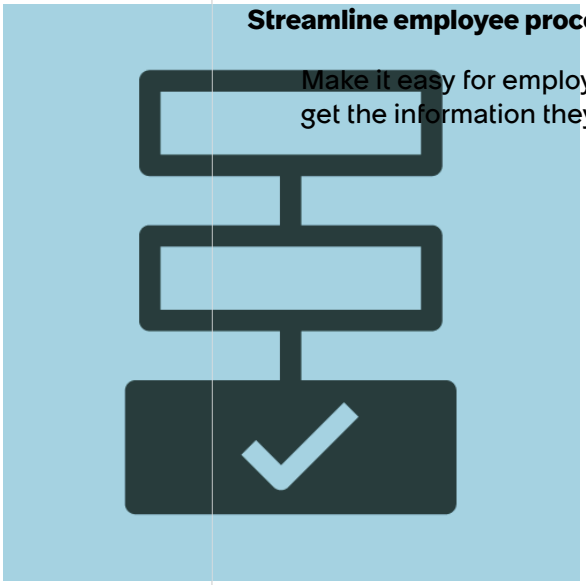
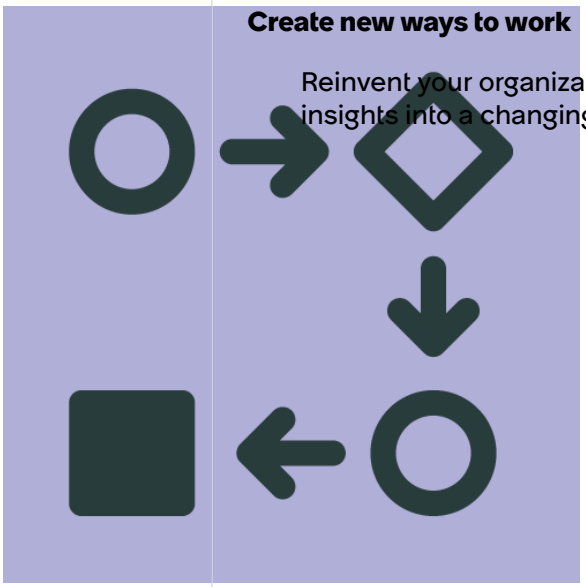
Employee Service Management

Enhance employee experience with seamless digital workflows through ServiceNow® Employee Service Management.



Deliver greater operating efficiencies and *even better enterprise employee experiences* with ServiceNow Employee Workflows

Boost employee productivity and engagement



Employee Service Management facilitates seamless digital workflows, including automated onboarding processes, to empower new hires right from day one. As your employees progress in their journey with your organization, you can offer efficient HR and IT support, simplifying tasks like requesting time off, relocating to another facility, or upgrading equipment. Communication via channels such as Virtual Agent for HR Service Delivery ensures your employees receive timely assistance, whether they are working remotely or on-site. With intuitive workflows, Employee Service Management breaks down departmental silos, fostering collaboration and efficiency. In a dynamic workforce, overcoming logistical hurdles with Employee Service Management ensures a frictionless employee experience and maximizes productivity.

Streamline employee processes

Make it easy for employees to navigate complex processes and get the information they need in their preferred channels.

Create new ways to work

Reinvent your organization to increase productivity and gain insights into a changing workforce.

Foster cross-functional collaboration

Provide a unified employee experience across IT, HR, facilities, legal, and other organizations.

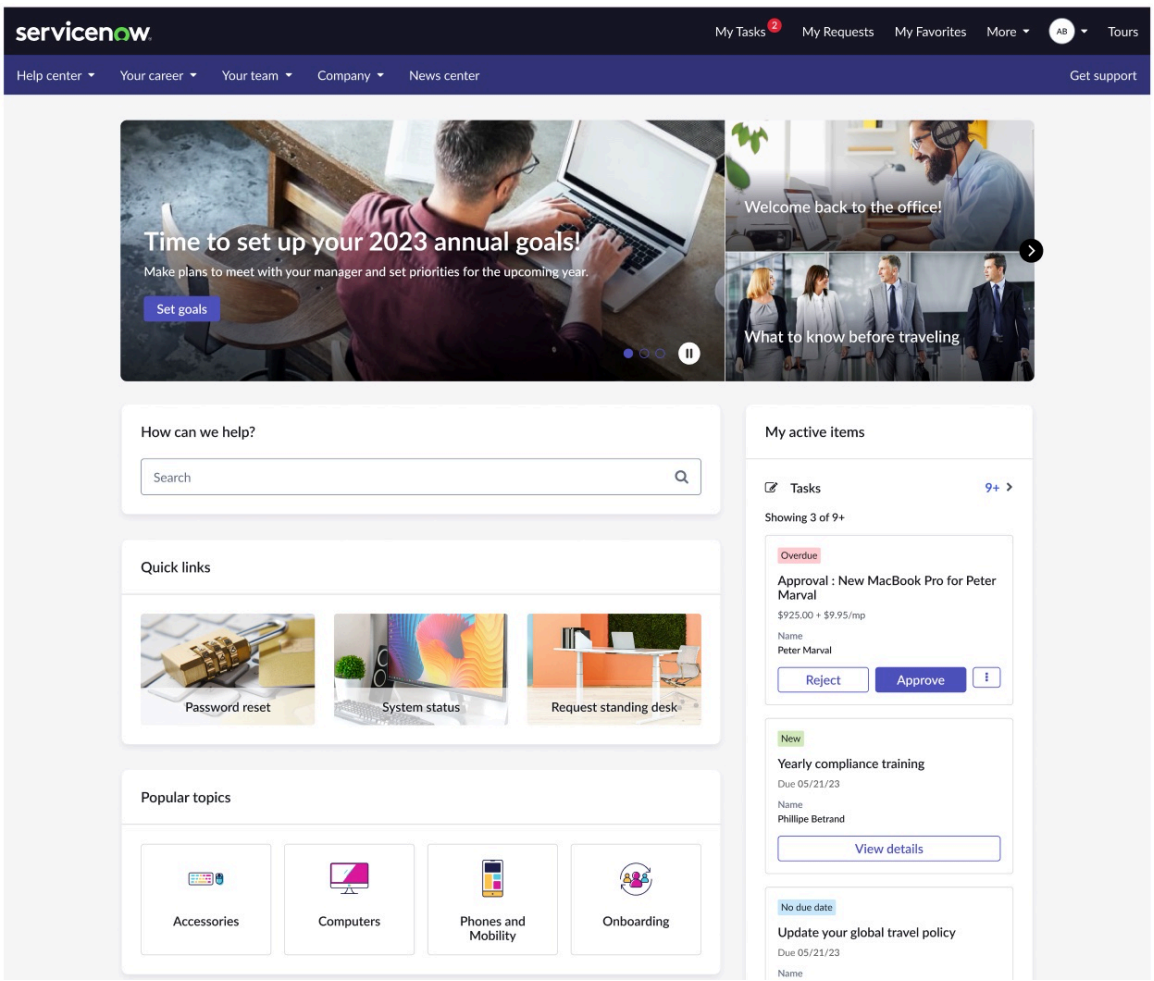
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

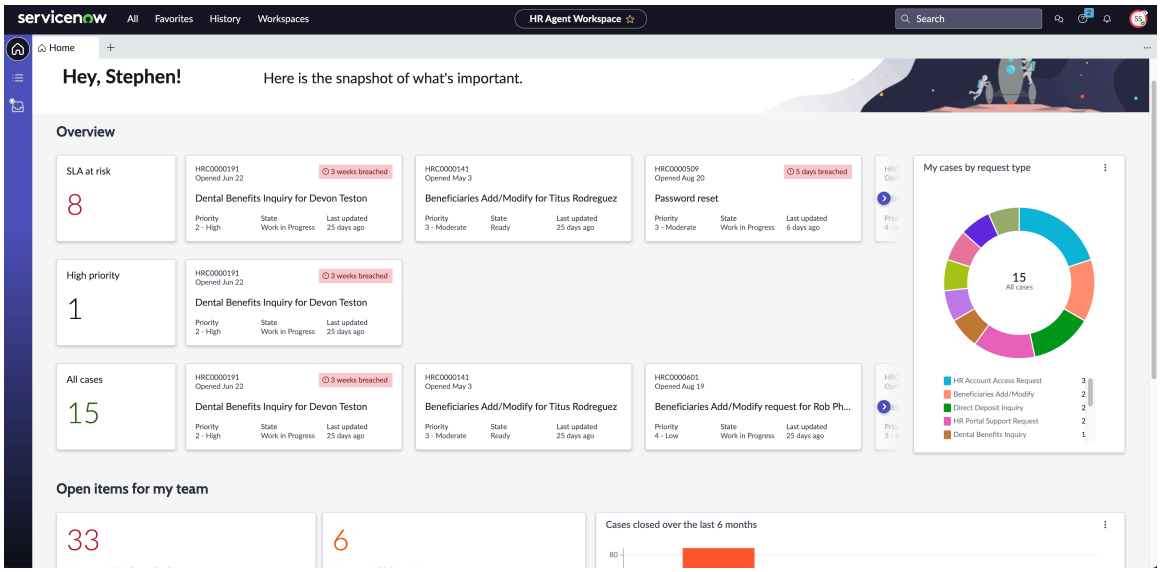
Request legal support and services.



Automate or streamline routine legal requests and focus on higher value work.

Intuitively manage career growth and development

Empower your employees to take charge of their own professional growth and development. Employees can identify their career goals, pick areas for improvement, and create personalized growth plans using Talent Development applications.



Streamline employee processes

Streamline employee experiences by implementing efficient workflows that simplify intricate processes such as onboarding, handling location changes, and managing to-do lists. Utilizing tools like Employee Center, ServiceNow for ServiceNow, or the Now® Mobile, ensure that your employees have seamless access to vital information and services, regardless of their location or the time of day.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create new ways to work

Embrace adaptive work practices to cater to the evolving demands of your employees. Gain invaluable insights into request volumes, request types, and team workloads. By implementing HR Service Delivery, Workplace Service Delivery, and Universal Request, you can ensure the swift and efficient resolution of employee requests and inquiries. Employees can conveniently access these capabilities at any time through the Now Mobile for HR Service Delivery.

Foster cross-functional collaboration

Utilize Employee Service Management with other features of the ServiceNow AI Platform to optimize your employee experience. By integrating Service Portal, Walk-up Experience, and Service Catalog with Employee Service Management, you can provide your employees with streamlined interactions and easily accessible services across departments. When you supplement other communication channels with Knowledge Management knowledge bases and articles, and provide answers to your employees quickly with Virtual Agent, your employees can get the help that they need any time.

Manage a safe and efficient workplace

Prioritize the health and safety of your employees with the Safe Workplace suite. Establish trust with your employees through proactive communication. Provide employees with self-service reservations using distanced floor plans. You can also gauge employee readiness to return to the workplace, monitor personal protective equipment needs, and make informed decisions about workplace reopening.

Employee Journey Management  Enable managers and organizations to drive employee engagement and productivity	Alumni Service Center  Provide former employees, volunteers, and contractors with access to services and resources	Manager Hub  Enable managers to self-service and proactively engage with their team
Agent Workspace  Enable agents to interact with employees, respond to inquiries, and resolve issues quickly.	Case and Knowledge Management  Standardize the documentation, interaction, and fulfillment of employee inquiries and requests	Extend HR Service Delivery capabilities  Integrate with third-party systems

HR Service Delivery overview

The ServiceNow® HR Service Delivery application improves the employee service experience by automating HR interactions and providing a single platform for all HR services.

HR Service Delivery applications

Depending on the HR Service Delivery package you choose, deploy one or more of the following applications.

Case and Knowledge Management

Standardize the documentation, interaction, and fulfillment of employee inquiries and requests, improving HR efficiency and services over time.

Employee Center with HR Service Delivery

Provide a single, unified portal for employees to get all the information, services, and help that they need.

> **Note:**
> Employee Center is also available as a standalone application.

Lifecyle events for enterprise

Automate onboarding and other employee lifecycle events that span multiple departments, improving employee satisfaction and efficiency across HR and other departments.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Supporting applications

You can also deploy the following supporting applications.

- Document Templates to automate and simplify the process of filling, signing, and reviewing a document online.
- Employee Document Management to secure, retain, access, and purge employee files with ease using paperless document management. A separate subscription is required.
- Employee Experience Pack to guide you through the HR processes that require configuration.
- Enterprise Service Management Integrations Framework to provide a consistent way of building integrations for common use cases such as pulling employee profiles and tasks from third-party application to a ServiceNow application, and pushing data from a ServiceNow application into a third-party application.
- HR Predictive Intelligence Workbench to guide you through your predictive machine learning implementation to create intelligent HR processes.
- HR Service Delivery Agent Workspace (Classic) to interact with employees, respond to inquiries, and resolve issues quickly as an HR agent.
- HR Success Dashboard indicators to help the HR leadership measure the performance of the HR implementations, using different base system or customised KPIs.
- Listening Posts to send pulse surveys for capturing employee feedback.
- Learning Core to build a integrated learning content repository.
- Manager Hub to increase managers self-service and proactive engagement with teams, and help them grow as leaders.
- Machine learning solutions for HR Service Delivery to help in auto determining assignment groups and services for HR cases, auto creating cases from emails, and discovering knowledge articles that help in faster resolution of cases and tasks.
- Performance Analytics for HR Service Delivery to reduce HR inefficiencies by reporting and analyzing service delivery performance and quality. A separate subscription is required.
- Virtual Agent for HR Service Delivery to enable automated chats for employees requesting HR services.

Mobile applications

You can use the following mobile apps with HR Service Delivery.

HR Service Delivery for mobile: You can let your employees view HR requests, request help, complete HR tasks, receive targeted mobile content and push notifications, chat with a virtual agent, and more using the Now Mobile app for HR Service Delivery.

Domain separation and HR Service Delivery

Domain separation separates data, processes, and administrative tasks into logical groupings called domains. You can then control several aspects of this separation, including which users can see and access data. For more information, see Domain Separation and HR Service Delivery.

Quick start tests for HR Service Delivery

Copy and customize quick start tests to validate that your instance works after you make any configuration changes, such as after applying an upgrade or developing an application. For more information, see Quick start tests for HR Service Delivery.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fields Containing Possibly Sensitive, Personal, or Personally Identifiable Information

Customers are responsible for ensuring their use of HR Service Delivery application is compliant with applicable data protection laws and regulations. Customers using the HR Service Delivery application should assess fields that may contain sensitive, personal, or personally identifiable information, the extent of which is solely determined by customers. Once installed, customers are able to access table definitions within their instance to review fields used by HR Service Delivery application. This can be done by navigating to "System Definition > Tables" and filtering "Name" "starts with" "sn_hr_".

COE security policies are a way to easily restrict access to different COEs via configuration. The underlying COE security policy implementations are ServiceNow ACLs.

Case and Knowledge Management

The Case and Knowledge Management application allows you to standardize the documentation, interaction, and fulfillment of employee inquiries and requests, which helps to improve HR efficiency and services over time.

Use and Explore	Install	Configure and Administer
Explore HR Case and Knowledge Management features and see how agents use them.	Activate HR Case and Knowledge Management.	Configure and administer HR Case and Knowledge Management features.

Activate Case and Knowledge Management

You can activate Human Resources Scoped App: Core [com.sn_hr_core] if you have the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin

Role required: admin

About this task

Human Resources Scoped App: Core allows you to standardize the documentation, interaction, and fulfillment of employee inquiries and requests.

It activates these related plugins if they are not already active.

Plugins for Human Resources Scoped App: Core

Plugin	Description
Human Resources Scoped App: Security [com.snc.hr.scoped_security]	Provides HR security.
Human Resources Scoped App: Integrations [com.sn_hr_integrations]	Provides HR Integrations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Components installed with Case and Knowledge Management

Several types of components install with the activation of the Case and Knowledge Management plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Note:
The Human Resources Scoped app: Core [com.sn_hr_core] plugin activates the sn_hr_core.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only HR admin user by requiring a minimum number (default is two) of active users with those admin roles.

Roles installed

Roles installed with Case and Knowledge Management

Role title [name]	Description	Contains roles
Case and Knowledge Management administrator [sn_hr_core.admin]	Can access and configure Case and Knowledge Management.	• approval_admin • assignment_rule_admin • knowledge_manager • link_generator_writer • schedule_admin • sn_cd.content_admin • sn_hr_core.content_writer • sn_hr_core.manager • sn_hr_integrations.admin • sn_hr_le.admin

	Note: This role also grants write access to the Users (sys_user) table.	
HR report creator [sn_hr_core.report_creator]	Allows HR agents with the sn_hr_core.basic role to access the HR case [sn_hr_core_case] and task [sn_hr_core_task] tables to create reports.	
HR secure information reader [sn_hr_core.secure_info_reader]	Grants access to read all HR cases, read basic user profile information, read secure user information.	sn_hr_core.profile_reader
HR secure information writer [sn_hr_core.secure_info_writer]	Grants access to write all HR cases, write basic user profile information, write secure user information.	• sn_hr_core.profile_writer • sn_hr_core.secure_info_reader

You can assign these roles to the appropriate roles, groups, or users in your application.

- To assign a role to another role, see Add a role to an existing role.
- To assign a role to a group, see Assign a role to a group.
- To assign a role to a user, see Assign a role to a user.

For further information on user administration and how to manage users, see User administration.

Scheduled jobs installed

Scheduled jobs installed with Case and Knowledge Management

Scheduled job	Description
Auto-close case	Automatically closes HR cases based on the configuration of the HR service for service activity and lifecycle event fulfillment types. This scheduled job runs daily.
Bulk case creation	Creates bulk cases. This scheduled job runs every six hours.
HR Daily Job	Sends reminder notifications to users based on certain HR task parameters. This scheduled job runs daily.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scheduled jobs installed with Case and Knowledge Management (continued)

Scheduled job	Description
Migrate HR e-signature tasks	Migrates HR task templates and open HR tasks to the new HR task type for e-signature. Also disables the old HR task types for credential, e-signature, and sign document. This scheduled job runs on an on-demand basis.
Update Client Roles	Updates role assignments for HR profiles that are beginning or ending their employment based on the HR condition table. This scheduled job runs daily. **Note:** The base system assigns the HR Admin (hradmin) user to this scheduled job. If you delete the HR Admin user, ensure that you assign another user with the HR admin (sn_hr_core.admin) role to this scheduled job.

For further information on scheduled jobs and how to use them, see Scheduled jobs.

Tables installed

The * next to a table indicates it was deprecated for customers taking the Rome release to support a new data model. Existing customers using the legacy COEs and tables are not affected. These tables have been replaced by the Employee Relations feature. For more information, see Employee Relations cases.

Tables installed with Case and Knowledge Management

Table	Description
*Allegation [sn_hr_er_allegation]	Contains information about an allegation type and subtype. **Note:** A non-metadata table.
*Allegation Subtype [sn_hr_core_allegation_sub_type]	Metadata table that provides 59 records to the base system. Allegation subtypes further define an allegation. For example: • Allegation type = Discrimination • Allegation subtypes: Age, disability, Race, and so on.
*Allegation Type [sn_hr_core_allegation_type]	Metadata table that provides base system records. Examples are: • Customer Mistreatment • Discrimination • Drugs and Alcohol • Fraud and Theft • Harassment

Tables installed with Case and Knowledge Management (continued)

Table	Description
	• Interpersonal Conflict • Misconduct • Retaliation • Wage and Scheduling Issue • Workplace Violence
*Associated Allegation [sn_hr_er_m2m_allegation_party]	Contains information that associates an allegation to subject of allegations. **Note:** A non-metadata table.
Bank Account [sn_hr_core_profile_bank_account]	Bank account table.
Bulk Case Creation Data [sn_hr_core_bulk_case_creation_data]	Bulk case creation data table.
Bulk Case Creation Run [sn_hr_core_bulk_case_creation_run]	Bulk case creation run table.
Case Restriction Configuration [sn_hr_er_case_restriction]	Extends the COE Security Policy [sn_hr_core_coe_security_policy] table.
Certification and License [sn_hr_core_certification_and_license]	Certification and License table.
Client Role Rule [sn_hr_core_client_role_rule]	Client role rule table.
COE [sn_hr_core_coe]	Center of Excellence (COE) table.
COE Configuration Matching [sn_hr_core_coe_config_matching]	Center of Excellence (COE) configuration matching table.
Compensation [sn_hr_core_compensation]	Compensation table.
Compensation Bonus	Bonus compensation table.

Tables installed with Case and Knowledge Management (continued)

Table	Description
Sn HR Core Config Case Creation Service [sn_hr_core_config_case_creation_service]	Case creation service configuration table.
Sn HR Core Email Content [sn_hr_core_email_content]	Email content table.
Sn HR Core Substitute Approver [sn_hr_core_substitute_approver]	Substitute approver table.
Topic Category [sn_hr_core_topic_category]	Topic category table.
Topic Detail [sn_hr_core_topic_detail]	Topic detail table.
Tuition Reimbursement [sn_hr_core_tuition_reimbursement]	Tuition reimbursement table.
User Fields On Case [sn_hr_core_service_approval_option]	User fields on case table.
Who is covered [sn_hr_core_who_is_covered]	Who is covered table.

For further information on table administration and how to manage data, see Table administration.

HR Administration

Administer the Case and Knowledge Management application to improve HR efficiency and make it easier for employees to get the services they need.

Note:
To use guided setup to help configure HR Service Delivery on your instance, navigate to **HR Administration** > **Guided Setup**. For further information on how to use the guided setup interface, see Using guided setup.

Guided setup for HR Service Delivery

Run the guided setup to complete the relevant tasks for getting started with the HR Scoped application.

Before you begin
Role required: sn_hr_core.ws_admin and sn_hr_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Guided Setup supports domain separation at the global and at the parent or child levels. You can run the guided setup separately for each domain within HR Service Delivery.

To learn more about domain separation, see Domain Separation and HR Service Delivery.

Procedure

1. Navigate to **All** > **HR Adminstration** > **Guided Setup**.
   Alternatively, you can click the **Guided setup** related link in a specific domain in **Workspaces** > **SP Admin Workspace**.

   Note:
   Guided Setup-Legacy allows you to run guided set up at a global domain only. Use the new **Guided Setup** instead.

2. Click **Continue**.
   The HR Guided Setup page appears.
3. Expand any category to view detailed status and related tasks.
   a. Click **Start** to set up each task or activity within a category.
   b. Click **Mark as complete** after you are done with the set up.

HR Guided Setup

Category	Description
HR Users	Set up your HR team's groups, roles and tier escalation definitions to enable where HR cases get delivered in the HR application, set up rules of escalations, and define role assignments. ○ Set up groups and manage members within those groups, and what skills assignments can be handled by those groups. ○ Set up HR roles to control access to functions in the HR application. ○ Set up group's roles. ○ Set up individual user's roles. ○ Set up client role rules for non HR team users to be able to access HR Services. ○ Set up HR tier escalation rules.
HR Company	Set up your company's departments, locations, positions and skills to use within HR application that are generally to be set in a user's profile. ○ Set up departments for user's profiles. ○ Set up locations for offices, and user's profiles. ○ Set up positions for user's profiles. ○ Set up skills for user's profiles in order to route specific HR cases to the correct group or individual.
HR Chat and Email Configuration	Set up your HR notifications, email, and chat settings. ○ Set up HR chat queue so that users can communicate to HR staff via chats. ○ Set up email notifications to define who receives what content when process related changes occur.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Category	Description
	○ Set up email templates used in notifications. ○ Set up email scripts used by templates.
HR Application Configuration	Set up your applications with components that define the operation and available data groupings: ○ Set up criteria to define groups of users based on conditions, allowing for pre defined group actions. ○ Set up Document Templates to define text and formats that can be used for HR application functions such as signed documents and employee verification letters. ○ Set up external links to manage URL based content available to users. ○ Set up properties that adjust runtime behavior of the HR application. ○ Set up relationships between users. ○ Set up surveys to define who receives and what type of information is captured from users during case management.
HR Knowledge Management	Knowledge Management helps you to capture and share ideas, experience, and information that your users collectively possess. Effective use of Knowledge Management improves efficiency, quality of service, and customer satisfaction. Complete the activities in this category to configure your organization's knowledge management process. ○ Set up your knowledge bases to add in HR content. ○ Set up your knowledge articles that serve as your HR content. ○ Set up your knowledge articles as an import to pull in a library of content into articles.
HR Service Catalog	Service catalog helps to present the services that your organization offers to employees. Complete the activities in this category to structure and build the services that the employees can request through the service catalog. ○ Set up service catalog categories to help categorize the HR cases and requests. ○ Set up service catalog items that collect information from users of your application. ○ Set up links between service catalog items and knowledge articles and attachment forms displayed in the service portal.
HR Service Configuration	HR Services are a collection of user selectable Service Catalog items, but they contain behavior options, categorizations, pre-filled templates for HR case management and other attributes. ○ Set up service catalog categories to help categorize the HR cases and requests. ○ Set up HR service definition, including links to Service Catalog Record Producers, Templates, Case Options, and Fulfillment Instructions. ○ Set up Service Options that define case creation behavior options for use in this service. ○ Set up Topic Detail for classifying this service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Category	Description
	○ Set up Topic Category for classifying this service. ○ Set up Service Templates for what fields will get pre filled for a service during a case creation.
HR Service Definitions	HR Service Definitions tables that contain data used by the HR Services. ○ Set up Benefit Providers used by your company. ○ Set up Benefit Types used by your company. ○ Set up Disciplinary Issue Types used by your company. ○ Set up Disciplinary Warning Types used by your company. ○ Set up Operational Report Frequency values used by your company. ○ Set up Operation Report Types used by your company.

4. Click **Complete** after you have finished all the tasks within all categories.

HR properties

HR properties control the behavior of HR Service Delivery.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Properties**.
   Some HR properties are found under **sys_properties.list**.
2. Configure the HR properties, as appropriate.

HR Properties form

Property	Description
sn_hr_core.hr_profile_default_fields	Fields that appear on the Generate HR Profiles page. You can add fields from the sn_hr_core_profile column, but use commas to separate the fields.
sn_hr_core.hr_email	Enter the default email address for general HR inquiries.
sn_hr_core.hr_phone	Enter the default phone number for general HR inquiries.
sn_hr_core.hr_profile_editable_fields	Fields that users can edit themselves about their employee profile.
sn_hr_core.profile.max.tries	The maximum number of attempts allowed before the application exits when creating a user.
sn_hr_core.hr_vip_default_priority	The default priority on cases that the **Opened for** and/or **Subject person** is tagged as a VIP.
sn_hr_core.impersonateCheck	Check **Yes** (true) to prevent any user impersonating another user from viewing HR information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
	Note: Even if the logged in user has HR access and impersonates another HR user with the same access, HR information is not visible.
com.snc.signaturepad.retrieveSignature	Check **Yes** to enable signature retrieval and allowing users to save their digital signatures for reuse. If true, retrieves the latest signature image for a user and show it by default when the user navigates to the signature pad.
sn_hr_core.log	The level of detail for system logs. The valid values are: ○ Info: Least amount of detail ○ Warn: Default ○ Debug: Most amount of detail
sn_hr_core.rollup_work_notes	Check **Yes** to have work notes from a task also appear on the case.
sn_hr_core.duplicate_hr_case_time_num	The number of days that must pass before a duplicate case warning appears when an HR case is created for the same HR service and subject person in HR Agent Workspace. The base system value is three (3) days. For example, if an agent creates an HR case for a General Benefits Inquiry (HR service) for Abel Tuter and another General Benefits case is created in HR Agent Workspace within three days, a message appears notifying the user of a potential duplicate case. A list of similar cases also appears. The agent can continue to create a new case or cancel. **Note:** This property only affects possible duplicate HR cases for the same HR service and subject person in HR Agent Workspace. For more information, see Receiving a duplicate case warning with HR Service Delivery Agent Workspace.
sn_hr_core.inbound_email	This parameter determines if an email to HR is converted into an HR case. ○ Yes: Create an HR case from email. ○ No: Do not create an HR case from email.
sn_hr_core.sync.exclusion_fields.profile	Specifies which fields on the HR profile (sn_hr_core_profile) table you don't want to synchronize with the User (sys_user) table. For example, specify fields that should not be overwritten as they are already synchronized with an external application.
sn_hr_core.sync.exclusion_fields.sys_user	Specifies which fields on the User (sys_user) table you don't want to synchronize with the HR profile (sn_hr_core_profile) table (as a comma separated list).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Property	Description
	For example, specify fields that should not be overwritten as they are already synchronized with an external application.
sn_hr_core.itext7.pdf_conversion	Activate this property to use the iText7 for your document templates for PDF conversion, pre-fill values, and merge signatures into your documents.
sn_hr_core.reclassify_default_transfer	Determines how you want your instance to behave when you transfer an HR case to another case after an upgrade. Valid entries: ○ true: Use the default transfer case to use the standard method. The HR case number changes when transferring an HR case from one HR service to another. Both HR case numbers appear on the HR case for reference. ○ false: Use the reclassify method to transfer an HR case. The HR case number does not change after transferring an HR case from one HR service to another. **Note:** For more information, see Transfer an HR case.
sn_hr_core.include_elevated_roles	Checks for logged in users that have roles with elevated privilege before granting access. Valid entries: ○ true: Check if logged in user has role with elevated privilege before granting access. ○ false: Do not check if logged in user has role with elevated privilege before granting access.
sn_hr_core.restrict_query.limit_inactive	Limits access to cases, through inactive tasks, based on a time limit in months. If the property is left empty, there will be no limit on the cases that are displayed. The default value to **12**. Depending on your business requirements, you can set this property to a value lesser than 12 months. This might improve the performance experience of your instance. **Note:** You might not get a benefit out of this property in one of the following cases: ○ Property is unavailable in the system. ○ Property is left empty. ○ Property is set to a positive value, but the number of inactive case tasks within the time limit is large.

3. Click **Save**.

Configure how HR cases are created

Modify how search results for an employee appear and configure the default HR case creation form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.admin

About this task
HR case creation has multiple steps:

- Search for an employee or related case.
- Create an initial HR case.
- Complete the details of the case.

Using the **Case Creation Configuration** form you can control the information returned from a search and the required fields when creating an initial HR case.

Note:
Zing text search is used to search on indexed fields in the User [sys_user], HR Profile [sn_hr_core_profile], and HR Case [sn_hr_core_case] tables. Refer to Zing text indexing and search engine.

Procedure
1. Navigate to **All** > **HR Administration** > **Case Creation Configuration**.
2. On the form, modify the fields as appropriate.

Case Creation Configuration form

Field	Description
Page size	Determines the maximum number of search results for each page break when using the **Search for Employee** form. **Note:** The default is 10. If there are more than 10 search results, the form divides the results into chunks of 10. It does not limit the search results to 10.
Minimum input length	Specifies the minimum number of characters that must be entered in the **Search for Employee** form to return results.

3. Modify the default search behavior when searching by employee.

Modify search behavior

Field	Description
Display table	Displays employee information. Search uses the **HR Profile [sn_hr_core_profile]** table when displaying information for an employee. This field is read-only.
Limit users on search	Option for adding filter conditions for searching for a user. For example, you could add a filter for only active users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Additional display fields	Option for adding fields to help narrow a user search. The base system configuration provides fields for the user department, user employee number, and user location when applicable.
Links	A URL link configured in **Link Generator**. See Link generator for HR Service Delivery.
User field	Read-only field that determines which users are displayed for a search the information displayed about them.
Force partial search	Option for providing the ability to enter a partial name to return search results. For example, when searching for Abraham Lincoln, users could enter `Abra` to return search results. Selecting this option also helps provide consistent search results when creating an HR case. **Note:** If this option is not selected, users must enter the whole word to match.
Priority table name	The table that stores the priority values. This field and the **Priority column** field optimize search during case creation by limiting the drop down menu options.
Priority column	The column in the specified table that contains the priority values.
Allow skipping verification	Option for providing the ability to enter or skip the employee name or case number when creating an HR case. For more information, see Create an HR case. For example, if your company receives a complaint from an external individual or an anonymous user, providing this option enables an HR agent to create a case without having to enter an employee name or case number.

4. In the **Case Search** related list, modify the default search parameters when searching by case number.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Modify search parameters

Field	Description
Case table	Read-only field that contains the **HR Case [sn_hr_core_case]** table used for case search purposes.
Limit cases on search	Option for adding filter conditions to your search. For example, you could add a filter to search only for active cases.
User fields	Option for adding user fields to appear during a case search. The base system configuration provide fields for subject person, opened for, opened by, and watch list values when applicable.

5. In the **Employee Information** related list, modify the fields that appear in the **Employee Information** section of the **Case Creation** form.

Modify fields

Field	Description
Left fields	Determines the fields that appear on the left side of the **Employee Information** section of the **Case Creation** form. The base system configuration displays fields for the user name and user employee number.
Right fields	Determines the fields that appear on the right side of the **Employee Information** section of the **Case Creation** form. The base system configuration displays fields for the user email and user ZIP or postal code.

6. In the **Case Creation** related list, determine the default fields that appear in the **Case Creation** form.

Determine default fields

Field	Description
Task create table	Read-only field that contains the **HR Case [sn_hr_core_case]** table used to show default case creation fields.
Limit services	Option for creating service conditions that determine the HR services that are available for specific employees. For example, you may not want to offer 401(k) benefits to employees outside of the United States.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: HR services work with HR criteria to select the correct HR service for the subject person on the HR case. When a subject person is selected for an HR case, these fields determine the HR services available. When no subject person is selected, only services with no criteria are shown.
Fields minimum input length	Specifies the minimum number of characters that must be entered in a user search input field on the HR case creation form to return results. The value in this field affects searches in the following fields: ○ Subject person ○ Opened for ○ Opened by ○ Assigned to ○ Collaborators ○ Watch list A search request is not executed until the minimum number of characters are entered. A hint shows the minimum number of characters that must be entered to execute the search. The default value is 0. If the default value is used, a search is executed for each character entered. **Note:** Placing a value in this field prevents a search from executing for every character entered that does not meet the minimum. The default value is 0
Left task fields	Determines the fields that appear on the Case Details Section (CDS). The base system provides the **COE** field, which is non-configurable.
Right task fields	Determines the fields that appear on the right side of the CDS. The base system configuration displays the **Opened for**, **Subject person**, and **HR service** fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Removing the **Subject person** field from the form or leaving it empty limits the HR services available to employees without associated HR criteria.
Bottom task fields	Determines the fields that appear on the bottom of the CDS. The base system configuration displays the **Work notes** field.

7. In the **Case Creation Service Configurations** section, configure the HR case creation form for individual HR services.
   For more information, see Configure the HR case creation form for an HR service.
8. Save your modifications.
   - To save the modifications and remain on the form, click **Save**.
   - To save the modifications and exit from the form, click **Update**.

Application view of HR catalog

The **Application View** provides an aerial view of your HR catalog. The **Application View** allows you to view your catalog with all categories and items and ensure that it is set up correctly.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Application View**.
   On the left side of the page, a list of application view categories and the number of records in each display. The main section of page displays the all application view probes and the number of records in each.
2. To view a list of records for application probe, click the down-arrow next to records.
   Clicking a record takes you to the record.
3. Click New Probe to report on a table or setup aspect in the HR Service Delivery system.

HR notifications

Notifications are reminders that are created using email templates and sent out for **Lifecycle Event Activities** and **HR Services**.

HR case writers or Lifecycle Event activity writers can set up reminder notifications on HR tasks and task templates to remind the **Assigned to** person about due dates. Reminder emails are created using email templates. See Add or modify email content for notifications.

HR notifications for HR services are recurring and are a one-time for Lifecycle Events.

Note:
To view other notifications, you can navigate to **System Notification** > **Notifications**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Process

- Create or edit email content. See Add or modify email content for notifications.
- Create or edit an HR task template. See Configure an HR task template.
- Create or edit an HR Service. See Configure an HR service.
- Create or edit an HR service activity. See Configure a service activity for an HR service. Ensure the HR task template selected has the **Set reminder** box checked.

Note:
Notifications for HR Services are only sent to the **Assigned to** person for the HR task.

Add or modify email content for notifications

Use the **Email Content** form to create notification templates to alert the assigned to of an HR task when a due date is approaching.

Before you begin

Roles required: sn_hr_core.case_writer, sn_hr_le.activity_writer
You must have the HR Case Writer [sn_hr_core.case_writer] or Lifecycle Event Activity Writer [sn_hr_le.activity_writer] role to select an **Email Content** template. For Lifecycle Events, you must have the Lifecycle Event Activity Writer [sn_hr_le.activity_writer] role to create or edit an HR task template for Lifecycle Events.

When setting up notifications, an email template must be created. The base system provides an email template that can be used as a model.

Email notifications can be sent for HR tasks with due dates and can be configured:

- To be sent relative to the due date.
- To be sent at intervals until the task is completed or skipped.
- With customized content.

Procedure

1. Navigate to **All** > **HR Administration** > **Email Content**.
2. From the **Email Contents** list, select **New** or an existing email template to edit.
3. Enter or edit the fields on the **Email Content** form.
4. Select **Save** to save the record and remain on the **Email Content** form.
   Or, select**Submit** or **Update** to return to the **Email Contents** list.

Email notification layout for HR Service Delivery notifications

Use the email notification layout and template shipped with the Employee Experience Foundation (com.snc.sn_ex_emp_fd) plugin to deliver HR notifications. Apply the layout to email notifications to elevate the look and feel, and deliver branded notifications.

The Employee Experience Foundation (com.snc.sn_ex_emp_fd) plugin is installed as a dependent plugin with Employee Center or Employee Center Pro. However, you can still independently install the plugin from ServiceNow Store.

By default, the following email notifications use the Employee notification layout. You can choose to modify the email body or use them as provided.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Email notifications for HR Service Delivery

Notification name	Used for	Recipient
HR case opened **Note:** By default, this notification is in **False** state. Set it to **True** to start using this email notification.	Sends an email notification when an HR case is created.	Opened for
HR case closed **Note:** By default, this notification is in **False** state. Set it to **True** to start using this email notification.	Sends an email notification when an HR case is marked as complete.	Opened for, Watch list
Comment left on HR case **Note:** By default, this notification is in **False** state. Set it to **True** to start using this email notification.	Sends an email notification when comments are added to an HR case.	Opened for, Watch list

Important:
These email notifications are automatically set up for a new user of HR Service Delivery.

If you are an existing user of HR Service Delivery on a release prior to San Diego, upgrade to Employee Center or Employee Center Pro or install the Employee Experience Foundation plugin from ServiceNow Store to start using these email notifications.

Collect employee input

Collect employee input without creating additional case records or adding new fields to existing tables with employee forms.

Employee forms are questionnaires built using the survey designer that you can use in HR tasks to verify or update information from employees. The information collected can be mapped directly to fields on a target table. You can also use HR criteria to query answers for use in downstream processes, such as for lifecycle event activities.

How to collect employee input

Employee forms enable you to collect or verify information from employees. To use them, you must first create the employee form. Employee form questionnaires are built using the survey designer, and you can map questions from the employee form to corresponding fields on a target table. The mappings allow you to auto-populate information onto the employee form, and that information can be read-only or editable. If editable, the updated values will be pushed back to the corresponding table fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

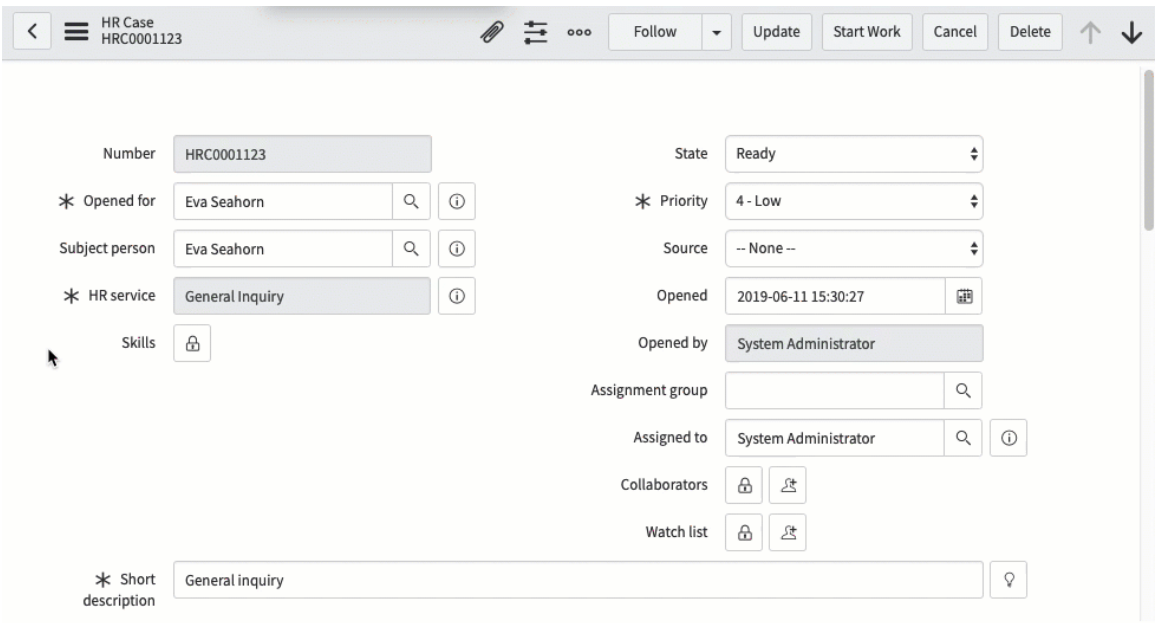
For more information, see Create an employee form.

Once created, you can use the employee forms in HR tasks or HR task templates.

Note:
Make sure that the HR task type is set to **Collect employee input**.

- Adding an HR task to an HR case
- Configure an HR task template

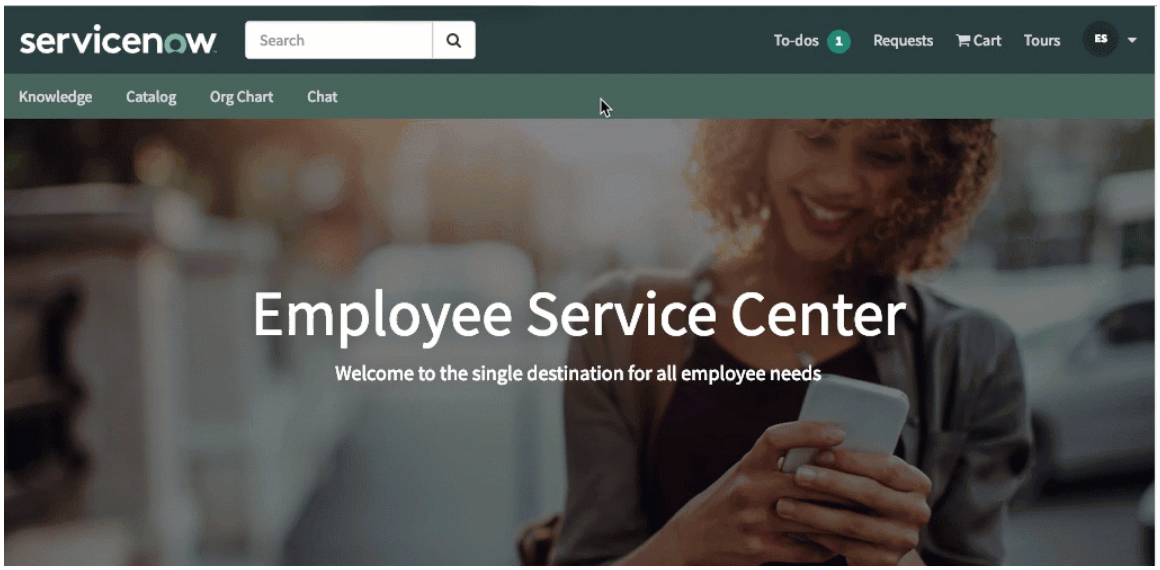
You can also use HR criteria records to query collected answers for use in downstream processes, such as for lifecycle event activities. Because questions on the employee form are built using the survey designer, the answers collected are saved to the Metric Result [asmt_metric_result] table. You can use HR criteria records to query answers from that table to determine whether an activity should trigger for a particular user. For example, if on an invention disclosure form, the new hire answers yes, then you can use that answer to trigger the creation of another task to collect details on the invention.



For more information, see Create an HR criteria record for an employee form.

Example: Gathering intellectual property information

As part of the onboarding process, you want to ask new hires if they have any inventions to disclose. If they do, you want to gather details on the invention. To collect this information, you need to create an employee form, which is a questionnaire built using the survey designer. The questionnaire can include:



- New hire's manager
- New hire's business unit
- Do you have inventions to disclose?
- If yes, provide details on your invention.

After you create the employee form, you can use the form in HR tasks to collect the information you need. The following GIF shows an example of an HR agent creating a collect employee input task for an employee, Eva Seahorn, as part of an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The employee can then provide that information when they receive the to-do. The follow GIF shows an example of the employee, Eva Seahorn, then completing the collect employee input to-do in the Employee Center.

Collect employee input error handling

If an error occurs when updating the employee form, a work note will be added to the HR case and HR task forms. Information not updated must be manually updated by the HR agent, and you can navigate to **HR Administration** > **Employee Form Errors** for further details on the error.

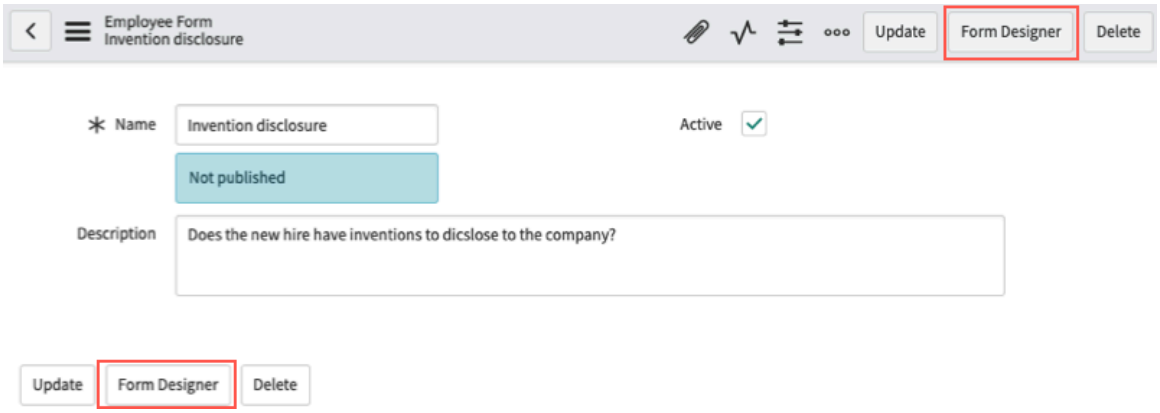
Create an employee form

Create or modify an employee form so that you can collect employee input. Configuration of the employee form is a three-part process. First, create the employee form record. Second, use the survey designer to build one or more questions for the employee form. Third, you can map questions from the employee form to corresponding fields on a target table.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Form**.
2. Click **New**.
3. Fill in the fields on the form.



Employee Form

Field	Description
Name	Name of the employee form.
Description	Description of the employee form.
Active	Option to activate the employee form for use.

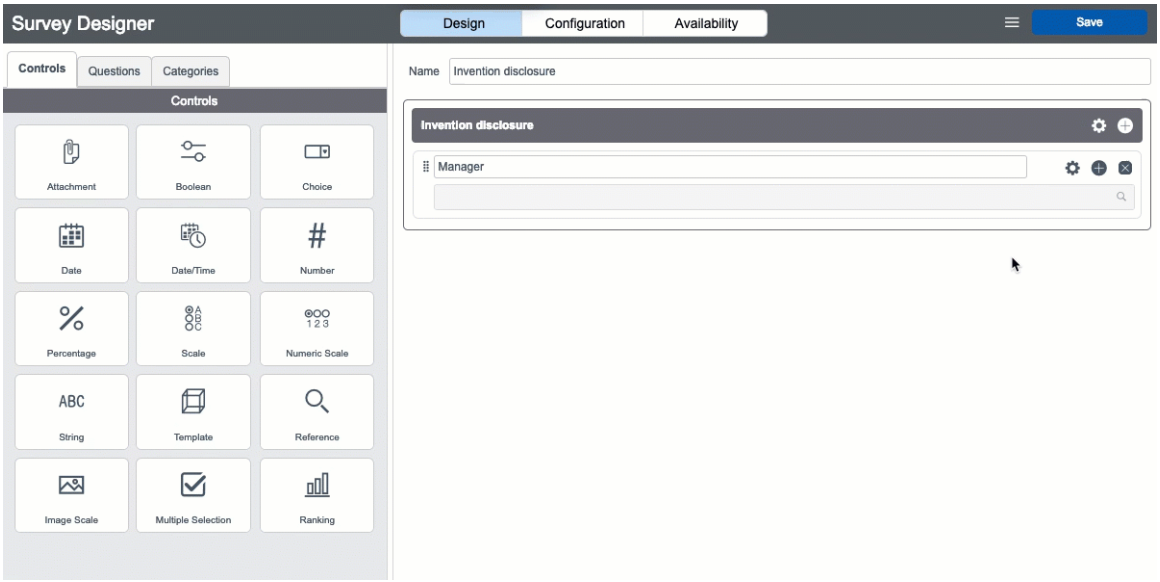
4. Right-click the form header and click **Save**.

   The **Form Designer** button appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

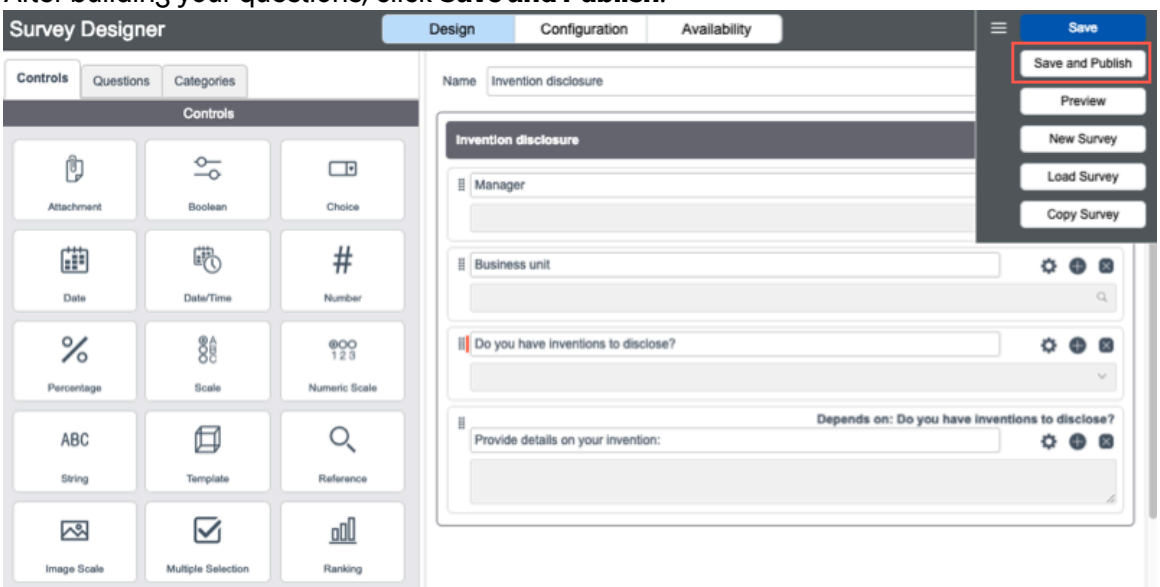
5. Click **Form Designer** to open the survey designer in a new window.
6. Use the survey designer to build questions for your employee form.

> **Note:**
> If you plan to map the question to a table field, make sure that the data types match. Mapping is supported for the following question types:
>
> - Boolean
> - Choice
> - Date
> - Date/Time
> - Number
> - String
> - Reference



For further details on the different question types, see Survey designer elements.

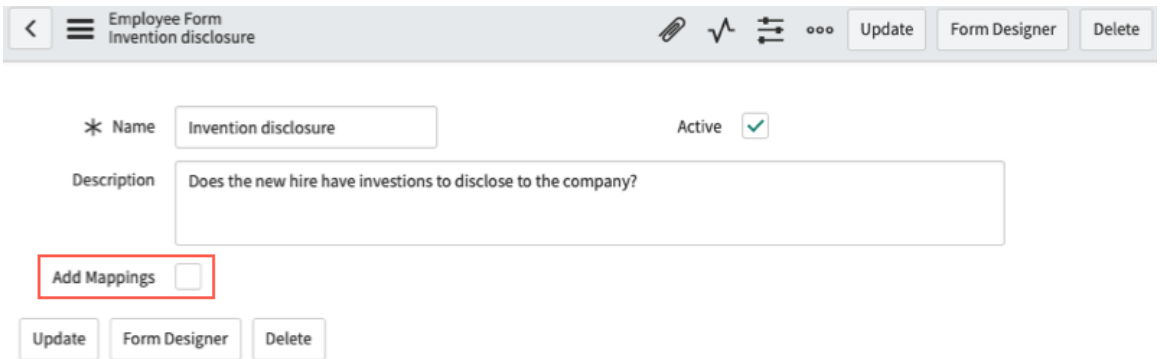
Example



The following GIF shows an example of a user building a reference question and a boolean question in the survey designer.

> **Note:**
> Make sure to provide each question a name so that you can more easily identify the question when creating mappings or HR criteria records.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



7. After building your questions, click **Save and Publish**.

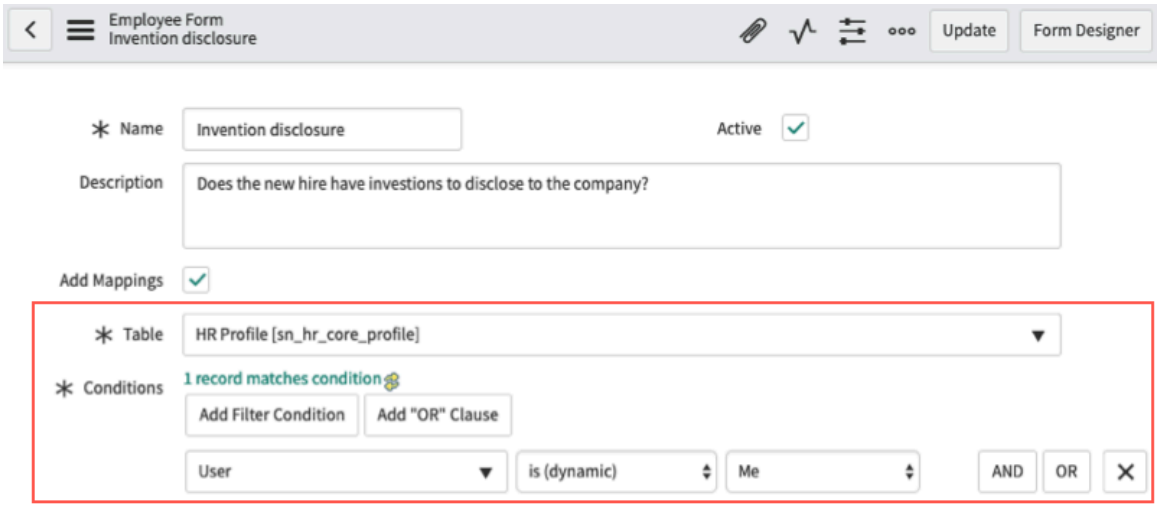
8. Return to and reload the employee form.

   The **Add Mappings** field appears on the employee form.

9. If you want to map one or more questions to fields on a table, fill in the following new fields on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Form



Field	Description
Add Mappings	Option to map questions from the employee form to fields on a target table. This field appears after you save and publish at least one question in the survey designer.
Table	Select the table that the employee form is mapping to. This field appears when **Add Mappings** is selected.
Conditions	Use the condition builder to identify one record on the table to access. Make sure that the result is a match to a single record. This field appears when **Add Mappings** is selected. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

Example

For example, you can map an employee form to the HR Profile [sn_hr_core_profile] table with the following condition:

[User] [is (dynamic)] [Me].

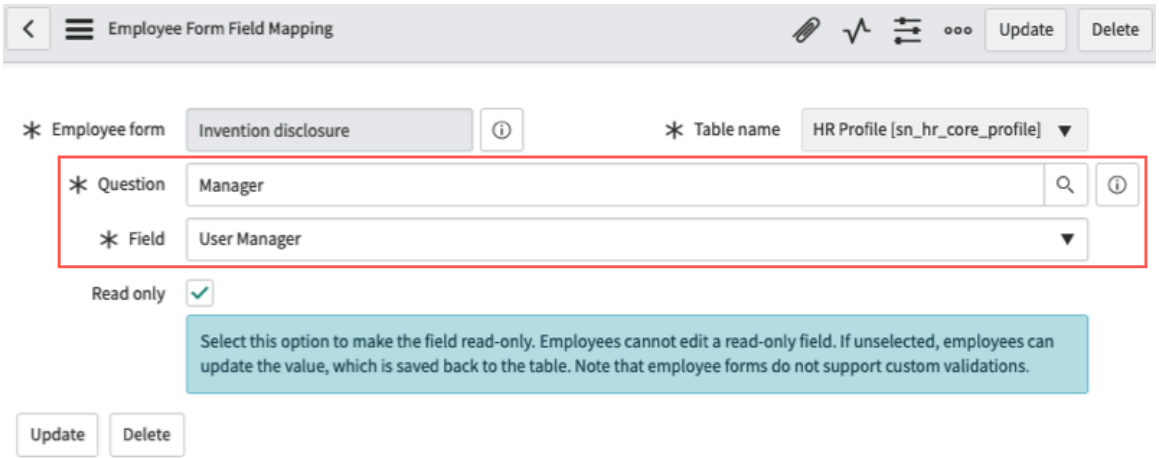
The result is that the logged-in user's HR profile record is accessed for mapping.

10. To map one or more questions from the employee form to fields on the target table.

    a. In the **Employee Form Field Mappings** section, click **New**.

    b. Fill in the fields on the form.

Employee Form Field Mapping form



Field	Description
Employee form	This field is automatically set to the name of the employee form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

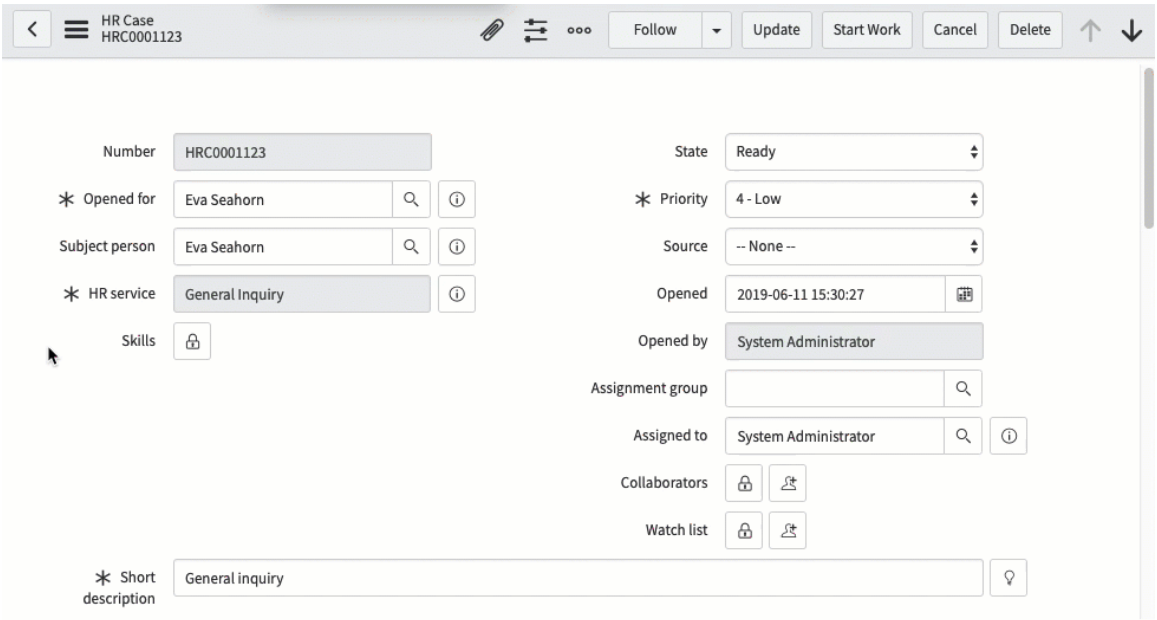
Field	Description
Table name	This field is automatically set to the table that the employee form is associated with.
Question	Question from the employee form that is being mapped from. **Note:** Make sure that the data type matches that of the target field.
Field	Field that is being mapped to **Note:** Make sure that the data type matches that of the source question.
Read only	Option to make the question read-only. If selected, the user can read but not update the field value on the employee form. This field appears after you select a question in the **Question** field.

Example

For example, you can map a question for the user's manager to the corresponding field on the User [sys_user] table. When the user views the employee form in an HR task, they will see their manager's name filled in for that field. Because it is marked as read-only, the user will be able to read but not update that field.

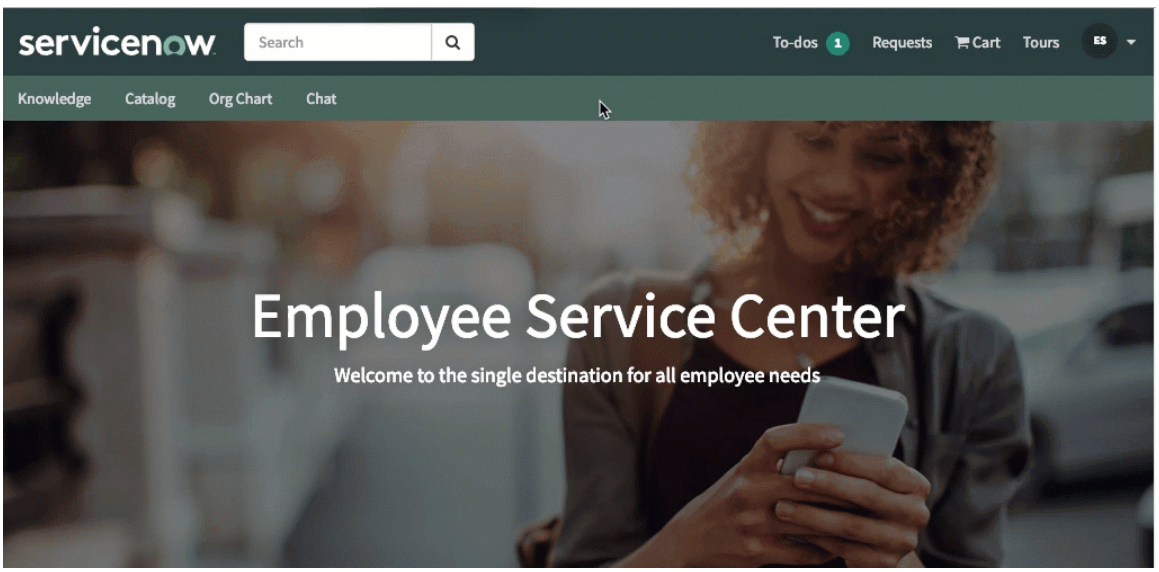
c. Click **Submit** or **Update**.

d. Repeat the process as needed.



11. Click **Update**.

What to do next



You can use the employee form in task forms to collect employee input from users.

The following GIF shows an example of an HR agent creating a collect employee input task for an employee, Eva Seahorn, as part of an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The follow GIF shows an example of the employee, Eva Seahorn, then completing the collect employee input to-do in the Employee Center.

Create an HR criteria record for an employee form

Create an HR criteria record for an employee form based on the employee answers stored in the Metric Result [asmt_metric_result] table.

Before you begin

Role required: sn_hr_core.admin

About this task

Answers from the employee form are stored in the Metric Results]asmt_metric_result] table. You can query the answers using HR criteria. For example, if on an invention disclosure form, the new hire answers yes, then you can use that answer to trigger the creation of another task to collect details on the invention.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **HR Criteria**.
2. Click **New**.
3. Fill in the fields on the form.

HR criteria form

Field	Description
Name	Name of the HR criteria record.
Description	Description of the HR criteria record.
Active	Option to activate the HR criteria record for use.

4. Right-click the former header and click **Save**.
   The **Conditions** section appears.
5. In the **Conditions** section, click **New**.
6. On the HR Condition form, enter the following field values.

HR condition form

Field	Value
Name	<Name for the HR condition>
Table	Metric Result [asmt_metric_result] table
Employee form	Select the employee form you want to query. This field appears when the Metric Result table is selected in the **Table** field.
Condition	Select the question and answer from the employee form you want to query. For the question, provide the following condition: [Metric] [is] [<Question>] For the answer, provide the following condition based on the value type: ○ **[String value] [is] [<Answer>]** ○ **[Reference value] [is] [<Answer>]** ○ **[Actual value] [is] [<Answer>]** **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Active	Selected
User column	Assigned to

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Click **Submit**.
8. On the HR Criteria form, click **Update**.

What to do next

Depending on the case type, the HR criteria record will use the following survey instance:

- If you are using the HR criteria record with a lifecycle event, it will use the survey instance that is associated with the lifecycle event case.
- If you are using the HR criteria record with any other HR case, it will use the latest survey instance.

HR criteria

HR criteria defines the audience for HR content, services, or cases. You can make information available to or create an HR case for specific groups, individuals, or to all employees using HR criteria.

HR criteria uses the standard platform condition builder to support complex conditions for controlling the Employee Center content that employees see when logged in. For more information, see Condition builder.

HR criteria contains a script include that can be called from an advanced User criteria.

Note:
Complex conditional statements for scripted User criteria applied to a knowledge base with large amounts of documents can cause performance issues. Standard (non-scripted) User criteria is recommended for securing knowledge documents.

See User criteria for Service Portal.

HR criteria define conditions that are evaluated against HR tables. Once HR criteria is defined, you can filter what is available to those users.

HR criteria helps group people using a condition builder on any table. User criteria is used across the ServiceNow platform to filter catalog items, Service Portal widgets, and knowledge articles. User criteria filters users based on role, department, group, location, or company. User criteria can be created when HR criteria is created. HR criteria:

- Filters content on the Employee Center.
- Applies only to **Subject person**. HR criteria filters **HR services** based on the **Subject person** during case creation or transfer.
- Filters **Lifecycle Event Activities** in the **Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events]** plugin.
- Selects document template for HR cases.
- Selects users when creating bulk HR cases.

For Lifecycle Events, activities have associated HR criteria that determines when to trigger an activity for the subject person selected on the Lifecycle event case. This step helps to personalize the workflow for the subject person.

Note:
For HR Catalog Items (record producers), ensure **Use "User Criteria" to define access to catalog items and categories** is set to **Yes** under **Service Catalog** > **Catalog Administration** > **Properties**. Verify that this field is checked **Yes**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can use user criteria for Knowledge and Service catalog access. Add a reference column to the User Criteria [user_criteria) table when columns are required for the criteria query.

If you use HR criteria for Knowledge and Service catalog access, ensure:

- Referenced columns are correctly indexed.
- Conditions that can cause performance issues (starts with) are not used.
- Knowledge document searches and use cases are performance tested with instances that are similar to what is used in production.

When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global .

Configure an HR criteria record

Create or modify HR criteria to define an audience for HR content, services, or cases.

Before you begin

Role required: sn_hr_core.admin

HR criteria uses the standard condition builder. For more information, see Condition builder .

Procedure

1. Navigate to **All** > **HR Administration** > **HR Criteria**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

HR Criteria form

Field	Description
Name	Name of the HR criteria record.
Description	Description of the HR criteria.
Active	Option to activate the HR criteria for use.
Related user criteria	You can create user criteria from HR criteria. User criteria is used across the ServiceNow platform to filter catalog items, HR Service Portal widgets, and knowledge articles. **Note:** This field remains blank until you create User criteria. The **Create User Criteria** link appears after you click **Save**.

4. Click **Save**.
   You can create User criteria based on HR criteria. User criteria is used across the ServiceNow platform to filter catalog items, HR Service Portal widgets, and knowledge articles.
5. Select the **Create User Criteria** related link.
   a. Click **New** or **Edit** to open an existing record.
   b. Fill in the fields on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Condition form

Field	Description
Name	Name of the HR condition.
Table	Table that the HR condition is associated with. The table HR criteria conditions are defined from. For example, select the **HR Profile (sn_hr_core_profile)** table to select a field and define a condition.
Active	Option to activate the HR condition for use.
User column	Together with the **Table** field, filters users when evaluating a condition for a user. To create User criteria, select **User**. **Note:** Depending on the table selected, this field can be required to match conditions. When the User [sys_user] table is selected, this field is mandatory otherwise a false positive can occur since the lookup is not associated to an expected user.
Condition	The field from the table selected and a value that defines the condition. Use conditions to define your HR criteria. For example, to define a single condition, you can select the following from the **HR Profile (sn_hr_core_profile)** table: ▪ **Home country** ▪ **is** ▪ **United States of America** This condition selects all employees who have a home country of the United States on their HR profile record. You can define multiple conditions for an HR criteria using the **And Or** condition filters. When using **And** each condition must be met. When using **Or** any condition that is met is used. For more information, see Condition builder . **Note:** When you use multiple conditions, only the records that match all of the conditions are used. When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global . **Note:** For more information, see Filters .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

For example, to create a condition to show the link for new hires and contractors, select:

- Table: Client Role Rule [sn_hr_core_client_role_rule]
- Condition: **[Role] [is] [sn_hr_core.hrsm_new_hire] AND [Role] [is] [sn_hr_core.hrsm_contractor]**

After creating a condition, a clickable link appears with the number of matching records. Click the link to see if the correct users are being selected based on the condition.

c. Click **Submit** or **Update**.

6. In the **Conditions** section, you can add more conditions to define the HR criteria.

HR surveys

HR Surveys let users rate their satisfaction with HR case resolution, and provide management with feedback to improve HR processes.

One predefined HR survey is provided: HR Request Satisfaction Survey. HR administrators and HR managers can edit HR surveys and the associated trigger conditions.

The HR Request Satisfaction Survey is triggered randomly for 50% of closed HR cases. Users receive an email with the survey link after they accept the resolution or when the HR case is closed incomplete.

HR managers and administrators can review responses by question and see a scorecard. Comments entered by users provide feedback that can be used to improve the performance of HR case management. The following survey options can be configured.

- The look and feel of the questionnaire, for example, by adding the company logo.
- Conditional questions that appear when users answer other questions in a certain way.
- The trigger condition, for example, to send it for every case or to a lower percentage of users.

With trigger conditions, the system generates a survey instance each time a specific action occurs on a given table, such as when an HR request closes. You can choose to send a survey every time the condition is met. Or, you can set a probability for the system to send a survey at random when the condition is met. Trigger conditions are ideal for sending surveys to measure satisfaction with a recent experience, such as closing an HR request.

When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

For more detailed information about working with surveys, trigger conditions, and survey questions, see Get started with Survey Management.

Add or modify an HR survey

You can modify the predefined HR satisfaction surveys to suit the needs of the organization, and create HR surveys.

Before you begin

Role required: sn_hr_core.admin or sn_hr_core.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
For example, to create an HR survey to gauge the employee satisfaction of HR processes or services.

The following steps describe how to work with survey questions in the Survey Definition form. You can also click **Survey Designer** to open the survey and its questions in the survey designer. When you save the survey, the survey definition is automatically added. See Survey designer.

Procedure
1. Navigate to **All** > **HR Administration** > **Surveys** > **All HR Surveys**.
2. Click **New** or open an existing survey.
3. Complete the form.

   Note:
   Some fields were eliminated for HR. See Modify a survey definition for more information.

4. Click **Submit**.

Add or modify HR survey categories and questions

When an HR survey definition is created, a survey category is automatically added. You can create questions that are associated with this category or define another category for questions.

Before you begin
Role required: admin, hr_admin, or hr_manager

About this task
For example, the HR Request Satisfaction Survey has one category, with four questions about satisfaction with the HR request process. You can define another category to ask about satisfaction with the HR agent who handled the case, or you can add more questions to the existing category.

The following steps describe how to work with survey questions in the Survey Definition form. You can also click **Survey Designer** to open the survey and its questions in the survey designer.

Procedure
1. Navigate to **All** > **HR Administration** > **Surveys** > **HR Surveys**, and open the survey to add questions.
2. In the **Metrics Categories** related list, complete one of the following actions.
   The Survey Category form that appears includes the **Assessment Metrics** related list, which contains any questions that are already defined.
3. To edit a question, complete the following steps.

   a. Click the question text and edit the fields on the form.

   b. Click **Update**.

   c. If required by the question type, add definitions in the **Assessment Metric Definitions** related list.

      Example
      For example, Likert and numeric scale data types require the scale metric definitions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. To add a question, complete the following steps.

   a. Click **New** and complete the form.

   b. Right-click the header and click **Save**.
   Additional fields appear based on the selected data type. For example, if you select **Choice**, you must enter the scale definition.

   c. If applicable, add definitions in the **Assessment Metric Definitions** related list.

   Example
   For example, the Choice data type requires that you enter the choices.

5. Click **Update**.
   The Survey Definition reopens.

Publish a new HR survey

Publish a new survey so users can complete it.

Before you begin
Role required: sn_hr_core.admin, or sn_hr_core.manager

About this task
After a survey is published, you can edit it and it remains published. The **State** field on the Survey Definition form indicates whether the survey is published.

Procedure

1. Navigate to **All** > **HR Administration** > **Surveys** > **All HR Surveys**, and open the survey to publish.
2. Click **Publish**.

Result
If there are assigned users, the system automatically generates a survey instance. You can click **Send Invitations** to send a notification to the assigned users with a link. Assigned users can also navigate to **Self-Service** > **My Assessments and Surveys** to take the survey.

Note:
A survey cannot be returned to the **Draft** state after it has been published. You can, however, deactivate a survey by clearing the **Active** check box.

What to do next
If you want employees to receive a link to a survey, such as the HR Request Satisfaction Survey, create a notification. To get the URL of the published survey so it can be included in the notification, click the **View Survey URL** related link. You can copy the URL and paste it as a hyperlink in the notification.

Add a trigger condition for an HR survey

When you create an HR survey, you can add a trigger condition to specify when the survey is sent and to whom.

Before you begin
Role required: sn_hr_core.admin, or sn_hr_core.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Trigger conditions are ideal for sending surveys to measure satisfaction with a recent experience, such as closing an HR request.Some descriptions use the Incident table as an example. Substitute HR case information to create an HR survey trigger condition.

See Survey administration.

See Survey trigger conditions.

To create a trigger condition:

- A user with the HR Admin role must also be designated as an HR delegated developer.
- Via the **Settings** icon, this user must change the Developer application from **Global** to **Human Resources: Core**.

Procedure

1. Navigate to **All** > **HR Administration** > **Surveys** > **Trigger Conditions**.
2. Click **New**.
3. Complete the form.
   For details about the fields, see Trigger Condition form for surveys
4. Click **Submit**.

Managed lists

You can use the **Managed Lists** module to view and manage administrative areas like departments, locations, positions, and details about HR services.

To access managed lists, go to **HR Administration** > **Managed Lists**.

Add or modify departments

You can use departments to categorize users. Departments are assigned to an employee user profile, and are synchronized to the HR profile.

Before you begin

Role required: admin

About this task

The base system provides various departments. You can create or edit existing departments and add users.

Procedure

1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Departments**.
2. Click a department name to view or edit details for that department.
3. Click **New** to create a department.
4. Use the ID field to enter a company-specific department number.
5. Click **Save** to stay on the **Departments** form.
   The **Expense Allocations** and **Users** tabs appear.
6. Click **Expense Allocations** to view all expense allocations associated with the department.
7. Click **New** to create a new expense allocation associated with the department.
8. Click **Users** to view all users associated with the department.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Click **New** to create a new user associated with the department.
10. Click **Save** to stay on the **Departments** form or Update to return to the **Departments** list.

Add or modify locations

If your company has multiple offices, location records store the address and contact details for each site, and are assigned in the employee HR profile and user records. The location of an HR agent can be used for automatic assignment of HR cases.

Before you begin
Role required: admin

About this task
The Administrator can view, edit, or create locations. You can use the location of an HR agent for automatic assignment of HR cases.

Procedure
1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Locations**.
2. Click a location name to view or edit details for that location.
3. Click **New** to create a location.
4. Click **Save** to stay on the **Locations** form.
   The Locations section displays at the bottom of the form. Use to create a parent/child relationship between locations.
5. Click **New** to create a child location.
6. Click **Save** to stay on the **Locations** form or **Submit** to return to the **Locations** list.

Add or modify employee positions

As part of the Human Resources setup process, you define positions to describe employee job functions within the organization. Positions are associated with employees in the HR profile.

Before you begin
Role required: admin

About this task
Create position records for your organization. Other organization information, such as location and department information, is already set up in the ServiceNow system and used in User [sys_user] records.

Procedure
1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Positions**.
2. Click **New** to create a position, or click an entry to open an existing position.
   If you view an existing position, the **HR Profiles** related list displays HR profiles of users assigned to the position at the bottom.
3. Enter the **Position** title and select the **Department**.
4. Check **Active**.
5. Click **Save** to stay on the **Positions** form or **Submit** or **Update** to return to the **Positions** list.

Add or modify employee relationships

As part of the Human Resources setup process, you define relationships to describe how contacts and beneficiaries are related to employees.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

About this task
Create relationship records for your organization.

Procedure
1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Relationships**.
2. Click **New** or edit an existing relationship.
3. Enter the relationship identifier or name.
   For example, Spouse.
4. Enter a value for the relationship.
   The value is used to further define the relationship.
5. Check Dependent when the relationship is a dependent on the employee for benefits or support.
6. Click **Submit** or **Update**.

Add or modify benefit types

Benefit types are benefits offered by your company and the associated table.

Before you begin
Role required: sn_hr_core.basic, or sn_hr_core.manager
You can add or modify a benefit type using the Managed Lists module.

Procedure
1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Benefit Types**.
   The HR Benefit Types list opens.
2. Click **New** to create a benefit type or on an existing benefit type to edit.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

HR Benefit Type form

Field	Description
Name	Benefit type.
Value	Issue value name, such as benefit_401k, or basic_life.
Type	Click and select the benefit type. Benefit types are: ○ HR Disability Benefit ○ HR Health Benefit ○ HR Insurance Benefit ○ HR Retirement Benefit
Active	Check to make this benefit type active and available to use.
Requires beneficiaries	Check to indicate that this benefit type requires beneficiaries to be entered when selected.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click **Save**.
   The **HR Benefit Plans** section appears.
5. Click **New** to create a benefit plan associated with the benefit type.
6. To modify benefit type data, find the existing benefit type in the HR Benefit Types list.
   You can use the list search menu by typing the benefit type and pressing Enter.
7. Click the benefit type to open the form.
8. Modify the form.
9. Click **Update**.

Add or modify benefit plans

You can add or modify a benefit plan and provider using the Benefit Plan for under Managed Lists. The plan name is a combination of the provider and plan type.

Before you begin

Role required: sn_hr_core.basic, or sn_hr_core.manager

Procedure

1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Benefit Plans**.
   The HR Benefit Plans list opens.
2. Click **New** to create a benefit plan or on an existing plan to edit.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

4. Click **Save** to stay on the **HR Benefit Plan** form or **Update** to return to the **HR Benefit Plans** list.

Add or modify disciplinary issue types

Disciplinary issue types are misconduct that can trigger a disciplinary action.

Before you begin

Role required: sn_hr_core.basic, or sn_hr_core.manager

About this task

Disciplinary issue types can be viewed at **HR Administration** > **Managed Lists** > **Disciplinary Issue Types**.

Default types of disciplinary issues include:

- Absenteeism
- Abusive Language or Behavior
- Improper Dress
- Misconduct
- Insubordination
- Tardiness
- Improper Use of Equipment
- Unsatisfactory Work Performance

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Failure to Follow Corporate Policy
- Other

Procedure

1. Navigate to **HR Administration** > **Managed Lists** > **Disciplinary Issues Types**.
   The HR Disciplinary Issue Types list opens.
2. Click **New** to open a disciplinary issue type record.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

Disciplinary issue type form

Field	Description
Issue	The disciplinary issue.
Order	Number set to indicate the order in which the issue appears in the **HR Disciplinary Issue Types** list.
Value	Issue value name, such as absenteeism, or improper_dress.

4. Click **Save** to stay on the **HR Disciplinary Issue Type** form or **Submit** to return to the **HR Disciplinary Issue Types** list.
5. To modify disciplinary issue type data, find the existing disciplinary issue type in the HR Disciplinary Issue Types list.
   You can use the list search menu by typing the disciplinary issue type and pressing Enter.
6. Click the disciplinary issue type to open the form.
7. Modify the form.
8. Click **Save** to stay on the **HR Disciplinary Issue Type** form or **Update** to return to the **HR Disciplinary Issue Types** list.

Add or modify disciplinary warning types

A disciplinary warning type is the method used to communicate or the action taken as a result of a disciplinary type.

Before you begin

Role required: sn_hr_core.basic, or sn_hr_core.manager

Procedure

1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Warning Types**.
   The HR Disciplinary Warning Types list opens.
2. Click **New** to create a disciplinary issue type record or on an existing record to edit.
3. Complete the form.

Note:
The fields you see depend on how the form is configured and what fields are selected to display.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Disciplinary Warning Type form

Field	Description
Warning	Warning type or action.
Order	Number set to indicate the order in which the issue appears in the **HR Disciplinary Warning Types** list.
Value	Issue value name, such as verbal or written.

4. Click **Save** to stay on the **HR Warning Type** form or **Submit** to return to the **HR Warning Types** list.
5. Click **Update** to return to the **HR Warning Types** list.

Add or modify HR systems

You can add or modify an HR operations system using the HR Administration module.

Before you begin

Role required: sn_hr_core.basic or sn_hr_core.manager

Procedure

1. Navigate to **All** > **HR Administration** > **Managed Lists** > **HR Systems**.
   The HR Operating Systems list opens.
2. Click **New** to open an HR Operations System record.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

HR OIperations System form

Field	Description
Name	Name of the HR system.
Contact	The internal company contact for the system.
URL	The web address for the HR system.
Active	Check to make active and available to use.
Order	Number set to indicate the order in which the issue appears in the **HR Operations Systems** list.

4. Click **Save** to stay on the **HR Operations System** form or **Submit** to return to the **HR Operations Systems** list.
5. To modify an HR system, find the existing HR system in the HR Operations Systems list.
   You can use the list search menu by typing the HR system and pressing Enter.
6. Modify the form.
7. Click **Save** to stay on the **HR Operations System** form or **Update** to return to the **HR Operations Systems** list.

Add or modify HR report frequencies

HR operations report frequencies determines how often reports are generated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.basic or sn_hr_core.manager

About this task
Employees can ask about HR report frequencies or request an HR report frequency through the HR Service Portal.

By default, the report frequencies available are:

- Daily
- Weekly
- Monthly
- Quarterly
- Yearly

Procedure
1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Report Frequencies**.
   The **HR Operations Report Frequencies** list opens.
2. Click **New** to create an HR operations report frequency record or on an existing record to edit.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

HR Operations Report Frequency form

Field	Description
Report frequency	How often the report generates, for example, daily, weekly, monthly.
Domain	

4. Click **Save** to save the record and stay on the **HR Operations Report Frequency** form.
5. Click **Submit** and return to the **HR Operations Report Frequency** list.

Add or modify HR report types

Report types define the category of information that appears in an HR operational report.

Before you begin
Role required: hr_basic, or hr_manager

About this task
Types of system reports include:

- Customer Satisfaction
- Compliance
- Operational
- Trend Analysis
- Other

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Report Types**.
   The **HR Operations Report Types** list opens.
2. Click **New** to open a system report type record.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

HR Operations Report Type form

Field	Description
Report type	The kind of report to generate, such as, compliance or operational.

4. Click **Submit**.
   The system report type is listed in the **HR Operations Report Types** list.
5. To modify the system report type data, find the existing system report type in the **HR Operations Report Types** list.
   You can use the list search menu by typing the report type name and pressing Enter.
6. Click the system report type to open the form.
7. Modify the form.
8. Click **Update**.

Add or modify visa categories

You can add or modify a visa category using the HR Administrations module.

Before you begin
Role required: hr_basic, or hr_manager

About this task
Currently, there are two types of visas:

- Business — Employee is traveling to a foreign country to conduct business. An example is Joe Employee is traveling to Japan for a week for meetings with a customer and co-workers in the Tokyo office.
- Work — Employee is traveling to a foreign country to work as an expatriate (expat). An example is Joe Employee is relocating to the Tokyo office to work in Japan for two years.

To create or modify a visa category:

Procedure

1. Navigate to **All** > **HR Administration** > **Managed Lists** > **Visa Category**.
   The **HR Visa Categories** list opens.
2. Click **New** or a visa category.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

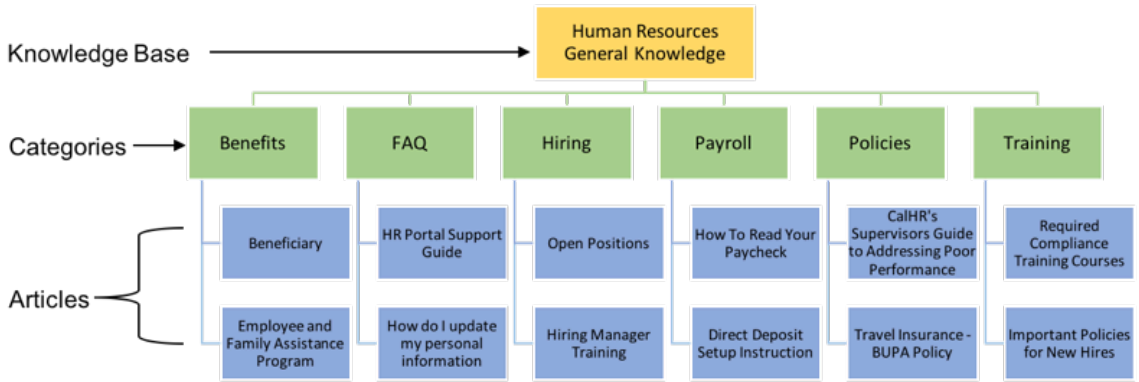
HR Visa Category form

Field	Description
Visa category	Enter or edit the name of the visa category.

4. Click **Submit** or **Update**.
   The visa category appears in the **HR Visa Categories** list.

HR Knowledge Management

HR knowledge management allows the enterprise HR department to provide employees with a searchable knowledge base of HR policies, procedures, and other articles. By sharing information with employees, HR can reduce the time spent answering routine questions and enable employees to find answers that are relevant to them.



HR knowledge bases

The Case and Knowledge Management application provides the following preconfigured HR knowledge base: Human Resources General Knowledge.

A knowledge administrator can create additional HR knowledge bases. Each knowledge base can be assigned to a knowledge owner and managers, as well as have unique workflows, user criteria, and category structures. See Create a knowledge base for more information.

HR knowledge articles

Each knowledge base contains knowledge articles, which are organized into categories and subcategories. For example, knowledge articles in the Human Resources General Knowledge base are organized among six categories.

Knowledge contributors can create HR knowledge articles in a knowledge base.

For more information, see Create an HR knowledge article.

You can also attach or link HR knowledge articles to an HR case or HR catalog item.

- Attach knowledge articles to an HR case
- Link knowledge articles or managed documents to an HR catalog item

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR knowledge blocks

You can use knowledge blocks with HR knowledge management to simplify knowledge authoring for writers and knowledge consumption for readers. Knowledge blocks are reusable pieces of content secured by user criteria that you can add to knowledge articles in a knowledge base. The user criteria controls which users can read or not read the block content in an article or search, enabling users to more easily view content that is relevant to them.

For more information, see Knowledge blocks for HR knowledge management.

Knowledge Management

Create an HR knowledge article

Create or modify a knowledge article within an HR knowledge base to share HR information across your organization.

Before you begin

Role required: sn_hr_core.kb_writer

Procedure

1. Navigate to **All** > **HR Administration** > **Knowledge Management** > **Create New Article**.
2. Fill in the fields on the form.

Knowledge form

Field	Description
Number	This field is automatically set to a knowledge article number.
Knowledge base	Name of the knowledge base. **Note:** You can use an existing or create a new HR knowledge base. See Create a knowledge base for more information.
Category	Name of the knowledge category or subcategory. **Note:** You can use existing or create categories to organize the articles in the knowledge base. Click the Lookup icon to open the category picker, where you can select, add, and edit knowledge categories and subcategories.
Valid to	Date that the knowledge article expires. After the valid to date, or if the valid to field is empty, the article does not appear in the search results.
Short description	Description of the knowledge article.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

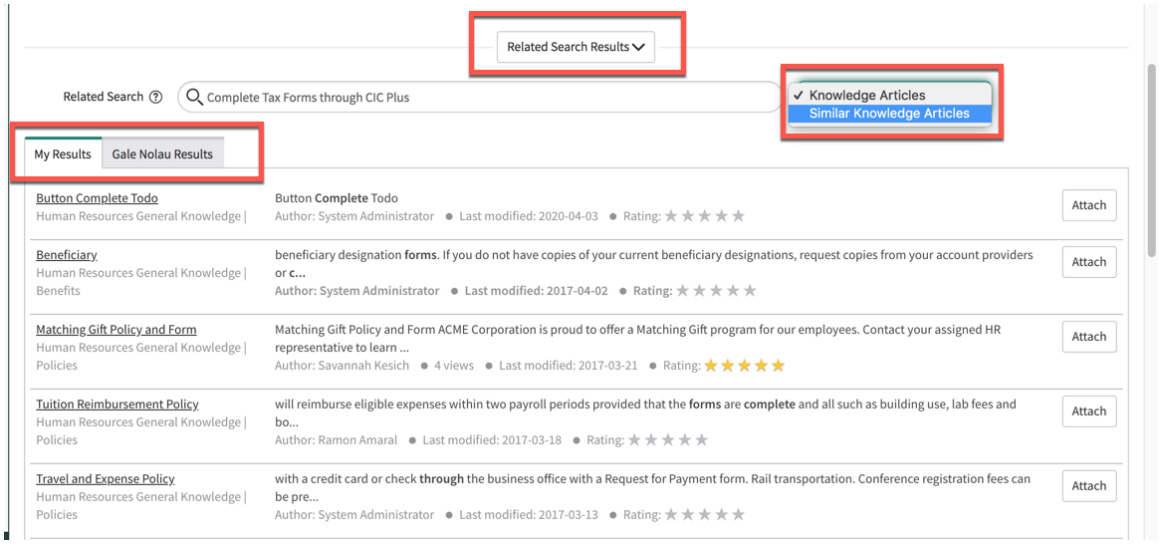
Field	Description
Text	Text of the knowledge article.
Article type	Type of knowledge article: HTML or Wiki.
Workflow	This field is automatically set to the publication state of the article, such as Draft, Published, or Retired.
Source Task	This field is automatically set to the task record that the article was created in response to, if applicable.
Attachment link	Check box for enabling the automatic download of attachments. If selected, attached files automatically download when the user opens the article. **Note:** Currently, this option is not supported on the Employee Service Center.
Display attachments	Check box for enabling the display of attachment. If selected, attached files are displayed and accessible to users at the bottom of the article. **Note:** This option is contingent upon adding one or more attachments to the article. To add or manage attachments, click the paperclip icon in the title bar.

3. Click **Save** or **Update** to create or update the article.
4. Click **Publish** to publish the article.

Note:
Any additional steps required to publish the knowledge article, such as approvals, depend on the publishing workflow for the knowledge base. See Knowledge workflows for more information.

Attach knowledge articles to an HR case

Attach one or more knowledge articles to an HR case to help process that record. For example, you can attach an article about the company dress code policy when an HR case is submitted that asks about wearing shorts to work.



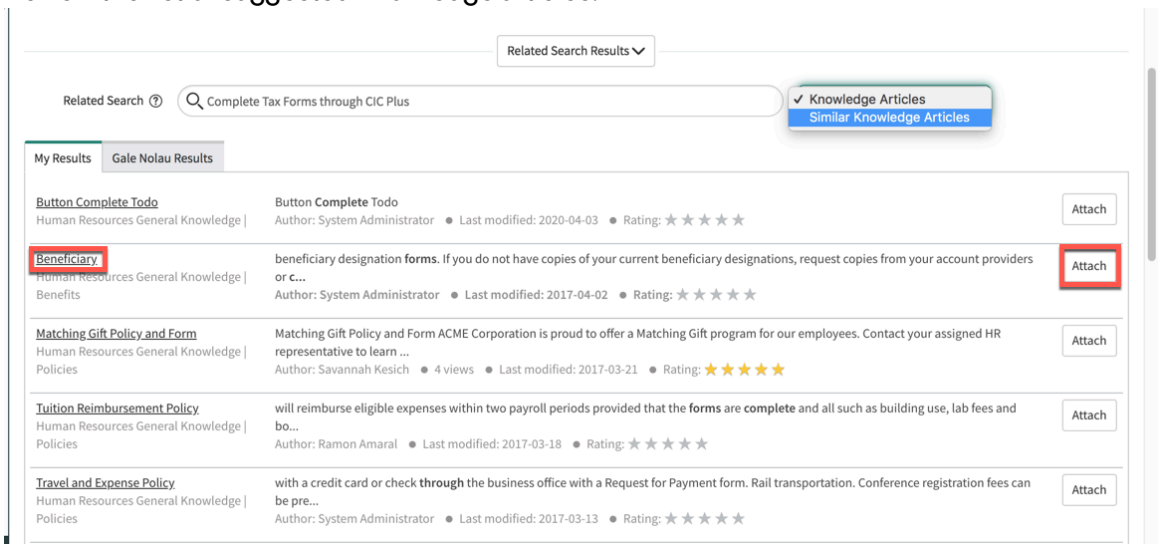
Before you begin
Role required: hr_basic or hr_case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **All HR Cases**, and open one of the modules, such as **Assigned to me** or **Open**.
2. Open an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Related Search Results**.



The following options are displayed in a list:

- **Knowledge Articles**: Based on the short description of the HR case and the user criteria that is associated with the knowledge base, relevant knowledge articles are displayed in two tabs: **My Results** displays a list of articles you can access. **[employee name] Results** displays a list of articles that the Opened for employee can access.
- **Similar Knowledge Articles**: Based on the short description of the HR case, user criteria associated with the knowledge base, auto-training of the Similar Knowledge Articles for HR Case (ml_sn_sn_hr_core_global_case_to_articles) solution definition, similar knowledge articles are displayed in the **My Results** tab.

  The **Similar Knowledge Articles** option narrows down and displays the most relevant knowledge articles to resolve the HR case. This option is displayed only when the Predictive Intelligence for Contextual Search plugin is activated along with Human Resources Scoped App: Core plugin.

4. Review the list of suggested knowledge articles.

5. Click **Save**.
   You can remove an attachment by going to the **Attached Knowledge** tab and clicking **Edit...** button. From the list displayed, you can select the knowledge article to remove and click **<**. Click **Save** to complete the process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Knowledge blocks for HR knowledge management

You can use knowledge blocks with HR Service Delivery to simplify knowledge authoring for writers and knowledge consumption for readers.

Knowledge blocks are reusable pieces of content secured by user criteria that you can add to knowledge articles in a knowledge base. The user criteria controls which users can read or not read the block content in an article or search, enabling users to more easily view content that is relevant to them.

How to use knowledge blocks

To use knowledge blocks, a knowledge administrator or manager must enable the knowledge blocks feature for each knowledge base in which the blocks will be used.

Enable knowledge blocks for each knowledge base

Knowledge contributors can create knowledge blocks and insert them into articles in a knowledge base:

Note:
Knowledge blocks are not supported in articles of type wiki. By default, knowledge block doesn't show files attached to it. However, you can see images and text are visible on KB's created from block files.

- Create a knowledge block
- Add knowledge blocks to a knowledge article
- Preview a knowledge article with knowledge blocks by user or date

Knowledge block content can be read or not read in an article or search based on user criteria set at the knowledge base and knowledge block level. See Select user criteria for a knowledge block for more information.

Example: Holiday calendar with location-specific knowledge block content

You are part of an enterprise HR organization that maintains a company knowledge base. You want to create a holiday calendar so that employees know which days of the year are company holidays. Since the company has multiple locations and holiday dates vary based on where the employee is located, there are several ways that you could create the knowledge article.

One way is that you could create a knowledge article for each location, with an article for Location A, Location B, and so on.

- Pros: simplified consumption. Employees have a single article to search for and read.
- Cons: more work for HR. HR has multiple articles to manage and update for each location where the company has employees.

Another way is that you could create a single knowledge article that includes sections for each location.

- Pros: simplified authoring. HR has a single article to manage and update.
- Cons: more work for employees. Employee must scroll through and disregard extraneous content to find the section in the article that pertains to them.

With knowledge blocks, you can create a single knowledge article with location-specific block content secured by user criteria. This approach helps to reduce the workload for both HR and

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

employees. As an HR agent, you have a single article to manage and update. Employees have a single article to search for and read, with the user criteria ensuring that they only view content that is relevant to them.

If you are using a custom search or knowledge article viewer

If you are using a custom search or knowledge article viewer with your application, you should integrate it with the appropriate knowledge or knowledge blocks API. (Integration is only necessary if you are using a custom search or knowledge article viewer.)

Integrating a custom search or knowledge article viewer with knowledge blocks

Activation information

To use knowledge blocks in your application, you must activate knowledge blocks. For information on what components are installed with the feature, see Components installed with knowledge blocks.

Note:
Activating knowledge blocks automatically activates Knowledge Management Advanced, which enables advanced features such as article versioning. Knowledge blocks can be used with or without the article versioning feature. To disable the feature, see Disable the article versioning feature.

Related topics

Knowledge blocks

HR services

HR services are the requests and assistance an HR organization provides its employees, such as benefits enrollment, direct deposit setup, and requests for relocation assistance.

They are the starting point for HR case creation and define the process for that case type, from request to fulfillment. You can create new or modify existing HR services, as well as configure them to be available for internal use only or for employee self-service.

HR Centers of Excellence data model

HR services are categorized under one of the HR Centers of Excellence (COEs), which are part of a data model that organizes HR data, services, and processes by functional discipline. Each COE is an extension of the HR Case [sn_hr_core_case] table, and each COE is further organized by HR topic category and detail. Before you begin configuring the individual HR services, review and set up the categorization structure for them.

- HR Centers of Excellence data model
- HR service categorization

HR request to fulfillment process

In determining what HR services to offer, you should consider:

- What are the requests you expect to receive and the services you want to provide?
- How do you plan to report on this data? This affects how you categorize your HR services.
- What information must you collect to fulfill the requests?
- How can the requests be made?

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Email
- Phone
- Employee self-service through the HR service catalog

- How is the request ultimately fulfilled?
  - HR case form
  - Fulfillment instructions
  - Approvals
  - Tasks
  - Child HR services
  - Lifecycle events
  - Knowledge articles

HR service configuration

HR services are the starting point for HR case creation and define the request to fulfillment process for that case type. The configuration requirements for an HR service depend on whether it is available for internal use only, or if you are allowing the employee to request the service directly from the HR service catalog through a self-service portal such as the Employee Center.

Configuration

HR service type	Configuration requirements
Internal use only	• HR service • HR case template
Employee self-service	• HR service • HR case template • HR catalog item (also known as a record producer)

Not all HR services need to be accessible for employee self-service. Some services may only be initiated by HR agents, such as to set up payroll for a new hire. Some services may require the employee to contact HR directly by email or phone, such as when a manager requests a promotion for a direct report. In these cases, the HR case is created internally by the HR agent. HR services intended for internal use only require configuration of the HR service and HR case template. See HR service configuration for more information.

Other HR services, however, may also be initiated by the employee, such as to update an employee profile or to request a password reset. These services are made available as HR catalog items in the HR service catalog. Employees can browse the HR service catalog and make requests directly from a self-service portal such as the Employee Center. HR services intended for employee self-service require configuration of the HR catalog item (also known as a record producer) in addition to the HR service and HR case template. See HR catalog item configuration for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR service catalog management

The HR service catalog provides employees a catalog of HR services that they can request directly from HR. Employees can access the HR service catalog from a self-service portal such as the Employee Center. You can manage the setup and categorization of the HR service catalog, as well as configure the individual HR catalog items that populate it.

- HR service catalog management
- HR service catalog categorization

HR template configuration

HR templates allow you to: automatically populate fields on an HR case or task form. You can configure HR templates for:

- HR services
- HR catalog items
- HR service activities
- Lifecycle event activities

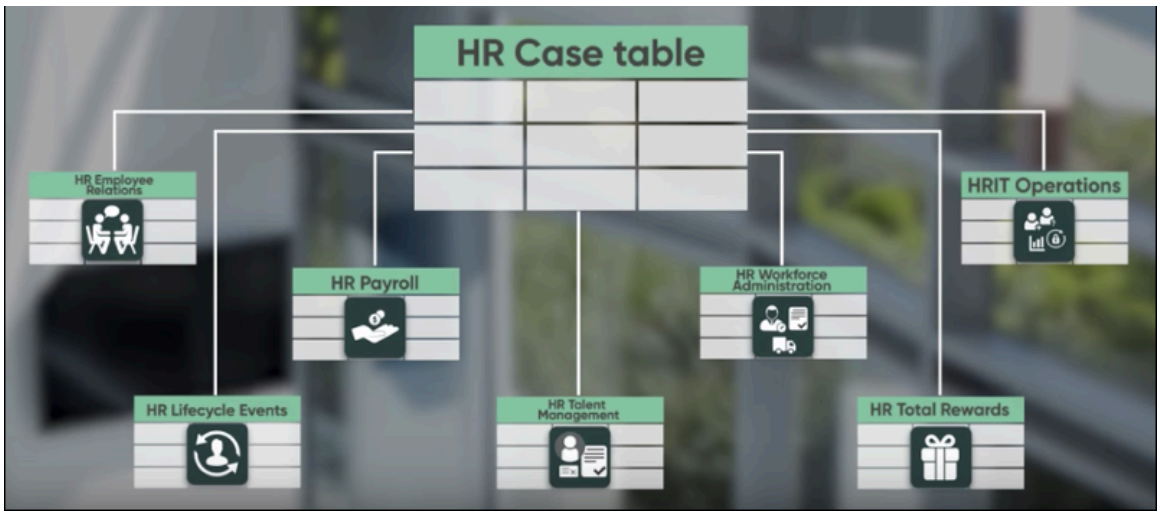
For more information, see HR templates.

HR Centers of Excellence data model

Organize HR data, services, and processes by functional discipline with the HR Centers of Excellence (COEs) data model.

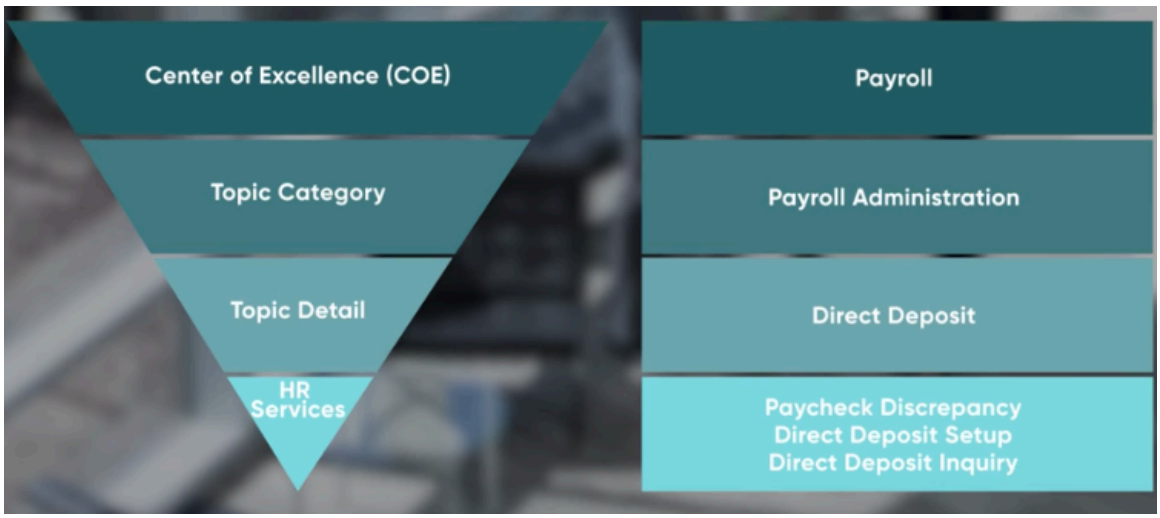
https://player.vimeo.com/video/980245693?h=df05d40e5a&badge=0&autopause=0&player_id=0&app_id=58479
Each COE can be configured to its unique function, such as to payroll or employee relations. The COE data model further allows you to limit access to sensitive information, promote consistency for metrics and reporting, and help drive automation by defining the request to fulfillment process at the HR service level.

HR Centers of Excellence (COEs) overview



Each HR Center of Excellence is an extension of the HR Case [sn_hr_core_case] table and is organized around a functional discipline, such as employee relations, lifecycle events, payroll, talent management, workforce administration, total rewards, HRIT operations, benefits, compensation, corporate communications, and global mobility.

Note:
The benefits, compensation, corporate communications, and global mobility COEs are disabled by default.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

Each COE is further organized by HR topic category and detail, which defines the first- and second-level of categorization for HR services under that COE. Each COE can have one or more topic categories. Each topic category can have one or more topic details. And each topic detail can have one or more HR services. This structure enables you to categorize HR services by functional area, and you can configure the categorization structure and the individual HR services to meet the needs of your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR service categorization setup

Before you begin configuring the individual HR services, review and set up the categorization structure for them.

Note:
For a list of base system COEs and how to enable or disable them, see Enable or disable an HR Center of Excellence (COE).

Roles

The System Administrator (admin) role can configure and create new COEs.

The Lifecycle Event Administrator (sn_hr_le.admin) role with the Delegated Developer (delegated_developer) role can also configure and create new COEs.

HR service categorization

HR services are categorized under one of the HR Centers of Excellence (COEs), which are part of a data model that organizes HR data, services, and processes by functional discipline.

Each COE is an extension of the HR Case [sn_hr_core_case] table, and each COE is further organized by HR topic category and detail. Before you begin configuring the individual HR services, determine which COEs you want to use, and then create or modify the appropriate HR topic categories and details for each COE.

Enable or disable an HR Center of Excellence (COE)

Enable or disable an HR Center of Excellence (COE) for use. COEs are tables that extend the HR Case [sn_hr_core_case] table and part of a functional discipline, such as total rewards or talent management. COEs are also part of HR services that contain topic category and detail.

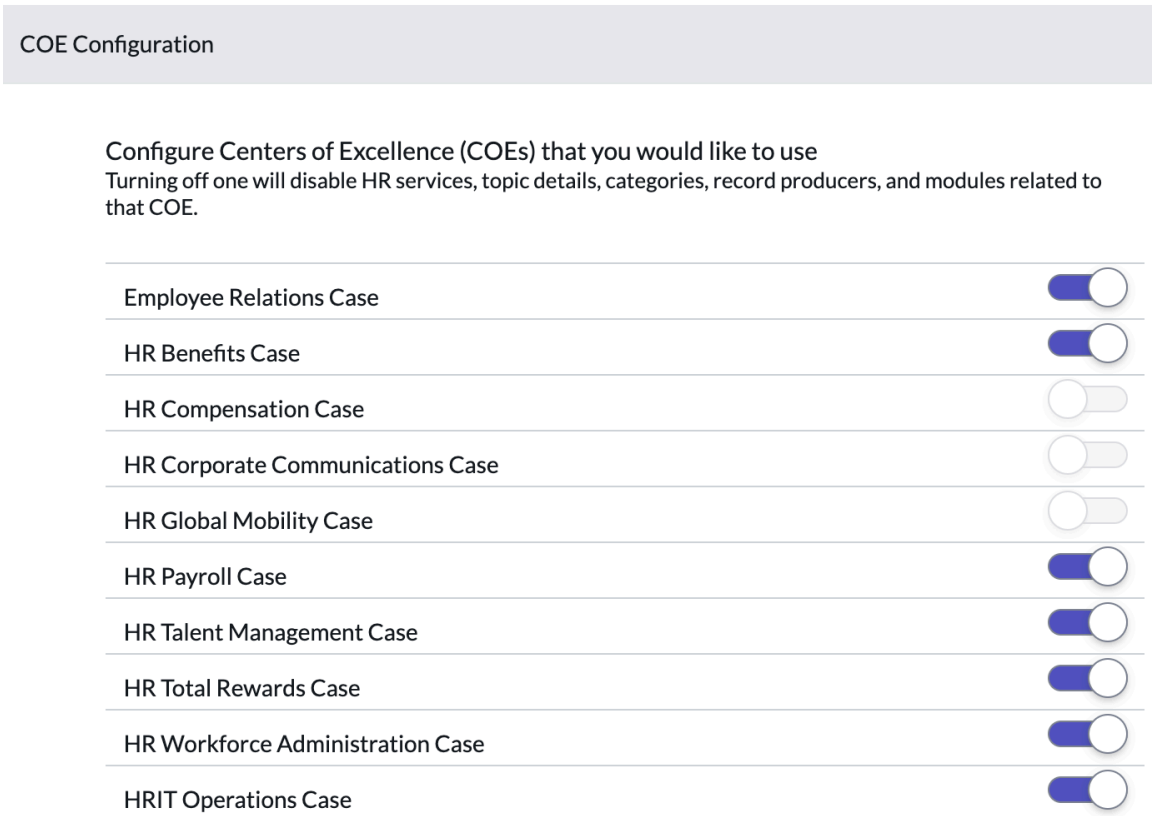
Before you begin

Role required: sn_hr_core.admin

Deactivate COEs manually on all your environments, if your company:

- Does not use COEs.
- Wants to deactivate COEs.
- Has multiple environments and you're using system update sets to update changes.

Note:
System update sets capture deactivation in one environment, but after a patch or upgrade, COEs are active in your other environments. See System update sets.



Procedure

1. Navigate to **All** > **HR Administration** > **COE Configuration**.
2. Enable or disable the applicable HR Center of Excellence (COE).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

COEs that are not associated with any HR services, topic details, categories, or record producers are automatically disabled.

When you disable a COE, all associated HR services are also disabled. However, the extended tables linked to that COE remain accessible and are not disabled. Any active cases under the deactivated COE will continue to remain active; only the COE itself is deactivated.

3. Click **Save**.

Configure an HR topic category

Create or modify an HR topic category to define the first-level of categorization for HR services. Each topic category is associated with a single HR Center of Excellence (COE).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.admin

Procedure
1. Navigate to **All** > **HR Administration** > **HR Services** > **Topic Categories**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Topic Category form

Field	Description
Active	Check box to activate the HR topic category for use.
COE	Name of the HR Center of Excellence (COE) that the HR topic category is categorized under. Each HR topic category is associated with a single COE.
Name	Name of the HR topic category.

4. Click **Submit** or **Update**.

Configure an HR topic detail

Create or modify an HR topic detail to define the second-level of categorization for HR services. Each topic detail is associated with a single topic category and HR Center of Excellence (COE).

Before you begin
Role required: sn_hr_core.admin

Procedure
1. Navigate to **All** > **HR Administration** > **HR Services** > **Topic Details**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Topic Detail form

Field	Description
Active	Check box to activate the HR topic detail for use.
Name	Name of the HR topic detail.
Topic category	Name of the HR topic category that the HR topic detail is categorized under. Each HR topic detail is associated with a single HR topic category.

4. Click **Submit** or **Update**.

Configuring HR Service Delivery Center of Excellence (COE) security policies

Use COE Access Control List (ACLs) Configuration to allow specific groups read or write access to HR cases under a specific COE.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, you don't want the Benefits group to view the cases created by the Compensation group. You create a COE security policy that allows the Compensation group access. Groups that aren't included on the policy cannot access the cases.

Use this feature as an alternative to using ACLs rules. For more information on ACLs, see Access control list rules.

COE security policies don't affect case creation. COE security policies affect what cases you can view or modify after creation.

You can still reclassify (transfer) HR cases from one HR service to another. Depending on the security policy, you might not be able to view the case after reclassification.

COE ACL Configuration uses the COE Security Policy [sn_hr_core_coe_security_policy] table to determine access to the extended HR case tables (COEs).

The * next to a table indicates it was deprecated for customers taking the Rome release to support a new data model. Existing customers using the legacy COEs and tables are not affected. These tables have been replaced by the Employee Relations feature. For more information, see Employee Relations cases.

The tables you can provide security for are:

Tables

Label	Name
HR Benefits Case	sn_hr_core_case_benefits
HR Compensation Case	sn_hr_core_case_compensation
HR Corporate Communications Case	sn_hr_core_case_corporate_communcations
*HR Employee Relations Case	sn_hr_core_case_relations
*HR Ethics Case	sn_hr_core_case_ethics
HR Global Mobility Case	sn_hr_core_case_global_mobility
HR Payroll Case	sn_hr_core_case_payroll
*HR Performance Case	sn_hr_core_case_performance
HR Talent Management Case	sn_hr_core_case_talent_management
HR Total Rewards Case	sn_hr_core_case_total_rewards
HR Workforce Administration Case	sn_hr_core_case_workforce_admin
HRIT Operations Case	sn_hr_core_case_operations
HR Lifecycle Events Case	sn_hr_le_case

Note:
You can also provide security to any case table you extend.

To define security for a COE:

- Choose all or specific HR services that fall under a COE.

Note:
When you select specific HR services for a COE, the unselected HR services are accessible by the case reader.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Determine what groups have read or write access to HR services under a COE.
- Create conditions to filter the records that apply to your security policy.

> **Note:**
> Condition builder is a powerful tool that filters specific actions on the COE. Use caution when using conditions on your security policy. It may also affect system performance.

Create COE security

Place security on a COE to prevent a group from accessing another group's cases.

Before you begin
Role required: admin, sn_hr_core.admin, sn_hr_le.admin

Procedure

1. Navigate to **All** > **HR Administration** > **COE Security Configuration**.
2. Select the COE (table that extends the HR case table) you want specified groups to have access to.
3. Check **Applies to all services** if you want all the HR services under the selected COE to be included in the security policy.
4. Leave this field blank to select specific HR services under a COE.
5. If you leave this field blank, the **Services** field appears and you can select specific HR services.
6. Ensure that the **Application** field displays the scope correctly.
   For more information, see System settings for the user interface (UI).
7. Check **Active** to enable security on the COE.
8. From the **Type** field, select how the policy you are defining controls security for the COE.
   Your choices are:
   - Read
   - Write
   - Case Restriction

   > **Note:**
   > The Case restriction option is only displayed when Employee Relations is installed.

   Selecting Case Locking displays the following fields:
   - Able to lock cases: Users that belong to the associated group can lock cases under the COE.
   - Able to view locked cases: Users that belong to the associated group can view locked cases.
9. **Optional:** Select the filter condition (if configured) the security policy must pass for the COE to be in effect.

   > **Warning:**
   > Selecting the filter condition might impact the security policy and affect all cases under a COE, including the non-active cases. Be sure you understand the full impact of the condition.

10. Select **Save** to remain on the security policy you are working on or **Submit** to return to the list of COE Security Policies.
    If you select **Save**, the Groups related list appears.
11. Select **Edit** to associate groups to the COE security policy.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information on Groups, see Manage HR Groups.

12. Move the groups you want associated with the COE security policy you are defining from the Collection column to the Groups List column.
13. Select **Save**.
    The COE Security Policy returns.
14. Select **Update**.

HR service configuration

HR services are the requests and assistance an HR organization provides its employees. You can configure an HR service to define the request to fulfillment process for that case type.

You can configure an HR case template to automatically populate fields on the HR case form when a request for that service is made. And if you need to make an existing HR service available for employee self-service, you can configure a record producer to make the service available as an HR catalog item in the HR service catalog.

For best results, do not configure multiple record producers to invoke a single HR service.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration instead. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

Configure an HR service

Create or modify an HR service to define the request to fulfillment process for that case type. Examples of HR services include benefits enrollment, direct deposit setup, and background check requests by third-party providers.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Click **New** or open a record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

3. Fill in the fields on the form, as appropriate.

HR Service form

Field	Description	
HR service name	Name of the HR service.	
Value	This field is automatically set to the name of the HR service.	
Badge	Badge to use with the HR service. Badges display on the portal to indicate to the employee which department is fulfilling that activity. See Configure an HR badge for more information.	
Fulfillment type	Fulfillment type of the HR service. Select one of the following values:	
	Manual	A simple fulfillment type with no associated configurations. For example, for a medical benefits inquiry, the HR agent would fulfill the employee's request by answering the employee's question.
	Service Activity	Service activities fulfill the HR service. In the **Service Activities** section at the bottom of the HR Service form, add one or more service activities to fulfill the HR service. **Note:** Service activities can be approvals, tasks, or child HR services. See Configure a service activity for an HR service for more information.
	Workflow	A workflow fulfills the HR service.
	Lifecycle Event	(Enterprise Onboarding and Transitions only) A lifecycle event fulfills the HR service. In the **Lifecycle Event Type** field, select a lifecycle event to fulfill the HR service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: A lifecycle event is a collection of activities that comprise an employee experience such as new hire onboarding. See Building a lifecycle event for more information.
	Advanced	An advanced option to fulfill the HR service using a combination of workflows and service activities.
	Flow	A flow fulfills the HR service. In the **Flow** field, select a flow that will be invoked to fulfill the HR service. To link flow to the HR service, a flow condition needs to be created for the HR service. A flow is an automated process of sequential and reusable actions. For more information, see Flow Designer.
Topic detail	HR topic detail that the HR service is categorized under. **Note:** The HR topic detail is the second-level of categorization for HR services. See HR service categorization for more information.	
Topic category	HR topic category that the HR service is categorized under. **Note:** The HR topic category is the first-level of categorization for HR services. See HR service categorization for more information.	
COE	HR Center of Excellence (COE) that the HR service is categorized under. **Note:** ○ The COEs are organized around functional disciplines and are extensions of the HR Case [sn_hr_core_case] table. See HR service categorization for more information. ○ (Enterprise Onboarding and Transitions only) An HR service for a lifecycle event can be associated with any COE.	
Automatically close case	Option to automatically close the HR case after all of the to-dos or all of the mandatory to-dos are complete. This field appears when **Service Activity** or **Lifecycle Event** is selected from **Fulfillment type**.	
	Close when	Select one of the following: ○ All to-dos are complete ○ Mandatory to-dos are complete
	Close offset	Number of days to offset the closure of the HR case. The maximum offset that you can apply is 90 days. For example, if the offset is set to three, then the HR case will close

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	three days after the completion of all (or all mandatory) to-dos. **Note:** If a case has only optional tasks and its HR Service has auto_close_case set to true and close_when set to mandatory (close when mandatory to-dos are complete), the case will automatically close when the scheduled job runs, ignoring the auto_close_offset field.
Opened for / Approver view	(Employee Service Center only) Configuration of the HR ticket page header for the person that the HR case was opened for and any approvers. **Note:** The HR ticket page is where users can view the details of an HR case in the Employee Center. See for more information.
Subject person / Task assignee view	(Employee Center only) Configuration of the HR ticket page header for the subject person of the HR case and any task assignees. **Note:** The HR ticket page is where users can view the details of an HR case in the Employee Center. See for more information.
Active	Option to activate the HR service for use.
Show case to subject person	(Employee Service Center Employee Center only) Option to show the HR case to the subject person when it is created, including: ○ HR tasks assigned to the subject person **Note:** The ticket page of the Employee Center shows all to-dos and requests for an HR case when the Opened for and Subject person are identical. If you want the Subject person to only see tasks assigned to them, change the Opened for person to someone different (possibly the Subject person's manager). ○ Child HR cases where the subject person is also the opened for ○ Child HR cases when the subject person has a task assigned ○ Requests where the subject person is the requested for If the HR case has one or more child cases, the child cases are automatically rolled up with the parent case up to three generations. HR child cases that are rolled up with the parent do not appear as separate requests on the requests page. Non-HR child cases appear both as a separate request and as part of the roll-up on the parent case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: The HR ticket page is where users can view the details of an HR case in the Employee Center. See for more information.
Template	HR case template to use with the HR service. **Note:** The HR case template automatically populates fields on the HR case form when a request for that service is made. See Configure an HR case template for more information.
Record producer	(Employee self-service only) Record producer to use with the HR service if you want to make the service available as an HR catalog item in the HR service catalog. The record producer defines the required fields and how the HR catalog item appears in the HR service catalog to employees. For more information, see Configure a record producer for an HR service. **Tip:** For best results, do not configure multiple record producers to invoke a single HR service.
Case options	Additional case options for the HR service. For example, you can: ○ Add Manager to Watchlist: The manager of the opened for person is added to the watchlist and receives notifications about the case. ○ Agent Can Add An Approval: Allow agents the flexibility to add adhoc approvers to a case. For more information, see Add adhoc approvers to a case. ○ Automatically Create Draft Document: Automatically place a document for HR services to the subject person on the HR Service Portal. An example is when an employee requests tuition reimbursement. An education expense agreement document is automatically sent to the employee to sign. ○ Automatically Initiates Document tasks: Tasks are created for participants who are mapped to a document template. This option appears only when the Document Templates [com.snc.document_templates] plugin is installed and a document template is selected on a HR service. ○ Do Not Default Subject Person: Subject Person is not defaulted from the Opened for person when a case is created. ○ Skip Auto Assign: HR case is not automatically assigned to an HR group or agent using the HR template or matching rules. **Note:** Skipping auto assignment does not affect the HR templates, assignment rules, or the workflows.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Skip Automatic User Acceptance State: Select to bypass the user acceptance state. ○ User Cannot Cancel: Opened for person on HR case cannot cancel it via the Employee Center (EC) or service portal.
HR criteria	HR criteria to apply to the HR service. **Note:** ○ HR criteria defines the conditions that an employee must meet for an HR agent to be able to access that HR service on their behalf. For example, you can configure the HR criteria for a 401(k) request so that the HR service is only available to U.S. employees from the **Create New Case** module. See HR criteria for more information. ○ (Employee self-service only) HR criteria applied to the HR service is internal-facing only, and has no relation to the user criteria that is used to control what HR catalog items an employee can access from the HR service catalog. See Edit the record producer for an HR catalog item for more information. ○ When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Case creation service config	Configuration of the HR case creation form for the HR service. **Note:** The HR case creation form is what displays when an HR agent selects an HR service from the **Create New Case** module. You can configure the form to include additional fields to collect relevant information. See Configure the HR case creation form for an HR service for more information.
Description	Description of the HR service.

4. In the **Checklist** related list, you can provide steps to help HR agents fulfill HR cases for the associated HR service.

HR checklist for HR agents

Field	Description
Checklist	Provide a checklist of items for HR agents to check off when fulfilling the HR case.

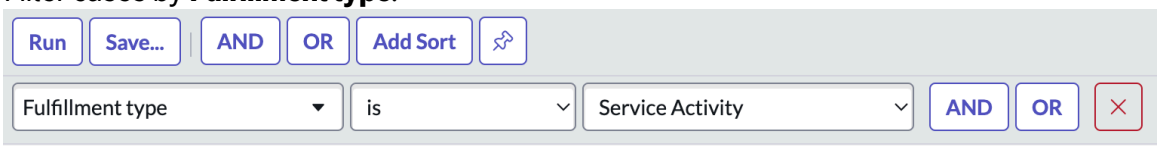
5. In the **HR Service Additional Information** related list, you can configure the fields that appear on the HR case form after a request for that service is made.
This is a two-part process. In addition to the configuration here, you must also configure the HR case form for the HR Center of Excellence (COE) that the HR service is categorized under.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The HR case form is what displays after an HR case is created. Configuration of the HR case form is a two-part process. See Configure the HR case form for an HR service for more information.

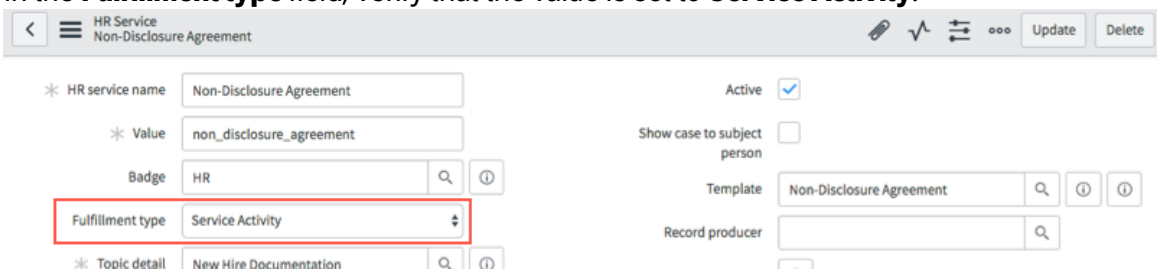
6. Click **Submit** or **Update**.

Note:
If you added a custom column to an HR COE table, you must create a UI policy action (**Visible** field is set to **False**) to hide it from other HR services that use that HR COE table. For example, if you add a custom column to the HR Payroll Case [sn_hr_core_case_payroll] table, it appears in all HR services related to this table. The custom column appears even after you add it for a specific HR service. For more information, see UI policies.



Configure a service activity for an HR service

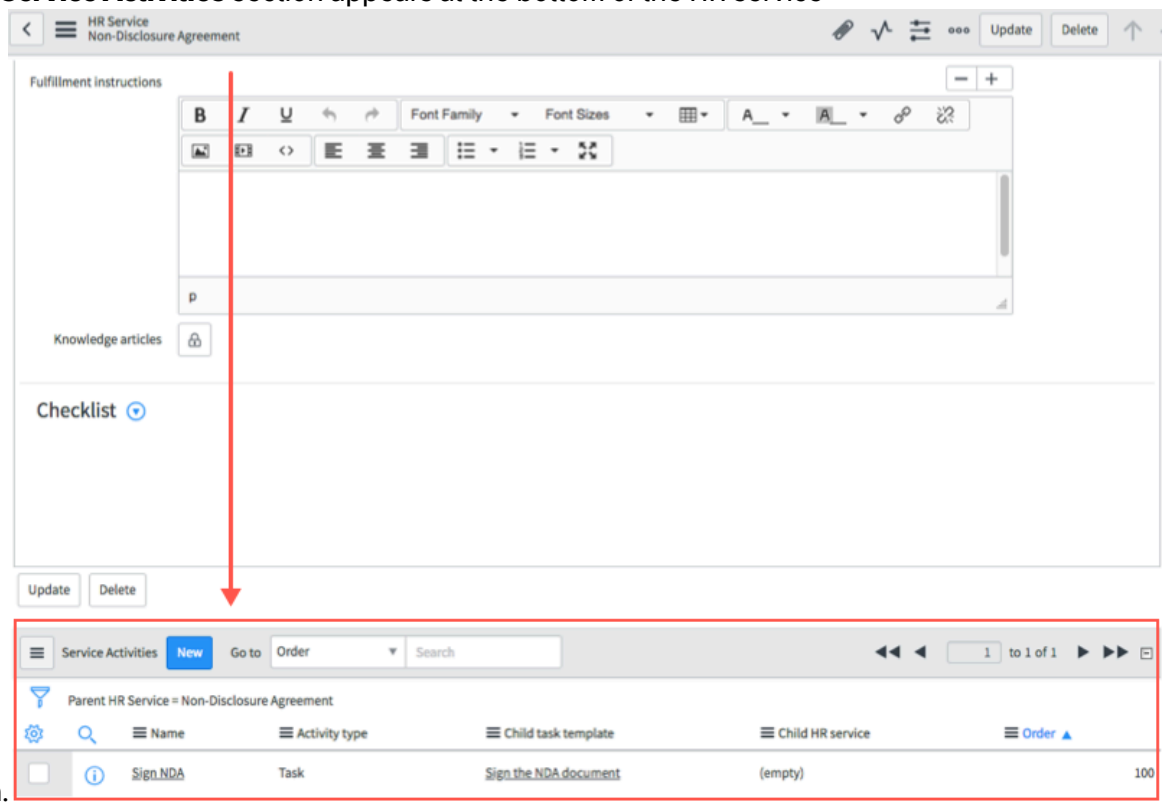
If the fulfillment type of an HR service is set to **Service Activity**, configure one or more service activities. Service activities can be approvals, tasks, or child HR services.



Before you begin
Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Filter cases by **Fulfillment type**.



3. Open the HR service.
4. In the **Fulfillment type** field, verify that the value is set to **Service Activity**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Service Activities** section appears at the bottom of the HR service form.

5. Click **New** or open a record, and follow the tasks as applicable.
   On the Service Activity form, you can configure the following types of service activities:
   - Approval
   - Task
   - Child HR Service

   For each service activity type, follow the applicable task.

Configure an approval

Configure a service activity that is an approval. Approvals require one or more users to approve the case before it can proceed.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. On the Service Activity form, set the **Activity type** field to `Approval`.
2. Fill in the fields on the form, as appropriate.

Service activity form fields and descriptions

Field	Description
Activity type	Set the value to **Approval**.
Name	Name of the service activity.
Missing any approver	Select one of the following actions for when any approver is missing:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Select replacements ○ Skip missing ○ Close incomplete
Missing all approvers	Select one of the following actions for when all approvers are missing: ○ Select replacements ○ Close incomplete
Wait for	Select one of the following actions for when an approval is completed: ○ Anyone to approve ○ Everyone to approve ○ First response from anyone
On rejection	Select one of the following actions for when an approval is rejected: ○ Allow resubmit of approvals **Note:** When an approval is rejected, the **Assigned to** user for the case can submit another request for approval with work notes or comments. See Resubmit an HR case for approval. ○ Close incomplete **Note:** To reject an approval, users should have the HR case writer [sn_hr_core.case_writer] role.
Parent HR service	This field is automatically set to the parent HR service.
Order	Order number for when the service activity is made available. Lower numbered service activities are made available before higher numbered service activities. **Note:** ○ The current service activity must be closed, completed, accepted, or rejected before the next service activity is made available. ○ Service activities with identical order numbers are made available at the same time.
Approvers from case	User fields from the HR case to approve the task.
Approver users	Users to approve the task.
Approver groups	Groups to approve the task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Submit** or **Update** on the Service Activity form.
4. Click **Update** on the HR Service form.

Configure a task

Configure a service activity that is a task.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. On the Service Activity form, set the **Activity type** field to `Task`.
2. Fill in the fields on the form, as appropriate.

Service activity form

Field	Description
Activity type	Set the value to **Task**.
Child task template	Name of the child task template that the service activity is associated with. **Note:** The HR task template automatically populates fields on the HR task form when the task is generated. See Configure an HR task template for more information.
Name	Name of the service activity.
Parent HR service	This field is automatically set to the parent HR service.
Order	Order number for when the service activity is made available. Lower numbered service activities are made available before higher numbered service activities. **Note:** ○ The current service activity must be closed, completed, accepted, or rejected before the next service activity is made available. ○ Service activities with the same order number will be grouped and when there is an approval activity in the group, approval will execute first, followed by others.

3. Click **Submit** or **Update** on the Service Activity form.
4. Click **Update** on the HR Service form.

Configure a child HR service

Configure a service activity that is a child HR service.

Before you begin
Role required: sn_hr_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
This feature is only available when the Human Resources Scoped App: Lifecycle Events (com.sn_hr_lifecycle_events) plugin is activated.

Procedure

1. On the Service Activity form, set the **Activity type** field to `Child HR Service`.
2. Fill in the fields on the form, as appropriate.

Service activity form fields and descriptions

Field	Description
Activity type	Set the value to **Child HR Service**.
Child HR service	Name of the child HR service that the service activity is associated with.
Name	Name of the service activity.
Parent HR service	This field is automatically set to the parent HR service.
Order	Order number for when the service activity is made available. Lower numbered service activities are made available before higher numbered service activities. **Note:** ○ The current service activity must be closed, completed, accepted, or rejected before the next service activity is made available. ○ Service activities with identical order numbers are made available at the same time.

3. Click **Submit** or **Update** on the Service Activity form.
4. Click **Update** on the HR Service form.

Configure the HR case creation form for an HR service

Configure the fields that appear on the HR case creation form for an HR service.

Before you begin
Role required: sn_hr_core.admin

About this task
This is the form that displays when an HR agent selects an HR service from the **Create New Case** module. You can include additional fields on the HR case creation form so that HR agents are able to collect relevant information before beginning work on the case. The case creation configuration records can be applied to one or more HR services.

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Open the HR service.
3. In the **Case creation service config** field, open the case creation configuration record.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

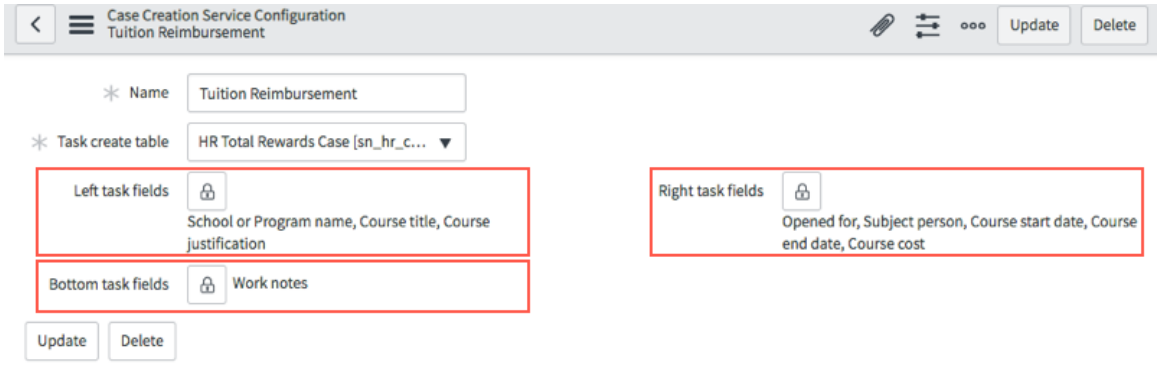
Note:
To create a new case creation configuration record for the HR service, click the **Lookup** icon, and then click **New**.

4. Fill in the fields on the form.

Case Creation Service Configuration form

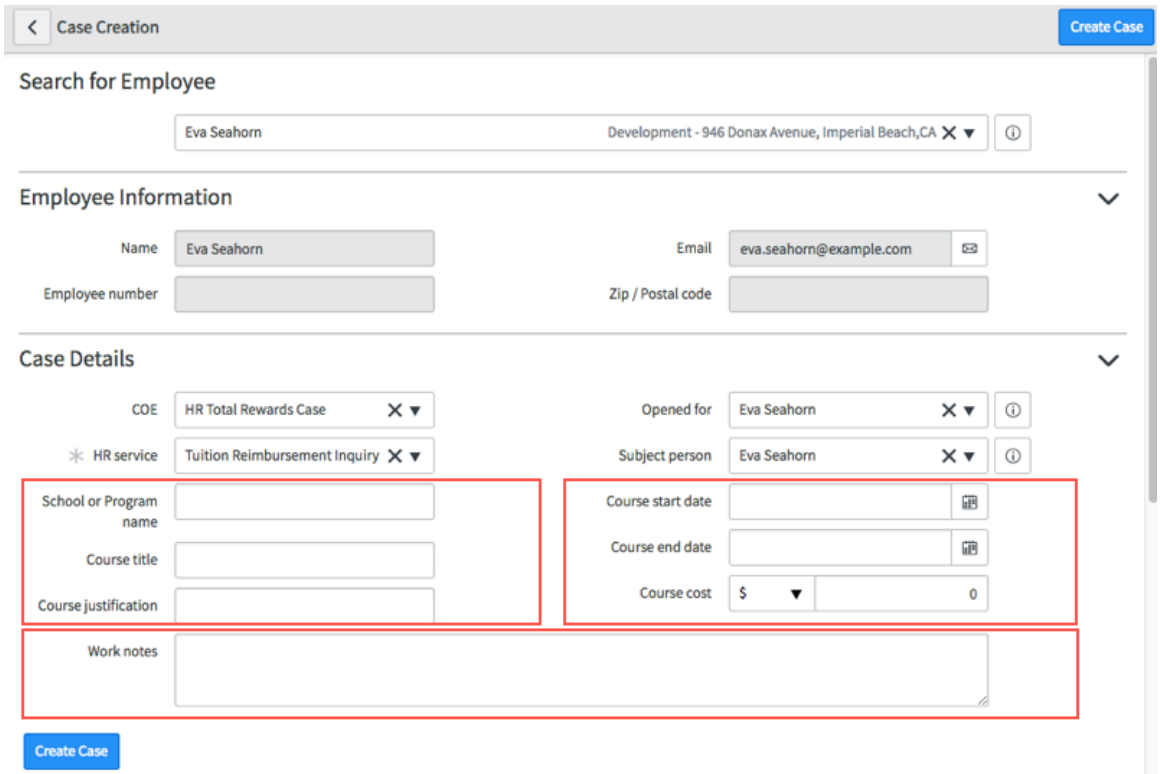
Field	Description
Name	Name of the case creation service configuration record.
Task create table	Name of the HR case table that the record is associated with.
Left task fields	Fields to add on the left side of the form. **Note:** Only fields added to the Left task fields appear on the User segment groups form. Fields added to the Right task fields do not appear o the User segment groups form. For more information, see Create a user segment group.
Right task fields	Fields to add on the right side of the form.
Bottom task fields	Fields to add on the bottom of the form.

Note:
When adding the Description(rich_description) field, the TinyMCE HTML editor does not appear until after the case is created and viewable. Any HTML formatted edits can be added after the case is created.



5. Click **Submit** or **Update** on the case creation service configuration record.
6. Click **Update** on the HR service form.

Example: Additional fields for tuition reimbursement HR case creation forms



You are part of an enterprise HR organization using the HR Service Delivery application. You have several HR services related to tuition reimbursement, and you know this case type requires the HR agent to collect information such as the school name, course title, and course justification before case work can begin. If that information is collected prior to case creation, you can save your organization time by avoiding the back-and-forth the HR agent and employee must engage in to capture the relevant information.

To do this, you need to configure the HR case creation form for tuition reimbursement HR services to include additional fields that ask for the school or program name, course title, course justification, course start date, and course end date. So you create a case creation service configuration record and associate it with the HR Total Rewards Case [sn_hr_core_case_total_rewards] table. For the left, right, and bottom task fields, you add the additional fields you want to appear on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Once the configuration is complete, HR agents that select the tuition reimbursement request service from the **Create New Case** module will see the additional fields that you added. This enables the HR agent to collect the relevant information before beginning work on the case.

Configure the HR case form for an HR service

Configure the fields that appear on the HR case form for an HR service.

Before you begin

Role required: sn_hr_core.admin

About this task

This is the form that displays after an HR case is created. Configuration of the HR case form is a two-part process. First, you add or remove the additional fields on the HR service form. Second, you configure the HR case form for the HR Center of Excellence (COE) that the HR service is categorized under.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Add or remove the fields in the **HR Service Additional Information** related list.
   a. Navigate to **HR Administration** > **HR Services** > **HR Service Configuration**.
   b. Open the HR service.
   c. In the **HR Service Additional Information** related list, fill in the fields as appropriate.

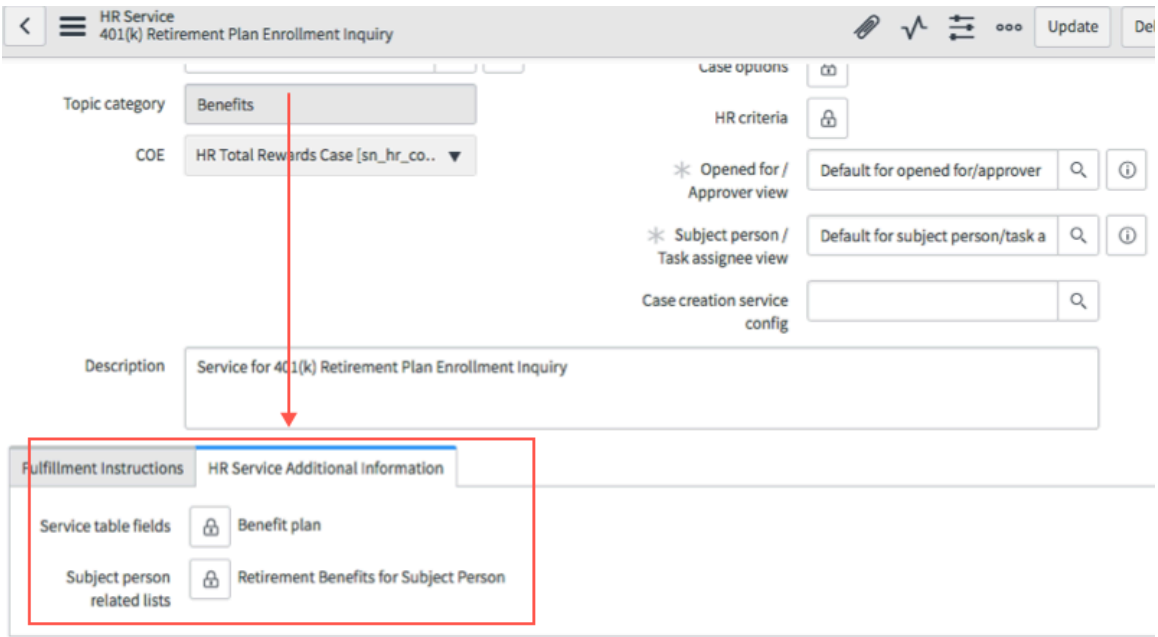
HR service additional information form fields and descriptions

Field	Description
Service table fields	Click the lock icon to view the list of available fields from the HR Center of Excellence (COE) that the HR service is categorized under. Select the fields you want to appear on the HR case form for the HR service. For example, the 401(k) retirement plan enrollment inquiry HR service includes the **Benefit plan** field. **Note:** If you added a custom column to an HR COE table, you must create a UI policy action (**Visible** field is set to **False**) to hide it from other HR services that use that HR COE table. For example, if you add a custom column to the HR Payroll Case [sn_hr_core_case_payroll] table, it appears in all HR services related to this table. The custom column appears even after you add it for a specific HR service. For more information, see UI policies.
Subject person related lists	Click the lock icon to search for a subject person related list you want to appear on the HR case form for the HR service. For example, the 401(k) retirement plan enrollment inquiry HR service includes the **Retirement Benefits for Subject Person** related list.

   d. Click **Update**.

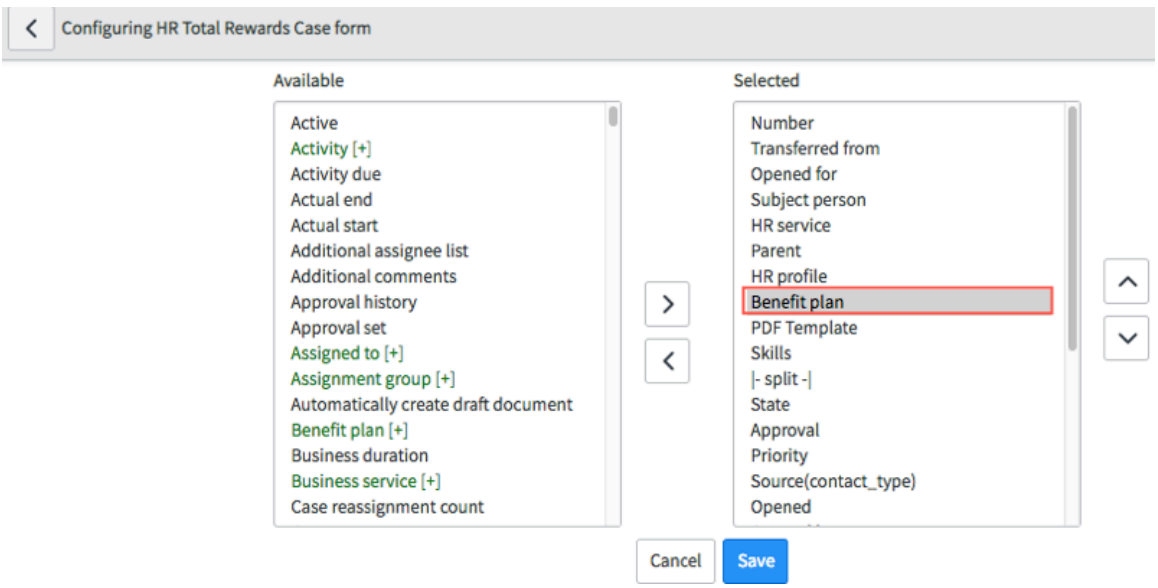
2. Configure the HR case form for the HR Center of Excellence (COE) that the HR service is categorized under.
   a. Navigate to **HR Case Management** > **All HR Cases**, and open an HR case that is part of the same COE as the HR service.
   b. In the HR case form header, click the menu icon and navigate to **Configure** > **Form Layout**.
   c. Move the fields that you added to the HR service form to the **Selected** column.
   d. Click **Save**.

HR case form configuration examples



Examples on how to configure the HR case form for an HR service.

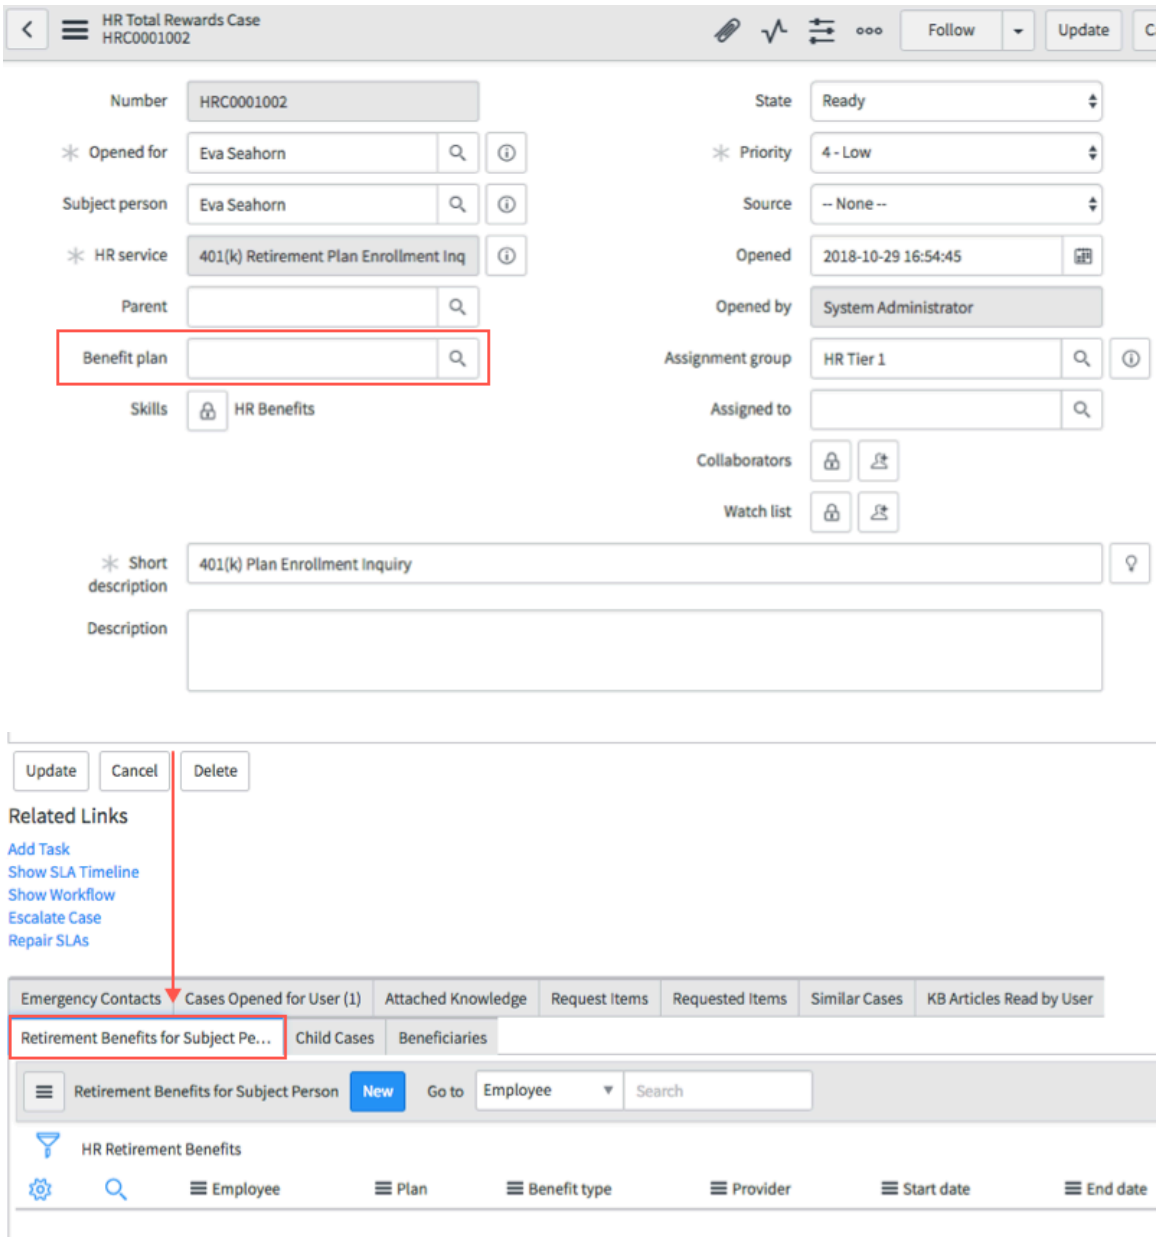
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Example: Additional fields for 401(k) HR case forms

You are part of an enterprise HR organization using the HR Service Delivery application. You have several HR services related to 401(k) retirement benefits, and you want to add several additional fields to the HR case form, specifically the benefit plan and the list of retirement benefits for the subject person. This way, HR agents can have access to that information when working on that case type. Configuration of the HR case form for an HR service is a two-part process:

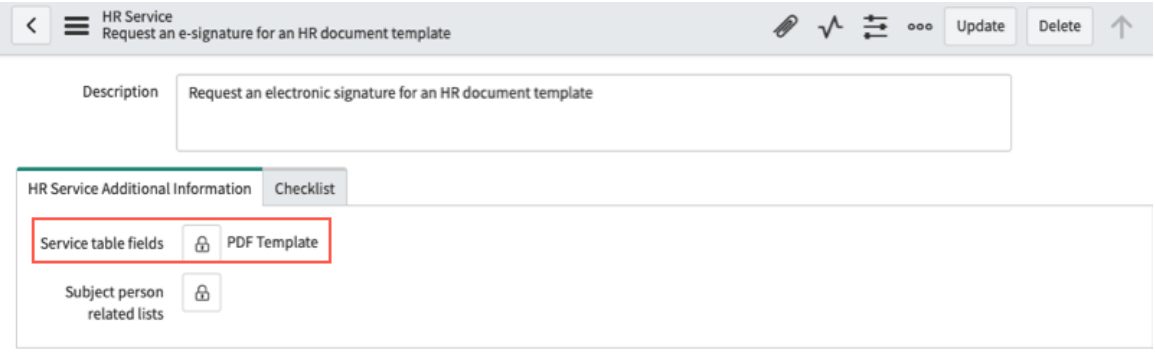
First, you need to add the fields and/or related lists you want to appear on the HR case form for that HR service in the **HR Service Additional Information** related list.



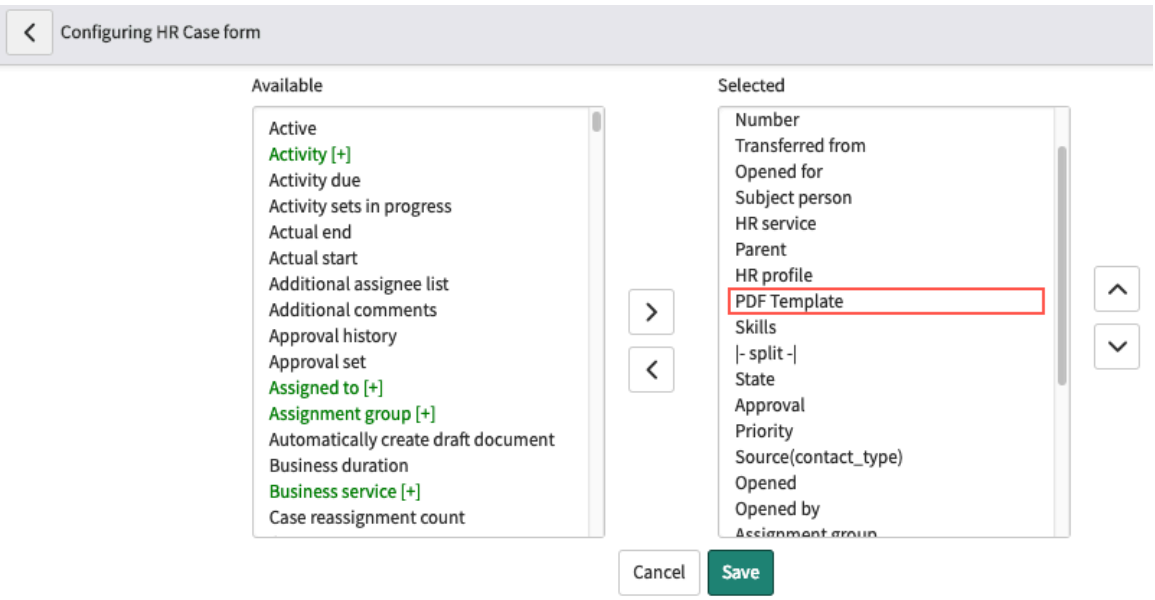
Second, you need to configure the HR case form for the COE that the HR service is categorized under. For the 401(k) retirement plan enrollment inquiry HR service, that COE is HR Total Rewards. Open any HR case for the HR Total Rewards COE. In the HR case form header, click the hamburger icon and navigate to **Configure** > **Form Layout**. Make sure the additional fields are included under the Selected column.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Once the configuration is complete, HR agents that are working on a 401(k) case will see the additional fields you added to the HR case form. This enables the HR agent to use the additional information as they work on the HR case.



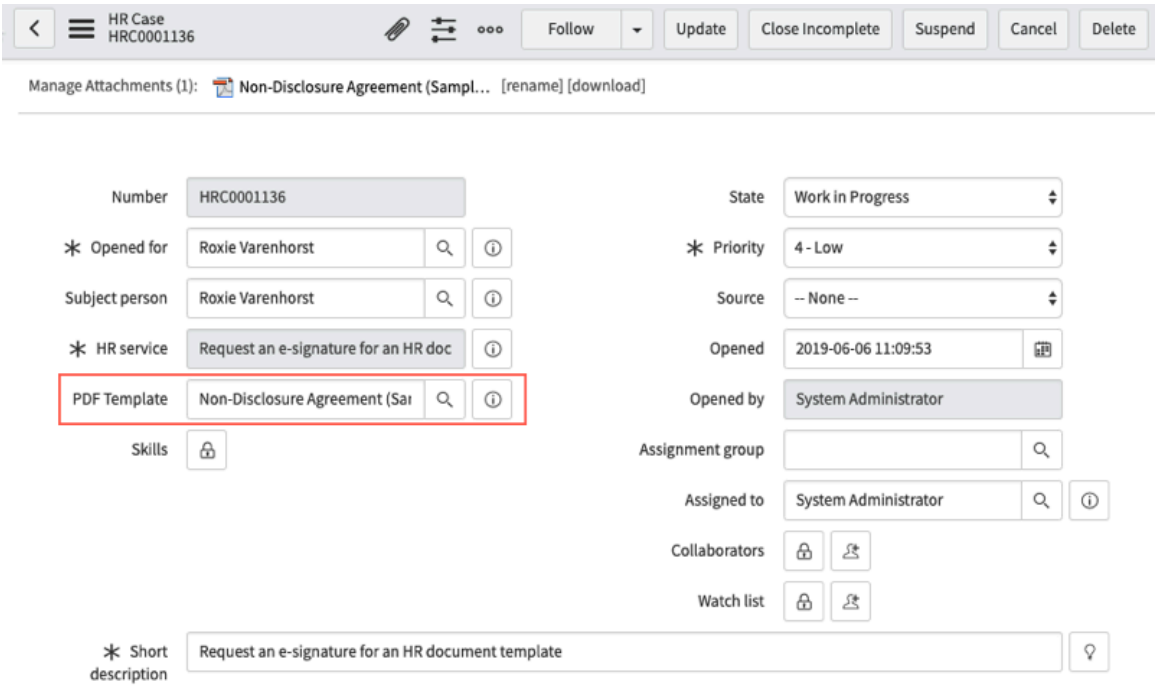
Example: Requesting an e-signature for an HR document template



You are configuring an HR service to request electronic signatures for HR document templates using HR e-signature. Unlike managed documents or knowledge articles, the HR document template that the signatory will sign is selected on the HR case form. Therefore, you need to add the **PDF Template** field to the HR case form for your HR service. This way, HR agents can select the HR document template that they want the employee to sign when creating that case type.

First, on the HR service form, under the **HR Service Additional Information** related list, add the **PDF Template** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Second, create an HR case or open an existing case that is part of the COE that your HR service is categorized under. On the HR case form header, click the menu icon and navigate to **Configure** > **Form Layout**. Make sure that the **PDF Template** field is included under the Selected column.

Now, when an HR agent requests an electronic signature for an HR document template, the **PDF Template** field will appear on the HR case form for that HR service. This enables the HR agent to select an HR document template, preview it, and generate it so that the employee can then electronically sign the document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add a custom column (field) to an HR table

You can add custom columns (fields) to an HR table.

Before you begin

Role required: sn_hr_core.admin

Note:
When adding custom columns to an HR COE table, you must create a UI policy to hide it from other HR services that use that HR COE table.

Procedure

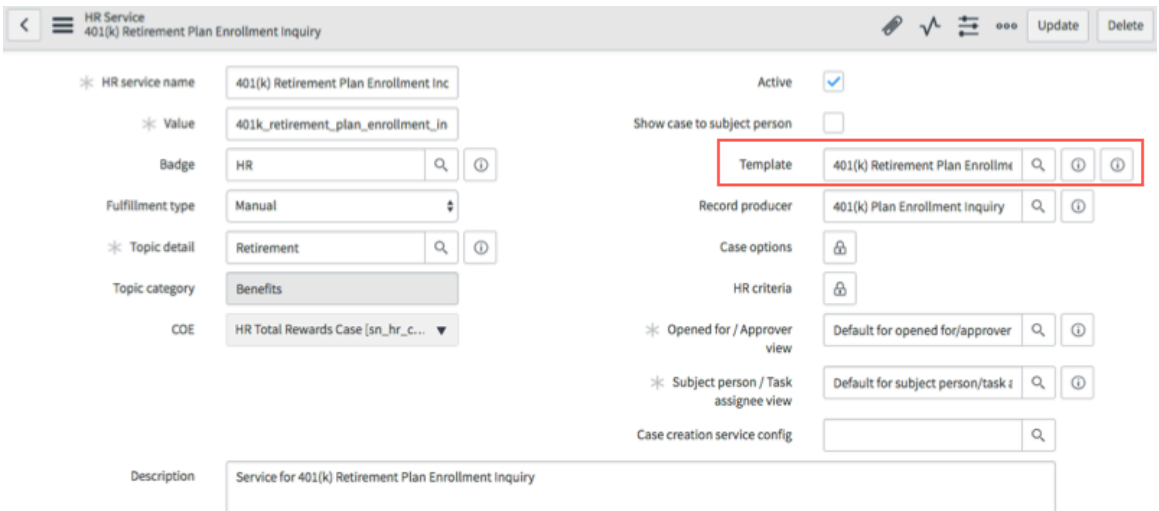
1. Navigate to **All** > **System Definition** > **Tables**.
2. Select the table you want to add a custom column to.
3. Under the **Columns** tab, select **New**.
4. Fill in the fields for the **Dictionary Entry**.

   Note:
   For more information on columns and fields, see Field administration.

5. Select **Save** or **Submit**.

   Note:
   If you added a custom column to an HR COE table, you must create a UI policy action (**Visible** field is set to **False**) to hide it from other HR services that use that HR COE table. For example, if you add a custom column to the HR Payroll Case [sn_hr_core_case_payroll] table, it appears in all HR services related to this table. The custom column appears even after you add it for a specific HR service. For more information, see UI policies.

Configure an HR case template



Create or modify an HR case template for an HR service to automatically populate fields on the HR case form when a request for that service is made.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.admin

Procedure
1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Open the HR service.
3. Open the HR template for that service.

Note:
To create a new HR case template for the HR service, click the **Lookup** icon, and then click **New**.

4. Fill in the fields on the form, as appropriate.

Note:
This is the new UI form view. To switch to the classic environment, click **Switch to Classic UI** in the form header.

HR Case Template form

Field	Description
Name	Name of the HR case template.
Active	Option to activate the HR case template for use.
COE	HR case table (COE) that the HR case is categorized under when a request for that HR service is made. **Note:** Make sure that the COE for the HR case template matches that of the associated HR service.
Owning group	Group that is responsible for the HR case template.
Short Description	Short description that appears on the HR case form when a request for that HR service is made.
Priority	Priority assigned to the HR case when a request for that HR service is made.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Assignment type	Assignment of the HR case when a request for that HR service is made. You can assign the HR case to a user, skill, or group. Select one of the following: ○ Named user: In the **Assigned to** field, select a user. ○ Skills/Assignment group: In the **Skills** or **Assignment Group** field, select a skill or group.
Use global descriptions for translations	Option to enable the use of global descriptions for translations. If selected, you can provide the short description and description for the HR case template in one or more languages. See Translations for HR cases and tasks for more information. You can use dynamic variables to personalize your short and global descriptions. Using dynamic variables in an HR task template works in: ○ HR tasks related to HR cases in the legacy UI or HR Service Delivery Agent Workspace ○ Employee Center Pro To-dos form ○ Lifecycle Events ticket form **Note:** Because some dynamic variables might provide personal information, use the sn_hr_core.task_template_variable_ignore system property to ensure privacy. For example, social security number (ssn) is excluded by default. You can add other variables to this system property to disable them but ensure they are comma separated with no spaces between each variable.
Add field	Fields to automatically populate on the HR case form when a request for that HR service is made. Select one or more fields from the **Add field** list and provide the desired values. For example, you can add the **State** field to set a default case state or add the **PDF Template** field to select a document for cases that require a document acknowledgement or signature. Any changes that you make to the template fields or values will take precedence over the original template values in the fields. **Note:** Select the Document Template option to associate a document template (of Document Templates [com.snc.document_templates] plugin) with an HR service.

5. Click **Submit** or **Update** on the HR template form.
6. Click **Update** on the HR service form.

© 2026 ServiceNow, Inc. All rights reserved.

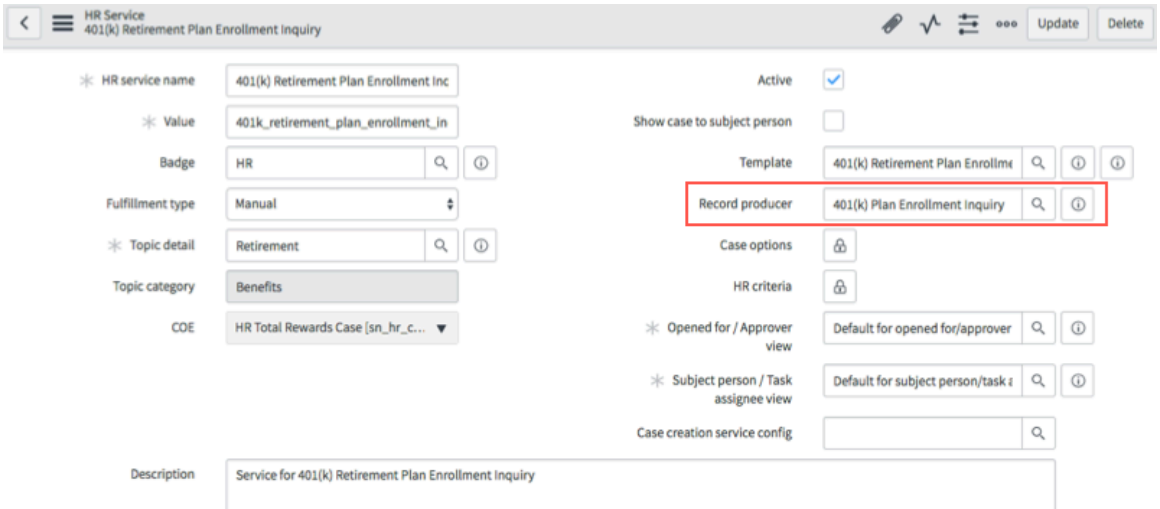
Configure a record producer for an HR service

Make an existing HR service available for employee self-service by adding it to the HR service catalog.

Before you begin

Role required: sn_hr_core.admin



About this task

To avoid creating duplicate services, do not create a new HR catalog item. Instead, configure a record producer to link your existing HR service to the HR service catalog. For optimal performance, use one record producer per HR service.

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Open the HR service.
3. Open the record producer for that service.

> **Note:**
> To create a new record producer for the HR service, click the **Lookup** icon, and then click **New**.

4. Fill in the fields on the form, as appropriate.

Record Producer form

Field	Description
Name	Name of the record producer.
Table name	HR case table that the record producer is associated with. **Note:** Make sure that the HR case table for the record producer matches that of the associated HR service.
Application	This field is automatically set to `Human Resources: Core`.
Active	Option to activate the record producer for use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Preview link	Link to preview how the HR catalog item appears to users in the HR service catalog.
Expand help for all questions	

5. In the **What it will contain**, **Accessibility**, and **Generated Record Data** related lists, fill in the fields as appropriate.
   Since you are configuring the record producer from the HR service form, make sure to:

   a. In the **What it will contain** related list, provide the following script:

   ```
   new sn_hr_core.hr_ServicesUtil(current,
    gs).createCaseFromProducer(producer, cat_item.sys_id);
   ```

   b. In the **Accessibility** related list, set the **Catalogs** field to **Human Resources Catalog**.

6. In the **Variables** related list, configure the variables for the HR catalog item as appropriate.

   Variables collect information from the user, and are used to ask questions and map answers to fields. You can add as many variables as you need to the HR catalog item. Commonly used variables types include:

   - Checkbox
   - Multiple Choice
   - Reference
   - Select Box
   - Single Line Text

   To learn more about the different types of variables and how to configure them, see Types of service catalog variables.

7. In the **Available For** and **Not Available For** related lists, configure the user criteria to apply to the HR catalog item as appropriate.
   User criteria controls which employees can access and request the HR catalog item in the HR service catalog. To learn more about user criteria and how they are used to control access to HR catalog items, see Set security for items and categories.

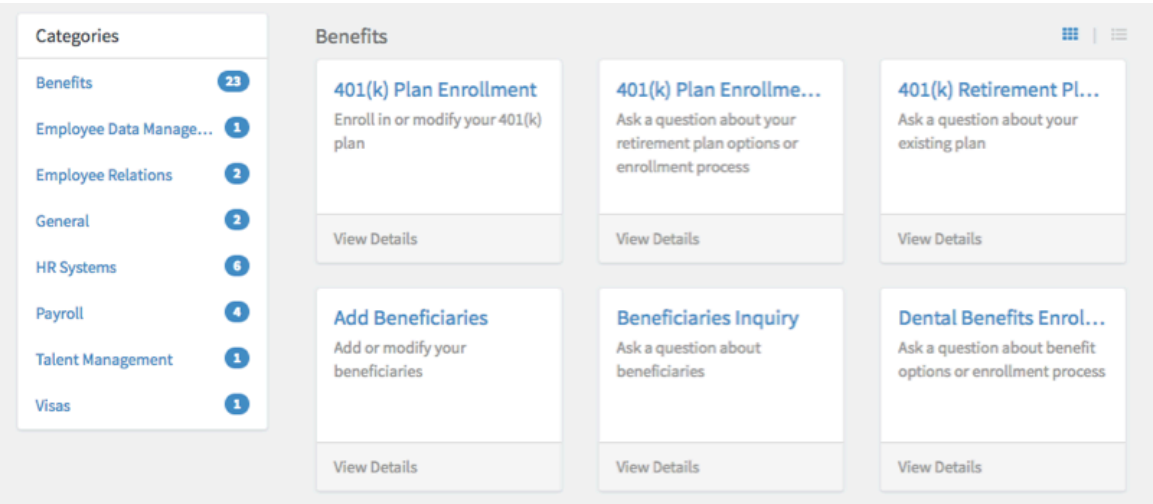
   Note:
   User criteria applied to the HR catalog item is employee-facing only, and has no relation to the HR criteria that is used to control what HR services an HR agent can request for an employee from the **Create New Case** module. See Configure an HR service for more information.

8. Click **Submit** or **Update** on the record producer form.
9. Click **Update** on the HR service form.

HR service catalog management

Empower employees to request HR services through the HR service catalog. The HR service catalog provides employees a catalog of HR services that they can request directly from HR, such as to add beneficiaries to a benefits plan, request a travel visa, or inquire about a discrepancy in their paycheck.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Employees can access the HR service catalog from a self-service portal such as the Employee Service Center. You can manage the setup and categorization of the HR service catalog, as well as configure the individual HR catalog items that populate it.

HR service catalog categorization

The HR service catalog is a collection of HR catalog items that employees can request directly from HR. The HR catalog items are organized into categories, which define the organizational structure for the catalog. For example, the items can be categorized by benefits, employee data management, employee relations, general, HR systems, payroll, talent management, and visas.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration instead. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

You can manage the creation or modification of categories in the HR service catalog, as well as assign or remove HR catalog items from a category or assign or remove categories from an HR catalog item. To manage the categorization of HR catalog items in the HR service catalog, see HR service catalog categorization.

HR catalog item configuration

HR catalog items are the HR services that your organization makes available for employees to request directly from the HR service catalog. (Not all HR services need to be accessible to employees; some services are only initiated internally by HR agents. This means that all HR catalog items have a corresponding HR service, but not all HR services have a corresponding HR catalog item.) To configure the HR catalog items, see HR catalog item configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Once an HR catalog item is published to the HR service catalog, it is available for employees to request. When an employee submits an HR catalog item request, an HR case is created.

HR service catalog categorization

HR catalog items in the HR service catalog are organized into categories. The categories define the organizational structure for the catalog so that employees can more easily browse and request the HR services they need.

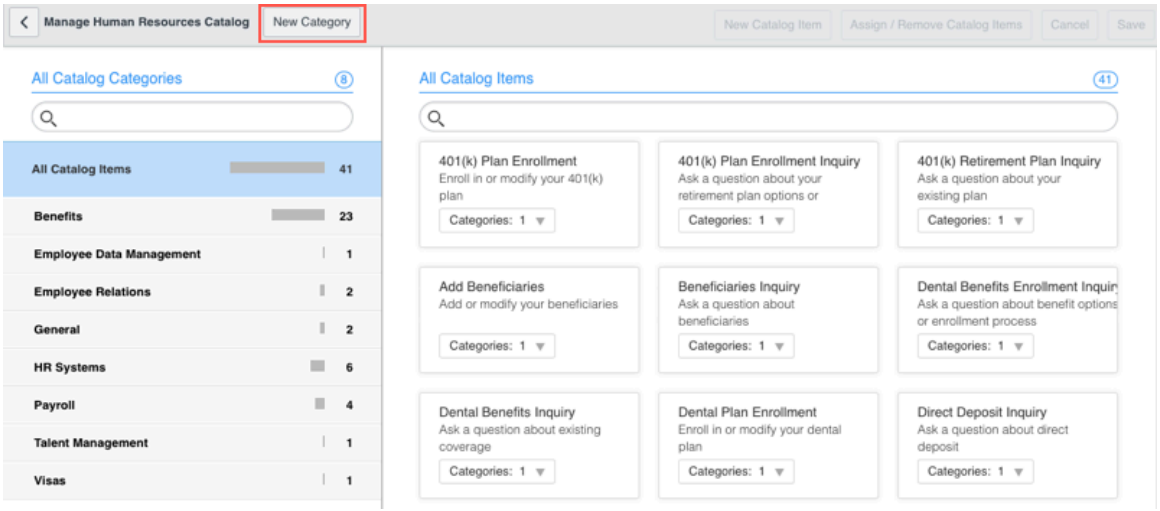
You can manage the creation or modification of categories in the HR service catalog, as well as assign or remove HR catalog items from a category or assign or remove categories from an HR catalog item.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration instead. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

Create an HR catalog category

Create a new category in the HR service catalog.



Before you begin

Role required: sn_hr_core.admin

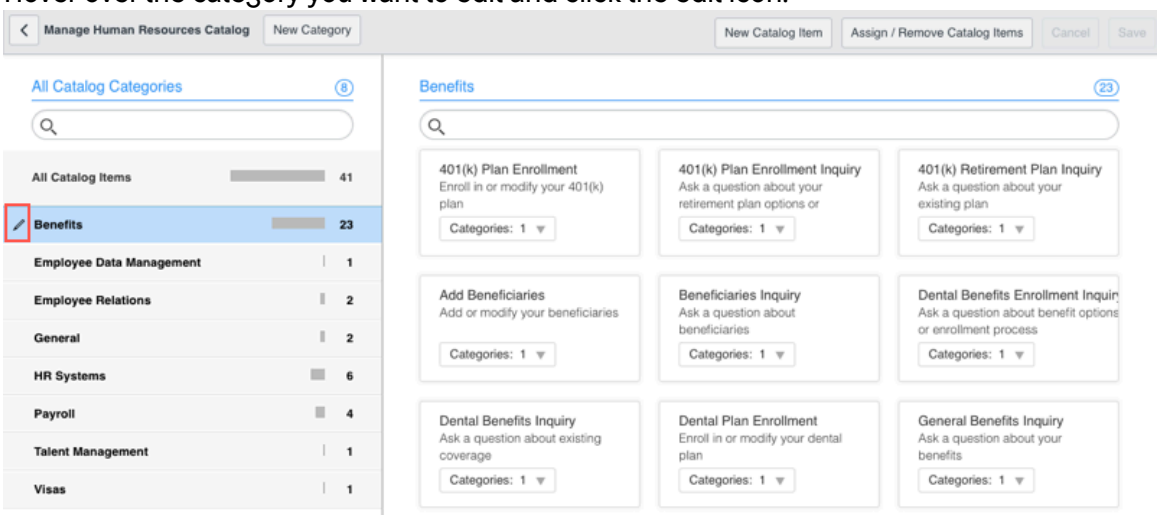
Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **Manage HR Catalog**.
2. Click **New Category**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Provide the category name and description.
4. Click **Submit**.

Edit an HR catalog category



Edit an existing category in the HR service catalog.

Before you begin

Role required: sn_hr_core.admin

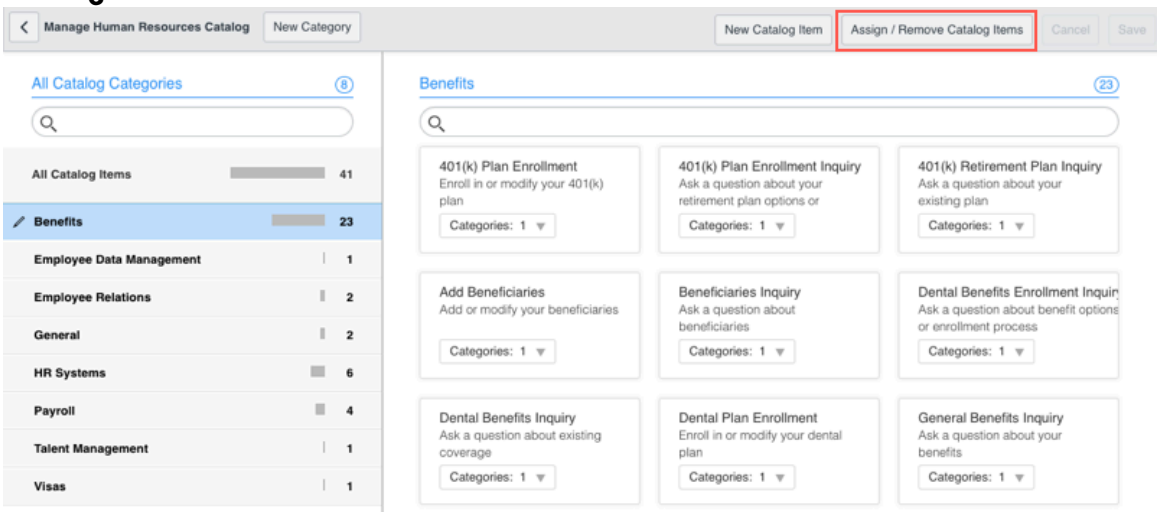
Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **Manage HR Catalog**.
2. Hover over the category you want to edit and click the edit icon.

3. Modify the category name, active state, or description as needed.
4. Click **Submit**.

Assign or remove HR catalog items from a category

Assign or remove one or more HR catalog items from a category in the HR service catalog.



Before you begin

Role required: sn_hr_core.admin

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Locate the HR catalog item you want to assign or remove categories, and open the **Categories** list.
4. Select the categories to assign and deselect the categories to remove.

5. Click **Save**.

HR catalog item configuration

HR catalog items are the HR services that your organization makes available for employees to request directly from the HR service catalog.

You can configure an HR catalog item (also known as a record producer) to define the required fields and how the item appears in the catalog to employees. You can configure an HR case template to automatically populate fields on the HR case form when a request for that item is made. And you can link to relevant knowledge articles or managed documents for employees to reference.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration instead. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

Create an HR catalog item

Create an HR catalog item so that employees can request the HR service directly from the HR service catalog through a self-service portal such as the Employee Service Center. When you create a new HR catalog item, a corresponding HR service, record producer (synonymous to HR catalog item), and HR case template are automatically created.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **Manage HR Catalog**.
2. Select a category.
3. Click **New Catalog Item**.

   Note:
   The COEs available to you may differ depending on the HR package you have.

   - The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
   - If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
   - If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
   - The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

4. Fill in the fields on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New Catalog Item form

Field	Description
Name	Name of the HR catalog item.
Short description	Short description of the HR catalog item.
Case type	Name of the HR Center of Excellence (COE) that the corresponding HR service and record producer are categorized under. **Note:** The COEs are organized around functional disciplines and are extensions of the HR Case [sn_hr_core_case] table. To learn more, see HR service categorization.
Topic Category	Name of the HR topic category that the corresponding HR service and record producer are categorized under. **Note:** The HR topic category is the first-level of categorization for HR services. To learn more, see HR service categorization.
Topic Detail	Name of the HR topic detail that the corresponding HR service and record producer are categorized under. **Note:** The HR topic detail is the second-level of categorization for HR services. To learn more, see HR service categorization.
Assignment group	Default assignment group of the HR catalog item.
Priority	Default priority of the HR catalog item.

5. Click **Submit**.

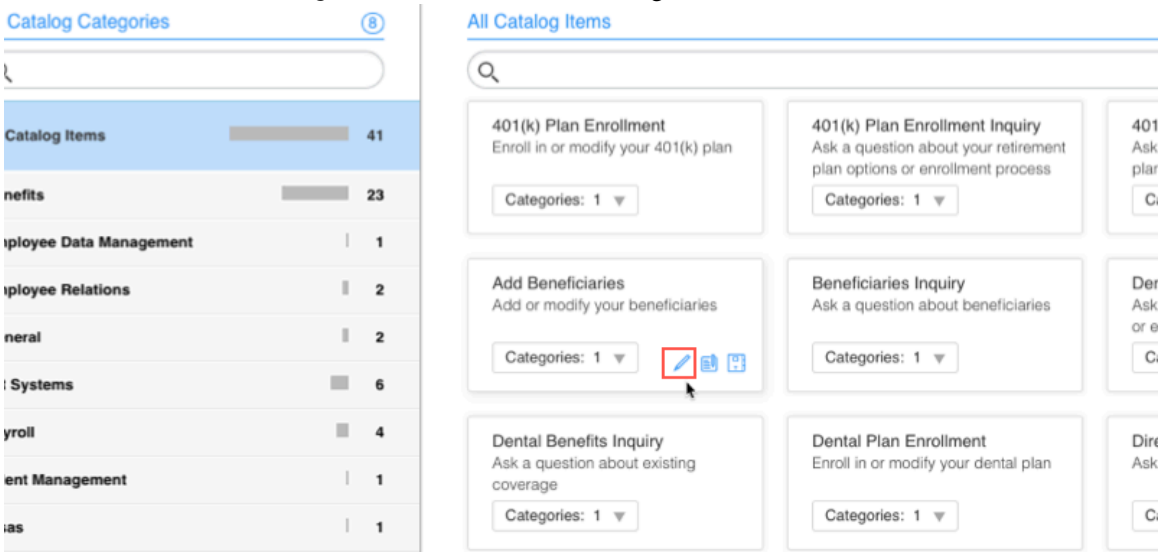
Note:
If you click **Publish**, the HR catalog item will be available for employees to request in the HR service catalog.

What to do next

The creation of an HR catalog item automatically creates a corresponding HR service, record producer (synonymous to HR catalog item), and HR case template. Configure the record producer and HR case template before you publish the HR catalog item to the HR service catalog.

Edit the record producer for an HR catalog item

Edit the record producer for an HR catalog item to define the required fields and how the item appears in the HR service catalog to employees.



Before you begin

Role required: sn_hr_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **Manage HR Catalog**.
2. Hover over the HR catalog item and click **Edit catalog item**.

3. Fill in the fields on the form, as appropriate.

Record Producer form

Field	Description
Name	Name of the record producer.
Table name	HR case table that the record producer is associated with. **Note:** Make sure that the HR case table for the record producer matches that of the associated HR service.
Application	This field is automatically set to `Human Resources : Core`.
Active	Option to activate the record producer for use.
Preview link	Link to preview how the HR catalog item appears to users in the HR service catalog.
Expand help for all questions	

4. In the **What it will contain**, **Accessibility**, and **Generated Record Data** related lists, fill in the fields as appropriate.
   You can provide a short description and description, configure a script, add images, define a template, and more.
5. In the **Variables** related list, configure the variables for the HR catalog item as appropriate.

   Variables collect information from the user, and are used to ask questions and map answers to fields. You can add as many variables as you need to the HR catalog item. Commonly used variables types include:

   - Checkbox
   - Multiple Choice

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

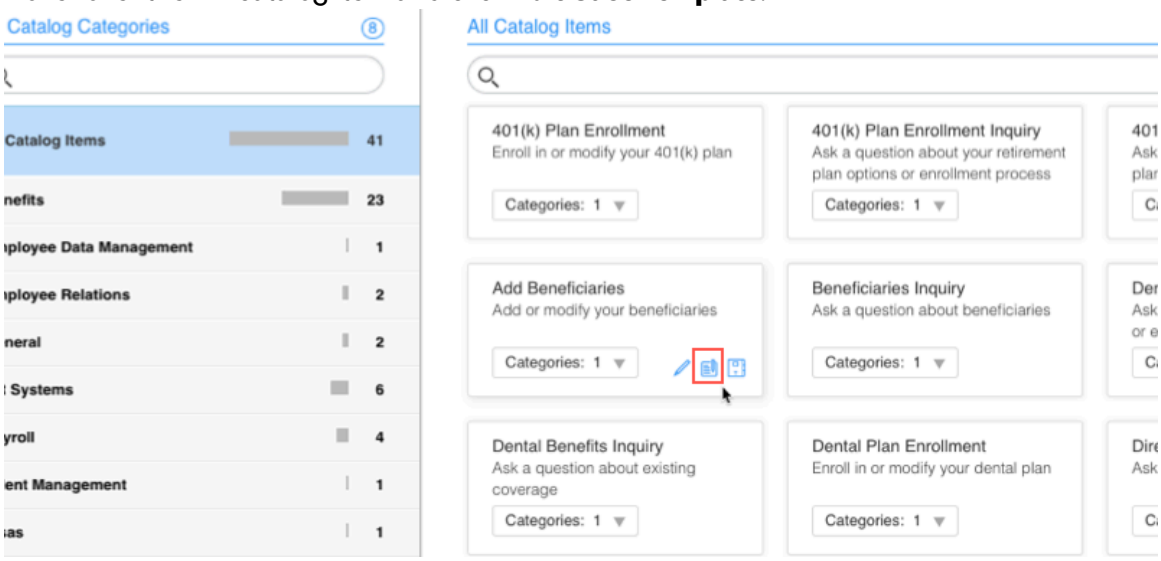
- Reference
- Select Box
- Single Line Text

To learn more about the different types of variables and how to configure them, see Types of service catalog variables.

6. In the **Available For** and **Not Available For** related lists, configure the user criteria to apply to the HR catalog item as appropriate.
   User criteria controls which employees can access and request the HR catalog item in the HR service catalog. To learn more about user criteria and how they are used to control access to HR catalog items, see Set security for items and categories.

   Note:
   User criteria applied to the HR catalog item is employee-facing only, and has no relation to the HR criteria that is used to control what HR services an HR agent can request for an employee from the **Create New Case** module. See Configure an HR service for more information.

7. Click **Update**.



Edit the HR case template for an HR catalog item

Edit the HR case template for an HR catalog item to automatically populate fields on an HR case form when a request for that item is made.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **Manage HR Catalog**.
2. Hover over the HR catalog item and click **Edit Case Template**.

3. Fill in the fields on the form, as appropriate.

   Note:
   This is the new UI form view. To switch to the classic environment, click **Switch to Classic UI** in the form header.

HR Case Template form

Field	Description
Name	Name of the HR case template.
Active	Option to activate the HR case template for use.
COE	HR case table (COE) that the HR case is categorized under when a request for that HR service is made. **Note:** Make sure that the COE for the HR case template matches that of the associated HR service.
Owning group	Group that is responsible for the HR case template.
Short Description	Short description that appears on the HR case form when a request for that HR service is made.
Priority	Priority assigned to the HR case when a request for that HR service is made.
Assignment type	Assignment of the HR case when a request for that HR service is made. You can assign the HR case to a user, skill, or group. Select one of the following: ○ Named user: In the **Assigned to** field, select a user. ○ Skills/Assignment group: In the **Skills** or **Assignment Group** field, select a skill or group.
Use global descriptions for translations	Option to enable the use of global descriptions for translations. If selected, you can provide the short description and description for the HR case template in one or more languages. See Translations for HR cases and tasks for more information. You can use dynamic variables to personalize your short and global descriptions. Using dynamic variables in an HR task template works in: ○ HR tasks related to HR cases in the legacy UI or HR Service Delivery Agent Workspace ○ Employee Center Pro To-dos form ○ Lifecycle Events ticket form **Note:** Because some dynamic variables might provide personal information, use the sn_hr_core.task_template_variable_ignore system property to ensure privacy. For example, social security number (ssn) is excluded by default. You can add other variables to this system property to disable them but ensure they are comma separated with no spaces between each variable.
Add field	Fields to automatically populate on the HR case form when a request for that HR service is made. Select one or more fields

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	from the **Add field** list and provide the desired values. For example, you can add the **State** field to set a default case state or add the **PDF Template** field to select a document for cases that require a document acknowledgement or signature. Any changes that you make to the template fields or values will take precedence over the original template values in the fields. **Note:** Select the Document Template option to associate a document template (of Document Templates [com.snc.document_templates] plugin) with an HR service.

4. Click **Update**.

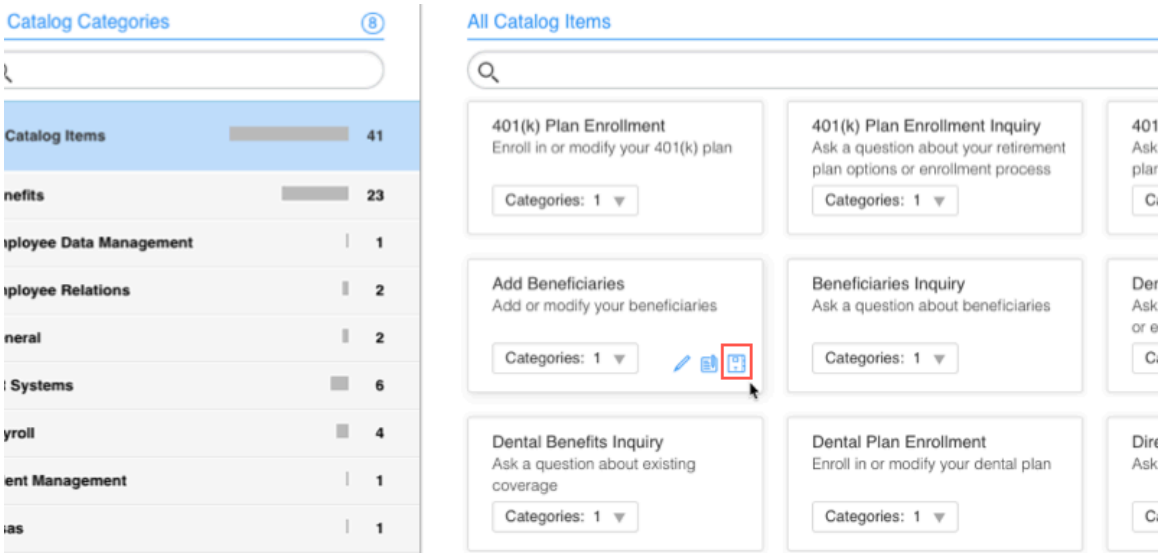
Link knowledge articles or managed documents to an HR catalog item

Link knowledge articles or managed documents to an HR catalog item so that employees can refer to the articles or documents when requesting the service through the HR service catalog.

Before you begin

Role required: sn_hr_core.admin

For example, an HR catalog item for a beneficiaries inquiry can include links to knowledge articles on who can be named as a beneficiary, the difference between a primary and contingent beneficiary, and so on.



For the link to display on the HR catalog item, make sure the item has a variable that is:

- **Type** set to **Macro with Label**
- In the **Type Specifications** related list, with **Widget** set to **HRI Catalog to KB Article Display**

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **Manage HR Catalog**.
2. Hover over the HR catalog item that you want to add the knowledge article or managed document to, and click **Manage KB articles**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **New** or open a record to add or edit a link.
4. Fill in the fields on the form.

Catalog Item to KB Link form

Field	Description
Name	Name of the HR catalog item to knowledge article or managed document link.
Catalog Item	This field is automatically set to the HR catalog item.
Knowledge Article	Name of the knowledge article.
Managed Document	Name of the managed document.
Active	Check box to activate the link for use.
Order	Order number for the link. Lowered numbered links are displayed before higher numbered links.

5. Click **Submit** or **Update**.
   The knowledge article will display under the **Related Knowledge Documents** section when employees open the HR catalog item in the HR catalog.

HR fulfillment instructions

HR fulfillment instructions provide focused and targeted information on how an agent can complete an HR case faster and more efficiently for HR Service Delivery Agent Workspace and legacy HR Case Management.

You can configure fulfillment instructions to appear for an HR case by group, HR service, table, conditions, or a combination of multiple requirements. For example, you can configure a different set of fulfillment instructions to appear for HR cases that are based on the employee's location.

Using the condition builder, you can dynamically change what fulfillment instructions appear for an HR case when it is transferred from one HR service to another. For example:

- An HR case is created as a General Inquiry with specific fulfillment instructions.
- Later, this HR case is transferred to a Leave of Absence request. New fulfillment instructions appear for the transferred case.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Checklist

Add a checklist to ensure the agent does not skip or miss any of the fulfillment instructions. To add a checklist to an HR case, use HR services. See HR service configuration.

Configure HR fulfillment instructions

Use HR fulfillment instructions to provide focused and targeted instructions for an HR case.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Fulfillment Instructions**.
2. Click **New** or open an existing fulfillment instruction.
3. On the form, fill in the fields.

HR fulfillment instructions

Field	Descriptions
Name	Label of the fulfillment instructions.
Table	Name of the table that contains the fulfillment instructions for an HR case.
Condition	Conditions under which the fulfillment instructions are made available for an HR case. The conditions determine which fulfillment instructions appear for an HR case. For example, you can set conditions that an HR case has different fulfillment instructions by location. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global. For additional information, see Condition builder.
Active	Fulfillment instructions that are active and available for use.
Order	Order that the fulfillment instructions appear for an HR case in relation to other fulfillment instructions.
Instructions	Text that provides instructions on how to complete the HR case. Use the tool suite to format the instructions.
Knowledge articles	Knowledge articles that you want to attach to the fulfillment instructions. HR agents

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Descriptions
	use knowledge articles as reference when fulfilling an HR case. **Note:** Knowledge articles are visible only to HR agents and not to employees.

Note:
Previously, Fulfillment Instructions and Checklists were configured from HR services. Checklists are still configured from HR services. For more information on checklists, see Checklists in HR cases.

4. Click **Submit** or **Update**.

HR templates

HR templates allow you to automatically populate fields on an HR case or task form. You can configure HR templates for HR services, HR catalog items, HR service activities, and lifecycle event activities.

Configuration

For	Configure
HR service	Configure an HR case template to automatically populate fields on the HR case form when a request for that service is made.
HR catalog item	Edit the HR case template for an HR catalog item to automatically populate fields on the HR case form when a request for that item is made.
HR service activity	Configure an HR task template to automatically populate fields on the HR task form when the HR service activity is triggered.
Lifecycle event activity	Configure an HR task template to automatically populate fields on the HR task form when the lifecycle event activity is triggered.

Related topics

Form templates

Configure an HR task template

Create or modify an HR task template to automatically populate fields on the HR task form when that task is generated. You can configure an HR task template for an HR service or lifecycle event activity.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Choose one of the following.

2. Click **New** or open a record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Fill in the fields on the form, as appropriate.

HR Task Template form

Field	Description	
Name	Name of the HR task template.	
Active	Option to activate the HR task template for use.	
Owning group	Group that is responsible for the HR task template.	
Short Description	Short description that appears on the HR task form when the task is generated.	
Optional	Option to mark the HR task as optional. In the Tasks/To-Dos the Type indicator lets you filter the tasks based on the Required or Optional selection.	
HR task type	Type of the HR task. Select one of the following:	
	HR Service	An HR service fulfills the HR task. In the **HR Service** field, select an HR service.
	Submit Catalog Item	A catalog item fulfills the HR task. In the **Catalog Item** field, select a catalog item.
	Submit Order Guide	An order guide fulfills the HR task. In the **Order Guide** field, select an order guide.
	Collect employee input	Collects information from employees. In the **Employee form** field, select the employee form that the user will fill out or verify. **Note:** Employee forms are questionnaires built using the survey designer to collect information from employees. See Collect employee input for more information.
	Checklist	In the **Checklist Items** field, provide the checklist items.
	E-signature	User electronically signs a document. In the **E-signature template** field, select the e-signature template to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: ○ E-signature is a scoped application that enables users to sign managed documents, knowledge articles, or HR document templates with their typed or drawn signature, credentials, or as an acknowledgment. See HR e-signature for more information. ○ If HR document template is the document type of the e-signature template, you must select the HR document template that the signatory will sign on the HR case form. See Select an HR document template for an e-signature task for more information.
	Credential	Prompts the user to login with their credentials to acknowledge conditions and terms related to their signature. To add text that explains what their login credentials mean, add the **Acknowledgment text** field. To add a document, add the **Acknowledgment document** field. **Note:** ○ This option is only available for existing customers that have not yet migrated to e-signature. See Migrate existing HR task templates and open HR tasks to e-signature for more information. ○ Starting with the Xanadu release, the HR task type: Credential will be hidden, but will continue to be supported. E-signature provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
	E-Signature	Prompts the user to sign a document. To add text that explains what their signature means, add the **Acknowledgment text** field. To add a document, add the **Acknowledgment document** field.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: ○ This option is only available for existing customers that have not yet migrated to e-signature. See Migrate existing HR task templates and open HR tasks to e-signature for more information. ○ Starting with the Xanadu release, the HR task type: E-signature (e_signature) will be hidden, but will continue to be supported. E-signature provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
	Mark When Complete	Notify the user a **Completed** button appears on the HR Service Portal. Use the **Short description** field to provide details about this task. **Note:** **Mark When Complete** changes the state of the task to **Closed Complete**.
	Sign Document	Requests the subject person to edit or sign a document. An example is sending an education agreement to be signed for tuition reimbursement. This option is only available for existing customers that have not yet migrated to e-signature. See Migrate existing HR task templates and open HR tasks to e-signature for more information. **Note:** The document must be included in the HR case template in the **PDF Template** field. See Configure an HR case template. To add text that explains what their signature means, add the **Acknowledgment text** field. To add a document, add the **Acknowledgment document** field. Acknowledgment text entered on the HR document template overrides text written here. See Configure an HR document

Field	Description	
		template (HTML) or Configure an HR PDF document template. **Note:** Starting with the Xanadu release, HR task type: Sign Document will be hidden, but will continue to be supported. E-signature provides the latest experience for this functionality. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
	Take Survey	In the **Survey** field, select a survey that the user is assigned to take.
	Upload Documents	Requests the person assigned to the task to upload documents. Examples are receipts, course registration, or transcripts for tuition reimbursement. Use the **Short description** field to provide instructions. **Note:** The task must be in **Ready** or **Work in Progress**.
	URL	In the **URL** field, provide a URL that the user acknowledges when accessed.
	View Video	In the **URL** field, embed code/URL that the user is requested to view.
Assignment type	Assignment of the HR task when the task is generated. You can assign the HR task to the employee or fulfiller. Select one of the following:	
	Employee	Select one of the following: ○ Parent case subject person: Assign the task to the subject person of the parent case. ○ Parent case opened for: Assign the task to the opened for person on the parent case. ○ User from case: Assign the task to a user from the case. ○ Named user: Assign the task to a specific user.
	Fulfiller	Select one of the following: ○ Parent case assigned to: Assign the task to the person the parent case is assigned to. ○ Named user: Assign the task to a specific user

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		○ User from case: Assign the task to a user from the case. ○ Skills/Assignment group: Select the skills and group you want assigned to the task.
Due date	Due date of the HR task. Select one of the following: ○ Based on task assignment date ○ Based on parent case table	
Set reminder	Select to configure a reminder to send to the assignee.	
Reminder template	Select a relevant mail template.	
When to send (days)	Specify the number of days before the due date to send the initial reminder.	
Interval (days)	Enter the number of days between each reminder.	
State	State of the HR task when the task is generated. Select one of the following: ○ Draft ○ Ready ○ Work in Progress ○ Closed Complete ○ Closed Incomplete ○ Cancelled ○ Skipped	
Task support team	Task support team for the HR task. The Task support team field defines the HR agent or queue that picks up any communication about the task when a user selects the Ask a question link. Select one of the following:	
	None	No task support team.
	Users and groups	Select users from the parent case or HR groups as the task support team for the HR task.
	Queue	Select a chat queue as the task support team for the HR task.
Use global descriptions for translations	Option to enable the use of global descriptions for translations. If selected, you can provide the short description and description for the HR task template in one or more languages. See Translations for HR cases and tasks for more information. Check to show the **Global short description** and **Global description** fields. You can select a table (top, right) from the list and the associated dynamic variables from that table appear. You can add dynamic variables when creating your text to personalize the task. To use dynamic variables in the **Global short description** field, copy and paste the dynamic variables from the **Global description** field.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Because some dynamic variables might provide personal information, use the sn_hr_core.task_template_variable_ignore system property to ensure privacy. For example, social security number (ssn) is excluded by default. You can add other variables to this system property to disable them but ensure they are comma separated with no spaces between each variable.
Add field	Fields to automatically populate on the HR task form when the task is generated. Select one or more fields from the **Add field** list and provide the desired values. When you add **Rich Description**, you can select a table (top, right) and the associated dynamic variables from that table appear. You can add dynamic variables when creating your text to personalize the task. **Note:** Because some dynamic variables might provide personal information, use the sn_hr_core.task_template_variable_ignore system property to ensure privacy. For example, social security number (ssn) is excluded by default. You can add other variables to this system property to disable them but ensure they are comma separated with no spaces between each variable.

4. Click **Submit** or **Update**.

Manage HR roles

Roles control access to features and capabilities in modules in the HR application.

The HR Service Delivery Scoped app can help prevent users outside of the HR organization from accessing HR data.

Scoped roles for both HR case workers and HR clients (employees, contractors, alumni, and others) grant access to HR services. Users without an HR scoped role typically cannot view HR cases or HR profile information. For information on all the roles installed with Case and Knowledge Management plugin, see Components installed with Case and Knowledge Management.

Only the HR Administrator [sn_hr_core.admin] can assign scoped HR roles.

To configure your system, you must log in as a System Administrator [admin]. The HR Administrator [sn_hr_core.admin] role is contained in the System Administrator [admin] role. The combination of these two roles allows a user to perform all tasks associated with configuring your system.

After system configuration, ensure that only the HR Administrator [sn_hr_core.admin] role has access to sensitive information. Remove the HR Administrator role from System Administrator [admin] role to help prevent the System Administrator from viewing sensitive HR information.

After granting access to a role, all the groups or users assigned to the role also have access. Roles can contain other roles, and grants access to any role that contains it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
IT System Administrators (admin) can still impersonate ServiceNow users. When impersonating a user with a scoped HR role, an admin cannot access features granted by that role unless the admin already possesses those roles. For more information on impersonating a user, see Impersonate a user.

HR Performance Analytics

To configure the Performance Analytics (PA) dashboard, assign the Performance Analytics Administrator [pa_admin] role to the HR Administrator [sn_hr_core.admin] role.

Note:
Only the System Administrator [admin] can assign PA roles to employees.

Roles

Role	Description
System Administrator [admin]	Also known as admin and IT admin. Within the global scope of the application, has access to all system features, functions, and data, regardless of security constraints. • Grant users with the delegated developer role [delegated_developer]. • Build export sets, move content between instances (development to production), and clone instances. • Run guided setup or modules to manage: Company-wide objects like user, departments, and locations.
HR Administrator [sn_hr_core.admin]	This role can: • Assign users any of the HR roles. • View and access the HR Service Portal. • View, create, and edit HR cases in **HR Case Management**. • Access and create HR tasks inside an HR case using the **Add Task** related link. • View, create, and edit HR profiles including sensitive information like salary. • Create HR profiles and generate for multiple users through custom criteria. • Associate any user to HR roles, groups, and skills. • View and access **HR Administration**. • View and access **HR Dashboards & Reports**. • Run **Application View** to manage:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles (continued)

Role	Description
	HR objects like HR roles and profiles. **Note:** When the Human Resources Scoped App: Core (com.sn_hr_core) and Lifecycle Events (com.sn_hr_lifecycle_events) plugins are active, the Lifecycle Admin (sn_hr_le.admin) role is part of HR Admin (sn_hr_core.admin).
Delegated Developer [delegated_developer]	When added to the HR Administrator role, can: • Access, and manage HR objects like HR profile, cases, groups, roles, service catalog objects, and Service Portal. • Modify HR application-related objects like skills, Knowledge Base, chat, notifications, surveys, reports, integrations, and SC. • Modify application structures like tables, business rules, and client-side validation,
User with HR role	There are specific HR roles that allow users access to specific areas of the system. For example, the HR profile reviewer [sn_hr_core.profile_reader] role can read profiles, but not edit them.

After system configuration, to help prevent the System Administrator from accessing sensitive information:

- Remove the HR Administrator [sn_hr_core.admin] role from System Administrator [admin].
  - The base system requires a user with the System Administrator role to run scheduled jobs. For details on HR scheduled jobs, see Components installed with Case and Knowledge Management.
  - To ensure the scheduled jobs run, change the user in the **Run as** field for each scheduled job to a user that has the HR admin role.

    Note:
    Changing the user allows the scheduled jobs to run, but only a user with the System Admin role can view and run a scheduled job on demand.

  - Change the scope of the application to Human Resources: Core application. For information on changing the scope, see Contextual development edit messages.
  - Reveal the **Run as** field. For information on revealing hidden fields on a form, see Configuring the form layout.
- Log out and log back in to ensure that the changes take effect.

Note:
Ensure that you have completed setup before removing the HR Administrator role.

Minimum number of scoped admins required

System properties determine the minimum number (default is two) of scoped admins that must be active for an application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To list the properties, enter `sys_properties.list` in the filter navigator and search for the property to configure.

The list of system properties and what scoped admin can access:

System properties

Properties

Property Name	Scoped Admin
sn_hr_core.min_admin_count	HR admin [sn_hr_core.admin]
sn_hr_ef.min_admin_count	Employee Document Management admin [sn_hr_ef.admin]
sn_hr_integrations.min_admin_count	HR Integration Admin [sn_hr_integrations.admin]
sn_hr_le.min_admin_count	HR Lifecycle Event Admin [sn_hr_le.admin]
sn_hr_le_pa.admin_count	HR Lifecycle Event Performance Analytics Admin [sn_hr_le_pa.admin]
sn_hr_pa.min_admin_count	HR Performance Analytics Admin [sn_hr_pa.admin]
sn_hr_pj.min_admin_count	HR Parental Journey Admin [sn_hr_le_pj.admin]
sn_hr_sp.min_admin_count	HR Service Portal Admin [sn_hr_sp.admin]
sn_hr_va.min_admin_count	HR Virtual Agent Admin [sn_hr_va.admin]
sn_templated_snip.min_admin_count	Response Template Admin [sn_templated_snip.admin]
sn_hr_ws.min_admin_count	HR Agent Workspace Admin [sn_hr_ws.admin]

Remove HR Administrator role from IT System Administrators

After system configuration, remove the HR Administrator role (sn_hr_core.admin) from IT System Administrator role (admin) to help prevent IT System Administrators from viewing sensitive HR information.

Before you begin

Role required: admin with sn_hr_core.admin

Make sure that you have at least two users with the HR Administrator role. If you assign only one person with the role and that person is deactivated, you will not have a user to perform the HR admin duties.

Procedure

1. Log in as admin.
2. From **User Administration**, go to **Roles** (left navigation menu).
3. Click **admin**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. From the **Contains Roles** tab, click **Edit**.
5. From the **Contains Roles List** column, highlight and move **sn_hr_core.admin** to the **Collection** column.

   Note:
   Also, remove other scoped HR Admin roles, such as sn_hr_le.admin.

6. Click **Save**.
7. Log out.

What to do next

After removing the HR administrator role from IT System Administrator role, log out and log back for the changes to take effect.

Note:
Ensure that you have completed the setup before you Remove HR Administrator role from IT System Administrators.

All the default HR scheduled jobs will run as usual even after the HR Administrator role is removed from the IT System Administrator role.

Note:
System user inherits the IT System Administrator role (admin). When you remove HR administrator role from the IT System Administrator role, System user will no longer have the HR administrator role. Validate all your customizations that are running in the context of System user.

Add Delegated Developer to HR Administrator

For an HR Administrator [sn_hr_core.admin] to perform some platform duties, the delegated developer role must be added.

Before you begin

Role required: admin with sn_hr_core.admin

HR Administrator with Delegated Developer role

The HR Administrator role with the delegated developer role can:

- Add and update script includes.
- Add and update ACLs.
- Configure forms.
- Configure related lists.
- Configure and create COEs. For more information, see HR Centers of Excellence data model.

  Note:
  The Lifecycle Event Administrator (sn_hr_le.admin) role with the Delegated Developer (delegated_developer) role can also configure and create new COEs.

To add the delegated developer role to a user:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Log in as admin.
2. From the Filter navigator, enter **sys_store_app.list**.
   The **Store Application** list appears.
3. Click **Human Resources: Core**.
4. Under **Related Links**, click **Manage Developers**.
5. Ensure **Developers** is highlighted.
6. Enter the name of HR Administrator.
7. Click all items (green bar moves to the left) to grant permission.
8. Click **Save**.
9. Log out and log back in to ensure that the changes take effect.

Manage HR Groups

HR Groups are a set of users with common job skills.

Before you begin

Role required: sn_hr_core.admin, user_admin
You can have multiple levels of groups. For example, HR is a group that contains all HR employees within your company. You can have subgroups under HR such as HR Benefits, Employee Relations, and more.

Procedure

1. Navigate to **All** > **HR Administration** > **Manage Roles** > **Manage HR Groups**.
2. From the **Groups** list, click **New** or select an existing HR group.
   The **Group** form appears.

HR Groups form

Field	Description
Name	Enter a name that describes the group.
Manager	Click the **Lookup using list** icon and select the person responsible for this group.
Type	Use to define a category a group belongs to. A group can be associated with one group type (narrow scope) or multiple group types (expanded scope). This allows you to ensure qualified agents are assigned to complex cases or you have adequate coverage for less complex cases. Click the **Unlock Type** icon. Then click the **Lookup using list** icon and add **human_resources**.
Group email	Enter the email address of the group. This email acts as a group notification that sends an email to every member of the group.
Parent	Click the **Lookup using list** icon and select the HR group that is above the current group.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Vendors	Vendors that the group is responsible for.
Description	A description of the group.

3. Click **Save** and a series of tabs appear at the bottom of the form.

HR groups form tabs

Field	Description
Roles	Click **Edit** and from the **Edit Members** form, move the roles from the **Collection** column to the **Roles List** column. Adding a role to a group means that all group members also have that role. **Note:** Roles associated with the parent group are automatically assigned.
Group Members	Click **Edit** to add users to the group. Click **New** to create a user and add it to the group.
Groups	Click **New** to create a new group. **Note:** Creating a group from here does not automatically create a child group under the group you have displayed.
Skills	Click **New** to create a new skill. Click **Edit** and the **Edit Members** form appears. Move skills from the **Collection** column to the **Skills List**. Click **Save** when done. **Note:** Skills associated with the parent group are automatically assigned.
Activities	This field only appears for the Lifecycle Events application. The HR Service Activities the group manages. The HR Service Activities are part of the Activity Set and together make up a Lifecycle Event. Only members of this group can update this HR Service Activity. Refer to Configure a lifecycle event activity.

4. Click **Submit** or **Update**.

HR skills management

Your organization can define HR skills to establish the qualifications of HR staff. Skills can be included in the auto-assignment process used to assign HR agents to HR cases and tasks.

Some HR skills are predefined, and you can create as many other skills as you need. You can assign skills to users or groups. When you assign a skill to a group, the skill is assigned to every group member.

Skills are also a way to ensure that HR cases are assigned to the correct group or individual.

When an HR case is opened:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Matching rules are used to determine case assignment by matching criteria. Refer to Matching rules for case assignment .
- An HR template is applied based on the HR Service selected.
- An HR template assigns the skill required for the case or task.
- The skill determines which group or individual is assigned to the case.

Note:
If an HR case is created without skills, it will be assigned to a user without skills.

Assign an HR skill to a group

When you assign skills to HR groups, all members of the group inherit the skills and any child skills.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Manage Roles** > **Manage HR Groups**.
   This list is the same that appears under **User Administration** > **Groups**.
2. Select the HR group that you want to assign skills to.
3. In the **Skills** tab, click **Edit**.
4. Double-click skills in the **Collection** list to move them to the **Skills List**.
5. Click **Save**.
   Messages are displayed to notify you of the skills that were assigned to each group member.

Messages displayed for group skill assignment

Add or modify an HR skill

You can create HR skills and assign them to HR staff to assist with the auto-assignment of HR cases and tasks.

Before you begin
Role required: sn_hr_core.admin

About this task
The following procedure describes how to create and edit HR skills from the Skills application. Although you can create and edit skills in the **Manage HR Skills** module, you must use the Skills application to assign child skills.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **Manage Roles** > **Manage HR Skills**.
2. Click **New Skill** or open an existing skill.
3. Enter or edit the name of the **Skill** and **Description**.
4. Click **Submit** to save your changes.
5. To assign users to the skill, complete the following steps.
   a. Locate and click the skill in the **All Skills** column.
   b. Click **Assign/Remove Users** at the top, right.
   c. Click the users you want assigned to this skill.
   d. Click **Save**.
   If you add users to a skill with child skills, the child skills are assigned to the user. Messages are displayed to notify you of the skills that were assigned.

Assign an HR skill to a user

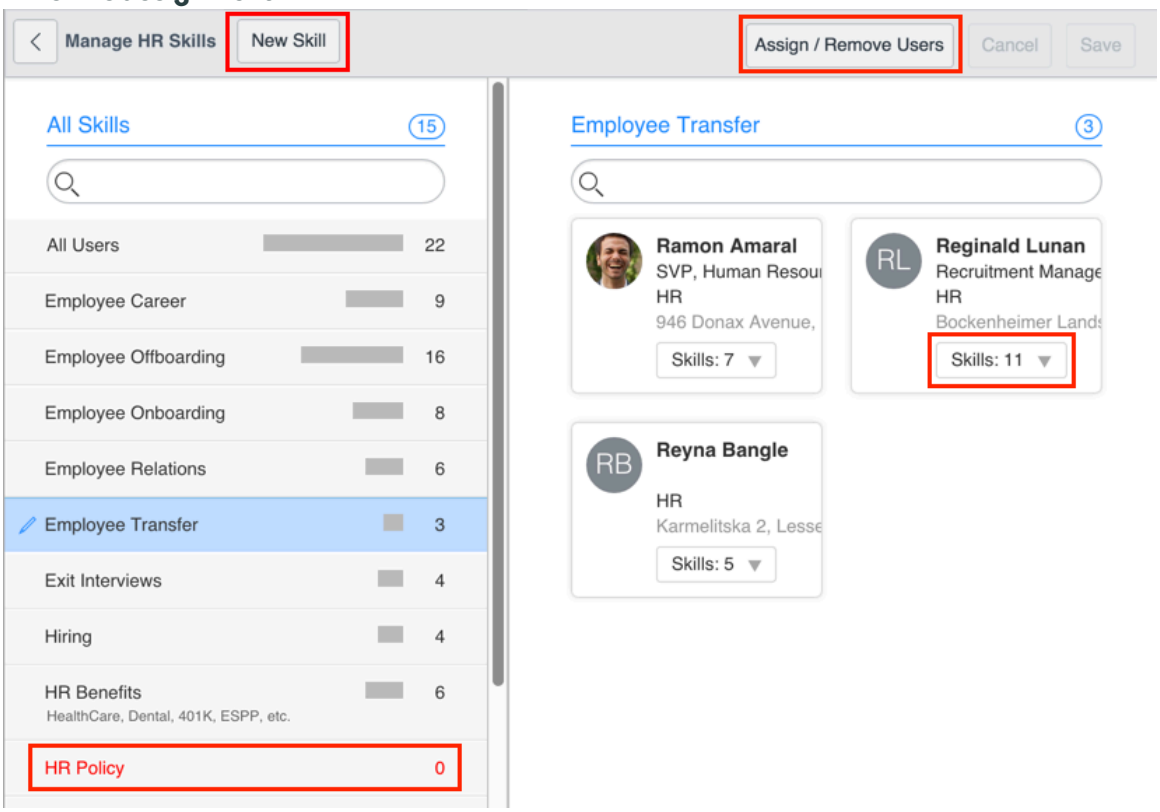
You can assign skills to HR users to facilitate the auto-assignment of HR cases and tasks.

Before you begin

For more information about HR skills and the auto-assignment process, see HR skills management.

Role required: sn_hr_core.manager

About this task



The following procedure describes how to assign HR skills in the Manage HR Skills module. If you want to define a parent and child hierarchy for HR skills, you must use the Skills application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **Manage Roles** > **Manage HR Skills**.

HR skills assignment

Skills appear on the left. Select a skill to see the assigned users on the right. The user cards indicate how many skills each employee is assigned. If no skills are assigned to a user, the number on the user card is red. Skills with no assigned users are red in the skills list.

2. Select a skill in the **All Skills** list to assign to users.
3. Click **Assign/remove users**.
   The list of all users in the HR department appears on the right. Users assigned to the skill are highlighted in blue.
4. To search for an HR user, type any information, such as name, location, or title, in the search box above the list of users.
   As you type, the list narrows to display user cards that contain those letters in any field.
5. Perform any of the following actions.

6. Click **Save**.
7. To assign other skills to a user, complete the following steps.
   a. Select **All Users** in the list on the left and locate the user on the right.
   b. Click the arrow next to **Skills: #** in the user card.
   c. Select the skills for the user, and click **Save**.
8. To configure skills, perform any of the following actions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add or modify escalation rules

You can create an escalation process to assign HR cases to HR agents with the appropriate skills.

Before you begin

Role required: sn_hr_core.admin

About this task

You can create an escalation process to assign HR cases to HR agents with the appropriate skills. Ensure that the following items are in place to use HR tier escalation rules.

- The HR tier escalation rules are set up correctly.
- The email address for the tier group is correct.
- The correct roles are assigned to the tier. Roles, groups, skills, and location determine the group a case is escalated to.

The following procedure describes how to create and edit HR tier escalations used when cases are assigned to HR groups.

Procedure

1. Navigate to **All** > **HR Administration** > **Manage Roles** > **Escalation Rules**.
2. Click **New** or open an existing escalation tier.
3. From **Escalate from**, click the **Lookup using list** icon and select an existing tier.
   Or, click **New** to create a new tier. This tier contains HR agents that have fewer skills than the next tier.
4. From **Escalate to**, click the **Lookup using list** icon and select an existing tier.
   Or, click **New** to create a new tier. This tier contains HR agents that have more skills than the previous tier.
5. Click **Submit** to save your changes.
   Click an **Escalate from** or **Escalate to** group to view group information.

Manage HR Groups

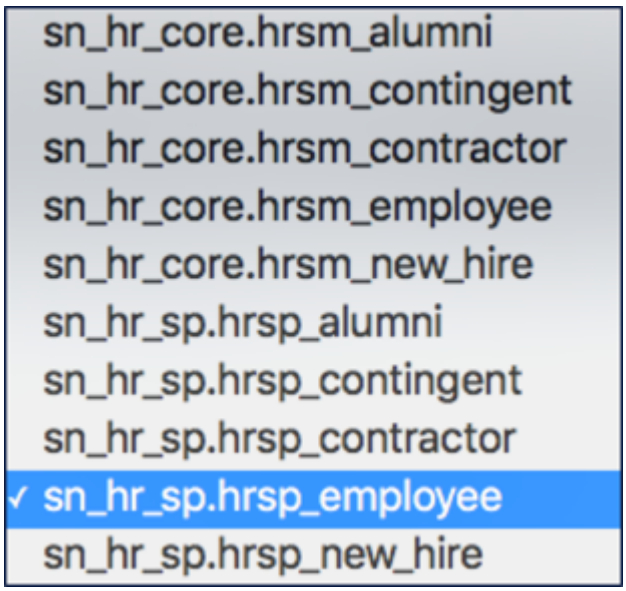
Client roles

You can control what HR functionality that an employee can access using Client Roles. You can license all employees or provide HR services to users in a specific location or group.

Client roles define access within the application. For more information, see Manage HR roles.

ServiceNow provides these roles and modifying them is not recommended. These roles can be added to other roles or groups. There are two groups:

- HR fulfillment support: sn_core_hrsm
- HR Service Portal: sn_core_hrsp



Both roles contains conditions depending on the type of user:

- Alumni (only used when you have the Alumni Service Center installed). For more information, see Setting up your Alumni Service Center.
- Contingent
- Contractor

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Employee
- Employment Type
- Location
- New Hire
- New Hires Only
- Office Based Employees
- Remote Employees

Client Roles

Note:
When creating an HR case and an employee does not display, ensure that the employee has any of the sn_hr_core.hrsm roles assigned. Also, when an employee cannot access the HR Service Portal, ensure any of the sn_hr_core.hrsp roles are assigned.

Client roles are defined and administered like regular roles. ServiceNow tracks them for licensing purposes.

Assignment of client role rules is defined in the **Client Role Assignment Rules** module.

Client role assignment rules

Use Client Role Assignment Rules to automatically assign or reassign a role to an employee.

Before you begin
Role required: sn_hr_core.admin
A condition or set of multiple condition clauses based on the HR profile [sn_hr_core_profile] table are used to automate assigning roles.

Note:
Client role assignment rules are for access to the Employee Center only.

For example:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- A newly hired employee can be automatically assigned the new hire [sn_hr_core.hrsm_new_hire] role. This role provides limited access to the Employee Center or service portal.
- The Update Client Roles scheduled job runs and acknowledges the employee start date for the new hire has not been reached.
- The Assign HR Roles business rule assigns the new hire role based on the conditions set on the client role assignment rules.

To map conditions to a client role:

Procedure

1. Navigate to **All** > **HR Administration** > **Manage Roles** > **Client Role Assignment Rules**.
2. Click **New** to create a client role rule or click an existing client role rule to edit.
3. **Active** is enabled by default.
4. From **Condition**, click the **Lookup using list** and select an existing HR condition.
5. Click **New** to create an HR condition.
   You can also click the **Preview this record** icon to open the record.
6. Click **Submit** or **Update**.
7. From **Role**, click and select the HR role you want to automatically assign when the conditions are met.
8. Click **Submit** or **Update** to save your changes.

HR Service Delivery case assignment

HR cases can be automatically assigned to your agents via an HR case template, assignment and matching rules, or advanced work assignment (AWA).

Assignment and matching rules and AWA use the platform Skill Management application to define skills.

- Assignment and matching rules associate skills using HR case templates.
- AWA uses skill determination rules.

Advanced Work Assignment (AWA) for HR Service Delivery

Use the ServiceNow Advanced Work Assignment for HR Service Delivery feature to automatically assign HR cases to agents based on availability, capacity, and skills.

AWA for HR Service Delivery pushes cases and tasks to qualified agents using work item queues, routing conditions, and assignment criteria that you define.

For more information, see Agent Workspace Advanced Work Assignment (AWA).

AWA is also available for HR Service Delivery Agent Workspace. For more information, see Advanced Work Assignment (AWA) for HR Service Delivery Agent Workspace overview.

Assignment and matching rules in HR

The base system uses the automatic case assignment feature to assign an HR case to an agent. It attempts to assign an agent with the least number of cases assigned, has the skills required by the case, and matches the location of the subject person.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Auto Assign business rule

HR Case has a business rule called Auto Assign that invokes matching rule logic.

When auto assignment is triggered, the matching rules logic obtains a list of agents. The number of agents returned is based on a parameter that specifies the length of the list. The default is one.

Note:
For specific HR services, the auto-assignment functionality can be skipped. See Case options in Configure an HR service.

Matching Rules

HR assignment rules use the Resource Matching Engine [com.snc.matching_rule] plugin that is activated with the Human Resources Scoped App: Core [com.sn_hr_core] plugin. You can specify a table and a condition. By default, the base system sets an assignment group for each table and leaves the Assigned to field empty.

For HR cases that meet these conditions, the hr_AssignmentAPI script include is called to return a list of agents that are eligible for assignment. See Add or modify a matching rule.

Note:
The base system provides matching rules for every COE table and HR task table.

Each HR table and task in the base system have two matching rules:

- Agents by skills and country
- Agents by skills

The higher priority (lower execution order) rule for each pair is the match by skills and country.

- If this matching rule does not find eligible agents, then the condition of the lower priority rule is still true and attempts to match by skills alone.
- If the higher priority rule finds an agent, the assigned to field is no longer empty and the secondary rule does not match.
- Either the getAgentsByCountryAndSkillsOrderLeastLoaded or getAgentsBySkillOrderLeastLoaded in the hr_AssignmentAPI script include are called.

Assignment script includes

The hr_AssignmentAPI passes the call through to the hr_AssignmentUtil script include to reduce upgrade issues. Rather than update hr_AssignmentUtil, you can add to hr_AssignmentAPI or another customer script include.

The getAgentsByCountryAndSkillsOrderLeastLoaded or getAgentsBySkillOrderLeastLoaded in the hr_AssignmentAPI script include looks for the least ordered by country and skills.

- These scripts also look at the agents in the assignment group.
- They then look for agents that have the required skills for the case and are in the same country as the subject person.
- The list of agents that are returned are sorted according to case assignment load defined as active cases of type HR case (or extension) or active HR tasks.

Auto assignment for HR tasks is slightly different than HR cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The list of possible agents for an HR task is generated like an HR case.
- But, after ordering the list, the task is checked for a parent HR case and if the agent assigned is on the list.
- If it is, the agent is placed at the top of the list ignoring case load.

Required skills

If you have more than one HR department, you can remove the HR group assignment from the HR template and use assignment rules to assign the HR group. For example, if you have HR departments in both the U.S. and German offices, you can create an HR group for each office. You set up assignment rules to assign the HR group based on the location of the employee who submitted the HR case.

If your organization is using HR skills to qualify HR case assignments, ensure that the assigned user or group members have the required skills. To determine whether skills are being used and assigned, check the following configuration options.

- **HR Administration** > **HR Services** > **HR Templates**: Look at the template that corresponds to the assignment rule to see what skills, if any, are required.
- **HR Administration** > **Manage Roles** > **Manage HR Skills**: Find the HR user assigned to the case and click the **Skills: #** button to see whether the required skill is assigned. If not, check the box to assign it, and click **Save**.

Refer to Create rules to route and assign customer service cases for more information on matching and assignment rules.

Add or modify an HR assignment rule

Assignment rules are used to assign the HR group when it is not assigned from the catalog item template. You can create HR assignment rules as needed.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Assignment Rules** > **HR Assignment Rules**.
2. Click **New**.
3. Complete the form.

Assignment Rules form

Field	Description
Name	Descriptive name for the HR assignment rule.
Execution Order	Order in which the rule processes. Rules with lower-order numbers process first. For example: ○ The first HR assignment rule has an execution order of 100. ○ A second HR assignment rule has an execution order of 200.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ If a group has members that fit the conditions defined in the first HR assignment rule, it assigns an agent with the least amount of assigned cases. ○ If the first HR assignment rule cannot find an agent to assign, the second HR assignment rule runs.
Application	Indicates core application scope the assignment rule applies to.
Active	Check box that specifies the rule is in use.
Applies To	
Table	Table with the records that the assignment rule applies to. Default is the HR Task [hr_task] table.
Conditions	Conditions in which the assignment rule applies. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Assign To	
User	User to assign to the case when this rule is applied.
Group	Group to assign to the case when this rule is applied.
Script	
Script	Script to define advanced assignment rule functionality. Current.variable_pool set of variables is available. **Note:** Two example scripts are provided as a comment. You can modify either script or use the information as a starting point for your own script. Remove the examples when you are finished.

4. Click **Update**.

What to do next
After creating the assignment rule, you can test it to verify that it works.

Related topics
HR Administration

Test an assignment rule

You can test a new assignment rule to verify that it works as intended.

Before you begin
Role required: sn_hr_core.admin

Procedure
1. Create a new HR case.
2. Fill in the fields with data that matches the assignment rule conditions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Submit the HR case.
4. Reopen the case and check that the correct assignment information was added.

What to do next

If the correct assignment information was not added, check to see whether you are using HR skills and if the user has the required skills.

Note:
Assignment groups are assigned at the time an HR case is created from the HR case form. Once the State is changed to Ready, an agent is assigned. When an HR case is created from the Employee Service Center, an HR agent is assigned immediately.

- **HR Administration** > **HR Services** > **HR Templates**: Look at the template that corresponds to the assignment rule to see what skills, if any, are required.
- **HR Administration** > **Manage Roles** > **Manage HR Skills**: Find the HR user assigned to the case and click the **Skills: #** button to see whether the required skill is assigned. If not, check the box to assign it, and click **Save**.

After verifying that the necessary skills are assigned to the correct users, test the assignment rule again.

Related topics

HR Administration

Add or modify a matching rule

You can add or modify a matching rule to assign HR cases to specific users or groups.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Assignment Rules** > **HR Matching Rules**.
2. Complete or edit the form.

Matching Rules form

Field	Description
Name	Descriptive name for the HR matching rule.
Execution Order	Order in which the rule processes. Rules with lower-order numbers are processed first. If a rule is applied, the rules with a higher-order number are not processed. For example, a matching rule with order 100 states to assign the case to an agent with the specified skill. Matching rule with order 200 states to assign the case to the group **HR**. If a group has the specified skill, then it is assigned. If not, then the second rule runs and assigns it to **HR**.
Active	Check box that specifies the rule is in use.
Applies To	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Table	Table with the records that the matching rule applies to. Default is the HR Task [hr_task] table.
Conditions	Conditions in which the matching rule applies. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Resource	
Matching	Indicates the option to match the rules. Default is Scripted.
Script	Script to define advanced matching rule functionality. Current.variable_pool set of variables is available. **Note:** Two example scripts are provided as a comment. You can modify either script or use the information as a starting point for your own script. Remove the examples when you are finished.

3. Submit the HR case.
4. Reopen the case and check that the correct matching information was added.

Labor unions

Use Labor Unions to define the details about unions within your company.

You can use labor union data to track employee union membership so you can configure HR conditions and criteria to target content and workflows for these employees.

Defining a union includes:

- Defining local chapters
- Identifying union contacts
- Setting up employee union members so you can track and automate workflows and target content relevant to union representation

Setting up labor unions

Set up HR Service Delivery labor unions to define information about the labor unions you support. You can associate an employee membership to a specific union and union chapter.

To create a union structure, you must set up a Union first.

After setting up a Union, you can set up:

- Local chapters
- Employee membership
- Union contacts

Tables

The following tables are included:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Labor Union [sn_hr_core_labor_union]
- Local Union Chapter [sn_hr_core_local_union_chapter]
- Labor Union Contact [sn_hr_core_labor_union_contact]
- Employee Union Membership [sn_hr_core_employee_union_membership]

Roles

The following roles are needed for access to Labor Unions records:

Roles

HR role title [name]	Description	Contains roles
HR profile reader [sn_hr_core.profile_reader]	The HR profile reader role can access and read: • Unions • Union Contacts • Employee Union Membership	N/A
HR profile writer [sn_hr_core.profile_reader]	The HR profile writer role can access and read: • Unions • Union Contacts • Employee Union Membership The HR profile writer role can also create and edit employee union memberships.	HR profile reader [sn_hr_core.profile_reader]
HR admin [sn_hr_core.admin]	The HR admin role can access, read, create, and edit: • Unions • Local Chapters • Union Contacts • Employee Union Membership	• HR profile reader [sn_hr_core.profile_reader] • HR profile writer [sn_hr_core.profile_reader]

HR profile writer [sn_hr_core.profile_reader]:

The HR profile writer role contains the HR profile reader role. It can access and read Unions, Union Contacts, and Employee Union Membership. It can also edit Employee Union Membership.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a labor union

Create a union with details that identify it.

Before you begin
Role required: admin

Note:
You must create a union before you can create local chapters and union contacts.

Procedure

1. Navigate to **All** > **HR Administration** > **Labor Unions** > **Unions**.
2. Fill in the form.

Unions Administration form fields

Field	Description
Union name	The name that identifies the union.
Industry	The industry the union represents.
Active	Indicates that the union record is active and available for use.
Union description	Text that describes the union.
Union URL	The website URL of the union.

3. Select **Submit** or **Save**.
   If you select **Save**, the **Local Union Chapters** and **Labor Union Contacts** tabs appear.

Note:
For more information on **Local Union Chapters**, see Create a local chapter. For more information on **Labor Union Contacts**, see Create union contacts.

Create a local chapter

Use Local Chapters to set up and track the chapters of your union. Local chapters are children to labor unions.

Before you begin
Role required: admin

Procedure

1. **HR Administration** > **Labor Unions** > **Local Chapters**,
2. Select **New**.
3. Fill in the form.

Local chapters form fields

Field	Description
Name	The name of the local union chapter.
Labor union	The name of the labor union that the local chapter belongs to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: For more information, see Create a labor union.
Active	Indicates that the union local chapter record is active and available for use.
Union chapter description	A description of the local union chapter.
Local chapter URL	The website URL of the local union chapter.

4. Select **Save** or **Submit**.
   If you select **Save**, the **Labor Union Contacts** and **Employee Union Memberships** tabs appear.

Note:
For more information on **Labor Union Contacts**, see Create union contacts. For more information on **Employee Union Memberships**, see Create employee union memberships.

Create union contacts

Use Union Contacts to create and track the people who work for a union or local chapter organization.

Before you begin

Role required: admin

Note:
Creating a union contact does not create a user record.

Procedure

1. Navigate to **All** > **HR Administration** > **Labor Unions** > **Union Contacts**.
2. Select **New**.
3. Fill in the form.

Union contacts form fields

Field	Description
Contact name	Name of the union contact.
Phone number	Phone number of union contact.
Email	Email address of union contact.
Labor union	The labor union that the contact person is associated with. **Note:** For more information, see Create a labor union.
Local union chapter	The chapter of the labor union the contact person is associated with.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: For more information, see Create a local chapter.
Labor union role	The contact person's role within the labor union.

4. Select **Save** or **Submit**.

Using Labor Unions

After a labor union has been set up, you can associate employees with a labor union.

Note: Associating a labor union with an employee is a reference to the membership and not proof of actual membership.

There are a couple of methods to associate a labor union with an employee:

- From the employee's HR profile

  Note: For more information, see Add or modify an HR profile.

- From the Employee Union Membership form

  Note: For more information, see Create employee union memberships.

Create employee union memberships

Use Employee Union Membership to input and track your union employees. Creating union memberships allows you to gain visibility into employee membership through an HR profile and target content or tasks through HR criteria.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **HR Administration** > **Labor Unions** > **Employee Union Membership**.
2. Select **New**.
3. Fill in the form.

Employee union membership form fields

Field	Description
Employee	The employee and member of a union. Selecting the Lookup using icon ( ) displays all employees with an HR profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: There is an **Employee Union Membership** tab on an HR profile for employees that are part of an employee union membership. For more information, see Add or modify employee union membership.
Labor union	The labor union the employee is a member of. **Note:** For more information, see Create a labor union.
Local union chapter	The local union chapter the employee is a member of. **Note:** For more information, see Create a local chapter.
Effective start date	The date the employee became a union member.
Effective end date	The date the employee left the union, if applicable.
Active	Identifies if the employee is an active union member.
Union steward	Identifies if the employee is a union steward.
Union job code	The employee's job code within your company.

4. Select **Save** or **Submit**.

Configure an HR badge

Use **Badges** to create or modify existing identification badges used to quickly identify the organization of the **Assigned to** person for the **Activity** on the **HR Ticket** page.

Before you begin

Role required: sn_hr_core.admin

About this task

Custom badges only appear for specific types of HR activities.

- The base system provides defaults and is configurable.
- On the **HR Ticket** page, you can filter to-dos based on badges.
- Defaults are added to HR services.
- Can be overridden on an Activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **Badges**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Badge form

Field	Description
Name	Name of the HR badge. Provide up to three characters to represent an organization, such as HR for Human Resources or IT for Information Technology.
Badge description	Description of the HR badge.

4. Click **Submit** or **Update**.

Response templates for HR Service Delivery

You can use response templates with HR Service Delivery to resolve cases faster and more efficiently.

Response templates (formerly known as templated snippets) are reusable messages. You can copy these messages created from these templates to an HR case, task, email, or chat to provide quick and consistent messages to employees. For example, a response template for a payroll discrepancy case enables HR agents to use a standardized message when responding to that case type.

Note:
For more information on response templates, see Response templates.

Response template channels

Response templates can correspond to multiple channels. A channel represents the media you want the response template to be available for. For example:

- Chat channel: Provides response templates for chat conversations.
- Email channel: Provides response templates for emails.
- Form: Provides response templates for HR case or tasks.

If you create a new response template and do not assign it to a channel, it is not available to use.

To create a universal response template that is available for all channels, assign it to all channels.

Note:
Any response templates created prior to the Quebec release are associated with all channels preserving their prior behavior and can be used universally.

Activation information

The response templates feature automatically activates when Case and Knowledge Management activates. See Activate response templates.

To use response templates in a chat in Agent Workspace for HR Service Delivery, activate: Advanced Work Assignment for HRSD (com.sn_hr_awa) plugin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Advanced Work Assignment (AWA) for HR Service Delivery Agent Workspace overview and Setting up Workspace Agent Chat.

For more information on setting up chat in Virtual Agent, see Virtual Agent.

How to use response templates with form (HR case or task)

HR administrators and managers can create response templates. Each template is associated with an HR table that is an extension of the Task [task] table. Configure the template to include variables pulled from that table. Also, use a condition builder to specify what a case must meet for the template to be available, such as for a specific HR service.

For more information on creating or modifying a response template, see Create or modify an HR Service Delivery response template.

Response templates appear for an HR case form for templates associated with the Form channel and satisfy the conditions on the response template. For the HR case form, the **Responses** button appears at the top. If there are multiple templates available, you can select the appropriate one. See Work an HR case.

Note:
For more information on using a response template with an HR case, see Copy a response template to an HR case.

For Agent Workspace for HR Service Delivery, the Response Templates icon ( ) appears in the Contextual sidebar. For more information, see Response template for HR Service Delivery Agent Workspace.

Components installed with response templates

Several types of components are installed with activation of the Templated Responses (com.sn_templated_snip) plugin, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles installed

By default, the following HR roles contain the following response template roles.

Note:
The Templated Responses [com.sn_templated_snip] plugin activates the sn_templated_snip.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only Response Template admin user by requiring a minimum number (default is two) of active users with this role.

Roles installed with response templates

Role title [name]	Description	Contains roles
Response templates administrator [sn_templated_snip.template_snippet_admin]	Grants access to scoped administration	sn_templated_snip.template_snippet_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with response templates (continued)

Role title [name]	Description	Contains roles
	of the response templates feature.	
Response templates writer [sn_templated_snip.template_snippet_writer]	Grants access to create, read, update, and delete (CRUD) response template content.	sn_templated_snip.template_snippet_reader
Response templates reader [sn_templated_snip.template_snippet_reader]	Grants access to read response template content.	None

You can assign these roles to the appropriate roles, groups, or users in your application.

- To assign a role to another role, see Add a role to an existing role.
- To assign a role to a group, see Assign a role to a group.
- To assign a role to a user, see Assign a role to a user.

For further information on user administration and how to manage users, see User administration.

Tables installed

Tables installed with response templates

Table	Description
Response Template [sn_templated_snip_note_template]	Stores response template information. Response templates are reusable messages that can be copied to case or task forms. Response templates provide quick and consistent messages to users, or display standard chat response messages to requesters in Agent Chat.
M2M Response Template to Channel [m2m_response_template_to_channel]	Maps channels to response templates.
Response Template Channel [sn_templated_snip_channel]	Stores information about response template channels.
Note Template for Table	Maps notes to response templates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with response templates (continued)

Table	Description
[sn_m2m_note_template_for_table]	

For further information on table administration and how to manage data, see Table administration.

Create or modify an HR Service Delivery response template

Create or modify a response template (formerly known as a templated snippet) to define a reusable message. You can copy these messages when responding to employees to provide quick and consistent messages.

Before you begin

Role required: sn_hr_core.manager, sn_templated_snip.template_snippet_admin

Each template is associated with an HR table that is an extension of the Task [task] table. The template can be configured to include variables pulled from that table. For example, if you choose the HR Case (sn_hr_core_case) table, you can select the Subject person variable to appear in the Template body and it will replace the variable with the actual name of the subject person when the response template is used.

Also, use condition builder to define when a case meets the criteria for a template, such as for a specific HR service.

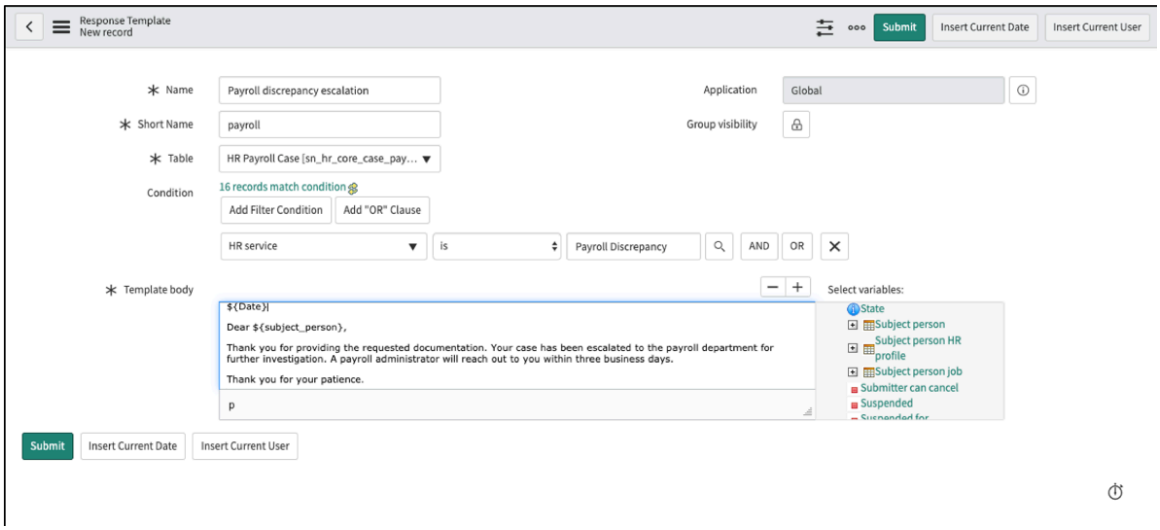
Procedure

1. Navigate to **HR Administration** > **Response template configuration**.
2. Select **New** to create a response template.
   Or, select an existing response template to modify from the list.
3. Fill in the fields on the form.

Response template form

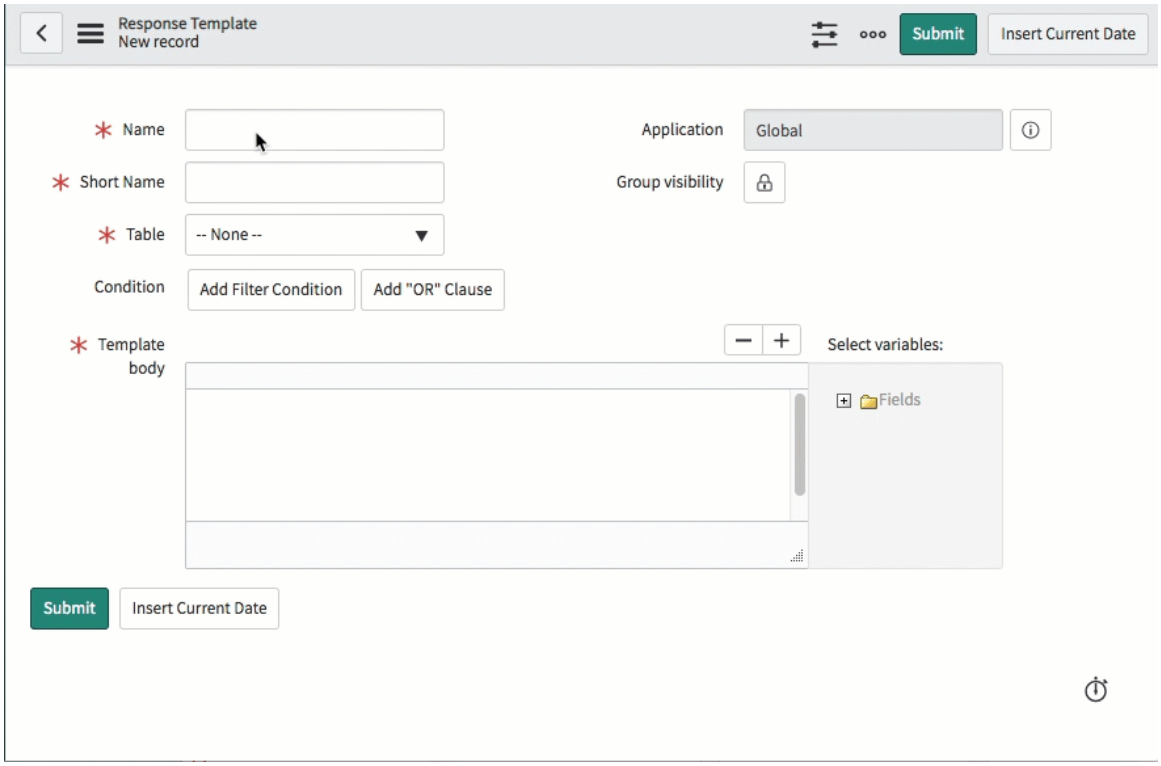
Field	Description
Name	Name of the response template.
Short Name	Short description that identifies the response template when using chat in Agent Workspace. Use the short name with a quick command (/) to show the text from the template body of the response template while in chat. This feature provides a fast and consistent way to populate text while in chat. For example, the short name `gm` identifies the chat response template for a Good Morning greeting. Enter **/gm** in a chat window to show the text from this response template.
Table	Name of the table that the response template is associated with.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Field	Description
	If you are creating a response template for Agent Workspace chat, the associated table is the Interaction [interaction] table. For other response templates, the table must be an extension of the Task [task] table. **Note:** Creating custom COE tables do not allow you to add the Copy to Clipboard UI action. Users can still use the copy and paste function.
Condition	Conditions that determine when the response template is available for use. When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global. **Note:** The conditions available depend on the table you select. For chat response templates, specify the condition: **[Type] [is] [Chat]**
Application	The application that created the response template.
Group visibility	Indicates what groups have access to the response template. Adding groups filters who can view the response template. **Note:** Leaving this field empty makes the response template available to all groups.
Template body	Text of the response template providing instructions to the agent on how to respond to a specific case or task. You can reference field values by selecting variables from the variables list based on the table you select. You can manually enter custom variable references: ○ Current user: `${current_user}` ○ Current date: `${Date}` Or, place your mouse where you want the custom variable reference to appear and

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

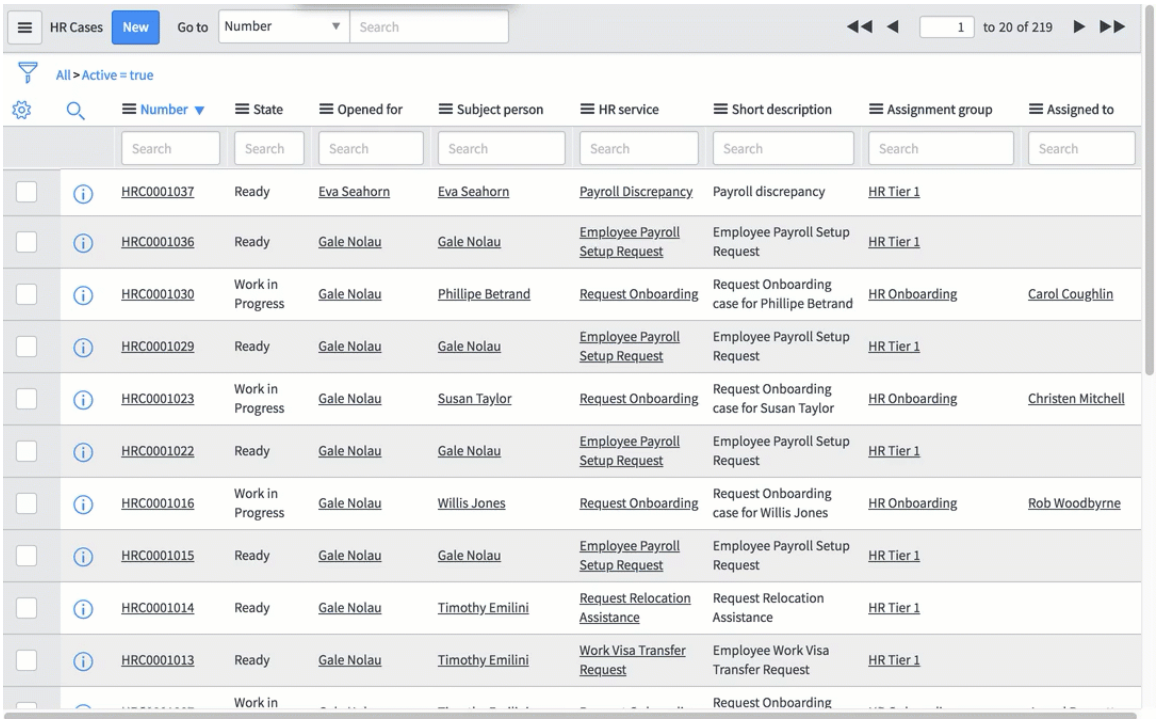


Field	Description
	select the **Insert Current User** or **Insert Current Date** buttons. **Note:** Response templates do not support rich text.
Select variables	Variables you can add to the template body. For example, if you choose the HR Case (sn_hr_core_case) table, you can select the Subject person variable to appear in the Template body and it will replace the variable with the actual name of the subject person when the response template is used. **Note:** The variables available depend on the table you select.

Example

The following GIF shows an example of an HR manager in the HR Service Delivery application creating a response template to escalate payroll discrepancy cases. The template is associated with the HR Payroll Case [sn_hr_core_case_payroll] table, and a condition is set to filter on cases that match the Payroll Discrepancy HR service. The template text is pasted into the body, and then a variable for the subject person is added to the salutation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



4. Click **Submit** or **Update**.
   Channels limit the response template to only the channels you add. If you leave this blank, the response template is available to no channels. This feature allows you to have different messages for chats, emails, or form. For more information, see Create a response template channel.
   The Channels related list appears.

What to do next

You can copy response template content to any field on a form that meets the specified conditions.

The following GIF shows an example of an HR case writer in the HR Service Delivery application opening a payroll discrepancy case and copying a payroll discrepancy escalation template to the comments field in the HR case form for the employee to read.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a response template channel

Follow these steps to create a response template channel. Response template channels ensure the correct response templates appear for use with chat, email, or HR case or task.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **HR Administration** > **Response Template Configuration**.
2. Select an existing response template or click **New**.
3. Select **Channels**.
4. Select the **Lookup using list** icon.
5. Select **New**.
   Fill in the fields on the form.

Response Template Channel

Field	Description
Name	The name of the channel. Channels represent a category you want the response template to appear for. The base system provides: ○ Chat ○ Email ○ Form

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

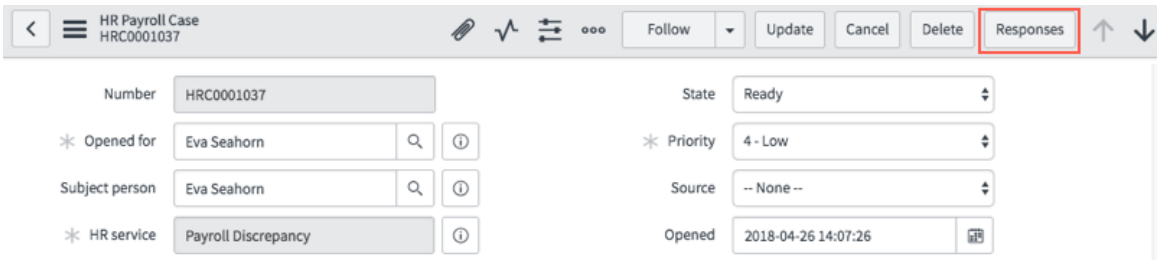
Field	Description
	Note: The Advanced Work Assignment for HRSD (com.sn_hr_awa) plugin must be activated to use response templates in chat.
Value	The name of the channel you want to remain consistent in relation to different languages. For example, if I am working in French, the **Name** field could be LeChat, but Chat in the **Value** field. This ensures that the correct template is selected regardless of language.
Application	The application the response template is available to use in.
Active	Activates the Response Template Channel. **Note:** Unchecking the box inactivates the record without deleting it.

6. Select **Save**.
   Channels limit the response template to only the channels you add. If you leave this blank, the response template is available to no channels. This feature allows you to have different messages for chats, emails, or form. For more information, see Create a response template channel.
   The Channels related list appears.
7. Click **New** to create a new channel or **Edit** to access an existing channel.
8. After you select the channel(s), click **Save**.
   The **Response Template** form returns.
9. Click **Update**.
   For more information on response templates, see Create or modify an HR Service Delivery response template.

Copy a response template to an HR case

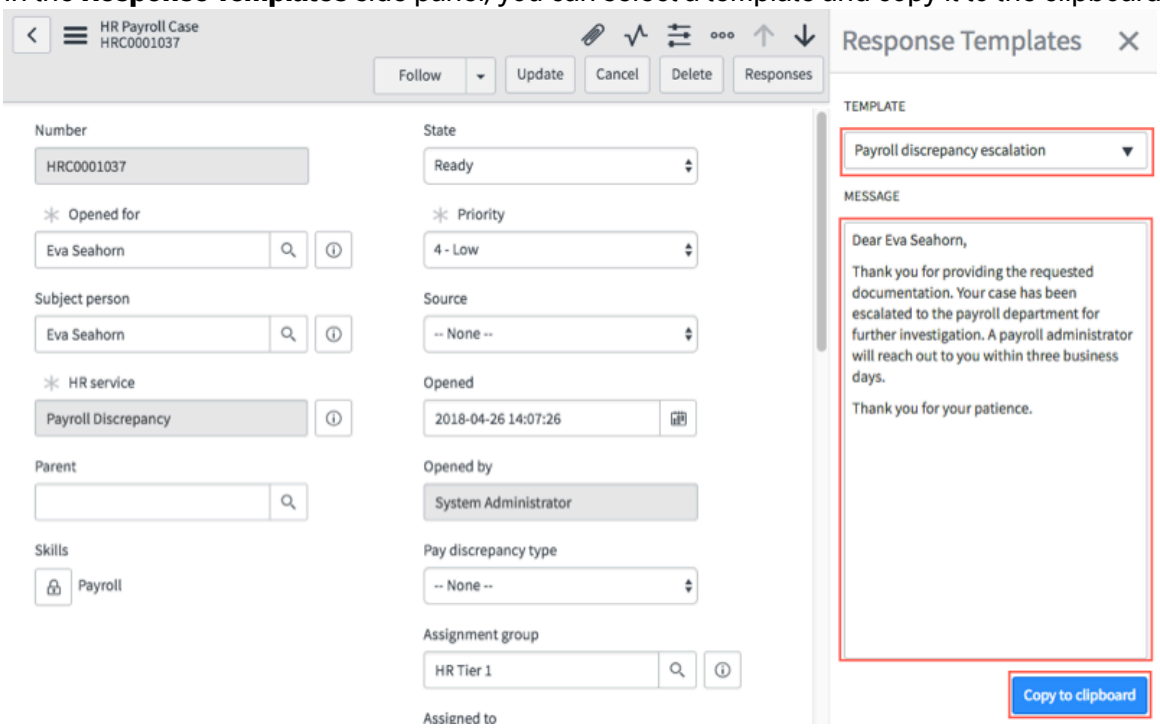
Copy response template (formerly known as templated snippet) content to any field on an HR case form that meets the specified conditions.

Before you begin



Role required: sn_hr_core.case_writer

Procedure



1. Navigate to **All** > **HR Case Management** > **All HR Cases**, and open one of the modules, such as **Assigned to me** or **Open**.
2. Open the HR case.
3. Click **Responses** to open the **Response Templates** side panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If the **Responses** button is not visible, make sure that a response template that meets the conditions for the open case is available to use. See Create or modify an HR Service Delivery response template for more information.

4. In the **Response Templates** side panel, you can select a template and copy it to the clipboard.

5. Once copied, you can paste the content to a field on the form, such as to **Comments**, or into an email that you send to the employee.

Note:
For information on using response templates in HR Agent Workspace, see Use Response templates on an HR case.

HR synonym dictionary

HR Service Delivery provides a Synonym Dictionary that helps expand text searches with additional keywords.

Before you begin
Role required: admin, ts_admin

About this task
You can edit the HR Synonym Dictionary to reflect your business and terminology.

Note:
You must be in the Global scope to edit.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

Complete the following tasks:

Load the HR Synonym Dictionary

The HR Synonym Dictionary loads automatically when you check the **Load demo data** box and activate the Human Resources Scoped App: Core [com.sn_hr_core] plugin.

Activate the HR Synonym Dictionary

1. Navigate to **System Properties** > **Text Search**.
2. Check **Yes** in the **Enable Synonym (which can be defined in Synonym Dictionaries)** field.
3. Click **Save**.

Edit the HR Synonym Dictionary

1. Navigate to **System Definition** > **Text Index Synonym Dictionaries**.
2. Click **HRSD Synonym Dictionary**.
3. The base system provides five default Synonym Sets.
4. Click a Synonym Set to edit.
5. Add words in the **Synset** box separated by commas. The words in this box are your custom words that you feel your employees use in search.
6. Or, click **Insert a new row** to add a Synonym Set.
7. Click **Update**.

Publish the HR Synonym Dictionary

1. The HRSD Synonym Dictionary form appears.
2. Click **Publish Dictionary** under Related Links.
3. The Synonym Dictionary is active after a few minutes.

HR security

HR Service Delivery provides Restricted Caller Access, Encryption Support, and Edge Encryption security features.

Restricted caller access for HR

Restricted caller access (RCA) defines cross-scope access to HR Service Delivery applications.

RCA is available to help secure sensitive information in HR scoped tables and script include APIs. Without RCA, tables that are not private to a scope are susceptible to queries by any server-side script.

The **Scoped Application Restricted Caller Access [com.glide.scope.access.restricted_caller]** plugin is activated during the HR application installation or upgrade.

Caller tracking

This setting is recommended for the development stage. Access is allowed to tables and script includes, but tracked in the Restricted Caller Access table. Access information can be viewed from **Application Restricted Caller Access**.

Caller restriction

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This setting is recommended for the production phase after development is complete.

To define cross-scope access to an application resource, refer to Define cross-scope access to an application resource.

Related topics

Set the application scope, application resources, and event access

Encryption for HR and Employee Document Management

HR Service Delivery and Employee Document Management provides encryption to secure sensitive information.

Encryption prevents unauthorized users from downloading and viewing employee documents or viewing specific fields. To encrypt employee documents or fields in HR, Column Level Encryption is activated by default and provides role-based encryption functions.

A cryptographic manager configures the fields or applications that are to be encrypted using encryption modules and module access policies:

- **Note:**
  Ensure the **Application** field has Employee Document Management selected.

- From the module access policy, set the role for encryption access. Specify the role to the user adding employee documents. Users with this role can access encrypted documents. See Create a module access policy.
- Employees can view their own documents when HR Service Delivery is licensed, activated, and the document type allows employee access. The role specified in the encryption module is not required for employees to view their own documents that are encrypted. Define policies for a document type To configure the field or attachment for encryption, see Encrypting fields and attachments.

Note:
Documents that were previously encrypted using encryption contexts have the same access using encryption modules in Xanadu.

For details on Column Level Encryption see, Column Level Encryption.

Edge Encryption for HR and Employee Document Management

HR Service Delivery and Employee Document Management provides edge encryption to secure sensitive information.

Edge encryption provides you with direct control over your data security. Encryption and key management are performed on your intranet between your browser and your ServiceNow instance.

See Understanding Edge Encryption.

Because edge encryption is enabled on a proxy server on your side of the network, there is significant planning, network administration and management, and setup required.

See Planning for Edge Encryption.

To install edge encryption, see Edge Encryption installation.

To configure edge encryption, see Edge Encryption configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Edge encryption for HR

You can encrypt columns (fields) or attachments associated with an HR table. See Encrypt fields using encryption configurations.

Note:
There are limitations when using edge encryption. See Edge Encryption limitations.

HR chat from lists and forms

You can chat with employees about their HR services request from any HR list or form in HR Service Delivery.

Access chat from the **Toggle Connect Sidebar** from the **Form Header** on any HR form or list. A number display on the **Toggle Connect Sidebar** icon to indicate that someone is trying to chat with you.

A chat initiated about a specific HR case is part of the case record. By default, the chat conversation saves to the **Work notes** of the HR case. Work notes on an HR case are not visible to the employee. Changing chat to **Comments** make the chat visible to the employee on the HR case.

In the chat widow, click the icon next to the HR case number to access the details of the HR case.

Note:
When an agent is not assigned to an HR case, some features are not available from the Employee Center. For example, the Ask a Question link to chat about a specific case cannot assign an agent. For information on automatically assigning an HR agent to a case, see Assignment and matching rules in HR.

See Connect.

Manage the HR chat queue

You can configure the HR department chat queue and review the chat records to measure how well employees are being assisted when they initiate a conversation.

Before you begin

To use the HR chat queue, the administrator must activate the Advanced Work Assignment [com.glide.awa] and Agent Chat [com.glide.interaction.awa] plugins.

Role required: admin or hr_admin

About this task

You can configure the assignment group for monitoring the chat queue and the messages that employees see when they initiate a conversation and while they are waiting.

You can review the chat records to see how long employees waited for a response and who is accepting the chat requests.

Procedure

1. Navigate to **All** > **Collaborate** > **Connect Support** > **Support Administration** > **Queues**.
2. Select **HR Department Chat Queue** from the Chat Queues list.
3. Fill in the fields, as appropriate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Chat Queue form

Field	Description
Name	Name of the queue.
Active	Not used in Connect.
Assignment group	User group that contains the support staff for the queue. Any user in the group can view the queue in the Connect sidebar and accept chats. No other users can access the queue. This field must be populated.
Average wait time	Average time it takes for an agent to accept a chat in the queue. This value is automatically calculated. Do not manually edit.
Confirm problem	Not used in Connect.
Escalate to	Different queue to which an agent can escalate a chat. For example, there is a queue for high priority support chats. When a queue is defined in this field, agents can access the **Escalate** option in conversations.
Initial agent response	Message that users see when an agent accepts their chat. For example, **Thank you for contacting support. We are looking into your question now and will be with you shortly.**
Not available	Message that users see when they attempt to start a chat outside the defined queue **Schedule**. You can use HTML to format the message and include links or media.
Question	Initial phrase that users see when they start a new chat in the queue. For example, **How can I help you?**
Schedule	Schedule that defines when the queue is available. Leave the field blank to make the queue available all the time. Users cannot start a new conversation in the queue outside the schedule hours.

4. To review conversations associated with the queue, add the **Chat Queue Entries** related list and review the records for the following information.

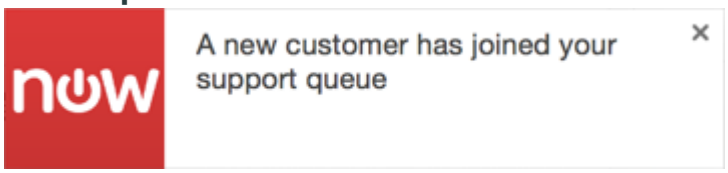
Monitor the HR chat queue

Employees can ask a question from the **Chat with HR** link on the HR Portal. Their question is placed in the HR chat queue, and any HR agent monitoring the queue can respond to it.

Before you begin

Role required: sn_hr_core.admin

Note:

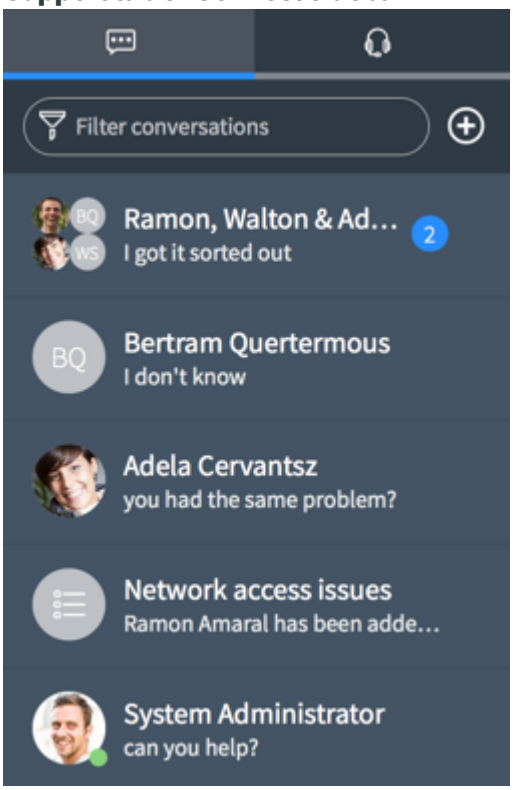


Connect Support will be deprecated. For similar capabilities, please move to Advanced Work Assignment and Agent Chat. For details, see Move from Connect Support to Advanced Work Assignment and Agent Chat.

About this task

By default, all members of the HR group monitor the HR chat queue. When a question is submitted to the queue, a pop-up notification appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



HR chat queue notification

Procedure

1. Navigate to **All** > **Collaborate** > **Connect Support**.
   The Connect workspace opens in a new tab.
2. Click the support tab of the Connect sidebar, indicated by a headset icon ( ).
   The support tab displays **Queues** to which you belong. It also displays your open support conversations under **Cases**. When a user starts a support conversation or an agent transfers a conversation to a queue, any agent who belongs to the associated queue can accept the conversation.

Support tab of Connect sidebar

3. Accept a conversation in one of the following ways.
4. Respond to the user and help resolve the issue.
   By default, your messages are added to the conversation record as comments and are visible to the user.

What to do next

If necessary, you can open a new HR case or incident from the conversation for further investigation. You can also transfer the conversation to a different agent or queue, or escalate the conversation to a higher priority queue.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create an HR case from a chat

If an HR chat results in the need to open a case, create the case directly from the conversation.

Before you begin

Role required: sn_hr_core.basic or sn_hr_core.case_writer.

Note:
Connect Support has been deprecated and is no longer supported or available for new activation. For similar capabilities, please move to Advanced Work Assignment and Agent Chat. For details, see Move from Connect Support to Advanced Work Assignment and Agent Chat.

About this task

When you create an HR case from a support conversation, the system copies the conversation history to the case activity stream as comments and work notes. Future messages are tracked in the case as well.

Procedure

1. Navigate to **All** > **Connect** > **Connect Support**.
   The Connect workspace opens in a new tab.
2. Click the support tab of the Connect sidebar, indicated by a headset icon ( ).
3. Under **Cases**, open an HR conversation.
4. At the bottom of the conversation, click the menu icon ( ) to open the Connect actions menu.
5. In the Connect actions menu, select **Create HR Case**.
   A new case form opens in a record tab. The system automatically sets certain fields based on conversation details.
6. Complete the form as necessary and click **Submit**.
   Any comments or work notes in the record conversation appear as comments on the incident form. Work notes do not appear in the chat for the ESS user. The chat agent can select whether a message is a Comment or Work Note in the conversation.
   a. In the record conversation, by the text entry field, click the message type icon ( ).
   b. Select **Comment** or **Work Note**.
   c. Enter a message.
   By default, record conversation messages are added as comments.

   Note:
   If you add an attachment to a record conversation, it is attached to the underlying record as well.

   The system automatically shares the record in the conversation, copies the conversation to the record activity stream, and references the record on the Chat Queue Entry [chat_queue_entry] table. Any new journal fields added to the record do not appear in the chat. The system also changes the document ID for the conversation to reference the incident number instead of the entry in the Chat Queue Entry table.

Capturing multiple job records for a user

Capture multiple job records for a user with the new Jobs (sn_hr_core_job) table. When creating HR cases, you can specify which job the case pertains to. For example, say that you have a payroll discrepancy case and the employee has two associated job records. When the case is created, you can specify which job the case is for.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

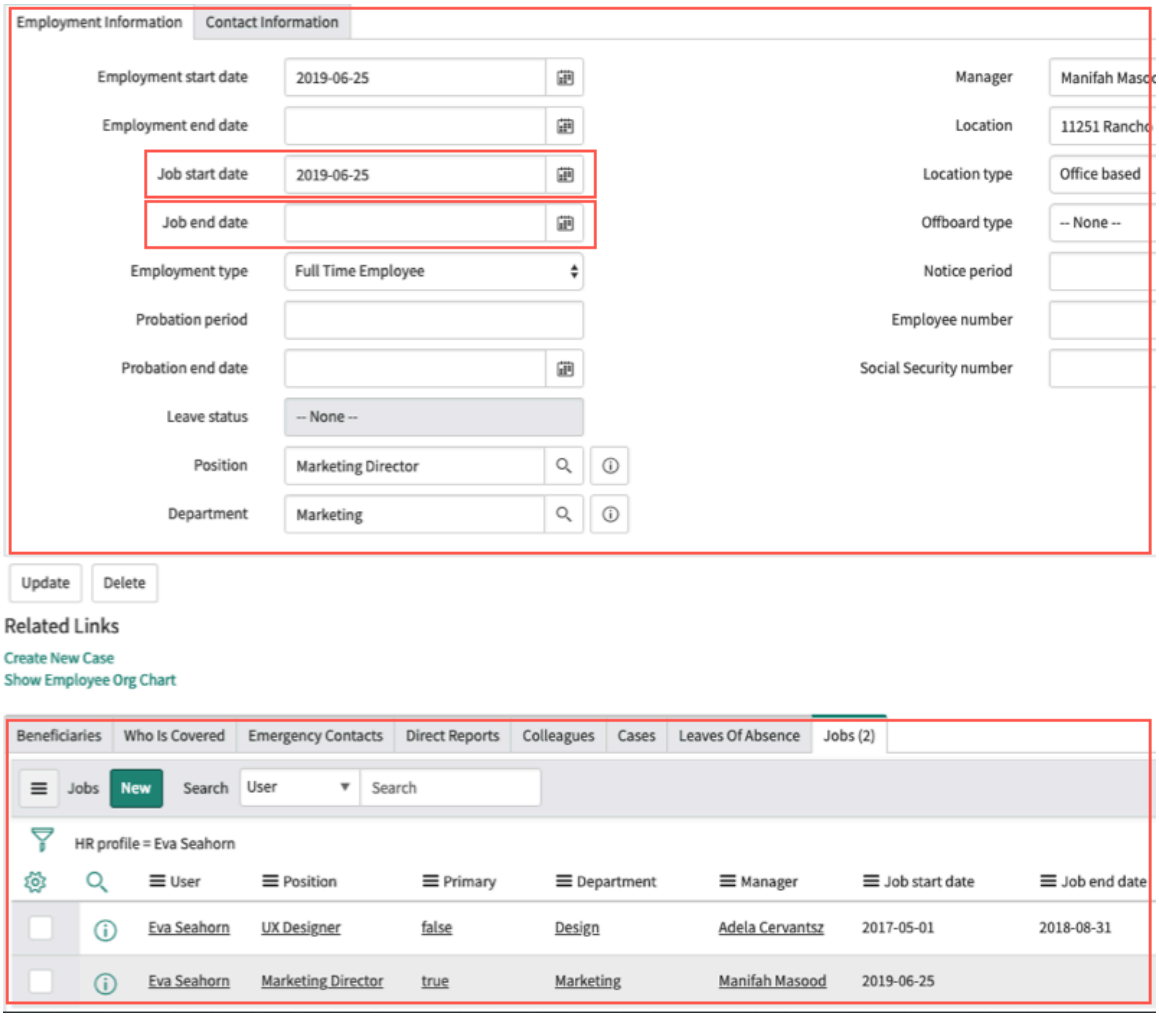
Jobs table overview

Beginning in the New York release, you can use the new Jobs (sn_hr_core_job) table to store multiple job records per user and capture the job history of users within your organization.

Jobs table and HR Profile table

The HR Profile table has a reference to the Jobs table for the user's primary job.

HR Profile (sn_hr_core_profile) table



Field	Description
primary_job • Job start date • Job end date	Reference field to the Jobs (sn_hr_core_job) table.

For example, the following HR profile record is for Eva Seahorn. Eva was first hired as a UX designer in May 2017. In August 2018, Eva left the company. In June 2019, Eva was rehired as a marketing director. Eva has two associated job records, with the marketing director position as Eva's primary job.

- In the Employment Information related list, information about the primary job is displayed.
- In the Jobs related list, all of the associated job records are displayed.

Note:
The employment start date represents the first day the user was employed with the organization. The job start date represents the first day of the user's current primary job. Because Eva left the organization in August 2018, but was rehired in June 2019. This represents Eva's new employment start date.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Jobs table and HR Case table

The HR Case table has a reference to the Jobs table for the subject person's job.

HR Case (sn_hr_core_case) table

Field	Description
subject_person_job	Reference field to the Jobs (sn_hr_core_job) table.

In the case of Eva Seahorn, for example, Eva was rehired as a marketing director in June 2019. Eva has two associated job records. When an onboarding case is created for Eva, the **subject_person_job** field enables you to specify which job the onboarding case pertains to. The onboarding case would be for the marketing director job Eva was rehired for.

Supporting multiple jobs in a lifecycle event

Use the Jobs table to create lifecycle event cases where you can specify which job the case pertains to. For example, say that you have an intern that is being transferred to a full-time position. The intern has two associated job records. When an onboarding case for the full-time position is created, the case is associated with the full-time job record, ensuring that downstream activity sets and activities are triggered based on information from that relevant job record. For more information, see Support multiple jobs in a lifecycle event.

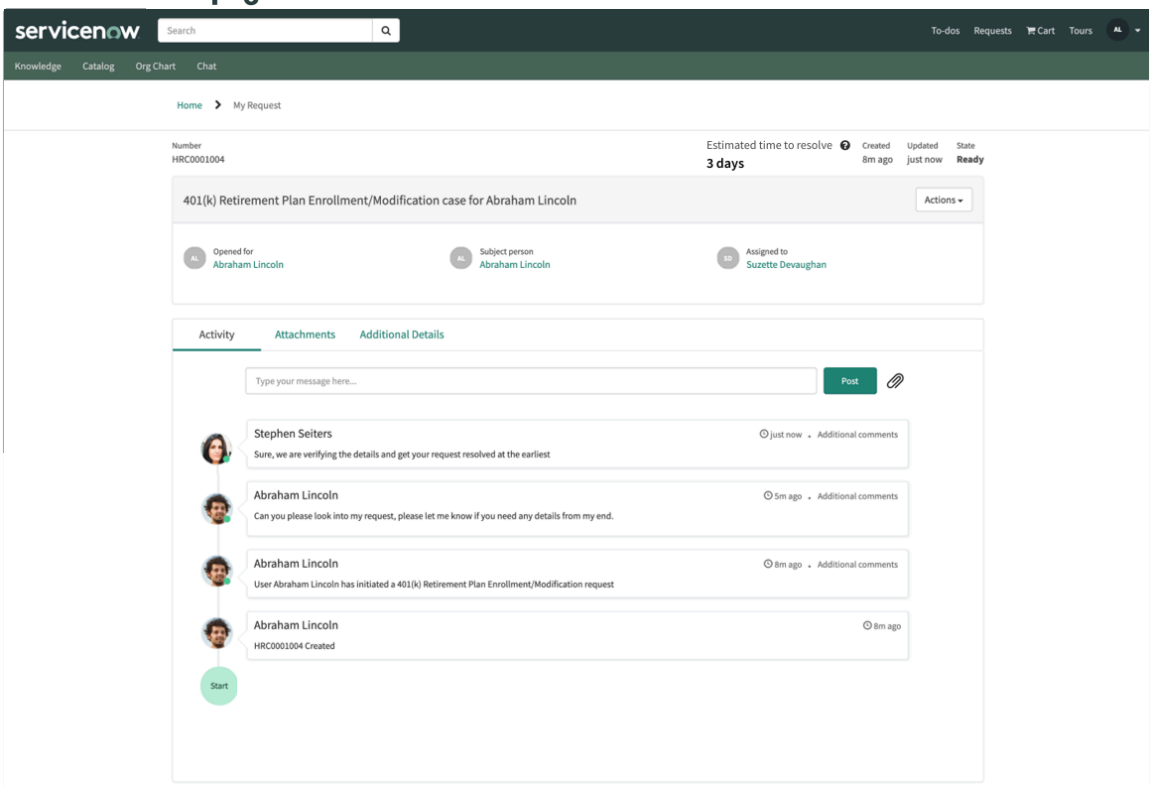
Standard Ticket Page view for HR Service Delivery



Configure your HR services to use the Standard Ticket page to provide a consistent user experience for your employees.

You can configure the appearance of your ticket page layout (such as header and tabs) from **Standard Ticket** > **Standard Ticket Configuration**. For more information, see Configure custom HR services.

For new and restarted instances, the Standard Ticket page view is available by default. For upgraded instances, you must configure the page route map. For more information, see Enable the page route map.

After you have configured the HR services and have completed the page route mappings, your HR requests appear in the Standard Ticket page view in the following format:

Standard Ticket page view

When you enable expected resolution time (ETTR), you can see the estimated time for your request. For more information, see Estimated time to resolve HR cases.

Configure custom HR services

Configure your custom HR services in the Standard Ticket page to provide consistent employee experience in the Portal.

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Standard Ticket** > **Standard Ticket Configuration**.

Important:
By default, the standard ticket configurations are done for the following HR services:

- sn_hr_core_case_talent_management
- sn_hr_core_case
- sn_hr_core_case_payroll
- sn_hr_core_case_relations
- sn_hr_le_case
- sn_hr_core_case_operations
- sn_hr_core_case_total_rewards
- sn_hr_core_case_workforce_admin

2. Select your custom HR service.
3. On the form, configure the required fields:

Ticket Configuration form

Field	Description
Table	COE table for which you want to configure the standard ticket page.
Active	Option to specify if the ticket configuration is active.
Application	Application associated with the ticket configuration.
State field	Any field of the task-extended table. By default, this field is mapped to the **State** field of the task-extended table. Configure the form to add this field. **Note:** You cannot add fields for any of the following information: ○ Number ○ Short description ○ Created date ○ Updated date ○ Watch list ○ Any user input such as comments and work notes
Info Region	
Show 'Description'	Scenario where the request description should be displayed. Possible options are: ○ None ○ Always ○ When no variables

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: When displayed, you can expand and collapse the description.
Advanced	Option to specify that a widget should be displayed in the info region.
Info widget	Widget that should be displayed in the info region. This field appears only when the **Advanced** check box is selected. **Note:** By default, the HRM Case Info widget is used to display the HR case-related information.
Info widget parameters	Comma-separated list of info widget parameters. This field appears only when the **Advanced** check box is selected.
Info fields	Fields that should be displayed in the info region. This field disappears when you select the **Advanced** check box. **Note:** You cannot add fields for any of the following information: ○ Number ○ Short description ○ Created date ○ Updated date ○ Watch list ○ State ○ Any user input such as comments and work notes
Action Region	
Action widget	Widget to specify the actions available in the info region. **Note:** By default, the HR Standard Ticket Actions widget is used.
Action widget parameters	Comma-separated list of action widget parameters.

Note:

- By default, two types of tabs are activated and configured: **Activity** and **Attachments** type.
- You cannot duplicate any tab type other than Custom.
- You can configure a maximum of five tabs.
- You can add only one of these tab types:
  - Variable Editor (Read-Only)
  - Variable Summarizer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Right-click the header menu and click **Save**.
5. On the Tab Configurations related list, configure the fields.

Tab Configuration form

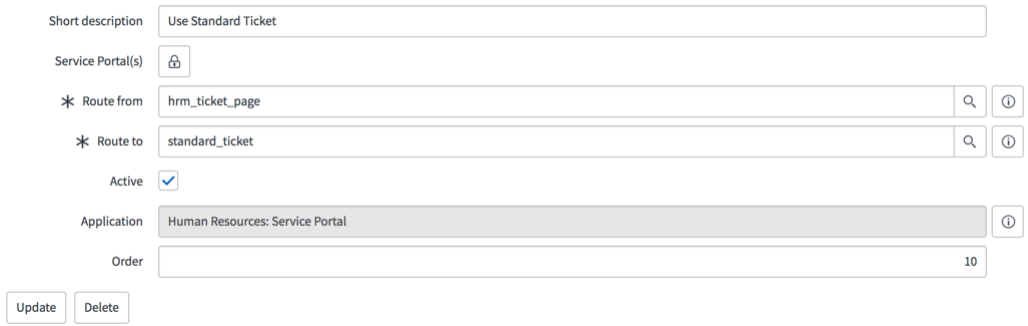
Field	Description
Type	Tab type based on which a widget is displayed. Possible options are: ○ None ○ Activity ○ Attachments ○ Custom ○ Variable Editor (Read-Only) ○ Variable Summarizer
Tab name	Name of the tab.
Application	Application associated with the ticket configuration.
Order	Order in which the tab should be displayed in the tabs section.
Visible	Conditions for the tab visibility.
Widget	Widget that should be displayed in the tabs section. This field appears only when **Custom** is selected from **Type**. **Note:** For the **Tasks/To-dos** tab, by default the HRM Task Parent widget is used. For the **Approvers** tab, by default the HRM Approval Tab widget is used. For the **Attachments** tab, by default the HR Standard Ticket Attachments widget is used. This widget also displays employee documents (EDM).
Widget parameters	Comma-separated list of tab widget parameters. This field appears only when **Custom** is selected from **Type**.

6. On the Ticket Configuration form, click **Update**.

Enable the page route map

If you have upgraded your instance, redirect your HR ticket pages to the Standard Ticket page in Portal. View your HR requests in the Standard Ticket Page view.

Before you begin



Role required: admin

Procedure

1. Navigate to **All** > **Service Portal** > **Page Route Maps**.
2. Create the page route map from **hrm_ticket_page** to **standard_ticket**.

Note:
hrm_ticket_page is available only when you have the Employee Center [com.sn_hr_service_portal] plugin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Create the page route map from **hrsp_ticket** to **standard_ticket**.

> **Note:**
> **hrsp_ticket** is available only when you have Human Resources Scoped App: Core [com.sn_hr_core] plugin, without the Employee Service Center [com.sn_hr_service_portal] plugin.

4. Create the page route map from **ticket** to **standard_ticket**.

> **Note:**
> **ticket** is available only Non-HR catalog items.

Translations for HR cases and tasks

Enable translations on HR case and task templates so that employees can view the short descriptions and descriptions of their HR cases and tasks in their preferred language.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure the global descriptions for translations for an HR template

Configure an HR case or task template to enable translations. You can provide the global descriptions for translations in multiple languages so that users can view the short descriptions and descriptions of their HR cases and tasks in their preferred language.

Before you begin

Make sure to activate the languages that you want to support translations for.

Role required: admin

Procedure

1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Templates**.
2. Click **New** or open a record.
3. Fill in the fields on the form, as appropriate.

   For details on how to how to configure an HR case or task template, see:

   - Configure an HR case template
   - Configure an HR task template
4. To enable translations, make sure that the **Use global descriptions for translations** field is selected.
   When selected, the **Global short description** and **Global description** fields display.
5. Provide the global short description and description for each of your activated languages.

   Note:
   Make sure to provide global descriptions for each supported language. You cannot select the **Use global descriptions for translations** option within a single HR template for some languages and not others.

   a. Go to **System Systems** > **General**, and select the language that you want to provide translations for.

      Example
      For example, you can set the language to Spanish.

   b. On the HR template form, provide the global short description and description in the selected language.

      Example
      For example, you can provide the global short description and description for dental benefits in Spanish.

   c. Repeat the process for each language you are supporting.

      Example
      For example, if English, Spanish, and Korean are activated on your instance, then make sure to provide global translations for each of those languages in the HR template.
6. Click **Submit** or **Update**.
7. If you are configuring an HR case template, then you can also update the corresponding HR service to use case headers that support the use of global descriptions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **HR Administration** > **HR Services** > **HR Service Configuration**.

b. Open the corresponding HR service record.

c. Update the following fields:

Corresponding HR service record form

Field	Value
Opened for / Approver view	Opened for/approver case header configuration using global descriptions
Subject person / Task assignee view	Subject person/task assigned to case header configuration using global descriptions

d. Click **Update**.

Example: Dental benefits enrollment

This is an example of how the global short description and description displays for the Dental Benefits Enrollment/Modification HR service in the Employee Service Center when the language is set to Spanish.

Employee Profile table

The Employee Profile (sn_employee) plugin provides an Employee Profile (sn_employee_profile) table that makes the employment start date and employment end date fields available outside of HR Service Delivery. For example, the table can be used with Strategic Portfolio Management to update the resource capacity of users.

Overview of the Employee Profile table

Use the Employee Profile (sn_employee_profile) table to make the **employment_start_date** and **employment_end_date** fields available outside of HR Service Delivery.

Learn more about the Employee profile.

Employee Profile (sn_employee_profile) table

Field	Description
user	Reference to the User (sys_user) table.
employment_start date	Represents the employment start date.
employment_end_date	Represents the employment end date.

If you are using Employee Profile with HR Service Delivery

When you activate the Employee Profile plugin, the following fields are pulled from the HR Profile (sn_hr_core_profile) table to populate the Employee Profile (sn_employee_profile) table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Profile (sn_hr_core_profile) table

Field	Description
employment_start_date	Represents the employment start date.
employment_end_date	Represents the employment end date.

Sync employee profile from HR profile is a one-time scheduled job that will pull all users with their corresponding employment_start_date and employment_end_date values from the HR Profile table upon plugin activation. Subsequent updates will be made by the **Synchronize fields to HR profile** and **Synchronize fields to employee profile** business rules.

Note:
If you need to run the one-time scheduled job again, make sure to first activate the job and allow for the invalidated RCA before running it. Do not run the job on a scheduled basis.

Activation information

You must activate the Employee Profile (sn_employee) plugin to use the Employee Profile table with your application.

Note:
If you are using the table with Strategic Portfolio Management, see Update the resource capacity for more information.

Activate Employee Profile

You can activate the Employee Profile plugin [sn_employee] if you have the admin role.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Components installed with Employee Profile

Several types of components are installed with activation of the Employee Profile [sn_employee_profile] plugin, including tables, user roles, and scheduled jobs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Roles installed

Roles installed with Employee Profile

Role title [name]	Description	Contains roles
Employee Profile admin [sn_employee.admin]	Grants access to create, read, update, and delete for the Employee Profile table.	None

Scheduled jobs installed

Scheduled jobs installed with Employee Profile

Scheduled job	Description
Sync employee profile from HR profile	HR Service Delivery only: One-time scheduled job that pulls all users with their corresponding employment_start_date and employment_end_date values from the HR Profile (sn_hr_core_profile) table.

Tables installed

Tables installed with Employee Profile

Table	Description
Employee Profile [sn_employee_profile]	Employee Profile table.

Link generator for HR Service Delivery

Use the Link Generator to create a link on an HR case form that accesses information outside of the application to help fulfill the case.

Create links on the HR case form to payroll, social media, or to products to fulfill computer or software requests. Generate URLs to manage content, knowledge articles, and catalogs.

An example would be to create a link to a third-party HR application from the HR case form so HR agents can access additional profile information. Creating these types of links assume:

- The HR agent has valid credentials to access a third-party HR application.
- The link takes the HR agent directly to the profile information in the third-party HR application and not to the home page.

The **Human Resources Scoped App: Core [com.sn_hr_core]** plugin activates the **Link Generator [com.snc.linkgenerator]** plugin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The process for creating a link for a form is:

- Create a record for the target website name and URL in **Define Link**(Link Generator Sources).
- Create a record for the deep link name, website name, link type, and script in **Define Link Parameters** (Link Generator Services).
- Map information like the button name, button location type, form (table), Location (field), and Deep link name in **Define Button** (Link Generator Mappings).

Add or modify an HR deep link

Use the **Define Link** (Link Generator Sources) to create a record for the target website name and URL.

Before you begin

Role required: link_generator_writer

Procedure

1. Navigate to **All** > **Link Generator** > **Define Link**.
2. Click **New** or an existing record.
3. Click **Submit** or **Update**.
4. Navigate to **Define Link Parameters**.
5. Click **New** or on an existing record.
6. Click **Submit** or **Update**.
7. Navigate to **Define Button**.
8. Click **New** or on an existing record.
9. Click **Submit** or **Update**.

HR flows and triggers

HR flows created in Workflow Studio use natural language to automate approvals, tasks, notifications, and record operations without coding.

Three new flows are available to automate the triggering of Lifecycle Events. The triggers are based on changes in the HR Profile [sn_hr_core_profile] or Job [sn_hr_core_job] tables. These flows reduce or eliminate the need to write business rules to trigger Lifecycle Events.

Note:
Customize these flows to use in other Lifecycle Events other than on boarding events.

The following flows are installed with the Human Resources: Core application. These HR flows are deactivated by default.

New Hire on Boarding Case Trigger HR Profile

The trigger is based on the employee's start date in the HR Profile Table [sn_hr_core_profile]. If the employment start date is at or after today, the flow creates an HR Onboarding case. This flow runs every time an HR profile is created or updated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information about the HR Profile, see Employee Profile table and HR Profile.

New Hire on Boarding Case Trigger Job

The trigger is based on the employee's start date in the Job Table [sn_hr_core_job]. If the employment start date is at or after today, the flow creates an HR Onboarding case. This flow runs every time an HR profile is created or updated.

For more information about the Job Table and related profile records, see Capturing multiple job records for a user.

Case Trigger Custom Condition

Table: HR Profile [sn_hr_core_profile]

This flow can be used as a template to create a customized trigger. The trigger is based on a custom date check for the employee start date. The default trigger is initiated two days prior to the employee start date. For more information about flows and triggers, see Flows.

These flows create an HR case adding an entry in the HR Lifecycle Events Case [sn_hr_le_case] table. If multiple flows are active at the same time, there is a high probability of creating duplicate records and cases.

Note:
Only one of these flows should be active at any given time for a particular lifecycle event.

Activate an HR flow

HR flows help automate task and case creation.

Before you begin
Role required: admin

About this task
There are three HR flows installed with the Human Resources: Core application.

- New Hire on Boarding Case Trigger HR Profile
- New Hire on Boarding Case Trigger Job
- Case Trigger Custom Condition

Activation is immediate. These flows create an HR case adding an entry in the HR Lifecycle Events Case [sn_hr_le_case] table. If multiple flows are active at the same time, there is a high probability of creating duplicate records and cases.

Note:
Only one of these flows should be active at any given time for a particular lifecycle event.

Procedure

1. Navigate to **All** > **Process Automation** > **Flow Designer**.
2. Open the flow you want to activate.
3. Click the **Activate** button.

Explore and use HR Case and Knowledge Management

HR Case and Knowledge Management pulls together many HR case related features.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Understanding Case and Knowledge Management

Case and Knowledge Management for the scoped version of HR benefits your enterprise by automating standard HR processes within your organization that support relationships between employees and the HR department.

Who uses HR Service Delivery

HR Service Delivery is used by the enterprise HR department. An enterprise HR department is composed of many areas, such as employee relations, benefits administration, policy enforcement, recruitment and employment, and performance management. The members of a large HR organization typically include:

- HR specialists who specialize in one or more HR disciplines. For example, the benefits area has specialists in insurance administration, leave and vacation time, and employee stock purchase.
- HR generalists who work with a business group or in a geographical region to assist employees with questions, careers, performance management, and other employee relations requests.
- HR managers who monitor and measure the effectiveness of the HR group in supporting employees across the organization. They also ensure that the enterprise is compliant with federal, state, and local regulations.
- HR systems administrators who configure and maintain systems such as the central employee database, payroll, learning and performance management system, and others, including the Human Resources application.

How you use HR Service Delivery

HR Service Delivery enhances and supports your enterprise. The relationships between your employees, IT, and the HR department are supported in numerous ways:

- Employees can use the HR Service Portal or catalog to submit questions and other requests to the HR department.
- If you use the Connect Support feature, employees can chat with an HR agent who is monitoring the HR chat queue. See Connect Support.

  Note:
  Connect Support will be deprecated. For similar capabilities, please move to Advanced Work Assignment and Agent Chat. For details, see Move from Connect Support to Advanced Work Assignment and Agent Chat.

- HR staff can create, manage, and view HR cases to answer questions and process the requests that employees submit.
- HR managers can run reports and view overview information to monitor and manage work done by the HR department.
- HR and corporate IT administrators can more effectively manage the company HR systems, such as the payroll and performance management systems, through the Enterprise Configuration Management Database (ECMDB).

How you benefit from HR Service Delivery

Your entire organization benefits by using the application in the following ways:

Automates standard HR processes

Several typical HR processes are automated. This automation reduces the number of checklists, email exchanges, and phone calls performed by the HR team.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Improves employee access

Employees access HR services through a service catalog, rather than having to write individual emails, make phone calls, or personally visit HR for each request.

Tracks requests and progress

HR managers use reports and views to help them understand the work their staff is performing to support the company. Employees can see the status of their requests.

Integrates with other services

Human resources processes can include both HR tasks and tasks for other teams, to provide significant service delivery improvements.

HR Service Delivery terminology

The following terminology is used for the application.

Terminology

Term	Definition
HR Criteria	Way to select groupings of HR and System users based on criteria
HR Services	List of HR Services
HR Topic Categories	List of HR Service Topic Categories
HR Relationships	User relationships with each other
HR Positions	Positions available in company table
HR Assignment Tier Definition	Specifies escalation hierarchy
HR Group Roles	List of groups that have HR group roles
HR Email Scripts	List of all HR email scripts
HR User Roles	List of users who have HR user roles
HR Templates	Templates for Case record creation based on catalog item
Client Role Rules	Specifies the rules to generate client roles
HR Topic	Details List of HR Service Topic Details
HR Service Options	List of HR Services options that affect case creation
HR Departments	Departments available in company table
HR Locations	Locations available in company table
HR Chat Queues	List of HR chat queues
HR Surveys	Surveys used by HR application
HR Links	External links used by HR application
HR Properties	System properties used in HR Application
HR Email Templates	List of all HR-related email templates
HR Knowledge Bases	Knowledge bases used by HR application
HR Knowledge Articles	Knowledge articles used by HR application
HR Notifications	Email notifications used by HR application

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Terminology (continued)

Term	Definition
HR Service Catalog Categories	Service catalog categories used by HR application
HR Service Catalog Items	Service catalog items used by HR application
HR Document Templates	Document templates for document content used in HR application
HR Groups	Groups used by HR users
HR Skills	Skills available to company users
HR Roles	Roles used by HR users
HR Benefit Provider / Plans	Benefit providers and plans used by HR Benefits service
HR Benefit Type	Benefit types used by HR Benefits service
Disciplinary Issue Types	Disciplinary issue types used by HR Employee Relations service
Disciplinary Warning Types	Warning types used by HR Employee Relations service
HR System Report Frequencies	System Report Frequencies defined for HR Systems Service
HR System Report Types	HR System Report types used by HR System service

HR Service Delivery Process Mining

Integrating the Process Mining application with the HR Service Delivery application enables you to analyze processes relevant to your KPIs, and identify bottlenecks associated with HR service cases and, if installed, Lifecycle Events cases.

Process Mining for HR Service Delivery feature overview

Process Mining for HR Service Delivery enables companies to analyze and improve service delivery processes. It leverages Process Mining capabilities in the ServiceNow platform and offers a best practice content pack for HR Service Delivery.

The HRSD Process Mining content pack contains preconfigured process mining models that help analysts and process owners understand the effectiveness of their processes, including opportunities for continued performance improvement.

Use Process Mining to discover, streamline, visualize, analyze, monitor, and more.

- **Visualize your processes**: Map processes across system and functional boundaries based on data analysis.
- **Streamline your processes**: Identify bottlenecks, siloes, redundancies, and other inefficiency drivers.
- **Automate your processes**: Identify frequent, consistent, and repeated tasks that are suitable for automation.
- **Improve your processes**: Link process maps to KPIs to perform root cause analysis and identify drivers of performance.

For complete information about the Process Mining application and how it relates to and integrates with HR Service Delivery, see Process Mining.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To enable the Process Mining content pack for HR Service Delivery, see Activate Process Mining content packs.

HR Service Delivery Process Mining configuration model

HR Service Delivery Process Mining configuration model includes process definitions for standard HR services, as well as a process map that uses multi-dimensional mining for Lifecycle Events if this application is installed.

Process maps and transitions look across your portfolio of HR services to find and visualize problem areas, opportunities for enhancements, and process compliance.

Process definitions and multi-dimensional mining

All standard HR services	Lifecycle Events (if installed)
Looks across HRSD to find deviations and problem areas.	Provides a Lifecycle Event process map using multi-dimensional intelligent mining.
Provides a single HR service view, enabling you to drill down to find bottlenecks and other fulfillment issues.	Access automated end-to-end process visibility on multi-relational processes and tables.
Automatically notifies process owners when common issues are detected using process configurations, such as channel performance degradation, KPI obtainment trends (for example, SLA), or too much variation between what is expected versus what is actual.	Quickly find key drivers behind process problems using an AI-based root cause analyzer.

End user and roles

If you have the required roles, you can use Analyst Workbench to access the visualized process workflow data, and tools for analyzing the data related to HR service cases. For more information, see Overview of the Analyst Workbench.

The following combinations of roles are required for using the Process Mining application with HR Service Delivery.

Combinations of roles

Process Mining role	HR Service Delivery role
sn_process_optimization_admin	sn_hr_core.admin
sn_process_optimization_power_user	sn_hr_core.case_writer
sn_process_optimization_analyst	sn_hr_core.basic

Optimization project for HR service cases

The HRSD Process Mining content pack (com.sn_hr_process_mining) adds a prebuilt project that includes predefined HR service cases and, if installed, Lifecycle Events cases process

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

model definitions. By default, the project filters cases for the last two quarters. You can also configure a new process project based on the prebuilt project. For more information, see Using Process Mining.

The process model definitions include default activity definitions and breakdown definitions for cases that you can use as they are or modify for a custom configuration.

- Use activity definitions to understand state transitions such as cases transitioning from the work in progress state to the solution proposed state and analyze the linked processes such as Problem (PRB) records.

  Note:
  The content pack activity definitions can be set to either ALL or INCLUDE based on whether the field values are populated or not in the `field_values_selection_type` column in the `promin_activity_def` table, so that the correct number of activities are available by default for each project.

- Use breakdown definitions to filter records and analyze a process map by categories. For example, you can filter the HR service case data by different channels, products, assignment groups, and locations.

Continual Improvement Management initiative for HR cases

If the Continual Improvement Management (CIM) application is enabled, you can also use the CIM project from the Analyst Workbench to track the progress of improvement initiatives for HR cases. The improvement initiative and process optimization model are automatically linked. For more information, see Integration with Continual Improvement Management.

Performance Analytics for HR cases

If the Performance Analytics (PA) application is enabled, you can also use the available template configurations to open the Process Mining application from a PA indicator based on the HR service case data. For more information, see Integration with Performance Analytics (PA).

HR Case Management

You use the Case and Knowledge Management application to create, view, or edit HR cases in the scoped version of HR. HR cases are created from HR requests or inquiries related to HR account or systems, benefits, payroll, performance management, reporting, talent acquisition, time and expense reporting, and more.

Self-Service HR case creation

From the Employee Center, employees can inquire or request HR services from the following categories:

- Benefits
- Employee Data Management
- Employee Relations
- General
- HR Systems
- Payroll
- Talent Management
- Visas

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

An HR case is created when an HR service is requested through the Employee Center.

HR agent case creation

Employees can inquire about HR services via email, chat, or phone. HR agents can create an HR case based on a Center of Excellence (COE) or HR service.

After an HR case is created, it is assigned to an HR agent and/or an assignment group via the HR service and associated HR template.

HR cases can have one or more associated HR tasks or HR child cases that make up the parent case.

Example HR request

An employee named Alan wants to find out about the dental plans offered:

1. Alan submits an HR request through the Employee Center asking about one of the dental plans offered.
2. An HR case is created and assigned to an HR agent.
3. The HR agent can answer the inquiry by phone, email, chat, or through the Comments section of the HR case.
4. If the answer satisfies the inquiry, the HR case can be closed.

Create an HR case

Create HR cases for employees or other individuals that require an HR service. Note that employees can also use the HR Service Portal to create HR cases for themselves.

Before you begin

Role required: sn_hr_core.case_writer

About this task

- For information about configuring case creation, see Configure how HR cases are created.
- Employees can also create HR cases for themselves using the record producers in Employee Center. The details entered by the employee get recorded in the description of the HR case.

> **Note:**
> If a value entered by the user does not match with the value in the HR profile of opened for, only then the value entered by the user gets recorded in the description of HR case. This behavior is not observed when the HR service of the case is either New Hire Onboarding or New Hire Journey.

Procedure

1. Navigate to **All** > **HR Case Management** > **Create New Case**.
   Or, from any case list, click **New**.
2. Determine the person for whom you are filing the case.
3. Fill out the information in the **Case Details** section.

Case Details fields

Field	Description
COE	The **Center of Excellence** associated with the HR case you are creating. Selecting a COE filters the choices for HR service. See HR Centers of Excellence data model. **Note:** If an HR service is selected first, the associated COE automatically populates.
HR service	The HR service based on the COE selected or what you select based on communication with the employee request. The HR services that are available to an employee are filtered by: ○ The COE selected ○ HR criteria for the **Subject person** based on the HR service configuration The limit services filter on the **Case Creation Configuration** form. If the HR service field is empty, ensure that you did not remove the **Opened for** field.
Document Template Type	The category for the document template. **Note:** This option appears only when the Document Templates [com.snc.document_templates] plugin is activated, and the **Document Template Type** field is selected while configuring the HR service.
Document Template	The document template associated to the case to generate document template tasks. **Note:** This option appears only when the Document Templates [com.snc.document_templates] plugin is activated, and **Document Template** was selected when the HR service was configured.
Work notes	Information specific to the case that can help other HR agents. Text in the **Work Notes** field is not visible to the user named in the **Subject person** field. The sn_hr_core.restrict_guest_email system property allows a user to send an email from a personal email account referencing an HR case. If this property is set to false (the default), the text from the email appears in the Work notes field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: You can translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.

4. Select the person responsible for the service request in the **Opened for** field.
   - If the case is being created by the person making the request, the values for **Subject person** and **Opened for** are the same.
   - If the case is being created for a different user, for example, a manager filing a case for an employee, use the choice list to select a different user.
5. Select the subject of the case in the **Subject person** field by selecting the Lookup using list icon ( ) and searching for and selecting another employee.

   Note: Advanced reference qualifiers on a reference field is not supported in the case creation configuration page. When the limit user search filter is applied to the employee search, it will not be applied to **Opened for** and **Subject person**.

6. Click **Create Case**.
7. **Optional:** Continue working on the case.
   For more information, see Work an HR case

Result

The **HR case** form appears with additional information about the case. The values selected for the **COE** and **HR service** fields determine the fields that appear.

Open an HR case to create a Journey Accelerator action plan

Journey Accelerator action plans can be created by opening an HR case with a related lifecycle event.

Before you begin

Role required: sn_hr_core.case_writer

About this task

When the Create Journey Accelerator Action Plan template is configured to automatically create Journey Accelerator action plans, a task is created and assigned to a manager for review.

When the template is not configured to automatically create Journey Accelerator action plans, a to-do task is created. The task is assigned to the manager (**Opened for**) to create a plan. The to-do contains the following information pre-filled in the plan:

- Who is this plan for (mapped from the subject person)
- Plan type (mapped from the activity)
- Publish date (mapped from the activity)

Procedure

1. Navigate to **All** > **HR Case Management** > **Create New Case**.
2. Enter the name of the new employee in the Search for Employee field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Fill in the Case Details:
   - **COE**: `HR Lifecycle Events Case`
   - **HR service**: `New Hire Onborading`
   - **Opened for**: `managers name`
   - **Subject person**: `new hire name`
4. Click **Create Case**.
5. Review all the fields and make any updates that are needed and click **Ready for Work**.
   A to-do task is created in the managers to-do list in the Employee Center. Managers review and publish plans from the Employee Center.

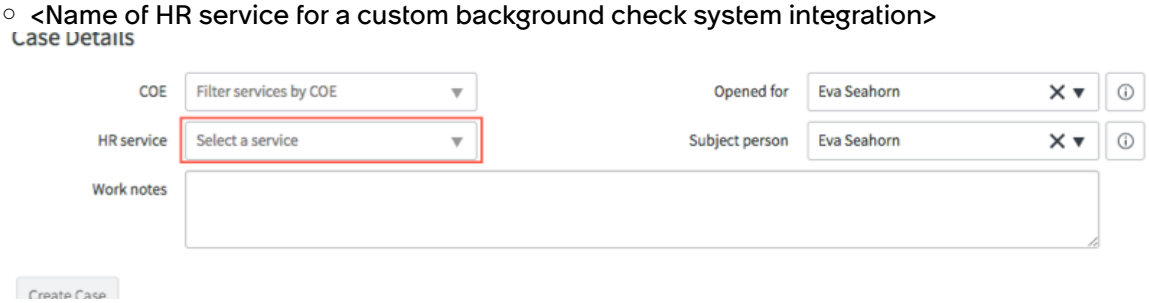
Working with Journey Accelerator plans

Request a background check through a third-party background check provider

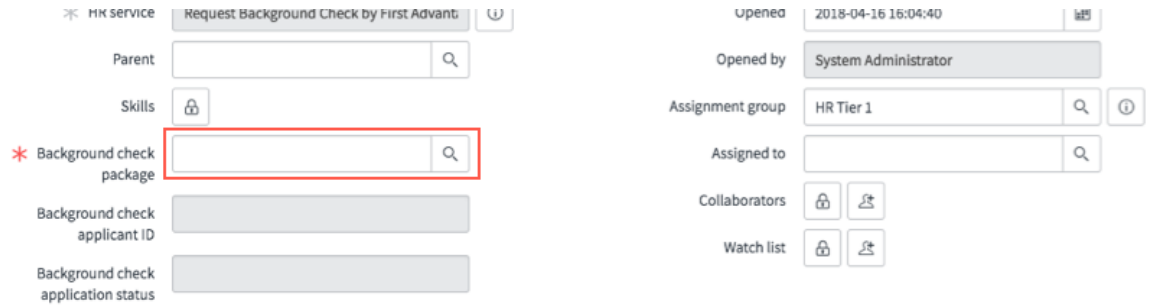
Request a background check for an employee through a third-party background check provider such as First Advantage, Accurate, or Sterling.



Before you begin

An HR integrations administrator must have set up the integration between HR Service Delivery and the third-party background check system before requests can be made. See HR Integrations for more information.

Role required: sn_hr_core.case_writer



Procedure

1. Navigate to **All** > **HR Case Management** > **Create New Case**.
2. In the **Search for Employee** field, select the employee you are creating the case for.
3. In the **Case Details** section, in the **HR service** field, select one of the following services to request a background check through the third-party background check provider.
   - Request Background Check by First Advantage
   - Request Background Check by Accurate
   - Request Background Check by Sterling
   - <Name of HR service for a custom background check system integration>

4. Fill in the other fields on the form, as appropriate.
   For further details on the form fields, see Create an HR case.
5. Click **Create Case**.
6. In the **Background check package** field, select the background check package you want to use for the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Click **Ready for Work** to send the background check request to the appropriate third-party background check provider.

Result

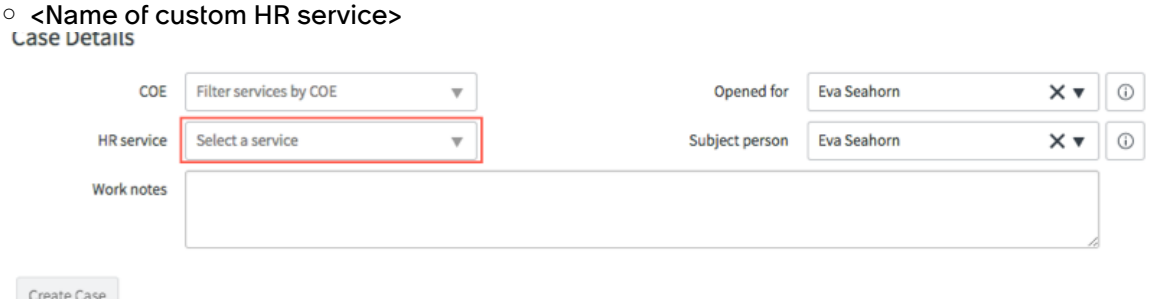
As the background check application progresses, the status is updated in the **Background check application status** field.

What to do next

To view the background check details, navigate to the **Background Check Details** related list.

Request an electronic signature through the Docusign service

Request an electronic signature through the DocuSign service. When the case state changes to **Ready**, the flow triggers and creates DocuSign tasks for all of the signers. For parallel signing, the tasks are assigned all at once. For serial signing, the tasks are created in the order defined.



Before you begin

An HR integrations administrator must have set up the integration between HR Service Delivery and the DocuSign system before requests can be made. See Integrating with the DocuSign service for more information.

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Create New Case**.
2. In the **Search for Employee** field, select the employee you are creating the case for.
3. In the **Case Details** section, in the **HR service** field, select an HR service.
   - Request Signature using DocuSign on Adhoc Document
   - Request Signature using DocuSign Template
   - <Name of custom HR service>

4. Fill in the other fields on the form, as appropriate.
   For further details on the form fields, see Create an HR case.
5. Click **Create Case**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next

When the case state changes to **Ready**, the flow triggers and creates DocuSign tasks for all of the signers. For parallel signing, the tasks are assigned all at once. For serial signing, the tasks are assigned in the order defined.

Note:

- The tasks are created using the HR task template named DocuSign Task Template.
- Users with the sn_hr_core.admin role can track the flow execution with the **Show Flow** related link. If a case is cancelled from platform, you must manually cancel the associated flow. Otherwise, the flow will remain in waiting. To cancel the flow, click the **Show Flow** related link to open the flow designer in a new window, and then click **Cancel Flow**.
- Signers must complete their DocuSign tasks through a self-service portal such as the Employee Center. Signing in platform is not supported.

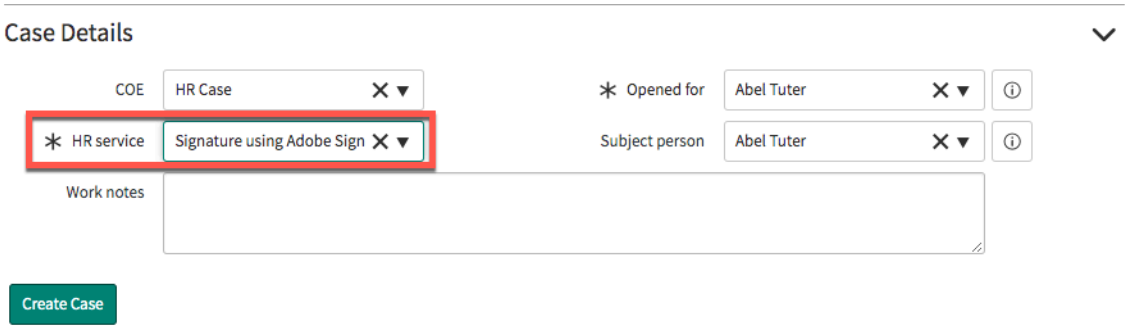
Case and task status change

Action	Result
Document signed by all	• Case and tasks closed completed • Signed document(s) attached to case and tasks
Document declined	• Case and declined task closed incomplete • Pending tasks canceled • No attachments to case
Document voided or flow errored	• Case closed incomplete and tasks canceled • No attachments to case

Request an electronic signature through the Adobe Acrobat Sign service

Request an electronic signature through the Adobe Sign service. When the case state changes to **Ready**, the flow triggers and creates Adobe Sign tasks for all of the signers. For parallel signing, the tasks are assigned all at once. For serial signing, the tasks are created in the order defined.

Before you begin



An HR integrations administrator must have set up the integration between HR Service Delivery and the Adobe Sign system before requests can be made.

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Create New Case**.
2. In the **Search for Employee** field, select the employee for whom you are creating the case.
3. In the **Case Details** section, in the **HR service** field, select an HR service.
   - <Name of custom HR service>
   - Signature using Adobe Sign

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Fill in the other fields on the form, as appropriate.
   For further details on the form fields, see Create an HR case.
5. Click **Create Case**.

What to do next

When the case state changes to **Ready**, the flow triggers and creates Adobe Sign tasks for all of the signers. For parallel signing, the tasks are assigned all at once. For serial signing, the tasks are created in the order defined.

Signers must complete their Adobe Sign tasks through a self-service portal such as the Employee Center. The Adobe Sign task is displayed as a URL in the to-dos page in the Employee Center.

On clicking the URL, the signer is directed to the Adobe Sign system to sign the document. After completing the task, the signer is redirected to the to-dos page in the Employee Center. The status of the Adobe Sign task is not updated immediately because the callback is asynchronous.

Note:

- The Adobe Sign tasks are created using the HR task template named the Adobe Sign task template.
- Auto-close integration type tasks are created using the HR task template.
- Users with the sn_hr_core.admin role can track the flow execution with the **Show Flow** related link. If a case is canceled from platform, you must manually cancel the associated flow. Otherwise, the flow remains in waiting. To cancel the flow, click the **Show Flow** related link to open the flow designer in a new window, and then click **Cancel Flow**.

Case and task status change

Action	Result
Document signed by all	• Case and tasks closed completed • Signed document(s) attached to case and tasks
Document declined	• Case and declined task closed incomplete • Pending tasks canceled • No attachments to case
Document voided or flow errored	• Case closed incomplete and tasks canceled • No attachments to case

Work an HR case

After initial creation of an HR case, the next steps are to change the state, provide additional information, and ensure that any outstanding tasks are completed.

Before you begin

Role required: sn_hr_core.case_writer

HR case creation and completion require different information depending on the Center of Excellence (COE) and HR service selected. The HR service an employee is requesting determines the type of HR case.

Procedure

After employee verification, click **Create Case**.
The following fields appear:

Create case form

Field	Description
Number	An HR case number is assigned and is a unique identifier, cannot be changed, and has an HRC prefix.
Parent	Populates the parent case when the displayed case is a child. For example, a **Request onboarding** case has multiple child cases and tasks under it.
Skills	The required skills of the person assigned to this category of HR case. Skills can auto-populate based on the HR case template associated with the HR service.
State	The state of the case. The state can auto-populate based on the HR case or task template associated with the HR service. • Draft: The default state for a case when it is first opened. **Note:** Can only be changed to Ready, Closed Complete, Closed Incomplete, Cancelled, or Suspended. • Ready: The case is ready to be worked on. • Awaiting Approval: Requires approval before it can move to the next state. **Note:** Can only be changed to Ready, Closed Complete, Closed Incomplete, Cancelled, or Suspended. • Work in Progress: The case is assigned and being worked on. • Closed Complete • Closed Incomplete • Cancelled

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	• Awaiting Acceptance: The **Opened for** person must accept the HR case before it can proceed. For example, a **Request for Onboarding** case was opened for a hiring manager. The hiring manager must accept the case before it can move to the next state. • Suspended: Use to temporarily prevent violation of a service level agreement (SLA). Refer to Suspend and resume an HR case. **Note:** The **State** cannot be edited in List view.
Priority	The precedence of the case, based on the **HR service**. The priority automatically overrides the template and changes to **2 - High** for users flagged as VIP. Configured in HR Properties (sys_property).
Source	From where the case originated. Sources are: • Not selected • Self Service • Phone • Chat / Connect / Live Feed • In Person • Email • Other • Virtual Agent **Note:** Cases created through email or self-service are automatically moved to **Ready** state and assigned to a group or user.
Opened by	The user who created the case.
Assignment group	The group the record is assigned to. If the group is not set automatically, assign an HR group to provide a selection of HR users in the **Assigned to** field. Assignment groups are restricted to those groups with a type of human_resources. To change the **Assignment group**, the **Assigned to** agent must be a member of the new group and the **State** must be **Ready**. **Note:** To automatically assign a group to an HR case, see Assignment and matching rules in HR and Configure an HR case template.
Assigned to	The user assigned to work on this case. When a group is automatically assigned, a user from the group is automatically

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	assigned when the case is created. If the user is not auto-assigned, click the **Lookup using list** icon to select a user who is a member of the selected assignment group. To change the **Assigned to** HR agent, the agent must be a member of the **Assignment group** and the **State** must be **Ready**. If **Assigned to** is left blank, some features are not available from the Employee Center ticket page. For example, the **Ask a Question** link to chat directly about an HR case cannot assign an agent. Comments or work notes do not appear on a case until an agent is assigned.
Collaborators	Add collaborators or other HR agents to the case. Only HR agents can be added as collaborators. This action permits the original agent to still track the case. Or, an HR agent can add another HR agent as a collaborator to request help. Adding a collaborator populates the case on the collaborations list. Other factors related to adding collaborators: • Collaborators can remove themselves from the case. To remove yourself, highlight your name in the **Collaborators** list and click the **X**. • Collaborators are not required to be part of the assignment group. • Assigned to person can add or remove collaborators. • Collaborators cannot add or remove collaborators. • Notifications are sent to collaborators when added to the HR case. Adding collaborators can alleviate the amount of emails requesting help on an HR case by consolidating communication. Collaborators and the COE for the HR case can conflict. The basic rules are: • For all HR cases, collaborators override any security on a COE. For more information, see Create COE security. • Employee Relations (ER) cases can override collaborators when restrictions apply. For more information, see Configure an employee relations case restriction. **Note:** Agents must have the ER case writer [sn_hr_er.case_writer] role in order to be a collaborator.
Case support team	Employees assigned to answer questions about onboarding a new hire. Only appears for Lifecycle Events cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	You can add users or define a group that can support the **Subject person** for a Lifecycle Event case. The **Subject person** can communicate with the case support team while the case progresses.
Watch list	The list of users who receive notifications regarding this case. Anyone in the company can be added to the **Watch list**. For example, an employee requests a travel visa. Add the manager of the employee to ensure that updates are communicated. Click the **Edit Watch List** icon to add users. Click the **Add me** icon to include yourself.
Min ETTR	Indicates the minimum estimated resolution time in days for case completion. Estimate is based on the historical data taken for resolving similar HR cases. **Note:** Available after activating Predictive Intelligence ETTR capability
Max ETTR	Indicates the maximum estimated resolution time in days for case completion. Estimate is based on the historical data time taken for resolving similar HR cases. **Note:** Available after activating Predictive Intelligence ETTR capability
Short description	Populates from the HR service. After the case is created, you can modify the description.
Description	You can add a longer, detailed description after the HR case is created. Use the Rich Text Format (RTF) tools to format your text. Rich text formatting also appears for a case or task description on the Employee Center.

The following embedded lists appear:

Special Handling Notes List

Shows notes of messages specific to an HR case or conditions. For more information, see Add special handling notes for an HR Service Delivery case.

Knowledge results

Shows knowledge results based on the short description of the HR case. There are two tabs. One showing articles that you have access to, and one showing articles that the **Opened for** employee can access. Click **Attach** to make the article visible to the person that the HR case was opened for in the **Additional comments** section. See Attach knowledge articles to an HR case for more information.

Tasks

Appears when there are tasks associated with the case. Click a task to view or update it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
When you close the parent case, all child tasks are assigned the Closed Incomplete state.

Fulfillment Instructions

View information on how to complete the case. This information is defined in the HR Service configuration.

A checklist outlining the exact steps to complete appears when configured by the HR service. See Configure an HR service.

Comments and Work Notes

You can add comments or work notes to the case to provide details about the case. **Work notes** are not visible to the **Subject person**.

Note:
Translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.

If your company uses templated snippets and depending on the conditions defined, the **Responses** button appears in the form header:

a. Click the **Responses** button.

b. Select a response template.

c. Click **Copy to clipboard**.

Note:
This button copies all text in the message field. To copy partial text, highlight the text, and use the copy command. You can also edit the text after pasting it.

d. You can paste the text into the **Work Notes**, **Comments**, or any text field.

Parental Leave Details

Appears for Parental Leave of Absence Request cases. Provides details about the leave request.

Parental Leave Details

Field	Description
Leave subtype	Identifies the role of the Subject person for parental leave of absence or the type of parental leave. Select: • Birthing parent • Partner of birthing parent • Adoption • Surrogacy • Foster placement
Leave status	Indicates the status of the parental leave. Select: • Requested • Approved

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	• On Leave • Rejected • Completed • Cancelled
Child arrival date	The date the child is expected to arrive. **Note:** Use this field for Adoption or Foster placement.
First day of leave	The date the employee is requesting to start parental leave.
Estimated last day of leave	The estimated date the employee is expected to end parental leave.
Due date	The birth date of the child. **Note:** Use this field when Birthing parent, Partner of birthing parent, or Surrogacy is selected from **Leave subtype**.

The following sections appear dependent on the type of task or case:

Reimbursement

Appears when a **Tuition Reimbursement Request** case is selected. Complete the fields related to the school or program name, justification, refund amount, and course dates.

Activities

Shows a list of all changes or updates to the HR case with the most current at the top.

Related Links

The following appear dependent on the type of case and roles associated with the user:

- Add Task: Click to add a task to the case. Refer to add a task.
- Show SLA Timeline: The SLA in timeline format that shows elapsed time.
- Show Workflow: The workflow that is associated with the case.
- Escalate Case: Click to escalate the case and provide a reason.
- Activity Set Execution: Populates for Lifecycle event cases. Click to view the Activity Set Contexts and each activity set.
- Repair SLAs: Click to repair any service level agreements associated with the case.
- Assign to Me: Appears when **Assignment group** is empty or if you belong to the Assignment group. Click to assign the HR case to you. A button also appears in the header form.

The related lists appear dependent on type of case or task:

Emergency Contacts

List of emergency contacts for the **Subject person**

Cases for Subject Person

List of cases associated with the **Subject person**.

Cases Opened for User

List of cases associated with the **Opened for** person.

Attached Knowledge

List of knowledge articles attached to the HR service type.

Approvers

Lists employees that can approve changed information or the case, state of approval, comments, and associated dates.

Note:
To reject an approval, users should have the HR case writer [sn_hr_core_case.writer] role.

Requested Item

List items like laptops, software, or furniture requested for the Subject person.

Requested Items

List of items requested for the case. Requested items are created from tasks, but do not appear under HR Tasks.

Similar Cases

List of related cases by type of request.

KB Articles Read by User

List of Knowledge Base articles read by the **Subject person**.

Direct Deposit for Subject Person

List of direct deposit information for the

Health Benefits for Subject Person

List of health benefits the subject person is enrolled. This tab only appears for health benefit cases.

Retirement Benefits for Subject Person

List of retirement benefits the subject person is enrolled. This tab only appears for retirement benefit cases.

HR Cases

All HR cases for the **Subject person**.

Child Cases

Lists child cases associated with this case. Click **New** to create a child case under the case you are working on.

Note:
When you close the parent case, all child cases are cancelled.

Beneficiaries

Only appears for Total Rewards cases with an HR service type of Beneficiaries Add/ Modify or Inquiry.

List of beneficiaries for **Opened for** and **Subject person**.

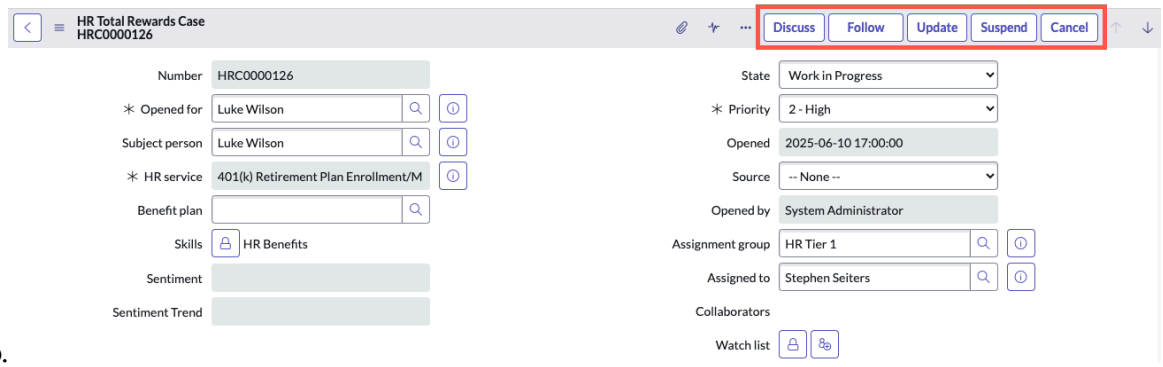
View HR case information

There are multiple ways to find a specific HR case.

Before you begin

Role required: sn_hr_core.case_reader

Procedure



1. Navigate to **All** > **HR Case Management** > **All HR Cases**.
   - **Assigned to me:** All cases assigned to the logged-in user.
   - **Open:** All open cases.
   - **Open - Unassigned:** Open cases that do not have agent assignments.
   - **Closed:** All closed cases.
   - **All:** All cases regardless of state or HR Service.
   - **Case SLAs:** All cases with SLAs.

   You can also view cases by HR service.
   - **Employee Relations Cases**: All cases related to disciplinary issues.
   - **HRIT Cases**: All cases related to HR accounts, password reset, HR Portal support, and HR reports.
   - **Payroll Cases**: All cases related to direct deposit, payroll discrepancy, and request corporate credit card.
   - **Total Rewards Cases**: All cases related to medical, dental, retirement, beneficiaries, leave of absence, pharmacy, relocation, vision, and tuition reimbursement.
   - **Workforce Administration Cases**: All cases related to employment verification letters and general inquiries.
   - **Lifecycle Events Cases**: Cases related to Onboarding or Account Notification.
2. Select the case to view.
3. Select a button.
   Depending on the case, different options are visible at the top.
   - **Discuss**: Opens a sidebar discussion where agents can discuss the case with users who have access to the record.
   - **Follow**: Track activity on the case or follow a record in Connect Chat to track activity as it happens. For more information, see Follow a record in Connect.
   - **Update**: Save and update the record. Takes you back to the list form.
   - **Suspend**: Suspends an HR case that does not have a state of closed or canceled. You can suspend the timing specified in the service level agreement (SLA) to perform additional research.
   - **Cancel**: Cancels the case.
   - **Responses**: Appears for inquiry cases and enables agents to copy a response template.
   - **Associate Interaction**: Select to associate an interaction to the case. Interactions are requests for assistance through a given channel, for example, a call or a chat. For more information, see Interaction Management.
   - Ready for Work: Select to change the state of the case to Ready and assign an agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Close Complete**: Close the case and change the state to Complete.
- **Close Incomplete**: Close the case and change the state to Incomplete.
- **Preview Document**: Click to preview a document for accuracy before generating and sending it.
- **Sign Document**: For documents that require an HR signature, click to preview, sign, and save the document.

Buttons appear at the

top.

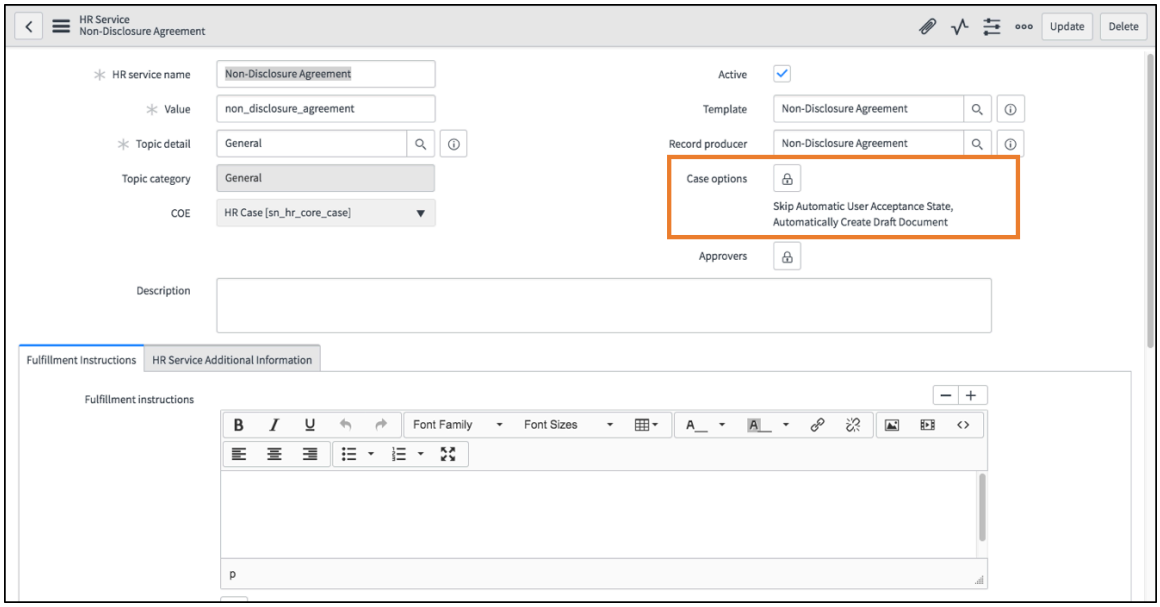
HR document generation

There are multiple ways to generate documents in HR Service Delivery.

- Automatically
- Multiple signatures are collected.
- Preview, Sign, or Save

Automatically

The document is made available for the subject person to sign. Only after the signature is added, the document will be generated automatically. Following are some examples:



- A document such as Tuition Reimbursement Request must be sent to the employee for signature. The Request Tuition Reimbursement service has a work flow that triggers a task for the subject person (employee) of the case.

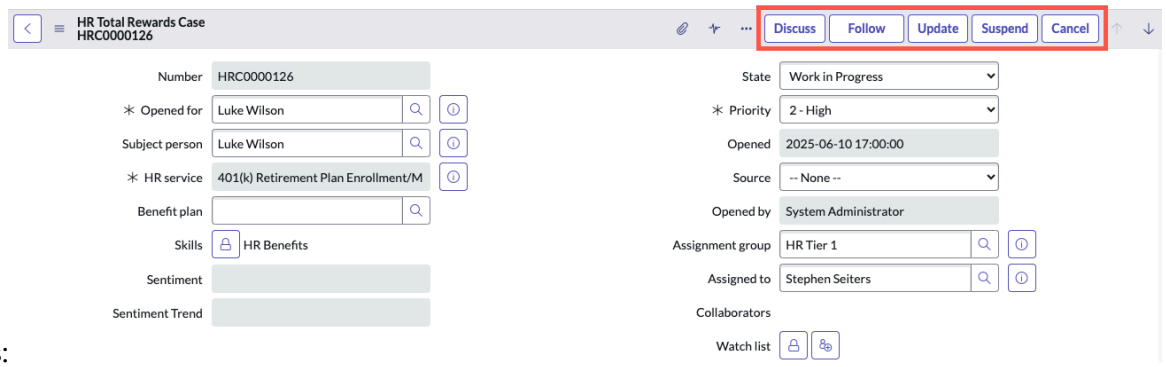
  An administrator enables the**Automatically Create Draft Document** case option on the HR service and sets up the HR service. When a case is created with that HR service and its state is changed to Work in Progress or Ready, a task gets automatically generated for the employee with the document available for signing.

- A document such as Employee Verification Letter must be sent to the employee that does not require any signature.

  An administrator selects the template on the HR service. An HR case is created with that HR service. The HR agent previews the document using the **Preview Document** option, generates the document, and sends an email to the employee using the **Send email** option on the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Multiple signatures are collected



Documents like offer letters can require multiple signatures. When all signatures are collected, the document is automatically generated.

Note:
For more information on setting this feature up, please see Advanced form configuration and Advanced Forms Management in HR Service Delivery.

Preview, Sign, or Save

Some documents require an HR agent to review, sign, or save it prior to sending it to a subject person for an HR case. An example is when a subject person requests an employment verification letter. This document requires an HR agent to review it for accuracy, sign it, and send it to the requested email address.

- Open a case requiring a document to be sent to the subject person.
- Ensure that the state is **Work in Progress**.
- The Form Header

shows:

- Click **Preview Document** to view the document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Click **Sign Document** for documents that require an HR signature.

Note:
By default, the document is available for the subject person to view once you preview it. Change this behavior by changing the **State** field on the HR task template. You can access the task template from the HR Case form by selecting the **HR service** > **Service Activities** > **Child task template**.

Change values

When there are errors in the document:

- Check the table the incorrect information is pulled from.
- Check the HR case to ensure correct case information.
- Check the document template for errors within the body of the document, incorrect field mapping, or variable information.

Edit a generated document

Support rendering values of variables, scripts, and blocks in edit mode in Preview Document. View the content of variables, scripts, or blocks rather than only viewing the variable or block names.

Before you begin
Role required: sn_hr_core.case_writer

Note:
This feature is available only when the document is generated from a template in the Document Template plugin.

Procedure

1. Navigate to **All** > **HR Case Management** > **All HR Cases** > **Assigned to me**.
2. Open an HR case that is assigned to you.
3. Click **Preview Document**.
4. In the Preview Document window:
   a. Click **Edit Document**. Except for signature tokens, all other variables, scripts and blocks are rendered with their values.
   b. Add text, any valid tokens, or signature tokens.

      Note:
      Invalid tokens will be removed while saving.

   c. Click **Save changes**.
   The document is saved and sent as an attachment in document tasks that are created for participants.

Secure HR case attachments

Add an extra layer of security on attachments that are linked to a case. Grant access to attachments with sensitive or private data to groups, users, user criteria or roles.

Before you begin
Role required: sn_hr_core.basic or sn_hr_core.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **All HR Cases**.
2. Open an HR case that is assigned to you.
3. Select a document from the **Documents** related list.
4. In Access Settings, enable the **Sharing Permissions** option.
   The following related lists appear. Perform the required actions:

Sharing permissions options

Related list	Steps
Role Permissions	To grant access to a document based on a role: **a.** Click **New**. The Role Permissions modal opens. **b.** In the **Permission** list, select **Reader** or **Writer**. **c.** In the **User Role** field, select a value. **d.** Click **Submit**.
User Criteria Permissions	To grant access to a document based on user criteria: **a.** Click **New**. The User Criteria Permissions modal opens. **b.** In the **Permission** list, select **Reader** or **Writer**. **c.** In the **User Criteria** field, select a value. **d.** Click **Submit**.
User Permissions	To grant access to a document based on user permissions: **a.** Click **More**. **b.** Select **User Permissions**. **c.** Click **New**. The User Permissions modal opens. **d.** In the **Permission** list, select **Reader** or **Writer**. **e.** In the **User** field, select a value. **f.** Click **Submit**.
Group Permissions	To grant access to a document based on group permissions: **a.** Click **More**. **b.** Select **Group Permissions**. **c.** Click **New**. The Group Permissions modal opens. **d.** In the **Permission** list, select **Reader** or **Writer**. **e.** In the **User Group** field, select a value. **f.** Click **Submit**.

Sending an email from a case

Send any communication related to HR Workforce Administration cases using the Send email feature. Minimise typing errors by auto-populating the email address of the subject person (of the case) in the email.

Before you begin

Role required: sn_hr_core.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Create a case under the HR Administration Workforce category.
3. For the **Verification of Employment service** HR service, fill in the **Document template category**, **Document template**, and **Subject person** fields.
4. For the **Employee Verification Letter** HR service, fill in the **Document type**, **PDF template**, and **Subject person** fields.
5. Click **Preview document**.
6. In the window, click **Generate**.
   A document is generated and added as an attachment to the case.
7. Click **Send Email**.
   In the Send email window, the **Recipient email** field is auto-populated with the email ID of the subject person. Click **OK**.
   An email along with the generated document is sent to the intended recipient.

Checklists in HR cases

A feature of HR services is the ability to automatically add a checklist to an HR case. A checklist can serve as a reminder to the HR agent to ensure that the procedure is followed.

1. An employee submits a direct deposit request through the HR Service Portal. An HR case is created with the request.
2. A checklist appears on the HR case. Checklists can be added directly into the case or can be automatically added to a case from the associated HR service. For example, the checklist items are:
   - Verify that the employee has attached the correct direct deposit form.
   - Validate the direct deposit case information.
   - Send information to the payroll department, put case in progress.
   - Approve and close case when payroll completes setup.

Refer to Configure an HR service on adding a checklist automatically to an HR case.

Adding an HR task to an HR case

You can add, view, or work on HR tasks assigned to HR cases.

Before you begin

Role required: sn_hr_core.basic or sn_hr_core.case_writer

About this task

You can view HR tasks from the parent HR case or by going to **HR Case Management** > **HR Tasks**.

Procedure

1. Open an HR case.
2. Scroll to **Related Links** and click **Add Task**.
   - HR Task: Select to add an HR task.
   - Facilities Request: Select to create a facilities request such as desk or office space.
3. To create an HR Task, complete:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR task fields

Field	Description
Number	The auto-assigned task ID. **Note:** You cannot change this value.
Parent	The case number you are creating the task for.
Location	Select the location of the employee you are creating the task for. Location determines the HR agent assigned to the task. **Note:** For onboarding cases that task selecting an office or desk, the location determines the building map that shows.
Template	Click and select the HR Task template for this task. The HR Task template can auto-populate fields like the HR task type, short description, and the group or person the task is assigned to.
Stage	The stage (bundle) of a lifecycle event case. Use this field to define what activity set in a lifecycle event case you want to add an ad hoc task to. For more information, see Ad hoc cases and tasks for lifecycle event cases.
Due date	Select the date the task is to be completed.
Set reminder	Check to send an email notification based on the **Due date calculation** entries. **Note:** Reminders can also be set up on the **HR Task Template** to automatically populate.
Reminder template	Select the email template used for reminder notifications. Email templates are set up from **HR Administration** > **Email Content**. Refer to Add or modify email content for notifications.
When to send (days)	Enter the number of days before the task due date to send the reminder email.
Interval (days)	Enter the number of days the reminder email should be sent on an interval.
HR task type	When assigning a task to an employee, you can request how the employee acknowledges completion of the task. The tasks appear on the HR Service Portal for the employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
	Note: The short description comes from the template, but you can add or modify it. It shows on the HR Service Portal.	
	HR Service	An HR service fulfills the HR task. In the **HR Service** field, select an HR service. **Note:** **Bulk Parent Case** does not appear as a selection because it is only used when creating a parent case for child bulk cases. Refer to Create a bulk case request.
	Submit Catalog Item	A catalog item fulfills the HR task. In the **Catalog Item** field, select a catalog item.
	Submit Order Guide	An order guide fulfills the HR task. In the **Order Guide** field, select an order guide.
	Collect Employee Input	Collects information from employees. In the **Employee form** field, select the employee form that the user fills out or verifies. **Note:** Employee forms are questionnaires built using the survey designer to collect information from employees. See Collect employee input for more information.
	Checklist	In the **Checklist Items** field, provide the checklist items.
	E-signature	User electronically signs a document. In the **E-signature template** field, select the e-signature template to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: ○ E-signature is a scoped application that enables you to sign managed documents, knowledge articles, or HR document templates. You can type or draw your signature, credentials, or acknowledgment. See HR e-signature for more information. ○ If HR document template has a document type of e-signature template, select the HR document template that the signatory signs on the HR case form. See Select an HR document template for an e-signature task for more information.
	Credential	Indicates that you want the user to acknowledge reading a document by logging in with their login credentials. The **Acknowledgment text** and **Acknowledgement document** fields appear. Using these fields shows a check box and text above the login credentials. In the Acknowledgement document field, select a document that the user is asked to read. **Note:** This option is only available for existing customers that have not yet migrated to e-signature. See Migrate existing HR task templates and open HR tasks to e-signature for more information.
	E-Signature	Indicates that you want the user to provide an e-signature to acknowledge or validate a document. The **Acknowledgment text** and **Acknowledgement document** fields appear. Using these fields shows a check box and text above the e-signature. **Note:** This option is only available for existing customers that have not yet migrated to e-signature. See Migrate existing HR task templates and open HR tasks to e-signature for more information.
	Mark When Complete	Notify the user a **Completed** button appears on the HR Service Portal. Use the **Short description** to provide details about this task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: **Mark When Complete** changes the state of the task to **Closed Complete**.
	Sign Document	Requests the user to sign a document. An example is sending an education agreement to be signed for tuition reimbursement. The **Acknowledgment text** field appears. Using this field shows a check box and text above the signature. **Note:** This option is only available for existing customers that have not yet migrated to e-signature. See Migrate existing HR task templates and open HR tasks to e-signature for more information. After the user signs the document, the document is generated with the signature and attached to the task. The task is closed complete and the document is attached to the case.
	Schedule a meeting	Enables you to create a meeting invite for an employee while you are working on an HR case. For example, you can schedule a meeting with a new hire as part of the onboarding process. ○ You can view the available slots of an employee and schedule a meeting. The employee will receive a meeting invite on Microsoft Outlook. ○ You can also send the meeting invite to external attendees. **Note:** For the meeting invite and scheduling capability, you must install the ServiceNow Microsoft Exchange Online Spoke.
	Take Survey	In the **Survey** field, select a survey that the user is assigned to take.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: For lifecycle event cases, this feature also works if the subject person or anyone that has access to the original lifecycle event case can answer the survey question. For more information, see Triggering an activity from upstream activities.
	Upload Documents	Requests the person assigned to the task to upload documents. Examples are receipts, course registration, or transcripts for tuition reimbursement. Use the **Short description** field to provide instructions. **Note:** The task must be in **Ready** or **Work in Progress**.
	URL	The **URL** field appears. Enter a URL link that the user acknowledges when accessed.
	View Video	The **URL** field appears. Requests the person assigned to the task to view a video.
Activity	Shows when an employee responds or completes a task and shows task activities by employee and assigned HR agent.	
Optional	Check to make the task optional. The **Skip** button appears for a task in the **Open Case** page. The **Subject person** can skip the task or do nothing and the HR agent can close complete the case.	
State	The work status of the case. The states are: ○ Draft ○ Ready ○ Work in Progress ○ Closed Complete ○ Closed Incomplete ○ Cancelled ○ Skipped ○ **Note:** Change the state to **Ready** or **Work in Progress** for the employee to see the task that you created.	
Assignment group	The HR group the case is assigned to. If the group is not set automatically, assign an HR group to provide a selection of HR users in the **Assigned to** field. Assignment groups are restricted to those groups with a type of human_resources.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: To change the **Assignment group**, the **Assigned to** agent must be a member of the new group. This field also determines when Virtual Agent or Connect Support is used for the Ask a question feature. ○ Agent Workspace: Virtual Agent ○ Users and groups: Connect Support
Assigned to	The user assigned to work on this case. If the user is not auto-assigned, click the lookup icon to select a user who is a member of the selected assignment group. **Note:** To change the **Assigned to** HR agent, the agent must be a member of the **Assignment group**. You can also use this field to assign a task to the **Subject person** of the case. For example, if you want the **Subject person** to sign and return a document or make a task optional.
Task support team	The point of contact within your company for questions. **Note:** To use, activate the Connect Service Portal Widgets (com.glide.connect.sp_widgets) plugin.
Users and groups	Select when you want specific users or groups assigned to the HR case or task to be the primary support for this HR task. You can select from fields on the HR case or task such as the Opened by, Opened for, and others or you can select from different groups. You can further filter by selecting specific skills.
Connect	Selecting Connect indicates your company is using ServiceNow Connect messaging. After you select Queue, the Queue field appears below it. Select a chat queue you want to support the task you are creating. You can further filter by selecting specific skills. In previous releases, this field was labelled Queue. **Note:** The Connect support (com.glide.connect.support) plugin was deprecated. For more information, see Activate Connect Support.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
	Agent Workspace	Supports Agent Workspace for chat. Selecting Agent Workspace indicates your company uses Virtual Agent conversations for chat. After you select Agent Workspace, the AWA Queue field appears below it. Select the Advanced Work Assignment chat queue you want to support the task you are creating. You can further filter by selecting specific skills
Parent case users	Appears when **Users and groups** are selected from **Task support team**. Select fields like Opened by, Opened for, and others from the parent HR case that you want to support this HR task.	
Groups	Appears when **Users and groups** are selected from **Task support team**. Select a group associated to the HR case or task to be the support for this HR task.	
Queue	Appears when **Queue** is selected from **Task support team**. Select the chat queue you want this HR task to be routed to for questions or help. **Note:** What you select here must match the value in the **HR Queue** field on the Chat Setup form under Collaboration. If these values don't match, an error occurs.	
Skills	The required skills of the person assigned to this category of HR case.	
Watch list	The list of users who receive notifications regarding this case. Click the lock icon to add users. Click the **Add me** icon to include yourself.	
Short description	Short descriptions populate from the HR task template selected and can be overwritten. Enter information that prompts the user about the task request. The short description appears on the HR Service Portal to the employee.	
Description	A longer, detailed description of the case. Use the Rich Text Format (RTF) tools to format your text. Rich text formatting also appears for a case or task description on the Employee Service Center or service portal.	
Additional comments (Customer visible)	Enter comments, updates, or information about the task that is visible to the **Subject person** on the case. **Note:** Translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Work notes	Enter notes about the case to correspond with other HR agents. These notes are not visible to the **Subject person**. **Note:** Translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.

4. You can:
   a. Click **Save** from the **Content menu** to save the task and remain on the **Task** form.
   b. Click **Submit** to save the task and return to the **HR Case** form.
   c. Click **Ready for Work** to save the task and change the state to **Ready** and remain on the **Task** form.
5. Perform any of the following actions.
   When all tasks are closed for an HR case, an email notification is sent to the HR agent who is assigned to the case.

   Note:
   When you close the parent case, all child tasks are assigned the Closed Incomplete state.

6. Click the attachment icon at the top of the form, to add a document attachment
   Attachments to tasks are available on the parent case.
7. Click **Update**.

Create Office Space Request Task

As part of the onboarding process, you can find and reserve an office space for a new hire.

Before you begin

Role required: sn_hr_core.basic or sn_hr_core.case_writer

Procedure

1. Select an HR Case.
2. Select **Add Task** under the Related Links section.
3. Select **HR Task** from the Task Type window.
4. Complete the form.
   These instructions describe the required fields for requesting an office space. For a complete listing of all HR task fields, refer to Adding an HR task to an HR case.
5. Select **Submit** or **Ready for Work**.

View HR task information

There are multiple ways to find a specific HR task.

Before you begin

Role required: sn_hr_core.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Tasks**.
   - **Assigned to me:** All tasks assigned to the current user.
   - **Open:** All open tasks.
   - **Open - Unassigned:** All open tasks that have not been assigned.
   - **Closed:** All closed tasks.
   - **All:** All tasks regardless of state or assignment.
2. Select the task to view.

Add adhoc approvers to a case

Provide your agents with the flexibility to add adhoc approvers to a case that is part of an HR service.

Before you begin

For example, in certain scenarios where in an employee's requests falls outside the bounds of the standard process or the agent needs to take an additional approval, an HR agent might need to request an adhoc approval before proceeding with its fulfillment.

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **HR Case Management** > **Assigned to me**.
2. Open a case that is in Ready or Work in progress state.
3. In the **Related links** list, click **Add an approval**.

Note:

- This option appears only to the Assigned to user, when the case is in Ready or Work in progress state.
- Administrator must have configured the **Agent Can Add An Approval** option on the HR service to which the HR case is associated.

4. Fill in the required fields in the **Add an approval** window.

Add approvers

Field	Description
Approver users	Users who must approve the request.
Wait for	Conditions that you want to set for the approval flow. ○ **Anyone to approve**: If any one of the approvers approves the request, the approval flow will be complete. ○ **Everyone to approve**: Only if all the approvers approve the request, the approval flow will be complete. ○ **First response from anyone**: The first response of any one approver is taken into consideration. For example, if one of the approvers first rejects the request, the flow will be rejected; if one of the approvers first approves the request, the flow will be approved.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
On rejection	Conditions that you want to set when an approver rejects a request, for example, allow resubmission of approvals, or mark it as close incomplete.
Reason	Reason for initiating the approval flow.
Additional Comments	Any other information that you want to share with the approvers.

5. Click **Send for approval**.

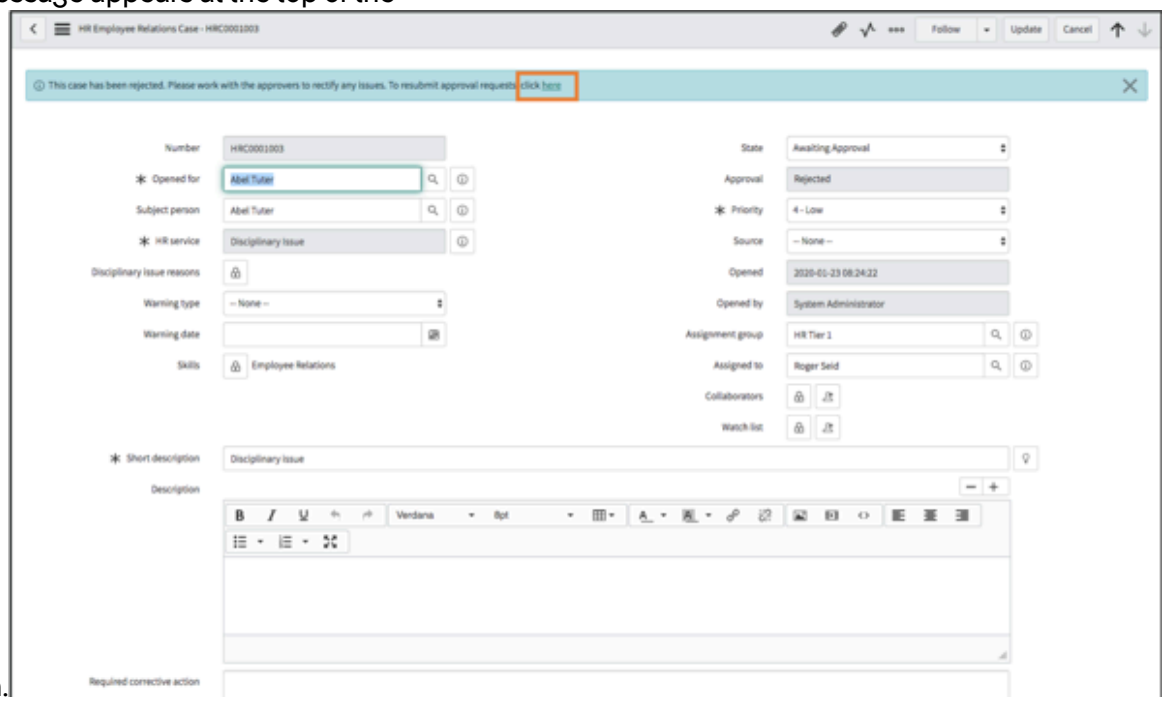
Resubmit an HR case for approval

HR cases that are rejected can be resubmitted for approval. Resubmitting a rejected case alleviates having to recreate a new case.

Before you begin

Role required: sn_hr_core.case_writer

After a new case is submitted, an email notification is sent to all approvers. Approvals for HR cases are assigned to individual users or to members of a specified group. Approvers can reject or approve from the HR Service Portal or HR Ticket Page.



When a service activity for an HR service has **Allow resubmit of approvals** for **On rejection**, the Assigned to person can resubmit an approval request after rejection. See Configure an approval.

You can view a list of approvers at the bottom of the HR case form under the **Approvers** tab.

HR cases: Approvals for HR cases use workflows. Do the following to resubmit a rejected HR case.

Procedure

1. Open the HR case that has a rejected approval.
   A message appears at the top of the form.

2. Select the **here** link.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The **Enter the reason for resubmitting approval requests** pop-up appears. You can enter work notes (not visible to employee) or comments (visible to employee). Work notes or comments are required.

3. Select **OK**.

Lifecycle Events cases:

Approvals for HR activities under a lifecycle event are configured differently than an HR case. There are more options for approvals. See For an approval.

Note:
Approvers that do not have the sn_hr_core.manager role cannot access the HR case after the state changes to **Closed Complete**.

Transfer an HR case

You can create and use methods to reclassify or transfer an opened HR case from one HR service to another. Oftentimes an HR case opens as a General Benefits Inquiry. After investigating, you can transfer it to the applicable HR service.

The base system includes two scenarios that agents can use when transferring HR cases from one service to another: Reclassify and Standard.

Differences between transfer scenarios

Functionality	Reclassify	Standard
HR case number	Does not change The system closes the original case, creates a new one with the same number, and changes the number in the original case. This ensures that the subject person continues to see the same case number.	Changes The system closes the original case and creates a new case. The subject person sees a different case number.
Links	Redirect to the new case	Do not redirect from the original case to the new case
Notification emails	Not sent	Sent to the subject person with closed and transferred case information

The following apply to both Reclassify and Standard transfer scenarios:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Fields from the current case are copied and moved to the new case.

> **Note:**
> The sn_hr_core.transfer_case.ignored_fields sys property can be set with fields that are not copied in an HR case transfer.

- Work notes copy from original case to new case.
- Attachments are copied and moved from the current case to the new case.
- Previous interaction records from the current case are copied and moved to the new case.

The sn_hr_core.reclassify_default_transfer sys property determines the default method to use after upgrade. For more information, see HR properties.

You can configure additional transfer case scenarios by following these steps: Configure HR transfer case.

Configure HR transfer case

The base system provides examples of HR transfer case configuration types. You can also create your own.

Before you begin

Role required: sn_hr_core.admin

About this task

If you are creating a transfer case configuration, you must also create a script include to implement the sn_hr_core HR case transfer extension point. For more information, see Registering custom script includes against the scripted extension points.

Refer to the existing script includes as examples:

- hr_TransferCase
- ReclassifyCaseTransfer
- StandardCaseTransfer

The hr_TransferCase script include provides a list of fields ignored in the transfer and acts as a utility for the other two script includes.

> **Note:**
> Refer to Script includes.

Procedure

1. Navigate to **All** > **HR Administration** > **Transfer Case Configuration**.
2. Select **New**.
3. Fill in the form.

HR Transfer Case Configuration

Field	Description
Name	The name of the HR case transfer type. The defaults are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Reclassify ○ Standard
Display text	The HR case transfer type that appears on the Transfer Case menu from the HR case form. The defaults are: ○ Transfer with existing case number ○ Transfer to a new case number
HR criteria	Defines what HR agents can view and use this transfer type when performing an HR case transfer from the HR case form. See HR criteria. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Is default	Indicates that the transfer type is the default and appears first in the Transfer Case menu from the HR case form. **Note:** To mark a transfer type as the default, click the **Set as Default** button at the bottom.
Active	Indicates if the HR case transfer type is active and available for use. Inactive indicates that the transfer type does not appear in the Transfer Case menu from the HR case form.

4. Select **Submit** or **Update**.

Move an HR case from one HR service to another

You can reclassify an HR case that you originally create under one HR service but want to move it under a different HR service.

Before you begin
Role required: sn_hr_core.case_writer

About this task
You can also retain the details of the original case. For example, you can take a General Inquiry case and reclassify it as a Medical Benefits Inquiry case.

Procedure

1. Open an existing HR case.
2. From **Additional actions**, select **Transfer Case**.
3. From **Transfer type**:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Transfer with existing case number**: The HR case number does not change, links redirect with new case, and work notes transfer to new case.
- **Transfer to a new case number**: The HR case number changes, links do not redirect, and work notes do not transfer. Both HR case numbers appear on the HR case for reference.

4. From **New HR Service**, select the HR service you want to assign to your original case.
5. Select **OK**.
   The current case and its child tasks close. When you transfer an HR case from one HR service to another, some field values do not transfer to the new case. The Opened for person receives a notification email with the closed case and transferred case information. Replies to the email appear in the Comments section of the HR case. If the subject person replies to the email associated with the closed case, the reply appears in the comments for both the closed and transferred cases.

   Note:
   If the sn_hr_core.restrict_guest_email system property is False (default), text from an email appears in the Work notes field when the employee is responding from a personal email account.

   See Email setup.

Escalate an HR case

If you are unable to resolve an issue, you can escalate an HR task. This action reassigns it to the manager of the HR group.

Before you begin
Role required: sn_hr_core.basic or sn_hr_core.case_writer

About this task
Escalate an HR case when you encounter any of the following conditions.

- Are unable to complete the task due to excessive workload.
- Do not have the necessary skills.
- Need help with some part of the HR case.

An escalated HR case is reassigned based on escalation rules. See Add or modify escalation rules.

Procedure

1. Open an HR case to be escalated.
2. Under **Related Links**, click **Escalate case**.
3. Enter a reason for the escalation in the dialog window that opens.
4. Click **OK**.
   The case is reassigned to the manager of the escalation group as a high priority case.

Suspend and resume an HR case

If you are unable to close the HR case within the duration specified in the service level agreement (SLA), you can suspend the case.

Before you begin
Role required: sn_hr_core.basic or sn_hr_core.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

For example, to contact a vendor, such as the insurance administrator or payroll processing company, to obtain the required information to close the case. After beginning work on the case, you can suspend it until the information is received. This way the HR case does not show that the SLA is breached. When the information is received, you enter it into the case and resume SLA tracking.

Procedure

1. Open the HR case to suspend.
   Begin work on the case before suspending it.
2. From the **State** field, click and select **Suspended**.
   The **Suspend Reason** pop-up window opens.
3. Select one of the following suspension reasons and enter the information you are waiting for.
   - **User**: If you need more information from the employee before proceeding.
   - **Company**: If you are waiting for a reply from a vendor or other outside company.
   - **Group**: If you are waiting for a reply from an internal group.
   - **Other**: If you suspend the case for any other reason.

   Example
   For example, if you are waiting for the health insurance administrator to investigate an employee claim, select **Company** for the reason and enter `Results of investigation` or something similar.
4. In the **Work Note** field, enter information about why the case is suspended.

   Note:
   Translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.
5. Click **Suspend**.
   The SLA stops progressing and the suspension notes appear in the activity stream as work notes. You can continue to add work notes to a suspended case.
6. To resume a suspended HR case, open the case and click **Resume**.
   The SLA progress is resumed.

Add special handling notes for an HR Service Delivery case

Create special handling notes that appear for a specific HR case or set of conditions.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **Special Handling Notes** > **Special Handling Notes**.
2. Select **New** or an existing record.
3. Fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Special Handling Notes

Field	Description
Short description	Enter a short description that describes the special handling note.
Message	Enter a message that appears in the special handling notes. Rich text formatting is available.
Type	Select the type of special handling note: ○ Standard: Select to display a special handling note for a specific table and related record. For example, if you select HR case, you can select from list of HR cases. A special handling note appears for a specific HR case already created. ○ Conditional: Select to use filter conditions. Use filter conditions to specify when a special handling note appears.
Display as a pop-up alert	Leave this field blank. **Note:** Currently, a pop-up window is only for HR Service Delivery Agent Workspace.
Priority	Assign a priority to the special handling note. The choices are: ○ 1 - Critical (red) ○ 2 - High (orange) ○ 3 - Moderate (light green) ○ 4 - Low (light blue) The priority and color appear in the special handling note.
Status	The status of the special handling note. ○ Active: The special handling note is active. ▪ Active notes appear in the pop-up window. ▪ Active notes remain until dismissed or set to Inactive or Expired. ○ Inactive: The special handling note is no longer active and does not appear in a pop-up window. Inactive special handling notes still appear when you navigate to **Special Handling Notes** > **Special Handling Notes**. ○ Expired: The special handling note is no longer active. The expiration date has passed or manually expired.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Effective immediately	Check to activate the special handling note immediately. If you leave this field unchecked, you can specify a date and time the special handling note appears.
Effective on	Appears when you leave the Effective immediately field unchecked. Select a date and time when the special handling note appears.
Expires on	If you want to automatically inactivate a special handling note, select a date and time.
Table name	Appears when you select Conditional from the Type field. Select the HR table the special handling note appears for when a specific HR case appears or when you satisfy filter conditions. **Note:** Special handling notes do not support child tables. For example, if you select the HR case [sn_hr_core_case], the special handling note only appears for cases specific to the table. To create a special handling note for child tables, you must create a special handling note for each table.
Related record	Appears when you select Standard from the **Type** field. Select and a pop-up menu appears. Select the table name and a corresponding case from the Document field. For example, select HR case from the Table name field and the HR case you want the special handling note to appear.
Conditions	Appears when you select Conditional from the **Type** field. Select conditions when met, show the special handling note. For example, select: ○ HR profile ○ is ○ Aileen Mottern This condition shows the special handling note for a General Inquiry case for Aileen Mottern.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

4. Select **Submit** or **Update**.

HR cases for VIPs

Your organization can assign VIP status to users, such as the CEO and vice-presidents, to ensure that the resolution of their tasks is given high priority.

If your organization uses the VIP feature, set up the following to ensure that VIP HR cases are handled appropriately.

- Navigate to **Skills** > **Groups**.
- Add members or a group to **HR VIP Watchlist**. When an HR case is submitted, members of this group receive notification as the case progresses.
- Review the HR service level agreement (SLA) for handling VIP cases. The duration is two hours. When the duration is reached, the SLA is breached and the members of the watchlist are notified.
- Navigate to **HR Administration** > **Properties**.
- Enter a case priority number in the **Default case priority for VIP requestor** field.
- For VIP employees, check the **VIP** box on their User [sys_user] record.

Note:
The VIP check box does not show by default. Customize the User record form in the Form Designer to show the VIP check box.

You can identify VIP HR cases in the following ways:

- **HR Cases** list: A VIP icon appears in the **Opened for** and/or **Subject person** fields. If the **Opened for** and/or **Subject person** fields do not appear, personalize the list.
- **HR Case** form: The employee name in the **Opened for** and/or **Subject person** fields is red.
- HR catalog items: When the form is submitted, a message appears at the top identifying the submitter as a VIP.

Creating bulk cases

You can create the same type of HR case, for multiple employees, without having to create the same case multiple times. Segments for a bulk case help you define specific values for groups of employees.

Bulk case creation can save you time and effort. For example, onboarding 20 new hires, a payroll run issue, or an annual recertification process, are cases that can be created as a bulk case.

Bulk HR cases can be created for all active users. For users without an HR profile, like new hires, an HR profile is automatically created.

You can create one bulk case that creates individual HR cases for each employee in a group. Examples include:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Sending an annual recertification task to a group of employees every year.
- Onboarding multiple new hires.
- Managing a payroll issue that affects multiple employees.

Bulk case process

Perform the following steps to create a number of similar cases using bulk case request:

- Create and save a bulk case request.

  A bulk case request starts the process and contains basic information about the types of cases you are creating.

  Note:
  You must create and associate at least one user segment group to a bulk case request.

- Create one or multiple user segment groups.
  - User segment groups allow you to specify values for a group of users. You can create multiple segments for a bulk case request that defines different values for different groups of users.
  - User segment groups allow admins to ensure their bulk case creation is correct before executing.
  - After creating a user segment group, you can see the number and the users the bulk case request has targeted. You can also remove specific users.
- If your user segment groups look accurate, you can create cases.

Number of cases and performance

HR bulk case creation is designed to create up to 10,000 basic HR cases, or 1,000 cases using workflows such as Lifecycle Event cases.

Note:
Performance declines when attempting to create more bulk cases than the system is designed to handle.

Bulk cases from previous releases

You must complete or close all existing bulk case requests from previous release versions. Incomplete bulk case requests in previous release versions cannot be completed in Rome.

When opening completed bulk case requests from a previous release version, some fields are not editable and segments do not appear.

Bulk cases queued and asynchronously updated

The request to process bulk cases are queued and asynchronously updated in the background.

Note:
In previous releases, the **Bulk case creation** scheduled job processed bulk case requests. This scheduled job is now deprecated.

HR admin (sn_hr_core.admin) and bulk case creation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Previously, the HR case writer (sn_hr_core.case_writer) role was required. Because bulk case creation involves a large number of cases, it was decided to change the required role to HR admin (sn_hr_core.admin).

If you want employees with the HR case writer (sn_hr_core.case_writer) role to create bulk cases, you can update the Access Control List (ACL) for the following table:

Bulk Case Request (sn_hr_core_bulk_case_request).

To allow user segment groups under the request, update the ACLs for:

- Bulk Case User Segment (sn_hr_core_bulk_case_user_segment)
- Bulk Case User Segment Group (sn_hr_core_bulk_case_user_segment_group)

For more information on ACLs, see Access control list rules.

Create a bulk case request

Use bulk case request to create the same type of HR case, for multiple employees, without having to create the same case multiple times.

Before you begin

Role required: sn_hr_core.admin

Note:
Previously, the HR case writer (sn_hr_core.case_writer) role was required. Because bulk case creation involves a large number of cases, it was decided to change the required role to HR admin (sn_hr_core.admin).

Procedure

1. Navigate to **All** > **HR Case Management** > **Bulk Case Requests**.
2. Select **New**.
   On the form, fill in the fields.

Bulk case form fields

Field	Description
Name	The name that describes the bulk case request.
HR service	The HR service associated with the bulk case request. **Note:** When you create a user segment group, the fields from the HR service you select can appear similar to creating a new HR case. For more information, see Create a user segment group.
Status	The status of the bulk case request. The default is **Draft** and changes to **Ready** after you create and save the **User segment groups** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: At least one user must be included. The status changes to **In progress** after you select the **Create cases** button.
Create parent case	Indicates you want to create a parent case that is associated with the bulk cases. Check the **Create parent case** choice to create a parent case.
Opened by	The name of the user creating the bulk case request.
Selected user count	Shows the number of users selected for the bulk case request. **Note:** This field is empty until you create and save a user group segment.
Requested time	Shows the date and time your bulk case request was submitted to create cases. **Note:** This field is empty until you create a user group segment and select **Create cases**.

3. Select **Save**.
   The **User segment groups** and **Cases created** tabs appear.
4. Select **New** in the **User segment groups** tab.
   For more information, see Create a user segment group.

Create a user segment group

User segment groups allow you to specify values for a group of users, or with multiple segments specify different values for different groups of users. Segments allows you to ensure that your bulk case creation is correct before executing.

Before you begin

Role required: admin

About this task

After you create a bulk case request, you create a user segment to define the users a case will be created for.

Note:
You can have multiple user segments associated with a bulk case request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. From the **User segment groups** tab on the **Bulk Case Request** form, select **New**.
2. On the form, fill in the fields.

Note:
The **Label**, **Opened for**, and **Filter by** fields

Create user segment

Field	Description
Label	The label that describes the user segment. **Note:** When cases are created, the short description from the HR Case Template appears. The label describes the segment.
Opened for	The employee you choose as the **Opened for** person on each case. For example, you can select the hiring manager for an onboarding bulk case request.
Work notes	Information that provides further details about the user segment.
Additional fields	Depending on the HR service selected when creating a bulk case request, additional fields may appear. For example, if **Tuition Reimbursement Request** was entered in the HR service field on the Bulk Case Request form, the following fields appear: ○ School or Program name ○ Course title ○ Course justification ○ Course start date ○ Course end date ○ Course cost For more information on what fields appear, see Configure the HR case creation form for an HR service. The base system only provides additional fields for the Tuition Reimbursement Inquiry and Tuition Reimbursement Request HR services.
Filter by	Determines who to create the bulk HR case for:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Upload file: ▪ Upload a file with user names or email addresses. Select **Download Template** for a pre-formatted Excel spreadsheet. **Note:** The header of the first column must contain user_name or email. ▪ Check the **user_name template** to indicate you're uploading a file with user names. ▪ Check email template to Indicate you're uploading a file with email addresses. ▪ Select **Choose File** to find and select the file you're uploading. ▪ Select the **Upload** button after you choose a file. ▪ After uploading the file, the number of users appears. This number represents the number of users that fulfill your criteria. ○ HR criteria: Use pre-defined HR criteria. Criteria based on conditions defined by the **HR Profile [sn_hr_core_profile]** or **User [sys_user]** tables. The base system provides examples that you can select from the **Select HR Criteria** list. **Note:** Only available to users with the sn_hr_core.content_reader, sn_hr_core.content_writer, or sn_hr_core.admin roles. ○ User criteria: Criteria based on role, department, group, location, or company. User criteria is a platform feature. See User criteria for Service Portal . **Note:** Only available to users with the sn_hr_core.content_reader, sn_hr_core.content_writer, or sn_hr_core.admin roles.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ HR profiles: Use conditions based on the **HR profile [sn_hr_core_profile]** table with conditions that you choose. ○ Users: Use conditions defined by the **User [sys_user]** table with conditions that you choose. After selecting a filter, the number of matching users appears in green as a link. Click the link to view all users selected based on the filter. For the **HR Profile** and **Users** filter, you can refine the selection. Right-click on a column, select **Filter Out** or **Show Matching**. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

3. Select **Save**.
   The **Bulk Case Request** form returns with the user segment group you created. If your user group segment has many cases, the status for the segment is **Processing**.

   Note:
   You can still review and edit your user segment group. For more information, see Manage a user group segment.

4. When the status is **Processed**, the **Create cases** button appears at the top right and above the related list tabs.
5. Select the **Create cases** button.
   Your request is queued and asynchronously updated in the background.

   Note:
   After selecting the **Create cases** button, all users with a status of **Included** are rechecked against the filter criteria used. Cases aren't created for users that no longer match the filter criteria. Cases are also not created for users that match the criteria after the user segment was created.

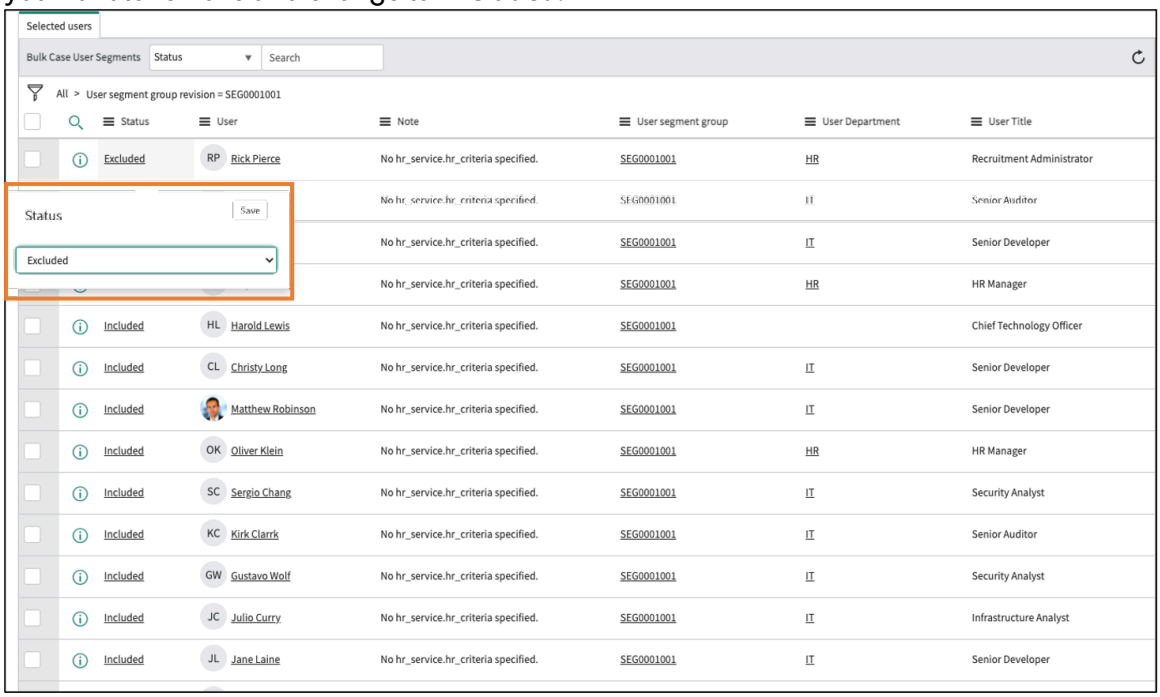
6. Select the **Cases created** tab to view a list of cases created.

Manage a user group segment

After creating a user group segment, you can review and edit it before you create cases.

Before you begin

Role required: sn_hr_core.admin



Procedure

1. Navigate to **All** > **HR Case Management** > **Bulk Case Requests**.
2. Select any bulk case request that has a status of **Ready**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can also edit a user group segment immediately after creating one.

3. Select the user segment group you want to edit found under the **User segment groups** tab. The **User segment details** form appears.
4. Scroll down to the **Selected users** tab.
5. To remove a user from the user segment group, double-click in the **Status** column for the user you want to remove and change to **Excluded**.

The meaning for each status:

- Included: User matches criteria defined in **User Segments**, create a case for the user.
- Excluded: User no longer matches the criteria defined in **User Segments**, do not create a case.
- Duplicate: The user has a duplicate record, do not create a case.

The **Note** column provides information on the status. The definitions are:

- No hr_service.hr_criteria specified: HR criteria was not used in selecting the user for the user group segment.
- User satisfies hr_service.hr_criteria: HR criteria was used in selecting the user for the user group segment.
- User do not satisfy hr_service.hr_criteria: The user did not meet the HR criteria selected and is excluded from the user group segment.
- User from user-segment-group<group-label> with sys_id<unique-id> is included: The user is marked as a duplicate.

> **Note:**
> The note clears after you change the status of a user.

6. After changing a user's status, select **Save**.

Employee Relations cases

Because of the sensitive nature of employee relations (ER) cases, there are expectations for tighter security to protect privacy. These aspects make employee relations cases different from standard HR cases.

When ER cases are handled correctly, there is less risk to your company. Features are:

- You can create ER cases without an Opened for or Subject person.
- You can create related records for allegations, interviews, and corrective actions.

ER covers a large area within HR and includes different types of cases, situations, and scope.

Investigations

Currently, HR Service Delivery supports one type of ER case:

- Report Misconduct
- Track people not in the ServiceNow® system to receive a full view of an investigation

  Related records that support this type of ER case are:

  - Allegations
  - Involved parties
  - Interviews
  - Accommodations
  - Evidence
  - Corrective actions

Security

Confidentiality and securing employee relations cases is the utmost importance.

HR Service Delivery employee relations uses the following to ensure that the correct people have visibility:

- Roles
- Groups
- Assignment rules

Intake

HR Service Delivery employee relations provides:

- Catalog item (Report misconduct)
- Sample KB articles
- Record forms for:
  - Allegations
  - Involved Parties
  - Interviews
  - Corrective Actions

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fulfillment

To work and close an ER case:

- COE and HR service: Report Misconduct
- HR case template
- Case form
- Fulfillment instructions and checklist

Reports

The following reports are provided:

- Case volume by month
- Case volume by allegation type
- Case volume by location
- Case volume by department

For more information on reports, see HR Service Delivery Employee Relations dashboards.

Next Experience UI

You can optionally use the ServiceNow® Next Experience UI for Employee Relations. Next Experience provides an intuitive, personalized experience to drive productivity, improve engagement, and surface insights across Employee Relations. For more information, see Next Experience UI.

For information on installing a store application, see Install a ServiceNow Store application.

Activate Employee Relations

You can activate Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations] if you have the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin

Role required: admin

About this task

Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations] enables you to create and manage employee relations cases.

Plugins for Human Resources Scoped App: Employee Relations

Plugin	Description
Human Resources Scoped App: Core [com.sn_hr_core]	Enables you to standardize the documentation, interaction, and fulfillment of employee inquiries and requests. **Note:** Employee relations require activation of this plugin, but is a separate scope.
Human Resources Scoped app: Workspace [com.sn_hr_agent_workspace]	A single-pane view that tier 1 agents use to respond to all task types, view the

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugins for Human Resources Scoped App: Employee Relations (continued)

Plugin	Description
	full context of an issue, and get relevant recommendations to resolve issues. **Note:** This plugin is optional for ER.
Evidence Management [com.sn_evidence_management]	Enables you to collect, categorize, retain, and secure evidence for use in ER cases. Evidence that requires gathering and reviewing artifacts for an investigation. This plugin activates when the Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations] is activated, but is reusable with other products and applications.
Interview Templates [com.sn_interview_templates]	Enables you to create reusable interview question templates. Having interview templates provides consistent and efficient interviews for Employee Relation interviews. This plugin also controls read, write, and access to interviews. **Note:** This plugin is optional for ER.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Components installed with HR Service Delivery Employee Relations

Several types of components are installed with activation of the Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations] plugin, including tables, and user roles.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles installed

Roles installed with Employee Relations

Role title [name]	Description	Contains roles
HR ER administrator [sn_hr_er.admin]	Can access and configure HR Service Delivery Employee Relations.	• ER case writer [sn_hr_er.case_writer] • ER configuration manager [sn_hr_er.config_manager]
HR ER case reader [sn_hr_er.case_reader]	Can access and view HR ER cases.	HR case reader [sn_hr_core.case_reader]
HR ER case writer [sn_hr_er.case_writer]	Can access, create, and edit HR ER cases.	• HR case reader [sn_hr_core.case_reader] • HR case writer [sn_hr_core.case_writer]
HR ER confidential [sn_hr_er.confidential]	Can access locked HR ER cases when locking configuration is activated.	• HR basic [sn_hr_core.basic] • HR case writer [sn_hr_core.case_writer]
HR ER configuration manager [sn_hr_er.config_manager]	Can access, setup, and edit HR ER configuration.	None

Note:
Impersonating another user with an ER role is not supported.

Tables installed

HR ER tables installed

Table	Description
Allegation [sn_hr_er_allegation]	Contains information about an allegation type and subtype. **Note:** A non-metadata table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR ER tables installed (continued)

Table	Description
Allegation Subtype [sn_hr_er_allegation_subtype]	Metadata table that provides 59 records to the base system. Allegation subtypes further define an allegation. For example: • Allegation type = Discrimination • Allegation subtypes: Age, disability, Race, and so on.
Allegation Type [sn_hr_er_allegation_type]	Metadata table that provides base system records. Examples are: • Customer Mistreatment • Discrimination • Drugs and Alcohol • Fraud and Theft • Harassment • Interpersonal Conflict • Misconduct • Retaliation • Wage and Scheduling Issue • Workplace Violence
Associated Allegation [sn_hr_er_m2m_allegation_party]	Contains information that associates an allegation to subject of allegations. **Note:** A non-metadata table.
Case Restriction Configuration [sn_hr_er_case_restriction]	Extends the COE Security Policy [sn_hr_core_coe_security_policy] table.
Corrective Action [sn_hr_er_corrective_action]	Contains information on corrective actions associated with an ER case. **Note:** A non-metadata table.
Employee Relations Case [sn_hr_er_case]	Extends the HR case [sn_hr_case] table. **Note:** A non-metadata table.
Interview	Contains information related to ER interviews.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR ER tables installed (continued)

Table	Description
[sn_hr_er_interview]	**Note:** A non-metadata table.
Interview Question Template [sn_interview_question_template]	Contains information related to the interview question template. Available when the Interview Templates [com.sn_interview_templates] plugin is activated.
Involved Party [sn_hr_er_involved_party]	Contains information on involved parties related to the ER case. **Note:** A non-metadata table.

Setting up Employee Relations

Set up HR Service Delivery Employee Relations (ER) so that your agents can engage with your employees, answer questions, create ER cases, create related records, and resolve issues.

To set up ER:

- Activate the required plugins. For more information, see Activate Employee Relations.
- Configure case restrictions. For details on case restrictions, see HR Service Delivery Employee Relations case restrictions.
- Create a COE security policy. For information on COE security policies, see Create a COE security policy.
- Configure allegation types and subtypes. For more information, see HR Service Delivery employee relations allegation types and subtypes.
- Configure assignment rules. For details on assignment rules, see HR Service Delivery Employee Relations assignment rules.
- Configure matching rules. For more information, see HR Service Delivery Employee Relations matching rules.
- Set up interview question templates. For information on interview question templates, see Create an interview question template.

Note:
For additional information on tables and roles installed, see Components installed with HR Service Delivery Employee Relations.

Employee Relations catalog items

The base system provides the following ER catalog items:

- Accommodation Request
- Report Discrimination

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Report Misconduct
- Performance improvement plan(PIP)

Use Guided Tours in Employee Relations

Use guided tours in Employee Relations to get an overview of Employee Relations cases.

Before you begin

Role required: admin,sn_hr_er.case_writer,sn_hr_er.case_reader

About this task

Guided tours help train and onboard users within the workspace. Each tour is designed to provide an overview, guide you through a task, or complete a process. If needed, administrators can create more tours. For more information, see Guided tours.

When you visit a page that has a guided tour for the first time, a welcome screen appears. You can choose to either begin the tour or skip the tour. The tour can be revisited from the Help Center menu.

Guided tours in Employee Relations are only available in report misconduct cases. The tour is inactive by default. To enable the guided tour, see Enable guided tours in Employee Relations.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select the **Lists** icon ( ).
3. Select an ER case.
4. Select the **Show help** icon ( ).
5. **Optional:** Select the **Pin Help Center menu** icon to pin the Help Center side panel on the page.
6. Select **Take a Tour**.
7. Take the necessary action and select **Next** to progress through the tour.
   For ending the tour at any point, you can select **End Tour** in the side panel or select the **Close** button in the pop-up window and confirm to end the tour.
8. Select **Done** after the tour is ended.

Enable guided tours in Employee Relations

Enable guided tours in Employee Relations to get an overview of Employee Relations cases.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Guided Tour Designer** > **Guided Tours**.
2. Select the **Tour ID** beside **Details View of Employee Relations Case**.
3. Select the **Active** check box.
4. Select **Update**.
5. Configure Auto Launch for the Employee Relations guided tour.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Navigate to **All** > **Guided Tour Designer** > **Configure Auto Launch**.

b. Select the **now/hr/agent/record** tile.

c. Select the **Auto Launch** toggle beside **Details View of Employee Relations Case** so it switches to the right.

HR Service Delivery Employee Relations case restrictions

Use Case Restriction Configuration to determine what groups and agents can access or restrict ER cases.

Groups

Restrict access by Center of Excellence (COE) for specific groups:

- Define what groups can restrict ER cases.
- Define what groups can view ER cases.

The base system provides one case restriction configuration that enables the HR Confidential group to access ER cases.

For more information, see Manage HR Groups.

Note:
When creating case restrictions, be sure that you have at least one configuration that enables you to read these cases.

Roles

Members of groups that can access ER cases must have the sn_hr_er.confidential role.

For more information, see Manage HR roles and Evidence Management for Employee Relations.

COE Security Configuration

Use COE Security Configuration to define group restrictions for a COE and for all or specific HR services under it.

You can then restrict the COE with read and write capabilities.

Note:
If you choose to restrict other COEs besides Employee Relations Case [sn_hr_er_case], you can cause performance issues. ER cases numbering more than 100 K can impact performance.

For more information, see Create a COE security policy.

COE security policies are a way to easily restrict access to different COEs via configuration. The underlying COE security policy implementations are ServiceNow ACLs.

Collaborators and the COE for the HR case can conflict. The basic rules are:

- For all HR cases, collaborators override any security on a COE.
- Employee Relations (ER) cases can override collaborators when restrictions apply.

ER assignment rules

Use ER assignment rules to assign a group to an ER case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see HR Service Delivery Employee Relations assignment rules.

ER matching rules

Use ER matching rules to assign an agent that has the least number of cases, the required skills, and matches the location.

For more information, see HR Service Delivery Employee Relations matching rules.

Configure an employee relations case restriction

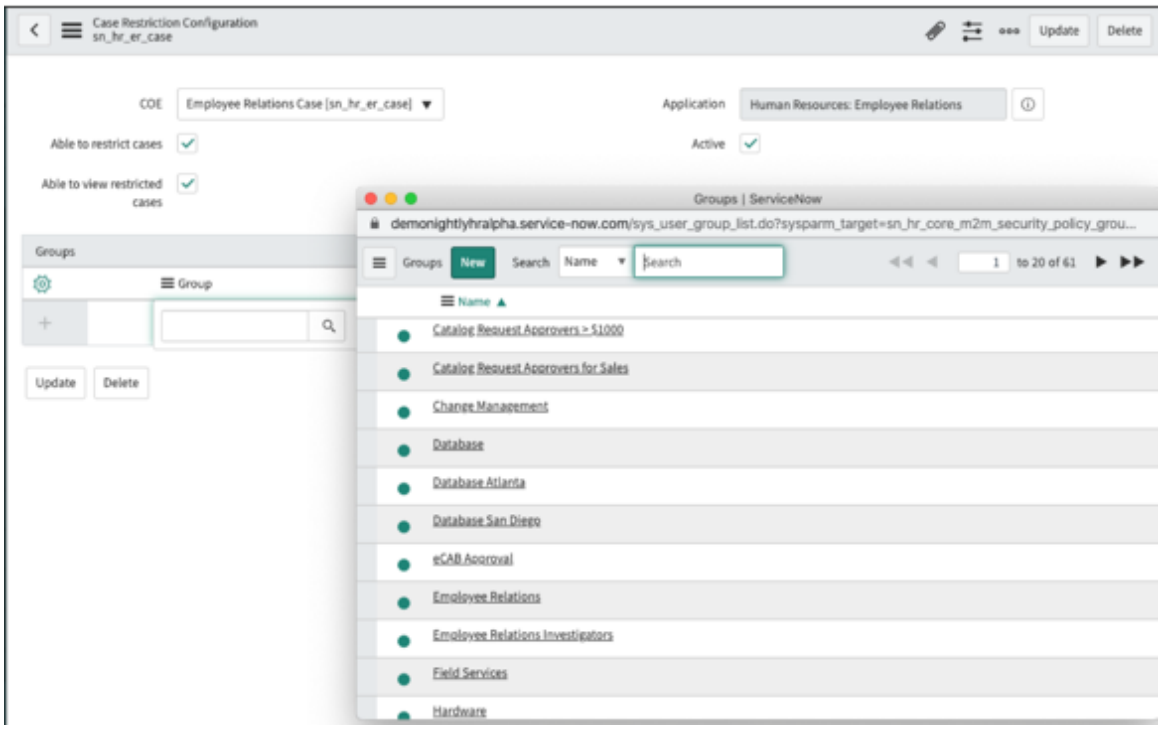
Define what groups can view or access employee relations cases using Case Restriction Configuration.

Before you begin
Role required: admin and sn_hr_er.admin

Warning:
When creating case restrictions, be sure that you have at least one configuration that enables you to read these cases.

Procedure

1. Navigate to **All** > **Employee Relations** > **Administration** > **Case Restriction Configuration**.
2. Click **New**.
3. On the form, fill in the fields.



Case Restriction Configuration form

Field	Description
COE	Center of Excellence (COE) that you want to restrict access to. **Note:** For more information on COE, see HR Centers of Excellence data model.
Able to restrict cases	Option to enable members of a group to restrict access to all HR cases for the COE.
Able to view restricted cases	Option that enables a group to view restricted HR cases for the COE.
Application	The application that the case restriction configuration applies to. This field is automatically set to Human Resources: Employee Relations.
Active	Option to activate the case restriction configuration record.

4. Click **Save** or **Submit**.
5. Add the groups that you want the case restriction configuration to apply to.

Note:
You can also restrict by role. Agents with the sn_hr_er.confidential role can access restricted ER cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Click **Update**.

> **Note:**
> Collaborators on an HR or ER case can override COE security. But, ER cases with restrictions override collaborators. For more information, see Create COE security.
>
> COE security policies are a way to easily restrict access to different COEs via configuration. The underlying COE security policy implementations are ServiceNow ACLs.

Create a COE security policy

Use **COE Security Configuration** to define group restrictions for a COE and for all or specific HR services under it.

Before you begin

Role required: sn_hr_core.admin

Certain users will be able to access a COE even it is restricted. For example, Opened for, Opened by, Watch List and Collaborators get access to a restricted COE irrespective of its security policies.

COE security policies are a way to easily restrict access to different COEs via configuration. The underlying COE security policy implementations are ServiceNow ACLs.

Procedure

1. Navigate to **All** > **HR Administration** > **COE Security Configuration**.
2. Click **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

COE Security Policy form

Field	Description
Policy name	Name that you want to give to the security policy that is created for the Center of Excellence (COE).
COE	Center of Excellence (COE) that you want to create a security policy for. **Note:** The COEs that appear depend on the Application selected.
Applies to all services	Option to apply all HR services for the COE security policy.
Applies to all child COEs	Option to apply the security policy on child COEs of the parent COE.
Short description	More information about the security policy that is created for the Center of Excellence (COE).
Services	HR service that the COE security policy applies to. This field appears only if the **Applies to all services** check box is not selected.
Application	Application that the COE security policy applies to.
Active	Option to indicate the active status of the COE security policy. Only active security policies are applied.
Type	Access that you want your HR agents to have for the cases that fall under the COE or HR services. Valid values: ○ **Read** ○ **Write**
Applies when	Condition statement that filters an HR case. If the HR case matches the conditions, the COE security policy applies to it. You can create conditions based on key words or fields from the HR case. When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: An empty filter condition matches all records for the selected COE.

4. Click **Save** or **Submit**.
5. Add the groups that you want the COE security policy to grant access to.

   Note: Leave this list blank to ensure no groups have access through the COE security policy.

6. Click **Update**.

HR Service Delivery case restrictions for an Employee Relations agent

Even Employee Relations agents with special privileges to view and modify a case are limited from viewing, modifying or restricting a case under certain circumstances for security purposes.

An Employee Relations agent is treated as a normal employee and does not have any kind of special privileges if the agent meets one of the following criteria:

- The person for whom the case was opened.
- An involved party in a case.
- A subject person.

Restrictions are enabled for the Employee Relations agent in the following areas of the ServiceNow instance:

UI actions

Actions such as Update, Ready for Work, and Cancel that are available to regular employees are also available to the agent. Actions such as Associate Interaction, Delete, Close Complete, Close Incomplete, and Suspend are not available.

View

Can view only the restricted self-service view of the case on the Agent Workspace, the platform view, and the Employee Center. The agent cannot change the view.

Access to related lists and records

No access to the related lists and related records for a case, for example, allegations, involved parties, interviews, evidence, and so on. The agent cannot access the related records in the platform view.

Access to tasks

Can view only the tasks assigned to them and not tasks assigned to other employees.

Case restriction configuration

Case restriction configuration enables the HR confidential group members to restrict a case using the **Restrict** button available on the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Restricting a case means that even if an Employee Relations agent is part of the HR confidential group and is involved in a case, the agent will not have access to that case. For more information on case restriction, see Configure an employee relations case restriction.

Security Configuration

For Employee Relations COE (Center of Excellence), the HR matching rules skip any Employee Relations agent who meets the criteria so that the case is not assigned to them. For more information, see Create a COE security policy.

COE security policies are a way to easily restrict access to different COEs via configuration. The underlying COE security policy implementations are ServiceNow ACLs.

HR Service Delivery employee relations allegation types and subtypes

Allegation types and subtypes help you further define an employee relations case.

Allegation types and subtypes are attached to an HR Service Delivery ER case and are the foundation for the case.

When creating an allegation type, you directly associate subtypes.

Subtypes further define an allegation and provide flexibility to categorize an employee relation case and provide specific details.

The base system provides allegation types and subtypes that you can use immediately.

Configure an employee relations allegation type

Create allegation types and subtypes to help provide details on an employee relations case.

Before you begin

Role required: sn_hr_er.config_manager

Procedure

1. Navigate to **All** > **Employee Relations** > **Administration** > **Allegation Types**.
2. Click **New**.
3. On the form, fill in the fields.

Allegation Type form

Field	Description
Name	Description of an allegation. An allegation is a high-level category and allegation subtypes can provide details of the allegation. For example, harassment can be an allegation. Subtypes can be: ○ **Bullying** ○ **Insubordination** ○ **Profanity**

4. Click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Allegation Subtypes related list appears.

5. Click **New**.
6. On the form, fill in the fields.

Allegation Subtype form

Field	Description
Name	Description of allegation subtype. Subtypes help define the allegation type.
Allegation type	Enter a description of an allegation subtype. For example, harassment can be an allegation. Subtypes can be: ○ **Bullying** ○ **Insubordination** ○ **Profanity**

7. Click **Submit**.

HR Service Delivery Employee Relations assignment rules

HR Service Delivery employee relations assignment rules allow you to automatically assign a group to ER cases when the assignment group is empty.

When the HR case template sets the assignment group, assignment rules are ignored.

When an ER case is created, it:

- Checks for the Skills/Assignment group from the HR Case Template for the associated HR service. See Configure an HR case template for an HR service.
- If there is no assignment group for the HR case template, the base system provides the Employee Relations Case assignment rule.
- The Employee Relations Case assignment rule assigns the Employee Relations group to the case.

Note:
For more information, see Add or modify an HR assignment rule.

HR Service Delivery Employee Relations matching rules

Because ER cases do not use a subject person, matching rules try to find an agent with the required skills and in the same country where the case was opened to determine case assignment.

Matching rules look for:

- Country the ER case was opened in.
- If no country is available, find any involved parties with a type of complainant and use their country.
- If there are no involved parties with type of complainant, look for involved parties with type of subject of allegation and use their country.
- If there are no involved parties with a country that can be used, then only skills are used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For more information, see Add or modify a matching rule.

You can restrict an ER case to be assigned to only members of a specific group. See Configure an employee relations case restriction.

Interview Management

Use Interview Management to create templates to capture questions, answers, and notes in a consistent and efficient way, sync scheduling with Microsoft Outlook, and better plan and track your interviews.

Setting up Interview Templates

Set up HR Service Delivery Interview Templates so your agents can quickly, consistently, and accurately capture appropriate information.

Activate the Interview Templates plugin (com.sn_interview_templates) for the ServiceNow AI Platform if you have the admin role. For more information, see Activate Interview Templates.

- Create interview question templates.
- Create interview template tags. Tags help you filter your interview question templates so you can easily browse for relevant questions to use in an interview. For example, agents ask different questions depending on who they are talking to and what the specific allegations are. Template tags help agents to find the appropriate interview template.

Roles installed

Role	Description	Contains roles
Interview questions template admin [sn_interview_temp.admin]	Can access, read, create, and edit interview question templates, template tags, and Employee Relations properties.	sn_interview_temp.reader, sn_interview_temp.writer
Interview questions template writer [sn_interview_temp.writer]	Can access, read, create, and edit interview question templates and template tags.	sn_interview_temp.reader
Interview template reader [sn_interview_temp.reader]	Can access and read interview question templates and template tags.	N/A

System properties

The **sn_interview_temp.filter_attr_allowed_tables** system property determines the tables you are allowed to create interview template tags for interview question templates.

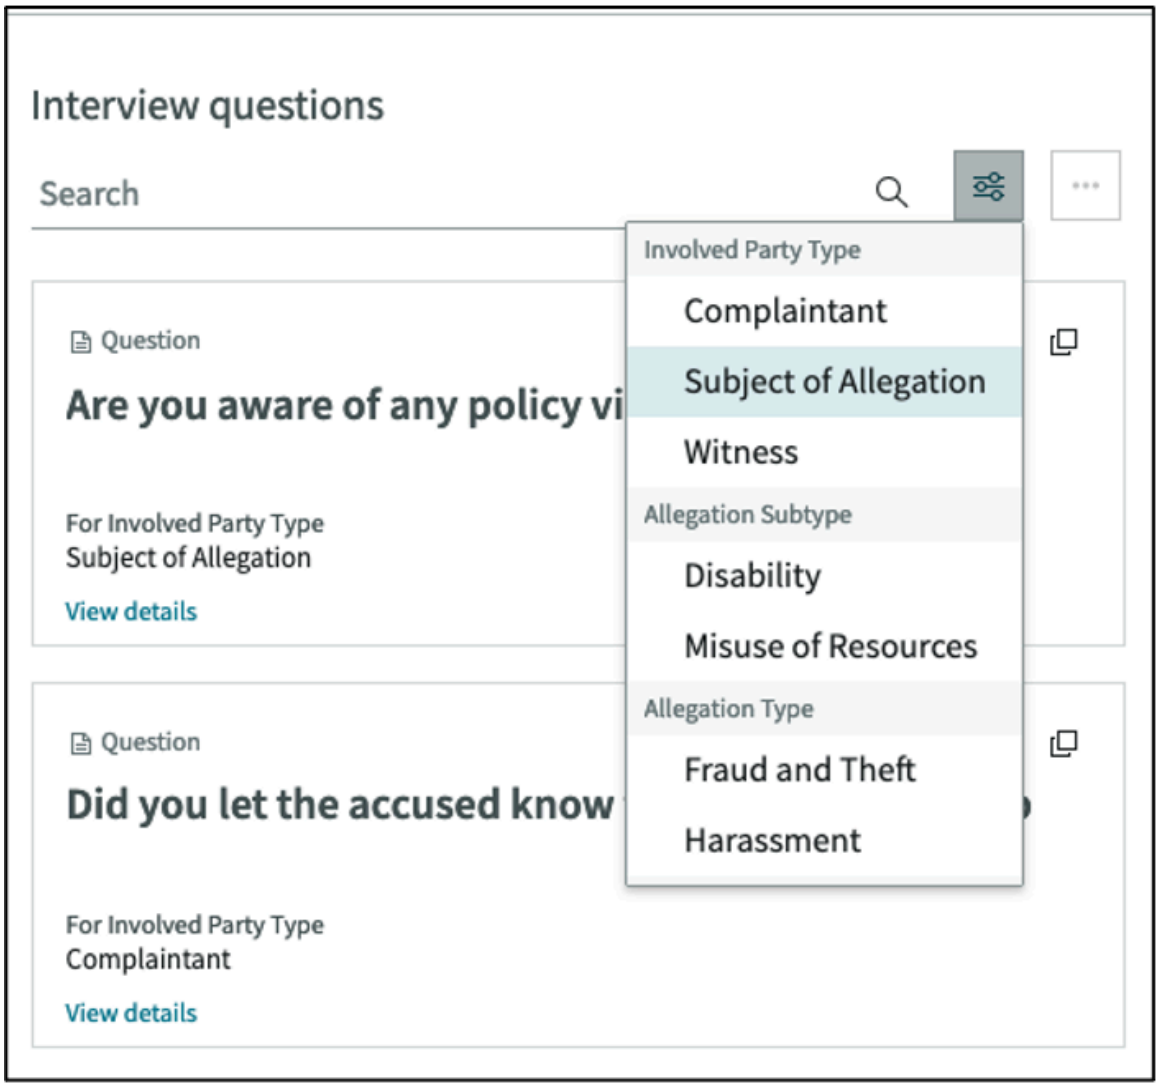
When entering multiple tables, separate the table names with a comma (,) but with no space between each table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Template tags

Template tags are a way to organize your interview templates and a way to filter them when looking for the correct template. Template tags allow you to find relevant questions easier and faster.

From the legacy UI, you can select the **Questions** button to show all interview templates. The template tags appear at the bottom of each interview template displayed.



In the HR Service Delivery Agent Workspace, the template tag appears at the bottom.

There are two types of template tags you can create:

- Referenced: Uses the fields from the following tables to create reference tags:
  - Allegation Subtype [sn_hr_er_allegation_subtype]
  - Allegation Type [sn_hr_er_allegation_type]
  - HR Service [sn_hr_core_service]
- Custom: You create you own interview template organization. For example:
  - Customer category = Involved party type
  - Custom tags:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Complainant
- Subject of allegation
- Witness

Involved party type becomes the top-level category in the organization with the tags being a way to organize the type of person you are interviewing.

Activate Interview Templates

You can activate the Interview Templates plugin (com.sn_interview_templates) for the ServiceNow AI Platform if you have the admin role.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Interview Templates plugin (com.sn_interview_templates) using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Create an interview question template

Interview Question Templates provides your agents with a consistent and efficient way to capture answers from interviews.

Before you begin
Role required: sn_interview_temp.admin

Procedure

1. Navigate to **All** > **Employee Relations** > **Interview Question Templates**.
2. Select **New** or an existing interview question template.
3. Fill in the form or make edits.

4. Select **Save**.
   The **Template Tags** related list appears. In order to filter your interview templates, you must associate the interview template with a template tag.

   Note:
   For more information on **Template Tags**, see Create an interview template tag.

Create an interview template tag

Create template tags you can use to filter interview question templates on pre-defined attributes. Template tags allow you to find relevant questions easier and faster.

Before you begin
Role required: sn_interview_temp.admin

Interview template tags drive the filtering interaction for an agent as a way to browse or search for a template.

Procedure

1. Navigate to **All** > **Interview Templates** > **Template Tags**.
2. Select **New**.
3. Fill in the form.

Template Tag form

Field	Description
Tag type	The category of tag you are creating. The choices are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Referenced: Select to create tags related to a specific table. The tables that appear depend on the entries in the **sn_interview_temp.filter_attr_allowed_tables** system property. For more information, see Setting up Interview Templates. **Note:** When you have multiple applications that use **Interview Question Templates**, using **Referenced**, can keep your interview question templates separate. Associating a tag with a table helps your users filter for interview question templates faster and easier. ○ Custom: Select to create tags that are free-form text and referenced by a custom category.
Table	The table associated with a interview template tag. The tags you select are from the table you select. You can associate one of the following tables: ○ Allegation Subtype [sn_hr_er_allegation_subtype] ○ Allegation Type [sn_hr_er_allegation_type] ○ HR Service [sn_hr_core_service] This field only appears whe you select **Referenced** from the Tag type field.
Custom category	The category that your custom tag belongs to. Ensure you have mapped out your structure before creating. Having a clear organization of your tags and categories makes searching for specific questions faster. This field only appears when you select **Custom** from the **Tag type** list.
Custom tag	The tag you want to associate with a question interview template. Enter a custom tag associated with the Custom category to create a hierarchy with custom category as the top of the hierarchy and tags under it. For example:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Customer category = Involved party type ○ Custom tags: ▪ Witness ▪ Complainant ▪ Subject of allegation Involved party type becomes the top-level category in the organization with the tags being a way to organize the type of person you are interviewing.
Application	The application scope you are currently in and associated with the interview template tag.
Domain	The domain your current scope is associated with. This field applies to customers that have multiple domains. For more information, see Domain Separation and HR Service Delivery.

4. Select **Save** or **Submit**.

Using Interview Management

You can schedule and document interviews and use interview templates using the Core UI or HR Service Delivery Agent Workspace.

Creating a record of an interview is an important part of an employee relations investigation.

Scheduling an interview: There are two (2) methods you can use to schedule an interview:

- Manual entry: You enter a start and end date/time for the interview and confirm outside the application.

  Note:
  In legacy UI, the manual entry is the only method available for scheduling an interview.

- Use Microsoft Outlook Calendar to schedule an interview.
  - To use this feature, you must integrate with Microsoft Exchange. Ensure the **sn_hr_er.ex_online_notification_url** system property contains the Callback URL in the **Value** field. For more information, see Set up Microsoft Exchange Online spoke.
  - The **sn_hr_er.exchange_online_max_candidate** system property determines the maximum number of meeting time slots to return when trying to schedule an interview using Microsoft Exchange. The default value is 500 slots.

  Note:
  You can use the manual method of scheduling in HR Service Delivery Agent Workspace. For more information, see Schedule an interview in HR Service Delivery Employee Relations using the legacy UI or Schedule an interview in HR Service Delivery Employee Relations using Agent Workspace for HR Case Management.

Scheduling an interview

You can use the default ServiceNow® calendar or integrate with Microsoft Exchange to schedule interviews related to Employee Relations (ER) cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule an interview in HR Service Delivery Employee Relations using the legacy UI

Documenting interviews is crucial to ER cases. Use the Interview form to take notes and capture important details of the ER case.

Before you begin

Role required: sn_hr_er.case_writer

Procedure

1. Navigate to **All** > **Employee Relations** > **Cases**.
2. Select an ER case.
3. Scroll down and select the **Interviews** tab in the related list.
4. Select **New**.
5. Fill in the form.

Interview

Field	Description
Number	The number identifying the interview record. The application automatically assigns interview numbers.
HR case	The HR ER case number associated with the interview. **Note:** If you access the interview from **Employee Relations**, you have to select an HR case to associate the interview to.
Interviewee	Name of the person who you are interviewing. Select the **Lookup using list** icon and search for the person you are interviewing. If no names appear, you can select **New** and create an involved party. For more information, see Create an involved parties record.
Interviewers	Names of the people who conducted the interview. Click the **Unlock Interviewers** icon and search for the names of the people who conduct the interview. **Note:** Only members with the sn_interview_temp.writer role or belong to a group that has the Employee Relations skill.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	You can optionally enter the email addresses for each interviewer.
External attendees	Indicates people outside of your company attended the interview.
External invite email	The email addresses of the external people that attend the interview.
Scheduling method	The method you are using to schedule the interview. If your company only uses the manual method of scheduling, **Manual entry** appears and cannot be edited. If your company uses the integration with Microsoft Outlook Calendar to schedule, **Calendar** appears. For more information, see Using Interview Management.
Start date	The date and start time of the interview.
End date	The date and end time of the interview.
Additional parties	Other people you want as part of the interview record. Click the **Add me** icon  to add yourself or the **Unlock additional parties** icon  to add yourself or other people. You can optionally enter the email addresses for each interviewer.
External URL	A URL that is relevant to the interview. For example, if your company maintains interview notes in a different or external system from HR Service Delivery, you can enter the URL to maintain a link and consistency.
Interview date	The date the interview took place. Appears after the interview concluded.
Created by	The user that created the interview invite record.
Interview notes	Notes from the interview or you can enter the answers to the questions from the interview question templates.

6. Select the **Questions** button at the top, right corner to view, and select questions from an interview template.
   Interview templates ensure consistency and efficiency when conducting interviews. For more information, see Create an interview question template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. If an interview template appears, select it and you can select **Copy to clipboard** or **Insert to notes**.

   Note:
   Copy to clipboard copies the questions from the interview template and allows you to paste it to an external document. **Insert to notes** copies all questions to the **Interview notes** field.

8. Select **Save** or **Submit**.
   If you select **Save**, the Evidence related list appears. For more information, see Evidence Management for Employee Relations.

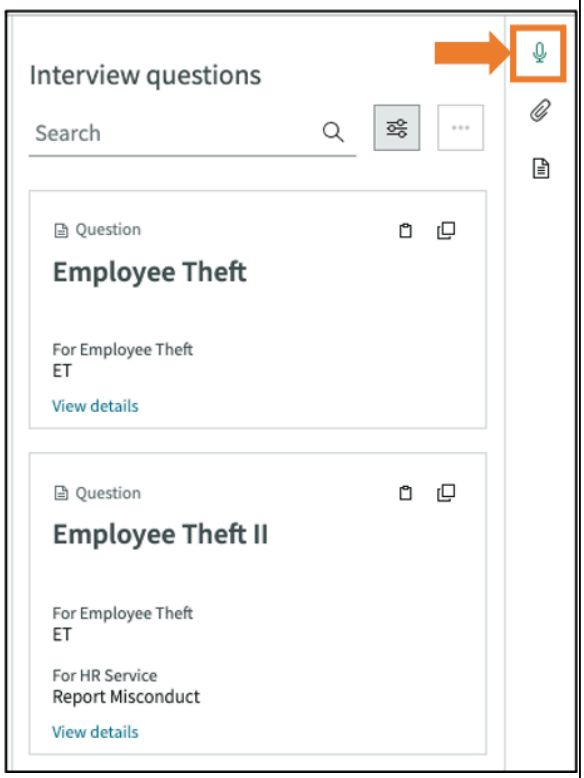
Schedule an interview in HR Service Delivery Employee Relations using Agent Workspace for HR Case Management

Use HR Service Delivery Agent Workspace to capture a record of an interview.

Before you begin
Role required: sn_hr_er.case_writer

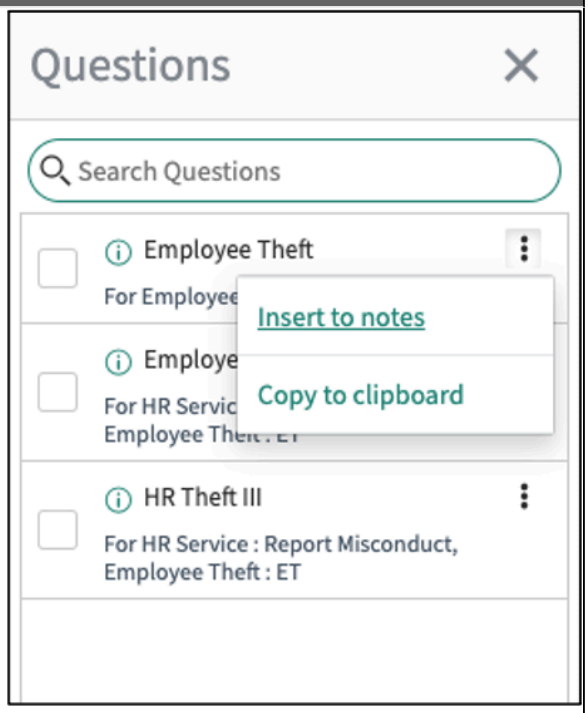
Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select the **Lists** icon ( ).
3. Select **Other**.
4. Select **Employee Relations Cases**.
5. Select an ER case.
6. Select **more** from the row of tabs below the **Case Timeline**.
7. Select **Interviews**.
8. Select **New**.
9. Fill in the form.



Create new interview form

Field	Description
Number	he number identifying the interview record. The application automatically assigns interview numbers.
HR case	he HR ER case number associated with the interview. **Note:** If you access the interview from **Employee Relations**, you have to select an HR case to associate the interview to.
Interviewee	Name of the person who you are interviewing. Select the **Lookup using list** icon and search for the person you are interviewing. If no names appear, you can create an involved



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	party. For more information, see Create an involved parties record.
Interviewers	Names of the people who conducted the interview. Click inside the field and a list of names appear that you can select. **Note:** Only members with the sn_interview_temp.writer role or belong to a group that has the Employee Relations skill.
External attendees	Indicates you want to add external attendees to the interview record.
External invite email	The email addresses of the external attendees. Only appears when you select the **External attendees** choice. **Note:** Separate each email address with a comma.
Scheduling method	The method you are using to schedule the interview. Select **Manual entry** to select the Start and End dates and times of the interview. If your company uses the integration with Microsoft Outlook Calendar to schedule, select **Calendar**. You can schedule an interview with an interface that syncs with your company's Outlook Calendar. For more information, see Using Interview Management.
Start date	The start date and time of the interview. Select the **Show calendar** icon (and select the date and time the interview starts.
End date	The endt date and time of the interview. Select the **Show calendar** icon (and select the date and time the interview ends.
Additional parties	Other people you want as part of the interview record. Click in the field and a list of names appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	You can optionally enter the email addresses for each interviewer. **Note:** These names appear from
External URL	A URL that is relevant to the interview.
Created by	The user name of the person who created the interview record.
Interview notes	Notes from the interview or you can enter the answers to the questions from the interview question templates. In the Contextual Sidebar, select the **Interview Templates** icon (to search for interview question templates.  Interview templates provide questions you can use in the interview, You can insert the questions from the template into the **Interview notes** field or copy to the clipboard to insert in an outside document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	 Select ⋮ to see the Insert to notes or Copy to clipboard choices. Interview templates ensure consistency and efficiency when conducting interviews. For more information, see Create an interview question template.

10. Select **Save**.

Evidence Management for Employee Relations

Use Evidence Management to capture and categorize evidence for Employee Relations or related cases.

Evidence is defined as any digital artifacts gathered as part of an investigation, like files that are either uploaded to Evidence Management or reside in another system.

Setting up Evidence Management

Set up HR Service Delivery Management so your agents can collect evidence and information related to Employee Relation (ER) cases.

You can activate Evidence Management [com.sn_evidence_management] plugin if you have the admin role. This plugin activates when the Human Resources Scoped App: Employee Relations [com.sn_hr_employee_realtions] plugin is activated. For more information, see Activate Employee Relations.

Roles

The following roles are installed with the Evidence Management [com.sn_evidence_management] plugin:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles installed with Evidence management

Role title [name]	Description	Contains roles
Evidence admin [sn_em.admin]	Can access and configure all areas within Evidence Management.	• sn_em.evidence_config_manager • sn_em.evidence_reader • sn_em.evidence_writer
Evidence Configuration manager [sn_em.evidence_config_manager]	Can access, create, and manage evidence type records. **Note:** requires the evidence reader and writer roles to manage the evidence type records.	
Evidence reader [sn_em.evidence_reader]	Can view evidence if the ER case is accessible.	
Evidence writer [sn_em.evidence_writer]	Can create and manage evidence records.	sn_em.evidence_reader

Employee Relations roles include Evidence Management roles.

Users are unable to read evidence when impersonating.

When an Employee Relations case is restricted, users can only view the evidence record if they can view the ER case.

Evidence types

Before you can add evidence to an ER case, you must set up evidence types. Evidence types help you categorize and organize the evidence you collect related to ER cases. The base system provides:

- Audio
- Chat logs
- Email
- Photos
- Screenshots
- SMS
- Video

You can create additional evidence types. For more information, see Create evidence types.

Create evidence types

Create evidence types to catalog and organize employee relation evidence in an efficient and logical way to enhance your business processes.

Before you begin
Role required: sn_em.evidence_config_manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The base system provides preconfigured evidence types.

Procedure

1. Navigate to **All** > **Evidence Management** > **Evidence Types**.
2. Select **New**.
3. Fill in the form or edit the fields.
4. Select **Submit**.

Using Evidence Management

You can create, edit, and categorize evidence related to an employee relations case using the Core UI or HR Service Delivery Agent Workspace.

You can associate evidence to an Employee Relations (ER) case. For more information on ER cases, see Employee Relations cases.

Adding evidence to an Employee Relations case in the legacy UI

Create evidence records to attach to an Employee Relations case to help with investigations.

Before you begin
Role required: sn_hr_er.case_writer

Procedure

1. Navigate to **All** > **Employee Relations** > **Cases**.
2. Select a case.
3. Scroll down to the **Evidence** tab in the related list.
4. Select **New**.
5. Fill in the form.

Evidence form

Field	Description
Number	The number that identifies the evidence record. This is automatically generated by the application.
Name	The name that describes the evidence.
Evidence type	The evidence type associated with the evidence. The base system provides the following: ○ Audio ○ Chat logs ○ Email ○ Photos ○ Screenshots

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ SMS ○ Video For more information, see Create evidence types.
Created by	Name of the user that created the evidence record.
Submitted by involved party	Name of the person who submitted the evidence. Select the **Lookup using list** icon and search for the person that submitted the evidence. If no names appear, you can select **New** and create an involved party. For more information, see Create an involved parties record.
Involved parties	Any person involved with the evidence provided in the ER case. Select the **Unlock involved parties** icon ( ) and search for people you want to include as involved parties. If no names appear, you can select **New** and create an involved party. For more information, see Create an involved parties record.
Table	The table evidence is associated with. The default is the Employee Relations Case [sn_hr_er_case] table, but you can associate evidence to any table.
Parent	The parent case the evidence is related to. To associate a parent case, select the **Lookup documents using list** icon and select the table associated with the parent case. The default is the Employee Relations Case [sn_hr_er_case] table. Select the table and the associated case that is the parent case. **Note:** If you have a parent case and evidence is added to it, this field is pre-populated.
Evidence source type	Indicates if the evidence is an attachment or a URL.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Select one. If the evidence is an attachment, attach the file using the Manage Attachments icon ( ) at the top, right of the form. If the evidence is a URL, enter the URL in the URL source field.
URL source	Select the Edit this URL icon (and enter the URL. This field displays only when you select **URL** from the Evidence source type field.
Interview	The associated interview number. If you came from the interview record, the number automatically displays. For more information, see Interview Management.
Description	Description of the evidence.

6. Select **Submit**.

Add evidence to an Employee Relations case in Agent Workspace for HR Case Management

Create evidence records to attach to an Employee Relations case to help with investigations using HR Service Delivery Agent Workspace.

Before you begin

Role required: sn_hr_er.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select the **Lists** icon ( ).
3. Select **Other**.
4. Select **Employee Relations Cases**.
5. Select an ER case you want to attach evidence to.
6. Select **more** from the row of tabs below the **Case Timeline**.
7. Select **Evidence** from the row of tabs below the **Case Timeline**.
8. Select **New**.
9. Fill in the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Evidence form

Field	Description
Number	The number that identifies the evidence record. This is automatically generated by the application.
Name	The name that describes the evidence.
Evidence type	The evidence type associated with the evidence. The base system provides the following: ○ Audio ○ Chat logs ○ Email ○ Photos ○ Screenshots ○ SMS ○ Video For more information, see Create evidence types.
Created by	Name of the user that created the evidence record.
Submitted by involved party	Name of the person who submitted the evidence. Select the **Search for Record** icon and search for the person that submitted the evidence. If no names appear, you can select **New** and create an involved party. For more information, see Create an involved parties record.
Involved parties	Any person involved with the evidence provided in the ER case. Click into the field and a list of involved parties appears. If no names appear, you have to create an involved party record. For more information, see Create an involved parties record.
Table	The table evidence is associated with. The default is the Employee Relations Case [sn_hr_er_case] table, but you can associate evidence to any table.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Parent	The parent case the evidence is related to. To associate a parent case, select the **Lookup documents using list** icon and select the table associated with the parent case. The default is the Employee Relations Case [sn_hr_er_case] table. Select the table and the associated case that is the parent case. **Note:** If you have a parent case and evidence is added to it, this field is pre-populated.
Evidence source type	Indicates if the evidence is an attachment or a URL. Select one of the following: ○ Attachment ○ URL If the evidence is an attachment, select **Browse** from Attachments on the right and attach the file. If the evidence is a URL, enter the URL in the **URL source** field.
URL source	Select the Edit this URL icon (and enter the URL. This field displays only when you select **URL** from the Evidence source type field.
Interview	The associated interview number. If you came from the interview record, the number automatically displays. If no interview number appears, click into the field and you can select one. For more information, see Interview Management.
Description	Description of the evidence.

10. Select **Save**.

HR Service Delivery Employee Relations accommodations

Accommodation requests are from your employees requesting changes related to their work situation.

Examples of accommodations are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Provide new equipment
- Job restructuring
- Leave
- Reader or interpreter services
- Reassignment
- Scheduling changes
- Workplace modification
- Workplace policies

You can associate an accommodation request with an HR case and start and end dates when the accommodation is temporary.

Agents can create more than one accommodation request per ER case. This is useful when an employee open an accommodation request for a single situation, but HR might have more than one classification for an accommodation. Some accommodation requests might require approval or have different start and end dates.

You can use HR service fulfillment types to define any workflow required to review, approve, and deliver accommodations like any HR case. For more information, see Configure an HR service.

Create accommodation types

Accommodation types help define and categorize accommodation requests.

Before you begin

Role required: sn_hr_er.config_manager

Note:
The base system provides accommodation types, but you can add more.

Procedure

1. Navigate to **All** > **Employee Relations** > **Accommodation Types**.
2. Select **New**.
3. Fill in the form.

Accommodation types form

Field	Description
Name	Name that describes the accommodation type.
Active	Indicates if the accommodation type is available and ready to use. **Note:** The base system provides accommodation types that you can use. The base system delivers these types as inactive. Ensure you select **Active** for the accommodation types you want to use

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Application	The scope application you are in when creating the accommodation type.

4. Select **Save** or **Submit**.

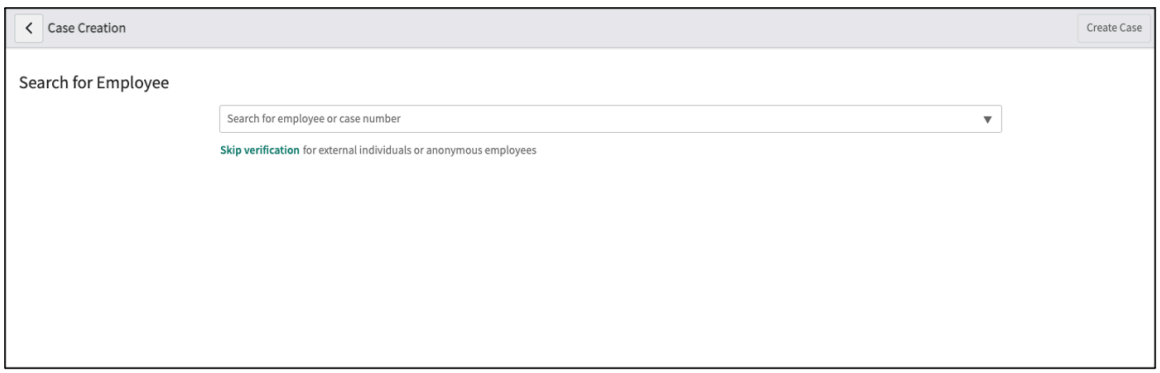
Using HR Service Delivery Employee Relations

Creating an HR Service Delivery Employee Relations (ER) case is similar to creating any HR case with some differences.

The process for working ER cases are:

- Create an ER case using the Core UI Case Creation form or the HR Service Delivery Agent Workspace Create a new case form.
- After case creation, add:
  - Involved Parties
  - Allegations
  - Interviews
  - Evidence
  - Corrective Actions
  - Accommodations

COE and HR service



HR Service Delivery supports the Employee Relations Case COE.

And it supports the following HR services: Report Misconduct and Accommodation Request.

Opened for is not an employee

When creating HR cases, you must identify an Opened for person. For ER cases, you are not required to identify the Opened for person.

If you are an HR agent and using the HR case form or Agent Workspace, select **Skip verification** from the Case Creation Search for Employee form

Related information

After opening an ER case, related information provides the details of an ER case and includes:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Allegations
- Involved Parties
- Interviews

Allegations

Allegations provide additional details about the misconduct and includes:

- Allegation type
- Description
- Involved parties

Involved Parties

As part of capturing important information about the misconduct, you can capture information about anyone involved. Information like the type of involved party. Is the involved party a:

- Witness
- Complainant
- Subject of allegation
- Other

Or, is the involved party a user in the system or not a user.

Interviews

Interviews from all related parties are important and captures the following information:

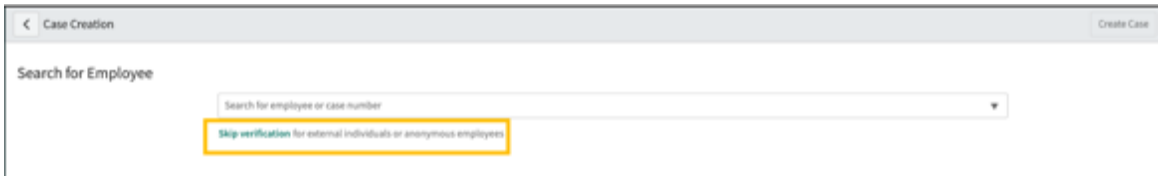
- The interview date
- Names of the interviewers
- Name of the person being interviewed
- Any people you want to link to the investigation
- Notes on the interview

Employee using Employee Center (EC) or Service Portal

When an employee creates an ER case from the Employee Center (EC) or Service Portal, the Opened for, Opened by, and Complainant are assigned to the employee.

Note:
A role is not required for employees to create an ER case.

- Agents that can work an ER case must have the HR ER case writer [sn_hr_er.case_writer] role.
- When creating an HR ER case, for employees that do not have the HR ER case writer [sn_hr_er.case_writer] role, the Opened for field does not appear.
- When an agent with the HR ER case writer [sn_hr_er.case_writer] role opens the case, the Opened for field does not appear.



Create an HR Service Delivery Employee Relations case using the legacy UI

You create ER cases for employees that wish to report misconduct, discrimination or a disciplinary issue.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_er.case_writer

Procedure
1. Navigate to **All** > **HR Case Management** > **Create New Case**.
2. From **Search for Employee or case number**, enter an employee name or click **Skip verification**.

Note:
Skipping verification enables you to create an ER case without identifying an Opened for person and takes you directly to case details.

Case Details form

Field	Description
COE	The **Center of Excellence** associated with the HR case you are creating. Currently, Employee Relations Case is the only COE available for ER cases. Selecting a COE filters the choices for HR service. See HR Centers of Excellence data model. **Note:** You can also select an HR service first and the associated COE automatically populates.
HR service	The HR service depends on the COE selected or what you select based on communication with the employee request. Select: ○ Accommodation Request ○ Report Discrimination ○ Report Misconduct ○ Performance improvement plan(PIP) HR services available to an employee filter by: ○ COE selected. ○ HR criteria for the **Subject person** based on the HR service configuration. Limit services filter on the **Case Creation Configuration** form. If the HR service field is empty, ensure that you did not remove the Opened for field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: **Bulk Parent Case** does not appear as a selection because it only appears when creating a parent case for child bulk cases. Refer to Add or modify bulk HR cases.
Opened for	The person the HR service request is for. **Note:** This field does not appear if you selected the **Skip verification** link. Click the **Lookup using list** icon to find a user. Use the choice list to search and select another employee. Click the **Reference field** icon to view or edit **HR profile** information. **Note:** Selecting the **Do Not Default Subject Person** HR Service Option for an HR service, prevents the **Subject Person** from automatically filling in when creating an HR case. For more information, see Configure an HR service.
Work notes	Information specific to the case that can help other HR agents. **Work Notes** are not visible to the **Opened for** subject. The sn_hr_core.restrict_guest_email system property allows a user to send an email from a personal email account referencing an HR case. When the property has a value of false (default), the text from the email appears in the Work notes field. To access system properties, enter `sys_properties.list` in the navigation filter. **Note:** Translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.

3. Click **Create Case** and the **Employee Relations Case** form appears with additional information about the case.
   The **COE** and **HR service** selected for the HR case determines the fields that appear.

Employee Relations Case form

Field	Description
Number	An HR case number is assigned and is a unique identifier, cannot be changed, and has an HRC prefix.
External opened for	The ER case was reported by somebody outside of your company.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Checking this box removes the following fields: ○ Opened for ○ Preferred contact method
Opened for	The person who is responsible for the HR service request. **Note:** Select **Skip verification** to create a case without verifying the employee or case number. ○ The person requesting the HR service. When you make an HR service request for yourself, the **Subject person** and **Opened for** person are the same. ○ The person requesting the HR service on behalf of an employee. For example, a manager requesting an HR service for a direct report. In this example, the manager (**Opened for**) made an HR request on behalf of an employee (**Subject person**). Use the choice list to search and select another employee. Click the **Reference field** icon to view or edit **HR profile** information.
Preferred contact method	The communication method the **Opened for** person (if applicable) prefers to be contacted. Select: ○ Not Specified ○ Personal Phone ○ Work Phone ○ Personal Email ○ Work Email
HR service	The HR service selected in the Case creation form.
Incident date	The date of the incident. If there are multiple incidents, select the date of the most recent incident.
Skills	The required skills of the person assigned to this category of HR case. Skills can auto-populate based on the HR case template associated with the HR service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
State	Status of the case. The state can auto-populate based on the HR case or task template associated with the HR service. ○ Draft: The default state for a case when it is first opened. **Note:** Can only be changed to Ready, Closed Complete, Closed Incomplete, Cancelled, or Suspended. ○ Ready: The case is ready to be worked on. ○ Closed Complete ○ Closed Incomplete ○ Cancelled ○ Suspended: Use to temporarily prevent violation of a service level agreement (SLA). Refer to Suspend and resume an HR case.
Priority	The priority that the incident needs resolution. Use impact and urgency to determine the priority.
Source	The reporting method the incident
Opened	The date and time the ER case was created.
Opened by	The person who created the ER case.
Assignment group	The group the ER case is assigned to. If the group is not set automatically, assign an HR group to provide a selection of HR users in the **Assigned to** field. For automatic assignment, refer to HR Service Delivery Employee Relations assignment rules.
Assigned to	The user assigned to work on this case. When a group is automatically assigned, a user from the group is automatically assigned when the case is created. If the user is not auto-assigned, click the **Lookup using list** icon to select a user who is a member of the selected assignment group. To change the **Assigned to** HR agent, the agent must be a member of the Assignment group.
Collaborators	Agents or interested parties you want to associate with the case. Collaborators can

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	track and stay up-to-date on the progress of the ER case. If an ER case transfers from the assigned to agent to another agent, the original assigned to agent can add themselves as a collaborator and still monitor the case. By having visibility to the case, collaborators can also help the assigned to agent with the case. Other factors: ○ Collaborators can remove themselves from the case. ○ The Assigned to agent can add or remove collaborators. ○ Collaborators cannot add or remove collaborators. ○ Notifications are sent to the collaborators when added to the ER case. Collaborators and the COE for the HR case can conflict. The basic rules are: ○ For all HR cases, collaborators override any security on a COE. For more information, see Create COE security. ○ Employee Relations (ER) cases can override collaborators when restrictions apply. For more information, see Configure an employee relations case restriction. **Note:** Agents must have the ER case writer [sn_hr_er.case_writer] role in order to be a collaborator.
Watch list	Interested parties that can view all updates and receive notifications for the ER case.
Short description	Populates from the HR service. After the case is created, you can modify the description.
Description	A longer, detailed description after the ER case is created. Use the Rich Text Format (RTF) tools to format your text. Rich text formatting also appears for a case or task description on the Employee Center or service portal.

The following buttons appear:

Discuss

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Option to begin a sidebar discussion on the case by adding the required participants.

Follow

Option to get notified of any comments or work notes on the case, according to your notification settings.

Update

Option to update the case.

Ready for work

Option to change the status of case to Ready for work.

Cancel

Option to cancel the case.

Delete

Option to delete the case.

The following embedded lists appear:

Fulfillment Instructions

Information on how to complete the case. This information is defined in the HR Service configuration.

A checklist outlining the exact steps to complete appears when configured by the HR service. See Configure an HR service.

Comments and Work Notes

Comments or work notes that provide details about the case. **Work notes** are not visible to the **Subject person**.

> **Note:**
> Translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.

Related Links

The following appear dependent on the type of case and roles associated with the user:

- Add Task: Task you want to add to the case. Refer to Add an HR task to an HR case.
- Show SLA Timeline: The SLA in timeline format that shows elapsed time.
- Repair SLAs: Click to repair any service level agreements associated with the case.

Involved Parties

People associated with the ER case. Involved parties can be the complainant, subject of the allegation, a witness, or other (undefined). For more information, see Create an involved parties record.

Allegations

Information that further defines an employee relations case. For more information, see Create an allegation record for HR Service Delivery Employee Relations in the legacy UI or Agent Workspace.

Interviews

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Interview record for an involved party. For more information, see Schedule an interview in HR Service Delivery Employee Relations using the legacy UI.

Evidence

Evidence to support the ER case. For more information, see Evidence Management for Employee Relations.

Corrective Actions

Information about the resolution and any associated corrective actions after an investigation related to the ER case. For more information, see Create a corrective action in HR Service Delivery Employee Relations in the legacy UI or Agent Workspace.

Attached Knowledge

List of knowledge articles attached to the HR service type. For more information, see HR Knowledge Management.

Approvers

Lists employees that can approve changed information or the case, state of approval, comments, and associated dates. For more information, see Resubmit an HR case for approval.

> **Note:**
> To reject an approval, users should have the HR case writer [sn_hr_core_case.writer] role.

Child Cases

Lists child cases for the current case.

ER Cases for Involved Parties

Lists other ER cases for the involved parties of the ER case.

Create an HR Service Delivery Employee Relations case using Agent Workspace

You can use HR Service Delivery Agent Workspace to create ER cases for employees that wish to report misconduct, discrimination, or a disciplinary issue.

Before you begin

Role required: sn_hr_er.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. To create a new ER case, select the **Add** icon.
3. Select **HR Case**.
4. Search for an employee or case number, or select the **Skip verification** link if the subject person is external or wants to remain anonymous.
5. Fill in the form.

ER Case form

Field	Description
COE	The **Center of Excellence** associated with the HR case you are creating.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Currently, Employee Relations Case is the only COE available for ER cases. Selecting a COE filters the choices for HR service. See HR Centers of Excellence data model. **Note:** You can also select an HR service first and the associated COE automatically populates.
HR Service	After selecting **Employee Relations Case** from the **COE** field, select one: ○ Accommodation Request ○ Report Discrimination ○ Report Misconduct **Note:** You can use the Skip verification feature when creating a Report Misconduct case. For more information, see Using HR Service Delivery Employee Relations. ○ Performance improvement plan(PIP) Limit what HR services are available to an employee by filtering: ○ COE selected. ○ HR criteria for the **Subject person** based on the HR service configuration. Limit services filter on the **Case Creation Configuration** form. If the HR service field is empty, ensure that you did not remove the Opened for field. **Note:** **Bulk Parent Case** does not appear as a selection because it only appears when creating a parent case for child bulk cases. Refer to Add or modify bulk HR cases.
Opened for	The person the ER case was opened for. You can enter letters or numbers to search for possible hits.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	If the person wants to remain anonymous or is outside of your company, you can leave this field blank.
Subject person	The person the ER case is about.
Work notes	Details about the ER case. **Note:** Interviews are under the **more** tab.

6. Select **Create case**.
   The case returns with a **Case Timeline** that provides a visual of all tasks and key milestones and dates related to the case. The **Case Timeline** helps agents visualize and navigate the key investigation activities on a case and quickly understand the history and what still needs to be done. A **Show Legend** drop-down also appears to show or hide the number of events scheduled or conducted and the associated date.

   Below the **Case Timeline** are a number of tabs that you can provide additional information about the case.

   Note:
   Closed and completed events could still appear on the timeline, but not necessarily in the related tabs.

   The **Related Items menu** shows a series of tabs you can use to add information about the ER case.

   Details

   Workplace case information entered by the requester for the ER case.

   Involved Parties

   People associated with the ER case. Involved parties can be the complainant, subject of the allegation, a witness, or other (undefined). For more information, see Create an involved parties record.

   Allegations

   Information that further defines an employee relations case. For more information, see Create an allegation record for HR Service Delivery Employee Relations in the legacy UI or Agent Workspace.

   Interviews

   Interview record for an involved party. For more information, see Schedule an interview in HR Service Delivery Employee Relations using the legacy UI.

   Evidence

   Evidence to support the ER case. For more information, see Evidence Management for Employee Relations.

   more

   Select to view the following:

   - Corrective Actions: Information about the resolution and any associated corrective actions after an investigation related to the ER case. For more information, see Create a corrective action in HR Service Delivery Employee Relations in the legacy UI or Agent Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Attached Knowledge: List of knowledge articles attached to the HR service type. For more information, see HR Knowledge Management.
- Approvers: Lists employees that can approve changed information or the case, state of approval, comments, and associated dates. For more information, see Resubmit an HR case for approval.

  Note:
  To reject an approval, users should have the HR case writer [sn_hr_core_case.writer] role.

- Child Cases: Lists child cases for the current case.
- ER Cases for Involved Parties: Lists other ER cases for the involved parties of the ER case.
- Allegation Outcomes: Shows allegations and results.

Create an involved parties record

Capture information about people associated with the ER case. Involved parties can be the complainant, subject of the allegation, a witness, or other (undefined).

Before you begin

Role required: sn_hr_er.case_writer

Procedure

1. **Optional:** Navigate to the **Involved Parties** tab in legacy UI.
   a. Navigate to **All** > **Employee Relations** > **Cases**.
   b. Select an ER case.
   c. Scroll down to the related list and select the **Involved Parties** tab.
   d. Select **New**.
2. **Optional:** Navigate to the **Involved Parties** tab in Agent Workspace.
   a. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
   b. Select the **Lists** icon ( ).
   c. Select an ER case.
   d. Select the **Involved Parties** tab.
   e. Select **New**.
3. Fill in the form.

Involved Party form

Field	Description
HR case	The HR employee relations case number from the case you selected.
Type	The type of involved party. Select: ○ Complainant (the person or group that makes a complaint). ○ Subject of allegation

Field	Description
	○ Witness ○ Other
Not in system	Option for indicating the involved party is not an employee of your company. **Note:** When you check this box, the Name field replaces the User field.
User	The person who is the involved party. Only appears when you don't check the **Not in system** box.
Name	The name of the involved party. Only appears when you check the **Not in system** box.

4. Click **Submit** or **Save**.
   - If you select **Save**, the **Interviews** and **Corrective Actions** tabs appear. For more information, see Schedule an interview in HR Service Delivery Employee Relations using the legacy UI.
   - Use the **Corrective Actions** tab to create and associate a corrective action record with an involved party.
   - If an allegation record is created, the Subject of Allegation is auto-populated from the Involved Parties record of type **Subject of Allegation**, provided that only one subject of allegation exists.

Create an allegation record for HR Service Delivery Employee Relations in the legacy UI or Agent Workspace

Use Allegations to provide additional details for an ER case.

Before you begin
Role required: sn_hr_er.case_writer

Procedure
1. **Optional:** Navigate to the **Allegations** tab in legacy UI.
   a. Navigate to **All** > **Employee Relations** > **Cases**.
   b. Select an ER case.
   c. Scroll down to the related list and select the **Allegations** tab.
   d. Select **New**.
2. **Optional:** Navigate to the **Allegations** tab in Agent Workspace.
   a. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
   b. Select the **Lists** icon ( ).
   c. Select an ER case.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. Select the **Allegations** tab.

e. Select **New**.

3. Fill in the form.

Allegation form

Field	Description
HR case	The HR case number associated with the allegation.
Allegation type	The allegation type describing the ER case. Allegation subtypes further describe an allegation. Allegation types are: ○ Customer Mistreatment ○ Discrimination ○ Drugs and Alcohol ○ Fraud and Theft ○ Harassment ○ Interpersonal Conflict ○ Misconduct ○ Retaliation ○ Wage and Scheduling ○ Workplace Violence
Allegation subtype	Further describes an allegation type. Your choice of allegation subtype is dependent on what you select for allegation type.
Description	Details about the allegation.

4. Click **Save** or **Submit**.
   If an Involved Parties record of type **Subject of Allegation** exists, the Subject of allegation field in the allegation record is auto-populated, provided that only one subject of allegation exists.

Create a corrective action in HR Service Delivery Employee Relations in the legacy UI or Agent Workspace

Create a corrective action record for an ER case.

Before you begin

Role required: sn_hr_er.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Create a corrective action using one of the following options:

Corrective action options

UI	Steps
From the legacy UI	a. Navigate to **All** > **Employee Relations** > **Cases**. b. Select an ER case. c. Scroll down to the related list and select the **Corrective Actions** tab. d. Select **New**.
From the Agent Workspace for HR Case Management UI	a. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**. b. Click the **Lists** icon ( ). c. Select **Other**. d. Select **Employee Relations Cases**. e. Select an ER case. f. Select **More tabs**. g. Select the **Corrective Actions** tab. h. Click **New**.

2. Fill in the form.

Corrective Actions form

Field	Description
Number	The number identifying the corrective action record. The system automatically assigns the corrective action numbers and you cannot change it.
HR case	The HR ER case number associated with the corrective action. **Note:** If you access corrective actions from an HR ER case, the number automatically appears.
Involved party	The person the corrective action is for. Click the Lookup using list icon and select from the list.
Corrective action type	The corrective action for this ER case. Select from the list:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Verbal warning ○ Written warning ○ Suspension ○ Termination
Status	The status of the corrective action. ○ Draft ○ Ready ○ In progress ○ Completed
Discussion date (yyyy-MM-dd)	Select the date of the corrective action discussion.
Discussion held by	The lead user of the corrective action discussion. Click the Lookup using list icon and search for the person who led the discussion.
Also present	Identifies other people that were part of the discussion. Click the **Add me** icon to add yourself or the **Unlock additional parties** icon to add yourself or other people.
Due date (yyyy-MM-dd HH:mm:ss)	The date and time the corrective action is complete.
Description	Notes and information on the corrective action meeting.

3. Click **Save** or **Submit**.

HR Service Delivery Employee Relations dashboards

The HR Service Delivery Employee Relations dashboards provides visual reports that give you statistics on ER cases.

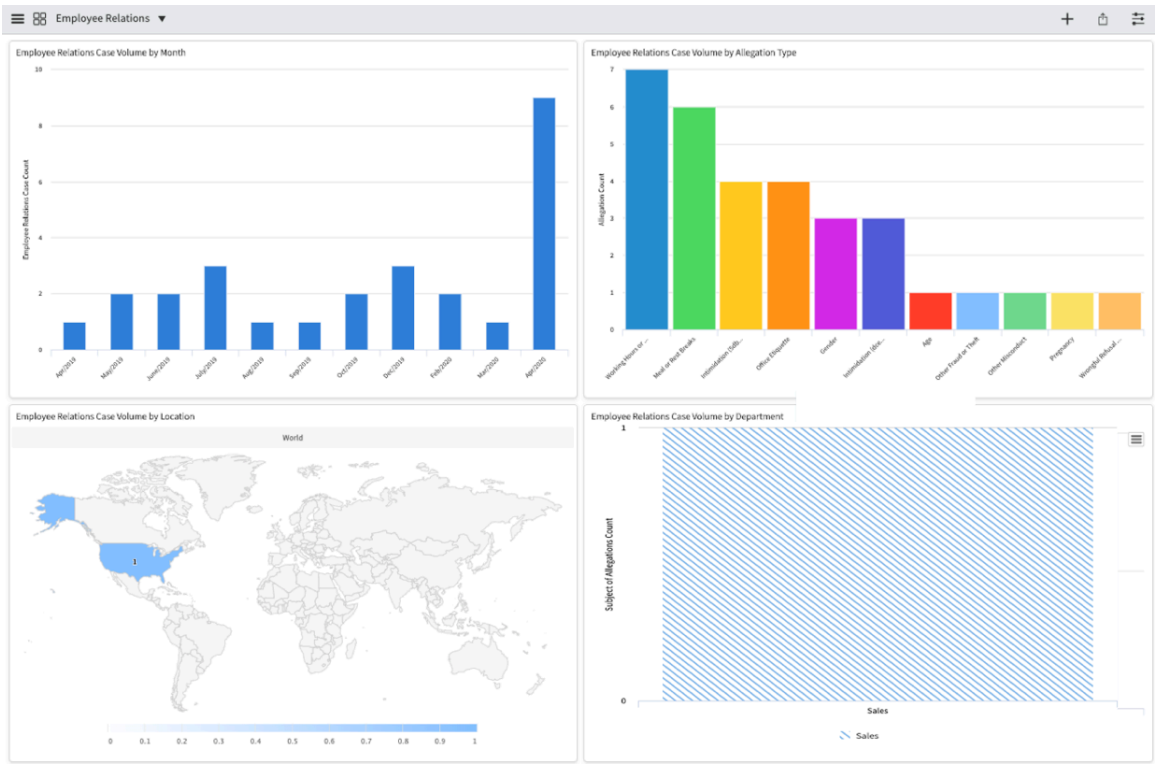
There are four (4) sections that provide information:

Employee Relations Case Volume by Month

A bar chart showing the number of ER cases per month and year. Click a bar and the Employee Relations Cases list appears.

Employee Relations Case Volume by Allegation Type

A bar chart showing the number of ER cases by Allegation Subtype. Click a bar and the Allegations list appears.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Relations Case Volume by Location

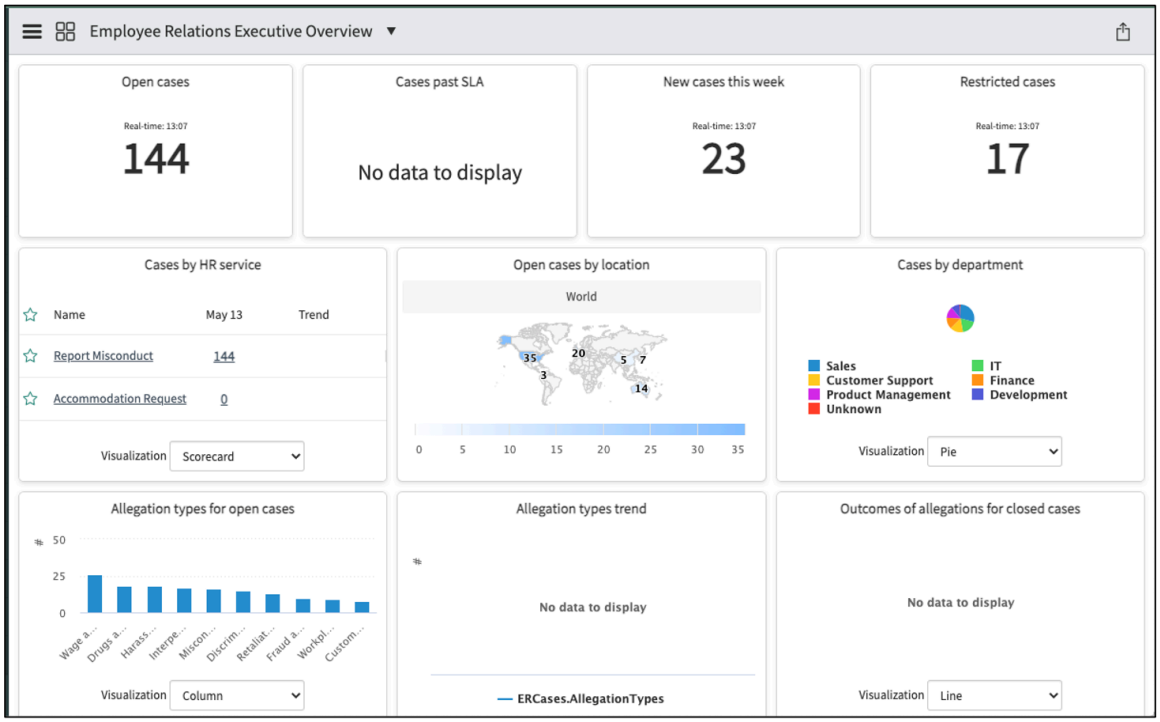
Map showing the number of ER cases per geographic region. Click the country and a detailed view appears.

Employee Relations Case Volume by Department

Shows the number of ER cases by company department. Click the image and the Involved Parties list appears.

Employee Relations Performance Analytics Executive Overview

The HR Service Delivery Employee Relations (ER) Performance Analytics (PA) dashboard provides you with historical trends, data comparisons.



You must activate the Performance Analytics - Content Pack - Human Resources: Employee Relations Scoped App plugin.

The HR ER PA dashboard provides timely information for the following:

Executive overview

Provides data on trends or areas of concern that are emerging and require a deeper analysis in order to create proactive strategies.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Case analysis

Provides case metrics and goals for ER agents and teams. Having this information can also help your ER teams plan their workload based on volume trends and the details on case data. This section provides:

- The number of open ER cases from the current time and date.
- The number of cases that have exceeded their Service Level Agreement (SLA).
- The number of cases created for the week from the current time and date.
- The number of restricted ER cases created from the current time and date.

Investigation analysis

ER investigation leaders need to understand the quality of service in an ER investigation and be able to identify trends beyond individual cases. Comparing cases and trends in allegation data are important in this area. This section provides:

- The number of ER cases by HR service. You can change how the data is displayed using the **Visualization** list.
- The number of ER cases by geographical location.
- The number of ER cases by department. You can change how the data is displayed using the **Visualization** list.
- The number for each allegation type for open cases. You can change how the data is displayed using the **Visualization** list.
- Data trends by allegation type.
- The number of closed cases by allegation outcome.

Performance Improvement Plan (PIP) service

Manage employee performance issues within Employee Relations using the Performance Improvement Plan (PIP) service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Organizations handle employee performance issues in close coordination with HR teams, Employee Relations teams, and/or Legal teams. Proper processes must be followed and appropriate documentation and communication must be maintained.

With this feature, a manager can:

- Initiate a PIP case for an employee and involve the Employee Relations advisory to handle and support the PIP case more efficiently.
- Track the progress of tasks and take the necessary action — Structured workflow (with a life cycle event) auto-initiates tasks for a manager, an employee, and an Employee Relations (ER) agent.

PIP workflow

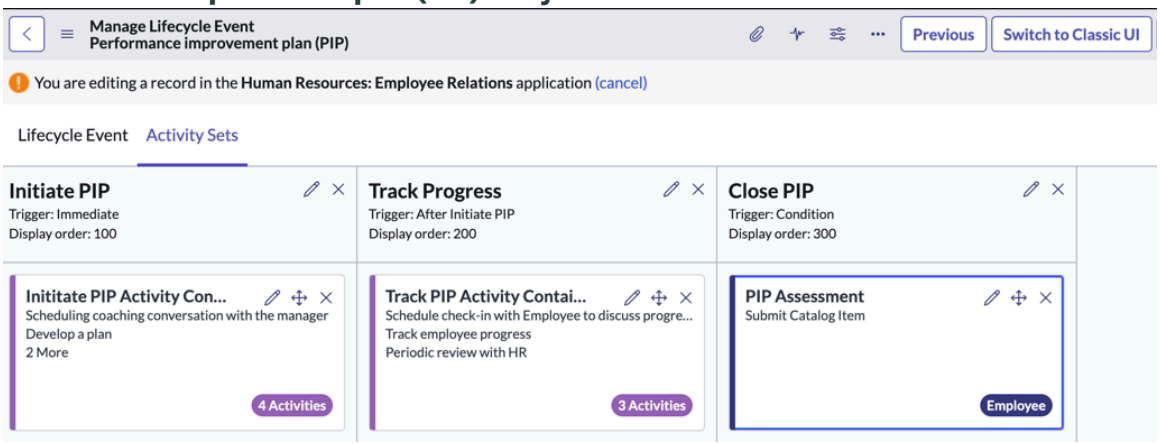
Use case explaining how a manager, an employee, and an ER agent can work together on Performance Improvement Plan.

- A manager initiates a PIP request for an employee to have structured conversations with the employee on performance improvement, and have an agreed course of action with the ER department.
- A PIP case is automatically created and assigned to an ER agent. A Performance Improvement plan (PIP) life cycle event is triggered and tasks are automatically created for the manager, employee, and ER agent in the order specified (sequential or parallel).
- The employee and the manager receive tasks for signing the PIP acknowledgment forms.
- The manager schedules a coaching conversation with the employee and develops a plan for the employee, which is reviewed by the ER agent.
  - Aligns PIP goals with the employee and tracks the progress of the employee on a regular basis.
  - Conducts periodic reviews with the ER agent to evaluate employee progress.
  - Submits the PIP assessment indicating whether the PIP is successful or unsuccessful. See Complete PIP assessment.

Configure a PIP lifecycle event

After a PIP request is initiated by a manager, a structured workflow (a predefined lifecycle event) auto-initiates tasks for a manager, an employee, and an ER agent.

Before you begin



- Role required: admin
- Install the Human Resources Scoped App: Employee Relations, and Enterprise Onboarding and Transitions plugins.
- Activate the HR Taxonomy, and Document Templates applications from ServiceNow Store.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.
2. Open the Performance Improvement plan (PIP) life cycle event with predefined activity sets and activities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Performance Improvement plan (PIP) lifecycle event

3. Configure the activity set and activities as per your business use case.

Initiate a PIP request

Initiate a PIP request for your employee. Have structured conversations with your employee on performance improvement, and have an agreed course of action with HR or the Employee Relations department.

Before you begin

- Role required: admin
- Install the Human Resources Scoped App: Employee Relations, and Enterprise Onboarding and Transitions plugins.
- Activate the HR Taxonomy, and Document Templates applications from ServiceNow Store.

Procedure

1. Navigate to **All** > **Employee Center**.
2. Click the **HR** topic.
3. Select the **Employee Conduct** tile or the **Career Development** tile.
4. Click the **Start a Performance Improvement Plan (PIP)** request.
5. On the form, fill in the fields:

Start a Performance Improvement Plan (PIP)

Field	Description
Employee name	Employee for whom you are initiating the performance improvement plan. **Note:** You will be able to select an employee only if you are added as the manager in the HR profile of the employee.
PIP start date	Start date for initiating PIP tasks.
PIP end date	End date for completing PIP tasks.
Reason for PIP	Reason for initiating PIP for the employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Areas of improvement	Areas in which you want the employee to perform well.

6. Click **Submit**.

What to do next
A PIP case is created and assigned to an ER agent. The (PIP) life cycle event is triggered and tasks are auto-initiated for the manager, the employee, and an ER agent.

Acknowledge a PIP request

Acknowledge the PIP request that is initiated by your manager. Complete other tasks that have been assigned to you.

Before you begin
Role required: none

Procedure

1. Navigate to **All** > **Employee Center** > **My tasks**.
2. Sign the PIP acknowledgement form that is sent by your manager.
3. Complete the other PIP tasks as and when they are assigned to you.

Complete PIP assessment

As a manager, complete the PIP assessment indicating whether the PIP is successful.

Before you begin
Role required: none

Procedure

1. Navigate to **All** > **Employee Center**.
2. Complete the PIP assessment task.
3. If the PIP is successful:
   a. Select **Yes** from the PIP successful list.
   b. Click **Submit**.
4. If the PIP is unsuccessful:
   a. Select **No** from the PIP successful list.
   b. From the PIP extended list, select **Yes** to indicate the extension date, or select **No** if you do not want to specify an extension date.
   c. Click **Submit**.

What to do next
When the PIP is marked unsuccessful, a PIP assessment case is created for the ER agent. The ER agent and the manager can discuss the next course of action for the employee.

Analytics and Reporting Solutions for Employee Relations

Analytics and Reporting Solutions contain prepackaged Performance Analytics content for use with other ServiceNow AI Platform products. This Analytics and Reporting Solution provides you

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

with historical trends and data comparisons for Employee Relations to assess organizational performance.

Required roles

The following roles and tasks are associated with this Solution:

- ServiceNow AI Platform administrator (admin): Install and activate this Analytics and Reporting Solution and make any necessary changes to system properties.
- Performance Analytics administrator (pa_admin): Review the indicators, breakdowns, widgets, and dashboards. Set up and start data collection. Share the dashboards with appropriate stakeholders.
- HR Service Delivery Employee Relations case reader (sn_hr_er.case_reader): Grants access to read all HR ER cases and the Employee Relations Executive Overview.

Related topics

Analytics and Reporting Solutions

Activate the Analytics and Reporting Solution for Employee Relations

Activate the content pack plugins for the Analytics and Reporting Solution.

Before you begin

Activate the full, subscription version of Performance Analytics on the instance where you are activating this Platform Analytics Solution. You can activate Performance Analytics on a non-production instance without purchasing a subscription. For more information, see Activate your Performance Analytics subscription.

Role required: admin

About this task

Activate the following plugins prior to activating the Performance Analytics - Content Pack - Human Resources: Employe Relations Scoped App [com.sn_hr_employee_relations_pa] plugin:

Plugins for HR ER PA

Plugin	Description
Human Resources Scoped App: Core [com.sn_hr_core]	Enables you to standardize the documentation, interaction, and fulfillment of employee inquiries and requests. **Note:** Employee relations require activation of this plugin, but is a separate scope.
Performance Analytics - Content Pack - Human Resources Scoped App [sn_hr_employee_relations_pa]	Measures key performance indicators to track HR performance over time.
Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations]	Enables you to easily manage employee relations and investigations cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **System Applications** > **All Applications** > **All**.
2. Search for `Human Resources Scoped App: Employee Relations [com.sn_hr_employee_relations]`.
3. Install the application.
4.

Configure the Analytics and Reporting Solution for Employee Relations

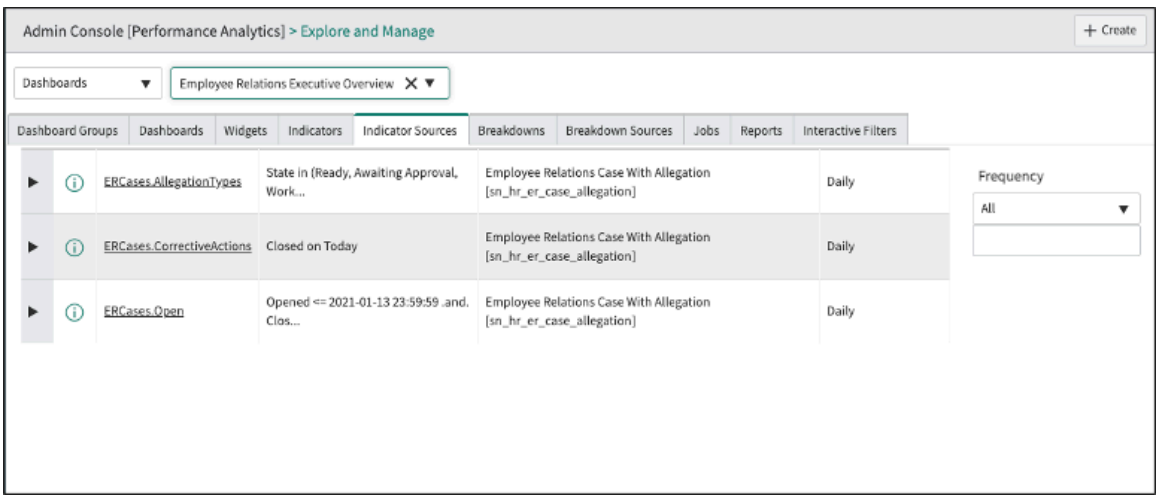
Run diagnostics, review and customize components, and start collecting data.

Before you begin

A ServiceNow AI Platform administrator must have installed the content pack plugins or ServiceNow Store application for this Platform Analytics Solution.

Role required: pa_admin

Procedure



1. Run diagnostics on all records.

   These diagnostics can catch many mismatches between the configuration of your Platform Analytics Solutions and your tables. For more information, see Performance Analytics diagnostics.
2. Navigate to **All** > **Performance Analytics** > **Administration Console**.
3. Select the **Dashboards** link in the **Explore and Manage** tile.
4. Verify the Employee Relations Executive Overview dashboard that are installed with this Platform Analytics Solution.
5. Open the **Indicator Sources** tab.
6. For each dashboard included in this Platform Analytics Solution:

   a. Filter the indicator sources on the dashboard name.

   Example

   Here you see the indicator sources filtered on the Self-Service Analytics dashboard from the Employee Relations Executive Overview.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. Review the facts table, conditions, and frequency of the indicator sources compared to the data structure on your own instance.

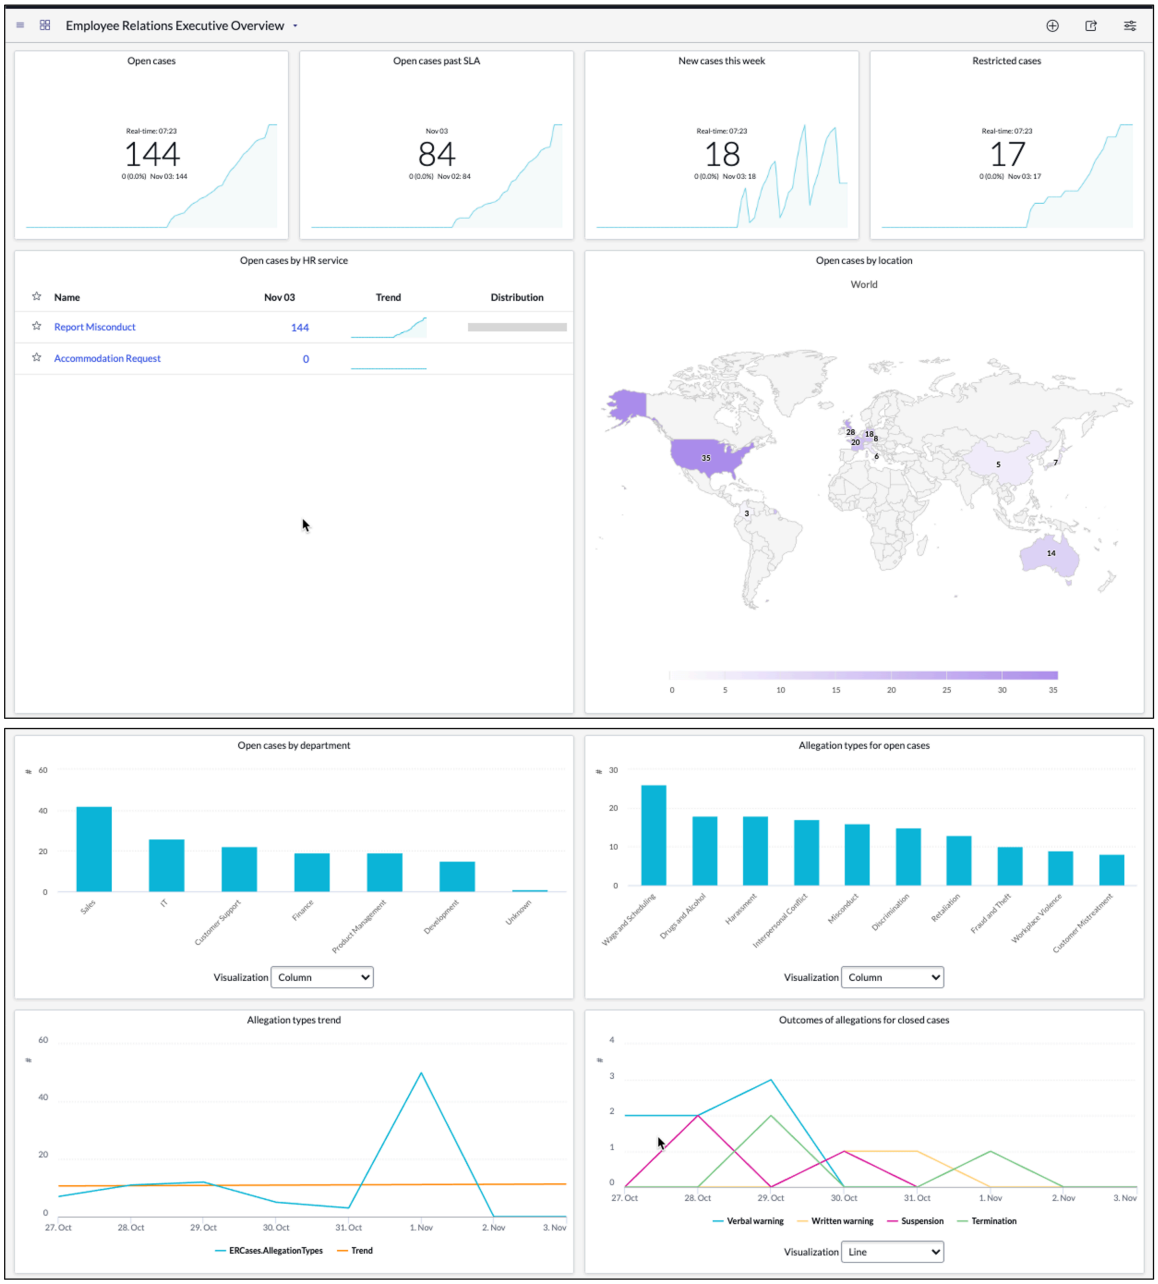
> **Important:**
> Pay particular attention to time stamp fields such as Resolved or Created that are referenced in the **Conditions** field. You may need to use different time stamp fields.

c. If necessary, open an indicator source and make corrections.

d. If you are editing an indicator source record, go to the Indicators related list and review the **Conditions** field for each indicator.

Changing the indicator source can also affect the additional conditions on the individual indicators.

7. If you changed the time field stamps in any indicator sources, then change any related Performance Analytics scripts.



For more information, see Update Performance Analytics scripts.

8. Open the Breakdown Sources tab.
9. For each dashboard included in this Platform Analytics Solution:
   a. Filter the breakdown sources on the dashboard name.
   b. Review the conditions on the breakdown source as described in Review the breakdown sources.
10. Navigate to **All** > **Performance Analytics** > **Jobs**.
11. Set up and run the historical job for this Analytics and Reporting Solution, *ERCases.HistoricalDataCollection*.
    Follow the procedure in Run historical data collection for a Platform Analytics Solution.
12. Edit and activate the scheduled data collection job for this Analytics and Reporting Solution, *ERCases.DailyCollection*.
    Follow the procedure in Schedule data collection for a Platform Analytics Solution.

Employee Relations Executive Overview dashboard

The Employee Relations Executive Overview dashboard provides you with high level data on Employee Relations cases and detailed information on the types of ER cases, locations, cases by HR service and department, and trends.

Reports

Reports in Employee Relations Executive Overview dashboard

Title	Type	Source table	Description
Open cases	Real-time Score	Employee Realtions Case [sn_hr_er_case] table	The total number of open ER cases.
Open cases past SLA	Latest Score		The number of open ER cases that have passed the Service Level Agreement (SLA)
New cases this week	Real-time Score		The number of new ER cases for the current week.
Restricted cases	Real-time Score		The number of ER cases that are classified as restricted. For more information, see HR Service Delivery Employee Relations case restrictions.
Open cases by location	Map	Employee Realtions Case [sn_hr_er_case] table	Provides the number of open ER cases by geographical location. This data can help you recognize trends or you can use it for data comparisons. The location represents the location of the Opened for users at the time the case was opened.
Open cases by HR service	Scorecard		Shows the number of open ER cases by date for each HR service (with link) and a trending graph.
Open cases by department	Column (default)		Shows the number of ER cases for each department within your company.
Allegation types for open cases	Column (default)		The number of open ER cases for each allegation type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Reports in Employee Relations Executive Overview dashboard (continued)

Title	Type	Source table	Description
Allegation types trend	Line Chart		Provides the number of ER cases by allegation type by date. It also shows a trend line that indicates if cases are going up, down, or staying neutral.
Outcomes of allegations for closed cases	Line Chart		Shows the number and corrective actions associated with a closed ER cases by allegation.

Employee Relations integration with Universal Request and Legal Investigations

Employees can submit complaints through the Employee Center portal without worrying about who should investigate the complaint. During the triaging or investigation process, fulfillers working on these issues can transfer them back and forth between the Legal and HR departments as necessary for resolution.

Better together solutions

Use Legal Investigations and HR Service Delivery Employee Relations with Universal Request together for the following key features:

- Omni-channel modes for submitting complaints via the Employee Center portal, and Anonymous Report Center (ARC) portal.
- Single triaging queue for all complaints through Universal Request.
- Inter-departmental transfer of case details between Legal Service Delivery Legal Investigations and HR Service Delivery Employee Relations.

Complete the necessary configurations to start using the integration. See Set up Legal Investigations with HR Service Delivery Employee Relations.

Integration workflow

Use case explaining how routing agents, legal fulfillers, and HR agents can use the applications (Legal Investigations, Employee Relations and Universal Request) together to resolve complaint requests submitted by employees.

1. Employees who observe an ethical violation or similar incident report it by submitting a universal request. See Submit a complaint through the Quick Link in Employee Center.

   Alternatively, an ethics compliance ticket can be raised via Anonymous Reporting Center.

2. A universal request routing agent can triage these complaint requests and create tickets for the appropriate department to work on. An HR case can be created from a universal request with COE as Employee Relations Case, and HR Service as Report Misconduct. See Create an HR case from Universal Request.
3. An HR agent who is assigned the ticket can work on it and close it, transfer it to another department, or transfer to the universal request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. When a ticket is transferred from the HR department to the Legal department, the details in the HR ticket (description, short description, comments, attachments, and underlying data of the investigation such as involved parties, allegations, interviews, and evidence) are copied to the legal ticket. See Transfer an HR case in Universal Request.

   The HR ticket is closed and a legal ticket is created which is handled by a legal agent.

HR Profile

The HR Profile application stores confidential employee data, such as name, personal contact information, email addresses, employment history, and contacts, in the scoped version of HR.

HR Profile enables the organization to access and track employee information throughout the period of employment and beyond. HR profile records are associated with user records, but unlike user records, HR profile records are stored confidentially and are not publicly viewable.

Organizations can use an integration method to populate or synchronize HR profile records from their employee database.

The fields that are editable by employees are defined in **HR Properties** under **HR profile fields editable by users**. See HR properties.

HR profile editable field configuration

An option in Human Resources Configuration provides a list of HR profile fields that can be enabled for edit. Understand the difference between how the personal and the employment information fields are updated in the HR profile based on this configuration.

Typically, organizations allow employees to update certain personal information, but not sensitive and employment information. HR agents or managers change this information. For example, employees can change their home address and personal email address, but the manager must update the position when the employee is promoted.

Note:
Use the configurable allow list to add fields that users can modify themselves. This allow list is a system property and accessed by going to **All** > **HR Administration** > **Properties**. The list of user editable fields appears as comma separated list. The property name is **sn_hr_core.hr_profile_editable_fields**.

For more information about adding or modifying HR profiles, see Add or modify an HR profile

The **HR profile fields that users or managers can edit without HR approval include <number of fields>** option in Human Resources Configuration provides the list of editable HR profile fields. The following list of fields indicates which of the configurable fields contain personal and which contain sensitive and employment information.

Configurable fields

Personal information fields	Sensitive and employment information fields
• Home address • Home city • Home country • Home phone • Home state/province • Home zip/postal	• Date of birth • Department • Employee number • Employment end date • Employment start date • Employment type

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configurable fields (continued)

Personal information fields	Sensitive and employment information fields
• Middle name • Personal email • Personal mobile phone • Prefix • Work email • Work mobile • Work phone	• Ethnicity • First name • Gender • Last name • Location • Location type • Manager • Nationality • Notice period • Place of birth • Position • Probation end date • Probation period • Time type

In the configuration option field list, all the personal information fields are enabled for edit by default. All employees can open their HR profile from the HRSM Portal and update these fields. If you do not want to allow employees to update one or more of these fields, disable editing by clearing the check box in the configurable list. For example, you do not want employees updating their work email address or phone number.

ACLs control the HR profile personal information fields, which can be modified for more controlled access.

You must have the **sn_hr_core.secure_info_reader** role to view the Social Security field on an HR profile. This role is contained in the **sn_hr_core.manager** role.

The employment information fields that you enable for edit allows a manager to update the field. However, the manager cannot open an employee HR profile. The manager must submit an employee information change request with the updated information. When the request to change the editable fields is submitted, the HR Employee Change Workflow takes the following actions.

- Opens an HR case.
- Updates the employee HR profile.
- Closes the HR case.

To update any HR profile fields that are not editable, employees or their managers submit an employee information change request. An HR case is created and the HR Employee Change Workflow is started. The workflow requires that the change request is approved. When it is approved, the fields are updated and the HR case is closed.

At a Glance panel in Agent Workspace for HR Service Delivery

The fields that appear on the **At a Glance** panel in Agent Workspace for HR Service Delivery are dependent on what fields appear in an HR profile.

Note:
Fields with no data on the HR profile do not appear in the **At a Glance** panel.

If you want additional fields to appear on the **At a Glance** panel, see Configuring the form layout.

Related topics

HR Profile

HR profile and HR case security

Because HR profile information is sensitive and confidential, the System Administrator [admin] cannot view it. The same is true for some of the information in HR cases and HR tasks.

Note:
The preceding statement applies only when you complete the steps in Remove HR Administrator role from IT System Administrators.

HR profile information is confidential and viewed only by authorized HR personnel who are assigned a role that includes sn_hr_core.profile_reader or sn_hr_core.profile_writer, such as sn_hr_core.secure_info_reader.

For HR cases and HR tasks, only authorized HR personnel are allowed to view attachments, work notes and comments, description, calendar, and payload (configurable). Authorized HR personnel are assigned a role with sn_hr_core.case_reader and sn_hr_core.case_writer, such as sn_hr_core.secure_info_reader.

HR administrators [sn_hr_core.admin] will be able to perform all tasks and view all data.

HR profile information that system administrators can access

System Administrators cannot create an HR profile. They can see the list of HR profiles and open HR profile records, but only have access to the following information.

- The HR profile number and prefix of an employee.
- Employment information that is synchronized with the user record [sys_user]. This information includes name, employee number, department, manager, and location.
- Work contact information, such as work email address and work phone number. Personal information is hidden.
- Information that appears in the following related lists.
  - Employment Information
  - Contact Information
  - Beneficiaries
  - Who is Covered
  - Emergency Contacts
  - Direct Reports
  - Colleagues
  - Cases

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR case and task information accessible by HR Administrators

HR Administrators can view the employee user information, such as location and department, and the short description. Activities, such as state changes, are displayed in the activity stream, but comments and work notes are hidden. System Administrators cannot view this information.

When the HR Administrator opens an HR case or HR task, a message describes the information that is not displayed.

An HR case can be created from an HR profile. Click **Create New Case** under **Related Links** and **Case Creation** appears.

Impersonating a user

You can prevent a user from accessing HR information by impersonating a user that has HR access by using the **If true, ACLs check if the user is being impersonated.** property.

- Navigate to **HR Administration** > **Properties**.
- Scroll to **If true, ACLs check if the user is being impersonated.**
- Check **Yes** (true) to enable ACLs to check when a user is impersonating another user and prevent the user from viewing HR information.

  COE security policies are a way to easily restrict access to different COEs via configuration. The underlying COE security policy implementations are ServiceNow ACLs.

- Even if the logged in user has HR access and impersonates another HR user with the same access, HR information is not visible.

> **Note:**
> This property was introduced for the HR Service Delivery scoped application and not applicable to the HR Services Delivery Non-scoped application.

See Add field security in HR.

See Restricted caller access for HR.

See Manage HR roles.

Customized profile information

As part of designing the HR processes, you can customize the way HR profile information is processed. Keep in mind that some of the fields that appear are referenced from the User [sys_user] table.

If you have the sn_hr_core.admin role, you can customize HR profile information.

Extend profile information

You can collect more profile information in a separate table. For example, you can create a Dependents table that extends the HR Profile [hr_profile] table.

Because profile information is sensitive and confidential, the system administrator cannot view it. For more information, see HR profile and HR case security.

Associate profiles with user records

An HR profile record must be associated with the employee record in the User [sys_user] table, to ensure that both employee records can be accessed conveniently. During the creation of an HR profile record, you can select the user record to associate with the profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Certain fields are displayed in both the user and HR profile records, but they are in only one of the tables, User [sys_user] or HR Profile [hr_profile]. The following fields are in the User [sys_user] table.

- Prefix [introduction]
- First name [first_name]
- Middle name [middle_name]
- Last name [last_name]
- Manager [manager]
- Department [department]
- Location [location]
- Employee number [employee_number]

Note:
Bot phone number sync is not supported.

The following table describes the other fields that are synchronized by the *Synchronize fields to hr_profile* business rule.

Fields synchronized using the business rule

HR profile [hr_profile] field	User [sys_user] field	Notes
Position [position]	Title [title]	Position in the HR profile is a referenced field. The HR profile could not be updated message appears: • When the title is updated in the User form • A position record with the same value does not exist
Home address [address]	Street [street]	
Country [country]	Country code [country]	Although the field names are the same, these fields are of different types. In the HR profile, [country] is a reference field. In the user record, [country] is a choice list. The country code appears in the User form instead of the country name when the country selected in the HR profile is not in the choice list.
Work email [work_email]	Email [email]	The HR profile contains both personal and work email fields, while the user record only contains the work email.

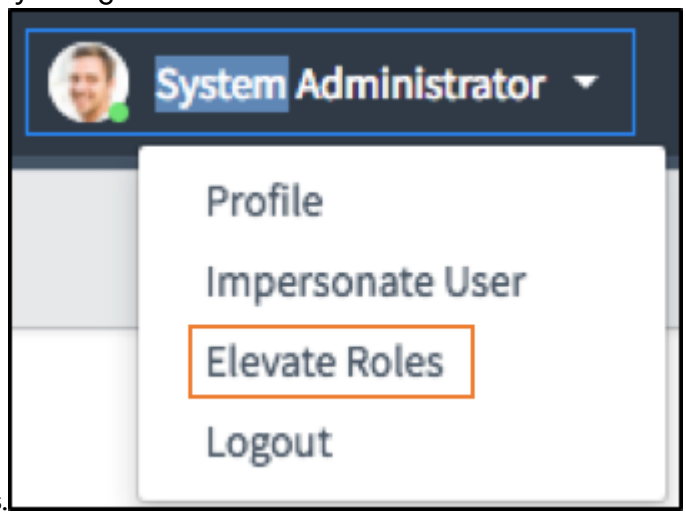
Note:
The User form must be configured to show address, country, and email fields.

Add field security in HR

You can secure a field on a form so that specific HR users cannot view it.

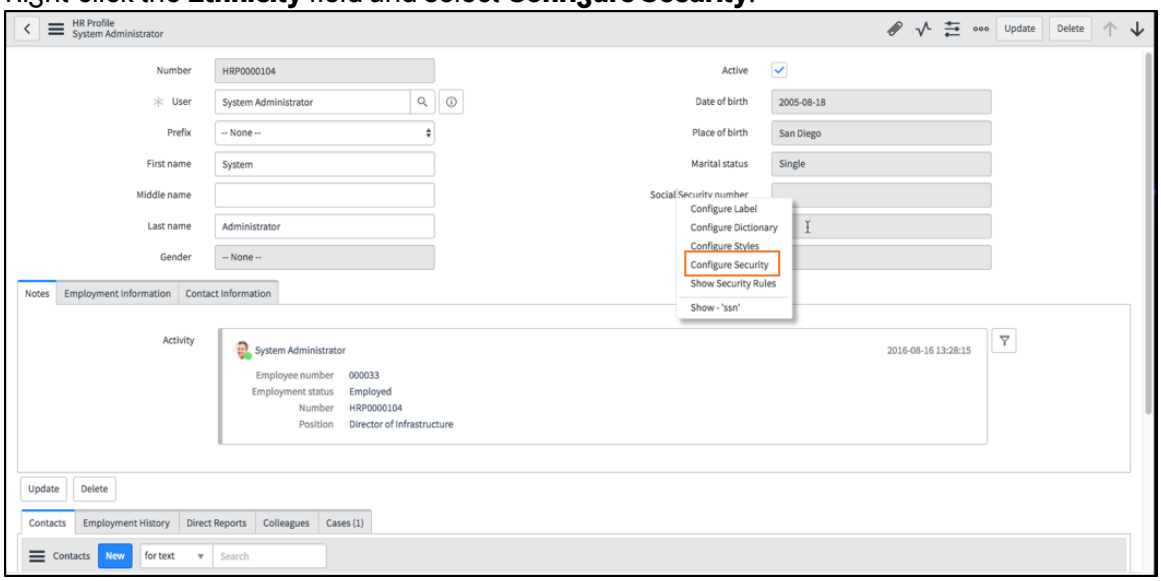
Before you begin
Role required: sn_hr_core.admin, security_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



About this task

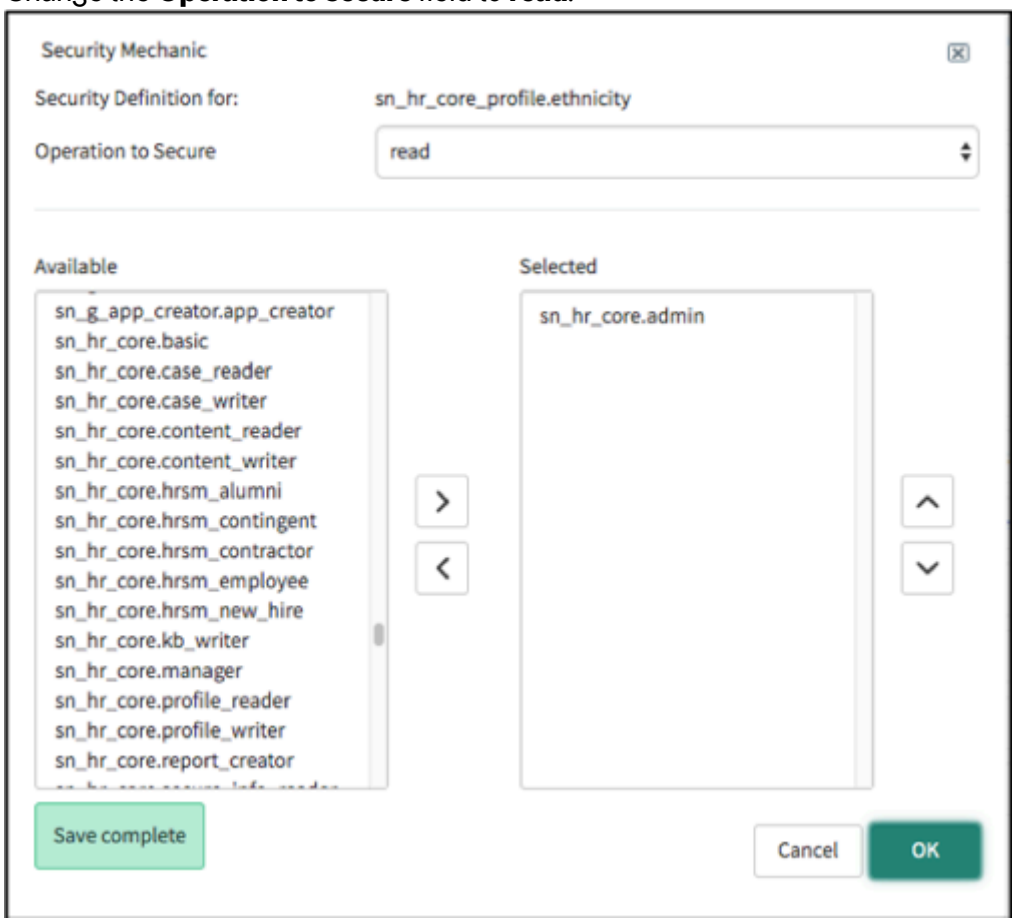
Use **Access Control** (ACL) on a field to secure it.



> **Note:**
> This example shows how to secure the **Ethnicity** field on an **HR Profile** form so users with the HR Manager [hr_manager] role or below cannot view it.

Procedure

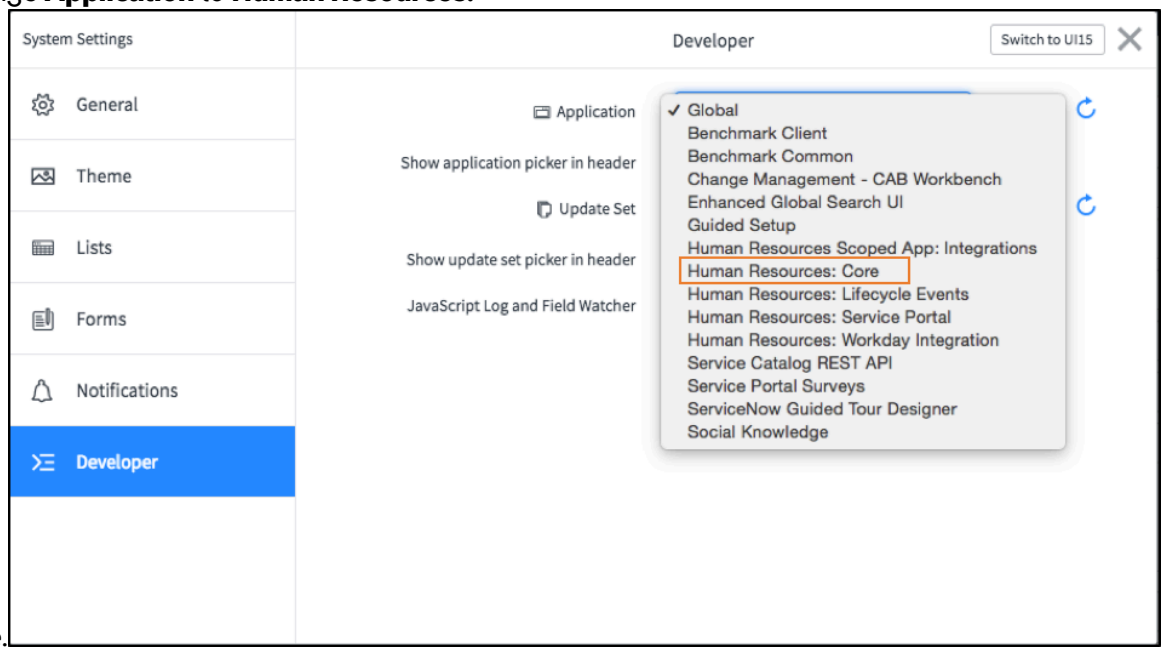
1. Navigate to **All** > **HR Profile**.
2. Elevate your role to add **security_admin**.
   Select your login name and select **Elevate Roles**.



3. Check **security_admin**.
4. Select **OK**.
5. Select an HR profile record to edit.
   It can be any record.
6. Right-click the **Ethnicity** field and select **Configure Security**.

7. The **Security Mechanic** menu appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Change the **Operation to secure** field to **read**.

8. Move a role that you want to view the field to the **Selected** column.
   For example, move **sn_hr_core.admin**. By selecting **read** and adding **sn_hr_core.admin**, any role below this role, cannot read the field. For example, **sn_hr_core.manager** is below this role and cannot view this field after completing the steps.
9. Click **OK**.
   Because HRSM is a scoped application, you have to ensure that you are in the scoped version within the form.
   - Click the Settings icon.
   - Select **Developer** under **System Settings**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Change **Application** to **Human Resources: Core**.

- Close the window.

HR profile encrypted tax identification fields

HR Service Delivery provides different choices for capturing your employee's tax identification number.

Previously, the **Social Security Number** field could be used to capture your employee's tax ID number, but was not encrypted.

The unencrypted **Social Security Number** is still available for use, but an encrypted field is available for use that provides additional security to sensitive information.

The encrypted **National tax ID (encrypted)** field uses the Password2 (2-way encrypted) Key Management Framework (KMF) encryption.

You can further define the encrypted **National tax ID (encrypted)** field by associating a type:

- ITIN: Individual Taxpayer Identification Number
- SSN: Social Security Number
- TIN: Taxpayer Identification Number

And you can provide additional details by associating the country.

Note:
For more information on how to add the tax identification number for an employee, see Add or modify an HR profile.

Generate HR Profiles

For new customers using HR Service Delivery, you can create an HR profile for multiple employees using conditions and criteria.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.basic or sn_hr_core.manager

Procedure

1. Navigate to **All** > **HR Profile** > **Generate HR Profiles**.
2. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

HR profiles form

Field	Description
Filter Users	Click and select the conditions that must be met for an employee to be assigned the profile.
Profiles	Click and select the type of profile for employees that meet the conditions.

3. Click **Create Profiles**.

Add or modify an HR profile

Employees can directly edit some information in their HR profile, such as emergency contact information, but they are restricted from editing certain fields. If employees want to change information that they are restricted from editing, they must submit a general request to HR for the changes.

Before you begin
Role required: sn_hr_core.secure_info_writer, sn_hr_core.basic, or sn_hr_core.manager

About this task
The HR Administrator [sn_hr_core.admin] can configure which HR profile fields an employee can update. An update to information that the employee cannot change requires an HR employee information change request.

Note:
Use the configurable allow list to add fields that users can modify themselves. This allow list is a system property and accessed by going to **All** > **HR Administration** > **Properties**. The list of user editable fields appears as comma separated list. The property name is **sn_hr_core.hr_profile_editable_fields**.

To update the HR profile when an employee information change request is assigned to you, complete the following steps.

Procedure

1. Navigate to **All** > **HR Profile** > **HR Profiles**.
   The HR Profiles list opens.
2. Find the existing HR profile to update by selecting **User** from the HR Profiles list search menu, typing the name, and pressing Enter.

   Also, you can click a profile number to open a user profile.

   From **HR Profiles**, select **New** and type the user name in the **User** field on the HR Profile New record form to create the profile. You cannot change the user name after an HR profile is saved.
3. Click the profile number to open the user profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The profile opens displaying populated name, manager, department, location, and contact fields from the user record.

4. Complete or update the form with as much additional information as you have.

HR profile sections and related lists

Section or related list	Description
Number	The auto-assigned profile ID number, which cannot be changed.
User	The user associated with the profile. Click the **Lookup using list** icon and **New** to create a user.
Prefix	Click and select the personal title of the user.
First name	First name of the user, pulled from the user record.
Middle name	Middle name of the user, pulled from the user record.
Last name	Last name of the user, pulled from the user record.
Gender	Select the gender of the user.
Active	Check to indicate that the user is a current employee for your company.
Legal hold	Indicates that the HR profile is under legal hold and all associated employee documents cannot be deleted. ○ Click the **Add Legal Hold** button in the form header. ○ Select a **Reason**. ○ Enter comments. ○ Click OK. To remove an HR profile from legal hold, click the **Remove Legal Hold** button in the form header.
Date of birth	Click the **Select Date** icon and select the birth date of the user.
Place of birth	Enter the location the user was born.
Country of birth	Select the country the user was born.
Marital status	Select the marital status of the user.
Nationality	Enter the nationality or nation in which the user is a citizen.
Ethnicity	Enter the ethnic group the user identifies with.
Ready to return to workplace	Identifies if the employee is ready to return to work. Works with Enterprise Employee Experience Packs for employees working from home during a health crisis. Select **Yes** and the employee is included in campaigns and lifecycle events related to returning to work. Select **I'm not sure** and the employee is included in some of the lifecycle events related to returning to work. An HR task triggers for HR to review the employee's concerns. For more information, see Enterprise Employee Experience Pack.

Section or related list	Description
Social Security number	Enter the social security number of the user. **Note:** This field is not encrypted for security. For security purposes, it is recommended to use the **National tax ID (encrypted)**, **National tax ID type**, and National tax ID country fields. For more information, see HR profile encrypted tax identification fields.
National tax ID (encrypted)	The national tax identification number of the employee. **Note:** This field uses the Password2 (2-way encrypted) Key Management Framework (KMF) encryption.
National tax ID type	The type of national tax identification associated with your employee. The different types are: ○ ITIN: Individual Taxpayer Identification Number ○ SSN: Social Security Number ○ TIN: Taxpayer Identification Number
National tax ID country	The country associated with the national tax identification number of the employee. You can enter the country name or select the Suggestion icon ( ) to view a list of countries.
Contact Information	Information such as address, phone number, personal email address. Some field values are copied from the onboarding form.
The following related links are available:	
Create new case	Click to create an HR case for the HR profile displayed.
Show employee org chart	Click to view the organization chart of the employee.
View Manager Profile	Click to view the HR profile of the manager of the employee.
The following related lists are automatically populated.	
Beneficiaries	A list of beneficiaries associated with the employee. Click **New** to create a beneficiary.
Who is covered	A list of people who are covered under the benefits for the employee.
Emergency Contacts	A list of the employee emergency contacts. One contact in the list is designated as the primary and others can be entered as alternates.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Section or related list	Description
Employee Documents	Lists all HR employee documents associated with the HR profile. **Note:** This tab only appears when the **Employee access** field is checked from the **Document Type** form.
Direct Reports	List of the employees who report directly to the user.
Colleagues	List of other employees who have the same manager as the user.
Cases	Open HR cases for the user.
Legal Holds	Lists legal or litigation holds on any employee-related documentation. Click **Add Legal Hold** or **New** to place documents associated with the employee on legal hold.
Employee Union Memberships	Lists the labor union information associated with the employee. Select **New** to add labor union information for the employee. For more information, see Create employee union memberships.

5. Click **Submit** and return to the **HR Profiles** list page or **Save** and remain on the **HR Profile** form.

Note:
Some HR profile information, such as department, is synchronized between the User [sys_user] and HR Profile [hr_profile] records. Updating information in one record automatically applies the updates in the other record.

Add or modify contacts for HR

You can add or modify contact information to an HR profile and specify who to contact in an emergency through the Contacts module or related list.

Before you begin
Role required: admin

For information on creating or editing an HR profile, see Add or modify an HR profile.

Procedure

1. Navigate to **All** > **HR Profile** > **HR Profiles**.
2. Click **New** or an existing contact.
3. Enter or modify the contact name, telephone numbers, and other information.
4. In the **Employee** field, click and select the employee that the contact is associated with.
5. To specify the person as an emergency contact, check the **Emergency contact** box.
   The **Priority** field appears.
6. Select the priority of the contact, **Primary**, or **Alternate**.
7. Click **Submit** and return to the **HR Contacts** list or **Save** and remain on the **HR Contact** form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Who is covered

You can create or modify who is covered under an employee benefit plan using the HR Health Benefits module.

Before you begin

Role required: sn_hr_core.manager

About this task

Employees request to create or modify who is covered under their benefit plan by submitting a request through the HR Service Portal. Once a contact is added to the HR application, HR agents can add a contact as a beneficiary to an employee benefit record.

Procedure

1. Navigate to **All** > **HR Profile** > **Who is covered**.
2. Click **New** or an employee to open a record.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

HR Beneficiary form

Field	Description
Employee	The user who submitted the case. Click the **Lookup using list** icon and select the employee.
Contact	Click the **Lookup using list** icon to view a list of contacts for the employee. Click **New** to enter a new contact for the employee. You can specify the relationship to the employee and emergency contact here.
First name	First name of the beneficiary. Displays from **Contact** information.
Last name	Last name of beneficiary. Displays from **Contact** information.
Relationship	Relationship to the employee.
National tax ID	Social security number of the beneficiary or tax ID number for a trust account.
Date of birth	Beneficiary birth date.
Gender	Gender of the person being covered.

4. Click **Submit**.
   The person covered is listed in the **Who is covered** list.
5. To modify who is covered data, use the **Who is covered** list.
   You can use the list search menu by typing the who is covered name and pressing Enter. You can also search on the employee name the same way.
6. Click the who is covered name to open the form.
7. Modify the form.
8. Click **Update**.

Add or modify a beneficiary

As an employee, you add a beneficiary to your benefit plan from the Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: none

About this task
Employees can request to add or modify a beneficiary to a benefit plan by submitting a request through the Employee Center.

Alternatively, a manager can submit a tuition reimbursement request by opening an HR case: Create an HR case.

Procedure
1. From the Employee Center menu, navigate to **Human Resources** > **Benefits** > **Health and wellness**.
2. Click the **Add Beneficiaries** request.
3. Complete the form.
   The fields you see depend on how the form is configured and what fields are selected to display.

HR Beneficiary form

Field	Description
Employee	The user who submitted the case. Click the lookup icon and select the user.
Contact	Click the **Lookup using list** to view a list of contacts for the employee. Click **New** to enter a new contact for the employee. You can specify the relationship to the employee and emergency contact here.
First name	First name of the beneficiary. Displays from **Contact** information.
Last name	Last name of beneficiary. Displays from **Contact** information.
Date of birth	Beneficiary birth date.
National tax ID	Social security number of the beneficiary or tax ID number for a trust account.
Trust	Check if the beneficiary is a trust.
Relationship	Relationship to the employee.
Benefit type	Type of benefit, such as, 401(k), Basic Life, Retirement Plan, or Voluntary Life.
Beneficiary type	Primary or contingent.
Percentage	Percentage amount of the benefit distributed to the beneficiary.

4. Click **Submit**.
   The system creates an HR case and assigns it to the configured HR person. View the status of your request from the **My Requests** tab.

Enroll in a health plan

As an employee, you can submit a question about or enroll in a company health plan such as medical, dental, or vision from the Employee Center.

Before you begin
Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
Employees can ask questions about company benefits and enroll in a medical, dental, or vision plan by submitting a request through the Employee Center.

Alternatively, a manager can submit an enrollment request by opening an HR case: Create an HR case.

Procedure
1. From the Employee Center menu, navigate to **Human Resources** > **Benefits** > **Health and wellness**.
2. Click the **Medical Plan Enrollment**, **Dental Plan Enrollment**, or **Vision Plan Enrollment** request.
3. Complete the form.
   The fields you see depend on how the form is configured and what fields are selected to display.
4. Click **Submit**.
   The system creates an HR case and assigns it to the configured HR person. View the status of your request from the **My Requests** tab.

Add or modify Life, AD&D insurance benefits

You can add or modify an insurance benefit for an employee using the HR Benefits module.

Before you begin
Role required: sn_hr_core.basic, or sn_hr_core.manager

About this task
Employees can ask questions about insurance benefits and request to enroll in or modify an insurance plan by submitting a request through the HR Service Portal. An insurance benefits case is opened and can be viewed and managed.

Procedure
1. Navigate to **All** > **HR Profile** > **Life, AD&D Insurance Benefits**.
2. Click **New** to open an insurance benefit record.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

HR Insurance Benefit form

Description	Field
The name of the insurance plan. Click the **Lookup using list** icon and select the plan for the employee.	Plan
The user who requested enrollment. Click the **Lookup using list** icon and select the user.	Employee
The membership/enrollment ID number of the employee.	Plan ID
The life insurance company that provides the insurance benefit. Fills in when the plan is selected.	Provider
The type of insurance plan. Fills in when the plan is selected.	Plan type

Enter the coverage type of the plan. An example is Family Coverage or Individual Plan. Not all insurance plans have coverage type.	Coverage type
The period the insurance policy covers.	Term
Click the **Lookup using list** icon to search for and select contacts that are beneficiaries.	Beneficiaries
List of family members of the employee covered under the health benefit.	Who is covered
Date when the benefit is active for the employee and beneficiaries.	Start date
Date when the benefit is no longer active for the employee and beneficiaries.	End date
Dollar amount employer contributes to plan per paycheck.	Employer Contribution (per paycheck)
Dollar amount employer contributes to plan per year.	Employer Contribution (per year)
Dollar amount employee contributes to plan per paycheck.	Employee Contribution (per paycheck)
Dollar amount employee contributes to plan per year.	Employee Contribution (per year)

4. Click **Submit**.
   The insurance benefit is listed in the **HR Insurance Benefits** list.
5. To modify insurance benefit data, find the existing insurance benefit in the **HR Insurance Benefits** list.
   You can use the list search menu by typing the employee name and pressing Enter.
6. Click the health benefit to open the form.
7. Modify the form.
8. Click **Update**.

Enroll in the company retirement plan

As an employee, you can submit a question about, or enroll in the company retirement plan from the Employee Center.

Before you begin
Role required: none

About this task
Employees can ask questions about retirement benefits and request to enroll in a retirement benefit plan by submitting a request through the Employee Center.

Alternatively, a manager can submit a tuition reimbursement request by opening an HR case: Create an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. From the Employee Center menu, navigate to **Human Resources** > **Benefits** > **Retirement**.
2. Click the **401(k) Plan enrollment** request.
3. Complete the form.
   The fields you see depend on how the form is configured and what fields are selected to display.
4. Click **Submit**.
   The system creates an HR case and assigns it to the configured HR person. View the status of your request from the **My Requests** tab.

Add or modify disability insurance benefits

You can add or modify a disability insurance benefit for an employee using the Disability Insurance Benefits module.

Before you begin

Role required: sn_hr_core.basic, or sn_hr_core.manager

About this task

Employees can ask questions about disability insurance benefits or be enrolled in or modify their disability insurance program. A disability insurance benefits case is opened and can be viewed and managed.

Procedure

1. Navigate to **All** > **HR Profile** > **Disability Insurance Benefits**.
2. Click **New** to open a disability benefit record.
3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

Disability benefit record form

Field	Description
Plan	The name of the disability insurance plan. Click the **Lookup using list** icon and select the plan for the employee.
Plan type	The type of health benefit plan. Fills in when the plan is selected.
Plan ID	The identification number of the health plan.
Start date	Date when the benefit is active for the employee and beneficiaries.
End date	Date when the benefit is no longer active for the employee and beneficiaries.
Employee	The user who requested enrollment. Click the **Lookup using list** icon and select the user.
Employee Contribution (per paycheck)	Dollar amount employee contributes to plan per paycheck.
Employee Contribution (per year)	Dollar amount employee contributes to plan per year.
Employer Contribution (per paycheck)	Dollar amount employer contributes to plan per paycheck.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Employer Contribution (per year)	Dollar amount employer contributes to plan per year.

4. Click **Submit**.
   The health benefit is listed in the **HR Disability Benefits** list.
5. To modify insurance benefit data, find the existing insurance benefit in the **HR Disability Benefits** list.
   You can use the list search menu by typing the employee name and pressing Enter.
6. Click the amount under the **Employee Contribution** column to open the form.
7. Modify the form.
8. Click **Update**.

Add or modify employee union membership

Use Employee Union Membership to identify employees that belong to a union and associate their union information to their HR profile.

Before you begin
Role required: admin

Create employee union memberships

Procedure

1. Navigate to **All** > **HR Profile** > **HR Profiles**.
2. Select **New** or an existing HR profile.

   Note:
   For information on the fields to complete an HR profile, see Add or modify an HR profile.

3. After creating a new or editing an existing HR profile, select **Save**.
   The HR profile related list appears.
4. From the **Employee Union Membership** tab, select **New**.
5. After entering the required information, select **Save** or **Submit**.

Setup or update your direct deposit

As an employee, setup or update direct deposit from the Employee Center.

Before you begin
Role required: none

About this task
Employees can ask questions about or setup/update direct deposit by submitting a request through the Employee Center.

Alternately, a manager can submit a tuition reimbursement request by opening an HR case: Create an HR case.

Procedure

1. From the Employee Center menu, navigate to **Human Resources** > **Compensation**.
2. Click the **Direct Deposit Setup** request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Complete the form.
   (The fields you see depend on how the form is configured and what fields are selected to display.)

Direct Deposit Setup form

Field	Description
Account nickname	A brief, descriptive term for your account, allowing personalization and easy identification.
Bank routing number	The unique identifier for the bank associated with the account.
Account number	The unique identifier for your individual bank account.
Account type	Identifies the classification of the account. Choose from: ○ Checking ○ Savings ○ Other
Deposit type	Type of direct deposit. Choose from: ○ Amount ○ Percentage ○ Remaining balance
Deposit amount	Displays when Amount is selected for Deposit type. Enter the dollar amount for direct deposit.
Deposit percentage	Displays when Percentage is selected for Deposit type. Enter the percentage amount for direct deposit.

4. Click **Submit**.
   The system creates an HR case and assigns it to the configured HR person. View the status of your request from the **My Requests** tab.

Request tuition reimbursement

As an employee, you can submit a question about, or request tuition reimbursement from the Employee Center.

Before you begin

Role required: none

About this task

Employees can ask questions about approved courses and request tuition reimbursement by submitting a request through the Employee Center.

Alternatively, a manager can submit a tuition reimbursement request by opening an HR case: Create an HR case.

Procedure

1. From the Employee Center menu, navigate to **Human Resources** > **Benefits** > **Education Reimbursement**.
2. Click the **Tuition Reimbursement** request.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Complete the form.
   The fields you see depend on how the form is configured and what fields are selected to display.

HR Tuition Reimbursement form

Field	Description
School/Program name	Name of the school or program where you took the course.
Course Title	Name of the course you took.
Course justification	Explanation of why you took the course.
Course start date	Date when the course started.
Course end date	Date when the course ended.

4. Click **Submit**.
   The system creates an HR case and assigns it to the configured HR person. View the status of your request from the **My Requests** tab.

Add or modify accommodations

You can add, modify, or view accommodation requests for an HR profile. Accommodations are requests from your employees related to their work situation.

Before you begin

Role required: sn_hr_er.case_writer

Note:
For more information, see HR Service Delivery Employee Relations accommodations.

Procedure

1. Navigate to **All** > **HR Profile** > **HR Profiles**.
2. Select an HR profile from the list.
3. Scroll down to the related list and select the **Accommodations** tab.
4. Select **New** or to edit, select the **Status** link.

Note:
For information on creating an accommodation request, see Add or modify accommodations.

5. Select **Submit** or **Update**.

HR Dashboards & Reports

The HR Dashboards & Reports application provides the HR organization with visual representations of accountability, progress, performance metrics, monitor employee satisfaction, and status on HR cases in the scoped version of HR.

Depending on your HR job function, you can use any of the following tools to help you with day-to-day HR operations.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Dashboards, including the Overview, Case, and Manager Dashboard. Dashboards are a type of homepage containing reports and other widgets. You click a listed record or a segment in a report to see details.
- HR reports, including reports that are available on the dashboards. Several HR reports are predefined for you, and you can create more reports.
- Survey response charts and detail for the HR case satisfaction survey or other HR surveys that you create.

You can customize any dashboard that you can access to add or remove reports and other widgets. For example, an HR benefits administrator adds a report to the Overview dashboard that displays the status of HR cases in the **Benefits** service.

Actions

Button	Description
Add content	Click, highlight topics, and move to sections of the page.
Change Layout	Click the column layouts on the left.
Save the chart as an image file	If a menu icon appears when you point your cursor to a chart, you can click the icon to export the chart to an image file.

The HR Dashboards & Reports provide:

- Overview
- Manager Dashboard
- HR Case Dashboard
- Reports
- Satisfaction Survey Scorecard

Migrating HR dashboards to Platform Analytics Workspace

For enhanced user experience, the HR Overview Dashboard, the Manager Dashboard, the HR Case Dashboard, and the SLA Dashboard have been migrated to Platform Analytics Workspace. Select the Analytics Center icon to open the migrated dashboards in Platform Analytics Workspace.

Note:
Ensure you have installed Platform Analytics Workspace from ServiceNow® Store and have the pa_viewer role.

View Overview Dashboard

The Overview dashboard provides a graphical representation of HR cases.

Before you begin
Role required: sn_hr_core.manager

About this task
By default, the Overview Dashboard shows the following reports:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- HR Cases Opened in the Last 6 Months by Topic Category: Provides a color coded bar chart on the number of cases opened in the last six months by type of Topic Category.
- Active HR Case Breakdown by Topic Category: Provides a bar chart color coded by active HR cases and the HR agent assigned.
- Active HR Cases by Topic Category: A pie chart, color coded by active HR cases by Topic Category.
- Active HR Cases Pivot Table by Topic Category: A spreadsheet that cross-references the HR agent assigned to the HR case by Topic Category with number of cases.

You can customize any dashboard that you can access to add or remove reports and other widgets.

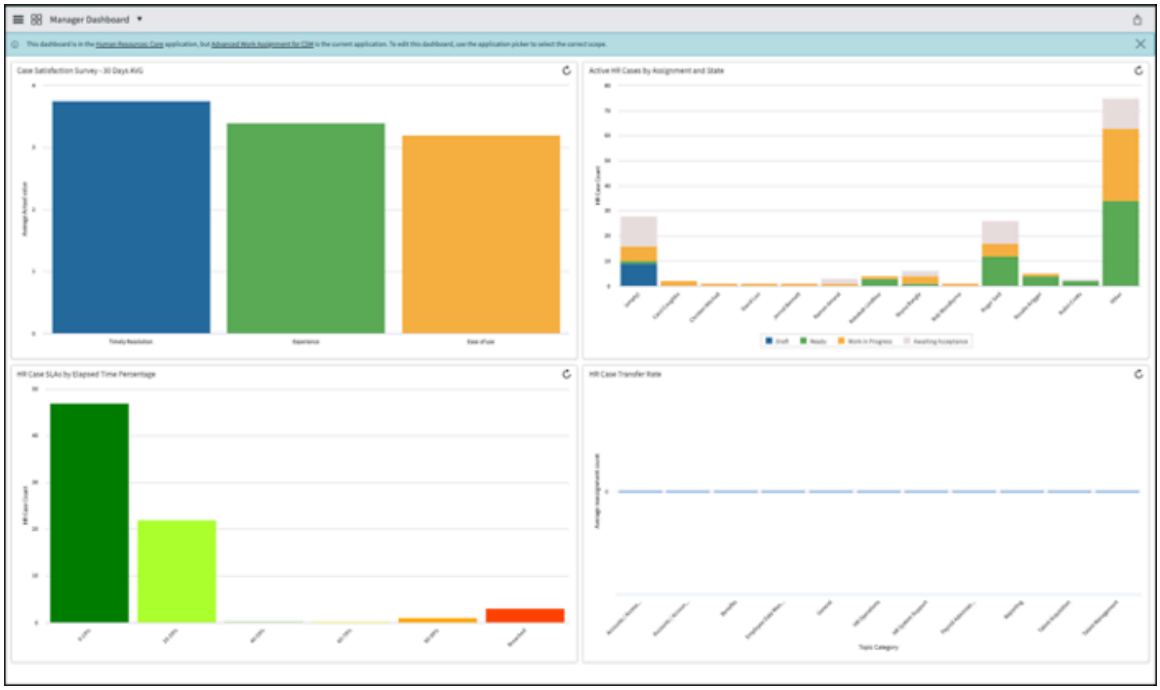
Procedure

1. Navigate to **All** > **HR Dashboards & Reports** > **Overview**.
2. Perform any of the following actions.

View Manager Dashboard

You can use the Manager Dashboard to monitor HR team effectiveness based on metrics. Metrics includes state of assigned cases by HR agent and service level agreement (SLA) elapsed time percentage.

Before you begin



Role required: sn_hr_core.manager

About this task

By default, the following reports appear on the Manager Dashboard:

- Case Satisfaction Survey - 30 Day AVG: Evaluate the satisfaction of employees with the handling of HR cases. This chart shows information if you ask employees to complete the HR Request Satisfaction Survey.
- HR Case SLAs by Elapsed Time Percentage: Monitor the time to resolve HR cases and follow up when case SLAs are breached.
- Active HR Cases by Assignment And State: Review the numbers of HR cases assigned to each HR agent by state, for example, **Ready** or **Work in Progress**, to help you evaluate the effectiveness of each HR agent.
- HR Case Transfer Rate: Review the number of cases transferred to a different HR agent by case category to determine whether the right assignments are taking place.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can customize any dashboard that you can access to add or remove reports and other widgets. For example, an HR benefits administrator adds a report to the Manager Dashboard that has the assignment and state of HR cases in the **Benefits** category.

Procedure

1. Navigate to **All** > **HR Dashboards & Reports** > **Manager Dashboard**.
2. Perform any of the following actions.

View HR Case Dashboard

The HR Case Dashboard is a central place for HR users to monitor ongoing HR operations. The dashboard contains reports that query the database and display the results.

Dashboards are the home pages for products on the ServiceNow instance. The HR Case Dashboard provides summary information about your Open/Assigned cases, High Priority cases, and cases breached by the Service Level Agreement (SLA). It displays cases by service and cases assigned to you.

To show the HR Case Dashboard, navigate to **HR Dashboards & Reports** > **HR Case Dashboard**.

Features of the HR Case Dashboard

The HR Case Dashboard shows:

- The number of Open/Assigned cases.
- The number of High Priority cases.
- The number of cases that have breached an SLA.
- The details of all cases assigned to you.
- All cases assigned to you by Topic Category.

Run Reports

You can run reports to view and monitor the status of HR cases.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.manager, sn_hr_core.admin, sn_hr_core.basic

About this task
Use HR reports to improve overall efficiency and effectiveness. For example, you can view all Employee Relations cases that were created in the past month.

Procedure
1. Navigate to **All** > **HR Dashboards & Reports** > **Reports**.

   Reports in the HR report group are listed. The icon to the left of the report indicates the type of report, such as a list, pie chart, or bar chart. Point your cursor to the icon to see a pop-up window of report information. Click the star on the left to make the report a favorite. You can filter for favorite reports by clicking the star above the Reports list.

2. Click the name of the report to run.
   The report opens with the runtime options and the results.
3. Perform any of the following actions.
   - Change any runtime option and click **Run** to see the results.
   - In a list report, click a listed case to see its details.
   - In a chart, click a segment to see the corresponding cases.
   - Publish or schedule the report.
   - Edit the runtime options and save a new report.

What to do next
If you want to create additional HR reports, click **Create a report** above the Reports list. After you create reports, share them with the HR report group. Once on the Reports list, the group can view them. For more information, see Create a report.

Satisfaction Survey Scorecard

Apply filters to refine the predefined HR satisfaction surveys results to analyse and gain insight into the survey.

A scorecard displays charts for survey results, in which category and question responses are analyzed and current ratings are compared with previous ratings. Users can examine ratings over time, compare question ratings, or compare the ratings of all categories. All ratings are averages for the time range selected. The system dynamically updates a scorecard each time you view it, so the ratings reflect recently completed surveys.

Use these options to refine the results according to your requirement.

Satisfaction survey scorecard options

Task	Action
Display a different view for the scorecard	Select the view from the left choice list above the chart. The interactive scorecard shows the name of the survey and results or comparisons of the ratings. Show results in the following views: following views: • Category Results • Question Results • Average Ratings • History
Save a chart as an image	Click the menu icon and select the type of image file. After the file is generated, click **Download**. The file is downloaded to the download folder of your browser.

HR Service Delivery integration with Service Portfolio Management and Digital Portfolio Management

HR Service Delivery integration with Service Portfolio Management and Digital Portfolio Management enables you to manage HR services in a standardized, structured format as suggested in the Common Service Data Model (CSDM) methodology. It ensures that the hierarchy in which you define services is consistent with the hierarchy of other business units.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Larger enterprise customers on their journey to embrace the vision of Enterprise Service Management face the problem of different work flows following different data models and hierarchy which makes it difficult to provide a uniform view of all services. These customers require a common interface, a single place for monitoring metrics, viewing services, and getting similar information across the work flows. With this integration:

- HR Services are mapped within the hierarchy of CSDM, providing a consistent way for the service owners to define appropriate business services.

Mapping

HR Service Delivery	Common Service Data Model
COE (Center of Excellence) For example: Total Rewards	-
Topic Category For example: Benefits	Taxonomy Node For example: Laptop Support (Service)
Topic Details For example: Dental	Services For example: Laptop Support (Service)
HR Service - Record Producer For example: Dental Benefits Inquiry	Service Offerings For example: ○ Executive Laptop Support (Service Offering): 15 " Portal Plan laptop (Catalog Item) ○ Standard laptop Support (Service Offering): 13" Portals Plan Laptop (Catalog Item)

- HR Services appear as part of the overall services in Human Resource Portfolio in Enterprise Portfolios in Digital Portfolio Management. With Digital Portfolio Management, you can manage and maintain all your services, applications, and products from a single location. It enables you to surface data from solutions you own as well as from solutions that you don't own but rely on from other ServiceNow products.

Activation information

First, activate the Human Resources Scoped App: Core [com.sn_hr_core] application. Activating the application automatically activates Service Portfolio Management.

Next, activate Digital Portfolio Management to view HR services in Digital Portfolio Management dashboard.

Work flow

1. Activate the required applications.
2. Create a service table configuration in Service Portfolio Management.

Note:
Default HR service table configuration is available for use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Configure CSDM service mappings.

> **Note:**
> Demo data for HR CSDM service mappings is available for use.

Adopt CSDM methodology

Manage services of your business unit in a standardized, structured format as suggested in the Common Service Data Model (CSDM) methodology. Ensure that the hierarchy in which you define services is consistent with the hierarchy of other business units.

Before you begin

Role required: admin

About this task

Customers require a common interface, a single place for monitoring metrics, viewing services, and getting similar information across the work flows. With this feature, you can:

- Map your services in the hierarchy of CSDM, providing a consistent way for the service owners to define appropriate business services.
- View your services as part of the overall services in Digital Portfolio Management. With Digital Portfolio Management, you can manage and maintain all your services, applications, and products from a single location. Surface data from solutions you own as well as from solutions that you don't own but rely on from other ServiceNow products.

Procedure

1. Create a business or technical service and corresponding service offering records for your business unit.
2. Create a service table configuration in Service Portfolio Management.
3. Map your BU service to CSDM Service or Service Offering.
   For more information, see Configure CSDM service mappings.
4. Add your business unit logic to populate Service and Service Offering columns in task records or resulting BU records that are created by using the BU service (For example: HR service use case).
   The table must have Service and Service Offering columns.
5. Create a service portfolio and add the required taxonomy nodes.
   For more information, see Service Portfolio Management.
6. Map BU service to the taxonomy nodes in the Services related list.

> **Note:**
> After the Service is mapped, related offerings are automatically selected. You can create or edit the offerings related to the service.

7. Configure KPI group and indicators for your business unit in the Digital Portfolio Management dashboard.
   For more information, see Digital Portfolio Management.
   - To display the KPIs in Digital Portfolio Management, create a KPI group and add the required KPIs. Once KPIs are added, add group mapping to associate the group with correct taxonomy node where you want to display indicator data.
   - The PA indicators must have the correct breakdown assigned. For example, if you are creating an indicator for service offering, add the **DPM: Service Offerings breakdown** to

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

that indicator. Before adding the breakdown, make sure the record table exists in breakdown mappings.

Note:
Make sure that the service is in operational state, so that indicators can work as expected.

- After you have added the above configurations and the required data, you can view analytics in Digital Portfolio Management dashboard.

HR Service Delivery and CSDM tables

HR Service Delivery manages (contributes data to) CSDM tables. HR Service Delivery also uses data from CSDM tables that other applications generate. Several ServiceNow products, therefore, benefit from and add value to HR Service Delivery.

Implementing the CSDM data framework

See Implementing the CSDM framework in stages.

CSDM tables used by HR Service Delivery

1. Service table configuration: Use to create a service table configuration for your Business Unit (BU). Associate your BU service mappings to the correct service table configuration.
2. CSDM service mapping: Use to configure CSDM service mappings to the appropriate service table mappings. Ensure that the services or service offerings are tagged with the right business portfolio.

Products that add value to HR Service Delivery

Using HR Service Delivery with the following ServiceNow products can increase its benefits to your organization.

Service Portfolio Management (Service Portfolio Management)

Enables organizations to document and manage services using a standardized, structured format.

Digital Portfolio Management

Enables organizations to manage and maintain all your solutions (services, service offerings, business applications, and application services) from a single location.

Products that benefit from integration with HR Service Delivery and CSDM

HR Integrations

Integrate HR Service Delivery with HR management systems to synchronize employee profiles, to-dos, and other data; background check systems to request background checks; e-signature systems to request electronic signatures; and more.

HR Services that are used in HR integrations can be mapped within the hierarchy of CSDM, providing a consistent way for the service owners to manage the services and understand metrics from one place.

Lifecycle events

Lifecycle Events enable the fulfillment of HR cases that are related to various employee journeys and transitions.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Lifecycle Events application helps to facilitate daily activities among various cross-functional processes and departments. It makes completing processes that relate to an employees daily life more efficient and easier.

HR Services that are used in Lifecycle Events can be mapped within the hierarchy of CSDM, providing a consistent way for the service owners to manage services and understand metrics from one place.

Roles for CSDM service table configurations and service mappings

Roles required for creating or viewing CSDM service table configurations and service mappings.

Roles

Roles	Description
Service Administrator [service_admin]	Can Create a service table configuration in Service Portfolio Management.
Service Editor or Service Author [service_editor], [service_author]	• Can read a configuration in Service Table Configuration. • Can Configure CSDM service mappings, only if the user is the owner of the service.
Service Viewer [service_viewer]	• Can read a configuration in Service Table Configuration. • Can read CSDM service mappings.

Create a service table configuration in Service Portfolio Management

Create a service table configuration for your Business Unit (BU). Associate your BU service mappings to the correct service table configuration.

Before you begin

Role required: service_admin

Procedure

1. Navigate to **All** > **Service Portfolio Management** > **CSDM Configuration** > **Service table Config**.
2. Click **New**.
3. On the form, fill in the fields:

Service table configuration form

Field	Description
Name	Name of the service.
Service table	BU table to which the service is mapped.
Mapping level	Mapping level associated with the Service table configuration:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Service: Parent service ○ Service offering: Refines the parent service to a specific business need and performance level.
Application	Application to which the service table configuration is associated.
Active	Option to activate or deactivate the service table configuration.

4. Click **Submit**.

Configure CSDM service mappings

Configure CSDM service mappings to the appropriate service table mappings. Ensure that the services or service offerings are tagged with the right business portfolio.

Before you begin

Role required: service_editor, or service_author

Procedure

1. Navigate to **All** > **Service Portfolio Management** > **CSDM Configuration** > **CSDM Service Mapping**.
2. Click **New**.
3. On the form, fill in the fields:

CSDM service mapping form

Field	Description
Service table	Service table to which the mapping is associated. **Note:** Only the tables configured in the service table configuration of your business unit appear.
Service	Name of the HR service.
CSDM service offering	CSDM service offering or service with which you want to map your BU service.
Active	Option to activate or deactivate the service mapping.

4. Click **Submit**.

Admin Workspace for Service Providers overview

HR Admin Service Provider is a consolidated view of customers service usage and consumption, which gives service provider admins the opportunity to make data driven decisions.

SP admins can perform the following functions:

- View different aspects of the service consumption such as the number of services consumed per customer and the ticket volume per service.
- View customer details including the number of services and HR users.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Access quick links related to daily work tasks such as domain and customer creations, and user management.
- Access quick links for specific domain on the customer details page.

Note:
SP Admin (sn_sp_admin_ws.admin) can access workspace and see a consolidated view of the demand and consumption of services offered to customers. This enables data driven decision making and access to portfolio level links.

Admin Workspace for Service Providers gives SP admins a centralized workspace to see a consolidated view of the demands and consumption of services offered to customers using KPIs.

Page overview details

Page	Description
Landing Page	Shows an overview of services, customer cases, customer details, breached SLAs, trends over time and includes customer data, KPIs and portfolio level useful links.
Client Details Page	Shows an overview of cases er service, breached SLAs, trends over time,. and includes client (domain) specific KPIs, contact details and useful links.

Note:
If HR service list doesn't show on the client details page , you might need to add read ACL on sn_hr_core_service table for SP admin.

Feature and application details

Feature	Description
Lexicon Taxonomy Name	Admin Workspace for Service Providers (SPs)
Release Vehicle	Store
PRB Management Group	Dev-App-HR
Does it support mobile interface	No
Plugin or scoped app	Scoped app
License requirement	Yes
On-Prem support	Yes
Link to troubleshooting	NA
Link to FAQ	NA
Domain seperation	Yes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To see the KPIs, trends across all domains in the workspace dashboard for SP admin need to be in global domain.

Troubleshooting details

Item	Description
Application (UI) Issues	If application (UI) issues occur, you can start by checking the builder for SP admin workspace and 2 controllers in the MSP Dashboard and the MSP Client Page.
Data Frequency Changes	Some data visualization components such as KPIs, trends, and indicator scorecards are collecting current month data and some aren't, which might cause some data to change. **Note:** It's recommended that you run indicator jobs at the start of the month and collect data for previous months only, not for the current month.

Existing table details

Table	Description
Domain (domain)	Has all the data about the domain, which is to pull domains and customer data.
Company (core_company)	Has all the data about the company and might have multiple companies associated with it. This pulls all points of contact in domain data.
HR Service (sn_hr_core_service)	Has all the service data and shows services about domains on the client details page.

Note:
There is a plugin dependency on Domain Support - Domain Extensions Installer

SP Admin role details

Role	Description
SP Admin (sn_sp_admin_ws.admin)	SP Admins are scoped adminitrators for the application and can access workspace, dashboards, KPIs, indicators and portfolio level useful links.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

ACL details

ACLs	Description
Experience (4 ACLs)	• 2 ACLs for read/write for UX page access • 2 ACLs for read/write for UX route access.
SP Admin Read (4 ACLs)	• 1 ACL for sn_hr_core_service • 1 ACL for report_view • 1 ACL for sn_hr_core_case table • 1 ACL for sp_admin role.
Pa Tag Read (2 ACLs)	• 1 ACL for pa_tag and pa_m2m_indicator_tags table • 1 ACL for pa_indicators_breakdowns m2m table.
Execute (1 ACL)	1 ACL for data broker sn_sp_admin_ws.MSPUtil

Note:
ACLs are enforced access levels and only SP admins can access the application, workspace, and modules.

UIB Controller details

Page	Description
Service Provider	Primary controller that encapsulates all business logic for MSP dashboard features such as create or update KPI, data and links, which need to be shown on the MSP dashboard.
Service Provider Client	Controller that encapsulates all business logic for MSP dashboard client details page features such as create or update KPI, data and links, which need to be shown on the client details page.

Use Guided Tours in Admin Workspace for Service Providers

Use Guided Tours in Admin Workspace for Service providers to get an overview of the workspace.

Before you begin

Role required: sn_sp_admin_ws.admin

About this task

Guided Tours help train and onboard users within the workspace. Each tour is designed to provide an overview, guide you through a task, or complete a process. If needed, administrators can create more tours. For more information, see Guided tours.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When you visit a page that has a guided tour for the first time, a welcome screen appears. You can choose to either begin the tour or skip the tour. The tour can be revisited from the Help Center menu.

Procedure

1. Navigate to **All** > **SP Admin Workspace**.
2. Select the **Show help** icon ().
3. **Optional:** Select the **Pin Help Center menu** icon  to pin the Help Center side panel on the page.
4. Select **Take a Tour**.
5. Take the necessary action and select **Next** to progress through the tour.
   For ending the tour at any point, you can select **End Tour** in the side panel or select the **Close** button in the pop-up window and confirm to end the tour.
6. Select **Done** after the tour is ended.

Employee Journey Management

Employee Journey Management integrates HR Service Delivery features and applications to enable employees, managers, and the organization to initiate and manage journeys to drive employee engagement and productivity.

There are several applications, plugins, integrations, and features that are available for Employee Journey Management. Each application or feature may have requisites and prerequisites that must be met before applications or features works properly. Prior to installing and configuring any features, read the related documentation.

Requisite plugins and applications

Requisite plugins and applications must be installed or activated so that related features and application work properly.

Content Publishing

Content Publishing allows a multitude of contents to be created and published to various channels such as portal, email, mobile and more. Content Publishing allows you to communicate with your employees using different methods.

Employee Center

The ServiceNow® Employee Center is a standard multi-department, dynamic portal for service delivery and employee engagement. The Employee Center portal also enables customers to easily scale their service solutions across departments, such as IT, HR, Workplace, Legal, and Procurement with digital workflows.

Human Resources Scoped App: Core [com.sn_hr_core]

Provides case and knowledge management for HR Service Delivery. Standardizes the documentation, interaction, and fulfillment of employee inquires and requests while having visibility into the quantity and type of cases coming in.

Lifecycle Events Enterprise

You can activate the Human Resources Scoped App: Lifecycle Events for Enterprise plugin [com.sn_hr_lifecycle_ent] if you have the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Key applications

Read the installation and configuration documentation for key applications to identify any prerequisites.

Journey designer

The ServiceNow® Journey designer application enables employees and managers in your organization to initiate and manage journeys to drive employee engagement and productivity.

Journey Accelerator

Administrators can use the ServiceNow® Journey Accelerator application to create templates for plans and to-do tasks. Managers then use the templates to create and publish customized plans for key employee transitions. Managers, employees, and mentors can access the plans from the Employee Center (EC).

Applications and feature integrations

Read the installation and configuration documentation for any application or integration that you intend to install. Some of the applications and integrations have detailed prerequisites that must be completed before the integration or application works properly.

Learning Posts

With the ServiceNow® Learning Posts application, create an omni-channel learning experience for your employees empowering them with the right learning at the right time of need.

Listening Posts

The ServiceNow® Listening Posts application enables you to create simple pulse surveys to capture employee touch points, gain insights from employee feedback, and improve overall employee experience.

Machine Learning for HR Service Delivery

Machine learning solutions for HR Service Delivery help in auto determining assignment groups and services for HR cases, auto creating cases from emails, and discovering knowledge articles that help in faster resolution of cases and tasks.

Manager Hub

The ServiceNow® Manager Hub increases managers self-service and proactive engagement with their team by providing insights and recommended actions for what's most urgent and important to drive team success. It enables managers to grow as leaders through curated and personalized resources.

Microsoft Exchange Online

Note:
If an administrator intends to use the Microsoft Office 365 scheduling capabilities with Journey Accelerator, the administrator must install and configure the related Microsoft plugins and integrations before installing Journey Accelerator and Journey designer.

By integrating the Journey Accelerator scheduling feature with the Microsoft Office 365 calendar function, users can schedule plans and to-do tasks.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Journey designer

The ServiceNow® Journey designer application enables employees and managers in your organization to initiate and manage journeys to drive employee engagement and productivity.

Journey designer Getting started

Journey designer uses Journey Accelerator and Lifecycle Events to create a unified journey experience for employees and managers in the Employee Center. Journeys offer a unique user experience. In the back-end, records are created using Journey designer, Journey Accelerator, and Lifecycle Events components to pull together a customized journey for employees.

Explore  Learn how Journey designer helps facilitate journey creation, management, and completion.	Install  Install the Journey designer app and its features.	Configure  Configure Journey designer

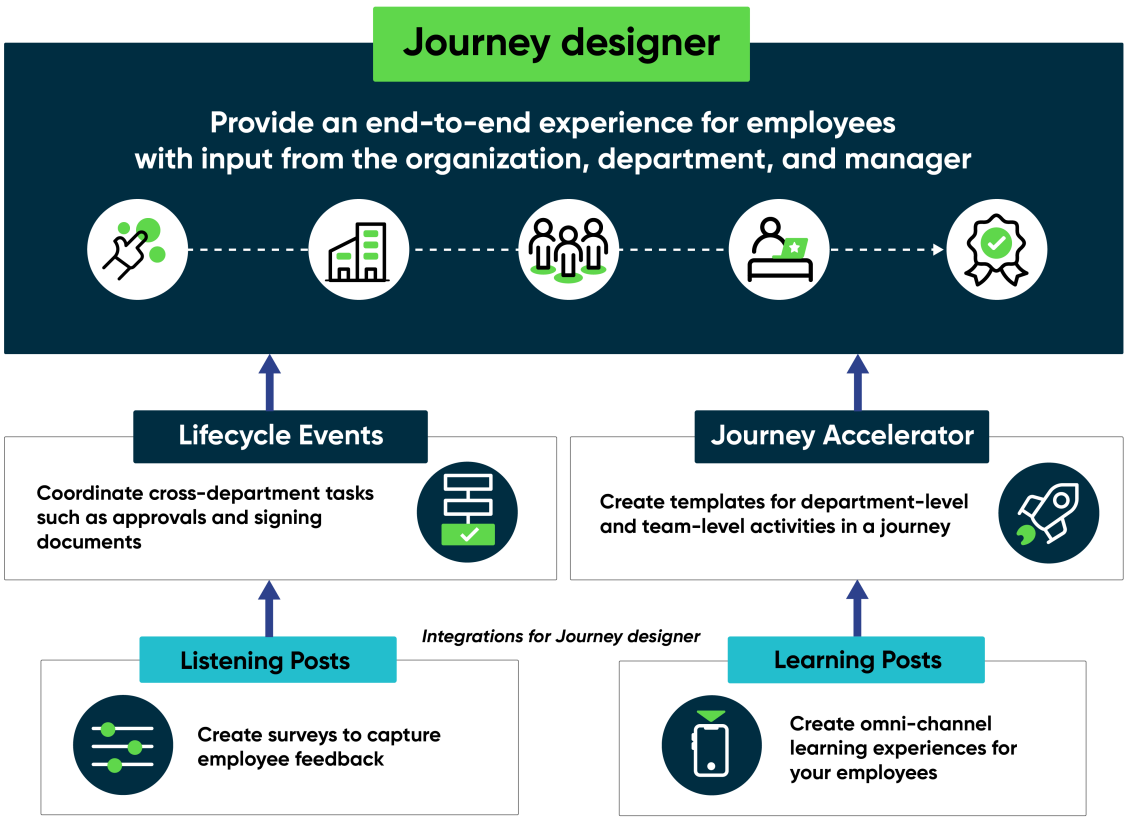
Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.



Explore Journey designer features

Organization administrators activate and configure Journey designer to help managers and employees understand and actively collaborate on professional and personal journeys.

Journey designer data model and related applications

Journey designer expands the possibilities for managers and administrators to create consistent and meaningful employee journeys. Journeys are created by using Lifecycle Events and Journey Accelerator features and functionality to support employees and mentors navigate various journeys.

Journey designer related apps and integrations

Lifecycle Events

Lifecycle Events enable the fulfillment of HR cases that are related to various employee journeys and transitions.

Journey Accelerator

Administrators can use the ServiceNow® Journey Accelerator application to create templates for plans and to-do tasks. Managers then use the templates to create and publish customized plans for key employee transitions. Managers, employees, and mentors can access the plans from the Employee Center (EC).

Integrations for Journey designer app

Extend the Journey designer application's capabilities by integrating other applications into the journey experience.

Administrators can

- Install, configure, and maintain journeys.
- Configure analytical reports and display the results in dashboards.
- Use Lifecycle Events and Journey Accelerator to build journeys.

Managers can

- Build employee journeys that are easy to maintain and reuse.
- Add mentors to journeys for improved collaboration.
- Use in-product guidance on how, when, and why to create and manage journeys for team members.
- Review reports and dashboards to help understand and track results.
- View important information about outstanding journeys and drill down on details.
- Trigger new journeys for team members.

Employees can

- View and complete urgent to-dos from Lifecycle Events and Journey Accelerator.
- Navigate through all of their tasks and milestones.
- Schedule events and complete learning.
- Complete learning courses added by your organization or your manager.

Journey details guided tours

Use Guided Tours in Journey designer to get instructions on how to perform a task. Guided Tours use a series of steps that may span multiple pages. The tour includes links to detailed documentation.

Before you begin

Role required: manager

Procedure

1. Navigate to **All** > **Employee Center** > **Journeys**.
2. Select a journey and click on **Tours**.
3. Select **Begin Tour**.
4. Take the necessary action and select **Next** to progress through the tour.
   For ending the tour at any point, you can select **End Tour** in the side panel or select the Close icon in the pop-up window and confirm to end the tour.
5. Select **Done** after the tour is ended.

Journey overview guided tour

Use Guided Tours in Journey designer to get instructions on how to perform a task. Guided Tours use a series of steps that may span multiple pages. The tour includes links to detailed documentation.

Before you begin

s
Role required: manager

Procedure

1. Navigate to **All** > **Employee Center** > **Journey overview**.
2. Select a journey and click on **Tours**.
3. Select **Begin Tour**.
4. Take the necessary action and select **Next** to progress through the tour.
   For ending the tour at any point, you can select **End Tour** in the side panel or select the Close icon in the pop-up window and confirm to end the tour.
5. Select **Done** after the tour is ended.

Installation and configuration overview

The Journey designer app has multiple versions that have different installation instructions and configuration options.

Install Journey designer version 3

Install the Journey designer version 3 [sn_jny] application to enable administrators and managers to create and manage various professional and personal events and journeys.

Before you begin

Note:
You must upgrade to Vancouver before you can install Journey designer version 3.

Dependent plugins and apps for Journey designer:

- Human Resources Scoped App: Core [com.sn_hr_core]
- Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent]
- Employee Center Pro 28.2.1 [sn_ex_sp_pro]
- Journey Accelerator 6.2.2 [sn_ja]
- Admin Experience Framework 2.1.3

Note:
Journey designer version 3 is compatible with Tokyo Patch 5 and later.

Role required: admin.

About this task

Journey designer version 3 (JD) must be installed as a store application on the Vancouver family release.

Important:
The Journey designer app also installs the Journey Accelerator v6.2.2 [sn_ja] (JA) application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Go to the ServiceNow Store and find the Journey designer [sn_jny] application using the filter criteria and search bar.

   In the list next to the **Install** button, the versions that are available to you are displayed.

2. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to install it, select the **Load demo data** check box.

   Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

   Note:
   Any demo data related to dependent applications must be updated when Journey designer is updated.

5. Select **Install**.

Install Journey designer version 2

Install the Journey designer version 2 [sn_jny] application to enable administrators and managers to create and manage various professional and personal events and journeys.

Before you begin

Note:
You must upgrade to Utah before you can install Journey designer version 2.

Dependent plugins and apps for Journey designer:

- Human Resources Scoped App: Core [com.sn_hr_core]
- Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent]
- Employee Center Pro 28.0.1 [sn_ex_sp_pro]
- HR Taxonomy 1.2.1[sn_hr_emp_taxonomy]
- Journey Accelerator 6.0.5 [sn_ja]
- Retry Framework 1.0.2 [sn_retry_handler]

Role required: admin.

About this task

Journey designer version 2 (JD) must be installed as a store application on the Utah family release.

Note:
The Journey designer app also installs the Journey Accelerator v6.0.0 [sn_ja] application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Go to the ServiceNow Store and find the Journey designer [sn_jny] application using the filter criteria and search bar.

   In the list next to the **Install** button, the versions that are available to you're displayed.

2. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to install it, select the **Load demo data** check box.

   Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

5. Select **Install**.

What to do next

When Journey designer is installed, outstanding Lifecycle Events cases aren't affected. You can migrate existing HR services to use journeys instead of Lifecycle Events. See, Journeys Migration Guide.

Install Journey designer version 1

Install the Journey designer [sn_ja] application to enable administrators and managers to create and manage various professional and personal events and journeys.

Before you begin

Note:
You must upgrade to Tokyo before you can install Journey designer.

Dependent plugins and apps for Journey designer:

- Content Publishing [sn_cd] 26.0.2
- Employee Center Pro [sn_ex_sp_pro] 26.02
- HR Taxonomy [sn_hr_emp_taxonomy] 1.2.0
- Human Resources Scoped App: Core [com.sn_hr_core]
- Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent]
- Journey Accelerator [sn_ja] 5.0.4
- Retry Framework [sn_retry_handler] v1.01

Role required: admin.

About this task

Journey designer (JD) must be installed as a store application on the Tokyo family release. For the Utah family release, JD can be installed as a store application or activated from the **System Definition** > **Plugins** page.

Note:
The Journey designer app also installs the Journey Accelerator v5.0.0 [sn_ja] application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Go to the ServiceNow Store and find the Journey designer [sn_jny] application using the filter criteria and search bar.

   In the list next to the **Install** button, the versions that are available to you are displayed.

2. Select Journey designer v2 and select **Install**.

   In the Install dialog that is displayed, any dependencies that are installed along with your application are listed.

3. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
4. If demo data is available and you want to install it, select the **Load demo data** check box.

   Demo data comprises sample records that describe application features for common use cases. Load demo data when you first install the application on a development or test instance.

5. Select **Install**.

Add or repair demo data for applications and plugins

If the demo data wasn't added during the initial installation, administrators can add demo data to a plugin using **Repair** install.

Before you begin

Role required: admin or sn_appclient.app_client_company_installer

About this task

Any demo data from installed dependent applications must be updated when Journey designer is updated. You can view which store applications are installed from the **Journey designer Admin Console**, see. Configure Journey designer features.

Run a repair installation on a plugin to add demo data or fix an issue that the plugin is experiencing.

Procedure

1. Navigate to **All** > **System Definition** > **Plugins**.
2. Find the plugin or application that you want to add demo data to and select the more icon (vertical eclipses).
3. Select **Repair**.
4. Select the check box for **Load demo data**.
5. Select **Repair**.
6. Select **View Log** to view and confirm that the demo data was added.

Note:
Sort the **Created** column in descending order to see the latest log entries first.

Example Log:

```
Loading onload_demo_data plugin script:
 com.sn_hr_lifecycle_ent/sys.scripts/generate_onboarding_cases
.js
```

Fix Restricted Caller Access (RCA) approval requests

After you install or upgrade to the latest Journey designer application from ServiceNow Store, you might encounter RCA approval messages requesting for an update in the access request.

Before you begin
Role required: admin

About this task
RCA requests that are generated after the installation of a newer version of the Journey designer application that are in the **Requested** state can be manually updated to **Allowed**. You can manually update the requests, or you can follow the directions in KB1432208 to upload and run a script to update RCA requests in bulk.

Procedure
1. Navigate to **All** > **System Application** > **Application Restricted Caller Access**.
2. In the **Status** column, right-click **Allowed** and select **Filter Out**.
   A list of **Requested** RCA privileges is displayed.
3. In the **Operation** column, double-click the entry you want to update.

   Note:
   If needed, change to the application that the request is for.

4. Select **Allowed** in the **Status** list.
5. Select **Update**.
   If there are multiple RCA requests, you must follow this task for each request.

Configure Journey designer features

Administrators configure Journey designer for the needs of their organization.

Journey designer administration console apps and configuration

The Journey designer administration console consolidates Journey Accelerator, Journey designer, and Lifecycle Events configuration needs in a single intuitive page. Administrators can see which applications are already installed and other applications that are available for installation.

Design a journey

Create and configure Lifecycle Events and Journey Accelerator plans to build and maintain journeys.

Enhance the journey

Manage the features you already have installed and see what's available to install and enhance your journeys.

Journey designer console helpful resources

Administrators new to Journey designer can use the resources available on the admin console page to learn about the features and workflow for creating journeys.

Introduction

View a video that shows you the basic flow for creating and maintaining journeys. This video offers and detailed explanation about the relationship between Journey designer, Journey Accelerator, and Lifecycle Events.

Getting started

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learn more about journeys, Lifecycle Events, and Journey Accelerator. This information helps you to understand everything involved in creating journeys.

Helpful resources

Access the Journey designer guided setup or detailed documentation from the helpful resources listed in the console.

Basic configuration process overview

The configuration process depends on the features and integrations used in your organization. Here are the basic process steps for configuring Journey designer.

Step 1: Create and manage journey configurations

- Create and configure Journey designer journeys

  Journey designer configurations are used as templates for creating journeys. Administrators create configurations that are used to trigger journeys.

- Manage Journey designer user roles

  Your roles control access for creating and modifying different features in Journey designer.

Step 2: Configure the Journey

Create a Journey type to classify the Journey configuration and associate the journey with a Lifecycle Events, Journey Accelerator, or both. Create and manage Journey types

- Lifecycle Events, see Configure a lifecycle event

  Note:
  A journey that contains a life-cycle event must have an associated HR Service with the **Journey** fulfillment type. Either update an existing HR Service case or create a one. See Configure an HR service for a journey

- Journey Accelerator, see Create a Journey Accelerator plan type

Step 3: Configure Journey permissions

Update users' permissions for journeys

Step 4: Create and manage Journey designer reports and dashboards

Journey designer dashboards and reports

Create and configure Journey designer journeys

Create a journey and embed the necessary components from Lifecycle Events and Journey Accelerator.

Before you begin

Role required: admin

About this task

A journey is a top-level container, where you define whether the Journey contains Lifecycle Events or Journey Accelerator modules, as well as the permissions for journey owners and mentors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Journey designer** > **Manage Journey Configurations**.
2. Select **New**.
3. On the form, fill in the fields.
   See Journey designer Journey Configuration fields reference.
4. Click **Submit**.

Manage Journey designer user roles

Manage Journey designer users and the roles that they have.

Before you begin
Role required: admin

About this task
The Journey designer application includes roles with the permissions necessary for that user to complete tasks. For more information on the roles installed with Journey designer, refer to Roles.

As an administrator, you can assign users to roles to enable them to perform tasks in Journey designer.

Procedure

1. Navigate to **All** > **Journey designer** > **Manage Roles**.
2. Select the role that you want to add a user to.
3. In the **User Roles** form, select **New**.
4. From the **User** list, select a user.
5. Select **Submit**.

Manage Journey designer bulk updates for tasks

Journey designer admins can configure which task types are available for bulk update and view information about tasks that were updated in bulk.

Managing bulk task updates is set to active for Journey designer version 4.0 and later. The task types available for bulk update are:

- Approval [sysapproval.approver]
- Mark when complete [mark_when_complete]
- Submit catalog item [submit_catalog_item]
- Submit order guide [submit_order_guide]

Remove a task type from bulk update

As an admin you can remove a task type from the types available for bulk update.

Before you begin
Role required: sn_jny.admin

Procedure

1. Type `sys_properties.list` in the **All** search filter.
2. Press enter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Search for `Journey designer` in the **Application** column.
   If the **Application** column isn't visible, select the gear icon to add the **Application** column to the **Personalize List Columns**.
4. Select **sn_jny.bulk_management_task_type** from the name column.

   Note:
   You must be in the Journey designer scope to be able to edit this property.

5. In the **Value** field, delete any task type entry that you want removed from the bulk update feature.

```
{
"sn_hr_core_task": ["submit_catalog_item",
 "submit_order_guide", "mark_when_complete"],
"sysapproval_approver": true
}
```

   - Approval [sysapproval.approver]
   - Mark when complete [mark_when_complete]
   - Submit catalog item [submit_catalog_item]
   - Submit order guide [submit_order_guide]

6. Select **Update**.

View Journey designer bulk request task records

View bulk update records to determine if updates were successful or failed.

Before you begin

Role required: sn_jny.admin

Procedure

1. Type `sn_jny_bulk_request.list` in the **All** search filter.
2. View information about bulk updates, including status.

   - **Created**: The date that the record was created.
   - **Requested by**: The name of the user that requested the bulk update.
   - **Status**:
     - Error
     - Requested
     - Success
   - **Bulk request initiated from**: The task that the bulk update was requested for.
   - **Action taken**:
     - Completed
     - Skipped: Only optional tasks can be skipped.
     - Approved
     - Rejected

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Message**: The message that is returned to the UI.
- **Bulk task IDs**: A number used by the system to track the bulk request.

Links that are selectable lead to additional information for the listed column.

Creating and managing quick links for journeys

Quick links give employees quick access to varied resources directly from a journey. Administrators, journey owners, and mentors are able to add linked resources to journeys.

Note:
Journey owners and mentors must be given **Can add quick links** permission by an administrator. Journey permissions are assigned and managed in journey configurations. See, Update users' permissions for journeys.

There are two types of quick links that can be added to a journey from **Journey designer**.

- Administrator configured links: Administrators add quick links to journey types. These quick links are added to all journeys that are created from that journey type.
- User configured links: Journey owners and mentors with **Can add quick links** permission add or delete web-based links directly to a user's journey.

Note:
Administrator added quick links can't be deleted by journey owners or mentors.

Quick links added by administrators

From the **Manage Journey Type Quick Links** page, administrators create and configure quick links in a journey configuration.

Manage journey type quick links form

Field	Description
Content type	The content type represents the type of knowledge the quick link goes to: • **Knowledge**: Articles within a knowledge base that can be shared across an organization. • **Catalog item**: Hardware and software items that can be tracked and offered in the service catalog. • **Page** • **External link**: Links to websites with a valid URL format, for example `https://www.domain.com`. **Note:** Selecting a content type opens additional fields used with that content type.
Quick link name	The name of the link that is visible in the journey.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manage journey type quick links form (continued)

Field	Description
Title	The title entered in this field overrides the default title of the quick link.
Short description	The description added in this field overrides the default description of the quick link.
Icon	The icon displayed for a quick link in a journey.

Quick links added by managers and mentors

Managers and mentors with edit journey permission add external links to a journey.

Manage journey type quick links form

Field	Description
Link text	The user readable text that is visible in the journey.
Link address	Manager and mentors add valid external links. The Quick Links widget checks for a valid URL format. For example, `https://www.website.com`.

Create a quick link as an administrator

Journey designer administrators create quick links that are part of a journey configuration. Administrator created quick links cannot be deleted or edited by journey owners or mentors.

Before you begin
Role required: admin

About this task
Quick links added by an administrator appear in all **Journey Types** they are added to. Only administrators can delete a quick link from **Journey Types**. See, Delete a quick link created by an administrator.

Procedure
1. Navigate to **All** > **Journey Designer** > **Manage Journey Type Links**.
2. Select **New**.
3. Select a **Type** and **Quick link**.
   - **Type**: Only active **Journey Types** are available.
   - **Quick link**: The **Quick link name** for active Employee Center Quick Links. See, Quick links configuration

> **Note:**
> If you don't see the Journey Type you are looking for, start typing the name of the journey type in the field to search for it.

Delete a quick link created by an administrator

To delete an administrator created quick link in Journey designer, you must be an administrator.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Journey Designer** > **Manage Journey Type Links**.
2. Select the check box for the row that contains the link you want to delete.
3. From the **Actions on selected row** list, select delete.
4. Confirm that you want to delete the record.
   Deleting the record removes the quick link from all journeys of that **Journey Type**.

Update users' permissions for journeys

Users in a journey have permissions that enable different levels of access to a journey. Administrators modify user permissions for different types of journeys.

Before you begin
Role required: sn_jny.admin or admin

Procedure

1. Navigate to **All** > **Journey designer** > **Mange Journey Configurations**.
2. Select the configuration to modify.
3. Select the tab for the user permissions to modify.
   - **Journey owner permissions**
   - **Mentor permissions**

   For user permission details see, Journey designer user permissions reference.
4. Select a check box to enable the permission, or clear a check box to disable the permission.
5. Select **Update** to save your changes.

Create and configure Journey designer headers

Manage journey headers or customize journey headers for different journey types based on user roles.

Before you begin

- The **Application scope** must be set to Journey designer.
- Role required: admin

About this task
There are default heading configurations for these personas:

Employee

The person for who the journey is created.

Journey owner

The creator of the journey. Owners are often managers for the employees on a journey.

Mentor

A person who helps employees to complete journeys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
A **Heading Configuration** must first be created to add heading configuration fields to.

Procedure

1. Navigate to **All** > **Journey designer** > **Manage Heading Configurations**.
2. Select **New**, or open an existing Heading Configuration.

   Create header configurations for each persona included in a journey.

   - Employee: The user the journey is created for.
   - Mentor: A user that helps the employee to complete a journey.
   - Owner: The user who created a journey. Journey owners are employee managers or mentors.
3. Open a header configuration to modify or add fields to the configuration.

   Note:
   A header configuration must exist before **Heading Fields** can be added or changed.

   a. Select **New**, or open an existing heading field.
   For more information see, Journey designer header configuration fields reference.

   b. Fill out the **Heading Field** form, and select **Submit** or **Update**.

Related topics

Journey designer header configuration fields reference

Create and manage Journey types

Create plan types to manage the top-level classification for stages and tasks for Journey types, as well as the header views for users.

Before you begin
Role required: sn_jny.admin or admin

Procedure

1. Navigate to **All** > **Journey Designer** > **Manage Journey Types**.
2. Select **New**.
3. In the **Title** field, enter a meaningful name for the type of journey that you are creating so that it is easily identifiable.
4. Click the search icon next to a role to change the header configuration for that role.

   These fields contain default plan header configurations for the plan type.

   - View for manager
   - View for employee
   - View for mentor

   See Create and configure Journey designer headers to customize headers for a plan.
5. After you have selected any header configuration you want to change, select **Submit**.

Create and manage plan types

Create plan types to manage the top-level classification for stages and tasks in a Journey designer plan.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Journey Designer** > **Manage Plan Types**.
2. Select **New**.
3. In the **Title** field, enter a meaningful name for the type of plan that you are creating so that it is easily identifiable.
4. After you have selected any header configuration you want to change, select **Submit**.

Create and manage plan configurations in Journey designer version 1

Create and manage plan configurations that are based on a plan type. Plan configurations are customized for specific employee audiences.

Before you begin

- A plan type must exist: Create and manage plan types
- Journey designer v1
- Role required: admin

Procedure

1. Navigate to **All** > **Journey Designer** > **Manage Plan Configurations**.
2. Select **New**, or open an existing plan configuration.
3. On the form, fill in the fields.

Plan Configuration form

Field	Description
Title	Descriptive title so that managers can identify different plan configurations. For example, Sales Employee Plan Configuration.
Audience	A group of users. Select an audience so that you can control which specific groups of users can access the plans. **Note:** The plan configuration preview feature depends on whether the plan configuration owner has access to the selected **Audience type**. These **Audience types** are accessible to all plan configuration owners. ○ HR Profile ○ HR Criteria ○ Users ○ Users Criteria ○ Upload file
Active	Option that you can select to make the configuration available for use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: A plan cannot be active until it contains at least one stage.
Journey Accelerator plan type	Plan types. The top-level classification is used to identify different types.
Short description	Brief description of the plan.
Description	Detailed description of the plan.

4. Select **Submit**.

To add stages to the plan, do the following:

5. Select the plan you just created.
6. Select **New**.
   a. Choose an available stage name.
   b. Enter the stage order.
   c. Select **Submit**.
   The **Active** option can now be enabled.
7. Select **Update**.

Setup the Journey designer version 2 plan configuration review and approval process

ServiceNow administrators configure the Journey designer plan configuration feature and process.

Administrators assign the initial owners and approvers to Journey designer plan configurations.

In Journey designer version 2, administrators can assign plan configuration owners and approvers, delegating plan configuration and maintenance. Delegating plan configuration maintenance enables people with the right expertise to maintain plan configurations.

Administrators can assign owners and approvers of plan configurations associated with departments to users in that department who are responsible for the content. Plan configuration owners and approvers don't need any elevated privileges in ServiceNow.

Important:
It's optional to assign owners and approvers to a plan configuration. Administrators have full capabilities to update and create plan configurations regardless whether there's an assigned owner.

Create Journey designer plan configuration

Create a Journey designer plan configuration in Journey designer version 2.

Before you begin
Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task
ServiceNow administrators create Journey Plan Configurations for managers to use when creating journeys. Plan configuration owners update plan configuration to keep the plan configurations current.

After the initial plan configuration is created, admins can assign owners and approvers for plan configuration maintenance. Owners can add their own stages and task templates from the Employee Center.

Procedure
1. Navigate to **All** > **Journey designer** > **Administration** > **Manage Plan Configurations**.
2. Click **New**.
3. File out the form.
   Some fields are only available after an **Owner** is selected. For more information about the fields, see Journey designer version 2 plan configuration fields.
4. Click **Submit**.

Assign owners and approvers to a journey configuration

In Journey designer version 2, administrators assign the initial owners and approvers to a plan configuration.

Before you begin
Role required: admin

About this task
Co-owners have the same capabilities as owners.

Note:
Approvers are optional. If no approver is selected, the approval process isn't required.

Procedure
1. Navigate to **All** > **Journey designer** > **Administration** > **Manage Plan Configurations**.
2. Open a **Plan Configuration** to assign an owner and approver.
   Double-click the **Plan Configuration** to open it.
3. Select the **Plan Config Owners and Approvers** tab.
4. Select **New**
5. Select the search icon for the **Owner field**.
6. Start typing the name of the owner to search the list of users.

   You can click in the **Owner** field to view a list of recent selections.

   Co-owners and **Approvers** fields are available only after you select an **Owner**.
7. Select the lock icon next to the **Co-owners** field.
8. Select a co-owner.
9. Select the lock icon next to the **Approvers** field.
10. Select **Submit**.

Change Journey designer version 2 plan configuration owners or approvers

Administrators can change a plan configuration owner or approver.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

About this task
Administrators may need to change owners or approvers for Journey designer plan configurations if people change roles or leave their job.

Procedure
1. Navigate to **All** > **Journey designer** > **Administration** > **Manage Plan Configurations**.
2. Open a **Plan Configuration** to change an owner or approver.
   Double-click the **Plan Configuration** to open it.
3. To to the **Plan Config Owners and Approvers** tab.
4. Double-click the **Name** of the owner.
5. Change the owners, co-owners, or approvers.
6. Select **Update**.

Create and manage stages

Create and manage stages that are contained inside a plan. Stages contain tasks or to-do lists for managers, mentors, or employees to complete.

Before you begin
Role required: admin

About this task
Use stages to create a logical sequence for completing tasks. Managers add stages to plans in the Employee Center.

Procedure
1. Navigate to **All** > **Journey Designer** > **Manage Stage Names**.
2. Select **New**.
3. In the **Title** field, enter a meaningful name for a stage in a plan.
   For example, Week 1, Day 1, or Month 2.
4. Select **Submit**.

Add stage configurations

Stages group tasks or to-do lists for managers, mentors, or employees as part of a plan configuration. You must set the stage order and associate the stage with a plan configuration.

Before you begin
- Role required: admin
- Create a stage: Create and manage stages

Procedure
1. Navigate to **All** > **Journey designer** > **Manage Task Templates**.
2. Open an existing plan configuration and navigate to the **Journey Accelerator Stage Configurations** section.
3. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Journey accelerator stage configuration

Field	Description
Name	Auto-filled when you select the Stage name
Stage name	Select the stage name, such as Month 2.
Stage order	Set the order for the stage in multiples of 100
Active	Option that you can select to make the configuration available for use.
Journey Accelerator plan configuration	Select the plan configuration where to add the stage

4. Select **Submit**.

Create a satisfaction score action

A satisfaction score action triggers a widget to appear to the employee, containing either a URL or request to schedule a meeting, when the specific condition is met.

Before you begin

Role required: admin

Install and configure Listening Posts: Integrating Listening Posts with Journey designer

Procedure

1. Navigate to **All** > **Journey designer** > **Manage Journey Configurations**.
2. Select the journey configuration or create a new one.
3. Navigate to the **Satisfaction Score Actions** tab at the bottom of the page and select **New**.
4. On the form, fill in the fields:

Satisfaction score actions form

Field	Description
Condition	Set the condition that will trigger the action.
Score	Select the score to trigger the action, where 1 is the lowest and 5 is the highest possible score.
Active	Option that you can select to enable the action.
Order	Sets a ranking for the action. In the event that more than one action fulfills a condition, the action that is ranked first appears in the widget.
Action	Select what is to appear in the widget.
URL	If you selected the **Open URL** action, provide the URL to redirect the employee, such as a knowledge article.
URL label	If you selected the **Open URL** action, provide the hyper text for the link.

5. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Creating and managing audience-specific templates

Administrators can develop Journey Accelerator templates for customized plans with stages that include user tasks for different audiences.

Create and manage action plan task templates

Create and manage the task templates that managers, mentors, and employees can use for their Journey designer plans. Use task templates to provide a consistent and streamlined experience for creating Journey designer plans.

Before you begin

Role required: admin

About this task

Task templates appear as to-do lists in the Employee Center for managers, mentors, or employees.

Procedure

1. Navigate to **All** > **Journey designer** > **Manage Task Templates**.
2. Click **New**, or open an existing plan configuration.
3. Fill in the fields in the template form.
   For more information see Task template fields.
4. Click **Submit**.

Manage to-do templates created by managers in Journey designer

Modify and manage to-do task templates that managers create.

Before you begin

Role required: admin

About this task

Procedure

1. Navigate to **All** > **Journey designer** > **Manage Manager Task Templates**.
2. Open a task template, or click **New**.
3. Modify or complete the fields in the form.
   For detailed information on the fields in the form, see Journey designer Model task fields.
4. Click **Submit** or **Update** to save the form.

Recommended learning in journey configurations

Administrators add relevant learning recommendations to a journey configuration.

The recommendations are based on the courses taken by similar employees with the same Lifecycle Events type (LE), Journey designer journeys, and Journey Accelerator plans.

- Recommended courses that are added to a journey configuration by an administrator can be modified or deleted only by an administrator.
- Recommended external courses are only available for the designated duration of the course.
- Recommended learning courses are accessible to managers and mentors that have **Can add recommended learning** permission in a journey configuration. Managers and mentors can add courses only as recommendations to an individual journey from the Employee Center. See, Display learning recommendations to the Manager creating a journey.

Task template fields

To make a task template, fill in the task template fields.

Task template fields and descriptions

Field	Description
Name	Descriptive name for the activity that is associated with the task.
Table	Table that is used to track tasks and fields. Select the Task [sn_ja_task] table to enable access to the template fields.
Template	Template fields that appear only when a table is selected. Template fields are tracked in the Journey Accelerator Task [sn_ja_task] table. The following settings apply to the overall properties of the task: • **Mandatory**: Set to **true** to make the task required. Set to **false** to make the task optional. • **Editable**: Set to **true** to enable users to modify task fields. Set to **false** so that users can't modify certain fields in the task. **Note:** When `editable = false`, the following occurs: ○ The plan creator can't change the **To-do name**, **To-do description**, or **This to-do is optional** fields. ○ Users can't delete the to-do task from a plan. • **Type** ○ **Regular**: Standard to-do task template. ○ **Calendar**: Schedulable task. Creates to-do task linked to Microsoft Office 365 calendar event.
Active	Option that enables the task template when selected. Only active tasks are available for managers to use.
Task short description	Brief description of the task. This text appears to users from the Journey Accelerator plan. This field appears in the **Short description** field when you are managing tasks in stages.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task template fields and descriptions (continued)

Field	Description
Task description	Detailed description of the task.
Parent plan table	Higher-level table that associates an entry in the Journey Accelerator Task [sn_ja_task] with the table that tracks plans, Journey Accelerator Plan [sn_ja_plan]. Selecting the Journey Accelerator enables access to the plan-related fields.
Assign to source	User who is assigned the task: • Employee • Manager • Mentor **Note:** Initially, only the first mentor is assigned with to-do tasks in the list with multiple entries. Managers can reassign the to-do tasks to other mentors after the plan is created.
Relative due date trigger	Condition that is used to trigger when a task is assigned based on the publish date of the plan. This condition is evaluated with **Date offset type** and **Date offset type**. • **Created** • **End on** • **Start on** • **Updated** **Note:** Only use the **Start on** condition. **Start on** is selected by default.
Date offset type	Condition that is used to trigger when a task is assigned. This condition is evaluated with **Relative due date trigger** and **Number of offset days**. • **On** • **After** **Note:** The **After** condition is the default selection. We recommend that you use only the After condition.

© 2026 ServiceNow, Inc. All rights reserved.

Task template fields and descriptions (continued)

Field	Description
Number of offset days	Condition that is used to trigger when a task is assigned. This condition is evaluated with **Relative due date trigger** and **Date offset type**. • **Days** • **Hours** **Note:** Only specify days, and keep hours set at 0 (zero). For example: If the `Relative Due Date Trigger = Start On`, `Date Offset type = After`, and `Number of offset days = 5 days`, the task is configured to trigger 5 days after the publish date of the plan.

Add or modify recommended learning in the Journey designer app

Configure and manage recommended learning for employee journeys.

Before you begin

Role required: admin

About this task

The Learning Posts app must be integrated with the Journey designer app for the recommended learning feature to be available. For details about Learning integration see, Learning Core.

Procedure

1. Navigate to **All** > **Journey designer** > **Administration** > **Manage Recommended Learning**.
2. Select **New**.
3. On the form, fill in the fields.

Recommended Learning for Journey Configuration

Field	Description
Journey course	A course that is available to Journey designer for use in employee journeys.
Course name	The course name is included with the Journey course
Type	Select a Journey configuration to add the recommended learning to.
Active	Select **Active** to make the Journey course available in the selected type.
Display order	The value used to order the display of multiple recommended learning entries.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Submit**.

Note:

- Recommended learning added to a journey configuration by an administrator is included in all journeys created with that journey configuration.
- Only an administrator can delete a recommended learning entry from a journey configuration.

Related topics

Delete recommended learning in the Journey designer app

Delete recommended learning in the Journey designer app

Delete recommended learning for employee journey configurations.

Before you begin
Role required: admin

About this task
Recommended learning added to a journey configuration can be deleted only by an administrator.

Procedure

1. Navigate to **All** > **Journey designer** > **Administration** > **Manage Recommended Learning**.
2. Select the check box next to the recommended course that you want to delete.
3. Select **Delete** in the **Actions on selected rows** list.
4. Select **Delete** to confirm that you want to delete the selected courses.

Configure a solution definition for the journey recommendations

Configure a solution definition to display learning recommendation to users with similar journeys.

Before you begin
Role required: admin

The following plugins must be activated from the ServiceNow store to display the Similar Journey based Recommendation solution definition:

- Journey Accelerator [sn_ja]
- Journey designer [sn_jny]
- The Learning Posts [sn_lc]

Procedure

1. Navigate to **All** > **Predictive Intelligence** > **Similarity**.
2. Select **Solution Definitions** to display a list of all the solution definitions under Similarity. You will see the **Similar Journey based Recommendation** solution definition.

Note:
You can customise the solution definition according to you needs and retrain it. Open the solution definition to edit the fields

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Open the solution definition and edit the fields to customise the solution definition according to you needs.
4. Select the **Update & Retrain** button to save the changes and train the solution definition.

What to do next

Update the solution definition in the **HR AI configuration** > **Similar Journey Users** > **Solution definition** field.

> **Note:**
> For more information, see Configure the HR solution definition and domain.

Employee Center (EC) homepage journey tabs widget

The Service Portal Designer contains a library of widgets to add to a service portal. The **EC homepage journey tabs widget** displays key details related to users' journeys.

Administrators can add the **EC homepage journey tabs** to their organizations Employee Center service portal. Employee Center users assigned to a journey see information relevant related to their journey.

Involved journeys

Mentors see the **Involved journeys** tab.

My journeys

Users that are assigned to a journey see the **My journeys** tab.

Team journeys

Journey owners with active journeys for their team see the **Team journeys** tab.

Add Journey designer widget

The Journey designer widget is not on the Employee Center home page by default. An administrator must add it.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Service Portal** > **Service Portal Configuration**.
2. Select **Designer**.
3. Select **Employe Center Homepage**.
4. In the **Filter Widget** field, type `EC homepage Journey Tabs`.
5. Drag the **EC homepage Journey Tabs** widget to the service portal page.
   Add the `EC homepage Journey Tabs` to any valid element on the page.

What to do next

Verify that the widget is available in your organization's Employee Center portal.

1. Login as a user that has permissions to view or modify journeys.
2. Verify that the title *`Team journeys`* is visible.

Integrations for Journey designer app

Extend the Journey designer application's capabilities by integrating other applications into the journey experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integrating supported applications expands the features and capabilities of Journey designer. Supported applications have unique installation and configuration requirements. Supported integration applications can be installed before or after installing the Journey designer app.

- Learning Posts v5.0.0 [sn_lnp]
- Listening Posts v5.0.0 [sn_lp]
- Manager Hub v1.0.0 [sn_mh]
- Microsoft Exchange Online spoke v3.2.0 [sn_ex_online_spke]
- Retry Handler Framework v1.0.1 [sn_handler]

  The Retry Handler Framework is required when using the Microsoft Exchange Online spoke.

Integrating Learning Posts with Journey designer

Integrate Learning Posts with Journey designer to create and access an omni-channel learning experience empowering employees with the right learning at the right time, making learning accessible.

ServiceNow® Learning Posts is a ServiceNow Store application.

Important:

- Learning Posts automatically activates Learning Core.
- Learning Posts is available with the HRSD Enterprise package.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Integrating the Learning Posts app with Journey designer enables you to manage recommended learning for journeys from inside Journey designer.

Use Recommended Learning

The Recommended Learning feature combines Learning Posts with Predictive Intelligence. It learns how your organization uses training and provide a list of recommended courses to add to journeys.

- Employees can: See learning tasks and work on the task in their journeys.
- Managers can: Add recommended learning to journeys for employees if they have **Can add recommended learning** permission.
- Mentors can: Add recommended learning if they have permission to edit a journey if they have **Can add recommended learning** permission.
- Administrator: Manage recommended learning for journey configurations.

Note:
Administrators set permissions in journey configurations. See, Update users' permissions for journeys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Administrator manage Recommended Learning for Journey Configurations

Administrators Create recommended learning records for Journey Configurations that are associated with a Journey type. The recommended learning is then accessed by journey owners, mentors, and employees. Only an administrator can delete recommended learning from a journey configuration. See, Add or modify recommended learning in the Journey designer app.

Journey owners and mentors can add recommended learning to a journey

Journey owners or mentors with the **Can add recommended learning** permission for a journey configuration are able to add recommended courses to individual journeys. See, Add recommended learning to a journey.

Integrating Listening Posts with Journey designer

Use Listening Posts with Journey designer to embed pulse surveys to get insight into employees' experiences and share those insights with managers.

Configure a pulse survey widget in the Journeys page

Add the widget to the Journeys page to prompt employees for feedback. You can configure the widget in either Journey Accelerator or

Lifecycle Events. The steps for both options are provided below:

Configure in Lifecycle Events

Step 1: Create a pulse theme

Follow the steps to Create a pulse theme in Listening Posts

> **Note:**
> You can create a separate pulse theme for each journey type.

Step 2: Create pulse survey

Follow the steps to Create a pulse survey in Listening Posts

Step 3: Trigger pulse survey from Lifecycle Events

Open an existing Lifecycle Event and create an activity record with the **Pulse Survey** Activity Type. Select the pulse survey that you created in step 2 and assign the **Pulse user field** to the person you want to take the survey.

Configure a lifecycle event activity|Configure a pulse survey event activity

Step 4: Add analytics to the Journey page

Customize with the following options:

- Select **Can view satisfaction score** from the Journey owner permissions tab. See Update users' permissions for journeys
- Configure actions, such as a URL or link to schedule a meeting, to appear with specific score results in the Satisfaction Score Actions tab. See Create a satisfaction score action
- Share pulse survey results with the manager. See Create a response sharing rule in Listening Posts

Configure in Journey Accelerator

Step 1: Create a pulse theme

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Follow the steps to Create a pulse theme in Listening Posts

Note:
You can create a separate pulse theme for each journey type.

Step 2: Create pulse survey

Follow the steps to Create a pulse survey in Listening Posts

Step 3: Add to a plan configuration

Add the task template containing the pulse survey to a plan configuration via a stage configuration. Add stage configurations

Step 4: Trigger pulse survey from Journey Accelerator

Create a task template with a **Task type** of `Pulse Survey`. In the **Related record** field, select the pulse survey you created in step 2.

Create and manage action plan task templates

Step 5: Add analytics to the Journey page

Customize with the following options:

- Select **Can view satisfaction score** from the Journey owner permissions tab. See Update users' permissions for journeys
- Configure actions, such as a URL or link to schedule a meeting, to appear with specific score results in the Satisfaction Score Actions tab. See Create a satisfaction score action
- Share pulse survey results with the manager. See Create a response sharing rule in Listening Posts

Integrating Manager Hub with Journey designer

Integrate Manager Hub with Journey designer to facilitate daily activities among various cross-functional processes and departments, and automate processes such as new hire onboarding.

Follow the instructions in the Manager Hub documentation to install and configure the application for Journey designer.

Integrating HR Service Delivery Virtual Agent Conversations app with Journey designer

Install the HR Service Delivery Virtual Agent Conversations app to enable Journey designer to send actionable notifications as nudges to employees and managers on configured communications channels.

The HR Service Delivery Virtual Agent Conversations app displays action buttons to enable interactions and complete the actions. Using HR Service Delivery Virtual Agent Conversations app aids faster approvals and task completion by engaging employees and managers on the channels that they are at.

Activation information

Install the latest version of HR Service Delivery Virtual Agent Conversations [sn_hr_va] to enable actionable notification in Journey designer.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Integrating the Learning Posts app with Journey designer enables you to manage recommended learning for journeys from inside Journey designer.

Predefined Virtual Agent notifications for HR Service Delivery

The HR Service Delivery Virtual Agent Conversations app provides predefined notifications to help your employees, mentors, and managers receive information about the common tasks in HR Service Delivery.

Notifications are sent to employees, managers, and mentors that are associated with a journey. The following HR Service Delivery Virtual Agent notifications are available:

- New Journey created – Notify Employee
- New Journey created – Notify Manager
- New Journey created – Notify Mentor
- New Mentor(s) added – Notify Manager
- New Mentor(s) added – Notify Employee
- New Mentor(s) added – Notify Mentor
- Journey Tasks Overdue
- Journey JA task Commented
- Journey LE task Approval Requested

Note:
For a holistic experience of the journey outcome in Virtual Agent, turn on all the six Journey created scenario notifications (Manager, Mentor, and Employee).

For more information about HR Service Delivery Virtual Agent Conversations and topic blocks, see Virtual Agent for HR Service Delivery.

Actionable notification in the Journey designer app

Journey designer use case: When notifications are configured, a notification is sent when a new journey is created and published. The employee is notified of it on the configured CI channel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The manager is prompted to add a mentor. After the mentor is added, notifications are sent to the employee and the mentor.

Virtual Agent Designer

As and admin, go to **Conversational Interfaces** > **Virtual Agent** > **Designer**. Filter on the following:

- **Type** = `Topics`
- **Category** = `HRSD Actionable Notifications`
- **Status** = `Active`

There are four action topics linked to Journey designer provided in the base system of the application.

- _add_comment_to_ja_task - Add a comment. These comments are alsi displayed in the journey task activity.
- _add_mentor_to_journey - Add a mentor. You can select a mentor from the list provided by the Virtual agent or search a person by typing the name.
- _approve_le_approval_activity - Approve the request assigned as a part of the journey.
- _reject_le_approval_activity - Reject the request assigned as a part of the journey.

You can also associate other actions with the notifications. For more information, see Add actions to the notification content.

Using Journey designer

Journey designer enables managers, mentors, and employees to create and manage personalized journeys through configurable templates. It allows users to guide and track individual progress with access to dashboards and reports, while leveraging the Now Assist Virtual Agent for automated support.

Journey designer

Journey designer plan configuration template process, owners, and maintenance

Journey plan configuration template management is a collaborative effort that includes ServiceNow admins, journey template owners, and team experts.

Creating and managing journeys needs the knowledge and skills of many people. Responsibilities for keeping journey stages and task current aren't always clearly defined. Journey designer enables a journey administrator to orchestrate and delegate all the activities needed to create and maintain journeys.

Note:
An administrator must assign owners and approvers to Journey designer plan configurations. For more details, read Setup the Journey designer version 2 plan configuration review and approval process

ServiceNow application administrator

- Sets up, configures, and maintains your ServiceNow instance, including features such as creating and updating plan configurations.
- Assign Journey designer plan configuration owners and approvers.
- Maintain oversight of journey configuration creation and modification process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Journey owner

- Maintain plan configurations and initiate the approval workflow for plan configuration.
- Update and publish changes to plan configurations.
- Create and change task templates for your audience.
- Add or update stages in a journey.

Journey approver

- A subject matter expert (SME) with specialized knowledge about an area in a journey as it relates to business needs, individual roles, and responsibilities.
- Approvers are assigned approval tasks when a journey configuration is created or modified.

Assign owners and approvers to a journey configuration

Journey designer plan configuration owners

Plan configuration owners create and update plan configurations and publish changes.

ServiceNow administrators assign plan configuration owners. The owners of a plan configuration publish updates for review and approval. The decentralized approach to plan configuration ownership and approval supports a workflow for area experts to customize and maintain plan configurations. These plan configurations are called journey templates in the Employee Center .

Owner

Owners are assigned by ServiceNow administrators. A plan configuration owner has expertise related to the plan configuration needs of a logical area.

Co-owner

Co-owners are assigned by ServiceNow administrators and have all the responsibilities of an owner.

Update and publish changes to plan configurations

Plan owners update plan configurations and publish the changes for review and approval.

Before you begin

Role required: Owner or co-owner of a Journey designer plan configuration.

About this task

Journey designer plan configuration owners update and publish plan configurations from the Employee Center service portal.

Important:
In the Employee Center, Plan configurations are also referred to as Journey templates.

Plan configuration owners can:

- Add, reorder, rename, or delete stages.

Note:
Only empty stages can be deleted.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add task templates to a stage.
- Create a task template.
- Preview a template as a selected employee.
- Publish a journey template (plan configuration) for approval by reviewer.

> **Note:**
> If a plan configuration doesn't have any assigned approver, the plan configuration is immediately published when the changes are submitted.

- Plan configurations that are published and currently in use aren’t impacted by changes.

Procedure

1. From the Employee Center service portal, navigate to **Journeys** page.
2. Select the **Journey templates** tab.
3. Select the plan configuration that you want to update.
4. Update the plan configuration.

   Owners and co-owners can change different parts of the plan configuration.

   - **Stages**: logical containers of task templates.
   - **Task templates**: individual tasks assigned to employees, mentors, or managers.

   For details about the see, Journey designer journey template reference.
5. Select **Publish journey template**.

   > **Note:**
   > Only new task templates need an approval.

6. Select **Submit**.

   After the request is submitted, an approval task is sent to all the approvers assigned to the plan configuration.

   > **Important:**
   > Only one approval triggers the publication of the plan configuration. If an approval is needed from a certain approver, owners should let all the approvers know.

   Owners and co-owners can cancel an approval request as long as an approver hasn’t approved or rejected the request.

Create and update task templates for plan configurations

Plan owners create and update task templates that are used in plan configurations.

Before you begin

Role required: Owner or co-owner of a Journey designer plan configuration.

About this task

Journey designer plan configuration owners can change or create task templates for a plan configuration.

- Add task templates to a stage.
- Create a task template.
- Preview a template as a selected employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Publish a journey template (plan configuration) for approval by reviewer.

  Note:
  If a plan configuration doesn't have any assigned approver, the plan configuration is immediately published when the changes are submitted.

- Plan configurations that are published and currently in use aren’t impacted by changes.

Procedure

1. From the Employee Center service portal, navigate to the **Journeys** page.
2. Select the **Journey templates** tab.
3. Select the plan configuration that you want update.
   Owners can add task templates to a stage or update a template already in a stage.
4. Add or update a task template.
5. Select **Publish changes**.
6. In the **Submit for approval** window, add information about the changes.
   Add any necessary instructions for approvers.

   Note:
   Plan configurations need only one approval to be published. If you have multiple approvers for a plan configuration, communicate any special instructions for the review and approval workflow to all approvers.

7. Select **Submit**.
   An approval request task is sent to each of the approvers for the plan configuration.

Add or update stages in a journey plan configurations

Owners add or update the stages in journey plan configurations.

Before you begin

Role required: Owner or co-owner of a Journey designer plan configuration.

About this task

Journey designer plan configuration owners can change or create task templates for a plan configuration.

- Add stages
- Delete stages. A stage must not have any task if you want to delete it.
- Publish a journey template (plan configuration) for approval by reviewer.

  Note:
  If a plan configuration doesn't have any assigned approver, the plan configuration is immediately published when the changes are submitted.

- Plan configurations that are published and currently in use aren’t impacted by changes.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. From the Employee Center service portal, navigate to the **Journeys** page.
2. Select the **Journey templates** tab.
3. Select the plan configuration that you want update.
   Owners can:
   - Reorder stages
   - Change stages
   - Create additional
4. Make the changes to the plan configuration.
5. Select **Publish changes**.

> **Note:**
> Plan configurations need only one approval to be published. If the changes require review by a certain approver, be sure to communicate special instruction for approval to all approvers.

6. Add details about the changes to the **Additional details** field.
7. Select **Submit**.

Journey designer plan configuration approvers

Plan configuration approvers review and approve plan configurations.

ServiceNow administrators assign plan configuration approvers for different plan configurations. Approvers are assigned by ServiceNow administrators. Approvers are subject matter experts (SME) with specialized skills related to plan configurations. When an owner publishes updates to a plan configuration an approval task is created for any approvers.

Review and approve plan configuration changes

Approvers receive approval tasks to track reviewing, approving, and rejecting changes to a plan configuration.

Before you begin

Role required: assigned as approver for a plan configuration

About this task

Approver

Plan configuration approvers are assigned to a plan configuration by a ServiceNow administrator. Approvers are responsible for reviewing changes that were made by a plan configuration owner. An approver can choose to accept or reject the changes.

Owner (or co-owner)

Changes plan configuration, and publishes the changes which initiate the plan configuration approval workflow.

Procedure

1. From the Employee Center service portal, navigate to **Journeys** page.
2. Select **My Tasks**.

Find the **Approve Request** task that you want to approve or reject.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

An approval request looks similar to this example.

```
Approve Request

Sales Employee Plan Configuration (Demo)

Due in 7 days
```

3. Review the changes.

Note:
The changes in the request need only one approval to be published. Make sure you understand all the changes to the plan configuration.

The right pane includes the details of the approval. You can **Reject** or **Approve** the changes.

Managers, mentors, and employees work with journeys in the Employee Center

Managers, employees, and mentors access journeys from the Employee Center (EC).

From the Employee Center, users can create, modify, and complete journeys depending on their assigned permissions and roles.

- Employees can: View their journey and complete assigned tasks.
- Managers can: Create and modify journeys, assign mentors, modify user permission for a journey, and monitor journey analytics. Managers create and modify journeys, add additional mentors, add recommended learning, add quick links, and add personalized messages.
- Mentors can: Help employees successfully complete a journey. Mentors with the assigned permission can modify journeys, add additional mentors, add recommended learning, add quick links, and add personalized messages.

Note:

- Journeys are available from the Now Mobile app. See Journeys on Now Mobile
- The total task count in the journey progress bar may be different from the **Journey overview All tasks** count. This total task count discrepancy is because the **Journey overview** count displays the task count for only those tasks the employee has access to.

Some features may require integration with a related application, see Integrations for Journey designer app.

Journey view for a manager

As a manager, here's how you can view all your journeys and your team's journeys in Journey designer on the Employee Center portal.

The Journeys page on Employee Center portal provides you with a bird's eye view of all your journeys, your team's journeys, involved journeys, and other information.

My team's journeys

The My team's journeys is the first page that you see when you access Journeys after navigating from Employee Center. Use this page to quickly identify journeys that are assigned to your team, visualize recent progress. You can also create journeys, see Create a journey

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

My journeys

Use the My journeys tab to view tasks that need your attention on the **Your next tasks** widget, see View and update your next tasks. You can also view all of the other journeys assigned to you, and view each one or update the status, see Journey view for an employee.

Involved journeys

Use the Involved journeys tab to stay on track and updated about they journeys that involve you but are not assigned to you or your immediate team members.

Task templates

Use the Task templates tab to create templates of tasks, such as scheduling a meeting or taking a learning course, to assign to employees' journeys. For more information, see Create a task template.

Create a journey

Users that are managers and have Modifier [sn_jny.writer] permission create journeys for employees and assign mentors to help with the journey.

Before you begin

Role required: A user must manage other users to have access to create journeys.

About this task

The user that creates a journey is the journey owner. Journey owners create, modify, and manage all aspects of a journey.

Procedure

1. From the Employee Center, select **Journeys**.
2. Select **Create a new journey**.
   Journey templates have preconfigured journey configurations. Your organizations administrator creates and manages journey configurations.
3. Select a journey template to use an existing journey configuration or select **Blank** to create your own journey.
4. Complete the form to create a journey.

Let's start with a few details about this plan form

Field	Description
This journey is for	Name of the employee that this journey is for.
Journey name	Descriptive name of the journey.
Journey mentor	Mentors that you can select. You can also set the mentors' view or edit permission. You can add up to 5 mentors.
Journey description	Details about this plan.

5. Select **Create journey**.

What to do next

Journey owners and mentors with permission can edit existing journeys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add Journey Accelerator tasks to a Journey.
- Add Journey Accelerator stages to a journey.
- Drag stages and tasks within a journey to change the order.
- Add a mentor.
- Publish the journey.
- Add recommended learning and quick links.

Create a task template

Journey owners (managers) and mentors create templates of tasks, such as scheduling a meeting or taking a learning course, to assign to employees' journeys.

Before you begin

Role required: Modifier [sn_jny.writer]

Procedure

1. From the Employee Center, navigate to **Journeys** > **My templates**.
2. Select **Create task template**.
3. On the form, fill in the fields:

Create a task template form

Field	Description
Task type	Option to select a task type to display other fields in the form. ○ **General Task** ○ **Schedule a meeting** ○ **Take a learning course**
Task name	A descriptive name of the task.
This task is for	Option to select from a list of user types employee, manager, mentor, or specify the name of the employee that this task is for.
Watchlist	Option to add additional people to be notified about this task.
Share with	Option for managers (users who have direct reportees) to share the task template with other managers.
Task description	Details about this task.
Due Date	Option to select by when the employee must complete the task.
This task is optional	Option to set this task to optional.

4. Select **Create task template**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add task template to journey

Use task templates to quickly add pre-configured tasks to an employee's journey, such as scheduling a meeting or taking a learning course.

Before you begin

- Role required: Modifier [sn_jny.writer]
- Create a journey
- Create a task template

Procedure

1. From the Employee Center, navigate to **Journeys** > **My team's journeys** and scroll to the **Journeys for my team** section.
2. Select the Journey where to add the task template.
3. Navigate to the stage where to add the task and click **Add tasks**.
4. Select **Use task templates**.
5. Select **Create task template**.
6. Select from the available task templates and click **Use template**.

Mentors can modify and manage journeys

Mentors with the appropriate permission can modify journeys and add other mentors.

Before you begin

Role required: Modifier [sn_jny.writer]

Procedure

1. From the Employee Center, select **Journeys**.
2. Select the **Involved journeys** tab, and select the journey you want to update.
3. Select **Edit Journey**.

   Add a mentor

   Select the **Mentor** edit icon to add additional mentors to the journey. Add mentors who have unique skills to share with the employee.

   Add a stage

   Select **Add a stage** to create a state in the journey. New stages can be helpful to provide additional training or resources from the original journey.

   Add tasks

   Select **Add tasks** to add additional tasks to an existing stage of a journey. New tasks give employees access to additional training and other resources.

4. Select **Finish editing**.

What to do next

With the correct permissions, Journey mentors can edit existing journeys. Mentors can:

- Add Journey Accelerator tasks to a Journey.
- Add Journey Accelerator stages to a journey.
- Drag stages and tasks within a journey to change the order.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Add a mentor.
- Publish the journey.
- Add recommended learning and quick links.

Add, edit, or delete journey quick links

Journey owners and mentors add, edit, and delete quick links in a journey.

Before you begin

Role required: Journey owner or Journey Mentor with **Can add quick links** permission.

About this task

Journey owners and mentors have permissions assigned to them from a Journey Configuration. The permission the enable owners and mentors to add, edit, or delete quick links to a journey is **Can add quick links**. Owners and mentors with this permission can add valid URLs to an individual journey as a quick link.

Note:
If the **Quick links** widget is not visible in a journey, the **Can add quick links** is not configured in the Journey Configuration. Only administrators can update the permissions for the journey configuration. See, Update users' permissions for journeys.

Procedure

1. From the Employee Center, navigate to **Journeys**.
2. Open the journey to add the quick link to.
   The **Quick links** widget is at the bottom right of the journey page. You can also add quick links when you are creating a journey. See, Create a journey.
3. Select **Add a link** and fill in the fields.
   - **Link text**: The text that is visible in the journey.
   - **Link address**: A valid URL.
4. Select **Add link**.
   Select the more icon to edit or delete a link.

Journey view for an employee

As an employee with journeys in Journey designer, view your journey overview and tasks associated with that journey in Employee Center.

The Journeys page on Employee Center portal provides you with a bird's eye view of all your journeys, your team's journeys, involved journeys, and other information.

Journey overview

Gives you an overview of all the journey details. Use the filters available to look at various tasks on Employee Center. Use the filters available to look at various tasks.

- Your tasks
- Overdue
- Due soon
- All tasks

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity

Use the Activity tab to add any journey activity updates in the activity field and post it to keep a tab of the progress in the journey.

Attachments

Use the Attachments tab to add supporting attachments to the journey, if needed.

Employees view and complete journeys

Employees have access to the journeys that are assigned to them.

Before you begin
Role required: Employee with HR profile

About this task
Any employee assigned to a journey can view the journey to complete tasks that are part of the journey. Employees access assigned journeys from the Employee Center.

Procedure

1. In the Employee Center portal, select **Journeys**.
2. Select the journey that you want to work on.

   Stages contain the tasks for you to complete.
3. To view details about a particular task and to manage its progress, select that task.

   Tasks have a process or steps that you take to complete the task.

Note:
The total task count in the journey progress bar may be different from the **Journey overview Your tasks** count. This total task count discrepancy is because the **Journey overview** count displays the task count for only those tasks the employee has access to.

The following table reflects the status of a journey based on whether overdue tasks exist for the journey or the subject person to whom the journey belongs:

Journey status experience

Journey status	Persona	Subject person has overdue tasks	Other person has overdue tasks	Visible tasks	Invisible tasks	Message
Overdue	Employee/ Mentor	Yes	No	Yes	No	No message
Overdue	Employe/ Mentor	No	Yes	Yes	No	Your journey is overdue because tasks assigned to other people haven't been

Journey status	Persona	Subject person has overdue tasks	Other person has overdue tasks	Visible tasks	Invisible tasks	Message
						completed yet.
Overdue	Employee/ Mentor	No	Yes	No	Yes	Your journey is overdue because some tasks haven't been completed. You may not be able to see them because they are assigned to other people.
Overdue	Manager	Yes	No	Yes	No	No message
Overdue	Manager	No	Yes	Yes	No	Your journey is overdue because tasks assigned to other people haven't been completed yet.
Overdue	Manager	No	Yes	No	Yes	This journey is overdue because some tasks haven't been completed. You may not be able to see them because they are assigned to other people.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure task count for your next tasks widget

You can configure how many tasks you want to see in your next tasks widget.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **System definition** > **Script includes**.
2. Search for the `jnySNC` script include entry in the name field and select it.
3. Edit the following script to change the number of tasks you want shown on your next tasks widget.

```
//tasks limit
jnySNC.MY_JOURNEY_NEXT_TASKS_LIMIT = 10;
```

Note:
Here the number of tasks limit is set to 10, you can update it to any number you'd like.

View and update your next tasks

View your next tasks using the **Your next tasks** widget on the My journeys page to understand the next steps in your journey.

Before you begin

Role required: employee

Procedure

1. Navigate to **All** > **Employee Center** > **Journeys** > **My Journeys**.
2. Your next tasks widget will show you the next ten tasks that need your attention.
3. Select a task that you want to update.
4. Select **Complete** if the task is complete or select **Mark as in-progress** if you are still working on the task.

Manage Journey designer task updates in bulk

Many journeys have similar task types for multiple users. You can update similar task types in bulk for journeys of the same type.

Managers and other journey participants that regularly manage journey tasks can update certain types of task in a single action. Journey designer identifies similar task types that are present in similar journeys. Similar tasks can be managed in bulk instead of managing each task in each journey type.

There are a limited number of task types available for bulk update.

- Approval [sysapproval.approver]
- Mark when complete [mark_when_complete]
- Submit catalog item [submit_catalog_item]
- Submit order guide [submit_order_guide]

The bulk update feature is enabled for up to 50 journeys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Update similar tasks in bulk

Managers, mentors, and other journey participants with access to certain Journey designer task types are able to update similar tasks identified by Journey designer in a single action.

About this task

There are four Journey designer task types available for bulk update:

- Approval [sysapproval.approver]
- Mark when complete [mark_when_complete]
- Submit catalog item [submit_catalog_item]
- Submit order guide [submit_order_guide]

> **Note:**
> The completion workflow for the different task types is unique. The steps in this task are a general representation of how to complete a bulk update.

Before you begin

Role required: you can use bulk update for any available Journey designer tasks that you have write permission for.

Procedure

1. From the Employee Center, navigate to **My Tasks**.
2. Select a task to update.

   Similar tasks that are available for bulk update display a message indicating that there are other tasks that you can update at the same time.

3. Select **Select more**

   When there are multiple tasks available, a list of those tasks is displayed. Task must be a similar type in the same journey type to be eligible for bulk update.

   You can select any or all tasks in the list of tasks available. You can work on only those tasks that need attention.

4. Select **Continue**.
5. Select **Next**.
6. Complete the task.

   Depending on the task type, the completion of the task is unique to the task type.

   > **Note:**
   > Some tasks may be optional. Optional tasks can be skipped. Required tasks can't be skipped.

Send a personal message to journey users

Journey owners and mentors with the **Can add personalized message** permission can send a personal message to the employee assigned to a journey.

Before you begin

Role required: Managers and mentors with **Can add personalized message** permission

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

The personalized message feature requires that the **Can add personalized message** is enabled for journey owners or mentors. This permission is set for each journey configuration. See, Update users' permissions for journeys.

The **Send a note** button is only visible in published journeys.

Procedure

1. From the Employee Center, select **Journeys**.
2. Create and publish a journey, or open an existing journey that has been published.
   Journey configurations with the **Can add personalized message** enable a **Send a note** button.
3. Select **Send a note**.
   You can modify the note and add attachments.
4. Select **Send** to send the note to the user.
   An email is sent to the email address that is in the HR profile.

Display learning recommendations to the Manager creating a journey

Enable manager who is creating a journey for an employee, to add relevant learning recommendations for the employee in the Employee Center.

Note:
Make sure the manager has **Can add recommended learning** permission to add courses to the employees journey. For more information, see Recommended learning in journey configurations.

Learning recommendations can be added from **Add courses** option at the bottom left of the journey page. Courses are displayed under the **Recommended courses** section. The courses are from external learning partners like Udemy, Pluralsight, and Cornerstone.

The courses displayed are based on solution definitions **Similar journey based recommendations** created under Similarity. The recommendations are based on the courses taken by similar employees with same Lifecycle Event type (LE) and Journey Accelerator action Plan (JA plan type). For more information, see Configure a solution definition for the journey recommendations.

Note:

- Courses that are accessible to the manager are only displayed as recommendations.
- To receive latest recommendations, update the solution definition regularly.

Add recommended learning to a journey

When the Learning Posts app is integrated with Journey designer, managers and mentors with **Can add recommended learning** are able to add courses to a journey.

Before you begin

Role required: Manager or mentor

Note:
Select the option **Can add recommended learning** in **Manage journey configuration** > **Journey owners permissions** to display the **Add courses** button on the Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. From the Employee Center, select the **Journeys** page.

   Note:
   The **Journeys** page is displayed only if the logged in user is a manager and has one reporting employee.

2. Select a journey to edit it.
3. Select the **Add courses** button on the Recommended learning widget.
4. Select a course by typing the name in the search bar or choose a course from the list.
   Your organization must have a compatible learning system configured and running with the Learning Posts app installed and configured. See, Learning Posts.
5. Click the **+Add** button by the course to add it.
6. Click **Add course** to add the selected course(s) to the widget.

Journey designer dashboards and reports

Dashboards are configurable graphic displays of key metrics, reports, and other widgets on a single screen.

Journey designer reports

Report names, tables, and types

Report name	Table	Type

Before you begin
Role required: admin

About this task
The following dashboards are provided with the Journey designer app:

Journey overview dashboard

Displays information about the status of your active journeys, such as the number of journeys in draft mode, overdue journeys, journeys tasks, journeys by role and activity type.

Executive journey view dashboard

Displays the number of employees completing their journeys, SLA breaches, average days to complete journeys, and other metrics executives would be interested in.

You can modify many aspects of a dashboard.

- Add widgets
- Share based on users, groups, or roles
- Add and configure tabs

This task shows you how to add widgets to a dashboard and configure a tab layout.

Procedure
1. Navigate to **All** > **Journey Designer** > **Administration** > **Journeys Overview/Executive Journey view**.
2. Select **Edit**.
3. From the **Configuration** menu, edit the following as required.

Overview/Executive view fields and descriptions

Field	Description
Visualization type	Drop-down to select the data visualization of the report widget. Options available are: ○ Single score ○ Dial ○ Gauge ○ Area ○ Column ○ Line ○ Scatter ○ Spline ○ Step ○ Horizontal bar ○ Vertical bar ○ Donut ○ Pie

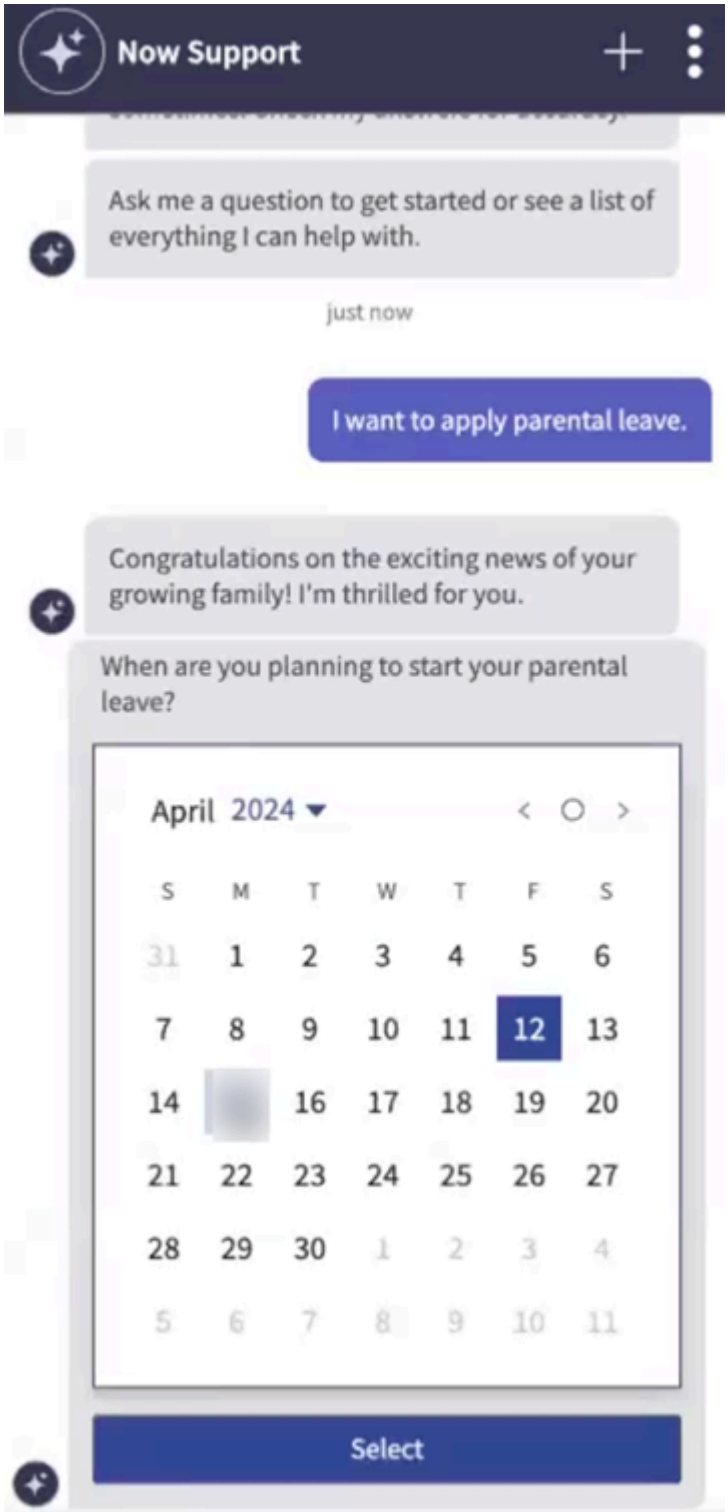
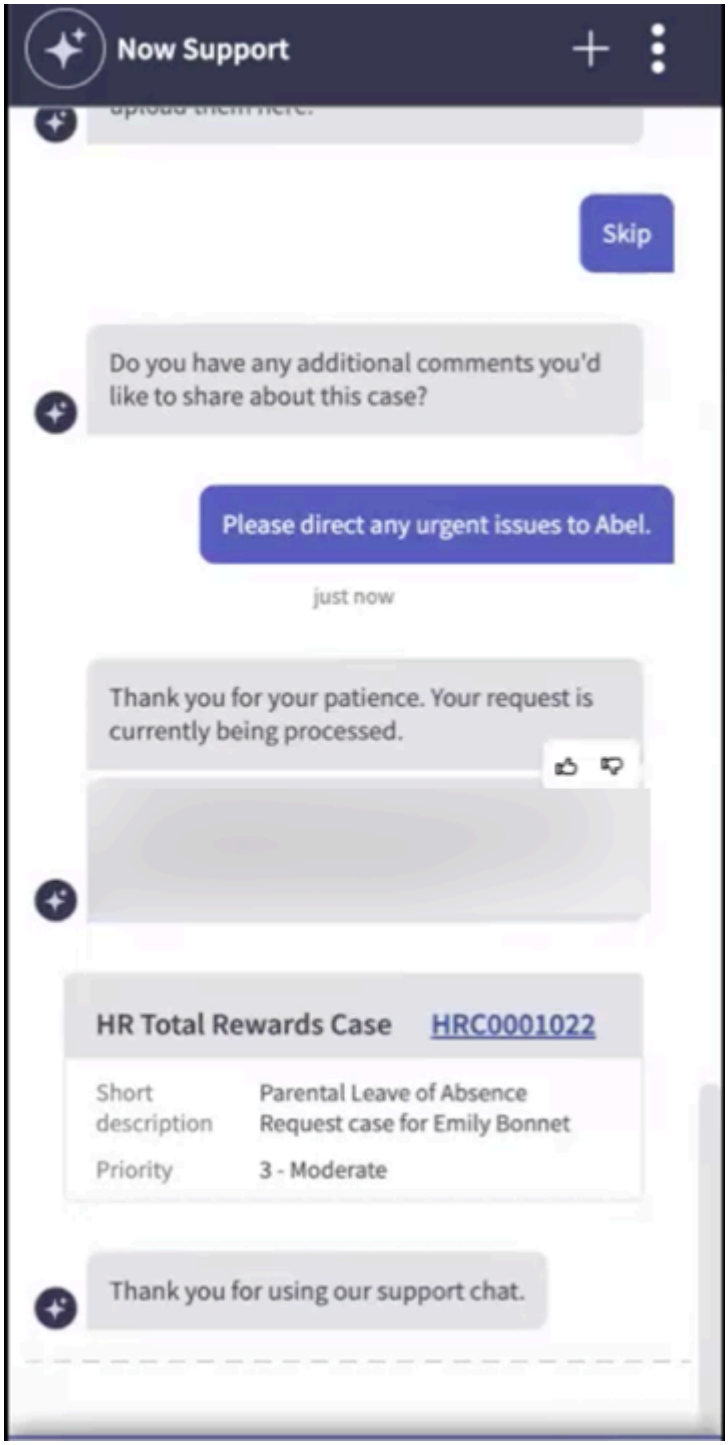
Now Assist Virtual Agent topics for Journey designer

Complete the Journey designer related tasks from Employee Center using the Now Assist Virtual Agent topics.



To use the following Now Assist Virtual Agent topics in Employee Center, verify that the Journey designer and Now Assist for HRSD applications are installed from ServiceNow Store.

- Parental Leave of Absence Request
- Journey Accelerator Task



Parental Leave of Absence Request

The Parental Leave of Absence Request Virtual Agent topic enables you to apply for a parental leave from Employee Center. From Employee Center, open a chat window and type in words such as, parental leave. After you have provided the required details, such as start date and end date, supporting documents if any, a case is created for the HR team to review.

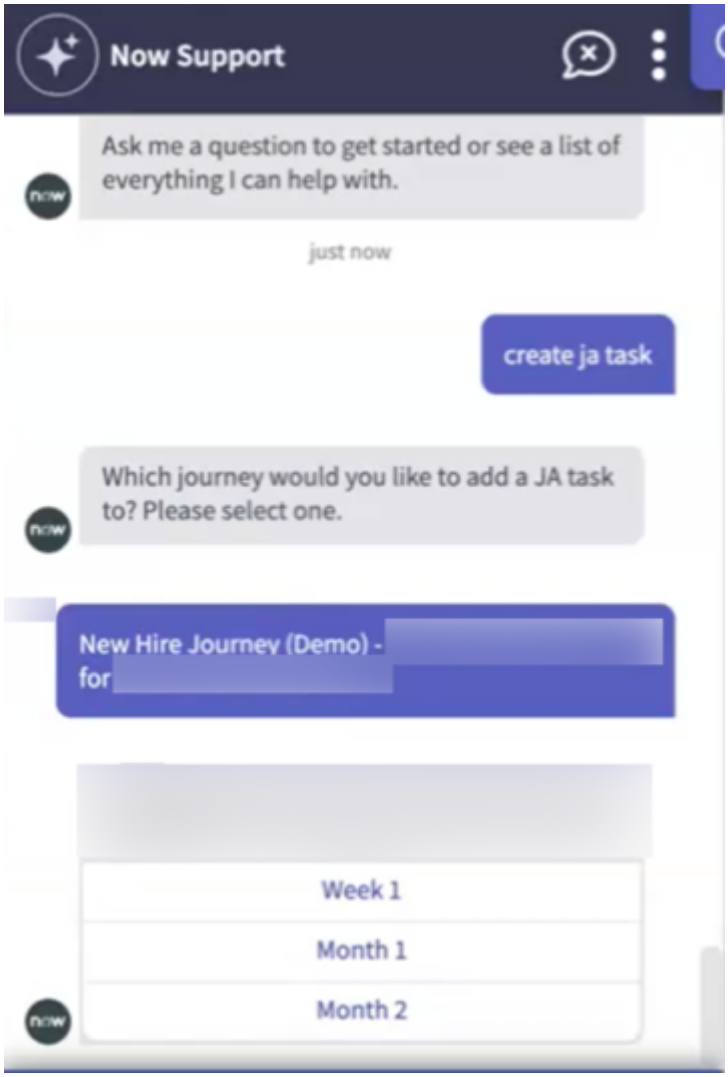
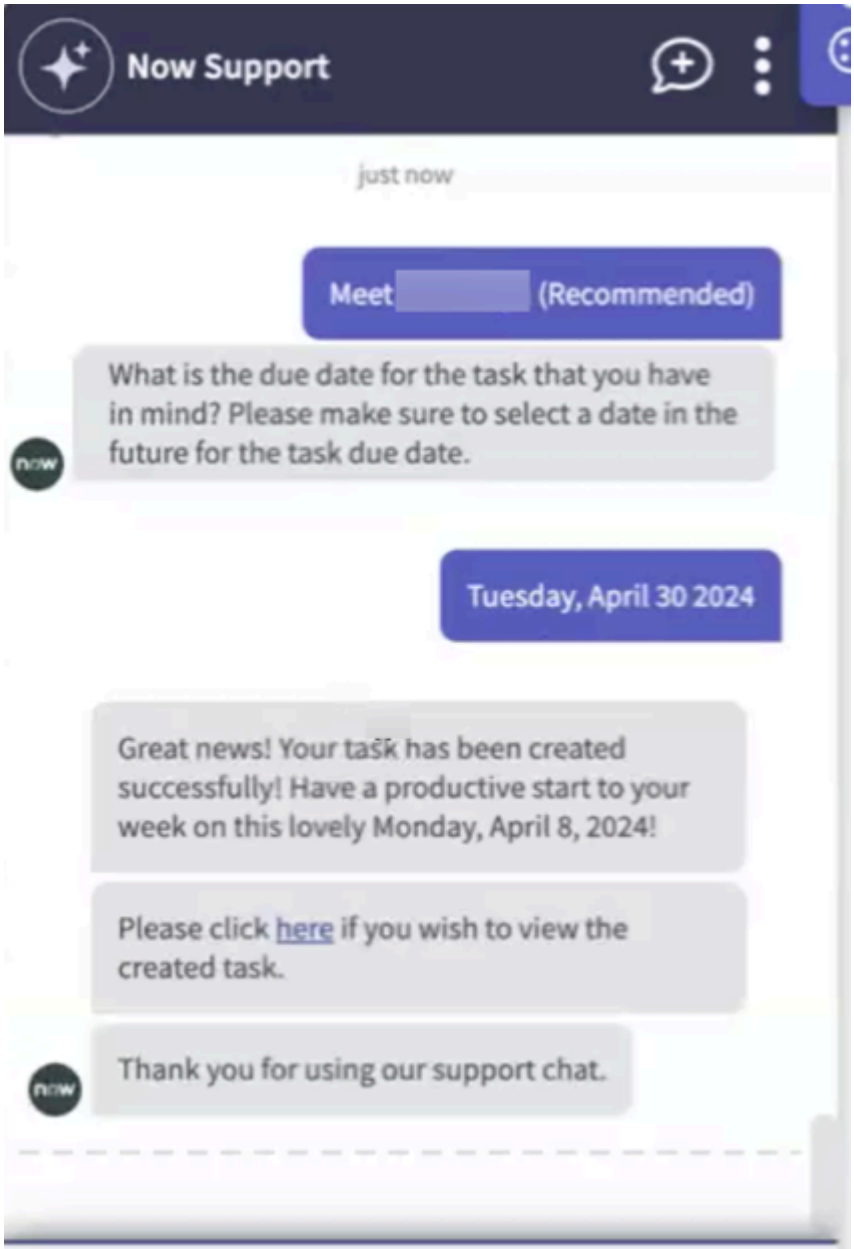
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Create JA task

The Create JA task Virtual Agent topic enables you to create a JA task for any journey (if any JA plan is associated with that journey). This means that Journey Accelerator is one of the sources for that journey and the Create JA task Virtual Agent topic supports creation of JA task from the available templates only and not from scratch.



Note:
The Create JA task Virtual Agent topic will be available only if the current logged in user has any journey(s) that have a JA plan associated. This means that Journey Accelerator is one of the sources for that journey and current logged in user should be a manager or a mentor for that journey with edit access.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

From Employee Center, open a chat window and type in words such as, create JA task. After you have provided the required details (such as journey to which you want to add the JA task, stage at which you want to add the JA task, template for the JA task, due date for the task) the JA task is created. You can view the created task by navigating to the provided link in the topic flow.

Tables

Tables installed with Journey designer

Table name [name]	Description
Available For [sn_jny_m2m_journey_config_user_criteria]	Contains and tracks users that meet the criteria to access recommended learning courses.
Field Mapping [sn_jny_journey_field_mapping]	Map fields, custom text, or custom scripts to fields used in a journey. These field mappings are from HR tables and fields to Journey designer or Journey Accelerator tables and fields.
Heading Configuration [sn_jny_journey_heading_config]	Contains details about Journey designer header configurations.
Heading Field [sn_jny_journey_heading_field_config]	Contains details about Journey designer heading fields and tracks changes related to field labels.
Journey [sn_jny_journey]	Contains and manages Journey designer plans and journeys relation to other tables.
Journey Audit [sn_jny_journey]	Tracks CRUD actions on plan configurations and who made them.
Journey bulk request task [sn_jny_bulk_request]	Tracks information about bulk updates. Admins can use this table to understand and troubleshoot bulk updates if there are errors or failures.
Journey Configuration [sn_jny_journey_config]	Contains details about Journey designer plan and journey configurations.
Journey Configuration Quick Link [sn_jny_m2m_journey_config_quick_link]	Manages the relationship of quick links that are added to plans and journeys.
Journey Mobile Carousel [sn_jny_st_jny_mobile_carousel]	Manages data that is presented in the carousel on the Now Mobile App.
Journey Progress [sn_jny_journey_progress]	Manages data related to tracking how a journey is progressing against milestones for tasks completion.

Tables installed with Journey designer (continued)

Table name [name]	Description
Journey Quick Link [sn_jny_journey_quick_link]	Contains details about quick links in Journey designer.
Journey Quick Links [sn_jny_st_journey_quick_links]	Manages the data for quick links in journeys.
Journey Tasks [sn_jny_st_journey_task]	Tracks activity for task templates in journey configurations.
Journey Timeline [sn_jny_st_journey_timeline]	Tracks the timeline data for a journey.
Journey Type [sn_jny_journey_type]	Tracks the details about the journeys contained in Journey designer
Journey Type Quick Link [sn_jny_m2m_journey_type_quick_link]	Manages quick link data related to a journey configuration.
Mobile Journey [sn_jny_st_journey]	Tracks journey data activity from the Now Mobile app.
Mobile Journey Overview [sn_jny_st_mobile_journey_overview]	Tracks data used in the Now Mobile app for user journeys.
Not Available For [sn_jny_m2m_journey_config_user_criteria_no]	List users that met the criteria not to be added to a recommended course.

Journey designer Journey Configuration fields reference

A journey configuration requires several fields to be completed or selected.

Journey Configuration page

Administrators configure journeys so that users have access to the features that are appropriate for their role. Each journey configuration is customizable to meet the needs within an organization.

Journey configuration fields

Field	Description
Journey configuration name	Provide a name for the Journey that helps managers identify the intended use case so they can customize the Journey with activity sets or stages.
Type	A Journey type is a category used to identify the intention of the journey, such as onboarding, leave of absence, or career growth.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Journey configuration fields (continued)

Field	Description
	Note: This value is used for reporting and categorization. If using Journey Accelerator, keeping the **Plan type** and the **Journey type** consistent is helpful.
Journey source	• **Lifecycle Events**: Use Lifecycle Events to facilitate cross-department tasks, such as approvals. • **Journey Accelerator**: Use Journey Accelerator modules to create templates for different audiences, such as a department-specific onboarding process. • **Lifecycle Events and Journey Accelerator**: The Journey will contain both a Lifecycle Event and Journey Accelerator plan.
Lifecycle event type	Select a lifecycle event for the Journey configuration. Lifecycle Events are created and managed from the **Manage Lifecycle Event** form. Go to **All** > **Lifecycle Events** > **Manage Lifecycle Event** to add or manage lifecycle events. See, Lifecycle Events.
Journey accelerator plan type	Journey Accelerator plan types are configured by an administrator. Plan types include plans for transitions such as onboarding, offboarding, or promotions.
Active	Indicates whether the Journey configuration is available (active) for use in Journey designer.
Update on manager change	Option to enable a change in manager. Selecting this option will update the journey configuration and make it eligible for a manager change. The following fields of tasks are updated on reassignment: • HR Case: Subject person, Opened for • HR Task: Assigned to • Incident: Caller • JA Task: Assigned to • Approvals: Assigned to • Requests: Requested for

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Journey configuration fields (continued)

Field	Description
	Note: For this functionality to work, ensure that you copy the flow **Manager Change - Journeys** and activate it. To activate a flow, see Activate a flow. Also note that email notifications (in the event of a change in manager) are sent to the old manager, new manager, assigned agent, and the user updating the manager in `sys_user`.
Journey mobile image	The image that appears at the top of the Journey when viewed in the mobile app. See, Journeys on Now Mobile.
Can be used as a template	Indicates whether the Journey configuration can be triggered from the **Create journey** widget.

Journey title details tab

Titles help journey owners identify which journey is the best for their needs.

Journey title details fields

Field	Description
Use custom title	A unique title for a Journey.
Title	The name of the journey configuration that is visible to other users such as, journey owners, employees, and mentors.
Description	The description of a journey is visible to the journey owner. Descriptions help journey owners select which journey configuration is appropriate for their needs.
Title icon	Administrators can add icons to journey headers.

Journey owner permissions tab

Owner permissions control which features are available for the owner of a journey to use. Some permissions are directly related to which features are available in your implementation of Journey designer.

Journey owner permissions fields

Field	Description
Can add mentors	Enables journey owners to add mentors to a journey. Mentors can have tasks assigned to them.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Journey owner permissions fields (continued)

Field	Description
Can edit journey	Enables journey owners to edit and add Journey Accelerator tasks and stages in a journey. **Note:** Journey owners and mentors can't modify stages, cases, or tasks coming from the **Lifecycle Event**.
Can view satisfaction score	Enables journey owners to see the pulse survey results tied to this journey. **Note:** This feature requires integration with Listening Posts. See, Integrating Listening Posts with Journey designer.
Can add recommended learning	Enables journey owners to add courses that are related to training or learning. This permission depends on your organization's implantation of Journey designer app and features. **Note:** This feature requires integration with Learning Posts. See, Integrating Learning Posts with Journey designer.
Can add quick links	Enables journey owners to add quick links to a journey. The quick links module in the Employee Center enables access to internal and external resources, such as knowledge bases, catalog items, pages, and links.
Can add personalized message	Enables journey owners and mentors to send personalized messages to employees. When enabled, you can also select an email template to include for the journey configuration. The selected email template is available for the journey owner or mentor to send or modify before sending. When this permission is enabled, the **Send a note** button is visible in the published journey.

Mentor permissions tab

Mentor permissions determine how much control that a mentor has in the journey process. A mentor is a person who helps employees complete journeys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Mentor permissions fields

Field	Description
Can add other mentors	Enables mentors to add other mentors to a journey. An extra mentor could have unique skills that would be helpful for an employee. Mentors can have tasks assigned to them.
Can edit journey	Enables mentors to edit everything in a journey.

Journey designer Model task fields

Managers create to-do tasks that are saved as templates. The templates are stored as a Journey designer Model Task.

Model task fields and descriptions

Field	Description
Task name	The name of the to-do as it appears in an action plan.
Owner	The manager that created the to-do task template.
Additional assignee list	Adds user to the **Additional people** field of the to-do task.
Assigned to type	• Persona: One of the personas supported for action plans. (manager, employee, mentor) • User: A single user. **Note:** The availability of other fields depends on your selection. The persona is listed in the **Assigned to source** field.
Parent plan table	The table that contains the to-do task template information (Journey Accelerator Plan [sn_ja_plan]).
Assigned to source	The persona to which the to-do task is assigned.
Assigned to	The name of a single user.
Active	Select to make the task available. Clear the check mark to hide the template from users.
Mandatory	Select to make the to-do task mandatory. Clear the check mark to make the task optional.
Journey Accelerator task type	• Regular: Task without the scheduling feature. • Calendar: Available when Journey Accelerator is configured to work with a

Model task fields and descriptions (continued)

Field	Description
	calendar such as Microsoft Exchange Online • Learning: Delivers an online course. This option is only available when Learning Posts is installed. • Pulse surveys: Delivers a survey to collect feedback. This option is only available when Listening Posts is installed.
Due date configuration	A conditional due date for the task.
Number of days/weeks	The days or weeks from the assigned condition for when the task is due.
Task description	The description of the task that is visible to the users.

Journey designer version 2 plan configuration fields

These fields are for Journey designer version 2 plan configurations.

Plan configuration fields and descriptions

Field	Description
Title	The title of the plan configuration that is visible in the Employee Center.
Audience	Used to restrict content access by an audience. See, Restrictions for Content Publishing and Content Experience
Visible to all owners	When selected, the plan configuration is visible to all users that own any plan configuration. **Note:** Only owners are able to change or add to the plan configuration.
Short description	A short one line description of the plan configuration, for example "Onboarding journey template for sales employees."
Description	A long description of the plan configuration that owners read to get more details about the configuration.
Active	A published plan configuration is active. If **Active** is selected, it's available to be used.
Journey Accelerator plan type	A Journey designer plan configuration must be associated with a Journey Accelerator Plan Type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plan configuration fields and descriptions (continued)

Field	Description
State	• **Awaiting approval**: The plan configuration has been published by the owner, and it must be reviewed and approved by the assigned **Approvers**. • **Draft**: The plan configuration is under development and it must be approved to be published and move to the **Ready** state. • **Ready**: A published plan configuration is in the ready state.

Journey designer header configuration fields reference

Journey designer headers can be configured for different journeys so that the different users can have a unique view for their role in the journey.

Heading Configuration

Note:
The **Heading Configuration** must be created before heading fields can be added.

Heading configuration fields for Journey designer

Field	Description
Configuration name	The name of the header configuration.
Persona	Journeys have 3 personas. Each persona has its own header configuration. • **Employee**: The person for whom the journey is created. • **Journey owner**: The person who creates the journey. Managers create and modify journeys for their employees. • **Mentor**: The person identified to help the employee complete a journey. A mentor's permission may include the ability to add other mentors and edit a journey.

Heading Configuration Fields

Heading fields have default labels for the name of each field. Labels are displayed to users in the journey. Add custom labels to make user visible labels meaningful to the user.

For example:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Label examples

Custom label	Table name	Field name
Journey publish date	Journey Accelerator Plan [sn_ja_plan	*start_on*
Mentor	Journey [sn_jny_journey]	*mentors*

Heading Configuration fields

Field	Description
Custom label	A custom label is visible to the users who are part of the journey.
Display order	A label's display order is used in the user interface to identify how the label is displayed.
Field name	The default name of a field that is given to the label identified in a table.
Table name	The name of the table that contains the field names and custom labels used in the user interface. The header fields for journeys are in these tables. • Journey Accelerator Plan Header Field [sn_ja_plan] • Journey [sn_jny_journey] A journey header configuration can have labels identifies in multiple tables.

Journey designer user permissions reference

Administrators can configure the user permissions for different Journey designer journey configurations.

Journey owner and mentor permissions

Some permissions are only available when other applications are integrated with Journey designer.

Owner and mentor permissions details

Field	Description
Can add mentors	Allows a user to add mentors to a journey. Adding mentors is helpful if an employee needs guidance from a user with a special skill set.
Can edit journey	Allows a user to modify a journey. Managers can enable mentors to modify an employee's journey.
Can view satisfaction score	Allows a journey owner to view statistical data related to an organizations journey.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Owner and mentor permissions details (continued)

Field	Description
Note: Available for only journey owners, and only available if the Listening Posts app is installed.	
Can add recommended learning	When the Learning Posts app is installed and configured, journey owners and mentors can add recommended learning to an employee's journey.
Can add quick links	Allows the user to add quick links to a journey. Quick links can link to different content types. There are two types of quick links. • Administrator can add quick links to a journey configuration. • Journey owners and mentors can add URL links to individual journeys.
Can add personalized message	Enables journey owners and mentors to include personalized messages from a journey to employees. Permission can be set for either journey owners or mentors. **Note:** The **Send a note** button is visible in only published journeys.

Journey designer journey template reference

The journey template page has information that is useful to the plan configuration owner.

Header area

The header of this page displays the plan configuration name and description and the following information.

A ServiceNow administrator assigns owners, co-owners, and approvers.

Owner

There can be only one primary owner of a journey template.

Co-owners

There can be multiple co-owners for a journey template. Co-owners have the same abilities of the owner to change and publish plan configurations.

Approvers

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Approvers review and approve or reject changes to a journey template. Changes to a journey template need only one approval.

Tip:
Owners can add comments that are displayed in the **Activity** tab of a plan configuration.

1. From **My tasks**, open an **Approval request**.
2. Select the link at the top of the request.
3. In the plan configuration, select the **Activity** tab.
4. Read the comments added by the owner to see if there are any special instructions.

Preview

Preview a template to make sure the changes you made are what you expected.

- **Preview this template**: Preview the template with the roles that are assigned to the owner.
- **Preview as an employee**: Preview the template with the roles assigned to the selected user.

Note:
The plan configuration preview feature depends on whether the plan configuration owner has access to the selected **Audience type**. These **Audience types** are accessible to all plan configuration owners.

- HR Profile
- HR Criteria
- Users
- Users Criteria
- Upload file

Publish journey template

The changes are visible after an approval by one approver. The template can't be edited until after an approver either approves or rejects the approval request.

Note:
Comments are visible as comments in the **Activity** tab.

Cancel approval request

The owner or any of the co-owners can cancel the approval request.

Journey template overview tab

The overview tab shows all the components of a journey that can be modified by owners.

Stages

A logical container of a journey that includes tasks that are assigned to employees, mentors, or managers.

Task templates

Individual tasks assigned to a user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity tab

Displays the history of all the changes for a plan configuration in chronological order.

Email notifications

Owners, co-owners, and approvers can be the recipient of email notifications.

Note:
Users with **Notification** set to **Disable** won't receive any notifications.

Email notifications details

Email notifications are sent when	Email notification recipients are
An owner or co-owner is assigned to a plan configuration	• Owner • Co-owner
An owner publishes a journey template for approval	Approver
An approver rejects a journey template approval request	• Owner • Co-owner
An owner cancels or rescinds a journey template approval request	Approver
A journey template approval request is approved	• Owner • Co-owner
It has been more than 3 days since a journey template was submitted for approval by the owner **Note:** Notifications are sent on the third day and every other day (that is, 5th, 7th, 9th days) until a response is received.	Approver

Journey Accelerator

Administrators can use the ServiceNow® Journey Accelerator application to create templates for plans and to-do tasks. Managers then use the templates to create and publish customized plans for key employee transitions. Managers, employees, and mentors can access the plans from the Employee Center (EC).

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Learning about how to use Journey Accelerator application to create templates for plans and to-do tasks. How Managers can use the templates to create and publish customized plans for key employee transitions. Managers, employees, and mentors can access the plans from the Employee Center

Journey Accelerator overview

Using the Journey Accelerator application on the ServiceNow AI Platform, administrators create templates that enable managers to develop transition plans for employees. Administrators build templates for transition plans, such as promotions, offboarding, onboarding, and role changes for employees.

Journey Accelerator users

Users

User	Description
Administrators	• Define and manage plan types for employee transitions, such as promotions, onboarding, offboarding, and more. • Create and manage plan configurations for specific employee audiences, such as sales associates or IT technicians.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Users (continued)

User	Description
	• Create and manage task templates, such as workstation setup or planning and training sessions. • Track plan progress and template usage from the Journey Accelerator dashboard.
Managers	• Create and manage customized plans for employee transitions. **Note:** Only managers can create plans. • Add to-do tasks by using a library of existing tasks. • Create tasks that are unique to an employee transition. • Publish plans that are based on employee transition dates, such as start dates. • Assign mentors to employees.

Mentor	• With the Can view permission, mentors can:
	  ○ View all to-do tasks in a plan
	  ○ Update tasks that are assigned to them
	• With the Can edit permission, mentors can:
	  ○ Edit, add, or delete stages and to-do tasks
	  ○ Publish plans
	  ○ Set plan publish dates

Employees	• View the plans, complete their to-do tasks, and track their progress. **Note:** All users can do the following actions: • Add comments: Send comments or questions to the plan's owner. • Add attachments: Add relevant files that support the completion of a to-do item such as certificates and emails.

Journey Accelerator versions and release compatibility

Available features depend on the Journey Accelerator version, family release, and application-specific features.

Not all Journey Accelerator features are available in all supported family releases. Go to the ServiceNow Store to view the latest information and requirements for features and releases.

Note:
Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Different versions of Journey Accelerator are supported only in certain family releases.

Journey Accelerator Version 5.0.4

Supported family releases: Tokyo.

Note:
Journey Accelerator Version 5.0.0 cannot be installed as a standalone application. Journey Accelerator version 5 functionality is installed as a dependency with Journey designer version 1. This information is for reference only.

Other requirements:

- To schedule Outlook meetings from Journey Accelerator tasked-based to-dos, the following spoke should be installed:
  - Microsoft Exchange Online Spoke v3.2.0 [sn_ex_online_spke]
  - Retry Handler Framework v1.0.1 [sn_retry_handler]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To use the Listening Posts [sn_lp] application, you must install Listening Posts v5.0.0 from the ServiceNow Store (and all Listening Posts requirements)
- To use the Learning Posts [sn_lnp] application, you must install Learning Posts v5.0.0 from the ServiceNow Store (and all Learning Posts requirements)

Journey Accelerator Version 4.0.2

Supported family releases:

Note:
Journey Accelerator Version 4.0.2 is the last family release that a standalone version of the app can be installed. The latest Journey Accelerator functionality is included with the Journey designer application.

- Utah
- Tokyo
- San Diego

System requirements:

- HR Service Delivery Enterprise package
- Employee Center [sn_ex_sp]
- Content Publishing [sn_cd]
- The following update sets must be loaded after installing Journey Accelerator. Links to the update sets are in the Supporting Links and Documentation section of the ServiceNow Store:
  - JA_ESC_header_menu_item-Journey Accelerator_Plans.xml
  - JA_Enforce_security_property.xml
  - JA_Allow_Content_Delivery.xml

Other requirements:

- To schedule Outlook meetings from Journey Accelerator tasked-based to-dos, the following spoke should be installed:
  - Microsoft Exchange Online Spoke v3.2.0 [sn_ex_online_spke]
  - Retry Handler Framework v1.0.1 [sn_retry_handler]
- To use the Listening Posts [sn_lp] application, you must install Listening Posts v4.0.2 from the ServiceNow Store (and all Listening Posts requirements)
- To use the Learning Posts [sn_lnp] application, you must install Learning Posts v4.0.2 from the ServiceNow Store (and all Learning Posts requirements) as well as the following update set: JA_HR_Learning_Core.xml

Key features and requirements summary for the latest version of Journey Accelerator in ServiceNow Store

Journey Accelerator Version 3.0.3

Supported family releases

Key features and requirements summary for Journey Accelerator Version 1.0.2 in ServiceNow Store

Install and configure Journey Accelerator

Install the Journey Accelerator [sn_ja] application to enable your users to easily create and manage transition plans.

Before you begin

The Employee Center must be installed and activated. Managers, employees, and mentors access Journey Accelerator plans from the EC.

- Learn about the Employee Center (EC) portal [com.sn_hr_service_portal] at Employee Center.
- If you are planning to use the Journey Accelerator v2 scheduling feature, see Microsoft Exchange Online setup for Journey Accelerator before you begin installation.
- Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Select a version from the list and select **Install**.

   In the Review Installation Details dialog box, any dependencies installed with your application are listed.
4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

Verify the Journey Accelerator installation

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Verify the Journey Accelerator installation

Verify the installation and updates are correctly applied for the Journey Accelerator application by using demo data.

Before you begin

Note:
This task can be completed only if the Journey Accelerator application demo data has been installed.

Role required: admin

Procedure

1. Navigate to **All** > **System Administrator** > **Impersonate User**.
2. In the search field, enter the user name `Darcie Schmidt` and press **Enter**.
3. Navigate to **Self-Service** > **Employee Center**.
4. To view and create plans, click **My action Plans**.

Result

When you see the **My Action Plans** page, you have correctly installed and updated the Journey Accelerator application.

Modify a scheduled job for Publish Journey Accelerator plans

Update the Publish Journey Accelerator plans job. The job evaluates a plan's publish date to determine when to publish the plan.

Before you begin

Role required: admin

About this task

You can change the scheduled frequency at which the job runs, modify scripts, and add conditions.

Note:
The default scheduled frequency for a Publish Journey Accelerator plan is 12 hours.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. In the **Name** field, enter `Publish Journey Accelerator plans`, press **Enter**, and then open the job.
3. On the form, fill in the fields.

Schedule script execution form

Field	Description
Name	Name that identifies this scheduled job.
Active	Option that indicates that scheduled job is active and should be executed at the specified date and time.
Application	Name of the application that contains the script. **Global** appears if the script is in the global scope.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Conditional	Option for enabling the running of the scheduled job if certain conditions are met in the associated script.
Run	Time interval to use for running the scheduled job: ○ **Daily**: Runs daily, at a designated time. ○ **Weekly**: Runs on a weekly basis, at a designated time and day of the week. ○ **Monthly**: Runs on a monthly basis, at a designated time and day of the month. ○ **Periodically**: Runs on a designated repeating interval. ○ **Once**: Runs for a single occurrence only. ○ **On Demand**: Runs immediately on demand. ○ **Business Calendar: Entry Start**: Runs on the starting entry dates for the business calendar that you select in the **Business Calendar** field. A scheduled job runs for the starting date of each of the business entries that you defined for the business calendar. For example, if the business calendar represents a fiscal year, and the starting date of each entry is a fiscal month, the scheduled job runs on the first day of each month. ○ **Business Calendar: Entry End**: Runs for the ending date for the business calendar that you select in the **Business Calendar** field. This selection runs in the same manner as **Business Calendar: Entry Start**, but for the end dates of the associated business calendar entries. **Note:** When you select **Business Calendar: Entry Start** or **Business Calendar: Entry End**, you can apply an offset factor to schedule the job to run before or after the time span of the selected business calendar. If you select a business calendar and all its business calendar spans are in the past, the job would never run as this is an invalid configuration. To learn more, see the **Offset type** and **Offset** fields. To learn more about creating and using business calendars and defining business calendar entries, see Creating business calendars and Define business calendar entries.
Repeat Interval	Duration of the repeat interval for each scheduled job execution. Enter the duration in the number of days, hours, or minutes. For example: ○ To run the scheduled job every four days, enter `04` in the **Days** field. ○ To run it every 26 hours, enter `26` in the **Hours** field. ○ If it should repeat at an interval of 13:30:25, enter `13` in the **Hours** field, and then enter `30` and `25` in the two unlabeled fields after it.
Starting	Date and time of the first scheduled job generation. Select the calendar date and time. This field appears only if you select **Periodically** in the **Run** field.
Condition	Conditional script that determines if a scheduled job should run. The last expression of the script should evaluate to a Boolean (true/false) value. This text box appears only if you select **Use conditions**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Run this script	Name of the script to run at the scheduled date and time. Two examples are copy script logic from a business rule or call a script include.

4. Click **Update**.
   To learn more about scheduled jobs, see Scheduled jobs.

Configure action plan access in the Employee Center

Add or change the header menu labels. Or, update the My active items list link used to access action plans in the Employee Center user interface.

Configure Journey Accelerator menu items in the Employee Center

Install the latest Employee Center app from the ServiceNow Store. After you install the EC app, you can modify the labels for header menus or My active items links.

1. Install Employee Center

   Install the Employee Center app to get the latest EC user interface.

2. Update the Employee Center theme

   Update the Employee Center service portal settings to use the latest theme and menus.

3. - Add a Journey Accelerator action plan link to the My active items widget
   - Add a Journey Accelerator action plan menu to the Employee Center

Update the Employee Center theme

Install the Employee Center app from the ServiceNow Store to update the EC UI theme.

Before you begin

Install the Employee Center app from the ServiceNow Store before you can update the labels for the menu items or My active items links. For more information, see Install a ServiceNow Store application.

For more information on Employee Center themes, see Customize Employee Center portal theme.

Role required: admin

About this task

Update the Employee Center service portal setting to use the latest Employee Center user interface.

Note:
The Employee Center in your instance might already use the updated field settings.

Procedure

1. Navigate to **All** > **Service Portal** > **Portals**, and click **Employee Center**.
2. Open the record for **Employee Center Menu**.
   Set these fields and values:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee Center fields and values

Field	Value
Homepage	`ec_dashboard`
Theme	`EC Theme`
Main menu	Employee Center Menu

3. Click **Update**.

What to do next

You can update Employee Center menu items and links in My Active Items.

- Add a Journey Accelerator action plan link to the My active items widget
- Add a Journey Accelerator action plan menu to the Employee Center

Add a Journey Accelerator action plan link to the My active items widget

Add a menu item for Journey Accelerator action plans to the My active items widget in the Employee Center.

Before you begin

The latest Employee Center app installed on your instance. See, Install Employee Center.

Role required: admin

Procedure

1. Navigate to **All** > **Employee Center** > **Activity Configuration**.
   The Activity Configurations table appears.
2. Select **New** to create an activity configuration.
   The Activity Configuration form appears.
3. Use the application picker to set the application scope to **Employee Center**.
   See Application picker for more information about using the application scope picker.
   The **Application** field is set to **Employee Center**.
4. In the **Activity Name** field, type `Action plan items`.
5. In the **Activity portal page** field, select **ja_plans**.
6. Accept the default values for the following fields:
   a. **Activity navigation** field is set to **Internal**.
   b. **Order** field is set to **100**.
   c. **Primary** check box is cleared.
   d. **Advanced** check box is cleared.
   e. **Active** check box is selected.
7. Select **Submit**.

What to do next

Complete the configuration process for the activity configuration you created by specifying configuration details. See Create activity configuration details for the Journey Accelerator action plan items activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create activity configuration details for the Journey Accelerator action plan items activity

Complete the configuration process for the Journey Accelerator activity that you created by specifying activity configuration details. The activity configuration details enable administrators to control the actions of links associated with applications and features.

Before you begin

Ensure that the application scope is set to Employee Center. Use the application picker to change the application scope if it isn't currently set to Employee Center. See Application picker for more information about using the application scope picker.

Role required: admin

About this task

An activity configuration is associated with an application that you specify using the application picker. The fields that appear in an Activity Configuration or Activity Configuration Detail form depend on the application scope that you set using the application picker. See the following topics for more information about the forms associated with the Activity Configurations table:

- Activity Configuration form
- Activity Configuration Detail form

This task starts with the application scope set to the Employee Center application, and ends with creating conditional filters that are applied to the Journey Accelerator application.

Procedure

1. Navigate to **All** > **Employee Center** > **Activity Configuration**.
   The Activity Configuration table appears.
2. Select the activity configuration that you created for the Journey Accelerator action plan items.

   Tip:
   If you used the task described in the Add a Journey Accelerator action plan link to the My active items widget topic to create the activity configuration, select the Activity Configuration record with the **Activity Name** field set to **Action plan items**.

   The Activity Configuration form appears.
3. **Optional:** Set the application scope to **Employee Center** using the application picker if the application scope is set to a different value.

   Tip:
   The application scope must be set to **Employee Center** to create the activity configuration details associated with the activity that you're configuring.

4. From the **Related Links** section, select **New** on the **Activity Configuration Details** tab.
   The Activity Configuration Detail form appears.
5. Change the application scope to **Journey Accelerator** using the application picker.
6. In the **Table** field, select **Journey Accelerator Plan [sn_ja_plan]** from the drop-down list.
7. Use the **Conditions** field to add filter conditions and or clauses that determine the employee's visibility into the action plans listed in the Journey Accelerator Plan table.
   These conditions control access to the links associated with the Journey Accelerator activity that you configured for the different employees across your organization.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tip:
The following filter conditions and or clauses are examples that you can use or further modify to your specifications:

Filter Condition

Conditions			Boolean Operator
Active	is	true	AND OR
Manager	is (dynamic)	Me	AND OR
Mentors	is (dynamic)	Me	AND OR

"OR" Clause

Conditions			Boolean Operator
Active	is	true	AND OR
Employee	is (dynamic)	Me	AND OR
State	is not	Draft	AND OR

8. Select **Submit**.

Add a Journey Accelerator action plan menu to the Employee Center

Add a list item for Journey Accelerator action plans to the **My active items** list in the Employee Center.

Before you begin

The latest Employee Center is installed. See,Install Employee Center

The Employee Center theme needs to be configured to use the latest user interface. See, Update the Employee Center theme.

Role required: admin

Procedure

1. Navigate to **All** > **Service Portal** > **Portals**, and click **Employee Center**.
2. Open the **Main menu** record, and click **More** under Menu Items section.
3. On the **Menu item** form for **More**, click **New**.
4. Fill in these **Menu Item** form fields:

Menu item fields and values

Field	Value
Label	`Action Plans`
Page	`ja_plans` change in of the other fields.

The other fields can remain as they are.

5. Click **Submit**.

Creating and managing audience-specific Journey Accelerator templates

Administrators can develop Journey Accelerator templates for customized plans with stages that include user tasks for different audiences.

Using Journey Accelerator, administrators can develop and manage templates for audience-specific transition plans. Plans include templates with stages and to-do lists. Managers can use these templates to create transition plans for their employees.

For more information about different audiences, see Audiences.

Manage Plan Types

Plan types are the top-level containers for stages and tasks. Administrators select a plan type and a title for the plan when configuring a specific plan. Administrators enter a meaningful title for the type of plan that they are creating so that users can easily identify the plan type, such as "IT Senior Tech Promotion." For more information about plan types, see Create and manage Journey Accelerator plan types.

Manage Stage Names

Stages are contained inside the Journey Accelerator plan. Stages contain tasks or to-do lists for managers, mentors, or employees to complete. Stage **Titles** are visible to users. Stages should have an implicitly logical order, such as a time sequence. For more information about stages, see Create and manage Journey Accelerator stages.

Manage Task Templates

Journey Accelerator task templates appear as to-do lists in the plan list view in the Employee Center for managers, mentors, or employees.

Manage Plan Configurations

Plan configurations are based on a plan type. Plan configurations are customized for specific employee audiences. For more information about plan configurations, see Create and manage Journey Accelerator plan configurations.

Manage Plans

Administrators can access and manage plans for specific users after a manager has created a plan. Administrators only update individual plans when the plan's owner (manager) makes a request to do so. For more information about managing plans, see Managing existing Journey Accelerator plans created by managers.

Manage Plan Header Configuration

Administrators can configure the header for different plan types. Default header configurations are available for the different Journey Accelerator roles.

- View for manager
- View for employee
- View for mentor

For more information about updating the default header configurations or creating new plan header configurations, see Customize and manage Journey Accelerator plan headers.

From the Employee Center, managers can create customized Journey Accelerator plans that contain stages with specific to-do lists for themselves, mentors, and employees.

Create and manage Journey Accelerator plan types

Create plan types to manage the top-level classification for stages and tasks in a Journey Accelerator plan.

Before you begin
Role required: admin

About this task
Managers select a plan type when they are configuring a specific plan. As an administrator, you should create a title for a plan type that is meaningful. You want managers to quickly understand what plan type they are using, for example New Hire, Promotion, or Offboarding.

Procedure
1. Navigate to **All** > **Journey Accelerator** > **Manage Plan Types**.
2. Click **New**.
3. In the **Title** field, enter a meaningful name for the type of plan that you are creating so that it is easily identifiable.

   These fields contain default plan header configurations for the plan type.
   - View for manager
   - View for employee
   - View for mentor

   See, Customize and manage Journey Accelerator plan headers to customize headers for a plan.
4. Click the search icon next to a role to change the header configuration for that role.
5. After you have selected any header configuration you want to change, click **Submit**.

Enable automatic action plan creation

You can configure the Create Journey Accelerator Action Plan template so that a plan is automatically created from a lifecycle event.

Before you begin
The Create a new action plan for your employee activity must be active. See, Activate the Create a new action plan for your employee activity.

Role required: admin

Procedure
1. Navigate to **All** > **Livecycle Events** > **Administration** > **Manage HR Templates**.
2. Open the **Create Journey Accelerator Plan** template.
3. Set **Create plan automatically**.
   - Set **Create plan automatically** to true to automatically create a plan when the lifecycle event activity is created.
   - Set **Create plan automatically** to false create a to-do for Opened for person (manager) in the HR case.
4. Click **Update** to apply and save your changes.
   When **Create plan automatically** is set to true, an action plan is automatically created for the activity in a lifecycle event.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Open an HR case to create a Journey Accelerator action plan

Activate the Create a new action plan for your employee activity

Set activities in Lifecycle Events to active to enable the activity to process fulfillment and closure of related events and activities.

Before you begin
Role required: sn_hr_le.admin or sn_hr_le.activity_set_manager

About this task
The Create a new action plan for your employee activity by default is not active. To create Journey Accelerator action plans, activate the Create a new action plan for your employee activity if it isn't already active.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Manage Activity Configuration**.
2. Click **Create a new action plan for your employee**
3. Select the check box for **Active**.
4. Click **Update**.
   See, Configure the supporting components for a lifecycle event if you want more information about Lifecycle Events and fulfiller activities.

Related topics

Open an HR case to create a Journey Accelerator action plan

Customize and manage Journey Accelerator plan headers

Create customized plan headers for different plan types based on user roles.

Before you begin
Role required: admin

About this task
Journey Accelerator plans use three different roles:

- Manager
- Employee
- Mentor

You can customize the plan header for each role. Customizations include role-based permission, customizing field labels, and setting role-based plan preferences. Plan header fields are available in the Journey Accelerator Plan [sn_ja_plan] table.

Procedure

1. Navigate to **All** > **Journey Accelerator** > **Manage Plan Header Configuration** and click **Default for employee**.
   The default header configuration for the employee role has these fields configured:
   - **Plan created by**
   - **mentor**
2. Click **mentor**.
3. In the **Custom label** field, enter `buddy` to replace mentor.

Note:
A custom field header can only be used for one mentor field. You can customize the mentor field for either **Mentor can view** or **Mentor can edit**.

4. Click **Update** to save the changes to the mentor field.
5. Click **Update** again to save the changes to the header configuration.

   The text **This person's mentor** is changed to **This person's buddy**. This change applies to only the header view of the employee role. Field labels are unique to each role.

   The changes are available to use in Journey Accelerator Plan Types.

Customize field labels in a Journey Accelerator plan header

Customize the labels for fields that are available in the Journey Accelerator Plan [sn_ja_plan] table so that users have a customized and consistent experience. You can use customized plan headers for different plan types.

Before you begin
Role required: admin

About this task
Journey Accelerator plans use three different roles:

- Manager
- Employee
- Mentor

You can customize the plan header for each role. You can also customize role-based permissions, field labels, and role-based plan preferences. Plan header fields are available in the Journey Accelerator Plan [sn_ja_plan] table.

Procedure

1. Navigate to **All** > **Journey Accelerator** > **Manage Plan Header Configuration** , and click **New**.
2. In the **Name** field, enter a meaningful name.
   The name should be meaningful to the role that you are creating the custom header for. For this task, enter `Support Manager Plan Header`.
3. Click **Submit**.
4. Open the plan header configuration that you created.
5. Click **New** .
6. In the Details list, select **Mentors can edit**.
7. In the **Custom label** field, enter `buddy` and click **Update**.
8. Click **Update** again.

   Any plan type role that uses this plan header displays the label buddy in the plan header. Labels apply to individual roles. Each role can have its own customized labels.

   Configure unique plan headers for different plan types. For more information, see Create and manage Journey Accelerator plan types.

Create and manage Journey Accelerator stages

Create and manage stages that are contained inside the Journey Accelerator plan. Stages contain tasks or to-do lists for managers, mentors, or employees to complete.

Before you begin
Role required: admin

About this task
Use Journey Accelerator stages to create a logical sequence for task completions. Managers add stages to plans in the Employee Center.

Procedure

1. Navigate to **All** > **Journey Accelerator** > **Manage Stage Names**.
2. Click **New**.
3. In the **Title** field, enter a meaningful name for a stage in a plan.
   For example, Week 1, Day 1, or Month 2.
4. Click **Submit**.

Create and manage action plan task templates

Create and manage the task templates that managers, mentors, and employees can use for their Journey Accelerator plans. Use task templates to provide a consistent and streamlined experience for creating Journey Accelerator plans.

Before you begin
Role required: admin

About this task
Journey Accelerator task templates appear as to-do lists in the Employee Center for managers, mentors, or employees.

Procedure

1. Navigate to **All** > **Journey Accelerator** > **Manage Task Templates**.
2. Create a template or modify an existing template.
   For information about the template fields, see Journey Accelerator task template fields.
3. Click **Submit** or **Update**.

Manage to-do templates created by managers

Modify and manage to-do task templates that managers create.

Before you begin
Role required: admin

About this task

Procedure

1. Navigate to **All** > **Journey Accelerator** > **Manage Manager Task Templates**.
2. Open a task template, or click **New**.
3. Modify or complete the fields in the form.
   For detailed information on the fields in the form, see Journey Accelerator Model Task fields.
4. Click **Submit** or **Update** to save the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create and manage Journey Accelerator plan configurations

Create and manage plan configurations that are based on a plan type. Plan configurations are customized for specific employee audiences.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Journey Accelerator** > **Manage Plan Configurations**.
2. Click **New**, or open an existing plan configuration.
3. On the form, fill in the fields.

Plan Configuration form

Field	Description
Title	Descriptive title so that managers can identify different plan configurations. For example, Sales Employee Plan Configuration.
Audience	Group of users. Select an audience so that you can control which specific groups of users can access the plans.
Active	Option that you can select to make the configuration available for use. **Note:** A plan cannot be active until it contains at least one stage.
Journey Accelerator plan type	Plan types. The top-level classification is used to identify different types.
Short description	Brief description of the plan.
Description	Detailed description of the plan.

4. Click **Save**.
5. To configure the stages for this plan, click **New**.
   a. Select an available stage name.
   b. Click **Submit**.
6. Click **Update**.

Managing existing Journey Accelerator plans created by managers

Plan owners make updates to Journey Accelerator plans only from the Employee Center portal. Administrators should not change existing individual plans.

Changes to existing individual Journey Accelerator plans should be made only from the Employee Center portal by the manager who created the plan.

Configure and manage the Action Plan Guided Tour for Journey Accelerator

As an administrator [admin] or a guided tour administrator [guided_tour_admin], you can manage and update the Action Plan Guided Tour for Journey Accelerator.

Journey Accelerator has a guided tour to help managers learn about action plans and come up-to-speed on the available features.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To access the Action Plan Guided Tour from your ServiceNow instance, navigate to **Guided Tour Designer** > **Guided Tours** and search for `Action Plan Guided Tour` in the name column.

Guided tours help train role-based users on how to use an application's user interface (UI) and features. Tours contain a series of interactive steps a user completes in their browser window. Administrators can manage and modify guided tours. You can find more information about guided tours in these ServiceNow documentation topics.

- Guided tours : This overview covers many of the features administrators use to create and modify tours.
- Guided Tour Designer interface : Learn about the Guided Tour Designer features and interface.
- Edit a guided tour : This task provides details about how to modify guided tours.

Journey Accelerator integrations

Extend Journey Accelerator capabilities by integrating other application into the Journey Accelerator experience.

Microsoft Exchange Online setup for Journey Accelerator

By integrating the Journey Accelerator scheduling feature with the Microsoft Office 365 calendar function, users can schedule plans and to-do tasks.

> **Note:**
> If an administrator intends to use the Microsoft Office 365 scheduling capabilities with Journey Accelerator, the administrator must install and configure the related Microsoft plugins and integrations before installing Journey Accelerator.

The Journey Accelerator scheduling feature enables users to schedule Microsoft Office 365 calendar events directly from Journey Accelerator plans and to-do tasks.

If you plan to use the scheduling feature, you must install and configure these plugins and integrations before you install Journey Accelerator. The embedded scheduling feature includes all plugins, integration APIs, and actions.

Some integrations and related plugins require activation by ServiceNow® personnel. Journey Accelerator uses an embedded Microsoft Exchange Online spoke with limitations for use with Journey Accelerator. The use beyond these embedded limitations may require that you get additional licensing or subscriptions.

Journey Accelerator v2

Microsoft AD Spoke [com.sn.ad.spoke]

Provides communication between Journey Accelerator and Microsoft Active Directory to manage objects such as users, groups, and computers.

Microsoft Azure AD spoke [com.sn.azure_ad.spoke]

Provides security requirements to Journey Accelerator so that users, security groups, and office groups are appropriately managed.

Microsoft Exchange Online spoke v2.0.1 [sn_ex_online_spke]

The Microsoft Exchange Online spoke enables creation and management of calendar events and mail in Microsoft Exchange Online.

Journey Accelerator v3 and later

Microsoft Exchange Online Spoke V3.0.0

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Microsoft Exchange Online spoke enables creation and management of calendar events and mail in Microsoft Exchange Online.

Retry Handler Framework

Framework that retries a failed HTTP request when the API rate limits are exceeded and the 429 Too Many Requests status code is returned. The retry-after time HTTP header is used to retry the request again after that specified retry-after time.

Set these Journey Accelerator system properties

Follow the instructions for setting up the spokes respective to your Journey Accelerator version. After spoke setup is complete, navigate to **sys_properties.list** in ServiceNow and set up the following properties for the Journey Accelerator app.

- sn_ja.calendar_provider_option: Select exchangeOnline
- sn_ja.ex_online_dummy_account_id: Insert `<outlook dummy account for querying meeting times>`
- sn_ja.ex_online_service_account_id: Insert `<outlook service account or delegator for calendar management>`
- sn_ja.ex_online_notification_url: Insert `<webhook URL from Microsoft Exchange Online Spoke>`

Note:
When using Microsoft Exchange Online spoke v.2.0.2 with Retry Handler Framework, the scripted rest API for the retry handler framework is used as the webhook URL.

For detailed steps, see Update system properties for Microsoft Exchange Online in the Journey Accelerator app

Update system properties for Microsoft Exchange Online in the Journey Accelerator app

Update the Journey Accelerator app system properties to use with Microsoft Exchange Online features support by Journey Accelerator.

Before you begin

Complete all the steps required for setting up Microsoft Exchange Online Spoke v2.0.2 Microsoft Exchange Online before updating the system properties for the Journey Accelerator app.

See, Microsoft Exchange Online setup for Journey Accelerator for a list of required spokes supported for different versions of Journey Accelerator.

Role required: admin

Procedure

1. Navigate to **All** > **sys_properties.list**.
2. Search **Application** for `Journey Accelerator`.
3. Locate and update the following fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field names and values

Name	Value
sn_ja.calendar_provider_option	`exchangeOnline`
sn_ja.ex_online_dummy_account_id	`<Outlook dummy account for querying meeting times>`
sn_ja.ex_online_service_account_id	`<Outlook service account or delegator for calendar management>`
sn_ja.ex_online_notification_url	`<webhook URL from Microsoft Exchange Online Spoke>`

Double-click the **Value** to edit.

Note:
When using Microsoft Exchange Online spoke v.2.0.2 with the Retry Handler Framework, the scripted rest API for the retry handler framework is used as the webhook URL.

Listening Posts with Journey Accelerator

Use Listening Posts with Journey Accelerator to add surveys to action plans and to-do tasks to enable immediate feedback based on the context of a task.

Administrators can create templates to trigger surveys using Listening Posts so that a survey is opened when a task is completed.

Activate the Listening Posts (sn_lp) plugin from ServiceNow Store. Listening Posts is available with the HR Enterprise package.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Learning Posts with Journey Accelerator

Quickly create action plans that include to-do tasks for learning and training with Learning Posts.

With the Learning Posts application, you can embed learning courses from commonly used Learning Management Software (LMS) systems such as Saba, Udemy, Cornerstone, SumTotal, and others with included integrations. For more information, see Learning Posts.

Include courses focused on the employee needs. Managers can easily search for training and add it as a to-do task in an action plan. Create plans with to-do tasks for new employees, team members returning from leave, or employees taking on a new role. Employees access the learning directly from an action plan or to-do task.

Working with Journey Accelerator plans

Managers, employees, and mentors can access the Journey Accelerator plans through the Employee Center (EC).

For information about the EC, see Employee Center with HR Service Delivery and Employee Center.

Monitor Journey Accelerator plans

Monitor plans and to-do tasks from the Journey Accelerator dashboard.

Before you begin
Role required: Reader [sn_ja.reader]

Procedure

1. Navigate to **All** > **Journey Accelerator** > **Journey Accelerator Dashboard**.
2. Click the items in the dashboard for more details.
   Here is some of the information you can see about Journey Accelerator plans and to-dos.
   - Overdue Plan To-dos
   - Plans in Draft State
   - Plans in Ready State
   - Plans Published in Last 6 Months
   - To-dos Created in Last 6 Months - From Template (True) Vs. Plan Created (False)

Create and track plans for your employees

Create and manage employee transition plans by using Journey Accelerator templates. You can use role-based plans to create consistent plans for different roles on your team.

Before you begin
Role required: All employees with direct reports

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. In the Employee Center (EC) portal, click **Action Plans**.

   Note:
   Depending on the Employee Center configuration, the Action plans menu can be in the top header menu or under the More list menu. You can also access action plans from My active items list.

2. Click **Create action plan**.
3. On the form, fill in the fields.

   Let's start with a few details about this plan form

Field	Description
Who this plan is for	Name of the employee that this plan is for.
Plan type	List of available plan types that are configured for specific groups or types of transitions.
Plan name	Descriptive name of the plan.
This person's mentor	Mentors that you can select. You can also set the mentors' view or edit permission.
Plan description	Details about this plan.

4. Click **Create plan**.

   You can create a plan that is based on the plan types and audience. You can either publish the plan immediately or exit and make changes later. Plans save automatically.

   You can perform the following actions in the plan:

   Edit plans

   - To change the plan name, add or delete mentors, and change the plan description, click **Edit plan details**.

     Note:
     Mentors are notified when they are added to a plan.

   - To add a stage, click **Create stage**.

   Edit stages and to-do tasks.

   - Reorder to-do tasks by using the drag capabilities in the UI or from the Move down menu in a stage.
   - Rename a stage from the Rename stage menu in the stage.
   - Delete optional to-do tasks.

     Note:
     Not all editing actions are available for the to-do tasks that are mandatory. You can't delete mandatory to-do tasks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Edit an existing to-do task.
- Click **Add to-do** to create a to-do task or to choose from a list of available to-do tasks.
  You can assign to-do tasks to users other than the employee or the mentor. These to-do owners receive to-do tasks with access to only their assigned to-do tasks in a published plan.

5. Review the draft and publish or edit the plan.
   Publish:

   - Click **Publish now** to immediately make the plan available.

     Note:
     Only use Publish now for active users. Publishing a plan before the user is active can incorrectly generate to-do tasks.

   - Click **Publish on a set date** to select a date when you want the plan to be published.

   Edit:

   - Click **Edit plan details** to edit the plan name, add or remove a mentor, set a mentor's permission, or edit the plan description.
   - Click **Delete plan** to remove the entire plan from the Employee Center.

   You can edit existing plans at any time before the plan is marked complete. See Edit existing Journey Accelerator plans.

Edit existing Journey Accelerator plans

Edit existing Journey Accelerator plans by adding, removing, or rearranging stages and tasks to meet the needs of the employee and your team.

Before you begin

Role required: All employees with direct reports

Procedure

1. In the Employee Center portal, click **Plans**.
2. Click the plan that you want to edit.
3. Update, move, or delete stages or to-dos.
   When you're done, click **Exit editing**.

   Note:
   - Deleting tasks or stages permanently removes them from the plan.
   - Plans immediately update with your saved edits.

Manage action plan to-do tasks and create templates

Create, modify, and manage to-do tasks for employees and mentors as part of your management responsibilities.

Journey Accelerator action plans can be customized for employee transitions. Part of that customization is a managers ability to add, delete, modify, and save to-do tasks. Save the to-do tasks you create as templates to save time and provide consistent experiences for employees and mentors.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add or modify an action plan to-do

Create, modify, and save to-do tasks as part of an action plan. To-dos are assigned to employees, mentors, or managers to complete.

Before you begin
Role required: All employees with direct reports

Procedure

1. Navigate to **All** > **Employee Center** > **Action plans**, and open an action plan.
2. Click **Add to-do** or open an existing task in a stage.
3. Choose the option that is best suited for your employee or mentor.
4. Fill in the to-do form.

Note:

- For to-dos that are appropriate for more than one employee or mentor, select **Save as Template**. Save the to-do as a template so that it is available to use for other employees or mentors in future action plans.
- The Action plan to-do task fields topic has descriptions of the To-do form fields.

5. Click **Save**.

Employees view and complete action plans

View, manage, and track your action plan progress from the Employee Center portal.

Before you begin
Role required: Any employee assigned to a plan has access to the plan. You can be assigned as the employee or mentor.

About this task
Your manager creates plans for different employee transition events. When you can access your plan from the Employee Center portal, you see only your assigned tasks if your plan is in the Ready or Complete state.

Note:
Tasks in your plan are also listed under To-dos. The To-dos list does not show the stage that contains the task.

Procedure

1. In the Employee Center portal, click **Plans**.
2. Click the plan that you want to work on.

   Stages contain the tasks for you to complete.
3. To view details about a particular task and to manage its progress, click that task.
   You can manually update the status of a task and add additional details when needed. The different statuses are as follows:
   - **Mark as in progress**: Updates that record for the task so that others can see that you started working on the task.
   - **Complete**: Shows that you completed the task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Comments**: Sends messages to the plan manager.
- **Attachments**: Adds files, such as certificates of completion, for training or other documents.

Mentor employees by using a Journey Accelerator plan

Mentor employees that are assigned to you and view or edit employee plans depending on your permission type.

Before you begin
Role required: You must be assigned as a mentor to an action plan.

About this task
Managers create plans for different employee transition events. Some transitions include having a mentor. Mentors access plans from the Employee Center portal.

There are two types of mentor permissions:

Can view

Mentors see all tasks in a plan. Mentors with the Can view permission can only update the tasks that are assigned to them. Mentors can view plans in Draft, Ready, or Complete states.

Can edit

Mentors with the Can edit permission can edit, add, and delete stages or to-do tasks. The Can edit permission enables mentors to publish plans and set plan publish dates.

Note:
Tasks in a plan are also listed under To-dos. The To-dos list does not show the stage that contains the task.

Procedure

1. In the Employee Center portal, click **Plans**.
2. Click the plan that you want to work on.

   Stages contain tasks to complete.

   The type of mentor permission restricts or enables edit access to plan stages, to-do tasks, and publishing a plan.
3. Click a task to view or edit its details so that you can manage the progress of it.
   Manage tasks manually. Mark your tasks and add additional details when needed. You can choose the following task statuses:
   - **Mark as in progress**: Updates that record for the task so that others can see that you started working on the task.
   - **Complete**: Shows that you completed the task.
   - **Comments**: Sends messages to the plan manager.
   - **Attachments**: Adds files, such as certificates of completion, for training or other documents.

Journey Accelerator reference

Reference topics provide additional information about the lists and forms that you use to configure and use Journey Accelerator.

Journey Accelerator task template fields

To make a task template, fill in the Journey Accelerator task template fields.

Task template fields and description

Field	Description
Name	Descriptive name for the activity that is associated with the task.
Table	Table that is used to track tasks and fields. Select the Journey Accelerator Task [sn_ja_task] table to enable access to the template fields.

Template	Template fields that appear only when a table is selected. Template fields are tracked in the Journey Accelerator Task [sn_ja_task] table.
	
	The following settings apply to the overall properties of the task:
	• **Mandatory**: Set to **true** to make the task required. Set to **false** to make the task optional.
	• **Type**
	  ○ **Regular**: Standard to-do task template.
	  ○ **Calendar**: Schedulable task. Creates to-do task linked to Microsoft Office 365 calendar event.

Active	Option that enables the task template when selected. Only active tasks are available for managers to use.
Task short description	Brief description of the task. This text appears to users from the Journey Accelerator plan. This field appears in the **Short description** field when you are managing tasks in stages.
Task description	Detailed description of the task.
Parent plan table	Higher-level table that associates an entry in the Journey Accelerator Task [sn_ja_task] with the table that tracks plans, Journey Accelerator Plan [sn_ja_plan]. Selecting the Journey Accelerator enables access to the plan-related fields.
Assign to source	User who is assigned the task: • Employee • Manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task template fields and description (continued)

Field	Description
	• Mentor **Note:** Initially, only the first mentor is assigned with to-do tasks in the list with multiple entries. Managers can reassign the to-do tasks to other mentors after the plan is created.
Relative due date trigger	Condition that is used to trigger when a task is assigned based on the publish date of the plan. This condition is evaluated with **Date offset type** and **Date offset type**. • **Created** • **End on** • **Start on** • **Updated** **Note:** Only use the **Start on** condition. **Start on** is selected by default.
Date offset type	Condition that is used to trigger when a task is assigned. This condition is evaluated with **Relative due date trigger** and **Number of offset days**. • **On** • **After** **Note:** The **After** condition is the default selection. We recommend that you use only the After condition.
Number of offset days	Condition that is used to trigger when a task is assigned. This condition is evaluated with **Relative due date trigger** and **Date offset type**. • **Days** • **Hours**

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task template fields and description (continued)

Field	Description
	Note: Only specify days, and keep hours set at 0 (zero). For example: If the `Relative Due Date Trigger = Start On`, `Date Offset type = After`, and `Number of offset days = 5 days`, the task is configured to trigger 5 days after the publish date of the plan.

Journey Accelerator Model Task fields

Managers create to-do tasks that are saved as templates. The templates are stored as a Journey Accelerator Model Task.

Model template fields and descriptions

Field	Description
Task name	The name of the to-do as it appears in an action plan.
Owner	The manager that created the to-do task template.
Additional assignee list	Adds user to the **Additional people** field of the to-do task.
Assigned to type	• Persona: One of the personas supported for action plans. (manager, employee, mentor) • User: A single user. **Note:** The availability of other fields depends on your selection. The persona is listed in the **Assigned to source** field.
Parent plan table	The table that contains the to-do task template information (Journey Accelerator Plan [sn_ja_plan]).
Assigned to source	The persona to which the to-do task is assigned.
Assigned to	The name of a single user.
Active	Select to make the plan available. Clear the check mark to hide the template from users.
Mandatory	Select to make the to-do task mandatory. Clear the check mark to make the task optional.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Model template fields and descriptions (continued)

Field	Description
Journey Accelerator task type	• Regular: Task without the scheduling feature. • Calendar: Available when Journey Accelerator is configured to work with a calendar such as Microsoft Exchange Online
Due date configuration	A conditional due date for the task.
Number of days/weeks	The days or weeks from the assigned condition for when the task is due.
Task description	The description of the task that is visible to the users.

Action plan to-do task fields

The to-do form contains fields that a manager uses to customize tasks for employees and mentors to complete as part of a transition plan.

To-do form fields and descriptions

Field	Description
To-do name	The name of the to-do to appear as the heading or title of the task.
Stage	Select from the list of available stages included in the action plan.
To-do description	A description of the task that appears in the action plan to-do.
Who this to-do is for	The name of the employee or mentor to whom this to-do task is assigned.
Other people	Assign this to-do to additional people. People have different access and responsibilities based on their role (employee or mentor).
Due Date	Set a due date based on a specific date or a relative date from the date the action plan is published. • An exact date • A number of weeks after publishing • A number of days after publishing • No due date
This to-do is optional	Mark the to-do as optional to give employees or mentors the option not to complete this task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To-do form fields and descriptions (continued)

Field	Description
Add scheduling to this to-do	Enable scheduling for this task. Your organization must be using Microsoft Online Exchange to enable this feature.
Attachments	Drop files in this field to include them as an attachment to the to-do.
Save as Template	Save a to-do as a template so that you can use it in other action plans.

Components installed with Journey Accelerator

Several types of components install with the activation of the Journey Accelerator application, including user roles and tables. There are also dependencies on other features or apps.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for the Journey Accelerator application. If you want to install the demo data, click **Load demo data** when installing this application. Demo data includes sample records and configurations for common use cases.

Roles installed

Role titles and descriptions

Role title [name]	Description	Contains roles
Administrator [sn_ja.admin]	Grants access to create and manage all Journey Accelerator components, tables, and data.	• [sn_ja.modifier] • [sn_cd.content_manager]
Modifier [sn_ja.modifier]	Grants access to modify all Journey Accelerator plans, stages, and to-dos.	[sn_ja.reader]
Reader [sn_ja.reader]	Grants access to read all Journey Accelerator plans, stages, to-dos, and dashboards.	none

You can assign these roles to the appropriate roles, groups, or users in your application.

- To assign a role to another role, see Add a role to an existing role.
- To assign a role to a group, see Assign a role to a group.
- To assign a role to a user, see Assign a role to a user.

Tables installed

Table names and descriptions

Table name [name]	Description
Journey Accelerator Plan Header Field [sn_ja_plan_header_field]	Tracks the fields that are available for configuration in the plan header.
Journey Accelerator Model Task [sn_ja_model_task]	Contains Journey Accelerator task records used to copy a task.
Journey Accelerator Plan [sn_ja_plan]	Contains Journey Accelerator plans and manages associations with related tables.
Journey Accelerator Plan Configuration [sn_ja_plan_config]	Contains details about Journey Accelerator plan configurations.
Journey Accelerator Plan Header Configuration [sn_ja_plan_header_config]	Tracks fields used for plan header configuration.
Journey Accelerator Plan Type [sn_ja_plan_type]	Tracks the different Journey Accelerator plan types.
Journey Accelerator Stage [sn_ja_stage]	Contains Journey Accelerator stage details and relationships to other Journey Accelerator tables.
Journey Accelerator Stage Configuration [sn_ja_stage_config]xx	Contains details about a stage's configuration.
Journey Accelerator Stage Name [sn_ja_stage_name]	Tracks the names of the different Journey Accelerator stages.
Journey Accelerator Task [sn_ja_task]	Contains Journey Accelerator task details and relationships to other Journey Accelerator tables.
Journey Accelerator Task Template [sn_ja_task_template]	Contains details about Journey Accelerator task templates.
Journey Accelerator Task Template for Stage Config [sn_ja_m2m_stage_task_temp]	Used to maintain the relationship of task templates to Journey Accelerator task templates.

For more information on table administration and how to manage data, see Table administration.

Lifecycle Events

Lifecycle Events enable the fulfillment of HR cases that are related to various employee journeys and transitions.

The Lifecycle Events app helps to facilitate daily activities among various cross-functional processes and departments. It makes completing processes that relate to an employees daily life more efficient and easier.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Explore  Define and document the lifecycle event process.	Configure enterprise lifecycle events  Enable the automation of onboarding and other employee lifecycle events that span across company departments.	Configure lifecycle events  Enable and configure digital workflows to manage employee lifecycle events through a single service delivery platform.
Use  Build lifecycle events to automate fulfillment of HR cases.	Analytics and Reporting Solutions  Lifecycle Events dashboards provide visibility into lifecycle events.	

Activate Lifecycle Events

You can activate Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events] if you have the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin

Role required: admin

About this task

Human Resources Scoped App: Lifecycle Events enables you to easily configure digital workflows to manage employee lifecycle events through a single service delivery platform.

It activates these related plugins if they are not already active.

Plugins for Human Resources Scoped App: Lifecycle Events

Plugin	Description
Human Resources Scoped App: Core [com.sn_hr_core]	Provides core HR features.
Employee Center [com.sn_hr_service_portal]	Provides Employee Center.

Using Agent Workspace with Lifecycle Events

To use Agent Workspace with Lifecycle Events, you must activate:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Human Resources Scoped App: Workspace [com.sn_hr_agent_workspace] plugin

Using Playbook with Lifecycle Events

To use Agent Workspace and Playbook with Lifecycle Events, you must request the Playbook plugin from the ServiceNow Store.

Note:
For more information on requesting a ServiceNow Store plugin, see Install a ServiceNow Store application.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Lifecycle event script includes and APIs

Script includes call workflows within Lifecycle Events.

The following script includes are provided with Lifecycle Events:

Script includes installed with Lifecycle Events

Name	Description
hr_ActivitySet	Main script include for Lifecycle Events workflows and activity management.
LaunchActivities	API to launch an instance of all activities under an activity set. Called when a Lifecycle Event case is created.
getAvailableDependentActivitySets(activitySet)	Retrieves a collection of dependent activity sets for an activity set.
isActivitySetCompleted	Checks when all activities in a set are complete.
IsActivitySetActive	Checks when an activity set is active.

The following APIs are provided with Lifecycle Events: hr_LEType - Contains methods related to Lifecycle Event types, activity sets, and activity set activities.Methods related to Lifecycle Event Types:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- createLEType(@param - REQUIRES: Array of js objects having field name value pairs) - Returns js object with status - 'success'.
- updateLEType(@param - REQUIRES: Array of js objects having field's name value pairs and Lifecycle Event Type Id) - Returns js object with status - 'success'.
- removeLEType(@param - REQUIRES: Lifecycle Event Type Id) - Returns js object with status - 'success'.

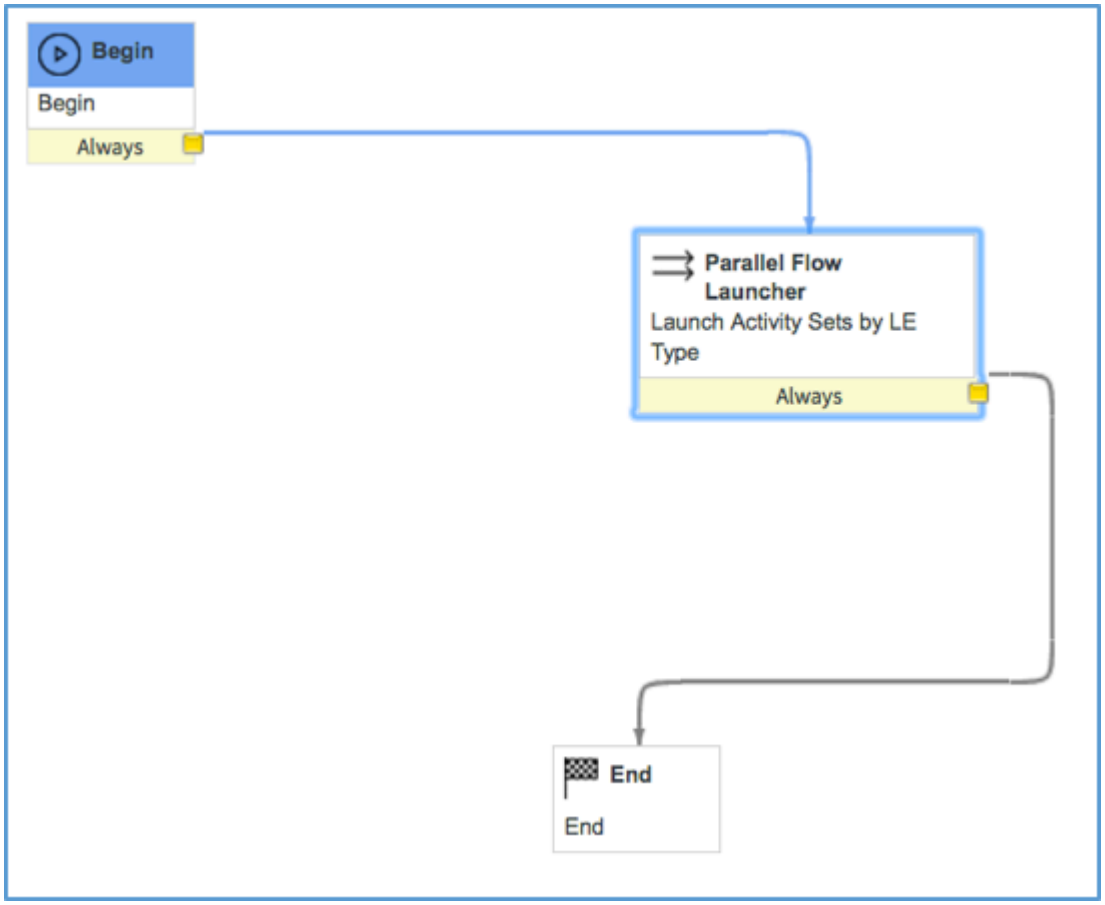
Methods related to Activity Sets:

- createActivitySet(@param - REQUIRES: Array of js objects having field's name value pairs) - Returns js object with status - 'success'.
- updateActivitySet(@param - REQUIRES: Array of js objects having field's name value pairs and ActivitySetId) - Returns js object with status - 'success'.
- removeActivitySet(@param - REQUIRES: activitySetId) - Returns js object with status - 'success'.

Advanced:

- Hr_triggerUtil – Convenience methods for advanced scripting on running activity sets.
- checkActivitySetsCompleted(activitySetList) – Verify when activity sets in the list are complete.
- checkForElapsedDate(date) – Verify when the date passed in has elapsed.
- checkForElapsedDateWithOffset(date, offset, offsetUnits, offsetType)

Lifecycle Events workflows



The **HR Activity Set Launcher** workflow drives the entire lifecycle event process. Associated workflows drive each of the activity sets within a lifecycle event.

When a lifecycle event case is created:

- The **Invoke Activity Set Launcher Workflow** business rule runs.
- The **HR Activity Set Launcher** workflow starts.
- The workflow runs during the lifecycle event case and manages the activity sets.

> **Note:**
> You can access the workflows from **Execution Contexts**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Each activity set in a lifecycle event has an associated workflow. Each workflow:

- Monitors trigger conditions and dependencies on other activity sets to generate activities.
- Checks the status of activities in the workflow every four hours (default) for activity sets triggered by date or a custom script.
- Checks the status of activities when an activity case or request is updated.
- Closes the activity set when activities are marked complete.

The base system limits the total number of activity sets that can run at the same time to 25. This value can be increased, but system performance can be affected.

Note:
The **Evaluation interval** field is not revealed by default. This field works with the **Max activity count** field on the **Activities** tab under Workflow Properties. See Workflow properties . If you reveal the **Evaluation interval** field with the intention of changing the default value (four hours), use caution. Frequent updates mean that more events fire and could cause your lifecycle event activity sets to cancel before the Lifecycle Event completes. For workflows associated with Lifecycle Events, the value of the **Max activity count** field has been increased to accommodate long running business processes that contain multiple workflow activities. For an alternative method, see Lifecycle Events evaluation interval.

1. Open Workflow Editor.
2. From Workflows, select **HR Activity Set Launcher**.
3. Under Parallel Flow Launcher, click the **Activity Properties**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Update the **Max Simultaneous** value.

   See Parallel Flow Launcher workflow activity .

Activate Lifecycle Events for Enterprise

You can activate the Human Resources Scoped App: Lifecycle Events for Enterprise plugin [com.sn_hr_lifecycle_ent] if you have the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin

Role required: admin

About this task

Human Resources Scoped App: Lifecycle Events for Enterprise enables you to automate onboarding and other employee lifecycle events that span across multiple departments such as IT, Facilities, Finance, and Legal.

It activates these related plugins if they are not already active.

Plugins for Human Resources Scoped App: Lifecycle Events for Enterprise

Plugin	Description
Human Resources Scoped App: Core [com.sn_hr_core]	Provides core HR features.
Employee Service Center [com.sn_hr_service_portal]	Provides Employee Center.
Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events]	Provides lifecycle events.
Document Templates [com.snc.document_templates]	Provides Document templates.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.

3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application .

Building a lifecycle event

Lifecycle events enable you to automate the fulfillment of HR cases such as new hire onboarding.

Each lifecycle event is a collection of activities that often span multiple departments and are organized into activity sets. To configure a lifecycle event, you must first document the business process for your event. Next, you must configure all of the supporting components. You can then configure the lifecycle event and its associated activity sets and activities. Finally, you configure a corresponding HR service so that the lifecycle event can be requested for service.

Note:
If you are further customizing an existing lifecycle event, follow the configuration tasks as applicable.

Related topics

- Lifecycle Events employee requests
- Clone a lifecycle event
- Filter lifecycle event activities
- Lifecycle event properties
- Support multiple jobs in a lifecycle event
- Configure the UI of the lifecycle event builder
- Create an HR case for a lifecycle event

Document the lifecycle event process

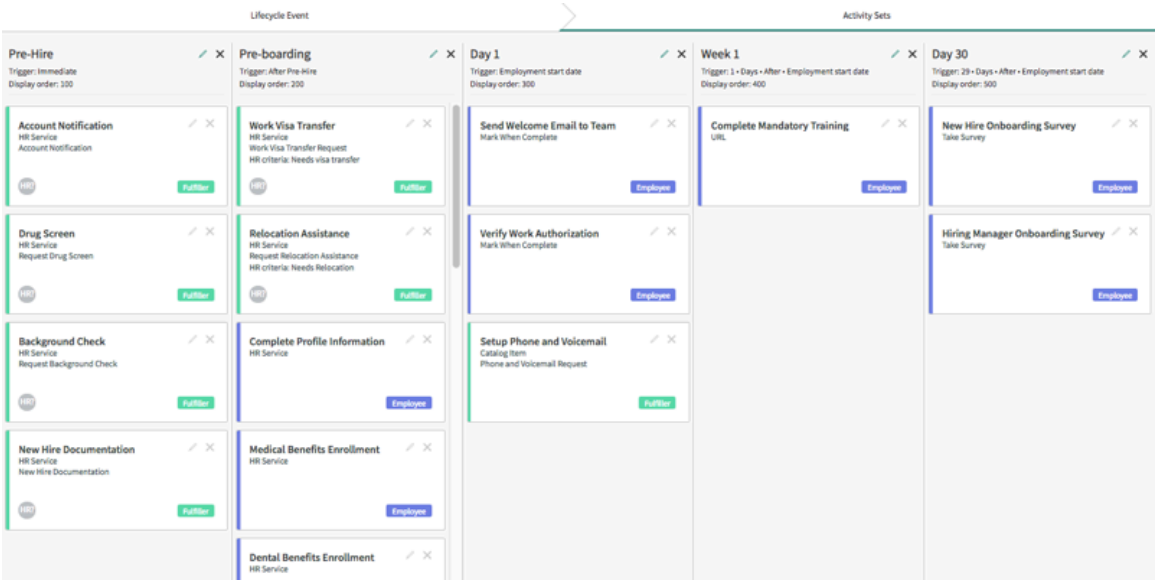
Define and document the lifecycle event process. Lifecycle events are generally cross-departmental and require action from different departments.

It is thus critical that everyone agrees on the flow and their areas of responsibility. As you map out a lifecycle event, consider who is responsible for owning the activity, what the activity type is, and if there is a targeted audience for that activity.

Defining the lifecycle event

As you map out and define your lifecycle event, consider the following.

- What is the lifecycle event type? Examples of lifecycle events include employee onboarding, offboarding, and parental leave.
- What are the different stages of the lifecycle event? These stages are represented as activity sets, which act as containers for the associated activities. Each activity set is triggered based on specified conditions.
- What are the different activities for each activity set? For each activity, determine the appropriate owning group, activity type, and audience.
  - Who owns the activity? Lifecycle events generally span multiple departments. Each activity must be owned by the relevant group that is responsible for overseeing and maintaining that activity, such as HR, IT, or Facilities.
  - What is the activity type? Is it a task for an employee or fulfiller? An approval or notification?
    - Approvals
    - Tasks for employees



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Activities for fulfillers, which can be configured as order guides, catalog items, HR services, HR tasks, incidents, and more
- Notifications

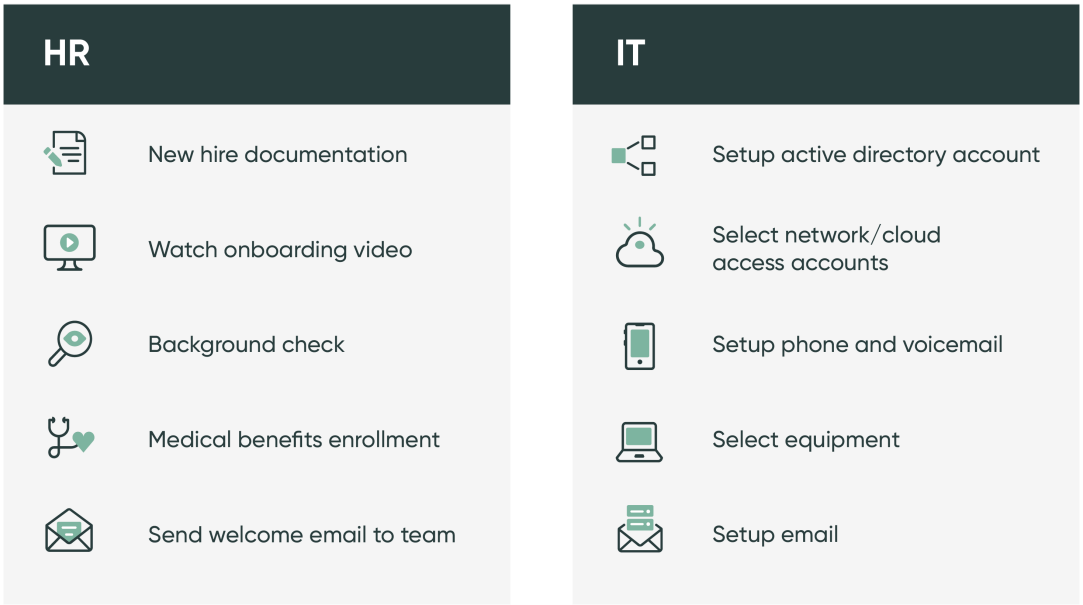
- Is there a targeted audience for the activity? Some activities are not required for all employees, and you can use audience records to target the activity to the appropriate user types.

Example: New hire onboarding

New hire onboarding is a lifecycle event that is included as demo data with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin. The event is organized into activity sets, such as pre-hire, pre-boarding, and day one, which represent different stages in the lifecycle event process. Each activity set contains one or more activities, such as a task for the employee to enroll in medical benefits or a request for an IT fulfiller to set up a new hire's phone and voicemail.

Configure the supporting components for a lifecycle event

Configure the supporting components for a lifecycle event. Lifecycle events are a collection of activities. For each activity, you must identify and configure the underlying components that support it, such as HR task templates, order guides, catalog items, and HR services. You must also identify and configure the relevant owning groups, activity types, and audience records.



- Owning groups
- Activity types
- Audiences

Owning groups

Owning groups control who owns a lifecycle event activity. Because lifecycle events are generally cross-departmental, it's critical that ownership of each activity is assigned to the appropriate group, such as for HR, IT, or Facilities. Each owning group is responsible for overseeing the activities that fall under their purview. See Configure an owning group for a lifecycle event for more information.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role. For example, only members of the HR activity writers owning group with the sn_hr_le.activity_writer role can configure an HR activity.

Activity types

Lifecycle event activities can be approvals, employee activities, fulfiller activities, notifications, and more. Depending on the activity type, you must configure the appropriate components that underlie it.

A key benefit of the Enterprise Onboarding and Transitions application is that you can reuse existing components and processes. These components and processes include existing HR services, HR task templates, or catalog items. For each activity, determine whether there's an existing component that you can use or if you must configure a new one.

Activity types and corresponding configuration requirements

Activity type	Configuration requirements
Approval	N/A To learn more about approvals, see Approvals.
Employee task	Configure an HR task template To learn more about HR templates, see HR templates.
Fulfiller activity	Depending on the fulfiller activity type, configure the appropriate supporting components.

© 2026 ServiceNow, Inc. All rights reserved.

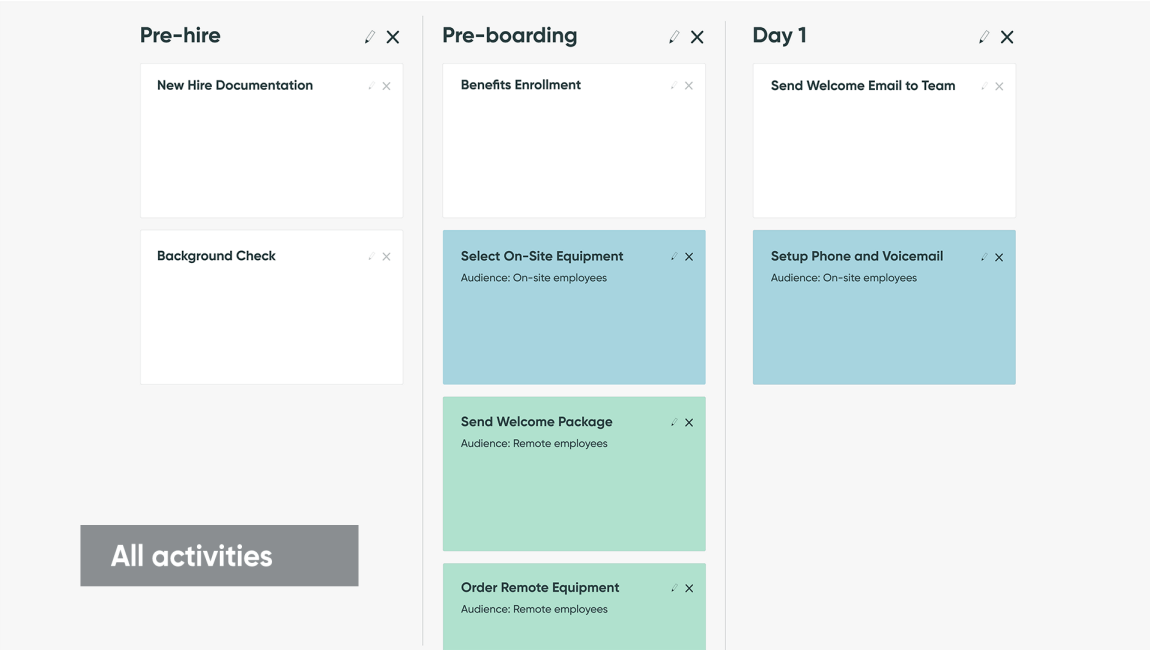
Activity types and corresponding configuration requirements (continued)

Activity type	Configuration requirements	
	Note: The following fulfiller activity types are preconfigured with the Enterprise Onboarding and Transitions application. To configure additional types, see Configure an activity configuration for a lifecycle event.	
	Automated Order Guide	Create an order guide To learn more about order guides, see Order guides.
	Catalog item	Create or edit a catalog item To learn more about catalog items, see Service catalog items.
	HR service	Configure an HR service To learn more about HR services, see HR services.
	HR task	Configure an HR task template To learn more about HR templates, see HR templates.
	Incident	Create an incident template To learn more about incident management, see Incident Management.
Notification	Create an email template To learn more about notifications, see Notifications.	
Flow	Create a subflow **Important:** The only subflow available for use by default is the **Switch primary job** subflow. This subflow is used to support multiple jobs in a lifecycle event. To use a different subflow for an activity, additional configuration is required. See the Implementing multiple subflows in an LE activity [KB0817520 article in the HI knowledge base for more information. To learn more about subflows, see Subflows.	
Content	Configure a schedule content template for a lifecycle event activity	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity types and corresponding configuration requirements (continued)

Activity type	Configuration requirements
	To learn more about Content Experiences and Content Publishing, see Content Publishing.
Activity container	N/A



Audiences

Not all lifecycle event activities are required for all employees. Some activities are intended for a target audience. You can use audience records to define the criteria that the subject person of a lifecycle event case must meet for the activity to trigger on their behalf. For more information, see Audiences.

Clearly defined audience criteria enable you to create targeted workflows for different audience types. For example, you can create a tailored onboarding experience for newly hired employees depending on whether the employee is office-based or remote.

Note:

- If an activity isn't associated with an audience record, then the activity triggers for all employees.
- If a subject person doesn't meet the audience criteria defined for an activity set during the evaluation process, the **State** field in the corresponding activity set is set to **Skipped**.

Configure an owning group for a lifecycle event

Create or modify an owning group to define the user group that owns a lifecycle event activity. Each owning group is responsible for overseeing the activities that fall under their purview.

Before you begin
Role required: sn_hr_le.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role. For example, only members of the IT activity writers owning group with the sn_hr_le.activity_writer role can configure an IT activity.

Procedure

1. Navigate to **All** > **LIfecycle Events** > **Administration** > **Manage Owner Groups**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Group form

Field	Description
Name	Name of the owning group.
Manager	Manager of the owning group.
Description	Description of the owning group.
Group email	Email address to associate with the owning group. This email acts as a group notification that sends an email to every member of the group.
Parent	Parent group to associate with the owning group.

4. Click **Save**.
5. In the **Roles**, **Group members**, **Groups**, and **Skills** related lists, assign the appropriate roles, users, groups, or HR skills to the owning group.

Related lists and corresponding descriptions

Related list	Description
Roles	Roles assigned to the owning group. **Note:** Any roles assigned to the parent group are automatically assigned to the owning group.
Group members	Users assigned to the owning group.
Groups	Groups assigned to the owning group. **Note:** Any groups assigned to the parent group are automatically assigned to the owning group.
Skills	HR skills assigned to the owning group. **Note:** Any HR skills assigned to the parent group are automatically assigned to the owning group.

6. Click **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure an activity configuration for a lifecycle event

Create or modify an activity configuration to define the fulfillment process and conditions for closure for a lifecycle event activity.

Before you begin

Role required: sn_hr_le.admin or sn_hr_le.activity_set_manager

A key benefit of the Enterprise Onboarding and Transitions application is that you can leverage existing fulfillment processes from different departments to fulfill lifecycle event activities that are assigned to them. For example, you can use a fulfillment process set up by the IT department to fulfill lifecycle event activities assigned to IT. Preconfigured activity types are available to use. You can also configure your own custom activity types.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Activity Configuration**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Fulfiller Activity Configuration form

Field	Description	
Fulfiller activity	Name of the fulfiller activity type.	
Configuration type	Configuration type. Select one of the following:	
	Catalog item	Creates a task, request, or case based on an existing catalog item. In the **Catalog** field, select a catalog.
	Content	
	Flow	Creates a flow on the parent lifecycle event case. **Note:** A flow automates a process with a sequence of reusable actions. See Flow designer for more information.
	HR service	Creates a case based on an HR service.
	HR task template	Creates a task based on an HR task template.
	Order guide	Creates an IT request based on an order guide. In the **Catalog** field, select a catalog.
	Template	Creates a record on a task table that supports templates.
	Workflow	Creates a workflow on the parent lifecycle event case. In the following fields, provide the following:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ **Workflow**: A workflow that runs on the parent lifecycle event case. ○ **Workflow required fields**: Fields on the activity form that are required to be populated for the workflow. ○ **Workflow optional fields**: Fields on the activity form that are optional and populated for the workflow.
Activity closure	Conditions that must be met for the fulfiller activity to close and for the State value to change to Completed. **Note:** Once all of the activities in an activity set are completed, then the State value of the activity set will change to Finished.
Active	Option to activate the fulfiller activity type for use.
Task table	Table that the fulfiller activity type is associated with. Depending on the **Configuration type** selected, you can select a table or the field is automatically set to a table.
Badge	Badge that the fulfiller activity type is associated with. **Note:** Badges display on the portal to indicate to the employee which department is fulfilling that activity. See Configure an HR badge for more information.

4. Click **Save**.
5. In the **Fulfiller Activity Configuration Mappings** section, map one or more fields from the parent lifecycle event case to the child activity.

   a. Click **New** or open a record.

   b. Fill in the fields on the form.

Fulfiller Activity Configuration Mapping table

Field	Description
Activity type configuration	This field is automatically set to the name of the fulfiller activity type.
Map from table	HR case table that the parent HR service is associated with. **Note:** Make sure that this table matches that of the HR case table associated with the parent HR service.
Map from field	Field that is being mapped from.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Make sure that the data type matches that of the target field.
Map to table	This field is automatically set to the table that the fulfiller activity type is associated with.
Map to field	Field that is being mapped to. **Note:** Make sure that the data type matches that of the source field.

Example
For example, the preconfigured fulfiller activity type for catalog items maps the subject_person field from the HR Lifecycle Events Case [sn_hr_le_case] table to the requested_for field on the Request [sc_request] table so that the activity form is automatically populated with the name of the user that the catalog item is being requested for.

c. Click **Submit** or **Update**.

d. Repeat the process as needed.

6. Click **Update**.

Configure a schedule content template for a lifecycle event activity

Create or modify a schedule content template to deliver content as part of a lifecycle event. Each template must be associated with the Schedule Content [sn_cd_content_visibility] table, and you can configure the template for mobile content, portal content, notification content, or to-do content.

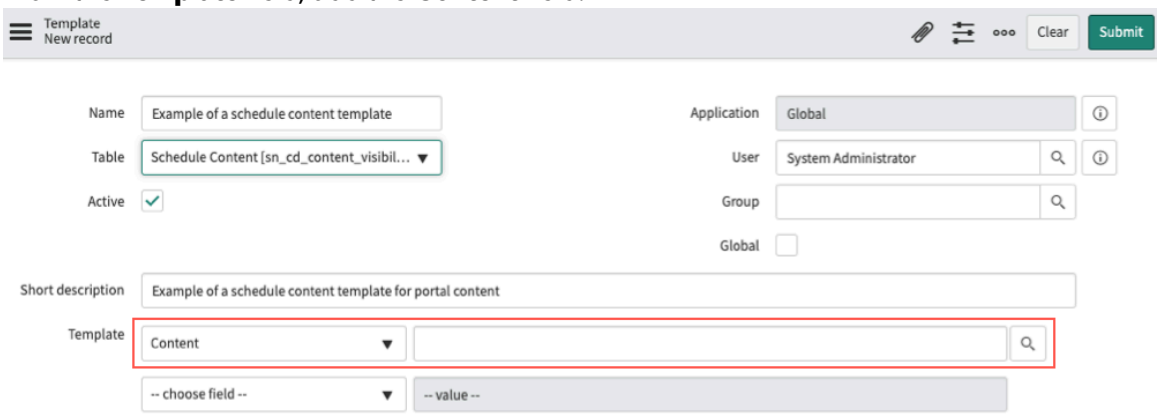
Before you begin
Have the content that you want to use with the schedule content template. You can use the following types of content:

Content types

Content type	Description
Configure mobile content	Mobile content is delivered as a mobile banner in the Now Mobile and Mobile Onboarding apps.
Content Publishing	Portal content is delivered as content (such as a banner, calendar, or video) in a portal such as the Employee Service Center.
Notification content	Notification content is delivered as a notification.
Creating to-do content that appears in a banner or styled content	To-do content is delivered as a to-do in both portal and mobile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

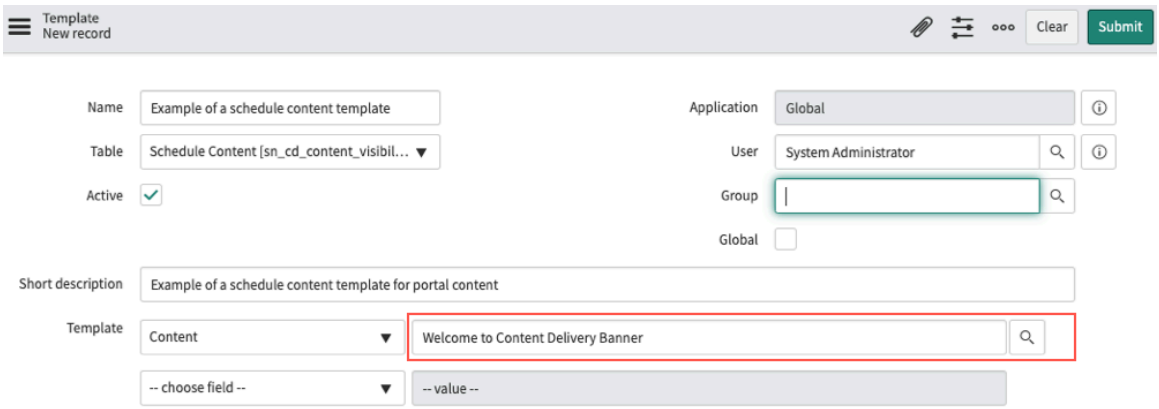


Procedure

1. Navigate to **All** > **System Definition** > **Templates**.
2. Click **New** or open a record.
3. Fill in the following fields on the form.

Template form

Field	Description
Name	Name of the template.
Table	Set the value to `Schedule Content [sn_cd_content_visibility]`.
Short description	Short description of the template.



4. From the **Template** field, add the **Content** field.

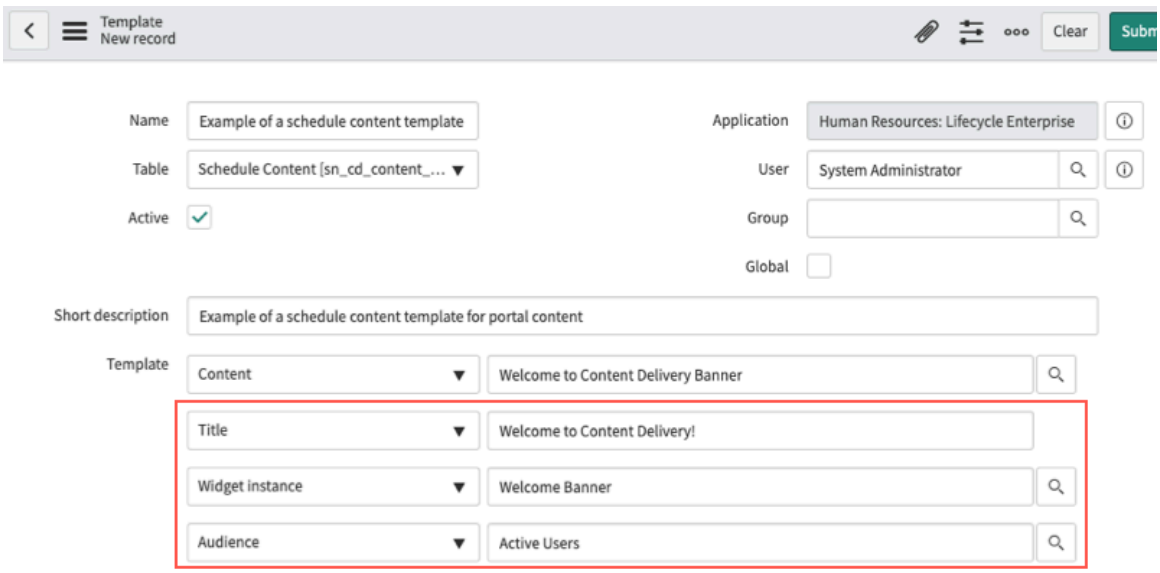
5. For the **Content** field, select a content record to use with the template.

Example

For example, this is a schedule content template for a content record called "Welcome to Content Delivery Banner".

6. Add additional fields with corresponding values, as needed.

   Depending on the content type, you must add additional fields with corresponding values. Content is one of the following types.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Mobile content
- Portal content
- Notification content
- To-do content

For a list of the available fields for each content type, see Schedule content.

Example

For example, the content type for the "Welcome to Content Delivery Banner" record is portal content. Portal content requires, at a minimum, the addition of the **Title**, **Widget instance**, and **Audience** fields.

7. Click **Submit** or **Update**.

What to do next

Use the schedule content template to deliver content as part of a lifecycle event. See Configure a lifecycle event activity for content for more information.

Configure a lifecycle event

Build a lifecycle event and its associated activity sets and activities with the lifecycle event builder.

Before you begin

Role required: sn_hr_le.admin or sn_hr_le.activity_set_manager

Begin by defining the event type, such as new hire onboarding. Each lifecycle event has one or more activity sets, which represent different stages in the lifecycle event process. And each activity set has one or more activities, which can be requests for approvals, tasks for employees, activities for fulfillers, or the sending of notifications.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.

2. Click **New** or open a record.

3. Fill in the fields on the form.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Manage Lifecycle Event form

Field	Description	
Title	Name of the lifecycle event.	
Active	Option to activate the lifecycle event for use.	
Description	Description of the lifecycle event.	
Display activity sets to subject person	(Employee Center only) Option to show the activity sets timeline on the HR ticket page to the subject person of the lifecycle event case. This is a two-part process. In addition to selecting the box here, you must also select **Show case to subject person** for the HR service that the lifecycle event is associated with. To select the latter, see Configure an HR service. **Note:** ○ If **Show case to subject person** for the corresponding HR service is not selected, then the activity sets timeline will not display for the subject person. ○ The progress bar for each activity set does not appear for the subject person. It only appears for the opened for person. ○ The HR ticket page is where users can view the details of an HR case in the Employee Service Center. See for more information.	
In the employee view, sort activities by	You can choose how your employees view activities in the lifecycle event. ○ Due date: Show activities in chronological order with tasks that are due earlier at the top and other activities in by creation date. ○ Display order: Show activities in the order they appear in an activity set. **Note:** What you select in this field is also reflected on the Employee Center for a user's to-dos.	
Event type	Event type of the lifecycle event. Select one of the following:	
	Onboarding	Lifecycle event to use with mobile onboarding. **Note:** You must also make sure that the **Display activity sets to subject person** option on the lifecycle event form and the **Show case to subject person** option on the corresponding HR service form are selected. See Select a Lifecycle Event for Now Mobile for more information.

4. Click the **Activity Sets** tab or **Next** to configure the activity sets and activities for the lifecycle event.

   You can create new or modify existing activity sets and activities. For further details on the form fields, see:

   - Configure a lifecycle event activity set
   - Configure a lifecycle event activity

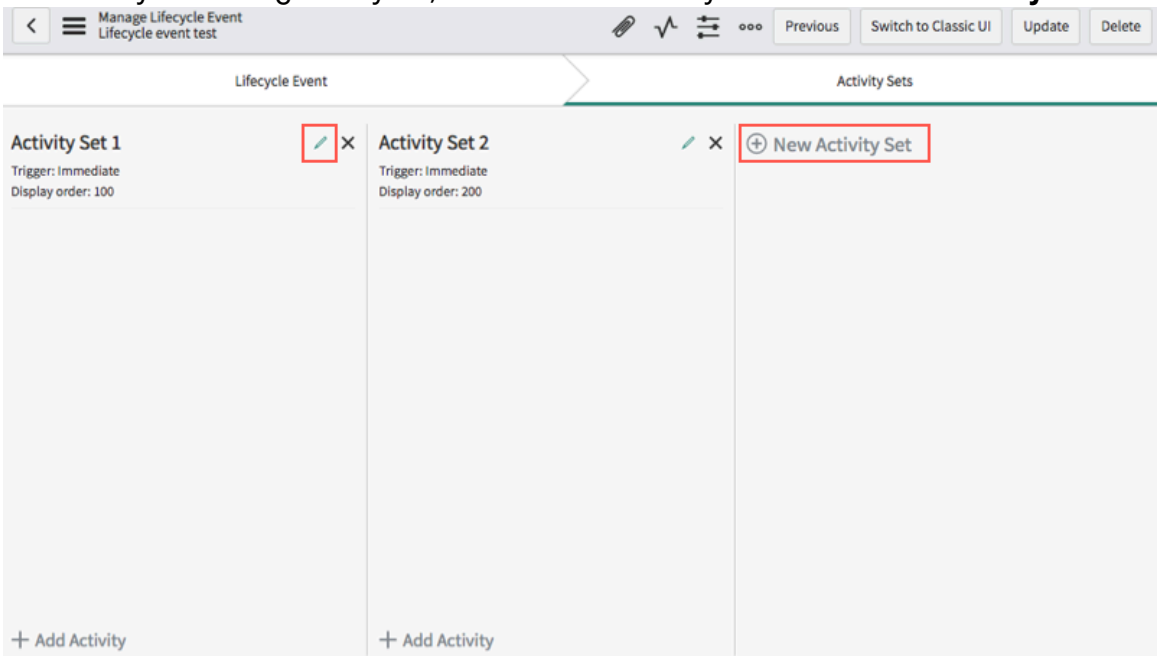
5. Click **Submit** or **Update**.

Configure a lifecycle event activity set

Create or modify a lifecycle event activity set to define a container for a group of activities.

Before you begin

Role required: sn_hr_le.admin or sn_hr_le.activity_set_manager



Activity sets represent different stages in the lifecycle event process, and you must define when the activity set is triggered, such as immediately upon creation of the lifecycle event case or after the completion of another activity set. Each activity set is associated with a single lifecycle event.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**, and open a record.
2. Click the **Activity Sets** tab to access the lifecycle event builder.
3. Create a new or modify an existing activity set.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To create a new activity set, click **New Activity Set**.
- To modify an existing activity set, hover over the activity set and click **Edit Activity Set**.

4. Fill in the fields on the form.

Activity Set form

Field	Description
Title	Name of the lifecycle event activity set.
Display title	Display title of the activity set. The display title is employee-facing only, and appears on the activity sets timeline on the HR ticket page in both portal and mobile. For example, an employee-facing title for the preboarding activity set could be "Get ready for day one." If no display title is provided, the default activity set name will be used instead.
Description	Description of the lifecycle event activity set.
Active	Option to activate the lifecycle event activity set for use.
Display order	Order number for when the activity set appears in the lifecycle event builder and in the activity sets timeline on the HR ticket page. **Note:** ○ The order number has no relation to when the activity set is triggered. ○ If no order number is provided, then the activity set will appear after all of the numbered activity sets. ○ The HR ticket page is where users can view the details of an HR case in the Employee Service Center. See for more information.
Display to opened for	Option to show or hide the activity set to the opened for person of the lifecycle event case. If selected, the activity set will appear in the activity sets timeline on the HR ticket page in both portal and mobile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: If not selected, the activity set will not appear in the activity sets timeline. Any associated to-dos assigned to the opened for and subject person will still appear on the HR ticket page. However, to-dos that are assigned to anyone else will be hidden.
Display to subject person	Option to show or hide the activity set to the subject person of the lifecycle event case. If selected, the activity set will appear in the activity sets timeline on the HR ticket page in both portal and mobile. This is a three-part process. In addition to selecting the check box here, you must also: ○ Select **Display activity sets to the subject person** for the lifecycle event type. See Configure a lifecycle event for more information. ○ Select **Show case to subject person** for the HR service that the lifecycle event is associated with. See Configure an HR service for more information. **Note:** If not selected, the activity set will not appear in the activity sets timeline. Any associated to-dos assigned to the subject person will still appear on the HR ticket page. However, to-dos that are not assigned to the subject person will be hidden.
Audience	The specific audience the activity set targets. Setting an audience for an activity set allows you to create activities within an activity set for a specific group of people. If the audience field is empty, the activity set applies to all employees. You can also use audience as a filter when using the Test Activity Sets tool. For more information, see Using the Test Activity Sets tool for a lifecycle event activity set. **Note:** You can also define an audience at the activity level. The audience criteria for an activity set overrides the audience criteria for an activity.

5. In the **Activity Set Trigger Condition** section, set the trigger condition for the activity set.

Trigger condition options

Trigger condition	Description
Immediate	Activity set triggers upon creation of the lifecycle event case.
Date	Activity set triggers before, on, or after the specified date. **Note:** If the date for the activity set is updated, then the change will apply only to open HR cases with active activity sets that have not yet triggered.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Trigger condition	Description	
	Trigger table	Select an HR case or profile table.
	Trigger field	Select a date field.
	Ignore empty date	Option to not trigger the activity set when the date field is empty. If selected, the activity set will not trigger when the date field does not have a value.
	Date offset type	Select the date offset type: ○ None ○ Before ○ After
	Date offset quantity	Provide an offset quantity. This field is available when **Before** or **After** is selected from **Date offset type**.
	Date offset units	Provide a unit of measure of days, weeks, or months. This field is available when **Before** or **After** is selected from **Date offset type**.
Other Activity Sets	Activity set triggers after the completion of one or more activity sets.	
	Activity set dependencies	Select one or more activity sets that must complete before the activity set triggers.
Advanced	Activity set triggers per the provided script.	
	Trigger script	Provide a custom script to determine when the activity set triggers. There are two variables in the scripts: ○ parentCase: Reference to parent lifecycle event case. ○ hrTriggerUtil: Allows checking of other activity sets or dates from other types of triggers. The Activity Set Launcher workflow runs every four hours to verify these conditions. See Lifecycle Events workflows.
Condition	Activity set triggers per the specified conditions. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.	
	Condition table	Select an HR case or HR profile table.
	Condition	Use the condition builder to define the conditions that must be met for the activity set to trigger.
Combination	Activity set triggers based on a combination of a specified date, other activity sets, and/or conditions.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Trigger condition	Description	
	Combination type	Select when the activity set triggers: ○ And: Activity set triggers only when all of the specified triggers are met. ○ Or: Activity set triggers when any of the specified triggers are met.
	Date	You can specify a date as part of the combination trigger type.
	Other Activity Sets	You can select one or more activity sets that must complete as part of the combination trigger type.
	Condition	You can use the condition builder to define the conditions that must be met as part of the combination trigger type.

6. Click **Submit** or **Update**.

Example: Advanced trigger script

- Trigger type = advanced.
- The new hire (Subject Person) has an assigned manager.
- The start date for the new hire has been reached (cannot be empty).
- Two specific activity sets have completed.

```
(function shouldActivitySetTrigger(parentCase /* GlideRecord for
 parent case */,
        hrTriggerUtil /* hr_TriggerUtil script include instance
 */) {

 //Check that employee has a manager
 var employeelocationType = parentCase.subject_person.manager;
 if (gs.nil(employeeLocationType))
  return false;

 //Check that the employees start date is populated and on or
 before today
 var employeeStartDate =
 parentCase.subject_person_hr_profile.employment_start_date;
 if (gs.nil(employeeStartDate)
 || !
hrTriggerUtil.checkForElapsedDate(employeeStartDate.getDisplayVa
lue()))
  return false;

 //Check Previous Sets have finished
 var prerequisiteActivitySetIds =
 ['20f71984ecb61300964fb378c827556f',
 '58123661dbf2930085ea54c0cf9619ba'];
 if
 (!
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

```
hrTriggerUtil.checkActivitySetsCompleted(prerequisiteActivitySet
Ids))
  return false;

 return true;

})(parentCase, hrTriggerUtil);
```

Replace the sys_ids in the example with your activity set sys_ids. From your activity set, click the **Form Context Menu** icon and select **Copy sys_id**.

Lifecycle Events evaluation interval

There is a mechanism available to ensure timers within a workflow trigger automatically rather than wait for the evaluation interval to trigger.

Activity sets can be triggered using different methods based on how you configure it:

- Immediately
- By a date
- Trigger script (advanced)
- Conditions (fields from a table)
- Combination or different trigger types
- *Other activity sets

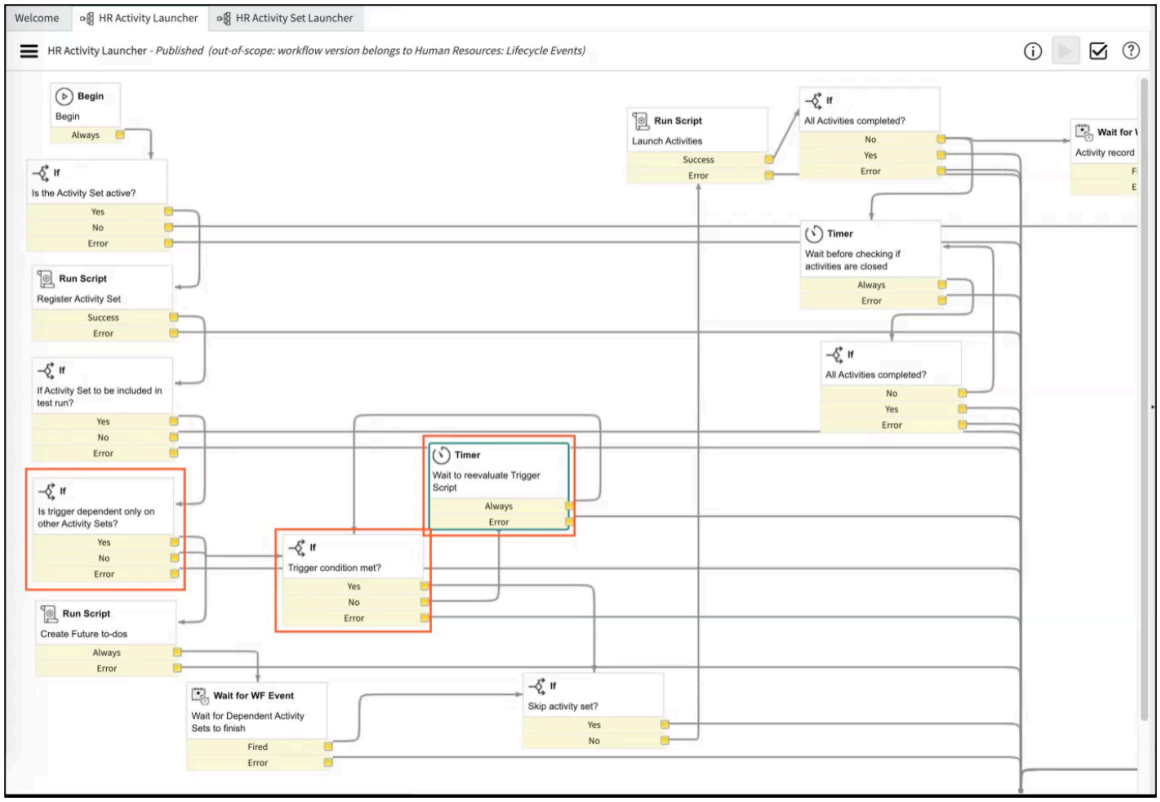
> **Note:**
> For more information on activity set triggering, see Configure a lifecycle event activity set and Lifecycle Events workflows.

*When an activity set is triggered by other activity sets it must wait for all dependencies to resolve before triggering.

HR Activity launcher flow

When a lifecycle event case is changed to the Ready state, all activity sets run through the HR Activity Launcher flow. The activities in each activity set are not triggered at this time. When an activity set is not dependent on other activity sets to trigger activities, the trigger conditions are analyzed.

If the trigger condition has not been met, it waits for the Wait to reevaluate Trigger Script timer to run (default is every four hours).



If the trigger condition is met, but after the evaluation interval runs, it has to wait another four hours before the activities set is re-evaluated. This can cause delays in an activity set to trigger.

The Wait to reevaluate Trigger Script timer uses the **sn_hr_le.All activity set closure timer** field under Lifecycle Event Properties to determine when to evaluate the activity set. The default value is four hours.

You can reduce the value in the **sn_hr_le.All activity set closure timer** field in order to launch the activity set sooner.

> **Note:**
> Use caution if you decide to change the default value. Frequent updates trigger more events and can cause your lifecycle event activity sets to cancel before it can complete. For more information, see Lifecycle event properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Condition with Event BR (Demo) activity set

An alternative to using the **Evaluation interval** field is to use the **Condition with Event BR (Demo)** activity set that is included with demo data as an example of what you can use. This is an optional solution, but you can create and use server-side code (business rule, event script, scheduled job, etc.) that triggers the check_activity_set_trigger event into the HR Activity Set Trigger Check workflow. Any activity set can be triggered using the check_activity_set_trigger event from the server side with the exception of activity sets that are triggered immediately or only by other activity sets.

Note:
To access the **Condition with Event BR (Demo)** activity set, activate the Human Resources Scoped App: Lifecycle Events for Enterprise (com.sn_hr_lifecycle_ent) plugin. This is an optional method that can be used instead of the values in the **Evaluation interval** field.

- The trigger type for the activity set must be set to **Condition**.
- The **Condition with Event BR (Demo)** activity set triggers when the state of primary lifecycle event case moves to **Work in progress**.
- The **Email - Condition with Event BR (Demo)** activity is included with the **Condition with Event BR (Demo)** activity set.
- The **Condition with Event BR (Demo)** activity set contains the **HR Activity Launcher** workflow. It also contains the **Condition with Event BR (Demo)** business rule.
  - The **Condition with Event BR (Demo)** business rule runs after the state of an LE case changes to **Work in Progress**.
  - It then looks for the workflows that are running for the LE case until it finds the HR Activity Set Trigger Check workflow and broadcasts the check_activity_set_trigger event to that workflow.

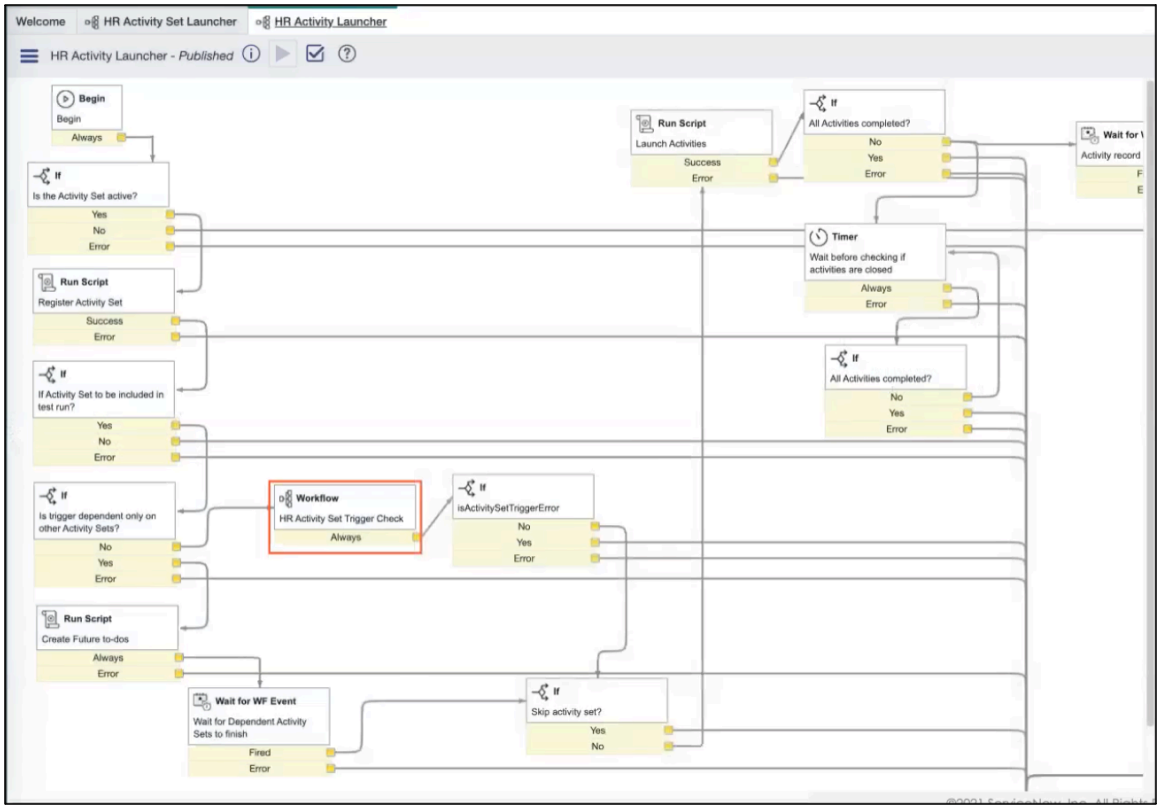
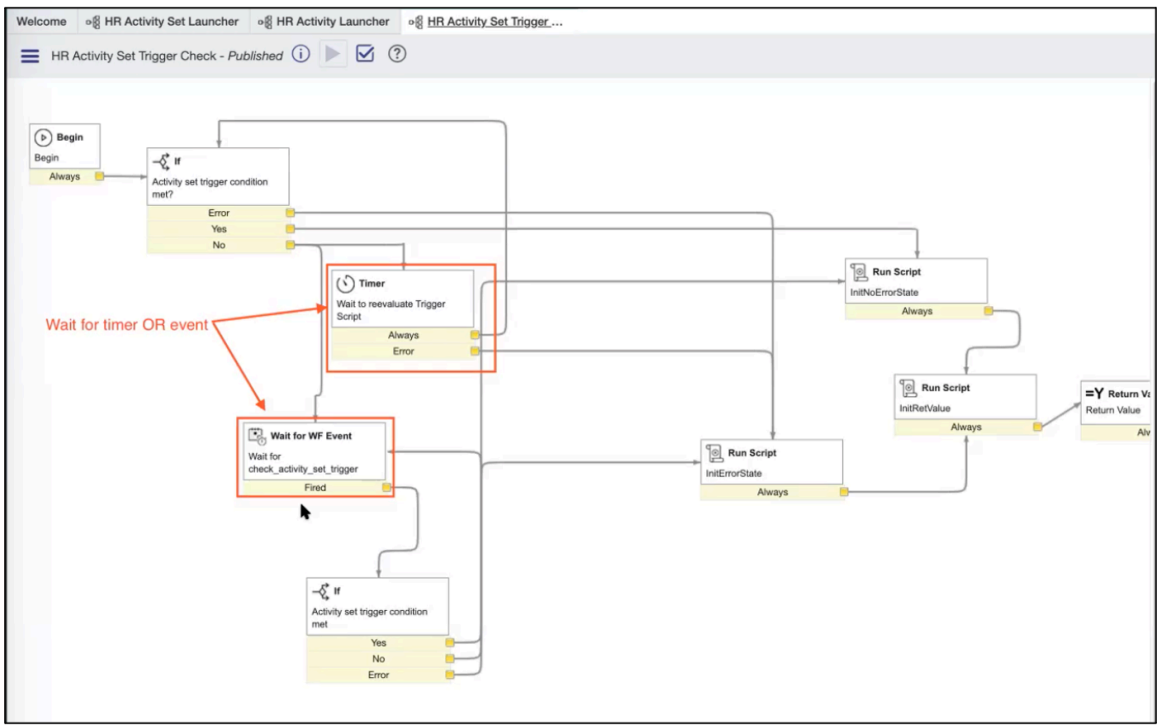
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- You can modify the **Condition with Event BR (Demo)** activity set, **Email - Condition with Event BR (Demo)** activity, and **Condition with Event BR (Demo)** business rule to fit your requirements.



Note:
For more information, see Lifecycle Events workflows and Business rules.



HR Activity Set Trigger Check workflow

The HR Activity Set Trigger Check workflow (see below) was added to the HR Activity Launcher workflow so that any server-side script can notify the workflow to see if the activity set is ready to trigger.

Note:
It does not trigger the activity, it evaluates the condition of the activity set.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The HR Activity Set Trigger Check workflow is called when an activity set is not dependent on other activity sets.
- It periodically checks if the trigger condition for an activity set has been met.
- If the trigger conditions have not been met, it still waits for the evaluation interval to run.
- If the check_activity_set_trigger event fires, the Activity set trigger conditions are checked immediately.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View and use the Condition with Event BR (Demo) activity set

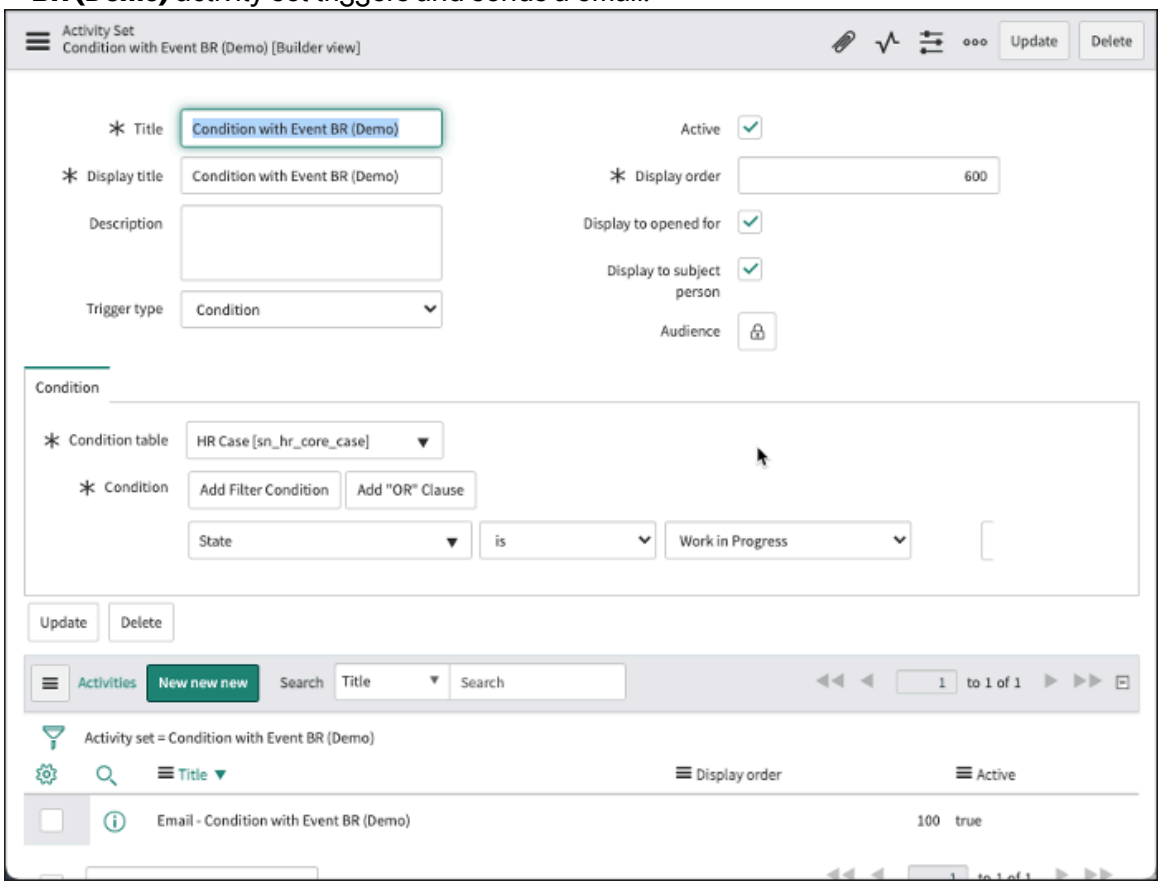
You can trigger activity sets using an event that is included in the Condition with Event BR (Demo) activity set or you can create and use server-side code (business rule, event script, scheduled job, etc.) that triggers the check_activity_set_trigger event into the HR Activity Set Trigger Check workflow.

Before you begin

Role required: admin

Note:
To access the **Condition with Event BR (Demo)** activity set, activate the Human Resources Scoped App: Lifecycle Events for Enterprise (com.sn_hr_lifecycle_ent) plugin. This is an optional method that can be used instead of the values in the **Evaluation interval** field.

Procedure



1. Navigate to **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.
2. Select the **New Hire Onboarding (Demo)** lifecycle event.
3. Select the **Activity Sets** tab.
4. Scroll to the right and select the **Condition with Event BR (Demo)** activity set.

   Note:
   The **Condition with Event BR (Demo)** activity set is an example of what you can use. This is an optional solution, but you can create and use server-side code (business rule, event script, scheduled job, etc.) that triggers the check_activity_set_trigger event into the HR Activity Set Trigger Check workflow.

5. Select the edit ( ) in the **Condition with Event BR (Demo)** activity set.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The **Trigger type** is **Condition**.
- When the **State** of the LE/HR case changes to **Work in Progress**, the **Condition with Event BR (Demo)** activity set triggers and sends a email.

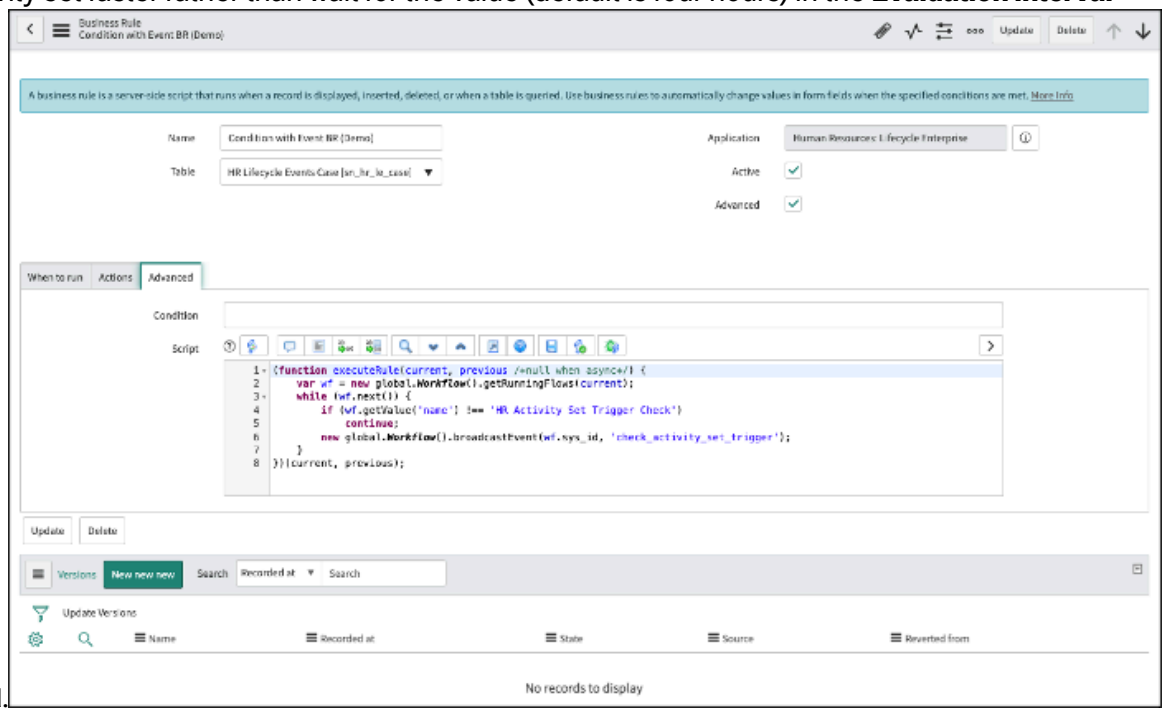
View and use the Condition with Event BR (Demo) business rule

You can view and use the Condition with Event BR (Demo) business rule to trigger an evaluation of your activity set faster.

Before you begin

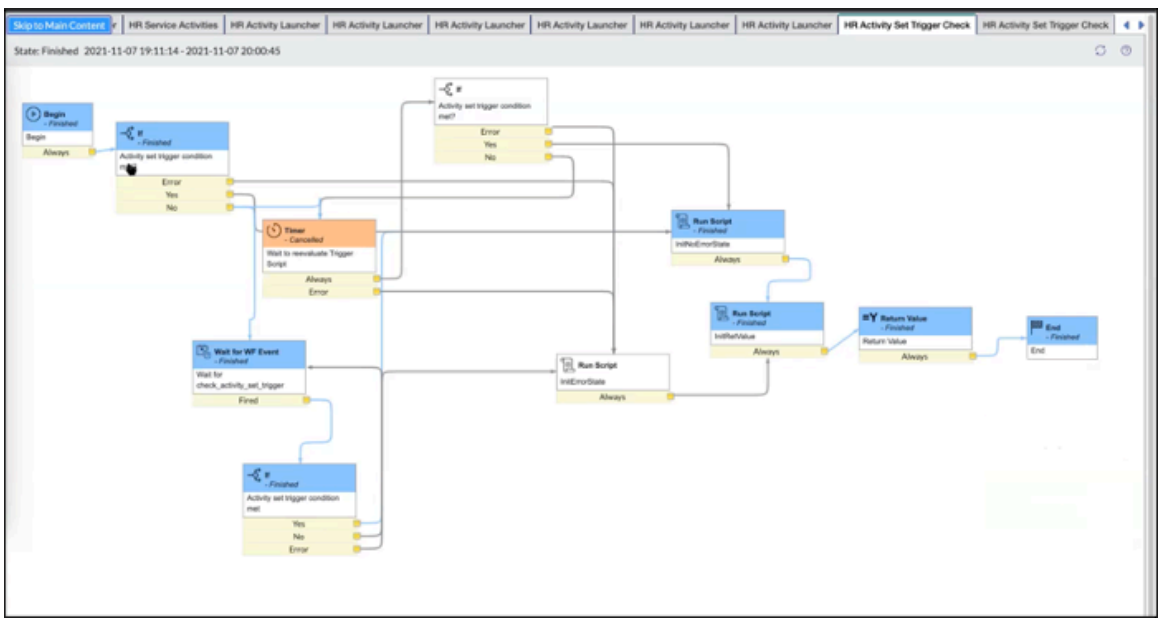
To evaluate the trigger conditions for an activity set via the Condition with Event BR (Demo) business rule, the **Trigger type** field in the corresponding Activity Set record must be set to **Condition**.

Role required: admin



Procedure

1. Navigate to **Lifecycle Events** > **Lifecycle Events Cases**.
2. Select a case that was created from the New Hire Onboarding (Demo) lifecycle event.
3. Select the Additional actions (icon.
4. Select **Configure** and then **Business Rules**.
5. Search and select **Condition with Event BR (Demo)**.



> **Note:**
> The **Condition with Event BR (Demo)** business rule runs after the State changes to Work in Progress.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select the **Advanced** tab.
   In the Script field, you can view how this business rule works. It looks for the running flows for the LE/HR case. When it finds the HR Activity Set Trigger Check workflow, it broadcasts the check_activity_set_trigger event to the flow. This is what triggers the evaluation of an activity set faster rather than wait for the value (default is four hours) in the **Evaluation interval** field.

7. When you change the state of the LE/HR case to **Work in Progress**, the activity set triggers.
8. Return to the LE/HR case and select the **Show Workflow** related link.
9. Select the **HR Activity Set Trigger Check** tab.
   The Timer was cancelled when the LE/HR case state was changed to **Work in Progress** and the **check_activity_set_trigger** event was fired.

Change the evaluation interval default wait time

As an administrator, you can change the default time that an activity set waits before the activity set is evaluated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

About this task
Starting in the Utah family, the default evaluation interval can be changed.

Procedure
1. Navigate to **All** > **Lifecycle Events** > **Manage Lifecycle Events**.
2. Select a lifecycle event.
3. Select the **Activity Sets** tab.
4. Select the edit icon for an **Activity Set**.

   Note:
   In Journeys, stages are equivalent to activity sets.

5. Select **Configure** > **All** from the **Additional actions** list.
6. Select the **Dictionary Entries** tab.
7. Find **evaluation_interval Column name**.
8. Open the related **Dictionary Entry**.

   Note:
   To edit this record, you must be in the Human Resources: Lifecycle Enterprise application.

9. Select the **Default Value** tab.
   Default value format `0 04:00:00` is equal to `d hh:mm:ss`:
   - Days = d
   - Hours = hh
   - Minutes = mm
   - Seconds = ss
10. Change the **Default value**.
11. Select **Update**.

Configure a Lifecycle Events trigger for activity sets

Create triggers for activity sets in Lifecycle Events.

Before you begin
Role required: admin

Procedure
1. Navigate to **All** > **Lifecycle Events** > **Manage Lifecycle Events**.
2. Select the lifecycle event you want to change.
3. Select the **Activity Sets** tab.
4. Select the **Edit Activity Set** icon for the activity set to add the trigger to.
5. Select a **Trigger type**.
   For information about the trigger types, see Lifecycle Events activity set trigger types.
6. Select **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Lifecycle Events activity set trigger types

Administrators can configure activity set triggers to make activities in an activity set available.

Activity set trigger types

Immediate

Triggers all the activities in a set as soon as the lifecycle event is created.

Date

Triggers activities in an activity set when a date or milestone. The first day for a new hire onboarding activity could be the new hire's first day at work. Date triggers require a **Trigger table** and a **Trigger field**.

Fields associated with Date field

Field	Description
Trigger table	Select a table from the available list.
Trigger field	Select a field from the available list.
Ignore empty date	If there is no date in the trigger field, the activity set won't trigger.
Date offset type	• After • Before
Date offset quantity	The number of offset units to be evaluated.
Date offset units	• Days • Weeks • Months

Other activity sets

The activity set is triggered when another activity set is complete. When an activity set is triggered by other activity sets, the trigger isn't activated until all dependent activities in the set are complete.

Advanced

Use the **Advanced** trigger to add a script that evaluates custom conditions to trigger the activity set.

Condition

Use the **Condition** trigger to define conditions based on the value of fields in a selected table.

Combination

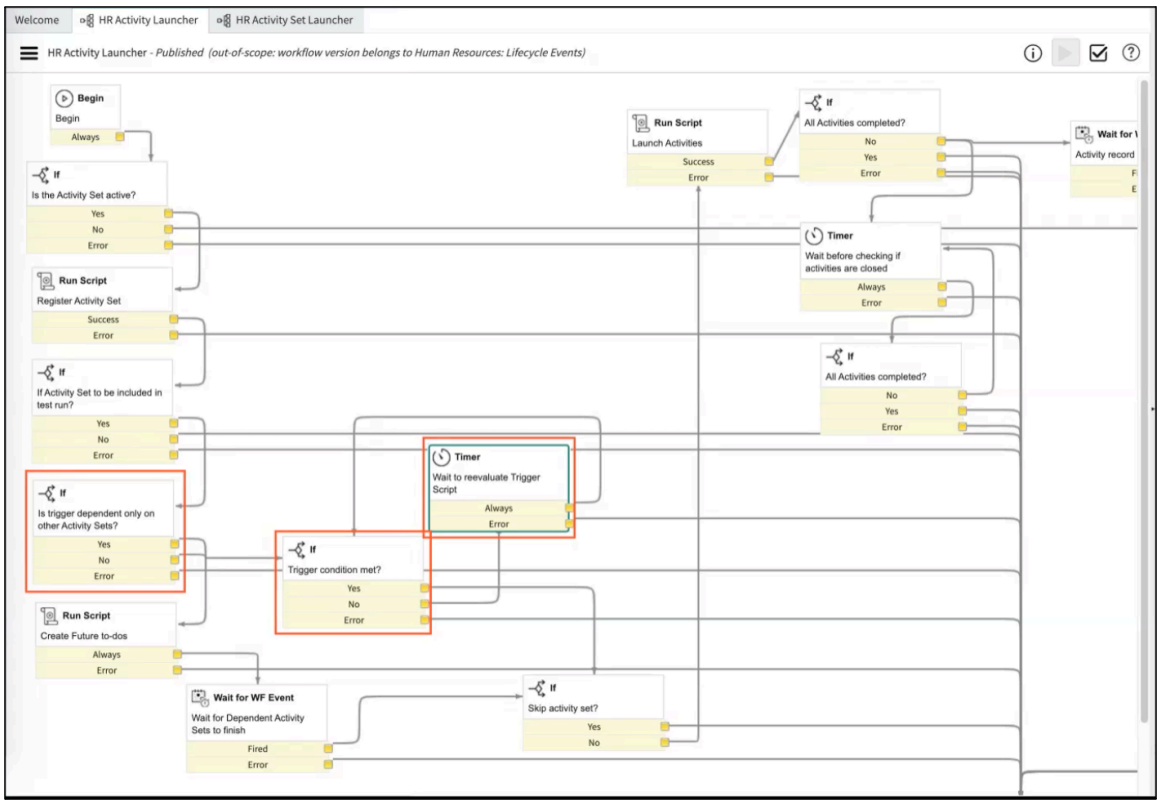
Combines the use for **Date**, **Other Activity Sets**, and **Condition**. All three conditions must be met to trigger the activity set.

Lifecycle Events triggers and workflow reference

Information about Lifecycle Events triggers and workflow.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Activity launcher flow



When a lifecycle event case is changed to the Ready state, all activity sets run through the HR Activity Launcher flow. The activities in each activity set aren't triggered. When an activity set isn't dependent on other activity sets to trigger activities, the trigger conditions are analyzed.

If the trigger condition hasn't been met, it waits for the Wait to reevaluate the Trigger Script timer to run (default is every four hours).

If the trigger condition is met, but after the evaluation interval runs, it has to wait another four hours before the activities set is reevaluated. Waiting for reevaluation can cause delays in an activity set to trigger.

The Wait to reevaluate Trigger Script timer uses the **evaluation_interval** in the **sn_hr_le_activity_set** table. The default value is four hours. You can reduce the value in the **evaluation_interval** field to launch the activity set sooner, see Change the evaluation interval default wait time.

Note:
Use caution if you decide to change the default value. Frequent updates trigger more events and can cause your lifecycle event activity sets to cancel before it can complete. For more information, see Lifecycle event properties.

Condition with Event BR (Demo) activity set

An alternative to using the **Evaluation interval** field to trigger an activity set is to use the **Condition with Event BR (Demo)** activity set that is included with the demo data as an example of what you can use. Using the **Condition with Event BR (Demo)** is an optional solution, but you can create and use server-side code (business rule, event script, scheduled job, and the like) that triggers the check_activity_set_trigger event into the HR Activity Set Trigger Check workflow. Any activity set can be triggered using the check_activity_set_trigger event from the server side except for activity sets that are triggered immediately or only by other activity sets.

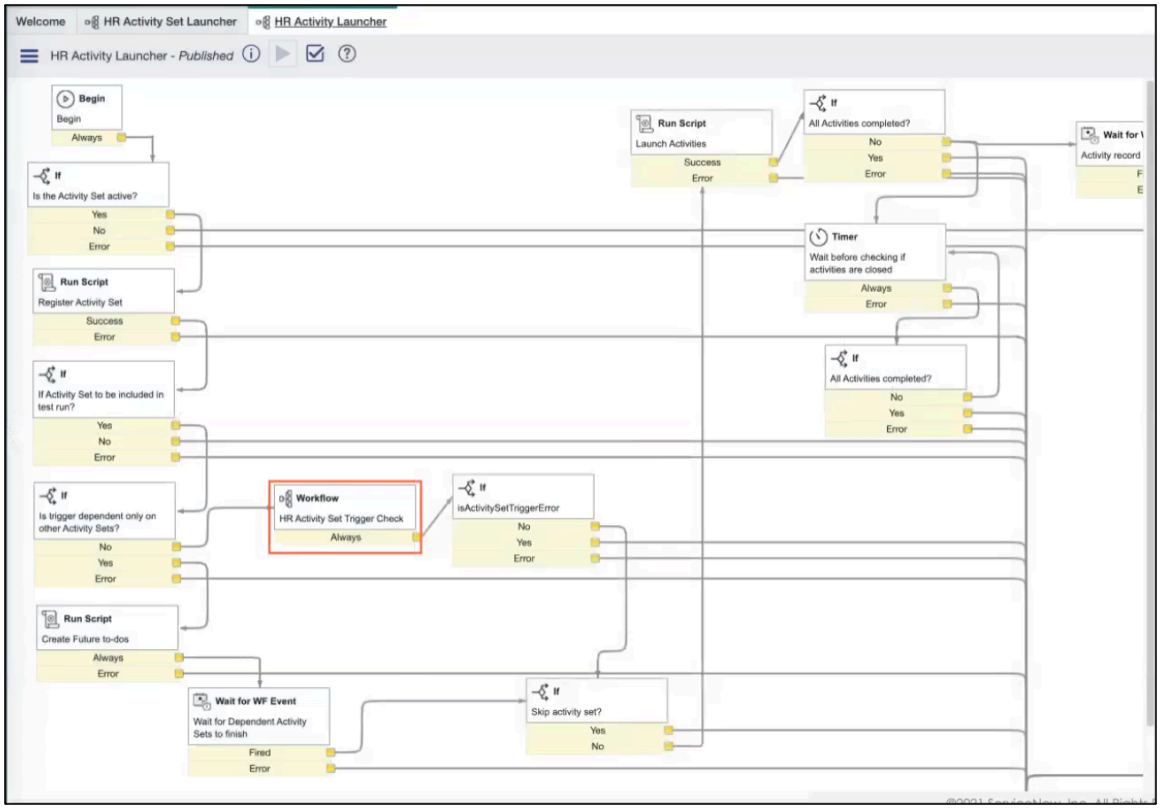
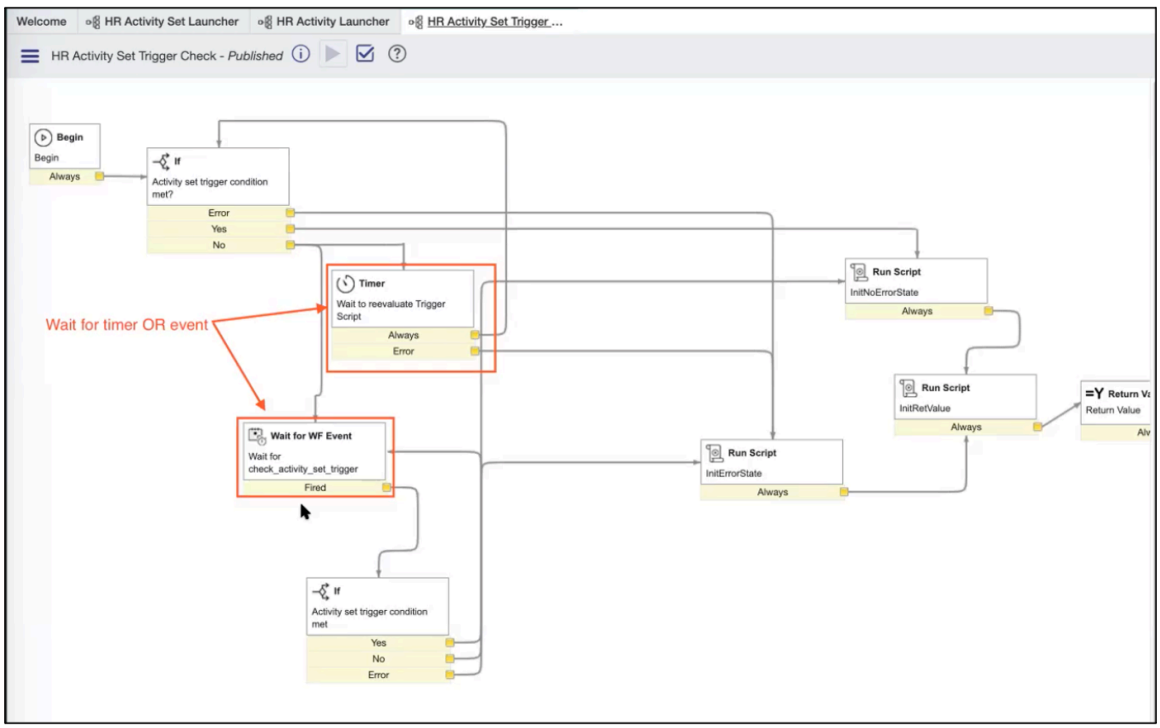
Note:
To access the **Condition with Event BR (Demo)** activity set, activate the Human Resources Scoped App: Lifecycle Events for Enterprise (com.sn_hr_lifecycle_ent) plugin. This is an optional method that can be used instead of the values in the **Evaluation interval** field.



- The trigger type for the activity set must be set to **Condition**.
- The **Condition with Event BR (Demo)** activity set triggers when the state of primary lifecycle event case moves to **Work in progress**.
- The **Email - Condition with Event BR (Demo)** activity is included with the **Condition with Event BR (Demo)** activity set.
- The **Condition with Event BR (Demo)** activity set includes the **HR Activity Launcher** workflow. It also includes the **Condition with Event BR (Demo)** business rule.
  - The **Condition with Event BR (Demo)** business rule runs after the state of an LE case changes to **Work in Progress**.
  - It then looks for the workflows that are running for the LE case until it finds the HR Activity Set Trigger Check workflow and broadcasts the check_activity_set_trigger event to that workflow.
- You can change the **Condition with Event BR (Demo)** activity set, **Email - Condition with Event BR (Demo)** activity, and **Condition with Event BR (Demo)** business rule to fit your requirements.



Note:
For more information, see Lifecycle Events workflows and Business rules.

HR Activity Set Trigger Check workflow

The HR Activity Set Trigger Check workflow was added to the HR Activity Launcher workflow so that any server-side script can notify the workflow to see if the activity set is ready to trigger. The HR Activity Set Trigger Check workflow evaluates conditions. It doesn't directly trigger any workflows.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The HR Activity Set Trigger Check workflow is called when an activity set isn't dependent on other activity sets.
- It regularly checks if the trigger condition for an activity set has been met.
- If the trigger conditions haven't been met, it still waits for the evaluation interval to run.
- If the check_activity_set_trigger event fires, the Activity set trigger conditions are checked immediately.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Check activity set trigger workflow event

Use the **check_activity_set_trigger** workflow event in a server-side script (business rule, event script, scheduled job, and the like) to shortcut the Wait to reevaluate the Trigger Script timer and evaluate an activity set's trigger just-in-time. If you're considering using a more frequent Evaluation interval to avoid a long timer wait, use this option instead.

Note:
The **check_activity_set_trigger** event doesn't work with activity sets that are triggered immediately or triggered only by other activity sets.

When preparing to use the **check_activity_set_trigger** workflow event, first determine when the activity set's trigger criteria could be checked. For example, if using a "Condition" trigger type, a business rule with the same condition may be a good place to check if the condition is true. If using an "Advanced" trigger, determine what server-side business logic caused the Advanced script to return true. For example:

- script include
- scheduled job
- import script

.

After you've determined the server-side location to check the trigger criteria, add the following script to it:

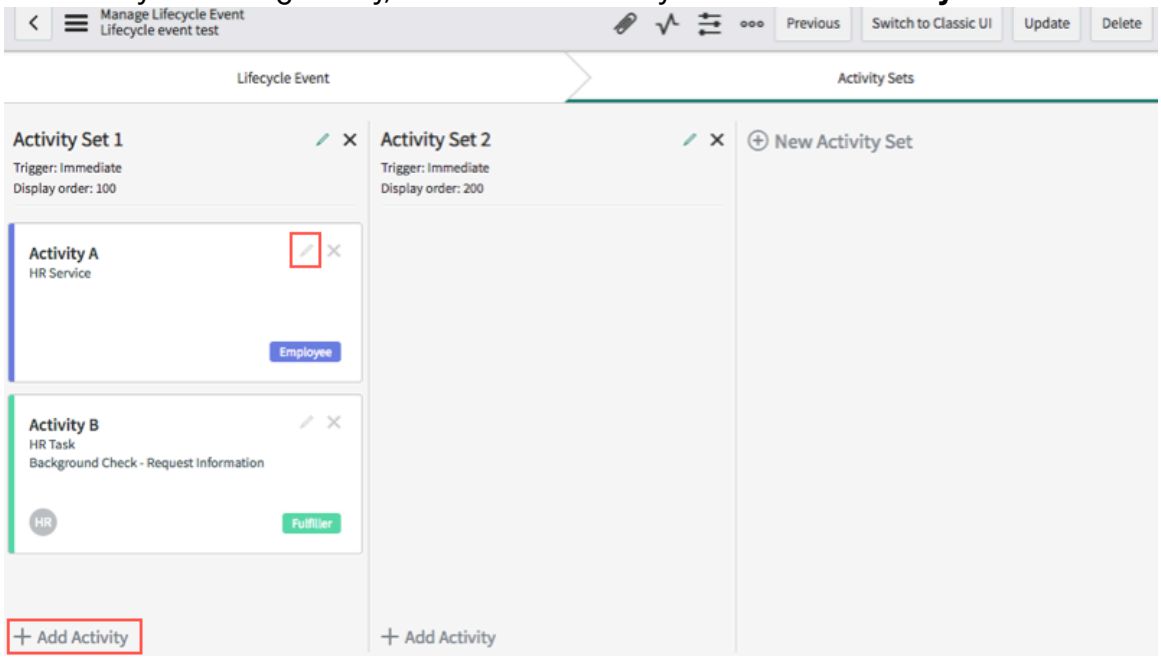
```
(function executeRule(current, previous /*null when async*/) {
 var wf = new global.Workflow().getRunningFlows(current);
 while (wf.next()) {
  if (wf.getValue('name') !== 'HR Activity Set Trigger Check')
   continue;
  new global.Workflow().broadcastEvent(wf.sys_id,
 'check_activity_set_trigger');
 }
})(current, previous);
```

Configure a lifecycle event activity

Create or modify a lifecycle event activity. Lifecycle Events activities can be approvals, employee tasks, fulfiller activities, notifications, flows, content, or activity containers.

Before you begin

Role required: sn_hr_le.activity_writer and membership in the owning group that owns the activity.



Each activity must be associated with an owning group. If the activity has a targeted audience, you can use audience records to define the conditions or criteria that the subject person of a lifecycle event case must meet for the activity to trigger on their behalf. Each activity is associated with a single activity set.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**, and open a record.
2. Click the **Activity Sets** tab to access the lifecycle event builder.
3. Create a new or modify an existing activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- To create a new activity, click **Add Activity**.
- To modify an existing activity, hover over the activity and click **Edit Activity**.

4. On the Activity form, set the **Activity type** field to one of the following:
   - Approval
   - Employee task
   - Fulfiller activity
   - Notification
   - Flow
   - Content
   - Activity container
   - Pulse survey

   For each activity type, follow the applicable task.

> **Warning:**
> An LE activity (fulfiller activity) for an HR service that has the same LE type as the LE case can cause a loop that could cause a memory issue.

For an approval

Configure a lifecycle event activity that is an approval. Approvals create a to-do for the specified approvers to approve or reject.

Before you begin

Role required: sn_hr_le.activity_writer and membership in the owning group that owns the activity.

Procedure

1. On the Activity form, set the **Activity type** field to `Approval`.
2. Fill in the fields on the form, as appropriate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity form

Field	Description
Title	Name of the lifecycle event activity.
Description	Description of the lifecycle event activity.
Activity type	Set the value to `Approval`.
Active	Option to activate the activity for use.
Owning group	Owning group that the activity is associated with. **Note:** ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.
Activity set	Activity set that the activity is associated with.
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records. The subject person of the lifecycle event case must meet the conditions or criteria of one audience record for the activity to trigger in the case. If no audience record is selected, then the activity for the activity to trigger in the case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind. **Note:** Audience records define the conditions or criteria that a user must meet.

3. In the **Approvers** related list, define the approvers for the lifecycle event activity.

Approvers related list fields

Field	Description
Approver groups	Groups to approve the activity.
Approver users	Users to approve the activity.
Approvers from case	User from the lifecycle event case to approve the activity.

4. In the **Approval Options** related list, set how the activity is approved.

Approval Options related list fields

Field	Description	
Wait for	Select one of the following actions for when an approval is completed:	
	Anyone to approve	Only one person is required to approve the HR activity.
	Everyone to approve	Everyone assigned to the HR activity is required to approve it. If one person rejects, the Assigned to person receives a message with a link to select a substitute approver.
	First response from anyone	The first person to respond (approve or reject) to the activity determines the state.
On rejection	Select one of the following actions for when an approval is rejected:	
	Allow resubmit of approvals:	An HR agent can resubmit for approval. The Assigned to person receives a message on the case with a link to resubmit approval requests. All approvers are resubmitted the approval request.
	Close incomplete	When the HR service is rejected, change the **State** of the case or task to **Closed and Incomplete**.
Missing any approver	Select one of the following actions for when any approver is missing:	
	Select replacements	When an approver is missing, the Assigned to person can select a replacement. If the activity is configured to have the Opened for Manager to approve, but the Opened for person has no manager assigned, the activity has a missing approver. If **Select replacements** is selected in the **Missing any approver** field, the Assigned to person receives a message with a link to select a substitute approver.
	Skip missing	Bypass any missing approver and continue.
	Close incomplete	Change the state of the case or task to **Closed Incomplete** when there is a missing approver.
Missing all approvers	Select one of the following actions for when all approvers are missing:	
	Select replacements	When all approvers are missing, the Assigned to person can select replacements. If the activity is configured to have the Opened for Manager to approve, but the Opened for person has no manager assigned, the activity has a missing approver. If **Select replacements** is selected in the **Missing any approver** field, the Assigned to person

Field	Description	
		receives a message with a link to select a substitute approver.
	Close incomplete	Change the state of the case or task to **Closed and Incomplete** when all approvers are missing.

5. Click **Submit** or **Update**.

For an employee task

Configure a lifecycle event activity that is a task for an employee. Employee tasks are assigned to the subject person of the lifecycle event case.

Before you begin

Role required: sn_hr_le.activity_writer and membership in the owning group that owns the activity.

Procedure

1. On the Activity form, set the **Activity type** field to `Employee`.
2. Fill in the fields on the form, as appropriate.

Activity form

Field	Description
Title	Name of the lifecycle event activity.
Description	Description of the lifecycle event activity.
Activity type	Set the value to `Employee`.
HR task template	HR task template to use with the activity. **Note:** An HR task template automatically populates fields on the HR task form when the task is generated. See Configure an HR task template for more information.
Wait for generated task to complete	Option to wait for the generated task to complete before the activity closes. This field appears when you select one of the following task types in the HR task template form. If selected: ○ **HR Service**: Completion of the HR task results in the creation of an HR case. The HR case must complete in order for the activity to close. ○ **Submit Catalog Item**: Completion of the HR task results in the creation of a request. The request must complete in order for the activity to close. ○ **Submit Order Guide**: Completion of the HR task results in the creation of an IT request. The IT request must complete in order for the activity to close.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: ○ The condition for closure depends on the activity type, and can be modified. ○ If selected, the change applies only to new lifecycle event cases. Activities in existing cases will not wait for the generated task to complete before the activity closes.
Active	Option to activate the activity for use.
Owning group	Owning group that the activity is associated with. **Note:** ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.
Activity set	Activity set that the activity is associated with.
Use badge from HR service configuration	(If for the associated HR task template, the **HR task type** value is **HR service**) Option to use the badge that is associated with the parent HR service.
Badge	Badge that the fulfiller activity type is associated with. **Note:** Badges display on the portal to indicate to the employee which department is fulfilling that activity. See Configure an HR badge for more information.
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records. The subject person of the lifecycle event case must meet the conditions or criteria of one audience record for the activity to trigger in the case. If no audience record is selected, then the activity for the activity to trigger in the case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind. **Note:** Audience records define the conditions or criteria that a user must meet.

3. Click **Save**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the associated HR task template, when the **HR task type** value is **HR service**, **Submit catalog item**, or **Submit order guide**, in the **Activity Field Mappings** section, you can map fields from the parent lifecycle event case to the appropriate variables on the child activity that is generated when the employee activity is triggered.

   a. Click **New** or open a record.

   b. Fill in the fields on the form.

   Activity Field Mapping form

Field	Description	
Activity	This field is automatically set to the name of the associated lifecycle event activity.	
Map from table	Source table that the activity field is mapped from. This field is automatically set to the name of the HR case table that the parent lifecycle event case is associated with.	
Map from	Map from type. Select one of the following:	
	Field	Map from a field. In the **Map from field** field, select the field in the source table that the activity field is mapped from. **Note:** Make sure that the data type of the field being mapped from is the same as the data type of the field being mapped to.
	Custom text	Map from custom text. In the **Custom Text** field, provide a string value. Custom text can be static or include variables that are pulled from the source table. For example, you can provide a short description for an IT request, such as, "Provide laptop for new hire: ${subject_person}."
Map to variable	Variable that the activity field is mapped to. **Note:** Make sure that the data type of the field being mapped from is the same as the data type of the field being mapped to.	

   c. Click **Submit** or **Update**.

   d. Repeat the process as needed.

5. Click **Update**.

For a fulfiller activity

Configure a lifecycle event activity that is for a fulfiller. Fulfiller activities are assigned to an agent or fulfiller in a department such as HR, IT, or Facilities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: sn_hr_le.activity_writer and membership in the owning group that owns the activity.

Procedure

1. On the Activity form, set the **Activity type** field to `Fulfiller`.
2. Fill in the fields on the form, as appropriate.

Activity form

Field	Description	
Title	Name of the lifecycle event activity.	
Description	Description of the lifecycle event activity.	
Activity type	Set the value to `Fulfiller`.	
Fulfiller activity	Select one of the following fulfiller activity types: **Note:** You can control the different fulfiller activity types that appear here. See Configure an activity configuration for a lifecycle event for more information.	
	Automated Order Guide	(Lifecycle Events for Enterprise only) An order guide fulfills the activity. In the **Order guide** field, select the order guide to use. **Note:** An order guide submits a single service catalog request that generates several items. See Order guides for more information.
	Catalog Item	(Lifecycle Events for Enterprise only) A catalog item fulfills the activity. In the **Catalog item** field, select the catalog item to use. **Note:** A catalog item is a good or service. See Service catalog items for more information.
	Flow	A flow fulfills the activity. In the **Flow** field, select the flow to use. **Note:** A flow automates a process with a sequence of reusable actions. See Flow designer for more information.
	HR Service	An HR service fulfills the activity. In the **HR service** field, select the HR service to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
		Note: HR services are the requests and assistance an HR organization provides its employees. See HR services for more information.
	HR Task	An HR task fulfills the activity. In the **HR task template** field, select the HR task template to use. **Note:** An HR task template automatically populates fields on the HR task form when the task is generated. See Configure an HR task template for more information.
	Incident	(Lifecycle Events for Enterprise only) An incident fulfills the activity. In the **Template** field, select the incident template to use. **Note:** An incident template automatically populates fields on the Incident form. See Incident Management for more information.
Active	Option to activate the activity for use.	
Use badge from HR service configuration	(If for the associated HR task template, the **HR task type** value is **HR service**) Option to use the badge that is associated with the parent HR service.	
Badge	Badge that the fulfiller activity type is associated with. **Note:** Badges display on the portal to indicate to the employee which department is fulfilling that activity. See Configure an HR badge for more information.	
Owning group	Owning group that the activity is associated with. **Note:** ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.	
Activity set	Activity set that the activity is associated with.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records. The subject person of the lifecycle event case must meet the conditions or criteria of one audience record for the activity to trigger in the case. If no audience record is selected, then the activity for the activity to trigger in the case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind. **Note:** Audience records define the conditions or criteria that a user must meet.

3. Click **Save**.
4. In the **Activity Field Mappings** section, you can map fields from the parent lifecycle event case to the appropriate fields on the child activity that is generated when the fulfiller activity is triggered.

Note:
This section inherits any mappings from the associated fulfiller activity type. You can use the default fulfiller activity type mappings as-is or further modify them.

a. Click **New** or open a record.

b. Fill in the fields on the form.

Activity Field Mapping form

Field	Description	
Activity	This field is automatically set to the name of the associated lifecycle event activity.	
Map from table	Source table that the activity field is mapped from. This field is automatically set to the name of the HR case table that the parent lifecycle event case is associated with.	
Map from	Map from type. Select one of the following:	
	Field	Map from a field. In the **Map from field** field, select the field in the source table that the activity field is mapped from. **Note:** Make sure that the data type of the field being mapped from is the same as the data type of the field being mapped to.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
	Custom text	Map from custom text. In the **Custom Text** field, provide a string value. Custom text can be static or include variables that are pulled from the source table. For example, you can provide a short description for an IT request, such as, "Provide laptop for new hire: ${subject_person}."
Map to table	Target table that the activity field is mapped to. This field is automatically set to the name of the table that the child activity is associated with.	
Map to field	Field in the target table that the activity field is mapped to. **Note:** Make sure that the data type of the field being mapped from is the same as the data type of the field being mapped to.	

c. Click **Submit** or **Update**.

d. Repeat the process as needed.

5. Click **Update**.

For a notification

Configure a lifecycle event activity that is a notification. Notifications automate the sending of an email to the specified recipients.

Before you begin

Role required: sn_hr_le.activity_writer and membership in the owning group that owns the activity.

Procedure

1. On the Activity form, set the **Activity type** field to `Notification`.
2. Fill in the fields on the form, as appropriate.

Activity form

Field	Description
Title	Name of the lifecycle event activity.
Description	Description of the lifecycle event activity.
Activity type	Set the value to `Notification`.
Email template	Select an existing or create a new email template.
From	Provide the name of the sender.
Active	Option to activate the activity for use.
Owning group	Owning group that the activity is associated with.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.
Activity set	Activity set that the activity is associated with.
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records. The subject person of the lifecycle event case must meet the conditions or criteria of one audience record for the activity to trigger in the case. If no audience record is selected, then the activity for the activity to trigger in the case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind. **Note:** Audience records define the conditions or criteria that a user must meet.

3. In the **Recipients** related list, define the notification recipients for the lifecycle event activity.

Recipients related list fields

Field	Description
Recipient users	Users to receive the email notification.
Recipient groups	Groups to receive the email notification.
Users/Groups on case	User fields from the lifecycle event case to receive the email notification.

4. Click **Submit** or **Update**.

Flow activity parameters

Use flow activity parameters on a lifecycle event activity to automatically populate values from a subflow within an activity.

You can configure subflows for a lifecycle event and pass the values for the input parameters of the subflow within the activity.

Having the ability to call any subflow from a lifecycle event activity provides you with a low code or no code configuration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Calling subflows from a lifecycle event activity provides an enterprise-wide workflow you can use to interact with third-party applications at a specific point in a lifecycle event.

For more information, see Flows.

Use cases

You can use flow activity parameters for:

Offboarding

Subflow	Parameters
Terminate employee in Workday.	• Employee: Subject person • End Date: Subject person HR Profile.Employment End Date

Onboarding

Subflow	Parameters
Mark employee as a no show in Workday. (Employee accepted an offer of employment, but at some point decided to back out of agreement.)	• Employee: Subject person • Reason: Reason for no show

Transition/Rehire

Subflow	Parameters
Switch primary job	• Employee: Subject person • Job: Subject person job

For more information, see Subflows.

Map activity fields and input parameters

You can use fields from a table to map your activity field to an input parameter.

Or, you can map activity fields to an input parameter using a custom script.

For a flow

Configure a lifecycle event activity that uses a subflow.

Before you begin

Role required: sn_hr_le.activity_writer and membership in the owning group that owns the activity.

Procedure

1. On the Activity form, set the **Activity type** field to `Flow`.
2. Fill in the fields on the form, as appropriate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity form

Field	Description
Title	Name of the lifecycle event activity.
Description	Description of the lifecycle event activity.
Activity type	Set the value to `Flow`.
Flow	Subflow to use with the activity. **Important:** ○ Only the **Switch primary job** subflow that is used to support multiple jobs in a lifecycle event is available to use out-of-box. ○ To use a different subflow with the activity, additional configuration is required. See the Implementing multiple subflows in an LE activity [KB0817520 article in the HI Knowledge Base for more information.
Active	Option to activate the activity for use.
Badge	Badge that the fulfiller activity type is associated with. **Note:** Badges display on the portal to indicate to the employee which department is fulfilling that activity. See Configure an HR badge for more information.
Owning group	Owning group that the activity is associated with. **Note:** ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.
Activity set	Activity set that the activity is associated with.
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records. The subject person of the lifecycle event case must meet the conditions or criteria of one audience record for the activity to trigger in the case. If no audience record is selected, then the activity for the activity to trigger in the case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Audience records define the conditions or criteria that a user must meet.

3. Click **Save**.
   The **Activity Field Mappings** and **Rescind activities** tabs appear. These fields pass from the subflow.

Configure activity field mapping

Use activity field mappings to map information from a field on a table, custom text, or a custom script to a flow input from a subflow.

Before you begin

Role required: sn_hr_le.activity_writer

About this task

The activity field mappings pass fields from the subflow you selected when configuring the lifecycle event activity.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Manage Activities**.
2. Select an activity that has **Flow** as the **Activity type**.
   For more information, see For a flow.
3. Click the **Activity Field Mappings** tab.
4. Click an activity field mapping.
5. Fill in the fields on the form, as appropriate.

Activity Field Mapping

Field	Description
Activity	The activity you are creating field mappings for.
Map from table	The table you want to map values from.
Map from	How you want to map values from the table you selected. Valid values are: ○ Field ○ Custom Text ○ Custom Script
Map from field	The field from the table you selected that you want to map your activity field. For example, you can select the Activity [sn_hr_le_case] table and the subject-person field from that table to map to the User flow input.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Appears when you select **Field** from the **Map from field**.
Custom text	The text you want to map to your activity field. Appears when you select **Custom Text** from the **Map from field**.
Script	The script you want to map to your activity field. Appears when you select **Custom Script** from the **Map from field**.
Map to flow input	The input parameter from your subflow that you are mapping from a field from a table, custom text, or custom script. For more information, see For a flow.
Input mandatory	Indicates if the input is required and reflects the settings from the subflow you selected. For more information, see Subflows.

6. Click **Submit** or **Update**.

For content

Configure a lifecycle event activity to schedule content. This activity type enables you to deliver relevant and tailored content to employees as part of the lifecycle event. For example, you can push company-related information or a first day at work banner to new hires as part of their onboarding.

Before you begin

Role required: sn_cd.content_manager, sn_hr_le.activity_writer, and membership in the owning group that owns the activity.

Procedure

1. On the Activity form, set the **Activity type** field to `Content`.
2. Fill in the fields on the form, as appropriate.

Activity form

Field	Description
Title	Name of the lifecycle event activity.
Description	Description of the lifecycle event activity.
Activity type	Set the value to `Content`.
Template	Schedule content template to use with the activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: A schedule content template schedules and delivers content to users as part of a lifecycle event. See Configure a schedule content template for a lifecycle event activity for more information.
Active	Option to activate the activity for use.
Owning group	Owning group that the activity is associated with. **Note:** ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records to target the content to the subject person, opened for person, or a person working on the lifecycle event case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind. **Note:** Audience records define the conditions or criteria that a user must meet.

3. In the **Activity Field Mappings** section, you can map fields from the parent lifecycle event case to the appropriate fields on the content activity.
   You can use the activity field mappings to define who the content is delivered to, when the content is delivered, how long the content is available for, and more.

   a. Click **New** or open a record.

   b. Fill in the fields on the form.

Activity Field Mapping form

Field	Description
Activity	This field is automatically set to the name of the associated lifecycle event activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description	
Map from table	Source table that the activity field is mapped from. This field is automatically set to the name of the HR case table that the parent lifecycle event case is associated with.	
Map from	Map from type. Select one of the following:	
	Field	Map from a field. In the **Map from field** field, select the field in the source table that the activity field is mapped from. **Note:** Make sure that the data type of the field being mapped from is the same as the data type of the field being mapped to.
	Custom text	Map from custom text. In the **Custom Text** field, provide a string value. Custom text can be static or include variables that are pulled from the source table. For example, you can provide a short description for an IT request, such as, "Provide laptop for new hire: ${subject_person}."
Map to table	Target table that the activity field is mapped to. This field is automatically set to the name of the table that the child activity is associated with.	
Map to field	Field in the target table that the activity field is mapped to. **Note:** Make sure that the data type of the field being mapped from is the same as the data type of the field being mapped to.	

c. Click **Submit** or **Update**.

d. Repeat the process as needed.

4. Click **Submit** or **Update**.

For an activity container

Configure a lifecycle event activity that is a container for a group of activities. This activity type enables you to manage the dependencies of activities within an activity set. You can use activity containers to order activities, in parallel or sequence, as well as configure multiple activity containers within an activity set.

Before you begin

Role required: sn_hr_le.activity_writer and membership in the owning group that owns the activity.

Procedure

1. On the Activity form, set the **Activity type** field to `Activity container`.
2. Fill in the fields on the form, as appropriate.

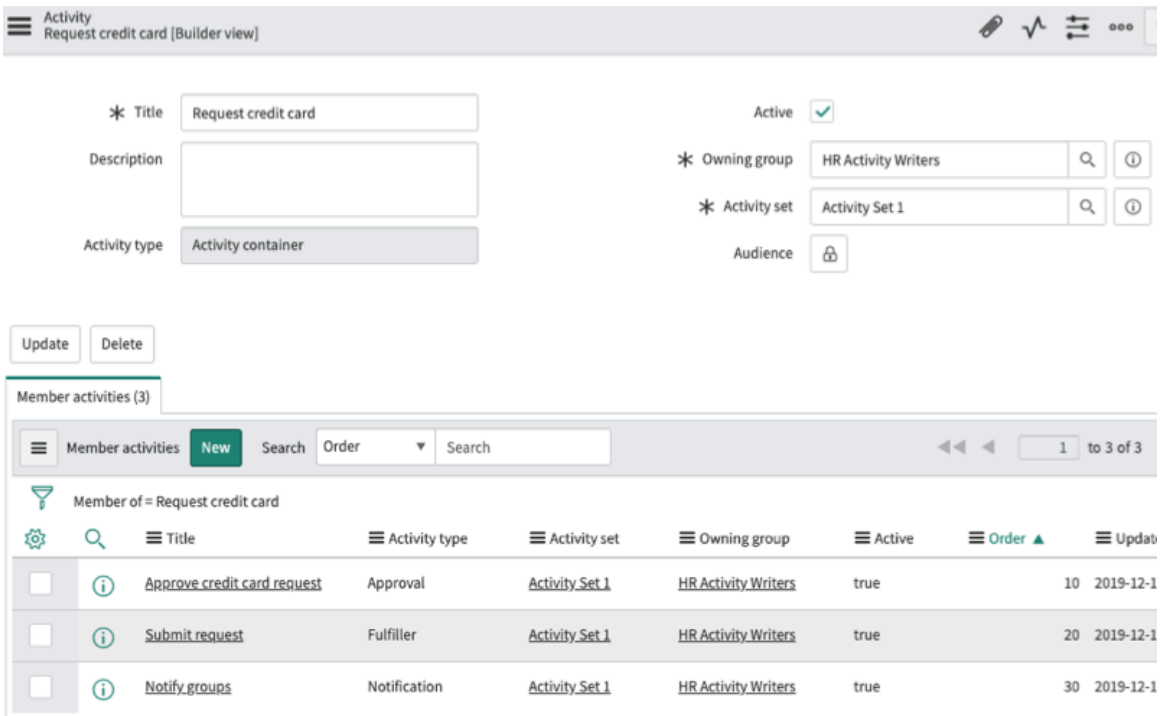
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity form

Field	Description
Title	Name of the lifecycle event activity.
Description	Description of the lifecycle event activity.
Activity type	Set the value to `Activity container`.
Active	Option to activate the activity for use.
Owning group	Owning group that the activity is associated with. **Note:** ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records. The subject person of the lifecycle event case must meet the conditions or criteria of one audience record for the activity to trigger in the case. If no audience record is selected, then the activity for the activity to trigger in the case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind. **Note:** Audience records define the conditions or criteria that a user must meet.

3. Right-click the former header and click **Save**.
   The **Member activities** related list appears.
4. In the **Member activities** related list, create one or more member activities of the following types:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Note:

- Member activities inherit the audience of the activity container.
- Member activities trigger based on the order number assigned. Activities with the same order number trigger at the same time.
- New member activities must be created for each activity container. You cannot move existing activities into an activity container, nor can you move member activities out of the container to use as standalone activities.
- Member activities cannot be activity containers. You cannot place an activity container inside another activity container.

- Approval
- Employee
- Fulfiller
- Notification
- Flow
- Content

Example

For example, this is an activity container to request a credit card. The activity container has three member activities. The first is to approve the credit card request, the second is to submit the request, and the third is to notify relevant groups about the request.

5. Click **Update**.

For a pulse survey

Configure a lifecycle event activity that is a pulse survey. Pulse surveys capture employee feedback.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required:

Procedure
1. On the Activity form, set the **Activity type** field to `Pulse Survey`.
2. Fill in the fields on the form, as appropriate.

Activity form

Field	Description
Title	Name of the lifecycle event activity.
Description	Description of the lifecycle event activity.
Pulse survey	The survey to send.
Pulse user field	The users to whom you want to send the survey. Use the tree picker to select a field.
Active	Option to activate the activity for use.
Owning group	Owning group that the activity is associated with. **Note:** ○ Owning groups control who owns a lifecycle event activity. To learn more, see Configure an owning group for a lifecycle event. ○ To create, update, or delete an activity, you must be both a member of the associated owning group and have the sn_hr_le.activity_writer role.
Audience	Defines whether the activity should trigger for the lifecycle event case. You can apply one or more audience records. The subject person of the lifecycle event case must meet the conditions or criteria of one audience record for the activity to trigger in the case. If no audience record is selected, then the activity for the activity to trigger in the case. The audience criteria for an activity set applies first. When the audience criteria is met, the activity set executes. The audience at the activity level is then checked and executed. You cannot set an audience for activity sets that have a trigger type of Rescind. **Note:** Audience records define the conditions or criteria that a user must meet.

3. Click **Submit** or **Update**.

Moving an activity within an activity set
There are multiple ways you can move an activity within an activity set.

The different methods are:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The drag-and-drop feature enables you to move an activity within an activity set or to another activity set.
- Use the reorder pop-up on an activity and select where you want the activity to reside.
- Edit the activity and select and save a new activity set or enter a new display order number to reorder an activity within an activity set.
- You cannot reorder a request activity.

  Note:
  Requests have a grey background around the request card for easier identification.

- You cannot move an activity above a request activity.
- If you use the  to move an activity to another activity set, by default it moves it to the top position of the activity set below any request activities.

Reorder a life cycle event activity

You can reorder an activity within an activity set for a lifecycle event using different methods.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.
2. Select a lifecycle event.
3. Select the **Activity Sets** tab.
4. Use the drag-and-drop method to select an activity with your mouse and hold it and drag it to a different location within the same activity set or into another activity set.

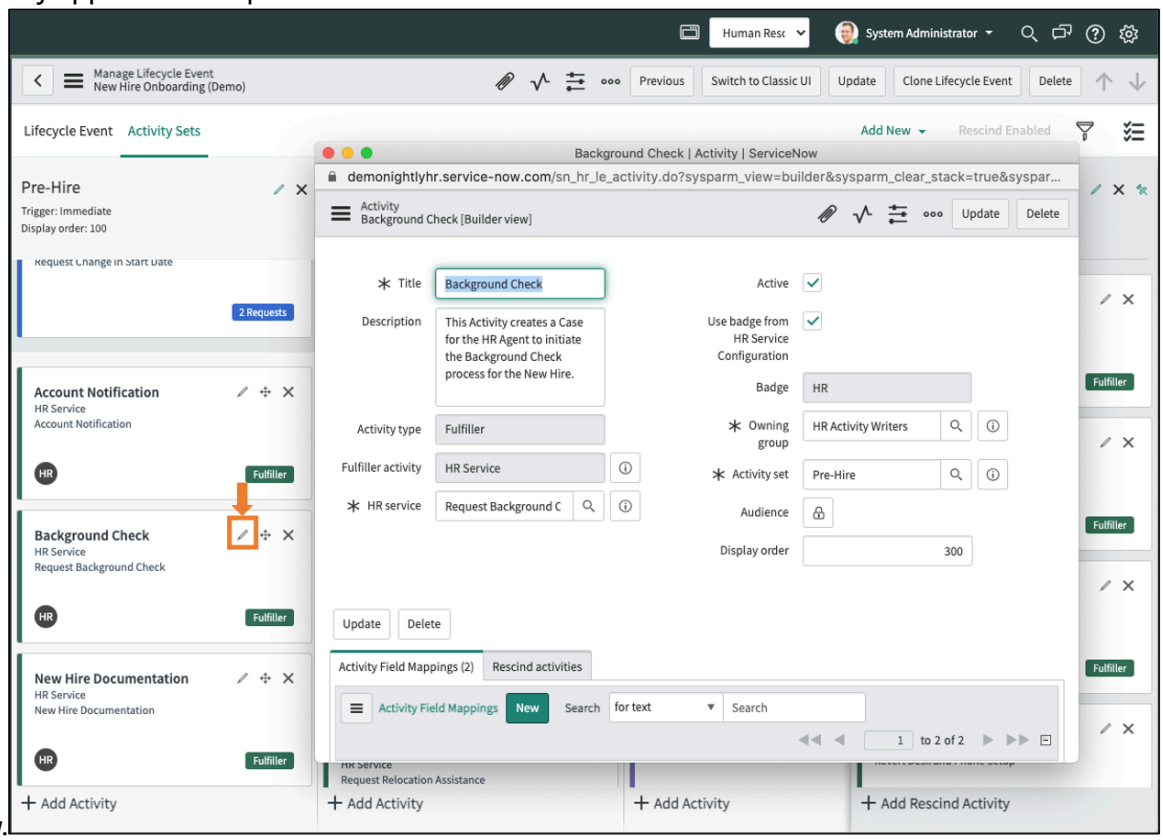
   Note:
   The ordering numbers change automatically.

5. To move an activity, select the Reorder icon ( from an activity.

   Note:
   If you use the Reorder icon to move an activity to another activity set, by default it moves it to the top position of the activity set below any request activities.

6. A reorder pop-up appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



7. Select a choice with your mouse and release.

Note:
The ordering numbers change automatically.

8. Another way to edit an activity is to select the Edit Activity icon ( ) on an activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The activity appears in a separate window.

9. Edit the **Activity set** and **Display order** fields to change the activity set the activity belongs to and the order it appears.

   Note:
   Requests cannot be reordered.

10. Select **Update**.

Triggering an activity from upstream activities

For a lifecycle event case, you can trigger or create an activity from an activity that is in another activity set.

Activities in later activity sets can be created based on survey responses in earlier activity sets and for users other than the person the case was created for (subject person).

You can create an activity that has a task type of Collect Employee Input and based on the results, another activity is created. In this example, the activity that has a task type of Collect Employee Input is the upstream activity. The activity that is created from this is the downstream activity.

Previously, only the Subject person could answer questions from an activity with a task type of Collect Employee Input (survey). For an New Hire Onboarding lifecycle event, the Subject person might not have access to the survey yet. Now, the Opened for, Subject person, or Assigned to can take the survey. This keeps the lifecycle event moving.

Upstream survey creates downstream survey

For example, a lifecycle event activity can task a manager with taking a survey.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The survey asks a hiring manager if their new employees require special equipment.
- The hiring manager can answer the survey indicating if the new hires require special equipment.
- If the answer is yes, a new survey can be created in a downstream activity set that asks what specific safety equipment are required.
- Anyone that has access to the original lifecycle event case can answer the second survey requesting specific safety equipment for the new hires.
- To configure this activity, associate an HR template that has an HR task type of **Collect Employee Input**. For more information, see Configure an HR task template and Adding an HR task to an HR case.
-

System property

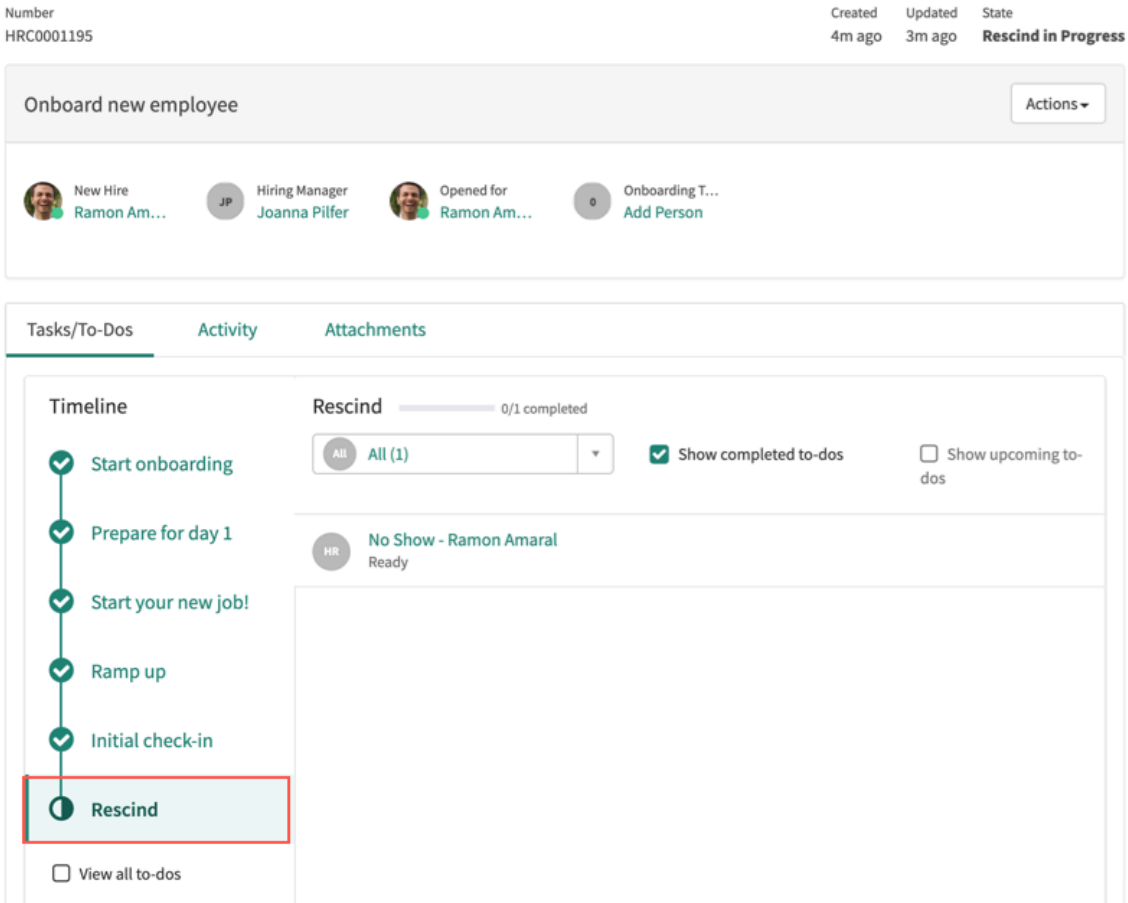
The sn_hr_core.create_new_survey_instances system property determines if new survey instances are created with each survey task even when an existing survey instance for the same user exists.

The default value is **True** and indicates multiple survey instances can be created.

If the value is **False**, when an existing survey instance for the same survey and same user exists, the survey is attached to the survey task.

Configure the rescind process for a Lifecycle Events activity

Cancel and revert work done in a Lifecycle Events case with the rescind process. Rescind activities can be defined to notify employees and departments when a case is rescinded, trigger automated flows, and revert work already completed, such as the provisioning of equipment or the setting up of a workplace.



Before you begin

Role required: sn_hr_le.admin or sn_hr_le.activity_set_manager

About this task

The rescind process enables you to cancel and revert work done in a Lifecycle Events case. For example, if a new hire decides not to join the company or a job offer is revoked, you can revert work done in the onboarding case.

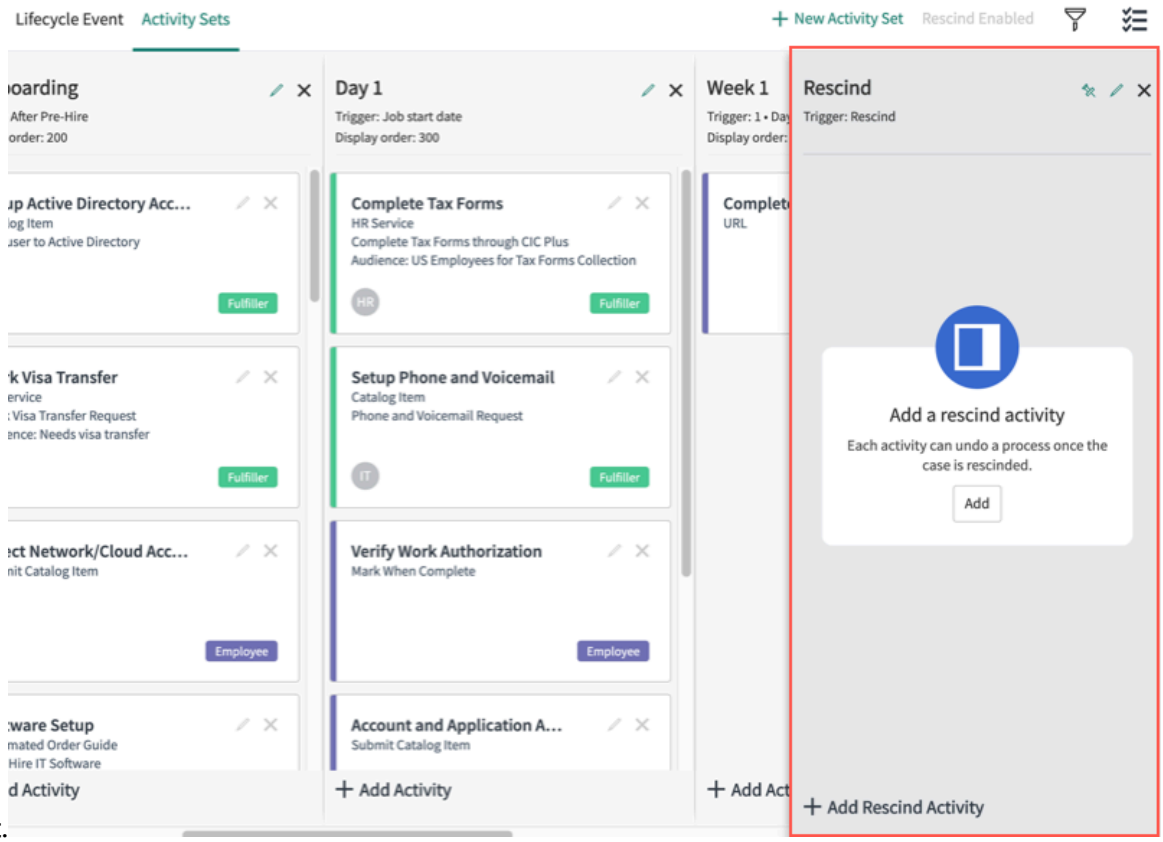
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Enable the Rescind activity set.

a. Navigate to **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**, and open a Lifecycle Events record.

b. Select the **Activity Sets** tab.



c. Select **Enable Rescind**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Lifecycle Events builder displays the Rescind activity set.

> **Note:**
> You can't set an audience for activity sets that have a trigger type of **Rescind**.

2. Add one or more rescind activities.

   a. Select **Add Rescind Activity** to add an activity that you want to rescind to the Rescind activity set.

   b. Fill in the fields on the form.

Rescind Activity form

Field	Description
Title	Name of the rescind activity.
Description	Description of the rescind activity.
Activity to rescind	Name of the activity to rescind. You can select any activity that is associated with the same Lifecycle Events type, except for activity containers (you can select member activities) and other rescind activities.
Activity type	Activity type of the rescind activity. Select one of the following activity types: ▪ Approval ▪ Employee activity ▪ Fulfiller activity

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	▪ Notification ▪ Flow ▪ Content ▪ Activity container **Note:** For this activity type, there's no **Activity to rescind** field at the container level. When configuring the rescind member activities, you can select the corresponding activity to rescind at the member activity level.
Active	Option to activate the rescind activity for use.
HR template	An HR template that you have defined for a Lifecycle Events activity. HR templates are defined to populate fields automatically on an HR task form associated with a Lifecycle Events activity.
Owning group	Owning group that the rescind activity is associated with.
Audience	Defines whether the activity should trigger for the Lifecycle Events case. You can apply one or more audience records. The subject person of the Lifecycle Events case must meet the conditions or criteria of all audience records for the activity to trigger in the case. If an audience record isn't selected, then the activity triggers for the case each time the trigger conditions are evaluated. **Important:** The rescind activity automatically inherits the audience of the underlying activity to rescind. If you clear or update the activity to rescind, the audience is also automatically cleared or updated.

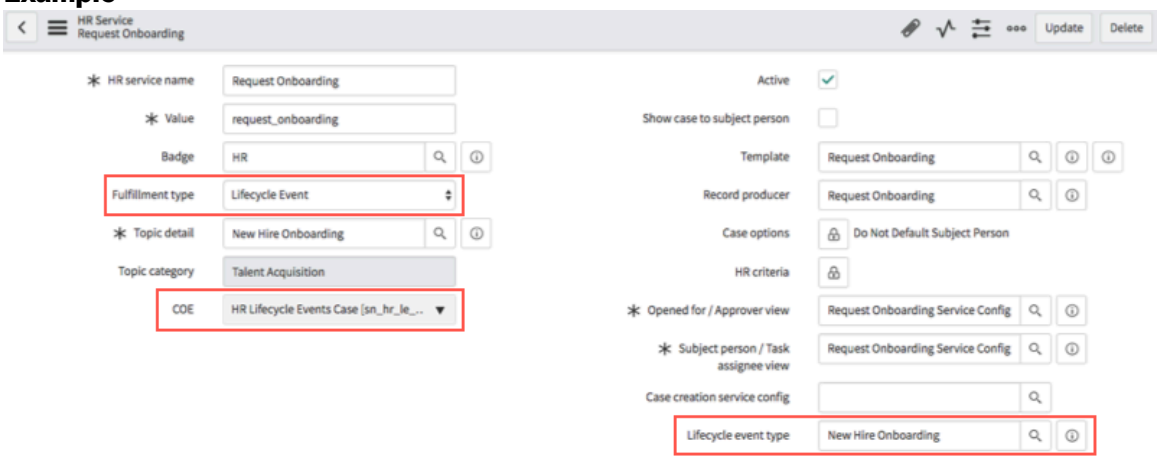
c. Repeat the process as needed.

Configure an HR service for a lifecycle event

Create a corresponding HR service so that the lifecycle event can be requested for service. For example, the lifecycle event for New Hire Onboarding has a corresponding HR service also named New Hire Onboarding. When an HR case for that HR service is created, the HR case will be fulfilled by the associated lifecycle event.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.admin



About this task
HR services are the requests and assistance an HR organization provides its employees, and they are the starting point for HR case creation. You must create an HR service for a lifecycle event so that it can be requested for service. To learn more about HR services, including whether to make an HR service available for internal use only or for employee self-service, see HR services.

Procedure
1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Select **New**.
3. On the form, fill in the fields.

HR Service Configuration form

Field	Value
Fulfillment type	Set the value to `Lifecycle Event`.
Lifecycle event type	Select the lifecycle event you want to fulfill the HR service. **Warning:** If the lifecycle event type field of an HR service is the same as the lifecycle event (LE) type that's being used in an LE activity, a loop can be created that causes memory issues.
COE	Select the COE you want the HR service to be categorized under. **Note:** An HR service for a lifecycle event can be associated with any HR Center of Excellence (COE).

Example

4. Fill in the other fields on the form, as appropriate.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For further details on the form fields, see Configure an HR service.

5. Click **Submit** or **Update**.

Configure an HR service for a journey

Create a corresponding HR service so that the lifecycle event can be requested for service as part of an employee's journey.

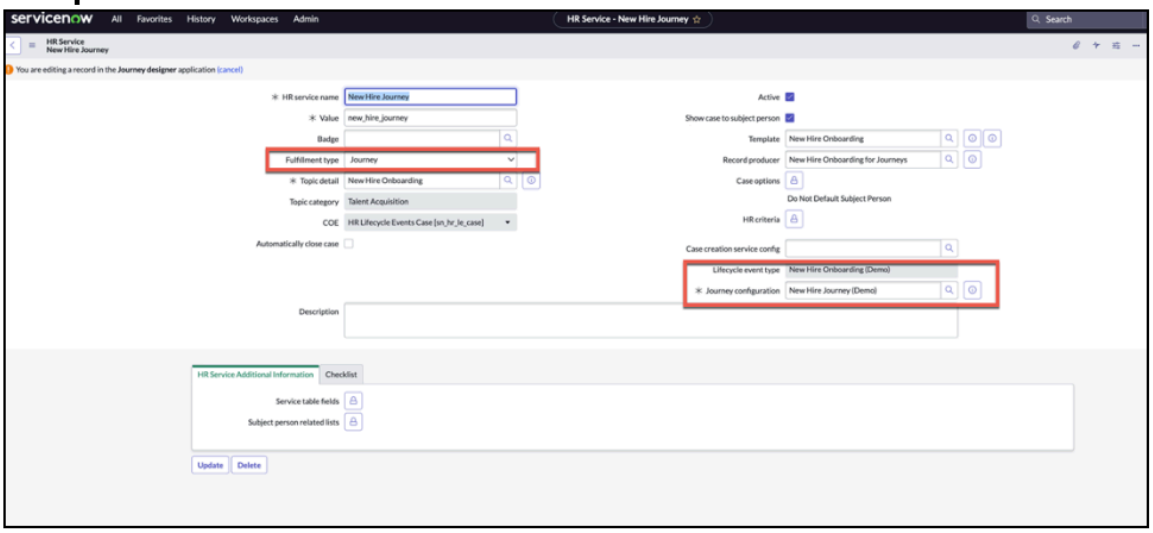
Before you begin

Role required: sn_hr_core.admin

About this task

HR services are the requests and assistance an HR organization provides its employees, and they are the starting point for HR case creation. You must create an HR service for a lifecycle event so that it can be requested for service. To learn more about HR services, including whether to make an HR service available for internal use only or for employee self-service, see HR services.

Procedure



1. Navigate to **All** > **HR Administration** > **HR Services** > **HR Service Configuration**.
2. Click **New**.
3. On the HR Service form, provide the following field values.

HR Service form

Field	Value
Fulfillment type	Set the value to `Journey`.
Lifecycle event type	Select the Lifecycle event you want to fulfill the HR service.
Journey configuration	Select the Journey designer journey you want to associate with the Lifecycle event.
COE	Select the COE you want the HR service to be categorized under. **Note:** An HR service for a Lifecycle event can be associated with any HR Center of Excellence (COE).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

4. Fill in the other fields on the form, as appropriate.
   For further details on the form fields, see Configure an HR service.
5. Click **Submit** or **Update**.

Using the Test Activity Sets tool for a lifecycle event activity set

Use the lifecycle event test tool to thoroughly test a lifecycle event before launching it.

The lifecycle event test tool provides different views of a lifecycle event. The different views available are:

- Use filters to show only applicable activity sets and activities for the subject person. For example, you can select a subject person and preview what that person will see and what tasks are assigned to them.
- You can use conditions like HR criteria to view what activity sets and activities the selected people will see and what tasks are assigned to them.
- Each activity set and activity can be assigned to specific audiences. You can view the activity sets and activities applicable to a specific audience.
- You can also view all activity sets and activities that are not applicable to an audience.

Note:
When a user matches an activity but not an activity set, the activity set and activity will still appear.

Inapplicable activities and sets

When using the lifecycle event test tool, you can show activities and sets that are inapplicable for a subject person.

A subject person is considered inapplicable when they do not meet the audience criteria for a specific activity or activity set.

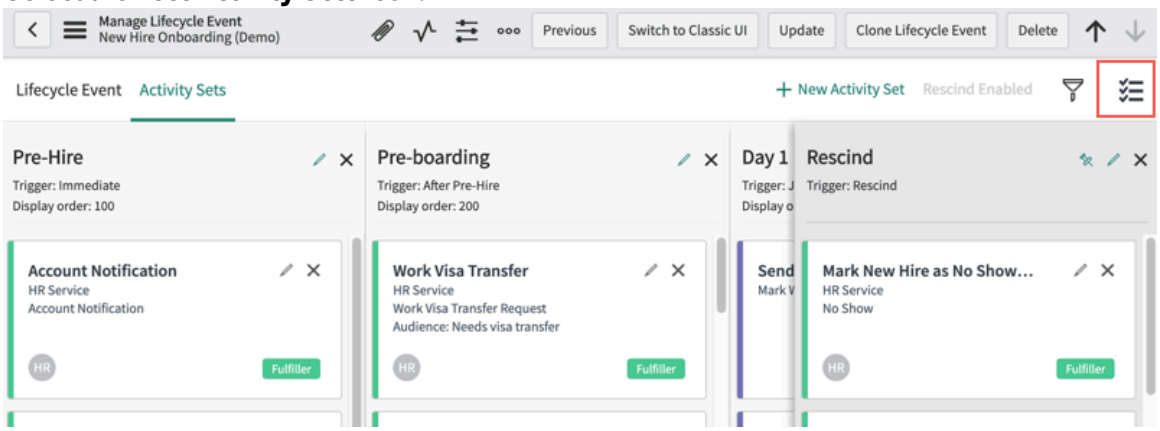
Indeterminate activities and sets

When using the lifecycle event test tool, you can show activities and sets that are indeterminate for a subject person.

A subject person is considered indeterminate when there is not enough information to determine if the subject person is part of the audience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Preview and test a Lifecycle Events case

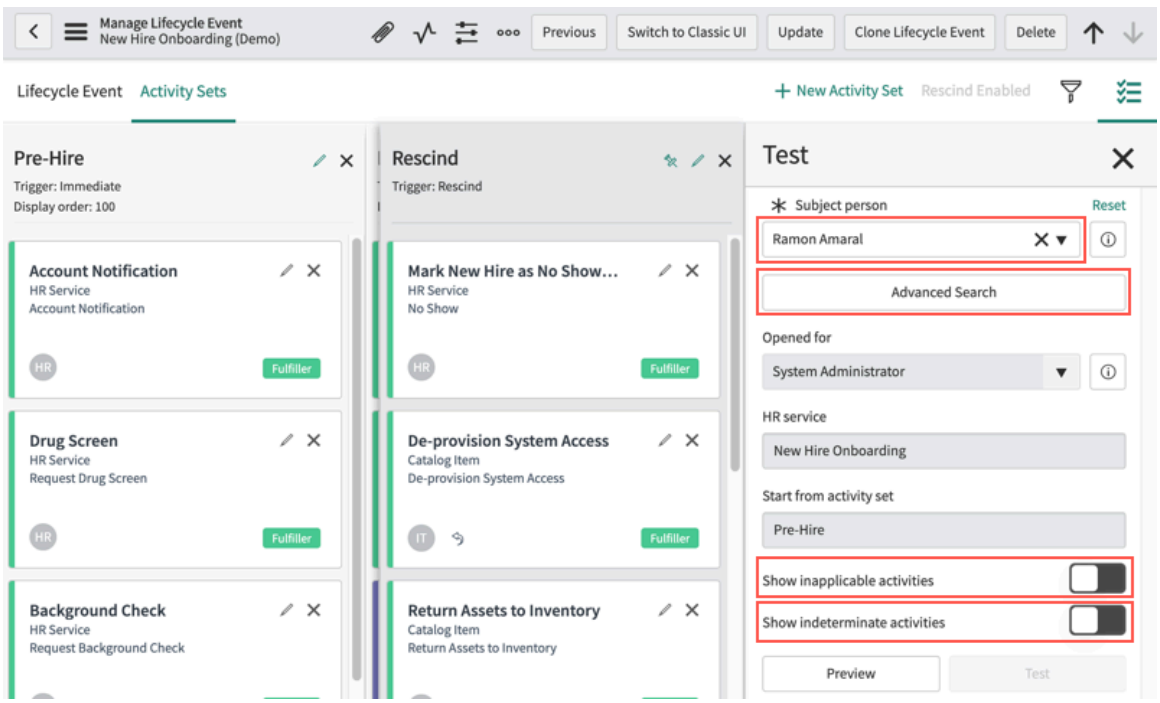


Preview and test a Lifecycle Events case for different audience types. You can preview a Lifecycle Events case to validate the activities that trigger for a particular audience. You can then create a test Lifecycle Events case for different users and select which activities to include or exclude in your test.

Before you begin

Role required: sn_hr_le.admin

Procedure



1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**, and open a record.
2. Click the **Activity Sets** tab to access the lifecycle event builder.
3. Select the **Test Activity Sets** icon.

The Test side panel appears.

4. In the **Test** side panel, use the **Subject person** field to select a subject person.

> **Note:**
> To select a subject person based on audience criteria, select **Advanced Search** to find and select a user based on the criteria you specify.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. **Optional:** Select the **Show inapplicable activities and sets** button to show all activities and activity sets that are not applicable for the subject person.
6. **Optional:** Select the **Show indeterminate activities and sets** button to show all activities and activity sets that can't be determined for the subject person.
7. Select **Preview** to preview the workflow.
8. Select **Test** to create a Lifecycle Events case based on the workflow that you previewed. A Lifecycle Events case for the subject person you selected is created.

Lifecycle Events employee requests

You can create and track requests that are opened by users from within Lifecycle Events so that your users don't have to create a new HR case or request. Requests from your users can be either an HR service or a catalog item.

If you have the sn_hr_le.admin or admin role, you can configure employee requests from the Human Resources (HR) app. Your users can open requests in the Employee Center from an activity set that is assigned to them.

Configure Lifecycle Events employee requests

Enable your managers and employees to open employee requests directly from Lifecycle events so that they don't have to create a new HR case or request.

Before you begin

Role required: sn_hr_le.admin or admin

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.
2. To add employee requests to the event, open a Lifecycle Event and click the **Activity Sets** tab.
3. Navigate to **Add New** > **Employee Request**.
4. On the form, fill in the fields.

Employee Request form

Field	Description
Title	Title that appears in the Action list menu in the HR case.
Description	Details about the request.
Requester	Person who has access to view and make requests. ○ **Opened for**: Person that the Lifecycle Events case was opened for. ○ **Subject person**: Person that is the subject of the LE case. (This person may or may not be the same person that the request was opened for.)
Category	Employee Requests category types.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ For the HR Service category type, see HR services. ○ For the Catalog Item category type, see Service catalog items.
HR Service	Requests and assistance that an HR organization provides its employees.
Catalog Item	Goods or services that are available for requests.
Active	Option that an employee or manager can select to make the request available.
Blocks activity set completion	○ When selected, the employee request must be completed before an activity set is marked as completed. ○ If unselected, the activity set completes if all the underlying activities are complete regardless of whether the employee request is fulfilled.
Activity Sets	Sets of activities that the employee request is available in.
Audience	Specific groups of users that have access to the employee request. For more information about these groups, see Audiences.

5. Click **Submit**.

Verify Lifecycle Events Employee requests configuration

Filter lifecycle event activities

Verify Lifecycle Events Employee requests configuration

Use the Preview and Test capabilities to verify that the employee request activity has been configured correctly.

Before you begin

Role required: sn_hr_le.admin or admin

About this task

Verify that the **Request Change in Start Date** option is available when you view the requests that employees can make for the activity set that you're testing.

This task requires that you download the demo data that is provided with the Human Resources Scoped App: Lifecycle Events for Enterprise.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**.
2. Select **New Hire Onboarding (Demo)**, and then select the **Activity Sets** tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
If you don't see this life-cycle event, download the demo data provided with the Human Resources Scoped App: Lifecycle Events for Enterprise.

3. Select the **Test Activity Sets** icon.
4. Select **Preview**, and then select **Test**.
   Wait for the confirmation message "New Hire Onboarding (Demo) case created..." to display.

Note:
In preview mode, all employee requests appear regardless of audience, Opened for, or Subject person settings. Employee requests for the appropriate configuration appear in the completed test results.

5. Navigate to **All** > **Self-Service** > **Employee Center**.
6. From the Employee Center global header, select **My Tasks**.
7. Select the first task in the My tasks widget associated with the new hire onboarding activity set that you created via your test.
   More information about the task you selected appears in the My tasks widget.
8. Select the link that reflects the name of the activity set that you're testing for new hire onboarding.

Note:
This link appears underneath the title of the task that you selected in the My tasks widget.

   The Journey details page appears.
9. Select the **More Journey actions** icon.
   A list of options appear for the employee requests associated with the activity set that you're testing.
10. Verify that the **Request Change in Start Date** option appears in the list of employee requests associated with the activity set.

Note:
The options associated with the **More Journey actions** icon depend on the audience configuration for the employee request. In this example that uses demo data, all employees see the **Request Change in Start Date** option.

Create a Lifecycle Events Employee Request from the Employee Center

Enable your users to create common requests from Lifecycle Events so that they don't have to create a new HR case or request. When your users open a request, any related cases and tasks are automatically associated with the parent event.

Before you begin
Role required: sn_hr_le.admin

About this task
Note:
This task is based on the demo data that is available with the Human Resources Scoped App: Lifecycle Events for Enterprise. Download the HR Scoped App demo data before completing this task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

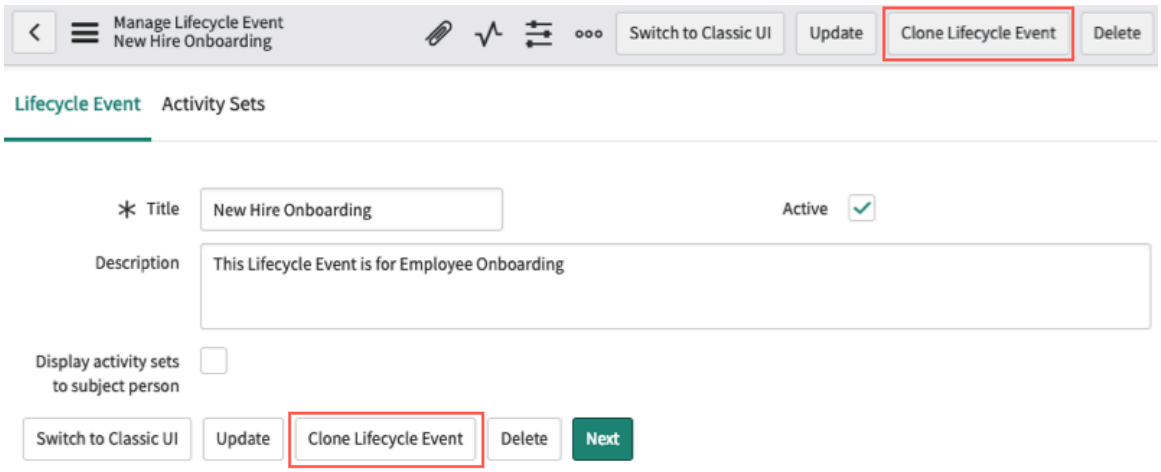
1. From your Employee Center home page, click **To-dos**.
2. Open the New Hire Onboarding request.
3. From the Actions list, click **Request Standup Desk**.
4. Click **Order Now**.
5. Complete the **Order Confirmation**, and click **Checkout**.

What to do next

Click **Requests** to view your request.

> **Note:**
> The HR case or catalog request that was initiated from the employee request is associated with the parent Lifecycle Events case. Agents can see the status of the employee request from the Lifecycle event.

Clone a lifecycle event



Clone a lifecycle event and its associated activity sets and activities with the lifecycle event builder.

Before you begin

Role required: sn_hr_le.admin

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**, and open a record.
2. Click **Clone Lifecycle Event** to clone the lifecycle event and all of its associated activity sets and activities.

Once complete, a message that the lifecycle event was successfully cloned appears.

What to do next

After cloning a lifecycle event, you can filter lifecyle event activities. See, Filter lifecycle event activities

Filter lifecycle event activities

Filter lifecycle event activities by activity type, owning group, audience, and rescind. You can also search for individual activities by name.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_le.admin

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **Manage Lifecycle Events**, and open a record.
2. Click the **Activity Sets** tab to access the lifecycle event builder.
3. Click the Filter icon to open the **Filters** side panel.
4. In the **Filters** side panel, select filters from the list, or type an activity's tile in the input field.

Lifecycle event properties

Lifecycle event properties control the behavior of lifecycle events. You can set the duration of the activity set closure time in hours.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Properties**.
2. Update the lifecycle event properties, as appropriate.

Lifecycle event properties form

Property	Description
sn_hr_le.All activity set closure timer	Duration of the activity set closure time in hours and determine when an activity set triggers for a lifecycle event. By default, the time is set to four hours. Use caution if you decide to change the default value. Frequent updates trigger more events and can cause your lifecycle event activity sets to cancel before it can complete. **Note:** To trigger an activity set proactively rather than wait for the value entered in this property, see Lifecycle Events evaluation interval.

3. Click **Save**.

Support multiple jobs in a lifecycle event

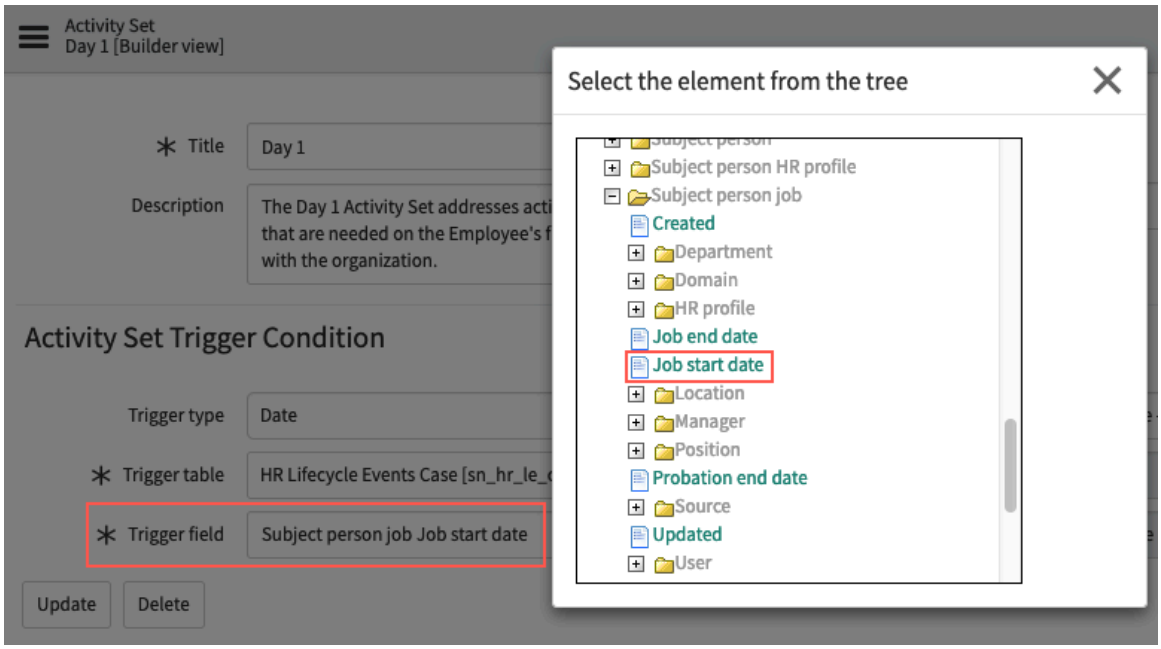
Use the Jobs table to create lifecycle event cases where you can specify which job the case pertains to.

Before you begin
Role required: sn_hr_core.admin

For example, say that you have an intern that is being transferred to a full-time position. The intern has two associated job records. When an onboarding case for the full-time position is created, the case is associated with the full-time job record, ensuring that downstream activity sets and activities are triggered based on information from that relevant job record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task



Beginning in the New York release, you can use the new Jobs (sn_hr_core_job) table to store multiple job records per user and capture the job history of users within your organization. See Capturing multiple job records for a user for more information.

Procedure

1. If you are using an integration to pull HR profiles from a third-party system, configure your integration to pull jobs information into the Jobs (sn_hr_core_job) table.
   For details on how to configure a third-party integration with HR Service Delivery, see Integration of HR Service Delivery with third-party systems.
2. For HR case creation, associate the subject person's job to the HR case with the **subject_person_job** field.

   Example
   For example, for the preconfigured New Hire Onboarding lifecycle event, the *`Create HR Case if Start Date is Future`* business rule for the Jobs table is configured to automatically create onboarding cases for users with a future job start date. When the rule creates the onboarding case, it uses the **subject_person_job** field to specify which job the user is being onboarded for.
3. For the lifecycle event, make sure that the relevant activity sets are triggered by the subject person's job by updating the **Trigger field** value to **subject_person_job**.

   Example
   For example, the Day 1 activity set in the preconfigured New Hire Onboarding lifecycle event is triggered by the subject person's job start date.

4. If you are not using a third-party integration and need to configure the switch of a primary job, you can use the **Switch primary job** subflow to switch the subject person's primary job through a lifecycle event activity.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example
For example, you can create a lifecycle event activity to switch the primary job of the subject person from the old to the new job by setting the **Activity type** value to **Flow** and the **Flow** value to **Switch primary job**.

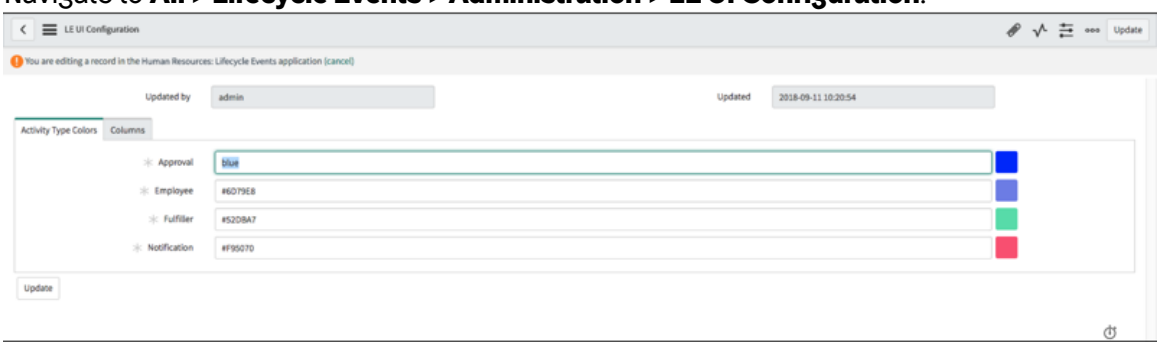
Configure the UI of the lifecycle event builder



Customize the appearance of the lifecycle event builder. You can change the colors of the different activity types, as well as change the color and size of the activity set columns.

Before you begin

Role required: sn_hr_le.admin

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Administration** > **LE UI Configuration**.

2. To configure the activity type colors, enter the hex color or the name of the color you want.
3. To configure the columns, you can define the colors and size (in pixels).
4. After making any edits, click **Update**.

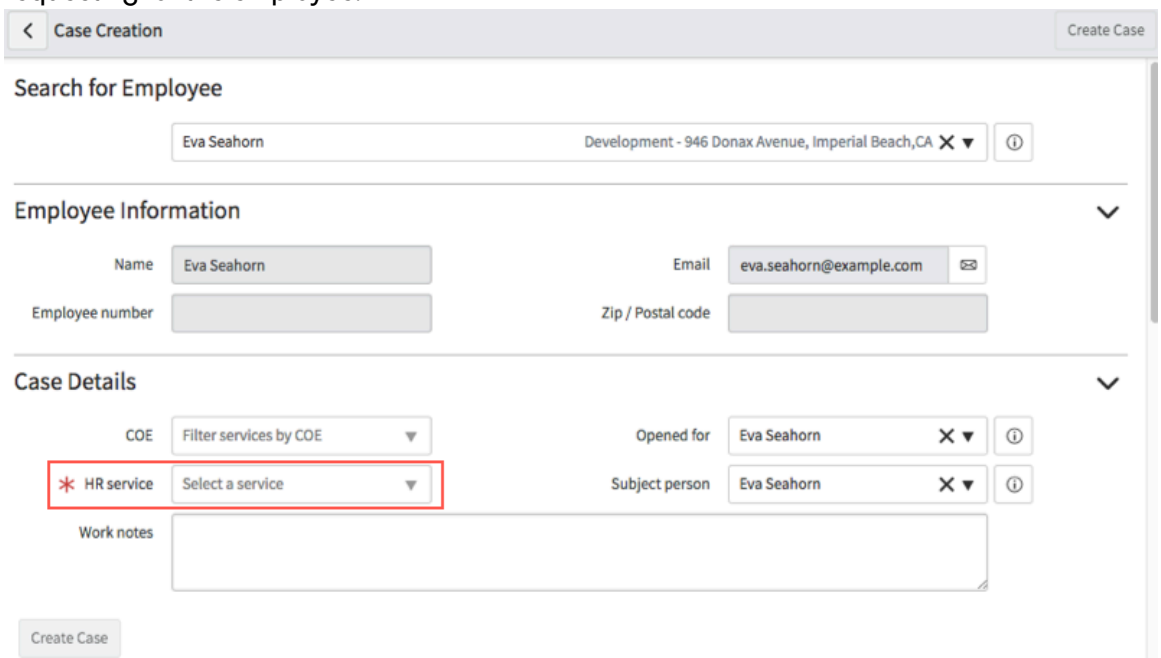
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create an HR case for a lifecycle event

Create a lifecycle event case. A lifecycle event case is an HR case that is fulfilled by a lifecycle event. For example, the HR service for New Hire Onboarding is fulfilled by the lifecycle event for New Hire Onboarding.

Before you begin

Role required: sn_hr_le.case_writer



A lifecycle event administrator must have built the lifecycle event and created a corresponding HR service before you can create a case for that event. See Building a lifecycle event for more information.

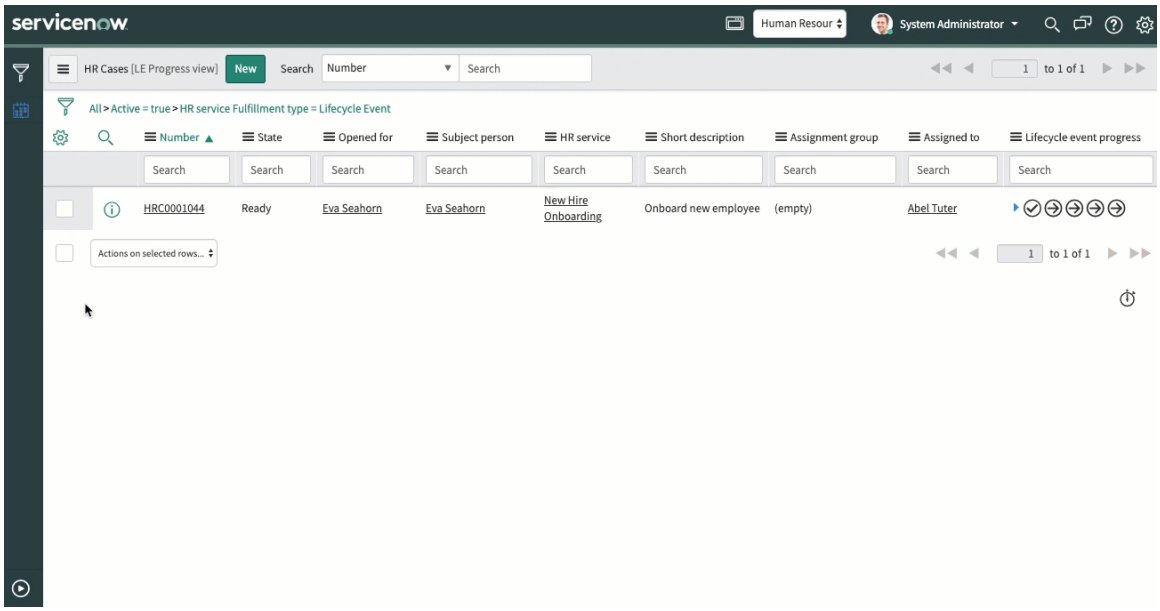
Procedure

1. Navigate to **All** > **HR Case Management** > **Create New Case**.
2. In the **Search for Employee** field, select the employee you are creating the case for.

   Note:
   You can search by employee name, partial employee name, case number, or any indexed field on the HR Profile of the sys_user table.

3. On the HR case creation form, under the **Case Details** section, select the HR service you are requesting for the employee.

4. Click **Create Case** to create the HR case.
5. On the HR case form, fill in the fields on the form, as appropriate.
   For further details on the form fields, see Work an HR case.
6. Click **Ready for Work** to change the state from **Draft** to **Ready**.



What to do next

After you create a lifecycle event case, you can track the case's progress and monitor the status of the individual activity sets and activities.

The following GIF shows an example of an in-progress lifecycle event case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
You can drill down from the lifecycle event case list view to monitor the status of the individual activity sets and activities. You can also drill down from the individual event case form.

Ad hoc cases and tasks for lifecycle event cases

You can add an ad hoc task or case to an active lifecycle event case and associate it to a specific activity set. When tasks are added they appear for the subject person under **My Tasks** or the **Review your work** in the Employee Center or Employee Center Pro.

Lifecycle events are a collection of activities (services, tasks, requests, notifications, etc.) that are organized to provide an employee experience. Examples of an employee experience are new hire onboarding or when an employee takes parental leave. In a lifecycle event, all employees that are part of a specific audience go through the same experience.

Ad hoc tasks or cases are not part of an original lifecycle event configuration. Ad hoc tasks or cases can be added to an existing stage or bundle of a lifecycle event that is in progress and active.

Note:
You cannot add a task or case to a closed or completed activity set.

When an agent adds an ad hoc task or case, it also becomes visible to the Subject person in the Employee Center or their mobile device. This allows the Subject person of a case to perform a task or respond to a request.

Adding an ad hoc case or task to an active lifecycle event case provides agents with flexibility that does not disturb the original structure.

Examples of when an ad hoc task or case are useful:

Extend family leave

An employee is on parental leave, but wants to extend their leave.

An agent can add a new case to the employee's parental leave lifecycle event that extends their leave.

Adding a new case that extends an employee's parental leave becomes a child case of the parent lifecycle event case.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Changing personal information during onboarding

Another example is when a new hire is going through the onboarding process of a lifecycle event.

A new hire wants to change personal information, but there is no way to do this while onboarding.

An agent can create a new task for the new hire that appears in the current activity set as a to-do.

Required plugins

To use the lifecycle event ad hoc feature, the following plugins are required:

- Human Resources Scoped App: Core [com.sn_hr_core]
- Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events]

Optional plugins

The following plugins are optional that allows you to create or view ad hoc tasks or case in alternative places:

- Human Resources Scoped App: Workspace [com.sn_hr_agent_workspace]
- Playbook Experience [com.playbook_experience]

Create an ad hoc case or task

You can create a case or task and add it to a stage (bundle) while a lifecycle event is in progress.

Before you begin

Role required: sn_hr_le.case_writer

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Lifecycle Events Cases**.
2. Select a case that has a state that is active (for ad hoc tasks only).

   Note:
   To add an ad hoc case, the lifecycle event case cannot be in the Closed Complete, Closed Incomplete, or Cancelled, states.

3. Scroll down to the Related Links section of the case form.
4. Select **Add a child case** or **Add task**.
   For more information, see Create an HR case for a lifecycle event and Adding an HR task to an HR case.
5. After filling in the required fields, ensure you select a value from the **Stage** field.
   For an HR case, the **Stage** field is located in the Case Details section. For an HR task, the **Stage** field is between the **Template** and **Display order** fields.
   If you do not associate a task or case with a stage in the lifecycle event, the task or case becomes a child of the parent case, but is not included in the lifecycle event.

   Note:
   Stage is also known as an activity set or bundle. For more information, see Configure a lifecycle event activity set.

© 2026 ServiceNow, Inc. All rights reserved.

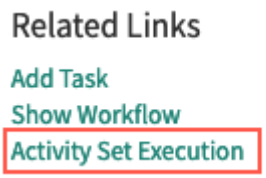
Monitor the status of a lifecycle event case

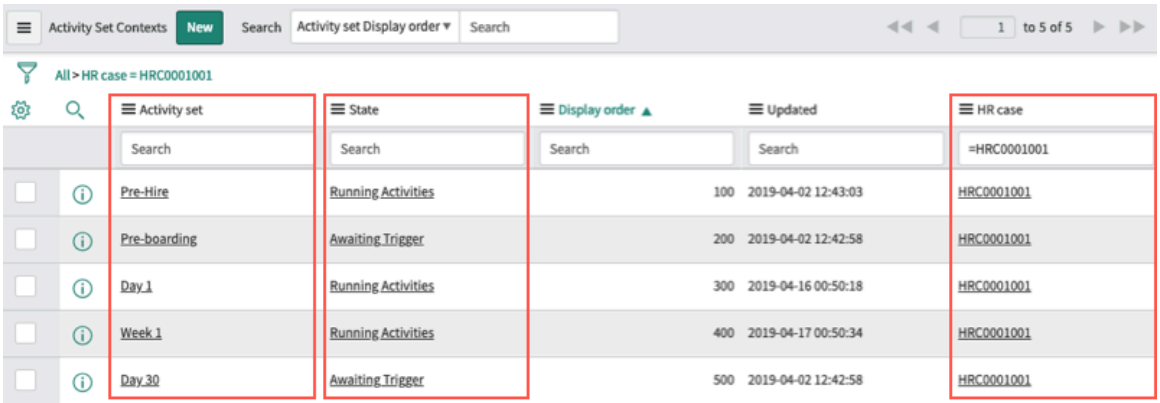
Monitor the status of a lifecycle event case with activity set execution contexts. You can monitor the state of each activity set in a lifecycle event case. You can further monitor the state of the individual activities. You can also report on the activity set contexts table in conjunction with the HR case table.

Before you begin



Role required: sn_hr_le.activity_reader

Procedure



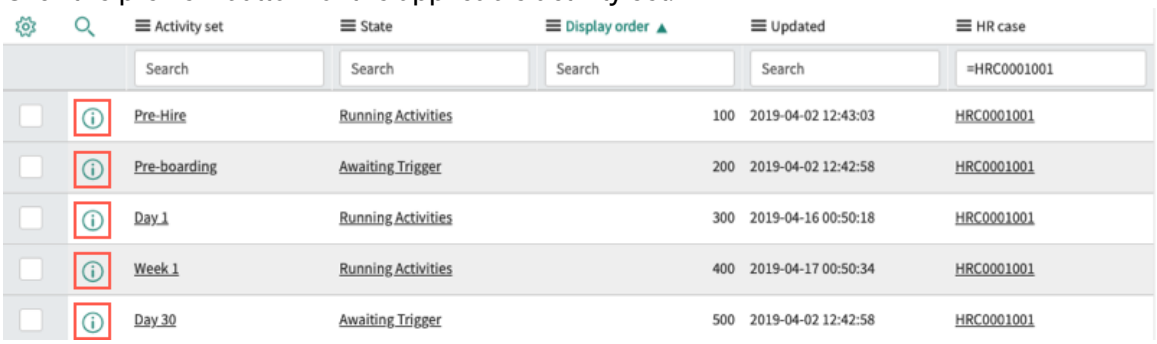
1. Navigate to **All** > **Lifecycle Events** > **Lifecycle Events Cases**.

   Note:
   Alternatively, you can navigate to **Lifecycle Events** > **Administration** > **Execution Contexts** to view all execution context records.

2. Open a lifecycle event case.
3. Under the **Related Links** section, click **Activity Set Execution**.

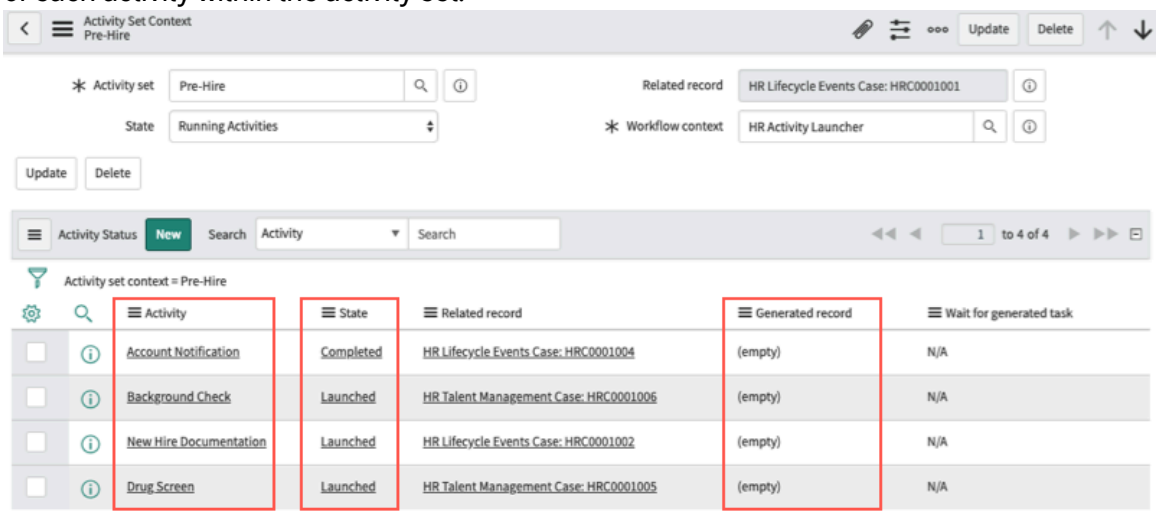
4. From the Activity Set Contexts list, you can monitor the state of each activity set in the lifecycle event case.

Column headers in Activity Set Contexts table



Column headers	Description
Activity set	Activity set that is associated with the lifecycle event case.
State	Status of the activity set: ○ Awaiting Trigger ○ Running Activities ○ Finished ○ Error

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Column headers	Description
	Note: You can monitor the status of individual activities by opening the activity set context record.
HR case	Lifecycle event case that is being monitored.

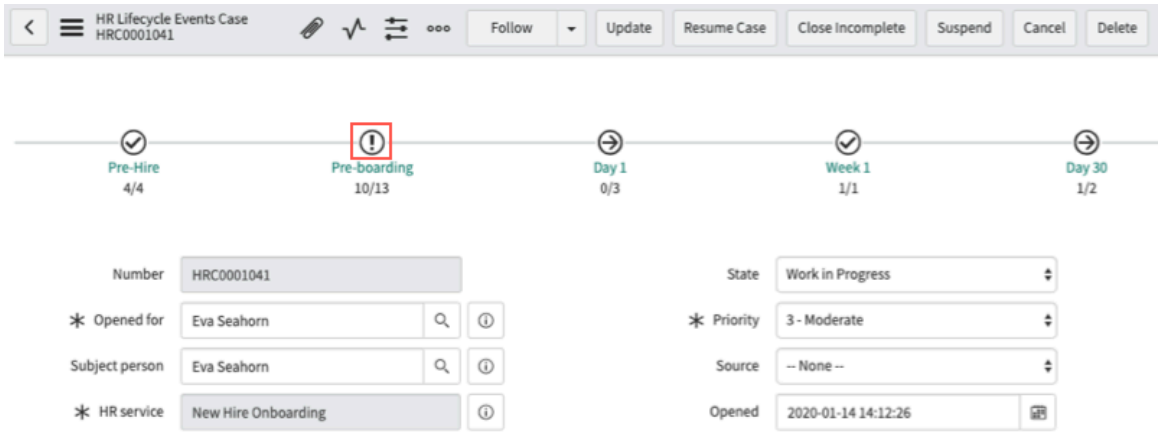
5. To further monitor the state of each activity within an activity set:

   a. Click the preview button for the applicable activity set.

   b. On the Activity Set Context form, under the Activity Status section, you can monitor the state of each activity within the activity set.

Resume a lifecycle event case

Resume a lifecycle event case after a workflow error or workflow timeout.



Before you begin

Role required: sn_hr_le.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Lifecycle Events** > **Lifecycle Events Cases**, and open the lifecycle event case that errored.

2. Identify and fix the error.

Tip:
Navigate to the **Comments and Work Notes** section in the case to view the work note on why the workflow failed.

3. Click **Resume** to resume the case.
The lifecycle event case resumes from where it was errored out.

Important:
You cannot resume the case if it was in **Closed Complete**, **Closed Incomplete**, or **Cancelled** state.

Lifecycle event dashboards

Use lifecycle event dashboards to gain visibility into active lifecycle event and onboarding cases.

There are two dashboards available with the Human Resources Scoped App: Lifecycle Events (com.sn_hr_lifecycle_events) plugin:

- Active Lifecycle Event Cases
- Active Onboarding Cases

The Onboarding Executive View dashboard requires the Performance Analytics - Content Pack - Human Resources Lifecycle Events Scoped App [com.sn_hr_lifecycle_pa] plugin.

Active Lifecycle Event Cases

- The **Active Lifecycle Event Cases** dashboard provides a list of all active life-cycle events or onboarding cases with the subject person, state, assigned to, and opened for information. You drill into each case using this dashboard.
- It also provides charts for active and overdue tasks.

See, Performance Analytics

Lifecycle Events reference

Reference content helps administrators and users understand the installed components of an application and how those components interact.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Components installed with Lifecycle Events for Enterprise

Several types of components are installed with activation of the Human Resources Scoped App: Lifecycle Events for Enterprise plugin [com.sn_hr_lifecycle_ent] plugin, including user roles and tables.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

Roles installed

Roles in Lifecycle Events for Enterprise

Role title [name]	Description	Contains roles
Lifecycle events for enterprise administrator [sn_hr_le_ent.admin]		None

Components installed with Lifecycle Events

Several types of components install with the activation of the Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events] plugin, including tables and user roles.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature, and it's used in some related example tasks.

Note:
The Human Resources Scoped App: Lifecycle Events [com.sn_hr_lifecycle_events] plugin activates the sn_hr_le.min_admin_count system property [sys_properties.list]. This property helps to prevent you from deleting your only Enterprise Onboarding and Transition admin user by requiring a minimum number (the default is two) of active users with this role.

Roles installed

Roles in Lifecycle Events

Role title [name]	Description	Contains roles
Lifecycle Events administrator [sn_hr_le.admin]	Grants access to create, manage, and add users to groups within Lifecycle Events. Can access: • Guided Setup • Manage Owner Groups • Manage Roles	• sn_hr_le.activity_set_manager • skill_admin • sn_hr_le.case_reader • sn_hr_le.case_writer • sn_hr_core.content_writer • sn_hr_le_pa.admin (When PA-Content Pack - HR LE Scoped App plugin activates)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles in Lifecycle Events (continued)

Role title [name]	Description	Contains roles
	• LE UI Configuration • Onboarding Executive Dashboard • Onboarding Executive View	• pa_viewer • survey_admin
Activity reader [sn_hr_le.activity_reader]	Can read HR activity sets and activities.	None
Activity set manager [sn_hr_le.activity_set_manager]	Can activate and trigger HR activity sets.	sn_hr_le.activity_writer
Activity writer [sn_hr_le.activity_writer]	Can create HR activity sets and activities.	sn_hr_le.activity_reader
Case reader [sn_hr_le.case_reader]	Can read Lifecycle Events cases.	sn_hr_core.case_reader
Case writer [sn_hr_le.case_writer]	Can create Lifecycle Events cases.	• sn_hr_core.case_writer • sn_hr_le.case_reader
HR Performance Analytics administrator [sn_hr_le_pa.admin]	Lifecycle Events Performance Analytics Admin role for the scoped application. • Access and modify the Lifecycle Events PA content packs. • Edits Performance Analytics properties. • Accesses Admin Console. • Launch Dependency Assessment. **Note:** This role is contained in the Lifecycle Events administrator role [sn_hr_le.admin].	None

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
After the Lifecycle Events plugin is installed, the Lifecycle Events administrator (sn_hr_le.admin) role is automatically assigned to the IT system administrator (admin) role. Use the admin role to assign the sn_hr_le.admin role to at least two users in your organization. If one of the two users is deactivated in the future, the user that remains active can reassign the sn_hr_le.admin role to other people in your organization.

After the sn_hr_le.admin role has been assigned, remove the role from the admin role to suppress the IT system administrator from viewing sensitive HR information. The removal of the sn_hr_le.admin role from admin role ensures that only the Lifecycle Events administrator has access to the sensitive information.

For more information about the process to remove an HR administrator role from the admin role, see Remove HR Administrator role from IT System Administrators.

The Lifecycle Events administrator (sn_hr_le.admin) role with the Delegated Developer (delegated_developer) role can also configure and create COEs. For more information, see HR Centers of Excellence data model.

You can assign these roles to the appropriate roles, groups, or users in your application.

- To assign a role to another role, see Add a role to an existing role.
- To assign a role to a group, see Assign a role to a group.
- To assign a role to a user, see Assign a role to a user.

For further information on user administration and how to manage users, see User administration.

Tables installed

Tables installed with Lifecycle Events

Table	Description
Activity [sn_hr_le_activity]	Details of activities that are part of an activity set and together make up a life cycle event. Extends the Activity Base [sn_hr_le_activity_base] table.
Activity Base [sn_hr_le_activity_base]	Extends `sys_metadata`.
Activity Field Mapping [sn_hr_le_activity_field_mapping]	Details of an activity field mapping that pass information from the parent life cycle event case to an activity.
Activity Set [sn_hr_le_activity set]	Details of activity sets and activities that make up Lifecycle Events.
Activity Set Context [sn_hr_le_activity_set_context]	Created for each Activity Set when the life cycle event initializes. Tracks the state of each set (triggered, waiting for activities to complete, and more).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables installed with Lifecycle Events (continued)

Table	Description
	Works with the Activity Status [sn_hr_le_activity_status] table to provide filtering for the Lifecycle Events widget on the Ticket page.
Activity Status [sn_hr_le_activity_status]	Created when an Activity Set triggers and tracks the state of the activity created. Tracks the progress of the Activity for each Lifecycle Events case that initializes. Works with the Activity Set Context [sn_hr_le_activity_set_context] table to provide filtering for the Lifecycle Events widget on the Ticket page.
Fulfiller Activity Configuration [sn_hr_le_fulfiller_activity_config]	Fulfiller activity configuration passes field information from the Lifecycle Events Case [sn_hr_le_case] table to the HR case [sn_hr_core_case] table
Fulfiller Activity Configuration Mapping [sn_hr_le_fulfiller_activity_config_mapping]	Fulfiller Activity Configuration Mappings copy to all activities created using the fulfiller configuration.
HR Lifecycle Events Case [sn_hr_le_case]	Details of a submitted Lifecycle Events case. • Account Notification • Request Onboarding Extends the HR Case [sn_hr_core_case] table.
Lifecycle Events Type [sn_hr_le_type]	Lifecycle Events Types are a way to organize activity sets and activities together. Lifecycle Events Types act as a container for activity sets and activities. Lifecycle Events Types are also associated with an **HR Service**.
LE UI Configuration [sn_hr_le_builder_ui_configuration]	Lifecycle Events user interface configuration details.
Employee Request sn_hr_le_employee_request	Tracks details of Employee Requests. Created when an Employee Request is created. Works with the Activity Base [sn_hr_le_activity_base] table.
Future To-dos [sn_hr_le_future_todo]	Tracks details about activities waiting to be triggered.

For further information on table administration and how to manage data, see Table administration.

Learning Posts

With the ServiceNow® Learning Posts application, create an omni-channel learning experience for your employees empowering them with the right learning at the right time of need.

Assign learning tasks from an lifecycle event and deliver courses according to the time of need. For example, update an employee who has returned from sabbatical leave with the latest company policies and strategies.

Activation and setup

First, you must activate the Learning Posts [sn_lnp] from ServiceNow Store. Learning Posts automatically activates the Learning Core [sn_lc] application that contains the base set of tables, content, learning bases, roles, and access configuration that are used in the Learning Posts [sn_lnp] application. For more information, see Exploring Learning Core.

Important:
Learning Posts is available with the HRSD Enterprise package.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Initiate a learning task from a lifecycle event

When a lifecycle event is triggered, a learning task is created and assigned to the subject person of the case. The task is displayed in the To-dos page in Employee Center.

Before you begin
Role required: admin

Procedure

1. Create a learning task template.
   For more information, see Create a learning template.
2. Configure a lifecycle event activity set.
   For more information, see Configure a lifecycle event activity set.
3. Configure a lifecycle event activity.
   While creating a lifecycle activity, make sure you select **Activity Type** as **Employee**, **Employee Activity** as **Learning task**, and **HR Template** as any learning template task. For more information, see Configure a lifecycle event activity.
   When the lifecycle event is triggered, a learning task is created and assigned to the subject person of the case.

Create a learning template

Create a learning template to simplify the process of creating learning tasks by populating fields automatically.

Before you begin
Role required: learning_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Learning Administration** > **Administration** > **Templates**
2. Click **New**.
3. On the form, fill in the fields as appropriate.

Learning template fields

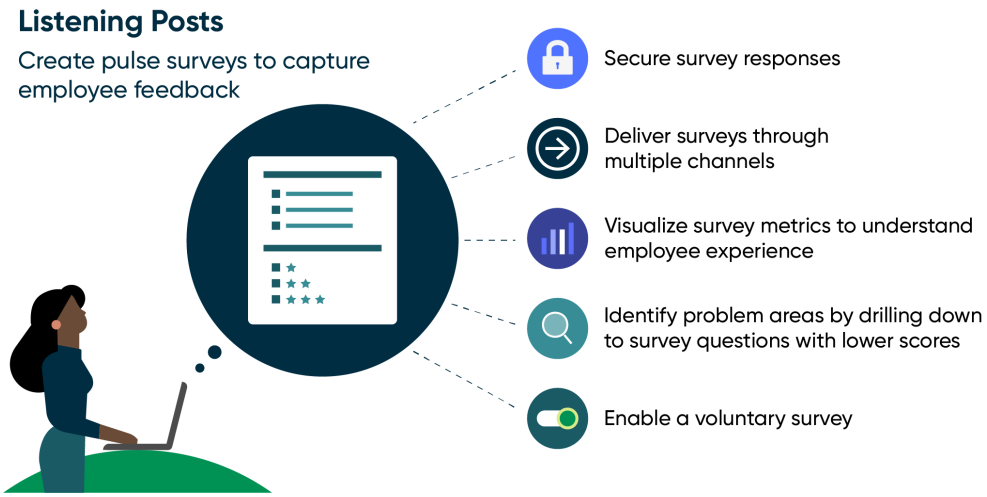
Field	Description
Name	Name of the learning template.
Table	Table that this template applies to. Select Learning task [sn_lc_learning_task]
Template	Content that automatically populates records that are based on this template. ○ From the list, select **Learning library** and search for the library item. ○ From the list, select **Course item** and search for course item. ○ From the list, select **State** and select a state for the learning task. ○ From the list, select **Short description** and add a suitable description for the learning task.
Use global descriptions for translations	Option to enable the use of global descriptions for translations. If selected, you can provide the short description and description for the learning task template in one or more languages.
Link template	Template that links a child table with the template for the parent table. In the template for the child table, set the value to the field that references the parent table. After you set the value, the child template is explicitly linked to the parent table.
Additional fields	In the **Assign to** field, specify the user to whom the learning task is applicable.

Important:
You must specify values in **Catalog**, **Course item**, **State Short description**, and **Assign to** fields while creating the template. If any of the fields is left empty, the learning task will not be created as part of the life cycle event and an error is recorded in System Logs.

4. Click **Submit**.

Learning tasks widgets

The Learning tasks and Learning tasks – Completed (pre-configured widgets) help to display learning tasks in the To-dos page in Employee Center.



For more information on these learning widgets, navigate to **Employee Center** > **To-dos Configuration**.

Listening Posts

The ServiceNow® Listening Posts application enables you to create simple pulse surveys to capture employee touch points, gain insights from employee feedback, and improve overall employee experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integrate Extend capabilities by integrating Listening Posts with other applications	Analytics and Reporting Solutions Visualise pulse survey metrics to gauge employee experience	Reference Get details about components like fields, tables, and properties

Exploring Listening Posts

Learn more about Listening Posts before you start using it for creating simple pulse surveys.

Key features

Secure survey responses

- Set an anonymity level while creating a pulse survey.
- Define groups with which you want to share the pulse survey responses.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Deliver surveys through multiple channels

- Deliver pulse surveys from Listening Posts or Content Automation or Content Delivery applications.
- Enable employees to take a pulse survey from various communication channels such as Virtual Agent, Slack, Microsoft teams, chat web client in Employee Center, and via an SMS.

Gain survey insights in a dashboard

- Visualize pulse survey metrics to understand overall employee experience.
- View average scores, trends, response rates, and summary of responses for all surveys under a theme.
- Apply filters and gain insights based on a country, a department, or other parameters.
- Identify problem areas by drilling down to survey questions with lower scores.
- Track channels through which pulse surveys are taken by employees. For example, Virtual Agent or SMS.
- Interpret the journey of an employee on the Listening Posts survey widgets. Gain an implicit insight on the behavior of employees and their responses to pulse surveys. For more information, see Integrate with User Experience Analytics.

Enable a voluntary survey

Enable employees to share their feedback anytime by accessing the voluntary feedback survey on Employee Center.

Configuring Listening Posts

Set up Listening Posts to create simple pulse surveys for collecting employee feedback.

Activation information

Activate the Listening Posts (sn_lp) plugin from ServiceNow Store. Listening Posts is available with the HR Enterprise packages.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

Widgets for Listening Posts

Pre-configured widgets help to display a pulse survey that is raised from Listening Posts onto Employee Center.

Pre-configured widgets

Name	Description
Listening Posts My Survey	Displays a pulse survey as a widget on Employee Center.
Listening Posts Take Survey	Displays the pulse survey page with pulse questions on Employee Center.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Pre-configured widgets (continued)

Name	Description
Listening Posts Survey List	Displays all pulse surveys assigned to a user in a list view on Employee Center.
Listening Posts Feedback Bucket	Contains the fly out notifications that are received after a task completion on Employee Center.
Listening Posts Feedback Collection	Displays the pulse survey fly out notifications after a task completion on Employee Center. This fly out notification remains for 10 seconds on the screen.
Listening Posts Popup Survey	Displays the survey to the user in a modal after a user clicks the **Give feedback** button on the fly out notification on Employee Center.
Listening Posts Voluntary Feedback Popup	Displays the **Give feedback** button on Employee Center to enable a user take a voluntary survey.
Listening Posts Voluntary Feedback	Displays a questionnaire when a user clicks the **Give feedback** button on Employee Center.

For more information on these widgets, navigate to **Service Portal** > **Widgets**.

Additional configuration to display pulse survey widgets on Employee Center

- Update the Employee Center plugin to 22.0.* version.
- Allow Restricted Caller Access to be created under the Listening Posts application.
- Deactivate the record Use Standard Ticket (sys_id: ed1cbb15738200105788e1e54cf6a760) in Page Route Maps to get the notifications on the My Requests page.

Note:

- Only the HR ticket page [hrm_ticket_page] is supported and not the Standard ticket page [standard_ticket page].
- The Listening Posts Feedback Bucket, Listening Posts Feedback Collection, and Popup Listening Posts Survey widgets are embedded only in the To-dos page [hrm_todos_page], HR ticket page [hrm_ticket_page], and HRM To-dos page [hrm_todo].

Enable a Listening Posts voluntary survey

Enable users to share their feedback anytime by letting them access the voluntary feedback survey on Employee Center.

Before you begin
Role required: pulse_admin

Procedure

1. Navigate to **Listening Posts** > **Voluntary feedback** > **Voluntary survey**.
2. Enable the **Active** check box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The **Give feedback** button is displayed on Employee Center to let an employee take a voluntary survey.
- After an employee takes a voluntary survey, the responses are recorded in the **Pulse users** related list in the Voluntary Survey page. To view the voluntary survey responses in a dashboard, navigate to **Listening Posts** > **Voluntary feedback** > **Voluntary feedback report**.

Creating and delivering pulse surveys

Understand how to create and deliver pulse surveys for collecting employee feedback.

Create a pulse question in Listening Posts

Create a question in a pulse survey or add a question to the pulse question bank.

Before you begin

Role required: sn_lp.creator

Procedure

1. Navigate to **Listening Posts** > **Pulse Question Bank**.
2. In the **Questions** related list, click **New**.

> **Note:**
> You can also open a pulse survey and directly add questions to the pulse survey by clicking **New**.

3. On the form, fill in the fields:

Pulse Survey Question form

Field	Description
Name	Name of the question.
Question	Description of the question.
Type	Name of the pulse survey.
Rating option	Format in which the rating is provided for questions asked in a pulse survey. For example, Star or Number.
Description	Description to appear when the survey recipient points to a question in the pulse survey.
Order	Order in which you want to place the question in the survey. For example, a question with a lesser order is placed first in the survey.
Allow additional information	Option to provide a text box in the survey for the survey recipient to enter more details.
Active	Option to indicate that the question is used for assessments and metric calculations.
Mandatory	Option to indicate that the question is required and must be answered by the survey recipient.

4. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a question bank in Listening Posts

Create a repository of questions to use in a pulse survey.

Before you begin
Role required: sn_lp.creator

Procedure

1. Navigate to **Listening Posts** > **Pulse Question bank**.
2. Click **New**.
3. On the form, fill in the fields:

Pulse Survey Question Bank form

Field	Description
Name	Name for the question bank.
Description	Description for the question bank.

4. In the **Questions** related list, click **New** to add questions to the question bank.
   For more information, see Create a pulse question in Listening Posts.

Create a pulse theme in Listening Posts

Theme is a group of pulse surveys with a common purpose. For example, onboarding an employee can be a theme, and Day 1, Week 1 can be a pulse survey.

Before you begin
Role required: sn_lp.creator

Procedure

1. Navigate to **Listening Posts** > **Pulse Theme**.
2. Click **New**.
3. On the form, fill in the fields:

Pulse Theme form

Field	Description
Name	Suitable name for the theme.
Type	Type of the theme: ○ **Group pulse**: Audience, start date, and end date of the theme are fixed. ○ **Employee lifecycle**: Audience, start date, and end date of the theme vary based on criteria. **Note:** Employee lifecycle is assigned to audience depending on the configured lifecycle event.
Description	Additional description for the theme.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Active	Option to indicate that the theme is active and available for use.
Filters	Filters in Pulse Dashboard that are used to refine employee responses. **Note:** The default filters are department, country, and title.

4. Click **Submit**.

What to do next

- View the list of pulse surveys under a theme in the **Pulse Surveys** related list. To create a pulse survey under a theme, see Create a pulse survey in Listening Posts.
- Add reports and specify order in which you want the reports associated to the theme to be displayed in Pulse Dashboard. To add a report under a theme, Add a pulse report in Listening Posts.
- View the list of response sharing rules in the **Response Sharing Rules** related list. To create a response sharing rule, see Create a response sharing rule in Listening Posts.

Add a pulse report in Listening Posts

Capture more demographics and have relevant breakdowns by adding reports within a theme. Add a report by specifying an order in which the report must appear on the Pulse Dashboard.

Before you begin

Role required: sn_lp.creator

Procedure

1. Navigate to **Listening Posts** > **Pulse Theme**.
2. In the **Reports** related list, click **New**.
3. On the form, fill in the fields:

Reports form

Field	Description
Report	Report that must appear in Pulse Dashboard.
Order	Order in which the report must appear in the Pulse Dashboard. A report with a lesser order appears first.
Theme	Theme to which the report belongs.

4. Click **Submit**.

Create a response sharing rule in Listening Posts

Create response sharing rules by defining groups with which survey responses are shared.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_lp.creator

Procedure
1. Navigate to **Listening Posts** > **Pulse Theme**.
2. In the **Response Sharing Rules** related list, click **New**.
3. On the form, fill in the fields:

Response Sharing Rule form

Field	Description
Name	Name for the response sharing rule.
Description	Description of the response sharing rule.
Demographic Condition	Only user responses that satisfy this condition are displayed to the viewer on the Pulse Dashboard.
User criteria	User groups with which you want to share the pulse survey responses. **Note:** ○ Only the **Users** and **Groups** fields are applicable in user criteria for response sharing rules in a pulse survey. ○ The **Advanced field** option isn't applicable. ○ If the user criteria is empty, no notifications are sent.

4. Click **Submit**.

Create a pulse survey in Listening Posts

Create a pulse survey under a theme. Publish the survey to enable users to receive and complete the survey.

Before you begin
Role required: sn_lp.creator

Procedure
1. Navigate to **Listening Posts** > **Pulse Survey**.
2. Click **New**.
3. On the form, fill in the fields:

Pulse Survey form

Field	Description
Name	Name of the pulse survey.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Theme	Theme to which you want to associate the pulse survey.
Add Audience	Option to add users who receive the pulse survey instances. **Note:** This field appears only when the Content Delivery plugin is installed.
Audience	Users with whom you want to share the pulse survey instances. **Note:** ○ This field appears only when you enable the **Add Audience** check box. ○ You can add audience for a survey using the **Audience** field or the **Survey Recipients List** related list. When you add users in both the **Audience** field and **Survey recipients List**, a union of those users receive pulse survey instances.
Send notifications	Option to notify users when a survey is assigned to them.
Send Mobile notifications	Option to send notifications on a mobile application.
Virtual Agent notifications	Option to send actionable notifications via Virtual Agent.
Description	Additional information about the pulse survey.
Active	Option for indicating that the pulse survey is active and available for use.
State	Current state of the pulse survey. ○ **Draft**: State of the pulse survey when created. ○ **Ready**: State of the pulse survey before instances are created by the scheduled job. ○ **Published**: State after the survey instance is available to the audience. ○ **Closed**: State after the end date of the pulse survey. The survey is automatically set to closed state after its end date.
Auto-initiate conditions	Option to set up conditions to trigger feedback surveys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: This option appears only for a pulse survey that is associated to a theme of type **Employee lifecycle**.
Start date	Date starting which the pulse survey instances are sent to users.
End date	Date until which the pulse survey instances are available for users to respond.
Anonymity level	Level of anonymity that you want to set for an auto-initiated pulse survey. ○ **Non-Anonymous**: Name and demographic details of users are captured along with their survey responses. ○ **Anonymous**: Only survey responses of the users are captured. ○ **Employee Choice**: User is given an option to make a choice while taking the survey on Employee Center: Keep their identity anonymous or non-anonymous.

4. Click **Submit**.
5. In the **Questions** related list:
   - To add a question to the content, click **New**. For more information, see Create a pulse question in Listening Posts.
   - To add a question from the Question Bank, click **From Question Bank**.

   Note:
   You cannot add or update questions once a survey is published.

6. To create another copy of the survey, click **Copy**.
7. Click **Schedule Publish**.

   Note:
   Clicking **Schedule Publish** ensures that the instances are created when the LP create group pulse instance scheduled job runs. This option is applicable when the start date is in the future.

8. To publish survey instances immediately without waiting for a scheduled job run, click **Publish Immediately**.

   Note:
   The **Publish Immediately** option appears only for a survey that is associated to a theme of type Group pulse. The start date must be today or in the past, and there must be at least a day difference between the start date and the end date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. To cancel a published survey, click **Cancel**.
   The pulse survey is closed; all the pulse survey instances which are yet to be taken are canceled, and completed instances remain unaffected.

What to do next

- In the **Pulse Users** related list, view the final lists of users to whom the pulse survey instances are sent. This related list is displayed only after a pulse survey is published and instances are available to users.
- In the **Survey Recipients List** related list, add recipients to whom you want to send the survey instances.
- In the **Feedback initiators** related list, click **New** to initiate feedback surveys based on trigger conditions. See Automatically initiate a pulse survey from Listening Posts.

Automatically initiate a pulse survey from Listening Posts

Send automated surveys to measure employee satisfaction with a recent experience, like closing an HR task initiated from a life cycle event, by applying auto trigger conditions.

Before you begin

Role required: sn_lp.creator

Procedure

1. Navigate to **Listening Posts** > **Pulse Survey**.
2. Select a survey.
3. Enable the **Auto-initiate conditions** option to set up conditions for initiating feedback surveys on completion of a task.

   Note:
   The **Auto-initiate conditions** option appears only if the survey is associated to a theme of type **Employee lifecycle**.

4. In the **Feedback Initiators** related list, click **New**.

   Note:
   Feedback Initiators work only for the HR tasks of Listening Posts V3 or a later version.

Trigger Condition form

Field	Description
Assessment	Survey to send.
Table	Table to run the trigger condition on. You can select only tables in the current application scope. For example, to send a survey whenever an HR task closes, select the HR task [sn_hr_core_task] table.
User field	Field that stores users to whom you want to send the survey. You can select any field, on the selected table or on a referenced table that references the User [sys_user] table. Use the tree picker to select a field.
Active	Check box that determines whether this trigger condition is active (selected).
Trigger randomly	Check box that determines whether to send the survey to the appropriate user every time the condition is met (cleared) or only a percentage of the time (selected).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Probability (%)	Approximate probability that the survey is sent each time the condition is met. For example, if the probability is set to 50, the system sends the survey approximately 50% of the time the conditions are met. There are no repeat interval restrictions is assumed. This field is visible and required only when Trigger randomly is selected.
Description	Summary information to identify the trigger condition. **Note:** For a triggered record, the table title is used for the survey description.
Condition	Condition builder that defines the criteria that must be true to send the survey. For example, to send a survey whenever an HR task closes, create the condition [State] [is] [Closed].

5. Click **Submit**.

Create a pulse survey as content in Listening Posts

Use the Content Type Pulse Survey to create pulse surveys that can be delivered via ServiceNow Content Delivery or Content Automation.

Before you begin

Role required: sn_lp.creator, sn_cd.content_manager, sn_ca.campaign_manager

Procedure

1. Navigate to **Content Delivery** > **Pulse Content**.
2. Click **New**.
3. On the form, fill in the fields:

Survey Content form

Field	Description
Title	Name of the pulse content.
Theme	Theme with which you want to associate the pulse content. **Note:** Only the themes of type Group Pulse can be selected in the pulse content.
Active	Option to indicate that the pulse content is active and available for use.

4. Click **Submit**.
5. In the **Questions** related list:
   - To add a question to any content, click **New**. For more information, see Create a pulse question in Listening Posts.
   - To add a question from Question Bank, click **From Question Bank**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Delivering pulse surveys in Listening Posts

Deliver pulse surveys to employees from various applications such as Listening Posts, Content Automation, and Content Delivery.

Listening posts

After you create pulse surveys in the Listening Posts application and define the required pulse surveys fields such as **Start date** and **End date**, the Listening Posts: Create Group Pulse Instance schedule job performs the following tasks:

- selects all the pulse surveys that are in published state and creates survey instances. If the end date of a survey has passed, the survey is automatically moved to closed state.
- selects all the pulse surveys that are in ready state. If the start date of a pulse survey has passed, the scheduled job creates instances for that pulse survey. If the end date of a pulse survey has passed, the schedule job changes the state of the pulse survey to closed.

Content Automation

After you create content of type **Pulse Content** in Content Automation, use campaigns to create pulse instances. For more information, see Deliver pulse content using campaigns.

Content Delivery

After you create content of type **Pulse Content** in Content Delivery, use schedule content to create pulse instances. For information on how to create a schedule content, see Schedule the delivery for content.

The Listening Posts: Create Group Pulse Instance schedule job considers the availability state date of the schedule content and creates instances for published surveys.

Deliver pulse content using campaigns

After you create content of type **Pulse Content** in Content Automation, use campaigns to create pulse instances.

Before you begin

Role required: sn_ca.campaign_manager

Procedure

1. Create a campaign.
2. Create a campaign bundle of a trigger type **Fixed Date** or **To dos completion**.
   For more information, see Create a campaign bundle
3. Create content of type **Pulse Content**.
   For more information, see Create a pulse survey as content in Listening Posts.
4. Add the Content Type **Pulse Content** to the campaign bundle.
5. After completing all the parts of a campaign, click the **Publish** button.
   The schedule job **Content Automation: Create LP Pulse survey** creates pulse surveys for campaigns that are in Published state with Content Type **Pulse Content**. The scheduled job verifies if the **Re-evaluate campaign** check box is enabled. Depending on the reevaluation frequency, the scheduled job creates or cancels pulse survey instances for the users who are added or removed from the campaign.

Complete a Listening Posts pulse survey

Provide your rating for the questions asked in a pulse survey. Your feedback is used to gauge overall employee experience.

Before you begin

Role required: none

Procedure

Complete a pulse survey using one of the following options.

- Open the pulse survey email that you have received. Click the **Take Survey** link to answer and complete the pulse survey.
- Click **Take Survey** on the Listening Posts widget in Employee Center.
- Take a pulse survey from other communication channels such as Virtual Agent, Slack, Microsoft teams, and chat web client in Employee Center.
- Take a pulse survey via an SMS.

Take a Listening Posts voluntary survey

Share your feedback anytime by accessing the voluntary feedback survey on Employee Center.

Before you begin

Role required: none

Procedure

1. Navigate to **Employee Center**.
2. Click the **Give feedback** button.
   A predefined questionnaire appears: **I like something**, **I don't like something**, and **I have a suggestion**.
3. Submit your response.

Listening Posts integrations

Extend Listening Posts capabilities by integrating with other applications.

Integrating Listening Posts integration with Virtual Agent

Enable an employee to complete a pulse survey from other communication channels such as Virtual Agent, Slack, Microsoft Teams, and chat web client in Employee Center.

Listening Posts integrates with Virtual Agent to deliver pulse survey as an actionable notification on Virtual Agent. This integration with Virtual Agent allows integrating with other communication applications, such as Slack and Microsoft Teams.

For sending survey notifications on Virtual Agent, the **Virtual Agent notifications** option must be enabled while pulse survey is created in Listening Posts. When the pulse survey is published, an actionable survey notification is automatically sent to all pulse survey users on Virtual Agent. The actionable survey notification is also displayed in a chat web client in Employee Center.

For sending survey notifications on Slack and Microsoft Teams, notifications must be enabled on Slack and Microsoft Teams. For more details, see Virtual Agent integration with messaging apps.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For sending notifications via an SMS, a delivery channel must be set up in **Pulse survey notification content SMS** in the Virtual Agent Notification Messaging. For more details, see Set up the Conversational SMS Integration with Twilio.

Note:
When a survey creator enables the **Send Virtual agent notifications** option, then all the enabled integrations such as Microsoft Teams, Slack, and SMS are used and the pulse survey is pushed to those channels. If a survey recipient takes the survey on one channel, then the survey becomes inaccessible on the remaining channels.

Integrating Listening Posts with User Experience Analytics

Listening Posts integration with User Experience Analytics provides an interpretation of an employee's journey on the Listening Posts survey widgets. It provides an implicit insight on employee's behavior and their response to pulse surveys.

Activation information

To start using Listening Posts with User Experience Analytics, you must activate the Listening Posts [sn_lp], User Experience Analytics [com.glide.appsee], and Service Portal Analytics [com.glide.service-portal.analytics] plugins.

Evaluating Listening Posts surveys using events in User Experience Analytics dashboard

As a pulse administrator, you can evaluate the successful or unsuccessful attempts of an employee in taking the Listening Posts My Survey and Listening Posts Take Survey using the **Successful submissions at survey response** and **Unsuccessful attempts at survey response** events. For example, understanding the average time taken by an employee to respond to a survey, or the number of resignations in the survey process could be used to improve the design of future surveys or indicate whether more encouragement is needed to increase employee participation.

For more information about the details that are displayed for these events, see Events related to the Listening Posts surveys on User Experience Analytics dashboard.

Integrating Listening Posts with Journey designer

Use Listening Posts with Journey designer to embed pulse surveys to get insight into employees' experiences and share those insights with managers.

Configure a pulse survey widget in the Journeys page

Add the widget to the Journeys page to prompt employees for feedback. You can configure the widget in either Journey Accelerator or

Lifecycle Events. The steps for both options are provided below:

Configure in Lifecycle Events

Step 1: Create a pulse theme

Follow the steps to Create a pulse theme in Listening Posts

Note:
You can create a separate pulse theme for each journey type.

Step 2: Create pulse survey

Follow the steps to Create a pulse survey in Listening Posts

Step 3: Trigger pulse survey from Lifecycle Events

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Open an existing Lifecycle Event and create an activity record with the **Pulse Survey** Activity Type. Select the pulse survey that you created in step 2 and assign the **Pulse user field** to the person you want to take the survey.

Configure a lifecycle event activity|Configure a pulse survey event activity

Step 4: Add analytics to the Journey page

Customize with the following options:

- Select **Can view satisfaction score** from the Journey owner permissions tab. See Update users' permissions for journeys
- Configure actions, such as a URL or link to schedule a meeting, to appear with specific score results in the Satisfaction Score Actions tab. See Create a satisfaction score action
- Share pulse survey results with the manager. See Create a response sharing rule in Listening Posts

Configure in Journey Accelerator

Step 1: Create a pulse theme

Follow the steps to Create a pulse theme in Listening Posts

> **Note:**
> You can create a separate pulse theme for each journey type.

Step 2: Create pulse survey

Follow the steps to Create a pulse survey in Listening Posts

Step 3: Add to a plan configuration

Add the task template containing the pulse survey to a plan configuration via a stage configuration. Add stage configurations

Step 4: Trigger pulse survey from Journey Accelerator

Create a task template with a **Task type** of `Pulse Survey`. In the **Related record** field, select the pulse survey you created in step 2.

Create and manage action plan task templates

Step 5: Add analytics to the Journey page

Customize with the following options:

- Select **Can view satisfaction score** from the Journey owner permissions tab. See Update users' permissions for journeys
- Configure actions, such as a URL or link to schedule a meeting, to appear with specific score results in the Satisfaction Score Actions tab. See Create a satisfaction score action
- Share pulse survey results with the manager. See Create a response sharing rule in Listening Posts

Reporting capabilities for Listening Posts

Visualize survey metrics to understand overall employee experience. Identify problem areas by drilling down to survey questions with lower scores.

Before you begin

Role required: sn_lp.dashboard_view

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

- Gain insights based on location, department, and other parameters.
- View average scores, trends, response rates, and summary of user responses for surveys under a theme.
- Identify problem areas by drilling down to survey questions with lower scores.

Procedure

1. Navigate to **Listening Posts** > **Pulse Dashboard**.
2. In the Global filters section, you can perform the following tasks:
   a. In the **Theme** field, select a theme for which you want to view user responses.
   b. In the **Surveys** field, select the survey in the theme for want to view user responses.
   c. In the **Start Date** field, specify the date from which you want to view the data of pulse surveys.

      Note:
      For a survey under the theme type **Group Pulse**, **Start Date** corresponds to the start date of pulse survey. For a survey under the theme type **Employee Lifecycle**, **Start Date** corresponds to the date starting which instances are created.

   d. In the **End Date** field, specify the date until which you want to view the data of pulse surveys.

      Note:
      For a survey under the theme type **Group Pulse**, **End Date** corresponds to the surveys whose start date falls before the selected end date. For a survey under the theme type **Employee Lifecycle**,**End Date** corresponds to date until which the instances are created.

   e. To enable canceled surveys in reporting, select **Include canceled surveys**.
3. In the **Overall Score** section, view the aggregate scores of all surveys under a given theme.
4. In the **Overall Summary** tab, you can perform the following tasks:
   a. In **Viewable Score**, view the aggregated user response scores to which you have access.
   b. View the average aggregate scores broken down by user demographics. For example, view Average scores by Country, Average scores by Department, Average scores by Title , Average Score by HR Task Type and Average Score by HR Service.

      Note:
      - The Average Score by HR Task Type and Average Score by HR Service reports appear only when you select **HR task** in the Task type filter. **HR task** in Task type filter functions when a survey uses feedback initiators to trigger a pulse survey, post completion of an HR task only.
      - To select the HR Task in Task type filter, you must have the case_reader role.

   c. Drill down to the data of any department or country by applying filters in the Filters section.
5. In the**Trend History** tab, view the average scores trending (quarterly/yearly) for a survey selected under a theme.
6. In the **Response Details** tab, view the response rates and average scores for all pulse surveys under a theme.

Reference for Listening Posts

Reference topics provide additional information about Listening Posts.

Components installed with Listening Posts

Several types of components are installed with activation of the Listening Posts (sn_lp) plugin, including tables, user roles, and scheduled jobs.

Demo data is available for this feature.

Roles installed

Roles in Listening Posts

Role title [name]	Description	Contains roles
Listening Posts Admin [sn_lp.admin]	Can create, read, and delete all the records in Listening Posts.	sn_lp.manager
Creator [sn_lp.creator]	• Can create pulse surveys. • Can access the dashboard view.	• survey_admin • sn_lp.dashboard_view
Manager [sn_lp.manager]	• Can create pulse surveys. • Can access the dashboard view.	sn_lp.creator
Dashboard viewer [sn_lp.dashboard_view]	Can access the dashboard view.	None

Scheduled jobs installed

Scheduled jobs installed with Listening Posts

Scheduled job	Description
Content Automation: Create LP Pulse survey	• Creates pulse surveys for campaigns that are in published state with Content Type **Pulse Survey**. • Verifies if the **Re-evaluate campaign** check box is enabled. Based on **Re-evaluate frequency**, the scheduled job creates or cancels instances for the users who are added or removed from the campaign. **Note:** When you refine the audience in a campaign, the intersection of the users at campaign and campaign content level are considered for delivering pulse surveys.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Scheduled jobs installed with Listening Posts (continued)

Scheduled job	Description
Listening Posts: Create Group Pulse Instance	• Creates instances for surveys that are in published state. If the end date of a survey has passed, the schedule job changes the state of the pulse survey to closed. • Creates instances for surveys that are in ready state. If the start date of a pulse survey has passed, the scheduled job creates instances for that pulse survey. If the end date of a pulse survey has passed, the schedule job changes the state of the pulse survey to closed.

Tables installed

Tables installed with Listening Posts

Table	Description
Pulse Content [sn_lp_cd_pulse_survey_content]	Store records of Content Type **Pulse Survey**.
Pulse Content Question [sn_lp_m2m_pulse_content_question]	Links questions to pulse content.
Pulse Survey [sn_lp_pulse_survey]	Stores details of pulse surveys.
Pulse Theme [sn_lp_pulse_theme]	Store details of themes. Theme is a group of pulse surveys.
Response Sharing Rule [sn_lp_response_sharing_rule]	Stores details of response sharing rules. A response sharing rule defines groups with which pulse survey responses are shared.
User Demographic [sn_lp_user_demographic]	Stores user profile data along with the user's response for a pulse question.

Lifecyle events for enterprise

The Lifecyle events for enterprise application supports automation of onboarding and other employee lifecycle events.

The Lifecyle events for enterprise application helps to improve employee satisfaction and efficiency across HR and other departments for events that span multiple departments.

Install and configure related apps and processes.	Extend Enterprise Onboarding and Transitions features with integrated features and services.

Understanding Lifecyle events for enterprise

Use Lifecyle events for enterprise to automate the fulfillment of employee lifecycle events such as new hire onboarding, offboarding, relocation, promotion, parental leave, and more. Lifecycle events are a collection of activities organized into activity sets to comprise an employee experience.

Lifecyle events for enterprise overview

Lifecyle events for enterprise enables organizations to easily automate employee experiences and processes that span multiple departments, offering the following benefits.

- Easily snap together experiences and processes to automate cross-departmental work
- Drive action across multiple departments and systems for improved efficiency
- Provide end-to-end visibility on each process to ensure that correct actions are taken
- Guide employees step-by-step so that they know what to do next
- Continually optimize the process with insight from lifecycle event dashboards

The following video provides an overview of the Lifecyle events for enterprise application.

This video provides an overview of the Lifecyle events for enterprise application.

Activation information

Beginning in the Orlando release, Lifecyle events for enterprise is comprised of two plugins. Depending on the HR Service Delivery package you choose, activate one or both of the plugins.

Lifecyle events for enterprise plugins

Plugin	Description
Lifecycle Events [com.sn_hr_lifecycle_events]	Enables you to easily configure digital workflows to manage employee lifecycle events within HR. See Activate Lifecycle Events for more information.
Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent]	Enables you to automate onboarding and other employee lifecycle events that span across multiple departments such as HR, IT, Facilities, Finance, and Legal through a single service delivery platform. See Activate Lifecycle Events for Enterprise for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Lifecyle events for enterprise plugins (continued)

Plugin	Description
	Note: The lifecycle event for new hire onboarding is included as demo data with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Configuring Lifecyle events for enterprise

Depending on your role, you can access and configure the following:

Lifecycle event administrator

Users with the lifecycle event administrator [sn_hr_le.admin] role can administer and configure any part of the application, including any lifecycle event and its associated activity sets and activities. For more information, see Building a lifecycle event.

Activity set manager

Users with the activity set manager [sn_hr_le.activity_set_manager] role can build any lifecycle event and the associated activity sets. You can configure any lifecycle event activity, so long as you are a member of the owning group that owns the activity. For example, if you are a member of the HR owning group, then you can configure any activity that is owned by the HR group, such as an employee task to watch an onboarding video or a fulfiller task to provide relocation assistance.

- Configure a lifecycle event and the associated activity sets
- Configure a lifecycle event activity if you are a member of the associated owning group

Activity writer

Users with the activity writer [sn_hr_le.activity_writer] role can configure any lifecycle event activity, so long as you are a member of the owning group that owns the activity. For example, if you are a member of the IT owning group, then you can configure any activity that is owned by the IT group, such as to set up an active directory account or to set up equipment for a new employee. For more information, see Configure a lifecycle event activity if you are a member of the associated owning group.

Activity reader

Users with the activity reader [sn_hr_le.activity_reader] role can read any lifecycle event and its associated activity sets and activities.

Using Lifecyle events for enterprise

Once the Lifecyle events for enterprise application is configured, users with the following roles can write and read lifecycle event cases.

Note:
A lifecycle event case is an HR case that is fulfilled by a lifecycle event.

Lifecycle event case writer

Users with the lifecycle event case writer [sn_hr_le.case_writer] role can create, manage, and monitor the status of any lifecycle event case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create an HR case for a lifecycle event
- Monitor the status of a lifecycle event case

Lifecycle event case reader

Users with the lifecycle event case reader [sn_hr_le.case_reader] role can read any lifecycle event case.

Install Lifecyle events for enterprise

Install Lifecyle events for enterprise and related applications.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **All Applications** and select **Enterprise Onboarding and Transitions**.
2. Select **Install**.
   Two apps are installed with Enterprise Onboarding and Transitions:
   - Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent]
   - Performance Analytics - Content Pack - Human Resources Lifecycle Events Enterprise Scoped App [com.sn_hr_lifecycle_pa]

Business roles

Activate Lifecycle Events for Enterprise

Business roles

Business roles enable you to automatically provision applications to employees through licensed identity provider (IDP) services. If you are subscribed to HR Service Delivery, preconfigured integrations for select systems may be available to use.

Preconfigured integrations for new hire onboarding

The following integrations are available to use with new hire onboarding. These integrations require subscriptions to the relevant spoke in IntegrationHub, as well as the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Note:
The lifecycle event for new hire onboarding is included as demo data with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

- Okta integration for new hire onboarding
- Microsoft Azure AD integration for new hire onboarding

Activation information

The Business Roles [com.snc.businessroles] plugin is automatically activated with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Configure a business role

Create or modify a business role based on job function, geography, and so on.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_businessroles.writer

About this task
Modeled after the organizational hierarchy for applications access, business roles enable you to provision applications to your employees. Depending on their job function, employees need different applications to perform their work. For example, the applications that a product designer requires differs from that of a software engineer. Each business role is mapped to one or more groups, and you can create default business roles and parent-child hierarchies to provision applications.

Procedure
1. Navigate to **All** > **Business Roles** > **Business Roles**.
2. Click **New** or open a record.
3. Fill in the fields on the form.

Business Role form

Field	Description
Name	Name of the business role.
Parent business role	Other business roles of which this business role is a member. If the business role has a parent, then the child inherits all the applications that are provisioned to the parent. For example, say you have a parent business role called All Employees that provisions applications A and B, and a child business role called Marketing that provisions applications C, D, and E. When a new hire is assigned the Marketing business role, that user is provisioned applications A through E.
Short description	Description of the business role.
Default	Option to set this record as a default business rule. If selected, the business role is automatically assigned to all new hires that meet the audience criteria for that record. For example, a default business role called Active Users can be used to provision basic applications that users across your entire organization require.
Audience	Defines the conditions or criteria that the new hire must meet for the hiring manager to be able to assign the business role on their behalf. For example, you can use audience records so that one business role is only available for on-site workers and another business role is only available for remote workers. For details on how to configure an audience record, see Audiences.
Active	Option to activate the business role for use.

4. Right-click the form header and click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. If you are integrating with the Okta service, map the business role to one or more Okta groups.

   a. In the **Map to Okta groups** related list, click **Edit**.

   b. From the list of available Okta groups on the left, move the groups that you want mapped to the business role to the list on the right.

   > **Important:**
   > If an Okta group is deleted from within the Okta system, that change will not be reflected in your instance. You must manually delete the record by navigating to **Okta Spoke** > **Okta groups**, as well as remove it from any business role mappings.

   c. Click **Save**.

6. If you are integrating with the Microsoft Azure AD service, map the business role to one or more groups.

   a. In the **Group** related list, click **Edit**

   b. From the list of available groups on the left, move the groups that you want mapped to the business role to the list on the right.

   > **Important:**
   > If a group is deleted from within the Microsoft Azure AD system, that change will not be reflected in your instance. You must manually delete the record by navigating to **Directory Sync** > **Groups**, as well as remove it from any business role mappings.

   c. Click **Save**.

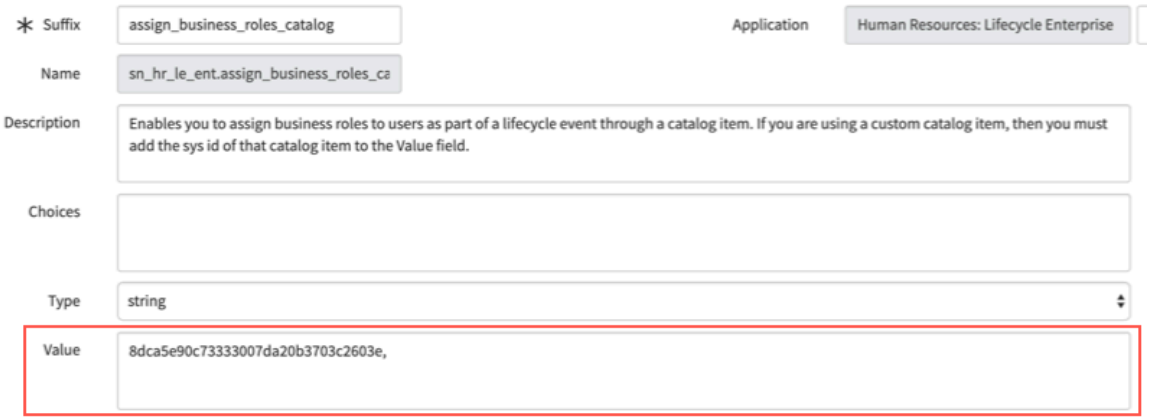
7. Click **Update**.

Update the assign_business_roles_catalog system property

The **assign_business_roles_catalog** system property enables you to assign business roles to users through a catalog item as part of a lifecycle event, and is included with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin. If you are using a custom catalog item with your lifecycle event, you must update the system property with the sys id of that item.

Before you begin

Copy the sys id of the catalog item that you want to use to assign business roles as part of a lifecycle event.



Role required: sn_hr_le_ent.admin

Procedure

1. In the navigation filter, enter `sys_properties.list`.
   The System Properties list is displayed.
2. Open the **sn_hr_le_ent.assign_business_roles_catalog** record.
3. In the **Value** field, add the sys id of the catalog item that will be used to assign business roles as part of a lifecycle event.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The default value is the sys id of the **Assign business roles to new hire** catalog item that is included as part of the demo data for the lifecycle event for new hire onboarding.

4. Click **Update**.

Lifecyle events for enterprise integrations

Extend Lifecyle events for enterprise capabilities by integrating other application into the journey experience.

Okta integration for new hire onboarding

Automatically provision relevant applications for new hires as part of the onboarding process with the Okta integration. This integration requires the Okta spoke v1.1.1 in IntegrationHub, and is configured to work with the lifecycle event for new hire onboarding that is included as demo data with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Setting up the Okta integration

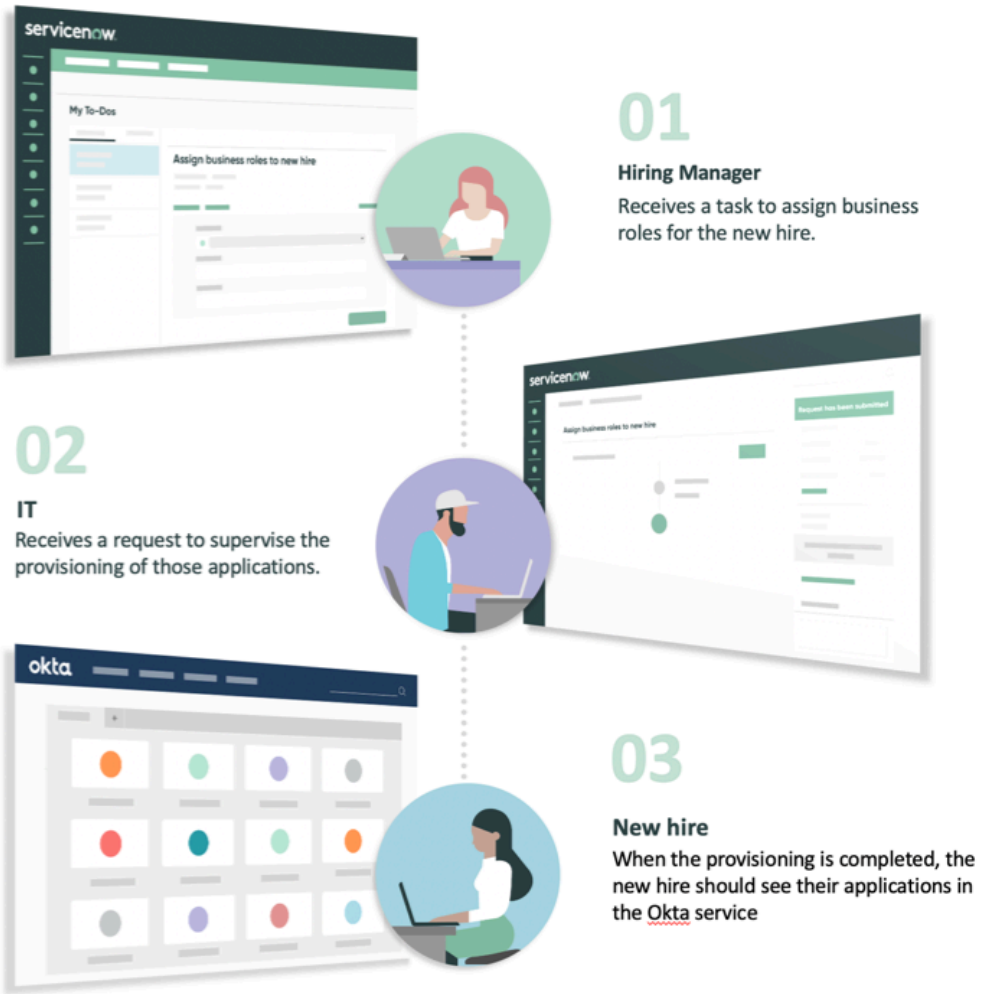
To set up the Okta integration for new hire onboarding, you must first set up the Okta spoke v1.1.1, next fetch the Okta groups into your instance, and last configure the relevant business roles. For details on how to set up the integration, see Set up the Okta integration for new hire onboarding.

Using the Okta integration with new hire onboarding

Once the integration is set up, you can use it with new hire onboarding. The following components are included in the demo data for your use and example.

Note:
The lifecycle event for new hire onboarding is included as demo data with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Components installed with Okta integration with new hire onboarding



Component	Name
Lifecycle event activity	Account and Application Access (in the Day One activity set)
HR task template	Groups Assignment for New Hires
Catalog item	Assign business roles to new hire

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

How the application provisioning works

The application provisioning process works as follows. When an onboarding case is created, the hiring manager receives a task to assign business roles for the new hire. Once assigned, IT then receives a request to supervise the provisioning of those applications. When the provisioning is complete, the new hire should see their applications in the Okta service.

Important:
New hires must have a user record in the Okta system in order for their applications to be provisioned to them.

Set up the Okta integration for new hire onboarding

To set up the Okta integration for new hire onboarding, you must first set up the Okta spoke v1.1.1, next fetch the Okta groups into your instance, and last configure the required business roles.

Before you begin

This integration requires subscriptions to the following:

- Okta spoke v1.1.1
- Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin

Note:
The lifecycle event for new hire onboarding is included as demo data with this plugin.

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Set up the Okta spoke v1.1.1.
   For instructions on how to set up the spoke, see Set up Okta spoke v1.1.1.
2. Fetch the Okta groups into your instance.
   For instructions on how to fetch the groups, see Fetch Okta groups.

> **Important:**
> If an Okta group is deleted from within the Okta system, that change will not be reflected in your instance. You must manually delete the record by navigating to **Okta Spoke** > **Okta groups**, as well as remove it from any business role mappings.

3. Configure the required business roles.

> **Note:**
> The Business Roles [com.snc.businessroles] plugin is automatically activated with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

   For instructions on how to configure the business roles and map them to the relevant groups, see Configure a business role.

Microsoft Azure AD integration for new hire onboarding

Automatically provision relevant applications for new hires as part of the onboarding process with the Microsoft Azure AD integration. This integration requires the Microsoft Azure AD spoke in IntegrationHub, and is configured to work with the lifecycle event for new hire onboarding that is included as demo data with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Setting up the Microsoft Azure AD integration

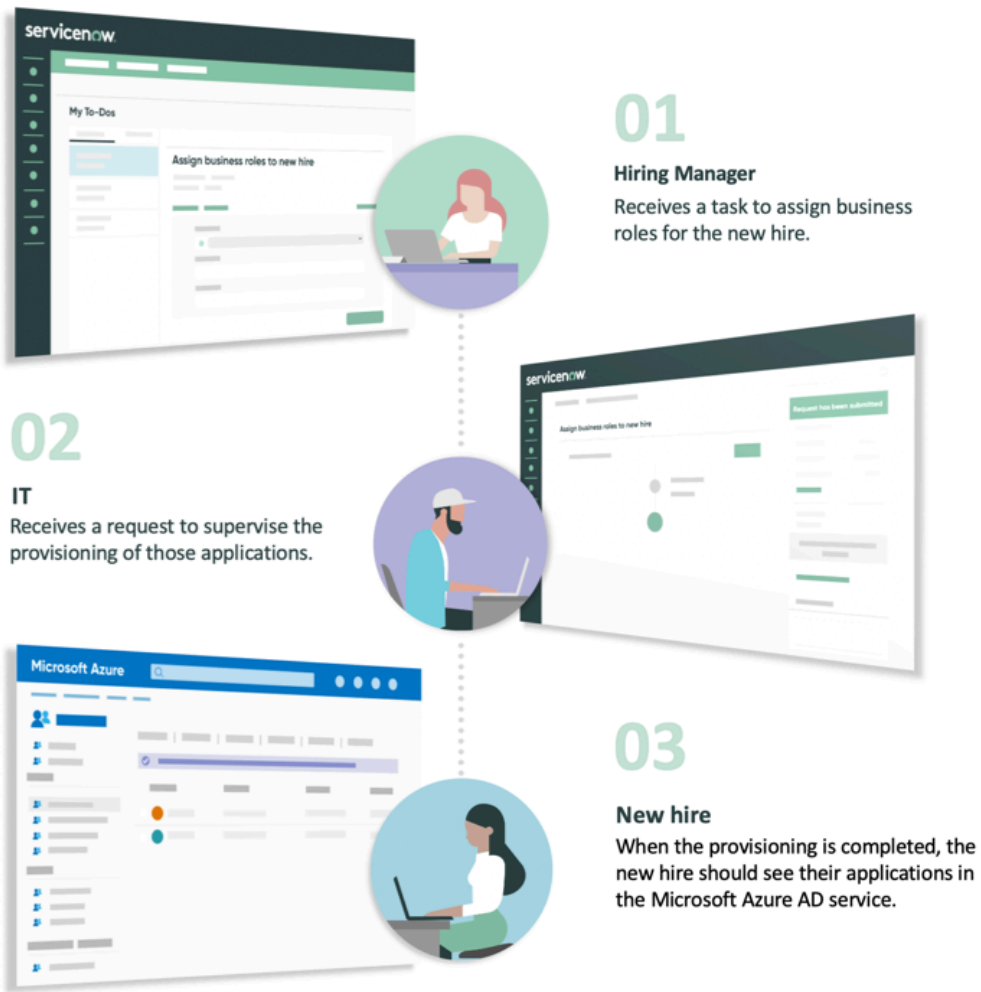
To set up the Microsoft Azure AD integration for new hire onboarding, you must first set up the Microsoft Azure AD spoke, next configure the remote directory sync to fetch the groups into your instance, and last configure the relevant business roles. For details on how to set up the integration, see Set up the Microsoft Azure AD integration for new hire onboarding.

Using the Microsoft Azure AD integration with new hire onboarding

Once the integration is set up, you can use the it with new hire onboarding. The following components are included in the demo data for your use and example.

> **Note:**
> The lifecycle event for new hire onboarding is included as demo data with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Components installed with Microsoft Azure AD integration with new hire onboarding



Component	Name
Lifecycle event activity	Account and Application Access (in the Day One activity set)
HR task template	Groups Assignment for New Hires
Catalog item	Assign business roles to new hire

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

How the application provisioning works

The application provisioning process works as follows. When an onboarding case is created, the hiring manager receives a task to assign business roles for the new hire. Once assigned, IT then receives a request to supervise the provisioning of those applications. When the provisioning is complete, the new hire should see their applications in the Microsoft Azure AD service.

Important:
New hires must have a user record in the Microsoft Azure AD system in order for their applications to be provisioned to them.

Set up the Microsoft Azure AD integration for new hire onboarding

To set up the Microsoft Azure AD integration for new hire onboarding, you must first set up the Microsoft Azure AD spoke, next configure the remote directory sync to fetch the groups into your instance, and last configure the required business roles.

Before you begin

This integration requires subscriptions to the following:

- Microsoft Azure AD spoke
- Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin

Note:
The Lifecycle Events for new hire onboarding is included as demo data with this plugin.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Role required: admin

Procedure

1. Set up the Microsoft Azure AD spoke.
   For instructions on how to set up the spoke, see Set up Microsoft Azure AD spoke.
2. Configure the remote directory sync to fetch the groups into your instance.

   Note:
   The Remote Directory Sync [com.snc.remote_directory_sync] plugin is automatically activated with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin. This plugin retrieves data from a remote directory on external systems like Microsoft Azure AD or Okta, and stores a copy of the data locally. This plugin stores data about individual users and groups, and the relationship between them.

   a. Navigate to **Directory Sync** > **Integrations**.
      The Directory Integrations table appears.

   b. Select **New**.

   c. Fill in the fields on the form.

      Directory Integrations form

Field	Description
Display name	Display name for the integration.
Connection & Credential	Set the value to `sn_azure_ad_spoke.AzureAD`.
Directory provider	Set the value to `Microsoft Azure AD`.

   d. Right-click the form header and select **Submit**.

   e. Select **Publish** to publish the record.

   Publication triggers the fetching of groups into your instance so that you can assign them to different users. Groups are fetched on a scheduled basis. You can view the fetched groups by navigating to **Directory Sync** > **Groups**.
3. Configure the required business roles.

   Note:
   The Business Roles [com.snc.businessroles] plugin is automatically activated with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

   For instructions on how to configure the business roles and map them to the relevant groups, see Configure a business role.

Sailpoint integration for new hire onboarding

Provide relevant applications for new hires automatically as part of the onboarding process with the Sailpoint integration.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This integration requires the Sailpoint IdentityIQ for Service Catalog v2 app from the ServiceNow Store, and is configured to work with the lifecycle event for new hire onboarding that is included as demo data with the Human Resources Scoped App: Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Setting up the Sailpoint integration

To set up the Sailpoint integration for new hire onboarding, you must install the Sailpoint IdentityIQ for Service Catalog v2 app from the ServiceNow Store. For the installation guide and further information, see SailPoint IdentityIQ for Service Catalog v2 .

Note:
Make sure to use version 2.0.10 or later.

Using the Sailpoint integration with new hire onboarding

Once the integration is set up, you can use it with new hire onboarding. The following components are included in the demo data for your use and example.

Note:
The lifecycle event for new hire onboarding is included as demo data with the Lifecycle Events for Enterprise [com.sn_hr_lifecycle_ent] plugin.

Components installed with Sailpoint integration with new hire onboarding

Component	Name
Lifecycle event activity	Account and Application Access in Sailpoint (in the Day One activity set)
HR task template	Assign Roles in Sailpoint

How the application provisioning works

The application provisioning process works as follows. When an onboarding case is created, the hiring manager receives a task to assign roles and entitlements for the new hire. The hiring manager must then manually complete the task. Once assigned, IT then receives a request to supervise the provisioning of those applications. When the provisioning is complete, the new hire should see their applications in the Sailpoint service.

Important:
New hires must have a user record in the Sailpoint system in order for their applications to be provisioned to them.

E-signature applications of HR Service Delivery

E-signature applications of HR Service Delivery.

HR e-signature

HR e-signature is a **non-embedded signature** capability for managed documents, and knowledge articles, attached to an HR task for fulfilment. It supports three signing types (Acknowledgement, Credential, and Signature) and two document types (Managed Documents and Knowledge Articles).

Note:

- HR e-signature must be used for internal, non-legal acknowledgement use cases.
- HR e-signature is a legacy product with no active development.

HR document templates

HR document templates provides embedded signature and supports both internal and external e-signing use cases. It supports two document types, HTML and PDF.

Note:
HR document templates is a legacy product and being prepared for deprecation. Use Document Templates instead.

Document Templates

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document Templates is an embedded signature capability for HTML and PDF document templates. It provides embedded signature, supports both internal and external e-signing use cases (of legal types also). It supports three signing types (Signing using the AdobeSign application, Signing using the DocuSign application, and Signing using the ServiceNow application) and supports two document types, HTML and PDF.

HR e-signature

Sign electronic documents from any desktop or mobile device with e-signature. E-signature is a scoped application that enables users to sign managed documents, knowledge articles, or HR document templates with their typed or drawn e-signature, their credentials, or as an acknowledgment.

The e-signature [com.snc.esign] plugin activates the sn_esign.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only e-signature admin user by requiring a minimum number (default is two) of active users with this role.

HR e-signature is a **non-embedded signature** capability for managed documents, and knowledge articles, attached to an HR task for fulfilment. It supports three signing types (Acknowledgement, Credential, and Signature) and two document types (Managed Documents and Knowledge Articles).

HR and e-signature roles

By default, the following HR roles contain the following e-signature roles.

HR roles and e-signature roles

HR role	E-signature role
HR administrator [sn_hr_core.admin]	E-signature administrator [sn_esign.admin]
HR basic [sn_hr_core.basic]	E-signature manager [sn_esign.config_manager]

You can use the assignments as-is or change them. To change the default assignments, see Components installed with e-signature for information on how to assign a role to another role, group, or user.

How to use e-signature templates with HR tasks

Users with the HR administrator [sn_hr_core.admin] or basic [sn_hr_core.basic] role can create e-signature templates. Each e-signature template pairs a document type to sign (managed document, knowledge article, or HR document template) with a signature type (signature, credential, or acknowledgment). For example, you could create an e-signature template for a non-disclosure agreement that requires a typed or drawn signature.

For more information, see Configure an e-signature template.

You can then use the e-signature templates in HR tasks or HR task templates to request signatures from users.

Note:
On the HR task form, make sure that the HR task type sets to **E-signature**.

- Adding an HR task to an HR case
- Configure an HR task template

Migrating existing HR task templates and open HR tasks to e-signature

Migrate existing HR task templates and open HR tasks to the new HR task type for e-signature with the **Migrate HR e-signature tasks** scheduled job. The scheduled job automatically updates the HR task type and e-signature template based on your existing configurations. It also disables the old HR task types for credential, e-signature, and sign document.

For more information, see Migrate existing HR task templates and open HR tasks to e-signature.

Activation information

E-signature automatically activates when you activate Case and Knowledge Management. If it does not activate, you can manually activate e-signature. For information on what components install with the feature, see Components installed with e-signature.

Related topics

E-signature

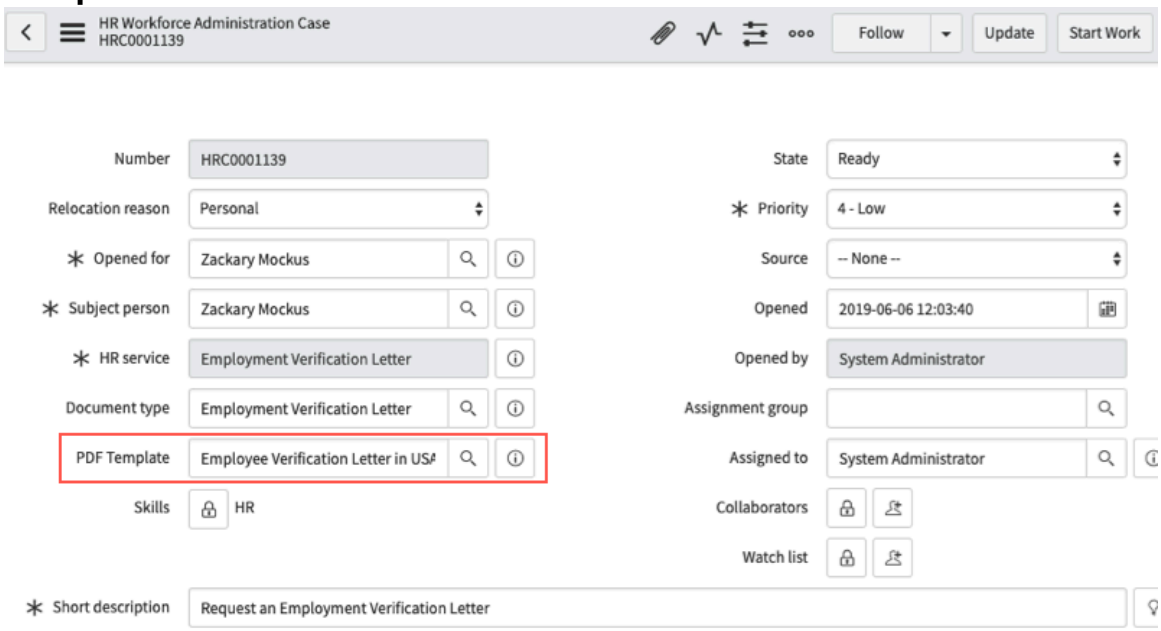
Select an HR document template for an e-signature task

If the document type of the e-signature template you are using is an HR document template, then you must select the HR document template that the signatory will sign on the HR case form.

Before you begin

Role required: sn_hr_core.basic or sn_hr_core.case_writer

Depending on the HR service you are using to request the e-signature, you may need to configure the HR case form so that the **PDF template** field appears and an HR document template can be selected.



Procedure

1. Navigate to **HR Case Management**, and create a new or open an existing HR case.
2. On the HR case form, in the **PDF Template** field, select an HR document template.

Note:
If the **PDF Template** field is not visible, make sure that the HR case form for the HR service you are using is configured to show that field. See Configure the HR case form for an HR service for more information, and also HR case form configuration examples for an e-signature-specific example.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example

3. Assign the case to a user.
4. Click **Ready to Work**.

What to do next

The user to whom the case is assigned can:

1. Click **Start Work**.
2. Click **Preview Document**.
3. From the Preview Document window, click **Generate** to generate the document for signing. The document to sign is added as an attachment to the HR case form.

Migrate existing HR task templates and open HR tasks to e-signature

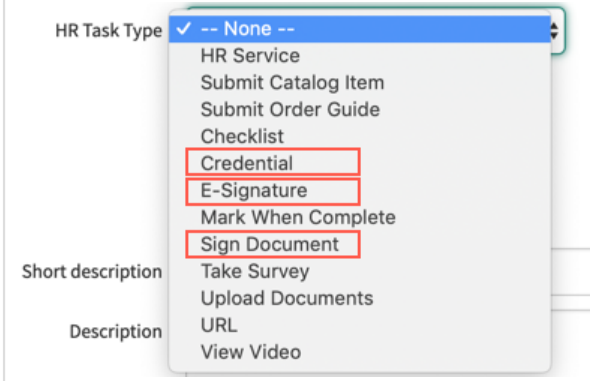
Migrate existing HR task templates and open HR tasks to the new HR task type for e-signature with the **Migrate HR e-signature tasks** scheduled job. The scheduled job automatically updates the HR task type and e-signature template based on your existing configurations. It also disables the old HR task types for credential, e-signature, and sign document.

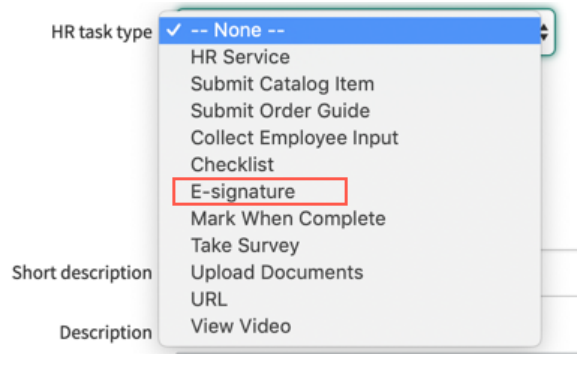
Before you begin

Role required: sn_hr_core.admin

About this task

Important:





Starting with the Xanadu release, HR task types: Credential, E-signature (e_signature), and Sign Document will be hidden and no longer activated on new instances, but will continue to be supported. E-signature provides the latest experience for this functionality.

For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

The **Migrate HR e-signature tasks** scheduled job migrates existing HR task templates and open HR tasks from the **Credential**, **E-Signature**, and **Sign Document** HR task types to the new **E-signature** HR task type.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Pre-migration and Post-migration HR task type details

Pre-migration	Post-migration
	

The associated document and signature configurations are also migrated to new or existing e-signature templates. If an e-signature template for the applicable document and signature configuration already exists, then the existing e-signature template is used. Otherwise, a new e-signature template is created.

Pre-migration and Post-migration e-signature template details

Pre-migration HR task type	Post-migration e-signature template
Credential	• Document type: Managed document • Signature type: Credential
E-Signature	• Document type: Managed document • Signature type: Signature
Sign Document	• Document type: HR document template • Signature type: Signature

Finally, the HR task types for **Credential**, **E-Signature**, and **Sign Document** are disabled. Only the new HR task type for **E-signature** remains.

Procedure

1. Navigate to **All** > **System Definition** > **Scheduled Jobs**.
2. Open the **Migrate HR E-signature Tasks** scheduled job.
3. Click **Execute Now**.
   Depending on the data you have, the migration may take some time.
   - Existing HR task templates are updated to the e-signature task type and an e-signature template.
   - Open HR tasks are updated to the e-signature task type and an e-signature template.
   - HR task types for **Credential**, **E-Signature**, and **Sign Document** are disabled.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR document templates

HR Document Templates are used to create and modify reuseable HR documents.

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates that provides the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

Use HR document templates for documents that can be customized with dates, names, and signatures like:

- Employee verification letters
- Non-disclosure agreements
- Offer letters
- Educational reimbursement agreements

You can personalize HR document templates by mapping fields or using variables from the available tables to place data in fields. You can also capture multiple e-signatures in a document that automatically generates once all signatures are captured.

There are two types of HR **Document Templates**, both create PDF files, but are created and maintained differently:

1. Document templates (HTML)
2. PDF document templates

Acknowledgement text

Within your document templates, you can capture the meaning of a signature. You can add acknowledgement text to your document templates that prompts the user to check a box when signing or providing credentials to a document.

Document templates (HTML)

Document templates are created within the HR application and use variables to pre-fill information from tables into the document. You create how the document looks by defining the header, footer, images, placement of footer, and the text within the template. The base system provides default document templates that you can use to model your documents:

- Employee Verification Letter in Canada
- Employee Verification Letter in USA
- Offer Letter Template
- Education Agreement

Before you begin generating documents, configure the templates with your company logo and text. Obtain the following items and information to create or configure the predefined HR document templates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- A page of your company letterhead.
- Copies of your current company employment verification letter and offer letter templates, if available.
- The logo image to use in your header. The header image can be a maximum of 50 px high. If your letterhead includes a logo and text, ensure that the logo image includes the text, because you can only configure the image (not text) in the header.
- The logo image to use in your footer, if applicable. The logo image can be a maximum of 15 pixels high. You can configure both an image and text in the footer.For best results, ensure that the image is optimized and a Scalable Vector Graphics (SVG) file.

Important:
Usage of HR document templates with itext5 is no longer supported. Use HR document templates with itext7 instead.

To use HR document templates feature with itext7, the boolean property **itext7.pdf_conversion** must be set to true in the Human Resources: Core (sn_hr_core) scope. This property has been set to true, by default, since the Paris release. If you are using the version of HR Document templates that has been released prior to the Paris release, create the **itext7.pdf_conversion** property manually to switch to itext7.

PDF document templates

PDF document templates originate from **Managed Documents** and use field mapping to pre-fill information from tables into the document. Before you customize a document:

- The document must be a fillable PDF. See the Adobe home page and search for Convert existing forms to fillable PDFs to learn how to create fillable PDF documents https://www.adobe.com/ .
- The document must be uploaded and published.

The base system provides the default PDF document template as an example: Non-Disclosure Agreement (Sample).

Generating documents

Both the **Document template** and **PDF document template** generate PDF documents that can be reviewed or printed and can require multiple signatures.

A common use case for generating a document from an HR case is when an employee requests an employment verification letter. For information on generating a PDF document from an HR case, see HR document generation.

Migrate HR Document template (HTML) to Document Template

Follow the steps for migrating HR Document template (HTML) to Document template (HTML).

Before you begin

Role required: admin

Procedure

1. Create a document template category in the Category [sn_doc_template_category] table (if HR Document template has a document type associated with it).
2. Navigate to **Document Template** > **HTML template**.
3. Click **New**.
4. Fill in the form fields, such as Name, Table, Category, Body, Language, similar to HR Document template and save it.

   If there is any signature token (Signature token: ${signature}, ${<-user_field->.signature}) in HTML body, remove it and save the template.
5. If HR document template has HR criteria associated with it, select the corresponding user criteria in the new document template.
6. Find participants based on signature tokens in old HR document template body, and create participant records in the **Participant** related list in the new Document Templates.
   After a participant is created, add the signature token by clicking **Insert signature**. In the legacy HR Document Templates body, signature token is supported in the format ${<-user_field->.signature} while in new Document Templates body, signature token is supported in the format ${signature:<-participant_user_name->}.
7. Publish the template by clicking **Publish**.
8. Update the case template to use the new document template or category.
   See the HR case fields in the Functionality and Table Comparison: HR Document Templates and Document Templates table in Migrating from HR Document Templates to Document Templates.

Migrate HR Document template (PDF) to Document Template

Follow the steps for migrating HR Document template (PDF) to Document Template (PDF).

Before you begin

Role required: admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Create a document template category in the Category (sn_doc_template_category) table (if HR Document template has a document type associated with it).
2. Navigate to **Document Template** > **PDF template**.
3. Click **New**.
4. Fill in the form fields, such as Name, Table, Category, and Language, similar to that of HR Document Templates.
5. If HR document template has HR criteria associated with it, select the corresponding user criteria in the new document template.
6. Select **Attachment type** as **Select from document revision**, and add **Document revision** used in the HR document template.
7. Select the corresponding signing type and **Save**.
8. Click the **Parse PDF** related link.
   Template mapping records are created. Update the mapping fields.
9. Create a participant record with action type **Sign** for each user who needs to sign the document.

   Note:
   This step is required only when legacy HR Document Template has PDF Template mapping record with Document field type as **Signature**.

10. Publish the template by clicking **Publish**.
11. Update the case template to use the new document template or category.
    For more information, see the HR case fields in the Functionality and Table Comparison: HR Document Templates and Document Templates table in Migrating from HR Document Templates to Document Templates.

Configure an HR document template (HTML)

Create or modify HR document templates with your unique company logo and audience criteria. Document templates are created within the HR application and use variables to pre-fill information from tables to create reusable HR documents.

Before you begin

Role required: sn_hr_core.manager and sn_hr_le.admin

About this task

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates that provides the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

HR document templates customize HR documents to match the service and subject person.

The base system provides examples of employment verification letters, educational reimbursement agreements, and an offer letter.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Body text is defined and formatted with TinyMCE and can merge or include user and table variables during document generation. The PDF generator does not support some of the HTML elements.

Note:
The example offer letter only appears when the **Human Resources Scoped App: Lifecycle Events** is activated.

Procedure

1. Navigate to **All** > **HR Administration** > **Document Templates**.
2. Click **New** or on an existing document template to edit it.
   When you select **New**, the HR Document Templates list appears.
3. Select **Document Template**.

   Note:
   To know the differences between the types of document template, see HR document templates.

4. Fill in the fields on the form.

HR Document Template form

Field	Description
Name	Name of the HR document template.
Table	Select the table associated with the type of template. The table determines the available variables that can be used. **Note:** Only tables that you have access to appear.
Document type	Select the document type the template applies to. Click **New** from **HR Document Type** to create a document type. A document type is required when you want a list of documents to appear in the HR case form. **HR criteria** works with this field to narrow the list of documents you want available for an HR case. See Using document types with HR document templates. **Note:** When creating a document type, the **Value** auto-populates from the name you enter (all lower case and underscores).
Header image	Select to add an image in the header. You can add your company logo using this feature. **Note:** Supported file types are: JPEG, JPEG2000, GIF, PNG, BMP, WMF, TIFF, and JBIG2.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Header image position	Select where you want the header image to appear.
HR criteria	Select the audience criteria for this document. For example, you can create a letter intended for only Canadian employees. The HR criteria narrows the number of users for the template. **Note:** When defining conditions like case sensitivity or null values, see API GlideFilter - Scoped, Global.
Body	Enter and format the text to comprise the body of the template. To insert variables, place your cursor in the desired location and click the variable. Available variables are listed under **Fields**. Use the formatting tools in the **Body** to apply formatting options, such as bold, italic, underline, font styling. The body is a place holder for HTML text and tokenized variables. When the PDF is generated, the variables are resolved before sending it to the PDF Generator [com.snc.pdf_generator] plugin. **Note:** Currently, there is no support for style tags to align text left or right. Space indentation must be used. Jelly and CSS Styling are not supported.
Select variables	A list of variables that can be used in the body of the template. Variables pull information from the selected table to customize the template. Offsets are supported for date variables. Offsets extend or subtract days, weeks, or months from a date used in a template. Valid date offset variables are: ○ + (plus) ○ - (minus) ○ d (days) ○ w (weeks) ○ m (months) Examples: ○ Offer letter (five days after stated date): Your offer is valid until ${Date +5d}. ○ Benefits for terminated employee (two weeks from termination date): Your benefits end effective ${subject_person.hr_profile.employment_end_date +2w}.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Only variables that you have access to appear.
Footer image	Select to add an image in the footer. The original height of your image should not exceed 170 pixels. Scale your image by 30% or ensure the image height is less than 50 pixels in order for the image to be clear and visible. **Note:** Supported file types are: JPEG, JPEG2000, GIF, PNG, BMP, WMF, TIFF, and JBIG2.
Footer image position	Select where you want the footer image to appear.
Footer text	Enter text. For example, you can add proprietary and confidential statements.
Page size	Select the page size from the choice list. **Note:** A4 is 8.3 x 11.7 inches or 210 x 297 millimeters.

5. Place the cursor in the desired location in the body of the template and click the **Insert Date** or **Insert Signature** buttons to insert these variables.
   You can use these buttons multiple times to add different types of dates or signatures based on the variables you choose.
6. Click **Save** to save your document and remain on the **HR Document Template** form or click **Submit** to save and return to the **HR Document Templates** list.
7. Review the look of the generated document by impersonating an employee and submitting the associated catalog item.

   Impersonate the user assigned to work on the case to generate the letter within the HR case. Continue editing and testing the document template until you are satisfied with the generated PDF.

   TinyMCE provides rich text creation that the PDF generator does not support. Non-supported HTML elements are:

   Note:
   The following HTML elements are NOT supported:

   - Vertical alignment.
   - Page breaks.
   - Table-specific color (text color is supported).
   - Custom spacing between blocks of text or images.
   - Custom column width in HTML tables.
   - Custom column alignment in HTML tables.
   - Custom border styling in HTML tables.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- CSS text manipulation ()including CSS based font tags).
- Inline styling.
- Background images.

See Editing functions in the TinyMCE editor.

Related topics

Configure an HR criteria record

Configure an HR PDF document template

Create or modify custom HR PDF document templates with your unique criteria. PDF document templates originate from Managed Documents and are either a fillable PDF with mapped fields or a standard PDF with an inline signature.

Before you begin

Role required: sn_hr_core.manager

About this task

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates that provides the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

With PDF document templates, you can take an existing document and reuse it with custom information from an HR case or any available table. For example, you can take a fillable PDF document from Managed Documents, and map fields to customize the document each time it is used.

The document must be a fillable PDF to map the fields to a table. See the Adobe home page and search for fillable PDF to learn how to create fillable PDF documents https://www.adobe.com/.

Note:

Fillable PDFs presented to an employee does not save any data populated by the employee (except for signatures). Fillable PDFs are only used for mapping fields to a table.

Documents are uploaded and accessed from the Managed Documents application in the Documents [dms_document] table. Documents are required to be published as a document revision before it can be accessed.

The base system provides the Non-Disclosure Agreement document template as an example of a PDF document template.

Note:

See . Managed Document features

Procedure

1. Navigate to **All** > **HR Administration** > **Document Templates**.
2. Click **New** or on an existing PDF document template to edit it.
   When you select **New**, the HR Document Templates list appears.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

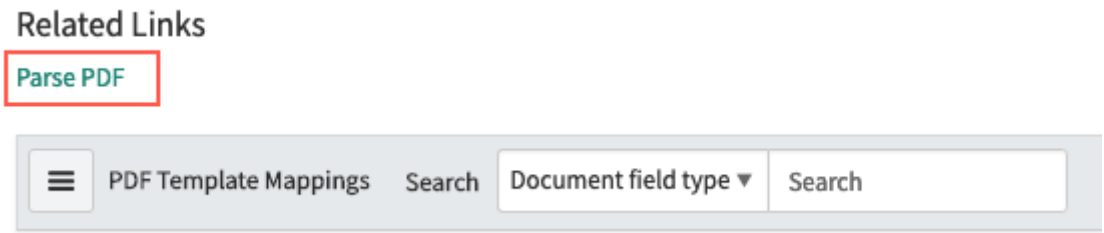
3. Select **PDF Document Template**.

> **Note:**
> To know the differences between the types of document template, see HR document templates.

4. Fill in the fields on the form.

HR PDF Template form

Field	Description
Name	Name of the HR PDF document template.
Table	Select the table associated with the type of template. The table determines the available fields that can be mapped. **Note:** Only tables that you have access to appear.
Document type	Select the document type the template applies to. Click **New** from **HR Document Type** to create a document type. A document type is required when you want a list of documents to appear in the HR case form. HR criteria works with this field to narrow the list of documents you want available for an HR case. See Using document types with HR document templates. **Note:** When creating a document type, the **Value** auto-populates from the name you enter (all lower case and underscores).
Active	Option to activate the HR PDF document template for use.
Document revision	Select the document and revision the PDF document template is based on. Documents listed originate from Managed Documents. **Note:** User group and document owner determine what revisions are available to view or select.
HR criteria	Select the audience criteria for this document. For example, you can create a letter intended for only Canadian employees. The HR criteria narrows the number of users for the template. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
PDF Preview	Appears after saving or selecting an existing PDF template. Click to view a preview of the template. **Note:** Using style tags for text alignment is not supported. Use spaces to align your text.

5. Click **Submit** or **Save** to save your PDF document template.
   The **Mark Signatures** button appears at the top menu bar. Click to map where signatures are required in the template. A preview of the PDF document template appears to define a signature block.

   The **Parse PDF** related link appears. When there are fields on the template that can be mapped, the **Parse PDF** link appears under **Related Links**.

6. Click **Parse PDF** if it appears under **Related Links** to view the fields that can be mapped.
   The AcroForm PDF determines which fields can be mapped and the table selected determines what information you can have populated in those fields.

   The **PDF Template Mappings** list appears. Click the fields of the PDF to map them to fields on the table selected. You can customize your document with pre-filled information from the table. See Add or modify a PDF template mapping. After creating or editing the field mappings, the PDF Preview button appears.

7. Click **Update**.

Add or modify a PDF template mapping

With PDF template mapping you can pre-fill information from specified tables into a reuseable HR document configured in a PDF document template.

Before you begin

Role required: sn_hr.core_admin

About this task

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates that provides the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

PDF template mappings are derived from the table associated with the PDF document template. PDF template mapping is accessed from a PDF document template that contains fields that can be mapped. Refer to Configure an HR PDF document template.

The PDF Template Mappings section appears when a new fillable PDF document has been uploaded from Managed Documents and the **Parse PDF** link is selected.

Procedure

1. Select a field to edit.
2. Complete the form.

PDF template mapping fields

Field	Description
Field name	Enter a name that represents the field mapping and stored as part of the document mapping in the database.
HR PDF template	The name of the PDF template associated with the field mapping.
Document field	The field that appears in the document template. Typically the same name as the **Field name** but can be different. For example, on an I-20 document template, a **Document field** is #form[0].First Name. But, the **Field name** can be First Name.
Document field type	Select the type of field you are mapping. The choices are: ○ Signature ○ Text Field ○ Checkbox ○ Combo ○ Radio
Preview value	Enter a field mapping value for preview. **Note:** Use this field to test a field value without going through the process of mapping fields or creating a case to test your mappings. What you enter here appears in your document.
Advanced script	Use to configure script fields for complex mapping of a field. For example, to map a Social Security Number from the HR Profile [sn_hr_core_profile] table to a document and format it correctly, a script is used.
Mapping table	The table that the mapped fields come from.
Mapping field	The field that maps information into your document.
Use signing date	Check when the signing date should be captured with the signature when a user signs the document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Page number	The page number of the PDF document where the mapped field should insert information. For example, enter 2 when the mapped field appears on page 2 of the PDF document.
Active	Check to activate the field mapping.
Select date format	Appears when **Use signing date** is checked. Specify the date format to be used on a document. ○ User date format: Uses date format specified on the User [sys_user] table for the logged in user. ○ Specific date format: When selected, the Specific date format appears. Click the **Suggestion** icon and you can select from a list of formats.

3. Click **Save** to save your field mapping and remain on the HR PDF Template form, or click **Submit** to save your field mapping and return to the HR Document Templates list.

Using document types with HR document templates

Document types limit the choices for allowable documents based on HR service. For organizations with large amounts of documents, document types help categorize and make finding the correct document easier.

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates that provides the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

For example, you can have multiple employee verification letters depending on if the employee is full-time, part time, or contingent. HR criteria on an HR service determines which letter to send.

When an HR case is created for an HR service, it checks:

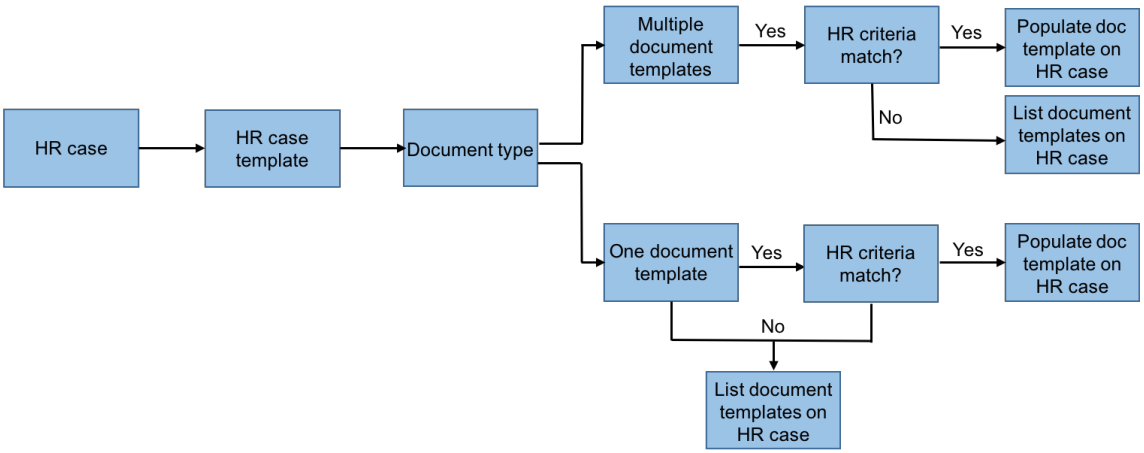
- HR case template for the HR service
- The document type for the HR case template
- HR criteria

Verifying this information allows the case to narrow the search for the correct letter or auto-populate the exact letter required.

Setting up document types

To use this feature:

- Add a document type to your document templates.
- Add the document type to an HR case template. From the HR template classic environment, you can add a specific PDF template, but cannot specify a



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

document type. Adding a specific PDF template automates populating the HR case form, but eliminates flexibility when you have multiple documents.

- Add the HR case template to an HR service.
- Add HR criteria to the HR service.
  - Using HR criteria provides flexibility in choosing or auto-populating a document for an HR service.
  - When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

How it works

When an HR case is created from an HR service:

The HR case template looks for a document type to determine what **Document template** or **PDF document template** to a case. It tries to automatically place a document template on an HR case by:

- Checking if there are documents associated with the document type.
- If there is only one document associated with the document type and the HR criteria is empty, place that document on the **HR case** form.
- If there is HR criteria on the document template, verify the **Subject person** on the **HR case** form matches the criteria. If yes, place the document template on the **HR case** form.
- If there are multiple document templates for the document type, check for **HR criteria**. When a single document matches, populate the document template on the **HR case** form. When multiple documents match, do not populate, but list documents in the Document type list in the **HR case** form.
- When **HR criteria** is not available on any document templates, list documents in the Document type list in the **HR case** form.

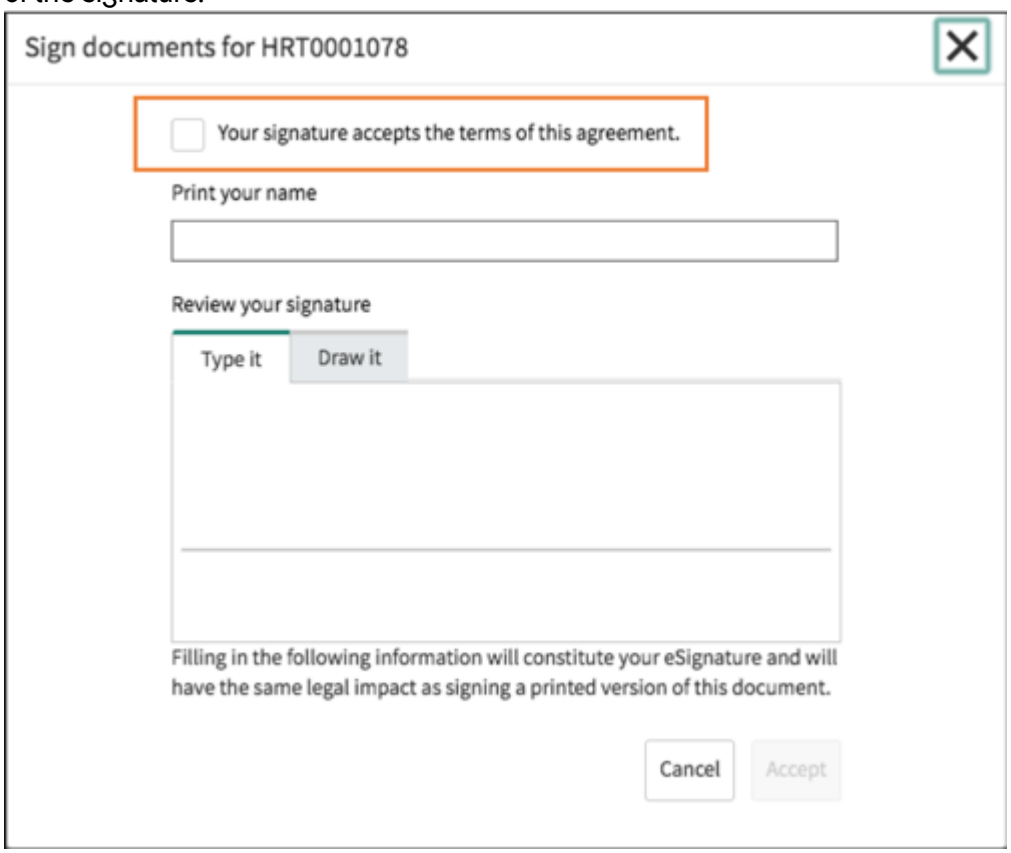
> **Note:**
> There is HR criteria on the HR service and HR document templates. On HR services, HR criteria narrows the allowable services for an employee. For example, you can provide 401 (k) services to US employees, but not to non-US employees. On HR document templates, HR criteria narrows what employees the document is for. For example, when you have employee verification letters for US employees and non-US employees, use HR criteria to determine the correct document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Adding a signature acknowledgment for HR documents

You can add an acknowledgement check box with customized text on HR documents associated with an HR task.

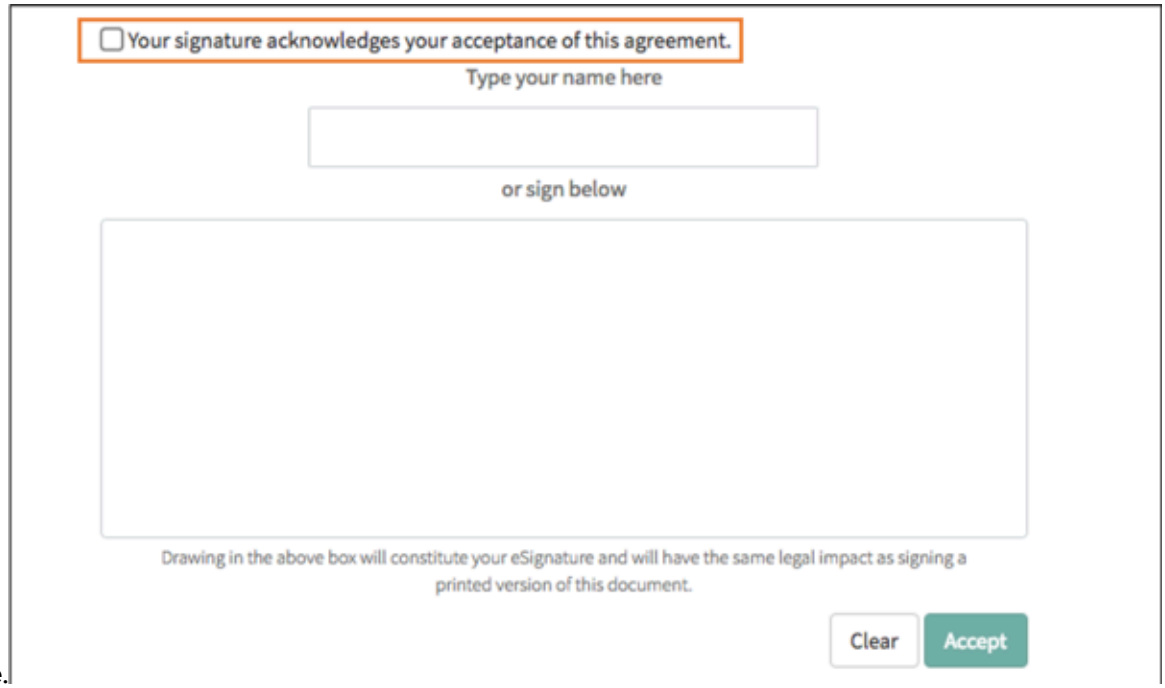
Important:



Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

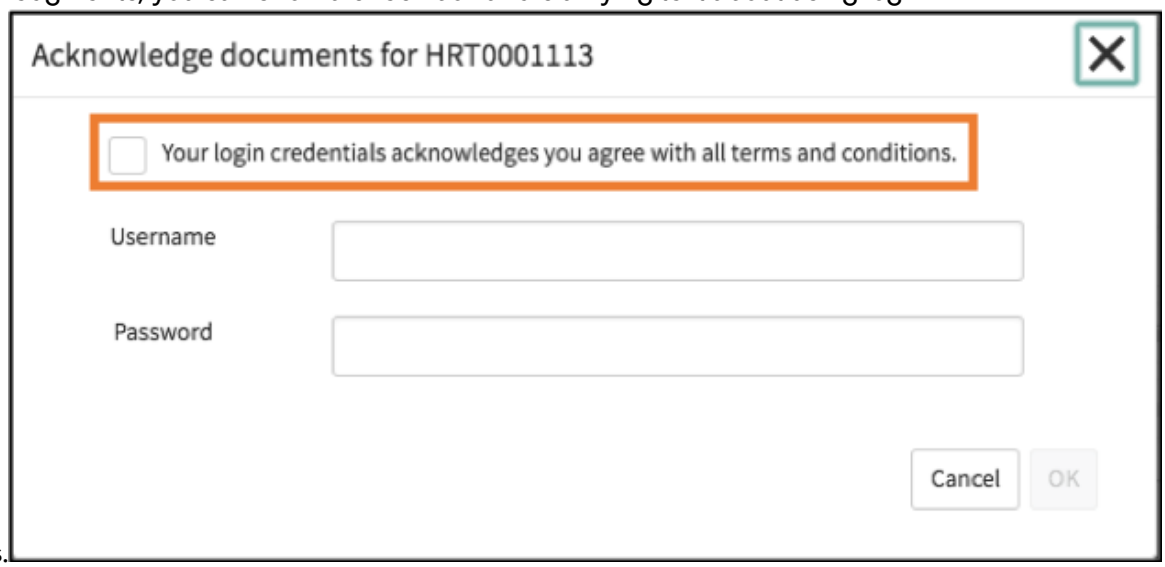
Use Document Templates that provides the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.



Signature acknowledgements are a way to capture the meaning of the signature, such as review, approval, responsibility, or authorship.

For the e-signatures task type, you can show a check box and clarifying text about the meaning of the signature.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For the sign document task type, you can show a check box and clarifying text about the meaning of the signature.

For acknowledgments, you can show a check box and clarifying text about using login credentials.

There are multiple ways to add the check box and text for the different task types.

Create signature acknowledgment from an HR task

Using this method creates the acknowledgment check box and text one time for the specific HR task. It does not save it for future HR tasks of the same type.

- From an existing HR case, add an HR task.
- From the HR task, select an HR Task Type of:

  E-Signature.

- Select an E-signature template.

Note:
See Adding an HR task to an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create or modify an HR template (task)

Using this method creates an acknowledgment check box and text every time the HR service is requested for an HR case.

- Table: Select an HR task table.
- HR task type: Select one:
  - E-Signature
  - Sign Document

    Note:
    The parent HR case requires a PDF document.

  - Credential
- Acknowledgment document: Attach a document.
- Acknowledgment text: (Add this field) Enter text to appear next to check box.

Note:
See Configure an HR task template.

Create or modify an HR document template

Using this method creates an acknowledgment check box and text every time the document is associated with an HR case.

From the HR document template, add text in the **Acknowledgment text** field.

Note:
See Configure an HR document template (HTML) or Configure an HR PDF document template.

Automate signing requests using templates

For more information on using DocuSign templates and automating signing requests using templates, see How to automate signing requests using templates.

Signature pad for HR

Signature pad is a feature that any application can use. It captures an electronic signature that can be associated with a document or a task.

Important:

Starting with the Xanadu release, HR Document Templates is being prepared for future deprecation. It will be hidden and no longer activated on new instances, but will continue to be supported.

Use Document Templates that provides the latest experience for this functionality. For migration guidelines, see Migrating from HR Document Templates to Document Templates.

For deprecation details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.

The HR Service Delivery application uses signature pad with onboarding documents like offer letters, background check approval, company policy acknowledgements, and more.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Human Resources Scoped App: Core [com.sn_hr_core] plugin activates the Signature Pad [com.snc.signaturepad] plugin. The Signature Image [signature_image] table installs with this plugin.

Ensure **Yes** is checked in the **com.snc.signaturepad.retrieveSignature** field on HR properties. See HR properties.

Note:
E-signature

Use

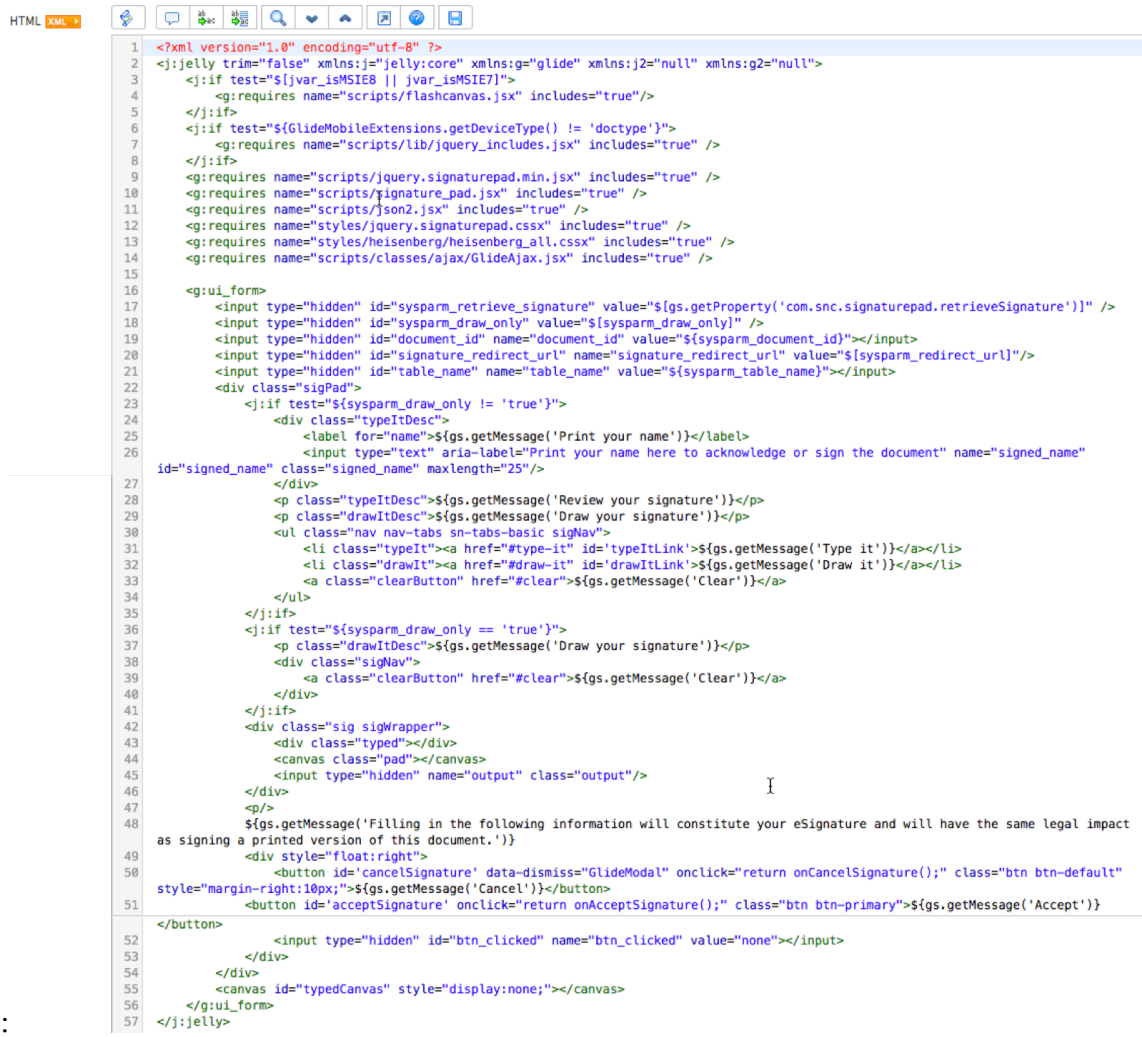
You can send your employees documents that require a user verification such as a digital signature or by typing their name.

When signature pad is associated with a document or a task, it captures the drawn signature as an image and stores it in the Signature Image [signature_image] table.

Note:
Typing a signature provides acknowledgement, but does not capture an image that is stored.

For **HR document templates**, use the **Insert Signature** button to insert a variable that prompts a user to sign the document. For **HR PDF document templates**, use the **Employee Signature** field name and **PDF Template Mappings** to prompt a user to sign the document. Refer to HR document templates.

Note:
Check the generate document UI action condition to ensure this feature works correctly.



Examples

The HR Delivery System uses PDF documents for various scenarios. An example of the code used to call a UI page or dialog box for the signature pad:

```
var gDialog = new GlideModal('accept_signature');
gDialog.setTitle(new GwtMessage().getMessage('Please sign document'));
gDialog.setWidth("500");
gDialog.setPreference('sysparm_document_id', gel('task_sys_id').value);
gDialog.setPreference('sysparm_table_name', gel('task_table').value);
gDialog.setPreference('sysparm_draw_only', 'false');
gDialog.render();
```

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

An example of the code used in a document after a signature has been accepted and a final PDF document is created:

```
<?xml version="1.0" encoding="utf-8" ?>
<j:jelly trim="false" xmlns:j="jelly:core" xmlns:g="glide" xmlns:j2="null" xmlns:g2="null">
    <j:if test="${jvar_isMSIE8 || jvar_isMSIE7}">
        <g:requires name="scripts/flashcanvas.jsx" includes="true"/>
    </j:if>
    <j:if test="${GlideMobileExtensions.getDeviceType() != 'doctype'}">
        <g:requires name="scripts/lib/jquery_includes.jsx" includes="true" />
    </j:if>
    <g:requires name="scripts/jquery.signaturepad.min.jsx" includes="true" />
    <g:requires name="scripts/signature_pad.jsx" includes="true" />
    <g:requires name="scripts/json2.jsx" includes="true" />
    <g:requires name="styles/jquery.signaturepad.cssx" includes="true" />
    <g:requires name="styles/heisenberg/heisenberg_all.cssx" includes="true" />
    <g:requires name="scripts/classes/ajax/GlideAjax.jsx" includes="true" />

    <g:ui_form>
        <input type="hidden" id="sysparm_retrieve_signature" value="$[gs.getProperty('com.snc.signaturepad.retrieveSignature')]" />
        <input type="hidden" id="sysparm_draw_only" value="$[sysparm_draw_only]" />
        <input type="hidden" id="document_id" name="document_id" value="${sysparm_document_id}"></input>
        <input type="hidden" id="signature_redirect_url" name="signature_redirect_url" value="$[sysparm_redirect_url]"/>
        <input type="hidden" id="table_name" name="table_name" value="${sysparm_table_name}"></input>
        <div class="sigPad">
            <j:if test="${sysparm_draw_only != 'true'}">
                <div class="typeItDesc">
                    <label for="name">${gs.getMessage('Print your name')}</label>
                    <input type="text" aria-label="Print your name here to acknowledge or sign the document" name="signed_name"
id="signed_name" class="signed_name" maxlength="25"/>
                </div>
                <p class="typeItDesc">${gs.getMessage('Review your signature')}</p>
                <p class="drawItDesc">${gs.getMessage('Draw your signature')}</p>
                <ul class="nav nav-tabs sn-tabs-basic sigNav">
                    <li class="typeIt"><a href="#type-it" id='typeItLink'>${gs.getMessage('Type it')}</a></li>
                    <li class="drawIt"><a href="#draw-it" id='drawItLink'>${gs.getMessage('Draw it')}</a></li>
                    <a class="clearButton" href="#clear">${gs.getMessage('Clear')}</a>
                </ul>
            </j:if>
            <j:if test="${sysparm_draw_only == 'true'}">
                <p class="drawItDesc">${gs.getMessage('Draw your signature')}</p>
                <div class="sigNav">
                    <a class="clearButton" href="#clear">${gs.getMessage('Clear')}</a>
                </div>
            </j:if>
            <div class="sig sigWrapper">
                <div class="typed"></div>
                <canvas class="pad"></canvas>
                <input type="hidden" name="output" class="output"/>
            </div>
            <p/>
            ${gs.getMessage('Filling in the following information will constitute your eSignature and will have the same legal impact
as signing a printed version of this document.')}
            <div style="float:right">
                <button id='cancelSignature' data-dismiss="GlideModal" onclick="return onCancelSignature();" class="btn btn-default"
style="margin-right:10px;">${gs.getMessage('Cancel')}</button>
                <button id='acceptSignature' onclick="return onAcceptSignature();" class="btn btn-primary">${gs.getMessage('Accept')}
</button>
                <input type="hidden" id="btn_clicked" name="btn_clicked" value="none"></input>
            </div>
        </div>
        <canvas id="typedCanvas" style="display:none;"></canvas>
    </g:ui_form>
</j:jelly>
```

Activate the Signature Pad plugin

To activate signature pad in your application, activate the Signature Pad plugin [com.snc.signaturepad]. The Signature Image [signature_image] table installs with this plugin.

Before you begin

Role required: admin

About this task

To purchase a subscription, contact your ServiceNow account manager. After purchasing the subscription, activate the plugin within the production instance.

You can evaluate the feature on a sub-production instance without charge by requesting it from the HI Customer Service System.

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Document Templates

With the ServiceNow® Document Templates application, you can create HTML and PDF document templates to generate standard letters or documents. You can automate and simplify the process of filling, signing, and reviewing a document online.

In addition, you can perform the following tasks:

Enable multiple participants to collaboratively work on a single document

Create specific tasks for specific participants such as sign, fill, or review. Auto initiate tasks based on the order defined for the participants.

Collect repetitive information and furnish it wherever necessary

Retain information on the document so that the participants do not have to fill the document all over again. Validate and retrieve data at any point in time.

Gain a real-time insight

Preview the document at any stage during the information input process. Understand at what stage and with which participant is the action pending.

Notify the participant

Notify participants about their assigned document tasks.

Secure a document

Provide document access only to mapped participants.

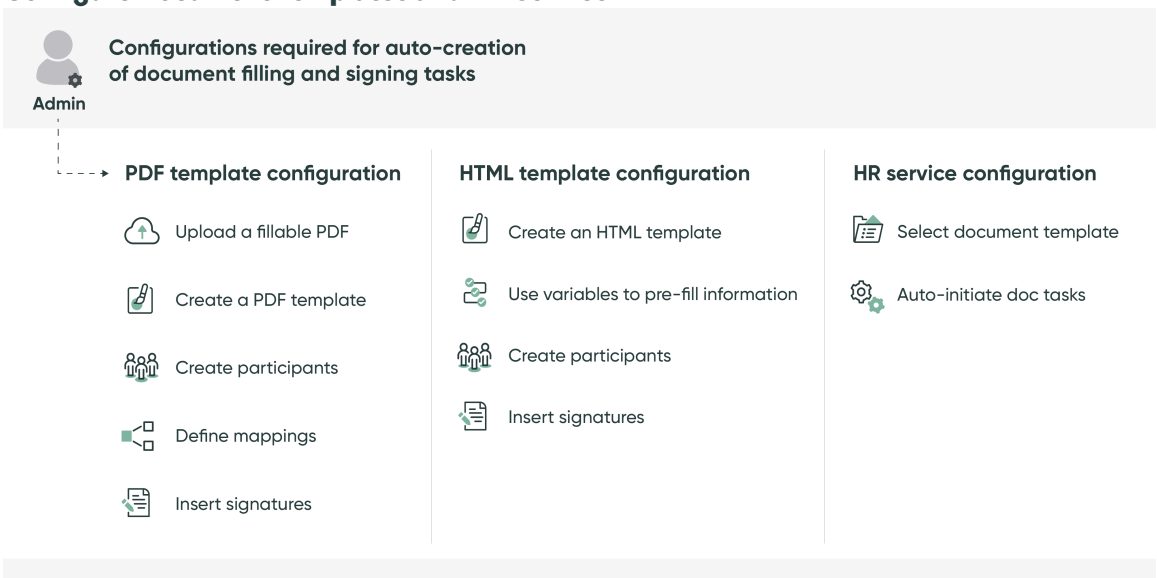
Exploring Document Templates

Understand how you can use the Document Templates application from activating the plugin until filling, signing, and approving a document online.

Note:
Only HTML and PDF document templates are supported in HR Service Delivery. Word document templates is not supported in HR Service Delivery.



1. Activating plugin

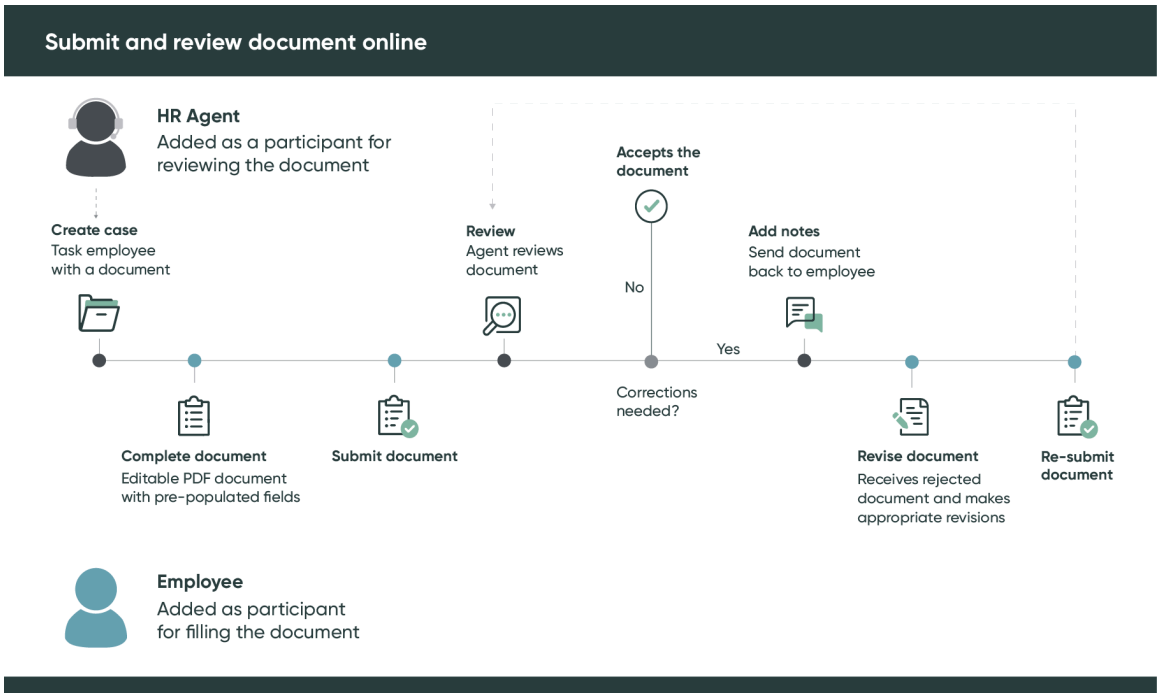
An administrator activates the Document Templates plugin [com.snc.document_templates].

Configuring Document Templates and HR service

An administrator configures a document template by defining participants, defining tasks for participants, and marking signature blocks. Associates the document template to the HR template of a service and initiates document tasks from a case.

Configure Document Templates and HR service

Working on assigned document tasks



Participants receive document tasks for filling, signing, and reviewing a document. When the document tasks of all the participants are complete, the final document is added as an attachment to the case.

Use Cases

Possible use cases for Document Templates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Submitting and approving a document online

This is a use case where a document is to be filled out by an employee and reviewed by an HR agent.

An administrator configures an HR service (by selecting a document template and enabling the case option) and creates a case with that HR service. When the state of the case changes to Ready or Work in progress, document tasks get initiated for both employee and HR agent.

The employee fills in the details and submits the document for review. If there are no corrections, the HR agent approves the document, else, the HR agent adds notes and rejects the document.

Document tasks are again initiated for both employee and HR agent. The employee makes the appropriate revisions and resubmits the document. After the HR agent approves the document, it gets added as an attachment to the case.

Completing onboarding activities for an employee

This is a use case where an employee requires to complete onboarding activities such as submitting a document, requesting an ID card, and requesting a laptop.

An administrator configures an HR service (by selecting the document template and enabling the case option) and configures an activity in a life cycle event with that HR service.

When the lifecycle activity is triggered, a case gets created with that HR service. When the state of the case changes to Ready or Work in progress, a document task gets initiated for the employee. After all the tasks of the HR case are complete, the document (submitted by the employee) gets added as an attachment to the case.

Use Guided Tours in Document Templates

Use Guided Tours in Document Templates to get instructions on how to create a document template.

Before you begin
Role required: sn_doc.admin or sn_doc.writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Guided Tours help train and onboard users within the workspace. Each tour is designed to provide an overview, guide you through a task, or complete a process. If needed, administrators can create more tours. For more information, see Guided tours.

When you visit a page that has a guided tour for the first time, a welcome screen appears. You can choose to either begin the tour or skip the tour. The tour can be revisited from the Help Center menu.

Procedure

1. Navigate to **All** > **Document Templates** > **All Document Templates**.
2. Select **New**.
3. Select one of the following templates:
   - **HTML Document Template**
   - **PDF Document Template**
4. Select the **Show help** icon ().
5. **Optional:** Select the **Pin Help Center menu** icon  to pin the Help Center side panel on the page.
6. Select **Take a Tour**.
7. Take the necessary action and select **Next** to progress through the tour.
   For ending the tour at any point, you can select **End Tour** in the side panel or select the **Close** button in the pop-up window and confirm to end the tour.
8. Select **Done** after the tour is ended.

Setting up Document Templates

Set up Document Templates to automate and simplify the process of filling, reviewing and signing a document online.

Application activation

You can activate the Document Templates application from ServiceNow Store.

Note:
PDF document template and HTML document template are available with the Document Templates application. For Word document Template, Contract Management Pro (paid) or Legal Service Delivery (paid) license is required.

- To configure and use a PDF document template, see Document Templates of type PDF (Advanced forms).
- To configure and use an HTML document template, see Document Templates of type HTML.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Using Document Templates: HR Service Delivery use case

Using Document Templates.

Document template categories

Document template categories help you to categorize similar documents together. It makes finding the correct document template easier.

For example, you can have multiple employee verification letters depending on if the employee is full-time, part time, or contingent. You can create a document category and have those document templates stored in that category.

You can create a document category by navigating to **Document Templates** > **Document Template Categories**. After creating a document template category, you can add document templates to that category.

Important:
Document categories and document templates appear based on your user criteria.

Document Templates of type HTML

An HTML document template uses variables to pre-fill information from tables into the document. You can create how the document looks by defining the header, footer, images, placement of footer, and the text within the template. Using the HTML document template, you can collect e-signatures from multiple participants and generate a PDF document online.

Before you begin generating documents, configure the templates with your company logo and text. Obtain the following items and information to create or configure HTML templates.

- A page of your company letterhead.
- Copies of your current company employment verification letter and offer letter templates, if available.
- The logo image to use in your header.
- The logo image to use in your footer.

The following flow describes how you can use an HTML document template from configuring the template until signing and generating a PDF document online.

- Configure an HTML document template
- Create participants for an HTML document template
- Insert signatures
- Publish the HTML document template
- Document tasks generation.

Note:
You can also edit the body of the HTML template and generate a PDF copy before initiating document tasks.

Configure an HTML document template

Create or modify the document template with your unique company logo and audience criteria.

Before you begin

Role required: sn_hr_core.admin and Delegated developer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Document Templates** > **All Document Templates**.
2. Select **New**.
3. Select **HTML Document Template**.
4. On the form, fill in the fields.

HTML Template form

Field	Description
Name	Name of the document template.
Table	Table associated with the type of template. The table determines the available variables that can be used. **Note:** Tables appear based on the application scope that is selected.
Category	Document category in which the template is added.
User criteria	Audience criteria for this document. For example, you can create a letter intended for only Canadian employees. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Body	Text in the template. To insert variables, place your cursor in the desired location and select the variable. Available variables are listed under **Fields**. Document template styles are applied to regular text fields, and not for rich description fields. A rich description field preserves its own HTML formatting and style and is not overridden by the document template formatting and style. Use the formatting tools in the **Body** to apply formatting options, such as bold, italic, underline, font styling. The body is a place holder for HTML text and tokenized variables. **Note:** ○ Jelly and CSS Styling are not supported. ○ You can also use Document template scripts to dynamically change the text in the HTML body.
Start date	Date starting which the HTML document template is valid. **Start date** helps in maintaining multiple versions of same template. **Note:** Start date must be before the end date.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
End date	Date until which the HTML document template is valid. **End date** helps in maintaining multiple versions of same template. By default, if the values in **Start date** and **End date** are empty it will imply that the template will always be valid. If you specify an end date, you must also specify a start date.
Template date format	Format in which you want the date to appear when an agent previews the document, generates the attachment, or initiates document tasks for participants. **Note:** ○ When signing using a ServiceNow application or the AdobeSign application: If no value is selected in **Template date format**, the value specified in the **template_date_format** system property is considered. If both **Template date format** and **template_date_format** system property are empty, the value in the Date format field from the agent's user profile is considered. ○ When signing using a DocuSign application: The date format selected in Signing settings in the DocuSign application is considered over **Template date format** in the configured HTML template in a ServiceNow instance.
Template language	Language in which you want dynamic tokens to be translated when an agent previews the document, generates the attachment, or initiates document tasks for participants. The **Template language** field is also used for full template translation. **Note:** ○ Template language is a mandatory field. The default language is none. ○ Translation feature is available only when language plugins are installed on the instance.
Select variables	List of variables that can be used in the body of the template. Variables pull information from the selected table to customize the template. Offsets are supported for date variables. Offsets extend or subtract days, weeks, or months from a date used in a template. Valid date offset variables are: ○ + (plus) ○ - (minus) ○ d (days)

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ w (weeks) ○ m (months) Examples: ○ Offer letter (five days after the stated date): Your offer is valid until ${Date +5d}. ○ Benefits for terminated employee (two weeks from termination date): Your benefits end effective ${subject_person.hr_profile.employment_end_date +2w}. **Note:** Only variables that you have access appear.
Signing type	Option to specify the application that is used for signing the document. For example, ServiceNow Sign, DocuSign or AdobeSign. **Note:** Signing types are available only when the respective integration plugins are installed.
Header	
Header image	Image to be displayed in the header. You can add your company logo using this feature. **Note:** Supported file types are: JPEG, JPEG2000, GIF, PNG, BMP, WMF, TIFF, and JBIG2.
Header image position	Position where you want the header image to appear : left, right, or center.
Header image height	Height of the image in the header. **Important:** ○ The height and width of the image is scaled proportionally based on the value that you specify. ○ Ensure that the height of the image is lesser than the value specified in the **Page size** field, otherwise, the image is cropped.
Footer	
Footer image	Image to be displayed in the footer. **Note:** Supported file types are: JPEG, JPEG2000, GIF, PNG, BMP, WMF, TIFF, and JBIG2.
Footer image height	Height of the image in the footer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Important: ○ The height and width of the image is scaled proportionally based on the value that you specify. ○ Ensure that the height of the image is lesser than the value specified in the **Page size** field, else, the image is cropped.
Footer image position	Position where you want the footer image to appear: left, right, or center.
Footer text	Text to be displayed in the footer. For example, you can add proprietary and confidential statements.
Footer text position	Position where you want the footer image to appear: left, right, or center.
Vertical alignment	Vertical alignment of the footer text with the footer image.
Page	
Page size	Size of the page that can be selected from the list such as Letter, A4, or Legal.
Custom font	Custom font from the PDF Generation Font Families table. **Important:** Make sure that you use the custom font family in the CSS of the HTML body.
Top/Bottom margin	Space from the top of the page until the starting of the HTML content or space from the bottom of the page until the ending of the HTML content.
Left/Right margin	Space from the left of the page until the starting of the HTML content or space from the right of the page until the ending of HTML content.

5. Place the mouse in the desired location in the body of the template and select the **Insert Date** button to insert date variables.
   You can use the button multiple times to add different types of dates based on the variables you choose.
6. Select **Add blocks**.
   a. To add an existing document block to the template, in Search blocks, type in the name of an existing document block, select the document block, and select **Insert**.
   b. To add a new document block to the template, click **Create New Block**. For more information, see Create document blocks in Document Templates.
7. To automatically generate Table of Contents (TOC) and page numbers in the document that is generated from an HTML template, perform the following steps:
   a. In the **Table of Contents** field, select the TOC configuration that you want to apply on the HTML template.
   b. In the **Page number** field, select the page number configuration that you want to apply on the HTML template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. Select **Insert Table of Contents** and insert the Table of Contents macro in the required position in the body of the HTML template.

> **Note:**
> The Table of Contents macro will not be displayed if the TOC configuration is not selected in the **Table of Contents** field.

8. To translate content in templates using Localization Framework, select **Translate**. For more information, see Use Localization Framework for Document Templates.
9. To save your document and remain on the **HTML Document Template** form, click **Save**.
10. To save and return to the All Document Templates list, select **Submit**.

Create participants for an HTML document template

Define actions and the order of actions for participants. The type of action and order are considered while initiating document tasks.

Before you begin

- Role required: sn_hr_core.admin
- This content applies only to the document templates that are created in the Document Templates application (sn_doc). Document Templates is different from HR Document Templates. For HR Document Templates, refer to HR document templates.

Procedure

1. Navigate to **All** > **Document Template** > **All Document Templates**.
2. Select the HTML template you want to use.
3. Configure the required template and click **Submit**.
4. In the **Participants** related list, click **New**.
5. On the form, fill in the fields:

Participant form

Field	Description
Name	Display name of the mapped participant.
Action	Type of action performed by the participant: Sign **Note:** In addition, the participant can choose to decline signing the document. The option to decline signing appears only when the **Signing Type** is **ServiceNow**. For more information, see Sign an HTML document.
User	Mapping user field to a participant.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: ○ When you select a value, the participant is considered to be an internal user. If Participant Name and Participant Email fields (optional for internal user) are filled along with User field, the electronic signature task will be sent to Participant Name and Participant Email, not the Name and Email from the User field. When you do not select a value in the User field, the participant will be considered an external user (Participant who does not have access to ServiceNow system). For such participants, Participant Name, Participant Email are to be specified. ○ The value in the User field is cleared when you save or update the template with the Advanced script field selected.
Participant name	Option to specify the name when the defined participant is an external user. **Note:** ○ When you select a value in User field, the Participant name field will be an optional field. When you do not select a value in User field, the Participant name field will be a mandatory field. ○ The value in the Participant name field is cleared when you save or update the template with the Advanced script field selected. ○ This field is available only when signing type is AdobeSign or DocuSign.
Participant email	Option to specify an email address when the defined participant is an external user. **Note:** ○ When you select a value in the User field, the Participant email field will be an optional field. When you do not select a value in User field, Participant email field will be a mandatory field. ○ The value in the Participant email field is cleared when you save or update the template with the Advanced script field selected. ○ This field is available only when signing type is AdobeSign or DocuSign.
Table	Table (sys_user table or any table extending sys_user table) from which you are choosing to populate the variables.
Document template	Name of the document template.
Document task template	Template selected on the Document Template task table to populate additional details for the document task, such as description and short description for sign tasks. **Note:** If additional details are not defined, the default values of the template are used in the document template task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Advanced script	Option to display the Script field.
Script	Script indicating the participant conditions with User ID, Participant name and Participant email. This field is enabled only when the Advanced script field is selected.
Optional	When enabled, a participant will be skipped if the participant name and email is not available. This check is done during runtime only and not while configuring the template.
Signature height	Option to indicate the height of signature.
Signature width	Option to indicate the width of signature.

6. Click **Submit**.

Insert signatures

Insert signatures in an HTML document template by selecting participants from the list.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. Configure an HTML document template.
2. Create participants for an HTML document template.
3. Place the cursor in the desired location in the **Body** field.
4. Select **Insert Signature** to insert signature variable for a participant.
5. In the Add a signature window, select a participant.

> **Note:**
> Signing date is not supported.

6. Click **OK**.

Variables supported in HTML document templates

Include customized variables in a document template in addition to the variables that are available in the **Select Variables** field in the HTML document template configuration page.

Supported Variables

The following variables are supported in an HTML document template:

- Date
- Date/Time
- Duration
- Email
- HTML
- IP Address

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- List Collector
- Lookup Multiple Choice
- Lookup Select Box
- Multi Line Text
- Multiple Choice
- Numeric Scale
- Reference
- Select Box
- Single Line Text
- URL
- Wide Single Line Text
- Yes / No
- CheckBox
- Requested For

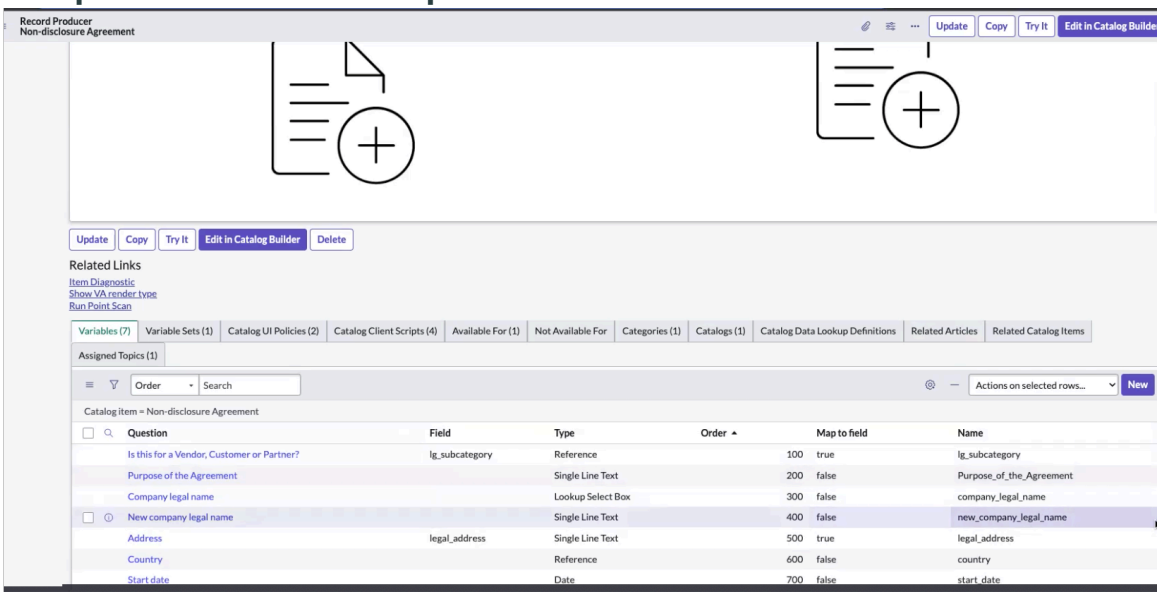
Unsupported Variables

The following variables are unsupported in an HTML document template:

- Attachment
- Break
- Container End
- Container Split
- Container Start
- Custom
- Custom with Label
- UI Page
- Label
- Rich Text Label
- Masked
- Multi Row Variable Set

Add customized variables in a document template

Customize variables at a record producer level, and call out those variables in the HTML document template that you are configuring.

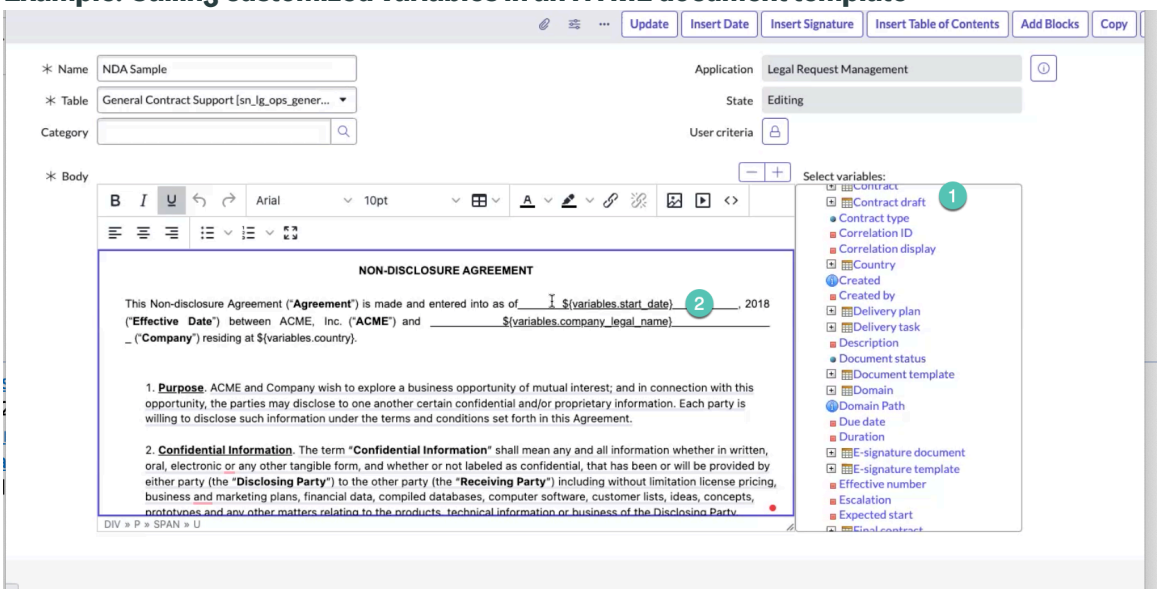


Before you begin
Role required: admin

Procedure

1. Open a record producer and fill in the required fields.
   Add the variables that you want to use in the **Variables** list.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Example: Variable list in a record producer

2. Open an HTML document template that has the same table selected as the record producer. Call out the customized variables in the HTML template body by typing in the variable in this format, for example, $ {variables.start_date).

Note:
start_date refers to the exact **Name** of the variable in the **Variables** list in the record producer.

Example: Calling customized variables in an HTML document template

1 refers to variables from the table selected in the HTML document template.

2 refers to customized variables from the variable list in the record producer.

Document template scripts

With document template scripts, you can dynamically change the text in the body of the HTML template. Document template scripts allow you to perform simple tasks, such as displaying HR data, and complex ones, such as making advanced database queries.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can add a `${template_script:script name}` embedded script tag to the body of the HTML template, replacing script name with the name of the script you created. This makes it easy to use the same scripts in multiple document templates. You can create a script by navigating to**Document Templates** > **Document Templates Script**.

Example of how to create and use a document template script in an HTML template

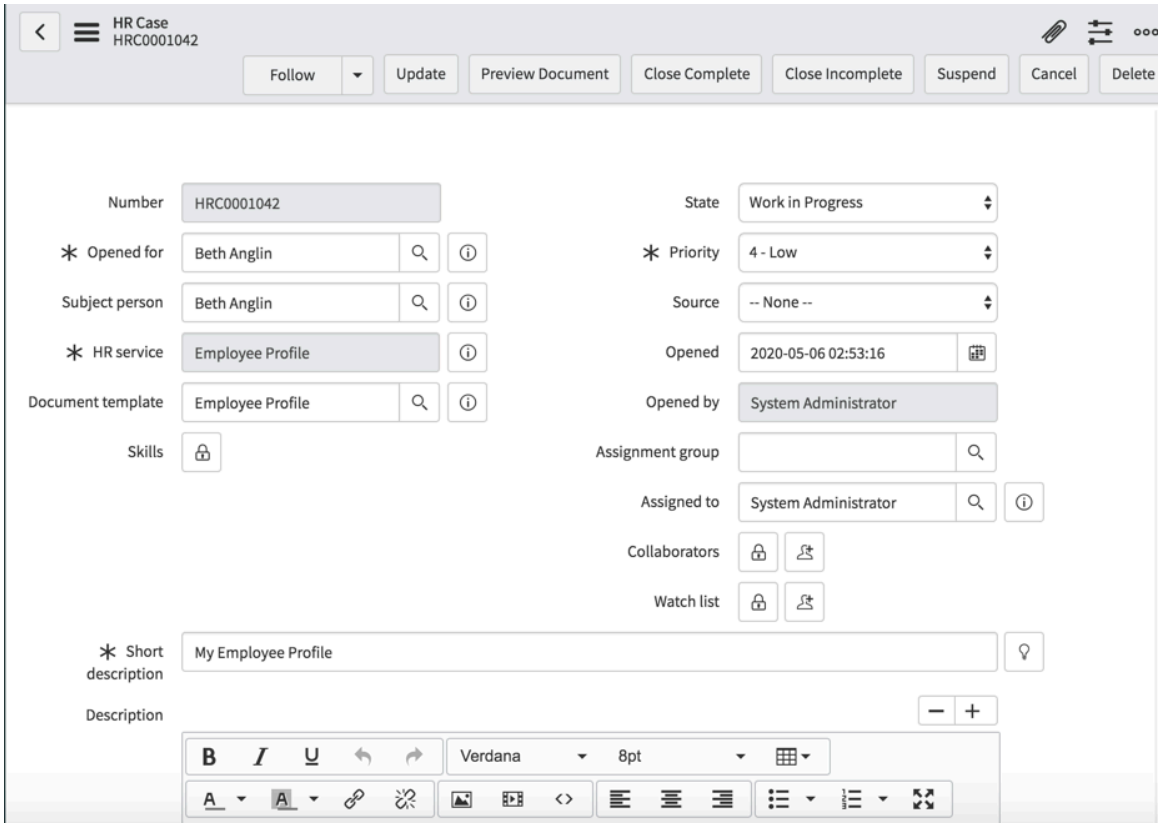
1. The employee_emergency_contacts script populates the emergency contacts list in an Employee Profile document.

```
(function runTemplateScript(target /*GlideRecord for target
 task*/ ) {
 var getHeaderCell = function(label) {
  return '<th style="border: 1px solid #dddddd; text-align:
 left; padding: 8px;">' + label + '</th>';
 };
 var getDataCell = function(value) {
  return '<td style="border: 1px solid #dddddd; text-align:
 left; padding: 8px;">' + value + '</td>';
 };

 var html = '';
 var hrTaskGr = new GlideRecord('sn_hr_core_contact');
 hrTaskGr.addQuery('user', target.getValue('subject_person'));
 hrTaskGr.query();
 while(hrTaskGr.next()) {
  html = html + '<tr>';
  html = html + getDataCell(hrTaskGr.getDisplayValue('name'));
  html = html +
 getDataCell(hrTaskGr.getDisplayValue('mobile_phone'));
  html = html +
 getDataCell(hrTaskGr.getDisplayValue('relation_to_employee'));
  html = html + '</tr>';
 }

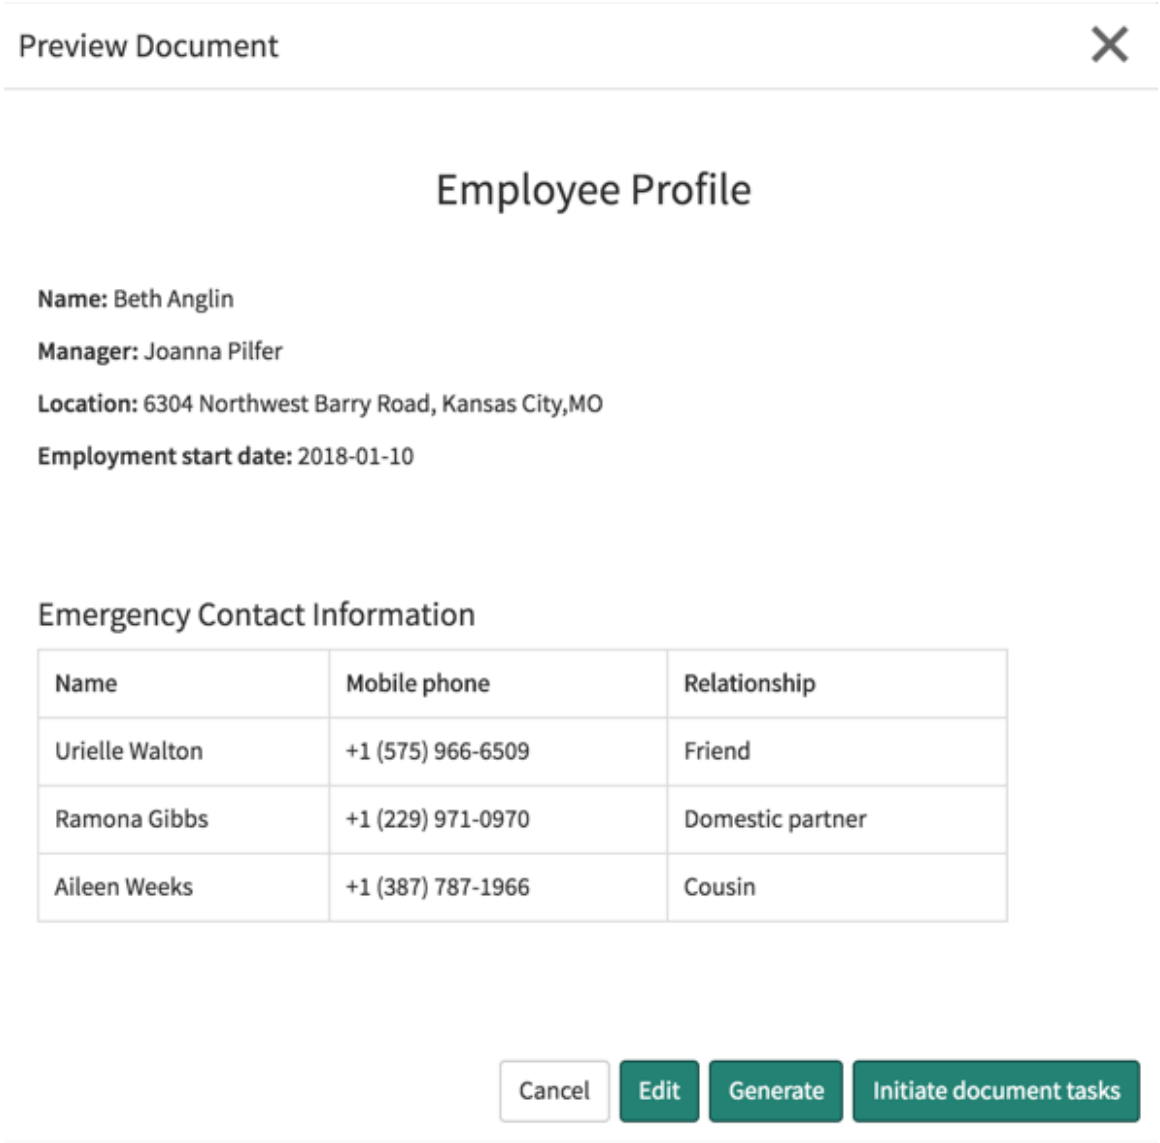
 if(!gs.nil(html))
  html = '<h4>Emergency Contact Information</h4><table
 width="500px;"><tr>' + getHeaderCell('Name') +
 getHeaderCell('Mobile phone') + getHeaderCell('Relationship')
 + html + '</table>';

 return html;
})(target);
```



2. The employee_emergency_contacts script is called in an HTML document template by typing **${template_script:employee_emergency_contacts}** in the body of the Employee Profile HTML document template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



3. The Employee Profile HTML document template is selected on a case and the document template is generated with emergency contacts list as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Example of how document template script translates text in an HTML template

Following is an employee_emergency_contacts script that populates the emergency contacts list in an Employee Profile document.

`docTemplate` in this script references to the document template record, which helps in identifying the language and date format that are selected on the document template. `getDisplayValueLang` is an API that helps in changing the language of dynamic tokens to the display language set in the **Template language** field in a document template. `getByFormat` is an API that helps in displaying the date in the format set in the **Template date format** field in a document template.

```
(function runTemplateScript(target /*GlideRecord for target
 task*/, docTemplate /*GlideRecord for doc template*/) {

    //Add your code here to return the dynamic content for
 template
    var getHeaderCell = function(label) {
        return '<th style="border: 1px solid #dddddd;
 text-align: left; padding: 8px;">' + label + '</th>';
```

```
    };
    var getDataCell = function(value) {
        return '<td style="border: 1px solid #dddddd;
 text-align: left; padding: 8px;">' + value + '</td>';
    };

    var html = '';
    var templateLang = docTemplate.getValue('language');
    var templateDateFormat =
 docTemplate.getValue('template_date_format');
    var hrTaskGr = new GlideRecord('sn_hr_core_contact');
    hrTaskGr.addQuery('user',
 target.getValue('subject_person'));
    hrTaskGr.query();
    while(hrTaskGr.next()) {
        var dob = hrTaskGr.getDisplayValue('date_of_birth');
        var grDOB = new GlideDateTime(dob);
        html = html + '<tr>';
        html = html +
 getDataCell(hrTaskGr.getDisplayValue('name'));
        html = html +
 getDataCell(hrTaskGr.getDisplayValue('mobile_phone'));
        html = html +
 getDataCell(hrTaskGr.getElement('relation_to_employee').getDisp
layValueLang(templateLang));
        html = html +
 getDataCell(hrTaskGr.getElement('priority').getDisplayValueLang
(templateLang));
        html = html +
 getDataCell(grDOB.getLocalDate().getByFormat(templateDateForm
at)
        );
        html = html + '</tr>';
    }

    if(!gs.nil(html))
        html = '<h4>Emergency Contact Information</h4><table
 width="500px;"><tr>' + getHeaderCell('Name') +
 getHeaderCell('Mobile phone') + getHeaderCell('Relationship')
 + getHeaderCell('Priority') + getHeaderCell('Date of birth') +
 html + '</table>';

    return html;

})(target, docTemplate);
```

Following is an example of how dynamic tokens are translated in an HTML doc template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

1. While configuring an HTML template, the template language is selected as German and date format is set to dd/MM/yyyy.

2. The HTML document template is referenced in an HR case.
3. When the agent previews the document, generates the attachment, or initiates document tasks for participants, priority and relationship fields are translated into the German language, and dates appear in the dd/MM/yyyy format.

Emergency Contact Information

Name	Mobile phone	Relationship	Priority	Date of birth
Dillon Booth	+1 (930) 242-8957	Nichte	Primär	16/11/1997
Hope Boyle	+1 (596) 999-0916	Neffe	Alternative	05/02/1989
Byron Greer	+1 (841) 172-8171	Neffe	Alternative	04/09/2000

Priority: 4 – Niedrig

Document blocks in Document Templates

Replace blocks of text in a document based on certain rules so that you do not have to create multiple template versions of the same document.

Key features include:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Create document blocks that you can use in multiple HTML templates. Each document template block can have multiple block contents. Each block content can be mapped to a condition. The first block content that matches the condition will be considered.

  Assume that there is a clause in a verification letter that is intended for employees of a particular geography or of a particular type. In this case, you can write a condition based on parameters such as employee location or employee type. Then, associate the condition to a content that must appear conditionally in the document that is being generated.

- Translate document templates and document block content by installing Localization Framework and language plugins that you require.

Create document blocks in Document Templates

Create document blocks that you can use in multiple HTML templates.

Before you begin

Role required: sn_doc.admin

Procedure

1. Navigate to **All** > **Document Templates** > **Document Template Blocks**.
2. Click **New**.
3. On the form, fill in the fields:

Document Templates Block form

Field	Description
Name	Suitable name for the document block.
Table	Table to which you want to associate the document block.
Topic detail	Used to categorize template blocks according to the service for which they are applicable. Each topic category can have one or more topic details and each topic detail can have one or more HR services.
Topic category	Used to categorize template blocks according to the service for which they are applicable. Each topic category can have one or more topic details and each topic detail can have one or more HR services.
Active	Option to make the document block available for use.
Description	More information about the document template block.

4. Click **Submit**.

What to do next

1. Add content to the document template block. For more information, see Create block content in Document Templates.
2. View the HTML document templates which contain the document blocks.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create block content in Document Templates

Each document template block can have multiple block contents. Each content mapping to a condition.

Before you begin

Role required: sn_doc.admin

Procedure

1. Navigate to **All** > **Document Templates** > **Document Template Blocks**.
2. Select a document template block.
3. In the **Document Templates Block Contents** related list, click **New**.
4. On the form, fill in the fields:

Document Template Block Contents form

Field	Description
Name	Suitable name for the block content.
Block	Name of the document template block to which you want to associate the document block content.
Order	Order in which the conditions are matched. The first block content that matches the condition is considered.
Active	Option to indicate that the block content is available to use.
Applies when	Conditions are applied on the selected table on document template block.
Applies to	User criteria to which the block content is applicable.
Applies to user	User to whom the selected user criteria is applicable. **Note:** If no value is selected in the **Applies when** and **Applies to** fields, then the block content will be applicable for the HTML template irrespective of the user and selected table.
Body	Text that you want to include in the block content.

5. Click **Submit**.

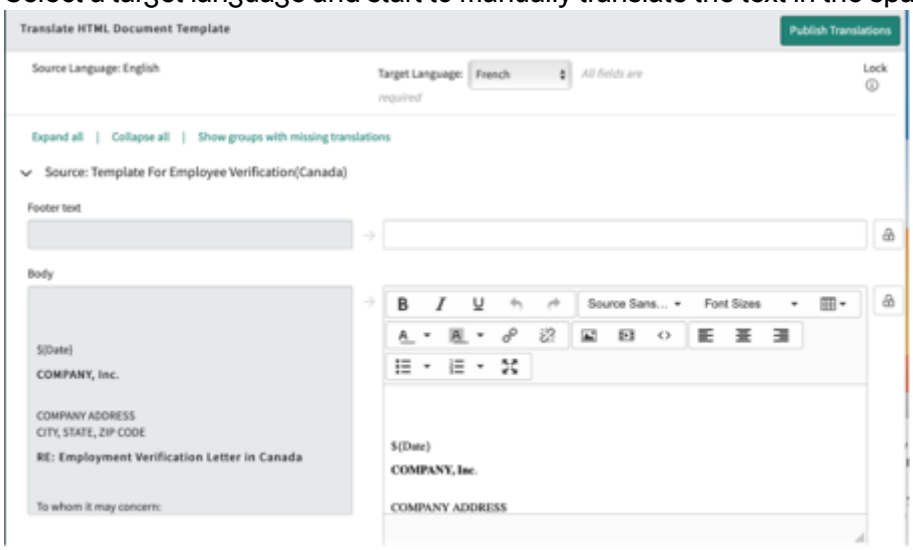
Use Localization Framework for Document Templates

Translate content in Document Templates and document blocks Localization Framework.

Before you begin

- Role required: sn_doc.admin
- Install the Localization Framework Installer plugin (com.glide.localization_framework.installer).
- Configure Localization Framework with the required artifacts. See Artifact Configurations for more information.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



- Activate the required languages and configure them with Localization Framework. For more information, see Activate a language.
- If you want to use machine translators, activate the Dynamic Translation plugin (com.glide.dynamic_translation). Configure the Dynamic Translation framework for the translation service provider. For more information, see Dynamic Translation.

Procedure

1. Select a document template or a document block.
2. Click **Translate**.

> **Note:**
> If the Dynamic Translation application is installed, the **Machine Translate** button appears. The configured machine translator converts only the content (in the document template or document block) to the required language, but not the token values.

3. Select a target language and start to manually translate the text in the space given.

4. Click **Publish Translations**.
   A copy of the source template is created and moved to Draft state.

Document Templates of type PDF (Advanced forms)

A PDF document template originates from a fillable PDF or a standard PDF with inline signatures. Using the PDF document template, you can collect details and e-signatures from multiple participants, review, and generate a filled PDF document.

> **Important:**
>
> You can create a PDF document template either:
>
> - uploading a fillable, editable PDF document into the form.
> - using a PDF from Managed Documents.

The following flow describes how you can use a PDF document template from configuring the template until filling, signing, reviewing, and generating a PDF document.

- Configure a PDF document template.
- Create participants for a PDF document template.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Define a PDF field mapping.
- Mark a signature block.
- Publish the PDF document template.
- Document tasks generation.

Configure a PDF document template

Upload an editable, fillable PDF template and customize the template as per your business needs.

Before you begin

Role required: sn_hr_core.admin and Delegated developer

Procedure

1. Navigate to **All** > **Document Templates** > **All Document Templates**.
2. Click **New**.
3. Select **PDF Document Template**.
4. On the form, fill in the fields:

PDF Template form

Field	Description
Name	Name of the PDF document template.
Table	Tables appear based on the application scope selected.
Category	Document category in which the template is added.
Application	Scope of the application in which the document template is created.
State	Current state of the document template. ○ **Draft**: Indicates that the document template is not yet published. ○ **Editing**: Indicates that the document template is being edited after it has been published. ○ **Published**: Indicates that the document template can be consumed by services and cases.
Active	Option for enabling the PDF document template for use.
User criteria	Audience criteria for this document. For example, you can create a letter intended for only Canadian employees. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Signing type	Option to specify the application that is used for signing the document. For example, ServiceNow Sign, DocuSign, AdobeSign, Digital Signature - Smart Cards.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Signing Types are available only when respective integration plugins are installed.
Document storage destination	Option to specify the location where the signed document is stored. **Note:** This option appears only when **Digital Signature - Smart Cards** is selected as Signing Type.
Owner	Option to specify the owner of the document storage destination. **Note:** This option appears only when **Digital Signature - Smart Cards** is selected as Signing Type.
Attachment type	Option to upload a new document or select a document from ServiceNow Managed Documents.
Document revision	Option to select a document from ServiceNow Managed Documents. **Note:** This field appears when **Select from document revision** is selected in **Attachment type**.
Document	Option to upload the attachment of a fillable PDF for further customization. **Note:** This field appears when **Upload new document** is selected in **Attachment type**.
Start date	Date starting which the PDF document template is valid. **Start date** helps in maintaining multiple versions of same template. **Note:** Start date must be before the end date.
End date	Date until which the PDF document template is valid. **End date** helps in maintaining multiple versions of same template. By default, if values in **Start date** and **End date** are blank it will imply that the template will always be valid. If you specify an end date, you must also specify a start date.
Template date format	Format in which you want the date to appear when an agent previews the document, or generates the attachment, or initiates document tasks for participants.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: ○ When signing using a ServiceNow application or the AdobeSign application: If no value is selected in **Template date format**, the value specified in the **template_date_format** system property is considered. If both **Template date format** and **template_date_format** system property are empty, the value in the Date format field from agent's user profile is considered. ○ When signing using the DocuSign application: The date format selected in Signing settings in the DocuSign application is considered over **Template date format** in the configured PDF template in a ServiceNow instance.
Template language	Language in which dynamic tokens are translated when an agent previews the document, or generates the attachment, or initiates document tasks for participants. **Note:** ○ Template language is a mandatory field. The default language is none. ○ Translation feature is available only when the language plugins are installed on the instance.
Acknowledgment text	Text that prompts the user to select a check box when submitting a filled document.
Source template	Source template from which you created a copy of current template.

5. Click **Submit** or **Save**.

What to do next

- Click the **Parse PDF** related link to automatically parse information on the PDF and store that information in the PDF Mapping table for reuse.
- In the **Participants** related list, create participants.
- In the **PDF Template Mappings** related list, define field mappings.
- Click Mark a signature block.
- Publish the template. Flows using the template might get effected in case you want to edit a published template.

Define a PDF field mapping

Define editable fields and store signature mappings using the PDF field mappings section.

Before you begin

Role required: sn_hr_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Information on the PDF is parsed and stored in the PDF Mapping table. **Parse PDF** will allow you to store the fillable fields and **Mark signatures** will allow you to add signature mappings.

Procedure

1. Navigate to **All** > **Document Templates** > **All Document Templates**.
2. Select **PDF Document Template**.
3. Configure the PDF template.
4. Click the **Parse PDF** related link.

Note:
The link appears only for an editable PDF.

The PDF Mapping related list displays field mappings.

PDF Template Mapping

Field	Description
Field name	Display name that represents the document field.
PDF template	PDF template to which the mapping record belongs.
Document field	Field from the fillable PDF document that is automatically created through the **Parse PDF** related link. **Important:** Editing Document field is not allowed as it might break the document template flow.
Document field type	Type of field you are mapping, such as Signature or Checkbox.
Preview value	Field-mapping value for preview. **Note:** Use this field to test a field value without going through the process of mapping fields or creating a case to test your mappings. What you enter here appears while you preview the document.
Advanced script	Use to configure script fields for complex mapping of a field. For example, to map a Social Security Number from the HR Profile [sn_hr_core_profile] table to a document and format it correctly, a script is used.
Mandatory	Mandatory field to be filled by the assigned participant. **Note:** This field is not applicable for document field of type checkbox.
Mapping table	Table that the mapped fields come from.
Read only	Option for enabling the editing of the field by the selected participant.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Mapping field	Field that maps information into your document.
Participant	Participant who can edit the field in the document.
Page number	Page number of the PDF document which contains the field. Page number where the field is present.
Format	Format in which values are to be entered by the participant. If the participant does not enter value in the specified format, a validation error appears for the participant.
Active	Option for activating the field mapping.
Use Signing date	Option to record the signature date automatically in the specified field in PDF document. **Note:** This option is applicable to ServiceNow Sign only.
Date offset type	Indicates if the date should be Before, On, or After the specified date. **Note:** This field appears only for a date field when the **Advanced script** option is deselected.
Date offset quantity	Measuring units for the offset such as days, weeks, or months. **Note:** This field appears only for a date field mapping when the **Advanced script** option is deselected. It appears only when the **Before** or **After** values are selected in the **Date offset type** field.
Date offset units	Number of units to offset. **Note:** This field appears only for a date field mapping when the **Advanced script** option is deselected. It appears only when the **Before** or **After** values are selected in the **Date offset type** field.
Select date format	Format for the date field. Values are: ○ User date format: Indicates that the date format is picked from the participant's user preference. ○ Specific format: Indicates the format in which you want the participant to enter the date.
Specific date format	Specific format in which you want the participant to enter the date.
States	Options stored for the non text fields. For example, social status might includes options such as **Married** or **Single**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create participants for a PDF document template

Define actions and the order of actions for participants. The type of action and order are considered while initiating document tasks.

Before you begin

- Role required: sn_hr_core.admin
- You need to define participants only when you want to use the document template flow. If you only want to generate a PDF document, defining participants is not mandatory.
- This content applies only to the document templates that are created in the Document Templates application (sn_doc). Document Templates is different from HR Document Templates. For HR Document Templates, refer to HR document templates.

Procedure

1. Navigate to **All** > **Document Template** > **All Document Templates**.
2. Select the template you want to use.
3. Configure the required template and click **Submit**.
4. In the **Participants** related list, click **New**.
5. On the form, fill in the fields:

Participant form

Field	Description
Name	Display name of the mapped participant.
Action	Type of action to be performed by the participant such as **Fill**, **Sign**, or **Review**. **Important:** In case of ServiceNow signing, **Fill** and **Review** actions are available for a PDF template. In case of external signing, **Sign** action is available for PDF document template.
Order	Order in which a task has to be initiated for the participant to complete the action.
User	Mapping user field to a participant. **Note:** ○ When you select a value, the participant is considered to be an internal user. If Participant Name and Participant Email fields (optional for internal user) are filled along with User field, the electronic signature task will be sent to Participant Name and Participant Email, not the Name and Email from the User field. When you do not select a value in the User field, the participant will be considered an external user (Participant who does not have access to ServiceNow system). For such participants, Participant Name, Participant Email are to be specified. ○ The value in the User field is cleared when you save or update the template with the Advanced script field selected.

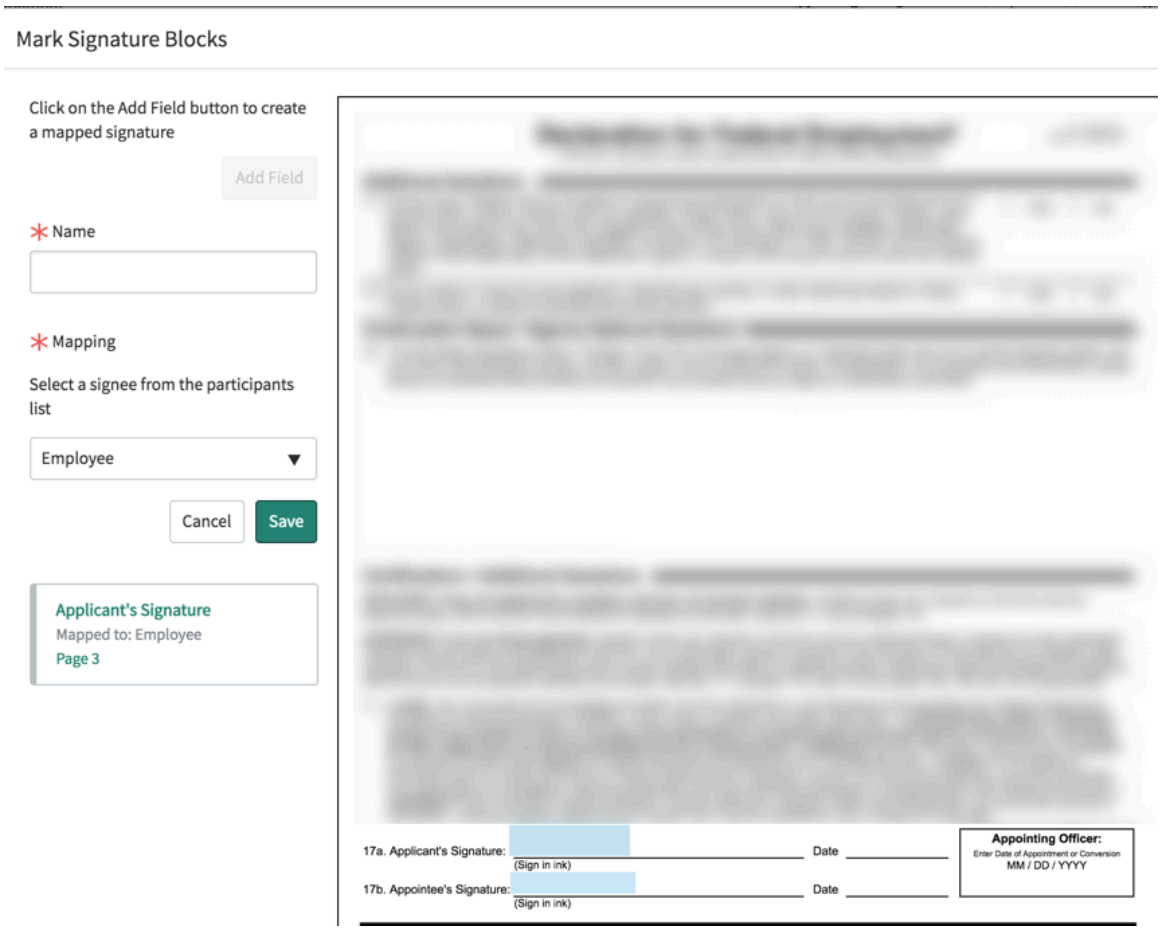
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Participant name	Option to specify the name when the defined participant is an external user. **Note:** ○ When you select a value in User field, the Participant name field will be an optional field. When you do not select a value in User field, the Participant name field will be a mandatory field. ○ The value in the Participant name field is cleared when you save or update the template with the Advanced script field selected. ○ This field is available only when signing type is AdobeSign or DocuSign.
Participant email	Option to specify an email address when the defined participant is an external user. **Note:** ○ When you select a value in User field, the Participant email field will be an optional field. When you do not select a value in User field, the Participant email field will be a mandatory field. ○ The value in the Participant email field is cleared when you save or update the template with the Advanced script field selected. ○ This field is available only when signing type is AdobeSign or DocuSign.
Table	Table (sys_user table or any table extending sys_user table) from which you are choosing to populate the variables.
Document template	Name of the document template.
Document task template	Template selected on the Document Template task table to populate additional details for the document task, such as description and short description for fill, sign and review tasks. **Note:** If additional details are not defined, the default values of the template are used in the document template task.
Due date source	Due date for the document task that is created for that participant.
Date offset type	Due date for the document task is picked from the task record. Additionally, you can offset the due date by days, weeks or months.
Advanced script	Option to display the Script field.
Script	Script indicating the participant conditions with User ID, Participant name and Participant email. This field is enabled only when the Advanced script field is selected.
Optional	When enabled, a participant will be skipped if the participant user and participant email is not available. This check is done during runtime only and not while configuring the template.

6. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result
The participant is added to the document template.



Mark a signature block

Specify the area in the PDF document where you want to collect the signatures of participants.

Before you begin
Role required: sn_doc.admin

Important:
You can mark signatures only if you have defined participants and mapped users to those participants.

Procedure
1. Navigate to **All** > **Document Template** > **All Document Templates**.
2. Select the PDF document template you want to use.
3. Configure a PDF document template.
4. Create participants for a PDF document template.
5. Click **Mark Signatures**.
6. In the Mark Signature Blocks window:
   a. Click **Add Field** and select the area where you want to collect the signature of a participant.
   b. In the **Name** field, specify a name for the signature mapping record.
   c. In the **Mapping** list, select a user from the mapped participants.
   d. Click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Click **Submit**.
   The signature mapping is added to the PDF Template Mappings section.

Document Templates configurations

Use Document Templates configurations to generate table of contents and page numbers on a PDF document that is generated from an HTML template.

Note:
Only if the *com.snc.pdfgenerator.html2pdf.api.version* property is set to 2 (default), the Table of Contents and Page number configuration features are available to use. If the *com.snc.pdfgenerator.html2pdf.api.version* property is set to 1, the Table of Contents and Page number configuration features are not available to use.

Create a TOC configuration in Document Templates

Create a TOC configuration to generate Table of Contents in a PDF document that is generated from an HTML document.

Before you begin
Role required: sn_doc.writer

Procedure

1. Navigate to **Document Templates** > **Document Configuration** > **Table of Contents Configurations**.
2. Click **New**.
3. On the form, fill in the fields:

Table of Contents Configuration form

Field	Description
Name	Name of the Table of Contents configuration.
Title	Table of Contents title that appears in the generated document.
Type	Table of Contents is displayed in a list view in the generated PDF document.
Heading numbering	Format in which you want the page numbers of the headings to be displayed. The values are: ○ None ○ Decimal
Table leader	Gap between the heading and page number. Table leader helps to correlate a section or a heading with its page number. The values are: ○ None ○ Dotted
Clickable	Enable or disable clickable links inside the generated Table of Contents.
Show page numbers	Option to display page numbers on the generated PDF document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: This option makes the page number configuration field on the document template mandatory.
Application	Application scope in which the TOC configuration is created.
Start numbering after table of contents	Option to begin page numbers after TOC ends. **Note:** ○ This field appears only when the **Show page numbers** field is enabled. ○ This field overrides the **Start numbering from page** field in page number configuration.

4. Click **Submit**.

Create a page number configuration in Document Templates

Create a page number configuration to automatically generate page numbers in a PDF document that is generated from an HTML document.

Before you begin
Role required: sn_doc.writer

Procedure

1. Navigate to **Document Templates** > **Document Configuration** > **Page Number Configurations**.
2. Click **New**.
3. On the form, fill in the fields:

Page Number Configurations form

Field	Description
Name	Name of page number configuration.
Page number format	Format in which page numbers are displayed on the generated PDF document: **Decimal**
Start numbering from page	Page from which you want the numbering to begin. **Note:** The value in this field is overridden by the **Start numbering after table of contents** in TOC configuration.
Application	Application scope in which the page number configuration is created.
Position	Vertical position of the page number: **Header** or **Footer**
Horizontal alignment	Horizontal alignment of the page number: **Left**, **Center**, or **Right**

4. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Work on a document task

Complete your document tasks from Employee Center.

Before you begin

Role required: none
You must have activated the Employee Center (com.sn_hr_service_portal) plugin.

Procedure

1. Navigate to **All** > **Self-service** > **Employee Service Centre**.

   > **Important:**
   > Alternatively, you can complete your document tasks by navigating to **Self-Service** > **My Document tasks**.

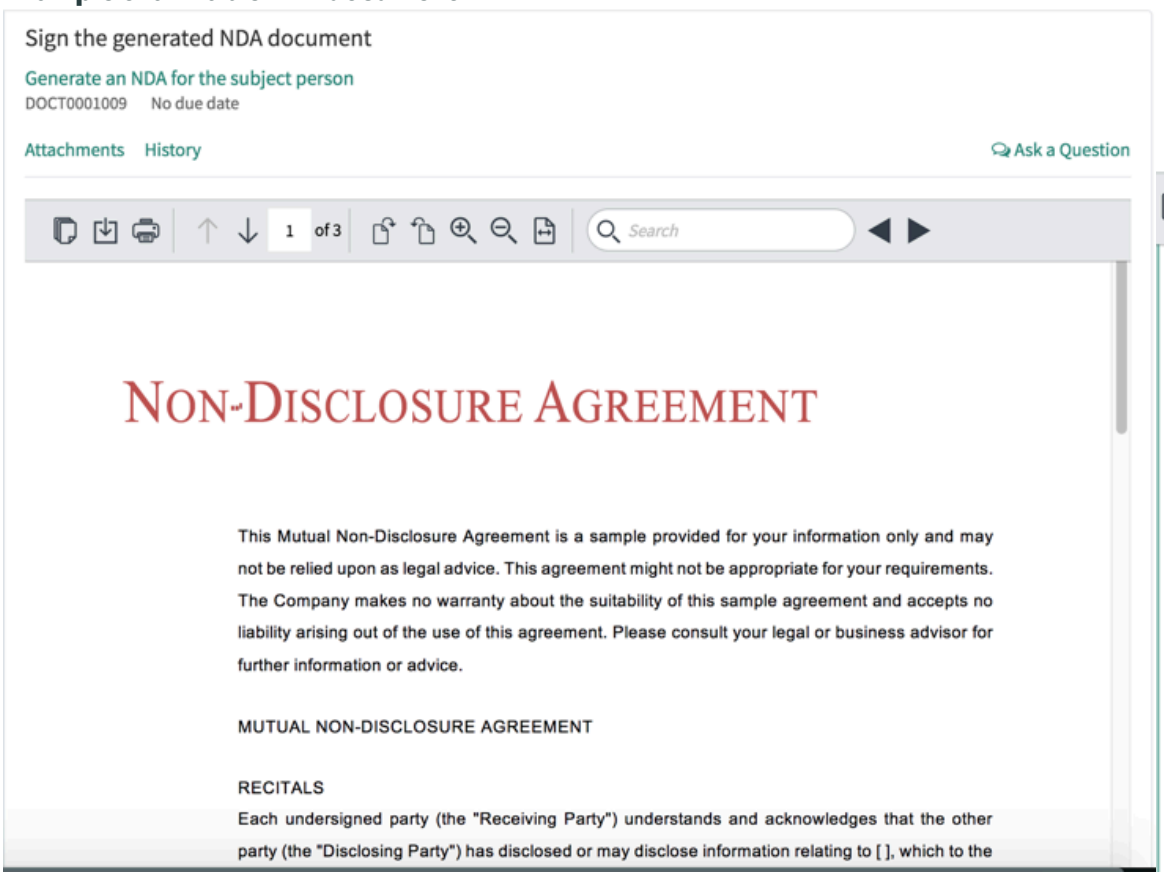
2. Select the To-dos page.
3. Work on any one of these document tasks that is assigned to you.

Fill and sign a PDF document

Complete your document task by filling in the required details and submitting the PDF document.

Before you begin

- Role required: none
- This content applies only to the document templates that are created in the Document Templates application (sn_doc). Document Templates is different from HR Document Templates. For HR Document Templates, refer to HR document templates.



Procedure

1. Navigate to **All** > **Self-service** > **Employee Center**.
   Alternatively, you can complete your document tasks by navigating to **Self-Service** > **My Document Tasks**.
2. Select the To-dos page.
3. Select the document task (filling) that is assigned to you.
4. Fill details in the editable fields.
5. Click the **Please Acknowledge** check box.
   This check box is displayed only if **Acknowledgement text** is added on the template.
6. Add your signature by typing or drawing.
7. If you want to clear the signature and sign again, click **Clear Signature**.
8. To view your signature in the document, click **Generate**.
9. To save your changes in the document, click **Save**.
10. Click **Submit**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The task is complete and appears in your Completed To Dos section. You can view and print the document with the submitted details.

Example of a fillable PDF document

Sign an HTML document

Complete your document task by signing and generating a PDF copy of the HTML document.

Before you begin

Role required: none

Procedure

1. Navigate to **All** > **Self-service** > **Employee Center**.
   Alternatively, you can complete your document tasks by navigating to **Self-Service** > **My Document Tasks**.
2. Select the document template task (signing) that is assigned to you.
3. Add your signature by typing or drawing.

> **Note:**
> If you do not agree with the content in the document, you can select the **I don't want to sign this document** option. You must enter your reason for declining, followed by **Decline and complete** to complete the task. The option to decline signing appears only when the **Signing Type** is **ServiceNow**.

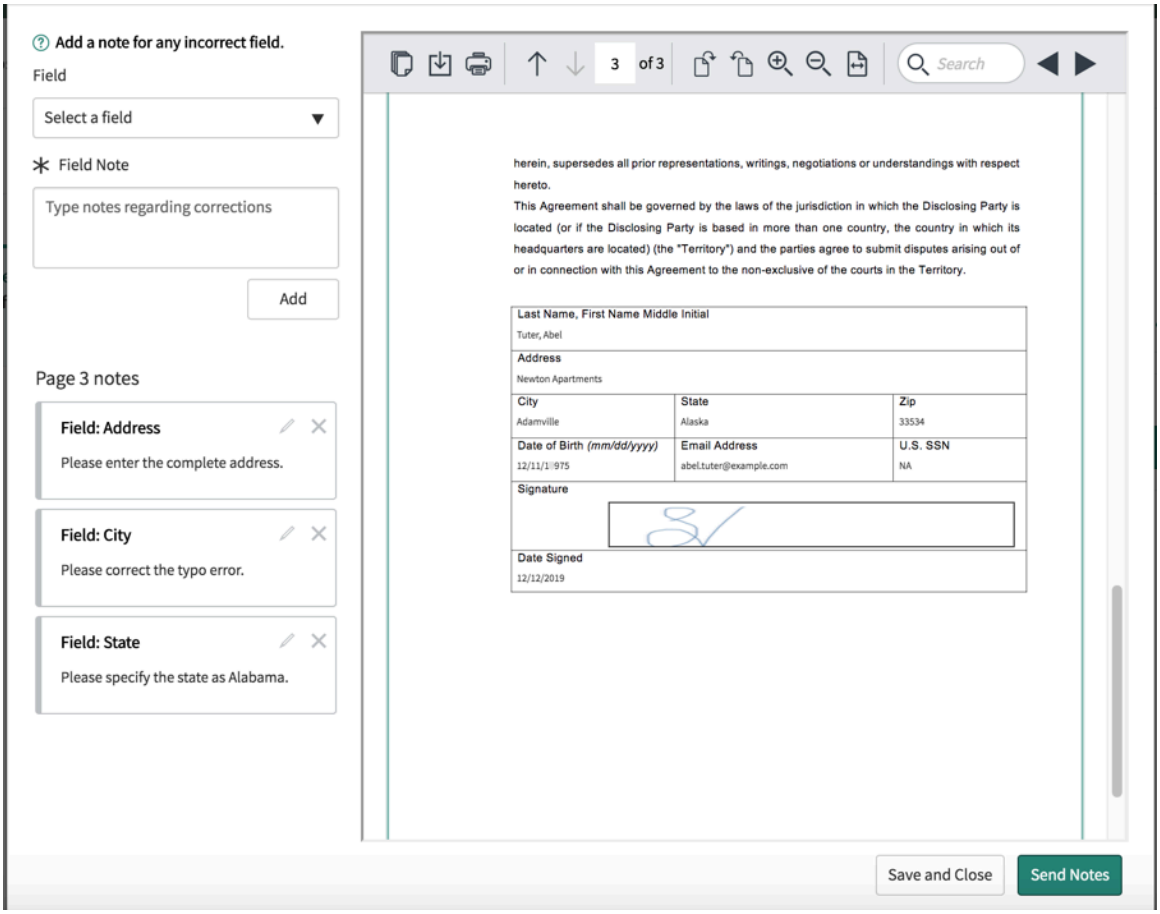
4. Click **Clear Signature** if you want to clear the signature and sign again.
5. To view your signature in the document, click **Generate**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Click **Submit**.
   The task is complete and appears in your Completed To Dos section. You can view and print the document with the signatures.

Review a PDF document

Complete your document task by reviewing a PDF document. Send your review comments to one or more participants who are working on the document.



Before you begin

Role required: none

Procedure

1. Navigate to **All** > **Self-service** > **Employee Center**.
   Alternatively, you can complete your document tasks by navigating to **Self-Service** > **My Document Tasks**.
2. Select the To-dos page.
3. Select the document template task that is assigned to you.
4. Click **Review document**.
5. If you do not have any comments, click **Approve**.
6. If you want to add a note in the document:
   a. In the **Field Note** field, add your comments. If you want to associate the comment to a specific field, select the value from the **Field** list.
   b. Click **Add**. You can edit or delete the note if required. You can also save your changes and review them again at any point in time.
7. Click **Send Notes**.

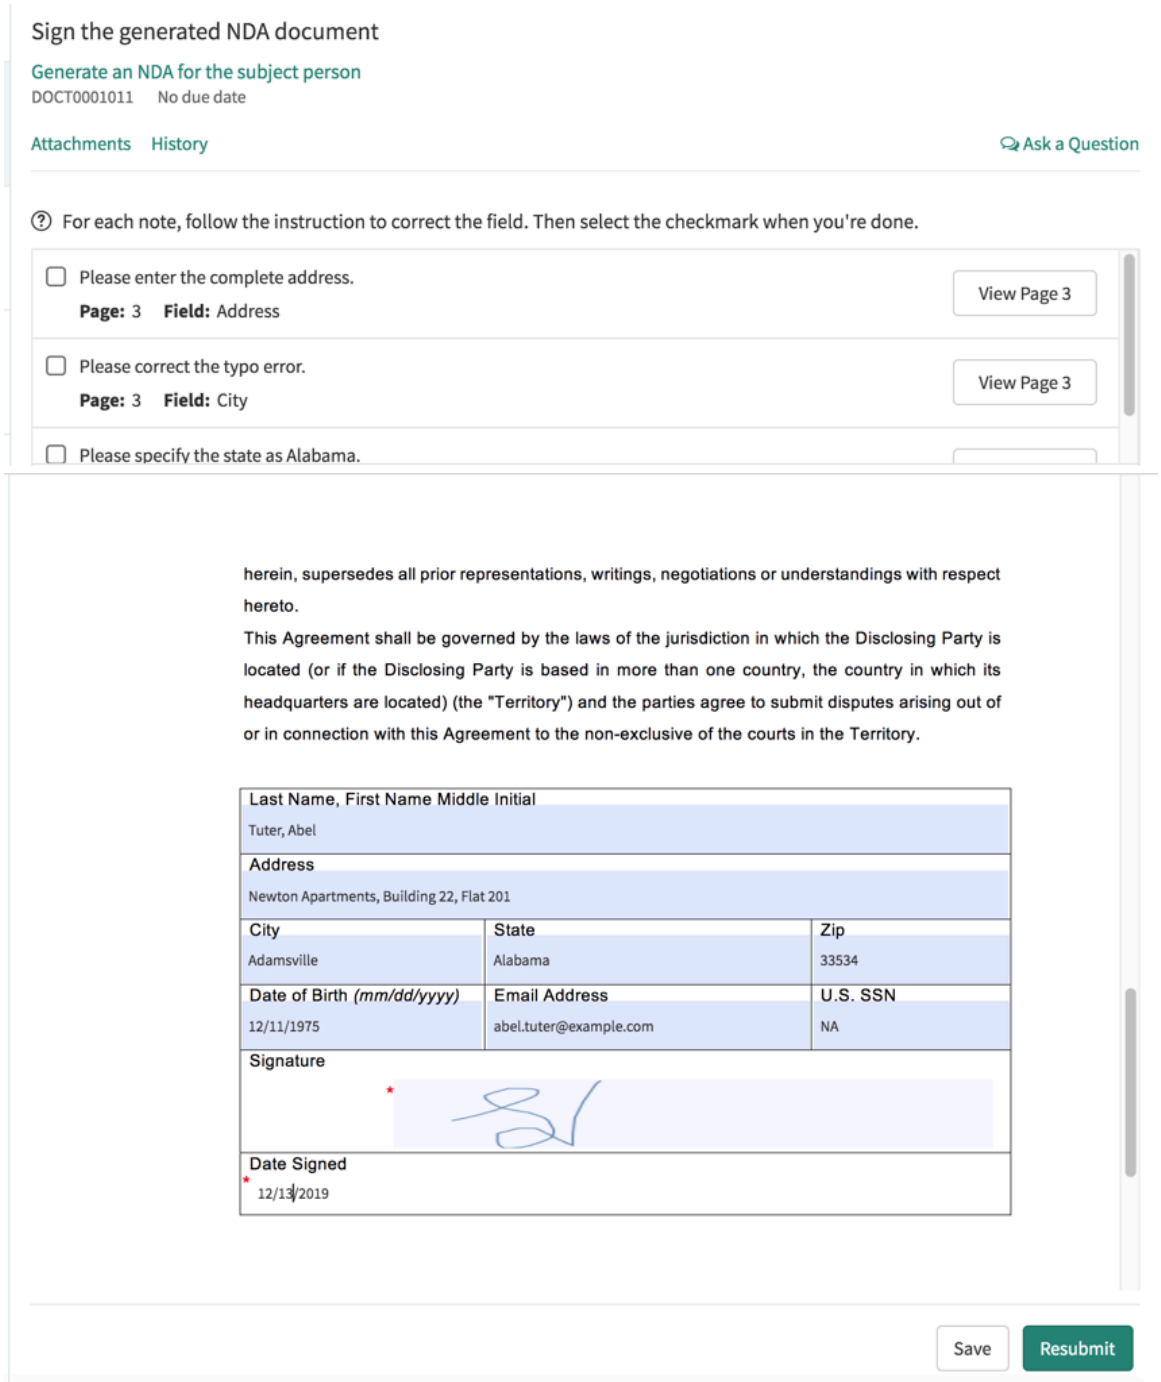
The state of the document task is changed to Complete Rejected. Document tasks are reinitated for all the participants of the template.

Resubmit a PDF document

Complete your document task by incorporating the reviewer's suggestions.



Before you begin

Role required: none

Procedure

1. Navigate to **All** > **Self-service** > **Employee Center**.
   Alternatively, you can complete your document tasks by navigating to **Self-Service** > **My Document Tasks**.
2. Select the To-dos page.
3. Select the document task that is assigned to you.
4. If a change note has been associated to a field, clicking**View Page** will navigate you to that field directly.
5. Select the check box to indicate that you have incorporated the change note.
6. Add your signature by typing or drawing.
7. If you want to clear the signature and sign again, click **Clear Signature**
8. To view your signature in the document, click **Generate**.
9. Click **Resubmit**.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The task is complete and appears in the Completed To Dos section. You can view and print the document with the submitted details.

Document generation methods

A PDF document can be generated automatically, manually, or by using an API.

Automatically

A PDF document is automatically added as an attachment to the case when:

1. The configured template is selected on the HR template of a service.
2. The **Automatically Initiate Document tasks** case option is selected on the HR service of a case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. The state of the HR case is changed to work in progress.
4. The document tasks of all the participants are complete.

Manually

A PDF document can be generated manually using the **Generate** option on the **Preview Document** option on the case.

API

The following API generates and attaches the document to the target record that is passed to the API.

```
//recordId - Sys ID of the target record. This record must be
 from the table defined in the document template.
//documentTemplateId - Sys ID of the document template to use
 for pdf generation.
//pdfName - Name of the pdf generated
new
 sn_doc.GenerateDocumentAPI().generateDocumentForTask(recordId,
 documentTemplateId, pdfName);
```

Note:
If your table is caller restricted, calling this API may generate RCA records from components in the Document Templates scope to your table. You must allow them.

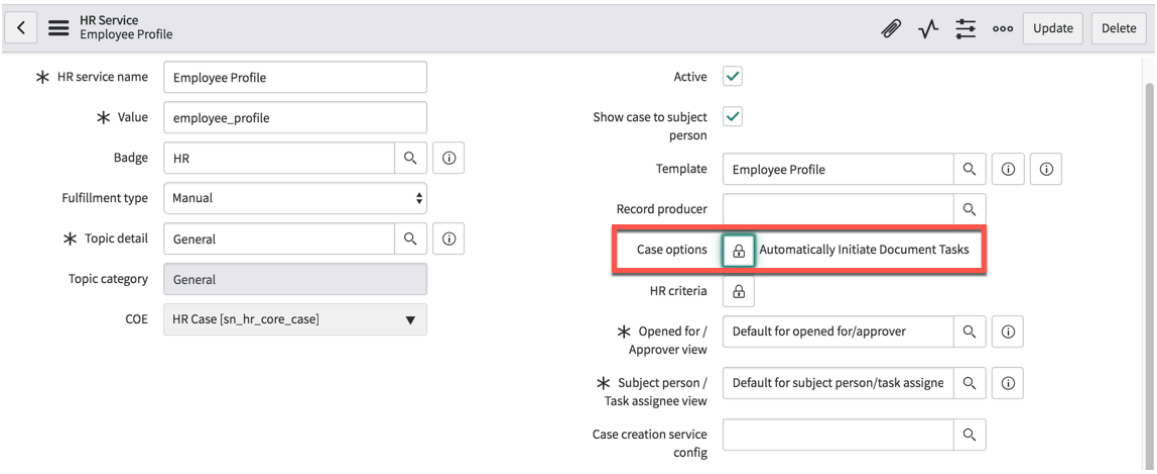
Document tasks generation

Document tasks can be generated either automatically or manually. The tasks get generated in the order defined for the participants.

Note:
Cancelling an HR case leads to the cancellation of document tasks associated with it. If you do not want the document tasks to be cancelled automatically, navigate to **All** > **System Definition** > **Business Rules** and inactivate the following business rules:

- Initiate Cancel Document Tasks
- Cancel Document Tasks

Automatically



Document tasks are automatically initiated for the participants when you:

- Select the **Automatically Initiate Document tasks** option on the HR service of a case.

  Note:
  Make sure that the configured template is added to the HR template of a service.

- Change the state of the HR case to **Ready**.

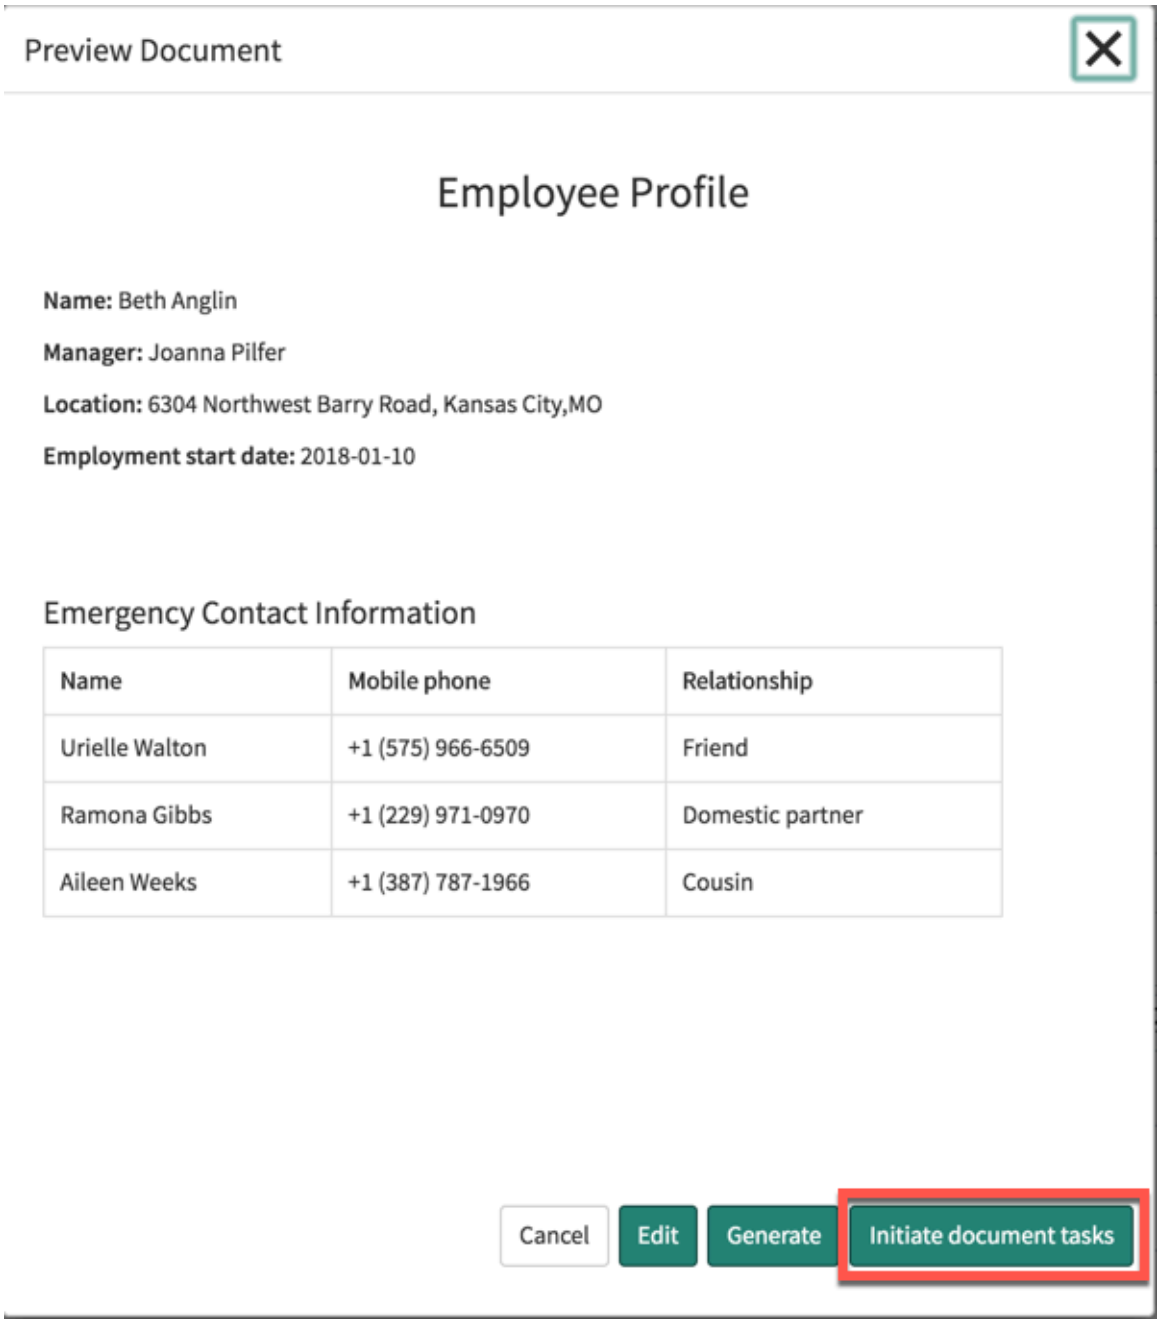
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Manually

Document tasks are manually initiated when you click the**Initiate document tasks** button on the **Preview Document** option on the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Initiate document tasks** option does not appear when the **Automatically Initiate Document tasks** option is already enabled on the HR service of a case.

Note:
Initiating document tasks from a Preview model is not available for a word document template.

Using Document Templates: Generic use case

Understand how to use Document Templates outside of HR Service Delivery.

Before you begin
Role required: admin

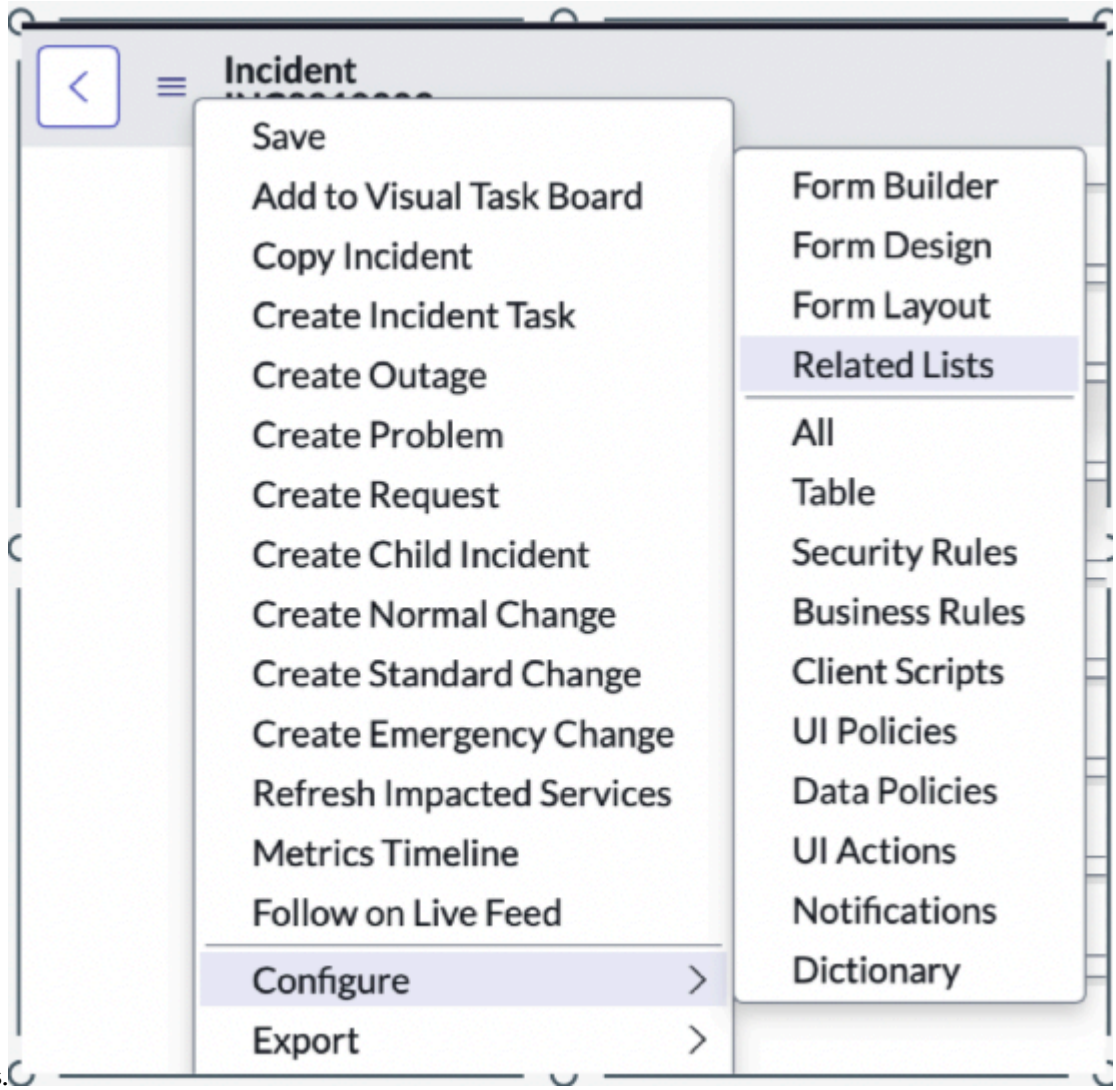
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Define a document template for a given table, for example, Incident table.
2. If participants are configured for the document template, use the following API to initiate document tasks for participants:

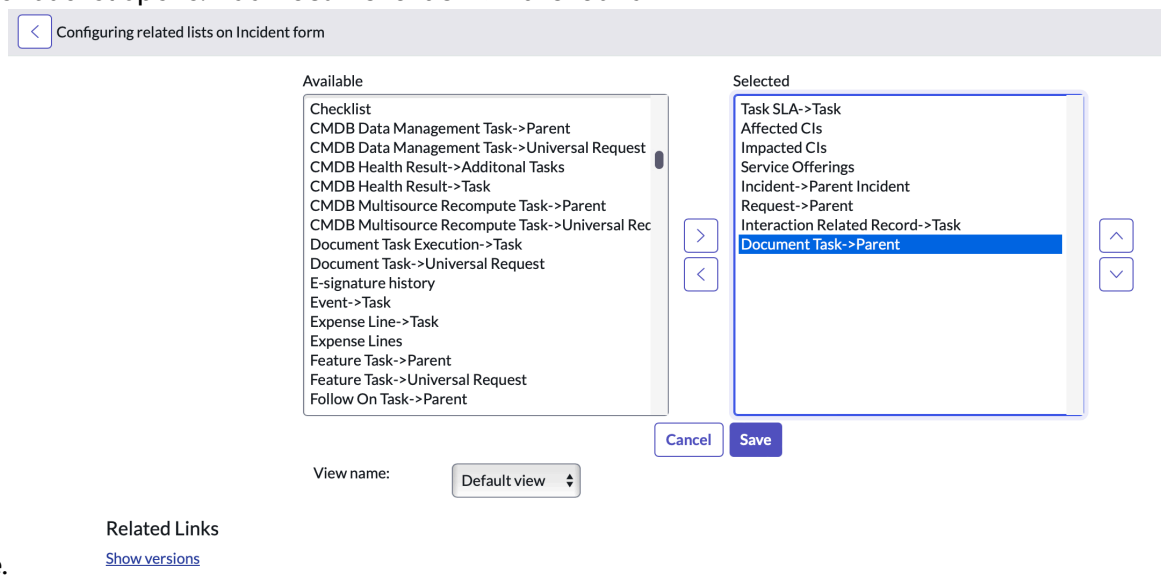
```
/**
* Description: Method to prefill document with mapped values and attach it to record table.
* @param {GlideRecord} taskGr (GlideRecord of task table)
* @param {String} htmlBody html body of document (Optional, if not passed then it will be generated from template for html template)
* @param {SysId} docTemplateId (sysId of document template)
* @param {String} generatedPdfName name of generated pdf (Optional, if not passed then it will be taken from template name)
* @param {String} documentId (word template attachment sysId) (Only for word templates)
* @return {boolean} true/false
*/
new sn_doc.GenerateDocumentAPI().initiateDocumentTasks(taskGr, htmlBody, docTemplateId, generatedPdfName, documentId)
```

3. To generate a PDF document from a document template, use the following API:



```
/**
* Description: Method to generate a PDF from a document template.
* @param {GlideRecord} recordId (GlideRecord of task table)
* @param {documentTemplateId} docTemplateId (sysId of document template)
* @param {String} pdfName name of generated pdf (Optional, if not passed then it will be taken from template name)
* @return {sysId} (sysId of the attachment)
*/
new
 sn_doc.GenerateDocumentAPI().generateDocumentForTask(recordId, documentTemplateId, pdfName)
```

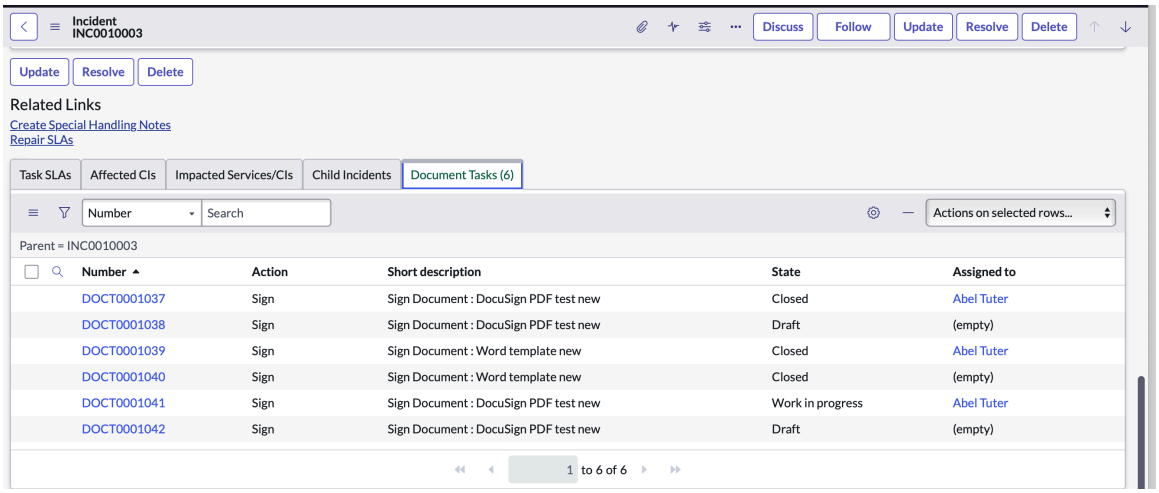
4. To view the document tasks that are associated to a record:



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. Open the record, for example, an incident record.

b. Configure the related lists.



A slushbucket opens. Add **Document Task -> Parent** and **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document tasks associated to the record are displayed in **Document tasks** related list.

Reference for Document Templates

Table	Description
	Note: This table is available by default with ServiceNow Platform. However, the menu shortcuts to navigate to this table are available with the Document Templates application only.

Federal plugin

The ServiceNow, Inc. Federal plugin provides additional data elements for public sector customers that align with the Human Capital Information Model (HCIM). The HCIM is a set of data standards for Federal human capital management developed by the Human Resources Line of Business (HRLOB) at the Office of Personnel Management (OPM).

This plugin is intended for the use of extending the tables such as HR Profile, Location, Position with additional fields and tables relevant to the Federal, State, and Local public sectors.

Federal plugin overview

The following are some key benefits of the Federal plugin:

- Promotes interoperability by providing data structures that makes data flow seamlessly to and from agencies, or shared service providers.
- Provides additional data elements that are commonly used in services agencies provide to the government employees they service.
- Augments the delivered HR Service Delivery and ServiceNow AI Platform tables.

  For example, the default Locations table (cmn_locations) can be configured to include reference fields from the Duty Station table (sn_fedtables_duty_station), or the Duty Location can be added as a field to the HR Profile to display the GeoLoc of the employee's duty station.

- Offers prebuilt capability that allows for easier configuration of services and workflows and minimizes customization needs.

Important:
The tables installed with the Federal plugin are standalone. There are no dependencies between the HR Service Delivery tables and the Federal plugin tables, until the Federal plugin tables are included in the work stream.

Get started

Set up Federal plugin	Using Federal plugin	Federal plugin reference
Configure the plugin to get started	Use the plugin to promote interoperability between agencies or shared service providers.	Get details about tables in the plugin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Set up Federal plugin

Set up the Federal plugin.

Activate Federal plugin

You can activate the Additional tables for Federal Agencies plugin [com.snc.fedtables] if you have the admin role.

Before you begin
Role required: admin

About this task
Tables are installed with the plugin. For more information, see Federal plugin.

Procedure

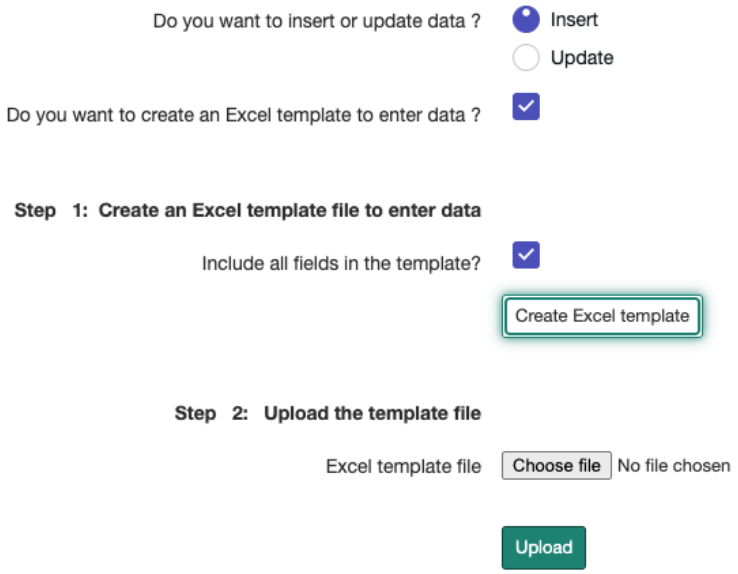
1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Additional tables for Federal Agencies plugin [com.snc.fedtables] using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Import an excel template for Federal plugin



Some data elements included in the Federal plugin allow for an import of the reference data.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Definition** > **Tables**.
2. In the **Name** column, filter the tables by **sn_fedtables**.
3. Select the Federal table in which you want to import the data.
4. Open **Show List** in **Related links**.
5. Right-click on the column heading for the data element you want to add reference data to.
6. Select **Import** from the menu.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select **Insert** or **Update** as the import type.
8. Select **Choose file** to select the Microsoft Excel spreadsheet.
9. Select **Upload** to upload the Microsoft Excel spreadsheet.
10. In the Upload Progress page, select **Preview Imported Data** to verify the imported data.
11. If the template passes validation and the imported preview matches your expectations, select **Complete Import** to import data into the staging table.

Note:
If the template fails validation, verify records in the template and repeat the process again.

Using Federal plugin

With the Federal plugin, promote interoperability between agencies or shared services and augment the delivered HR Service Delivery and ServiceNow AI Platform tables.

Before you begin

Role required: admin

- Activate Federal plugin.
- Import an excel template for Federal plugin.
- Review this KB article.

Note:
If you cannot access the KB article, search for Federal Data table plugin in ServiceNow Community.

Important:
The Federal plugin:

- contains data elements that extend from the HR Profile table and therefore is only available with the HR Service Delivery solution. If you download the plugin without HR Service Delivery, you will notice empty tables and not have the ability to use the tables.
- is only available for customers on the Washington DC release and later.
- does not include business rules, client scripts or additional roles.

Learning Core

The ServiceNow Learning Core application enables you to build a learning content repository by integrating with third-party Learning Management Systems, such as Cornerstone OnDemand, Udemy, PluralSight, Sumtotal and Saba learning systems. It allows you to configure learning catalogs that contain course items from both external learning systems and internal learning systems.

Learning Core provides the base set of tables, content, learning bases, roles, and access configuration that are used in the Learning Posts application and other coaching applications. Learning Core can be activated only as a dependent plugin.

Learning Core integrates with Cornerstone OnDemand, Pluralsight, Udemy, Sumtotal, and Saba learning systems. Activate only the learning system that you to plan use. For more information, see Integrate Learning Core with third-party learning management systems.

Exploring Learning Core

The ServiceNow® Learning Core application enables you to build a learning content repository by integrating with third-party Learning Management Systems, such as Cornerstone OnDemand, Udemy, PluralSight, Sumtotal and Saba learning systems. It allows you to configure learning catalogs that contain course items from both external learning systems and internal learning systems.

Learning Core provides the base set of tables, content, learning bases, roles, and access configuration that are used in the Learning Posts application and other coaching applications. Learning Core can be activated only as a dependent plugin.

By default, Learning Core integrates with Cornerstone OnDemand, Pluralsight, Udemy, Sumtotal, and Saba learning systems. Activate only the learning system that you to plan use. For more information, see Integrating Learning Core with third-party learning management systems.

Key features

Enablement of Predictive Intelligence Workbench displays recommended learning courses to users in Employee Center.

Learning Core Home page

Learning Core home page provides a consolidated view of the learning catalogs and learning management systems that have been configured in the Learning Core application.

Learning Catalogs

Click a tile to view the complete details of a specific catalog such as course items that it contains, managers to whom the catalog is viewable, users to whom the catalog is assigned.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning Sources

Click a source link to open the learning system source record in Enterprise Service Management Integrations Framework.

Catalogs

Catalog allows you to drive access control.

There are 2 levels of Access control:

- Catalog level
- Course level

Using the **Related Lists** for **Catalog**, you can define users who can read, cannot read, can contribute, cannot contribute to the course and catalog.

Collections

Collections are groupings of courses that are orchestrated within ServiceNow.

Configuring Learning Core

Set up and configure Learning Core with a learning management system to build a learning content repository.

Administration tasks in Learning Core

Complete the administrative tasks in Learning Core with the Learning admin [learning_admin] role.

Before you begin
Role required: learning_admin

Procedure

1. Create source records for learning management systems that are integrating with Learning Core.
   For more information, see Create a source for a learning system.

   Important:
   Once you set up the Learning Core application, the source record for Cornerstone OnDemand, Pluralsight, Udemy, Sumtotal , and Saba applications are automatically created in the Source module in Enterprise Service Management Integrations Framework. These source records contain a predefined set of properties and integration services that help in pulling learning courses from Cornerstone On Demand, Pluralsight, Udemy, Sumtotal , and Saba applications into your ServiceNow instance.

2. Configure properties for various settings used in Learning Core.
   For more information, see Configure properties for Learning Core.
3. View the consolidated report on courses in each source, the number of catalogs associated with each of the source, and the status of learning tasks by source.
   For more information, see Reporting Solutions for Learning Core.

Create a source for a learning system

Create a source record for the third-party learning system that you want to integrate with your ServiceNow instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

- Role required: learning_admin
- Learning Core integrates with Cornerstone OnDemand, Pluralsight, Udemy, Sumtotal , and Saba learning systems by default. Activate only the learning system that you to plan use. For more information, see Integrating Learning Core with third-party learning management systems.

Procedure

1. Navigate to **Integrations Framework** > **Source**.
2. Click **New**.
3. In the **Name** field, enter the name of the integration source, for example, Pluralsight.
4. Right-click the form header and click **Save**.
5. In the Integration Services related list, click **New**.
6. On the form, fill in the fields:

Integration service form

Field	Description
Name	Name of the integration service, for example, Pluralsight.
Import set tables	List of intermediate tables which store records from the third-party system. **Note:** This field is enabled only when a scheduled pull service is selected in the **Service type** field.
Flow	Flow that interacts with the third-party system to pull the required data.
Active	Option to indicate that the integration service is available for use.
Application	Application which contains the integration service record.
Source	Name of the third-party system with which you want to integrate your application.
Order	Order in which you want to run transformation scripts.
Service type	Option to indicate the type of service **Scheduled pull** or **Ondemand Push**.
Retry policy	Configuration set to push a record when the previous push fails. **Note:** This field appears only when Ondemand Push service is selected in the **Service type** field.

7. Click **Update**.

Configure properties for Learning Core

Configure properties for various settings used in Learning Core.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin

Role required: learning_admin

Procedure

1. Navigate to **Learning** > **Administration** > **Properties**.
2. Configure the name of the portal that must open when the learning task is clicked in an email.
3. Navigate to **System Properties** and set the following property values:

Learning Core properties

Property	Description
com.glide.transform.json.max-partial-length	Transforms JSON objects to internal objects and sets the word limit for records fetched through an API call. ○ **Type:** integer ○ **Default value:** 16384 ○ **Recommended value:**1638400 **Note:** You must add this system property to set the desired value. When you synchronize third-party learning content with your ServiceNow instance, if the word count of the content being pulled into your instance exceeds the value set for this property, the synchronization will fail.
com.snc.process_flow.reporting.serialized.val_size_limit	Specify the number of bytes allowed for runtime values in each step in the flow execution details. To prevent truncation, set the value to an integer equal to or less than zero. ○ **Type:** integer ○ **Default value:** 16384 ○ **Recommended value:**1638400 **Note:** When you synchronize third-party learning content with your ServiceNow instance, if the word count of the content being pulled into your instance exceeds the value set for this property, the synchronization will fail.

Note:
These properties set a word limit for records that are fetched through an API call. API call fails when the word limit goes beyond the **1638400** limit.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure a learning system

Configure the learning system so that the schedule flow pulls learning content from the third-party system into a ServiceNow instance.

Before you begin

Role required: learning_admin

Procedure

1. Navigate to **Learning** > **Administration** > **Learning System Configuration**.
2. Select the required learning source and set the **Active** field to true.

Learning System Configuration

Field	Description
Learning source	Record of the learning management system in Enterprise Service Management Integrations Framework.
Active	Option to indicate that the source is available for use.
Learning system	External learning management system to which the record is associated.
Reassign completed course	Option to reassign the completed course.
Support assign course	Option to indicate whether a particular external system allows a course assignment API.
Sync course activity days	Option to specify the number of days that is considered for synchronizing course progress between the external learning management system and a ServiceNow application.
Logo	Option to include a logo of the source.

3. Click **Update**.

Integrating Learning Core with third-party learning management systems

Connect your ServiceNow instance with third-party learning systems to pull learning content into a single repository.

Before you begin

Role required: learning_admin

Activating the Learning Core (sn_lc) plugin automatically enables the following plugins:

- Enterprise Service Management Integrations Framework

The following plugins are not active by default, and you must install them to use them with Learning Core.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Integrate your ServiceNow instance with the third-party learning source account that you plan to use.
   The records from the third-party content are pulled into your ServiceNow instance using an API call. To successfully run this API call, you must configure the *com.glide.transform.json.max-partial-length* and *com.snc.process_flow.reporting.serialized.val_size_limit* properties. For more information on these system properties, see Configure properties for Learning Core .
2. Activate the required schedule flow to synchronize third-party learning content into your ServiceNow instance.
   For more information, see Activate Learning Core flows.
3. Configure the learning system with which you want to integrate your ServiceNow instance.
   For more information, see Configure a learning system.

   Note:
   Once you set up the Learning Core application, the source record for Cornerstone OnDemand, Pluralsight, and Udemy applications are automatically created in the Source module in Enterprise Service Management Integrations Framework. These source records contain a predefined set of properties and integration services. For more information, see Sources for Learning Core.

4. Refresh the entire third-party content or synchronize new and updated service content into your ServiceNow instance.
   - To refresh the entire content, set the *full_pull* property to **true**.

     Note:
     When the schedule flow is run for the first time, it always is a full pull irrespective of the value set in the property.

   - To synchronize new and updated service content, set the *full_pull* property to **false**.

   a. Open any integration source for which you want to pull content.

   b. Click **Run Job** to manually synchronize data.
   The integration framework pulls the corresponding third-party learning courses into the Learning External Content [sn_lc_external_content] table on your ServiceNow instance.

   When synchronizing new and updated services, the content is populated as described in the table below.

Third-party content providers and corresponding services

Third-party content	New and Updated Services synchronized
Udemy	○ Courses ○ User activity
Cornerstone	○ Users ○ Courses ○ User activity ○ Course assign service

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Third-party content	New and Updated Services synchronized
Pluralsight	○ Courses ○ Course progress such as percentage
Sumtotal	○ Users ○ Courses ○ User activity ○ Assign course in Sumtotal
Saba	○ Course assign service ○ Pull Courses from Saba ○ Sync Saba Users ○ Pull Saba User Course Activity
Workday Learning	○ Users ○ Courses ○ User activity ○ Assign course in Workday Learning

What to do next

To integrate Learning Core with a new third-party learning system, follow the instructions in Create a source for a learning system.

Sources for Learning Core

Once you set up the Learning Core application, the source record for Cornerstone On Demand, Pluralsight, Udemy, Sumtotal, and Saba applications are automatically created in the Source module in Enterprise Service Management Integrations Framework. The source records in the Enterprise Service Management Integrations Framework application contain a predefined set of properties and integration services.

Integration source record: Cornerstone Ondemand

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Cornerstone.
Properties	Set of properties that are predefined for the Cornerstone OnDemand application. • **page_size**: Number of records that are pulled through an API call from the Cornerstone OnDemand application. • **full_pull**: When set to **True**, all the active users and learning courses from the Cornerstone OnDemand system are pulled into the ServiceNow application. When set to **False**, modified users, modified transcripts, and updated courses are pulled from the Cornerstone OnDemand system into the ServiceNow instance. • **url_prefix**: Deep link prefix to pull learning objects from Cornerstone OnDemand system during run time.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration source record: Cornerstone Ondemand (continued)

Field	Description
	• **pull_offset_hours**: Value that is considered for pulling modified records. For example, the last successful run was on 12/12/2021 at 17:00:00, pull_offset_hours is set to 5, and full_pull is set to False. The next pull fetches all the records that have been modified from 12/12/2021 12:00:00 until current date and time.
Integration Services	Services that interact with the Cornerstone OnDemand application to pull or push learning courses. • **Course assign service**: Assigns a course to an employee in the Cornerstone Ondemand application. • **Sync users**: Maps users in the Cornerstone OnDemand system to users in the ServiceNow system using email Ids. **Note:** If you want to use user_id or user_name field for mapping users, then override**getCornerstoneUser method** in the sn_lc.UserMappingUtil script. • **Courses**: Pulls learning courses from the Cornerstone OnDemand application into the ServiceNow application. • **User activity**: Pulls details of user activity on learning courses from the Cornerstone OnDemand application into the ServiceNow application.

Integration source record: Pluralsight

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Pluralsight.
Properties	Set of properties that are predefined for the Pluralsight system. • **page_size**: Number of records that are pulled through an API call from Pluralsight. • **full_pull**: When set to **True**, all the learning courses are pulled from Pluralsight into the ServiceNow instance. When set to **False**, updated learning courses progress is pulled from Pluralsight into the ServiceNow instance. • **pull_offset_hours**: Value that is considered for pulling modified records. For example, the last successful run was on 12/12/2021 at 17:00:00, pull_offset_hours is set to 5, and full_pull is set to False. The next pull fetches all the records that have been modified from 12/12/2021 12:00:00 until current date and time.
Integration Services	Services that interact with the Plural sight application to pull learning courses into the ServiceNow application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration source record: Pluralsight (continued)

Field	Description
	• **Courses**: Pulls learning courses from the Pluralsight application into the ServiceNow application. • **Course progress**: Pulls the progress of learning courses from the Pluralsight application into the ServiceNow application.

Integration source record: Udemy

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Udemy
Properties	Set of properties that are predefined for the Udemy application. • **page_size**: Number of records that are pulled through an API call from Udemy into the ServiceNow application. • **full_pull**: When set to **True**, all the learning courses are pulled from Udemy into the ServiceNow application. When set to **False**, updated learning courses and learning courses progress are pulled from Udemy into the ServiceNow application. • **pull_offset_hours**: Value that is considered for pulling modified records. For example, the last successful run was on 12/12/2021 at 17:00:00, pull_offset_hours is set to 5, and full_pull is set to False. The next pull fetches all the records that have been modified from 12/12/2021 12:00:00 until current date and time.
Integration Services	Services that interact with the Udemy application to pull learning courses into the ServiceNow application. • Pull Courses: Pulls learning courses from the Udemy application into the ServiceNow application. • Pull user activity: Pulls details of user activity on learning courses from the Udemy application into the ServiceNow application.

Integration source record Sumtotal

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Sumtotal
Properties	Set of properties that are predefined for the Sumtotal application.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Integration source record Sumtotal (continued)

Field	Description
	• **full_pull**: When set to **True**, all the learning courses are pulled from Sumtotal into the ServiceNow application. When set to **False**, updated learning courses and learning courses progress are pulled from Sumtotal into the ServiceNow application. • **url_prefix**: Deep link prefix to pull learning objects from Sumtotal during run time.
Integration Services	Services interact with the Sumtotal application to pull or push learning courses. • **Assign course in Sumtotal**: Assigns a course to an employee in the Sumtotal application. • **Pull Courses**: Pulls learning courses from the Sumtotal application into the ServiceNow application. • **Sync users**: Maps users in the Sumtotal system to users in the ServiceNow system using user IDs. • **User activity**: Pulls details of user activity on learning courses from the Sumtotal application into the ServiceNow application.

Integration source record: Saba

Field	Description
Name	Name of the record in Enterprise Service Management Integrations Framework: Saba
Properties	Set of properties that are predefined for the Saba application. • **full_pull**: When set to **True**, all the learning courses are pulled from Saba into the ServiceNow application. When set to **False**, updated users, learning courses, and learning course progress are pulled from the Saba system into the ServiceNow application. • page_size: Number of records that are pulled per page.
Integration Services	Services that interact with the Saba application to pull or push learning courses. • **Course assign service**: Assigns a course to an employee in the Saba application. • **Pull Courses from Saba**: Pulls learning courses from the Saba application into the ServiceNow application. • **Sync Saba Users**: Maps users in the Saba system to users in the ServiceNow application based on email IDs. • **Pull Saba User Course Activity**: Pulls details of user activity on learning courses from the Saba application into the ServiceNow application.

Activate Learning Core flows

Activate the flows that run on a schedule basis to pull learning course items from the Cornerstone OnDemand, Udemy, Pluralsight, Sumtotal , and Saba applications into the ServiceNow application.

Before you begin

Role required: admin

Procedure

1. Navigate to **Process Automation** > **Flow Designer** > **Designer**.
2. In the **Flows** section, activate the flows that you need.
   To change the frequency and time at which you want to run the flow, click **Trigger**.

Flows for Learning Core

Flow	Description
Trigger Cornerstone Learning Sync	By default, runs on a scheduled basis to pull course items from Cornerstone Ondemand into a ServiceNow application. **Important:** The flow does not run if you do not activate the Cornerstone Ondemand record in Learning System Configuration.
Trigger Pluralsight Learning Sync	By default, runs on a scheduled basis to pull course items from Pluralsight into a ServiceNow application. **Important:** The flow does not run if you do not activate the Pluralsight record in Learning System Configuration.
Trigger Udemy Learning Sync	By default, runs on a scheduled basis to pull course items from Udemy into a ServiceNow application. **Important:** The flow does not run if you do not activate the Udemy record in Learning System Configuration.
Trigger Sumtotal Learning Sync	By default, runs on a scheduled basis to pull course items from Sumtotal into a ServiceNow application. **Important:** The flow does not run if you do not activate the Sumtotal record in Learning System Configuration.
Trigger Saba Learning Sync	By default, runs on a scheduled basis to pull course items from the Saba system into a ServiceNow application. **Important:** The flow does not run if you do not activate the Saba record in Learning System Configuration.

Managing course and catalog content

Create, curate, and manage learning content in Learning Core.

Create a course catalog

Create a course catalog to maintain courses under one category and drive access control.

Before you begin

Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Procedure

1. Navigate to **Learning** > **Administration** > **Course Catalog**.
2. Click **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Course catalog form.
4. Click **Submit**.

Related topics

Create courses to add to a course catalog

Define user access to course catalog

Create courses to add to a course catalog

After creating a course catalog, create new course items to add to the course catalog and categorize them accordingly.

Before you begin

Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Create a course catalog, for more information see, Create a course catalog.

Procedure

1. Navigate to **Learning** > **Administration** > **Course Catalog**.
2. Open the course catalog that you want to add courses to.
3. On the **Learning Course Items** tab, click **New**.
4. Select the type of course item that you want to create:
   - To create internal learning content, see Create internal learning content.
   - To create a content collection, see Create a content collection.
5. Click **Submit**.

Define user access to course catalog

After creating a course catalog, define user access criteria at the course catalog level.

Before you begin

Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Create a course catalog. For more information, see Create a course catalog.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Learning** > **Administration** > **Course Catalog**.
2. Open the course catalog that you want to define user access for.
3. On the Can Read tab, click **Edit**.
4. Add users who should have access to the course catalog.
5. On the Cannot Read tab, click **Edit**.
6. Add users who should not have access to the course catalog.

> **Note:**
> If a user is present in both Can Read and Cannot Read related lists, the Cannot Read takes precedence and the user is restricted from read access to that course catalog.

7. On the Can Contribute tab, click **Edit**.
8. Add users who can contribute to the course catalog.
9. On the Cannot Contribute tab, click **Edit**.
10. Add users who cannot contribute to the course catalog.

Create a content collection

Create a content collection in Learning Core to dynamically group learning content that includes multiple internal and external courses.

Before you begin

Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Every collection has to be a part of a course catalog. Create a course catalog before you can create a collection. For more information, see Create a course catalog.

Procedure

1. Navigate to **Learning** > **Content** > **Collections**.
2. Click **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Collection form.
4. Click **Submit**.

Add course items to collection

After you create a collection, add course items as groupings of courses that are orchestrated within ServiceNow®.

Before you begin

Role required: sn_lc.learning_admin, sn_lc.learning_course_catalog_admin

Create a content collection. For more information, see Create a content collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Learning** > **Content** > **Collection**.
2. Select the collection that you want to add course items to.
3. On the Course Collection Items tab, click **Add**.
4. On the form, fill in the fields:

Collection course item

Field	Description
Collection	Associated course collection.
Course	Course item to be added to the selected collection.
Order	Order that defines the start of a new section. All learning courses that have order greater than this defined order will be displayed under this section.
Mandatory	If it is mandatory for the course item to be added to the collection.

Define user access to course within a collection

Define user access to the collection to define who has read access to the collections.

Before you begin

Role required: admin

Create a collection. For more information, see Create a content collection.

Procedure

1. Navigate to **Learning** > **Content** > **Collection**.
2. Open the collection that you want to define user access for.
3. On the Can Read tab, click **Edit**.
4. Add users who should have access to the course catalog.
5. On the Cannot Read tab, click **Edit**.
6. Add users who should not have access to the course catalog.

Note:
If a user is present in both Can Read and Cannot Read related lists, the Cannot Read takes precedence and the user is restricted from read access to that course catalog.

Add learning course sections

Add learning course sections to collections.

Before you begin

Role required: sn_lc.learning_admin

Create a collection. For more information, see Create a content collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Learning** > **Content** > **Collection**.
2. Open the collection that you want to add learning course sections to.
3. On the Learning Course Sections tab, click **New**.
4. On the form, fill in the fields:

Learning course sections

Field	Description
Title	Name of the learning course section.
Course item	Associated course item.
Order	Order of the learning course item within the collection.
Short description	Description of the learning course item.

5. Click **Submit**.

Create internal learning content

Create internal learning courses so that employees can learn new content and enhance their skills set.

Before you begin
Role required: sn_lc.catalog_manager

Procedure

1. Navigate to **Learning** > **Content** > **Learning Content**.
2. Click **New**.
3. On the form, fill in the fields.
   For a description of the field values, see Learning internal content form.
4. Click **Submit**.

What to do next
Associate skills to learning content.

Reporting Solutions for Learning Core

Learning Experience Dashboard provides a consolidated report on courses in each repository, catalogs with courses, and learning tasks status.

Learning Experience Dashboard

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning Repository widget

Displays the number of courses associated with each of the source. Source indicates the third-party learning management system that has integrated with the ServiceNow application.

Catalogs

Displays the number of catalogs associated with each of the source. Indicates how many number of courses from a particular source (third-party learning management system) are added to catalogs.

Task Status

Displays the status of all the learning tasks within each source.

Learning Core Reference

Reference topics provide additional information about Learning Core.

Components installed with Learning Core

Several types of components are installed with activation of the Learning Core [sn_lc] plugin, including user roles, and tables.

Roles

Role title [name]	Description	Contains roles
Learning admin [sn_lc.learning_admin]	Grants administrative rights to create, read, update, and delete (CRUD) catalog, learning content, learning course catalogs, roles, and configure learning source.	• sn_lc.catalog_manager • sn_hr.integr_fw.admin
Learning course catalog admin [sn_lc.learning_course_catalog_admin]	Posesses admin rights to manage learning course catalogs.	[sn_lc.learning_course_catalog_admin]
Learning content writer [sn_lc.content_writer]	Grants read or write access for learning courses.	sn_lc.content_creator
Learning task creator [sn_lc.task_creator]	Grants read or write access for learning tasks.	[sn_lc.task_creator]
Learning catalog manager [sn_lc.catalog_manager]	Grants administrative rights to create, read, or update learning libraries.	• sn_lc.task_creator • sn_lc.content_writer
Learning catalog group manager [sn_lc.catalog_group_manager]	Grants administrative rights to create, read, or update learning libraries based on groups.	• sn_lc.task_creator • sn_lc.content_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables

Table	Description
Learning External Content [sn_lc_external_content]	Stores details of external course items that are pulled from third-party systems.
Learning User Course Activity [sn_lc_user_course_activity]	Stores details of learning course activities such as user to whom the course is assigned, status, due date, and name of the learning course.
Collection [sn_lc_collection]	Stores details of the collections of internal and external learning content.
Learning Course Catalog [sn_lc_course_catalog]	Stores details of the course catalogs that maintain courses under one category and drive access control
Learning Content [sn_lc_content]	Stores details of internal learning content such as knowledge articles and videos that are created in the ServiceNow application.
Learning Course Item [sn_lc_course_item]	Stores details of learning course items, such as the source to which the learning course belongs.
Learning Task [sn_lc_learning_task]	Stores details of learning tasks, such as a user to whom the learning task assigned, and due date by when the learning task must be completed.
Learning System Configuration [sn_lc_learning_system_configuration]	Stores configuration parameters of sources, third-party learning management systems.

Course catalog form

Use the course catalog form to create a new learning course catalog.

Course catalog form

Field	Description
Title	Name of the catalog.
Active	Option to indicate that the catalog is available for use.
Owner	The owner of the course catalog.
Description	Description of the catalog.
Publish flow	Flow for publishing the course. Use **Insta publish flow** for immediate publishing of course catalogs.
Retire flow	Flow for publishing the course. Use **Insta retire flow** for immediate retirement of course catalogs.
Management	
Admins	Suitable administrator role for the course catalog.
Content properties	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Course catalog form (continued)

Field	Description
Extension duration (days)	Number of days until which any course within the catalog can be extended.
Pending retirement duration (days)	Number of days remaining for the course to retire.

Learning library form

Use the learning library form to create a learning library.

Learning Library form

Field	Description
Title	Name of the catalog.
Active	Option to indicate that the catalog is available for use.
Applicable to groups	Option to enable the assignment of course to groups. **Note:** This field is applicable only to WFO/Coaching application.
Description	Description of the catalog.
Restrict Type	Employees that the catalog is available to.
Manager Access Restrict To	Employees that the catalog is visible to or employees who can curate the items in the catalog. **Note:** This field appears only when **User criteria** is selected in the **Restrict Type** field.

Learning task form

Assign a learning task to an employee that can be completed from the To-dos page in Employee Center.

Learning task form

Field	Description
Number	Unique identifier of the learning task.
Assigned to	User to whom you want to assign the learning task.
Learning Library	Name of the learning library that is assigned via the learning task.
Course Item	Name of the course item that is assigned via the learning task.
Optional	Option to make the learning task non-mandatory.
State	Current state of the task.
Due date	Date by which the assignee must complete the learning task.
Opened by	Name of the user who has created the learning task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning task form (continued)

Field	Description
Short description	Additional details of the learning task.

Life-cycle stages of a content collection in Learning Core

The State transition of a collection guides you through the stages of its life cycle.

Collection life-cycle stages

Life-cycle stage status	Description
Draft	Default value for a new collection.
In Review	Collection that is pending review.
Scheduled for Publish	Collection that is scheduled for publish.
Published	Collection that is published.
Pending Retirement	Collection that is pending for retirement.
Retired	Collection that is retired.

Learning internal content form

Use the Learning internal content form to create internal Learning courses so that employees can learn new content and enhance their skills set.

Learning Internal Content form

Field	Description
Internal source	Type of Learning content that is created. • **Knowledge article** • **URL** • **Free form** • **Quiz**
Knowledge Article	Knowledge article to be included in theLearning content. This field is available only when **Knowledge article** is selected from the **Internal source** field.
URL Domain	Link to be included in internal Learning content. • **Youtube** • **Vimeo** • **Other** This field is available only when **URL** is selected from the **Internal source** field.
URL	URL for the selected domain.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning Internal Content form (continued)

Field	Description
	This field is available only when **URL** is selected from the **Internal source** field.
Title	Title of the Learning content.
Course catalog	Course catalog associated with the internalLearning course.
Level	Level of complexity of the Learning content.
State	Current state of the internal Learning course.
Author	Name of the user who created the Learning content.
Days to expire	Number of days before the content expires.
Active	Option to indicate that content is available for use.
Estimated duration	Total duration of the course content in days and hours. For example, for a video, it's the duration of the video. For a Knowledge article, the duration is estimated based on the length of the article.
Image	Image associated with the internal Learning course.
Details	
Short description	Brief description of the internal content.
Description	Full description of the internal content.
Objective	End goal of the internal content being created.
Audience	
Non discoverable	Determines if the course is discoverable by the audience. If a course is non-discoverable, it can’t be assigned and doesn't appear in the search results on the portal.
Metrics	
Average rating	Rating given to the content.
Release Lifecycle	
Published	Published date of the internal content.
Planned publish date	Date when the internal content is due for publishing.
Valid until	Date until when the internal content is valid.

Learning External Contents form

Description of the field values in the Learning External Content form.

Learning External Contents form

Field	Description
Title	Title of the content that is pulled from third-party learning system.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning External Contents form (continued)

Field	Description
Description	Description of the course item that is pulled from external learning system.
URL	URL to open the course item in external system.
Type	Type of service (OnDemand Push or Scheduled Pull) that interacts with external learning system.
Updated	Date and time when the course item was last updated.
External source	Name of the external learning system from which the course item is pulled.
Correlation ID	Unique identifier for the course item that is generated from external system.
Active	Option that indicates that the course item is active and available to use.
Mobile deeplink	Deeplink that is generated from external system. Deeplink allows you to navigate to a course from a native application.
Estimated duration	Total time that is taken to complete the course item.

Collection form

Use the Collection form to create a content collection in Learning Core to dynamically group learning content that includes multiple internal and external courses.

Collection form

Field	Description
Title	Name of the collection.
Course catalog	Course catalog associated with the collection.
Level	The difficulty level of content in the collection. • **Beginner** • **Intermediate** • **Advanced**
Course type	The type of content in the collection. • **Collection** • **Path**
State	Current state of the collection.
Active	Option to enable the collection. When the checkbox is selected, the collection can be accessed by users.
Image	Image associated with the collection.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Collection form (continued)

Field	Description
Estimated duration	Estimated duration of collection in days, hours, minutes, and seconds.
Details	
Short description	Brief description about the collection.
Description	Detailed description about the collection
Approval	Approval status of the collection.
Audience	
Non discoverable	Visibility of the collection. When the checkbox is selected, the collection will not appear in search results on the Learning portal. Every collection is discoverable by default.
Metrics	
Average rating	Average rating of content in the collection.
Release Lifecycle	
Published	Published date of the collection.
Planned publish date	Scheduled publish date of the collection.
Valid until	Retirement date of the collection.

Anonymous Report Center (ARC)

Employees can submit sensitive complaints or misconduct cases anonymous to the agent working on the case, using the Anonymous Report Center (ARC) portal.

Your employees can use the ARC to:

- Submit a complaint without disclosing their identity to the agent working the case.
- Receive updates on their complaint.
- Communicate confidentially with investigators.

From the Employee Center, employees are re-directed to the ARC and from there they can create a complaint anonymous to the agent working the case.

Note:
The ARC can be activated as a stand-alone feature or combined with HR Service Delivery Employee Relations.

You can use the Completely Automated Public Turing (CAPTCHA) or Google reCAPTCHA V2 to verify a human is submitting the complaint.

From the Employee Center, employees can choose to submit a complaint through the Employee Center or use the Anonymous Report Center (ARC). When using the ARC, the user is signed out of the Employee Center and directed to the ARC.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:

- A report key (optional) can be generated that allows the person filing the complaint to track and view details about the progress of the anonymous case and respond to any follow up questions. Without the report key, the person who made the anonymous report cannot access their report. For more information, see Setting up the Anonymous Report Center.
- Anonymous Report Center (ARC) does not display all widgets if the guest user is deleted from the instance.
- Although HR agents can't track users through the ARC portal, system admins can potentially trace users via their IP addresses.

Setting up the Anonymous Report Center

Set up and configure the Anonymous Report Center (ARC) to provide your employees a way to submit complaints anonymous to the agent.

Install and activate the Anonymous Report Center (com.sn_anonymous_report_center) plugin to use the Anonymous Report Center (ARC) if you have the admin role. For more information, see Activate the Anonymous Report Center.

Roles installed

Role	Description	Contains roles
sn_anon_rc.admin	Grants admin rights to Anonymous Report Center application.	

System properties

The following system properties are available:

- Length of the auto generated secret key used for retrieving anonymously created reports. The minimum key length is 14. (sn_anon_rc.secret_key_length): Determines the length (in characters) of the auto generated secret key used for retrieving anonymously created reports. The minimum length is 14 and the default.
- Enable Google reCaptcha V2 on Anonymous case creation. If true, please configure on Google and set these properties: google.captcha.secret, google.captcha.site_key (sn_anon_rc.arc.captcha.google.enabled): You can enable Google reCAPTCHA V2 for anonymous case creation. Google reCAPTCHA V2 verifies if an interaction is legitimate and the complaint was created by a person. For more information, see Google reCAPTCHA.

  Note:
  If you decide to use Google reCAPTCHA V2, you must define the following Google reCAPTCHA V2 properties:

  - google.captcha.secret
  - google.captcha.site_key

  You must also set up an enterprise Google captcha account. For more information, see Configure Google reCAPTCHA for the password reset process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Allow anonymous user access to the anonymously created cases using secret key. (sn_anon_rc.allow_anonymous_case_access): Determines if anonymous users can access the anonymous cases they submitted using a secret key.

Note:
A report key (optional) can be generated that allows the person filing the complaint to track and view details about the progress of the anonymous case and respond to any follow up questions. Without the report key, the person who made the anonymous report cannot access their report. HR agents that have access to the Anonymous Report Center (ARC) and admin has access. For more information, see Setting up the Anonymous Report Center.

Activate the Anonymous Report Center

You can activate the Anonymous Report Center plugin (com.sn_anonymous_report_center) for the ServiceNow AI Platform if you have the admin role.

Before you begin

If the Human Resources Scoped App: Core (com.sn_hr_core) plugin is activated, the Employee Center is also included. On-demand delegations can be performed with the Employee Center or the ServiceNow® mobile.

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the Anonymous Report Center plugin (com.sn_anonymous_report_center)using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

Note:
When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Using the Anonymous Report Center

Your employees can use the Anonymous Report Center (ARC) to submit sensitive complaints or misconduct cases anonymous to the agent working on the case.

Anonymously report misconduct

Create misconduct cases that are sent to your Human Resources department without your identity being revealed.

Before you begin

Role required: none

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Ensure that the Anonymous Report Center (com.sn_anonymous_report_center) and Human Resources Scoped App: Employee Relations (com.sn_hr_employee_relations) plugins are activated.

Procedure

1. Navigate to **All** > **Self Service** > **Employee Center**.
2. From the **Human resources** tab, select **Employee Conduct**.
3. Select **Visit Anonymous Report Center**.
   You are logged out of the Employee Center and logged into the **Anonymous Report Center** as a guest user.
4. Select **Submit an Anonymous Report**.
5. Select **Report misconduct**.
6. Fill in the form.

Report misconduct

Field	Description
Do your best to fully describe the situation	Provide information that accurately describes the misconduct you witnessed with as much detail as possible. **Note:** All information you provide is confidential.
List the names and info of those involved	Provide the names of the individuals involved in the misconduct. Include any witnesses to the misconduct. **Note:** Full names, job titles, teams, and departments are valuable for the investigators.
Let us know what date the incident occurred	Select the date the misconduct occurred. **Note:** Estimated dates are acceptable.
Let us know where the incident took place	Enter the location the misconduct occurred. **Note:** Details like room, desk spaces, or areas within the building the misconduct took place are all helpful to investigators.
I understand that the information I'm providing, including any sensitive or personal details, will be reviewed by the appropriate HR agents and teams.	After completing the form, check the box.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Enter the text verification code or check the **I'm not a robot** box.
8. Select **Submit**.
9. To save a PDF copy of your report, select the **Save a PDF copy of your report** link.

Note:
The report key and report number are required to access updates or comments related to an anonymous report. The report key and report number allows the person filing the complaint to track and view details about the progress of the anonymous case and respond to any follow up questions. Without the report key, the person who made the anonymous report cannot access their report. HR agents that have access to the Anonymous Report Center (ARC) and admin has access. For more information, see Access an anonymous report.

Anonymously report discrimination

Create discrimination cases that can be sent to your Human Resources department without your identity being revealed.

Before you begin

Role required: none

Note:
Ensure that the Anonymous Report Center (com.sn_anonymous_report_center) and Human Resources Scoped App: Employee Relations (com.sn_hr_employee_relations) plugins are activated.

Procedure

1. Navigate to **All** > **Self Service** > **Employee Center**.
2. From the **Human resources** tab, select **Employee Conduct**.
3. Select **Visit Anonymous Report Center**.
   You are logged out of the Employee Center and logged in to the **Anonymous Report Center** as a guest user.
4. Select **Submit an Anonymous Report**.
5. Select **Report discrimination**.
6. On the form, fill in the fields.

   All information you provide is confidential.

Report discrimination form

Field	Description
Please describe the situation in detail	Description of the discrimination incident with as much detail as possible.
Please list the employees who were involved	Identity information on the individuals involved in the discrimination and any witnesses to the discrimination, such as their full names, job titles, and team and department affiliations.
Indicate the approximate date of the incident	Date the discrimination occurred.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: You can provide an estimated date.
Indicate the place where the incident took place	Detailed location information on where the discrimination occurred, such as the room, desk space, or area within the building.

7. Select the confirmation check box that states **I understand that the information I'm providing, including any sensitive or personal details, will be reviewed by the appropriate HR agents and teams**.
8. Enter the text verification code or select the **I'm not a robot** check box.
9. Select **Submit**.
10. Save a PDF copy of your report, which contains the report key and report number necessary to access report updates, progress, or comments, by selecting the **Download report copy** link.

Note:
Only HR agents and admins that have access to the Anonymous Report Center and can access reports. For more details, see Access an anonymous report.

Access an anonymous report

You can retrieve your anonymous report to submit or view comments and updates from the agents working on your anonymous report. You must have the report key and report number in order to access your anonymous report.

Before you begin
Role required: none

Procedure
1. Navigate to **All** > **Self Service** > **Employee Center**.
2. From the **Human resources** tab, select **Employee Conduct**.
3. Select **Visit Anonymous Report Center**.
   You are logged out of the Employee Center and logged into the **Anonymous Report Center** as an anonymous user.
4. Select **Follow up on a report**.
5. Enter the **Report Key** and **Report Number**.

Note:
This information was provided when you submitted your anonymous report. Without this information, you cannot access it. If you no longer have this information, create a new anonymous report with details on the misconduct or discrimination and indicate that you lost the report key and report number from your first anonymous report.

6. Enter the text verification code or check the **I'm not a robot** box.
7. Select **Next**.
8. Enter questions or comments related to the anonymous report.
9. Select **Post**.

Employee Document Management

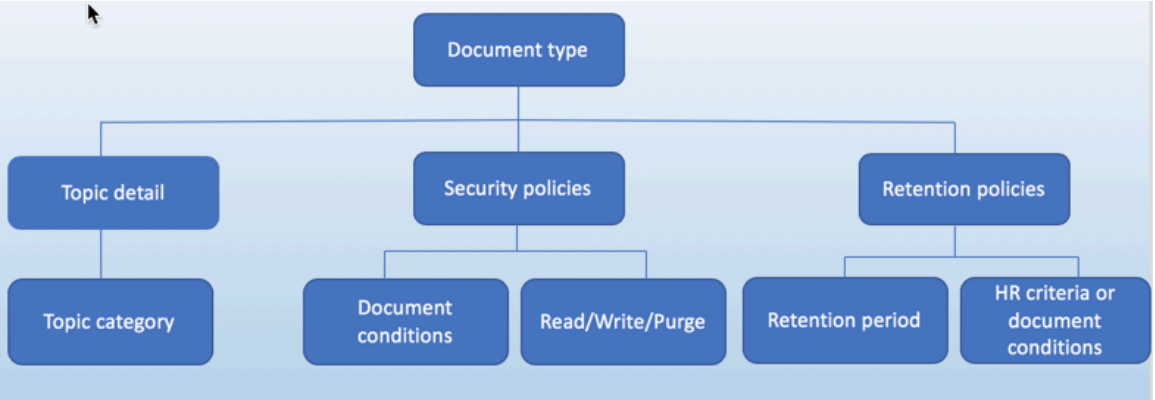
Manage large numbers of documents more efficiently with the ServiceNow™ Employee Document Management product. Employee Document Management provides storage space, a filing system, the ability to easily retrieve documents, defining who can view sensitive documents, and when to purge documents.

Your company asks employees to complete and return documents related to benefits, payroll, employee relations, access to internal systems, and other services. Employee Document Management is cloud-based, efficient, secure, and it reduces compliance risks.

Explore  Learn about how Employee Document Management works	Configure  Plan and configure your implementation	Use  Learn how to manage employee documents
Dashboard  View statistics of your employee documents	Reference  More information on other properties of Employee Document Management	

Exploring Employee Document Management

With Employee Document Management, you can streamline document management and maintain documents with integrity, accuracy and access controls.



Streamline management of employee documents

- Centralize files that are currently stored on multiple cases.
- Automatically or manually move employee documents from a case to the employee file.
- Find documents using metadata tags.
- Place legal holds on all documents for an employee (HR profile), or for all documents by document type.
- Define who can access what documents.
- Define retention policies that determine how long to retain employee documents and prevent purging for legal holds.
- Define when to purge documents.

Configure Employee Document Management

The base system provides pre-configured records that can be used immediately to expedite the configuration of Employee Document Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Employee document definitions

To use Employee Document Management, you must define the following:

- Document type: Defines how documents are categorized and are associated with Center of Excellence (COE), topic categories, and topic details. For example, you can create a document type for all documents related to Total Rewards or for each benefit. Document types also determine who can access, how long to retain, and if a legal hold is in effect.
- Retention periods: Defines how long to keep an employee document based on regulations or company policy.
- Retention policies: Combined with a retention period and criteria, determines how long to retain an employee document.
- Security policies: Determines who can view, create, move, or authorize to purge employee documents.

You can configure employee documents to automatically move to the document repository when an HR case is completed and closed.

Administrator, agent, and employee access to Employee Document Management

There are multiple levels of access for Employee Document Management.

- Administrators configure the Employee Document Management application.
- Agents upload employee documents on behalf of employees or as part of a case.
- Employees who can upload and view their documents.

Employee Document Management administrators assign appropriate roles to employees who require access to employee documents. The security policy determines access and purge authorization.

The document type and the associated retention policy and retention period determine when to purge employee documents. The security policy can require approval to purge. The security policy requires a user to belong to the group that has purge authorization.

Legal holds can be placed on HR profiles. Legal holds prevent employee documents from being purged. You can also place and manage legal holds by document type. Managing by document type provides bulk-processing for increased efficiency.

Employee Document Management for agents

Employee Document Management agents can:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Search for existing employee documents using different filters.
- Place or upload employee documents directly into the repository.
- When your company is also using HR Service Delivery, you can move employee documents from the HR case form to the repository. Employee documents can also be configured to automatically move when an HR case is closed.

Employee access

Employees can view their own employee documents when the document type provides employee access. Employee documents are also available on HR cases and the Service Portal or Employee Service Center profile page. See Define policies for a document type.

Configuring Employee Document Management

Configure Employee Document Management.

Activate Employee Document Management

You can activate the Employee Document Management [com.sn_employee_document_management] plugin with the admin role. This plugin includes demo data and activates related plugins if they are not already active.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.

   You can search for the plugin by its name or ID. If you cannot find a plugin, you might have to request it from ServiceNow personnel.
3. Select **Install** to start the installation process.

   Note:
   When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears: `Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>.`

   You will see a message after installation is completed. For information about the components installed with a plugin, see Find components installed with an application.

Request employee document management bulk uploads

The Employee Document Management Bulk Uploads requires separate subscriptions to the Orchestration [com.snc.runbook_automation] and ServiceNow IntegrationHub Installer [com.glide.hub.integrations] plugins. These plugins must be activated by ServiceNow personnel.

Before you begin
Role required: admin

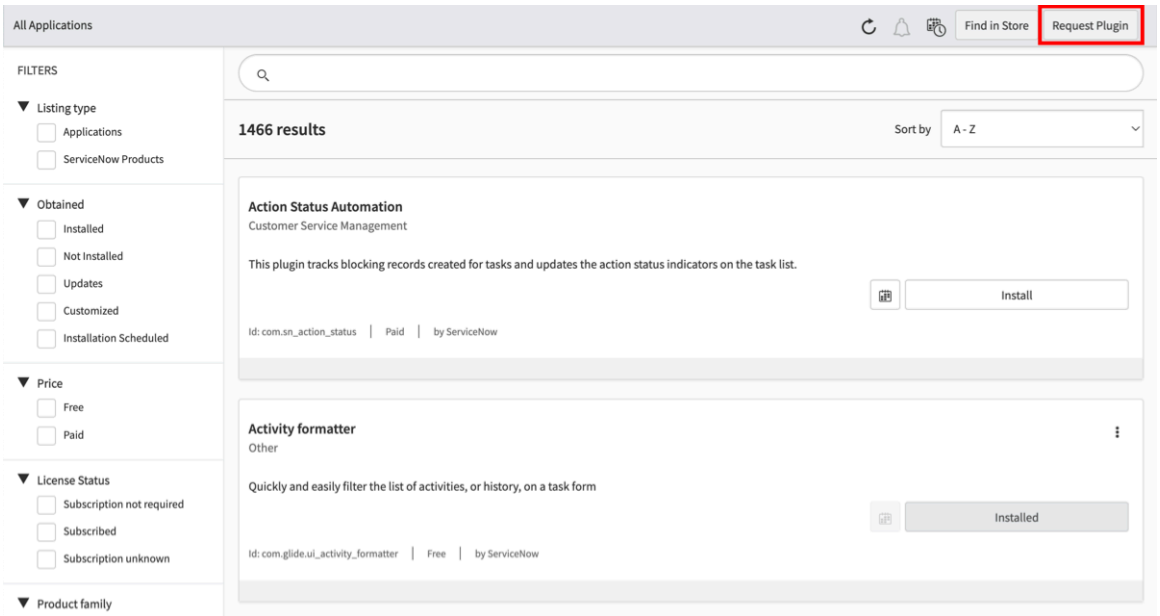
About this task
There is demo data available that provides configuration examples of a local directory and third-party, cloud-based document repositories. These examples help you to configure Employee Document Management bulk uploads with your own internal document repository.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To view the demo data, you must activate the Orchestration [com.snc.runbook_automation] and ServiceNow IntegrationHub Installer [com.glide.hub.integrations] plugins first.

The Employee Document Management [com.sn_hr_employee_document_management] plugin must be activated last.

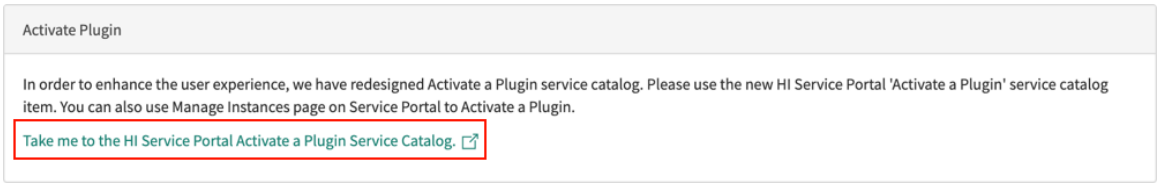
Plugins for Employee Document Management Bulk Uploads



Plugin	Description
Orchestration [com.snc.runbook_automation]	Required for bulk imports from local drives.
ServiceNow IntegrationHub Installer [com.glide.hub.integrations]	Required for bulk imports from third-party, cloud-based document repositories.

To purchase a subscription, contact your ServiceNow account manager. The account manager can arrange to have the plugin activated on your organization's production and subproduction instances, generally within a few days.

If you don't have an account manager, decide to delay activation after purchase, or want to evaluate the product on a subproduction instance without charge, follow these steps.



Procedure

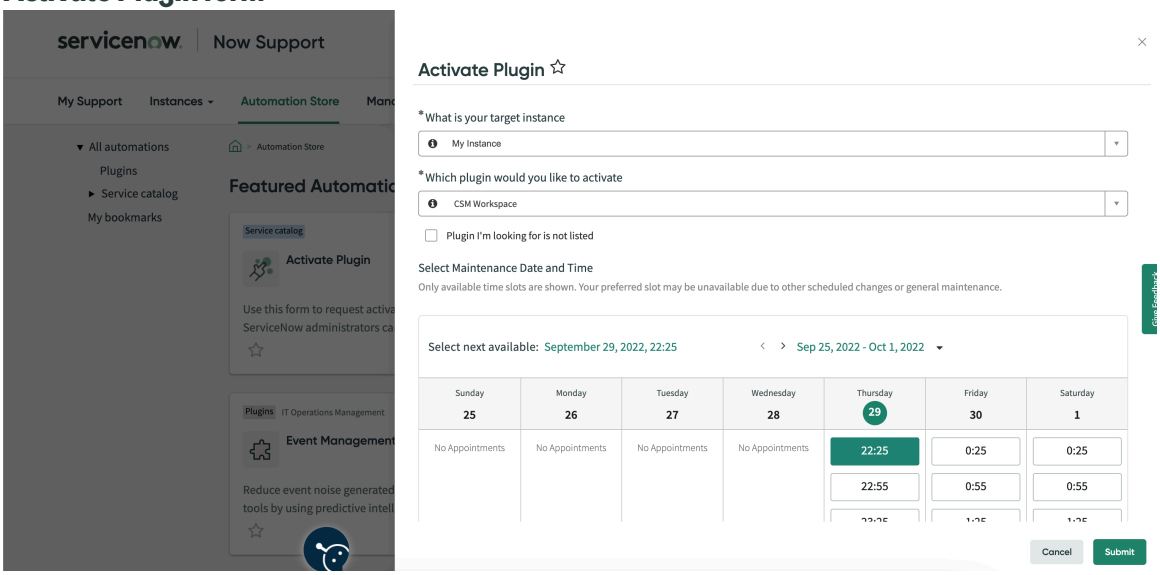
1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. On the All Applications page, select **Request Plugin** to open the **Activate Plugin** form on Now Support.

3. On Now Support, select the link to access the Now Support Service Portal Service Catalog.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select your instance.
5. Select **Actions > Activate Plugin**.
6. On the **Activate Plugin** form, provide the following information.

Activate Plugin form



Field	Description
What is your target instance	Instance on which to activate the plugin.
Which plugin would you like to activate	Name of the plugin to activate. **Note:** If the system does not list the plugin you want or if you are activating the plugin on an OEM or on-premise instance, select the **Plugin I'm looking for is not listed** check box and then enter the name of the plugin.
Select Maintenance Date and Time	The date and time to activate the plugin. **Note:** Plugins are activated in two batches, once in the morning and once in the evening, on every business day in the US Pacific time zone. If the plugin must be activated at a specific time, enter the request in the **Reason/Comments** field.

Example

For example, see the following form to activate the CSM Workspace plugin on an instance named My Instance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activate Plugin form

7. Select **Submit**.
   For additional details about requesting a plugin, see Requesting a Plugin from the Service Catalog [KB0751715] article in the Now Support Knowledge Base.

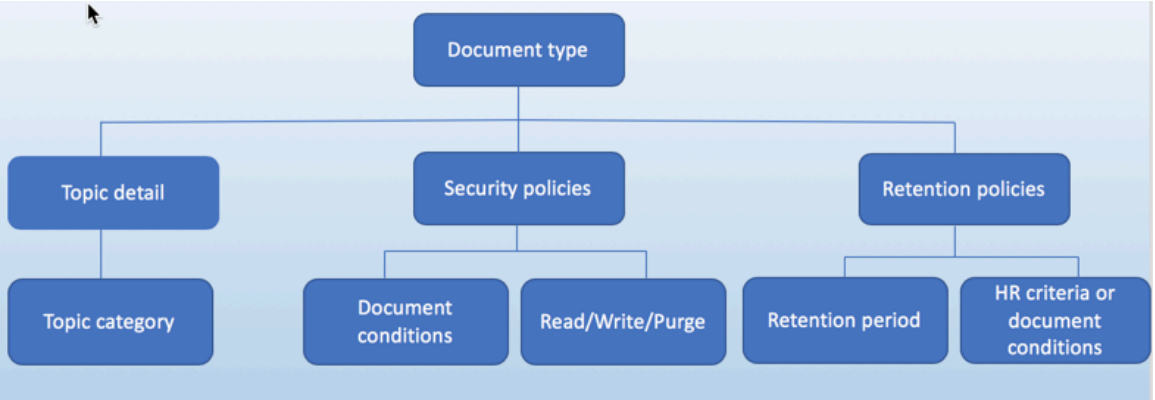
Defining and setting for employee documents



Use Employee Document Management to configure how employee documents should be handled based on company policy, processes, and regulatory compliance.

Document types

Document types are at the center of the Employee Document Management application. All employee documents are required to have a document type assigned. Categorize your employee documents by assigning document types. Use document types to combine policies that determine handling of an employee document. Use document types to:

- Associate a security policy. Security policies determine who can access employee documents and determine purge authorization.
- Associate a retention policy. Retention policies determine how long to keep a document and who the document is applicable to.
- Place a legal hold. Legal holds temporarily prevent document purging or changes to the document.
- Allow access to employees.
- Configure employee documents to be moved automatically when an HR case is closed. See Configure an HR service.

© 2026 ServiceNow, Inc. All rights reserved.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Define policies for a document type

For each document type, you can determine who can access a document as well as define the retention policies associated with it, or place a legal hold. A document type can manage multiple documents.

Before you begin

Role required: sn_hr_ef.manager

About this task

Document types combine topic detail, retention policies, and legal holds. The default retention period for a document type is defined on the corresponding Center of Excellence (COE). For details on COEs, see HR Centers of Excellence data model.

Note:
The base system provides various document types as examples.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Document Types**.
2. Click **New** or an existing document type to edit.
3. Fill in the fields as appropriate.

Document Type form

Field	Description
Name	Name that describes the document type.
Topic detail	Topic detail associated with an HR service. The topic detail categorizes the document type. The HR service can be used to automatically move employee documents to the employee document repository when an HR case is closed.
Active	Option for activating or deactivating a document type. On deactivating a document type, the document type does not appear for selection when creating a document or moving attachments.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Application type	Application associated with the document type.
Legal hold	Indicates if a legal hold has been placed on the document type. When checked, all employee documents with this document type are placed on legal hold.
Employee access	Enables employees to access their own employee documents.
Expiration date	Option to set expiration date on a document. Email notifications will be sent to document owners, managers, or HR representatives (as per expiration policies) when the document expires or nearing its expiration.

4. From the Context Menu, click **Save** to remain on the Document Type form.
The following tabs appear.

Document type tabs

Tab	Description
Security Policies	Security policy associated with the document type. Security policies grant authorized users the ability to view, create, move, or authorization to purge employee documents. When you select a topic detail, the default security policy associated with that topic detail (if any) is automatically displayed in the **Security Policies** tab. In the **Security Policies** tab, you can, ○ Add and associate multiple security policies to a document type. ○ Define an order in which a security policy must be evaluated. Lower numbers are placed ahead of higher numbers. For example, a security policy with an order set to 100 is evaluated before a security policy with an order set to 200. ○ Enable or disable a security policy. When you disable a security policy, it implies that a security policy will be associated with the document type, but will not be considered for evaluation.
Retention Policies	Retention policy associated with the document type. The retention policy combines the retention period (determines how long a document

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tab	Description
	should be saved) and HR criteria (filters who the policy is applicable to). See Add or modify a retention policy.
Legal Holds	Shows any legal holds placed on the document type with reason, date, and time stamps.
Expiration Policies	Expiration policies enable an administrator to filter documents of a document type based on HR criteria or on fields of employee document table or as a combination. It also enables an administrator to configure groups or recipients that could receive email notifications when document expires or nears its expiration.

5. After adding or editing the retention policy, click **Save** to remain on the Document Type form or click **Submit** to return to the Document Type list.

Define how long to retain employee documents

A retention period defines how long an employee document should be saved before being discarded. Retention periods are combined with conditions or criteria to form a retention policy.

Before you begin

Role required: sn_hr_ef.manager

Note:
Retention periods are unique and cannot be duplicated. Before you can delete a retention period, you must be sure that a document type is not associated with the retention policy.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Retention Periods**.
2. Fill in the fields as appropriate.

Retention Period form

Field	Description
Title	Name that describes the retention period.
Date field	Starting point of the retention period. The fields that are available depend on the Employee Document [sn_hr_ef_employee_document] table. Fields from the Employee Document [sn_hr_ef_employee_document] table used to define the beginning of the retention period. Dot-walk and select a field to determine the starting point of the retention period.
Application type	Application associated with the retention period.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Date offset type	Offset that determines if the retention period should start before or after what was selected in the **Date field**. Combined with the **Date field**, **Date offset units**, and **Date offset quantity** determines the length of the retention period. For example: ○ Date field = Created ○ Date offset type = After ○ Date offset units = Years ○ Date offset quantity = 1 Using this configuration, the retention period is one year after the created date of the document.
Date offset units	Unit of time that determines if the retention period should be measured in months or years.
Date offset quantity	Number of months or years before or after the **Date field** selection.

3. Click **Submit** or **Update**.

Add or modify default retention policies

Default retention policies ensure that employee documents are not mistakenly purged. When a retention policy has not been assigned to a document type, the default retention policy is used.

Before you begin

Role required: sn_hr_ef.manager

About this task

You can edit default retention policies.

The HR Service Delivery base system provides default retention policies for each employee document associated with a Center or Excellence (COE) table.

Default retention policies are assigned to all documents that fall under a COE and the retention period is indefinite and never purged.

Note:
If you change the default retention period, all new documents are assigned the new period, but existing documents still use the original retention period.

Default retention policies cannot be deleted when being used by a document type. Only one default policy for a COE is allowed.

Once a purge date is calculated and a legal hold is placed, the purge date does not change.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Default Retention Policies**.
2. Click **New** to create a default retention policy or on an existing policy to edit.
3. Fill in the fields as appropriate.

Default Retention Policy

Field	Description
Table	COE table employee documents are associated with when the HR Service Delivery is licensed and activated.
Retention period	Retention period identifying how long the document is retained. The only field you can edit.
Application type	Application associated with the default retention policy.

4. Click **Submit** or **Update**.

Add or modify a retention policy

Set policies determining how long documents should be retained and who is covered. Retention policies combine the retention period and conditions or criteria.

Before you begin
Role required: sn_hr_ef.manager

About this task
Regulations, laws, and your company policies determine how long documents should be retained.

Once a purge date is calculated and a legal hold is placed, the purge date does not change.

To ensure that there are no accidental purging, the base system provides default retention policies. When a retention policy has not been assigned to a document type, the default retention policy is used.

When a document type is covered by multiple retention policies:

- The policy with the longest retention period applies.
- When there is a non-default default retention policy and a default retention policy with a retention period of indefinite, the non-default retention policy applies. Assuming the HR criteria matches and the retention period is applicable.

Retention policies have a one-to-one relationship to a document type, you cannot have the same retention policy for multiple document types.

Note:
You can use the same retention period for multiple retention policies.

When you have multiple retention policies, but there is an overlap in criteria, the retention policy with the longest retention period is used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example: Document type = Disciplinary Notice

- Retention policies:
  - US employees (retention period = End Date + 7 years)
  - US contract employees (retention period = End Date + 5 years)
- If a user is both a US employee and contract employee, the US employees retention policy is used because it has a longer retention period.

Note:
You can use the default retention policy for all document types. The default retention policy defines that all employee documents are retained while an employee is a current employee of your company. Once an employee leaves the company, a second retention policy is triggered based on HR criteria. When an employee does not satisfy the HR criteria and leaves the company, the original default retention policy is still in effect. The employee documents are retained indefinitely.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Retention Policies**.
2. Click **New** or an existing retention policy to edit.
3. Fill in the fields as appropriate.

Retention Policy form

Field	Description
Applies to	Employee Document [sn_hr_ef_employee_document] table and document type associated with the retention policy. Select a table and document type the retention policy is based on.
HR criteria	Who the retention policy applies to. For example, you can select HR criteria based on a country. This criteria ensures everyone based in the selected country has the same retention policy. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Retention period	How long an employee document should be saved.
Active	Indicates if the retention policy is active and in use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Default retention policies cannot be deactivated.

4. Click **Submit** or **Update**.

Add or modify default security policies

Default security policies ensure that employee documents are secure. The HR Service Delivery base system provides default security policies for each document type and determines who can access and has purge authorization.

Before you begin

Role required: sn_hr_ef.manager
Users are granted access to employee documents by:

- Groups
- Roles
- Both groups and roles

The security policy can require authorization to purge and requires a user to belong to the group that has purge authorization.

See Manage HR Groups and Manage HR roles.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Default Security Policies**.
2. Click **New** or an existing default security policy to edit.
3. Fill in the fields as appropriate.

Security Policies fields

Table	Description
Description	Phrase that describes the HR employee document security policy.
Application type	Application associated with the security policy.
Active	Option for enabling or disabling the security policy. When you disable a security policy, it implies that the security policy will be associated with the document type, but will not be considered for evaluation.
Applies when	Filters defining additional conditions on a security policy.

4. Click **Submit** or **Update**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add or modify document security policies

Many employee documents contain confidential and personal information. Use document security policies to define access to employee documents and ensure that they are secure.

Before you begin

Role required: sn_hr_ef.admin

About this task

You can determine who can read, write, or authorize purging of documents by adding or modifying document security policies.

Note:
You can provide employees visibility into their own employee documents through their HR profile. Check the **Employee access** box on the **Document type** form. See Define policies for a document type.

Users are granted access to employee documents by:

- Groups
- Roles
- Both groups and roles

The security policy can require authorization to purge and requires a user to belong to a group that has purge authorization.

See Manage HR Groups and Manage HR roles. Or see Groups and Roles.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Security Policies**.
2. Click **New** or an existing security policy to edit.
3. Fill in the fields as appropriate.

Security Policies fields

Table	Description
Description	Phrase that describes the HR employee document security policy.
Application type	Application associated with the security policy.
Active	Option for enabling or disabling the security policy. When you disable a security policy, it implies that the security policy will be associated with the document type, but will not be considered for evaluation.
Applies when	Filters defining additional conditions on a security policy.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use the three tabs to determine what groups or roles are required to search, access, and edit meta data for an employee document by document type. You can also define what groups receive purge notifications or can authorize purging of employee documents.

Security Policy tabs

Tabs	Description
Read	Groups: Groups a user must belong to search and read an employee document with the associated document type and security policy. Roles: Roles a user must have to search and read an employee document with the associated document type and security policy. **Note:** Users with the Employee Document Management Reader [sn_hr_ef.document_reader] role must also be added here to search and read documents associated with the document type and security policy. Match all: Determines if both the conditions for groups and roles must be met for access. **Note:** If you leave unchecked, the user only has to meet conditions from either Groups or Roles, not both.
Write	Groups: The groups a user must belong to access. Roles: Roles a user must have to search, read, and create an employee document with the associated document type and security policy. **Note:** Users with the Employee Document Management Writer [sn_hr_ef.document_writer] role must also be added here to search, read, and create documents associated with the document type and security policy. Match all: Determines if both the conditions for groups and roles must be met for write access.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tabs	Description
	Note: If you leave unchecked, the user only has to meet conditions from either Groups or Roles, not both.
Authorize Purge	Authorization is required to purge documents, or send a notification before the purge process runs. Groups: Group a user must belong to authorize or be notified of an upcoming purge. **Note:** Only one person in the group is required to authorize.

4. Click **Save** and the **Document Types** related list appears.
5. Click **New** and you can create a document type to be associated with the security policy.
6. Click **Submit** or **Update**.

Add or modify expiration policies on a document type

Add or modify expiration notification policies on a document type. Allow setting an expiration date on a document and sending email notifications to document owners, managers, or HR representatives when the document expires or nearing its expiration.

Before you begin

Role required: admin

About this task

Certain documents, such as passports or training certificates, have expiration dates. For organizations to adhere to compliance policies, the latest versions of employee documents are to be maintained. With this feature, an administrator can set up expiration notification policies on a document type and a user can set an expiration date for a document while uploading it to Employee Document Management or when moving a case to Employee Document Management.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Expiration Notification Policies**.
2. Click **New**.
3. On the form, fill in the fields:

Expiration Notification Policy form

Field	Description
Document type	Document type on which the expiration policy is set. For example, Education Agreements.
Name	Name that you specify for the expiration notification policy.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Order	Order that you specify for an expiration policy. Assume that a document qualifies two expiration notification policies, then the policy with lesser order is given higher priority.
Active	Option to activate the expiration policy for use.
Add filter criteria	
HR criteria	HR criteria defines the audience on whom you want to apply filter conditions. For example, US employees: Tax forms collection.
Applies when	Filter conditions that you want to apply on fields of employee document.
Match both	When there is more than one filter condition, enable this option. Documents are filtered based on all conditions specified.

4. Click **Submit**.

What to do next

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Expiration Notification Policies**.
2. Open the required expiration notification policy.
3. In the **Expiration Notification Recipients** related list, add recipients:

Expiration Notification Recipient form

Field	Description
Name	Name for the expiration notification recipient.
Data offset type	Date offset type relative to the expiration date of the document. For example, do you want to send a notification before or after the expiration date.
Data offset units	Number of days, weeks, or months that defines your offset units.
Data offset quantity	Value specified for data offset. For example, assume you have selected Data offset type as **Before**, Date offset units as **Days**, and Date offset quantity as **3**, then email notifications will be sent three days before the expiration date of the document.
Expiration notification policy	Expiration notification policy for which recipients are being created.
Recipients	Recipients for notifications could be selected from the fields supported on an employee document. **Note:** If you want to notify different recipients on different days, you can configure multiple expiration notification recipients for a single expiration notification policy.
Active	Option to activate the expiration notification recipient.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the Groups section, add groups to which you want to send notifications. Groups receive notifications at the same time as the recipients.
5. Click **Submit**.

Using Employee Document Management

Manage employee documents and learn about bulk imports.

Managing employee documents

Use Employee Document Management to search, create, move, or manage legal holds on employee documents.

Employee Document Management is your virtual file cabinet containing any or all your organization's employee documents. With Employee Document Management, you can:

- Search for employee documents: There are many ways you can use to narrow down your search for employee documents.
- Create employee documents:
  - Employee documents can be added directly to the document repository.
  - When combined with HR Service Delivery, HR agents can move documents from an HR case or add directly to the document repository.
- Place an HR profile or document type on legal hold: Placing an HR profile or document type on legal hold prevents associated employee documents from being purged after the retention period has been reached.
- Move employee documents: When employee documents are attached to an HR case, you can manually move them to the document repository. Or, you can configure HR services to automatically move employee documents when the case is closed/complete.
- View employee documents: Employees can view their own employee documents on the service portal or Employee Center. Here Define policies for a document type is how you give them access by document type. The base system provides example document types.

Searching for employee documents

Search for and view employee documents using different filters from the employee document repository. You can also download documents for audit purposes.

Before you begin

Role required: sn_hr_ef.document_reader

About this task

Employee Documents is the repository for employee documents. No matter how large your repository of employee documents is, you can search on the fly or set up pre-set search filters to find the documents you need quickly.

Procedure

1. Navigate to **All** > **HR Profile** > **Employee Documents** > **Search Documents**.
2. Use the column filters to identify documents you are looking for.
   For example, sorting on the Employee column shows all documents by employee.
3. To download documents, select the check the box next to the documents and then select **Download** from the Actions choice list.
   Downloading multiple documents with the same name appends each document with the employee name. A number is added when documents are still duplicated.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. To view more information about a document, click the document name.
   If **Yes** is checked in the**sn_hr_ef.enable_document_viewer** Employee Document Property, the employee document appears.

Create or modify an employee document

With the employee document writer [sn_hr_ef.document_writer] role, you can create or upload an employee document directly to the employee document management repository.

Before you begin

Role required: sn_hr_ef.document_writer

About this task

Documents can also be uploaded from the HR case form and then moved to the document repository.

> **Note:**
> Employee documents can also be moved from the HR case form automatically when the case is closed by configuring the HR service. For information on configuring this feature, see Configure an HR service.

Procedure

1. Navigate to **All** > **HR Profile** > **Employee Documents** > **Create New Document**.
2. On the form, fill in the fields.

Employee Document form

Field	Description
Document	Employee document to upload. Click **Choose File** to upload an employee document. **Note:** By default, the maximum size of a document allowed is 30 MB. The default can be changed from the **Maximum file upload size in megabytes** field in Employee Document Properties. For more information, see Properties for Employee Document Management application. After selecting a document, the read-only fields show the file size, file format, created on, and created by. The viewer within the UI only supports viewing .pdf documents. Other types of documents can be downloaded and then viewed. For optimal search results, do not use dashes (-) in the name of the document. Using full words separated by spaces or underbars provides better search results.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The **Enable "Document Viewer" to preview pdf documents** in the Employee Documents property must be checked **Yes** to view .pdf documents. **Note:** Viewing documents is not supported for FedRAMP, on-premise customers, mobile devices, customers using edge encryption, or encryption support.
Description	Description of the employee document.
Employee	Name of the employee the document is associated with.
Payroll country	Payroll country of the employee at the time of document creation. **Note:** When you upload the document or move the case attachments to employee file, the value in the **Payroll country** field defaults to the user profile of the employee.
Document type	Document type associated with the employee document. Document types provide categorization and the retention policy. **Note:** ○ You can read and write a document only if you fulfill the read or write configuration requirement of at least one security policy associated with the document type. ○ You can purge a document only if you fulfill the purge authorization configuration requirement of at least one security policy associated with the document type. ○ You can receive a purge notification only if you fulfill the purge authorization or notification configuration requirement of at least one security policy that is associated with the document type.
Effective date	Date and time from when the employee document is valid. In general, effective date takes the date of document creation, except in cases of contractual agreements. For example, the pay increase or promotion

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	might come into effect from a date different from the date of the performance appraisal.
HR case	HR case number the employee document is associated with when moved from an HR case.
Purge hold	Purge hold status of a document. ○ Pending purge authorization: Purge notification has been sent out, but authorization has not been received. ○ Purge Approved: Purge authorization was received, the document is scheduled to be purged. ○ Purged Rejected: Purge authorization was rejected, the document is not scheduled to be purged. The security policy associated with a document type sets purge authorization. The following roles have permission to change purge authorization: ▪ EF admin [sn_hr_ef.admin] ▪ Employee File Management Manager [sn_hr_ef.manager]
Expiration date	Option to set an expiration date for a document. Email notifications will be sent to document owners, managers, or HR representatives (as per expiration policies) when the document expires or is nearing its expiration. **Note:** This option is enabled only when an administrator enables the **Expiration date** check box.

3. Click **Submit** to create the employee document record.
   The Employee Document Audit Trail related list tab appears.

   Provides view of all actions for an employee document from creation or uploaded to the time it is purged.

   The following actions are captured:

   ○ Record created
   ○ Fields updated
   ○ Attachment removed
   ○ Attachment updated
   ○ Attachment renamed
   ○ Platform tag added

- Platform tag removed
- Document viewed
- Document downloaded
- Document downloaded by employee on Employee Center

Move employee documents to the document repository

You can move employee documents from an HR case to the employee document repository. You can also move employee documents automatically by HR service when an HR case is closed complete.

Before you begin

Role required: sn_hr_ef.document_writer or sn_hr_core.case_reader

About this task

Employee documents can also be added directly to the employee document repository. The employee document repository provides a central repository for quick and easy identification using different sorting features. See Create or modify an employee document.

Procedure

1. Navigate to **All** > **HR Case Management** > **All HR Cases**.
2. Select a case that has employee documents attached.
   From the list view, there is no way to identify HR cases with employee documents attached. The HR case number or the Opened for person are required to locate an HR case.
3. From the form header, click **Move Attachments**.
   The **Move Attachments to Employee File** menu appears.
4. Select the check box next to the documents you want to move.
   The **Select COE for attachments to be moved** and **Topic Detail** fields can be modified, but only if the document was added under the wrong type of HR case.
5. Select the **Document Type** for each document.
   The document type determines categorization, who can access it, and the retention policy. If no document type appears for the associated topic detail, one should be created to ensure correct categorization. See Define policies for a document type.
6. Click **Move Selected**.

Result

The employee documents move from the HR case to the employee document repository. After an employee document is moved, the file name, format, and size are copied from the attachment to the document.

Note:
You can also automate this process by checking the **Automatically move attachments** box from HR services. See Configure an HR service.

What to do next

Once you have moved the attachments, the attachments are displayed in the Employee Documents section in the case.

Add or remove a legal hold for employee documents

Legal or litigation holds prevent the deletion of documents related to a document type or all employee documents for an HR profile.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_ef.admin, sn_hr_ef.manager, sn_hr_core.profile_writer, sn_hr_ef.legal_hold_writer

About this task
A legal hold suspends all retention policies for associated employee documentation.

Note:
If you are logged in as System Admin [admin], ensure that you are viewing in the Employee Document Management scope. If you change your scope, you also have to refresh the page.

A legal hold prevents the purging of documents only by out-of-box document clean-up mechanism. It is not applicable to custom clean-up mechanisms, such as custom table cleaners or table archival rules.

Procedure
1. Navigate to **All** > **HR Profile** > **HR Profiles**.
2. Select an HR profile you want to place on legal hold.
3. Click **Add Legal Hold** in the form header.
4. From **Add legal hold on this profile**, select a reason and add comments.
5. Click **OK**.
6. Add comments.
7. Click **OK**.
8. To place a document type on legal hold, navigate to **HR Administration** > **Employee Documents** > **Document Types**.
9. Select a document type.
10. Click **Add Legal Hold**.
    The **Add Legal Hold** button is in the form header.
11. Add comments.
12. Click **Ok**.
13. Click **Update**.
    All documents associated with the document type are placed on legal hold and are not purged based on the retention policy.

Add legal hold to multiple HR profiles

Add legal hold to multiple HR profiles at one time. Legal or litigation holds prevent the deletion of employee documents for an HR profile.

Before you begin
Role required: sn_hr_ef.admin, sn_hr_ef.manager, sn_hr_core.profile_writer, sn_hr_ef.legal_hold_writer

Procedure
1. Navigate to **All** > **HR Profile** > **HR Profiles**.
2. In the list view, select all the HR profiles on which you intend to apply legal hold.
3. In **Actions on selected rows**, select **Add Legal Hold**.
4. In the Add legal hold dialog box:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the **Reason** field, select a value.

b. In the **Comments** field, add more details.

c. Click **OK**.
Employee documents of selected HR profiles are placed on legal hold and are not purged based on retention policy.

Add legal hold to multiple document types

Add legal hold to multiple document types at one time. Legal or litigation holds prevent the deletion of documents related to a document type.

Before you begin
Role required: sn_hr_ef.admin, sn_hr_ef.manager, sn_hr_core.profile_writer, sn_hr_ef.legal_hold_writer

Procedure

1. Navigate to **All** > **HR Administration** > **Document Types**.
2. In the list view, select all documents on which you intend to apply legal hold.
3. In **Actions on selected rows**, select **Add Legal Hold**.
4. In the Add legal hold dialog box:
   a. In the **Reason** field, select a value.
   b. In the **Comments** field, add more details.
   c. Click **OK**.
   Documents associated with selected Document Types are placed on legal hold and are not purged based on the retention policy.

Manage documents on legal hold

You can view a list of all document types or HR profiles that are currently under or had been under a legal hold. You can review the reasons a document type or HR profile was placed on legal hold and remove the legal hold.

Before you begin
Role required: sn_hr_ef.legal_hold_writer

About this task
Legal holds are placed on employee documents by HR profile or by document type. See Add or remove a legal hold for employee documents.

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Legal Holds**.
2. Select a document type or HR profile.
3. Change the **Legal hold reason** if applicable.
4. Enter **Comments**.
5. Click **Update**.

View employee document purge logs

For optimal system performance and depending on your internal processes, employee documentation is purged based on the security policy established by your company.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_ef.manager

About this task
Purging permanently deletes employee documents from the instance. Purging frees up overall storage.

- The purge log shows what documents were deleted.
- Attributes of the deleted documents are stored.
- The default attributes that identify deleted documents are employee and HR case number. You can change the default in the Properties for Employee Document Management.

See Properties for Employee Document Management application.

Procedure

Navigate to **All** > **HR Administration** > **Employee Documents** > **Purge Logs**.
A list of purged documents with the fields specified in the **These fields will be included in the purge logs if enabled** of Properties for Employee Document Management Application appear.

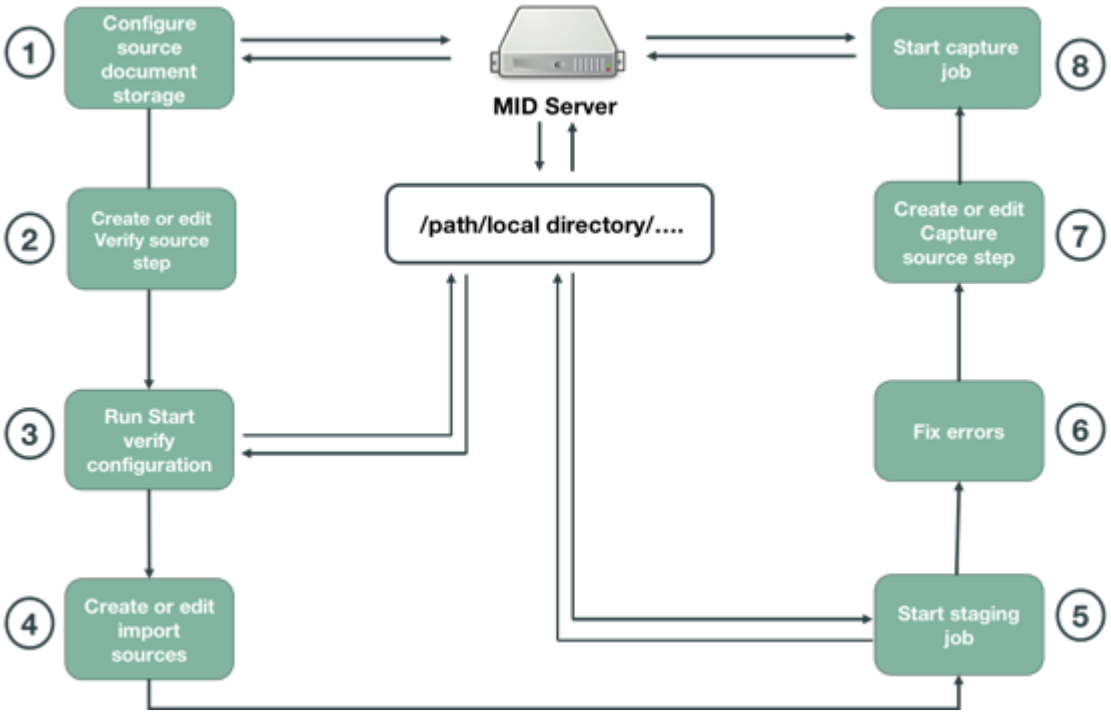
Employee document management bulk imports

Use the Employee Document Management Bulk Imports feature to copy your employee documents from an external third-party cloud-based storage or a local network directory to Employee Document Management. Having your employee documents within HR Service Delivery makes administration efficient and convenient.

If you currently store your employee documents outside of HR Service Delivery, you can consolidate and maintain these documents over the duration of your employees tenure.

Your current document repository

Where you currently store your employee documents determines bulk import configuration. The Employee Document Management bulk imports feature provides integration with:



- Local document storage solution.
- Third-party, cloud-based document storage solutions.

Configuring local document storage

Activating the Orchestration [com.snc.runbook_automation] plugin is required for importing employee documents from a local document repository.

Note:
Java JRE 6 or later is also required.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The process for configuring HR Service Delivery with a local document repository is:

1. Configure HR Service Delivery to communicate with the source location from Employee Document Import Configuration.

   Before you can configure a local document storage, ensure that a MID Server is configured and available. A MID server is required to facilitate communication and movement of data between a ServiceNow instance and applications, data sources, and services.

   Important:
   By default, this feature expects the file server to be UNIX. If the file server is any OS other than UNIX, then you must customize the solution.

   - Only Secure Shell Protocol (SSH) credentials are supported.
   - The MID server can be on a Windows or Linux server. The server that hosts the files to be imported must be non-windows.

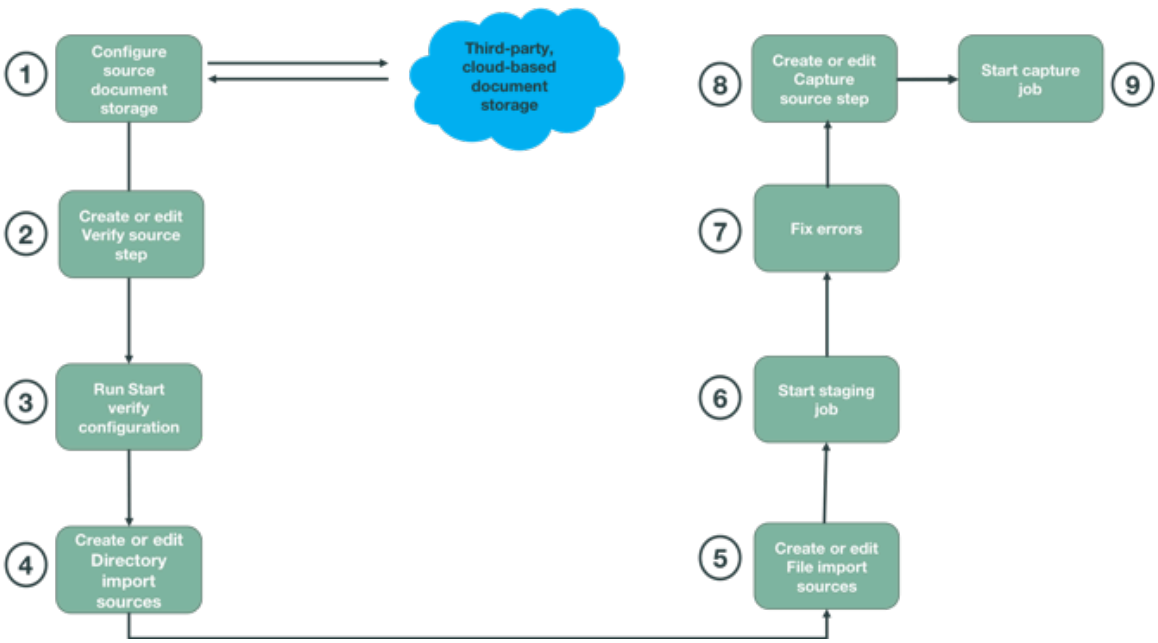
     Note:
     Other methods of configuring your local document storage requires custom development.

   Create a credential to use for authentication with the local document storage. See Set up SSH credentials to the MID Server.

   Note:
   When connecting to a local document repository, you may need to grant admin rights.

2. Create or edit the Verify source step. This step creates a source step required to validate the connection between your local directory and Employee Document Management.

   Note:
   Having your source employee documents in a central repository, simple directory structure, and consistent file naming convention is highly recommended and reduces errors.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Run the Start verify source job to verify the connection and validate source employee documents are identified and located.
4. Create or edit the Employee Document Import Sources. This step identifies the source documents you want to import from your local document storage to Employee Document Management.
5. Run the staging job. This step saves information about your source employee documents into the Employee Document Staging [sn_hr_ef_import_staging] table. All required information to import the employee document is contained in this record.
6. Verify that steps 3 and 4 are correct by viewing your staging records. You can fix errors in the staging table.
7. Create or edit the Capture Source step. This source step imports the staging records and source employee documents to Employee Document Management.
8. Start the Capture job that processes the staging records that have a state of **Ready** and pulls or looks up the source employee documents. Your source employee documents are copied to Employee Document Management.

Configuring third-party, cloud-based document storage

Activating the ServiceNow IntegrationHub Installer [com.glide.hub.integrations] plugin is required for importing employee documents from a third-party, cloud-based document repository.

Note:
Integrating with a third-party, cloud-based document storage is considered a custom implementation. Employee document management bulk imports provides a basic framework to integrate with third-party, cloud-based document storage. You may need to consult with your ServiceNow Solution Consultant.

You need the following to configure with your third-party cloud-based (source) document repository:

- The URL to your source document repository.
- Credential alias.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The process for configuring HR Service Delivery with a third-party cloud-based document storage is:

1. Configure HR Service Delivery to communicate with the third-party, cloud-based source document repository.
2. Create or edit the Verify source step. This step creates a source step required to validate the connection between your third-party, cloud-based document repository and Employee Document Management.

   Note:
   Having your source employee documents in a simple directory structure and consistent file naming convention is highly recommended and reduces errors.

3. Run the Start verify source job to verify your connection from your third-party, cloud-based document repository is communicating with Employee Document Management.
4. Create or edit the Directory import sources step. This step identifies the directory your source documents are located in your third-party, cloud-based document storage.
5. Create or edit the File import sources step. This step identifies the source documents you want to import from your third-party, cloud-based document storage to Employee Document Management.
6. Run the staging job. This step saves information about your source employee documents into the Employee Document Staging [sn_hr_ef_import_staging] table. All required information to import the employee document is contained in this record.
7. Verify that steps 3 and 4 are correct by viewing your staging records. You can fix errors in the staging table.
8. Create or edit the Capture Source step. This source step imports the staging records and source employee documents to Employee Document Management.
9. Start the Capture job that processes the staging records that have a state of **Ready** and pulls or looks up the source employee documents. Your source employee documents are copied to Employee Document Management.

File size limitations

The base system allows you to import employee documents that are 30 megabytes or smaller.

Use the **sn_hr_ef.max_file_size** field in the Properties for Employee Document Management Application to set the maximum file size allowed.

Note:
Increasing the maximum size can affect system performance.

For more information, see Properties for Employee Document Management application.

Use import mapping to locate and transform source employee documents

Import mapping locates your source employee documents from your source document repository and transforms them to import them to Employee Document Management.

Import maps define mapping variables used to acquire meta data from the source document repository. It also allows you to correctly identify the employee documents you want to import and maps them to required elements in Employee Document Management.

The required elements for a local network directory:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Employee name
- Document type
- File name

The required elements for a third-party, cloud-based directory:

- items
- item
- Employee name
- Document type
- File name
- url

Parsing for fields and values from an output file

If your source document repository provides an output file, you can transform mapping locates, parse, and map the output file into values that Employee Document Management requires. To transform an output file, do the following:

- Create a Field mapping type that finds an array of items in the output file (JSON is an example of an output file).
- Create a Field mapping type that for each item in the array that locates the file ID.
- Create a Field mapping type that locates the employee mapped element.
- Create a Field mapping type that locates the docType mapped element.
- Create a Field mapping type that locates the fileName mapped element.
- Create a Field mapping type that locates the url mapped element.

Extracting from a file name

If your source employee documents have:

- A consistent naming convention.
- The employee file has all required meta data in the file name.

You can use import maps to locate and transform the source employee document into values that Employee Document Management requires.

For example, your employee documents have a consistent naming convention: Abel_Tuter_LOARequestLeave.pdfYou can map parts of the file name to the required elements for Employee Document Management:

- Employee name: abel.tuter
- Document type: LOARequestLeave
- File name: Abel_Tuter_LOARequestLeave.pdf

Scripting

You can also use scripts to map source elements to the required map elements for Employee Document Management. See Scripts.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The base system provides import map examples you can use as models.

Configuring employee document management bulk import with source document repository

Use Employee Document Import Configuration to identify and communicate with the source document repository. The source document repository is where you currently store your employee documents.

Before you begin
Role required: sn_hr_ef.admin, sn_hr_ef.document_import

About this task
Before you can move your employee documents from your source document repository, you must:

- Identify the type of repository you are pulling documents from.
- Identify the URL and credentials from the repository you are pulling documents from. Or, identify the directory you are pulling documents from.
- Test to make sure that there is communication from your source repository and Employee Document Management.

Procedure
1. Navigate to **All** > **HR Administration** > **Bulk Import** > **Import Configuration**.
2. Fill in the fields on the form.

Employee Document Import Configuration

Fields	Description
Name	A descriptive name that identifies your employee document bulk upload configuration.
Source type	Identifies the source you are moving employee documents from. ○ Local: The source employee document repository is local. ○ URL: The source employee document repository is cloud-based.
Host	Appears when **Local** is selected from **Source type**. The IP address of the local source employee document repository you are pulling from. When pulling from a local directory, the IP address of the source connected via the MID server.
URL	Appears when **URL** is selected from **Source Type**. The URL of the source third-party, cloud-based document repository.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fields	Description
Directory	The directory in the source employee document repository you are pulling from. For Local source type, you can specify a recursive directory structure. For third-party, cloud-based (URL) source type, you can only specify the root directory. **Note:** If you have multiple directories in your third-party, cloud-based repository, a separate Employee Document Import Configuration is required for each one. Use the **Clone Configuration** button to make cloning easier.
Staging record state	The state assigned to the imported employee document staging records before being inserted into the employee documents. ○ Draft: Allows you to verify the staging records prior to inserting into the employee documents. **Note:** Use the **Draft** state as the default in a testing environment when adjusting your mapping configurations. Employee documents that have a **Draft** state must be changed to **Ready** before the Capture step can process it. ○ Ready: When the staging records for employee documents are accurate and does not require verification, use this state. You can still fix any errors that occur. The state changes to Error when verification cannot be confirmed. **Note:** Use the Ready state as the default in a production environment after testing ensures that your mapping configurations are error-free. Employee documents in the Ready state process automatically in the Capture step.
Credential alias	The connection and credential alias ID that labels a credential or connection record. The credential alias is required to connect to the local source document repository.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fields	Description
	The credential alias is configured from the local document repository. The credentials to access the local document repository are stored on the instance and tagged with the alias.
Domain	Automatically populated via domain separation and identifies the specific domain you are configuring employee documentation bulk uploads for.
Log mapping	Indicates that you want to write debug statements to the system log during the staging phase. Log mapping provides an easier debugging of mapping. Recommended when first configuring bulk imports during the testing phase.

Note:
For more information on credentials and aliases, see Introduction to credentials, connections, and aliases.

For more information on domain separation, see Domain Separation and HR Service Delivery.

3. Select **Save**, **Submit**, or **Update**.
   The Employee Document Import Sources and Employee Document Import Map tabs appear.

Create or edit import configuration

To import employee documents, map the source employee documents from your local document repository or third-party cloud-based repository to Employee Document Management.

Before you begin
Role required: sn_hr_ef.document_import

About this task
For a local document repository, name mapping acquires file meta data from the file name.

Procedure
1. From **Employee Document Import Configuration** form, click the **Employee Document Import Map** tab.
2. Click **New** or on an existing import configuration.
3. Fill in the form.

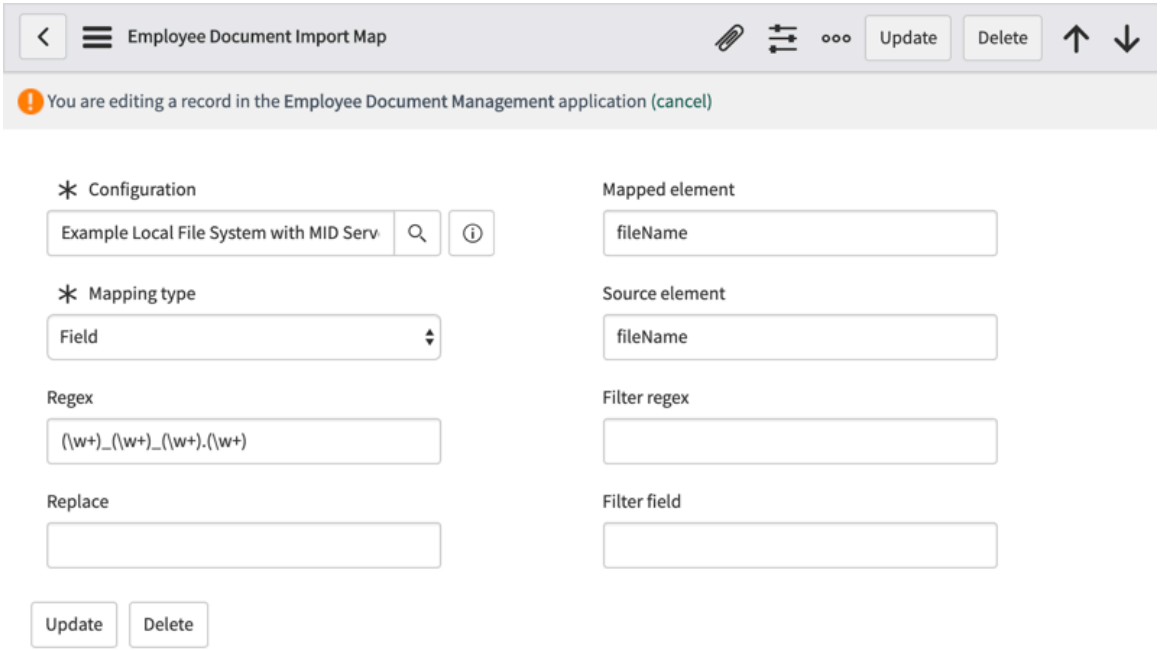
Employee Document Import Map

Field	Description
Configuration	The name of the employee document bulk import configuration. See Configuring

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	employee document management bulk import with source document repository.
Mapping type	Defines how you are locating the source employee documents within your source document repository. ○ Field: Indicates that within an array of information about your source document you want to identify a specific part of the array to map. ○ Value: Indicates that you are identifying a specific term within an array of information from your source document you want to map.
Regex	The regular expression string that identifies files you want to include from the source repository. For example, (\w+)_(\w+)_(\w+).(\w +) matches file names that contain alphanumeric, underscore, and a period. Once you have identified specific parts of information in the array, you can then map it. The more consistent your existing naming convention, the easier to locate your employee documents from your source repository,
Replace	The information you want the source employee document to contain when imported to Employee Document Management. For example, the array for your source employee document has school. You want the new value to equal transcripts for document type. Enter: ○ Replace: transcripts ○ Mapped element: docType ○ Source element: school **Note:** You can also use regular expressions (RegEx) to define the replacement value. When using RegEx, use a regular expression test site to ensure correct parsing.
Mapped element	Determines what meta data field is acquired and the value included in the final staging record created.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



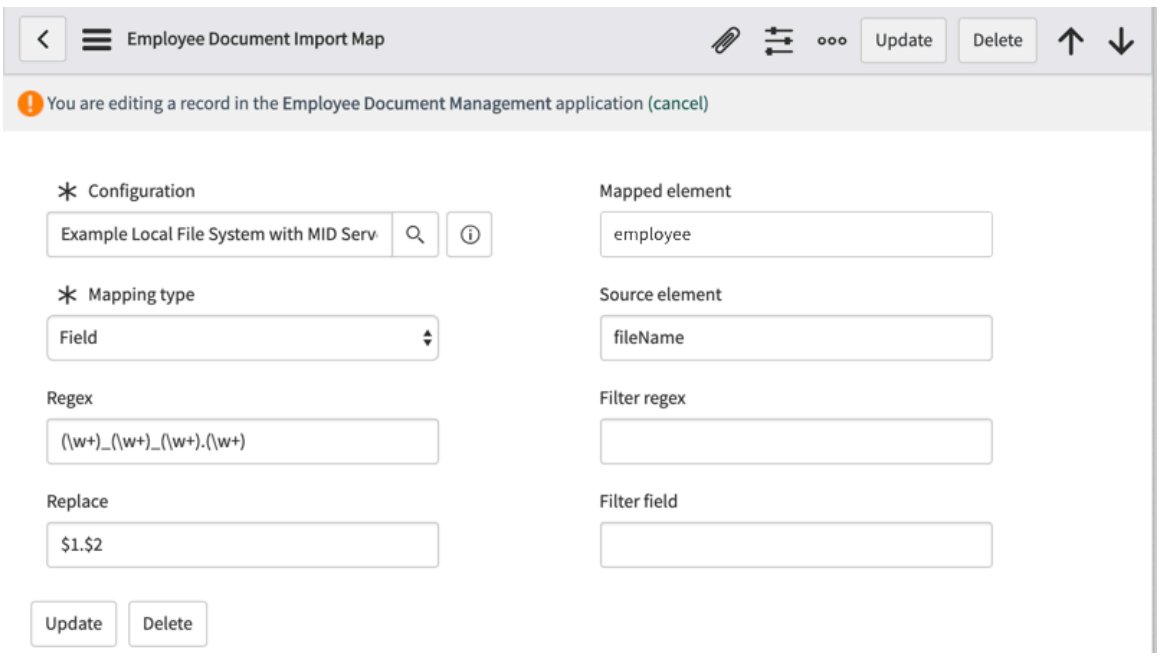
Field	Description
	Fields from the Import Document Staging [sn_hr_ef_import_staging] table that you want to map your source employee documents to. The base system provides the following fields you can map your source employee documents to: ○ docType: Document type ○ fileName: File name ○ employee: Employee name
Source element	The field or value from a local or third-party cloud-based employee document repository you want to map to Employee Document Management. For example, if your source file name contains the employee name, you can use the employee name as the source element and use the Mapped element of employee.
Filter regex	A regular expression sequence that matches text found in the array from your source employee document repository. Use this field to refine your identification of source employee documents.
Filter field	Locates specific text found in the array of information returned from the source repository when files matching the Regex are imported. **Note:** You can also use regular expressions (RegEx) to define the replacement value. When using RegEx, use a regular expression test site to ensure correct parsing. Use this field to help refine the information you want mapped. For example, to import only files with a file name formatted first_last_xxx.pdf (abel_tuter_tuition.pdf): ○ Regex: (\w+)_(\w+)_(\w+).(\w+) ○ Mapped element: fileName ○ Source element: fileName ○ Filter field: .pdf

File name example

The example file name is abel_tuter_tuition.pdf.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To find and extract the file name from the source repository, see this example:



The import map is looking for a source element called fileName.

The import map is going to translate this source element to a mapped element called fileName.

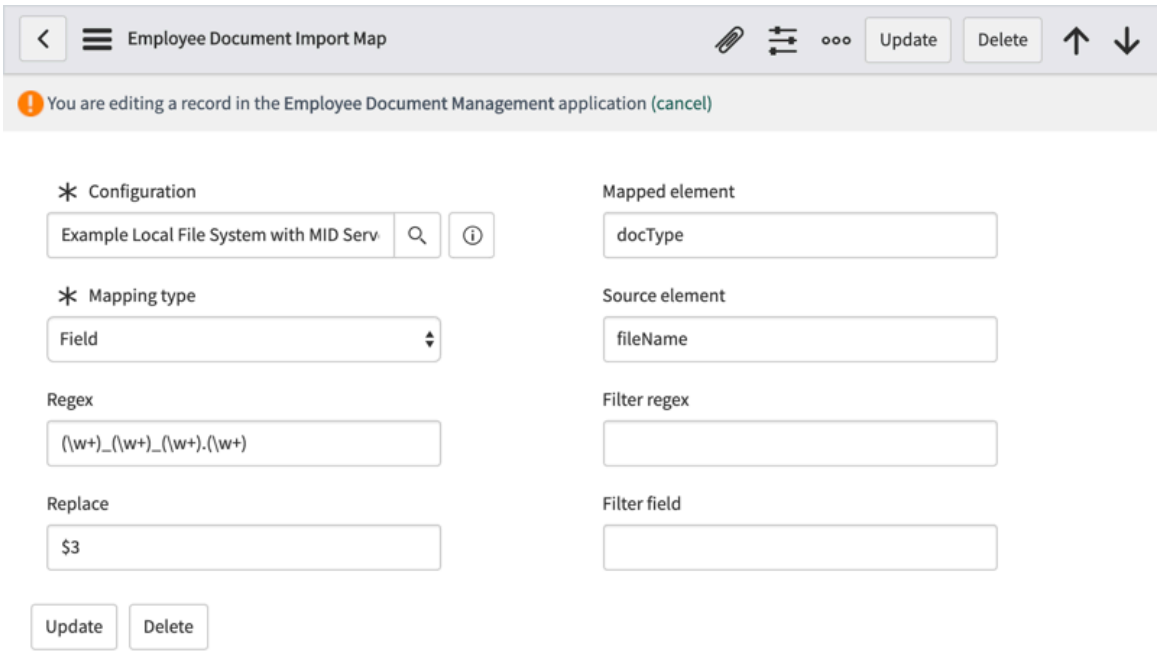
The Regex is looking for the format of the file name first_last_xxx.pdf.

File name to employee name example

From the file name, the employee name is extracted. Employee name is a requirement for Employee Document Management.

The import map is looking for a source element called fileName.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



The import map is going to translate this source element to a mapped element called employee.

The Regex is looking for the format of the file name to be first_last_tuition.pdf (\w+)_(\w+)_(\w+).(\w+).

It replaces the original file name with first.last ($1.$2)

File name to document type example

From the file name, the document type is extracted. Document type is a requirement for Employee Document Management.

The import map is looking for a source element called fileName.

The import map is going to translate this source element to a mapped element called docType.

The Regex is looking for the format of the file name to be first_last_tuition.pdf (\w+)_(\w+)_(\w+).(\w+).

It creates a docType of tuition ($3).

4. Click **Submit** or **Update**.

Create or edit the verify source step

Use Employee Document Import Jobs to create a Verify source step. Verify is required to validate the connection between your local directory or your third-party, cloud-based document repository and Employee Document Management. The Verify source step also validates that source employee files are there to be processed.

Before you begin

Role required: sn_hr_ef.admin, sn_hr_ef.document_import

About this task

The base system provides a sample Verify source step you can use as a model.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **Import Configuration**.
2. Click an existing Import Configuration record.
3. From the Employee Document Import Source tab, click an existing Verify source step or **New**.
4. Fill in or edit the form.

Employee Document Import Source — Verify

Field	Description
Configuration	A descriptive name that identifies your employee document bulk upload configuration.
Source step	The import step that makes up the import job. Select Verify. Verify: Ensures the connection between the Employee Document instance and source repository (third-party cloud-based or local) is configured correctly and can communicate.
Import type	The import type that drives the source step. You can select the method that drives the source step. ○ Sub flow: A workflow launched by another workflow to drive the import step. See Workflows used as subflows. ○ Flow action: The Flow Designer action that drives the import step. See Flow Designer. ○ Workflow: An automated way to provide a multi-step process. See Workflow. ○ Script: Use to automate the import step. See Scripts.
Application	The application the import source is used in.
Domain	Automatically populated via domain separation and identifies the specific domain you are configuring employee documentation bulk uploads for.
Sub Flow Action Workflow Script	The subflow, flow action, workflow, or script that launches the source step based on the import type. For example, if you are using Flow Action as your Import type, the Action drop-down appears to select the action you previously created.

5. Click **Submit** or **Update**.
6. Click the **Start verify configuration** related link to start the verify job.
   The **Employee Document Import Jobs** tab appears with the Verify job in the **Queued** state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Reload the form to see if the import step validated.
   Validated indicates that the credentials are correct, the directory is valid, and shows the number of source employee files found in the directory.

Create or edit the stage directory lookup source step

Use Employee Document Import Jobs to create or edit the Stage Directory source step.

Before you begin

Role required: sn_hr_ef.admin, sn_hr_ef.document_import

About this task

Stage directory is required to locate your source employee documents from your local or third-party, cloud-based document repository. This step also uses the mapping to parse file names and create a record in the staging table for each of the files with the parsed data.

The base system provides a sample Stage - Directory source step you can use as a model.

Procedure

1. Navigate to **All** > **HR Administration** > **Import Configuration**.
2. Click an existing Import Configuration record.
3. From the Employee Document Import Source tab, click an existing Stage - Directory source step or **New**.
4. Fill in or edit the form.

Employee Document Import Source — Stage - Directory

Field	Description
Configuration	A descriptive name that identifies your employee document bulk upload configuration. The name comes from the Employee Document Import Configuration. See Configuring employee document management bulk import with source document repository.
Source step	The import step that makes up the import job. Select Stage - Directory. Stage — Directory: Ensures that the employee documents from the source repository are located and mapped correctly.
Import type	The import type that drives the source step. You can select the method that drives the source step. ○ Sub flow: A workflow launched by another workflow to drive the import step. See Workflows used as subflows. ○ Flow action: The Flow Designer action that drives the import step. See Flow Designer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Workflow: An automated way to provide a multi-step process. See Workflow. ○ Script: Use to automate the import step. See Scripts.
Application	The application the import source is used in.
Domain	Automatically populated via domain separation and identifies the specific domain you are configuring employee documentation bulk uploads for.
Sub Flow Action Workflow Script	The subflow, flow action, workflow, or script that launches the source step based on the import type. For example, if you are using Flow Action as your Import type, the Action drop-down appears to select the action you previously created.

5. Click **Submit** or **Update**.

Create or edit the stage file source step

Use Employee Document Import Jobs to create or edit the stage file source step. Stage file is required to stage your source employee documents from your third-party, cloud-based document repository.

Before you begin
Role required: sn_hr_ef.admin, sn_hr_ef.document_import

About this task
The base system provides a sample Stage - File source step you can use as a model.

Procedure
1. Navigate to **All** > **HR Administration** > **Import Configuration**.
2. Click an existing Import Configuration record.
3. From the Employee Document Import Source tab, click an existing Stage - File source step or **New**.
4. Fill in or edit the form.

Employee Document Import Source — Stage - File

Field	Description
Configuration	A descriptive name that identifies your employee document bulk upload configuration. The name comes from the Employee Document Import Configuration. See Configuring employee document management bulk import with source document repository.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Source step	The import step that makes up the import job. Select Stage - File. Stage — File: Ensures that the employee documents from the source repository are located and mapped correctly.
Import type	The import type that drives the source step. You can select the method that drives the source step. ○ Sub flow: A workflow launched by another workflow to drive the import step. See Workflows used as subflows. ○ Flow action: The Flow Designer action that drives the import step. See Flow Designer. ○ Workflow: An automated way to provide a multi-step process. See Workflow. ○ Script: Use to automate the import step. See Scripts.
Application	The application the import source is used in.
Domain	Automatically populated via domain separation and identifies the specific domain you are configuring employee documentation bulk uploads for.
Sub Flow Action Workflow Script	The subflow, flow action, workflow, or script that launches the source step based on the import type. For example, if you are using Flow Action as your Import type, the Action drop-down appears to select the action you previously created.

5. Click **Submit** or **Update**.
6. Click the **Start staging job** related link.
   The staging job verifies that the source document directory and source files can be staged. The **Employee Document Import Jobs** tab appears with the Stage import step in the **Queued** state.
7. Reload the form to see if the Stage import step completed.
   The **Employee Document Staging** tab appears. You can view all source documents that are in the staging table and make corrections if necessary. See Correcting employee documents in the staging table.
8. Change staged documents that have a state of **Draft** to **Ready**.
   Staged documents must be in **Ready** state for it to be picked up in the **Capture** step. You can change the state by checking all staged documents that have a **Draft** state and selecting **Ready for import** from **Action on selected rows** or opening a specific staged document and selecting **Ready for Import**.

Create or edit capture source step

Use Employee Document Import Jobs to create or edit the capture source step. Capture is required to import your source employee documents from your local or third-party, cloud-based document repository.

Before you begin

Role required: sn_hr_ef.admin, sn_hr_ef.document_import

About this task

The base system provides a sample Capture source step you can use as a model. The example for the local document repository provides a sample script that can be used.

Procedure

1. Navigate to **All** > **HR Administration** > **Import Configuration**.
2. Click an existing Import Configuration record.
3. From the Employee Document Import Source tab, click an existing Capture source step or **New**.
4. Fill in or edit the form.

Employee Document Import Source — Capture

Field	Description
Configuration	A descriptive name that identifies your employee document bulk upload configuration. The name comes from the Employee Document Import Configuration. See Configuring employee document management bulk import with source document repository.
Source step	The import step that makes up the import job. Select Verify. Capture: Ensures that the employee documents from the source repository are imported to Employee Document Management.
Import type	The import type that drives the source step. You can select the method that drives the source step. ○ Sub flow: A workflow launched by another workflow to drive the import step. See Workflows used as subflows. ○ Flow action: The Flow Designer action that drives the import step. See Flow Designer.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Workflow: An automated way to provide a multi-step process. See Workflow. ○ Script: Use to automate the import step. See Scripts.
Application	The application the import source is used in.
Domain	Automatically populated via domain separation and identifies the specific domain you are configuring employee documentation bulk uploads for.
Sub Flow Action Workflow Script	The subflow, flow action, workflow, or script that launches the source step based on the import type. For example, if you are using Flow Action as your Import type, the Action drop-down appears to select the action you previously created.

5. Click **Submit** or **Update**.
   Run the Capture job after the Verify configuration and Staging jobs have run successfully.
6. Click the **Start capture job** related link.
   The capture job imports the source documents into Employee Document Management. The **Employee Document Import Jobs** tab appears with the Stage import step in the **Queued** state.
7. Reload the form to see if the Stage import step completed and have a state of **Complete**.

Bulk import map examples

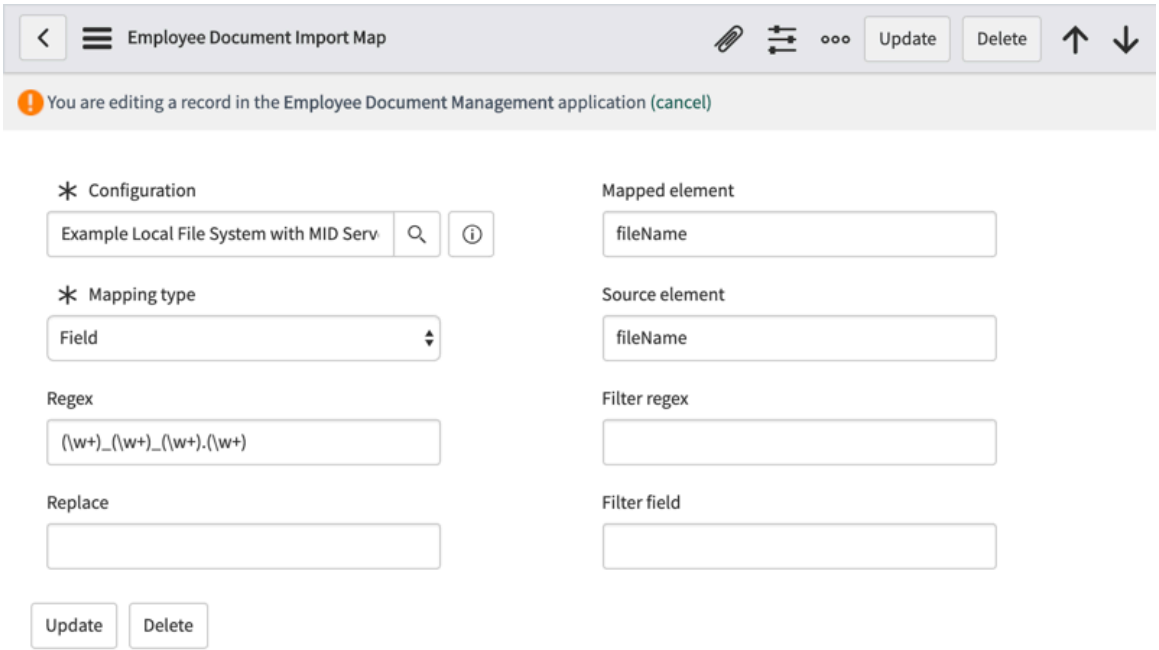
Mapping your source employee documents to required elements in Employee Document Management is crucial for a successful bulk import.

This topic provides examples on how to map your source employee documents to the required elements in Employee Document Management. The values provided are examples designed to guide you through the import map configuration.

Map fields and values directly from existing file names

Using your existing employee document file names is recommended when your source employee documents reside in a local repository.

For example, an employee document can have all the meta data in the file name Abel_Tuter_tuition.pdf to map to Employee Document Management.



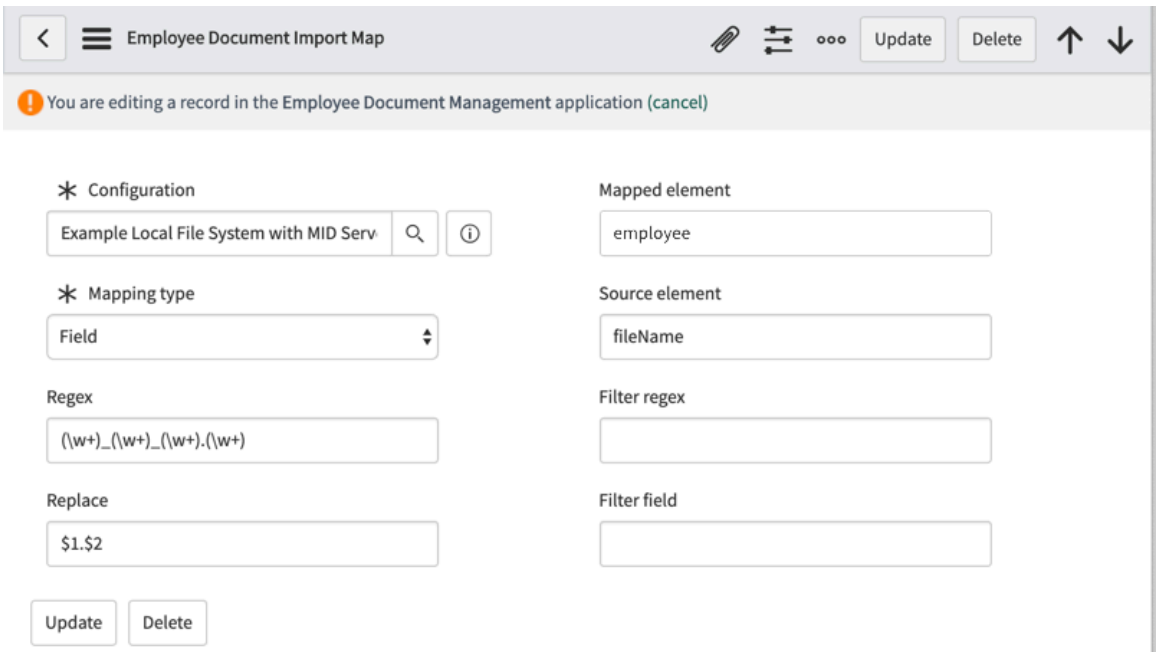
Note:
When using regular expressions (RegEx) to define the replacement value, use a regular expression test site to ensure correct parsing.

File name example

The example file name is abel_tuter_tuition.pdf.

To find and extract the file name from the source repository, see this example:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



The import map is looking for a source element called fileName.

The import map is going to translate this source element to a mapped element called fileName.

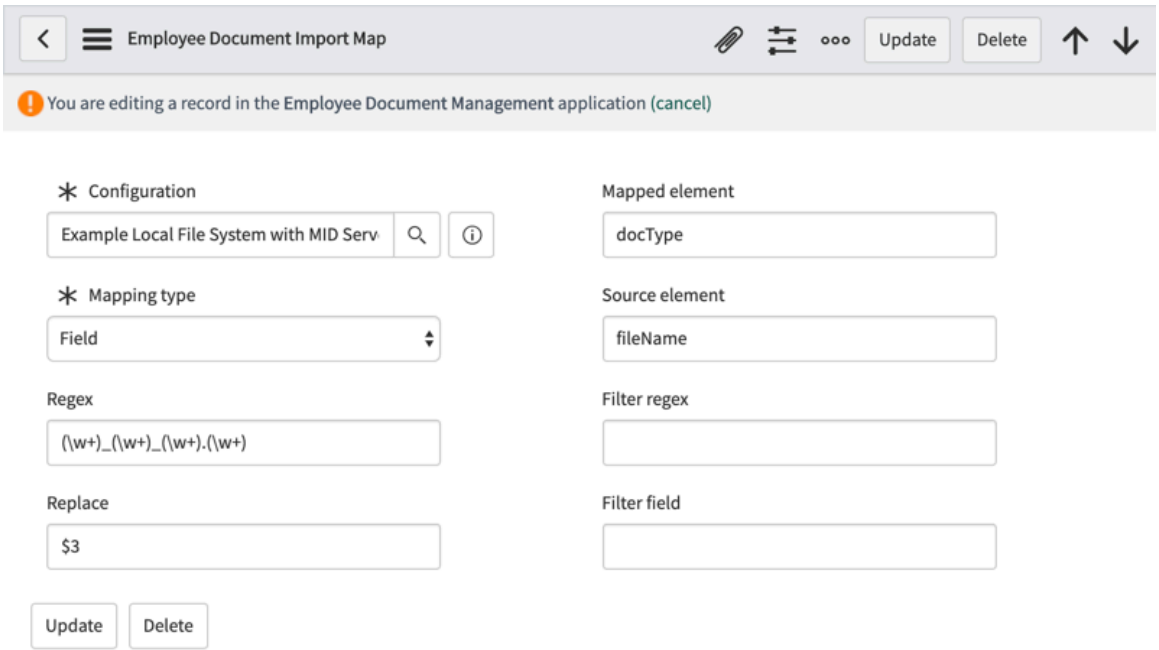
The Regex is looking for the format of the file name first_last_xxx.pdf.

File name to employee name example

From the file name, the employee name is extracted. Employee name is a requirement for Employee Document Management.

The import map is looking for a source element called fileName.

The import map is going to translate this source element to a mapped element called employee.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Regex is looking for the format of the file name to be first_last_tuition.pdf (\w+)_(\w+)_(\w+).(\w+).

It replaces the original file name with first.last ($1.$2)

File name to document type example

From the file name, the document type is extracted. Document type is a requirement for Employee Document Management.

The import map is looking for a source element called fileName.

The import map is going to translate this source element to a mapped element called docType.

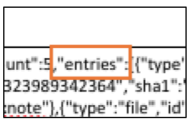
The Regex is looking for the format of the file name to be first_last_tuition.pdf (\w+)_(\w+)_(\w+).(\w+).

It creates a docType of tuition ($3).

Note:
Having the source employee documents in a central repository, simple directory structure, and consistent file naming convention are highly recommended and reduces errors.

Parse and map fields and values from a JSON output

Using a JSON output is recommended when your source employee documents reside in a third-party, cloud-based repository.



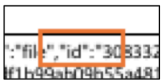
Map record for element item

Field	Description
Mapping type	Field
Mapped element	items

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Map record for element item (continued)

Field	Description
	Looks for the items mapping element in an array of items in the folder. This mapping is used after Stage — Directory import source.
Source element	entries Source element in the JSON output and represents the items in a folder. For example, Box uses entries as the source element.



{"total_count":5,"entries":[{"type":"folder","id":"51854612204","sequence_id":"0","etag":"0","name":"Meeting Notes"},{"type":"file","id":"307557775676","file_version":{"type":"file_version","id":"323989342364","sha1":"c31e242051ab80c4c71cc6c1443788323c477fdf"},"sequence_id":"1","etag":"1","sha1":"c31e242051ab80c4c71cc6c1443788323c477fdf","name":"Admin Guide.boxnote"},{"type":"file","id":"308330516313","file_version":{"type":"file_version","id":"324842139513","sha1":"70fa4681b9e09f2ffeb35901f14bd4990f8e307e"},"sequence_id":"1","etag":"1","sha1":"70fa4681b9e09f2ffeb35901f14bd4990f8e307e","name":"Screen Shot 2018-04-30 at 12.14.20 PM.png"},{"type":"file","id":"308332929283","file_version{"type":"file_version","id":"324844560259","sha1":"711fc4140ef489be6570659f1b99ab09b55a481c"},"sequence_id":"3","etag":"3","sha1":"711fc4140ef489be6570659f1b99ab09b55a481c","name":"sn_hiring_question.xlsx"},{"type":"file","id":"307557774812","file_version":{"type":"file_version","id":"323989341500","sha1":"92c9614354519c993b8b52a2a1da4e2d078dca89"},"sequence_id":"1","etag":"1","sha1":"92c9614354519c993b8b52a2a1da4e2d078dca89","name":"Welcome to Box.pdf"}],"offset":0,"limit":100,"order":[{"by":"type","direction":"ASC"},{"by":"name","direction":"ASC"}]}

Map record for element employee

Field	Description
Mapping type	Field
Mapped element	item Looks for item, an entry in an array of items in the folder. This mapping is used after Stage — Directory import source to run operations against a single item.
Source element	id For each item in the array, find the file ID in the JSON output.
Filter regex	file Combined with the Filter field to exclude subfolders.
Filter field	type Filter output to where the type field is equal to file to exclude subfolders.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

{"type":"file","id":"308332929283","file_version":{"type":"file_version","id":"324844560259","sha1":"711fc4140ef489be6570659f1b99ab09b55a481c"},"sequence_id":"3","etag":"3","sha1":"711fc4140ef489be6570659f1b99ab09b55a481c","name":"sn_hiring_question.xlsx"}

Add map records for element employee (continued)

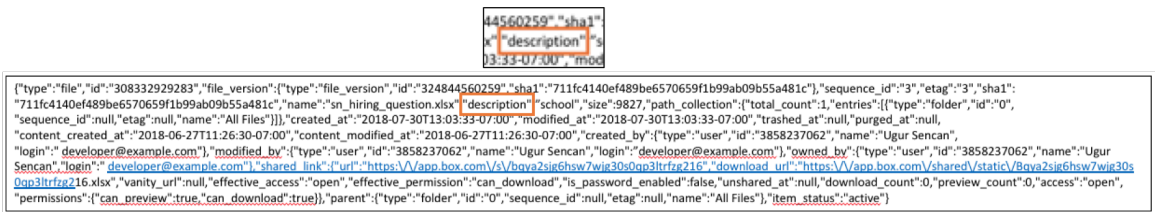
Field	Description
Mapping type	Field
Regex	(\w+)\s(\w+) String translation to convert fname lname to fname.lname.
Replace	$1.$2 Converts files found in Regex field fname lname to fname.lname.
Mapped element	employee Looks for employee mapping element. Employee is a field in the file item. This mapping is used after Stage — file import source.
Source element	owned_by.name Looks for name in owned_by object. Bypass nested objects with a dot notation.
Filter regex	

{"type":"file","id":"308332929283","file_version":{"type":"file_version","id":"324844560259","sha1":"711fc4140ef489be6570659f1b99ab09b55a481c"},"sequence_id":"3","etag":"3","sha1":"711fc4140ef489be6570659f1b99ab09b55a481c","name":"sn_hiring_question.xlsx","description":"","size":9827,"path_collection":{"total_count":1,"entries":[{"type":"folder","id":"0","sequence_id":null,"etag":null,"name":"All Files"}]},"created_at":"2018-07-30T13:03:33-07:00","modified_at":"2018-07-30T13:03:33-07:00","trashed_at":null,"purged_at":null,"content_created_at":"2018-06-27T11:26:30-07:00","content_modified_at":"2018-06-27T11:26:30-07:00","created_by":{"type":"user","id":"3858237062","name":"Ugur Sencan","login":" developer@example.com"},"modified_by":{"type":"user","id":"3858237062","name":"Ugur Sencan","login":"developer@example.com"},"owned_by":{"type":"user","id":"3858237062","name":"Ugur Sencan","login":" developer@example.com"},"shared_link":{"url":"https://vapp.box.com/s/vbqya2sjg6hsw7wjg30s0qp3ltrfzg216","download_url":"https://vapp.box.com/shared/static/vbqya2sjg6hsw7wjg30s0qp3ltrfzg216.xlsx","vanity_url":null,"effective_access":"open","effective_permission":"can_download","is_password_enabled":false,"unshared_at":null,"download_count":0,"preview_count":0,"access":"open","permissions":{"can_preview":true,"can_download":true}},"parent":{"type":"folder","id":"0","sequence_id":null,"etag":null,"name":"All Files"},"item_status":"active"}

Add map record for element employee (alternative)

Field	Description
Mapping type	Value Selecting **Value** maps the employee element within an array of information from your source document to a specific value in Employee Document Management.
Replace	david.loo The value you want to replace the source element with in Employee Document Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Add map record for element employee (alternative) (continued)

Field	Description
	Employee Document Management requires employee names to be formatted fname.lname.
Mapped element	employee Looks for the **employee** mapping element that is a field in the file item. This mapping is used after Stage — file import source.
Source element	davidl Looks for the source value of davidl.

This example illustrates how to use Value mapping to take an employee name from your source document and map it to the format that Employee Document Management requires.

Add map records for element docType

Field	Description
Mapping type	Field
Mapped element	docType Looks for the docType mapping element embedded in the description field in the file item. This mapping is used after Stage — file import source.
Source element	description Looks for name in description.
Filter regex	

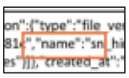
Add map records for element docType (continued)

Field	Description
Mapping type	Value

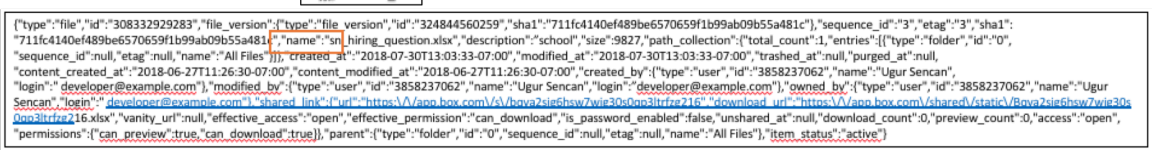
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add map records for element docType (continued) (continued)

Field	Description
	Use Value to map a specific value in your third-party, cloud-based repository to a value in Employee Document Management.
Replace	employee verifications Replace verification (source) with employee verifications (Employee Document Management).
Mapped element	docType Looks for the docType mapping element embedded in the description field in the file item. This mapping is used after Stage — file import source.
Source element	verification Look for the name value of verification in the JSON.



Add map records for element docType (continued)



Field	Description
Mapping type	Value Use Value to map a specific value in your third-party, cloud-based repository to a value in Employee Document Management.
Replace	transcripts Replace school (source) with transcripts (Employee Document Management).
Mapped element	docType Looks for the docType mapping element embedded in the description field in the file item. This mapping is used after the Stage — file import source.
Source element	school Looks for the name value school.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Add map record for element fileName

Field	Description
Mapping type	field
Mapped element	fileName Looks for the fileName mapping element embedded in the name field in the file item. This mapping is used after Stage — file import source.
Source element	name Looks for filename in the description in the JSON output.
Filter regex

Bulk import mapping records

An example of Employee Document Import Map.

When a connection to your source repository is confirmed and import maps are set up correctly, you can click **Start staging job** from Related Links.

Correcting employee documents in the staging table

Use the Employee Document Staging form to correct staging records prior to importing to HR Service Delivery. Staging records are created after you have mapped your source employee documents and the Start staging job has run.

Before you begin

Role required: sn_hr_ef.admin, sn_hr_ef.document_import

Procedure

1. Navigate to **All** > **HR Administration** > **Bulk Import** > **Document Staging**.
   Or, from the Employee Document Import Configuration form, click the **Start staging job** related link.
   After the Employee Document Staging job runs successfully, you can review and correct any errors.
2. Click an employee name.
3. Click the **Validate** button.
   The Verify Fields pop-up appears.
4. Edit incorrect information.
5. Click **Complete**.
6. Click **Ready for Import**.
   You can also correct fields from the **Employee Document Staging** form.

Employee Document Staging

Fields	Description
Employee	Employee associated with the staged employee document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fields	Description
Document Type	The document type you want associated with the employee document. Document types categorize your employee documents and determine access and retention. See Define policies for a document type.
File name	File name of the employee document.
State	The state of the employee document. ○ Ready: Document is ready to be captured and moved to Employee Document Management. ○ Draft: Document ignored when the Capture job is run and not moved to Employee Document Management.

7. Click the **Attachment Content** tab.

Attachment Content

Field	Description
Content source	The type of source document repository your employee documents are being pulled from. ○ URL: The source employee document repository is cloud-based. ○ Local: The source employee document repository is local.
Content	The path in the source repository that the staged document resides.

8. Click the Additional Information tab.

Additional Information

Fields	Description
Job	The name of the Employee Document Staging job. The job takes the document bulk import configuration name.
Configuration	The name of that identifies your employee document bulk import configuration. See Configuring employee document management bulk import with source document repository.
Description	Currently not used.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Fields	Description
Domain	Automatically populated via domain separation and identifies the specific domain you are configuring employee documentation bulk uploads for. For more information on domain separation, see Domain Separation and HR Service Delivery.

9. Click **Validate** to ensure that the employee and document type are correct.
   You can change this information from the pop-up.
10. After making changes, click **Update**.
    The Employee Document Import Configuration form returns. You can continue reviewing and correcting Employee Document Staging records.
11. After reviewing and determining the staging records look correct, click the **Start capture job** related link to start the import process.

Employee Document Management dashboard

Gain insight into macro trends more efficiently on a single dashboard-style page showing you important metrics on employee documents, status of purging and purge settings, and legal holds.

Activating the Performance Analytics - Content Pack - Human Resources Employee Document Management Scoped App [com.sn_hr_employee_files_pa] plugin enables the Performance Analytics reports and dashboard for the Employee Document Management.

For more information on configuring your dashboard, see Dashboards overview.

The Employee Documents Dashboard has two tabs:

- Documents and Purging
- Legal holds

Documents

Provides totals for:

- Total Documents
- Documents Added in Last 30 Days
- Employees without Documents
- Unused Document Types

Also provides totals for:

Purging

Provides totals for:

- Pending Purge Authorization
- Purged Rejected
- Purge Date Not Calculated
- Purge Authorization Approver Group

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Purge Date Passed
- Purge Schedule for Next 6 Months

Legal holds

Shows number of legal holds for:

- Employees
- Document Types
- Documents
- Documents on Legal hold

> **Note:**
> You can also group and stack your data by different categories.

View Employee Document Management Dashboard

The Employee Document Management Dashboard provides a quick and easy way to view statistics about the purge and legal hold status of your employee documents.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **HR Administration** > **Employee Documents** > **Dashboard**.
   The **Documents and Purging** tab shows by default.
2. The Click the **Legal Holds** tab to view the number of employees, document types, and documents on legal hold.

Reference - Employee Document Management

More information on other properties of Employee Document Management.

Properties for Employee Document Management application

Activating the Employee Document Management [com.sn_employee_document_management] plugin adds the following properties.

Properties control the behavior of the Employee Document Management application.

For optimal system performance and depending on your internal processes, employee documentation is purged based on the security policy established by your company.

Document management fields and descriptions

Field	Description
sn_hr_ef.enable_document_viewer (Enable "Document Viewer" to preview documents)	Enables document viewer to view documents of type (.docx, .txt, .png, .xls, and so on) directly from Employee Document Management. The default value is **Yes**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document management fields and descriptions (continued)

Field	Description
	Note: If **No** is checked, you can still download the document and view it locally.
sn_hr_ef.enable_download_multiple (Enable "Download" UI Action to download multiple employee documents in a zip file.)	Lets you download multiple employee documents from Employee Documents list into a .zip file. The default value is **Yes**.
sn_hr_ef.max_file_size (Maximum file upload size in megabytes:)	The maximum file size of a document you can upload. The default is 30 megabytes. You can change this value, but system performance can be affected.
sn_hr_ef.purge_stride_length (The frequency in days that purge dates will be recalculated for Employee documents.)	Determines the stride value for recalculating the purge dates for employee documents. The stride value determines the range of values that can be assigned to every user [sys_user] record that has associated employee documents. For example, if 30 is entered, the range of values that can be randomly assigned is from 1 through 30. When the Refresh Purge Dates for Employee Documents scheduled job runs, based on the current date, it determines the stride value. Any user record assigned that stride value has their employee documents purge date recalculated. Also, purge dates are recalculated for employee documents that match the following requirements: • Employee document is active. • There are no legal holds or purge holds on the employee document. • The stride value for the user record matches the stride value for the current date. The number you enter determines the stride value range. For example, Entering a 1 indicates that there is no stride range and the purge recalculation is performed for all employee documents daily. Entering a larger number ensures that system performance is optimal since large companies can have large amounts of documents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document management fields and descriptions (continued)

Field	Description
	The default value is **30** and can be modified.
sn_hr_ef.purge_authorization_interval (The number of days before the next month a purge notification is sent (value between 1-30):)	The number of days before the beginning of the month for the purge notification to be sent out. The Purge Notification Daily Job scheduled job uses this value to determine when to send a purge notification or authorization. The default value is **7** and can be changed.
sn_hr_ef.enable_purge_logs (Enable purge logs to log the files deleted during document purge.)	Indicates if you want a purge log to be created for deleted documents. A purge log lists all deleted documents with the fields you specify in the **These fields will be included in the purge logs if enabled** field. The default value is **Yes**. **Note:** The purge log is created after the Purge employee documents scheduled job runs. This job runs daily by default.
sn_hr_ef.purge_log_fields_to_include (These fields will be included in the purge logs if enabled.)	If you checked **Yes** for the **Enable purge logs to log the files deleted during document purge** field, enter the fields you want to appear in the purge logs. Separate the fields with a comma. Purge logs can be downloaded into a .csv file. The default values are: **employee, hr_case**. **Note:** The purge log is created after the Purge employee documents scheduled job runs. This job runs daily by default.

Components installed with Employee Document Management

Several types of components install with the activation of the Employee Document Management [com.sn_employee_document_management] plugin, including tables, user roles, and scheduled jobs.

Note:
The Application Files table lists the components that are installed with this application. For instructions on how to access this table, see Find components installed with an application.

Demo data is available for this feature.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The Employee Document Management [com.sn_employee_document_management] plugin activates the sn_hr_ef.min_admin_count system property [sys_properties.list]. This property prevents you from deleting your only Employee Document Management admin user by requiring a minimum number (default is two) of active users with this role.

Document management roles and descriptions

Document management role details

Role title [name]	Description	Contains roles

EF admin
 	
[sn_hr_ef.admin]
	Has full control over the Employee Document Management application. Can:
	• Access Employee Document Management.
	• Assign Employee Document Management roles.
	• Search and read employee documents.
	• Create and update employee documents.
	• Manage administration of employee documents. Can create, read, and write to the following tables:
	  ○ Retention Period [sn_hr_ef_retention_period]
	  ○ Retention Policy [sn_hr_ef_retention_policy]
	  ○ Security Policy [sn_hr_ef_security_policy]
	  ○ Document Type [sn_hr_ef_document_type]
	• Manage legal holds on profiles and document types.
	
	Note: Contains the HR basic [sn_hr_core.basic] role that contains the HR profile writer [sn_hr_core.profile_writer] role.
		• Employee Document Management Reader [sn_hr_ef.document_reader]
		• Employee Document Management Writer [sn_hr_ef.document_writer]
		• Employee Document Management Legal Hold Writer [sn_hr_ef.legal_hold_writer]
		• Employee Document Management Manager [sn_hr_ef.manager]
		• HR basic [sn_hr_core.basic]
		• sn_hr_ef.document_import

Document management role details (continued)

Role title [name]	Description	Contains roles
	Note: Requires the HR profile writer [sn_hr_core.profile_writer] role. HR profile writer can also create and search for employee documents. • Cannot manage legal holds on document types unless combined with the Employee Document Management Manager [sn_hr_ef.manager] role.	
Employee Document Management Manager [sn_hr_ef.manager]	Can: • Access Employee Document Management. • Search and read employee documents. • Create and update employee documents. • Manage administration of employee documents. Can create, read, and write to the following tables: ○ Retention Period [sn_hr_ef_retention_period] ○ Retention Policy [sn_hr_ef_retention_policy] ○ Security Policy [sn_hr_ef_security_policy] ○ Document Type [sn_hr_ef_document_type] **Note:** All default security policies with the base system are part of the sn_hr_ef.manager role by default. Provides both read and write capabilities. No roles are automatically part of new security policies.	• Employee Document Management Reader [sn_hr_ef.document_reader] • Employee Document Management Writer [sn_hr_ef.document_writer] • Employee Document Management Legal Hold Writer [sn_hr_ef.legal_hold_writer]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document management role details (continued)

Role title [name]	Description	Contains roles
	• Add or remove legal holds on profiles and document types. **Note:** Requires the HR profile writer [sn_hr_core.profile_writer] role with the Employee File Management Legal Hold Writer [sn_hr_ef.legal_hold_writer] role to place HR profiles on legal hold.	
Document Import [sn_hr_ef.document_import]	Grants access to the Employee Document Management Bulk Import Employee Document Staging [sn_hr_ef_import_staging] table and process flow.	None

Document management scheduled jobs

Document management scheduled job details

Scheduled job	Description
Clean up inactive employee documents	Deletes uploaded but not submitted employee documents.
EF Bulk Import from Staging - Hourly	Processes up to 100 import staging records in the Ready state. It runs the capture step to upload the attachments and create an employee document. This job picks up 100 records per configuration. This job picks up the oldest configurations first regardless of the number of associated staging records. For example: • Configuration A has only one staging record created on 11/01/2018 at 8:00 AM. • Configuration B has 99 staging records created on 11/01/2018 at 8:05 AM. • Configuration A runs first and Configuration B runs in an hour.
Purge employee documents	This job purges employee documents flagged as eligible for purging.
Purge Notification Daily Job	Determines what documents require notification or authorization to purge based on security policy. This job sends an email with a link to the list of documents to all members of the group assigned.
Refresh Purge Dates for	This job ensures that any employee documents that have a changed retention period since the last run does not purge a document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Document management scheduled job details (continued)

Scheduled job	Description
Employee Documents	This scheduled job works with the sn_hr_ef.purge_stride_length property to determine which employee documents for a user [sys_user] record get purge dates recalculated.

Note:
The Employee Document Management scheduled jobs run daily by default. To change when a scheduled job runs, see Default schedules.

Document management tables and descriptions

Document management table types

Table	Description
Attachment Tracking [sn_hr_ef_attachment_tracking]	Tracks copied attachments for purging. Also used to for attachments that get copied to an HR case from an HR task.
Document Type [sn_hr_ef_document_type]	Records about employee document categorization, access, retention policy, and legal holds.
Employee Document [sn_hr_ef_employee_document]	Records about an employee document, document type, purge hold, purge date, employee, tags, size, format, creation date, and created by.
Employee Document Staging sn_hr_ef_import_staging	Contains information on employee documents from your source repository. This information maps to elements required for import to Employee Document Management.
Legal Hold [sn_hr_ef_legal_hold]	Records about legal hold placed on either a document type or HR profile.
Purge Log [sn_hr_ef_purge_log]	Configurable by the Employee Documents Properties. Determines what fields appear on the purge logs.
Retention Period [sn_hr_ef_retention_period]	Records about retention periods including date offset type, units, and quantity.
Retention Policy [sn_hr_ef_retention_policy]	Records about retention policies including conditions the policy applies to, retention period, and created by.
Security Policy [sn_hr_ef_security_policy]	Records about security policies including COE, purge authorization, groups, roles, and created by.
Document Type Security Policy	Associates security policies to a document type.

Workforce Optimization for HR Overview

Workforce Optimization for HR simplifies the daily routine of HR Agent Managers to develop high-performing teams by optimizing schedules and work assignments, respond to ad hoc changes in real time, manage time-off requests and providing the skills they need to succeed—all in one workspace.

Workforce Optimization for HR

Manage and maintain the productivity of your workforce from a single application using Workforce Optimization for HR. With this application, you can efficiently route work to your team, manage your team's skills and schedules, and monitor their performance.

The application is available on configurable workspaces. Administrators can configure and customize the workspace using the application capabilities to complete the service objectives efficiently.

Workforce Optimization for HR WFO enables you to do these tasks:

- Gain real-time visibility into work items, escalations, and KPIs by each channel so you can manage for optimal performance.
- Manage normal work shifts and on-call shifts from one, centralized experience. Track shift coverage, swaps, and time off requests.
- Forecast agent demand with precision modeling demand scenarios to analyze impact to agent schedules, and update forecast to properly staff for demand surges.
- Empower agents with the skills they need to succeed using internal and external learning management platforms.

Workforce Optimization for HR key features

Automating employee coaching and training

Assess your team's performance#and set coaching plans to improve their skills.

Integrated application data

Drive workforce optimization effectively by managing schedules, shifts, and queues for your teams. You can assess skills, automate agent recommendations based on those skills, and provide mentoring opportunities for employees.

Scheduling

Manage the scheduling for your organization from a central location. You can create shift plans, schedule plans, assign agents to shifts, and publish the schedules. Manage teams' approvals, swap agents' shifts, and forecast agent staffing scenarios.

Team performance

You can organize each of your teams into assignment groups. You can define a set of key Performance Indicators (KPIs) to analyze the performance of all groups

© 2026 ServiceNow, Inc. All rights reserved.

Exploring Workforce Optimization for HR

Use Workforce Optimization for HR to optimize your workforce and manage your teams efficiently.

Manage and monitor the real-time work being done by your agents across different channels and queues. Coach your teams so that they gain the skills that let you address the demands from your customers. Efficiently schedule your teams to provide better coverage with integrated channel management.

As a manager, you can monitor the demand for agents and skills in your organization to resolve issues. Assess agent skills, identify areas where they need improvement and provide training to enhance their skills set. Track your teams performance, and manage the schedule of all agents in your assignment group—all from a unified location.

As an agent, you can manage your own schedule, access the schedule of your peers and request time off or shift swaps.

Manager workspace landing page

The landing page provides a real-time overview of the current workload and the team performance. View the following metrics using advance score cards, combo cards, and line charts having multiple data sets such as:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- KPIs: Today's cases, This week's case volume by status, Open cases by service, Last updated open cases by age (No of days)
- Closed cases - SLA met vs. SLA breached: Open case by backlog (line graph of closed cases), Open case by age (graph of 10-15 days, 15-30 days, more than 30 days)
- Approvals: You can see the list of approvals of time offs.

Scheduling

Access your teams' calendar to know which agents are scheduled for coverage and which agents have taken time off.

Using Scheduling, you can also:

- Assign agents to shifts.
- Define break time.
- Preview and publish team schedule.
- Approve agent time-off or shift-swap requests.
- Create on-call shifts and assign primary, secondary rotation groups to handle escalation scenarios.

For more information, see Scheduling in Workforce Optimization for HR.

Schedule Adherence

Access your teams' calendar to know which agents adhered to their planned schedules and make timely decisions to increase your team's performance by setting expected adherence targets.

Using Schedule Adherence, you can also:

- Configure and tweak the schedule adherence and conformance formulas and properties so that you can customize them for your organization.
- Access the schedule of all of your teams from one location and gain insights on whether your team is complying with published schedules.
- Analyze the historical time attendance of your team members.
- View planned versus actual historical data for your team and individual agents.

Teams

Monitor performance trends for your teams using KPI groups. Create a set of KPIs and apply them to all groups within a team and assess team performance from one location.

Using Teams, you can also:

- Identify all the teams you manage as well as the ones you have visibility into.
- Analyze the KPIs that are crucial for your team.
- Drill into agents within each team and monitor their performance.
- Access each agent's profile to view details such as their manager, peers, and assignment groups.
- Drill down into each agent's skills or recommend them for coaching.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information, see Teams in Workforce Optimization for HR.

Coaching and Skills Assessment

Enhance the quality of work done by your agents using Coaching. Assess agent skills and recommend the ones that they require to resolve issues. Identify coaching opportunities based on the recommendation and train the agents to acquire those skills.

Using Coaching, you can also:

- Automate the scoring, grading, and assessment of agent skills.
- Use coaching opportunities to create assessments.
- Track training assigned to agents based on their assessments.
- Analyze the skill gap and recommend training.
- Managers can assign courses to agents from third-party learning management systems (LMS), such as Udemy, Pluralsight, and Cornerstone OnDemand.

For more information, see Coaching in Workforce Optimization for HR

Workforce Optimization for HR Manager Workspace Landing Page

The Manager Workspace landing page displays metrics of the on-going work and helps managers to take informed decisions.

The Workforce Optimization for HR Landing Page offers single-pane glass view into the key metrics and the KPIs.

- KPIs

  Today's cases

  Displays the number of cases that were resolved by agents on first contact by the customer.

  This week's case volume by status

  Displays the number of cases that have been in the same state for 30 days.

  P1 cases

  Displays the number of cases that have been re-opened by the customers after they were resolved.

  SLA breached cases

  Displays the number of open cases that are escalated by the customer or internally.

  Unassigned cases

  Displays the number of unassigned cases.

  SLA at risk cases

  Displays the number of cases with their SLAs at risk.

  Each score card also displays a graph that you can click to further analyse the cases.

- Work Items

  Open cases by service

  Displays the total number of open cases. The combo card also displays the break-up of the open cases according to the current status: **New**, **Open**, and **Awaiting Info**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Last updated open cases by age (no. of days)

Displays the graph of open cases that were created in the last 10-15 days, 15-30 days, and more than 30 days.

- Agents

Closed cases - SLA met vs. SLA breached

Displays the number of agents in the team and the break-up of agents according to current status: **Available**, **Offline**, **Break**, and **Away**.

Approvals

Displays the number of time-off requests by the agents that are pending manager's approval.

Shift swap requests

Displays the number of requests by the agents to swap shifts that are pending manager's approval.

Team performance

Displays a graph of the open cases and unassigned cases in the last 12 months.

Reassigned cases

Displays the number of requests that have been reassigned.

You can click the line charts to further view the list of cases.

- Critical open cases: Displays the list of open critical cases that were updated least recently. Click **View all** to view all the critical cases.

Get an overview of the Manager Workspace landing page and also learn on how to configure it using UI Builder as per your business needs.

Configuring Workforce Optimization for HR

Enable Workforce Optimization for HR and configure settings to use Scheduling, Teams, and Coaching applications.

Activate Workforce Optimization for HR

Workforce Optimization for HR solution is highly modular, offering a wide range of capabilities such as Scheduling, Coaching, and Teams applications in Manager Workspace. Configurable Workspace (sn_hr_wfo_workspa) plugin activates all other dependent plugins to enable users to access Scheduling, Coaching, and Teams applications in Workforce Optimization for HR.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the plugin using the filter criteria and search bar.
   You can search for the plugin by its nae or ID/ If you cannot find a plugin, you might have to request it from ServiceNow personnel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **Install**, and then in the Activate Plugin dialog box, select **Activate**.

> **Note:**
> When domain separation and delegated admin are enabled in an instance, the administrative user must be in the **global** domain. Otherwise, the following error appears:`Application installation is unavailable because another operation is running: Plugin Activation for <plugin name>`

RCA approvals in Workforce Optimization for HR

After you install or upgrade to the latest Workforce Optimization for HR from ServiceNow Store, you might encounter Restricted Caller Access (RCA) approval messages.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. Right-click the header and choose **Import XML**.
3. Click **Choose file** and select the XML file that you downloaded.
4. Search and find the HR Agent WS bulk RCAs approval script record.
5. Click **Run Script** to approve all the requested RCAs.

> **Note:**
> RCA fix script can approve the RCAs which exist at the time of execution. After running the RCA script (if you install the Document Templates from ServiceNow Store, Human Resources Scoped App: Lifecycle Events, and Human Resources Scoped App: Employee Relations plugins), re-run the RCA script to approve the new RCAs.

Workforce Optimization for HR Domain Separation

Domain separation is supported for Workforce Optimization for HR. Domain separation enables you to separate data, processes, and administrative tasks into logical groupings called domains. You can control several aspects of this separation, including which users can see and access data.

Support level: Basic

- Business logic: Ensure that data goes into the proper domain for the application's service provider use cases.
- The application supports domain separation at run time. The domain separation includes separation from the user interface, cache keys, reporting, rollups, and aggregations.
- The owner of the instance must set up the application to function across multiple tenants.

Sample use case: When a service provider (SP) uses chat to respond to a tenant-customer's message, the customer must be able to see the SP's response.

For more information on support levels, see Application support for domain separation.

Setting up Scheduling for Workforce Optimization for HR

Manage events the team calendar. Create schedule plans, shift plans, event categories, and event types.

Configure event categories

Add event categories and create or update field configurations for events in the Manager workspace.

Before you begin

Role required: sn_hr_wfo.admin

The following event category configurations are available by default:

- Actual Work
- Break
- Meeting
- On-Call
- On-Call Time Off
- Time Off
- Training
- Work

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Scheduling** > **Event Categories**.
2. In the **Event Categories** list, click **New**.
3. In the **Name** field, enter a name for the event category.
4. If you want to exclude this event category for agent coverage calculation, enable the **Exclude from coverage** check box.
5. In the **Event field configuration** dialog box, edit the following configuration as necessary:

Note:
You can remove any property that does not apply to a type of event.

```
{
            "create": {                 //Creates an event type
 form
```

```
                    "additionalQueryString": ""
                }
                ]
            }
        }
```

6. Click **Submit**.

Create event types

Create multiple events and add them to the team calendar.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Scheduling** > **Event Configuration**.
2. Click **New**.
3. On the form, fill in the fields.

Event configuration form

Field	Description
Name	Name for the event type.
Category	Type of event, for example, meeting, break, or time off.
Priority Order	Priority of the event type that you want to exclude from the coverage. The higher the number means the higher the priority.
Color	Color that identifies this type of event in the team calendar.

4. Click **Submit**.

Configure schedule adherence properties

Configure schedule adherence properties to calculate the adherence to improve the operational efficiency of your organization.

Before you begin

Role required: sn_hr_wfo.admin

About this task

The threshold settings for adherence and conformance indicate how many minutes early or late an agent can clock in or clock out to a scheduled work shift without being considered as non-adherent.

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Schedule Adherence** > **Settings**
2. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Schedule Adherence properties form

Field	Description
Enable Schedule Adherence	Calculation and information about the agents' adherence to the schedules.
Threshold for early checkin for planned shift (in Minutes)	Time set early check in. This time is the acceptable time for an agent to start the work shift before the actual shift time. The default value is 60 minutes. For example, if an agent's planned work shift is 8 a.m. to 5 p.m., and the agent clocks in at 7 a.m., the threshold time allows flexibility and the agent is not considered as a non-adherent agent.
Threshold for adherence % of Time Worked Summary	Percentage set for a threshold in adherence. The agents who do not qualify to be above the defined threshold value (70%) are considered non-adherent agents.
Lower threshold conformance % of Time Worked Summary	Lower threshold percentage set for flexibility in conformance. The agents who do not qualify for the defined lower and upper conformance threshold values (80-120) are considered as non-conformant agents. The default value is 80%.
Upper threshold for conformance % of Time Worked Summary	Upper threshold percentage set for flexibility in conformance. The agents who do not qualify for the defined lower and upper conformance threshold values (80-120) are considered as non-conformant agents. The default value is 120%.
Default threshold time for clock-out event generation (in Minutes)	Default threshold time to generate an automatic clock-out event if an agent fails to clock out. The default value is 60 minutes. For example, if an agent's planned work shift is 8 a.m. to 5 p.m. and the agent fails to clock out at 5 p.m., the system waits for 60 minutes as the threshold time and generates an automatic clock-out event.

3. Click **Save**.

Modify schedule adherence and conformance formulas by using extension points

Configure and tweak the schedule adherence and conformance formulas using scripted extension points to customize them for your organization.

Before you begin

Role required: sn_hr_wfo.admin

About this task

Use the `sn_shift_planning.ScheduleAdherenceExtPt` extension point and create an implementation to configure the formulas. You can create multiple implementations. However, the implementation with the lowest order number is executed.

Procedure

1. Navigate to **All** > **System Extension Points** > **Scripted Extension Points**.
2. Search for `sn_shift_planning.ScheduleAdherenceExtPt`.
3. On the form banner, click the link **here** to edit the record.
4. To create your extension point script, click **Create Implementation** in the related links.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Modify the formulas for calculating the schedule adherence and conformance in the `getAdherencePercentage` and `getConformancePercentage` methods.

```
var ScheduleAdherenceExtPt = Class.create();
ScheduleAdherenceExtPt.prototype = {
    initialize: function() {
    },

    getAdherencePercentage: function(plannedTime, timeNotWorked, availableNonPlannedTime, totalTimeWorked){
        var adherencePercentage;
        return adherencePercentage;
    },

    getConformancePercentage: function(plannedTime, timeNotWorked, availableNonPlannedTime, totalTimeWorked){
        var conformancePercentage;
        return conformancePercentage;
    },

    type: 'ScheduleAdherenceExtPt'
};
```

6. Click **Update**.

Result

The schedule adherence and conformance calculations are based on the formulas in the implementation.

Event type extension points in Workforce Optimization for HR

Use extension points to call scripts for event categories such as meeting, time off, or work time.

To see a list of extension points that you can use for Workforce Optimization for HR, navigate to **System Extension Points** > **Scripted Extension Points**. In the Extension Points list, open the *sn_shift_planning.EventManager* extension point.

Use scripted extension points to integrate customizations without altering the core components in the application code. When customizing a base application, you implement the scripted extension points by creating the custom script includes and registering them against the scripted extension points.

Extension points for event types

Extension points	Description
sn_shift_planning.EventManager	Implement this extension point to customize the logic for the event categories that you create.

You can use extension points to create events such as meeting, training, and time-off requests. For example extension point implementations, see the following extension instances in the Implementations related list:

Extension instances

Category	Extension Script
Meeting	*AgentScheduleMeetingEventManager*
Break	*AgentScheduleBreakEventManager*
Training	*AgentScheduleTrainingEventManager*
Time off	*AgentScheduleTimeOffEventManager*

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Extension instances (continued)

Category	Extension Script
Work	`AgentScheduleWorkEventManager`
On call	`AgentScheduleOnCallEventManager`
On Call Time Off	`AgentScheduleOnCallTimeOffEventManager`
Actual Work	`AgentScheduleActualWorkEventManager`

Setting up Teams in Workforce Optimization for HR

Organize your teams into assignment groups and create reports for those groups to can gain visibility into the team's performance.

As an administrator, you can configure KPIs as well as child KPIs. The child KPIs appear when you drill-down into top level KPIs. For example, Closed Cases KPI has P1 Cases, P2 Cases as child KPIs.

Create KPI Groups to monitor performance

Create key performance indicator (KPI) groups with the KPIs that matter most to your teams. When you associate your KPI groups with assignment groups, you can monitor your team's performance.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Create a KPI group.
   a. Navigate to **Workforce Optimization for HR** > **Team Performance** > **KPI Groups**.
   b. Click **New**.
   c. In the **Name** field, enter a name for the KPI group.
   d. In the **Type** menu, select **Teams**.
   e. Right-click the form header and click **Save**.

      You can add up to five KPIs to a KPI group.
2. Add KPIs to a KPI group.
   a. In the **KPIs** related list, click **New**.
   b. In the **KPI** field, select the KPI to apply for this group.
   c. Click **Submit**.
3. Add KPI assignment groups to the KPI group.

Note:

- You can associate a KPI assignment group only to one KPI type.
- You can add additional managers to each assignment group.
- You can associate a user with a KPI group as the primary assignment group for that user.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the **Assignment Groups** tab, click **Edit**.

b. Move the desired assignment groups from the Collection to the Assignment Groups list.

c. Click **Save**.

Add managers to a KPI assignment group

Add managers to a KPI assignment group.

Before you begin

Role required: sn_hr_wfo.admin

About this task

You can associate a user with a primary assignment group by selecting the group in the user

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Team Performance** > **Additional Managers**.
2. Click **New**.
3. In the **Assignment Group** field, select an assignment group.
4. In the **Manager** field, select a manager you want to add for this assignment group.
5. Click **Submit**.

Setting up Coaching in Workforce Optimization for HR

Manage agent skills and assess the quality of completed tasks. Use predictive intelligence to recommend skills for agents. Train your agents with internal and external learning content.

Configure an indicator to display in the Coaching Overview tab in Workforce Optimization for HR

Add a system property to display the desired indicator in the Coaching Overview tab in the Coaching application.

Before you begin

Important:
This feature is available with the Workforce Optimization for HR from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for HR.

Set the map application scope to **Coaching**. For information on how to set the scope, see Set map application scope.

Role required: sn_hr_wfo.admin

About this task

Replace the existing indicator with any Performance Analytics indicator that has the Assigned to and Assignment group breakdowns to display in the Coaching Overview tab in the Coaching application.

Procedure

1. In the application navigator, enter `sys_properties.list`.
2. Click **New**.
3. Enter the following field values.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure an indicator form

Field	Value
Name	sn_coaching.coaching_overview_default_quality_indicator
Application	Coaching
Type	string
Value	{"title": "<name>", "sys_id": "<sys id>"} where <name> is the name of the indicator that you want to display in the Coaching Overview tab and <sys id> is the unique record identifier Example: ○ Name: % of P1 incidents resolved on first call. ○ Sys ID: 0423e59387401010ca99e12397cb0bbb {"title": "% of P1 incidents resolved on first call", "sys_id": "0423e59387401010ca99e12397cb0bbb"}
Read roles	sn_coaching.coach

4. Click **Submit**.
   The configured indicator replaces the existing indicator in the Overview tab in the Coaching application in Workforce Optimization for HR.

Setting up skill prediction in Workforce Optimization for HR

Collect skill data based on skills agents have used for case resolution. Use supervised learning to recommend these skills for agents to resolve similar open case. You can also find patterns in how skills are used for case resolution and use unsupervised learning to recommend skills for agents.

Before you begin

Set up skills. For more information, see Skills Management.

Predictive Intelligence must be set up and configured on your instance to train the models. For more information, see Predictive Intelligence.

Activate the Skill Recommendation application plugin (com.snc.sre) to use predictive intelligence for recommending skills.

Role required: sn_hr_wfo.admin

Procedure

1. Configure the skill prediction property.
2. Run the solution definition models such as *`Recommend similar skills for cases`* or *`Recommend skills from similar cases`* to train the supervised and unsupervised solutions.
   For more information on training a solution, refer to Create and train a similarity solution.
3. Run the *`Start skill prediction`* scheduled job everyday to start predicting skills for cases or agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

This scheduled job is inactive by default. When you activate it, the job runs daily at 1:00 AM on all cases resolved the previous day. The job then adds the skills to the User Predicted Skill [sn_sre_user_predicted_skill] table and Task Predicted Skill [sn_sre_task_predicted_skill] table.

Note:
Recommended skills will start appearing once the number of records in [sn_sre_task_predicted_skill] table exceeds the value defined in the [sn_sre.user_predicted_skill_threshold] .

Use extension points for skill prediction in Workforce Optimization for HR

Use scripted extension points to customize skill prediction for tasks.

Before you begin

The Skill Recommendation extension point is included with the Skill Recommendation (com.snc.sre) plugin.
Role required: sn_hr_wfo.admin

About this task

You can create multiple implementations for each extension point and provide an order number for each implementation. The implementation that has the lowest order number is executed.

Procedure

1. Navigate to **All** > **System Extension Points** > **Client Extension Points**.
2. From the Extension Points list, select **Skill Recommendation** (sn_sre.SkillPredictionAPI).
3. Do one of the following:
   - To create a new skill recommendation implementation, click **Create Implementation**.
   - To modify an existing implementation, from the **Implementations** related list, select a class.
4. Modify the script as required.
5. Click **Update**.

Configure a list menu to display in the Learning tab in Workforce Optimization for HR

Add list or list categories to modify the list menu for Coaching with Learning in the Coaching application in Workforce Optimization for HR.

Before you begin

Important:
This feature is available with the Workforce Optimization for HR Configurable Workspace from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for HR.

Set the map application scope to **Coaching With Learning**. For information on how to set the scope, see Set map application scope .

Role required: sn_hr_wfo.admin

Procedure

1. In the application navigator, enter `sys_ux_list_menu_config.list`.
2. Click **Learning list** record.
3. Under UX list category, click **New**.
4. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

List category form

Field	Value
Title	Enter the name of the list category.
Description	Enter a short description about the list category.
Order	Enter a value to set the position of the list category in the current list.
Active	Select the check box to make the list category visible.

5. Click **Submit**.
6. Under UX Lists, click **New** to create lists under that list category.
7. Enter the following field values.

UX list category form

Field	Value
Title	Enter the name of the list.
Table	Select the table for the data that you want to display in the list.
Configuration	Select **Learning List**.
Columns	Select the columns that you want to display for the table.

8. Click **Submit**.
9. Click **Update**.

Setting up Demand Forecast in Workforce Optimization for HR

Configure the data you want to collect, modify forecast parameters and calibrate manual adjustments using Demand Forecast.

Configure data collection for Demand Forecast

Define the data you want to collect for cases, interactions, or any table to forecast the number of agents that you require for your staffing needs.

Before you begin

You must have the MetricBase plugin [com.snc.clotho] enabled to use Demand Forecast in Workforce Optimization for HR. For more information, see Requesting the MetricBase product.

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Demand Forecast**.
2. Define the data you want to collect for forecasting agents to resolve cases.
   a. Click **Data Collection Definitions**.

      See the Components installed with Workforce Optimization for HR for the list of configurations that are available by default.

   b. Click **New**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

c. On the form, fill in the fields:

Forecast Configuration form

Field	Description
Name	Name for the collection forecast configuration.
Table	Table that is used for collecting data.
Type	Data Collection Definition type is set to **Collection** by default and collects data using a scheduled job.
Date Field	Data that you can add to forecast for the future.
Conditions	Conditions that you can set so that you can capture the data that you need.

d. Click **Submit**.

e. Create an index for the table you have created using the date field and the conditions you have added to the table. For information on creating a table index, see Create a table index.

Add parameters to be defined in the formula

Add parameters to be defined in the formula to calculate agent count per hour in a day.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Demand Forecast** > **Formula Parameters**.
2. In the **Name** field, enter a name for the parameter.
3. Do one of the following:
   - If you need to add a value to be calculated for the formula, in the **Value** field, enter a value.
   - If you want to use the performance analytics score card API or a custom API, select **Advanced**, and add a script.

   The Average Case Work Time and Average Chat Work Time forecast parameters provided by default are examples of how you can use scripts to add the parameters. For a list of parameters provided by default, see Components installed with Workforce Optimization for HR.
4. Click **Submit**.

Configure resource conversion formula

Configure the resource conversion formula.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Demand Forecast** > **Resource conversion formula**.
2. Click **New**.
3. On the form, fill in the fields.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Forecast Configuration form

Field	Instructions
Name	Name for the resource forecast configuration.
Type	Type is set to **Resource Conversion Formula**.
Formula	Formula to calculate the forecasted number of agents that you need. In the Related Links section, do the following: ○ Click **Browse Forecast Configuration**, select the forecast configuration to add to the formula and click **Add**. ○ Click the Browse Forecast Parameter, select the forecast parameter to add to the formula and click **Add**. **Note:** **FC** refers to Forecast Configuration and **FP** refers to Forecast Parameter.

4. Click **Submit**.

Group forecast configuration

Associate an assignment group with a Resource Conversion Formula. You can assign a forecast configuration to multiple assignment groups, but an assignment group can have only one forecast configuration.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Demand Forecast** > **Group Forecast Configuration**.
2. Click **New** and fill in the fields on the group forecast configuration form.
   - In the **Assignment Group** field, browse and select the group to which you want to associate a forecast configuration.
   - In the **Forecast Configuration** field, browse and select a **Resource Conversion Formula**.

Modify forecast parameters to visualize forecast data

Configure and tweak forecast parameters to see how the forecast behaves when you vary the period length, periods to forecast, or algorithm. You can view the modified forecast on the time-series visualization.

Before you begin
Role required: sn_hr_wfo.admin, sn_hr_wfo.manager

The user with these roles must also be a manager of the assignment group that is associated with the resource conversion formula.

About this task
You can define the start and end dates for which you want to visualize the forecast data. The start date for a forecast configuration is based on the number of historical days you want to consider for data visualization. This is set using the *sn_agent_forecast.number_of_historical_days_in_timeseries_chart*.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The published forecast is reflected on the team calendar only when the **Forecast resources for future** job is executed.

The default start date is set to 3 days ago starting from the day before the current day. The end date is calculated based on the period length and the periods to forecast represented in days. For example, if the period length is 1 day and the periods to forecast is 30, then the end date is 30 days including the current day. Forecast can be generated for a maximum period of 90 days.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Click **Forecasts**.
4. Select the forecast model for which you want to view the time-series data.
   You can visualize each of the forecast parameters that were created for the forecast model.
5. Click the gear ( )icon.
6. Click the plus (+) sign.
7. Configure the forecast parameter.
   a. From the **Period length unit** list, select the unit for the length of the period to forecast.
   b. In the **Period length** field, enter the duration of the period to forecast.
   c. In the **Periods to forecast** field, enter the number of seasons, which is the period length, for which you want to forecast.
   d. In the **Algorithm** field, select an algorithm you want to use to calculate the forecast.
   e. Click **Update**.
   The forecast is created in **Draft** state. The forecast is calculated and displays in the forecast model. You can analyze the forecast with the new forecast parameters before you publish it.
8. To preview a forecast before publishing it, click **Preview**.
   The forecast is calculated using the algorithm and parameters configured in the forecast parameter. When you create a manual adjustment to predict future resources, Demand Forecast overlays the adjustment in the time-series chart.
9. Publish the forecast parameters.
   - To publish a newly created forecast parameter, click **Save** and then click **Publish**.
   - To publish an active forecast parameter, click **Publish**.

   Note:
   You can only have one forecast in **Published** state, which is used to calculate the resources.

   When the forecast parameter is published:
   - The state of the record changes to **Published**.
   - The **Forecast resources for future** job runs daily and uses the published forecast parameters to calculate the agent forecast. The calculation uses the resource conversion formula to calculate the forecast data from the current point forward. You can view the updated resources in the team calendar.
   - Any other forecast parameters that were created would be unpublished and inactive.

Create a manual adjustment for a forecast

Adjust forecasts manually to fine-tune them for greater accuracy. Create the adjustment for a specified time period and analyze how it impacts your forecast.

Before you begin

Role required: sn_hr_wfo.admin

The user with these roles must also be a manager of the assignment group that is associated with the resource conversion formula.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule () icon.
3. Click **Forecasts**.
4. Select the forecast model for which you want to make a manual adjustment.
5. Click the Manual Adjustments () icon.
6. Make a manual adjustment.
   a. Click the plus (+) sign.
   b. On the form, fill in the fields:

Manual adjustment for forecast

Field Name	Description
Name	Name for the manual adjustment.
Start Date Time	Date and time when the manual adjustment for the forecast must start.
End Date Time	Date and time when the manual adjustment for the forecast must end.
Adjustment Unit	Unit for the manual adjustment. Available units: ▪ Percentage—adjustment value percentage. For example, if the forecast data shows case count and if the adjustment value is 15, the manual adjustment shows a 15% increase in case count than the forecast data. ▪ Number—adjustment value count. For example, if the forecast data shows case count and if the adjustment value is 15, the manual adjustment shows 15 more cases than the forecast data.
Adjustment Value	The numeric value for which you want to adjust the forecast. The value is applied to each group in the Groups [sys_user_groups] table. The manual adjustment visualization on the time-series chart displays the data for your groups. For example, let's assume that the value is 15 and the unit is number. If you have two groups for a forecast model and both have 2 agents each before you do the manual overlay, when you enter the value as 15, it is applied to each of the two groups and the total value displays as 34. This is calculated as follows:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field Name	Description
	▪ Two agents for group A + the adjustment value 15 = 17 ▪ Two agents for group B + the adjustment value 15 = 17 The total is 34. If you have two groups for a forecast model and both have a volume (for example: Cases/ Chats) of 2 before you do the manual overlay, when you enter the value as 15, it is applied to each of the two groups and the total value displays as 34. This is calculated as follows: ▪ Two cases/chats for group A + the adjustment value 15 = 17 ▪ Two cases/chats for group B + the adjustment value 15 = 17 The total is 34.

c. Click **Save**.
The manual adjustment is created in **Draft** state. The manual adjustment is calculated and displays as a green line in the forecast model. You can analyze or update the forecast with this manual adjustment before you publish it.

7. Publish the manual adjustment.

a. Click the saved manual adjustment that you want to use for forecasting resources.

b. Click **Publish**. The state changes to **Ready to Publish**.
When the **Forecast resources for future** job is run, it calculates the forecast, checks for manual adjustments, applies those values if any, and moves it to the **Published** state.

Note:

- When you unpublish a forecast, it moves to **Draft** state. You can delete a forecast that is in **Draft** state.
- If you want to end a manual adjustment after it has started and before its end date, you can click **End Now**.

The forecast will no longer be used in the resource conversion formula.

When the manual adjustment is published:

- The state of the record changes to **Published**.
- The adjusted values will be used in the resource conversion formula and the demand forecast displayed on the calendar.
- Any other manual adjustment configurations that were created would be unpublished and moved to **Draft** state.

Using Workforce Optimization for HR

Enhance the quality and efficiency of your teams using smart scheduling, team structure, and real-time refreshing single scores. Monitor chat conversations and help agents on cases. Assess the quality of tasks completed, recommend skills for agents, and train them to address skill gaps.

Workforce Optimization for HR Manager workspace

Monitor your teams' work and organizational performance using Workforce Optimization for HR. Stay on top of the status of cases your teams are working on at a given time.

Teams in Workforce Optimization for HR

Use Teams to track and analyze performance trends for your teams from a single location. You can monitor the trends for each agent within your team and compare your agents or team members with one another.

With Teams, you can do the following:

- Identify skill gaps so that you can recommend which skills are needed to coach your agents.
- Organize your teams into assignment groups. You can add a set of key performance indicators (KPIs) to help you measure team performance consistently across the groups.
- Compare KPIs between multiple teams belonging to the same KPI group.
- View the KPIs between the selected date range.
- Drill down into a Team level KPI to view the split of KPIs across all individual team members.
- View the KPI trend to analyze the future forecasts for each of the KPIs, if the date range has the latest values.
- Targets can be set on the KPIs through the team performance page at the global or individual level. When such targets are set, the trendline reflects the targets.
- Drill down to the individual agent level to view a 360 degree view of the current work, historical KPIs, presence history, channel capacity utilization, skills, and upcoming time-offs.

Analyze performance trends

Analyze trends to monitor your team's performance and adherence within a KPI group.

Before you begin

Role required: sn_hr_wfo.admin, sn_hr_wfo.manager

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Analyze the data by drilling down into the data for a team, a specific team member, an indicator, or a case.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Teams icon.
3. Select a date range to view your teams' performance for that time period.
   You can set the default date range using the *sn_team_perf.default_date_range*.
4. Analyze team performance.
   a. Select a team.
   b. In the **Performance** tab, track and analyze the overall indicator performance for all members in the team.
   c. Drill down into the data for this team:

Analyze team performance

To	Do this
Analyze indicator performance	▪ To analyze the indicator performance for the team, click an indicator value for the team in the header row. ▪ To analyze indicator performance for a team member, click an indicator value for the team member.
Track cases	Click the **Tasks** tab and analyze all cases related to the team. ▪ To view the cases details, select a case. ▪ To view the a team member's details, select a team member.

You can also review cases, details of assignment groups, additional managers, and information relevant to the team.

Scheduling in Workforce Optimization for HR

Use Scheduling to manage your workforce resources efficiently by planning and managing schedules, staffing, and shifts across your teams all from one location. You can also integrate with on-call scheduling and create shifts and schedule for on-call rotations.

With Scheduling, you can do the following:

- Add meetings, training, time-off requests, or ad hoc work shifts by using the team calendar.
- Filter agents in the team calendar based on their location, region, assignment groups, or any field in the agent's record.
- Create shift and schedule plans for agents.
- Approve or reject agents' time-off and shift-swap requests.
- Track and manage the team's schedule on the team calendar by viewing the planned shifts versus the actual clock-in and clock-out times for the selected day or week.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Analyze whether your team members are following the schedules. If you see a potential issue, you can easily alert your team so that they can take immediate action.
- Use historical adherence reports to analyze and recommend coaching opportunities for your agents.

To delve into more information behind your key performance indicators, filters and sidebars, see Exploring indicators with KPI Details

Create a shift plan

Schedule shifts for your team to make sure you cover all work assignments and breaks. You can also specify the days of the week that you want to override scheduled shifts.

Before you begin

Role required: sn_hr_wfo.admin

About this task

In the **Shifts** tab, the shifts are grouped by active and inactive shifts. The contextual side panel displays the active and the inactive shifts in the order that they are displayed in the **Shifts** tab.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Click the **Shifts** tab.
4. Click the plus (+) icon.
   - To create a work shift, see Create a work shift.
   - To create an On-call shift, see Create an on-call shift.

Create a work shift

Create a work shift.

Before you begin

Role required: sn_hr_wfo.admin

Create a shift plan. Create a shift plan

Procedure

1. Click **Work shift**.
2. In the **Name** field, enter a name for the shift.
3. Select the time window for the shift.
   a. In the **Time Zone** field, select the time zone of the users that you want to allocate to the shift.

      Note:
      To add a shift for agents working in their local time zones, select the **Use agent time zone** option. The system uses the time zone that is specified in the agent's user record.

   b. In the **Start Time** field, enter the time of day when you want to start the shift.
   c. In the **End Time** field, enter the time of day when you want to end the shift.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select the days of the week for which you want to add this shift.
5. Click **Save**.

Add schedule breaks to a shift

After creating a work shift, you can add schedule breaks to the shift.

Before you begin

Role required: admin

Before adding schedule breaks to a shift, make sure to create a shift plan and a work shift. See, Create a shift plan. Create a work shift, Create a work shift.

Procedure

1. Select the shift that you created.
2. Click **Add break**.
3. In the **Name** field, enter a name for the break.
4. Set a duration for the break.
   - In the **Duration** field, enter the length of time for the break.
   - In the **Earliest Start time** field, enter the earliest time to start the break.
   - In the **Latest End time** field, enter the latest time to end the break.

     For example, you can set the earliest start time as 11:00, the latest end time as 15:00, and the duration of the break as one hour. If you add four agents to the work shift, the Scheduling application automatically staggers the break duration for each agent. Stagger breaks to ensure that four of your agents can cover the entire shift span.
5. Click **Save**.

Create an on-call shift

Create on-call shift.

Before you begin

Role required: sn_hr_wfo.admin

Create a shift plan. Create a shift plan

Procedure

1. Click **On-call shift**.
2. In the **Name** field, enter a name for the shift.
3. From the **Group** field, select a group that you want to assign for the shift.
4. Select the time window for the shift.
   a. In the **Start Time** field, enter the time of day when you want to start the shift.
   b. In the **End Time** field, enter the time of day when you want to end the shift.
   c. From the **Time Zone** menu, select the time zone of the users that you want to allocate to the shift.
5. Select the days of the week for which you want to add this shift.
6. Click **Save**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create on-call rotation

After creating on-call shift, create on-call rotation to be able to rotate the shift among employees.

Before you begin
Role required: admin

Before create the on-call rotation, create an on-call shift. See, Create an on-call shift.

Procedure

1. Select the shift that you created.
2. Click **Create rotation**.
3. From the **Agents** field, select the names of the agents you would like to be part of the shift. When you click the field, the name of all agents that belong to the group that the on-call shift is being created for is displayed.
4. From the **Rotate interval** field, select if you want the rotation to be daily or weekly.
5. Click **Save**.

> **Note:**
> The **Escalation Type** field is auto-populated with **Rotate through rosters** field value if multiple rosters have been created for the rotation. If not, it is populated with **Rotate through members** field value.

6. Click **Publish** to make the shift active and publish it on the schedule.

Create a schedule plan

Manage your team's schedule by creating a schedule plan that covers a span of time and includes your team's work shifts. You can also assign agents to shifts based on their skills and availability. This way, you can make sure that you are using your resources in the best way possible for your organization.

Before you begin
Role required: sn_hr_wfo.admin

About this task
You can set the number of days to cache agent schedules using the *sn_shift_planning.number_of_days_to_cache*. The **Total coverage/demand** row displays the number of agents covering each shift in a day. The day view displays the demand for the number of agents forecast for every hour in a day. For example, 4/5 shows that you have four agents scheduled for an hourly time slot, 11 AM to 12 PM and the agent demand forecast for that hour is 5.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Create a schedule plan.
   a. Click the **Team Calendar** tab.

> **Note:**
> You can analyze the staff alignment for a day or for the week.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

b. In the contextual side panel, click the show schedules icon to display the schedules.

c. In the Schedules panel, click + icon.

d. In the **Name** field, enter a name for the schedule plan.

e. From the **Start Date** field, select a date to start the schedule plan and click **OK**.

f. From the **End Date** field, select a date to end the schedule plan and click **OK**.

g. Select the required assignment group. f you want to assign the schedule to the groups you manage, select **Groups I manage**. If you want to specify groups, select **Specify groups** and browse for groups.

h. Click **Save schedule**.
You can view the schedule of all agents in the assignment group that you directly or additionally manage.

4. Add a work shift to the schedule plan.

> **Note:**
> To add more shifts to an existing schedule plan, select the schedule plan and then add the work shift.

a. In the contextual side panel, click **Add Shift**.

b. In the **Shift** field, select the work shift that you want to add to the schedule plan.

5. Add agents to the work shift.

a. In the **Agents** field, search for agents and add one or more agents to add to the shift.

b. Click **Save**.

> **Note:**
> It may take a few minutes for the screen to refresh.

Publish a schedule plan for visibility into team coverage

Generate a preview of your schedule plan and publish it so that your agents can see their shifts and schedules ahead of time. You can unpublish a schedule to make changes and then publish it again.

Before you begin
Role required: sn_hr_wfo.admin

About this task
You can make a copy of a schedule and update it to create a new schedule. Updates could include modifying the schedule start and end dates as well as adding or removing shifts or agents.
When you make a copy of the schedule, the following updates are automatically made to the schedule copy:

- The start date is set to the current date and the end date to 30 days from the current date.
- The schedule state changes to **Draft**. You can make the necessary changes to the shift and click **Save**.
- The schedule only displays agents in the assignment group of the current logged in user.

You can also unpublish a schedule make updates, and then publish it again.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If the start date is the either the current date or had occurred in the past, the schedule state remains as **Published** and the end date changes to tomorrow.
- If the start date is in the future, the scheduler changes the schedule state and agent schedules to **Draft**.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule icon ( ).
3. Generate a schedule preview.
   a. Click the **Team Calendar** tab.
   b. Click the Show Schedules ( ) icon to display in the contextual side panel.
   The team calendar refreshes and generates the preview when you save a work shift.
4. Publish a schedule.
   a. Select a schedule and edit the schedule if necessary.
   b. Edit the schedule if necessary and click **Save**.
   c. Click **Publish**.

> **Note:**
> You can click **Delete** in **Draft** state and delete the schedule if you no longer need it.

Result
All the schedules that are in **Draft** state move to **Published** state. You can view the published schedule in the team calendar.

Track and manage team schedule

Create, update, or monitor your teams' schedule from one location. You can approve or reject requests for swapping shifts or time off for agents within your assignment group.

Before you begin
Role required: sn_hr_wfo.admin

About this task
Using the calendar, you can do the following:

- View all of your agents by assignment group.
- Get insights into team compliance with published schedules.
- View agent's work schedule that is actual shift time vs clock-in and clock-out times.
- Filter the team calendar based on the **Assignment Group**, **Location**, **Skills**, **Shift Plan**, and **Events** for a customized view.
- Modify agent's shift, clock-in, and clock-out timings, if required.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Modify an agent's shift timings.
   The schedule that includes this shift must be in **Preview** or **Published** state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

a. In the **Team Calendar** tab, navigate and point to the shift for the agent that you want to modify the schedule for.

b. In the shift pop-up window, click the Edit ( ) icon.

c. Modify the agent's shift time as desired.

> **Note:**
> If the existing shift has a break, you can add more breaks to the shift.

d. Click **Save**.

The following snapshot helps you to view the time worked summary for the selected agent.

4. Approve or reject an agent's time off or shift-swap with another agent.

> **Note:**
> You must approve a request two days before the time-off or shift-swap start date. If not, the approval is auto-rejected. An administrator can change this default setting. For more information, see **Setting the due date for time-off and shift-swap request approvals** in Overlapping time-off requests by an agent are rejected.

a. Click **Approvals**. You can view all agent requests in your queue and the details for each request.

b. Select a request that you want to approve or reject and do one of the following:

- To approve a request, click **Approve**.
- To reject a request, click **Reject**.

If you approve the request, the schedule gets updated in the team calendar based on the approvals.

Monitor schedule adherence

Use schedule adherence to evaluate whether or not your agents are adhering to their assigned schedules. You can look for areas where low-value activity can be eliminated or reduced and further analyze staffing levels throughout the day.

Before you begin

Role required: sn_hr_wfo.admin

About this task

- Adherence is a metric to analyze how closely agents follow their schedule in completing the work assignments. Conformance measures the work completed, regardless of when it was completed.
- A high adherence rate indicates that agents are sticking to their schedules and offering customer service when expected. Low adherence suggests changing the processes or decisions to manage the team efficiently. The numbers are highlighted in red for non-adherent agents.
- Schedule adherence and conformance calculations are based on the formulas, agents' actual and planned work timings. The following are the default formulas that are used to calculate adherence and conformance for agents. However, your administrator can change the formulas, as required. The following components and formulas are used to calculate adherence and conformance:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The *shift_planning_clock-in* and *shift_planning_clock-out* scripts generate the agents' clock-in and clock-out events from the login and logout sessions. The business rule *Agent Time Work Event Trigger* generates clock-in and clock-out events whenever there is a change in agent's presence state.
- **Schedule Adherence**= (Minutes worked in shift/Scheduled shift time in minutes + Overtime)
- **Conformance**= (Minutes worked in shift + Overtime)/Scheduled shift time in minutes

- The ideal adherence percentage by default is above 70, and conformance is between 80–120. However, your administrator can change the threshold values. The agents who do not qualify to the defined threshold values are considered as non-adherent and are highlighted in red.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule icon ( ).
3. Monitor the schedule adherence of your agents.

Schedule adherence

To	Do this
View schedule adherence at organization or team level	**a.** Click the **Schedule Adherence** tab. The bar chart appears with the schedule adherence percentage and conformance percentage of your teams. **b.** Click the bar to view the graph and drill down further to view the analytics of your team members.
Analyze planned vs actual scheduling for your team members	**a.** Click the **Team Calendar** tab. **b.** Select the date. **c.** Click the bar representing the agent's actual time worked of an agent to view the **Time Worked** summary. **Note:** The clock-in and clock-out timings are the actual work timings of your agents. The events are generated based on the agent's login, logout actions, and presence state. If an agent forgets to clock-out, the system automatically generates the clock-out event after 60 min, by default. However, your administrator can change it using *Default threshold time for clock-out event generation (in Minutes)*. Example: A clock-in event gets generated when an agent logs in or changes the presence status to **Available**. Similarly, a clock-out event gets generated when an agent logs out of the system or changes the presence status to either **Offline** or **Break**. If an agent fails to clock-out even after 60 min of the shift end time, the system automatically generates the clock-out event.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Analyze adherence and conformance

View the time worked summary of your team members to determine if your teams are adhering to the planned schedules. You can also use historical adherence, which is a reporting view of real-time adherence, to see how well your agents have followed their schedules in the past.

Before you begin

s
Role required: sn_shift_planning.admin

About this task

Adherence and conformance calculations are based on the defined configuration and your agents' actual and planned work schedules.

Note:
Your administrator can disable schedule adherence or change the configuration for adherence and conformance. For more information, see Configure schedule adherence properties.

Procedure

1. Navigate to **All** > **Workspaces** > **Manager Workspace**.
2. Drill down to view the time attendance and time worked summary of your agents.

View time attendance and time worked

To	Do this
Analyze time worked summary of your team	**a.** Click the Lists ( ) icon. **b.** Under Schedule Adherence, click **Time Worked Summary**. **Note:** The **Available Non Planned** time captures the time the agent was available and clocked in outside of the agent's scheduled work events. For example, if an agent is scheduled to attend a training from 13:00 to 14:00, but forgets to clock out that attendance, then that time is considered as the clocked-in time. Therefore, the training time from 13:00 to 14:00 will be captured as the available non-planned time.
View your agents' time attendance	**a.** Click the Lists ( ) icon. **b.** Under Schedule Adherence, click **Time Attendance**.

Example:
To understand the computations of the fields in a time worked summary, let's consider Fatima Alonzo's work day:

- Shift time begins at 8 a.m. and goes to 5 p.m. = 8 hours
- Planned time = 8 hours = 480 minutes
- Clocks in 8 a.m. and clocks out at 12 p.m. for a break. Back from the break, clocks in at 12:30 p.m. and clocks out at 5:05 p.m.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Minutes worked in shift = 480 - 30 = 450 minutes
- Schedule adherence= (minutes worked in shift/scheduled shift time in minutes + overtime) = 450/(480+65) = 82.57%
- Conformance= (minutes worked in shift + overtime)/scheduled shift time in minutes = (450 + 65) / 480 = 107.29 percent.

Note:
Fatima Alonzo is adherent because the schedule adherence and conformance are within the threshold. To see which agents are non-adherent, look for the numbers that are highlighted in red.

Analyze staff alignment using Demand Forecast in Workforce Optimization for HR

Use Demand Forecast to plan the number of staff members that you require so that you have enough agents to do the job.

Before you begin
Role required: sn_agent_forecast.user

About this task
Using Demand Forecast, you can:

- Monitor agent or team shift coverage for any day or week.
- Analyze if you are overstaffed, understaffed, perfectly staffed, or not aligned well with your staffing needs.
- Adjust the staff alignment depending on the coverage you need and the schedule of your teams.
- Analyze staff alignment as you are creating a schedule.
- You can analyze the agent coverage you have and the actual demand for the number of agents based on assignment groups and work shifts in a day.

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.
3. Click the **Team Calendar** tab.
4. Analyze staff alignment for each shift.
5. You can click the filter icon and select the assignment groups and shift plans for which you want to view the staff alignment.

Add events to a team calendar

Create a meeting, training, time-off request, or an adhoc work event from the team calendar.

Before you begin
Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **Workspaces** > **Manager Workspace**.
2. Click the Schedule ( ) icon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click the **Team Calendar** tab.
4. Click **+New**.
5. Create an event.
6. Click **Save**.

Swap your agents' shifts in Workforce Optimization for HR

Swap an agent's shift in your assignment group with another agent who can work on that shift and skip the approval process.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Click the Schedule icon ( ).
3. In the **Team Calendar** tab, navigate and point to the shift for the agent that you want to swap with another agent.
4. In the shift pop-up window, click the Shift Swap icon ( ).
5. In the **Requested Shift** section, click the **Agent** field and select the agent who can work on that shift.
6. Click **Submit**.
   The team calendar displays the updated schedule.

Coaching in Workforce Optimization for HR

Use Coaching in Workforce Optimization for HR to assess your team's abilities to efficiently resolve cases by reviewing their work at critical moments.

With Coaching, you can do the following:

- Recommend training for your agents to address skill gaps.
- Use the coaching opportunities that are available to coach your agents. You can also create a coaching opportunity using the Coaching application specific to your agent needs.
- Use assessments and surveys to apply consistent, measurable scores across teams.
- Use Predictive Intelligence to recommend skills for your agents and provide training to address those skill gaps.

Skills Overview in Workforce Optimization for HR

Use Skills Overview to analyze skill data such as how many skills are assigned to users and tasks. You can also see how many experts you have for a particular skill and the overall skill coverage by your teams.

Access Skills Overview from the Teams application:

1. Go to **Workspaces** > **Manager Workspace**.
2. Click the teams icon.
3. Select a team.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click the **Skills** tab.
5. Select a skill.

You can access the Skills Overview page when you click on a skill in a user profile page in any Workforce Optimization for HR application.

Use cases

Use cases

User	Landing page use
Skill Admin [skill_admin]	• Analyze all experts available for each skill. • Drill down into the skill hierarchy. • Number of skills assigned to users and tasks. • The mean time taken to resolve incidents for that skill. • Visualize how many users you have at different skill levels.

Indicators

MTTR of incidents of skill - Mean time taken to resolve incidents with this skill.

Breakdowns

The indicator is broken down by Skill.

Components

Components

Component Name	Type	Description
Skill Overview Container [sn-manager-skill-overview-container]	Visualization components	Contains the following components: • Reports • Mean Time to Resolution (MTTR) indicator • Skill Coverage pie chart • Content tree • Skill Experts components
Skill Tree Connected [sn-manager-skill-tree-connected]	Tree	Displays the skill hierarchy. If the selected skill does not have a skill hierarchy then the component will not display on the Skill Overview page.
Skill Experts [sn-manager-skill-experts-connected]	List	Displays all users who are at the expert level for the skill.
Skill Coverage [now-uxf-visualization-connected]	Pie-chart	Displays the percentage as well as the number of users with different levels of expertise for the skill.

Reports

Important:
The Pending Users and Assigned Tasks reports display when you enable the Coaching with Learning application from the ServiceNow® Store. To enable this application, see Activate Workforce Optimization for HR.

Reports

Title	Type	Source table	Description
Assigned Users	Single score	User Skill [sys_user_has_skill]	The number of users who have the selected skill assigned to them.
Assigned Tasks	Single score	Task Skill [task_m2m_skill]	The number of tasks for which this skill has been assigned.
Pending Users	Single score	Pending Users [sn_lc_learning_task]	The numbers of users who are yet to be assigned the selected skill from the learning task.
Course Items	Single score	Learning Course Item [sn_lc_course_item]	The number of internal and external courses that have the skill associated with the course item.

Learning in Workforce Optimization for HR

Use Coaching with Learning to train your agents with internal and external learning content. Organize similar content into learning libraries. Assign learning tasks to your agents and track completion. Create learning paths that include a collection of courses on a specific topic associated with a set of skills.

Create a course catalog in Workforce Optimization for HR

Create course catalogs and set user criteria to define user access to the course items and learning paths associated with it.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Select the Coaching icon.
3. Select the **Learning** tab.
4. Go to **Learning course catalogs** > **All course catalogs**.
5. Select **New**.
6. Create a course catalog.
   For more information, see Create a course catalog.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a learning library in Workforce Optimization for HR

Create a learning library to organize related content into categories.

Before you begin
Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Manager Workspace**.
2. Select the coaching icon.
3. Select the **Learning** tab.
4. Select **Learning Libraries** and select **My learning libraries**.
5. Create a learning library.
   a. Select **New**.
   b. In the **Title** field, enter a unique name for the learning library.
   c. In the **Description** field, enter a description for the learning library.
   d. Select **Save**.

   Note:
   The learning library is visible to all groups that you directly or additionally manage.

6. Add learning courses to learning libraries.
   a. Select the **Content** tab.
   b. Select **Add**.
   c. In the **Add Learning Courses** pop-up window, select all course items you want to add to the learning library.
   d. Select **Add**. The course items are added to the learning library.

   Note:
   To remove any course item you have added, select the course item and Select **Remove**.

7. Add a group to a learning library.
   a. Select the **Applicable Groups** tab.
   b. Select **New**.
   c. In the **Group** field, select a group that you want to associate with the learning library.
   d. Select **Save**.

Create internal learning in Workforce Optimization for HR

Add internal courses so that agents can learn new content and enhance their skill set.

Before you begin
Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Manager Workspace**.
2. Select the coaching icon.
3. Select **Learning Courses** and select **Internal Courses**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can search courses based on keywords using the **Search courses** field or narrow down the display of the courses based on skills using the **Filter courses by skill** field.

4. Create an internal learning course.
   a. Select **New**. The **Learning Internal Content** screen appears.
   b. Fill in the following fields.

Learning internal content form

Name	Description
Title	Name of the course.
Internal source	Select the type of content for the course. Here are the available types of courses: ▪ URL—Youtube, Vimeo, or any link for a video ▪ Knowledge article ▪ Free form
Days to complete	The number of days required to complete the course. Default value is set to 5.
Course catalog	The catalog associated with the course.
Knowledge article	If the internal source is a knowledge article, select the article.
URL Domain	If the internal source is URL, select the domain for the URL. Here are the available URL domain types: ▪ Youtube ▪ Vimeo ▪ Other
URL	If the internal source is URL, enter the URL for the selected domain.
Estimated duration	Length of time when the course has to be completed. For example, for a video, it is the duration of the video. For a KB article, the duration is estimated based on the length of the article.

5. Click **Save**.
6. Add a skill to the internal content.
   a. Select the **Associated skills** tab.
   b. Select **New**.
   c. In the **Skill** field, select a skill you want to associate with the internal content.
   d. In the **Skill level** field, select a skill level for the selected skill.
   e. Select **Save**.
7. Add a learning task to the internal content.
   a. Select the **Learning Tasks** tab.
   b. Select **New**.
   c. In the **Assigned to** field, choose a trainee to whom you want to assign the learning task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

d. In the **Course item** field, select the course item to associate with the learning task.

e. In the **Due date** field, select the calendar icon and select the date and time when you want to trainee to complete the learning task.

f. Click **Save**.

Access external courses on Workforce Optimization for HR

Add courses from external sources such as Udemy, Pluralsight, or Cornerstone to enable your users to gain skills from external content.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Manager Workspace**.
2. Click the coaching icon.
3. Click the **Learning** tab.
4. Go to **Learning Courses** > **External Courses**.
   You can search courses based on keywords using the **Search courses** field or narrow down the display of the courses based on skills using the **Filter courses by skill** field.
5. Select a course.
6. Click **Go to course**.
   You can review and learn the external course.

Assign a course item to agents

Assign a course item to one or more agents and add a due date for them to complete the course.

Before you begin

Role required: sn_hr_wfo.admin

About this task

You can analyze the course items that were most taken by your team members. You can also see which courses were created in the last five days.

Note:
You can close the status of a course item for any of your team members that you directly or additionally manage by selecting **Mark as complete** for that course item.

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Manager Workspace**.
2. Select the coaching icon ().
3. Select the **Learning** tab.
4. Select **Learning Courses** > **All Courses**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- You can search courses based on keywords using the **Search courses** field or narrow down the display of the courses based on skills using the **Filter courses by skill** field.
- In the course item cards, you can view details of each course, including skills associated with the course. If a course has more than one skill, you can select the count next to a skill and view all skills. To remove a skill, select a skill and select **Remove**.
- You can close the status of a course item for any of your team members that you directly or additionally manage and by selecting **Mark as complete** for that course item.

5. Select the assign icon for the course item you want to assign to agents.
6. In the **Assign learning course** screen, assign the learning course to groups or team members.

   a. If the agents have to complete the course item within a given date, select the **Mandatory** check box.

   b. In the **Due date** field, select the date by which they need to complete it.

   c. Select **Assign**.

Note:

- The course that is most taken by your agents is identified with the **Most taken** highlight.
- The course that has been created less than five days before the current date is identified with the **New** highlight.

Create a learning path in Workforce Optimization for HR

Create a learning path, add relevant skills and course items, and publish the path. When your agents complete the path, any skills associated with the path are automatically added to the agent's profile.

Before you begin

Role required: sn_hr_wfo.admin

Procedure

1. Navigate to **Workspaces** > **Manager Workspace**.
2. Select the Coaching icon.
3. Select the **Learning** tab.
4. Navigate to **Learning Paths** > **All learning paths**.
   - You can search a path based on keywords using the **Search** field or narrow down the display of the paths based on skills using the **Filter by skill** field.
   - You can select a learning path to view the details. You can analyze the path objective, the skills associated with the course items, the total number courses in the path, and the duration to complete them.
   - You can select the link that displays the skills and view all skills associated with the learning path. The list of skills will display if there are more than 5 skills associated with the learning path.
5. Select **Create new path**.
   The **New learning path** screen displays.
6. On the form, fill in the fields:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Learning path form

Field	Description
Path name	Unique name for the learning path.
Course catalog	Catalog to which you want to associate the learning path
Objective	Objective of the learning path.
Short description	Brief description of the learning path.
Description	In-depth description of the learning path.

7. Click **Next**
   The learning path that is created is in **Draft** state. You can choose to complete it later.
8. Add or remove course items.
   - You can search courses based on keywords using the **Search** field or narrow down the display of the courses based on skills using the **Filter by skill** field.
   - You can select a course and preview the details.

   a. Enable or disable the check box for the course items that you want to add or remove from the learning path.

   b. Select **Add items**.
   The **Review** screen appears.
9. Review the learning path.
   The skills associated with the selected courses are automatically populated in the **Course skills** field.

   a. Review and edit any required details.
   You can also add additional skills to the learning path.

   b. **Optional:** To remove items that you no longer want to associate with the learning path, select the item and then select **Remove selected items**.

   c. Click **Next**.
   - The screen displays the agent view of the learning path.
   - The **Curriculum** section displays the course items in the order that you have selected in the **Review** screen.
   - If you do not want to publish the learning path, you can select **Save** and come back to it later.
10. Click **Submit** to publish the learning path.
    The learning path is published based on the Publish flow.

Assign a learning path to agents

Assign a learning path to one or more agents and add a due date for them to complete the path.

Before you begin

Role required: sn_hr_wfo.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

About this task

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Manager Workspace**.
2. Select the coaching icon ().
3. Select the **Learning** tab.
4. Select **Learning paths** > **All learning paths**.
   - You can search paths based on keywords using the **Search** field or narrow down the display of the paths based on skills using the **Filter by skill** field.
   - Each path displays a highlight that shows whether it is in draft or published state. You can select a path that is **Draft** state and complete it. You can select a path that is in **Published** state and view the path details.
5. Select the Assign icon for the path you want to assign to agents.
   The Assign icon is only available when the path is in **Published** state.
6. In the **Assign learning path** window, assign the learning path to groups or team members.
   a. If the agents have to complete the path within a given date, select the **Mandatory** check box.
   b. In the **Due date** field, select the date by which they need to complete the path.
   c. Click **Assign**.
   You can see the progress your agents have made as they work on a path.

Create a learning task

Create learning tasks for agents to keep track of their learning activities.

Before you begin
Role required: sn_hr_wfo.admin

About this task
Set learning task completion due dates to include or exclude weekends using the *exclude_weekends_on_learning_task_due_date* system property.

Procedure

1. Navigate to **All** > **Workforce Optimization for HR** > **Manager Workspace**.
2. Click the coaching icon.
3. Click the **Learning** tab.
4. Click **Learning Tasks** and select **All Tasks**.
5. Create a learning task.
   a. Click **New**.
   b. On the form, fill in the fields:

Learning task form

Name	Description
Assigned to	Name of the agent to whom you want to assign the learning task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Name	Description
Learning library	The learning library that contains the course item for the learning task.
Course item	The course that needs to be completed by the agent.
Due date	Date when the agent must complete the course. Default is 5 days after the creation of the learning task. This value is calculated from the **Days to Complete** field for the course item. For learning tasks that are assigned or in progress, the due date field is highlighted as follows: ▪ Green—if the task is due after the current day. ▪ Yellow—if the task is due on the current day. ▪ Red—if the task was due before the current day.

6. Click **Save**.

Workforce Optimization for HR reference

Workforce Optimization for HR reference includes information about the roles, system properties, and tables installed.

Components installed with Workforce Optimization for HR

Several types of components are installed with activation of Workforce Optimization for HR application, including user roles, key performance indicators (kpis), scheduled jobs, properties, and tables.

Workforce Optimization for HR

Roles

Role title [name]	Description	Contains roles
Workforce Optimization User [sn_hr-wfo.user]	Typically uses Workforce Optmization for HR.	sn_hr-wfo.user
Workforce Optimization Admin [sn_hr_wfo.admin]	Grants administrative rights to create, read, update, and delete (CRUD) additional managers.	sn_hr_wfo.admin
Workforce Optimization HR Manager [sn_hr_wfo.manager]	Grants rights to create, read, or update, coaching, scheduling, teams, or channel management applications.	sn_hr_wfo.manager

Properties

Properties	Description
sn_hr_wfo.hr_group_types	System property that ensures the right HR related lists are rendered on the records in team

Properties (continued)

Properties	Description
	performance module. The logged in user should belong to a group of the group types (sysId) specified in this property.

Filter Configuration

Module Name	Module Tables/Database View
Manager Workspace	Stores filter configurations for all applications such as, Schedule, and Coaching. [sn_mgr_workspace_filter_configuration]
Schedule	• User [sys_user] • User Skill [sys_user_has_skill] • Agent Schedule [sys_shift_planning_agent_schedule] • Schedule Event [sn_shift_planning_event] • Manager Groups database view [sn_wfo_manager_group]
Coaching	• Skill [cmn_skill] • Skill Category M2M [cmn_skill_m2m_category] • Group Member [sys_user_grmember]

Manager Workspace

Roles

Role title [name]	Description	Contains roles
Manager Workspace User [sn_mgr_workspace.user]	Grants read access to home and list modules.	workspace_user
Manager Workspace Manager [sn_mgr_workspace.manager]	Grants read access to primary group, additional managers, and the approval button.	• sn_mgr_workspace.user • sn_wfo.user
Manager Workspace Admin [sn_mgr_workspace.admin]	Grants administrative rights to create, read, update, and delete (CRUD) all applications and settings in Manager Workspace.	• sn_mgr_workspace.manager • workspace_admin • ui_builder_admin

Properties

Properties	Description
cnm_skills.ws_max_users_swap_skill_matrix	The maximum limit for the number of users that allows you to swap axes in the skill matrix.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Properties	Description
	• **Type:**Integer • **Default value:**50

Performance Analytics Indicators

Indicator Name	Description
No. of cases resolved	Number cases resolved the first time it was handled.
No. of cases not updated in last 30 days	Number of cases that are not updated since 30 days.
No. of resolved cases reopened	Number of cases reopened because issues were not addressed properly.
No. of escalated open cases	Number of cases that are not worked on and are escalated.

Scheduled jobs

Scheduled job	Description
Daily Data Collection	Runs the job daily and collects data for all teams indicators.
Historic Data Collection	Runs the job and collects historic data for all teams indicators.
Weekly Data Collection	Runs the job weekly and collects data for all indicators in Manager Workspace.

Scheduling

Roles

Role title [name]	Description	Contains roles
Shift Planning User [sn_shift_planning.user]	Grants read access for scheduling including the ability to view schedules and shifts.	
Shift Planning Agent [sn_shift_planning.agent]	Grants agents access to their calendar and request shift swap or time-off.	sn_shift_planning.user
Shift Planning Admin [sn_shift_planning.admin]	Grants administrative access to create, read, update, and delete (CRUD) schedules and work shifts.	• sn_shift_planning.approver • sn_shift_planning.user • sn_shift_planning.agent

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables

Table	Description
sn_shift_planning_time_worked_summary	Stores the time worked summary of an agent.
sn_shift_planning_agent_time_work	Stores the agent's time worked, such as clock-in and clock-out timings. If an agent logs in early or logs out late, then the shift start and shift end times are stored in place of clock-in and clock-out timings.
sn_shift_planning_agent_time_attendance	Stores the clock-in and clock-out timings of agents. Data is retrieved when an agent logs in, logs out or changes the presence state.

Properties

Property	Description
sn_shift_planning.number_of_days_to_cache	Number of days to cache agent schedules. • **Type:** Integer • **Default value:** 5
sn_shift_planning.enable_schedule_adherence	Calculates and displays schedule adherence information for your agents. • **Type:** Boolean • **Default value:**True
sn_shift_planning.early_clockin_threshold	Threshold settings indicate how many minutes early or late an agent can clock-in or clock-out to the scheduled time without being considered non-adherent. This is the acceptable duration of time flexibility for an agent to start work before the scheduled start time. • **Type:** Integer • **Default value:**60 min
sn_shift_planning.adherence_threshold	Set the percentage for a threshold in adherence. The agents who do not qualify to be above the defined threshold value (70%) are considered non-adherent agents. • **Type:** Integer • **Default value:**70%
sn_shift_planning.conformance_lower_threshold	Set the lower threshold percentage for flexibility in conformance. The agents who do not qualify for the defined lower and upper conformance threshold values (80-120) are considered non-conformance agents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Property	Description
	• **Type:** Integer • **Default value:**80%
sn_shift_planning.conformance_upper_threshold	Set the upper threshold percentage for flexibility in conformance. The agents who do not qualify for the defined lower and upper conformance threshold values (80-120) are considered non-conformance agents. • **Type:** Integer • **Default value:**120%
sn_shift_planning.auto_clockout_threshold	Threshold time for the system to wait and generate automatic clock-out events when agents forgets to clock-out. For example, if an agent's planned work shift is 8 AM to 5 PM and fails to clock out at 5 PM, the system waits for 60 min as threshold time and generates an automatic clock-out event. • **Type:** Integer • **Default value:**60 min

Scheduled Jobs

Name	Description
Shift Planning - Delete All Agent Schedules Cache	Deletes cache from the sn_shift_planning_agent_availability table. • Runs automatically everyday at 2:30 am • Run this job on-demand when you import data.
Clock-out event generation (For scenarios where clock-out event does not get triggered)	Generates clock-out events every 4 hours if agents haven't clocked-out. **Note:** Consider an agent's work shift timings are from 8 AM to 5 PM and *sn_shift_planning.auto_clockout_threshold* property value is set to 60 minutes. The agent clocks-in and fails to clock out, the scheduled job waits till 6 PM(5 PM+60 minutes) and if there is no clock out till 6 PM, the system generates a clock-out event with agent's shift end time.
Populate Agent Time Worked Summary	Runs daily to calculate the time worked, adherence and conformance based on agent's planned and actual work shift timings of

Scheduled Jobs (continued)

Name	Description
	the previous day. The values are stored in [sn_shift_planning_time_worked_summary] table.
Update Wrapper End Time for Actual Work Events	Runs daily to make sure the actual work wrapper end-time is equal to last clock-out time.
[Schedule Adherence] Daily Data Collection	Runs the job daily and collects data for all teams indicators.
[Schedule Adherence] Historic Data Collection	Runs the job and collects historic data for all teams indicators.
[Schedule Adherence] Weekly Data Collection	Runs the job weekly and collects data for all indicators in Manager Workspace.

Setting the due date for time-off and shift-swap request approvals: Administrators can configure the due date logic for the Time Off Request and Shift Swap Request approval flows. The approval due date is set as the number of days before the request start date. The default is set to two days which means if the approval is not approved two days before the request start date, it will be auto-rejected. For information on configuring flows, refer to Build your first flow in Flow Designer.

Demand Forecast

Forecast configurations

Name	Description
Cases Assigned	Collects data for cases.
Chat Interactions Created	Collects data for chat interactions.

The **WFO Forecast** time series metric retention policy is available by default for all forecast configurations. By default, this retention policy stores data at a 15min interval for the past three years for all zboot customers.

Resource conversion formula

Name	Formula to create this resource forecast configuration
Resources for Sales Support	`([FC:Chat Interactions Created] * [FP:Average Chat Work Time - Sales Support]`
Resources for Service Support	`([FC:Cases Assigned]*[FP:Average Case Work Time - Service Support]) + ([FC:Chat Interactions Created]*[FP:Average Chat Work Time -Service Support])`
Resources for Tech Support	`([FC:Cases Assigned]*[FP:Average Case Work Time - Tech support])+([FC:Chat Interactions Created]*[FP:Average Chat Work Time -Tech Support])`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Forecast Parameters

Name	Description
Service Support: Average Case Work Time	Average time a service support agent worked on a case. Time is measured in hours. The default value is 0.5.
Service Support: Average Chat Work Time	Average chat duration a service support agent had for each interaction. Time is measured in hours. The default value is 0.25.
Tech Support: Average Case Work Time	Average time a tech support agent worked on a case. Time is measured in hours. The default value is 1.
Tech Support: Average Chat Work Time	Average chat duration a tech support agent had for each interaction. Time is measured in hours. The default value is 0.5.
Sales Support: Average Chat Work Time	Average chat duration a sales support agent had for each interaction. Time is measured in hours. The default value is 0.5.

If you create forecast parameters for a forecast configuration, the values set in the configuration are used instead of the default forecast parameters listed in the forecast properties section. For information on configuring forecast parameters, see Modify forecast parameters to visualize forecast data.

Forecast Properties

Name	Description
sn_agent_forecast.forecast_interval	The smallest interval (in minutes) at which historical data is collected and forecasts are generated. Valid values are 15 and 60.
sn_agent_forecast.number_of_historical_days_in_timeseries_chart	The number of historical days that will be plotted in time series chart in Manager Workspace.

Roles for Demand Forecast

Role title [name]	Description	Contains roles
Forecast admin [sn_agent_forecast.admin]	Grants administrative rights to create, read, update, and delete (CRUD) forecast configuration tables.	• sn_agent_forecast.users • clotho_admin
Forecast user [sn_agent_forecast.user]	Grants read access to forecast configuration tables.	

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables for Demand Forecast

Table	Description
Forecast Configuration [sn_agent_forecast_configuration]	Define data collection definition and resource conversion formula configurations.
Forecast Parameter [sn_agent_forecast_parameter]	Define forecast parameters required for the formula.
Forecast Configuration group [sn_agent_forecast_configuration_m2m_sys_user_group]	Associate resource conversion formula with assignment groups.

By default, forecast configurations are available for the following groups:

- Sales Support
- Service Support
- Tech Support

Schedule jobs for Demand Forecast

Name	Description
Collect daily data for demand forecast data collection definitions	Runs daily at 2 am. For any table defined in the Data Collection Definition configuration, it counts the number of records from the previous day for each hour for every group and stores it in the MetricBase.
Forecast resources for future	Runs daily at 3 am. Calculates the forecast resources for the future based on the collected data and stores the data in the Agent Forecast metric in MetricBase.
Create cases and chats for previous day	Daily job that creates demo cases and chats for previous day.
Delete case demo data	Deletes cases older than 90 days. Not enabled by default.
Delete interaction demo data	Deletes chats older than 90 days. Not enabled by default.

On Demand jobs for Demand Forecast

Collect historical data for demand forecast data collection definitions	Runs on demand. Collects historical data daily for every hour for the past three years for automated forecast configuration.
Generate forecasting demo data	Runs on demand. Collects data for data collection definitions for past 90 days. Runs Forecast resources for future jobs to generate volume forecasts and staffing plan for next 30 days. Activates Create cases and chats for previous day job to create cases and chats.

Teams

Roles

Role title [name]	Description	Contains roles
Teams User [sn_team_perf.team_performance_user]	Grants access to read KPI tables.	• sn_wfo.user • pa_analyst
Teams Admin [sn_team_perf.team_performance_admin]	Grants access to create and configure KPIs, KPI groups, and assignment groups in the Teams module.	• sn_wfo.admin • sn_team_perf.team_performance_user

Properties

Property	Description
sn_team_perf.kpi_group.max_parent_kpis	The maximum number of parent indicators that you can add to one KPI group. • **Type:**Integer • **Default value:**5
sn_team_perf.kpi_group.max_supporting_kpis	The maximum number of supporting KPIs you can define for a parent KPI. • **Type:**Integer • **Default value:**10
sn_team_perf.ws.max_assignment_groups	The maximum number of assignment groups prioritized by order number to display on the Teams application in Manager Workspace. • **Type:**Integer • **Default value:**15
sn_team_perf.default_date_range	The default date range set in the date range picker. • **Type:**Integer • **Default value:**30

Coaching

Roles

Role title [name]	Description	Contains roles
Coaching Admin [sn_coaching.admin]	Grants administrative rights to create, read, update, and delete (CRUD) coaching	• sn_coaching.coach • sn_lc.learning_admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles (continued)

Role title [name]	Description	Contains roles
	opportunities, assessments, training, and skills.	
Coaching Coach [sn_coaching.coach]	Grants administrative rights to create, read, or update coaching opportunities, assessments, training, and skills.	• sn_coaching.trainee • pa_viewer • sn_lc.catalog_manager
Coaching Trainee [sn_coaching.trainee]	Grants access to add training, assessments, and skill records.	• skill_user • pa_viewer • survey_reader

Important:
This feature is available with the Workforce Optimization for HR from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Business rule

Business rule	Table	Description
Calculate coaching survey score	Assessment Instance [asmt_assessement_instance]	Sets the feedback rating based on the survey score.

Coaching opportunities

Coaching Opportunity Name	Description	Table
Coaching Opportunity for SLA Breach	Coaching opportunity for the agents who worked on the critical and high priority cases that breached SLA.	Task SLA [task_sla]
Coaching Opportunity for low CSAT	Coaching Opportunity for the agents who worked on cases that has a customer satisfaction score less than 4.	Case Report [sn_customerservice_case_report]
Coaching Opportunity for skills award verification	Coaching Opportunity for verification of skills awarded to agents.	Case [sn_customerservice_case]
Knowledge Management Process: Coaching on quality of knowledge articles	Coaching Opportunity for the agents who need to improve the quality of a knowledge article by reviewing the assessment.	Case [sn_customerservice_case]
Coaching Opportunity for high TTR	Coaching Opportunity for the agents who worked on a case that had time to resolution more than 3 days.	Case Report [sn_customerservice_case_report]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Coaching opportunities (continued)

Coaching Opportunity Name	Description	Table
Interaction: Coaching Opportunity for Handling Time	Coaching Opportunity for the agents who worked had handle time more than 10 mins on an interaction.	Interaction [interaction]

Note:
You can customise the coaching opportunities for low CSAT, high TTR, SLA breach, and handling time based on your business needs.

Important:
This feature is available with the Workforce Optimization for HR from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Coaching Surveys

Name	Description
Chat Quality Survey	Survey associated with the Chat Interaction coaching opportunity. The coach assess the agent using this survey after the agent completes a chat interaction.
Case Quality Survey	Survey associated with the Case Interaction coaching opportunity. The coach assess the agent using this survey after the agent completes a case interaction.

Properties

Property	Description
sn_coaching.learning_default_duration	Number of days to read the knowledge article or complete training. The admin (sn_wfo.admin) sets the number of days for the trainee to complete reading the article or complete the training. The number of days is converted to the due date for the trainee to complete the training. It is calculated from the current date taking the trainee's time zone into consideration. • **Type:**Integer • **Default value:**5
sn_coaching.exclude_weekends_on_training_due_date	Excludes weekends when the due date is set for trainees to complete training. • **Type:**true | false • **Default value:**true

Coaching with Learning

Important:
This feature is available with the Workforce Optimization for HR from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Roles

Role title [name]	Description	Contains Roles
Learning admin [sn_lc.learning_admin]	Grants administrative rights to create, read, update, and delete (CRUD) catalog, learning content, roles, and configure learning source.	• sn_lc.catalog_manager • sn_hr.integr_fw.admin
Learning catalog manager [sn_lc.catalog_manager]	Grants administrative rights to create, read, or update learning catalogs.	• sn_lc.task_creator • sn_lc.content_writer
Learning catalog group manager [sn_lc.catalog_group_manager]	Grants administrative rights to create, read, or update learning catalogs based on groups.	• sn_lc.task_creator • sn_lc.content_writer
Learning content creator [sn_lc.content_creator]	Grants administrative rights to create, read, or update internal courses.	sn_lc.content_reader
Learning content writer [sn_lc.content_writer]	Grants read or write access for learning courses.	sn_lc.content_creator
Learning content reader [sn_lc.content_reader]	Grants read access for learning courses.	sn_lc.content_reader
Learning content advisor [sn_lc.learning_advisor]	Can assign learning tasks.	sn_lc.learning_advisor
Learning task creator [sn_lc.task_creator]	Grants read or write access for learning tasks.	sn_lc.task_creator

Tables

Table	Description
Learning External Content [sn_lc_external_content]	Stores details of external course items that are pulled from third-party systems.
Learning User Course Activity [sn_lc_user_course_activity]	Stores details of learning course activities such as user to whom the course is assigned, status, due date, and name of the learning course.
Learning Content [sn_lc_content]	Stores details of internal learning content such as knowledge articles, videos that are created in ServiceNow.
Learning Course Item	Stores details of learning course items, such as the source to which the learning course belongs.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables (continued)

Table	Description
[sn_lc_course_item]	
Learning Catalog [sn_lc_catalog]	Stores details of learning catalog items with its course items.
Learning Task [sn_lc_learning_task]	Stores details of learning tasks, such as user to whom the learning task assigned, and due date by when the learning task must be completed.
Learning System Configuration [sn_lc_learning_system_configuration]	Stores configuration parameters of sources (third-party learning management systems).

Properties

Property	Description
glide.ui.sn_coaching_assessment_activity_fields	Edit coaching assessment activities. • **Type:** string • **Default value:** assigned_to,cmdb_ci,state,impact,priority,opened_by,work_notes,comments,*Attachme
sn_coaching.recommended_learning_deprecated	Coaching with Learning Recommended Trainings is being deprecated and replaced with the Learning Tasks and course items from Coaching with Learning. • **Type:** string • **Default value:** true
sn_coach.lrn.exclude_weekends_in_learning_task_due_date	Enable to exclude weekends while setting the due date for learning tasks. • **Type:** true|false • **Default value:** true
sn_coach_lrn.learning_task_array_properties	List array properties for the now-list-menu component on the Learning Tasks tab, coaching module. • **Type:** string • **Default value:** script for data array
com.glide.transform.json.max-partial-length	Transforms JSON objects to internal objects and sets the word limit for records fetched through an API call. • **Type:** integer • **Default value:** 16384

© 2026 ServiceNow, Inc. All rights reserved.

Properties (continued)

Property	Description
	Note: You must Add this system property to set the desired value.
com.snc.process_flow.serialized_var_size_limit	Specify the maximum bytes allowed for runtime values in each step in the flow execution details. To prevent truncation, set the value to an integer equal to or less than zero. • **Type:** integer • **Default value:** 16384

Important:
This feature is available with the Workforce Optimization for CSM Configurable Workspace (sn_csm_wfo_workspa) from the ServiceNow Store. To enable this feature, see Activate Workforce Optimization for CS configurable workspace.

Skill Recommendation

Roles

Role title [name]	Description	Contains roles
Skill Recommendation User [sn_sre.user]	Grants rights to view skill recommendation tables.	wfo.user
Skill Recommendation Admin [sn_sre.admin]	Grants administrative rights to edit the properties for skill recommendation.	• wfo.admin • sn_sre.user

Navigate to **Skill Recommendation** > **Configuration** to configure these properties.

Properties

Property	Description
Enable skill recommendation. sn_sre.enable_skill_recommendation	Enable this property to start recommending skills for agents. • **Type:**true | false • **Default value:**true
Maximum number of skills to predict based on supervised learning. sn_sre.max_supervised_skills	Using supervised learning, the maximum number of skills to predict for each incident ordered by confidence of prediction. • **Type:**Integer • **Default value:**3

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Properties (continued)

Property	Description
Maximum number of skills to predict based on supervised learning. sn_sre.max_unsupervised_skills	Using unsupervised learning, the maximum number of skills to predict for each incident ordered by confidence of prediction. • **Type:**Integer • **Default value:**3
Number of times Predictive Intelligence must predict the same skill for an agent before recommending it for the agent. sn_sre.user_predicted_skill_threshold	The number of times Predictive Intelligence must predict the same skill for an agent before recommending the skill for the agent. • **Type:**Integer • **Default value:**20
Similarity solution definition to recommend skills from similar cases. sn_customerservice.unsupervised_solution_definition_for_cases	Name of the Predictive Intelligence solution definition used for predicting skills to resolve cases using unsupervised learning. If you have created your own solution definition, you can replace the default one with the one you have created. • **Type:**String • **Default value:**ml_sn_sn_customerservice_global_recommend_similar_
Similarity solution definition to recommend skills for cases. sn_customerservice.supervised_solution_definition_for_cases	Name of the Predictive Intelligence solution definition used for predicting skills to resolve cases using supervised learning. If you have created your own solution definition, you can replace the default one with the one you have created. • **Type:**String • **Default value:**ml_sn_sn_customerservice_global_recommend_skills_fr

Scheduled job

Scheduled job	Description
Start skill prediction	Runs the job every day at 1 AM on all incidents that were closed the previous day. Recommends the skills used to close the incidents to resolve similar open incidents.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Tables

Table	Description
User Predicted Skill [sn_sre_user_predicted_skill]	• Stores how many times a skill has been predicted for the user. • Skills not recommended in the last 60 days are automatically deleted from this table.
Task Predicted Skill [sn_sre_task_predicted_skill]	• Stores the skills predicted to resolve each type of incident. • Records created over 60 days ago are automatically deleted from this table.

Employee Experience Pack

Employee Experience Packs are prepackaged configurations, content, and workflows that you can use as is or customize for your own HR processes.

Note:

Starting with the Xanadu release, Employee Experience Pack is being prepared for future deprecation. It will be hidden and no longer activated on new instances but will continue to be supported.

Employee Experience Packs reduce your implementation time and effort.

Applications

Applications for Employee Experience Packs may include:

- HR Service Delivery
- Case and Knowledge Management
- Employee Center
- Enterprise Onboarding and Transitions
- Content Delivery
- Content Automation

Note:
The required licenses and plugins that you may need depend on the type of experience that you are implementing for your own HR processes.

Preconfigured package

Employee Experience Packs use preconfigured data, configurations, and content so that customizing or starting from the beginning is unnecessary. However, you can still modify or create your own experiences. Employee Experience Packs provide you with:

- Elements that your employees can use for self-help, such as sample knowledge articles, virtual agent conversations, and catalog items.
- Sample HR cases and tasks to help you manage your own HR processes.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Targeted and other content that helps you to engage with your employees.
- Surveys, reports, or dashboards so that you can measure how successful your program and processes are.

Employee Experience Packs

For details on system requirements and family compatibility for Employee Experience Packs, go to the ServiceNow Store.

These Employee Experience Packs can guide you through the HR processes that require configuration:

- Pre-built services
- Activities
- Communications

HR Service Delivery Agent Workspace (Classic)

As an HR agent, you use the HR Service Delivery Agent Workspace to interact with employees, respond to inquiries, and resolve issues quickly.

Agent Workspace for HR

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

HR Agents can:

- Chat with employees and create or work on their requests.
- Take calls from employees and create or work on their requests.
- Create or work on HR cases to completion.
- View information that is related to the employee or the case.
- Search for an employee and verify that it is the correct employee by address, location, or other HR profile information.
- Manage and view the case list.

Here are some of the key benefits of the HR Agent Workspace.

Single-pane view

See all details about an issue in one place.

Integrated communication channels

Communicate in real time with employees by chat or phone in the same interface.

Agent Assist column

Close cases and incidents faster with Agent Assist recommendations.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Agent Assist is available for HR cases and interactions.

HR Service Delivery Classic HR Service Delivery Agent Workspace

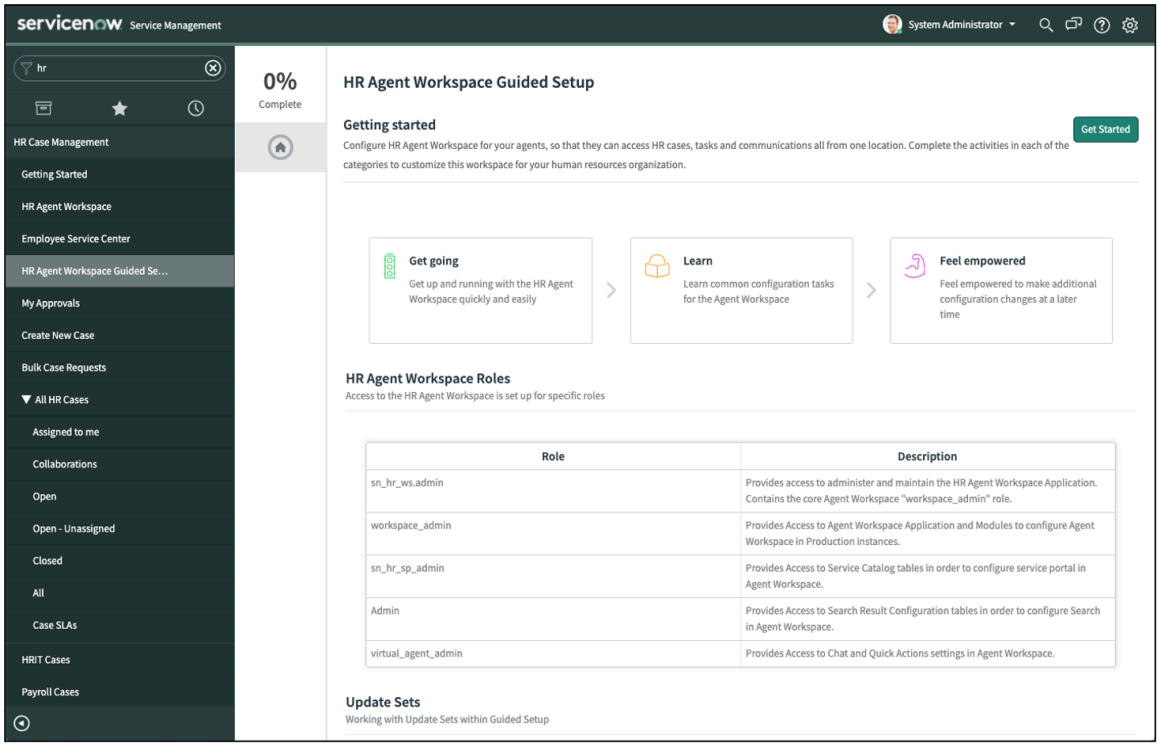
HR Service Delivery Agent Workspace is a configurable service desk application that is based on Exploring Workspace. This application puts all the tools that you need in one place so that you can assist employees with their needs.

Get started

Explore Learn more about HR Agent Workspace.	Configure Plan and configure your implementation.
Use Learn how to use HR Agent Workspace.	

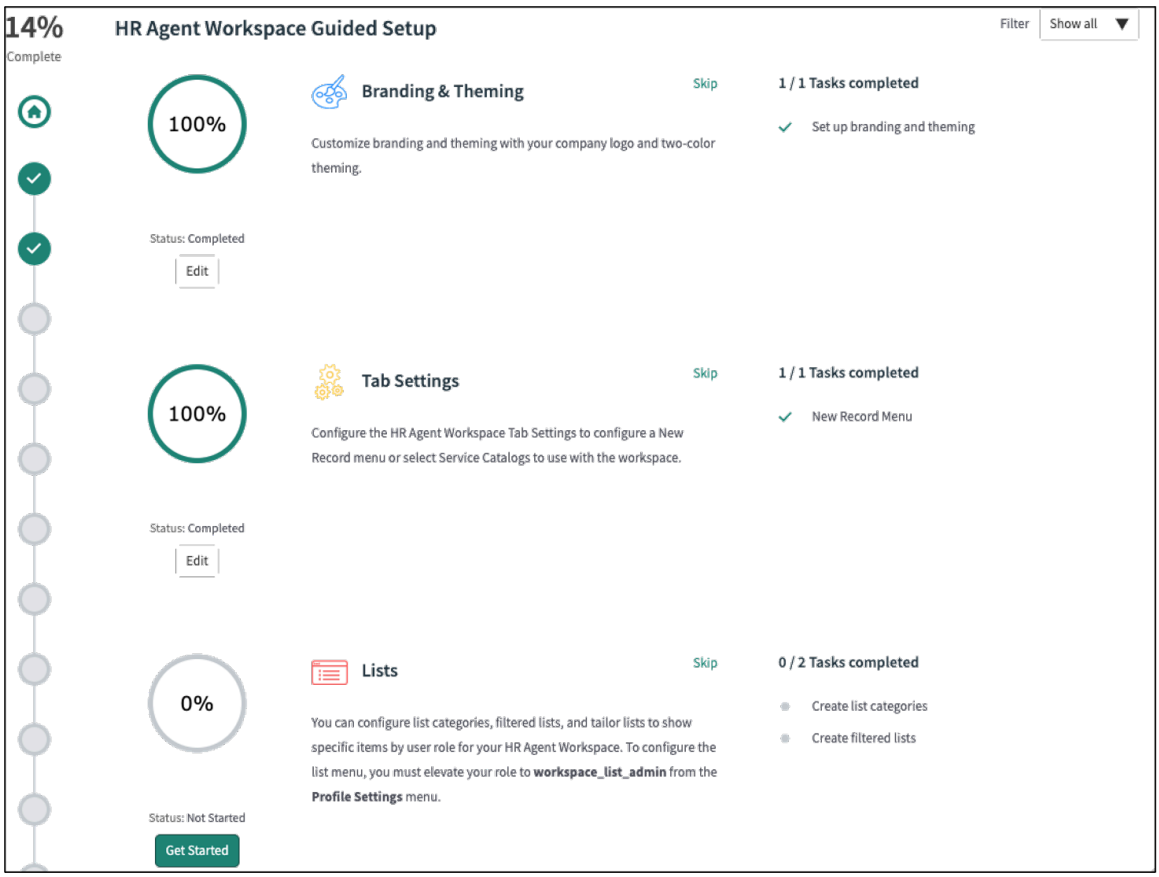
HR Service Delivery Agent Workspace Guided Setup

Use **HR Agent Workspace Guided Setup** to step through the initial configuration of HR Service Delivery Agent Workspace.



Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.



HR Agent Workspace Guided Setup provides an introduction to starting your configuration. It also organizes configuration activities into categories. Each category provides information like planning guidance, pre-setup steps, and links to useful information. Each category also provides links to the pages in your instance where you perform the configuration.

To access **HR Agent Workspace Guided Setup**, navigate to **HR Case Management** > **HR Agent Workspace Guided Setup**.

For more information on **Guided Setup**, see Using guided setup.

Exploring HR Service Delivery Agent Workspace

Use HR Service Delivery Agent Workspace to manage your employee HR requests from one place.

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

Home page

The Home page provides you with an overview of your work at a glance. It provides you with information that can help you decide what you should act on first, like HR cases and their Service Level Agreement (SLA) status, items that affect your team, and general information and announcements.

Case list

From the Home page, you can access the Case list. The Case list provides you with a view into all HR cases or you can filter and sort by what is relevant to you.

HR case form

Manage multiple cases, view information that is related to the case, and use knowledge articles or similar cases to manage the case.

HR case form

Agent Workspace feature	Description
Tabs	Tabs display lists, HR case numbers, and the Add icon. The Add icon enables you to instantly **Create HR case** or **Create interaction**. When you have multiple tabs open, you can only see the case number on the tab by default. However, you can also configure the information you want to be displayed on the tab. For more information, see Customize tab label in Agent Workspace for HR Case Management. If you point to the number, you can quickly see more details related to a case, for example, the description of the case, HR Service and Subject person.
Form header	Displays brief details of an HR case like HR service, priority, state, and assigned-to agent.
UI actions	Action button that enables you to save changes you made, change the status, cancel, or other relevant actions for a case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR case form (continued)

Agent Workspace feature	Description
	Note: The buttons that appear are similar to the native platform UI. The button types that appear depends on the type and status of the HR case.
Related items	Shows details about the HR case and records from other tables that have a relationship with the HR case. **Note:** When a case appears under Playbook, these tabs change. For more information, see Exploring HR Service Delivery Playbook.
Case details	Information about the case: • Subject person • HR service requested • Priority assigned • Assignment group • Assigned agent • Description • Comments and Work notes
Activity stream	Comments, work notes, and current and past states of the case.
Contextual side panel	Manage and work on the case using various task-oriented icons. The icons appearing on the Contextual side panel depend on the type of case that you are working on. For more information, see HR Service Delivery Agent Workspace contextual side panel.

Tabs

Use tabs to display the records that are associated with an HR case, like case details and tasks. You can select a tab and jump to the information. Child tabs appear below the top tabs and display case details, HR profile information, and tasks.

Note:
Any reference that you select under a parent tab opens as a child tab.

Related Items menu

Use the Related Items menu to see information about the details, tasks, and other information that is associated with a case. This menu provides a quick and easy way to look up information about a case and subject person.

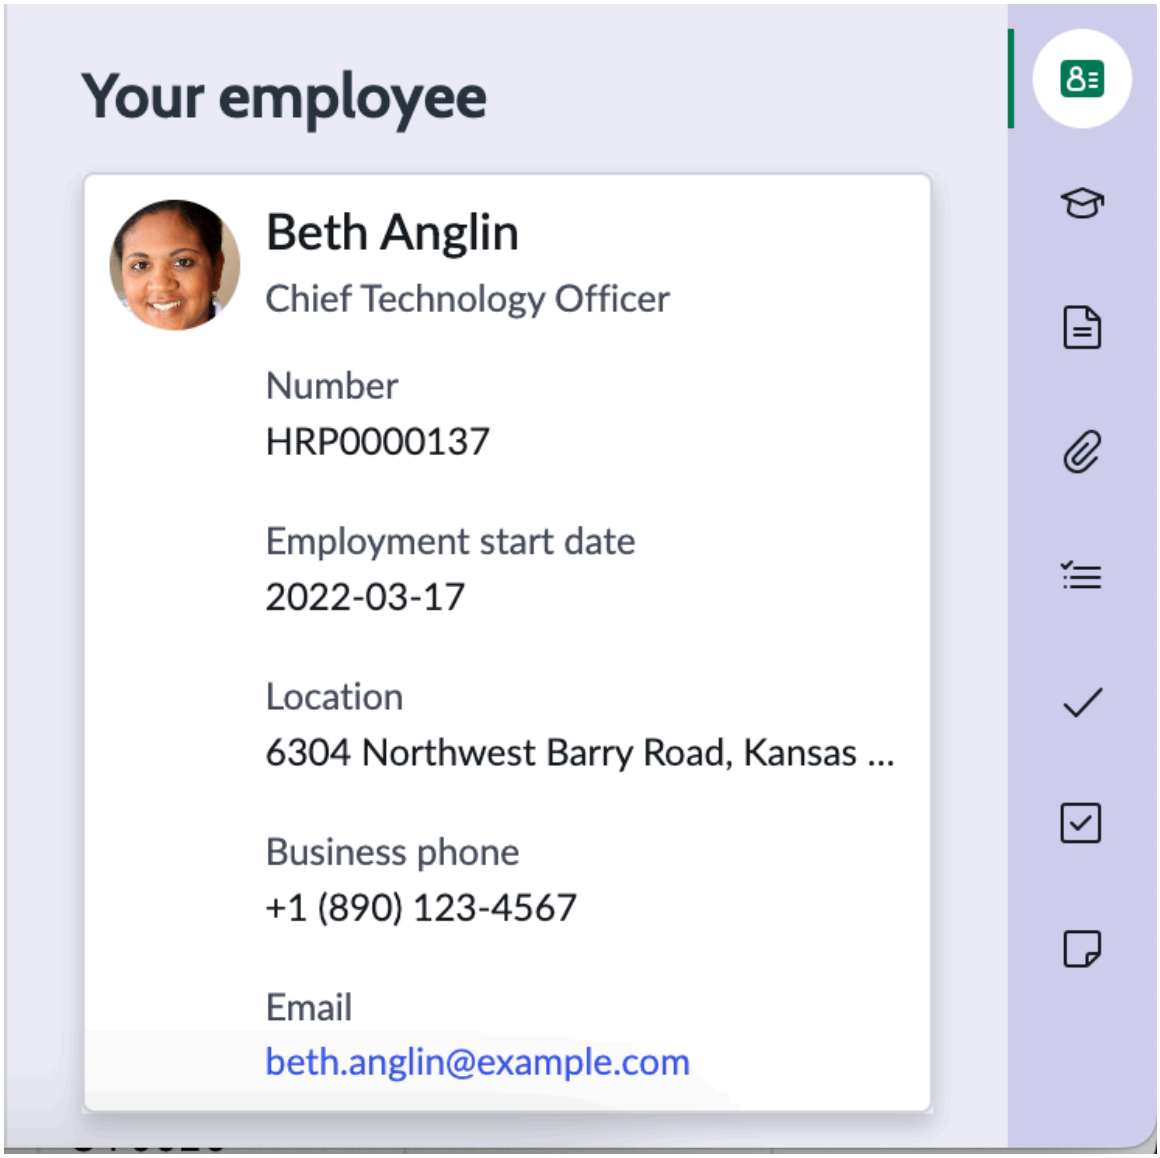
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The type of HR case determines what tabs appear.

HR profile icons

Icons that enable you to get quick access to information about the opened for and subject person.

- : Select the HR profile icon to access the HR profile for people who are related to the case. Selecting an HR profile also displays the at-a-glance side panel where you can see information that your HR admin configures and other things like the email, office location, and the employee's organization information. For more information, see the At a Glance panel.
- : Select the Search for record icon to access a list of all HR profiles within your company.
- : Select the Open deep link icon to access information outside of the application to help fulfill the case. For information about configuring deep links, see Link generator for HR Service Delivery.



Note:
For information on how to set up custom actions on record fields, see Set up custom actions on record fields in Workspace.

HR Service Delivery Agent Workspace contextual side panel

The contextual side panel in HR Service Delivery Agent Workspace provides information designed to help you work an HR case and interact with your employees.

The contextual side panel provides a column of icons that provides you with information. Use the information when you interact with your employees or to complete the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The icons that appear depend on the type of HR case you are looking at.

Contextual side panel icon descriptions

Icon	Description
	At a Glance: Provides key HR profile details for fast recall. Having this information readily available helps agents understand who they are trying to help when communicating with an employee.
	Agent Assist: Provides relevant knowledge articles about the case. You can also provide comments (visible to employee) or work notes (not visible to employee) or view all activities related to the case. **Note:** Agent Assist is also available for HR interactions.
	Employee Documents: Lists documents related to the case you are on. Select the document and you can download it or rename it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Contextual side panel icon descriptions (continued)

Icon	Description
	Note: The Contextual side panel requires the Employee Document Management [com.sn_employee_document_management] plugin to display the employee documents. For more information, see Employee Document Management.
	Attachments: Documents relevant or related to the HR case are displayed as attachments. These attachments can be moved to Employee Document Management (EDM) for archival and historical purposes. For example, receipts for tuition reimbursement are attachments to an HR case. After you move attachments to Employee Document Management, they will be employee documents. See Move employee documents using HR Service Delivery Agent Workspace. Select an attachment to download or delete it. **Note:** A small green dot indicates there are attachments .
	Response Templates: Shows reusable messages that you can use when responding to an employee that has a question about their case. Copy the text from the response template you want to use and paste the text into the Comments or Work notes section of the HR case. An HR service configures response templates and are a fast, consistent, and efficient way to respond to common questions related to HR cases. For more information, see Response templates for HR Service Delivery.
	Fulfillment Instructions: Provides you with focused and targeted information on how to complete an HR case faster and more efficiently. Can include specific instructions, KB articles, or a checklist of what to do on the case. For more information, see HR fulfillment instructions.
	Checklist: Provides you with a list of things that need to be checked or done. Checklist helps you in resolving an issue efficiently and in a quicker way. For more information, see Using checklists in HR Service Delivery Agent Workspace.

Setting up HR Service Delivery Agent Workspace

Set up HR Service Delivery Agent Workspace so that your agents can engage with your employees, answer questions, create cases, and resolve issues.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

ServiceNow® HR Service Delivery Agent Workspace uses the Agent Workspace application as a platform.

To set up HR Service Delivery Agent Workspace, you can:

- Activate the Human Resources Scoped App: Core [com.sn_hr_core] plugin.
- Activate the Human Resources Scoped App: Workspace [com.sn_hr_agent_workspace] plugin.
- Set up these components of the HR Service Delivery Agent Workspace:
  - Communication channels and routing.
  - Additional components and settings that are specific to HR Service Delivery.
  - Forms in workspace. See Set up forms in Workspace.
  - Workspace setup. See Set up Workspace.

Roles installed

By activating the Human Resources Scoped App: Core [com.sn_hr_core] and Human Resources Scoped App: Workspace [com.sn_hr_agent_workspace] plugins, you install the following roles:

Roles for HR Service Delivery Agent Workspace

HR role title [name]	Description	Contains workspace roles
HR manager [sn_hr_core.manager]	Grants access to all HR cases, profiles, and secure information. With this role, you can manage HR Service Delivery Agent Workspace lists and categories. This role contains the Workspace List Admin, which is an elevated role. For more information on elevated roles, see Elevated privilege roles. The Workspace user [workspace_user] role allows you to access HR Service Delivery Agent Workspace and create and access interactions.	Workspace List Admin [workspace_list_admin] Workspace user [workspace_user]
HR case writer [sn_hr_core.case_writer]	Grants access to write all HR cases. With this role, you can access HR Service Delivery Agent	Workspace user [workspace_user] Interaction agent [interaction_agent]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles for HR Service Delivery Agent Workspace (continued)

HR role title [name]	Description	Contains workspace roles
	Workspace and view, create, and work on existing cases. You can also access all areas of Case and Knowledge Management. This role contains the Workspace user role, which allows you to perform interaction agent and interaction queue transfers.	
HR agent [sn_hr_core.basic]	Grants access to basic HR agents to HR Service Delivery Agent Workspace modules. This role contains the Advanced Work Assignment Agent [awa_agent] role, which allows an HR agent to work customer interactions and manages workload across multiple service channels.	• Advanced Work Assignment Agent [awa_agent] • To see all the roles contained within the HR agent [sn_hr_core.basic] role, see Components installed with Case and Knowledge Management.

Workspace content manager [sn_cd.workspace_content_manager]	Lets you schedule content to workspace.
	• The uxframework_user role allows you to browse and select from the library of UX component records so they can set a component reference field on any accessible table.
	• The sn_cd.content_manager role grants access to Content Publishing.
	  ○ The sn_esign.config_manager role can manage the e-signature configurations.
	  ○ The sn_cd.content_approver role can approve content that is scheduled to appear on the Employee Center.
		• UX framework user [uxframework_user]
		• Content Delivery content manager [sn_cd.content_manager]
		  ○ E-Signature configuration manager [sn_esign.config_manager]
		  ○ Content Delivery approver [sn_cd.content_approver]

HR Workspace Admin [sn_hr_ws.admin]	Lets you configure all aspects of HR Service Delivery Agent Workspace. The workspace_admin role allows you to configure Agent Workspace	Workspace administrator [workspace_admin] • Chat admin [chat_admin] • UX framework designer [uxframework_designer] • Agent workspace user [agent_workspace_user]

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Roles for HR Service Delivery Agent Workspace (continued)

HR role title [name]	Description	Contains workspace roles
	• The chat_admin role administers the chat tables. • The uxframework_designer role has write access to UX page element records for designing UIs. • The agent_workspace_user role allows you to perform interaction agent and interaction queue transfers. • The sn_agent_recommend.recommendation_admin role manages agent assist recommendation configurations. • The interaction_admin role allows you to administer the Interaction Management system. • The workspace_list_admin role allows you to manage workspace lists and categories. • The ui_action_admin role allows you to manage UI actions. • The ui_builder_admin role provides permission to use the UI Builder APIs so you can create, update, read, and delete UX pages. • The uxframework_user role allows you to browse and select from the library of UX component records so they can set a component reference field on any accessible table. • The sn_intel_analyzer.similarity_analyzer_admin role allows you to administer the Similarity Analyzer. The Similarity Analyzer defines patterns and trends that can help you resolve a record. • The form_admin role manages forms, form sections, and section elements.	• Agent recommendation admin [sn_agent_recommend.recommendation_admin] • Interaction admin [interaction_admin] • Workspace list admin [workspace_list_admin] • UI action admin [ui_action_admin] • UI builder admin [ui_builder_admin] • UX framework user [uxframework_user] • Similarity Analyzer [sn_intel_analyzer.similarity_analyzer_admin] • Form admin [form_admin] • Personalize form [personalize_form] • UI notification admin [ui_notification_admin]

Roles for HR Service Delivery Agent Workspace (continued)

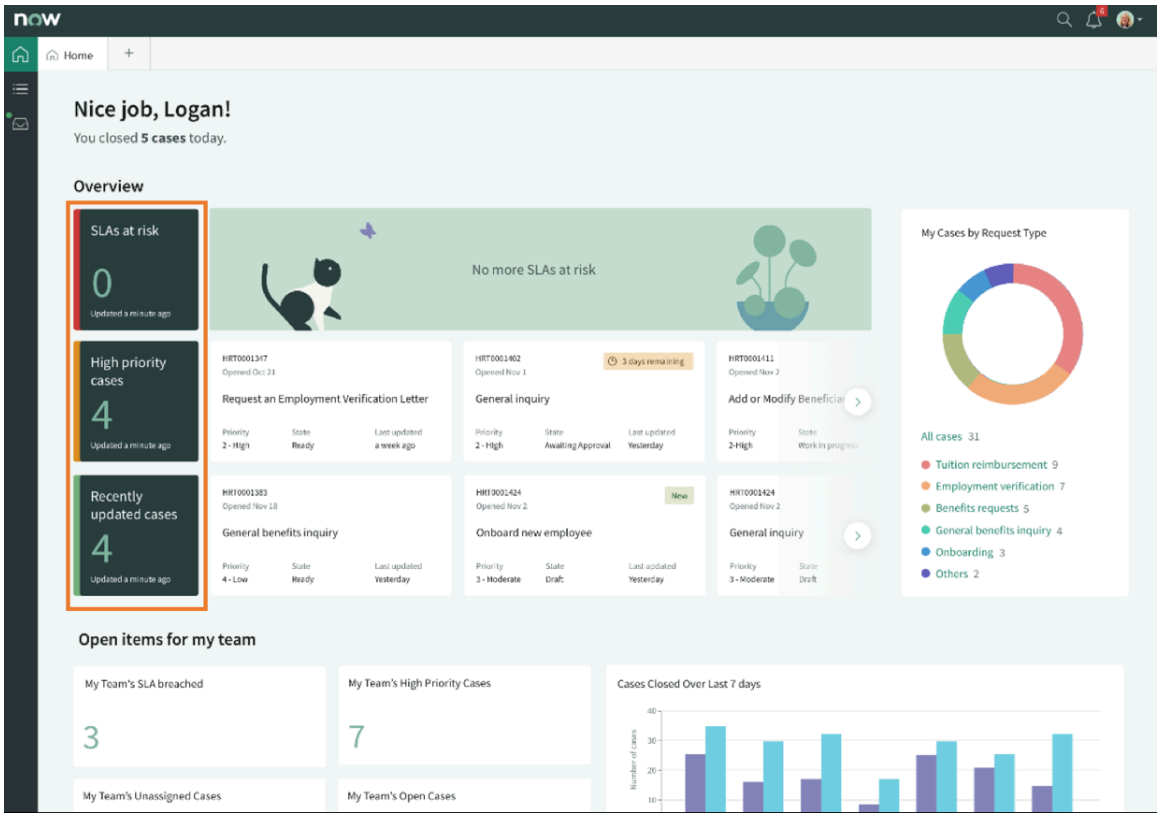
HR role title [name]	Description	Contains workspace roles
	• The personalize_form role allows you to personalize forms. • The ui_notification_admin role allows you to configure notification triggers.	

Rich text

Rich text allows you to format your comments or work notes to emphasize your message and is readable across many programs and platforms.

You can enable rich text for HR Service Delivery Agent Workspace by using the *glide.ui.journal.use_html* system property (*sys_properties.list*). By default, this property is set to **false** (off).

Agent Workspace case form callout descriptions

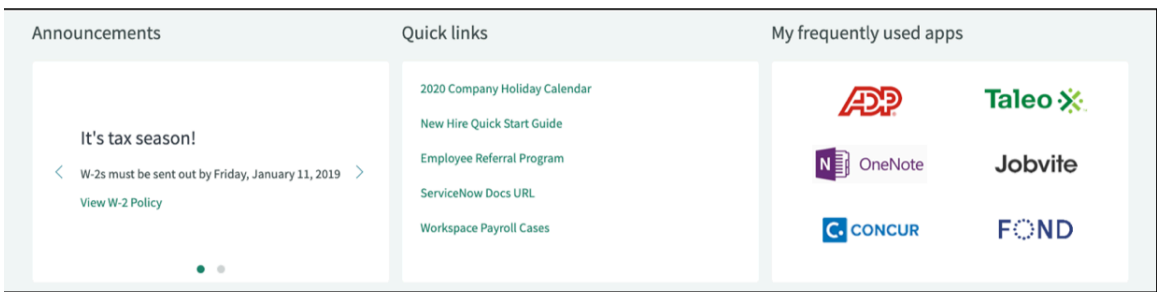


Number	Description
	Toggle compose settings icon that you select to show the rich text editor and stacked view icons.
1	Rich text editor slider that you can toggle on to turn on the rich text.
2	Stacked view slider that places Comments and Work notes side-by-side or stacked above one another.

Warning:
If your company is using other Agent Workspace applications, turning this property to **true** (on), might impact your system performance.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Classic HR Service Delivery Agent Workspace landing page



The first thing HR agents see when accessing HR Agent Workspace is the landing page. The landing page provides a personalized and engaging experience for the HR agent.

The landing page shows high priority cases, cases at risk for violating service level agreements (SLA), and cases with recent changes.

Information related to the teams your HR agents belong to display below the Overview section.

The bottom of the landing page provides company information, links, and tools available. This section is part of Content Delivery. For more information, see Content Library.

Configuration

The base system provides two (2) landing pages:

- HR Landing Page
- HR Landing Page (CD)

The Landing Page (CD) is available when the Content Delivery (com.sn_content_delivery) plugin is activated. The base system provides the ability to configure your landing pages in a limited manner.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Card List Configuration: Determines which cards display in the middle section of the landing page.
- Card Tag Configuration: Determines which tags appear on the cards.

For more information, see:

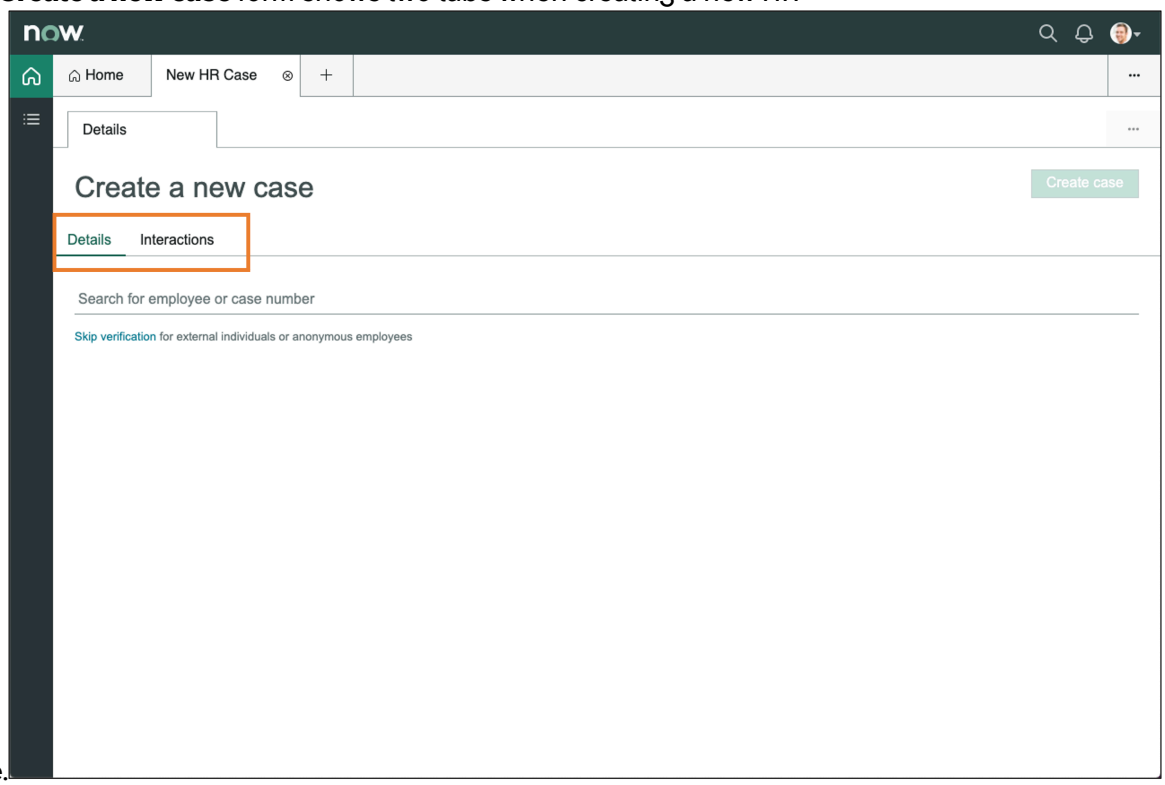
- Configure the Card List Configuration for the Classic HR Agent Workspace landing page
- Configure the Tag Configuration for the Classic HR Agent Workspace landing page

Modifying your landing page

The base system landing pages can only be modified if you make a copy first.

> **Note:**
> For more information on configuring a new landing page, see Setting up landing pages in a workspace.

Classic HR Service Delivery Agent Workspace landing page



In order to modify a landing page supplied by the base system, you must first make a copy.

To make a copy of your landing page, use the UI Builder. For more information, see UI Builder.

Classic HR Service Delivery Agent Workspace Create a new case form

You can configure how your **Create a new case** form looks in HR Service Delivery Agent Workspace.

The **Create a new case** form shows two tabs when creating a new HR case.

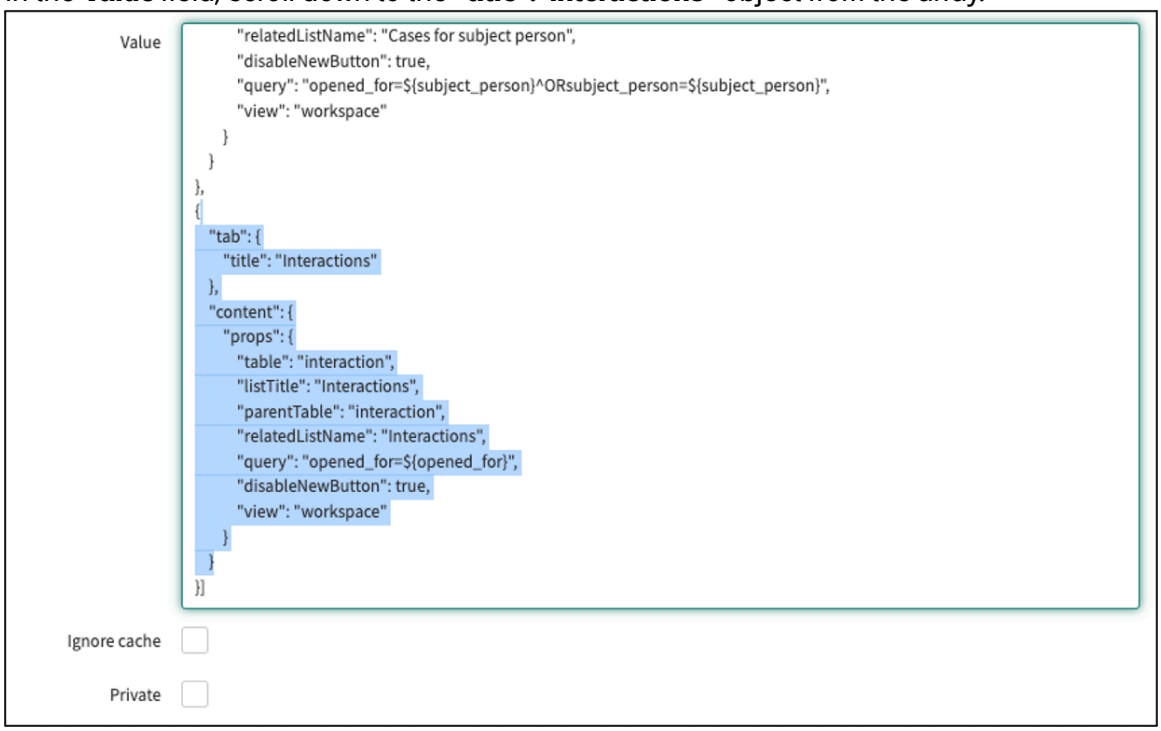
Use the sn_hr_ws.case_creation_tabs system property to add or delete the tabs that appear at initial case creation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Description** field in the sn_hr_ws.case_creation_tabs system property provides information on how to add a new array object for new tab entries. To delete a tab, remove the tab array object. For more information on, see Add or delete tabs from the Create new case form.

After entering an employee or case number, the **Cases for opened for** tab appears if the employee has additional cases associated cases.

Add or delete tabs from the Create new case form



Use the sn_hr_ws.case_creation_tabs system property to add or delete the tabs that appear at initial case creation.

Before you begin
Role required: admin

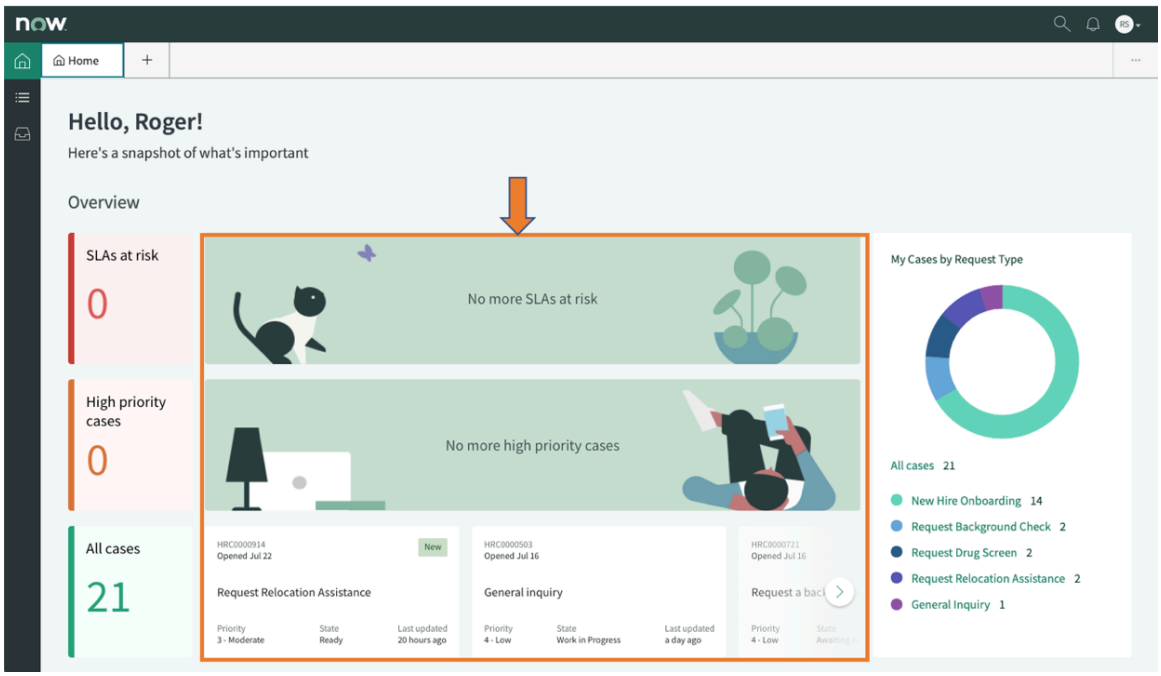
The **Description** field in the sn_hr_ws.case_creation_tabs system property provides information on how to add a new array object for new tab entries. To delete a tab, remove the tab array object.

Procedure

1. Navigate to **All** > **sys_properties.list**.
2. Search for and display the **sn_hr_ws.case_creation_tabs** system property.
3. In the **Value** field, scroll down to the **"title":"interactions"** object from the array.

4. Remove the text highlighted above.
5. Select **Update**.

Configure the Card List Configuration for the Classic HR Agent Workspace landing page



Use the Card List Configuration to configure the cards that appear on the HR Service Delivery Agent Workspace landing page.

Before you begin
Role required: sn_hr_core.admin

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Administration** > **Landing Page** > **Card List Configurations**.
   The base system provides three (3) pre-configured records:
   - **SLAs at risk**
   - **High priority cases**
   - **All cases**

2. Select one of the pre-configured records or **New**.
3. Complete or edit the fields on the form.

Landing Page Card List Configuration

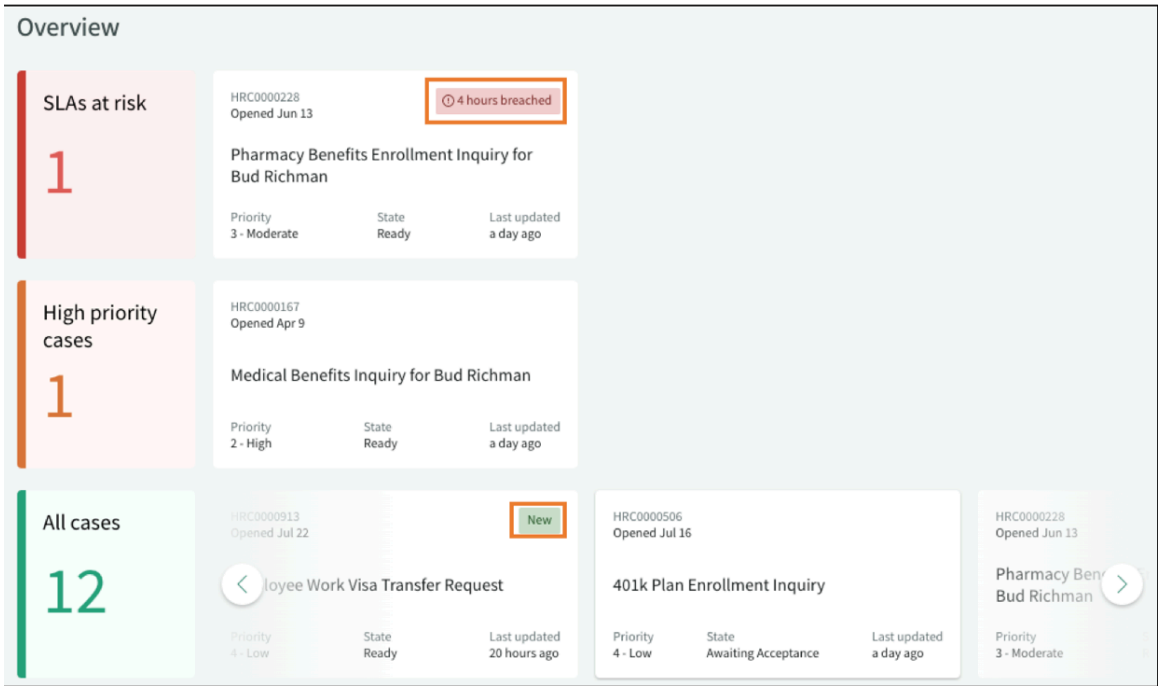
Field	Description
Description	A description of the record.
Query	A set of conditions that when valid determine what appears on the landing page. For example, to show all high priority HR cases for the logged in agent: ○ Active is true ○ Select AND OR ○ Assigned to is (dynamic) Me ○ Select AND OR ○ Priority is one of 1 - Critical 2 - High ○ Select AND OR
Application	The application that contains this record.
Text to view all records	Text that appears when the record has data.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Text to display if list is empty	Text that appears when the list has no data.

4. Click **Submit** or **Update**.

Configure the Tag Configuration for the Classic HR Agent Workspace landing page



Use the Land Page Tag Configuration to define the tags to display on the cards list configuration.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Administration** > **Landing Page** > **Card Tag Configurations**.
   The base system provides three (3) pre-configured records:
   - SLA
   - Blue "VIP" if opened for or subject person is VIP
   - Green "New" if created in last 24 hours

2. Select one of the pre-configured records or **New**.
3. Complete or edit the fields on the form.

Landing Page Tag Configuration

Field	Description
Description	A description of the tag configuration record.
Type	The type of tag configuration record: ○ Highlighted value ○ SLA Timer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
SLA timer configuration	The configuration of the SLA timer that determines which task SLA displays as part of the timer component. **Note:** For more information, see SLA timer configurations. Field appears when you select **SLA Timer** in the **Type** field.
Tag text	Text that appears for the tag on the card. Field appears when you select **Highlighted value** in the **Type** field.
Color	The color you want the tag to appear as. Each color has a meaning: ○ critical = Red ○ high = Orange ○ warning = Yellow ○ moderate = Purple ○ positive = Green ○ info (VIP) = Blue ○ low = Gray
Condition	Applies this configuration when specific conditions are met. For example, conditions when to flag for a VIP are: ○ Opened for.VIP is true ○ Or ○ Subject person.VIP is true The fields available to you to create a condition are from the HR case [sn_hr_case] table. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Application	The application that contains this record.
Order	Order in which the configuration processes first. Configurations with lower numbers process first.
Icon	Use to display an icon for any non-SLA tag.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: For more information, see Icon.

4. Click **Submit** or **Update**.

At a Glance panel

Enable HR agents to better assist and resolve employee requests with the At a Glance panel in HR Service Delivery Agent Workspace.

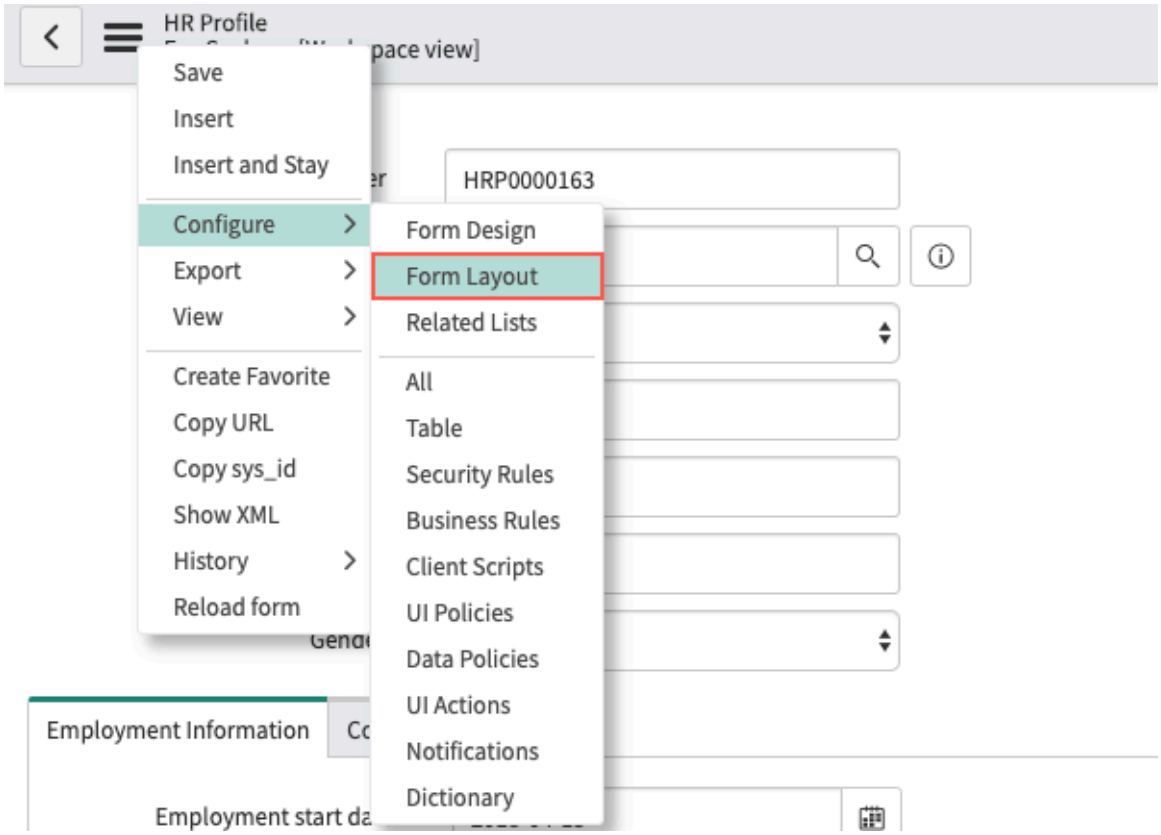
At a Glance panel overview

The At a Glance panel displays key HR profile details about the employee, such as the employee's job title, employment start date, office location, contact information, and organizational details. Agents can quickly access this information so that they have a better understanding of the employees they are trying to help.

Configure the At a Glance panel

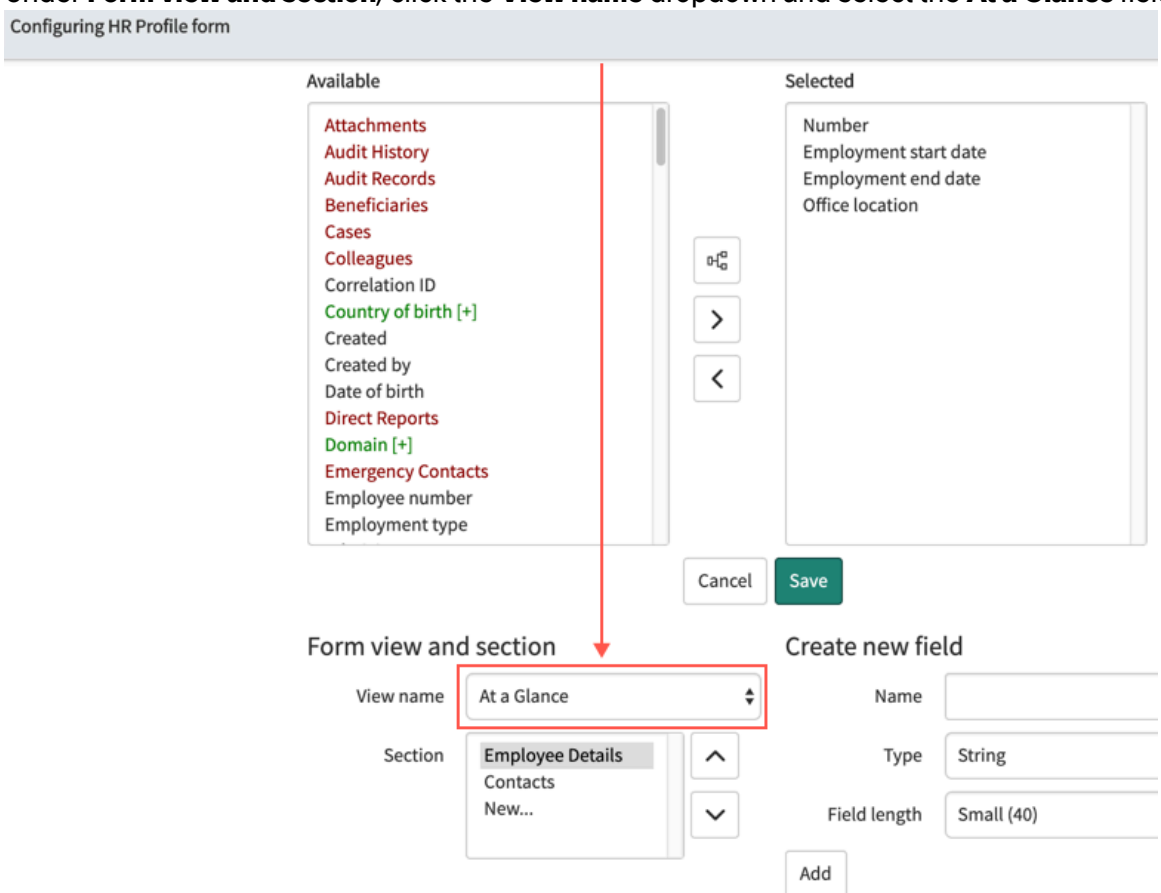
You can configure the At a Glance panel by adding or removing HR profile fields for the Employee Details and Contacts sections.

Before you begin



Role required: sn_hr_core.admin

About this task



Procedure

1. Navigate to **All** > **HR Profile** > **HR Profiles**.
2. Open any HR profile record.
3. Right click the form header, and navigate to **Configure** > **Form Layout**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Under **Form view and section**, click the **View name** dropdown and select the **At a Glance** field.

5. Select the section that you want to configure.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Employee Details
- Contacts

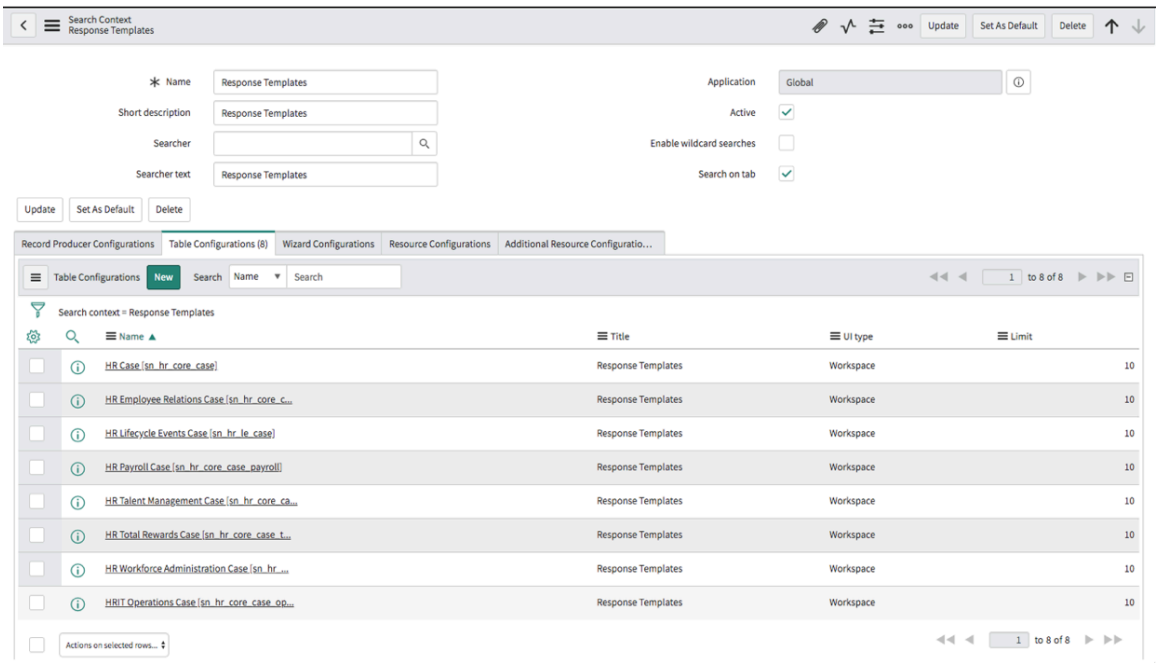
By default, the At a Glance panel is configured to display basic employee details. You can select fields from the Employee Details and Contacts sections to add or remove fields from the At a Glance panel.

Note:
The At a Glance panel replaces the Customer 360 Ribbon component.

6. Add or remove fields for that section.

   If a field does not have a corresponding value, then it does not appear in the panel.

7. Click **Save**.



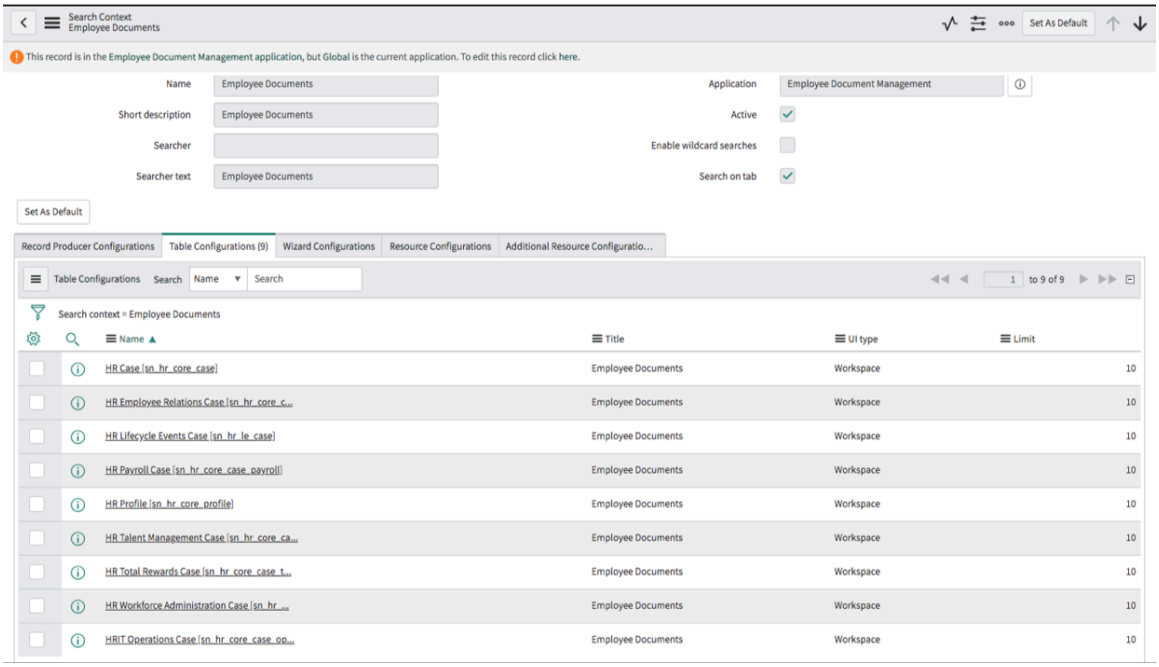
HR Service Delivery Agent Workspace contextual side panel

The contextual side panel provides your agents with tools to research and resolve HR cases.

For information on setting up Contextual Sidebar, see Set up Agent Assist.

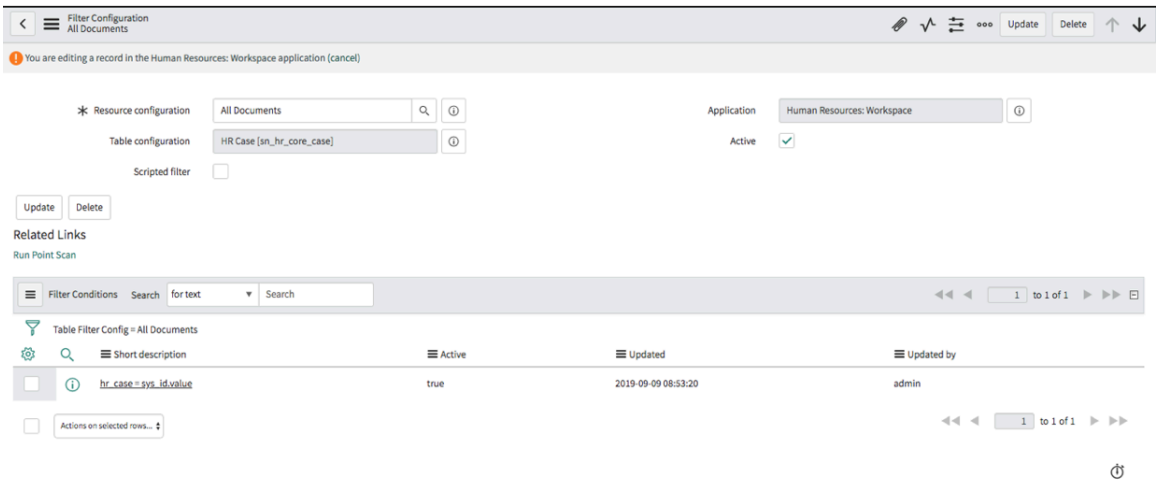
Response Templates

Defined in **Search Contexts**.



For more information, see Set up Agent Assist information sources.

Note:
The base system provides table configurations for each HR case table. If you use a different Center for Excellence (COE), you must create a new table configuration record.



Employee Documents

Defined in **Search Contexts**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The Search Context for Employee Documents has Filter Configurations for each table and match the filter options on the HR Service Delivery Agent Workspace.

- You can have one filter condition per HR case table.
- You can customize conditions with basic conditionals.
- You can disable filter configurations to prevent showing documents from the table.

For more information, see Filter configuration for contextual search.

Advanced Work Assignment (AWA) for HR Service Delivery Agent Workspace overview

Use the ServiceNow Advanced Work Assignment (AWA) for HR Service Delivery Agent Workspace to automatically assign a work item to agents based on their availability, capacity, and skills.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Plugins

Activate the Advanced Work Assignment for HRSD [com.sn_hr_awa] plugin if you have the HR admin role. Activating this plugin also activates:

- Advanced Work Assignment [com.glide.awa]

  When activated, the Advanced Work Assignment for HRSD [com.sn_hr_awa] plugin supports the AWA routing with historical affinity for chat and cases when the Advanced Work Assignment - Agent Affinity [com.glide.awa.agent_affinity] plugin is activated.

- Agent Chat [com.glide.interaction.awa]
- Human Resources Scoped App: Core [com.sn_hr_core]

You can also activate:

- Skills Management [com.snc.skills_management]
  - Activated by default when the Human Resources Core [com.sn_hr_core] plugin is activated.
  - Only activate when you are using skill determination rules to map a skill to an HR case.
- Skill Determination [com.snc.skill_determination]

  Activate when using skill determination rules. .

- Interactions Management [com.glide.interaction]
- Human Resources Scoped App: Virtual Agent Conversations [com.sn_hr_virtual_agent]

  Only activate when using Virtual Agent. For more information, see Virtual Agent for HR Service Delivery.

Chat setup

Ensure the **HR Fulfiller UI** field is set to **Agent Workspace**. For more information, see Configure Agent Chat for HR Service Delivery Agent Workspace.

HR case

AWA is an alternative to using:

- HR templates (based on the HR service)
- HR assignment rules
- HR matching rules

AWA automatically routes HR cases, chats, or interactions based on:

- Availability
- Capacity
- Capacity and Skills

AWA pushes cases to qualified HR agents using work item queues, routing conditions, and assignment criteria that you define. HR agents see their assignments in their inbox. You can set the capacity for an agent, which is the number of work items on a particular service channel that an agent may actively work on. You can set assignment rules to determine how AWA routes work items to a group of agents. If an agent rejects a work item, the item is rerouted to another agent.

For more information, see Advanced Work Assignment.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
To use AWA, you must ensure your:

- HR templates do not identify assignment groups or skills.
- Deactivate your existing HR Assignment Rules and HR Matching Rules.

Agent Inbox:

Using AWA you can automatically assign an HR case and have it appear in an agent's inbox.

For more information, see Agent Inbox controls. The inbox layouts determine what appears on work item cards in an agent's inbox. For more information, see Inbox layout.

Skill Determination Rules

Use Skill Determination Rules as an alternative way to map skills to an HR case.

The base system provides a skill determination rule for each COE and is inactive by default.

There is also a skill determination rule for interactions:

Skill determination rules for Interactions [Human Resources]. Defines what skills are required in chat and when creating an interaction. The script defines the mappings. By default, this skill determination rule is inactive.

Service channels

Service channels help assign specific types of chats or HR cases to the correct agents. For more information, see Service channels.

There are two service channels provided with the base system:

- Chat
- HR Case

Each service channel has eight (8) queues.

- Each queue corresponds to a COE and HR table.
- HR cases route to a corresponding queue.
- Each queue defines an assignment group.
- AWA logic reviews the assignment group and routes to the appropriate agent.

AWA uses service channels to organize incoming requests from chats, cases, and incidents. AWA routes these work items to specific queues. For more information about AWA, see Agent Workspace Advanced Work Assignment (AWA).

Business rules

There are three (3) business rules. Activate only one:

- Skill determination for HR Cases

  Use this business rule when you are using skill determination rules to map a skill to an HR case.

- Copy skills to task_m2m_skill table

  Use this business rule when you are using HR templates to map a skill to an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
These business rules make entries in the Task Skill [task_m2m_skill] table. AWA uses this table to determine final mapping between a task and a skill.

- Skill determination for Interaction[HR]
  - Only activate this business rule when using chat assignment by skill.
  - Works with the Skill determination rules for interactions [Human Resources] to populate the Interaction Skill [interaction_m2m_skill] table.
  - AWA uses this table to check the mapping between interaction and skill.
  - Interaction records are automatically created when an employee initiates a chat.

AWA Assignment Rules

The base system provides two (2) AWA assignment rules. For more information, see Configure agent assignment rules.

- Capacity based assignment for HR work items assignment rule

  Considers agents with the greatest availability for handling the work.

- Capacity and skill-based assignment for HR work items assignment rule
  - Considers agents with the greatest availability and their assigned skills for handling the work. Assigned skills can optionally be made mandatory.
  - When skills are considered mandatory, only considers routing work items to agents that have the skills.

    Note:
    When agents with the correct skills are not available or their capacity is full, it does not route to other agents but will wait until one is available.

Workspace Agent Chat

Workspace Agent Chat is the real-time messaging system you use in HR Service Delivery Agent Workspace.

Similar to HR case, there is a service channel for chat with eight (8) queues.

Virtual Agent

When Virtual Agent is active, the chat window shows Virtual Agent topics. Under the Chat service channel under AWA, there is a script that maps the additional Virtual Agent topics to the queue.

When Virtual Agent is not active, the chat window shows the Employee Service Center (ESC) pre-chat categories. Under the Chat service channel under AWA, there is a script that maps the additional Virtual Agent topics to the queue.

Note:
You can distinguish the queues by the ESC pre-chat categories and Virtual Agent topics.

For more information, see Virtual Agent.

If you are migrating from Connect Support, use AWA to create the chat queues for routing chat work items to agents and the Chat Setup form to configure Agent Chat. For more information, see Migrate from Connect Support to Advanced Work Assignment and Agent Chat.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information on Workspace Agent Chat, see Workspace Agent Chat.

Configure Agent Chat for HR Service Delivery Agent Workspace

Use Agent Chat Settings to configure Agent Chat for HR Service Delivery Agent Workspace.

Before you begin

Role required: sn_hr_core.admin

Note:
Ensure you have activated the Agent Chat [com.glide.interaction.awa] plugin prior to using this feature. For more information on configuring chat, see Set up Agent Chat.

Procedure

1. Navigate to **All** > **Conversational Interfaces** > **Settings** > **Agent Chat**.
2. In the Agent Experience section, select **Connect Support settings**.
3. In the **HR Fulfiller UI** field, change to **Agent Workspace**.
4. Select **Save** or **Update**.

Configure AWA queues for HR Service Delivery Agent Workspace

Use Advanced Work Assignment Queues to define what work items are routed automatically to agents through a service channel.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **Advanced Work Assignment** > **Settings** > **Queues**.
2. From the **Queues** list, change the **Active** field to **false** for **Agent Chat Queue**.
3. Or, select a queue to edit.
   For more information, see Work item queues.
4. Select the **Save** icon.

Configure AWA chat groups for HR Service Delivery Agent Workspace

Adding your HR agents to chat groups to route chat requests to the correct agent.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **User Administration** > **Groups**.
2. Select a group.
   The base systems provides:

Chat groups in HR Service Delivery Agent Workspace

Groups	Groups
HR	HR Systems
HR Activity Writers	HR Talent Management
HR Admin	HR Tier 1

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Groups	Groups
HR Benefits	HR Tier 2
HR Employee Relations	HR Tier 3
HR Investigations	HR Tier 4
HR Leadership	HR Total Rewards
HR Onboarding	HR VIP Watchlist
HR Payroll	HR Workforce Administration
HR Recruiting	HRIT Operations

3. Select the **Group Members** tab.
4. Select **Edit**.
5. Add users from the **Collection** column to the **Group Members List**.
6. Select **Save**.
7. Select **Update**.

Service channels for HR Service Delivery Agent Workspace

Service channels help you automatically route HR cases.

Service channels assign specific type and scope of work to agents. The base system provides pre-configured channels.

For more information, see Service channels.

Work item sizing and capacity

Service channels also use work item sizing and capacity to determine the number of cases an agent supporting the channel can handle.

The base system provides a default capacity, but can be overridden.

For more information, see Service channel capacity and utilization.

Agent Affinity for HR Service Delivery Agent Workspace

Agent Affinity is an Advanced Work Assignment enhancement that enables you to streamline the routing of work items based on historical, task based, and account team affinity.

Agent Affinity works with HR Service Delivery Agent Workspace to assign HR agents based on:

- Historical affinity: Assign agents based on whether an agent fulfilled past requests for similar cases or tasks.
- Task based affinity: Assign agents based on past assignments for similar cases or tasks.
- Account team affinity: Assign agents based on the team they are on.

There are three pre-configured affinity rules available:

- Chat Context Affinity
- Chat Historical Affinity
- HR case Historical Affinity

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activate the Agent Affinity plugin (com.glide.awa.agent_affinity) to use this feature.

The role structure to administer and configure AWA:

HR Admin [sn_hr_core.admin]

- Contains the HR AWA Admin [sn_hr_awa.admin] role.
- Contains the Advanßced Work Assignment Administrator [awa_admin] role.

For more information, see Agent Affinity.

Computer telephony integration (CTI) for HR Service Delivery Agent Workspace

Computer Telephony Integration (CTI) allows HR Service Delivery Agent Workspace to support inbound and outbound telephone calls.

For more information, see Setting up phones in workspace.

Computer telephony integration (CTI) demo installation and configuration for HR Service Delivery Agent Workspace

The Computer Telephony Integration (CTI) enables HR Service Delivery Agent Workspace to test the phone communication channel for inbound telephone calls in a non-production instance.

To use this feature, activate the CTI Demo Data for HRSD [com.sn_hr_cti_demo] plugin.

Note:
Only incoming calls are supported.

Important:
The CTI Demo Data for HRSD [com.sn_hr_cti_demo] plugin has been deprecated. To provide calling capabilities to agents, you can use ServiceNow Voice for HR Service Delivery.

Special handling notes with HR Service Delivery Agent Workspace

Get an agent's attention by adding special handling notes to a case.

You can set up special handling notes to appear as a pop-up modal or as a related list on the form.

Special handling notes have a status, an assigned priority, and an expiration date.

To configure special handling notes for HR Service Delivery Agent Workspace, do the following:

1. Edit the special handling notes properties.

   For more information, see Configure special handling notes properties.

2. Create special handling notes for an HR table.

   For more information, see Configure special handling notes.

3. Create a special handling note.

   For more information, see Configure special handling notes.

For more information, see Highlighted values in the form header and Special handling notes.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Configure special handling notes in HR Service Delivery Agent Workspace

Configure an HR table to use special handling notes. You must do this before you can create special handling notes.

Before you begin

Role required: sn_hr_core.admin

Procedure

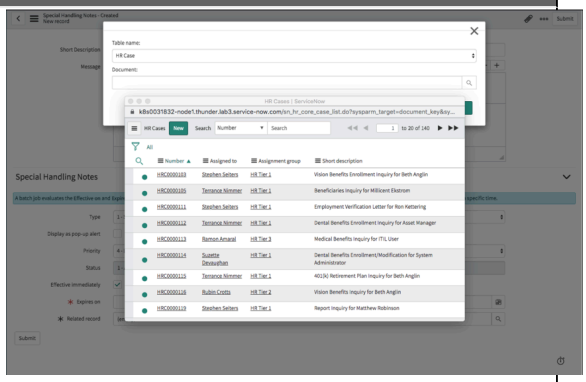
1. Navigate to **All** > **Special Handling Notes** > **Configuration**.
2. Click **New** or select an existing record.
3. In the **Table name** list, select an HR table.
   Selecting the HR case [sn_hr_core_case] does not automatically include any child tables.
4. Move a related field to the Selected list.
5. Click **Submit**.
   The Special Handling Notes Configuration list appears.

Add a special handling note in HR Service Delivery Agent Workspace

Create special handling notes that an agent can see for a specific HR case or an HR case with a set of conditions.

Before you begin

Role required: sn_hr_core.admin



Procedure

1. Navigate to **All** > **Special Handling Notes** > **Special Handling Notes**.
2. Click **New** or select an existing record.
3. On the form, fill in the fields.

Special Handling Notes form

Field	Description
Short description	Short description that describes the special handling note.
Message	Message that appears in the special handling notes. Rich text formatting is available.
Type	Type of special handling note that you can select: ○ Standard: Select this option to display a special handling note for a specific record. When you select the Lookup documents using list icon, you can select a table and associated record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	 ○ Conditional: Select this option to use filter conditions to specify when a special handling note appears.
Display as a pop-up alert	Special handling note that appears as a pop-up alert. **Note:** Currently, a pop-up alert is the only way to show special handling notes. Select this option to show special handling notes. If you leave this option clear, special handling notes appear on the HR case form as an embedded list on the platform version of HR. For more information, see Work an HR case.
Priority	Priority that you assign to the special handling note. The choices are: ○ 1 - Critical (red) ○ 2 - High (orange) ○ 3 - Moderate (light green) ○ 4 - Low (light blue) The priority and color appear in the special handling note.
Status	Status of the special handling note: The status based on the **Expires on date**. ○ Active: The special handling note is active. ▪ Active notes appear in the pop-up window. ▪ Active notes remain until dismissed or set to Inactive or Expired. ○ Inactive: The special handling note is no longer active and does not appear in a pop-up window. Inactive special handling notes still appear when you navigate

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	to **Special Handling Notes** > **Special Handling Notes**. ○ Expired: The special handling note is no longer active. The expiration date has passed or manually expired.
Effective immediately	Option to activate the special handling note immediately. If you leave this option unselected, you can specify a date and time that the special handling note appears.
Effective on	Field that is available when you leave the **Effective immediately** option unselected. Select the  Select date and time icon to select the date and time when the special handling note appears.
Expires on	Field where you can set a date and time to automatically inactivate a special handling note. Click the  Select date and time icon to access the calendar where you can choose the date and time to activate the special handling note.
Table name	List that is available when you select **Conditional** from the **Type** field. Select the HR table where you want the special handling note to appear in for a specific HR case or when you satisfy filter conditions. **Note:** Special handling notes do not support child tables. For example, if you select the HR case [sn_hr_core_case], the special handling note only appears for cases that are specific to the table. To create a special handling note for child tables, you must create a special handling note for each table.
Related record	Field that is available when you select **Standard** from the **Type** field. When you select this option, a pop-up window appears where you can select the table name and a case from the **Document** field. For example, you can select HR case from the **Table name** field and the HR case where you want the special handling note to appear.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Conditions	Field that is available when you select **Conditional** from the **Type** field. Select the conditions when met that would show the special handling note. For example, let's say that you want to add a special handling note for a General Inquiry case for an employee named Aileen Mottern, you would select: **[HR profile] [is] [Aileen Mottern]**. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.

4. Click **Submit** or **Update**.

Using the HR Service Delivery Agent Workspace

As an HR agent, use HR Service Delivery Agent Workspace or the Agent Workspace for HR Case Management to interact with employees, respond to inquiries, and resolve issues.

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.

You can start work in HR Service Delivery Agent Workspace or the Agent Workspace for HR Case Management from one of these areas:

- Landing page
- List queue
- Agent inbox

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Chat
- Phone
- Global search

For additional information on working within Agent Workspace, see Using workspace.

Along the left side and top of the Home page are a series of icons you can select.

Agent Workspace features with description

Agent Workspace feature	Description
Home	Select to take you back to the Home page.
HR case list	Select to view a list of HR cases, interactions, HR tasks, and more. You can access the list icon from any screen.
Inbox	Shows any work items assigned to you. You can also indicate if you are: • Available • Offline • Away you are available **Note:** Requires activation of the Advanced Work Assignment (com.glide.awa) and Agent Chat (com.glide.interaction.awa) plugins.
Add New	Select to create one of the following: • Interaction • HR case **Note:** Found at the top, left side of the Home screen.

Create a new case

From the HR Agent Workspace home page, select the create case icon.

New case or interaction

You can create a new HR case or an interaction. An interaction is when an employee contacts an HR agent and you want to ensure the interaction is documented and captured.

Searching for an existing case or employee or skip

You can search for an existing case or create a case from any screen. Select the create case icon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Searching for an employee also helps to verify that you are creating a case for the correct person.

If your company uses **Employee Relations**, you can select the **Skip verification** link to create an ER case without identifying an Opened for person. For more information on Employee Relations, see Create an HR Service Delivery Employee Relations case using the legacy UI.

Agent Workspace existing case features with description

Agent Workspace feature	Description
Search field	Field where you enter a name, partial name, or case number. **Note:** Unlike the platform web-based UI, you can't search for or create cases for inactive users.

Starting from the List queue

You can select a case or an interaction from the list icon.

For additional information, see Setting up list view in a workspace.

Working from the agent inbox

You can also start work by going to the agent inbox, which is on the left side of the navigation bar.

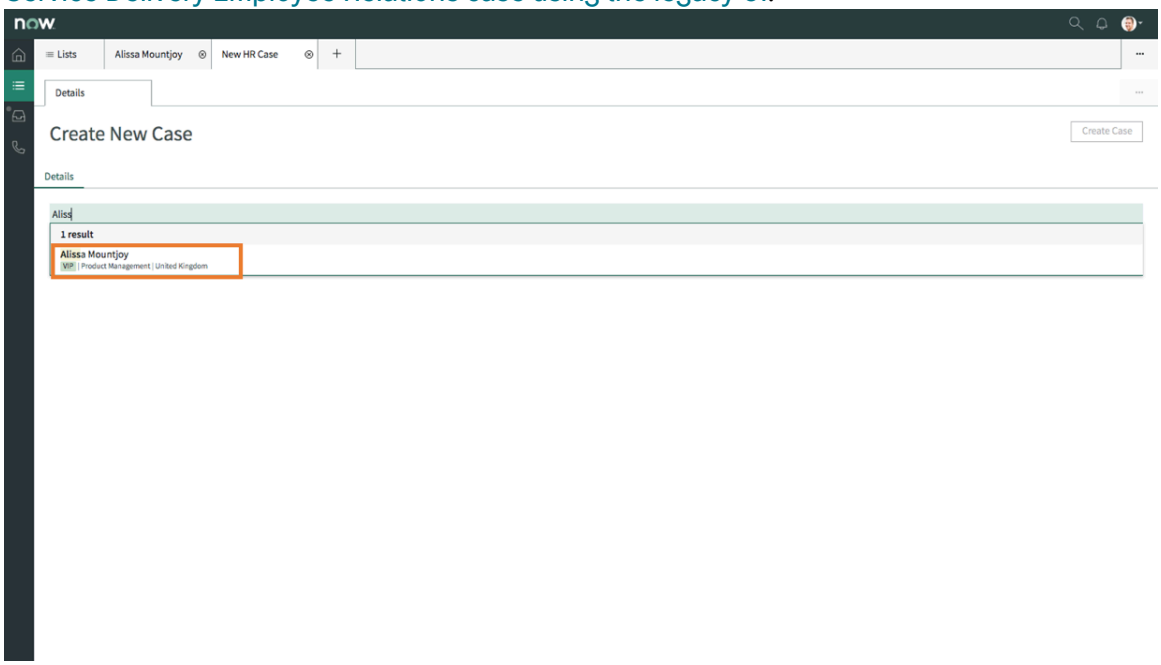
Agent Workspace agent inbox features with description

Agent Responsibilities	Description
Select an HR case from agent inbox.	Inbox that contains the HR cases that are assigned to you. Chats and interactions also appear in agent inbox. For more information on using chat, see Using chat in HR Service Delivery Agent Workspace.

For additional information, see Working from the agent inbox.

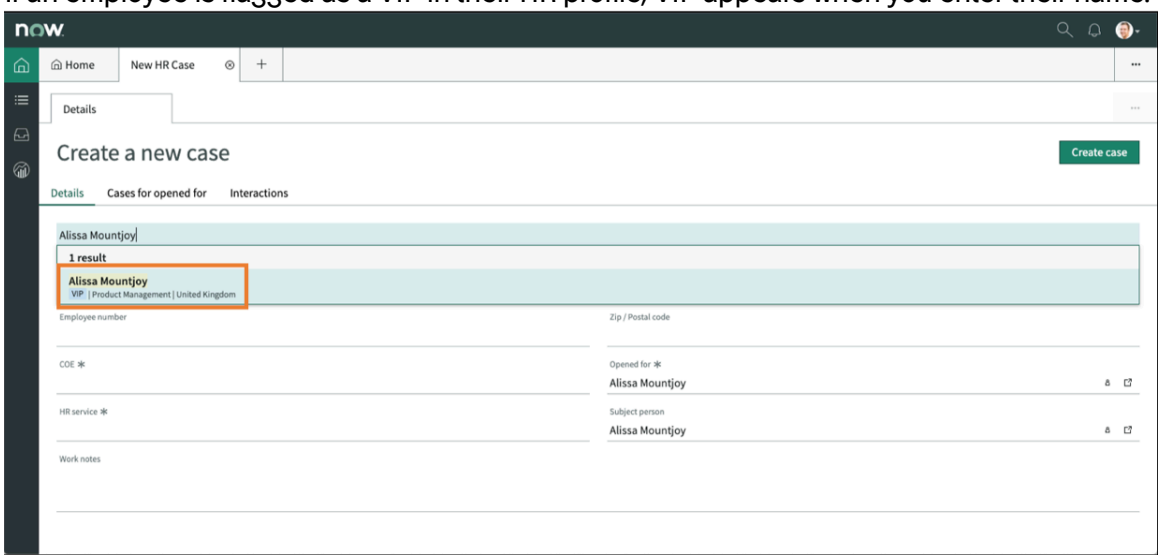
Create case in Classic HR Service Delivery Agent Workspace

Creating a new HR case in HR Service Delivery Agent Workspace is easy and all the information you need is on one page.



Before you begin
Role required: sn_hr_core.case_writer

Procedure



1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
   The landing page appears.
2. To create an HR case, select the **Add** icon.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

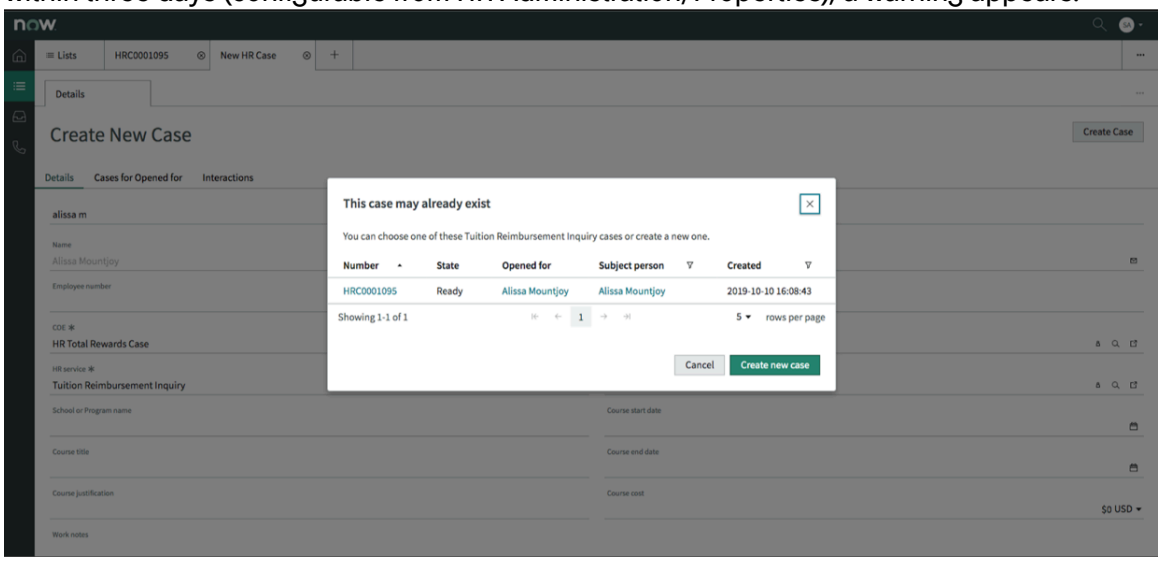
3. Select **HR Case**.
   For information on **Interactions**, see Using interactions in HR Service Delivery Agent Workspace. For Employee Relations (ER) cases you can skip adding the Opened for person by selecting the **Skip verification** link. For more information on ER cases, see Create an HR Service Delivery Employee Relations case using the legacy UI.

4. Enter an employee name.
   If an employee is flagged as a VIP in their HR profile, VIP appears when you enter their name.

5. Verify that the employee is the correct person the case is for.

> **Note:**
> Advanced reference qualifiers on a reference field is not supported in the case creation configuration page. When the limit user search filter is applied to the employee search, it will not be applied to **Opened for** and **Subject person**.

6. Select the HR service for the HR case.
7. In the Case Details section, fill in the fields.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

New case creation

Fields	Description
COE	Select the **Center of Excellence** associated with the HR case you are creating. Selecting a COE filters the choices for HR service. For more information, see HR Centers of Excellence data model. **Note:** You can also select an HR service first and the associated COE automatically populates.
HR service	The HR service based on the COE selected or what you select based on communication with the employee request. What HR services are available to an employee filter by: ○ COE selected. ○ HR criteria for the **Subject person** based on the HR service configuration. Limit services filter on the **Case Creation Configuration** form. If the HR service field is empty, ensure that you did not remove the Opened for field. **Note:** **Bulk Parent Case** does not appear as a selection because it only appears when creating a parent case for child bulk cases. For more information, see Add or modify bulk HR cases.
Work notes	Information specific to the case that can help other HR agents. **Work Notes** are not visible to the **Subject person**. The sn_hr_core.restrict_guest_email system property allows a user to send an email from a personal email account referencing an HR case. When the property has a value of false (default), the text from the email appears in the Work notes field. To access system properties, enter `sys_properties.list` in the navigation filter. **Note:** Translate the text in your preferred language using the **Translate** option. For configuring the dynamic translation framework, see Dynamic translation.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. Select **Create Case**.
   If the duplicate case warning appears, verify that you are creating a unique case. When there are no similar cases, an HR case number is assigned and the State is **Draft**. If there is a similar case for the subject person, HR service, and if the case was created within three days (configurable from HR Administration/Properties), a warning appears.

9. Select **Create new case**.
   The following fields appear:

Create new case form

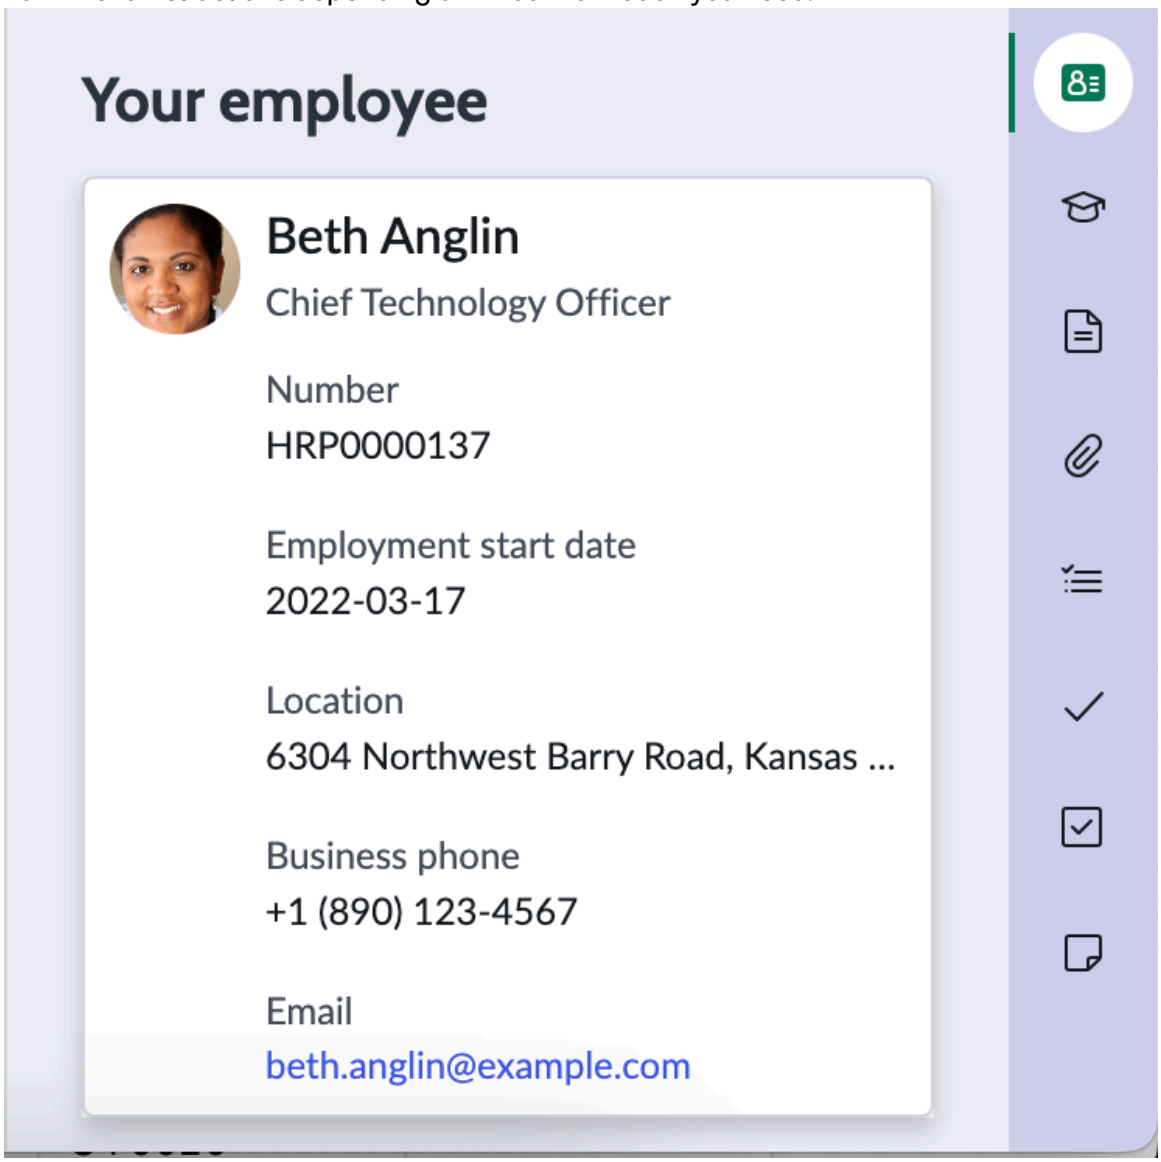
Field	Description
Number	An HR case number is assigned and is a unique identifier, cannot be changed, and has an HRC prefix.
Parent	Populates the parent case when the displayed case is a child. For example, a **Request onboarding** case has multiple child cases and tasks under it.
Skills	The required skills of the person assigned to this category of HR case. Skills can auto-populate based on the HR case template associated with the HR service.
State	The state of the case. The state can auto-populate based on the HR case or task template associated with the HR service. ○ Draft: The default state for a case when it is first opened. **Note:** Can only be changed to Ready, Closed Complete, Closed Incomplete, Cancelled, or Suspended. ○ Ready: The case is ready to be worked on. ○ Awaiting Approval: Requires approval before it can move to the next state.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Can only be changed to Ready, Closed Complete, Closed Incomplete, Cancelled, or Suspended. ○ Work in Progress: The case is assigned and being worked on. ○ Closed Complete ○ Closed Incomplete ○ Cancelled ○ Awaiting Acceptance: The **Opened for** person must accept the HR case before it can proceed. For example, a **Request for Onboarding** case was opened for a hiring manager. The hiring manager must accept the case before it can move to the next state. ○ Suspended: Use to temporarily prevent violation of a service level agreement (SLA). Refer to Suspend and resume an HR case. **Note:** The **State** cannot be edited in List view.
Priority	The precedence of the case, based on the **HR service**. The priority automatically overrides the template and changes to **2 - High** for users flagged as VIP. Configured in HR Properties (sys_property).
Source	From where the case originated. Sources are: ○ Not selected ○ Self Service ○ Phone ○ Chat / Connect / Live Feed ○ In Person ○ Email ○ Other ○ Virtual Agent **Note:** Cases created through email or self-service are automatically moved to **Ready** state and assigned to a group or user.
Opened	The date and time the HR case was opened.
Opened by	The user who created the case.
Assignment group	The group the record is assigned to. If the group is not set automatically, assign an HR group to provide a selection of HR users in the **Assigned to** field. Assignment groups are restricted to those groups with a type of human_resources.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	To change the **Assignment group**, the **Assigned to** agent must be a member of the new group and the **State** must be **Ready**. **Note:** To automatically assign a group to an HR case, see Assignment and matching rules in HR and Configure an HR case template.
Assigned to	The user assigned to work on this case. When a group is automatically assigned, a user from the group is automatically assigned when the case is created. If the user is not auto-assigned, click the **Lookup using list** icon to select a user who is a member of the selected assignment group. To change the **Assigned to** HR agent, the agent must be a member of the **Assignment group** and the **State** must be **Ready**. If **Assigned to** is left blank, some features are not available from the Employee Center ticket page. For example, the **Ask a Question** link to chat directly about an HR case cannot assign an agent. Comments or work notes do not appear on a case until an agent is assigned.
Collaborators	Add collaborators or other HR agents to the case. Only HR agents can be added as collaborators. For example, an HR agent can add them self as a collaborator after transferring a case to a different agent or group. This action permits the original agent to still track the case. Or, an HR agent can add another HR agent as a collaborator to request help. Adding a collaborator populates the case on the collaborations list. Other factors related to adding collaborators: ○ Collaborators can remove themselves from the case. To remove yourself, highlight your name in the **Collaborators** list and click the **X**. ○ Collaborators are not required to be part of the assignment group. ○ Assigned to person can add or remove collaborators. ○ Collaborators cannot add or remove collaborators. ○ Notifications are sent to collaborators when added to the HR case. Adding collaborators can alleviate the amount of emails requesting help on an HR case by consolidating communication. Collaborators and the COE for the HR case can conflict. The basic rules are:



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ For all HR cases, collaborators override any security on a COE. For more information, see Create COE security. ○ Employee Relations (ER) cases can override collaborators when restrictions apply. For more information, see Configure an employee relations case restriction. **Note:** Agents must have the ER case writer [sn_hr_er.case_writer] role in order to be a collaborator.
Case support team	Employees assigned to answer questions about onboarding a new hire. Only appears for Lifecycle Events cases. You can add users or define a group that can support the **Subject person** for a Lifecycle Event case. The **Subject person** can communicate with the case support team while the case progresses.
Watch list	The list of users who receive notifications regarding this case. Anyone in the company can be added to the **Watch list**. For example, an employee requests a travel visa. Add the manager of the employee to ensure that updates are communicated. Click the **Edit Watch List** icon to add users. Click the **Add me** icon to include yourself.
Short description	Populates from the HR service. After the case is created, you can modify the description.
Description	You can add a longer, detailed description after the HR case is created. Use the Rich Text Format (RTF) tools to format your text. Rich text formatting also appears for a case or task description on the Employee Center.

10. Check the contextual side panel for information that can help you work this case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

You can choose from Agent Assist, Response Templates, or Fulfillment Instructions depending on what information you need.

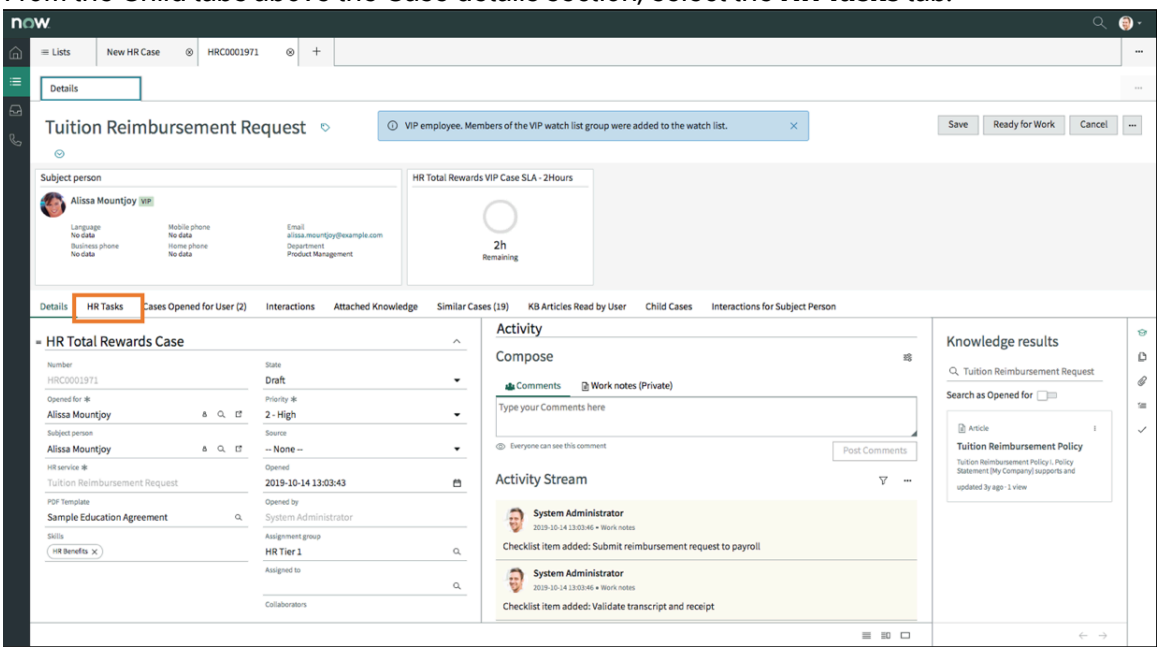
11. Select **Ready for Work** to change the **State** to **Ready** and assign an HR agent and assignment group.
    If your company requires approvals or signed agreements, you must resolve these requirements before you can close the case.

Create a task for a case using HR Service Delivery Agent Workspace

You can add a checklist for an HR task. Use the checklist as a step-by-step guide to ensure a consistent and efficient process.

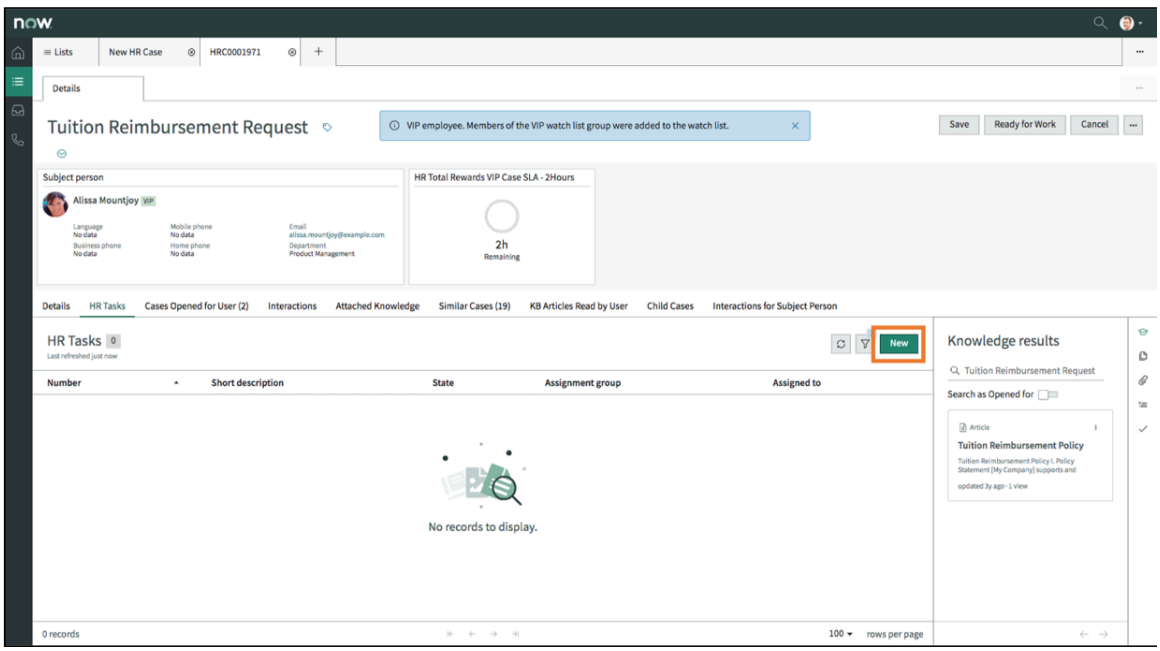
Before you begin

Role required: sn_hr_core.case_writer



About this task

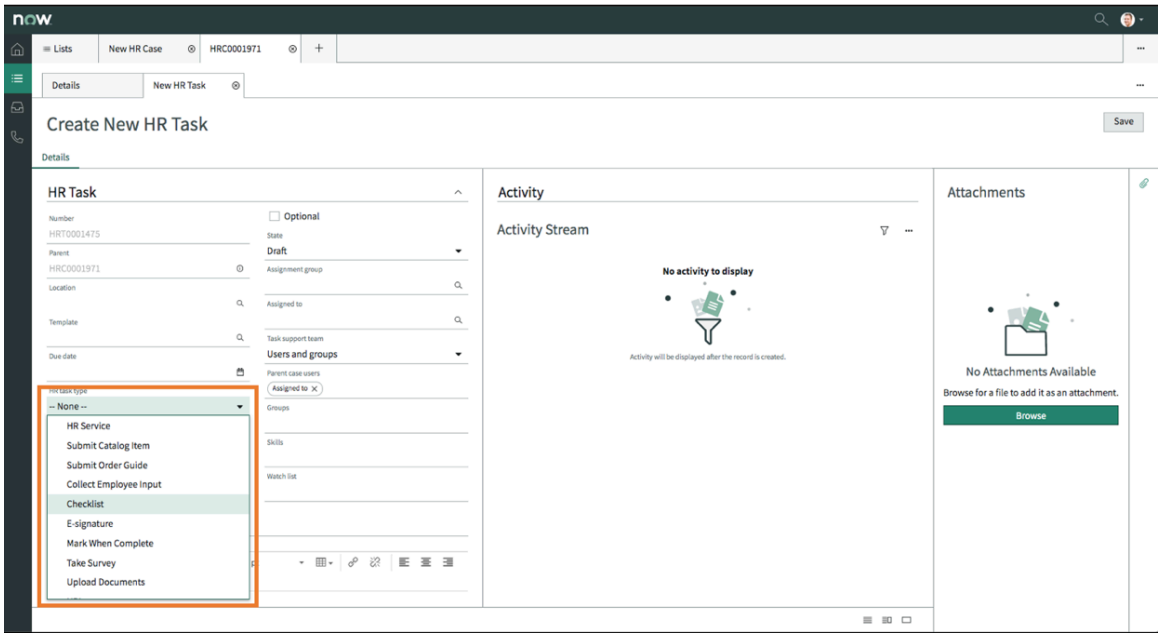
When assigning a task to an employee, you can request how the employee acknowledges completion of the task. The tasks appear on the Employee Center for the employee.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace** and select a case you want to add a task to.
2. From the Child tabs above the Case details section, select the **HR Tasks** tab.



3. Select **New**.

4. Select an **HR task type**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The different task types you can select are:

HR task types

Task type	Description
HR Service:	An HR service fulfills the HR task. In the **HR Service** field, select an HR service. **Note:** **Bulk Parent Case** only appears as a selection when creating a parent case for child bulk cases. Refer to Create a bulk case request.
Submit Catalog Item:	A catalog item fulfills the HR task. In the **Catalog Item** field, select a catalog item.
Submit Order Guide:	An order guide fulfills the HR task. In the **Order Guide** field, select an order guide.
Collect Employee Input:	Collects information from employees. In the **Employee form** field, select the employee form that the user fills out or verifies. **Note:** Employee forms are questionnaires built using the survey designer to collect information from employees. See Collect employee input for more information.
Checklist:	In the **Checklist Items** field, provide the checklist items. Checklists are instructions or steps on how to complete the task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task type	Description
	Note: For more information, see Using checklists in HR Service Delivery Agent Workspace.
Credential:	Indicates that you want the user to acknowledge reading a document by logging in with their login credentials. The **Acknowledgment text** and **Acknowledgment document** fields appear. Using these fields shows a check box and text above the login credentials. In the Acknowledgment document field, select a document you want the user to read. **Note:** This option is only available for existing customers that have not yet migrated to e-signature. For more information, see Migrate existing HR task templates and open HR tasks to e-signature.
E-signature:	User electronically signs a document. In the **E-signature template** field, select the e-signature template to use. **Note:** ○ E-signature is a scoped application that enables you to sign managed documents, knowledge articles, or HR document templates. You can type or draw your signature, credentials, or acknowledgment. For more information, see HR e-signature. ○ If HR document template has a document type of e-signature template, select the HR document template that the signatory signs on the HR case form. For more information, see Select an HR document template for an e-signature task.
Mark When Complete:	Notify the user a **Completed** button appears on the HR Service Portal. Use the **Short description** to provide details about this task. **Note:** **Mark When Complete** changes the state of the task to **Closed Complete**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task type	Description
Sign Document:	Requests the user to sign a document. An example is sending an education agreement for signature on a tuition reimbursement. The **Acknowledgment text** field appears. Using this field shows a check box and text above the signature. **Note:** ○ This option is only available for existing customers that have not yet migrated to e-signature. For more information see Migrate existing HR task templates and open HR tasks to e-signature. ○ After the user signs the document, the document generates with the signature and attaches to the task. The task closes and the document is attached to the case.
Take Survey:	In the **Survey** field, select a survey that the user is assigned to take.
Upload Documents:	Requests the person assigned to the task to upload documents. Examples are receipts, course registration, or transcripts for tuition reimbursement. Use the **Short description** field to provide instructions. **Note:** The task must be in **Ready** or **Work in Progress**.
URL:	The **URL** field appears. Enter a URL link that the user acknowledges when accessed.
View Video:	The **URL** field appears. Requests the person assigned to the task to view a video.

Note:
For information on all the fields, see Adding an HR task to an HR case.

5. Select **Save**.

   You can also add a task by selecting **Add Task** from the ··· from **Details**.

Using At a Glance for HR Service Delivery Agent Workspace

Use the **At a Glance** feature from the contextual sidebar to quickly view HR profile information for the opened for person on an HR case.

You can configure what information you want to appear in At a Glance from the HR profile form.

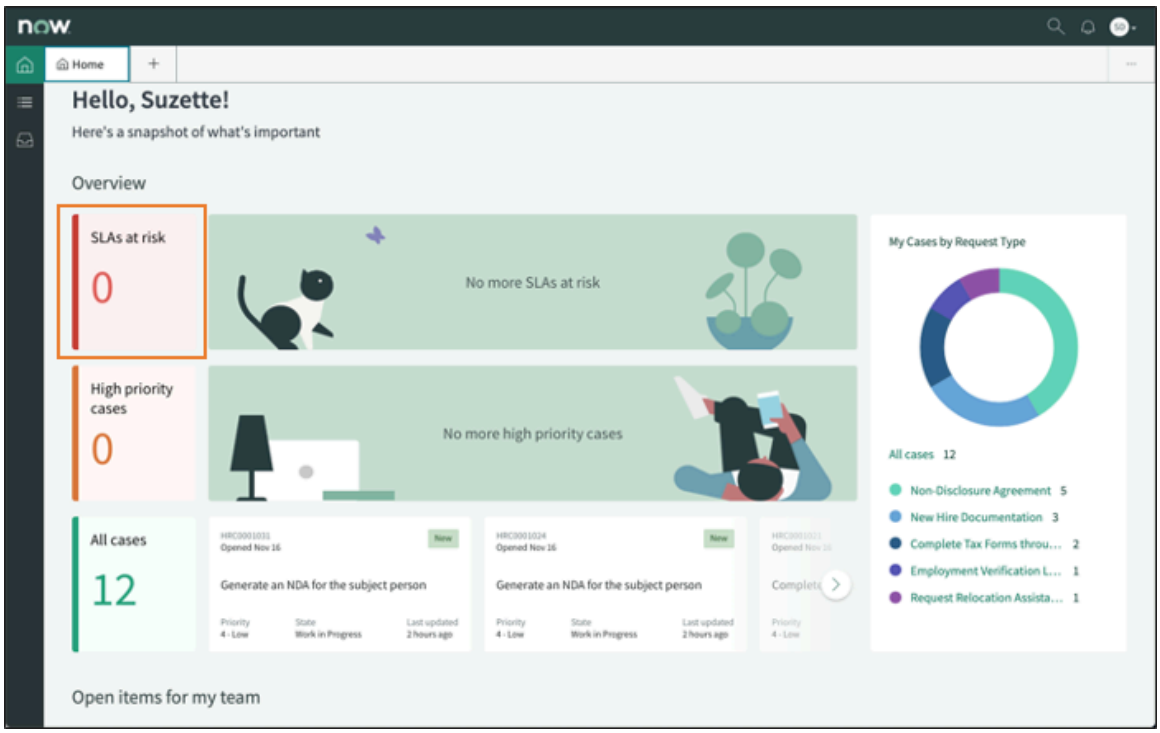
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR profile

What appears on your **At a Glance** panel depends on what you configure on an HR profile. You can open any HR profile and add or remove the fields you want to appear. What you select appears for all HR profiles, but only fields with data appear on the **At a Glance** panel.

Note:
If the subject person on an HR case does not have an HR profile record, the At a Glance icon in the contextual side panel does not appear.

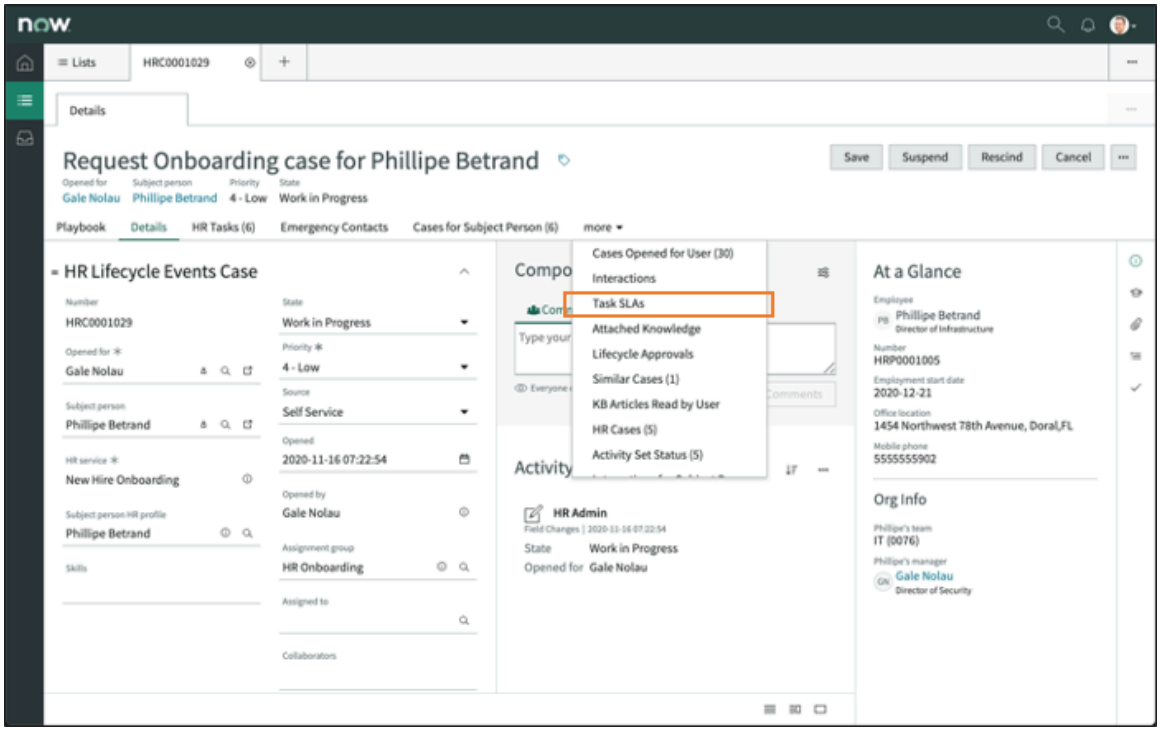
If you change the subject person, the profile information of that person will also be immediately updated in the **At a Glance** panel, enabling you to verify the right person even before saving the change.



For more information, see HR profile editable field configuration. For more information on adding fields to an HR profile, see Configuring the form layout.

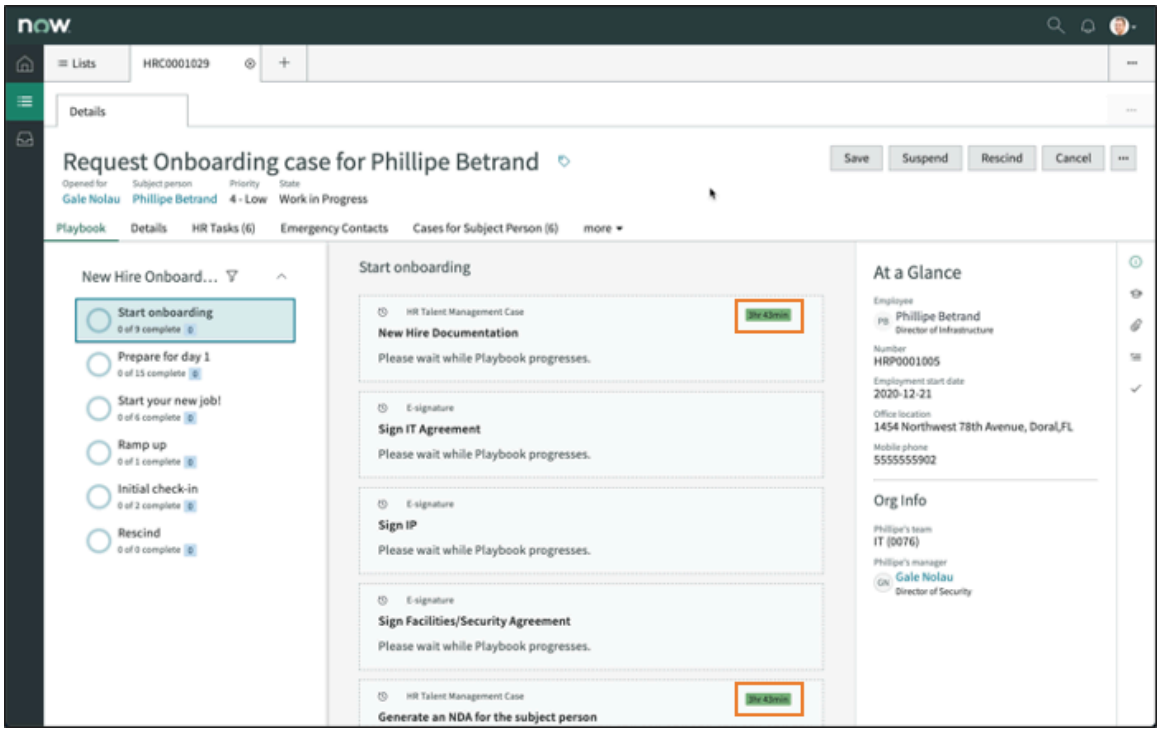
Viewing SLAs for HR Service Delivery Agent Workspace

Service Level Agreements (SLAs) can be viewed for cases or tasks and provide progress information.



HR Agent Workspace SLAs

View SLAs for HR cases from the Agent Workspace home page:



View SLAs for HR tasks from the Related Items menu.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Playbook SLAs

View SLAs for HR Playbook from the case card.

Note:
For more information on SLAs, see Service Level Management.

Custom My List for HR Service Delivery Agent Workspace

You can create your own **My Lists** to show specific cases that are relevant to you. Having a custom **My Lists** helps you work faster and efficiently.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The default **Lists** show HR cases divided in the following categories:

- All HR Cases
- Lifecycle Events
- Other
- Interactions
- HR Tasks
- HR Profile
- Employee Documents
- Knowledge
- Reminders

Create My Lists

Use **My Lists** to create a custom list of HR cases that you can readily access and start working on.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Click the **Lists** icon ( ).
3. Click **My Lists**.
4. Click **+New list**.
5. Click **Start from existing** or **Create your own**.
   Clicking **Start from existing** provides existing HR case lists you can select to create a custom **My Lists**. Clicking **Create your own** provides you with a list of all tables you can create a list from.
6. Select how you want to create your **My List** and fill in the fields.

Start from existing

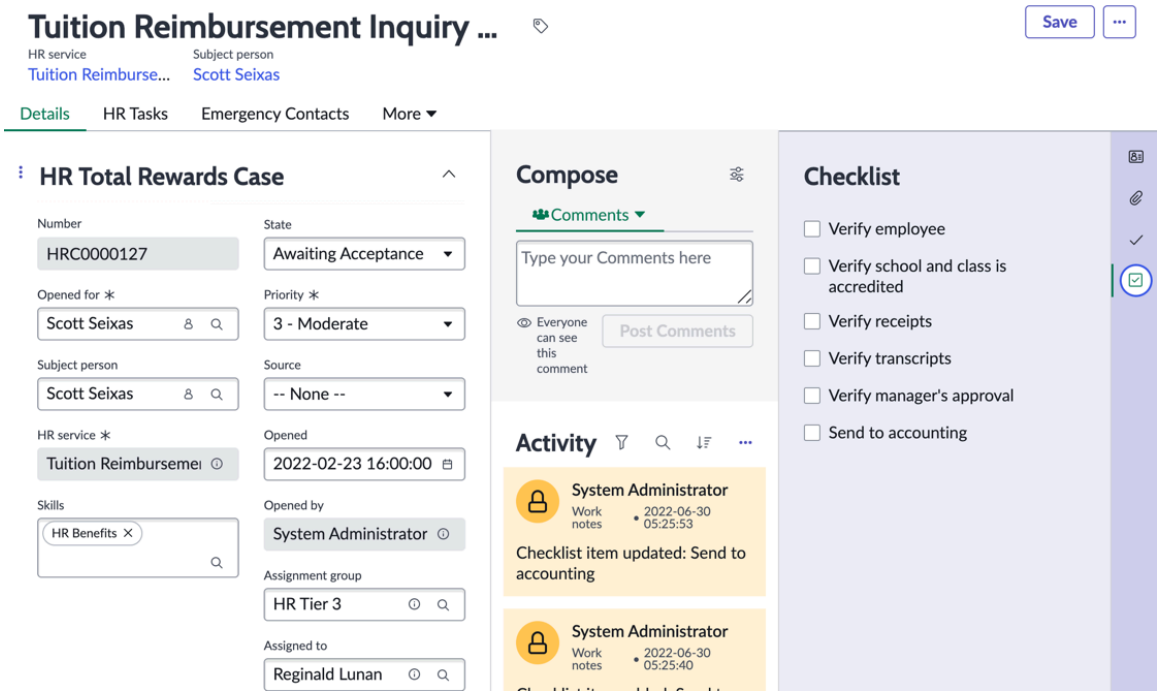
Field	Description
List	Select the HR case categories that you want to base your **My Lists** on.
List Name	Fills in based on what you select from **List**. You can change the name by typing over what displays.
Select columns	The columns are pre-display for you. Click the**X** to delete columns you don't want to appear.
Add filters	Add filters to further define what cases appear in your **My Lists**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Criteria pre-fills based on what you selected in the **List**. You can edit, add, or delete the defaults.

Create your own

Field	Description
List name	The name that identifies your **My Lists**. Enter a name for your list.
Select Source	The table that your **My Lists** is based on. Enter letters or the name of the table to start a search, then select q table.
Select columns	The columns you want to appear in your **My Lists**. A list of columns appears based on the table you selected. Click the**X** to delete columns you don't want to appear.
Add filters	Add filters to further define what cases appear in your **My Lists**. **Note:** Criteria pre-fills based on what you selected in the **List**. You can edit, add, or delete the defaults.



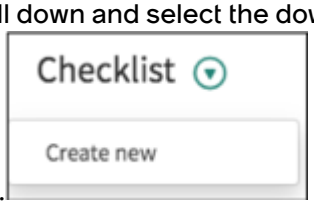
7. Click **Create**.

Using checklists in HR Service Delivery Agent Workspace

Creating and using checklists on an HR case or task helps you resolve issues faster, more efficiently, and with fewer errors.

The Checklists appears as a tab in the contextual side panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



When the configuration for an HR service or HR task template has checklists, they automatically appear. Having a checklist for an HR service or HR task template ensures consistency when resolving issues. For information on configuring checklists, see Configure an HR service and Configure an HR task template.

Creating a checklist directly into an HR case

To create a one-time checklist directly into an HR case, create the case in HR Service Delivery Agent Workspace.

- Go to the platform HR Case Management and open the case you created.
- Scroll down and select the down arrow and select **Create New**.

- Enter instructions.

Creating a checklist directly into an HR Task

Create an HR task with **Checklist** for the **HR Task Type**. See Create a task for a case using HR Service Delivery Agent Workspace.

Go to the legacy HR Case Management and open the task you created.

From the **Fulfillment Instructions** tab, create your checklist.

Note:
These types of checklists are a one-time use and only appears for the specific case or task.

Sending an email in HR Agent Workspace

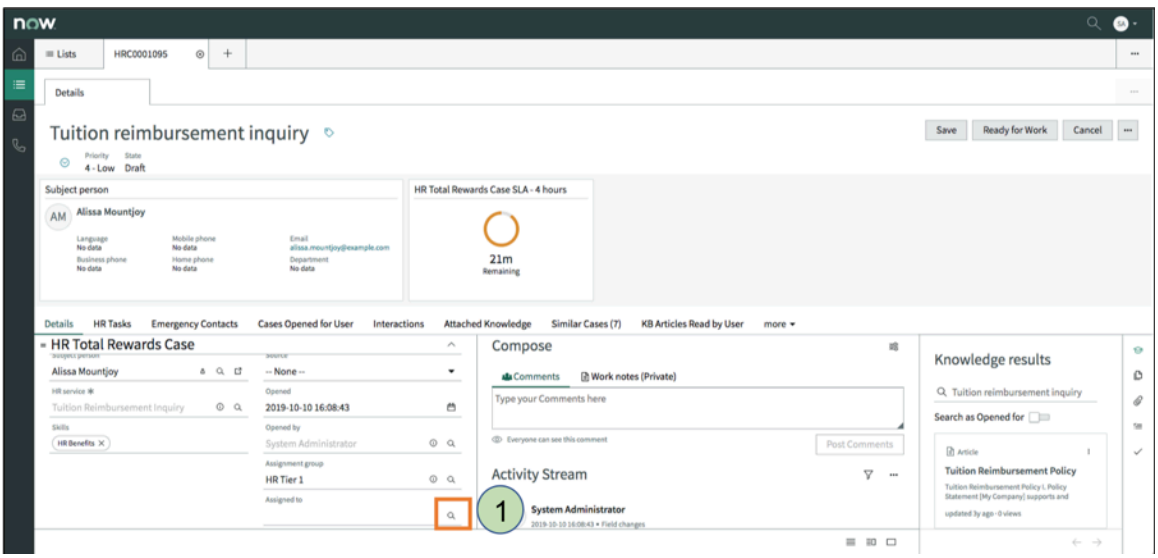
Send an email with attached documents or communicate about the HR case from the HR Agent Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a case for which you want to send an email.

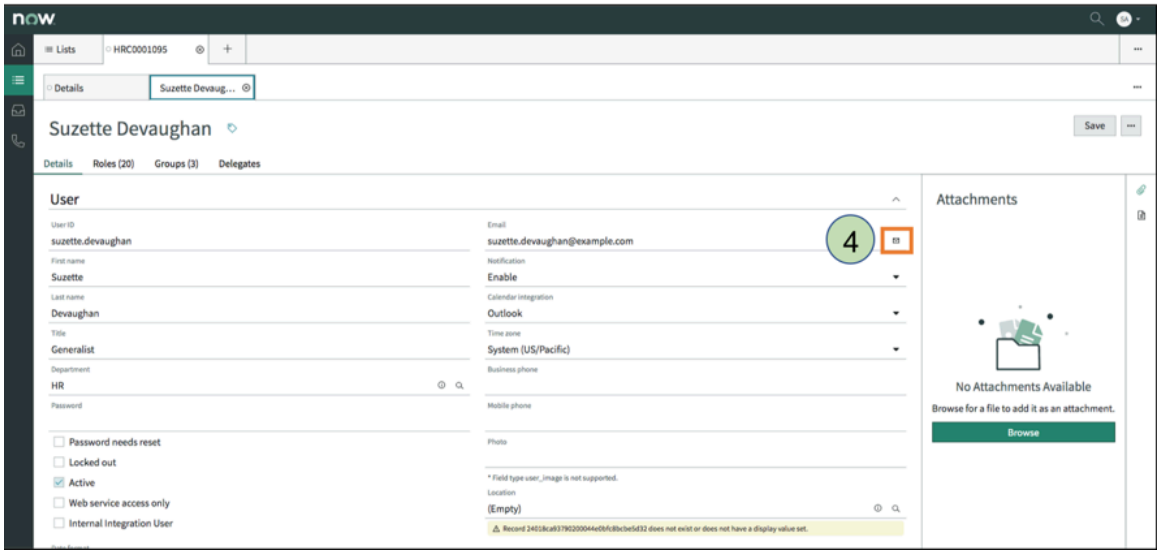


> **Note:**
> If you want to directly send the attachment in a case as an email, click the **Send Email** button on the case tab.

3. Click the ... icon at the top right hand corner of the tab.
4. Select **Compose Email**.
   The New Email Draft opens in another tab.
   The **To** field will be automatically filled with the subject person's email id. However, you can change the recipient of the email.
5. The **Subject** field in the email will be updated with the case title.
6. Compose your email in the space provided.
7. Click **Send Email**.
8. Click **Save as draft**, if you are not ready to send the email yet.
   Use the **Quick Messages** or the **Response Templates** on the contextual side panel to help you compose the email swiftly. For more information, see Use Response templates in an email.

Sending an email notification after reassignment

After you reassign an agent to an HR case, you can send an email to notify the agent.



There are multiple ways to notify other agents that you have assigned them to an HR case.

1. Select 🔍 next to the **Assigned to** field.
2. Select an agent.
3. Click the Open record icon (ⓘ) next to the agent's name.
4. The agent's details are opened in a new tab.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. In the Email field, click the Email icon( ).
6. Add a **Subject** line and compose the mail in the space provided.
7. Click **Send**.

You can also create an email from the ... More icon. For more information, see Sending an email in HR Agent Workspace.

Response template for HR Service Delivery Agent Workspace

Response templates provide you with information on resolving an HR case or how to help an employee making an inquiry.

Response templates help you to be efficient and consistent when working on similar HR cases.

Response templates provide reusable messages. Copy and paste these messages into an email, chat, comments, work notes, or use as talking points when on the phone.

Response template channels

Response template channels segregate your response templates into media categories. You may want responses to have slightly different text in a chat response compared to an email response. Or, you don't want a specific template to appear for chat. The base system provides the following channels:

- Chat
- Email
- Form

> **Note:**
> Form provides text you can use in the comments or work notes on an HR case.

For more information on setting up a response template channel, see Create a response template channel.

For more information on setting up response templates, see Response templates for HR Service Delivery.

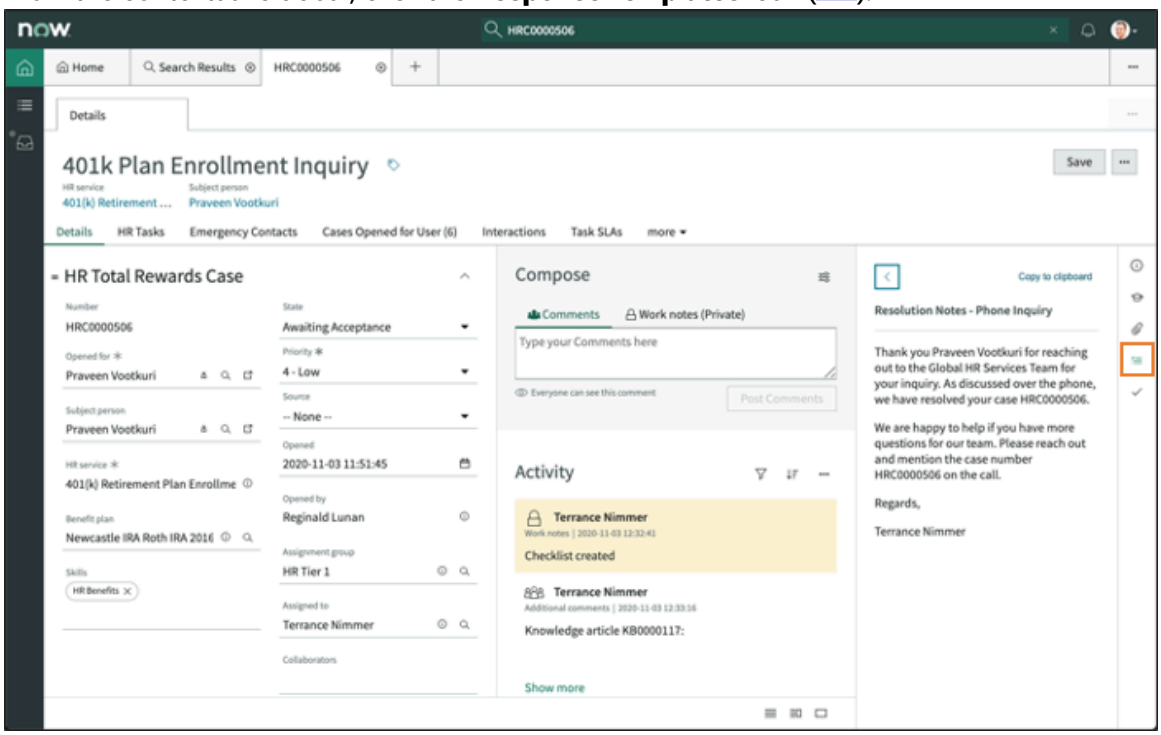
Use Response templates on an HR case



Use response templates as reusable messages that you can copy and paste into the comments or work notes for an HR case.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Click the Lists icon ( ) and select an HR case.
3. From the contextual sidebar, click the **Response Templates** icon ( ).

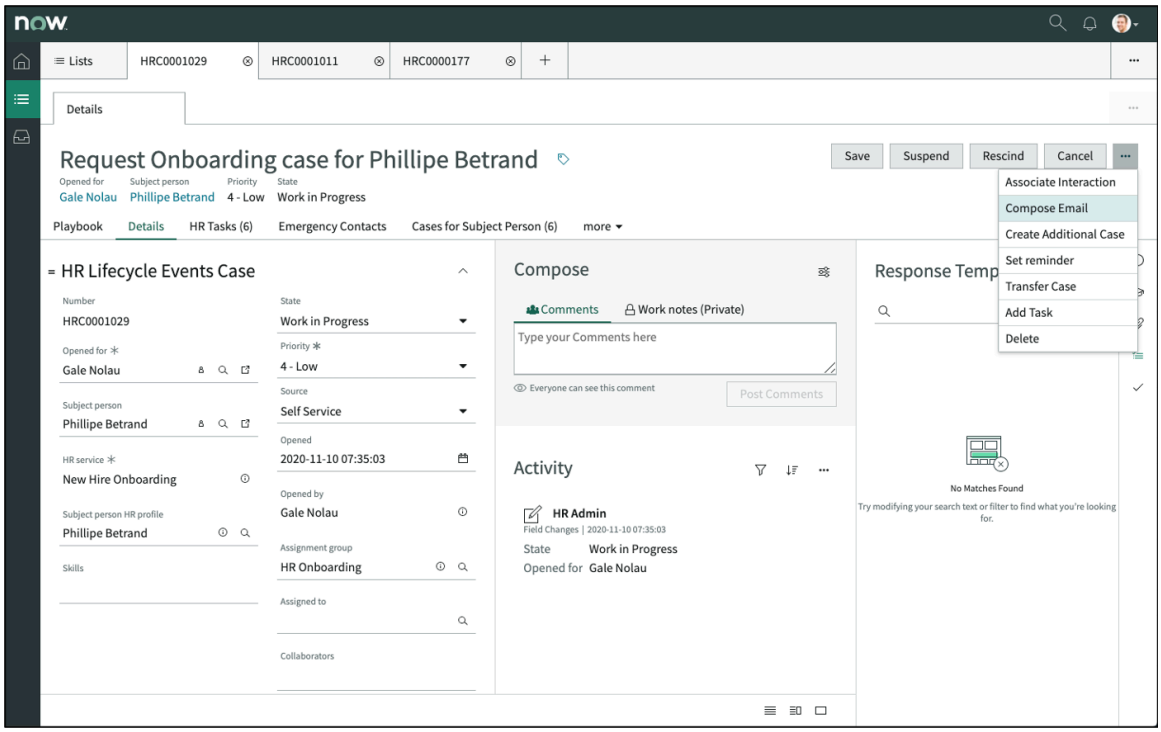
4. Select the Copy to clipboard button to copy all text and paste into the **Comments** or **Work notes** area.

> **Note:**
> Use the space next to the **Search for Record** icon ( ) to search for a specific response template.

5. Click **Post Comments**.

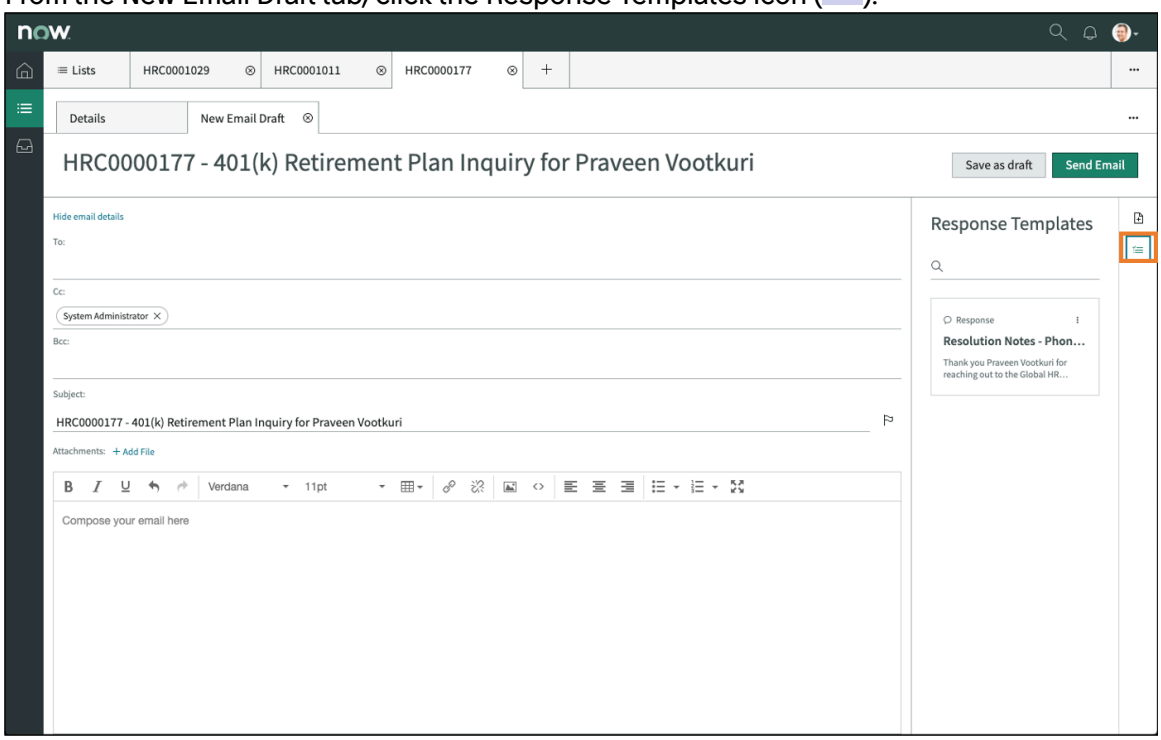
Use Response templates in an email

Use response templates as reusable messages that you can copy and paste into an email.



Before you begin

Role required: sn_hr_core.case_writer



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. From the **Details** tab of an HR case, select the **More Actions** button then select **Compose Email**.

2. From the New Email Draft tab, click the Response Templates icon ( ).

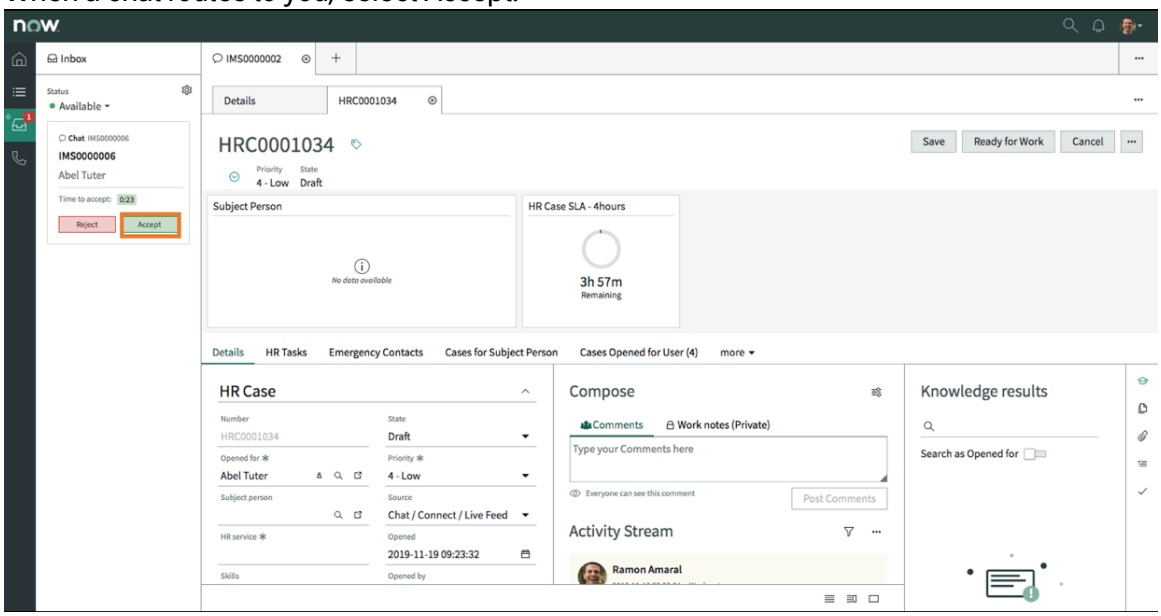
3. Open the response template, copy, and paste the text into the body of the email.
4. Enter the name of the person you are sending the email to in the **To** field.
5. Click **Send Email**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Use Response templates in chat

HR agents can use response templates as reusable messages that you can use related to an interaction.

Before you begin

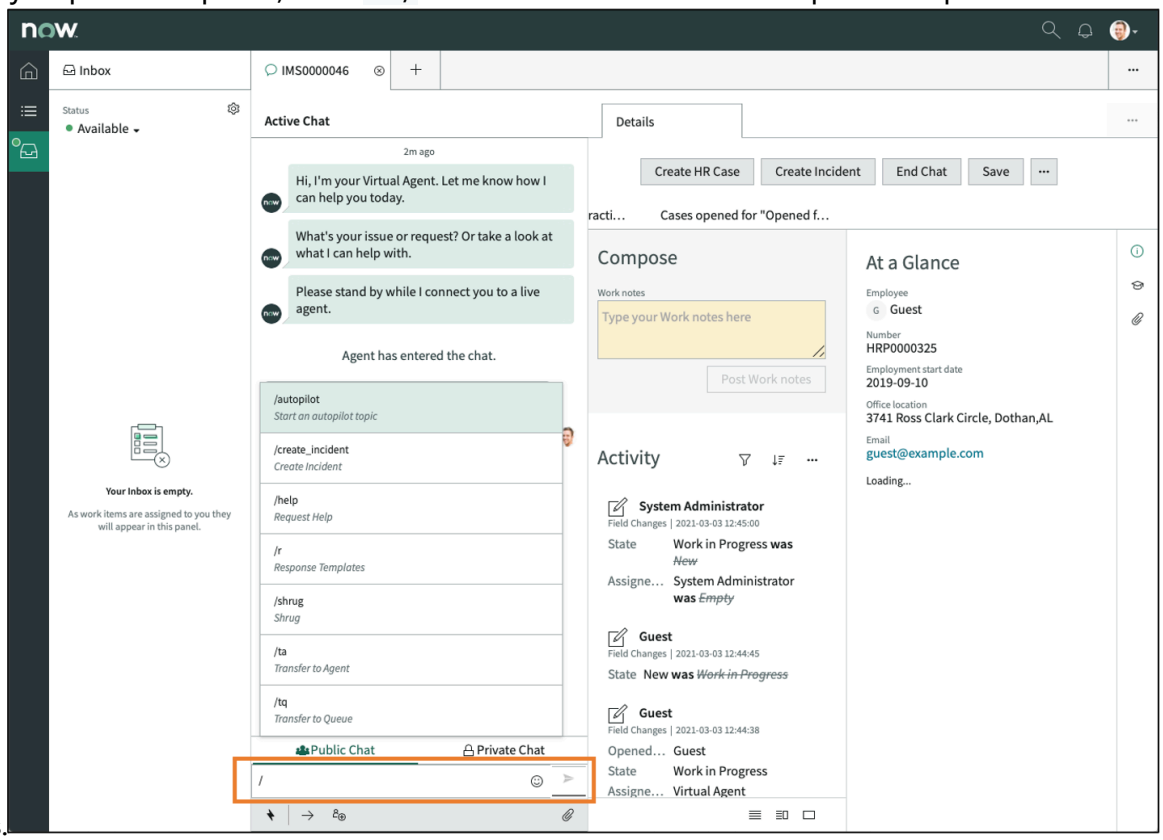


Role required: sn_hr_core.case_writer

The Advanced Work Assignment for HRSD (com.sn_hr_awa) plugin must be activated to use response templates in chat. For more information, see Response templates for HR Service Delivery.

Note:
Currently, chat is only available for Interactions in HR Service Delivery Agent Workspace.

Procedure

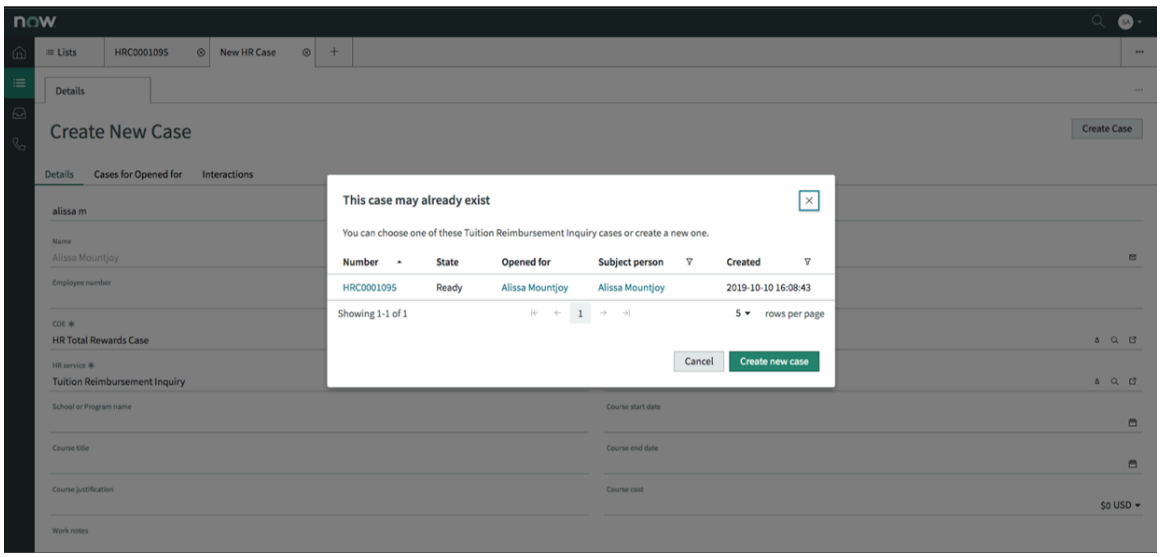


1. Navigate to **HR Case Management HR Agent Workspace**.
2. Ensure your **Inbox** status is set to **Available**.
3. When a chat routes to you, select Accept.

4. An interaction record is automatically created and you can start chatting with the employee.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To display response templates, enter a / in the chat area and a list of response templates appears.



5. Select the response template and the text appears in the chat window.
6. Select the Send button to transmit the message.

Receiving a duplicate case warning with HR Service Delivery Agent Workspace

HR Service Delivery Agent Workspace provides a feature that warns you that there might be a similar case already created.

If there is a similar case for the subject person, HR service, and if the case was created within three days (configurable from HR Administration/Properties), a warning appears.

Note:
For information on the sn_hr_core.duplicate_hr_case_time_out property, see HR properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select **Create new case** or **Cancel**.

Using the More icon in HR Service Delivery Agent Workspace

You can use the more icon from HR Service Delivery Agent Workspace to perform many duties related to working an HR case.

When working a case, select the more icon in the far, upper right.

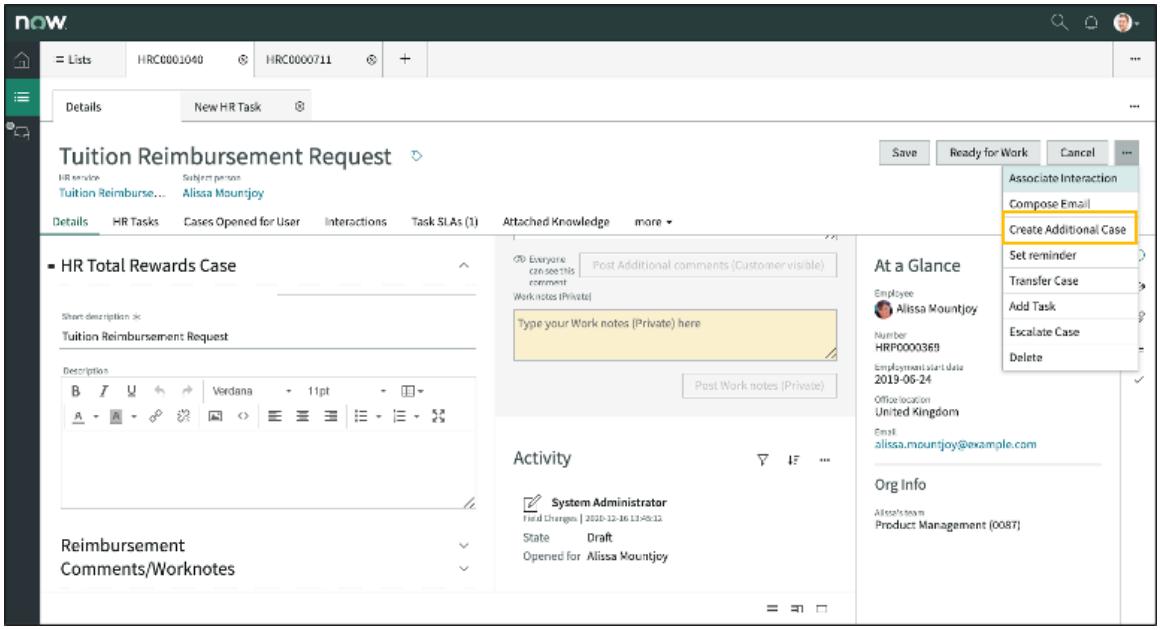
From here, you can:

- Associate Interaction: Associate the displayed case with an interaction. For more information, see Using interactions in HR Service Delivery Agent Workspace.
- Compose Email: Send an email from an HR case. The **New Email Draft** tab opens to compose and send the email. The **To** field is automatically updated with the Subject person's email ID. Agent can retain the email or add a new email. For more information, see Sending an email in HR Agent Workspace.
- Create Additional Case: Create another HR case without leaving the case you are viewing or working on. For more information, see Creating a case from a case or HR profile.
- Set reminder: Create a reminder to ensure followup by a specific date. For more information, see Create a reminder in HR Service Delivery Agent Workspace.
- Transfer Case: Reclassify a case for another HR service. For more information, see Transfer a case using HR Service Delivery Agent Workspace.
- Add Task: Add an HR task to the case. For more information, see Create a task for a case using HR Service Delivery Agent Workspace.
- Escalate Case: Assign hot or important cases to another tier or agent with more expertise. For more information, see Escalating a case in HR Service Delivery Agent Workspace.
- Delete: Delete the case you are working on.

Creating a case from a case or HR profile

From HR Service Delivery Agent Workspace, you can create additional cases from either an existing case or from a user's HR profile.

A convenient and time saving feature of HR Service Delivery Agent Workspace is having everything you need as an HR agent in one place.



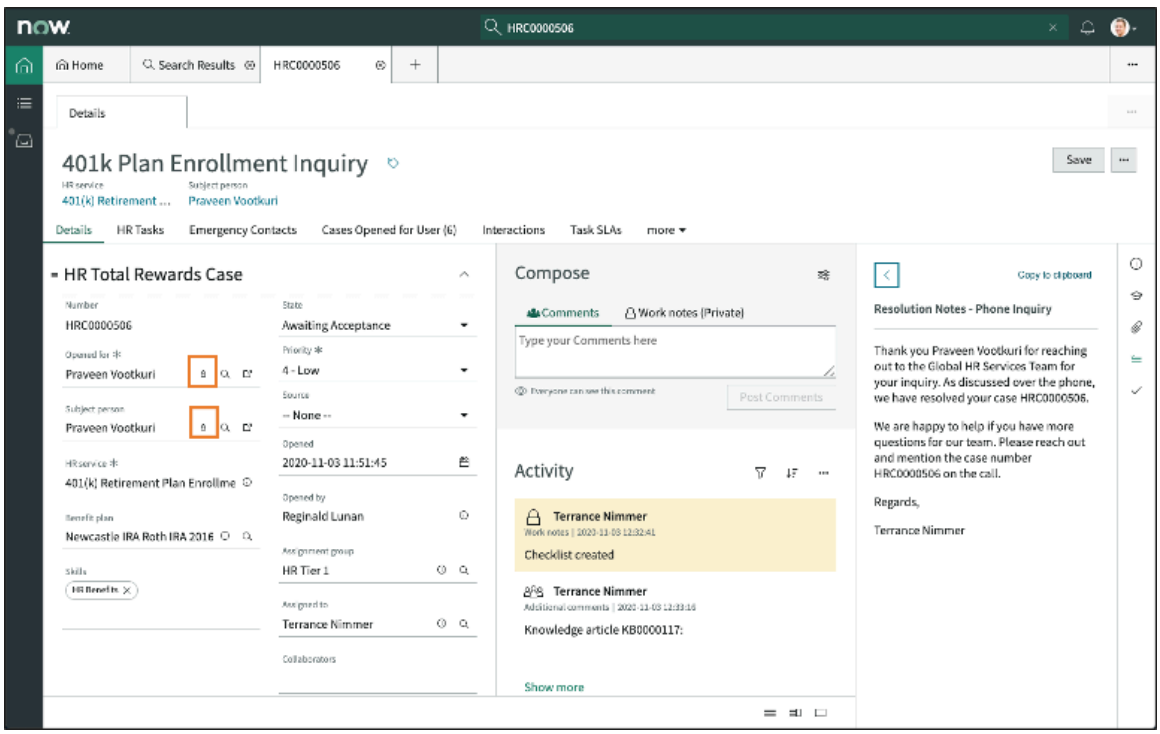
You don't have to leave a case you are working on and try to find it later. You can create another HR case from:

- An HR case you are viewing.
- From an HR profile that displays on a case you are viewing.

From an open case

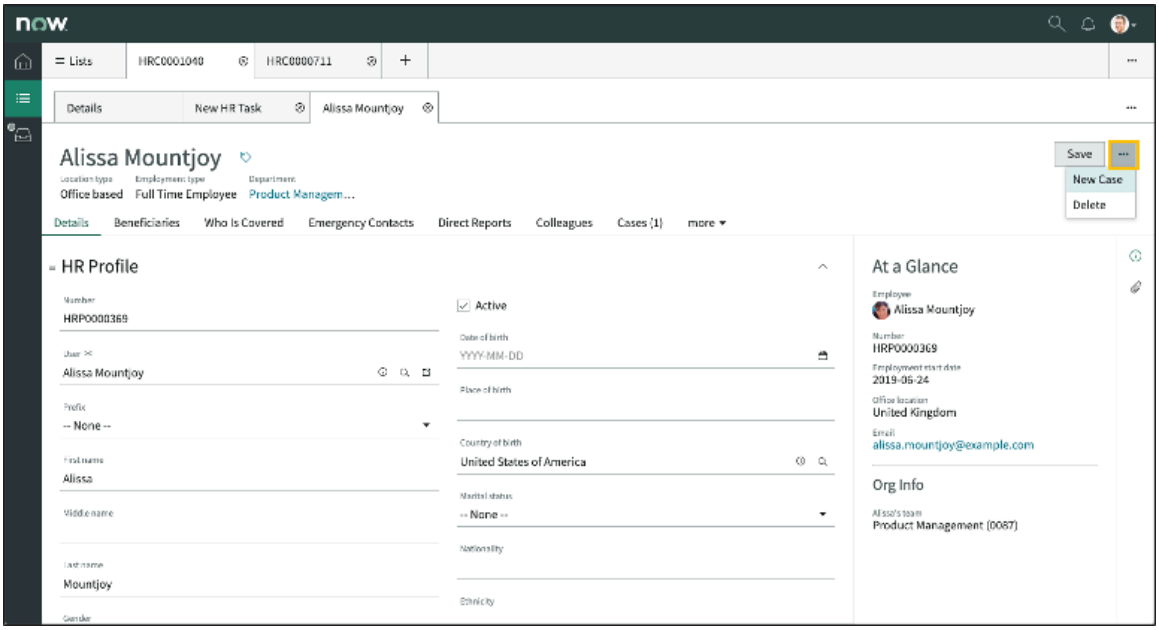
Use this feature when you want to create a different HR case for the employee that already appears in an existing case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Select the ··· more icon.

Select **Create Additional Case**. The employee name from the first case pre-populates in the new case.



From an HR profile

When viewing an HR case, you can create another case from the Opened for or Subject person's HR profile.

Select next to the Subject person.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Select the ••• more icon.

Note:
The At-a-glance panel displays. See At a Glance panel.

Select **New Case**.

Transfer a case using HR Service Delivery Agent Workspace

Transfer an HR case from one HR service to a different HR service.

Before you begin
Role required: sn_hr_core.case_writer

About this task
Many cases are created as a General Inquiry case. After researching the employee's needs, you can transfer an existing case to a different HR service.
For information on configuring HR case transfer or classification properties, see Transfer an HR case.

You can complete this task in the Classic HR Service Delivery Agent Workspace or the configurable Agent Workspace for HR Case Management.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Find the case you want to transfer.
   For more information on finding an HR case, see Using the HR Service Delivery Agent Workspace.
3. Select the ••• more icon.
4. Select **Transfer Case**.
5. From **Transfer type**:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Transfer with existing case number**: The HR case number does not change, links redirect with new case, and work notes transfer to new case.
- **Transfer to a new case number**: The HR case number changes, links do not redirect, and work notes do not transfer. Both HR case numbers appear on the HR case for reference. The original case state changes to **Closed Complete** and cancels.

6. From **New HR Service**, select the HR service you want to assign to your original case.
7. Select **OK**.

The current case and its child tasks close. When you transfer an HR case from one HR service to another, some field values do not transfer to the new case.

Note:
Priority transfers from the original case and does not override the HR template for the new HR case.

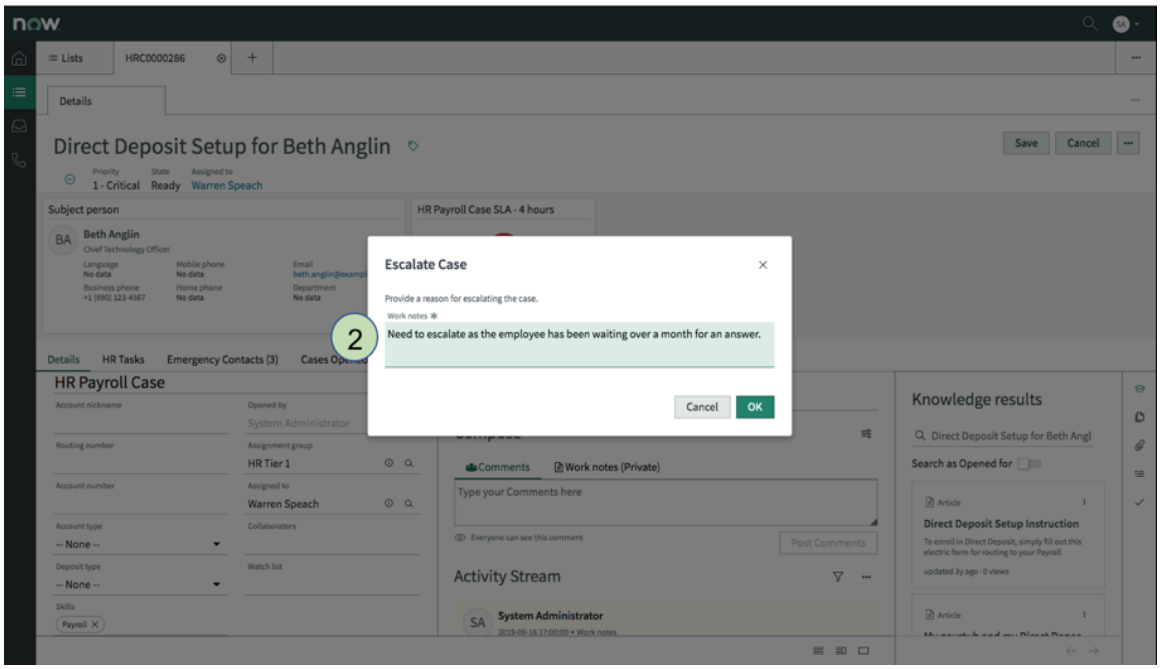
The subject person receives a notification email with the closed case and transferred case information. Replies to the email appear in the Comments section of the HR case. If the subject person replies to the email associated with the closed case, the reply appears in the comments for both the closed and transferred cases.

Note:
If the sn_hr_core.restrict_guest_email system property is False, text from an email appears in the Work notes field when the employee is responding from a personal email account. False is the default property.

See Email setup.

Escalating a case in HR Service Delivery Agent Workspace

Escalate an HR case when you are unable to resolve an issue and must amplify the importance of a case.



Depending on how you have implemented matching rules determines what group and agent the case is escalated to. For more information, see Assignment and matching rules in HR and Add or modify escalation rules.

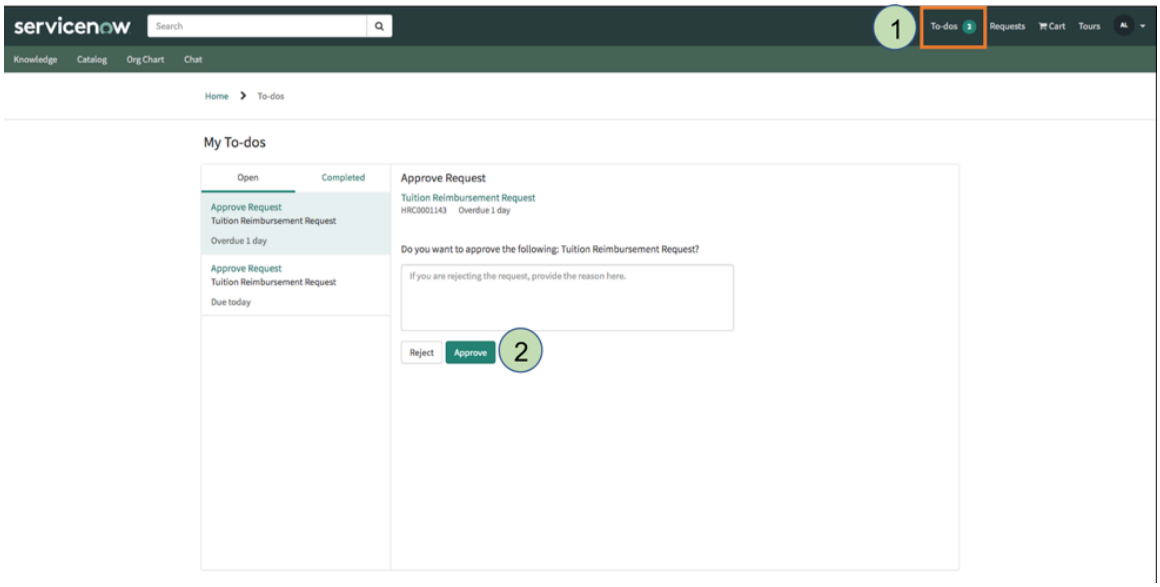
Agent Workspace case form callout description

Number	Description
1	Select the ··· more icon. From here, select **Escalate Case**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agent Workspace case form callout description

Number	Description
2	Enter an explanation on why you are escalating the case. Select **OK**. The form refreshes and is now assigned to the next tier assignment group.

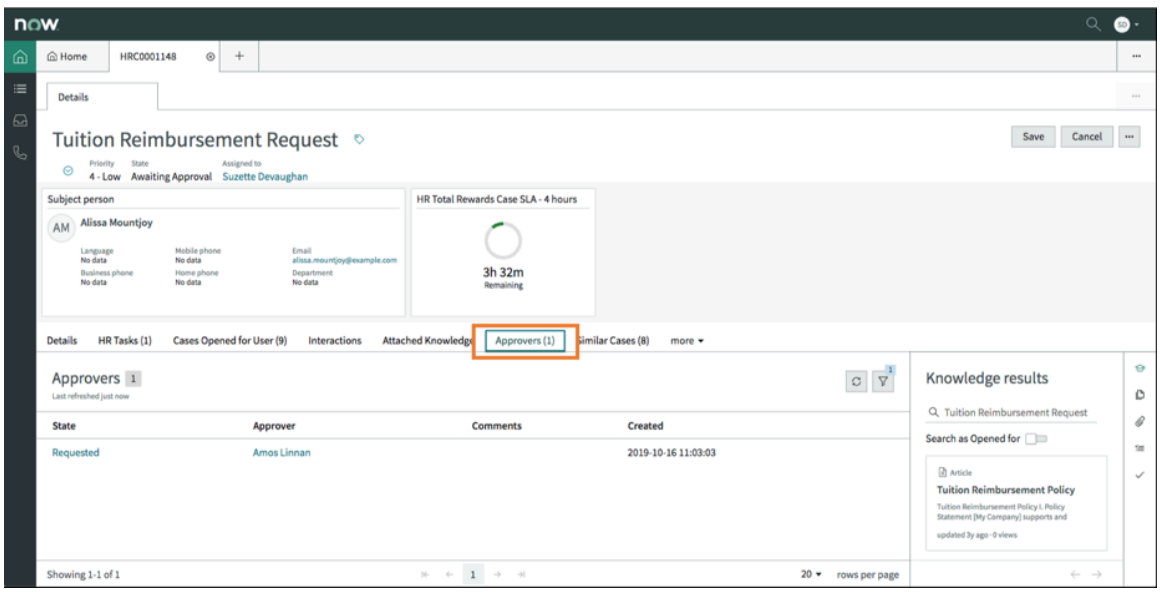


Adding or substituting approvers to a case in HR Service Delivery Agent Workspace

HR cases can be set up to require approvals before it can progress to completion.

The HR service configures actions related to approvals. For more information on HR service configuration, see Configure an HR service.

When a case requires an approver, the request for approval appears in the approver's Employee Center or portal under To-dos.

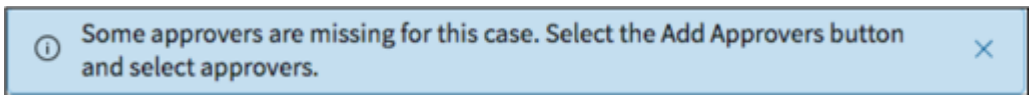


© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agent Workspace case form callout descriptions

Number	Description
1	Select To-dos.
2	To approve, select **Approve**. To reject, enter a reason and select **Reject**.

In HR Service Delivery Agent Workspace, the child tab **Approvers** lists all requested approvers.



Multiple approvers required

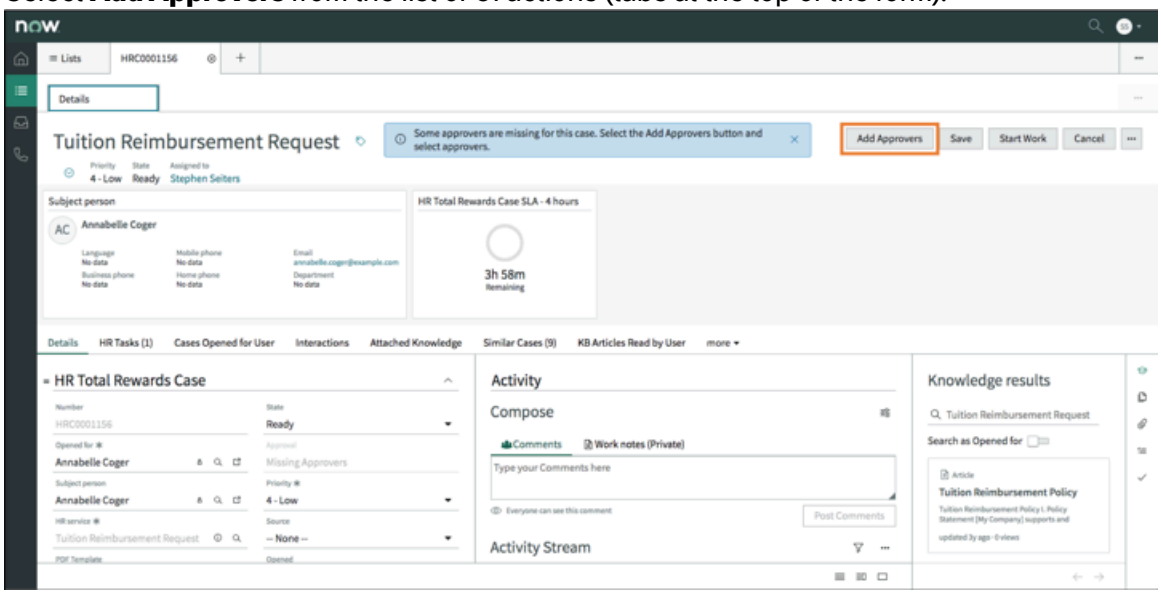
HR services has an optional configuration that requires multiple approvers. When configuring an HR service, select approvers from the fields on the HR case. For example, select Subject person manager as an approver. Using fields from a case provides maximum flexibility when assigning an approver. By assigning an approver from the case, it's possible an approver cannot be found. For example:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Subject person manager is the approver.
- The Subject person's HR profile does not contain a manager.
- Or, the Subject person's manager recently left the company.

When an approver is missing, the following message appears:

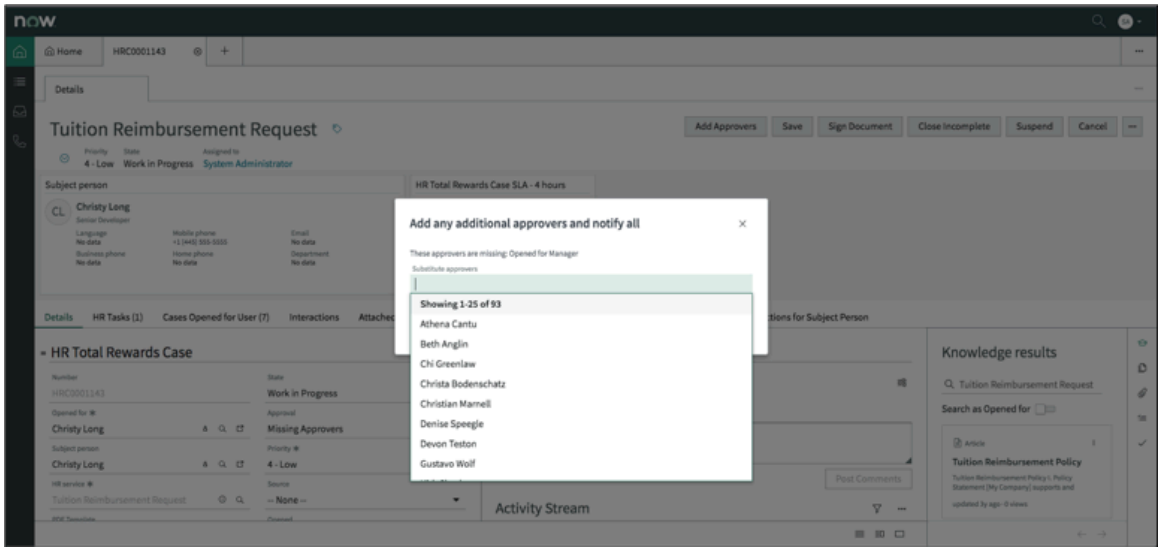
Add or substitute an approver to a case in HR Service Delivery Agent Workspace



Using HR Service Delivery Agent Workspace you can add an approver or substitute missing approvers for cases that require approval.

Before you begin

Role required: sn_hr_core.case_writer



Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Locate and open an HR case that requires approvers.
3. Select **Add Approvers** from the list of UI actions (tabs at the top of the form).

4. Select replacement approvers or add new ones.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **OK**.
6. Select **Save**.

Creating reusable templates in HR Service Delivery Agent Workspace

Create consistent recurring documents by developing templates using Document Templates and use them in a generic workflow in HR Service Delivery Agent Workspace.

Install the Document Templates plugin to use this feature.

Use templates for communication letters to employees like verification letters or offer letters. Associating templates with an HR case and moving it to an appropriate working status, like Work in progress, retrieves the data from the case and integrates it with the template. For more information, see Configure an HTML document template.

Agents can use templates to generate document tasks and get signoffs from the stakeholders. After all the participants sign the template, the document is created. For more information, see Create and sign document tasks from document tasks in Agent Workspace.

Note:
Templates of type HTML are only supported to be used for the Document templates.

Create and sign document tasks from document tasks in Agent Workspace

Create document tasks directly in the HR Service Delivery Agent Workspace using document templates and sign off on them from Agent Workspace.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select an HR case for the document task.
   In the **HR service** field, make sure that an HR service that has document template is selected. For example, request an employment verification letter or generate an offer letter. For more information, see Create a case in Agent Workspace for HR Case Management.
3. Click the **Start Work** button.
4. Select the **Preview document** option.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The document is displayed with options to cancel, edit, generate or initiate document task. For more information, seeDocument tasks generation in Document Templates.

5. Select the **Initiate document task** button.
   Document tasks that are part of the selected HR case are generated and listed in the **Document tasks** tab. The participants will receive document tasks as configured in the template
6. Select the document task.
7. In the document task record, sign off on the document.

   a. Select the **Sign Document** button.

   b. In the dialog box that appears, sign the document.

   > **Note:**
   > If the **Signing type** in the template is Adobe Acrobat Sign or Docusign, after clicking **Sign Document**, the document opens in a new tab to enable you to use the associated signing type.

   c. Click **Sign** to complete the signing process.
   The status of the document task is automatically set to **Closed**.

Result
After all the documents associated with the case are closed, the document is generated and listed under **Attachments**.

Employee Document Management for HR Service Delivery Agent Workspace

Employee Document Management provides storage space, a filing system, the ability to easily retrieve documents, defining who can view sensitive documents, and when to purge documents.

For more information about Employee Document Management, see Employee Document Management.

Create or upload employee documents using HR Service Delivery Agent Workspace

Create or upload employee documents to an HR case using the HR Service Delivery Agent Workspace.

Before you begin
Role required: sn_hr_ef.document_writer

Procedure

1. Navigate to **HR Agent Workspace** > **Lists** > **Employee Documents** > **All**.
   Alternatively, you can also create an employee document from **HR Agent Workspace** > **Lists** > **HR Profiles**.
2. Click **New**.
3. On the form, fill in the fields.

Employee Document form

Field	Description
Employee Document	Employee document to upload.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Click **Browse** to upload an employee document. By default, the maximum size of a document allowed is 30 MB. The default can be changed from the**Maximum file upload size in megabytes** field in Employee Document Properties. For more information, see Properties for Employee Document Management application. After selecting a document, the read-only fields show the file size, file format, created on, and created by. The viewer within the UI only supports viewing .pdf documents. Other types of documents can be downloaded and then viewed. For optimal search results, do not use dashes (-) in the name of the document. Using full words separated by spaces or underbars provides better search results. Check **Yes** in the **Enable Document Viewer to preview pdf documents** in the Employee Documents property to view .pdf documents. **Note:** FedRAMP, on-premise customers, mobile devices, customers using edge encryption, or encryption support does not support viewing documents.
Description	Description of the employee document.
Employee	Name of the employee the document is associated with.
Document type	Document type associated with the employee document. Document types provide categorization, security, and retention policies.
HR case	HR case number the employee document is associated with when moved from an HR case.
Purge hold	Purge hold status of a document. ○ Pending purge authorization: Awaiting authorization for document purging. ○ Purge Approved: Document has authorization to schedule purging.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Purged Rejected: Document did not receive purge authorization. **Important:** Document type's security policy determines purge authorization. The following roles have permission to change purge authorization: ▪ EF admin [sn_hr_ef.admin] ▪ Employee File Management Manager [sn_hr_ef.manager]

4. Click **Save** to create the employee document record.
   The **Audit Trail** tab appears.

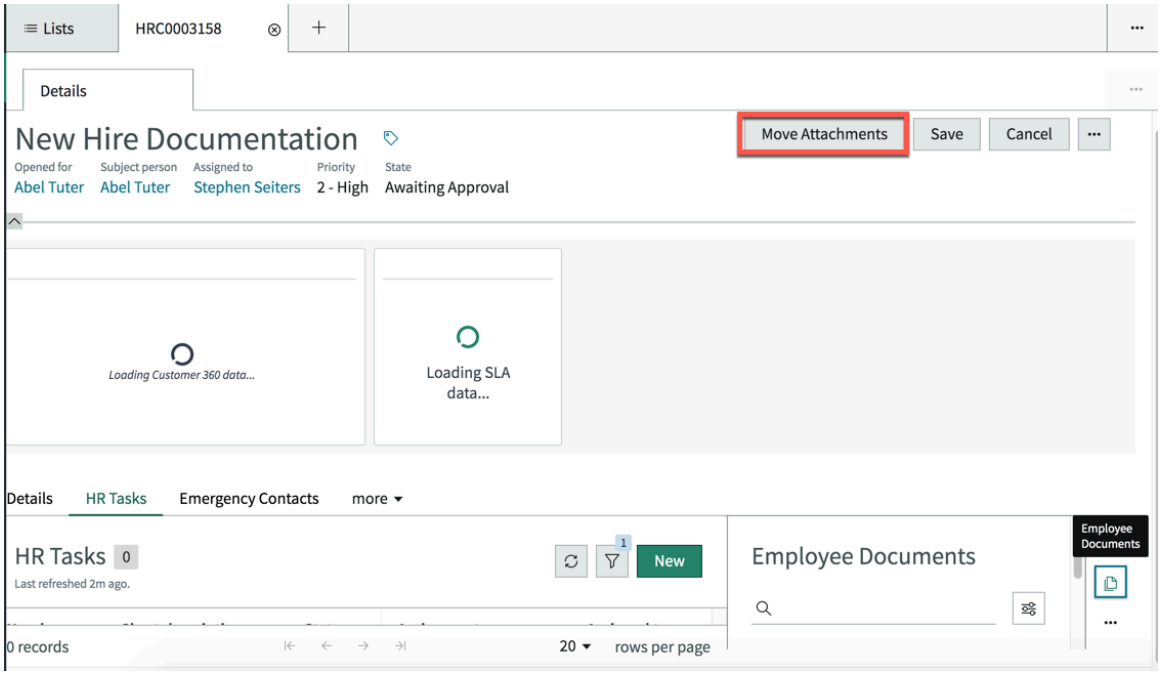
   Provides view of all actions for an employee document from creation or uploaded to the time it is purged.

Move employee documents using HR Service Delivery Agent Workspace

Move employee documents from a case in HR Service Delivery Agent Workspace to employee document repository. The employee document repository provides a central repository for quick and easy identification of documents using different sorting features.

Before you begin

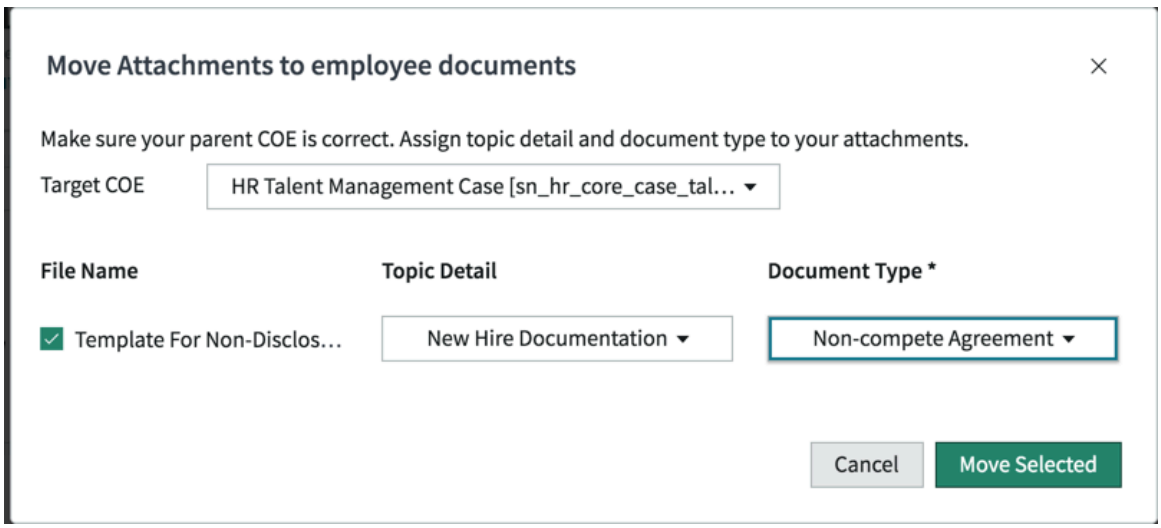
Role required: sn_hr_ef.document_writer, sn_hr_core.case_writer



Procedure

1. Navigate to **HR Agent Workspace** > **Lists** > **All HR Cases** > **All**.
2. Select a case that has employee documents attached.

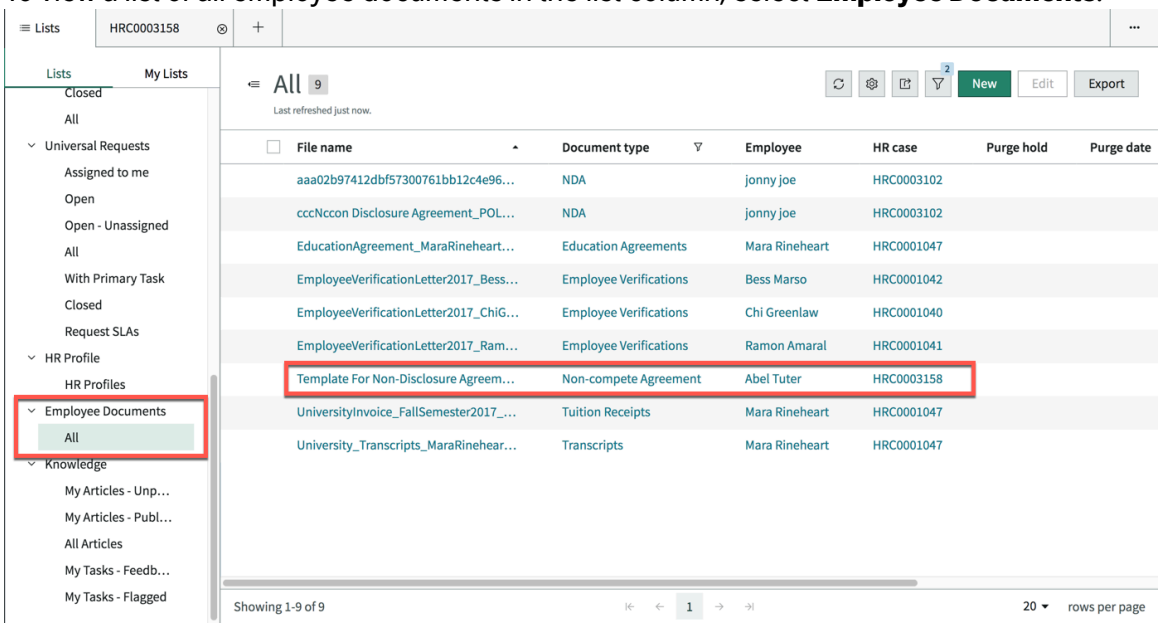
   Note:
   From the list view, there is no way to identify HR cases with employee documents attached. To locate an HR case, you need the HR case number or the Opened for person.



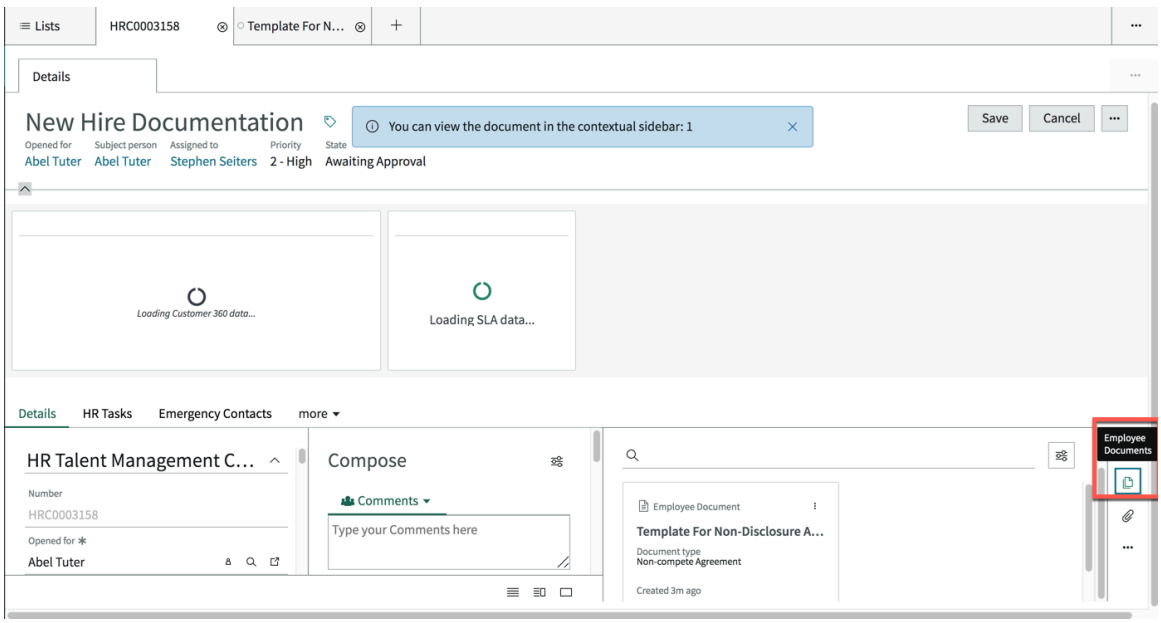
3. Click **Move Attachments**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the Move Attachments to Employee documents window:
   a. Select the check box next to the documents you want to move.
   b. Select the **Document Type** for each document. The document type determines categorization, who can access it, and the retention policy. Create a document type if none appears for the associated topic detail. Creating a document type ensures correct categorization.
   c. Click **Move Selected**.



> **Note:**
> The **Target COE** and **Topic Detail** fields can be modified only if the document has been added under the wrong type of HR case.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Result

- The employee documents move from the HR case to the employee document repository.
- To view a list of all employee documents in the list column, select **Employee Documents**.

- The moved attachments appears in the contextual side panel under the employee documents icon within the case.

Machine learning solutions for HR Service Delivery Agent Workspace

Use machine learning solutions to auto determine the correct HR service and assignment group for cases in HR Service Delivery Agent Workspace.

Auto determination of HR service in HR Service Delivery Agent Workspace

Auto determine the correct HR service for a case in HR Service Delivery Agent Workspace. Enable an HR agent to transfer the case to the appropriate HR service rather than having to spend significant time manually triaging cases to appropriate HR services.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
This feature is available with the HR Professional and HR Enterprise packages when you activate the HR Service Delivery Agent Workspace and Predictive Intelligence applications. If you do not want to use this feature, disable the *sn_hr_core.case_auto_categorization* system property.

After you create the case, the HR Case Classification solution definition auto determines the HR service based on the short description of the case. The appropriate HR service for the case is displayed in a banner.

Important:
The banner is not displayed if:

- you have logged the case under the correct HR service
- you have manually transferred or auto-transferred the case
- case is not in the ready or draft state

Auto training the predictive model

The HR Case Classification solution definition is configured and the predictive model is auto trained only when all the following conditions are met.

- The Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- There are 10000 records of HR case study matching the filters defined in the solution definition.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

Note:
Auto training does not happen if any one of the preceding conditions is not met. In such a case, Manually train the HR predictive model. Navigate to the **HR AI configuration** module, open the HR Case Classification record, and map the manually configured solution definition.

Auto determination of assignment group in HR Service Delivery Agent Workspace

Auto determine the assignment group for a case in HR Service Delivery Agent Workspace. Enable an HR agent to transfer the case to the correct assignment group rather than having to spend significant time manually identifying groups for the HR cases.

Important:
This feature is available with the HR Professional and HR Enterprise packages when you activate HR Service Delivery Agent Workspace and Predictive Intelligence applications. If you do not want to use this feature, disable the *sn_hr_core.case_auto_assignment* system property.

After a case is created, the Auto Assignment Group for HR Cases solution definition auto determines the assignment group from the Short description, Description, Opened for Title, Opened for Location Name, HR service of the case. The appropriate assignment group for the case is displayed in a banner.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Important:
The banner is not displayed if:

- You have manually assigned the case to an assignment group.
- The assignment group is not identified for the case.
- The case is not in the ready or draft state.

Auto training the predictive model

By default the Auto Assignment Group for HR Cases solution definition is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- There are 10000 records of HR case study matching the filters defined in the solution definition.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

Note:
Auto training does not happen if any one of the preceding conditions is not met. In such a case, Manually train the HR predictive model. Navigate to the **HR AI configuration** module, open the Case Assignment group record, and map the manually configured solution definition.

Similar closed cases in HR Service Delivery Agent Workspace

Help an HR agent resolve the current case by displaying similar closed cases.

Important:
This feature is available with the HR Professional and HR Enterprise packages when you activate HR Service Delivery Agent Workspace and Predictive Intelligence applications.

Similar Closed HR Cases

When the Similar Closed HR Cases (ml_sn_sn_hr_core_global_similar_closed_hr_cases) is configured and the predictive model is trained:

- Similar closed cases are displayed in **Similar Closed HR Cases** in the Related Search Results section. If there are three or more similar closed HR cases whose COE matches that of the current case, then the case with the highest confidence is displayed as a recommended HR case.
- If there is no recommended HR Case, then the knowledge article that is attached to more than three similar closed cases is displayed as a recommended article. The recommended article can be attached to the current HR case.

Auto training the predictive model

The Similar Closed HR Cases (ml_sn_sn_hr_core_global_similar_closed_hr_cases) is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

Using the deep link feature in HR Service Delivery Agent Workspace

Deep links are a way to access information from outside of HR Service Delivery Agent Workspace.

Use deep links to access information that is not readily available within HR Service Delivery Agent Workspace. For example, use deep links to access a third-party application that you use frequently.

For more information on configuring deep links, see Link generator for HR Service Delivery.

E-signature in HR Service Delivery Agent Workspace

When working on an HR case or HR task, you can use e-signature to sign documents that require signatures.

When an employee creates a case requesting an employment verification letter, you can:

- Preview the document.
- Use e-signature to sign it.
- Generate the document.

Previewing a document ensures you sign the correct document. This step is useful if you have multiple employment verification letters.

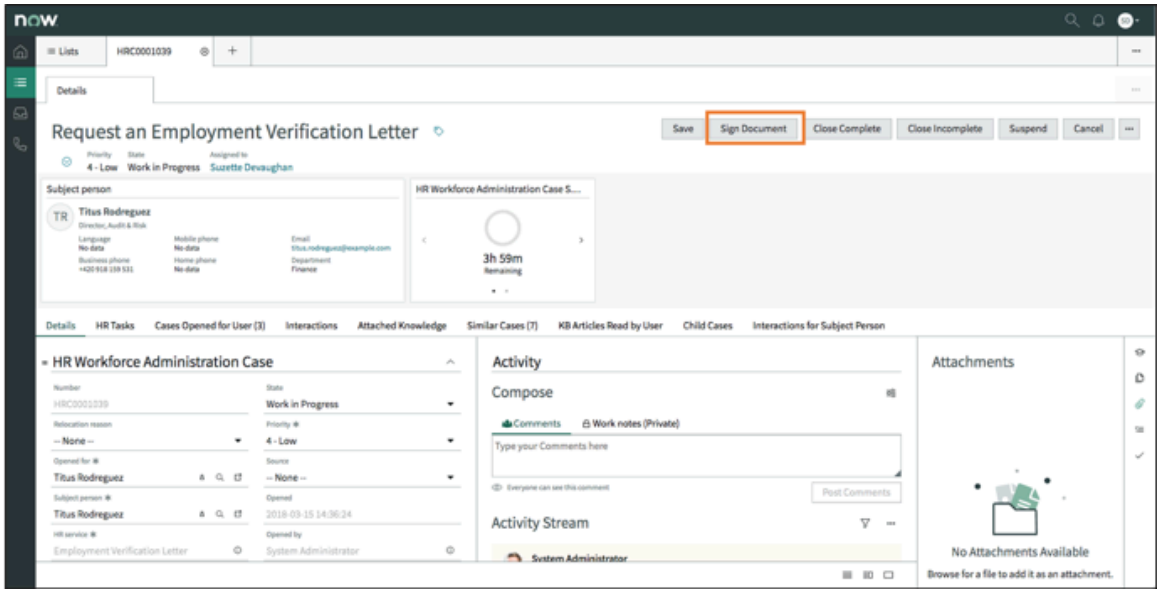
E-signature provides multiple methods to sign. You can choose to type your name or use your mouse to draw your signature. For more information, see Sign and generate a document in HR Service Delivery Agent Workspace.

You can optionally require a user to check an acknowledgment box before the signature is accepted.

Generating the document combines the document template with your signature and creates an attachment to the case. If you use Employee Document Management, you can move the attachment to your document repository for storage.

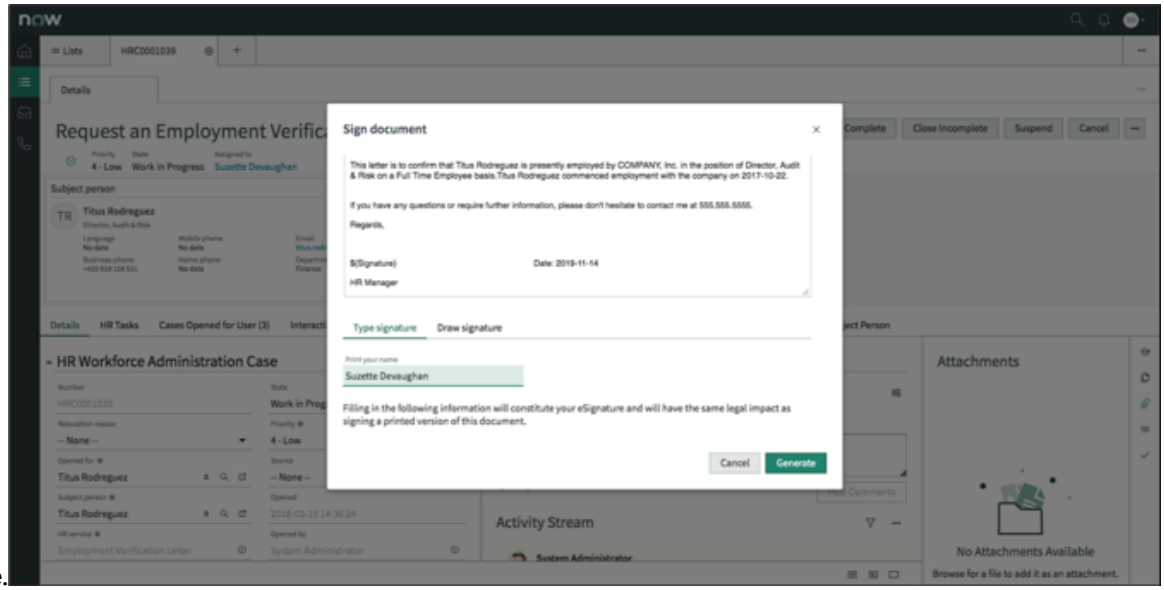
Note:
For more information, see Configure an e-signature template.

Sign and generate a document in HR Service Delivery Agent Workspace



Depending on the case or situation, you can electronically sign a document.

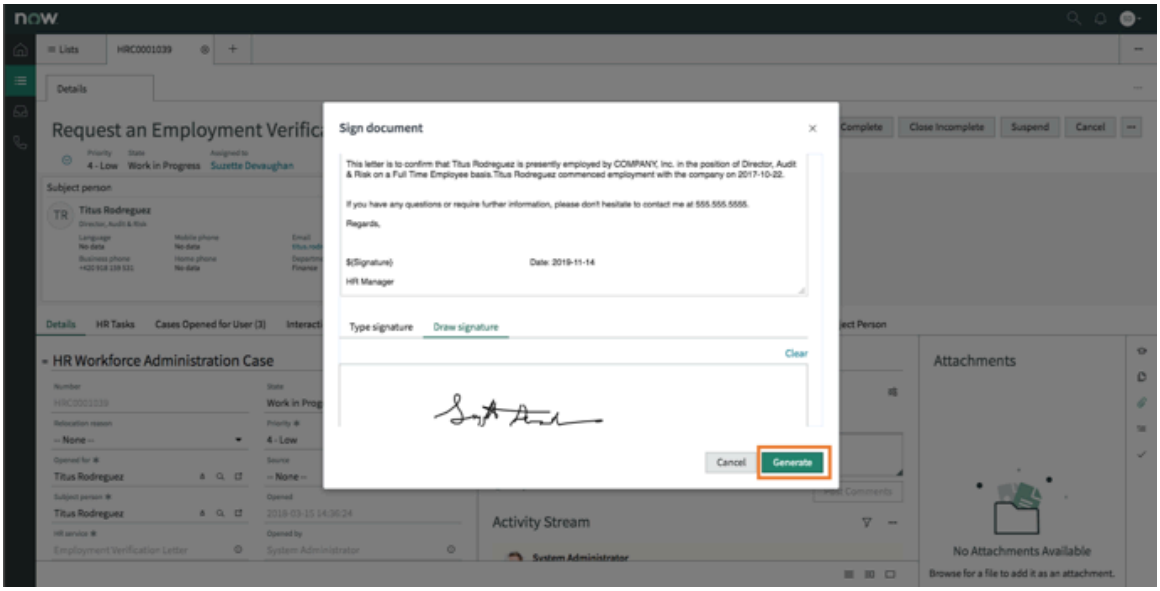
Before you begin
Role required: sn_hr_core.case_writer



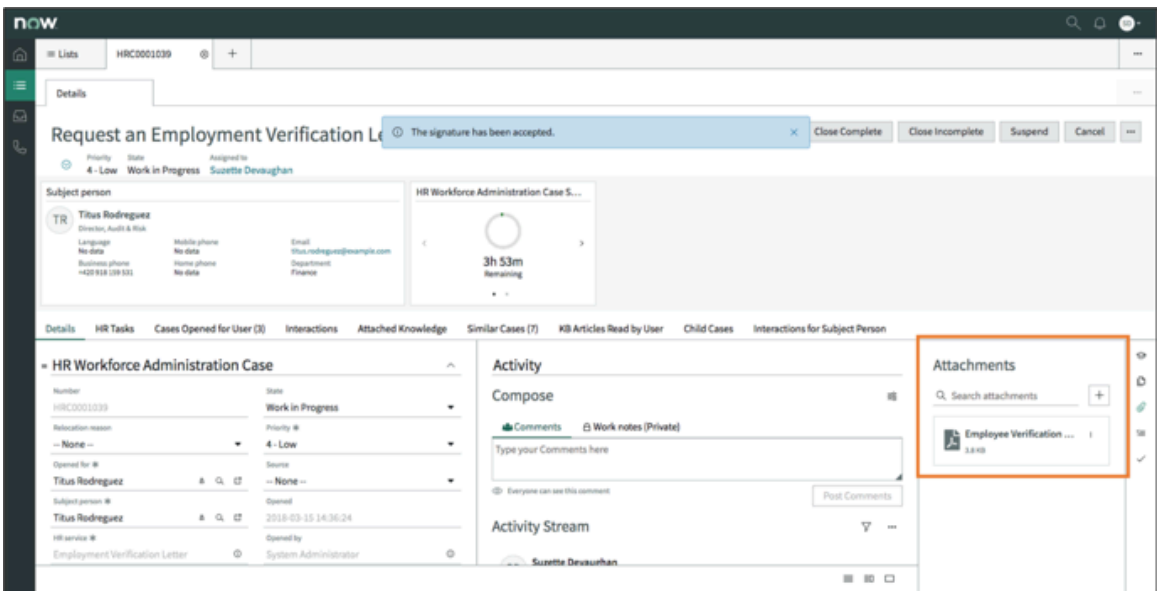
Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Locate and open an HR case.
   Ensure that the state of the case is **Work in Progress**.
3. Select the **Sign Document** button.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



4. Preview the document.
   Ensure it is the correct document for the case.



5. You have two choices on how to sign the document.
   a. Select **Type signature** to type your signature.
   b. Or, select **Draw signature** to draw your signature using your mouse.
6. Select Generate to attach your signature to the document.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Select the Attachments icon.

The document moves to Attachments in the contextual side panel. If your company uses Employee Document Management (EDM), you can move the document to the EDM repository. For more information on EDM, see Create or upload employee documents using HR Service Delivery Agent Workspace.

Using chat in HR Service Delivery Agent Workspace

Agent chat for HR Service Delivery Agent Workspace enables you to ask questions and receive information through live or virtual agent chat.

Activation

Ensure you have activated the Agent Chat [com.glide.interaction.awa] plugin prior to using this feature. For more information on setting up chat, see Agent Workspace chat.

HR groups

Ensure that your HR agents are part of an HR group or subgroup. Having subgroups helps to ensure HR agents with the correct skills and knowledge pair up when an employee initiates a chat.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For example, an employee initiates a chat requesting information about your company's benefits. Having a benefits subgroup with agents that specialize in your company's benefits ensures the employee's chat is directed to the correct agents.

For more information about HR groups, see Manage HR Groups.

Interaction records

Agent chat automatically creates interaction records. When an employee initiates a chat with an HR agent, an Interaction case is automatically created.

Quick actions

Using quick actions, you can:

- Create an HR case.
- Show applicable response templates.
- Transfer chat to another agent.
- Transfer chat to another queue.

Virtual agent

Automating chat can enhance the employee experience by addressing queries immediately. At any time during a virtual chat, the employee can request to interact with a live HR agent.

For more information on virtual agent, see Virtual Agent for HR Service Delivery.

Working from the agent inbox in HR Service Delivery Agent Workspace

Use the agent inbox to manage your incoming work, such as chats, HR cases, and interactions.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select the  inbox icon.
3. From **Status**, select **Available**.
4. When a chat comes through the chat queue, select **Accept**.
5. From the active chat panel, you can start chatting.
6. Select the  quick action icon.
   Or enter a back slash (/) in the chat area.
7. Select a quick action to quickly create an HR case, show related response templates, transfer chat to another agent, or transfer the chat to another queue.

SMS conversations in HR Service Delivery Agent Workspace

Using the Conversational SMS service channel app, available on the ServiceNow Store, HR agents can provide support for long-running SMS conversations via HR Service Delivery Agent Workspace. Requesters can initiate HR support conversations through SMS.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

SMS support conversations

SMS support conversations can run long. For this reason, HR Service Delivery workspace agents need the ability to track ongoing conversations on the HR SMS service channel. HR Service Delivery workspace agents can initiate or continue SMS conversations and also accept SMS work items from the HR Service Delivery Agent Workspace Inbox.

For SMS support conversations, in the Workspace Chat panel, when the interaction type is **Messaging**, an interaction sub-type of **SMS** is indicated as **Active SMS**.

For complete details about SMS support conversations, associated service channels, requestor initiated, and agent initiated SMS conversations, refer to Conversational SMS service channel.

SMS support conversations for HR Service Delivery agents

HR agents can access new SMS messaging interactions, as well as access ongoing SMS messaging conversations. Agents can switch from an in-progress messaging interaction, such as a chat, to a new SMS messaging interaction.

Advanced Work Assignment HR agents and managers can end an SMS messaging conversation. HR agents with the awa_agent role can end an active SMS messaging conversation assigned to them using the **End conversation** action button. Users with the awa_manager role can end the conversation even when it is not assigned to them on the interaction. When an agent ends the conversation, a confirmation to close the interaction appears.

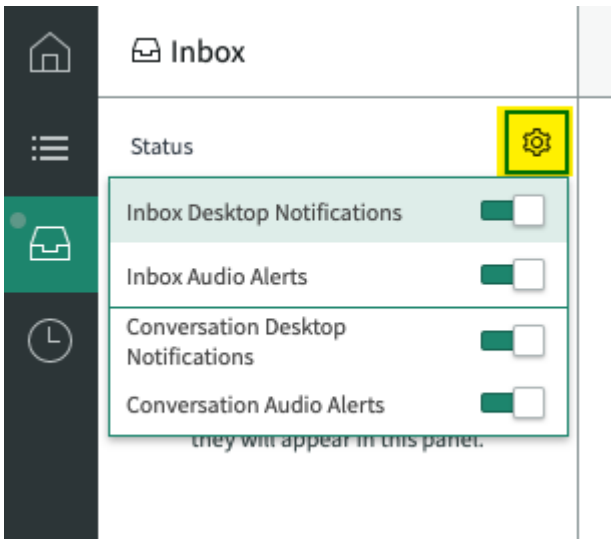
HR AWA agents and managers can switch from an in-progress messaging interaction to a new messaging conversation. Switching to a new messaging interaction does not close the original messaging interaction, but enables agents to carry on multiple messaging conversations. AWA agents can access ongoing messaging conversations when the HR AWA agents and managers have access to ongoing messaging conversations and are notified when there is a new message on any long running assigned interactions. When an ongoing messaging conversation has a new message that needs attention, an icon is displayed after the Inbox icon in HR Service Delivery Workspace. A new tab carries a counter badge that indicates the number of messaging conversations that have unread messages. AWA agents and managers can view cards for messaging conversations.

HR AWA agents and managers can view a list of all **In Progress** or **On Hold Messaging Work Items** assigned to other agents. The list indicates the service channel, interaction number, and last updated date. Agents can click the list item to open it in a Workspace tab. Agents can open a messaging interaction in a sub tab and, if the interaction is active, view the chat panel on the interaction record. Agents can type messages in the chat panel to have an SMS conversation with an employee.

Quick actions for agents

Access existing chat-based quick actions for SMS messaging. For details, refer to Agent Chat.

Conversation desktop notifications



HR agents can set preferences to receive conversation desktop notifications, audio alerts, and Google Chrome browser toasts. Audio alerts and desktop notifications occur when agents opt

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

in to receiving **Conversation Audio Alerts** and **Conversation Desktop Notifications** via the HR Service Delivery Agent Workspace Inbox settings.

Once opted in, agents hear an audio alert when a new message occurs on a conversation that is currently open in a workspace tab, but not in focus. Audio alerts also notify when a long running conversation is assigned to an agent, but is not currently open in a workspace tab. Agents decide if they want to enable these alerts and notifications.

Use the edit menu in the HR Service Delivery Agent Workspace Inbox to enable alerts and notifications.

Agents can receive Google Chrome browser toasts when the following criteria is met:

- The agent has opted in to receive **Conversation Desktop Notifications**.
- The agent is using Google Chrome browser.
- The Workspace browser tab is not in focus.
- A new message on an existing conversation, assigned to the agent, is in one of the following places:
  - A currently open Workspace tab.
  - Not in a currently open Workspace tab, but in a long running conversation in an ongoing section of Workspace.

Employee initiated SMS conversations

Employees can initiate HR support conversations through SMS. Agents can expect the system to automatically associate the sender phone number to the channel user profile. If an SMS message is received for a non-existing channel user profile, a new channel user profile is automatically created by the system. The system queries the **Mobile phone** field on employee HR profile for a match. When a match is found, the system associates the employee with the newly created channel user profile. If more than one match is found no association is made on the channel user profile. If no match is found no association is made on channel user profile.

When an employee adds a phone number to an SMS messaging interaction or updates a phone number on the interaction, the Number field on the interaction updates from null to the employee's name. The HR profile for that employee is associated to the phone number. Only one active channel user profile can exist for a given phone number at any time.

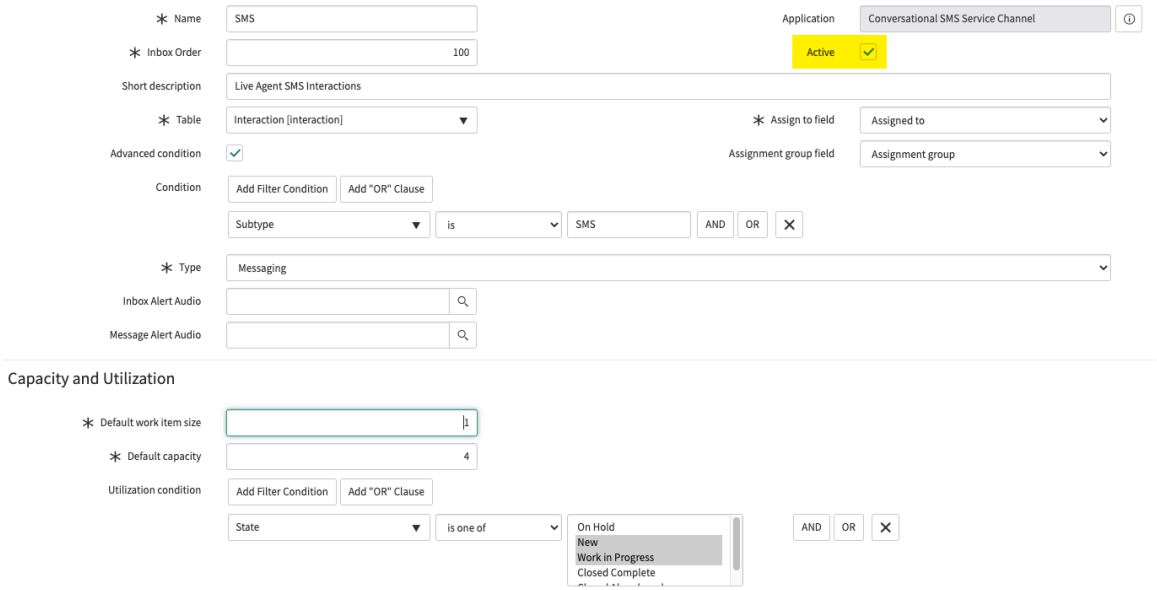
Set up HR Service Delivery Conversational SMS service channel

Configure the Conversational SMS service channel store app for HR Service Delivery.

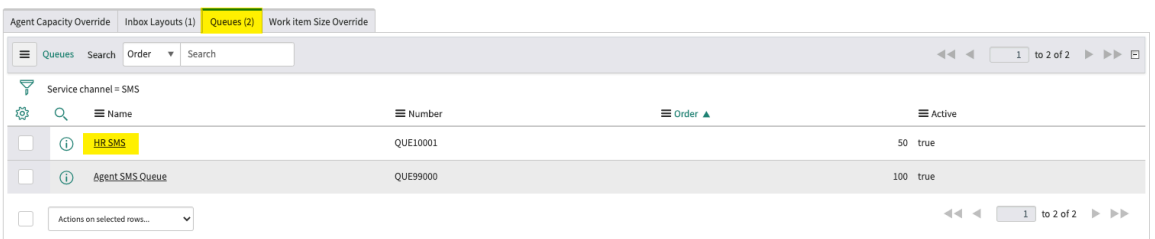
Before you begin

Role required: admin



About this task

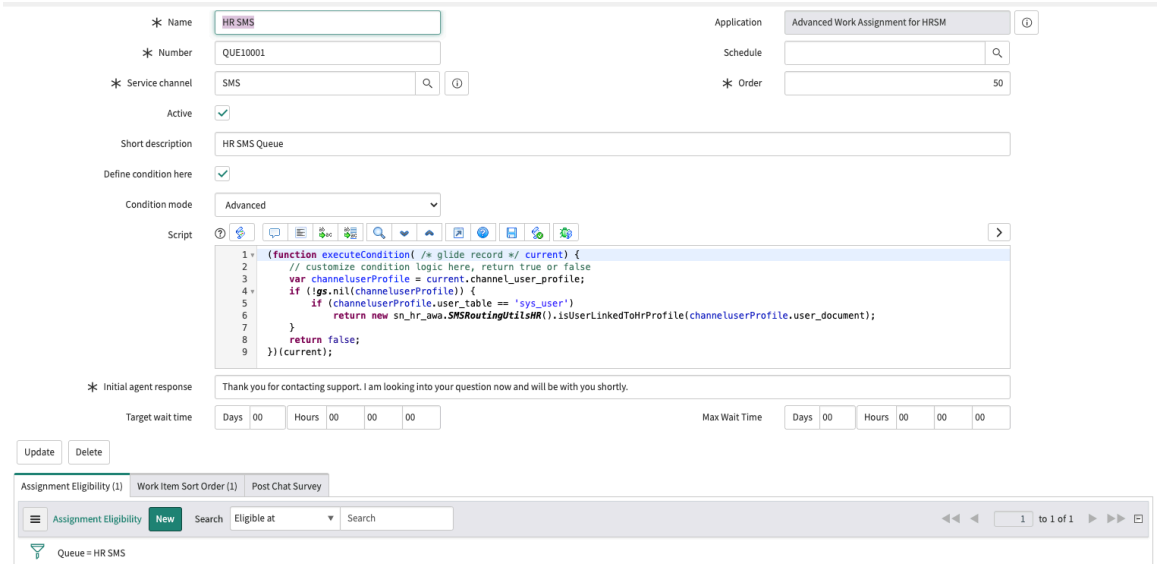
The HR Service Delivery base system includes the **HR SMS** service channel queue with the default **HR SMS Support Group** assignment group. The **Agent assignment rule** is capacity based by default. For HR Service Delivery, configure the SMS service channel for the HR SMS queue.



Procedure

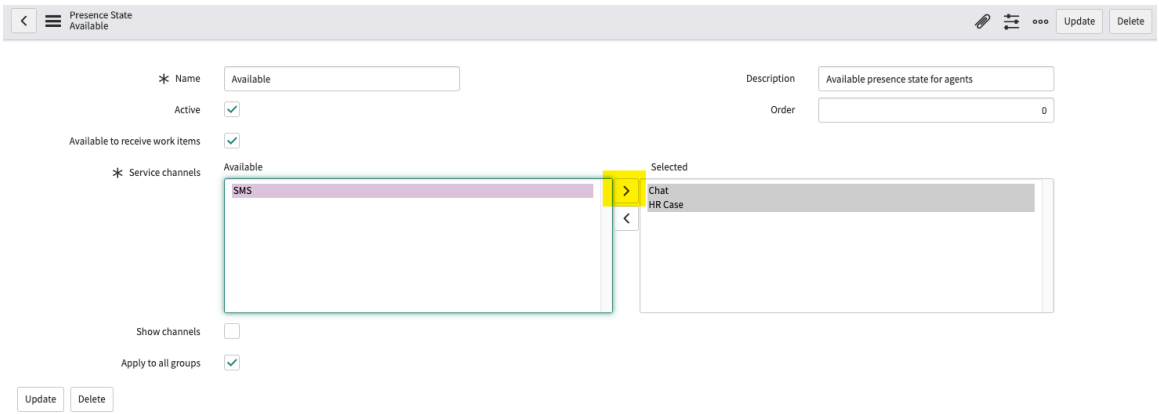
1. Navigate to **All** > **Advanced Work Assignment** > **Service Channels**.
2. Click the **SMS** service channel.
3. On the Service Channel SMS form, select the **Active** check box to activate the service channel.

   Note:
   By default, most of the form is populated for you. **Capacity and Utilization** fields are set to 1 for **Default work item size** and 4 for **Default capacity**. You can change these, and any form values, if desired.



4. Click the Queues related list to view and configure the HR SMS queue.

5. View the default configurations on the Queue HR SMS form, ensuring the **Active** check box is checked.
6. Modify values as you desire.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Click on any of the related lists to view or modify default configured values.

> **Note:**
> Notice that the Assignment Eligibility related list defaults to the **HR SMS Support Group**. Manually add users to this group to route assignments. Refer to Add a user to a group to learn how to add users to this group.

8. Click **Update** to save any changes you made.
9. Update the Advanced Work Assignment Presence States by navigating to **Advanced Work Assignment** > **Settings** > **Presence States**.
10. Click **Available** in the Presence States list.
11. In the Presence State Available form, select **SMS** in the **Service channels Available** column and move it to the **Selected** column using the right-pointing arrow.

12. Click **Update**.

> **Note:**
> For complete information regarding Conversational SMS service channels and setup guidance, refer to Conversational SMS service channel.

Compose an SMS message from a chat in HR Service Delivery Agent Workspace

Create and send an outbound SMS message to a recipient directly from a chat interaction. Access interactions assigned to you to follow up via SMS message when you need more details from the employee.

Before you begin

Role required: sn_hr_core.case_writer

About this task

An interaction is a request for assistance made through chat, phone, or in person. Interaction records are automatically created when you are using agent chat.
The **Compose SMS** option is only enabled for active chat interactions. For more information about interactions in HR Service Delivery, refer to Using interactions in HR Service Delivery Agent Workspace.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select the  HR case list icon and navigate to **Interactions** > **Assigned to me**.
3. Select an active chat interaction for which you would like to respond to the recipient via an SMS message.
4. In the chat interaction modal, click the  more options icon and select **Compose SMS** to initiate an SMS conversation with the recipient.
   The **Send via SMS** modal launches with **Send from** and **Send to** fields.
5. Use the drop-down **Send to** field to select the SMS recipient.
   You can choose an automatically populated phone number or choose **Other** to enter the phone number manually in the **Other number** field. Automatically populated phone numbers display based on the following criteria:

   The **Opened for** field is populated on the interaction with phone number.

   The phone numbers as specified on the HR Profile record. The label for each phone number on the **Send via SMS** modal will match the label for the **Phone number** field on HR Profile record.

   If a manually added phone number is not associated with an existing active channel user profile record, the record is created automatically when you send the SMS message.

   Note:
   When an interaction is created with phone number p1, not associated with an existing HR Profile, a channel user profile is be created as a Guest. When the user updates an HR Profile, HRP1, with a phone number p1, the user is treated as HRP1.

6. Compose the SMS message, add an attachment if necessary, and send to the employee.
   You can also select the  quick action icon, or enter a back slash (/) in the chat area, to use quick actions for SMS messaging. See Agent Chat for more information.
   You will receive a confirmation when the SMS message is sent. Click the confirmation to view the interaction details,if desired.

   Note:
   For complete details regarding initiating SMS conversations in Agent Workspace, refer to Agent initiated SMS conversation. For details about using Agent Workspace with HR Service Delivery, refer to Using the HR Service Delivery Agent Workspace.

Using interactions in HR Service Delivery Agent Workspace

Use interaction records to create an HR case or reference employee information to decide to create a case or request from different types of employee communications.

An interaction is a request for assistance made through chat, phone, or in person. You can route interactions by skill, group, or directly to an HR agent.

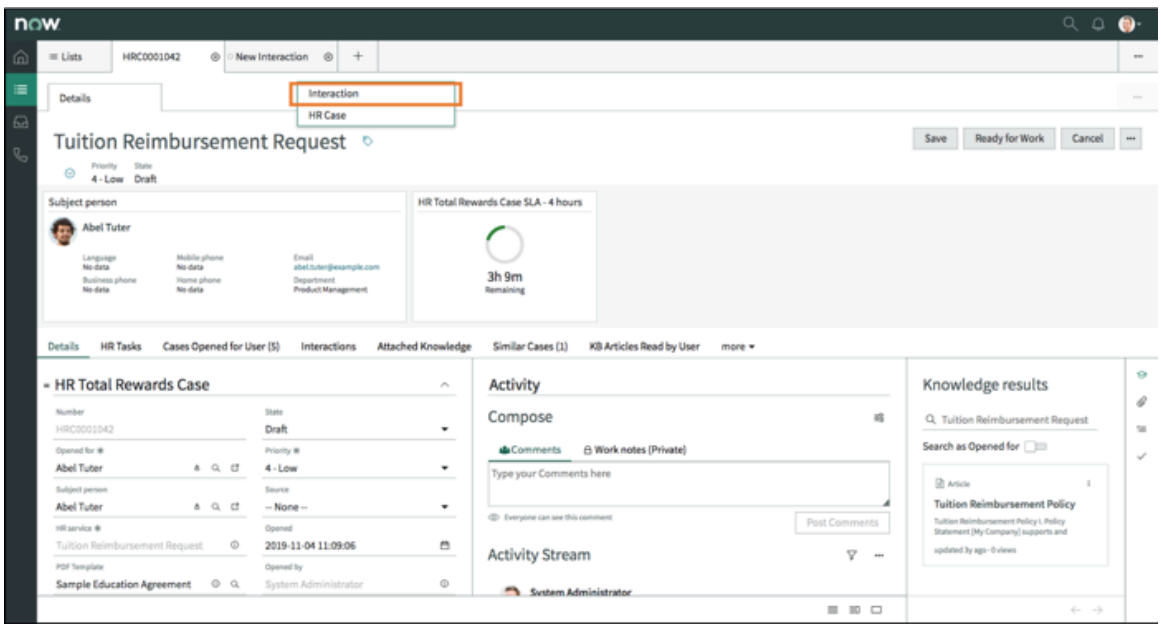
You can also create an interaction for simple requests where you decide you might not want to create an HR case or associated tasks.

Interaction records are automatically created when you are using agent chat.

Note:
Agent Assist is available for interactions.

For more information on interactions, see Interaction records in Agent Workspace.

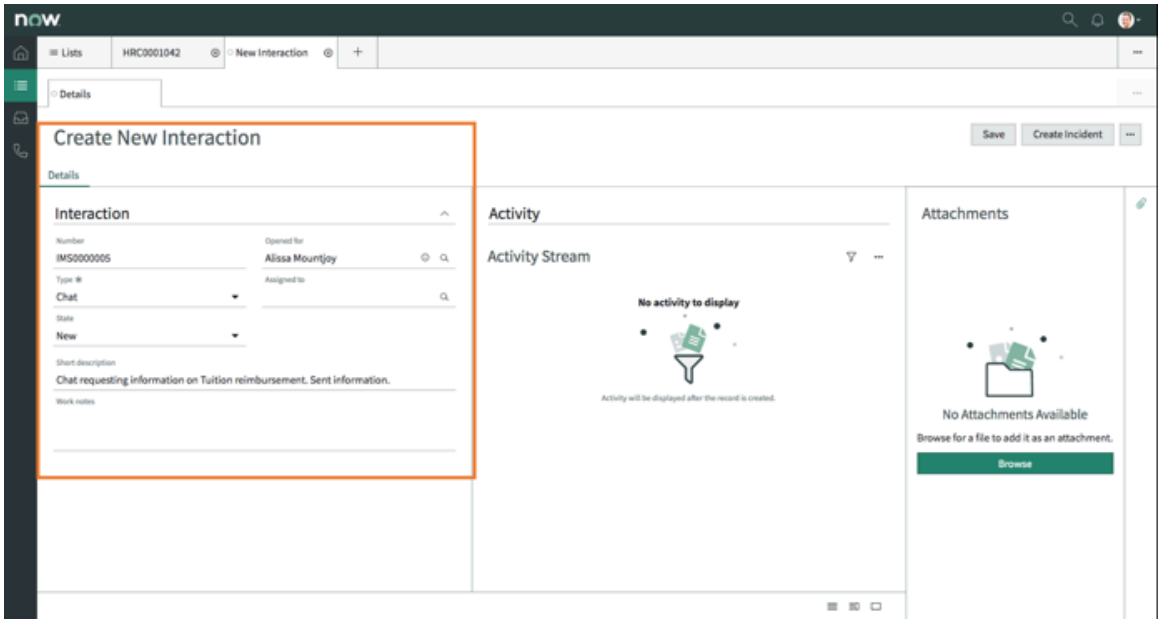
Create interactions in HR Service Delivery Agent Workspace



You can create interaction records from the HR Service Delivery Agent Workspace form.

Before you begin

Role required: sn_hr_core.case_writer



Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. To create an interaction, select the Create case icon.
3. Select **Interaction**.

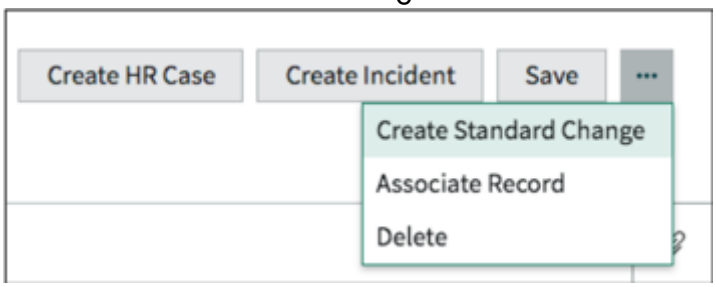
4. In the details section, enter information about the interaction.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Fill in the fields.

Interaction fields

Field	Description
Details	Every interaction record defaults to the Details form, showing initial interaction record information.
Number	The number assigned to the interaction record.
Type	The type of communication responsible for the interaction record. The values are: ○ None ○ Chat
State	The status of the interaction record. ○ New ○ Work in Progress ○ Closed Complete ○ Closed Abandoned
Opened for	The employee the interaction is about.
Assigned to	The HR agent responsible for the interaction.
Short description	A short description about the interaction.
Work notes	Information specific to the interaction and can help other HR agents. Work notes are not visible to the Opened for person.



6. Select **Save**.

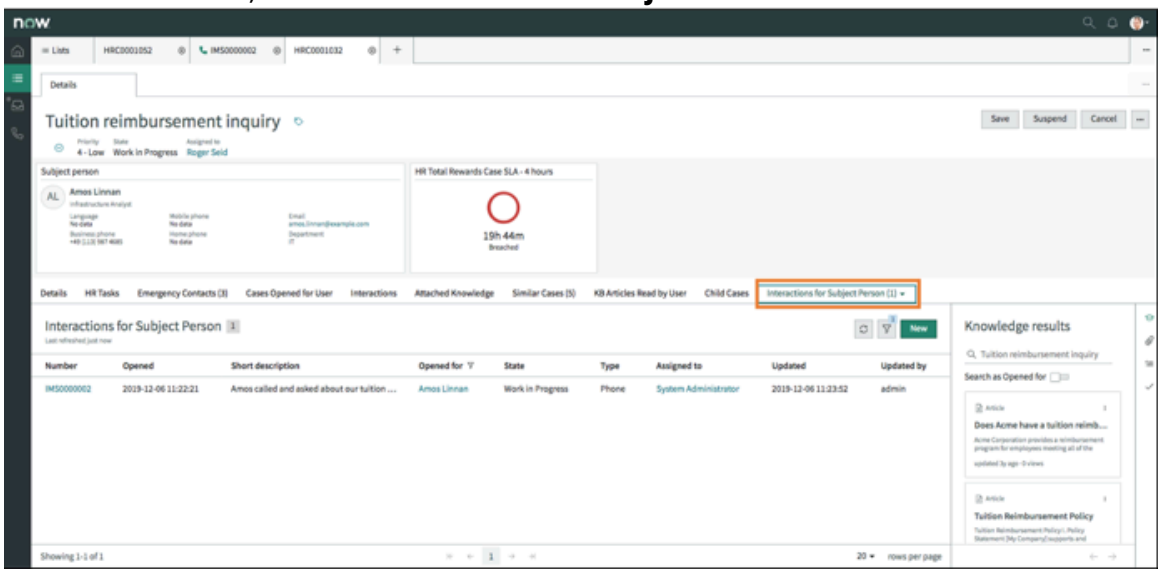
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Interaction tabs

Tab	Description
Related Tasks	Any tasks or cases opened from the interaction, for example, a new incident or new case.
User's Tasks	Incidents related to the interaction.
User's Interactions	Logs all interactions tied to each specific user.
Cases opened for "Opened for"	Shows all HR cases related to the Opened for person.

7. You can select from the following: ••• more icon.

8. Select **Create HR Case** to create a case based on the interaction.
Create Incident is part of demo data and not available to HR Service Delivery Agent Workspace.
9. Select the ••• more icon to display additional actions you can take.



more icon choices

Choice	Description
Create Standard Change	Part of demo data and not available to HR Service Delivery Agent Workspace.
Associate Record	Use to associate an interaction to an HR case. After linking, the interaction appears under the **Interactions** tab for an HR case. Select **Task** under **Record Type** then optionally select a task record. You can also associate an interaction record that contains a knowledge article. Under **Record Type**, select **Knowledge** then select a knowledge article.
Delete	Select to delete the interaction record.

10. Select **Save** to save work entered for an interaction.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

11. To view interactions, select the **Interactions for Subject Person** tab on the child tab.

Working lifecycle event cases in HR Service Delivery Agent Workspace

Manage lifecycle event cases using HR Service Delivery Agent Workspace.

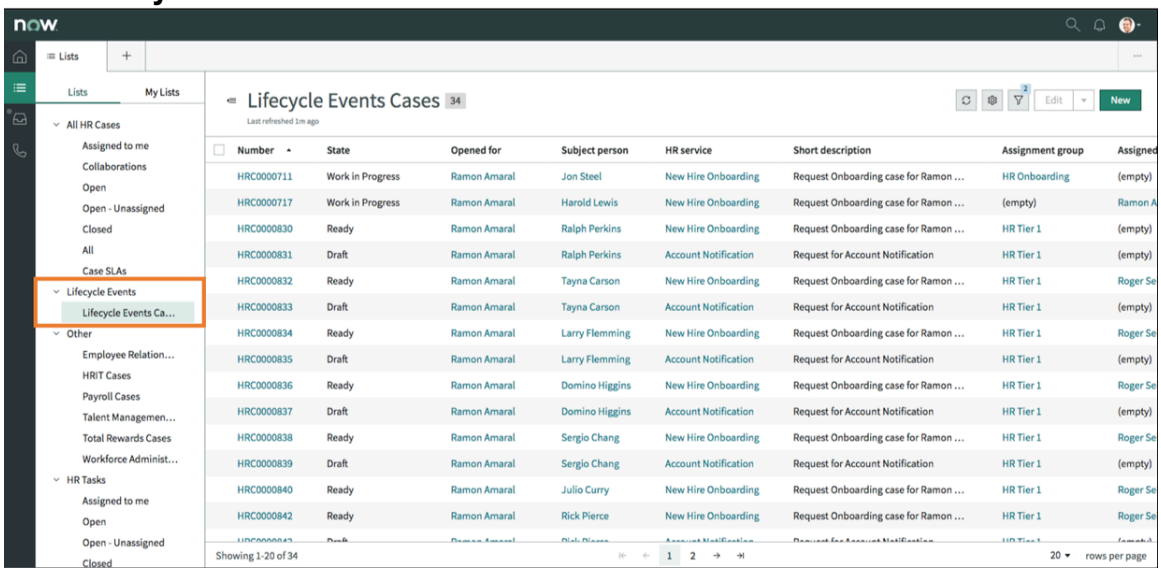
A lifecycle event case is an HR case fulfilled by a lifecycle event. For example, the HR service for New Hire Onboarding fulfills the lifecycle event for New Hire Onboarding.

Note:
This section assumes you have Enterprise Onboarding and Transitions activated. For more information, see Understanding Lifecyle events for enterprise.

List lifecycle event cases using HR Service Delivery Agent Workspace

You can show all lifecycle event cases by using lists.

Before you begin



Role required: sn_hr_le.case_writer

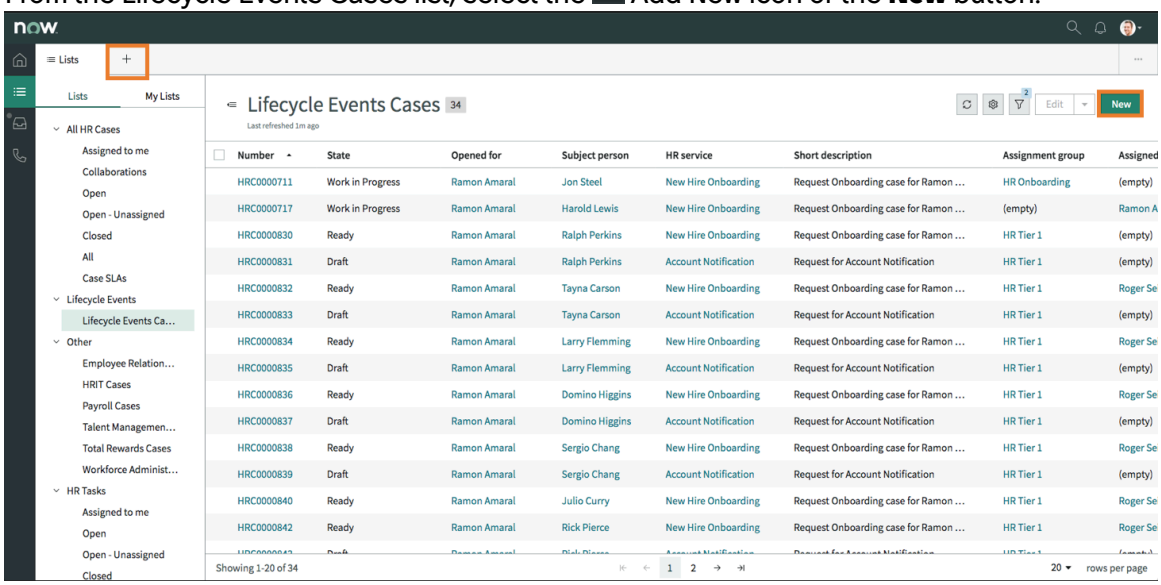
Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select the List Lists icon.
3. Select **Lifecycle Events**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Lifecycle Events Cases**.

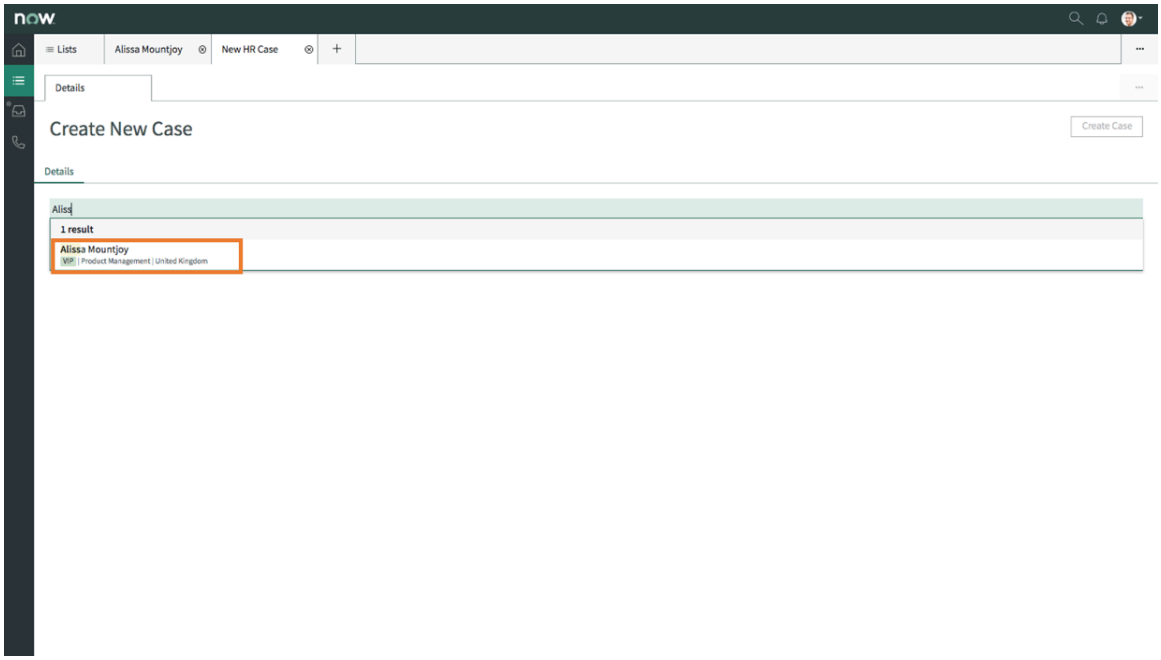
Create a lifecycle event case using HR Service Delivery Agent Workspace



There are multiple ways to create a Lifecycle Event case.

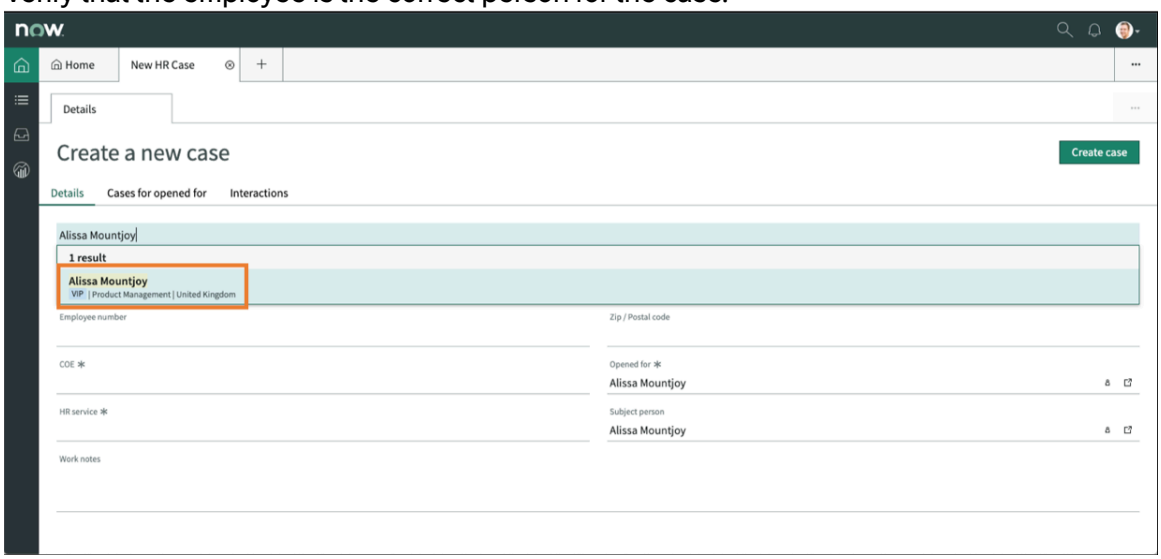
Before you begin

Role required: sn_hr_le.case_writer



Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. From the HR Service Delivery Agent Workspace landing page, select the Add New icon.
3. Select **HR Case**.
4. From the Lifecycle Events Cases list, select the Add New icon or the **New** button.



5. Enter an employee name or case number.

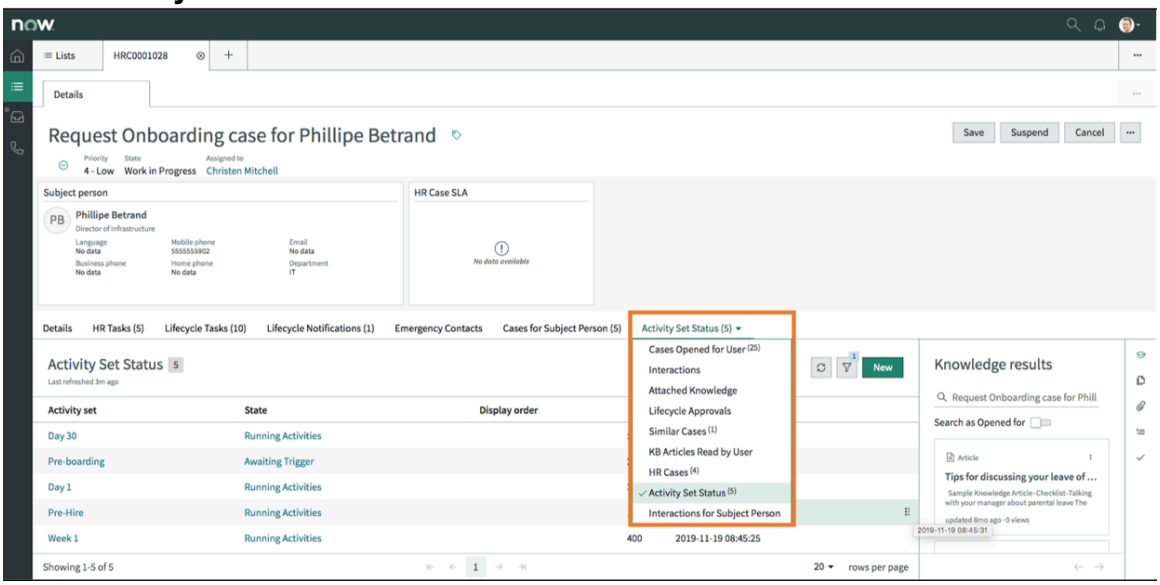
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Verify that the employee is the correct person for the case.

7. Enter **New Hire Onboarding** in the **HR service** field.
8. Select **Create Case**.
9. Select **Ready for Work**.
   The **State** changes to **Ready**. In the Details section, the **Assignment group** and **Assigned to** fields populate based on your case assignment rules or HR case template. For more information, see Assignment and matching rules in HR and HR templates.

View activity set status in HR Service Delivery Agent Workspace

Monitor the status of a lifecycle event case with the **Activity Set Status** tab. You can also monitor the state of each activity set and activities in a lifecycle event case.



Before you begin

Role required: sn_hr_le.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

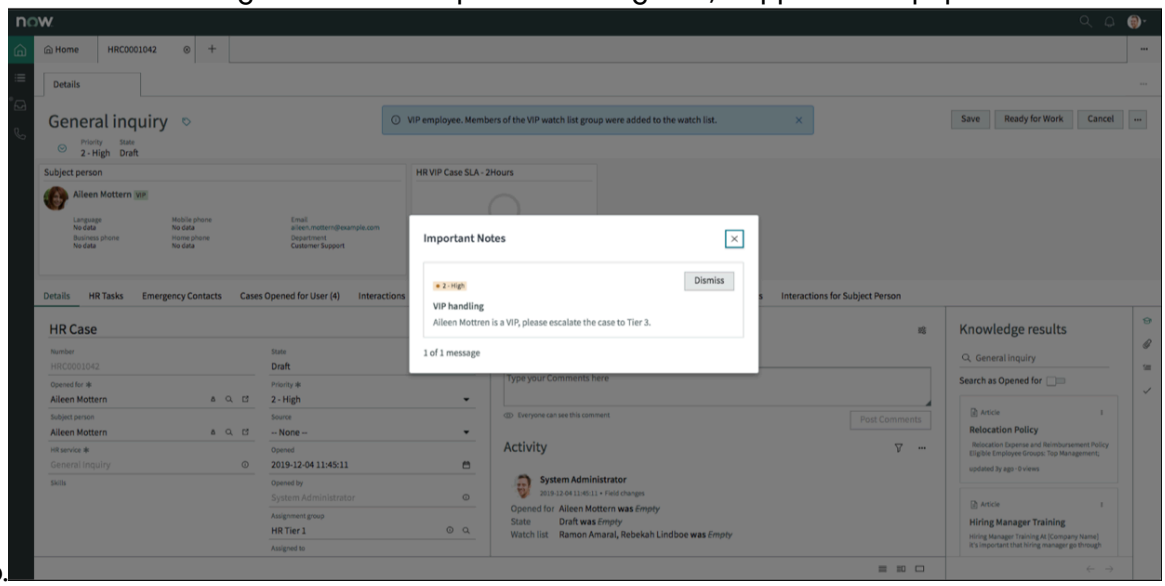
Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Locate and display a lifecycle event case that is in progress.
   For more information, see List lifecycle event cases using HR Service Delivery Agent Workspace.
3. Select the **Activity Set Status** tab.
4. Select **Activity Set Status**.

View a special handling note in HR Service Delivery Agent Workspace

When configured, special handling notes appear for HR cases that require special attention.

Before you begin



Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Locate and display an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

If the HR case is configured to show a special handling note, it appears as a pop-up.

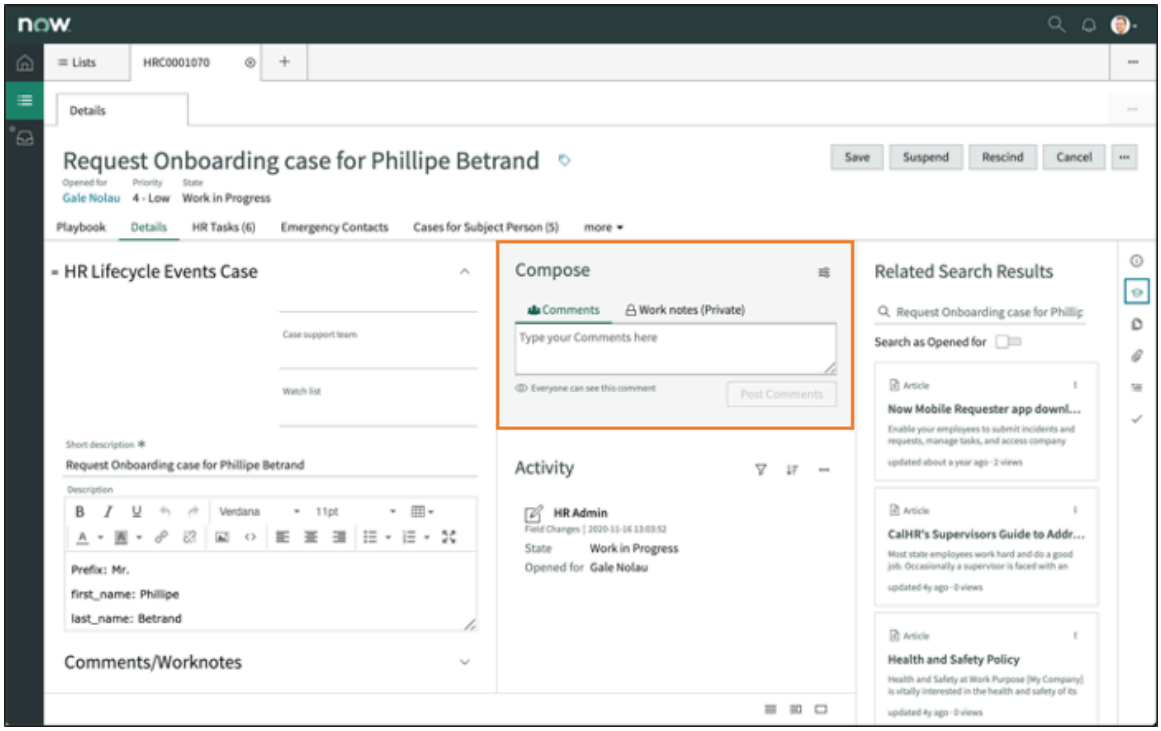
3. Read the note and select **Dismiss**.

Using the activity stream in HR Service Delivery Agent Workspace

Use the activity stream section of HR Service Delivery Agent Workspace to document work notes (private) or comments, respond to email, or view the state of the HR case.

Create a work note or comment in HR Agent Workspace

You can add a work note (private) or comment to an activity.



Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. In the Compose section, select **Comments** (visible to subject person) or Work notes (not visible to subject person.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **Post Comments**.

> **Note:**
> There is also a **Comments/Worknotes** section at the bottom, left side of the form. This section is turned off by default, but can be used to enter text by clicking the accordion icon ( ). After entering text, click **Save**.

Create a reminder in HR Service Delivery Agent Workspace

You can create reminders tied to HR cases or tasks to provide timely communication and actions are taken. Use reminders to make certain you follow up by a specific date.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Click the Lists icon (List) along the left side.
3. Navigate to and open a case you want to add a reminder.
4. Click the **More Actions** icon (•••), scroll down and click **Set reminder**.
5. Fill in the fields.

Create New Reminder

Field	Description
Short description	Text that describes the reminder.
Date time	The date and time you want to receive the reminder.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Task	The task or case associated with the reminder. Automatically appears based on the case or task you have displayed when creating the reminder.
User	The name of the logged in user that created the reminder.
Reminder	Status of the reminder.

6. Click **Save**.

Note:
To view reminders, click **more** from the Related Items menu, scroll down, and select **Reminders**. When an alert is activated, a number appears inside the Notifications icon () and the notifications message scrolls across the screen.

HR Service Delivery Playbook

Currently, HR Service Delivery Playbook offers you a single pane to view and work all tasks and steps required for resolving a lifecycle event case.

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

Note:
Only lifecycle event cases are supported at this time.

Having all case information in a single pane allows you to quickly and easily decide what your top priorities are. Having top priorities allows you to:

- View all in-progress steps across different departments so you don't waste time searching and opening different forms.
- View all completed actions.
- Easily and quickly see what you should do next.

Lifecycle event cases

Because there can be multiple activity sets in a lifecycle event case that also contain multiple activities, being able to view all aspects is crucial to an HR agent.

Using an accordion button, you can expand or collapse activity sets to view the activities within.

Within an activity set, you can view all tasks, state, owners, and have the ability to take action.

Note:
For more information about lifecycle events, see Lifecyle events for enterprise.

© 2026 ServiceNow, Inc. All rights reserved.

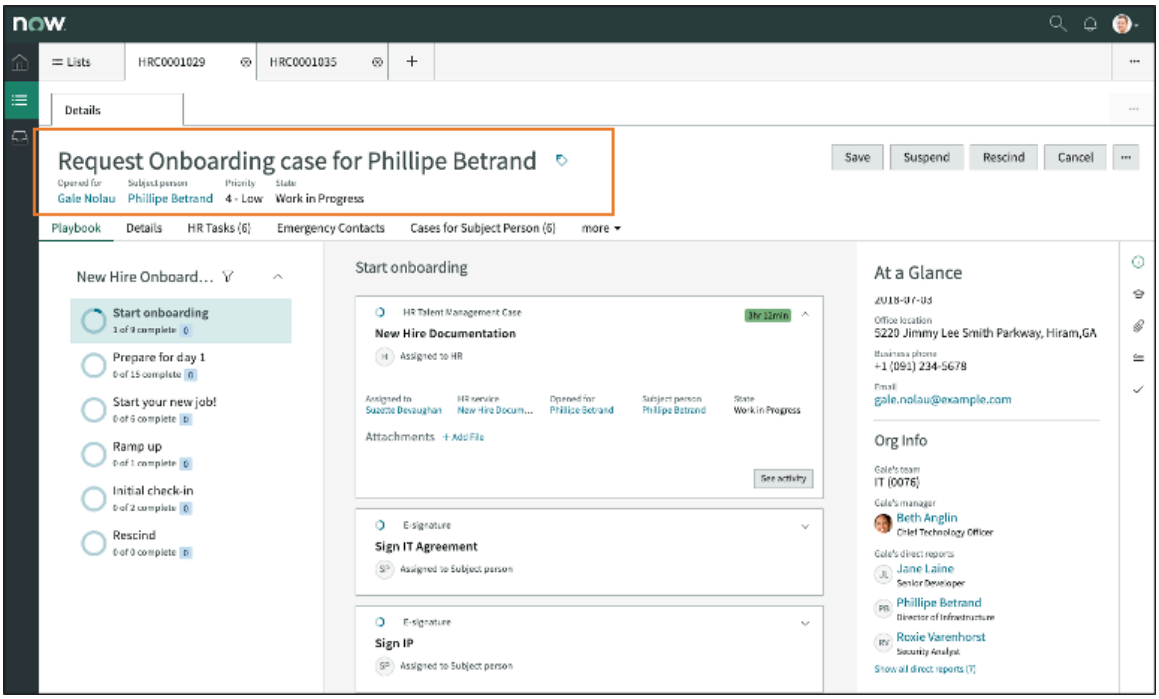
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Exploring HR Service Delivery Playbook

Use HR Service Delivery Agent Workspace to manage lifecycle event cases.



HR Agent Workspace case form with Playbook

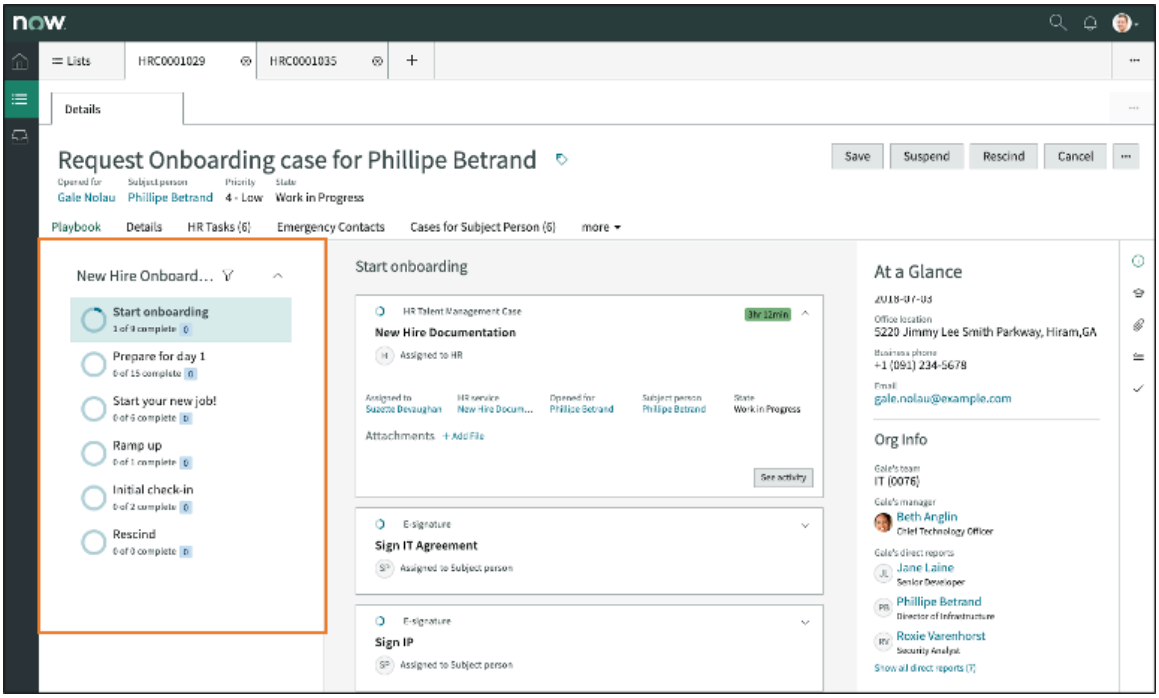
When Playbook is activated with HR Service Delivery Agent Workspace, the **Playbook** tab appears in the Related Items menu.

Playbook Header

The Playbook Header shows the title of an activity set.

> **Note:**
> For more information on lifecycle event structure, see Configure a lifecycle event.

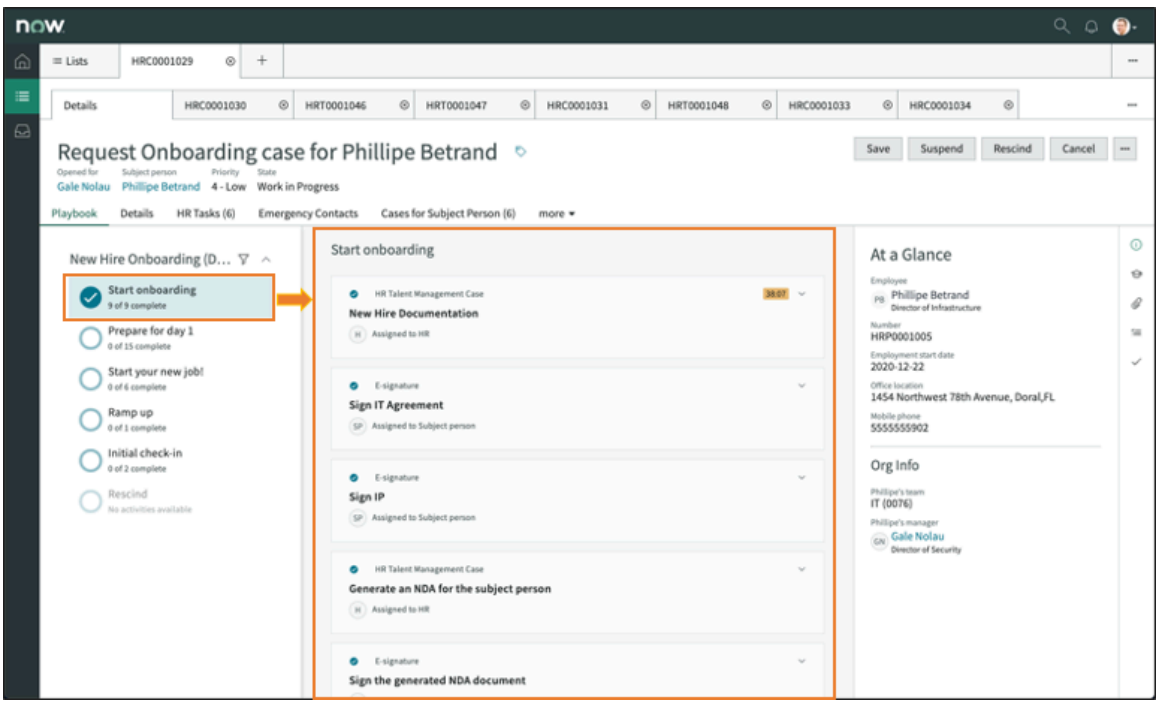
Stage panel



Along the left side of the Playbook form, you will see the stage panel that shows the lifecycle event and each activity set. Below each activity set shows a the number of activities completed and a status circle. A check inside the circle indicates a completed activity set.

A check mark inside the Playbook Header indicates that the activity set is complete.

You can quickly see how many activities there are for an activity set and how many are completed.



In the example, the activity set Start onboarding has a total of nine activities with one completed (1 of 9).

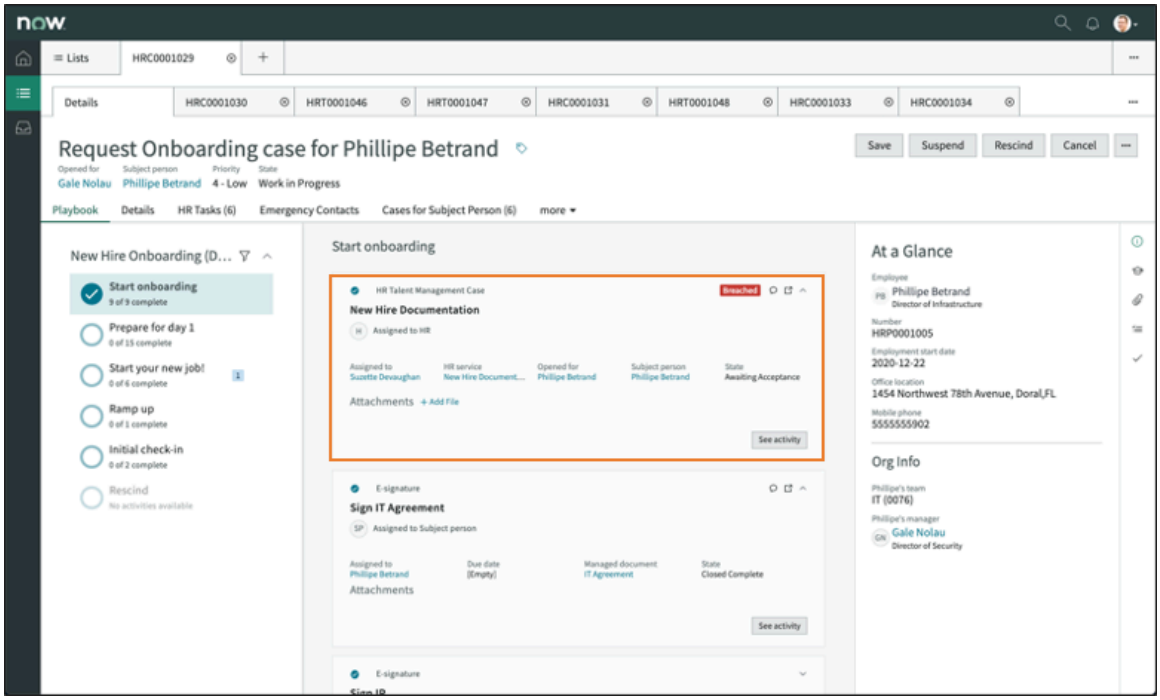
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activity stream

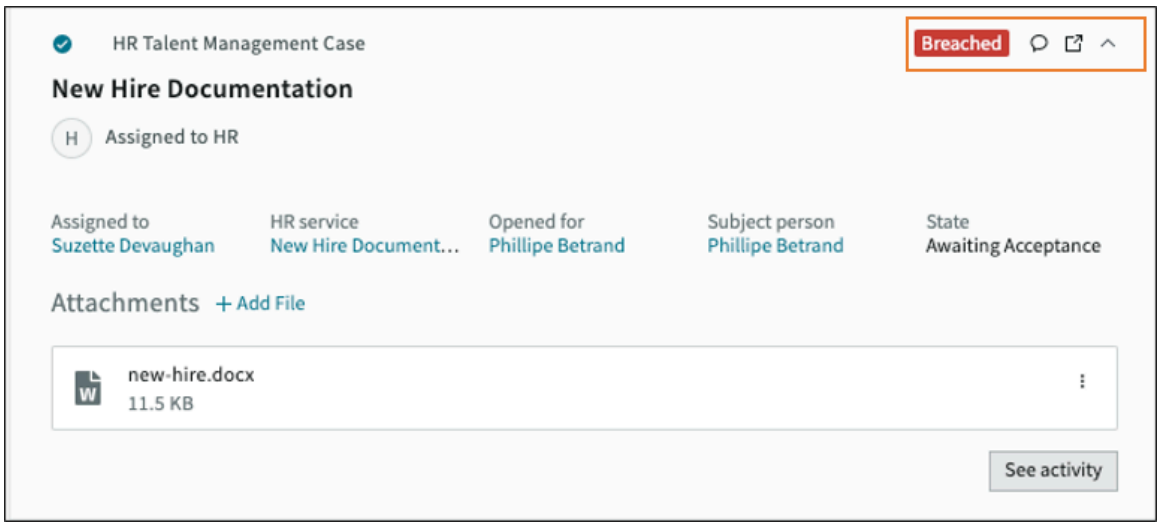


Click on an activity set in the stage panel to view all activities within the activity set.

HR card

You can drill into an activity from the activity stream by clicking on an activity to view details about case or task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



The HR case opens in a separate widow and tab.

HR card details

Click the activity and the **Assigned to**, **HR service**, **Opened for**, **Subject person**, **State**, and attachments appear.

At the top, right of an HR Playbook card are a series of icons.

The first icon on the left provides the state of the HR case or task. Hovering over shows details of the SLA.

Click the **Add note or comment** ( ) icon to add comments or notes related to the activity.

To view comments or notes, click the **See activity** button.

Click the Open task ( ) icon to view the details of the HR case or task. A new tab with the HR case or tab opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Click the Minimize task ( ) icon to close the details of the HR case or task.

The other areas of Playbook are covered in Exploring HR Service Delivery Agent Workspace.

Setting up HR Service Delivery Playbook

Set up HR Service Delivery Playbook so that your agents can easily manage, track, and lifecycle event cases.

Activation

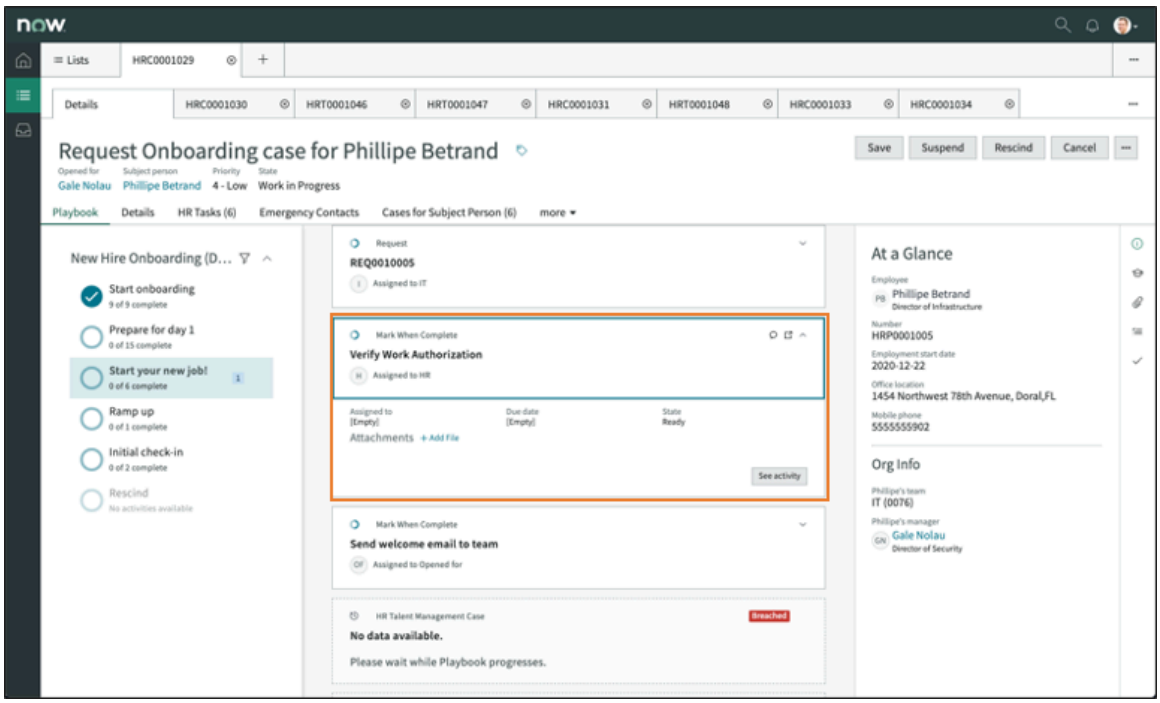
To activate Playbook for HR, you must go to the ServiceNow Store to make it available on your instance.

Activate the following plugins:

Playbook Experience Core [com.glide.playbook_experience.config].

The next two (2) applications are obtained from the store:

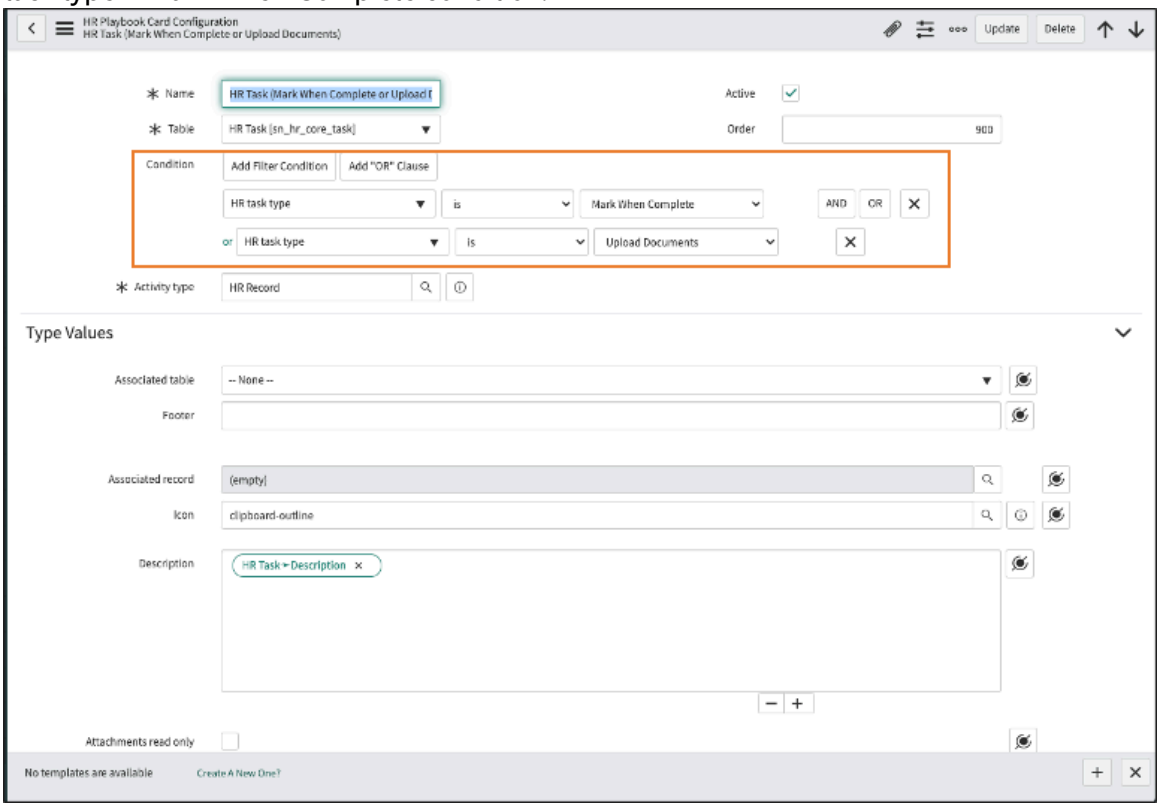
- Playbook Experience [sn_playbook_exp]
- Playbook Experience Components [now_playbook_exp]



For more information, see Install a ServiceNow Store application.

HR cards

The Playbook tab under HR Service Delivery Agent Workspace has HR cards.



HR cards represent each activity in the activity set which could represent various records such as HR tasks, HR cases, requests, incidents, approvals, and more.

Below is an example of an HR card showing an HR task record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Verify Work Authorization card has an HR task type = Mark When Complete condition.

- Each activity shows an HR task, case, request, and others. The activities look at the HR Playbook Card Configuration table to match the lowest order record.
- The HR Playbook Card Configuration can have filters to determine what values to render.
- Use HR Playbook Card Configuration to configure cards.
- For more information, see Configure HR Service Delivery playbook card.

As an HR administrator, use this to configure how each playbook looks in HR Service Delivery Playbook for different types of records (HR case, task, and others). Different record types have different relevant information to show.

The base system provides 19 records.

Note:
For more information on playbook configuration, see Set up a playbook.

Configure HR Service Delivery playbook card

Use Playbook Card Configuration to view and manage what appears for each card in an activity set.

Before you begin

Role required: sn_hr_ws.admin

Each activity attempts to show a record (HR task, HR case, request, and so on) and goes through the card configuration and attempts to match to the lowest ordered record in the table. For example, the 'Verify Work Authorization' is a 'mark when complete' card that the base system provides.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The properties from the card configuration record are filled in from the record (HR task, HR case, request, and so on).

Note:
For Classic HR Service Delivery Agent Workspace and Agent Workspace for HR Case Management, there are two separate default card configurations and activity overrides. The property *sn_hr_agent_ws.use_uib_playbook_card_config* (default value = false) decides which card configuration is to be used for HR Service Delivery Playbook when you have each Agent Workspace installed. By default, the Classic card configuration will be selected in the card configuration.

Procedure

1. Navigate to **All** > **HR Administration** > **Playbook Card Configuration**.
2. Fill in the fields on the form.

HR Playbook Card Configuration form

Field	Description
Name	The name that identifies the HR Playbook Card Configuration.
Table	The record type of the configuration. Determines what card appears for each activity within an activity set (lane). Also determines what properties the card uses.
Condition	The conditions that determine if the type values render to an HR Playbook card. **Note:** When defining conditions like case sensitivity or null values, see APIGlideFilter - Scoped, Global.
Activity type	The activity type from a lifecycle event activity. Activity types can be approvals, employee activities, fulfiller activities, notifications, and more. **Note:** For more information, see Configure the supporting components for a lifecycle event.
Active	Indicates if the record is active and available for use.
Order	The order in which the activity attempts to match this record. The lowest values are evaluated first.

The Type Values section determines what appears on each card.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Type Values

Field	Description
Associated table	Not applicable at this time.
Footer	Information you want to appear in the footer of an HR Playbook card. Enter text or click the pill picker icon to display references you can select from to automate the placement of information.
Associated record	Not applicable at this time.
Icon	Displays an icon that appears in the upper, left-side of the card. Click the Lookup using list icon to select the icon you want to appear.
Description	Select the pill picker icon to display a description on the card. **Note:** This is not a free-form field, you must select from the available
Attachments read only	Check to indicate existing attachments can only be read. **Note:** This is a read only field and not for adding attachments to the activity. See the **Attachment source** field.
Title	The title of the card. You can enter free-form text or select from the list after clicking the pill picker icon.
Form fields	Displays a vertical column of fields that render below the row of record fields. **Note:** The fields are editable when at least one button on the card says **Form fields required**. You can enter comma separated text or select fields by clicking the pill picker icon. The fields you select appear as a column on the left-side of the card.
Show SLA	Check to indicate you want the SLA icon to appear at the top, right-side of the card.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	The icon shows the state of the SLA.
Tagline	Enter or select information that appears at the top of the card above the title.
Attachment source	Use to allow uploading of attachments. Selecting associated_record allows the user to upload an attachment from the card.
Record fields	Fields you want to appear across the upper section of the card. Enter comma separated list of fields you want to appear on the card or click the xx icon to select references.
Show Checklist	Check to display the checklist from the activity. Users can check off tasks the same way they do on the case form.
Assigned to	Identifies the **Assigned to** agent. You can enter free-form text or select from the references after clicking the pill picker icon . The name appears next to the title.
Form View	Works with the **Form fields** and allows you to define an entire section you want to appear on the card.

3. Click **Submit** or **Update**.

HR Playbook Experience

Use Playbook Experiences to select the playbook your company uses.

The base HR Service Delivery Playbook contains a pre-configured playbook experience.

A Playbook experience is tied to Playbook Configurations and Playbook Activity Overrides.

Playbook Configuration

- Decide if you want the activity state icon on the card.
- Determine what fields to use in the Playbook filter.
- Determine the maximum number of form fields allowed on a card before a model is used.
- Define the conditions to display on the card for the SLA time icon.

Playbook Experiences

Controls the playbook user experience.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Sets up display and activity filters.
- Provides SLA integration.
- Provides access control.

Activity Overrides

The base system uses activity overrides to show the list card for requests and the default record card for collapsing and expanding tasks. Activity overrides are also for expanding cards assigned to the user, overdue, SLA breached, and so on that agents see by default.

Activity overrides control the logic and conditions for cards that are expanded and cards that are collapsed.

Enables you to override three (3) defaults for each card (from the **What to override** tab):

- The type of card used (default card, list card, create record card, knowledge card, and so on).
- Expand state (should this card open by default when playbook loads).
- Roles Required (should you limit this card to specific roles).

Activity Actions

Defines playbook actions like add using forms, conditions, and scripts, and what buttons appear on a card. You can configure these buttons:

- Location, where the buttons appear.
- Button type and color.
- How the button is implemented (server script, client action, or a UI component modal).

Activity actions also work with displaying buttons and icons that can:

- Render a component (Add Approvers or Close Complete).
- Update the record (change its state).

To make changes to the default configurations, see Update playbook experience configurations.

Configure HR Playbook Experiences

Use Playbook Experiences to modify the default playbook experience configurations.

Before you begin

Role required: sn_hr_ws.admin

Note:
To make changes, clone the HR Playbook Experience record first.

Procedure

1. Navigate to **All** > **Playbook Experience** > **Playbook Experiences**.
2. Select **HR Playbook**.
3. Select the **Playbook Configurations** tab and select **true**.
   For information on the form fields, see Update playbook experience configurations.
4. Select the **Playbook Activity Overrides** tab and an activity override.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For information on the form fields, see Set up playbook activity overrides.

5. After editing or creating, click **Update** or **Submit**.

Configure HR Playbook activity overrides

Create optional activity overrides for the default behavior of activities in your HR playbook.

Before you begin

Role required: sn_hr_ws.admin

Note:
Activity overrides are affected by the system property *sn_hr_agent_ws.use_uib_playbook_card_config*.

If this system property is true, Agent Workspace for HR Case Management Playbook Card Configurations are used, and it's activity overrides will apply. If this system property is false, which is the default value, Classic HR Service Delivery Agent Workspace Playbook Card Configurations are used, and it's activity overrides will apply.

You can also access Playbook Activity Overrides from Playbook Experiences. See Configure HR Playbook Experiences.

Procedure

1. Navigate to **All** > **Playbook Experience** > **Activity Overrides**.
2. Select an activity override or **New**.
   For information on the form fields, see Set up playbook activity overrides.
3. After editing or creating, click **Update** or **Submit**.

Configure HR Playbook activity actions

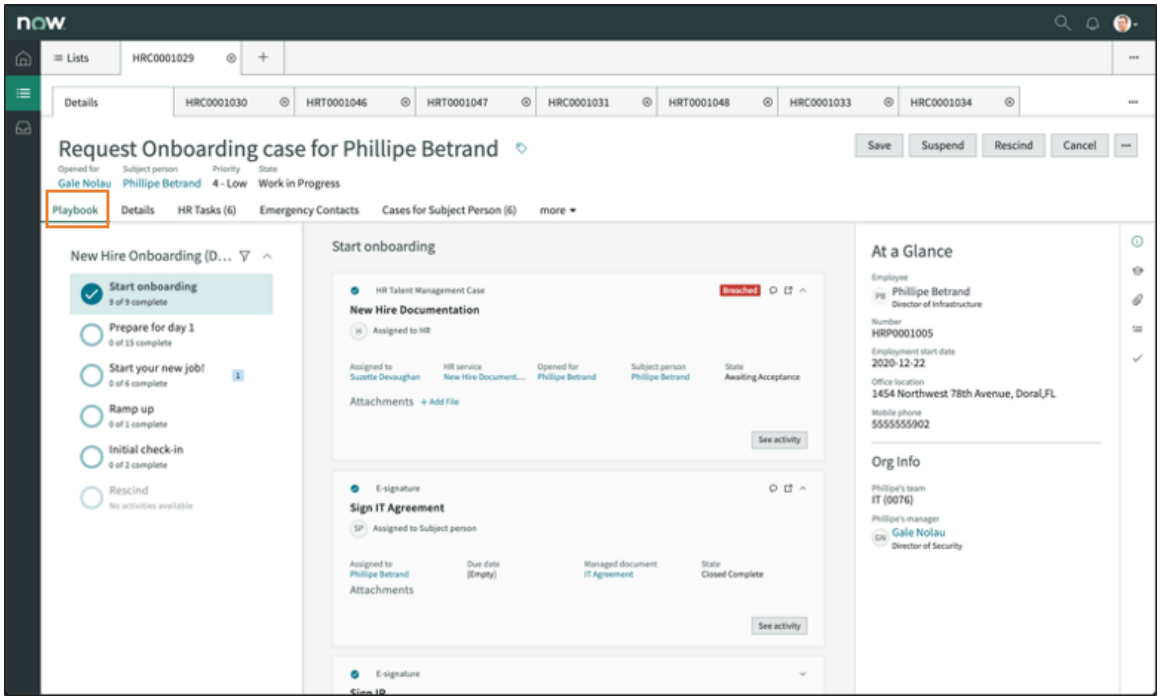
Use playbook actions to enable users to complete (add buttons and lists) and skip activities.

Before you begin

Role required: sn_hr_ws.admin

Procedure

1. Navigate to **All** > **Playbook Experience** > **Activity Actions**.
2. Enter or edit the form fields.
   For information on the form fields, see Customize Playbook actions.
3. After editing or creating, click **Update** or **Submit**.



Using HR Service Delivery Playbook

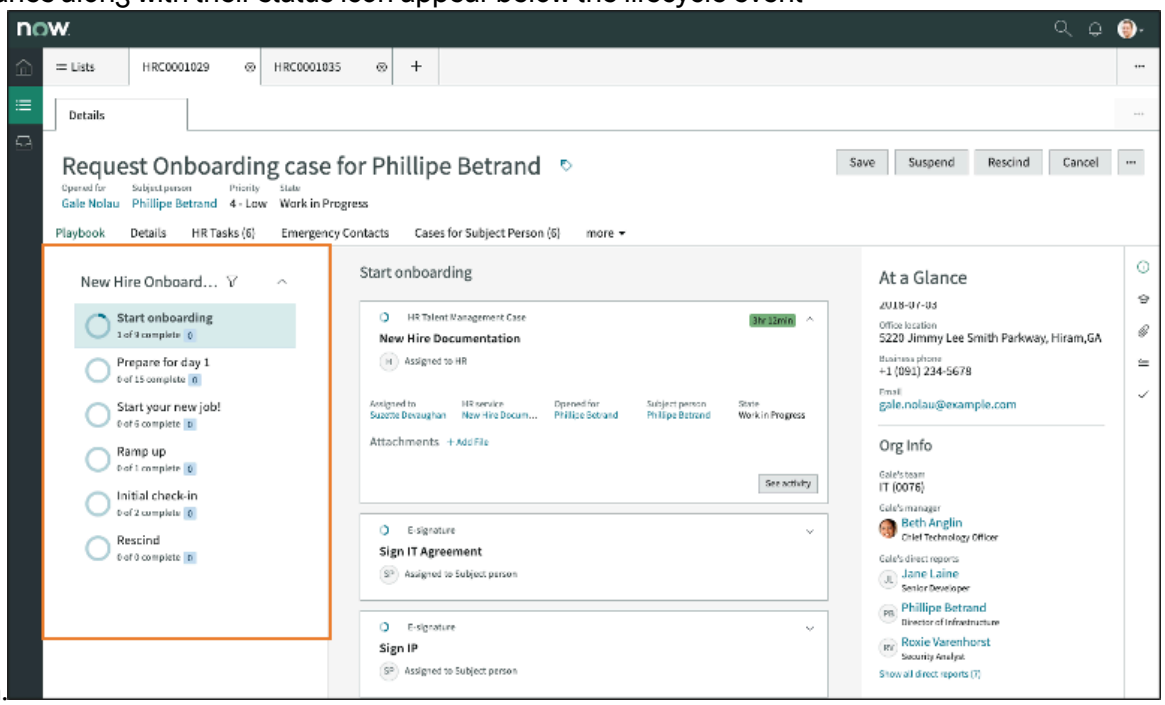
Currently, HR Service Delivery Playbook is only available for use with lifecycle event HR cases.

Playbook shows as a tab on the HR Agent Workspace form after displaying an LE case.

Note:
The Playbook tab only appears after the HR case has moved to **Ready** or **Work in Progress**. This triggers the lifecycle event and data appears for all launched activities.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Selecting the Playbook tab allows you to view and work all lifecycle event activities and their child tasks in a single pane.



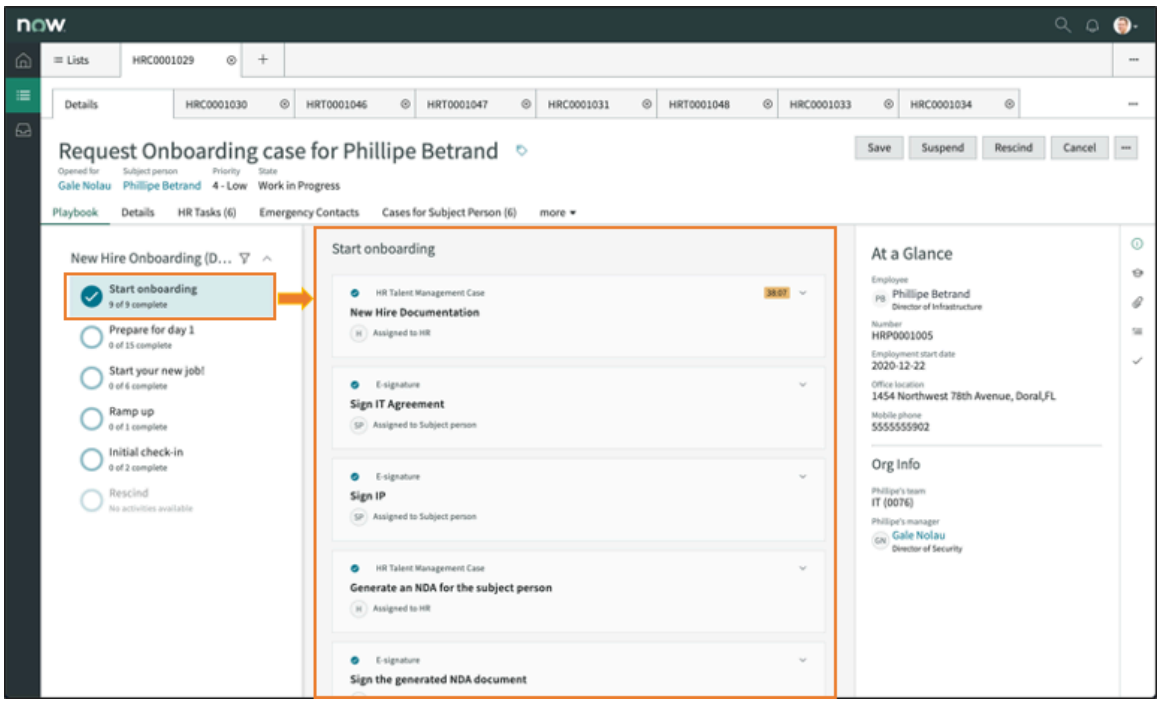
Note:
Tasks that are created ad-hoc and not part of the workflow do not appear in the tab, but may be accessible in regular related lists.

Lifecycle event

The title of the lifecycle event is at the top below the **Playbook** tab in the stage panel.

Activity sets

The list of lanes along with their status icon appear below the lifecycle event description.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Under the New Hire Onboarding (Demo) lifecycle event are five (5) activity sets:

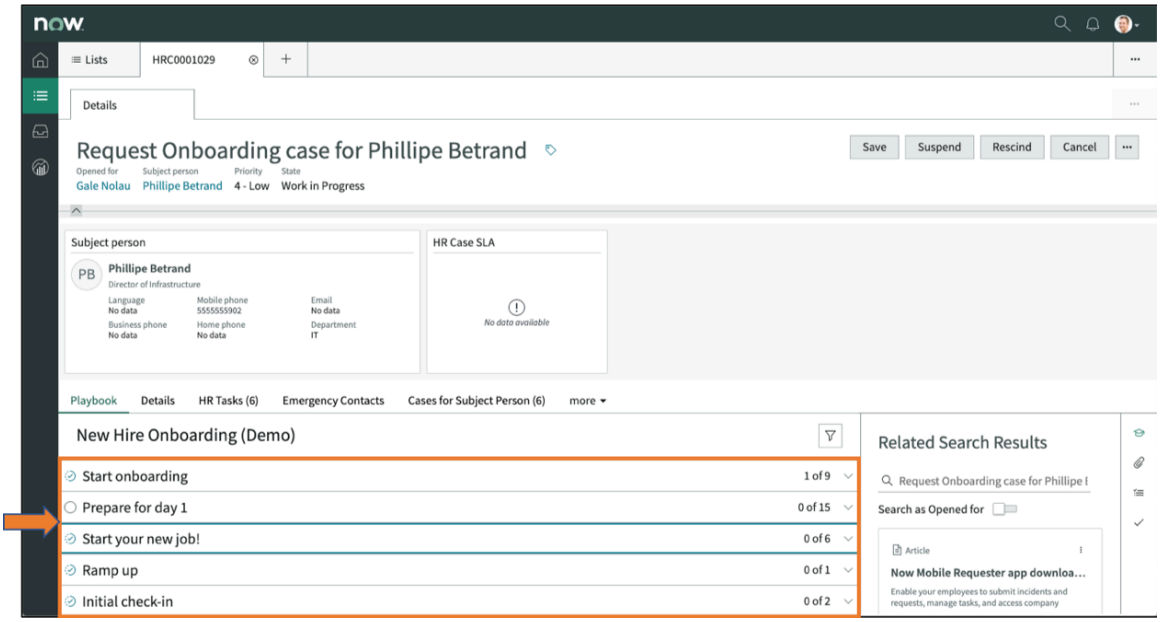
- Start onboarding
- Prepare for day 1
- Start your new job!
- Ramp up
- Initial check-in

Activities

Click on an activity set to view the associated activities.

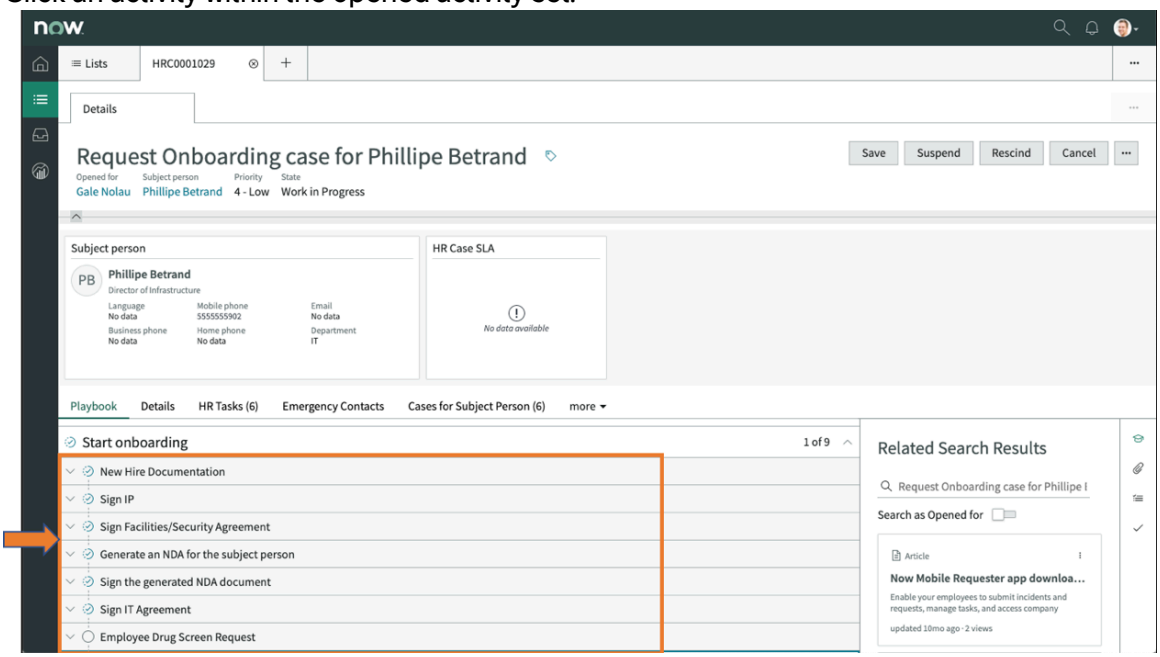
HR Playbook add a note or comment

You can add a work note or comment to an HR lifecycle event case from Playbook.



Before you begin

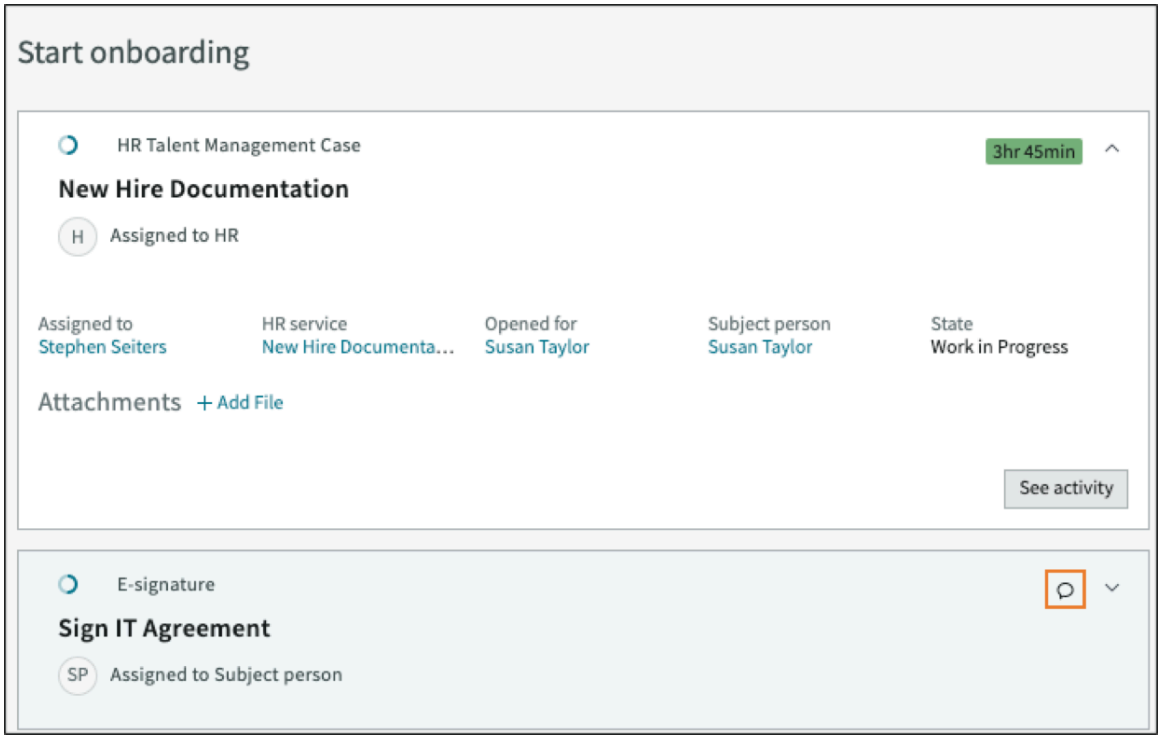
Role required: sn_hr_le.case_writer



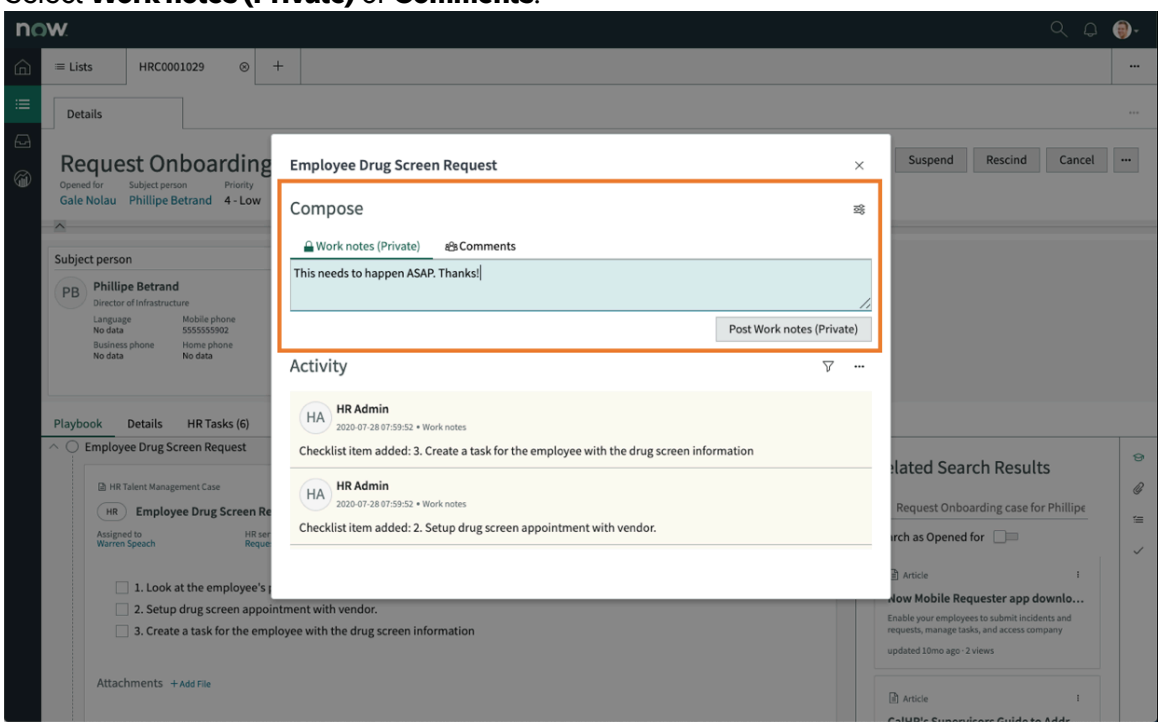
Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

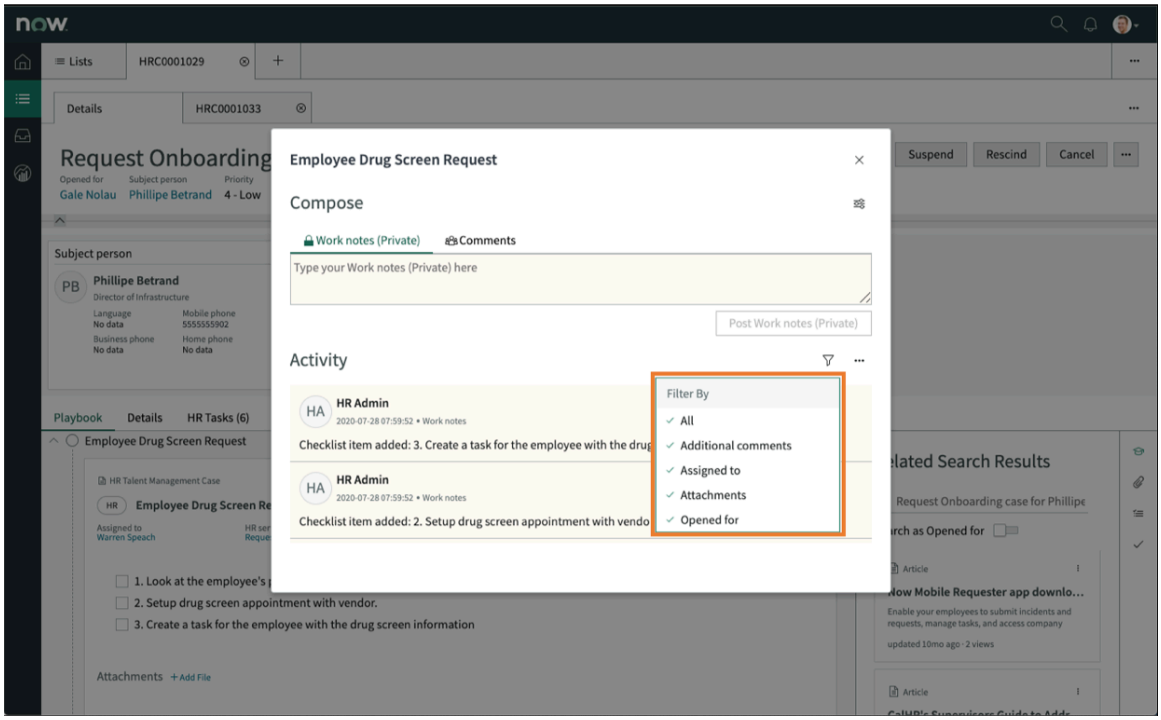


4. Click an activity within the opened activity set.

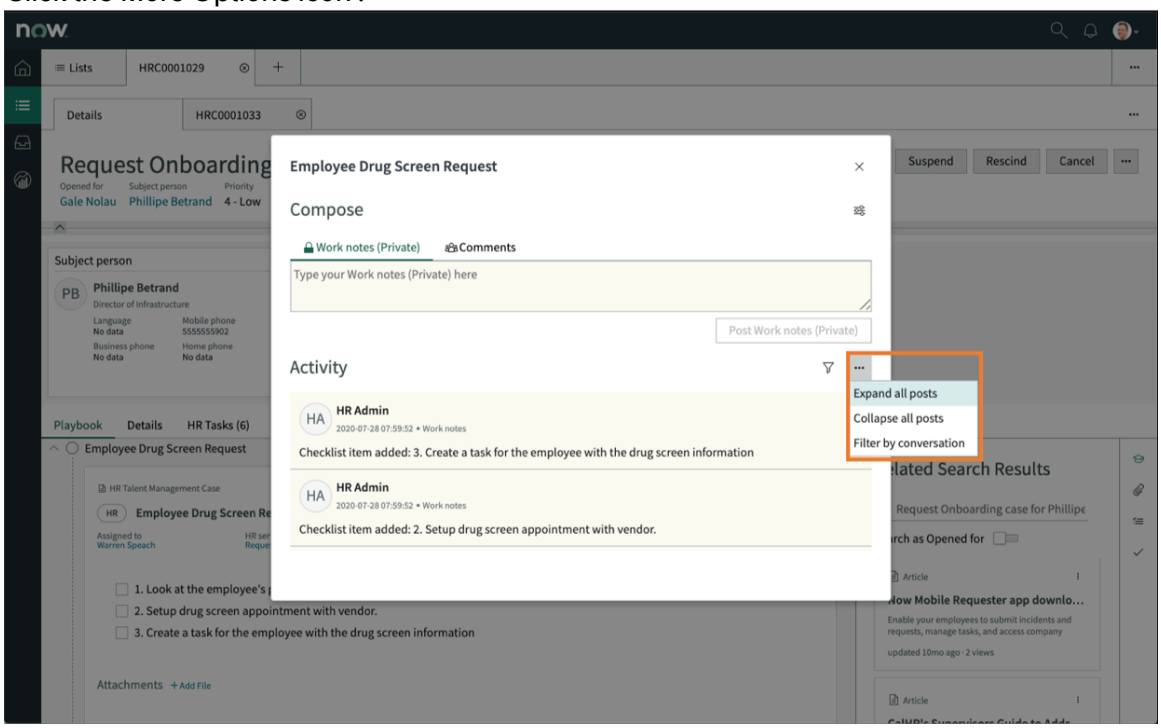


5. Click the **Add note or comment** icon .

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



6. Select **Work notes (Private)** or **Comments**.



7. Enter text and click **Post Work notes (Private)** or **Post Comments**.
8. Click the **Filter by** icon to filter by activities.

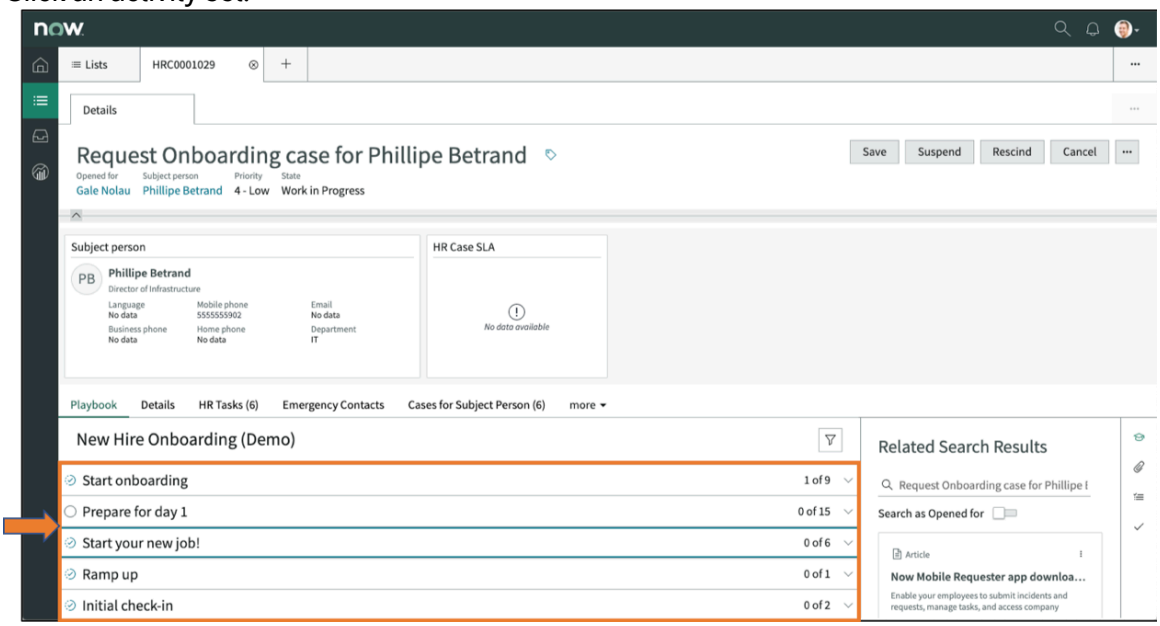
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Check the filters you want to show activities under.
10. Click the More Options icon .

11. Select the filters you want to use to show activities by.

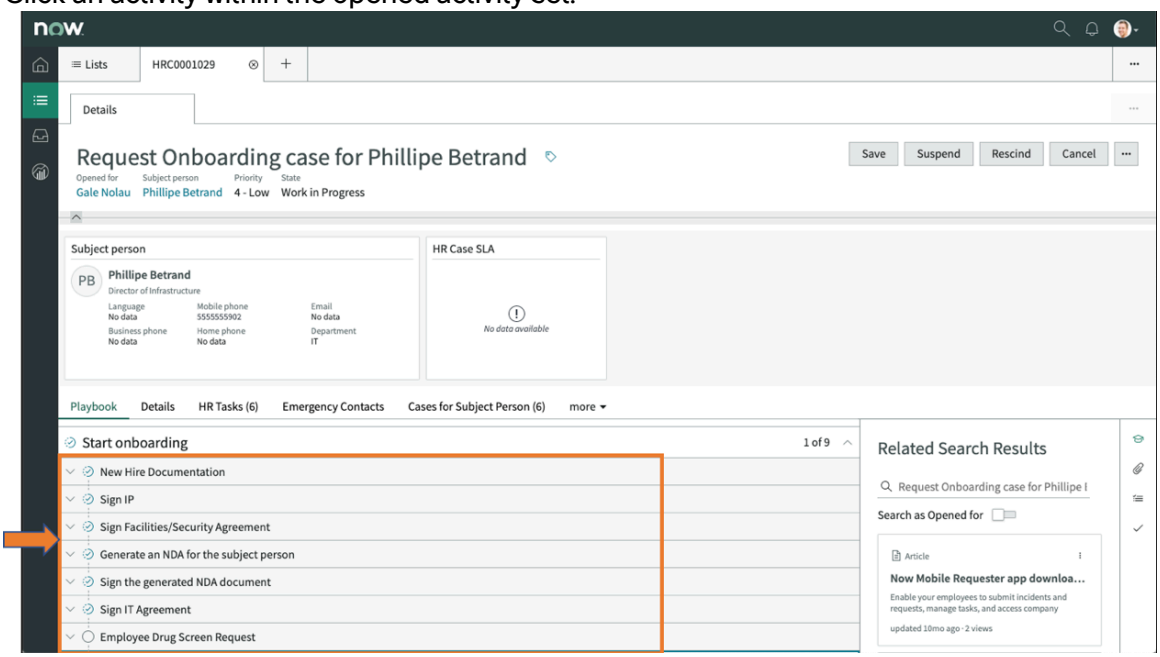
HR Playbook open a case or a task

You can open a sub-case or task on an HR lifecycle event case from Playbook.



Before you begin

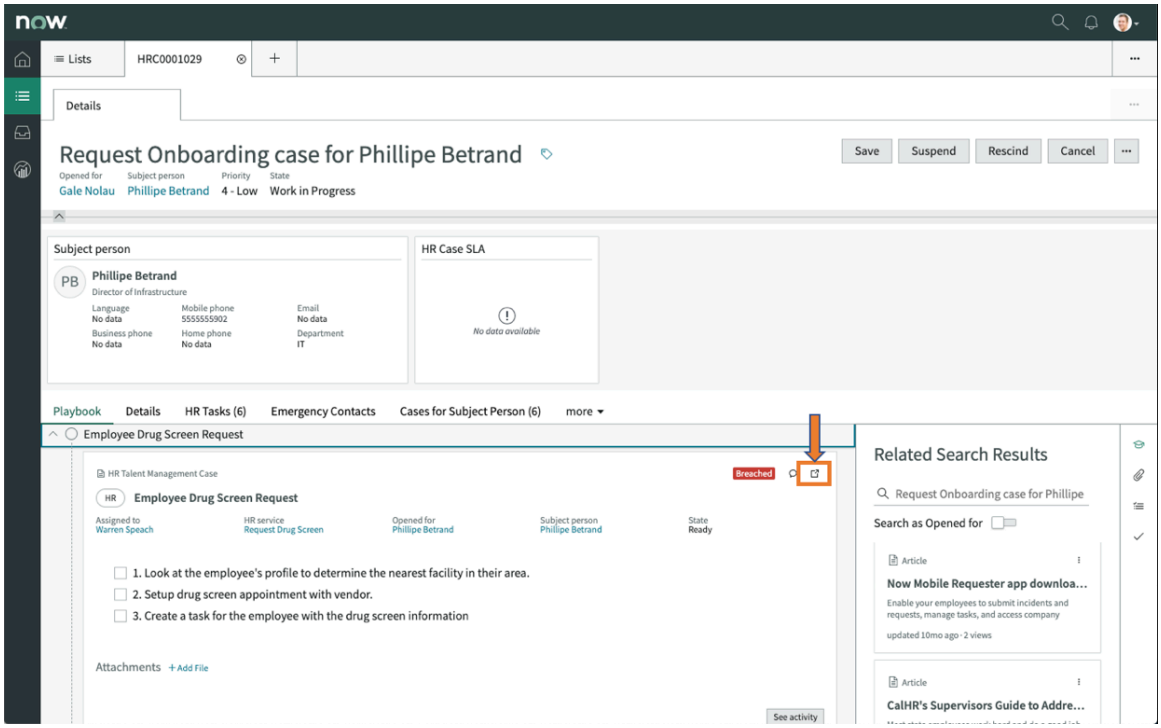
Role required: sn_hr_le.case_writer



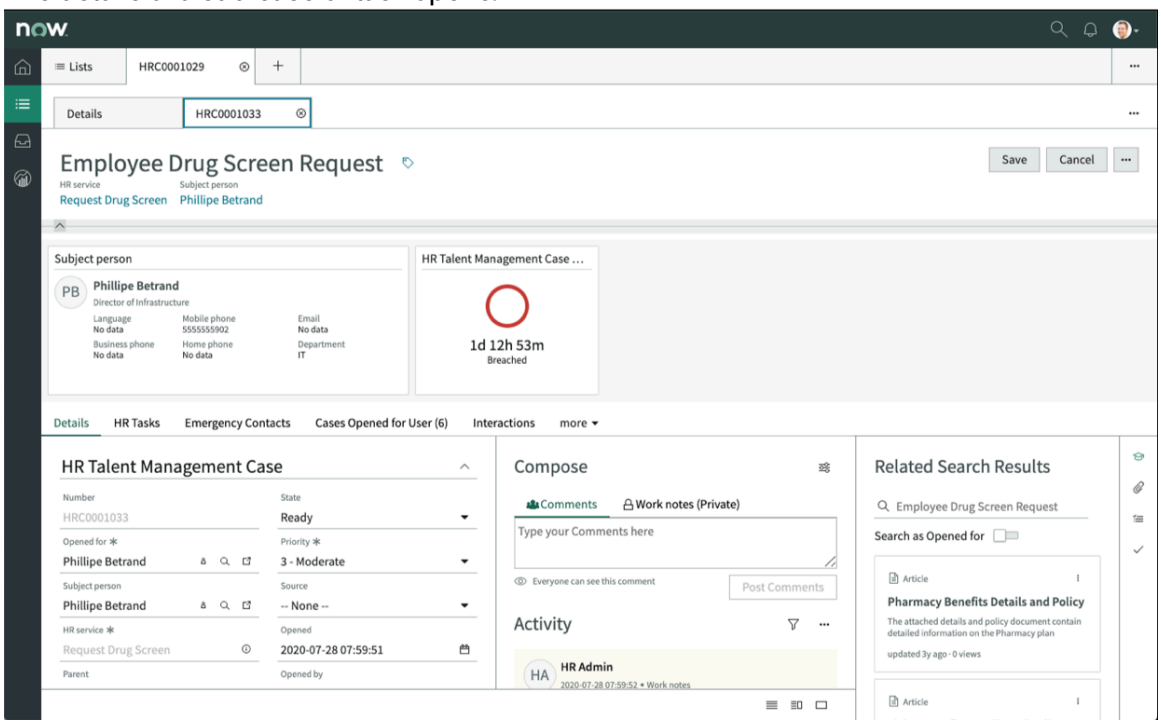
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.



4. Click an activity within the opened activity set.



5. Click the **Open task** icon .

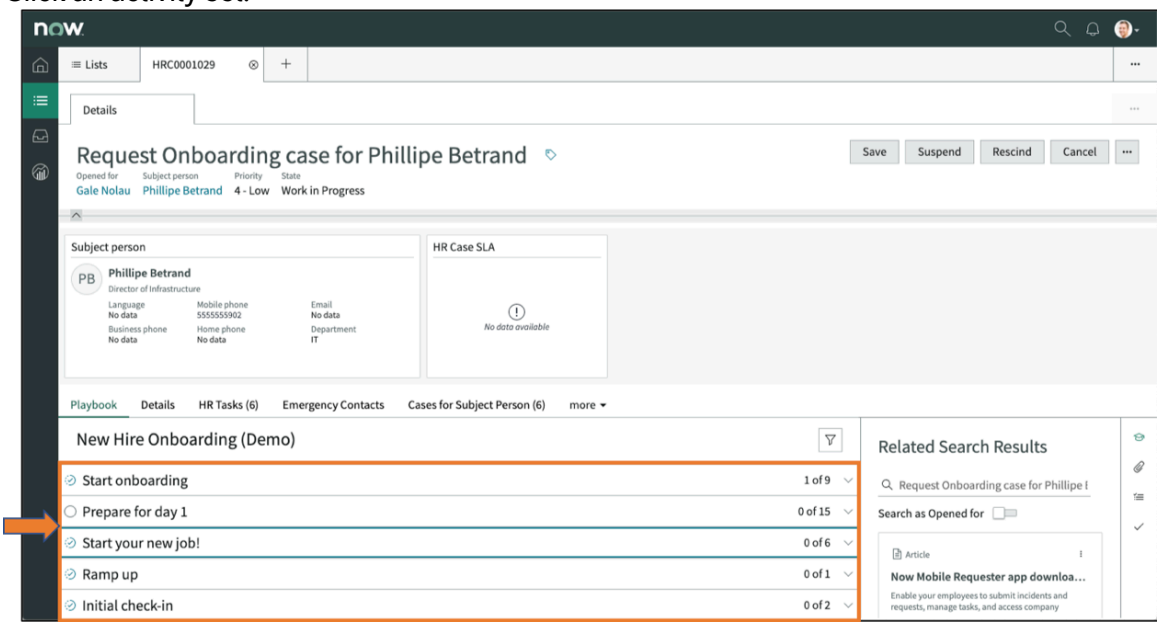
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. The details of a sub-case or task opens.

7. You can make edits and click **Save**.
8. To return to Playbook, click the **Details** tab.

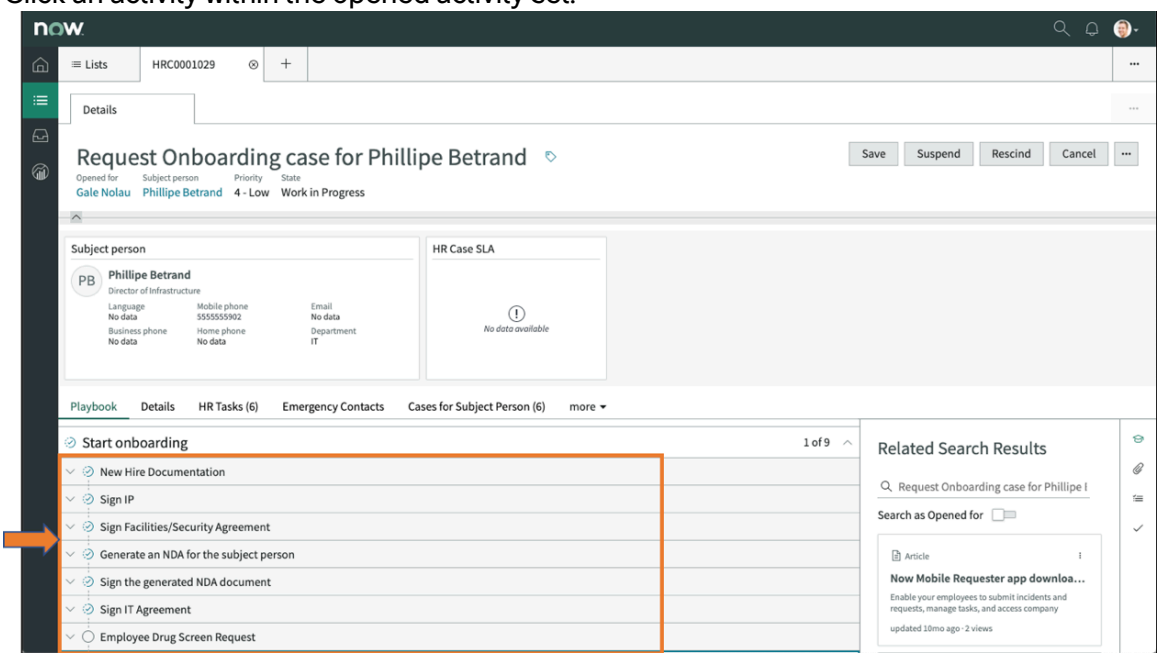
HR Playbook see activity

You can view the activity stream in a modal from HR Playbook.



Before you begin

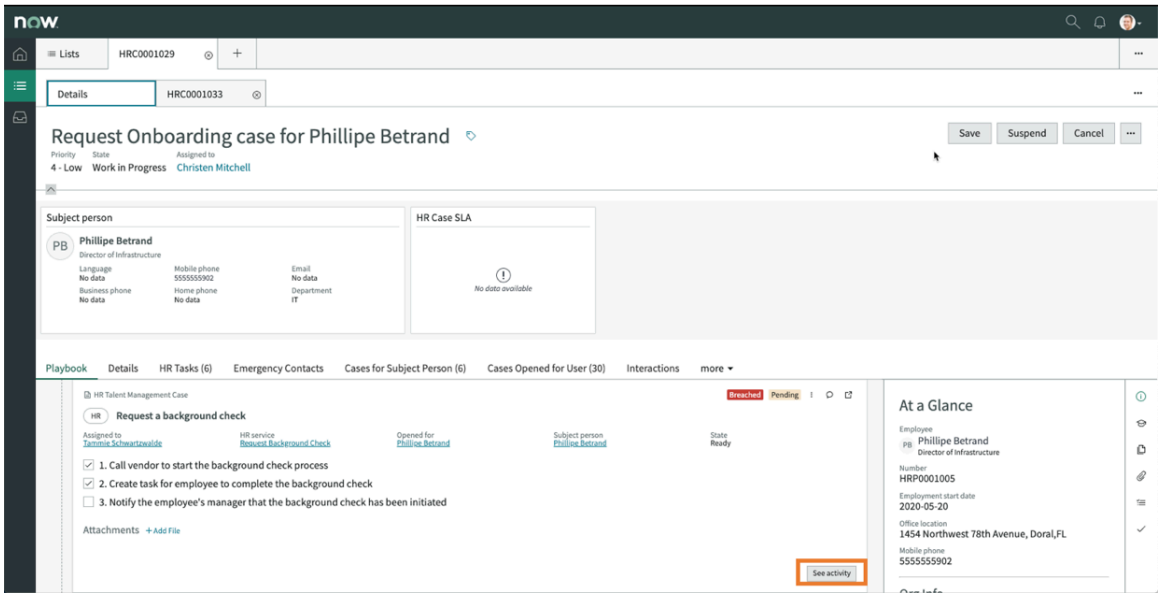
Role required: sn_hr_le.case_writer



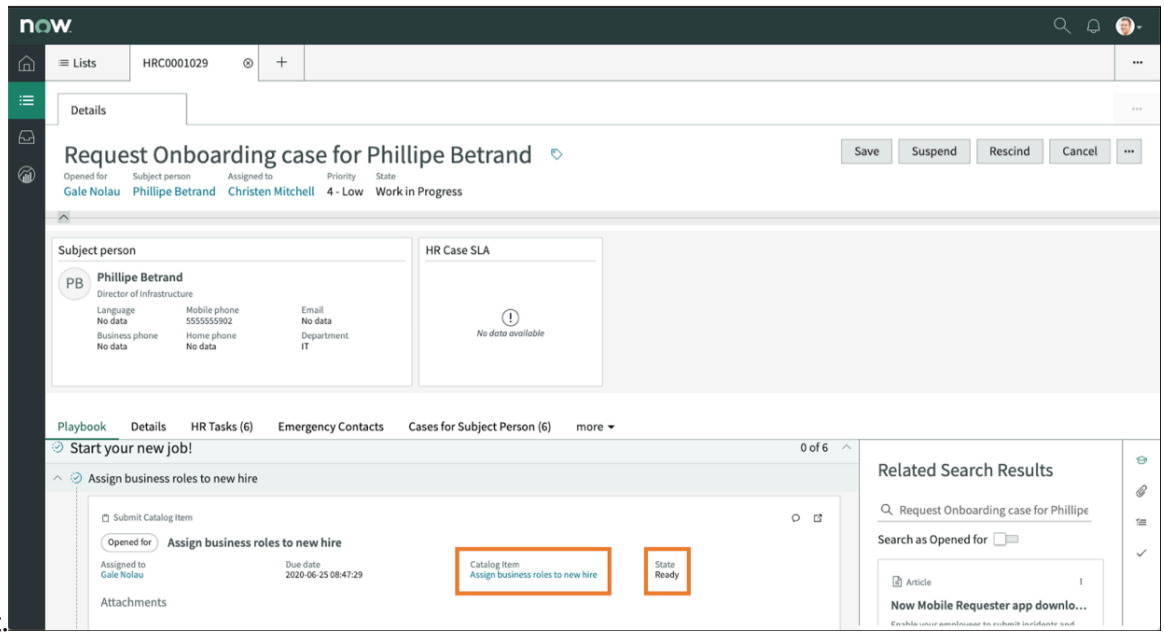
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.



4. Click an activity within the opened activity set.



5. Click the **See activity** button.

> **Note:**
> Only agents with access to the case card and not assigned to the case can see this button. The Assigned to agent does not see this button.

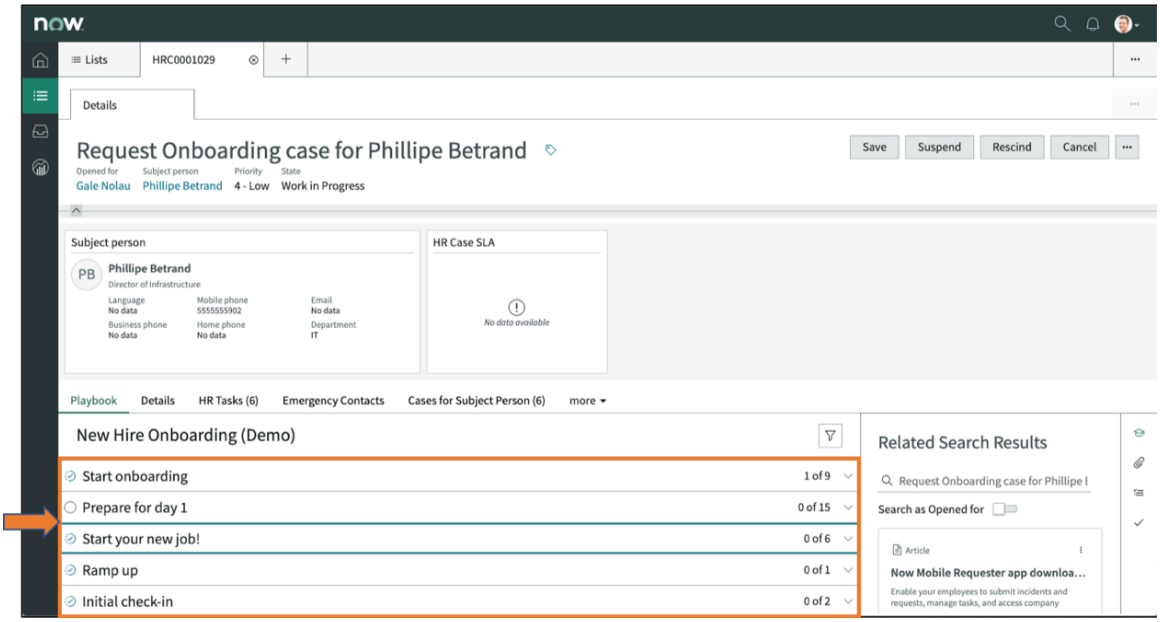
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Activities can have links to training, videos, or catalog items. The state of the activity also appears to the right.

Note:
Clicking the Catalog Item link opens the general catalog page.

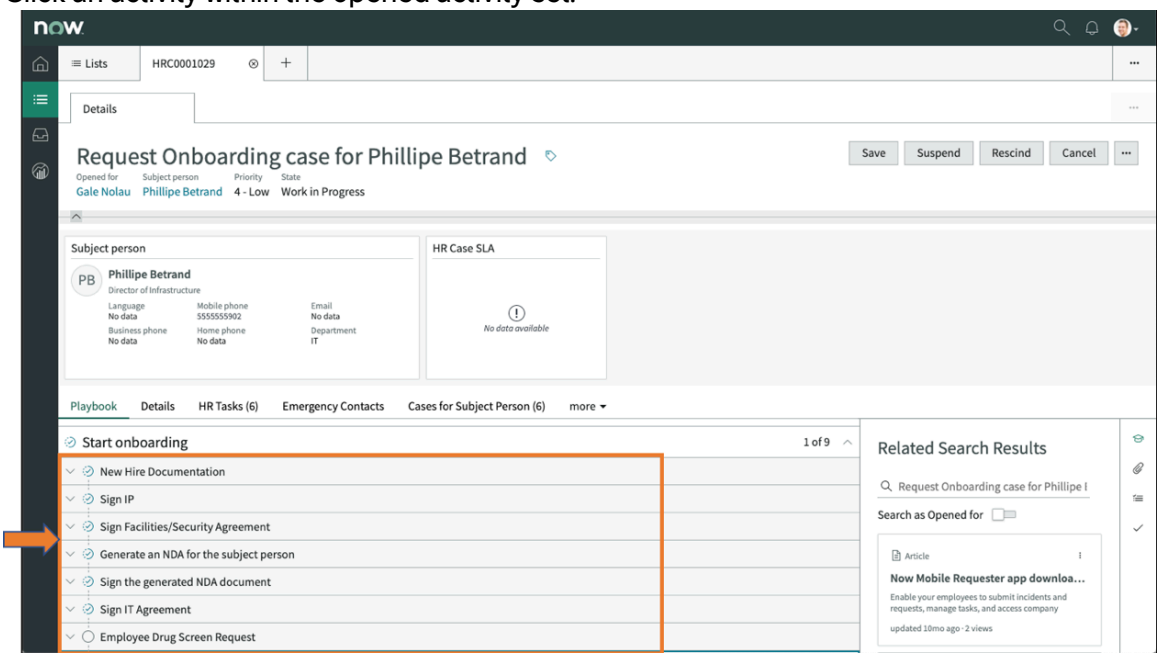
HR Playbook add attachment

Depending on the activity, you can add attachments from Playbook.



Before you begin

Role required: sn_hr_le.case_writer



Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click an activity set.

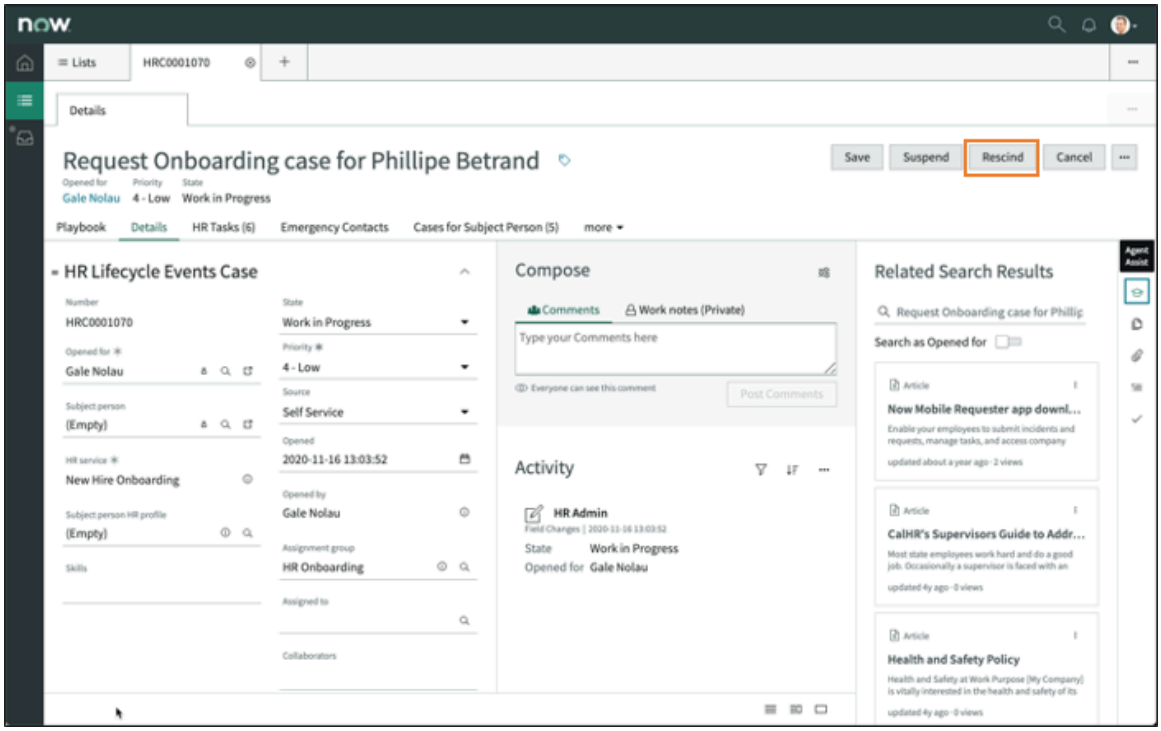
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click an activity within the opened activity set.

5. Click **+Add File**.
6. Select the file you want to up load and click **Open**.

HR Playbook rescind an activity

You can cancel and revert work done in a lifecycle event case using the rescind process.



Before you begin

Role required: sn_hr_le.case_writer
For more information, see Configure the rescind process for a Lifecycle Events activity.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Click **Rescind**.

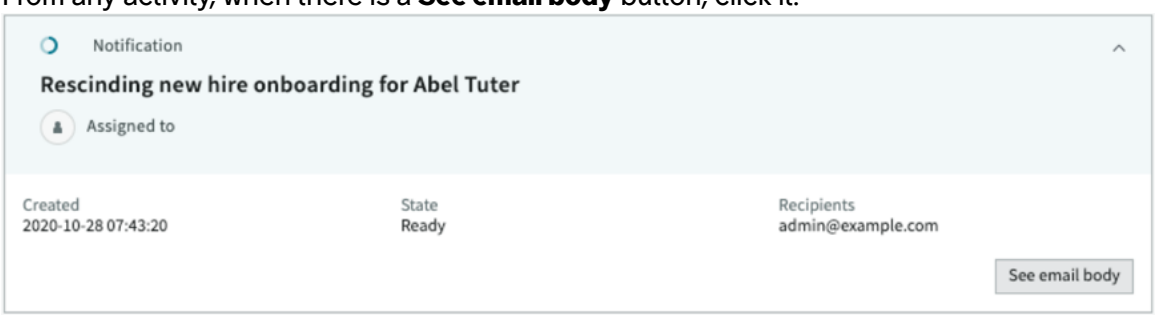
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Enter a reason for rescinding the case.

> **Note:**
> You cannot undo a rescind, so proceed with caution.

5. Click **OK**.
   The rescind activities appear and future activity sets are cancelled.

View email sent to opened for or subject person



As an HR agent, you can view emails to the opened for or subject person on a lifecycle event case.

Before you begin

Role required: sn_hr_le.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select a lifecycle event case.
3. Select an activity set.
4. From any activity, when there is a **See email body** button, click it.

5. Click the **X** at the top, right corner of the email to close it.

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR Service Delivery Agent Workspace integration with Universal Request

With the integration of HR Service Delivery Agent Workspace and Universal Request applications, you can provide a consistent user experience for employees while creating service requests.

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

HR Service Delivery Agent Workspace integration with Universal Request overview

A universal request gets created when an employee clicks the **Request help** option in Employee Center. A universal request routing agent analyses the issue (as HR department related) and creates an HR case from that universal request. After the case gets resolved by an HR agent, the state of the HR case changes to **Awaiting Acceptance**. Automatically, the state of the universal request changes to **Awaiting response**. Finally, after the employee accepts the resolution, the universal request gets closed and in turn, the HR case gets closed.

At any point in time, the HR agent can route the HR case back to the universal request queue with or without resolution.

All the important details, such users who are working on the issue, inter-department transfers, and work notes, are recorded in the universal request ticket providing complete visibility to the employee who has raised the request.

Activating the necessary plugins

After you have activated the Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) and Universal Request (com.snc.universal_request) plugins, you will notice that:

- The Universal Request form has the UI action to create an HR case.
- The **Universal Request** field appears on the HR case form only when an HR case is associated with a universal request record.
- The **Transfer** button appears on the HR case form to let an HR agent route an HR case back to the universal request, another department, or service.

Create an HR case from Universal Request in HR Service Delivery Agent Workspace

Create an HR case from a universal request record to restore service to a customer as soon as possible. After creating the HR case record, you can investigate potential solutions.

Before you begin

Role required: routing_agent and sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Navigate to **Universal Requests** > **All**.
3. Open the universal request record from which you want to create an HR case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Click **Create HR case**.
5. Fill in the required fields on the HR case form.

> **Note:**
> The **Employee Information** field values are automatically copied from the universal request to the HR case.

Create a new case form

Field	Description
COE	The Center of Excellence
HR service	The HR service type
Opened for	The person the ticket is opened for
Subject person	The subject person
Work notes	Other notes if any

6. Click **Submit**.
   The HR case number appears in the **Primary Ticket** field on the universal request form, and the ticket is listed in the **Associated Tickets** related list. Also the universal request number from which the HR case is created appears in the **Universal Request** field on the HR case form.

Work on an HR case of Universal Request in HR Service Delivery Agent Workspace

Provide resolution to an HR case that is initiated from a Universal Request.

Before you begin
Role required: routing_agent and sn_hr_core.case_writer

About this task
The state changes described in the procedure can be configured to suit your requirements. For more information, see Universal Request state mapping

Procedure
1. Open the HR case that is created from a Universal Request.
2. Click **Start Work**.
   The state of the case changes to **Work in Progress**.
3. Click **Closed Complete** when the resolution is provided.
   The state of the HR case is changed to **Awaiting acceptance** and the state of the universal request is automatically changed to **Awaiting response**. On the Employee Center:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- If the user accepts the resolution, the state of the universal request is changed to **Closed**. The state of the HR case is automatically changed to **Closed Complete**.
- If the user rejects the resolution, the state of the universal request is changed to **In progress**. The state of the HR case is automatically changed to **Work in progress.**

> **Important:**
> If for some reason the HR agent clicks **Closed Incomplete** without routing the HR case back to universal request, then the behavior is as follows:
>
> - If the **Needs Additional Review** check box is selected on the universal request, the universal request will be in the **In progress** state, and the HR case will be in the **Close Incomplete** state.
> - If the **Needs Additional Review** check box is deselected on the universal request, the universal request gets closed based on the state mapping.

Transfer an HR case to Universal Request HR Service Delivery Agent Workspace

Transfer an HR case back to the Universal Request queue, or to another department with or without resolution.

Before you begin

Role required: routing_agent and sn_hr_core.case_writer

About this task

Configure the *sn_uni_req.transfer_type* property in the Universal Request properties page to determine how to handle the primary ticket transfers. For more information, see Universal Request properties.

Procedure

1. Open the HR case that you want to transfer.
2. Click **Transfer**.

> **Note:**
> The **Transfer** option is displayed only if you are a part of the assignment group or if the case is assigned to you.

3. In the transfer dialog box, provide the following details.

> **Note:**
> Based on your transfer type configuration, the given fields are displayed. For more information, see Universal Request Properties.

- **Action**: Select if the case should be transferred to another department or back to Universal Request
- **Department**: Select the department from the list.
- **Service**: Select the specific service of the chosen department.
- **Transfer reason**: Select the reason from the list.
- **Transfer notes**: A brief description for routing the primary ticket that you want to pass to the UR Routing agent.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- **Copy additional comments and attachments**: Deselect if you do not want to transfer the ticket with additional comments and attachments. By default, all attachments and comments are transferred.

  Note:
  Work notes are not copied while transferring.

4. Click **Transfer**.

Result

- On the HR case form, you can view the transfer reason and transfer notes.
- The state of the HR case is changed to **Closed Incomplete** and the transfer reason and transfer notes are copied to the universal request.
- The state of the universal request remains **In progress**.

Note:
The state changes mentioned can be configured. See Transfer configuration for more information.

Agent Workspace for HR Case Management (Configurable)

Agent Workspace for HR Case Management (Configurable) is one of two workspaces available for the HR Service Delivery application and uses the Next Experience user interface. It is built on a configurable UI Builder version, which makes it easy to configure and extend according to business needs.

Comparison between HR Service Delivery Core UI, HR Service Delivery Agent Workspace (Classic), and Agent Workspace for HR Case Management (Configurable)

HR agents can work on HR cases using HR Service Delivery Core UI, HR Service Delivery Agent Workspace (Classic), or Agent Workspace for HR Case Management (Configurable). Review the following details to understand the key offerings and differences between these applications:

- The HR Service Delivery Core UI enables you to create, view, or work on an HR case in a form view.
- The HR Service Delivery Agent Workspace (Classic) gives you the ability to create custom workspaces from the Agent Workspace framework.

  Note:

  - HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
  - If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

- The Agent Workspace for HR Case Management (Configurable) is a refactored version of the classic agent workspace experience built on a configurable UI Builder version. This application

Use Agent Workspace for HR Case Management to manage your employee HR requests from one place.

Agent Workspace for HR Case Management home page

The Home page is the starting point in exploring Agent Workspace for HR Case Management. On the left hand side you will see a list of icons. You can access these icons from any screen.

The Home page shows high priority cases, cases at risk for violating service level agreements (SLA), and cases with recent changes.

Agent Workspace home page callout descriptions

Number	Agent workspace elements	Description
1	Home icon	The Home page provides you with an overview of your work at a glance. It provides you with information that can help you decide what you should act on first, like HR cases and items that affect your team.
2	Learning icon	Learning helps you explore and manage coursework, view course activity and history, and engage with career development content through customizable catalogs from various sources.
3	Lists icon	The lists provide you with a view into all HR cases. You can filter and sort by what is relevant to you. Select to view a list of HR cases, interactions, HR tasks, and more. For more information, see Lists in Agent Workspace for HR Case Management.
4	Analytics Center	The Analytics Center provides an overview of your most important dashboards and data visualizations along with a place for you to ask questions about analytics. For more information, see Analytics Center.

Agent Workspace home page callout descriptions (continued)

Number	Agent workspace elements	Description
5	Calendar icon	Use the Calendar to see work schedules and assignments, add personal events or shift swap requests or approvals.
6	Tabs	Tabs display lists, HR case numbers, and the Add icon. If you hover on an HR case number, you can quickly see more details related to a case, for example, the description of the case, HR Service and Subject person. When you have multiple tabs open, you can only see the case number on the tab by default. However, you can also configure the information you want to be displayed on the tab. For more information, see Customize tab label in Agent Workspace for HR Case Management.
7	Add icon	Select to instantly create one of the following: • **Create HR case**. For more information, seeCreate a case in Agent Workspace for HR Case Management. • **Create interaction**. An interaction is when an employee contacts an HR agent and you want to ensure the interaction is documented and captured. For more information, see Using interactions in Agent Workspace for HR Case Management.
8	Overview	Displays a graphical representation of the data based on the overall HR cases. Use this dashboard to understand the cases that need priority or the SLA (Service Level Agreement) status, general information and announcements, etc.

Agent Workspace home page callout descriptions (continued)

Number	Agent workspace elements	Description
9	My team	Displays a graphical representation of the data related to the teams you belong to. Use this tab to understand the cases assigned to the team that need priority or the SLA status.

My team

Information related to the teams your HR agents belong to display in the **My team** section.

The bottom of the landing page provides company information, links, and tools available. This section is part of Content Delivery. For more information, see Content Library.

Use Guided Tours in Agent Workspace for HR Case Management

Use Guided Tours in Agent Workspace for HR Case Management to get instructions on how to perform a task.

Before you begin

Role required: sn_hr_core.writer

About this task

Guided Tours help train and onboard users within the workspace. Each tour is designed to provide an overview, guide you through a task, or complete a process. If needed, administrators can create more tours. For more information, see Guided tours.

When you visit a page that has a guided tour for the first time, a welcome screen appears. You can choose to either begin the tour or skip the tour. The tour can be revisited from the Help Center menu.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Navigate to one of the following pages:
   - Home page
   - List page
3. Select the **Show help** icon ( ).
4. **Optional:** Select the **Pin Help Center menu** icon to pin the Help Center side panel on the page.
5. Select **Take a Tour**.
6. Take the necessary action and select **Next** to progress through the tour.
   For ending the tour at any point, you can select **End Tour** in the side panel or select the **Close** button in the pop-up window and confirm to end the tour.
7. Select **Done** after the tour is ended.

Setting up Agent Workspace for HR Case Management

Set up Agent Workspace for HR Case Management so that your agents can engage with your employees, answer questions, create cases, and resolve issues.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

- Install the application Agent Workspace for HR Case Management [sn_hr_agent_ws].
- Set up these components:
  - Communication channels and routing.
  - Additional components and settings that are specific to HR Service Delivery.
  - Forms in workspace. See Customize fields in a form in Agent Workspace for HR Case Management.
  - Workspace setup. See Configuring Configurable Workspace.

Roles installed

By installing the HR Service Delivery Configurable Workspace [sn_hr_agent_ws], you install the following roles:

Roles for Agent Workspace for HR Case Management

HR role title [name]	Description	Contains workspace roles
HR manager [sn_hr_core.manager]	Grants access to all HR cases, profiles, and secure information. With this role, you can manage Agent Workspace for HR Case Management lists and categories. This role contains the Workspace List Admin, which is an elevated role. For more information on elevated roles, see Elevated privilege roles. The Workspace user [workspace_user] role allows you to access Agent Workspace for HR Case Management and create and access interactions.	Workspace List Admin [workspace_list_admin] Workspace user [workspace_user]
HR case writer [sn_hr_core.case_writer]	Grants access to write all HR cases. With this role, you can access Agent Workspace for HR Case Management and view, create, and work on existing cases. You	Workspace user [workspace_user] Interaction agent [interaction_agent]

Roles for Agent Workspace for HR Case Management (continued)

HR role title [name]	Description	Contains workspace roles
	• The personalize_form role allows you to personalize forms. • The ui_notification_admin role allows you to configure notification triggers.	

Agent Workspace for HR Case Management Guided Setup

The Guided Setup enables you to configure Agent Workspace for HR Case Management for your agents so that they can access HR cases, tasks and communications all from one location.

Agent Workspace for HR Case Management Guided Setup provides an introduction to starting your configuration. It also organizes configuration activities into categories. Complete the activities in each of the categories to customize the workspace for your human resources organization. Each category provides information like planning guidance, pre-setup steps, and links to useful information. Each category also provides links to the pages in your instance where you perform the configuration.

To access Agent Workspace for HR Case Management Guided Setup, navigate to **HR Case Management** and select Agent Workspace for HR Case Management Guided Setup. Select the **Get Started** button on the landing page to start the configuration.

In the Agent Workspace for HR Case Management Guided Setup page, you will see a list of different categories. Select the **Get Started** button under each category to start the configuration.

For more information on **Guided Setup**, see Using guided setup.

Install Agent Workspace for HR Case Management

Install Agent Workspace for HR Case Management (sn_hr_agent_ws) from the ServiceNow Store.

Before you begin

Go to the ServiceNow Store and download the Agent Workspace for HR Case Management app.

Role required: admin

Procedure

1. Navigate to **All** > **System Applications** > **All Available Applications** > **All**.
2. Find the application using the filter criteria and search bar.

   You can search for the application by its name or ID. If you cannot find an application, you may have to request it from the ServiceNow Store.

   Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.
3. Select a version from the list and select **Install**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

In the Review Installation Details dialog box, any dependencies installed with your application are listed.

4. If you're prompted, follow the links to the ServiceNow Store to get any additional entitlements for dependencies.
5. **Optional:** If demo data is available and you want to install it, select the **Load demo data** check box.
   Demo data comprises the sample records that describe application features for the common use cases. Load the demo data when you first install the application on a development or test instance.
6. Select **Install**.

What to do next

Go to **All** > **HR Case Management** > **Agent Workspace for HR Case Management Guided Setup**. Complete the activities in each of the categories to customize the workspace for your organization.

RCA approvals in Agent Workspace for HR Case Management

After you install or upgrade to the latest Agent Workspace for HR Case Management from ServiceNow Store, you might encounter Restricted Caller Access (RCA) approval messages in the HR Agent Workspace.

Before you begin

Role required: admin

Install the Agent Workspace for HR Case Management application. The RCAs that are generated after the installation are in the Requested state and you must manually mark the RCAs as allowed, which can be time-consuming.

To automate the RCA approvals for any record, you can run the HR Agent WS bulk RCAs approval script where the source scope is the Agent Workspace for HR Case Management application. Download the HR Agent WS bulk RCAs approval file from ServiceNow Store.

Perform the following steps:

Procedure

1. Navigate to **All** > **System Definition** > **Fix Scripts**.
2. Right-click the header and choose **Import XML**.
3. Click **Choose file** and select the XML file that you downloaded.
4. Search and find the HR Agent WS bulk RCAs approval script record.
5. Click **Run Script** to approve all the requested RCAs.

> **Note:**
> RCA fix script can approve the RCAs which exist at the time of execution. After running the RCA script (if you install the Document Templates from ServiceNow Store, Human Resources Scoped App: Lifecycle Events, and Human Resources Scoped App: Employee Relations plugins), re-run the RCA script to approve the new RCAs.

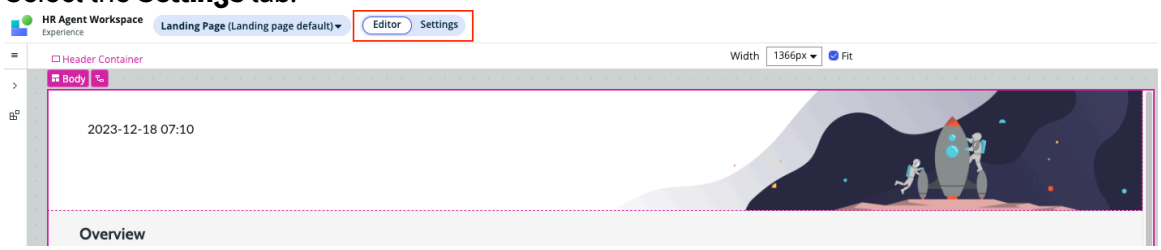
UI Builder for Agent Workspace for HR Case Management

Use UI Builder to build pages in Agent Workspace for HR Case Management using Next Experience and custom web components.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

For more information about UI Builder, see UI Builder.

Create a landing page variant



Create a variant of your landing page to build a custom portal experience for your users.

Before you begin

Role required: sn_hr_agent_ws.admin and sn_hr_core.basic

Procedure

1. Navigate to **All** > **HR Case Management** > **UI Builder for Agent Workspace for HR Case Management**.
2. Select **Landing page default**.
3. Select the **Settings** tab.

4. Select **Duplicate**.

   If the **Duplicate** action in the **Actions** column is not selectable and a message about a different application scope is displayed, select the **Edit in original scope** button.

5. Enter the name of your variant.
6. **Optional:** Define who can view your page by selecting **Add an audience** and selecting or defining the audience.
   For more information, see Learn about audiences.
7. Select **Create**.
8. In the **Order** field, set the order of the variant to a lower value than the Landing page default.
   The order of the variant defines the copy to be used.

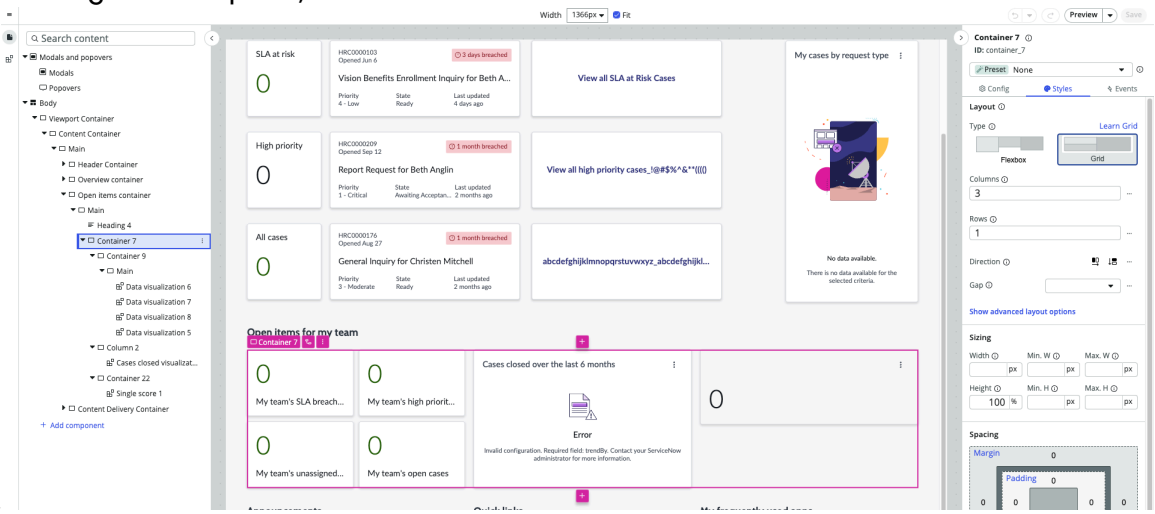
Landing page configuration example

Learn how to configure a landing page through an example configuration process.

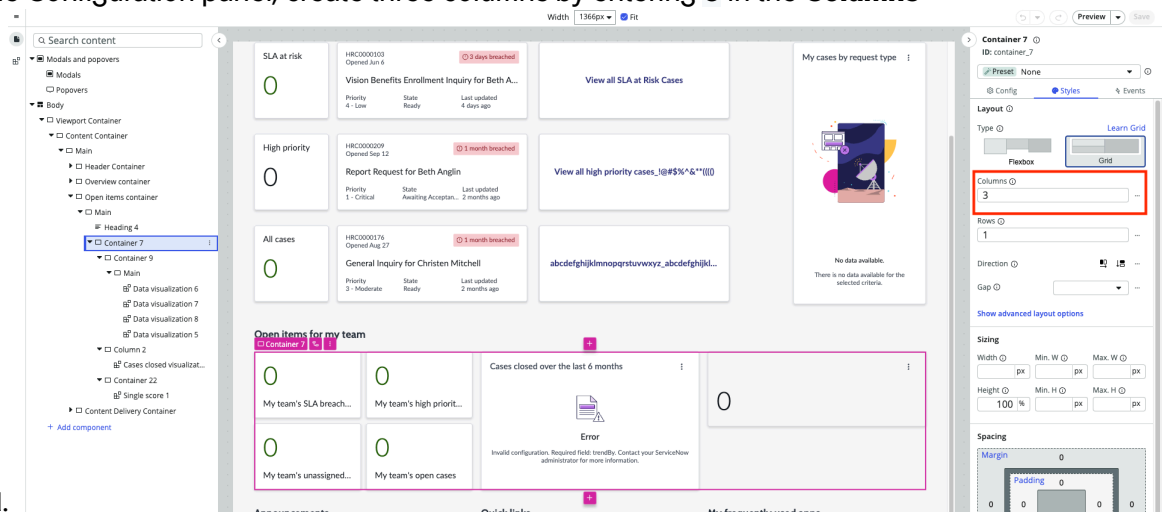
Before you begin

Create a variant of your landing page. For more information, see Create a landing page variant.

Role required: sn_hr_agent_ws.admin and sn_hr_core.basic



About this task



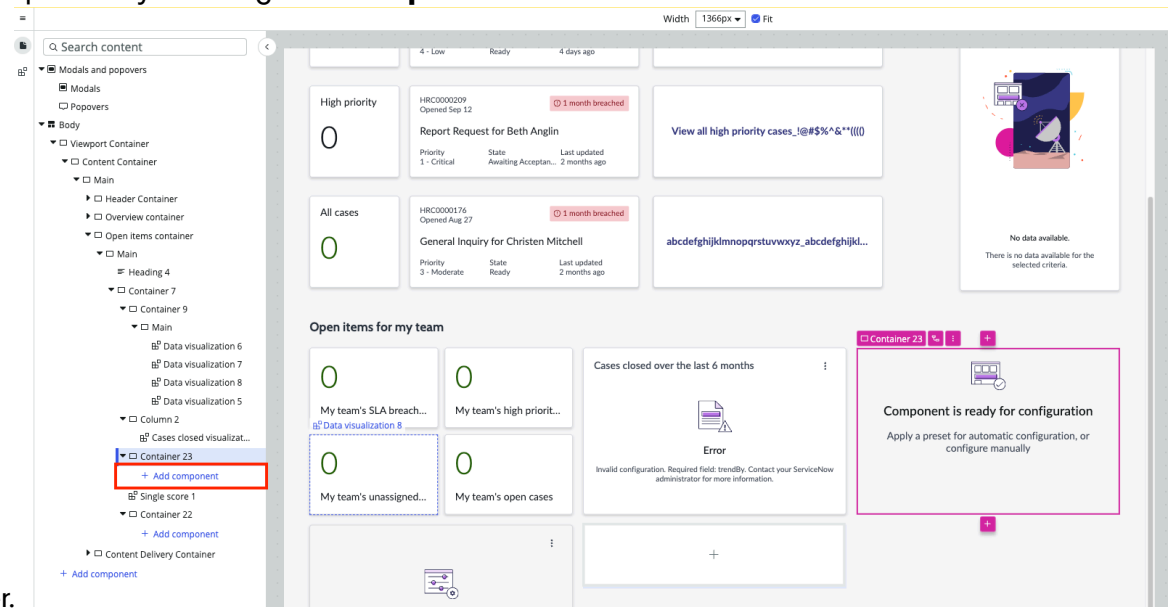
The configuration example shows how you would configure an **HR Cases closed in the last week** report beside the **Cases closed over the last 6 months** report on a landing page.

Procedure

1. Navigate to **All** > **HR Case Management** > **UI Builder for Agent Workspace for HR Case Management**.
2. Select your variant.
3. Select the **Editor** tab if it is not already selected.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. In the Page content panel, select **Container**
7. 



5. In the Configuration panel, create three columns by entering 3 in the **Columns** field. 

6. Select the more icon (⋮) beside **Column 2**.
7. Select **Add after**.
8. Select the **Components** tab and select **Container**.

   A container is an area of the page where you add information, images, or functionality (your components). You can have several containers on a page, nest containers within containers, and include several components in the containers.

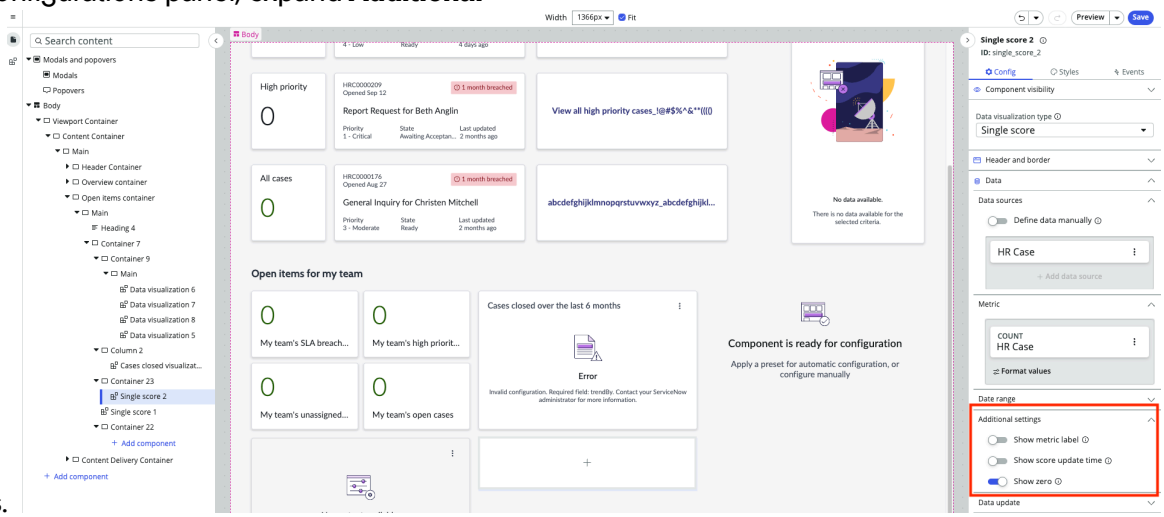
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

9. Add a component by selecting **+Add component** under the container.
This example uses **Container 23**.

10. Select the **Data visualization** component.
11. Add a data source.
    a. In the Configuration panel, select **+ Add data source**.

    b. In the **Select a source** field, enter `HR Case`.
    c. Select the **sn_hr_core_case** table.
    d. Select **+Add custom conditions**.
    e. Add a condition with the following values:
        - Select field: `Assignment group`
        - Select operator: `is(dynamic)`
        - Enter value: `One of my groups`

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



f. Refine the condition by selecting **AND**.
You can create dependent conditions by selecting **AND** or **OR**.

g. Add a condition with the following values:

- Select field: `Closed`
- Select operator: `at or after`
- Enter value: `Last week`

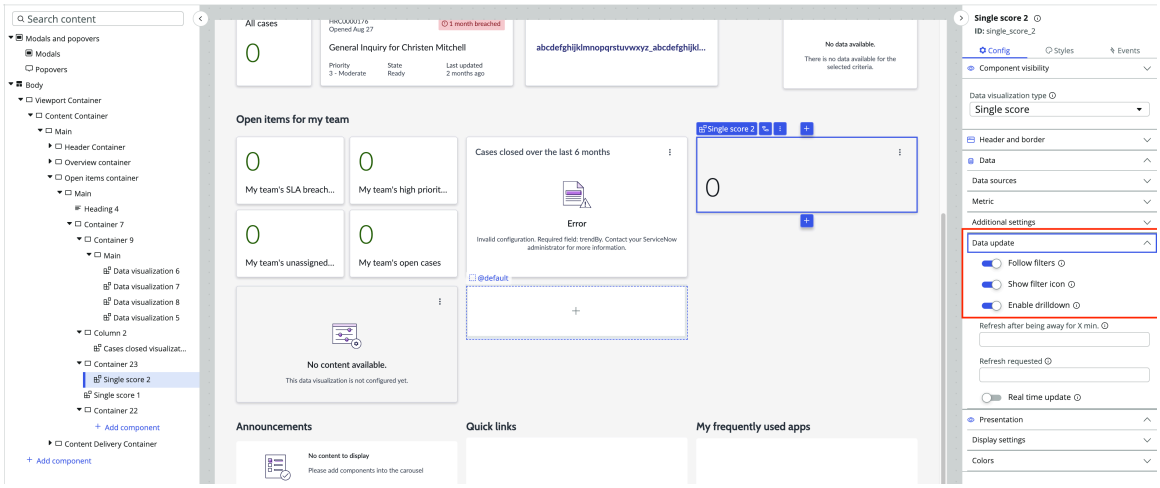
h. Select **Add this source**.

12. In the Configurations panel, expand **Additional settings**.

13. Add additional data to display by enabling **Show metric label** and **Show score update time**.
14. Select **Save**.
15. Make the variant the default landing page by changing the order of the original landing page.
    a. Select **Landing page default** from the drop- down list.
    b. Select the **Settings** tab.
    c. Enter a number greater than 0 in the **Order** field.
    d. Select **Save**.

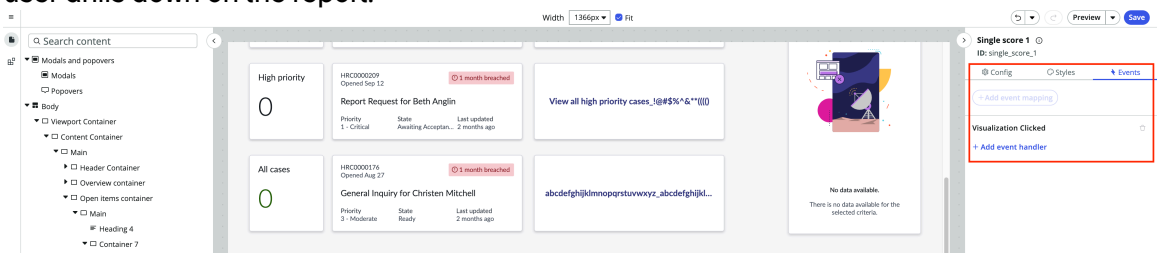
Enable a detailed data display within a report

Enable users to visualize a subset of report data.



Before you begin

Role required: sn_hr_agent_ws.admin and sn_hr_core.basic



Procedure

1. Navigate to **All** > **HR Case Management** > **UI Builder for Agent Workspace for HR Case Management**.
2. Select your variant.
3. Select the container containing your report.
4. In the Configuration panel, select **Data update**.
5. Turn on the **Enable drilldown** option.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. In the Events panel, select **+Add event handler** to map the data that is displayed when the user drills down on the report.

7. In the **Search item** field, enter `Open cases - simple list page`.
8. Select **Open cases - simple list page**.
9. Select **Add**.
10. Select **Save**.

Configure quick links in Agent Workspace for HR Case Management

Configure quick links to quickly access internal and external resources related to specific departments within your organization.

Before you begin

Employee Center Pro must be installed. For more information, see Install Employee Center Pro.

Role required: sn_hr_agent_ws.admin and sn_hr_core.basic

Procedure

1. Navigate to **All** > **Content Publishing** > **Re-usable Components** > **Link Content**.
2. Create the link.
   a. Select **New**.
   b. On the form, fill in the fields.

Link Content form

Field	Description
Name	Name of the link to content.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Ensure that you have content created in **Content Publishing** > **Content Library** > **View All**.
Type	The type of content, which for a quick link is **Link**.
URL	The URL link to the content to appear on the service portal.

c. For the **Load link in** field, select **Current page** to load the link in the current portal page.

d. Select **Submit**.

3. Define when and where you want your content to be available.

a. Navigate to **All** > **Content Publishing** > **Schedule Content**.

b. Select **New**.

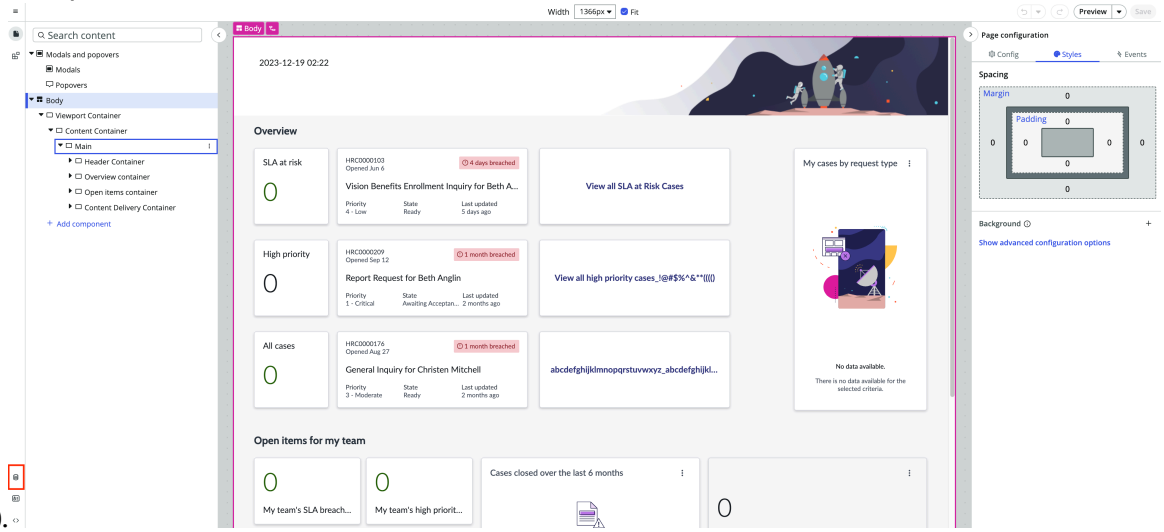
c. On the form, fill in the fields.

Schedule Content form

Field	Description
Content	The content or information you want to make available as set in the link definition.
Active	Option to enable the form.
Title	Name of the schedule content record.
Audience	Audience for the content.
Content location	Location where the content you're scheduling appears.
Approvers	Users who can approve the content before it's made available.
Component type	Should be set to **Quick links**.
Availability start date	Date the content should first be available to the audience.
Availability end date	Final date the content is valid.

d. Enter or verify the field values in the following table.

Schedule content form



Field	Value
Content	The newly created record
Content location	UIB Workspace

© 2026 ServiceNow, Inc. All rights reserved.

e. Select

getQuickLinksContent.

f. In the **content_id** field, enter the name given to the Content group.

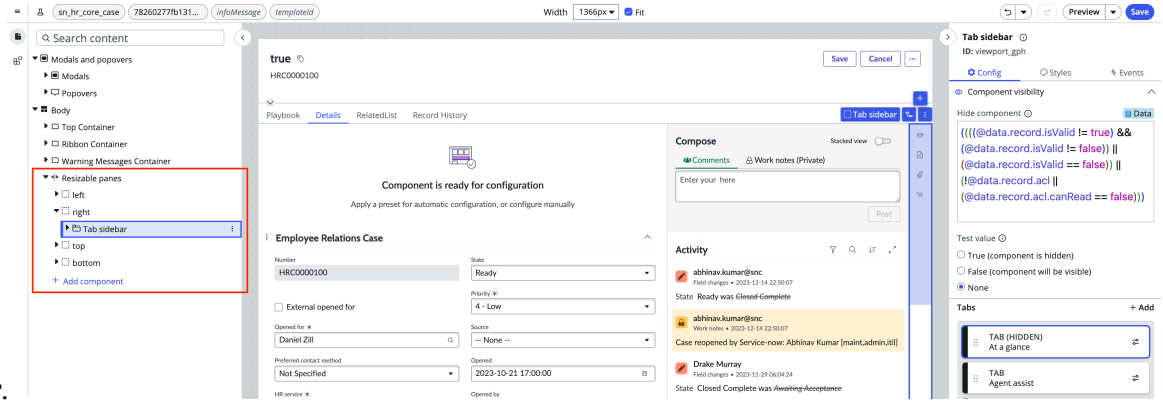
g. Select **Save**.

Configure contextual side panel tabs in Agent Workspace for HR Case Management

Add or delete tabs from the contextual side panel that is available in all record pages in Agent Workspace for HR Case Management.

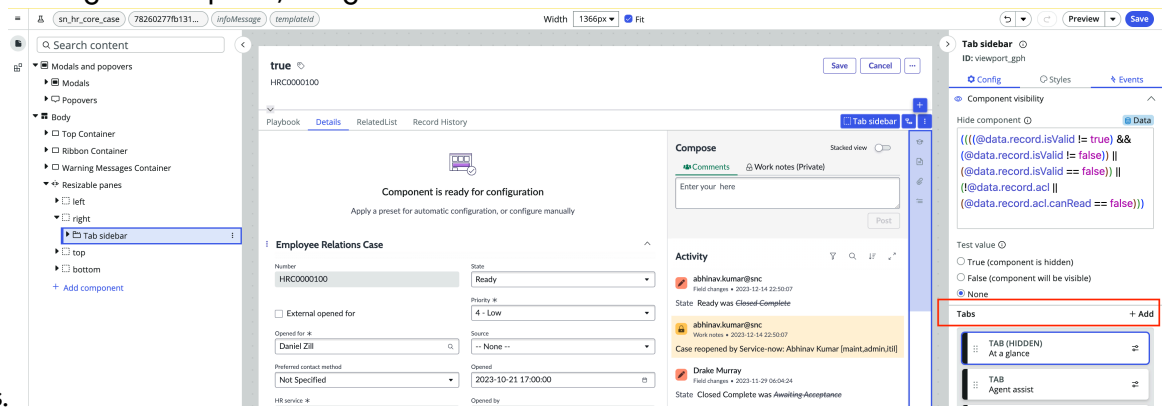
Before you begin

You must have a Case SRP record variant. For more information, see Create a landing page variant.



Role required: sn_hr_agent_ws.admin and sn_hr_core.basic

Procedure



1. Navigate to **All** > **HR Case Management** > **UI Builder for Agent Workspace for HR Case Management**.
2. Under the Pages and variants list, select your **Case SRP** record variant.
3. In the Page content panel, navigate to **Body** > **Resizable panes** > **right**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Select **Tab sidebar**.

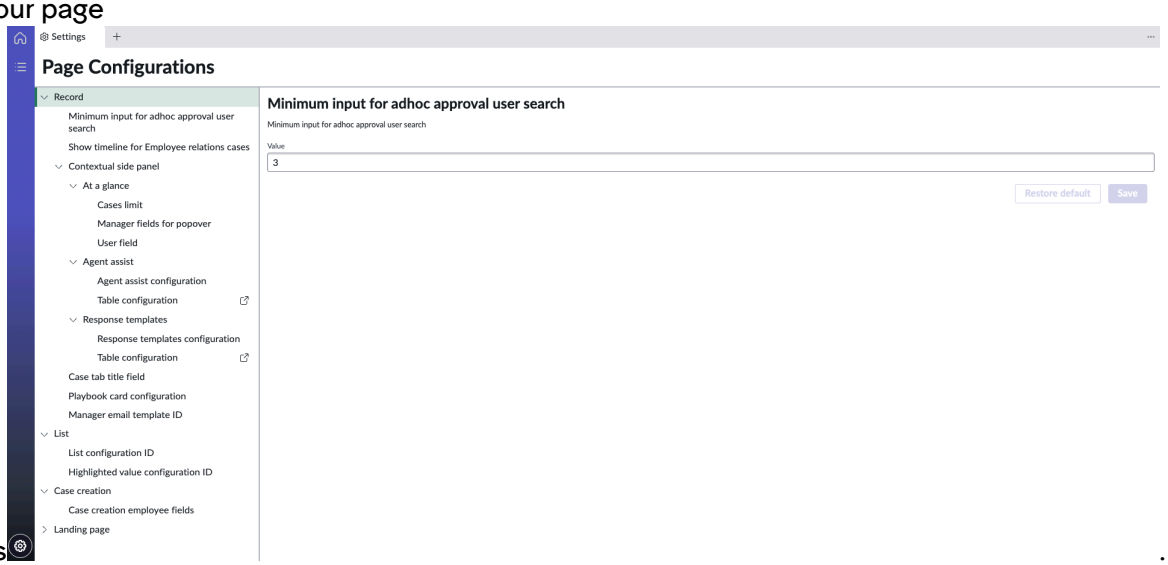
5. In the Configurations panel, navigate to **Tabs**.

6. Add, hide, or delete a tab in the sidebar.

Page configurations

Use Page configurations in Agent Workspace for HR Case Management to provide a customized experience for your users.

Before you begin



Role required: admin

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the settings icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Personalize your page configurations.

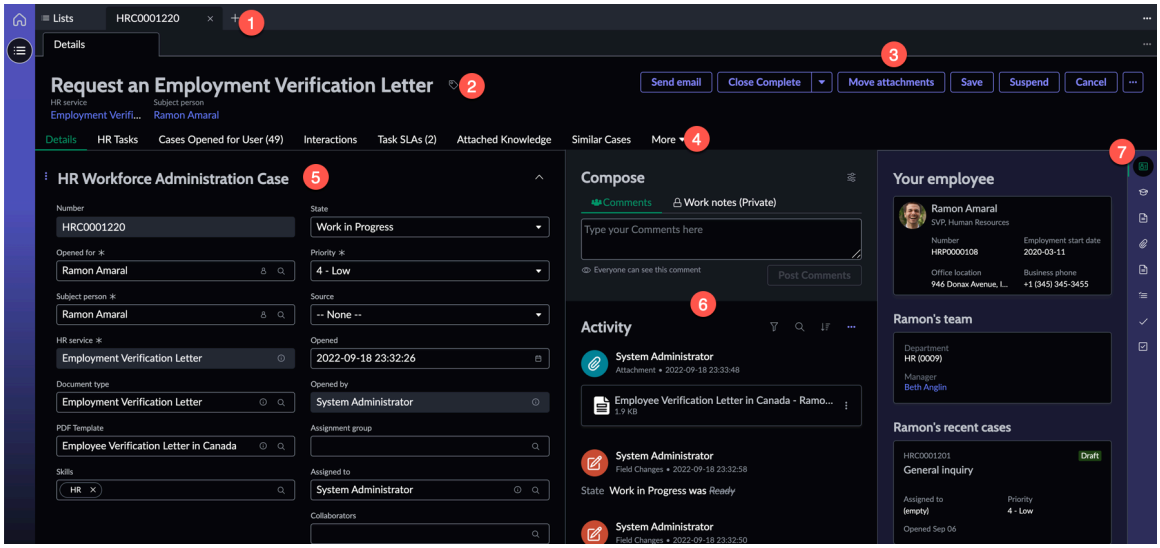
For a description of the fields, see Page Configurations reference.

Using Agent Workspace for HR Case Management

As an HR agent, use the Agent Workspace for HR Case Management to interact with employees, respond to inquiries, and resolve issues.

Note:
The COEs available to you may differ depending on the HR package you have.

- The categorization of HR catalog items are employee-facing only, and have no relation to the categorization of HR services under the HR Centers of Excellence (COEs) data model.
- If you are creating a new HR service and plan to make it available for employee self-service, see HR catalog item configuration. Creating a new HR catalog item automatically creates a corresponding HR service, and you can avoid creating duplicate services.
- If you have an existing HR service that you want to make available for employee self-service, do not create an HR catalog item. (Creating a HR catalog item automatically creates a corresponding HR service.) Instead, see Configure a record producer for an HR service to add the existing service as an HR catalog item in the HR service catalog.
- The Agent Workspace for HR Case Management is highly configurable for HR agents. It supports the same functionality in the Classic HR Service Delivery Agent Workspace.



You can start work in the Agent Workspace for HR Case Management from one of these areas:

- Landing page
- List queue
- Agent inbox
- Chat
- Phone
- Global search

For additional information on working within Agent Workspace, see Using workspace.

HR case form enables you to manage multiple cases, view information that is related to a case, and use knowledge articles or similar cases to manage the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.

Agent Workspace case form callout descriptions

Number	Agent Workspace feature	Description
1	Tabs	Use tabs to display the records that are associated with an HR case, like case details and tasks. You can select a tab and jump to the information. Child tabs appear below the top tabs and display case details, HR profile information, and tasks. **Note:** Any reference that you select under a parent tab opens as a child tab.
2	Form header	Displays brief details of an HR case like HR service, priority, state, and assigned-to agent.
3	UI actions	Action button that enables you to save changes you made, change the status, cancel, or other relevant actions for a case. **Note:** The buttons that appear are similar to the native platform UI. The button types that appear depends on the type and status of the HR case.
4	Related items	Use the Related Items menu to see information about the details, tasks, and other information that is associated with a case. Also shows

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agent Workspace case form callout descriptions (continued)

Number	Agent Workspace feature	Description
		details of the records from other tables that have a relationship with the HR case. This menu provides a quick and easy way to look up information about a case and subject person. **Note:** The type of HR case determines the tabs that appear in this menu. When a case appears under Playbook, these tabs change. For more information, see Exploring HR Service Delivery Playbook.
5	Case details	Information about the case: • Subject person • HR service requested • Priority assigned • Assignment group • Assigned agent • Description • Comments and Work notes
6	Activity stream	Comments, work notes, and current and past states of the case.
7	Contextual side panel	Manage and work on the case using various task-oriented icons. The icons appearing on the Contextual side panel depend on the type of case that you are working on. For more information, see HR Service Delivery Agent Workspace contextual side panel.

HR profile icons

Icons that enable you to get quick access to information about the opened for and subject person.

- : Select the **Open HR Profile** icon to access detailed information related to the person in the HR case. You will see details like HR profile, employee information, contact information, cases opened for the person etc. The same information is briefly displayed in the At-a-glance side panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- : Select the **Search for Record** icon to access a list of all related records within your company. The list is displayed relevant to the field on which you are searching. You can filter or sort in the list to refine your search results.
- : Select the Open deep link icon to access information outside of the application to help fulfill the case. For information about configuring deep links, see Link generator for HR Service Delivery.

Note:
For information on how to set up custom actions on record fields, see Set up custom actions on record fields in Workspace.

Lists in Agent Workspace for HR Case Management

Lists are an easy way of accessing cases under various categories. For example, you can quickly get a list of HR cases in lifecycle events or cases related to payroll.

The default **Lists** show HR cases categorized into the following:

HR case lists

Type of lists	Description
All HR Cases	The following categories of HR cases are displayed: • **Assigned to me**: List of cases assigned to you. • **Collaborations**: List of cases with active collaborations. • **Open**: List of all open cases. • **Open - unassigned**: List of all unassigned open cases. • **Closed**: List of all closed cases. • **Recently updated**: List of cases updated by an agent or employee other than the Assigned to agent. • **Case SLAs**: Service level agreement details of HR cases.
Manual	A simple fulfillment type with no associated configurations. For example, for a medical benefits inquiry, the HR agent would fulfill the employee's request by answering the employee's question.
Service Activity	Service activities fulfill the HR service. In the **Service Activities** section at the bottom of the HR Service form, add one or more service activities to fulfill the HR service.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

HR case lists (continued)

Type of lists	Description
	Note: Service activities can be approvals, tasks, or child HR services. See Configure a service activity for an HR service for more information.
Lifecycle Events	HR cases fulfilled by lifecycle events. For more information, see Lifecycle event cases in Agent Workspace for HR Case Management.
Other	Hr cases in the following categories: • HRIT cases • Payroll cases • Talent management cases • Total rewards cases • Workforce administration cases • Employee relations cases
HR Tasks	All Hr tasks in Open, Closed, Assigned to me or Open - unassigned categories. For more information, see Create a task for a case using Agent Workspace for HR Case Management.
HR Profile	Various types of HR profiles.
Employee Documents	Documents belonging to employees.
Knowledge	Knowledge articles used and published by the HR team.
Reminders	Reminders created by the HR agents. For more information, see Create a reminder in Agent Workspace for HR Case Management.

You can create your own lists to show specific cases that are relevant to you in the **My Lists** tab. Having a custom **My Lists** helps you work faster and efficiently. For more information, see Create My Lists. For general information on using lists, see Using lists to find work to do.

Create My Lists

Use **My Lists** to create a custom list of HR cases that you can readily access and start working on.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Click the **Lists** icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Click **My Lists**.
4. Click **Add new list**.
5. Click **Start from existing** or **Create your own**.
   Clicking **Start from existing** provides existing HR case lists you can select to create a custom **My Lists**. Clicking **Create your own** provides you with a list of all tables you can create a list from.
6. Select how you want to create your **My List** and fill in the fields.

Start from existing

Field	Description
List	Select the HR case categories that you want to base your **My Lists** on.
List Name	Fills in based on what you select from **List**. You can change the name by typing over what displays.
Select columns	The columns are pre-display for you. Click the**X** to delete columns you don't want to appear.
Add filters	Add filters to further define what cases appear in your **My Lists**. **Note:** Criteria pre-fills based on what you selected in the **List**. You can edit, add, or delete the defaults.

Create your own

Field	Description
List name	The name that identifies your **My Lists**. Enter a name for your list.
Select Source	The table that your **My Lists** is based on. Enter letters or the name of the table to start a search, then select q table.
Select columns	The columns you want to appear in your **My Lists**. A list of columns appears based on the table you selected. Click the**X** to delete columns you don't want to appear.
Add filters	Add filters to further define what cases appear in your **My Lists**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Note: Criteria pre-fills based on what you selected in the **List**. You can edit, add, or delete the defaults.

7. Click **Create**.

Result

A new list is created for you. Change the order of your lists using the **Reorder** button. For more information, see Create My Lists in workspace. You can also use this keyboard shortcut **Ctrl + Shift + Left/Right Arrow** to reorder tabs on lists.

Note:
Some users (especially non-admins) may not have access/visibility to the lists in the workspaces. For information on troubleshooting, see https://support.servicenow.com/kb?id=kb_article_view&sysparm_article=KB1325208.

Create a case in Agent Workspace for HR Case Management

Create a new HR case in Agent Workspace for HR Case Management.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. To create an HR case, select the **Add** icon (plus sign).
3. In the search field, enter a name, partial name, or case number.

   Searching for an employee helps to verify that you are creating a case for the correct person.

   Note:
   - You can search for or create cases for inactive users in Agent Workspace for HR Case Management.
   - If your company uses **Employee Relations**, you can select the **Skip verification** link to create an ER case without identifying an Opened for person. For more information on Employee Relations, see Create an HR Service Delivery Employee Relations case using the legacy UI.

4. Select **Next**.
5. On the form, fill in the fields.
   For more information, see Create a new case form.
6. Select **Create case**.
   If the case being created has the same subject person, HR service, and if the case is created within three days (configurable from HR Administration/Properties), a warning appears that a similar case might already exist. You can choose to **Create new case** or **Cancel**.

   Note:
   For information on the sn_hr_core.duplicate_hr_case_time_out property, see HR properties.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Enhance search criteria

Narrow the search criteria by specifying the column against which you want users to be searched. When an HR agent searches for a user while creating a case, provide more accurate search results.

Before you begin

Role required: admin

Procedure

1. Navigate to **HR Administration** > **Case Creation Configuration**.
2. Enable the **Force partial search** option.
3. In priority table name, select a table.
4. In priority column, select a column on which you want to apply the search first.
   For example, assume you have select last name in priority column. When an HR agent searches for an employee, search is first performed on the last name and then on the other columns.

Create a task for a case using Agent Workspace for HR Case Management

Choose a task type when creating a task within a case. When assigning the task to an employee on Employee Center, you can also request how the employee acknowledges completion of that task.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management** and select a case you want to add a task to.
2. From the Child tabs above the Case details section, select the **HR Tasks** tab.
3. Select **New**.
4. Select an **HR task type**.

   The different task types you can select are:

HR task types

Task type	Description
HR Service:	An HR service fulfills the HR task. In the **HR Service** field, select an HR service. **Note:** **Bulk Parent Case** only appears as a selection when creating a parent case for child bulk cases. Refer to Create a bulk case request.
Submit Catalog Item:	A catalog item fulfills the HR task. In the **Catalog Item** field, select a catalog item.
Submit Order Guide:	An order guide fulfills the HR task. In the **Order Guide** field, select an order guide.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task type	Description
Collect Employee Input:	Collects information from employees. In the **Employee form** field, select the employee form that the user fills out or verifies. **Note:** Employee forms are questionnaires built using the survey designer to collect information from employees. See Collect employee input for more information.
Checklist:	In the **Checklist Items** field, provide the checklist items. Checklists are instructions or steps on how to complete the task. **Note:** For more information, see Using checklists in HR Service Delivery Agent Workspace.
Credential:	Indicates that you want the user to acknowledge reading a document by logging in with their login credentials. The **Acknowledgment text** and **Acknowledgment document** fields appear. Using these fields shows a check box and text above the login credentials. In the Acknowledgment document field, select a document you want the user to read. **Note:** This option is only available for existing customers that have not yet migrated to e-signature. For more information, see Migrate existing HR task templates and open HR tasks to e-signature.
E-signature:	User electronically signs a document. In the **E-signature template** field, select the e-signature template to use.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task type	Description
	Note: ○ E-signature is a scoped application that enables you to sign managed documents, knowledge articles, or HR document templates. You can type or draw your signature, credentials, or acknowledgment. For more information, see HR e-signature. ○ If HR document template has a document type of e-signature template, select the HR document template that the signatory signs on the HR case form. For more information, see Select an HR document template for an e-signature task.
Mark When Complete:	Notify the user a **Completed** button appears on the HR Service Portal. Use the **Short description** to provide details about this task. **Note:** **Mark When Complete** changes the state of the task to **Closed Complete**.
Sign Document:	Requests the user to sign a document. An example is sending an education agreement for signature on a tuition reimbursement. The **Acknowledgment text** field appears. Using this field shows a check box and text above the signature. **Note:** ○ This option is only available for existing customers that have not yet migrated to e-signature. For more information see Migrate existing HR task templates and open HR tasks to e-signature. ○ After the user signs the document, the document generates with the signature and attaches to the task. The task closes and the document is attached to the case.
Schedule a meeting	Enables you to create a meeting invite for an employee while you are working on an HR case. For example, you can schedule a meeting with a new hire as part of the onboarding process.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Task type	Description
	○ You can view the available slots of an employee and schedule a meeting. The employee will receive a meeting invite on Microsoft Outlook. ○ You can also send the meeting invite to external attendees. **Note:** For the meeting invite and scheduling capability, you must install the ServiceNow Microsoft Exchange Online Spoke.
Take Survey:	In the **Survey** field, select a survey that the user is assigned to take.
Upload Documents:	Requests the person assigned to the task to upload documents. Examples are receipts, course registration, or transcripts for tuition reimbursement. Use the **Short description** field to provide instructions. **Note:** The task must be in **Ready** or **Work in Progress**.
URL:	The **URL** field appears. Enter a URL link that the user acknowledges when accessed.
View Video:	The **URL** field appears. Requests the person assigned to the task to view a video.

Note:
For information on all the fields, see Adding an HR task to an HR case.

5. Select **Save**.

   You can also add a task by selecting **Add Task** from the ... from **Details**.

Agent Workspace for HR Case Management contextual side panel

The contextual side panel in Agent Workspace for HR Case Management provides information designed to help you work an HR case and interact with your employees.

The contextual side panel provides a column of icons that provides you with information. Use the information when you interact with your employees or to complete the case.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

The icons that appear depend on the type of HR case you are looking at.

Agent Workspace contextual side panel icon descriptions

Icon	Description
	At a Glance: Provides key HR profile details for fast recall. Having this information readily available helps agents understand who they are trying to help when communicating with an employee.
	Agent Assist: Provides relevant knowledge articles about the case. You can also provide comments (visible to employee) or work notes (not visible to employee) or view all activities related to the case. **Note:** Agent Assist is also available for HR interactions.
	Employee Documents: Lists documents related to the case you are on. Select the document and you can download it or rename it.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agent Workspace contextual side panel icon descriptions (continued)

Icon	Description
	Note: The Contextual side panel requires the Employee Document Management [com.sn_employee_document_management] plugin to display the employee documents. For more information, see Employee Document Management.
	Attachments: Documents relevant or related to the HR case are displayed as attachments. These documents can be moved to Employee Document Management (EDM) for archival and historical purposes. For example, receipts for tuition reimbursement are attachments to an HR case. After you move attachments to Employee Document Management, they will be employee documents. See Move employee documents using HR Service Delivery Agent Workspace. Select a document to download or delete it. **Note:** A small green dot indicates there are attachments .
	Response Templates: Shows reusable messages that you can use when responding to an employee that has a question about their case. Copy the text from the response template you want to use and paste the text into the Comments or Work notes section of the HR case. An HR service configures response templates and are a fast, consistent, and efficient way to respond to common questions related to HR cases. For more information, see Response templates for HR Service Delivery.
	Fulfillment Instructions: Provides you with focused and targeted information on how to complete an HR case faster and more efficiently. Can include specific instructions, KB articles, or a checklist of what to do on the case. For more information, see HR fulfillment instructions.
	Checklist: Provides you with a list of things that need to be checked or done. Checklist helps you in resolving an issue efficiently and in a quicker way. For more information, see Using checklists in HR Service Delivery Agent Workspace.
	Use personal notes to add information that is not finalized and must not be tracked within the case history. For more information, see Add personal notes

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Using At a Glance in Agent Workspace for HR Case Management

Use the **At a Glance** feature from the contextual side panel to quickly view HR profile information for the **Opened for person** on an HR case enabling HR agents to better assist and resolve employee requests.

The At a Glance panel displays key HR profile details about the employee, such as the employee's job title, employment start date, office location, contact information, and organizational details. Agents can quickly access this information so that they have a better understanding of the employees they are trying to help.

HR profile

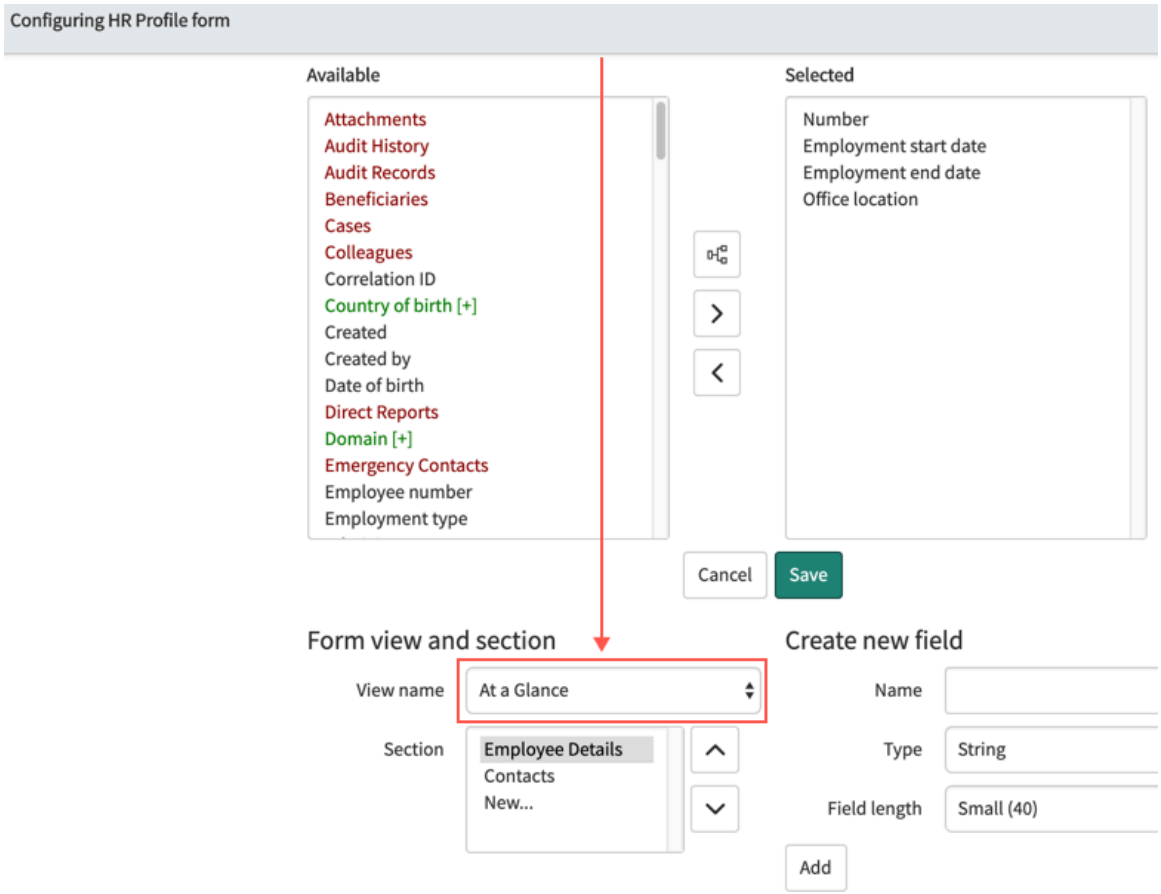
What appears under **Your Employee** section depends on what you configure on the HR profile. You can open any HR profile and edit the fields you want to be displayed by adding or removing them. The fields you selected appear for all HR profiles, but fields with data are only displayed in the **Your Employee** section. For more information, see Configure the At a Glance panel.

Note:
If the subject person on an HR case does not have an HR profile record, the At a Glance icon does not appear in the contextual side panel.

If you change the subject person, the profile information of that person will also be immediately updated in the **Your Employee** section, enabling you to verify the right person even before saving the change.

For more information, see HR profile editable field configuration.

Configure the At a Glance panel



You can configure the At a Glance panel by adding or removing HR profile fields for the Employee Details and Contacts sections.

Before you begin
Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **HR Profile** > **HR Profiles**.
2. Open any HR profile record.
3. Right-click the form header, and navigate to **Configure** > **Form Layout**.
4. In the **Form view and section**, click the **View name** dropdown and select the **At a Glance** field.

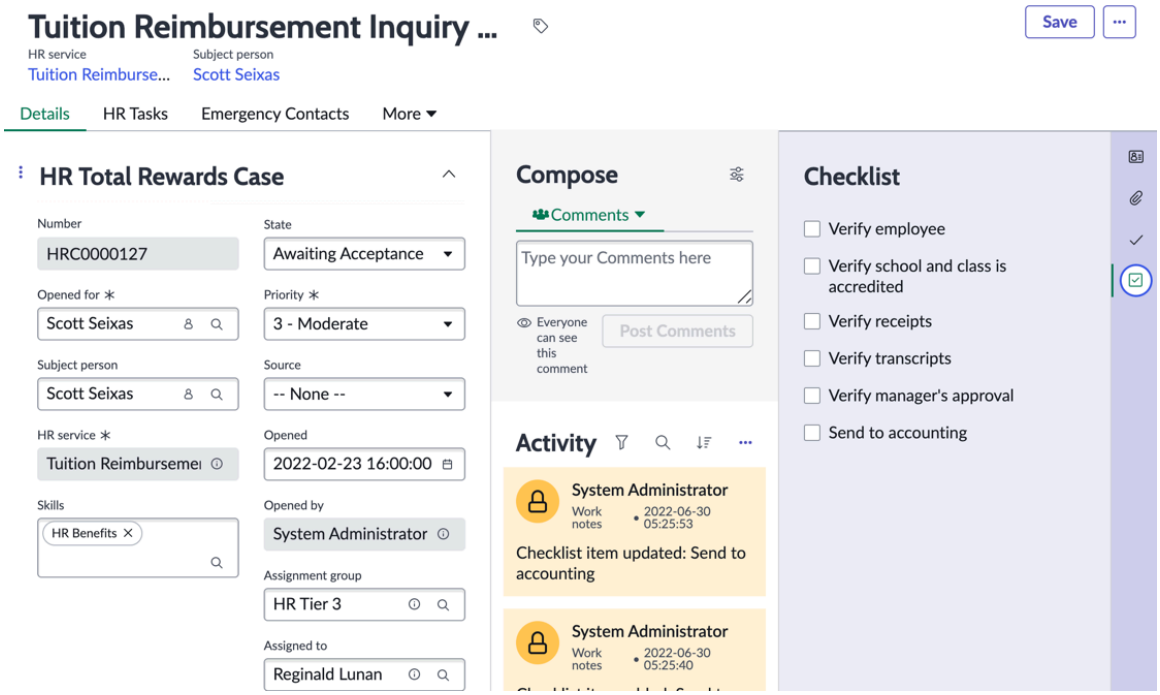
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select the fields that you want to configure from Employee details and Contacts sections. By default, the At a Glance panel is configured to display basic employee details. You can select fields from the Employee Details and Contacts sections to add or remove fields from the At a Glance panel.

   Note:
   The At a Glance panel replaces the Customer 360 Ribbon component.

6. Add or remove fields for that section.

   If a field does not have a corresponding value, then it does not appear in the panel.



7. Click **Save**.

Using checklists in Agent Workspace for HR Case Management

Creating and using checklists on an HR case or task helps you resolve issues faster, more efficiently, and with fewer errors.

The Checklists appears as a tab in the contextual side panel.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When the configuration for an HR service or HR task template has checklists, they automatically appear. Having a checklist for an HR service or HR task template ensures consistency when resolving issues. For information on configuring checklists, see Configure an HR service and Configure an HR task template.

Creating a checklist directly into an HR case

To create a checklist directly into an HR case, select **Checklists**.

1. Click **Add item**.
   a. In **Checkbox text**, add instructions.
   b. Select **Add link** to add link text and link.
   c. Select **Apply** and **Save**.
2. To rename a checklist item, select **Edit**. Make the required changes and select **Save**.
3. To reorder a checklist item, select **Edit**.
   a. Select **Reorder item** .
   b. Drag and place the item at the required position.
   c. Select **Save**.
4. To delete a checklist item, select **Remove item** .

Creating a checklist directly into an HR Task

Create an HR task with **Checklist** for the **HR Task Type**. See Create a task for a case using HR Service Delivery Agent Workspace.

Go to the legacy HR Case Management and open the task you created.

From the **Fulfillment Instructions** tab, create your checklist.

Note:
These types of checklists are a one-time use and only appears for the specific case or task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Response templates in Agent Workspace for HR Case Management

Response templates provide you with information on resolving an HR case or HR task or how to help an employee making an inquiry.

Response templates help you to be efficient and consistent when working on similar HR cases.

Response templates provide reusable messages. Copy and paste these messages into an email, chat, comments, work notes, or use as talking points when on the phone.

Response template channels

Response template channels segregate your response templates into media categories. You may want responses to have slightly different text in a chat response compared to an email response. Or, you don't want a specific template to appear for chat. The base system provides the following channels:

- Chat
- Email
- Form

> **Note:**
> Form provides text you can use in the comments or work notes on an HR case.

For more information on setting up a response template channel, see Create a response template channel.

For more information on setting up response templates, see Response templates for HR Service Delivery.

Using a Response template in an HR case or HR task record

Use response templates as reusable messages that you can copy and paste into the comments or work notes for an HR case or task.

Before you begin
Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the **Lists** icon ( ).
3. Select an HR case or task.
4. From the contextual side panel, select the Response templates icon ( ).
5. Select the response template.
6. Select the **Copy to clipboard** button and paste the text the **Comments/Worknotes** area.
7. Select **Post Comments**.
   The reused message is visible under the **Comments/Worknotes** section to the subject person.

Using a Response template in chat

Use response templates as reusable messages that you can copy and paste into a chat.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.case_writer

The Advanced Work Assignment for HRSD (com.sn_hr_awa) plugin must be activated to use response templates in chat. For more information, see Response templates for HR Service Delivery.

Note:
Currently, chat is only available for Interactions in Agent Workspace for HR Case Management.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Ensure your **Inbox** status is set to **Available**.
3. When a chat routes to you, select Accept.
4. An interaction record automatically creates and you can start chatting with the employee. To display response templates, enter /r in the chat area and a list of response templates appear.
5. Select the response template and the text appears in the chat window.
6. Select the Send button to transmit the message.

Using a Response template in an email

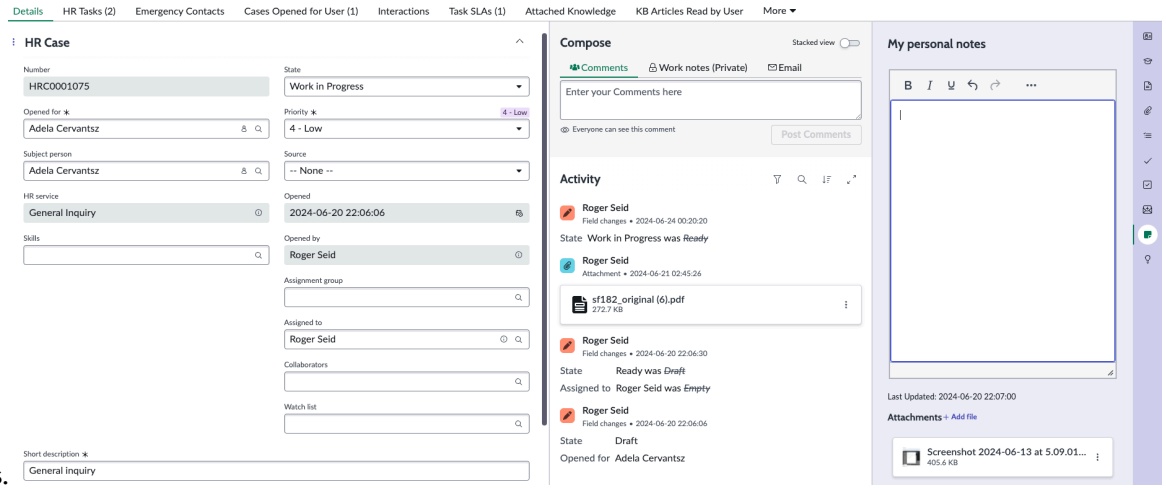
Use response templates as reusable messages that you can copy and paste into an email.

Before you begin
Role required: sn_hr_core.case_writer

Procedure

1. From the **Details** tab of an HR case, select the **More Actions** button then select **Compose Email**.
2. From the New Email Draft tab, click the Response Templates icon ( ).
3. Open the response template, copy, and paste the text into the body of the email. The **To** field is automatically populated with the email address of the Subject person. However, you can change the email address to send the email to a different person.
4. Click **Send Email**.

Add personal notes



Personal notes allow agents to record information that remains private and is not visible to other agents working on that case.

Before you begin
Role required: sn_hr_core.case_writer

About this task
Unlike working notes, which are accessible to all agents assigned to a case, personal notes provide a secure way to document sensitive information that shouldn't be shared with the broader team. For example, when managing Employee

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Relations cases, agents can use personal notes to document confidential details.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the **Lists** icon ( ).
3. Select an HR case.
4. In the Contextual Side Panel, select the **Personal Notes** icon( ).
   The case must be in ready, work in progress, or awaiting acceptance state.
5. Enter your notes.
6. **Optional:** Select **+Add file** to add an attachment.

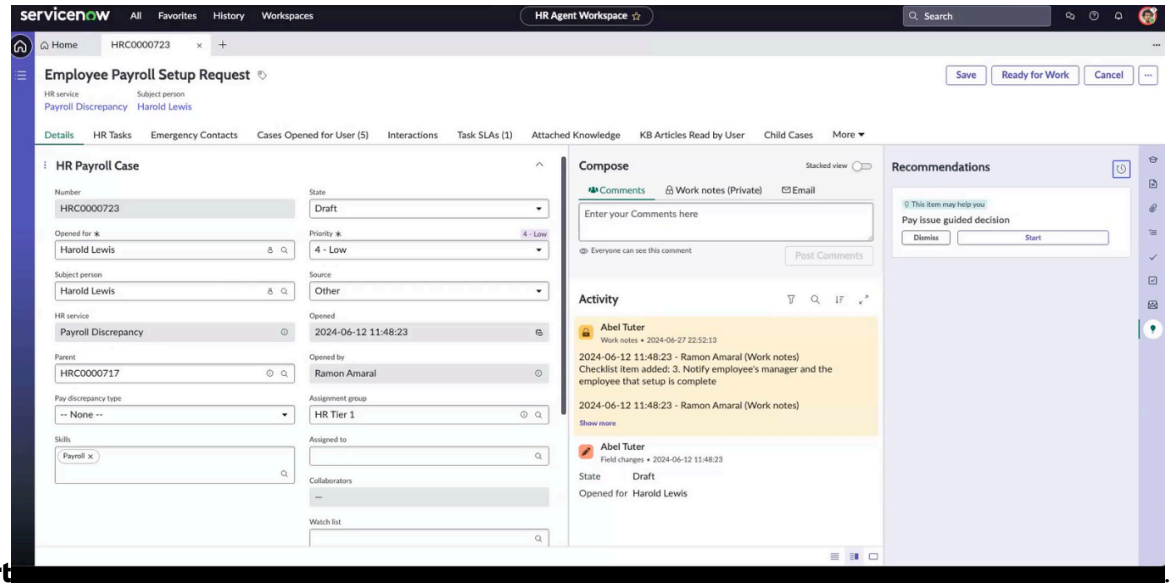
Resolve HR cases using guided decision trees in Agent Workspace for HR Case Management

Quickly resolve HR cases using guided decision trees that provide a predetermined sequence of questions to triage employee cases.

Before you begin

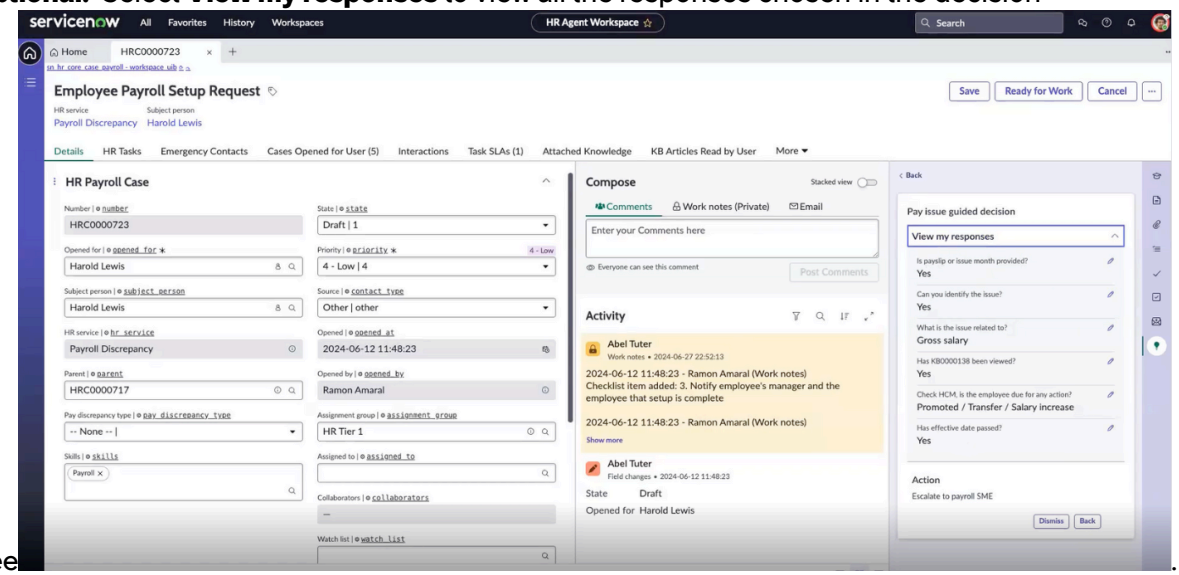
Role required: sn_hr_core.admin or sn_hr_core.case_writer

About this task



For more information about guided decision trees, see Configuring Guided Decisions .

Procedure



1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the Lists icon ( ).
3. Select an HR case.
4. In the contextual side panel, select the Recommendations icon ( ).

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

5. Select **Start**.

6. Select your response and then select **Next** to progress through the decision tree.
7. When you want to end the decision tree, select **Dismiss**.
8. **Optional:** Select **View my responses** to view all the responses chosen in the decision tree.

View a sample decision tree in Agent Workspace for HR Case Management

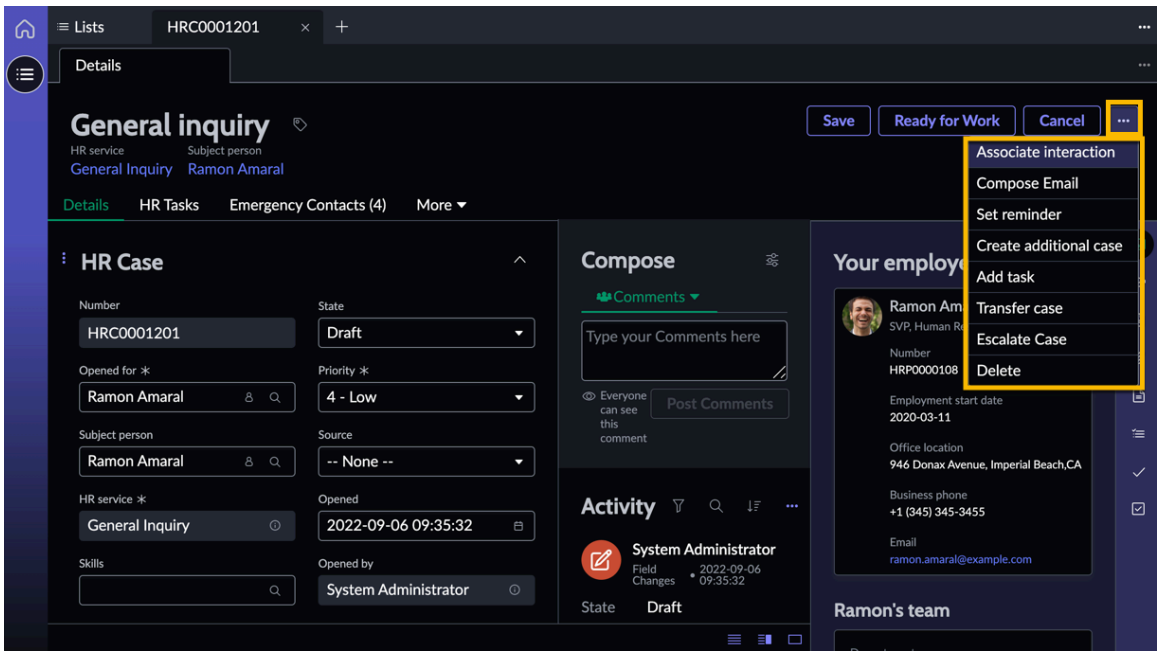
View sample trees that triage general inquiry or payroll cases in Agent Workspace for HR Case Management.

Before you begin

Role required: sn_hr_core.admin

Procedure

1. Navigate to **All** > **Guided Decisions** > **Decision Trees**.
2. Select one of the following:
   - **General Benefits Tree**
   - **Pay issue guided decision**



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select **Open in Builder** to view the tree in **Decision Tree Builder**.
   For more information, see Configuring decision trees in Decision Tree Builder.

Using the More icon in Agent Workspace for HR Case Management

You can use the more icon from Agent Workspace for HR Case Management to perform many duties related to working on an HR case.

More icon is displayed at the top right corner of the Details tab when working on a case.

From here, you can:

- Associate interaction: Associate the displayed case with an interaction. For more information, see Using interactions in HR Service Delivery Agent Workspace.
- Compose Email: Send an email from an HR case. The **New Email Draft** tab opens to compose and send the email. The **To** field is automatically updated with the Subject person's email ID. Agent can retain the email or add a new email. For more information, see Sending an email in Agent Workspace for HR Case Management.
- Set reminder: Create a reminder to ensure followup by a specific date. For more information, see Create a reminder in Agent Workspace for HR Case Management.
- Create additional case: Create another HR case without leaving the case you are viewing or working on. For more information, see Creating a case from an HR case.
- Add task: Add an HR task to the case. For more information, see Create a task for a case using Agent Workspace for HR Case Management.
- Transfer case: Reclassify a case for another HR service. For more information, see Transfer a case in Agent Workspace for HR Case Management.
- Escalate case: Assign important cases to another tier or agent with more expertise. For more information, see Escalating a case in Agent Workspace for HR Case Management.
- Delete: Delete the case you are working on.

Create a reminder in Agent Workspace for HR Case Management

You can create reminders from an HR case or task to receive an intimation which will allow you to follow up by a specific date. Reminders enable timely communication and make sure that the actions are taken.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Find the case you for which you want to add a reminder.
   For more information on finding an HR case, see Using Agent Workspace for HR Case Management.
3. Select the ••• more icon.
4. Select **Set reminder**.
5. Fill in the fields.

Create New Reminder

Field	Description
Short description	Text that describes the reminder.
Date time	The date and time on which you want to receive the reminder.
Task	The task or case associated with the reminder. Automatically appears based on the case or task you have displayed when creating the reminder.
User	The name of the logged in user that created the reminder.
Reminder	Status of the reminder.

6. Click **Save**.
   You can view your reminders from the HR case list, by scrolling down and selecting **Reminders**.

Note:

- When alert is activated, a number appears inside the Notifications icon () and the notifications message scrolls across the screen to remind you.
- Reminder notifications appear only to the user who has set the reminders.

Creating a case from an HR case

Create additional cases directly from the HR case you are working on in the Agent Workspace for HR Case Management.

Before you begin

Role required: sn_hr_core.case_writer

A convenient and time saving feature of Agent Workspace for HR Case Management is having everything you need as an HR agent in one place.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

To create a case, you don't have to leave a case you are working on and try to find it later. Create another HR case from:

- an HR case you are viewing.
- an HR profile that displays on the case you are viewing.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select a case from which you want to create additional case.
3. Click the  icon at the top right hand corner of the Details tab.
4. Select **Create Additional Case**.
5. In the new tab, search by name or case number to verify the employee requesting this case.
6. Click **Next**.
7. Enter the details like COE, HR Service and Opened for.
8. Click **Create case**.

Transfer a case in Agent Workspace for HR Case Management

Many cases are created as a General Inquiry case. After researching the employee's needs, you can transfer an existing case to a different HR service.

Before you begin

Role required: sn_hr_core.case_writer
For information on configuring HR case transfer or classification properties, see Transfer an HR case.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Find the case you want to transfer.
   For more information on finding an HR case, see Using Agent Workspace for HR Case Management.
3. Select the more icon.
4. Select **Transfer case**.
5. Select one of the two options from **Transfer type**.
   - **Transfer with existing case number**: The HR case number does not change, links are redirected to the new case, and work notes is transferred to the new case.
   - **Transfer to a new case number**: The HR case number changes, links are not redirected, and work notes is not transferred. Both HR case numbers appear on the HR case for reference. The original case state is changed to **Closed Complete** and is canceled.
6. Select an appropriate COE.
7. From **New HR Service**, select the HR service you want to assign to your case.
8. Click **OK**.

   When you transfer an HR case from one HR service to another, some field values are not transferred to the new case. The current case and its child tasks are closed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Priority is transferred from the original case and does not override the HR template for the new HR case.

The subject person receives a notification email with the closed case and transferred case information. Replies to the email appear in the Comments section of the HR case. If the subject person replies to the email associated with the closed case, the reply appears in the comments for both the closed and transferred cases.

Note:
If the sn_hr_core.restrict_guest_email system property is False, text from an email appears in the Work notes field when the employee is responding from a personal email account. False is the default property.

See Email setup.

Escalating a case in Agent Workspace for HR Case Management

Escalate an HR case when you are unable to resolve an issue and must amplify the importance of a case.

Before you begin
Role required: sn_hr_core.case_writer

The matching rules you have implemented will determine the group and agent the case is escalated to. For more information, see Assignment and matching rules in HR and Add or modify escalation rules.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Find the case you want to transfer.
   For more information on finding an HR case, see Using Agent Workspace for HR Case Management.
3. Select the ••• more icon.
4. Select **Escalate Case**.
5. In the Work notes, enter a reason for escalating the case.
6. Click **OK**.
   The form refreshes and is now assigned to the next tier assignment group.

Secure documents

Add an extra layer of security on documents that are linked to a case. Grant access to documents with sensitive or private data to groups, users, user criteria or roles.

Before you begin
Role required: sn_hr_core.case_writer

Note:
Ensure that the Document Management [com.snc.platform_document_management] plugin is installed.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **Agent Workspace for HR Case Management**.
2. From Lists, select an HR case.
3. Navigate to **More** > **Documents**.
4. Select the required document.
5. Review the following tabs to perform the necessary actions.

Document tab descriptions

Tab	Steps
Details	Change the access settings from **By referenced** records to **Sharing Permissions**. **Note:** This is a mandatory step.
Role Permissions	To grant access to a document based on a role: **a.** Click **New**. The Role Permissions modal opens. **b.** In the **Permission** list, select **Reader** or **Writer**. **c.** In the **User Role** field, select a value. **d.** Click **Save**.
User Criteria Permissions	To grant access to a document based on user criteria: **a.** Click **New**. The User Criteria Permissions modal opens. **b.** In the **Permission** list, select **Reader** or **Writer**. **c.** In the **User Criteria** field, select a value. **d.** Click **Save**.
User Permissions	To grant access to a document based on user permissions: **a.** Click **More**. **b.** Select **User Permissions**. **c.** Click **New**. The User Permissions modal opens. **d.** In the **Permission** list, select **Reader** or **Writer**. **e.** In the **User** field, select a value. **f.** Click **Save**.
Group Permissions	To grant access to a document based on group permissions: **a.** Click **More**. **b.** Select **Group Permissions**. **c.** Click **New**. The Group Permissions modal opens. **d.** In the **Permission** list, select **Reader** or **Writer**. **e.** In the **User Group** field, select a value. **f.** Click **Save**.

Report a knowledge gap from a case in Agent Workspace for HR Case Management

Report a knowledge gap for a case to get a documented resolution for common HR cases.

Before you begin
Role required: none

Procedure
1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the **Lists** icon ( ).
3. Select an HR case.
4. Select the More icon and select **Report knowledge gap** from the drop-down list.
5. In the Knowledge feedback task form, enter a description in the **Description** field.
6. Select **Save**.
7. **Optional:** Request notifications of updates to an existing knowledge base article by selecting a knowledge base article from the **Outcome** field.
8. Select **Save**.

Result
A knowledge gap is created and is listed in the **Knowledge Feedback Tasks** related list on the case record page.

View assigned knowledge tasks in Agent Workspace for HR Case Management

View your assigned knowledge tasks in Agent Workspace for HR Case Management when a knowledge gap is reported in a case.

Before you begin
Role required: sn_hr_core.kb_writer

Procedure
1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the **Lists** icon ( ).
3. Select **My tasks - feedback** under **Knowledge**.
4. Select the knowledge task that you want to work on.

Add adhoc approvers to an HR case in Agent Workspace for HR Case Management

Provide your agents with the flexibility to add adhoc approvers to a case that is part of an HR service.

Before you begin
For example, in certain scenarios where in an employee's requests falls outside the bounds of the standard process or the agent needs to take an additional approval, an HR agent might need to request an adhoc approval before proceeding with its fulfillment.

Role required: sn_hr_core.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **Workspace** > **HR Agent Workspace**.
2. Open the case that is assigned to you.
3. Click **More actions** and select **Add an approval**.

Note:

- Administrator must have configured the **Agent Can Add An Approval** option on the HR service to which the HR case is associated.
- This option appears only to the **Assigned to** user, when the case is in **Ready** or **Work in progress** state.

4. Fill in the required fields in the **Add an approval** window.

Field	Description
Approver users	Users who must approve the request.
Wait for	Conditions that you want to set for the approval flow. ○ **Anyone to approve**: If any one of the approvers approves the request, the approval flow will be complete. ○ **Everyone to approve**: Only if all the approvers approve the request, the approval flow will be complete. ○ **First response from anyone**: The first response of any one approver is taken into consideration. For example, if one of the approvers first rejects the request, the flow will be rejected; if one of the approvers first approves the request, the flow will be approved.
On rejection	Conditions that you want to set when an approver rejects a request, for example, allow resubmission of approvals, or mark it as close incomplete.
Reason	Reason for initiating the approval flow.
Additional Comments	Any other information that you want to share with the approvers.

5. Click **Submit**.

Templates in Agent Workspace for HR Case Management

Create consistent recurring documents by developing templates using Document Templates and use them in a generic workflow in Agent Workspace for HR Case Management.

Install the Document Templates plugin to use this feature.

Use templates for communication letters to employees like verification letters or offer letters. Associating templates with an HR case and moving it to an appropriate working status, like Work in progress, retrieves the data from the case and integrates it with the template. For more information, see Configure an HTML document template.

Agents can use templates to generate document tasks and get signoffs from the stakeholders. After all the participants sign the template, the document is created. For more information, see Create and sign document tasks from document tasks in Agent Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Templates of type HTML are only supported to be used for the Document templates.

Create and sign document tasks in Agent Workspace for HR Case Management

Create document tasks directly in the Agent Workspace for HR Case Management using document templates and sign them off from Agent Workspace.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select an HR case for the document task.
   In the **HR service** field, make sure that an HR service that has document template is selected. For example, request an employment verification letter or generate an offer letter. For more information, see Create a case in Agent Workspace for HR Case Management.
3. Click the **Start Work** button.
4. Select the **Preview document** option.
   The document is displayed with options to cancel, edit, generate or initiate document task. For more information, seeDocument tasks generation in Document Templates.
5. Select the **Initiate document task** button.
   Document tasks that are part of the selected HR case are generated and listed in the **Document tasks** tab. The participants will receive document tasks as configured in the template
6. Select the document task.
7. In the document task record, sign off on the document.

   a. Select the **Sign Document** button.

   b. In the dialog box that appears, sign the document.

   Note:
   If the **Signing type** in the template is Adobe Acrobat Sign or Docusign, after clicking **Sign Document**, the document opens in a new tab to enable you to use the associated signing type.

   c. Click **Sign** to complete the signing process.
   The status of the document task is automatically set to **Closed**.

Result
After all the documents associated with the case are closed, the document is generated and listed under **Attachments**.

Edit a generated document in Agent Workspace for HR Case Management

Support rendering values of variables, scripts, and blocks in edit mode in Preview Document. View the content of variables, scripts, or blocks rather than only viewing the variable or block names.

Before you begin
Role required: sn_hr_core.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
This feature is available only when the document is generated from a template in the Document Template plugin.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Click **Lists**.
3. Open an HR case that is assigned to you.
4. Click **Preview Document**.
5. In the Preview Document window:
   a. Click **Edit**. Except for signature tokens, all other variables, scripts and blocks are rendered with their values.
   b. Add text, any valid tokens, or signature tokens.

      Note:
      Invalid tokens will be removed while saving.

   c. Click **Save**.
   The document is saved and sent as an attachment in document tasks that are created for participants.

Generate a summary report

Create and save as many templates as needed by using the ServiceNow Document Templates application. Create a summary report by selecting a document template for the report. Export the case details, in a PDF format, for documenting and sharing purposes.

Before you begin

Role required: sn_hr_core.case_writer

You must be assigned to the case.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for Case Management**.
2. Create an HR case within the Employee Relations COE by selecting the **Add** icon (plus sign).
   For detailed instructions, see Create a case in Agent Workspace for HR Case Management.
   An employee relations case is created.
3. Select **Summary Report**.
4. In the Summary Report window, select a predefined document template format in which the case details are captured.
   For details on how to create and use document templates, see Document Templates.
5. Select **Generate**.
   Summary report is generated with case details, including work notes, and added as an attachment to the case.

Sending an email in Agent Workspace for HR Case Management

Send any communication related to HR cases with attached documents using the Send email feature. Minimise typing errors by auto-populating the email address of the subject person (of the case) in the email.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Before you begin
Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select a case for which you want to send an email.

   Note:
   If you want to directly send the document in a case as an email, click the **Send Email** button on the case tab.

3. Click the  icon at the top right hand corner of the tab.
   - For the **Verification of Employment service** HR service, fill in the **Document template category**, **Document template**, **Subject person** fields.
   - For the **Employee Verification Letter** HR service, fill in the **Document type**, **PDF template**, **Subject person** fields.

   Click **Preview document**. In the window, click **Generate**. A document is generated and added as an attachment to the case.
4. Select **Compose Email**.
   The New Email Draft opens in another tab.
   The **To** field will be automatically filled with the subject person's email id. However, you can change the recipient of the email.
5. The **Subject** field in the email will be updated with the case title.
6. Compose your email in the space provided.
   You can use Response template for the content on the email.
7. Click **Send Email**.
   An email with the generated document is sent to the intended recipient.

   Click **Save as draft**, if you are not ready to send the email yet.

Send an email notification after reassignment

After you reassign an agent to an HR case, you can send an email to notify the agent.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select a case for which you want to send an email.
3. Select  next to the **Assigned to** field.
4. Select an agent.
5. Click the Open record icon () next to the agent's name.
   The agent's details are opened in a new tab.
6. In the Email field, click the Email icon().
7. Add a **Subject** line and compose the mail in the space provided.
8. Click **Send**.

Using interactions in Agent Workspace for HR Case Management

Use interaction records to create an HR case or reference employee information to decide to create a case or request from different types of employee communications.

An interaction is a request for assistance made through chat, phone, or in person. You can route interactions by skill, group, or directly to an HR agent.

You can also create an interaction for simple requests where you decide you might not want to create an HR case or associated tasks.

Interaction records are automatically created when you are using agent chat.

Note:
Agent Assist is available for interactions.

For more information on interactions, see Interaction records in Agent Workspace.

Create interactions in Agent Workspace for HR Case Management

Create interaction records from the configurable Agent Workspace for HR Case Management form.

Before you begin
Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. To create an interaction, select the **Add** icon (plus sign), and select **Create Interaction**.
3. Type a name or case number to verify the employee in this interaction, and select **Next**
4. In the details section, enter information about the interaction.

Interaction details fields

Field	Description
Type	The type of communication that initiated the creation of the interaction: ○ None ○ Chat ○ Messaging ○ Phone
Opened for	The employee who the interaction is about.
Short description	A short description about the interaction.
Assigned to	The HR agent responsible for the interaction.
Work notes	Information related to the interaction that can help other HR agents. Work notes are not visible to the Opened for person.

5. Select **Create interaction**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

What to do next
Agents use an interaction to help complete and create tasks and cases.

Interaction record tabs

Tab	Description
Related Tasks	Any tasks or cases opened from the interaction, for example, a new incident or new case.
User's Tasks	Incidents related to the interaction.
User's Interactions	Logs all interactions tied to the employee the interaction is opened for.
Cases opened for "Opened for"	Shows all HR cases related to the Opened for person.

Button

Button	Description
Create HR case	Creates an HR case from the interaction and copies discussions and documents of the interaction to the HR case. The documents of the interaction are displayed in the **Attachments** section of the case record.

Lifecycle event cases in Agent Workspace for HR Case Management

Manage lifecycle event cases using Agent Workspace for HR Case Management.

A lifecycle event case is an HR case fulfilled by a lifecycle event. For example, the HR service for New Hire Onboarding fulfills the lifecycle event for New Hire Onboarding.

Note:
This section assumes you have Enterprise Onboarding and Transitions activated. For more information, see Understanding Lifecyle events for enterprise.

You can see all lifecycle event cases in List Lists under the **Lifecycle Events** section.

Create a lifecycle event case using Agent Workspace for HR Case Management

There are multiple ways to create a Lifecycle Event case.

Before you begin
Role required: sn_hr_le.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. From the Lifecycle Events Cases list, select the **New** button.
   Alternatively, click the + Add New icon and select **HR Case**.
3. Enter an employee name or case number.
4. Verify that the employee is the correct person for the case.
5. Enter **New Hire Onboarding** in the **HR service** field.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

6. Select **Create Case**.
7. Select **Ready for Work**.
   The **State** changes to **Ready**. In the Details section, the **Assignment group** and **Assigned to** fields populate based on your case assignment rules or HR case template. For more information, see Assignment and matching rules in HR and HR templates.

Using the activity stream in Agent Workspace for HR Case Management

Use the activity stream section of Agent Workspace for HR Case Management to document work notes (private) or comments, respond to email, or view the state of the HR case.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. In the Compose section, select **Comments** (visible to subject person) or **Work notes** (not visible to subject person).
3. Type your inputs in the space provided.
4. Click **Post Comments**.

Note:
There is also a **Comments/Worknotes** section at the bottom, left side of the form. This section is turned off by default, but can be used to enter text by clicking the accordion icon ( ). After entering text, click **Save**.

Machine learning solutions in Agent Workspace for HR Case Management

Use machine learning solutions to auto determine the correct HR service and assignment group for cases in Agent Workspace for HR Case Management.

Auto determination of HR service in Agent Workspace for HR Case Management

Auto determine the correct HR service for a case in Agent Workspace for HR Case Management. Enable an HR agent to transfer the case to the appropriate HR service rather than having to spend significant time manually triaging cases to appropriate HR services.

Important:
This feature is available with the HR Professional and HR Enterprise packages when you activate the Agent Workspace for HR Case Management and Predictive Intelligence applications. If you do not want to use this feature, disable the *sn_hr_core.case_auto_categorization* system property.

After you create the case, the HR Case Classification solution definition auto determines the HR service based on the short description of the case. The appropriate HR service for the case is displayed in a banner.

Important:
The banner is not displayed if:

- you have logged the case under the correct HR service
- you have manually transferred or auto-transferred the case
- case is not in the ready or draft state

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Auto training the predictive model

The HR Case Classification solution definition is configured and the predictive model is auto trained only when all the following conditions are met.

- The Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- There are 10000 records of HR case study matching the filters defined in the solution definition.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

Note:
Auto training does not happen if any one of the preceding conditions is not met. In such a case, Manually train the HR predictive model. Navigate to the **HR AI configuration** module, open the HR Case Classification record, and map the manually configured solution definition.

Auto determination of assignment group in Agent Workspace for HR Case Management

Auto determine the assignment group for a case in Agent Workspace for HR Case Management. Enable an HR agent to transfer the case to the correct assignment group rather than having to spend significant time manually identifying groups for the HR cases.

Important:
This feature is available with the HR Professional and HR Enterprise packages when you activate Agent Workspace for HR Case Management and Predictive Intelligence applications. If you do not want to use this feature, disable the *sn_hr_core.case_auto_assignment* system property.

After a case is created, the Auto Assignment Group for HR Cases solution definition auto determines the assignment group from the Short description, Description, Opened for Title, Opened for Location Name, HR service of the case. The appropriate assignment group for the case is displayed in a banner.

Important:
The banner is not displayed if:

- You have manually assigned the case to an assignment group.
- The assignment group is not identified for the case.
- The case is not in the ready or draft state.

Auto training the predictive model

By default the Auto Assignment Group for HR Cases solution definition is configured and the predictive model is auto trained when all the following conditions are met:

- The Human Resources Scoped App: Workspace (com.sn_hr_agent_workspace) plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- There are 10000 records of HR case study matching the filters defined in the solution definition.
- The *glide.platform_ml.auto_training.enabled* system property is set to true.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
Auto training does not happen if any one of the preceding conditions is not met. In such a case, Manually train the HR predictive model. Navigate to the **HR AI configuration** module, open the Case Assignment group record, and map the manually configured solution definition.

Display similar closed cases in Agent Workspace for HR Case Management

Help an HR agent resolve the current case by displaying similar closed cases.

Important:
This feature is available with the HR Professional and HR Enterprise packages when you activate Agent Workspace for HR Case Management and Predictive Intelligence applications.

Similar Closed HR Cases

When the Similar Closed HR Cases (ml_sn_sn_hr_core_global_similar_closed_hr_cases) is configured and the predictive model is trained:

- Similar closed cases are displayed in **Similar Closed HR Cases** in the Related Search Results section. If there are three or more similar closed HR cases whose COE matches that of the current case, then the case with the highest confidence is displayed as a recommended HR case.
- If there is no recommended HR Case, then the knowledge article that is attached to more than three similar closed cases is displayed as a recommended article. The recommended article can be attached to the current HR case.

Auto training the predictive model

The Similar Closed HR Cases (ml_sn_sn_hr_core_global_similar_closed_hr_cases) is configured and the predictive model is auto trained when all the following conditions are met:

- The Agent Workspace for HR Case Management plugin is installed.
- The Predictive Intelligence (com.glide.platform_ml) plugin is installed.
- The *glide.platform_ml.auto_training.enabled* system property is either set to true or absent.

Working with approvers for a case in Agent Workspace for HR Case Management

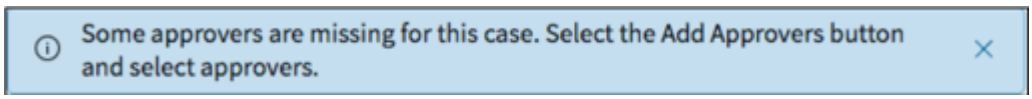
HR cases can be set up to require approvals before it can progress to completion.

The HR service configures actions related to approvals. For more information on HR service configuration, see Configure an HR service.

When a case requires an approver, the request for approval appears in the approver's Employee Center or portal under To-dos.

In Agent Workspace for HR Case Management, the child tab **Approvers** lists all requested approvers.

Multiple approvers



HR services can also have multiple approvers. When configuring an HR service, an optional configuration allows you to select approvers from the fields on the HR case. For example, manager of the Subject person can be selected as an approver. Using fields from a case provides maximum flexibility when assigning an approver. . For example:

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

When an approver is assigned from the case, it is possible that the approver may not be found. Following are a few circumstances under which the approver may be missing:

- the subject person manager is the approver.
- the Subject person's HR profile does not contain a manager.
- the Subject person's manager recently left the company.

When an approver is missing, the following message appears:

Add or substitute an approver in a case

Using Agent Workspace for HR Case Management you can add an approver or substitute missing approvers for cases that require approval.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Locate and open an HR case that requires approvers.
3. Select **Add Approvers** from the list of UI actions (tabs at the top of the form).
4. Select replacement approvers or add new ones.
5. Select **OK**.
6. Select **Save**.

Add adhoc approvers to an HR case

Provide your agents with the flexibility to add adhoc approvers to a case that is part of an HR service.

Before you begin

For example, in certain scenarios where in an employee's requests falls outside the bounds of the standard process or the agent needs to take an additional approval, an HR agent might need to request an adhoc approval before proceeding with its fulfillment.

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Open the case that is assigned to you.
3. Click **More actions** and select **Add an approval**.

Note:

- Administrator must have configured the **Agent Can Add An Approval** option on the HR service to which the HR case is associated.
- This option appears only to the **Assigned to** user, when the case is in **Ready** or **Work in progress** state.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

4. Fill in the required fields in the **Add an approval** form.

Add an approval form

Field	Description
Approver users	Users who must approve the request.
Wait for	Conditions that you want to set for the approval flow. ○ **Anyone to approve**: If any one of the approvers approves the request, the approval flow will be complete. ○ **Everyone to approve**: Only if all the approvers approve the request, the approval flow will be complete. ○ **First response from anyone**: The first response of any one approver is taken into consideration. For example, if one of the approvers first rejects the request, the flow will be rejected; if one of the approvers first approves the request, the flow will be approved.
On rejection	Conditions that you want to set when an approver rejects a request.
Reason	Reason for initiating the approval flow.
Additional Comments	Any other information that you want to share with the approvers.

5. Click **Submit**.

View approval history in Agent Workspace for HR Case Management

Review the approval history in the activity stream. Get a better understanding of when the approval request was created, who were the approvers, and when was the request rejected or approved.

Before you begin

- Role required: sn_hr_core.case_writer
- Ensure that the following plugins are installed: Human Resources Scoped App:Core, Human Resources Scoped App:Lifecycle Events, Human Resources Scoped App:Lifecycle Events for Enterprise, HRSD Configurable Workspace, and Human Resources Scoped app Workspace.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Open a case that is in Ready state.
3. Activity stream contains the approval history, for example, when was the approval request created, who were the approvers, and when was the request rejected or approved.

Note:

- Approval history appears in activity stream only when the **glide.workflow.user_approval_history** property in **sys_properties.list** is set to true.
- If this property is set to true in HR Service Delivery workspace, it will be also to be true for all other installations within ServiceNow AI Platform.

Customize tab label in Agent Workspace for HR Case Management

Change the tab title for the HR Cases, in Agent Workspace for HR Case Management, based on any of the case field values enabling you to see more details on the tab when multiple tabs are open.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **Now Experience Framework** > **Experiences**.
2. Select HR Agent Workspace.
3. Under the UX Page Properties tab, select **caseTabTitleField** property.

   The field value to be displayed on the tab title can be configured here.
4. In the **Value** field, provide the key value pair.

   The key being the table name, and the value being the field value. For example, "sn_hr_core_case": "opened_for". The value field has to be a valid JSON.

   Tab titles can also contain multiple fields. The key value remains the table name, but the value can be a list of strings. For example: "sn_hr_core_case": ["opened_for", "number"].
5. Click **Update**.

Customize related lists in Agent Workspace for HR Case Management

Customize which related lists are visible to users in Agent Workspace for HR Case Management.

Before you begin
Role required: admin

Procedure

1. Navigate to **All** > **HR Case Management** > **All HR Cases** > **All**.
2. Select the case that you want to customize related lists for.
3. Select the additional actions icon .
4. Navigate to **Configure** > **Related lists**.
5. Select the related lists and the desired order.
6. In **View name**, select **Workspace UIB**.
7. Select **Save**.

Customize Activity stream in Agent Workspace for HR Case Management

Customize the Activity stream to reduce agent effort in understanding the case context.

Before you begin
Role required: admin

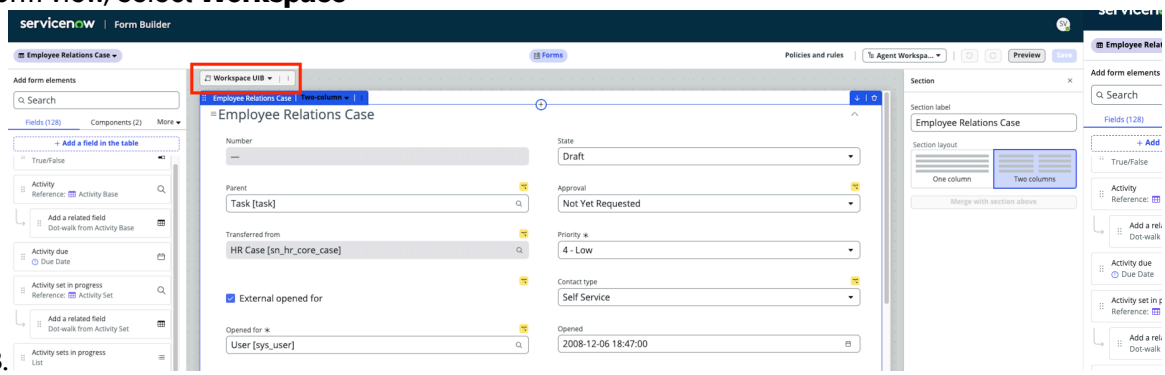
Procedure

1. Navigate to **All** > **HR Case Management** > **All HR Cases**.
2. Select a case to customize Activity stream for.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

3. Select the activity stream icon .
4. Select the filter activity icon .
5. Select the required activities and the desired order.
6. Select **Save**.

Customize fields in a form in Agent Workspace for HR Case Management



Add and arrange fields within a form layout to match form requirements using Form builder in Agent Workspace for HR Case Management.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **HR Case Management** > **All HR Cases** > **All**.
2. Select the case that you want to customize form fields for.
3. Select the additional actions icon .
4. Navigate to **Configure** > **Form Builder**.
5. In form view, select **Workspace UIB**.

6. Customize the fields by performing one of the following actions.

Highlight fields in Agent Workspace for HR Case Management

Highlight fields in the workspace to call an agent's attention to them.

Before you begin

Role required: admin

Procedure

1. Navigate to **All** > **Workspace Experience** > **Administration** > **Highlighted Values**.
2. Select **New**.
3. On the form, fill in the fields.

Highlighted Value form

Field	Description
Table	Name of the table that contains the fields you want to highlight.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
Field	Name of the field you want to highlight if the triggering conditions are met.
Application	Scope of applications this highlighting pertains to.
Workspace	The workspace this highlighting applies to. Select **Agent Workspace**

4. Right-click the header and select **Save**.
5. In **Highlighted Value Conditions**, select **New**.
6. On the form, fill in the fields.
   For a description of field values, see Highlighted value condition form.
7. Select **Submit**.

Employee Document Management for Agent Workspace for HR Case Management

Employee Document Management provides storage space, a filing system, the ability to easily retrieve documents, defining who can view sensitive documents, and when to purge documents.

For more information about Employee Document Management, see Employee Document Management.

Create or upload employee documents using Agent Workspace for HR Case Management

Create or upload employee documents to an HR case using the Agent Workspace for HR Case Management.

Before you begin
Role required: sn_hr_ef.document_writer

Procedure
1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Click the **Lists** icon ( ).
3. Click **Employee documents**.
4. Click **All**.
5. Click **New**.
   Alternatively, you can also create an employee document from **HR Profiles**. Select a HR Profile and from the more actions menu, click **New document**.
6. On the form, fill in the fields.

Employee Document form

Field	Description
Employee Document	Employee document to upload. Click **Browse** to upload an employee document. By default, the maximum size of a document allowed is 30 MB. The default can be changed from the**Maximum file upload size in megabytes** field in Employee

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	Document Properties. For more information, see Properties for Employee Document Management application. After selecting a document, the read-only fields show the file size, file format, created on, and created by. The viewer within the UI only supports viewing .pdf documents. Other types of documents can be downloaded and then viewed. For optimal search results, do not use dashes (-) in the name of the document. Using full words separated by spaces or underbars provides better search results. Check **Yes** in the **Enable Document Viewer to preview pdf documents** in the Employee Documents property to view .pdf documents. **Note:** FedRAMP, on-premise customers, mobile devices, customers using edge encryption, or encryption support does not support viewing documents.
Description	Description of the employee document.
Employee	Name of the employee the document is associated with.
Document type	Document type associated with the employee document. Document types provide categorization, security, and retention policies.
HR case	HR case number the employee document is associated with when moved from an HR case.
Purge hold	Purge hold status of a document. ○ Pending purge authorization: Awaiting authorization for document purging. ○ Purge Approved: Document has authorization to schedule purging.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Field	Description
	○ Purged Rejected: Document did not receive purge authorization. **Important:** Document type's security policy determines purge authorization. The following roles have permission to change purge authorization: ▪ EF admin [sn_hr_ef.admin] ▪ Employee File Management Manager [sn_hr_ef.manager]

7. Click **Save** to create the employee document record.
   The **Audit Trail** tab appears.

   Provides view of all actions for an employee document from creation or uploaded to the time it is purged.

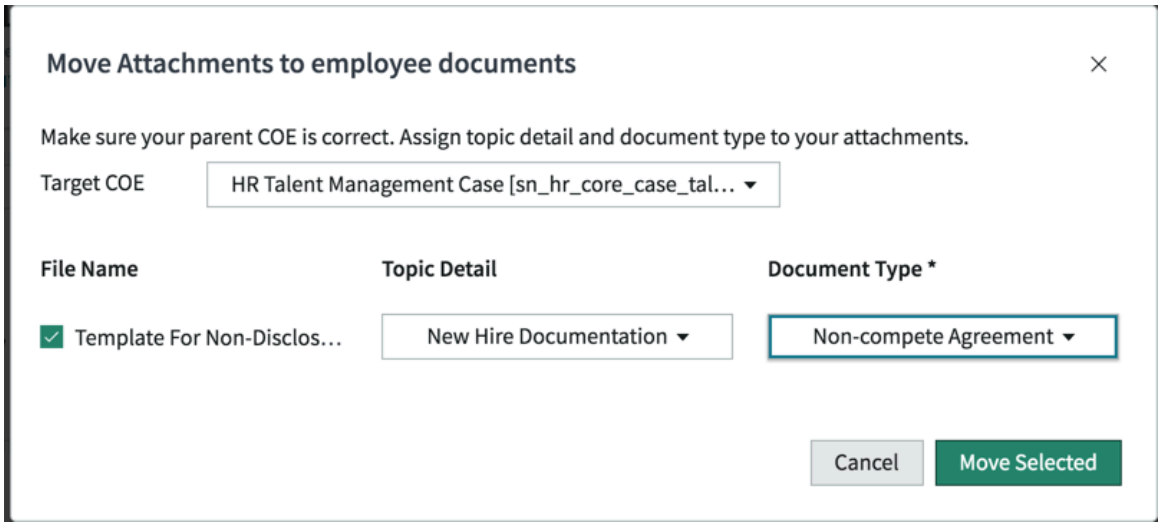
Move employee documents in Agent Workspace for HR Case Management

Move employee documents from a case in Agent Workspace for HR Case Management to employee document repository. The employee document repository provides a central repository for quick and easy identification of documents using different sorting features.

Before you begin

Role required: sn_hr_ef.document_writer, sn_hr_core.case_writer

Procedure



1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select a case that has employee documents attached.

   Note:
   From the list view, there is no way to identify HR cases with employee documents attached. To locate an HR case, you need the HR case number or the Opened for person.

3. Click **Move Attachments**.
4. In the Move Attachments to Employee documents window:
   a. Select the check box next to the documents you want to move.
   b. Select the **Document Type** for each document. The document type determines categorization, who can access it, and the retention policy. Create a document type if none appears for the associated topic detail. Creating a document type ensures correct categorization.
   c. Click **Move Selected**.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
The **Target COE** and **Topic Detail** fields can be modified only if the document has been added under the wrong type of HR case.

Result

- The employee documents move from the HR case to the employee document repository.
- To view a list of all employee documents in the list column, select **Employee Documents**.
- The moved attachments appears in the contextual side panel under the employee documents icon within the case.

E-signature in Agent Workspace for HR Case Management

When working on an HR case or HR task, you can use e-signature to sign documents that require signatures.

When an employee creates a case requesting an employment verification letter, you can:

- Preview the document - Ensures you sign the correct document. This step is useful if you have multiple employment verification letters.
- Use e-signature to sign it - You have multiple methods to sign. Choose to type your name or use your mouse to draw your signature. For more information, see Sign and generate a document in HR Service Delivery Agent Workspace.

  You can optionally require a user to check an acknowledgment box before the signature is accepted.

- Generate the document - Combine the document template with your signature and create an attachment to the case. If you use Employee Document Management, you can move the attachment to your document repository for storage.

Note:
For more information, see Configure an e-signature template.

Sign and generate a document in Agent Workspace for HR Case Management

Electronically sign a document.

Before you begin

Role required: sn_hr_core.case_writer

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Locate and open an HR case.
   Ensure that the state of the case is **Work in Progress**.
3. Select the **Sign Document** button.
4. Preview the document.
   Ensure it is the correct document for the case.
5. Select **Type signature** to type in your signature, or select **Draw signature** to draw your signature using your mouse.
6. Select Generate to attach your signature to the document.
   The generated document is displayed under the Attachments in the contextual side panel. If your company uses Employee Document Management (EDM), you can move the document to the EDM repository. For more information on EDM, see Create or upload employee documents using HR Service Delivery Agent Workspace.

Using the deep link feature in Agent Workspace for HR Case Management

Deep links are a way to access information from outside of Agent Workspace for HR Case Management.

Use deep links to access information or applications that are not readily available within Agent Workspace for HR Case Management. For example, use deep links to access a third-party application that you use frequently.

For more information on configuring deep links, see Link generator for HR Service Delivery.

Using chat in Agent Workspace for HR Case Management

Agent chat for Agent Workspace for HR Case Management enables you to ask questions and receive information through live or virtual agent chat.

Activation

Ensure you have activated the Agent Chat [com.glide.interaction.awa] plugin prior to using this feature. For more information on setting up chat, see Agent Workspace chat.

HR groups

Ensure that your HR agents are part of an HR group or subgroup. Having subgroups helps to ensure HR agents with the correct skills and knowledge pair up when an employee initiates a chat.

For example, an employee initiates a chat requesting information about your company's benefits. Having a benefits subgroup with agents that specialize in your company's benefits ensures the employee's chat is directed to the correct agents.

For more information about HR groups, see Manage HR Groups.

Interaction records

Agent chat automatically creates interaction records. When an employee initiates a chat with an HR agent, an Interaction case is automatically created.

Quick actions

Using quick actions, you can:

- Create an HR case.
- Show applicable response templates.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- Transfer chat to another agent.
- Transfer chat to another queue.

Virtual agent

Automating chat can enhance the employee experience by addressing queries immediately. At any time during a virtual chat, the employee can request to interact with a live HR agent.

For more information on virtual agent, see Virtual Agent for HR Service Delivery.

Working from the agent inbox in Agent Workspace for HR Case Management

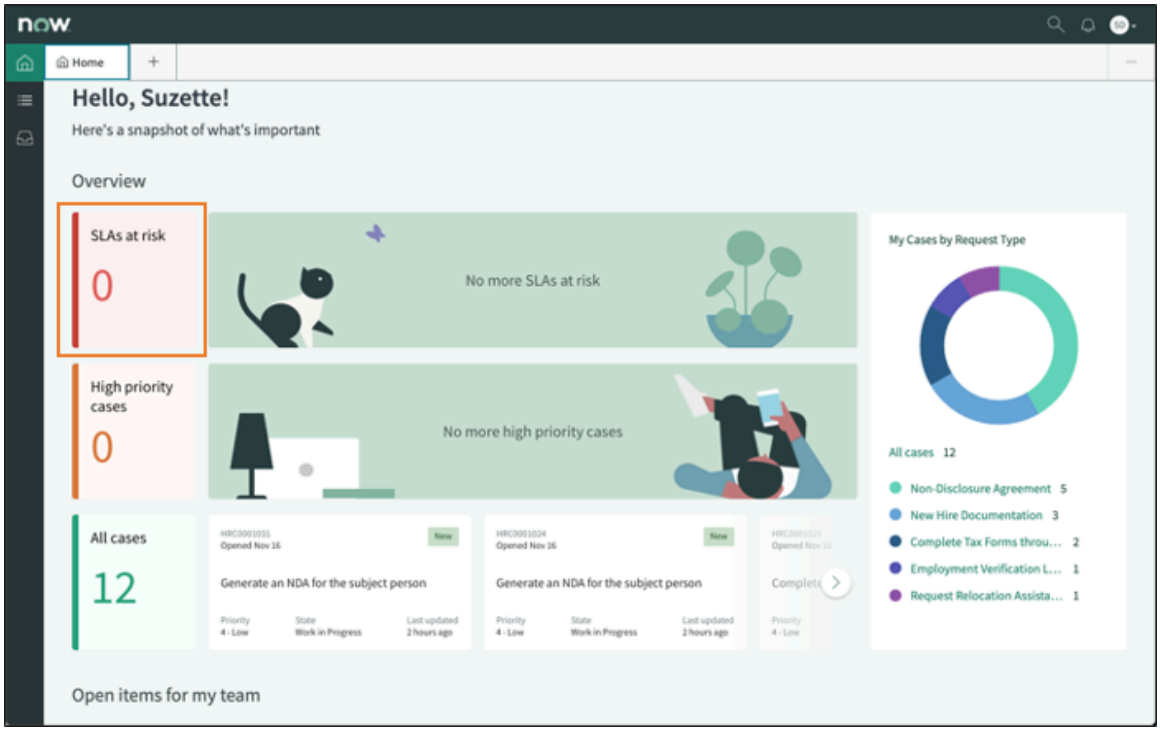
Use the agent inbox to manage your incoming work, such as chats, HR cases, and interactions.

Before you begin

Role required: sn_hr_core.case_writer

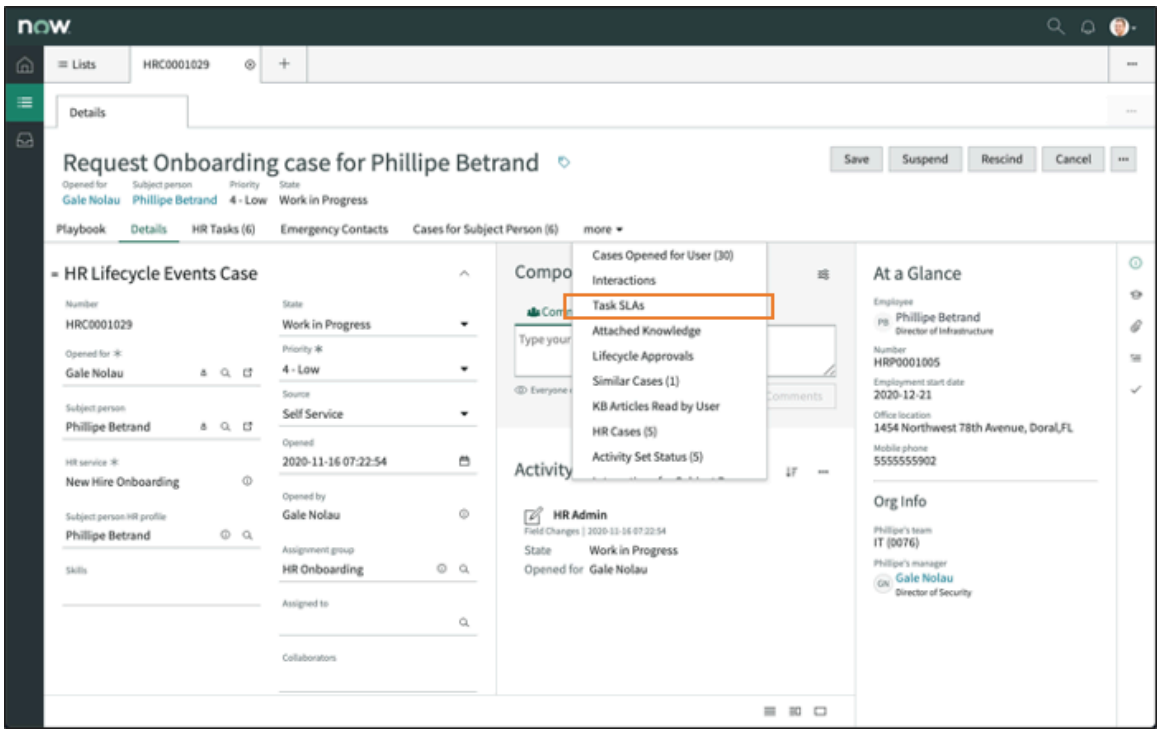
Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the  inbox icon.
3. From **Status**, select **Available**.
4. When a chat comes through the chat queue, select **Accept**.
5. From the active chat panel, you can start chatting.
6. Select the  quick action icon, or enter a back slash (/) in the chat area.
7. Select a quick action to quickly create an HR case, show related response templates, transfer chat to another agent, or transfer the chat to another queue.



Viewing SLAs for HR Service Delivery Agent Workspace

Service Level Agreements (SLAs) can be viewed for cases or tasks and provide progress information.



HR Agent Workspace SLAs

View SLAs for HR cases from the Agent Workspace home page:

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Note:
For more information on SLAs, see Service Level Management.

SMS conversations in HR Service Delivery Agent Workspace

Using the Conversational SMS service channel app, available on the ServiceNow Store, HR agents can provide support for long-running SMS conversations via HR Service Delivery Agent Workspace. Requesters can initiate HR support conversations through SMS.

Request apps on the Store

Visit the ServiceNow Store website to view all the available apps and for information about submitting requests to the store. For cumulative release notes information for all released apps, see the ServiceNow Store version history release notes.

SMS support conversations

SMS support conversations can run long. For this reason, HR Service Delivery workspace agents need the ability to track ongoing conversations on the HR SMS service channel. HR Service Delivery workspace agents can initiate or continue SMS conversations and also accept SMS work items from the HR Service Delivery Agent Workspace Inbox.

For SMS support conversations, in the Workspace Chat panel, when the interaction type is **Messaging**, an interaction sub-type of **SMS** is indicated as **Active SMS**.

For complete details about SMS support conversations, associated service channels, requestor initiated, and agent initiated SMS conversations, refer to Conversational SMS service channel.

SMS support conversations for HR Service Delivery agents

HR agents can access new SMS messaging interactions, as well as access ongoing SMS messaging conversations. Agents can switch from an in-progress messaging interaction, such as a chat, to a new SMS messaging interaction.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

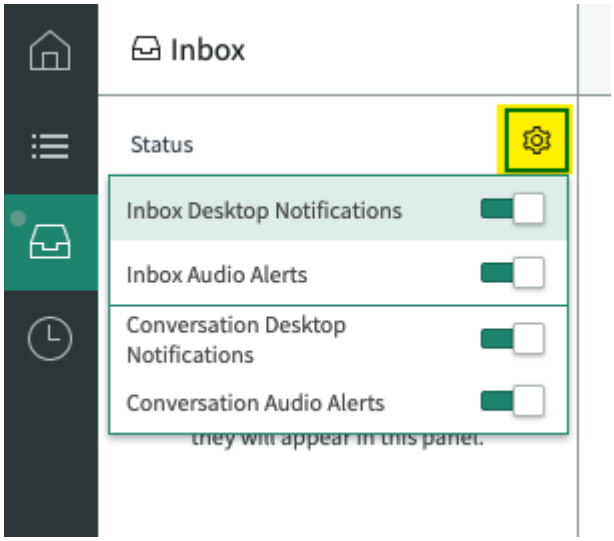
Advanced Work Assignment HR agents and managers can end an SMS messaging conversation. HR agents with the awa_agent role can end an active SMS messaging conversation assigned to them using the **End conversation** action button. Users with the awa_manager role can end the conversation even when it is not assigned to them on the interaction. When an agent ends the conversation, a confirmation to close the interaction appears.

HR AWA agents and managers can switch from an in-progress messaging interaction to a new messaging conversation. Switching to a new messaging interaction does not close the original messaging interaction, but enables agents to carry on multiple messaging conversations. AWA agents can access ongoing messaging conversations when the HR AWA agents and managers have access to ongoing messaging conversations and are notified when there is a new message on any long running assigned interactions. When an ongoing messaging conversation has a new message that needs attention, an icon is displayed after the Inbox icon in HR Service Delivery Workspace. A new tab carries a counter badge that indicates the number of messaging conversations that have unread messages. AWA agents and managers can view cards for messaging conversations.

HR AWA agents and managers can view a list of all **In Progress** or **On Hold Messaging Work Items** assigned to other agents. The list indicates the service channel, interaction number, and last updated date. Agents can click the list item to open it in a Workspace tab. Agents can open a messaging interaction in a sub tab and, if the interaction is active, view the chat panel on the interaction record. Agents can type messages in the chat panel to have an SMS conversation with an employee.

Quick actions for agents

Access existing chat-based quick actions for SMS messaging. For details, refer to Agent Chat.



Conversation desktop notifications

HR agents can set preferences to receive conversation desktop notifications, audio alerts, and Google Chrome browser toasts. Audio alerts and desktop notifications occur when agents opt in to receiving **Conversation Audio Alerts** and **Conversation Desktop Notifications** via the HR Service Delivery Agent Workspace Inbox settings.

Once opted in, agents hear an audio alert when a new message occurs on a conversation that is currently open in a workspace tab, but not in focus. Audio alerts also notify when a long running conversation is assigned to an agent, but is not currently open in a workspace tab. Agents decide if they want to enable these alerts and notifications.

Use the edit menu in the HR Service Delivery Agent Workspace Inbox to enable alerts and notifications.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Agents can receive Google Chrome browser toasts when the following criteria is met:

- The agent has opted in to receive **Conversation Desktop Notifications**.
- The agent is using Google Chrome browser.
- The Workspace browser tab is not in focus.
- A new message on an existing conversation, assigned to the agent, is in one of the following places:
  - A currently open Workspace tab.
  - Not in a currently open Workspace tab, but in a long running conversation in an ongoing section of Workspace.

Employee initiated SMS conversations

Employees can initiate HR support conversations through SMS. Agents can expect the system to automatically associate the sender phone number to the channel user profile. If an SMS message is received for a non-existing channel user profile, a new channel user profile is automatically created by the system. The system queries the **Mobile phone** field on employee HR profile for a match. When a match is found, the system associates the employee with the newly created channel user profile. If more than one match is found no association is made on the channel user profile. If no match is found no association is made on channel user profile.

When an employee adds a phone number to an SMS messaging interaction or updates a phone number on the interaction, the Number field on the interaction updates from null to the employee's name. The HR profile for that employee is associated to the phone number. Only one active channel user profile can exist for a given phone number at any time.

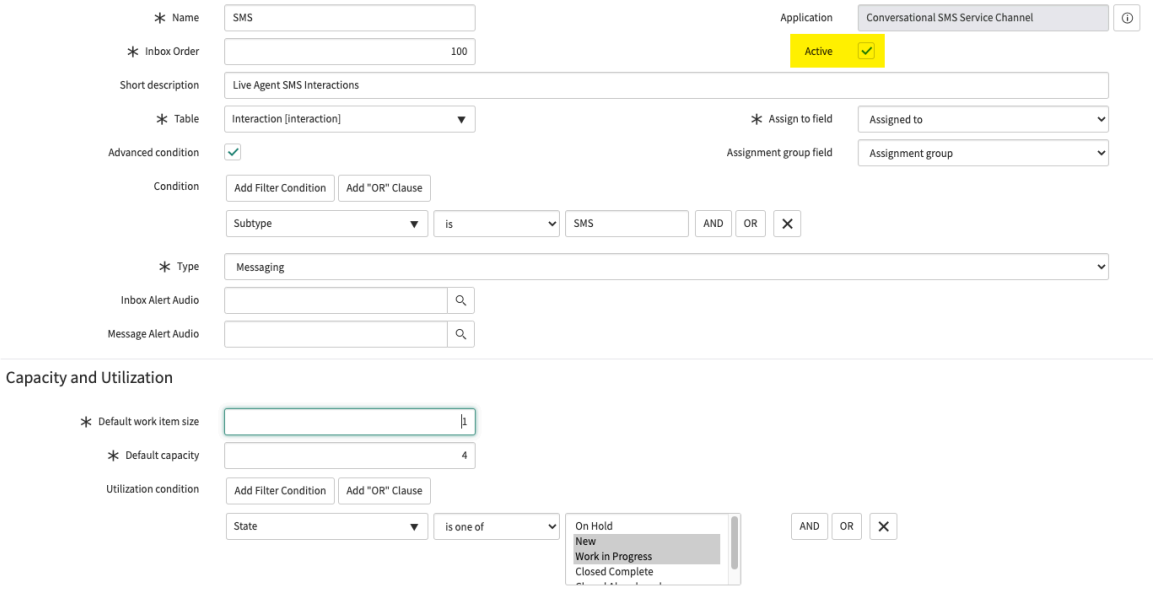
Set up HR Service Delivery Conversational SMS service channel

Configure the Conversational SMS service channel store app for HR Service Delivery.

Before you begin

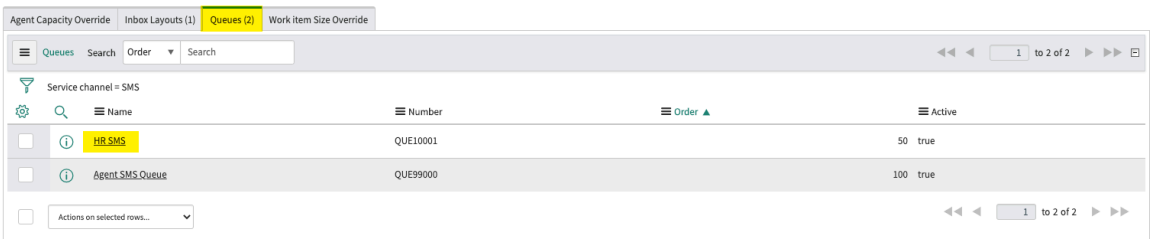
Role required: admin

About this task



The HR Service Delivery base system includes the **HR SMS** service channel queue with the default **HR SMS Support Group** assignment group. The **Agent assignment rule** is capacity based by default. For HR Service Delivery, configure the SMS service channel for the HR SMS queue.

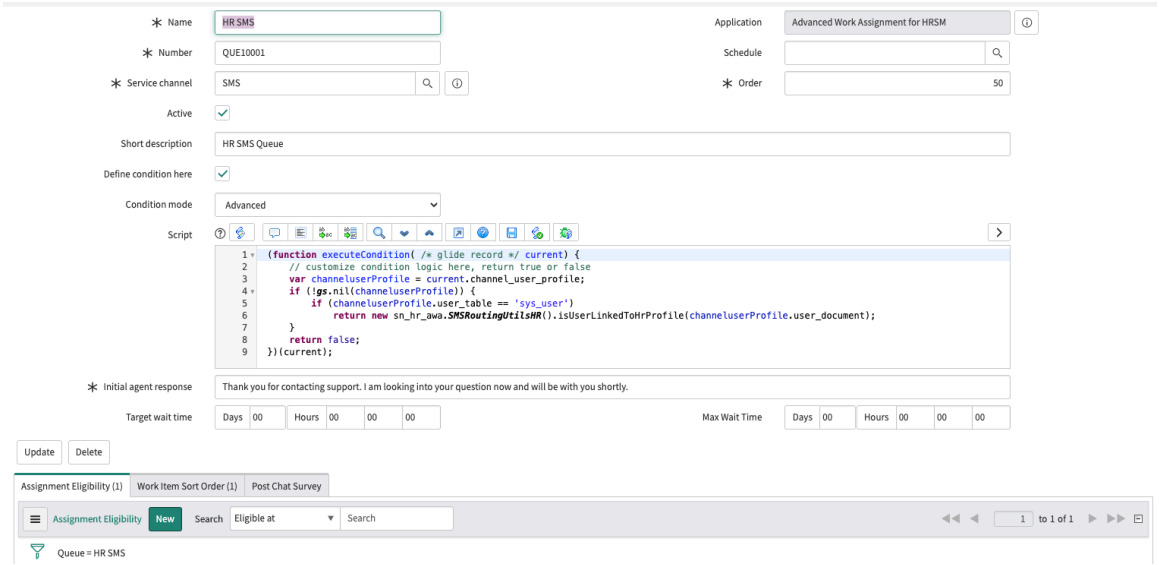
© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



Procedure

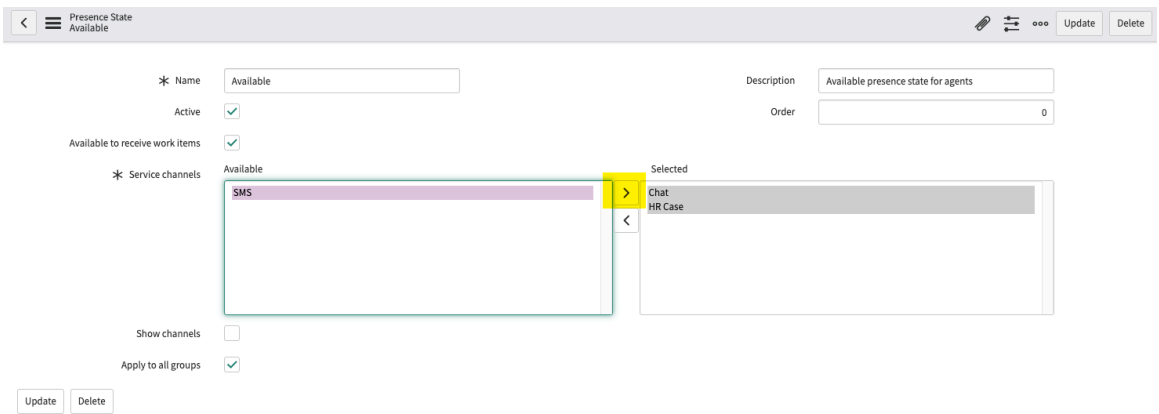
1. Navigate to **All** > **Advanced Work Assignment** > **Service Channels**.
2. Click the **SMS** service channel.
3. On the Service Channel SMS form, select the **Active** check box to activate the service channel.

> **Note:**
> By default, most of the form is populated for you. **Capacity and Utilization** fields are set to 1 for **Default work item size** and 4 for **Default capacity**. You can change these, and any form values, if desired.



4. Click the Queues related list to view and configure the HR SMS queue.

5. View the default configurations on the Queue HR SMS form, ensuring the **Active** check box is checked.
6. Modify values as you desire.



© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

7. Click on any of the related lists to view or modify default configured values.

> **Note:**
> Notice that the Assignment Eligibility related list defaults to the **HR SMS Support Group**. Manually add users to this group to route assignments. Refer to Add a user to a group to learn how to add users to this group.

8. Click **Update** to save any changes you made.
9. Update the Advanced Work Assignment Presence States by navigating to **Advanced Work Assignment** > **Settings** > **Presence States**.
10. Click **Available** in the Presence States list.
11. In the Presence State Available form, select **SMS** in the **Service channels Available** column and move it to the **Selected** column using the right-pointing arrow.

12. Click **Update**.

> **Note:**
> For complete information regarding Conversational SMS service channels and setup guidance, refer to Conversational SMS service channel.

Compose an SMS message from a chat in HR Service Delivery Agent Workspace

Create and send an outbound SMS message to a recipient directly from a chat interaction. Access interactions assigned to you to follow up via SMS message when you need more details from the employee.

Before you begin

Role required: sn_hr_core.case_writer

About this task

An interaction is a request for assistance made through chat, phone, or in person. Interaction records are automatically created when you are using agent chat.
The **Compose SMS** option is only enabled for active chat interactions. For more information about interactions in HR Service Delivery, refer to Using interactions in HR Service Delivery Agent Workspace.

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Select the  HR case list icon and navigate to **Interactions** > **Assigned to me**.
3. Select an active chat interaction for which you would like to respond to the recipient via an SMS message.
4. In the chat interaction modal, click the  more options icon and select **Compose SMS** to initiate an SMS conversation with the recipient.
   The **Send via SMS** modal launches with **Send from** and **Send to** fields.
5. Use the drop-down **Send to** field to select the SMS recipient.
   You can choose an automatically populated phone number or choose **Other** to enter the phone number manually in the **Other number** field. Automatically populated phone numbers display based on the following criteria:

   The **Opened for** field is populated on the interaction with phone number.

   The phone numbers as specified on the HR Profile record. The label for each phone number on the **Send via SMS** modal will match the label for the **Phone number** field on HR Profile record.

   If a manually added phone number is not associated with an existing active channel user profile record, the record is created automatically when you send the SMS message.

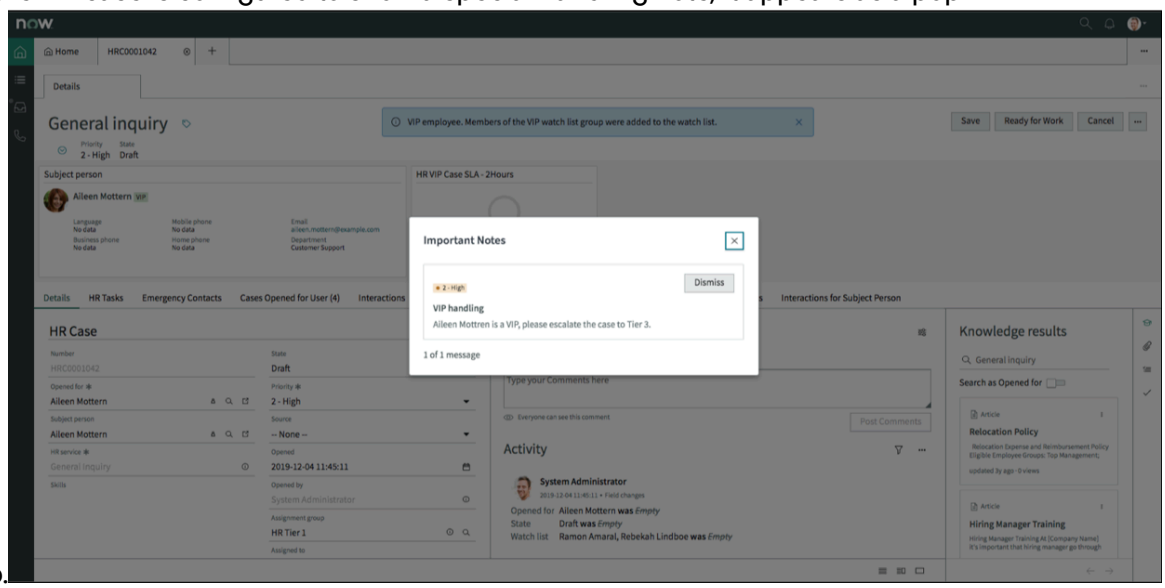
   Note:
   When an interaction is created with phone number p1, not associated with an existing HR Profile, a channel user profile is be created as a Guest. When the user updates an HR Profile, HRP1, with a phone number p1, the user is treated as HRP1.

6. Compose the SMS message, add an attachment if necessary, and send to the employee.
   You can also select the  quick action icon, or enter a back slash (/) in the chat area, to use quick actions for SMS messaging. See Agent Chat for more information.
   You will receive a confirmation when the SMS message is sent. Click the confirmation to view the interaction details,if desired.

   Note:
   For complete details regarding initiating SMS conversations in Agent Workspace, refer to Agent initiated SMS conversation. For details about using Agent Workspace with HR Service Delivery, refer to Using the HR Service Delivery Agent Workspace.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

View a special handling note in HR Service Delivery Agent Workspace



When configured, special handling notes appear for HR cases that require special attention.

Before you begin

Role required: sn_hr_core.case_writer

Procedure

1. Navigate to **All** > **HR Case Management** > **HR Agent Workspace**.
2. Locate and display an HR case.
   If the HR case is configured to show a special handling note, it appears as a pop-up.

3. Read the note and select **Dismiss**.

Create a bulk case request using Agent Workspace for HR Case Management

Create bulk case requests through Agent Workspace for HR Case Management to create the same type of HR case for multiple employees without having to create the same case multiple times.

Before you begin

Role required: sn_hr_core_admin

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the **Lists** icon ( ).
3. Select **Bulk case requests**.
4. Select **New**.
5. On the form, fill in the fields.
   For more information, see Bulk case request form.
6. Select **Save**.

   The **Details**, **User segment groups** and **Cases created** tabs are displayed.

7. Create a user segment group.
   For more information, see Specify a user segment group for a bulk case request in Agent Workspace for HR Case Management.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

8. **Optional:** View details of your bulk case request by selecting the **Details** tab when your segment status changes to **Processed**.
9. Create cases for all users with a status of Included who meet the filter criteria by selecting *Create cases*.

> **Note:**
> After selecting the **Create cases** button, all users with a status of **Included** are rechecked against the filter criteria used. Cases aren't created for users that no longer match the filter criteria. Cases are also not created for users that match the criteria after the user segment was created.

10. **Optional:** Select the **Cases created** tab to view a list of cases created.

Specify a user segment group for a bulk case request in Agent Workspace for HR Case Management

Create a user segment group to specify in a bulk case request the users for whom a case will be created. You can specify values for a group of users or specify multiple segments with different values for different groups of users.

Before you begin

Role required: sn_hr_core_admin

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the **Lists** icon ( ).
3. Select **Bulk case requests**.
4. Select the bulk case request.
5. Select **Create segment group**.
6. On the form, fill in the fields.

Create user segment group: details table

Field	Description
Label	Label that describes the user segment group.
Opened for	Employee to be assigned as the Opened for person on each case. For example, for an onboarding bulk case request, you would select the hiring manager.
Work notes	Further details about the user segment.

7. Select **Next**.
8. Indicate how you will indicate which users the bulk case request will create cases for in the **Filter by** field.
9. Select **Create segment group**.

The **Bulk Case Request** form is displayed with the user segment group you created.

Note:
You can still review and edit your user segment group. For more information, see Review users in a user segment group.

Review users in a user segment group

After creating a user group segment, review and edit users before you create cases.

Before you begin

Taskhas a status of Ready.

Role required: sn_hr_core_admin

Procedure

1. Navigate to **All** > **HR Case Management** > **Agent Workspace for HR Case Management**.
2. Select the **Lists** icon ( ).
3. Select the **Bulk case requests** tab.
4. Select the bulk case request.
5. Select the **User segments group** tab.
6. Select the user segment group.
7. Select the **User segments** tab.
8. Review the list of users that meet the criteria.
   The case creation statuses are:
   - Included: The user matches the filter criteria and a case will be created for the user.
   - Excluded: The user does not match the criteria and a case will not be created.
   - Duplicate: The user is listed multiple times.

Agent Workspace for HR Case Management reference

Reference topics provide additional information about Agent Workspace for HR Case Management components and forms.

Create a new case form

The Create a new case form allows you to create a new case in Agent Workspace for HR Case Management.

Create a new case form

Field	Description
COE	Select the **Center of Excellence** associated with the HR case you are creating. Selecting a COE filters the choices for HR service. For more information, see HR Centers of Excellence data model.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries.
Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Create a new case form (continued)

Field	Description
	Note: You can also select an HR service first and the associated COE automatically populates.
HR Service	The HR service based on the COE selected or what you select based on communication with the employee request. What HR services are available to an employee filter by: • COE selected. • HR criteria for the **Subject person** based on the HR service configuration. Limit services filter on the **Case Creation Configuration** form. If the HR service field is empty, ensure that you did not remove the Opened for field.
HR service description	Description of the HR service selected in the **HR Service** field. For more information on configuring the HR service description, see Configure an HR service.
Opened for	The employee who the case is created for. This person can be different than the subject person. For example, it could be the subject person's manager.
Subject person	The recipient/beneficiary of the HR service fulfilled through the HR Case. **Note:** Advanced reference qualifiers on a reference field is not supported in the case creation configuration page. When the limit user search filter is applied to the employee search, it will not be applied to **Opened for** and **Subject person**.
Work notes	Information related to the case that can help other HR agents. Work notes are not visible to the Opened for person.

Page Configurations reference

A description of the page configuration settings in Agent Workspace for HR Case Management.

Configuration settings

Property	Description
Record	
Minimum input for adhoc approval user search	Minimum number of alphanumeric values required to initiate a search in the **Add an approval** pop-up.
Case tab title field	Tab title displayed for each HR case. **Note:** If the **Case tab title field** isn't specified, the sn_hr_core_case property is applied for all associated extensions.
Playbook card configuration	Toggle to determine the playbook card configuration table depending on versions installed.
Manager email template ID	Sys_id of the email template displayed, when the manager's email ID is selected from the manager name's pop over in the **At a Glance** sidebar.
Contextual side panel	
At a glance	
Cases limit	Maximum number of recent cases displayed in the **At a Glance** panel.
Manager fields for pop over	Fields displayed in the pop over when the manager's name is selected from the **At a Glance** sidebar.
User field	Field-value pairs that determine what user is displayed in the **At a Glance** panel.
Agent assist	
Agent assist configuration	List of table names and sys_id of the associated agent assist configuration record. **Note:** A sys_id is a unique 32-character GUID (Globally Unique ID), that identifies each record in an instance. For more information, see Unique record identifier (sys_id).
Response templates	
Response templates configuration	List of table names and sys_id of the associated response template configuration record.
List	
List configuration ID	The Sys_id of the list configuration [sys_ux_list_menu_config] record in the UX List Menu Configuration table.
Highlighted value configuration ID	Sys_id of the highlighted value configuration [sys_ux_highlighted_value_config] record in the UX Highlighter Value Configuration table.
Case creation	
Case creation employee fields	Employee fields displayed on the case creation page.

Configuration settings (continued)

Property	Description
Landing page	
HR case card configurations	
High priority HR cases	Filter to determine which high priority cases are displayed in the landing page. You can also set text to be displayed when a user views records or when a list is empty.
Recently updated HR cases	Filter to determine which recently updated HR cases are displayed in the landing page. You can also set text to be displayed when a user views records or when a list is empty.
HR cases SLA at risk	Filter to determine what high priority cases are displayed in the landing page. You can also set text to be displayed when a user views records or when a list is empty.

Highlighted value condition form

Use the Highlighted value condition form to create conditions to highlight a field.

Highlighted value condition form

Field	Description
Conditions	Conditions that trigger a field to be highlighted.
Color	Color of the highlighted field.
Application	Scope of applications this highlighting pertains to.
Order	The order in which to evaluate the conditions. When you have multiple conditions for highlighting the same field, they are evaluated in order from lowest to highest.
Hide Label	Toggle to hide label name.
Label	Name for the highlighted field that shows up when the condition is met.
Show Icon	Toggle to display the leading bullet when a field is highlighted. Example - 
Value Override	Text that replaces the field values from the table. If you don't supply a Value Override, Workspace highlights the field value from the table. If you supply a value, Workspace replaces the field value with your text and highlights that. Example -

Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Bulk case request form

The bulk case request form provides information to create a bulk case request to enable the creation of the same type of HR cases.

Bulk Case Request form

Field	Description
Number	Automatically generated bulk case request number.
Name	Name describing the bulk case request.
HR service	HR service associated with the bulk case request.
Status	Status of the bulk case request. The bulk case request statuses are: • Draft - The default status. • Ready - A user segment group has been created for the bulk case request. • In progress - The request is in the bulk case request creation process.
Create parent case	Option to create a parent case that is associated with the bulk cases.
Opened by	Name of the user creating the bulk case request.
Selected user count	Number of users selected for the bulk case request. The value of this field is taken from the user selection field while creating a user group segment.
Requested time	Date and time your bulk case request was submitted to create cases. The value of this field is auto-populated upon creation of the user segment group.

HR Service Delivery Playbook

Currently, HR Service Delivery Playbook offers you a single pane to view and work all tasks and steps required for resolving a lifecycle event case.

Important:

- HR Service Delivery Agent Workspace (Classic) is now deprecated and no longer supported or available for new activation. For details, see the Deprecation Process [KB0867184] article in the Now Support knowledge base.
- If you are an existing user of HR Service Delivery Agent Workspace (Classic), you can migrate to the Agent Workspace for HR Case Management (Configurable) for enhanced features and capabilities. See Migration Guidelines.

Note:
Only lifecycle event cases are supported at this time.

Having all case information in a single pane allows you to quickly and easily decide what your top priorities are. Having top priorities allows you to:

- View all in-progress steps across different departments so you don't waste time searching and opening different forms.
- View all completed actions.
- Easily and quickly see what you should do next.

ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Lifecycle event cases

Because there can be multiple activity sets in a lifecycle event case that also contain multiple activities, being able to view all aspects is crucial to an HR agent.

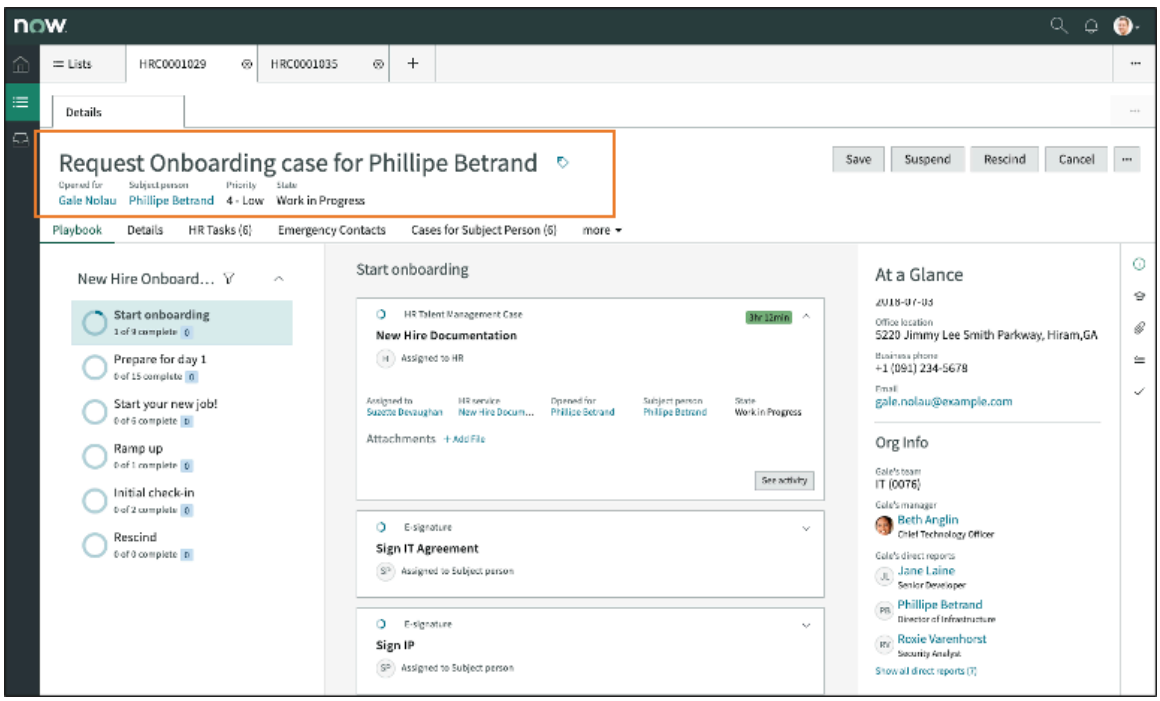
Using an accordion button, you can expand or collapse activity sets to view the activities within.

Within an activity set, you can view all tasks, state, owners, and have the ability to take action.

Note:
For more information about lifecycle events, see Lifecyle events for enterprise.

Exploring HR Service Delivery Playbook

Use HR Service Delivery Agent Workspace to manage lifecycle event cases.



HR Agent Workspace case form with Playbook

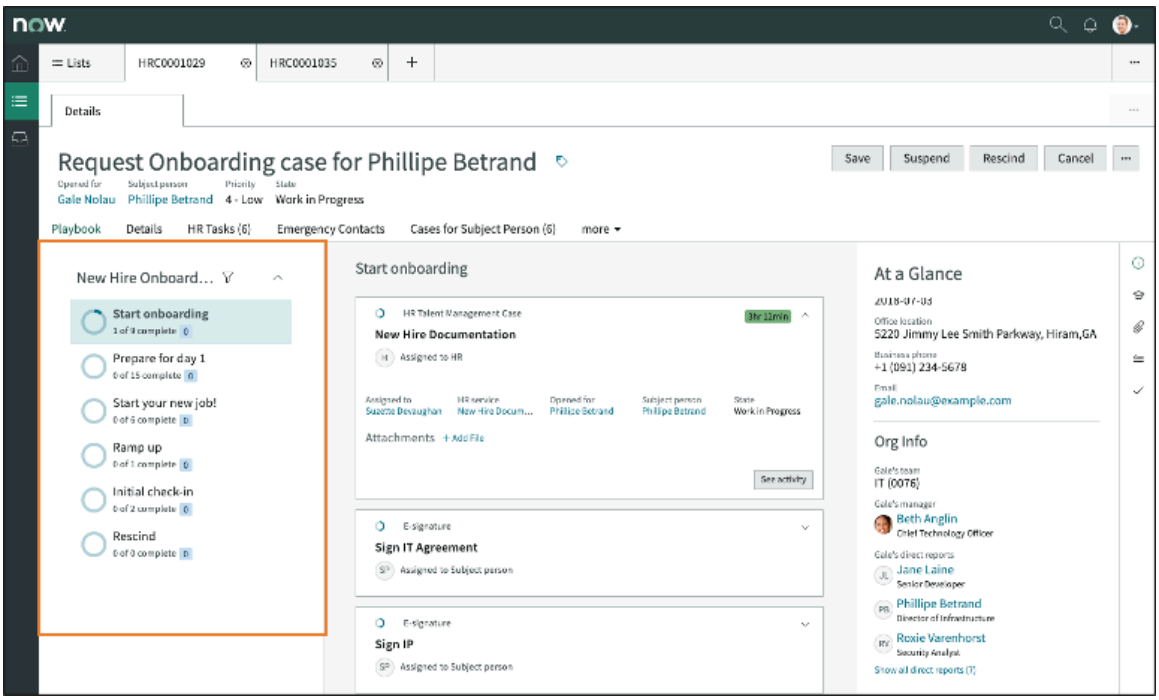
When Playbook is activated with HR Service Delivery Agent Workspace, the **Playbook** tab appears in the Related Items menu.

Playbook Header

The Playbook Header shows the title of an activity set.

Note:
For more information on lifecycle event structure, see Configure a lifecycle event.

Stage panel



Along the left side of the Playbook form, you will see the stage panel that shows the lifecycle event and each activity set. Below each activity set shows a the number of activities completed and a status circle. A check inside the circle indicates a completed activity set.

A check mark inside the Playbook Header indicates that the activity set is complete.

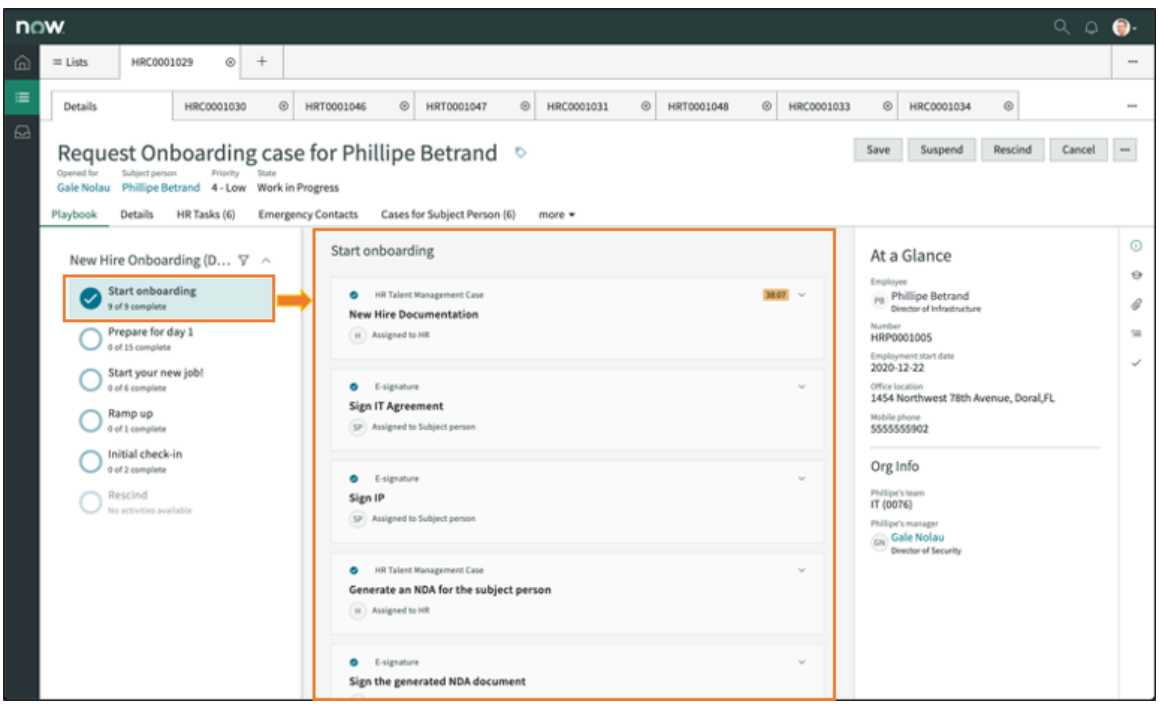
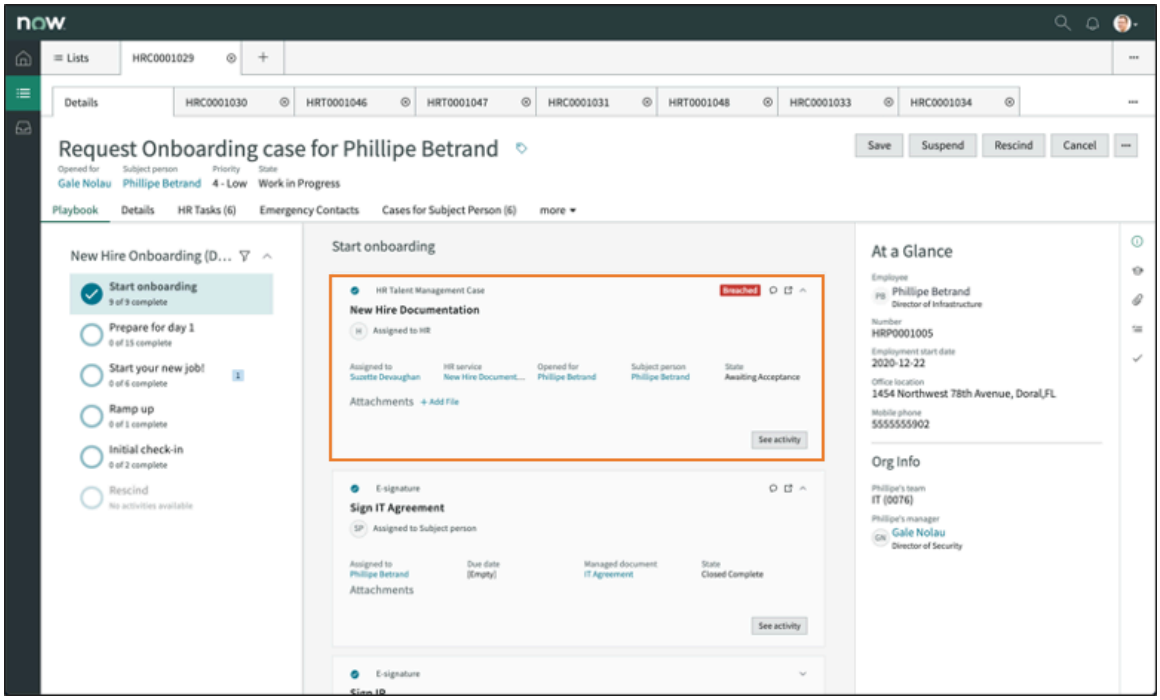
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



You can quickly see how many activities there are for an activity set and how many are completed.

In the example, the activity set Start onboarding has a total of nine activities with one completed (1 of 9).

Activity stream

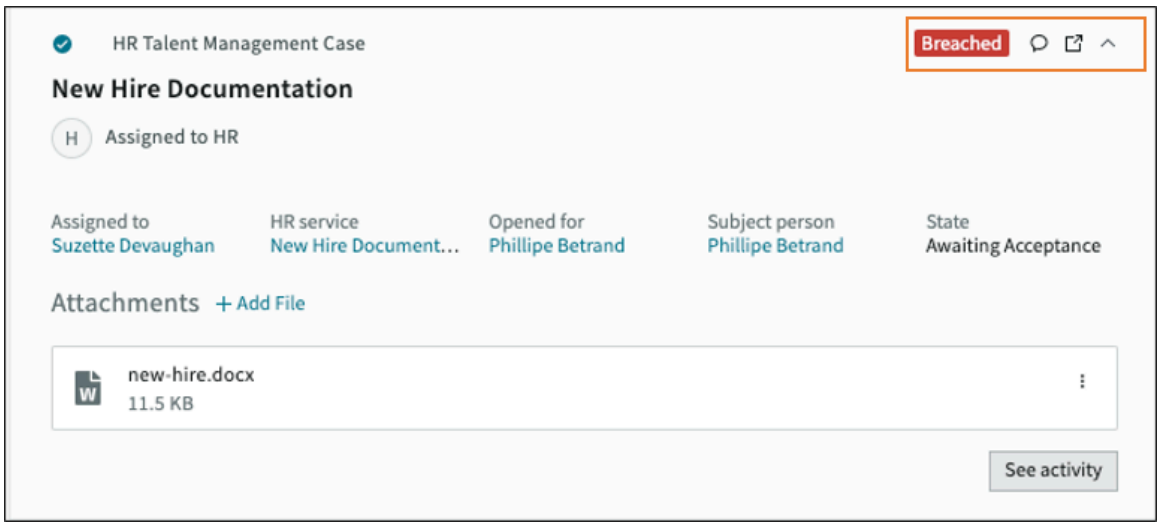


Click on an activity set in the stage panel to view all activities within the activity set.

HR card

You can drill into an activity from the activity stream by clicking on an activity to view details about case or task.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.



The HR case opens in a separate widow and tab.

HR card details

Click the activity and the **Assigned to**, **HR service**, **Opened for**, **Subject person**, **State**, and attachments appear.

At the top, right of an HR Playbook card are a series of icons.

The first icon on the left provides the state of the HR case or task. Hovering over shows details of the SLA.

Click the **Add note or comment** ( ) icon to add comments or notes related to the activity.

To view comments or notes, click the **See activity** button.

Click the Open task ( ) icon to view the details of the HR case or task. A new tab with the HR case or tab opens.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

Click the Minimize task ( ) icon to close the details of the HR case or task.

The other areas of Playbook are covered in Exploring HR Service Delivery Agent Workspace.

Setting up HR Service Delivery Playbook

Set up HR Service Delivery Playbook so that your agents can easily manage, track, and lifecycle event cases.

Activation

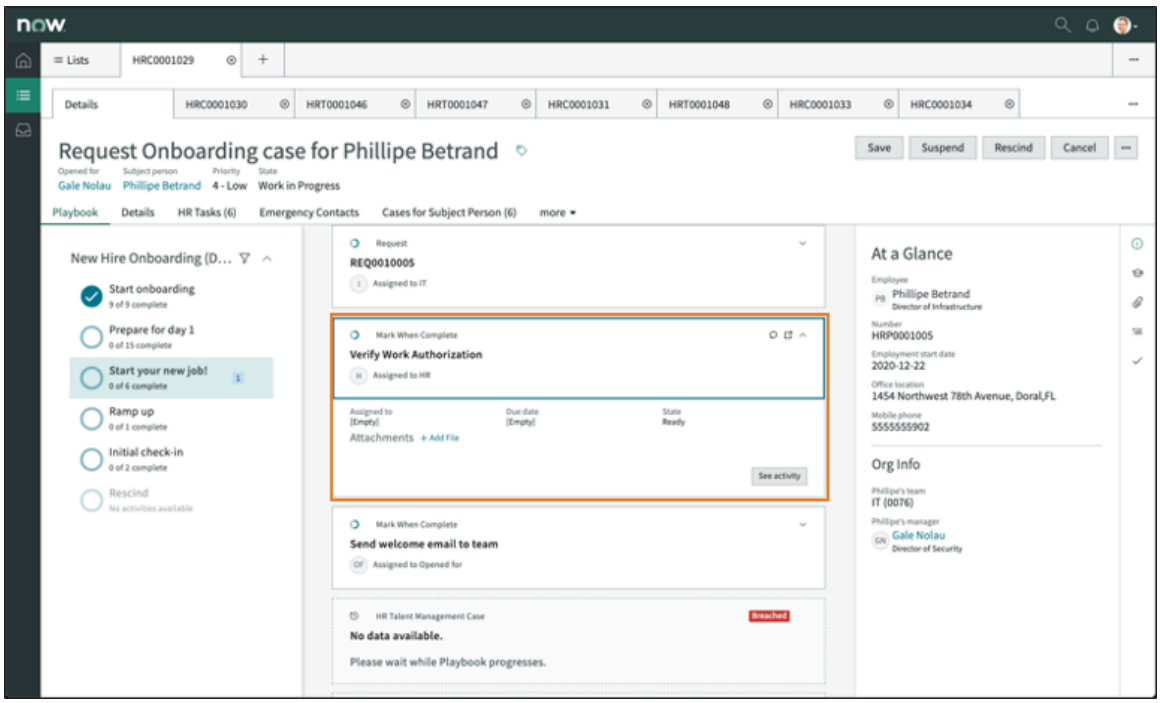
To activate Playbook for HR, you must go to the ServiceNow Store to make it available on your instance.

Activate the following plugins:

Playbook Experience Core [com.glide.playbook_experience.config].

The next two (2) applications are obtained from the store:

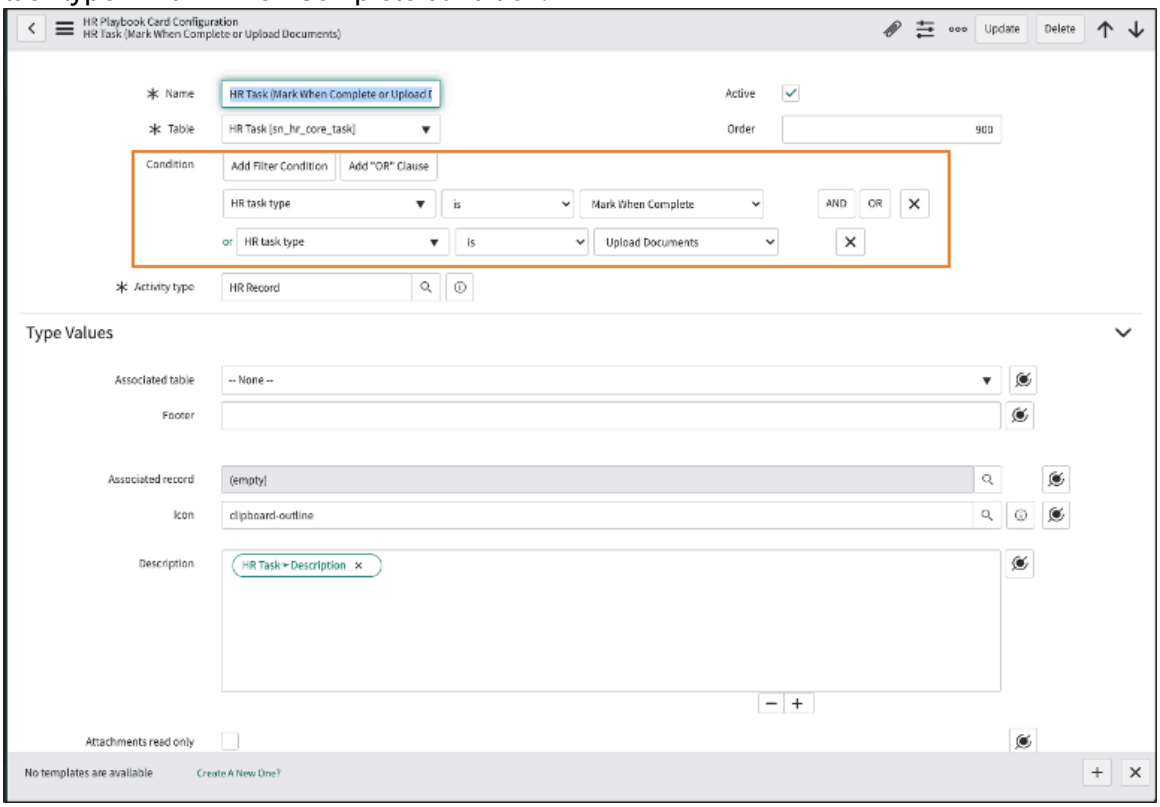
- Playbook Experience [sn_playbook_exp]
- Playbook Experience Components [now_playbook_exp]



For more information, see Install a ServiceNow Store application.

HR cards

The Playbook tab under HR Service Delivery Agent Workspace has HR cards.



HR cards represent each activity in the activity set which could represent various records such as HR tasks, HR cases, requests, incidents, approvals, and more.

Below is an example of an HR card showing an HR task record.

© 2026 ServiceNow, Inc. All rights reserved.
ServiceNow, the ServiceNow logo, Now, and other ServiceNow marks are trademarks and/or registered trademarks of ServiceNow, Inc., in the United States and/or other countries. Other company names, product names, and logos may be trademarks of the respective companies with which they are associated.

- The Verify Work Authorization card has an HR task type = Mark When Complete condition.

- Each activity shows an HR task, case, request, and others. The activities look at the HR Playbook Card Configuration table to match the lowest order record.
- The HR Playbook Card Configuration can have filters to determine what values to render.
- Use HR Playbook Card Configuration to configure cards.
- For more information, see Configure HR Service Delivery playbook card.

As an HR administrator, use this to configure how each playbook looks in HR Service Delivery Playbook for different types of records (HR case, task, and others). Different record types have different relevant information to show.

The base system provides 19 records.

Note:
For more information on playbook configuration, see Set up a playbook.

Configure HR Service Delivery playbook card

Use Playbook Card Configuration to view and manage what appears for each card in an activity set.

Before you begin
