor plan by placing these elements on a separate layer.

All text objects must be isolated on a dedicated layer according to their type. Each type of object must have its own text layer.

Drawings must be isolated on a dedicated layers based on the drawing type. Ensure that each room type is on a separate layer. If you are merging elements, ensure that they imported with the same line and background color.

Names must be clear and identical from one file to another. On Map Studio, after a file is imported, the configuration is retained and automatically applied to other files only if the layer names are identical (available only in Tokyo and later releases). Map admins, map creators or map editors cannot recognize the different layers in the Map Studio if your files have different layer names. The CAD configurations are not performed automatically.

Lines

All lines must be connected to form closed shapes. Lines in the CAD file are used to draw the floor plan and define your building outline, rooms and inaccessible areas. Spaces outside the closed lines are considered open areas. For example, hallways.

Ensure that all lines and shapes are properly closed. For example, if shapes are not properly closed, rooms in a hallway are not considered a part of a hallway and points are created in the rooms.

Export

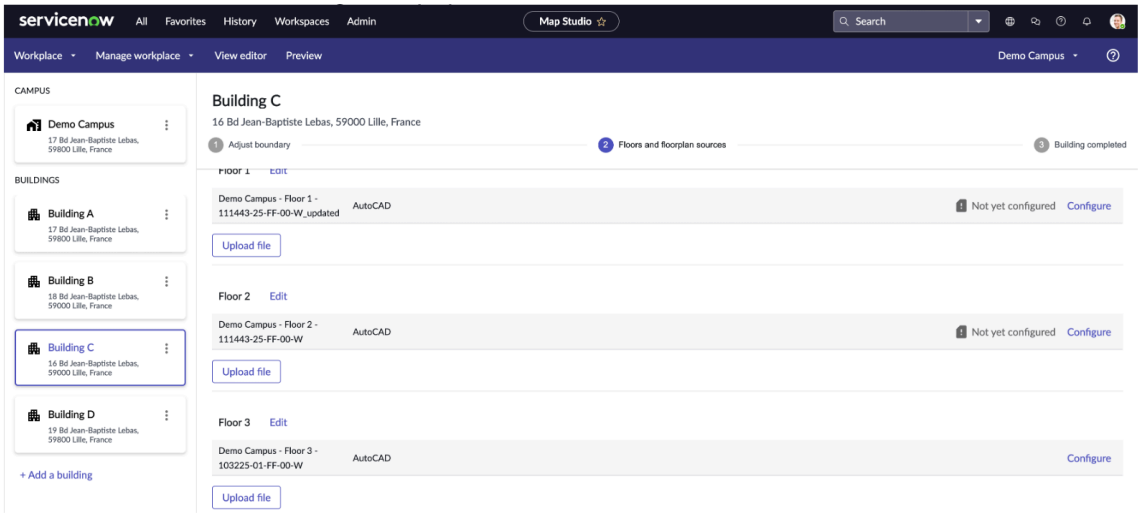
Export your CAD file in DWG or DXF formats. Other formats are not supported. Make sure you are exporting the right version of CAD file. AutoCAD 12 (AC1009) to AutoCAD 2018–2021(AC1032) is supported in Indoor Mapping Map Studio.

Autocad import tool

The Autocad import tool in Indoor Mapping v 1.8.0 provides the ability to configure, optimize, improve the quality and level of design and details in your CAD file.

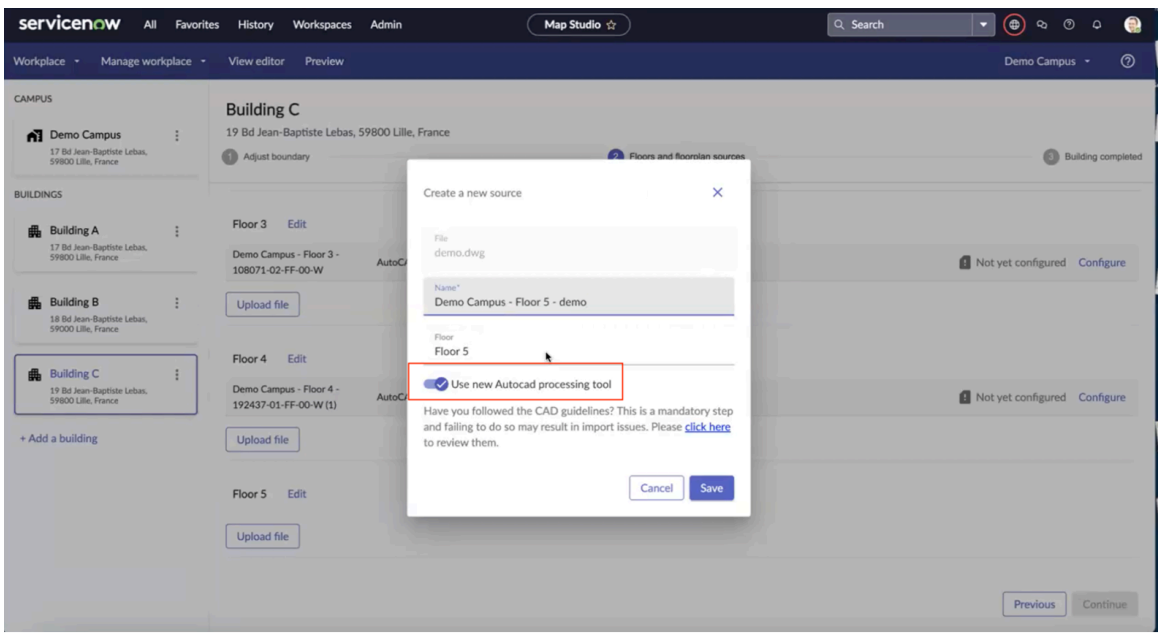
Upload your CAD source file using the latest Autocad import tool. It imports the named objects, blocks, and layers in your CAD file.

Configure the AutoCAD import tool



Configure and import your CAD source file to Map Studio.

Before you begin
Role required: admin



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

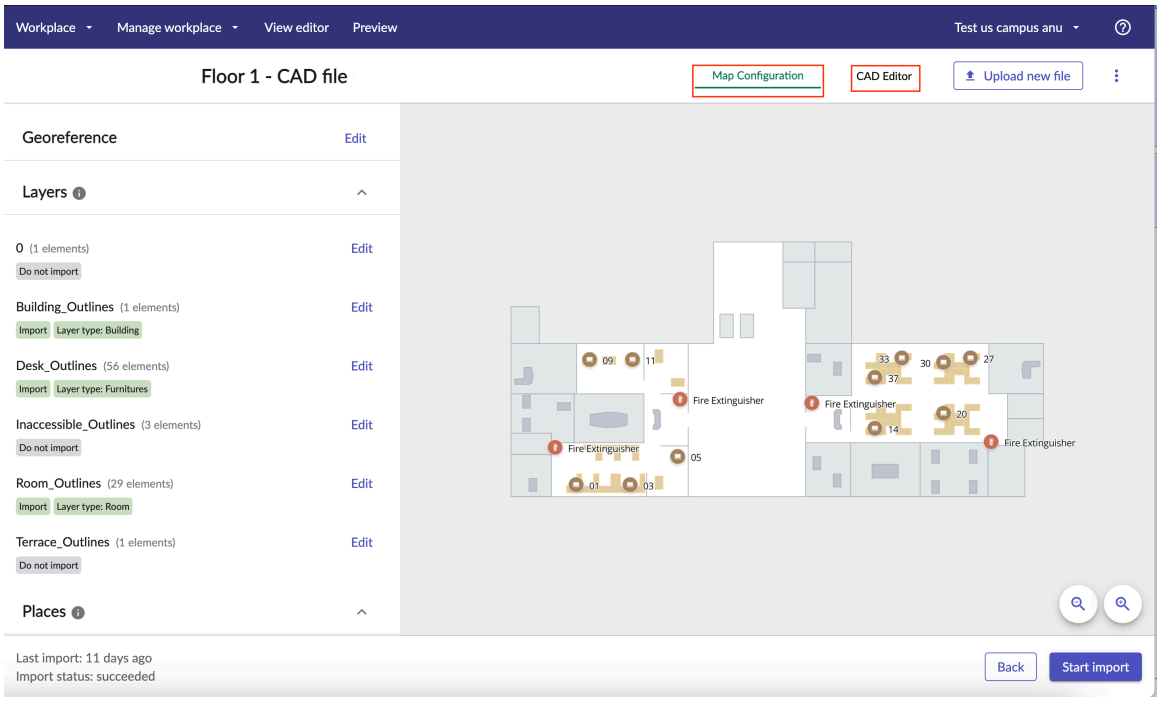
Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a Campus.
   For example: Demo Campus.
3. Select **Continue** or navigate to **Manage Workplace** > **Floor & Floor plans**.
   This list of buildings for a selected campus is displayed.
4. Select a building from the panel.
5. Select a floor to upload your CAD source file.

6. Select **Upload** file, if your CAD source isn't uploaded and configured for a floor.
7. Select **Configure** to configure and update to your CAD file.
8. The Create a new source dialog box appears.

9. Complete the following information:
   - File: Name of the AutoCAD source file. For example: demo.dwg
   - Name: Campus name is added and is pre-filled by default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



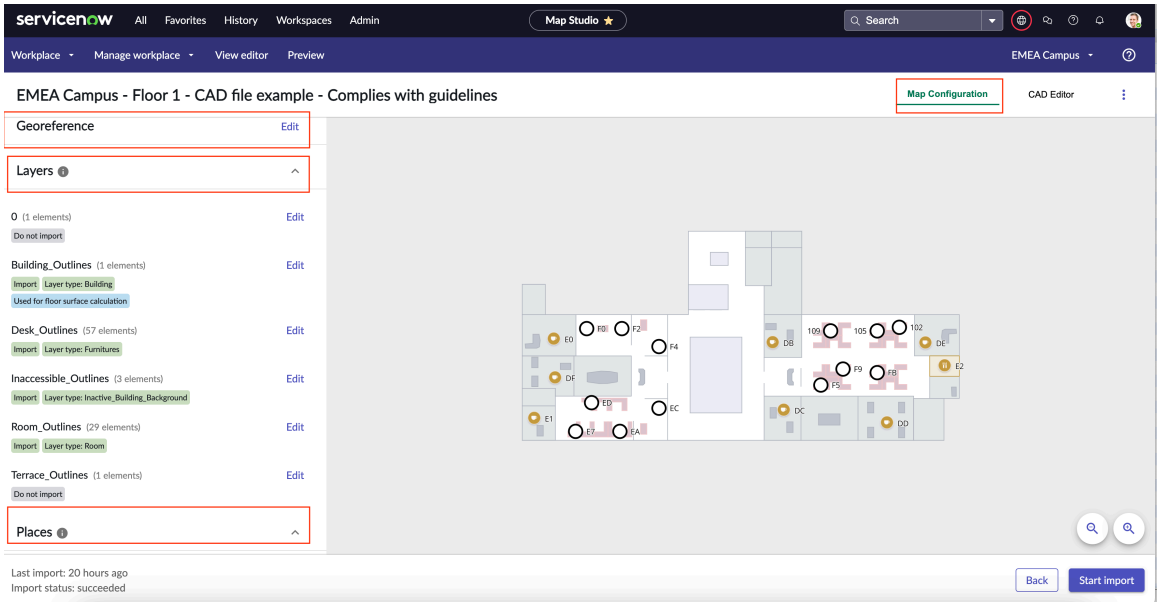
- Floor: Name of the floor where the CAD configuration changes have to be made or where the CAD file is to be imported. For example; Floor 3.
- Use the new Autocad processing tool: By default this option is enabled.

> **Note:**
> Disable the **Use the new Autocad processing tool** button if you want to continue using the Autocad tool provided in earlier versions of Indoor Mapping (pre 1.8.0 version). For more information, see Import CAD files to Map Studio.

10. Review the CAD guidelines by selecting the **Click here** link.
11. Select **Save**.
    The CAD configuration page is displayed. For more information, see CAD configuration.

CAD configuration

The CAD Configuration page layout provides the **Map Configuration** tab and the **CAD Editor** tab options.



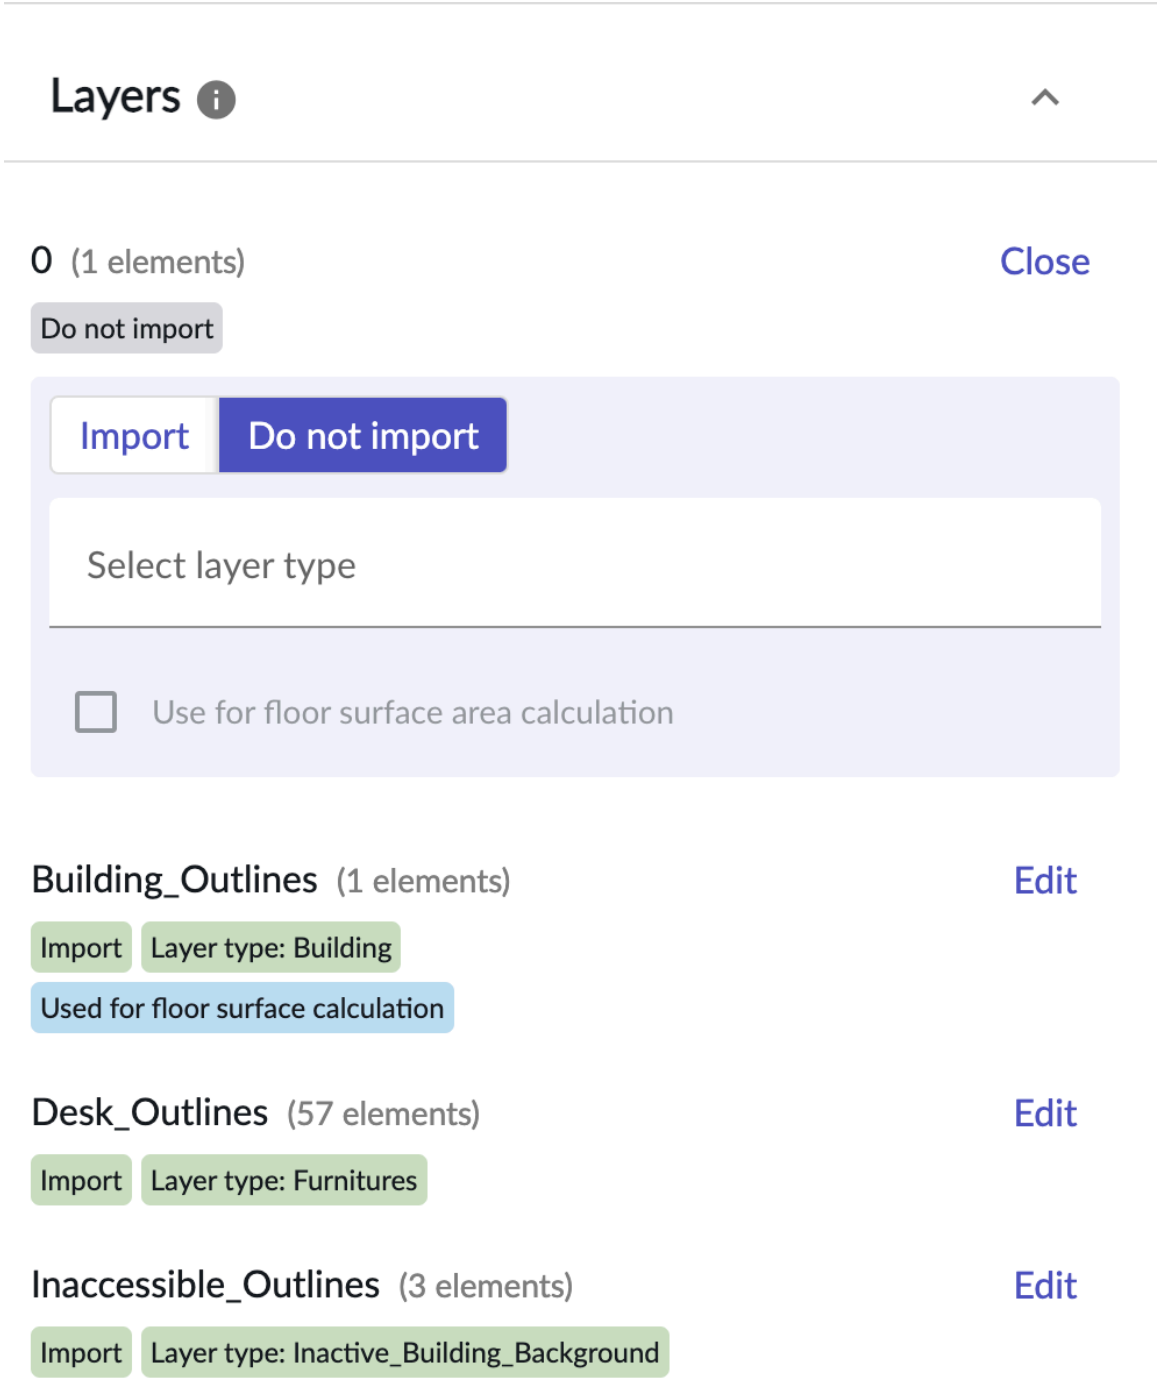
> **Note:**
> Indoor Mapping retrieves the CAD configuration from previously configured files based on the layer names. If this is the first time that you are importing your CAD file or if there are few unknown layer names in your CAD file in Indoor Mapping, then, after importing the CAD file, it will not be configured and the Map Configuration preview will be blank.

Map Configuration tab

Manage CAD layers, places, text, block, layer types, and place types using the Map Configuration preview layout.

Select the **Map Configuration** tab to open the Map configuration page. For more information, see Configure CAD objects using the Map Configuration tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

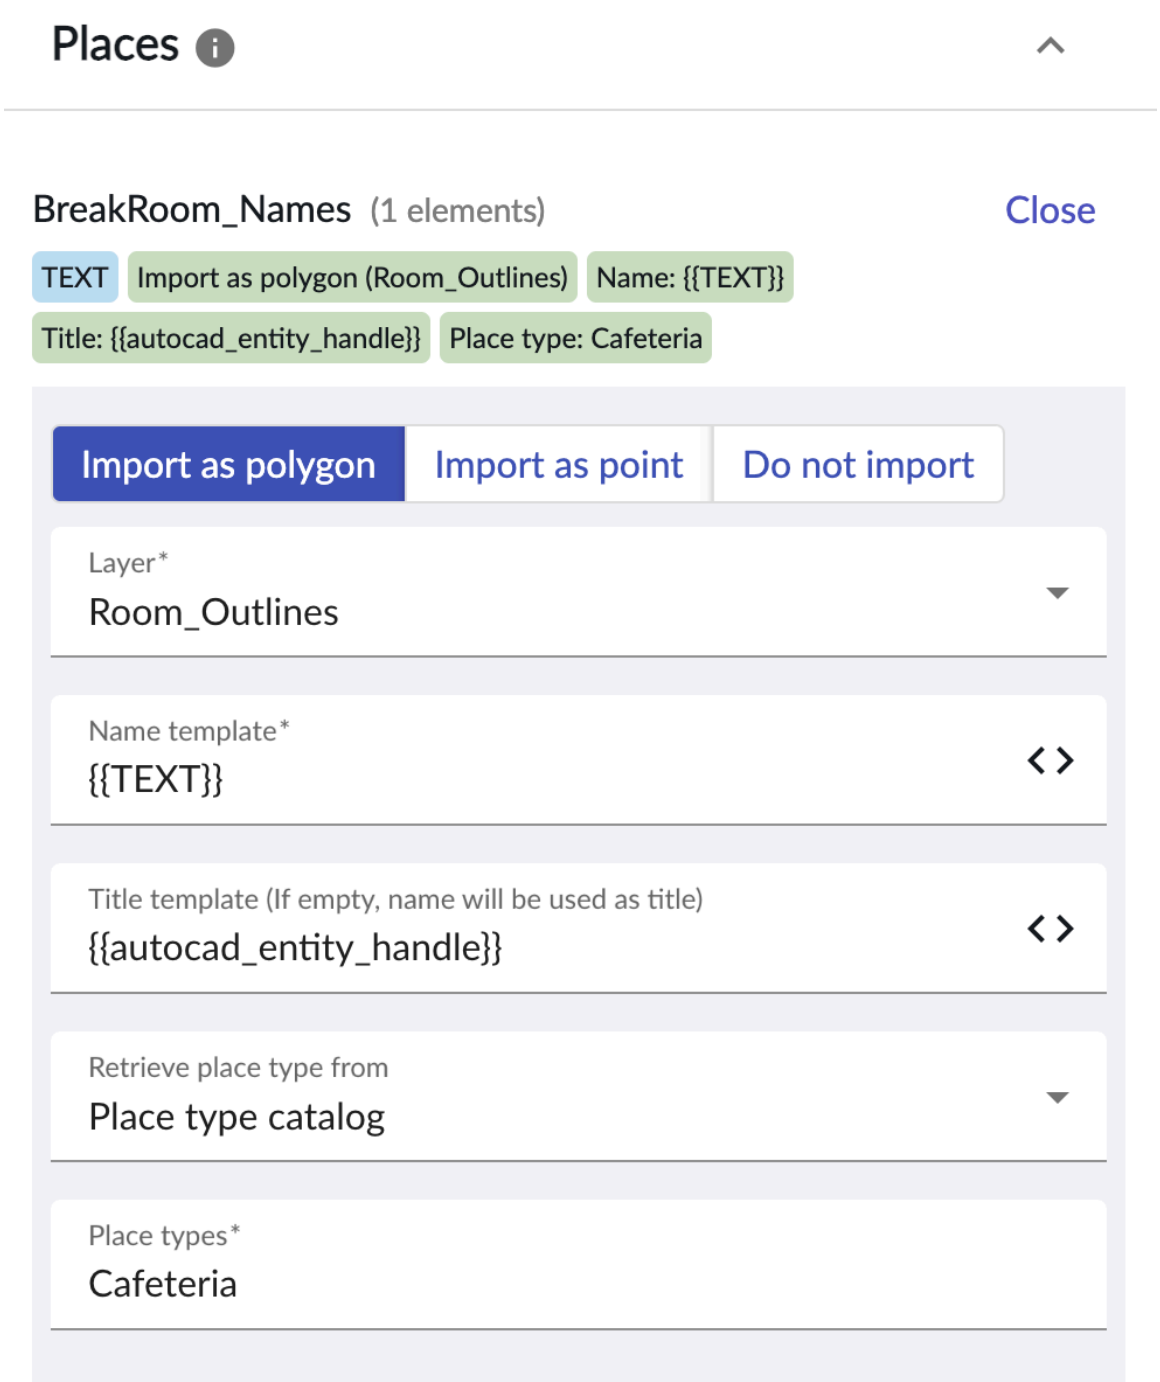


Georeference

Georeference your floor plan and position it on the map to scale and align it on the World map (OpenStreetMap). For more information, see Georeference your floor plan.

Layers

Configure the layers in your CAD file and preview it on the Map Configuration preview layout. For more information, see Configure layers.

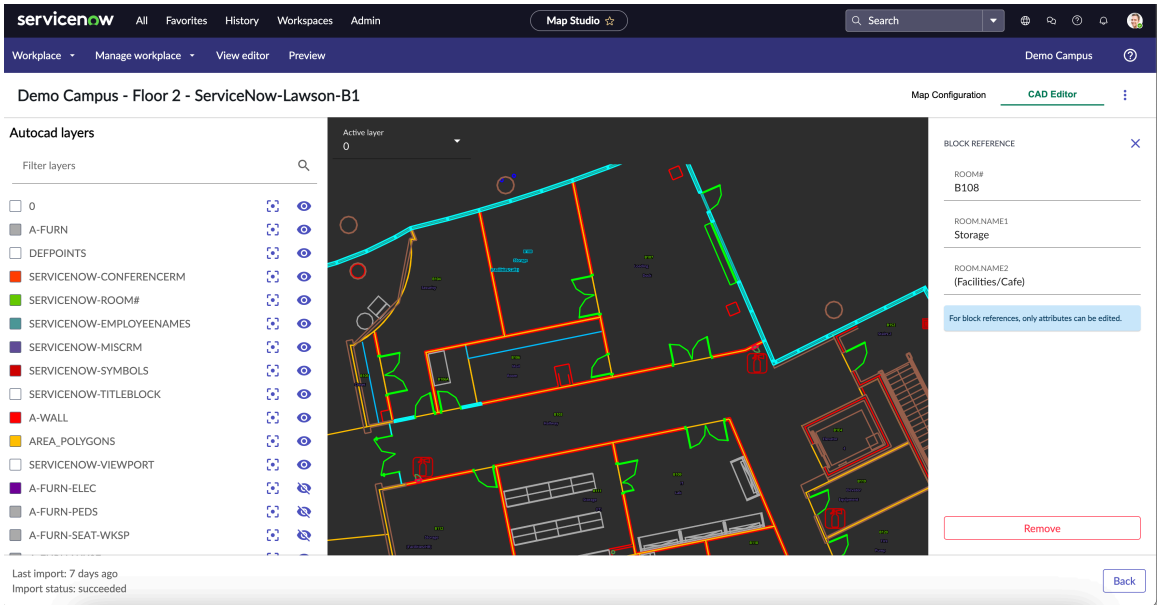


© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Places

Configure place in your CAD file and preview it on the Map Configuration preview layout. For more information, see Configure places.

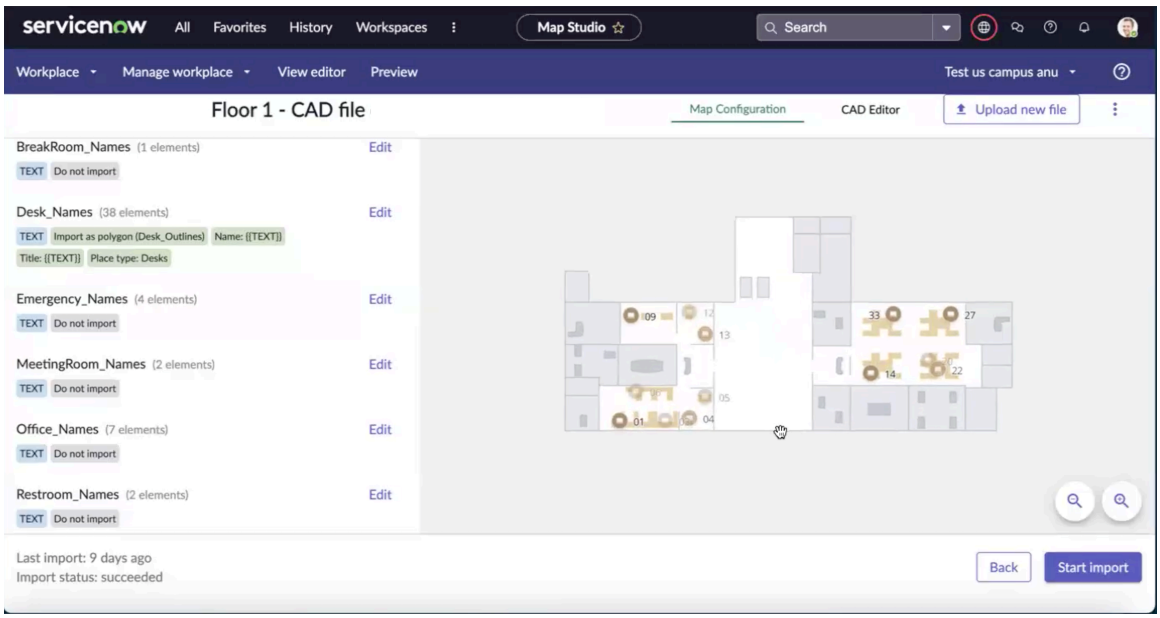
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



CAD Editor tab

CAD editor provides editing and drawing tools to edit and optimize your CAD source file. Add or update text, place, or a block attribute. Resolve missing polylines, polygons, and place types in your CAD file.

Configure and manage layers, places, text, and block attributes. For more information, see Configure CAD objects using the Map Configuration tab.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure CAD objects using the Map Configuration tab

Manage objects and elements in your CAD file using the Map Configuration tab.

Select a layer or place to preview it on the Map configuration preview layout.

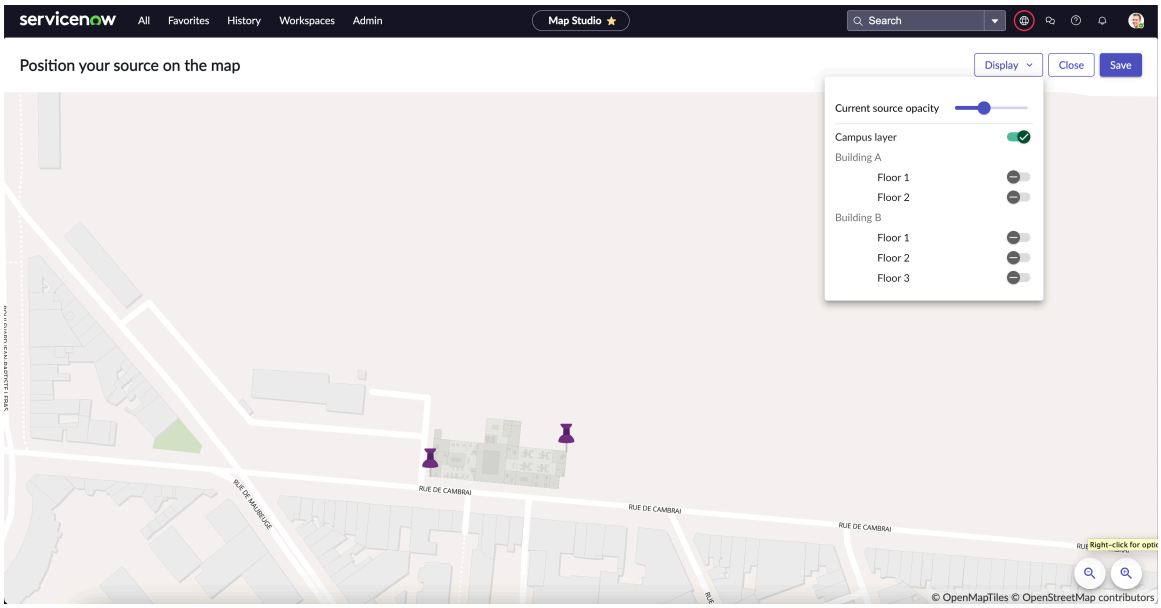
Georeference your floor plan

Georeference and position your source floor plan on the map to scale it.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

1. Select the Map Configuration tab to display the Map configuration page.

Note:

if the floor plan isn't positioned on the map, georeference isn't set ( ) alert is shown.

2. Select Georeference and select **Edit**.

3. Move around the pins to position your floor plan on the map.
4. Select **Display** and from the drop-down list enable the radio button for the required floors.
5. Select **Save**.

Configure layers

Select a layer on the Map Configuration preview and edit it.

Before you begin

Layers are the shapes or geometries in your CAD file.

Role required: admin

Procedure

1. Select the **Map Configuration** Tab.

   The Map Configuration preview page is brought into focus.

2. Expand **Layers** by selecting the chevron toggle icon ( ).
3. Select **Layers** to select a layer.
4. Select **Edit**.

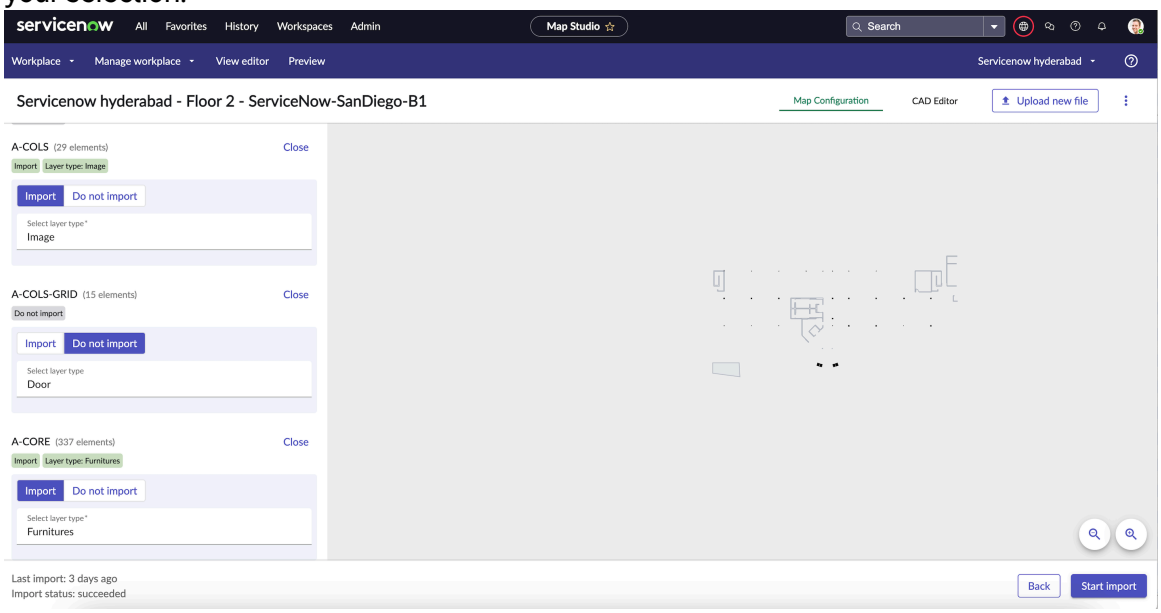
   The edit panel appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Use for floor surface area calculation option is not available for selection after it's enabled for a layer. For more information, see Compute Autocad floor surface area.

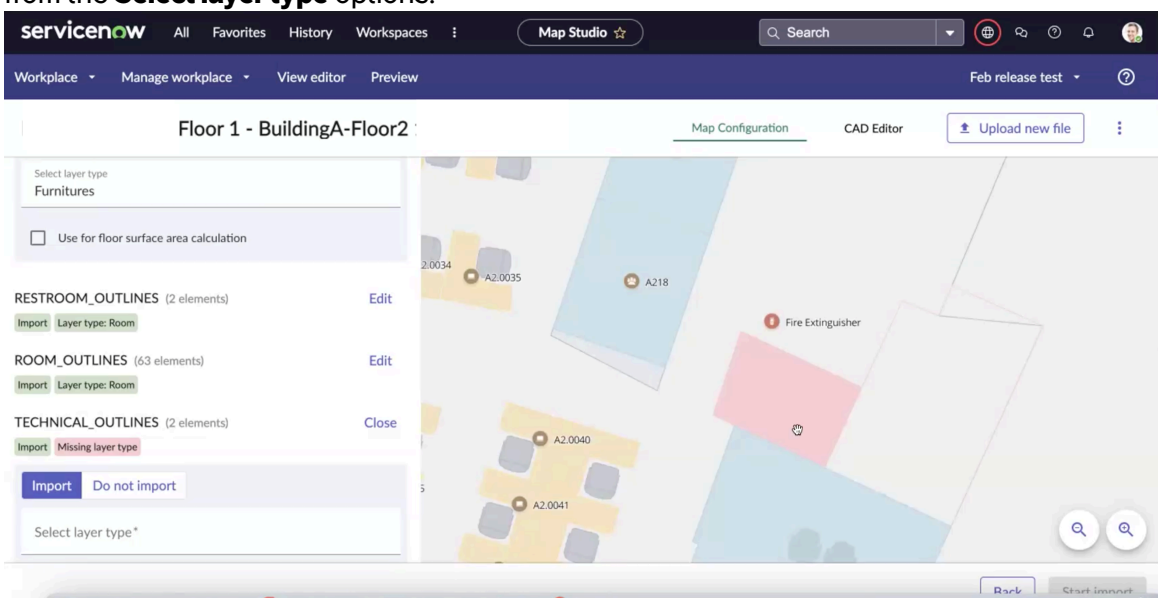
The selected layer shows the layer name along with the number of elements in it. For example: Logo (1442 elements)

The summary pill shows summarized information for a layer configuration. The summary pill summarizes information in the following colors based on the layer configuration and layer state:



- Neutral blue: Indicates the type of item selected. For example, Text or Block.
- Green: Indicates that the place configuration is correct for a selected place.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- Orange: Indicates minor configuration issues.
- Grey: Indicates layers that are not imported.
- Red: Indicates blocking errors.

5. Select **Import** to import the elements in a layer on your CAD file.
   A validation message is displayed: Configuration saved successfully
6. Select **Do not Import** when you don't want to import a layer configuration to your CAD file.
   A validation message is displayed: Configuration saved successfully

   The selected layer elements are displayed on the Map configuration preview panel based on your selection.

7. Resolve a missing layer type (highlighted in red in the summary pill) by selecting a layer type from the **Select layer type** options.

The missing layer type is resolved and the summary pill shows the Layer type highlighted in green. The Map Configuration preview shows the missing layer type with the newly assigned layer type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

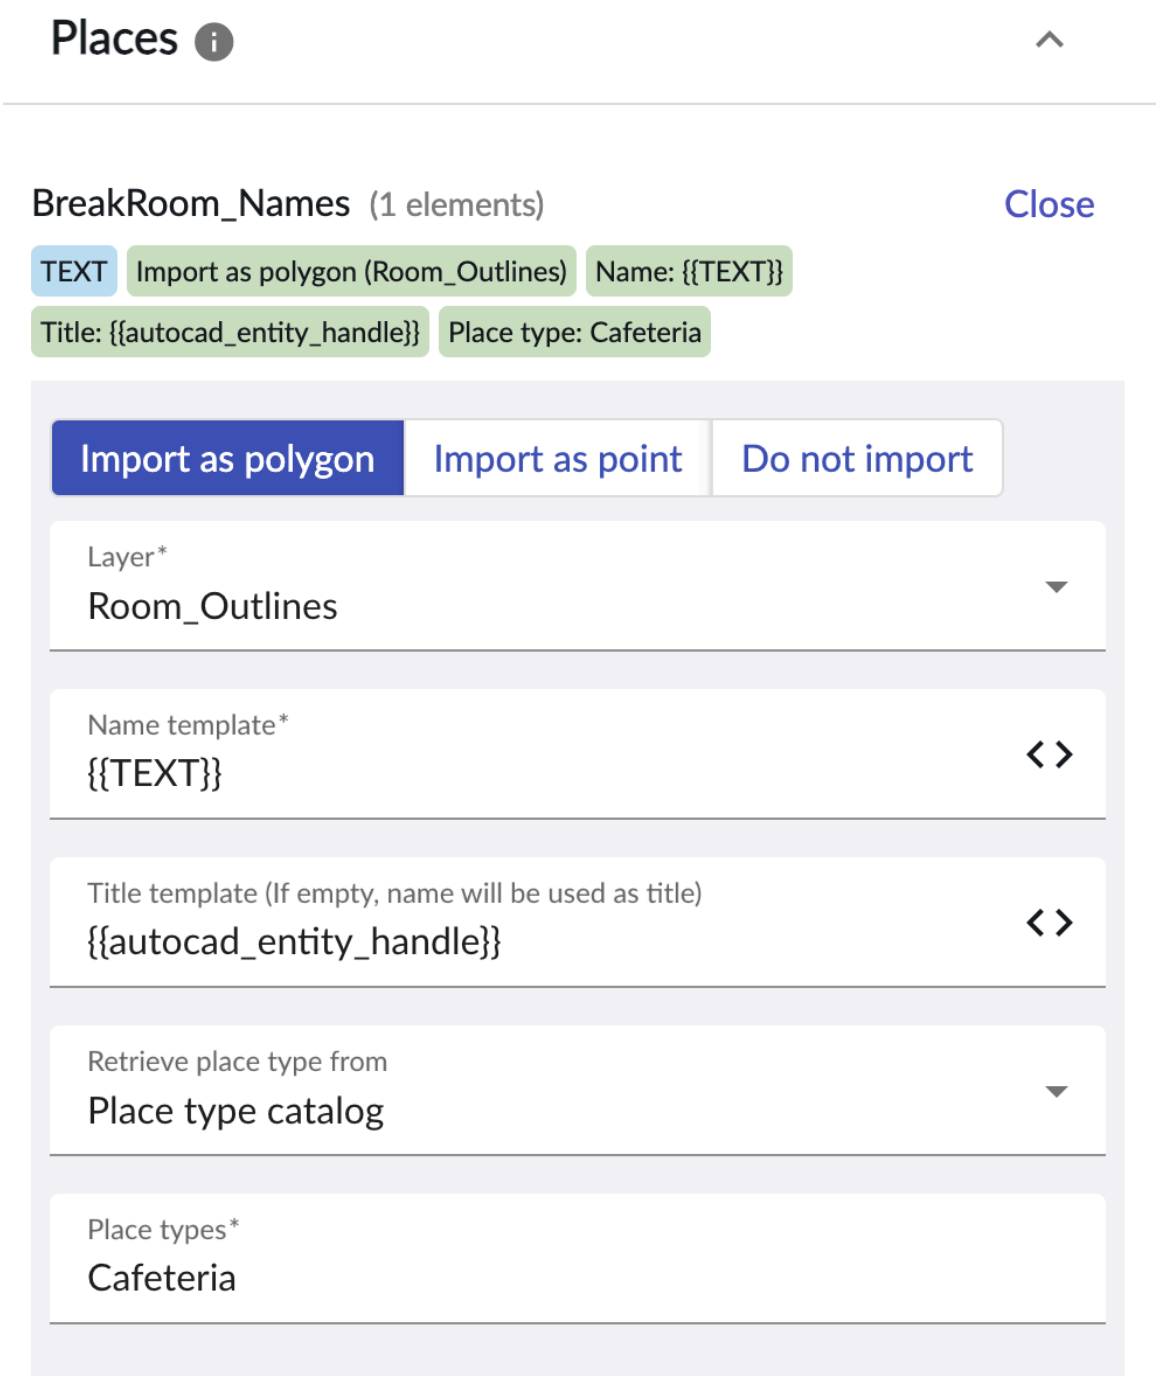
Note:
Layer types render on a map with default styles. If layer type is missing, elements will appear with a red default style.

Layer type categorizes and applies a style to a layer from the Indoor mapping Layer types table (**All** > **Indoor Mapping** > **Layer Types**)

8. To change a layer type from the current type to another, select the **Select the Layer type** option.
   For example, if your current Layer type is **Room** and you select **Building** from the list to change a layer type. The newly selected layer type along with its style and categories are applied.
9. After making the changes, select **Close** to close the edit panel.
10. Repeat the steps for the layers that you want to import to your CAD source file.

Configure places

Configure Places using the Map Configuration preview layout. Retrieve place types from the CAD file.



About this task
You can also configure shapes, names, and titles for a place type.

Before you begin
Role required: admin

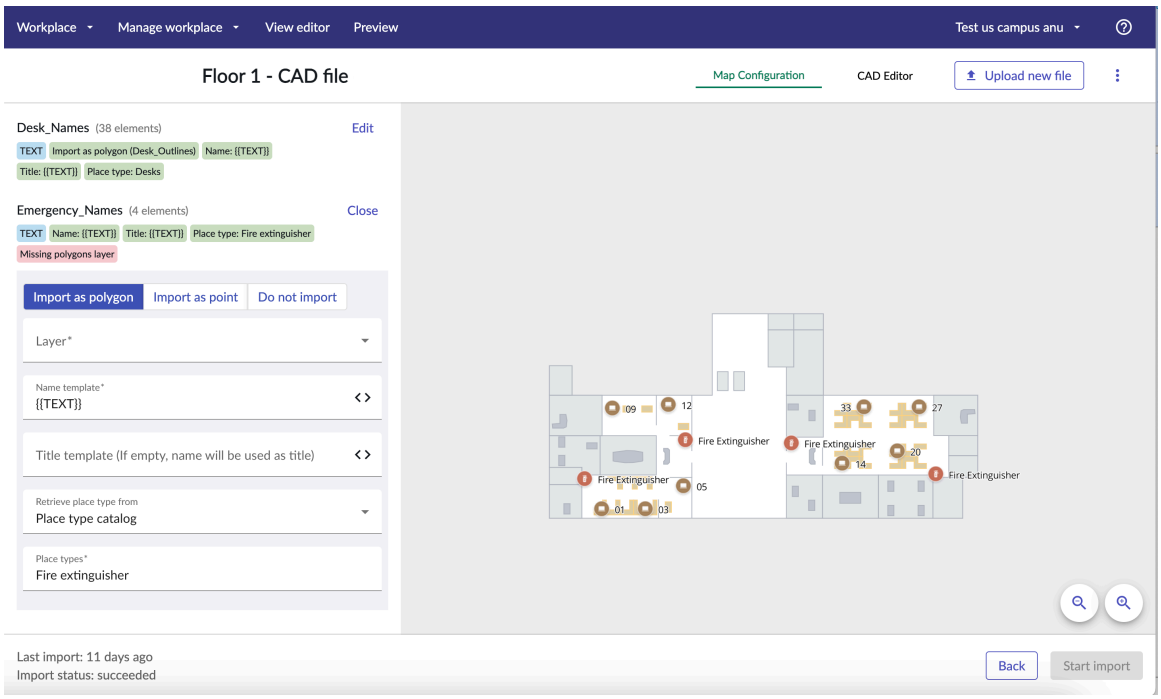
Procedure
1. Select the **Map Configuration** Tab.

   The Map Configuration preview page is brought into focus.
2. Expand **Places** by selecting the chevron toggle icon ( ).
3. Select **Edit** to edit the place attributes and elements.
   The edit panel appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The selected place shows the number of elements in a place. For example: Breakout Room (1 element).

The summary pills summarize information about your place configuration. For example, the summary pill shows if the place is a block or text, the place type is cafeteria or patio (configuration information).



If you missed something in your configuration, the summary pills provide alerts (highlighted in red) like missing polyline, missing polygon.

The summary pill summarizes information in the following colors based on the place configuration and place state:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Neutral blue: Indicates the type of item selected. For example, text or blocks.
- Green: Indicates that the place configuration is correct for a selected place.
- Orange: Indicates minor configuration issues.
- Grey: Indicates layers that are not imported.
- Red: Indicates blocking errors.

4. Select Import options (**Import as a polygon**: Step 5 or **Import as Point**: Step 7) to import the configuration to your CAD file.
   You can also select **Do not Import** if you do not want to import the configuration to your CAD file.
5. Select **Import as polygon** to import a place as a polygon in your CAD file.

Note:
The text appears in red on the Map Configuration preview when you select create as polygon and the shape is missing.

a. From the **Fetch polygons from this layer** list, select the layer that specifies where the shapes for these places are located on the map.
   If the shapes for meeting rooms are on the Meeting-Room layer, select Meeting-Room from the drop-down list.

b. In the **Name template** field, enter the name template that you want to use for the places.

   You can select the following options to be used from the CAD file:

   - Select **TEXT** if you want the place name to be copied from the CAD file.

     If the place is defined a block in your CAD file, you can also select a block attribute for the Name template.

   - Select **autocad_entity_handle** if you want to use a CAD-generated unique ID for a layer. Entity names and handles are unique within a CAD drawing.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Select **Blocks** if you have defined block attributes in your configuration.

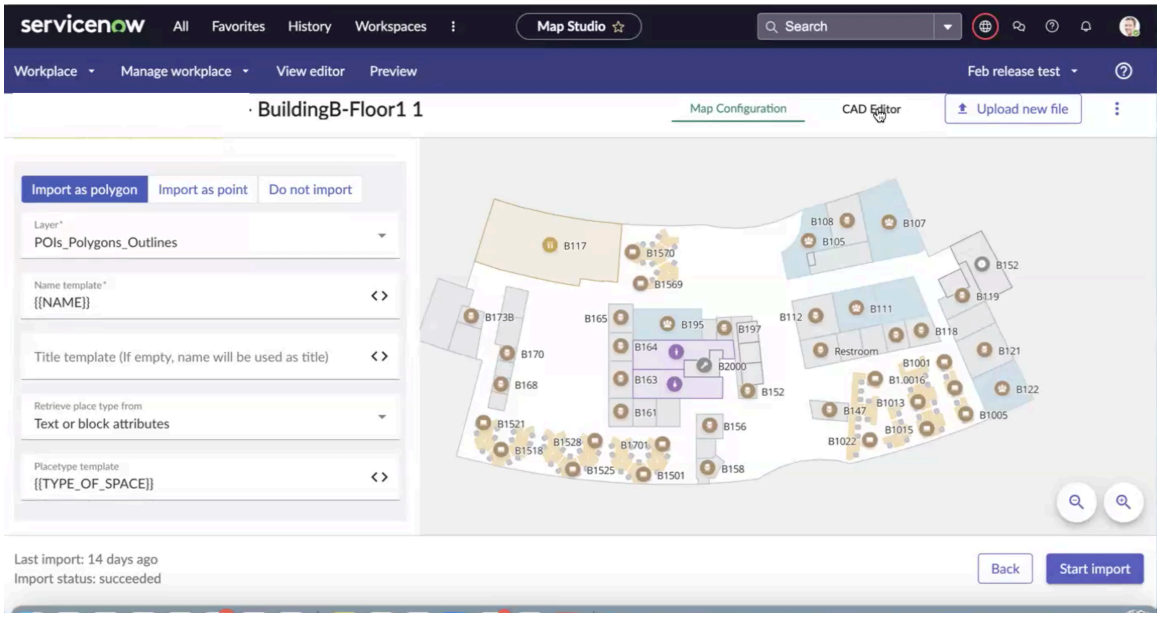
> **Note:**
> Blocks are not available from Indoor Mapping version 1.13.0.

d. From the **Title text layer** list, select the layer that contains titles for the places.
The current layer is selected by default.

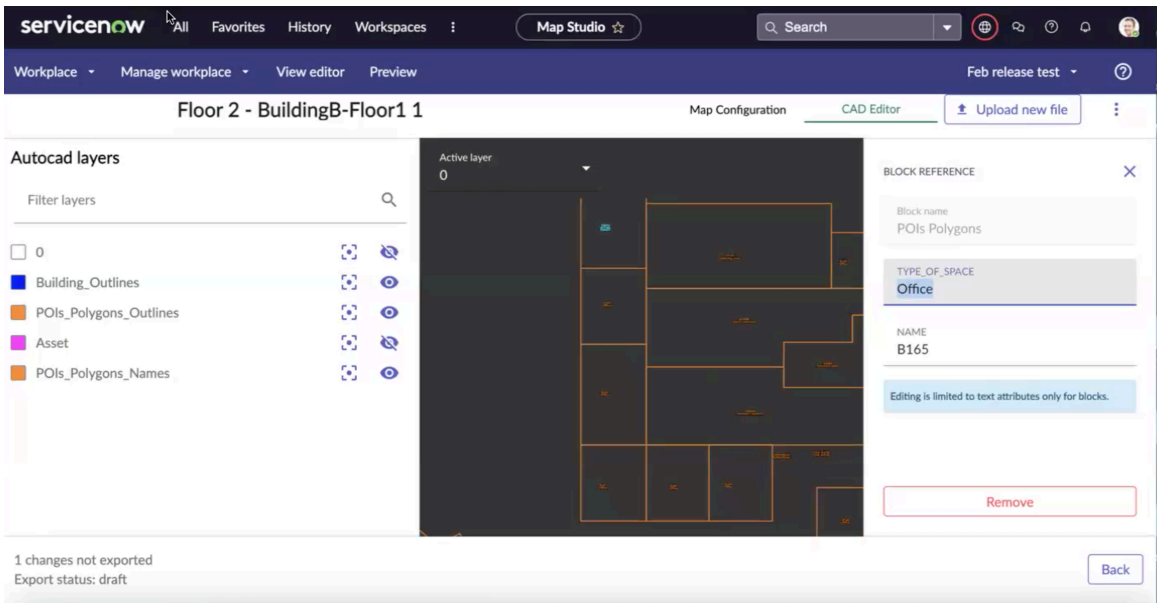
e. In the **Title template** field, enter the title template that you want to use for the places.

If this field is left empty, the name is used as Place type title.

You can select **TEXT** or **autocad_entity_handle** to add it to the field.



If the place is defined a block in your CAD file, you can also select a block attribute for the Title template.



6. In **Retrieve place type from**, select the option to retrieve place types from the CAD file.
You can select any of the following options to retrieve place types from the CAD file:

- **Place type catalog**: Select this option if you want to apply the default Indoor Mapping place type styles and categories to a place type. The place type catalog or the Place types table (**All** > **Indoor Mapping** > **Place types**) contains Indoor Mapping place types and their default styles. For more information, see Create Indoor Mapping icons and place types.
  - **Place types**: Select an appropriate Indoor Mapping place type to style and categorize it. For example: Fire Extinguisher. Selected place type is displayed on the CAD editor preview.
  - When Indoor Mapping Places are integrated with Workplace Service Delivery, the places are categorized as meeting room, fire extinguisher, and so on. Based on this categorization, you can also verify if the meeting rooms are reservable.
- **Block attributes**: Select this option if you want the retrieve the place type from the block attributes.

> **Note:**
> The Block attributes name contain the place type information. The place type name in a CAD file must be the same as the place type names in the Indoor Mapping Place type catalog. If the Block attributes name doesn't match with the Place type name in Indoor Mapping, create the place type, styles, and icons in Indoor Mapping Place types. For more information, see Create Indoor Mapping icons and place types.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Other layer**: Select this option if you want to apply place types from another layer.

  From the **Place Type Text Layer** list, select the layer that contains the place types for the locations on the map, then in the **Placetype template** field, enter the template that you want to use for the place types.

- **Manually set later**: If place types are set using the **Manually set later** option, the Map Configuration preview shows the place as an unknown place type.

  When a default place type that is set manually is selected on the CAD editor preview, the message “information isn’t available on a floor plan, set manually” is displayed.

  The place type is shown as Miscellaneous or unknown type in the Indoor Mapping Place types table (**All** > **Indoor Mapping** > **Place types**). The undefined place type is matched to a miscellaneous place type in the Place types table so that it isn’t ignored during the synchronization process.

  To assign place types manually, perform any of the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Set the places manually using the CAD editor. Select the appropriate **Active layer**. Select places and add the place type information to the text or block attribute, if it exists.
- Navigate to Indoor Mapping Map Studio **Manage WorkplaceManage Places**. Multi-select places or select a place using a lasso or by using the Shift key option to select the required places. Select an appropriate **Place type** in the Place edit panel. For more information, see Manage places.

7. **Optional:** Select **Import as point** to import a place as a point in your CAD file.

> **Note:**
> The text appears in red on the Map Configuration preview when you select create as point and the shape is missing.

a. Select the following options to configure place types:

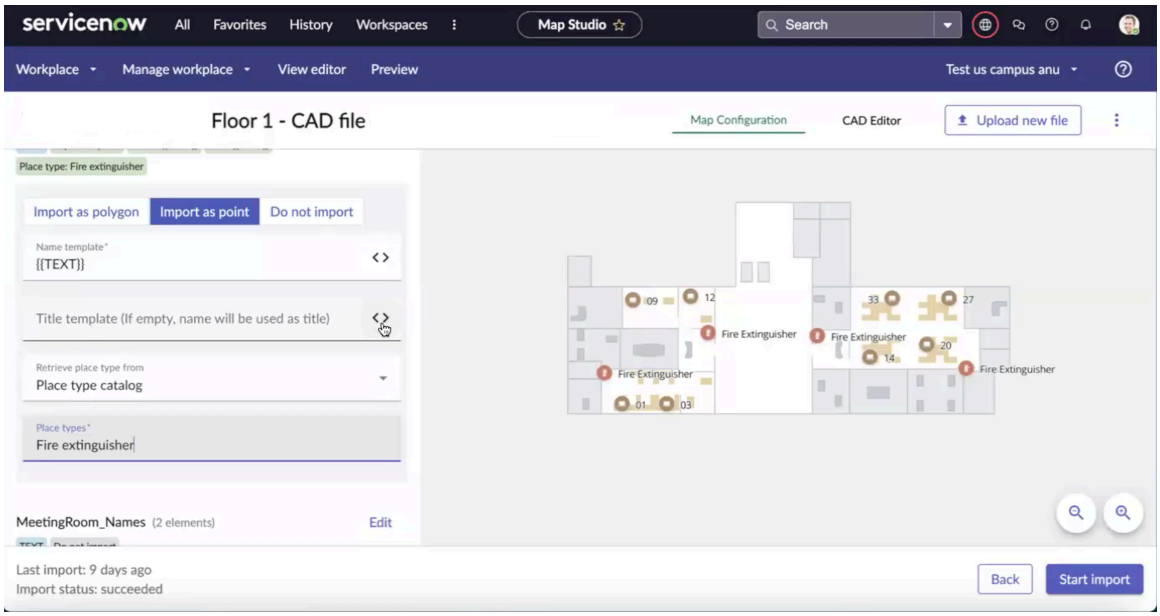
a. Name template: Configure the name for your template.

- Select **TEXT** if you want the Text or name to be copied from the CAD file.

  The Map configuration preview shows the name on the map for a selected place.

- Select **autocad_entity_handle** to use a CAD generated unique ID. Entity names and handles are unique within a CAD drawing.

b. Select **Blocks** if you have defined block attributes in your configuration.



c. Title template: Select **TEXT** or **autocad_entity_handle** if you want the Text or name from Autocad to be used.

> **Note:**
> If this field is left empty, the name is used as the title (See step 6 a).

8. In Retrieve Place type, select the following options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Place type catalog**: Option to apply Indoor mapping default style to place types. The place type catalog or Place types table (**All** > **Indoor Mapping** > **Place types**) contains Indoor Mapping place types and default styles.
  - **Place types**: Select an appropriate Indoor Mapping place type to style and categorize places. For example: Fire extinguishers.
  - The selected place type is displayed on the CAD editor preview.

- **Block attributes**: Select this option if you want the retrieve the place type from the block attributes.

> **Note:**
> The Block attributes name in a CAD file must be the same as the place type names in the Indoor Mapping Place type catalog. If the Block attributes name doesn't match with the Place type name in Indoor Mapping, make sure to first create the place type, styles, and icon in Indoor Mapping and then retrieve it.

- **Manually set later**: If Place types are set using the **Manually set later** option, the Map Configuration preview shows the place as an unknown place type.

  When a default place type that is set manually is selected on the CAD editor preview, the message “information isn’t available on a floor plan, set manually” is displayed.

  The place type is shown as Miscellaneous or unknown type in the Indoor Mapping Place types table (**All** > **Indoor Mapping** > **Place types**). The undefined place type is matched to a miscellaneous place type in the Place types table so that it isn’t ignored during the synchronization process.

  To assign place types manually, perform any of the following:

  - Set the places manually using the CAD editor. Select the appropriate **Active layer**. Select places and add the place type information to the text or block attribute, if it exists.
  - Navigate to Indoor Mapping Map Studio **Manage WorkplaceManage Places**. Multi-select places or select a place using a lasso or by using the Shift key option to select the required

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

places. Select an appropriate **Place type** in the Place edit panel. For more information, see Manage places.

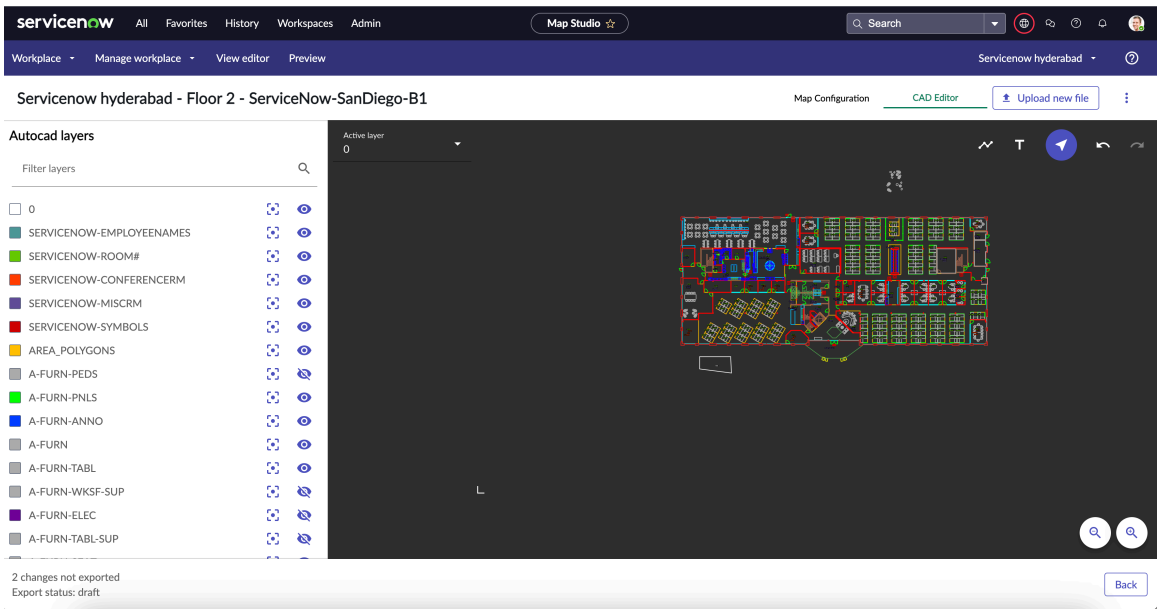
9. **Optional:** Select the warning check boxes to display the warnings on the map. The check boxes are updated based on the changes made on the edit panel.

10. To resolve issues like a missing polygon, perform the following steps:
    - From the Map Configuration preview, switch to the CAD Editor tab.

      For more information, see Configure CAD objects using the CAD Editor tab.
    - Select the place on the CAD Editor preview and add a polygon or a missing line.
    - Switch back to the Map configuration preview.

      Notice that the summary pill for the place shows the **Import as polygon** highlighted in green and the text is not highlighted in red. The style appears along with the polygon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Configure CAD objects using the CAD Editor tab

Edit and manage CAD objects using the CAD Editor tab. Draw polylines or polygons, add text or mtext, edit text, place or block attributes.

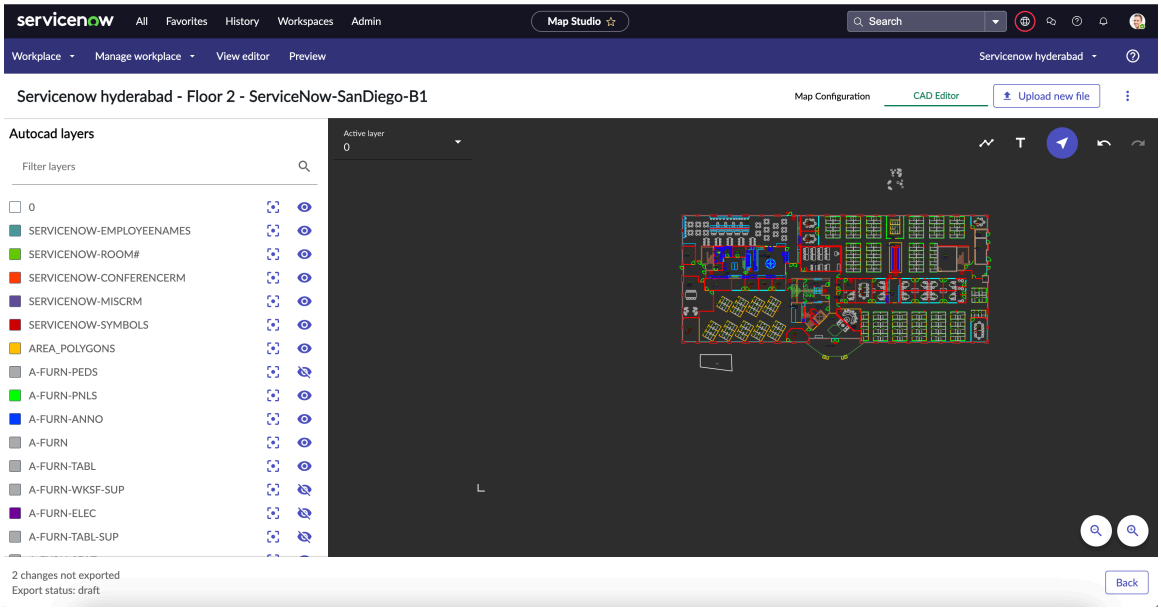
The CAD Editor shows a preview of the CAD layers, places, blocks, elements, geometries, and shape. It retains the original style and color of your source CAD file. Add, remove, or update changes to your CAD file in real-time. Resolve issues like unclosed polylines, missing polygons, missing text attributes. Edit block, layer, text, and place type attributes.

Move an element from one layer to another using the **Active Layer** option. Elements within a CAD file can reside on different layers. After updating the changes to shapes, geometries, and elements in the CAD editor, switch to the Map Configuration to preview your updated changes on the map.

If your CAD file has numerous layers, use **Filter layers** to search and sort the layers that you want to select. Isolate a layer and work on it independently. Hide or show a layer on the CAD Editor preview.

Isolate a layer in the CAD editor

CAD editor provides the ability to isolate a layer from multiple layers while editing your CAD file.



Before you begin

Role required: admin

Procedure

1. Select the **CAD Editor** tab.
2. Navigate to **Autocad Layers**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. **Optional:** Use the **Filter layers** option to filter and search for layers.
   When you have numerous layers in your CAD file, the filter option helps in sorting and working on a few selected layers at a time.
4. Select a layer and select the Isolated icon ( ).
5. The preview shows the layer that was isolated.
   For example: polylines or polygons.
6. Use the Select tool icon ( ) to select the isolated layer in the editor.
7. **Optional:** Edit and make changes as required.

> **Note:**
> Blocks can't be edited but attributes within a block can be edited.

Hide or show a layer in the CAD editor

Hide or display a layer while you're editing and updating layers in the CAD Editor.

Before you begin

Role required: admin

Procedure

1. Select the **CAD Editor** tab.
2. Navigate to **Autocad layers**.
3. Select a layer and select the toggle off visibility icon).
4. The layer is hidden and doesn't appear on the CAD Editor preview.
   For example: Room A. Room A isn't displayed for a selected layer.
5. To show a layer, select the toggle on visibility icon ( ) option.

Drawing and editing tools in the CAD editor

The CAD Editor tab provides editing and drawing tools to configure, optimize, and edit your CAD files before importing it to the Map Studio.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

It provides the following editing and drawing capabilities:

- Draw line: The Draw line tool () is used to draw a line or polyline. Use the Draw line tool to close unclosed polylines in a polygon. For more information, see Draw a polyline or a polygon.
- Text: The Draw text tool () is used to add text or mtext (multiline) text objects. For more information, see Update or add text attributes.
- Select tool: The select tool () is used to select regions, objects, or elements within an active layer.
- Undo: The undo tool () is used to revert the most recent editing action or actions to their previous state. The undo tool restores the CAD edits to its previous state before the action was performed.
- Redo: The Redo tool  is used to reapply or cancel modifications to the CAD source file in the CAD editor. The CAD editor reapplies the last action that was modified.

Draw a polyline or a polygon

Draw a polyline, polygon, or a geometrical shape using the Draw line tool available in the CAD Editor. Join lines to form a polygon or a shape.

Before you begin

For example, if you want to create a geometrical shape to form a room, you can use the Draw Line tool to draw the vertices. Similarly, resolve missing polylines in a polygon or add a missing polygon by drawing a line and joining the nodes.

Role required: admin

Procedure

1. Select the CAD editor tab.
2. Select **Active Layer**.

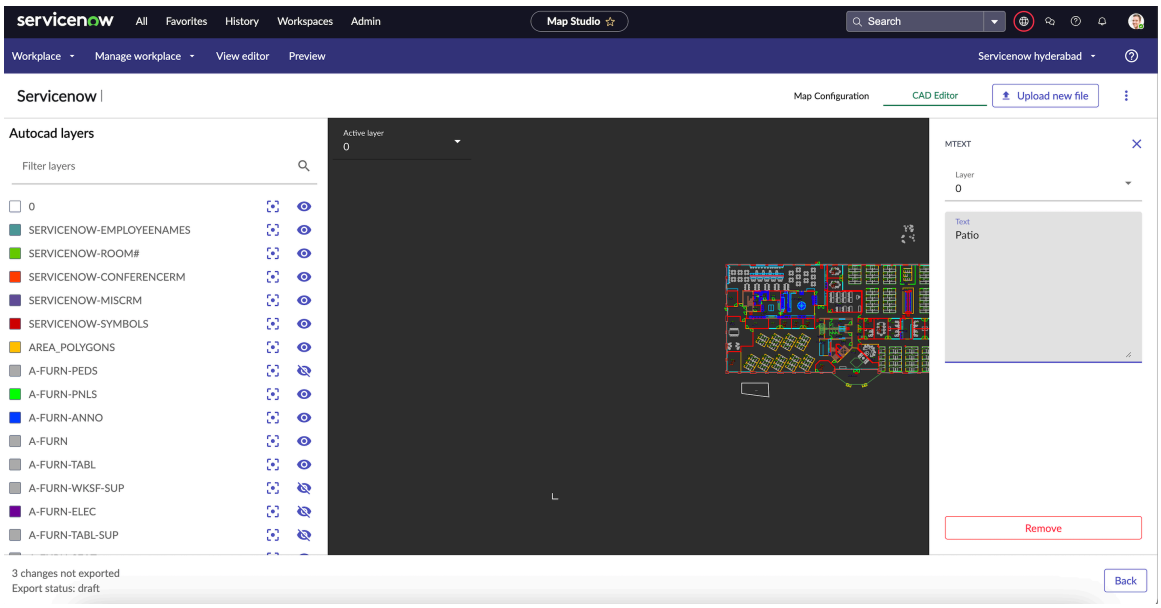
   Select a layer where you want to add the polyline, polygon, or a shape.
3. Select the Draw line tool  tool.
4. Select a starting point or node and drag.
5. Release the tool to create a line by selecting again on the last point that you've added.
6. To create a shape, select the starting point.

   When you draw a polygon, you must select either the first point that you've created or select the last point or node to create a line.
7. Select **Remove** to remove the element from the CAD file.

Update or add text attributes

Add, edit, update, or remove text attributes in the CAD Editor.

Before you begin



For example, if you want to change the name of a room, you can select the text and use the text edit panel to rename it.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Select the CAD Editor tab.
2. Select the appropriate **Active layer** on the CAD editor can.
3. Select the Text tool icon (T) from the menu.
4. Select to add the text.
5. The text edit panel opens.

6. Add the text and close the panel.

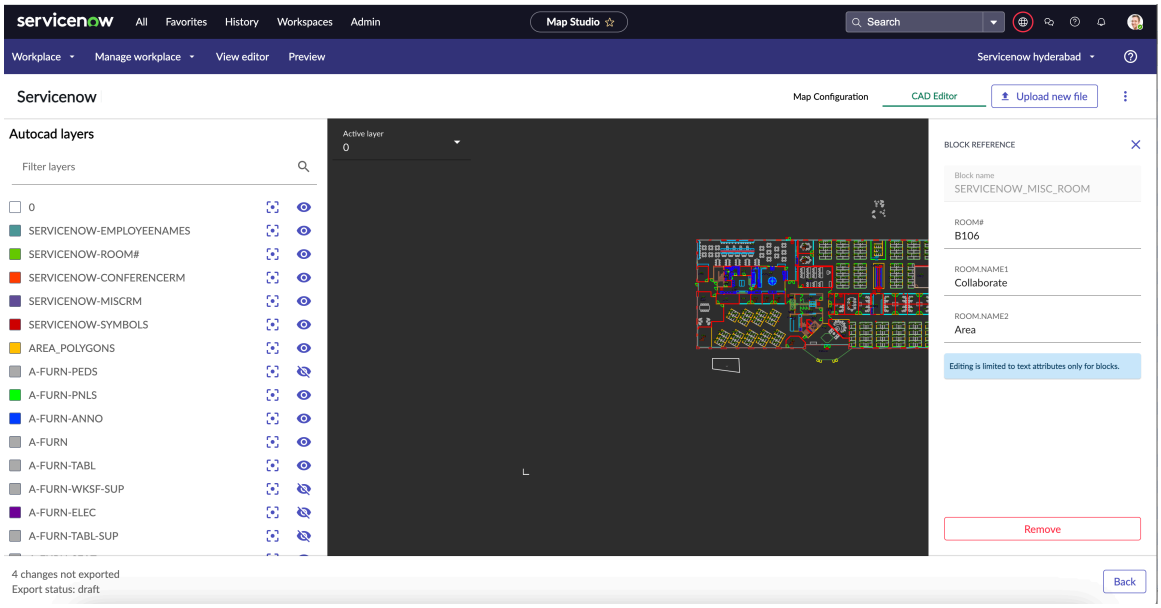
   The text attribute is added to a selected layer on the CAD file.

7. To edit an existing text, select the text to open the text edit panel and edit.
   The updated changes appear on the CAD Editor preview.
8. Select **Remove** to remove a text.

Editing block attributes

Edit block attributes in CAD Editor.

Before you begin



Note:
Blocks can't be edited. Only attributes within a block can be edited. Polylines linked to a block can't be edited.

Role required: admin

Procedure

1. Select the **CAD Editor** tab.
2. On the preview layout, select a block reference.
3. The editing panel appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

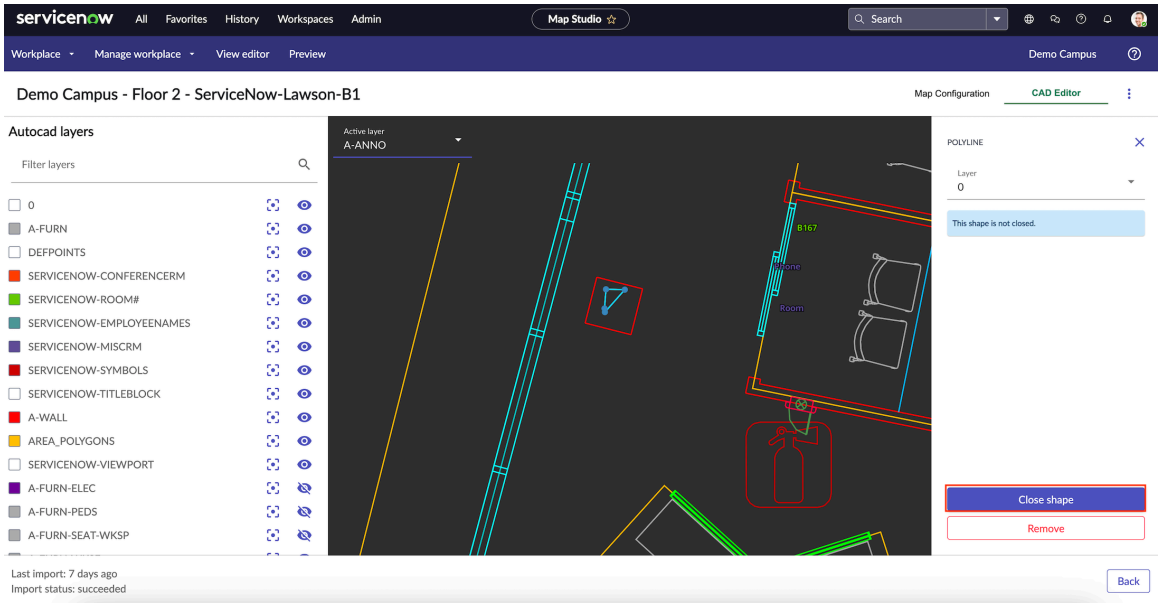
4. Edit the attributes as required.
   For example, edit the text attributes in a block.
5. Select **Remove** to remove the element from the CAD drawing.

Closing a geometry or a polyline in a layer

Close an unclosed line in a layer on the CAD editor.

Before you begin

A shape is closed when all the nodes are connected by lines. If a line is missing or if the vertices aren't joined properly, the properties for a selected geometry show the shape as unclosed.



Role required: admin

Procedure

1. Select the **CAD Editor** tab.
2. Select a polyline, a shape, or a geometry with unclosed lines or vertices in the CAD file.
3. Select to open the editing panel.

   The editing panel displays a "The shape isn't closed" validation message.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Close shape** to close the polylines automatically.

   The shape is closed.

5. Select **Remove** to remove the element from the CAD drawing.

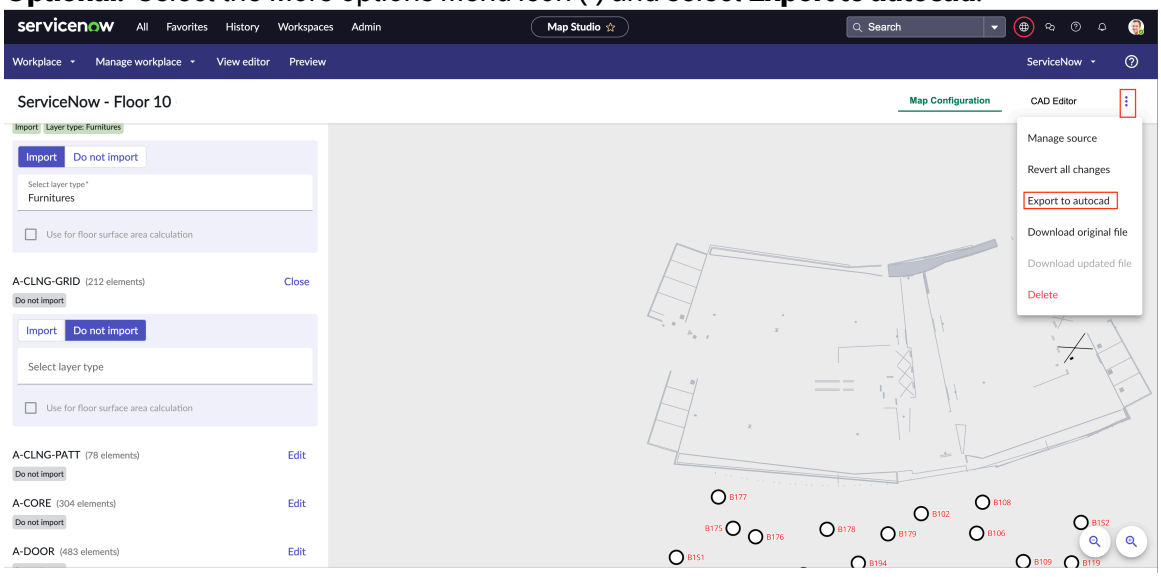
Export CAD configuration

Export the updated CAD changes to your CAD file. Exporting the updated changes creates a copy of the modified CAD file in Indoor Mapping.

About this task

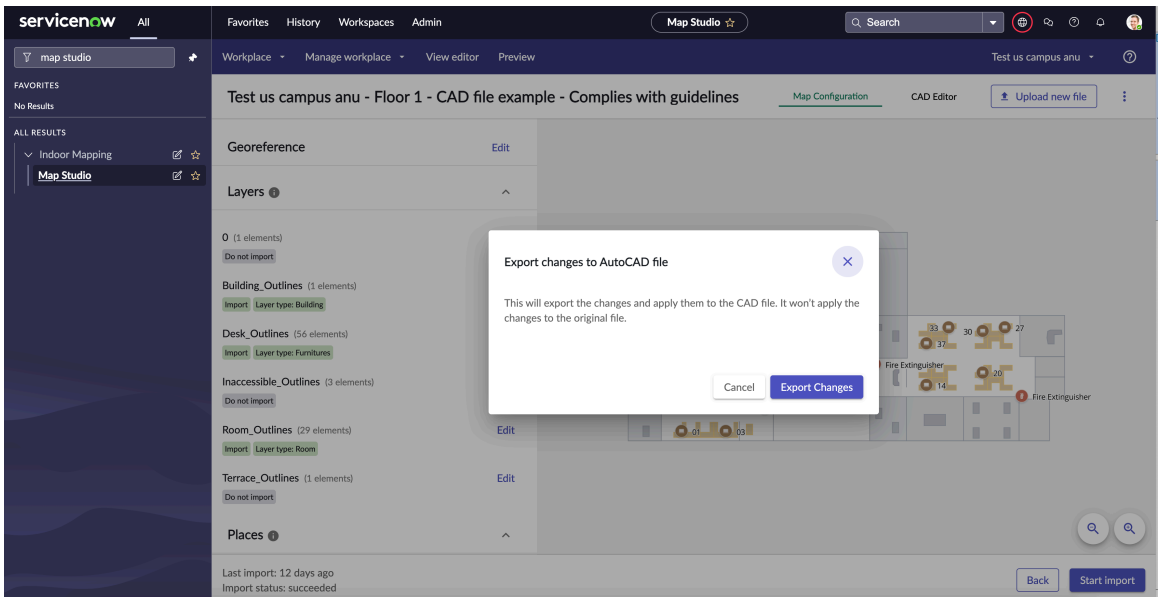
Make configuration changes to your CAD source file using the CAD Editor and Map Configuration tabs. CAD configuration changes are updated in the Autocad Source (sn_map_core_autocad_source) table.

Note:
Exporting the CAD configuration changes is an optional step. The updated CAD configuration changes reside in Indoor Mapping as an updated CAD file (a copy).



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin



Role required: admin

Procedure

1. **Optional:** Select the More options menu icon (⋮) and select **Export to autocad**.

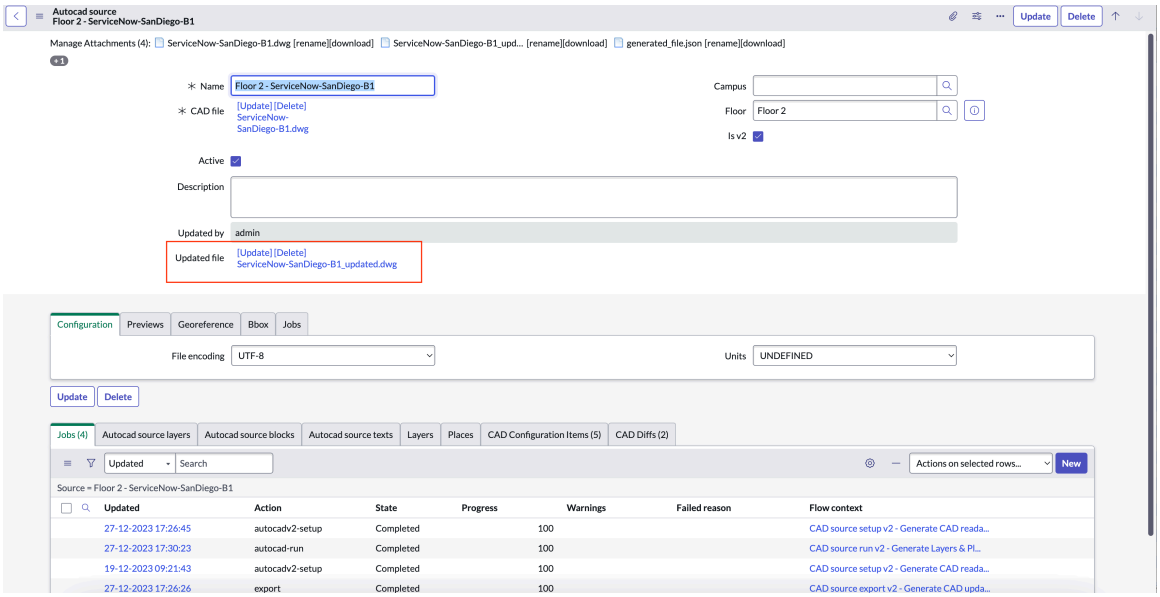
2. The export dialog box appears.

3. Select **Export**.

   The application may take some time to load the changes and complete the export process. The time to load depends on the size of the CAD file.

> **Note:**
> Updates made to the CAD file are only locally available in Indoor Mapping until you export the changes to your CAD file. Exporting the file keeps the CAD file up to date with changes made in Indoor Mapping.

4. The **Download updated file** option is activated in the more options menu (⋮) after you've exported your CAD changes.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Selecting this option downloads the updated CAD file.

5. Navigate to Autocad sources (**All** and in the context menu filter by `sn_map_core_autocad_source.LIST`.
You can find the updated CAD file changes in this table.

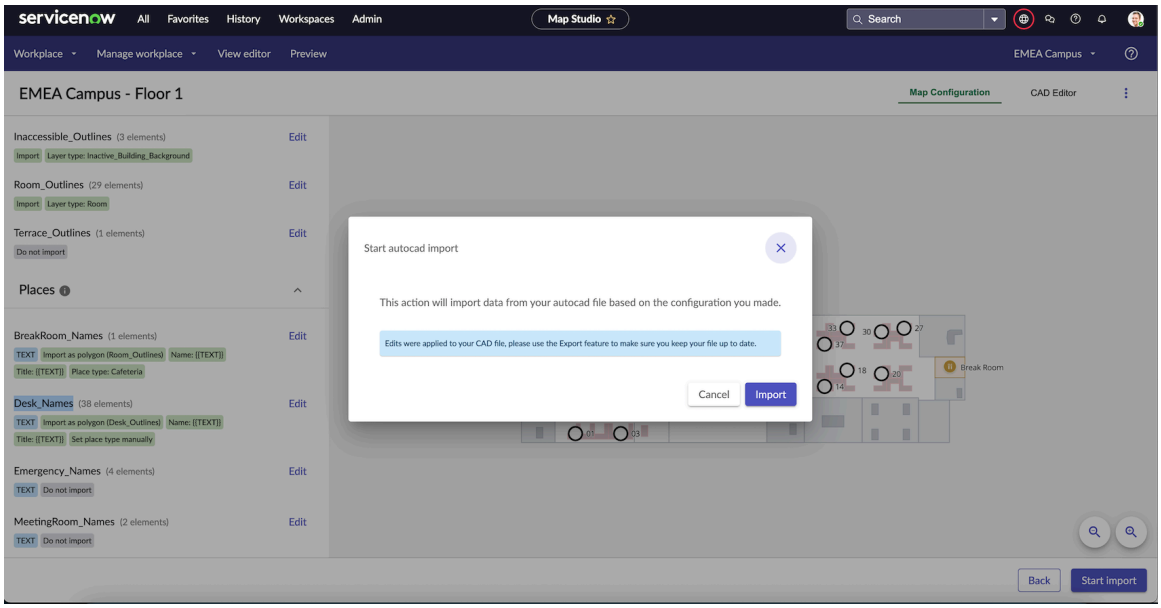
> **Note:**
> The attributes that are added, modified, or deleted are updated in the Autocad source (sn_map_core_autocad_source) table. Exporting the changes doesn't apply the changes to your original CAD file. A new column is added to the Autocad source table to show the updated CAD file. Your original CAD file is kept intact. For example, your original CAD file name is **demo.dxf** and the updated CAD changes are exported to a new column **demo_updated.dxf**.

6. From the list of CAD source files, select and open the CAD file that you updated.
The exported CAD changes are available as a new file in the **Updated file** column.

Import CAD configuration

After your CAD configuration is complete, import the CAD configuration changes.

Before you begin



> **Note:**
> Your CAD configuration changes must be completed before you import your changes. Editing and updating your CAD source file isn't mandatory. CAD file must only be edited and updated if information is missing in your CAD file.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. On the Autocad configuration page, select **Start Import** to make sure your map is created.

   The **Start Import** button is enabled only when layers and places that you want to display on your CAD file don't have any issues like missing polygon, template, polylines. Resolve these issues before importing the layers and places in your CAD source file. For more information, see Configure CAD objects using the Map Configuration tab.

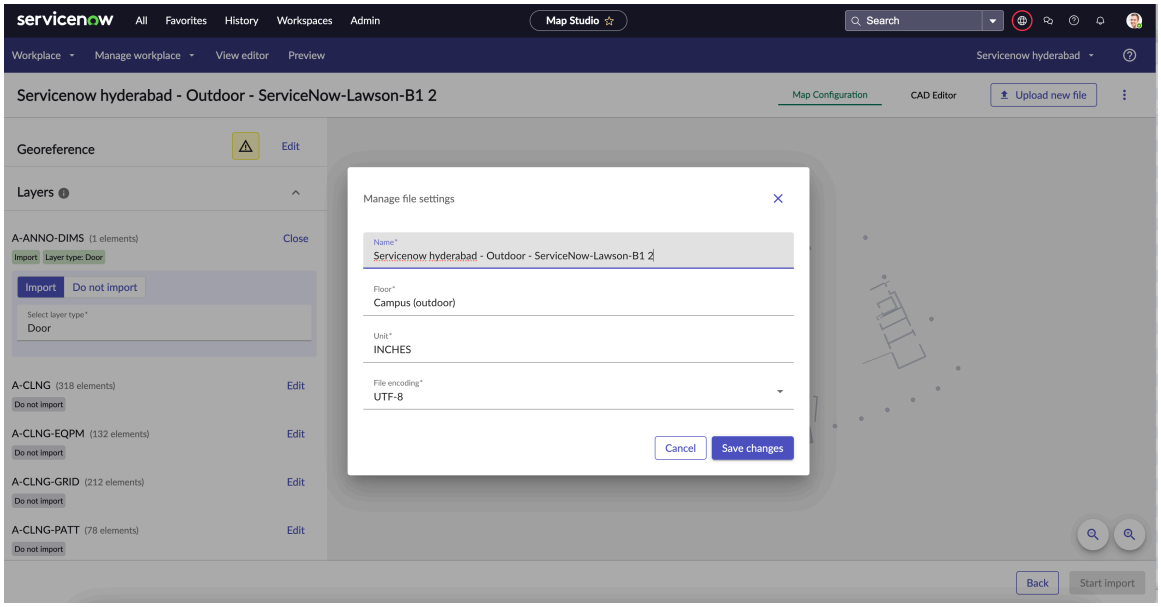
2. Select **Start Import**.

   The updated CAD configuration changes are imported to the Map studio for a floor plan. A message is displayed that the building configuration for a campus is complete.

3. **Optional:** Select **Go to overview** to navigate to the Map Studio Campus overview page.
4. **Optional:** Select **Continue** to view your updated changes in real time on a World map (OpenStreetMap).

Edit file settings

Modify the unit file settings of your CAD source file.



Before you begin

Role required: admin

Procedure

1. From the CAD Configuration home page, select the More actions menu (⋮).
2. Select **Manage source**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Complete the following information:
   - Floor: Name of a floor where you're configuring the CAD source plan.
   - Unit: The unit that appears in the field is the current file unit.

     If you want to change the file unit, select the required file unit size.
   - File encoding: Option to change or update your file encoding standard. Update the file encoding format only if there's an issue with the file encoding standard.

Bulk update floor plans

Use the Bulk import feature to update floor plans by importing multiple CAD files.

Create an Import Group

Create an import group and use it to bulk update floor plans.

Before you begin

Role required: sn_map_core.map_admin, sn_map_core.map_editor

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Bulk imports** > **Import Groups**.
   You can also navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. On the Floor plan import groups list, select **New**.

   Note:
   If you are in the Map Studio, select **Import files** on the **Bulk update maps** card.

3. On the Floor plan import group form, fill in the fields.
   For a description of the field values, see Floor map import group form.
4. Select **Submit**.
5. Attach CAD or PNG files to the record.
   For more information about attaching files to a record, see Manage attachments.
6. Select **Start Import**.
   The system creates import tasks based on the number of files attached to the record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Work on the import tasks that are created for your import group. For more information about working on import tasks, see Work on an import task.

Work on an import task

Select a source and resolve issues to complete the import task for a floor plan.

Before you begin
Role required: sn_map_core.map_admin, sn_map_core.map_editor

About this task
Import tasks are automated processes, but sometimes require your inputs. If an import task can't proceed without your input, the **State** field is set to `Waiting user input`.

The required input is based on the **Step** field and more information is added to the work notes of the record.

- Source retrieval: This step is required to link the CAD file to its source in the Workplace Service Delivery application.
- Georeference: This step is required to position and scale your source floor plan on the map.
- Configuration: This step is required to select the layers and place types for floor plan.

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Bulk imports** > **Pending tasks**.
2. From the Floor plan import tasks list, select the task that you want to work on.
   You can also select an import task from the import group. For more information about import groups, see Create an Import Group.
3. If the import task is at the `Source retrieval` step, select a source for the import task.
   If the file name is the same as the source, the system automatically selects the source and moves to the next step.

   a. In the source field, select the source that is related to the attached source file.

      Example
      For example, if the source file A - `Floor3` . dwg is for the third floor of Building A, select `Building A- Floor 3` as the source.

   b. Select **Continue**.

4. If the import task is at the `GeoReference` step, configure the GeoReference of the floor plan.
   If the GeoReference of the floor plan is already configured, the system automatically moves to the next step.

   a. Open the floor map by selecting **Open in Map Studio**.

   b. Set the GeoReference of the floor plan.
      For more information about setting the GeoReference, see Georeference your floor plan.

   c. Select **Continue**.

5. If the import task is at the `Configuration` step, configure the layers and places on the floor plan.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the layers and places are already configured, the system automatically moves to the next step.

a. Open the floor map by selecting **Open in Map Studio**.

b. Configure the layers and places on the floor plan.
For more information about configuring layers and places, see the following topics:

- Configure layers
- Configure places

c. Select **Continue**.

Compute CAD file properties to extract space or room surface area

Extract room and space dimensions from CAD files or Indoor Mapping Map Studio. Use the extracted properties in Workplace Service Delivery (WSD) space measurement table.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Space Mapping** > **Indoor Mapping Administration** > **Properties Mapping**.
   By default, the following properties are stored in the Indoor Mapping Properties Mapping table:
   - **CAD_COMPUTED_SURFACE_SQ_METERS**: If the polylines are defined as closed shapes or if a unit is set, compute the surface area automatically in square meters from the CAD polylines. By default, this property is set to **false**.
   - **CAD_COMPUTED_SURFACE_SQ_FEET**: If the polylines are defined as closed shapes or if a unit is set, compute the surface area automatically in square feet from the CAD polylines. By default, this property is set to **false**.
   - **INDOORMAP_COMPUTED_SURFACE_SQ._FEET**: Retrieve the **usable_size_sq_feet** from polygons in Indoor Mapping. Activate this property if your CAD file doesn't have closed shapes or if a unit isn't defined in the file. This property is also used for raster files (PNG). The scale in Indoor Mapping varies slightly depending on how the building was stretched during the georeferencing process. By default, this property is set to **true**.
   - **INDOORMAP_COMPUTED_SURFACE_SQ_METERS**: Retrieve the **usable_size_sq_meter** from a CAD file for a surface area from polygons in Indoor Mapping. Activate this property if your CAD file doesn't have closed shapes or if a unit isn't defined in the file. This property is also used for raster files (PNG). The scale in Indoor Mapping varies slightly depending on how much the building was stretched during the georeferencing process. By default, this property is set to **true**.

   After activating, these properties are applied automatically during the synchronization process to your Indoor Mapping maps. The properties populate the useable square meters or square feet field of the Workplace Core space table by default. The space table form fields can be modified as required.

   Note:
   Select a value from the computed AutoCAD file or select a value that is available in the Indoor Mapping Map studio.

2. Select **New** to create a property.

   On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Indoor Mapping Place Properties Mapping form

Field	Description
Property	Name of the property as it appears in the AutoCAD file. For example: **CAPACITY**. This name cannot be changed.
WSD Space column	Table that is used for mapping a CAD property to a WSD space column when the Indoor Mapping map data is synchronized with Workplace Service Delivery. Select any value from the drop-down list. For example: **Capacity**.
Order	Option to specify an import order for each record in the CAD properties mapping table. The ordering is useful when there are two properties that must be placed in the same WSD space columns for two different files.
Active	Option to make a property active.
Domain	Option for domain separation. The default value is **global**.

3. Select **Submit**.
4. After importing the CAD source files, navigate to **Places** in the Map Studio menu.
5. Select to open a place.
   The Places panel opens in the edit mode. Notice that **Autocad properties** field is available. For more information, see Manage places.
6. Make sure to synchronize your campus after adding a CAD property.

   For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.

7. Navigate to **All** > **Workplace Core** > **Campuses**.
   Add place properties mapping to a space in a campus if these properties aren't added to a space.
8. Select a Campus.
9. Select the personalized list columns icon ( ) to move the required values from the Collection list to the available list.
10. Select **OK**.
11. Spaces available in a campus are updated with the selected values after a CAD file is imported in the Map Studio and after the Indoor Mapping synchronization process is complete.

Compute Autocad floor surface area

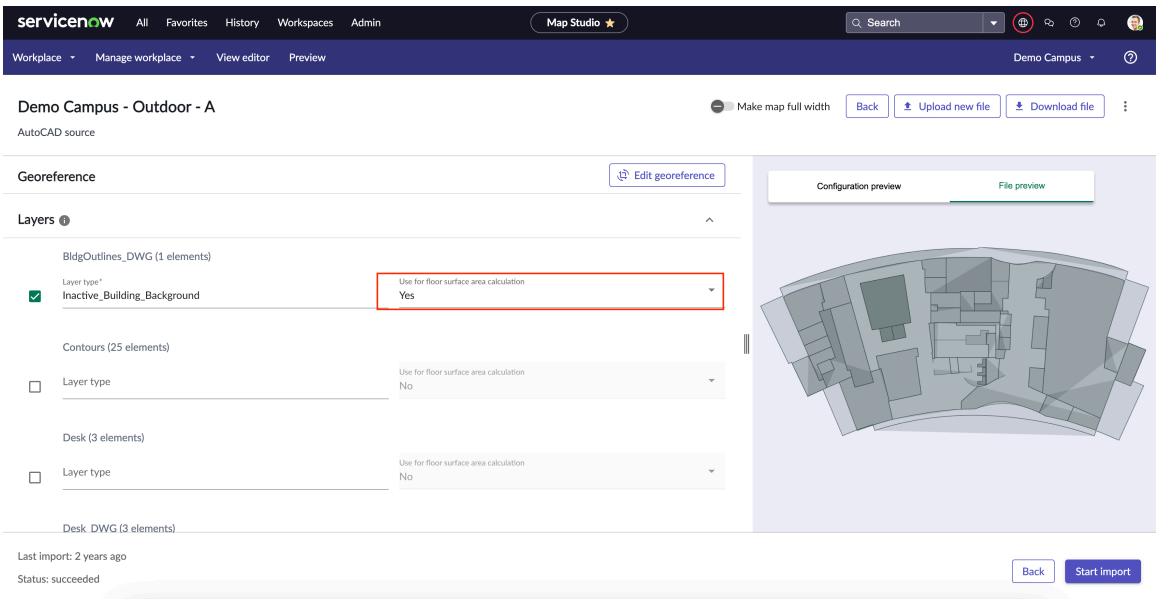
Compute floor size area and dimensions in Indoor Mapping Map Studio while importing your AutoCAD floor sources.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

The computed floor size area measurements in Indoor Mapping are available in the Workplace Core Floor table form with pre-filled field values. For example, **Total Square feet**, **Usable Square feet**.

Role required: admin



Procedure

1. To compute the Floor size area from an AutoCAD file, activate the floor size computation property.
   a. Navigate to **All** > **Indoor Mapping** > **Indoor Mapping Properties**.
   b. Enable editing and set the property **Set true to activate floor size computation** to true.
   c. Click **Save**.
2. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
3. Select a campus for which you want to compute the floor surface area.

   For example: Demo Campus.
4. Select a Building in the Map Studio.
5. Select **Manage Workplace** > **Floor & Floorplans**.
6. Select a floor plan and select **Configure**.
7. In the AutoCAD source page, select the **Use for floor surface area calculation** from the list optionsx.

   The **Use for floor surface area calculation** option is only visible after you have enabled the floor size computation property as shown in Step 1.

   Note:
   It's optional and not mandatory to select a **Layer** while selecting the **Use for floor surface area calculation** option.

8. Select a **Layer** that represents the outline of the floor to compute the floor surface area value.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The layer for which **Use for floor surface area calculation** computation is selected is used for the floor surface area calculation.

> **Note:**
> Only one layer can be selected at a time. Ensure that the selected layer has closed polylines.

9. Select **File Preview** to preview and verify if the polylines are closed for a selected layer.

   If in case, the selected Floor layer has several closed polylines, then the biggest polyline is used.

   a. Select **Yes** from the drop-down list.

10. Select **Start Import** to import the CAD floor source plan.

    The computed floor surface area value is stored in the Floor configuration on the Map Studio.

11. Navigate to **All** > **Space Mapping** > **Properties Mapping**.
    This will push the computed floor surface area value from the Map Studio to the Workplace Core Floor table form.

12. On the Indoor Place Properties Mapping page, Click **New** and fill in the form fields:

> **Note:**
> This step needs to be only configured once.

Field	Description
Property	Name of the property. For example:**CAD_COMPUTED_SURFACE_SQ_FEET** and **CAD_COMPUTED_SURFACE_SQ_METERS**. **Note:** Name of the property cannot be modified or edited. The property name must be same as what you have used in your AutoCAD file as a label.
WSD table	The table where you want to populate or place the property. Select **Floor** from the drop-down list to compute the floor surface area value in the Floor table.
WSD field	The field where you want the floor surface area to be auto-populated. Select **Total Square feet** or **Usable Square feet**.
Order	You can keep the order as 0.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

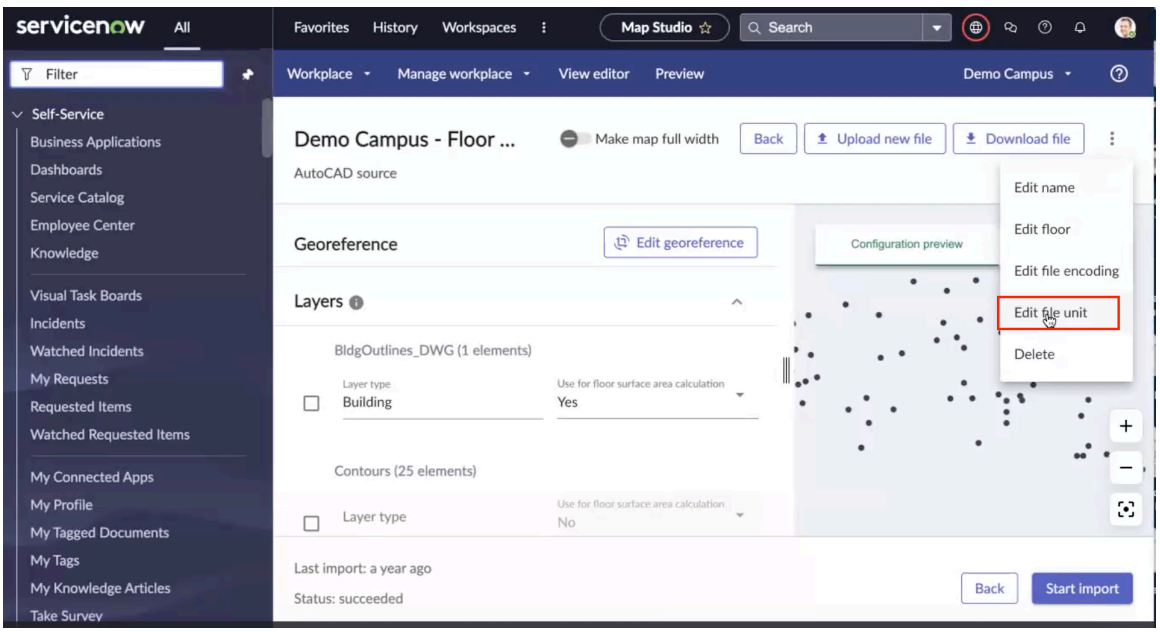
Field	Description
Active	When this option is not selected, your property will be automatically deactivated on your different maps. Select this option to activate the property.
Domain	Default value is **Global**. Retain **Global** to avoid any conflicts between your different applications.

13. Click **Update**.
14. Navigate to **All** > **Space Mapping** > **Indoor Map/WSD Synhronizations** to run the Synchronization script to update the selected floor with the updated property.
15. Select a campus.

    The synchronization script syncs the newly added computed floor surface area fields on the Floor table.
16. Navigate to **All** > **Workplace Core** > **Space Administration** > **Floors**.
17. Select the Floor for which you computed the surface area value and verify the Measurement Details section.

    For example, the following field values will be pre-filled depending on user configuration:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



a. Total square feet: The floor surface area value is auto-populated.

b. Usable Square Feet: The floor surface area value of the floor is auto-populated.

Note:
If the CAD values are incorrect or empty when you are importing the CAD file in the Map studio, it is most likely that the CAD file did not have a unit or may have an incorrect unit. In such cases, CAD file conversions in the Map Studio are not accurate.

The CAD file unit value can be computed correctly in the Map Studio based on the AutoCAD file coordinates. Navigate back to the CAD file configuration page for a floor plan and perform the following;

- Select the More actions icon (⋮) on the top right pane of the Map Studio.
- Select the **Edit file unit** option.

- Select a unit from the drop-down list.

  For example; Feet.

- Click **Save**.
- Click **Start Import** and run the synchronization again.

  For more information, see Synchronize Indoor Mapping with Workplace Service Delivery.

  The conversions are now accurate.

Raster file requirements

Raster files are flat files and therefore, design and places have to be manually created. Raster floor plan files must meet the Map Studio import requirements.

If you are importing a raster image (PNG) source, the designs and place creation process must be performed manually in a graphic designer tool. For example: Adobe Illustrator. Currently, only PNG file formats are supported.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Map administrators must ensure that the floor plan sources adhere to the import requirements of Indoor Mapping. Before importing, ensure that the raster image (PNG) sources are reviewed by graphic designers for design corrections and accuracy. Import of JSON/GEOJSON files is only available for third-party mapping providers migration.

For more information about raster file import requirements, see ServiceNow Blog.

Raster design requirements

Design properties	Requirements
Floor plan proportions	• Ensure that your design studio Artboard has 20,000 x 20,000 pixels ratio for optimal image rendering. • Ensure that the floor plan occupies the complete Artboard in your design studio. Image quality is based on the Artboard size. If the floor plan does not fit the whole Artboard, then, the final size is reduced and may get pixelated. • Verify that the building is at scale to match the real building proportion and shape on the outdoor map. If the building proportions are not accurate, time, and distances for directions are not accurate.
Design	• Redesign your floor plan for ease of use. Floor plans must be as simple as possible so that end users can easily understand the map. • Ensure that all text objects are removed from the raster image file. Text objects are not supported on the PNG file for floor plans. **Note:** Places for spaces are added to describe places on a map. Therefore, text objects on a map can be confusing to end users. • Remove the image borders. All the spaces around a building must be removed or made transparent.
Export	Export the image file with the following requirements:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Raster design requirements (continued)

Design properties	Requirements
	• Type: Currently, only PNG and JPEG raster image sources are supported in Indoor Mapping. • Size: Image file must not exceed 50 MB. • Dimensions: Image dimension must be 20,000 x 20,000 pixels.

Import Raster files

After creating your campus, buildings, and floor, upload and import the raster floor plan sources.

Before you begin

For more information about raster source file requirements, Raster file requirements.

Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a campus.
3. Select **Manage workplace** > **Floor and Floorplans**.
4. Select the floor that you have created and click **Upload file**.
5. Select the raster file that you want to import for the floor plan.
6. Before uploading the raster file, you can edit the name of the source.
   By default, the name of the source is <campus name-floor title-file name>.
7. Ensure that the correct floor name or level is selected.
8. Click **Save**.
9. After uploading the file (uploading may take few minutes to complete), you will see the preview of the floor plan at the top of the screen.
10. The next steps to configure the raster file are displayed.
11. Edit georeferences and use the two purple pins to set to scale your floor plan by dragging and moving the pins to fit the building shape on the World map.
12. Click on the pins, the color changes to pink and you can change the position.
13. Click and hold any of the pins to change its position.

> **Note:**
> It is important that you set your floor plan to scale as this will help in wayfinding and getting directions. The directions show the exact time and distance between points. For example: Point A and point B.

14. Select the layer type of the file that you are importing.
    Layer types must be configured beforehand while you are setting up your default values.
15. After completing Steps 11 and 12, select **Start Import** to import the raster source file.
16. After the floor plan is imported, click **Continue**.
    Alternatively, you can also navigate to **Manage Workplace** > **Places**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You are redirected to Places.

Note:
Raster files are flat files and therefore, places have to be created manually.

Manage map objects and data

Manage the map objects and map data from the Map Studio interface. Customize your maps as often as required.

In the Map Studio, manage and edit map objects and map data. Upload CAD and raster image file sources, configure your architectural diagrams and import back to the Map studio to have great looking maps. Create views, places, direction graphs, and migrate data to another instance using the snapshots capability.

Create a campus with buildings and floors

Create your first Indoor Mapping campus and add a few buildings and floors to it using the Indoor Mapping Map Studio. Import your CAD and raster image source files to complete your campus configuration.

Before you begin

Install Indoor Mapping and configure basic information about your campus, building, or floors in the Map Studio by importing the floor plan sources.

Note:
Upload and Import AutoCAD (DWF or DXF) or raster image (PNG) source files in the Map Studio.

Before you begin to use the Map Studio, ensure that your floor plans meet the following guidelines:

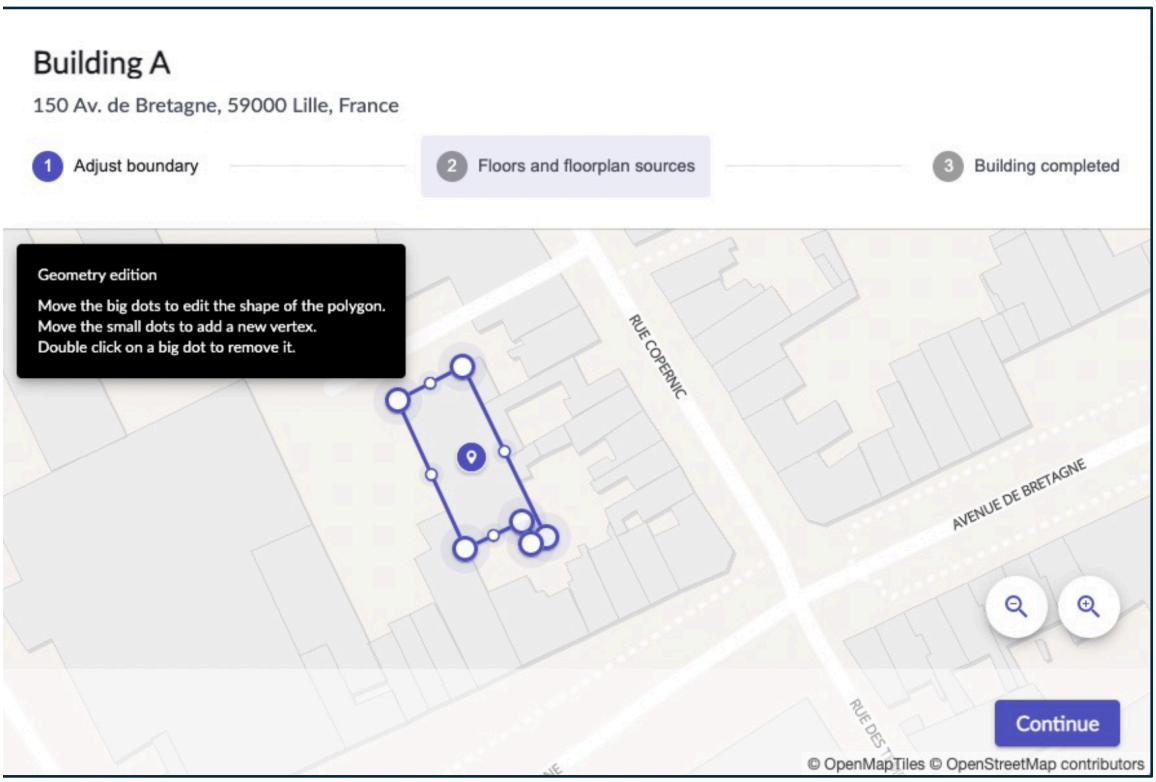
- AutoCAD requirements
- Raster requirements

Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Additionally, if you have existing campuses, you can search for a campus on the Map Studio home page.
   a. Select the **Search** icon ( ) to search for a campus that you want to update or switch to.
3. To create a campus, select the **Get Started** tab.
   On the form, fill in the fields.

Add an Address



Field	Description
Country	Country or region where the campus is located.
Campus Name	Name of the campus.
Address	Precise campus location address as it appears on the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. **Optional:** Select **Edit** to edit the campus name and address.
5. Select **Continue** to add your first building.
6. Provide the building name.
   Building address is pr-efilled.
7. Click **Continue**.
8. Enter the name of the building and address.
9. Click **Save**.

   Building boundaries are computed automatically.
10. **Optional:** In case, if you cannot find your newly created building on the map, you will see the following screen:

Building location shown in Map Studio

11. Select **Continue**.

> **Note:**
> Your polygon must be at least around the building. It doesn't need to match the exact shape of the building.

12. At this stage, you can add additional buildings or edit the existing building details.
13. Select **+Add a building** to create additional buildings in your campus.
14. Navigate to **Manage Workplace** > **Floor & Floorplans** to add a floor or floors to your building.
15. Select your building.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Ensure to select a building as you can upload files at the Campus level. If you select a building, it will be visible at every levels as you can only import your files at the Outdoor level.

16. Select **Add a floor**.
    On the form, fill in the fields

Add a floor

Field	Description
Building	Building name or number where the floor is located.
Number	Floor level. Takes an integer or a numerical value.
Name	Floor name or title
Title	Title displayed on the floor controller.

17. Click **Create**.
18. Repeat Steps 16-18 for each floor of your building.
19. Navigate to '**Manage Workplace** > **Campus and buildings**.
    It is important that your campus encompasses or its boundaries are well adjusted for all buildings. The boundaries are automatically adjusted. For more information, see Working with boundary editor.
    Your campus is configured.
20. After your campus and buildings are created, you can start importing your CAD files or raster image floor plan source files.
21. In the Map Studio, navigate to **Manage workplace** > **Floors and Floor plans**.
22. Locate your floor where you want to upload your CAD or raster file.

    (Optional) At this stage, floor plans can be uploaded and imported as AutoCAD (DXF/DWG) or raster image file (PNG) sources or you can import the files after creating a campus. Ensure that you've reviewed the design guidelines before importing the sources to the Map Studio. For more information about how to import, see Import CAD files to Map Studio and Import Raster files.

23. After importing a CAD or raster file, select **Manage Workplace** and select **Overview**.
24. Select the building that you created.
    Your map is configured and available on the Map Studio.

Working with boundary editor

Boundary editor helps to define the mapped area of a campus on the global map by adjusting the campus boundaries to visualize the location of a campus and building on a map. Boundaries are used to differentiate between outdoor maps and indoor mapped areas.

Before you begin

Floor plans, places, and directions must be within the boundaries in order to be properly displayed. If the boundaries were automatically computed by the system, you can uncheck **Auto compute boundary** to modify the boundaries.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a Campus.

   The campus is displayed on Map studio.
3. Navigate to **Manage Workplace**, **Campus & Buildings**.
4. Adjust or change the boundary of a campus, if changes or updates were made to the campus, and if places, floor plans or directions are now out of the initial boundary set during the campus creation.
   a. Ensure that the campus is selected on the left panel.
   b. Move the big dots on the campus or building boundary to edit the shape of a polygon.
   c. Move the small dots to add a new vertex.
   d. Double-click on a big dot to remove it
5. Click **Save boundary** to save the changes.
   The **Save boundary** button is enabled when some changes are made to the campus or map objects boundary.
6. You can also change or adjust the building boundaries if updates or modifications were made, and if floor plans or directions are now outside of the original building boundary.
   a. On the left panel, make sure the building is selected.
   b. Move the big dots on a building to edit the shape of a polygon, and move the small dots to add a new vertex.
   c. Double-click on a big dot on the polygon to remove it.
   d. Click **Save boundary** after adjusting campus boundaries.

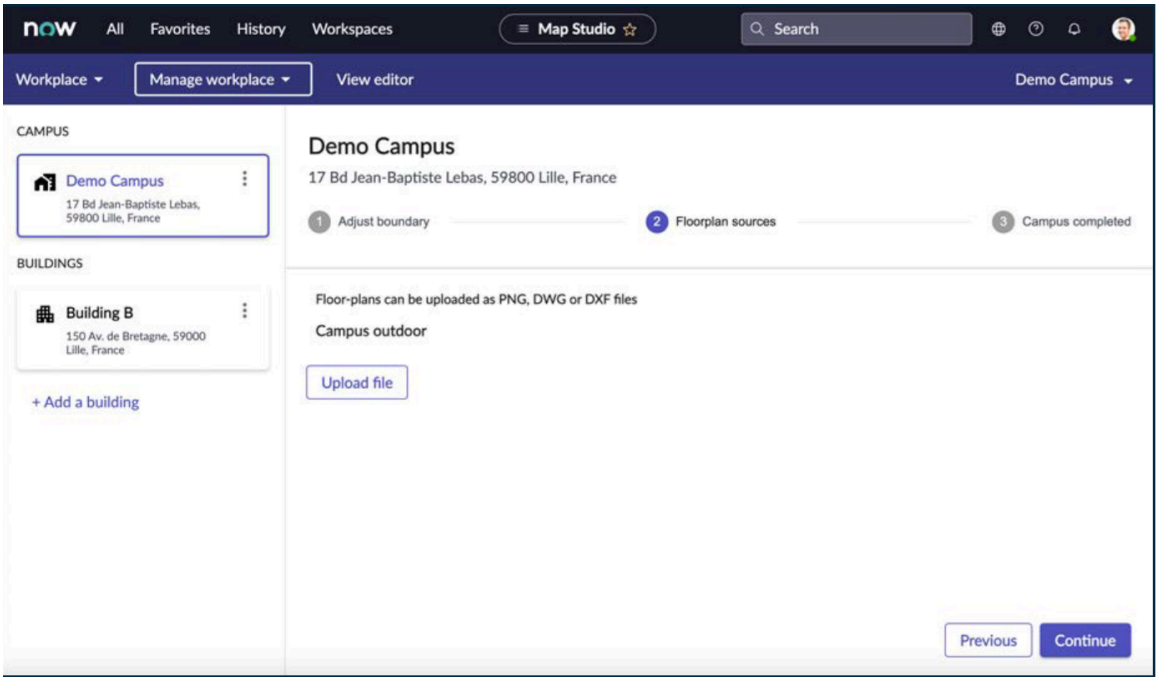
   The **Auto compute boundary** option is also available adjacent to the **Save boundary** button for both campus and building boundaries.

   (Enabled by default) Enabling this option helps to automatically adjust the boundaries when new floor plans, places, or directions are added and they are outside of their initial boundaries. When this option is enabled, the boundaries cannot be manually adjusted. Disable it to manually adjust the building boundaries.

Import outdoor elements

Import outdoor elements that you want to display on the indoor map. This can be a graphic element such as a logo or a an outdoor parking lot with parking spaces that needs to be created as Places.

Before you begin



Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a campus to add to your outdoor layer.
3. Navigate to **Manage Workplace** > **Floor & Floorplans**.
4. Add a new source and select the file you would like to import.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add outdoor elements

5. Click **Continue**.
6. Configure the raster source file.
7. Edit the georeference.
   For more information about editing georeferences, see Import Raster files.
8. Select the layer type.
9. Click **Start Import**.
10. Create a place on your campus by selecting **New point** or **New polygon**.
    For more information about creating a polygon and point, see Manage places.
11. Make sure that you select the floor on a campus.
12. Start creating directions.
    For more information, see Manage Directions.

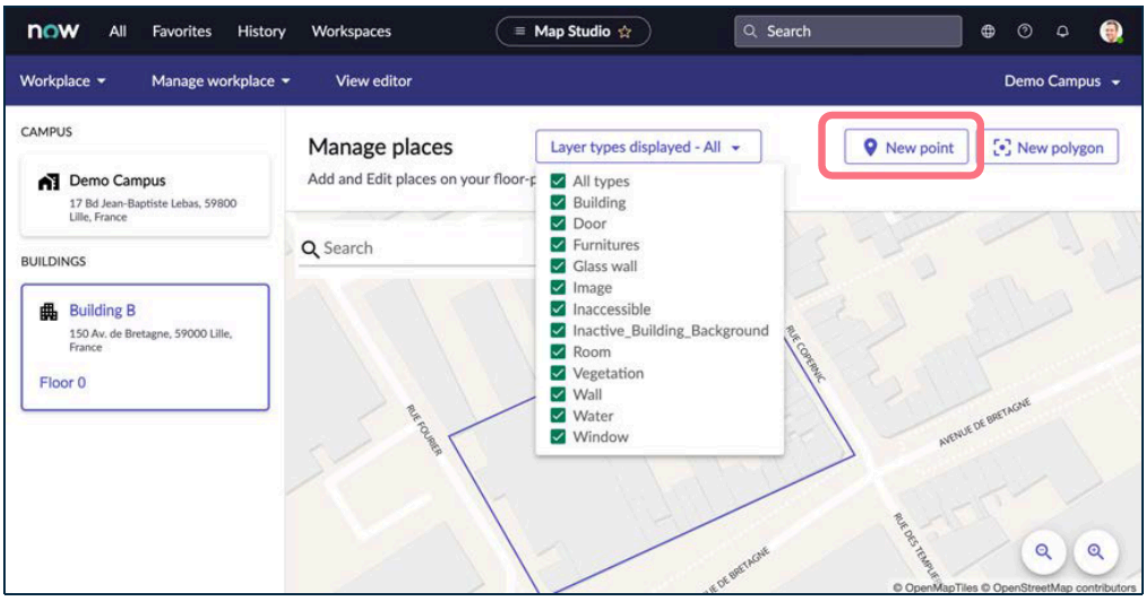
Manage places

Edit campus and buildings to add places, icons, and place types that you want to display on the indoor maps.

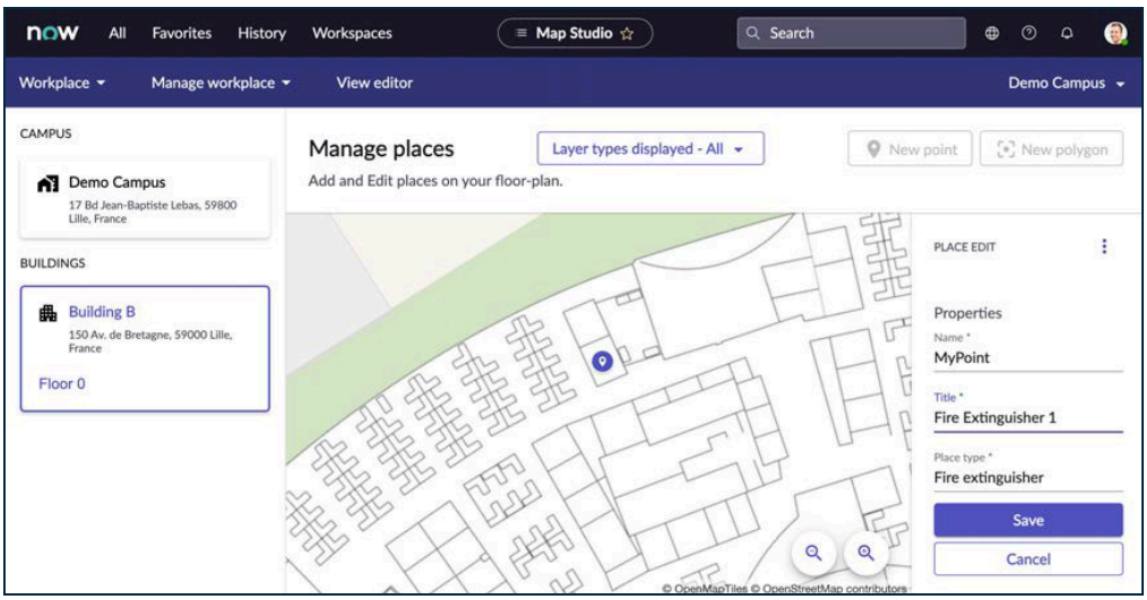
Before you begin

Place Types are used to define a physical location on your map, it can be a polygon or a point depending on if a place corresponds to a room or just a place in your map. Places are linked to place types and are used to categorize the different places on your map (example: meeting room, office, printer, parks, staircase, elevators, etc). Places also have markers showing the place title.

Note:
Places can either be automatically generated by a CAD import or have to be manually created with a raster import. For more information, see Import Raster files and Import CAD files to Map Studio.



Role required: map admin, map editor, map editor limited



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a campus.
   The campus opens in the Map Studio home page.
3. To edit and manage places, select a building.
4. On the map menu, select **Manage Places**.
5. Select the floor on which you want your places to display on your maps.
6. Click **New point** or **New polygon** to start creating places and new points of interest.
7. Select **New point**.

Create a new Point

8. Click on the map to position the point.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

On the form, fill in the form fields

Place edit panel

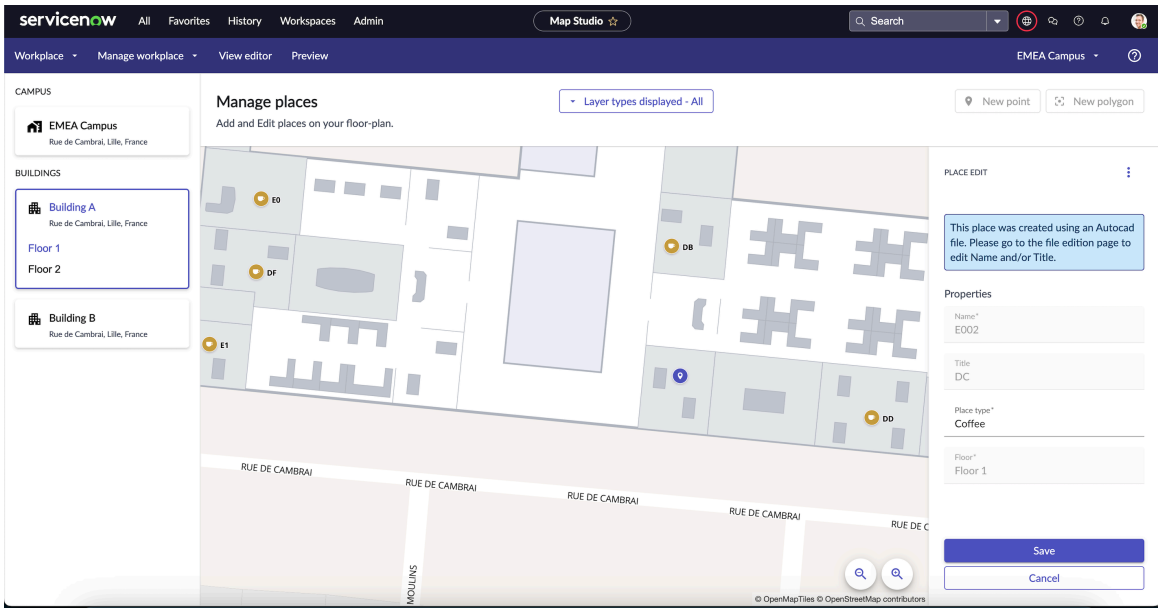
Name	Label name for a space. **Note:** Use a unique name for each space for ease of identifying the spaces on a map (not visible to the end user).
Title	Title displayed on the map.
Place type	Place Types are used to categorize Places (example, Meeting rooms, Desks, etc.). It also provides a default Icon which can be customized later in the view editor.
Floor	Floor to which places and place types are added.

Note:
If places in a CAD file are configured using the Autocad Import tool (Indoor Mapping v.18.0), only the **Place type** field is editable in the Place edit panel. The **Name**, **Title**, and **Floor** are read-only fields. For more information, see Configure places.

9. Select **New polygon** to add polygons or points respectively.
10. Click on the map to draw a polygon for a place, and close the polygon by clicking on the blue point or dot.
Polygons can be used when you do not have a building in campus.
11. Make sure you close the shape by completing or ending the creation back on the first point.

On the form, fill in the fields

Place edit



Field	Description
Name	Label name to identify a specific place (not visible to the end user).
Title	Title as it appears on the map.
Place type	Place Types name. The place types are used to define a physical location on your map, it can be a polygon or a point depending on if this place corresponds to a room or just a place in your map (cafeteria, booth, elevator, auditorium, etc).
Floor	Floor names. The places and place types are created for a selected floor.
Add a Marker	Marker on the map. Add a marker to see the location pin on the map. Markers define the icon (image) of place and identifies a location on your map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Add an Entrance	Entrance to a room is used by the wayfinding application. If you add an entrance, your pathway stops at the entrance.

12. **Optional:** Select a place (configured using the CAD configuration page) to open the place editing panel.

    (Optional) Notice that the **Name**, **Title**, and **Floor** are read-only fields and cannot be edited. Only the **Place type** field can edited. A validation message is displayed to inform that the selected place was created using an Autocad file. These fields can be edited in the Autocad Configuration page (Indoor Mapping v 1.8.0). For more information, see Autocad import tool and Configure places.

13. Click **Save**.

14. To switch from a point to a polygon, click the other options icon (⋮) on the Place Edit panel and select **Switch to a polygon**.

    When you select a place, the Place Edit panel shows the CAD file properties such as room, capacity, etc. The AutoCAD properties are stored in a dedicated table **sn_map_core_place_properties**. For more information, see Compute CAD file properties to extract space or room surface area.

    The Indoor Mapping application provides the ability to extract room dimension from CAD files and to use it in Workplace Service Delivery rooms and space measurements.

Create Indoor Mapping icons and place types

To manage places and place types in Indoor Mapping Map Studio, start with creating icons for places, and then create a place type.

Before you begin

Indoor Mapping place icons are used for places and to define what you see on your map. The icons are also used to style your place types. Place type sure used to categorize places. You can show or decide not to display places in a view. Place types have the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Name
- Icon
- Color (in case of a polygon)

Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **icons**.
   The Indoor Mapping icons page appears. To edit an existing icon select an icon and apply your edits.
2. Select **New** to create new icons.
3. Complete the following information on the new icon record page:

   a. **Name**: Name of the icon.

   b. **Image file**: Select and add an image file to be used as icon image.

   c. **Title**: Image title to download the icon as a PNG file.

      The size of the image is automatically adjusted to right size and shape by the Indoor Mapping Map Studio.

   d. **Active**: The icon must be active to appear in the studio and on your building to add value and differentiate your place types on the map.

4. Click **Update**.
   The new icon for Indoor Mapping place type is created.
5. After creating the icons, you need to create the Place Types.

   Place Types are displayed with your Icon on the Map Studio to differentiate places on the map.

6. Navigate to **All** > **Indoor Mapping** > **Place Types**.
7. Select **New** to create a new Place Type record.

   On the form, fill in the fields

Place type

Field	Description
Name	Define the name of the place type.
Default marker icon	Search and select the required icon from the list.
Default stroke color	Color you want the Place Type to display on the Map Studio. Put the hash (#) symbol for the hexadecimal color for Map Studio to recognize and differentiate (Only available for polygons). For example: #008000 for Green color.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Default stroke opacity	For the opacity, select a range between 0 and 1 (Only available for polygons) Here '0' denotes transparent and '1 'denotes opaque.
Default stroke width	The thickness of the outline or stroke of your place type.
Default polygon display	This option is enabled by default. Clear the selection if you want the place type to appear as a point on the map. A polygon will present the surface of a room, for example, meeting rooms or any other closed room. The point is used to represent a place that is not fixed or to represent a place that is not in a closed room like a resting place or a telephone.
Default title display	Option to display the title of the place type on the Map Studio.
Default marker display	Select this option to display the icon of your place type on the Map Studio.
Active	Option to activate or deactivate or turn off the place types on maps. Turning off the place type will not remove the place type. It will be just inactive on your map, and there will be no points of interest in the map.

8. Click **Submit**.
   After the settings are saved, you can see the list of campuses and buildings for which the place type is active.
9. To set up your new Place Type, navigate to **All** > **Indoor Mapping** > **Map Studio.**
10. Select a campus and select **Manage places** to add and edit places.
    For more information, see Manage places and Edit with view editor.

Manage Directions

Directions are used to compute routes from point A to point B on the map. Map administrators can manually draw lines on the floor map areas where people are allowed to walk within a building. This cannot be automated and has to be done manually.

Before you begin

Role required: map admin, map editor, map editor limited

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Two direction modes (**Accessible** and **Default**) are enabled by default in Indoor Mapping.
   - **Accessible:** This mode is for users with reduced mobility and so by default, the stairs and escalators are inactive, while elevators and ramps are added.
   - **Default**: Configured for general public and pedestrians.
2. New direction modes require icons.
   For more information, see Create Indoor Mapping icons and place types
3. To create a new direction mode, navigate to **All** > **Indoor Mapping** > **Direction modes**.

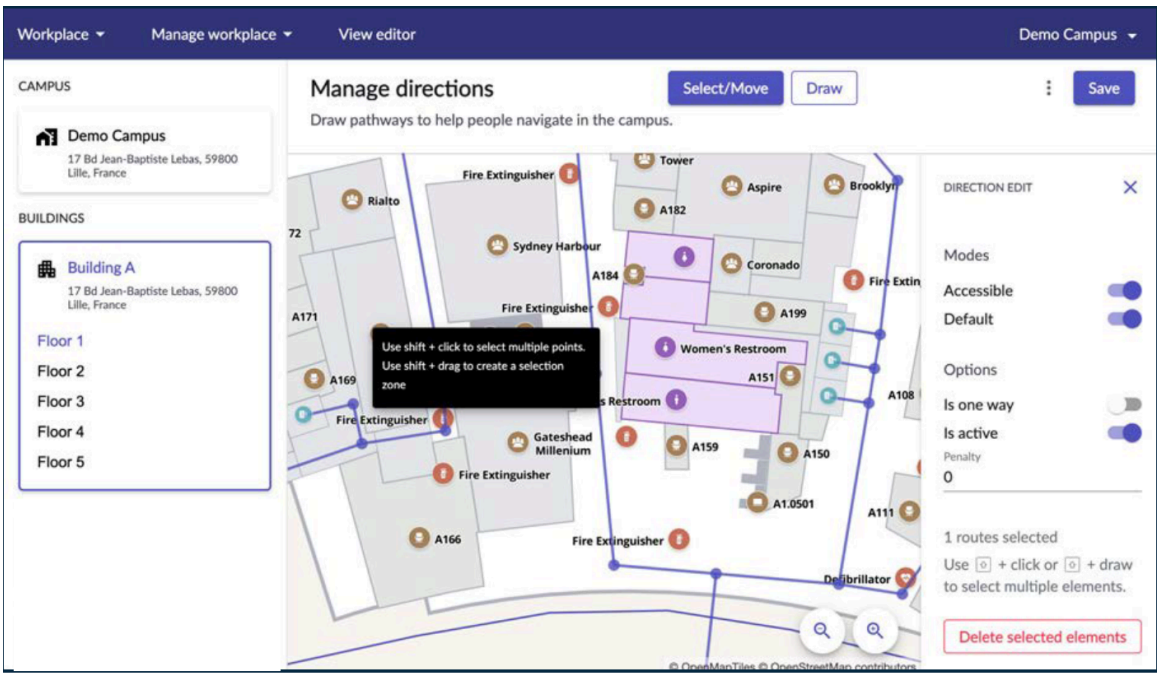
   On the form, fill in the fields

New Direction modes

Field	Description
Name	Direction mode name.
Title	Direction mode title will be displayed on the map studio when you select the direction mode of a direction.
Icon	Select an icon from the list.
Average speed	Average speed for the type of transportation used.
Active	Option to activate the direction mode on the map. **Note:** Turning off the direction mode does not remove it's just made inactive on your map and the directions will not be shown on the map.

4. Click **Submit**.
   The newly added direction mode is available in the list.

   Note:
   On the direction mode record, select **Route to direction mode associations** to find the list of campuses and buildings for which the direction mode is active.



5. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
6. Select a campus.
7. Go to **Manage Workplace**, select **Directions**.
   Alternatively, select **Manage Directions** from the Map Studio menu.
8. Select a building and floors where you want to add the directions to edit.
9. From the **Direction modes** drop-down list, select a direction mode from the available options:
   - **All modes**
   - **Accessible**
   - **Default**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. To draw directions from one point to another, select **Draw** and begin drawing routes along all the hallways for each floor.

> **Note:**
> Lines must be straight as they are used by the wayfinding application to display routes within a building.
>
> All segments created are by default set to Active, this state can be edited at any time on the Studio to reflect any changes (incidents, renovation, and so on). Change the state by selecting the toggle option **Active** or **Inactive**.

Draw directions

11. To stop drawing, select **Select/Move** or press **esc** (escape) on the keyboard.
    All segments that are created are by default set to **Active**. The Active state can be edited any time on the Map Studio to reflect any changes (incidents, renovations, etc.).
12. To change the state, click the toggle option **Active** or **Inactive**.
    States help the wayfinding application to calculate a similar route without going through the inactive routes or segments.
13. Use the **All modes** option to use segment in both ways **Accessible** or **Default**.
    You can also change it to enable only one-way directions.
14. Select a way and define in which way the segment can be used.
15. Small arrows appear on the map.
    The route with the selected direction mode is highlighted on the map.
16. Each of the segments of the direction graph can be edited.
17. By default, both default and accessible modes are shown as active on each segment.
18. Once the direction graph is complete, make sure you clearly identify the connectors to link your floors together.
    For more information, see Create a connector type.
19. Select the **Display settings** icon adjacent to the **Save** button.
20. Select **Connector links**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

21. Select the node that represents a connector and ensure that the correct building is selected. For more information, see Create a connector type.
22. After creating the connectors, link additional floors of your building together.
23. Select the node and ensure that you link it with the same node you have created for the same connector.
24. After creating direction graphs for every floor in a building, repeat the process to add a graph on the campus.
25. Ensure you link two graphs by connecting the two end nodes.
26. Click **Save**.
27. To unlink a connector, select **Detach connector**.
28. Select **Place entrances** from Display settings to display the place entrances for a selected campus or building.
    This option displays on the map where the entrance is located and the point or points that are going to be used by graph directions as start points.
29. Select **System generated paths to entrances** from Display settings:
    This option is used to connect place entrances connect to a generated path. The paths marked in green show system generated paths. Users do not have draw manually. The application automatically computes paths from an entrance.
30. Click **Save**.
31. Click the other options icon ( ).
32. Select **Copy directions**.

    This option helps in mapping or copying directions where several floors have the same layout. You can also reuse directions defined for a previous floor. For more information, see Copy direction graphs to multiple floors.
33. Click **Save** to save all your changes.
34. After editing the directions, you must activate the direction mode in the map View Editor so that it is available for all map users.
35. Select **View Editor** on the Campus menu and click **Edit.**
36. After making the required changes, click **Save**.
37. If you want to remove a content, select it and click **Delete**.

Create a connector type

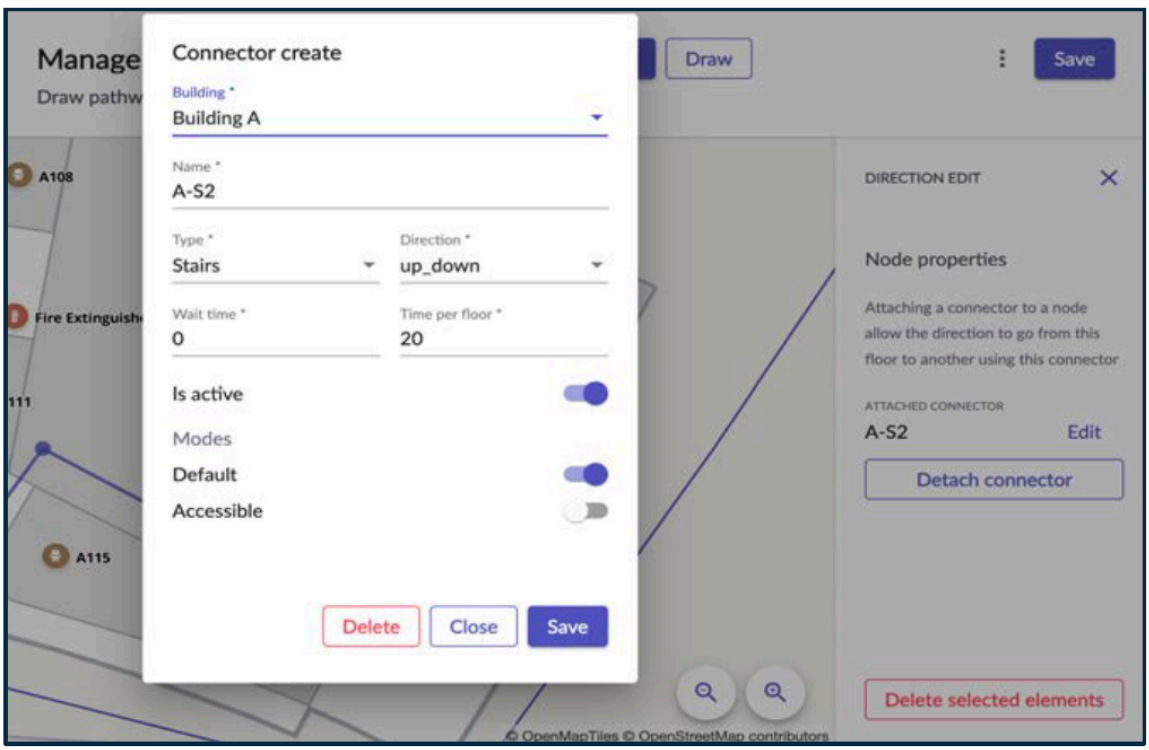
Create connectors (stairs, elevators, escalators, ramps) and activate the connector type in the View editor. Connector Type contains the style (icon) and properties for each connector.

Before you begin

Indoor Mapping provides Connector Types that are enabled by default. You can create a new connector type depending on your requirement.

Role required: map admin, map editor, map editor limited

Procedure



1. To create an icon for your connector type, navigate to **All** > **Indoor Mapping** > **Icons**.
   Indoor Mapping provides a pre-existing icon library. To edit an existing icon, select an icon record and apply your edits. For more information, see Create Indoor Mapping icons and place types.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

2. After creating your icon, navigate to **All** > **Indoor Mapping** > **Connector types**.
   You can edit an existing connector type by selecting the record and applying your edits.
3. Select **New** to create a new connector type.

Create connectors

On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Connector create

Field	Description
Name	Name of the connector type. For example: Elevator The Name will be displayed in the drop-down list when you create a new connector in Map Studio.
Default wait time	Indicate the default wait time. For example: 30
Default time per floor	Default time per floor. For example: 5
Default marker icon	You must search and select the icon type for the connector For example: Elevator
Active	Option to make the connector type active. If you clear the check box, then your connector type will be automatically deactivated on your different maps. **Note:** Turning off the connector type does not remove it. It will be made inactive on your map and there will be no connector display on your maps until it is activated again.
Default order	Specify the default order for the connector type.
Default maximum zoom	Default value is 23.
Default minimum zoom	Default value is 15.
Default marker display	Option to select the default marker display.
Default direction	Select any of the following from the drop-down list: ○ Up ○ Down ○ Up and down

4. Click **Submit**.
   The new connector type is available on the Connector types page.
5. To activate the connector type in the View editor so that it is available for all your buildings, navigate to **All** > **Indoor Mapping** > **Map Studio**.
6. Select a campus, and on the Map Studio menu, select **View Editor**.
7. From the View Editor content panel on the left pane, select **+Add Connector** to add the newly added connector.
8. Select the connector type that you added in Step 3.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Click **Apply**.
10. Select **Save this view** to save your changes.

Copy direction graphs to multiple floors

Select a campus or building and copy floor direction graphs from a floor to a single floor or multiple floors in a building.

Before you begin

Note:
If a building has similar floor layouts across floors, for example floor 1, 2, 3, etc, and if you want to replicate directions from one floor to another, copy directions from a single floor to multiple floors on a building. This will ensure that all connectors are linked between all floors.

The destination floors that you are copying from must belong to the same building. Copying direction graphs from one floor to multiple floors helps to copy the direction graphs that are manually created. Users don't have to draw the graph on every floor if the building architecture and structure is similar.

Role required: map editors, map admin, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a campus.
3. Select **Manage Workplace** > **Directions**.
4. Select a building on the Map Studio and click the More actions menu icon ( ).
5. Select **Copy directions** from the list.

   a. In the Copy Directions dialog box, complete the following:

   - **From**: Select the floor from which you want to copy the directions from.
   - **To**: The floors to which you want to copy the directions to. Click **Select All** to select all or multiple floors at one go.

     Note:
     The floors must belong to the same building. For example, if you want to copy directions from Building A, then the floors that you select to copy must belong to Building A.

6. Select the floor in the **From** list and select a floor or click **Select all** to select multiple floors in a building.
7. Click **Copy directions**.
   The floor directions are copied to selected floor or floors.
8. Select **Clear floor directions** to clear existing directions for a selected building or floor.

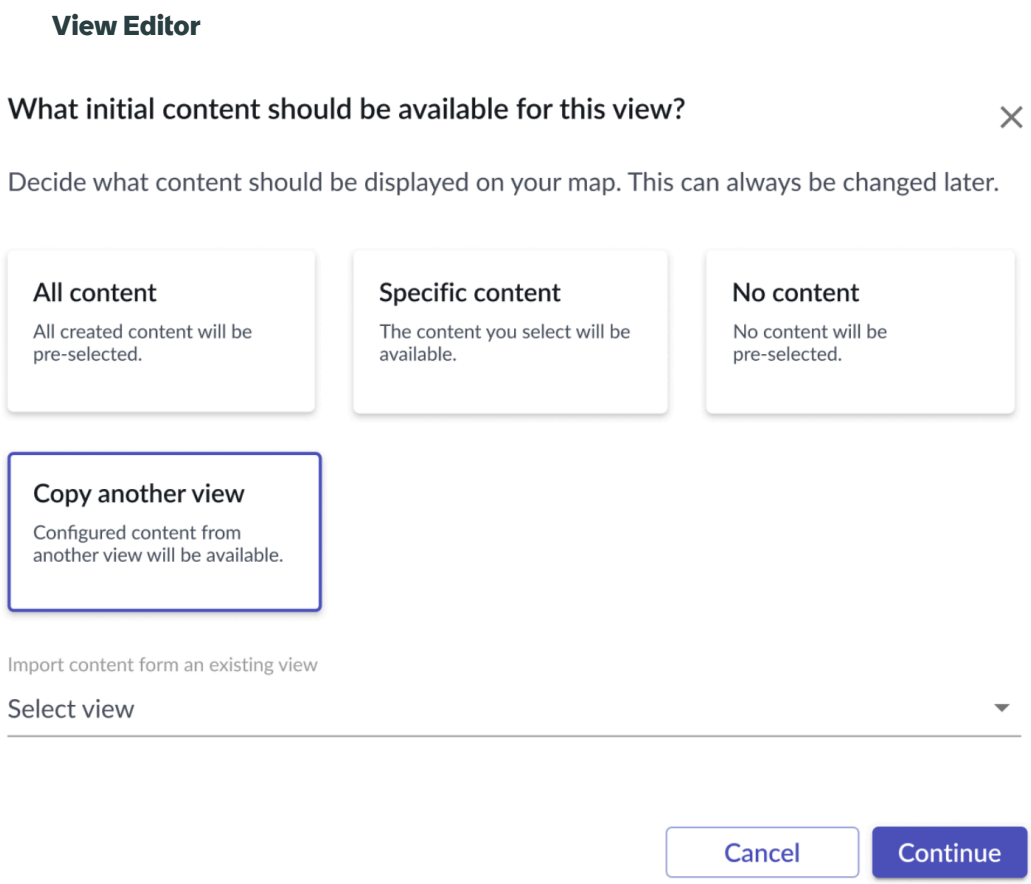
Edit with view editor

Edit and customize indoor maps with the Map Studio view editor. Enabling the default view in Indoor Mapping is a mandatory step so that maps can render in Workplace Service Delivery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

For Indoor Mapping View editor, as a map administrator you cab decide which elements should be visible to map users. You can also define the style of different items such as layers and places. A default view type is available with Indoor Mapping but needs to be enabled. This is a mandatory step. If the default view is not enabled, Indoor Mapping maps are not rendered in Workplace Service Delivery.



You can create and customize additional view types as required. However, only the default view type is used in Workplace Service Delivery currently. View type and View editor are capabilities of Indoor Mapping.

Note:
Ensure that you have installed both Indoor Mapping and Workplace Indoor Mapping plugins.

Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a campus or building from the home page and select **View editor**.
   The **Default** view and other view types that you have added to the View editor is displayed. For example, click **Default**. The **Edit** button is displayed when the view has already been configured and is not blank. If the view is never configured or is blank, it is replaced by a **Not enabled** warning. Click to edit and enable the view.

3. You are provided with the following four options.
   These options define the content that you want to display on you map. For example, adding multiple view types in your campus such as layers, places, place types, etc.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **All content**: In this option, the view is automatically generated. All buildings and floors are selected. All layer types, place types, connector types are also selected with the default style. All direction modes are selected.
- **Copy from view**: Option to select a view. It can be other view types from the same campus or a view type from another campus. Only views that are configured appears. When selecting a view from the same campus, all view content is copied including buildings and floors. When selecting a view from a different campus, all buildings and floors are included with default options as they cannot be copied from the other campus.

  You can copy the selected content and style from another view. For example, if you want to change the display of place types in a view, you don't have to redo the whole process for each place type. You can just copy the configurations from another view and make the required adjustments to suit your needs.

- **Specific content**: Pop-up dialog box option to select the buildings/floors, layer types, place types, connector types, and direction modes from the check list. The selected content is added to the view with its default style.
- **Start from a blank view**: In this option, you are not selecting any content. Nothing is displayed on the view and the map.

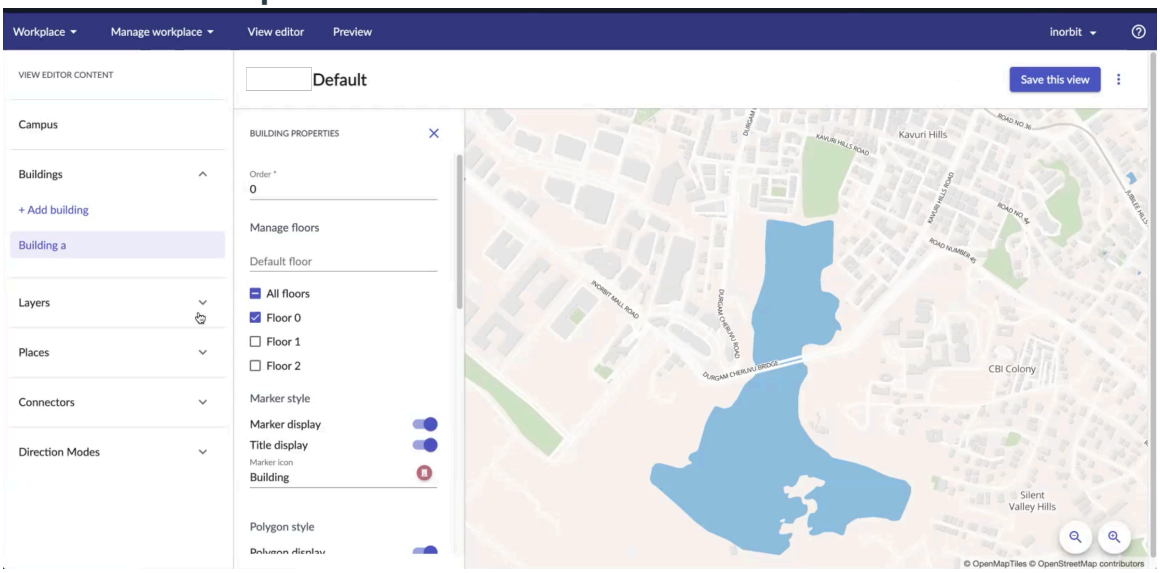
4. Select any of the four options from Step 3.
   For example, **Use the default configuration**.
5. Click **Continue**.
   The view content is loaded for the selected option and the map for selected campus along with view type is shown.
6. Click **Save this view** to save the changes.
7. When there is more than one View type, map creators can select **Copy another view** and then, **Import Styles from an existing**.
8. The **View Editor Content** displays content based on your selection.
   For more information, see View editor content.
9. Click **Apply** to apply the view changes.
10. Click **Save this view**.

    You also have the option to reset the view by clicking the More options menu icon ( ) available next to **Save this view option**.

View editor content

Work with the View Editor content and customize the campus, buildings, layers, places, connectors, and direction modes properties.

Before you begin



Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a campus for which you want to customize the view editor content.
3. From Map Studio, select **Manage Workplace** > **View Editor**.
4. Select a view that you want to edit.
   For example: Default.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View editor content panel

5. To edit a campus view content, click the Campus drop-down list to display the campus properties.
6. Update the properties and decide how your campus will render on the map.
   Fill in form field

Campus properties

Field	Description
Marker style	Select the **Marker style** and **Title display** toggle key options.
Polygon style	Select the **Polygon style** option. Edit, if required, the stroke (line) color, width, opacity, fill color.
Default Camera	Click on the Default camera button to position it on the map. Set the default latitude and longitude, default bearing, and default pitch. A bearing is the direction you're facing, measured clockwise as an angle from true north on a compass.

7. Select **Buildings** and from the drop-down list, select the elements that you want display in your view.
8. Select **+Add building**.
9. From the Add or remove content page, select the required buildings and floors.
10. After making the changes, click **Apply**.
11. Select **Layers** and from the drop-down list, select **+Add layer**.
12. From the Add or remove content page, select the layers that you want to see in your view.
13. Select **Apply**.

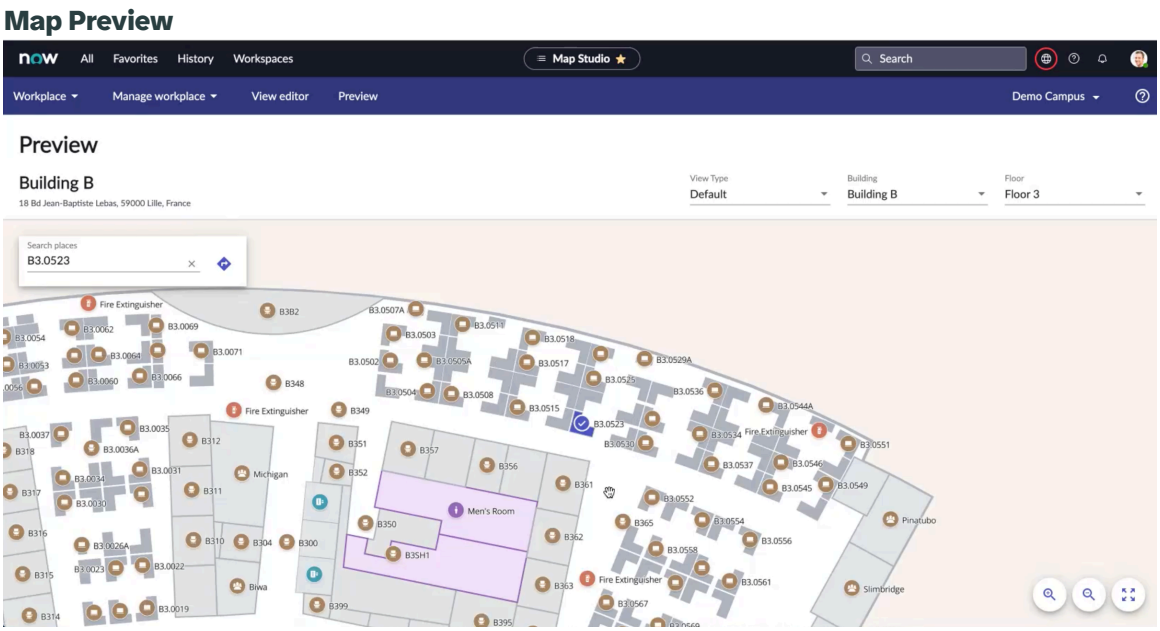
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

14. Select **Places** and from the drop-down list, select **+Add places**.
15. From the Add or remove content page, select the places you want to see in your view.
16. Click **Apply**.
17. Select **Connectors** and from the drop-down list, select **+Add connector**.
18. From the Add or remove content page, select the connectors you want to see in your view.
19. Click **Apply**.
20. Select **Direction Modes** and from the drop-down list, select **+Add direction modes**.
21. From the Add or remove content page, select the direction modes (Default or Accessible) that you want to see in your view.
22. Click **Apply**.

Map preview

Use theMap Preview to display maps and test directions that you have created in the Indoor Mapping Map Studio. Testing directions will ensure that directions graphs in wayfinding works as expected for employees and visitors.

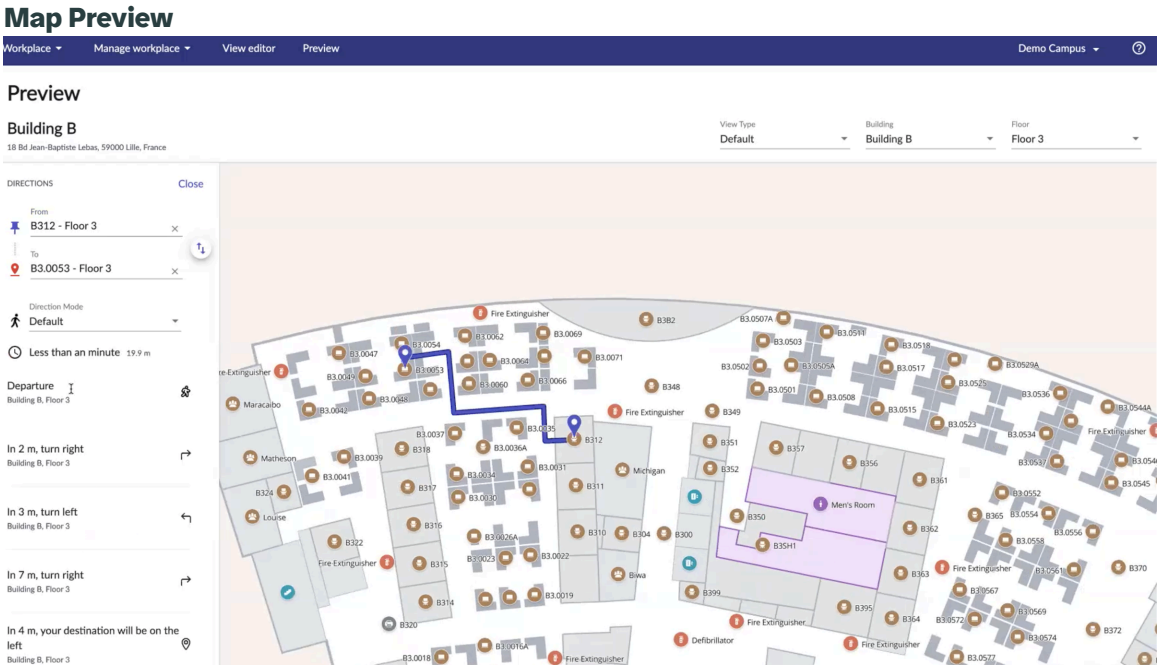
Before you begin



Note:
Step by step directions for wayfinding within workplaces are only available on the Now Mobile app.

Role required: map admin, map editor, map editor limited

Procedure



1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Select a campus.
   Create one if you do not have a campus in the map studio. For more information about how to create a campus, see Create a campus with buildings and floors
3. Click **Preview**.
   The map opens in the **Preview** mode. If the view is not enabled, nothing will appear in Preview. For more information, see Edit with view editor.
4. In the search field, search for places on the Campus, for example: Meeting room 101.
   When you start typing in the search field, application provides auto-suggestions for places that are available in the selected campus.
5. Select a place to highlight and display it on the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select the **Get Directions** icon ( ) to open the change directions panel.
   Application provides alerts if you have not added direction modes for your View type in a selected campus. Adding direction mode helps to enable direction in a building for wayfinding and location directory.
7. Specify the **From** and **To** fields to specify the floors from where you want to have the wayfinding capabilities.
8. You can also add directions from one building to another.
9. Select the required buildings in the **From** and **To** fields to display the directions.

   For example: You can move from One building to another (Building A to B) on a campus. Within the same building (Building B), you can select a floor (Floor 3) and create directions for wayfinding from one space to another on Floor 3 (B312 to B3.0053).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

10. You can use the reverse direction icon available near the **From** and **To** fields to change the from and to options and reverse the directions.
11. Toggle between the **View Types** available on the top right menu (in case if you have multiple View types).

    Select the buildings and floors that you want to show on the map. Zoom in and zoom out as required.

    Change the Campus from the **Campus** drop-down list on the top right menu on the map studio.

Print a map

Print a map by configuring relevant options and applying filters.

About this task

You can print a map from one of the following applications.

- Location directory
- Workplace Central
  - Building overview

Before you begin

Note:
Map printing is not supported on Mozilla Firefox.

Role required: sn_map_core.map_printer

Procedure

1. Navigate to the map view in your app, then select **Print map**.
2. On the Edit Map Content panel, configure the fields.

Edit Map Content panel

Field	Description
Show Pin on map	Option to display a pin on the map.
Pin label	Label text for the pin on the map. This field is available only if **Show Pin on map** is selected. This field appears only if **Show Pin on map** is selected and the pin position is saved. You can change the label by selecting **Edit Pin** from the Edit Map Content panel.
Remove Outdoor Background	Option to remove the map area outside the selected building.

3. **Optional:** Select a position on the map to place the pin, then select **Save Placement**.
   To place a pin on the map, the **Show Pin on map** field must be selected. You can change the position of the pin by selecting **Edit Pin** from the Edit Map Content panel.
4. **Optional:** On the Edit Map page, select a space to customize the space settings.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Space Settings

Field	Description
Show Space Text	Option to display the space label on the map.
Show Space Marker	Option to display the space icon on the map.
Order on Map	Order of the space text and marker on the map. ○ Bring to Top: Space text and marker are moved to the top layer of the map. ○ Default: Space text and marker are on the default layer of the map. ○ Send to Back: Space text and marker are moved to the lowest layer of the map.
Space label text size	Size of the space label text on the map.

5. Select **Continue** to open the print layout page.
6. Select the paper size and orientation from the Print Layout panel.
   For more information about the options, see Map printing options.
7. In the preview area, zoom and drag the map based on your requirement.
   You can use right-click to rotate the map.
8. Configure the options in the Print Layout panel.
   For a description of the field values, see Map printing options.
9. Select **Print**.

Result
You can use your web browser to print the map or save it as a PDF.

Trouble?

- If the aspect ratio of the map is not the same as your instance, verify that the layout settings (like page size and orientation) of the print dialog of your browser are the same as the settings on your instance.
- If the map is shifted on the printed page, or the position of icons or the pin is not the same as your instance, set the margins in the print dialog of your browser to **None**.
- The license text is automatically added to the outdoor map and is included in the printed map. To remove the license text, you must remove the outdoor map by using the **Remove Outdoor Background** option.

Create Snapshots to migrate Indoor Mapping data

Create snapshots for taking point-in-time backups of your Indoor Mapping map data and objects and migrate the snapshots to Workplace Service Delivery instances.

Before you begin

Note:
Users without map admin or map editor roles cannot create, read, download, or apply a snapshot. Users with wsd_core_admin roles can create or apply snapshots when the **Snapshot Workplace locations** option is enabled.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Snapshot capability in Indoor Mapping provides the following:

- Ability to export Indoor mapping data and instance values
- Ability to import Indoor mapping data and instance values
- Ability to import and export Workplace Indoor Mapping related objects

Role required: map admin, map editor, wsd_core_admin

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Snapshots**.
   The Snapshots page appears and list of existing snapshots, if any, are displayed.
2. Select **New** to create a new snapshot record.
   Ensure to export/import the update set for Indoor Mapping and other configured applications as well.
3. Complete the following information:
   - **Name**: Provide a name for the snapshot.
   - **Campuses**: Select single or multiple campuses as required. By default all campuses are selected.
   - **Include workplace locations**: Select it to capture all workplace elements linked to Indoor Mapping.
4. Click **Submit**.

   The snapshot is created. The status is shown as **In Progress** in the Snapshot page. This process may take some time to complete. Once completed, the state moves to **Created**.
5. From the Snapshot page, click open the newly created snapshot data.
6. Select **Download Snapshot** to download or export the snapshot locally.
   Files will be downloaded as XML.
7. Import the snapshot using update sets on a different instance where you want to apply the snapshot.
8. Navigate to **All** > **System Update Sets** > **Retrieve update sets** to import the XML file.
9. From the Related Links, select **Import Update Set from XML**.
10. On the Import XML page, click **Choose file** and select the downloaded XML from where you have downloaded the XML file.
11. Select **Upload**.
12. After importing, go to **Indoor Mapping** > **Snapshots** and select the imported snapshot.
13. Click **Apply snapshot** to apply it to an instance where you want to have the snapshot data applied.

    Applying a snapshot overwrites all the records for a selected map object for example, campus,building, floor, or spaces. So having a snapshot in place helps in case a backup data is required.
14. Select **Yes** to apply the snapshot to a selected map object.
15. To delete a snapshot, select the campus from the Campus page and click **Actions** on Selected items drop-down box and select **Delete**.
16. Few workplace tables are impacted during the snapshot process.

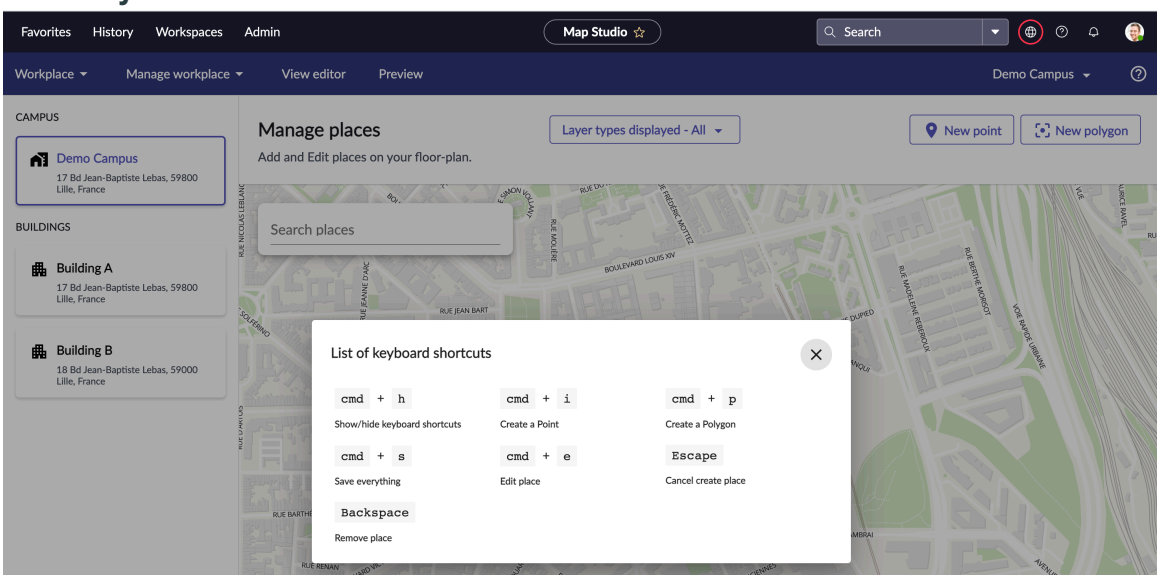
    For more information about impacted tables, see Snapshot Impacted tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

Note:
After moving the snapshots, the Space Details table [sn_wsd_spcmgmt_space_detail] in Workplace Space Management doesn't get populated with the snapshots. To get the updated Space details table record, manually run the fix script **Load space details table- current state**. Navigate to **All** > **Fix Scripts** and search for Workplace Space Management **Load space details table- current state** fix script. Select **Run Fix Script** tab to run the script and get latest Space Details table [sn_wsd_spcmgmt_space_detail] record.

Keyboard shortcuts



The keyboard shortcuts provided with Indoor Mapping allow Map Studio administrators to quickly perform common administrative tasks by using keys in the **Map Studio**.

Before you begin
Role required: map admin, map editor, map editor limited

Procedure

1. Navigate to **All** > **Map Studio**.
2. Select a campus.
3. Click the help icon ( ) to display the list of keyboard shortcuts available.
   You can also use **cmd + :** (Mac) or **ctrl+:** (Windows) to display the keyboards shortcut list. Press **esc** to close the dialog box.

List of keyboard shortcuts

4. To display the keyboard shortcuts for **Directions** click the help icon ( ) available on the top right pane of the Map Studio.
   - Toggle draw mode; **cmd + m** (Mac) or **ctrl+m** (Windows).
   - Save all updated graphs: **cmd +s** (Mac) or **ctrl+m** (Windows).
   - Stop drawing: Press **esc** (Mac) or **Esc** (Windows).
   - Delete selected items: When a node or route is selected, press **fn + delete** (Mac) or **Backspace** (Windows).
5. To display list of shortcuts for Places:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create a new place with a point: **cmd + i** (Mac) or **ctrl + i**.
- Create a new polygon: **cmd +p** (Mac) or **ctrl +p**
- Edit a selected place: **cmd +e** (Mac) or **ctrl +e** (Windows)
- Save the selected place: **cmd +s** (Mac) or **ctrl +s** (Windows)
- Cancel the create a place process: **esc** (Mac) or **Esc** (Windows)
- Delete a selected place: **fn + delete** (Mac) or **Backspace** (Windows).

Synchronize Indoor Mapping with Workplace Service Delivery

Synchronize Indoor Mapping locations and map data objects with Workplace Service Delivery campus, buildings, floors, and spaces.

Before you begin

The changes that you make to Workplace Service Delivery building, floor, and space records are not updated automatically with the Indoor Mapping map data and objects. To update the changes, synchronize Indoor Mapping campus, buildings, floors, and place types with Workplace Service Delivery (WSD) location records.

Note:
After installing the Indoor Mapping application and updating locations on your map, run the synchronization utility to synchronize Indoor Mapping location records with Workplace Service Delivery locations. Run the synchronization utility when you add, update, or remove locations from Workplace Service Delivery or update locations or map objects in Indoor Mapping Map Studio.

The synchronization process is a five-step process. Take appropriate actions as required during the synchronization process:

- Cleaning: The Cleaning step in the synchronization utility isn't available initially when you run the synchronization wizard for the first time. It is available only for spaces that are deleted while making updates to the Indoor Mapping Map studio.

  Note:
  A **Cleaning** step can also appear as your first step in the synchronization utility if a location record is changed or updated in the Indoor Mapping Map studio. This step is shown for location records that are synchronized but are updated or modified later on after the synchronization process.

- Building Sync: Option to synchronize a building in a campus in Indoor Mapping and Workplace Service Delivery.
- Floors Sync: Option to synchronize the floors in a building in Indoor Mapping and Workplace Service Delivery floor record.
- Types Sync: Option to link and map Indoor Mapping place types to corresponding spaces in Workplace Service Delivery.This option shows the Indoor Mapping place types that are not linked to a Workplace Service Delivery spaces. You can select the **Link** operation in the synchronization utility to link the location records.
- Spaces Sync: Option to synchronize the spaces available on a floor.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Space Mapping** > **Indoor Mapping Administration** > **Indoor Map / WSD Synchronizations**.

   The Indoor Map / WSD Synchronizations page displays existing synchronization records for Indoor Mapping and Workplace Service Delivery.

2. Select **New**.

   Note:
   You must create or have an existing Campus, Region, and Site in Workplace Service Delivery (WSD).

   On the form, fill in the fields.

   Indoor map / WSD Synchronization form

Field	Description
WSD Campus	Option to select a Workplace Service Delivery campus. Select the lookup list icon () to search and select a Workplace Service Delivery campus. Make sure that the time zone of the campus matches with the Region of your Indoor Mapping campus.

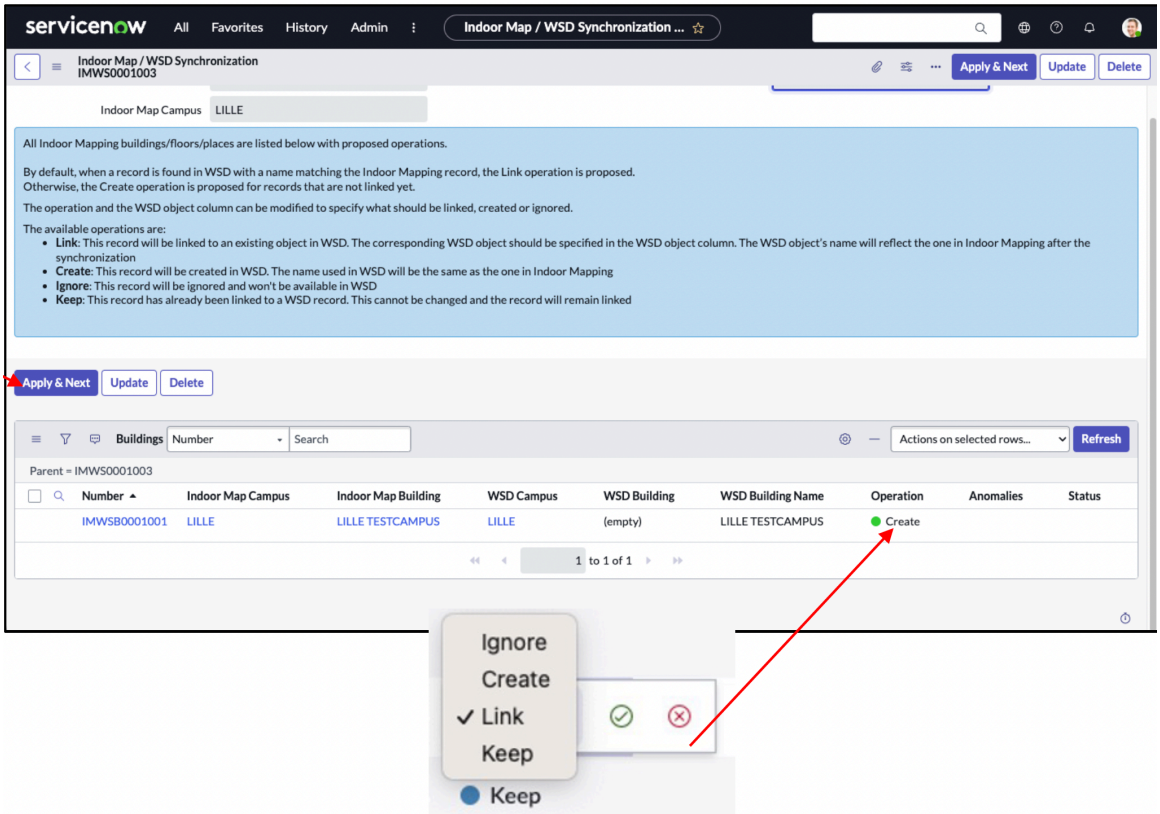
3. Select **Submit**.

   A new synchronization record is created.

4. From the synchronization record page, select the Indoor Mapping Campus that you want to synchronize with the Workplace Service Delivery Campus, if they aren't already synchronized. The new synchronize script record opens (for Example: IMWS0005278).

   On the form, fill in the form fields.

   Indoor Map/WSD synchronizations form



Field	Description
WSD Campus	Campus created in Step 3.
Indoor Map Campus	Indoor Map campus. Search using the lookup list icon () to select the Indoor Mapping campus information or search for an Indoor Map campus.

   The campuses are synchronized.

5. The synchronization utility proceeds to synchronize a building in a campus.

   This is the first step in the synchronization process if you are running the synchronization utility for the first time.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Indoor Map / CMN Location Synchronization

WSD Campus	Name of the Workplace Service Delivery campus.
Indoor Map Campus	Name of the Indoor Mapping campus.
State	Building

Note:
A **Cleaning** step can also appear as your first step in the synchronization utility if changes or additions are made to Indoor Mapping locations records or map objects after they are synchronized.

You can change the proposed operation in the synchronization utility. Select an operation from the Operation column and right-click to change it.

- If a new building is detected, **Create** operation is proposed in the Building related list Operation column. Indicates that a corresponding Indoor Mapping map record doesn't exist in Workplace Service Delivery, and a new record should be created. The location name used in Workplace Service Delivery should be similar to the location name in Indoor Mapping
- **Link**: Indicates that a matching record from Indoor Mapping is found in Workplace Service Delivery based on the location name. The Indoor Mapping record is linked to an existing object in Workplace Service Delivery (WSD). After linking, the Workplace Service Delivery location name is shown in Indoor Mapping.
- **Ignore**: Indicates that the Indoor Mapping record is ignored and won't be available in Workplace Service Delivery.
- **Keep**: Indicates that the Indoor Mapping record is already linked to a Workplace Service Delivery record. This record can't be changed in the synchronization process. If you want

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

to unlink a record, select a location record in Workplace Core and select **Unlink**. After unlinking, the location record doesn't show the **Keep** operation.

- **Cleaning**: Two synchronization operations are available when performing the cleaning activity on a location record:
  - **Retire**: Option to set the status of Workplace Service Delivery location to **Retire**.

    Note:
    This action removes all references to Indoor Mapping and is deactivated in the Workplace Core location table. The object is not available for subsequent synchronizations.

  - **Unlink**: Option to unlink or remove references to Indoor Mapping. The location remains active in Workplace Core and can be reused in subsequent synchronizations.

6. Select **Apply & Next**.

   The synchronization process shows anomalies if a record is invalid. Go to the instance log page to verify the reason for anomaly.

   The building records are synchronized and the status is shown as **Queued**.

   Note:
   The synchronization utility takes sometime to synchronize a location record. Wait till the operation completes and the page is refreshed with updated status. Don't select **Update** as synchronization at this stage is incomplete.

7. After building records are synchronized, the synchronization utility **State** moves to **Floor**.

   Indoor Map / CMN Location Synchronization

WSD Campus	Name of the Workplace Service Delivery campus.
Indoor Map Campus	Name of the Indoor Mapping campus is selected by default.
State	Building

   The floor records are ready to be synchronized and the status is shown as **Queued**.

   Note:
   The synchronization utility takes sometime to synchronize a location record. Please wait till a synchronization operation completes before you proceed to the next step in the synchronization utility. Don't select **Update** as synchronization at this stage is incomplete. The synchronization process shows anomalies if a record is invalid in the Anomaly column of the Related list.

8. Select **Apply & Next**.

   Note:
   The synchronization process is executed as per the proposed operation. Wait till a synchronization operation completes before you proceed to the next step in the synchronization utility. Don't select **Update** as synchronization at this stage is incomplete. A synchronization operation must be complete before starting a new one.

9. **Optional:** Proceed with **Type** synchronization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Indoor Mapping places that aren't linked to Workplace Service Delivery spaces are ignored from the synchronization process. This step ensures that all Indoor Mapping place types are linked to appropriate Workplace Service Delivery spaces.

- By default, new location **Types** are linked to **Miscellaneous**.
- In the Related List, select the Operation column, and make inline edits.
- Right-click and selecting **Link**, **Ignore**, or **Keep** to change the proposed operation.

10. Select **Apply & Next**.

> **Note:**
> The synchronization process is executed as per the proposed operation. Wait till a synchronization operation completes before you proceed to the next step in the synchronization utility. Don't select **Update** as synchronization at this stage is incomplete. A synchronization operation must be complete before starting a new one.

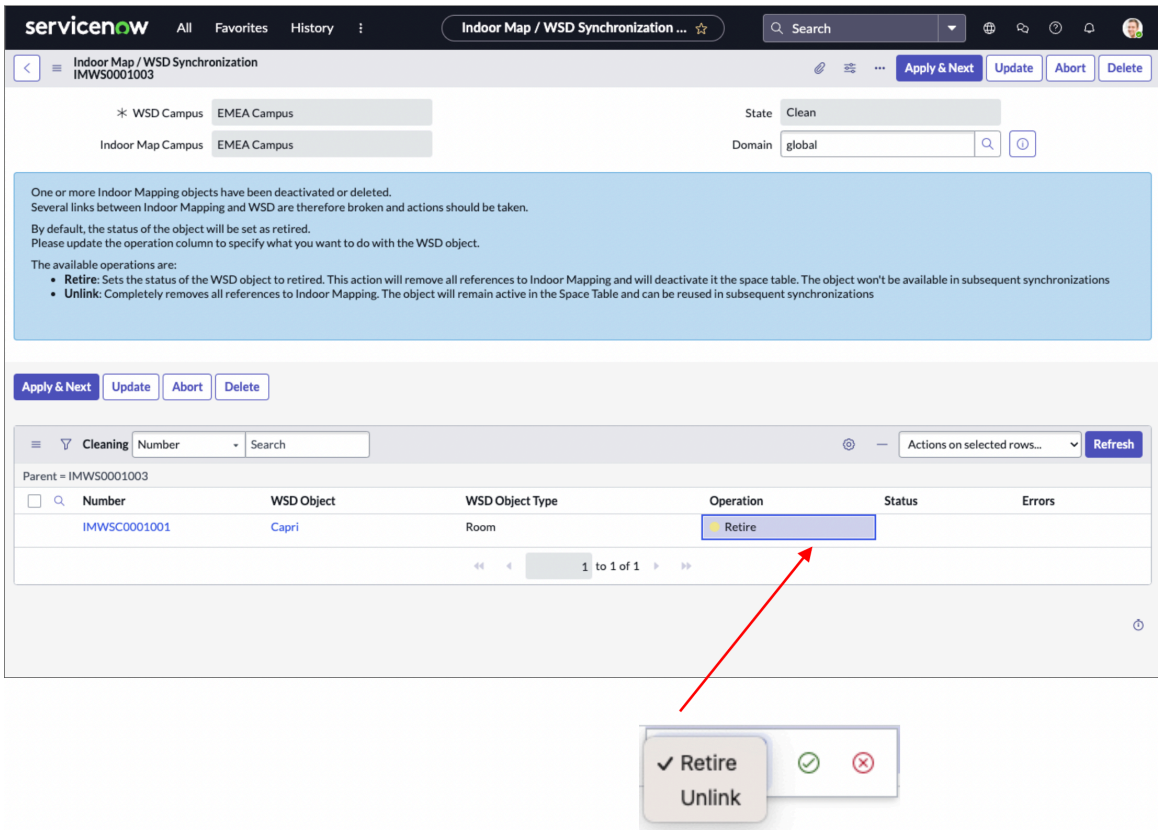
11. **Optional:** The synchronization utility shows the **Updated Space Type on Link or Keep?** option.

    (Optional) This option prevents overwriting location records that are already synchronized.

    For example, a place type (Auditorium) in Indoor Mapping is linked to a **Miscellaneous** Workplace Service Delivery Space Type. If this space type is later changed to a Meeting room in Workplace Service Delivery, update this location record by selecting **Updated Space Type on Link or Keep?**. This prevents overwriting the location records later on in the synchronization process when **Link** and **Keep** operations are selected. A corresponding Workplace Service Delivery location is only added in Indoor Mapping when **Create** option is selected.

12. The synchronization utility state moves to **Space** synchronization.

Indoor Map / CMN Location Synchronization



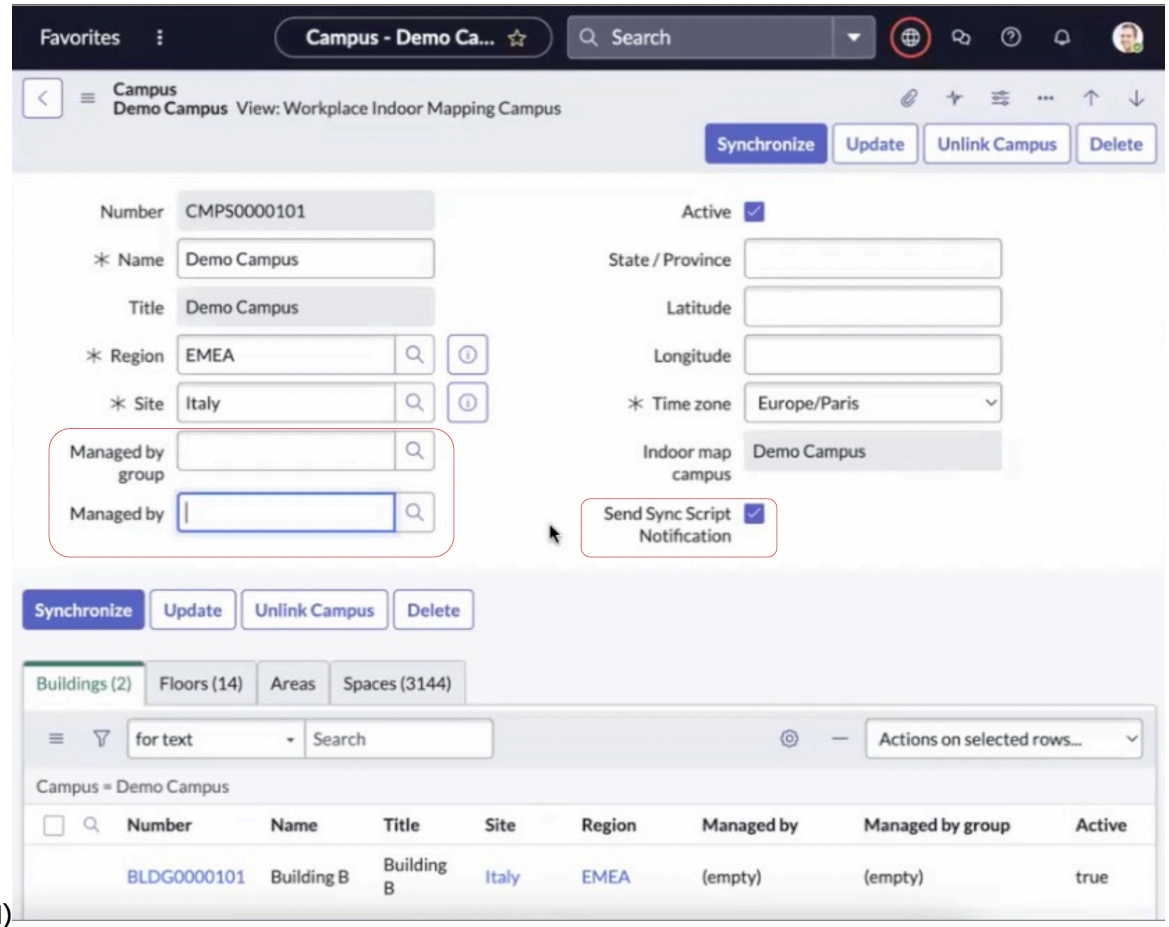
WSD Campus	Name of the Workplace Service Delivery campus.
Indoor Map Campus	Name of the Indoor Mapping campus is selected by default.
State	Spaces

13. Proceed with the suggested operations **Link**, **Create**, **Ignore**, or **Keep**.
14. Select **Apply & Next**.

> **Note:**
> The synchronization process is executed as per the proposed operation. The **Remaining operations** field shows the progress of synchronization. Wait till an operation completes. Select **Refresh** on the Related lists to get the synchronized status of a record.
>
> A synchronization operation must be complete before starting a new one. Don't select **Update** as synchronization at this stage is incomplete.

15. **Optional:** If any updates or changes are made to Indoor Mapping location or map data objects in the Map studio after a location record is already synchronized, a **Cleaning** step appears in the Synchronization utility wizard as your first step.
    Location record that is deleted or updated in Indoor Mapping Map studio after a locations is synchronized are shown for you to take appropriate action. By default, the **Retire** operation is proposed. It can be changed an **Unlink** operation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



16. When all location records are synchronized in a campus, the synchronization **State** moves to **Complete**.
17. Enable the Default view in the Indoor Mapping Map studio.

> **Note:**
> Enabling the default view in Indoor Mapping is a mandatory step. The Default view is required to render the map in Workplace Service Delivery. For more information about Default view, see Edit with view editor.

18. **Optional:** Configure notifications to be sent to workplace users every time a change or update is made to synchronized location records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional)

a. Enable notifications on the Workplace Core Campus Table.

b. Navigate to **All** > **Workplace Core** > **Administration** > **Campuses**.

c. On the campus page, select the gear settings icon ( ).

d. In the Personalized list columns, select **Send Sync Script Notification** and add it to the Selected column.

e. Select **Ok**.

f. On the campus page, from the list of campuses, select a campus.

g. In the **Managed by group** field, select the lookup list icon ( ) to search for a workplace group and add the group.

h. In **Managed by** field, select the lookup list icon ( ) to search for a workplace user and add the workplace user.

i. Select the **Send sync script notification** checkbox.
Workplace users are notified daily whenever a location record is updated and when unsynchronized data is detected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

19. Launch the synchronize utility to update location records with the latest changes.

    When changes are done in Indoor Mapping Map Studio, updated locations and map objects are not automatically synchronized with Workplace Service Delivery Spaces. It is necessary to manually run the Synchronization utility.

    Enable the **Synchronize** and **Unlink campus** on a Workplace Service Delivery campus.

    a. Navigate to **All** > **Workplace Core** > **Space Administration** > **Campuses**.

    b. Select a campus from the list of campuses.
    For example, campus 501.

    c. On the Campus form details page, select the additional actions menu icon ( ).

    d. Select **View** > **Workplace Indoor Mapping** campus.

    e. Select the time zone of your campus.

    f. Add the Indoor Mapping campus name to the Indoor Mapping campus field.

    g. Select **Save** to link the WSD Campus and Indoor Mapping Campus.

    h. After saving, the following buttons are available:

    - **Synchronize**: Option to navigate to the Indoor Map/WSD synchronizations page.
    - **Unlink Campus**: Option to remove the link or mapping between Workplace Service Delivery campus and Indoor Mapping campus. The location remains active in Workplace Core and can be reused in subsequent synchronizations.

      The **Unlink Campus** tab is available after the synchronization is complete and the Indoor Mapping map object is linked to WSD locations indicating that the linking is complete. Unlinking a campus unlinks all the buildings associated with a campus. Unlinking a building unlinks all the floors and spaces associated with a building. Unlinking a floor unlinks the spaces associated with a floor.

Synchronize Indoor Mapping with CMN Locations

Create a new CMN Location or synchronize an existing CMN Location with a corresponding Indoor Mapping Place type.

Note:

Synchronize CMN Locations with Indoor Mapping map data objects. Workplace Service Delivery is not installed in your instance in this case and you have CMN location types that you want to synchronize with Indoor Mapping.

Note:
After installing Indoor Mapping and updating locations in the Map Studio, run the sync script to synchronize it with CMN locations and keep it up-to-date. The synchronization process must be performed every time a new place or location is updated in the Indoor Mapping Map Studio. For more information, see Synchronize Indoor Mapping map data with CMN location.

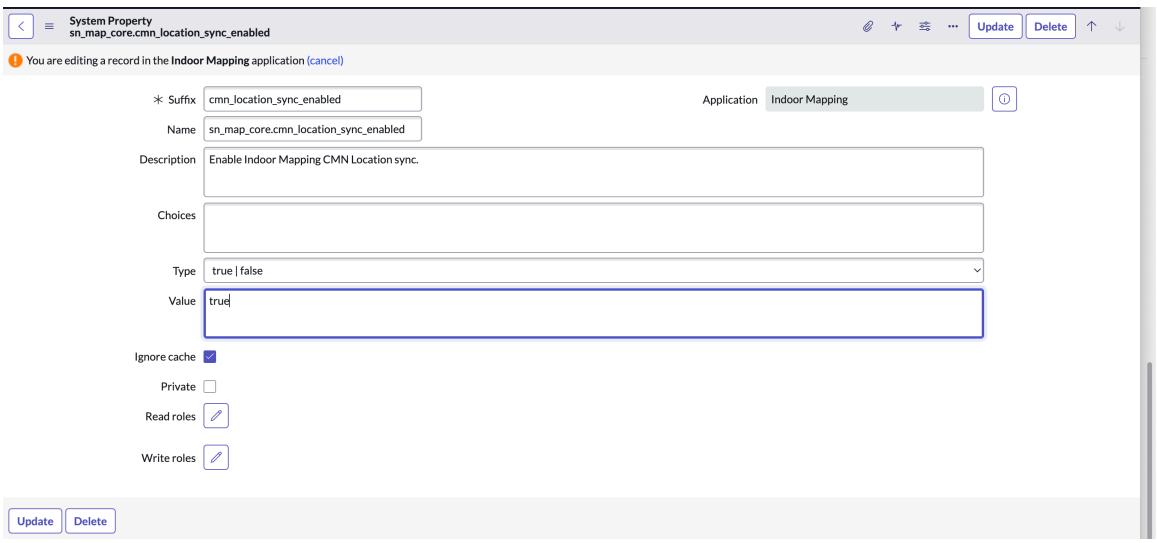
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Ensure that your CMN Locations (cmn_location) have the correct CMN Location types mapping to synchronize with Indoor Mapping campuses, buildings, floors, and places. For example, when you are synchronizing Indoor Mapping buildings, the sync script checks and ensures that the corresponding CMN location has the location type as Building/Structure. If the sync script is unable to find the appropriate CMN location type, then, it gives a suggestion for you to create a new building. Hence, mapping the CMN Locations with appropriate CMN Location types is required.

During the synchronization process all CMN Locations are renamed to match with location names in Indoor Mapping. For example, if your campus name in Indoor Mapping is Demo Campus. Then, the corresponding CMN Campus too will be renamed to Demo Campus in the CMN Location Table.

Consider the following to synchronize CMN locations with Indoor Mapping locations and map data:

Enable the CMN location property



To synchronize CMN Location types with Indoor Mapping, enable the system property **sn_map_core.cmn_location_sync_enabled**.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **sys_properties.list**.
2. In the System Properties page, search for **cmn** in the **Name** column.
3. Select to open the **sn_map_core.cmn_location_sync_enabled** property.

Default value of this property is **true**.

Note:
If Workplace Service Delivery is installed in your system, this property should be set to **false**. You can enable this property (if it is set to false and if Workplace Service Delivery is not installed) to synchronize CMN locations and location types with Indoor Mapping map data.

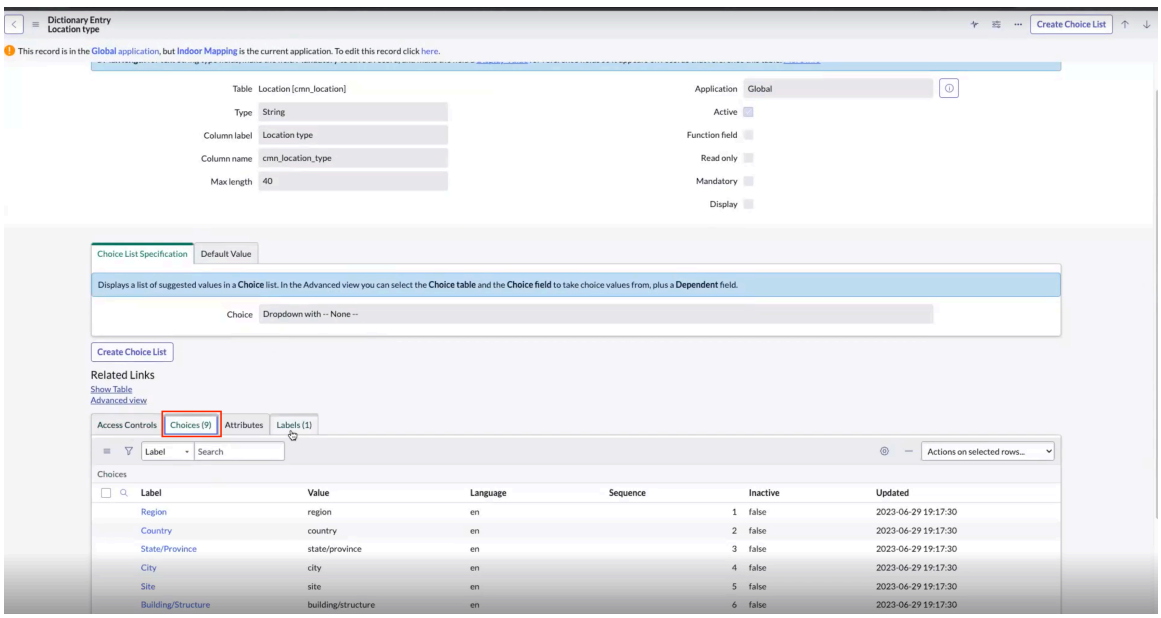
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add CMN locations and map it to Indoor Mapping Place types

CMN Locations types are not available by default in the Indoor Mapping Place types table. Associate or map an existing CMN Location type in your instance with a corresponding CMN Location Type column in the Indoor Mapping Place Types table. When CMN Location types are not available, create a CMN location type to associate it with a Indoor Mapping Place type.

Before you begin

Synchronization utility looks for a corresponding CMN location type and synchronizes it with a Indoor Mapping place type. For example: Indoor Mapping Place type **Desks** is mapped with CMN Location type **Desks**.



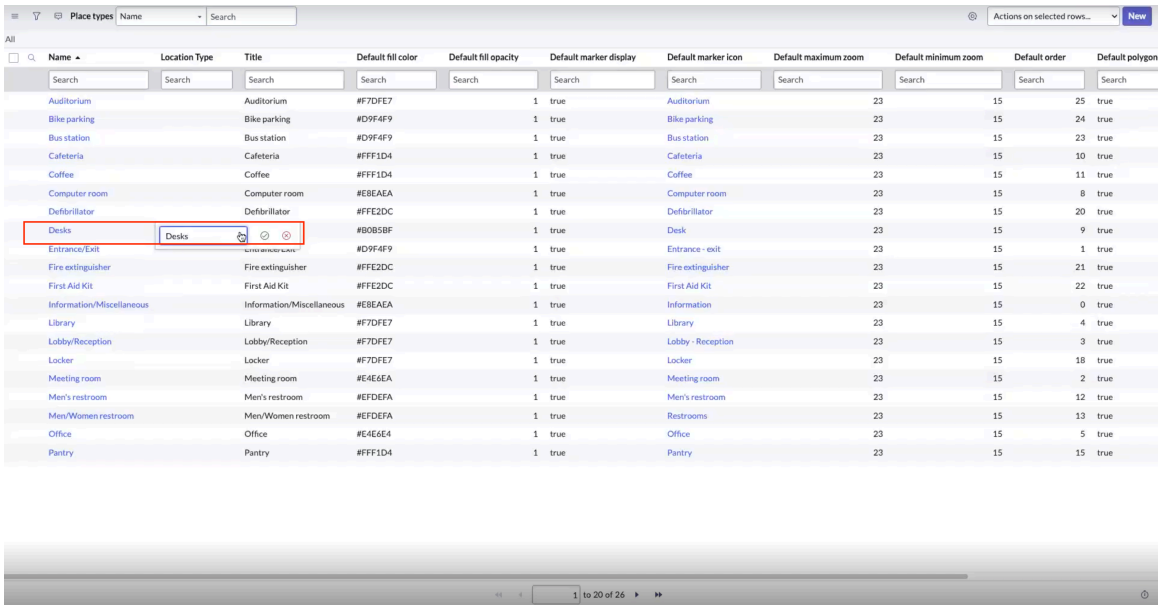
Note:
In case of Indoor Mapping, all map objects like campus, building, floor, and Places have separate tables. But in case of CMN location, there's only one table for Campus, buildings, floors and Location place types. The Parent column in CMN location table contains the hierarchy of campus, buildings, floors and so on. All map objects in the CMN location table have a parent location column and a child location according to which the locations are created in the Locations table [cmn_location].

Role required: admin

Procedure

1. Navigate to **All** > **System Definitions** > **Tables**.
2. Select or search for the **Locations** (cmn_location) table.
3. In the Columns related list, select **Location type**.

   The Location type table is displayed.
4. Add a location in the Location type table for a CMN location.
   The locations types are used in the CMN Location type column of Indoor Mapping Place types table. This is a mandatory step as CMN location types are not available by default in the Indoor Mapping Place types table.
5. Click the **Choices** column to create corresponding Indoor Mapping Place types in the CMN location table.
   For example, Place types of Desks, Meeting rooms and so on.

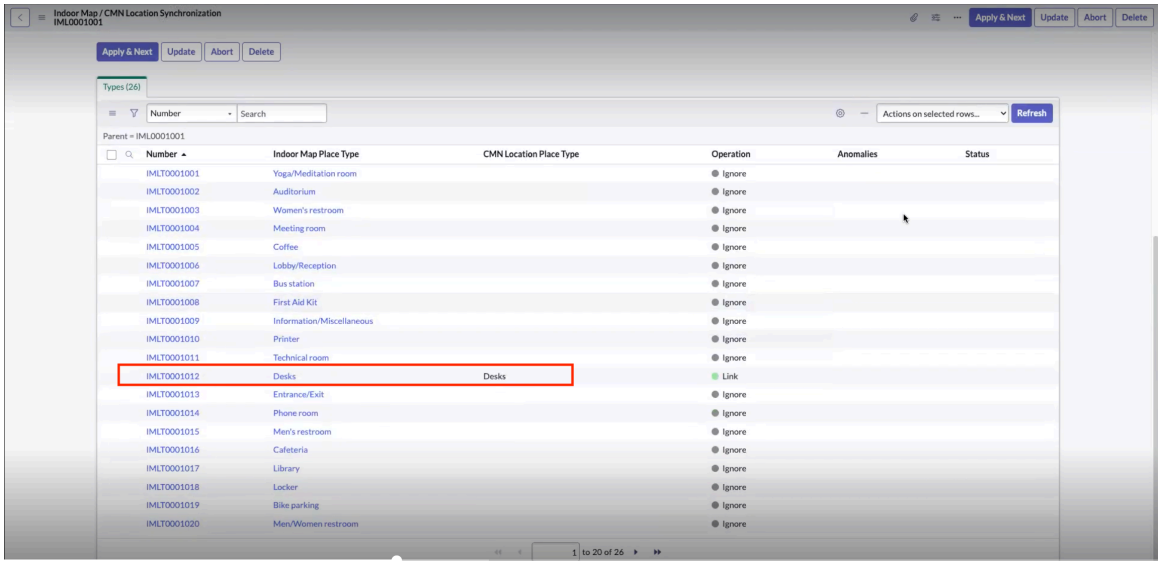


© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select the **Inset a row option** in the **Label** column and add a CMN location place type (for example, Desks).
7. Make inline edits and save the record.
8. To map the CMN location types (places, see step 6) with Indoor Mapping Place Types, change the Application scope to Global.
9. Select **Indoor Mapping**.

10. Navigate to the **All** > **Indoor Mapping** > **Place types** table.
11. Select the personalize list icon ( ) and move **Location type** to the Selected list column.
12. Double click any row to make inline edits in the Location Type (cmn_location_type) column and add a CMN location to match corresponding Indoor Mapping place types.

    For example, add place types of **Desks**.



> **Note:**
> The place type (Desks) was added in the CMN locations table (cmn_locations) Choices column in step 6.

13. Save the record after making inline edits.

    This step should be done manually every time you want to add a corresponding Indoor Mapping place types and map it with a CMN location place types. The synchronization script maps the CMN locations with relevant Indoor Mapping places. If the CMN location types are not added, the synchronization script shows the **CMN Location Type** column as empty as it is unable to find a corresponding CMN location place type for Indoor Mapping places.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

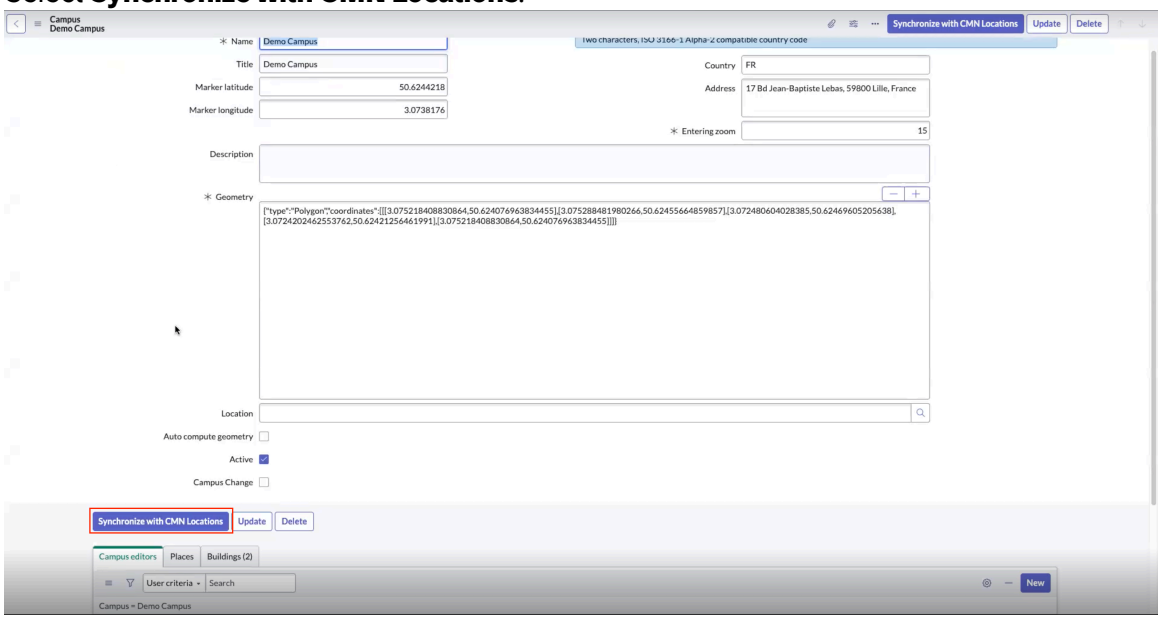
Note:
Indoor Mapping Outdoor places (for example, cafeteria, park, and so on) are linked directly to a campus and not to a floor. While synchronizing the CMN locations, the outdoor places are also synchronized.

Result
The CMN location types are added and ready to be mapped with corresponding Indoor Mapping places.

Synchronize Indoor Mapping map data with CMN location

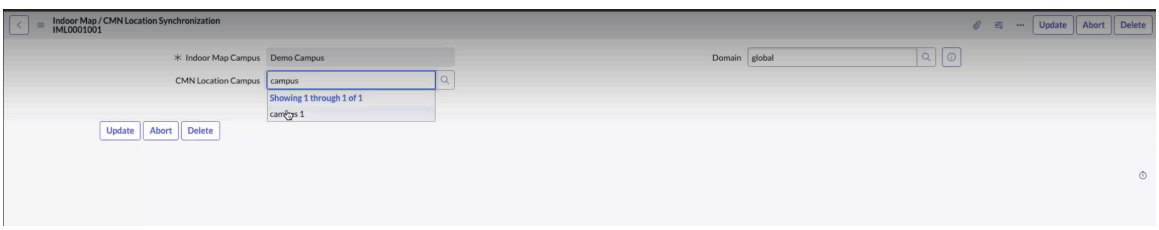
Synchronize the CMN Locations and Location place types with Indoor Mapping map data, places, and place types.

Before you begin
Role required: admin



Procedure
1. Make sure that you have configured Indoor Mapping locations, floor plan, and map object:
   - Add campus, building, and floors in Map studio. For more information, see Create a campus with buildings and floors.
   - Add floor plan to a floor. For more information, see and Manage CAD source files.
   - Add places in Map studio. For more information, see Manage places
   - Enable the Default view in the Indoor Mapping Map studio. In the Indoor Mapping select **View editor** > **Default**. Select **All content**.

     Note:
     Enabling the default view in Indoor Mapping is a mandatory step. The Default view is required to render the floor maps in Workplace Service Delivery. For more information, see Edit with view editor.



2. Navigate to **Indoor Mapping** > **Campuses**.
3. From the Campus page, select a campus.
   For example: Demo campus

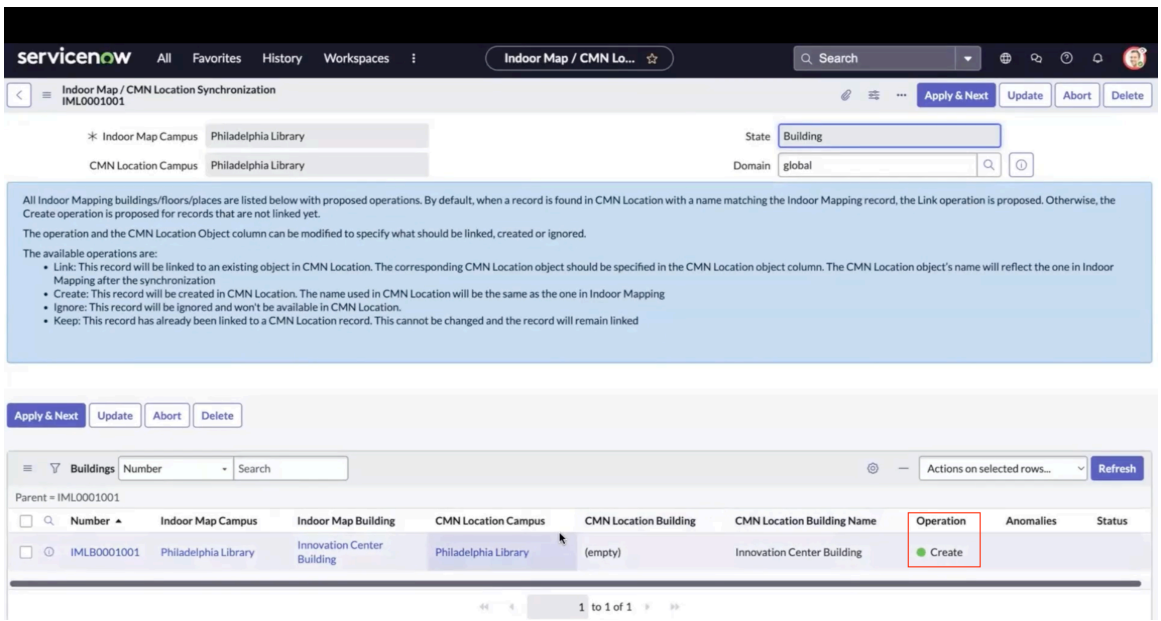
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. To create a CMN campus, navigate to **All** > **CMN Location** and open the open the Location table (cmn_location) and select **New**.
5. On the Location form, fill in the form fields:
   - Name: Name of the campus.
   - Street: Street where the campus is located.
   - City: Address of the campus.
   - State/Province: Stat where the campus resides.
   - Country: Country where the campus is located.
   - Parent: Parent-child hierarchy. For example, Campus is the Parent and Buildings belonging to a Campus will be the child. For more information, see Configure location migration hierarchy.
   - Latitude: Latitude coordinates of a campus location.
   - Longitude: Longitude coordinates of a campus location.
6. Select **Submit**.
7. Select and open the **Demo Campus** that you created in step 3.
8. Select **Synchronize with CMN Locations**.

9. On the synchronization record form, search and select the CMN campus that you created in step 5.

10. Select **Update** to map the Indoor Mapping campus with the CMN campus.
    The location record is updated in the CMN Locations table.
11. **Optional:** Navigate to **All** > **Tables** and search for the synchronization record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



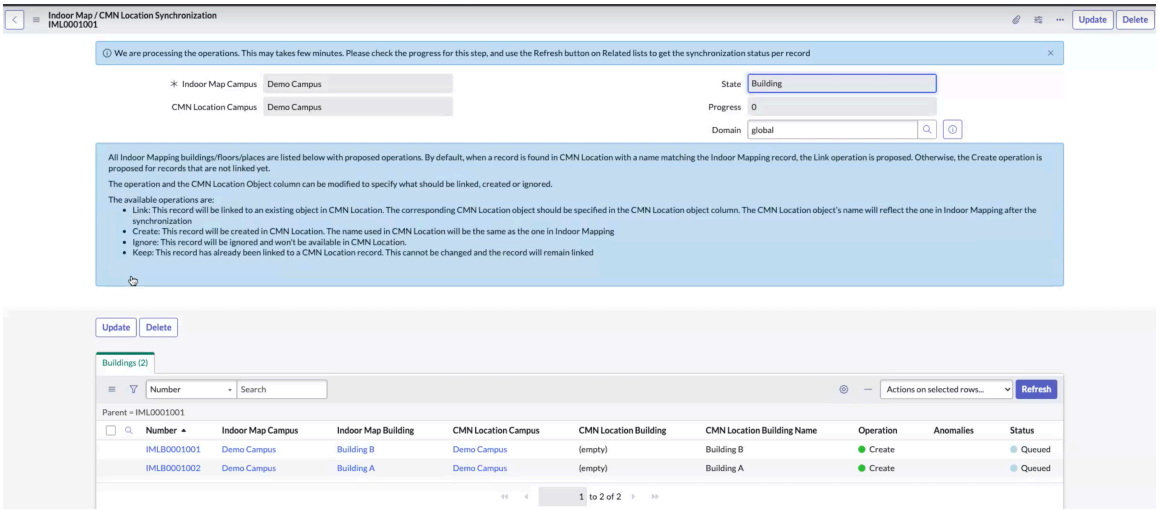
(Optional) Make sure that the Indoor Mapping campus name matches with the CMN Location Campus.

12. Navigate to **Indoor Mapping** > **Campuses**.
13. Select the Indoor Mapping campus that you want to synchronize.
14. Select Indoor Map / CMN Location Synchronization to run the sync script.
15. The synchronization record form synchronizes the campus and moves to synchronize the buildings in a campus and shows the following prefilled data.

Indoor Map / CMN Location Synchronization

Indoor Map Campus	Name of the Indoor Mapping campus is selected by default.
CMN Location Campus	Name of the CMN Location campus is selected by default.
State	Building
Domain	Global

16. From the Building related list, select an operation from the Operation column and right-click to change the suggested operation.



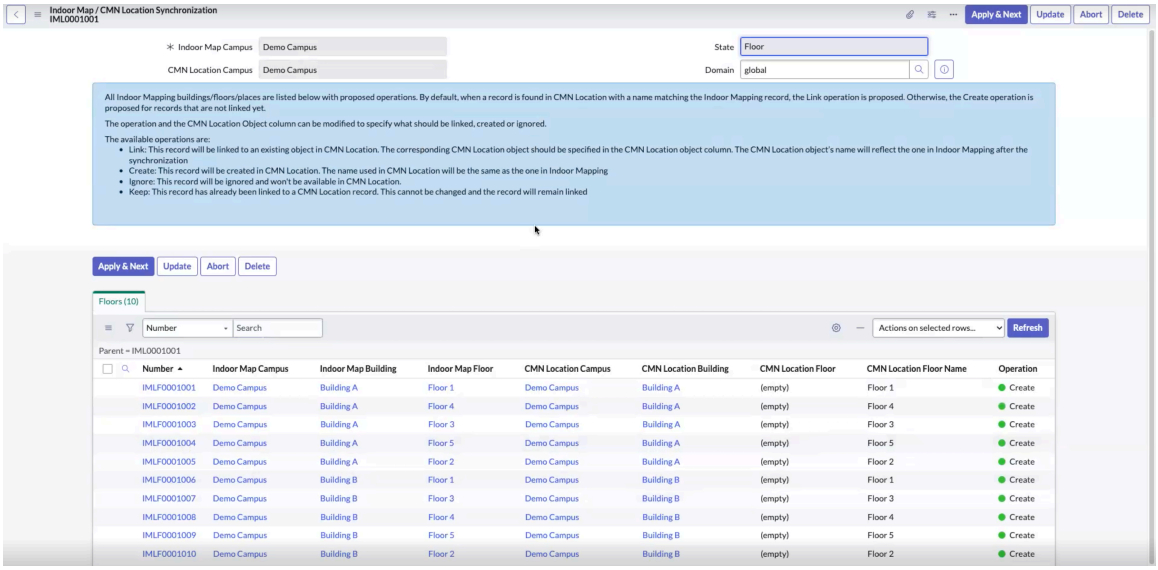
Following options are available:

- **Create**: Indicates that a corresponding CMN building doesn't exist in Indoor Mapping, and a new record should be created. The location name used in CMN location should match with the the location name in Indoor Mapping.
- **Link**: Indicates that a matching record from CMN location is found in Indoor Mapping. Select this option to link the CMN building with Indoor Mapping.
- **Ignore**: Indicates that the CMN location can be ignored and won't be available in Indoor Mapping.
- **Keep**: Indicates that the CMN location is already linked to a corresponding record in Indoor Mapping. This record can't be changed in the synchronization process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

17. Select **Apply & Next**.
18. If you selected **Create** operation in Step 16, a building is created in the CMN location and the status is shown as **Queued**.
    The synchronization is executed according to the selection operation (Create, Link, Keep, or Ignore).

> **Note:**
> The synchronization process is executed and the operation is Queued till it completes. A synchronization operation must complete before starting a new one. Don't select **Update** as synchronization of location records at this stage is incomplete. Wait for the operation to complete or till the page is refreshed with status **Complete**.



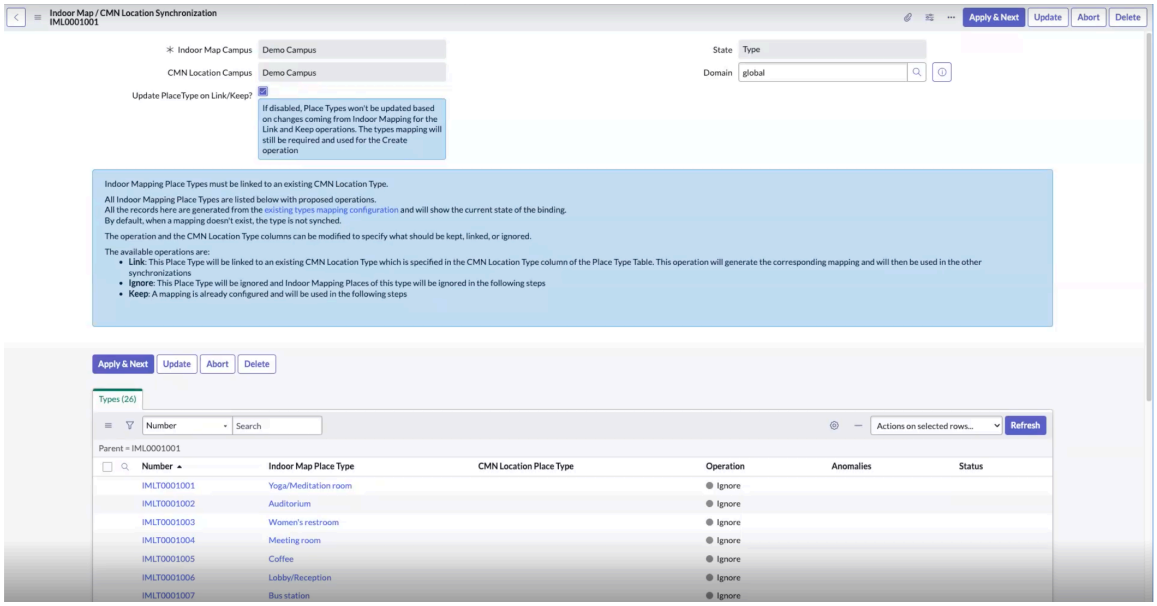
19. **Optional:** Select **Refresh** to refresh the page and see if synchronization is complete for a building.
20. Synchronization state moves to Floors.

Indoor Map / CMN Location Synchronization

Indoor Map Campus	Name of the Indoor Mapping campus is selected by default.
CMN Location Campus	Name of the CMN Location campus is selected by default.
State	Floor
Domain	Global

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

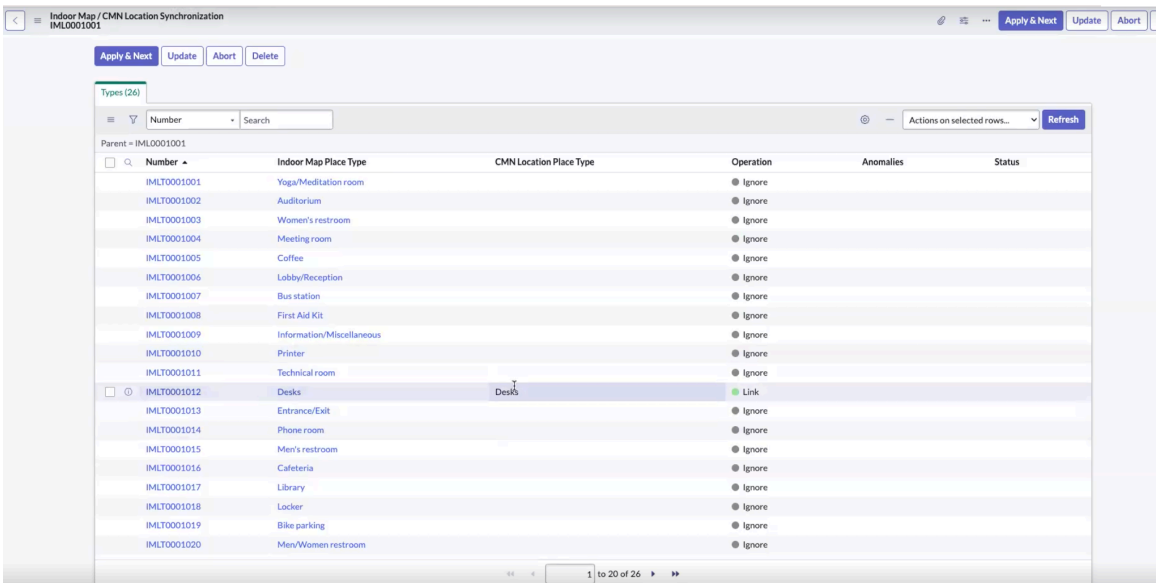
21. Select the Floors that you want to synchronize.
Select the required operation from the proposed operation (Create, Link, Keep, Ignore) from the Related list.
22. Select **Apply & Next**.



> **Note:**
> The synchronization process is executed as per the proposed operation (Create, Link, Keep, or Ignore). Wait till the operation completes and is queued. A synchronization operation must be complete before starting a new one. Don' select **Update** as synchronization at this stage is incomplete.

23. Synchronization state moves to **Type** synchronize Indoor Mapping Place types with CMN Location Place types.

Indoor Map / CMN Location Synchronization



Indoor Map Campus	Name of the Indoor Mapping campus is selected by default.
CMN Location Campus	Name of the CMN Location campus is selected by default.
State	Type
Domain	Global

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select the required operation from the proposed operation (Create, Link, Keep, Ignore) from the Related list.

If the CMN Location Place Type column is empty, create a CMN Location Place Type to map it to corresponding Indoor Mapping Place Types. For more information, see Add CMN locations and map it to Indoor Mapping Place types.

24. Select **Apply & Next**.

> **Note:**
> The synchronization process is executed as per the proposed operation. A synchronization operation must be complete before starting a new one. Don' select **Update** as synchronization at this stage is incomplete. Wait for the operation to complete.

25. The Synchronization state moves to **Places**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Indoor Map / CMN Location Synchronization

Indoor Map Campus	Name of the Indoor Mapping campus is selected by default.
CMN Location Campus	Name of the CMN Location campus is selected by default.
State	Places
Domain	Global

Select the required operation from the proposed operation (Create, Link, Keep, Ignore) from the Related list.

Note:
The synchronization process is executed as per the proposed operation. Wait till the operation completes. **Remaining Operations** shows the progress of the synchronization process. A synchronization operation must be complete before starting a new one. Don' select **Update** as synchronization at this stage is incomplete. Wait for the operation to complete.

26. Synchronization moves to **Complete** when all location records are synchronized.
27. After synchronization is complete, verify that the CMN location Campus, buildings, Floors and Places are synchronized.

    a. To verify that the Place Types are linked, navigate to the Indoor Mapping Campus that you created in step 1 (**Demo campus**) and open the campus form.

    b. Notice that the **Location** field is having the Campus name **Demo Campus**.
    This is a reference to the Campus in CMN location and shows that the Indoor Mapping campus is linked to the CMN location.

    c. The **Unlink Campus** tab is available after the synchronization is complete and the Indoor Mapping map object is linked to the CMN location indicating that the linking is complete.

    Unlinking a campus unlinks all the buildings associated with a campus. Unlinking a building unlinks all the floors and spaces associated with a building. Unlinking a floor unlinks the spaces associated with a floor.

28. When the records are fully synchronized, the CMN Locations table shows the Location source column as Indoor Mapping.

29. **Optional:** To make a synchronization record as favorite, complete the steps.

    a. Select the List controls icon ( ) and select **Create favorite** to easily locate your sync record.

    b. Select a color, if required.

    c. Select **Ok**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

(Optional) For more information about synchronizing Indoor Mapping locations with Workplace Indoor Mapping, see Synchronize Indoor Mapping with Workplace Service Delivery.

30. To add a place or location to an Indoor Mapping building, navigate to **All** > **Indoor Mapping** > **Map Studio**.
    a. Select the building to add a place or location.
    b. Select Manage places.
    c. Select the floor to be displayed on a map.
    d. Click **New point** or **New polygon** to start creating places and new points of interest.

    For more information, see Manage places.

31. After adding the places or locations in Indoor Mapping Map Studio, synchronize the places with CMN locations for a building or campus.

Using enhanced synchronization

Synchronize your workplace locations with your Indoor Mapping data by using the enhanced sync feature.

To use the enhanced sync feature, you must have completed the initial manual sync to link Indoor Mapping and WSD. You must have the sn_wsd_indoor_map.admin role or the sn_wsd_core.workplace_manager role to access the relevant modules.

> **Warning:**
> Ensure that you have a one-to-one relationship between Space Types and Place Types for the bidirectional functionality to work.

To use the enhanced sync feature, see the following steps.

1. Configure the Enhanced Sync properties to define the behavior of the sync operations between Indoor Mapping and Workplace Service Delivery.

   For more information about the Enhanced Sync properties, see Enhanced Sync Properties.

2. Update data in Workplace Core.

   Updates to the location hierarchy objects in Workplace Core are synced to the Indoor Mapping objects based on the sync properties. These objects include the names and titles of Campuses, Buildings, Floors, and Spaces.

   The Place Type attribute is also updated in Indoor Mapping when the Space Type value for a Workplace Space is updated. When a Space in Workplace Core is deleted or changed to retired status, the related Indoor Mapping place is deactivated.

3. Update data in Indoor Mapping Indoor Mapping.

   Updates to the location hierarchy objects in Indoor Mapping are synced to Workplace Core based on the sync properties. These objects include field values like the name and title.

   The Place Types are synced from Indoor Mapping places to Workplace Core. Objects are created in Workplace Core when they're created in Indoor Mapping. For example, if an update to a CAD file introduces three new Indoor Mapping places, the three places are created as Workplace Spaces based on the sync properties.

   Place Properties are synced to the mapped fields in Workplace Core as configured in the Indoor Place Properties Mapping. For example, square feet (SQ FT) or square meters (SQ M)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

calculated from the CAD surface area information. When a Place in Indoor Mapping is deleted or its deactivated, the related Workplace Space is Retired.

4. Review pending sync operations to process or ignore the operations.

   For more information about Enhanced Sync operations, see Manage enhanced sync operations.

5. Review the sync activities for information about the updates made to Indoor Mapping and Workplace Core as part of enhanced sync.

   You can view the sync activities by navigating to **All** > **Workplace Core** > **Enhanced Sync** > **Enhanced Sync Activities**.

   The Enhanced Sync Activities list contains information about sync operations like the timestamp, the impacted table, and the workplace location.

6. Review the sync error logs for informational messages, warnings, or errors.

   (Optional) You can view the sync error logs by navigating to **All** > **Workplace Core** > **Enhanced Sync** > **Enhanced Sync Error Logs**.

Manage enhanced sync operations

Review pending sync operations and decide whether to process or ignore the operation.

Before you begin

Role required: sn_wsd_indoor_map.admin or sn_wsd_core.workplace_manager

Procedure

1. Navigate to **All** > **Workplace Core** > **Enhanced Sync** > **Enhanced Sync Operations**.
2. Filter the list to include the records that you want to process.

   Only the records that are included in the filter are processed. For more information about filtering lists, see Create a filter in List.

   Review the pending operations, which include Workplace Space retirements or Indoor Mapping Place deactivations.

3. Edit the operation based on your requirement.
   Records that have the operation set to **Ignore** aren't processed.
4. Select **Process Pending**.

> **Important:**
> Only the records that are included in the filter are processed.

Result

Pending records that are set to Retire or Deactivate are processed and are synchronized with Indoor Mapping or Workplace Core.

If some records aren't processed, you can review the error logs. You can view the sync error logs by navigating to **All** > **Workplace Core** > **Enhanced Sync** > **Enhanced Sync Error Logs**.

.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Autocad tool

Autocad tool in Indoor Mapping v1.7.0 and earlier versions. It provides the ability to import the CAD file to Map Studio and make few configuration changes to places and file size units.

For information about the Autocad import tool in Indoor Mapping v1.8.0, see Autocad import tool.

Import CAD files to Map Studio

Create a campus, add few buildings and floors to the campus. Upload your CAD floor plan to make configuration changes and preview the CAD design layout.

Before you begin

After making the required place type and file unit size changes, import it to the Map Studio to complete your building configuration. View the updated changes to places and place types in the Map studio (**Manage Workplace** > **Places**).

Role required: map editor, map admin, map editor limited

Procedure

1. Navigate to **All** > **Indoor Mapping** > **Map Studio**.
2. Create a Campus, add few buildings and floors to a campus or select an existing campus.
   For more information, see Create a campus with buildings and floors
3. Navigate to **Manage workplace** > **Floors and Floor plans**.
4. **Optional:** If you want to add a floor, select **Add a floor** option.
5. Select **Upload** to upload the CAD source file.
   For example: demo.dwf
6. Complete the following information:

   a. **File**: Name of the CAD source file.
      By default, the name of the source is the <campus name-floor title-file name>. For example, Lawson-B12.dwg

   b. **Name**: Campus name.

7. Click **Save**.
   A message with a clickable link to review the AutoCAD guidelines is displayed.

   Review the guidelines before uploading the CAD file.
8. Upload process may take sometime to complete depending on the CAD file size.
9. After the upload process is complete, select **Configure**.
   In case of large files, the configuration process may take some time to complete.
10. The AutoCAD source page displays the following options:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Georeference: Option to edit position and adust the location pins for a location.
- Layers: Option to configure layer types that you want to display on the global map.
- Places: Option to configure places that you want to display on the global map.
- Configuration preview: CAD file configuration preview.
- File preview: After making the required changes to Layers and Places, preview your changes on the Configuration preview layout.

11. Select **Edit georeference** to move the location pins and position the floor on the global map (OpenStreetMap).
    If location pins are not positioned, warning message **Not Configured yet** is shown.

    on the form, fill in the fields

Edit georeference

Field	Description
Display	From the drop-down option, select a floor or floors in a building. Enable the toggle option to display buildings and floors on the map. Drag and move around to position the location pins as required.
Align with other sources	Select the campus or map objects from the list. Select **Align** to align your floor plan with the shape and size of a building on the global map.

    a. Click **Save**.

12. To preview the CAD file, select the following options:
    a. **To be imported**: Dynamic preview will change based on the selections that you make.
    b. **Uploaded**: Shows the preview for the uploaded CAD source file.
13. Select the required layers from the **Layers** section that you want to display on the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

A warning message is displayed if there are too many layers on your CAD source file. Select only the required layers.

14. To visualize CAD elements within each layer, select the **Make map full width** option.
15. Configure place type configuration using the **Places** section.
16. Select the Places from the list that you want to display on the map.
    On the form fill in the field

Places

Field	Description
Use polygon from layer	Layer on which the place shapes are located.
Title template	Required title template from the list of available templates.
Place Type	Place type to categorize the place type on the map. For example: Auditorium.

17. Repeat the steps for places that you want to import and display on the map in the Map Studio.
18. **Optional:** Although the CAD import requirements state that polylines need to form closed shapes in order to create polygons, if some polylines are not properly closed in the file, Indoor Mapping offers a property to automatically close these shapes.
19. **Optional:** Enter the maximum distance between two points on the map and the system will close the points.
20. **Optional:** If there is a small disconnect between the first and last point, you can correct this by modifying the sys_property automatically converting lines to polygon while importing a CAD file.

    a. Navigate to **All** > **Indoor Mapping** > **Indoor Mapping properties**.

    b. Search for **sn_map_core.line_to_polygon_max_distance**

    (Optional) This property indicates the maximum distance in centimeters between the first and last point to convert a line to a polygon while importing an AutoCAD file.

    c. Provide a value to this property within a range 1-100.

    (Optional) For example: Set the sn_map_core.line_to_polygon_max_distance to 15.

    d. Import the CAD file again and confirm that both the places are converted to Polygon now.

21. Select **Start Import**.
22. After import is complete, select **Manage Workplace** and select **Overview**.
23. Click on the building that you created.
    Your map is now available on the Map Studio with the CAD changes.
24. **Optional:** On the CAD configuration page menu, select the following options, as required:
    - **Upload new file** to upload a new floor plan.
    - **Download file** to download the CAD file.
    - **Make a map full width** to view the CAD file in full mode.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

25. **Optional:** Select the More actions menu icon (⋮):

    - Edit name: Option to edit the CAD source name. Select **Save** after you update the name.
    - Edit floor: Option to edit source floor. Select **Save** after updating the floor name.
    - Edit file encoding: Option to edit source file encoding. Select a standard encoding format for your file. Select **Save and upload**.
    - Edit file unit: Option to edit the CAD file unit. For example: Inches, feet, centimeters, and so on.
    - Use new AutoCAD tool: Option to switch and navigate to the new Autocad processor configuration page to manage, edit, and optimize the layers, places, and objects in your CAD file.
    - Delete: Option to delete the CAD source file.

    The CAD file is loaded into the Map Studio and the configuration for layers, layer types, and places is created. The application automatically applies the same configurations to subsequent floors that are imported. This is helpful in speeding up configurations of buildings that have multiple floors and where all the CAD files have similar layers. If the CAD layers within the subsequent files have the same layer names as the layers within the initial file, then layers, layer types, and places is pre-filled with the same values as those in the initial file.

Indoor Mapping references

Learn more about the Indoor Mapping basic indoor mapping terms, and the components installed with indoor maps like roles, tables, and properties.

Map components installed with Indoor Mapping

Several types of components are installed with the Indoor Mapping application, including user roles, tables, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this plugin.

Roles installed

User roles installed with Indoor Mapping

Role title [name]	Description	Contains roles
Indoor Mapping administrator sn_map_core.map_admin	• Sets up the map data and objects in Indoor Mapping Map Studio. • Has complete access to the application.	user_criteria_admin Can manage the User Criteria records.
Map editor sn_map_core.map_editor	Sets up maps in the Indoor Mapping Map Studio, imports floor plans, and can manage maps (edit or delete) in the Map Studio.	Not applicable.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

User roles installed with Indoor Mapping (continued)

Role title [name]	Description	Contains roles
Map editor limited sn_map_core.map_editor_limited	Limits the access to a campus and can only view and edit campuses that are assigned to this role. Users with this role cannot view or update all campuses or map objects in Map Studio.	Not applicable
Map Printer sn_map_core.map_printer	Allows users to access the map printing page and print maps.	None

Tables installed

Table components installed with Indoor Mapping

Table	Description
AutoCAD Source [sn_map_core_autocad_source]	Provides the needed data and the user setup for an Autocad file to generate (import) places and layers.
Autocad source block [sn_map_core_autocad_source_block]	Automatically generated after an Autocad file upload, provides the data needed to extract autocad blocks into map places.
Autocad source layer [sn_map_core_autocad_source_layer]	Automatically generated after an Autocad file upload, provides the data needed to extract autocad layers into map layers.
Autocad source text [sn_map_core_autocad_source_text]	Automatically generated after an autocad file upload, provides the data needed to extract autocad texts into map places.
Campus [sn_map_core_campus]	Provides the campus name, address and geometry. A campus contains a set of buildings.
Building [sn_map_core_building]	Provides the building name, campus, address and geometry. A building contains a set of floors.
Floor [sn_map_core_floor]	Provides the floor name and number. A floor contains a set of places.
Font [sn_map_core_floor]	Manage fonts for indoor maps.
Connector [sn_map_core_connector]	Manage connector and connector types to a building like stairs, escalators, elevators, and stairs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Table components installed with Indoor Mapping (continued)

Table	Description
Connector Type [sn_map_core_connector_type]	Organizes connectors into types to provide a common style and information like waiting time and the direction of the connectors, for example: elevator.
Direction Mode sn_map_core_direction_mode	Defines the route preferences, for example: accessible.
Icon [sn_map_core_icon]	Provides an icon to be used on the map for places, buildings, campuses, connectors and direction modes.
Tile [sn_map_core_tile]	Automatically generated after a raster_source is imported, provides the location and image for the tiles generated for the imported layer.
Job [sn_map_core_job]	Manage jobs.
View content [sn_map_core_view_content]	Provides a style and content for a campus displayed in a view type. The style can be provided for the campus, building, place, connector, layer, place type, connector type and layer type.
Layer [sn_map_core_layer]	Manage floor plan layer.
Layer type [sn_map_core_layer_type]	Organizes layers into types to provide a common style.
Place [sn_map_core_place]	Provides the place name and geometry.
Place type [sn_map_core_place_type]	Organizes places into types to provide a common style.
View type [sn_map_core_view_type]	Provides multiple styles for the same campus. It can also be used to display a different content for the same campus.
Entrance []sn_map_core_place_entrance	Provides the locations of the place entry.
Place Marker [sn_map_core_place_marker]	Provides the locations of the place marker

Table components installed with Indoor Mapping (continued)

Table	Description
Node [sn_map_core_node]	Provides the location of a node in the direction graph.
Routes [sn_map_core_route]	Provides a path between two nodes.
Raster source [sn_map_core_raster_source]	Provides the needed data and the user setup to generate (import) an image layer.
Campus editor sn_map_core_m2m_campus_editor	Enables users to edit a campus using user criteria.
Connector to direction mode associations [sn_map_core_m2m_connector_direction_mode]	Manage connectors and direction modes on a building.
Route to direction mode associations [sn_map_core_m2m_route_direction_mode]	Maps routes with relevant direction modes.
View type and Campus to direction mode associations [sn_map_core_m2m_view_type_campus_direction_mode]	Allows a direction mode to be used inside a campus displayed with a view type.
View type reader [sn_map_core_m2m_view_type_reader]	Allows a users to display a view type using a user criteria.
View type and campus to user criteria associations [sn_map_core_m2m_view_type_campus_reader]	Allows users to display a campus with a view type using a user criteria.
Font [sn_map_core_font]	Required fonts for outdoor styles.
Outdoor style [sn_map_core_outdoor_style]	Defines the style of the street map displayed behind the indoor map.
Snapshot sn_map_core_snapshot	Creates snapshot to migrate data across instances.
Place properties mapping sn_map_core_place_properties	Extracts room dimensions from a CAD source file.
CAD Configuration item	Internally used by the Map Studio to save configuration made for an Autocad source.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Table components installed with Indoor Mapping (continued)

Table	Description
[sn_map_core_cad_configuration_item]	
CAD Diff sn_map_core_cad_diff	Internally used by Map Studio to save the changes made to an Autocad source in the CAD Editor.
Indoor Map / WSD Synchronization [sn_wsd_indoor_map_sync]	Synchronizes Indoor Mapping map data with Workplace Service Delivery data.
Indoor Map / WSD Buildings Synchronization [sn_wsd_indoor_map_building_sync]	Synchronizes Indoor Mapping building data with Workplace Core building data.
Indoor Map / WSD Cleaning [sn_wsd_indoor_map_clean_sync]	Table used by the synchronization process between Indoor Mapping and Workplace Service Delivery. Cleaning step is a part of the synchronization process.
Indoor Map / WSD Floors Synchronization [sn_wsd_indoor_map_floor_sync]	Synchronizes Indoor Mapping floor data with Workplace Core floor data.
Indoor Place Properties Mapping [sn_wsd_indoor_map_place_properties_mapping]	Indoor Mapping properties.
Indoor Map / WSD Spaces Synchronization [sn_wsd_indoor_map_space_sync]	Synchronizes Indoor Mapping spaces data with Workplace Core space data.
Indoor Map / WSD Types Synchronization [sn_wsd_indoor_map_type_sync]	Synchronizes Indoor Mapping place types data with Workplace Core space types data.
Indoor Map / CMN Location Buildings Synchronization [sn_map_core_building_sync]	Synchronizes Indoor Mapping building data with CMN location buildings data.
Source [sn_map_core_source]	Parent table for all kind of sources in Indoor Mapping. Sources are files (raster or PNG files or CAD files) that can be imported to create floor plans.
Autocad source [sn_map_core_autocad_source]	Stores Autocad file and data about the file.
Autocad source block [sn_map_core_autocad_source_block]	Internally used by Map Studio. Stores information about block references present in an Autocad file.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Table components installed with Indoor Mapping (continued)

Table	Description
Autocad source layer [sn_map_core_autocad_source_layer]	Internally used by Map Studio. Stores information about layer configuration present in an Autocad file.
Autocad source text [sn_map_core_autocad_source_text]	Internally used by Map Studio. Stores information about text present in an Autocad file.
Print Request [sn_map_core_print_request]	Internally used by the Indoor Mapping application. Stores information about print requests that are raised by users.

Scheduled jobs

Scheduled jobs installed with Indoor Mapping

Scheduled job	Description
Clean old Indoor Mapping tiles (old versions > 3 days)	A schedule job is running every days to purge data that are not relevant anymore in the tiles table. The tiles tables stores data generated from PNG file import process. When a new PNG is upload to retrieve an existing one, previous generated tiles are not used anymore and therefore, will be purge by the scheduled job.
Sync script Notification	A notification is sent to the administrator if changes were made to Indoor Mapping map data objects and the synchronization script is not run. The notification reminds the administrator that the data might not be in synchronized and that the synchronization process must be run.

Indoor Mapping terminology

Key terms used in Indoor Mapping.

Terms used in Indoor Mapping

Terms	Descriptions
Blocks	Blocks are an Autocad feature which groups text element of a CAD file together to create blocks for desks, meeting rooms, etc.
Boundary	Represents the limit of a campus or building.
Building	Represents a physical building. A campus may contain multiple buildings. A building can have multiple floors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Terms used in Indoor Mapping (continued)

Terms	Descriptions
	Note: A building must belong to a campus.
Campus	A campus contains a set of buildings and outdoor elements like: • Places that represent outdoor points or place types. For example: bus stop, fire hydrant, visitor gate, and so on. • Layers representing outside elements in buildings. For example: walking paths, trees, park, and so on. • Nodes and routes to represent possible directions in buildings.
Campus (Outdoor)	Campus (outdoor) are the graphic elements (e.g. trees or logos) or Places (e.g. bus stop, restaurant) placed on the world map. Outdoor elements do not depend on a building floor and are displayed.
Connectors	Defines the physical means to change floors (e.g. stairs, escalators, ramps or elevators). Connectors are added on the direction graph nodes.
Connector types	Defines the kind of connectors available in an instance (e.g. ramps, escalators, elevators, etc.). A connector type contains the style (icon) and properties for each connector. New connector types can be created at the instance level.
Directions or Direction graph	Represents a set of connected lines and nodes created in Map Studio to provide Wayfinding on the map.
Direction Modes	Defines multiple modes of directions or means of transportation (for example Pedestrian, Accessible, Bike, Truck etc.). Extra modes can be created at the instance level.
Entrance (Polygons)	Polygon entrances define where the door of a space is located so that the wayfinding engine enters the room accordingly.
Floor	Represents a floor of a particular building.
Floor plan sources	Defines the original data source or file to import in Map Studio in order to create an Indoor Map. It can either be a PNG or DWG/DXF.
Floor controller	Represents a list of floors or buttons to click on to visualize the different building levels.
Georeference	Action of positioning a floor plan at its exact location on the world map.
Indoor mapping application	The Indoor Mapping application is the plugin that must be installed in order to have Map Studio and configure an Indoor Map.
IPS	Indoor Positioning System also known as the technology providing the blue dot on the map.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Terms used in Indoor Mapping (continued)

Terms	Descriptions
Layers	Layers are part of the CAD file and represent the elements of a floor plan (e.g. Pipes, rooms, columns, etc.)
Layer Type	Defines type of layers like walls, columns, heating pipes, and so on. They are defined at the instance level. They are used to categorize the imported elements and to style them (CAD import only).
Map Studio	Map Studio is the tool to create, edit and maintain Indoor Maps.
Marker	A marker is a pin placed on a campus/building/polygon to display the icon and the title.
Name	The name is an admin ID for an imported or created element (e.g. name of a place).
Nodes	Defines points along the direction graph. Nodes are also used to create connectors to change floor.
Outdoor style	Represents the “outside” in between buildings (default, open street map, etc). New outdoor styles can be created at the instance level.
Places	Places refer to any element placed on the map that users will be able to search for. It can be a meeting room, library, park etc. Places are either polygons or points. They can be automatically imported from a CAD file or manually created on Map Studio.
Place Types	Place Types are added to points of interest to categorize and style them with the right icon and color. New Place. Types can be created at the instance level.
Polygon (places)	A polygon is made of a pin and a shape. Polygons are mandatory for meeting rooms to have a shape to color green or red according to the booking status.
Point (places)	A point is a pin placed on the map that does not have a shape around it.
Raster image file	Supports import of raster PNG image for main floor plan. The raster image provides one raster tile layer for a floor.
Segment or Route	Defines a line between two nodes.
Style editor	To create, configure and style a view.
Text	Text is an AutoCAD feature used to add text elements on a CAD layer. That way, users can create Text elements for desks, meeting rooms and so on.
Tile	The title is what will be displayed on the map to end users (e.g. title of a place).
View	A view is composed of content and style that will be displayed for certain users. Views are configured in the style editor. For example, admins can create an Employee view type and go to

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Terms used in Indoor Mapping (continued)

Terms	Descriptions
	the style editor to decide what they want to display in that view. They can also select the style of these elements for that view.
View types	Provides a name to a specific view (e.g. Employee, maintenance, etc.). View types can be created at the instance level.
Wayfinding	Automated algorithm displaying a path between an origin and a destination. Wayfinding is different from Indoor Positioning and doesn't contain a blue dot.
Zoom Level / Default Zoom	Defines at which Zoom levels certain elements will be displayed or at which Zoom level a campus will open.

Snapshot Impacted tables

Few Indoor Mapping and Workplace Indoor Mapping tables are impacted during the snapshot process when the Indoor Mapping backup data is migrated to Workplace Service Delivery instances.

Indoor Mapping Tables

Note:
After moving the snapshots, the Space Details table [sn_wsd_spcmgmt_space_detail] in Workplace Space Management doesn't get populated with the snapshots. To get the updated Space details table record, manually run the fix script **Load space details table- current state**. Navigate to **All** > **Fix Scripts** and search for Workplace Space Management **Load space details table- current state** fix script. Select **Run Fix Script** tab to run the script and get latest Space Details table [sn_wsd_spcmgmt_space_detail] record.

The following tables are affected during the snapshot process.

Tables
Workplace Indoor Mapping Tables
sn_wsd_core_campus
sn_wsd_core_building
